He placed the helmet on, and waited for the HUD to initialize as the suit sealed itself. As much as it would be a failure of his to let the Humans get to that point, he somewhat wished he could fight in a proper space battle. However, when they moved on the inner galaxy, there would likely be plenty of opportunities then.

He’d ponder the Imperator’s reluctance to employ Sovereign tech later. For now, he was going to take an enjoyable break to the tune of some excellent music. If there was one area where Humans were absolutely superior to all other races, it was in the absurd variety of music they could make. Ethereals had never considered it something worthy of ‘entertainment’ so the concept of listening to music just because it was enjoyable was one that had taken some time to fully grasp.

He’d considered the benefits of it when listening to some Vitakara music, at least from what little they produced, the majority of which had surprisingly come from the Oyariah, but had really never found it personally to his liking. Sectoids and Andromedons had absolutely nothing, and records of Muton War Chants still existed, but they just sounded like a lot of screaming.

Humans though, that was something they were good at. True, there was some of it he didn’t care for, but there was enough that was for him to be completely satisfied. He personally found those from the rock, metal, and epic genres to be the absolute best, although Humans made quite good music for much of their entertainment, especially movies and video games.

After listening to some for the first time, he was beginning to understand why Quisilia had taken an interest in the species beyond a purely practical perspective. The Battlemaster found it somewhat depressing that Quisilia of all Ethereals was somehow the one he could most relate to recently. At least he saw this entire operation of at least some worth.

And he was not looking forward to bringing on Macula and Isomnum, but measures had to be taken. The next phases had to begin and more Ethereals were needed.

No, realities of war could come later. This was his break, and he was going to enjoy it.
“Begin scenario,” he ordered, after checking his suit for integrity. “Ten second delay.”

The room darkened, and the Battlemaster felt a sharp change in gravity. The area around him changed to that of space, and in the distance was a Sectoid Hiveship, a massive circular ship that gleamed in the artificial sunlight. Ten second delay was up.

The floor dropped out from underneath him.

“Scenario begun,” the CODEX said, and the music began playing.

The Battlemaster activated the jets on his back and legs, shooting forward towards the massive ship which had noticed him and started to fire plasma. Fortunately it was easy enough to avoid and he was small compared to most space targets, and he sighted the hatch he wanted to enter. On most scenarios he’d spend some time disabling the guns, but he didn’t feel like doing that at this point.

Using his jets to spin and dodge the plasma, he landed on the Hiveship with hardly a scratch, and with telekinesis he forced the hatch open and dropped inside on some terrified simulated Sectoids. With the music blaring in his ears, he began cutting his way through the ship, the troubles and concerns of the Collective fading to the background.

***

Desolan Orbit

At times, Nartha wondered just how realistic the goal of rebelling against the Collective actually was. As he sped to the primary orbital station over Desolan, he was now worried he had been overly optimistic about their chances.

Desolan itself was a barren wasteland. It had always been like that. Even today volcanos went off daily, and that was nowhere as prominent as it had been even a century ago. The one large body of water was contaminated with ash, and barely drinkable without severe filtering. He did recall there had been a project to fully purify the Desolan Bowl, but he didn’t know how or if that was even happening.

That was not the only body of water of course, or the Mutons would have died out long ago. There were pockets of uncontaminated springs throughout the planet, all of which were continuously purified by Collective equipment to not destroy the last sources of water on the planet. From his understanding of Muton culture before their assimilation, this had been the most precious resource on the planet.

Muton tribes generally wandered until they found a spring, and went to war with each other for control of them. It was just one reason that they had been constantly at war with each other. The only reasons he could think of why they hadn’t died out with the scarce amount of water was because they had evolved to not require nearly as much water as other species, and because their numbers had been much smaller, only in the hundreds of thousands, not the billions as it was today.

“This is Desolan Primary Station Two,” the deep voice said, probably a Borelian from the inflection. “Please send identification codes or be fired upon.”

Nartha’s lips curled up. “Sending now. I’m on orders from the Zar’Chon himself.”

“Noted. Processing now.”

Yes, he probably was being overly optimistic.
Desolan was the heart of the Collective war machine. It was without a doubt the most heavily guarded planet in the Collective, and for good reason. To his knowledge there weren’t similar War Camps on other worlds, or there wouldn’t be until the Collective used up every piece they could of Desolan itself.

So that was why the Desolan Fleet alone dwarfed the entire Runianarch Navy, and it was about a quarter of the size of the Sectoid fleet, and a third of the Federation Navy. Just looking out his viewport he saw four Federation Carriers, a minimum of sixteen Cleanser Ships, ones which specialized in orbital bombardment, but were actually quite effective against smaller hostile spacecraft.

To make it even more ridiculous, there were no less than eight Sectoid Hiveships, the massive Dreadnought-class saucers that he was pretty sure were the size of an Earth city. The Sectoids didn’t build many medium-class spacecraft, it was either very large, or very small. But each Hiveship contained hundreds, maybe thousands of Sectoid Fighters, Scouts, and Transports.

But the flagship of the Desolan Fleet was actually the one and only Vitakarian Dreadnought, the *Elder’s Maelstrom*, built solely for the destruction of enemy Capital-class spacecraft, and higher. It was twice the length of a Hiveship, albeit only a fraction as wide, with angled armor plates that were symmetrical across all sides. It was largely due to the fact that the *Maelstrom* was essentially a massive gun.

Nartha didn’t know how it worked, only that it was supposedly powerful enough to destroy a Hiveship in one hit. On top of that the hull was dotted with point-defense lasers, missile launchers, plasma and gauss turrets for both fighters and medium-class spacecraft, as well as a small fleet of Runianarch fighters and bombers.

The Vitakara didn’t build spacecraft specifically for war often, but when they did, they were hard to match. Beyond the fleet itself, there were sixteen different orbital stations surrounding the entire planet, all with their own defenses, and each of the two hundred and eighteen Gateways to Desolan had a self-destruct sequence that any of the orbital stations could activate.

Hm. Perhaps that could be useful?

The point was that the chances of *anyone* posing even a slight threat to Desolan were very, very low. He wasn’t even sure an Ethereal could take the planet unscathed. Even if the fleet was somehow able to be destroyed, there was the planet itself.

Desolan was no longer the tan, rocky planet it had been. The War Camps could be seen from space and were spread out all over the planet. Removing the billions of Mutons, and other Collective forces, Desolan was not a friendly place for *anyone*. The volcanoes were bad, but not nearly as prevalent as the dust storms, arid weather, and high gravity.

That was something the Humans would have to keep in mind if they fought here. Their gauss weapons, or any other conventional weapons they still employed wouldn’t work quite the same, whereas plasma weaponry dominated here. At least there were no predators. The few other animal species found had been swiftly wiped out once the Collective had taken control, in order to remove as many threats as possible.

“*You are cleared for landing at Station Two,*” the operator said. “*You’ll be able to take a Gateway to the surface within. The Station Commander has also requested a meeting before you depart.*”

“Understood,” Nartha said as he angled his spacecraft towards the Hangar. “I’ll be there shortly.”
Now, how was he going to go about doing this?

He wasn’t interested so much in the person killing the Berserkers as he was in the method used to accomplish it. Should he acquire that, it might be useful later in the war. He’d do a cursory search, but he doubted out of all the Zararch agents, that he would be the one to find the culprit. Framing someone might draw him out, but Nartha didn’t consider that worth the risk. No, better to figure out how it was done, and use that later.

The Muton abductions on the other hand, that would be investigated thoroughly. That would be difficult, but no one could pull off an operation like this without leaving some obvious tells, and since they weren’t Nulorian, it might mean they wouldn’t be as professional and thus make his job more difficult.

The Zar’Chon hadn’t given him a specific amount of time that these issues needed to be solved, but the sooner he wrapped both of these up, the better. At the same time, he needed to be very careful. The idea that the Zar’Chon suspected something was off with him couldn’t be ignored, and he wouldn’t put it past him to order another Zararch agent to tail him.

So first he would need to establish if he was being observed, while investigating the Berserker deaths, since he didn’t plan to do much off the record with that assignment, and once he figured it out one way or another, he would proceed with the abductions. Then there was the high likelihood of encountering other Zararch agents, since more had been assigned to these cases.

The good news was that Zararch agents preferred working alone, so he hoped he was safe from that. A partner would severely complicate his job.

Entering the Hangar, he began bringing his ship down for a solid landing, taking a deep breath as he prepared to enter one of the most dangerous strongholds of the Collective.

---

Mars Observation Station, Zar’Chon Chambers

Ravarian wasn’t quite sure he’d heard correctly. “How many did you say?”

“Three more,” Quisilia repeated, as amused as ever. “Yes, the Battlemaster wants to move this invasion to a more comfortable phase. Short of a final invasion, this is the best way to do it.”

“Good news then, I suppose,” Ravarian said, still thinking furiously, although he knew Quisilia could just read his mind to know his true feelings. He had met approximately five Ethereals in his entire career, one of which no one else knew about. Now that was going to be extended to three more he’d never heard of before.

And he was going to be speaking to them. “Are you certain I am best for this?” He asked. “I am aware that not all Ethereals are as…open to listening to other aliens as you and the Battlemaster are.”

“They’ll get over it,” Quisilia dismissed. “Both the Battlemaster and I believe it’s past time the Ethereals let go of our admitted xenophobia when it comes to alien species. Treat them with respect, and you have little to fear.”

“You say that,” Ravarian said dryly. “However, my experience with Caelior has me skeptical. He did almost strangle me once. Should I expect a similar level of resentment?”

“Unlikely,” Quisilia said, looking out the external feed of Mars. “Caelior is young and arrogant,
and has clearly changed as you’ve noted. If there is anyone you should concern yourself with, it is Isomnum, but his part in the war will be...limited."

Ravarian frowned. “Why?”

Quisilia gestured and on cue Fluffy jumped into his extended palm. “Because of his abilities, to put it lightly. He has a rather warped perspective, one that has arisen as the result of his ability to drive people insane. It’s a hobby of his, if I can be blunt, he makes Caelior look like a harmless kitten in perspective. But he is one of the oldest and most powerful Ethereals in the Collective.”

Wonderful, an Ethereal sadist.

“That is also not inaccurate,” Quisilia commented. “Still, be sure to never speak to him alone without me there. This goes for your people. Leaving him unattended will likely result in a large part of this station succumbing to sudden bouts of insanity.”

“Maybe this should be held somewhere else,” Ravarian muttered, bringing up a hololist from his palm. “This is sounding like a safety hazard for everyone involved.”

“I would tend to agree,” Quisilia nodded. “However, if you wish to change it, I suggest you do it soon.”

“Will do,” Ravarian confirmed. “And the Battlemaster wants me to present the information to them?”

“Also correct,” Quisilia said. “They will be unfamiliar with the current political and military situation on Earth, and will need it explained clearly and concisely. They will also need an explanation on the various figures of interest. I assume the Battlemaster has informed you about how he plans to proceed?”

“The overall plan,” Ravarian clarified. “Some details were intentionally vague, although this seems to be why. It is an abrupt change in strategy, but one I feel will ultimately serve us better than simple warfare.”

“It will be interesting to see how this plays out,” Quisilia mused, turning away again. “If nothing else, this is an excellent warm-up exercise for the main event. Really, if we cannot properly subdue a technologically inferior species, what hope do we have against the species of the inner galaxy?” He laughed briefly at the end of that.

“To be fair, we are intentionally handicapping ourselves,” Ravarian pointed out. “This war could be over in a matter of weeks if we truly wished to conquer them.”

There was the sound of Quisilia sighing. “Part of that is due to your unfamiliarity with our future plans, but please, if all we were interested in was the subjugation of the Humans, we wouldn’t be going through this whole charade, would we? No, conquering a species is easy, but if all we wanted was numbers, we’d just do what we did to the Mutons.”

Fluffy jumped down from Quisilia’s arm as he turned to fully face Ravarian. “The Humans are important. We want them on our side, not now of course, but that is what the new strategy intends to change. You are well aware ADVENT has its own secrets and black operations. ADVENT has enemies, and we do not need to stoop to petty lies to discredit them.”

Quisilia turned back to the external feeds, which showed Earth. “The Empire made many mistakes in retrospect, and this war has highlighted the flaws of the Collective itself, many of which the Humans have directly, and indirectly, exposed. We need to change, we cannot rely on force to win
our wars, it did not work before, and it will not work in the future. At some point we will face an enemy more powerful than us, and we cannot afford to face it with just this Collective.”

Ravarian listened intently. The Ethereal Empire was something Quisilia rarely referenced, but he didn’t completely see the point of doing this the hardest way possible. “At the same time, Quisilia, there is little the Humans could do to stop us if we really wanted it. All that is needed is for their leaders to be influenced to do as we wish.”

“A short-sighted answer,” Quisilia said coolly. “One that has long since passed. Humans are capable of psionics, that strategy is no longer viable for long-term operations. Too much has been done that they will never surrender willingly, not so long as Aegis is with XCOM. If we were to simply conquer the Humans, and treated them as the Mutons, it is unlikely we could harness their own ingenuity. It is impressive, is it not, how they have still managed to hold out? We will need that in the future.”

Ravarian decided to let the matter drop. He could see Quisilia’s point, but at the same time believe it was ultimately an interesting experiment that cost time, resources, and lives. However, he was very sure that Quisilia was not telling the entire truth. The real reason they were treating the Humans this way might be something only he knew.

Maybe one day he’d learn it, but for now he’d complete the objectives set out for him.

“The inner galactic species,” he said. “You are concerned about them.”

Ravarian didn’t know much about the inner rim species, aside from that Sicarius and Quisilia had gone on missions of their own, and that the exact details were only shared amongst themselves. But he was growing more and more curious about them as time went on, because once the Humans were dealt with, that was where their attention would be turned towards.

Quisilia just looked at him for a short time, almost as if coming to a decision. “Not the species themselves, but what they represent. You will learn in good time, Zar’Chon, prepare for the meeting. I will see you there.”

And the Ethereal promptly vanished in front of him. Cryptic hints, excellent. Well, he’d be thinking of that for the rest of the day. Or at least the time he wasn’t spending putting together a presentation suitable for five beings who could kill him with a single gesture.

His job was rather stressful sometimes.

***

*Helion-7 Primary Hive*

The Battlemaster had always found it curious that despite the Sectoids being ludicrously small, even compared to other species like Vitakara, their architecture was open, tall, and massive. Helion-7 was the pinnacle of Sectoid architecture, as the entire planet was composed of nothing more than hundreds of Hives, megastructures housing millions of Sectoids that extended deep into the ground.

Sectoids didn’t have commodities like nearly every other species. They didn’t have homes, belongings or possessions. They didn’t sleep. They only required nutrient injections every week for food and water. All they ever did was whatever task they had been bred for. So every piece of equipment, building, and technology was always manned by at least one Sectoid drone.

But now it was certainly different.
There were noticeably fewer Sectoids than before, and the Greater Sectoid Hive had slowed down production of nearly everything to deal with the sudden plague. There had been little that could be done, and while the Battlemaster hadn’t personally overseen it, the most common tactic was complete sterilization. Entire Hives were terminated if they were infected or no, and to be safe all the nearby ones were sterilized as well.

It was another reason the Battlemaster didn’t like the species. Rather than try and find a way to stop or reverse the disease, they simply terminated those they found without further explanation. It was especially galling because Revelean had agreed to help, but when he went to the Hive Commanders, he had been told that they were ‘solving the problem.’

The Battlemaster would never understand the logic of those who would rather have control over a force of organic drones over a much smaller, but smarter alternative. Yet the entirety of Sectoid culture, if it could even be called that, revolved around it. Sectoids were grown to do one specific task, and that task was all they knew. They were completely useless anywhere else.

The only ones with any sort of individuality were the Hive Commanders.

And they were utterly emotionless. Were it any other species he would call them overly cruel and wasteful. But they were not Ethereals. This logic was simply what they understood and to them, he knew that every other species was viewed by them as overly emotional and compromised.

For this they made excellent scientists for performing the more unethical experiments of the Collective. The Battlemaster had always found them strangely fascinating in how they worked, while at the same time being repulsed by them. They didn’t have emotions, well, that wasn’t completely correct. But the only ones he had ever seen from them were anger, arrogance, and fear.

And even then, he wasn’t sure if they were ever truly afraid, or if they just pretended to be.

_Hive Commander Zero-Zero-One will speak to you now_, the scratchy voice of his Sectoid guide said in his mind. _Follow us._

So he did. His escort was unsurprisingly the Helion-7 Defenders, who had also seemed to be spared from the plague itself. They were considered the most dangerous force on the planet with the exception of the Hive Commanders, and even then that was debatable with how they worked. The Defenders wore orange armor that covered every part of their body, unlike most Sectoids, and had the ability to link directly to a Hive Commander. Supposedly their power was just below a real one, but the Battlemaster didn’t know for sure. To his knowledge, they had never been used in combat before.

His armored boots made almost no sound on the alloy floor, which radiated warmth, a side effect of the massive elerium generators that powered the Hives. It was a bizarre property of the metal here, but one he quickly got used to. They traveled through the towering archway and multicolored shields that permeated Sectoid architecture, and into a room that had what passed for individuality with the Sectoids.

The function of most Sectoid rooms was very clearly stated on the outside, a recent addition from incorporating Ethereal Script into their language, but here there were several combinations of technology that would never exist in any other room in the Hive. There were cloning tubes, dissection tables, stasis chambers and several glass chambers where this particular Hive Commander kept his specimens.

At the moment, Hive Commander 001 was over his ridiculously short dissection table, currently in the process of surgically removing the eyes of another Sectoid. For what purpose, the Battlemaster
could only guess at. What unnerved him about Sectoid experiments was that they didn’t use any form of anesthetic during their experiments. They had a drug that induced complete nervous system paralysis, but kept the subject very much alive.

To the Sectoids, anesthetic was something that accomplished nothing, and thus they didn’t use it. There was little he could do to stop the practice, but that didn’t mean he liked it, nor would he tolerate it in front of him. He reached out with his telekinesis using a lower hand and squeezed, and the body jerked as the innards of the Sectoid were suddenly crushed, killing it instantly.

Hive Commander 001 looked up at his approach, setting down his scalpel and tapping a button on his wrist that retracted the spindly mechanical arms that were assisting his project. *Battlemaster, welcome.* The Battlemaster could detect the sneering tone immediately, the unfiltered voice of the Sectoid entering his mind instantly.

He knew he was most certainly *not* welcome, but just something 001 was doing as a courtesy, as if they hadn’t determined his true motives long ago.

Sectoids did not have names. Not even the Hive Commanders. They simply had numerical designations, and Hive Commander 001 was supposedly the first, and by extension, oldest Hive Commander. He had been instrumental in shaping the Sectoid species into what it was today. Because of this he was regarded as the unofficial leader of the Greater Hive Commanders, even though they didn’t have standard ranks.

The spindly alien with ruddy orange skin barely reached to his knee while standing at his full height, but the solid golden eyes of 001 were incapable of expressing anything but sheer disdain and arrogance. Ethereals did not intimidate him. Nothing did.

The Imperator was not fooled. The Sectoids believed that the Collective was only a means to an end, and that the Greater Hive Commanders were preparing for the day when they were powerful enough to take control of all who they deemed lesser species. How little they knew, and how easily they had been manipulated into believing their actions were of their own accord.

Hive Commander 001 did not bother to hide his disdain for aliens, while most Hive Commanders at least made a pretense of an alliance. He rarely interacted with other Ethereals, instead staying on Helion-7, a recluse in the goal of advancing his species. The only reason the Battlemaster suspected they were speaking was because the Greater Hive Commanders had deemed it important to assure the Imperator that they were still committed to the Collective.

Yet it was clear 001 was not going to enjoy doing it.

“What is the status of your species?” The Battlemaster asked, knowing 001 would despise small talk. As did he, especially when dealing with Sectoids.

*We are moving forward,* 001 answered, turning to the Battlemaster slowly, tapping several buttons on his wrist gauntlet which brought forth a small floating platform he stepped on. *The diseased are purged and the drones will be replenished in weeks. XCOM mistakenly believed such a disease would cripple us. The drones can be replaced easily.*

The Battlemaster was unimpressed as 001 rose up to eye level on the platform. “You refused Ethereal assistance. While it certainly was not possible to salvage all of the drones, we could have prevented the bulk from succumbing to the disease.”

The Hive Commander blinked once. *The drones have served their purpose, and the previous iteration was flawed. We will begin phasing out the remaining defective drones once our numbers*
have been restored to sufficient levels.”

Phasing out. Which meant that whatever drone hadn’t been killed soon would be. Such a waste of perfectly usable units. “Then what is your solution? Your method of creating drones is clearly flawed. Another disease could do the same thing if you retain your methods.”

Walk with me, 001 essentially ordered as he floated forward. The Battlemaster followed, both of them escorted by the Helion-7 Defenders. The method is perfectly serviceable. Genetic diversity leads to divergence; to individuality; to a number of unknowable factors that would threaten the Greater Hive Commanders. If the drones die to these infernal tricks the Humans create, then little of value has been lost. The Greater Hive Commanders still stand, and we are all that matter.

“So you will do nothing.” The Battlemaster stated flatly. “Is it really a strain to ensure that if another bioweapon on this scale does hit, it wouldn’t halt your entire species?”

XCOM will not do this again, 001 disputed, the voice sneering. They are sentimental fools who believe this act horrifies us, or that we are crippled for years. If only. The drones mean nothing. They will be replaced, and nothing will change. Let the Humans build their weapons, let them see how little effect it has on us. A drone does not feel fear, it does not care if it is wasting away, it only will work to complete the task for which it has been assigned.

Self-serving imbecile. The Battlemaster was well aware that the drones could be replaced, and that they didn’t necessarily care as they died horrific deaths. But the problem was that, regardless of effectiveness, the Sectoid Fleet had been reduced to nearly a tenth of its strength over a period of months, and while that didn’t affect the war on Earth much, against an actual enemy, those months were vital.

Not to mention morale suffered as the non-Sectoids saw the effects of a bioweapon that turned the being to little more than mush.

“Then use templates,” the Battlemaster said evenly. “Diversifying every single Sectoid is impractical, but additional templates would reduce the chance of being wiped out again. It is wise to take precautions, if for no other reason than the next enemy we face who does this might not be as weak as the Humans.”

No, 001 growled into his head. We will not subject our species to the chaos of diversity. There are defined roles for our species, and that is how we have avoided petty conflict for thousands of years. Diversity leads to individualism, which leads to disobedience, which leads to conflict. The fist of the Hive Commander clenched at the sheer gall the Battlemaster had to question him. We will not change simply because you demand it. We care nothing for your arguments of morality, effectiveness, or resources. What you suggest undermines the structure of the Greater Hive Commanders, and this will not be permitted. These orders will not be recognized, no matter if they come from you, or by-

The Hive Commander stiffened as he felt the psionic forces converge around his body. The Battlemaster slowly walked around the large open hallway to stand in front of him, a hand raised with the fingers in a C position, as if gripping something. “You forget your place, Hive Commander Zero-Zero-One,” the Battlemaster said coolly, slowly applying more pressure. “It is one thing to disagree with our ideas and standards, but it is another to simply refuse our direction.”

You will not kill me, 001 said, eyes brimming with fury. The Imperator will not allow his little soldier to disrupt our great alliance.

The Battlemaster chuckled. “The Imperator does not care what you think. You can simply be
replaced, is that not what you espouse? I know Hive Commanders can be created, and the first
generations deteriorate over time. Perhaps it is time to phase them out.”

*Do not think to compare me to the thoughtless drones,* 001 spat back, although he did seem slightly
worried now. Although still surprisingly unafraid. *Your false equivalence is the tactic of one who is
in an inferior position. Do you honestly believe you are one to fear?*

The Battlemaster appraised him. “Fear is not a detriment, Zero-Zero-One, it can save your life. You
are inflexible; your methods are outdated and inferior to the coming wars; if you are incapable of
working with me out of your arrogance and pride, then there is no further use for you. If you will
not make the necessary adjustments, then I will find another who shall.”

With that he reached for his sword and the Helion-7 Defenders reacted, although he had
anticipated this and with his free hands, directed his telekinesis at the escort and squeezed. The
aliens squealed as their helmets and armor caved into their bodies, which leaked yellow fluid as
they began bleeding out.

*Battlemaster!*

He didn’t look over at the new contingent of scurrying Sectoids coming towards him, for fear it
might be a trick. He telekinetically pulled 001 towards him until his hand was snugly around the
spindly alien’s throat. Then he turned to see the one who had addressed him. It was another Hive
Commander, this one without any armoring, clothing or gadgets, but from his posture and tone, the
Battlemaster knew who it was.

“This does not concern you, or the Greater Sectoid Commanders.”

*I am unaware of the dispute,* 029 said calmly. *But you do have our oldest Hive Commander in your
grasp, and by default I believe we are entitled to know why you are attempting to kill him.*

“I, and the Collective, have tolerated his antagonistic behavior towards aliens, but my patience is at
an end,” the Battlemaster stated, just as calmly. If nothing else, 029 did pretend to be a diplomat
even if his ambitions were the same as all the others. “There is a point where willful ignorance of
the realities of conflict and military matters are dangerous to the Collective. Zero-Zero-One
believes that there is nothing to be changed as the result of the XCOM bioweapon, believing that
the introduction of measures to negate this from happening again will bring about the destruction
of your species.”

*I understand our history and ways are not your own,* 029 said with a nod, a mannerism he’d
adopted from his years of moving between the Collective as a representative of the Greater Hive
Commanders. *Nonetheless, I believe that his death is an extreme step. You are not one to kill out of
a simple disagreement, Battlemaster, it is unlike you.*

The little orange alien was clever. “Zero-Zero-One refused Ethereal assistance, and has stated there
are no changes to be made. He will not listen to reasons as to why this path is unacceptable. This is
not his first offense either. He believes he is beyond consequences. If the Greater Hive
Commanders will not reign him in, then I will.”

*Let me assure you that 001 spoke out of ignorance,* 029 said quickly. *To say that we are doing
nothing is absurd, but it is understandable you would come to that conclusion, as we have not
informed him of certain projects taking place. If you would walk with me, we can discuss this more
rationally and I can assure you that we will return fully to the Collective stronger than ever.*
That was a lie if he’d ever heard one. 001 was as close to a leader as the Sectoids had. The idea that anything would be done without his knowledge or permission was absurd, unless things had really changed in the Greater Hive Commanders. But for now he would indulge 029. All he cared about was results, and if an attempted execution forced the Sectoids to act, then that was fine.

With a flick of his wrist he tossed the tiny Sectoid away without a look, and walked towards Hive Commander 029. “Then show me what you are doing.”

_of course, Battlemaster_, he said as he began walking down another hallway. _Right this way._

***

**Desolan, War Camp 402**

Nartha’s meeting with the Station Commander had been short and to the point. It had essentially boiled down to ‘do your job and don’t interfere without approval.’ Simple enough, and he’d figured that there was no point wasting time and headed directly down to the surface.

Desolan Gateways operated differently than other ones in the Collective. Instead of being accessible by any other Gateway, they were instead only accessible by certain other linked Gateways. Supposedly, Nartha wasn’t sure if that was actually true, or a piece of misinformation from the Zararch. The advantages to that would be that Desolan wouldn’t fall under a surprise attack, and the disadvantage would be that they had no way to easily counterattack the planet should it fall.

So from what he could tell, the idea of locked Desolan Gateways could go either way.

But for the moment, he was immediately not enamored with the planet itself. From the moment he’d stepped outside into the War Camp, the heavier gravity set in, and just walking around was strenuous. The planet was somehow even more arid than he’d anticipated, and overall he was not comfortable at all.

Still, this was the first time he had properly surveyed a Muton War Camp up close.

It was…interesting. One word for it, anyway.

Nartha had never seen so many Mutons in one place before. He couldn’t take a few steps without bumping into a twelve-sized unit of Mutons, all without armor which he’d found surprising. Instead there was some other kind of textile clothing they wore, heavily padded, but it cut down their bulk by a noticeable amount. He’d also found it interesting that not all Mutons were completely covered. Some had bared arms and legs; others wore face coverings; it wasn’t uniform, and that was surprising to him.

The War Camps were without fault divided up into specific sections. Each one was massive, and from birth to deployment, all phases were covered. The birthing stations were where the females continuously birthed Mutons, which were then taken to Infant Control, where they were watched, fed, and taught basics of language for the first few years of their lives.

Beside that began the Development Grounds. From what Nartha understood, this was where the equivalent of Muton adolescents and teenagers began their training. It was largely conditioning, with weapons training only coming in the latter years, before they were transferred to the Filter. The name appeared to have been a joke at first, but had stuck as it was extremely appropriate.

The Filter took the training of the Development Grounds, and amped it up to lethal levels. There were live-fire exercises, extreme conditions training with no additional equipment, and near suicide
missions. Only about half of the Mutons survived the harsh training here, as opposed to the ninety percent from the Development Grounds.

Should a Muton survive that far, they became a full Muton soldier, and spent the rest of their time in the Staging Area, which was an all-in-one training ground for Mutons, complete with training ranges, exercise machines, war games, which were assigned to them on a daily basis. The operation for each War Camp was a logistical nightmare to his untrained mind, but by now the system was clearly established.

Then there was the War Camp Command, which oversaw all operations and was run by the designated Sargon, the so-called ‘intelligent’ Mutons. Nartha had never met one, so he was curious as to how different they were to regular Mutons. The Command Center was a simple four story block that extended to the sky, and Nartha simply walked through the door.

The Vitakarian sitting at the desk noted his approach, and nodded in his direction. “The Sargon is awaiting you. First door to your right.”

“Thank you,” Nartha said, pleasantly surprised he was actually expected. He followed the instructions and walked down the steel hallway briefly before turning and entering what appeared to be a small medical bay, although small by Muton standards. It was rather large for most others. The Sargon himself stood in front of a desk, clad in green armor, with a curious sash over the armor looped around his shoulder, on which was the emblem of the Collective.

The Sargon was also larger than the standard Muton, and seeing him manipulate a delicate object like a haptic pad was not something he was expecting. “Sargon Desolan-402,” he greeted. “You were expecting me.”

“Agent Nartha,” the Sargon answered in a strangely cultured voice, as he turned to face him. “Good, you’ve come. You are aware of me, so I will not introduce myself. I’m glad to see the Zararch are finally taking an interest in this matter. It has become more serious the more I have looked into it.”

Nartha nodded. “The Muton abductions. What have you found so far?”

“That this has been happening over the course of the past five years,” he answered immediately. “This is not just restricted to this specific War Camp either. Multiple Sargons across Desolan have reported similar anomalies as information is transferred to them. As a result, the exact number of potentially abducted Mutons could be between two hundred thousand, to five hundred thousand.”

That was extremely interesting, because it confirmed several things. One, that this had been going on long before the Humans had entered the picture, so this wasn’t related to them, and two, that whoever was behind this was both extremely smart as well as had a sizable army on their hands. Certainly not a large number in the grand scheme of the Collective, but it was nothing to scoff at.

Still, some things were not adding up. “How exactly could that happen?” Nartha demanded. “Is the integrity of our security and records that easily broken?”

“Allow me to explain what we believe is the issue,” the Sargon said. “There appear to be a couple different phases when Mutons suddenly disappear. Just after they are born, or in their youngling years. After that there does not appear to be any activity. However, this appears to be done at extremely rare intervals.”

The Sargon paused. “Whoever is behind this believes that we will not investigate one anomaly, so their actions are limited. For newborns only one of one hundred that day will go missing, and there
will not be similar anomalies for a month. Or a newborn is reported as dead, but the body was never delivered for recycling. This also happens with the younglings, one may suddenly disappear, and one out of ten thousand is not something we would notice otherwise.”

“But since this is happening everywhere, it’s more noticeable,” Nartha surmised. “Clever.”

“Indeed,” he rumbled. “Had this not been noticed, I suspect it would have continued without our knowledge. But now that we are aware of this issue, I am confident that we can pinpoint the perpetrators due to their predictable tactics. We fortunately have access to the complete records as to those who interacted with the abducted Mutons, and in this War Camp, these are the ones you should question.”

He handed the pad to Nartha who began scrolling through the list. This was good and bad. The Sargon was right that it wouldn’t take long to correct, and the Zararch wouldn’t hesitate to kill every one of the suspects after a thorough interrogation to solve this issue. There were other Zararch agents working on this too, and unless these people had prepared for this contingency… they would not last long at all.

So he had to act fast.

“Thank you,” he said, downloading the information to a data cube. “I’ll begin investigating immediately.”

“Excellent,” the Sargon said, sounding pleased. “If you should capture one of them, please bring them back alive. An operation this large should not be allowed to flourish longer than it already has.”

“It will not,” Nartha lied. “I will speak to you again when I have results.”

How he was going to get those results was going to be interesting. If things didn’t go well, he might be better off letting the Zararch win this round. There were, at the moment, so many variables in play that he doubted he could successfully maintain his cover and help this group out. But first he would see what he found before writing this off.

***

_Helion-7 Primary Hive_

_The Greater Hive Commanders recognize the need to change_, Hive Commander 029 said as they walked down another hallway. The Battlemaster didn’t fail to notice that there were more Defenders trailing behind them, for all the good it would do them. _Hive Commander 001 has expressed his desire to retain the original methods of drone creation, but it is by no means our only option. Even as we speak now we are making experimental genetic alterations to our drones that will only serve to benefit both the Greater Hive Commanders, and the Ethereal Collective._

“Clarify,” the Battlemaster stated, not interested in 029’s smooth diplomacy. The little Hive Commander was very good at talking, especially with aliens, and made obvious attempts to seem reasonable, but at the moment the Battlemaster was not willing to indulge that. “Simply changing the genetic structure and retaining cloning methods is not fixing the problem. You are still vulnerable to another similar bioweapon.”

_Apologies, Battlemaster, I was not clear_, 029 said quickly, the tone bordering on the line between condescending and earnest. _You are aware that our drones perform different functions in the Hive and Greater Sectoid Fleet, and the Hive Defender Force, as well as other positions under the_
Greater Hive Commanders. These Pilots, Soldiers, Scientists, Leaders; they have all had the same genetic sequences, with only minor alterations, which is why so many succumbed to the bioweapon.

They slowed as the hallway showed views into other rooms. Cloning chambers where drones were being grown by the hundreds per room, and grey Sectoid scientists were huddled over machines and microscopes performing with a chattering fervor. This event has made us realize that our efficiency is simply lacking, 029 said, gesturing to the work being done. We have failed to optimize the drones for their specific purposes. For example, there is little reason that a Scientist and Soldier should have equal intelligence, or durability. The balancing act is something of a concern, for we do not want to increase the drones to a dangerous level of sapience, but there is no question that there is room for improvement.

The Battlemaster didn’t know for sure if this was actually something the Hive Commanders had planned, or if 029 was improvising on the spot to spare the Hive Commanders from further embarrassment. As long as it resulted in change, he didn’t necessarily care. “So the genetic diversity will ensure that one strain will not cripple your species again.”

Yes, 029 confirmed, drawing out the s making it sound like a hiss. Several Hive Commanders have taken an interest in how the bioweapon was engineered, it can be replicated for different genetic strands, and we will certainly test it to ensure that if one strand is compromised, it will not affect the others.

“Good,” the Battlemaster nodded as they walked. “That is all that is required. I suspect the Greater Hive Commanders have additional plans beyond this?”

Many, 029 confirmed, the smallest hint of arrogance in his voice. While only simple drones were killed, this attack by the Humans was something that we will not sit idly by and ignore. Their supposed mastery over genetic engineering is nothing compared to our own. They will be punished for this action, and we will ensure their world will die.

His curiosity was piqued. “I want specifics.”

They stopped in front of another room, this one filled with hundreds of Earth plants, fruits, vegetables, alges, and numerous kinds of vegetation either held in stasis or potted. Their army is useless if it starves, 029 said. It is useless if it cannot breathe, it is ineffective against something that it cannot see. We are working on a successful and subtle contamination and subversion of their plant life, turning their food sources into poison, killing the plants outright, and otherwise ensuring that the very planet the Humans wish to protect becomes their enemy.

Well, there was certainly merit in that. He would have to check with the Imperator to see if the deployment of such things would be allowed, or if the Imperator wanted to preserve Earth as it was. Yet he found it an excellent response to the bioweapon. “An impressive effort,” he complimented. “I suspect the Humans will not be able to stop it until it is too late.”

They will not, 029 assured him, walking forward again. They believed they were clever by delaying the effects of their bioweapon, a subtlety that can only be respected, but they have underestimated how easily that can be turned on them. On the scale of months to years, weeks are nothing. Even if they were able to counteract our modifications, it will be far too late.

The Battlemaster wondered if they were being too long-term. He doubted this war would last years, and even months was pushing it. Once he spoke with the Imperator and got specifics on what was, and was not permitted, he could deliver specific instructions on what these plagues were supposed to do. Faster-acting ones were preferable, and should the Imperator wish Earth itself not
be touched, he could simply have Revelean reverse-engineer the plagues with antidotes and restore Earth after the war was over.

That would be an acceptable compromise. The Sectoids enacted retribution, the Humans were crippled, and Earth was restored at the end.

*This will take time to fully materialize*, 029 cautioned. *But we have more…practical…improvements that are soon ready to be deployed. We have been lax in the maintenance of our military forces, as there has not been a need until now, and our own forces are…insufficient…for the task at hand, and fail to adequately match the prowess of other Collective forces.*

Translation: We do not want to become obsolete.

Good. The Sectoids needed to realize their contributions would be further reduced if they failed to evolve with the changing times. Their fleet would likely one day be overtaken by the Federation, Mutons were already better soldiers than Sectoids, and the Vitakara, and likely Andromedons would overtake them in the science and engineering fields with time. The Sectoid species was defined by its stagnancy, something that would need to change.

Fortunately, it appeared that would happen.

“Then what are you doing to fix this?” The Battlemaster asked as the shimmering shield in front of them disappeared, and they stepped into a large arena, the oncoming group entering into an elevated area overlooking the lower floor. Standing in rows of ten, and blocks of four rows each, were armored humanoid figures.

*We have invested considerable resources into the creation of a combat unit*, 029 stated, clearly proud as he looked down upon the small army. *The Hive Vanguard, the synthesis of Human and Sectoid genetics to create a superior fighting unit as well as greater psionic prowess than any drone before it, excluding the Helion-7 Defenders.*

That was incredibly unexpected. The Sectoids creating a purely combat unit was a major step, because despite their fleet, the Battlemaster firmly believed they considered war merely a distraction and problem, not something they intentionally sought out, nor prepared for. At no point had he expected the actual combination of alien and Sectoid genetics.

They truly were fearful of becoming obsolete, it seemed.

The soldiers below him were slightly taller than the average Human, and armored from head to foot. The armor was an obsidian black, and smooth, but not too thick. On the chest was the insignia of the Greater Hive Commanders, a strange mishmash of shapes and lines that made no sense to him, but likely meant a lot to the Hive Commanders on some telepathic scale. Their helmets were simple and had no visible eyepieces, but a few breathing apparatuses on the nose. The wrists were also altered. They carried no weapons, but the left gauntlet certainly looked like a heavily modified Sectoid wrist plasma blaster, and the right one had some sort of smaller, but complicated device on it.

On a likely telepathic cue from 029, the armored figures reached up and removed their helmets in unison, giving the Battlemaster a look at the more visible changes to the unit. Their skin was no longer a grey, but closer to a pinkish flesh color, their eyes were much closer to Human-sized, and were a solid black orb instead of an orange one. Their heads were also in a much better proportion to their bodies. The only clear aspect they retained from the original Sectoid template was the mouthless faces, as it seemed nearly every other aspect had been improved with Human genetics. They even had five fingers now.
The Hive Vanguard is superior to standard ADVENT soldiers in every way, 029 said. Armor designed to lessen the impact of gauss weapons, an ability to coordinate instantaneously with nearby Vanguards telepathically, and more importantly, the ability to link with nearby enemies without full mind control.

The Battlemaster looked down at the Hive Commander. “Why not simply mind control them?”

Make no mistake, 029 clarified. They can, but that takes considerable effort, as Human minds are more complicated and…unorganized…hindering a smooth subversion. But this allows a simple telepathic link, which will allow the Vanguard to predict incoming attacks with ease and strike where the Humans do not expect it.

Ah, that was a very clever tactic. A shame he wasn’t telepathically capable, because that trick would be invaluable to test out, mind-reading without mind-control was a very valid tactic in hectic battlefronts.

Now I will demonstrate how much more effective these Vanguards are to certain current Collective forces, 029 continued, and on another telepathic cue, the Vanguards put their helmets back on, and marched to the far left end of the room, save one who stood alone as a door on the opposite end of the room slid open, and a half dozen Sectoid Leaders scurried in.

This is the most dangerous ground unit we have deployed, 029 said as the Vanguard raised the left hand and began firing. Let us see how six of them fare against one. One of the Leaders was taken out by the plasma bursts, and the others began raising their augmented arms to return fire. The Vanguard responded by holding up its opposite arm, with the smaller pieces moving quickly, and without warning a small purple shield materialized in front of the Vanguard, easily protecting it from the worst of the plasma.

The Battlemaster noted with interest that the shield did appear to draw on psionic energy, there were purple distortions around the hand, and he knew what a psionic shield looked like. Now protected, the Vanguard killed another two Leaders with the plasma blaster.

“The shield,” the Battlemaster said. “I have not seen a similar device.”

It is a recent development, 029 said as the Vanguard thrust its left hand forward, shooting a bolt of psionic energy which killed another Leader. The psionic gauntlet draws upon psionic energy and manipulates it into specific shapes. The configuration it is now in is a shield. There is a close-range melee configuration as well. Let it be demonstrated.

The purple shield around the Vanguard dissipated, and the pieces of the gauntlet reorganized themselves, and then there was psionic energy molded into the crude shape of a blade jutting from the wrist of the Vanguard. It extended well past the wrist, and was a standard blade design, although the edges were composed of nothing more than unstable psionic energy.

It charged forward at the remaining Leaders, sliced down at one and the blade cut through the unarmored alien with ease, and at the same time, the Vanguard shot the final Leader in the face with the plasma blaster. Once done, it disengaged the gauntlet, stepped back through the carnage, and seemed to be waiting for more orders.

“Impressive,” the Battlemaster complimented, impressed with the initial performance. “I assume that the psionic blade can cut through armor as well?”

Of course, 029 confirmed. Not as easily, certainly, but it can penetrate ADVENT armor with direct slashes and stabs. Even the weapons of the Templars would likely not be able to stand against them
for very long. Pure psionic energy cannot be stopped so easily.

“Move the Vanguards you have completed into the Collective Military,” the Battlemaster ordered. “I am aware that you don’t have many, but the ones you do will suffice for Earth, and more can be grown later.”

*It will be done*, 029 promised, as the Vanguards reassembled before him. *I expect they will serve the Collective well, and will show the Humans the inferiority of their species.*

The Battlemaster kept his amusement of that statement in check. Inferior was objectively incorrect, but competition would serve the Sectoids well, now that they knew their psionic aptitude was no longer special. For their place in the Collective to be retained, they would need to earn it.

And the result would be a stronger Collective. Which was all he wanted.

He would be very curious to see just how the Humans would respond to this. He expected it would not take long for them to similarly adapt.

***

**Blacksite 007 – ID: “Watcher” – Overseer: Quisilia**

Of the few Blacksites Ravarian had visited, Quisilia’s was by far the most confusing, from a logistical and psychological perspective. There were no clear directions, there was no symmetry, and some of the rooms seemed like logical impossibilities. He’d taken a wrong turn at one point, and found himself suddenly standing in open space, although that couldn’t have been possible. He’d not thought about it at the time, and slowly backed out. Maybe it was a transparent substance, or external feeds, but still, why would Quisilia need that?

Probably just to screw with his head.

It wasn’t the only confusing thing. He’d spent a good few minutes walking in circles in a seemingly never-ending hallway, which shouldn’t have been possible. The Blacksite must have had some kind of ability to change internally, and he was just the unfortunate victim of either programming, or Quisilia making his life unreasonably difficult.

But eventually he’d arrived at what he assumed was the central room, and if it wasn’t, that was just too bad. If Quisilia wanted to move, he could lead him there himself. Ravarian wasn’t going to waste more time navigating this labyrinth. It was also the first time he saw other beings on the station. They all appeared to be analysts heavily cybernetically modified, especially their heads. They didn’t pay attention to him aside from a few glances to the side.

There were actually a fair number of Sectoids, in addition to the mix of Vitakarians and Dath’Haram. There was also an Oyariah Titan, surprisingly enough. What they were doing he didn’t know, and as soon as he’d entered the room, they’d cleared out, presumably to let him prepare. He didn’t know if Quisilia was actually on the Blacksite, but he assumed he’d show up whenever he wanted.

Probably wanted to make another Twitter status update.

He grimaced at the thought. It would be just like Quisilia to reveal there was something important happening.

But he pushed that thought to the side and began preparing. The room was unreasonably open, with some consoles on the far walls, but otherwise it was just empty spaces aside from the large haptic
projector in the middle. Along the far wall were external feeds of space, the current ones focusing on the system sun, although Ravarian knew they weren’t nearly that close to it.

He hoped.

Luckily the haptic projector was standard, and he had no trouble operating it. So there were three major points of note he wanted to address: The situations in Africa and South America, and the current problems in Australia. He knew the Battlemaster would likely add some more to the plan, but this would set the stage and context.

Ravarian had not considered there was anything more going on in Australia until he had taken a closer look at the reports. The Human resistance was one thing, but the recent attacks displayed were not their usual tactics. Something was extremely wrong on the continent, and he couldn’t figure out exactly what that was.

The most obvious tell had been the so-called ‘revolt’, where it seemed like literally every Human had suddenly turned on the Collective forces stationed there. The video recovered was concerning, as it depicted Humans fighting with a resilience and aggression they didn’t normally display. All in complete silence, and even including the children and elderly.

That was bizarre. Humans never risked children, and even if the Commander wouldn’t hesitate to kill them if the circumstances justified it, this did not seem to qualify. There seemed to be clear evidence of psionic meddling, but that would imply there was another Human psion on the level of Patricia in Australia, and then the obvious question became who?

The initial suspicion was an XCOM psion, but that didn’t seem likely the more he thought about it. They wouldn’t waste a psion there, not yet, and one on this level would have been used against them by now. Since ADVENT didn’t have psions of their own, it couldn’t be them. So that left two options, an independent Human psion, or an alien traitor.

Neither seemed likely. Whoever this psion was, they clearly had experience and training, likely of a pre-Invasion time period. And there had been no instances of psionic activity from Humans before that. And an alien traitor seemed equally unlikely since the only ones outside Ethereals who were psionic were Sectoids, and the only Sectoids that could do this were Hive Commanders.

It seemed absurd to think that a Hive Commander of all things was a traitor, but it unfortunately made more sense than a surprise Human psion not connected to ADVENT or XCOM.

Either way, that situation needed to be dealt with.

The other continental situations were luckily more straightforward. In South America their way into influencing the region was Konstantine Volikov, who had established contact with certain South American countries who were not a part of ADVENT. Volikov had enjoyed clear success against ADVENT, he was clearly intelligent, methodical, and had the loyalty of his elite band of assassins.

There were several different avenues that could be pursued in convincing him to work with them. He was a pragmatic altruist, and if he could be convinced that the Collective would be better for the people than ADVENT, he would likely fight for that. However, there were a few problems with this entire situation.

The first is that Volikov reportedly didn’t consider the Collective any better than ADVENT, and given what had happened, Ravarian couldn’t blame him from coming to that conclusion. He was only fighting ADVENT out of some moral sense of duty, or because he just disliked authoritarian
governments. Either was a possibility based on his background, and that was not especially great news for them.

Ravarian was assuming that the Battlemaster would state that there would be no mind control utilized, so that meant that whoever was sent down would need to convince him, and Volikov was not going to fall easily. He appeared to somehow detect when people were lying or not, and if he learned that the Collective was lying to him…they wouldn’t likely be able to kill an Ethereal, but it made their job in South America much harder.

So, they were best off not lying to him.

He supposed he would learn just what the Ethereals had planned for Humanity after the war was over.

Africa was likely going to be the easiest. All they needed to do was convince Betos that the Collective was a friend, and she would believe them. She was looking for a reason, and all they needed to do was provide it to her. Once that was done, then assisting her in uniting Africa would be the next logical step. He suspected that would not be difficult.

“As do I,” Quisilia agreed as he materialized in front of him. “Betos will not be a problem. Idealists never are.”

“No, but if we’re too obvious, it will bring ADVENT down upon them,” Ravarian noted, shutting down the projector for the moment. “That isn’t preferable until Africa is successfully united against ADVENT.”

“Considering-“ Quisilia suddenly stopped. “Oh, wonderful. I was not expecting him here.”

Ravarian was about to ask who, when the door behind him slid open and another strange alien stepped through. Ravarian blinked as he got a good look at the being. It stood nearly as tall as Quisilia, wore light grey armor with the same Elder emblem that was on Senorium’s armor in the center of the chest. It was similar in protection to Zararch combat gear; offering protection, but prioritizing maneuverability over everything else.

The most obvious feature was the hood that covered the alien’s head, and within it were two glowing blue eyes, and the outline of a smile underneath it. A sniper rifle of some kind nearly as tall as Ravarian was strapped to his back, and a similarly large pistol was at his waist. The conclusion seemed obvious after he had processed it a few seconds. Another one of the Creator’s Chosen as she’d called them, this one a severely altered Vitakarian it seemed.

“I do hope you have the Zar’Chon suitably protected,” the alien drawled, the voice already oozing with sarcasm and dryness. “I would hate for him to go insane from a simple conversation.”

“I would be more concerned for your own sanity,” Quisilia answered, stepping forward. “I do not recall inviting you here. How exactly did you know?”

The alien spread his hands in front of him, a Human gesture that was the equivalent to ‘not my fault’. “I only follow the orders of the glorious Creator bitch,” he said, the mockery catching Ravarian off-guard. Hearing an Ethereal being referred to in such a way was unheard of. “And her glorious Creatorness has decreed that I be her representative in this meeting which is no doubt going to be important, so take it up with her if you’ve got a problem.”

“Who are you?” Ravarian demanded.

“Ah, right,” the alien said smugly. “Where are my manners? I am officially known as Venadiar,
Watcher of the Elders, and Hunter of the Creator.” He sniffed indignantly. “And yes, it is an
idiotically long name no one ever remembers. But I don’t like it, so just call me Dave, or simply
my title as Hunter, I could really care less.”

Ravarian’s lips twitched. “I suppose you two get along.” Excellent. Now there was another mini-
Quisilia who seemed to be just as bad of a troll. ‘Dave the Hunter’ indeed. Still, he had no doubt
that this Hunter was extremely dangerous. He didn’t appear to be psionic, but he supposed looks
could be deceiving. And he’d alluded to Quisilia making sure he was ‘protected’.

“Well, since I’m here, what are we waiting on?” The Hunter asked, striding over to the haptic
projector. “I don’t have all day, and I have things to do.”

“You can postpone your hunting trips,” Quisilia said, amused. “I can promise this will be more
interesting than killing some Mutons.”

The Hunter pulled out his pistol and appraised it. “As long as I finally get to go to Earth, I’m fine
with that. I’m rather tired of the same damn planets over and over. I could kill pretty much
everything in my sleep, aside from the ‘prohibited units’.” He moved his head in a strange way,
and had Ravarian not known better, he would have assumed he was rolling his eyes. The Hunter
took on a wistful tone. “I’m rather interested in Earth. The Humans seem to be a fascinating
species, much more so than everyone else.”

Ravarian was not sure if that was an insult or not. “What exactly is your purpose?” Ravarian asked.
“Despite your title, I doubt the Creator has many enemies.”

The Hunter snorted. “Please, everyone hates the bitch. Find me someone who doesn’t, but the
difference is she’s too high on her own self-importance to notice, in addition to being a fucking
lunatic. So yeah, I don’t get many actual orders. So I spend a lot of my time just talking to the poor
souls who get sent to her. Fascinating stuff, especially from the Humans. Shame they only last
slightly longer than Vitakara.”

He tapped his head, giving an eerie smile. “Can’t talk to people long unfortunately, most can’t take
it. As for what I do the rest of the time, well…” he lifted the pistol, looking at it fondly. “I go
hunting. You name it, I’ve likely killed it. Well, except Sargons and the ‘special’ units. Ethereals
get annoyed when you shoot their pets.” Another indignant sniff. “As if they can’t just grow
another one. Cheapskates.”

Despite indications to the contrary, Ravarian was wondering if the Hunter was actually saner than
the Creator. He was definitely not normal, in more ways than one, and anyone who spoke with
such bluntness to and about Ethereals was obviously not thinking clearly. “Well, you finish up…
whatever you were doing,” the Hunter said with a wave. “I’ll just stand over here until things
actually start.”

Ravarian shook his head, and turned back to the projector, bringing it up as he tried to focus on
what he was going to present. It likely couldn’t get more outlandish than this.

***

The Battlemaster was rather surprised that Macula had come to speak with him before the meeting
itself. He was an Ethereal who tended to keep to his own affairs, and had a standing tendency to
intentionally avoid Collective matters. The Battlemaster was aware that Macula wasn’t impressed
with the alien species, and isolated himself performing deep recon for the Imperator in the inner
“I have never bothered to visit this place before,” Macula mused, looking down into the empty box in the idling state. His voice was unchanged from the last time they had spoke nearly three years ago, a deep thoughtful tone with touches of condescension in it. “It perhaps might be worth an experimental run.”

“You would likely fail,” the Battlemaster said bluntly. “The Prism is not tailored towards receiving or simulating telepathic attacks.”

“Please,” an obsidian blade flew towards one of Macula’s gloved hands. “My telepathy is not something that I need to practice. I’ve had plenty of that lately, but I feel my combat skills have deteriorated as a result.”

“If you wish,” the Battlemaster said, not caring one way or another. While Macula’s reasons were rooted in his own arrogance, he would never discourage practice. Macula was one of the more interesting in the Imperator’s entourage. The Imperator had never said where he’d come from, nor had Macula bothered to answer that.

Some things were obvious, his skill with telepathy and preference for short bladed weapons meant he was almost certainly part of the Division of Shadows, but other than his name, nothing else was ever said. His attire didn’t help either. The Battlemaster didn’t know if Macula was trying to be a Battlemaster, Overmind, or Shadow, since his attire had elements of all three.

The silver armor was extremely limited, only covering the legs, arms, and chest. The rest was a blue alloy weave which was under the armor, and the main component of the gloves. Then he also had a cape that was identical to the Battlemaster’s except the color was a deep blue, and the material wove around the chest like a shawl; moderately obscuring the chest armor.

Unlike most Ethereals, Macula did not have a helmet, but his head was obscured by a hood exactly like the Overmind’s, one that hid the face entirely except for the glowing orange eyes. The look was certainly unique for an Ethereal, but it didn’t seem practical for open combat. Knowing Macula, he had likely made it just because he looked good in it.

“I assume you didn’t come just to inquire about my Blacksite,” the Battlemaster said, walking up beside him, easily towering over the smaller Ethereal.

“All business, you never change,” Macula chided. “Perhaps I just wanted to say hello before you inevitably reveal what your plan for Earth is. There are exciting developments in store, Battlemaster, ones that extend far beyond one little planet.”

“Do tell,” the Battlemaster said, looking down. “You have found another inner galactic species?”

“Considering the state those species are currently in, I’d say we have little to worry about,” Macula said. “All trying to subvert and one-up each other, at some point they will enter open warfare with each other, and our time to strike will be then. They will not expect us.”

The Battlemaster was unsurprised at the news. “It appears the galaxy never changes. Peace is only temporary.”

“That’s only part of the story,” Macula amended. “The situation is more delicate than that, and for now the Imperator wants Earth handled first. I admit, I didn’t believe this venture would prove to be so interesting. Who would have thought a little primitive species would be such an issue?”

“Even with our limited incursion, we underestimated them,” the Battlemaster agreed. “As it stands
now, they are highlighting the issues of our own strategies and military. They have proven useful.”

“But not a challenge, I suspect,” Macula sighed. “No matter. Whatever you have planned, I am rather interested to see what the future holds.”

“I am curious,” the Battlemaster inquired. “You wanted to assist in this. Why?”

“Because Humans are new, and my experience with them is non-existent,” he answered with a wave of one hand. “The Vitakara are laughably simple, the Sectoids are boring, and the Andromedons are too paranoid to have any sort of experimentation done to them. With Humans there are no such restrictions. While the Synthesized War certainly was our defeat, there was something I miss about killing thousands of thralls with my blades and mind alone.”

The Battlemaster could empathize with that, even as little sense it made logically. He could not deny the satisfaction of combat and victory. “There will be no shortage of that, but our strategy must be subtle as well. The phase of simple combat has passed. I approved your request because you can think strategically and are capable of subtlety. Both will be needed.”

“A challenge I cannot refuse,” Macula said easily, in a mock bow. “But you have been fighting them longest. I would prefer your honest opinion. How much of a threat do these Humans actually pose?”

The Battlemaster thought for a moment. “They are only as large of a threat as we allow them.”

“And if we allow them to become one?”

“Their numbers are few, their territory is limited, and they cannot reproduce quickly,” the Battlemaster said. “But they can adapt quickly, they are innovative, and they are capable of using the Gift. Should they become a threat, they will be dangerous indeed. And if Aegis is fully on their side, our chances lower drastically. At that point the Overmind would be needed.”

“Interesting,” Macula mused. “More than I expected. And not Deusian?”

“We do not want Earth destroyed,” the Battlemaster shook his head. “I will save the Reaper for when she is needed. The Overmind will be sufficient, and I doubt we will reach this point.”

“As do I,” Macula said smugly, turning away as he began walking towards the internal Gateway. “I do not believe there is any point in delaying, Battlemaster. I am curious what you have planned, and it wouldn’t be appropriate to show up late, would it?”

The Battlemaster agreed. The sooner they started this, the sooner the next phase could fully begin. ADVENT would likely attack in America within the next few days, and their next attack on Korea would likely follow soon after. At the same time, the rest of the Ethereals needed to establish themselves. Much needed to be done.

No point in delaying, as Macula said.

***

Desolan, War Camp 402

Fortunately, the list of possible suspects that could be behind this was fairly short. There were ten in total, two guards, one instructor, two medical professionals, and five teachers who worked with the youngling Mutons. Nartha would not have been surprised if there were at least some, or all of them working together.
Cells tended to operate like that, with none of the individual ones knowing much about the others. If he was in charge of a Muton smuggling/slave ring, he would have every single member on a need-to-know basis. They would either be assigned targets for dead drops, or they would have free reign over choosing them, but would still have dead drops. They would never actually meet another cell member.

He would also have contingencies both he and cell members knew if, say, a Zararch agent came poking around. Either some ways of alerting him, or otherwise indicating that the cell was compromised. To be safe, in a case like that he’d likely prefer to intentionally deceive the Zararch agent in question and sacrifice a less important cell member. Deters the agent, and he would be able to return to business soon.

That was how an intelligence professional, or Nulorian operative would run it.

The biggest question was why they were doing this. Two possibilities existed: They were doing this to build an army, or other kind of operation where they were being compensated for gathering Mutons for some specific purpose. It was a pure business arrangement, and he would expect a well-run operation if that was the case, as well as professional cell members.

The other was that they were doing it because of the perceived moral wrongdoing regarding the species. He was well aware that usage of Mutons was considered slavery by some, and that might be enough to convince some of them to act. He had never really cared too much about the issue. The Mutons were barely sapient, and all complaining about it caused was getting the attention of the Zararch.

It just seemed like a waste of time. There were much more important matters than a species of idiot brutes. The Sargons didn’t seem to be like that though, but he knew that was because they had been specifically modified, so they didn’t technically count. If this was the motivation of these people, then his job was likely going to be easier. Idealistic people made mistakes.

The youngling schools were one of the more interesting parts of the War Camps. It was here where they were conditioned and prepared for the harsher parts of training. Basic speech, pattern recognition, basic firearm safety, basic physical training, everything was taught here. It was essentially a school of nothing but drill instructors.

As a result, the teachers were Vitakarian, Dath’Haram, or Borelian. Borelians generally taught weapons training and physical education, and for once this was one area where male Borelians actually dominated the field as opposed to their female counterparts. Dath’Haram exclusively taught language and pattern recognition, as well as some basic mathematics, though that was optional. Vitakarians could do either, and they were the minority of teachers.

He showed his identification to the guards at the door, and they stepped aside as he strode into the massive hallway. It was extremely wide, due to the fact that Muton classes marched in rows five wide and ten long, and they never deviated from this. The main hallways were large enough for two full classes to march past each other, with some room for the rare bystander at the side. The entire building was built for pure function. Hard angles, grey walls and floors, sharp white lighting, and no additional decorations of any kind.

Nartha walked over to classroom seven, where one suspect Dath’merina’haramal was stationed. He’d singled her out because of her name, that she was a Dath’Haram, and she’d been working roughly since the first known incident. There were too many red flags here to be ignored. That she’d kept the prefix Dath instead of Runi or Zar meant that she was technically a civilian likely from the Council of Dath’Haram, since teachers fell directly under their authority.
That was already suspicious. Nartha was surprised that that was even allowed, especially since of all the races, the Dath’Haram had, on average, put on record the issues with the treatment of the Muton species far more than anyone else. Actually, they were the only ones to publically hold any sort of stance on the matter. They never gained any traction, but it was always a Dath’Haram behind the latest moral outrage. That the entire species was incredibly pacifistic, far more than Vitakarians, was another oddity. The question of why a Dath’Haram would not officially join the military, but actively work on grooming soldiers was highly suspicious.

So he stayed to the back of the class behind Merina as she spoke to the assembled Muton younglings, and he simply observed the class. She typically dealt with classes ready for graduation to the next stage, so by now the Mutons were extremely disciplined. The younglings really didn’t look too different from their adult counterparts. Their skin was a little pinker, and there were less wrinkles on their faces, but there was no mistaking their species.

For five-year olds, they were already fairly strong. They were about the size of a Human teenager, and far bulkier on average. They didn’t wear armor, not yet, but they wore brown padding and thick boots and pants. Their arms were bare, and each one was assigned a mock plasma rifle which shot out little plastic pellets, which did go at speeds fast enough to hurt, but not puncture Muton skin or kill.

His understanding was that was part of a game, where instructors had classes fight each other to begin preparing them for the war games later. It was taught as a game, but not for fun. Each youngling was graded and scored based on performance, and their rank rose or decreased as a result. The highest ranking Mutons were at the front of the class, the latter in the back.

Nartha did find it impressive that whoever Merina asked a question, all of them answered at once. They were simple questions, ones with yes or no answers, but the response was immediate and always correct. Their voices weren’t even high-pitched, which he was ultimately not surprised at. Definitely a species of soldiers, he couldn’t think of a better suited one.

“All of you have performed adequately today,” Merina finished. “Dismissed!” All the class displayed their rifles in a form of a salute, he guessed, then marched out in a very orderly fashion. He suspected there were some Human teachers that wished they could teach Mutons. Humans were rather disorderly sometimes. Especially the children.

“Highly disciplined,” he complimented, stepping forward. “I didn’t know they were capable of doing that.”

The Dath’Haram woman bared her pointed teeth at him, their version of a smile. “You would be surprised. They catch on quickly.”

“So it seems,” he agreed. “You are clearly skilled at your job. I work with Mutons occasionally, and I might guess that the younglings are smarter than the adults sometimes.”

Merina put a haptic pad into her bag slowly. “I am not surprised at that, actually. Mutons don’t survive the War Camps without some kind of psychological damage.”

Good. Her responses were useful. “You would know more than I,” he conceded. “I’ve only just arrived.”

“You?” She asked, closing her bag, looking up thoughtfully. “What do you do? No one comes here just because they can.”

“I’m from the Runianarch,” he lied with an easy smile. “I had to speak with the Sargon about new
batches of Mutons. While he figures that out, I decided to take a tour. The War Camps are
something even we don’t see that often, yet it is an essential part of the Collective military.”

Merina was deliberately keeping her expression clear. “There are reasons for that. Ones you’ve no
doubt seen. Or if not now, you will.”

He cocked his head in apparent interest. “If you don’t mind, what? Everything seems to be up to
standards. Even the children aren’t disrupted. I’ve been pleasantly surprised.”

these younglings is just draining.” she motioned to the door. “By the end of it, at least half of those
younglings will be dead. And the survivors conditioned beyond recognition—she suddenly
stopped, realizing she’d probably said too much. “But it is necessary for preserving the integrity of
our army.” She finished.

What was it with these people being bad liars? Regardless, he had plenty to work with now. He let
some concern in his voice. “I’m aware the situation isn’t ideal, but having half those younglings
eventually die is unreasonably steep. That seems like a gross misuse of resources. Are you not
exaggerating?”

“Ha,” she chuckled darkly. “If anything, I’m being generous. You haven’t gone into the Filter,
have you? Go there and then ask if I’m exaggerating.”

“Apologies,” Nartha interrupted. “I didn’t mean to offend you.”

“No, it’s fine,” she relented, slinging her pack over her shoulder. “Not your fault, and you’re at
least somewhat concerned with it. Whatever way you look at this, it just seems like something is
just wrong with it. If half our trainees are dying, maybe something needs to be changed.”

“I will have to look into this,” he promised earnestly, frowning. “The Sargon will be providing an
explanation to me.”

She looked at him with new interest. “I wish you luck with that, really. Most just ignore the
problem.”

He sniffed. “Ignoring problems is why there are certain problems in the Collective. I will not do
the same here.”

“In that case,” she paused. “Well, if you begin making some headway, please let me know. I’m
Dath’merina’haramal.”

“Runi’narth’a’vitiary,” he answered in return. He would need to forge a record for that in case she
bothered to look. She wouldn’t find anything at best, or would find there was a Nartha in the
Zararch. However, Nartha wasn’t an uncommon name, which was why he kept it. Better there be
many results than an odd few.

As she walked away, and he exited the room to go talk to the next teacher, he figured that had been
a fruitful talk. She was definitely still a suspect, but now one who was more inclined to listen to
him. Should he play this right, if she was involved, she would lead him to who was in charge. If
she wasn’t, then he had a contact here in the future.

She was perfect for being turned against the Collective, but depending on how the rest of the
operation went, she might have to be sacrificed. Maybe he could give her to the Sargon once he
made contact with the actual cell leader; there was more than enough circumstantial evidence for
an arrest, and a Sectoid mind-probe would confirm one way or another.
But that was an inelegant solution. Right now, everything was on track.

***

Blacksite 007 – ID: “Watcher” – Overseer: Quisilia

At last, all of them were here for the meeting. The more Ethereals arrived, the more Ravarian felt out of place in more ways than one. He was unquestionably the smallest one in the room, an unusual feeling since he was tall even among Vitakara, and that these Ethereals, and the Hunter for that matter, could likely kill him with a single thought or gesture.

It felt like a minefield where if he said the wrong thing…well, that would be the end for him, despite Quisilia’s assurances.

First Caelior had arrived, which wasn’t too bad. If nothing else, Ravarian was familiar with him and how he worked. At the moment they had a somewhat working relationship, and Caelior at least knew he was of some use. Ravarian swore that the Hunter had a death wish since his first greeting was calling Caelior “Little Storm”, which naturally enraged the young Elder.

So Quisilia had kindly responded by throwing one of his knives at the Hunter, impaling him in the chest. Ravarian had been stunned at the overreaction, as that was likely a fatal wound, but the Hunter had just sighed and said. “Yes, yes, I won’t do that again. I get the message.” And proceeded to pull it out with barely any trouble. He’d apparently noticed Ravarian staring, since he gave him an eerie smile soon after.

The Battlemaster and the Ethereal Macula had arrived soon after, the latter Ravarian was still unsure about. He didn’t talk much, and had yet to address him directly, but from his conversations with the Hunter, he got the impression that this Ethereal didn’t really respect anything that wasn’t an Ethereal. It didn’t even seem like he was toying with the Hunter like Quisilia would, but simply considered them an amusing distraction at best, complete with derision and patronization.

The Hunter didn’t seem to care, and continued his irreverent streak by taking his own jabs at Macula, ones that Ravarian didn’t fully understand, but actually seemed to make Macula pause, and look at the Hunter with a little more…not quite concern, but it was definitely something more than disinterest.

If the Hunter worked for the Creator, he likely knew quite a lot about the Ethereals that even Ravarian didn’t have any idea of.

And with that there was already plenty of tension in the air. Quisilia attempted to defuse the situation, but it wasn’t helping that Caelior was less than impressed with Macula, even if he didn’t say so. Nor did the Battlemaster seem to overly care either way.

Then Nebulan had arrived, and that had eased tensions. Of all the Ethereals, she seemed one of the more respected ones. She wore red robes with exposed arms, similar to the Ravaged One if his uniform had been pristine, but unlike nearly every other Ethereal, she had no helmet, nor any other means of hiding her face.

Ethereal heads were interesting. They were smaller than he’d realized, but rounded in a similar way to Vitakarian and Human ones, with slits in their faces where the nose would be, they had no visible ears that he could see, but they did have lipless mouths that stretched across their lower faces. What was extremely strange was that they didn’t really have chins, but the mouth was only slightly elevated from the neck itself.
It made him wonder if at one point the Ethereals hadn’t had mouths at all, and it was just an addition they had made later. It certainly looked like the head and neck were almost one complete organ, and the neck was longer than most species. Along the neck were visible cords and depressions, that rose and fall as the Ethereal breathed. Ravarian tried not to stare, but it admittedly was the first time he’d seen an unmasked Ethereal. At least he wasn’t looking at her fiery eyes.

Nebulan had actually greeted him, and they’d had a pleasant conversation about basic updates before the final Ethereal had shown up: Isomnum.

Just from looking at him, Ravarian knew he was going to be both insufferable, and cause problems for everyone else. He wore similar attire to Macula, save the grandiose cape and hood. But instead the helmet was close to a death mask of an Ethereal, and portrayed the silver face of the Ethereal without a mouth. It was clearly tight to Isomnum’s actual head, and covered the entirety of the head and neck, as well as moving as easily as if it were an actually functioning head. Truth be told it was extremely unsettling, and even with Quisilia protecting him from the worst of it, he felt the urge to get away now before he risked losing his mind.

Then the Hunter in all his infinite wisdom decided to speak. “And the grand edgelord has finally arrived.”

If Ravarian could have facepalmed at that, he would have. Humans had some excellent ways of displaying emotion. Isomnum had just looked over at the Hunter, who began blinking rapidly and started backing up, muttering to himself and reaching for his pistol. “Do not ruin the mind of the Creator’s pet,” Macula warned. “As insufferable as he is, she would not be pleased.”

“If the insect speaks to me again, that he speaks for the depraved Creator will mean nothing,” Isomnum said, his voice reminding Ravarian of the Ravaged One, a combination of vibrations and combined high and low pitches that had the result of inducing headaches in the ones he was speaking to. It conjured images of ancient monstrosities and layered screams of the void.

He sincerely hoped Isomnum didn’t speak much during the meeting.

“Enough,” the Battlemaster ordered, commanding them to gather around the haptic projector. “We will begin now.”

So they did.

“The first phase of taking Earth has begun,” the Battlemaster said, bringing up a hologram of Earth. “The purpose of this was to determine the extent of ADVENT and XCOM’s ability to wage an effective war against us. They are adapting, and skilled. It is unlikely they will fail to adapt as the war progresses, but I have determined that it is unlikely their threat will decrease. ADVENT is worthy of being subverted, as the Imperator originally suggested.”

“As should be anticipated,” Nebulan said. “The Imperator does not make idle suggestions.”

“That needed to be determined first,” the Battlemaster continued flatly. “Regardless, the war is ongoing, and it is time to move ADVENT to where we want them. They are expecting a continuation of the same strategy. Major attacks on cities. These will continue, but our reach will be far larger. Earth is composed of seven continents, six of which are relevant,” said continents were highlighted yellow on the blue display. “From here I will divide these into our respective spheres of influence.”

“Imagine that,” the Hunter said. “The great Battlemaster giving up his authority.”
“No.” The Battlemaster disputed. “Let me be perfectly clear: I am in command of this operation. Before launching any operations, you will inform myself, Quisilia, or Zar’Chon Ravarian, and only after I give my approval will you be allowed to proceed. There are no exceptions, is that understood?”

A few of the Ethereals, Caelior and Nebulan, nodded. That was not sufficient for the Battlemaster. “Say you understand, or leave.”

“Understood, Battlemaster,” everyone said, with various levels of resignation. Ravarian was relieved to know that. The Battlemaster was still without a doubt the most reasonable Ethereal. Under him there was a much lower chance of stupidity taking place.

“With that understood, here is where we stand.” The image zoomed to the Americas. “My sphere will be North America. Over the coming months it will become a battlefield where a large part of the conflict will take place. America holds a major cultural place in Humanity, and they will fight hard to keep it. Within days they will launch a counterattack, and it is entirely possible we will lose ground. This will be expected. Until our final time has come, this is a part of the world we will both win and lose often.”

“Believing the Humans will win will make it a reality,” Isomnum noted. “There is little point in entertaining their insignificant fantasies of rebellion.”

“With Aegis still aiding XCOM, that is exactly what we should do,” Quisilia cautioned. “You may have forgotten what exactly Aegis can do, Isomnum, but I have not. XCOM will not escalate this conflict, but this works both ways. They have more to lose doing it to us, but we must not forget that provoking Aegis will yield the same result on an admittedly smaller scale.”

“Then why bring me here?” Isomnum growled. “I will not restrain myself for the sake of a few billion alien lives. Aegis is a coward who will never kill one of us. The Humans and our thralls are insignificant.”

“Some thralls would argue otherwise,” the Hunter muttered under his breath.

“You are deluded if you actually believe that,” Quisilia chided. “Aegis won’t kill you, but I doubt he wouldn’t stand in the way of blasting your shrinking brains out, while he keeps you trapped in a stasis field. I doubt you’ll be laughing if that happens.”

“Quiet,” the Battlemaster interrupted, lifting a hand. “Isomnum, your role will be explained shortly. Suffice to say, Quisilia is right. I do not want to force Aegis to pick a side, not yet. We cannot rely on our abilities forever. If we cannot defeat the Humans with some degree of convention, we are useless against the inner galactic species, much less the Synthesized. Now…”

The image shifted to South America. “Zar’Chon, inform us of the current situation.”

His turn. “Yes, Battlemaster,” all attention on him, he pointed to the continent. “South America is in a curious and unstable position. ADVENT only has control of roughly half of it, the bulk concentrated in Brazil,” said country turned red, along with other ADVENT-controlled countries. “Right now Brazil is controlled by Marshal Luana, one of the more heavy-handed and dictatorial leaders of ADVENT. She is a warmonger, arrogant and easily manipulated.”

A hologram of the Marshal appeared. “ADVENT has at some point attempted to curtail her authority,” Ravarian continued. “But their efforts have been ineffective, or she is ignoring them. Either way, her actions, which include launching several invasions of other countries with scant evidence, has put every non-ADVENT country on notice, specifically Argentina and Chile.”
Once those countries were highlighted in green, he continued. “Officially, they are doing nothing except refusing ADVENT membership. Unofficially, they are backing a small terrorist organization led by a certain Konstantine Volikov, unofficially referred to as the ‘Reapers.’”

“A melodramatic name,” Macula noted dryly. “And uncreative.”

“Volikov apparently dislikes the name,” Ravarian shrugged. “But it is born as a result of their actions. The Grim Reaper is one of most well-known Human icons, transcending cultures and languages. The Reaper is Death, and Death cannot be killed or stopped. Having Volikov and his people be compared to it is nothing to scoff at.”

He briefly paused. “Many people have tried to kill Volikov, and failed. The Reapers leave body counts in the double digits with each attack, and reportedly have yet to suffer a casualty. The situation is tense there, and if ADVENT knew there was alien influence, they would annex the region. But if we were to act through the Reapers, and by extension, the Argentinian and Chilean governments, we could prepare the region to resist ADVENT, as well as weaken it.”

“This Volikov,” Nebulan said, looking at him. “Tell me about him.”

“A potential problem if we underestimate him,” Ravarian warned. “He’s an expert assassin, marksman, survivalist, and close-quarters specialist. And this is what we’ve been able to learn. He’s managed to evade both the Russian and American intelligence agencies, has penetrated and killed multiple members of third world countries, and those under authoritarian regimes. He does not view either ADVENT, or us, in a positive light. At best he considers us equally as bad.”

“And you think he is actually a valid opportunity?” Macula asked skeptically.

“All Volikov knows of us is what ADVENT has shown,” Ravarian reminded him. “He has never met an alien to his knowledge, and if we were to present ourselves as a reasonable party, and assist him in his goals, I am certain he would be inclined to at least listen to us. However, he will not tolerate dishonesty from us, and has an uncanny ability to figure out if someone is lying.”

“Which is why you will contact him, Nebulan,” the Battlemaster ordered. “I do not care how you do it, but you will ensure he is on our side. No mind control, and no lies, those are your only two restrictions.”

“Why handicap ourselves?” Macula asked curiously.

“Because at some point, we will not be able to solve our problems by brute forcing them,” the Battlemaster answered. “I want Volikov on our side. And I want him to do it of his own free will, not because one of you made him. Not only is this risky, since Volikov would likely have a contingency in place now that he is aware of our capabilities, but you don’t know how to think like a Human. ADVENT would determine alien influence much faster if you did this the fast way. You will handicap yourself, and if you are not smart enough to figure out how to do otherwise, then leave and someone else will do it for you.”

“It has been a while since I have attempted something like this,” Nebulan mused. “I will ensure that Volikov inevitably works for us, using only my other talents, of course. I assume we can bring our own personnel as well?”

“As long as I have approved it,” the Battlemaster nodded. “For you, Nebulan, the fewer, the better.”

“I will not need many,” she said. “I already have an idea of how to enter.”
“I assume you will be using your Asaru persona?” The Battlemaster asked.

Ravarian didn’t know what that was, but Nebulan gave a single nod. “Of course.”

“That is settled,” the Battlemaster confirmed. “The Asian sphere will be overseen by Caelior. Korea is where ADVENT is currently preparing, and it will likely need to be taken next. After this, China is a problem that will need to be dealt with sooner than later.”

“I am looking forward to it,” Caelior stated. “I will lead my forces to victory as I have before.”

The Hunter made the motion like he was rolling his eyes. “You had one victory. Don’t let it go to your head, Little Storm.”

“One more smart comment and this blade will go through your-“ Quisilia began before he was interrupted by Macula.

“There are simpler ways of subduing the simple-minded, Quisilia,” he said, amused. “The Hunter will not trouble us for the remainder of this discussion.”

Ravarian waited for something to happen. A few seconds stretched out and he glanced over to the Hunter to see what he thought, and the Hunter had one hand raised, mouth partially open as he appeared to be starting to speak, but he didn’t move further. After a few more seconds, Ravarian confirmed that the Hunter wasn’t moving at all. He glanced back towards Macula, who was returning his attention to the Battlemaster. For all intents and purposes, it looked like he had somehow frozen the Hunter mid-sentence.

Interesting.

“Quisilia, you will go to Australia and end this resistance,” the Battlemaster continued. “Our own current forces have proven insufficient, and our own operations are being impeded at a higher rate than is acceptable. Kill all of them, and bring any XCOM agents back alive, as well as any other figures of note.”

“With pleasure,” Quisilia said easily. “I could use a distraction. Hopefully they will provide at least some challenge.”

“Zar’Chon, now explain the situation in Africa,” the Battlemaster said, the image changing to the continent in question.

“Of course, Battlemaster,” he nodded. “If any of you were not aware, there was a defection of several thousand ADVENT soldiers and personnel, led by Helsa Betos, a former Marshal of ADVENT. Their reasons boiled down to ethics. They felt ADVENT was abusing its power and were too harsh against civilians and perceived enemies. Betos in particular is extremely naive and idealistic, though her beliefs about ADVENT are not unfounded, and we are extremely fortunate that she had no contact with any of our own forces, else she might have stayed out of obligation to defending her species.”

He paused. “But as it stands now, she is our gateway into control of Africa. Her likely goal is the African states all united as one force that is against ADVENT. In practice, this will likely be impossible without an African intercontinental war. The region is extremely volatile, something that most Humans are surprisingly ignorant of. Africa in general is ignored by most of the world, and as a result much goes unchecked.”

“So what do you recommend?” Nebulan asked.
“Betos has made contact with Nigeria,” Ravarian said. “We need to contact her, and assist in helping her unite the others, because if she tries to do it herself, she will fail. Barring that, we could use Betos as a cover to turn the various states into puppets, under our direct control. By the time ADVENT realizes what is happening, the region will likely be compromised. If we continuously supply Betos with our technology, and she passes it along, Africa now becomes a more dangerous place for ADVENT to try and invade.”

“You will contact Betos, Macula,” the Battlemaster said. “Do what you wish with the African states, but I want Betos on our side. Treat her as an ally, alien as she is, and no more or less. The constraints I stated for Nebulan apply to you as well.”

“Noted.” Macula said dryly.

“Isomnum, when the time is right, you will attack Moscow,” the Battlemaster said, looking towards him. “I have no intention of restraining you, but you will not operate outside of where you have been ordered. Russia is a place considered secure for ADVENT, and the Russians are recognized as a tough and hard people. Stereotypes are not always accurate, but they work to our advantage here. The sight of their leaders exposed to…you, will shake the morale of the entirety of ADVENT.”

“Then I await my time,” Isomnum said simply.

“That is the overview,” the Battlemaster said. “It is being put into effect immediately. Begin your preparations, the second phase begins now. Dismissed.”
The Praesidium, Tactical Research and Demonstration Room 9

The influx of soldiers was a welcome sight after several months of continually suffering losses. It had taken some time for Jackson to put together a comprehensive list of elite soldiers and pilots, in addition to the recent additions from the PRIEST Program which had initially thrown a wrench into the selection process. But now that was done, and their numbers were higher than ever.

The Commander stood before a group of twenty of the best men and women the world currently had to offer, all of them now in standard black XCOM fatigues and standing expectantly as he prepared to give them a proper introduction to XCOM and the strange aspects that came with it. This wouldn’t be his only orientation; there were three other groups scheduled, and although Shen was doing his own one for the new MEC soldiers, he would handle everyone else.

It was going to be interesting to see their reactions. He anticipated there was a lot they were going to need to get used to.

“Welcome,” he began. “You are all aware of who I am, so I won’t repeat myself. You were selected because you display some measure of intelligence, so I expect you to use it here. This is a relatively small organization compared to most, so I tend to take a more active role, and in XCOM, the most vital people are soldiers. Our science and engineering teams can create weapons and technology beyond what you can likely imagine, but you will be the ones using it. No one else can fulfill your role.”

He had the attention of each one. Good. “Each of you will have access to the best weapons and armor currently developed by the Human race, and will be provided with options as how to outfit yourselves. Each of you have different backgrounds, which we have taken into account when assigning your specializations, but you know your own strengths and weaknesses best. You are expected to know how to use the equipment you have, and if you don’t know right now, learn. Ignorance will get you killed.”

There were a few nods at that, along with some side whispers of agreement. “Now for the reason we’re all here: the Aliens. How many of you have fought them before?”

Roughly half of them raised their hands. “Good, several of you.” The Commander nodded, tapping a button on his prosthetic, and bringing up a hologram of a Muton from the holoprojector beside him. “However, I suspect the majority of your experience has been limited to only a few alien types, and some have none aside from what they’ve investigated for themselves. That isn’t going to cut it here. Name an alien, and we’ve killed it.”

He gestured at the hologram. “Mutons? The regular soldiers are little more than cannon fodder to us. They aren’t the ones we worry about. We fight the Elites and Berserkers,” the hologram shifted at his tap and an Elite replaced it. All of the holograms were scaled correctly, and he saw the eyes of some of them blink as they saw just how big an Elite was.

“These are the kinds of aliens we fight and kill,” the Commander continued. “And yes, that is their
actual size. You need to learn how to kill it, and the secret to that is working as a squad; who that squad entails doesn’t matter, all that does is that you leverage your abilities to work together. I expect all of you know this, but I’m going to repeat it so you understand that you aren’t going to kill this—” he nodded towards the hologram. “On your own.”

Another round of nods. “Floaters, Cyberdisks, Sectopods, Lurainian, Chryssalids, there are aliens you likely won’t have heard of before today. This is expected, and to an extent that is intentional. You are some of the privileged few who know more about the extent of the alien threat than most.” He paused. “There is a lot that we have not told ADVENT, about the aliens themselves and our own projects for stopping them.”

There were a few moments of silence, before one soldier slowly raised his hand. Cole, he believed the name was. “Respectfully, Commander, why not? Doesn’t that hurt our chances?”

Well, here was where it was going to get interesting. “No, it doesn’t,” he answered bluntly. “What ADVENT does or does not know has very little impact on our victory or not. ADVENT needs to bring the world to order, and we can focus on how to actually kill the aliens. But you do have a valid question, and the short answer is that I do not fully trust Chancellor Vyandar, nor certain people in ADVENT.”

The Commander smiled slightly. “Because I’m the one who put her where she is today, and warned that if she ever tried abusing her power I would kill her.” Ah, now there were the sharp intakes of breath. “Chancellor Vyandar is a useful ally,” the Commander continued unabated. “But people are right to be suspicious of her past. Prior to her appointment, she was the Director of an organization called EXALT, a conspiracy devoted to influencing world events. For a time they fought against us, but I convinced her that our interests were best aligned than opposed. If you want the longer version, there are plenty who are familiar with the situation. One of the family heads of EXALT is here now, in fact.”

Well, he had successfully managed to render the majority speechless. Funny how that whole incident seemed so much smaller in the grand scheme of the war. He had practically just admitted that there had been a world conspiracy that XCOM had fought, beaten, and now had turned to their side. “So…” one of the soldiers said hesitantly. “XCOM is actually controlling ADVENT?”

“No.” The Commander shook his head. “I intend to keep XCOM apolitical in regards to world affairs. Chancellor Vyandar has done great things for humanity already, and I expect she will continue to. However, should her goals change, or she attempt to remove us, we will not allow that to happen.”

There were a decent number of soldiers that now looked rather uncomfortable as to how much was really going on behind the scenes. They would get used to it. “If you’re concerned about the possibility of us ever fighting ADVENT, that is minimal at best,” the Commander reassured them. “But our job is the preservation of Humanity from the alien threat at any cost, and Humans can pose just as large of a threat to our species as any alien. Is that understood?”

“Yes, Commander!” They shouted.

“Good,” he said neutrally. “Before we continue onto several other topics ADVENT is not aware of, there is something that needs to be addressed. You are aware of it, as you signed the papers, but I doubt it is clear to you what is meant by genetic modification. It’s a word on paper, and without context it might not sound like something to be fully concerned about. In truth, it isn’t, but it’s important to understand why I’ve made certain genetic modifications mandatory.”
This had been a decision he’d come to with less reluctance than he’d thought he’d have. Originally he’d preferred to give soldiers the choice of genetic modification, since some did have personal or other issues with it, but that was a luxury that couldn’t be afforded now. They had the MELD stockpiles, and the baseline Human wasn’t going to cut it much longer. They needed to push every advantage they had on the aliens, and having both a small army of unmodified Humans and excess MELD was not something they could waste.

While he expected some objections at first, he felt the complaints would die once they saw just how improved they actually became. With that in mind, he continued speaking. “My job is to keep you alive. The aliens are more advanced than us, more numerous, and often more powerful. We have ways of mitigating this through weapons and armor, but that isn’t good enough anymore.”

He let his gaze sweep the room. “Dead soldiers are a reality of war, but that doesn’t mean I will ever write any off as simply expendable. I want you kept alive, if for no other reason than that there is another soldier to fight the aliens. You need to be better than you already are, and that is where genetic modification comes into play. How many of you actually read that section about genetic modification?”

A few raised hands, more than he’d expected to be honest. “It’s what would be considered an invasive procedure. It’s not without its changes, some more extreme than others.” He pointed to his own golden-rimmed eyes. “However, the tradeoffs are significant. A fear of genetic modification is baseless and that has been proven without a doubt. I don’t want my soldiers falling ill, so you will be modified to be immune to diseases. I don’t want you missing shots, so your eyes will be enhanced so that you can hit a Muton in the head five hundred feet away with a rifle. I don’t want you bleeding out or keeling over from exhaustion, so you will have another heart inserted. Those are mandatory, and if you want to go further, you can.”

There was some apprehension in the room, but also quite a bit of awe. He could sense that they felt what he was telling them was too good to be true. “If you want your skin to heal from wounds in minutes, or leap buildings in a single bound, that is also possible.” He smirked. “You don’t have to believe me, and no, it isn’t something too good to be true. The stories you heard about XCOM soldiers jumping impossible lengths and surviving attacks that would kill anyone else are mostly true. But XCOM soldiers can and do die, and this is a step to prevent that. Questions?”

No one spoke up, so he continued, and motioned the Vitakarian from the side of the room into the light. “One thing ADVENT is unaware of is that we currently have several alien assistants working for XCOM and applying their knowledge against the Collective.” There were several whispers and clear expressions of surprise. Completely expected, and Sci’traloa’vitiary just observed the group stoically like he did for everything else.

“This is Sci’traloa’vitiary,” the Commander continued. “Currently working with Dr. Vahlen on elerium-armor integration.”

“Greetings, Humans,” Traloa said, inclining his head. “I will assure you that I currently have no plans to violently assault your species, and it is likely you will not interact with me on a regular basis, so the possibility of my sudden betrayal is significantly lower than it would be otherwise. But do remember I am making the equipment you use,” he finished with a smile.

The Commander openly smirked at that. The soldiers were trying to figure out if he was telling a joke, or was being completely serious, and he knew Traloa was enjoying this more than he should. Of all the Vitakara here, he’d adapted the best, to the point of knowing how to crack jokes, which was made funnier by how he delivered them so deadpan.

“Yes, that was a joke,” the Commander clarified, because several were looking at the alien with
clear suspicion. “But that aside, we have very effective means of ensuring that the Vitakara here cooperate.”

“Quite,” Traloa agreed dryly. “It is of explosive effectiveness. Please do not stand too close if I ever turn on you.”

“Quiet,” the Commander warned good-naturedly, raising an eyebrow. “Joking aside, Traloa is an exception to the Vitakara here. Most of them are perfectly normal, and are unlikely to cause you any trouble. That being said, I would not be surprised if at least some of you had reservations about aliens being here, and a personal dislike of the aliens is understandable.”

He let his tone turn more serious. “However, you will not take that out on the aliens that are helping us. Save that for the ones trying to kill you. There are some very basic rules that you need to follow in regards to them here. You do not assault, insult, or otherwise degrade the alien residents here, I don’t care if you think it’s justified, it’s not allowed. If you actually have a concern, let me know but I will also not tolerate false accusations. I will have one of our telepaths read your mind, so be very careful if going that direction.”

He raised another finger. “Second: You do not interfere with whatever the aliens are doing. As they are experienced with much alien tech, their projects are sensitive and important. So don’t intentionally interrupt, sabotage, or otherwise make life difficult. This will not be tolerated. This does not mean you can’t interact with them, but do it when they’re not working.”

He sighed as he reached the third point. “Now this is a point I shouldn’t have to make, but unfortunately it is needed. Whatever devious thoughts are going through your head, you do not flirt with the aliens.”

“Unless you are fully prepared for the consequences,” Traloa added blandly. The Commander resisted the urge to give him a look of disbelief. He’d thought bringing the most ‘human’ alien might put the soldiers a little more at ease. However, this was backfiring more than he liked. Now this was going to raise a lot of idiotic questions all because of one idiotic incident.

Vitakara did not handle certain Human foods well. That had been made abundantly clear.

“Please ignore what he said,” the Commander said neutrally. “Now, with all those rules out of the way, all of which you are expected to follow completely, there is one more thing you should be aware of.”

At least this would make them forget about the previous topic. For now. “We have been able to make fairly accurate predictions about the aliens and their plans. This is not due to our own operatives, although we do have them. The Ethereals are, ultimately, the greatest threat to our species. You have all seen the Battlemaster and Caelior, and unfortunately, those are far from the only ones, and not even the most dangerous.”

He let that settle in briefly. “We know who they are, and what they can do. We have been able to develop technology far beyond what ADVENT possesses, some of which you will become very familiar with soon. These events we would not have been able to accomplish on our own, and the reason for this is because we have another defector from the aliens.”

Right on cue, Aegis walked out. Patricia was shielding everyone in the room from his aura, so their reactions were a mix of surprise, amazement, horror, and a lot of swearing. “This is Aegis,” the Commander said over the mix of voices. “Formerly of the Ethereal Collective, and now ally to XCOM. He is one of the largest reasons we’re able to put up a reasonable fight. Right now we have kept this a secret for a multitude of reasons, but make no mistake, when the time comes, he
will fight against the aliens.”

“Correct,” Aegis added. “I did not agree with the handling of your species, and I will not perpetuate the Imperator’s ignorant vision any longer. I will work with your species until the Collective leaves, or we die.”

“You have all been assigned barracks and duties,” the Commander said. “Whatever questions you have can either be answered with our archives we have compiled, or by speaking to other soldiers. There will not be much time until we launch a counterattack in America, so I would suggest you prepare as best you can. Dismissed!”

All the soldiers saluted, and walked out of the room in various stages of shock.

A good start to the day, if he did say so himself.

***

The Praesidium, Barracks

The good news for Sierra was that she wasn’t going to have to go back into the tank anytime soon. She’d gotten the more unpleasant gene mods out of the way a while ago, since she’d had some suspicions it would go this way eventually. However, it wasn’t quite the same for the majority of soldiers who were going to have the modifications administered to them over the next few days.

Sierra was somewhat torn on the new mandate for specific genetic modifications. On one hand, she felt that this should be a decision each soldier made for themselves and forcing it was both immoral and unnecessary. But on the other, they needed every advantage they had, and having been extensively genetically modified herself, Sierra could see literally zero reasons to not become modified.

Seriously, the ability to laugh at bullets and jump from buildings wasn’t really something that could be matched. Being able to read the lettering of a poster from the opposite end of the room was also pretty neat. All in all, she wasn’t at all surprised the Commander had decided to mandate at least some.

Still, there were some nervous about the procedure itself, like the Egyptian Gamil Sultan, who she’d been chatting with the past half hour. “It’s not dangerous,” she shrugged. “I think anyone who’s undergone it is proof of that.”

“I know that,” Gamil sighed, furrowing his eyebrows and scowling. “But I do not like the idea of being in a tank, much less having MELD pumped into me. How does that even work?”

Sierra thought back. “Depends on what kind of modifications you get. The more you have, the longer it is. Each one has to be done separately, and for most of them you are sedated.”

“Most of them!”

“Technically I think it’s all of them,” Sierra quickly clarified. “Although the eyesight one is a bit iffy. I kinda remember that. Sort of. Have you ever had eye surgery?”

“No!”

“I think it’s sort of like that,” Sierra continued. “They place a little machine on your eyes, strap it to you, and flood your eyes with MELD. Or something like that.”
His blue eyes were wide in horror now, the air around him was slightly distorted as he clearly became more nervous. What was-ah, right, he was one of the new psions who’d been cleared to be awakened. “I thought you wanted to make it seem safe? *That,*” he paused dramatically. “*Is not* reassuring.”

Hm, yes, she was bad at this. “It’s not as bad as it sounds,” she clarified. “Really. You don’t really feel a thing. What’s a good comparison?” She paused, looking up for no reason. “Have you ever had a small mildly irritating itch in your eye? It’s sort of like that, but less so because you’re not really aware of it to the same intensity.”

“Oh,” he said, now visibly relieved. “Well, I can live with that.”

“You’re definitely one-hundred percent sedated for pretty much every other one,” she said, shifting in her seat. “They explain it before you go in. Whatever part of the body is being modified has to be exposed to MELD.” She held up her hand, the faint octagons on her skin becoming more visible in the light. “For the Iron Skin mod, they pretty much submerged me in MELD. For the Disease Immunization one, I think they pump MELD into your organs in small doses.”

“That can’t be done quickly,” Gamil noted. “Especially if there are multiple ones.”

“Nope, the entire procedure can take several days,” Sierra agreed. “But it is worth it, at least I think so.”

“I still don’t like the idea of infecting my body with millions of nanomachines,” Gamil admitted, resting his head on a hand. “It’s not some drug, its actual machines in your body. That’s just unsettling.”

Sierra shrugged. In all honesty, she hadn’t been overly concerned with that piece of information. The nanites weren’t dangerous once they were in her body, and she had been assured that they couldn’t be hacked or modified once their purpose was fulfilled. It *was* entirely possible that she’d been lied to, but she didn’t think so. The Commander wouldn’t have modified himself if that was a risk.

“You got some new ones, right?” Gamil suddenly asked. “I thought you only had the Iron Skin mod.”

“At one point, I did,” Sierra confirmed with a nod. “Well, and the eyesight one. But I needed a few more because of what I’ve been training for.” She smiled. “You’ll probably see it very soon, in fact.”

“This the Archangel program?” Gamil asked. “I’ve heard that was something recently created. Some kind of special operations group?”

Sierra chuckled. “Sort of. Can’t really say exactly what since the engineers are still working out some of the kinks, but it could be considered our own answer to the Floaters.”

“Really?” He perked up. “Huh. Well, that sounds good. Meanwhile I’ve been learning how to maintain a half-dozen stasis fields.”

“And how is it working with our resident Ethereal?” Sierra asked, leaning back.

“Aegis? He’s a good teacher, actually,” Gamil answered brightly. “I never would have figured some of this out on my own, or even with Patricia. He doesn’t talk as much as you’d think, but he’s alright for an alien.”
Sierra snorted as she realized that they were getting a batch of new soldiers today. “The rookies are going to be shocked at everything here.” Her tone imitated a much lighter inflection. “Oh by the way, we fought the Illuminati, put their leader in charge of the world, have a bunch of alien captives, and oh right, we have an Ethereal here. Welcome to XCOM!”

Gamil laughed along with her. “Hopefully they take it well.”

“Probably,” Sierra guessed. “You know how the Commander is. He’s probably got psyche profiles on everyone here. I doubt he’s going to choose someone that’s going to have problems.”

“Not sure about that,” Gamil mused. “I really think he doesn’t care what you think as long as you do your job.” He gave her a sidelong look. “Otherwise, I doubt you’d be here. You don’t know when to shut up sometimes.”

“Ha ha, very funny,” Sierra rolled her eyes. “Maybe, but I can tell you we aren’t getting any anti-ADVENT people in here.”

“You might as well say anti-Human,” Gamil said. “Anyone who goes against ADVENT at this point is a traitor to humanity. Fuck them.”

Sierra rubbed her eyes. “There is a difference between anti-ADVENT, and realizing that ADVENT is not the most perfect thing to ever exist. Really, what do you think? Egypt isn’t even part of ADVENT right?”

“Unfortunately not,” he admitted with a sigh. “I don’t see why either. I don’t think we’d do much worse with them in charge.”

“Maybe because they want to keep their independence?” Sierra suggested. “I can see why they wouldn’t join, but I agree there isn’t any excuse for not working with ADVENT. That is just bad.”

“So why do you have so many issues with ADVENT?” Gamil asked. “I’d say they’re doing a lot of good.”

“For now,” Sierra emphasized. “Key word. I don’t care who is in charge, I’m never trusting a government that openly spies on its citizens, attacks other countries unprovoked, keeps how its government works secret, chooses which people are up for election, and has a police force that is pretty much another branch of the military.”

“And when exactly has ADVENT abused this?” Gamil folded his arms. “They’ve been justified.”

“For now,” Sierra repeated. “If you can’t see just how much this could be abused, then sorry, you’re an idiot. They are justified now, but really, even that’s questionable. ADVENT goes out of their way to make the most public and visceral statement possible, and they act like dictators when they don’t need to be. Saudia turned the Canada annexation into a damn publicity stunt to say ‘Look! We can invade another country with no consequences whatsoever!’ Isn’t that a little concerning? ADVENT is basically daring the world to actually do something against them.” She paused for breath. “Sorry, that just rubs me the wrong way. If you have to do it, just do it, don’t make it into some stunt to show off just how powerful you are.”

“Fair point,” Gamil admitted. “Maybe it’s an American thing. I have more respect for governments that actually do their job than just talk about doing it. Might just be me, but ADVENT seems at least more honest. At least they’re open about what they do, and don’t hide it.”

“Which is a point in their favor,” Sierra agreed. “But yeah, the idea of ADVENT is good. I’d say it’s even avoided abusing its power so far, even if they do show off. But the problem is that
“ADVENT seems to rely on the people in charge having the right priorities, and I don’t believe that, and Human nature are compatible right now.”

“Perhaps that can be changed,” Gamil mused thoughtfully. “If there was ever a time for us to unite as a species, this would be it.”

“What an optimist,” Sierra commented dryly. “I think you confused ‘priorities’ with ‘good’. Good people don’t get to where Saudia and the Commander are. ADVENT doesn’t reward the good, it rewards the effective. I guess we’ll see if you’re right though, eventually.”

“Hopefully.” He gave a lopsided smile, standing. “No point in delaying this I suppose. Time to get my own gene modding done. Thanks, Sierra.”

She returned the smile, probably looking rather cynical now. “Anytime. See you on the other side.”

***

The Praesidium, Psionic Training Area

The amount of newly awakened psions was almost staggering. The Commander had pulled from their current roster, as well as drawn a few from the PRIEST program, and now there were twenty-five other psions of various powers, a surprisingly high number of Magus-class psions, and even a few Leviathan-class ones like herself.

They were going to need specialized rooms for each discipline now, it seemed.

It was fairly split between disciplines when everything finally settled. Telekines and Defensive aptitudes were the most common, Offensive and Telepaths slightly less so. However, it was easier now that there were some actual veterans beyond Aegis and herself that were helping. She was focusing on the Telepaths, while Matthew focused on Telekines, Chan assisted with the Offensive-focused ones, and Aegis directly taught the Defensive-focused psions, as well as helping everywhere else.

Complicating training further, some of the psions had decided to join the ranks of the Templars, and with a few psions being in the Archangel program, that was going to change the application of their own attacks. It was an interesting balancing act, but one she felt would be settled over the next few days.

“Does it ever get quieter?” Patricia looked to her right as an exhausted-looking woman approached, face beaded in sweat and clutching a water bottle. She was fairly old for a soldier here, pushing forty if Patricia recalled correctly. She was also not up to the current physical standards, but she did have a legitimate reason for such, and the gene mods were helping.

Sussan Sevhonkian was one of the only psions XCOM had requested from the PRIEST Program, a civilian data scientist from Armenia; she’d never even held a weapon before joining XCOM, but had still felt compelled to do her part in the war nonetheless. Patricia respected her quite a lot, since she had been willing to leave her family to come here, and had finally forced XCOM to figure out what they were going to do with soldiers who had families.

For the most part, they had tried to avoid soldiers that had spouses or children, but with the PRIEST Program, that wasn’t as easy, and made the soldier in question a possible security breach. However, in this case, they had the ability to read minds, so any leaks would be shut down quickly. Besides, it was only one or two families they had to worry about. Some reasonable accommodations could be made.
Sussan herself was a Telepath just shy of the Leviathan class, but she was getting the hang of it pretty quickly. Patricia understood her question completely. “No,” she admitted. “But you eventually learn to block out what you don’t want to hear.”

Sussan shook her head. “How? I haven’t been able to sleep well at all because everything is just… overwhelming.” She took a long drink of water. “It’s fine when I’m awake, like now, I can just focus or do some kind of physical exercise to distract me, but it’s impossible when I close my eyes.”

Patricia considered that for a minute. “How do you visualize it?”

“Like a coordinate plane,” she chuckled. “Data points on an X/Y axis. I’m trying to work on visualizing it in a 3D plane, but it’s not as easy since all of them scream for your attention,” she waved a hand. “It’s just meaningless gibberish, and that’s probably the most irritating thing for me.”

Patricia scratched her chin. “To be honest, I don’t have a sure answer. I know what worked for me, but that doesn’t mean it works for everyone else. Telepathy isn’t an exact science, unfortunately.”

“I’ll take anything at this point,” she sighed. “What did you do?”

“I had someone to practice on,” she answered fondly with a smile. “I got better at focusing on him, and through that I figured out how to block out what I didn’t want subconsciously. Then again, my awakening happened more gradually. It wasn’t as quick as yours.”

“Hm, I’ll have to try that,” she said. “So…there really isn’t a limit on what you can do to someone once you’re in their mind? That’s what I’ve been getting from a lot of what you’ve taught us so far.”

Patricia gave her a humorless smile. “Exactly. The closest comparison is a puppet. You are only limited by your imagination.”

Patricia felt and saw her shiver at that. “There is some messed up stuff you can do,” she said quietly. “I think I accidentally killed one of those Chryssalids just by making it think it was drowning.”

“That’s the purpose of them,” Patricia nodded. “Experiment with the Chryssalids, and then apply to actual Humans. Our minds regulate everything in our body, and if they can be tricked, they can be turned against the body. Don’t feel bad about killing them, it’s only an alien.”

“I guess,” Sussan said, unconvinced. “I’ve never done anything like this before. Killing things is… unsettling.”

“This sounds callous, but you get used to it,” Patricia told her. “If you still have issues with it, just focus on the fact that more aliens that die, the better chance your family will live. That grid you visualize when using your telepathy? That is where you’ll be in battle. Think of it as removing bad data. You aren’t killing people, you’re killing aliens. Don’t forget that.”

“I think I’ll practice that,” Sussan nodded. “And…well, maybe find someone to practice on.”

“You ever want me to help, I will,” Patricia promised. “Aegis would also be willing.”

“I’ll consider it,” she said. “Thanks, Patricia.”

“Anytime.” Sussan walked off, and Patricia decided to walk over where the most interesting and
unnerving of the new psions was standing. Lukas Von Theil, though he preferred to be called Geist for some reason, was the most powerful psion ever awakened, at least on the Trask scale. Patricia had been somewhat surprised when he’d shown equal inclination towards telepathic and defensive disciplines, and so he’d trained for both of them at the same time.

He seemed wholly disinterested in traditional training, preferring to get basic overviews from her and Aegis and go experiment on his own. He seemed intentionally cryptic and vague for the sake of it when talking to anyone, and didn’t socialize with the other psions. Still, she was going to make an effort. He even felt odd compared to everyone else, making him stand out to any psion nearby.

All she sensed was an intense focus and curiosity. She didn’t pry, but he seemed completely unaffected by some of the other effects of psionics such as the initial loudness Sussan had complained about. Right now he was standing, looking down at the ground, hands clasped behind his back. “Interesting floor?” She asked.

“I am concentrating, Psion Trask,” he answered without looking at her. “I am attempting to conceptualize a more effective defense. The lack of creativity and utilization of psionics is surprising here, and stifling.”

“Really,” she said sarcastically. “And how did you come to that conclusion?”

“I am surprised you do not understand,” he said, looking up at her finally, his eyes tinged purple. He was definitely drawing upon his power. “There is a lack of ambition. Thus far few here seem to grasp the scale of what beings like us can do. There is little need to stay with the single-layered shields, single Chryssalids, and dummies. Those offer no challenge or ability for growth.”

Ah, so that’s what it was then. “Two reasons for that,” she said. “First, not everyone has the raw talent you do, and second, there is a limit to what we can do within the Praesidium. You want a challenge, talk to Aegis.”

“I am not foolish enough to challenge Aegis,” he stated in the same voice. “Not yet. He is much more skilled than he has shown to your psions. He is deliberately holding them back, be it because of their lack of skill, or other reasons. I do not care, but I will not waste time performing the trivial exercises such as simple domes and shields.”

He pulled out a clenched fist and held it out before him, opened it, and they were suddenly in a small psionically shielded dome, with Geist’s arm rippling with psionic energy. “This is trivial, Patricia. Much like how dominating a single mind is simple for you. But you did not stop at a single mind, did you?”

Patricia crossed her arms. Geist was working towards a point, and she suspected she knew what it was. “No. You don’t think the scale is adequate? Fair, but again, the psions need to get used to their abilities before they start pulling off mass mind control.”

“Scale is simple, complexity is not,” Geist stated flatly, letting the shield dissipate. “This is a lesson you seem to have yet to learn as well, Psion Trask. The ability to mind control hundreds is simply you applying the basic powers of your discipline on a larger scale. There are easier ways to kill, there are more effective means of sabotaging the aliens. Why not warp the alien commanders into sleepers or force their brains to shut off?”

Patricia raised an eyebrow. “Because that takes time. Time that isn’t always available in combat.”

“Spare me,” Geist said dryly, stepping forward. “No, it’s because of your habits, and because it is
His words were reminiscent of what Aegis had told her, about how she wasn’t thinking as much as she should, and brute forcing everything. Geist was blunt, and frankly rude, but he did have a point. “Point taken. You certainly don’t have issues speaking your mind.”

“I do not particularly care if you dislike me or not,” Geist shrugged. “But I don’t see a point risking this war because you are held to a standard beyond reproach.” He held his hands up, palms vertical to the floor, and two small psionic shields appeared, then two more, until there was a shimmering purple cube between his hands. “Aegis is talented, Patricia, but he will only teach what he knows.”

“That wasn’t an insult,” she said, referring to his earlier comment. “And yes he will, but if there is anyone who knows about psionics, it is him. Like it or not, he knows more than you.”

“What I would suggest, Patricia, is that we do not solely rely on him,” he corrected, disintegrating the cube in his hand. “Whatever he teaches, the Ethereals know how to counter. We are not still in this war solely because of one alien, but because we have adapted in ways the Ethereals did not anticipate. That is our strength, and this should be applied to our own psionic abilities.”

Patricia idly wondered if he would be this forward if he wasn’t a psion. She suspected he likely wouldn’t act differently. Still, she did appreciate the different perspective. It was slightly irritating, but perhaps he could actually meet the Commander. He appeared to have some ideas the Commander would like, and they were alike in their practical methodicalism.

“Were you actually a chemistry teacher?” She asked curiously. “Because you certainly don’t talk like a teacher.”

“Most teachers are sympathetic, and are predictable,” Geist said. “They do not fully understand their students, nor the intricacies of childhood. I understand people, and I know how best to engage them. I did not lie, Trask, I simply had different methods than most teachers.”

“Clearly,” she muttered. “But fair enough.”

“Most people I simply do not find engaging enough,” Geist continued. “I do not need Human interaction to function, nor lead what I consider to be a fulfilling life. And I think that more people appreciate that than the alternative.”

“As long as you can work with others, that won’t be a problem,” Patricia said. “You wouldn’t be the first quiet one I’ve worked with.”

He smiled for the first time, but it appeared closer to an imitation than the real thing. “Then I believe we have nothing to worry about. Now if you’ll excuse me, I would prefer some time to ensure that I am adequately prepared for our next attack.”

“I’ll leave you then,” she said. “Have fun.”

***

_The Praesidium, Situation Room_

“One per continent, is that the suggestion?” Jackson asked, looking up from the holotable.

The Commander exchanged a look with Shen, who gave a short nod. “Yes, that would be ideal. Actual bases can be in the future, but for now we should have Hangars on standby, especially with
the Firestorms coming online shortly.”

“Right,” Jackson nodded, biting her lower lip as she thought. “And how many Firestorms are we talking about per base?”

“Twenty to start with,” the Commander said. “Likely more in the future.”

“I expect production to increase once we launch our own construction facility,” Shen added. “But it isn’t feasible to have the entirety of our air force confined to the Praesidium.”

“So we can aim for one per continent,” Jackson said, pressing some buttons on the holotable. “I assume ADVENT would assist in the construction?”

“If possible,” the Commander confirmed. “Otherwise, we can hire who we need; but I doubt ADVENT would pass this up. On the condition that this is not on record and the workers have the location of the base removed from their minds.”

Jackson pinched the bridge of her nose. “See, I don’t know if they’ll go for that.”

“I want this going to Saudia,” the Commander said. “Let her answer it before jumping to conclusions. Worst case scenario, we create an XCOM construction wing and do it ourselves to bypass ADVENT altogether.”

Shen frowned. “Why not just do that to begin with?”

“I do want to eventually,” the Commander clarified. “But in this case, speed is important. ADVENT can have Hangars built in several weeks if they leverage their crews. Doing this ourselves will take time I don’t know we have.”

“Makes sense,” Jackson said. “Alright, there are several obvious locations we could station a base. Brazil makes the most sense for South America, the United States for North America, maybe Midwest.” The holomap shifted to the other side of the world. “I would also suggest Germany and Russia for the other continents. Africa would be an issue, unless you want to wait until Egypt or South Africa joins ADVENT.”

“Are there alternatives?” The Commander asked. So far this was good, but he wanted to be aware of all his options.

“Potentially,” Jackson stressed the word. “We could avoid the continents altogether and instead set up bases along nearby islands. This would apply more to the coasts, but we could potentially construct more, and outside of ADVENT territory.”

“And what if there are no islands available?” The Commander asked.

Shen seemed to get it first. “You want to explore the artificial island possibility?”

“Exactly,” Jackson said firmly. “Maybe not at first, but something to look into when we have our own construction wing.”

The Commander frowned. “And is that actually feasible? How exactly could we create an island?”

“It technically isn’t ‘creating’ an island, so much as building on top of existing rocks, islands, and reefs to support something larger,” Jackson explained. “It’s a fairly simple, if involved process. For our purposes, we wouldn’t need much, but just enough to support a small Hangar, so the job wouldn’t be as extensive. We would need a large supply of sand to make it work.”
The Commander thought for a moment. “I suspect this has been done before successfully. We could look into how it was done before, for the equipment used if nothing else.”

Shen coughed awkwardly. “I’m surprised you didn’t know about this. China was the one who put the idea into action, and until recently, they’ve been constructing islands to cement their claim on the South China Sea. It was a large geopolitical issue for some time, though it died down once the aliens showed up.”

Hm, he must have missed that, which wasn’t surprisingly given that China hadn’t been a focal point during the past year, aside from causing issues with the Council. Even then he hadn’t needed to gather ammunition on their previous overreaches, since China was one country that kind of pseudo-intimidation wouldn’t work on.

However, this gave him an idea.

“How willing do you think China would be to do this for us?” He mused.

Jackson blinked. “That depends. What are they getting out of it?”

“How showing that they are willing to work against the aliens?” The Commander thought. “China apparently wants to play nice now. This might be a good opportunity for them to actually prove it.”

“It would lessen tensions significantly,” Shen said thoughtfully, rubbing his chin. “China would be seen as working with ADVENT, and the Communist Party can demonstrate that they are still influential enough to negotiate with the primary world power. A win for both parties.”

“ADVENT is starting Operation Kraken as well,” Jackson reminded him. “If they could get Chinese support, that would make their job significantly easier.”

Operation Kraken was one of the newer initiatives by ADVENT to leverage their naval forces to hinder alien supply drops in the Pacific theatre. It was their attempt to cover the ocean with submarines ready to fire at UFOs at a moment’s notice. Right now the majority were moving towards Japan, while several more groups were stationed at various intervals around Korea.

China joining, even if they weren’t as technologically advanced, would be a massive boon. Definitely something to at least attempt. “Send that to Saudia and Laura,” the Commander said. “And send it to the Chinese as well. Let’s see what they say. In the meantime, I also want continent Hangars planned. We can focus on the artificial island idea later.”

“Got it,” Jackson confirmed, looking rather pleased. “I hope they accept. If China and ADVENT actually work together, there goes the largest chance of an idiotic war.”

“Don’t get your hopes up,” the Commander warned. “China won’t do this for anyone but themselves. The good news is that they’re not idiots…for the most part.” Their antics on the Council threw some doubt on that claim, but in hindsight, they had gotten out before he’d put a violent end to the Council. At least they took a stand and left instead of just complaining about him.

But that was in the past. If China was open to being an ally, he was willing to give them another chance. He had a feeling that they wouldn’t squander it this time.

***

The Praesidium, Barracks
Oliver was still feeling decidedly odd after the genetic modification. It certainly hadn’t been close to the most unpleasant thing he’d ever dealt with in his life, but it hadn’t exactly been pleasurable either. Still, he couldn’t entirely argue with the results. He honestly felt better after all was said and done; stronger and more energetic.

To test this out he’d run a series of exercises that he knew would exhaust himself, and as opposed to feeling wiped out, he felt merely winded. That had been an amazing, and somewhat unnerving realization. Whatever he had been before, he was decidedly no longer a normal Human.

He wasn’t sure how he felt about that. The rational part of him realized that this was a great improvement, and it would likely save his life. On the other, he almost felt like he was cheating. He’d worked hard to get to where he was, and the gene mods had basically given him the end result with no effort. It was a minor thing, and didn’t make rational sense, but it did bother him somewhat.

The eye modifications were going to take some getting used to. He was still learning to focus them on what he wanted, because he’d gone through a period of focusing on things really far away, and everything else becoming blurry, and vice-versa. He’d been assured that was just a normal phase and that he’d adjust within a few days. It seemed to be accurate, and his vision had stabilized over the past few hours.

And now the new recruits had shown up, and boy were they providing some of the best entertainment any of them had seen in weeks. It was funny upon reflection, because under normal circumstances, what was happening in XCOM was literal world-shattering information, but it was something that just…happened at XCOM.

Really, Oliver couldn’t blame the young Frenchman who was having an incredulous conversation with Zara. If he’d been hit with the news that the Illuminati was running the world, and that XCOM was working with alien defectors and an Ethereal all at once, then he might be just as shocked. One he could handle pretty well, and he had, but three at once was a bit much.

“So you were not only running the media, you also had an army?” Leonard Bissonnette practically accused a highly amused, and smiling Zara. “Do I understand that right?”

“One, we weren’t ‘running the media’; we had a number of agents and had some monetary investments in the larger media organizations, but far from ‘running it’,” Zara clarified, raising a finger, then adding a second as she continued. “Two, an army might be a generous term. I’d compare it to more of an elite special forces group, commanded by yours truly.” She gave a mock bow.

“Uh huh,” Leonard said skeptically. “So you never killed stories or twisted the news to fit your narrative?”

“What? No, of course we did,” Zara admitted with a shrug. “Really, this shouldn’t be a shock. And honestly, we did everyone a favor. We mostly helped make sure that stupidly corrupt and idiotic people didn’t get into positions of power, and making conspiracy people look stupider than they already did. You’d want to ask Elizabeth, I’m just a soldier.”

“Elizabeth who?”

“Elizabeth Falka,” Zara said, clearly enjoying this way too much. “I think she’s the Director of ADVENT Intelligence now? I can give her a call if you want.”

“Fucking hell,” he swore under his breath, looking around at all of them. “Does this not seem like a
big deal or is it just me?”

“Honestly,” Ellinor, one of the newer soldiers, and soon-to-be Defensive Templar, interjected. “I was more surprised that there was an Ethereal of all things here. You know, the one thing that’s repeatedly beaten our soldiers?”

“Eh, I’m in a similar boat,” Shun shrugged, leaning comfortably into the corner of a couch. “Really, this kind of stuff just kinda happens here. Carmelita, remember when Soran turned out to be an alien?”

“Hard to forget that,” the little Korean woman snorted. Even without armor Oliver was quite sure she was the most intimidating person in the room. “I especially liked how weird Patricia was acting for a few months before she actually told us she was reading minds.”

“Or Aegis just showing up and surrendering,” Seok, another Korean, added with a nod. “Although we didn’t find out about that till later.”

“At least for me, XCOM showing up out of nowhere and helping us take the Fury Base ranks up there,” Zara commented. “And the Commander showing up and saying ‘Hey, want to run the world?’”

“With a lot of strings attached,” Shun muttered under her breath. “Still, wouldn’t have predicted that.”

“So I guess the point of this is that weird stuff happens in XCOM,” Oliver summarized for Leonard. “You get used to it pretty quick.”

“So…” Ellinor said after a few moment of silence. “Does, ah, anyone know exactly why the Commander made sure to stress not to, er, flirt with aliens? Did something…ah…happen?”

Oliver rubbed his forehead. Oh no, it was only a matter of time. He’d not heard of it, but having some familiarity with the internet, and people being curious to a stupid degree, it was one hundred percent not surprising that apparently something had happened. Because there was no way this was just something the Commander would casually require…months after they were originally acquired.

“He didn’t actually say that,” Zara snorted. “He didn’t, right?” She looked around for some answers.

“Don’t look at me,” Oliver shook his head. “First I’ve heard of it.”

“Hey, I heard it too,” Leonard added. “Didn’t help that the alien with him made what I think was a joke about it.”

They were interrupted by the light sound of Carmelita laughing, something it seemed none of them had heard before. It was a pleasant sound; a stark contrast to her normally dark demeanor. “I can answer that,” she said between laughs. “One of the scientists told me about it.”

Oliver was not sure he wanted to know, exactly, but this was the equivalent of watching a train wreck and he couldn’t really stop listening. “So,” Carmelita continued. “This was after some big project completion, didn’t figure out what. So the science team decides to celebrate and have a small party. So one of them, being a nice Human and all, decided to ask the Vitakarian who’d been helping them to join them.”
Oliver could see exactly where this was going. “From what she told me,” Carmelita explained. “It was a good start. The alien seemed a little restrained, if happy, to be participating, and as with any civilized party, there was wine involved. And chocolate.”

Ellinor sniffed. “Wimps. They should have something actually alcoholic.”

“She said civilized,” Oliver pointed out. “Not a bar fight.”

“Knulle deg,” she likely insulted in Norwegian.

“What?”

“Both of you be quiet,” Shun shushed. “Anyway, keep going.”

“Also, why is that they had chocolate important?” Zara added.

“I’ll get to that,” Carmelita said, raising her non-modified arm to focus their attention. “So yeah, everything’s going well. So a good ways into it, most everyone is drunk, and now the Vitakarian is a lot more relaxed. She was described to me as ‘high’.”

“Drunk?” Shun asked.

“No, high, like on drugs,” Carmelita clarified. “Not that I would know, but at this point one of the scientists was flirting with her, and seemed to be going over her head, and they were all just kinda laughing at the situation. Then, the Vitakarian says, and I quote, ‘I would like to have sexual intercourse with that Human,’ and she points at the guy who’d been flirting with her all night.”

All of them were torn between mock horror and amusement. “Brilliant,” Zara chuckled. “I have to use that sometime. Did it work?”

“Well…” Carmelita paused. “We definitely now know that Humans and Vitakara are… compatible. I think. My friend didn’t have the intimate details, although both involved didn’t seem to regret it afterwards. So I guess it worked?” She shook her head. “Although apparently the mood was killed several times when she started vomiting randomly. A few times after they went too their private quarters to, so I’m told.”

“Why?” Oliver inquired.

“The unproven scientific consensus is that Vitakarians get high on chocolate, and it makes them vomit if they consume it,” Carmelita said, cracking up. “I know there is at least one person working to convert it to a safe drug.”

“Send it to the science teams,” Ellinor chuckled. “We’ve got a new weapon to use against the aliens! We kill them with chocolate.”

“What if this is what they do when they’re high though?” Leonard asked jokingly. “I don’t know how we’d respond if they start yelling at random Humans if they want to have ‘sexual intercourse’.”

“Let’s hope the aliens don’t have a way to weaponize weed in response,” Zara added. “What do we get when both armies are equally stoned?”

“Let’s not go there,” Oliver said quickly. “I think this discussion has run its course.”

“Hey, at least they sort of look like us,” Leonard pointed out. “At least it wasn’t something really
"weird like an Oyariah."

"I don’t really blame the guy," Shun said. "As far as aliens go, they aren’t that bad. I wouldn’t say no. They’re pretty much like us, at least physically."

"Aside from their skin, and their eyes, and they don’t have hair, and they’re tall," Zara listed off. "But yeah, very similar."

"Oh shut up," Shun snorted. "You know exactly what I mean."

"I’ll stick with Humans, thank you very much," Ellinor huffed. "I would never be able to get past the whole ‘alien’ thing. What about you, Oliver?"

He was not getting dragged into this. "I’m sticking to attractive Human women thank you very much."

"Hey, does anyone know if there is any organized crime in the Collective?" Ellinor asked suddenly. "Because if there is, we definitely need to smuggle some chocolate to them."

They all laughed at that. "Better idea," Carmelita said. "We just send out some care packages to alien territory, like Australia. Just have them labeled as “Chocolate – Do not open” or something. Then of course they do, and eat them, and we give them food poisoning."

"Trolling worthy of Quisilia," Leonard commended with a nod. "I approve. Get this to the Commander right away."

"Why the hell are you following Quisilia?" Carmelita asked. "You do know he’s an Ethereal right?"

"Oh, he is?" Leonard said. "I was fifty-fifty on that, didn’t know if that was real or him just trolling everyone."

"He takes selfies."

"You do know Photoshop exists?"

"Really, I kinda don’t care he’s an alien bent on enslaving us," Shun admitted. "I mean, I kinda do, but on the other hand, I have to respect anyone that openly mocks Caelior, then trolls the Zar’Chon, and the Battlemaster. His Youtube channel is hilarious too. Say what you will about him, he produces good content."

All of them stared at her. "What do you mean ‘his Youtube channel’?" Carmelita asked, very slowly.

"You remember that really weird announcement on his Twitter that everyone freaked out about?" Shun asked. "Well, it turned out it was just the launch of his Youtube channel. He already has twenty-million subscribers, including myself, I admit."

"Traitor," Zara rolled her eyes sarcastically. "Alright, I have to see this."

"Count me in," Oliver added, grabbing his tablet and tossing it to Shun. "Pull it up, let’s see how Quisilia is giving everyone in ADVENT Intelligence a headache."

"Gladly," Shun smiled. "Bet you didn’t expect this when you came to XCOM, Leonard, did you?"

"Watching a video with a living memelord Ethereal?" Leonard said, as they gathered around Shun.
“Can’t say that I did.”

“Welcome to XCOM, kid,” Oliver grunted. “Like I said earlier, you’ll get used to it.”

---

*The Praesidium, Research Labs*

There was quite a bit that Vahlen wanted to discuss, even though the majority of her work had been assisting Shen with other projects, which the elder engineer would be showing off soon. But it was built on the basis of what Vahlen’s team had learned, and there was still quite a few other projects in production.

Elerium had been the main focus of Vahlen’s team, and as a result there were elerium crystals everywhere in the labs; stored in jars, cases, hooked up to various machines with scientists running experiments on them. There was a louder than normal perpetual hum here, and the Commander suspected it was due to all the elerium being used.

Vahlen was in her regular lab coat and standing in front of a table with various unidentifiable tools attached to small elerium crystals. She must have sensed him walking up, because she turned to him, smiling, and gave him a quick kiss on the cheek. “Welcome back,”

“You say that like you didn’t just see me a few hours ago,” he said, amused.

“Well, you haven’t been here in a while,” she amended, turning back to the table. “And we have been busy.”

“So I see,” the Commander noted. “Elerium?”

“That has been the primary focus of our team,” Vahlen confirmed. “As per your directive. We have continued to make some progress on the Manchurian Project, but that has not been our priority. Anti-Psionics has taken priority over that, and now that we understand elerium enough to actually use it, it won’t be long until we have plasma weapons of our own.”

*Excellent.* With that, they would be able to successfully match the aliens in pure damage output. While he knew that by no means would they stop using laser and Gauss weapons, plasma gave them some additional options, and in general would be more effective against standard alien units than the other weapon types.

He was going to regret this, and likely not understand half of it, but he had to at least make an effort. “In that case, how *does* elerium work? It couldn’t have been easy.”

“Initially, you’re right,” Vahlen said, picking up one of the blue-green crystals with a gloved hand. “How familiar are you with Moscovium?”

Oh dear. “Vahlen…”

“Oh, right,” she nodded rapidly, remembering she wasn’t speaking to a scientist. “Element 115 on the periodic table, it was discovered just over a decade back, but has only recently been officially recognized. This is important because elerium, as it turns out, is actually an isotope of this element.”

That was something he hadn’t expected. “That seems like a large coincidence.”

“Not necessarily,” Vahlen disagreed. “The periodic table is unlikely to change if we were to expand
beyond Earth. Elements don’t suddenly cease to exist, but we would likely just find more, or different properties of already existing ones. That the aliens have discovered this element and turned it into a power source isn’t exactly far-fetched.”

She set the crystal down. “Normally, finding, let alone stabilizing an isotope like this would be extremely time intensive, but thanks to the aliens, we know how to achieve this necessary configuration. That actually wasn’t the hard part, there is plenty of working alien tech to draw from; the issue was actually getting the elerium to react.”

“She assumed you figured out,” the Commander guessed.

“Yes,” Vahlen said, smiling. “We were looking at elerium the wrong way. We had always assumed it was, or at least primarily exists, in a solid state.”

The Commander looked down on the table, where there were quite a few very tangible-looking elerium crystals. He felt he was interpreting her statement wrong. “Are they not?”

Vahlen hesitated, clearly trying to think about the best way to explain this. “Not exactly. We now think that elerium is a kind of time crystal, based on how we’ve seen it react. Time crystals still oscillate, even in their ground state, which to not completely lose you, means that they can act as a way to carry momentum throughout its structure.”

She motioned towards the table. “To explain more simply, there is a large reserve of potential untapped energy in each elerium crystal, and if we know how to…jumpstart it, for lack of a better word, it produces an exothermic reaction, and through this we can produce stable energy nearly anywhere.”

He understood…most of that. “I assume you wrote a report on that?” He asked.

“Of course,” she nodded. “I forwarded a copy to you.”

He made a note to try and read it later. “So we know how elerium works, and can integrate it into our own technology?” He asked to clarify.

“Eventually,” she said. “Because we know what elerium is now, we can synthesize it ourselves, as well as constructing more generators. It will take some time to convert our power sources to elerium, but it certainly is possible.”

“Forward your research to ADVENT,” the Commander said. “They need to begin integrating this immediately. The discovery of cheap energy will benefit the entire Human race, not just us.”

“And now we can actually begin to research and design plasma weapons of our own,” Vahlen continued. “With elerium solved, our largest hurdle is past. The next step then, is anti-psionics.”

“Yes,” the Commander nodded, as Vahlen picked up a tablet and tapped a finger on it. “Aside from the Manchurian Program, what other possibilities have you explored?”

“A genetic modification that would be able to either shut down the parts of the brain affected by telepathy, or stop it entirely.” Vahlen turned the tablet to him, which showed pictures of brain scans which he didn’t know how to interpret. “There is a recordable difference between a brain affected by psionics and a brain that isn’t. There are some ways we are exploring to both detect, and shut this down.”

“No test subjects yet?” The Commander noted.
“No, preliminary research only,” Vahlen confirmed. “I didn’t want to begin Human testing until we have isolated the probable brain regions to modify, and the majority of my team was able to focus on this. Now that elerium is finished, we can focus on it. However, this will have several drawbacks.”

“Such as?” The Commander asked.

“We won’t be able to do it to psions,” Vahlen explained. “For obvious reasons, it would render them comatose. In addition, it is very likely that soldiers who undergo this modification will not be able to be enhanced with friendly telepathy. Distinguishing between allied and hostile telepathy is impossible.

Well, there wasn’t going to be something that was perfect, and he could live with those limitations. Psions could defend themselves, or at least learn how. But he was curious. “Does it have to be a straight modification?” He asked. “We have technology to detect and interact with psionic abilities, could we use it for creating anti-psionic fields.”

Vahlen set down the tablet, hesitating before she answered. “In theory…yes. In fact, it’s another avenue we’re exploring. However, we don’t know much about how that specific technology works to interact with psionics, and reverse-engineering it will take time. I don’t even know if it could actively block psionic abilities. But it is a possibility.”

“Is there any of the Sovereign technology schematics Aegis has that could help with anti-psionics?” The Commander asked.

Vahlen pursed her lips. “I don’t know. Much of what is in there is difficult even for me and Shen to fully understand, let me show you,” a few taps on her tablet, and she showed an image to him. It was six full pages of gibberish and formulas written in an alien language that wasn’t Ethereal Script, and only at the end were some schematics, which honestly to him looked like a sphere of some kind.

“And you don’t understand this?” The Commander asked. “Can’t really blame you.”

“We haven’t fully figured out the language the Sovereign Ones write in,” Vahlen admitted. “The main pieces Aegis brought, the Gateways and practice amps, those had already been translated by the Ethereals, and it wasn’t difficult to translate them to English. From what I can make out, whatever this device does ‘ensures that the thralls are immune to tampering of the mind’. From what I can also make out, constructing it requires both equipment and resources that don’t exist.” She set the tablet down. “It might be a mistranslation, but I’m not sure. Even for Sovereign technology, it is complicated. Even just the math is beyond me.”

“We can always bring in mathematicians,” the Commander reminded her. “You don’t need to do everything.”

“No, but I should at least be able to have some idea how this works,” she muttered scowling. “It’s frustrating to have to rely on others. Luckily, Shen isn’t having as much trouble. He grasps their formulas much better than I do. But maybe you’re right, what Aegis has brought us could likely save us, should we decipher it. The more people looking at this, the better.”

“I’ll have Jackson put together a team of linguists, cryptologists, and mathematicians,” the Commander told her. “You’ll review the list before they’re approved, but we need to do something to get an edge. I don’t think this war is going to get easier, and we can’t suffer any more defeats.”

Vahlen smiled. “I think we’ve come up with something that will help us out a bit with that. If
nothing else, it will give the Ethereals pause.” He followed her as she turned to head towards the Genetic Labs, and the Subject Cells. “However, before we get there, we do have something of a situation,” Vahlen warned as they walked towards the cells.

The Commander glanced down at her. “What happened?”

“Nothing major,” Vahlen said, looking mildly disconcerted as she psionically unlocked the door to the Labs. “As a general rule, I experiment with my own telepathy on the various test subjects. I’ve gotten rather skilled at navigating and influencing their minds.”

He was wholly unsurprised at that. She was a seventy-six on the Trask scale, a Magus-class psion and one of the most powerful in XCOM. Not quite Patricia, but closer than most. “Did you find something strange?”

“Not strange, but concerning,” Vahlen clarified. “We only experiment on convicts, thankfully, and that has never been an issue. Their minds are interesting, from a purely clinical perspective, but the problem is that we somehow have someone who is actually innocent of what he was convicted for.”

The Commander rubbed his forehead. As far as incidents, this was a thankfully minor, if irritating, one. “I hope you haven’t done anything to him?”

“No, nothing yet,” Vahlen assured him as they stepped into the Subject cells and stopped before one. “Once I found out, I quarantined him until I could speak to you. I’ve kept him well-fed and supplied him with actual amenities. But I did restrict him to the cell until we decided what to do with him.” The man before them, sleeping on an actual bed Vahlen must have moved in for him, seemed to be in his forties, with thinning black hair and thin stature; he was also extremely pale, likely from years of confinement.

“He’s seen too much,” the Commander muttered. “I don’t suppose you know who actually committed the crime he was convicted for? Or who actually convicted him?”

“He was accused of murdering his ex-girlfriend,” Vahlen explained. “He doesn’t know who did it, even if he has suspicions. I do know the judge and jury who presided over his trial. I don’t know the details of the case, but I’ve put together a report you can give to ADVENT.” She wrinkled her nose. “This is unacceptable. If ADVENT isn’t working on a judicial branch for the PRIESTs, this will keep happening.”

“Agreed,” the Commander said grimly. “Wipe his mind of what he’s seen here, and I want him moved out of here and to a country of his choice, with as much compensation as he wants. Give it to ADVENT too, maybe this will get them to accelerate their justice reform. I hope you included in your report suggestions to investigate this case.”

“Certainly,” Vahlen said. “I’ll have him moved, then alter his memories. He’ll remember us freeing him, but nothing of what he’s actually seen. I doubt he’ll care. He just wants to be free.”

“We don’t have any more, correct?” The Commander said.

“Innocent people here? No,” Vahlen confirmed. “Like I said, I discovered this almost immediately. However, I want us to have a telepath to investigate the ones being sent to us beforehand so we don’t have this situation again.”

“Better yet, just go through all of death row and solve the issue at the root,” the Commander half-seriously suggested. “I’ll have to talk to Saudia about this.”
“Now that we have that sorted out, we can move onto the developments,” Vahlen said, as they walked further down. “The more research we perform on MELD, the more baffled I am that the Ethereals haven’t put it to greater use. Genetic modification and mechanical augmentation is all well and good, but MELD is a lethal weapon if the potential is tapped.”

“This is for Artemis?” The Commander asked.

“It could be,” Vahlen clarified. “There are two methods of nanite weaponization we are working towards: Short-wave organic control, and bioproduction.”

“Promising,” the Commander said, since he suspected what both of those meant. “I assume short-wave is for in-combat usage only?”

“Correct,” Vahlen confirmed as they stopped in front of another cell. “The problem we continually have to worry about is the nanites being compromised. The way around this is nanites slaved to a specific frequency, and said frequency would be connected to a soldier via an implant. This wouldn’t allow the nanites to be altered or hacked.”

She tapped a finger on the glass and the man inside bolted up, eyes widening in fear once he saw Vahlen. “Couldn’t the implant be hacked?” The Commander asked.

“It’s not connected to a network, so no,” Vahlen dismissed, pressing a button that enabled communication into the cell. “Demonstrate nanite manipulation.”

The man nodded and turned towards a small orange cube on the ground. The cube began vibrating and suddenly dissolved and the small MELD nanite swarm flew into the air and rematerialized into a cube in his hand. For good measure he tossed the cube into the air once and caught it.

“He can control it with his mind,” the Commander noted. “An application of MEC cybernetics?”

“A lesser application, and nowhere near as complicated,” Vahlen clarified. “He’s technically not controlling them, he’s controlling the implant. The implant sends a limited number of signals that mean different things; up, down, left right, sphere, cube, and so on. It takes some practice, but I think that idea can soon be put into practice.”

“Give some soldiers MELD cubes, and this could kill the Battlemaster,” the Commander said as he thought about it.

“It’s nowhere near combat ready,” Vahlen clarified. “But the concept is sound, which is what I wanted to show you. The next usage will be useful to increasing our MELD production without relying solely on facilities.”

They moved down to another cell, where there actually wasn’t a test subject inside, but a dead, naked corpse. She was suspended over a clear glass vat underneath her, and the machine suspending her had a syringe arm just hovering over her. “Explain,” the Commander said dryly.

“MELD bioproduction,” Vahlen explained. “MELD has the ability to replicate itself, and there are hundreds of thousands of human and alien corpses that go to waste rotting. They are just a valid source of MELD, but they haven’t been utilized correctly as of yet. This was a specimen I requested from a morgue to test on, and I believe it will be beneficial to us.”

“That sounds extremely dangerous,” the Commander pointed out. “If it gets out of control-”

“Please, I know what I’m doing,” Vahlen told him. “One: The nanites have been programed to only harvest organic material, as you can see, there is no other organic material in the room. Two: It’s
been specifically programed to *not* harvest the other materials in the room, like the steel and glass. Three: The nanites can be shut off or destroyed at any time. Four: The room has several incinerators that will melt everything if that fails.” She pointed to the nozzles pointing out from the corners of the walls.

That seemed sufficient to the Commander. Although, he wasn’t sure if you could be too careful when it came to this. “Fair. Go on and demonstrate.”

“Well do,” Vahlen said as she pressed a button on a wristpad. “This can be done with only one nanite to start, but I would prefer you have the enhanced version.” As she spoke the syringe arm began injecting the yellow MELD into specific spots on her body; the feet, legs, chest, arms, hands and finally eyes.

The Commander grimaced as he saw the syringe go into her eyes. He never really liked seeing that.

“It will take a few minutes for the MELD to begin working,” Vahlen said. “Just watch.”

He did, and it took close to ten minutes before the first noticeable effects began showing. The body first began leaking MELD from cracks in the skin, where the nanites had eaten to that point, and began dripping down into the vat below. Then the Commander saw the MELD actually begin to dissolve the corpse entirely as the nanites replicated further.

Eventually it had eaten through the bones and tissue holding parts of it together, and parts of the body fell into the vat below, and were consumed by the nanites in the vat itself, while the ones still in the body harvested it. It seemed fairly slow, but the Commander then realized that the entire body had been turned into a vat full of MELD in just under a half hour.

“And that is enough MELD to fully enhance three soldiers,” Vahlen said proudly, as she pressed a button on her wrist. “All from one body. The nanites within can then be wiped and reprogrammed to whatever we want.”

“I think,” the Commander said slowly. “We might have potentially solved any MELD shortage we had. I would inform ADVENT about this use immediately. We now have a use for the bodies beyond fertilization and autopsies.”

“Gladly,” Vahlen said. “I take it you wish me to establish this program more fully?”

“Yes,” the Commander ordered, a smile growing on his face as he looked at the vat of MELD. “Let’s get this up and running.”

***

*The Praesidium, Patricia’s Quarters*

Patricia hadn’t quite believed it before she’d actually sat down and watched it, but lo and behold, it was an actual thing, and was the funniest thing she’d seen all day. So she naturally had to share this with someone. “Hey,” she called to Creed who was laying on the bed. “You’ll never guess what just got greenlit.”

His face scrunched in confusion. “What? A new project?”

“Not related to XCOM,” she chuckled. “Well, officially anyway. You know, what they call entertainment that gets approved for production.”

His face lit up and he nodded. “Ah, right. Took me a second to make the connection. So let me
guess, they’re making a movie about XCOM?”

“Close…”

“TV series?”

“Got it,” she confirmed, sitting down beside him and holding up her tablet for him to see. “And boy is it something.”

Creed smirked when he saw it. “This should be good.”

The trailer was, all things considered, not completely terrible. It was treated completely serious… she thought, since the various actors seemed to be into their roles. The plot seemed to be set in the pre-invasion period when they were fighting small groups of aliens and dealing with abductions. Not too bad, but what they seemed to think happened during those times…yeah…

It seemed that the trailer seemed to think that the aliens had flat out invaded each and every town they’d abducted, taking the unfortunate civilians alive, who were of course yelling and begging for their lives. Then XCOM showed up, and it turned into some sort of hostage situation. Obviously supposed to be emotional, but she just snorted when she watched it. That wasn’t anything close to what had actually happened.

“I don’t recall it being that…exciting,” Creed said, lips twitching. “We were lucky if there even were aliens there and they weren’t already long-gone.”

“Keep watching,” she said, as it showed the first of the characters.

This might have been her favorite part, because it seriously looked as though someone had been told vaguely what the actual members of XCOM actually looked like, but nothing else. The ‘Commander’ here wasn’t too far off visually, likely because he had actually been seen in public, but that was where the accuracy ended. For one, he appeared to be portraying a stand-up, nice, and ethical person. That alone was amusing.

There was the second in command who she thought was supposed to be Bradford, but looked absolutely nothing like him, and had the most overdramatic voice of them all. His one line as XCOM soldiers were seeing an alien for the first time was the most exaggerated “What…is it,” she had ever heard. It was very funny.

Patricia presumed that no one actually knew who the science lead was, aside from that it was a woman, because the lead scientist was not Vahlen, but some Korean lady. Same for Shen, who she assumed had been described to them as ‘the older engineer’. For good measure they’d made “Shen” look like a semi-mad scientist, with a beard too.

Creed started laughing. “Did you know they were doing this?”

Oh, and apparently she was also in this. Apparently in this timeline, XCOM already had psionics and she was the resident psion, called “Patricia”. No last name was given, likely for legal reasons, but yeah, the actress playing her was too much of a copy for it to be a coincidence.

“They certainly think we use a lot of explosives,” Creed commented. “And…oh, come on. Who thinks these clichés are actually good?”

And that was the other thing, whoever had made this just could not help themselves, and included stupidly generic taglines like “Witness the beginning” and “Can they succeed” and crap like that. Her personal favorite was the line the “Commander” spoke at the end that was perfectly
punctuated by the dramatic music.

“Gentlemen, we are now dealing with an enemy…unknown.”

It was so overly dramatic and out of character for the Commander that it was actually hilarious.

“So,” Creed set down the tablet. “I guess this is a thing. Who’s even making TV right now? That just seems like a waste of time that could be put elsewhere.”

“ADVENT has to be behind this,” Patricia said. “This is complete propaganda, and giving the general population a distraction so they don’t lose morale. If we’re having problems beating the aliens in real life, they can just show the aliens losing in TV. Psychologically it’s very smart. But still,” she smirked. “Completely inaccurate.”

“I wonder if I get on…” he mused. “Because I just know everyone is going to have a love interest.”

“I’m probably going to end up with that Russian soldier,” she guessed with a smirk. “Just guessing, and I guarantee that the Commander will also end up with the science lady.”

“Do you think they actually asked him about this?” Creed wondered. “I mean, it’s only polite to ask first.”

“Probably, and he likely said ‘sure, but I have actual things to do. No, you can’t have a tour,’ the end.” Patricia guessed. “Well, whatever the case, I think we have a new base-wide event. We haven’t really had one of those for a while.”

“Oh yes,” he said as he thought some about it. “This is going to be great.”

“Yeah,” she agreed. “I’m personally going to be mailing them about every inaccuracy I spot.”

“Careful,” Creed warned mockingly. “I don’t think executives would like being told that their entire show is inaccurate.”

“Hey, I’m one of the few known XCOM soldiers in the world,” she defended. “My word should count for something. And I can always threaten to mind control them.”

Creed groaned. “Please don’t.”

She lightly punched him. “Kidding, don’t worry.”

He rubbed his eyes. “Just wait till Quisilia hears about this. I’m expecting nothing less than full weekly reviews.”

“For some reason,” Patricia said slowly and sarcastically. “I think they’re counting on the publicity from that.”

***

The Praesidium, Engineering Bay

The Commander was rather looking forward to seeing what Shen had managed to put together for him. If the list was all complete, it was a much-needed boon and boost to morale for the soldiers. While the Commander wasn’t thrilled with the way the war had gone so far, it wasn’t unexpected. He would have been more suspicious if they had been winning more often than not. It would have felt like a trap to lure them into complacency.
Ultimately, he knew that in the grand scheme of this war, these were only the beginning stages. They were still here, they were still making progress, and soon that was going to pay off. Today might just mark the moment when they started hurting the aliens, and preferably, make them scared.

The main threat the aliens had were the Ethereals. Just one could turn any victory into a near-assured defeat. They were the key to victory. Defeat the Ethereals, then the Collective would soon follow, and once it did, there was going to be retribution for this unprovoked war. But he would save his plans for when they were actually feasible.

Right now, he wanted to see what Shen had put together.

“Commander, welcome,” Shen greeted as he walked up. “Your meeting with Vahlen was productive?”

“Very,” the Commander agreed as they began walking through the whirring machines. “I expect now that we have elerium decoded, you can move forward with several other projects?”

“Yes,” Shen nodded. “We will be working with the science teams to get plasma weaponry deployed as soon as possible. But elerium has helped us complete several major projects: Firestorm, Stargate, and Icarus. More will be coming in the future, but it is looking very bright, even as ADVENT will no doubt make advancements of their own.”

He knew about Project Firestorm, and had passing knowledge of the other two. “Well, I’m ready to see what you’ve come up with.”

“Let’s start small then,” Shen suggested, and led him to a metal table that had some kind of weapon on it. The size was about that of an autorifle, and the main barrel was circular and chrome, and culminated in an end with four prongs extended, all sparking with electricity. “While we didn’t have many new weapons for you, aside from Templar requests,” Shen continued. “Several engineers came up with this little weapon.”

The Commander picked it up, noting it was much lighter than he was expecting. “So what is it?”

“This,” Shen said with an amused smile. “Is the WHEEE.”

The Commander gave an absentminded nod, until his brain caught up with his ears. “I’m sorry, what?”

“The Weaponized High Explosive Energy Emitter,” Shen explained, giving a rare chuckle. “The idea was taken from the original ARC Thrower, which has sadly become rather obsolete in both use and power. The design was taken and scaled up to a full-sized cannon. The best description would be…” he paused, glancing up for inspiration. “A mobile lightning gun.”

Well, that explained the weight. He began walking to the range, shifting it around as he figured out how it weighed in various positions. “I don’t think you’ll have to test this on me,” he commented as he saw the end prongs spark. He could swear Shen sighed in relief at that. “Let’s see how this actually works.”

Shen had luckily set up several dummies at the end of a quartered off range. One was a regular stuffed dummy in the shape of a Vitakarian, or other vague humanoid, and the next was a copy, but with some light armor on it. He aimed first at the uncovered dummy, noting that the weapon sparked at the prongs, and saw a small laser beam shooting out from the WHEEE, which reminded him of the old laser weapons. The moment he applied some light pressure to the trigger, there was
a sharp crack and bright flash, and the dummy was gone.

Only scraps of material floated down, whatever remained that hadn’t been atomized by the WHEEE bolt.

That was rather satisfying. “Impressive,” he complimented. “I don’t suppose this can be fired indefinitely?”

“Unfortunately not,” Shen said with a smile. “This current iteration can only shoot four blasts before it requires a replacement cell, and the cells take near ten minutes to fully recharge, even with elerium generators.” He motioned to the WHEEE. “However, there are three different cells built into the cannon, which you can cycle through, and the recharging process will begin immediately for the most recent cell. You’ll have to watch your fire, but we didn’t want this to be a limited-use weapon.”

“Smart,” the Commander agreed. “Time for a little more conclusive test.” He aimed for the armored dummy, wondering what would happen to the metal itself. If the person inside didn’t die from literal shock, he wondered what-

He fired another bright white bolt, and the metal turned a scorched black, and then fell to the ground as the dummy had the same reaction as the first one, which was a violent explosion.

Huh. He smiled.

“I think we have another anti-Battlemaster weapon,” he noted, cycling the cells even though he still technically had two shots left. “I don’t imagine all that metal armor would be good for him if he were to…say…get struck by lightning.”

“No,” Shen agreed as the Commander turned back to him. “I don’t think he would. This hasn’t been field-tested yet…but you can imagine why we’re pretty confident about the results.”

“Be sure to make enough of these,” the Commander said approvingly, gesturing for him to continue. “I think I’m going to keep this one.” He flipped the labeled safety switch and followed Shen as they walked to a different part of the Engineering Bay.

“First I’ll demonstrate the Stargate Project,” Shen said, and they stepped into an expansive area, where there were two full-sized and identical Gateways, set a short distance from each other. Engineers were stationed at terminals close by, and connected to, the Gateways themselves.

“You figured it out,” the Commander said approvingly. “How hard was it?”

“Reverse-engineering a piece of technology that allows instant teleportation?” Shen questioned with some rare sarcasm. “Fairly. Sovereign tech is…difficult to understand, even when fully translated to English. However, on a purely scientific level, it does make some degree of sense, though how this could have possibly been discovered I cannot imagine.”

The Commander and Shen walked to the middle, in between both Gateways. “So if you can explain, how does it work?”

“The Gateways act as tuning forks, which resonates two points in space by creating a harmonic function,” Shen began, and the Commander was already having trouble following. Physics was not something he particularly liked, or was good at. “This function is designed to resonate two points in space-time.”

“Right,” the Commander said dryly. “And how does it do that?”
“By creating a compound wave constructed by a fast-fourier transform, which spikes at two points on an infinite line…” he trailed off when he saw the Commander’s face. “You don’t follow?”

“No.”

“Ok,” Shen rubbed his forehead. “The two Gateways are resonating at the same frequency, and that is how they are connected. The connection is through two points in space through the space-time fabric. So anything going in one, comes out the other. It’s not necessarily instantaneous, but the more perfect the resonance aligns between the two Gateways, the more likely people going into Gateways will exit instantly.”

He understood that. “And if the resonance isn’t perfect?”

“Two possibilities,” Shen answered. “The most common is that it takes longer to emerge from the other side of the Gateway. Instead of instantly, it could be a minute or more. People who went in didn’t report any difference in how it felt to them, as far as they were concerned, it was instantaneous. The other danger, and this was when we deliberately messed with the resonance, is that whatever goes in just vanishes.”

The Commander raised an eyebrow. “Just vanishes? Nothing else?”

“The most likely outcome is that it was teleported, but to a location other than the second Gateway,” Shen explained. “Where that is, we can’t predict. It could be a few feet away, or the other side of the world. It’s not lethal, or so we think, but it could transport beings to dangerous locations. We didn’t test on people either, but we did need to know the potential dangers.”

The Commander looked to the Gateways. “I hope you have a safe version prepared?”

“I assumed you’d want to test it for yourself,” Shen said, pointing to the engineers manning the Gateway terminals. “Begin synchronization!”

“Synchronization beginning,” one of them called, and both the Gateways began shimmering with purple and black energy, the black hole in the center growing larger and larger as Shen and the Commander walked up to one. A few minutes later, the Commander could make out a blurry image in the Gateway, which appeared to be the very room he was in.

“Synchronization complete!” Someone called. “Resonance is stable.”

“Here goes nothing,” the Commander muttered as Shen nodded it was safe to go through. He took a single step into the Gateway and he was suddenly on the other side of the room. He blinked. It seemed anticlimactic, but he then remembered that he had literally been teleported from one position to another.

“I think it works!” He called out. He turned around and walked through the Gateway he had exited, and was immediately back beside Shen. “That was strange,” he commented. “I didn’t feel anything. It was instant.”

“The big test will be once we have Gateways across the world,” Shen said. “I expect there might be some delay, but for now, it is instantaneous. The schematics and plans are ready to be given to ADVENT, as well as construct more of our own, with your approval.”

“Done,” the Commander said instantly. “I don’t think the aliens will be pleased that we can have unlimited reinforcements now too.”

“Unlikely,” Shen agreed. “And with that, I think I’ll show you the other two projects. I think you’ll
be just as pleased with the results for them.”

With what he’d seen so far, his expectations were high. “Lead the way,” he told Shen, and followed him to another part of the Engineering Bay.”

***

The Praesidium, Barracks

[Concerning the continuing development of XCOM technology, it has not slowed despite the continuing losses against alien forces. The main reason for this is that the Commander of XCOM has taken an extremely long view of the war ahead, and has accounted for a difficult initial defense. In addition, the presence of the Ethereal Aegiss, as well as Psion Patricia Trask has helped maintain morale.]

[In addition, there are several major projects that have been in development for the past several months, that I am not only just learning about. The FIRESTORM, ICARUS, STARGATE projects, as well as the ADVENT PRIEST Program have all significantly contributed to XCOM strategy moving forward, which I will detail below to the best of my ability…]

Nuan gritted her teeth as she looked over the currently typed report. The misspellings were bad, but it wasn’t something that she could particularly fix at the moment or easily. Her prosthetics, which rested on the laptop in front of her, were more of a hindrance than a help in more delicate situations like this.

While she was still thankful to have hands, it was more difficult to adjust than she was expecting. She hadn’t felt right ever since she’d started using them, and everything she tried to do to get more used to them only highlighted just how odd she felt. She was more dexterous with them than she’d been a few weeks ago, but still…

What continually upset her was there wasn’t any feeling. Not like actual skin. She could control to an extent how much pressure she exerted, even if she’d shattered a few glasses every now and then. She used plastic now as a result, but that was the only stimuli she truly got. She knew when she was touching something, but it barely mattered what.

Heat, cold, hard, soft; she couldn’t feel anything anymore. She knew the prosthetics could withstand extreme temperatures, so she wasn’t in much danger per-se, but she would have honestly preferred the ability to feel pain, over this blank nothing. Before this, she would have liked the ability to just ignore pain, but now she wouldn’t think of it. What people didn’t understand was that if you couldn’t feel pain, you also couldn’t feel anything else.

And she missed that.

It felt petty and selfish since she actually had functional limbs, but all it was reminding her of more and more was just what she had lost. It was difficult to just keep ignoring that, since it could happen at any time, even while writing a report for her superiors.

So she’d tried everything she could to take her mind off it, and decided to figure out exactly what XCOM had been doing to make the most comprehensive assessment possible. Turned out that XCOM had quite a lot of projects going which were all being completed now. Elerium was perhaps the largest game-changer, and she was debating putting in a section explaining how to use it from Vahlen’s report.

Considering the Commander’s overall attitude to giving away information, she was expecting the
majority of it to be redacted. Maybe she’d have to speak to him about it. Thankfully it seemed
China was actually not making any rash decisions and making sure not to antagonize ADVENT.
They were no doubt still concerned, but she was breathing a little easier now that she didn’t have to
worry about a Chinese-ADVENT war.

Although, once they learned the details of the PRIEST Program, that might change. China would
be trying to make psions of their own, but she doubted they would have much success. The
PRIEST Program would be considered a threat, but then again, pretty much everything was a threat
now. If anything, they were going to be more concerned about the rapid technological progress of
XCOM.

She was fully expecting Aegis to be censored as well, but maybe it would be enough for her
superiors to figure out that something was causing this rapid advance. The Gateways were the
largest tell and she hadn’t planned on even trying to include how they worked. There was zero
chance the Commander would let that fall into Chinese hands.

“Another report by the ever-diligent Chinese agent?” Iosif commented lightly as he walked up.

“Quiet,” she muttered in return, but she was rather happy to see him. He at least didn’t have any
issues talking with her, as the combination of her nationality and now perceived disability had
made her more unapproachable than ever. She wouldn’t have minded too much, but sometimes the
isolation was depressing.

Oddly enough, the MEC soldiers made for better conversation partners. Even if they couldn’t quite
relate, they at least understood more of what she was dealing with, even if they weren’t
necessarily...sympathetic. The newer-model ones that had just been converted did seem to retain at
least some of their personalities, one had even made a joke, but they still seemed more imitations
of personalities than the actual thing.

No, that wasn’t really fair. They just...their augmented brains must not be able to process emotions
and genuine displays like regular Humans. It was a strange combination to her, they were perfectly
capable of understanding various emotions, as well as breaking down causes for each, but they
couldn’t really express them for themselves.

She wondered if that was actually just a cost of heavy brain modification, not necessarily related to
the MECs. Either way, the MEC pilots were far from automatons that quite a few people
perceived. Still, it wasn’t quite like holding a conversation with an actual person. She glanced up at
Iosif. “Shouldn’t you be training those new Templars?”

“Where do you think I’ve been all day?” He asked rhetorically as he sat down by her. “I’m feeling
rather good seeing the new ones come in. The aliens won’t find us as easy to kill.”

“Let’s hope so,” Nuan muttered, looking back at the laptop screen, willing herself to keep going.
She did need to get this done. “The Commander has had his people advance a great deal
technologically.”

“I think we’ll be attacking the aliens in America next,” Iosif guessed. “Think you’ll be combat
ready by then?”

Her lips twitched as she thought. “Maybe. I can handle a weapon well enough.”

“But...” he finished, clearly sensing her hesitation.

“But I’m not comfortable with these yet.” She held up the prosthetic arms. “I’m not sure I’ll ever
be,” she admitted.

His eyebrows furrowed as he likely sensed she wasn’t exactly happy right now. “Is it really that bad? Have you talked with the engineers?”

“It’s not that,” she sighed, trying to think of how best to explain it. “Functionally, everything works perfectly. I can even write legibly now. My issues are more psychological, I think.” She paused. “I can’t feel anything. And that bothers me.”

“How can your hands work then?” He asked, frowning, nodding to the cup by her laptop. “You shouldn’t be able to pick that up then.”

“That’s pressure sensors,” Nuan corrected. “It’s…you’ve worn heavy gloves, right? You can still handle things, but it’s more difficult and you don’t have any sensitivity in them.” She twisted a hand, exposing it to him. “That’s what this is like. Permanently.”

“Ah,” he nodded in understanding. “That…hmm…I can see why that wouldn’t be pleasant.”

“I’ve found the best thing to do is just distract myself,” Nuan shrugged. “Exercise, research, talking; physical things mostly. Too much time alone and I just start thinking about it again.” She glanced back at her laptop. “However, some things just can’t be helped. We all have people we answer to.”

“Can I see them?” He asked suddenly.

“Sorry?”

“Your prosthetics.” He nodded to her hands. “I’ve not seen any up close, aside from the MEC pilots, and theirs are vastly different.”

She thought about it. It seemed a little strange, but Iosif probably had another point to this than just wanting to hold her hand. They were both professionals after all, and she had to admit that she would have been curious to see one up close if the positions were reversed. She didn’t answer, but extended her right hand to him, which he took rather gently, or so it looked.

He manipulated her hand lightly, turning it over, and visibly gripping it harder and lighter. “You can’t feel this?” He asked, looking up.

“I tell that something is holding onto it,” Nuan clarified. “I can’t tell the difference in how tight you’re holding me or not. Well, except if you’re barely holding on. Metal doesn’t bend easily.”

He tapped the palm of her hand. “So still nothing?”

“I know something is tapping it, but that’s it.”

“Thank you,” he said, setting her hand back on the table, which she kept there for the moment. “Have you looked into…” He paused. “Well, weaponizing them?”

She blinked. “No? I mean, I was just wanting to get used to them first.”

“Fair enough,” Iosif nodded. “But you can’t feel pain now. Honestly, something that might help might be to take advantage of this. If you can’t feel, I don’t think you’re going to come to terms with it just thinking of how much worse it is. Strength-wise, I think that only the MEC pilots are stronger than you. Maybe some of the modified soldiers like Carmelita.”
“I can punch walls and not be hurt,” she said. “I guess that’s something.”

“And you felt good, right?” Iosif asked knowingly. “Taking out frustrations on nameless walls always helps.”

“More than was probably good,” she admitted. “I really haven’t thought about these like…that.”

“Maybe think about it,” Iosif said. “At the very least, I bet punching an alien would feel good. I’d even say you’d make a good Templar, but if you don’t, I’d like to at least teach you some basic skills. It isn’t everyone who can punch with impunity.”

She cocked her head, somewhat surprised by the offer. “I don’t want to hurt you.”

He chuckled, extending his own arm, and she saw the faintly illuminated hexagons that lined his skin from the light above. “I have Iron Skin and psionics. I think I can take a punch. Might not feel good, but if my skin can stop plasma, it can take a prosthetic punch. Besides, this would take your mind off everything else.”

Nuan didn’t really see a reason not to do it. It was a kind offer, and one she probably wouldn’t get anywhere else. “Ok, I accept… and I hope you don’t regret it.”

“Regret?” He laughed. “I highly doubt that. I wouldn’t have proposed the idea otherwise.” He stood. “Anyway, whenever you finish writing stuff for the Commander to redact, find me. I’ll be waiting.”

She pointedly ignored most of his last sentence. “I will. Thank you.”

“Anytime, Nuan,” he said with a smile. “We’re all here to help each other, regardless of what expectations are.”

A good sentiment. If only more people would follow it, they likely wouldn’t have the problems they did today.

***

The Praesidium, MEC Suit Storage

“You finished the Shinobi-Class MEC?” The Commander asked as they stepped into the main MEC Suit Storage area, where the suits were stored when not in use.

“We delayed it slightly, as we needed to account for several different variables the Battlemaster proposed,” Shen explained. “This is a MEC specifically designed for fighting him, and with Aegis’s help, I think he’ll be surprised at what exactly it can do.”

The Commander then saw the Shinobi MEC itself. With a pilot inside, and all powered up, the MEC itself stood twelve feet tall exactly, near the same size as the Battlemaster, which would already make the battle more even. The suit was white, and slimmer than the other MECs; more humanoid in some aspects. Every part of the joints and limbs were covered in a smooth metal layer, even if it was clearly not as much as a Marauder or Ballista-class.

There were two tanks of something on the back, and both wrists had attachments built into the limb itself, which didn’t stand out, but were clearly to be used for dispersing something. What that could be, the Commander could only guess at this point. There were also strange attachments on each of the joints, small, blunt protrusions that appeared to be a mesh, with a faint blue glow underneath.
The weapons it held was where his attention was directed. The right hand held a massive longsword, which seemed to be not quite as long as the Battlemaster’s, but at least eight feet long, and with equally large proportions for the hilt size and width. It had an upward angled crossguard, and a block pommel. The other hand held a dark grey rectangle shield, with the XCOM logo emblazoned on it in black.

“Impressive,” the Commander said, nodding in approval. “I assume it does more than just fight with a sword and shield?”

“Certainly,” Shen said with a nod, as Aegis also then stepped into the room. “Aegis will demonstrate it in a simulated battle.”

“While not perfect, Shen and his team have made an excellent effort to combat the Battlemaster,” Aegis said, not stopping as a purple psionic sword of his own appeared in one of his hands. “I am no swordsman, but I can provide an effective demonstration.”

The Commander was amused to see that Aegis was actually in the inferior position here since he was several feet smaller, but certainly didn’t act like it was a problem. He swung his psionic sword and the MEC answered by meeting the strike, then immediately began going on the offensive, raining down a series of sword blows and strikes that the Commander would not have thought possible. It seemed to him even faster than the Battlemaster.

“In theory, MEC pilots should have faster reaction times than purely organic beings,” Shen commented as Aegis was forced to use additional defensive psionics to protect himself, as the Shinobi used both the sword and shield offensively; stabbing with the sword while bashing the shield into Aegis when he wasn’t expecting it. “This includes the Battlemaster. We can’t fully match his charging ability, but we can try and react to it better.”

The Shinobi was also extremely mobile for a twelve-foot machine. The Commander noted that there were several small jets built into the legs, feet, and back of the MEC which fired off intermittently as the Shinobi moved, which must have been precisely controlled by the pilot since it never seemed to hinder the suit in any way.

Aegis apparently got tired of being attacked, and thrust out a hand, lifting the Shinobi into the air and tossing it back, then leaping forward to continue the assault. The jets on the Shinobi flared, and while it didn’t quite have a smooth landing, it recovered extremely quickly, despite losing its shield. While the sword hand blocked Aegis’s strike, holding him in a sword lock, the other arm raised and shot out a stream of white mist towards the Ethereal.

Aegis fell back, covering himself in a psionic shield as the Shinobi advanced, wrist raised and spraying more of it in his direction. “Liquid nitrogen,” Shen explained. “A potential way to slow the Battlemaster down, or any other fast alien. If nothing else, he’ll want to stay away from it.”

“Clever,” the Commander noted slowly. “I assume it can be adapted for other chemicals?”

“Yes,” Shen confirmed. “Acid, napalm, white phosphorus, thermite. The only thing that we didn’t design it for was chlorine triflouride for…obvious reasons.”

Aegis extended a hand, and the MEC froze in place, as it was caught telekinetically. Aegis moved around it, and suddenly there was a blue flash, making Aegis stumble back, freeing the MEC. It leapt toward Aegis, sword in hand and Aegis barely got his own psionic blade up to deflect it, as he was still dazed.

“Short-range electric pulse,” Shen clarified. “The Battlemaster wears metal armor. He is vulnerable
to electricity, and if the Shinobi is stuck telekinetically, they can emit this and it should disrupt his
control. Unfortunately it needs a brief recharging period, but it is effective, as you can see with
Aegis who doesn’t even have that.”

“It certainly looks like it will hold up well,” the Commander complimented. “Anything else it can
do?”

“Those are the main features,” Shen said, motioning to the two duelists. “Stand down!
Demonstration finished!” The Shinobi stood down immediately, and the psionic blade and shield
around Aegis dissipated as he straightened.

“As you can see,” Aegis said. “I believe this will provide an adequate challenge to the
Battlemaster.”

“Ah, one more thing,” Shen motioned to Aegis. “Stab her in the arm with the sword. There is
another feature we added.”

“Certainly,” Aegis took the offered sword from the Shinobi and stabbed towards the arm. The
Commander assumed this was part of the demonstration, even if it was an unconventional way of
showing it off. Aegis had to turn the blade to the heat setting, but he pushed the tip through and
withdrew quickly. Mere seconds later, the gaping wound leaking liquid and oil began closing, until
a few seconds later there was no visible wound at all.

“Self-healing MELD nanites,” Shen confirmed. “We expect the Battlemaster will land several
blows, and knowing him, most will be critical. The Shinobi suit has repairing nanites to repair
surface damage, and internal nanites to regulate internal systems. Not an infinite supply, mind you,
but it will increase survivability significantly.”

“The sword can be configured to be attached to the hand of the suit,” Aegis added. “As can the
shield. However, it is an optional function that varies on the style of the pilots in question.”

The Commander smiled grimly. “I’m looking forward to the Battlemaster encountering this.
Especially with Templars…”

“Or soldiers in general,” Shen said. “I imagine that a Shinobi-Templar-WHEEE combination might
be enough to overcome even him. No superweapons required.”

“I would not become overconfident,” Aegis warned. “This will cause problems for the
Battlemaster, but he will adapt.”

“Maybe,” the Commander agreed. “But I think sooner or later he’ll reach a limit.”

Shen motioned to the MEC, and the Shinobi walked off. “While we’re here, Commander, I do
want to appraise you of another project that isn’t officially in production yet.”

The Commander raised an eyebrow. Shen doing something off the record. This was unexpected.
“Nothing too outlandish, I hope?”

“Depends on your definition,” Shen said slowly, and began leading him to another section of the
Engineering Bay, with Aegis following closely behind. “You recall the Athena Contingency?”

“I wrote it,” the Commander snorted. “Of course I do.”

“But as of yet, no steps have been taken in case we…need it,” Shen pointed out hesitantly.
“Considering our precarious position…I do think that is a mistake. Even with our advances, we are
still far from posing a dangerous threat to the larger Collective, much less more powerful Ethereals.”

The Commander suddenly frowned, recalling exactly what the Athena Contingency entailed. The implications were not...bad...but it was one where there were a very limited number of good outcomes. He hadn’t started work on it for a reason. This needed to be something that was handled very, very carefully. “Please don’t tell me you have a—”

“No,” Shen quickly clarified. “Not a sentient one. More of a...let’s say, proof of concept.”

“This is dangerous.” Aegis commented.

“I assume you read my mind?” Shen sighed.

“When it comes to machines, relying on them is dangerous, and giving them abilities to reason is cataclysmic,” Aegis answered. “There is a reason we avoided artificial intelligence. We observed multiple alien species believe they could harness the advanced capabilities of an AI. All of them were eventually betrayed by it, or otherwise sabotaged. One of the most likely theories as to what the Synthesized are is an AI that turned on its creators. You are playing with something you do not understand, Raymond Shen. I would advise—”

“You can advise all you wish,” Shen retorted, surprisingly sounding irritated with the Ethereal as they stepped into a circular room that was filled with alien computers that the Commander recognized from various UFOs. “But the fact is that our options and tools are limited. If you continue to not provide more tangible assistance, then we need to explore other possibilities. And since you admit that the Ethereals are unfamiliar with this field, I hardly think you are in a position to lecture us about the dangers.”

“I have seen where this leads.” Aegis stated flatly. “It has never turned out positively.”

“Enough,” the Commander demanded, raising a hand, looking at Shen. “Doctor, what exactly do you have to show me?”

“Yes,” Shen adjusted his glasses. “The CODEX system was what I am interested in. While it is not a true artificial intelligence, it can perform many functions and has an ability to respond to stimuli that is extremely similar to theoretical AI concepts. However, it cannot go beyond this, as there are programming blocks that prevent it from ever being able to answer or think outside the designated parameters.”

“So you took a CODEX and did what?” The Commander asked.

“The first thing I did was set up a working CODEX,” Shen said, walking over to one of the consoles. “It relies on databases for all information, as well as connections to UFOs or other systems. I and a small team created a system disconnected from any networks or systems. This still is not connected to any XCOM database.”

“At least you are sensible.” Aegis commented.

“And...here.” Shen pressed a button, and a solid blue hologram of the CODEX figure appeared, but instead of a faceless head, it instead appeared to be an older man, with glasses and thinning hair. He appeared to be based off a real person, but who that was, the Commander couldn’t guess. “As you can see, I made some visual changes. The CODEX system has quite a bit of untapped versatility, but the default is the faceless golden figure, with Female Voice Two, to be specific.”

“I see,” the Commander looked at the hologram closely. “Where are you?” He asked the hologram.
“I am currently, error: Location unknown,” the hologram answered in a generic male voice without any inflection. “Error: Data not found; Error: Database connection lost; Error: Local systems not accessible; Error: Likelihood of memory corruption: One Hundred percent.”

“Quiet,” Shen called to the hologram. “He’s not connected to anything. You won’t be able to ask him anything without getting roughly fifteen error messages.”

“‘He’?” Aegis said skeptically.

“Better than it,” Shen shrugged. “I doubt you referred to the CODEX as ‘it’ either.”

“Does he have a name?” The Commander asked, amused. “Or at least the system itself?”

“Yes,” Shen said, as he continued working at the terminal. “The JULIAN System. Named after a friend who worked in artificial intelligence. Expert programmer and my teacher many years ago.” Shen paused. “I’m afraid he passed away several years ago. I felt it fitting to name what may be the first artificial intelligence after him.”

“Fair enough,” the Commander nodded.

“I’m sure your friend would appreciate you jeopardizing the Human race in his name,” Aegis commented. “But the sentiment is commendable.”

“Comments like that aside, I do have another demonstration,” Shen said. “And…now. JULIAN, identify the following people in this room.”

“Current residents in the area,” JULIAN said in the same monotone. “Three: Jack Young, Shen Trey, Pablo Roberto. Do you have further inquiries?”

“No,” Shen shook his head. “Shut down.” JULIAN vanished as he continued explaining. “Even with a temporary database, I didn’t want to use actual data, so I simply put our pictures with different names. But you can see that it works near-instantly.”

The Commander scratched his chin as he thought. AI was not something he wanted done in secret, or with only a few people. While Shen had his heart in the right place, Aegis had a very good point that an actual AI was not something they had much experience with. “I’m expanding this to a full operation; find the best experts in artificial intelligence and put them on making this work safely. And I want to be appraised of every development. You don’t do things like connecting it to external sources, or giving it increased capabilities without my approval.” He looked to Shen. “This looks good so far, but this is either being done correctly, or not at all. We can’t take the chance.”

He glanced up at the Ethereal. “And you are going to work with Aegis on this. While he clearly doesn’t like AIs, I’d rather he disapprove and keep you from doing something stupid than have him not be involved at all. And this is going forward Aegis, even with the dangers.”

“I do not like it,” Aegis said. “But I will have to ensure you do not cause lasting damage.”

“Good enough,” the Commander nodded, before looking to Shen. “Now, let’s see what else you have to show off.”

***

The Praesidium, Archangel Testing Area

“Coming in hot!” Sierra called out as she angled her armor to prepare for the rapid insertion. “Ted,
Anna, you with me?"

“Copy, Sierra,” Ted Holden answered, sounding way too excited about this. “Right behind you. Ready for this?"

“We are completely not,” Anna Pavlova disputed, slightly stammering as they approached the ground. “Fuck you and your idiot plans, Sierra.”

“Noted,” Sierra grinned as the target zone was highlighted on her HUD. She’d wanted to try this ever since she’d strapped on the Archangel armor. She would never have thought she’d be in this position, but now she didn’t want to be anywhere else. “Prepare to cut jets.”

A few seconds later the HUD flashed yellow, and she flipped her body up vertically, flared her jets with a mental command which briefly slowed her, and then cut the power and fell to the ground feet first. The first time she’d done anything like this she’d thought for sure she was committing suicide, but much to her surprise, the Muscle Fiber Density modification did let her drop entire stories without any damage whatsoever.

And it worked especially well for Archangel drops. She landed on the sandy metal flat filled with targets with a sharp thud, and immediately began firing her gauss rifle at the targets. Ted landed right beside her and thrust out his arms, which were encircled with psionic energy. Purple beams shot from them, incinerating the targets in question.

Anna landed on the other side, and began firing her own autorifle, marching forward as she fired, turning the targets into metal scraps and pieces of material. “Targets eliminated,” Sierra said. “Launch!” She triggered the launch command manually, and jumped into the air. She’d memorized the exact time needed for the jets to fully turn on, and timed correctly, she could be in the air again nearly instantly.

Ted whooped as they flew back into the midnight desert sky. “Now that was a combat drop!”

“Fifteen seconds and thirty-two targets removed,” Anna commented as they circled the sky. “Not bad for a first try.”

“I think I came in a little too early,” Sierra said, thinking on the drop. “I could have waited another second before killing the jets.”

“Good run,” the voice of Shen said. “Perform air-to-ground assault on Section 7. I’ll let you decide how to handle it.”

“Copy,” Sierra confirmed, and began angling her body and jets towards the section. Controlling the armor had taken some getting used to, and for a while she’d mostly gone through various stages of crashing it into walls and sand. But the moment when she’d actually flown in the air for a decent amount of time, and landed it without stumbling had been one of the best feelings ever.

The armor itself was largely controlled by a kind of neural interface, which was a much less invasive version of the MEC implants. Each time she technically had to be connected to the suit, and that allowed her a surprising amount of control over it. Everything vital was displayed on the HUD, but for direction, speed, and intensity, she mostly just had to think about it, and the suit would usually respond. It was a difficult thing to explain, but while the Archangel armor was bulkier than Aegis armor, she didn’t really feel it at all.

Complicating controls slightly were small pads in the boots that when pressed by the toes, gave the jet on that leg an extra boost. It had taken some time to not accidentally press it while flying, but
now she was good at keeping her feet still unless she needed a little extra control. She’d spent enough time in the suit that some of the more complicated maneuvers were starting to become familiar.

“Section 7 is urban chokeholds, yes?” Anna asked. “Or is that 8?”

“No, 7 is urban chokeholds,” Sierra confirmed, a grin stretching across her face once she said that. “Firestorm tactic?”

“Oh yeah,” Ted said gleefully. “Think I’ll let you ladies take point. I’ll destroy whatever you miss.”

Sierra checked her fuel levels for the suit heavy weapon. Archangel armor had several different integrated attachments, chemical dispensers and heavy lasers being chief among them, and the flamethrower was without a doubt her favorite weapon she had yet to use. “Anna, you take street two.”

“Oh understood,” she confirmed and sped past her as Section 7 approached. It was a mock city block created, with several buildings filling a small web of streets. No skyscrapers unfortunately, but it provided a good enough simulation. And on the streets were dummies in fake cover, presumably attacking allied or XCOM forces.

“Pulling up to the center,” Ted informed her and flew upwards until he was stationed more or less in the center of the section, having a clear view of everything. His arms were encircled in violent psionic energy as he waited to unleash it.

“Prepping flamethrower and coming around for the first pass,” Sierra stated as she manually prepped her flamethrower. She wasn’t as familiar with the weapon, and didn’t want to rely on mental commands through the suit with it yet. The Commander was probably watching, and he would want to see everything working.

She circled around, took a breath, and then sped forward, lining up with the street she was planning to strafe. She stuck her rifle to the attachment on her chest, which kept it in place temporarily as she got closer to the ground. Now came her favorite part. “Firing.” At the correct mental command, napalm shot out the nozzle on her left wrist, covering the entire street.

Sierra was now prepared for the kickback of the weapon, and had adjusted the strength of her jets to compensate. Once she reached the end of the street, and therefore the enemy line, she ceased the napalm stream and angled herself upward, shooting for the sky with a victorious cheer of her own.

“Strafing run complete,” Anna updated, and as Sierra angled herself around, she saw Anna’s chosen street burning as well. Ted was also shooting lances of psionic energy at the dummies that hadn’t been incinerated, which was almost none, bless his excitable little heart.

“You know, I wish you had missed a few more,” Ted commented, as he flew up to where they were congregating. “I didn’t really do anything.”

“Hey, the lights looked pretty,” Anna joked. “All we did was set some things on fire.”

“Good work, all of you,” Shen interrupted. “Return to Praesidium entrance. Nothing fancy when you come in.”

“Roger,” Sierra acknowledged. “We’re on our way.”

She turned herself around, and they shot back across the desert towards the Praesidium. In
retrospect, she considered herself very lucky she’d decided to go check out just what XCOM had been working on that one day, because if she hadn’t, she likely wouldn’t have been asked if she wanted to join the program, and she would have missed out on the ability to fly.

Flying was, unequivocally, awesome. There wasn’t a better word to describe it.

Granted, it probably wouldn’t be quite as fun when aliens were shooting at her, but she was more or less invincible, so she wasn’t quite as worried about that as she probably should have been. She wasn’t the only one of the current soldiers who were asked. She was an outlier in that she really didn’t have any kind of air experience whatsoever. Most everyone else had a background in parachute insertions, or other paratrooper activities. Anna was an Air Force TRF, and Ted had been a paratrooper.

All the new soldiers recruited specifically for the Archangel Program were all experienced pilots or paratroopers. All things considered, she felt she was holding her own pretty well. It helped that she completely loved doing this.

“Coming in for a landing,” Sierra said as she saw the landing pad, where Shen, the Commander, and a few other Archangels were standing. Per the orders, she took it slow, and angled herself up vertically about fifteen feet above the ground and killed the jets; falling to the ground and landing upright, Ted and Anna right behind her.

“Impressive,” the Commander complimented, inclining his head. “It sounds like you had fun.”

“As much fun as can be had, Commander,” she said tactfully. While she most certainly had, it might be best not to visibly have too much fun. “I expect things will become more serious in actual combat. But we are well-prepared.”

“We’ll find out shortly,” the Commander said, turning to Shen. “The pilots you have certainly seem skilled enough. Would you consider them combat-ready?”

“That is more of a question for the respective Dominion Archangels,” Shen said, cracking a smile. He hadn’t quite gotten into the whole titles they’d decided on, but since they were coming up with entirely new military divisions, most of them had decided to give themselves appropriately decent titles. Which the Commander seemed to recognize.

“Taking the whole ‘angel’ theme seriously, I see,” he said dryly.

Sierra smirked. “All the psions get neat titles, Commander,” she pointed out. “Only fair we get some of our own.”

“Well in that case, what do they think?” He said turning to the two Dominion Archangels, the ones with the most experience both with the suits and aerial operations in general.

There was Nu Jung-Hwan, who just went by Hwan, one of the most experienced South Korean pilots in their entire military. In his off time he was also proficient in multiple martial arts and had taken up swordplay as a hobby. Naturally, he was one of the few Templar Archangels, and there wasn’t anyone who had picked up on how to use the suit as well as he had.

Since he’d apparently helped design it, that wasn’t a surprise. Even with the limited time the suits had actually been able to be used, he was a natural at it, pulling off insertions at incredible distances and leaving again in mere seconds.

The other was Viktoria Hammarström, who had quite possibly the best name Sierra had ever heard. She was special beyond her name though, since she was originally part of the Swedish
Parachute Rangers, and was also a natural with the Archangel suit. However, aside from being more tactically-minded, she was also a Leviathan-class Psion, and with the Offensive aptitude of powers.

While still getting used to her psionic abilities, Sierra had witnessed her destroy the entirety of Section 7 once with some kind of psionic maelstrom. She was going to give Patricia a run for her money if she kept training.

“Most I believe are sufficiently combat ready,” Hwan stated confidently. “Some of the Templars have yet to fully master aerial melee combat adequately, as some are not in acceptable control of the suit. But who you saw today are quite ready, as I’m sure you’d agree.”

“I concur,” Viktoria agreed. “There is little more that can be learned from repeated exercises outside of actual combat. The Archangels here are more than adequate for combat.”

“Excellent,” the Commander said. “In that case, I would prepare yourselves. We will be taking the fight to the aliens in the next few days. I would advise that you be ready.”

They all saluted. “Yes, Commander.”

“Then return to your training,” the Commander said, returning the salute. “I look forward to seeing you in action against the aliens themselves.”

Sierra couldn’t agree more.

***

The Praesidium, Practice Ranges

Oliver did have to admit that the new gene mods really did make a difference. He had literally hit every single target at maximum range and it had genuinely not been that difficult for him. He was going to have to ask that XCOM get some harder practice ranges, because it was almost stupidly easy now.

He hadn’t been the only one there either, and some of them had sort of tried to see who could make the most impressive trickshot. He was too old to really do stuff like that, and it might have irritated him before the mandatory upgrades. But considering how accurate he was with a pistol of all things, he was less offended by professional soldiers not taking a practice range completely seriously.

But he was done now, and would have been on his way back had he not spotted a very much armored Carmelita sitting in the background with some tools and a paint can of all things, working on something. He had to at least go and see what that was about. “Expecting trouble?” He asked, making her glance up.

“Oliver, right?” She said in her soft voice, looking at his face inquisitively.

“Yes.” He looked down at the table. “Project?”

Carmelita seemed to be working on some kind of helmet. It wasn’t the standard one issued to Assault-class soldiers, but a design he’d never seen before. It reminded him more of an astronauts helmet, if the faceplate was complete black and not transparent, as well as the overall design being more oval to fit the head better.

He raised an eyebrow, and he broke into a smirk once he saw what Carmelita had painted on the
front of the helmet. It was a smiley face of all things, in a bright Wal-Mart yellow, with two slits for eyes and a curved line underneath for a mouth. Nothing original, but it was not something he was expecting to see on a helmet. “Ah, what is that?”

Carmelita looked at the helmet fondly as she flipped it in her hands. “This,” she said, looking up. “Is one of the few unsolved mysteries in XCOM. It’s an old helmet, one of the first-gen kinds. As far as I know, only one was made and I found it, and didn’t want it to go to waste.”

“That’s the mystery?” He asked. It seemed rather benign to him.

“Nope,” she clarified. “Back in the beginning, this actually belonged to a sniper. No one ever figured out anything about him since he didn’t talk, but we had to go along with it. He never showed his face and only communicated in sign language.”

Oliver’s eyebrows furrowed. “Why? And isn’t that dangerous?”

“Never found that out,” Carmelita shrugged. “And you would think, but we somehow managed to make it work. Probably because the sniper was actually one of the best I’ve seen. I think he came with the Commander, but no one knows for sure that I could find.”

“He had a sense of humor, clearly,” Oliver said, looking down at the helmet.

Carmelita gave a sad smile. “No, a…friend…he found out where the sniper was hiding out, and made some ‘adjustments’ to the helmet.” Her eyes unfocused as she looked sightlessly into the distance. “Needless to say, the sniper was not amused, but I guess he liked it enough to keep it.”

Oliver found that very amusing. “Who? I’d give him thanks for creativity. That’s rather brilliant. And terrifying.” He added after a few seconds of thought.

“His name was Shawn,” Carmelita said with a sigh. “He’s dead. Chryssalid.”

“Oh.” That detail suddenly put this in a new context for him. Considering how Carmelita was acting, he suspected that this Shawn had been…important to her. “I’m sorry to hear that.” Especially if he’d died to a chryssalid. Hopefully it had been quick and not as a reanimated corpse carrying eggs.

“Appreciated,” she said tonelessly. “His was one of the first deaths. Hamburg. I should have been sent with him. He might have lived.”

_or, if he died by chryssalid, you would have had to shoot him._ He privately thought, but didn’t say aloud. “Not necessarily. I think you know that.”

She pursed her lips. “I was a better soldier than him. His chances would have been better with me protecting him.”

“Protecting?” He raised an eyebrow. “Interesting choice of words.”

“Don’t play coy, I doubt you’re an idiot,” she stated flatly. “I doubt it’s ‘interesting’ either. You try and protect the people you care about, right? Even if you know they can do that themselves?”

“True,” he admitted. “Although I’m afraid not in the same context as you.”

“Count yourself lucky,” Carmelita said coldly. “Mira was right. Attachments never work out in our line of work. All it will eventually cause is pain.”
The name was unfamiliar to him. “Another friend?”

“Wouldn’t call her that,” Carmelita said. “She’s dead too.” Carmelita looked thoughtfully around. “It’s funny. There aren’t really any survivors from the original team of soldiers. Only Patricia and Abby are still alive, and me. It’s strange, somehow managing to endure while everyone dies around you. I don’t want to think how many of the new people just coming in will die in the war.”

“That seems defeatist,” Oliver commented.

“Maybe,” she said slowly. “But all I can do is what Shawn would want. He would want XCOM protected, and I shall do that.”

“You’re only doing this for him?” Oliver asked.

“Not completely,” Carmelita shook her head. “He would want me to protect XCOM. But the only thing I really care about is avenging him, and every other Human killed in this war. I will either see all the alien worlds burning, or I will die. There is no peace with the aliens, regardless of what some think. They must be driven extinct, and I will work until my dying breath of make that a reality.”

Oliver felt like he was on thin ice right now. “You don’t seem to have much of a problem with the aliens here.”

“They are allied,” she said simply. “They are a danger, but one that can be controlled. That is the only possibility I see for aliens should we win. They will submit to us, or they will die. I would personally prefer the second option.”

“I see.” Oliver was not quite sure how to take this. He’d known Carmelita unsettled him on some level, but had largely chalked it up to her serious charisma and natural intimidation. But now he knew it was because he was quite sure she was a sociopath who would not be dissimilar to how some aliens probably viewed humanity. She didn’t seem unstable, not in the usual sense.

He’d seen broken people before. If the loss of her lover would snap her, it would have happened long ago. She was at a stage where that chance had passed, and all that mattered to her was vengeance, and she was perhaps one of the most dangerous women you could have for an enemy. When she said she intended to kill or virtually enslave every alien, he was inclined to believe her.

He wondered where the Commander stood in regards to her.

“So whatever happened to the sniper?” He asked, changing the topic. “Did he die too?”

“No one knows, actually,” Carmelita stated. “The mystery, as I mentioned earlier. He just sort of… vanished. XCOM Intelligence actually started up around that time, so I assume he was transferred there. But no one actually knows. Wherever he is, I’m sure he’s doing fine. I don’t see him dying easily.”

She flipped the helmet in her hands. “In the meantime, I’m going to use this. Maybe give the aliens something else to fear.” She put it on her head; Oliver heard it hiss as it clicked. “How does it look?”

She stood before him, fully armored. “Rather terrifying, actually,” he said honestly. A smiley face should not be scary, but knowing who Carmelita was, and the happy simplicity of the smiley face, it seemed ironically malicious. It might be funny, had said woman it belonged to not been carrying an alloy cannon, had a stinger that still made him shiver when she used it, and generally was a ruthless killing machine.
“Good,” she said. “I think he’d like me using his work this way.”

Oliver suspected that Shawn had likely intended it as a joke, and not a symbol for the aliens to fear, but then again, he might be wrong. “A good way to carry on his memory.”

“Yes, exactly,” she said, looking into the distance. “If I’m going to survive this war, I don’t want to forget what I fought for. This will help remind me.” She began walking away, and placed a hand on his shoulder. “Not often I have an actual conversation with people these days. Thanks.”

“All right,” he said as she walked off.

He wondered if he should keep an eye out for her, but decided against it. Whatever Carmelita did, there was almost no chance he’d be able to impact it one way or another, and he did not want to get in her way.

She already had entire alien species marked for death. He suspected that one older man wouldn’t even make her blink. Best not to risk it until he talked with her some more.

***

The Praesidium, Hangar Bay 2

The Commander smiled as Shen brought him into the Hangar. “About time we had a modern fighter.”

Before him were ten of the new Firestorms, the first of the next-generation XCOM air force. The design had taken initial inspiration from the Sectoid UFOs, but had stripped down the superfluous aspects, and was ultimately much smaller. It had a single cockpit, and the back half of the Firestorm was a semi-circle containing the engine, the front half holding the cockpit and tipped ‘wings’, even though it was an aircraft that didn’t rely on such anymore.

“Adapting the alien anti-gravity systems was one of the easiest parts in constructing the fighter,” Shen said as they took a closer look. The Commander liked how sleek the fighter was. No wasted space or unneeded accessories. “Once elerium was solved, it was only a matter of shrinking the necessary parts to an acceptable size.”

“How does it pilot?” The Commander asked, peering into the cockpit.

“At the moment, the actual controls are not dissimilar to current fighter aircraft,” Shen explained. “Depending on how the Archangel Program turns out, we may investigate a means of similar connection between a pilot and a Firestorm.”

“And weapons?”

“Varies,” Shen said, motioning to the location of the twin guns, one on each side of the cockpit, within two sheets of metal which obscured it from being that visible. “We attempted to make it possible to swap out different weapons, but it was ultimately simpler to have slightly different models of Firestorms. One with laser capabilities, and one with gauss cannons.”

The Commander nodded, looking at the Firestorm. “Sustained laser, I assume?”

“Yes, and initial simulations are very promising,” Shen said, rapping his knuckles on the hull. “It’s a lot of work, but the alien XCOM did have the same type of weapon, so I think it’ll be able to be adapted.”
long distances is a feature.”

Now that was very good to have. The Commander wondered if the Sectoid UFOs had ever been considered to perform similar functions. The UFOs had the capability of hovering and firing, as Patricia had demonstrated during the first battle of Japan. For that matter, he wondered just how much of their navy he hadn’t seen.

By Aegis’s own admission, the Sectoid fleet was only one part. There was the Ethereal Dreadnought, but to date he didn’t believe that they had seen Vitakara or Andromedon crafts. He wasn’t counting the transports. And they had to have additional types of aircraft, such as bombers and frigates.

He wondered just how much the Firestorms would force the Collective to deploy to stop them. The basic UFOs probably wouldn’t cut it anymore. They had died to conventional weaponry, much less this kind of aircraft.

“And this is spaceworthy?” He asked, remembering that had been a requirement he’d put in.

“Correct,” Shen said with a nod. “There are life support systems, and the Firestorm can operate in zero-g environments without major issues. Oxygen supplies last twelve hours, and the hull is durable enough for atmospheric exit and reentry.”

“And no fuel needed,” he added, just to be clear on its capabilities. “Just elerium?”

“Yes, the only thing that needs to be changed is the elerium crystals that power the engines,” Shen said. “And elerium crystals of that size last a long time. There is little worry about the Firestorm suddenly running out of power. Multiple contingencies are in place to prevent that concern.”

“On that note…” the Commander began, after a few seconds of silence. “The Avenger Project.”

“Undergoing some revisions,” Shen said, adjusting his glasses. “While the schematics Aegis provided are useful, it was a prototype Andromedon ship, and one with some flaws in it. We are going to improve on the design, and then we will need to build a facility large enough to house it.”

“Leave that to Jackson,” the Commander assured him. “Just give her the size. We can have a suitable facility done in several months.”

“By then we’ll have a schematic in place,” Shen said. “To be honest, that is our initial concern. The Praesidium is large, but I expect that the Avenger-class ship itself will be the same size.”

“We’ll have to be careful with it,” the Commander said, thinking. “I don’t want to lose it to someone like Caelior. Or the Battlemaster for that matter.”

“I have some ideas to lessen the risk,” Shen assured him with a faint smile. “Depending on how the JULIAN Project turns out, that may be one way. Alternatively, I have found some rather curious schematics based on Sovereign technology, which I do not believe the Collective has taken note of.”

“Really?” The Commander said skeptically. “Why?”

“Because if I understand some of them correctly, they allow things to be done that shouldn’t be possible,” Shen said, then shook his head. “But that is a completely different topic. I trust you are satisfied with the Firestorms?”

“Very,” the Commander nodded. “I look forward to seeing them in action.”
“I think the pilots are eager to find out for themselves,” Shen chuckled. “I expect soon we will give them what they want.”

***

The Praesidium, Situation Room

“I’m curious,” the Commander said. “Do you think you can defeat the Imperator?”

“Alone?” Aegis answered flatly, standing almost motionless opposite him; the holotable in between. “No.”

The Commander smirked humorlessly. “That was fast.”

“The Imperators were the most powerful of our kind by a significant margin,” Aegis said. “I am not delusional about how I compare. Nor any other Ethereal either, I suspect.”

“Right,” the Commander said slowly. “And you did know about this before defecting to us?”

“Yes.”

“So,” the Commander crossed his arms. “Despite that, you still felt it worth the risk. You never actually explained why you did it, besides disagreements with how our species was handled.”

“Because the Imperator is both apathetic and practical,” Aegis said. “Upon reflection, my kind have been…poor leaders. Only a select few of us have bothered to ensure that the Collective is something strong enough to fight the Synthesized, or any other enemy. But the rest? Unfortunately other aliens are of less importance to them. The Imperator does not care what happens to the Collective, so long as they eventually follow his orders.”

“But aside from that, anything goes?” The Commander said.

“Not once has he interacted with any alien representative,” Aegis said. “Which is why his continued interest in Patricia is disquieting. He may not hold aliens in high regard, but for some reason, your species he considers different. He plans in terms of decades, not weeks, or even years. I suspect over time he realized that both of us held significantly different views, and slowly cut me out of his inner circle.”

Aegis sounded rather offended as he spoke. “I do not understand his motives anymore, nor his strategy, if there ever was one he shared with me. There was only one way to effectively call attention to our isolated leader, and that was to leave. And XCOM was the natural place to head to. That, and the Sovereign Ones gave us the location of this planet for a reason. Under the Imperator, I feel your potential would be wasted. I will not sacrifice our chance against the Synthesized for loyalty.”

The Commander wasn’t completely sure if Aegis was telling the whole truth, but it sounded right. “Yet you say he considers our species different.”

“Yes,” Aegis reaffirmed. “I suspect it is simply your psionic potential. The Gift is exceedingly rare, and those with it can eventually pose a threat…or be turned into an asset.”

“So,” the Commander said, looking down at the holotable. “If you cannot fight the Imperator and win, what is your plan to defeat him?”

“I do not anticipate he will be defeated,” Aegis said bluntly. “Your species, like it or not, will not
win this war. The best you can do is extract too heavy a toll to justify continued assaults. Perhaps you will kill one or two of my kind. But you will not win completely. You are not facing just us, but the Greater Hive Commanders, Andromedon Federation, and the Aui’Vitakar. Even should you build an army of psions, it will not be enough.”

“So you want them to sue for peace.” The Commander stated flatly. “You actually think that we would just accept that after everything that has happened? And do you really think the Imperator would just forget that there is an entire species that was able to hold off his entire alien Collective?”

“As I said, the Imperator is practical,” Aegis repeated. “While I cannot speak for your species, if the Collective offers peace, I suggest you take it. The Imperator is the only one who can stop this war now, and if nothing else, he will keep his word. Though I expect there will be some stipulations.”

“And I think you’re being naïve,” the Commander responded, furrowing his eyebrows. “You’ve said yourself he likely has plans for us. Do you really think he’d abandon them, especially if he is as powerful as you say? What is to just stop him from coming himself and finishing it?”

“Because you are beneath his attention,” Aegis said, clearly frustrated. “You do not have a concept of how little you and your species ultimately matter, which can be forgiven, given the circumstances, but it is the truth. The Imperator would only fight if he actually considered you a threat. Whatever his plans are, they are decades if not centuries into the future. He has no doubt planned for such a contingency as extracting too high a toll from the Collective.”

“And what could such a contingency be?” The Commander asked. “If you said he wouldn’t break his word, that does not leave many options.”

“I expect that, should the situation worsen, the Imperator will order an autopsy of the entire Collective, and this war to figure out what went wrong,” Aegis said. “After a retreat, he will likely hold the Collective back for a century or two, wait until the prominent figures like you have grown old and died, and the war with the Collective is a distant memory. Your species will likely be different at that time, and throughout this I expect that the Imperator will order humanity be exposed to aliens on a gradual peaceful basis. The Vitakara are ideal for this.”

The Commander saw where Aegis was going with this, and he did not like it. “At some point, the Imperator will order an autopsy of the entire Collective, and this war to figure out what went wrong.”

“Aegis paused. “In the end, all you have accomplished in the grand scope will be the delaying of the Imperator’s plans by several centuries. Perhaps he will not even wait that long before beginning an incursion of the inner galaxy.”

The Commander pursed his lips. There was the Ethereal longevity in action. Time was not something that really affected them, while age would eventually kill any Human. Unfortunately, Aegis had a good point. Two hundred years was a long time, minimum, and even he wasn’t sure he would be able to prevent a more naïve humanity from falling to a hypothetical Imperator offer to join the Collective.

The Imperator, whatever his motivations, and whatever his plans, was not an idiot. Mostly. Despite bungling Humanity so spectacularly, the Commander figured he would learn from this. Which meant that there couldn’t be any surrender, peace offer or no. There were no good options. Keep on
fighting, they might very likely die, and stop fighting, and the Imperator won the war later.

“Whatever happens, you have changed the Collective forever,” Aegis told him, maybe trying to reassure him. “Few could do what your species has, and that is—”

“No.” The Commander interrupted bluntly. “I don’t care about that. You’re expecting to lose.”

“I am not expecting to win.” Aegis clarified.

“I am not interested in peace,” the Commander stated. “That is impossible at this point. I don’t care really what you think our chances are, but if you’re going to be here, you are going to help us on the assumption that we will win.” He held up a hand, forestalling any comments. “Now, will we? Maybe, maybe not. But we’re damn well going to try. We’re not trying to damage the Collective, we are trying to destroy them. It may take years, or even decades, but you had better be planning to win the entire time. If you aren’t going to help us with that, then go into isolation somewhere else.”

“I meant no offense,” Aegis said, apparently not surprised by his words. “But I do not like giving false hope.”

The Commander laughed ruefully. “There is a difference between false hope and planning to lose. Going by what you said, we should have surrendered the first time you bombed Hamburg, since the idea of soon facing an Ethereal and winning was simply impossible, yes?”

Aegis was silent. “I believe you once said that killing an Ethereal ‘should be impossible’,” the Commander recounted. “What is next? That it is impossible to kill the Battlemaster? That it is hopeless to drive the Collective off Earth? That it is outlandish to even think of taking the fight beyond it?” He shook his head. “No, Aegis. We are not going to give up until either the Collective is in ruins, or we all die.”

“I hope you maintain that optimism,” Aegis said neutrally. “And that it doesn’t lead your species to a fate that could have been prevented. Your ideals mean nothing if everything you care about dies in the process. What worth is there in a pointless sacrifice? Because that is what you are proposing. Alive, you still have a chance, however small.”

“It wouldn’t be pointless,” the Commander said. “Maybe it’s a Human thing, but we don’t like being beholden to an alien race who will enslave us in all but name. At the very least, we screw up whatever grand plans the Imperator has.”

Aegis looked at him for a few seconds. “It is a shame it came to this,” he mused. “Your species would have been excellent allies against the Synthesized.”

“We are allied to you, yes?” The Commander smiled. “Perhaps we still will be someday. That isn’t something we need to worry about for a while. But for now…” He looked back to the holomap of America. “We need to focus on the immediate threat.”

***

The Praesidium, Psionic Training Arena

“How well did you know him?” Patricia asked as she and Aegis observed the psions training on targets, dummies, and each other. This topic was something that had been bugging her for some time, and she hadn’t gotten a proper chance to ask Aegis about the Imperator.

“Moderately well,” Aegis said, also watching the psions. “He never made an effort to befriend those around him without good reason. The only ones I would say who know him well are the
Battlemaster, Quisilia, the Overmind, and Sicarius. Everyone else...he was the Imperator, and our leader."

Patricia nodded. The names made sense except for one. “Sicarius? That seems odd.”

“Not so odd when you consider the Imperator practically raised her,” Aegis mused. “I suspect she is considered an adoptive daughter, though he would never say so to anyone else.”

“Really?” Patricia glanced up, surprised. “I didn’t realize that.”

“I have yet to determine how the Imperator actually found her,” Aegis recalled. “He ordered us to randomly stop on a planet that had been ravaged by the Synthesized.” His voice took on an odd tone. “And he went down alone, and returned with a young Ethereal girl, barely thirty, a child by our standards, starving and half-mad. That she survived at all is a miracle, and the Imperator took her with him wherever he went and personally trained her.”

Aegis’s voice became softer. “It is acts like that which make me believe that the Imperator is merely misguided, and not innately malicious. However, I cannot be sure if it was a simple act of decency or he found and raised Sicarius for the sole purpose of having a loyal assassin who could rival Quisilia.”

Well, this was new. “She’s better than Quisilia?” She asked. “Really?”

“I would say she is more dangerous,” Aegis amended. “She is not normal, especially for an Ethereal. Killing is instinct for her, and the Imperator has fed that over the years. Nuance and context are not things she can easily grasp. Quisilia can, and is far more independent. Sicarius does not care what she does, as long as it is what the Imperator orders.”

“Hmm,” Patricia thought on that. The Imperator was an odd figure. Absurdly powerful, so Aegis said, but not someone who ever seemed keen on using it. He was capable of, at least on the surface, performing selfless acts, but his motivations were a mystery. She, like Aegis, was not entirely convinced he was completely evil. But misguided seemed too naïve. The Imperator knew what he was doing.

The question was why?

“Why the interest?” Aegis asked, looking down at her. “Did you speak to the Commander?”

“Huh? No,” she frowned. “But considering the Imperator seems to have some interest in me, I’d prefer to know a little about him. More than that he’s a threat that could probably kill us all with his mind.”

“Understandable,” Aegis agreed. “Unfortunately, I am afraid I am of little help. I would not consider him a friend, and even as part of his inner circle for a time, we did not hold similar views. We have both changed since we emerged from stasis. Ever since then he has strayed more and more from our original goal.”

“Which was fighting the Synthesized, right?” Patricia recalled, confused. “Why? Wasn’t that the reason you intentionally froze yourselves? So you could fight them knowing what you were up against?”

“Originally, yes,” Aegis explained. “But something changed over the years. I do not know why, but his priorities shifted. He withdrew from managing the affairs of the Collective, and placed myself and the Battlemaster in charge. The Battlemaster has not wavered in this goal, but he did not see that the Imperator was just putting him in a position where he wouldn’t ask questions.”
“Risky,” Patricia noted. “I wouldn’t want the Battlemaster angry at me.”

“The Battlemaster is not a threat to the Imperator,” Aegis said. “Or so everyone believes.”

Patricia snorted. “You think otherwise?”

“No,” Aegis said flatly. “But if anyone could surprise me in this, it is him. There was a reason the Imperator chose him out of all the Battlemasters in the Collective.”

“Getting back to the point,” Patricia redirected. “So what else would the Imperator focus on if not the Synthesized?”

Aegis paused for a moment. “I do not know. It has to do with the inner galactic species. The first expedition he only intended to gather cursory information. He sent Quisilia, Sicarius, and Nebulan, and whatever they brought back…it seemed to have changed his priorities. Ever since then, he has been focusing on learning whatever he can about them. The Battlemaster believes he is simply gathering information for when they prepare to fight them, but I do not think it is just that.”

“Then what?”

“I do not know,” Aegis admitted. “The Imperator never shared what he learned from those expeditions. I do not even know their names, or even descriptions. But I do also know he became very interested in finding ruins and relics of previous civilizations. He was looking for something, that much I can say for certain.”

“For what, I wonder?” Patricia mused rhetorically, rubbing her chin thoughtfully. “A weapon? Information? You said you think the Synthesized have done this before? Maybe he’s looking for more survivors? I doubt he was the first to think of putting himself in stasis.”

“Perhaps,” Aegis was clearly doubtful. “I doubt it is a weapon, but information is plausible. But even that faded as he began investigating planets of different biomes. Water worlds and rocky dead ones became sites of interest. I only know this because of the copied reports I received from the Zararch agents, forwarded by Quisilia. I suppose he wanted to keep me at least partially informed, but whatever the Imperator was looking for, I do not think he found it.”

This seemed stranger the more she heard. “I guess I can ask him about that whenever he decides to talk,” she shrugged. “And I guess during this time, he just ignored the Collective completely.”

“Yes, though not because he didn’t have time.” A sigh escaped Aegis’s helmet. “I do not necessarily think it was intentional either. Time…it is not the same when you are immortal, Patricia. Years can pass you without really noticing. After some time, it becomes meaningless since it is not something to be concerned about any longer. Mortal species like yours, the Andromedons, and the Vitakara move at a speed that is alien to us who are not used to it. For some like myself and the Battlemaster, we are used to it, but the speed at which you research, develop, and build is foreign to one like Revelean or the Creator.”

“That actually explains a lot,” Patricia said. “I guess that it works to our advantage.”

“For now,” Aegis agreed. “But Ethereals are not wired for quick decisions. A week is considered fast by our standards, and even for the Battlemaster, a well-planned attack can take weeks to put together and carry out. This is a large reason why the attacks are fewer than you might expect. So yes, since you Humans work quickly, this gives you an advantage.”

“One which the Battlemaster will regret letting us have,” Patricia said with a grim smile. “He’s not going to know what hit him in the next few days.”
“No,” Aegis agreed thoughtfully. “I do not think he will.”

***

The Citadel, Situation Room – Two Days Later

Laura had clearly not expected him to show up in full armor, but the Commander figured it was time to take a more direct role in this fight. He was quite tired of just directing from the safety of the Situation Room. He didn’t want to get out of practice, and the soldiers needed to see their Commander fighting on the front lines.

“I didn’t realize you were going out there,” she commented as he joined her and Weekes, with Patricia and Jackson beside him. “And what is that?”

She nodded towards the WHEEE cannon strapped to his back. “That?” The Commander smiled. “The WHEEE.”

Weekes snorted. “Cute.”

“Wouldn’t mock it,” Patricia warned lightly. “I wouldn’t want to get shot by it.”

“Unimportant.” The Commander raised a gauntleted hand. “Are your forces in position?”

“Yes,” Laura brought up the holomap showing the West Coast. “We’ve got armies ready to converge on Seattle, Salem, Hillsboro, and Las Vegas areas. Purifiers, MDUs, and squads are all ready to go.”

“The Lancers are also going to be assisting,” Weekes said with a smile. “We’ve got enough gene-modded ones that the aliens won’t know what hit them.”

“Good.” The Commander nodded. “Seattle first.”

“There will be two main armies, one from the north and one from the east,” Laura said, focusing on the city. “The aliens have fortified it heavily, but they can’t withstand an army. Especially one supported by both the Lancers and XCOM.”

“We’re going to move beyond Portland as well,” Weekes said, pointing at the highlighted areas around the city itself. “Hillsboro and Salem are the two locations the aliens have entrenched themselves. They aren’t as heavily defended, so unless they get a sudden influx of reinforcements, I don’t think there is much we need to worry about.”

“Las Vegas will be an issue,” Laura warned. “Or what’s left of it. The aliens have turned the remains into a full military base, and assaulting it is going to be…challenging. That is where the heaviest fighting will take place. ADVENT Intelligence suspects that there might be a Sargon there, but I don’t think we’ll know for sure until we attack.”

“I have three teams prepared,” the Commander promised. “And one for whenever the Battlemaster shows up.”

“You think he will?” Weekes asked.

The Commander smiled. “Yes. But we have several plans for him.”

Laura nodded in recollection. “At your command, I will assume?”

“Or the ranking XCOM operative on-site,” the Commander affirmed. “Hopefully we won’t need it,
but I want it ready in case.”

“I suppose the question is where you will be?” Weekes asked. “And I assume Central Officer Jackson will act in your stead here?”

“Correct,” Jackson stepped forward. “I will handle communication and updates between XCOM personnel.” She paused. “I’m not experienced in tactics, but I will provide what assistance I can.”

“I’ll be leading the XCOM squad in Seattle,” the Commander said. “Patricia will lead one in Las Vegas, and Matthew Hawkins will assist in Portland. In addition to that, there will be two Firestorm and Archangel squads for Vegas, and one of each for Seattle and Portland.”

They both nodded, having been appraised of the capabilities of each earlier. “If you want numbers, I’m planning for one thousand Lancers for Las Vegas, and five hundred for every other location,” Weekes stated. “All fully gene modded and ready to go.”

“The PRIEST Program doesn’t have anyone yet?” The Commander asked.

“None combat-ready,” Laura shook her head. “A shame. It was likely going to change in a few days. Some of the soldiers are exhibiting appropriate control.”

“Not needed,” the Commander said. “We’ve delayed this long enough. What we have will suffice. Let’s give the people something to be optimistic about.”

“Not just the civilians,” Laura said with a weary smile. “I think everyone could use a victory about now.”

“Let’s not jump to conclusions,” Weekes warned. “The battle hasn’t even started yet.”

“True.” The Commander placed the helmet over his head. “But I have a good feeling about this.” He looked at both of them through his helmet. “Give the order. We begin retaking America now.”

“Copy that,” Laura said, pressing a switch opening the intercom. “This is Commander Christiaens. You are cleared to deploy and engage. Good luck, XCOM will be right behind you.”

That they would be. The Commander turned away, and began marching toward the Hangar, where his skyranger was waiting; Patricia right behind him.

Despite how badly it could go wrong, he was looking forward to what happened next.

What happened next would be a turning point, one way or another.

***

Supplementary Material

XCOM File 0772

Subject: Current List of Psions

Author: Overseer Patricia Trask

Commander,

Due to the recent influx of recruits, and the development of the Trask System of measuring psionic power by the ADVENT PRIEST Program, I thought it prudent to put together a comprehensive list
of the current psionic soldiers, including Templars and non-Templars. I will continue to update this as more psions are awakened, but for now, this should suffice for our records. The list is in alphabetical order, and I will mark their power classification, Trask level, and psionic specialization by their names.

If you don’t want to look up the PRIEST Document ADVENT sent over, this is how the different classifications are broken down. The Trask level is from 1 to 100.

An **Awakened** classification is from Trask levels of **1** to **20**.

An **Adept** classification is from Trask levels of **21** to **40**.

A **Psion** classification is from Trask levels of **41** to **60**.

A **Magus** classification is from Trask levels of **61** to **80**.

A **Leviathan** classification is from Trask levels of **80** to **100**.

There is no higher classification, even though Trask levels can exceed 100. However, since I sincerely doubt we will find a psion of a higher power level than 100 outside of aliens, I will be classifying any individual with a Trask level higher than 100 as **Ethereal**.

This will obviously only apply to one specific being.

In addition to that, there are four specializations, or disciplines, if you prefer, of psionic abilities. These will also be stated by the psion in question. I will put them here for the record:

A **Telekine** primarily specializes in telekinetic abilities.

A **Telepath** primarily specializes in telepathic abilities

A **Defensive** specialization focuses on protection and manipulation of psionic solids.

An **Offensive** specialization focuses on destructive abilities of various focuses.

Without delaying it any longer, here is the current list of psions:

- Ellinor Aagard – Defensive Magus (**70**) [*Notes: Templar*]
- Taqi al-Pour – Defensive Magus (**66**)
- Saar Aron – Telekine Adept (**40**) [*Notes: Templar*]
- Iosif Bronis – Defensive Magus (**78**) [*Notes: Templar*]
- Leono Cantu – Defensive Psion (**56**)
- Mona Eriksson – Offensive Magus (**71**)
- Zama Elethu – Defensive Magus (**74**) [*Notes: Archangel*]
- Eddison Fisher – Telekine Psion (**49**)
- Ryo Ha-Sun – Telekine Psion (**55**) [*Notes: Templar*]
- Viktoria Hammarström – Offensive Leviathan (**81**) [*Notes: Archangel*]
- Matthew Hawkins – Telekine Magus (**77**) [*Notes: One of the recovered Furies - “Alecto”*]
- Ted Holden – Offensive Psion (**49**) [*Notes: Archangel*]
- Moriai Jin – Telepath Adept (**33**)
- Chan Jin-Taek – Offensive Psion (**57**) [*Notes: Templar*]
- Pall Johansson – Telekine Psion (**58**) [*Notes: Templar*]
• Charlie Jones – Offensive Psion (47)
• Ismail Mazar – Telekine Magus (68) [Notes: Recruited from ADVENT PRIEST Program; civilian background]
• Hugo Nilsen – Defensive Magus (62) [Notes: Templar]
• Alicia Sancho – Offensive Psion (53)
• Sussan Sevhonkian – Telepath Magus (80) [Notes: Recruited from ADVENT PRIEST Program; civilian background]
• Alicia Sancho – Offensive Psion (53)
• Gamil Sultan – Defensive Psion (50)
• Kawamura Taira – Telekine Leviathan (82) [Notes: Archangel]
• Fatima Tariq – Telepath Magus (80) [Notes: One of the recovered Furies – “Tisiphone”]
• Said Tariq – Defensive Magus (79) [Notes: One of the recovered Furies – “Megarea”]
• Lukas Von Theil – Telepath/Defensive Leviathan (93) [Notes: Prefers to be called “Geist”; Recruited from ADVENT PRIEST Program; civilian background; tested equally high for both Defensive and Telepathic disciplines]

And myself, of course:

• Patricia Trask – Telepath Leviathan (84)

And I didn’t forget about the other members of the Internal Council either:

• The Commander – Telekine Adept (36)
• Moira Vahlen – Telepath Magus (76)

And I didn’t forget about our resident Ethereal:

• Aegis – Defensive Ethereal (138) [Notes: Looking at this, I wonder what the other Ethereals come in at]

This should cover the current psions enlisted. I’ll update this when more come.

Chapter End Notes

Since I doubt I’ll be posting another chapter before then, I’ll wish everyone reading a Merry Christmas and again say thanks for continuing to read this story that's gotten much, much larger than I had ever planned for. On that note, the good news is that the next chapter is already written (And it will be even somewhat longer than this), so you'll likely get it sooner than later once my editing team finishes it up.

And thank Johnclaw Dragonhelm (One of my beta readers) for coming up with the explanations for Elerium and Gateways that are more plausible than anything I could come up with.
Outside Hillsboro, Portland – United States of America

11/6/2016 – 9:38 A.M.

Things may not have gone well for ADVENT recently, but Roman suspected that was going to change at this moment. For what seemed like the first time for him, the full might of the ADVENT military was gathered and marching from Portland to the alien strongholds in Hillsboro and Salem, two small cities that had been under alien control for months.

“A good day for killing aliens,” Anton said as they marched forward, still undetected by the aliens. “[They won’t see us coming.]”

“[Maybe not,]” Galina said as she looked into the fog. “[But they are going to hear us.]”

Roman grinned under his helmet. That they would. ADVENT had pulled out everything for this attack. At this moment the entire legion was marching on the split streets of the now-destroyed city of Beverton, and multiple squads were moving through the forests at the same time. American armored fighting vehicles like the M3A3 Bradley and Stryker were on the roads, guarded by MDUs and the new SHIVs.

That was where Roman and his squad were now deployed, alongside two of the Bradleys, with him in the front, as was his role as Shieldbearer. Behind the first line of tanks were dozens more squads, and multiple Strykers following them. But what Roman knew was really going to get the attention were the front lines, the shining white MDUs that marched silently, with the SHIVs and their operators closely behind.

But in front of even them were the Lancers.

Roman had known about the elite unit of the ADVENT military, even if he hadn’t actually seen it in action that much. But seeing them in person was something completely different. Their domed helmets and pitch-black armor that looked even stronger than his own made for a foreboding image.

They weren’t just at the front either. They were scattered throughout the ADVENT force, either alone or in small groups of two. The isolated ones had been holding sniper rifles, and their armor was slimmer than the others, so he suspected they were the sniper unit. The main Lancers; they were unique. Most carried some kind of firearm or gauss rifle, but others carried melee weapons in their hands; actual swords and hammers.

“[Executors,]” Stanislav had explained when the Lancers had started arriving. “[You saw the ones that XCOM called Templars?]”

He’d nodded. “[Yes. For fighting the Battlemaster, right?]”

“[Apparently,]” Stanislav had shrugged. “[The Lancer Executors are that same concept, but for ADVENT.]” He’d raised an eyebrow, clearly amused. “[Supposedly they’re dangerous.]”

“I hope this fog dissipates soon,” Elena muttered, checking her rifle again, bringing him back into the present. “[While we make a dramatic entrance, I’d prefer to actually see the aliens we kill.]”
“[Give it a half-hour,]” Roman suggested. “[It should be gone by then.]”

A half-dozen dogs started barking, and the Lancers froze, the leader immediately raising a fist and the entire army came to a halt. Once they stopped, the dogs immediately went quiet. That had been another recent addition to the ADVENT military. Roman liked dogs, he assumed most people did, but the Molosser Hounds as they were called, they unnerved him.

The explanation he’d been able to find is that they were currently genetically engineered and MELD-enhanced German Shepherds and Huskies, which seemed like a poor description for how enhanced these dogs really were. The damn things were up to his waist, their eyes were rimmed golden, and he could actually see the muscles under their fur.

Galina had stayed far away from them when the Molosser Handlers had brought them out. She was terrified of dogs, and ones that could probably kill her with a single pounce and bite was not something she’d wanted to be around. Had the dogs not made him slightly terrified himself, he would have found it funny.

However, he doubted ADVENT would use them if there was a risk of them biting Humans. Even the Handlers didn’t use leashes, and instead stayed close to their Hounds, which were covered in padding on their bodies and top of their head, while the belly and lower jaw seemed unprotected. Probably for mobility, and the padding also had some pockets he saw the Handlers reach into occasionally and pull out some kind of treat for the Hounds.

“[Guess that means we’re close,]” Konstantin said, lifting his autorifle, the grin present in his voice. “[Those dogs are smart.]”

Roman could only see the outline of the main city in the distance, since they were in the suburbs area so far. The distinctions were clear. The street was cut off by an alien barricade, and there were turrets and AA weapons mounted on and behind it, as well as the nearby buildings. The buildings themselves seemed connected by the barricade the aliens had built, and he could see faint outlines moving behind it, and on the roofs. “[Maksim, what do you see?]”

“[One second,]” Maksim raised his sniper rifle and looked through the scope. “[Hmm. Not much. They are not prepared at all. Some Vitakarian guards, a couple Borelians. No Mutons yet.]”

“[This is Chief Marshal Peterson,]” a voice suddenly interjected into their helmets. All of them listened raptly as the Chief Marshal of the Third American Legion spoke, something he would not do unless it involved the entire army. “We have moved to acceptable locations outside Salem and Hillsboro, and both groups are in positions to attack the enemy unawares. At my command, open fire and wipe these aliens off the face of this Earth. Remember Vegas, San Francisco, Australia, Japan, and take no prisoners today. Retribution has come, and the aliens will pay for it with their lives.”

“[Hell yes,]” Anton said, readying his weapon.

The Chief Marshal finished up. “Wing Captain Holder, you are cleared to begin your aerial assault. Morning Sky, you are cleared to deploy XCOM soldiers at your designated location. All ground forces, you are cleared to engage at will.”

The Bradley tanks aimed their weapons, which in contrast to heavier tanks, weren’t traditional tank cannons, but autocannons which he assumed were gauss-powered. All of them fired at once, breaking the silence with the sound of high-powered automatic cannons. Several alien guns exploded, and more alien bodies were thrown into the air or ripped apart outright. “Advance!” The leading Lancer shouted, and the black-armored soldiers rushed towards the fortified city.
“[Stay close to me, like we practiced!]” Roman shouted to his team as they gathered around him in formation. He pressed several buttons on his wrist, and the silver antenna on his back rose. His HUD blinked green. “[Emitter online! Move forward!]”

They shouted affirmatives and they, along with multiple other squads, charged into the fog that was beginning to be lit up with the green plasma of the alien defenders, and red lasers and brief orange streaks of gauss rifles being fired from the MDUs, tanks, and soldiers, all of whom slowly advanced. The tanks were continuing to fire at identified AA emplacements, and now the aliens were beginning to wake up.

“[Squad of four up ahead!]” Elena called, firing her weapon. “[Going into cover!]”

“[Emitter still good,]” Roman assured her. “[Keep moving!]”

“[I really hope the ADVENT engineers were right,]” Stanislav growled as the aliens prepared to fire. “[If I die, I’m going to haunt them.]”

Anton fired and killed one of the aliens, but the rest of the aliens started firing their plasma weapons directly at them.

Moment of truth.

The plasma streaked towards them, and then it suddenly bounced upwards or to the side as if hitting an invisible wall. The bolt dissipated a few seconds later, and the aliens froze once they saw what had happened. Maksim whooped and used that to snipe one of the Vitakarians in the head, while Konstantin and Galina focused on pinning down the last two with their autorifles.

“[Grenade out!]” Elena called, and chucked one towards the final two aliens. They yelled something in their language and ran back, warning several more aliens coming to reinforce of the danger, right before it exploded in a bright flash that was not shrapnel like he was used to, but instead closer to a massive firework.

The aliens screamed as the sizzling fire hit their silver armor, which seemed to offer little protection as it burned through the armor and aliens themselves, before Anton and Maksim killed them with a hail of gauss rounds. “[They were right,]” Elena said, sounding rather impressed. “[Thermite does work well.]”

They reached the actual line of alien territory, and fell into cover, with Roman tapping some more buttons on his wrist. “[Arrived at checkpoint. Shutting down emitter. Forty-seven percent remaining.]”

“[Good for another push!]” Konstantin shouted as the aliens began pouring out into the streets, and directly into the line of Lancers which were ahead of the leading ADVENT squads. Roman watched in amazement as one of the Executors directly charged a group of Vitakarians, and the other four Lancers just laughed off Plasma fire as they took shots, but it didn’t seem to slow them down at all.

The Lancer Executor was happily bashing the Vitakarians in the knees, head, and chests; caving in the armor and shattering their bones. The other Lancers systematically took apart a Borelian team, flanking and using explosives liberally. Aircraft streaked overhead and missiles were fired in the distance, even as the AA defenses the aliens had set up began working, shooting plasma and lasers into the sky.

“[We need to take those out!]” Roman called as a laser shot one of the Ravens out of the sky.
“[Got one marked on that roof,]” Maksim said, sniping from a makeshift elevation built on several crates. Roman looked over to where the massive laser battery was built onto the flat roof of one of the many abandoned stores in this city.

He nodded. “[Maksim, Galina, Konstantin, provide covering fire. Everyone else, with me!]”

“[Providing suppressive fire!]” Galina called out in affirmation as the rooftop manned by several Borelian soldiers was suddenly under heavy gauss fire. The MDUs were now in the city with them, and were advancing, drawing more fire away from them.

“[Forward!]” Roman yelled, and they ran down the narrow streets, which were still heavy with plasma fire now that the aliens were forming another barricade up ahead, with enough firepower to force the Lancers to hold temporarily. Roman kicked in the door to the shop which broke and swung open, throwing the alien behind it to the ground.

Stanislav chuckled as he blew apart the Vitakarian at point-blank range. “[One to the left!]” Elena warned, swinging her weapon and firing at another alien, this one a Dath’Haram which was much less armored, and subsequently died as the gauss rounds tore it apart.

“[One more,]” Anton called, as there was one final alien, backing into a corner, its hands up. “[Think it’s surrendering]”

Sure enough, the alien was yelling at them in their language, and clearly trying to be as non-threatening as possible. Roman pursed his lips and slowly walked over to the alien, pulled out his pistol and jabbed the barrel under the chin of the alien and pulled the trigger, splattering its brain over the wall.

“[No prisoners,]” he stated to the corpse, before motioning them to move up. “[Let’s take out that battery.]”

Salem Airspace, Oregon – United States of America

11/6/2016 – 10:04 A.M.

It was one thing leaping out of a Skyranger in Archangel armor, but it was something else to do the exact same thing during the beginning of a heated firefight.

Didn’t make it feel any less amazing.

“This is Seraphim Morrow to Morning Sky,” Sierra said as she sped through the air, flying upward so she could get a good view of the situation. “We are in the air and preparing to make our first strike.”

“Copy, Seraphim Morrow,” Morning Sky replied. “Good luck up there.”

Sierra grinned as she noted that the aliens were already falling to the attack of ADVENT, led by the Lancers and MDUs, with tank support while hundreds of ADVENT squads moved forward. “We ready for this?” Anna asked, speaking through their internal comms, and coming up to hover beside her. “Should we recon first?”

“Yes,” Sierra confirmed. “They have AA defenses, so we’ll need to get rid of those first. We’ll have to fly low to avoid getting shot too often.”
“I can take care of the turrets if you cover me,” Ted told them, hovering a bit lower, his arms already emanating psionic energy. “Unless you want to rely on bombs?”

“Nah,” Sierra said, angling her body down and providing a thrust to her jets as she shot towards the city. “We’re wasting time. Let’s go!”

They swooped down, now getting a better view of the street-to-street fighting that was currently taking place between ADVENT and the entrenched alien forces. “Let’s introduce ourselves,” Sierra called, as she spotted an opening where a collection of Mutons were entrenched against an ADVENT force. “Right behind them!”

They approached the ground at a speed that would be lethal if they weren’t enhanced, and at just the right moment, Sierra turned her body upward, killed the jets, and fell to the ground, already reaching for the grenade on her waist and tossing it. It was a special weapon, one of the more dangerous explosive chemicals.

It landed right in the middle of the group and exploded in an anticlimactic burst, but then again, the explosion wasn’t the danger. The white smoke that expanded from it however, was. The effects were immediate. The unmasked Mutons immediately began clutching their faces and making grunts of pain, while their parts of their armor spontaneously combusted in small patches of flame.

White Phosphorus had been described to her as a half-acid, half combustible agent, which was absolutely lethal for anyone caught in a blast. It, like many chemical weapons, was not exactly approved of, but ADVENT and XCOM were a lot more lenient about what types of weapons were considered acceptable. And personally, Sierra thought that if it caused the aliens as much pain as it seemed to be, it was perfectly fine.

She fired her own laser rifle at the Mutons outside the smoke, and Anna killed three in quick succession with her autolaser. Ted tossed a White Phosphorous grenade of his own to another group of Mutons, and jumped into the sky, with Sierra and Anna soon following, all aliens in the area either dead or dying.

“Let’s hit their nerve center,” Sierra suggested, making sure to keep them all moving since staying still would let the aliens get a better shot, and the air was already lighting up with plasma as the aliens realized there were new threats. “Where do you think they’ll be most clustered?”

“City center, probably,” Anna suggested as she swooped down and tossed a plasma grenade onto a sniper nest, blowing it up in a bright green explosion. “Hitting the back would help.”

“Then we go there,” Sierra ordered, and they shot across the air, going extremely fast, albeit near to the rooftops. “Lot of aliens ahead.”

“Split and circle around,” Ted stated suddenly. “Let me have a shot.” His body suddenly swung vertically and he hit the metaphorical breaks on his jets, and swung up his arms that were wreathed in psionic energy, which grew more and more intense until unstable beams of psionic energy shot out to the street below.

Sierra had already swooped off to the left while Anna had gone to the right, so she unfortunately missed the initial attack, but swinging around back to Ted’s position, the results were apparent. There were at least two dozen corpses on the ground, with the street turned a scorched black, the corpses themselves charred and eaten away by the corrosive energy of psionics.

Ted was already moving forward, wasting no time, and Sierra and Anna shot after him. “Nicely done,” Anna complimented. “Hold on, going to blow up this turret.” She picked one of the plasma
batteries that was firing up in the sky, swooped down and landed beside it and began killing the aliens around it.

Sierra thought she might as well try it. “Going to get the one on the left,” she said, eyeing her target, which had a fairly small safe landing area. There were three guards on it, all fortunately Vitakarians or Dath’Haram, it was hard to tell with the armor. She gritted her teeth, this was going to be tight.

She killed the jets at what was probably the closest she could risk, and landed right beside a surprised alien, and unceremoniously, knocked him out with the butt of her rifle, sending him over the edge of the two-story building, and immediately shot the other two before they could react. She found what seemed to be the control panel, ripped it open, and fired a sustained laser into it.

There were a couple of loud pops, and the turret went still. Good enough. She switched cells on her rifle, and shot into the sky once more. An explosion further in caught her attention, and she saw Ted had blown up one with a devastating psionic lance. “Up ahead, that square,” Sierra said as she angled herself to circle it.

This was clearly where the alien control was. It was a fortress within a fortress, all the buildings were interconnected with a black alloy wall, and each rooftop was equipped with AA defenses and equipment for sniper nests. “That’s a nice fortress,” Anna commented. “It would be a shame if something were to happen to it.”

“It was nice of them to trap themselves there,” Sierra commented as the aliens continued to try and fruitlessly shoot them. They were just too slow to get an accurate shot on the Archangels. “We drive them out. You have the rocket?”

“Two,” Anna corrected, already readying the weapon attachment on her wrist. “Priming!”

“Alright, commence the White Phosphorous bombing run,” Sierra ordered. “Ted, you have the grenades?”

“Affirmative,” he said as they all swooped up. “In hand.”

“Loose them when you get a chance,” Sierra commanded. “Turn that fortress into a prison.”

Sierra herself tossed several of her White Phosphorous grenades into the fortress area when she got an opportunity, spacing them as she flew around the perimeter, covering as much ground as possible. Anna was aiming her own WP rocket at the most open area, though Sierra wasn’t sure that would be needed. It was going to spread no matter where she shot it.

Ted was also back in his psionic turret mode, blowing up another AA plasma turret, and whatever aliens around it he could see. His armor was slightly marred from taking some hits, but Archangel armor was designed to be able to take some plasma fire. The WP rocket Anna fired exploded in a mist of white smoke that immediately began spreading, already forcing the aliens to run away.

Sierra saw several Vitakarians on the edge of a building, trying to shoot at them, and she got an idea. “Pick your targets,” she told Anna and Ted. “I think we’ve done enough to destabilize their operations.”

“Copy that,” Anna said, and rocketed off to the front lines of the conflict with ADVENT.

“Confirmed,” Ted also acknowledged, as he seemed content to stay put and kill anything that entered his line of sight.
For herself, she angled her jets towards the Vitakarians on the roof and fired with her laser rifle, killing one immediately, then quickly attached it to her chest so her hands were free. When she got close enough, she killed the jets again and slammed into the alien, knocking her to the ground, if not knocking her completely out.

Sierra hooked her fingers under some bands of her armor, and leapt up, engaging the jets and soaring into the sky. The genetic modifications essentially made the weight of the alien she was now carrying irrelevant. Not that she was planning to hold onto her for very long.

She waited until she was at a reasonable height and then let the Vitakarian fall, who was only now conscious enough to realize what was happening. “So long!” Sierra called down as the Vitakarian fell to her death. Well, that was fun, if a little pointless. Still, considering how well everything was going so far, she could justify doing that.

Sierra looked around the battlefield, knowing there was a lot more to do. She grasped her laser rifle in her hands, and went hunting. She was curious to see if the aliens would be able to adapt in time before they fell to ADVENT.

She snorted. And the real XCOM squad wasn’t even here. She would hate to be facing them right now.

***

Seattle, Washington – United States of America

11/6/2016 – 10:02 A.M.

The attack on Seattle was well underway as the Commander stepped off the Skyranger, followed by the squad of XCOM soldiers, and the Archangels close behind. The MEC Pilot Gloria had been dropped in her Ballista-class MEC, and all of them were waiting for the Commander’s orders to move in.

They were slightly elevated, and the Commander had a relatively decent view of the city in the distance, the heart of Seattle. The smaller towns outside it were not nearly as protected. Creed snorted as he saw it in the distance. “Andromedons. Too clever for their own good.”

“They are smart,” the Commander agreed with a nod as a squad of ADVENT soldiers jogged past. “That makes them dangerous.”

In the distance, the heart of Seattle was protected by a red-domed shield, which seemed so far to be impervious to any outside attack. Several missiles had been fired into it with seemingly no effect. A problem, but the Commander knew it could be dealt with eventually. “Let’s find out who’s in charge.” He motioned to the Seraphim of the Archangel squad. “Hwan, take your team and begin assisting ADVENT where you can. You will be contacted if we need you.”

The Templar drew his longsword and saluted with his free hand. “Yes, Commander. We will be awaiting any orders you have.” He motioned to the other two Archangels, Catherine Gosselin and Liliyane, another new Templar with a rather peculiar weapon of her own; a poleax of all things. But it fit an Archangel fairly well, and he knew she’d been practicing with it. “Up we go! Good luck, Commander!” All the Archangels leapt into the air, jets activating, and flew into the sky.

“Commander!” An ADVENT Officer came running up, accompanied by two Lancer Predators, the main fighting force of the Lancer Corps. “Chief Marshal Wilkins wishes to update you on the current situation!”
“Lead the way,” the Commander stated, already moving. All of them broke into a jog as they went to where the Chief Marshal was waiting, which was a commandeered store-turned-command center, heavily guarded by Lancers.

Chief Marshal Blake Wilkins was standing over a makeshift holotable, in full armor and helmet, with one of the Lancer Executors beside him, and some other Officers. “Commander,” he greeted as he looked up. “Glad to have you here.”

“What’s the situation?” The Commander asked. “My Archangel squad is already assisting in the air, as are our own Firestorms and Ravens.”

“Appreciated,” Wilkins nodded, motioning to the Lancer beside him. “This is Executor Jackson, Lancer Corps. We’re only launching smaller incursions now until we have a better idea of what we’re facing. With Andromedons, you can’t be too careful.”

Good. This person wasn’t an idiot. “How much do we have?”

“We are in Lynnwood now,” Wilkins pointed to the holomap. “Our army is coming from the north and the east, as well as some support from the US Destroyers we were able to get from the Puget Sound, that large lake.”

“I know what it is,” the Commander told him. “And you’re having issues?”

“Not necessarily,” Wilkins amended, tapping a finger on the holotable. “We wanted to get an assessment of what they have, and we do now. They’re entrenched both within the heart of Seattle itself, and outside. The force is mostly composed of Andromedons and Mutons. We’re also coming under sniper fire, so throw some Vitakara in the mix.”

“We have marked the main locations they are entrenched in,” Executor Jackson stated, pressing a button and various areas on the map lit up red. “Along with known and suspected enemy composition. We’ve held back our heavy hitters until this is determined. Now that you’re here, the actual assault can begin.”

“What are the casualty numbers so far?” Creed asked.

“In the low hundreds,” Wilkins stated. “We didn’t send them on a deliberate suicide mission if that’s what you were wondering. We didn’t want them to advance, only engage and hold the line. That is what they’ve done, and taken a fair number of aliens with them.”

“How is the air situation?” Rebecca Carr, one of his soldiers asked.

“Manageable,” Wilkins said. “So far they haven’t mobilized much, mostly Scouts. Their AA weaponry is making it difficult to provide air support on the ground.”

“We can help with that,” the Commander said. “And what do you plan to do next?”

“We send in our second wave,” Wilkins said, clasping his hands behind his back. “Our tanks, support vehicles, Lancers, Purifiers, and a few other tricks we have. And your people, of course. There is no point delaying it further.” He began walking to the exit, and all of them followed and they saw the massive line of tanks rolling into the cities, accompanied by MDUs and dozens of ADVENT soldiers.

“What is that?” Ellinor Aagard asked, noticing one of the leading vehicles.

The Commander was not surprised at the question, and he hadn’t actually seen one of those used in
combat before. It was a grey standard M1150 tank, but with an attachment on the front. There were
two arms that extended a good ways from the body of the tank, with a roller on the ends. Attached
to the roller were lines of chains.

“That’s a Mine Flail,” Creed said in amazement. “I didn’t even know they still existed.”

“Still exist, and I doubt even Andromedons can fully hold up to them,” Wilkins said coldly. “We
run into a deadlock, we send this in and fuck them up. I don’t have an unlimited number, so I’m
using them wisely. Tell us where you’re headed, and I will order the assault.”

“Oh,” Rebecca Carr, standing beside Creed interjected. “So how does that work?”

Creed glanced over at her. “Originally? It swings the chains around rapidly. As the name implies, it
detonates mines to make it safer to move over. But since we haven’t seen the aliens use mines…”
he trailed off contemplatively.

“Uh,” Rebecca Carr, standing beside Creed interjected. “So how does that work?”

Creed glanced over at her. “Originally? It swings the chains around rapidly. As the name implies, it
detonates mines to make it safer to move over. But since we haven’t seen the aliens use mines…”
he trailed off contemplatively.

“Uh,” Rebecca Carr, standing beside Creed interjected. “So how does that work?”

Creed glanced over at her. “Originally? It swings the chains around rapidly. As the name implies, it
detonates mines to make it safer to move over. But since we haven’t seen the aliens use mines…”
he trailed off contemplatively.

The Commander was somewhat amused at that, but returned his focus to Wilkins. “Where is the
fighting heaviest?”

“Pacific Highway intersection,” Executor Jackson answered. “That’s where the strongest
Andromedon line is.”

“Then we go there,” the Commander ordered, motioning to his squad. “Let’s go!”

“We’ve got transports to take you there,” Wilkins pointed to a couple of Humvees. “Though your
MEC will have to run.”

“Not an issue,” the Commander said as they entered the armored transports. “We’ll give you
support where needed.”

“Understood,” Wilkins confirmed. “Good luck, Commander. Glad to have you here.”

“Seconded,” Jackson added. “My Lancers will be assisting you when we can.”

The Commander only nodded, then entered the Humvee and closed the door, and they sped off into
the battle ahead.

***

Moapa, Nevada - United States of America

11/6/2016 – 8:32 A.M

The ADVENT Army fully assembled was an inspiring sight. The flat landscape of Nevada made it
perfect for ADVENT to reliably deploy their heavier weapons and vehicles, and the lines of
Abrams tanks, Strykers, M6 Linebackers and a few more additions she hadn’t seen before, put the
size of the ADVENT Army to scale.

This wasn’t counting the thousands of soldiers, MDUs, Purifiers, and aircraft that she knew were
going to be deployed. Their own arrival had not gone unnoticed, and while they were not in range
of Vegas, that was intentional. They were waiting for her, upon request. The temporary command
headquarters were under a plastic shelter, and would likely be taken down soon.

“Fatima, Viktoria, Jim, follow me inside,” Patricia ordered as they walked up to the command
headquarters. “The rest of you stay outside and await orders.”

“Yes, Overseer,” they answered in unison, even as she could tell they were wanting to start the fight. There was a tangible feeling of anger and vengeance permeating the men and women here. That was only growing stronger and more emboldened as more and more arrived. She hoped it wouldn’t spill over into overconfidence.

She had specific plans for Fatima, and the two Seraphim Archangels, and they needed to know what to do to be most effective. The figures at the holotable were already waiting, and she sensed them becoming more confident as she walked in. Flattering how she’d developed a reputation, but one that was definitely earned.

Funny how they had no idea they were also accompanied by Viktoria, another Leviathan. After this, Patricia suspected she’d develop a reputation of her own. “Psion Trask, welcome,” a man in full armor greeted, clearly older than was typical, with greying hair and an eyepatch. Definitely a veteran. “Glad we have you to assist us. All indications are we’re going to need it.”

“With any luck, I’ll make sure you don’t have to worry,” Patricia assured him, smiling under her helmet. “We’re all ready to assist.”

“Good,” the man gave a curt nod. “Since we haven’t met, I’m Mathis Stettler, General of the ADVENT Army.” He gestured to the woman beside him, also in full armor. “This is Chief Marshal Sally Collins, American Legion Seven, and beside her is Predator Lorian Rudin, Lancer Corps.”

“A pleasure,” the armored Lancer nodded. “Your reputation precedes you, Psion Trask. I look forward to working with your squad.”

“As do we,” Fatima said. “We’ve worked well in the past.”

“Deus Vult,” Lorian recalled. “Yes, that was certainly a success.”

“And now we will continue those successes,” General Stettler redirected, raising a hand. “The short version, Psion Trask, is that Las Vegas is effectively an alien stronghold now. The city itself you are familiar with does not exist. The aliens destroyed any buildings they didn’t need, and heavily fortified the rest.”

“What did they remove?” Jim asked.

Chief Marshal Collins snorted. “You’d be better off asking what they kept.” She motioned to the holotable. “They cleared out a large section in the middle of the city, presumably for aircraft. The smaller buildings they seem to have turned them into a kind of barracks, and destroyed neighboring ones, maybe to free up space. They’ve kept many of the larger hotels and casinos, and turned them into sniper nests.”

“Nellis Air Force Base has been turned into a storage area of sorts as well,” Stettler added. “They seem to be keeping the majority of their heavy vehicles and weapons there. Cyberdisks, Sectopods, Mechtoids. Likely drones as well. I’d expect they’re storing Sectoid Fighters and Scouts there as well.”

“Using the hotels for sniper nests is smart,” Jim nodded approvingly. “The landscape is perfect for that.”

“Which is a problem,” Stettler grumbled. “Until we actually reach the city, we will be completely exposed. And we’re not getting in without a devastating fight.” He pointed to the perimeter. “They built a wall around the entire perimeter; a high one too, dotted with anti-personnel and anti-aircraft
turrets, and manned by Mutons and Andromedons.”

“A problem,” Patricia repeated, thinking. “How many do you think are in the city?”

“An estimate?” Stettler looked over to Collins. “Ten thousand? Maybe more? They have Gateways, so until we shut those down, this battle won’t end anytime soon.”

“Enemy composition?” Patricia asked.

“The full extent isn’t known,” Lorian stated. “But this is a military base. I’d expect pretty much anything.”

“Organic units mostly, then,” Patricia said. “Good. I won’t be able to help with the mechanical ones, but unless they’ve made modifications, the Mutons and any other organic enemy shouldn’t pose a threat.”

“The problem is they’ll figure out fast we have a telepath,” Collins noted. “I don’t know how fast you work, but if a large part of their military is augmented, you could be neutered. No offense intended, psion, but we need to prepare for that possibility.”

Patricia was more impressed than offended she’d been so blunt. “None taken, Chief Marshal. Which is why I want to go out ahead. Let me work before the main army gets here.”

Stettler frowned. “With the amount of sniper nests and flat terrain? You might get shot before you have a chance to do anything.”

She clasped her hands behind her back. “Unlikely. I know what to look for, and I don’t need to be close to begin working. They will be looking for an army, not one person. Trust me, General, I know what I’m doing here. I work first, and we don’t have to worry about their leader neutering what I can do. But that means you don’t attack until I give the signal.”

Collins cocked her head. “And what will that be? You telepathically contact us?”

Patricia shook her head. “Not you, her.” She motioned to Fatima. “It is difficult to focus on a specific person at long distances, but I can pick out psions easily enough, telepaths especially. She will inform you when to attack.”

“And how long do you estimate it to take?” Lorian asked.

“I don’t know,” Patricia answered. “It could be as little as a half hour, or more than three. Time is difficult to track when I use it over a large area, and try and do it right.”

“Fine,” Stettler conceded. “You’re too important an asset to waste, so if you say this would help, I’ll allow it. We can delay the attack until you’re ready.”

“Thank you,” Patricia told him sincerely. “You will not regret it.”

“Maybe,” Lorian chuckled. “You might make it too easy for us.”

“I think we could use an ‘easy’ win,” Collins sniffed. “At least I have no problems with it.”

“I’ll have a Humvee take you out,” Stettler said. “You can get off whenever you want.”

Patricia followed him as he exited the shelter and directed her to where the armored Humvees, Bradleys, and Strykers were parked, many of which were already loaded with soldiers. The General spoke with one of the drivers, then motioned her over as the young driver quickly got into
Patricia stepped into the passenger side of the vehicle and they were immediately driving off, down the road, leaving the rest of the ADVENT Army behind. She couldn’t see the face behind the helmet he wore, but her driver was definitely nervous; clearly he hadn’t expected to be driving her around, and she supposed to someone unfamiliar with her, she would be intimidating.

Her telepathy was likely also a source of it. She could only imagine the stories of what she could and had done. The funny thing was that a good part of it was probably true.

“Relax,” she told him. “I’m really not someone you need to worry about accidentally making angry. Trust me, if I had issues with random people I suddenly met, I wouldn’t get anywhere.” She reached up and took off her helmet, knowing that an actual face might put him at ease. “And don’t lie, either. I can tell when people do that.”

“Sorry…Psion Trask,” he stammered, not sure what her title was. “I’ve never met a psion before, especially not one like…well, you.”

“Patricia,” she offered. “And that’s understandable. Though we’re still Humans, just ones with some extra abilities.”

“I suppose,” he said cautiously. “If you don’t mind me asking…how does it work?” He gestured at nothing as they drove through the desert. “Are you reading my mind now?”

“Yes and no,” Patricia answered, thinking how best to phrase it without it sounding worse than it was. “I’ve…trained…enough, where I just hear thoughts just by being around people. Sometimes random images flash into my mind. You know how in a crowd you can hear dozens of conversations going on at once? It’s like that, but louder.” She smiled. “The point is that even if I am technically reading your mind now, that doesn’t mean I’m listening. I don’t do that just because I can, privacy is something I can respect.”

“Uh huh,” he looked around nervously. “Although I think I’m the only one in that crowd right now, unless you can still hear people from the base?”

“I’m also good at blocking out what I don’t want to hear,” she offered. “You have to learn that eventually…otherwise the voices will overwhelm you.”

“Ah.” A few moments of silence. “Is it easy?”

“Now?” She thought. “Fairly. I suppose it depends on the scale.” She looked into the desert where the sun was rising over the barren landscape. “An army is difficult to properly control. You have to continually impress your orders upon them, but fortunately the minds of aliens and men are weak. An individual is easy to manipulate, an army is difficult to direct without proper focus.”

She rubbed her forehead. “Hard to explain without you being one, but I believe psions can only become stronger, not the other way around.”

“Does XCOM have psions in their intelligence branch?” He asked, glancing over. “That sounds invaluable.”

She blinked, realizing that the answer to that was actually no. Huh, that was something that Zhang had brought up some time ago, but at some point they’d focused on having all available psions on the front lines, and intelligence was not something that had even been addressed.

That needed to be corrected. It was a major oversight. “Sorry, classified,” she told him. “So, my
“Malu Aolani,” he answered. “US Army Motor Transport Operator, formerly of Hawaii. Wasn’t deployed there when the aliens hit, which is likely why I’m still alive.”

She just nodded. “We’ll take it back.”

“Hopefully.” he didn’t sound convinced. “But I don’t think there’s anything there anymore. I doubt the aliens left anyone alive, or any building standing.”

“The aliens are effective, but they are generally not genocidal,” Patricia shook her head. “Not unless they need to be, and this current alien leader, the Battlemaster…He doesn’t target civilians intentionally. I doubt everyone left was killed.”

“The alternatives aren’t better though,” he said emotionlessly. “You probably know that better than most.”

Unfortunately, she certainly did.

“We’re getting close,” Malu said, looking down at the GPS. “I don’t want you to be exposed to snipers, and…your armor is somewhat noticeable.”

“I’m aware,” Patricia said dryly. “Which is why you’ll drop me off here.” Malu immediately slowed the Humvee to a stop in the middle of the road. “Stay safe and get back there alive,” Patricia told him, putting on her helmet again. “The next time you come here, you’ll hopefully be attacking.”

“Good luck, Patricia,” he said, giving her the ADVENT salute. “Make them suffer.”

She smiled under her helmet. “They will die, Malu, I can promise you that.” She returned the salute and shut the door, and he turned around and drove back up the road, while she turned to where Las Vegas was in the distance. Now she needed to be somewhat conscious. There would be snipers, so she needed to find a place that wasn’t obvious.

She walked leisurely up the road, beginning to expand her mental reach, not too difficult since there was no life around her. It would make aliens trivially easy to spot. A few minutes of walking found her behind one of the rare, and rather pitiful, trees, looking into the now-fortified city of Las Vegas. Stettler hadn’t exaggerated. It appeared to be an impregnable fortress, one with a black wall around it, and focusing her sight, she could see faint figures manning the walls, with turrets lining the walkways and entrances.

The larger hotels had indeed been turned into sniper nests, some with the windows busted out throughout the building and small platforms extending from them. The bad news was that they would be almost impossible to stop without getting close. The good news was that she was definitely close enough to begin working.

She assumed a kneeling positon, placing her hands on her thighs, bowing her head and closing her eyes, beginning to breathe in and out at a steady pace, and let her mind extend to the city before her. Alien minds were distinct, and with nothing else close, it was remarkably easy to pick them out and begin entering their minds.

Much as she would like to take Malu’s advice about making them suffer, she wasn’t going to do that initially. That would simply let them know something was wrong. Maybe once ADVENT arrived, but right now…the opposite approach was what she wanted. There were thousands of minds to corrupt, and she was going to do so to each one.
So she slowly began spreading her control, planting herself with hooks in their mind; backdoors no one but psions would even think about. She was a silent observer to their most personal memories and thoughts, all rushing and vanishing from her mind in an instant, and so once she set the hooks for her entrance, it was time to begin rewriting how they saw the world.

Aegis and Geist had been right in pointing out her flaws, and today she would correct that. Every being, no matter if they were alien or Human, had a small voice in their head, a monologue that dictated what they were thinking about and how they were feeling. This voice was typically the person’s own, or occasionally a close companion or friend. Most of the time it varied.

But no one ever paid attention to it beyond that. No one questioned what their mind told them.

And they would also not notice that the voice in their head that they had heard since consciousness, was not theirs, but her own. The thoughts were still their own, but the voice that dictated them was her own manifestation. She idly wondered if a change like this was permanent or not, as it didn’t technically affect their mind.

It did set the stage for her first commands.

She spent minutes or hours, she wasn’t sure which, reprogramming the voices in the minds of the aliens, to be the one that represented her. It was interesting how much of the same concerns and thoughts aliens had that Humans did. Thinking about their mates, stressing over deadlines and commanders, wanting their shift to end because they were hungry. Even Mutons displayed some kind of preference for certain people, even if they knew never to express it.

Ironic that was only making it easier for her to exploit them.

Now it was time to act.

*Everything is fine.*

*Everything is normal.*

*There was no Army, there are no soldiers, everything is normal.*

She began repeating this mantra every few seconds, over the course of uncountable minutes, bombarding their minds with this subconscious realization that nothing was happening. It was an ordinary day. Nothing worth raising an alarm. Patricia repeated this over and over, and decided to test it.

*Jump,* she directed toward the mind of a Zararch sniper, perched up in one of the sniper nests. He did, of course, and not once did his friends react as he calmly walked off the edge.

*Everything is normal. Everything is fine.*

The sniper felt nothing as he plummeted to his death.

*This is fine.*

She looked through the eyes of the aliens on the ground as they saw the sniper slam into the ground before them, becoming a yellow splatter on the ground, mixed with armor.

*This is normal. No reason to stop working.*
Everything is fine. We have work to do.

Excellent. She sent the prompt to Fatima. Begin the attack.

And she continued the mantra, drilling and impressing the command until they repeated it in their minds. No living alien was unaffected, and no alien was aware. They simply continued on, as if it was an ordinary day. And when the first bombs hit, the first shells landed, and when the encroaching army appeared on the horizon they did not panic, they did not worry; at most they simply wondered if this was even something they should bother thinking about.

Everything is normal.

Everything is fine.

***

Seattle, Washington – United States of America

11/6/2016 – 10:52 A.M.

Nuan felt somewhat inadequate compared to some of the other soldiers fighting beside her. The first engagement against the aliens had gone…extraordinarily well. The alien force was primarily composed of Andromedons and Vitakara, who had set up in entrenched positions in a shelled intersection, black alloy barricades set up providing cover, not including the buildings the aliens were also using.

The two Templars, Pall and Ellinor had immediately rushed into combat. Ellinor was protecting herself with a psionic shield and Pall thrust a hand forward, sending a telekinetic wave which knocked the Runianarch soldiers he was charging off-balance. He immediately laid into them with his battle axe, nearly taking the head off one and caving in the chest of another.

Ellinor was performing similarly, Dane Axe in hand as she buried it in the unprotected seams of armor. The rest of them were taking up cover behind the first alien barricades, rallying the ADVENT soldiers behind them to advance. Creed, Rebecca, and herself were suppressing the back left line of Andromedons, while Cole, Ricardo and Eddison were focusing on the other half.

The Commander was on the roof, surprisingly enough not holding any weapon, but she’d seen him pulling out some kind of small spheres. She would have guessed they were marbles, but she knew that couldn’t be right. The genetic enhancements were definitely coming in handy, she was amazed how much of a difference they made in actual combat.

She could actually zoom in on an enemy, and fire accurately while doing it. It had taken some getting used to, but it was an amazing feeling. The result was that the Andromedons were pinned by unnaturally accurate fire, while the two Templars cut through the Vitakara force with laughable ease. Ellinor had a small shield before her as she advanced on a pair of Borelians, while Pall was incorporating his telekinetics into his attacks; disrupting balance, breaking limbs, pulling weapons out of hands.

Eddison was also acting in a highly supportive manner. “Acquiring targets!” Purple energy flowing off him, he extended a hand to a group of Andromedons in cover, and twisted his wrist, while pulling back his arm. The Andromedon soldiers were suddenly lifted into the air, completely exposed.

“Concentrate fire!” Creed commanded, and every XCOM soldier with a rifle began firing on the suits. They could take damage, but not even Andromedon suits could hold against a sustained
barrage of gauss fire. The viewports of the suits broke, and then went limp. Nuan didn’t know why they weren’t fighting back, but then realized that Eddison was likely keeping them in place telekinetically.

“Eddison!” She called, pulling out a plasma grenade, another gift from Aegis she’d heard. “Can you direct them?”

He got what she was asking, and gave a quick nod. She tossed the first grenade towards the suspended suit, and he raised his free hand as if to catch it, and moved it until it was in the shattered viewport of the Andromedon. Nuan repeated it for the second suit, with both suits exploding in a spray of plasma and fire.

The aliens had snipers as well, but the Commander was supposedly dealing with them. She glanced up at the rooftops to see Vitakarian corpses either hanging over the railings, or slumped on the ground. There were two left on one rooftop, and the Commander was just kneeling behind another nearby rooftop, one hand palm up.

Something flashed from the palm, a streak of silver, and the alien screamed and went immediately silent. Another flash and she saw that it was that marble thing in his hand again. Some kind of projectile? Whatever he was doing, it was working.

“Mutan reinforcements approaching!” Ellinor called out as she turned to face the reinforcements coming from the nearby street.

“Move up!” Creed waved for them to follow. “Cut them down where they stand!”

“Overseer!” One of the ADVENT Officers came running up. “We’ll clear this street for you.”

Nuan looked back to see several ADVENT Engineers moving into place some kinds of launchers, which were large enough that they required trailers to transport them, and aiming them at the street where Mutons were pouring in. “Copy,” Creed waved them to the sides. “Provide covering fire! Let them do their work.”

Nuan looked at the launcher, knowing she’d seen it before, then her eyes widened. “Mine clearing charges!”

Creed glanced over to her as he fired down the street. “Yep. Seems ADVENT thinks they’re useful for more than just mine clearing.”

“Snipers cleared,” the Commander added, jumping down from the roof and pulling out his sniper rifle finally. “That technique was surprisingly effective.”

“Matthew knows what he’s doing,” Eddison agreed, pulling his hands back towards him, and a half dozen Mutons stumbled into the street.

“Fire!” The ADVENT Captain called, and the launchers shot out long cables into the air with a bang, right down the length of the street. The Mutons didn’t know what those were, and the cables actually landed on some of the exposed Mutons. “Detonate!”

The street was lit up in a series of explosions as the Mine Clearing Charges did their work, though instead of mines blowing up, it was Mutons. “Forward!” The Officer called, while Creed and the two Templars moved forward.

“Keep pushing them!” He called, as even then Nuan saw more aliens coming in the distance. Another intersection was coming up.
“Nuan, ready your Thermite grenades,” Creed said as they moved forward, firing towards the next alien blockage. “Let’s see if Andromedons can stand up to that.”

“Yes, sir,” Nuan said, holstering her rifle and pulling out the two grenades delicately. XCOM was getting more brazen in their deployment of dangerous chemicals. Not that she necessarily had a problem with it, but just because ADVENT was using CIF₃ didn’t mean that Thermite and White Phosphorus were suddenly safer.

But they were effective.

Ellison hooked her axe on her belt, and fully devoted herself to erecting a shield that protected the entire street. “Get into position!” She roared. “Nuan, now!”

Nuan quickly took a look at where the heaviest concentration of enemies were. She decided to focus on the left groups, since they were composed of more Andromedons. “Grenades out to the left!”

She chucked them to the left, and the Andromedons nearby backed away, or at least as much as they could before the Thermite flared and burned through not only the nearby Mutons, but the cover as well. Unfortunately, while it did damage the Andromedon armor, it didn’t look to be fatal, and enough Andromedons had gotten out of the way.

“Shield collapsing!” Ellison warned, picking up her axe again. “Charge forward!”

“Center group being raised,” Eddison stated, lifting a palm up, and the front line of Mutons were raised into the air, and subsequently cut down by a combination of gauss and laser fire. The Muton forces were being completely overwhelmed by the combination of suppressive fire, and the Templars moving in and killing them within seconds.

The Commander was on the roof, and working on taking out some snipers on the opposing side of the street, to some success she saw as there were corpses on the other side. The Muton lines decimated, XCOM and ADVENT advanced further still, and now the Andromedons were retreating back. Seeing the Templars approaching them, they switched tactics, spraying acid from their gauntlets, forcing them to stay back.

“We’ve got trouble coming,” the Commander warned from the rooftops. “Elites, and a lot more Andromedons heading our way.”

“Understood,” Creed stated, taking the time to reload his weapon. “We fortify here.” Nuan took a position beside him, grateful for the aliens for making such useful cover. To her sides were more ADVENT soldiers, emboldened by the advance. Nuan wondered if they’d just gotten lucky so far. The aliens clearly hadn’t expected such a vicious attack, and were now paying a heavy initial cost.

But the aliens weren’t stupid. They would try to adapt eventually.

And this looked like the first true test.

Looking down her rifle, at the titanic Mutons approaching, easily twice her size, she couldn’t help feeling a little intimidated. But then she looked to the front, where Pall and Ellinor were standing firm, Ellinor with a psionic shield in front of her, taking the brunt of the initial fire. The Commander was sniping from the rooftops, Eddison was readying for another attack, and ADVENT was moving more Mine Clearing Charges into the area.

Maybe this wouldn’t turn out so bad after all.
The plasma began raining upon them, and the battle began anew.

***

Las Vegas Ruins, Nevada- United States of America

11/6/2016 – 11:12 A.M

Oliver had been told that the aliens had built a fortress, but seeing it in person was something else. Whatever ruins there had been were gone, and in its place was what appeared to be an impregnable base. The black alloy wall that went around the perimeter was especially foreboding; especially as the harsh sunlight from the noon sun only made it stand out more.

“Begin firing!” One of the Officers called out, and the hundreds of tanks that had accompanied the ADVENT Army began their assault.

“Let’s see if I can get some shots,” Cassandra muttered, raising her sniper rifle as the MDUs began moving forward, as well as the Humvees and Breacher Vehicles that began zooming towards the desert. Explosions appeared on the alloy wall, and some into the city itself. Curiously enough, it didn’t look like the aliens realized they were under attack.

Odd.

“Load up!” Blake Harkin ordered, the XCOM soldier in charge currently as Patricia was occupied doing…well, he assumed she was the reason for the lack of a response. “Fatima, do your thing.”

“Got it,” Fatima confirmed as all of them boarded a Stryker. Oliver really hated traveling in confined vehicles, because he knew that everyone was just one bad rocket or mine away from being killed in suitably meaningless fashion. If he was going to die, he’d prefer it be because of his own mistakes, or even just being outnumbered. Anything as long as he had some control over it.

“I hate these things,” Mona Eriksson echoed his thoughts as she climbed in it.

“Have you even ridden in one, Mona?” Lin Zexian, one of the new Taiwanese soldiers asked.

“I don’t like confined spaces,” was her answer. The ones with them chuckled at that.

“It won’t be for too long,” Blake said as the Stryker began moving out. “From the sounds of it, it seems like the whole alien base isn’t even aware we’re here. Patricia did her job well.”

“They don’t even have automated defenses?” Fakhr asked skeptically.

“It’s not that easy,” Blake corrected. “The perimeter defenses are online, but there are no soldiers supporting them, there aren’t any aircraft, and I assume the Sectopods and Cyberdisks have to be activated manually. They might come, but by then it might be too late.”

“Pity,” Mona looked down at her gauntleted hands, which Oliver noted were different than the others. Thinner and made out of some different kind of fabric and no actual armor. Probably had to do with her abilities. Offensive Psions couldn’t use the same stuff as the rest of them since they were destructive enough to damage what they were actually wearing. “I was hoping to actually try some stuff out.”

“Believe me,” Oliver grunted. “You’ll have plenty of opportunities.”

“This is Seraphim Hammarström to appointed Overseer Harkin,” Viktoria’s voice said in their
helmets. “Looks like it’s sadly not going to be as easy as it looked. Guess the Cyberdisks are on some kind of contingency, and there are…” There was a pause. “Yep, I would say a few thousand coming to defend the wall.”

“Copy,” Blake confirmed, as the sounds of battle became more audible. “We’ll be ready. Fatima, I’d say start it now.”

“Affirmative,“

That was the benefit of having two immensely powerful Telepaths. One for neutralizing the enemy, and another for supporting allies. Oliver had heard what it was like to have Patricia supporting people, and he wasn’t sure it was something he was necessarily looking forward too. Anything that messed with his mind too much wasn’t something he was a fan of. But here he didn’t really seem to have a choice.

It probably wouldn’t hurt.

The Stryker stopped, and Fakhr hit the doors open and they charged out, first behind the tank so they had some cover from the enemy fire. The Strykers and other armored transports had parked largely the same way; horizontally to the wall, giving the soldiers cover until better defenses could be established.

ADVENT Engineers were already working to construct barricades between the tanks, supported by the rest of the ADVENT forces. The MDUs were still far behind the front line, but they were advancing and firing, and in the midst of them was the Goliath-class MEC, firing its massive railgun at regular intervals.

“Laying down covering fire!” Lin shouted as he began firing his autorifle at one of the turrets on the top of the wall. Oliver also began raising his own rifle to get a good look at what they were facing. The wall was even larger up close, probably close to twenty feet tall, with turrets lining the ground, middle, and top of it.

The middling ones sticking out from the wall were exclusively plasma, and the ones on the top were a mix of plasma and laser, the latter of which was proving to be the most lethal. Computers were more accurate than Humans, and alien programming was at least equal to that of MDUs, and Oliver ducked down as he saw an ADVENT soldier get sniped by a laser directly to the head.

He swung his rifle back up, focused directly on one of the laser turrets in question, and fired. His enhanced vision allowed him to make a shot he would never have been able to without specialized equipment. The turret sparked, and exploded in a red burst. “One down!” He called.

Several tank volleys took out a few more turrets, even if they were largely not having a major effect on the wall. The main line of Abrams tanks were providing good suppressive fire, and making a lot of dents in the wall, but they weren’t quite as accurate. That however was going to change as they began moving forward, and the MDUs strode ever closer.

“Cyberdisks!” One of the soldiers screamed frantically, as the disk-shaped machines swooped over the wall, and immediately deployed into their attack formation. The green plasma fire that was slamming into the sand around them was soon joined by the hissing golden streaks of Cyberdisk rounds.

“Cover!” Fakhr called, out as she stepped back and loaded a rocket into her launcher. Oliver and Lin complied, and lit up the area around them, even if that seemed somewhat pointless since they
were only dealing with machines which were harder to manipulate and distract. A yell from Mona, and Oliver saw a sizzling purple streak launch into the air and slam into one of the Cyberdisks, shredding the delicate insides and sending it plummeting towards the ground.

“Firing!” A rocket shot out and slammed directly into another cyberdisk, destroying it instantly while causing shrapnel damage to another one nearby. Another purple psionic lance, and another Cyberdisk was vaporized. Cassandra was doing her own share of work, resting her sniper rifle on the edge of the Stryker’s corner, and shooting at the turrets up above.

“What’s wrong with them?” She muttered as Oliver saw another turret explode. “They aren’t doing anything.”

Oliver aimed up to see what she was talking about, and frowned as he saw that the walls actually were being manned. They were definitely aliens, he could see at least a few Mutons and Runianarch soldiers up there. But they just stood there, looking down. It wasn’t even like they were frozen or incapable of moving. He could swear one of them was doing a patrol from the calm way they just walked across the wall.

Well, at least until a sniper shot from Cassandra ended his life. Or was it a she?

The Cyberdisks still kept coming, and had appeared to realize that not everything was ok, and began taking better positions and retreating as needed. More still were destroyed, and the turrets were gradually taken out. Throughout the battle, Oliver felt more and more calm; more focused; he didn’t have to think about where to shoot next because he knew his target would be there.

Fatima’s telepathy, he assumed.

Hm. Perhaps this was not as bad as he thought.

No words needed to be spoken by anyone as the ADVENT soldiers were under the same spell as the rest of them. Fire became concentrated, shots became focused and accurate, soldiers acted in time to save each other’s life from things they would have previously not been aware of. And slowly but surely, they began advancing the battle line forward.

The new wave of armored transports flew past them at some unspoken signal, approaching the wall itself. Out of them poured the Lancer teams, who destroyed what ground turrets remained around them, and began pulling out grappling equipment to scale the wall. Blake motioned them forward and they advanced to where the Lancers were.

This wasn’t so much a battle anymore as it was a rout. However, Oliver was not going to get his hopes up for an easy victory. This was just the outer wall, they still had the city itself to take, and it was only a matter of time before the aliens realized what was going on.

And yet, as he thought about it, he wondered what the aliens could actually do to stop this.

Hopefully, they couldn’t.

***

*The Cultro, Earth Orbit*

*11/6/2016 – 11:52 A.M*

They were launching their expected counterattack.
It was much larger than he had anticipated.

The Battlemaster looked down at the golden haptic display of the West Coast of the United States. They were attacking beyond Portland, which was...not entirely expected. Out of the possible targets, he would have thought those would be lower on their priority list, and should the outlying bases fall, that would put the entire northwest at risk of collapse. Even if Seattle were to hold, it wouldn’t last long if the Portland area fell.

A problem. And given the scale of the attack, he knew the bases there were not equipped to handle it. Not without reinforcements. XCOM and ADVENT forces were cutting through the defenses with a disturbing amount of speed, and their technological progress had been far greater than he had anticipated.

Armored vehicles, these new flying XCOM soldiers, chemical grenades, and their plasma dissipaters. That alone was giving ADVENT a massive advantage, since the local forces were equipped with primarily plasma weaponry. That ADVENT had been able to, if not negate their weapon type, interrupt it, was not a good development. They should not have managed to do it so quickly.

Hm. Perhaps they had been pushed too quickly. That ADVENT was primarily using this told him that Aegis was unlikely to be behind it, since Aegis knew that if they pushed too hard, he would have no choice but to put a very quick end to this war. This was not a major problem ultimately, but right now the current battle strategy was insufficient to counter it.

Then there were the reports of a new kind of ADVENT soldier that seemed to be invincible, much like certain XCOM ones. Lancers most likely, and ADVENT had probably turned them into MELD-enhanced super-soldiers. Not unexpected, but the bases primarily composed of Runianarch soldiers would fall easily to them. That was a problem that he needed to solve later.

The bases in Hillsboro and Salem were likely lost, and all that remained would be to extract a large cost from XCOM itself. If it was going to fall, he wanted some idea of how best to handle them. It wasn’t worth direct intervention, but there wasn’t a need to sacrifice the Vitakara unnecessarily.

“Establish a connection to Runi’Yularan’s sarrah.”

“Establishing,” the CODEX said. The golden figure of the Vitakarian overseer of the Portland regional defenses appeared, in full combat armor and holding a plasma rifle.

“Battlemaster,” was his curt greeting, looking around in response to something. “Good to hear from you. We’re not holding well against-“

“I am aware,” the Battlemaster interrupted, raising one fist. “Your orders have changed. Your own forces are insufficient against what XCOM and ADVENT currently have. Order all Runianarch soldiers through the Gateways to safety, and you will follow them.”

Yularan was clearly surprised. “Retreat?”

“You will die if you stay,” the Battlemaster stated flatly. “I will not sacrifice your soldiers for a defeat. And while your soldiers will retreat, I fully intend to keep ADVENT and XCOM occupied. I will order Muto units from Desolan itself to reinforce the cities. In addition, I will be releasing the new Sectoid Vanguards, as I feel this would be an adequate field test for their skills.”

“But to be clear, the intent is not to win,” Yularan noted slowly, once more glancing around. “Then why continue fighting? Especially if you’re having our forces retreat?”
“Information,” the Battlemaster explained. “Both in how these new developments have changed ADVENT, and how the Vanguards perform. They are expendable and can be replaced. Your soldiers cannot. Carry out my orders and signal my ship when your forces have evacuated, and establish Gateway connections to the ID numbers my CODEX will send you. Execute this without delay.” The Battlemaster cut the connection and looked back to the map.

Seattle was likely going to hold. Even if it didn’t, ADVENT would pay a heavy price to acquire it, and likely not get much more than a leveled city. Collective Andromedon Overseer V’Thrask had spent his time well, and made sure Seattle would not fall easily, if at all. The Andromedons might suffer severe losses, but holding the city was important, because if that fell, then so would the Northwest.

It was a problem, but one he was sure V’Thrask could handle adequately. He had proven competent, and the only thing that would undermine him was incompetence or luck, the former of which didn’t exist with Andromedons, and the latter he didn’t believe the concept of to begin with. They would have to be outfought, outsmarted, and outmaneuvered to have a chance of losing the city.

Still, no point in taking chances. He’d directed a portion of the system fleet to assist in the air defenses, and V’Thrask had established Gateways to several Collective bases full of Andromedons, Zararch, and Mutons. He was curious to see how they would handle the new ADVENT tech, since they would not fall to it so easily. If nothing else, important data would be collected.

Now he needed to figure out what was going on with Las Vegas. Of all the targets that could be attacked, he’d been convinced that would be the main one. A military base of that size, and location was too large a threat to ignore, and had adequately addressed it by making sure the Sargon there had whatever was needed to turn it into an acceptable fortress.

But he’d heard nothing from them so far. There was a general warning they were being attacked, but the Sargon Vegas-1 had not informed him they were under attack. That implied that either the force attacking them was not significant enough to warrant an actual update, or they had been compromised somehow. Which also didn’t make sense, since signal strength there was perfectly fine, and all diagnostics connected to the Vegas base were online.

With that said, the Battlemaster suspected something was wrong. It had to be. “Establish a connection to the Las Vegas Command Base,” he ordered. “Priority One.”

“Confirmed, establishing now.”

Almost instantly, the hulking golden figure of the Sargon was before him. “Battlemaster,” he greeted. “I am ready to assist.”

“Status report,” the Battlemaster demanded. “The general alarm was sent to us. What is happening?”

“Interesting,” the Sargon said, almost in a monotone. “That must be an error. Everything is normal here. Everything is fine.”

The Battlemaster was instantly concerned. Sargons didn’t talk like that. Not usually. They didn’t use words like ‘fine’ either. “I will rectify this error immediately, Battlemaster,” Vegas-1 continued in the monotone. “I apologize for inconveniencing you-“

“Display exterior cameras on Vegas Base Command,” the Battlemaster ordered the CODEX. Normally he wouldn’t force an override like this; he had a fairly good idea of what had happened,
but he needed to know for sure. Holographic screens appeared, and it didn’t show some paltry ADVENT force, but what he would only assume was a large portion of their army.

They were bringing everything to fight, and based on how close they were, and that the aliens on the wall were getting slaughtered like animals, he assumed they were winning decidedly. Trask. Clever. He now knew for sure what was happening, and he’d made a mistake in underestimating that. Now defeating ADVENT here would be much, much harder.

“Override Seven-Seven-Two-One-Seven, Desolan, initiate Reset Protocol, Countermeasure Two-Two-Sargon-One,” the Battlemaster stated to the Sargon. They were supposedly immune to direct mind control, but there were clearly some flaws left in the programming, and so he had to reset the psionic immunity manually. Revelean needed to fix that immediately.

The Sargon visibly froze, then moved again. “Battlemaster, the situation is concerning. It appears that a hostile psion has managed to place the majority of our forces in a trance that leaves us unable to adequately respond to outside stimuli and information. We will not be able to forcefully remove them from this state without assistance.”

The Battlemaster knew his options were limited, but the telepathy had to be dealt with. “Activate all mechanical units; I will be ordering a Gatekeeper to assist. That should deal with the psion affecting the majority of our soldiers. Reinforcements will also be coming, as will I.”

“Acknowledged, Battlemaster,” Vegas-1 confirmed. “I will begin carrying out your orders and executing the appropriate contingencies immediately.”

“I will be there shortly,” the Battlemaster stated, and ended the communication. “Head to the Las Vegas base,” he ordered the CODEX as he began issuing orders for reinforcements. “This needs to be handled immediately.”

***

Seattle, Washington – United States of America

11/6/2016 – 12:08 P.M.

They were getting closer to the shield, and now they were facing much stancher resistance than before. The Commander fought from the rooftops, and was now joined by teams of ADVENT Snipers, as they faced the Zararch agents across the city in a duel stretching entire city blocks. On the ground the Andromedons were being supplemented with Borelians, Mutons, and Elites.

XCOM was holding the line as ADVENT was rushing to reinforce the massive intersection that was now the location of the heaviest fighting in the city. There were no more open streets, instead there were black alloy barricades and the front of buildings reinforced. The aliens were not just using the apartments and two-storied buildings as mere constructs, but were fully occupying them and using them defensively.

“Pall, Ellinor,” the Commander said as he looked down the scope of his gauss rifle. “Clear the leftmost building and fall back.”

“Yes, Commander!” The two Templars followed his orders and dashed across the torn street, protected by Ellinor’s shield, and leapt into the window of the second floor. The Commander gave a grim smile as he executed a Zararch sniper on the roof of another building. That was one building done. Now they needed to deal with the line of aliens in the front.

“Gloria, prepare for a barrage on my designated position,” the Commander said, turning on his
marking laser and aiming it at the frontal alien line. “Fire at will.”

“Local ADVENT forces, prepare for rocket barrage on enemy position,” Creed called as he waved for the rest of the XCOM soldiers to fall into cover. The Ballista-class MEC soon showed just how dangerous it was as the missiles streaked down to where the Andromedons and Mutons were hunkering behind, lighting up the street in a bright explosion of fire and shrapnel.

The Commander fired at one of the Runianarch soldiers who was foolishly trying to take a position at a window, or perhaps use the plasma turret set up there. Another body dropped to the ground. His genetic enhancements made this almost laughably easy. He ejected the empty clip and put in a fresh one as the smoke cleared and he could see how much was actually accomplished.

He frowned. Unfortunately not as much as he’d hoped. All the Mutons, and most of the Borelians were dead, but the Andromedons were either heavily damaged, or had retreated into the buildings, and now subsequently coming out. Hm. That was new. Some of the Battlefield Engineers had a new attachment to their backs, and it looked to be one of their red shield projectors…now clearly mobile.

“Elites!” One of the snipers called. “Concentrate fire!”

The Commander looked down the smoking street to see at least twenty of the massive Elites marching down. “Concentrate fire down the middle,” the Commander ordered, reaching into a pouch on his waist and pulling out his alloy spheres. “Nuan, give them another thermite grenade or two.”

“Oh it,” she confirmed. “Throwing!”

The throw was perfect and landed in the middle of a group of four Elites; it sparked with a bright flash, but unfortunately barely seemed to slow them down. The armor was torn, scorched, and weakened; yellow blood spilled from the now-exposed flesh, but it didn’t appear to be stopping them in the least. The barrage of gauss fire didn’t seem to be doing much more than irritating them.

It was clear what they were planning to do. Overwhelming ADVENT with Elites was a valid strategy, and one that was extremely difficult to stop. The good news was that it looked like there was very little behind this push, so if they took these Elites out, they might be able to actually advance instead of being held to a standoff.

He held a hand, palm up, and one of the silver spheres glittered in the midday sun. While he knew he wasn’t the most powerful telekine ever, he had been working on a way to take advantage of what he could do, which it turned out, was more than he suspected. A small object accelerated to lethal speeds was not quite as impressive as mind control, but it was certainly more useful than what most people gave it credit for.

Not to mention he’d gotten rather good at it.

The enhancements to his body and eyes made his hand-eye coordination near-perfect, so lining up a perfect shot was barely a challenge. The sphere shot away instantly, directly towards the ornate eyehole of the Elite helmet, the weakest part of the entire thing. He was able to shoot it faster than the speed of sound, even if he needed some distance for it to be effective. But the Elites at the back? Those he could take out.

The farthest Elite in the back didn’t have any time to react as the sphere slammed into its eye and brain behind it, and withdrew to his palm all within the span of a few seconds. A rubberbanding attack, as he thought of it, easy to learn as it was close to a muscle reflex. He repeated the same
thing with the next-closest one, killing each one instantly with well-placed alloy spheres.

The remaining Elites, and their Andromedon support, were close enough that this technique wouldn’t be effective against them. He quickly pocketed the spheres, and appraised the situation below. The good news was that they were being held at the intersection, but the bad was that ADVENT was taking losses.

“Eddison, we need to lift them up,” the Commander said. “Pall, Ellinor, status inside?”

“Almost clear, Commander,” Ellinor panted. “Andromedons are not easy to kill with primarily melee weapons.”

“Ready when you are, Commander,” Eddison also added, beginning to stand up. “Give me covering fire!”

The Commander also focused his own power, extending his right hand down to one of the Andromedons. Telekinesis was an odd feeling to him; he wasn’t really powerful enough to grab more than one thing at a time, maybe two, so perhaps the experience was different for someone like Eddison who could lift a dozen.

It was both what he expected and not at the same time; an intangible hand he controlled that could manipulate whatever he saw. The invisible hand clutched the yellow-helmeted Andromedons and lifted into the air. And now came the part that he was quite good at. He might not have extensive powers, but he was going to be as lethal with the ones he had as possible.

Pressure was something he understood and applied, and he began squeezing. On the ground, Eddison, enshrined by the purple waves of psionic energy, raised both hands, and the front line of aliens was lifted into the air. A twist of his hands and they spun around, disorienting and rendering them incapable of firing back. Most Elites dropped their cannons, and the Andromedons clearly weren’t familiar fighting upside down.

The Commander didn’t distract himself with that, as he continued crushing the Andromedon in his grasp. The helmet casing began cracking, the acid canister on it’s back shattered, spilling the green chemical onto the ground. The hands were forced into misshapen positions, and the joints of the legs broken.

He unconsciously moved a hand underneath the one he was directing his power with, adding another hand to the one crushing the Andromedon, and applying two directions of pressure, the goal being forcing the alien into a broken, ruined ball of metal, flesh, and blood. ADVENT Rocketeers fired at the exposed aliens, blowing their armor apart, and gauss slugs ripping the exposed flesh apart in sprays of ichor.

The helmet of the Andromedon shattered, and the alien let out a final shriek before the oxygen hit its skin, turning it into a shriveled corpse in seconds. The Commander kept squeezing, and didn’t stop until the delicate controls on the inside were sparking and destroyed. He dropped one hand, and with an almost inconsiderate flick of his wrist, sent the ruined corpse of the Andromedon suit across the city.

The Elites were dying, slowly but surely as more rockets and grenades were tossed at them. Another thermite grenade by Nuan targeted their inverted bodies, and melted away their helmets as opposed to other parts of their body, allowing the ADVENT soldiers to fire away and kill them much faster. Andromedon suits lost their helmets, killing the pilots and reverting them to autopilot mode, which was solved by a few well-thrown plasma grenades.
Each dead alien was released by Eddison, and the aliens not caught in his telekinetic field were retreating further into the city. The Commander pulled out his sniper rifle again, and began firing at the aliens still exposed. Eddison had fallen to one knee, so the Commander knew he couldn’t hold this forever.

But they did it, and the last alien fell. For a brief moment, there was relative silence on the battlefield. “Status check,” the Commander said, looking down the scope of his rifle for more aliens.

“Eddison is wiped out,” Creed said, who had Cole kneeling down by him and checking up on him. “He’ll be fine though. Everyone else is good to go, but we should stock up before moving forward.”

“We’re fine as well,” Pall also informed him, as he saw the two Templars step out of the building they had finally cleared, their armor smeared with alien blood and soot. “Building cleared. Doesn’t sound like there are others right now.”

“Take a quick breather,” the Commander ordered as ADVENT began setting up a more permanent line. The Engineers were moving the massive Elite corpses towards the middle of the road, and stacking them up on top of each other, then sealing them with Symbiote sprayers as a kind of makeshift cover; a rather innovative tactic.

While the ADVENT squads moved up, they were also bringing in smaller necessities such as water, and small parcels of food for the other soldiers, which was being primarily handled by the ADVENT Medics who were treating the wounded and checking on the soldiers still alive; phasing them out with fresh soldiers so they could recharge and be ready for later fighting. The Commander wasn’t hungry, he doubted anyone was during combat, but water was welcome. He turned to jump down when his HUD suddenly blinked as he was receiving a communication from an unknown source.

He moved his hand to the button which would allow him to respond, but before he could, a voice preemptively spoke. “The skills of your soldiers and yourself was not exaggerated, Commander. I am impressed.”

That should not have happened. He had to acknowledge and approve any incoming communication. This was very bad, their communications were compromised if who he thought it was was actually talking to him. Instead, he moved to cut off exterior speech and communication. No one else should hear whatever this was. “Who are you?”

“I am Collective Andromedon Overseer V’Thrask, of the Andromedon Federation,” the being answered. It occurred to the Commander he hadn’t heard an Andromedon actually speak to him before. It didn’t sound too odd; the voice was deep, even if it sounded almost watery, and while it wasn’t a monotone, it didn’t have any additional emotion behind it. He would have expected nothing less from a species as inclined towards machinery and engineering as them.

“I don’t suppose you’ll explain how you broke our network encryption?” The Commander asked. He doubted the Andromedon would gloat; most aliens, it seemed, were not overdramatic attention-seekers, which was both a relief and worrying. So he wasn’t expecting a straight answer.

“You people are skilled with what they know,” V’Thrask stated. “But we have centuries worth of experience with network communications. Your methods are inferior to our own, but even still, it is not easy to break. Specialists are required, of which I am one. Most consider it not worth it to listen to one communication stream, but in this case it was warranted.”
That…was a longer response than he’d anticipated. “Why bother talking at all?” He asked. “Why not listen in and keep a tactical advantage over us?”

“Orders, Commander, I’m sure you can understand the need to follow them.”

He frowned. “That doesn’t explain it. Why are you talking to me? We are not going to surrender, nor do we plan to retreat.”

“Good, that would not be ideal,” V’Thrask surprisingly agreed. “But I would not be too concerned, Commander, I do not intend for your species to lose today.”

The Commander blinked. “What?”

“The shield will come down in approximately three minutes,” V’Thrask continued as if he hadn’t heard. “Move as many of your forces within it as possible, because it will not stay down forever. Current estimates place full repair at twenty-two point four minutes. Take advantage of this, because your assault will only take more time if you do not.”

“You’re helping us?” The Commander asked incredulously.

“I am under orders, Commander, I follow them.” A pause. “I am unable to explain now, but the Federation needs to understand why exactly your species has captured the attention of the Ethereals, and what is actually happening on this world. The Ethereals have not been forthcoming to certain elements of our leadership. Several have decided the only way is to discover that for ourselves. They are hiding something from us, and I suspect you can tell us what that is.”

Oh yes, he certainly could.

Assuming this wasn’t a trap. The story sounded plausible, but the Commander was not going to make the mistake of assuming V’Thrask was on their side. He was under orders, as he said. “I agree. But I’m also not convinced this isn’t a trap.”

“I would be disappointed if you didn’t consider that,” V’Thrask said, not sounding any different. “But that is irrelevant at the moment. I will keep in communication and guide you to the shield generator, and then you will meet us. Only a small number are aware of the current plan, and you will not share this with ADVENT. We are not interested in them. You will take us back to your base of operations and we will explain the situation in detail. If you are concerned with our motivations then, I am aware of your psions, and expect you to use them.”

The Commander began nodding to himself. If, and he still wasn’t convinced this wasn’t a trap, if V’Thrask was actually genuine, this could be an essential ally in the fight. That at least some Andromedons were willing to have their people defect to get information meant that the situation there was more complicated than any of them, even Aegis, had predicted.

When they learned an Ethereal defected…well, that would be interesting.

“Fine,” the Commander said. “We’ll work with you for now. And keep in contact.”

“Confirmed,” V’Thrask said. “Prepare for the shield to come down.”

The Commander jumped down to his XCOM squad, all of whom were largely recovered. “Squad communications only,” he ordered. The soldiers immediately complied. “And prepare to move out immediately.”

“What’s going on?” Creed asked.
“Look!” Nuan pointed, and sure enough, the massive red shield that had covered the inner city of Seattle suddenly turned off.

“The hell?” Pall asked in wonder. “What happened?” The other ADVENT soldiers were also pointing, and the Officers clearly trying to communicate with leadership.

“A change of plans,” the Commander noted as he pulled out his WHEEE cannon. “Mission parameters have changed. Our new objectives are to destroy the shield generator.”

“Assuming we can find it,” Ellinor muttered. “It’s a big city.”

“Won’t be a problem,” the Commander said with some amusement. “Because our second objective is the extraction of several Andromedon defectors. One of whom just contacted me and informed me what was going to happen.”

Seven helmets stared at him in stunned silence. “Andromedons?” Creed asked skeptically.

“I’m not convinced it’s a not a trap,” the Commander said. “But it appears the Federation isn’t happy with the Ethereals stonewalling them on certain matters, and has some of their own to get answers. I assume they sabotaged the shield generator, but it will be repaired shortly. We need to get in there, follow the instructions this Andromedon V`Thrask provides, then get him and his other defectors to the Praesidium. And we’re not telling ADVENT.”

“Then we better get moving,” Eddison said. “How much time do we have?”

“About twenty minutes,” the Commander said as he turned towards the city. “Let’s go!”

Hillsboro, Portland – United States of America

11/6/2016 – 12:17 P.M.

Roman fell back into cover as they kept moving deeper into the city, and the battle was in full gear for both sides. The air battle was lighting up the sky as enough AA guns had been taken out for the fighters to begin attacking in force, and the UFOs had been deployed in response. The aliens had also deployed Floaters to deal with the XCOM Archangels, which fortunately were in Salem, the other town nearby.

But the closer they got to the city center, the more entrenched everything was. The defenses were more established, and the defenders stronger. As of right now, the street they’d been fighting through now had several barricades set up in the middle of it, large enough for two aliens to stand behind and fire, and these were spaced as far as he could see. In the back were two buildings on opposite sides that had been converted into something of an anti-infantry tower, with Vitakarians manning plasma turrets and snipers on the roofs.

Not that ADVENT was in a bad position; far from it. Roman and his squad lead the charge with two other teams, several Molosser Handlers, and one Bradley tank, and hitched to that was some kind of launcher. A mine clearing charge if he’d seen it correctly. An interesting application if they would use it the way he was expecting them too.

“Maksim, can you get a shot on those gunners?” Roman yelled as plasma bolts rained down on them, even as the Engineers were working to establish better cover. Galina and Konstantin were laying down enough suppressive fire, supplemented by the Bradley to keep the ground-level aliens from firing temporarily, but the alien gunners and snipers were a different problem. They had
reverted to speaking English for the benefit of the other soldiers, since communication was key in situations like this.

“Working on it!” Maksim called, spinning out of cover and falling to one knee as he lined up a shot. “Got him.”

“Redirect fire!” One of the Officers called. “Loose the dogs!”

Roman ordered his team to comply and they all aimed for the towers in the distance. Most didn’t hit, but Roman had been appraised of this tactic and he knew what would happen. The Molosser Hounds dashed forward towards the first split alien barricades, barking ferociously. The closest aliens shouted as they were suddenly assailed by the animals, and were discovering that the massive hounds were a dangerous threat.

The Hounds had been trained well, and used their weight to unbalance the aliens first, along with chewing up the hands, which were usually not as protected. Roman also noted that the dogs were almost disturbingly smart. The Hound chewing on the Vitakarian closest to them had the alien by the arm, muzzle splattered in golden blood, and was actually dragging it in front of the barricade in a way to protect itself from enemy fire.

If Roman had been able to muster any sympathy for the aliens, he might have felt bad at seeing the hound begin biting out the throat of the Vitakarian as she struggled and screamed. A slow way to die, and the other hound had similarly dragged its unfortunate victim to a similarly covered area. The Hounds were vicious and quick, and they seemed to know when they’d done enough damage, and dashed back to their Handlers, leaving the alien to choke on their own blood.

Roman smirked as he saw the Handlers give their Hounds a treat for a job well done. Good boy.

“We need to get rid of those towers,” Stanislav muttered as they dashed to the barricade. “It’s only going to get more dangerous. Those turrets and snipers are not going away.”

“I’ve got an idea,” Roman said. “ADVENT Command, requesting A-10 airstrike on the following points.”

“Acknowledged,” came the response. “Awaiting target sites.”

“Mark the buildings!” Roman called for the two Officers, who shouted affirmatives and switched on their laser markers. The rest of them kept laying down fire on the target areas, as the aliens on the ground began firing at them. Two ADVENT soldiers fell from plasma fire, and Roman killed a Vitakarian who’d stuck his head out too far.

Elena cheered as the first airstrike slammed into the leftmost building with the sweet sound of the A-10 machine guns. He couldn’t be sure, but it looked like it hadn’t just taken out the snipers on the roof, but shot through the roof and killed whoever was on the second floor. The second airstrike came a few seconds later with similar results.

“Push forward!” Roman yelled, motioning forward, as Galina and Konstantin, along with several other Gunners began taking the initiative and moving forward, firing while the rest of ADVENT rushed into cover ahead. The Molosser Hounds dashed forward under the hail of gauss slugs, and began attacking enemies at random.

The aliens were outnumbered and outgunned, and they were thoroughly disoriented from the thunderous assault they’d carried out. The ones attempting to run away were shot in the back, the wounded ones were executed on the ground, the unlucky ones were torn apart by the Hounds,
while the aliens beside them either tried to shoot the dog, or backed away to get as far away as possible.

Some aliens were braver than others. A Borelian who was being attacked by a Hound was holding her own, even though the Hound had mangled her hand. However, she was completely exposed as a result and quickly executed. And just like that, the stalemate was broken, and they were in control of a fortified street, and the sealed city center was in the distance.

“I’ll have to find a detour,” the Bradley operator informed him. “Can’t get through these barricades obviously. Sorry.”

“We’ll manage,” Roman said as the rest of the ADVENT squads began appraising the area. “There doesn’t seem to be anything here right now.”

“Don’t speak too soon,” Galina warned as she reloaded her autorifle. “We’re not done by a long shot.”

“Right,” Roman switched to a different frequency. “ADVENT Command, we’ve secured our immediate location. Requesting additional forces to hold the area. Plotting a path for tank support would be appreciated.”

“Four squads will be deployed to hold this area,” the operator said. “Your team has done a lot, Shieldbearer Kostov, you want to let someone else take the lead for a bit?”

Roman looked around, and all of them shook their heads. “Negative. We’ve still suffered no casualties or wounds. We’re good to go. However, I could use a renewed shield battery. I’m under thirty percent on mine.”

“That can be arranged,” the operator confirmed. “Hold position and do not advance until the order is given. We’re waiting until the majority of our forces are in the same radius, otherwise we’ll be-“

“Flanked, yes, I know,” Roman finished. “Not the first time I’ve done this. Don’t worry, we’ll hold this position.”

“Excellent…wait, hang on.” There was a pause. “Shieldbearer, get your forces into defensive positions. Looks like you have company coming your way…we haven’t seen these before.”

“Everyone into cover!” Roman yelled, moving forward until he was at the corner of a building, looking down the street. “Unidentified enemies approaching.”

“That doesn’t sound good,” Anton muttered as he and Maksim moved together some heavy alloy crates for cover. “Unidentified? Command, can you tell us anything else?”

“New unit appears Humanoid, black armor, very likely Vitakarian. Appears to be from the established Gateway.”

“Those are the Lurainian, right?” Elena asked, looking up at him as she helped several other engineers stack the alien corpses on top of each other for some crude cover. “We haven’t fought them yet.”

“Instinct says yes,” Roman said slowly, thinking on everything he knew on the Vitakarian Special Forces. “But I don’t think they wear black armor. And I know a lot of them are Borelian… Command, any Borelians spotted in similar armor?”
“Negative. But we’ve only seen a small amount. Lancers are moving in to deal with it in case it’s something else.” A pause. “Shieldbearer, we’re trying to get eyes on your position, but you have contacts coming from the north and east streets; they seem to be taking advantage of your advance to flank you.”

“Understood,” Roman cursed; this was not shaping up well. He waved Stanislav and Anton over facing that direction. “Anything-“

“Contact!” Maksim yelled sharply and fired. The black-armored humanoid leapt to the side as it came around the corner, almost as if it was expecting the shot. It didn’t appear to have any weapons on first glance, but when it raised its left arm he saw some kind of wrist plasma weapon.

“Fire at will!” Roman ordered, a command that was echoed by the other Officers.

All the ADVENT soldiers in the area began firing down the street, and the right arms of all the aliens flashed and they were suddenly holding purple shields on their arms, which looked suspiciously like… “Oh no.” Galina said.

“Command, the enemies appear to be psions,” Roman said urgently. “Requesting immediate ground and air support on our position.”

The psionic aliens didn’t advance, but instead lined up in a perfect line as Roman and his squad fired on them. Even though they fired a constant barrage, they didn’t manage to make a single shot. Roman took a few seconds to steady his aim, and instead of aiming at the head, aimed at the feet of the alien. It was a shot he knew he could hit, and the moment he fired it, the alien shifted his feet and the slug missed.

“What the fuck?” Maksim demanded. “Why aren’t we hitting them?”

“We’ve got bigger problems,” Galina called and Roman saw another line of the aliens forming, and the hands of these were rippling with psionic energy.

“Throwing grenade!” Elena called, and threw a standard frag grenade towards the alien line, but the grenade suddenly stopped, then reversed course in mid-air and back towards them.

“Down!” Roman yelled and rolled out of the way. The grenade exploded, and wounded a couple of ADVENT soldiers, but fortunately didn’t kill them. The Medics rushed to get them out of the way, even as Roman scrambled to cover.

“This is bad,” Roman muttered to no one in particular. Psionics were not something they were equipped to handle, and it was only a matter of time before they began using telepathy. Even as the thought entered his mind, a nearby ADVENT soldier bolted up and began charging straight into the line of fire muttering gibberish to himself as he suffered some kind of mental breakdown.

The aliens behind the shield line fired several beams of plasma that killed him instantly.

“Ugh,” Galina clutched her helmet. “Everything’s spinning, I can’t see clearly.”

“More coming from the right!” Anton shouted, and to Roman’s dismay he saw that even more of the aliens were performing the same kind of shield line.

“[Help!]” Elena called out suddenly, throwing her weapon to the ground. “[Get me out of here now!]”

Fuck. Without wasting a second he leapt towards Elena and tackled her to the ground before she
bolted like the other guy. “[Get off me! Get off me!]” She screamed as she struggled. “[Get me out of here now! Let me go!]”

They couldn’t defend against this. “Sedative!” He yelled towards one of the Medics, one who hopefully was still uncompromised. “Now!”

She tossed a syringe to him, and he set it down on the ground as he attempted to remove her helmet; luckily she was weaker than him, even if it was difficult to control the fully armored woman. But he got it off, and she looked completely and utterly terrified, the pupils of her eyes were severely dilated and tinged purple. He gritted his teeth and found a vein with the syringe, and a few seconds later she slowed her struggles.

“[It’s going to be alright,]” he told her as the drug took effect. “[It’s going to be alright.]”

Then he heard the sound he didn’t think he would hear again. The sound of an A-10’s guns. Stanislav cheered as the bullets suddenly ripped into the alien line, which for once they didn’t seem to have expected. Roman dashed back to his position and saw that there were a few aliens still alive, but only the back line, and even then only a few had managed to protect themselves with some kind of psionic shield.

“We’ve got backup!” Maksim called, pointing to the opposite alien line which was very much intact. Roman watched in amazement as the entire alien line was suddenly lifted into the air and... crumpled for lack of a better word, a yellow fluid shooting from the joints and cracks of their armor as they were juiced by whoever was coming.

“XCOM!” Anton whooped, and sure enough, the welcome sight of a full squad of armored and armed XCOM soldiers came around the corner. The psionic aliens that were still alive chittered something, and began backing up as they must have sensed the XCOM psions approaching. The Molosser Handlers took that opportunity to let the dogs out from their cover, and those ran down the black armored aliens, but unlike the others, these actually turned to defend themselves.

The shields in their gauntlets suddenly shifted to some kind of energy blade and stabbed down, actually managing to pierce the hide of the Hound. It yelped and backed up, and the rest of the aliens converted their shields to psionic blades and began slashing at the Hounds, which were being frantically called back.

Then suddenly all four of the aliens were lifted into the air. Roman turned to see the XCOM psion standing beside him, one hand extended palm up. He twisted the hand in a smooth motion, and the limbs of all the aliens suddenly rolled in a complete circle, sounding audible pops and cracks as all of them were crippled beyond repair.

Another gesture and the necks were snapped, and the psion let the corpses fall to the ground. “Good thing we got here in time,” he noted, looking around. “They had to start using psions eventually.”

“We appreciate it,” Roman said. “We’re not equipped to handle psionics.”

“Most aren’t,” the soldier nodded. “Psion Matthew Hawkins, XCOM.”

“Shieldbearer Roman Kostov,” he returned. “Ready to assist. What were those? I thought the only psions were Sectoids or Ethereals?”

“That,” Roman turned to the corpses. “Is a good question.”

“I’m checking that now,” a female XCOM soldier said; Roman noted that the flag on her armor
was Chinese, surprisingly enough.

“What’s the status of your forces?” Matthew asked him.

“I’m down one,” Roman gestured to Elena. “Several more casualties and wounded for everyone else. ADVENT is sending reinforcements, but we were attacked before they arrived.”

“We’re going to advance forward,” Matthew said. “Hold the line here until ADVENT tells you to move forward.”

“Uh, Matthew?” The Chinese soldier called out. “This thing looks a lot like a Sectoid.”

“What?” Matthew marched over to where she was standing over the corpse. One helmet taken off, and Roman could see what she meant. In fact, he wasn’t sure it could be anything else. No mouth, pinkish skin, that…shape of a Sectoid head…it looked like one, but if someone had decided to improve them significantly.

“Interesting,” Matthew said slowly. “Let everyone know. Vahlen will need to look at this.”

“I’ll inform ADVENT Command,” Roman told him. “And good luck.”

“Appreciated, Shieldbearer,” Matthew said, before turning back to his squad. “Come on! Move out!”

***

Las Vegas Ruins, Nevada - United States of America

11/6/2016 – Unknown

The attack must have started, even if she had no concept of what was actually happening. The sounds she picked up on were the muffled and submerged sounds of assault weapons, tank shelling, explosions, and aircraft roaring overhead. Yet it didn’t seem important in the context of what she was doing. The mantra was still repeating over and over, and it was only getting easier as more died from assumed ADVENT fire, allowing her to increase her control over the remaining aliens.

*Everything was normal.*

When the attack had started, she’d come close to losing control of a portion of the aliens, but in the end, they were incapable of resisting her voice inside their heads. It was a surreal experience being so closely interconnected with so many aliens, simple and complicated. They were puppets on invisible strings that she manipulated, having no understanding of their lack of free will.

So she’d begun experimenting on just how far she could push their obliviousness; her own control over their minds. How much could she subject them to, and still not have anything be wrong?

Her will was ingrained deep enough that she could focus on specific groups, random aliens who were victims of her curiosity. Just by focusing on them for mere seconds, she was able to absorb the entirety of who they were; their desires, loves, likes, dislikes, and other feelings that were difficult to put into Human words. But there was enough overlap that she could understand them well enough.

All beings, it seemed, could be boiled down to understandable, base emotions that drove them. Some species exhibited these more than others, but the absences of some didn’t equate to none at
all. Fear was universal. Anger was universal. Joy was as well. Now what those meant to different species varied, but what it represented was unmistakable.

She was reminded of the psychological profiles of the various species she’d spent time reviewing. Weaknesses that they wanted to exploit. Every species had their breaking points, which could further be refined by individual. Inside the minds of these aliens, those were easy to figure out. Now to see just if she could keep their minds intact…temporarily.

Performing an act of suicide or mass murder was trivially easy. It was simple to have the mate of a Vitakarian place a pistol to her head and blow her brains out in front of him. Or another Borelian execute every tenth member of her squad. Or Andromedons casually dismembering a compliant Muton in front of a complacent and mildly curious audience.

Everything was normal.

Everything was fine.

A few cases weren’t a problem, those she could easily control the reactions of. Nothing they saw would elicit a response, not yet. Once she left their minds, the full weight of what they’d done would hit them, and psychologically drive them to madness. If they were lucky, they might kill themselves before their minds snapped completely.

A win-win. Even in the event her control was somehow disrupted…she sincerely doubted the majority of the Vitakarian forces would be in a position to fight. She smiled to herself at that. Simple commands. An endless march forward, which could lead directly to walking off buildings or into the line of fire. All while thinking contentedly that everything was happening as it should.

Target practice was a normal activity, and the fact that the aliens simply decided to target other living aliens at this time was perfectly normal and acceptable. Sudden suicides were not emergencies, only something they had gotten used to recently. Death on a scale of hundreds at a time was not something to be concerned about, but merely another part of life here.

Everything is fine.

Everything is fine.

Everything is fine.

Her control was becoming more tenuous, even as more died at her commands. ADVENT had yet to engage the main alien infantry forces, but even still were killing plenty on their own. But the more she warped their minds to accept the hell she had created, the more they were starting to realize this was wrong. On some level they understood that. The voices she had supplemented were screaming at what was happening, and she could only suppress it for so long.

Even she had a limit. Or did she?

How far could she go here? What did she have to lose by dominating these lesser beings? It wasn’t as though they mattered in the scheme of this war, and were only standing in the way of their eventual victory. Their fates were decided, the only question was how they would be removed from this war.

She would only get better with practice, and there was still more she was curious about…there were some limits that she needed to push, to see just how much she could subject these aliens to and prevent them from reaching their breaking point. Self-mutilation? Torture of others they cared about? Perhaps that would be an interesting test-
What the fuck is wrong with me?

It dawned on her exactly what she was thinking about doing, and what she’d already done. The distraction lessened her already slipping control of the aliens, and the dawning horror and insanity began rising, which she struggled to keep suppressed.

Everything is normal

She hadn’t intended to go quite that far when she’d started…but the curiosity had been too strong. She needed to see just how much she could do.

Everything is fine.

But there was a right and wrong way to do things, and she’d let herself slip into forcing beings, even aliens, into doing horrific things for no other reason than she was curious. And she still wasn’t sure why she’d snapped out of the experimental trance she’d been in. The Commander would have been disappointed in her.

This needed to just end now. She felt it more merciful to just give them a quick death. Something-

The final vestiges of control were shattered as the screaming penetrated her consciousness, forcing her to retreat into her own mind. Gatekeeper. In a rush the sounds, colors, and chaos of the world came back into view; initially disorienting, but fast enough to stumble to her feet and look forward.

The ADVENT forces were scaling the wall surrounding the city, and Rocketeers and Engineers were setting up charges to blast their way into the city. But there were reinforcements coming, and the Gatekeeper had to only be one of the units coming to assist. She opened a channel to her squad. “We’ve got a Gatekeeper, I’ve lost control of the alien forces.”

“Understood,” Harkin answered. “We’re in the city now, and…uh, well, whatever you did…it worked.”

She winced. “I won’t be able to provide much assistance until the Gatekeeper is taken out. I would assume that there are also other reinforcements coming, likely from Gateways.”

“Leave those to us,” Viktoria interjected. “We’ll locate and take out the Gateways…damn it. Looks like they’re getting air support now.”

“UFOs incoming!” One of the Officer yelled, pointing to the sky where there were a small fleet of UFOs coming. Twenty? Thirty? She couldn’t tell, but she did see the smaller UFO that indicated an Overseer. Patricia pursed her lips and switched her channel to Sabre Squad.

“Iosif,” she said slowly. “I believe the Battlemaster has arrived, and he’s brought another army with him.”

“Understood.” A pause. “We’re heading over there now.”

***

Las Vegas Ruins, Nevada - United States of America

11/6/2016 – 12:38 P.M.

“Approaching enemy contacts,” the CODEX stated emotionlessly. “Dropping.”

The port opened underneath and the Battlemaster plunged towards the ground, allowing him an
excellent view of the current situation. It was...troubling, to say the least. ADVENT armored vehicles were approaching the wall, indicating the perimeter defenses had ultimately failed, and the UFOs were engaging their air forces, so a large part of the AA defenses had likely also been compromised. The wall had not been completely breached, but there were ADVENT soldiers pouring over it via established grappling hooks that pulled up soldiers from the ground.

The opening streets were now engaged in open combat with the now-freed Mutons, which would soon be joined by Sectopods, the Vanguards, more Cyberdisks, and Elites which would be coming through the Gateways. The first order of business was taking care of the ADVENT forces inside the base.

He angled himself towards the street with the heaviest fighting, and stabilized himself with a telekinetic blast towards the ground in the middle of ADVENT forces. He crushed one under his boots upon landing; transitioning to a full circle sweep which decapitated all the soldiers in his immediate vicinity.

“The Battlemaster!” One of them yelled. “Fall back now!”

Normally he might have felt inclined to take his time and get some kind of enjoyment out of this, or practice if nothing else. Humans couldn’t kill him, but they could provide a faint challenge. But he’d underestimated them so far today, and he could not afford to go easy on them. He raised a hand, extending a ranged telekinetic reach and clenched his fist, crushing their skulls in one brief burst of power.

The air around him shimmered as he dashed forward, violently stabbing one of the MDUs that had come over, then immediately dashing behind the other two accompanying it, stabbing another through it’s central control unit, while telekinetically grabbing the other and violently throwing an arm up, sending it into the air.

His other two hands were not idle either, both extending in the opposite directions of each other, throwing out a violent telekinetic wave which threw the ADVENT soldiers caught in it away, the force killing most of them outright when they collided with walls, or the unforgiving pavement. More MDUs jumped down from the wall, one of which he sliced in half since it landed next to him, and another he telekinetically yanked forward, pulling the weapon out of its grasp.

Then it charged him, attempting to pummel him into submission or death. Unfortunately the Battlemaster didn’t have time for sparring with the inferior robot and slammed a psionic-enhanced fist through the central processor of the MDU, while ripping the head off with a free hand. The wreck he tossed back onto a retreating ADVENT team, and now noticed that there were more soldiers literally jumping down to fight him.

These were different. Lancers. He recognized the distinctive helmets and black armor. And they clearly approached him with a plan in mind. Some of them wielded melee weapons; some which made sense, like warhammers, maces, and swords, but some that didn’t so much, such as daggers, katanas and other archaic Human medieval weaponry.

Clearly they had been inspired by the Templars, and he didn’t have the desire to toy with them, so he charged forward with an initial swipe upward which should have dismembered and beheaded the first Lancer in question. However, upon impact all it accomplished was sending the Lancer flying back with a yell of pain.

The other Lancers with gauss weapons were holding back and spreading out. Smart, not grouping up would make them survive longer. Their only problem was that they had forgotten he didn’t just fight with a sword. He thrust out one hand, blowing the melee Lancers away, and with his lower
ones telekinetically grabbed the eight Lancers aiming their weapons at him and lifted.

In his grasp, he dashed forward and swung for a beheading slash. But instead of it being clean, the blade got about halfway through the neck of the unfortunate Lancer, before getting stuck. The Human gurgled and likely died quickly, but that was enough to let the Battlemaster know what he was dealing with. His effectiveness with his sword was going to be reduced since they had genetically enhanced their skin.

The Humans really had learned their lessons from previous battles. In that case, rendering them incapable of further issues was the best method of dealing with them right now. With a gesture he sent them flying into the air and over the wall. It likely wouldn’t kill them, but he doubted they would bother him again.

The melee Lancers were charging him now, six in total, and he figured the best means of defense was to do what they didn’t expect. Their weapons wouldn’t hurt him, and his was likely to be more of a hindrance than help, so he threw it with as much force as he could summon at one of the Lancers, impaling her in the throat and sending her flying back.

They almost skidded to a stop, but he didn’t waste another moment and telekinetically pulled one to his hand, grasping the smaller Human like a toy as he held it by the arm, while using his other hands to simultaneously twist the neck, arms and legs until he heard them crack. Once that was done, he tossed the Lancer aside and pulled another one to him, repeating the same thing.

Now the Lancers were retreating, but to little avail. He dashed forward right behind them, and lashed out in a solid kick to the head of one, snapping his neck back and sending him flying, while pinning another under his foot, kneeling down and pulling up on the torso, breaking their back and likely killing them.

He summoned another Lancer to his grasp, and repeated the technique, slamming the unfortunate Human’s back onto his knee, eliciting a shriek before he threw her body irreverently to the side, while he extended a free hand to catch the final Lancer and held him tight with two hands while he twisted the Lancer’s neck with the other one like a screw.

The threat taken care of, he telekinetically recalled his sword to his hand, and realized that no one else was around to fight. Even the wall above him was free of ADVENT, which meant they were scared, especially since he’d taken apart their best units in mere moments. Understandable, and they had put up a decent fight. They knew they wouldn’t win against him, and in that context, retreat was the only valid tactic.

Mutan, Sectoid, and other Collective forces were marching to his position; oddly no Vitakarians he noticed, but that wasn’t important. “Spread out and eliminate the Humans,” he commanded, brandishing his sword as he turned to lead them down another street. “I will assist in driving them back. Deploy the Sectopods to destroy their armored vehicles-“ He cut off abruptly as the sound of an XCOM Skyranger streaked overhead down the area he was heading.

Something dropped from it, blocking his way, and the Skyranger was too fast for the plasma fire shot at it in response. The Battlemaster appraised the dropped machine…no…the machine stood, nearly his exact size, brandishing a shield and sword of its own. The armor was more refined and humanoid than similar machines, but it was no question as to what it was. A MEC.

More specifically, a MEC clearly designed to fight him.

“You will die today Battlemaster,” she said, lifting her alloy shield with the XCOM logo emblazoned on it. “We will ensure it.”
Just as she said it, another Skyranger flew over, and several soldiers jumped out, landing beside the MEC. All of them wore XCOM armor and wielded weapons. The Battlemaster was somewhat amused to note he recognized some of them. Iosif extended his mace in a salute, his body rippling with psionic energy. Beside him was Carmelita, who carried a longsword this time, and some kind of new weapon. She had a new helmet, with a yellow smiley face on it.

Were the situation different, he would have found that odd.

But there was no time to dwell on it.

There were three more Templars beside them, and another psion in the back, none of which he recognized. Two more of the soldiers ran backwards, and he saw the weapons clutched in their hands. Snipers. Perhaps useful if he was vulnerable to such attacks, but they would simply be detrimental to the overall battle.

“I will handle them,” he told the Vanguard who had walked up beside him. “Deal with the other ADVENT and XCOM soldiers.”

The Sectoid made an affirmative chitter, and the aliens behind him dissipated as he raised his own blade in a salute. There would be no toying with them today, but he expected them to put up a good fight, and that was worth acknowledging. He raised his own greatsword in a return salute, the steel brightly reflecting the sun as they prepared to duel on the torn pavement.

Then with a flourish, he charged forward to meet the soldiers head-on. The battle today would not be decided by armies, but by the outcome of this fight.

One which he knew he would win.

Las Vegas Ruins, Nevada - United States of America

11/6/2016 – 12:22 P.M.

“Time’s up,” Harkin grunted as they came under immediate plasma fire from within the control station. “Patricia says they have a Gatekeeper. Guess that’s our next target.”

Oliver just nodded and kept firing on the small army of Mutons that was approaching from further within the city. The good news was that they had assumed control of one of the gate stations, and it fortunately wasn’t psionically locked, and had been relatively simple to open. There was a small issue in that it was in Ethereal Script, but Fatima had walked them through, even if her own telepathy wasn’t working thanks to the Gatekeeper.

“Elites!” Fakhr called. “And Berserkers incoming!”

“Hold this line until the gate is opened!” Blake commanded as he kept firing, taking out one of the unhelmeted Mutons in a burst of gauss fire.

The roar of the Berserkers sounded as they charged forward, directly towards their own tenuous position. With a yell Mona thrust out her arms, shooting purple lances of energy that violently eviscerated the aliens; not quite killing them, but severing their bodies and legs, leaving smaller pieces on the ground which still tried flopping towards them before they bled out.

Oliver dashed to the corner of another building for a better shot. Several shots from Cassandra, who had set herself up high on the wall, took out several more Mutons. ADVENT still had a
presence, even if grappling up on the wall was dangerous now that there were aliens firing on it. He fired a few shots, all at one of the Elites that was taking an open position and rendering the open street a death trap for anything in it.

An entire squad of ADVENT soldiers died, and Fakhr on the opposite of him hissed as her arm was clipped by a plasma bolt. “We need to take those things out!”

Duh, Oliver thought as another Elite joined the first, then another, and with the entire street covered, they began walking down the street. This was, as Fakhr had so expertly noted, ‘not good’. The problem was the Elites could seemingly survive anything, and on top of that didn’t feel pain. “Mona, can you do that again?”

Psionic energy was almost sparking off the psions arms as she hunkered from the barrage of plasma fire. “Not forever!” Despite that, she spun out of cover, falling to one knee and thrusting one arm out, shooting another beam of psionic energy into the middle Elite, literally blowing a hole through the neck, which was enough to kill it, and the body fell to the ground.

“I…can’t do that again…” she gasped, stumbling back into cover, and Oliver noticed how bad a shape she was really in. To begin with, whatever armor had been on her arms, or any kind of covering at all, was gone, leaving her skin completely exposed. What also didn’t help was that the psionic energy was quite literally tearing it apart, and it was subsequently repairing itself at the same time. He now understood why Offensive-specializing psions were required to get the Biomuscular Regeneration genetic mod.

“New plan,” Blake called as the Elites held position as four more approached, and behind those were a few dozen more standard Muton soldiers. “Target the guns. We can’t get their armor, but we can take out their weapons.”

“Hopefully,” Lin muttered as he once more tried his own return suppressive fire. “You guys take those out, I’ll try and slow them down!”

“I’ve got the left one,” Cassandra called.

“Me and Oliver can try for the right,” Blake said. “Fakhr, can you fight?”

“Stings, but I’ll manage,” Fakhr grunted, hefting her gauss rifle; the armor of the arm that had been shot either scorched or missing altogether. “ADVENT forces, provide covering fire now!” Several of the Officers yelled affirmatives, and the barrage of gauss slugs seemed to concentrate in the center of the street.

“Aiming,” Oliver called, swinging out and taking a few precious seconds to line up a good shot. The good news was that the plasma cannon was massive, and there were some clearly vulnerable areas. He aimed for the glowing plasma cells, or at least that’s what he assumed they were, and fired. The gauss rounds hit dead-on, and penetrated far enough to cause the cannon to spark, which immediately got the attention of the Elite who swung his cannon to unload on his position.

Oliver heard a roar and an odd-sounding explosion, and he turned to peek out and saw one of the Elites was now without an arm, and half the armor protecting his chest was shredded or gone. A burst of fire from Blake triggered an explosion on the other Elite, which unfortunately just took out both hands, and moderately damaged the armor.

“We’ve got help coming in!” Cassandra whooped, as ADVENT forces were now pouring through the almost opened gate. Rocketeers and Shieldbearers led the way, with dozens of ADVENT soldiers, Gunners, and Engineers behind them. The Elites began backing up, and their
reinforcements halted and instead began firing from their fixed positions.

“Protect the Flails!” One of the Shieldbearers called, marching forward and firing on the retreating Elites. “Street Sweeper stage is a go!”

Oliver was not completely sold on the Street Sweeper tactic, which involved the usage of tanks which had attachments affixed to them called Mine Flails. Truthfully, he wasn’t too surprised that they were going to try that on enemy positions, but he wasn’t sure if rapid spinning chains would be as effective against armor.

The streets themselves were wide enough for two, and behind the Shieldbearers, and flanked by multiple ADVENT squads were the Mine Flails themselves. They sure looked intimidating, even if the chains were idle at the moment. “Push along with the tanks!” Blake ordered as the Flails drove past the guard station. “Oliver, Lin, assist the front! Fakhr, come back to Mona so I can take a look at both of you.”

“Copy,” Fakhr said, and dashed over as her position was retaken by more ADVENT soldiers. The Elites tried firing on the Flails, but clearly weren’t sure where to fire. They couldn’t slow it down, since the Flails moved by treads, and was partially covered by the flail attachment itself. The Flail also had a main gun that was firing into the alien lines, but it was well-protected by armor, and the Shieldbearers whose emitters were rendering all alien plasma fire useless.

It was rather amazing to see devastating barrages of plasma just…turn away, not even getting close enough to cause any harm. The gauss fire by ADVENT and XCOM was unaffected, and dozens of aliens fell as they scrambled back. “More Berserkers!” Lin called, as four of the Juggernauts charged forward, unaffected by the hail of gauss slugs.

“Starting the flails,” came the warning from one of the drivers. “Stand back.”

ADVENT quickly repositioned and got out of the front, as the motors started working, and the chains began swinging around and around. It was slow at first, but it soon reached blurring speed in a few seconds. The Berserkers didn’t know what the tanks were, or didn’t care, but they were determined to destroy them all the same.

The first Berserker raised her wrist tipped with sharpened blades at the front of the Flail, ever charging forward, and with a stab forward, was immediately flung to the ground. It looked like part of the arm had gone flying off as well, but it happened too fast for Oliver to really be sure. What he was sure of was that the Berserker was first forced to the ground by the whip of the chains, and said chains completely ripped the alien apart, armor and all, in a spray of metal and blood.

Oliver blinked as the same thing happened to the other Berserkers who couldn’t stop their charges in time, and were literally torn apart by the spinning chains. Yellow blood was being flung everywhere as the Flails drove over the chunks of flesh, bone, and armor that had once been an alien. The entire ADVENT force cheered, himself joining them, as the Elites began backing up after seeing just what the Flail could do.

Oliver joined the march forward, fighting beside one of the Flails with several other ADVENT soldiers as they kept advancing forward. For once, they now had a way to keep going forward the aliens didn’t have a way to stop right now. The Muton forces were retreating, and were subsequently being killed off by the unrelenting storm of gauss fire.

He glanced behind him to see there were even more pairs of Mine Flails coming through the entrance, and turning onto different streets to take the fight to other areas of the city. Street Sweepers indeed.
Oliver grinned and marched forward, ever continuing their march on the aliens.

Salem, Portland – United States of America

11/6/2016 – 2:08 P.M.

“Two Heavies behind you,” Ted called out as Sierra swooped to the left, shooting down another few of the regular Floaters that had been deployed in a questionable attempt to slow them down.

“Understood,” she acknowledged, then took a brief second to orient herself and twist her body around to shoot the Heavies behind her. They clearly hadn’t expected the maneuver, and swooped upward as she unloaded with her gauss rifle, shredding one and sending it plummeting to the ground. The other one was quickly shot out of the sky by Anna with several laser pulses.

“Time to get those Gateways?” Ted asked as he flew towards their position, faint psionic energy enveloping him.

“We’d better,” Sierra said. “You heard Matthew’s update. Some new kind of Sectoid. We need to shut those down now.”

“At least we know where they are,” Anna said as they blasted their way towards the city center. “They’re nothing if not consistent.”

Alright, we’re going to do flamethrower runs first, then touch down in the Gateway area,” Sierra ordered as they approached the small fortress, or what was left of it after their continued attacks. The only things that now even tried to fight them were Floaters, and they were running dry on those, especially with the ground forces getting overrun. “Anna, provide covering support.”

“Will do,” Anna lowered herself to begin hovering just above the fortress wall, laying down suppressive fire on the exposed squares where the four Gateways were stationed, and deploying Mutons, Sectoids, Vitakara, and Floaters in steady streams. Sierra assumed that they weren’t expecting anyone to be brazen—or crazy enough to attack here. They scattered once the Archangels flew over the wall, but for many it wasn’t quick enough.

Sierra lowered her wrist and prepared for the blowback of blasting the ground with her flamethrower. The white-orange flames engulfed dozens of aliens in a single sweep as she flew over the Gateway square. Ted was having similar success, and Anna was throwing what remained into disarray. “Are we trying to capture or destroy these?”

Sierra thought about that briefly as she shot around for her ground landing. Both had merit, but it would come down to if they could effectively hold them long enough for ADVENT or XCOM to secure them. If they couldn’t hold, the aliens might be able to repair disabled ones. “Destroy for now,” she said. “We can build them now.”

“Understood.” Anna focused her weapon on one of the Gateways, none of them sending out reinforcements, at least for the moment. The weapon was surprisingly having little effect on the structure itself, so instead she turned her fire on the elerium generator next to it, and destroyed it with a green explosion that took out one of the ‘arms’ of the Gateway it was next to.

Now more aliens were coming out, Runianarch soldiers who didn’t know anything about what was happening, so instead they just shot at whatever moved. Anna was forced to maneuver to the side, while Sierra angled herself towards a group of three; swinging her feet down and nailing one directly in the back, while shooting the ones to her left and right within seconds.
Once those were cleared, she clipped the rifle to her chest and aimed her flamethrower gauntlet at the active Gateway and fired into it. She smirked as she hoped she’d taken out a few alien reinforcements. After chucking a thermite grenade into the sightless void for good measure, she aimed at the elerium generator and fired, activating her jets to boost her back to avoid the explosion.

Several plasma bolts clipped her, throwing her off-course and she unceremoniously crashed into a stack of crates. She wasn’t hurt, but it reminded her how easy it was to be taken out of commission. But she was on her feet in seconds, firing at the trio of Mutons advancing on her position, plasma bolts flying her direction.

She fell to one knee and lined up her rifle on them. Easy. It took only a second to line up a headshot. She fired, lined up another, fired, and repeated the same thing for the last one. As the last Muto body hit the floor, she jumped into the air, jets blazing as she shot into the sky. Another elerium explosion took out another Gateway, leaving only one more.

All of them were in the air, but the aliens were putting up something more of a fight, and had smartly rallied around the last Gateway. At least it would have been smart, but all it enabled was a perfectly timed psionic lance from Ted whose blast either ripped their armor apart, or threw them back. Sierra swooped around their flank, and scorched the area with her flamethrower, incinerating anything that dared stand by the Gateway.

A few laser blasts from Anna ensured that nothing would come out of the Gateways again, and, mission accomplished, they got out of there as quickly as possible, heading straight for the safety of the ADVENT line. “Gateways at Salem are destroyed,” she informed Chief Marshal Peterson. “We’re going to restock before heading to Hillsboro.”

“Great job!” He congratulated. “I think we’ll be able to take it from here. They were not expecting us to attack here, that’s pretty certain.”

“We’ll be on call until the battle ends,” she reminded him. “Things start getting heated here again, we’ll fly over.” With that she cut the comms, and flew towards the designated resupplying area.

The aliens were going to need to do a lot better if they ever wanted to stop them. But knowing them, Sierra suspected that this kind of attack was not going to work as well in the future. Better to enjoy it while it lasted.

***

Seattle, Washington – United States of America

11/6/2016 – 2:10 P.M.

Of all the ways Nuan had expected the battle to go, working with some (possibly) traitor Andromedons was not something she had ever considered. Granted, on some level it wasn’t unprecedented. There had been the entire incident with Nartha, and then Aegis had also defected, so it wasn’t out of the realm of possibility that an Andromedon could defect…but honestly the only thing that would have surprised her more was if a Sectoid had been the one to defect.

The Commander was clearly skeptical, but there hadn’t been much time to argue since the shield was going to come back online shortly, and they had to find and shut down the shield generator. The Andromedons helping them had surprisingly kept in contact, from the moment they had begun rushing deeper into the city.
“When you reach the intersection, hold position,” the Andromedon, V’Thrask ordered.

“You’re going to need to give a better reason,” Creed commented as they approached the designated intersection, all of their weapons up and ready. “We’re in your territory, and could be surrounded easily.”

“Take your position if you need to,” V’Thrask didn’t sound even mildly put off by Creed’s tone. “Unless you want to walk into a patrol of two dozen Andromedons, we need to lock on your exact position.”

Nuan did not like the sound of that. For one, they didn’t know if they could be trusted, and at the wrong moment they could betray them, killing the Commander of XCOM, not to mention all of them. Then again, there wasn’t anything stopping them from doing that already. A more precise lock likely wouldn’t matter much if the Andromedons really were planning to betray them.

Still, she wasn’t going to stay quiet. “Commander, I’m not sure that’s a good idea. Even if they are tracking us now, do they need an exact fix on us? Is there anything stopping a missile strike or worse once they have that?”

“To clarify,” a new Andromedon voice interjected, only a shade lighter than V’Thrask. “The lock is for us to establish network connections with your suits. Your locations are already known to us. I am A’Darrah, Andromedon Federation Collaborative Data and Systems analyst. I intend to sync your current HUD and radar systems with information directly from our own communications network.”

The frown was clear in Eddison’s voice. “Wait. How can you do that? Our own systems can’t be compatible with yours.”

“Not originally,” A’Darrah stated. “But the network and programming security of your suits is primitive and inadequate to coordinated machine intelligence hacking. The Federation has successfully reverse-engineered Aegis-level armor of XCOM, and are fully capable of hacking it if needed. You are fortunate functions are limited, otherwise this would be employed by our Battlefield Engineers. As it is, I contest the only reason this has not been put into practice is because of the small number of XCOM soldiers that exist. I would expect this to change in the future.”

“Let them do their thing,” the Commander said as they reached the intersection. “We’re committed now.” The Commander didn’t sound worried, and that was likely because he probably had a plan if the Andromedons did betray them. If there was anyone who would, it was him.

The streets were surprisingly empty, even if there were clear signs of fortifications and barricades at various parts of the roads. “Seems like everything dried up,” Pall commented, battleaxe raised as he looked for something out of the ordinary.

“I have redirected the necessary forces away from your current position,” V’Thrask explained. “Most are currently engaged in battling ADVENT Lancer squads, and the rest are holding back against other tank-led ADVENT Offenses.” A pause. “Your species is innovative with weapons of war. Your tactics are flawed, but nonetheless are effective against certain enemy types.”

“Thanks,” Ellinor muttered dryly. “Always nice to be considered a threat.

Nuan’s HUD suddenly blinked, and instead of the small minimap at the upper right corner of her screen, it was replaced with a completely different element, that was not originally Human. Instead of a small 2D map, it was a full 3D rendering of their immediate city, along with miniature figures
that were others in her squad, and red figures further on for enemies.

“Your HUD technology is insufficient,” A’Darrah said, and Nuan could almost imagine the barest hint of emotion in it. “I have replaced the current and ineffective element with our own. I have also marked out a path which will take you to the shield generator. V’Thrask will attempt to redirect Collective soldiers, but you will have to fight the ones guarding the shield generator.”

“Understood,” the Commander said, and they began following the designated line that took them deeper into the city. “What is enemy composition?”

Nuan couldn’t help but notice what the aliens had done to the city as they dashed through it. There were many buildings that were completely trashed, but the further they went in, the buildings started getting sparse altogether; clearly surgically removed, and the ones that remained were converted into small fortresses, with alloy paddings and barricaded roofs. The streets themselves were similarly protected, each intersection having barricades in all directions, as well as crates of unidentifiable supplies.

“There are two parts; exterior and interior defense,” V’Thrask answered. “Exterior defense will be your largest issue. There are four Muton Elite guards, sixteen Lurainian soldiers of various races, mostly Borelians. The area is covered by four Zararch Snipers, and there are twelve Andromedon soldiers.”

Nuan saw Creed exchange a glance with the Commander. “That seems like a lot.”

“Interior defenses are composed of two Battlefield Engineers and several dozen Vitakara support staff,” V’Thrask continued. “You will have little trouble disposing of them.”

“Still,” Creed sounded skeptical as they entered an alleyway, weapons drawn cautiously since they didn’t fully trust the radar. “That’s a lot. The Lurainian can be handled. The Elites will be difficult if we don’t deal with them immediately. The Andromedons will be a problem.”

“Anticipated,” A’Darrah interjected. “The Andromedon suits can be temporarily shut down. The onboard intelligence can be subverted with proper authorization, but the result will be that it locks me out of the system for a half-hour afterwards. You will likely only be able to rely on that once.”

Well, it was something. “And how long will that take them out?”

“However fast they decide to either contact the Overseer, or assume their suits have been compromised. Two to four minutes at least.”

Not a lot, but with four psions, and all of them genetically enhanced, it wasn’t technically impossible. Just highly improbable. “That’ll have to do,” the Commander grudgingly said. “But don’t launch your attack until I give the word. We might not need it.”

“Ah, and there is the shield,” Rebecca noted wryly as the sky was suddenly obscured by the red shield. “Right on time.”

“And we’re close,” Creed said, coming to a stop. “Lots of contacts ahead. We need to do this carefully.”

“Thank you for the exceptional advice,” the Commander said with as much sarcasm as she’d heard. “Get on the outlying buildings, I need to take out the snipers first.” With that he jumped onto the nearest roof and fell to one knee, aiming his sniper rifle in the distance. “They’re spaced out. I can probably take them out without alerting the main group. A’Darrah, are you blocking their communications?”
“I am personally redirecting all outgoing communications to my location,” was the answer. “They will be able to call for help, but no one but me will hear it. To do more would only raise suspicion.”

“Good,” the Commander said. “I’ve located all the snipers. Firing.”

He fired four quick shots, his rifle moving surprisingly little with each shot. “Snipers down.” Nuan blinked. She’d never seen anyone fire that fast or with such accuracy. Well, she assumed he’d hit everything.

“How did you do that?” She asked, even knowing it wasn’t the best time.

“Gene mods and natural sniping talents,” he said, pulling out the WHEEE. “I’d have never been able to do that without being enhanced. With practice I’m sure you could do the same thing.” He turned forward. “Alright, everyone on the roofs, we need to get a good idea of what we’re facing.”

Several minutes later Nuan found herself on the top of a two-story building that had once been a restaurant, overlooking the shield generator. This was one area the aliens had completely flattened and replaced. There was a wide square of nothing but asphalt and concrete, and in the center was the shield generator building. It looked surprisingly…utilitarian, which she supposed was normal for Andromedons.

The generator itself was housed in a cube structure, which curved into an arrow-like point where the antenna for the generator actually stuck out, and projected the shield. But the generator itself was massive, and she could see why it needed an entire team to work it. The cube it was housed in was at least the size of the building she was currently hiding on. There weren’t any obvious weak points either. Every potentially exposed part of the antenna was covered by some kind of alloy plating, and there seemed to be another shield projected just under the roof so someone couldn’t just chuck a grenade inside.

“I wish we had a telepath,” Cole muttered. “This would make things much simpler.”

“Well, we don’t,” the Commander said. “But with four psions, I think we can manage this small army. Eddison, how quickly can you kill the Elites?”

“Snapped necks should do the trick,” he answered, looking down. At least the Elites were in the open, four directly guarding the door. “But I need to focus everything just for one. I can kill them all, but it’ll take time.”

“That’ll work,” the Commander affirmed with a nod. “Ellinor, I need you to protect us with a barricade. No Templar attacks yet. Pall, same thing, but I want you to hold everyone in place. How large an area can you cover?”

“Honestly as large as you need,” he said slowly. “The drawback is that I won’t be able to distinguish people in the field. One of you jumps down, you’ll be stuck too.”

“Perfect,” the Commander pointed to a group of clustered Andromedons and Lurainian. “Trap those. Once I take them out, attack how you see fit.”

“And what about the rest of us?” Nuan asked.

“You will fire from this position first,” the Commander began, brandishing the WHEEE. “Once I kill enough aliens, or this runs out of charges, you can come down to ground level. Focus on the Andromedons. The WHEEE should be enough to kill an Andromedon or two.”
“Ready when you are,” Creed nodded. “Pall, Eddison, Ellinor?”

“At your command,” Pall confirmed, as the psions gathered their power.

“Now!” The Commander ordered, and the soldiers rushed to the edges of the roof. Nuan quickly dropped a smoke grenade at their position, while Creed, Ricardo, Cole, and Rebecca began firing their weapons down at the exposed aliens. Several Lurainian were killed immediately, and even an Andromedon helmet shattered from the surprise attack.

“Stay where you are!” Pall shouted, likely more a way to focus than actually something he expected the enemy to follow. Both hands were held down, invisible waves emanating off of them as he appeared to be keeping something down. Eddison extended his hands and one of the Elites was yanked into the air. The Commander was surrounded by a personal shield and he jumped down and aimed the WHEEE at the first Andromedon he saw.

Nuan saw the flash of a lightning bolt and the Andromedon exploded into several different pieces. The Commander aimed at the next nearest Andromedon, and fired again, achieving the same result, and subsequently shocking the Lurainian next to it into unconsciousness or death. The first Elite was dead, and Eddison was moving on to the next.

Now the aliens were firing at them, and Ellinor responded by using her free hand to create another purple barrier; instead of it being directly in front of them, it was directly in front of the back alien line, allowing them to kill the ones close, but protecting them from fire from the Elites in the back, and the Andromedons coming to assist.

The Commander meanwhile was appearing to have fun with killing the practically helpless aliens in the face of the WHEEE. He was putting his own telekinetics to use, unbalancing the Lurainian and Andromedons trying to shoot him, and frying them with the WHEEE. Although ‘frying’ implied there was something left. Nuan saw the lightning bolt hit a Borelian and it was just gone in a spray of golden mist and fur.

In the meantime, they were killing the disorganized aliens trying to find cover. Nuan shot the gun of an Andromedon, aiming at the seemingly exposed elerium core, which exploded and destroyed the helmet of the Andromedon as a result. A few well-placed gauss shots to the control panel killed the reactive AI.

“Elites are almost dead,” Eddison grunted, as the third Elite fell to the ground with the ornate helmet faced the opposite way. “And I want that gun.”

“Think we’ve got them now,” the Commander stated as he fried several more Andromedons clustered together; trapped in Pall’s telekinetic field. “Engage at will.”

“Copy that,” Pall stated, as he picked up his axe and literally leapt toward an Andromedon that was still alive. In the air he swung the blade down with enough force to bury the blade into the helmet of the Andromedon, and yank it out. It wasn’t shattered, but the crack was growing, and Nuan concentrated her own gauss fire on it, and ultimately shattering it and killing the Andromedon inside.

Ricardo and Cole also jumped down, and focused on cleaning up the few Lurainian who remained. But the lone Vitakara had little chance against augmented Humans. Nuan was continually amazed just how powerful XCOM was sometimes. Eddison was picking up aliens like toys, while the Commander made enemies explode with the WHEEE cannon.

They finally cleared out the majority of aliens, and the Commander gestured to the door, and
telekinetically ripped it off its hinges and they charged inside. “Kill them all,” the Commander ordered. “We want this place destroyed.”

The two Templars entered first, and Nuan knew it was going to be a devastating bloodbath. The largely Vitakarian staff hardly put up a fight as Ellinor and Pall butchered them with their weapons. The Battlefield Engineers were helpless to do anything as the Commander killed one with the WHEEE cannon, and Eddison crushed the other like an action figure.

“We’re inside, how do we destroy this?” The Commander asked once the last alien was dead.

“Do you see the main control console?” A’Darrah asked. Nuan saw the largest computer that was attached to the circular base of the shield generator. “You have two options. Shut it down manually, or destroy the generator. Destroying it can simply be accomplished by opening one of the panels exposing the interior, or making one yourself. Shutting it down requires the proper input commands, which are in my possession.”

“Can you prevent anyone else from turning it back on?” The Commander asked. “I don’t want to destroy this if we don’t have to.”

“Yes, that can be done.”

“Then we do that,” the Commander walked to the console. “Walk me through shutting this down.”

At this point Nuan was fairly sure all of them were convinced these Andromedons were actually genuine. If they were planning to betray them, they would have done that already. It took a few minutes, but Nuan heard the shield generator power down, going from a steady whine and thrumming, to the sound of air coolers for the machines themselves.

“All done,” the Commander said. “Marshal Wilkins, We’ve disabled the shields. You are free to launch aerial and ground attacks on the city interior. We’re going after the leadership.”

“I think you just won this battle for us, Commander, I can’t thank you enough,” Wilkins said. “I don’t know what happened with the shield the first time, but we need to thank whatever idiot engineer made that happen. Hell, I’d give them a pardon.”

Creed snorted.

“I’ll keep that in mind,” the Commander said, keeping the amusement in his voice to a minimum. “Good luck.”

“Amusing, but I don’t expect you to kill us,” V’Thrask said. “If you want to extract us quietly, we need to meet up and be extracted quickly. A’Darrah is sending coordinates. When we meet, we will likely lose our current advantages and have to fight to the extraction point. I advise you have your pilot ready.”

“Will do,” the Commander affirmed as the red line in Nuan’s HUD changed to where she assumed the Andromedons were. “We’re on our way.”

***

Las Vegas Ruins, Nevada - United States of America

11/6/2016 – 1:26 P.M.

The initial swing by the Battlemaster was unsurprisingly blocked, but that was intentional. He
thrust down a free hand, sending a telekinetic shockwave that threw back the XCOM Templars closest to him, and immediately transitioned to block as the MEC swung the equally large sword in a swift dual strike.

The Battlemaster deflected one of the blows with his gauntlets and was briefly hit when the MEC bashed her shield against him several times, following up with a stab. Carmelita also leapt to him at the same time, and he attempted to take a step back, only to see that his foot was being telekinetically held in place by one of the Templars, even as Iosif and another Templar carrying a warhammer approached.

The strikes were ones he could take, and he let the MEC score a hit on his shoulder as he dropped his blade to his lower hand and stabbed at the exposed torso, while then telekinetically blowing the MEC back with his other free hands. Unfortunately the distraction allowed Carmelita to get an ineffective hit on him, but a mere alloy blade didn’t even scratch it.

He telekinetically grabbed Carmelita and tossed her towards Iosif, and the Templar beside him raised a hand and caught her, setting her down gently. The MEC was also recovered, having used some kind of built in jets to slow the throw, and the stab would he had inflicted had repaired itself. Smart, and not a good sign.

The other telekin psion had now joined the other Templar in effectively securing him in place, which he allowed for the moment so he could appraise the situation. He assumed that every soldier here was severely modified, and his sword wouldn’t be as effective. So he had to first deal with the telekines, and then the others.

He tossed his sword at the MEC, which impaled itself on the shield and cut right through it, though the damage was likely minimal. With his lower hands he sent out a telekinetic pulse that Iosif blocked with a shield. With his other two hands, grasped the two telekin Templars and pulled them toward his grasp.

No time to waste. Humans were far smaller than he was, and it made it extremely easy to snap their necks, which he did in quick succession and tossed the bodies away. Two down, five to go. The snipers he was not concerned with, as they had been firing already and done little more than glance off his armor. The MEC charged him again, and he recalled his greatsword to his hand to deflect the swing away from him.

All the XCOM soldiers were now shielded in purple fields; likely from the psion in the back. Iosif and another psion holding some kind of axe were closing on him from the sides, and Carmelita was charging forward with her sword the color of molten steel. That was a concern, but the MEC was not giving him any time to deal with it, as it fought like the machine it was.

The Battlemaster had never liked shields, and considered them a hindrance to his style of combat, and had rarely seen them be effective against him. But this MEC actually used the shield as a weapon of its own, not just for defense. Instead of turtling behind it, after each strike the shield was bashed against him, which while not hurting him, required him to focus on it.

Iosif was close enough to strike, and the Battlemaster kicked out at him, which the psion deflected with a shield, but did pause. At the same time the Battlemaster grabbed the shield, holding it in place while he slashed down at the axe-wielding psion, hitting him and sending him flying back several feet.

The Battlemaster pushed on the shield, twisting it to rip it off the MEC, while the attacks continued unabated. Iosif managed to score a hit on his lower leg, one he felt even if it didn’t cause damage. One telekinetic push back removed him temporarily. The MEC was still attacking with
her own sword while he grappled with the shield, and he couldn’t stop every single attack coming his way.

Carmelita jumped from behind, and scored a hit on his arm, leaving a noticeable scrape. The other Templar he pushed away with a roar, sending him back with enough force to dent the alloy barricade he landed against. The MEC then unexpectedly let go of the shield, and he stumbled back briefly, but it was all the time it needed to raise its wrist and he was suddenly engulfed in a freezing mist.

His mind ran through the possibilities. Cold. Freezing agent. Dangerous. Without wasting another second, he dashed backwards, and jolted forward as he slammed into a psionic barricade the supporting psion in the back had created. “You’re getting stronger,” he told them approvingly, even as they approached again.

The purple barricade behind him suddenly had additional walls on its sides, which extended to where the MEC was; the machine was approaching and raising its wrist to likely freeze him. The suit could withstand freezing temperatures for a short time, but it would not be sustainable for long, and he ran the risk of being frozen even if he was technically alive.

But the foolish psion had unfortunately doomed the MEC in question. The jets on the MEC were already warm, and was likely expecting a telekinetic attack. But he acted instantly and charged forward; a purple blur directly towards the MEC, greatsword angled directly for her head. The shield might have saved her, but she was unable to stop the charge.

The pointed sword ripped through her head, and his direct collision threw her to the ground, sending the weapon flying. Standing over the defeated MEC, he ground his boot down into the wrecked head to make sure it was destroyed, then extended a hand towards the other psion who had helped him, and blew him backwards.

He spun around to see Carmelita approaching, and performed a precise telekinetic grab, calling the sword to his hand. With a flick of his wrist he threw it far into the city, then returned his attention to Iosif who was the lone Templar left. “You’ve fought better, Templar.”

Iosif didn’t respond, but charged forward and the Battlemaster met his mace swing with the greatsword. The Templar was more creative with his attacks now, creating barriers which sprang up under his arms, or just before his legs in an attempt to trip or distract him. It did work to an extent, and the Battlemaster was suitably impressed with his skills.

Unfortunate that it would be for nothing. He yanked Iosif down with a telekinetic grab, placed a foot on his chest and took a reverse grip of his sword to stab downwards. Not even his genetic modification would save him here. “Do it!” Iosif yelled.

The Battlemaster risked looking behind him to see Carmelita aiming a weapon he hadn’t seen before at him, and that was enough of a warning for him to begin dashing away. The weapon sparked and his arm was struck with a bolt of pure electricity. It had barely glanced him, but the pure shock of the weapon drove him to the ground, involuntarily twitching as he struggled to stand up.

The arm that had been glanced was numb, and he couldn’t move it at all. His vision was blurred and his senses were severely impaired. The suit could withstand brief electrical pulses, but he had not designed it to withstand a pure lightning bolt. He thrust out with as much psionic power as he could muster towards Carmelita before she could fire that weapon again, and his blurry vision saw her go flying into the air.
On shaky legs, he debated retreating. At the rate he was recovering, if XCOM sent another team, he would be unlikely to emerge victorious. At the same time, there was only one more Templar, and...he glanced to the side to see the other psion was back up, the supporting defensive one. He took several breaths, and thought about it as rationally as he could.

Two on one. The odds were in his favor, especially since neither were armed with those electricity guns. Defense psions were also something he could handle easily. He wouldn’t retreat, not yet. The one arm hanging limply at his side, he marched toward Iosif to kill the Templar once and for all.

Seattle, Washington – United States of America
11/6/2016 – 3:19 P.M.

The Commander was mildly surprised to be reminded that the Space Needle had survived the attacks so far. Ironically, it was now the highest building in the city, so he wasn’t entirely surprised that the Collective had apparently turned it into their main command center. It had taken some hits, and the top platform was missing some sections, but otherwise it was largely intact.

“Big Sky, do you have the coordinates for extraction?” The Commander asked as they marched to the Space Needle.

“Affirmative,” he answered. “But if we’re flying Andromedons back, we’re probably going to need another.”

“Good thing we planned for an extra,” the Commander muttered. “Have Shattered Sky head over. We’re not going to leave right away once the Andromedons are extracted anyway.”

“Copy, good luck, Commander.”

“Enemies ahead,” Creed pointed forward. The Commander looked forward and saw the Space Needle defenses were smaller than he was expecting. It was likely that all of them were trying to fight off ADVENT penetrating deeper into the city, and because V’Thrask had ordered them away.

“Two dozen Mutons and six Elites?” Eddison snorted. “They really are running low.”

“I’d thank our Andromedon friend,” Nuan cautioned. “And I’m not getting cocky yet.”

“Listen to Nuan,” the Commander agreed, slowing down and letting the Templars take point. “The Elites are still a threat. Eddison, I presume you can take them out?”

“I can do a few more,” he agreed confidently. “Assuming the rest of you can handle the Mutons?”

“Permission to engage?” Creed asked, raising his rifle.

The Commander raised his own sniper rifle; electing to not use the WHEEE and let it recharge. One shot, and a Muton fell dead. “Permission granted. Pick your targets!”

The Muton reaction was immediate, and they gave their battle cries and fell behind their alloy barricades. The Commander also noticed that they activated several turrets on the ground he hadn’t seen earlier. They rose from the ground, and began shooting plasma bolts their direction. “Find cover!” He ordered, leaping forward to a building corner and beginning to take aim at the first turret.
Ellinor and Pall were not hindered by the turrets, and were quite easily slaughtering the unhelmeted Mutons. Ellinor buried the axe head deep into the skull of one, while Pall had his greatsword set to the high-friction mode and was slicing through the Muton armor with surprisingly little effort.

Creed and Rebecca killed one each, while Cole and Nuan concentrated on one of the turrets, causing it to explode. The Commander aimed for the barrel of another, and fired, destroying the firing mechanism. It still tried to fire, and subsequently exploded as a result. Eddison had both Mutons raised into the air, hand clenched in a fist as he brandished it in the air.

The Elites were squirming in the air, their plasma cannons lying on the ground, which the Commander assumed was the result of Eddison removing them himself. The psionic power seemed concentrated around their throats. Choking them. He approved of the tactic. One of the worse ways to go out, and he didn’t exactly feel bad the Elites were succumbing to it.

The basic Muton soldiers were essentially wiped out within a few minutes, with XCOM advancing rapidly forward, as the remaining turrets had to split between the ranged soldiers, and the Templars decimating their nearby forces. But soon the last turret and Muton died, with several XCOM soldiers putting gauss slugs into the heads of the Elites just to be sure they were dead.

“The outside is clear,” the Commander said. “We’ll wait here.”

“Commander…” Creed pointed inside the Space Needle lobby. “I think they’re already here.”

All the XCOM soldiers raised their weapons, and the psions subsequently lifting their weapons in warning or hands shimmering faintly with psionic energy. The Andromedons weren’t hidden, but the Commander was continuously reminded of how much larger they were than regular Humans, at least in their suits. The smallest ones, the Battlefield Engineers, were eight feet, and the Soldiers were close to nine, with the proportions to match.

Needless to say they towered over the Humans the closer they got. The Commander counted. Two, four, seven…eight. Eight Andromedons were coming, four having the red tint of Battlefield Engineers, with the accompanying drones. Three appeared to be standard soldiers, armed, even though their weapons weren’t raised. The final Andromedon had the same suit as the Soldiers, but there were odd shapes plastered to his helmet, symbols of some kind. It might be a language, or it could simply be a combination of shapes only Andromedons knew. It was very angular and symmetrical. Very Andromedon.

They exited the doors, and stood in front of the XCOM soldiers; two warring species placed in a very unexpected situation. The Commander didn’t have his weapon up, nor did the Andromedon who he assumed was V’Thrask. “Commander,” V’Thrask greeted, or at least acknowledged. “Arrival within expected time. Good. If there is anything that needs to be discussed, we should do it now. Your soldiers do not seem trusting.”

“No offense intended,” Creed said. “We’re just being careful.”

“You systematically destroyed defenses that were more numerous and larger than your own,” V’Thrask said evenly. “We are currently not equipped to handle psionic forces. Attacking you would be ineffective and suicidal. Aside from that, we do not intend to fight you today.”

The Commander was trying to get a sense of the Andromedons while he spoke, and he knew Ellinor, Pall, and Eddison were doing the same thing. He didn’t sense any dishonesty, even if Andromedons seemed colder than most Humans, or even aliens. But he didn’t seem to be lying. “Think he’s good,” Ellinor said. “I assume you shut off the Gateways?”
“Gateways and outgoing communications have been sabotaged and severed,” V’Thrask explained. “As of six minutes ago, the Ethereal Collective lost contact with this position. It will not be reestablished in time before ADVENT claims this city.”

“We have an extraction planned,” the Commander said, eyeing the weapons they held. “I assume we’ll be fighting at some point before we get there, but once we arrive, you will surrender your weapons.”

“Fine.” V’Thrask surprisingly said. “We are wasting time here. Let us move to the extraction point.”

That decided, the mix of Andromedon and Human soldiers began jogging towards the designated points on their HUDs. The XCOM soldiers were still not taking chances, and Eddison along with Cole were hanging behind the main body of Andromedons, with the two Templars up front by him and V’Thrask.

“Four contacts approaching,” a Battlefield Engineer he assumed was A’Darrah said, looking down at a haptic display on his wrist. “Likelihood of a Muton unit is high.”

“Weapons up and forward,” V’Thrask ordered, and the Commander let the Andromedon soldiers take the lead in a straight line, V’Thrask in the middle. Sure enough, a unit of Mutons marched directly in front of them. Seeing Andromedons, they didn’t pay them any mind. The Andromedons raised their rifles and fired plasma beams that killed the Mutons almost simultaneously.

“Hold formation and advance,” V’Thrask stated, now consulting his own wrist haptic pad. “No immediate contacts.”

“Initiating drone scouting,” A’Darrah said, the drone hovering over him flying off into the air, joined by the drones of the other Battlefield Engineers.

The rest of the way they didn’t encounter any large armies or concentrations of aliens. Several more Muton units were encountered, but they were killed within seconds of contact. The Andromedons had no hesitation killing those who had been their allies, and seemed suitably unaffected by their defection. Maybe they were always like this, but it seemed to be treated as completely normal.

An explosion rocked the ground, and the Commander saw one of the buildings collapse as a result of shelling fire from ADVENT. The air battle was just as intense as ever, but all the Firestorms were still operational, and ADVENT was also holding their own. On the torn streets, he finally saw the landed skyranger.

“It’s going to be a tight fit,” he warned. “Skyrangers weren’t made for Andromedons.”

“We will manage,” was all V’Thrask said.

To his mild surprise, there wasn’t a last-second ambush and the area seemed completely secure, or as much as it could be. The drones returned to the Battlefield Engineers, and the Commander turned to V’Thrask. “Load up, and the skyranger will take you to our base. Drop your weapons here, and your drones. They will be returned if you are officially cleared by us.”

“Very well,” V’Thrask set his own plasma rifle down beside the ramp. “I expect you to hold to that promise.”

Well, it was certainly nice that the Andromedons were being so compliant. He hadn’t quite expected that from them. It was refreshing. The Battlefield Engineers even powered down their
drones without complaint, and walked up the ramp. It was definitely a tight fit, with all the aliens standing, but it would work.

“We will speak when you return,” V’Thrask, moving his suit in a crude imitation of a nod. “I expect there is much you wish to ask.”

“To put it mildly,” he answered dryly. “Big Sky, they’re all loaded up. Be sure and let Jackson know what to expect.”

“Will do,” he said as the ramp was raised. “Aegis is going to love this.”

The skyranger lifted off, and shot off into the air, carrying what might have been the reason for their victory. “So what now?” Creed asked.

“We take Seattle back and kill whatever aliens remain here,” the Commander said, turning to them. “But they can’t recover from this. We’ve won here. All that remains is cleaning up.”

Several soldiers cheered at that, and with a smile on his face, the Commander led them back into the city to go hunting.

***

Las Vegas Ruins, Nevada - United States of America

11/6/2016 – 2:42 P.M.

Things had seemed to be going exceptionally well, and for the most part they were. In fact, Oliver was not going to get the image of what Viktoria had performed out of his mind for a long time, if ever, and he knew the aliens wouldn’t forget either. While some people would be content with simply killing the aliens sniping from the hotels, Viktoria had decided the best course of action was to completely destroy it.

Oliver hadn’t had any idea that it was possible for a psionic maelstrom of that size to even be created, and ADVENT and even XCOM had watched in stunned amazement as the Archangel single-handedly brought down a hotel, literally ripping it in half with her psionic power. As they advanced, he’d also noticed extremely odd things that he wouldn’t have expected anywhere else.

They had begun finding Vitakara corpses strewn throughout the city, but all of them had either committed suicide, or…he hated to use the word, but almost ritually killed. No other explanation made much sense, or to clarify, more sense than a bizarre ritual. At least that’s what ADVENT probably thought.

It was unnerving, especially since some of the positions the aliens were in were downright bizarre. Finding four Vitakarians dead around a fully cooked meal, others with plasma pistols in their mouths, and some of the corpses were smiling when found. The only plausible explanation besides a bizarre ritual was that Patricia had done this and…that didn’t seem like it was a good thing.

He wanted the aliens dead and gone as much as everyone else, but this went to a level beyond what he thought was acceptable. Seeing some of the corpses, and those of other aliens…that was horrific and cruel for the sake of it. Killing aliens was one thing, even mind controlled suicide he could accept. But it seemed abundantly clear that she’d been doing far more than just ordering them to kill themselves. There was an air of experimentation and flair that wouldn’t have been present otherwise.

That bothered him. A lot.
More so because he didn’t know if there was a way of telling her “Hey, what you’re doing is kind of fucked up” without making her angry. Well, that was a problem he would deal with later. Right now all of them were rushing towards where the Battlemaster was currently at, thanks to the triggering of the distress signal from Iosif.

That meant things were going badly.

However, they were fairly close, and after commandeering several Humvees, they were speeding towards the location of the duel. “There they are, dead ahead.” Cassandra said, looking through her scope. “Yeah, it’s bad. Only two are left. Iosif and Said I think.”

“Weapons out and prepare to deploy!” Blake ordered. “Nuclear contingency is happening. I’ve sent the command, and we have to hope it works. Keep him distracted.”

Their Humvee driver slid into a stop, and the XCOM soldiers deployed, where Iosif was still attempting to duel the Battlemaster. Iosif was clearly exhausted, and Said was doing everything he could to deflect the swings of the Battlemaster, who, Oliver noted, also seemed injured. He seemed slower, and one of his arms was hanging limply.

The suddenly hail of gauss fire caught his attention, and he extended a hand out to them, and Fakhr and Blake were lifted into the air, and unceremoniously slammed into the nearby building. A roar from Iosif brought his attention back to the Templar, who managed to score a direct hit on the knee of the Battlemaster, actually making him stumble. The Battlemaster slashed upwards, the flat of his blade hitting just under his chin and sent him flying, carving off part of the helmet itself.

A roar of anger came from Mona as she unleashed a psionic lance at the Battlemaster who dashed back, missing the bolt completely. He faced the XCOM soldiers briefly, though Oliver didn’t know what he was waiting for, and only held out one hand. Within seconds the gauss slugs being fired filled up the telekinetic field he was projecting.

“Your Commander is willing to kill you to stop me?” He called, with a disbelieving tone. “Are you willing to die for…this?”

Oliver grinned under his helmet. He’d taken the bait. “If we die,” Iosif yelled, stumbling forward, helmet discarded as he raised his mace in another salute. “You die with us.”

Said created four shields, trapping the Battlemaster in a shimmering cage. A gesture sent him flying back, but it provided enough time for Iosif to charge once more to command his attention once more. “Your persistence is admirable,” the Battlemaster growled as he beat back the tired Templar, disarming him with a twirl of his blade and sending him back with a telekinetic blast. “But I do not intend to die today.” He looked toward all of them. “Your victory will ring hollow.”

With that he leapt up into the air and the whine of the Overseer UFO sounded overhead, an opening appeared underneath it which the Battlemaster entered, and closed underneath him. And just like that, it sped off into the bright afternoon sky. Mona spoke for all of them. “It worked.”

“We better hope he doesn’t come back,” Oliver said, rushing to where Iosif was laying on the ground. “At least we got here before anyone else died.”

“Not quite as bad as you think,” Iosif groaned, as Blake had also gotten up and was immediately checking on him. “Carmelita and Hugo are alive, just unconscious. He also thought he got Sung, but he just disabled the main processor. Get her out of the suit.”

Oliver glanced over to the beheaded Shinobi, rather glad that the pilot’s head hadn’t actually been
taken off in the fight. Better to be trapped temporarily than dead. “We’ll get her out,” Blake said. “But we need to get medical attention to everyone here. Looks like you gave him some trouble.”

“Forget these weapons,” Iosif grimaced. “We just need to have WHEEE cannons. I think that almost killed him. Fuck, we had our shot and missed it. He’ll just come back, and he knows now.”

“Hey, you’re the reason we’re going to win this today,” Oliver told him. “ADVENT is destroying the aliens now. They’re going to lose, and the Battlemaster could have rendered that pointless. You bought time, and that’s all we needed.”

“Hopefully,” Iosif said, looking a little better now that he had been given some water. “I’m guessing it’s not over yet?”

“Nope,” Mona said, walking over. “But it will be soon. There are still more aliens to kill.”

“In that case,” Iosif said, gripping his mace again and giving a weary smile. “Let’s get to work.”

***

The Cultro, Earth Orbit

11/6/2016 – 3:02 P.M

The Battlemaster waited for something to happen. But as the minutes ticked by, he came to the ugly realization that he’d been tricked. ADVENT had somehow been able to fake a nuclear signature aimed for the city, and he’d subsequently been tricked into retreating. He couldn’t survive a nuclear blast; he knew that, and ADVENT and XCOM knew that as well.

If it were anyone else, he would have recognized it as a trick. But the Commander was the kind of opponent that would actually go through with such a threat. If he thought he could be stopped with a nuclear blast, the Battlemaster knew that the Commander would go through with it even if it cost him thousands of his own kind.

So a conundrum. He couldn’t take chances as a result.

“Order a retreat,” he told the CODEX. “Activate the Gateways and achieve it without delay.”

He had considered flying back down there, but he felt it would be the wrong thing to do. He’d been bested here, as had the majority of his forces. The Humans had earned their victory, and prolonging it would be a pointless waste on both sides, and there were clear flaws evident in his strategy that had been made extremely evident to him.

He had underestimated the Humans today, and as a result the Collective had lost ground. Checking up on the status of the other attacked cities was not pleasant. The bases around Portland had fallen, which had not come as a surprise, but Seattle also falling was unexpected and bad. What was more concerning was that communication had been remotely severed not long ago, which indicated that V’Thrask was either dead or captured.

He was more puzzled as to how that could happen without some kind of additional information. But right now he didn’t have any idea how Seattle had fallen, and that was almost more concerning than his defeat against XCOM. Something that he’d have Ravarian investigate immediately. But for now, he needed to reassess the situation.

The good news was that ADVENT and XCOM had revealed their hands today. He now knew exactly what they currently had, and already he had ideas on how to counter it. They had had the
element of surprise here, and that had let them retake three major areas, and nearly kill him, but they would not be able to replicate that so easily again.

The situation was far from ideal, but this was not a large setback. It would, however, give the Humans a morale boost and further establish ADVENT as the primary power of Earth. The political ramifications were not his concern, and they didn’t matter in the scope of the war, but he knew Ravarian and Quisilia would be following the aftermath with great interest.

Today had been a wakeup call, and one he would not let happen again. It was a rule drilled into the Battlemasters from the beginning: “Underestimation is arrogance; Pride is failure; Apathy is death”

Even he, it seemed, was not immune much as he tried. He had underestimated what they were capable of, as well as believed his own forces were enough to fight back, and had waited well beyond what he should have to actually do something. The resource and unit costs would be enormous, and he would bear the brunt of that.

There would be retribution.

But today was not that day.

The Humans had won the battle; they deserved to enjoy it while it lasted.
Chapter Notes

See the end of the chapter for notes

The Praesidium, Patricia’s Quarters – Classified Location

11/7/2016 – 2:30 A.M.

Patricia sat on the edge of her bed in the darkness, which thanks to her enhanced eyesight, turned everything a faint shade of white, illuminating the room with near perfection. Times like this she wished it was like a switch she could turn off because she really would prefer everything to just be dark around her.

Really, she should have been sleeping now. The mood in XCOM was better than it had been in a long time not only due to the resounding victory, but also bringing back eight Andromedon defectors. That was something the Commander had said would be handled the following day, and encouraged everyone to get some well-earned rest, and the Andromedons had been put in the stasis cells for the night.

Certainly an interesting development, and she was intrigued as to what they would have to say to explain what exactly motivated them to do this, but she’d been too unsettled and disturbed with herself to really take a lot of pleasure in the victory. Reading the reports about what both XCOM and ADVENT teams had found, which ADVENT had trouble explaining, put into perspective just how far she had gone.

Even the Commander had a point he wasn’t comfortable with. He’d told her quite plainly that while he didn’t have issues with the mass suicide, she should attempt to keep her kills quick and clean. Prolonging pain for the sake of it was both unprofessional and sadistic, words that hurt all the more so since she had strived to not be that.

She didn’t know what had brought that on. At some point she’d stopped thinking in terms of beings, alien or no, and simply considered them…pawns. Pawns were puppets, tools to be used, experimented on, and discarded. It was a perspective she’d never been able to understand, at least before now.

The problem now was that she did understand it, and instead of violently dismissing it she was actually thinking about why exactly something like that had wormed its way into her mindset. This was not something spontaneous, but the culmination of her continuous training and growing skill in telepathy.

She didn’t necessarily have a problem with viewing aliens as tools. Some were more than that, like Aegis, but they were ultimately the enemy. The Commander had a point that she shouldn’t prolong the deaths, but what worried her was that she didn’t exactly feel guilty for doing it in the first place. She’d stopped because she knew she “shouldn’t be doing this”, but it wasn’t because she felt that it was wrong.

That worried her. Not because she cared for aliens, but because she knew that was a slippery slope down until she was thinking the same thing about people. Or worse, she’d already passed that point long ago.
No…not yet. Subduing Pakistan had been done, if not harmlessly, at least efficiently. No experimentation there. So she hadn’t quite passed the point of no return. But at some point, she feared that she might, and worse, not see anything wrong with it.

A telepathic flicker beside her, and Creed breathed heavily as she heard him wake up. She mentally sighed; he’d known something was bothering her, but assumed she was just tired. He didn’t know what had happened, and she wasn’t quite sure if, or even how to tell him. But that wasn’t fair to him, especially when he didn’t have the luxury of hiding stuff from her, even if it wasn’t necessarily something that he needed to know.

“I’d have thought you would be exhausted,” he yawned, sitting up and scooting over to the edge of the bed, swinging his feet over and putting an arm around her. “What’s going on?”

She sighed and rested her head against his shoulder. “Can’t sleep. And…just thinking.”

“Don’t be vague. About what?”

She hesitated. “You read any of the reports from Las Vegas?”

Patricia only sensed some confusion. “I didn’t read reports, no, but I do know you took out pretty much the entire alien force by yourself until the Gatekeeper showed up. I’d say you did good.”

“That isn’t the problem.” She rubbed her forehead. “I did do that…but I also did…other things. I decided to experiment; test just how far I could push things. I made all the aliens puppets and made them torture, mutilate, and kill themselves just to see if I could keep their reactions under control…” She trailed off. “The autopsy reports don’t exactly paint a pretty picture.”

She felt his immediate surprise and shock at her admission, though nothing physical. “You said you go into trance-like states sometimes,” he said after a minute or so. “Was this one of them? You didn’t know really what you were doing until a certain point? You haven’t done anything like this before as far as I know.”

“It’s not that simple, or really an excuse,” she muttered. “I knew what I was doing, but it didn’t really bother me because…well, they weren’t really worth caring about. They were aliens. Pawns. They were going to die, so I thought I might as well get some worth out of them. They weren’t thinking beings to me, just experiments.”

She was silent for a minute. “I don’t really even remember what made me stop. Maybe I’d commanded one alien to kill his mate in some horrific way, maybe something worse, but I knew what I was doing was wrong. So I stopped. I think the Gatekeeper showed up soon after that. Not that it made much of a difference. All the Vitakara were wrecks and the ones with their sanity intact killed themselves as a result.”

Patricia’s shoulders slumped. “Effective, I guess. But I shouldn’t have felt the need to go that far, much less actually done it.”

“But you did stop,” Creed pointed out. “And you realized you went too far. What are you really worried about? If you were too far gone, you wouldn’t even be this conflicted.”

Patricia closed her eyes. “Because even though I know it is wrong, I’m not sure it actually was.”

Now Creed felt actually concerned about her, and moved her to sit cross-legged on the bed, both of them facing each other. “I think you should explain that,” he said neutrally, taking her hands.

Right. She really had to. “Because it worked,” she said simply. “I know better what I can do. My
telepathy is more refined. Vitakara minds,” she took a breath. “Well, I think I’ve figured out most of them. Even Andromedons aren’t as much of a mystery. I don’t know…” She trailed off. “But they’re the enemy. We kill the enemy, or capture if we really need to. I don’t feel guilty about doing that to them. I know I should, but I don’t, and I don’t know if something is wrong with me or not.”

She briefly let go of one of his hands, gesturing around them. “That’s what we do here. We’ve defined ourselves by going past a lot of established lines in the name of protecting us, and honestly that is probably the reason we’re still alive. Is this actually a line that shouldn’t be crossed, or am I just scared because I know just what I can do?”

Creed looked down at her gently. “Do you remember when you told me that one of the things that terrified you was abusing your power? Is that still true?”

“I remember,” she said quietly. “And I want it to be.”

“Alright,” he shifted closer. “So why can’t it be?”

She shrugged. “Can I go back after this? I’ve already broken that rule I had.”

“And what makes you have to break it again?” He questioned.

She considered that. “Nothing, I suppose.”

“You can be powerful without resorting to what an Ethereal would do to us,” he told her softly. “You’re better than that, and I still believe it, even if I can’t read your mind. You wanted to improve what you can do, but I think what probably separates powerful psions is knowing just what they need to do. You can control yourself, Patricia.”

He was right on that point. Just because she did this once, didn’t mean she was gone forever. “You’re right,” she said with a nod. “I made a mistake. I don’t have to repeat it.”

“Exactly,” he smiled. “Now I think you should at least try to sleep—ah” He was cut off as she leaned up and kissed him, and they stayed like that for a few moments. “Or,” he breathed once she broke it off. “We could do something else.”

***

Unknown

Unknown Time

“You have a lot of fucking nerve,” Patricia growled to the nondescript Human sitting in the middle of a flat horizonless room, in front of a table with a chair opposite it. “I suppose you just like watching, hmm?”

“I have little interest in your activities with your mate,” the Imperator said nonchalantly, his facial expression not changing at all. “I was simply awaiting the opportune moment, and I thought you would prefer to have this conversation where no one else could hear. You spontaneous plans had little to do with it.”

Patricia rolled her eyes, realizing she was in her armor. “How very, very thoughtful.” Nevertheless, she stormed over to the chair and sat down opposite him. “And just so you know, we crushed your little army and sent your Battlemaster running. Good luck trying to gloat this time.”
“Because I am certainly prone to such gloating,” he said, actually attempting to be sarcastic. How cute. “I have little interest in your victories, and a loss will only make the Battlemaster stronger. The notion that you achieved anything other than a temporary victory is a delusion, but one I do not blame you for partaking in.”

“Spare me,” Patricia ground out, glaring at the Human form the Imperator assumed. “Somehow, I don’t feel inclined to believe you right now. There’s only so many times you can say we have no chance before it becomes meaningless.”

“Your belief is irrelevant,” the Imperator said. “I was simply stating that your assumed reasons for me speaking with you were misconceptions. Your little Archangels, MECs, Templars; none of that has attracted my attention, but you, on the other hand, managed to get mine. I did not think we would speak so soon, but your performance at Las Vegas was exceptional.”

Patricia’s lips pursed. “I’m not going to apologize, but it will be quicker next time.”

“Amusing, that you think I care how many aliens die,” the Imperator said with a humorless smile. “They can be replaced, and I do not trouble myself with them. But I can sense that you are conflicted about your actions.”

“And I’m not comfortable sharing that with you.” Patricia said flatly. “You are the last one I’d speak to.”

“Psion Trask,” the smile became knowing. “Do you really believe this is the first time a telepath of exceptional power has felt as you do? The realization of power you experienced? The euphoria of control over so many minds?” He clasped his hands together. “You are likely asking yourself many things. Questions of morality, or life, of lines crossed or left alone. This is natural. It is normal. It is what all psions, but especially telepaths, go through at some point in their lives. It was only a matter of time before you reached yours.”

Patricia blinked. That shouldn’t be a surprise…but then again, she’d never heard Aegis or anyone else mention it. However, this was the Imperator- “Go ahead and sense if I am lying,” he said knowingly. “I have no reason to lie to you here.”

Still suspicious, she tentatively examined the projection of the Imperator. She couldn’t even begin to penetrate it, but he didn’t seem to be lying. “Did Aegis know?” She asked.

“Highly unlikely,” the Imperator answered. “Aegis, as much as you believe he is a telepath, it is not his specialty. He may be able to break into your mind, but he would never be able to do what you have done. He was designed to be an Aegis, and an Aegis he will forever be. If he had known, he would have prepared you better.”

Patricia leaned back. She wasn’t quite sure what to do now. “Let me guess,” she said. “You went through the same thing.”

“Yes, but not quite like you did,” he nodded. “The thrall species of the Synthesized were attacking one of our bases. There were four Ethereals left, and we were being hunted by them. I had recently been awakened, and taken command. I knew what I was capable of, or at least I thought I did, and at one point I decided not to run, and I alone destroyed the pathetic thrall aliens that had come to kill us.”

She suspected this was more impressive than it sounded. “And how many? A few thousand?”

“Four million descended upon the planet,” the Imperator said. “All were defeated. There were no
Director Flagships to command my attention. Not strictly telepathic, but I did reach an important realization, one which the Overmind assisted in."

Despite herself, Patricia was curious. “And what was that?”

“That holding back would accomplish nothing,” he answered, standing up. “Too many beings believe that all species are equal, or that everything deserves as much consideration as the other. But you and I both know that isn’t true. You learned that when you dominated the Vitakara like the puppets they are. You exposed the aliens for their weak minds then forced them to perform horrific acts. You know what they are, Psion Trask, but you do not want to say the words."

The Imperator’s appearance was changing as he spoke, the skin was becoming lighter and the eyes turning purple. “They are inferior,” he hissed softly. “There is no shame in stating facts you proved. You should not be ashamed to recognize yourself as better out of a misplaced empathy.” The chalk-like humanoid sat back down, lips curled back in an unsettling smile.

“Do you wonder why I do not take an interest in the Collective as those such as the Battlemaster do?”

Patricia was not liking just how accurate the Imperator was sounding right now. “I assumed it was because you’re lazy.”

“Amusing,” he said. “No. Because I do not need to. Their interests and goals are irrelevant. The species as they are now are merely setpieces until the real work begins. They are pointless and incomplete. Their purpose is none for me. Do you really think the Vitakara actually have a place in my plans?”

“Yes,” Patricia said. “Otherwise you would not have wasted time on them.”

“Mhmm,” the Imperator looked around the white emptiness. “I presume Aegis revealed some of what Revelean and Fectorian are working on? Perhaps I should have clarified that the modern Vitakara have no place. These species are tools, Psion Trask; ones which can be enhanced or discarded at will. If they cannot stand up to a single-planet species such as yours, explain to me why I should care about them?”

Well, she actually had an answer to that. “Because it’s wasteful otherwise. Doing nothing serves no purpose beyond some bizarre god complex.”

“Good,” he nodded. “An acceptable answer I feel. But returning to the previous point, why exactly are you afraid of accepting that you are indeed superior to those around you? Ignore your societal pressures and customs and explain.”

Patricia raised an eyebrow. “You really want to know?”

“I would not be speaking if it were otherwise.”

“Fine,” she grunted. “Because I still want to care. About people. About things. You might laugh, but I don’t want to lose my humanity. What I fight for. What I did.” She gestured around. “I didn’t care. I acted out of curiosity, out of a desire to be more powerful, skilled, whatever. But I didn’t care about those I dominated. They were just a means to an end.”

“Did you accomplish what you desired?” The Imperator asked.

“Yes.”
“Do you regret what you did?”

“No. I wish I did.”

“Then why are you still afraid?”

“Because soon that will spread to things I actually care about,” she admitted. “I don’t want to look at Creed and feel nothing. I don’t want the soldiers around me to become little pawns I control like a chess game. I don’t want this war to just become my quest to become more powerful. That is what I am afraid of.”

She exhaled loudly. “And I’m telling this to who is probably my greatest enemy. Wonderful.”

“If it is any consolation, I do not consider you an enemy,” the Imperator offered. “Consider me an observer if you wish.”

“Really,” Patricia said dryly. “I’m working to burn your little empire to the ground. At least grant me the courtesy of recognizing me as one.”

“I will, once you explain how your actions make me your enemy,” the Imperator said. “At worst you’ve killed a decrepit member of my species and killed a small amount of my armies. You have yet to threaten me personally. And enemies generally do not converse with each other.”

“I didn’t exactly have a choice,” Patricia pointed out.

“I haven’t kept you here,” he smiled. “You can sever the connection at any time.”

She glared at him, but silently conceded the point. “Let me ask you a question,” the Imperator said. “Why did you wish to become more skilled?”

“To make it easier to kill aliens, and you,” she answered honestly.

“So,” he sat back. “You weren’t acting out of pure selfishness. You had reason to experiment and grow more proficient.” His eyes bored into hers. “I assure you, Patricia, only the truly weak and unstable lose what drives them after experiencing what you have. You are neither. You simply just need to understand what is happening, and how to utilize it.”

“Fine, I’ll bite.”

“Never forget what your ultimate goal is,” the Imperator said. “Be it destroying the Collective, or even me. Grow your power in pursuit of this goal. Do not avoid your realization of the inferior, use it to your advantage. You need not abandon your connections to your lover or friends, after all, a victory with nothing left is simply hollow.”

He shook his head. “There are many theories as to what shapes people, and to an extent all are true. Love. Fear. Pain. But none reveal the nature of a person like power. The Human saying ‘Power corrupts, and absolute power corrupts absolutely’ is not entirely incorrect, though corrupt has a negative connotation. Power changes, and absolute power changes absolutely. It does not sound as good, but it is nonetheless more accurate.”

He motioned to her. “You are, and will change, Patricia Trask. You can fight it, but you will no longer be the same woman you were even before this realization. You cannot reverse what has happened, but you can determine the person you will be. You could fight this, cut yourself off, restrict yourself, and ultimately, you would change yourself for the worse, or simply become what you currently fear.”
He leaned forward. “Or you could embrace what you are. *Use* your gift on your enemies with no remorse, and you will accomplish your goals. Anchor yourself in your goals and relationships, and you will be a terrifying and unstoppable force. But, Patricia Trask, only you can decide what to do.”

Silence stretched between them. “Why are you telling me this?” Patricia asked.

“Because I am not interested in the weak,” the Imperator stated, his voice growing noticeably colder. “The Battlemaster is right to challenge your world as he is. If our Collective loses, then so be it. If I die, then I failed. But if you are to win, then I will ensure that you will carry on our mission and crush the puppeteers that control this galaxy. I have no qualms about gifting you knowledge, especially in the art of the Gift. Use it. Or do not. But there is little worth in beating an unskilled opponent.”

He stood, smiling. “With that said, I think perhaps I should demonstrate just how outmatched you are.” Patricia found herself standing, and they were no longer in an endless room, but standing in the vast expanse of space.

Patricia didn’t have any smart comments here, this entire conversation was nothing short of unnerving and was definitely affecting her in ways she was *not* comfortable with. “Go ahead.”

He motioned down, and the Earth was beneath them, rotating so slowly as to be imperceptible. “So many people on your planet, and aliens as well,” the Imperator mused, and extended one hand toward it. The air around them shimmered, as screen-like squares made themselves apparent. Much like a screen it showed people inside them.

Civilians, soldiers, aliens, people she knew. Chancellor Vyandar talking with some military leader, the Commander and Vahlen sleeping, Abby walking through a desert of some kind. There were still more; Chinese generals looking over some kind of map, a Sargon speaking to some Andromedons, and even more, until they filled up the area around her.

“We cannot control time,” the Imperator said. “But perhaps we can affect it.”

He lowered a hand and everyone in the psionic screens froze. Mid-motion, mid-speech, just froze. She could still see them breathing, but they were just doing...nothing. Then all the heads turned to her direction, eyes sightlessly staring forward towards her.

“Perhaps this will illustrate the ineffectiveness of your armies,” the Imperator said. “This is no illusion, Psion Trask. All those you see are indeed appearing to look at you. They do not know why they feel compelled to look that way, but they do. If you do not believe me, well, there are plenty of security recordings available.”

Everything vanished and they were in the middle of a starry blackness. “Think on what I said,” the Imperator told her. “I suspect we will speak again. Sleep, Psion Trask.”

And the figure of the Imperator vanished, and Patricia fell into a deep sleep.

***

*The Praesidium, Outside Stasis Cells – Classified Location*

11/7/2016 – 1:24 P.M.

Normally, he would be extremely happy on a day like today. There were the Andromedons to debrief, and he had some meetings with ADVENT to figure out where best to go from here.
However, Patricia explaining that little stunt the Imperator had pulled had put a damper on the whole day. It was unfortunately true, even if it was only for a few seconds.

Since Patricia hadn’t added anything else to that, he assumed that had been the entire point of the Imperator showing up in her mind again, just to childishly taunt her. Still, this was extremely disturbing and they needed some means of anti-telepathy fast. Vahlen was already drawing up some ideas, but the best case scenario here was a couple months at least.

He glanced over at the tired face of Patricia. She did not look like she’d slept well, and considering both the day before, and the Imperator, he could understand that. Maybe he should give her a break and figure things out for a short time, perhaps a week. She wasn’t the only psion anymore, and Las Vegas had been a warning sign that something needed to be done.

The Commander was more concerned about the Imperator contacting her again. Even it was only to intimidate her, he was doing this for a reason, and he didn’t know what exactly to do to stop it. There had to be something more to this than him just appearing and talking to Patricia, but then again, she reported that he had never once seemed threatened by her or Humanity for that matter.

Maybe he was just bored.

Could a being like the Imperator just do things for fun?

Aegis had openly warned Patricia that the Imperator was leading her to some specific realization, and Patricia had agreed, although she said that the most he’d done was just talk to her. And not once had he tried to turn her against them, or even offer for her to join. It was, as she had put it, “Strange”.

On that everyone agreed.

But now they needed to determine what V'Thrask and his Andromedons were actually doing here, and that would hopefully be settled fairly soon. The Commander waved his hand over the psionic sensor, and the shield shimmered and faded, and he, Patricia, Aegis, and Zhang stepped into the cell where V'Thrask was standing.

The suit had the acid launchers and tanks removed, but it had done very little to make the suit smaller. “An Ethereal,” V’Thrask stated, the most emotion he’d heard from the alien yet. The alien actually took a step back as Aegis appraised the smaller Andromedon. “Highly improbable.”

“I suppose this is confirmation that my defection has been suppressed,” Aegis said flatly. “Unsurprising.”

“Yes, we have an Ethereal working with us,” the Commander confirmed. “And it hasn’t been publicized for several reasons. Namely, that we don’t want the full force of the Collective being sent our direction.”

“This changes the parameters significantly,” V’Thrask continued. “All data gathered has been under the assumption of pure Human innovation. Ethereal support raises chances of success significantly.”

“To be fair,” Patricia said. “Everything ADVENT has done has been on their own. Aegis has only helped us out with some of our stuff. Mostly psionics and Gateways.”

“It is unfortunate that we are unable to establish contact with the Federation immediately,” V’Thrask said slowly, suit whirring as he looked down at him. “That the Ethereals have hidden this from us would be catastrophic.”
The Commander looked up at Aegis. “Would it?”

“Unlikely,” Aegis said. “The Federation would not move against the Collective. Tensions would rise, but nothing would be accomplished.”

A low gurgle came from the Andromedon suit. “Ethereal Aegis, I am afraid that you underestimate how severe things are becoming in the Federation. Your Collective is far more fragile than you are aware of. I am not talking of the ongoing feud between the Federation and the Greater Hive Commanders, but this is within the Unions themselves.”

The Commander crossed his arms. “I am very interested to hear this. So, why are you defecting?”

“As I stated earlier, I, and those with me, were under orders,” V’Thrask began. “I am from the Andromedon Union Viarior, and there are those from the Apear, Reinarm, and Haruma as well. You are familiar with them, Ethereal; you should know what that implies.”

“It raises questions,” Aegis said. “Viarior I can understand, but the others seem odd.”

“Before I explain why this is significant, you must understand the current situation within the Federation,” V’Thrask interrupted. “The Unions are beginning to split again. Lines are being drawn unofficially. Chief Overseer Chernior, the leader of the Federation, and by extension, our species, has been attempting to project some measure of unity, but it is only a matter of time before the Hive Commanders learn of it, and I suspect the Zararch already know.”

“Likely,” Aegis agreed.

“Are you saying the Andromedons are facing a civil war?” The Commander asked, frowning.

“That,” V’Thrask emphasized. “Depends on a great many factors, one of which is your own species and this conflict. The Federation is not nearly aware of what is actually happening here as you might think, but they know that this should realistically not be even close to a battle. Something else is happening, and they need to know why.”

He looked towards Aegis. “They suspected it was because Humans are psionically capable and the Ethereals wanted to take care. Now it might be due to that one of their own has defected. As I said, an improbable development.”

“So is the Federation waiting for something?” Zhang asked. “Our victory or defeat?”

“And that is where the rising Union tensions are coming into play,” V’Thrask explained. “There are certain Andromedons who are frustrated with the seeming lack of leadership in the Collective, with the exception of the Battlemaster, and want to split off from it. There are two things stopping this from happening, the first is that there is no reliable defense or information on the living Ethereals, and it would be suicide to face the Sectoids, Vitakara and Mutons all on their own.”

He paused. “The second, and more important, is that the majority of the Federation considers the Greater Hive Commanders a threat, and that, more than anything else, is keeping the Federation together. The Unions may hate each other, but faced with a larger threat, we will unite against it.”

“The Federation fears the Hive Commanders that much?” Patricia questioned.

“They are an amoral race of drones led by equally ruthless telepathic masters,” V’Thrask stated. “They have never liked us. We have always distrusted them. It has been that way for a century and
has slowly but surely deteriorated. The Hive Commanders build their fleets by the thousands, and hinder our own efforts. The Ethereals do not intervene, and most in the Federation do not believe we can rely upon them if it comes to war.”

“I suppose the question is if the Federation is willing to go to war,” the Commander noted. “Whoever made the first strike would likely gain the support of the Ethereals paying attention.”

“The Sectoids are psionic,” V”Thrask said. “That automatically makes them more valuable. But you are correct. Tensions will simply keep rising until one takes the risk. If the Ethereals are watching, and have chosen to still not intervene…then some suspect they will simply let the Federation and Hive Commanders fight if they avoid Vitakara and other Collective military worlds.”

“Incorrect,” Aegis interrupted. “A war would be ended in days. Whichever side started it would have their leadership purged. Do not make the mistake of thinking that the Imperator is not watching.”

“You still haven’t answered why you are here,” the Commander reminded him. “The situation is tense with the Federation. How does that relate to you?”

“There are a small group of Andromedons who would prefer you succeed,” V”Thrask said. “They see this as the best chance to break the Collective apart. They would support your war against the Collective. In return, should you defeat the Hive Commanders and Ethereal Collective, you would allow the remains of the Federation to establish themselves as an independent power.”

“The remains of the Federation?” Zhang noted.

“Openly allying with your species would lead to a civil war,” V”Thrask stated bluntly. “There are enough Unions and Andromedons who are Collective loyalists, even if they despise the Hive Commanders. The Battlemaster is extremely respected by our species, as is the Collective military.” V”Thrask bowed his head. “However, the Battlemaster does not expect treason, not from the Andromedons. We were placed here over a period of months for the sole purpose of eventually establishing contact with you, Commander. Our task has been accomplished and you are informed about the current situation. If you want, we can continue to provide our expertise against the Collective itself. Each of us are experts in our field. Engineering, artificial intelligence, chemical warfare. While your species has made impressive strides, you are lacking in many areas.”

The Commander exchanged a glance with Zhang, who gave a single nod. V”Thrask was definitely not lying; either Patricia or Aegis would have said something, and now they had potential allies should they ever move outside Earth. While he didn’t exactly like the idea of Andromedon allies, he wasn’t going to refuse their help, since they ultimately weren’t the real problem.

The information that the Federation and Greater Hive Commanders were on the verge of…if not war, then some kind of conflict…that was extremely interesting and useful. The more he thought about it, the less stable the Collective really was. The only thing that was keeping everything from completely falling apart were the Ethereals, and depending on how things went, more could die in the coming months and years.

There was no unity in the Collective. The entire thing was based on fear; fear that defying the Ethereals would lead to death. Not unreasonable, but impossible to build something sustainable on. While Ethereals like the Battlemaster did what they could, that clearly was not solving the underlying issue of what was keeping the Collective together.

He wondered if any Ethereal had come to this conclusion.
Perhaps they had, and they simply did not care. It would not surprise him.

“Fine,” the Commander nodded. “You help us get the Collective off Earth, and we’ll eventually get you back to the Federation and help kill the Hive Commanders and Ethereals. I’m sure we can find some use for you here.”

“Excellent,” V‘Thrask said. “While all of us are experienced in combat, I suspect it would not do to participate in operations alongside you. But we will assist where you need us.”

“In that case,” the Commander said slowly, rather surprised he was even in a position to say this. “Welcome to XCOM, V‘Thrask.”

***

Unknown Location – Argentina

11/8/2016 – 10:17 A.M.

To say it had been an interesting week would be a severe understatement. There were plans and strikes to carry out as usual, and several of his people recently come from Africa were certainly talking of interesting developments. Supposedly something big was coming relatively soon, but he was likely going to be distracted by everything else that had happened. Africa, right now, was just not important.

The muted TV played silently in front of his chair, with some TV anchor showing the Chancellor giving some speech, which was likely some variation on “With this victory, we have reminded the aliens that we will not go quietly into the night, we’re going to live on…”

He snorted and shook his head. If the Chancellor decided to just blatantly rip off speeches from good invasion movies, he might be more inclined to watch. As it was, ADVENT’s own counterattack had been both a surprise and a curiosity to watch. The aliens had been clearly caught off guard, and he could give ADVENT credit where it was due, it was legitimately impressive.

Now if that would last, he was less sure of. In fact, he knew it wasn’t going to last. Ignoring that this was an alien species, it was just how war worked. ADVENT would get a big victory, which was going to come at some point, then likely a few days or weeks later, the aliens would fight back. It was just going to be a continuous back and forth until one side hurt the other too badly. And right now, Volk knew that ADVENT would exhaust itself long before the aliens did.

Still, their focus on the aliens was good for him. Less attention being paid to the lesser countries across the world, and the borders with foreign nations weren’t getting the attention they needed. Perfect for making sure the Peacekeepers stayed well away from Argentina. But there was only so much that he could do, and he’d been content with that given that work was never in shortage.

Until he’d received a very mysterious package.

That had been surprising on multiple levels, since for one, only a very few people knew his actual location, and all of them he trusted with his life, and said package had not come from any of them. It was unmarked, and was small enough to fit into his hand. The initial instincts of himself and his people were a very poor assassination attempt. Package bombs and poisons were not unheard of when his location was more public, so they’d followed their own procedures.

Once it had been confirmed that it wasn’t a bomb, or poisoned, they’d opened it and inside was some circular device with a note with instructions written in English, but decidedly strange handwriting. Volk had his suspicions when he’d seen the handwriting, and when it had turned out
that it was some kind of holoprojector, it had been confirmed.

He pressed the button on the holoprojector, needing to see it once again. A blue figure appeared, a seemingly large Vitakarian wearing some kind of light armor which had an unidentifiable emblem that was likely some hieroglyph or word in their language emblazoned on the upper right chest. Other than that, the alien had no weapons or other identifying features. Aside from the obvious glowing eyes and the timbre all Vitakara seemed to have when they spoke of course.

“Greetings, Konstantine Volikov,” the recording began, in perfectly spoken English. “My name is Zar’jorean’mattis, designated representative of the Ethereal Collective and the Elder Asaru for the purposes of this message. We have been gathering information on your world and are aware of your current operations in South America and beyond.”

The alien paused. “While we understand you may have some reservations given the larger situation, your own work indicates that you are aware ADVENT is not as truthful as it appears, and certain important facts about us have been…omitted, for admittedly obvious reasons.”

Volk had to smile mirthfully at that. While ADVENT were no saints, the insinuation that they lied about everything or even major things was questionable at best. Like the little fact that this entire invasion was unprovoked, or Australia for that matter. But he kept listening.

“We recognize that we have made some missteps in the handling of your species, and it is now time, we believe, to begin rectifying that and working with certain parts of your species more closely. We are willing to meet you and discuss your current operations and how we can support them, and with your cooperation, we can move forward from there. If you wish to accept, simply press the black button on the side of this communicator which will establish a link with me. Both I and Elder Asaru look forward to your response.”

The hologram vanished. He looked over to Elena who was staring at where the hologram had been, her face complexly blank as usual, but she was blinking intermittently and not messing with the partially disassembled pistol in her hands. He knew her enough to know that was her thinking overtime. “Still think I should go through with it?”

Right now, that was the plan. There couldn’t be too much harm in meeting. Well, there could be, but the aliens knew he existed now, which was not something he could ignore. For all he knew, refusing would just lead to them killing him. Accepting could at least give him some information about what they wanted. He wasn’t going to do anything he didn’t want to, but if he was going to force the aliens to kill him, it was going to be on terms he had some control over.

He was also curious to meet this Asaru.

“Impossible to determine plausibility of honesty without further interrogation of species in question,” she answered automatically. “More information can only be ascertained by contact. Answer unchanged.” She glanced down. “I am sorry.”

He set the holocommunicator down and went to sit by her, feeling guilty he’d brought it up again. Elena was taking her inability to determine if an alien, which she had no experience with, was lying or not, much harder than she really should. It wasn’t entirely her fault she was that way; he blamed the GRU for that.

“It’s out of your control,” he told her, taking one of her hands off the table. “You did fine. And I think you can fix that in the future.”

Her mind immediately jumped to what he could mean like that. “Interview/Interrogation of
Well, maybe not quite like that. “If this goes through...maybe you can just talk to them?”

One firm nod. “Acceptable. Deficiencies will be fixed. Upon contact, what is your plan?”

“Right, that.” He scratched his beard, a smile coming to his face. “I think we should make a lasting impression. Make it clear where we stand and that we’re doing this our way.”

Elena returned to assembling her weapon. “Aliens are notably advanced in technological aspects, and have displayed more military might than we currently command. Demands will likely be ineffective; negotiating advantage is not in our favor.”

“Perhaps,” Volk said slowly. “But I’m not going to be an alien puppet, and right now, I’m guessing the aliens need us more than we need them.”

Elena paused, looked up and frowned at him. “Implausible. Alien forces are estimated to outmatch our own-“

“Elena,” he interrupted with a smile, glad she was seeming at least curious enough to speak more about this outside of necessities. “If that were the case, then why contact me at all?”

She blinked twice, and considered for a few moments. “They approve of your work against ADVENT. Our work.”

He grunted. “Probably at least one reason. Really, Elena, I don’t know why, but I do have some leverage here, and I’m going to use it. But you’re going to be there when we meet. I don’t trust anyone else more than you.”

“Good,” she appraised her completed weapon. “Operatives retained are insufficient to properly protect you. If the aliens try to trick you, they will die.” Volk smiled at that, because he knew that wasn’t an idle threat. If Elena didn’t like where the aliens were leading him and blew the brains out of whoever this representative was, well, then the alien alliance wouldn’t happen. A shame, but he trusted her instincts over his own.

There were advantages to being the leader. He had many tricks, but very few would ever predict that the most effective one would just so happen to be the woman he loved.

Always amusing to see idiots underestimate both of them. And he knew exactly what he was going to do now. Risky, but then again, so was this entire event.

***

Abuja – Nigeria

11/9/2017 – 12:02 P.M.

The good news was that progress was being made. President Okon had assured her that he had reached out to ‘certain parties’, though had not disclosed exactly who to her until now. In the meantime, she’d let him begin the political aspects, while she had worked to establish her own soldiers more permanently, and Okon had ‘gifted’ them a large district in Bwari.

While he didn’t explicitly confirm it, she was fairly sure he’d displaced the few people who were living there, much to her displeasure. It wasn’t even as nice as an ADVENT base, but there was electricity and running water, as well as plenty of bunks. They’d converted some of the buildings to
armories and storage areas, and the rest were improvised barracks. Some of the Engineers brought along were looking into improving what they had, but that would take time.

Unfortunately, displacing people was a topic that was something to bring up with him later, and in the meantime she’d been busy working on getting everyone situated. She had many of her soldiers working with the Nigerian military to bring them up to some level of ADVENT standards.

Betos did have to admit that the multi-national nature of ADVENT meant they had a rather diverse coalition, even if her own group was composed of primarily Israeli, American, and German soldiers. Still, the Nigerian soldiers had paid attention to what they did share, and the remaining deserters were deciding to take some liberties with their own armor.

She wasn’t sure if she should be enforcing some harsher standards, but she personally didn’t care overmuch if they decided to spraypaint and color their armor different from the standard black, blue, white, or green. They weren’t part of ADVENT anymore, and were technically not part of anyone else’s military either. So some standards could be relaxed.

“A word of warning, Marshal,” President Okon said to her while they stood overlooking part of the entrance to the Presidential Palace, where they were waiting for his guests to arrive. “These men may not be who you expect, though I ask you to forget your…prejudices…when speaking.”

She pursed her lips. “That is not for you to decide, President Okon. And I think it is past time you informed me who you are expecting.” Perhaps it was presumptuous of her to speak like that to the President of Nigeria, but she wasn’t ignorant of the fact that she was in a stronger position than he wanted to admit.

“I suppose you are owed that much,” he agreed, not facing her. “The presidents of Chad, Niger, and Cameroon; Babikr Kone, Ezeudo Ifekristi, and Atem Esaba, respectively, of course. They have agreed to speak about a more permanent alliance of African power.” He gave her a sidelong look. “You wish the unification of Africa, yes?”

She gave a nod. “That is the only way you have a chance.”

Okon chuckled. “Perhaps, perhaps, but you realize that cannot be done with peace exclusively.” His nose wrinkled in disdain as the first limo began pulling up. “There are many undesirables that inhabit our nations. Terrorists, thieves, rebels; people who disrupt our stability. An alliance weakened with this rot will not stand against anything, much less the might of ADVENT.”

Again, she was not liking the feeling she was getting from this. “Rebels and terrorists. I imagine they have motives?”

“The usual,” he snorted. “Corruption, ‘abuse of power’, pitiful excuses designed to appeal to western sympathies. As if they know anything about what is required to run a government.”

On one hand, Betos was unfamiliar with the intricacies of the African nations, and Okon did have a point. Revolutionaries were often more idealistic than practical, and the ones that emerged victorious had a fairly high chance of collapsing soon after, and terrorists had no motivation beyond killing those they hated.

It was an important distinction. Terrorists were driven by hate; rebels and revolutionaries by hope and dreams. Terrorists had no goal outside death; rebels at least had some larger goals to strive towards. And many governments often ascribed the word ‘terrorist’ when it wasn’t nearly as simple. Palestine had been handled that way, and in that lens, the outcome was almost assured.
Betos didn’t particularly like the idea that she was likely going to be working with some probably terrible people. She didn’t know for sure, and Okon was going to explain everything smoothly, but her instincts told her that this wasn’t exactly the right side.

“You would make a better first impression if you wore something more appropriate,” Okon said as he turned around, and Betos followed him into the Presidential Palace. “While it may be acceptable elsewhere, your military rank and…experience…is atypical, especially of a woman.”

Betos resisted bristling. “I doubt you are suggesting that they are intimidated by me?”

“Considering you are wearing armor to an otherwise formal occasion, it is not unlikely,” Okon smiled. “But consider it a warning that they are less likely to respect you.”

“Too bad,” Betos shrugged. “I’m a soldier, not a diplomat, and I’m not going to coddle supposed leaders of countries because a woman in combat gear makes them uncomfortable. I’m here to help you keep ADVENT out of Africa, and that’s it.”

“If you insist,” Okon sighed. “As long as you are aware of the consequences.” They walked through the ornate hallways, which Betos still personally found a little too gaudy for her liking. Maybe she just didn’t like the shining white paint everywhere. At least Okon had taken her advice about making sure everything was protected, and there were a fine mixture of her soldiers and Nigerian military guards at all doorways and hallways, not including the small guard that was following them.

One of the Nigerian soldiers came up to Okon and told him something quietly. The President nodded, glancing at her. “The first of our guests has arrived, let us prepare accordingly.” Just as well, since they were going towards the small dining room anyway. Okon planned to have the talks take place over a meal, which seemed fairly standard.

The dining room was very similar to where she’d first talked with Okon himself, with a beautifully set table for five, and delicious-looking and smelling food on it. The stage was set, and now all that remained was for the actors to finally meet. At the very least, she was making progress here, and the next few hours would determine if that was a good or bad thing.

Knowing how things typically went, she was assuming that it would be a little bit of both.

Resistance Camp Outskirts, Northern Territory – Australia

11/9/2016 – 2:12 P.M.

Abby was rather happy, and not just because she’d identified another potential target to liberate. Adelaide wasn’t the largest city in Australia, but it was one that was under a fairly light alien guard, or so it had seemed from several days of scouting. Timed right, they could liberate thousands of people and damage the alien operations here even more.

They also didn’t appear to be doing anything important with the city either, so that would only make the mission easier. Harper could probably be convinced, and the Chronicler would almost certainly go along with it. And on top of that, ADVENT crushing the aliens in America was definitely something that, while she hadn’t expected, had given her a surge of confidence.

While they had been making progress here, ultimately they were doing little more than irritating the aliens. Abby knew their effect was minimal, and the heavy legwork would have to be done by ADVENT and XCOM, and recently things had not exactly been looking good. But now it seemed
like there was some measure of control being established.

Abby froze as her hand went to her pistol as she heard something scuttling in the bushes. While the arid and rather empty Australian wasteland was something she personally despised, one benefit was that it was almost impossible for her to be surprised. In contrast, the Resistance had set up where there was some cover from vegetation; scratchy bushes and trees, with some high weeds and ferns for good measure. Climate-wise, it was better, but it also allowed for ambushes, which she supposed was perhaps the point.

However, to her knowledge, Harper would have his soldiers just approach her normally, not hide in the bushes. And come to think of it, around this time there were generally guards...she holstered her pistol and unstrapped her rifle and took a cautious step forward. “Step out from the bushes!”

To her horror, there was a familiar animal shriek and a Chryssalid leapt out, spittle flying from its teeth and the purple carapace glittering in the sunlight. Abby didn’t even think and fired a burst from her rifle, which punctured the alien in the head and torso. It shrieked again and fell to the ground, and another burst with her rifle finished it off, though she fired again to be sure it was dead.

Once that was done, she immediately reloaded, because if there was one Chryssalid here, there would be more around, and if there were Chryssalids around, there were going to be other aliens. She had a sickening feeling she knew what had happened. That would explain why she hadn’t been able to update Harper earlier. She hadn’t thought much of it because communication was sporadic to begin with, and it wasn’t the first time she hadn’t been able to get into contact. However, she’d sent a message which meant…

She crept up to the bushes, trying to keep low as she surveyed the surrounding vegetation. Everything screamed for her to rush to the camp immediately since some of them may be alive, but she knew that was likely the fastest way to her getting killed. Calm, calm. She took a second to catch her breath and assess what she knew.

One: There were aliens here. Chryssalids and probably more.

Two: There were no sounds of fighting, which meant either everyone was dead or they were recovering. That there was a Chryssalid indicated the former.

Three: If they had access to the communications, they might be expecting her.

Four: Where the hell was the Chronicler?

Something like this shouldn’t have happened if he was there. He wasn’t flashy with his abilities, and she knew he didn’t like people knowing about them, but he should have been able to sense them coming and either redirect them or kill them. So either he hadn’t been here or...oh, that wasn’t good.

Or the Ethereals could have figured out there was a psion with the Resistance and sent one of their own to kill him.

Retreat might be the best option, but the problem was that she had nowhere to go. She had one little Humvee, which would not have enough gas to get to the other, smaller camps, which for all she knew, had been similarly attacked. She didn’t have powerful enough communication equipment to contact XCOM, and with all that, she needed to know at least if there were survivors. So she moved forward slowly, methodically, aiming her weapon at every sound.
Now that she was closer to the camp, the signs of battle were clear. There were piles of Chryssalid corpses, and even more bodies of Resistance soldiers, some of whom were torn apart from the Chryssalids implanted in the bodies and hatching. The odor was already pungent in the hot Australian sun, and the yellow and red blood of Humans and aliens splattered and drying on the dirt.

The mix of tents and temporary plastic structures seemed largely intact, oddly enough, even with some clear rips and dents. But it seemed deserted, aside from hundreds of people dead in the center area. She decided it was worth risking exposure, since there was nowhere else to go, even if it looked like no one was alive.

She carefully stepped through the mass of corpses, and began noticing that the methods of death were not the same. The soldiers on the edges of the camp were clearly ripped apart unceremoniously and messily; by claws and teeth. These...these were precise cuts. Abby knelt down, frowning as she looked at the corpse of a soldier whose throat had been split, and the ones next to him had been killed with a stab wound to the heart.

Yes, it definitely wasn’t a firearm, nor was it plasma or laser. How could someone get close enough to stab someone through the chest? The only aliens she was aware of that even used melee weapons were the Battlemaster, some Dath’Haram, and the Oyariah. Maybe this was done by Dath’Haram? But with the amount of corpses around with those same kinds, either a small army of nothing but them had come, or this was something else.

She scanned the faces, looking for ones she recognized. Harper would have gone down fighting with his men. She didn’t see Joseph either, though it was entirely possible he was just buried under more corpses or lying face-down. Nor did she see the Chronicler, who would be more distinct, even in this mess.

Abby made her way to the command tent, still not hearing anything, and pushed open the flap and saw everything largely as she had left it. The maps, table, and equipment were still there, but there was no one else, no bodies either thankfully. The air suddenly shimmered beside her and the Chronicler literally stepped out of thin air.

“Too late,” he muttered, not seeming to notice her at first. “A problem.”

“Where were you?” Abby demanded, temporarily forgetting his suddenly appearing out of nowhere. “Everyone is dead!”

“Wait,” he held up a hand, cocking his head. “No, not everyone. Harper and a few soldiers are barricaded in one of the barracks structures. You’re still in danger here. This place is not abandoned.”

Abby breathed a sigh of relief. Good news. Sort of. “What else is left?” She asked. “I killed a Chryssalid here, but there may be more.”

“The Chryssalids are gone,” the Chronicler stated, walking out into the open again, face hardening once he saw the mass of corpses. “This should not have happened. In answer to your question, I was doing some scouting of my own. Away from here, clearly. But I think the aliens know I exist.”

“Wonderful,” Abby muttered, weapon still raised as she looked around. “How?”

“I don’t know,” he admitted, gingerly stepping forward. She wished he had his armor on, but instead he wore the typical desert survival gear most of the Resistance had, much lighter than her own. “But something was interfering with my telepathy, redirecting it, lulling me into a kind of
complacency. When I detected it, it vanished and I knew something had likely happened. So I came back.”

“We’ll discuss how you did that when we get Harper out of here,” Abby said. “Where are they?”

“In the-ah!” The Chronicler gasped and Abby leapt back as a dark grey blade sprouted from his chest, a towering armored figure appearing behind him. The being pulled out the blade, flinging the droplets of blood behind it with a flourish. The armor on the alien was slim and form-fitting, with a base of dark grey with a dark red highlighting the boots, pauldrons and gauntlets.

On the chest was the same stick-figure like Ethereal that she recognized from the report on the Senorium alien. While it did seem smaller in mass, it still had to be at least seven or eight feet tall. The helmet matched the rest of the form-fitting style, and was a thin grey faceplate with slanted eye slits which glowed purple.

“You aren’t supposed to be here,” the alien growled, a rasping and guttural voice, which seemed to actually be female in origin. It was hard to tell with aliens. “You were supposed to be away.” Abby fired her weapon and the alien raised a hand, stopping her gauss slugs and then gesturing, throwing her back where she slammed against one of the plastic structures.

The Chronicler had amazingly not fallen over, but instead turned to the alien, smiling even though clearly in some amount of pain. “You wouldn’t be the first to underestimate what I can do.”

She swung her blade clearly intending to either slice him open or behead him, but the Chronicler didn’t even move, instead let the blade come to him, only for it to hit an invisible wall mere millimeters from his neck. He peered curiously up at the alien. “Curious. Just what are you?”

“The one who will kill you,” it hissed, thrusting out a hand encased in crackling psionic energy and pressed it towards him only for the Chronicler to flick his fingers and send her flying backwards. She did recover gracefully and landed perfectly on her feet with a backflip.

“You are no Ethereal,” the Chronicler chided, taking some careful steps toward her. “Whatever you are, I think it is you who will die today. I’m afraid I don’t have that luxury yet.”

“Fool!” She growled, the air behind her shimmering with purple energy as she built up some kind of psionic wave. “I cannot be killed.”

With a push the wave roared towards the Chronicler, throwing bodies and debris that were already partially disintegrating from the corrosive energy, which the Chronicler responded to by raising a hand and a purple shield appeared in front of the wave, stopping it completely. Abby felt completely useless as she just watched; she knew she would only get in the way if she got involved again, and better to have the Chronicler focus only on this alien than worry about protecting her as well.

“Not bad,” the Chronicler complimented mockingly as he made a twisting motion with his hands, and all the joints of the alien suddenly averted with a loud snap, causing the alien to half-growl, half-scream in pain as she collapsed to the ground in a heap. But to Abby’s surprise, it barely worked for more than a few seconds.

The alien flung out one limb, as if snapping it back into place, did the same with the other one, and physically straightened out the legs, before standing, reaching for her blade. “Who are you, psion?” She demanded, now appraising the Chronicler more carefully. “No one has ever done that before.”
“Someone who is far more powerful than you can hope to be,” he answered, all humor gone. “I would advise you leave now before this gets worse.”

The alien chuckled. “A worthy challenge then.” She flourished her blade and vanished into the air and immediately appeared beside the Chronicler and swiped down, only to be blocked by the Chronicler’s own psionic blade which immediately moved to block her next few swipes, before she vanished again and materialized behind him, though the Chronicler blocked her just as easily.

The attacks the alien sent out became much more complicated. She was somehow sending out waves of psionic energy with her blade swings, and somehow teleporting to multiple angles within seconds of each other in an attempt to overwhelm him. The Chronicler surrounded himself in a psionic shield, negating the worst of it, but he appeared to be taking her more seriously.

This alien must have had some resistance to telepathy, otherwise Abby felt the Chronicler would have ended this a while ago. “Enough of this,” she heard the Chronicler rumble, his voice layered deeply as he was drawing on his psionic power. He extended a hand and the blade of the alien was ripped out of her hands, and he somehow imitated her teleportation attack, appearing right behind her and slashing downwards, cleaving successfully through the part of her shoulder that wasn’t as armored, and followed up by pulling out another smaller knife-like attachment in the hilt of the sword itself and stabbing it into her chin, and using the longer blade to plunge through her neck, and thrust a hand out, sending her flying back.

There was a brief interlude of nothing, as the alien was…not motionless, but not going to get up anytime soon. How it was still alive Abby had no idea, but it seemed to be largely over. She moved to walk over when the Chronicler raised a hand in her direction. “Wait.”

She raised her weapon, useless as it might be in the direction of the alien, which now had some nebulous purple aura around it, faintly clinging to the alien body, which first used her good arm to yank the knife out of her chin, and slowly pulled out the sword lodged in her neck while standing up. Both weapons fell to the ground with dull thuds, as the severed arm was pulled to her, and held under the stump that was light with bright purple thread-like lines and what looked like swirling matter.

Once it was attached, she flexed it experimentally, and with a motion the knife was returned to the blade with a click and she held it pointed to them. “I warned you,” she hissed, nothing in her voice indicating the injury she had sustained. “I. Cannot. Die!”

Abby saw the Chronicler frown. She had no idea what would happen. Maybe explosives would work? But the alien had not died from two fatal wounds, and was clearly enhanced with some kind of nanotech and psionic…something. The Chronicler was clearly more powerful, and could likely hold out for as long as the alien, but that wasn’t a large advantage when the opponent was seemingly immortal.

“Get Harper and the survivors,” the Chronicler told her as he appraised the alien. “I’ll keep her busy.” Abby didn’t wait to see what he did, and dashed towards where the Chronicler had initially pointed to where the survivors were, stepping over wrecked bunks and bodies, until she found a clearly barricaded door, which was supposed to be a debriefing room, although very, very small.

“Harper!” She yelled, hearing the unearthly sounds of psionic combat outside. “Open up now!”

“Is the area secure?” The voice of Harper called out.

“No,” Abby glanced behind her at the exit. “But it’s contained. You need to get out now!”
“Hold on.” It took nearly a minute of rustling and moving before the door opened to reveal a haggard, blood-streaked Lincoln Harper, with one less eye; the ruined one was an untreated gory mess. The rest of the survivors were not much better, with bandaged wounds, limbs twisted at bad angles, and otherwise looked exhausted, even if they still clung to their weapons. Three men and one woman were with him, some of the faces she recognized, but no one she really knew.

“What’s going on?” One of them asked.

“Some alien attacked me when I came back,” she answered. “She’s currently being fought off by…just come on, we shouldn’t waste more time. Can all of you move?”

“We can move,” Harper affirmed. “Though some of us can’t fight at the same time.”

Abby shrugged and waved them towards the exit. “Not much we can do to help anyway.”

She guided them out where the Chronicler was currently bathing the alien in psionic energy, which was causing severe damage to the armor, but otherwise didn’t seem to be hurting her, and she was continuing her teleportation making it even more difficult to actually keep her pinned. Harper looked on in disbelief. “That’s-“

“Yeah,” Abby said, keeping to the side of the conflict. “No questions yet.”

The Chronicler seemed to sense where they were, and released a massive telekinetic wave towards the alien which caught her and flung her backwards. “These aliens are more dangerous than I anticipated,” the Chronicler told her as they came closer. “They should not be possible, not without extensive technology the Ethereals do not possess. This will require further investigation. In the meantime, you need to be removed here to warn XCOM. Harper, were all the cells hit?”

Harper got over his shock quickly. “I don’t know, but I did have contact with several backup ones. Where were-“

“Unimportant,” the Chronicler looked at them, even as the alien was getting up and walking back. “ADVENT and XCOM need to be warned. I know one place that isn’t hit. You will be set there until we can determine the extent of this attack.”

“Set?” Abby wondered, nervously glancing at the alien.

“A way to get you out,” he gestured and it went flying again. “You’ll be able to contact XCOM and ADVENT from there. I would advise you keep my role quiet until I return. It will not be long, and this might feel strange.”

He raised a hand towards them, and there was a brief shimmer and they were all suddenly someplace else.

***

Unknown Location – Argentina

11/9/2016 – 3:33 P.M.

Volk was definitely not planning to let the aliens see his actual base, so he and several of his people had established a temporary camp where, if things didn’t go right, the main camp would be safe. The designated meeting location was in an open plain right before one of the forests where they were camped.
It really was a beautiful day with a slight breeze and cloudy sky. The vegetation was a healthy green, and more importantly, provided his snipers cover while they were aiming out to where the UFO was set to land. Volk did not know exactly what to expect, except that the Vitakarian representative had assured him that Asaru would speak personally.

Elena was the only one beside him, and she had her hood up and geared for battle. He was similarly armed, though thought this would be best conducted face to face; hoods weren’t needed since they knew who he was already. Either way, he felt suitably protected and his scouts had confirmed that there were no alien snipers or similarly hidden agents.

The aliens could come to Earth, but they just were not experienced enough to blend in.

“Ah, here it comes,” Volk said to no one in particular. One of the circular UFOs he’d seen so often on the ADVENT news shot overhead and hovered over the plains. The metal was a dark grey as opposed to the regular bright shimmering silver the other ones had. But aside from that, it looked completely identical to one of the fighters.

He saw Elena grip her weapon tighter, and he knew she was getting ready in case she had to shoot something the moment it stepped outside. Unlikely to be needed, but that was just how she was. The UFO slowly lowered itself, not generating any wind, but somehow blowing the grass directly underneath it down.

“I don’t like how it feels,” Elena muttered quietly. “I don’t like how it sounds.”

Now that Volk paid attention, he did now hear the low constant thrumming that was just on the edge of his hearing. It was low and continuous, likely some kind of engine or generator, he did not find it difficult to block out. But every few seconds he did feel something like a pulse; imperceptible and it didn’t seem to do anything, but he still felt it.

*That* made him uncomfortable. Hopefully the aliens would shut it off.

“Let’s go greet our alien friends,” Volk said, and walked closer to the UFO. The pulsing was definitely based on distance, since he definitely felt it more often the closer he got, even if the intensity was exactly the same. He was getting concerned it was going to make Elena preemptively react to any surprises, and he couldn’t exactly fault her for that.

They waited for several minutes, and the pulsing suddenly stopped. Thank God. Still, the aliens were taking their sweet time coming out. They were deliberately waiting for something, and he was trying to not just go up and see if anyone was inside. Maybe they intended for him to enter the UFO? If so, they were going to be waiting a while. There was no chance he was going to go in there, Elena or no.

Then the multicolored shield that seemed to function as a kind of door suddenly dissipated. Good, at least they were going to come out. But to his surprise, no alien of any kind walked out.

Instead, out came the most beautiful woman Volk had ever seen.

Wavy brown hair sharply cut off at the shoulders framed a face that he could best describe as ‘regal’, with fair skin, unmarred features and entrancing violet eyes. Her face was warm, inviting and caring. Her body was just as perfect, well-toned and only slightly shorter than he was. She was also dressed in what appeared to be some kind of alien armor, which had thin silver plates that protected the limbs and torso, while the underarmor garments were a dark grey. Aliens liked that color. She carried no helmet, nor any weapons, and walked with a quiet confidence towards him.
He was immediately suspicious.

While he couldn’t deny that the aliens had somehow managed to figure out his physical preferences, it was suitably unnerving to be greeted with the sight of a likely ambassador to the aliens looking like she’d just walked off the runway of Miss USA. No one that good usually joined the military, and he’d bet even fewer would join the aliens of all things.

The most likely explanation was that this so-called Human wasn’t actually real, but some kind of genetic…thing…the aliens thought might, for some reason, put him at ease. He didn’t know if he should be flattered, or horrified at just how disturbingly accurate the aliens had guessed what he might like.

Nope, he was definitely feeling the latter.

“Konstantine Volikov, a pleasure to finally meet,” she said. Her fucking voice was even perfect; strong, seductive with a clear Russian accent. This was now very unsettling. She extended a gloved hand which he did take. It was pretty much as he expected, she at least felt like a Human, although with gloves that didn’t mean much.

“That is…mutual,” he said, keeping his voice normal. “You know who I am, but I don’t know who you are.”

She gave a dazzling smile. “Of course. I am Asaru; I believe you wanted to meet personally?” He couldn’t suppress a blink of surprise, which…Asaru seemed to find amusing. “Not what you expected, I presume?”

“No.” He said flatly. “I believe your associate identified you as an Elder, or Ethereal as ADVENT likes to call them. You are very clearly a Human.”

“The ruse serves its purpose,” Asaru explained wistfully. “But I find labels and such limiting. Once you tell people who and what you are, there are certain expectations that have to be fulfilled,” she sighed. “But I find such tiring. And you act surprised that a Human could be working with the Collective? Is that really so hard to believe?”

Volk raised an eyebrow. “I’m going to say yes. And even if they were, I don’t think they’d have such a position of…influence; which you seem to have. And I don’t think you’re actually Asaru.”

She clicked her teeth. “You are rather bold, but perceptive.”

Volk gave an unamused smirk. “I thought I was going to be speaking with her.”

“I assure you,” ‘Asaru’ said. “Everything we discuss here will be relayed to her. I speak with her complete authority.”

“Really.” Volk said slowly, thinking of what to do next. At the very least he wanted to get some information about the aliens, even if he was ultimately going to make Asaru herself come before they even thought of reaching some agreement. Best to play along. Asaru’s smile widened, seemingly for no reason.

“If you really represent her,” Volk said. “You should be able to answer some questions.”

She bowed her head. “That is why I am here.”

“Good,” Volk crossed his arms. “So here’s the most obvious one: Why is your Collective even here?”
“Through an interesting set of circumstances,” she answered. “We were led here, but didn’t know what we would find. We observed your species for a short time, before the ones watching took it upon themselves to begin conducting operations. Peace was thrown out, as they did not think your species would willingly join, and your species was nowhere near united enough to make such a major decision.”

Volk snorted. “How convenient. Everything just so happens to be someone else’s fault. Next you’ll tell me that those who made those decisions are dead or gone. Please. Don’t lie to me. If you forcibly assimilate species, just fucking say so. I promise not to be offended.”

“We do not as a general rule,” Asaru repeated. “However, we...misstepped with Humanity. We did indeed believe that you were both too primitive and violent to be peacefully assimilated. Something that has clearly been disproved rather violently. Contrary to what you might believe, most of the species in the Ethereal Collective joined willingly and peacefully.”

“Most?”

“The Mutons were uplifted, but they truly were primitive and fought our efforts.”

Volk was inclined to believe that. “So basically what you’re saying is that you did a bad job initially and now everyone is stuck in a war.”

Asaru pursed her lips. “In retrospect, it likely didn’t need to come to this.”

Volk rubbed his forehead. “And what is stopping you from just saying sorry and making peace? ADVENT isn’t the only power in the world for now.”

“Please,” Asaru dismissed. “Your species will never end this war voluntarily. XCOM and ADVENT will not allow it; perhaps they are justified, perhaps not, but unfortunately, ending the war is not possible, because at best it would only delay it. You see the danger ADVENT poses, now imagine what they will do in even twenty or fifty years?”

Volk was watching her face intently, now seeing some strange things that didn’t really add up to what she was saying. “And I suppose the Collective is much better than ADVENT?”

“What ADVENT does not tell people is that, ironically, we are more open than they are,” Asaru said with a knowing smile. “While each species government answers to us, they are largely autonomous. This is no overarching and oppressive empire, like ADVENT is, but we have no interest in a species forced to fit to what we perceive them to be. As obviously ADVENT is incompatible, the government you would have under the Collective is, quite literally, what you want it to be.”

Volk didn’t even try to disguise the skepticism he felt. “By that, I assume that includes working with alien ambassadors, as well as anyone else you’re contacting. I’m definitely not the only one here, am I?”

A rhetorical question, but one he wanted answered. “There are fewer than you think,” Asaru said. “There is one other, and that might expand further. While ADVENT doubtlessly believes that we prefer puppet leaders, that isn’t exactly true. Puppets have their uses, but they cannot build anything lasting. In general, I personally find them incompetent and require too much micromanaging.”

Asaru shook her head. “You are not a puppet, Volikov, that is why I have contacted you instead of appealing to the Argentinian and Chilean governments. I could, but they would be too scared of
what we can do to be of permanent use. You respect us, but you are not intimidated by us either. A rare trait in a Human.”

Volk was not sure if this was a genuine comment, or alien flattery. “Well, I’m surprised you consider me so highly. However, I assume you realize my influence is…limited,” he nodded towards Elena. “I don’t have a large group, and I’m definitely not a politician.”

“I have little interest in Human politics,” Asaru dismissed with a sniff. “Work with us, and we’ll provide you with whatever you need to first secure these regions, and then take the fight to ADVENT. You are Human, we are not. You know what is needed; you know the strengths and weaknesses here. You will lead our operations here, while I will only serve as an advisor.”

Much as he didn’t like to admit it, he had to admit she could make a good offer. Assuming she was telling the truth…hmm…there was a lot he could do. The problem was there were still things that just didn’t add up. “Let’s ignore that for the moment,” Volk said slowly. “Why even go through all this trouble in the first place? Much as ADVENT is saying otherwise, I haven’t exactly forgotten that you could likely destroy us quickly. So why don’t you?”

Asaru’s expression didn’t change. “As I said earlier, your species was mishandled. A war does not serve anyone, and simply conquering your species would accomplish nothing but increasing anti-alien sentiment and drive dangerous organizations with vast resources like XCOM and ADVENT underground, who wouldn’t cease until they are either removed or succeed.”

She paused. “There are several additional reasons, but some even I am not at liberty to disclose. Suffice to say the situation is more complicated than you might assume. Yes, we could dominate your species, but it would backfire more than our operations here already have.”

That…was an oddly logical answer. He hadn’t expected the aliens to admit they screwed up here, but it actually seemed like the being in front of him was actually saying that which was…oddly refreshing. From an alien of all things. “Go get him,” he told Elena, who nodded and walked away. Volk returned his attention to Asaru. “So instead you want to make…alliances with certain people. Show that the Collective can cooperate peacefully with Humans. Turn this from a species conflict to an interspecies one.”

“To an extent, yes,” Asaru confirmed. “I sincerely doubt standard operations will cease, but countries with our backing should be Human-led and controlled. ADVENT will simply use that as propaganda otherwise.”

Volk’s lips curled up. “Assuming they wouldn’t do that anyway.”

She mirrored his smile. “A fair point. I am curious now what you are thinking. You haven’t shot or refused, so I assume you are considering.”

“I am,” Volk eyed her carefully. “I won’t ask you for some guarantee, because both of us know promises are all well and good, but you can’t prove you’ll follow through. What you are saying sounds…promising…but I suppose we’ll see just how genuine you really are.”

Her smile didn’t diminish. “If you wish, I could provide you with what you would hope to be sufficient proof. I would certainly hate to try and find another qualified candidate.”

“It’s not about what you can give me,” Volk said. “It’s about what you’ll allow. So, you want me to wage a war against ADVENT with you and establish the New Earth Collective, or whatever you decide to call it? Then we’re going to do this my way. No exceptions.”
Asaru scratched her chin thoughtfully. “I suppose that depends on what you have in mind. I can’t promise no exceptions, of course, since even I answer to a superior. But you do not strike me as someone who would propose unreasonable action.”

Well, here it went. “First, all operational commands are handled by me, at least in the South American region. I’m not stupid enough to run your whole invasion, but you yourself said I know this area better. I know what works, I know what will get you willing allies. Give me your alien advisors if you want, or yourself even, but I get the final call on all combat and intelligence operations here.”

“Done.” She said.

He cocked his head. That seemed way too easy. “Second, civilian targets are off-limits, and if your military has a problem with that, too bad. I don’t care if you slaughter the entire ADVENT leadership with syphilis, but you’re not going to attack people who are just caught in the middle. Obviously I’d like you to keep your experimentation to a minimum, but I’m not delusional enough to think that would actually stop, but stuff like that Sectoid Hive is not really helping.”

“It is unfortunate the Sectoids tainted the image of all of us,” Asaru sighed. “Experiments like that are done at the behest of the Hive Commanders, which the Collective does not regulate, for better or worse.”

“Sure,” Volk noted skeptically. “But you didn’t address what I said.”

“Ah, yes,” she recalled. “Not an issue. Unless the civilian population is compromised by psionics or organic programming, standard tactics are to avoid intentionally destroying civilian targets. With that said, we, much like ADVENT, do not prioritize civilians over our own forces. I hope that is an acceptable compromise.”

“As long as it’s actually followed,” Volk agreed. “Very little that can be done to help civilians in warzones. Not intentionally targeting them is likely the best that can be done.”

“War is a sad affair, but mitigation is something we can do to lessen the damage,” Asaru nodded. “Ah, I see you brought over some more of your Reapers.”

Volk snorted at the nickname. “‘Reaper’, something ADVENT calls us to explain the assassins killing their soldiers. The name is pointless, but it is amusing.”

“You have quite the title as well,” Asaru reminded him as Elena walked up with Hadrian and two other Reapers in full combat trenchcoats and gas masks. “I assume you didn’t pick it?”

“No,” Volk said as he turned his attention to Elena. “Anyway, representative, this is Hadrian, one of my Reapers.”

“A pleasure, representative,” Hadrian said, taking off his mask to reveal the face of a man likely just over thirty with black hair just visible under the hood. “I assume Volk has reached an agreement.”

“We’re working on it,” Volk told him, turning back to Asaru. “Now to continue our conversation, there is something else I want to make clear.”

Volk didn’t glance over as Elena executed Hadrian at point-blank range. Once he heard the body hit the ground, he continued. “While I can respect sending spies to infiltrate us, I will not tolerate being spied upon. Your spies may be professionals, but they are not Humans. They do not fit in, and we notice.”
Asaru didn’t even flinch. “How did you learn?”

“All supposed Americans know the history of the American Revolution, yes” Volk asked. “You know, the one where John Adams led the Americans against the British Redcoats?”

Asaru frowned. “That would be assumed.”

“No, they don’t,” Volk said, deadpan. “Because the Americans were led by George Washington, not John Adams. A fact that he,” he nodded down. “Seemed to misremember, but was very sure was correct.” Volk gave an ironic smile. “You could always assume people who don’t know that are idiots, but idiots generally don’t speak two languages, have skin that somehow doesn’t scratch, and can see things us normal Humans can’t.”

In reality, he’d discovered Hadrian was an alien from day one thanks to Elena, who simply told him that he was making micro expressions and expressing body language that was both not Human, and contradictory to what he was sometimes talking about. Keeping any important information from him had been child’s play, and the gaffes like the (true) American Revolution mishap were more of an amusement than anything else.

The other Reapers dragged the body away, leaving just him, Elena, and the being who was supposedly a representative of Asaru. “I will ensure the Zararch do not watch you or your people,” she finally said. “This wouldn’t have been a concern as an ally, but I can assure you it won’t happen.”

Well, if she was lying, it would be easy to figure out. “Glad to hear it. And finally, I want a catalogue of your weapons, equipment, and other assets so I know exactly what I can have to use. I also want operation documents for the larger invasion. If I’m going to help with this, I want to know everything that is relevant.”

“A catalogue can be provided,” Asaru confirmed. “I can only promise to speak to the Battlemaster on the matter of invasion documents. That is beyond my authority.”

He’d expected as much, and to be fair, it was a fairly long shot. But no harm in asking. If the alien hadn’t killed him yet, it was unlikely she would at this point. Now he had one last thing to determine, which was a risk, but considering he was making demands of an alien Collective that, no matter what they said, didn’t need him, he felt one more couldn’t hurt.

Especially since he was almost completely positive.

“Think that’s the major things out of the way,” Volk said, a hand resting on his pistol. “But right now I’m wondering why you’re still lying?”

She gave a laugh. “About what? While you may not consider my word worth much currently, I am owed at least a chance to prove it.”

“Not about that,” Volk said. “You aren’t an ambassador to Asaru. I don’t even think you’re real.”

“I shook your hand,” she reminded him. “While…”

A shot rang out and Asaru’s head snapped back, though the body stayed upright. Volk kept the pistol aimed at the figure, and sure enough, the figure oriented herself, looking amused with a bleeding hole directly in the center of her forehead where he’d shot. “You are very bold, Volikov,” she said quietly, the Russian accented voice gone, replaced with what he assumed was the true voice of Asaru, a layered and melodical one that drew out the beginnings and endings of sentences. “You understand this could end badly for you?”
“Unlikely,” Volk stated as he holstered his pistol. “If you actually had an issue, you would have already killed me.”

“I believe that the right choice was made, contacting you,” she mused, the bullet hole in her forehead vanishing. “I am curious how you noticed.”

“Your mouth didn’t line up with what you were saying sometimes,” Volk said smugly. “And you kept referring to yourself the entire time we talked instead of ‘Asaru’s representative’, who I assumed wouldn’t be having the authority to give me what I asked, or speak with beings like the Battlemaster.” He smirked. “Always pay attention to the little things, Asaru. That I’ve seen what you Ethereals can do also helped, since I assume making an illusion isn’t too difficult.”

“More than you might imagine,” Asaru said dryly. “But I am impressed. Yet you still have not decided what you will do?”

“Assuming you keep your word? I’ll work with you,” Volk stated. “Give me what I need and I’ll give you this continent. Forget our deal and you’ll either never see me again, or you will kill me.”

“Very well,” she agreed. “You will have what you will need, and your requests will be fulfilled to the best of our ability. And concerning your operation in Uruguay, which I am aware of…” she stepped forward. “I believe I can assist with that significantly.”

Volk raised an eyebrow. “Go on then, I’m curious what you can do to help.”

***

Abuja – Nigeria

11/9/2017 – 2:18 P.M.

Betos decidedly felt like an outsider at the meal for the talks. All of the Presidents arriving wore rather plain and generic black suits, aside from President Babikr Kone of Chad, who had a pistol openly strapped to his waist, in addition to an oversized knife. He was the one who made her the most uneasy. Tall and thinner than looked healthy, with a near-shaved head and tiny spectacles, he had talked the least so far, and seemed content to listen to the others.

He seemed dangerous.

Cameroon President Atem Esaba on the other hand didn’t seem too bad. He was the heaviest one, and definitely not in shape, nor carried weapons, but was the friendliest by far, even greeting her personally while the others had barely given a nod of acknowledgement. From what she understood, Cameroon was rather diverse as far as African countries went, which seemed to explain why Atem’s skin wasn’t as dark as the other presidents. Unfortunately, he did seem to be one of the few who actually took his responsibility to his citizens seriously, and the more she listened, the less appealing everything else looked. She probably should have gone there first. Atem seemed more trustworthy than Okon at least.

The President of Niger, Ezeudo Ifekristi, Betos wasn’t exactly sure what to think about, he was clearly once military, and was easily the biggest and strongest out of all of them. Since Niger was the source of multiple revolutions over mere decades…it did explain the heavily military-influenced nature of their government. He seemed fairly practical, which was not something Betos was sure was a positive here, but he seemed at least competent. He’d also shown up with the largest military unit, though for what purpose Betos didn’t know. Intimidation didn’t seem likely, nor did Betos believe he was in actual danger. If that were the case, he would have some kind of
weapon on him, which he did not.

Very odd.

The conversation had danced around the actual purpose, with the various leaders making small talk about the state of their countries and ‘allies’. Not much of importance was shared, and Betos interpreted it as a way for all of them to speak for some time to reacquaint themselves, before actually turning to more serious matters.

That, it seemed, was going to happen now.

“We have spent enough time discussing trivial matters,” President Kone finally said, lifting a hand. “President Okon, let us move to the reason you have asked us here.”

“Yes, this matter is of some interest to me,” Ezeudo agreed, lacing his fingers together. “Though consider me skeptical.”

“As am I,” Atem added, setting his fork down. “Though I doubt for the same reasons.”

“The idea is not appealing initially,” Okon admitted. “Though I believe such a measure will be the only way to keep ourselves independent from the ADVENT tyrants. Marshal Betos here has made me aware of ADVENT’s capabilities.”

“You needed her to tell you ADVENT is dangerous?” Ezeudo grunted, shooting a skeptical glance her way. “Anyone who is paying attention is aware of what they can do. They wish genocide among the inferior. The Arabs were the first, and it is only a matter of time before they move to us. This is not new.”

“With respect, Mr. President, that isn’t exactly true,” Betos interrupted, wondering how he’d possibly gotten that idea. “ADVENT, as authoritarian as they are, do not plan for genocide. You have to know how their leadership thinks. Above all else they are practical. Your countries are in danger, but not from racism or some kind of ethnic cleansing. What you should be concerned about is when ADVENT decides that you are a threat, or that you are not doing enough to help them.”

At least she had their attention. “At some point, they are going to come to each of you. They will open with standard negotiations, but if you deviate from those in any way, or refuse what they offer, there is nothing stopping them from simply annexing you like they did with Canada. They did nothing wrong except refuse to help.”

“The West has always ignored us,” Atem stated. “ADVENT will be no different. They do not care for us, nor we for them.”

“Do you really believe that?” Betos demanded coldly. “If it isn’t clear, ADVENT is nothing like what you are used to. They won’t ignore Africa. You have people; you have resources; you have land. ADVENT sees everything it doesn’t directly control as under possible risk of alien control.”

She paused. “The stark reality, Presidents, is that ADVENT cannot be stopped by one country, or even several. China is keeping its distance, and South America will likely capitulate soon as well. The Middle East was pacified in little more than a day. However, one continent would, if not stop them, give them pause.”

Her gaze swept across all of them. “Ultimately, the good news is that everything is secondary to the aliens, and that, more than anything, may be why ADVENT would back off from a united Africa.”
“Yet a united Africa poses a threat to them,” Kone said calmly. “You yourself stated they do not tolerate threats.”

“Immediate threats,” Betos clarified. “They consider China a threat. They considered the Middle East a threat. The reason they are leaving China alone is because they have not interfered with ADVENT and because a pointless Chinese-ADVENT war would drain resources from fighting the aliens. A conflict with a united Africa would be seen in much the same way.”

“Then if we do not interfere, they would leave us alone,” Atem said. “Cameroon has no interest in fighting ADVENT, nor interfering with their nations.”

“As Canada clearly shows,” Okon pointed out. “And even if they would, Marshal Betos has told me that ADVENT would not be above simply replacing the leadership with those friendly to them.”

“How American,” Ezeudo snorted. “But your point is made…Marshal…ADVENT will need to be handled soon. The question now is simply how we will prepare.”

“You fail to take into account that our countries are not prepared for a conflict,” Ezeudo told her, eyes boring into her. “Even now my country is plagued with dissidents; revolutionaries and terrorists.”

“On that we are agreed,” Kone nodded. “The terrorists in my nation are too much of a concern to ignore. Boko Haram is growing, and they may join with the rebels if they are not stopped. Public support is unfortunately growing, largely thanks to western propaganda.”

“Purge them,” Ezeudo stated. “There is no United Nations to manipulate the world into condemning defending our nations as we see fit. And ADVENT will not act, will they Marshal?”

“Unlikely,” Betos shook her head. “The aliens are their concern, and their official policy is not to intervene in foreign nations unless the situation is dire. Killing terrorists won’t be a concern.” She frowned. “How is Boko Haram still around? They were a jihadist group?”

“Once, but they are not nearly as fanatical as they once were,” Kone explained with a sharp grin. “Islam has faded in them like the rest of the world, and so they evolved. Their drive is no longer primarily religion, but nationalism, idealism, and anti-corruption.” He snorted at the last one. “They use the same tactics. Suicide bombers, assassination, killing of loyalists, but intermixed with propaganda and linking with lesser rebel groups to draw sympathy from the West against the ‘corrupt’ leadership.”

“You have a point, Ezeudo,” Okon nodded. “There is no UN to make empty threats, and all of us have been too gentle with these animals. Before we can think of ADVENT, we must bring our nations to peace.” He swept a hand towards Betos. “The Marshal has also provided me with the advanced weaponry used by ADVENT. Rifles and armor that far surpass the second-hand junk the West gives us out of pity. We have our own plants and our own manufacturers. There is no reason to not use these against the dissenters.”

“An excellent bargaining chip,” Atem said. “One you will not gift us unless we agree to your little alliance.”

“No, my skepticism is gone,” Kone suddenly said. “ADVENT has, for the worse, reset the world. The balance of power is abolished and consolidated with them. But we are stagnant. This is more than simply opposing ADVENT, this is the chance to reset our own continent. We gain nothing from remaining divided. The age of the small nations having any power is long past, only the large
powers have any influence.”

He nodded to Betos. “She understands this. If we do nothing, at best we will continue to be irrelevant in the world, and at worst, we will be puppets of the West and our land, people, and resources stripped and used. They have always used us and we had little choice. No. The time for our own sovereignty should arise now.”

“Change cannot be a mere alliance,” Betos warned. “You need leaders. You need authority over the ones involved. Otherwise you will make the same mistakes the United Nations did; a body with no power or purpose but to keep the peace.”

“Indeed,” Ezeudo looked towards Okon. “How many did you invite to this discussion?”

“Out of respect, every nation in the continent,” he answered, lips curled into a small sneer. “Even the Western puppets. Better that some are not here. The inferior should not have a place in this alliance.”

“Without a doubt,” Kone agreed grimly. “Should this be done, it will be done correctly. There are those in government who will oppose this. There is little need to keep the illusion of their power anymore. They must die.”

“I presume the military will follow you?” Okon asked.

“They despise them, and our promise to wipe Boko Haram and crush the rebels will win him over,” Kone dismissed with a wave. “I am less concerned for my soldiers, and more for yours, Esaba.”

“That is unlikely to be needed,” Atem said. “Some of the minority blocs might have issues, but they will fall in line through a party vote. Otherwise they can be replaced. My commander will follow my orders.”

“Good, good,” Kone said with a nod. “Our laws will need to be…unified. Rewritten. Not by the incompetent fools in the congresses, but by us and our soldiers. We know what needs to be done, and they will not have a stomach for it.”

Betos frowned. “And what do you have in mind?”

“We will need resources to rebuild and improve our armies,” Ezeudo grunted. “We control deposits of metals, gold, diamonds. And we have thousands of so-called citizens who are too weak and poor to do anything. It is time we used them.”

“Agreed,” Kone said with a smile. “The mines and factories will need workers.”

Betos blinked. “Forced labor? You are not going to enslave them!”

“Such an overdramatic reaction,” Kone chuckled. “I suppose that can be allowed for a competent woman. No, slavery of citizens is pointless, but they should put their lives to some use before they wither and die like parasites.”

“Slavery is better served as punishment,” Okon nodded. “Something fitting for the rebels and terrorists. Even the mere criminal in the jail would be better used for the state than simply storing them away.”

“While I agree with the concept of putting those in our nations to work, the Marshal has a point,” Atem said. “Taken too far, this could reflect badly on us. No one will care about the terrorists, as
they should not, but as justified as putting our people to work is, it will be opposed.”

“They have nothing now,” Okon reminded them. “They simply want food. Shelter. We give it to them, and we have our workforce. It is the presentation that will be crucial, not the act itself.”

This was getting out of hand quickly, Betos did not like where this was going, but didn’t know how to regulate four Presidents. “You should reevaluate what you are speaking about,” she warned. “Not even ADVENT would go as far as some of this.”

“We are not ADVENT,” Kone said simply. “I do not care what they would, or would not do. This is simply what must be done to protect ourselves, as you have rightfully pointed out. You understand that this does not happen without compromise.”

“I can refuse to help,” she reminded them.

“This is preliminary,” Okon tried reassuring her. “But none of this would happen without you. The expertise you provide will not be ignored, and you will have a guiding hand in the course of designing the laws of this body.”

“We will need a leader of the Army of our soldiers,” Ezeudo said. “You know ADVENT. You know how they work. You have combat experience, and I assume you participated in the War on Terror and hunted down the Palestinian vermin in your own country. I would support your position.”

Betos resisted bristling at the casual dismissal of the Palestinians. “As would I,” Atem agreed. “An especially high honor, for both a non-African and a woman.”

“And as we are the first to join in this union, we will be the leaders,” Okon said to all of them. “There is little need to simply rally around one simply because of tradition. We four will unite this continent and bring a new era of African influence.” He poured some wine in his glass and raised it. “To the formation of the Sovereign African States.”

There was a chorus of affirmatives, and Betos echoed their movements, realizing that this seemed oddly similar to how ADVENT might have formed. Leaders coming together in secret; making alliances; planning radical change; all united under one vision.

And now the vision she had was slowly becoming warped into what could be a dark mirror of ADVENT itself. But she had no choice now. She was committed, and needed to make sure these men didn’t grow more drunk on power than they already were.

But she was in way over her head, and didn’t know what to do to help herself.

This might not have been a good idea.

***

Bagé Peacekeeper Outpost – Brazil

11/10/2016 – 5:21 P.M.

Jaylin had never really thought she would be happy to be on guard duty, but here she was. The first attack in Bolivia was far from the last. Attacks had begun happening at seemingly random times, and they were definitely all from the same group. No one knew who they were or who they worked for. Some thought that they were working for Argentina or another South American nation.
Jaylin, and most other people, mostly believed they were just extremely well-equipped terrorists. Although there were a few things that gave her pause as she’d looked over the reports gathered from across the country. As one of the survivors of the attack, and subsequent ones, she’d received a promotion that had put her on a team of trying to figure out exactly who these people were.

It didn’t make sense.

They had yet to capture one, or even kill one, which was not something she’d expect from anything other than a foreign intelligence agency, and these people didn’t fit any known intelligence group. She was even slightly wary of assigning them the ‘terrorist’ label since to date, they hadn’t targeted any civilians, which were the most vulnerable and easy attacks to carry out.

They were missing very basic information. They didn’t know if these people were native, they didn’t know who was supplying them, they didn’t know their goals or motivations. No group had taken credit, and all countries had denied involvement. Jaylin almost wondered if this was the result of some private billionaire who hated ADVENT.

It would explain the equipment and skill, and why no one would take credit. No one really thought China was behind it, since relations between the countries had been thawing to a degree, and more importantly, China wasn’t stupid.

But Jaylin, nor anyone on her team, knew what else to do. She’d requested assistance from Stein, who had personally informed her that ADVENT Intelligence would be deployed to handle this, which Jaylin really thought was for the best. They were definitely handling something they weren’t trained or equipped for. These assassins blended into the forests and knew the area better than they ever could, and the Peacekeeper armor wasn’t strong enough to block an expertly placed bullet.

But they needed ADVENT Intelligence here sooner than later. While everyone was worrying about the aliens, Jaylin was honestly more concerned with just randomly getting shot, as were most Peacekeepers deployed here. Uruguay citizens were also hosting border protests daily, which wasn’t helping matters at all.

Were they trying to make ADVENT mad?

“So you see the latest news?” Leon asked beside her as they stood behind the barricade that quartered off the Peacekeeper base, which gave them a view into the surrounding field. One of her suggestions to make ambushes impossible seemed to be working so far, since the base was in the middle of a place and they’d removed the nearby trees to give them plenty of open space.

Nothing was coming through without someone spotting it, and after the attacks, there was a 24-7 guard with Peacekeepers watching every angle, and even more standing guard over the Armory and vehicles. That was not including the other armed and on-duty Peacekeepers just wandering around and practicing on the mock range.

“Not really,” Jaylin yawned. “Unless you mean the Chancellor saying that the aliens are retreating and how great we all are?”

“Nah, a bit lower key,” Leon explained, tinkering with his rifle. “You remember that traitor? Betos?”

“I do,” Jaylin said, just the name itself beginning to make her irritated. “And also all the other two thousand or so traitors no one ever mentions for some reason.”

Jaylin knew she wasn’t the most empathetic person, but she could actually understand the issues
some people had with ADVENT, which would probably shock some people. It was why she didn’t really mind the deriding words she sometimes heard directed at Saudia and other various figures. Far as she was concerned, that was fine as long as everyone did their jobs.

With that said, under no circumstances was that ever justification for not only deserting, but going to a foreign nation and literally giving up state secrets. Jaylin was personally shocked ADVENT Intelligence had not just dragged her back and handed them to a probably gleeful Stein, but just shot her and be done with it. Literally no one would have complained. It was even worse that this was happening during an invasion.

So for her health, she hoped she’d never hear about the traitor again unless it was about her death or trial. “Well, she’s showed up with several African leaders,” Leon continued. “They announced the formation of the ‘Sovereign African States’ which seemed to be created in response to us. So that’s a thing. Four nations, but it’s drastically changing up the power dynamics there.”

“All thanks to the traitor,” Jaylin muttered, looking off into the setting sunset. “At some point we just need to take the bitch out.”

“Not saying I disagree with you, but there has to be a reason ADVENT hasn’t done anything,” Leon cautioned. “Although honestly, I can’t for the life of me figure out what.”

“Probably- hold up, something’s out there,” Jaylin interrupted, raising her rifle and peering into the distance where there was a figure walking up. Looked like the attire of the terrorists, but it was too far away. “Base Watch, unidentified figure north of my position. Possibly hostile.”

“Understood, sending reinforcements now and putting the base on alert,” the Base Watch, security managers of Peacekeeper bases, answered. “Best not to take chances. Looking through cameras now.”

The figure was definitely one of the terrorists, with the trench coat, hood and rifle. “Definite hostile contact,” she said. “Leon, you see it?”

“Yep,” he confirmed. “What is it doing?”

“Peacekeeper Tanika, can you check your camera,” Base Watch seemed confused. “We’re not seeing anything.”

Jaylin frowned, and saw two, three…“I don’t know what to tell you,” she said slowly. “And we’ve got bigger problems. There’s at least a half dozen coming up now. Opening fire-“

“Behind you!” Leon yelled and she turned around to see one of the terrorists right behind her, rifle raised. Leon fired and hit the being right in the head, but it didn’t even seem to do anything. It was like the slug passed through thin air.

There were more shouts around the base as more of the terrorists had somehow managed to get in, prompting guards to open fire but to similar results. Leon fired a few more shots, but all of them passed through like mist. Now she was thoroughly confused and concerned. There was no way this could happen, and the being was just standing there, arms spread mockingly.

“Sniper!” One of the Peacekeepers yelled as the one he was standing beside just fell down with a bullet hole in his helmet. Jaylin immediately took cover behind the barricade, as the area was filled with even more of the weird illusion-terrorists that were literally appearing and disappearing out of thin air.

“What the hell is this?” Leon asked as the chaos only got worse, as several Peacekeepers were
wounded by friendly fire from their own side from the ones that hadn’t figured out that some of them were illusions. And then it suddenly got much, much stranger. Before her eyes things started disappearing and appearing in different places. The barricade around the base melted before her eyes, and all the parked patrol cars just reversed direction, facing back instead of forward.

“We need to get everyone out of here,” she hissed into her helmet. “They’re doing something to our heads!”

“We’re seeing it too,” the shaky voice of the Base Watch communication said. “Everyone around me just vanished even though I can still hear them. A general retreat is ordered.”

More Peacekeepers were getting picked off from real attacks which Jaylin had no idea where the shots were coming from. She didn’t even know if the patrol car in front of her was real or not. She waved over some other Peacekeepers who were back to back and clearly unsure whether to fire on them or not. “Come on! To the car!”

She wasn’t the only one to have that idea, the rest of the armed Peacekeepers that weren’t getting picked off were either retreating to the vehicles or just running towards the city itself which was several miles away. Jaylin yanked open the door and climbed in, thankful that the keys were already inserted and ready to go.

Gunshots hit the patrol car, and she did her best to ignore them and luckily all of them missed. She drove forward, extremely glad she’d memorized the base and was easily able to follow the tracks from all the previous patrol car departures, even with things like the barricade gone. She was followed by several more cars, and a few explosions in the back indicated that at least a couple had been taken out.

She didn’t pay any attention to what was behind her, only gunning it forward to the city, and praying that whatever had attacked them didn’t follow. Whatever that was, there was no way they were going to be able to kill it.

ADVENT couldn’t ignore this any longer. They’d come under some kind of psionic attack, and either the aliens were helping these terrorists, or they had gotten some of their own.

Both possibilities were terrifying.

But both required a response. Immediately.

Chapter End Notes

To be perfectly clear, nothing in this chapter has anything to do with the Bureau. On another note, I have brought on another beta, Edumesh, who is a reader from the Spacebattles forums and has provided a lot of useful feedback. As with all the people I bring on, I’m positive this will only lead to better chapters going forward.
Crackdown

The Chronicler’s Sanctum, Unknown – Australia

11/11/2016 – 7:17 P.M.

Abby finally allowed herself a brief moment of respite, as she washed her hands of the blood that had gotten on them. Treating the survivors had taken up all her time, where she’d tried her best to set broken bones and bandage the other less severe wounds. None of them had discussed what had happened yet, and right now most of them were in a sedated sleep thanks to the Chronicler keeping an unusually robust medical cabinet.

That done, she walked to the steel fridge and pulled out a bottle of water, not even wondering if she should be doing that in his own home, but she didn’t particularly care right now. Now she could finally look around and see just how strange this place really was.

The Chronicler’s home, for that’s what it had to be, was definitely in some kind of cave. The walls were angled, jagged, and a smooth reflective grey that was cool to the touch. She didn’t see any light sources, but everything was still illuminated enough for her to navigate, but at the same time not overwhelming.

What was maddening was that there seemed to be no pattern to the layout, and she still had yet to figure it out. There were multiple different rooms, all connected via stone corridors, and each room was obviously for one purpose only. There was a kitchen and living room-like area, with top of the line equipment and furniture, and a medical suite with a wide range of drugs and even an operating table which she’d put to use.

But what made no sense was that those were the only two rooms she’d been in, and hadn’t encountered any others yet…despite deliberately taking different routes, either by mistake or to see if there was a different path. That hadn’t become readily apparent until now, but unless this was just a two-room cave with no exit, she was missing something.

“Thank you, agent,” Harper said wearily, also walking up to her after he’d made sure his soldiers were sedated. “There are a few more survivors thanks to you. I wouldn’t have been able to help them enough.” He did look better, now that his own wound had been properly treated and there were bandages around his head and eye, in addition to his other superficial wounds.

He still looked awful.

She shrugged. “It’s my job. Or was anyway. So what happened?”

He sighed and leaned on the counter, looking off into space, arms crossed as he continued in a forced emotionless voice. “We were attacked, as you can guess. First it was Chryssalids, an entire swarm. We’d not seen any indication of loose packs before now, so it caught us by surprise. We lost a few to them, but Chryssalids die fairly easily, and the…infected were easy enough to put down.”

Abby nodded, pursing her lips. “And then that thing showed up.”

It wasn’t a question, and Harper wordlessly nodded. “Cut through everyone like it was nothing. Nothing we did could even scratch it. Bullets were just stopped, and our own gear was pretty much
tissue paper against its sword. Within a blink, a dozen men were dead, and in another few seconds, another dozen. I ordered some of us to retreat and barricade ourselves in the barracks and command centers, thinking maybe enclosing it would give us a better chance.”

Abby recalled the carnage, even within the few she’d explored. “You were up against a psion. A powerful one at that. Nothing you could do. Trust me, I’ve seen how useless we are against psions.”

“Mhmm.” He looked to her. “So…did you know about Lucas? Assuming that’s his name?”

Her lips twitched. “For some time now. He asked me not to say anything. He doesn’t have a name as far as I can tell. Aliases at best. Calls himself ‘the Chronicler’. Make of that what you will.”

Abby interrupted with a humorless chuckle. “He most certainly is. Just not in what you think.”

“So…why?” He asked, despair tingling his voice. “Why isn’t he with XCOM? Or helping us? He can’t actually think we couldn’t use this.”

“He doesn’t like the idea of working for anyone,” Abby said, grimacing as a cool breeze washed over them. “And he’s been helping, I won’t dispute that. Our major victories? You can thank him for that, just helping in the background. I don’t really know his motivations, but he does have a plan.” Her shoulders slumped. “I just have no idea what it is anymore.”

“I guess the question is what happens now,” Harper mused. “Unless he plans to kill us, his secret’s out, and I have no intention of keeping it from ADVENT. We could have done so much more if I’d known we had a psion, and even if he helped us, that doesn’t mean he’s suddenly forgiven.”

Abby pinched the bridge of her nose. For some reason, she didn’t think the Chronicler was going to like that. “Good luck. Want to walk with me? I want to try and map this place out. Maybe find some way to contact XCOM.”

“I’ve got nothing better to do,” he said, pushing himself up, and followed her into the corridor.

“Once we get out, do we just leave?” Abby asked. “With how many have died…”

“I won’t know until I can determine just how much of our network is compromised,” Harper answered. “At the very minimum…we won’t be able to recover for several months. Operations in the other Oceanic nations may be compromised as well. I think-“

He abruptly stopped as they stepped into a markedly different room, this one the largest of all. It was a perfect square, in the center was an elevated metal platform with a clear pool of water underneath. Along each wall were metal consoles of some kind, with screens that extended to the ceiling.

The entire room was filled with ambient blue light, and opposite them were two additional exits on each corner. “This is…interesting…” Abby said slowly, taking a cautious step forward. “I don’t think we’re supposed to be here.”

“Probably not,” Harper agreed, walking to the platform. “But I’m curious now.”

Abby followed him and walked onto the empty platform, looking around once on it and still not
seeing what the point of it was. There was a small console on the corner, with buttons in some kind of language she couldn’t begin to decipher. It was definitely similar to the markings on his armor though. She cautiously reached to it and jerked her hand back as hundreds of micro-wire things sprouted from in between the button, hovering in the air for a few seconds before moving back into the console. “What the fuck?”

“I think we should leave,” Harper said upon seeing that, his eyes darting around the room to the other consoles. “I do not like that.”

They quickly departed and walked into the leftmost corridor, and soon stepped out into a much smaller room with no exit. It was a simple rectangle, with a walkway with black water rushing underneath. At the end was a strange organic….pedestal, and on top of it was one of those psionic artifacts she’d seen the Chronicler use.

She frowned and took a step forward, wondering if it was another, or the same one. The blue globe rippled with an inner light, and the pedestal seemed to be clinging to it. The whole area seemed oddly sacred. “Look at the walls,” Harper said quietly. “What is this?”

She glanced to the walls and could swear the room got colder, and the sound of the water rushing became louder. On the walls were lines and lines of the alien text, over and under diagrams and markings depicting things she didn’t even know how to begin to describe. Some of the outlines looked like the orb at the end of the room, and there were even more shapes and figures. Pyramids, tesseracts, cubes, and things that didn’t seem possible to make.

Abby felt an urge to look at the orb more closely, as it seemed to be glowing brighter on the inside. “Agent, I don’t think we should be here either,” Harper cautioned as she walked forward. “This isn’t right.”

She ignored him, and kept walking forward slowly, and was now able to hear…things, just on the edge of her consciousness. She couldn’t be sure if they were her imagination or not, but it was something like barely perceptible whispers, muttering in alien tongues. The orb grew brighter as she approached, and the closer she got, the more she felt a presence.

It emanated from the blue orb, and it felt old.

“I wouldn’t touch that,” the chiding voice of the Chronicler warned, as he appeared right beside the orb. She suddenly shook her head, as if snapped out of a trance. The orb wasn’t glowing any brighter, and the room was silent.

“What was that?” She demanded.

“Something you would have regretted if you’d gotten closer,” he answered, walking up to her. “In simple terms, you would not be Abigail Gertrude any longer.”

“Hello…Chronicler,” Harper said as he also walked up, his face stony. “Thank you for helping.”

The Chronicler sighed. “You can feel betrayed if you wish; it is earned, but it was necessary. I cannot explain it to either of you, but you’ll have to trust me here.”

“Really?” Harper demanded incredulously. “Trust you? Give me one reason to do that!”

The Chronicler arched one snowy eyebrow. “Because I saved your life, and more importantly, I plan to avenge this attack. I would prefer to leave your mind untampered with, but if you force me, I will take appropriate measures.”
“I might just prefer amnesia to this,” he growled. “It’s nice you want to fight back, but we’ll see what ADVENT wants to do with you once we get in contact.”

“Harper…” Abby warned, seeing the Chronicler smile.

“Amnesia is a simple and unnecessary solution,” he said dismissively. “Think carefully, Harper. If I’d been so obviously helping you this whole time, not only would the Ethereals have figured out what was happening faster, it’s unlikely any of us would be here now. Furthermore, you have a poor understanding of psionics if you think I’m just going to risk someone in your state exposing me preemptively. Now.” He raised a finger.

“Everyone needs to think calmly and rationally about this. The alien retreated after I dealt severe injuries to her multiple times, and I was unable to kill her. Unfortunate, but she can be dealt with in the future. The Ethereals now know there is a psion here, which poses a problem for you.”

“And I assume you have a solution?” Abby asked.

“Yes,” he nodded. “You return to XCOM, and let me fight the war here. I assure you I can do a much better job, and keep at least a few Ethereals focused on me, while making sure they aren’t turning their power on ADVENT. The Resistance here was always going to be defeated, but I can keep the aliens occupied for as long as needed. Now, if you doubt me, I can prove it.”

Harper still looked angry, but his features had relaxed. “How?”

The Chronicler smiled. “I am going to attack Sydney.”

***

ADVENT Command Center – Switzerland

11/11/2016 – 10:14 A.M.

The ornate and plush room always seemed like a waste whenever Saudia actually looked at it, especially when anytime she was in here, she was either staring at the TV or sitting around the table. Not actually using the admittedly nice and comfortable furniture. But during times like this, everything just faded into the background as the smoldering anger at what she was watching took precedence.

“I thought,” she said very slowly and quietly. “Luana was handled.”

The TV screen blasted a much, much different headline.

ADVENT INVADES URUGUAY. GOVERNMENT HAS BEEN TAKEN INTO CUSTODY.

Stein stood beside her, wearing simple military fatigues with her hair pulled back into a ponytail. She was clearly furious, which she only expressed through her stony face that Saudia had come to realize was something she only did when she was preparing to execute someone. Truthfully, Saudia was tempted to bring down the full might of the ADVENT justice system upon Luana. She’d certainly earned it.

However, justice would be determined by Stein. Still, this was unacceptable.

“I had thought I had made myself clear,” Stein answered, just as slowly. “She seemed to understand as well. I had thought the matter resolved. I was clearly mistaken. She is a problem now, and one I am going to remove.”
“Do it,” Saudia stated immediately. “I want this situation contained immediately. In the meantime, I need to address this myself. What are you planning?”

“Commander Christiaens just countermanded all of her orders, and has stripped her of her rank,” Stein said. “On the other hand, Luana is ignoring incoming communications from us, but her subordinates are keeping us informed. Director Falka is compiling a list of evidence.”

“Idiot.” Saudia shook her head. “What was she thinking?”

“She’s a warmonger,” Stein noted emotionlessly. “She’ll take any excuse. The Peacekeeper bases being attacked was the only thing she needed, despite the fact that there is no evidence that Uruguay is behind it. The survivors are being interrogated now, and what I’m hearing right now is that there is more evidence that the aliens are behind it than Uruguay.”

“Just what we needed,” Saudia scowled. “The media is already having a field day. We need to make a strong statement of our own.”

“She has done enough to constitute treason,” Stein stated. “She will be arrested, tried, and executed as an enemy of the state. Leave the administration of justice to me, Chancellor. We will need a new leader for Brazil in the meantime.”

“Just make sure you invite the media when you arrest her,” Saudia said. “And what is the status of Uruguay now?”

“All our forces were ordered back, but not before they inflicted severe casualties on both Uruguayan military and civilian targets,” Stein answered. “The Oversight Division will conduct a review, but I sincerely doubt that the fault lies with the soldiers. They were following the orders of an unstable woman we should have dealt with long ago.”

“Great,” Saudia muttered, turning on her heel to face Stein directly. “Find out everyone who signed off on this and administer justice. Everyone. I don’t want just Luana, but her staff as well. Someone didn’t follow protocol, and there will be very public consequences. We do not need a PR disaster right now.”

“This is already a PR disaster, Chancellor,” Stein pointed out. “We just need to mitigate the damage. I would suggest at minimum reparations for the families who lost members, and direct assistance in whatever they want. Make out a damn blank check to their government.”

“I’ll get it done,” Saudia promised, not looking forward to any of this. “The Commander is not going to be happy.”

Barracks, the Praesidium - Classified

11/11/2016 – 10:47 A.M.

It was always an interesting day to wake up and hear that ADVENT had invaded another country out of nowhere. Oliver and a few other XCOM soldiers were seated around one of the Barracks TVs, watching the news silently. “While ADVENT has released a statement calling the invasion a ‘rogue and unsanctioned operation’, it unfortunately does not erase the fact that the unprovoked attacks have left thousands of soldiers dead, and caused hundreds of civilian casualties. ADVENT has promised that the ones responsible will be punished, but at this point, there is some question as to if it will be enough.”
Oliver almost rolled his eyes at that. News anchors annoyed him with their overdramatic speech, as if anyone rational would be thinking that right now. It would clearly have to be enough, because ADVENT certainly couldn’t bring people back from the dead. What ADVENT was going to do would certainly be important, but he knew at best this would be viewed as a mistake, and very little would actually change. It wasn’t as though nations were going to leave ADVENT. Worse, despite it being unprovoked, he was not unaware that there was a vocal group that advocated the hostile takeover regardless of justification, or lack thereof.

“Do they really not think Luana’s behind this?” Terli Caixeta, one of the actual Brazilian soldiers asked. “Is it really that difficult to figure out?”

“She hasn’t said anything, I think,” Anna said slowly, shaking her head. “I’d think right now she’s more concerned about convincing Stein not to arrest her.”

“Please,” Terli wrinkled his nose. “Marshal Luana would think she is completely justified in this. She’s a good leader, but you don’t put her in charge of a country because then she does stuff like this.”

“I really want to know how this even happened in the first place,” Sierra interjected. “Aren’t there specific protocols to make sure something like this doesn’t happen?”

“Supposedly,” Oliver said, still watching the screen but not really listening. “The thing is we have no idea what actually happened. The only thing we know so far is that there were several large attacks on Peacekeeper outposts, and the next day Uruguay was invaded.”

“And now a bunch of people died for nothing,” Sierra said sourly. “If it were actually serious, ADVENT wouldn’t have pulled out literally hours later. But when your military is literally unkillable compared to whatever the hell Uruguay has, a few hours is all you need to completely decimate them.”

“I guess we’ll see what they do,” Anna shrugged. “Someone is probably getting executed for this. Invasions don’t happen without a lot of approval.”

“I’ll be impressed if ADVENT does something beyond saying they’re sorry,” Sierra grunted, looking back to the TV screen. “Or paying the country with a few million Alloys. If they want to actually be different from the controlling totalitarians they enjoy being, they need to punish everyone involved.”

Anna’s lips curled into a smile. “Stein is a stone-hearted bitch, but this is the kind of stuff she loves. Say what you will about her, she won’t leave a criminal unpunished. I’ll say she’ll likely be willing to go against the Chancellor if needed.”

“We’ll see,” Sierra said skeptically. “I don’t really trust ADVENT to do the right thing here.”

“You know, all of this is distracting us from the more important question,” Terli said suddenly. “If Uruguay didn’t attack those Peacekeeper outposts…who did?”

***

ADVENT Peacekeeper Compound, Brasília - Brazil

11/11/2016 – 11:02 A.M.

Jaylin didn’t have a specific clue as to what was going on at the moment. Upon reporting the attack, she’d been transported to the Brazilian capital and a few hours later transferred to the main
Peacekeeper Compound, which was far more impressive and expansive than the ones she’d been in for the past few months.

Something was clearly happening beyond the attack, as there were an abundance of armed Peacekeepers, Riot Control, and she’d even seen some of the SSR speaking with ranking officers. If the SSR was involved…well, maybe the Peacekeepers were going to take the threat seriously. They needed to at this stage.

She’d been provided food, clothes, and other amenities, even if she wasn’t allowed anywhere unsupervised. The initial medical check had likely been more to check if she was mentally sound… which she was as much as she could be. The whole event felt like a bad dream, but she knew it was very much real. They hadn’t told her the casualties, but she imagined it was bad. The armor cam would probably tell the story better than she could.

Right now she was just sitting in an interrogation room in a wooden chair, facing one-way glass, and her arms resting on the wooden table. The security camera looked down at her from the corner, and she just stared up at it, waiting for something to happen. Finally the door creaked open and Jaylin straightened up, then shot to her feet when she saw who it was.

“Chief Stein!” What was actually happening? “How can I help-“

“Take a seat, Officer,” Stein interrupted sternly, her grey eyes unblinking as she stared at Jaylin with the detached gaze that was curiously intimidating. Stein was surprisingly fully armored, rifle strapped to her back, and pistol and baton on her hip. The scarred gray armor was polished to dimly reflect the harsh light from the ceiling. She didn’t have her helmet, but Jaylin thought she would get that when she needed it.

Her face was completely expressionless, and while Jaylin didn’t know her well, she knew the more collected Stein was, the greater chance that something…important…was going to happen. Or brutal. No one had forgotten how she’d put down that riot. Jaylin complied and took a seat, nervous despite knowing she’d done nothing wrong. But Stein was a woman whose reputation and presence instilled at least some level of fear.

“You were one of the few to survive the attack on the Bagé Outpost,” Stein stated as she took a seat opposite Jaylin, resting her gauntleted hands on the table. “Explain what happened.”

Jaylin swallowed and gave a nod. “Yes. Around five in the evening, I was on watch and spotted several approaching figures. The terrorists we’ve been having trouble with. I informed the Base Watch, who questioned what I saw even though they sent reinforcements.”

“Why?”

“It wasn’t showing up on their cameras I guess,” Jaylin explained. “Then moments later we were suddenly surrounded by the terrorists who’d somehow gotten into the base. Things deteriorated after that, and the shooting started. That’s when things got…strange.”

“I’ve looked at the armor footage from the survivors, including yours,” Stein said. “The reality paints a much different picture. There were several terrorists, but not the dozens both you and others claimed. It also doesn’t account for the strange actions taken, such as hiding behind non-existent cover, or claiming to see things that are, or are not there.”

“I don’t know what to say,” Jaylin defended. “That is what I saw. I don’t know how else to explain it. I knew something was wrong, but I didn’t know what was going on. Base Watch was compromised or dead, so I found who I could and retreated. Whatever they were doing…it
Stein gave a single nod. “How familiar are you with psionics?”

Jaylin frowned. “Not especially, I know some things it can do. That alien in Japan was one, yes? Aren’t some XCOM soldier’s psions as well? Telekinetics, mind control and shields, right?”

Stein’s lips twitched in…amusement? “Yes…your story doesn’t make sense, but it correlates to other survivors, and fully fits the description of a psionic attack. These terrorists, they have never utilized psionics before?”

“No,” Jaylin shook her head. “Attacks have strictly been sabotage, assassination, and small-scale attacks. If they had psions, I would have expected them to use them before now.”

“I agree,” Stein laced her fingers together. “Which means these terrorists have somehow figured out how to awaken psions, or they are receiving alien support. Have you recovered or reported anything that indicates this?”

Jaylin shook her head once more. “No. But we have yet to capture one alive, or even recover intact gear. But they’ve never used plasma or laser weapons, nor special grenades. Their attire also doesn’t match alien clothing or armor. If they’re getting help from the aliens, it must be a recent development.”

“Troubling,” Stein looked her in the eyes. “Do you know if these terrorists are connected to any foreign power aside from the aliens?”

“If they are, we haven’t found any connection,” Jaylin confirmed. “We don’t even have names, structure, or actual specs on what they use, much less motivations or goals. Honestly, it’s more likely this is a privately funded group instead of one backed by a government. Quite possible a rogue intelligence or special forces agency.” Jaylin paused and risked continuing. “Frankly, Chief Stein, this is not something we are equipped to solve. This is something more for ADVENT Intelligence to investigate. All we can do is react and try to extrapolate from there. I’ve requested assistance before.”

“I’m aware,” Stein acknowledged. “However, there have been other matters we needed to focus on. However, this has now become a larger threat. You are certain it was only these terrorists who attacked, possibly with alien support?”

Jaylin frowned. “I don’t think we have enough information to say either way but…yes. At the very minimum it was the terrorists, and no one else. We don’t have enough to accuse anyone if that’s what you’re wondering.”

“A smart officer who doesn’t jump to conclusions,” Stein commented wryly. “Perhaps you should be in charge of Brazil. No matter. The situation has deteriorated since you arrived and we’ve attempted to sort out the mess. Your outpost was not the only one that was attacked. There were two others of equal size and along the border. All had survivors, and reported roughly the same thing you did.”

Jaylin didn’t know if the fact that she wasn’t losing her mind was a good or bad thing. “Not good,” she muttered. “What’s our response going to be? And for me-“

“Director Falka is beginning an operation to find and kill these terrorists,” Stein interrupted. “This will be done with Peacekeeper and SSR support, and as you are the highest ranking survivor, with experience on these terrorists, you will be working with them. It is likely XCOM is also going to be
involved, since this will likely have an alien component. I trust you are fine with this?"

It wasn’t as though she had a choice, but she was *definitely* fine with it. “Yes sir. My partner was also a survivor and has similar experience-“

“Yes, he can stay on with you,” Stein preemptively approved blandly. “However, there is more you need to know. After you reported the attack, and more information came in, Marshal Luana took it upon herself to invade Uruguay in retaliation, and took the government into custody and destroyed much of their military.”

Jaylin straightened further and blinked in shock. “What? Did they actually find out-“

“No.” Stein stated flatly, almost hissing. “Marshal Luana simply acted in her own interest and stupidity, and in doing so, has created a major international incident. We have pulled out since then, but Luana has overstepped her bounds for the last time. We’ve been more lenient than we should have, and in a short time we are going to arrest her and place the entirety of the Brazilian Legion Military Cabinet under the control of the Oversight Division. The Chancellor wants this fixed personally, and Luana will be arrested, tried, and executed for insubordination and treason.”

She stood. “Suit up, you’re going to participate in this operation. I anticipate we’re going to need some protection from the crowds and media.”

Jaylin stood numbly as Stein left the room without saying anything else, and moved to follow.

This day had certainly gotten a lot more interesting.

***

*Executive Tower, Montevideo - Uruguay*

11/11/2016 – 11:11 A.M.

Saudia believed that it would be prudent to speed up Gateway development, since it would certainly cut down on the hectic flights and trips when crises arose. After giving her brief update to the media, now she needed to meet with the Uruguayan government, who thankfully were all still alive, if a bit shaken.

She’d look at the reception to her speech once this was done, as she hadn’t had time to pay attention to the immediate response while she brought herself up to speed on the situation. Stein was getting ready to arrest Luana, and in the meantime, she’d personally try and smooth over diplomatic relations with Uruguay.

Kyong had assured her that he was perfectly capable of doing the same thing, but she had been able to convince him the optics would be much better if she directly participated herself. Her small entourage consisted of Kyong, Commander Christiaens, and the Chief Overseer Kevin Watkins. Saudia figured that since the Oversight Division was going to be getting their first major investigation, that it would be good to have him there to assure the President that this wouldn’t happen again.

The political response to the event had definitely been bad. Argentina and Chile had announced an alliance against ADVENT aggression, for all the good it would do them. The EU had universally condemned the attack, and for once public support was on their side. Even China felt bold enough to release a statement criticizing the standards that led to this, without necessarily condemning them.
The biggest problem was going to be the new SAS, who were almost certainly going to gain a few more nations into their little empire. Every time until now an operation of this scale and consequences had been justified, and it only took one mistake for people’s faith to be shaken, which was not what they needed, and was going to be a blow to morale especially in the light of the victory in America.

Not unless they fixed this fast.

The Executive Tower of Uruguay was rather plain as far as government buildings went, but was nonetheless the seat of executive power in the country, and where President Luis Carvallo had agreed to meet them. The older and gaunt man looked suitably exhausted, even as he had agreed to hold this conversation. He looked fine otherwise, and his wispy grey hair was perfectly in place, but she didn’t fail to notice his nervous glances to her personal guard that accompanied her, and had visibly been relieved when they’d left.

In an ordinary office building, Saudia and her entourage sat at a thick wooden table, and on the other side were the President and some members of the Uruguay General Assembly, who were eyeing them with a mixture of suspicion and fear, which was admittedly for good reason. Once the door closed and both groups were alone, she decided to speak.

“Mr. President, I said this over our call, but I will repeat it again to apologize for the incident,” she said, keeping her voice clear and controlled. “This should not have happened, and it will not again. I promised to determine those responsible and suitably punish them, in addition to reparations for our error.”

“I will add my own apology,” Commander Laura added earnestly. “This was caused by one of my subordinates, who we have been too lenient to, and some of the blame for this falls on me.”

“We cannot bring back your citizens and loved ones, nor replenish your numbers,” Kyong added. “But there are things we can do to help your nation rebuild and heal. That is what we are here to discuss. This was our error, and we expect nothing in return for this other than a wish for you to understand this was simply a mistake, and one we will fix.”

“Words are nothing,” the woman to the President’s right spat, who Saudia recalled as Isabella Nores, President of the Chamber of Representatives. “You say you will fix this. How?”

“No, I want to know what you will do to the ones who invaded our country,” Juan Gaos, President of the Senate Chambers interrupted. “The soldiers who came and slaughtered our people?”

“The soldiers were following orders,” Laura answered. “They had no reason to believe the orders they were receiving were illegitimate. Punishing them will achieve nothing, and they already feel guilty for their role in this. I’m sure that your military advisors would say the same thing—“

“Not all of us are warmongering imperialists,” Isabella sneered. “We don’t make a habit of invading countries, and our soldiers are trained not to follow illegitimate orders. Invasion is one of them. But I suppose it’s just something so familiar none of your soldiers question it!”

“We do it when justified, and we will not apologize for it,” Saudia cut off Laura before she could respond, lifting a hand. “This is a case where it was not. We won’t punish soldiers who followed their orders as expected. However, this was a failure through multiple chains of command, of those who did know better. That is what we can promise to fix.”

“Indeed,” Kevin continued, directing their attention to him. “You are likely not familiar with me, so to introduce myself, I am Chief Overseer Keith Watkins, of the ADVENT Oversight Division.
My job entails ensuring that our standards are kept, and issues within ADVENT are discovered, investigated, and resolved.”

“With all due respect, I believe you do not have a good track record here,” President Carvallo said. “This was a systematic failure. One you failed to prevent.”

“To an extent,” Keith said neutrally, knowing full well he had recommended to Saudia before that Luana was not exactly reliable and should be replaced, but at least he’d kept that to himself. “Marshal Luana had technically not violated guidelines before now, which was why she retained her control. I am already working with the Congress of Nations to introduce legislation to refine the qualifications for dismissal. But ultimately, all we can do is work to improve in the future.”

He laced his fingers together, taking a brief moment to gather his thoughts. Saudia watched with approval as the former FBI Director held their rapt attention. He certainly could command focus, which was certainly essential in his new position. “As you are already aware, Former Marshal Luana Russo will be arrested within hours by Chief Stein, and she will be tried and executed for insubordination and treason. My operation will consist of the thorough interrogation and investigation of the entirety of the Brazilian Legion Military Cabinet, and however far down this goes. Given the seriousness of the situation, I expect the investigation to conclude within one month, and all those who are arrested will be tried, convicted, and sentenced to somewhere between five years, or executed. It is impossible to fully tell this early in the investigation.”

All members of the Uruguayan party looked surprised at his words. “While I can’t prove that this will achieve the results I promise,” Keith continued. “I will do my best to prove that I fully intend to find and punish those who have smeared our image and Directive we uphold. If you wish, I will keep the Uruguayan Government updated in every step of our investigation. While we will punish Former Marshal Russo ourselves, we are willing to negotiate the extradition of anyone we uncover during this investigation.”

“That is…generous,” President Carvallo said slowly. “You make very bold promises. I hope you will follow through on them. Chief Overseer, we certainly do wish to be informed of the results of your investigation.”

“Certainly,” Keith inclined his head. “Simply direct me to your point of contact, and I will personally ensure they receive it. With that said, understand that what they and you will receive is confidential and is not to be shared outside of those it is designated to. We take breaches seriously, and any leaks will result in the loss of your access.”

“That is fair,” President Carvallo nodded slowly. “Now what of the families of those you killed?”

“That is largely dependent on you,” Kyong said earnestly. “At the moment, we are willing to pay each family who lost someone in our attack nine and a half million pesos. The exact amounts can of course be adjusted depending on family size and situation. In addition, we are also willing to pay off all debts and schooling for their children, should that be applicable.”

That definitely shocked them. “That is nearly half a million US dollars,” Isabella said in amazement. “How can you afford that?”

“We control a majority of the world economy, in addition to our own currency,” Saudia answered. “While it certainly isn’t a substitute for the loss of a loved one, we can at least ensure that their family no longer has to fear monetary troubles. Do not concern yourselves with our financial situation.”

In terms of monetary value, this was not nearly as much as they were thinking it was. The amount
of alloys ADVENT had recovered from the most recent battles had already paid for this ten times over. Not to mention their economy was nowhere near what would be considered healthy, making the investment not as large as it would be otherwise.

“In addition to the military damages sustained, we can of course assist in that as well,” Laura said. “We are willing to replace all physical assets with the highest quality weapons and armor of our own. We can’t replace your soldiers, but we can make the ones you have left equal to our own. Provide us with the equipment lost, and we will match it exactly.”

“This, of course, does come with a slight caveat,” Kyong said with a smile. “We don’t provide this easily, so we expect you to ensure that these weapons do not fall into foreign hands. What we provide you is for Uruguay – and only for Uruguay. We expect you to keep our technology out of foreign hands, or we will be forced to reevaluate any deal reached. Is this a fair compromise?”

The three Uruguayans exchanged glances, some in mild shock and amazement. Good, that meant they were likely not going to make the political situation worse. “It appears so,” Juan said with a slow nod. “Once we reestablish our military structure and appoint replacements…we can discuss details.”

“Excellent,” Laura nodded. “Finally, this is simply an offer should the future require it. The aliens are a clear and present threat, even if it is not so apparent here. Your own opinions are not important. With that said, if Uruguay is under the threat of a foreign or alien power, ADVENT will be willing to provide military assistance to your country. In light of what has happened, I would understand if you do not trust us, but nonetheless, the offer will remain open should you request it.”

“Chancellor,” President Carvallo said, leaning forward. “What do you want from us? You would not do all of this for no reason, and despite what your people did, this is what I can only describe as overcorrection. No one acts out of altruism or compassion.”

“The reason is simple, Mr. President,” Saudia said, also leaning forward. “We pride ourselves on professionalism and legality. We do not act outside the law. We do what is necessary, nothing more. Mistakes like this go against our vision for Humanity, and are insulting to everyone who wears the armor and bears the flag. If we are to sustain ourselves and unite our species, we must be held to a higher standard.”

She motioned to the table. “Change will not come unless forced. People like Luana are no longer acceptable in positions of power. Each and every one of them must be systemically purged and removed, and only the ones who can responsibly wield power should do so. I do not care about money. I do not care about repayment. A mistake was made, and we will need to fix it.”

Saudia made sure to look him in the eye. “If you really believe some repayment is due, acknowledge that we have fixed our mistake. Tell the world the truth, not what the media is turning it into. There is certainly a political element to our actions, but we did not need to respond in the first place. The minimum would have kept people quiet. But again, Mr. President, if we are to unite our species, we must hold to a higher standard, and that starts from within.”

“Well said, Chancellor,” Kevin agreed with an approving nod. “I am aware of the reputation organizations like mine have, where we’re simply only for show and the abuses of power go unchecked. But we are different, ADVENT is different. Now is the time we need to prove it to not just your country, but the world itself.”

President Carvallo nodded, and stood. “For now, Chancellor, you have convinced me with your words. I hope your actions follow suit soon, but for now it is enough. Your apology is accepted, and there is no doubt a population to address. I would ask that you join me in this.”
“Another speech before the media,” Saudia cracked a smile. “I would welcome the opportunity.”

Situation Room, the Praesidium - Classified

11/11/2016 – 2:16 P.M.

While the ADVENT invasion was certainly taking up the majority of global attention, the Commander was more and more convinced that the larger problem was the fact that three Peacekeeper Outposts had been destroyed, and the reports explaining what had happened indicated a very sudden and suspicious shift in how the war was going to be conducted.

“What do you think?” The Commander asked Aegis who stood with a tablet in his hand as he read the report the rest of them had. Patricia stood in the background, with Zhang beside her.

“Psionic attack likely,” Aegis mused. “Unlikely to be confirmed without a telepathic examination. But this is, if I had to label it, an attack by Nebulan. This is the kind of work she specializes in. Making beings see things that are, and are not there; spreading chaos and confusion; never showing herself. If she is involved, then that is bad.”

“Aside from the obvious, how is this worse?” Patricia asked. “At some point we knew it was likely either her or Macula were going to become involved.”

“Because that means the Battlemaster has changed his strategy,” Aegis explained. “He’s no longer relying on blunt force. These terrorists that ADVENT has been fighting in South America, they have likely been subverted by her. They will become more advanced, and therefore, more dangerous. She will be sure not to leave physical evidence, and worse, directly assist in combat.”

“The bigger concern is when they start targeting nations,” Zhang pointed out. “They can turn them against each other; keep us fighting each other instead of the Collective.”

“Unlikely,” the Commander shook his head. “ADVENT Intelligence is watching all governments closely. The moment they start getting the merest hint of alien corruption, the country will be annexed. Taking control of various terrorist groups and using them gives them plausible deniability, and ultimately makes them easier to operate in compared to countries controlled by ADVENT.”

“Indeed,” Aegis stated. “However, Nebulan prefers working in smaller groups. She doesn’t utilize mind control maliciously, which indicates to me that she is not dominating these Humans, and instead working with them. Perhaps they have been assimilated into the Phantom Division.”

“Which is?” Patricia asked, frowning.

“Nebulan’s personal army,” Aegis answered. “Many Ethereals have them, and I suspect by the end, Humanity will fight each one. I unfortunately know little of it, as she kept much of it secret, as with most Ethereals, but I suspect it is largely composed of former Zararch agents and other modified Vitakara. She does not like Andromedons or Sectoids, and considers Mutons crude.”

“Former Zararch?” Zhang arched an eyebrow. “Are you sure you don’t mean ‘transferred’?”

“That would be more accurate,” Aegis corrected. “The point is that Nebulan does not rely on mind control to maintain her subordinates’ loyalty, which raises questions as to how and why these Human terrorists are working with her. She would not hide herself from them.”
“Assuming this is her,” Patricia added. “Things like making entire buildings vanish and things just appear…Quisilia could likely do that.”

“Quisilia is more subtle,” Aegis dismissed. “If he wanted to attack, none would have survived.”

“Subtle,” Patricia muttered. “Even as he posts memes on Twitter.”

“Let’s assume we’re dealing with Nebulan here,” the Commander brought the conversation back on topic. “If she’s acting on her own, we need to start becoming involved. Once ADVENT sorts out this business with Uruguay, they will turn their attention to these terrorists. Zhang, I want you to prepare several agents for investigation.”

“That is not wise yet,” Aegis cautioned. “If you prepare agents, they will simply die. At minimum you need psions who can resist her illusions. It would be preferable if either cybernetic or genetic alterations were developed to negate her, otherwise you are throwing agents away.”

“Good point,” the Commander nodded. “Do you have any telepathic agents you can use?”

“Not here currently,” Zhang shook his head. “I don’t have many psionic agents to begin with. We need to make ADVENT aware what we’re dealing with here, otherwise they’ll face as much trouble as us.”

“The PRIEST Program is deploying now,” the Commander reminded him. “I’m sure they’ll be able to spare one or two telepaths to assist. And there is the Human element to deal with, which they don’t need psionics for.”

“I would not expect Nebulan to forget that,” Aegis warned. “The Phantom Division is extremely dangerous, and I do not know just what she has done to them. Psions they may not be, but any in the personal army of an Ethereal are far more dangerous than the standard alien.”

“I want to think you mentioned these personal Ethereal armies,” Patricia muttered. “But I somehow think that slipped your mind.”

“If it did, I did not intend it,” Aegis said, not sounding too apologetic. “If I didn’t mention it, it was likely because I really don’t know much about them, nor was it relevant.”

“Perhaps our new Andromedon allies could assist on this,” Zhang pondered, rubbing his chin. “I expect they have their own idea on how to counter psionics.”

“It is unlikely,” Aegis dismissed. “They are unlikely to stop something they cannot use themselves.”

“I’ll make that assessment for myself,” the Commander said dryly. “In the meantime, I should check in with Saudia and see how she’s resolved the Uruguayan situation.”

***

*Unknown Location – Argentina*

*11/11/2016 – 3:28 P.M.*

Volk was impressed at just how effective the aliens were at constructing entire bases out of practically nothing. He had realized early on that these were not the standard aliens he was dealing with. To begin with, every single UFO that had arrived had been visibly cloaked, and Asaru had assured him that she wasn’t using any telepathy, as that would be pointless.
He wasn’t sure he believed that, but it was minor at worst.

The UFOs ranged between large transports, and small troop carriers. They weren’t the standard UFOs either, the shiny circular ones. They were distinctive, and he suspected Ethereal. The transports reminded him of barges. Black rectangles that had nothing but space and a small bridge. The troop transports were also similarly shaped, but they were more angular, and didn’t…land.

They were more akin to dropships, flaps opened up on the underside and two dozen Vitakara at a time jumped down onto the ground. Volk wasn’t a xenobiologist, but he was fairly sure that dropping from twenty or more feet would cause broken legs, but none of the aliens had even so much as acknowledged the fall.

Considering XCOM soldiers could do unnatural stuff like that, he supposed it wasn’t surprising that the aliens could do that as well. As for the aliens themselves…they were strange. He wasn’t sure if there really was something off about them, or because he’d really not interacted with any before.

All of them were the one race of Vitakara; Vitakarians if he remembered. The ones that looked oddly like Humans. They were at various heights and body types, both male and female, but all of them seemed to boast a strength that was comparable to a small forklift. That they didn’t have machinery didn’t seem to deter them as they worked and handled alloy beams and sheets with almost no trouble.

The other odd thing was that their eyes were noticeably altered. He knew that Vitakarian eyes glowed blue for some reason. These glowed varying shades of purple, that only got darker as the sun set. None of them wore armor, only some kind of form-fitting grey jumpsuit that lacked any sort of identifying mark or insignia.

And he had stood there initially, not sure what to do until he saw some of the Vitakarians working on laying out a room, following a holographic projector. He could definitely follow directions, so he’d instructed his people to help the aliens. If they were going to be working with them, they might as well get to know them some.

Luckily the aliens could speak English, and figuring out that his strength was inferior to their own, let him do most of the precision work with tools that he could only describe as flash-welders and a cement gun. It had taken a few hours, but they’d completed the room, roof and all, and were now taking a short break, and he decided to see just how it would turn out.

It was flat, and was definitely going to take up the majority of the clearing. All one story, and frankly boring and uninspired for the most part, which he didn’t care about. Practicality was king as far as he was concerned. But the skeleton was complete, and all it lacked now were internal systems. Or at least he thought so, he had no idea what they were planning for this.

“Impressive, isn’t it,” a deep voice interjected, and Volk turned to see quite possibly the largest Vitakarian he’d ever encountered.

Large didn’t quite do it justice either. The Vitakarian towered over him, standing a minimum of eight feet, and with the obvious strength of a bodybuilder on steroids. He wore the grey jumpsuit the rest of the aliens wore, and his skin was a dark grey, approaching a shade of black. The most noticeable feature was his face, or more specifically, his eyes which were not even a blue or purple, but a blazing and intense red.

His smile was quite off-putting as a result.
Volk eyed him warily. “You build fast.”

“If pressed, we can,” he agreed. “I am Zar’joreal’mattis, I believe we spoke before when you contacted us.”

Ah, now Volk recognized the voice. Although the hologram had failed to convey some obvious physical features. “Joreal then, right?” Volk asked. “If I remember, you use the middle name.”

“Exactly,” Joreal confirmed, still with the smile. “A pleasure to meet you, Asaru wouldn’t work with you if she wasn’t confident in your skills.” He extended a hand, which Volk took after some brief initial surprise. His own hand was dwarfed in the much larger alien one.

“I suppose you would know more than I do,” Volk said. “No offense intended to her, but I’m innately skeptical of those who literally promise the world.”

“Which is fair,” Joreal acknowledged. “But I can affirm everything she said to you. She does not lie to her allies and friends.”

“Awfully quick to just accept us,” Volk noted. “I don’t disapprove, but I’d have expected some measure of alien superiority. Your friend in Japan for example.”

Joreal laughed. “Caelior is, to borrow some of your words, a little arrogant bitch. No one with any kind of authority gives him serious consideration. He is powerful, but his power is simply a tool those smarter than him use. If we were actual alien supremacists, it would make our Collective a little difficult to form, wouldn’t you say?”

A friendly alien, something of a surprise. “Interesting. Although for a supposedly friendly collective, your diplomatic skills are apparently…” he raised an eyebrow. “Lacking. Making an enemy of an entire species speaks to some mismanagement at best.”

The alien gave him a thin smile. “I believe Asaru has given…reasons…for that mistake. But don’t think that all aliens are quite like Caelior. You probably wouldn’t want ADVENT for example, to punish entire countries for the actions of a few, to put this into perspective.”

“So how much do you actually know?” Volk asked curiously. “What do you even know of our reasons for fighting ADVENT?”

“More than you probably think,” Joreal answered. “I prefer to do my own research before coming, which incidentally, was a somewhat condensed version of your species history. Your kind really are fascinating, even compared to others in the Collective.” He smiled. “However, for your original question, you despise authoritarian governments, of which ADVENT is one. But more than that, you hate the abuse of power, which is why you don’t just fight ADVENT. An admirable goal.”

“Glad you understand that,” Volk said with a nod. “Although I’m surprised you find us more interesting than the other aliens, if I understood correctly.”

“You would not be if you knew the history of the others,” Joreal said dismissively. “Andromedons have nothing in their history but war, which honestly gets old after the first three millennia, and Sectoid history is so dry aside from one or two fascinating events. Even our own history is mundane, and only becomes interesting once we unified.” He glanced up contemplatively. “Although, that of the Oyariah and Sar’Manda is an exception. And some parts of the early Borelians.”

“What of the Ethereals?” Volk asked.
“I’m afraid Asaru has yet to divulge the secrets of the old Ethereal Empire,” Joreal admitted. “It is unlikely she will for some time.”

Well, even that was interesting. So the Ethereals had an Empire, which implied that they didn’t any longer. Which in turn implied that something had destroyed it. Or perhaps they had destroyed themselves?

An interesting revelation nonetheless. “So is this your first time on Earth?”

“No,” he answered knowingly. “I’ve spent some time on this planet, largely to acquaint myself with how Humans…” he motioned with a hand. “Work for lack of a better word. It was more complicated than I anticipated, and in ADVENT controlled territory I had to be especially careful.”

“I’m very curious how you managed that,” Volk commented. “You do stand out, ignoring the glowing red eyes.”

“Oh, I don’t use this form,” he chuckled. “Far too obvious, even if I relied on holoprojection. No, this is simply the one I prefer. When I was on Earth I was much smaller. And looked more Human. And I can assure you I was a far more convincing one than that fool Zararch agent you killed.” He wrinkled his nose. “How the details of the American Revolution are unknown to them is pathetic. The Zararch needs to reevaluate their standards, and not send junior agents to important assignments on this planet.”

“I see you’ve acquainted yourself, Joreal,” the voice of Asaru said, and Volk turned to see a Vitakarian woman walk up, no longer the Human model he’d seen. “Good. You two will be working together, so I expect excellent results.”

Joreal bowed his head. “Of course, Asaru. Once the base is established, we will begin our operations, with your assistance, should you offer it.”

“I assume your Elena has reported my contributions,” Asaru turned to him. “Already our attacks have forced an international incident which ADVENT is rushing to fix.”

“Argentina will be thrilled,” Volk sighed. “I would have preferred we didn’t provoke an invasion, but at least this will get Luana out of power. A shame. I wanted to kill her myself.”

“I have been following that development,” Joreal added. “Assuming ADVENT is intent on ‘fixing’ this mistake, it will lessen their efficiency for some time if the Oversight Division is working through the Brazilian Legions. This gives us time to…prepare.”

“We shouldn’t be worrying about ADVENT right now,” Volk interjected, directly to Asaru. “Useful as you were in the battles, you aren’t exactly subtle. It will take ADVENT about two seconds to figure out that was a psionic attack, and another two to determine it was likely alien. We’re not going to be getting the SSR, Lancers, and whatever else they have, but also XCOM. This is not going to be as easy as you think.”

“Easy,” the figure of Asaru hooked an arm around Joreal’s massive one. “ADVENT and XCOM are not experienced in fighting a telepath, regardless of any assistance they have. This will likely be a challenge, though not one that has a chance of victory.” She smiled wider. “Let us first see the vaulted effectiveness before becoming concerned about it.”

Volk gave a lopsided smile. “That is not a bad idea, though I have a rule not to underestimate opponents. Especially ones that control a good portion of the world.”

“For now,” Asaru said. “We will see how true that holds in the coming months.”
Stein was fully intending to make a statement.

Jaylin was joined by nearly one hundred other Riot Control Officers, most of whom were stationed in formation around the place where the active President of Brazil worked, a building which had some unique architecture, like the massive solid overlay of the building itself, a more traditional small skyscraper with glass windows underneath, if a bit wider than normal.

The media of nearly every major and local outlet was almost salivating as they watched more and more Peacekeepers arriving, their TV anchors speaking frantically to the cameras about ‘developments’ and occasionally showing the ever-growing crowd of people showing up. Luana’s rise to power had not been popular, and even the rumor that ADVENT was going to remove her was enough to get entire crowds, who admittedly stayed a healthy distance from the Riot Control line, knowing that they wouldn’t hesitate to put down disobedience.

Within the perimeter of Riot Control Officers was where the true operation was being prepared. There were fifty SSR soldiers, in their imposing black armor that made her own feel inadequate. It was complete overkill, but again, Stein was making a statement. In addition to her own personal guard of Riot Control Officers, of which Jaylin shared the honor with three others, there was team of a half-dozen Molosser Handlers, with the largest dogs Jaylin had seen.

She’d known about them, of course, but hadn’t known the Peacekeepers were using them, let alone actually seen one. The size she had underestimated considerably. The grey-furred hounds could probably take down a Muton, and they were supposedly modified to be immune to projectiles…she was keeping one eye on them, because just one look at their fangs made her nervous.

Still, the way they rolled over for their handlers who rubbed their bellies and gave treats was cute.

If that wasn’t enough, Stein had also brought in another hundred State Officers, which she likely intended to use to secure the various floors, which Jaylin personally felt was overkill again, but she was not the one in charge. Jaylin also suspected that this wasn’t only to make a point, Stein just really didn’t like Luana, which wasn’t necessarily surprising.

“March.” Stein commanded, taking her place at the front of the Peacekeeper formation, and Jaylin by her side, began walking forward. Their riot shields were up, and Jaylin had the baton in her hand, set to lethal mode. Stein had been very clear about their purpose. Either the ADVENT guards inside would submit to their authority, or they would die. As far as she was concerned, failure to follow the commands of the Chief Peacekeeper herself was grounds for direct treason.

Jaylin didn’t entirely disagree, although capture might be a more preferable goal.

She certainly wasn’t afraid of dying, since they were flanked by the SSR, who had their rifles raised. Stein reached the glass door, and stood outside it. She pressed a button on her gauntlet, and began speaking, her message being transmitted to all nearby ADVENT equipment. Everyone in the building would hear it.

“This is Chief Peacekeeper Stein,” she began, voice flat and emotionless. “All ADVENT Personnel within this building are ordered to stand down and assist us in the arrest of Former Marshal Luana Russo. Failure to comply is grounds for treason and all attempts to hinder our
operation will result in immediate execution. To former Marshal Russo, turn yourself in immediately and prepare for your arrest. This is your only warning.”

She cut the open channel, and moved to the door. “Move in.” Stein opened the unlocked door and they entered the first floor, where there were several dozen ADVENT soldiers who were standing alone, their weapons and sidearms on the ground or holstered, and some of them with their hands in the air. Good, none of them were stupid.

“Chief Stein,” one of the Officers approached as the State Officers began securing the rest of the first floor. The SSR, stayed directly behind Stein. “We are willing to provide whatever assistance needed. The Marshal is on the third floor, last I heard. The Presidential Office.”

“ Appreciated, Officer,” Stein stated, inclining her head. “However, everyone in this building is now subject to the Oversight Division. Exit the building and they will take you into custody. If you have done nothing wrong, there is little to worry about.” Not sparing another glance, she pointed to the stairs. “Move up and we will secure the former Marshal.”

“Yes, Chief!” They all shouted, and began the march up the stairs. All things considered, Jaylin thought it was going rather well so far. In very little time they were on the third floor, in an open lobby area that had the white tiled floor that was so common in this building, and the fairly high-end furniture.

The Presidential office was not far forward, and along the way there were cases of various pieces of art. The ADVENT soldiers on the floor were similarly disarmed and submissive to the Peacekeepers, and Stein ignored them this time as the SSR gave them instructions. There were four ADVENT soldiers outside the doors to the Presidential office, all with their weapons pointed at the door.

“ Former Marshal Luana and her staff have not left the room,” one of the soldiers said as they approached, lowering their weapons and stepping aside for Stein. “We have ensured they cannot exit, though we do not know if they are prepared to fight or not, nor the status of their arsenal.”

“Good work,” Stein acknowledged. “Report to the SSR outside. Your actions will not be ignored here. We will handle it now.” She gave a brief salute, which the soldiers returned quickly before filing away.

“Are we marching in?” Jaylin asked as Stein stood in front of the double doors for a few seconds.

“Let me see,” Stein tested the door handle. “Locked,” she reported with almost grim amusement. “Break it down and execute any who open fire.”

“Yes, Chief Stein,” the heavily synthesized, almost mechanical voice of the SSR soldier stated, as four of them stepped forward, some kind of charges in their hands which they attached at the corners of the doorframe, and over the handles themselves. “Stand back,” the one SSR soldier warned as she pulled out a detonator. “Prepare for hostile fire.”

The door imploded inward with some startled shouts from the inside. The dust had yet to clear before the SSR soldiers charged in two at a time, subduing the first targets they found, shouting “Target suppressed!” for each unarmed officer they pinned to the ground. Once there were twelve SSR soldiers inside, none of whom had fired a shot, Stein and her Riot Control guard followed suit.

The Presidential office was very open and bright, with white tiles and a nice office desk by the windows. The majority of Luana’s staff were sitting on couches or standing, looking rather
worried, as they should be. “Take them into custody and take them to Oversight,” Stein ordered, as she focused on the cause. Luana stood in front of the window, fully armored and helmetless, her back still to them.

Four additional SSR soldiers followed Stein, their weapons drawn and aimed at Luana, even as she made no effort to act against them. But the SSR didn’t take chances. “You could have knocked,” Luana said, an undercurrent of amusement in her voice. “I rather liked this office.”

“You should have come down and turned yourself in,” Stein retorted, stepping forward. “You have no one to blame for this situation but yourself, traitor.”

“Traitor?” Luana turned around, looking more weary than anything. “Call me insubordinate if you wish, but a traitor I am not. Nor will I apologize for my actions.”

“You invaded a country,” Stein said flatly. “Not only that, under fabricated pretenses. You betrayed our Directive, and ignored the chain of command. You are a traitor to ADVENT.”

“No.” Luana growled. “I was simply taking initiative. Ultimately, does it matter what the reasons are for bringing these pointless nations under us? That is our goal, is it not? ADVENT will control this world, and we have nothing to gain by tolerating these independent states.”

“Incorrect,” Stein answered. “We will unite Humanity, but it will not be solely by force. We are better than imperialists, nor are we warmongers as you are. We act if it is justified, no more, no less. If that means the independent states survive, so be it. Should we abuse our might, we are no better than the Nazis, Soviet Union, or any other tyrannical power in our history.” Jaylin imagined her lips curling up in disdain. “There is no place for people like you in the new world. Submit yourself for arrest.”

“And you are willing to weaken us in the eyes of the world, just to appease one minute country?” Luana sneered. “I’ve watched your pathetic response. You’ve bent over backwards and shown weakness to the world. We were feared for good reason, and now ADVENT plays politics like the UN.”

The woman was delusional, and Jaylin wanted to give her a good whack on the head with her baton. She saw some of the other soldiers similarly tense at the utter crap she was spewing. “That,” Stein practically hissed. “Is because of you. Unlike you, ADVENT will admit and fix our mistakes. If that weakens us, than so be it. But I will not ask again. Submit yourself for arrest.”

“So you can parade me before the media, yes?” Luana mocked, crossing her arms. “If you intend to try me for treason, the sentence is usually death. Why shouldn’t I just force you to kill me now?”

“Because if you really desired death, you would have killed yourself already,” Stein stated, stepping forward. “You will not force me to act because I will simply kill you, and you do not want to die. Not yet. No, you want me to make you a martyr, as if that would happen.” She raised a finger. “You are not worth the effort. You are nothing but a criminal, and you will be tried, convicted, and executed as the piece of filth you are.”

Handcuffs ready, Stein stepped forward, and Luana pulled out the baton she had at her waist, set it to lethal mode and, spikes angled and primed, gave a swing towards Stein, who responded with a deflection with her own baton. Luana had clearly not practiced much, and it showed as Stein disarmed her by hooking the spikes in her own and twisting it out of her hand.

The SSR fired in unison, and she fell to the ground in pain, bleeding from the knees. At the same time Stein trapped the arm that had held the baton and placed her pistol to the elbow and fired,
blasting the joint apart and eliciting another scream. She looked down at the legs and fired two more shots, permanently destroying the kneecaps and turning the traitor into a sobbing wreck.

Stein ignored her screams of pain and proceeded to handcuff the arms, regardless of injury, and grabbed the woman by the back of her collar and hoisted her off the ground. “I don’t think she can walk, sir,” one of the SSR politely noted. “We’ll have to carry her.”

“No,” Stein disagreed. “She will be dragged like this. Let the world see what happens to traitors, and let her be a warning to others in ADVENT who believe themselves above the Law.” With that Stein began walking away, the former Marshal firmly in her grip, leaving trails of blood in her wake as she was dragged across the pristine floor.

Jaylin shook her head and followed, not exactly knowing if she should take pleasure from the woman’s screams of pain from each bump as Stein dragged her down the stairs. But she couldn’t find it in herself to feel sympathy from her.

The woman had broken the law, and now she would be punished for it.

***

ADVENT Busan Command Base, Busan - South Korea

11/13/2016 – 12:07 P.M.

“[I think things are getting better,]” Duri told Sandara. “[If we can push them back in America, then it bodes well. You should see some of the defenses here.]”

“[I’ve been seeing the same thing here.]” his wife agreed. “[The towers. Outside the city they’re making trenches, always with lines of volunteers. We help out wherever we can.]”

Duri smiled, glad that Sandara wasn’t quite as nervous as she had been. He was even happier to hear her and the girls helping. “[They definitely appreciate that. I assume you’re staying in Seoul for the time?]”

She glanced off the camera. “[For now…I don’t like the idea of going north, and we’re not in any immediate danger. There are evacuation protocols in place if we need it. If we’re in danger, we’ll leave. Right now they’re keeping all of us – civilians – in the center of the city. Everything is regulated and managed. It’s well done, and the girls still have classes, but it’s different.]”

Duri nodded. While he’d initially thought they’d be safer in the North, that was when he’d been more concerned about how ADVENT could hold on. In their recent discussions, they’d talked about it more rationally, and with ADVENT lessening the urgency for evacuation, they’d mutually decided that it might be best to stay put for the time.

It was also unlikely that as long as they were in potential war zones, that they would keep civilians on base housing. They needed it for soldiers, and it exposed them to unnecessary danger. He knew she would be treated perfectly fine. “[The girls are settling in then? They sounded fine to me.]”

“[Yes, thankfully.]” Sandara cracked a smile. “[They think you’ll be a hero after seeing the American soldiers raise the flag over Las Vegas. They’re a bit more hopeful, which is a relief. They’ve made some more friends too, and I’ve started to socialize a bit more. It feels better knowing I’m not the first to…well, adjust to this.]”

“[I’m glad to hear it,]” he said sincerely. “[Time you broke your anti-social habits.]”
She sniffed. “[Says the man who’d barely talked to a girl before me.]”

Ouch. “[Point taken.]” he said dryly, hearing a beep. “[I’ll talk to you again soon. Love you.]”

“[I love you too,]” she answered. “[See you later.]”

He stood and exited the room, letting someone else use it. The on-base activity was unabated, since they were, at some point, likely to be attacked. But if the aliens had wanted to have an easy victory, that time had long since passed. ADVENT was very entrenched now. The entire beachline was a massive trench, dotted with Flak Towers and barricades. The islands by Busan were fortified barracks with dedicated divisions, also dotted with lines of defenses and Flak Towers.

That was to say nothing of actually marching into the city itself, which was a mixture of trapped streets, barricades, fortified buildings, and other traps ADVENT had been laying and creating non-stop since they had been marked as potential targets. It was difficult to fortify the entire city, of course, but ADVENT was doing their best, and if given enough time…well, they might do it.

In short, the aliens were going to need a miracle or an Ethereal to get through it.

So right now, he just felt like watching the Engineers transport massive weapons through the base, overlook schematics for more defenses, or toy with their SHIVs. He tried to temper her confidence, but the recent victory in America had given him what might be considered unreasonable hope. There was still that alien that threw around carriers like toys, but then again, he’d wondered if the Battlemaster could be beaten, and he had been.

Not killed, but it was a start.

“Good chat?” Beatriz asked, walking up, not in armor, but her sniper rifle slung over her shoulder.

“Always is,” he answered. “Mostly recovered now?”

“Yes sir,” she rolled her shoulders. Beatriz had officially recovered a few days ago, and was now getting back to her full strength and speed. “Wonders of ADVENT medicine. I would have been out for much longer without…whatever they did.”

“Hopefully you’ll have a bit longer to recover before we’re attacked,” he said, leaning against the concrete wall of the barracks.

“You think we will be?” She asked. “They seem to be having problems in America. Maybe they’ll want to focus there?”

“Maybe,” Duri shrugged. “But I somehow think that if they wanted to have more than one focus, they could. Korea is the next logical step in that…and they wouldn’t ignore here.”

“Right,” Beatriz’s face grew a bit grimmer. “So. I need to apologize. I handled what happened in the battle…badly.”

Well, it appeared they were going to have that talk then. Truthfully he’d half-forgotten it, half put it off since there were other things to focus on. But her bringing it up unprompted was good. He turned to her, noting that she definitely seemed somewhat self-conscious. “You didn’t lose it completely. Which I suppose is a good thing.”

She swallowed. “Yes. Mostly because you yelled at me. I don’t handle death well, especially with people I know.”
Duri appraised the smaller Hispanic woman. “I don’t think any of us want to get accustomed to it. With that said, you can’t let it affect you as badly as it did.” He raised a hand as she opened her mouth. “You don’t need to tell me if it’s personal, that’s not my business. But it is your responsibility to get it sorted out. If you think you need to work some things out, that’s what the counselors are for.” He gave a lopsided grin. “I’d like to not rely on me yelling at you. I don’t like it.”

“Yes sir,” she nodded, apparently almost expecting worse. “You won’t have to worry about it again.”

“All I need to hear,” he agreed. “Hopefully we won’t be in that position again.”

“Being chased a horde of aliens and a psionic necromancer?” She said sarcastically. “I hope not.”

“I don’t think those were people,” Duri chuckled. “But it could be worse. We could have had to listen to him speak and give more praises to the glorious Creator.”

“Don’t forget that he’s the Creator’s Greatest Champion™,” Beatriz snickered. “As terrifying as it was, in retrospect some of it is funny. He sounded like he read all the lines that are supposed to be intimidating, but really aren’t.”

“To be fair, I think he relies more on his psionics to add the intimidation,” Duri acknowledged. “I wonder if the aliens get sick of it too.”

“I wonder,” she mused, looking back to the busy ADVENT base. “You think they have anything we do? Cities? Families?”

Duri shrugged. “I don’t know. Not really something we need to worry about. We just know how to kill them.”

“True, true,” Beatriz agreed with some hesitation. “But I am a bit curious. Hard not to be. There has to be something…more…than just fighting for them.”

“There probably is,” Duri agreed, her words also now making him wonder. “But if there is anything else, I somehow don’t think they’re going to share it with us.”

***

Abuja – Nigeria
11/13/2017 – 6:28 P.M.

“Did we do the right thing?”

Mox at least looked more sure of himself than she felt, leaned up on her desk, arms crossed and contemplating. She’d been doing that a lot recently. This had seemed like a good idea at first, but the more she saw the SAS take shape, the more she wondered if she’d unintentionally made everything much worse, not just for the people, but the countries as well.

“We didn’t really have a choice,” Mox stated. “It was either this or just go on the run. We’re at least making a difference here.”

“Is that really a good thing?” Betos asked wearily. “You know they’re seriously considering citizenship tiers. A fucking caste system, with their chosen master castes. Do you really think that’s a good difference?”
“I doubt they’ll do that,” Mox dismissed. “Just talk from Kone. They don’t want to make you angry, and they have to know something like that would.”

“Taking that out of the equation, are things actually better?” Betos asked. “Whatever promises they make about compensation, they’re still gathering up people and forcing them to work. They’re arresting people who question them. How is that,” she swept a hand around. “Any better than ADVENT?”

That at least got Mox to frown some. “And before you ask, I could certainly do something,” Betos continued. “However, I don’t trust these men, at least not the smart ones. They would betray me if they saw the opportunity, and me sabotaging their great plans might very well get me killed.” She sighed, rubbing her forehead. “And on the other hand, doing nothing is just as bad. Even if we all left, they have the schematics and have a unified government for perhaps the first time. The SAS isn’t going away.”

“The way I see it,” Mox said slowly. “We didn’t have any good options. We stay and make sure ADVENT stays in power, or we take a chance and try and make things better. Maybe it’s not turning out exactly how we hoped, but we can at least try and make it better. We couldn’t do that in ADVENT.”

“True,” she sighed, getting back up and walking around to her desk. “Well, they gave me authority over the military doctrine, so I at least have that. I better get to work.”

“I’ll let you be,” Mox said, standing. “We’re all still behind you, and we’re getting the armies into an actually decent fighting force. So not all is bad. Let me know if you need any help.”

“Will do,” Betos said, opening her laptop back up, beginning to focus on the screen as Mox left and shut the door behind him. It took close to an hour, but the more she worked the better she felt. At least this part of the SAS would be bearable, and if it clashed with whatever the hell Kone and Okon were planning, then that was just too bad.

One crisis at a time, she told herself. She could only try and fix one thing at a time, and-

A knock interrupted her. She frowned. “Yes?” She called.

“Package,” another voice answered. “For Betos.”

She had guards, so she doubted anyone would be let through if they weren’t legitimate. Still, she kept one hand on her pistol as she walked to the door. Outside the man didn’t even look like a soldier, but just a random Nigerian citizen. In his hands wasn’t a package, but some kind of silver circular device.

“Betos,” he said. “This is for you. Please press the button underneath if you wish to acquire another ally.” She took it gingerly, looking down at it.

“Who—” she began, looking up and the man had suddenly vanished. She blinked, looking up and down the hallway, knowing he couldn’t have just gone so quickly. She looked down at the device in her hand. It was unlikely to be dangerous, as there were so many better ways to assassinate her than strange… devices.

She pressed the button on the bottom, and almost dropped it as a blue light appeared on the top, and soon formed into the figure of an alien.

Not just an alien. One of the leaders. Ethereals they were called. “Greetings, Helsa Betos,” the Ethereal began, Betos unable to make out his face underneath the hood that covered his face. “I am
The problem, Betos was realizing, was that she had no idea what to really do here. The aliens were the enemies of ADVENT, but since they were also enemies of ADVENT, it didn’t really mean that much. They were portrayed as monsters, but it was also ADVENT who was saying that, so they couldn’t be trusted to be fully objective.

Which resulted in her being woefully uninformed, especially in regards to the leaders. She hadn’t fought against them, so she couldn’t even recall that for information. All she could do was improvise, and right now that seemed prudent. “I suppose that was one of your people?” She asked.

“A mere pawn, no one important,” the alien stated. “He completed his mission, and is happily with his family. I prefer not to work through such, but I felt it would be…inconsiderate…to approach in person. I am aware our appearance and deviation from Humans is…unsettling.”

“You wouldn’t go to this trouble for no reason,” Betos decided to get to the point. “What do you want?”

“I have been following your actions for some time,” the alien continued. “I am impressed you defected from ADVENT, and even more so that you have managed to get these shortsighted fools to unite. I do not believe you understand the implausibility of that. Nonetheless, my reason is simple: I would first like to meet with you, and discuss the possibility of an alliance of our own.”

“With the SAS?” Betos asked. “I don’t make decisions like that.”

The alien gave what sounded like a fake chuckle. “The so-called Sovereign African States, foolish old men drunk on power. They will indeed have a part to play, but I have little interest in tolerating their type. I will discuss working with you, for you have earned some measure of respect. You are concerned with more than just the power and glory; you have vision, you have plans. You are the kind of leader the Humans will need, not the ones you have allied yourself with.”

Betos found it oddly ironic that an alien was saying this, and wasn’t quite sure how to feel about that. It sounded like a compliment, but what did that really mean to an alien? Could she even apply Human logic to them? “I see,” she said slowly. “Flattering, assuming you mean anything you say. I’m afraid I don’t know much about you, other than ADVENT Propaganda.”

“Which as we are both aware, does distort the truth,” the alien gestured with a gloved hand. “I will not deny we have killed many Humans. Many more will die before this war ends; that is simply the nature of such. But it would be a mistake to ignore the cost to our own. As a Human, I expect you will have your reservations, but I suspect you are intelligent enough to move past that as this is the cost of war. I do not enjoy wasting time, Betos, do you wish to converse or not?”

“Fine,” Betos said. It couldn’t hurt, and she was curious what would happen. It couldn’t be worse than accidentally possibly creating an African ADVENT. “When and where? And who are you?”

“Your office is fine,” he said. “Do not worry about watching for me, I will arrive within the next couple of days. And you may call me Macula.”

“Macula,” Betos tested. “In that case…I look forward to it.”

“As do I, Betos,” the alien – Macula – answered. “I believe we have much to discuss.”

The hologram clicked off, and Betos was left alone again.

This definitely changed things, and she could only imagine what the aliens would be interested in.
This would be a very good thing, or it could be yet another mistake. But she’d made quite a few already.

What was one more?
Abby did not particularly like where the Chronicler lived. Element-wise, it was actually perfectly comfortable, and there was no shortage of food and drink, but there was a smothering, unsettling feeling that permeated the entire place. The feeling was one that she would swear meant someone was reading her mind, but she’d never felt that either from Patricia or the Chronicler.

And while Patricia had her own ethics, and Abby trusted her, she wasn’t naïve enough to think the Chronicler wasn’t constantly monitoring her. However, as far as altering her thoughts? She hadn’t noticed any evidence of that.

Then again, would she if it happened?

She shook her head. That was a rabbit trail that was pointless to dwell on right now, especially when things were likely going to become much more interesting in the next couple of days, assuming the Chronicler was actually going through with his initially outlandish plan to attack Sydney.

But he ‘needed time’ to get things in place, apparently. Now though, it seemed like he wanted to bring everyone up to speed, which was about time, since aside from sending XCOM a short affirmative signal telling them she was alive, she’d refrained from actually contacting them both because the Chronicler requested it, and she couldn’t really do it without it being likely suspicious.

She still had no idea how she was going to explain this, short of telling the truth.

In the meantime, she and Harper had spent the time fully recovering, and getting the rest of them in more or less stable conditions. While Harper was naturally suspicious of the strange gel the Chronicler had, in addition to traditional medicines, it was by far the most effective. Abby didn’t know how it worked, but it healed whatever it was placed on in a matter of days.

Christopher Williams, Roy Weaver, Derrick Ellison, and Norma Anderson were the sole survivors of the largest Australian Resistance cell, and while all of them were devastated by it, they were also wanting to exact vengeance on the aliens themselves. Harper had initially said that the goal was to leave since there wasn’t any more they could do, before the Chronicler had interrupted and said that if they wanted vengeance, they would have it.

There was an assurance in his voice that made Abby believe him, and judging by the rapt attention he’d received, they felt the same. She didn’t know if that was his telepathy, or just them wanting something to latch on to. She understood how they felt to an extent; leaving now would mean they’d essentially accomplished nothing. It would be an uncontested defeat.

Something all of them despised.

So now it was time to see what the Chronicler had to show them. Abby walked into the cool stone hallway, wanting to go to the central command center she and Harper had stumbled upon the first time. She also thought she’d figured out how this place worked. It seemed like all she needed to do was think of where she wanted to go, and it would lead to that room. It didn’t make any sense, but
her attempts of mapping the place out had led to her going in circles, reaching dead ends, and initially freaking her out.

Since the Chronicler was annoyingly vague about it, that was probably the best she was going to get, and with how weird everything else was here, a constantly shifting cave system was probably not too special.

The rest of them, minus the Chronicler himself, were already on the platform above the clear water, with some more consoles and a holotable of some sort being in the center. That hadn’t been there before. All of them wore their former resistance gear, which the Chronicler had one of the machines repair for them, so it was as good as new.

“No sign of him?” Christopher grunted as she walked up, and Abby really wished he’d just cut the rest of his beard off, because right now it was a black patchy mess.

“Not yet,” she answered, looking down at the holotable and seeing it was definitely different than usual. “Knowing him, he’ll likely make some dramatic entrance.”

“Whenever he gets here, we need to figure out the issue with ADVENT and XCOM,” Harper said, crossing his arms and giving her a brief nod of acknowledgement. He now wore a black patch over his missing eye, to her relief. “I’m not keeping this a secret, and if he wants to go through attacking Sydney, he won’t be able to either. And either way, they’re going to hear about a strange Human psion from the aliens at some point.”

“Well, I can’t keep putting it off,” Abby sighed. “This is a mess.”

“One he could have helped us avoid,” Norma said under her breath, the lighting making her dark skin even more shadowy. “Selfish bastard.”

“Not really,” Abby admitted. “He’s been helping, he was just not obvious about it.”

“Either way, nothing can be done about it now,” Harper interjected. “All that’s left is what happens next.”

“Exactly,” the Chronicler said smoothly, stepping out of thin air before them.

Abby sighed.

“Glad you joined us,” Christopher said sarcastically. “Busy?”

“Mocking as your tone is, yes,” the Chronicler said without missing a beat, as he pressed some buttons on the strange holotable. “But that’s settled, and now it’s time to let you all know what is happening.”

The holotable came to life, but it wasn’t holograms that were displayed. Instead, almost microscopic bars rose up from the table and formed into shapes with tangible density. No, not bars, little nanites it appeared to be, since bars couldn’t make some of the 3D shapes. They were a dark grey, and formed into the city of Sydney, complete with buildings and everything. It was actually impressive how accurate it was.

“This is the target, which all of you are familiar with,” the Chronicler said, pointing to the display. “So I won’t repeat it, save that it is the main command center of the alien operations in Australia. Destroying it would not only get their attention, but slow any hope of expanding beyond the Oceanic Theatre, which for ADVENT means Korea, and maybe China.”
“Wonderful,” Norma said, eyeing him skeptically. “Thank you for your insightful commentary. It’s not like we figured that out months ago.”

Abby almost smirked. But really, she had a point. The Chronicler like usual didn’t take offense. “Appreciated, Miss Anderson, but I am going somewhere with this.” He motioned back to the display, which created small recreations of an Andromedon, Muton, and Vitakara, all at separate points.

“Each of these represents one of my forces,” he continued. “I’ve been working on upgrading them since our last operation, Agent Gertrude, which will be necessary since I only have several thousand, and Sydney,” he nodded again. “Has roughly ten thousand, not including Gateway support, much less any surprise visits from the aliens, or Ethereals.”

“When you say ‘upgraded’,,” Roy interjected, eyeing the Chronicler intently. “That means…”

“I’m glad you asked,” the Chronicler smiled and motioned to one of the cases that was resting against the wall. It floated over to them, and still hovering, the Chronicler opened it and inside were perhaps the most…alien…weapons she’d ever seen. At first it looked like some kind of rifle, with an odd stonish exterior, that was until she saw that the stone was pulsing.

The Chronicler reached in and all of them flinched as thousands of little silvery wire-like things sprouted from the stony flesh of the weapon, and embedded themselves in the Chronicler’s hand, which he didn’t even acknowledge. “This is a particle weapon, relatively low-tech, but I don’t want to make things too difficult for my first attack.” He noticed all of them staring and raised an eyebrow. “No, it doesn’t hurt. It’s perfectly harmless, but once you use this, you won’t want to go back to regular unconnected weapons.”

“You say that…” Roy said cautiously.

The Chronicler sighed, then suddenly tossed the weapon in Abby’s direction and purely on instinct she reached up and grabbed it, and the countless little wires were now drilling into her hand. She yelped, but immediately realized that the Chronicler hadn’t lied. She really couldn’t feel anything. Abby looked down at the hand grasping the barrel, feeling the little things go deeper into her arm, but it just felt odd, not painful or even unpleasant.

She properly grasped the handle, once again feeling the wires go into her wrist, fingers, and arm, and cautiously let go of the barrel with the other and instantly the wires retracted, like they were never connected at all. “The hell?” She muttered, looking at the arm and not seeing any trace of the punctures.

“Go on, test it out,” the Chronicler encouraged with a smile. “You won’t hurt anything, although I’d prefer you not hit the consoles.”

“Or any of us,” Christopher added.

Abby nodded, turning away and looking down at the rifle which was morphing the stock, and eventually solidified into what seemed to be a stock perfectly adjusted for her. Testing it out, she lifted it up, her other hand grasping the barrel like normal, and the wires entered her once more. Yep, perfectly tuned to her. Even the handle was reforming and allowing her a tighter grip. She aimed at the wall ahead, and fired.

A crystal blue beam shot out with a sound like a continuous high-pitched energy discharge. The beam slammed into the wall and a section practically exploded, then she unconsciously stopped firing. The beam ceased, and the aftermath was a section of the stone wall that was just…
vaporized. There was an impression at least an inch thick, in a perfect circle with a two foot diameter.

She was about to compliment the weapon’s power, when she realized she hadn’t actually pulled a trigger. Abby looked down to confirm, and sure enough, there wasn’t anything. Was she firing by pure thought? Was that possible? To test it again, she raised the fire and gave the mental fire command. The beam shot out, and impacted another section of the wall.

“Where did you get these?” Harper asked incredulously as she walked back.

“Nowhere you’d know,” the Chronicler dismissed. “And no, you won’t be able to just make these. They are…fickle. If the wrong person picks one up…well….boom.”

Abby raised an eyebrow. “Sentient rifles?”

The Chronicler chuckled. “Not exactly. But this is how I’m augmenting my army. You saw my armor, Agent Gertrude. It functions in a similar way. But now I have a proposition for each of you, Agent Gertrude excluded.”

“Go ahead,” Harper said after a few seconds.

“It’s rather simple, actually,” he said, clasping his hands in front of him. “I have an army. But I would prefer to have some Human support. Leaders. Generals if you wish. Regardless of if we win in Sydney, the war will be far from over. Australia will be a battleground until the war on Earth is over, so I would humbly extend an offer to join my efforts in making the Collective uncomfortable here.”

The former Resistance fighters exchanged a look. “Flattering,” Norma said slowly. “The thing is, we’re just Humans, and to be honest, we’re not much of a help. Even if we have those,” she gestured at the weapon Abby held. “That’s not going to help us, especially if we’ve got Ethereals coming to kill us. And we’re not psions.”

“I know,” the Chronicler assured her. “Which is why you’ll have to be enhanced as well.” He pointed to some black cylinders on the side of the room Abby hadn’t noticed until now. They were some kind of metal, and there was a console with glowing lights close to it, but otherwise it didn’t appear special.

“The procedure is painless, I promise,” he told them as they moved to get a closer look. “When it is finished, you will not be Human, not entirely anymore. But you will be better, faster, and stronger. While I cannot promise immortality, you will come close. Very close.” He looked to Harper. “In addition, it will repair any previous injuries.”

“This sounds way too good to be true,” Christopher said slowly. “What’s the catch?”

“The catch?” The Chronicler looked upwards thoughtfully. “You will simply have to fight the same battle I have been.”

Abby got the feeling he wasn’t talking about the current war with the Collective.

“I don’t need an answer now,” the Chronicler said, moving back to the particle table. “But before the battle would be preferable. I don’t intend to launch it for several more days. Agent Gertrude, please come here.” She stepped to him as he was punching buttons on the device.

“I assume that offer didn’t include me?” She asked, as Harper moved away to talk with his soldiers.
“I doubt you want to be tied to events here, though I won’t turn down your help if you really want to provide it,” he said without looking at her. “Truthfully, I believe you will be useful elsewhere. Do not worry, I won’t send you away without anything. I have some gear specifically for you as well, but this is my war now. Subterfuge isn’t as important. Now, I need you when I speak to the Commander.”

She blinked. “You’re going to-“

“Yes,” he sighed, looking up. “Unfortunately, my time in hiding must come to an end. I, of course, could simply force you and the others to refuse to give details, but due to recent events, that would be a pointless waste of time. Better XCOM is aware of the situation completely, instead of accidentally disrupting my work.”

The grey particles suddenly formed into the shape of the Commander, which was an odd sight since his features were almost perfectly completed down to his hair, but he could be mistaken for a statue if he wasn’t moving. “Who is-“ He blinked. “Agent Gertrude. We’ve been concerned,” he saw the Chronicler. “Who are you?”

“That is why we’re talking, Commander,” the Chronicler said, inclining his head. “We’ve met before, I believe. I was with Saudia when you came to the Bastion, although you didn’t speak much with me.”

“Ah, right,” the Commander nodded. “I remember you. You had a title, Chronicler. A pleasure to see you, I suppose, but what are you doing with my agent?”

“A long story,” Abby said, briefly summarizing what had happened with the Resistance coming under attack. Then she got to the part where the Chronicler had come and fought off the alien, with his psionics.

The Commander’s gaze immediately focused on the Chronicler. “I see. So they have more of those aliens. And you are a psion. Interesting. Saudia forgot to share this information with me.”

The Chronicler smiled. “She didn’t know. I never told anyone.”

“Why?”

“Call it a code,” he said. “There wasn’t a need to, and my job was simply to gather information, and ensure that the Director of EXALT never came to harm. She has plenty of protection now, and we have a war to win, do we not?”

He paused. “Apologies for keeping Agent Gertrude from informing you of the truth of the situation, but I did need to take some precautions. However, we’re both professionals, so if you want, I will get to the point.”

Nice of the Chronicler to cover for her, even if it would likely make the Commander angry. But all he did was simply state, “Go ahead.”

“I will be taking over the war in Australia,” he stated without any ambiguity. “I suspect I will have at least a few of what remains of the Australian Resistance join me, and I have dominated a respectable number of aliens. I can wage a war, in addition to any other unexpected surprises.”

“Your war will last until an Ethereal arrives,” the Commander warned flatly. “As much as Saudia will want to kill you when she finds out who you are, I would also assume she would prefer you alive until then. Psion or not, you can’t fight an Ethereal on your own.”
He smiled. “Perhaps. But I’ll take my chances. I don’t answer to you, Commander. I’m not asking for your permission, I’m just making you aware that Australia will be a warzone, which I will handle until XCOM and ADVENT push the aliens back everywhere else. Then I will of course, cede the conflict to you.”

“How generous,” the Commander said dryly. “Unfortunately I’m not in a position to really interfere either way. I assume you also contacted me for a reason beyond this?”

“Aside from suggesting that Agent Gertrude be recalled,” he said. “This type of warfare is not for her, and while I would like her to see me fight in Sydney, she would be more useful elsewhere. However, I will not return her empty-handed. And if you wish, I can inform you of the plan of attack.”

The Commander thought for a moment, then gave a nod. “Fine. First tell me your plan.”

---

Desolan, War Camp 402

11/15/2016

Nartha decided he definitely had enough evidence at this point. Being Zararch gave him access to quite a bit of equipment, much of it for surveillance purposes, and after placing a monitoring nanodrone on Merina, he now had access to both her location and high-quality audio, and he’d had a small video drone follow her around, always making sure to be hidden. Andromedons made excellent micro-drones, and the Zararch had plenty incorporated into shells that looked like insects.

This posed something of a potential issue, since there weren’t really any insects on Desolan, but as long as it stayed away, that was all that was needed. The days of monitoring had paid off quite handsomely, as Merina was definitely altering records, and then taking the unlisted Muton children and leaving them at dead drops, which were soon picked up by another hooded figure.

He had spent some time debating actually bugging the boxes, or even the area, since he didn’t want to spook her, or anyone else for that matter. However, he also doubted that they had the means to detect nanotrackers, and he had installed one in it just in case. That being said, now was probably the time to do something about it. He’d spent some more time speaking to her, and she definitely viewed him in a positive light, and in time, might possibly bring him on board her little trafficking operation, but he simply didn’t have that kind of time.

So he’d invited her to his temporary quarters, which he’d ensured were scrubbed of any listening devices of visible and nano variety. It was to ‘discuss improvements’ as he’d lied, but in truth he was going to get some answers out of her. The door buzzer beeped, and he unlocked it, and Merina stepped in, baring her teeth in greeting as she saw him. “Nartha.”

He didn’t return the smile. “Merina. Please take a seat.” He gestured to the chair on the opposite end of the table he was at, a bare thing, and there wasn’t anything on the table itself except for his holoprojector. While she moved forward, he locked the door behind him, and activated his white noise device just as a precaution.

“Already down to business,” she said, not appearing to notice his much colder demeanor. “Did you speak to the Sargon?”

“Merina, I am going to get to the point,” Nartha said tiredly, straightening. “I’ve spent enough time
She froze, blinking at him in astonishment before his words registered. Her mouth opened and closed several times. “I…I don’t know—“

He pressed a button and activated the holoprojector that showed in perfect detail her leaving the container containing the Muton child at the dead drop. “Really?” He said dryly. “Or should I play the last one?” He didn’t have it, and had been rather lucky to get this, but she didn’t need to know it was a bluff. “Or perhaps I could pull up the records you altered, to make it appear like there were only fifty-seven babies when in reality there were fifty-nine?”

He gave a humorless smile. “Your operation is clever, but this happening on such a large scale? We were going to notice eventually.”

She was a much paler shade of green now, staring at him in terror. He turned off the holodisplay. “You are very, very lucky that you weren’t discovered by another Zararch agent, otherwise you would be before one of the Sectoid Interrogators. However, we both share similar goals.”

That seemed to shake her out of her paralysis. “What?”

“I am a Zararch agent,” he told her simply. “But one who has…issues with the Collective. There is a lot happening you do not know about. Our species has been taken advantage of by the Elders, and the time has come to change that. I’ve been working to locate and unify the resistant elements within the Vitakara and Ethereal Collective as a whole.” He nodded towards her. “I received this assignment personally from the Zar’Chon. My instructions were to find the cause of the abductions, and stop them. I intend to unite them with the Nulorian, and deliver a suitable target to satisfy the Zar’Chon.”

He paused for a few seconds. “So I need to know the details of your operation.”

Merina visibly swallowed. “What…what do you plan to do?”

Nartha cocked his head. “I don’t know without understanding how you operate. How many mature Mutons do you have?”

“I don’t know,” she said, shaking her head. “They keep details like that secret. But thousands at least.”

A start, and they would have likely not been subjected to the brutal training, which was bad in that they might not be as effective, but good in that they quite possibly may be smarter or more competent. “Your people have a substantial army of untouched Mutons to use against the Collective, that’s what I plan. In addition, you will be put in contact with the Nulorian, who can likely make your operation run smoother without bringing the Zararch down on you again.”

“You don’t understand,” Merina suddenly interjected. “We took them away because we didn’t want them to go to war! We didn’t do it for…” She gestured wildly. “Your grand plan of rebellion!”

He’d wondered about this. Yet it seemed a pointless goal, so he hadn’t devoted much time to it. What was the point of abducting Mutons over a period of years if you weren’t going to use them? It wasn’t as though they were smart enough to be useful otherwise. “I see,” he said slowly. “Then why go to all the trouble for no future use?”

“You really are a Zararch agent,” she hissed in frustration. “Not everything is a resource or tool. Much as you like to pretend otherwise, these soldiers you think are mindless are not. They only are
because that’s what we make them. From the moment they are born, these children are tortured. They know nothing except violence, and that’s repeated until they die or pass the tests! They are aliens, but they don’t deserve this. Not without a choice, which we take from them.”

“The Muton program is ineffective and needs to change,” Nartha agreed. “And that was at the creation of the Elders. Direct your anger at them, not me.”

“And why not?” She demanded. “You want to use them as an army!”

He nodded. “When the time comes.”

She stared at him. “And how does that make you any better?”

He didn’t exactly want to get into a debate on how much the individual Muton was worth, but he thankfully didn’t have to argue that point since he had plenty of other ones. “Because I will be using them to free our species from the Elders. I will use them to establish our independence and rebuild our species into what it should have been. This is bigger than you, Merina, what I am working towards will affect not just my species, but every other one in the Collective.”

He pressed a button on his holoprojector, and brought up an image of Earth. “I don’t know how familiar you are with this planet, but a species was discovered here. Humans they are called, and right now they are fighting the Collective. They may even win. But this is perhaps the only chance to make change happen.”

He looked up at her. “You are accomplishing nothing now. You have no tangible goal. What you are doing now is ultimately meaningless if you are actually telling the truth. You will always be raising Muton children and watching them die. Perhaps you’ll ‘save’ several, but nothing will actually change. I could have ended your operation now, and everything you were working towards would die. Do you know what the Collective would do to those Mutons you saved?”

She flinched, and he nodded. “They would kill them,” he confirmed. “Likely not a quick death either. Maybe throw them to the Berserkers. Maybe turn them over to be experimented. Perhaps using them as target practice for the others who would like nothing more than to kill their traitorous brethren. And you? If you’re lucky they would kill you right there. What is more likely is you’ll be sent to the Sectoids.”

“I get your point,” she muttered.

“I don’t think you do,” Nartha said bluntly. “The only way this changes is for the Collective to fall. You will not survive forever. The only future where you achieve what you really want is helping me take it down. You have two choices here. Take me to your contact, or refuse, and I arrest you and bring this operation down.”

She looked at him, almost sadly. “You would destroy everything just because you can?”

“No,” he answered. “Because I don’t have time to waste. If I cannot establish contact with your group, I have no reason not to prove to the Zar’Chon that I am still loyal to the Collective. While it is disappointing, you are not the only opportunity I have.”

She was silent for a few moments, thinking. “I will give you my contact,” she said. “But I don’t know if he’ll agree.”

“Let him know what I want,” he advised her. “I don’t want any surprises. I want to speak with the leadership, no one lower. Make it happen or I will bring this down.”
Now this was a risk. If whoever was running this was smart, they would have contingencies beyond one or two operatives being discovered. Logically, one compromised operative should not bring down the entire thing, it was a calculated risk on his part. If his theory was correct, all the Mutons were probably in one centralized location, and the goal was not to raise an army, but just to allow them to…exist.

They were in this for the moral reasons, not the logical, and he could use that. If things went bad, he would simply arrest both of them and turn them in. The contact would at least give a starting point. There was also the possibility that he wouldn’t show up, but that was where the message that he was a Zararch agent came in.

At the very minimum, it would tell the leader that the Zararch were investigating this and their days were numbered. Then there was the ultimate backup, which was the bugged crate, and he had all that data saved and ready to be turned over. But he felt he could hold that information back for now.

Alternatively, he could always go to the location he’d discovered, but that might get him killed, and definitely not make a good impression on them. Although, practically blackmailing the operatives might not either, but his choices were limited. He sincerely wished they’d had a smarter goal in mind when they’d started this, so this would be less…contentious.

“I’ll let you know tomorrow,” she said without any enthusiasm as she stood up.

He simply nodded, not worried about her fleeing. She still had the nanotracker on her. She would lead him to the center of this operation, one way or another.

Undisclosed Location – Argentina

11/16/2016 – 2:17 P.M.

Today was certainly going to be interesting. Volk once more sat across from the same suits as before, and neither of them looked especially happy. Personally, Volk felt they should be conducting these meetings in different locations, but once more he’d ensured the area was secure, and now his own forces were augmented by Asaru’s aliens.

It was almost symbolic in a way, now that he thought about it. The rotting and decaying building they were in adequately represented what he felt was a deteriorating relationship with the Argentinean government, although perhaps he was just anticipating the worst.

At least Elena was still standing behind him, one hand on his shoulder.

“Volikov,” the first suit said slowly, and very deliberately. “What exactly happened in your attack?”

“I had my people attack three Peacekeeper Outposts bordering Uruguay,” Volk answered. “If I recall, that’s what you wanted. I didn’t quite expect ADVENT to respond like that, but I unfortunately can’t predict the future.”

“Yes…” the suit continued. “You did what we wanted. With that said, perhaps it went a little too well. ADVENT managed to turn this into a PR victory, Uruguay is out of our hands, and is little more than an ADVENT puppet now, since they’ve been trapped using their technology…on the condition that they can’t share it with anyone.”
Volk rested his hands on the table. “That,” he said. “Is not my problem. You didn’t specify what you wanted, so I did what I thought was needed.”

“The question is how,” the second suit finally spoke, almost glaring at him. “You are a professional. Your record speaks for itself. One Outpost destroyed makes sense, but three? How did you do it?”

Well, best to get it out in the open. “I received a message from an alien representative some time ago,” he said, leaning back. “I met, and decided to form an alliance with them.”

They must not have been expecting him to just admit it, since they visibly became nervous, while looking at him incredulously. “What were you thinking?” The first suit demanded. “Do you want ADVENT to annex us? You put the entire country at risk and didn’t even ask us if that was a good idea?”

“I’m thinking long-term,” Volk explained calmly. “And I didn’t contact you, because it wasn’t relevant. I work for you; I don’t answer to you. The aliens didn’t want to talk to you, they wanted to talk to me.” He shrugged. “And I was curious what they had to say.”

“For such a smart man, I can’t believe you did this,” the second suit growled. “Do you know how much danger we’re in now? We’ve been funding an alien-backed terrorist group. What do you think ADVENT is going to do if they find out?”

“To be fair, this is your own fault,” Volk pointed out. “You could have kept using me, and stayed ignorant, but you asked. I’m well aware that ADVENT would annex Argentina over this, but this ultimately comes down to what you want the future of your country to be.”

Volk leaned forward, his tone turning as serious as he’d ever been. “Let’s be perfectly honest with each other. There are only two sides that matter. ADVENT, and the aliens. If you think that independent countries are going to exist at the end of this, you are sadly naïve. ADVENT is just looking for an excuse to annex you. One day they will find it. And if you think the aliens will let you maintain independence…” he chuckled and shook his head.

“No,” he looked back up. “At some point, you need to decide which side you will be on. I’ve chosen my side for now, and now you have the same choice.”

“And why are the aliens better?” The second suit demanded. “Because they told you?”

Volk smiled. “Better? That’s a relative word. But they’ve certainly been more amenable to me than ADVENT ever has. There is no such thing as a good government, the aliens will always perform their horrific experiments, and ADVENT will do the same. I’d bet you guys also have some black projects you wouldn’t ever share with me. That’s how the world works.”

Volk exchanged glances with each of them. “With that said, I’ve managed to get some concessions out of them. No civilian targets, human leadership should they win, advanced weapons and tech. I’d say that they might be more humane than ADVENT at the end.”

“How can you possibly think they’ll keep their word?” The first suit asked. “What stops them from just betraying you when it’s convenient?”

Volk smiled mirthfully. “Absolutely nothing. But I could say the same about you. What stops you from betraying me once you no longer need me? A calculated risk. Because I’ve figured out that the aliens need us. They don’t want to conquer us, and deal with Human terrorists for hundreds of years. They need Humanity on their side, and to achieve that, it means they’ll support the ones that
He pulled out a dull silver pistol he’d started carrying around. “This is what they’ve armed us with. Plasma weapons and more. The aliens you’ve been seeing are not the true power of the alien army. More importantly, I think they’ll keep their word because they have no reason to go through this if it were otherwise. The first time I met their leader, I was talking to an illusion the aliens created with their telepathy. There was, and still is, nothing stopping them from manipulating my mind. If that was their end goal, then why go through all this trouble?” He smiled. “It’s not likely I could stop it.”

“And this is your way of asking Argentina to support the aliens?” The first suit asked. “You understand what you are asking?”

“If you want to keep Argentina out of ADVENT, then yes,” Volk said. “If you want, I can put you in contact with the alien I’ve been coordinating with. But that is up to you.” Volk leaned back again, causing the chair to creak. “I’ve made my decision. I don’t need your funding anymore. Keep me on for jobs if you want, but I’m not stopping my fight until ADVENT is beaten.”

The two suits exchanged a glance. “May we take this?” the first one asked, motioning to the plasma pistol.

Volk motioned Elena to go get the black case he’d propped up against the wall when they’d arrived. “No, this is mine. But I’ll give you something better. Consider it a gift from the aliens.”

Elena set it on the ground, and opened the case, which displayed one of the sleek alien plasma rifles, one of the railgun-like rifles, a plasma pistol, with accompanying power cells, and a recharger for good measure. “Test them out whenever you like,” Volk said as the suits stood and appraised the weapons with obvious desire. “But be careful. If ADVENT catches you with these, I don’t think they will give you time to dispose of them.”

He stood, and began walking to the exit. “I’ll be waiting for your next contact, or if you want to discuss an alliance with the aliens. Think it over, and think about what you really want for the future.”

The Praesidium, Situation Room – Classified Locations

11/15/2016

“The Chronicler,” the Commander said to Zhang. “And there isn’t any more information on him?”

The stony face of Zhang frowned, and shook his head. “No. Unsurprising if he’s a psion.”

“Wonderful.”

The Commander didn’t claim to be omniscient, but it was rare that he was caught off guard. Learning that not only had Abby, and the entire Australian Resistance, likely been compromised since the beginning, but also that it was at the hand of a completely unknown Human psion certainly qualified. If it had been an Ethereal, he could have at least understood that, but a Human?

That raised a lot of questions. If Saudia had genuinely not known one of her advisors was a psion, then who had actually been in control of EXALT during that time? No one had ever noticed any obvious tampering, but the idea that a telepath just stayed with EXALT for years and done nothing was ludicrous.
And now he wanted to single-handedly fight in Australia? No, there was something else going on here beyond a psion appearing out of nowhere. He was clearly experienced with his abilities, at least according to what Abby had added. He’d have to have Geist or Patricia examine her when she got back to ensure there wasn’t any permanent tampering, but given his age, and that he was likely a telepath before the invasion, he was probably more skilled than both of them.

What confused him was that not only was he strictly maintaining independence, but that he’d waited until now to actually make himself known.

Why?

“When did you first start investigating Earth?” The Commander asked Aegis, who’d been standing silently as they’d discussed the issue.

“The first discovery was twenty years ago,” Aegis answered. “However, no actual action was taken until roughly two years ago, when the first abductions began. The first scouting missions should not have contained equipment to enable psionic awakening.”

The Commander pursed his lips. “So assuming that the Chronicler has been a psion for longer than the war, how was he awakened?”

“There are only two possibilities,” Aegis said. “The most obvious is a catalyst; awakening through a psionic object or device. It is perhaps possible he was involved in a high-stress situation that awakened his abilities…but in that case, I suspect there would be more psions.”

The Commander walked around the dark holotable, powered off, thinking. “Having someone like that loose is dangerous. At the very least we need to interrogate him to ensure he isn’t a threat. He’s possibly been using EXALT the entire time, or worse has been influencing other powerful people for longer. I don’t trust him.”

“Aside from a coordinated operation, I don’t know what we can do,” Zhang cautioned, crossing his arms. “He’s not hostile…for now…and until that changes, I don’t think we can justify spending time solving this mystery. Whenever he attacks Sydney, that will give Abby something to report. But I only think keeping an eye on him is recommended. No more than that.”

“At minimum,” the Commander scowled. “But this implies that there are potentially other aliens that have been here before the Collective. Aegis, how sure are you that these intra-galactic species aren’t exploring on their own?”

“Because if they were, we would have detected them,” Aegis said immediately, the silver helm looking down at him. “It is possible, of course, that they sent probes that crashed on your planet, but the issue is that none of the species are psionic.” His voice turned contemplative. “With that said, this is a puzzle I wish to solve. If you wish, I can go examine him and determine the answer to this, since I doubt he will give his secrets willingly.”

“Maybe once things calm down,” the Commander picked up a tablet resting on the corner of the holotable. “ADVENT is getting ready to fully take back America, the Collective will likely launch another attack soon, and maybe the Chronicler will get himself killed and solve this problem completely. Zhang has a good point. Until we have a good reason to devote time to him, we just make sure he’s staying out of trouble and focusing on more important things.”

“Speaking of which,” Zhang interjected. “The PRIEST Division has officially been established. Right now they only have military and training branches utilized, but they have three more they will begin using upon completion of the Manchurian Project.”
“We should focus on getting that done,” the Commander nodded. “That incident with the Imperator was a wakeup call. We can’t have our psions going rogue or turning into double agents. Anti-psionics should be prioritized.”

“You may wish to update Vahlen on that,” Aegis said. “However, I would encourage her not to be…overzealous in her efforts. One certain project she is working on is…disquieting.”

The Commander and Zhang exchanged an ironic look. Knowing Vahlen, that could mean a number of different things. She hadn’t had ‘benign’ projects for some time, or at least none a normal person would consider such. “You’ll have to be more specific,” the Commander said, raising an eyebrow.

“The one with the…” Aegis paused, as if recalling. “Octopus. The unnatural multi-limbed creature.”

First jellyfish, now octopi. The Commander wasn’t sure what project that was, but given how Aegis didn’t seem to like anti-psionics research in general, he was taking it with a grain of salt. She was probably looking at it for its regenerative aspects or something similar; he couldn’t see the immediate connection to psionics.

Regardless, he certainly wasn’t going to restrain her just because she made Aegis uncomfortable.

Who would have thought one, though admittedly brilliant, Human woman would be able to get such a reaction from a being who could shield entire planets and dominate minds with his psionic abilities?

He would have to tell her that later, she’d find it funny.

“The PRIEST Division will likely be our greatest weapon for a long time,” Zhang said thoughtfully. “Smart that ADVENT wants to deploy it, and press our advantage before the next alien attack.”

“It’ll come down to the plan,” the Commander said, although he nodded. “But I expect that it will be suitably comprehensive. Commander Christiaens is good at that, at least.”

“Indeed,” Zhang looked up at Aegis with an amused smirk. “I suppose you’ll refrain from participating as well.”

“There is little need,” Aegis stated immediately. “I will repeat again that when the time is right, I will help. But not before then.”

The Commander sincerely hoped that wouldn’t be tested for some time, but he felt that with each advance ADVENT made, that day was coming faster and faster.

The Hall of Steel, Blacksite 05 – Unknown

11/16/2016 - ?

The Battlemaster wondered at times if Fectorian was overly paranoid. Approaching his Blacksite in the Cultro, he was always first struck by just how large the space station really was. A Gateway would have been preferable, but Fectorian didn’t have any connected to the network due to security concerns, although the Battlemaster doubted that he couldn’t have found some way to protect himself.
The station didn’t look like a secretive Blacksite, but something close to a shipyard. It was segmented into clear levels, with a central square pillar and square blocks for each of the floors, all the size of a small city. On the third level there was an extension that was a full shipyard, which could be adjusted to create anything from small fighters to capital ships.

Fectorian was almost a military power unto himself, and no one had any idea. The entire solar system was augmented and trapped by his fleet and drones. Each planet was in the process of being mined for resources with his extensive automated forces, which was likely why he’d chosen a barren system to begin with.

Further small sections extended from various floors, but otherwise weren’t nearly as eye-catching as the shipyards, but what also soon became apparent were the extensive arrays of defenses on the station itself. Plasma, beam, magnetic, and since the Battlemaster genuinely didn’t recognize some of the weapons, he assumed Fectorian was actually incorporating Sovereign tech into his designs.

Good. More Ethereals needed to start doing that.

Behind the station was the first project he had undertaken upon the completion of the Hall of Steel: The Star Harvester, a vast collections of complicated rings, automated drones, and other small structures around the star of the system, which continuously harvested energy from it. As a result, Fectorian ended up with more energy than he knew what to do with, and stored his stockpile on one of the planets, and gave as much as was needed whenever the Collective asked.

As the project had only been completed recently, the Battlemaster had discussed developing these in other controlled systems, but now he didn’t expect that to happen until the Human matter was dealt with. The Human Solar System might be a good place for one, since it would take an extensive amount of energy to fully modernize it.

“Battlemaster, please approach Hangar level 2. Fectorian is expecting you.” The automated voice cut out, and the Battlemaster directed his ship towards the appropriate level. He knew the Blacksite was run by a machine intelligence Fectorian had developed, and would have expected by now it would figure out that he knew the way.

And that he’d just been here several days ago.

A few minutes later, he finally landed the ship and stepped outside into the Hangar. Fectorian was almost as much of a showman as Quisilia sometimes, since there was no reason to have entire rows of his soldiers in every Hangar. All were organized according to species and race. They were always the lowest version possible, since Fectorian saved his actual masterpieces for his private use, and rarely showed them to anyone.

In general, the augmented rows of Vitakara, Mutons, and Sectoids weren’t ultimately much different than normal. Ever since the creation of the Star Harvester, Fectorian had taken that as his emblem and all of his soldiers had the outline of the rings around a sphere on their shoulders, or on other pieces of cybernetics.

Most had exclusively cybernetic limbs, with some having one or two original ones. Eyes were usually replaced with mechanical alternates, and each soldier had an implant that covered the entire spine and ended at the base of the brain, further enhancing their abilities. The soldiers stood as still as statues as he exited, except for one…Human…who approached him.

This was new.

It was a female, and for one, didn’t look augmented in any way. Long black hair, porcelain skin
and a face Human males would likely describe as ‘attractive’. She was clothed in the armored harness Fectorian’s workers wore, a mixture of black sleeves, gloves, silver armor plates, and grey harnesses which held a collection of tools and equipment. “Battlemaster,” she greeted emotionlessly, but giving him a smile. “Follow me.”

Even her voice didn’t have the artificial tinge the rest of his army had. Curious. He knew Fectorian was experimenting on Humans, but not to such an extent. The modifications were likely internal then. Fectorian didn’t like making replicas, so he doubted that this was a purely automated machine that just looked like a Human.

They reached the end of the room, and the woman pressed a button which opened the door and they stepped inside a steel box. On the inside, the woman then entered some information into the panel, and the door shut. Fectorian had designed the station so that as little time was wasted as possible, which meant that the station was partitioned into hundreds of separate sections, all of which could be reached by a magnetic rail system, which combined with an internal Gateway system to allow anyone to reach any part of the station in seconds.

So it was not even half a minute later when the box transport stopped, opened the door and they were in Fectorian’s personal lab. Or one of them, at least. He had at least twelve, which he used for different kinds of experiments and fields. This was clearly one devoted to alien autopsy and scanning, as there were stacks of aliens in stasis, in various states of health. All of them were faced with life-ending injuries, and had been sent to him as a result.

Some would become part of his army, others would simply die, and he would recycle them. The room was exceptionally clean, as metallic drones scrubbed the steel floor continuously, and turned whatever materials and waste they picked up into more resources. There were several complex scanning machines on the left side of the room, and on the right were medical machines with suites of nanomachines and medical drones which would generally ensure that the subjects didn’t die before Fectorian got to them.

In the center was Fectorian’s main suite of cybernetic enhancement tools. There was a main table for holding the being in place, with multiple drones for lighting, delicate tasks, and providing more tools. Monitors and consoles were to the sides, displaying vitals and additional medical information. And Fectorian was there himself, though for once not working on some Vitakara or Muton.

It appeared that he wasn’t in his full armored suit this time, and had his ‘engineer’ suit on. Fectorian seemed to never decide what to wear when they met. As he was extensively modified, with his two lower arms being cybernetic replacements, as were both of his legs, and even his unmodified arms had ports to plug enlarged cybernetic limbs into them. He wore no cloth or soft material of any kind, but different types of metal plating that always changed in complexity.

The back of the armor had an attachment that acted as yet another set of small spindly limbs which could angle in front of his body, and could be used for pinpoint manipulation, holding trays of small tools, or laser cutting. The eyes were mechanical with a purple shining iris, and the helmet was simply an extension of his armor, covering his mouth and head, while leaving the eyes exposed, though there were panels built in that shut if he was in substantial danger.

Still, he only stood close to nine feet. His other suit did allow him to stand as tall as the Battlemaster himself, but it was mainly for combat, or so Fectorian said.

“Good, you came at the right time,” Fectorian greeted, his voice lacking the layered vocals of other Ethereals, and having a metallic tinge instead. “How do you like her?”
The Battlemaster looked at the Human who walked a few feet past him, and turned around. “I don’t know what you did,” he said, not entirely interested. “She was efficient.”

“Hm, you didn’t notice anything?” Fectorian asked, walking over to him, appraising the woman. “Excellent. That was the point. I’ll consider this a success.” He pressed a button on his wrist and the woman started changing. Her skin dissolved before him, the hair receded and even the clothes melted away as if on fire.

What remained was a metallic humanoid figure with dark grey metal limbs, with noticeable grooves and lines on them. Only the teeth actually remained white. Fectorian walked over to her and pressed several buttons which made the machine’s jaw drop open on its hinge, and the upper skull slide away to reveal the inner brain.

“A replica,” the Battlemaster slowly nodded, looking inside as the ‘brain’ which was a grey box with wires and LED lights in it. “I thought you disliked those?”

“A prototype, as I said,” Fectorian explained, reverting the replica to a normal state, with the jaw and head back in place. “I first needed to see if I could create a passable replica, and I appear to have succeeded here. Furthermore, I can control the entire physical appearance of the replica itself.”

The replica suddenly grew new skin, hair and clothes, and the Battlemaster was now staring at a dark-skinned woman with curly white hair, with severe burns on the left side of her face. “Nanites are useful machines,” Fectorian said with satisfaction. “However, I know you didn’t come to see my projects, but rest assured I will have much to show you in the future.”

He motioned him to follow and the Battlemaster did. “It was an interesting challenge you posed,” Fectorian commented. “But with what you provided, I was able to fulfill what you want. Your arm is fully healed, correct?”

“Yes,” the Battlemaster had been forced to have Sana repair the damage, but it was a minor injury at worst. “But I would prefer not to have that happen again.”

They then stepped in front of a small pedestal which Fectorian was proudly displaying the request the Battlemaster had given him shortly after the battle: A new and improved suit of armor. The basic design was almost entirely the same, but there were several obvious differences. The first was that the armor was lined with small rods which were positioned at an upwards angle all the way down the torso. The rods then curled to the back, and connected to an armored cylinder close to the back of the neck.

The arms and legs also had rods lining them, four in total, spaced evenly apart and growing connected into one towards the torso itself, and then also connected to the cylinder on the back. The fingers of the gauntlets were now tipped with the rods as well, but also had a point which the Battlemaster guessed could be retracted into the gauntlet itself.

“One electricity-proof set of armor, as requested,” Fectorian stated with a flourish. “I appreciate you gathering the materials needed, and finally providing the schematics for your Battlemaster equipment. Unfortunate your division was so secretive, since there were many improvements to be made in the designs, but I do understand now.”

The Battlemaster didn’t comment. Truthfully, he’d never expected his armor to fail him, and there had been no reason to disclose the secrets of the Battlemasters. However, it was time to move past that and Fectorian was one who could be trusted with them. It wasn’t as though he could simply make more later.
“And I assume you have tested this extensively?” He asked.

“You know me better than to ask,” Fectorian dismissed. “Yes, of course I did. And if XCOM tries to electrocute you again, every blast will simply gather the energy into a battery of my own design. Once it becomes powerful enough, you can discharge it back at them. Fitting, I think.” He pointed to the armor. “Electricity follows the path of least resistance, so there are plenty of more conductible metals to attract a lightning bolt.”

“I doubt that’s enough to absorb the entire blast,” the Battlemaster said skeptically.

“In the event where that is likely, I have lined the internal suit with additional non-conductive materials,” Fectorian continued. “And there is an additional layer of nanites between that, which are specifically designed to absorb bursts of electricity. You will not be harmed by lightning while wearing this, and you will retain the durability of the armor you wear now.”

The Battlemaster looked at the suit. At least it looked similar, but it was still a change he wasn’t entirely comfortable with. Still, he had to adapt and being immune to electricity attacks was a major advantage, especially if XCOM kept using those weapons. He had no reason to doubt Fectorian, but would definitely gain some practice before the next attack.

“Excellent work,” the Battlemaster nodded. “And the other project?”

“Ah, simple,” Fectorian stated absentmindedly. “A sensor upgrade is not difficult, and it was quite needed. You needn’t fear being tricked by fake nuclear signals. We will know if they are actually being used, or in the vicinity.”

That was perhaps even better news. “I believe at some point I will wish to use your own forces in battle,” the Battlemaster said. “I assume you would be able to spare some?”

“Finally,” Fectorian said, spinning around and not waiting for him to follow. “As powerful as my army is, it is rather pointless with nothing to do. It would be good to actually gather usable combat data. But don’t use my basic units. I have plenty more advanced models that need field testing, and a few more I am working on.”

They reached his table again, and Fectorian activated a holodisplay. “Units which…address key weaknesses in our forces. If the Humans wish to escalate this conflict, I am more than happy to test their limits.”

The Battlemaster looked over the proposed units, along with the accompanying project names. The ARCHON Project was certainly in response to the Archangels, while the REPLICA Project was definitely for more clandestine operations. It was clear what the Replica was, as Fectorian had demonstrated.

The SPECTRE Project appeared to be more of a doomsday weapon, one which could easily backfire, but Fectorian was not one for making mistakes. “How close are these to completion?” He asked.

“The base goals of the SPECTRE and REPLICA are essentially done,” Fectorian said. “Sadly, ARCHON is in the beginning stages, but I will endeavor to finish it if it is needed.”

“Do that,” the Battlemaster said thoughtfully. “I have other uses for what remains.”

***

Situation Room, the Citadel – United States of America
It didn’t feel too long since the last meeting, since the first counterattack. Quite a bit had happened, and ADVENT apparently wanted to push this advantage, since the Collective would almost undoubtedly try and correct their mistakes. The Commander was joined by Patricia and Zhang, for once none of them in armor, just standard fatigues because as the Commander had understood it, this was just a planning meeting, not something that would be carried out right away.

They were all familiar with the routine now, gathered around the holotable as they waited for Laura to begin her presentation. Beside her were Weekes and Elizabeth, with Saudia and Mercado at the end of the table, and opposite her was a new addition to the leadership.

Finn Gerstner, Vicar General of the newly launched PRIEST Division Military Branch was almost the perfect poster child for the program. The Swiss man had been an extremely popular government official, and had been one of the largest supporters and recruiters of ADVENT, and had joined the PRIEST Program once launched, and had encouraged others to follow suit.

It turned out that he was one of the six Leviathan-class Psions ADVENT had, and in the initial training he’d proven an excellent leader, as well as quickly grasping the basics of psionic theory fast. Vicar General had been deemed the best place for him, especially with his Offensive psionic affinity. He also stood out because the PRIEST attire was much different than standard ADVENT military fatigues.

In addition to the…interesting designation of Vicar General, a title clearly born of old religious titles, the PRIEST Division had also decided to fully embrace the pseudo-religious elements the name entailed. Their non-combat uniforms were a white-silver vest and pants, with the title and affinity symbol on their upper chest, the golden ADVENT logo was embroidered on the shoulders, and there was a short ceremonial white shoulder cape similar to the Officers. They wore no gloves or gauntlets, nor had any sort of self-defense weaponry, but their psionics clearly made up for that.

The translucent quality of his white skin, and golden-rimmed blue eyes also indicated his extensive genetic modification, which the Commander assumed was fairly standard for the PRIESTs.

Commander Christiaens cleared her throat, and began speaking as the holotable lit up with a map of the Western United States.

“Thank you all for being here. Since we are making the final preparations, it’s time everyone be brought up to speed,” she looked up, briefly glancing at all of them as she continued. “While we made a lot of progress in retaking America, much of that can be attributed to the Collective underestimating us. We caught them flatfooted, and we can’t assume they won’t try and make adjustments against future operations.”

She rested her hands on the holotable. “Simply put, we have an extremely limited window to act before the advantage we have is lost. We have the Shieldbearers, SHIVs, MDUs, XCOM has the Archangels, and we now have our PRIESTs. The Collective does not have any answers right now, and we need to press that. This opportunity will pass before too long, so over the past couple weeks, I’ve been working with the entirety of the military to devise a plan to take back the rest of the United States and push the aliens back to square one.”

The states of Nevada, California, and Hawaii lit up in red. “This will consist of two operations,” Laura continued. “Operation Sherman, which will take back the United States mainland, and Operation Kamehameha, for reclaiming Hawaii.” She manipulated the focus of the holotable, and the holotable zoomed to focus on Hawaii.

“Operation Kamehameha will initially serve as a distraction to Operation Sherman,” Laura
continued. “Over the past weeks we have been massing our naval forces to the Bering Sea, off the coast of Russia, and off the Pacific coast of Mexico. ADVENT Intelligence has determined that the islands are heavily fortified, but can be retaken with a dedicated attack.”

“What forces have been identified?” The Commander asked.

“Vitakara, primarily Vitakarians and Cobrarians,” Laura answered immediately. “This is in addition to a strong Muton presence, and they suspect there is a Sargon in charge of the islands. Luckily, the force is primarily infantry, although there is a strong automated line of turrets and point-laser defense systems. But no naval forces.”

“Andromedons?” Saudia asked.

“None that we have located,” Laura responded. “There are a minimum of twelve Gateways spread out through the islands, which will allow them immediate reinforcements, but they also lack any air support.”

“Which might be a problem,” Weekes pointed out. “While I know our carriers have Ravens…”

“Which is why Operation Kraken will go into effect here,” Laura countered, looking at all of them. “For those who are not aware, that is our operation using our extensive submarine forces to deny air assets. Which essentially means once we detect UFOs approaching, they surface and fire missiles into the air. Although in this case, they would be armed with both conventional and nuclear weapons.”

Finn raised a hand. “Excuse me Commander, isn’t that a…well, bad idea?”

“Not as bad as you think,” Laura reassured him. “Nuclear weapons are indeed devastating on land, but in the atmosphere the radiation is greatly reduced, or negated entirely. Using them at a high enough altitude will prevent the ensuing blast and EMP from affecting ground forces. While we should be hesitant using them on land, there is little reason to refrain from using them in the air, and the blast will remove any threat the Collective sends to reinforce Hawaii.”

Several submarine figures appeared on the holomap. “Submarines will be deployed around the island six hours before the operation commences and prepare their payloads. There will be two paths of attack, from Russia, and from Mexico, hitting the islands of Kauai and Hawai’i respectively.”

“Hawai’i will be a long one,” Weekes commented. “Insertion will be bloody.”

“Not if done correctly,” Laura stated. “We will use a combined force of Lancers, Shieldbearers, and PRIESTs for the initial invasion, while our naval forces provide long-range bombardment on all the islands. Upon establishing a beachhead, teams of Engineers will establish Gateways and bring in reinforcements from our more secure locations in the Eastern United States, Russia, and India.”

“Good idea,” the Commander nodded. “But the Gateways will pose a target.”

“They will, but they will also be transported in pieces to be assembled,” Laura answered. “Our teams are able to get a segmented Gateway working in under ten minutes. Our initial teams can hold out long enough for that. Then we will begin taking the islands, moving to the next one once the current one is taken. Portable artillery will be established to fire at nearby islands as well, if applicable.”

“This will certainly get their attention,” Saudia commented. “They are definitely not going to just
“That’s what we’re hoping for, hence the perhaps disproportionate force,” Laura clarified. “Once we know we have their attention, we launch Operation Sherman, and what I consider the more important one.”

The holotable shifted to the United States again. “Their only territory are outpost bases in Nevada and most of California,” Laura continued. “They have been heavily fortified, but they are vulnerable to a sudden, blanket, and surprise attack. And they have made one critical weakness in their defenses.”

Finn raised an eyebrow. “Explain?”

Laura gave a grim smile. “They haven’t secured the rail system. There are rail tracks that go straight into every city in California. I don’t know if this is an oversight, or they don’t know how dangerous that is. But this is what we’ve been working towards, to exploit this before they figure it out.”

The map disappeared, and in its place appeared a train, but not a regular one. This one had been reinforced with alloys, making the carts protected boxes, and on the top were AA, laser, and various other kinds of weaponry. The main engine was similarly protected, and the back car was simply carrying a tank.

“This is the converted ADVENT Battle Train,” Laura explained. “There are many countries that have extensive rail networks, and that is something we can’t forget. Europe, South Korea, and America all have them, and all will likely become battlegrounds in the future.”

“This has been a project we’ve been working on for some time,” Mercado said, speaking for the first time. “Prototypes were tested and constructed in Russia, which involved experiments with molten salt reactors, and more recently, elerium generators to vastly improve its power output. We added various turrets and armoring to allow it to survive sustained barrages, but it is an extremely fast and devastating method of quickly striking targets.”

“Once tests were conducted successfully, we’ve been converting trains into this in the Eastern United States, and more recently Canada and Mexico,” Laura continued. “This is to throw off any spies watching us. The Battle Trains will be packed with soldiers, vehicles, equipment, and Gateways and hit the major cities.”

“All of them?” Saudia asked with some skepticism. “Do we have that many?”

“We have plenty,” Laura reassured her. “And not all of them will be Battle Trains. We’ve also been mocking up some suicide trains, old ones, which will contain MOAB explosive devices, and several deployed per identified alien stronghold in the smaller cities will take out substantial numbers, and this done in coordination will cause chaos in their communications.”

“So for the main attacks, what is your plan?” The Commander asked.

“Battle Trains with primarily Lancers, MDUs, and PRIESTs will make up the first wave, along with armor units,” Laura said, returning to the map with the rails highlighted in red, going to the major California cities. “The Trains will establish themselves to provide supporting fire as the rest of the forces establish beachheads. Several railroads will be left unoccupied to allow for Suicide Trains to go into the heart of their cities and detonate. Once they are fully occupied, the second waves will come.”
Holographic planes appeared over the cities. “At this time will we be deploying the second wave of Battle Trains, with primarily infantry reinforcements, in addition to those coming through the Gateways, and begin airdropping additional vehicles, Lancers, Shieldbearers, and conducting airstrikes on marked targets.”

She highlighted the ocean around California. “Operation Kraken will also be applied along the West Coast. While this might not completely negate air support, it will hinder it. With the second waves in, the general advance for the rest of our forces will commence, and we should have hopefully overwhelmed the aliens enough to take back California and Nevada before they realize what is happening.”

The Commander was impressed with the whole plan. There was just something he needed to bring up. “An attack this scale will warrant a reprisal, not just a defense,” he pointed out. “We’ll need to be prepared.”

“That’s the question,” Laura nodded gravely. “Theoretically, they could attack anywhere. I’ve ordered South Korea receive extra reinforcements, and it’s also possible that Mexico or Canada will be attacked, Canada more so since there is a small alien presence in Alaska.”

“And Caelior or the Battlemaster could show up,” Weekes added. “Which our forces can’t really stop.”

“Leave the Ethereals to us,” the Commander said. “If you do encounter them…have your forces immediately pull back and let us handle them. We almost killed the Battlemaster once. We can do it again.”

“At the end, what I hope we achieve is a reclaimed America,” Laura finished. “For once, I believe we have the advantage here. Not just in strategy, but also in psionics. If this goes well, they will only really have Australia, most of the Oceanic nations, and Japan.”

“Indeed,” Saudia nodded, looking over to her. “When will this be launched?”

“Within the next week,” Laura said. “We need enough trains ready, and in several days we’ll have a critical mass of PRIESTs ready to go. If the aliens launch an attack somewhere else…we can launch it and at minimum draw their attention.”

“XCOM will be ready to provide support wherever you need,” the Commander said. “I’ll begin preparing squads whenever you need them.”

“Appreciated, Commander,” she inclined her head. “Hopefully we’ll be enjoying another victory soon.”

“Indeed,” he smiled grimly. “The aliens being forced to retreat would certainly be a nice change of pace.”

Mars Observation Station, Mars Orbit – Solar System

11/17/2016 – 1:14 A.M.

ADVENT was doing something, and Ravarian didn’t like how it looked at all. The holographic report in front of him didn’t assuage that feeling, and the fact that the Battlemaster was standing in front of him waiting for him to say something didn’t make him feel better either. “When are you planning to launch the attack on Korea?” He asked, shutting off the projector in his palm.
“Within days,” the Battlemaster answered. “I want an accurate assessment of ADVENT’s forces. Your agents will determine the speed of how soon we deploy.”

“They will have that to you within two days,” Ravarian said, knowing that would be more than enough time. “However…ADVENT is clearly preparing for something. Likely our attack, but we’re not completely sure what it is.”

The Battlemaster looked down at him. “What do you have?”

“A name,” Ravarian said. “PRIEST. We suspect it has something to do with psionics, and if so… there is a high possibility that ADVENT is going to begin fielding psionic soldiers in the future, if they don’t have some already prepared. Their naval forces have also been rapidly moving through the pacific.”

“Unsurprising,” the Battlemaster said. “Utilizing the psionic potential within their species was inevitable. I will have to factor this in. The naval forces either imply an attack in America, or more likely, preparation to defend Korea. Alternately, they could be preparing to strike us in Australia or Japan when we don’t expect it.”

“Should we deploy some Andromedon Aquatic Forces?” Ravarian asked.

“No, not yet,” the Battlemaster dismissed, raising a hand. “Let us see what they do first. It is more beneficial for the moment for ADVENT to make a move, if they can. They believe they have an advantage, and they will likely wish to exploit it since they know it won’t last forever.”

Ravarian agreed, which was why he wasn’t entirely comfortable with doing nothing until ADVENT acted. “The defenses we’ve recorded for Korea are more extensive than we expected. I’m not certain our forces are adequately prepared for taking the cities. ADVENT has been smart in constructing their defenses.”

“I am aware,” the Battlemaster nodded. “But they can’t win a war of attrition. And their attempt at turning our attacks into sieges will likely fail. Trenches are an interesting idea, but it will be a temporary issue at best.”

Ravarian didn’t quite know if he should politely disagree. He’d initially been skeptical when he’d seen the first of the new ADVENT defenses. The towers were impressive, but ‘Trench Warfare’ as the Humans called it was an alien concept. However, after performing some research, he was of the opinion that it was tactically a very smart move, especially since ADVENT had clearly worked to negate the disadvantages of the tactic.

And it made him acutely aware of the fact that the Collective didn’t exactly have a powerful artillery unit. Or artillery at all. The Sectopods had a limited range, but the military was primarily composed of infantry units. Their spacecraft was an advantage, but everything he’d read indicated that attempting to cross the famed ‘no-man’s land’ was not only questionable, it was suicidal.

ADVENT was on an even technological level, weapon wise, and he had the vision of a frontal charge leading to ADVENT tearing them apart.

That wouldn’t do.

“With respect, Battlemaster, that I do not believe is accurate,” the Battlemaster looked over to him, Ravarian swallowed, and continued. “Utilizing trenches has, historically for Humans, been devastating to infantry forces. It wasn’t as effective against vehicles, but still dangerous. The Collective is primarily composed of infantry, and an open area with no cover is not optimal ground
The Battlemaster looked at him for a few moments. “Noted, Zar’Chon. I will keep that in mind. Is there anything else?”

Ravarian shook his head. “Nothing major. ADVENT has begun arming their trains of all things. Perhaps they think we’ll be attacking their supply lines, but otherwise it doesn’t make sense.”

“ADVENT doesn’t do something without a reason,” the Battlemaster mused, turning away. “Ensure that your agents have a comprehensive report. I do not want ADVENT to become comfortable, nor get any ideas.”

“Yes, Battlemaster,” Ravarian confirmed. “It will be done soon.”

***

Abuja – Nigeria

11/17/2017 – 12:28 P.M.

The alien had said he would come to her, and that it would be soon. Betos didn’t know when or how, but she had her soldiers on the lookout for anyone suspicious. So for now she just stood leaning against the outside of her refitted command center, thinking on what the implications of this would be.

Getting the attention of the aliens was not something she had expected. Not yet at least, it would have come in the future, but not for a long time yet. They would still have ADVENT to contend with, and SAS was relatively small when compared to the larger war. She hadn’t really thought which side she really fell on, although right now the answer was definitively neither.

ADVENT she would not support, but that didn’t mean that the aliens would be any better. They wouldn’t be fighting if they were intent on actual peace, although given the leadership of ADVENT, perhaps they didn’t want that to begin with. The largest problem was that she didn’t know much about the aliens to begin with. She hadn’t fought them, or ever seen a live one.

Videos, briefings, and images yes, but all of those were from ADVENT. They listed appearance, combat abilities, strengths, and weaknesses. Not really anything about their motivations, goals, or organization, aside from ‘kill the Humans.’

She snorted.

No, at the very least there was more to the aliens than war. She doubted a culture could be sustained by such to begin with, but the question was what said culture entailed. They could be just as bad, if not worse, than ADVENT. But she didn’t know, and hopefully this Macula would clarify some for her.

If there was one thing she was apprehensive about, it was that this was an Ethereal, and they were rather…notorious. First the vaunted Battlemaster, and the other one, Caelior. Both could single-handedly take on entire armies and win. Could all of them do that? And they were all psionic as far as she knew, so she was at risk of being mind-controlled.

The issue was now that it didn’t really matter what she wanted. Even if she refused, they could control her mind. But they’d found her without any effort on her part, so they intended for her to have some role, and she doubted that it needed to be voluntary.
“It doesn’t,” the layered voice of Macula said beside her. “But there is little of value in that.”

Betos jumped and had her pistol in her hand the moment the Ethereal began speaking, but she wasn’t able to do anything as it was yanked out of her hand and hovered in front of the raised palm of the alien.

The Ethereal was much more intimidating in person. He towered over her, at least three meters or more, his attire a mixture of a silver armor that protected his legs, arms and chest, with some kind of blue cloth or weave underneath it. There was also a cape of the same color that fell from his shoulders, and attached to it was an obscuring hood that shadowed his entire face, save for the glowing orange orbs within it; eyes most likely.

She swallowed.

“No reason to be alarmed,” he said, orienting his palm horizontally and the pistol floated back to her, which she took. “If I wanted to kill you, you would be dead already.”

“I expected you to make an announcement, not appear out of nowhere,” Betos said, holstering her weapon. “Apologies, Ethereal Macula.”

“Accepted, Lady Betos,” he said, appearing to nod slightly. “Now, I believe we have some things to discuss.”

Betos looked at the door, now realizing that the height of the alien might be an issue. “The office may be somewhat…confined.”

“Then we walk,” Macula said.

Betos glanced around, actually surprised that no one had stumbled upon them yet. “Someone may see you-“

“No,” Macula raised the opposite upper hand. “They will not. I have made sure of that. Walk with me, Lady Betos, there is something I believe you should see.” He stepped into the street, and Betos followed, becoming more concerned at the ominous words. The implications were disconcerting at best, and terrifying at worst.

Would an Ethereal really kill her soldiers to make a point? Especially if he wanted an alliance?

They rounded a corner and she suddenly saw what he was talking about. It was filled with soldiers, sitting around, talking with each other, or in formation. It was something completely normal, except for one minor detail.

All of them were completely frozen in place.

Dead silence filled the area, aside from the steps she and Macula made as they walked forward. It was bizarre. They appeared alive, and she did note they were still breathing, but otherwise they didn’t seem to register anything else. She stood in front of one of her soldiers, one who was walking, and got no acknowledgement.

“What did you do to them?” She asked slowly.

“Simply altered their perception,” Macula said, standing behind her. “The measurement of time is a curious subject. It cannot be truly stopped, and controlling it is little more than a fringe theory, but what can be controlled is one’s perception of it.” He motioned to the frozen crowd. “They do not realize anything. Their minds are in the moment, unable to move forward. Should I release them,
they will not be aware of any difference initially. Frozen in this moment, they are blind to the world around them.”

Betos blinked. “What about their bodies? Their thoughts?”

“Theyir bodies function, but they will not realize or feel anything until their minds are released,” Macula explained. “They could starve, die, burn, and they would not react or feel. Their thoughts are frozen in the moment they were stopped. Painless; elegant; something I have mastered over decades. An army is useless if their minds can simply be trapped in the present.”

So this was a demonstration of his power. Fine, though for what end she could only guess at. “I assume you have a point to this?” She asked.

“Of course,” he said, walking around to face her directly, amusement permeating his voice; amusement and confidence. She could barely look into the glowing eyes; she was not easily intimidated, but Macula was an exception. “I know what you fear. You are no fool. You know ADVENT will not ignore your alliance forever, and you will eventually be crushed. You know your influence over the SAS is limited, and it is becoming what you fled in the first place. You have lost your power, if you had any to begin with.”

He paused. “But you have something useful to me. You have a vision of your ambitions. And unlike many, you follow this vision even if it leads to undesired results. You have risked your life, and that of your friends, and in doing so, you managed to begin the reformation of this continent. The men you allied yourself with are self-serving and dangerous, more concerned with their own power than the future. They cannot see beyond their settled scores and conquests. ADVENT is propaganda, the aliens don’t exist, and their enemies are ripe for defeating.”

The Ethereal sounded like he chuckled, a low rumble. “You value honesty, Lady Betos, so I will comply. I care little for your species. The majority are not worth my time, and there are greater concerns in this galaxy. Yet if I must intervene, I will shape your people into something acceptable. But though I have the vision, I am not human. You have vision, and you are. In some ways, our goals are aligned.”

“I think,” Betos said slowly. “That what we have in mind for my species would be radically different.”

“Are they?” He asked, almost a hiss. “I desire a species purged of the corruption and filth that permeate your kind, one that is incapable of betraying our Collective, and one trained and prepared for the wars to come.” He inhaled. “There are wars coming, Lady Betos, ones far larger and greater than this one ADVENT wages. The other species are flawed, shaped by forces beyond our control and our leaders lack the resolve to force change. Humans have the potential to be uplifted correctly, controlled and freed from the weaknesses of the lesser species. That is what I wish from your species.”

He motioned to her. “The details of how that is accomplished…that is where you come in. Governance, laws, cultures; these concepts I have little interest in, much less building from nothing. You do however, or you know who you would need. That is what I offer you, Lady Betos, a chance to complete my vision, and reforge your species as you envision it. And with my support, you have no fear of being stopped.”

His arm suddenly lashed out to the side, and a thin obsidian dagger flew into a nearby man, talking with one of her soldiers. It buried itself in his throat, yet his expression didn’t change as the blood slowly seeped out of his neck. “What—“ Betos began, as Macula telekinetically pulled the dagger back, and blood began pouring out, soaking his shirt in it, while his expression stayed the same.
“An ADVENT spy,” Macula explained. “One sent to watch you. As we speak my own operatives are purging the ring of spies ADVENT has embedded within the SAS and will establish means to ensure this does not happen again. You would be assassinated if ADVENT believed you posed a threat, and continuing on your path, you would be.”

The body suddenly collapsed to the ground, as the man died, the same expression on his face. “I can protect you against ADVENT, the men you have allied yourselves with, and anyone else,” Macula continued. “Work to achieve my vision, and none will be able to stop you. You have wished to make a difference your entire life. There is no better opportunity than now.”

Betos thought for a moment. The saying “If it sounds too good to be true, it probably is” came to mind. But at the same time…any alien that could do…that…could be a powerful ally. She wasn’t sure if his ultimate goals were something she wanted to accomplish, but if he did allow her to have a hand in shaping the future, could she really afford to pass it up?

At the very least, it couldn’t hurt, and if Macula was telling the truth…

Perhaps she could do things the right way. No more worrying about corruption, power plays, or the things that had plagued humanity since the beginning to time.

She met his burning eyes. “Very well,” she said. “I accept. Where do you want to start?”

***

*Unknown – Desolan*

11/18/2016

Nartha felt that he was in a decent enough position. He was still armed, the dead man’s switch was working which would immediately send everything to the Zararch if he unexpectedly died as had been clearly pointed out to Merina’s contact, which was a male Vitakarian who hadn’t exactly been pleased to meet him, but hadn’t wasted his time and simply gestured to follow him.

He’d then been directed to a Desolan-issue speeder, which all of them had climbed in and they’d shot off beyond the War Camps. It wasn’t too unusual, since there were speeder patrols every so often and there were cases where various officers used them to travel between War Camps. Nartha wasn’t relying on memory to get back, since he wasn’t familiar enough with the geography to have a chance to begin with.

Things had started to become more interesting when they’d entered one of the mountains and had gone progressively deeper. There were no light sources other than the speeder itself, and Nartha couldn’t help but feel slightly nervous since the speed hadn’t been reduced, which made him concerned that they would suddenly crash into the stone walls.

That would be anticlimactic.

“No wonder no one has found you,” Nartha muttered. “Everyone who followed would die.”

“Yes,” the driver said without hesitation. “They would.”

No further elaboration was given, so Nartha decided to stay quiet for the time. All he really knew was that he’d be meeting the leader, and they weren’t planning on killing him. Fair enough, since he wasn’t planning on doing anything like that either. He hadn’t pressed for details, knowing he’d likely get that eventually, and questions would likely only make Merina’s contact even more suspicious of him.
After some time, they shot into an illuminated and open area deep within the mountain. Nartha blinked to adjust to the sudden light, and he then got his first good look at the…base? Sanctuary? He wasn’t sure what to call it, aside from that the area was massive and had to have been at least as large as a War Camp.

But it was noticeably different in several ways. There were waterfalls with a steady stream coming from several points, and small canals had been dug creating some variety to the brown dirt, which culminated in a central lake-like depression. There were small square houses built from clearly flimsy material, but given that there were zero elements to worry about, it was competent enough.

He looked up at the light sources, and they were indeed artificial, both hanging from the angled mountain roof, and built into the stone itself. The illumination was extensive, and was just as bright and clear as if it had come from a sun. But what truly captured his attention were the hundreds of Mutons that occupied the area.

He was so used to seeing them in armor that it was…startling to see them wearing primarily cloth coverings and garments the Vitakara normally wore. What few of them did have armor, it wasn’t the bulky plating, but maybe a few alloys woven into regular garments, with some kind of language written on them.

The Mutons themselves were physically different than the ones in the War Camps. The males were not as stocky or tall, even if they would outmass a base Human or Vitakarian. The females were the most notably different, as they were much smaller, and ended up only being only slightly taller than the males, and stood straight instead of hunched over like he’d seen from several of the Berserkers.

Taking them off combat drugs and harsh training regimens had really changed them. Hm. It wasn’t ideal, but they could function well if properly armed and armored. Hopefully the tradeoff for this had been a substantial increase in intelligence. If not, at minimum they would serve as a good vanguard to a more dangerous force.

The speeder finally stopped, and the cockpit hood lifted, and all of them got out. It was by the edge of the artificial lake, and a short distance away was a small open tent, where several figures Nartha couldn’t determine were gathered around. It was surprisingly not as hot as he’d been expecting, and he assumed they had also installed either cooling or air conditioning systems into the cave as well.

“This way,” their guide said, and began walking toward the tent. They were beginning to attract some attention, especially from the various Mutons. He noticed that the groups tended to be either what he thought were…families, as odd as that sounded, since there was one male, one female, and usually three or four children, or groups of just children. It was odd seeing that from Mutons of all things.

Intermixed were other Vitakara, largely Dath’Haram, but also Vitakarians and Cobrarian, all of whom were armed and looked at him with obvious suspicion. They were apparently protective of the children, since they made sure to get in front of them while watching him.

Interesting.

The tent had three individuals. One of them was a Dath’Haram male, the next a Vitakarian female, and the final a Muton male. All of them were speaking with each other, and stopped once they walked up. “Zar’nartha’inha,” the Dath’Haram greeted, baring his teeth in greeting. “Welcome, to our Enclave.”

Merina and the guide had disappeared, leaving him alone. That was fine by him, since they
ultimately didn’t matter anymore. The Vitakara were wearing a mixture of tan desert survival gear, while the Muton was one of those that was armored. None were armed as far as he saw, and he inclined his head. “I appreciate you inviting me so quickly.”

“Considering you threatened to expose us, don’t pretend it was a simple request on your part,” the Vitakarian spat at him.

“He is Zararch,” the Muton said. “They do not know other ways.”

Nartha looked at the Muton and frowned. “There are other ways, but I did not have time for them.”

“We can’t change the circumstances now,” the Dath’Haram said, raising a hand in placation. “But we are all here, so let us talk. I am, or was, Dath’uurian’haramshiral, a former xenopsychologist and xenoanthropologist. This is Runi’zerinth’a’vitiary, our head of what passes for security.” He motioned to the Vitakarian woman. “And this is Chief Ryarik, of the D’Rarrah Tribe.”

“I welcome you, Zararch,” the Muton said, still retaining that glare Mutons had, and Nartha suspected he might actually mean it this time. Surprisingly literate for a Muton who wasn’t a Sargon. Perhaps this wasn’t a bad sign after all.

“You have an impressive operation,” Nartha complimented, sincerely meaning it. “I figured it would have to be well-hidden, but the length you went to explains why the Collective has not found you yet.”

Uurian gave a single nod. “It took many years, but our operation is as close to thriving as we could make it. Outthinking the Collective was not an easy task.”

“No,” Nartha interrupted bluntly, shaking his head. “While I appreciate how effective this was, you are not as smart as you think you are.” Zerintha’s face hardened, but Nartha raised a hand to cut her off. “I will be honest with you, since you’ll probably appreciate that more. The only reason you have survived this long is because the Collective hadn’t noticed until now. They do now, and now they have us looking for you. It didn’t take me long to figure out who was likely behind them, and then it was a simply matter of applying pressure. Your operation has flaws that any intelligence agency will exploit. You are not safe.”

Uurian appraised him. “I see. And yet you are against the Collective?”

“Correct,” Nartha confirmed. “My orders are to find this operation, and destroy it. I think it would be best to turn that against the Collective. I have already acquired allies in the Cobrarian Hierarchy, and established contact with the Nulorian. My goal is to establish a coordinated resistance through the entire Collective, and this operation would be an excellent asset.”

Zerintha’s eyes narrowed and she took a step forward. “You’re working with the Nulorian? The terrorists?”

“Of course I am,” Nartha answered evenly. “They are the only ones on Vitakar who shared this goal. You are the only other ones.”

“Well, I’m sorry to disappoint you,” Zerintha said coldly. “That isn’t our goal.”

“So your operative Merina stated,” Nartha said evenly. “So please, enlighten me as to what could be the point of this other than to resist the Collective?”

“I can not speak for Elders Uurian and Zerintha,” the Muton Ryarik said, in the gravely stunted voice of his kind. “But we are trying to…restore…what we once were. Not trying to…” he broke
out into something in the Muton tongue, before Zerintha told him something, the language sounding odd from her lighter voice. “Forget,” he finished. “We do not want to forget.”

“I will give you a short history,” Uurian told him, stepping forward. “I was…unaware of the extent to which the Mutons had been reduced. When the Collective sent me to this planet, they first wanted me to figure out means to break them easier and further reduce their already shattered culture. I am ashamed to say I was…instrumental…in helping them understand Muton psychology, in figuring how far they can be pushed. How to turn their traditions against them.”

He motioned to the area. “You would not know it today, but the Mutons were not just brutes as you likely think they are. They are only that way because the Collective needs a disposable weapon, and everything else is secondary. What little of the Muton culture that remains is warped to be unrecognizable, and anything resembling what they were is gone.”

He clasped his hands together. “Near the end, I decided to do something. I’d learned what the Collective was going to do, which they hadn’t bothered to tell those involved. We had believed we were working to figure out how to lessen their more violent tendencies and uplift them, but everything we discovered was simply used to make hardened, better soldiers. When they began the birthing centers and War Camps, I began gathering resources with a small group of similarly-minded colleagues, and we established this sanctuary here.”

Uurian motioned around him. “During the course of my research, I’d learned as much about the species as I could. I didn’t want that to be forgotten, and whenever possible, we began smuggling Mutons born for the war camps to here, where we raised them as best we could. Not perfectly, of course, but we tried keeping what we could to at least retain some aspects of their culture. Their society, titles, rituals, we tried respecting that as best we could.”

“Admirable,” Nartha nodded. “But to what end?”

Uurian sighed, shaking his head. “Zararch live for plots and motivations. I don’t. My only goal is to save at least some of the millions of Mutons, and ensure that what they were isn’t forgotten. There is no larger goal than that, short of expanding to other places once space runs out.”

That, while certainly ambitious, struck Nartha as incredibly short-sighted. Really, what was the point of going to all this trouble if nothing was going to change? What the Mutons were didn’t matter in the larger war. This wasn’t even really hurting the Collective, nor was it making a point they would recognize.

There was literally no point to any of this aside from a strange sentimentality.

Baffling.

“We raise families here,” Ryarik said. “Our children are told the stories; what history we can remember. Our ways that the Elders have recovered. They live free of the death of the War Camps.”

“To what end?” Nartha questioned. “Is their goal just to exist? If they can never leave this place, what future do they have? What is the point?”

“When the alternative is a life of mindless servitude and likely death?” Zerintha asked rhetorically. “Just ‘existing’ seems acceptable to me. Do you think the same is true of the citizens on Vitakar? What is the point of them existing?”

“Not the same thing,” Nartha disputed with a shake of his head. “Everything, for good or ill, all
comes to ultimately improving Vitakara society and strengthening the Collective. There is something they work to, even if it is as simple as protection or expansion,” he motioned around. “You are confined to one area, and at best to the underground network of caves. What are you working towards?”

“I think we have succeeded in the main goal,” Uurian interrupted. “We have a self-sustaining and growing population of peaceful Mutons who retain some of their old ways and history. They have children, they grow, they learn. They don’t need a larger goal to be content.”

“Sustainable,” Nartha said, a mirthless smile on his face. “Perhaps if you hadn’t been discovered. The Collective is aware of your operation now, and what do you think they will do once they find out what you’ve done? Just let you be? What do you think they will do? Are you even ready to defend them?”

“We have some means of defense,” Zerintha said, glaring at him. “But no, we don’t have an army. We rescued them specifically to make sure they wouldn’t have to be soldiers. That was the point!”

“As long as the Collective exists,” Nartha retorted. “You will never be safe, and eventually you will be found. I’m offering you something to actually work towards. If you truly want to revive the Mutons, allow them to actually have a chance to flourish, you must prepare to fight back. Otherwise the Muton species will die down here, and this time it will be forgotten.”

“I’m not so ignorant as to not make contingencies,” Uurian noted calmly. “But we’re not fools. War and violence have never caused any good. Call me a pacifist as the Zararch like to call us, but the Nulorian are no better than the Collective. What they did to the Muton species is unforgivable, but the Nulorian would purge whoever they deem unworthy.”

He bared his teeth once more. “You have an admirable goal. One I hope you succeed in. But I know what you are thinking. You don’t see sentimental aliens here, you see an army you can use against the Collective. That I will not allow. I will not turn them into warriors to die in your war.”

“We are content with our existence here,” Ryarik added. “We do not desire war, even if it is against the ones who destroyed us. We do not want to die.”

**But you will, it just won’t be right now,** Nartha thought in frustration. They didn’t seem to realize that they didn’t have a real choice here. And they were pushing him towards some unsavory options. He wasn’t going to turn them over to the Collective, they were still too valuable a resource to ignore, but they were clearly not going to be compliant because of their damned pacifism.

“So what are you going to do?” Zerintha demanded. “Will you destroy us because we didn’t agree to your request?”

Nartha sighed. “No. There is little point in assisting the Collective further. I could force you, but that would accomplish little. But when the Zararch does eventually find you, I will not prevent them.”

“That, I suppose, is all we can ask,” Uurian said. “Thank you, Nartha. I’m sorry we couldn’t give you what you wanted, but I wish you success.”

And with that, Nartha unfortunately knew what his next step would be.

Not ideal, but some things were required if the Collective was to be brought down.

***
The Battlemaster was quite surprised at the most recent development. His interactions with the Guardians were generally limited, as if he needed to speak with the Imperator, it would be in person, and interacting with the Guardians was rarely needed. The Battlemaster had always had respect for the Guardians as an organization, but it was a step he rarely needed to actually stop and take.

With that said, they were the closest the Imperator had to ambassadors. He usually only sent them if something needed to be urgently communicated, and couldn’t be intercepted; as a warning, which he had done several times to the Creator; and finally to assist in whatever the operations were taking place. To date, this had only been offered during the Muton Subjugation, and he had refused since the help wasn’t needed.

To outsiders, there would likely be little point seen in having the Guardians as they seemed to fill the same role the Division of the Battlemasters had. Their armor was also heavily based on Battlemaster designs, although they used elerium-powered plate armor which augmented their already extensive strength and speed significantly, even if visually it didn’t look dissimilar to the Battlemaster’s own.

They wore deep purple capes, also similar to Battlemasters, and their helmets were not ornate and simply covered their heads and mouths, though allowed the eyes to be seen, but during combat, flaps would slide down and cover them completely. The Battlemaster suspected the helmet was designed that way to work better with the hood that could be put up over it. While not as heavy as the Overmind’s or Macula’s it performed the same function.

However, neither the cape or hood were mandatory, and some Guardians eschewed both and made this decision largely based on their fighting styles. Like Battlemasters, each Guardian had their own unique style of combat, and their own set of unique weapons; the Guardian Sabers. Each Saber was designed and constructed by the Guardian themselves, and was based on highly unstable nanotech.

They were some of the most effective and highly configurable weapons ever invented. However, the Battlemaster personally found them on the verge of cheating due to their effectiveness. Not to mention they had their own drawbacks. They were excellent for the purpose they were designed for, but it was not a weapon he would ever personally use.

There were only two left, the First Guardian, and the Second Guardian. One was expected, but both being sent at once was unheard of. “The Imperator sends his greetings, and commends you on your efforts in bringing Earth under control,” the Second Guardian began, easily distinguishable not because of her voice, but because she wore the full Guardian set of armor, cape, hood and all.

Her delicately designed Saber was attached to her waist, with one lower hand resting on it at all times. Fortunate the two had decided to distinguish themselves, because otherwise they were difficult to tell apart otherwise. Both were the same height, and just as tall as he was, as they were almost always selected from the Division of the Battlemasters to begin with.

“It is appreciated,” the Battlemaster said slowly. “However, the Imperator would not send both of you here to simply offer his…compliments.”

“Because he has not,” the First Guardian stated, lacking both the cape and hood in contrast to his counterpart, and his lower hands clasped behind his back while his twin Sabers were hooked to his waist. “We are here to offer our support to your efforts once more.”
Interesting.

If ADVENT was preparing to field more psions, it would certainly not hurt to have more Ethereals at his disposal to mitigate them. Both Nebulan, Macula, and Quisilia were occupied for the foreseeable future, and he didn’t want to utilize Caelior too much outside of necessity. The Guardians could be essential in ensuring what they controlled remained under Collective control, and expanding it further.

“Is this by order of the Imperator, or your own request?” The Battlemaster asked.

“Both,” the Second Guardian said. “It has been too long since we have plied our trade against an enemy, and continued training only helps so much. We requested this of the Imperator, and he agreed. You are familiar with our skills, so you know what we can do.”

“Do not take this as a slight, Battlemaster,” the First Guardian clarified. “I suspect that you could take both of us and win. We simply wish to assist in any way we can, for the Imperator and his eventual victory.”

The Battlemaster nodded. “Granted. I have several operations that could use additional support. How familiar are you with Earth geography?”

“Moderately,” the Second Guardian answered, exchanging a look with her counterpart. “We studied the major battlegrounds so far, including additional areas of interest such as China, Canada, and Russia.”

“Then you are aware we’ve suffered some setbacks,” the Battlemaster stated. At their affirmation, he continued. “Korea will be our next major offensive, and it will be a difficult one. Afterwards we will retake the ground we lost in America, and additionally launch offensives in Canada and Mexico. More are planned, but if you are involved, you will spearhead some of these operations.”

“Acknowledged,” the First Guardian rumbled. “We look forward to testing ourselves against the Humans. They have posed a greater challenge than either of us have anticipated.”

“That they have,” the Battlemaster agreed. “But even their best will still be insufficient.”

“They face the Guardians of the Imperator,” the Second Guardian said with a flourish. “We will ensure their threat is removed. On that you have our assurance.”

Desolan, War Camp 402

11/19/2016

The best case scenario would have had the Muton Enclave group working to militarize their extensive forces independently, and keeping in contact with the other groups he was coordinating. However, since they were not interested, he would have to co-opt their resources through other means, and that was going to involve a lot more work on his part.

Specifically, he was going to have to get the Nulorian on Desolan.

The good news though, was that once they were on the planet, they would easily be able to find where the Enclave was. Nartha had seen enough to know that they couldn’t just pack up and move, no matter what contingencies were in place. So he had embedded nanite trackers on the speeder he had ridden in, and various places within the Enclave itself. They would not be detectable, but they
would be sending constant signals.

In addition to the location of the Enclave, he also had a list of each War Camp the speeder had gone too, which meant there were others there who were contacts. This would be useful for the Nulorian to secure the Enclave network against the Zararch.

He didn’t know exactly what the Nulorian were going to do to the leaders of the Enclave, or the Mutons for that matter. He didn’t especially care, but he did know that they would turn them into an acceptable fighting force, and run the operation much more securely as a result. It would likely not be pleasant, and he felt some guilt as ruining what had seemed to be a good operation with a mildly noble goal.

However, that would mean absolutely nothing if the Collective won. The Nulorian would give the Mutons at least something to fight for, beyond just existing and hoping they were never discovered. He would have to wait and see what the Nulorian could actually send, but in the meantime, he’d sent an encoded message explaining the situation. Maybe they’d think it was too risky, which he was also prepared for.

What absolutely had to be done was closing the Zararch investigation, which was going to be the trickiest thing to do. The Zar’Chon would want, if not results, at least a lead on where to go. Fabricating *anything* like that was a nightmarish undertaking, and simply setting up scapegoats with planted evidence wouldn’t be enough…

Hmm…unless he could establish an *interplanetary* smuggling ring? Data could be faked, that wasn’t the issue. The issue would be proof, because who would actually want to be behind that?

He rubbed his eyes. If it were anything else, he would bring down only part of the organization and let the other half live on. Unfortunately, this was too tied to a central location, and the ring of informants and cells would only lead to it. It was too risky to turn any part of it to the Zar’Chon. Not if he actually wanted to use it.

Worst case scenario, he could write this as a loss and move on. As much as he hated to admit it, he didn’t know what the best solution was. He supposed he could kill Merina, turn her over, say she fought and he had to kill her, and forge data to lead to somewhere else on the planet…

Hm. Maybe. Something to figure out.

He glanced down at his datapad. Hopefully the Nulorian would respond with something. It would at least give him some indicator on if he should continue focusing on this planet, or wrap this up completely.

There were no good solutions here.

But he’d have to make the best of it.

***

*Sydney Outskirts – Australia*

*11/21/2016 – 12:11 A.M.*

The gathered army of the Chronicler was an awe-inspiring sight, and one that even the aliens would be intimidated by. They were no longer the normal aliens she’d seen, but altered similar to how Harper and his people were. They wielded similar-looking particle rifles, and wore armor similar to the grey stonish armor the Chronicler himself wore.
The only exception to this were the Andromedons, who now sported various organic-like attachments to their suits. “They aren’t going to know what hit them,” Harper said grimly, walking up to her. She still wasn’t used to how he looked now. Harper, and all of his soldiers who had joined him, were now clearly…altered.

The most noticeable were the eyes. They appeared to be somewhat mechanical in nature, and the irises were a glowing blue, with no other colors whatsoever. There was something unsettling about looking into them, and the much more subtle change was that to their skin, which was a shade darker than it was before. Harper had explained this as some kind of…recovery layer, and had demonstrated by cutting his arm and she’d seen the wound almost immediately close.

Still, Abby had to agree with him. “No, they won’t.”

In the distance was Sydney, which had now been turned into an alien stronghold. They must have seen them coming, because there were at least a thousand Mutons in the distance taking up positions in fortifications, barricades, and towers just outside the city, joined by various Vitakara. She wondered what they were thinking, as Australia was the last place they’d expect a major confrontation.

She looked down at her own gauntlets, the same stony texture and color as the rest of the armor the Chronicler and his army wore. It was without a doubt the most comfortable armor she’d ever worn, and durability-wise, it probably ranked up there as well. Like the weapons, the complete interior of the armor had been riddled with the wires which were now embedded in her entire body.

Abby had tried not to think about it as she’d geared up. Even if it didn’t hurt, it made her acutely aware that she was essentially joining with the armor, which was probably why it had adjusted itself after she’d worn it a few minutes, and she noticed continuous tinkering to weight and tightness as it tried to form to what she wanted.

It also had a neat feature which would allow her to go invisible whenever she wanted. Like the weapon, all she had to do was think what she wanted, and it would happen. As far as she knew, there wasn’t a hard limit on time, which raised the question of just how the hell this thing was powered.

That she’d have to investigate later, but as the small army marched forward, she felt she would be putting it to its limits soon. She flipped the helmet around in her hands and put it on, feeling the wires begin the unsettling penetration of her face (eyes and nostrils included), and skull. Abby really wanted to know what the original designer of this technology was thinking when coming up with that feature, because as useful as it seemed to be, it would completely freak out most people.

“Quite impressive, isn’t it,” the Chronicler commented, walking up in full armor and hands clasped behind his back. He certainly was pleased with himself.

Abby nodded. “I really want to know where the hell you got all this stuff.”

The Chronicler chuckled. “That’s a secret I’ll keep for now; suffice to say it is quite scalable.”

“It would also help if you gave this to XCOM or ADVENT,” she added. “Assuming this is as good as you say…we could use it.”

“Trust me when I say that is a bad idea,” the Chronicler warned, glancing to her. “Everything has a cost to use, and technology like this…is best kept away from government and paramilitary organizations. For more reasons than one.”
“Even when the world is at stake?”

“Yes.” He answered firmly. “I’m afraid you can’t fully grasp the consequences without certain… sacrifices. Harper knows now, as do those who joined him. I cannot say more than that.”

That didn’t make much sense, but Abby couldn’t help but feel some agreement with him. Whatever these weapons and armor were, they were far beyond Ethereal tech, and Abby didn’t know if they should be touching this without figuring out how something like this worked, because so much of it didn’t seem possible in the first place.

Besides, the Chronicler was still going to use them, and if things got too bad, he could probably arrive and assist ADVENT or XCOM. However, that wouldn’t happen until Australia was taken, which could be some time yet. It would ultimately depend on how the upcoming battle for Sydney went. All signs pointed to a victory.

But she wouldn’t believe that until the last alien had been executed.

***

Portland, Oregon – United States of America

11/20/2016 – 8:01 P.M.

Roman and his team were mostly prepared for the surprise attack. So surprising, in fact, that no one had really been told until a few hours ago. Apparently ADVENT wasn’t going to sit back and let the aliens retaliate and had decided to just try and take back America for good. One massive strike into the heart of their territory.

He quite liked the plan.

He did not like, however, relying on the trains to take them there. Assuming that the aliens hadn’t touched the tracks with mines or explosives, he just didn’t like trains. Not exactly the best reason, but he found them uncomfortable, confining, and loud. But they all had to make sacrifices, and he had to admit it was a good way to get people excited to be the first out and in.

“[Hope the mindrapers don’t show up this time,]” Elena muttered as they moved to board the trains. She’d recovered with no visible injuries from the battle, although she’d been shaken for some time. Roman didn’t know how recovered she actually was, but she’d told him enough about how completely terrifying the feeling of losing control was.

The more he thought about it, the more Roman didn’t like psionics. It seemed to cause a lot more problems than it fixed. But that wasn’t how the world worked, and they needed to harness the power themselves to fight it. An endless loop, and ADVENT had adapted in kind with the new PRIEST Division, their own army of psions.

“[We’ve got some of our own now,]” Anton said, patting his rifle. “[Think the greys will be more focused on them than us ordinary soldiers.]”

“[Either way, this is going to spook them,]” Galina commented as a team of Lancers boarded. “[I don’t know what they were waiting for, but I’m looking forward to killing a few dozen more of them.]”

“[Get in line.]” Roman smirked as he did one final equipment check. “[The only good aliens are dead aliens.]”
“[It’s a bit funny,]” Elena said. “[I’ve wanted to visit California. But I didn’t expect that to happen while liberating it.]”

“[Assuming that there’s anyone left,]” Konstantin pointed out grimly. “[Doesn’t make sense to keep a lot of civilians around. If I were them, I’d have gotten rid of them a while ago.]”

Roman felt he was correct. As nice as it would be to personally liberate the cities, the aliens probably wouldn’t risk keeping Humans around, especially with ADVENT so close already. He hoped that they were still alive, but he supposed considering what the aliens did to the captives… perhaps it was better that they weren’t.

All they could do was avenge.

And that was something all of them were prepared to do.

***

ADVENT Command – Switzerland

11/20/2016 – 10:55 P.M.

“The final preparations have been completed,” Commander Christiaens informed Saudia through the holographic display. She was joined by a fully armored Weekes, Finn, and the Commander of XCOM. “All forces are prepared and ready to deploy.”

“There are multiple PRIEST Squads prepared and ready to assist,” Finn added. “Both Archpriests of America, and two dozen Protopriests are awaiting the order.”

“Noted, Vicar General,” Saudia confirmed. She was extremely interested to see just how large an effect the PRIESTs ended up having in the battle. Psions could change the course of battles, and having this many on their side? That could ultimately save them. But still, everything had to go exceptionally well.

“I have six XCOM Squads ready to deploy, and two held in reserve in case the Battlemaster or Caelior arrive,” the Commander added, who actually wasn’t armored, which likely meant he would be assisting Laura at the Citadel. “I believe we are ready to begin. There is no point delaying; we’ve been lucky they haven’t done anything until this point.”

“On that we agree,” Weekes said, giving a sidelong look at the Commander. “The Lancers are also ready, and now that the Hussar, Cuirassier and Dragoon Corps are also cleared for deployment, they have been prepared to assist as needed.”

“Excellent, you have my authorization to launch Operations Kraken, Sherman, and Kamehameha,” she stated. “I will inform the public tomorrow morning when the operations are fully underway. Congress will be notified as well, and they will begin drafting legislation for funding for rebuilding and projects, should you succeed.”

“How familiar are they with this?” The Commander asked.

“Familiar enough,” Saudia clarified. “They are aware that we have several major operations being planned, and that we will be launching them soon. This will not be a surprise to them.”

“I have also ordered Korea be put on guard,” Laura added. “If the aliens retaliate anywhere, it will likely be there. We should anticipate a war on two fronts within the next couple days. This could turn into a siege, Chancellor, be sure to warn the public to that idea. Not every battle is
“Noted, Commander,” Saudia nodded. “Good luck to all of you. You will have whatever support you need, and that of ADVENT as well. Wipe the aliens out.”

Weekes gave a wide smile. “With pleasure, Chancellor.”

All the holograms winked out, and Saudia sat down in the chair behind her. Everything was coming together much better than she’d hoped, which made her wonder what they were missing. Contingencies were in place, preparations were made, and they were rested and ready for battle.

Perhaps she wasn’t missing anything. Maybe they had done everything right.

But it was always the unexpected that ruined plans, and that was what she was ultimately concerned about. They could only push the aliens so far before they started an escalation. But that was inevitable.

They wanted a war. Now they were going to learn what that really meant.
There was something exciting about being on the edge of a massive US carrier, surrounded by a half-dozen destroyers, a cruiser, and an even larger amount of submarines beneath the ocean, all moving towards an enemy target in the dead of night. Sierra smiled.

The aliens had no clue what was about to hit them.

“Twenty minutes at most,” Carmelita said, walking up with her helmet tucked under her arm. “Your team is ready?”

“Of course we’re ready,” Anna grumbled beside Sierra. “Fun as these suits are, they’re not exactly light.”

Carmelita’s lip twitched, perhaps in amusement. “Noted, Archangel. You’ll have free reign to attack initial defenses. They likely have AA defenses, so be aware.”

Sierra looked towards the direction of where they were headed. The island of Hawai’i was now in sight, and the ADVENT soldiers were getting ready to deploy; set in specific formations as they prepared to deploy in the helicopters and on the boats with the amphibious assault ships from the supporting expeditionary strike group. Lines of MDUs were visible on the destroyers, also preparing for deployment, while the carrier held the majority of soldiers themselves.

ADVENT was not using their standard soldiers for the initial push, but their elite, including the newly deployed Priests. The standard units that were on the ships were ADVENT Snipers and their respective Officers, who would coordinate sniper fire from the ships while the initial sea invasion began. The landing ships were filled with Shieldbearers, Engineers, and Molosser Handlers.

However, the first wave of ships would be the ADVENT Special Forces, the XCOM squad, and Priests. The Lancers were there, but they were not the most visible ones anymore. It turned out that ADVENT was also using this battle to launch their additional special forces groups, which while not as elite as Lancers, were probably close to their level of lethality.

Dragoons appeared to be Lancers, only with a lot more explosive equipment. Their armor was somehow bulkier, with rocket launchers strapped to their backs and micro-missile launchers built into their gauntlets and additional attachments on their shoulders. Grenades were also strapped to their waists, and some had grenade launchers instead of rocket launchers. Unlike the Lancers who had black armor, theirs was a mixture of black and red, the red color accenting their helmets, gauntlets, and torso.

The other special forces group were the Cuirassiers, who were much more numerous, and what Sierra considered a more ‘generic’ variant, although she wasn’t sure of that. None of the Cuirassiers were as heavily armed, and some actually appeared to be medics instead of purely soldiers. Their armor was much different as well, it wasn’t as blocky and more form-fitting, and was a dull white with blue accents.
The priests though, those were definitely the ones that grabbed the attention of not just her, but most of the other soldiers as well. Their armor was similar to most in ADVENT, but it was more... elaborate. There were golden engravings on the pure white armor, reminiscent of the religious influence that seemed to permeate their ranks. All wore shoulder capes, similar to the Officers, and their helmets were noticeably unique. It was more elongated, and resembled more of a blast shield over the face, with no obvious eye sockets or breathing apparatuses.

There were two types she could see, the basic priests, and the leaders, Protopriests. The Protopriests were distinguished by their golden capes and accented armor of the same color. The golden engraving turned to white if the area around it was colored as well. The Priest armor was without a doubt something she loved artistically. Probably didn’t need to be like that, but Sierra was not complaining.

“Well, this is where the fun begins,” Ted commented as the island grew larger in the distance. He flexed his hand, creating a small ball of psionic energy in it, then made it dissipate just as quickly. “Always wondered if I’d be a part of something like this.”

Sierra chuckled. “Copy that.”

“I’d ready your jets,” Carmelita said, as a klaxon began blaring. “The attack is getting ready to start.”

It definitely was. Jets on the carrier were getting warmed up and moving into position. The landing ships were now accelerating towards the island, and the destroyers were angling their guns towards the island. Their cue to attack would be when the jets launched, and that was going to come in a matter of minutes.

“This is Admiral Walter to all ADVENT Forces,” the Admiral, and commander in charge of this mission began broadcasting. “This operation is authorized to begin immediately. Today we purge the aliens from our homes and land. It is not the first time we have suffered loss at this place, but today we ensure that it will be avenged. Remember the lives lost to these aliens, and return the favor in kind. Begin the attack, Admiral Walter out.”

“Cleared for takeoff!” One of the personnel directing the planes yelled over the sound of the roaring jets.

“Our turn as well,” Sierra said, transitioning to her piloting mode. At her mental command, the Archangel armor began roaring to life and with a running leap she shot into the air.

“Seraph Morrow to Overseer Alba,” she said as they began speeding towards the island. “We are airborne and heading to the target island.”

“Copy, Seraph,” Carmelita’s brisk voice answered. “We’ll be right behind you. Save some for us.”

“I don’t think that will be a problem,” Sierra commented as she had her HUD zoom into the initial defenses. The night vision of the armor was good, although not as clear as she was accustomed to. Still, she immediately spotted the defenses around the town of Hilo. The aliens hadn’t just fortified the town, they’d turned it, and the coast as far as she could see, into a fortress.

“Lower altitude,” Sierra ordered. “Increase speed and ready weapons. We don’t want them sniping us out of the air yet.”

“Yet?”

“Figure of speech,” Sierra snorted. “You know what I mean.”
They swooped lower until there were roughly five feet above the swirling water itself. Even at night Sierra could still make out the blue, although that was probably distortion from the visual feed. Sierra readied her flamethrower, making sure everything was checked ready to use. “Up on the wall, unload at will,” she commanded, and once they got close enough, Sierra angled herself upward and forced a hard stop to her suit.

Just over the height of the wall she raised her wrist and unleashed a sustained gout of flame at the unfortunate aliens patrolling it. They were Vitakarians and Cobrarians who barely had time to scream before the white-orange flame cooked them alive in their armor. Behind them was a barracks of sorts where Mutons and Vitakara began running to get armed and into position.

As Sierra swept her flame gauntlet along the wall, Anna fired her White Phosphorus missile into the mix of aliens, and immediately followed up by tossing several WP grenades to places where the missile hadn’t reached. Ted, psionic energy swirling around his body and especially arms, shot lances of psionic energy at the laser and plasma turret emplacements which were turning their positions to the encroaching ADVENT fleet.

Sierra ceased her dispersal of flame, and pulled out her Gauss rifle and began firing at anything still left alive from the white phosphorus. She scored several kills and headshots as more Mutons began arriving from the connected parts of the base, and now plasma filled the air around her. “Scatter!” She ordered, and immediately took evasive action. And that was when the fleet began their bombardment.

Cracks and bursts of orange light in the distance signaled the guns of the destroyers firing, and the wall was hit with high-powered shells and gauss rounds. One of the alien outposts along the wall splintered and killed the lookouts inside who were communicating frantically, likely to somewhere off-planet.

“We should move along the wall,” Ted suggested as he glided beside her. “Let’s give all the soldiers a fair chance.”

“Good idea,” Sierra confirmed, and angled herself towards gliding along the wall, braking, ascending, and falling as she and the rest of her Host picked off the aliens on it little by little, making it near-impossible for them to even see what was coming, much less prepare for it. Plasma shot into the sky around them, but only a few glancing hits were suffered, and behind them the invasion force advanced, and when it hit land, it would spell the end for the aliens.

Ted gestured and a Muton was engulfed in a small psionic storm, roaring as it fell off the edge, while Anna blasted two Cobrarians apart and Sierra took a more direct approach by swooping around in a tight circle and getting close enough to grab one or two Vitakarians by the arm and fling them into the ocean to either drown or be killed by the coming soldiers.

Another burst of flame from her wrist incinerated another tower, and with that the landing ships were close enough and the Lancers, Cuirassiers, Dragoons, and Priests stormed the beaches. Purple already flared from the Priests as they directed their power at the wall, and the Dragoons raised their explosive devices in the same direction.

Sections of the wall were slammed, cracked, and destroyed in quick succession, and the Lancers led the charge through the breaches. The battle of Hawaii had now truly begun.
The bright moon illuminated the small army marching on Sydney, the Chronicler and his five new followers leading the army, composed of dominated aliens under the thrall of the Chronicler’s psionic power, or perhaps his technology. Abby wasn’t sure anymore. She hung towards the back, having a clear view of the entire battlefield, but suspected that it was going to become exceptionally dangerous for her, and she hadn’t been…improved…like the others.

Best to stay out of the way, and kill what aliens she could.

There would be several stages to his attack, as the city itself was surrounded by now-abandoned residential areas; empty buildings and houses that the aliens had either destroyed themselves or converted into defenses. From what was built before them, it seemed to have largely been the latter. The houses had their roofs completely redone, with turrets and sniping nests on top, and before them were alloy barricades and ground turrets.

For whatever network the Chronicler was using, she was on it, and when the command “Open fire!” was given, she was ready.

The army raised their weapons in unison and began firing. Blue beams of energy slammed into the aliens who had refrained from firing since they’d clearly not known what they were. They paid for that with their lives as the beams cut through the encroaching and exposed Muton force, and shredded the static defenses with ease.

Instantly a city-wide klaxon rang out, and the other defense-houses went on alert, and plasma joined the blue beams in lighting up the battlefield. The Chronicler raised a fist, and the army stopped on cue as a massive purple shield appeared in front of them, easily absorbing all the oncoming fire, and while it completely protected the army, no small feat, it did allow the aliens to begin to organize.

“Submit to me,” the Chronicler growled, extending his other hand towards the mass largely mae up by Mutons and some Vitakara. “Forfeit your mind!”

Immediately the plasma turned towards the emplacements and within several more minutes they were destroyed. The Chronicler released the shield and kept marching forward, Abby continuing to follow. The dominated aliens now formed the front line of his army, and they were coming up on stronger defenses, who were as prepared as they could be.

And unlike the previous force, these were not just organic units, but Sectopods and Cyberdisks as well, with their Drone escorts. Green plasma bolts slammed into the compromised Muton line, downing several immediately, as the rest of the alien forces opened fire. The Chronicler’s army responded in kind, firing their particle beams at the defenders.

The defensive lines were a series of interconnected houses that had undergone similar conversion, with a multitude of turrets, lined by Muton and Vitakara soldiers, with Andromedon engineers. Snipers were deeper in the city, and Cyberdisks hovered above. To the sides were the two Sectopods, plasma guns extending from the ports in their main ‘pods’.

The aliens were already spread out, and the Chronicler’s army responded in kind as plasma rained down upon them, quickly slaughtering the front line, but Abby was pretty sure that was the purpose the Chronicler had intended for them. The stony-armored aliens proved more durable, with plasma shots seeming to be absorbed into the armor, only leaving black residue behind.
As before, the beams shredded the insufficient barricades, with confused alien shouts and cries coming from the alien lines. One of the Chronicler’s new agents, she couldn’t tell if it was Harper or another one of his men, lifted a hand and blue energy seemed to materialize around the palm before it shot out towards the alien line.

The sustained beam of...energy...Abby didn’t think it was psionics, but another application of the Chronicler’s particle weaponry, it easily cut through the Cyberdisk line, causing the machines to explode or simply fall to the ground in pieces, killing or grievously wounding the aliens underneath them. The rest of Harper’s people performed similarly, one aiming at the right-most Sectopod, directly into the place where the main beam was.

The machine tried to get away, but the slow and cumbersome alien machine could not do so fast enough. It took nearly fifteen seconds, but the beam penetrated the armor and burned into the heart of the Sectopod, causing it to explode in a rain of fire and metal, shaking the ground beneath it. The Chronicler raised a hand towards the other one and it was lifted into the air.

Abby could hear the metal groaning as the Chronicler slowly crushed it, dents first appeared on the outside, and the shell slowly began crumpling. Fluids leaked, and small internal explosions were heard. The sound of metal snapping and bending like cheap plastic were the final sounds of death for the towering alien machine, which was tossed aside with a flick of the Chronicler’s wrist as he continued his march forward. “Continue. They will not survive today.”

The surviving aliens were retreating, and flat-out running away, even the Mutons. The Chronicler, voice altered by his psionic usage, chuckled and sharply swept out an arm in front of him, with an arc of energy following his movement. The crackling purple arc swept towards the retreating aliens. It did minimal damage to the buildings themselves, albeit leaving cracks in the structures, but it was instantaneous death to the aliens it hit.

Vitakara and Mutons were bisected from the psionic arc traveling right through them with little resistance, with most not dying instantly. The upper torsos were writhing on the ground, screams from the Vitakara reaching their ears as they bled out slowly, and even the Mutons were unable to suppress the pain of being cut in half.

The Andromedons, what few of them there were, had also died from suit ruptures caused by the arc of energy. But the suits themselves were not gone, and turned to face the Chronicler’s army before being shredded by the hundreds of particle beams. Unabated, the near-silent army continued forward over the rubble, corpses, and metal. There was the occasional blast of blue from a mercy kill, but otherwise there was nothing.

Now came the next phase, after some open land that had clearly been razed by the aliens. The city proper was visibly in the distance, but there were still plenty of residential districts to go. Just from what she’d seen, Abby figured that the Commander was probably going to be fine with the Chronicler running things here.

It probably wasn’t safe to do otherwise, and the Chronicler had not even suffered a single casualty, aside from the recently dominated aliens.

The next defensive structure was dead ahead; similar to the second one, it was an interconnected series of converted houses and barricades, but stretched much farther. “Coming from the side,” Harper informed as the Chronicler’s army suddenly formed a semi-circle as aliens began firing not just from ahead, but from the sides as well.

Abby took cover from behind a tree, glad she hadn’t stayed in the middle, because as good as the armor was, the hailstorm of green plasma hitting the aliens could not be good for integrity. She
supposed that it should be expected that the aliens could flank them, given that they were the equivalent of a dagger striking the heart of the city.

They couldn’t hit *every* perimeter defense.

Andromedon Battlefield Engineers were deploying their shields from the sides, and these were sufficient to provide protection from the particle weapons, although it could apparently be overloaded much easier, since she saw some of the generators explode after a sustained barrage.

Abby looked up and saw a cloud of Cyberdisks flying in from throughout the entire city, and deploying into their battle mode from a good distance away. Sectopods stomped over from the sides, and didn’t bother deploying their guns, only opening up their center pods and charging the main laser. Harper and his soldiers were using their palm-weapons and slicing through generators, aliens, and cyberdisks, but they seemed to be suffering some damage.

A shot from deeper in the city hit one of the Chronicler’s Mutons in the head, and it collapsed with the head smoking, the first casualty suffered. The Chronicler, lifted his arms and twin barricades in front of the Sectopod beams appeared, just as they fired. “*Enough.*” At that statement all the organic aliens clutched their heads, screaming in pain.

One Sectopod was raised into the air, and flung towards the other causing both to tumble away in a crumpled ball of metal, fluids, and explosions. For good measure, a flat, psionic shield slammed down onto the wrecks, smashing it beyond all repair. Whatever the Chronicler was doing to the living aliens, it was awful enough where the Vitakara were shooting themselves in the head, and Mutons were trying to bash their heads on walls or sharp objects.

Harper and his soldiers destroyed the rest of the turret emplacements and Cyberdisks, and with no more plasma fire raining upon them, the rest of the Chronicler’s army put the rest of the living aliens out of their misery until there was a brief silence on the battlefield. Three had died so far, and considering how close they were, that was almost perfect.

Sniper fire still came from within the city, but it was intermittent, and the Chronicler had a shield in front of them as they continued marching forward, ever deeper into the heart of the alien operations in Australia.

Abby realized that she hadn’t had to fire her weapon once yet. For as much danger as they should be in, she felt strangely calm. With the Chronicler around, there didn’t seem to be any reason to be afraid.

She would have wanted to know exactly what the aliens were thinking.

She hoped *they* were scared for once.

***

*Mars Observation Station – Mars Orbit*

*11/21/2016 – 5:15 A.M.*

When Ravarian had been woken up by reports of attacks, the first odd thought that came to his mind was *Hawaii? Why attack Hawaii of all places?*

And not only were they attacking Hawaii, they were clearly intending to *conquer* Hawaii. Ravarian knew that they had to use their navy at some point, but had expected them to focus on defenses rather than for attacking a lone series of islands. It was strange, no matter how much he thought
about it. He understood that the islands had sentimental value, especially for Americans, but in the end, it was a small series of islands in the ocean.

The main hub of the Observation Station was as chaotic as it had ever been. Several dozen analysts and Runianarch strategists were centered around haptic consoles or holographic displays showing feeds from the battles going on.

The short version was that it was going badly.

ADVENT had indeed been working on a psionic branch of their military, and from the footage he’d seen, they were much more dangerous than the Vanguards. There was some obvious variance, but their most powerful Priests easily eclipsed the static capabilities of the Vanguards. He kept his expression clear as he saw two Priests annihilate an entire Muton team, psionically ripping them apart and leaving a gory mess behind.

The Battlemaster was coordinating reinforcements, but at least half the islands had been lost already, and it was going to take an emergency Gatekeeper to have things stabilize, as well as liberal deployments of Muton Elites and Andromedons. Resources that shouldn’t be devoted to an island. Were it up to him, he would have called a retreat and bombarded the island from orbit.

But that would give ADVENT a victory, and a bigger boost in morale. The Battlemaster had a plan, but what that was had yet to be revealed.

And that was before the attack in Sydney had been reported.

He’d thought he’d misheard at first, but no, Sydney of all places was under attack. No one had been able to identify if it was ADVENT, XCOM, or something else because the reports couldn’t agree what they were being attacked by. Oyariah had been cited as a potential perpetrator, and there were apparently other aliens in the ranks, so likely a telepath was behind this.

And now for the question he was trying to answer: Why?

The only possible motive for attacking strange locations, or at least Hawaii, was as a distraction. Was it a distraction for another attack in America? So soon again? Or Japan? ADVENT had been mobilizing forces in America, and they were fortifying in Korea…or were they simply trying to drain the Collective of as many resources as they could? Even if they were ultimately pushed back, it would be the Collective who would suffer a morale loss instead of ADVENT, who could point to the exceptionally high body counts over an unimportant island.

And since they were poorly equipped to fight psions, anything short of bombarding the area was going to cost time, resources, and lives. Ravarian shook his head, just instinctively, thinking how frustratingly slow the Collective was to adapt at times. At some point they needed to be able to win against ADVENT without relying on an Ethereal to ensure victory.

*Return to your chambers, Zar’Chon, it is time to discuss the situation.*

Quisilia. About time.

Without a word he turned on his heel and began walking towards the cylinder lift that would take him to his chambers. Australia was Quisilia’s sphere of influence, so perhaps he would have some idea of what was actually going on. A few minutes later he was in the circular and dimly lit room that had a haptic map of Hawaii and Australia, with the Battlemaster and Quisilia standing over it.

“Battlemaster,” Ravarian inclined his head. “What are we planning in retaliation?”
“I’ve ordered transport reinforcements with a fighter escort,” the Battlemaster answered immediately. “Gateways are inefficient, but they will assist in stemming the advance of ADVENT. These Priests are more numerous and dangerous than anticipated.”

If only there had been some warning that ADVENT was probably doing something like this.

He knew better than to speak that, but he sometimes wondered what the point of his job was if the information he gathered wasn’t actually used. The Battlemaster was smart, he couldn’t deny that, but when it came to Earth it was almost like he wanted the Humans to get continuously stronger, and watch what they were doing instead of intervening in any way.

At some points he wondered if the goals of the Ethereals had changed.

Not changed, but the Battlemaster wants to know the capabilities of the Humans before responding in kind. There is only so much more they can do. They have copied our weapons, armor, and now psionics. What do they have left after this?

Quisilia. While Ravarian could intrinsically see some value in letting the enemy overdevelop and tailor exact responses to that…it still struck him as unnecessary. But that was something to consider for another time. They had a crisis to resolve. “Reinforcements will be needed. Should I request Cleanser Ships?”

The Battlemaster looked at him, considering for a moment. “Request a unit. Hold them here, and do not deploy without my order. Now that ADVENT has a critical amount of psions, additional measures will need to be taken.” He returned his concentration to the haptic map, which was a real-time display showing the territory captured by ADVENT so far. “ADVENT has established mobile Gateways, and their forces are comprised of largely special forces and elite units. Losses they suffer will hurt them.”

The development of Gateways had been an initial surprise, but Ravarian didn’t consider it completely surprising as they were supported by the traitor Ethereal. They had reports of them being built in cities, so their usage in battle was expected.

“Numbers will do little good,” Quisilia noted. “The Lancers especially are enhanced, not to mention XCOM and the Priests.”

“Yes, which is why we will begin deploying several of Fectorian’s units,” the Battlemaster answered. “Elites will also be used. I intend to bleed ADVENT in this fight; winning is unlikely and intervening over an island isn’t a priority.”

Quisilia turned his head toward him. “The Spectres?”

“No. This is a distraction for ADVENT. The Spectres will be useful when their true attack strikes.”

“It’s been hours since their attack,” Ravarian reminded him. “If this was a distraction, what are they waiting for?”

“Unknown,” the Battlemaster admitted. “But let them show their hand before we respond. I have put Japan and our outer territories in the United States on alert. But if they march an army our way, we will know ahead of time.”

“Australia is a larger issue,” Quisilia said, moving around to look at the haptic display of Australia. “What is happening is quite curious.”

“Indeed,” Ravarian mentally pulled up the appropriate file and raised his prosthetic hand and
projected the holographic image of the mystery army to them. “Whatever they are…they do not appear to be ADVENT. Or XCOM for that matter. Their weapons are shredding our defenses, and there is at least one psion with them.” Ravarian allowed a frown. “This doesn’t make sense. If either organization had developed this level of weaponry, why aren’t they using it?”

“Because they didn’t,” Quisilia mused, looking at the image. “Quite curious. Especially since I made sure that the cells were destroyed beyond salvaging.”

“You mentioned there was a psion that escaped,” the Battlemaster noted. “But one psion should not result in this.”

“No,” Quisilia laced his fingers together, sounding amused. “However, it does explain several things. Who else could possibly possess technology more advanced than our own?”

Ravarian cocked his head. “Sovereign tech? Impossible. The Humans would not be able to comprehend it, much less actually construct it. Aside from that, are you suggesting that there is one who is helping them?”

“Not necessarily helping,” Quisilia said. “But it’s quite possible someone found it, and has devoted their lives to solving its mysteries. Interesting they would emerge now. We know they have visited this planet before, as they directed us toward it, but we always assumed it was because of the Humans…” he trailed off contemplatively. “Perhaps it was something else.”

The Battlemaster looked to Quisilia. “Can you handle it, or will you require assistance?”

“I only require two of the Spectres,” Quisilia said, lacing the fingers of his upper hands together. “I will handle this issue decisively.”

Ravarian knew Quisilia was a master spy, but direct combat did not seem to be his specialty. “With respect, Quisilia, that seems inadequate for the task at hand.”

Quisilia gave a short laugh. “I have killed a Director Flagship, Zar’Chon. I have killed millions of Synthesized thralls. Putting down an army enhanced by the gifts of the Sovereign Ones can be handled, I assure you. And if there is a puppet leading them…I can also handle them.”

He waved a hand and vanished from sight. Ravarian decided to trust Quisilia knew what he was doing. If nothing else, if he got himself killed he really didn’t want to have to look after two cats instead of one.

Right now though, the battle in Hawaii was more important, and he focused his attention on what might possibly be the biggest waste of the war on both sides.

***

The Island of Hawai’i - Hawaii

Operation: Kamehameha – Day 1

11/21/2016 – 6:32 A.M.

The Collective was rallying, for all the good it would do them. With their defenses fully breached, they were fighting ADVENT on a street-by-street level, and while they weren’t pushing them back, they were giving up ground far more slowly. This likely had to do with the sudden influx of Muton Elites, and the Priests had reported being disrupted, which meant a Gatekeeper was probably here.
Their telepathic advantage was unfortunately gone, but unfortunately for the aliens, the Priests were still showing just how lethal they were. Having crossed the current battlefield several times, swooping and flying around it, dodging and tanking plasma fire, Sierra had a pretty good grasp on the state of the battlefield.

Time to focus on where they were needed.

“Destroying the Gateways is the priority,” she said as she fired her pulse rifle at several Vitakara who were trying to set up on one of the rooftops. “But it’s too dangerous to hunt them by ourselves without knowing where they are.”

“Not to mention I’m running low on missiles and grenades,” Anna added as she swooped to the side, providing suppressive fire on a street held by several Mutons. One was ripped apart and the others were forced back into cover, which let the four Lancers charge forward and kill the stragglers. “Permission to fly back and restock?”

“Granted,” Sierra allowed. “Make it fast, me and Ted will provide support in the meantime.”

Anna didn’t waste time and was already flying back to the carrier. Sierra glanced around the battlefield, looking to where help was needed. “Carmelita, what’s your status?”

“Making progress,” the lightly strained voice of Carmelita answered, sounds of battle in the background. “We’ve got around twenty Elites on us and another small army of Mutons. Ah, correction, make that fifteen Elites. We’ve got it under control, and ADVENT is coming to support us.”

Sierra smirked. “Copy, we’re looking to provide support elsewhere.”

“Seraph Morrow, we could use your assistance,” the voice of Admiral Walter interjected. “We’re moving up Purifiers to begin cutting off parts of the city to the aliens and box them in. We would appreciate it if you could clear the area of the majority of hostiles.”

“Copy that,” Sierra confirmed as the location appeared on her HUD, on the edge of the city. “We’ll be there shortly.”

She angled herself towards the designated location and shot off; Ted was right behind her. “Purifiers are risky, but they will definitely allow asset denial.”

“And there they are,” Sierra commented as she saw teams of two Purifiers, with one Priest behind them, moving within the parts of the city ADVENT controlled. They definitely moved like robots, slow and methodical, as if each step could blow them up. Since they were carrying ClF3, this was an actual danger.

Probably what the Priest was for. “I can see the problem,” Ted noted as they came up to the street where the Purifiers were supposed to go. “God damn Sectopods.”

An accurate assessment, Sierra had to agree. The two-way street was now utterly wrecked, and there were several dozen Cuirassier and Lancer corpses. This was due to the towering Sectopod in the center of the intersection, flanked by four Cyberdisks. ADVENT was only set up partway down the street, a mix of Dragoons and Cuirassiers firing at it.

The smoking wrecks of several Cyberdisks and the potholed street filled with Muton and Runianarch corpses spoke to some effectiveness, but they were pinned now by the Cyberdisks and Sectopod launching barrages, which only seemed to have had minimal effect due to the two Priests in the back creating psionic bubbles.
However, the relatively untested psions would likely give out after some time. “Provide covering fire,” Sierra instructed, deliberately overshooting the mechanical pod of aliens. “Readying a flame circle.”

“Copy,” Ted agreed, arms awash in the purple mist of psionic power as he caught the attention of the back row of Cyberdisks, shooting weak lances of energy at them. Golden streaks flew his direction, forcing him to take evasive action and not concentrate on building his power. While he served as the distraction, she readied her flamethrower once more.

While not the liquid hell the Purifiers had, Napalm was still effective. From her knowledge of Cyberdisks, ordinary Napalm wouldn’t be especially effective if they were closed. However, when in their battle configuration, there were many vulnerable components exposed which would melt if exposed to a hot enough flame.

As she circled around, going faster than she’d done before in practicing this maneuver, she raised her wrist in preparation. The force might make her spin out of control, but she was going to have to master this sometime. “Ascend!” She barked as flame spat from her wrist, immediately engulfing the front row of Cyberdisks.

She immediately commanded the jets to angle and spin her around the pod of Cyberdisks and while the sheer force almost made her invert herself, she held on and continued shooting the white-orange flame in a circle of fire that caught all the exposed Cyberdisks in a perfect ball of orange. Several loud pops and sizzles were heard as the machines either fell out of the sky or exploded into scrap metal.

Sierra let out a whoop at the sight, adrenaline flowing through her and she stabilized and shot upward, finally slowing down to observe the results. The Sectopod had slightly turned and partially angled up the main pod towards her, the plasma cannon deploying and beginning to fire. It was obviously unaffected by the fire, but that hadn’t been the goal.

Sierra easily avoided the plasma projectiles, although some got exceptionally close. “Keep its attention!” Ted called, shooting more lances at the Sectopod. “The Purifiers are here!”

“As descend, Archangel Morrow,” a synthesized female voice said. “We do not want you caught in the blast.”

“Confirmed,” Sierra acknowledged and shot into the sky and angled towards the ADVENT line. She twisted in the air and looked down to see the Purifiers released their payloads. White-orange flame shot from their flamethrowers and the entire street exploded. The Sectopod was almost immediately blow apart as the joints melted and the hellish chemical seeped into every weak point and crevice available. The abandoned cars also went up in explosions, and the asphalt itself caught fire, as did the buildings around it.

“Burn in hell, alien trash,” Sierra muttered to herself as she looked down at the ground which was a sea of fire that spread far down the street. The Purifiers swept their weapons in small arcs to ensure the entire street was literally on fire. She also noted with some amusement that the alien corpses that had littered the street were just gone; likely vaporized from the flame.

As dangerous as it was, she was considering asking Shen to see just how…safe he could make it to
carry ClF3. Maybe a small amount?

“Did I miss anything—oh,” Anna said as she flew towards them, fully reloaded and equipped. “Nice.”

“We’re not done yet,” Sierra reminded her. “I doubt that was the only Sectopod, and we’ve still got the Gateways—“

“Alien reinforcement ships have just entered the atmosphere,” Admiral Walter suddenly interjected on the open channel. “All air forces initiate temporary retreat. Time to greet our new arrivals.”

Ted whistled. “He’s actually going to do it.”

Sierra grimaced. “I really hated this plan,” she switched the comm channel. “Carmelita?”

“We heard,” she answered. “They know what they are doing. Land temporarily just in case.”

Sierra targeted a flat roof that was a comfortable distance from the burning street, and settled down, just in time to see the faintest image of the alien fleet incoming. “They really want this island,” she commented to no one in particular.

There were at least twenty, maybe more, alien transports likely filled with soldiers flying in, and this was with her HUD as zoomed in as possible. They were surrounded by a mixture of Sectoid Fighters and Scouts, along with odd dagger-shaped ships she hadn’t seen before. They definitely looked like fighters. Vitakara maybe? Andromedon?

“Missiles are away,” the Admiral said, voice deceptively calm, and Sierra witnessed one, then two, then three nuclear missiles shooting towards the oncoming fleet. Using nuclear weapons was yet another questionable decision ADVENT was making, and she had to wonder just why they thought it was a good idea.

Supposedly the negative effects were lessened in the atmosphere, where it was set to detonate, but considering that there was also an accompanying EMP blast, not to mention that this hadn’t been tested in decades if at all, it seemed like a horrendously bad idea. And if something went wrong, or it detonated too early, well, they might all be vaporized or irradiate part of the ocean.

If it did work, though, she would give credit where it was due. It just seemed a massive risk to just test out. Using conventional missiles seemed safe and just as effective.

She was going to laugh if the aliens just shot it out of the sky though.

“So when will it be close enough?” Ted asked as they watched.

“I’m assuming we’ll know,” Sierra shrugged. “Nuclear weapons aren’t exactly subtle.”

Nearly a half-minute later the sky exploded in a blinding flash that temporarily made her HUD see nothing but white. It was a good thing that the helmet protected her actual sight, otherwise she’d probably be blind. Her vision was temporarily restored, only then two more successive blasts were seen and felt, and when the whiteness finally cleared, there was a smoking cloud in the area where the fleet was. Zooming in, she saw maybe a few pieces of scrap metal, but otherwise, the fleet was just…gone.

She waited a minute, and no other ships emerged from the wreckage. She engaged her engines, and floated a foot or so off the ground. They hadn’t been hit by the EMP aftereffect either, so
everything seemed to be ok. She looked back up, and there were still no ships coming. “Well,” she said slowly. “It actually worked.”

“I really want to see their faces,” Anna chuckled as they ascended once again. “What do you think they’re telling the Battlemaster? ‘Sorry sir, I’m afraid we just lost all our reinforcements.’”

“Someone’s probably getting executed,” Ted commented. “Alright, we should go hunt down those Gateways. And we have a Gatekeeper to kill.”

“It might be more effective if one of us just carries a Purifier wherever we go,” Sierra suggested half-seriously as they shot towards the battle once more. “I mean, they destroy Sectopods in one hit.”

“Take it up with Viktoria,” Anna chuckled. “But I’m pretty sure additional passengers are not recommended.”

“In that case,” Sierra said as she checked the status on her gear. “We’ll just have to make do with what we’ve got.”

***

**ADVENT Media Center – Switzerland**

**11/21/2018 – 9:18 A.M.**

The Media Center ADVENT had constructed was one of the less grandiose buildings she normally was in, and she quite liked it for that. It had some of the tightest and most up-to-date security measures invented and rigorous identity checks and facial recognition systems, with ADVENT Intelligence agents watching ensured that no one entered without authorization.

As disconcerting as it seemed for the media, at the very minimum they could be assured that they would be completely safe within the walls. As far as media centers went, Saudia was quite pleased with how it worked. Communication was essential, and if the media was to (hopefully) be an effective source of information, they should have access to pertinent information.

The main lobby of the building had multiple kiosks and rooms for each different branch and agency of ADVENT for the sole purpose of communicating with the media. While not all of them were open 24-7, they were open every day, for the majority of the day. The media was likewise unrestricted in when they chose to take advantage of this opportunity. They could arrive anytime, and either speak with a representative or schedule a meeting with someone even higher up.

As far as Saudia was concerned, when it came to transparency, they had no reason to complain. Of course not everyone was allowed; reporters for extremist, intentionally slanted, or otherwise sources of disinformation were not allowed. The bar of entry was not what she considered exceptionally high, and any media outlet, including those existing on social media such as Twitter and Youtube could participate provided they could prove that their reporting had clear effort put into it in the interest of informing the public.

And to make it better, there was a small restaurant that served multiple kinds of meals that were on the house for ADVENT. Free food and drink always made people more agreeable and dispelled the irritated attitudes people sometimes had. It was hard to write a hit piece on the evil authoritarian ADVENT when they made you steak and a nice cool tea. Or coffee in the morning.

The main briefing room itself was fairly standard. Red carpet lined the floor, and chairs filled the rectangular rooms in a neat order. At the end was an elevated platform and podium which the main
speaker presented from. Behind the podium was a white wall with a red and black ADVENT banner hanging down. There were always two SSR soldiers who stood behind the speaker, as well as two guards per door in the event of emergencies.

It wasn’t uncommon that she addressed the Press, but it was usually scheduled in advance and rarely this early. The room was always filled to the brim, and today was no exception as the media had been reporting nonstop about the sudden attack on Hawaii, and now that the trains had been deployed, they would soon be talking about the rest of the attack.

Three nukes had been launched into the air from the latest reports, which had so far caused no negative effects other than wiping out an entire fleet of alien reinforcements. She had breathed a sigh of relief at that, because as much as the scientists had assured her it was mostly safe, using nuclear weapons was always a risk.

Nonetheless, her risk had paid off and Hawaii would almost certainly fall to ADVENT.

Now, time to begin.

“Ladies and gentlemen, and all citizens of ADVENT. By now you are likely aware of the current military operation taking place in Hawaii.” On cue the reporters scribbled on their notepads and tapped on their phones. “I can confirm that yesterday I, along with the ADVENT Military, Intelligence, and XCOM, authorized an operation to retake Hawaii…”

She paused once again. “In addition to the remainder of the United States,” she raised her voice slightly at the sudden burst of gasps and whispers. “This operation is commencing as we speak, and will strike directly into the heart of alien controlled territory in the country.”

Saudia let that revelation sink in for a few seconds. “The latest reports from Hawaii are extremely positive. We have caught them by surprise and are currently pushing them back until every last one is either captured or executed. Their reinforcements have been annihilated due to our strategic usage of surgical nuclear missiles, which have been deployed in such a way that the negative repercussions are negligible, and the alien reinforcement fleet is in ruins, leaving the islands free for our soldiers to take.”

She briefly swept her gaze across the room. “As for the mainland operation, it is too early to say, but I have every confidence in our brave soldiers who are fighting to ensure that each and every citizen of ADVENT is protected from the aliens. Each of you will be continually updated as the situation develops, and there will be no questions today, thank you all.”

Saudia gave the ADVENT salute and stepped down. Despite what she’d said, the Press always shouted questions as if they expected an answer…just after she had said she wouldn’t.

Maybe she should write a rule against that.

A minute problem for another day. Right now she had an operation to oversee, and she sincerely hoped that it would continue going as well as it had been so far.

***

Mars Observation Station – Mars Orbit

11/21/2016 – 7:07 A.M.

Ravarian, along with most of the Vitakara in the main station command center stared in disbelief at…well, it was a blank screen now. There was nothing left. Disciple-7, who had been assisting in
determining resources and tactics, was equally silent. “Are there any left?” He finally rumbled.

“No,” one of the analysts, a worried Vitakarian woman, said meekly. “No signals or feeds. All of them are gone.”

Ravarian was trying to think of what the Humans could possibly have that could wipe out an entire landing fleet. Three missiles had been detected, but they assumed that even if they hit, the damage would be minimal, and unless they had developed some kind of super missile, even their largest ones shouldn’t have wiped everything out.

*What the fuck happened?* That was what he wanted to say, as Humans did have excellent phrases for almost any situation, but at the moment, the last thing any of them needed to be reminded of was the word *Human*.

“ADVENT aircraft pulled back before the missile launches, yes?” Disciple-7 asked suddenly.

“Yes,” another analyst confirmed. “The spotted Archangel units also temporarily landed.”

“The scenarios are limited,” Disciple-7 said slowly. “ADVENT has either developed a high-yield anti-aircraft missile, or they have launched nuclear weapons. Considering nuclear weapons often disperse an EMP blast, it is imperative that all aircraft and vehicles be outside the radius. As nuclear weapons launched in the atmosphere have limited damaging effects on the environment, using them in this scenario is plausible.”

“Feed from the ground coming in now!” Another analyst called out, and the holographic display showed the airspace the reinforcements had once occupied, which now bore the telltale sign of the nuclear mushroom cloud.

Well, they’d actually done it. Ravarian had wondered if they would resort to using their effective, but highly destructive weapons. Given their historical averseness to the weapons, he had expected it to only come in the later stages in the war, and against ground or high-value targets. For some reason, it hadn’t occurred to him that they could be potent air weapons as well.

Regardless of the reasoning, ADVENT was now willing to use nuclear weapons, and they were also capable of vaporizing entire reinforcement fleets. Which potentially meant that any entry point was now a hazard. And in major operations like attacking entire countries, that would not be a massive target for their nuclear submarines.

And to think he’d actually suggested utilizing the Andromedon Aquatic Forces. Maybe if the Battlemaster had actually taken his advice, they wouldn’t be in this situation now. He was going to bring it up again, now that he’d been proven right here.

At the irritating cost of an entire reinforcement fleet.

The situation suddenly became worse.

“Outpost Two-One is under attack!” One Zararch officer said in disbelief, as the area pulsated red on the holomap. It was joined by more blimps of red. “So is Outpost Seventeen! Eleven!”

Ravarian blinked. This was the expected counterattack, but there shouldn’t have been any surprises. ADVENT couldn’t move an entire army without being watched, and he had his agents watching the main Legions. “How?” He demanded. “How heavy is the attack?”

“Uh…” The officer looked down, briefly speechless. “It appears the outposts affected are…gone.”
“Sacramento, Los Angeles and Redding Bases are under attack!” Another called out.

“What do you mean gone?” Ravarian demanded.

“They aren’t responding,” the Officer said slowly. “The main feeds are offline. Communication is cut. I would suggest it was a bomb…but there was no aircraft reported in the area.”

“How are they attacking the major bases?” Disciple-7 demanded harshly.

“Pulling up feeds,” an analyst said. “Center display.”

And Ravarian was greeted with a very familiar sight. “Trains.” He said without any emotion. He didn’t think there were any other words needed to describe the situation. There were those armored trains his agents had reported, except they were now outside the bases and carrying ADVENT soldiers and equipment. There were turrets on them as well, already firing into Collective defenses.

There were no other words for what he was feeling now; like an idiot.

So that’s what they were for.

He had literally had the information in his hands, and misinterpreted it. Granted, he didn’t know how much blame he should take, and trains were almost never used for anything beyond transportation. He doubted they had ever actually been used in battle before now, but history didn’t matter. The railways they hadn’t really thought to do anything with, and ADVENT was taking full advantage of their ignorance.

He had to admit, they’d outsmarted him here.

“How many of our bases and outposts are under attack?” Disciple-7 asked.

A brief pause as the officers and tacticians looked down at the holomap. “Almost all of the American territories,” one said in disbelief. “They’re going to try and drive us out completely.”

And with how much they’d been outplayed already, in addition to suffering substantial losses, they might very well succeed.

No. Ravarian shook his head.

ADVENT had made their play. Whatever plan the Battlemaster had, he had better plan to put it into motion now. The loss of America would delay the war months at least, and give the Humans a persistent morale boost. They couldn’t keep suffering defeats just because they didn’t want to cheat.

But if so…that raised a rather disturbing question. If the Humans could beat them now in a fair fight, how much more dangerous would they be the longer they were allowed to advance?

This entire operation needed to be reevaluated. But once it was over, one way or another.

***

Redding, California – United States of America

Operation: Sherman – Day 1

11/21/2016 – 9:12 A.M.
“Deploy!” Roman yelled, both to his squad and the other ADVENT teams as the trains came to a stop, gauss fire already pounding from the train turrets. Konstantin threw open the doors and the soldiers poured out of the train cars. Roman activated his PDS field, and knew that for a short time they would be protected.

The rising sun illuminated defenses that Roman found almost laughable compared to what was coming to hit them. At least the way it was now, the train had stopped in front of a clear alien base in the city. It had been some distribution center at one point, but was now fielding plasma turrets, and a substantial Muton garrison that was already rushing to defend it.

Some of the Mutons carried grenade launchers which were already raised at the charging soldiers, gauss fire already rushing towards the aliens. Had the ADVENT force not also been accompanied by every branch of the ADVENT Special Forces, the Priest Division, and XCOM, it might have held out for some time.

The Mutons began firing as they fell into cover, and seemed to stutter as plasma bent away from Roman and his team, as well as every other Shieldbearer deployed. The Muton Grenadiers fired their payloads, but that was almost as ineffective as one of the Priests raised a hand, stopping the grenades in the air, and several were even blasted out of the sky. Probably one of the Hussars, since they were composed exclusively of snipers and scouts.

The Dragoons were almost as impressive as the Lancers had looked initially. They were close to what Roman would describe as walking tanks. One planted itself firmly into the ground, raised their hands and oriented themselves toward an alien barricade, and a stream of micromissiles shot out and eradicated both the structure and aliens themselves in a bright orange explosion.

The train turrets were firing at the main base behind the alien lines, collapsing the doors and sealing any possible reinforcements within. The Lancer Executors finally reached the alien line, and were as lethal as Roman had expected. More so, in fact.

As strong as the Mutons were, they were poor melee combatants. With roars they swung with fists and rifles, but their efforts proved futile as the Lancers bashed their skulls in or crushed their bones. More Mutons fell from Hussar fire who had deployed in makeshift sniper nests on the trains, and within them as well.

“Shield running low,” Roman updated those around him. “Shutting down in half a minute.”

“Acknowledged,” the Officer beside him confirmed, as did his team and the Lancer squad also beside him. Although Roman honestly didn’t know how worried they needed to be. The Muton line was shattered as the Executors were going through and slaughtering the Mutons with seeming ease. More were charging forward from the base, but they ran straight into a hail of gauss fire.

However, these Mutons were slightly different. They had helmets. Not a massive difference, but a noticeable one. Several purple lances suddenly sprouted from the arms of advancing Priests, which were able to damage the armor substantially, leaving smoking and charred metal, even if the Mutons were still alive.

The PDS fields from all the Shieldbearers were down now, so there was no intrinsic protection from the plasma anymore. The outer perimeter was breached, however, and ADVENT was claiming the outer defenses for their own and preparing to encircle the alien force still inside. The aliens were doing likewise, enacting downed barricades and rolling out what appeared to be portable turrets, both automated and manual.

Interesting.
“[Suppressing fire on center-left group.]” Galina informed as she began suppressing a group of four Mutons behind the dark alloy barricade. [Heads up! Grenadiers incoming!]”

Now it was apparent that there was someone smarter coordinating the Mutons, as Roman noticed that the Grenadiers had moved back, and the standard soldiers were taking the brunt of the ADVENT assault. There was enough volume of plasma fire to stop the advance completely, and even the Executors weren’t braving the sudden outpouring of plasma bolts crossing the battlefield.

A few moments later after Galina’s warning, dozens of plasma grenades were shot towards the ADVENT lines, to varying degrees of success. A few were shot, and some were caught by Priests or deflected by sudden psionic shields. Some landed on ADVENT positions, however, extracting the first major casualties from the attacking force.

“Wing Captain Leewood to Redding forces,” the leader of the ADVENT air forces in this attack suddenly said. “The main AA defenses for the city appear to have been taken out. Commencing aerial drops.”

“[Not a moment too soon.]” Elena commented. Roman concurred, this was where the main wave of reinforcements was going to come from, before the main army itself of course. The airdrops would bring soldiers, supplies, and even some tanks. Speaking of vehicles, the MDUs should be coming up soon…

Right on cue the lumbering white robots strode up behind the lines, and began laying down their lethal firepower against the Muton defenders. The high-powered lasers didn’t kill them in one hit, but it did keep them in cover. Several Dragoons protected by Priests stepped out and unleashed their payloads on the Muton lines, blowing holes in the barricades and Mutons themselves.

Roman observed that the majority of Muton soldiers began focusing their fire on the MDUs, and managed to take a few down from the sudden green barrages, but this just left openings for the rest of the soldiers to focus fire on the defenders. Roman fired several shots and the barrage of fire hit, but didn’t kill it, though the second shattered the weak alloy helm and blew the head of the Muton apart.

The Priests in the area were now also taking the upper hand. While few, once entrenched Roman could see just how powerful they could be. A storm of psionic energy destroyed one squad of Mutons, cutting through their armor with almost no effort. Random Mutons suddenly began attacking each other, although they were quickly subdued.

Other Mutons were lifted into the air and exposed to the full firepower of ADVENT, while others deployed defensive shields, allowing the Engineers to construct makeshift cover from corpses, and deploy the portable cover they always carried with them. “This is Buckeye One coming in to reinforce,” a female voice came over the radio. “Stand by. ADVENT Reinforcements dropping close to your position.”

“[Looks like they’re here!]” Anton whooped, glancing up. Roman briefly followed suit and saw the planes overhead and parachutes opening up as tanks and soldiers were dropping. An XCOM Skyranger shrieked overhead flying at a ludicrously low height and one figure jumped out, shimmering with a purple shield over the body, and fell towards the Muton lines.

Roman blinked as he saw…him? Her? It wasn’t easy to determine gender from armor, but whoever it was, they were attacking the Mutons with a damn axe. A Templar, one of the XCOM psions that fought in melee then. He hadn’t seen one properly in action before, and it was rather amazing to behold. The soldier must have been enhanced beyond psionics, as they were striking with enough force to puncture the helmets and killing the Mutons in one or two hits.
As the soldier was covered in the purple shield, nothing seemed to be able to damage them, and the soldier seemed to laugh off plasma as they struck, kicked, and dashed from alien to alien, fighting with a zeal that was even forcing the Mutons to back off, despite outmassing the Human by a significant margin.

The alien lines were faltering, and the XCOM squad that had arrived was now entering the fray. One of their gunners began striding right into the alien lines, yelling for them to advance as another Templar joined the first one in taking the fight to the Muton lines. That was the cue for the Executors to charge the front lines, and they joined in the carnage, eradicating the Muton lines and clearing the way for them to advance.

“[Move forward!]” Roman commanded, seeing a fairly safe opportunity to move forward. The Mutons were in full retreat, and they were being picked off as they ran by the Snipers, Hussars, and MDUs, not to mention the Executors and Templars running them down with a furious rigor. The first alien stronghold was taken.

The battle for Redding was fully underway.

***

Near Los Angeles, California – United States of America

Operation: Sherman – Day 1

11/21/2016 – 9:02 A.M.

The dimly lit train rattled as it sped towards LA, although Patricia wasn’t focusing on that, nor the soldiers around her. Eyes closed, she tried getting a sense of what was going to be facing them within the next few minutes. LA was expected to be heavily fortified, but she had taken Vegas without extensive strenuous effort, and she could do the same here.

Creed would lead the actual assault in her stead while she exerted her telepathic dominance over the aliens, and the squad she had would likely perform expertly. It was going to be the first conflict for some, such as Sussan, but the new psion would likely perform well once the battle began. Just in case, she had been sure to project a calm aura over the entirety of the train itself.

“Quite a curious plan,” a familiar voice mused as a shadowy figure stepped up beside her. “Yet I am not sure you consider the…consequences of such an action. Your strike, while bold, is one of escalation; a grasping chance of exploiting your apparent advantage before it is lost. One I cannot fault your species for, but you should know the reality of the situation better than most.”

She turned her head to see herself standing directly beside her, a perfect replica except her double wasn’t wearing the helmet she had on now, and the eyes were pools of black. She briefly glanced around at the others in the train car, and none of them seemed to notice the figure. How shocking. The doppelgänger smiled slightly at that.

What are you doing here now? She thought, knowing the Imperator would be able to hear her. Don’t you have better things to do?

“Considering all of this is the result of my decisions, I have a vested interest in keeping my eye on it,” he answered, the deep voice sounding wrong coming out of her mouth. “And the scale of this is one that I am personally interested in. You don’t know what you will unleash with this.”

Get to the point, or get out of my head. She thought with as much disdain as she could muster, narrowing her eyes at the figure. I really do not have time for more of your mind games.
“This is what will happen,” the Imperator said, her double clasping its hands behind its back. “Los Angeles is a stronghold of thousands of Mutons, a network of twenty-five Gateways, and five thousand more mechanical units including Sectopods, Cyberdisks, and Seekers. Enemies which you are poorly equipped to handle.”

Which is why I’ll focus on the thousands of Mutons. She responded. Like how I’ve always done it.

“Your attack will initially succeed,” the Imperator continued. “You will gain ground. The Mutons will fall. You will dominate them. Yet I am amused you have not thought about how this is going exactly as you planned. Why are you allowed to attack with no initial response?”

Patricia smiled under her helmet. Because maybe we outsmarted you?

Now the Imperator was amused. “No. The only reason your initial attacks are succeeding is because the Battlemaster is waiting. He wants you to make the first strike. He wants to see the composition of your forces, because then he can counter them. The Battlemaster is many things, but he is not someone who can be easily tricked.”

I don’t suppose you’ll tell me what he is planning then?

“The Battlemaster is one of the few I cannot read, but I can certainly speculate,” the Imperator nodded, the unnatural smile deeply contrasting the black pools of eyes. “Fectorian has been developing infantry units. These are far more powerful than the ones you have been fighting. You have little experience with controlling a mind enhanced by cybernetics. You will try, but you will exhaust yourself long before the battle is over, not because of your lack of power, but the incorrect application of it.”

Get to the point.

“Of course,” he raised a gauntleted finger, pointing it at her. “You are powerful, Patricia, but almost all you have learned has been through trial and error. Experimentation. You have had no training. You have had no teacher. At this point you have as much mastery as the ancient Ethereals of old who had begun to fully harness the Gift. Aegis has certainly done what he could, but he is no telepath, as I have said before.”

Again, get to the point.

“I can help you,” he said. “The cybernetic mind is one that can be dominated as easy as an organic one…but it is different. The techniques and outcomes are changed. All you need to do is allow me to transfer the technique directly into your mind. I will do that, and nothing else.”

Patricia had to smirk at the absurdity of that statement. Do you really think I’m that gullible? I’m not stupid enough to think letting you into my mind would just be for information.

“And what motivation would I have for lying to you?” He asked knowingly. “I could break your mind at any point, Patricia, but I am choosing not to. If I intended to do such to you from the start, we would not be speaking now. There would not be choice. But you have one, Patricia, your choices are true and they matter. Your choices will decide the outcome of this war and the future of your species.”

He smiled at her. “I am simply offering you one more, with no catch, aside from the consequence that your mastery over the Gift will grow. I will be watching, and if you choose to accept my offer, I will be waiting.” With that, he instantly vanished from sight.

She would have found his dramatic exits amusing if the conversations weren’t so disconcerting.
She jolted as a hand rested on her shoulder. “Hey, you alright?” Creed asked, cocking his head. “We’re almost there. Can you sense anything?”

“Fine,” she said curtly. “I’m…ready. There are a lot of Mutons. Sectopods, Cyberdisks, and Seekers as well. More Gateways than expected I think too, Muton minds aren’t the clearest.”

“Allright, good,” he nodded, and all of them gripped their weapons as the train began slowing down. “Prepare to deploy!” He ordered, with all of them and the ADVENT soldiers lining up at the doors. The Archangel Host was supposed to deploy immediately after initial engagement, so Patricia knew that would give some extra flexibility in dealing with the immediate entrenched defenses.

And now she could sense the hordes of aliens directly ahead, Mutons of all kinds. The question then was what she was going to force them to do. There were many options, but she felt like it would be best to…take advantage of the information the Imperator had given her.

Sound seemed to slowly fade as the doors opened and the XCOM and ADVENT soldiers charged outside and towards the fortified city. She stepped out half-aware of her surroundings, the map of minds in the city dominating her own sight. With one hand extended towards the mass of concrete, stone, and metal, psionic power flowing around her, she began to dominate the minds of those within.

With each mind she infected like a virus, she gave a specific order: *Destroy the Gateways.*

She wouldn’t have to worry about cybernetic units if there wasn’t any way for them to come.

What she didn’t see, was the immaterial form of the Imperator standing behind her, observing with the faintest of smiles on the face of the doppelgänger he imitated.

***

Sacramento, California – United States of America

*Operation: Sherman – Day 1*

11/21/2016 – 9:27 A.M.

Oliver had gotten used to psions over his time spent in XCOM. Once you got past the whole ‘doing things with their mind’ part, they were regular nice people. Iosif beside him was one such psion he got along with easily enough, and of course respectful to his fellow soldiers. The new psion Moriai Jin was also a pleasant soldier. While supposedly weaker than most psions, he was dedicated to being as helpful as possible.

Geist on the other hand, was unnerving.

Every single action or word spoken by the man seemed to be calculated and deliberate, with a delivery that would make a machine seem to have more emotion. And when Geist decided to actually put some emotion into his voice, it sounded nothing short of malevolent and sinister. He had yet to put on his helmet, despite everyone else doing so, and seemed utterly unmoved by the oncoming sounds of battle ahead.

Granted, all of them were soldiers and used to battle at this point. But from what Oliver knew, Geist was not even a soldier, but someone they had recruited from the PRIEST Program. He’d also gotten the feeling that during the brief time they’d spoken, Geist had been poking around in his head.
While he didn’t necessarily have anything to hide, the number of people he would be comfortable with in his mind did not include Geist among them.

However, the Commander apparently had enough confidence in him to make him Overseer…so he supposed they would have to wait and see how it went. The skyranger lights turned red, indicating that they were coming in for a landing. Unlike some of the other squads, they were not going in on the trains, but to reinforce by Skyranger.

“Do not move forward until I give the order,” Geist stated in a tone that did not allow compromise. “We will appraise the situation on the ground, then deploy as needed. Understood?”

“Yes, Overseer!”

The Skyranger ramp descended, and they were greeted with the sight of a mix of ADVENT soldiers, Lancers, and Cuirassiers engaged in a perimeter shootout with a large contingent of alien defenders who were within the city itself. The aliens had actually demolished much of the outer buildings by the tracks, and there was a small no-man’s land between the converted defensive towers, and the ADVENT forces.

The Engineers had set up some small defenses, but most were using the train itself as a defensive structure. The train defenses were firing at the aliens, and there was visible damage, but it was an essential stalemate until ADVENT decided to commit. Focusing on the alien defenses, Oliver saw that the ground forces were a mix of Muton soldiers and Elites. Not good.

It appeared the aliens within the structures themselves were Vitakarians, snipers and soldiers occupying all four floors of the building and raining green plasma down on the ADVENT train. “Telepath Jin,” Geist said slowly, raising a hand. “Establish telepathic enhancement to as many sniper and long-range personnel as you can. Templar Bronis, gather the Lancer Executors in the vicinity and prepare to move forward. You may take Engineer Kun to assist.”

“I can do that,” Iosif said slowly, shifting the mace in his hand. “However, I don’t necessarily command them—”

“You will take command temporarily,” Geist stated flatly, not looking to him. “If they refuse, inform me and I will take care of it. Understood?”

Oliver winced. This did not seem a good tactic, and one ADVENT would not approve of. Iosif just started walking to the respective Lancers with a brief nod and Nuan followed him. Jin was already finding a safe space to begin his own telepathic support. “Scout Man, Assault Darego, move towards the designated Goliath drop point and prepare to provide covering fire.”

“Yes, Overseer,” Khulan Man nodded as she and her Nigerian counterpart dashed off to where the drop point was.

“The rest of you follow me and fire at will,” Geist said, and they began walking; walking way too slowly for Oliver’s liking, towards the ADVENT line. It was maddening, he wanted to run to some kind of cover, but he really couldn’t. He didn’t know if it was Geist or some innate knowledge that sticking to the psion’s side was best, but he felt unnecessarily exposed.

“What’s the plan, Overseer?” David Cannon asked, his rifle raised. “I assume you have one?”

“The enemy has the defensive advantage, and we will suffer unacceptable casualties if we attempt to cross,” Geist stated. “Their primary support is within the two defensive towers, with secondary support on the ground. With the towers negated, and cover established, ADVENT can make a
methodical charge forward.”

“Right,” David said, noticeably unimpressed. “And the plan?”

“Join the initial fight,” Geist said, pressing a button on his wrist. “This will be unnecessarily difficult without coordination.” His arm suddenly was engulfed in purple energy, and he motioned towards the open space and purple shapes suddenly materialized out of nothing. “The cover will protect you,” Geist assured him. “Aegis has been helpful in refining my applications of psionics.”

Oliver looked at David and shrugged. No reason not to do it, and no matter what he thought about Geist personally, he did appear to be a competent psion. With that in mind, they charged towards the shimmering shield arranged into cover. Now green plasma was raining down upon them, and both of them managed to avoid the worst of it and on instinct Oliver slid into cover.

Interestingly enough, despite being translucent, the cover held and some quick testing did seem to indicate it was steady. Well, as plasma bolts started hitting it and vanishing, that was proven rather quickly. Oliver wasted no time in firing back with his gauss rifle, aiming towards the Mutons on the ground since they were easier to target.

“This is XCOM Psion Geist to ADVENT forces in the immediate vicinity,” Geist said over the radio. “All PRIEST Division forces in the area please converge upon my location. Remaining forces prepare to advance. XCOM Goliath support is incoming shortly.”

“Think they’ll come?” David asked as he fired.

Oliver managed to hit one of the Mutons, although not kill it. As nice as the enhanced eyes were, it still wasn’t possible to turn assault rifles into sniper rifles. “If someone sounds like that and orders you to come? I think you get over there.”

“Yeah,” David grunted. “I don’t want to make him angry.”

They continued the fight for minutes more, and now there were ADVENT soldiers who were also taking advantage of the psionic cover and taking much better shots at the aliens. The ground suddenly shook, and a look back confirmed that the Goliath had indeed landed. The lumbering behemoth raised the massive gauss weapon and immediately started firing at the defensive towers.

The bare battlefield suddenly was lit up with more psionic shields acting as cover, painting the whole area with purple streaks. “ADVENT Forces advance at will, stand by for tower negation.” A few moments later, the towers were suddenly encased in purple. It didn’t seem to be doing anything, but all fire was immediately stopped.

Huh. He had to admit that was a pretty good tactic. “Forward!” Iosif yelled, and with the sudden ceasing of the majority of plasma fire, he and the dozen or so Executors dashed through the maze of psionic cover towards the now-weakened Muton line. ADVENT soldiers were also charging forward and taking places behind the cover.

Oliver and David followed suit, getting closer and closer to the defensive stronghold itself as Iosif and the Executors hit and began destroying the ground line of aliens. Armor didn’t protect them as Iosif bashed their joints, heads, and weapons with his mace and more often than not seemed to kill on contact with a vital body part.

The towers were still imprisoned, and Oliver watched with some amusement as the aliens inside were trying to break the shield by shooting or hitting it. Out of curiosity, he looked behind to see Geist with a dozen Priests beside him calmly marching forward. So encased by psionic energy was
Geist that Oliver found it somewhat difficult to make out his form.

The Priests beside him were also enshrined by psionic energy, though now they were gathering it in preparation for something. The answer to that came shortly, as the shield to the first tower fell, and it was immediately hit by the Goliath’s weapons, and purple maelstroms of psionic energy. Rockets from ADVENT Rocketeers also slammed into the tower, telekinetically enhanced by the Priests, and within a few short minutes the first tower crumbled to the ground with a crash.

The second shield fell soon after, and it met the same fate once the Goliath fired a half-dozen missiles at the structure, and the Dragoons and Priests unleashed their tools and powers on it. The moment the second tower fell, all of the psionic cover disappeared and as ADVENT rushed to claim the previous alien territory, Iosif and the Executors cleaning up the last of the aliens, Geist looked further into the city.

His golden-rimmed eyes flicked minutely every second as everything was taken in, calculated, and planned. The neutral expression on his face didn’t change, but briefly Oliver thought he saw some satisfaction flicker over it. “We move forward,” Geist said as he strode up. “This was a first engagement. Now the real battle begins.”

Despite that, after the display Geist had put on, Oliver wondered just what the aliens would have to stop them.

Hopefully nothing. It would be good to see them run for once.

***

Mars Observation Station – Mars Orbit

11/21/2016 – 10:17 A.M.

ADVENT had finally shown their hand, and it was one with more ferocity than the Battlemaster had expected. He had, at most, anticipated ADVENT attempting to completely secure Nevada and perhaps the outer cities of California. But instead, they were going to attempt to push the Collective completely out of the country itself.

Now that the Zar’Chon had confirmed that ADVENT was mobilizing their full army, if there wasn’t a suitable response, they would succeed. Now that ADVENT was fielding psions, he now had to contend with the possibility that they wouldn’t succeed, or at minimum suffer heavy losses. ADVENT had escalated this conflict, however, so he would need to respond in kind.

There were three holograms before him, Fectorian’s Replicas he’d begun seeding throughout the Collective military. While the machine intelligence was not perfect, they could be isolated and their purpose was to report and observe without the risk of falling to telepathy, exhaustion, disease, or poison.

Now that the chocolate problem had become more…extensive, poison was an actual concern, if largely unwitting.

He felt frustration at that thought.

No time to focus on it though. Pushing that away, he addressed the holograms, all reporting from different cities. “Have the assaulting forces been categorized completely?”

“Confirmed, Battlemaster,” the Sacramento Replica said, having the appearance of a Vitakarian female missing one eye. “Corroborating data with other units indicates a similarity in unit
These initial attacks are composed of ADVENT Special Forces, and a varying amount of XCOM support. We are currently facing a Goliath-class MEC, and an unknown number of psions."

"Due to unit irregularity and comparison with previous battles, it is likely that XCOM Psion Patricia Trask is attacking this location," the Los Angeles Replica reported, appearing as a Vitakarian male. "We are losing substantial ground."

"Reinforcements will be arriving shortly," the Battlemaster assured them, glancing down at the data stream to confirm their uploads. This was all he needed. "Continue observation and engage as needed."

He shut off the holograms and the image reverted to the haptic map of the United States. So ADVENT wanted a fight. They had committed their forces to driving them out, but they had made the mistake of assuming that his resources were finite. While in actuality they were, the numbers were so far beyond what ADVENT could contend with they were virtually limitless.

However, he was never one to throw away resources unnecessarily. Even Mutons didn’t need to be wasted.

But there was a problem here: The Collective had a distinct lack of advanced units to counter the elite units of ADVENT and XCOM. Fectorian’s soldiers solved this to an extent, and the Elites played a substantial role, but one-on-one, a Lancer or XCOM soldier, much less a Priest, was a match for any soldier in the Collective, and usually exceeded them.

He would have to take a hard look at the military composition and make adjustments once this battle was over.

He pressed a button on his wrist, signaling for the relevant beings to meet him. It was time to fully launch their attacks and counterattacks. He brought up a haptic display and sent the signal for the designated fleets to begin arriving in the Solar System. He was going to need a lot for what was coming next.

The door slid open soundlessly and those he had summoned began walking in. The Zar’Chon of course, along with Disciple-7, and finally two of the Creator’s Chosen, the so-called Hunter, or “Dave” as he liked calling himself. He had another name, but the Battlemaster saw little point in using it. He had a tendency to be disrespectful, but as long as he did the job, the Battlemaster could tolerate it.

Considering he came from the Creator, it was understandable that the alien had developed means of coping.

Then there was Senorium, the unflinchingly loyal zealot and complete tool. Little independent thought, but he had his uses. Then came the two Guardians, who the others had clearly never seen before. The Warlock bowed deeply, and even the Hunter stood at attention. The Zar’Chon did likewise, and Disciple-7 didn’t react whatsoever.

“ADVENT has revealed their plan,” the Battlemaster began. “It is unlikely they have the resources to launch additional attacks. At this moment our major bases are under attack, and they are facing trained psions and genetically enhanced special forces units. In addition, they have revealed that they are capable of eliminating fleets entering the atmosphere using nuclear weapons.”

He swept his gaze over them. “ADVENT is willing to escalate this conflict. We will oblige them.”
“What is the plan then?” The Hunter asked, a sly smile on his face. “Bomb them from orbit?”

“No,” the Battlemaster said flatly, slightly offended that was even a suggestion. “We will launch attacks of our own. I have identified appropriate forces to respond to the current attacks, and depending on how those hold, we will take additional measures.” Parts of the map illuminated red. “I have authorized a full invasion fleet against Alaska, the Yukon territory, and British Columbia. This is in immediate effect.”

“They will not expect that,” the Zar’Chon nodded approvingly. “Their forces are out of position.”

“In addition, I have also authorized an invasion force to target Mexico,” the Battlemaster continued. “Specifically, the city of Guadalajara and the surrounding area.” The Battlemaster looked at the two Chosen. “Your…sibling…will lead this attack.”

He pressed a button on the console and the map shifted to one of Asia. “Finally, the attack on Korea will commence as planned. Hunter, you will participate in the attack.”

The Zar’Chon seemed slightly taken aback at the plan, but nodded nonetheless. “And what of us, Battlemaster?” The Second Guardian asked.

“You will stay until the situation develops further,” the Battlemaster said to her. “However, you may coordinate the attack on Alaska and Canada. You may be needed in California, First Guardian, but it is too early to make the assessment yet.”

“And what of me, Battlemaster?” The Warlock asked.

“You will accompany me,” the Battlemaster stated. “I intend to show ADVENT the consequences of escalating this conflict.”

**Redding, California – United States of America**

**Operation: Sherman – Day 1**

11/21/2016 – 11:24 A.M.

The fight had been taken from their initial command bases to the streets of Redding itself. They had taken a short amount of time to regroup and refuel after taking the base, and Roman had gotten word that the other attacks had gone similarly well and that ADVENT was sending the Legion proper to help mop up, assuming they didn’t purge the aliens before that point.

Priests, XCOM, and Lancers; there seemed very little that could stop them when working together. Even more so as they marched down the streets themselves.

The aliens had been working on constructing more turrets and barricades on street corners and in intermediate places between intersections, but they were clearly not prepared for an all-out assault. Roman actually believed that they had expended the majority of their Muton force, since now they were fighting Vitakara Runianarch soldiers.

Red lasers and green plasma was exchanged down the streets, but the Runianarch were clearly going to fall soon. In addition to all of his squad, his march forward was accompanied by a full Dragoon team of four, two MDUs, and three XCOM soldiers. The one Templar had turned out to be a woman, Ellinor Aagard, who was joined by two more soldiers, Rosario De Leon and Fakhr al
Din, the latter also carried enough explosives to be a Dragoon.

The Priests were assisting elsewhere, but frankly, they weren’t needed.

Two Runianarch fell to his rifle shots, largely thanks to Galina pinning them in place. More were running up, or slithering in the case of the armored Cobrarian soldiers. Those were definitely the most unsettling, as the idea of fighting man-sized snakes was something he’d only really heard about. The Borelians were the hardest to kill by far, still fighting after sustaining what he would consider lethal wounds.

“Firing rocket!” Fakhr yelled, launching a missile towards a barricade several aliens were hiding behind. Several were killed in the blast, and the soldiers quickly picked off the ones who ran away. Maksim seemed pleased he sniped a fleeing Vitakarian and Cobrarian in their backs.

“[They don’t take hints, these aliens.]” Maksim commented as another shot brought a Borelian to one knee. “[Brave aliens, but I don’t think we’ve taken many losses yet.]”

“No,” Roman agreed as he fired some more shots at the aliens. “[I don’t think we have.]”

Ellinor had largely been standing in the middle of the street, maintaining a psionic shield in front of her, while she protected everyone else as they advanced. The Dane Axe, glistening with alien blood was hooked to her side, since she apparently needed two hands to maintain the various psionic shields. Now that they were close to the major intersection, which the aliens had turned into a mix between a checkpoint and tower, she dropped the supplementary shields and grasped the axe in her hand.

“Hit the tower!” She yelled to the Dragoons. “Everything you have! Fakhr, you too!”

“Locking on for barrage,” one of the Dragoons stated, planting himself in the ground, the other one joining him. Roman saw launchers extend from their shoulders, angling towards the intersection. “Firing.” A dozen micro missiles shot into the sky and descended on the frontal position of the aliens in seconds.

With nowhere to really run, most aliens in the area were ripped apart by the blast, and Ellinor charged into the fray. Roman and the rest of the soldiers took this opportunity to charge as well. Laser blasts from the MDUs took out soldiers hiding out at the top of the platform overlooking the intersection, as well as those hiding out in the buildings.

Fire licking at the metal and aliens still alive, they were already backing up, although the confined space did very little against Ellinor who took all of them on in a fifteen-to-one charge. Or at least it would be that way until ADVENT caught up with them and had clear shots through the smoke and metal.

But Roman could see some of the action. Nothing seemed to be able to touch her as she not only slammed the axe down on the various aliens, particularly focusing on the Borelians who had parts of their face exposed, but also disoriented them by lashing out with her hand and throwing them back with the force, or lashing out with an armored foot towards the joints.

By the time Roman and his team had clear lines of sight, the aliens were either on the ground and killed with straight execution shots, or they were dead. One shot killed a Cobrarian soldier, and Roman looked up to see Ellinor bury the axe in the faceplate of a Borelian soldier, kicking the now-dead soldier away. “Think that’s all of them here.”

“Nice work,” he complimented, taking the opportunity to reload. “Don’t know if we needed to
“Even help.”

“No,” she surprisingly agreed, twirling her axe, flinging yellow droplets of blood around.

“But it is appreciated.”

“We’ve got Andromedons incoming!” Rosario yelled from outside. “A lot of them from two sides!”

“They probably have an Andromedon leader,” Ellinor said contemplatively to herself. “Saving their own for last. We hold out here, we can probably take the town.”

“Unless they have Gateways,” Elena pointed out. “Do we have enough to withstand a flanking attack?”

“That depends on how many they’re attacking us with,” she said slowly. “However…we might be able to even the odds a bit.” She pressed a finger to her helmet. “Captain de Leeuw, requesting an airstrike at the following location. Andromedon forces are converging.”

“Request received, A-10 squad being sent to your location, hold out for a little while,” the answer came instantly. “De Leeuw out.”

“Fakhr, set up main defenses on the right flank!” Ellinor called out, as she motioned to Roman. “You and your team will help me hold them back until the A-10s raze them.” Roman nodded, and they dashed out from the platform to the left side of the intersection.

“Well, that’s not good,” Galina commented as she saw the Andromedon force approaching. There were a minimum of a dozen Andromedons marching forward…and it appeared they had received some kind of upgrade. They marched directly down the street, unafraid of any oncoming fire, which Roman assumed was because of the red shield that was being projected from small mechanical extensions on their arms, which didn’t seem to interfere with holding and firing their weapons on the now-defending ADVENT forces.

Behind the front line of Andromedon soldiers were some Battlefield Engineers, and there was another hulking unit that Roman hadn’t seen before; this one didn’t seem to carry any weapons, and bore massive tanks on their backs, with what looked like chemical dispensers on the arms.

“Contamination Operatives,” Ellinor said grimly, hooking her axe on her waist. “We can’t let them get near.”

“Thank you for that very helpful advice,” Maksim said deadpan. “I can see why XCOM are considered the experts.”

“Yeah, yeah,” Ellinor snorted as the plasma fire began hitting their position. “However, I can keep them in place for a time.” Arms glowing with psionic energy, she thrust out one hand and a massive psionic shield stretching from one side of the street to the other appeared, taller than the Andromedons themselves.

The aliens stopped and began shooting the shield experimentally, although they quickly found out that it was pointless. Instead they began backing up, presumably to find a way around, before Ellinor chuckled. “Oh no, you’re not running away.” It was difficult to see, but Roman thought he saw another shield go up in the background, effectively trapping the Andromedons in a neat purple box.

“Here it comes!” Anton yelled as the sound of aircraft overhead was heard. Ellinor let the shield fall and the Andromedons barely had time to make a decision before the sound of the A-10 guns ripped
through the air and shredded the area the Andromedons inhabited. Their suits were punctured, scrapped, and in some cases a plasma weapon exploded.

The sheer volume of fire and damage even rendered the suits unable to come back to life, and all that was left were a pile of Andromedon corpses and suit wrecks. “That was fun,” Ellinor commented, turning around. “Let’s go help out the others.”

Roman turned to follow, thinking that even with the Collective trying to make advancements of their own, it didn’t seem to help them much when psions were involved. And really big guns. The battle for Redding wasn’t over, but he didn’t see a way that they could be stopped.

Their victory was only a matter of time.

***

Sydney Outskirts – Australia

11/21/2016 – 8:22 A.M.

The city proper was in sight, and the aliens were struggling to actually combat the Chronicler’s army. There had been a few losses, but the numbers were continuously replaced by the Chronicler dominating the next group of aliens encountered. They were now engaged with an Andromedon defense force, who had presumably also been the ones responsible for the red shield going over the inner city.

These Andromedons also had rectangle energy shields in front of them, apparently projected from new forearm attachments. They actually were managing to hold up against the particle weapons of the Chronicler’s army, but at the same time, they were overloading them far quicker than Abby presumed was normal.

But in true Andromedon fashion, they were handling this with some degree of intelligence. Soldiers were almost immediately swapped out if the personal energy shield fell, and drones flew in front of the Andromedon, deploying another shield to absorb fire while the Andromedon retreated and another took his place.

At the same time, their plasma weapons were not highly effective against the Chronicler. At best they were absorbed by the armor of the aliens, and otherwise didn’t do anything at all if they were absorbed by psionic shields or missed entirely. Sniper fire was still steadily coming in from the city, also to limited effect.

“Enough of this,” the Chronicler growled, dropping the psionic protection and extending a claw-like hand towards the Andromedon line. “Your shields cannot protect you.” The area around the Andromedon lines was suddenly distorted, and to Abby it almost looked like the reality itself was being warped and compressed.

The Andromedons were suddenly flattened and crushed under the psionic grip of the Chronicler. Yellow chemicals rose from their shattered helms and the suits sparked as they were broken. Drones became metal pancakes and weapons exploded in green flashes of plasma. How many had the Chronicler killed there? Twenty? Thirty?

How long could he actually keep this up for? They’d been fighting non-stop for at least four hours now, with the Chronicler performing similar feats against the aliens. On some level he had to be enhanced by the suit, but even then he was still one man.

Limits were still apparently unknown to him though, and he continued marching forward deeper
towards the now-shielded city. “Elites are coming,” Harper called, pointing further down the road they were on. Abby focused in that direction, and there were indeed a lot of Elites coming. A small army of them in fact, accompanied by the black-armored figures of the Sectoid Vanguards.

“Little threat,” the Chronicler said. “They will join our army.”

The heavy plasma cannons of the Muton Elites began firing, and the Chronicler’s army responded in kind, blue lances returning the fire and cleaving through several of the Vanguards who then activated their psionic shields and began returning plasma fire which proved as ineffective as before.

“There is something else…” the Chronicler said slowly. “Something wrong…”

A sustained barrage of plasma fire managed to take down one of the Chronicler’s Mutons, but in retaliation several of the Muton Elites were targeted and shredded by repeated blasts from the particle weapons. The psionic shields the Sectoids had seemed to be protecting them, and they were moving to psionic attacks, as Abby saw purple energy forming around their wrists.

What was taking him so long? The Chronicler should have been able to dominate these aliens by now.

Abby leapt onto one of the small flat tops of the buildings; a perk she’d realized her armor had, in that it allowed her to perform physical feats that were impossible except through genetic modification. She raised her own rifle, which configured itself to something she assumed was long-range, and she fired on one of the Vanguards.

It would have been perfect, had the Vanguard not immediately moved the shield to where she had fired, blocking it completely. Odd, but she immediately moved to one of the Muton Elites and fired a sustained particle blast on the face of the alien, and a few seconds later it burned through, causing it to tumble to the ground.

Just as they were gaining the upper hand once more, the Chronicler audibly growled and violently gestured towards the mass of aliens. Corrosive psionic energy convulsed around him, and the alien mass was suddenly engulfed in a massive psionic maelstrom that vaporized the ones at the center, and just as easily overwhelmed even those on the edge.

And just as quickly as he had brought it into existence, the maelstrom vanished, leaving only purple wisps. “Something is blocking my telepathy,” the Chronicler stated. “Or more accurately, someone is protecting the aliens.”

“You can’t break it?” One of Harper’s soldiers asked.

“Not on my own,” the Chronicler admitted. “The skill is…unlike anything I have encountered before. Nonetheless, we should be able to continue even with this roadblock.”

Then in the middle of the street, in the center of where the psionic maelstrom had been, the air shimmered a faint purple and an Ethereal literally stepped out of thin air, much like the Chronicler had done before. A very familiar Ethereal, now that Abby thought about it.

Quisilia raised a hand in greeting. “Hello there!”

Every alien of the Chronicler’s army, and Abby herself, trained their weapons on the lone Ethereal. The Chronicler himself stepped forward. “Ethereal. I was beginning to think you would let me continue unopposed.”
While Abby didn’t know the exact abilities of Quisilia, that he was apparently powerful enough to block the Chronicler’s telepathy was concerning. “I’m afraid not,” Quisilia said mockingly. “I must say you…aren’t quite what I expected. Just who are you? Not ADVENT or XCOM.”

The Chronicler seemed amused. “And just how would you know that?”

“Because I’m looking into the mind of your XCOM associate now,” Quisilia said clearly from behind her. Abby jumped and flew around to see the Ethereal standing behind her, the metal helmet looking forebodingly down at her. The Ethereal raised one finger to where his lips would presumably be, and vanished from sight.

Heart pounding, she returned looking to the street, where Quisilia was still inexplicably there and continued. “It appears she doesn’t know what you really are. Not surprising. Puppets usually stay quiet in these situations.”

“Like you are any different, Ethereal,” the Chronicler responded. “Or has your arrangement with the Sovereign One changed?”

Quisilia vanished and suddenly appeared directly before the Chronicler, standing over him by several feet easily. “I somehow doubt you know the intricate details, little puppet, suffice to say you vastly underestimate just how much we know.” He vanished and reappeared further down the street in his original position. “Do you really think we are as ignorant as the puppet species normally are?”

“I think you’re stalling for time,” the Chronicler responded, psionic power gathering around him. “I would expect nothing less from those who ran from the ones who destroyed their species. Even now you fight using the tactics of a coward. Otherwise you would not be able to stand and fight.”

Quisilia laughed and something flashed in his hand and he vanished once more and reappeared behind one of the Chroniclers Vitakarian soldiers and stabbed him through the chin with some kind of blade. With another arm he did the same thing and a third dropped some kind of ball that exploded into a black swarm of nanites that crawled up and into a nearby Muton, eating him alive.

Quisilia vanished and reappeared in the same place as before, now accompanied by a perfect copy of himself, then two, then more until the street itself had several dozen. “You are not fighting the Battlemaster, little puppet. Fighting fair is only for the naïve and honorable. Even then, when faced with overwhelming odds, even the Battlemaster would use every trick he could.”

The Quisilia figures pulled out another blade, this one colored obsidian and clearly visible. “So show me what you can do, little puppet; show me the gifts your benefactor has blessed you with.”

The Muton being consumed by the nanites suddenly flared in psionic fire, incinerating it completely presumably to kill all the nanites and keep them from spreading. “You are walking a dangerous line, Ethereal,” the Chronicler warned. “You don’t want to make me angry.”

“Oh, I do, little puppet,” Quisilia mocked. “In fact, I’m counting on it.”

The Chronicler swept out an arm, sending an arc of crackling energy towards the alien. It passed through the illusions without doing anything, and they all vanished. “Come and find me, puppet. I will be waiting.”

***

Busan – South Korea
“This is Chief Marshal Kong to all ADVENT Forces,” the Chief Marshal said into his helmet as Duri led his squad towards the trenches, accompanied by thousands of ADVENT soldiers all rushing to their positions. “We have confirmation of alien invasion fleets heading to the city, as well as other cities in South Korea. Flak Towers are online and armored vehicles and artillery are moving into position now. Take position and push these vermin off our world.”

“Encouraging speech,” Cara commented as they ran. “Bold to attack when we’re crushing them in America.”

“No, is smart,” Aleksandra countered as she checked her armor. “ADVENT busy with America. Might not be elsewhere.”

Duri would have found that argument a little more convincing except for one minor detail. “See, if they wanted to exploit that, South Korea is the last place they should have attacked. We’ve been preparing for weeks.”

“I don’t think this is in response to that,” Beatriz added as they reached the descending trench entrances. “I think they’ve been preparing for this for a while. They just decided to launch it now.”

“All right, let’s get focused and get ready to fight,” Duri interrupted, cutting everyone off as they descended into the trenches. They’d spent enough time training here that all of them were fairly comfortable with what would likely be a prolonged fight. They had been assigned to the Yongho 1 District of the city, which had several important components such as hospitals to protect.

In theory, ADVENT would want to have the entire country protected from coast to coast, lining the border with Flak Towers to blow any alien attack out of the sky. Realistically, they needed a more concentrated defense and resources were not infinite. So the main trench line had been formed around the district itself, and ADVENT had gone from there.

Fortunately, there were dozens of trench lines that were interconnected throughout the city itself. There was at least one route that ran the entirety of the Busan city itself, with some working as tunnels instead of trenches. In front of the trenches themselves, there was a flat, open space that had once been a forest.

The goal was to give the aliens clear places to land, otherwise they might resort to bombing runs or orbital bombardment, neither of which were ideal. So there had to be some spaces that were ‘designated’ for alien landing. However, the no man’s land was massive and there was no cover whatsoever for at least several miles.

Further compounding the issue for the aliens was that mines had been laid at random in the open space itself. The massive Flak Towers also dotted the trench line, just constructed behind the trenches at intervals of half a kilometer, with the trenches also being a means to access them. True towers, Duri was constantly amazed at how much firepower those things had at every floor.

Behind the trench lines were lines of tanks, artillery, and armored M2 Browning machine guns, as well as other stationary turret defenses. Throughout the trenches themselves were also stations where they were established as well, one of which Cara was going to be using; something she had told him she was looking forward to.

The trenches weren’t covered, unfortunately, but tops had a metal sheet slanted away from them, allowing them enough sight to view and fire from, while providing some kind of protection. The entrances and exits had metal protection as well, as did the trenches going under the Flak Towers.
All in all, the aliens were in for a really bad time.

They reached their position, and Cara took the elevated position and grasped the Browning in her hands. “Oh yeah, forgot how good this feels.”

Duri grinned under his helmet, and made sure everyone else was in position. Mana took a position on the other side of Cara’s emplacement, rifle raised to the currently-empty battlefield. Aleksandra took her position beside the Hawaiian, glancing over to Duri. “Say when you want me to create field.”

“If everything works correctly,” Duri said, rechecking his weapon again. “You won’t need to.”

Beatriz took a position by him, and rested her sniper rifle on the edge of the ground and was already peering through the scope. Nobuatsu was rushing to the nearby medical and ammo sections of the trenches, making sure everything was ready. The roles had been decided long ago, most of them were going to be fighting, but Nobuatsu was going to be performing medical duties wherever he was needed, and Miguel would be making sure everyone had ammo.

Speaking of Miguel, he was moving his SHIV to an appropriate position, which was on the edge of the back wall of the trench, overlooking the squad itself and cannon aimed down the open area, waiting for anything to even get within range. “SHIV in position,” Miguel reported, hooking the remote control to his waist and turning to Duri. “All of you let me know when you even think you’re running low.”

“Copy that,” Cara said giving a mock salute. “Don’t worry, I’m not going to deliberately waste ammo.”

“I wouldn’t be concerned about that,” Miguel shrugged. “We’ve got enough ammo to probably fight off an alien army three times the size of whatever’s coming.”

“UFO on approach!” Beatriz suddenly said. “Four of them, Scouts I think.”

“Time for the Towers to do their thing-“ Mana said before he was interrupted by the thunderous sound of the Flak Towers firing every available weapon on the oncoming UFOs. Duri looked into the sky to see the orange-white streaks of AA fire combined with lasers that sped towards the oncoming UFO fighters.

The frontal two UFOs were ripped to pieces by the rounds hitting them and further carved apart by the lasers. The latter two only survived a few more seconds before they were similarly torn apart by the towers. Cara cheered as the UFOs crashed into the nearby ocean or just behind the trenches themselves.

Collateral damage was a concern, but supposedly ADVENT had thought ahead to a degree and stationed the new Priests in various positions around the city, many of them telekines to deflect or catch falling debris. That was really all that was missing on his squad now, a Priest. Although they seemed to work in teams made up of their own, so that probably wouldn’t happen.

Perhaps it was for the best. He wasn’t sure how comfortable he was having someone like that on the team.

“I don’t think they try that again,” Aleksandra said wryly.

Well, they knew the Flak Towers worked now. Duri suspected that the aliens had assumed the same, and almost felt sorry for the pilots who had clearly been selected for suicide duty. Then again, they were aliens, so he didn’t feel they really deserved it to begin with.
“Now we wait,” Duri said. “Won’t be long now.”

As it turned out, he was partially right. Roughly twenty minutes later the first blips of the aliens appeared from the other end of the no man’s land, from the remains of the forest that ADVENT had left. “They’re just a little out of immediate engagement range,” Beatriz said. “Looks like a mix of Mutons and Vitakara. No armor units yet.”

Cara whistled. “They are going to get slaughtered.”

Duri had to agree. That was perhaps the worst composition possible to use to attack the trenches. The plan regardless was to let the aliens advance a certain ways, and then open fire and kill a large number at once. They’d figure it out eventually, but the goal was to make the initial engagement as costly as possible.

“Do you think they’ll charge?” Miguel asked. “Or-“

They were all suddenly cut off by a loud burst of static, which seemed to be affecting all of the nearby soldiers. “Greetings, ADVENT, and it is a pleasure to fight you on the battlefield today,” a dry, sarcastic voice said over the radio. “I am Venadiar, Watcher of the Elders and Hunter of the great bitch herself, come today on behalf of your soon-to-be alien overlords, and am to give you a warning that if you do not surrender, blah, blah, you know how it goes.”

The ADVENT soldiers looked around in confusion. “I’m sorry,” Cara said to no one. “Who the fuck is that?”

“We all know how this goes,” the alien continued. “And unlike my idiotic alien brethren, I won’t waste any of our time anymore. But on the orders of the glorious Elders, I will lead the Collective to victory against you. Except that’s rather trite and boring if I’m being honest, so we’re going to do something a little different today.”

Duri didn’t know if this was something he should find intimidating or funny. Right now he just felt confused. “We’re going to play a little game,“ the speaker, the Hunter, said. “The rules are simple and straightforward. There are two sides, Humans and aliens, you will fight each other. The one left standing, wins!” A pause. “And in the meantime, I get to kill whoever the fuck I want.”

Duri exchanged a look with Cara in disbelief. “Was that supposed to be a threat?”

“The Vitakara seem just as confused,” Beatriz reported. “I…don’t think they know what is going on either.”

“Get moving, imbecile aliens!” The Hunter growled. “I’m not going to wait just because you’re scared!” Duri heard the faint sound of a weapon firing, even though he didn’t know from where.

“Uh…” Beatriz looked up at him slowly. “Three Mutons are dead now.”

“Same goes for you, Humans,” the Hunter said. “If I have to kill all of you too, I will. And no, your trenches won’t protect you.”

The weapon fired again and Duri heard a scream further down the trench as a soldier was thrown back, helmet completely caved in and dead before he hit the floor. “How the fuck did he make that shot?!” Beatriz asked, alarm clear in her voice. “And from where?”

“Aliens are charging forward,” Cara reported, voice tight. “Guess our trigger-happy alien friend is spooking them as well. Preparing to fire.”
The long-range artillery fired in the background, and the lower floors of the Flak Towers also began firing from the windows. “Let ‘em have it!” Duri commanded. “Open fire!”

As one the trenches of ADVENT fired, sending lethal gauss rounds and bullets into the defenseless alien horde, and the front line was ripped apart almost instantly. While they were still too far away to make an accurate shot, Duri contributed by firing in the general direction of the alien forces.

The armor the Mutons and Vitakara had was essentially worthless against the hail of ADVENT fire. Intermittent explosions claimed more aliens, as even more were falling in sprays of golden blood and torn metal. No man’s land was also lit up with artillery fire, taking out even more scores of aliens. It wasn’t anything close to a fair fight.

“This is more like it,” the alien hummed in approval. “A bit too one-sided though. Let’s even the odds a bit.”

Duri heard, more than saw the explosion behind the trench lines. “What was that!” he yelled.

“Artillery piece!” Miguel yelled from behind him after around half a minute, one hand to his helmet as he listened to radio chatter. “Don’t know which one or how that was taken out in one shot!”

“Yeah, you run away cowards!” Cara shouted as she sprayed more rounds from her Browning. “They’re running away!”

“I can’t blame them,” Duri said, as he saw what remaining alien forces there were turning around and fleeing back to the alien-controlled territory. “I’d run too instead of a suicide charge.”

“Oh, dear,” the Hunter chortled. “The aliens are running. Well, I don’t always pick my targets.”

“Yep, he’s actually shooting at them,” Beatriz confirmed. “They’re apparently arguing about what to do. Looks like they’re going to try and build some kind of trench of their own.” She snorted. “Which is going to be difficult since they don’t have any tools. And assuming that we don’t kill them first. Or our Hunter friend decides to take out a few more ADVENT targets.”

Either way, the trench lines had held against their first major charge. How well they would continue to hold up would depend on what the aliens did next, and if this Hunter was going to continue shooting at both sides.

Duri grimaced. Someone who could apparently make a shot anywhere was not a risk he enjoyed having hanging over his head.

Based on how the alien talked, he suspected the alien enjoyed having that effect on people.

***

The Island of Hawai‘i - Hawaii

Operation: Kamehameha – Day 1

11/21/2016 – 12:44 P.M.

The attack on Hawai‘i was proceeding well, at least from what Sierra could tell. ADVENT had established Gateways on the island, as well as temporary command centers and supply depots. One of which she was at now, refueling and restocking before she went back out there. The good news was that the island was sparsely populated, and all the defenses were on the coast, where both sides
were under attack as ADVENT was attacking from multiple points.

“Hey, Sierra, looks like the aliens are sending in their stronger units,” Ted reported. “Elites are being reported. Almost all the gateways in this town are shut down or destroyed. The last few have Sectopods and Elites. They need our help.”

Sierra activated her engines after doing a quick check to make sure everything was ready. “Copy, on my way now.” She shot up into the air, roaring to rendezvous with the other members of her Host. The aerial view of the city illustrated the situation much better than she could put into words. The Purifiers had continued their work and there were noticeable swaths of the town burning, boxing the aliens in a ring of fire preventing retreat and putting them between ADVENT and toxic flame.

A fitting end for them, Sierra believed.

The Purifier teams had of course come under attack, but with Priest and Lancer support, as well as their own whenever they were called, there wasn’t much that could stop them. Sierra saw where Ted and Anna were flying over now, plasma bolts flying up in their general direction. Anna had expended her replacement rockets some time ago, and was simply using her autorifle.

Ted was still shooting psionic lances, although he was noticeably becoming more tired as the fight progressed. The armor around his arms and hands was blackened, cracked, and in poor condition. XCOM really needed to develop more psionic-resistant armor. Two Runianarch Soldiers crumbled under one lance, and he swooped to the side as Sierra shot in, flamethrower extended as she moved to torch the street.

The orange-white flame spat from her wrist, engulfing the street and torching the Mutons and Vitakara as one. She spotted the Gateway not too far away, the massive red-armored Elites pouring through and beginning to raise their plasma cannons to her. ADVENT was advancing on the streets below, the Lancers picking off whoever was still alive.

Anna swooped down to briefly land on a flat rooftop as she laid down gauss fire on the Elites, causing them to roar in pain as they brought their rifles to bear on her. Sierra reached to her waist and pulled out a thermite grenade, and tossed it towards the trio of aliens. “Ted! Cut the power when I give the word!”

“What?” He demanded as the Elites howled as the thermite ripped through their armor and Sierra dropped from the sky to land in front of them. Anna saw what she was doing and began targeting the other aliens around her.

“Be quick about it,” Anna warned as she shot a flanking Vitakarian soldier. “I can’t hold them back forever.”

“Doable,” Sierra confirmed, raising her wrist and engulfing the weakened Elites in napalm. The exposed plasma of their weapons couldn’t handle the heat and exploded, taking off their arms and much of their torso with it. That out of the way, Sierra took a few tentative steps forward, focusing on the Gateway itself, directing the flame towards the concentrated maelstrom of purple ethereal energy.

“Now!” She called to Ted who swooped down towards the powering cables, while she continued spraying flame into wherever the Gateway was connected to. She thought she heard shouts in the distance and smiled grimly at that. Ted’s arm glowed with crackling psionic energy; a purple lance of energy shooting from his arm and with one swipe he severed the power.
The swirling purple vortex dissipated almost instantly and Sierra ceased her fire, and leapt into the air, jets firing the moment she was airborne. “One more Gateway for us,” she commented in satisfaction. “Good job everyone.”

“Think most of the aliens are cleared out here,” Anna said, also rejoining her in the air. “Been listening to ADVENT comms. The other assaults are going well, and Hawai’i itself is almost taken. Nearly all Gateways are down and the stragglers are all that’s left on this island.”

“What about the inner islands?” Sierra asked, shooting down at one of said stragglers, a Muton who she killed with a few rounds to the head. “That’s where the alien command is.”

“Intact for the moment it seems,” Anna said, swooping to the side and outflanking a Borelian soldier which she promptly tore apart with her autorifle in a spray of golden blood. “Don’t know what they’re planning, but the leadership is intact. Right now they’re exchanging fire with ADVENT naval forces. Neither side is doing much right now. Guessing that will be our next target.”

“Then let’s clean up here,” Sierra ordered. “Ted, how are you holding up?”

“I’m alive,” he said non-commitally. “I can’t feel my arms, and I’m exhausted. I need a stimulant, telepathic or otherwise, if you want me to keep this up for another island. Assuming that it’s at this level of difficulty.”

Sierra thought for a brief moment. “We’ll finish up on this island, then we take a short break. ADVENT will likely want to have a coordinated attack for the inner islands. We’ll take a look at you once this is done. Can you hold out until then?”

“I can,” Ted confirmed, and as if to prove it, gestured a purple-encased hand towards a Muton and the alien was encased in purple energy which began eating away at him. “Let’s finish this up.”

An explosion in the distance several blocks over signaled another Sectopod falling. The bright sun above, Sierra appraised the scattered alien forces below her, determining where best to strike. In the end, she supposed it didn’t matter too much. She picked one out, and angled herself down and gunned him down from above, like a lethal bird of prey.

That wasn’t too inaccurate, in fact. They were indeed hunters.

Alien hunters, but hunters nonetheless.

***

Sacramento, California – United States of America

Operation: Sherman – United States of America

11/21/2016 – 11:46 A.M.

One thing Nuan had never really grasped before actually participating in combat was the sheer scale of war. It had been decades since there had been an actual, proper war with armies fighting over cities. Was World War II the last one? Every one after that seemed to get smaller, and more asymmetrical. Armies were removed in favor of guerilla forces, maneuvering was less important with the rise of airstrikes and drones.

Enemies were harder to defeat if they had no allegiance to a country. Terrorism had changed how war was fought, conducted, and won. But it clearly wasn’t that way anymore. The aliens were a
clear, present, and entrenched threat. They wouldn’t be defeated by drone strikes or guerilla squads. Only by legions of men and women marching to fight them.

And it was going to take a very long time.

The mass of ADVENT and XCOM forces marching down a barricaded street was one Nuan figured would be on every propaganda piece ADVENT put out after this. Which she couldn’t fault them for. It was a powerful image, especially seeing Humans of all various nationalities and backgrounds coming together to fight a common foe.

Somewhat romantic, in fact.

She was dreading the war coming to China though, not simply because it was her homeland, but because the war there would be messy at best. Beijing or Hong Kong consumed by war would be a nightmare of tactics, logistics, and scale. Not to mention that she didn’t know where the civilians would go.

They couldn’t just relocate hundreds of millions of people. And where would they go? What could support them?

China hadn’t shared with her, and she doubted they would bother to ask her opinion.

The road, or the road the aliens had carved out, as it was clear that they’d removed multiple buildings and houses to accomplish it, was seeded with towers, barricades, and other defenses. They weren’t close to the main base proper, but the defenses had only gotten more and more extensive. They’d just punched through a small base which had two Gateways, both of which they’d been forced to destroy.

Now things were getting more difficult as plasma was fired from the distance. Not to mention Geist had mentioned a little problem.

“Something is blocking me,” he’d said non-commitally, brow furrowing as if it was a minor issue. “Large telepathic attacks are being negated. I suspect there is an Ethereal supporting them. An issue. I will work on subverting this.”

Nuan found the man unsettling, yet at the same time trusted that he knew what he was doing. Maybe he was a good actor, but when he said he was ‘working on subverting this’, she got the feeling he might actually have a plan. She wished she had the ability to be literally unfazed by anything. The sheer confidence and command in his voice had also made him the leader of the current ADVENT forces they were with.

Although, she had to admit, he hadn’t given them much choice.

Geist planted his feet and extended an arm, psionic energy flowing off him as a massive barrier appeared before them, effectively cutting each side off from each other. “Begin the establishment of a defensive line,” he commanded. “Shieldbearers, prepare activation of PDS fields.”

The MDUs in the group also advanced to the front, aware enough not to try and fire at the shimmering shield. The alien fire had stopped as well, and Nuan focused to see exactly what they were facing.

It was not encouraging. Four towers that were abruptly cut off at four stories were arranged in a square, and covered by a layer of black alloy. Within them were automated defenses and openings manned by what appeared to be Vitakarian soldiers. They were connected by walls roughly one story high, manned by....
She frowned. These were new. They appeared to be Mutons on first glance, but they were... altered. They were black-armored, almost mechanical in nature. They wore helmets and the eyes were a bright orange. “Iosif,” she said slowly to the Templar as ADVENT continued setting up their line. “Do those Mutons look different?”

Iosif cocked his head and took a step forward. “I would say they were the Centurions. I know there were some in Japan, but they haven’t shown up for a while. But they were different. Larger and they seemed more...alive.”

Nuan, after watching them a few more seconds, realized the same thing. None of the Mutons had moved so much as an inch. Their weapons were also different. Many plasma weapons the aliens employed had exposed plasma innards for some reason, one Nuan could only imagine was for cost or maybe energy output, but nonetheless was a major flaw in the design.

The weapons these Mutons had kept the main model of the plasma rifles, but it was bigger, encased in the black alloy, and completely covered up the exposed plasma. “New unit?” She wondered out loud.

“Yes,” Geist said unexpectedly, walking up to them, the familiar serious look on his face. “They come from Fectorian, an Ethereal specializing in cybernetic enhancement, and deployed on the direction of the Battlemaster himself. The aliens are intent on keeping these cities, we should prepare for an extended siege.”

Both she and Iosif looked at him in mild surprise. “How the hell do you know that?” Nuan asked.

Geist sniffed. “The one protecting the aliens here is either incompetent or simply doesn’t care. While I cannot take control of the aliens, there is shockingly nothing preventing me from reading their minds. These mechanical units have their brains cybernetically altered, which ironically, makes their thought patterns straightforward. I suspect I would not be able to alter their minds even if they were not protected, not at first. But it is not important, at this moment, they are waiting for orders.”

Nuan somehow found the idea of Geist referring to an alien that was managing to somehow protect all aliens from mental control as incompetent highly amusing. But she limited it to a smirk under her helmet.

“I was similarly amused,” Geist nodded, the faintest sliver of amusement running through his eyes. “But they are Ethereals in all likelihood. They are arrogant by nature and uncreative in their pursuits.”

And he was right back to being creepy. “Please don’t read my mind,” Nuan said. “Take a cue from Patricia.”

“Patricia is idealistic and deliberately handicaps herself,” Geist said flatly. “I do not. But this is not the time for that discussion. We need to prepare for our attack.” And with that he marched off to go speak to a trio of Priests.

Nuan decided not to dwell on it and regrouped with the other XCOM soldiers who were grouping near the front of the shield, behind the cover ADVENT was establishing. Soldiers were already using it, aiming their weapons at the alien fortress. More were massing out front, and she saw a mixture of those enhanced Mutons and...she squinted...Oyariah.

“Titans,” Moriai stated, the scowl plain in his voice. “I remember them from Japan. The damn things took several rockets to take out just one.”
Nuan had never seen them in person, and they definitely looked foreboding. They stood as tall as
the Mutons, carrying massive shields that seemed to be made out of stone, nearly as tall as them,
and in their free hands they held flanged clubs like Iosif’s. Nuan knew they were naturally tough,
and the black armor they wore was only going to make them more difficult to kill.

Then as one they began moving forward down the street towards them. The twenty or so Oyariah
stood in front of the larger number of enhanced Mutons, effectively providing a barrier. Not that it
was needed as the shield prevented anyone from firing on them. “Clever,” Oliver commented.
“Guess they’re going to force us to do something unless we want them to get close.”

“Take your positions,” Geist commanded, walking up, with a dozen Lancer Executors beside him.
“I will be lowering the shield momentarily. Begin firing. The Priests will provide offensive
support, and when the Lancers and Iosif charge, focus your fire on the base itself.”

The energy pulsating around his arm vanished and the shield fell. “Open fire.”

The pounding gauss fire slammed into the Oyariah line, the sheer force causing them to slow
momentarily, before they closed ranks even tighter than before and began advancing, although at a
much more methodical and slow pace than before. Rockets firing from the Dragoons sped towards
the Oyariah line and the Mutons behind them, although the damage done seemed negligible to the
Mutons who shrugged off the loss of armor or limb and continued forward.

The Oyariah Titan shields hit had pieces blown off, but they still maintained their integrity. That
was when the Priests began their attack. A psionic maelstrom erupted in the Muton ranks, ripping
one apart at the center and causing substantial damage to the ones around him. Psionic shears of
energy slashed around the Titans, although it seemed to not be having much of an effect outside of
damaging the armor.

One Priest screamed some kind of battle cry, as she extended a hand towards the encroaching
Titans, and one was slowly lifted into the air, and with a thrust of her wrist, was sent flying into the
sky. Nuan was doing her own part as she firing into the line of aliens, although they all had to
contend now with the fire from the base, which was constant and unrelenting; barrages of green
plasma raining down upon them.

The Goliath was the focus of a good portion of the defense, and the Priests were maintaining
shields on it as it returned fire. “Engage at close range,” Geist directed calmly. “All ADVENT and
XCOM forces, focus fire on base defenses and personnel.”

Iosif and the Executors charged forward, and the Oyariah took the opportunity to finally split and
charge the encroaching Humans. Over a third of their number had been killed, so it was a much
fairer fight than before, discounting the Mutons behind them. Fortunately, Geist and thePriests
were also on top of that.

The Mutons were clearly able to take more damage, and were unrelenting in their attack as they
moved forward, firing steadily at the defensive lines. However, Geist seemed to have a way to deal
with them. One Muton was suddenly surrounded by psionic walls, and the ceiling barrier above
him suddenly slammed down, crushing it to the ground. A small psionic barrier also popped up
between the melee duel and the Mutons, forcing them to go around while the Priests continued
their psionic attacks.

As for the duel that was taking place, it was not exactly going as planned. The Humans were
smaller and faster, but the Oyariah were also faster than they looked, and easily outmassed even
the strongest of Humans. It wasn’t so much of a duel as it was pairs of Humans and aliens avoiding
being crushed by the other.
One Executor missed a swipe with his warhammer, and the Oyariah slammed the shield into him, forcing him to stagger back while a lighting strike with the alien’s flanged club slammed into the Executor’s knee, shattering the bone and while pinning the fallen Executor with the bottom of his shield. The Titan raised the club and slammed it down on the Lancer’s face until it wasn’t anything but mush inside.

Iron skin didn’t do much for blunt injuries it seemed.

In general the shields were giving the Oyariah a gross advantage. That they also outnumbered the Lancers, even slimly, was also another advantage. One on one, it was clear that the Oyariah held the upper hand. Iosif was unsurprisingly doing the best, although he was more surviving instead of actually fighting.

Two of the Titans were fighting him, and he was doing his best to block their attacks by well-placed psionic shields, dodging, and when possible, giving return strikes of his own. Although there was little he could really do against the shields which the Titans continued to try and slam into him. “We need some help here!” Iosif called.

Geist motioned to several of the Priests, who directed their abilities not towards the Mutons, who while not completely destroyed, were far fewer than before. The Oyariah were suddenly thrown back, tossed into the air, frozen, or had their weapons torn away.

“Order the Hussars to eliminate the Titans,” Geist ordered, as he created several more crushing prisons on the Mutons. “They are more dangerous than I anticipated.”

The Officers quickly communicated that order, and a few moments later heads of various Titans began snapping back. Some took nearly a half dozen shots, but they did go down, leaking golden fluid form their faces. The Titans held in stasis allowed the remaining Executors and Iosif to get in some strikes of their own.

The helmet of a Titan crumpled under a two-handed blow from Iosif, and a repeat blow seconds later penetrated the head itself, spraying blood all around it. Nuan looked around the defense lines, trying to see how much damage they had sustained beyond losing many of the Executors. There were multiple ADVENT corpses from the Muton fire, and that from the base, and others who were being dragged away to be fixed by the Medics.

The MDUs had suffered losses as well, being easy targets and exposed to sustained plasma fire from a distance. Nuan couldn’t tell what losses had been inflicted on the aliens, but she doubted that it was equal. She hoped it was, but realistically, that probably wasn’t the case.

There were more aliens coming out of the base now, and they appeared to be Vitakara that had been similarly modified like the Mutons. Very not good. They were accompanied by drones, and were carrying what looked like tools with hovercarts behind them. Engineers probably, and ones who were likely trying to establish a closer line.

“The current strategy is ineffective,” Geist said, swiping a hand towards the battlefield. “We need to reevaluate.” The purple barrier between the two armies reappeared and the plasma fire slowly stopped. Nuan glanced around again, noting that there were many of the Priests who had taken their helmets off, and looked exhausted or sick. For some of them, this might have been their first actual combat mission.

Now protected, the Medics were everywhere, and the soldiers, Officers, and Lancers were rushing ammo around, reloading, and frantically talking with each other. Engineers were working on repairing and reinforcing the defenses, while Geist was frantically talking with several Priests and
Officers.

The battle had now turned into a siege. Nuan supposed the plan now was to hold out until the main ADVENT army arrived. Air support was likely not going to happen until the main AA defenses were taken care of, and there were already dogfights in the skies.

Hopefully they could last until then.

***

Near Washington D.C. – United States of America

11/21/2016 – 3:17 P.M.

There were certain expectations in war. Humans in particular expected certain things from their enemies. There were fights on certain fronts that were to be expected. Japan, Korea, America, ADVENT knew they were going to be attacked. There was some honesty there. Both sides accepted that the war was going to be fought along the forever changing lines.

Yet there were certain things they would be surprised by.

An attack on the capital of one of their biggest countries was likely among them.

“We are approaching the outer defenses,” the Battlemaster stated as they strode towards the city in the distance. “Prepare to open fire.”

He had wondered how best to send ADVENT a clear message without provoking Aegis to significant action. Perhaps he would miscalculate here, but he doubted it. There were certain figures that would prompt a response. Chancellor Vyandar was one, and he doubted he would be able to penetrate the ADVENT HQ as Switzerland was by all reports, a fortress.

The same could not be said for Washington D.C., or President Nicole Treduant. The landmarks of America would be razed to the ground today, and their President would join the numbers of the dead. No holding back; the goal today was a simple display of consequences.

If ADVENT wanted to make a statement, he would oblige them.

“Honored Battlemaster,” Senorium said by his side, the Warlock fully armored and ready for battle. “The Cleanser Ships are in position. ADVENT is likely aware now. They are requesting permission to open fire.”

“Granted,” the Battlemaster stated as they began approaching several of the outer trenches. While ADVENT maintained a garrison here, as well as some of the Flak Towers, there hadn’t been a sustained effort to make it the fortress Korea was right now. Likely because they had not expected an attack here.

He was aware of what would happen once he was spotted, and indeed it probably already had. The President would be evacuated, likely through the underground tunnels from the White House, and evacuate at the Anacostia Naval Support Facility. The Battlemaster was expecting several additional contingencies, since he wasn’t naïve enough to believe they would be so brazen as to make their actual evacuation plan publically available. How he had been able to find it with a simple Google search was baffling.

As such, the Cleanser ships weren’t just going to target the Support Facility; they were going to target every airport in the D.C. area. While one focused on the airports, the other would hit any
Flak Towers available. The protection fleet of Sectoid fighters would be sufficient assuming ADVENT could even reach them in the middling atmosphere.

The small strike force he had brought along were all chosen for specific purposes. Very few could fit in the Cultro, so he had to make do with what he had. The Warlock was an obvious choice, and would provide substantial psionic support. There were a dozen of Fectorian’s modified soldiers, six of his Muton Ravagers who specialized in explosives and destroying buildings, and six modified Zararch agents, primarily long-range snipers.

The only other units were the four Spectres. Black humanoid figures who occasionally rippled as the nanites continuously recalibrated, they mimicked Humans and Vitakarians in shape, including the five-fingered hands, although they held no weapons in them. The heads were akin to helmets, with a symmetrical green light strip running down the sides of their faces. From what the Battlemaster had seen, this color changed once they were in combat. They said no words, but would follow his orders without question.

A half dozen yellow streaks rained down from the sky and slammed into the facility. The Battlemaster couldn’t see it of course, but he could hear the muffled explosions in the distance. Another dozen streaks landed a short distance from that. The Battlemaster knew there was still a heavy civilian presence in the city, and thus many would likely die today, although he had taken several measures to mitigate that.

The airstrike on the main Reagan National Airport wouldn’t hit the facility proper, but it would target the airstrips themselves, as well as the planes, rendering escape impossible. Aside from that, there was another rule enforced for his strike team. “Remember,” he warned Senorium as the ADVENT soldiers in the distance began scrambling to get into the trenches. “Do not target civilians unless they attack.”

“Of course, Battlemaster,” Senorium planted his feet and drew upon the psionic energy as more airstrikes pounded in the distance. Encased in the swirling vortex of energy, he thrust a hand forward and hundreds of ghostly purple figures charged the defense lines. Scattered gauss fire and screams of panic greeted this, and the Battlemaster charged forward.

“Destroy your assigned targets!” He commanded, performing short staccato psionic dashes to make it more difficult for the Humans to target him. “Leave none in ADVENT alive today!”

The Spectres dissolved into a black swarm of nanites and joined the charge forward, as did Fectorian’s soldiers. There were four main targets, which would be led by one Spectre and four of Fectorian’s soldiers. The Warlock would continue waging a constant attack from the spot he was in now, continuously summoning more of his ghostly and disposable soldiers.

There were three targets the Spectre teams would attack: The Pentagon, the Anacostia Naval Facility, and from there, the underground tunnels, and finally a march through the city targeting the various monuments. At the same time, he and the remaining Spectres would march towards the White House and Capitol Building to destroy both of them. Once President Treduant was located, he would converge on her position and execute her.

The possibility of her escape was higher than he would like, but even if she was not killed, this would have a significant impact. The Battlemaster materialized in front of a trio of ADVENT soldiers rushing towards the trenches, and he decapitated them with one swipe, and sent another twelve around him flying with a telekinetic blast.

The Spectre materialized in the trenches and grabbed one soldier by the throat who began screaming as the Spectre infected him with nanites. At the same time it extended another hand
towards the soldiers behind it, almost invisible wisps of nanites flying towards them. The soldier in the front began clawing at himself, and was gradually covered with a thin layer of nanites, and a few moments later he was still.

The gauss fire against it was ineffective as the Spectre simply opened up holes in itself where the slugs were calculated to hit, and they passed right through with no damage whatsoever. The Spectre dematerialized and rejoined the Battlemaster as he continued advancing forward down the street into the still-bustling city.

Behind him, the first of the new Spectres emerged. For all intents and purposes, they were the same thing, except they retained the outline of the victim. The Battlemaster decided to wait several minutes for the new Spectre army to form, and soon enough, they emerged. Black forms of ADVENT soldiers, with the now-red lines running down the helmet.

The Battlemaster had seen them work, and knew there was unlikely to be anything left of the body, and even the ones the Spectre had killed quickly would eventually rise as another one. Every nanite had the programming to create more Spectres, no matter if it was one nanite, or one million.

The civilians had noticed him as he continued advancing, and while he didn’t attack, most broke down in an utter panic as he approached, swerving away and crashing, or getting out of their cars and fleeing on foot.

Inconsequential, not worth paying attention to.

However, they were making it difficult for the ADVENT soldiers to target him or the Spectres. Missed shots would almost certainly hit civilians, but he was not so hindered. While the soldiers yelled for the civilians to get down, he reached out with his two lower arms and telekinetically snapped the necks of the ADVENT soldiers in the area.

Normally he would spend some time fighting them, but today there wasn’t time.

The Spectres paused by the bodies as they marched by, implanting several nanites to begin the creation of more Spectres. No holding back today. Not anymore.

Even if XCOM decided to engage, he did not plan to toy with them. He had a mission to accomplish, and nothing was going to distract him this time.

***

The Citadel, Situation Room – United States of America

11/21/2016 – 3:51 P.M.

The day had started out very well. To be fair, it was still holding steady through most of the day, but it was now starting to falter. The Commander had to admit he hadn’t expected this to happen. Where the Battlemaster would show up was a constant guessing game, and he had expected LA or Sacramento, if he showed up at all.

But definitely not Washington D.C.

The Citadel was not quite chaos at this point, but something very close to it as reports were scattered and contradictory over what exactly was happening. The Collective had actually used orbital bombardment and had targeted the airports and Flak Towers. There were Firestorms being sent up to fight, but the damage was already done.
Given that they had specifically bombarded the place where the President was supposed to evacuate, it was likely that Treduant was a target for the Battlemaster. They hadn’t received anything on her status, and the Commander assumed it would be a helicopter evacuation, although he didn’t know if there were any that would be able to get there in time.

He wouldn’t put it past the Battlemaster to blow up the whole White House if he learned there were helicopters going to it.

Tactically, this was a brilliant move, devastating as it was for ADVENT, and he was furious with himself that he hadn’t anticipated it. Such a surprise attack seemed atypical of the Battlemaster, something more akin to what Quisilia would do. Which was quite possibly what the Battlemaster had been relying on.

And the response was going to take time since the team responsible for fighting the Battlemaster was on the West Coast, and had to spend valuable time flying to the other side of the country.

On top of that, the Collective had launched additional attacks.

“We’re losing too much ground in Alaska,” Commander Christiaens said grimly, looking down at the holotable. “It’ll take a couple days to get support there, even if I can send several Russian Legions immediately. The Canadian Legions are preparing their own country, but they might not be enough. A lot of the Mexican Legion is also assisting us right now.”

“It’s luckily concentrated in a few cities,” the Commander noted. “Even if they sustain heavy damage, they can hold out for a couple days at least.”

She scowled. “Not if they decide to bombard us from space.”

That was a good point.

“Still no word from the President?” He asked, hoping it wasn’t rhetorical.

“None,” she shook her head. “And apparently the entire city is under attack. The Pentagon is saying they’re being attacked by cyborg aliens and some kind of nanite weapon. Others are reporting the same thing. Black humanoid things that dissolve and reform – and then replicate.”

“No video?” He asked.

“Nothing actually usable yet,” she said. “But we do have images of those psionic manifestations again. That Warlock is apparently with the Battlemaster, who is apparently not even giving us a chance to fight back. Apparently all those times before he was holding back.” She rubbed her forehead. “He snapped the necks of a dozen soldiers with a gesture. Fuck. Even if I get every available soldier there, it will be too late, and I can’t just bomb the city.”

While the Commander didn’t have any hesitation sacrificing civilians, he did agree there. It would accomplish nothing and likely not work. “At least he’s not targeting them,” he noted. “Which is… something.”

“It works to his advantage,” she said. “Makes us hesitate to open fire, and they get out of his way without him prompting. Win-win for him. Not to mention it doesn’t give us more fuel for propaganda.” She paused. “Although after this that’s not really going to save him.”

“Let’s focus on the other battles,” the Commander suggested. “We’ve both done what we can for D.C. Now it’s up to the soldiers.”
Despite that, he wasn’t confident in what the outcome would be.

Hopefully the XCOM team could handle him.

And even if that was successful…these apparent nanoweapons might be a bigger issue.

He shook his head. One problem at a time. The Battlemaster was the key to their military operation. Weapons could be destroyed eventually; Ethereals were not so easy.

***

Los Angeles, California – United States of America

Operation: Sherman – Day 1

11/21/2016 – 2:10 P.M.

The battle had been proceeding relatively well; Patricia’s domination had successfully permeated thousands of aliens and already she had forced the destruction of multiple Gateways, although the Collective had wised up and began sending through mechanical units and Vanguards, who while they couldn’t resist her concentrated power, could protect themselves against the cursory commands she imposed on the more vulnerable aliens.

And then it had all been stopped, and she had been metaphorically kicked out into the real world with a burst of dizziness as the sights and sounds of the world rushed back to her. ADVENT Special Forces and soldiers were still rushing into the city, but she knew from briefly scanning the mood that it was a continuous hard fight.

Frowning, she closed her eyes and extended her reach yet again. The aliens she could still sense…but there was indeed something else there. She stiffened upon a cursory inspection, and felt the presence of something ancient. It wasn’t the Imperator, she was familiar enough with him that she couldn’t mistake his presence, which meant that there was only one logical explanation.

The Overmind.

She didn’t bother turning around as her hands clenched unconsciously. So this is how you will try and force my hand, Imperator? Cheat?

“I did nothing,” the Imperator stated walking forward, wearing the same form as before, although he didn’t exactly sound displeased. “I suspect the Battlemaster asked for his assistance. Be thankful he is restricting himself to defense.”

Patricia figured she’d might as well walk forward into the city itself, since her telepathy wasn’t useful right now. Then would you politely ask him to leave?

“And why would I do that?” The Imperator asked, his voice split between amusement and sincerity. “What do you expect would happen?” He raised a finger at Patricia. “You are dangerous. You are a threat. It should not be surprising that you would be dealt with as one.”

He paused briefly, then once more clasped his hands behind his back. “Nonetheless, my offer of help still stands. I know what the Overmind is doing, and how to combat it. There are more aliens coming in now, in numbers your soldiers will not be able to hold out against. Fectorian’s soldiers are only some of what you should be concerned about, and I doubt you want to lose today after what has happened.”
What are you talking about? Patricia mentally growled as she stormed around the street corner, ignoring the ADVENT soldiers snapping to attention as she passed them. The sounds of combat echoed in the distance, and she followed.

The Imperator kept pace beside her. “The Battlemaster has launched attacks across the coasts. South Korea is under siege, and the Battlemaster himself is attacking Washington D.C.”

Patricia spun to him. “What?” She demanded out loud. “How?”

“Confirm it with your superiors if you wish,” the Imperator dismissed with a wave. “I have no reason to lie to you, but I suspect that it raises the stakes for you. Now you cannot afford to lose. And why are you skeptical, Patricia? Is it because I am supposed to be your enemy that is holding you back?”

Just a little bit. She fumed, trying to consider the implications. And also because Aegis told me enough about what you can do. Letting you in my head is a bad idea.

“Debatable,” the Imperator mused, glancing around at the rushing soldiers. “What I am offering is information. Knowledge. Things that you are continuously seeking. If you have a noted flaw, Patricia, it is that you lack nuance. You are blunt and see the world in certain ways, whereas reality is not as straightforward. Aegis represents one such viewpoint. I represent another. Neither are necessarily right, nor absolute, yet you insist that one is more valid than the other.”

You are trying to confuse me, Patricia physically shook her head as she approached the frontal defense line. Plasma was flying in green waves toward the ADVENT and XCOM soldiers, as they besieged a carved-out tower which had likely been part of a greater block, and now was an alien command center. Surrounding it was a black alloy wall, with multiple barricades and cover placed in squarish formations around it.

Elites, Vanguards, Fectorian’s soldiers, even Cyberdisks were floating above. The purple of psionic attacks flared on both sides, and ADVENT soldiers were falling, succumbing to plasma fire or psionic attacks. The aliens were filling out their ranks with reinforcements presumably from the Gateway housed within the tower.

“You do not need to fail, Patricia,” the Imperator said. “Witness what I can do before passing judgement on my sincerity.” She watched as he stepped forward, observed the battle before him, raised a gauntleted hand and snapped the fingers of one hand. As one the entirety of the alien forces, minus the cyberdisks, fell to the ground.

“I have taken the liberty of ensuring the Gateway is deactivated from the inside,” the Imperator continued. “Consider this a lesson, Patricia, what I did you could have very easily done. Yet you are too quick to give up when faced with a roadblock, only returning when you have overwhelming strength to destroy it. Every psion has their weaknesses, and the Overmind is no exception. I can always give you what you want, but I am now curious what you can figure out for yourself.”

The sounds of ADVENT destroying the Cyberdisks, and a few Vitakarian soldiers who were somehow still alive, faded in the background as she appraised the Imperator. I suppose I should say thanks. Whatever your reasons. If you’re being so generous, might you kill the aliens elsewhere?

He smiled. “Not today, psion. But you should go for now. If I might offer some advice, take your position in the tower as the defenses are more entrenched further in. Goodbye for now, and I will be waiting should you accept my help.”

And with that he vanished once more. He always left her with a lot to think about, and maybe she
could do that once there was a lull. But right now they needed to take the tower and fortify it. “Secure the tower!” She demanded, marching forward, Creed rushing towards her. While ADVENT and several XCOM soldiers moved to help, he came up.

“Was that you?” He asked.

“No,” she answered honestly. “Not this time. There’s an Ethereal protecting them. Something was probably miscalculated. That’s... easier to do than you think. It doesn’t matter, we need to keep moving forward. It’s only going to get harder.”

Even through his helmet she could sense the questions swirling around. “Alright,” he finally said. “We need to get caught up on the larger situation. Some of the things I’ve heard are bad.”

“So I’ve heard,” she muttered, still somewhat in awe at the sheer gall of the Battlemaster. “Let’s get communications fully up.”

***

Washington D.C. – United States of America

11/21/2016 – 4:39 P.M.

The area close to the White House had a large amount of military forces, and for what little good it did them, they put up a fight.

Unfortunately for them it was largely ineffective against the Warlock’s psionic manifestations, and absolutely worthless against the Spectres. The nanite figures had reached the point where they nearly outnumbered the ADVENT soldiers in the area, and were spreading like locusts throughout the city. The Battlemaster found them to be by far one of the most useful units in combat.

No one was immune to them. He dashed towards a team of Lancers and blasted several back with a telekinetic push, snapped the neck of one, and picked up the other by the helmet and tossed her directly towards a Spectre. The body passed through the Spectre and emerged on the other side, completely encased in nanites and thrashing on the ground as they began consuming her.

Explosions in the distance signaled the fall of monuments and buildings. The Capitol Building was burning and the Spectres were already inside, killing the ADVENT personnel within. The Battlemaster had made the distinction between civilian and ADVENT clear – anyone affiliated with ADVENT in a governmental and military capacity was a valid military target, the rest were not.

Ironically, considering how Humans despised their politicians, some might not consider it a great loss. But the destruction of the center of United States government would hinder them for weeks at least, and with the President dead or in hiding, it would take longer. Streaks of gold from the sky struck intermittently, likely targeting more Flak Towers.

Now he was at his primary target, the White House stood in front of him and the ADVENT forces were going to fight to the death to protect it from him. Admirable, but pointless when facing his army of Spectres, who bore the appearance of the soldiers they had killed. He paused as he heard the familiar roar of a Skyranger overhead.

XCOM. Expected, and today, he wasn’t going to waste time dealing with them.

Right on cue, three XCOM soldiers jumped out and two flew out, an odd combination. He recognized several of them. One wielded a warhammer encased in psionic energy. Chan Jin-Taek,
if he recalled the name. The latter soldier who had dropped out was a larger concern. Matthew Hawkins, one of the Furies.

Target one was now designated. The telekine posed the greatest threat and needed to be eliminated. All of the Templars were approaching him like they were expecting a standard duel. He wouldn’t resort to the Spectres, they did not fully deserve that level of refusal, but he was not interested in them slowing him down.

One psionic dash and slash later, aiming right for the neck of the Fury, and the headless corpse of Matthew fell to the ground before he could even make a motion. The Battlemaster lifted two of the Templars with a free hand and slammed them violently to the ground, while using his other free hand to grasp Chan telekinetically and pull him towards his grasp.

Another psionic dash forward, and the Battlemaster stabbed downwards into the skull of one of the Templars, a woman judging by the brief scream, and twisted the neck of the Templar in his grasp with surprising ease. It appeared he had not received the Iron Skin genetic modification, but nonetheless he was killed easily.

The other XCOM soldier, who he now saw wasn’t a Templar, but another psion, on the ground he lifted up, and squeezed the helmet; applying physical and psionic pressure until it shattered under his hand and the skull underneath was crushed. He dropped the body and leapt in the air towards the Archangels, one of whom was unable to get out of the reach of his greatsword, and cut easily through the engines, forcing the Archangel to crash to the ground.

While not dead, the Spectres were converging, and he would die to them. He reached up with a hand to telekinetically grab the other Archangel, and began crushing it. The delicate components could not withstand the psionic pressure, and with a thrown hand the soldier was slammed to the ground.

His back turned to the soon-to-be-dead soldiers, he resumed his march to the White House, seeing two more XCOM soldiers retreating in the distance. Snipers most likely, irrelevant. He had noted one had been wielding one of the electricity weapons, and felt some regret that he hadn’t been able to test out the armor properly, but there would be time for that later.

A dozen of the Spectres peeled off to follow him, and he simply pointed to the interior. “Locate President Treduant, do not kill her without my command.” His size made entering the White House an issue, but the Spectres would perform that task well enough, as well as kill anyone else inside. As far as he was concerned, the hard part was over.

While he waited, he observed the fires in the distance that permeated the air. The muffled booms of rockets signaled another relic of Human civilization falling. They would not see it that way, of course, but Humans placed a surprisingly amount of sentimentality and symbolism in their monuments and statues.

But that age of Humanity was over.

“President Treduant has been located,” the dead voice of the Spectre informed him. “White House roof. She has not attempted to escape.”

That was surprising. He would have expected at least an attempt. Regardless, he marched towards the White House itself and leapt upward, landing on the roof with a thud. President Nicole Treduant stood before him, closed a briefcase she held in her hand and calmly set it down to face him fully.
She didn’t look any different than how she was during her various public appearances. Calm, charismatic, and proud. Fearless too, judging from the way she faced him.

It was the body language of a woman who had accepted she was going to die, and was going to go out on her feet. Admirable. He had intended to kill her quickly to begin with, but she had gained some respect in his eyes.

“Battlemaster,” she finally greeted.

“Madam President,” he briefly inclined his head. “I suspect you know what happens next.”

She gave a sad smile. “I do.”

“I am surprised you did not try and leave.”

“We began,” she said, looking away in the distance. “Although the bombardment rendered the initial plan impossible. The chaos made a ground exit similarly difficult, and leaving by helicopter would be conspicuous and would likely be targeted by your ships. So I did what I could. All ADVENT forces were ordered to retreat and you get to kill me. Little more I can do except fight a battle I’ll likely lose.”

She reached for the pistol at her side, and the two Spectres moved forward before the Battlemaster waved them off. She didn’t pose a threat, not to him. “You are brave, Madam President. You will die well.”

She smiled unexpectedly. “As will you, I hope.”

“You cannot kill me. Nor can XCOM.”

“No,” she said. “I can’t. But I’m not going to just let your army of…” she looked behind her. “They are made of nanites right? Little machines?”

“Correct. A highly advanced weaponization of nanotechnology.”

“Good.” Her smile widened, and the Battlemaster took a step forward. “I didn’t want to make a mistake that big.”

“Nuclear launch detected!” The CODEX suddenly interjected.

Impossible.

He looked at the woman in disbelief. “You ordered a nuclear strike here?!”

“It seems you do have some way to know,” she lightly chuckled. “Not exactly. But you can’t outrun it now. You like talking I guess,” she lifted the briefcase. “Right before you came, I authorized a nuclear launch, and the rocket will detonate before you can escape.”

Not likely, the Cultro could probably pick him up in time. But he didn’t like the position he was being put in. “Killing me won’t make the Collective leave. And my ship will arrive before the blast hits.”

“Oh?” She asked. “Who said the nuclear blast was going to hit here?”

She looked down and the sky suddenly exploded in a blast of orange and white. He looked up to the sky and was wondering why she would bother launching a strike in the atmosphere when the ground below was hit with a noticeable shockwave. Then the Spectres began disintegrating; falling
to the ground like dust.

The ones around Treduant were the same way. The lights across the city suddenly flickered off; cars stopped moving; the city itself came to an abrupt, screeching halt. Only now did the Battlemaster remember that an effect that a nuclear weapon had when detonated at a certain range was a dispersed EMP effect.

All of his suit electronics were no longer working. No communication with the Collective; no HUD, even his new resistance against electricity was likely no longer effective. Not once had he been attacked with that kind of weapon, and as such had never thought to have the suit hardened.

That was probably what Fectorian had mentioned when discussing the flaws of the suit. He should have listened and followed his advice more closely.

The situation was now surprisingly precarious.

In the distance, the Battlemaster saw the Cultro fall from the sky and crash. “Well,” Treduant said coming to stand beside him. “It worked.”

All he could do was nod. “Well done. It did.”

Tricked again by a Human. They were certainly proving to be intelligent and worthy opponents. He couldn’t hate them for fighting for what they presumed was their own survival. “You didn’t target the civilians,” she said. “Noble for an alien.”

“No reason to.”

“Do you want to say anything else to me, or should we finish this?”

He turned to her, right as she raised the pistol, waiting for him to make a move. “No. Die well, Nicole Treduant. It is an honor to kill you.” Before she could even fire off a shot he lashed out with his sword and easily separated her head from her body in a spray of red.

The headless corpse tumbled over, the head a short distance away. The Battlemaster flourished his blade and considered the city before him. He had no communications, no support, and no direction. He was a target for ADVENT for miles around.

Unfortunately, he was nowhere near Collective territory, and he had no idea where the Warlock was, and it was likely ADVENT would be targeting him next. He would have to fight his way to safety, and that was going to be a long and bloody road.

With sword in hand, he jumped to the ground, and prepared for a long battle ahead.
Night had fallen some time ago, and the Battlemaster ducked into one of the many alleys in the city to pause and think.

The situation here was not ideal.

Treduant was dead, and Washington D.C. was coming apart, with fires spreading throughout the city and lighting up the night. The primary objective had, albeit with some difficulties, been accomplished. The issue was he was more or less stranded deep in enemy territory, and ADVENT was going to be closing on him with every soldier in the area.

Treduant’s last order had been tactically brilliant, and had placed him in what could be considered a dangerous situation.

The Spectres, which had been his largest advantage, were all dead; Fectorian’s soldiers were either damaged, or by this point, likely destroyed by the surviving ADVENT soldiers. Senorium was likely alive, but he’d seen no psionic manifestations or any indication he was in the area. While the Battlemaster didn’t believe he would just run, he was aware that the Warlock probably wouldn’t stay in the same place, nor did he have the energy to maintain an attack for hours.

By now ADVENT likely knew what was happening, and while it was risky to stay around the same general area, it was arguably more risky to just leave the city entirely.

He was not small. Stealth and subtlety were not his skills, and with his size, it was impossible. It was not a matter of if he would be found, but when. ADVENT was not going to negotiate or try anything other than killing him once and for all, and he suspected that they wouldn’t restrain themselves in the tools they used.

If he was caught far enough out, there was little stopping a nuclear strike from hitting his position and not only would he be ignorant of it being launched at all, he had no means of escape; no means to contact the Collective, and as an unfortunate result, staying near D.C was the safest place to be.

However, it would not take the Collective long to figure out where he was. The problem was going to be breaching what would soon be the heaviest concentration of ADVENT and XCOM forces in the country. At this point in time, he was vulnerable. That of course did not mean he was in danger, but he recognized that this was perhaps the best chance ADVENT would have to kill him.

He looked down at the red-stained sword. It had been decades since he’d been in a sustained fight. Bodily fluids wouldn’t affect the metal, though it was a different sight than what he had become accustomed to. But he did not train for mere show. He could fight for days at full strength, and he would receive help long before he began to tire.

He walked back out onto the street and continued forward, stepping around, between, and over the abandoned cars as the cracking fires burned around him. The city was eerily silent, and the silhouettes of the hundreds of corpses on the ground did little to change the feeling. All the civilians had fled some time ago, although the Battlemaster saw flickering shadows every so often.
Likely homeless Humans, not a concern for him. There might be some others staying in their homes, but they were not a danger to him.

The EMP had at least worked against ADVENT. Every soldier in the blast would have no communications, and their weapons would be incapable of firing. At least their gauss weapons; the Battlemaster had already encountered some soldiers who had reverted to pre-invasion ballistic weapons that, while laughably ineffective, did seem to still work.

But largely he had been left alone; left alone to wander the city as it burned around him. It was a curious sensation to see the aftermath of the conflict around him. Very rarely did he stay after a battle, leaving the cleanup and organization to his subordinates, but winding around now reminded him of the latter parts of the Synthesized War, when the core Imperial worlds had been attacked.

The first Siege of Etharia Prime reminded him of this. It had been one of the first worlds colonized by the Empire, and had eventually turned into one of its most culturally and historically important planets. It had been home to some of the most advanced labs, experimental architecture and archives supposedly dating back to the formation of the Empire.

Having such an important planet slowly be destroyed had almost been worse to witness than it simply being destroyed at once. There had been no way to retreat, and the rest of the fleets had been caught out of position, and at the time he’d known it would be days before they would get reinforcements, leaving him with only a few soldiers of the Division of Battlemasters, several of the Guardians, and several thousand civilians to work with.

Entire sections of the planet had to be sacrificed; entire records of Imperial history had been simply erased; homes, relics, and more were destroyed by the indiscriminate horde. The cities retained were consistently under siege, with it slowly crumbling around them as they desperately tried to hold the lines.

By the end, they had saved a world that was little more than rubble.

It had taught him a lesson about the uselessness of sentimentality. Strategically, the world had held little value to the Empire, and was simply considered such because of the emotional value assigned to it. And that had brought them nothing but thousands of dead Ethereals.

If he’d had to do it again, he would have abandoned the planet and had a Reaper destroy it, killing the dozen or so Director Flagships on it. At least the victory would be worth something, as they had barely managed to destroy half that number before help had arrived.

He did wonder what lesson the Humans would take from this. Looking up at the shattered Lincoln Memorial, with the Capitol Building collapsing in fire opposite it, he imagined the Humans would be furious. But he understood the effective psychological distress this would cause, because it had happened once before.

Oddly enough though, as he turned to walk down by the reflecting pool that led to the Washington Monument in the center, he did feel some regret. While this was a war, attacking symbols and monuments of history could be seen as dishonorable. Something that the Zar’Chon or Quisilia would have probably come up with, now that he thought about it.

He found himself unknowingly walking down a pre-determined path, one with a wall that had been directly targeted with missiles. There were some corpses on the path as well, which seemed to be leading to a circle ahead with some toppled flagpoles. Ironically, the United States flag was still flying below.
He looked at what the missiles had hit and noticed that the wall had originally seemed to be a large mural of sorts. Soot and cracks covered what was still left, but he could see what was likely originally supposed to be there. To the right there was a triangular field that held statues, and though most were melted, warped, and had clearly sustained some damage, their original forms were still recognizable.

The Humans depicted were equipped differently than modern ones were. The statues held rifles, which while clearly aged, were recognizable as guns. However the statues were also depicted as wearing some kind of poncho-jackets. Odd clothing, and it seemed more of a hindrance than anything else. There weren’t any Human females either, which seemed strange to him. Perhaps they had not been as involved in the past.

Times had clearly changed if that was the case.

A memorial of some kind, most likely. As he approached the center he saw the dust of the Spectres and multiple dead ADVENT soldiers around it. There was also some writing which likely explained what the purpose of this was. It didn’t appear to have been completely destroyed, so he spent a few moments reading it.

A memorial to something that was called the Korean War. One that, from the brief history written, did not appear to have gone well for anyone. With how many had died, he was surprised he hadn’t seen it covered as much in his rather brief search of Human history. There had only been a few conflicts that had seemed relevant at the time, namely the World Wars and the more recent War on Terror, since those were most equivalent to the tactics he would be facing.

In truth, the history itself was not as important as learning their military specifications and modern tactics. He had assumed that, while the wars in the past would certainly shape the future to an extent, modern warfare would take cursory inspiration at best. It would be different; evolve and improve. With how the current war had gone, and with the Humans clearly adapting tactics used in older wars, that was perhaps a mistake.

He shook his head at nothing. When planning the attack, the only place he had thought to really avoid was the Arlington Cemetery, as that was simply not an acceptable place for combat. It was disrespectful and an unnecessary target. However, he could have made the same justification for monuments like these. Regardless of their irrelevance to this war, he could respect those who fought and died in battle; to ignore that was disrespectful regardless of species.

He sighed to himself and turned to walk back to the Reflecting Pool, almost wanting to be attacked as it would be less distracting than thinking. It appeared he had likely made something of a mistake, not in the actual target, but by setting few restrictions on the targets. Military targets were acceptable, and his original mindset had been that anything aside from civilians was a fair target.

But it did raise the question of if it was necessary. In the end, Humanity would be conquered; in which case, was it really needed to have their relics and history attacked as well? If they were an actual threat, this would not be a debate, as the situation had changed, but this was far from a full war. The Humans were clever; far more so than he had initially given them credit for, but they would not win a war, that was simply impossible.

The Humans should be beaten militarily, and only that. This war did not need to be won through trickery or terror; that was not the right way it should be conducted, and something he had put to the side when attacking D.C. The message needed to be sent, but it could have been done just as effectively had he simply targeted the Pentagon, White House, and other military targets. Making the city itself a target had perhaps been a mistake.
The recent conflicts with the Humans had made him realize that the Collective Military itself was deeply flawed. While the Humans were not holding back, and advancing at a steady rate, the Collective had been stagnant for entire decades, not just the military. All of them were preparing to fight the same war again and had not been learning anything about how to improve.

There had been no drive. No reason to innovate. Advance.

If this was what a primitive, and the Battlemaster was no longer sure that word applied to Humans anymore, species could do against them, then what chance did they have against a more advanced species, much less the Synthesized?

Fectorian, Revelean; the Imperator had allowed both of them to work on their projects, but never allowed them to truly affect what was supposedly the organization his species was to lead. Perhaps Aegis was more justified in making a statement against the Imperator than he had originally assumed. While a traitor, perhaps there were more reasons than what the Imperator had said to him.

For an organization called the Ethereal Collective, he was wondering why he was the only one to actually have a public presence.

If they were supposed to be the leaders of such a Collective, why weren’t they?

Was that one reason why they were struggling to such an extent?

The Battlemaster stopped walking, wondering why exactly he was thinking about this now. He was not anywhere close to being out of danger, and this was something that required a safer environment to really consider the implications.

A battlefield was not that place.

Thumping in the distance reached his ears, signaling the sound of helicopters arriving in the distance. They were arriving.

He flourished the blade in his hand, and marched forward to fight ADVENT’s reinforcements.

***

The Citadel, Situation Room – United States of America

11/21/2016 – 11:51 P.M.

“I have every nearby Garrison closing on D.C. now,” Laura updated the hologram of Saudia, as well as those of Weekes and Patricia. “The Battlemaster will not be able to get far before we locate him. He also won’t be able to call for reinforcements, and can’t be picked up without us noticing.”

Saudia looked understandably skeptical. When the nuke launched by Treduant had gone off, no one had initially known what to make of it. However, some of the communications equipment was EMP hardened and they had been able to piece together at least some of the situation. It appeared that the nanoweapon the Battlemaster had brought had been destroyed, and Fectorian’s soldiers had been damaged as well.

With that said, the city itself had reportedly sustained substantial damage and museums, monuments, and government buildings had been targeted. Civilians hadn’t, which was perhaps the only good news to come out of the situation.
Either way, this was not what anyone would consider ‘good’.

“Are you sure about that?” Saudia demanded. “Because I’m going to have to give an update, and I can’t exactly cover up the fact that there was a nuclear weapon detonated above D.C. As it is this is hard to portray as a positive, especially as Treduant is dead.”

“Then don’t.” The Commander interrupted flatly, raising a palm. “This was not just a military target, this was a psychological one. The only intent here was to pacify us and scare us into submission. Don’t hide what happened. Show it.” Laura nodded beside him as he continued. “This was an unprovoked attack on not just our government, but on the history and culture of America itself. We still don’t know what we lost, and we haven’t even mentioned the people who have been killed. Use it to make people angry. This was a direct statement that there are no places that are safe from attack. Perhaps we should respond directly in kind.”

“And how do you propose we do that?” Weekes demanded, his helmet on as he was still on the front lines. “It’s not like we can hit their own bases, otherwise I agree. We can’t let this go unanswered, and our offensives are already stalling. At best this is going to turn into a sustained siege.”

“Two options that I can see,” the Commander said. “There are areas that the Collective controls on Earth, primarily Australia and Japan. We detonate nukes over those countries and disrupt them at the very least. If we want to send a more permanent message, we hit them with nukes directly.”

“No,” Saudia shook her head, scowling. “I already don’t like that we are using nuclear weapons in the atmosphere. Using them on land is not something I will authorize.”

“Maybe not on land,” Laura interjected. “But the Commander has a point. I am not going to let this go unanswered. The aliens have escalated this conflict, and if they feel safe attacking our capital cities, than we need to respond in kind. Disrupting their hold on Earth will send that message, even if it won’t permanently destroy them.”

“If you do that, it needs to be done now,” Patricia added. “This will only work a few times before they figure out countermeasures. I doubt many aliens even knew about the EMP aspect of nukes. Now they will. Use it before they adapt.”

“It will take them time, even if they do,” Laura commented. “They can’t exactly overhaul their entire army overnight.”

“I’m in agreement with both commanders,” Weekes said. “Let’s exclude the attack on D.C. At least some of us are Americans, and we’re not exactly rational about it. The fact is that D.C. is… was a valid military target. The civilians weren’t harmed. I doubt the Battlemaster cared about anything beyond expressing how much he disliked us having the gall to attack his bases.” He finished that sentence with a snort.

His gaze swept around. “With that said, it doesn’t fucking matter where he attacked. That isn’t an escalation in my opinion. What is an escalation are those nanoweapons. Nanoweapons that are self-replicating. If we aren’t justified in responding appropriately to that, then whoever holds that opinion can go straight to hell. Black out Japan and Australia. Chancellor-“

“I can guess what you’re going to say,” Saudia interrupted, looking over at him. “And yes, research into nanotech is going to be accelerated. We don’t exactly have a choice now. Commander, does XCOM have anything to share on that front?”

“We’ve been conducting research,” the Commander said. “It is a relatively new area, but we will
share what we have learned to help you. But at the moment, we need to focus more on defending against nanotech than weapons of our own. Those will come later.”

“Agreed,” Laura nodded. “Chancellor, with your approval I will prepare our nuclear subs to launch EMP nuclear strikes over the discussed locations. After it has of course been approved by the appropriate divisions.”

Saudia was silent for a few moments. “Granted,” she said. “I will have Minister Kyong inform China of the impending strike over Japan so they don’t panic when they detect a nuclear launch.”

“Good idea,” the Commander said. “I’d add every nearby foreign nation to that list. No reason for everyone to suddenly panic.”

“If I may offer a suggestion,” Weekes interjected, raising a hand. “We don’t need to use our nuclear subs. India has land-based ICBM capabilities, correct? Why expose our nuclear subs unnecessarily?”

The Commander exchanged a glance with Laura. “Can India hit Australia? Japan is obviously in range.”

Laura pursed her lips, briefly looking down at her tablet and pressing buttons on it. “Yes,” she finally said. “India has the capability to reach Australia. In fact, North Korea’s nuclear arsenal would be best deployed over Japan. India will target Australia.”

“It’s settled then,” Saudia looked between Weekes and Laura. “However, keep several nuclear subs on standby if there are issues.”

“Certainly.” Laura nodded, setting her lips in a thin line. “But now we need to focus on how to proceed with Sherman.” A holographic map of North America appeared. “We have penetrated Collective territory, but they are holding steady at LA and Sacramento. Hawaii will soon be taken by us, but I don’t know if it’s a good idea to hold onto that if they aren’t driven off completely.”

“We’re not giving it up now,” Weekes practically growled. “And what exactly is the Collective going to do? Send another fleet to take it back?”

“I doubt it’s an actual concern for them,” the Commander interrupted. “The bigger issues are that Canada is coming under attack, as is Mexico.”

“Alaska is heating up first,” Laura corrected, pointing at the map. “Anchorage is already coming under attack. There are multiple cities that are also being struck. There aren’t enough soldiers to protect them all. Fairbanks is the only location aside from Anchorage with Gateway support. I’ve diverted several Garrisons who helped in California to there.”

“How long can they hold?” Saudia asked.

“Anchorage?” Laura paused. “Based on the size of the alien force, they can hold out for a few days, minimum. Fairbanks…that depends on how badly the aliens want it. Even a medium-sized force will probably take it. They aren’t prepared.”

“How are Vancouver and Guadalajara holding?” Saudia asked.

“Surprisingly well so far,” Laura updated. “The good news is that the aliens don’t seem to know how to handle trench warfare. Even with the defenses half-finished at best, they are holding out extremely well. The bad news is that they’re expanding to strike the less-defended areas. Seattle has just come under attack. Again.”
The sigh that went around the room was almost palpable. At this point there wasn’t much left of Seattle except empty buildings and damaged skyscrapers. There hadn’t been time to even dig the trenches fully yet, much less build Flak Towers. “Portland should prepare for another attack,” the Commander suggested, looking at the map. “It might be best to adapt our strategy in Seattle.”

“How?” Saudia asked.

The Commander looked to Weekes. “You mentioned one the SFD chiefs specialized in inter-city guerilla warfare tactics, right?”

Weekes snorted. “By ‘one of the SFD Chiefs” you mean Chief Ranta, yes?”

“Yes,” the Commander nodded. The Finnish Chief of Hussar Operations Niklas Ranta, formerly a sniper of the Utti Jaeger Regiment, and supposedly one of the best living snipers in the world. These days he had apparently had a more administrative and tactical role, which, combined with his skills, was likely why he’d been chosen to lead the Hussars.

He’d also apparently made himself specialize in urban guerilla tactics, and was a proponent of using more of them in the war, most of which had been temporarily denied. Now though, it was as good a time as any to see how useful they would be in this war. “Commander Christiaens, looking at the numbers, Seattle will not hold out against another sustained assault. Instead of wasting soldiers, we should at least attempt to experiment in weakening the Collective in other ways. Weekes, is he as good as he says?”

“Absolutely,” Weekes nodded. “Give him what he needs, and he’ll make Seattle hell for the aliens. Although he’ll likely destroy a lot of the city with it. But he’ll make sure there are dead aliens.”

“My only concern is that this may be out of his jurisdiction,” Laura warned. “We don’t have a guerilla division-“

“Then clear it with Chief Operator Schalit,” Weekes interrupted. “We’re the Special Forces Division for a reason. Asymmetrical warfare is what we do. I’m not going to let ‘jurisdiction’ of all things be a problem.”

“Your point is made, Chief,” Saudia interjected. “Laura, make sure Chief Ranta actually can do what we need before giving him resources. Otherwise, I’m in agreement. If we can’t hold Seattle, we should ensure the aliens die by the thousands to take it.”

“Patricia,” the Commander looked over to her. “Anything you want to add?”

“No,” Patricia shook her head. “Apologies, I’m distracted. The Overmind is directly supporting the aliens, and from what I’ve been able to tell, on every battlefield. I’ve been trying to figure out some way to subvert it, but it’s rendering any kind of offensive telepathy difficult.”

“Little we can do about that,” the Commander said grimly. “Let us hope he doesn’t turn his abilities against us.”

“In some good news, South Korea is holding steady,” Laura updated, giving a brief smile at that as she turned the map to the respective country. “I don’t know what the aliens were thinking here. They were clearly not expecting this level of defense, or even how to get through them. And they apparently have some kind of homicidal alien that’s shooting at, and I quote, “Whoever the fuck he wants’.”

“Funny.” The Commander honestly wasn’t as concerned with Korea. There were enough defenses there to possibly hold out for half a year against a Battlemaster-level threat, much less the
somewhat half-hearted attempt they’d seen so far. “How close are the Garrisons to D.C.?”

“How close are the Garrisons to D.C.?” Laura said. “The main army won’t be far behind. An hour or less.”

The Commander nodded, wondering if that would even be enough. Still, he was trapped behind enemy lines without a way to escape. Contacting Aegis was something that wasn’t exactly…easy to do here, but if there was anyone who might have an idea on how best to capture him, it would be their resident Ethereal.

“Excuse me for a moment,” the Commander said, stepping back. “Call from the Praesidium.”

Laura simply nodded and he stepped out into the hallway and after ensuring the call would be secured, put a call towards the Praesidium. “Commander?” Jackson asked. “What do you need?”

“Aegis,” the Commander answered. “I need to speak to him. Concerning the Battlemaster. I assume you’ve been following the developments?”

A pause. “Yes. We’re lucky Shen had the foresight to harden the more delicate systems of Aegis armor from EMP attacks. Operatives Nira and Tendai retreated, and are alive. They’re trying to locate the Battlemaster and provide location data.”

Some good news there. He wasn’t surprised he hadn’t been updated yet about their status, as this had happened such a short time ago. “We held Shinobi Cho back, correct? What is the status of Roaring Sky?”

Another pause. “Crashed. The skyranger was hit by the blast and Roaring Sky had to punch out. MEC Pilot Cho is alive though, and the Shinobi is largely functional, although all the healing nanites were disabled. She is currently protecting Roaring Sky, and is outside D.C at the moment. Should I order her to pursue the Battlemaster?”

The Commander shook his head. “Negative. Have her get Roaring Sky to safety and regroup with Nira and Tendai, as well as the ADVENT forces. Given how easily the Battlemaster took Knight Team apart, it would be suicide to attack.”

“Agreed,” she said. “I’ve got Aegis now.”

“Commander,” the voice of the Ethereal greeted. “I have been appraised of the situation. I would advise your remaining soldiers approach the Battlemaster peacefully. He can be reasoned with, if you are willing to accept his surrender.”

The Commander gave a humorless chuckle. “How serious are you now, Aegis? Do you really think he would surrender? And that we would do anything except execute him?”

“You of all people should understand the tactical usage of similar tactics, and have performed worse than the Battlemaster ever has,” Aegis answered flatly. “So yes, I expect you would. XCOM is not ADVENT. The Battlemaster is an enemy combatant, and if captured, he would be treated well and not turned over to ADVENT who would desire only to execute him.”

Aegis didn’t hold back. Fair enough. “And what is the problem with that?” The Commander asked. “If we win this war, I don’t see him surviving. I also don’t expect him to surrender.”

“If he did,” Aegis said slowly. “Would XCOM hold him as a prisoner of war, one treated well, until the war was decided one way or another and ultimately not turned over to ADVENT? You would also not be bound to inform them of his capture, if you wish to avoid the issue altogether.”
“What is your plan, Aegis?” The Commander demanded.

“Let me speak to him,” Aegis said. “We were friends. I know him better than you. I know that he can be convinced to surrender if he knows escape is impossible. Let me at least attempt this, as there might not be another opportunity. If I succeed, we retain a valuable asset in the coming war, and increase your chances of victory significantly. If I fail, ADVENT still has a chance to kill him.”

The Commander considered that for a moment. “Fine. Once my soldiers see an opportunity, they will put you in contact with him. However, if the Battlemaster just kills them, their deaths will be on you. And I won’t forget it if it happens. Do you understand?”

“If they approach peacefully, the Battlemaster will not attack,” Aegis assured him. “But they must follow my instructions. The Battlemaster will not be taking chances now.”

“Central, did you get that?” The Commander asked Jackson.

“Yes, Commander,” Jackson confirmed. “I’ll patch Aegis into their comms as soon as possible and give their orders. For the record Aegis, I’m not expecting this to work.”

“Truthfully, neither am I,” Aegis admitted. “But I will at least make the effort. He deserves that much. He is ultimately not your enemy here. He is only following the directive of the Imperator.”

“Directive or not, he’s still the enemy,” the Commander grunted. “But good luck, Aegis. Hopefully he’ll listen to you. Commander out.” He tapped his headset and ended the call, before turning to head back to the Situation Room.

Depending on how things went, this day could potentially get a lot more interesting.

Mars Observation Station – Mars Orbit

11/22/2016 – 2:11 A.M.

This entire operation was not exactly going, as Ravarian would put it, well.

Not just because everyone seemed to be forgetting that he wasn’t an actual military leader. He was the Zar’Chon, but no one actually bothered to think if the head of the Collective’s Intelligence organization was actually qualified to make military decisions. He was certainly knowledgeable on the subject, and could offer certain insights from the perspective of an intelligence operative.

But he wasn’t the Battlemaster, nor from the Runianarch, Lurainian, or Federation Military for that matter. He was, unfortunately, the highest ranking Collective officer in the Solar System, and thus, he was having to make decisions outside his comfort zone.

And as such was the immediate target for being yelled at by, admittedly, justifiably furious commanders.

“What do you mean ‘you can’t do anything’?” Runi’callista’vitiary, the Collective Commander in charge of the Korea invasion demanded. “I am losing soldiers to some crazed traitor! Where is the Battlemaster?!”

“The Battlemaster is currently fighting,” Ravarian answered calmly, knowing there was little he could do to lessen the anger of the Borelian. And technically, it wasn’t a lie. He was very sure the Battlemaster was in combat. “I’ve attempted to pull the Hunter back, but he…ah…isn’t
responding.”

“You’re Zararch,” Callista growled, stepping forward. If she hadn’t been a hologram, Ravarian might have been concerned for his own safety. “If you can’t order him back, I want your snipers to kill him.”

From what little Ravarian knew of the Hunter, that was probably not going to work. “Do you have a location? Snipers aren’t good without targets.”

“No, I don’t,” Callista snapped. “So I’m stuck with a trigger happy traitor sniper? Is that what you’re saying?”

Ravarian paused briefly. “Unfortunately, yes. I’m overseeing and providing logistical support to a half-dozen major operations at this time. Every Ethereal I know is indisposed. I’m afraid I can’t help you now, I’m sorry.”

Callista raised one finger at him. “I’m keeping a list of every soldier that’s died because of your incompetence. And anyone else who put this traitor on this mission. If this problem isn’t solved soon, I will ensure that the Aui’Vitakar hear the full extent of your failure. And don’t even think of trying to cover this up, as I know you are.”

The hologram was abruptly shut off.

This was a problem.

He was honestly surprised the Hunter had actually been this much of an issue. He had easily been identified as insubordinate, but Ravarian would have never guessed him to be a traitor. Now he was directly threatening the peace on Vitakar. He sighed, activating the holodisplay in his hand, and quickly navigated to the list of Collective commanders.

This was a problem for the Battlemaster to solve, once he was recovered. Callista would calm down when he returned. But for now, a communications restriction was needed. For the remainder of this operation, she would not be able to communicate outside the Solar System, despite her threats. As much as Borelians were fearless, they were not always the most intelligent, especially in fits of anger.

However, her anger was justified so she wouldn’t be removed for now. It would be ironic, but helpful if she was in the Hunter’s sights at some point.

Actually no it wouldn’t. It would just be further evidence of the need to execute the Hunter, which there frankly didn’t need to be more of.

He did not like being so visible in the Collective. Quisilia was off in Australia, the Battlemaster was fighting somewhere in D.C. while they were still trying to determine his location, and both Guardians had left for unknown reasons. At least the Second Guardian had said she was going to assist in the operations in Canada. The First Guardian had just disappeared.

Typical.

Typical, frustrating, and annoying Ethereals who couldn’t be bothered to put a cohesive plan together. Oh no, each of them had to do their own thing and not tell anyone else about it, because each Ethereal was always on a top secret mission and didn’t have time to inform the mere Zar’Chon about where they’d be and what they’d be doing. No, that information was certainly useless to him.
Ethereals may be immortal gods wielding psionic energies to destroy entire armies, but they were exceptionally bad leaders. The only ones who seemed to have any sort of idea how to work with aliens were Quisilia and the Battlemaster. The others obviously could care less.

It was part of the reason he hadn’t contacted Caelior about possible assistance. There was a greater possibility that he’d get his neck snapped than the young, arrogant alien actually listening to what he had to say. He could imagine how the conversation would go:

“What? Has your incompetence put him in danger? I will not work with such a failure as you!”

And in a fit of juvenile rage, Caelior snapped the Zar’Chon’s neck.

Ravarian grimaced, feeling an overwhelming sense of frustration. The Sargon of all things was more helpful than any Ethereal. More polite too, for that matter. He was quite sure Quisilia would be reading his mind after this, and frankly, he didn’t care right now. If one thing had become apparent over this conflict, it was that most of the Ethereals, the Battlemaster and Quisilia excluded, had no idea how to run the Collective they supposedly led, much less interact with aliens they obviously saw as lesser.

It turned out that war revealed the nature of beings much better than words and propaganda ever could.

He doubted Quisilia would execute him. Maybe thinking this had crossed a line though. But was it really a crime to accuse Ethereals of (in his mind) incompetence if it was true?

While the Battlemaster had his faults, he was actually someone he could respect. Quisilia too. Not the absent Imperator or any other arrogant Ethereal. No, this was not something he was going to tolerate any longer. Once this conflict was resolved, he was going to make major revisions to the Zararch and how they interacted with the Collective.

If the Ethereals didn’t like it, they could kill him, but he was going to reexamine certain rules and guidelines given by the Ethereals and determine their merit. If they had a problem with it, they could speak to him in person.

He felt something rub up against his leg, and unconsciously bent down and picked up Cali’Zar’Chon, who had grown quite a bit over the past few months. It was nice to hold it while considering various tactics on holodisplays; a surprisingly good stress relief. A few of the analysts had given him some odd looks when he’d brought it out the first time, but everyone had gotten used to it.

Some of them had seemingly given jealous looks too. Over a cat of all things.

Maybe he should bring in several cats to wander around and provide moral support to his staff. The little furballs did have their uses, it turned out. Apparently dogs had a similar effect. Maybe he could run a secondary experiment on which one was better.

Something for later when he wasn’t as stressed.

“Zar’Chon,” Disciple-7 said into his earpiece. “We believe we have intercepted communications displaying the location of the Battlemaster. I am beginning to put together an extraction team.”

A competent subordinate that communicated things. Amazing. “Excellent,” he said, moving to
walk back to the main hub. “I’m on my way down to assist.”

The Island of Hawai’i - Hawaii

Operation: Kamehameha – Day 2

11/22/2016 – 8:32 A.M.

Sleep was somewhat fleeting for Sierra, but now that several of the major islands, including Hawai’i were taken, they had gotten a little bit of downtime while the rest of ADVENT kept the pressure on the alien strongholds. So she’d gotten some food and a few hours of sleep, and right now was doing some socialization with several ADVENT soldiers before heading back out to battle.

“Did you see anything through that Gateway?” Peter Hale, one of the regular soldiers asked. He was about the same age as her, if a bit more chipper than she was. He’d said he was originally from California, which clearly gave him a more personal stake in what was happening.

“Nope, just purple,” Sierra answered, shaking her head and pushing around her morning rations before finally deciding to just eat it. ADVENT rations were definitely not as good as what XCOM had. At least for now she’d have to get used to more bland military food. At least it wasn’t bad.

None of them were wearing armor, obviously, the ADVENT soldiers were wearing their standard fatigues, and she and the other Archangel pilots had a more sleek undersuit as even normal clothing would be too bulky. There were some more regular clothes, but considering they would be leaving in…she glanced over to the clock…roughly a half-hour, she hadn’t thought it was worth it.

The price of that was that the suit was…rather tight and not exactly what Sierra would consider modest. It had been somewhat amusing to see some of guys being very unsubtle in checking her, and Anna for that matter, out, while the others kind of just tried to look everywhere but at her. However, being an Archangel came with certain expectations, and people kept their distance.

“So how are the suits piloted?” Dianne, a soldier from Florida asked, sipping from her plastic cup. “You just angle your body? You’re not handling levers I assume?”

“No, quite,” Sierra explained, setting down her food briefly and standing. “Yes, angles help and direct us. But how those are controlled is through a…kind of neural implant.” She reached back and pushed her hair off her neck and turned slightly to give them a look at the implant in it. “Don’t ask me how it works, but from my understanding it reads certain brain patterns associated with actions. Essentially this allows us to control propulsion, weapons, speed, all with our minds.”

“Wait…” Dianne frowned. “You’re plugged into the suit?”

She exchanged a glanced with Anna. “Yes…” Anna said after a pause. “I think that’s accurate.”

Some of the soldiers looked visibly uncomfortable. “Just through that one implant?” A soldier she didn’t recognize asked. “Or are there others?”

“A couple,“ Sierra recalled. “There are two that line the spine, and two more just above the joints of the arms and legs. Improves speed so I’m told. It doesn’t hurt either, if you’re curious.”

“These definitely were,” Ted chimed in from the corner, a smirk on his face. The psion had largely kept out of the conversation, and she could tell he was still tired. He had the arms of his undersuit
unzipped and was lightly spraying them with a Medkit as more of a preventative screen than to actually heal them.

Psionics really did take a major toll on their bodies. When he’d taken off the suit his arms had been literally ripped and it looked like an entire layer of skin was gone. How he’d still been walking around with not much more than a grimace was something she didn’t know. She knew that Offensive Psions did have the Biomuscular Regen modification, but that seemed to function more as a way to ensure that the psion wasn’t rendered useless after a few displays of power.

“Hey, don’t scare them,” Anna chided lightly. “They’re still getting used to psions.”

“Don’t worry,” Ted reassured them. “I can’t read your mind, just pick up on certain emotions.” He raised a hand. “I’m better at killing aliens.”

“All of you seem to be,” Peter noted. “Although since you’re from XCOM…”

Sierra chuckled, thinking of the ironic fact that they were housing quite a few aliens themselves. “You have no idea.”

“Are you all from America?” Another soldier asked, cocking her head their direction. “You don’t have accents.”

“Yep, born and raised in Florida,” Sierra said.

Ted shot her a suspicious look. “I would not have guessed that.”

Sierra rolled her eyes. “Contrary to popular belief, not everyone from the South has a so-called southern accent.”

“Montana for me,” Ted added. “Don’t have anything to add beyond that. No psychic powers as a kid either.”

“Anna?” Sierra prompted.

“I came with my family from Ukraine,” Anna shrugged. “Lived in Vermont once we settled. Nothing more interesting beyond that.”

Huh, she hadn’t known that about her. Sierra had just assumed she’d grown up American from birth. Despite what Anna said, there was probably some story there, but that was for later when the aliens were gone. Her earpiece buzzed, indicating that they needed to get ready. “Nice chatting with you all,” Sierra said, giving a little wave. “But duty calls. See you all out there.”

“If you die, can I get your suit?” Someone called, to several scattered chuckles.

“No!” Sierra called back, then paused. “Actually, sure! But only if you record your face when the suit skewers you where the implants are supposed to be.”

“Never mind then!”

Sierra smirked and followed the other Archangels out, getting her thoughts organized for the battle ahead.

***

Washington D.C. – United States of America
The helicopters wasted no time in opening fire on him.

The Battlemaster had chosen to make the first battle along the Reflecting Pool, as it was an open space that would provide plenty of maneuverability. Gauss machine guns spat slugs from the air as they attempted to circle around him, in a vain attempt to keep him in one single place. There were six in the air currently.

Too many.

The Battlemaster lifted one fist into the air and enveloped himself in a telekinetic field that stopped all the projectiles instantly. With his free hands he reached towards two helicopters and clenched his fists, crumpling the rotors and blades that allowed the machines to levitate. But all things had their weaknesses, machines included.

Soldiers were marching in the distance, and guns were already being fired at him from the ground. The air turned purple as he transitioned into a charge and dashed forward as the helicopters began falling to the ground. With a free hand, the Battlemaster reached towards one turning to let its gun fire on him, and telekinetically grasped it.

He directed the machine into a nearby one, and although it was clumsy and required a brief amount of effort, he was successful and the two machines connected. Teams of ADVENT soldiers were now taking positions, especially gunners who were unloading their gauss autorifles into him. He simply transitioned into a psionic dash and performed several quick zig-zags towards the line.

“Hold him!” One of the soldiers screamed, and the Battlemaster belatedly noticed that there were the distinctive ADVENT Priests in the reinforcements.

So this might be a pleasant initial challenge.

He then paused as he suddenly realized that there was quite literally an army heading towards him. He was on the latter end of the reflecting pool, and everywhere from the Washington monument backwards had entire squads of ADVENT soldiers, with healthy mixes of Gunners, Snipers, Rocketeers, and Priests.

MDUs also dotted the army, and several of the ADVENT soldiers had the small SHIV machines. There were also the Lancers, and many ADVENT Special Forces units leading the charge behind the initial sacrifice.

This was potentially a problem. It was one thing to fight soldiers, but now that psions were involved, and the army more diverse, it was more difficult. No holding back today.

The Priests were extending hands his way, and he felt the iron grip of telekinesis wrap around his legs and quickly threw a hand forward, blowing back the soldiers immediately in front of him and transitioning into a psionic charge. While not lethal, it disrupted the hold on him and he was free. One swipe slaughtered a swath of soldiers, while his free hands were clenched fists that similarly found targets.

The armor of ADVENT did not protect fully against the steel of his armor, and soldiers went flying or stumbling backwards when hit by him. The Battlemaster twisted one lower hand violently and all soldiers within his hastily constructed telekinetic field were twisted around. Some bones snapped, some were bent in two; all were disrupted.

The Battlemaster slashed down at a Priest and cleaved through her armor with relative ease, the
force crumpling her body to the ground. Gauss fire became a melody to him as it flew around and
bounced off his armor. One hand slammed to the ground, sending a telekinetic shockwave that
unbalanced everyone around him.

He psionically dashed forward and spun in a complete circle within the blink of an eye killing all
the ADVENT soldiers around him; the now-headless corpses collapsing to the ground. Without
pausing he began cutting his way through the ADVENT soldiers as they desperately tried to
contain him, but they had never faced the unrelenting strength that was a Battlemaster unleashed.

Armor was punctured by metal; skin and bone were crushed under a telekinetic grip; time was a
commodity that was not allowed, as the Battlemaster moved too quickly, and targeted the vital
soldiers in the army to remove possible threats. The Priests he killed barely had time to shout
before their heads exploded, necks snapped, or they were thrown straight up into the air.

The soldiers within the range of his sword fared even worse. They were short enough to be like
fighting children with how little they could withstand his strikes. His free hands picked up and
threw, slammed, or mutilated them with ruthless abandon. The air around him became tainted with
the smell of blood and discharged weapons.

The MDUs and machines assisting them were turned on their own with simple applications of
telekinesis. The bipedal machines were compressed into balls of metal and thrown into more
soldiers, while the little SHIVs were stomped underfoot. The iron skin of the Lancers did little
good as they were drawn to his hand and slammed onto a knee or the hard concrete, leaving them
as broken wrecks.

Yet it was exhilarating.

Two Priests attempted to coordinate in the chaos, one shooting streams of psionic energy at him,
while another telekine attempted to hold him in place. The Battlemaster telekinetically raised the
second psion, crushed him and tossed the broken corpse away, before psionically dashing towards
the first psion and decapitating him with a single strike.

Three MDUs stood before him then, their laser weapons already lighting up and with an upwards
swipe one was destroyed, while his two lower hands grasped the machines and clenched them into
fists. The white bipeds crumpled into balls, and a stab into the center of the standing MDU shut the
machine off for good.

Time had essentially stopped for him, caught up as he was in the battle and seemingly massive
army he was caught in the middle of. Soldier after soldier died to him; none had time to even
escape his reach, much less strategize or prepare. Every strike was a deathblow. Every motion a
death sentence. Each motion; every move the Battlemaster made involved the death of another.

Even as he cut down a trio of ADVENT he was already taking in the immediate soldiers around
him; the next sword stroke, telekinetic grip, and psionic dash already being calculated.
Multitasking was one of the first things taught to potential Battlemasters; how to effectively
manage large groups of enemies in close proximity to each other.

He had to not only be cognizant of the threats themselves, but thinking three steps ahead every
second. It had been difficult to fully visualize at first, but with thousands of hours of training, the
War against the Synthesized, and countless more hours in the Prism, it was second nature to him,
but admittedly something he hadn’t allowed himself to be immersed in for a long time.

One soldier was slammed to the ground by his hand; a swipe of his sword killed another Priest; his
other two hands crushed an MDU and blasted back a squad of ADVENT soldiers. All
simultaneously; all within moments of each other; and already he was moving to the next targets.

A stab to kill an MDU. A SHIV crushed underfoot. The screams of ten soldiers lifted and then bent in two, then throwing their broken bodies at their comrades. Sprays of blood and bone adding red layers to his armor from each punch and sword slash. Over and over; on and on; a battle that seemed like there would be no end.

And then everything went silent.

The Battlemaster deliberately pulled himself out of the trance he’d fallen into and observed the carnage around him. Wrecked helicopters, faint sobbing and screams of the mortally wounded soldiers, and corpses covering the ground around the entire Reflection Pool, with some floating in the water itself.

MDU and SHIV wrecks sparked and smoked intermittently, and the ground was stained with blood, soot, and metal. The Battlemaster quickly reviewed his own status. His armor was coated and splattered with blood, the gauntlets were a deep red, as was his sword. His cloak was ripped, burned and torn, and even the armor had suffered small dents.

Still, the effort had tired him. He was fully capable of falling back into the trance, but he would eventually become sloppy, and those would not be the last soldiers ADVENT sent. He needed to keep moving, maybe go to somewhere they wouldn’t immediately expect. He had memorized the basic layout of the city, and knew a place he would have a brief reprieve.

With that decided, he began the march towards Arlington, knowing that if the Warlock was still around, he would most likely be in that area. Much as he had derided the Chosen as a tool, they would stand a better chance of surviving together than alone.

***

Busan – South Korea
11/22/2016 – 5:18 P.M.

Duri had never even known that it was possible for an alien to talk as much as the Hunter did.

The battle had persisted for over twelve hours straight now, and the Hunter had essentially been providing live commentary throughout the entire thing. If he hadn’t been a terrifyingly effective sniper, making shots that no one could begin to guess at how they’d been pulled off, Duri would have found it hilarious.

Even more so since the Hunter had also not stopped the trend of shooting his own side.

“Sectopods,” the Hunter was musing now. “I’ve always wondered what the Sectoids were thinking when they made them. Not a bad idea, but far too easy to outmaneuver.”

“He is not seriously going to do what I think he is,” Beatriz said flatly, looking through her scope. “No fucking way.”

“Oh, but I am, ADVENT sniper number one-hundred and two, or whoever the fuck you are,” the Hunter chided mockingly, making Beatriz immediately duck under the firing slit as if she was afraid of a sniper bolt hitting her. That was another thing he’d been doing. He’d occasionally address soldiers at random. He didn’t seem to know the names thankfully, so he called them random numbers.
It was a bit unsettling though. No one knew how he was still in their network, although Miguel said he was probably spoofing their network with stolen ADVENT proxies. Whatever that meant. Duri wasn’t a computer guy, much less a network guy, so he’d taken the engineer at his word.

“You are not going to be able to make the shot,” Beatriz muttered. “I don’t care how bullshit your sniper rifle is.”

“Watch and learn, little human,” the Hunter chuckled. “And I don’t blame you. I’m much better than you’ll ever be.”

The curiosity apparently got the better of her, and Beatriz propped her sniper rifle back up and peered through it. The aliens had managed to erect some form of barricade in the no man’s land, but it was extremely far away as to be ineffective, and the area had already been besieged with artillery, although they had also deployed scattered Andromedon shields to provide some protection.

Behind the lines there were the clear outlines of Sectopods and Cyberdisks. Ironically, the latter had proven to be little more than floating targets as they didn’t have the range to actually move forward without being shot out of the sky. Not only did they have to worry about the hail of gauss fire from the ground, but also the Flak Towers which had shot down a few more additional spacecraft that had been foolish enough to get too close.

“Cara! Setting ammo behind you!” Miguel told her, tapping the elevated turret ground she was standing on. “Anyone else need reloads?”

“Three more mags and I’ll be set for a while!” A nearby soldier called out, and a few more voices added to that. Miguel made a hasty note on a pad and dashed off to get the ammo. All of them had adjusted to the trenches fairly well, more so than Duri had expected. Miguel kept all of them supplied with ammo, and Nobuatsu had kept them well-hydrated and fed.

Although right now he was assisting several soldiers who’d been shot nearby by stray Collective plasma. Even they had to hit something.

For his part, he’d felt somewhat useless, as he couldn’t really aim at anything with an acceptable degree of precision. Only Beatriz had any kind of accuracy, and Cara with her Browning could inflict damage reliably. He was mostly relegated to directing fire and keeping everyone in line. He’d instructed Mana and Aleksandra to hold their fire unless they could actually aim for something. Otherwise he’d occasionally had them relieve Nobuatsu and Miguel.

Beatriz had kept him updated on what the Collective was doing on their lines, and occasionally asking what she should be targeting. He really needed binoculars, and had requested some but they had yet to actually come. But she was doing a good job illustrating the battlefield, so he didn’t feel too hampered.

Cara meanwhile had seemed to be having far too much fun with her gun. She was exceptionally good with it, and had audibly taken great pleasure in ripping the initial alien charge apart, and more recently overwhelming Andromedon shielding and cutting through Cyberdisks.

The biggest threat they now faced were the Sectopods, which were visible monoliths in the distance that were growing ever-closer. They were at the alien line now, but it looked like they weren’t in range yet to actually begin firing. The Collective had also begun firing at them, but their aiming was just as bad as ADVENT’s own. If they had their own snipers, they had yet to show them.
“They’ve got the Andromedon shield back up,” Beatriz reported, and Duri saw a square of red light up in the distance. As it was still night, the line itself was rather hard to see.

“Enemy composition the same?”

“Mutons and Borelians,” Beatriz confirmed. “Sectopods behind them. They’ve got some kind of support soldiers helping their wounded.”

Tactically, it would probably have been a good idea to have her target the support soldiers. But there were some things that shouldn’t be done, and attacking medics was one of them. Maybe a bit old-fashioned for ADVENT, but he would prefer their own medics not be attacked, so he would allow them the same courtesy.

That didn’t apply to their tools though. “Hit the Borelians if you can,” he instructed. “Cara! The shield is back up!”

“I see it!” She yelled, chuckling as she began unloading onto the shield in the distance. “I’ll take it down again!”

If Duri recalled right, if she did it, it would be the third time so far that shield had been erected, and then overloaded. In general the Andromedon shielding only lasted until someone in the trenches noticed, realized that no one was firing on it, and then had their gunners focus-fire it. They clearly didn’t have the infrastructure to properly power any equipment they had.

“Sectopods are moving forward,” Beatriz updated in between shots. “Got one Borelian too.”

“Good shot,” he patted her shoulder and activated his squad channel. “Alright everyone! Ready positions! We’ve got Sectopods coming in!”

“About time I do something,” Aleksandra stated, coming up beside him and readying her rifle. “Boring combat otherwise.”

“Speak for yourself,” Mana chided as he took a similar position beside her. “Personally, I prefer battles where my chance of dying is low.”

“Focus!” Duri chided as the ground rocked as missiles suddenly shot from the two dozen Sectopods, right from the back of the primary ‘pod’. The streaks in the air looked intimidating and were angling down towards the ADVENT line, and it was at an angle that none of them had a good shot at it.

From behind him he heard the pounding of one of the THAAD and Flak Tower defense systems, and sniper fire from the Hussars accompanying it. At the same time, various points along the trenches were encased in a purple bubble, likely from the supporting Priests anticipating where the missile strikes would be.

Several of the missiles exploded in a burst of green fire, but many streaked down towards the ADVENT line and hit with explosions that shook the ground. Most of those hit the psionic shields created by the Priests, but several hit the lines themselves with the accompanying screams of pain. One directly hit a Flak Tower a short distance away, destroying most of the rooftop weaponry and setting it ablaze.

“Going to help,” Nobuatsu updated and dashed away. Duri simply nodded and began focusing on the advancing Sectopod in the distance.

“Wow, amazing, the supposedly superior side actually hit something,” the Hunter commented. “I
was beginning to wonder if they were all incompetent, or if I’m just stuck with an inferior bunch.”

A pause. “Alright, for what I’m going to be doing next, I’m going to require a few volunteers. Anyoe want to sacrifice themselves for the good of humanity?”

“Oh, that’s not good,” Duri breathed. “Everyone get down until he…does whatever he’s going to do!”

Because the alien lunatic was clearly planning to kill some number of them. “Clever, little Officer,” the Hunter chuckled as the soldier next to him suddenly slumped forward, most of his head gone and showering his nearby comrade with blood. “Just for that, I’m not going to shoot any of your squad. However, medics always annoyed me.” A few shots rang out. “Nothing more irritating than shooting something and an idiot medic saving them. Kill stealer.”

“He-he just shot the soldier I was patching up!” Nobuatsu stuttered, sounding completely shaken and terrified. “Right in front of me! The other one who survived is dead too!”

Duri scowled. “Coward,” he swore. “At least go after something that actually gives you a challenge.”

“Oh, shut up,” the Hunter drawled. “I’d argue that hitting those damn Humans without scratching your precious medics was challenging enough. Why do you care anyway, not like you knew them?”

He opened his mouth to spit something out, but felt Cara grip his arm and could easily image her shaking head. “Don’t let the alien goad you, Duri. Let’s blow up their little army.”

“Duri, then,” the Hunter chuckled. “Listen to your less intelligent friend. Blow up the Sectopods, be a good little soldier. Leave the moralizing to others.” Another series of shots, though these were towards the alien line. “Everyone is equally worthy to die out here today,” the Hunter continued. “And ultimately, none of you actually matter. The ones who do aren’t here. Die or not, the galaxy will continue on without you.”

“Get this alien out of comms,” Aleksandra spat. “Ignore. Kill Sectopods.”

And that was what ADVENT was not doing. White-orange streaks of gauss and Browning fire were fired towards the alien machines, which were seemingly able to take it all. The artillery booming behind them though signaled that was possibly going to change. Plasma guns popped out of the top of the Sectopod center pods, and began firing at the ADVENT line.

No-man’s land lit up with artillery shelling and rocket bombardment. Several Sectopods stepped on mines which blew apart their clawed feet, and sent one tumbling to the ground. Several stumbled and exploded as the shelling took out their more delicate systems. Others weren’t heavily affected and only suffered superficial damage.

The centers of the pods began opening up, revealing a glowing red center that was getting more intense. “Aim for the center!” Duri roared, aiming his own rifle as best he could at the machine. Then the Sectopod suddenly stuttered, and the pod exploded, blowing into nearby Sectopods and unbalancing them. Another explosion followed suit; then another.

“Now that’s what I call a finale,” the Hunter stated, humming a tune. “You’re welcome, Humans. I’ve wanted to blow up those things for ages.”

“He didn’t get all of them,” Beatriz said, even as ADVENT did manage to take out a few more of the Sectopods. However, a couple did manage to unleash their main laser cannon which was not aimed at the trenches, but at the Flak Towers and artillery behind. One tower exploded and began
falling apart; multiple pieces of artillery blew up in the distance as the red laser struck them.

Still, all in all, the majority had been destroyed.

But as useful as the Hunter was, Duri would have preferred he just not interfere at all instead of treating all of this as some kind of game.

There was enough to worry about without a mocking alien on top of it.

Sydney Outskirts – Australia

11/21/2016 – 12:13 P.M.

The fight through Sydney had led to Abby seeing the sheer destructive power the Chronicler had at his disposal. His soldiers now stayed a fair ways back, although even they were being affected by his ever-growing fury at the aliens facing him. The very air cracked and splintered around the Chronicler, and his psionics had turned lighter, until there were flickers of blue in them.

Psionic energy enveloped the Chronicler, and no alien could stand against him.

Those that tried were blasted into pulp by purple circular blasts that threw the destroyed being back, or they were compressed into broken balls of bone and flesh. Despite being a medic and having a high tolerance for bodily damage, it was disturbing even to her. And now the Chronicler was taking random aliens and drawing out their deaths to presumably make a point.

“He roared, standing in the middle of a now-torn street, a dozen various kinds of Vitakarians lying on the ground, one of his hands raised over them as he methodically snapped their bones one by one. “I will rip this city apart, Elder!”

Abby was watching from a distance as usual, keeping to the rooftops. She pursed her lips and considered just killing the aliens as she suspected this wasn’t going to make Quisilia do anything. Pain for the sake of it was pointless, but she felt disrupting the Chronicler now was...dangerous. He wasn’t acting like he normally was.

“So uncivilized,” Quisilia chided from right behind her again. “Fine then puppet, let’s see if you really want to fight me.”

Before Abby could even turn, she caught a glimpse of the Ethereal as he vanished and reappeared down at the edge of the Chronicler’s force. He held some kind of blade in each of his hands and slashed and stabbed simultaneously, and within a few seconds a half-dozen of the Chronicler’s aliens were dead. The Chronicler immediately materialized next to the alien, a purple hissing blade of psionic energy in his hand, which slammed into a small psionic shield Quisilia had summoned.

“You made a mistake coming here, Elder One,” the Chronicler growled as his aliens began raising their weapons and he stabbed forward with another psionic blade which Quisilia also deflected. “You don’t want to challenge me.”

“Do I now?” Quisilia answered lightly, tossing some kind of grenades with his free hands towards the traitor aliens around him. Nanites spewed out of them and began filling the suits of the aliens. Abby also saw two black figures coming forward, red lines down their face. Some kind of mechanical unit she hadn’t seen before.

The Chronicler blew Quisilia back with a psionic blast, and the blades dissipated right before he
brought them forward to form a shockwave that straight-up collapsed the building behind Quisilia. It unfortunately didn’t hit the Ethereal, as he vanished from sight only to materialize behind the Chronicler who met him a reformed psionic blade.

“I’m curious,” Quisilia mused almost mockingly as they began dueling more conventionally. The nanites were eating through his alien force, and it turned out those figures were also made up of nanites who were engaging Harper and his soldiers. “You are quite weak for a puppet. Disappointing. No wonder you’ve done nothing for generations.”

“Enough!” The Chronicler pushed Quisilia away, and raised his left hand into a clenched fist, picking up the Ethereal and slamming him into a nearby building with enough force to crack the foundation. Except when the form of Quisilia fell to the ground it dissipated, and the Ethereal stepped out of this air.

“How very impressive,” he chided. “I would have thought a puppet would be able to tell the difference between an illusion and the real thing. But I suppose you are too blunt for that kind of—”

He was forced to vanish as the Chronicler sent a blue-tinged psionic wave at the Ethereal that tore right through the buildings and caused them to begin crumbling to pieces. Quisilia reappeared a few feet away from his original position. “Now, as I was saying—”

“Be silent, Elder One,” the Chronicler snarled, and Abby realized that his voice was no longer his own. It was like a groaning giant, slow, ancient, methodical; like a monster that had just been woken. The Chronicler was no longer surrounded by purple energy, but that which was a bright blue. The air felt charged with…something Abby couldn’t describe.

It felt as though something dangerous was now here; something old. Everything suddenly felt oppressive and like she was moving through molasses. Quisilia was suddenly trapped in a perfect cube and lifted into the air. While the Ethereal tapped on the blue wall, the Chronicler spoke.

“He warned you not to make him angry,” the thing speaking through the Chronicler said. “Now you will die, Elder One. Die as your brethren did to the Replicators.”

“Curious,” Quisilia didn’t seem particularly concerned, even as the walls were closing in on him. “That wasn’t what we called them.” Quisilia made a motion, and froze. The Chronicler chuckled.

“Did you really think I would let you simply step through a portal of your making?” He mocked, completing the reversal of fortune. “You are a child in this galaxy, as is your mastery of it.”

“And you are as arrogant as your brethren, Sovereign One,” Quisilia answered. Gesturing down and the Chronicler suddenly vanished into a shimmer in the ground, although he burst up again from another opening he had likely created. But it was enough to loosen his concentration and allow Quisilia to vanish from the cracked blue cage.

Abby didn’t see where he went, but the Chronicler turned his attention to the nanites that were slowly destroying his army. The air around his army suddenly charged with lighting-like blue strikes that hit the nanites themselves, while not hurting the soldiers. One of the black figures was suddenly alight in blue lightning and fell to dust.

Four Quisilias suddenly stepped out beside the Chronicler, their movements mirroring each other as he reached for another strange bladed weapon. “You are powerful, Sovereign One,” Quisilia chided as he struck down, only to be met with the Chronicler shielding himself in a blue psionic shell. “But that is all you have.”
The Chronicler squeezed a fist and the Quisilias were suddenly levitated into the air, and began to be compressed. Abby didn’t think he was actually there, but it was still mildly concerning to see a perfect replication of an Ethereal being crushed like a toy. “Who does your species serve?” The Chronicler hissed. “Lacesseran? The Black Fleet? Exspirant? The Bringer?” A sharp hiss. “The Leviathan?”

Abby didn’t know what he was possibly referring to, but she suddenly knew that whatever the Chronicler was caught up in, it was much, much larger than what they could imagine. Whatever was happening, it did not seem like a good idea to stay around. Maybe Quisilia knew what he was talking about, but she certainly didn’t, and she actually assumed that the armor she was wearing… that all of them were… it came from whoever was speaking now.

The Quisilias all dissipated, and another one stepped out in front of the Chronicler. “You’d like to know, wouldn’t you?” He asked. “Interesting. That narrows down the list of names.”

“You will answer the question,” the Chronicler stated, pointing a finger at the alien. “Or I will take you back with me and tear the knowledge from your mind. You cannot resist forever.”

“Then find me, Sovereign One!” Quisilia taunted, giving a wave before he vanished.

“Run, Elder One,” the Chronicler taunted back, lifting a hand and the air in the distance flickered with blue sparks and rifts. “I do not tire. I do not die. I will crush this city and drive you away or kill you. Run back to your master, puppet. This species is mine!”

Oh fuck.

Oh no.

The air in front of her became a blue charged maelstrom that roared more powerful than a hurricane and collapsed down on the buildings below it, shredding them into small chunks of rock within seconds. The Chronicler ceased the maelstrom a few seconds later, leaving a massive section of the city reduced to rubble.

Abby instinctively ducked down as the Chronicler and what remained of his army marched forward. But they thankfully didn’t seem to care about her anymore, which was a massive relief.

There was the slight problem of being stuck here, but she needed to at least stay and watch who would win. She wasn’t getting out of here right now, and the Commander needed to know what was happening here.

***

Sacramento, California – United States of America

Operation: Sherman – Day 2

11/22/2016 – 5:17 A.M.

“Here,” Nuan said and handed Iosif a bottle of water. The disheveled Templar gratefully took the water and gulped it down.

“Thanks,” he told her earnestly. “Gonna need it since Geist will want me back maintaining the barricade in…” he paused for a moment. “Probably pretty soon.”

Nuan grimaced. “That barricade isn’t necessary. He’s going to kill our psions if he makes them
maintain it another day.”

“We’ll see, we’re still alive in the same blasted spot we were in before,” Iosif shrugged, looking exhausted. “Considering how outgunned and outnumbered we are, I’d say that’s not bad.”

Nuan had to admit that the only reason they were still here and not retreating was because of the iron will of Geist who had stated in no uncertain terms that they were not going to give up any ground whatsoever. To this end he had organized the available psions and effectively taken command of the several hundred man army.

It would be unfair to say it had been a unilateral takeover, as he had gathered up the ranking Lancer, Hussar, Cuirassier, Dragoon, and Protopriests, as well as the highest-ranking officers to form a makeshift strategy team of sorts. He’d apparently had a spat with the Chief Marshal of the operation, Theresa Lambert who had apparently been shocked that they had still held their position, which was presumably much deeper than any other one.

She’d ordered them to fall back for their own safety, and Geist had flatly refused. Chief Marshal Lambert had apparently been placated when several of the Officers had offered support for Geist, and once the plan was explained, she’d tentatively allowed it to move forward. That had been the last of her protests, and Geist had begun turning their position into an unbreakable fortress.

The most important aspect of this consisted of the massive psionic barrier between them and the aliens. It had sustained a relentless pounding, but Geist had every single Defense-oriented Priest taking part in forming the barricade and sustaining it. He’d then had the Officers have their Engineers begin erecting defenses.

Since the offensive-oriented psions were not in a good position to help, he’d ordered them to assist the Engineers in constructing the barricades by using their corrosive and destructive powers to weaken concrete, metal, and stone. The telekines had also similarly assisted, moving heavy debris out of the way, or creating temporary cover themselves.

The telepaths had been ordered to mentally sustain the psions erecting the barrier. Geist himself had gone into some kind of trance to, as he had explained, ‘keep everyone awake and alert’. Since Nuan had not once felt tired during the entire night, she figured that it had worked. However, this couldn’t go on forever.

“How are you holding up?” Iosif suddenly asked her.

“Well,” she answered noncommittally. “I don’t really have to worry about physical exhaustion anymore, although maybe that’s Geist’s trick.” She didn’t really know though, as her cybernetic limbs had allowed her to handle much heavier loads than she could have previously. Which she’d done a lot of to help ADVENT set up a line.

She eyed him suspiciously. “But I should be asking you that. You look like you’re going to collapse.”

“Hey, I might,” he admitted with a weak smile, as he held his helmet under his arm. “But I’ll get a boost from one of the psions. With any luck we’ll be getting actual reinforcements, and the barricades are probably good enough to reach even Geist’s absurdly high standards.”

Nuan glanced over to where the psion, helmet still foregone, stood speaking evenly to one of the Protopriests. If there was one thing she could say about him, it was that he knew how to command large groups of people. He knew what to do and didn’t waste time debating it. “A shame you’re not a telepath, otherwise I’d say you can transfer some of my focus into you.”
He raised an eyebrow. “I wouldn’t do that. No reason to weaken you.”

“Quiet,” she scowled. “I mean it. It’s not like I’m really doing anything right now anyway. Even now that the break is over.”

Iosif put on his helmet. “Thanks, Nuan. I appreciate the offer. Really.”

“Dying to exhaustion would be an idiotic way for you to die,” Nuan said as she copied him by putting on her own helmet. “In fact, I would say that for every way you could die. Otherwise I’ll be the one writing your tombstone.”

“Oh no,” he said in mock sarcasm. “Truly a grave threat. I’ll have to do my best to stay alive then.”

Nuan lightly chucked as they walked to the line of erected barricades. “If you’re going to collapse though, just stop. If Geist says no, I’ll punch him in his robot face. He probably wouldn’t feel it anyway, since he’s essentially a robot already.”

“I’d urge you not to test your luck,” Iosif gently warned. “I don’t think he understands humor.”

With that Iosif gave a quick salute to her and jogged to where one of the Priests was to relieve him.

Nuan instead walked to where Geist was standing, overlooking the barricade, barrier, and alien fortress before them.

“How am I needed, Overseer?” She asked, making sure to be polite now.

“Right here, currently,” he said in the same monotone as usual. “I’ve deployed Scout Man and Jin and several Hussars to determine what the aliens are holding. I am awaiting their return, and when they do, we will attack again.”

Nuan glanced over to him. “I assume the plan of attack will be different?”

“To an extent,” Geist said slowly, crossing his arms. “While I could request Archangel Hammarström to raze this to the ground, she and her Host are needed elsewhere. Our options are limited, and reinforcements are still hours out. I have estimated the strength of our psions, and we would be able to hold out perhaps another day; longer if we relied on our barricades.”

Nuan was waiting for him to get to the point. “We are going to take this without firing a shot.”

She was aware it was more of a statement than a question, but she didn’t see how that could possibly work.

Geist frowned. “Perhaps I misspoke. The aliens will doubtless send machines to help. Those will need to be destroyed, but I believe I know how to deal with their organic components.” He actually had a brief moment where pride lit up his face. “I have been experimenting with the aliens, testing the limits of this Overmind. Powerful to have so long a reach, but sloppy. Ineffective to someone with creativity.”

He shook his head. “My experiment during the night was a success, and now I simply need to apply it more aggressively.”

“What experiment?” She asked.

“Sustaining my forces telepathically,” he answered. “The effort would have exhausted me. However, as the majority was drawn from the aliens, this was not a concern. I simply need to
transfer this knowledge to the telepaths and make the aliens die from exhaustion. Even the ones with machines in their brains are still dominated by their organic component. And from that power, we will make our soldiers fresh."

He glanced down at her. “Your offer to Templar Bronis was noble, but unnecessary. The aliens themselves are an untapped resource, and we will sap them of it.”

“Stop reading my mind,” Nuan growled.

“And if you attack me, I will make you remember the moment your arms were severed from your body,” he added flatly. “While I understand humor, contrary to your belief, it has no place here and I am your superior officer. I know more than you here, and it is why we have advanced while ADVENT has fallen back. Do I make myself clear?”

She gulped. “Yes, Overseer.”

“Good, then prepare to take the fortress,” he said, turning his attention back forward. “When the time comes, you will know when to move forward.”

Nuan didn’t risk saying more, even if she knew he was probably reading her mind now, so she gave a salute, and dashed away from the psion as quickly as she could. Directly to Iosif in fact. If Iosif was the friendly psion; Geist was the one who everyone was scared of.

She felt it best not to interact with him too much more after that. Because at the moment, he scared her more than any alien.

Funnily enough, she wondered if the aliens felt the same about their Ethereal masters.

That would be suitably ironic.

***

Los Angeles, California – United States of America

Operation: Sherman – Day 1

11/22/2016 – 12:01 A.M.

The alien fortress was easily overtaken with the majority of defenders dead, and the cybernetic enemies were quickly overpowered by the combined forces of ADVENT and XCOM. Right now the majority were taking a rest and fortifying their position in the fortress itself. There was a wealth of stored weapons and equipment within it as well, with what appeared to be alien rations of some kind as well. No one had been brave enough to test them yet.

What was interesting were some of the corpses they had found, particularly aliens that had appeared to be Vitakarians, but they hadn’t died when the Imperator had performed his little trick. It turned out that they were machines; replicas designed to apparently look like Vitakarians with uncanny accuracy. If not for the machine fluids and metal skeleton, she never would have guessed that the corpse in front of her wasn’t organic.

“No organic parts at all?” She asked Harkin who had been performing preliminary battlefield autopsies with several ADVENT medics and engineers. “So it’s not a cyborg.”

“No,” Harkin shook his head, looking distinctly uncomfortable. “No organic components at all. Honestly, with how much empty space is in this body, I’m not even sure it’s finished.”
Patricia furrowed her eyebrows. “How?”

“Based on how it’s designed,” Matt Freeman, one of the ADVENT Engineers answered, nodding to the wreck on the table. “It’s a skeleton in a near-literal sense. There is space that would normally hold organs. But there’s nothing there. The power cells are built into the spine, and the ‘brain’ of this machine isn’t complex or large enough to handle anything more than very simple commands.”

Sussan and Creed stood beside her, helmets off and clearly thinking hard. Sussan was definitely approaching this from a data standpoint and trying to figure out how many there were, and how to pick them out. Because they posed a distinct problem to telepaths in that these wouldn’t be able to be sensed in the first place.

Ideally, it made them excellent assassins and served as an anti-psion weapon.

Creed on the other hand was focused on a much simpler question. “Why bother with this in the first place?” He wondered out loud. “I assume that this was, or will be, used to create a Human variant for infiltration purposes. But the aliens don’t need that…?” He frowned. “There isn’t much of a reason to have this in the first place aside from a somewhat more durable soldier.”

“He has a point,” Sussan finally commented, biting her lower lip. “It would be one thing if they were being used like the Seekers. Assassins against us. But they weren’t. These were fighting on the front lines.”

“Maybe to cull division in the ranks?” A medic suggested with a shrug. “Do you know if that’s a problem?”

“No, they don’t work like that,” Patricia disputed. “Division in the ranks isn’t a problem, especially for Mutons.”

“Either way, the fact that they can make something like this is concerning,” Harkin interrupted. “And it potentially means that any civilians we encounter will be…” he nodded down. “Fake. We’ll need telepaths to verify each one.”

“I’ll be ready if needed,” Sussan said.

“As will I,” Patricia confirmed. “Get some rest everyone if you can, this is not going to end anytime soon.”

She departed the room and walked out onto the upper wall of the fortress, some distance away from where ADVENT were trying to set up plasma defenses built into the alien fortress. “I’m surprised you didn’t realize the reason such units were designed,” the Imperator said, appearing beside her, this time taking on the appearance of the Commander. “In fact, you were most likely the reason for them.”

Really, Patricia wondered. So would you enlighten me to the actual reason?

“This time I can,” the Imperator said with a mocking smile. “Machines are invisible to us. They are immune to our influence. Thus, they are something that is a threat, but also a means of defense against psions. Your display in Las Vegas was so successful because there was nothing to indicate that anything was wrong. That is an advantage of such a machine, to observe, report, and watch for possible psionic influence.”

When put like that, it did make sense. Interesting.

“Fectorian will be doing what you suspect,” the Imperator continued. “He would not overlook such
an opportunity. But it will not be as obvious as planting them in controlled cities. No, it will be a gradual insertion into Human society. Into ADVENT. Replicas that replace unknown citizens and function as sleeper agents much like EXALT did. So how will this be combated?”

Patricia sighed. *That is a problem for another time. Preferably when there is no battle being fought.*

“If you insist,” he said nonchalantly. “So I would focus on ending this battle then. Did you figure out what I did?”

Patricia crossed her arms. She had quite a few theories as to how the Imperator could have bypassed the Overmind, besides cheating and telling the Overmind to leave temporarily. It had to have been far beyond a surface-mental attack like she was used too. It was likely an attack on the deep biological components of the brain, much like how a computer functioned. She was used to attacking the high-level code of the brain, whereas the Imperator had focused on the machine code of the brain itself.

Clever if true, and she hadn’t truly experimented with the possibilities there. The alternative was that he had exploited some weakness in the Overmind’s command and protection of the minds. Since this presumably spanned over multiple battlefields and countless soldiers, it meant that each soldier couldn’t have the best protection imaginable.

So it was entirely possibly to have a wall that blocked out certain attacks completely, but let others slip by. Anything malicious would be blocked, but, for example, telling them to do something which would almost certainly-but not for sure-get them killed might be able to bypass the defense due to it not being inherently malicious.

“You make no sense. Patricia still couldn’t really believe they were having this conversation right now. *What exactly are you trying to gain by telling me how to beat the Overmind? Or you for that matter? Are you trying to lose?*

“No, I’m trying to make you think,” the Imperator stated, his voice deepening sharply. “Your perception of psionics is limiting. For you, ADVENT, and nearly everyone else, it is a way to levitate objects and control minds. You do not push what is actually possible. You discover the power, and as little can contest you, you maintain the status quo.”

His voice became slower. “I will tell you something, Patricia, *that* is why we ultimately lost the war with the Synthesized. We were comfortable with our own power and saw no reason to advance. We had no drive, we had no reason to do so. We were not challenged, and as a result we were unprepared for an enemy that had done nothing but improve.”

Patricia saw several explosions and heard the resounding booms in the distance. Another attack or something else it looked like. It barely registered because she was thinking about what the Imperator was saying. That didn’t sound quite like how Aegis had described the Synthesized, which she had equated to more of a horde than something that could critically think.

“Because that was a lie,” the Imperator stated, leaning on the wall. “Not from Aegis, he would not lie about something like this, but it was a lie that was all they were. Aegis participated in the entire
war, on the front lines in many cases. He only saw a fraction of what was happening near the wars end. They stuck with overwhelming numbers for the majority of it because they realized they didn’t need to adapt.”

He raised a hand and a shimmering figure appeared in front of her. It was a strange amalgamation of flesh and metal, with odd growths and bulges protruding out of it. The left hand was some kind of metal melee weapon, and the right was a misshapen hand. “This is a simple Synthesized ‘soldier’,” the Imperator began. “What inspired the name for them. Look at it and what do you see? Sloppiness; inelegance; brutality; you see something that can die easily.”

*Right.* Patricia nodded.

“Exactly,” the image vanished and in its place appeared something completely different. It was a bipedal figure, extremely thin, and the body was covered in a sheet of some black metal. Vine-like flesh-colored tentacle-things wrapped around the legs and up across the torso. But it wasn’t a mishmash of organ and machine, it was symmetrical and clean. The fingers of the alien were similarly closer to tentacles than jointed fingers.

More tentacles fell from the supposed ‘mouth’ of the alien, and the head itself had red-orbed eyes and obvious black cybernetic implants around the skull that seemed to drill right into the brain of this creature itself. It held no weapons from what she could see, but it looked like a near-perfect fusion of machine and flesh in an aesthetically pleasing way.

On the center of its chest, she saw what appeared to be a front-facing image of a Director Flagship, encased within a triangle outlined in red. “This is what killed four Imperators,” he said. “There was only one survivor, who managed to acquire the first glimpse of the true ingenuity of these Synthesized. However, I do not think it was designed in response to *us*, but it was activated because we began adapting to their initial tactics. I never learned what it could do, but as best I can tell these were the warriors of the Director Flagships themselves.”

*Aegis didn’t mention this.* Patricia recalled.

“Because he never fought against them,” the Imperator answered simply. “They were, as I recall, only deployed against Battlemasters, Reapers, or Imperators. And of course, whatever entered a Director Flagship. Quisilia would be able to tell you more, as he was one of the few to kill one.”

*The history lesson is interesting,* Patricia admitted. *But what is the point?*

The figure vanished and a new one appeared. This was again a bipedal figure, one that was also thin, but unlike the previous one, it was covered entirely in armor. It had double-jointed legs with small rounded feet. The limbs were almost normal, culminating in three-fingered hands. The head itself was also encased in armor, with an almost ovalish shape and slightly tinted red helmet receptors. The top of the head also appeared to take into account some kind of horns or growth.

The design was definitely of the Synthesized, and it also had the same Director Flagship symbol on the arms, also within a red-outlined triangle. *Another one?* She looked up to the Imperator. *Ones Quisilia fought?*

“No,” the Imperator smiled. “This is a Synthesized that exists in this very galaxy right now. The Synthesized never left the galaxy, not really. They are simply watching and waiting. For what, I have yet to determine, but I have my suspicions.”

*Does Aegis know?* Patricia demanded; the implications of this immediately dominating her mind.
“No.”

Why the hell not?

The Imperator lost his smile. “Because Aegis is, and has always been fixated on the obvious. He does not, nor does he wish to understand the higher level that the galaxy operates on. He thinks in simple terms of ‘ally’ and ‘enemy’ but not about the why. If he learned the Synthesized were already here, he would simply demand all plans be accelerated and potentially cause a civil war because he does not understand why they are here. All he would accomplish is ensuring that we die out.”

Will you please enlighten me as to the larger picture then? Patricia demanded.

“No, not here,” the Imperator said. “But considering certain events that are happening, I suspect you will begin to realize the situation sooner than you think. But the point this leads to, Patricia, about why I am helping you, it is because it ultimately benefits us.”

Patricia waited, and he continued. “I specifically chose the Ethereals with me now because they, in some way, broke the mold of the Empire,” the Imperator continued. “They were exceptional in their adaptability, power, ingenuity, or vision. I believed that would be enough. For some, it was. For many others, they were simply content to resume the status quo. They have no challenge. You cannot command or instill drive, not when nothing can challenge you.”

The Imperator smiled once again. “So that is why I tell you how to defeat my Overmind. That is why I help you when it makes little sense to do so. My species is arrogant, it is our greatest weakness, and I have allowed them to continue as such for too long. There is little point in coddling them any longer. Change will come to the Collective, Patricia, and should you listen to what I have to say, you will be a catalyst for it.”

He motioned to the city. “Now defeat my Overmind and take this city for your species. Perhaps he will realize what is happening, perhaps not, but you have what you need to beat him. I will be watching with great curiosity.”

And he vanished once more. Patricia stood silent for a moment, then closed her eyes, and began once more touching the minds of the aliens in the city, probing and testing the limits of what the Overmind had instilled.

It was odd, to actually want to prove the Imperator right.

But considering he was advocating against his own species, she supposed that was acceptable.

***

Washington D.C. – United States of America

11/21/2016 – 11:02 P.M.

The darkness made it easier to hide despite his size. The blacked out city also certainly contributed to this detail, as the Battlemaster had walked across the bridge, and as a consequence got closer to Arlington, and the edge of the city proper, he came across more civilians. Most ran at the sight of the silhouetted giant walking down the street, but he barely paid attention to them as he walked.

He had been fortunate that there was a bridge almost directly to the area close by. There had been a small team of soldiers at the entrance, but he had killed them before they could actually do anything more than shout a warning. He felt that there were more coming soon, and the next
engagement would probably be fought differently.

How different was something he didn’t know yet.

But he would be ready to meet it.

Now that he was in Arlington, he was surprised to see that there were actually people hiding out there, or at least as much as they could. But there were others that were just sitting near the various memorials or on benches, almost as though they were expecting to die there. Most of them made themselves smaller, or ran away when they caught a glimpse of him, but he didn’t really notice them.

The cemetery itself was rather peaceful, if a somewhat oppressive air hanging over it. The Battlemaster knew little about it, save that it was the gravesite of American soldiers and important public figures. He’d specifically made sure to keep the fighting out of it, since fighting on the graves of soldiers, enemies or not, was something he would never willingly do.

As it was, he did not intend to fight here, it was simply a place he doubted ADVENT would expect him to go, and it would allow him some time to regroup and potentially allow Senorium to find him. He suspected ADVENT would be hesitant to fight here as well, but if pressed even they would just for an opportunity to kill him.

But he would prefer to avoid that. The cemetery itself was relatively untouched, and it was an almost haunting experience sightseeing the rows of white crosses, tombstones, and other symbols he presumed had religious connections, which he could only assume rested on graves.

While he would normally take the most direct route, for now he was staying on the designated paths to avoid going over the graveyards themselves. If ADVENT arrived, he would take a more direct route, but for now he was content to move briskly along the paths. Up ahead he saw a fairly large structure, an amphitheater of sorts it looked like.

Out of curiosity more than anything else, he walked towards it, thinking it was likely another memorial. Given the importance that seemed to be placed of it, it was likely important. As he got closer, he also saw something that made him grip his sword tighter. It did appear that it was actually under guard.

However, these soldiers were much different than standard ADVENT soldiers. In fact, there weren’t any at all. Their uniforms were clearly more ceremonial, with badges and pins on them, white gloves and old military caps he recognized from studying pre-ADVENT human militaries. In their hands they didn’t hold gauss weapons, but older traditional rifles with bayonets.

Not a threat then, not really.

He considered killing them, but in the context of where he was, and how little threat they actually posed, there wasn’t necessarily a reason to. It was likely they were guards tasked with protecting a monument or tomb of something important. But it depended on the soldiers, if they wouldn’t attack, neither would he.

But he was at least going to see what they were guarding.

The guards raised their weapons as he approached, but seemed smart enough to realize that he wasn’t planning on attacking them, not yet. He was impressed that they barely seemed perturbed by his approach, and their faces were complete stone as they aimed their unwavering rifles at him, for all the good it would do them.
The Battlemaster was aware he posed an intimidating figure, but if that affected the guards in front of him, they did not show it. He moved around the building until he saw what was probably the object they were guarding. There were no less than a dozen guards around it, and all of them had their weapons raised.

It appeared to be a large box, made out of some kind of white stone or marble. Perhaps it represented a tomb. There was clear inscription on it as well, and it was rather ornate indicating its importance. The Battlemaster carefully walked around the soldiers in front of the perimeter, who followed his every move with their rifles.

In front of it, he finally got a good look at what was inscribed on the monument itself: “Here rests in honored glory, an American soldier, known but to God”

Ah, this was the Tomb of the Unknown Soldier. He’d seen mention of it, but had not known it was treated with such reverence. The concept was one he could admire, as he was aware of the number of those who would die and never be remembered again. Against the Synthesized it had not been uncommon, and in this war…it was again the same.

Even symbolically, it was a noble gesture.

He was curious if they would change the wording now that they were a part of ADVENT.

But that was ultimately not his concern. His curiosity had been sated and after looking at it for a few moments longer, he walked away, leaving the guards alone, even if they never lowered their rifles once. Dedication to a simple tomb. Respectable, even if it was something of a waste. But perhaps it mattered to the Humans more than him.

With that done, he kept walking to the far exit that would lead to the subdivisions and housing areas of the Arlington area. Staying near the Pentagon was not a good idea, and he knew ADVENT would be hesitant to nuke him so close to the city itself.

“Battlemaster!”

He immediately froze and swung to where the voice was coming from, sword at the ready, and saw something he was not expecting. It was one of the XCOM snipers that had retreated earlier, except that she had her hands up and was weaponless from what he could tell. This couldn’t be a surrender. He was the one at a disadvantage here, not her.

So she wanted to talk? About what?

“Do not come closer, XCOM,” he warned, pointing the bloody blade in her direction. “What do you want?”

“I have orders from the Commander,” she said, a bit gruffly. “An opportunity for you to surrender to XCOM. You would be treated well and kept from ADVENT who would likely execute you.”

The Battlemaster stared in disbelief. “No.”

“Not my job to convince you,” she said, slowly and deliberately reaching down to her waist and unlatching a device. “I’m just supposed to deliver this. You made a good decision coming here. ADVENT is looking in the wrong place, so you’ll have some time to talk. In the meantime, I’m ordered to lure them elsewhere temporarily. But you’ll have to make it fast.”

She tossed the device at him and he telekinetically caught it roughly halfway between them, keeping it suspended for several seconds in case it blew up. When it didn’t, he brought it forward
until it was in one of his lower hands. The XCOM soldier was already backing up and sprinting away from him, so he turned his attention to the communicator before him.

He pressed the button and a hologram of Aegis appeared before him. “Battlemaster,” Aegis greeted. “I wish this were under better circumstances.”

“As do I, traitor,” he answered, calmer than he felt. “I suppose it should be expected that you wish me to simply give up.”

“You cannot run forever,” Aegis warned. “ADVENT is ensuring that no reinforcements can come and save you. Yes, many will die, but that is what is considered acceptable for them. More of the Priests will come, and at some point even you will become tired.”

“Then I will die,” he stated flatly. “Unlike you, I don’t avoid what threaten me. But I will not surrender. Not to XCOM, and certainly not to a traitor.”

“I am not a traitor.” Aegis said. “I am performing what has to be done, which is preserving our species.”

“By allying with our enemies?” The Battlemaster demanded.

“The Imperator is no longer concerned about the Synthesized,” Aegis said. “The purpose he recruited us for has changed. He will go to war against the galaxy to restore the Empire as it was, without realizing that is how we’ll be destroyed for good.”

“And the best way to accomplish that was by betraying us?” The Battlemaster growled. “I do not know why you think the Imperator has abandoned our mission. I have seen nothing to suggest that.”

“If that is the case,” Aegis said, pointing a finger at him. “Then why are we on opposite sides? Why was this war fought in the first place? If the Imperator really wished to prepare for the Synthesized, then why do we fight our potential allies? What is different about the Humans as opposed to the Vitakara and Andromedons?”

Early on, the Battlemaster had wondered that.

However, he potentially had an answer.

“I am not the Imperator,” he admitted. “I cannot read his mind, nor would I have made the same decision. But I believe that it was to force us to change. We have been stagnant for hundreds of years, and yet we cannot win a war against a species confined to their homeworld. War brings refinement, and the Humans were chosen to be our catalyst.”

He paused, considering. “The Collective is flawed, Aegis, I am no longer blind to that. You might have had your reasons for leaving; ones I cannot say were invalid. But you ran instead of trying to fix them.”

“How do you really think I didn’t try?”

“No,” the Battlemaster shook his head. “Not really. If you had, I would have known about it. Sana would know about it. Nebulan, Sicarius, the Guardians…You left to make a statement and it was received. But if change was what you truly wanted, then you are a coward who ran in fear of the Imperator. He is our leader, but not our master.”

Another pause. “The Humans are not as I was expecting. Perhaps they didn’t deserve it. But their
fate was decided long ago. You have stayed out of it so far, Aegis, and if you wish to survive the end of this war, you will continue to do so. I will not surrender, traitor, and if I die today, so be it. But I will not take the easy way out of this. If you truly wish for this war to end, convince the Commander to surrender. Otherwise it will not be decided until ADVENT and XCOM are destroyed.”

He shut off the communicator and tossed it away. Unsurprising in retrospect that Aegis would wish to convince him to surrender, but it was always doomed to be futile. But now he had to focus on leaving; finding Senorium, and plotting a path where he survived.

Despite Aegis’s warning, he was confident he could survive.

If he had survived the war against the Synthesized, he could survive against ADVENT.

***

Sacramento, California – United States of America

Operation: Sherman – Day 2

11/22/2016 – 8:16 A.M.

“Prepare to lower the barrier!” Geist commanded, as the respective soldiers readied themselves for the fight to truly begin. Oliver and David similarly readied their weapons. According to Geist, the main barrier would dissipate and the Priests would erect defensive cover similar to their initial push. They would assist and protect ADVENT Engineers as they constructed permanent defenses, and presumably continue forward until they reached the fortress.

Geist had also said that he would be applying ‘his own abilities’ to the push, although what those were he hadn’t specified. It was primarily telepathic, likely. Oliver wasn’t entirely sure now what the aliens were doing in the fortress, as they had stopped firing some time ago, and he had noticed the subtle changes to the guard.

“What do you think they have?” David asked as the Priests began shimmering in purple energy. “They have to know what they’re facing now.”

“Don’t know,” Oliver shrugged. “But it isn’t anything good. They’ve been replacing everything with those cybernetic Mutons.”

“Begin!” Geist ordered, and the purple barriers flickered and dissipated, as an unbroken line of cover appeared a short distance ahead, and that was their cue to begin. The aliens in the fortress began raining plasma down on them, most of which missed the initial push, but a few ADVENT soldiers succumbed to the rain of plasma.

However, most of the initial charge was successful in making it to the psionic barricade. Oliver slid into position, and noted that Iosif and Nuan had also made it successfully. Darego had also made it to his left, and all of them were returning fire at the alien fortress. Cracks from the gauss sniper rifles of the Winged Hussars in the back rang out and already there were a few aliens that stumbled back.

“Scoot over some!” One of the Engineers beside him demanded, laying a small rectangular bar on the ground which he knew was the first step in establishing permanent cover. A sheet of metal was pulled up, locked in place, and another Engineer beside her began passing metal pieces which she began welding in place.
Oliver looked back to see Geist still standing back at the initial line, one right hand extended to the fortress ahead and the opposite held behind his back; a posture of a man who had no fear of death whatsoever. Psionic energy shimmered around him, although it was less pronounced than in the Priests holding up the barricade.

“We’ve got hostiles on the ground!” One Officer shouted, and from the fortress Berserkers stormed out. These weren’t standard Berserkers, but something that had been similarly enhanced like the Mutons. These Berserkers were clad in black armor, were somehow bigger than regular ones, and twin alloy blades protruded from each of their hands that looked at minimum half the size of himself.

Behind them came out the largest Mutons that Oliver had ever seen. These stood far taller than the Elites, and were constructed out of the same black armor as the rest of these enhanced Mutons. But as they lumbered forward, Oliver saw the extensive array of rocket launchers on the wrists and shoulders, and the visibly thick armor.

The enhanced Berserkers were charging forward, and the other Mutons were moving forward as well. “Dragoons, target oncoming Berserkers,” Geist ordered calmly. “Hussars, target explosive dispensers on the armored Mutons. Priest Telekines and Offensive forces, lift and destroy oncoming Berserkers. Once Berserker threat is removed, Telekines prepare missile defense techniques. Goliath Beauvau, target the armored Mutons.”

It sounded good. The problem was that there were at least more than a dozen Berserkers charging forward, and at least a dozen of those armored Mutons. This wasn’t counting the fact that they were still under fire from the fortress itself and the forces within. The Goliath behind him fired its weapon, the crack of the massive railgun drowning out every other sound around it.

One of the armored Mutons stumbled back, but amazingly it appeared largely intact, only sporting a hole in the armor. It raised its weapons to the MEC and fired in retaliation. It was joined by several more of the Mutons. The Berserkers were also close to the line, surprisingly not making any noise except for the thumping when they ran.

Oliver fired at it, but all it seemed to do was irritate it slightly. They simply didn’t have enough firepower to take them out fast enough, and the front had obviously been designed for frontal charges. The Berserker charging them was suddenly lifted into the air by one of the Priests beside him, one hand extended.

“Shoot it now!” He yelled. Other Berserkers were suddenly lifted up, but not all of them. The Offensive-affinity Priests then unleashed their own powers. Streams of psionic energy flared and small maelstroms and purple flares erupted on the battlefield. Another Priest behind him screamed as she fired a stream of psionic energy at the raised Berserker, corroding and destroying its armor.

Everything suddenly seemed to become much…calmer. The sounds of the battlefield became less distracting, allowing him to concentrate more easily. He no longer really felt tired or weary, as he’d become over the past several hours once the telepathic sustenance had ended. But that appeared to be back now, and it seemed a simple matter to aim his rifle up to an obvious gap in the head and fire.

The gauss slugs splintered the corroded material and lodged deep into the brain of the alien. More psionic energy followed the slugs, destroying anything in its path. The corpse was slammed to the ground and it didn’t rise again. Across the line, more Berserkers were meeting the same fate. Several had broken the line, however, and were wreaking havoc on the ADVENT positions.

The enraged aliens stabbed, grabbed, and threw soldiers around them, immune to pain and tickled
by weapons. Iosif was currently trying to kite one of the Berserkers, slamming his mace down on
the armored hands of the aliens, while Nuan tossed several grenades at the feet of the alien, which
exploded in black goop.

Symbiote Grenades. Smart. The alien swung at her and instead of jumping out of the way, she used
her prosthetic to block the strike, and then grabbed the blade itself while she threw
another Symbiote Grenade at the face of the Berserker which exploded as it exploded in its face. Iosif
meanwhile was working on smashing the joints of the alien, bringing it to the ground and Nuan
finally let go and jumped back. Her entire right arm was sliced and damaged, but did seem to still
be functional.

He didn’t want to know what that would have looked like if she hadn’t had prosthetics.

Iosif was joined by several Executors who first slammed their weapons on the joints of the
Berserker, which took far longer than normal since the combination of metal and flesh was more
interconnected that even he’d anticipated. It took a few times smashing the head, but eventually the
alien was still.

On the battlefield itself, the Goliath was easily holding its own against the armored Mutons. Oliver
hadn’t known that the Goliath had a point-laser defense system, but it did and had effectively taken
out at least half of the missiles shot at it, and even though the others hit, it was designed to be a
tank and take extensive damage.

Four of the armored Mutons were destroyed now, and then, unexpectedly, all of the aliens
suddenly fell down. Oliver cocked his head as the fire abruptly ceased from the alien side. “The
hell?” David commented to no one in particular.

Oliver glanced behind him to see Geist walking forward towards them, the distorted psionic
energy surrounding him. “I’m going to guess this is because of Geist.”

“Wasn’t he being blocked by one of the Ethereals?”

Oliver shrugged. “Maybe he beat him?”

“Exploited, would be a more accurate word, Infantry Ilari,” Geist stated as he walked up. “A
theory, but one which has held up in practice. The enemy soldiers are not dead, I am preventing
that from happening. They have simply collapsed from exhaustion as I have pushed their minds to
that point. Their lower mental functions will keep them alive, but they will not pose a threat to us.”

He glanced over to them. “Well done, both of you. The line recovered quickly despite those
Berserkers breaching it. However, such was inevitable with our limited numbers.”

“So what’s the plan now?” Iosif asked, walking up with Nuan.

“We secure the fortress and prepare the alien captives for extradition to secure ADVENT facilities,
as well as taking some of the more interesting specimens for ourselves,” Geist explained,
motioning forward to the Officers who were advancing across the now-safe concrete field. “Killing
them, while satisfying, will not allow us to gain as much information as the alternative.”

“They’re not all dead!” Someone shouted, and all of them raised their weapons to see two black
figures walking out of the fortress. They appeared humanoid, and in some kind of armor with green
lights on their face.

Which then turned to red.
“Don’t open fire!” Geist called, raising a hand.

“Why not?” Nuan demanded.

Geist’s lips twitched. “I want to see how it works. Apparently DC has come under attack by these. I want to know if the reports are true.”

“Having also caught up on that,” Iosif interjected. “I don’t think I want to see how it works.”

Geist turned to one of the Priest behind him. “Protopriest Darrah?”

“Yes sir?” The Priest answered.

“Bring the defensive and offensive specialized Priests forward,” he said as the machines in the distance began moving on the fallen aliens, and seemingly shooting black dust into them. “If I understand how these machines work correctly, this should render them ineffective.”

“What are they?” Oliver asked as he saw the humanoids advancing forward, and now were apparently joined by the black ghosts of some of the armored Mutons.

“They are called Spectres,” Geist said, motioning the Priests to move forward, and began moving himself. “A nanoweapon that can be impossible to stop if handled incorrectly.”

“And you wanted to see how it works?” David demanded. “It seems pretty damn apparent!”

Geist furrowed his eyebrows. “Calm, Gunner Cannon, I know what I am doing.”

The Spectres were halfway across when one of them was suddenly encased in a psionic box. Two more found themselves in similar situations, and the Priests soon figured out what Geist was doing, and followed suit and before the now-four Spectres realized it, they were trapped in psionic cages.

They clearly didn’t know how to handle them, as one placed a hand on it, and the entire being rippled, as the nanites tried to eat through the psionic shield. It was unsuccessful, obviously, and several of the others dissipated into black dust and tried flying against the shield to brute-force a way out.

“Psions, burn the area inside the shields,” Geist commanded. “Be thorough.”

The psionic shields were suddenly alight with energy as the Priests created entire maelstroms in the prisons. Normally these would spread out, but contained within a psionic shield they essentially annihilated anything inside. At the same time, it extracted a toll from the psions maintaining the shields, but they held on.

A few seconds later the psionic storms ended, and there was nothing in the shields. “Maintain,” Geist commanded. “We cannot take chances with this kind of weapon.”

One of the Protopriests shouted a command Oliver didn’t hear, and the cages were again alight with a psionic storm. Maybe overkill in the literal sense, but with nanoweapons, Oliver didn’t think that kind of precaution was especially unreasonable. But once that finished, Geist and the Priests lowered the shields and nothing perceptible happened.

The effect on the Priests however, had been extensive. Most of them collapsed to the ground as the shield collapsed, and the offensive-talented Priests no longer had any armor on their arms, which were covered in blood and scars. Medics were rushing forward, and the rest of the army advanced as well.
“Good job,” Oliver told the psion who for once, looked actually pleased and not completely emotionless. He might not really like the guy on a personal level, but he had to admit he wasn’t sure even Patricia would have been as successful.

“Appreciated,” Geist acknowledged. “Now come with me and help find a more…organic alien. Once the captives are secure, I will need to attempt to interrogate it.”

“Won’t that be a problem?” David asked.

“I don’t need for it to be awake to extract what I need,” Geist explained as they walked forward. “If I understand the methods this Ethereal uses, it requires the alien to be cognizant. If it is not, it does not receive protection. However, it is difficult to locate unconscious minds and thus I need one in front of me.”

“Will do,” Oliver nodded as ADVENT took the alien fortress for themselves.

He wasn’t sure how the rest of the battle was going, but he was feeling a hell of a lot more optimistic now.

***

Fairbanks, Alaska. – United States of America

11/22/2016 – 9:33 A.M.

Roman had never gone through a Gateway before, and now that he had...he found it slightly antici-

climactic. Once you got past the purple lights and strange psionic-like visuals, it was relatively uneventful. However, stepping out into a completely different area was a realization that left goosebumps on him. The difference between Redding, California, and Fairbanks, Alaska, was night and day.

After Redding had been taken, he and several other squads had been redirected to assist in the defenses on other cities that had come under attack. There sadly hadn’t been time to enjoy their victory, but the day had been good and they’d been able to get some brief rest.

Now they were marching down the street with the Chief Marshal beside him, Halli Cursan who sounded understandably tense. “The situation isn’t as good as where you likely came from,” she warned as gunfire in the distance reached his ears. “We don’t have trenches complete, nor do we have many Flak Towers. We have limited air support and a similar number of Priests and Special forces.”

That indeed did not sound good. “Enemy composition?”

“That’s the good news,” Halli nodded. “Seem to largely be Borelians and Mutons. We’re holding the perimeter for now, and they are being sent in numbers we can handle. Losses are fairly equal for both sides from what we’ve recorded.”

Roman looked around the area, noting that it was much less developed compared to other cities, with no building reaching higher than four stories that he could see. It was all downtown buildings and houses. Up ahead he saw two Flak Towers beside the main road, which dwarfed everything beside them.

In the distance he saw plasma fire heading towards the ADVENT line, from aliens that were taking cover behind trees, cars, and cover they had established themselves. It was definitely primarily Borelians, and they did seem to be employing some tactics in their attack. “Where are the other
attacks coming from?” Galina asked.

“The Airfield is one,” Halli said grimly. “The college has also come under attack, as has the airport. They are attacking us from all sides, and we can’t be everywhere.”

“We’ll assist here then,” Roman assured her, motioning his team to join the fight. “Request us if you need help elsewhere.”

“Good luck,” she said, and briskly turned to speak with one of the Cuirassiers that had walked up behind them.

 “[I’ll be activating my field,]” Roman told them as he got a good look at the ADVENT line so far. Just in front of it were the half-dug trenches, but the line itself looked solid. Black alloy barricades and rows of ADVENT soldiers, with a few Priests that were providing various psionic support, although it only appeared to be defense and telekinesis.

“[Copy,]” Elena confirmed as their weapons were raised. Roman activated his field and once the line was reached the plasma bolts fired from the Borelian forces were deflected to the sides. That gave the aliens clear pause, enough for Maksim to snipe one from the back as he moved to enter the leftmost Flak Tower.

Galina immediately began laying down fire, rallying the other ADVENT gunners to begin concentrating their fire at the main alien barricades. The Borelians were dressed slightly different than the standard Vitakarian soldiers he’d been fighting, these seemed more armored and designed for colder weather than others.

He clipped one in the shoulder and it fell back into cover, though Konstantin and Stanislav were more successful, the former catching one trying to move to closer cover and was immediately ripped apart by the autorifle. Stanislav also wounded another Borelian. “Field ending!” Roman warned. “It’s going to get hot again!”

Sure enough, the moment he shut off the field green plasma shot towards them, managing to hit some ADVENT soldiers who fell to the ground. The ones still alive were immediately tended to by Medics and protected by the Defensive Priest. The other Priest moved to the front line beside him. “Provide covering fire!” She yelled, beginning to become distorted with psionic energy.

Roman nodded and complied. Galina and Konstantin laid down suppressive fire on the alien forces, forcing them temporarily back into cover. However, that only proved to be their deaths as the Priest raised her hand, and the half-dozen Borelians closest to the ADVENT lines were lifted up into the air, and…compressed.

Roman glanced to the woman to see her using her other hand to clap together with the first one, in a crushing motion. The results were…unpleasant. From there they could hear the aliens screaming in pain as their limbs were twisted and bones splinted as they were quite literally ripped apart and forced into the psionic equivalent of a hydraulic press.

Yellow blood dripped from their corpses and destroyed bodies and they dropped to the ground. The Priest fell back down into cover, breathing heavily. “Nice work,” Anton complimented. “That should give them something to think about.”

Roman agreed, and it looked like the aliens had gotten the message as they didn’t seem eager to take control of the forward point again. More snipers confirmed kills, even as more aliens began arriving. “Andromedons,” Maksim reported from the Flak Tower. “And…some kind of armored figure.” A stunned pause. “Roman…I think the Battlemaster is here.”
He, and every other soldier nearby briefly froze at that. Roman felt his blood freeze and exchanged a quick look with Elena who was similarly paralyzed for a second. “Repeat that!” Halli demanded. “Did you say the Battlemaster was here? That can’t be, he’s still in D.C.”

“Well, if it’s not the Battlemaster, it looks pretty damn close,” Maksim insisted. “Getting a closer look now…uh…actually, I don’t think this is The Battlemaster. I think it’s another one.”

“Another one?” Konstantin growled. “They have another one?”

“It has some other aliens with it,” Maksim updated. “Some kind of Vitakarian it looks like. Snipers. The other Battlemaster is coming up now.”

“Hey!” One soldier called out. “They’ve stopped firing!”

Roman suddenly noticed that the battlefield had gone quiet. In the distance he saw the first glimpse of the oncoming Ethereal. He couldn’t fault Maksim mistaking the alien for the Battlemaster, as the Ethereal was as large as the Battlemaster himself. But there was something clearly different about this one; first was that this one wore some kind of hood and a cape, both of which were deep purple.

The next was that the helmet, as much as some of it was hidden under the hood, was different from the Battlemaster’s, not as ornate and looked like it just covered the entire face with little decoration. The armor also looked slightly shinier and more durable. But what was interesting was that this Ethereal didn’t have a weapon in its hands.

“Should we open fire?” Elena asked.

“It looks like it wants to talk,” Halli said slowly. “Let it come to the front alien line. No further. And be ready to retreat. We can’t defeat a Battlemaster.”

“Copy that,” Roman muttered as the alien got closer. The alien was massive, and even from a distance he knew it towered over all of them.

“ADVENT!” The Ethereal called out, with a distinctive female voice, despite the layering indicative of Ethereals. “By order of the Battlemaster of the Ethereal Collective, I have been allowed the freedom to allow your surrender. I will only make this offer once. Refuse, and your soldiers will die and citizens be taken captive.”

“This is Chief Marshal Halli of ADVENT,” she responded. “Considering what we know happens to captives, your offer is rather hollow. Who are you?”

“I am simply giving an offer,” the Ethereal said, taking an aggressive stance, one foot in front of the other. “How you answer is your decision.”

“We refuse.”

“Understood,” the Ethereal answered, and something flew to her upper hand. A cylinder of some kind flew into it. “If you must know who you will die to, it is the Second Guardian of the Imperator of the Ethereal Collective, and in his name, you are marked for death. Fight well, Humans.” An orange-yellow beam sprang from the cylinder and extended to a length Roman suspected was as large as him.

“Fire!” Roman yelled, and gauss slugs and lasers from the MDUs flew towards the Ethereal Guardian who flourished her strange energy blade and thrust out a hand, stopping the projectiles in the air and at the same time jumped forward, pulling forward with the two lower hands and several
ADVENT soldiers were lifted and went flying towards her.

The hand holding the energy blade slashed twice, and the ADVENT soldiers fell to the ground in pieces. The Ethereal thrust out with a hand and the ADVENT soldiers in front of her went flying backwards and she leapt forward and stabbed into one of the MDUs, then slashed up, and pushed the machine back with a telekinetic push.

The blade apparently could cut through anything, and now that the Ethereal was at the line, the soldiers were retreated. “Fall back!” Roman called to his team as the Ethereal cut through two more soldiers easily.

“Stay!” The Ethereal called out, and all the soldiers around her froze, including Roman, who while he could aim and think freely, couldn’t move. The rest of his team was frozen as well, and Roman watched in horror as the Ethereal decapitated Galina and followed up by stabbing Stanislav through the heart.

Elena shouted something Roman didn’t quite hear, but the Ethereal briefly stumbled as something hit it in the head. The sniper fire only seemed to barely distract her as she continued cutting through the soldiers with bloody and brutal ease. Upon closer inspection, Roman saw that it couldn’t have been an energy blade the Ethereal wielded in her hand.

The bodies, while clearly cut, weren’t cauterized and bled profusely. Now Roman could also hear a strange electronic buzz from the weapon, one which rose and fell in intensity whenever the Ethereal swung it. One arm reached towards him, and mimed a pull and Roman found his, Elena’s, and Konstantin’s weapons pulled out of their hands.

The Ethereal sliced her blade through the air and executed several more soldiers caught by her mental trap, and followed up with a stab towards another MDU, and Roman saw the beam of the weapon narrow and lengthen as it moved, until it was long enough to reach the MDU and stab it in the center. The blade retracted until it was the original length a second later, and the Guardian’s lower hands reached towards them and mimed lifting them up.

Roman barely had time to scream as he saw Elena crushed in a telekinetic grip and Konstantin’s neck snap before the Guardian lunged forward with her blade towards his neck. The last thing he felt was a searing warmth with his last thought hoping that Maksim would get out in time.

Then there was nothing.

Only black.

Washington D.C. – United States of America

11/22/2016 – 2:01 A.M.

The Battlemaster heard the discharging of gauss weapons in the distance, and saw ADVENT soldiers rushing towards them as well, a surprise considering he was supposedly the primary target. But for now they were distanced with something else. The Battlemaster broke into a run towards the commotion, opening with a psionic dash that pulverized an ADVENT soldier and decapitated another.

They were in the Arlington subdivision, where apartments and housing complexes dominated the landscape. From what the Battlemaster could tell, they were seemingly empty but he figured there were at least some civilians staying in them. The area he was in now had clearly seen recent
combat, as many of the houses had bullet holes, scorching, or had entire chunks blown out of it.

Once the Battlemaster turned the street, he saw a fairly welcome sight: Senorium.

The Warlock had clearly been in a fight, if not for his life, something that was pretty close. ADVENT soldiers were strewn around the area, most of which had sustained heavy damage indicative of psionics. Senorium’s armor was bloody, marred, and missing entire pieces. His helmet had been discarded or too damaged to provide any use, and as a result the Battlemaster could clearly see the rage that enveloped the alien’s face.

ADVENT had the Warlock surrounded, and were keeping their distance while firing gauss weapons. Blood spurted from his wounds, but the Creator had somehow enabled them to survive seemingly fatal injuries. The Warlock roared and extended his hands to one of the groups, shooting gouts of corrosive energy towards a group, while gesturing to another squad who stopped firing and dropped their weapons before collapsing to the ground in apparent pain.

However, the purple flare, size, and the Warlock’s more sluggish reactions indicated that his consistent usage of psionic was taking its toll. Much like a Battlemaster, the Chosen could not avoid becoming tired. He suspected that the alien could hold out for a while longer, but the issue was that Senorium didn’t seem to know how to pace himself, and if he wasn’t careful, he might quite literally burn out and allow ADVENT a perfect opportunity to kill him while he was paralyzed on the ground.

Something to watch for.

But there were more coming. Priests were in the mix as well, telekines and defensive psions it appeared, who were likely responsible for anchoring him to the ground, leaving him an easy target. Time to change that.

The Battlemaster thrust out an arm and the soldiers in front of him were thrown back several feet, while the ones closest to Senorium simply stumbled. With another clenched fist he collapsed their helmets into their heads, mixing brains with bone and metal. He killed one of the Priests with a simple decapitating strike, and the other he simply pulled into his hand and slammed the body onto the concrete where he followed up by smashing the face with his armored boot.

The Warlock gave a bloody grin as he saw the Battlemaster fighting towards him, and redoubled his attacks on the ADVENT soldiers, who began backing off once they saw the Battlemaster in the distance. A psionic maelstrom appeared on one of the ADVENT-controlled streets, cutting through the ADVENT soldiers and destroying the nearby houses many of the soldiers were using for cover.

“Battlemaster!” Senorium roared as the armored Ethereal joined him, flourishing his blade as he saw the ADVENT forces frantically communicating with each other in confusion and terror. “I’m pleased to see you survived.”

“I assume you have been kept busy,” the Battlemaster answered, declining to return the pleasure. “You’ve held out long.”

Senorium’s mouth formed into a sneer. “The Humans have attempted to kill me, all have failed. As one Chosen by the Creator herself, I cannot die to mere flying chunks of metal. I have held this position to give you a chance to find me, as I am certain you came to ensure my survival.”

The Battlemaster gestured to twin MDUs that were marching up, weapons raised and lifted them into the air before crushing them into steel balls. “We have a better chance of escape together.”
“That we do, Battlemaster,” the Warlock grinned, empowered further by the aura the Battlemaster commanded. More corrosive energy spat from him arms, hitting one of the ADVENT Gunners. “I am certain our extraction is coming. ADVENT knows we are here, and they will attempt to kill both of us. But we cannot be killed!”

Even in the middle of battle, he was tempted to let out a sigh at the idiotic fanaticism of the Warlock. Only idiots believed they couldn’t be killed. The chances of them dying were low, true, but those went up if they decided to stay in the exact same place. “No,” the Battlemaster interjected, walking forward. “We keep moving. Staying in one place is a trap. We cut a path through ADVENT. Follow my lead or you will die, no matter what you believe.”

He brandished his blade and began moving towards the street ADVENT was concentrated on. Senorium seemed briefly taken aback, but hastily dashed to his side. “Of course, Battlemaster, an Elder’s wisdom is far greater than my own.”

The Battlemaster didn’t bother to respond, and instead charged the ADVENT line and commenced the battle anew.

***

*Sydney Outskirts – Australia*

11/21/2016 – 4:28 P.M.

It turned out that a fight between an Ethereal, and a being possessed by some kind of entity was a highly destructive fight.

Aliens weren’t even attempting to slow down the Chronicler anymore, they were fleeing either out of fear or Quisilia’s orders, both of which made perfect sense. Anything that stayed even close to the Chronicler was atomized and leveled. One thrust out hand sent out a shockwave that splintered concrete buildings and turned anything inside into blood and gore.

Abby herself was staying far away, observing through her armor which she felt trapped in at this point. Harper and the others were similarly pursuing the aliens, and even they seemed charged under some unnatural force. They gestured and aliens just melted into goop, surrounded first by black ripples and tears.

Particle beams still fired from their hands, but they ultimately served as the background to the Chronicler’s path of destruction. Abby was no longer a participant in this fight, but an observer who simply hoped she’d survive with her mind and body intact.

Both of which had yet to be determined.

Quisilia had reappeared several times, largely by illusions she’d believed, not really taunting so much as commenting on what was happening. No one had been in the mood to listen and after the Chronicler had leveled an entire subdivision in the event he was hiding there, he’d not appeared since. The Chronicler clearly intended to make good on his promise to level the city, or at least the entity within him did.

And now Quisilia appeared on the street before him, surrounded by rubble where buildings had stood as the Chronicler had leveled them once he realized aliens had been inside. “Is this all you can do?” Quisilia asked, a blade twirling in his hand. “Destroy? Kill? I had honestly expected something with a bit more thought. You really think that you can kill someone by just blowing up buildings?” He wagged a finger at the Chronicler, and two more Quisilias appeared beside him.
“No, that just doesn’t work.”

The Chronicler appraised him for a moment. “No, Elder One. But it does put you at ease, and then you become vulnerable.” He suddenly reached behind him without looking and Quisilia, presumably the real Quisilia, became visible and encased in blue energy, hovering behind the Chronicler, hand raised in a fist. “I have seen more than you can possibly imagine, Elder One. I am no spymaster, but I understand the nuances of power; of visible and invisible influence.”

“No well enough, it seems,” Quisilia said, and that was when Abby noticed that Quisilia was holding something in his hand that exploded into a black mist that began flying towards the Chronicler. She also saw that similar mists had also appeared around Harper and his soldiers who were desperately backing off and trying to get the nanites off of them.

“Insolent!” The Chronicler roared as he flared with bright blue energy, and turned his attention to his soldiers. It was enough for the bonds to weaken and Quisilia vanished, only to appear behind one of Harper’s soldiers and stab up through the chin, presumably killing her. He vanished again just as quickly, then reappeared behind another of Harper’s soldiers and pushed him forward into a shimmering portal that had just been created.

Just as quickly, he attempted to vanish except that the air around him became charged with something that even Abby could feel it. Quisilia glanced upwards, and realized that the Chronicler was blocking his teleporting again. Abby looked back to the Chronicler, who had one hand raised towards the air, and another towards Harper’s soldiers. Blue fire flared and killed the nanites, while Quisilia slowly backed up.

“You fight well, Elder One,” the Chronicler complimented, almost grudgingly. “But you are no warrior. You cannot fight me and win. You cannot kill me. You can only try and slow me down.”

“I want you to think for a moment,” Quisilia said, in the same light tone, although Abby could definitely tell he was faking it. “You kill me here. Or capture me. What exactly do you think happens next?”

“Whoever your master is, they will receive the message to leave this world,” the Chronicler stated, slowly walking forward. “You mean nothing in this War, Elder One. You do not belong in this galaxy any longer. Your time is past, and the time for the new species to rise has come. Your interference is at an end.”

“I believe I disagree,” Quisilia disputed. “Just because we didn’t die when we were supposed to, doesn’t mean there isn’t a place for us.” He raised a black blade towards the Chronicler. “And all you’ve said simply reaffirms what the Imperator has learned. Even if you kill me, you will make a powerful enemy.”

The Chronicler laughed.

He gestured with one hand and Quisilia went flying, slamming into a building all the way at the end of the street. He teleported directly in front of the Ethereal pinned to the wall, who had hit it with enough force to crack it. Abby had to sprint forward to even catch what they were saying.

“You have no idea of what you speak,” the Chronicler said quietly, mockingly. “Your kind are the same as all Elder species. Believing they are superior simply because they live. Because they survive. And think they will be the ones to end the War. Freed from ‘tyranny’; from ‘control’. No... you do not care about that. You simply want to rule this galaxy undisputed.”

He chuckled. “Not that I can blame you. But your delusion will die. Starting with-“
The world suddenly became brighter than the sun and it felt like an earthquake struck the ground around her. Abby was thrown to the ground and glanced to the sky to see a sight she had not thought to see in person.

The mushroom cloud of a nuclear blast.

The other soldiers had fallen to the ground as well, and even the Chronicler found his monologue cut short as he stumbled and glanced up at the sky. “What?” Quisilia suddenly vanished as the Chronicler’s concentration, and likely vision, was broken since he wore no helmet and his senses were overwhelmed.

Quisilia then reappeared behind the Chronicler and pushed him forward into another shimmering portal and this time, the Chronicler didn’t immediately come out. He subsequently appeared behind Harper and each of his remaining soldiers and tossed them all into created portals to locations Abby didn’t have any idea of.

Then everything went quiet.

That was honestly not how she expected things to go.

“Towards the end, I did suspect the same,” Quisilia commented, appearing behind her, sheathing his blade on a slot on his chest. “Ironic. Saved by ADVENT in a likely attempt to cripple us.”

Abby had her weapon raised, but if Quisilia could beat the Chronicler of all people…granted, this had been more luck than skill, she really didn’t have much of a chance. Not how she had expected, or really wanted to go out. Still, at least it required an Ethereal to kill her, not some stray plasma bolt.

“Please,” Quisilia seemed to snort. “I can think of at least five times where I could have killed you. I wasn’t keeping you alive to taunt you at the end right before I kill you like some sadist. No,” he sniffed. “That’s too boring and predictable. There was a very specific reason I’ve left you alive.”

Abby chuckled mirthlessly. “You’re going to let me live. Really.” It wasn’t a question, more a statement of disbelief.

“Oh, it’s not because you’re not my enemy,” Quisilia quickly corrected. “However, I gain more from letting you live than die. I suspect you will soon anyway, so it will all work out in the end. But I am curious, what did you make of this Chronicler’s little benefactor?” He nodded towards her. “Who I suspect provided you with what you wear now.”

Abby thought for a minute. “Why does every alien species have some interest in controlling us?”

“Ah, I can answer that,” Quisilia said lightly. “You are independent. That is rarer than you might expect, but nonetheless something that others simply cannot allow. Independence in this galaxy is a rare and exceptional treasure. All species eventually succumb to one master or another.”

Abby smirked under her helmet. “We seem to be doing alright. And I assume you are the special ones who are free?”

“Mmm, a complicated question,” Quisilia said, looking up as a kind of drone floated down. “I’m fortunate I had the foresight to make this thing impossible to shut down.” The machine ejected something, and Quisilia tossed it to her, which she caught. A thumb drive.

“I suspect the Commander will be interested in this,” Quisilia said. “And make sure Aegis sees that as well. Perhaps it will enlighten him to what the Imperator’s concerns are. He is under the
impression that our supposed allies are…benevolent…which I’m sure even you can call into question.”

Abby narrowed her eyes. There had to be another angle to this; Quisilia was letting her go with this information for a reason, and she doubted it had anything to do with what had happened. Either it was to cause division, or more likely, create a distraction.

“None of those, but I don’t particularly care,” Quisilia reached into a pocket on his suit and pulled out a phone. “Cheap piece of junk. Of course it wouldn’t work here. Shame.” He looked up at her. “Ah, right, you’re stuck here. I supposed I’ll have to change that.”

“Wait!” Abby said. “Where did you actually send the Chronicler?”

“An unspecified point in space,” Quisilia said absentmindedly, as he tapped his phone again. “The same with his other minions. I have no idea where they are, and I’m fairly certainly I didn’t kill them. But he’ll be forced to spend time coming back to Earth, and for now he’s out of the picture. I suspect he’ll be back, and then I’ll be…well…more prepared than I was.”

He casually tossed the phone away and gestured at her. “In the meantime, I can’t teleport you back to your base, since your memories are too imprecise, but I do have a location where you can probably help out your human allies. Until next time, Agent.”

She wanted to say something else, but the air shimmered around her and she was suddenly in the middle of…some kind of military base? An ADVENT one judging by the soldiers running around. Some of them stumbled back as they saw her, and she couldn’t blame them. Gunfire and artillery shelling was in the distance, and she turned towards it.

“Hey!” A man, an ADVENT Officer called to her. “Who are you?”

“Abigail Gertrude,” she answered, thinking it was a good idea to take off her helmet. “XCOM Intelligence.”

He cocked his head. “We didn’t know we were getting XCOM support. They’re all busy in America. We won’t turn it down though, I’ll take you to the front lines.”

“Wait,” Abby interrupted. “I need to contact my superiors. You have a communication station?”

“Why?” He demanded. “We honestly need you now. We’re putting together a strike team to deal with a particularly nasty sniper. We could use you.”

Oh boy, how could she begin to explain this? “Classified,” she relented. “Look, I’ll help you but this takes priority. Let me speak to them, and I’ll join your strike team.”

She could hear the exasperation in his voice. “Fine,” he said. “But make it quick. I’ll take you to it right now.”

Abby considered asking where she actually was, but that would raise more questions than answers. She’d have to figure it out on her own.

***

Washington D.C. – United States of America

11/22/2016 – 2:48 A.M.
They were becoming more and more outnumbered, and ADVENT had begun finally using their soldiers far more effectively than they had before. They had quite rightly observed Senorium to be the weaker of the two, and as a result he was under constant assault by sniper fire. Golden ichor spewed out of his throat, face, and now eye even as his regenerative body began healing.

The Battlemaster couldn’t stay beside him either, as he was ensuring the front line of ADVENT died to his slices and telekinetic grabs. But on a narrow street, he was limited in what he could do. ADVENT was behind him as well now, the front line being Gunners who sent torrents of gauss projectiles towards Senorium, seemingly calculating that there was a better chance of them hitting the aliens than one of their own.

One punch pulverized an ADVENT Officer, and he slammed the blade of his sword down on another two, severing their shoulders and driving them to the ground. The Battlemaster suddenly found himself being lifted up by two Priests from the rooftops of a house, accompanied by other Priests who extended their arms and shot corrosive psionic torrents at him.

They were getting better.

Not good enough, sadly. His armor could withstand additional punishment yet, and he gripped the offensive psions in a choking grip, before sending them flying back. The other two he simply snapped their limbs and the moment that happened he dropped back down to the ground, readying his lower hand to slam a shockwave to destabilize the soldiers around him.

He risked a quick look behind him to see Senorium getting bombarded not just with bullets, but now rockets from one of the new rocket ADVENT soldiers. They were identified as Dragoons from the initial reports, and Senorium took one rocket directly to the chest, then another, and a third one blew it apart, forcing him to the ground, yellow coating the Chosen.

The Warlock roared and attempted to stand, one arm extended to the soldiers he was facing. The front line immediately started running away, but his telepathic command did not extend to the back row. Sniper fire continued ripping into the wounded alien. The other eye was shot out. The Battlemaster thought he saw a finger become shortened.

A dilemma. He didn’t particularly care about the survival of Senorium, but at the same time, if he was killed he was now in a much more difficult position. An executive decision needed to be made, at least until he could regenerate enough to become useful. His initial plan of ‘fight through ADVENT’ was becoming more and more difficult as he knew that no matter where they went, ADVENT would be waiting.

The Battlemaster sent a telekinetic wave towards the ADVENT soldiers he’d been fighting, then psionically dashed to where the Warlock was struggling to rise. The Battlemaster jammed his sword into a corpse, and leapt briefly up into the air to perform a repulsion attack, a weaker variant, but one that was useful when completely surrounded.

He hovered briefly in the air, crossing his arms as he gathered his power, then thrust them out in an expulsive wave that leveled the nearby houses and left a large crack on the ground beneath him. As the energy was directed primarily to the sides, Senorium managed to not be as seriously affected, but it knocked the wind out of his destroyed chest.

The Battlemaster dropped to the ground, and readied his sword once again. Two hands raised, he erected two telekinetic barriers. “How fast will it take you to heal?” He demanded.

“Momentarily,” the Warlock gurgled, spitting blood. “I cannot die, Battlemaster. Even if the Humans send a thousand more, we will defeat them as you just did now!”
“I slowed them,” the Battlemaster retorted, turning to the Warlock just in time to see the flesh over his chest reform. “They are not defeated, not yet. You cannot hold out forever, even now you are tiring.”

“A momentary weakness,” Senorium tried to assure him, now looking slightly worried. “A limitation I can easily overcome.”

The Battlemaster didn’t have time to explain the concept of pacing himself in sustained combat, and ADVENT was reforming their front line. “You will stay close to me,” the Battlemaster said. “Do not stop and fight the-“

He stopped speaking as Senorium’s face slowly morphed into one of absolute terror. A UFO suddenly roared overhead and began landing in the ruins of one of the destroyed houses. The sounds of battle continued, but it was no longer directed at them, but inexplicably at each other. A madness had taken over the ADVENT ranks, with some shooting allies, and others just falling to the ground screaming and gibbering.

Of all the ones to extract him, the Battlemaster would not have suspected Isomnum.

The black UFO’s entrance barrier slid back, revealing a brightly lit interior, almost pure white emanating from it. Out first stepped the Dread Lord himself, and beside him were his soldiers, who before today the Battlemaster had only heard of. They were a mix of all alien races, even Muton and Sectoid.

Some of them wore a kind of black armor, mostly the Mutons, and others wore clothing that would normally be seen in science labs or ancient Human religions, with sleek uniforms and robes. The Vitakarians carried unhilted black blades of sorts, coated in a colorless liquid, while others of Isomnum’s soldiers carried black weapons of a design the Battlemaster had not seen before.

Even the Sectoid stood straight, no longer the little grey creature but something that had been infected with black cybernetics and-

The Battlemaster stiffened as he saw the little creature more closely. He had only seen that kind of technology from the Synthesized.

What was Isomnum doing with it here?

The soldiers seemed to act on unspoken orders from Isomnum himself, and began slowly walking to the ADVENT line. From what the Battlemaster observed, the most noticeable thing about the soldiers was not necessarily the wide array of species, but that all of them were apparently blinded. All of them wore some kind of blindfold, and none of them covered their faces.

“Lord Isomnum,” Senorium said meekly, falling to one knee, practically shaking. “It is an-“

“Leave, Chosen,” Isomnum commanded, the voice speaking only made the screaming in the background intensify. “Retain your sanity if you wish. You are no longer needed.”

“Yes-yes of course Lord Isomnum,” the Warlock said, standing and creating a visible distortion that acted as a portal. Once he stepped through, he vanished. Isomnum was flanked by two of his soldiers, a Vitakarian and a Sectoid. The Battlemaster could not read the Sectoid, but the Vitakarian was emotionless, somehow unaffected by the madness Isomnum exerted.

“Your assistance is appreciated, Isomnum,” the Battlemaster said, inclining his head. “We may depart immediately.”
“We will leave momentarily,” Isomnum stated, looking around and walking towards where several ADVENT soldiers lay. “I have seen your reasoning for this attack. You have failed.”

“President Treduant is dead, and we have shown ADVENT is vulnerable,” the Battlemaster answered. “Her attack was a surprise, but the objective was succeeded.”

“If you leave now, you will not leave them with fear, but with hope,” Isomnum practically spat. “You were outwitted by a Human. Again. Your honor has done nothing but waste resources and time. The coddling of this species must end. They cannot think to attack what we have with impunity.”

A Muton dragged a screaming ADVENT soldier in front of the Ethereal, and Isomnum telekinetically lifted the helmet off to reveal the distraught woman before him. “Humans, Battlemaster, cannot be defeated without taking measures,” he said, gripping the woman’s chin with his finger. “The goal should not be victory on the battlefield, but to plant terror in the heart of every Human who dares oppose us. Terror leads to distraction, distraction to mistakes, and their mistakes lead us to victory.”

The Battlemaster had known of the reputation of the Dread Lord, and now he was beginning to understand why Isomnum had been deemed too extreme even for the Overminds. “Fears, these can be simple and complex. Some are situations, others are as simple as a fear of insects. Push too much; create this image in their mind…and it will inevitably shatter.”

He looked to the Sectoid. “Go. Bring me the Venomorph and the eggs.”

The Sectoid chittered and walked off. “What are you doing?” The Battlemaster demanded. “We need to leave.”

Isomnum ignored him temporarily, looking towards his soldiers who appeared to be picking Humans at random from the paralyzed mass of soldiers. “Bring those marked to the ship.” The Battlemaster saw a couple more soldiers walk off and began binding and carrying Humans to Isomnum’s UFO.

“So he was recruiting Humans for his army. Or a more accurate word was abducting. He didn’t know if he should stop it, but this was one area where the Imperator might override him, and this was not the time to fight, not when he still considered them to be in mild danger.

The Sectoid returned, chittering and holding up a clear vase, which had a small creature inside it. Behind the Sectoid was a Muton carrying a black box. “To answer your question,” Isomnum said, taking the vase gently and telekinetically lifting the little squirming insect out of it, before looking down at the woman. “I am completing your mission. Revelean was kind enough to loan me a prototype of his Venomorph.”

The Battlemaster only remembered a few details from the project, as he hadn’t checked it in months, or even heard about it from Revelean since. “A parasite?”

“One which grows in the host, consuming until it controls their body,” Isomnum confirmed. “And once its brain supersedes the host, it will kill and maim all around it.” He lowered it towards the woman’s mouth. “Be still, Human, you will forget this happened soon—“
He never finished as the Battlemaster severed the woman’s head from her body. “No.” The Battlemaster stated flatly. “The mission was accomplished. We. Are. Leaving.” He looked towards the box and telekinetically opened it. “Chryssalid eggs,” he spat, glaring at the Dread Lord. “Do you think so little of our species that we must resort to terror to win?”

“You instructed me to assist your efforts,” Isomnum stated. “I have done so. The Humans will treat this as a victory; we can yet turn it into their nightmare.”

The Battlemaster clenched a fist and the case crumpled and the delicate balls containing the Chryssalid eggs shattered. “Your suggestion is denied. We are leaving.”

Isomnum looked up at him; as impossible as it was to read under the helmet, he suspected the Ethereal was furious, disgusted, or both at him. Not that he particularly cared. “You are weak, Battlemaster, you are why we lost before. I will be speaking to the Imperator to ensure that we do not lose a second time.”

He motioned to his soldiers, and they wordlessly began walking back towards the UFO, with the Battlemaster following him. Unfortunate that the UFO was so small, as it would be difficult to avoid the Ethereal furious at him, but it couldn’t be helped.

In the end, Isomnum was here under his request, and under his command. Even if his threat to inform the Imperator was not a bluff, the Battlemaster would not pay it any weight. It was not as though the Imperator would actually supersede his military authority.

In the end though, he was out of danger.

Now he had to figure out how to salvage this entire operation and retain what territory they had.

***

**ADVENT HQ – Switzerland**

*11/22/2016 – 6:00 A.M.*

It had been a while since Saudia had stayed up all night, but in this case the adrenaline from managing the ongoing media news cycle, attacks on multiple fronts, and the uproar of foreign countries offering support and condolences, had made it somewhat easier. She literally had no time to be tired, much less devote to thinking about it.

The Battlemaster had escaped, which was a loss, but considering the circumstances, it could have been worse. Had that other Ethereal not arrived, perhaps they would have killed him and that Warlock.

But putting the Battlemaster in a situation where he’d needed extraction at all had been a minor victory. It at least showed he could be trapped and eventually worn down. The attacks in California were proceeding well…but it was becoming more of a stalemate, and reports of another Ethereal in Alaska had explained why cities were suddenly falling there.

Seattle had been temporarily abandoned, again, to put into motion a new kind of guerilla warfare, which had been approved by Commander Christiaens and Weekes, so it was likely a reasonable strategic maneuver. Still, she wasn’t happy to lose it so soon after gaining it. At least South Korea was going as well as could be expected, and they would probably be able to hold out indefinitely assuming no Ethereal showed up.

The nuclear strikes over Japan and Australia had gone off successfully, and she idly wondered how
they were handling that. She suspected that the Battlemaster would be working to negate this in the future, so it might as well be taken advantage of now.

She debated taking a short nap before the press conference today, where there would doubtless be more questions from the media about the attacks. Already foreign media was jabbering about the blast over Japan, and the state of the conflict in the US. For once though, they were all unilaterally focused on the alien threat, and not whatever aspect about ADVENT they chose to attack that week.

It was a refreshing change, and the attack on D.C. had been a catalyst for that. Almost every European country had either condemned the attack, or offered support, most of which amounted to little more than words…but she did wonder if it would make some of them think. England in particular had responded to the attack strongly, with the Prime Minister declaring it an ‘inconceivable and cowardly attack’. More aggressive than she’d expected.

“Chancellor,” her secretary said, speaking through the intercom in her office. “You…have a call incoming.”

She furrowed her eyebrows. The amount of people who were allowed to disturb her were very few. Either something had gone very bad, or very good. “Who?”

“Best you see for yourself, Chancellor. Security reasons.”

Which further reduced the options of who it could be. That reason was only given if absolutely no one could risk even knowing the following conversation existed. She wondered if it was the aliens, calling to either insult or congratulate her. “Put it through then,” she said, standing up. “Holoprojector or screen?”

“Holoprojector,” he answered. “Putting it through now.”

Alien then. No one else had holotech. She moved to the holoprojector which flashed red as it booted up and displayed the figure before her.

Who, it turned out, was perhaps the last person she had expected to speak to.

“Greetings, Chancellor Vyandar,” Chinese President Qin Yijun greeted. “I felt it was past time we properly spoke in person, or as close as can be expected from a woman of your position.”

Well, this was an interesting turn of events.

President Qin Yijun of the Communist Party of China was dressed similar to all Chinese politicians of the country, which amounted to a simple business suit, although the red hologram distorted whatever colors it had. He was relatively young, thirty-nine and from pictures she remembered he had black hair, darker skin than normal for a Chinese man, with full Chinese facial features.

“President Qin,” she inclined her head. “I was not expecting this.”

President Qin gave a slight smile. “While we could go through the normal diplomatic channels, I believe the current situation emphasizes speed above all else. It is time we make decisions together, not through our respective diplomatic branches.”

“I am not opposed to that,” Saudia said. “Yet I somehow doubt you’re calling to say that China is joining ADVENT.”

“No,” President Qin said lightly, but firmly. “We have every intent of retaining our independence.
With that said, you are not our enemy, and the aliens are on our own doorstep. Their ships have been seen flying over our waters, and it is no longer in our interests to hold our forces in reserve. What I propose is simple, Chancellor, a military alliance between our governments against the Ethereal Collective.”

While it wasn’t exactly the best outcome of this conversation, even having China at the table was a major step forward, especially in the Asian theatre. “I’m glad to hear you understand the threat, Mr. President, however, I do not want you to have the wrong idea of what such an alliance would entail. We have no intention of sharing our technology with you.”

“As anticipated,” President Qin nodded. “We do not expect you to do so, and the decision shall be mutual. This would be fairly simple initially. From what we understand of the current conflict in Korea, you are holding out but unable to push them back completely. We can provide you with enough reinforcements to crush the aliens in Korea, and send reinforcements to America if needed.” He paused. “It was courteous of you to inform us of your surgical nuclear strike over Japan. It is also an opportunity. You have given an opening for a counter-invasion of the island. Your forces are occupied. Mine are not.”

Retaking Japan.

That was not something she had considered as a possibility, but before then, she hadn’t had several extra million soldiers to take it over. Still, she wondered what the catch was. “In the event such an undertaking is started…” she began slowly. “The liberated territory will be returned to the surviving Japanese government and citizens, and become a full member of ADVENT. This is not an opportunity to expand your territory, Mr. President.”

“Considering what ADVENT is capable of,” he answered. “It would be foolish to make an enemy of you. Should a liberation of Japan be successful, it will, of course, be returned to the Japanese.”

Saudia gave a single nod. “And what of your soldiers and weaponry? It is not as ours is, I suspect. We will, of course, be willing to provide support from our special forces.”

“While we are certainly nowhere as advanced as your army,” President Qin admitted. “We have made significant advances, and despite the…attempted intervention of XCOM to deny us the alien Dreadnought, it has allowed us to progress significantly. Do not underestimate my soldiers, Chancellor, they can fight just as hard as yours.”

Saudia considered for a few moments. “I feel that we should discuss this in more detail. ADVENT, President Qin, would certainly be open to an alliance against the Ethereal Collective. However, this warrants an announcement in person. Would you be willing to meet in person so our branches can coordinate more effectively?”

He gave a light chuckle. “I suspect you would not stoop to such trickery as to abduct me, and it will perhaps send the needed message that, feelings towards your government aside, this war will affect the world and our species. I will come. Ensure that your staff are ready to coordinate. I will order my forces to prepare to deploy.”

“Excellent,” Saudia smiled. “I look forward to your arrival.”

He returned the smile, one full of confidence and cold fury. “As do I, Chancellor. We will speak shortly.”

The hologram dissipated, and Saudia was left alone. She quickly walked to her desk and opened a line to Diplomat Hassan. “Chief, get everyone you can assembled and prepare for a foreign
delegation.”

A pause. “Now? I can, but who is it?”

“President Qin,” Saudia said with a grim smile. “I think the Chinese are willing to ally with us.”
If he had not been rather pleased to be out of ADVENT territory, he would have likely found Sana’s reaction to him stepping into her Blacksite to be highly amusing. It had been brief, but he’d felt she had become legitimately afraid he was almost dead once he stepped in front of her. He didn’t exactly look like the ideal healthy Ethereal, especially with the amount of blood and gore on his armor.

His appearance had been extremely unsettling to the few patients she had in her presence, and not even her calming aura was enough to fully override that. He’d simply nodded to her and she’d busied herself with wrapping up…whatever she was doing. He didn’t know, nor did he particularly care right now. It took some time to get fully out of his armor, but he was out of it in time for her when she came in.

“What happened?” She’d asked.

“A miscalculation.” No reason to lie to her. “The Humans were cleverer than I’d anticipated. Trapped me in their territory for some time. It was not easy to escape.”

She’d begun examining him, still glancing over to him. “How did you? And why are you here?”

That was a fair question. Normally, he wouldn’t have bothered coming to be checked up on since he knew he wasn’t seriously injured, but he had for a couple reasons. One was that he hadn’t fought like that in some time, and wanted to ensure he was in good condition. The other was slightly…embarrassing…but Sana, nor most Ethereals, would really judge him. “Isomnum was the one who extracted me. The brief flight back was not ideal. I’d have preferred more pleasant company.”

“Ah.” Was all she’d said. “I see.”

It was all she needed to say. The Battlemaster was well aware that the only person who Sana legitimately hated more was the Creator. Her and Isomnum were the only exception for the normally gentle Ethereal. Even Revelean and Fectorian she disagreed with on a professional level, though still respected them.

That opinion would not change if he told her of Isomnum’s original plan for the city.

But he wouldn’t unless asked. It had not happened, and would only widen the divides that existed within the Collective. He realized belatedly that ADVENT soldiers all had cameras on them. Which meant that not only would they know of the original plan, but they would also know who and what Isomnum is, and also that there were indeed disagreements and schisms in the Collective.

XCOM had likely been aware of this because of Aegis, but seeing as how ADVENT hadn’t seemed like they’d had secret intelligence, he doubted they had shared all of it, or any to begin with. Of course it was a moot point. There wouldn’t have been time to smash all of the cameras, but it was only going to be used as more, and he had to admit-legitimate, propaganda against them.
“Done,” Sana said as she finished. “Minor bruising, but otherwise you’re physically healthy. You are fatigued though, and your body clearly hasn’t been through an ordeal like that in a while. I would advise rest for at least the next week. No returning to the battlefield.”

He shook his head. “That is not up to me. If I feel it is necessary, I will go.”

Sana had apparently predicted that, and was also predictably disapproving. “Of course you will. The very least you should do is have Fectorian repair your suit.”

“That I will do,” the Battlemaster promised. “I won’t return until that is fixed. Too risky otherwise.” He picked up a datapad and began the likely unpleasant task of figuring out how to sort out the mess these attacks had caused.

“Battlemaster,” a familiar voice greeted, and the Ethereal looked up to see the Zar’Chon walking in, professional as always, even if he was greeted with the sight of an unarmored Battlemaster, which he had almost certainly never seen before.

“Zar’Chon,” he answered in return, setting down the datapad. “I presume you mean to update me on the current situation.”

“On what I can,” the Zar’Chon answered, raising his hand and a holographic list began scrolling on his palm. It was going too fast for even the Battlemaster to see, but he supposed that was what the implants were for. “The short version is that our situation is not what I would consider ‘good’.”

“Then clarify,” the Battlemaster ordered.

“Of course,” the Zar’Chon nodded. “There is some good news. The Second Guardian has reported that her advances into Alaska and Canada have been successful. Vancouver is still holding out, but I have requested additional Spectres to take it. Seattle has been largely reclaimed as well. And Quisilia has returned alive, so the incursion in Australia is handled.”

The Battlemaster fixed the Zar’Chon with stare. With all that had happened, he had almost forgotten about that incident. “You sound almost surprised by that. What was learned? Did ADVENT attack there as well?”

“No,” the Vitakarian scowled. “It wasn’t ADVENT. Quisilia confirmed that to me. We didn’t know who they were. They were definitely wielding more advanced weaponry than even XCOM. When Quisilia returned he was oddly reluctant to discuss it. He said it was imperative the two of you speak. But the situation there is contained for the moment.”

That raised many questions, not the least of which being that if it wasn’t the Humans, than who could it possibly be? He was aware of the inner galactic species, but highly doubted that they had more advanced technology, or had a presence on Earth at all. They would have detected it well before now. He would definitely need to figure out what was going on in Australia. If Quisilia didn’t want to discuss it with the Zar’Chon, then…

An ugly thought entered his mind. There were only a few topics Quisilia would not share with his spymaster; that which related to internal Ethereal matters, the Synthesized, or the Sovereign Ones. Since there were no other Ethereals alive that would be fighting them, and the Sovereign Ones weren’t on Earth, then could the Synthesized have possibly arisen?

They had found remnants of their technology in hidden places in the galaxy. It was not inconceivable that the Humans…or Collective, for that matter, had accidentally activated it. No matter what the explanation was, it was highly concerning. “Noted. What else has happened?”
“We are in danger of losing California, should the situation continue to deteriorate,” the Zar’Chon finally said. “The initial train bombings destroyed much of our garrisons, even if they took the infrastructure with them. We suspect Patricia is in Los Angeles and Sacramento is also being spearheaded by another XCOM team with unexpected aggression.”

As would be expected…except. “How is that possible?” He asked. “Aren’t our soldiers being telepathically shielded?” While the Zar’Chon didn’t know the full details, he was aware that there was an Ethereal who was providing telepathic assistance on the ground to negate threats like Patricia.

“Either he is distracted or he has been subverted,” the Zar’Chon answered tactfully. “Either way, telepathy is still resulting in casualties in LA. Even in Sacramento we are receiving reports of telepathic attacks. It seems to be working against the telepath Priests, but most are transitioning to support roles, which are seemingly not affected.”

The Overmind had either become much weaker or lazier if he was allowing Humans to be able to subvert him so easily. The entire reason he had requested such assistance was to be an answer to telepaths like Patricia. However, it appeared that wasn’t the case. “And where else?”

“The Mexico offensive is…not going well,” the Vitakarian admitted, pursing his lips. “The deployment of the Creator’s Assassin was less effective than we’d hoped. Against ordinary soldiers in close quarters she is excellent, so the reports say, but the problem is that she is now fighting psions and is largely behind enemy lines. We are having difficulty breaking their trench lines. The Assassin has sustained heavy damage and is recovering now.”

Disappointing news, but not entirely surprising. One psion, no matter how skilled, against other psions of a similar or greater power level would almost always lose against them. The problem was that she was quite clearly built for smaller and more surgical operations, not as an attachment on the battlefield.

He would have to make appropriate adjustments.

“Battlemaster, I would also request you recall the Hunter immediately,” the Zar’Chon continued, now looking slightly irritated. “While the Creator’s…soldiers…are powerful, I did not expect one to be a literal traitor.”

“Explain.”

“I will send you the recording,” the Zar’Chon explained, looking at his holographic list, presumably to find it. “But upon the initial encounter, he essentially said he was ‘going to kill whoever the fuck he wanted’ as following orders was ‘boring and predictable’. I am paraphrasing, but the point is that for the entire attack, he has been shooting at both allied and enemy targets. He’s cost us dearly in resources in soldiers and turned the offensive in Busan into a mess.”

The Battlemaster was silent for a moment. Another bad miscalculation, but he could not have anticipated that the insubordinate Hunter would be such a catastrophic traitor. Although perhaps that was the wrong word, but it was producing the same results. The Hunter would have to be punished severely for this. Possibly executed.

The Creator would not like that, of course, but he didn’t especially care what she thought. If her pets disrupted his military operations, they weren’t exempted from consequences. For all the faults of the Warlock, his fanaticism at least ensured he was loyal. “Now that you’re back,” the Zar’Chon continued. “We need to decide how to respond to this.”
Indeed.

“The First Guardian will be sent to Sacramento,” the Battlemaster said after some thought. “He will kill the XCOM squad currently causing issues. The Canadian and Alaskan offensive will receive reinforcements. The Mexico forces will be pulled back temporarily as well. If needed, we will take additional measures to ensure we don’t lose California.”

“And South Korea?”

“We will maintain the offensive for now,” the Battlemaster said. “I will deal with the Hunter.”

“And Patricia?”

“I will deal with Trask myself,” the Battlemaster said, standing. “She cannot affect me.”

“What additional measures do you mean?” The Zar’Chon suddenly asked. “More Spectres?”

“Initially, yes,” the Battlemaster nodded. “And if those prove insufficient…request for enough Cleanser Ships to level their ground army. ADVENT has decided to escalate this conflict with psions and nuclear weapons, and in this case, we may respond in kind.”

“Acknowledged,” the Zar’Chon confirmed. “I would also suggest support and repair teams to Australia and Japan due to…ah, I forgot to mention that. ADVENT detonated two additional nuclear weapons above Japan and Australia. Our forces are completely disrupted.”

Attempting to take advantage of their vulnerabilities before he made efforts to correct them. The Humans understood warfare exceptionally well. In the span of a few days they had crippled or attacked nearly all of the Collective’s main installations on Earth. Impressive, and he couldn’t bring himself to feel much anger towards them. They were simply fighting intelligently and competently.

However, they were not the only ones, and if they felt confident enough to escalate the war to this degree, he would happily oblige.

“Do that,” he ordered. “How long is it estimated to repair everything?”

“Everything?” He frowned. “Critical systems within days. Military equipment and defenses, perhaps a week. Everything else likely two, and this is if we have as large a team as possible. ADVENT did this to disrupt us, so we can take our time in repairing it. They won’t be attacking Japan, let alone Australia during this time.”

“So order the teams to take their time and do it right,” the Battlemaster confirmed with a nod. “In the meantime, we will end these attacks by ADVENT.” He stood. “Dismissed, Zar’Chon, I will speak to you shortly. Now I need to speak to the Creator.”

***

ADVENT Secure Diplomatic Site – Switzerland

11/23/2016 – 1:42 P.M.

Both China and ADVENT had agreed that, for the moment, it was best that the media and public not be aware of any potential alliance between the parties in the event that they couldn’t come to an agreement. Saudia personally considered that unlikely; that China was willing to talk at all meant that they were planning to work on some level, though how much that would be was yet to be
In the meantime, they were holding the talks in ADVENT’s Secure Diplomatic Site, specially designed, isolated, and constructed to be out of the way and impossible to penetrate by any outside power, where high-level or extraordinarily sensitive diplomatic issues could be discussed without fear of exposure.

It was well stocked, furnished, and definitely the same quality as any building in the ADVENT HQ. The only difference was the far tighter security. The road itself was guarded by the Peacekeepers, and snipers watched the roads; ready and willing to kill stragglers or investigators who came too close. There had been several attempts by the media to investigate, but they had backed off when snipers had shot the expensive gear they were carrying.

No one was brave enough to go back, and they had correctly been smart enough not to actually report on it.

On top of the layers of physical security, it was also regularly swept for listening devices, electronic jammers, and dangerous substances. SHIVs patrolled on pre-determined routes and the basement not only contained a fully stocked armory, but a dozen MDUs to deploy in the event of an emergency.

It was also one of the first buildings to have a room specially designed for a Gateway, which would be essential for evacuation or reinforcements in such an event. It was a massive power draw, even with elerium cores, but it was what allowed the important figures in ADVENT to join in such sensitive diplomatic talks on such short notice.

Saudia had received a list of the people President Qin was bringing with him, which unsurprisingly contained his second in command in the Chinese Central Military Commission, who was effectively the leader of the military even if Qin was the Commander-in-chief, as well as his Minister of Defense and Chief of Joint Staff.

What was unsurprising was the presence of the Foreign Minister on the list, as such a diplomatic mission would need all the expertise he could gather. The final name had been a mild surprise, and somewhat amusing to her. Qin apparently felt comfortable bringing the Minister of State Security along as well. Perhaps there was a reason the head of Chinese intelligence was coming, but it seemed more of a move to unsettle her.

China had become used to having a large amount of influence in the old world. Such a move would have definitely been either a warning or threat, but China no longer had such power. Not truly. Which then begged the question of why they would even try such mind games. In any event, she could play at that game easily enough.

For herself, she had decided to have Commander Christiaens participate, as was the obvious choice, as well as Chief Diplomat Hassan. In addition to them, she’d also asked the Commander to participate, as XCOM needed to be involved in these talks, and Elizabeth as well. If he brought his own spymaster, she could certainly bring her own.

The final member she was including was the Prime Minister Sakata, or more accurately the Prime Minister in exile, of Japan. As this was his country, at least some members of the surviving government needed to be aware of the situation here. Given the history between Japan and China, this situation was darkly amusing.

But she needed to focus, as the Chinese delegation was now filing into the main meeting room where the negotiations were to take place. First came President Qin Yijung, who looked as
composed as he had in their initial meeting, who was followed closely by General Cheng Zhen, Vice Chairman of the CNC, who was much older than the President himself with grey streaks in his blackened hair.

However, Yan An, the Minister of National Defense was clearly the oldest in the room. Saudia recalled his age to be sixty-two, and he certainly looked the part. The Chief of Joint Staff, Kong Qigang followed, not appearing to be especially pleased with the whole situation, but kept a firm face regardless.

Han Jie, the Minister of State Security himself followed, and of the group he stood out due to his lack of any hair, which Saudia found rather ironic for a spymaster. He clearly wasn’t going to be easily forgotten, but he did have that same calculating look in his eyes she recognized in Elizabeth, and she noted him taking stock of everyone in the room.

Finally, Foreign Minister Xuan Wuying entered, looking as every diplomat should; friendly and like he wanted to be there. She didn’t know how true that was, but this was the situation every diplomat wished for, even if it simultaneously frightened them. “Chancellor,” President Qin greeted, extending a hand. “A pleasure to meet you in person.”

“The feeling is mutual, Mr. President,” Saudia replied evenly, taking the firm grip. “I hope our discussions are productive.”

“Quite,” he agreed, looking around at the other guests. Foreign Minister Xuan had already gone to greet Prime Minister Sakata and already the groups were forming around the respective mutual positions. Elizabeth was already chatting with the MSS Director, and both generals were conversing with Laura.

She figured it couldn’t hurt to let everyone mingle some, as few as they were, before getting down to business. “Ah,” Qin suddenly said, pursing his lips. “Commander. A…pleasure to meet you in person.”

The Commander looked almost smug, but simply inclined his head. “I’m pleased China is considering rejoining the effort against the aliens.”

“We haven’t forgotten the true threat,” Qin said evenly. “On that I can assure you.”

“And I haven’t forgotten that you like stunts like pulling out of the only anti-alien organization fighting because you didn’t get your way,” the Commander answered, just as evenly. “But I suppose all of us have our regrets.”

That was not how she wanted this to go.

“The differences between XCOM and China, no matter how grievous at the time,” she interrupted. “Do not matter now. China was hardly the only one who had issues with XCOM, Commander, as I’m sure you know.”

“Indeed,” the Commander gave a thin smile. “I do have to admire you following through on your word, disagree with it as I may. A government with a spine was somewhat rare.”

“In retrospect, it might have been handled differently,” Qin finally said. “The issue, Commander, was never your methods nor past, distasteful as some may find it, but your lack of willingness to communicate important information. Had we been aware of EXALT operations in our country, we would have happily assisted in destroying them.”

The Commander’s lip twitched. “To a certain degree, I agree. However, we had no way to know if
your government was compromised by EXALT. Had we warned you, any moles you had would have sent warnings and we would have accomplished nothing.”

“It is the actions of a rogue organization,” Qin said slowly. “One which, at the time, answered to a higher authority. If not us directly, perhaps someone on the Council who you could trust. But as the Chancellor said, it is in the past. We are willing to overlook this incident if you are.”

The Commander gave a smile. “I don’t hold a grudge, as long as you’re willing to assist us now. But our raid was certainly justified, even if you continue to disagree. I suspect that had I not done it, we may not be speaking right now.”

Saudia kept her face completely neutral at that little jab. Funny, Commander, very funny.

“I believe we should get started,” she said, as everyone began moving to their seats. “There is an operation still going on and time is of the essence.” All of them were soon seated on the ornate glossy wood table, ADVENT representatives on one side, and Chinese on the other. She sat at the end, with the President seated right beside her left, and the Commander on her right.

“We’re all aware of why we are here,” Saudia began. “Right now there are soldiers dying to retake America. Commander Christiaens and the Commander of XCOM believe this important enough to focus their attention on instead of the battles raging now. Mr. President, please state the reason for this meeting.”

“Certainly, Chancellor,” he nodded towards her. “Your soldiers are to be commended, Commander Christiaens, as are any who fight against the alien threat. We have kept to ourselves for a variety of reasons, but ultimately, this is a war even we cannot stay out of. The Communist Party does not believe it is beneficial for either China or ADVENT to have an adversarial relationship with the other. We are different, yet that does not mean we are unwilling to work together.”

“Indeed,” Foreign Minister Xuan echoed. “We admire what ADVENT has been able to accomplish over the past months, and while we are not, nor will we have an interest in joining, there is little reason to sever diplomatic relations entirely. This is why China is willing to form an initial military alliance with ADVENT, and XCOM of course.” He nodded to the Commander. “To fight against the alien threat. Should that prove beneficial, we could extend that to other sectors as well.”

“It is important for you to realize that we understand the threat that this world faces,” Qin continued again. “Too many countries now are refusing to assist either out of fear of ADVENT, or in some vain hope that will save them. They will never act until they are, or have been directly harmed in this fight. Much of Europe is insulated from the threat, which I suspect plays a large role in their neutrality.”

“We have also been left alone,” General Chang added. “Initially, we were relieved. However, it has quickly become apparent that this is by the aliens plans. To them, we are not a threat. They are relying on us retaining our neutrality even as we prepare to fight them. But eventually, they will turn their focus towards us, and if ADVENT is destroyed, there is no hope for China, much less our species.”

“And this is the catalyst for this meeting,” Qin finished. “The time for neutrality has passed. China will not be remembered as a nation of cowards who did nothing while aliens fought our species. It is time to enter this war, and as ADVENT is the only force willing to fight, it is prudent to ally to defeat our enemy.”

Fine words from the Chinese. Saudia also suspected this was also partially to ensure that China remained relevant, and probably more likely, a means to acquire more alien materials they almost
desperately needed if they wished to advance. Ideological reasons were nice, and they likely believed such words to an extent, but the Chinese were a practical people.

They saw the writing on the wall. If ADVENT died, so did they.

They were running low on materials. Such materials could be acquired through combat.

They saw Europe, Africa, and parts of South America refusing to get involved. This was their chance to emerge as the last remaining world power with some semblance of influence.

It all boiled down to politics. But that was what the world revolved around. Who could be the most convincing and offer the most reward. She could work with that. “We echo your sentiment,” she finally said. “A military alliance, while not the greatest move of unity that China could do, is nonetheless a powerful statement, one I believe the aliens will not know how to handle.”

“There is a reason China is referred to as a sleeping dragon,” Minister Han said with a slight smile. “It takes much to fully awaken us, but when enraged, little can stop us.”

“Then let’s get into details,” Laura said, leaning forward. “Words are nice, but if you really are intending to fight the aliens, we need to know if you actually know what that means. It’s one thing to read reports, another to witness it in person. Are your weapons even powerful enough to hurt the aliens? Can your soldiers survive against even one plasma blast? How does the PLA measure to the aliens?”

“We have broken through gauss weaponry, and have been producing it ever since designs have been finalized,” General Yan answered. “Our weapons are, at minimum, perfectly capable of hurting the aliens. Alien alloys are difficult to acquire, so we’ve had to improvise by simply working with reinforced Kevlar and experimental body armor. Little compared to yours, but is nonetheless an improvement over the original.”

“Our strength is in numbers,” Cheng stated. “At this moment our military is over two and a half million soldiers. We have much of our civilian populations working to fortify cities and produce more equipment. We have the capability to boost our numbers to over five million nearly overnight, should it be required.”

“And gain a multitude of inexperienced and undertrained soldiers,” the Commander noted. “A draft is useful for numbers, but numbers alone will not win this war.”

“Ultimately, you are likely correct,” Cheng answered. “But for now, numbers will be enough to end the fight in South Korea and storm Japan. Our support from our warships and air forces will additionally supplement our forces. As well as any ADVENT forces you wish to deploy.”

The news of the Chinese armaments was not surprising. Saudia would have been more surprised if they were only using conventional arms. Everyone was making improvements, and the Chinese were no exception. However, from the wording, these were likely the quite literal Chinese knockoff gauss weapons. Cheap and easily produced, but sub-par in most ways.

Given their history, she would not have been surprised if they’d stolen a gauss weapon, reverse-engineered it, and made a worse version so they could mass produce it. They weren’t above stealing designs when they needed to.

Or maybe they hadn’t. That would have been a good way to get annexed, and China probably didn’t want that risk.

“That is not necessarily an advantage, at least in a proposed liberation of Japan,” the Commander
continued. “This is almost certainly going to draw the attention of an Ethereal. I don’t know which one, but all of them are far beyond ordinary soldiers.”

“Indeed,” General Chang nodded. “Which is why we need to have contingencies for each one known. Even we have identified these aliens as the leaders, and the death of one is worth any number of soldiers. I believe they can be beaten, provided we are smart enough to figure it out.”

“On that I agree,” the Commander nodded. “They most certainly can be beaten. It is a matter of planning and preparation. But you understand that many will die to see this accomplished. Your soldiers are not ADVENT. Against an Ethereal, they are on a suicide mission.”

“That is completely understood,” Chang said. “But to die for one’s species and country is not something to be overlooked.”

“Good,” the Commander nodded grimly. “As long as you understand what you are proposing.”

“Now there is another question that needs to be raised,” Qin said after a moment. “We will be doing the majority of fighting in Japan. It is fair that we receive the same majority of resources gathered.”

Saudia shared a look with Laura, who nodded. “That is fair,” Saudia agreed. “We would not expect you to fight and not receive some of the materials which remain. However, there are certain things we will not allow to fall into foreign hands.”

Qin’s brow furrowed. “Such as?”

“Anything psionic,” Saudia began. “As well as any unidentified technology or aliens. Live prisoners we will also take into custody, as well as any Ethereal or Sectoid bodies.”

“I can understand Ethereals,” Xuan said slowly. “They are, after all, rare and unique. But simple Sectoids?”

“Yes, any psionic species is under our purview,” Saudia answered firmly. “Intact computers we will also have a priority on, although China will not be excluded from them. Anything else recovered we are willing to allow China to have.”

“How generous,” General Kong said dryly. “Allow us to have the common spoils while you gather what really matters.”

“This is true,” Qin also noted. “While I can certainly understand your…reluctance…to allow anyone other than yourselves to use psionics, this is not conductive to diplomacy, and ultimately, all it will do is inspire an arms race that might backfire. Even if we do not develop psionics, there are still criminal elements in this world that will eventually learn it. And they do not respect agreements or treaties.”

“It is not quite so simple,” Hassan pointed out. “The truth is, I do not believe that you quite understand the extent of psionic powers. This is not something that you can just weaponize without consequences. It is as much for your own protection as controlling the usage of psionics.”

Cheng snorted. “How patronizing. If ADVENT can manage it, I’m certain we can as well.”

Hassan gave a knowing look to the Chinese delegation. “ADVENT is a…special case. It was designed to have multiple redundancies and legislation regarding psionics was in place before the first Priest was deployed. Those with power have a healthy respect for this power, and understand the implications of it. I am not certain you do though.”
He nodded towards Kong. “You may, ironically, bring about your own downfall. While you give the illusion of unity to the world, you are aware of the factions and power plays in China. Perhaps some even in this room now. Have you considered what would happen if one or more people hostile to the government acquired psionic powers? How many of your soldiers are truly loyal, or just putting up a facade so they aren’t punished?"

Qin furrowed his brow. “We would, of course, take precautions, much like you have, I presume. This power would obviously be shared carefully.”

“With respect, I am skeptical,” Elizabeth interjected. “You may be able to keep it out of the hands of civilians, or even soldiers. But I am…acutely aware of the fact that not everyone in your government is on the same side. Including a not-insignificant portion who supports ADVENT integration.”

Han smiled. “Your agents serve you well, spymaster. But you are not the only one who can disseminate misinformation.”

Elizabeth maintained her own smile. “Certainly not, but my point is that psionics is a time bomb for you. You are not united as we are, and you know too little to implement appropriate precautions.”

Saudia nodded. “This is ultimately not up for discussion now. There are certain pieces of equipment and bodies that we cannot afford to let fall into foreign hands. This is, as we have explained, for your sake as much as ours, as we cannot afford additional threats. Simply put, we do not have enough of a strong relationship to trust you with such a power. If my some miracle, psionics didn’t cause an implosion of your government, you would now be an issue for us.”

“And if we had a stronger relationship?” Xuan asked slowly.

“Then all I can promise is that we would perhaps consider a limited program, overseen by us, of course,” Saudia answered slowly. “But we are not there yet, and will not be for a long while.”

“Still, in doing this now, you are effectively ensuring that China will forever be behind you if we do not follow your demands,” General Kong said, some anger in his voice. “That is not acceptable.”

“Then join ADVENT,” the Commander interjected. “Because that is the only way you will have what you wish.”

“The Commander is correct,” Saudia nodded. “I will be perfectly honest with you: China, or any foreign power, will not, nor ever, reach a point where they directly threaten us. I fully plan on uniting this world under ADVENT, Mr. President, preferably diplomatically, but that is not my only option. Those who resist will, as a result, eventually find themselves falling behind. We are willing to ally with other nations, but we are under no obligation to assist your own efforts. In the end, ADVENT is the only voice of Humanity that matters, and that cannot compromised.”

There was some silence at that. “While harsh, Chancellor, you are at least honest on where you stand,” Qin said with some dark amusement. “And lesser materials is better than none at all. But we will not be bullied into joining ADVENT, even if that means we are hindered at every turn.”

“That is acceptable,” Saudia nodded. “In which case, if you are still willing, we should discuss the finer details of the liberation of Japan.”

“Indeed,” Qin laced his fingers together. “Let us begin.”
She’d apparently traded one battle for another.

As far as Abby had been aware, South Korea hadn’t been under attack before Australia, but considering the current status of the war in North America, this had likely been in retaliation for such an attack. Made sense, and by all accounts ADVENT had been holding pretty well, disregarding the taunting alien sniper.

The question now was how the hell she was going to explain what had happened to her without ADVENT getting suspicious. It was unlikely, but she didn’t especially think ADVENT should be aware of what happened quite yet. This was something for the Commander to deal with. Which meant no transferring the video on the flash drive Quisilia had given her.

She’d checked it out on her own to make sure it was real, and surprisingly enough, it seemed to be. Had she not been there, and thus, couldn’t exactly be amused by what happened, the HD footage of Quisilia getting blown into a wall would have made her smile.

Still, even with psionics existing, some things were unbelievable.

Yes, see the person I was working with is apparently working with some entity that can blow Ethereals around like pinballs and has blue psionics. He also apparently wants to control our species as well. So when he was distracted by a nuclear explosion overhead, an Ethereal memelord pushed him into a portal which opens up somewhere in space, gives me this video, and teleports me here.

What? No I’m not crazy!

Abby shook her head. Aegis would probably know more about this than her, or at minimum at least the Commander would be able to make sense of it. She was in the base communications room, which while somewhat basic, was more than sufficient for her, and she could easily connect to the Praesidium from here.

It took a few minutes, but it was beginning to connect. She supposed the battle might have some effect on signal speed. She was in her armor still, minus the helmet. For one, it was comfortable enough that she didn’t feel the need to really take it off, and two, she was in a warzone and didn’t want to die here of all places.

“This is Central Officer Jackson,” a voice greeted. “Agent Gertrude, glad to hear from you. Though…I thought you were in Australia? What is the status there?”

Abby sighed. “Complicated. I need to speak to Zhang immediately. Be sure this is encrypted. Even then I really need to give this report in person.”

“Copy, where are you now?”

“Busan, South Korea.”

A pause on the other end. “Alright, transferring you now. This sounds like a story.”

“I’ll tell you later if you really want it,” Abby smiled grimly. “Although it isn’t a very happy one.”
There was a click, and Zhang’s gruff voice answered. “Agent Gertrude. Report. There have been… many developments. Was the Australian operation successful?”

Oh, boy. “Not…exactly. Sydney sustained heavy damage, but the Chronicler, and most of his army, are gone. Quisilia was there and was the one who survived his attack and prevented the city from being destroyed.”

“I see,” Zhang sounded suspicious. “How did you escape?”

Abby winced. “The short version is that our mutual Twitter memelord teleported me out.”

The silence was either in disbelief or Zhang was just stunned. “While I am glad you are alive… please explain why Quisilia would do that?”

“He said he had more to gain from me being alive than killing me,” Abby explained. “And the Chronicler was not who he appeared to be. He was apparently acting as an avatar of sorts for some kind of entity. Quisilia seemed to know what it was. Do you know what a Sovereign One is? You might want to ask Aegis.”

“A Sovereign One?” Zhang’s voice became more intense. “Are you certain those were the words?”

“Certain,” Abby nodded. “Quisilia was also kind enough to give me a recording of the entire fight. I’ve verified that it’s legitimate. I don’t know what he wants, but I need to get this back.”

“And this Sovereign One, it was against Quisilia?” Zhang demanded.

“Yes,” Abby said. “I wouldn’t get too excited though. It doesn’t seem exactly…benevolent to our own species. It warned the Ethereals away specifically because it wants us…well, I have the recording.”

“Strange.” Zhang said after a few moments. “You need to return to the Praesidium as soon as possible.”

“I will,” Abby nodded. “However, ADVENT is having an issue with an enemy sniper here. I’ve agreed to assist them. Once that is taken care of, I’ll return.”

“You cannot afford to die now,” Zhang stated. “What you know raises serious questions. No matter what, that cannot be risked.”

“I’ll make arrangements to have the drive transferred to XCOM should I die,” Abby said. “But I’m not leaving until this is done. I already said I would help, and that’s what I will do. If Quisilia wanted me to escape, I’m not going to squander that. Taking out a few elite Collective snipers would be sufficient repayment.” She looked down at her armor. “And the armor and weapon I have from the Chronicler are…well beyond what even XCOM has. I think I’m fairly safe.”

“Fine,” Zhang said with clear annoyance. “There is too much happening to debate this with you. I will be sending a skyranger to extract you and when it arrives, you are ordered to board it, whether you’ve done your part or not. Is that understood?”

“How much time is that?”

“Six hours, minimum.”

“It’ll have to be,” Abby nodded to herself. “I’ll speak to you soon then.”
“Good luck agent,” he said. “And do your best to stay alive.”

*Mars Observation Station, Communications Center – Mars Orbit*

11/24/2016 – 10:16 A.M.

The Battlemaster was not wearing his full battle suit, but his original one that he would use until Fectorian finished repairing the new suit. Visually they looked so similar he doubted most beings would notice one way or another. But now it was time to make the Creator reign in her pet, since he’d been unable to actually contact the Hunter despite sending multiple calls.

It was highly likely that the Hunter had destroyed it, since it didn’t even allow an opportunity to leave a message. If he thought that would be enough plausible deniability to save him, he was sorely mistaken.

So the Creator would have to deal with him for now, although he certainly intended to punish the Hunter afterwards. Though to what extent he still hadn’t decided. That largely depended on what the Creator did. She would likely not be pleased with his antics, and he might consider that punishment enough.

The hologram before him materialized into a shape he didn’t expect. Instead of the Creator, there was instead a figure cloaked in an open black robe, hood down, with black light garments underneath. Strapped to the waist of this being was a dagger of some kind, but aside from that there were no other weapons.

The figure itself was otherwise what most would consider disturbing. It was a Vitakarian…or so the Battlemaster assumed, even as it looked very irregular to standard ones. The flesh, instead of being a shade of grey, had deteriorated to a chalky white. The body itself looked somewhat shriveled and gaunt, and yet the eyes seemed to glow a brighter blue than normal.

There were odd markings on the skin too; brands of some kind it looked like. The Battlemaster could clearly see them, especially the prominent ones on the forehead and cheeks, but he couldn’t even begin to figure out where they were from, which was…odd. While he was no linguist, he could usually identify from what species such runes, languages, or markings were from.

But he had never seen anything like this. More oddly, all the markings were interconnected and when he looked, seemed to form some kind of outline on the face of the Vitakarian. He didn’t even now if they were words or symbols. He had not expected the Creator to be branding her subjects of all things, or resort to such gibberish, for that had to have been what this was.

The figure just stared at him. He supposed it awaited a response. “I need to speak to the Creator,” he stated. “Inform her I am waiting.”

“*The Creator is busy,*” the figure responded in a raspy voice that somehow had undercurrents of authority underneath it. “*You may leave your request with me.*”

The Battlemaster was somewhat surprised. It was rare that any alien outright refused him, let alone one that looked half-dead. “This is a time-sensitive matter. I will speak to the Creator *now.*”

“You will speak to her when she is available,” the being repeated flatly. “*No sooner. No later.*”

The Battlemaster paused. “Are you aware who I am?”
The Vitakarian cocked his head, appraising him with blazing eyes. “You are the Battlemaster of the Ethereal Collective. This is known to us.”

“Then consider this an order,” he repeated. “I will speak to her now.”

“She cannot be disturbed,” the Vitakarian repeated. “It is imperative she maintain her full.”

“Let me be clear,” the Battlemaster interrupted, lowering his voice and speaking very slowly. It appeared the difficulty the Hunter was posing was not a fluke. What was the Creator doing that she thought ordering her thralls to refuse an Ethereal was a good idea? “I do not have time to debate with you. I will speak to the Creator, or I will arrive at the Blacksite itself and kill everyone inside and destroy whatever project your Creator is working on. You have thirty seconds to comply, and I will not ask again.”

He was almost hoping the creature would continue to be stubborn. It would allow him some opportunity to relax and he had wanted to stamp the Creator down for some time now. This was simply more evidence of her delusions, and the Imperator had given her entirely too much freedom and not enough oversight.

The Vitakarian was silent for a few moments, head cocked at the same angle, as if listening to something only he could hear. Then he suddenly straightened. “Please wait, Battlemaster, I will return shortly.”

How nice that the decaying Vitakarian was cooperating now. This was not what he needed to deal with; not when there was still an entire military operation to sort out. The good news was that the Creator knew he didn’t make idle threats, and thus he was expecting her to arrive relatively soon, regardless of how ‘important’ her project was or not.

Sure enough, several short minutes later the Creator appeared before him. Upon seeing her, he realized that it had been an extremely long time since he’d actually bothered communicating beyond reading reports. She looked very different, and it wasn’t surprising since it had been years even seeing each other in person. It wasn’t atypical for her, as she had become more and more isolated as of late.

Doing what, he could only guess at. But if even some of the rumors of her Blacksite were true, it was nearly as sickening as the crimes of Isomnum’s past. Yet the Imperator had decreed she be allowed to work in peace, and he had decided to respect that. But now, he was quite sure that might have been a mistake.

The Creator was clad in grey underclothing similar to that worn by Macula, and in fact had the pockets and linings filled with various vials, cutting utensils, and other micro-tools for precise genetic sculpting. Over that, however, she wore an open variant of an Overmind’s robe, one which was pure white. More curiously, the Battlemaster also saw the strange markings all over her robe and clothing. Not on the skin though, which he was halfway surprised at.

Yet it did raise questions. Just from that, he knew that something had been going on for some time and that he didn’t have the faintest idea of what it could be was a bad sign. Another problem of the Collective to solve later, all he needed now was for her to assist him. The Creator jabbed one of her gloved fingers at him. “I do not expect you to understand what you interrupted, Battlemaster, but I will not tolerate it-“

“Enough,” he growled, raising a fist. “Your projects and opinions do not come before the needs to the Collective. I. Do. Not. Care. You would also do well to instruct your assistants to be more respectful-“
“They did exactly as I ordered!” She retaliated angrily. “I do not appreciate threats, Battlemaster, no more than you appreciate them to your underlings. I will be speaking to the Imperator about your gross misuse of your-“

“Your test subjects are in no way comparable,” the Battlemaster stated flatly. “And you are less important to this Collective than I am, and as of right now, one of your pets is disrupting a major military operation. Your Hunter. Recall him immediately and deal with him as you see fit. Once you finish, send him to me.”

The Creator stared at him for a few moments. “Is that it? Did you dare interrupt me and threaten my work for that!?”

“Yes.” The Battlemaster did not like her genuinely infuriated tone. She had truly become more unstable. “Recall him now. This is not a request.”

“And what is he doing?” She demanded. “Is he simply not being a good little soldier?”

“He is disobeying orders and firing on Collective soldiers,” the Battlemaster said. “If you really wish for details, I will inform you later. But this must be done now.”

She chuckled. “In that case, I am afraid I cannot help you. I could, of course, send my own to extract him, but I do not see the need. Certainly not for a few unenlightened aliens. If he wishes to return, it will be of his own prerogative or if the Humans…” she paused. “Or the Collective, stop him.”

The Battlemaster didn’t believe that. “You would never set something like him loose without a means of restraining him.”

“And if I did, I would certainly not use it to satisfy you,” she growled. “You have wasted my time, Battlemaster. Do not presume to trouble me again or there will be consequences.”

She disconnected.

He was, quite legitimately, shocked at the sheer disrespect and arrogance she had displayed. Not even Isomnum was so dismissive or unhelpful. There had been a major mistake in letting her work unchecked and now she believed she was untouchable. That she was above the concerns of the Collective.

In which case, there was only one thing he could really do. He opened a channel to the Zar’Chon. “Yes, Battlemaster?”

“Recall the Assassin to the Observation Station and give her a new target,” the Battlemaster commanded, looking onto the projections of space where Earth was still spinning. “She is to kill or capture the Hunter. Give her whatever support she needs.”

“It will be done,” the Zar’Chon assured him. “In the event that she captures him, what should be done?”

“Bring him to me, if I am here. Imprison him if I am not,” the Battlemaster ordered. “If he speaks too much, cut out his tongue and repeat that as many times as necessary.”

“Understood, Battlemaster.”

***
Busan – South Korea

11/23/2016 – 6:32 A.M.

There was good and bad news that Duri could visibly observe as the battle kept going forward. The good was that, aside from the persistent and taunting Hunter, the aliens had largely been unable to actually do anything to them. Every minor advance they made was pushed back my storms of gauss slugs and artillery, and snipers were continuing to decimate their back ranks and more delicate equipment.

As a result, it was almost inevitable that it would lead into the bad news, which was that the aliens were retreating to a point outside effective fighting range. Even Beatriz was saying it was difficult to get a solid target, although the retreating aliens did have to expose themselves as they retreated, giving ADVENT some briefly vulnerable targets.

“Question,” Cara said after she fired another burst from her M2. “If they get out of our artillery range, can’t we just bomb them?”

“Probably,” Duri answered, dusting off his rifle. “Although they probably would get shot down. I don’t think we know if they have AA defenses up.”

Beatriz snorted. “Do they look like they have any?”

Duri gave a wan smile under his helmet. “Good point.”

“That’s a good suggestion,” the Hunter suddenly interjected. “ADVENT, please send bombers out there to blow these disappointing aliens away. I’ll be sure to leave a few to do the job.”

He could hear the scowl in Aleksandra’s voice. “Found alien air defense.”

Duri almost rolled his eyes. The Hunter, for whatever reason, had apparently liked to listen in on his squad, as well as rotating through other squads. He wasn’t exactly flattered by the attention, since he suspected the Hunter was going to end this by killing one of them.

“Aww, I’ve never been called that before,” the Hunter gave a raspy chuckle. “I like you. You’ll live today.”

“Go fuck you, чуждый отброс.”

All that was returned was an ugly chuckle. Duri didn’t have a good feeling about what would come next. “Aleksandra-“

She suddenly lurched forward, dropping her rifle as her left hand seemed to burst into fragments of bone and bloody chunks. The normally stoic Russian screamed in agony and slumped to the wall, clutching the bleeding stump of her hand. “Nobuatsu!” Duri shouted to the medic as he and Beatriz immediately rushed to help her.

Duri lowered her to the ground while Beatriz helped remove her helmet as she was breathing heavily, all the color having drained from her already pale face. “Cheeky Human,” the Hunter chuckled. “Just because I find you amusing doesn’t mean I can’t make you hurt a little. Be a little more careful or next time, I might take off something a bit more vital.”

“This’ll only take a moment,” Nobuatsu told Aleksandra as he began spraying the stump with a medkit. “We’re getting something to carry you out of this.”
“He’s behind our line!” Beatriz snarled in revelation. “That’s how he’s able to shoot us!”

“At least for now,” Cara interjected. “We should probably let someone know about that.”

More ADVENT medics arrived, along with another soldier that didn’t seem to be wearing anything standard-issue. It looked more stone-like than what Duri had seen before. Either a new kind of unit, or maybe…XCOM? He didn’t know right now. “Not needed,” Aleksandra managed, standing up with Duri’s help, as she saw the stretcher. “I walk.”

Nobuatsu seemed to take a few moments to see if it was worth the trouble to argue it, then shrugged and motioned for the medics to follow them. “Fine, but if you collapse, you’re getting on there whether you like it or not.” He put a supportive hand on her shoulder and they quickly walked off to the better medical facilities behind the front lines.

“Take off your helmet,” the figure wearing the strange armor ordered, a woman it turned out. “He’s listening on the channels.”

Duri nodded silently and complied, and the woman did the same thing. She looked fairly young, short blonde hair, and attractive Caucasian features. American or European, clearly. However, her eyes were the hardened ones of a veteran, looks he’d only seen on the ones of his superiors or people who’d experienced tragic events. It looked wrong on someone so young.

“Who are you?” He asked.

“Abigail Gertrude,” she answered. “XCOM Intelligence.”

He raised an eyebrow. What exactly was XCOM Intelligence doing here, and as far as he could tell, she wasn’t especially blending in. And why would XCOM send an intelligence agent to a warzone? That wasn’t their forte, if he remembered right. Still, any XCOM soldiers were better than none. “How can I help?”

“I just need some information,” she nodded to the now-bloodstained area which Aleksandra had occupied. “I’m working with some ADVENT personnel to remove this Hunter. The shot came from behind, correct?”

“It appears so,” Duri nodded. “Her hand was below the firing slit,” he motioned to the stained alloy trench defenses. “The only way he could hit that is from behind, or to the side. Of the two, one seems much more likely.”

Her lips moved to a humorless smile. “Excellent. Thank you, Officer. Should all go well, you won’t have to worry about him for much longer.”

Duri gave a single nod. “I hope so. Make it painful.”

Some amusement sparked in her eyes. “If I can, it won’t be an easy death.”

She put her helmet back on, and marched away. Duri turned back to the largely quiet battlefield that was interspersed with staccato gauss bursts. The Hunter had gone silent, and hopefully he was moving back to the alien line where he belonged. However, he doubted that he was going to go down so easily.

If there was one thing he’d proven, it was that he was brazen enough to believe he could shoot behind enemy lines without consequences.

Duri hoped that XCOM agent would prove him very, very wrong.
The final offensive on Hawaii had finally begun. The aliens, at least from what Sierra had seemed to observe, were pretty much running scared when they realized just how much ADVENT was committing to this attack. The aliens were seemingly retreating and only leaving a skeleton army to put up a token defense for the more valuable units to retreat.

Didn’t stop her from killing every single one she’d seen.

However, it did look like they were going to make Honolulu one which forced a concentrated effort from ADVENT. On one of the carriers, with Ted and Anna behind her, Sierra observed the final obstacle standing in their way of reclaiming Hawaii: The Honolulu fortress.

Not only were their AA defenses installed into the various buildings, and a short alloy wall with the remaining Mutons, interspersed with some new kind of augmented Mutons, which from experience, Sierra could say were much more difficult to kill than standard ones. There were also Cyberdisks floating and already firing at them, as well as Sectopods on the streets.

“Bad news,” Ted said. “There is at least one Gatekeeper there. Even I can sense it.”

“Well, Sierra suspected that those numbers would going to be culled after the first volley from the warships. Carmelita, and most of the ADVENT forces were holding back until the initial barrage was over, and now that ADVENT had air superiority, when the artillery hit, there wasn’t going to be anything to stop them from having air support.

“And here it comes,” Anna said gleefully as the weapons of the ships turned to the city. They fired with thunderclaps and bangs; dozens of ships firing in unison at the alien fortress, without fear of collateral damage or missing. The effect was immediate, and Sierra saw buildings begin crumbling, aliens dying, and explosions in the city itself.

This continued for some time, and the aliens seemed helpless to stop the barrage, and ADVENT seemed content to keep firing until the front line of alien defenses was nothing but scrap metal and rubble. “Gatekeeper is still there,” Ted updated, stepping forward. “Probably hiding if it’s smart.”

“With great pleasure,” Anna said, raising her rifle. “Seraph?”

“With great pleasure,” Anna said, raising her rifle. “Seraph?”

“With great pleasure,” Anna said, raising her rifle. “Seraph?”

“With great pleasure,” Anna said, raising her rifle. “Seraph?”

She activated her jets, angled herself towards the island, and blasted forward. On the way she did one final check that everything was working. Probably not needed, but she had nothing else to really focus on as the majority of initial defenses had been destroyed by the barrage. “Cyberdisks on approach,” Anna said, as Sierra saw the flying disks in the distance. They almost seemed
confused, not sure where to target first as the list of targets approaching was overwhelming. “I want to try something.”

“Off you go,” Sierra acknowledged as Anna boosted forward towards one of the Cyberdisks, while she readied her flamethrower for the other ones. Ted’s arms glowed with purple energy as he also prepared to fight whatever was left. Anna pulled a turn that the Cyberdisk couldn’t follow and was close enough to grab one of the barrels of the machine.

She thrust upward and tossed a grenade into its innards, then boosted off. It exploded in a ball of white and orange, while Sierra unleashed her flamethrower on the other floating Cyberdisks. It was somewhat ironic that something so simple as fire was the largest weakness of this armored enemy. The aliens would have to fireproof these if they ever wanted to fight an Archangel in the future, and live.

Ted was continuing his own barrage of psionic energy against the Cyberdisks, and as it turned out, psionics had a similar effect to fire in that it destroyed all the vital components that were foolishly exposed when the Cyberdisk was open. Sierra didn’t know how long it took, as they literally flew circles around the Cyberdisks, and the alien forces on the ground were already occupied with the invading ADVENT and XCOM forces.

As the last Cyberdisk fell, Sierra quickly looked down at the city to see ADVENT forces swarming over it like a black horde, and near Pearl Harbor was Carmelita and her squad. Fitting that the stronghold of the aliens was destroyed by XCOM. But her job was only to assist where needed, and now they had free reign to attack wherever they wanted.

“Pick your targets,” she ordered as they swooped down closer to the battlefield itself. “Save important resources for high-priority objectives.”

“Copy that,” Anna confirmed, right before she briefly landed in front of a trio of Mutons, executed them with her autorifle before they were aware she was there, then blasted back up into the sky. Ted disintegrated another team of Mutons, the psionic energy eating into the aliens until there was nothing left but scraps of flesh and armor.

Sierra preferred taking a more direct hand in helping, by flying towards ADVENT positions and then landing behind the alien lines before either shooting them in the back or roasting them with a flamethrower burst. It made her smile to hear the cheers and whoops when she showed up, because they knew that the aliens facing them were dead.

And she made absolutely certain of that.

How long they fought like this, she didn’t particularly know. A couple hours most likely, and with their kill counts reaching levels she had never really thought she would attain. That was, of course, before she had an armored suit that could fly. And a few partners to help her out. “Archangels,” Carmelita suddenly interjected. “We could use your assistance now. We’ve found the Gatekeepers.”

Plural. That was not good. “We’re on our way,” Sierra confirmed, redirecting towards where Carmelita was. “Anna! Ted! Behind me!”

Her two Archangels quickly formed up behind her, and a few minutes later they were over where the battle against the Gatekeepers was taking place. The two hybrids of flesh and armor were supported by some of the augmented Mutons, and luckily the Gatekeepers were in their shells, and content to fire their yellow lasers.
The XCOM soldiers were backed up by several dozen ADVENT soldiers and Priests, and the combined fire seemed to be keeping the Gatekeepers from getting closer. The XCOM psions were continuing to use their abilities as much as they could, but as Ted could attest to, the closer a psion was to a Gatekeeper, the more difficult it was to concentrate enough to use them.

Carmelita was firing her alloy cannon behind cover, although she seemed to be looking for an excuse to charge forward, but was held back by the danger that the Gatekeepers posed. However, the Archangels did not need to have that problem. But first the Mutons had to be dealt with.

Anna pulled out several Thermite Grenades and tossed them towards the augmented Mutons, while Sierra and Ted continued firing at them from above. The Mutons didn’t make any noise or signal pain as the thermite ate into them, but it was enough for the combined firepower of the two of them to take several more down.

“We’ve got Purifiers coming up,” Carmelita updated. “Keep them distracted a little longer!”

More ADVENT soldiers died to another beam from the Gatekeepers, and one of the white spheres decided to charge forward, only to be stopped by one of the telekine Templars, Pall, if Sierra remembered correctly. All of them focused their firepower on the Gatekeeper, and when Pall was finally unable to maintain the hold, it retreated; smoking, dented, and blackened from the firepower of the Humans.

Sierra winced as one of the plasma shots from the Mutons clipped her shoulder, but it was only a scratch, and she could withstand several more shots there. “Here they are,” Ted motioned to the four Purifiers who were walking up, orange fire within their weapons almost begging to be released. The aliens seemed to realize they were dead the moment the Purifiers raised their weapons.

They attempted to fall back, but it was futile.

Within moments the entire airfield area the aliens had occupied was engulfed in the fiery embrace of Chlorine-Triflouride. The Mutons fell to the ground, the metal that was apparently keeping them together melting and fusing to the ground. Although maybe it was simpler than that, as their flesh melted off them as well.

The Gatekeepers emanated some kind of scream that even Sierra could hear, before they exploded from the fire that seeped through the cracks of their segmented covering. Although it was more accurate to say that one exploded, and one just fell to the ground, shell mostly intact as it leaked grey fluid.

The Purifiers swept their flamethrowers over the area a couple times, before ceasing the torrent and stepping back. All of ADVENT seemed to stand and watch the flames crackle and spread, further consuming the alien body parts that remained. “I wish I had a camera now,” Anna said wistfully beside her. “These kind of memories are worth preserving.”

“Take some stills from our armor cams,” Ted suggested. “I think we have a few days worth of usable material here.”

Anna chuckled. “All we need to do now is start our own XCOM card line.”

Sierra only smiled at their banter. And with that, it seemed, the final obstacle was destroyed. Hawaii would soon belong back to ADVENT. And she was going to be there when they raised the flag once more.
"He’s on this side somewhere," Abby told the leader of their small strike team. Kwok Yeong-Gi had two other Lancers accompanying him, Tae-Hyun and Eun-Won, as well as two Winged Hussars from North Korea, Hin-Sang and Soo-Hyun. However, his main weapons were the Priest trio, all of whom were fairly powerful, and now that they knew the general area the Hunter was operating out of, they could likely begin working.

“I will need protection,” Myo Young-Ja, the Magus Protopriest Telepath ordered. “Once I touch his mind…he might realize we are coming after him. He will likely try to stop us.”

“Then begin,” Na Yong-Chol nodded, raising a hand and all of them were suddenly under a psionic dome. The telepath extended one hand forward, his eyes likely closed under his helmet as a slight distortion surrounded his figure. The Winged Hussars had also fallen to one knee, looking through their scopes for any sign of the alien.

“I’ve never seen anything like that,” Min Eun, the final Priest in the triumvirate noted, nodding to her particle weapon. “It doesn’t even look XCOM.”

Abby looked down at the grey stone-like weapon. “It technically isn’t. Let’s say that this is…very experimental.”

Min tapped her own chest. “What’s the figure supposed to be? I can’t really make it out?”

Abby knew she was talking about the strange symbol on her armor, which she’d also noted on all of the Chronicler’s soldiers as well. She hadn’t figured it out either, and she was debating it being a hieroglyphic of some kind, or a depiction of some kind of creature. “It’s alien,” she finally said. “We’re…not completely sure what it means yet.”

“Ah.”

“So once we locate him, what do we do?” Tae asked Yeong. “If he detects Myo, I doubt he’s going to stay in one place.”

“Unlikely,” Yeong agreed slowly, pressing a button on his wrist. “However, I have three artillery teams standing by once we have his location. He doesn’t need to stay long. Just enough for us to level the building he’s residing in.”

“And what if it’s a hospital or destroying it hurts us?” Eun questioned.

“Then we do this the hard way,” Yeong said. “Snipers don’t do well under pressure. Whoever he is, I doubt he can withstand a telepath for long.” He motioned behind him. “And we have two more to keep him under control.”

“Capture or kill?”

“Capture if we can, kill if it’s not possible.”

“Copy.”

They waited for a few minutes. “I have located the mind,” the layered voice of Myo stated.
“Subtler than I was expecting. He is definitely a psion, and I have avoided direct contact.”

Yeong nodded. “Can you break through? And how powerful is he?”

“I can likely occupy him,” Myo answered. “He does not appear to be powerful. I cannot determine his species, but it is not an Ethereal or Sectoid.”

“Wait…” Abby furrowed her eyebrows. “It’s a psion…but supposedly not from an actual psionic species? It isn’t a Human, you’re sure?”

“Positive,” Myo assured her, hand lowering to his side. “And yes, he is definitely not a Sectoid or Ethereal.”

“This is probably one of those isolated psionic aliens,” Abby said. “You’ve seen or heard of the Warlock, right? That isn’t the only one. I’ve fought another one in Australia, an assassin of some kind with similar abilities.” She looked towards the buildings. “This sounds like another one. We can’t underestimate it. These things seem to be impossible to kill.”

“Then this will be the first,” Yeong stated, giving her an approving nod. “I appreciate the information. Myo, where is he?”

The telepath pointed towards a rather nondescript building some ways behind the ADVENT line, a small five-storied building that didn’t seem to be containing anything useful. “I don’t see anything,” Soo-Hyun said, looking through her scope.

“He probably has cloaking, and I doubt he’s on the roof,” Abby guessed. “But that doesn’t look important.”

“No, I don’t believe it is,” Yeong said, turning to Myo as he was tapping on his wristpad. “Myo, lock down his mind on my command. Keep him in place until the artillery hits.”

“I’m ready when you are,” he nodded, nearly imperceptible barriers surrounding him once more.

Yeong simply nodded, and after a few tense minutes, he finally turned to the telepath.

“Do it now.”

The moment he spoke that, missiles streaked towards the building and it lit up in a series of spectacular explosions. The ground rumbled as the building collapsed and rubble fell to the ground. “Move forward!” Yeong ordered, and the soldiers began dashing towards the collapsed building. Myo stayed in place, still presumably assaulitng the Hunter.

“He’s stronger than I assumed,” Myo grunted. “But it seems all he knows is defense. I can’t get much from him, but he’s still alive and he can’t move far.”

The rest of the ADVENT forces had cleared out as they approached the dusty rubble, the streets clear of any distractions of equipment, as ADVENT had made sure to have as swift of access as possible throughout the city. Abby saw something on the roof of a nearby building, almost seeming to mirror their motions. She glanced up and her blood froze.

The figure vanished into thin air and then reappeared on the ground, a short distance in front of them. “Look out!” Abby warned, raising her weapon as all of them skidded to a stop. “It’s another one of them!”

The Assassin suddenly looked in their direction, almost as if she hadn’t seen them there until now. Her blade was suddenly in the hand of the lithe figure, and raised in a mock approximation of what
Abby had seen the Battlemaster perform before combat. The Assassin wore the same armor as before, and appeared to be none the worse for wear despite her encounter with the Chronicler.

“You are here to kill my brother, yes?” the Assassin rasped.

Yeong stepped forward cautiously. “We are. And you as well if you threaten us.”

A low rumble emanated from the Assassin. “You would die. The XCOM soldier can attest to this. I was not expecting her here…and not wearing that.”

“The feeling is mutual,” Abby said, also stepping forward, weapon pointed at her. “What are you doing here, Assassin?”

“The same thing as you, I presume,” she answered, not wavering in her stance. “The Battlemaster is displeased with the idiotic actions of my brother, and I am to return him to the Collective.”

“We’d prefer to kill him,” Yeong suggested. “I don’t suppose treason is punishable by death?”

“You cannot kill him anymore than me,” the Assassin stated flatly. “My mission is not you. You can either help me here, and I leave, or you fight me and I kill all of you before completing my mission.”

“How can we trust you?” Tae demanded.

She was suddenly blasted back, and Abby saw a good chunk of her head simply…gone, presumably from a headshot. Their weapons turned towards the source of the gunshot, and they saw their first glimpse of the Hunter.

The figure was of similar size to the Assassin, although not quite as thin. The grey armor he wore was also similar, some kind of alloy plating over another alloy underweave. The symbol present on the Assassin’s chest was also engraved on his own. Unlike the Assassin though, a hood covered his head, and underneath it was a mask that was designed in such a way as to almost be smiling. The eye slits were lit with a bright blue underneath, but the helmet didn’t seem to be that heavy.

In his hands was the largest sniper rifle Abby had ever seen, which looked like it could easily be her height. At his side were strapped several pistols and a blade of some kind. He stood over the rubble of the building, but it didn’t look like he’d been particularly hurt by the artillery.

“My dear sister, consorting with Humans,” the Hunter tsked, chuckling as he appeared to reload his rifle. A psionic shield suddenly appeared in front of them once it turned their way. “And yet I’m the bad guy.” Another chuckle. “I’ve wanted to do that for a long time.”

The Hussars locked their own rifles on him, although the psionic barrier made it impossible to fire them yet. “So, Humans, you really think that you can actually fight me? Your telepath is annoying, but he’s…let us say he doesn’t know who he’s fighting. My mind is my own, and it will not be violated by a mere Human. Find me if you can.”

The Hunter suddenly vanished from sight. “Myo, where is he?” Yeong ordered, even as the psionic barriers stayed in place. “Forget breaking in, we just need to know where he is.”

“Just as well,” Myo answered. “I can’t break in. He shouldn’t be this strong. Give me a moment.”

A growl caught their attention, and the Assassin stood back up, a chunk of her helmet missing. “Traitorous sibling,” she spat. “You will pay dearly for your insolence, brother.”
“How the fuck…” Yong-Chol said quietly.

“Like I said,” Abby sighed. “They seem impossible to kill.”

The Assassin suddenly teleported a few feet over just as another shot hit the ground she’d been standing. “Stay down, sister!” The Hunter demanded, as he materialized on the third story of a nearby building. “I don’t like being interrupted.”

She blinked from their sight, and materialized in front of the Hunter and swung her blade towards him. He jumped back with surprisingly nimbleness and fired two rounds point-blank into her armor, one shattering the armor and the second going straight through her. “Fire!” Abby yelled to them. “Shoot him now!”

Abby fired her particle rifle and the Hunter slid to the side as the blue beam hit where he’d been. Shots from the Hussars did manage to hit him, and he stumbled back, just as the Assassin materialized behind him. Almost as if he predicted the move, he slammed the butt of his rifle behind him, knocking her off-balance before dropping the rifle and pulling out one of his pistols and firing several shots behind him without looking.

With his other hand he reached for his other pistol and fired down at them. “Ah!” Jin-Sang fell backward, blood seeping from shots from his throat. Abby didn’t know how he could pull off such a shot with a pistol, but he had done it easily, and was returning to the wounded Assassin who was struggling to recover.

He scooped his rifle up again, just as Min yelled and yanked backwards, and the Hunter went flying out towards them. A shout of anger reached her ears, and the Hunter somehow then used that momentum to control his fall and the moment he landed, he fired at Min and her head exploded into shards of armor and flesh.

“Do you really think I’ve never fought a psion before?” He chuckled in malevolent glee, reloading his weapon even as the rest of the soldiers fired. He leapt to the right and Abby saw that she needed to do something, so she did the last thing he would expect – she charged.

That got the Hunter’s attention, and he pulled out one of his pistols while holding his rifle by the barrel. She kept firing her own particle rifle, and when it hit, it easily tore through the armor and he negated that by continuing to move and fire at her. But unlike the other soldiers, her armor stood strong against the projectiles of the Hunter.

She felt the impacts, they made her stumble and came close to knocking the wind out of her several times, especially those to her head and chest, but she was still standing and closing in on the alien. “The fuck is this?” He demanded, as much in admiration as frustration. “Now that just isn’t fair.”

The Assassin materialized beside him and sliced down, and the Hunter, assuming she was aiming for a vital organ, moved back but she had anticipated that, and instead she sliced off his right arm. The limb holding the sniper rifle flopped to the ground, and the Hunter snarled in pain and fury. “Cheap shot, bitch.”

The Hunter suddenly tossed something towards the Assassin which she swung to deflect, but instead it exploded into a swarm of nanites that began coating her. “Tell the Battlemaster to come himself if he’s really displeased,” the Hunter snarled, punching more holes into his estranged sibling. “You’re clever, sister, but you’re no Battlemaster.” He sneered as the alien screamed as the nanites kept eating into her. “I’m guessing since you’re here your little mission to Mexico didn’t go as planned. You’re just another one of the bitch’s unthinking tools.”
A direct shot to his head sent him stumbling back, and Abby followed up with firing her particle rifle at it. She missed, but the slug from the Winged Hussar had apparently penetrated the helmet, and directly into the eye of the Hunter. “Gah!” He scowled, aiming his pistol at them. “Good shot! Serves me right for monologuing. But like my lovely sister…I can’t die.” Abby could easily imagine the smirk under his mask. “Sorry to disappoint. But I’ve put up with your distractions long enough.”

He began firing at the soldiers, but was blocked by a psionic barrier. “Cheaters,” he condemned lightly. “Not to worry,” he turned to Abby. “You’re an interesting one. I think bringing you back with me might make the Battlemaster a little less angry.”

“I don’t think so—“ Abby began, before the Hunter lowered his pistol and shot her leg, and this time she felt the projectile tear through her skin. She collapsed to the ground, pain shooting from her kneecap.

“ Took me a few shots,” the Hunter said, slowly walking up to her. “But there isn’t an armor I can’t pierce. Everything has gaps, even yours. So don’t put up a fight, and I won’t blow out your other kneecap.” He holstered his pistol, and reached down with his only arm to reach for her particle rifle. “And this—“

Abby gave a weak smile as the wires interjected themselves into him the moment he picked it up. The Chronicler had warned that no one but her could use it, though he hadn’t specified why. But that became readily apparent as the weapon exploded in his hand, blowing him back into the street, his entire arm and part of his side simply gone.

The Hunter groaned, and struggled to get up, though that wasn’t easy with no arms. And now another figure stumbled toward him. The Assassin had recovered, even if the nanites had reduced her armor to scraps and exposed her facial features as those resembling something oddly like an Andromedon.

“You will wish that this is the worst pain you can feel,” the Assassin hissed, as she planted her blade in the Hunter’s chest, or what was left of it, while she pulled out a small curved knife. “Because once the Battlemaster finishes with you, you will be judged the Creator.”

“Heh,” the Hunter gurgled, spitting some blood at her. “Let them. I will not die today, or ever—“

The Assassin grabbed him by the chin and made two quick cuts at the corners of his mouth, before prying his mouth wide open. Abby winced, but didn’t look away as the Assassin worked the blade in his mouth before finally tossing aside a tongue before hoisted the armless alien over her shoulder.

“Your assistance is noted, Humans,” she said, walking away. “We will meet again, but it is unlikely to be as allies.” With that the air simmered around her and she vanished, leaving them alone. Abby heard one of the soldiers rushing to her side once it was gone.

“We’ll get you medical help,” she heard Yeong assure her. “Don’t know where you got that weapon, but I think that’s the only reason we’re still alive.”

“Probably,” Abby winced, knowing that now they wouldn’t get a chance to research it. “I guess it’s a good thing only one of those aliens was against us.”

“Yeah,” he spared a look to where the furious battle had taken place. “I’ve never seen anything like that. Invincible beings. It was unnatural.”
“You probably won’t believe me,” Abby said as she let herself be hoisted up and hopped on one leg. “But I think that was the second-most dangerous recent experience.”

Yeong shook his head as he helped her walk. “I had thought it would be interesting to be part of XCOM. If what you do is like that, I think I’m quite happy where I am.”

“You’re smart.” Abby gave a pained chuckle. “I think you should try and stay that way. Smart and alive.” She glanced behind her and her eyes widened as she saw the Hunter’s sniper rifle lying on the ground, in the hand of the severed arm.

“Hey,” she said. “Can someone bag the rifle and body parts? I think XCOM R&D would like to take a look at that.” Yeong nodded, and motioned for the rifle and body parts to be picked up. Well, even if she didn’t bring back a particle rifle, the insanely destructive sniper rifle of the Hunter was probably a suitable alternative.

And likely one they would be able to actually replicate. And Vahlen would find the limbs of these aliens useful as well.

All things considered, it could have turned out much worse.

Los Angeles, California – United States of America

Operation: Sherman – Day 3

11/23/2016 – 11:01 A.M.

It just wasn’t working.

Patricia had tried nearly every single technique she could think of to put what the Imperator had revealed into tangible action. But it was a problem of visualization. It was a problem of actually putting such commands into such a small, yet understandable format. She just couldn’t think on such a small scale.

It was like trying to think about things from the perspective of a cell. It just wasn’t comprehensible for rational minds. Ironically, an insane person might actually be able to do this better, since they didn’t see the world in a rational, logical manner. And that was frustrating to her, not because it was impossible, but because it just tantalizingly, infuriatingly, just out of her reach.

She knew she was close to figuring it out.

But time was running out. She couldn’t just stay up here forever hitting the same roadblock over and over again. People were counting on her. People were dying while she played the psionic manipulator.

She furrowed her eyebrows as she looked into the city. Not as much progress as ADVENT would have liked had been made. The aliens were fortifying their positions deep within the city, and had been using newer units such as the Replicas and Fectorian’s enhanced soldiers. Even some Spectres had been deployed, though techniques and methods from other groups, specifically from Geist, had at least managed to turn substantial losses into some kind of tradeoff.

Still, the Spectres killed more than they didn’t, and the aliens were being smart and giving their dead to the nanoweapons, and essentially turning one Spectre into four hundred. The good news was that they were being designated as priority targets, and Purifiers and Priests immediately
focused on them whenever they showed up.

Yet it was only a matter of time before they became overwhelmed.

And she just didn’t have what was needed today. If she could affect the living, they could win. But she couldn’t, no matter how much she tried.

In fact, she was now wondering if this was simply a means of the Imperator distracting her. The technique was sound, but perhaps only Ethereals could do it, and for everyone else it was a waste of time. That would be infuriatingly smart, and would explain why he kept bothering her.

“No, you can certainly perform it,” the Imperator answered her unspoken question, materializing beside her. “I am not petty enough to waste your time on an impossible claim.”

“Welcome back,” she said with some mockery, as he had basically disappeared for most of a day, and only now had decided to reappear. While it was nice not to have his voice in her ear, she had, for some reason, almost missed his company. Maybe it was that the mystique of such a powerful being was slowly undone the more they spoke.

The Imperator, despite being their enemy, did not seem evil. Or at least no evil than anyone else. Just on the opposite side. And even now he was more of a spectator than anyone actually invested. She wasn’t sure what she was supposed to feel about that. There was a piece, a motivation here, that she was just missing.

The Imperator seemed to be using everyone in this conflict, ally and enemy. One was put up against the other; both were tested and pushed to their limits. Vital knowledge was given to any side, either to prove a point to others, or simply to see if it could be done. The Imperator did have some goal besides idle chatter, but nothing Patricia could think of completely fit.

“You are getting closer,” the Imperator said, gesturing out to the city. “I suspect you would eventually understand it. Knowing what to strive for is a major part of any ability of this magnitude, yet I fear that your time is running short. The Battlemaster is planning to end this attack, and kill you in particular. You, nor any soldier, can stand against him. Not yet.”

“We almost killed him once,” Patricia reminded the form of her doppelgänger. “We almost killed him again in D.C. Of all your Ethereals, he is most certainly not the invincible one.”

“And with that attitude, you will be another of his victims,” the Imperator mused, stepping forward, hands clasped behind the back. “There is no such thing as almost killing a Battlemaster. All you have done is made him stronger. For each weakness you expose, he will fix it. Every flaw is one that he will mend if exploited. You cannot keep almost killing him, for all you will do is inevitably make him invincible.”

Patricia sniffed. “That’s a long time. And I doubt he’ll stand against a nuke.”

The doppelgänger turned to her with a smile. “And tell me Patricia, are you willing to nuke this city to kill him?”

She was silent. “I do not blame you,” he continued. “Yet he can be driven back. But you must act now. I can give you what you want. I can give you the perspective you need. My offer has not changed. It is a simple exchange of knowledge, nothing more or less. On that you have my word.”

“And how do I actually know that?” She repeated, the same objection coming to her as before. “You are more skilled than me. I’m not sure I’d notice if you put something in my head you shouldn’t have.”
“You certainly think highly of yourself,” the Imperator commented, the smile maintained. “And how, exactly, do you know that I haven’t been doing that this entire time?” He swept a hand out in front of him. “Patricia Trask, as I’ve explained before, I have little interest in turning you into an unthinking pawn. Manipulating your mind in such a way I find insinuates that my words and reasons are inadequate, and ultimately, wrong. One should not have to resort to mind tricks and such…” he paused, searching for an appropriately descriptive word. “Cheating, to make a point or change a mind. Some do not bother, of course, but I am not one of them.”

He extended a palm to her. “I am offering to help you. Assume your rightful role in this galaxy. All organic life is subject to the will of beings like us. It is time for a Human to join those ranks.”

It all came down to a question: Did she trust the Imperator to be telling the truth?

The answer was surprisingly clear.

She reached out and took the offered hand. The Imperator smiled. “This will only take a moment.”

There was no noise, no sudden flash; very rarely was reality so dramatic, she was finding out. But it was, in its own way, just as momentous. It was as if the puzzle pieces, guesswork, and experimentation suddenly fell into place and she understood. She knew now where she’d been going wrong.

It was indeed a problem of perspective. She’d been so tied to her own viewpoint and perspective that envisioning anything on a higher or lower scale was extraordinarily difficult for her to do. She was rigid in her thought patterns and perspective, and now that barrier was just gone.

She closed her eyes and extended her mind outwards into she found the first alien mind she could. One protected by the Overmind on the surface, but she simply looked deeper; simpler; clearer than she ever had before. Gone were the easily translated words and images, and replaced with pulses and simple binary commands that the brain processed millions of times every second.

The sheer volume of work the brain was capable of was one she could have spent hours marveling at, yet such a simple realm was now her own. She grabbed and observed the pulses, seeing where they were directed and what information they contained. It took time, it could have been minutes or hours, but she eventually began to map out the functions that the brain controlled.

Breathing. Pumping blood. The heart. The nerves. Even the deepest biological functions she had access to. Now all that remained was to exercise her power over it. And now her old methods could be applied in a different way. She simply changed the pulses to contain a different command.

In this case, it was simply to shut the brain itself off.

The moment the command was given, she was back into the present, with the Imperator looking at her knowingly. “And that, Patricia, is only a fraction of what you can do. You have the knowledge. Now use it to dominate them.”

Patricia gave him a grim smile. “You will likely regret this.”

“I don’t think so,” the Imperator returned the knowing grin. “I have done exactly what I needed to do. The rest…that is up to you.”

Patricia returned her focus to the battlefield in front of her, putting thoughts of the Imperator to the side as she began to do as he apparently wished. The aliens alive now were at her mercy, and she was no longer going to hold back. The Imperator was right about one thing.
There was no reason to be apologetic about using her power.

If it resulted in the unsavory deaths of aliens, then that was simply an unfortunate price to pay in this war. But there would be no mercy today.

The aliens would die. All of them.

***

Sacramento, California – United States of America

Operation: Sherman – Day 3

11/23/2016 – 12:42 A.M.

The good news was that they were still alive, and in fairly good condition. The bad news was that they weren’t making much progress.

Despite finally getting reinforcements from ADVENT, the aliens were finally employing enough defensive tactics to hold ADVENT back. That, and they’d been far more liberal in their usage of the Spectres. Multiple offensives have been slowed to a halt once one showed up, and even with Geist sharing his tactics, they didn’t always fully work.

The aliens had also been sending a much higher ratio of aliens to their now-commandeered fortress, which had been under constant assault for…the past day? Nuan didn’t really remember, only that she had fallen into the pattern of moving, shooting, reloading, and repeating that. There were more Spectres, but those were immediately targeted by Geist before they could get very far.

The alien captives had been taken away, luckily, so there was no chance of those being lost. ADVENT had some, but Geist had ensured that XCOM took the ones he deemed the most important. Nuan didn’t know what they meant, since she hadn’t been involved in that deal, but it really seemed like the aliens wanted their fortress back now.

There were more of those mechanical Muton Elites, and even with the Goliath firing at them, the mass of enhanced and standard units was reaching critical levels. Nuan scowled as she took down one of the augmented Vitakarians, and then ducked down as a hail of green plasma shot her way, and continued unabated until a purple barrier appeared between her and the aliens.

“Thanks,” she called to Iosif who just nodded before erecting another barrier in front of some other ADVENT soldiers. She dashed to another place along the wall, and found herself on one of the corners, which did have some plasma turrets which ADVENT had repurposed. They were manual emplacements and given that Nuan had seen a concentrated barrage destroy a Sectopod, XCOM really needed to get working on plasma tech.

It was also the corner where the heaviest fighting was taking place, and thus, Geist was in the center of it. The man would never admit it, but even Nuan could tell he was getting tired and his concentration was stretched to the absolute limit. Now the man looked rather annoyed, even as he maintained three different barriers in front of hunkering soldiers.

“Need help?” She asked, reloading her weapon.

“Quite likely,” Geist said, sounding more of an admission than anything. “It appears the Overmind, or whatever Ethereal was protecting the soldiers, discovered what I was doing. Unfortunate, but it was unlikely to last forever.”
“What’s your plan?”

Geist eyed the mass of approaching aliens, a group of no fewer than twenty Spectres leading them. “Unfortunately, I think we’re going to need to call for help.”

Nuan glanced over at him. “Who?”

“The Archangels have been causing trouble for the aliens across the city,” Geist answered, pressing a button on his wrist. “And right now, we need a destructive Leviathan right here.”

There was only one Archangel Nuan could think of that fit that description. “Hammarström?”

“Hammarström,” he confirmed, raising the wrist to his mouth. “Seraph Hammarström, I request your assistance at my position. We have a severe alien overpopulation issue.”

“Wow, it must be bad if you’re calling, Geist,” Viktoria Hammarström answered. “On my way now. So what’s the situation?”

Geist walked to the edge, one barrier maintained in front of him as he appraised the situation. “I would estimate two hundred total enemies, with a minimum of twenty Spectres. They largely have the northern positions, and we are holding everything below that. I suspect more are in, or behind the buildings.”

“You care a lot about the buildings?”

“No. Raze them to the ground.”

“Got it. Hope ADVENT doesn’t mind the mess.”

Geist raised one eyebrow at that. “They would rather have a captured damaged city than retreating from an intact one.”

“That was a joke, Geist,” she snorted. “Seriously, you’re going to kill someone over a misunderstanding one day.”

Geist did not look amused. “Please do your job, Seraph.”

All he got in return was a laugh before she clicked off. It sounded like they’d spoken before, although Nuan didn’t know when that would have-

“In the Training Arena,” Geist answered her mental inquiry. “As a Leviathan, she provides an excellent means of testing my own abilities. She is trustworthy and is capable of doing as I requested.”

Well, so apparently Geist had people on a scale of trustworthiness. Lovely. She somehow doubted she was high on that list. “You are correct,” Geist nodded again. “As a Chinese operative, your split loyalties do not contribute well to an organization like XCOM where our loyalty should only be to our species. The Chinese have not proven-“

“Oh, shut up,” Nuan growled, really, really wanting to punch him in his smug face. “Do you really think that we don’t care about our species?”

“You are an appeasement to the Commander,” Geist said coldly. “Or rather, a peace offering. You are not a spy, but your loyalty is ultimately not with XCOM. That makes you untrustworthy from a practical standpoint.”
“We’ll see what the Commander has to say about that,” Nuan growled, turning away and ready to shoot some more aliens. “I’ve put up with your garbage for long enough. You’re no leader, and certainly not someone who should be a squad overseer. Have some respect for your soldiers.”

Geist fixed her with an icy stare. “You don’t need to tell the Commander anything. We have more important issues to focus on.”

It took a second, but she had to admit he was probably right. Any issues she had could be figured out after the battle was over, and maybe she was making things seem worse in the heat of battle. “You’re right,” she said almost automatically. “We have more important issues to focus on.”

The ghost of a smile flickered across his face. “I’m glad to hear it.” A roar overhead reached her ears, and Nuan looked up to see an Archangel streak overhead. “And it appears Viktoria has arrived.”

The Archangel hovered in the air, purple energy consolidated around her, and after a bright purple pulse, she extended a hand downwards to the alien line, and the entire battlefield exploded. It looked to Nuan as though a storm composed of nothing but purple lighting had descended upon the aliens. It was a blanket that covered it so completely and densely that she could barely see into it.

The Archangel swept her free hand in a semi-circle and the storm expanded further back. The buildings caught in the maelstrom first didn’t do anything but blacken, and the more delicate aspects of them were torn to pieces. Cloth was disintegrated, cars fell apart, glass shattered, and stone blackened and cracked.

The storm suddenly rose higher, until it engulfed not just the ground, but the very air that rested in the territory controlled by the aliens. The buildings were similarly engulfed, and after a few minutes of the purple storm, they fell apart as if only held together by poorly-glued stones. One fell, than another, then one by one, and the storm extended far enough that Nuan was almost sure it was a mile or more. At least five or six blocks.

Then as if a switch had been flicked, Viktoria let the psionic fire fade and the maelstrom almost died immediately. Nuan looked in amazement at the aftermath. The storm had essentially eaten away at several inches of the ground, no alien corpses were anywhere to be seen, the ground was blackened and the buildings were now reduced to small scattered stones.

An entire section of the city had just been completely razed. Geist hadn’t been exaggerating.

The psion looked towards the Archangel. “Well done, Seraph Hammarström.”

The Archangel gave a mock salute before speeding off, presumably to destroy something else. The battlefield was eerily quiet for once. The first it had been in some time. “We have a reprieve,” Geist stated. “Get some rest, everyone. They’ll be back. And if they aren’t, we will advance forward. Even if we destroy half this city, we will take it for ADVENT.”

His words were met with some cheers and whoops. Nuan also couldn’t help but feel emboldened by what she had witnessed. But she did wonder just how far they could push the aliens before they felt the need to hit back twice as hard.

She had a feeling they were going to find out what that meant.

***

Los Angeles, California – United States of America
The Battlemaster did not like waiting so long to actually respond to threats, but Fectorian repairing his armor had forced it. In the meantime, he’d brought in enough Cleanser Ships to drive ADVENT back, and attempt to mitigate the ground damage as much as possible. The Hunter had been brought back and was currently regenerating in a very secure cell.

He would be dealt with after the battle was over.

However, now he had to figure out exactly how the Overmind was being subverted by not one, but two Humans. Patricia was obviously one of them, but he was not aware of the other. The First Guardian would likely deal with whoever it was though, and the Overmind appeared to have learned about the interference as the telepath wasn’t affecting his forces much.

Although that flying Archangel psion was another problem that was almost as bad.

Not his concern, currently, as the situation in Los Angeles had somehow gotten stranger. The Replicas seeded throughout the lines noted that the soldiers seemed to be suffering strange biological ailments. Some began throwing up, some suffocated to death. Others keeled over, and preliminary reports showed that their hearts or brains had just…stopped.

And it didn’t necessarily kill either. Some just collapsed bonelessly to the ground, and the medics hadn’t been able to figure out how, except for a far-out theory that all their nerves and muscles had just stopped working. No one knew what was going on, except that as a result, ADVENT was getting dangerously close to taking the city.

And now he needed to put a stop to it.

“I have located the primary center of XCOM forces,” the voice of a Replica updated as he stepped through a gateway. “GOLIATH-class MEC trooper. Accompanied by two XCOM soldiers. Sending coordinates and directions.”

The Battlemaster received the information, and immediately transmitted it to the Cleanser Ships.

“Begin orbital bombardment of all ADVENT forces outside this position. I will handle the ones remaining.”

“Acknowledged, Battlemaster,” one of the Andromedons answered. “Bombardment will begin momentarily. Transmitting target coordinates for reference.”

The Battlemaster flourished his blade and began dashing towards the center of XCOM activity. Along the way he passed dozens of Collective soldiers who had died without having a shot fired at them. He had only seen something like this…centuries ago, back in the War. This was a technique that he had only heard of Overminds performing.

While not a telepath, and such powers were useless against him, he had been required to know how it worked and the capabilities such a psion posed militarily. And this was a technique that, if he recalled correctly, hit lower brain functions and targeted the physiology of the targets themselves, effectively bypassing standard psionic defenses and supposedly extremely difficult to actually prevent.

What he didn’t understand was how a Human had been able to figure this out. The technique was so difficult, he presumed, because a psion had to not only figure out how to send commands on that level, but also conceptualize and envision something on as close to cellular as could likely be imagined.
Many Ethereals, if they were not master telepaths, couldn’t even begin to master that, although admittedly, actual investigation into such a usage of psionics had only really developed during the war, so perhaps that would have changed. But for a Human to learn it so quickly…it was unsettling. He felt there was something else going on that he wasn’t aware of.

However, if all went well, Patricia would die today, along with any XCOM soldiers accompanying her.

He encountered a group of ADVENT soldiers engaged with several Cyberdisks, and immediately dashed forward, slashing with his sword and decapitating half of them, before telekinetically grasping the other ones and snapping their spines. He barely glanced over to the corpses, since more soldiers faced him; surprised shouts and backpeddling punctuating their movements.

The ground suddenly began shaking as yellow streaks rained down from the skies and the Cleanser Ships began their bombardment. Unlike D.C. though, it was not just one or two volleys, but now a continuous barrage into the designated areas. Explosions punctuated by screams of pain in the distance indicated the bombardment was having the intended effect.

In the meantime, the Battlemaster continued his bloody path forward. As with D.C., he did not bother taking his time killing the soldiers, and focused only on the most effective attacks. Most of the time they didn’t know they were being attacked before he killed them. Instantaneous deaths were preferable, and he distributed them liberally.

He did not know how much time had passed until the Goliath came into view, but during that time the bombardment had not ceased, although it was now moving to other parts of the city. They were fighting a Sectopod and more Cyberdisks, although the Goliath was proving to be more than enough to handle even them.

However, the Goliath had never faced a Battlemaster before, and it never would again.

He was faced with the interesting prospect of fighting something that was actually larger than him, but it wasn’t insurmountable by any means. One of the XCOM soldiers shouted a warning as he dashed forward, though didn’t get another word out before the Battlemaster telekinetically snapped his neck.

Another hand thrust out and sent another XCOM soldier and nearby ADVENT soldiers flying back before the Battlemaster turned his full attention to the Goliath who had now moved to face him. The MEC began firing at him with the railgun weapon, while slots opened up on the shoulder that immediately shot missiles his direction.

The Battlemaster had two options: Dodge or catch.

He skidded to a stop, planted his feet and created a telekinetic field to catch all the rockets and projectiles; once all were caught, he sent them back towards the Goliath with a gesture. The MEC was too slow to fully get out of the way, and took several direct hits to its torso. The ones that missed went randomly into ADVENT soldiers behind it, causing more damage.

The Battlemaster dashed forward and stabbed forward into a gap in the Goliath’s waist, one of the clearest vulnerabilities. The blade easily cut deep, and the Battlemaster pushed it close to the hilt, while lifting a hand to telekinetically catch the metal fist coming to punch him. A squeezed fist crushed the hand, and another grasp removed the weapon from the MEC and made it useless.

The Battlemaster pulled out his blade, and leapt upwards and buried it in the head of the MEC, the force of his attack forcing it to fall backwards. On the ground, he looked towards the chest where
the more vital equipment most likely was, and where the pilot probably would be. He used to hands to telekinetically pull the gaps wider apart, and followed up by stabbing downwards into the suit.

When he pulled up his blade, it was stained with fresh blood, so he presumed the pilot was dead.

He looked out towards the ADVENT soldiers, who were falling back in a furious retreat as they saw the MEC fall, as well as the steady bombardment all around them. The Battlemaster decided to take his time from that point onwards, as the ultimate goal was to drive ADVENT back now. If Patricia died, that was a bonus, and he would also like to learn exactly how she had learned this ability, but if he didn’t, he would simply keep attacking whenever she appeared.

He would kill her one day. It was only a matter of time.

“Battlemaster,” the Andromedon gunner updated. “We report that ADVENT forces have suffered severe casualties and appear to be in retreat in all sectors. Shall we continue bombardment?”

“Continue it,” the Battlemaster commanded as he killed three more soldiers. “Do not cease until they are out of range.”

“Understood. Maintaining bombardment.”

***

Sacramento, California – United States of America

Operation: Sherman – Day 3

11/24/2016 – 2:18 P.M.

And the assault had been going so well.

Oliver supposed that the Collective deciding to shoot them from orbit was inevitable. The aliens wouldn’t want to lose their only hold on the United States, even if this would be considered ‘cheating’, at least by the standards of the Battlemaster. The bombardment hadn’t come down on their position yet for some reason, but Oliver and most everyone else chalked that up to the ships just not getting to them yet.

Although it wasn’t as large of a problem for them, since they were a moderately smaller, spread out group unlike the clustered soldiers at the taken fortress and the large groups of ADVENT reinforcements. He supposed it was lucky they’d decided to keep pushing forward otherwise they might have been targeted.

But now they were in the heart of the city, and they needed to make a decision about where to go next. Continuing the attack seemed to be, for most everyone, a bad idea. While they likely could continue forward and destroy the majority of the alien forces, and their proximity might deter orbital bombardment on their position, there was the slight problem of having absolutely no support.

ADVENT was beginning to pull back to some of the now-captured towns and small cities, a smart move at least to Oliver, but the consequence of that was they would only hold onto Sacramento, and probably the other larger cities. If they stayed, they would almost certainly be surrounded, and even Geist had to know they couldn’t hold out forever without rest or backup.

Not to mention the aliens, once ADVENT was driven firmly away, would be able to completely surround them and outnumber their dwindling numbers. It appeared Geist had come to the same
conclusion. “We will fall back to what the established regrouping point will be,” he said after they
had destroyed several Cyberdisks. “If orbital bombardment becomes a more likely threat, we have
enough Priests to provide some protection.”

“Probably a good plan,” the leading Protopriest agreed, nodding her head. “At least the way back is
cleared.”

“Yes,” Geist pursed his lips. “Unfortunate the Ethereals resorted to bombardment when their lack
of competence was apparent. This issue will have to be rectified shortly. Move out!”

Oliver did like how utterly dismissive of the Ethereals Geist was. He suspected even Quisilia might
be slightly hurt by his words. Although it would probably make one half furious, and the other half
probably wouldn’t be able to pick up on the subtle jabs. Too bad, it was at least one amusing part
of this whole situation.

They jogged back up the roads they had come from, bypassing the hundreds of corpses and wrecks
they had destroyed. Their casualties had also been extremely low in comparison, and at least Oliver
could be certain that they had caused a lot more damage for the aliens than they had received…
prior to the bombardment at least.

The tremors caused by it were becoming more apparent, and the yellow streaks from the sky
seemed much closer than before. Geist was organizing the defensive Priests in a sort of circle
around the soldiers, probably to create a kind of ‘bubble’ to protect them if needed. When they
were all close together, Oliver did have to admit that they were now an obvious target.

A good portion of them were XCOM, special forces, or Priests, but if they ran into an especially
dangerous enemy force, that might not be enough. They were now reaching what Oliver thought
would be one of the riskiest parts – the desolate area that Viktoria had razed to the ground. But it
appeared they weren’t going that way, since Geist redirected them around.

Smart move. It would take longer going around, but it was better to have some cover from the
buildings than being completely exposed. Oliver was surprised they hadn’t encountered any aliens
during their entire run-

“Hold,” Geist commanded, raising a fist as Oliver immediately had to retract that assessment.

In the middle of the street was something that was unquestionably an Ethereal. It almost
looked like the Battlemaster, but the helmet was wrong and the figure lacked the sword or the cape. It did,
however, retain the massive height and size of the Battlemaster. “Fuck,” he muttered to himself.
This was going to get bad.

“Who is that?” Nuan asked. “I don’t recognize that one.”

“The First Guardian, if I recall,” Geist said, narrowing his eyes. “Very dangerous. Interesting that
they are appearing here. I thought they were simply bodyguards of the Imperator. Which means
they must be here on his order. Curious.”

“Be curious about it later,” Oliver said as the Ethereal began marching towards them. Something
flew into its hand from the waist. A long cylinder of some kind. Oliver could see another one
hanging from the waist as well. “I think we need to do something.”

“We aren’t in a position to fight an Ethereal,” Geist said slowly. “So we need to distract him while
the soldiers escape. Guardians are telepaths. I will telepathically attack him while the Lancers and
Templar we have attack, and we will fire from the back. Everyone else go around and don’t look
back.”

An orange-yellow beam of some kind extended from the object the First Guardian was holding, the length of which looked disturbingly long, almost his own size. “Here we go,” Iosif muttered as he and the Lancers began marching out to meet the Ethereal. Geist extended one hand as well, the air once more beginning to distort around him.

As the regular soldiers quickly moved away, Oliver decided he might as well try and be useful and began lining up shots against the Ethereal. The First Guardian apparently decided he was tired of the slow approach forward and leapt forward, slashing down at one of the Lancers. She raised her weapon to parry, but once it hit it was apparent both that the saber the Guardian was using was slowly cutting through the weapon, and that he was much stronger than she was.

He grasped another Lancer telekinetically and threw him into a building, before another of those weapons appeared in his lower hand and stabbed directly into the first Lancer’s heart, killing her. He switched the lower saber to the opposite hand, and now they were facing a dual-wielding Ethereal.

Not good.

Oliver decided to begin firing, and the Ethereal didn’t seem to be fazed by him in the slightest as he began attacking the other Lancers and Iosif. The Templar had a psionic shield around him and employed them liberally as he attacked, which did seem to be able to resist the cutting power of the buzzing sabers.

It also became apparent that, despite outnumbering the Ethereal six to one, he was very, very good at fighting multiple enemies. Two weapons, and two lower arms for telekinetic blasts back made for very effective defense as he moved from attacking one opponent to another in a span of seconds. “Hold him!” Geist commanded, and the three Telekine Priests began anchoring the Ethereal in place.

That, as it turned out, was a bad idea.

The Ethereal thrust all of his arms out in opposing directions, effectively sending all his opponents flying backwards. He drew back one of his sabers as he seemingly prepared to throw it, and another blade appeared out of the lower end. So the weapons were double-bladed as well. The First Guardian threw it towards the telekines, and the spinning yellow blade easily decapitated them, as well as Moriai and a few other soldiers.

The other side of his remaining weapon was also activated, and the First Guardian began re-engaging the close opponents with a renewed zeal. The fighting style changed completely. The weapons were no longer exclusively in the hands of the Ethereal, but he used them as telekinetic buzzsaws, sending the spinning blades out short distances towards an opponent, cutting them apart before swinging them around to a different enemy.

Three Lancers were killed within ten seconds of each other, and Iosif was barely able to keep up with the barrage of attacks coming from all sides. The Ethereal extended two arms towards the Lancers and snapped their necks to concentrate fully on the Templar. The ranged weapons were doing absolutely nothing to him, and Oliver didn’t really know how they could beat him at this point.

Then the Guardian was suddenly frozen in a stasis field, a thin purple film surrounding his body. “We can’t beat him here,” Geist called. “Get back, I’ll maintain this as long as I can.”
Iosif disengaged and retreated to the remaining Humans as they began following the path the first retreating group had left. “What about you?” Oliver demanded.

“I’ll be with you,” Geist said, face beaded with sweat and an intense look of concentration on his face. “I just may be slower. I don’t have to be here to maintain the field. The psion is powerful, and thus, easy to locate. I will be slower, however, and his telepathic attacks will become more intense since he can’t move.”

“Fine! Fine!” Oliver said, as they all began running away from the Ethereal. “Then let’s get out of here.”

Geist nodded, and slowly returned his extended hand to his side, clenched in a fist. At a nod, he joined the rest of them in retreating. The orbital bombardment now seemed like the least of their worries when they had an Ethereal chasing after them.

Such things certainly gave him perspective on just how bad it could go.

And orbital bombardment was definitely preferable to this.

***

ADVENT Military Command – Switzerland

11/25/2016

Over the past couple of days the security at ADVENT’s main military command center had, to the Commander’s subjective eye, at minimum tripled. It was completely necessary due to the presence of Chinese military officials, and the coordination between ADVENT and China that had taken place non-stop since the negotiations had been finished.

ADVENT and China had both agreed that they would not announce any alliance until the operation to retake Japan was well underway. He did quite like that the name they had proposed for it was Dǎotái, which roughly translated to Downfall. Operation Downfall. Knowing China, he suspected that the fact that it shared the same name as the proposed invasion of Japan back during World War II was not a coincidence.

The Chinese liked their symbolism. So did he, for that matter, and Operation Downfall it had become.

If it went well, it could very well herald a shift in the war, or at least more than what was already done. It was clear that the war would be different once the fighting died down, but this would ramp up the escalation to levels he honestly wasn’t sure they were prepared for. But it was ultimately inevitable. Escalation would come, and he preferred that they dictated the pace of this war, not the Collective.

It was unfortunate that Operation Sherman hadn’t been able to achieve its goal, but that had, in his estimation, accomplished the absolute most it could do. If they had actually managed to push the Collective out of America entirely, it would have been a miracle. But as it stood, they had pushed them back to deep California, Seattle, and unfortunately a growing part of Canada and Alaska.

That had always been a risk, but even now there were solutions being put into practice. He expected Saudia to approve them shortly.

In the meantime, he’d drawn back his XCOM soldiers to the Citadel for a brief recovery. Days of straight fighting took their toll, and ADVENT could corner the Collective in California without
their help, and Japan was going to be the operation he needed everyone to be on. South Korea was still holding strong, especially with that sniper taken out of the picture, although Agent Gertrude had been wounded. Zhang had given him a brief explanation of why she was there, and the immediate implications were extremely unsettling.

On one hand, whoever the Chronicler represented was no friend of the Collective. On the other, it meant that Aegis had lied to him, or didn’t know as much about the Sovereign Ones as he claimed. He was betting more on that latter. That was an issue to figure out when the operation was ended. China had proposed several strategies for dealing with the Ethereals that showed up, which largely consisted of throwing absurd amounts of soldiers and explosives at them, which the Commander felt was perhaps the most ineffective solution possible.

It was one thing if they were on equal or greater technological levels, and even then, he wasn’t a proponent of the ‘send soldiers on suicide missions’ doctrine. It was wasteful, lowered morale, and implied that whoever was in charge wasn’t creative enough to develop an actual solution. Granted, against Ethereals there really were no good solutions, but he didn’t approve of sending soldiers to die for the sake of it.

China was also definitely holding something back. The first clue to that had been their request to have several hundred terabytes of video footage of both the Ethereals and Collective. Reasonable, although he didn’t know what they would do with it in time for the invasion, which would take place in one or two days. The second had been that their commanding general for the invasion hadn’t specifically been chosen. There were clear advisors, but no main commander from what he’d understood. That seemed odd to him, but they hadn’t acted like that was even something worth bringing up. Perhaps they had decided that ahead of time, but it was still odd. The third had been the Chinese armor designs themselves. They were more based on the original Israeli prototypes, with smoother armor and rounded helmets. They were, of course, colored grey with red and gold tints. The aesthetic wasn’t the interesting part, it was what was in the armor. Because it appeared that China had made their suits resistant against EMP and given every single one extensive wireless capability.

It was arguably better than ADVENT’s, since the parts used could allow the wearer to communicate with someone thousands of miles away. It wasn’t the shorter comm ranges in typical ADVENT armor. Foresight or was there something else going on?

The Commander didn’t know, and he supposed he would have to see it in action. Soon everyone’s cards would be on the table, including his own. Now that he was in his private room, which he’d made sure to scan for bugs and listening devices, he pulled out one of the newer holocommunicators XCOM had begun developing. This one a direct line to Aegis. The Ethereal appeared in his hand, the ghostly blue figure appraising him. “Commander, you have need of me?”

He smirked at that. Not really a better opening line from him. “Yes, Aegis, this time I do. The operation will be starting within days. It is…highly likely that the Collective will send an Ethereal in retaliation, yes?”
“Almost certainly,” Aegis agreed. “I suspect Caelior. This is a situation where Battlemaster would be willing to unleash him. Perhaps Isomnum as there is no civilian presence. But given the choice, I would assume Caelior would be willing and able to fulfill the Battlemaster’s retribution.”

“Right,” well, here went nothing. “Which is why you’re going to ensure that China—and my soldiers—don’t get massacred in Japan.”

Aegis was silent a few moments. “I believe we have discussed that it is not time for me to—“

“Yes, we did,” the Commander interrupted firmly. “And that was before we were facing nanoweapons, our capital cities being attacked, and sustained orbital bombardment. It was also before we were using nukes as EMP weapons, having armies of psions, six Ethereals taking part in the war, and launching operations to kick the aliens out of our countries.”

He paused. “The war has escalated without your intervention. It is not going to go down. You’ve been an observer long enough. Your assistance with our science and psionic teams is appreciated, but it’s time you do more than that if you want to stay with us. Pick a side, Aegis. Refusing to help will not be tolerated any longer.”

The Commander wasn’t quite sure how he could realistically back that up, but at minimum it would force Aegis to either attack them, or leave. While having an Ethereal ally was an advantage, he had already provided them with everything he could. He was a useful psionic trainer, but they could eventually do that themselves.

There was little point having an Ethereal ally if they ultimately didn’t do anything beyond giving advice. He’d allowed that long enough.

“And what happens if that prompts the Imperator to respond?” Aegis said calmly. “What if he decides there is no point prolonging this war? You are thinking in the short term here, Commander. Yes, I could assist you, but there are consequences I cannot accurately predict, and ones you certainly cannot.”

“Then we deal with them,” the Commander said bluntly. “Aegis, what point is acceptable for you? Is it when Saudia dies? Is it when the Collective decides to wipe out a continent? Because of the danger that the Collective can just end the war? That isn’t going away. What you are doing, is being a coward.”

Aegis stiffened. “I beg your pardon?”

“Yes,” the Commander repeated. “You are being a coward. See, this might not be as serious for you as it is for us. You left the Collective because you disagreed with them. Fine. I can’t argue with that. But you also don’t want to commit to one side or another. You’re not doing anything, not because of some fear of escalation, but because if we lose...you want an out. You want to claim that you never fought against them, and everything you did was to make a point to the Imperator. That’s a bit harder to claim if you actually take a stand for one side or another.”

He narrowed his eyes. “For us, Aegis, this isn’t a disagreement, this is a matter of survival. You should know better than anyone the fear of our species being exterminated or enslaved. You don’t have to worry about that, as I doubt the Imperator would execute you, even if you did assist us, but we do. This is a war that your species caused, an unjust and cowardly war if I may add, and if you actually mean anything you said; if you actually want to show you are on our side...prove it.”

The Commander took a single short breath. “This is technically a request, but this is where you need to make a decision this time. Help us, and show you are on our side beyond your word, or
leave. There is no place for apathy for those in XCOM anymore. Help us or leave. That choice is yours.”

Aegis was silent against that for a few moments. “ADVENT will not like that you hid this.”

“I will handle ADVENT,” the Commander said. “And we had reasons. You stayed quiet in the assumption that the Collective would not escalate the conflict. This has changed, and there is no reason to hide yourself any longer. You should not be concerned about the Human reaction of all things.”

“There would be fallout,” Aegis noted. “But you likely know that already.”

“Of course.”

“This is curious,” Aegis mused, sounding oddly thoughtful. “You are the second one to accuse me of cowardice in recent days. The Battlemaster said something similar. I have never considered myself as such, but I hadn’t looked at it from those points of view. There is a self-preservation instinct I have, which is to deflect problems instead of solve them…and that is one place I can improve over time.”

He looked to the Commander. “Very well, Commander. I will once more take the field of battle. I can only hope that both of us are prepared for the consequences.”
Nuan flexed her mechanical fingers to make sure everything was working correctly. By the end of the operation in Sacramento, the damage her prosthetics had sustained was more extensive than she’d realized. The small patches and fixes had only been temporary measures, and by the end, whole fingers weren’t working correctly.

Not an ideal situation.

Still, even though they’d had to retreat, she was relieved to have something of a reprieve from the non-stop combat. She had never experienced anything like that in her life, and for that being her first time, she thought she’d held up well for the most part. Few casualties, and she’d been rather surprised when she’d seen her recorded kill count. She’d kept track early on, but it had become a blur rather fast.

What she wasn’t sure about was what they were going to do now. The battle had died down significantly in the US, and it appeared the Collective was content to hold onto their major cities while ADVENT secured the outskirts. Seattle was technically lost, but the Commander had told them that was a strategic decision, and there were teams working to sabotage, trap, and otherwise make their attempts to secure the city difficult at best.

Alaska was being steadily taken over by the Collective though. While the Commander had said there were plans in place, it didn’t exactly sound like a good situation, especially with Canada being threatened at the same time. Korea was still under attack, but that seemed to be going well.

But the Commander had been very tight-lipped about what was going to be coming next, which even she could tell was unlike him. He’d probably told Patricia, and knowing Geist, he’d probably read his mind to get the information, but she was uncharacteristically not sharing anything. Something was going to happen, and she was wondering how long it would be before it was revealed.

In the meantime, she was getting a tour of the Citadel by Iosif since she’d joined XCOM after the infamous attack. Although perhaps infamous was the wrong word, since she’d never heard of the incident until after joining. What was obvious was that the Citadel was extremely different to the Praesidium, and quite clearly constructed by Humans, whereas the latter was definitely repurposed alien architecture.

Still though, she did have to admit she’d gotten used to the silvery walls and rounded design of the Sectoid architecture, and that the sharp angles and utilitarian aesthetic of the Citadel definitely seemed subpar in comparison. With that said, she did have several questions, since the place was clearly in good shape and serviceable. “Why did you leave at all?” She asked. “I don’t see any lasting damage.”

“Ohly the Internal Council was really given the reason,” Iosif admitted as they walked the halls. “It was likely because the aliens knew where the base was, and there wasn’t anything stopping them from just trying again.” A pause. “We’re very lucky the Ethereals sent one of their own who was
relatively weak. I don’t think we’d be here if the Battlemaster had decided to lead the charge.”

Nuan furrowed her eyebrows and stopped walking. “So instead you moved to an alien base? One that they definitely knew about?” She crossed her arms, looking up at him expectantly.

Iosif scratched his head sheepishly. “I think the Internal Council was…counting on it being so brazen the aliens would never suspect it. And I know we extensively scanned it for bugs and the like.”

Nuan smirked. “A bold move. I’m rather surprised they haven’t done anything yet. They have to know where we are by now.”

“Most likely,” Iosif shrugged as they kept walking. “But they won’t do anything with Aegis there. He’s a good insurance policy.”

An insurance policy that seemed to have an aversion to actually contributing, but one nonetheless. She supposed having an Ethereal sort-of on their side was better than not having one at all. But still…she didn’t know the full details about why the Ethereal was only providing advice, but it was annoying to see these other Ethereals demonstrating how powerful they were, and Aegis was powerful, Iosif had said as much, but he still held back.

Why?

“And this was the old Mission Control,” Iosif said, continuing their modest tour, and stepping through the soundless automatic doors. “Which has apparently been restored to its old glory.”

The old Mission Control was actually fairly similar to the new one. It had the more angular aesthetic of Human design, with the steel floor and grey metal of the walls, but the core concepts were essentially the same. In the center was a massive holoprojector, and surrounding it were rows of computers and chairs for analysts, and there were platforms above acting as a second story.

Even if it wasn’t as aesthetically pleasing as the new Mission Control, the giant hologlobe was one she’d never get tired of seeing. “Seems to do the same thing as the new one,” she commented. “Some things just don’t change.”

“Indeed,” Iosif nodded solemnly. “Though not quite the same anymore.”

The legions of ADVENT personnel around certainly contributed to that feeling. She supposed she couldn’t really understand from the perspective of an outsider. But this was a defining part of XCOM’s short, but memorable history, and she was glad she was getting to see it at least once.

“This is where the former Central Officer and Van Doorn died, yes?”

Iosif gave another nod. “It is. Bradford and Van Doorn. Some of the first to actually fight an Ethereal. Good men. I didn’t know them well, but they’d always conducted themselves well and proved their dedication to XCOM with their deaths. It’s unfortunate they fell; we really could use their help.”

“Central Officer Jackson seems to be doing a good job,” Nuan noted as several spots on the hologlobe lit up. “I don’t know what position Van Doorn had, but I assume the Commander had a good replacement.”

“Oh, I didn’t mean it like that,” Iosif corrected. “The Commander doesn’t pick bad candidates, and Jackson has done a good job as far as I know. But to be honest, she isn’t Bradford. She doesn’t have his experience or connections. I don’t think many people knew just how well-connected Bradford was. You’d never guess, but there was a reason XCOM ran so smoothly in the beginning
when faced with the...tense situation between the Commander and the Council.”

He paused. “I don’t know if Van Doorn has really been ‘replaced’ either. Maybe Patricia is supposed to fill that role, but while she’s a good psion, she’s no Van Doorn. He was...irreplaceable from an experience perspective.”

Nuan didn’t know that much about Van Doorn, but she knew his basic reputation, and even her superiors had held some respect for him. China had not participated much during the War on Terror, and that was where General Van Doorn had become more widely known. Ever since he had been indisputably the most respected military official in the world.

She supposed a loss like him was irreplaceable.

“All things considered,” Iosif commented. “Things could have gone a lot worse. If only all Ethereals could be beaten by a few telepaths.”

“Some can be,” the Commander commented, walking up behind them and making her stiffen at his voice. “Unfortunately, the ones we’re likely to fight aren’t. From what Aegis said, the Ravaged One was a...special case.”

The Commander paused. “But that isn’t important right now. Come with me.”

Iosif and her exchanged a look, and followed him out of the room and back into the hallways. “You’ve not been here, Nuan,” the Commander said without looking back to her. “Your impressions on our humble beginnings?”

Nuan cocked her head. “If you’d shown me this first, I would be highly impressed. China didn’t have anything like this. Although I will say the Praesidium is an improvement.”

The Commander seemed to find that amusing. “I can’t disagree, but I have good memories here...” he sounded wistful at that, before turning to them. “However, I’m afraid your tour will have to be cut short. Suit up and prepare for deployment.”

“What’s the mission?” Iosif asked.

“We are going to assist in retaking Japan.” Was the answer.

Nuan was dumbfounded. It was enough of a surprise that ADVENT was going to try and retake America, but attacking Japan at the same time? Was that even a good idea? Could they even do that without...well, she would say Chinese help, but that seemed unlikely. “Japan,” she repeated. “That seems...risky.”

“Oh, it will be,” the Commander surprisingly agreed with a nod. “However, we have a few factors in our favor. Namely that the Collective will not be expecting an attack like this, they are already damaged from the EMP’s, and in addition, we have some help.”

“I suppose the Japanese want some revenge,” Iosif said, though Nuan had the distinct feeling he didn’t mean them.

“Oh, they do, but the difference is that this will not be a primarily ADVENT operation,” the Commander looked to her. “It appears that your constant insistence on the benefits of an ADVENT-Chinese alliance have had a role in their decision to reach out.”

Nuan’s eyes widened. Was it really happening? “You’re saying...”
“Yes,” the Commander smiled at her. “China and ADVENT are at this moment, in a military alliance. It will be announced within several hours, and has been negotiated for roughly a week. They will spearhead the liberation of Japan, with our assistance. In return, of course, they will acquire the majority of the salvage and afterwards, we can iron out the details of a firmer alliance.”

Nuan knew she probably had a stupid smile on her face, but she couldn’t help it. This was exactly what she’d been hoping for, and it reinforced her trust in her superiors that she now realized had been deteriorating dangerously. But that was all gone now; they’d finally come around and she knew it was at least partially to do with her.

She really hoped she wasn’t dreaming, but if she was, this was going to last as long as she could make it. If China was going to take the step of working with ADVENT, it might set off a chain of events where the other countries began also working in earnest to kick the aliens off their planet. That was the best case scenario, and it probably hinged on the upcoming battle.

“Thank you, Commander,” she said. “For the opportunity here.”

“In this case, you’re more to thank than I am,” he answered, inclining his head. “But get suited up now. You deploy in one hour.”

“Yes, Commander!” She performed a hasty salute in her excitement, grabbed Iosif by the arm, a bit firmer than she intended and quickly began marching back to the barracks to prepare for what was possibly the most important battle of the war yet.

***

Busan – South Korea

11/27/2016 – 10:11 A.M.

“Do you think they’ll ever retreat?”

“Doubt it,” Duri sighed, trying once more to line up an impossible shot at one of the barely visible aliens in the distance. Unlike Beatriz, who was still happily chipping away at them. If he’d realized that trench warfare was going to largely be him not shooting at aliens, interspersed with long stretches of absolutely nothing happening, he would have requisitioned a sniper rifle himself. He was definitely going to diversify after this.

“You want to try?” He glanced up to see Beatriz looking at him curiously, her sniper rifle slightly extended to him.

“How did you know?” He asked. “You a telepath and didn’t tell me?”

“I wish,” she sniffed. “No, but after seeing you act incredibly bored for the past hour and looking at my rifle, I figured you wanted to do something besides make sure all of us have ammo we’re not using.”

“Well, if you insist,” Duri grinned as she handed it over and brought himself up to a firing position. It was definitely much different than an assault rifle, but it wasn’t the first time he’d held one of these. He peered through the scope, actually happy to have some idea of where the aliens actually were instead of faint outlines on the horizon.

They did seem to be trying to mitigate ADVENT’s advantage over them, at least their barricades were kind of completed. Above ground, and technically worse than their own, but it was far, far
better than what they’d had before (which was nothing).

“Hey,” Beatriz chided. “I didn’t give it to you to use as a telescope. Kill some aliens, would you?”

“Easy,” Duri chuckled. “I need to find them first. Here we go…”

He knew he was going to miss before he even fired the gun. He was a fairly good shot with a rifle, but he wasn’t trained for long-range combat. He’d be lucky if he actually hit the alien barricade itself. Nonetheless, he fired at one of the Vitakarian soldiers in the distance. He saw the alien duck into cover, so he’d probably hit…somewhere close by…but it was definitely a miss.

“Ugh, shot wide,” he muttered, still looking through the scope.

“You’re not taking enough time,” Beatriz suggested. “At this range you can take minutes to set up shots, especially against humanoid figures. I could hit a Cyberdisk or Sectopod in my sleep—normally because those are closer, but I digress—but the small aliens need time. But you’re new, so I guess keep practicing.” He heard a pause. “This isn’t against the rules, right?”

“Technically, probably,” Duri shrugged. “But don’t worry, as your superior officer, you are just following orders. Doubt ADVENT is going to care all that much.”

“Hey, check above!” Miguel called from the back of the trench. “Looks like we have a skyranger incoming!”

Duri glanced behind him to see the sight of the skyranger flying towards the battlefield from the city. He’d seen the pictures, but he was fairly certain that this was the first time he’d seen a skyranger in person. They were smaller than he was expecting, but then again, they only had to fit in…what, eight soldiers.

“What is XCOM doing here?” Cara asked from her gunner position, sounding confused. “Yeah, it’s nice, but they don’t show up unless we really need the help.”

“Or they’re coming to end the attack,” Mana commented. “I suspect ADVENT doesn’t want this to drag out too long.”

Duri frowned. “XCOM is good…but they’re not that good. It’s going to take more than eight soldiers to end this battle here, much less the rest of the country.”

“I don’t know,” Beatriz said slowly, looking up at the encroaching skyranger. “I’ve heard the stories about their psions. Supposedly one of them turned Vegas into a tomb. Killed all the living enemies inside and ADVENT mopped up the mechanical ones.”

“Trask,” Mana nodded. “Yes. One of the most powerful they have. If she’s here, the aliens better run. If half the stuff about her is true, they’ll wish they had been killed by us.”

Duri didn’t feel the need to add too much to the conversation. If XCOM was going to help, good for them, and if they had something else planned, then that was also fine. But to his surprise, while the skyranger was getting closer to the ground, it was still flying over the trench line itself, and finally stopped, hovering a few dozen feet past the front line.

“I really hope XCOM isn’t stupid enough to do a charge forward,” Cara muttered. “Because that worked so well for the aliens.”

The first clue that something was off was that several of the alien soldiers began firing at the Skyranger, with as little accuracy as Duri expected. However, there were a few stray plasma bolts
that came perilously close, and the aircraft was suddenly enveloped in a psionic shield which instantly negated the green plasma.

The Skyranger door then opened, and Duri felt his body become paralyzed in terror. For the being that jumped from the skyranger to the ground below was not any number of XCOM soldiers.

But an Ethereal.

He’d never actually seen one in person, and this was not one of the ones that had been fought before. It was just as surreal as he had imagined. The alien was massive, at least three meters tall, but this one had a different kind of helmet. This one was more ornate and had some kind of open rectangle maw where the mouth probably was. It almost looked like it was screaming.

The Ethereal itself wore what at first glance looked like armor, and it did seem to be armor, but almost more ceremonial than anything. It clearly wasn’t thick, nor was full plate like the Battlemaster or even ADVENT armor. Instead it was more similar to…lighter types. Only parts of the body were covered, the chest, legs, and arms, and underneath was a kind of blue material.

The armor itself was masterfully engraved with alien patterns and…words, maybe? Duri didn’t know why he was focusing on the pretty armor when it belonged to an Ethereal. Also like the Battlemaster, a blue cape with gold embroidery fell from his shoulders.

Cara decided to speak for all of them. “That’s a fucking Ethereal!”

He could forgive her for stating the obvious this time. The skyranger flew off, and the Ethereal stood alone, not facing ADVENT, but the alien lines themselves. The entire battlefield had become silent; collective breaths held as they waited for something to happen. “Orders?” Mana asked breathlessly. “Shoot it?”

Duri couldn’t believe he was saying it, but the Ethereal, for whatever reason, wasn’t attacking them. “Hold on…let’s see what he does…he hasn’t attacked yet.”

They waited a few more seconds, and then the Ethereal began walking towards the alien line, purple energy beginning to coalesce around him. The aliens had stopped firing, but a quick glance through the scope confirmed they were just standing there in shock, still enough he probably could have shot them, even with his lack of experience.

The Ethereal was about a quarter of the way through no-man’s land when it raised one purple-enshrined hand, and slammed it down violently. A sheet of psionic energy materialized above part of the alien line and slammed down, crushing the barricade and any aliens unfortunate enough to be caught under it. More similar shields appeared and began falling down on the aliens.

Several of the Sectopods held back found themselves encased in purple boxes which collapsed in on them, crushing the machines instantly. The Ethereal was continuing to walk forward, all four of his arms moving in mesmerizing unison. The alien line was now littered with rapidly shifting, appearing, and disappearing psionic shields of various sizes of kinds.

That had apparently been enough to get the aliens to start attacking, though it was as close to a futile effort as ADVENT had had fighting Ethereals themselves. The Ethereal had erected a personal shield around him, and the ones that shot him found themselves bisected by shields that appeared to materialize inside them, or have limbs shattered when a low-form shield appeared to undercut them.

Cyberdisks shimmered in barely tangible prisons before becoming crushed. The barricades that
were capable of withstanding artillery fire were destroyed as if they were clay. Aliens soon forgot their mission, and with no Hunter to shoot them, fled as the aliens sent some UFOs, somehow believing that they would do the job.

Eight of the fighters fired at the alien from the skies, and all the Ethereal did was motion at them once and they found themselves encased in a form-fitting purple shield. Unlike the other ones, they were not crushed, but instead they fell from the sky like rocks as the shield likely prevented propulsion or any other way they used to stay aloft.

The alien was now three-quarters of the way across, and already he had broken the alien line and shown no signs of slowing down. Duri watched through the scope as massive Mutons were crushed into paste, and large groups of Vitakara were running forward, hands up and trying to convince the alien to spare them.

“What the fuck is going on?” Cara asked numbly. “Am I dreaming?”

“I don’t know,” Duri said equal awe in his voice. “But if I had to guess, I think that Ethereal really doesn’t like his brethren.”

“Uh…this is Chief Marshal Kong to all ADVENT forces,” the Chief Marshal said, sounding as shocked as they all felt. “Don’t, ah, don’t fire on the Ethereal…he’s apparently on our side.”

“Wow, I can see why he was put in charge,” Cara muttered as they saw the Ethereal down another wave of fighters.

“Quiet,” Duri muttered. Now was not the time for sarcasm.

“We have more information incoming,” Kong updated, still audibly shaken. “XCOM…apparently wanted to keep this a surprise. But everyone’s fine up here, the situation is normal. How are you?” A brief pause. “Please disregard that and prepare to advance forward.”

“I should ask him what his operating number is,” Cara snickered, jumping down from her gunner position. “Well, guess XCOM had more going for them than we thought.”

Duri grinned. “Well, you heard the Chief. Get ready to move out! We’re kicking the aliens off the country today!” That was met with cheers or acknowledgement as they prepared to do what they’d been hoping for since the battle had started.

Win.

***

ADVENT Media Center – Switzerland

11/27/2018 – 1:02 P.M.

This was going to be something historians would talk about for decades afterwards, assuming they actually had a history to discuss in the future. It didn’t seem so long ago that she was up here, announcing Operation Sherman, and in truth, it had only been a week. It certainly felt longer than that, but this turn of events had given her some energy back.

Today the world would be forever altered, and the war would never be the same.

Not that it had been before.
The media room was absolutely packed. They’d been endlessly speculating on the rumors of the various people she’d been meeting. The good news was that they didn’t exactly know who they were in contact with. Most seemed to believe it was with the EU (who had denied to comment), the SAS (who had flatly denied it), or China (who had also declined to comment). It had been interesting seeing the speculation about what the effects would be if there was something announced with any of the suspected parties.

However, there had been zero discussion about another possible attack.

She allowed herself a smile at that.

The Commander was here with her, and had asked to make his own statement, which she had immediately allowed. If for no other reason than it was good for the public to hear from XCOM every once in a while. However, there was definitely something off about what he was presenting. Not only was Patricia Trask and Shaojie Zhang with him, the former in full armor, but the Commander himself was in his own distinctive silver armor.

She didn’t know what he was planning. Perhaps that XCOM was going to be assisting in the defense of Vancouver or South Korea? More likely he was wearing it for the psychological factor. That he had his sniper rifle attached to his back armor and the pistol in plain view, that was a more than likely reason.

The Chinese delegation, which would consist of President Qin and Generals Zhen and Kong would be arriving…any moment now. She was quite looking forward to the looks on their faces when they realized that the Chinese government was going to make a surprise appearance. Not that she could blame them. After this, she was going to be taking a short trip to China for a similar media event.

She wondered how this was going to go over with the Chinese people.

At a signal from one of the door guards, she stepped up to the podium and right on cue the doors behind her opened to let the Chinese delegation begin filing in. There was a burst of gasps, muttering, and the inevitable clicks of cameras going off by the dozens. Saudia kept her face controlled, as did President Qin as he took a place beside her.

Saudia rested her hands on the sides of the podium. “Thank you all for coming today, and as you likely expected, we have some major announcements to make. These will be primarily on the state of the war and the future plans moving forward, both militarily and diplomatically. There will be no questions today, but I will of course be speaking at length over the following days.”

She let her gaze sweep over the enraptured crowd. “The first announcement, is that ADVENT is officially forming a military alliance with China.” She paused intentionally to let the press do their work reporting and transcribing. That alone was headline news, but she felt that would be less important than the later announcement.

“Negotiations have been taking place over the past week,” Saudia continued. “Under normal circumstances, such an event would not be kept secret, but this was a special case as when the Chinese government, and in particular, President Qin approached us, they had a very specific goal in mind for this initial alliance. Mr. President?”

She stepped off to the side as President Qin took the center podium to the clicks of cameras. “Thank you, Chancellor. It has been a pleasure to work with you, and I hope our relationship will continue to be fruitful in the days to come.” The Chinese President looked around the room as she had before.
“This was a decision that was not taken lightly, but times have changed, even since the formation of ADVENT itself,” he began. “It has become clear, both to me and my advisors, that the time for neutrality is over. This is a larger concern than either of our governments; it is one that concerns our entire species. It is one thing to disagree professionally, it is another to have one fight battles for you.”

He nodded to Saudia. “The Chancellor and I know where we stand. We disagree on much, but in one area we are bound, and that is the defeat of the Ethereal Collective. ADVENT, for as much as they are criticized, is doing something that no one else is even attempting – they are fighting back. They have done so since the beginning, while others have stayed behind, either out of fear or malice – it ultimately doesn’t matter.”

Saudia couldn’t help but notice that he was making a lot of eye contact with European media as he spoke. “That will end today. China will not allow another to fight its battles, and this battle cannot have any on the sidelines. The aliens are the enemy. They will come to capture, kill, or experiment on your people, and that will not change regardless of if ADVENT fights back or not.”

His speech was far harsher than Saudia had anticipated, but she couldn’t argue with it. He was putting a challenge to the world: If China can work with ADVENT, so can everyone else.

“If countries are so foolish as to believe that the aliens will simply ignore them, they are willingly blind to the threat they face,” Qin continued. “They do not discriminate between Chinese, American, or English. They do not care for your homeland, only its people. It is time to put aside our differences between countries, and unite to fight and conquer this alien threat. China will fight beside ADVENT to accomplish this task.”

Another pause. “And to conclude this, I do not say these words as empty promises, but a harbinger of what is happening now. Chinese forces are moving towards Japan at this moment to liberate it from alien control, and return it to the Japanese.”

There was a predictable, though muted outburst from the press. No one bothered trying to hush themselves as Qin let them digest this. Saudia took the center once more. “As per our negotiations, China will take primary point on this operation, with limited ADVENT and XCOM support. This is what I hope to be the first of many victories between ADVENT and the People’s Republic of China.”

She motioned to the Commander to step forward. “Our offices will be updating the press on the current status of the operation in Japan, but it will be several hours yet. However, before this meeting is adjourned today, the Commander of XCOM will be making some additional comments on the status of their own operations and this recent diplomatic victory.”

She stepped down and the Commander walked up, hands clasped behind his back and looking suspiciously pleased with himself. While she was as pleased with this turn of events as he probably was, he didn’t exactly seem happy about that. It was a look that he was going to do something that would somehow overshadow what had just taken place.

She really didn’t know how that could be possible though.

_Just what are you up to, Commander?_

***

Saudia was definitely suspecting something. To be fair, it was rather difficult to hide and he didn’t really have the desire, nor inclination to do so. He was allowed to have some fun with this.
Normally, he didn’t think there would be bigger news than this, but that was before the announcement that there was an Ethereal working for XCOM.

The press was going to have a heart attack today.

“Thank you, Chancellor,” the Commander began, once more nodding to Saudia. “I would first like to express my thanks for the leadership of both China and ADVENT coming together. This is a war than we cannot win unless we are fully united, and I am pleased to say that President Qin has taken the first step, and hope that many more will follow in the coming days.”

He decided to give them some more praise. It couldn’t hurt. “China has had a working relationship with us for some time, and the soldiers they have provided us with have more than done their part in defending humanity. XCOM I believe is the ultimate expression of unity; it is of people from all different backgrounds and nationalities coming together for the greater good.”

“While I do understand that such decisions on the scale of nations are more difficult than a paramilitary organization, I believe that we are seeing the first stages of such unity today.” He nodded to Qin. “As Chancellor Vyandar stated, I also hope that this is the first of many victories we share. I will be personally assisting in the liberation of Japan, as will the best of my XCOM operatives, including Overseer Trask.”

Patricia raised a hand behind him. Right, that part done. Now for the good part.

“However, today I do not want to simply focus on this, but about our enemy, though not necessarily in the way you are thinking,” he paused. “I have been in a privileged position these past few months, and have seen and worked to acquire knowledge about our enemy, for there is much that you, and even ADVENT, are not aware of.”

He paused. “But I am.”

The press looked confused, and he even sensed some confusion from those behind him, wondering where he was going with this. “There is much speculation on the nature of the aliens; their society; their government; their culture. Perhaps not in military circles, but certainly academic ones, and it is often ignored despite the prevailing saying that to defeat an enemy, you must know them.”

He tapped a finger on the podium. “Most do not, nor care to. Understandable, as information is hard to come by and often our survival is placed above the acquisition of trivial knowledge. However, I believe the time for that should be ended. There is much that should be known about the Ethereal Collective, much of which their own soldiers do not know.”

He rested one hand on the podium. “The Collective is much more fragile than you have been led to believe. They are commanded by an apathetic Imperator, a leader who allows the species to plot and plan on their own. The Ethereals have no loyalty to the species they command, but simply view them as a means to an end.”

Now he had the rapt attention of everyone in the room. “The Vitakara government is held hostage by the Ethereals and their people watched endlessly by the Zararch, killing or silencing anyone who has the audacity to ask questions. Even today there are those on their homeworld who resist the commands of the Ethereals, and each day more and more die.”

He paused. “Both President Qin and Chancellor Vyandar are correct. This war is bigger than any one country, but it also fails to state the scale of what is truly at stake. This is bigger than just one species. This war has disputed the fragile peace that once existed within the Ethereal Collective, and every day becomes more tenuous the more we resist.”
“All eyes are watching us now, those within the Andromedon Federation, and those of the Sectoid Hive Commanders. The Andromedons have been on the edge of civil war for years, and this conflict has only exacerbated the inevitable outcome. They are only held together by the threat of the Sectoids, and tensions between the species have been rising for years—and this war may force it to a breaking point.”

A pause. “The Sectoids themselves have been manipulated by the Ethereals from the beginning; the Ethereal Overmind bent their minds to listen to the Ethereals instead of rejecting them, and ever since they have obeyed as subservient pawns in the Imperator’s game of galactic control.” Some of the people looked slightly overwhelmed by what was being said, but he pressed forward. There would be plenty of time to digest it later.

“The point I wish to make here,” the Commander said. “Is that this is not only a war for the survival of our species, but one against the Ethereals. They have dominated and controlled all they encounter—except us. We resisted, and as a result, we are now what others undoubtedly look towards for inspiration. They fear what we are capable of, of what we have already set in motion.”

He allowed some time to think about that. “The question you all no doubt have right now is how I could know any of this. We have certainly extracted such information via our telepaths and interrogations, but it is not our greatest source. Not even the Ethereals are immune to the divide that exists within their Collective…” He trailed off.

“The time has now come to reveal that XCOM has been working with an Ethereal defector since the first invasion of Australia.”

The Commander allowed himself a smile as the room burst into chaos with everyone shouting questions and trying to be heard, and destroying any semblance of order. He glanced back at the entourage to see Saudia, for once, completely in shock. The blood from Qin’s face had drained and his generals looked especially stunned.

The Commander crossed his arms, waiting for it to calm down, but to his surprise, it wasn’t. He motioned to Patricia. “Silence!” She commanded, her eyes flaring purple, and within a few seconds the crowd quieted down and waited for him to continue.

“This Ethereal, whose name is Aegis, defected after he saw how our species had been treated by them. His reservations have existed for some time, and this was his chance to do something about it,” the Commander explained. “You will of course wonder why his involvement was kept a secret, and what we have done with the knowledge provided.”

He motioned to Patricia and Zhang. “We have pioneered technology used in ADVENT today, and even now are working on technology beyond even that of the Ethereals. We have provided ADVENT with crucial information about the aliens themselves, though not enough to implicate Aegis himself.

“But the question of why we have been silent? His reason was that his open involvement would escalate this conflict, and force us into an unwinnable situation. That,” the Commander punctuated with a fist to the podium. “Has not deterred the Ethereals. It has not stopped them from escalating this conflict. Nanoweapons; bombardment; terrorizing our cities and people. The Collective has escalated this war, and there is no turning back. They will not stop, regardless of his involvement or not.”

“But now,” he lowered his voice. “The time for hiding is over. As we speak, he is moving to destroy the Collective forces in Korea. Today, I can promise that the battle there will end. The Collective has feared his involvement, and now they will remember why they fear the power of an
Aegis.” The Commander looked towards one of the cameras.

“This is for the Battlemaster, and a message from Aegis himself. This is your final warning to withdraw your forces from this planet, or there will be consequences.” The Commander paused. “That is all. We will provide additional details once the current situation has stabilized.”

The Commander stepped down as the press rose up again, demanding answers, which he promptly ignored as he walked out of the room.

That had certainly been entertaining.

Although Saudia…he glanced over to see Saudia storming his way.

Saudia was going to have some questions.

***

Command Room, Mars Observation Station – Mars Orbit

11/27/2016 – 10:33 A.M.

Quisilia put his skill with words to excellent use.

“This is not good.”

The Battlemaster had to agree. Now they were in the exact position he wanted to have avoided, with Aegis now indisputably taking the side of the Humans. He didn’t know whether to be furious at Aegis doing something so damaging as that, or slightly relieved that Aegis was, for once, actually taking a firm stand for something. That at least he could respect.

Going against the Imperator was not done lightly, and regardless of his reasons, Aegis had now proven that his little stunt had not been a means of making a point, but something he felt strong enough to fight his kind for. But at the same time, it severely complicated things. The entire war effort, which had already had its fatal flaws exposed, was utterly useless against an Ethereal of Aegis’s caliber.

Human psions had already thrown a wrench into this plan, especially with them being completed sooner than anticipated, but they were nothing compared to an Ethereal. No, the entire Collective military was going to have to be reworked to take this development into account. He was now going to have to prepare for Ethereal-level threats, not just moderately powerful Humans.

Aegis knew his involvement would escalate the war. There was little reason to hold back against the Humans now. The Imperator might not like it, but that was too bad. The Humans, with Aegis, were now a threat. Perhaps not compared to the remaining Ethereals, but against the Collective forces. The entire strategy needed to be reworked and overhauled.

“I assume the plan has changed?” Quisilia asked.

To make matters worse, Japan was now under attack by not ADVENT, but the Chinese. An influential power of the old power structure of Earth, but one he hadn’t really bothered to consider in any serious capacity. And for that, he was paying the price. The Japanese defenses were already damaged by the previous nuclear EMP attacks, with only limited communication and Gateway support established.

Not even all the soldiers were armed. There were no mechanical units. Even with a technologically
inferior foe in the Chinese, against a neutered Collective, he was not happy with his odds, especially with the Chinese seeming to send a large portion of their army to invade. Worse, they were far more coordinated and organized than should be possible.

They, with inferior weapons, armor, and tech, were somehow managing to outflank, outshoot, and destabilize their defenses and he was somehow at a loss as to how that could be. Not even **ADVENT** was this tactically good, at least not with the speed the Chinese were performing. Already they were invading along the *entire* southern coast of Japan, and seemed to plan to surround the whole island.

A problem.

“Yes. The plan has changed,” the Battlemaster finally said. “Our strategy has proven to be ineffective. Collective forces have had their flaws revealed. I’m ordering a full retreat and full lockdown of the countries we do control with direct Ethereal and Cleanser Ship support. Our offensives in Korea will be abandoned, as will Japan-“

He was suddenly thrown against the wall, only managing to twist in the air, to face a visibly furious Caelior. The air was distorted around him, and the entire room was vibrating. Quisilia had one hand holding a blade, and was ready to spring into action. But Caelior did not seem to care. “Coward,” he spat. “And I thought you were actually one of our greatest champions. But no, at the moment you see the traitor reveal himself you run away!”

The Battlemaster *really* did not have time for this. “We are not pre-“

“No!” Caelior roared. “You are not prepared. You are weak. You are scared of defeat. You are the reason our Empire fell, because when faced with an adversary, you run. You flee like a scavenger. You are no Ethereal, much less worthy of the title of Battlemaster. You are an only fool who would be beaten by primitives!”

“Choose your words carefully, Little Storm,” Quisilia said, his voice noticeably humorous. The Battlemaster knew that he was fully prepared to attack if Caelior became more violent. “As the Battlemaster can attest, running into battle for the sake of it-“

One of Caelior’s hands clenched into a fist and Quisilia was suddenly lifted into the air and thrown back, though he vanished and reappeared right behind the irate Ethereal. Caelior did not seem perturbed, jabbing a finger at him. “And you are a bigger coward than he is. You hide in shadows and believe that you are powerful. You have been corrupted by the Humans, believe them worthy of our attention and preservation.” His voice turned to a sneer. “I feel like you would prefer them over your own kind.”

“At this moment, I certainly do, Little Storm,” Quisilia said. “Do you have a reason for your tantrum? It’s highly unprofessional.”

“And what are you going to do, Shadow?” Caelior growled. “Kill me? No, the Imperator will not allow it. I was chosen for a reason, and I am certainly more important to our fight than you will ever be. Far more than *him.*” He spat towards the Battlemaster.

Caelior spun towards the window. “You can have our useless soldiers flee from Aegis in Korea. But I will not let Japan fall to a mass of technologically inferior primitives. That you would even consider such a measure is disgusting.”

“There is a reason for that,” the Battlemaster stated, resisting the urge to unsheathe his sword. “When Aegis finishes with Korea, just *where* do you think he is coming next? Especially if you
“Let him come,” Caelior stated firmly. “I will do what you will not and kill the traitor and present his corpse to the Imperator. He does not intimidate me.”

The Battlemaster hesitated. “You really believe you can kill him?”

“It is not a question that needs to be asked,” Caelior sneered. “You could not. Quisilia could not. But I am more powerful than either of you, and one Aegis is nothing compared to the power I wield.”

“I do recall the Imperator wishing Aegis be kept alive,” Quisilia mused.

“That was before Aegis joined the Humans fully,” Caelior dismissed. “The circumstances have changed. I will not allow such an insult to go unpunished. One who has turned their back on our own can no longer be trusted.”

The young Ethereal turned towards the Battlemaster. “I initially believed that I could learn something from you, but that is clearly false. You are clearly of inferior stock, and why you were preserved is something I cannot understand. But I will not tolerate it any longer. When I return, I will take control of this military operation and you can go back to the Imperator like the failure you are.”

Coming from anyone else, the words would have been somewhat hurtful. However, from Caelior, they only sounded as powerless as the Ethereal himself was. Quisilia simply started laughing, but paused when the Battlemaster raised a hand. “Very well. On the condition that Aegis dies. Do that, and I will relinquish command to you.”

“As if I need your approval to do such a thing,” Caelior sniffed. “But it is certainly something that can be done. Make preparations for the transition of authority. That includes the Zar’Chon, Quisilia, as you’ll be under me when I return.”

“Oh, of course, Little Storm,” Quisilia said with clear mockery. “I, of course, live to serve your every command. Although, once you return, of course.”

“And you will address me properly,” Caelior stated, stepping towards Quisilia. “No more mockery. No more names. I will be in command, and I expect you to comply, else I will inform the Imperator of your insubordination.”

Caelior was truly lost if he didn’t realize that Quisilia only answered to the Imperator, not the Battlemaster. Quisilia was usually willing to listen to him, and offered his own advice, but unlike the other Ethereals involved, he was technically not under the Battlemaster. But he allowed Quisilia to have his fun.

“I suppose you should prepare your attack,” the Battlemaster said. “My-“

“Strategies, tactics, plans,” Caelior growled with a dismissive sweep of his arm. “We are not common primitives, Battlemaster, we are Ethereals. We do not outplan our enemies, we crush them. The only plan needed is how painful I will make their deaths. You have forgotten much from the Empire, Battlemaster. We are the masters of this galaxy, and we will not stoop to the level of our enemies.”

“Go then.” Was all the Battlemaster said. “Kill Aegis. Do it.”

“We will speak shortly,” Caelior said, and spun on a heel and marched away through the doors.
Quisilia walked up to him, twirling the blade in his hand. “I would say it’s a shame he’s going to die, but really, I would be lying. I’m surprised you let him go so easily, it’s not like you were in any danger.”

“Caelior is not fit to hold a position in the Collective,” the Battlemaster shook his head. “He has become a liability, and I have seen enough to know he will not change. He will die against Aegis, and we will be better off for it.”

“Still,” Quisilia mused. “He would have been useful.”

“No,” the Battlemaster dismissed. “He would not. That is why I allowed him to leave. He has no use to us anymore, and when he dies, it will only emphasize the need for change.”

“The defection of Aegis will be a large blow to morale,” Quisilia pointed out. “And the very public death of an Ethereal will not assuage that, no matter how necessary it may be.”

“I cannot kill one of our own for the crime of stupidity,” the Battlemaster said, looking out the window into space. “But I can have them die to it. The Collective will recover, as will our species.”

“Very well,” Quisilia sighed. “I will inform the Imperator of this. Although I suspect he will not object.”

“That,” the Battlemaster said. “Is very unlikely.”

***

Kumamoto – Japan

11/27/2016 – 2:17 P.M.

The Commander stepped outside the skyranger onto the shores of the now-captured Sapporo beachhead, as the Chinese forces deployed in square formations beside him and were already sweeping the streets of the city itself. The initial attacks had gone…almost suspiciously well, even with the massive advantage they had with the disrupted aliens and Chinese numbers.

“Geist, take Shun, Nuan, and Iosif towards the fighting,” the Commander stated, and the three dashed off towards the sounds of fighting in the center of the city. Patricia stepped up beside him, Creed and Carmelita close behind her. “Patricia, do your thing. We don’t need prisoners today.”

“Yes, Commander,” she nodded, and presumably began exerting her telepathic influence. The Commander then turned to see one of the Chinese squads walking forward to greet him.

“Commander,” the lead soldier greeted, voice heavily accented. “A pleasure. We have made excellent progress and we will likely have control of this city within the day. Similar offensives are already taking place across the country.”

“Yes, Commander,” she nodded, and presumably began exerting her telepathic influence. The Commander then turned to see one of the Chinese squads walking forward to greet him.

“Commander,” the lead soldier greeted, voice heavily accented. “A pleasure. We have made excellent progress and we will likely have control of this city within the day. Similar offensives are already taking place across the country.”

“Good,” the Commander said approvingly. “Estimated enemy defenses?”

“Their main weapon emplacements were taken offline by the EMP blast,” was the answer. “I estimate that they were not prioritized in the reconstruction process. They did not expect us to attack, and focused instead on basic power and living conditions.”

“Unlikely,” he agreed. “So what is the plan of attack moving forward?”

The soldier exchanged a look with one of his subordinates. “We will need for you to be connected
to the Tiāngōng Artificial Intelligence. From there you will receive further directions.”

The Commander blinked, and Creed stepped forward. “You have an AI?”

“Correct,” the soldier answered. “I am not aware of the specifications. You will need to speak to General Kong or President Qin if you wish further details. However, to be at your most effective, I highly recommend connection to the AI.”

Well, the suits weren’t sophisticated enough where there was a large amount of information within them. It was…likely safe to connect. But he would have to ensure that the suit wasn’t compromised when he returned to the Praesidium. The question of exactly how China had managed to develop an AI was one he would have to answer later.

“Alright, do it,” the Commander nodded. The process of setting it up was a short one, and rather anticlimactic aside from the voice in his helmet.

“Nationality identified: American. Ethnicity identified: Caucasian. Position identified: Commander of XCOM. Estimated spoken language: English – If this is correct, please state yes or no.” The voice was flat and bland, and didn’t have personality, but it was still neat to hear working.

“Yes,” the Commander said.

“Confirmed. Loading current objectives based on your current position. Based on previous combat data, you fight at long range with a sniper rifle and have unknown genetic modifications that improve mobility. Please confirm – yes or no.”

“Yes.”

“Objectives set.” The voice really was monotone. He couldn’t detect any kind of accent in it. It sounded purely like a computer, and he wondered if it sounded different in Chinese. “For your own safety, it is recommended that you follow all instructions. Failure to do so will lead to your death or equivalent disciplinary action by People’s Republic of China.”

The Commander smirked. “I’m not with China. I’m just helping out.”

“Noted. Documentation and systems updated.”

Huh, well it seemed it was more than a machine intelligence, which he had first assumed. He still wasn’t sure if this was an actual AI, or a machine intelligence. It seemed to be a highly sophisticated version of the latter, but not what he would define as a true AI quite yet. Maybe this would change. His HUD blinked and he saw the location he was being ‘sent’.

“Alright, I’ve got coordinates,” the Commander said to Carmelita and Creed. “Follow me.”

“I don’t think it wants us to follow you,” Carmelita said with a chuckle. “I think it actually has individual orders for each soldier.”

“The processing power must be absurd,” the Commander muttered. “Well, it’ll have to make do. Tell it to recalculate or something. Follow me. And be careful what you say, you could face disciplinary action by the Chinese.”

“Note: This policy no longer applies to members of XCOM.”

“Creepy,” Creed muttered. “I already don’t like it.”
“That is unfortunate. If you have issues with my performance, please inform your nearest captain.”

“Just…don’t distract me,” Creed sighed as he moved to follow the Commander. “I really hope this thing isn’t going to be an annoying GPS.”

The Commander almost hoped the AI would respond with a snarky comment, but it seemed its programming had limits. A shame. Hopefully JULIAN would have some more personality when he advanced enough. Shen was just going to love this new development.

With the AI watching them, they advanced forward into the city to test out its full capabilities.

***

**Kumamoto – Japan**

11/27/2016 – 2:42 P.M.

The aliens were disorganized and fleeing. The ones that were still alive anyway.

There was no Overmind to protect them here, although for what reason she couldn’t determine, nor really had a desire to question. It made her job easier, and she figured it was just better to accept some convenient gifts for once. Sacramento had been an excellent time of experimentation, and thanks to the Imperator…expanding her horizons, so to speak, she was getting better at the micro aspects of telepathy.

That China had some kind of machine intelligence was…surprising…but it was something they would fix later. As of now she was more than content to kneel on the ground and simply concentrate. An artificial intelligence could not truly predict psionics, and she had elected not to allow the machine in her suit.

The Chinese hadn’t really pressed her on that. They presumably knew her reputation, and were quite happily keeping their distance. Right now she was in…an experimental state. She knew she was most effective when her eyes were closed, removing the possibility of visual distractions; she could ignore noises fairly easily by now, but she wanted to get better.

A master of telepathy would not need to have their eyes closed, but simply be able to perceive the world immediately around them, and what was far beyond them. This was as good a time as any to practice that, and so here she was. The result was that her vision was…out of focus; almost blurry but not quite. Sound was muted as usual, and her telepathic range was noticeably smaller.

But she would be able to overcome that. Eventually.

“I am impressed they managed to convert the CODEX for their own purposes,” the Imperator said, materializing out of nowhere as before. Unlike the rest of her vision, he was in clear focus, and this time taking the form of President Qin, and standing before several blurry Chinese soldiers as if expecting them. “Such a feat is worthy of praise, especially with such limited experience.”

Patricia knew now she couldn’t speak openly, but he was no doubt listening in her mind now. He’d vanished for several days, but she had expected him to debut once more here. Where did they get one?

“From the Dreadnought fragment,” the Imperator answered thoughtfully, scratching his chin with
one hand. “In your rush to harvest as many resources as you could, XCOM failed to find the primary CODEX module, and when the Chinese acquired it, they immediately began working on it.”

Patricia felt a surge of annoyance. And they never actually thought that we could use it? They were still in the Council, and had an obligation to turn over something of that magnitude to us! Nationalist scum.

“Mhmm,” the Imperator turned to her, smiling. “The Chinese do have much to answer for here, but I suspect now is not the time to force amends. If you truly must do something, simply extract the information from their minds. There are those here who know more about this modified CODEX than they let on. They are needed in case something happens. Not all of them are common soldiers.”

And you know who they are.

“Of course I do,” the Imperator confirmed easily. “And in the interest of maintaining our…working relationship, you may have them. I have no reason to protect the Chinese. They have stolen as much from my species as XCOM. Do with them what you will.”

The names suddenly appeared in her head, along with the general area of where their minds were. They were close enough that she could easily reach into their minds and extract the secrets that rightfully belonged to XCOM. However, she didn’t know if this was the right time. This was a battle, and her efforts were unfortunately better spent against the aliens.

Then again…why artificially limit herself? She knew what she needed to do, and all that was required was the strength to do it. But she was going to improve during this round, and made herself stand, while maintaining her psionic focus. The first thing she did was locate the alien minds in her immediate vicinity.

Easy targets. Ones that were trivial to her now. Primarily Muton and Vitakara, they stood out with their practically screaming minds; filled with the white noise of fear. A much larger percentage were non-combat services, probably engineers and technicians to repair the damage caused by the EMP.

Now, this time she wanted to be slightly more strategic in her telepathic efforts. XCOM could use more alien specialists, especially with China having control of a modified CODEX. She smiled to herself as she made herself walk forward, almost absentmindedly. It was strange, almost like she was not in full control of her body, but just propelling it forward by willpower alone, as if she was an avatar in a video game; an outsider of her own body.

In a way, she supposed she was.

She knew where things were when she walked around; barricades, cables, rubble, things she wasn’t necessarily seeing in her current dream-like state, but that she was nonetheless aware of. And right now, that was unimportant as she worked. She first isolated the minds of the alien soldiers, and gave them a very simple command: Prepare the specialist aliens for transfer. Subdue, but avoid hurting them. Upon completion, eliminate each other.

Simple enough, and it would instill the desired effect in the soon-to-be captives. The good news for her was that they were clustered, and she simply sent out a sleep command, and stopped walking briefly to acquire a more basic command of their minds. She slowed their beating hearts and made them physically feel more at ease.
Everything is fine. Do not worry.

She hadn’t noticed it, but she realized that she had something of a guard around her now, and at the same time realized that she’d somehow slaved their minds to hers, and were at the moment connected to her own. Interesting; she hadn’t meant to do that, but it seemed to happen so… naturally.

“You are getting more skilled,” the Imperator complimented, stepping beside her. “The telepaths of the Empire were as you are now; in full awareness of the battlefield and those around them. These men and women do retain their minds in your presence, but they are now connected to your own. Utilize them as you would your soldiers, no speech necessary.”

Patricia found herself nodding at that, and out of curiosity decided to try some more experimentation. She wanted them to take cover at an upcoming intersection that had several alien barricades, and the moment the thought existed, they were already moving in that direction. Towards, she noticed, a half dozen Muton soldiers who were coming their way.

A near-oversight, but one she would easily rectify. Without ceasing her walk, she narrowed her focus on the bodily functions of the aliens charging forward. There were so many ways to kill, as she was finding out the more she experimented and thought about the gift she had been given. But sometimes the simplest ones were the most effective.

Stopping their hearts was such a motion, accompanied by one of her hands slowly clenching into a fist. No more blood pumped through their veins, and within seconds they were falling to the ground, clutching their chests and moaning in pain as she walked by. Well, they would have been moaning had she been able to hear them.

As it was right now, they were just corpses on the ground; their minds flickering out like candles one by one. More Chinese soldiers around her followed her march deeper into the city, and she decided to check on the status of her captives. Most of them were dead. Good, that meant that their primary objective had been completed.

She motioned towards the general direction of where their prisoners were, and a dozen Chinese soldiers wordlessly ran off to accomplish her unspoken directive. And as she had something of a reprieve, she figured she might as well take advantage of the information the Imperator had given her, and located the minds of the Chinese operators.

There was no psion to protect them, and their minds were easily taken over, and she didn’t waste time poking around heads any more than she had to. She was only there for the information XCOM was owed. Luckily their minds were easily navigable, and she finally found the information on their machine intelligence.

She smiled to herself, even as they were “ambushed” by a team of Borelians. A raised hand in their direction and the simple command of die immediately took care of that problem; it was so easy she barely was distracted from her previous work. It was a simple command, which was highly open to interpretation. Most simply killed themselves, others rushed in suicidal charges, other times their bodies just shut down.

One command; many outcomes.

Ah, there we go.

The Tiāngōng AI, China’s purported only hope of retaining any semblance of independence. Unfortunately the men were not engineers, so there were no technical details memorized, but there
was a great deal about what it was capable of, what the usage of it was, and where exactly it was housed.

Interesting that they knew where it was, but then again, it needed supercomputers to truly run, even if China had also managed to fully restore the power source of the Dreadnought. Keeping this thing secret from *everyone* was near-impossible, and many actually knew, even if they didn’t know what it was for.

The location was known. XCOM Intelligence could investigate later.

It seemed the Tiāngōng AI had two main purposes; to give China a tactical advantage over any foe, Human or alien, by tapping into terabytes of video, satellite, and personal data and allowing that to dictate their battle strategies. The AI was supposedly powerful enough to provide *each* soldier with personal objectives and real-time support, such as falling back, advancing, or anything in between. This was in conjunction with every other soldier, and such a level of coordination would be impossible for anything other than a computer.

XCOM could certainly use this for the JULIAN Project.

The second purpose was to have some kind of leverage over ADVENT. It was an insurance policy of sorts, one area where they were more advanced than ADVENT. Of course, this wouldn’t last, but China would leverage this to get more from ADVENT than they might normally. AI technology was useful, and useful enough to potentially gain psionic technology.

China, planning for the future as usual.

Both the Commander and Saudia were going to be interested to hear about that.

With that acquired, she relinquished their minds and returned on her warpath, the soldiers around her waiting for her unspoken commands. “You would do well to prepare,” the Imperator suddenly said. “The Commander convinced Aegis to intervene. Caelior is at this moment preparing to attack.”

Patricia looked at the sharply detailed figure amidst the blur. *And you are telling me this because? It is appreciated, and we will prepare.*

“I tell you this because he is coming alone,” the Imperator continued. “He has no support, no backup. He has unfortunately proven himself a liability to my plans, and it is in the best interests of both our species that he is disposed of. Aegis will certainly assist, but this is your opportunity to face an Ethereal – and win.”

Patricia cocked her head. *I doubt he’s left himself vulnerable.*

“The Little Storm is an arrogant child who failed me,” the Imperator stated emotionlessly. “You know what can defeat him. I am curious to see how you do it.” He vanished.

The Imperator was a continuous puzzle. But if nothing else, she knew that he wouldn’t interfere.

She stopped, and adjusted her helmet to contact the Commander. This was one thing he needed to know about.

***

*Kumamoto – Japan*
“[Two enemies located, recommend firing on leftmost alien. Species unable to be identified.]”

Nuan followed the instructions of the AI and fired at the alien specified. Unlike the intelligence, she could very easily see that it was a Muton, although its armor was not a pristine green and was covered in soot and dust. Not surprising that the AI had some kinks to work out, but Nuan knew that wouldn’t be a massive problem at least now.

Her euphoria over the whole situation was still strong, and the knowledge that China actually had been working on such a tool had only exuberated that feeling. Not even XCOM had something like this, and while it obviously wasn’t perfect, it was already proving to be exceptionally useful. She fired several shots into the Muton when it popped back out of cover, and combined with supportive fire from Shun, brought it down.

The other alien, a Cobrarian soldier, hissed as Iosif charged it swinging his mace towards its head. It slithered back and into a defensive barrier created by Iosif, with two more materializing to pin it in place. In desperation it tried wrapping its serpentine body around his, although all it achieved was getting itself shot, as the AI instructed her to provide supportive fire.

One strike on the head disoriented it, and as the body wriggled on the ground, Iosif pinned it in place with his foot before bringing the mace once more down on its head and crushing it into the pavement. The Chinese soldiers advanced forward down the street, past the corpses of the aliens they had already killed.

The AI itself had truly shown itself to be far superior to a standard commander. Much as she now respected the Commander, there was no way that he could have orchestrated such a thorough and meticulous invasion that even now was cutting through the disorganized alien line even with more limited weaponry than ADVENT or XCOM.

Geist had held back, refusing to allow the AI into his suit, and deciding to focus on providing telepathic support. Where that was, Nuan didn’t know, but for once she just wanted to enjoy the feeling of actually being in the position of power. Iosif was similarly enjoying the shift of the power dynamics, and Shun was like her, impressed with the Chinese Tiāngōng Program.

A good name too. She felt it was appropriate.

“[Immediate threats in the vicinity clear.]” it said. It did need a better voice. It reminded her of a GPS, only with less expression in the tone. “[Recalculating.]”

“Guess we keep moving until then,” Iosif said, joining her as they advanced down another street. The grey buildings around them seemed to have been largely untouched by the aliens during their occupation. Unsurprising, given the sheer number of them. They had converted some into bases or storage areas, but the majority were just abandoned.

“I’m surprised they are this disorganized,” Shun noted as she briefly knelt down by one of the Vitakarian corpses. “This is unlike the Collective.”

“That’s easy,” Iosif shrugged. “They weren’t prepared. This is close to their equivalent of D.C. coming under attack. Yes, they have a defense force, but they aren’t actually prepared.”

“A nuke did go off overhead,” Nuan reminded him.

A pause. “Fair point.”
“But they weren’t expecting us,” Nuan conceded. “Honestly didn’t think China would enter for some time yet. They’re cautious about entering this kind of situation.”

“Neither did I,” Shun agreed quietly. “But I am glad they did.”

They heard gunfire ahead of them as they got closer to the city center, and the AI immediately began giving her a short rundown of the situation. “[Soldiers of the People’s Liberation Army are currently engaged in combat with alien forces. Currently there are fifteen aliens alive, with one identified Muton and fourteen unidentified aliens. Engagement recommended. Please confirm yes or no.]”

She said yes of course, and was immediately directed towards cover behind several alien crates. There was a noticeable lack of cars or vehicles, or any sort of clutter on the streets, which Nuan figured was the result of the aliens clearing the cities out. But they had compensated with it by leaving clutter of their own in the form of barricades and supply crates which had been adapted as a kind of form of portable cover.

“[Target center-left unidentified alien,]” the AI ordered, helpfully flashing where it was located, and Nuan complied. It was a Borelian hiding behind several stacked crates, and her gauss burst forced it back into cover, although it didn’t do much to save itself as one of the Chinese soldiers tossed a grenade towards the alien, and it detonated right beside it.

Iosif charged two of the Mutons, swiftly lashing out and crushing their knees before finishing off with bashing their heads in. Yellow blood splattered from the caved-in skulls and Iosif was moving onto the other aliens even as the bodies were crumpling to the ground. As a result of his charge, the aliens near him were now in the unenviable position of getting out of there, and exposing themselves, or staying and almost certainly dying.

That was a choice she could get behind.

Nothing like the warm feeling of teamwork as she shot a fleeing Vitakarian in the back as Iosif closed in on the small group of aliens. They certainly worked well together, and for once, the aliens didn’t seem to be able to stop them.

However, she couldn’t quite ignore the fact that they were probably not going to like what had happened here. The alien response would be coming, and she was somewhat nervous as to what that would entail. This was a response that could not be taken lightly.

Zar’Chon’s Chambers, Mars Observation Station – Mars Orbit

11/27/2016 – 3:22 P.M.

No matter which way this ended, Ravarian felt like they would never really recover from the damage this day had caused. When he’d heard that one of the reasons for the limited invasion was because they didn’t want to ‘provoke’ Aegis, he had assumed there was something more. That may be the case, but as it turned out, that had been a very good reason to do so.

The Andromedons and Sectoids were not the Vitakara. Their people were not quite as sheltered and controlled. Even the Aui’Vitakar would be outraged by this…not to mention the entirety of the Runianarch and Lurainian. Even the majority of the Zararch were not privy to such knowledge, and right now…well, right now many of them were in shock that this was actually happening.

The Elders were supposed to be united, invincible, and to be obeyed above all else. How could you
feasibly react when seeing such a being fighting against you? Ravarian was more worried about just how badly this was going to shake the units on Earth. He was fearing sudden and mass defections once the news of this spread.

And this wasn’t something that he could just make disappear. He was going to have to deal with this very real and ugly truth. Unfortunately, he still wasn’t sure the best way to handle it. The Vitakara were going to have to be treated with some delicacy, and trying to cover it up simply wasn’t going to work in this case.

The hologram display on his palm flashed again, and he sighed as he saw yet another message from the Aui’Vitakar, and he sent his pre-written reply which was the equivalent of ‘We will discuss this later’, the same thing he’d sent to representatives from the Runianarch and Lurainian.

This was as close to a disaster as he had ever experienced in the Collective.

South Korea was done for. He’d seen Elders fight before, but it was clearly apparent that Aegis was one of the most powerful they had had. Anyone who could single-handedly defeat an army was one not to be trifled with. What was worse was that he already had reports of Vitakara turning on their brethren once they’d heard what was happening, Mutons refusing to fire at an Elder, and even Andromedons immediately surrendering and then shooting anyone who didn’t comply.

He didn’t know how ADVENT would handle that, but that, he felt was going to only escalate the growing divisions within the Collective. The Ethereals couldn’t just sit this one out like they had been doing; for once they would need to exercise some diplomacy if they wanted to retain some measure of stability in the Collective.

The Andromedons were already furious with the development of the Spectres, and the news that the defection of an Ethereal had been kept from them was not going to help. The Federation itself was formally demanding an answer from the Imperator himself, and some of the smaller Unions were openly suggesting that the Ethereals were no longer worth following.

That alone was troubling since the smaller Unions very often worked as mouthpieces for the major Unions to say what they usually wouldn’t. But what worried him about this was that it wasn’t just the obvious suspects saying this through their Union puppets, like Viarior or Apear, but the ones who were known supporters of the Ethereals like Stuirah and Jamoiar.

That was bad.

Very, very bad.

This entire situation could be summed up as bad.

And then there were the Sectoids.

Who were now preparing to hold one of the exceptionally rare conferences of the Hive Commanders, put forth by none other than 001 himself, as if it would be anyone else. And Ravarian suspected it was going to be due to the Commander’s little speech where he alluded to the suggestion that the Hive Commanders had been initially controlled by the Ethereals.

If that were true, he couldn’t really say. Quisilia hadn’t shared that with him, but he honestly wouldn’t be surprised at that. And having an Ethereal on his side suddenly gave his word a lot more weight.

The greatest threat Aegis posed, Ravarian was starting to suspect, wasn’t necessarily his power.
It was what he knew.

He very likely knew what the Imperator had planned. He knew the secrets of the Ethereals. He knew what they had done and what they were planning. He knew about the Blacksites and the stains of the species such as Isomnum and the Creator. And he had no reason to keep that a secret any longer.

Ravarian was curious now: What exactly had pushed him to not only leave, but willingly fight against his brethren?

Quisilia had a lot of explaining to do.

No, the Ethereals had a lot of explaining to do. And this time, he wasn’t going to accept dancing around the question. This entire situation was the result of at least one or more Ethereals fucking up, and while he would have been more understanding if they had…well, largely interacted with the collective they had made, they hadn’t, with only a couple exceptions. They would have to fix this themselves or watch it fall apart around them.

The reveal of Aegis had effectively changed how this war was interpreted now. It was no longer against a single species, but now against an Ethereal. No matter how much the Humans would deny it, that was what it had turned into. And said Ethereal now had an entire species backing him; one filled with psions and an ever-improving military.

Yes. This was very bad.

And of course Caelior was going to make it worse. Ravarian did not honestly know what he was thinking with his decision to go down and actually fight the Humans. Now was not the time for revenge, much as he would wish. The Collective itself needed to be stabilized before the focus could return to Earth. Ravarian was not entirely unconvinced that the only reason the Battlemaster was letting him go down was to die, especially since he had given orders to ignore any commands Caelior might send. The only thing he had allowed was moving Cleanser Ships into position over Japan.

Well, the Ethereal was heading down there now. Ravarian did not expect the young Ethereal to win, especially not now, but as much as he didn’t like the Little Storm, he still felt he was more valuable alive than dead.

He just needed to be taken down a notch. Hopefully a defeat would accomplish that.

In the meantime, he had to figure out how to put out the fire that was brewing in the Collective. He couldn’t ignore that forever.

***

Kumamoto – Japan

11/27/2016 – 5:00 P.M.

“Bring them in,” the Commander ordered Burning Sky as the AI updated him on the arrival of a UFO that had the same signatures as Caelior’s UFO. Thanks to Patricia’s…atypical warning, he’d figured that now was the time to bring in the XCOM squad specifically designed to bring him down. With Aegis also en route, after having pretty much demolished any kind of Collective attack in Korea, this plan suddenly became much more feasible.

Caelior’s greatest advantage was his power. Unfortunately for him he had the tendency to treat it
like a hammer or blunt instrument. He had very little interest in individual targeting, and would instead just destroy the entire building they resided in to kill them. His telekinetic manipulation also essentially granted immunity to physical projectiles.

But not energy weapons.

Jayhawk Team, the original squad for dealing with Caelior, was just such a squad for him. They would be interspersed throughout the battlefield so in the event that Caelior decided to target one, he wouldn’t take all of them out with one single attack. In addition, they would be planted far enough back where he couldn’t reach them immediately.

Then there was the Archangel team which would operate along the same concept. All armed with sniper rifles, they would maintain the height advantage from behind and far above the Ethereal himself. If all went well, the Ethereal would be under sustained laser assault, and the Commander trusted that his snipers would be able to hit even a moving target such as Caelior.

And since it appeared that the Overmind had given up protection of the Collective forces, the Commander was reasonably sure that if he had a strong enough group of telepaths, it might be possible for him to be defeated that way. That the Imperator himself had apparently told Patricia this made him suspicious, however.

Caelior was not popular in the Collective. Yet at the same time, it didn’t make sense for him to really be sacrificed for…well, that was the issue. Aside from being an internal problem, the Commander could genuinely not see any reason for deliberately giving them, and even encouraging them to kill any Ethereal.

Perhaps it was a test? Maybe the Imperator didn’t care about the preservation of his species as much as he assumed?

Something didn’t add up.

It would almost be better to attempt to capture Caelior, instead of killing him, but that came with its own set of problems, not the least of which was that they didn’t have the capability to hold an Ethereal for any long-term period of time. It was simply impossible, and aside from constantly keeping him sedated with psionics, one mistake would have him wake up and kill everyone.

Too risky, and the information Caelior could provide was unlikely to be more than what Aegis had already. Were the Manchurian Restraints fully complete, he would genuinely consider it a fitting punishment for the Ethereal, but alas, they were not. There was some merit in keeping an Ethereal for more extensive testing purposes, which he couldn’t do to Aegis, but Caelior would suffice.

But again, it came back to the lack of appropriate restraints. How, exactly, could they prevent an Ethereal from using psionics at any point? There was a reason they weren’t experimenting on psionically awakened test subjects.

It was safer just to kill him.

Aegis wouldn’t like it, but he knew that the possibility was likely when he defected. Granted, capturing him would have perhaps a more detrimental effect on the Collective, but ultimately, that was useless unless he could be contained.

“I sense him coming,” Patricia updated. “Geist, Fatima, you occupy him psionically. Don’t think you’ll break in, but he won’t be able to resist what I can do to him.”

“Affirmative, Psion,” Geist stated. “He will be occupied.”
Patricia had also developed some new kind of telepathy very recently. She had only given him the very basic overview, but it turned out that by attacking the lower brain, she could essentially manipulate entire bodily functions. He was impressed by that revelation, as it honestly sounded like something that Geist would have figured out first.

But then again, Patricia had a lot more experience. And it was difficult enough that even explaining the concept to Geist, or Fatima for that matter, hadn’t really led them to figure it out for themselves. Perhaps that could be solved with an information transfer, but that was something to figure out later.

“Coming up with our resident Ethereal,” Big Sky updated smugly. “He asked to be dropped off nearby.”

“Good timing,” the Commander said, spotting the UFO in the distance through his scope. “We’ve got Caelior incoming. Let’s see how this machine handles it.”

“Processing new information,” the machine intelligence said in the typical monotone. “Making adjustments based on previously acquired data.”

The skyranger roared overhead and Aegis dropped from it onto a nearby skyscraper. Without wasting any time, the Ethereal straightened and was already enshrined in psionic energy. Until recently the Commander hadn’t known Aegis even had a battle suit, but he supposed he shouldn’t be surprised by it.

It made a lot more sense than wearing the equivalent of a robe into battle.

“Heads up, he’s on his way,” the Commander stated as he saw Caelior deploy from under his UFO, with a new and fully repaired hoverboard-like device, and in the same battle equipment he’d seen before. “Jayhawk team, are you in position.”

“Affirmative, Commander,” Seraph Jim Cuban answered. “Preparing to ascend and split. We’ll let him get a little closer before opening fire. Or on your command.”

“Wait for my command, or Aegis’,” he advised. “Everyone else on the ground have lines of sight?”

There was a chorus of affirmations, and the Commander looked over to where Aegis was. “Do you think they’ll bombard us?”

“Quite possible,” Aegis confirmed, lifting one hand up. “But they will not be able to penetrate a psionic barrier.” As he finished, the sky itself was suddenly tinted with a very visible purple barrier that reminded the Commander of what being inside a deployable transparent bubble shield would be like. He briefly looked around and saw that the barrier seemed to extend as far as he could see.

Well, that problem was solved.

“Traitor!” The voice of Caelior roared and reverberated through the city. It must have been enhanced with psionics for it to actually reach his ears. Caelior himself was now speeding towards them, his body also wrapped in clear psionic energy. “You will die for this, Aegis! As will every Human here. Your attempt to challenge us will end!”

“Fire.”

Nine beams of sizzling red energy shot out from the city and above, including his own. Most hit his torso which sizzled the fabric away, though failed to actually penetrate the body. A couple
shots hit the helmet but also didn’t penetrate, and the remaining ones hit the hoverboard, causing it to spark and shudder.

Caelior disengaged and kicked the board away just before it exploded. “Die, Humans!” And with a wave of his hand, the front line of skyscrapers were shattered. The structures of metal, concrete, and wood were splintered as easily as glass. The unfortunate soldiers caught in the wave suffered mercifully little as the wave liquefied them before they had a chance to comprehend what was happening.

The hovering Ethereal didn’t stop as he motioned with another hand towards another large skyscraper, and clenched a fist, crushing it easily and letting the rubble fall to the ground, while he shot another telekinetic blast down a street, which also liquefied the soldiers as well as take out the bases of the buildings across that street.

The good news was that there were thankfully not large clusters of soldiers just waiting to be obvious targets. The Chinese soldiers were obviously firing at the Ethereal, but from what the Commander could tell, in very interspersed ways. Perhaps it had learned something; not clumping all soldiers together was probably the best possible scenario here.

Aegis had also apparently had enough and the city in front of Caelior was suddenly guarded by skyscraper-sized barricades before the buildings that were still standing. “Leave now, Caelior. This species is under my protection. I do not wish even you to die today.”

“Words from a traitor and fool!” Caelior sneered, settling himself on the ground. “You do not intimidate me. You are a broken remnant of what you were.”

“We still need lines of sight,” the Commander told Aegis, because as useful as the barriers were, as a consequence it blocked their lines of sight, with the exception of the Archangels.

The red beams still came down from sky, and with each hit, they distracted Caelior enough to where he turned to look to the sky…just as two more massive beams from the sea fired. Chinese vessels, using primitive laser tech. One hit Caelior directly in the back, spinning him around while the other collided into one of Aegis’s barriers.

“I will suffer this no longer,” Caelior growled, extending two hands to the ground, and one to the vessels out on the sea. The Commander watched with amazement as the ships in the distance crumpled as easily as toys and the destroyed wrecks simply sank deep into the ocean.

“Patricia, what’s your status,” the Commander said, as the ground began shaking. “We need him taken down now!”

“She’s busy,” Geist interjected as the shaking became more intense. “He is…stronger than even I anticipated. He is furious, and that ironically gives him more focus than he would otherwise. It is difficult to break his concentration, and he also appears to be simulating an earthquake right now.”

It certainly felt that way, and the shaking was becoming intense enough that it was impossible to actually hold his weapon steady. “Aegis!” He called to the other Ethereal. “Can you handle him?”

“I can.” The elder Ethereal waved a hand and a shimmering horizontal barrier materialized a short distance away from Caelior and slammed into him with enough force to send him flying backwards until he was almost in the water. Two more barriers materialized to the sides of him, but Caelior was more aware now, and leapt upwards just in time to avoid them.
He landed running towards the city, clapping two of his hands forward and sending a shockwave towards Aegis’s barriers, which did noticeably rattle them, and followed that by thrusting a hand down and creating another severe tremor in the ground. A box of psionic defenses suddenly appeared around the Ethereal, effectively trapping him inside.

“You think this will hold me!?” He yelled. “I cannot be contained by this!”

As a presumed response to that, he spread his hands all around him, and all of the rubble from the previously destroyed structures, corpses of Humans and aliens alike, as well as everything else rose into the air and at a gesture was flung upwards at an angle that would presumably bypass Aegis’s barrier and rain down on those behind it.

Aegis simply responded by extending the barrier upwards, angled in such a way that when the debris hit, they would just slide back down the psionic barrier to the ground. The Commander hoped that Aegis could keep this up a bit longer, but also saw from a glance above that the shield Aegis had erected for deterring bombardments was sustaining fire.

“Clever…” the young Ethereal rasped, seeming to take a moment to pause. “[Why did you leave us?]”

The Commander didn’t know if they’d been speaking the Ethereal language this whole time and he’d only realized at this point, or this was the first time. It appeared the knowledge Aegis shared was still good. A bit strange to know something he had never formally learned, but interesting nonetheless.

Aegis waited a moment before answering. “[Because there was no other way. The Imperator is no longer interested in our original mission. His efforts have been corrupted by something else.]”

 “[You are deluded if you actually believe that.]” Caelior snarled, clenching one of his fists. “[We will destroy the Synthesized as we intend. The plan for that has not changed, Aegis.]”

 “[And if that is the case, then why are we here?]” Aegis shot back. “[Earth! The Humans! Why are we fighting them? Why would we do so if we need allies and soldiers?]”

 “[Because...]” Caelior paused suddenly. “[The Imperator has his reasons, even if he does not share them with me. They pose a threat only he can see, or otherwise are a piece of a puzzle.]”

 “Good work, Aegis,” Geist said. “He is no longer focused.”

 “[That is what he wants you to think!]” Aegis insisted. “[I had made my concerns about our direction known to him, and as a result, he silenced me from it reaching others! If you ask him questions, you will receive the same treatment I did.]” To the Commander’s surprise, the barriers suddenly disappeared, including the ones around Caelior. “[Even if you kill me today, that will not change. All you will ensure is that our direction is irreversible and doom our species once and for all.]”

Aegis, what the hell are you doing? He was certainly good at putting the young Ethereal off balance, but he better be ready to throw up those barriers again. He couldn’t be fool enough to actually trust him, so it was probably a gambit.

 “[That’s...ah,]” Caelior suddenly stumbled forward, he gingerly put one hand on his helmet. “[You...what are you doing to me?]”

 “Thank you, Aegis,” Patricia suddenly said, and he saw the psion enveloped in purple walking out towards the Ethereal who had fallen to one knee. “I'll take it from here.”
While Geist and Fatima were focused on his higher brain functions, she attempted to puzzle out what went on beneath his surface thoughts. While he technically wasn’t protected by an innate telepathic defense, his other psionic abilities were making it more difficult for her to get her bearings on exactly what worked.

“This would be easier if you had spent time in an Ethereal mind before now,” the Imperator commented from behind her. “It usually is in this case. Rarely does one start with the base of the mind and work up.”

“Shut up and let me concentrate,” Patricia muttered, only superficially aware of the destruction going on around her. She was mildly surprised the Imperator was sticking around. If there was ever a time where he was going to backstab her and help Caelior, it would be now.

Yet for some reason, she doubted it. He had the attitude of one more interested in the spectacle than one who actually wished to take part in it.

She ignored him, and worked more to burrow deeper into the mind of the Ethereal and try and figure out how this actually worked. His brain was, as much as she could tell, highly energized at the moment. What passed for his heart was pumping rapidly and there was definitely something that was getting sent to his brain, a hormone or something like that.

“Correct,” the Imperator nodded approvingly. “Chemical impulses. Not the same as Humans, or any alien species for that matter, but they can be manipulated just like any other part of the body. These generally accompany feelings of anger and judgement.”

Caelior was shouting words now, and she only heard parts of them as she tried to figure out some way to…at least halt the impulses, if not change them. She knew there was some kind of impulse that would calm him down, but right now cutting the source of the problem at the moment would, at least, make him less volatile.

And…there.

Stop.

And there it went. Well, she’d done it and allowed herself to become slightly more aware of the real world. Aegis and him were exchanging words in their tongue, which she didn’t understand. The Commander did, but to her it was more of an oddly rhythmic harmonic exchange between the two beings.

“What are they saying?” Patricia asked.

“Aegis is trying to distract him,” the Imperator answered with a smirk on his face. “Appeal to his better nature or some other foolish gesture. I suspect it is purely for your benefit. Be prepared to
“Awfully callous of you,” Patricia grunted as she returned her attention to the lower mind of the Ethereal, one which was becoming easier to infiltrate and manipulate. “You certainly want him dead.”

“That he is succumbing to you is proof enough of his ineptitude,” the Imperator stated coldly. “I allowed him a chance to live, learn, and grow from the false prodigy he was. He has proven incapable of such. He no longer is worth my consideration. His purpose will be better served like this.”

“Good work, Aegis,” Geist suddenly interjected. “He is no longer focused.”

The world flickered around her and she became fully immersed in the brain of the alien. Each flickering line led somewhere different, and it was becoming a matter of plucking the strings to get a response. So she did, and she felt terror suddenly envelop the alien. “You caused his heart to skip a beat,” the Imperator explained. “Good.”

Alright, so that was what that did. Let’s see what happened if she plucked the string a little longer…

Her eyes saw the Ethereal fall to one knee, saying something in his language she didn’t need to know, as it was likely along the lines of “What are you doing to me?”

“I am going to kill you,” she said, lips curling into a grin, fingers twitching as she eased on the string that controlled his heart, allowing it to function briefly. She turned on her helmet mic to the rest of them as she began walking towards the fallen Ethereal. “Thank you, Aegis,” she said. “I’ll take it from here.”

She had broken the barriers, and now she had something she had once thought was a far-fetched notion – control of the mind of an Ethereal. Granted, it wasn’t necessarily in the traditional way, but it was control nonetheless, and this was something that the majority could not fully defend against. It appeared that telepathy was not as well understood by some of them as they would like to believe.

Patricia let the world briefly fade as she returned to the mind of Caelior more clearly, and saw the map of his brain clearly again, like working piping or an interconnected map. Nerves also fit this picture, and…well, she had access to them in their most basic form. No more simple commands that the brain would interpret.

No, this time the pain that would be felt would not be able to be described.

She extended one hand, palm vertical to the ground and simply commanded the nerves to briefly overload. Caelior suddenly howled in excruciating pain, and fully collapsed to the ground, shaking and yelling. That had not even been a second, and it had rendered the proud Ethereal a shaking wreck on the ground.

“You!” He shouted at the approaching Patricia. “What did you-“

“You are a test,” she answered, voice deeper than normal, indicating the depths of her psionic usage. She gestured with a finger and sent another microsecond of agony against him. He screamed again, convulsing on the ground. “I will acquire what I need from you, and then I will kill you.”

“I…I will not die like this!” He spat, trying to rise. Patricia narrowed her eyes, and decided to try another piece of his mind she hadn’t experimented with. She clenched her hand into a fist, and the
Ethereal began choking a few seconds later as his lungs refused to pump oxygen any longer. She let it continue for close to half a minute before she allowed him to breathe.

“Yes,” she said quietly. “You will die. It is only a matter of how long and how painful. You have killed many people. Today you’ve killed more. There will be justice for this, and it will be at my hand.”

“No!” Caelior insisted. “Aegis! He will not let me die! The Imperator! He will not let me die, not to you. Not to a Human.”

Patricia smiled under her helmet. “Is that right?” She knelt down closer to the Ethereal. “Then call for him, he will not answer you. You failed your mission, and you failed him. And Aegis…” she glanced behind her to see the other Ethereal and the Commander walking forwards. “Aegis will not kill you, no. But he will not stop me.”

“Patricia!” Aegis called. “Wait!”

Caelior chuckled. “Are you sure of that?”

She responded by letting him experience unfathomable pain for three full seconds, pulling back her fingers into a single fist as Aegis walked up to visibly demonstrate the control she had over him. “What?”

“You have beaten him,” Aegis said simply. “There is no need to torture him.”

“I am experimenting,” she answered, turning back to the Ethereal on the ground. “And since I have limited opportunities, I have to take what I can get. You would not be a viable…candidate, Aegis, and he does not deserve comfort, nor mercy.”

“And you plan to kill him,” Aegis interrupted. “Look at him! Does he pose a threat?”

Patricia looked back towards Aegis, and raised a fist as she once more cut off the airflow of the alien. “Not anymore,” she answered softly as the Ethereal choked behind her. “This is not up to you, Aegis, you knew what the consequences of this war were. Dead Ethereals. If you cannot accept that, then you should not have joined us.”

The Commander crossed his arms. “She has a point, Aegis. We’re not ending this war without a lot more dead Ethereals. I know you…don’t like it, but-“

“That isn’t the point here!” Aegis interrupted, pointing to Caelior as Patricia reluctantly let him breathe again. “You heard what he said! The Imperator was using him just as he does everyone! Think! The Imperator would not just sacrifice one with his power unless there was something to be gained from it. He wants him dead!”

Patricia could imagine the frown under his helmet as the Commander spoke. “You also make a good point. But from what we know about Caelior and his…actions.” He gave a dismissive glance towards the shaking Ethereal. “It could be simpler. Caelior was a loose cannon, a liability, and ultimately someone not worth keeping. While I wouldn’t sacrifice him, I can see why the Imperator would.”

The Imperator chuckled, appearing behind Caelior. “So unfortunate the Commander is on the opposite side. While predictable, he has a grasp of the choices one must make to achieve the ultimate goal.”

He was still invisible to the others, it seemed.
“Does it actually matter?” Patricia demanded, absently toying with the mind of her Ethereal captive, seeing what certain manipulations caused. “Even if the Imperator gains from this, so do we.” Caelior suddenly spat golden blood from his helmet. Hm, so that was what happened. She’d have to try that again. “And why should we spare him, Aegis? Really, why? He’s killed thousands and is not in any way remorseful.”

“I could say the same for you, me, or any of us,” Aegis countered. “And considering how much enjoyment you derive from your abilities, I hardly think you are in a position to judge Caelior.”

“That does not mean he should live,” she spat. “You just want to keep one of your kind alive!”

“And I do not support your method of execution!” Aegis countered, stepping forward, now notably agitated. “It is one thing to kill him, it is another to draw it out.”

“Then leave,” Patricia growled, sending another wave of agony to Caelior. “No one is making you watch. I will not waste this opportunity for the sake of my conscience. Too much is riding on what I can do, and this is one who deserves it.”

“Patricia!” The Commander interrupted, stepping forward. “Much as I would prefer to see him dead, Aegis does make another point.” He pointed at Caelior. “We do not needlessly torture our captives. You beat him. You won. We kill him or take him captive. Unnecessarily prolonging it is beneath us, do I make myself clear?”

Patricia stared at him for a few seconds, thoughts swirling around her. She almost wished that the Imperator would interject something. She wasn’t in the right state of mind to really be thinking this through. Every instinct in her screamed to kill the alien before her in as painful a method as possible, yet the Commander was her superior.

“Then what are your orders?” She finally said, the psionic power diminished enough that her voice was normal.

The Commander looked at the defeated Ethereal for a moment. “I heard the conversation, Aegis. Do you think he could be useful?”

“Possibly,” Aegis said immediately. “I do not wish to make promises, but he was a pawn of the Imperator. If he realizes that…”

“Not good enough,” the Commander shook his head. “I’m not betting on that. We need a way to secure him long-term, until this could be sorted out. The problem is that I don’t know how.”

“Patricia,” Aegis said, looking to her. “Could you keep him…sedated? Or kept unconscious?”

She took a few moments to look into the tangle that composed the mind of the alien. She pursed her lips. “Yes. I’m unfamiliar with how his mind fully works, so there might be complications…but nothing that would kill him. I could likely keep him in an unconscious state as long as it was intermittently maintained.”

“And by ‘intermittently’, you mean?”

“Don’t know,” Patricia admitted. “I’ve never done this before. Every few hours. Maybe longer once I get more experienced.”

“That would solve the short-term storage problem,” the Commander said slowly. “But keeping you as his personal psionic ward isn’t going to happen.”
“There are additional options beyond simply killing him,” Aegis pointed out. “There are the stasis pods. And there are drugs which are powerful enough to keep us sedated for long periods of time. Non-lethal solutions are not out of the realm of possibility. And…” he looked down. “He is beaten. He poses no more threat to us.”

“And what if it doesn’t work?” Patricia demanded. “You don’t know the risk he poses!”

“Patricia has a point,” the Commander admitted. “Caelior as it stands is still a danger. He’s unstable, even when he is supposedly an ally. I don’t see this improving with him being captured.”

“There…is a possible solution…” Aegis said slowly. “A procedure done to Ethereals who had broken our laws, but were not deemed worthy of execution. It would likely render him…tranquil, although destroy both his personality and mind in the process.”

“Really?” The Commander looked to Aegis. “And that’s better than killing him?”

Aegis looked almost sadly down at the Ethereal. “A blank slate is preferable to…this. Or to death. He could still learn. He would be more valuable to you alive this way. But there is no reason that must be the solution. He can be restrained without such permanent measures.”

“A shame the Manchurian Restraints aren’t ready,” the Commander mused. “He would be an excellent candidate. But if what you suggest is possible, this could suffice. If either the procedure fails, or he becomes too high a risk, we can kill him later.”

He nodded to Patricia. “We’ll take him captive. For now.” He shot a glance at Aegis.

She nodded and focused on the defeated Ethereal. It took several minutes to figure out how it would go…but she eventually found it, and unlike before, gradually manipulated it to send the Ethereal into a coma-like state where he would pose no danger.

You got off easy. You should be dead.

She stood, not feeling like this was the right decision, but knowing her place, and that was following her Commander. She only hoped he knew what he was doing, and this wasn’t going to end up being a Trojan horse.

“I can’t blame you,” the Imperator said, looking at her from behind the silent body of Caelior. “But you followed the orders of your Commander. I can understand and respect that. It is good you can restrain yourself when needed. Do not worry, I am sure the time will come for you to avenge the deaths he has caused. The figures behind this war are more than Caelior.”

She heard the skyranger overhead, and glanced up to see it landing near them. When she looked back, the figure of the Imperator was gone. A mild surprise, but right now she was ready to welcome only one voice into her head – her own.

“Guess we should get him ready for transport,” the Commander said as several XCOM soldiers walked over with restraints. “Let’s hope Vahlen is up for this.”

“What are you going to tell Saudia?” Patricia asked.

“That we’ve taken care of the problem,” the Commander answered. “I suspect she won’t like it, but Ethereals are our purview. Not ADVENT’s or China’s.”

“Does she know that?”
“I doubt it,” the Commander admitted whimsically. “But she will now. She probably would have killed him too, if you were wondering.”

Patricia sighed. “I really hope you know what you’re doing. He should be dead.”

“Maybe,” the Commander glanced to Aegis. “But we’ve made it this far by taking some risks. If this turns out to gift us an Ethereal weapon, I think it was worth it. But make no mistake…” he looked at the soldiers carrying the body into the skyranger. “If he becomes a threat, I will let you kill him yourself.”
This, Volk thought, had certainly been a very interesting couple of weeks. Quite a lot had happened after ADVENT had decided to launch attacks to reclaim America. That alone would have been interesting, but what made it very interesting was China suddenly coming into the fold, and launching an invasion to retake Japan.

That had been a surprise, but he had to admire them taking that kind of chance knowing that it was going to basically paint a giant target on their backs. He had personally never liked China; they were one of the worst kind of governments to exist in the world, and even compared to ADVENT they weren’t much better. He wasn’t opposed to them getting their due retaliation in time.

He did feel somewhat bad for the millions of Chinese people who were likely being drafted into service.

There had also been that one little detail that Asaru had somehow forgotten to mention to him. Namely that there was a fucking Ethereal working with XCOM.

Suddenly, quite a few things became clear.

He was, however, quite enjoying watching the media frenzy over the whole situation, not counting the fact that the other Ethereal had been taken prisoner by XCOM, but they were largely focused – or obsessed – with the Ethereal called Aegis. There was a whole range of theories being discussed from him manipulating XCOM, to this war not actually being against Humans, but him.

Volk took a sip of vodka from his glass. It was a bit early to drink, but he was quite looking forward to hearing how Asaru would spin this. The good news was that the command center was essentially completed, and he did have to admit that it was a major step up from his makeshift house. Moving all his things into the silver room was a bit strange, but he’d gotten used to it quickly.

Now he had his old TV before the far wall, with him sitting in his recliner while Asaru, in the form of a Vitakarian woman, and Joreal sat on the couch angled just beside his own. It was pretty small for Joreal, but Asaru seemed fine. He still hadn’t been able to really figure out just what the relationship between the two of them was. Asaru was very comfortable with him, resting her head on him, and he would have normally assumed them to be involved, were it not for the fact that Asaru was quite literally, not real.

It was weird.

Elena stood off to the side, leaning against a counter and seemed almost more interested watching them than the news footage. Volk, on the other hand, was more eager to actually see what they had to say. Considering how little convincing it had taken to get her here, he imagined she knew
exactly what they needed to discuss.

But he’d decided to illustrate his point by first showing the very public news footage.

He sat up, closing the leg rest and clasping his hands together. To his credit, Joreal didn’t really look comfortable and Volk figured he could be a little smug. “So, was this something that just slipped your mind?”

Joreal pursed his lips. “While I cannot speak for Asaru, I had no knowledge of this. It is… concerning.”

“As of course I knew about it,” Asaru stood up and looked down at Volk. Elena already had a hand on her pistol, although while her eyes were on the Ethereal projection, her body was angled towards Joreal in the event Asaru did something. Smart woman, but he doubted that would be necessary. “Something like this isn’t kept from me.”

“Wonderful,” Volk answered sarcastically, scratching his beard. “Now then, don’t you think this might have been some good information to share? In the interest of our alliance and all.”

Asaru tapped her chin. “For what it’s worth, I would have told you. However, I had my orders. The Battlemaster wanted this kept under wraps for obvious reasons, and I can only assume the Imperator agreed. You’re used to doing whatever you want, but that isn’t how things are done by the majority of beings in this galaxy. There are hierarchies, rules, and guidelines. And I have respect for the chain of command, even if it is rarely applicable to me.”

She finished with a smile. The supposed leader of the Ethereals had never really been mentioned much in the time she’d been here. It was always the Battlemaster who was the leader. From what Volk had learned, very few outside of the Ethereals actually knew anything about the Imperator himself.

Odd for a leader. Even Saudia was at least a public figure, even if her background was suspect. He didn’t quite like the idea of a supposed leader who seemed not to do anything, but Ethereals weren’t Humans. They probably did some things differently.

As for what she said, he was not exactly convinced of her honesty. It was plausible, but it would depend on how she took some further questions. “Well, in that case, why did the Battlemaster want it kept suppressed?”

One of her eyes widened, which was what he’d interpreted as a raised eyebrow. Or would, if Vitakarians had those. “Is that an actual question? If this got out, it would be…damaging for the Collective, to say the least. And would possibly inspire some unsavory and treasonous individuals to make some questionable decisions.”

“Yes, that makes sense,” Volk smirked. “But see, I’m not part of the Collective, remember? And on Earth, I need to know what I’m dealing with. How, exactly, do you think Argentina is going to react to this news? They might become spooked enough to report us to ADVENT or plain refuse to talk to us. If you’d have actually told me, I might have been able to at least get a pre-emptive start on damage control. Or maybe make them feel more inclined to trust you by giving up such important information.”

That did seem to make Asaru stop whatever she was going to say. “You’re rather bold, Volikov, but I suppose that is the point. And in this case, you are not wrong. However, this was a blanket command, and there were no exemptions.”
“Whatever,” Volk dismissed with a wave of his hand and a sigh. “But this is not happening again if you want this to continue, and if you have any, ah, ‘orders’, please get that cleared up immediately.”

“And what do you want, Volk?” Joreal asked. “An apology?”

“I already got an acknowledgement, which is fine for me,” Volk answered flatly. “But I want some answers now. Are there any other Ethereals or major aliens who are against you?”

“Not any worth worrying about,” Asaru answered, going back to sit on the couch. “However, in the interest of some transparency, there is a traitor Zararch agent we have been monitoring in the Collective. He is under control, however.”

That wasn’t really relevant, so Volk dismissed it. Better than nothing. “And how bad is it that Aegis is now openly against you?”

“Aegis,” Asaru said slowly. “Is very dangerous. In short, it is quite a problem. It is one reason the Battlemaster didn’t reveal the situation. He wanted Aegis to keep his anonymity in exchange for him being…uninvolved personally. Needless to say our operations have become a lot more dangerous. He is one of the most powerful Ethereals, and the capture of Caelior is…troubling.”

Well, some progress on that front. He was inclined to believe her here. “I suppose the more important question is if he can be beaten?”

“Anyone can be beaten,” Asaru snorted. “But yes, eventually. It will…not be easy.”

“So,” Volk crossed his arms. “Do you want me to kill him?”

Joreal laughed. “No offense, Volk, but you’re not…well, you would die.”

“Really,” was all he said. “Asaru, are Ethereals immune to poison? Can they hold against nanotech?”

“Our immune systems are excellent,” Asaru answered. “However, there are a few toxins and combinations which can be lethal to us in large doses or long incubation periods. And nanotech…mmm…I quite like your implication.”

“Good,” Volk nodded. “Now, do you want to stop toying around with ADVENT and actually get something done? Because I have ideas and if Aegis is as big of a threat as you say, there shouldn’t be any more holding back. Your army is, quite honestly, disappointing for a collective that is far more advanced.”

“The Battlemaster has realized the same thing,” Asaru nodded. “And now I am curious. What do you have in mind?”

Volk sat back down, lazily resting his head on one hand. “We need to be able to prove to Argentina that they can be protected. Right now your allies are failing miserably.”

“And how do you propose that be fixed?” Joreal asked.

“Start small,” Volk said. “Take some initiative. Argentina is our ally right now, but they are fickle and will fold if they feel threatened. Like most of this continent, they are more concerned about themselves than anyone else. Identify someone there first. An ally of sorts who is the kind of leader we can support. Protect him or her. Remove their opponents.”
“A coup then,” Joreal noted.

“Only if you’re an idiot about it,” Volk shrugged. “And while you’re doing that, I would suggest some very public figures in ADVENT start suffering accidents. I’m under the impression your Sectoids are good with bioweapons, right? Maybe wipe out the soldier population. Make ADVENT weakened in this part of the world. Something to show you can actually protect them against Aegis and ADVENT.”

“ADVENT will notice this,” Asaru said thoughtfully.

Volk sighed. “You have no idea what a proxy is? That’s what we are for. Human terrorists who can take the brunt of the blame. That’s the point. Yes, ADVENT will respond, but it won’t be as large of a response as if aliens just started appearing. And for as powerful as you are, you aren’t as subtle as you think. I’m Human. I know what they’ll focus on. I can make attacks look like they came from terrorists, not aliens.”

Asaru smiled. “I like you, Volk. Tell me then, what exactly will you need?”

***

 Alien Containment Chamber, the Praesidium – Classified Location
11/28/2016 – 1:11 A.M.

At least one amusing thing had come out of this situation. Vahlen’s response had been rather hilarious.

“Vahlen, we’re heading back,” he’d said. “Ready the alien containment chamber. I hope you’re ready to analyze an Ethereal.”

“Excellent!” She’d answered, before pausing. “Wait. Alien containment…did you…?”

“Yes, we’re bringing Caelior in. Alive,” he’d confirmed. “Aegis believes we can hold him. At the very least, he can be analyzed by you. Assuming you’re up for it?”

There had been some shocked silence. “I…I’ll get everything ready. A live Ethereal! I mean another one! One I can test more freely.”

Now he, Patricia, Aegis and the rest of the Internal Council were standing outside the containment chamber where Vahlen and her team were running a series of tests and taking samples on Caelior himself. Patricia was still in her armor and her eyes were closed, as she kept the Ethereal in a sedated state.

“I really hope this doesn’t backfire,” the Commander muttered, and he pressed a button which asked for permission to speak to Vahlen and her team, all of whom were in full sealed surgical gear. Interrupting them out of nowhere would have been a bad idea.

Vahlen pressed a button on her suit to communicate with them as the Commander asked the first question. “What’s your status on him?”

“Physical scans are complete, and we’ve been exploring ways to try and make him less…dangerous,” she answered, walking over to the glass and stripping the gloves from her hands and moved a screen showing a highlighted representation of the Ethereals body. “While I have extremely limited experience with Ethereal anatomy, at least in performing surgery, thanks to Aegis we do have some options in how we handle him.”
“I don’t suppose we could send him into a coma?” Jackson asked hopefully.

“Not with what we have right now,” Vahlen shook her head, glancing back at her team. “I mean, theoretically I could try and accomplish something like that, but it might kill him. Which I’m assuming we don’t want.”

“Preferably not,” Aegis agreed. “Dr. Vahlen, I presume you have mapped out his nervous system?”

“Yes,” she nodded. “I think we have the same idea. The largest threat Caelior poses to us is his telekinesis. This is something that is traditionally accompanied by gestures.”

“Not necessarily,” the Commander reminded her.

“It makes it easier,” she amended. “Much easier. Take those away, and even if Caelior wakes up and wants to kill us…he won’t be able to do it well unless he concentrates.”

“And Caelior cannot concentrate easily,” Aegis sighed. “He lacks the discipline, and disrupted as he is, taking away his movement would cripple him immensely.”

“Well, good I guess,” Jackson said slowly. “So what, we cut off his arms?”

“No,” Vahlen shook her head. “We paralyze him.”

Hm. That was a good idea. “Can you do that?” The Commander asked. “More importantly, can it be reversed?”

“Yes, and yes,” Vahlen confirmed, pointing at the screen. “It’s a matter of severing specific nerves, which can later be reattached. It would, of course, take him time to adjust, but until then he would be completely paralyzed.”

“How easily could he be put into a coma?” Zhang asked.

“If we had the right materials, easily,” Vahlen said slowly, looking to Aegis. “I did receive the list of drugs you used in the Empire for surgery on Ethereals. The problem is that for some, they are materials that simply don’t exist on Earth, or will take days to synthesize…assuming we get them right the first time. We still have the issue of long-term storage.”

“In that capacity,” Aegis corrected. “There are still many unused containment pods here. Some are large enough to fit him.”

“‘Fit’ is a stretch,” Vahlen disputed slowly. “They...could work. Barely. But they weren’t designed to hold an Ethereal and we haven’t used them since we stuck some of the old German government in them. And those were already prepared for Humans. Ethereal physiology is different. It’s not exactly a one-size-fits-all pod.”

“I can assist with that,” Aegis said. “However, before such an action is taken, I want to speak with him at least once so he is aware of what is going on.” He looked to the Commander. “That is acceptable, yes? Assuming safeguards are in place, there should not be a reason to not inform your captive of his immediate fate.”

The Commander thought about it briefly. “Fine. Only once Vahlen has ensured that he is wired with neural explosives, has paralyzed him, and we have multiple telepaths in his mind. I don’t think the procedure you suggested will be necessary if he cooperates.”

“To be completely safe, I would suggest that none of us be in the room when we speak to him,”
Zhang stated bluntly, eyeing the surgery taking place. “If it goes badly, there is little to stop him from at least killing those around him. At minimum, Commander, you should participate at a distance.”

“I would be able to protect you,” Aegis insisted. “In the condition Caelior will be in, his offensive ability is severely stunted. He will be more open to speaking to someone present, not through microphones.”

“I will repeat once more that he should not be here,” Zhang directed icily towards Aegis, turning his eyes towards him. “He is a severe security risk, no matter the precautions. Without the Manchurian Restraints, we can never safely have any Ethereal held here.”

“As long as he is mentally dominated, this isn’t an issue,” the Commander defused, raising a hand. “However, Zhang has a point. This highlights an issue with how this was conducted. We need a proper and dedicated facility for this kind of storage and experimentation. Housing it all under the Praesidium is putting everything in one basket. If something goes wrong, everything is crippled.”

“That is something to be discussed later,” Shen agreed. “But at the very least, we have options until the Restraints are complete, crude as they may be.”

“Well, he is contained for now,” the Commander said, rubbing his forehead. “We’ll meet later to figure out the finer details of this situation. But we’ve all done exceptionally today, even if it had a strange ending. You’re all dismissed if you want. I’ll probably be here all night.”

“I think we’ve all got things to do,” Jackson yawned. “I’m guessing I’m going to be getting a few calls from Saudia asking what the fuck we’re doing. Can’t wait to deal with that. Probably stuff about Aegis too, ugh.”

“Sleep is for the weak,” Zhang said gruffly, looking around. “Or so I’ve heard.”

They all tiredly chuckled. “We’ll all get some sleep eventually,” the Commander said, returning his gaze towards the surgery. “But unfortunately not quite yet.”

***

Westminster, London – England

11/29/2016 – 2:01 P.M.

There were quite a few immediate ramifications after XCOM had, for some reason, taken Caelior captive. Saudia had personally been surprised to hear that, and immediately suspicious as to what they were planning. She didn’t believe that Aegis had some kind of telepathic influence over the Commander, but he definitely had enough leverage to make suggestions to him.

Ultimately, it was one in a very long list of things that needed to be addressed, along with China and their battlefield intelligence, and speaking to Aegis himself. The revelation of an Ethereal working with XCOM had sent shockwaves throughout the world, even more so than…well, anything she could probably do.

Japan was still being cleared out by China and ADVENT’s own special forces, but there was practically nothing left to really challenge them anymore. The revelation of Aegis, and the capture of another Ethereal had seemed to shatter the will to fight for the aliens. Indeed, she had multiple reports of aliens all across the world surrendering because of Aegis.

A surprise for sure. But one she wasn’t going to complain about.
On top of *that* it appeared that President Qin’s aggressive speech towards the neutral nations was already bearing results. One of them was that Prime Minister Killian Bennett of the United Kingdom had invited her to speak with him immediately. Given how close this was to that event, Saudia was suspecting that the topic of conversation would be rather…focused, and also implied that this had been in the works for some time, and only now were they going through with it.

What would be interesting was if Bennett was wanting to form an alliance like China, or to join ADVENT completely. Given that the UK was one of the last primary powers of the EU, and forming an alliance independent of the EU was not likely, she believed the latter was more likely.

Which would hopefully kill the EU for good.

Westminster was unsurprisingly packed with media and a few protesters which Saudia barely paid attention to. The media shouted a series of questions that, for once, weren’t all accusations or innately hostile. But about Aegis, the state of the war, Caelior, and XCOM. Reasonable for once, but there were scheduled press conferences, and they would be able to ask those later.

Provided they weren’t already answered when Laura or herself gave another update. She really wanted a break from the conferences, but it was her job to keep people informed. Hopefully now there would be something of a lull. Plenty of time to regroup, expand, and improve. If there was ever a time to put some of the later-stage plans into action, it was now.

Their guide led them through the Palace, and it was suitably impressive. Saudia had never actually been inside it, although she’d seen pictures. They weren’t going to meet the Queen, but Saudia really didn’t care about that to begin with. Under ADVENT such positions would be abolished regardless, so she didn’t feel the need to devote any more energy to it than was necessary.

Still, she could definitely appreciate the aesthetic and luxurious surroundings. It reminded her of the Bastion in ways. A shame they’d had to leave it, but the fears that the aliens would attack it seemed somewhat unfounded, as the skeleton crew guarding it hadn’t reported anything unusual. Maybe there could be a better use for it.

Their guide opened another door, and allowed Saudia to step inside another ornate dining room, of which the only occupant was the Prime Minister himself. Killian Bennett, one of the most contentious politicians ever to grace the country. A former SAS operative who had retired surprisingly early to enter the political sphere, he had quickly established himself as a blunt and unapologetic man who had led to some controversial actions.

He was, for one, a sharp critic of the United Nations (before their destruction), Russia, and China, and a proclaimed Euroskeptic, though he had never done anything beyond trying to limit the relationship the UK had with the EU. Simply leaving, as he had said, would cause more problems than it was worth.

His other actions were that he had something of a hatred towards all religion, and he had been one of the first to lead the banning of Islam as an allowed religion, and had also drafted legislation limiting churches of all religions and establishing registries for all those practicing. Most people would wonder how such a contentious man, who was disliked by England’s main political parties, even if he ran as a Tory, could be appointed to such a position.

Ironically, Saudia knew quite a bit about the *how* because it had been EXALT who had initially propelled him to power. She had approved that particular op largely due to his anti-religion and anti-EU tendencies, and being a former special forces member, he had the correct mindset to make harder decisions in the future.
Putting him in charge had been simple. There was no shortage of blackmail in Parliament, and with a few exchanges of information, and helping Bennett forge some valuable connections, he was soon Prime Minister. He was actually rather good friends with Elizabeth, and the two had communicated regularly, he of course being unaware of her true loyalty.

Unfortunately some of his ideology was going to heavily conflict with ADVENT. But he might be able to overlook that in the name of security against the aliens. The man retained a good portion of his strength, and was likely physically stronger than her, even hidden by his business suit. His cunning eyes followed her as she entered, light reflecting off his bald scalp.

“Chancellor Saudia Vyandar of ADVENT,” the guide introduced. “Chancellor, Prime Minister Killian Bennett.”

“A pleasure,” Saudia answered, nodding her head.

“Appreciated,” Bennett answered, flicking a hand. “Leave us.”

Once the door closed, he gestured towards a chair at the end of the ornate table. “Please sit, Chancellor, we have much to discuss.”

“Certainly,” Saudia sat down on the red-padded chair. “I admit, I was not expecting this so… quickly.”

“I had been considering this for some time,” he answered with a grimace, sitting to the side of her. “But there is something about being called out by the Chinese that is intolerable. Much as I dislike them, they are correct for once. I have personally grown tired of sitting and waiting, while the politicians bicker and fight over the ‘ethics’ and ‘morals’ of ADVENT. It is irritating.”

“I can imagine,” Saudia rested a hand on the table. “So let us not waste more time. What is it you wish from us?”

“I want the UK to join ADVENT,” he stated bluntly. “Unlike China, I am under no illusions as to the direction this world is going. I have no intention of being a world power, and ADVENT will be. There is no need to take a symbolic alliance when joining would be better for both of us.” His brow furrowed. “While I don’t agree with every ADVENT supports, it is far better than the vast majority of authoritarian pretenders who believe power for the sake of it is good governance.”

Saudia smiled humorlessly. “If that was really their goal, they never cared about governance in the first place.”

He smiled and nodded. “Touché, Chancellor. I am not concerned with the media storm that will occur over this. I have been called every name in the book. No, the issue will be the politicians. As much as I wish it, I cannot simply force the UK to join ADVENT.”

Saudia crossed her legs. “And what do you have to subvert that? I can provide my support, and I believe the majority of the public support action.”

“Yes, they do,” he said knowingly, lacing his fingers together. “Parliament is composed of elitist snobs, partisan hacks, and the occasionally unscrupulous politician. I’m sure you’re aware I’m friends with your Intelligence Director. We go way back.”

Saudia kept a straight face. “She’s mentioned it.”

“I could force a vote, and likely get some use out of them one last time,” he continued. “But the thing is, I feel like such an action would be illegal under ADVENT, and knowing Stein…well, I
doubt she’d really care and send me to prison anyway.”

Technically, Saudia wouldn’t have had a problem with it. Treduant had done something similar to force Congress to cooperate, and then had the offending politicians promptly arrested once ADVENT had been established. When working in a corrupt system, some rules had to be bent. If it was for the greater good, Saudia could justify it. But she was interested in what else he had to counter this.

“So what is the alternative?” She asked.

“I can call for a referendum,” he answered. “A public vote with a simple question: Should the UK join ADVENT? I have the authority to do that, and Parliament would…well, they wouldn’t necessarily be forced to follow it, but refusing would be political suicide.”

“You’ll face opposition,” Saudia noted. “The EU will not like it, and neither will the media.”

He smirked. “Do I look like the kind of person who cares what they think? They don’t matter, and both of us know it. But what I want to do before I announce this is I want everything in place. I want the transition to be as smooth as possible. I want ADVENT Peacekeepers ready to round up the criminals in my government and take them far away. I want our military fully upgraded within two weeks. I want every aspect of the UK to be ready to transition. And I want to present this publically so the people know the plan and can have confidence in it.”

He smirked. “Only an idiot would call for something like this and not have a concrete plan of action.”

“That can certainly be done,” Saudia nodded. “I believe French and German representatives could also be useful, as they have also gone through this process. They can paint a more accurate picture of life in ADVENT than the other media can.”

“Certainly,” Bennett agreed. “And I would ask for some…tech demos as well. For our police and military. See what they can get out of this.”

“This is all well and good,” Saudia cautioned. “However, what if it fails?”

“Then it fails and I’m surrounded by shortsighted idiots,” he sighed. “But I don’t think it will. The people are fed up with the stalemate. The EU won’t do anything. Parliament won’t do anything. I can only do so much. I am confident that the UK will join ADVENT once the referendum is in place.”

“From the numbers I’ve seen, your country is not in an uncommon position,” Saudia nodded. “Now, you do need to be aware that your country will have to conform to ADVENT law. That means no more royalty, no more banned religions, and you’re going to be watched a lot more closely. You are aware of this, right?”

“I don’t have anything to hide,” he sniffed dismissively. “Not anymore. And as for religion…well, maybe that can be negotiated. There is no reason for Islam to exist, let alone be supported by the government.”

“I agree,” Saudia nodded. “However, based on history, every time someone has tried to kill a religion, it keeps coming back. Islam will fully die one day, as will all religions, but it will be a natural death. If the practice is peaceful, then the people are allowed that freedom. And all of them will be on registries of course. Religious violence is dealt with quickly and swiftly.”

“At least you have some ways of curtailing it,” he sighed, rubbing his forehead. “Very well. It’s not
worth causing a fight over. As for the Queen, she doesn’t have any power anyway, not really.”

“I should clarify,” Saudia shifted in her seat. “The monarchy will no longer be supported at all by ADVENT. The royal family after joining will simply be a rich family with an interesting past. If they wish to preserve that heritage, that is their right, but their importance will fade over time. The government will not pay for them any longer.”

“Come now, Chancellor,” he chided. “While I personally think the Royal Family thinks a bit too much of themselves, they are part of our culture. It’s something worth keeping around, even symbolically.”

“And they can keep that symbolism,” Saudia nodded. “But they will not be supported or recognized by ADVENT. We are past the times of kings and queens; of the monarchy. It will remain as part of history, but as with the Japanese Emperor, such positions will no longer be treated with any form of recognition. Besides, I’m certain the Royal Family is rich enough to keep themselves going without government assistance.”

Bennett pursed his lips. “I do not exactly support that, Chancellor. Nor will many people, I suspect. But I suppose there are costs to world unification. This issue is not one worth risking the world for. I do appreciate you reminding me of these things,” he smirked. “I admit, I have not been this enthused about working for some time. It is good to work with someone competent.”

“That is one of the core values of ADVENT,” Saudia agreed. “I’m glad we see eye to eye on this. Now, if you’re willing, we can begin working on how your country will be integrated into ADVENT.”

Alien Containment, the Praesidium – Classified Location

11/28/2016 – 5:22 A.M.

Keeping Caelior down was something that didn’t take too much effort once she got the hang of it. It was enough that she no longer had to have a constant hold on his mind, but could set it to stay unconscious for a certain amount of time. It was only roughly a half hour or something like that, but it did allow her a mental reprieve.

Patricia really wanted to get out of her suit, but knew she had to stay ready until he was dealt with one way or another. He still should have been killed, but if the Commander was set on keeping him alive, he wasn’t going to be a problem on her watch.

“He’s been speaking to you, hasn’t he.”

Patricia looked up at Aegis, who was still watching Vahlen and her team finish up the surgery. “Sorry?” She didn’t know if she’d misheard or not, since her concentration and lucidity had been slipping as the hours passed. It wouldn’t be out of the realm of possibility for her to hear Aegis say something he hadn’t.

“The Imperator,” Aegis repeated. “He’s been speaking to you.”

The way it was phrased did not make it sound like a question.

Patricia pursed her lips. This was certainly awkward, because she knew that Aegis was going to jump to conclusions that weren’t true. “Yes. Though he’s just as vague as ever.”
“You should not be speaking to him.” Aegis stated. “It is dangerous.”

Patricia rubbed her forehead. “See, I would be more inclined to believe you if he’d…well, actually done something to me. But he hasn’t. He’s been more of a help than an actual enemy.”

“I suspected as much,” Aegis said, his voice weary. “One does not simply learn how to manipulate the lower brain in a matter of days. He gave you the knowledge himself.”

“The basics,” Patricia shrugged. “As far as I know, there isn’t some hidden command that turns me into his servant.”

“He is playing you, Patricia,” Aegis said, finally turning to her. “As much as you don’t think he is manipulating you, the Imperator is one who does not do something without a reason.”

“Fine,” Patricia stood, crossing her arms. “So tell me, what is that reason? I can’t figure it out, but I can’t say it’s actually bad. He’s also not tried to convince me to betray XCOM, if you’re curious.”

“He is normalizing himself,” Aegis insisted. “You are becoming comfortable around him. More open to his suggestions. That is all he wants. He is deliberately not acting like the being you are expecting. He knows what to say to you, what to do to direct you down a certain path.” His voice became darker. “And your failure to see that is a problem.”

“You still haven’t answered by question,” Patricia reminded him. “Why would he bother to do this? He knows I won’t betray my species. And if that were the case, why isn’t he doing it to the Commander, or Geist, or any other psion?”

“Because the two you mentioned know better than to speak to him alone!” Came the heated answer, one which was causing some heads nearby to turn. “That is how the Imperator works. Beings do what he wants, and believe they alone came to that conclusion when in reality they were always following the path the Imperator created for them.”

Aegis paused. “He is a gifted speaker and his charisma is unmatched. Yet he is extremely dangerous. You have changed and you do not even realize it. You have become more comfortable with your abilities, more distant from the ones you cared about; you were willing to kill a defenseless Ethereal to practice. You were not always like this.”

Patricia glared at him. “No, Aegis, no I was not. I’m not the same person I was months ago, and the woman I was back then is not recognizable compared to the one at the beginning of this war. People change, which I guess isn’t common for Ethereals, but on Earth that happens. And that ‘defenseless’ Ethereal you want preserved was capable of destroying entire fleets.”

“He was no threat,” Aegis repeated. “Thanks to you, ironically.”

“He was our enemy,” Patricia stated, eyes flashing. “As are all the aliens that attack us. If I am going to use my powers, I am going to cause the most damage with them. And that extends beyond telepathy.” She tapped her head. “Perhaps you’re right. The Imperator did encourage me to not feel as guilty about what I was doing. That does not mean he was wrong.”

“You admit he has directly changed your own values,” Aegis said incredulously. “How can you not see an issue with that?”

“Because he pointed me in the direction, I ultimately made the choice,” Patricia answered. “And why should I have an issue with it any more than if you were responsible? The Commander himself has made me reevaluate what I believe. Yet I don’t see you having a problem with that.”
“But this is-“

“The Imperator, I know,” Patricia interrupted. “And no, that isn’t a problem. Not really. If he was going to do something to me, he would have done it by now.”

“He already has,” Aegis said. “And he is succeeding.”

“Succeeding at what?” She demanded angrily, her sleep-deprived mind wanting this to be over. “Tell me what!” The last word was a shout, one which had been psionically amplified. She shook her head, trying to stop the instinctive psionic usage. “He probably has a plan. Maybe. I don’t know anymore. But I’m aware of the possibility. But unless you can tell me why I should avoid him, then I don’t see a reason to do so just because you don’t like him.”

There was a pause between them. “Besides,” Patricia said wearily. “If there were an actual problem, the Commander would have probably brought it up with me.”

“The Commander has too much trust in you,” Aegis said, turning to look back through the glass. “He isn’t blind, but he trusts you to handle it. I will advise him to talk to you, but he cannot grasp the Imperator. You cannot either without witnessing him in person.” He looked down. “I cannot give you answers, Patricia, only warnings. Ones I suggest you heed unless you want to become the enemy you are fighting against. Perhaps that is his goal for you.”

“Your input is noted, Aegis,” Patricia said after a few minutes. “But I can make my own decisions. I can think for myself.”

Aegis didn’t sound surprised, but she could sense his disappointment. “I sincerely hope that is true, Psion. For all our sakes.”

***

Busan – South Korea

11/28/2016 – 5:55 P.M.

There was definitely a party going on somewhere. In fact, there were quite a few taking place across the base. This was one of the cases where Duri felt that some celebration was in order, but really, after seeing one single Ethereal single-handedly end the battle he felt a more appropriate reaction would be a strong drink.

If he drank, that is.

He wasn’t exactly the partying type; that was for kids and extroverts, of which he was neither. Not to mention that Officers actually had things to do and look over in the unlikely event something came up. Then there was the whole situation with China, which had been the second-most surprising thing to happen that day.

Strange days indeed.

Even more strange was that they had actual alien captives now.

“They’re big,” Beatriz noted as they looked over the aliens sitting alone in an improvised jail cell. She’d volunteered to come with him when he said he was going to look over the prisoners, and since everyone else was out celebrating, he’d said he’d like the company. “Bigger than in the scope, anyway.”
They definitely were. All of these aliens were Vitakarians, four to be precise. They really were big, the smallest was over two meters, and the bigger ones getting uncomfortably close to two and a half meters. Even sitting down they were close to eye level. It was strange, and made him very aware that he really hadn’t seen them this close when alive before.

“It’s definitely brighter when they’re alive,” Beatriz noted, after looking them over for a few seconds.

“What is?” Duri asked, glanced towards her. Both of them were in their armor, though she’d forgone the helmet as it wasn’t a combat situation. He noticed she had a tendency to bite her lower lip when she was thinking about something.

“Their eyes,” she nodded towards them. “They’re brighter when they’re alive. I’ve only seen them up close when dead. They still glow, but it’s definitely not as strong.”

“Huh, neat.” Fun fact of the day brought to him by Beatriz.

“Checking up on our xeno friends?” A voice interjected, and Duri turned to see the Officer he assumed was overseeing this area. “Officer Roe, Alien Containment Officer.”

Duri saluted him, more as a gesture of courtesy. “Officer Duri, Carolus Squad. I didn’t know we had that designation.”

Roe chuckled, his voice rumbling. “A fairly recent addition. Promotion for me. I had some history as a lawyer, and worked as an interrogator for a time; thus, I was pegged as a candidate for this position if it was needed. Aliens surrender, and boom, ‘promotion’. Still,” he glanced to the aliens. “They haven’t given me much trouble, and there aren’t many in this area.”

“When you say ‘not many’…?”

“Approximately two hundred and four for Busan,” Roe clarified. “Not all kept in the same place, and there’s more down the coast. I think there are some in America who actually surrendered. Crazy what’s happening. That Ethereal showing up changed everything.”

“So what do you know about these ones?” Beatriz asked, motioning to the aliens in the cell.

“Runianarch soldiers,” Roe answered. “I have it segregated by race and species. We even have a few Andromedons we’re looking after. But this group is all Vitakarians. A couple rooms down are a few Borelians, and you get the picture. This group is three females and one male, not really much to say, honestly.”

“A high number of females,” Duri noted with a raised eyebrow. “That normal or just coincidence?”

Officer Roe pulled out his tablet and began tapping on it. “That sort of varies depending on race. For Vitakarians, its pretty split, with it tipped towards a male majority. Dath’Haram, all four of them, are evenly split. I have yet to see a single male Borelian or Cobrarian.” Duri could imagine the amused smirk under his helmet. “Never let it be said that the aliens are misogynist.”

“Huh,” Beatriz said, sounding fairly interested. “That’s interesting. I wonder if it’s a cultural thing.”

“You know, we can hear you,” one of the female Vitakarians said from the cell. “And honestly, the fact that most of you Humans were actively discouraging half your population from participating in military operations until recently is utterly baffling.”
“Well, well, you can understand me,” Roe was definitely smiling underneath. “And here I thought you couldn’t understand me, with your whole silent routine.” He glanced up at Duri, switching to Korean. “[English seems to be the only Human language they know. I normally speak that around them. Sometimes takes them a while to respond.]”

Duri furrowed his eyebrows. “[How many of them speak English?]”

Roe turned towards the aliens. “[Likely a lot more than they let on. I’ll know more once I get a Priest in here to help. I’ve got one coming soon.]”

The female Vitakarian narrowed her eyes to blue slits. “What are you saying?”

“Don’t ask me,” Beatriz shrugged. “I don’t speak Korean.”

“That I’m going to be getting a telepath soon so I can determine exactly who cannot speak and who is faking it,” Roe said, taking off his helmet and smiling. “It’d save us both a lot of time if you would have said something at the beginning.”

“Maybe.” She stood to her full height, easily towering over them. “But I did not know what to expect. How you treat aliens is unknown to us.”

“Well good, you trust us enough to speak,” Roe said, walking over to her. Duri joined them in taking off his helmet as well. “Now, are there any more of you who can understand us?”

“Velonion knows bits and pieces,” she said, motioning to the male Vitakarian. “I’ve been trying to teach him when I can. The others don’t know any, unless they’ve not mentioned it.” She broke off and spoke something in their language. The other Vitakarian females responded in the same way. It actually didn’t sound…alien. Just like another language, like French or German. Incomprehensible to him, but not something he would raise his eye at.

“No, they only know a few words,” the Vitakarian confirmed. “Essentials. ‘Yes’ ‘No’ and the like.” A pause. “‘Die’ and ‘Kill’ as well.”

“Good, good,” Roe made notes on his tablet. “Now, I don’t believe I know your name. Want to share?”

“What’s going to happen to us?” She said instead. “We want to see the Ethereal.”

Roe pursed his lips, looking thoughtfully at them. “See, this is the situation. Believe it or not, ADVENT wasn’t aware there was an Ethereal working with XCOM until you were. And while I’m sure the Ethereal would be happy to meet you, he is currently with XCOM and presumably handling important work there.”

Duri was half-surprised that he felt bad for the alien when her face visibly deflated at Roe’s words. “Right now, you are a prisoner of war,” the Officer continued. “You surrendered, so already you’re in good standing with us. Right now things are somewhat confined, but once we have appropriate facilities, you will be moved there. Until then, you’ll be fed, clothed, and treated well, provided you don’t cause trouble for us.”

The Vitakarian considered that for a moment. “And if we…do cause trouble? And what does that actually mean?”

Roe’s smile didn’t waver. “It’s fairly simple. Follow orders of ADVENT personnel, don’t attack us, and very important – don’t lie. We’ll know if you do. You don’t have to have important intel to survive, but…let’s say that sudden lapses in memory will reflect poorly.” He tapped once on the
tablet. “And if you cause too much trouble? You’ll be executed or sent to our scientists to experiment on. They’re always needing live specimens.”

She blinked rapidly several times. Maybe the way they conveyed fear? “I understand,” she finally said after a brief pause. “I will make sure they do as well.”

“Excellent!” Roe set the tablet to the side. “Now, we do know that the Ethereal was the primary reason you decided to surrender. We are looking into perhaps transferring you to XCOM custody…provided certain criteria are met.”

“And what are those?” Was the immediate demand.

“I’m afraid I can’t say,” Roe said apologetically. “We can’t have people attempting to cheat, so to speak. I’m sure you can understand that we can’t send everyone to XCOM. But follow the rules, answer our questions honestly, and your chances will improve.”

“And what happens in the meantime?” She asked. “Do we just stay in a building and do nothing?”

“Of course not,” Roe dismissed. “Nor do we necessarily need you for manual labor, we have criminals for that now. No, you can…treat this as an opportunity to learn. Despite what your Collective propaganda likely tells you, we are not something to be feared…well, unless you are our enemy.”

The Vitakarian seemed to attempt to smile. “They did not even give us that. We knew nothing about your species except how to kill you. Any additional research was done of our own volition.”

“Interesting,” Roe made a note. “Aside from occupying yourselves, we have many human academic professionals who would certainly be interested in your species. Humans, as you should understand, don’t necessarily have a positive view of aliens. You will have some opportunities to dispute that, unless you wish to be difficult.”

“And I suppose you don’t hate us?” She glanced to Duri and Beatriz. “Or you two either?”

Roe’s smile didn’t waver, but his eyes grew harder, as did his tone. “Let us say that I don’t hate most aliens. I reserve that for a very specific few, namely the ones behind this invasion. You are just soldiers. You follow your orders. You have no say in how the war is run. I don’t hate you for doing your job.”

“Nor do I,” Duri added. “But honestly, I wish you had never come here.”

“I don’t hate you personally,” Beatriz said slowly, crossing her arms. “But I don’t like you. Your kind have killed us for no reason. You won’t, and should not be welcome on our planet, regardless of if you were following your orders or not.”

The Vitakarian just nodded at Beatriz. “I understand that.”

“And there you have it,” Roe said, lowering his tablet. “Now, I don’t believe I got your name?”

“Runi’cairu’inth’a.”

“You go by your middle names, correct?” Roe asked, looking up. “Cairu?”

“Yes.”

“Excellent,” he made some final notes. “You won’t have to stay in that cell too much longer.
You’ll all be moved shortly. We’ll have more questions later, but your cooperation has been noticed, and ADVENT thanks you for it.”

“How very nice of them.” Duri almost blinked at that. Was she really being sarcastic?

Roe just laughed, and Duri was almost hoping nothing too bad happened to her. He doubted it was going to be as fair as Roe was promising, but if they cooperated, he didn’t see a reason to mistreat them. That was what the aliens would do to them.

ADVENT was better than that.

At least he hoped it was.

***

Alien Containment Chamber, the Praesidium – Classified Location

11/28/2016 – 11:59 A.M.

“I am concerned about Patricia,” Aegis said. “She still does not fully understand the danger communicating with the Imperator poses.”

While waiting for Caelior to become conscious, Aegis had decided to inform the Commander over an apparent recent conversation. Truth be told the Commander had suspected something like that was going on given how deflective Patricia had been in response to some of his questions. However, from what it sounded like the Imperator was deliberately avoiding giving a sensible motivation for his actions.

The Commander did agree with Aegis that it was not safe, but at the same time, he trusted that Patricia would be able to handle it. “She’ll be fine. If the Imperator wants to communicate with her, that isn’t something we can really stop.”

“Unfortunately not,” Aegis exhaled, with some resignation. “But you should discourage her from such interactions. She will listen to you more than me, and even you must be becoming concerned about her state of mind. She has become more violent.”

Indeed he had, and that was something he could justifiably come down on her for. To an extent he could tolerate some experimentation, but drawing it out for the sake of it wasn’t professional nor efficient. At the very least, she needed to become better at letting him know exactly what these training sessions would entail. He didn’t care much about how aliens felt, but more about his own people trying to emulate Ethereals like Isomnum.

The Imperator may be pushing her this direction, but the Commander wouldn’t have been surprised if she’d begun doing it anyway. She was like that, once an idea got into her head she would try every logical way to make it work. The source of the idea could have been anyone, and in this case it so happened to be the Imperator. Considering the things Geist had done, it could have easily come from him.

Mhmm, Geist. He was going to need to deal with him for his actions. Patricia at least had some rules about how she respected the minds of her soldiers. She still had her own ethics, even if Aegis didn’t seem to think so right now. Geist, on the other hand, did not.

Still, that was not the main issue with Aegis’s suggestion. “You still don’t really get how Humans work,” he sighed. “Telling someone ‘don’t do this’ and not giving them a sufficient explanation doesn’t work with most people. They just do it without telling you, and it’s not like Patricia is
actively seeking him out.”

“And how long until she does?” Aegis inquired.

“That would depend on her reasons,” he answered evenly. “The Imperator has been rather free with his information. That would be an acceptable reason. If it’s more malicious than that, then we’ll have problems. But that doesn’t address my point. How, exactly, would I make sure they didn’t communicate?”

“At this point in time there is nothing,” Aegis admitted. “However, the Manchurian Restraints—”

“Will not be used that way,” the Commander interrupted. “Nor is that necessary. My soldiers are not children, Aegis. They can think for themselves, and I’ll respect that. I trust Patricia until she gives me a reason not to. She’s been here since the beginning. She’s not going to go running off just because the Imperator was nice to her.”

“I still do not believe that is his goal,” Aegis said, as Vahlen signaled that Caelior was waking up. “He is trying to change her; not convert her. That is arguably just as dangerous.”

“We’ll continue this later,” the Commander said as they both stepped into the Containment Chamber where Caelior was strapped to the operating table, with all his arms tied behind his back. The table had been oriented vertically so he could face them upright when he awoke. Without his helmet or armor, he didn’t look nearly as intimidating.

Ethereals really did look different under their armor and robes. They didn’t really have necks, but just one elongated head. The mouth was definitely not in the original species, as it seemed a noticeably thin and alien addition; lipless and small, as well as placed fairly far down the ‘face’.

Honestly, all these restraints were probably unnecessary since Vahlen had said the procedure was successful and Caelior was completely paralyzed from the neck down. Hopefully he wouldn’t be too violent upon waking up. “He should be fully conscious shortly,” Vahlen said, walking up to them, back in her standard science uniform. “Everyone ready?”

“Yes,” the Commander confirmed. “Patricia, Geist, and Sussan are monitoring him. They will inform me if anything is wrong.” He tapped his earpiece, opening up a channel. “Everyone set?”

“Yes, Commander,” Patricia confirmed.

Caelior suddenly moved his head, his voice making a groaning sound. The glowing orange eyes of the Ethereal opened, blinking even in the dimmed light. “XCOM…” he noted groggily, likely seeing him and Vahlen, he moved his head. “Aegis.”

“Caelior,” Aegis inclined his helmet. “Do not be alarmed. They do not intend to hurt you.”

Technically correct, but they wouldn’t hesitate to kill him. “I can’t move,” he said, voice growing louder, realizing the paralysis. “I can’t feel anything! What did you do to me?!”

“A precautionary measure,” Vahlen explained calmly trying to keep him from panicking, as she stepped forward. “You have been medicinally paralyzed from the neck down. Considering your abilities and previously hostile intentions towards us, we couldn’t take the risk. This is reversible, and if you cooperate, we could allow you to move again.”

The golden eyes narrowed, and the Commander raised a hand. “I would caution against attempting to use any of your…abilities.” He motioned to Vahlen. “This was not the only precaution. You have been fitted with neural bombs. These aren’t powerful, but are more than sufficient to kill you.
They can be detonated manually, or they will go off if it detects you have reached a certain threshold of psionic usage.” He gave a grim smile. “I would not push this boundary.”

Technically, it wasn’t actually connected to a sensor. While Vahlen had conceptualized the idea, there hadn’t been time to fully fit him with it. However, his brain was hooked up to computers which monitored his psionic usage, and sending the data both to Vahlen and Geist. If it reached a certain threshold, they would manually detonate the explosive.

But Caelior didn’t need to know that.

“Why didn’t you just kill me?” Caelior said wearily, looking to Aegis. “To gloat? To torture me like this? Trapped in my own body?”

“Because you do not deserve to die, Caelior,” Aegis said.

“I came to kill you,” Caelior spat. “I have disgraced the Imperator, I failed him. I suppose that is why he didn’t intervene. Death is better than living as your captive.”

“No,” Aegis shook his head. “You were sent down to die. No one believed you would win; not the Battlemaster, not the Imperator. You were sacrificed. You were supposed to die, Caelior, but I have convinced the Commander to change your determined fate.”

“Impossible,” Caelior disputed. “I would not be sacrificed like some pawn. I am one of the greatest weapons against the threat we face. I would not simply be... discarded.” Despite his words, he did seem to be slightly unsure.

“Were you aware that the Imperator has been communicating with Patricia?” The Commander said. “Helping her? Encouraging her? He was the one who informed her, and through her, us, that you were coming.”

If Caelior could have stiffened, he would have. “No. He would not do that. Why would he do that? He is no traitor to us.”

“Because the Imperator does not care about you, or any of us,” Aegis explained. “Everything is a tool or pawn to him; something to use and discard when needed. Every action is used to enact his nebulous agenda. The Imperator has abandoned our original goal for years, Caelior, it was ultimately why I left. He is too focused on the inner galaxy and Sovereign Ones. The Synthesized are not his primary concern.”

“That can’t be,” Caelior said slowly. “If that were the case I would have heard about it. Someone would know. Why didn’t you say anything if this was true?”

“Even you must have noticed how things were changing,” Aegis took a step towards the young Ethereal. “The Imperator slowly and quietly cut off my access to information. I was no longer informed of Collective developments. There was only one way to fully defy him, and that was leaving. There were other reasons.”

“Like what?”

Aegis hesitated, then continued. “He never told you the truth about how you were used. None of us did. Lies among the few of us that were left became less and less acceptable to me, but it was important for the Imperator that the lies be maintained.”

“What are you talking about?” Caelior demanded.
“You are no legend, Caelior,” Aegis said sadly. “You have been and were a propaganda tool of the Empire. Your legend was one of an artificial making, conceptualized by the Division of the Battlemasters, Shadows, and Overminds. The Ethereals needed hope, and the story of an Ethereal prodigy single-handedly challenging the Synthesized was the answer.”

He paused. “But it was just that: A story. Your victories were not of your own making. You believe you single-handedly changed the tide of battles, when you had been conditioned to ignore the influence of Overminds who assisted you from afar. You were sent into battle against Synthesized already weakened and scattered. Your true victories existed, but were far outnumbered by those engineered to grow the legend of Caelior.”

“No…” Caelior shook his head, voice in denial. “I’ve used my power. I remember the battles! I made the decisions! It can’t…it can’t have been fake.”

“You thought you did,” Aegis said. “But you are no telepath, Caelior. Your mind was not trained to resist the influence of the Shadows. Your power, Caelior, is real. Very real. But your accomplishments are not. They never were.”

Caelior was silent for a few minutes, head looking towards the ground. The Commander almost felt sorry for him. He didn’t really know what the appropriate reaction was when you were told that your life was an engineered lie, but this seemed to be fitting. If Ethereals could cry, the Commander would not have been surprised to see him shed some tears.

It is difficult for him to show it. Vahlen telepathically communicated. But he truly is shaken. He’s thinking now; about everything he’s gone through. He can sense Aegis is telling the truth, and that is scaring him.

“Then…why?” Caelior finally asked. “Why even bring me?”

“Because you are powerful,” Aegis answered. “The Imperator wanted you as a weapon, a tool, nothing more. But you were consumed by your legend; you believed yourself special and superior to others and those who knew the truth simply played into it as a source of amusement. You were not considered highly, Caelior, because of your attitude and words. But while you bear some of the blame, it is the result of the lies of others. For that, I am sorry.”

“And I fell right into it,” he said bitterly. “Why did…no one ever tell me? Did they believe I could not handle it?”

“I do not know,” Aegis admitted. “But I doubt many of them cared enough about you to even think that was important. You were not a friendly personality; you drove people away with your arrogance and superiority. I suspect your actions led to the Battlemaster deciding you were a liability to him.”

“I…think so,” Caelior said slowly. “I did threaten him. Quisilia mocked me for it, but I didn’t consider him worth paying attention to. He promised that if I killed you, I could assume control of the military.” A pause. “I was a fool.”

Yes, he most definitely was. The Battlemaster had definitely allowed him to die. Or would have, had they not changed the script. It seemed that for the first time in his life, Caelior was actually trying to think about something.

“What is going to happen to me?” Caelior didn’t sound angry, violent, or defiant, just defeated. “Do you intend to torture me? Experiment on me? Extract everything I know? I am aware of how XCOM operates.”
“That,” the Commander said. “Depends on your cooperation. You are too much of a risk to hold indefinitely, as it stands now. Even bombs won’t render you harmless. However, there is something under development that could allow you to live more…freely. But until then, we will ask some questions, either from Aegis, myself, or Zhang. Vahlen will run some tests on you and take samples. Then you will be placed in a Stasis Chamber until the Manchurian Restraints are completed.”

“And even if these…Restraints are developed, then what?” Caelior asked. “You would not wake me up if there was no plan for me?”

The Commander and Aegis exchanged a look. “Commander, do you believe he would have a place with us….with appropriate precautions, of course?”

The Commander appraised the Ethereal. He’d seen Caelior’s power; Aegis wanted for him to join XCOM. He wasn’t sure that was a good idea, but he was too powerful to really ignore as a weapon. Yet at the same time, he likely had as little tolerance for incompetence and childishness as the Battlemaster had.

Then again, that wouldn’t be a problem with the Manchurian Restraints.

“That depends,” he said slowly. “Aegis gave me a detailed dossier on you. You are an Ethereal supremacist, are overly emotional, and became enough of a liability that the Battlemaster deemed you better dead than alive. I have no place for someone like that. The question that should be asked is first, is that even something you would want, and second, if you are willing to change.”

“I…do not know,” Caelior admitted. “I do not know what I want. Everything I was is…not real. I don’t know what to do.”

“You can decide that when the time comes,” Aegis said. “In the meantime, you can stay here; think over what you learned, ask questions, grow. You can be what you thought you were, Caelior, but it must be your own decision.”

“First I need to know if you will cooperate with us,” the Commander said. “Everything else is contingent on that.”

“I have little choice,” Caelior answered. “But…yes. You will not have to force me. I do not like feeling trapped in my body, so I would ask you place me in stasis soon. This feeling of helplessness is…disconcerting.”

“It will not take more than a few days,” Vahlen promised. “And when you awaken, you will have feeling back. It may take some time for your body to readjust, but by then the Restraints will be applied and your mobility will be permitted.”

The Ethereal sighed. “Very well. Begin asking your questions.”

Abuja – Nigeria

11/29/2016 – 2:12 P.M.

The recent developments had definitely changed things up, to put it mildly.

Betos felt like she was running on empty for the vast majority of the time, between trying to manage the military effectively and safely, trying to curtail the more outrageous demands of the
SAS leadership, and on top of that work with Macula to try and establish the SAS as an alien-enhanced power without ADVENT noticing for a while.

Luckily, Macula had already come through on at least securing Abuja. He had brought in a very small number of his own alien forces, and placed enough sensors, scouts and some kind of holographic technology which would ensure that ADVENT was not going to be able to know what actually was going on in her little corner of Africa.

Her soldiers were somewhat apprehensive of even the limited number of aliens wandering around, but there wasn’t too much interaction with them, although some of the Borelians were helping train her soldiers to more effectively use their own advanced weaponry, namely the plasma rifles, railguns, and camo-tech.

It was all very impressive, and her soldiers were already as, or more, advanced than ADVENT on a technological level. The trick would be to apply this to the SAS as a whole, which was going to be a lot more difficult to do without attracting suspicion.

But right now, she didn’t care about that.

One Ethereal was now captured by XCOM, and one was working with them.

He had failed to mention several things to her.

The building Macula was staying in was a renovated house, which looked normal enough on the outside until you realized it was a holographic front, with a full alien cube-like structure underneath. It was fairly small and open, with the first ‘floor’ only consisting of his holographic devices, haptics, and computers. The space above that room was presumably where he slept.

The moment she stepped through Kellani stepped forward, one hand already moving towards his Titan Hammer. The Oyariah, Mac’kellani’hegemon, was more intimidating to her than the Ethereal. He seemed to fulfill the role of a bodyguard, but he was definitely not just some muscle. He towered over her, standing at least three meters high, but was surprisingly articulate which had been strange to hear from the stony alien.

“State your business, Lady Betos,” he said, having adopted her unofficial title given by Macula. Why he’d chosen that she didn’t know, as she would have preferred her military title of Marshal. But of all the things to complain about, that really wasn’t something she could make herself care too much about.

“Aegis,” she said. “Please move aside.”

“Yes, you may step aside,” Macula said walking over to her. “Lady Betos no doubt has some questions.”

Kellani stepped back, his hand falling to his side. “As you decree, Elder Macula.”

“Right,” Betos crossed his arms. “So were you ever going to mention this to me? I think it might have been important.”

“Unlikely,” Macula answered. “The main reason is that Aegis was not relevant, nor was his unfortunate defection. His influence would have been limited, though now that he has appeared, that has clearly changed.”

Betos sniffed. “Clearly.”
“That, Lady Betos, is not our goal,” Macula continued, raising a finger. “Right now we need to improve the SAS and ensure that ADVENT does not become too aware of our presence. Aegis does not have an impact on that, and I also say that may serve as a distraction for our own operations. They will be too focused on him.”

Macula did have a point there. ADVENT had a lot to focus on. “There is also the issue of China, and their repurposing of the Dreadnought Fragment CODEX,” Kellani rumbled. “Tensions between China and XCOM may become a focal issue.”

“But what about Chinese attack on Japan?” Betos asked.

“While I agree with Elder Macula that it is outside our focus,” Kellani said. “She raises an important point. It is a country that we cannot really afford to lose.”

“It will be reclaimed eventually,” Macula said. “It was…surprising, but this is a simple setback. Our work here is more important.”

“But that Ethereal was captured,” Betos pointed out. “That…can’t have been planned.”

“Yes, Caelior,” Macula paused, almost thoughtfully. “While his capture is unfortunate, nothing much of value was lost. I suspect the Battlemaster determined he was a liability and had the moron kill himself against Aegis. He was never much for thinking through his actions. His loss is not a detriment.”

Kellani didn’t say anything, which was somewhat telling. Normally he would repeat something Macula said, or agree with him. That he didn’t indicated that Kellani took the event a little harder than Macula, although it could be due to how the Oyariah apparently saw the Ethereals as gods, and having one captured was difficult to comprehend.

“Fine,” Betos sighed, rubbing her forehead. “But ADVENT is going to capitalize on this. An Ethereal is going to be used as incentive for them to recruit.”

“But they will target Europe first,” Kellani interjected.

“But they also won’t turn down African nations if they ask,” Betos responded. “We need to expand out further, and that’s not happening while the SAS tries different flavors of dictator.” She scowled. “I can’t keep them in check forever and they’ll only focus on Boko Haram and other terrorists for so long.”

“In that case,” Macula stepped forward with a flourish. “Perhaps it’s time I am formally introduced to the SAS leadership. I would quite enjoy such a diversion.” He motioned to her. “You are the only one that matters here. If the SAS is not conforming to your…well, desires, then that can be changed. Their armies cannot challenge me, nor can their minds.”

Betos felt that there was a double meaning with the latter statement. But she couldn’t disagree. The SAS would be alien-supported, so it made sense that the leadership knew of their benefactors. Macula for certain. “How soon should this be done?”

“When the world is focused on something else,” Macula said mildly. “Like an Ethereal speaking publicly. Once Aegis is properly introduced to the world…well, less focus will be on us. Even if ADVENT will never break their so-called watch, they have priorities. One of which would be watching a supposedly friendly Ethereal.”

“Alright.” Betos was already figuring out logistics. She didn’t trust this not to leak, and was going to have to take some precautions. But it could be done, and once everyone was on the same page,
then maybe something could finally move forward. “Let’s prepare for that.”

***

Beijing – China

11/30/2016 – 1:22 P.M.

The Commander had to admit that Beijing was much different when he wasn’t assaulting an EXALT facility. It was a massive and expansive city, one of the biggest in China, and while he could admire it, he was really only interested in getting in, having his meeting with the Chinese, and leaving. He was certain they were being watched, although that was likely the extent of it.

But their Intelligence was most certainly cataloging everything they were doing to analyze later.

This was going to be interesting.

In one of the skyscrapers, he, Patricia, and Zhang were directed towards the room President Qin had decided to meet them in to discuss the repurposed CODEX. They had agreed very quickly, so he assumed that they accurately understood the gravity of the situation. Which was good; there was a much better chance that something would be accomplished here.

He didn’t really want to make the Chinese an enemy again, but he wasn’t going to let this go.

The standard business office with windows allowing a smoggy view of the Beijing skyline behind them was fairly simple for such a meeting, but the Commander didn’t really mind. The less attention, the better. “Commander,” President Qin greeted. “Welcome. Again.”

He had to smile at that. “It’s much more impressive in the day, I have to admit.”

Qin didn’t react, but motioned him to sit down. “I know what you wish to discuss. All I have invited today is the lead for the Tiāngōng Intelligence, Peng Lei.” The other person, an older Chinese man stood and inclined his head.

“Commander, Director Zhang, and Patricia Trask,” he greeted. “A pleasure.”

All of them sat down as the Commander decided to get straight to the point. “The capabilities of your program are impressive, to say the least. How exactly was it developed?”

“It would be wise to be truthful as well,” Patricia added with a smile. “Just a suggestion.”

Lei adjusted his glasses, and at a nod from Qin, answered. “In going through the wreckage of the Dreadnought, there was much of it that was damaged or corroded beyond repair. However, we did manage to extract some vital components. One of them was what I can only assume was an information monitoring system. Not quite an AI, but with very similar theoretical capabilities.”

“The aliens call them CODEX systems,” the Commander nodded. “Very advanced, very versatile.”

“Indeed,” Lei agreed. “The system apparently recognized us as the new owners, and began assisting us in figuring out certain questions regarding their technology. It lacked much information on the aliens themselves, but it helped us understand their code and methodology. From what it provided, we were able to eventually modify it to the Tiāngōng Project.”

“All very fascinating,” the Commander deadpanned, looking to Qin. “And correct me if I am wrong, but China was part of the Council at this time, correct?”
A pause. “Correct,” Qin said.

“I’m glad we’re on the same page,” the Commander said with only slight mockery. “Now, don’t you think that this rather advanced technology might have been somewhat useful to XCOM? Indeed, wasn’t it stated fairly often that all major alien developments fell to us?”

“Commander, if you also recall, you delayed us acquiring the wreckage for months because of your vendetta,” Qin answered. “You never showed a respect for our country. You wanted everything to yourself.”

“And we were completely justified, knowing what we know now,” Zhang stated harshly. “We were concerned you would hold something back if you found it. We were clearly correct.”

Qin’s face wrinkled in disgust. “You are lucky you are allowed to wander here, Triad. You are still a criminal here.”

The Commander rapped his mechanical fingers on the desk. “Zhang has done more for humanity than you have so far, Mr. President. I would advise you keep comments threatening my advisors to a minimum. Especially when he is correct.”

“And let us also not forget that you have also been against us from the start,” Qin continued. “You have deliberately tried to curtail the influence of China. As an American, I can understand you were threatened, but do not believe this is something that excuses you.”

“Yes, I am very loyal to a country that betrayed me and imprisoned me for years,” the Commander answered sarcastically. “However, if I recall, China refused to support me back when the Council was still around. Australia, China, every country that stood as a roadblock to protecting our species. Why wouldn’t I have tried to reduce your influence? You only cared about the aliens when it directly threatened you.” He paused. “You did show some spine pulling out. I can’t fault you for that.”

“Do not forget I know who you are,” Qin reminded him. “Even in ADVENT, your name is not welcome.”

“Really.” The Commander smiled. “Patricia?”

“He is bluffing,” she said. “He has no intention of revealing your identity. He knows you would ensure China joins ADVENT. And he would probably end up dead.”

“Tell your psion to stop reading my mind!” He hissed, color draining from his face. Lei looked concerned as well, shooting Patricia intermittent glances.

“Then don’t threaten my Commander,” she answered flatly.

“Enough,” the Commander raised his hand. “The past cannot be changed. China made a mistake here, that is not in dispute. I would prefer that we take this opportunity to start anew. Allies are better than enemies, but there are certain things that must be done to atone.” He looked to Qin. “This is not a negotiation, Mr. President.” He nodded to Zhang.

“XCOM will have full access to the Tiāngōng Intelligence,” Zhang began listing. “We are allowed to question any and all personnel affiliated with it. XCOM will also acquire full schematics of the housing structure, and the full source code of the program. In addition, we will also seize all original assets housing the CODEX system. We will also be allowed to conduct inspections and withdraw data acquired by the Tiāngōng Intelligence.”
“Do you really think you can just come here and make demands like that?” Qin demanded. “It is one thing coming from ADVENT. It is another from a small paramilitary organization, even one such as yours.”

The Commander exchanged a glance with Patricia. “Yes,” he answered simply. “I can do that. You will be able to retain the Tiāngōng Intelligence, but we will have everything needed to make our own. I suspect ADVENT will back me if you force this.” He paused, leaning forward. “But I would advise you not fight this, Mr. President. It will end badly for any plans you have to keep China independent.”

He motioned to the Beijing skyline. “This is all you have. The Tiāngōng Intelligence is your only insurance policy. It would be a shame if something were to happen to it.”

“The Tiāngōng Housing is under heavily military guard,” Lei shook his head. “I…understand you are upset, but nothing short of an army will breach it.”

“Patricia,” the Commander said after a few moments of thought. “Can you have General Kong give President Qin a call?”

“Certainly,” she answered, closing her eyes. “It will just take a few moments.”

“Armies, are unneeded,” the Commander continued as they waited. “You have no protection, no countermeasures. And you underestimate what would really be required. It could be a simple phone call to move soldiers around, or the power to suddenly go out, or something else miniscule.”

There was a tense silence after that, broken shortly by Qin reaching into his pocket and pulling out a phone. Not breaking eye contact with the Commander he answered it. A few seconds later he put it down again, face still as stone. Lei looked similarly shaken. “You have made your point, Commander,” he said quietly. “You will have what you need.”

“Excellent, that’s all I wanted,” the Commander said. “Contrary to what you like to believe, I don’t want you as an enemy. There are more important things to focus on, but I will not have one country hoarding valuable tech because of a vendetta or a misguided selfishness.”

“My people will be arriving tomorrow,” Zhang added, addressing Qin. “I expect there to not be any problems. I have formal agreements for your people to sign.”

“I will see they are handled,” Qin sighed as Zhang pulled out the documents. “I hope this is the last conversation of this nature we will have, Commander.”

“As do I,” he nodded. “But that, Mr. President, will largely be up to you.”

***

Alien Containment, the Praesidium – Classified Location

12/1/2016 – 10:22 A.M.

The Commander stood with Jackson and Aegis in front of the one-way looking glass at the newest member of the containment cells. “This is…interesting. Jackson, would you care to fill me in on why, exactly, there is an Oyariah here.”

“I can do that easily enough,” Jackson looked down at her tablet. “The short version is that he was one of the aliens who defected. He’s been cooperative, but essentially said he wanted to speak to Aegis. ADVENT inquired if we wanted him, since the Priests determined that he was telling the
truth, and I accepted.” She lowered the tablet. “Couldn’t hurt, and worst case we get a live Oyariah to experiment on. We benefit either way.”

“Acceptable,” the Commander nodded, clasping his hands behind his back as he appraised the Oyariah before him. Like the others of his species, his black stony skin covered his body, only breaking at gaps for the joints. If the Commander wasn’t aware of how Oyariah biology worked, he would have assumed the Oyariah was still wearing some kind of armor.

He was seated on the bench in the back of the cell, waiting calmly for someone to make an appearance. The Oyariah’s faceplates weren’t ornate or complex, but simply just formed something akin to a skullcap over his head while leaving the grey-skinned face exposed. The black-pupiled eyes just stared ahead; seemingly sightless.

“The question is what to do with him if he is cooperative,” the Commander noted. “Oyariah are not really known for their scientific or engineering expertise.”

“You would be surprised,” Aegis said. “Many hold that opinion because they live underground, but few recall that their cities are on an equal level of sophistication to others on Vitakar.” A pause. “However, I suspect this one does not fit that category.”

“No point delaying,” the Commander said, moving to psionically unlock the cell door, which slid to the side. He walked inside the room with the alien, with Aegis behind him.

The Oyariah immediately fell to one knee upon the entrance of the Ethereal. “Elder Aegis, you honor me with your presence.”

Aegis seemed to see what was needed and fell into the role immediately. “You may rise.”

The Oyariah did so, and rose to a height that was close to eight feet, if not slightly higher. “What is your name, Dweller of the Stone?”

Well, he was being fancy. But he was handling it well. “Rava’xarian’hegemon, Elder Aegis, formerly within the Guard of the Ravager.”

The Ravager of the Hegemony. The Commander looked at him with new interest. That was the closest thing the Oyariah had to a military leader, and if Xarian had been one of her guards, this was one of the highest-ranking defections. Aegis apparently had the same thought. “You abandoned your duty to the Ravager. Why?”

“Because of your appearance, Elder,” Xarian answered. “I have heard the stories of the Aegis within the Black Library. Your feats, your victories, all of which were shared by Elder Cogitian and immortalized by the One Encased.” He trailed off briefly. “My faith in the Elders has been… weakened for some time. They have become silent, less forthcoming to their disciples, I did not know the reason. But your revelation has made that clear. They have lied to us; hidden your departure out of shame or malice, I do not know which.”

The Oyariah shook his head in apparent disgust. “One does not lie to us and expect to be trusted. I did not know what to make of this initially, but then I remembered the legends, the ones where you fought the God-Machines time and time again. If there is a war brewing between the Elders, I will not fight for the side who hides the truth from our people. I have come to pledge myself to your service and fight against your enemies until your will is accomplished.”

Huh. The Commander had to admit the Oyariah had given them quite a lot of useful information, even if it wasn’t intentional.
Such as the fact that the Ethereals had definitely been sharing information with the Oyariah, including knowledge about the Synthesized.

Well then.

*His motivations are true,* Aegis communicated. *He is not deceiving us.*

“I am honored by your faith in me, and impressed with your conviction,” Aegis finally said. “Yet even I understand that not all who are opposed to me are deserving of death. My conflict is against the Imperator, not the Elders as a whole. I sense that you have this same understanding.”

“Yes, I do,” Xarian admitted. “Yet you are one who has never deceived my people, not truly. I believe that when you faced the same choice as Elders Sana’Ligna and Battlemaster in lying to my people, you refused and left. And if you oppose the Dread Lord, then it is only further proof that your side is the correct one.”

The Commander was now *very* interested in what, exactly, the Oyariah knew about the Ethereals. Directly referencing Isomnum’s name of legend made him wonder what stories they knew of the Guardians or even Caelior. “Do you know who I am?” He finally asked, speaking for the first time.

“You are the Commander, one of the Godkillers and Slayer of the Ravaged One,” Xarian answered. “Your face and name are enshrined in the Halls of Stone, as are those of the Godkillers Patricia Trask, Moira Vahlen, and Franklin West. You are the only mortal to have faced the wrath of an Elder and live.”

Godkiller, huh. He quite liked the sound of that. “I don’t suppose I’m liked there then?”

“Any who are strong enough to kill an Elder are worthy of respect,” Xarian disputed with a shake of his head. “And whoever is the one to slay you, and the other Godkillers will be generously rewarded by the Elders themselves. Or so we have believed. Perhaps the False Elders have lied about even that.”

“Unlikely,” Aegis sighed. “They would reward any who slew one who killed our own.”

“And what do you believe about me?” The Commander asked. “You understand that, if this is permitted, you would be fighting on the side of a Godkiller?”

“The Ravaged One was reduced and diminished by the Machine-Gods and endured in this painful reality,” Xarian answered. “The legends show his power and tragedy. When he accepted the pain of a world, the Elder died that day. I am of the belief that you provided him a mercy, and if he was one of the Imperator’s kind, then your reasons are forgivable.”

“You didn’t quite answer my question.”

“Do you fight for the Elder Aegis?”

“I fight *with* him,” the Commander corrected. “Not for him. We don’t view the Elders the same way as you do.”

“It is a perspective that is only truly gifted to my kind,” the Oyariah nodded. “Yet I am satisfied. The Elders are not to be limited, but seen and understood by all. If your species fights alongside Elder Aegis, than that is all I care about.”

“I am again honored by this,” Aegis said. “Yet I fear few of your brethren feel the same.”
“They follow the will of the Stalker, Ravager, and Messenger,” Xarian replied. “And many are not on this planet. I was on orders of the Ravager. Such a decision cannot be undertaken easily, and few are as versed with the legends of the Elders as I am.”

“If I may ask a question,” the Commander interjected, raising an eyebrow. “Why are you? What is your interest in the Ethereals?”

“I was one of the Guard of the Ravager,” he answered, almost surprised that was asked. “To not be versed in such teachings and stories would be disgraceful. Yet I have spoken with them as well, my belief has been strong for decades and I consistently wished to strengthen it. What better way than to learn their histories and legends?”

“Fair point,” the Commander acknowledged.

“The Triumvirate of the Hegemony may come to the conclusion I have,” Xarian admitted. “They are even more familiar with the lore of the Black Library. But that is why it is important that one such as I publicly be seen in your service. Many of my brethren are simply confused and lost. They do not understand what is at stake, and seeing one of their own who fights at your side will convince those wavering to abandon the False Elders and take their rightful place at the side of an Elder in battle.”

“And you are willing to fight your own kind?” The Commander asked.

“In the service of Elder Aegis, I will do what I must,” Xarian inclined his head towards the Ethereal. “I will take no pleasure, but I will not fight against what I believe. I will not take the side of the liar and deceivers, even if I must turn my back on my brethren. They will understand, even if they cannot muster the courage to do the same.”

If there was one thing the Commander was certain of, it was that this was not an act. Even if he wasn’t as experienced in reading aliens as Humans, Xarian was not putting on a show. He truly seemed to believe this, and if that were the case, he could be a very valuable ally and recruiting tool. He was somewhat apprehensive of putting him in XCOM squads…but there was a first time for everything.

Maybe have a few test cases. See how he worked with other Humans.

Such a move was risky without the Manchurian Restraints, but for once, the Commander didn’t really believe those were needed here. “Jackson,” he said. “Did he come with any armor or weaponry?”

“Yes, it was shipped with him.”

“Good,” he looked at the Oyariah. “I’ve heard enough. If you’re willing to fight against the Imperator, I believe you could help us. If Aegis wishes to allow you into his service, I will permit it.”

Aegis looked to Xarian. “Do you desire this?”

“Of course, Elder Aegis.” Xarian said, falling once more to one knee.

“Then you will be the first of my personal guard,” Aegis said. “Aegis’xarian’hegemon, you will execute my will, fight in my name, and assist in restoring order to the Collective and this galaxy. Rise and take your place.”

The renamed Oyariah stood, and from what little skill the Commander had in telepathy, Xarian
seemed genuinely happy. Aegis was very good at playing the role of a deity, ironically enough. “Your equipment will be returned to you shortly,” the Commander said. “And I’ll have some living quarters prepared and ensure that the soldiers are made aware. Just…learn some basics about Humans before you interact with us too much. Not all of them have the highest view of aliens.”

“Of course, Commander of Aegis,” Xarian nodded. “I will ensure I am familiar with your kind before extensive interaction.”

Oyariah liked their titles. The Commander had a feeling things were going to get interesting with him around. And he hadn’t even been told of Caelior yet. Granted, he was in a pod now, but he wouldn’t be there forever.

Hopefully the soldiers would take it well.

XCOM Intelligence Control, the Praesidium – Classified Location

12/1/2016 – 1:03 P.M.

Abby hoped that the scientists were continuing to be nice to her armor. She had very strongly advised Vahlen not to even touch it, and given what happened to her rifle, Vahlen was inclined to agree. Instead she had settled for taking detailed scans which they were presumably going over now. Her leg was healing rapidly, thanks to XCOM medical equipment which was now a combination of alien equipment, nanotech, and maybe some Sovereign Tech, she wasn’t sure.

Once she was healed sufficiently, Abby was going to be doing some more tests wearing the suit, but right now there was the matter of the debriefing. Namely, watching Quisilia get thrown back into a wall. She really just wanted to watch that beautiful moment on repeat. It was so satisfying.

Zhang was not the only one in the room. For the first time, she was being introduced to the Ethereal himself. Aegis was very cordial towards her, and she returned the favor. There was something about being around him that made her feel more at ease. Probably something to do with his psionics, but she surprisingly didn’t feel uncomfortable around him, despite him towering over her.

The video finished and clicked off. “Aegis?” Zhang asked, turning towards him. “What do you make of this?”

“This is unexpected,” he answered slowly, carefully. “I was not aware there were rogue Sovereign Ones…as this…vessel….seemed to imply.”

That reminded Abby of something. “What, exactly, is a Sovereign One? I feel it’s something I should know about.”

“Something very old,” Zhang began curtly, looking at her intently. “What we discuss here doesn’t leave this room. Suffice to say you’ve stumbled upon a mystery even the Ethereals haven’t figured out. Aegis, care to fill her in?”

“Certainly,” Aegis said. “I will be brief.”

And so he proceeded to give the very short history about how the Ethereals fell, which it turned out they had come up against some kind of machine-organic hybrid, if the word “Synthesized” was to be believed. The Imperator had frozen a select few in stasis with the intention to awaken later and
take revenge. When they had woken up, they had been contacted by other survivors called Sovereign Ones who provided them with highly advanced technology.

No, there was definitely nothing suspicious about that.

Abby saw quite a lot of holes in the Imperator’s so-called plan. Holes so large that there was no way that he was ignorant of them. The idea that the Ethereals, all…ten of them? All of them would conquer the galaxy and prepare for an enemy they weren’t sure was even coming back?

There had to be another reason.

But she picked up the main point Aegis was trying to make. “So they never mentioned there was a rogue Sovereign One.”

“I have never heard of them before,” Aegis shook his head. “I was not the primary communicator between the Imperator and the Sovereign Ones.”

“And who was?” Abby asked.

“An Ethereal who the Imperator chose to be the Voice of the Sovereign,” Aegis answered. “She volunteered to be the vessel of communication, and as far as I know, she is who Revelean, Fectorian, and the Imperator go to when they wish to speak. I know the Imperator has spoken with them himself on occasion.”

“And you?” Zhang asked with a raised eyebrow.

“Once,” Aegis said. “It was an…interesting experience. They were capable of shattering even my strongest defenses. I was somewhere else for a time, underwater I think, but I could breathe and move as easily as I do now. The Sovereign One took the form of an alien I didn’t recognize. Blue-skinned, very similar to humans actually, feminine is the word. The head seemed composed of strange ridges.”

“I’m sensing a theme,” Abby muttered. These Sovereign Ones seemed to like water and aquatics. She doubted it was a coincidence. “The Chronicler’s little hiding place has a lot of water, and a chamber with one of these orbs. Something he warned me not to touch.”

“I know what you speak of,” Aegis nodded. “I believe they are some kind of link to Sovereign Ones. The Voice carries one with her at all times.”

“Well, it seems they lied about some things,” Zhang noted, looking back to the video. “Or at minimum left out some key bits of information. This Chronicler almost killed Quisilia and would have if not for freak timing. And you said he isn’t dead?”

“Quisilia didn’t seem to think so,” Abby shook her head. “However, Quisilia definitely made a powerful enemy if that is the case.”

“Agreed,” Zhang nodded. “If this Chronicler returns, I would suggest we seek him out. He could be a powerful ally.”

“Did you not hear ‘this species is mine’?” Abby demanded. “Is that really a good idea?”

Zhang pursed his lips. “That is a good point. By this point he has to realize the sides of the war.
Turning him down might be dangerous for us. Dealing with Ethereals is hard enough; we don’t need another powerful entity angry at us.”

“I would also caution against this Sovereign One, if it is truly one,” Aegis added. “This does not match with what we know of the Sovereign Ones. I cannot help but wonder if they have realized that the Imperator is no longer interested in fighting the Synthesized and are seeking…other opportunities. We should proceed cautiously.”

“You say ‘what we know’,” Zhang said pointedly. “But be honest: How much do we really know about them?”

“That they are also allies against the Synthesized,” Aegis answered. “Ones who are willing to share their gifts with us and are united in this cause. They have never shown hostile intentions towards us.”

“So they have all this advanced technology,” Abby said slowly. “And yet they haven’t managed to kill the Synthesized. And you know this because….why? They told you?”

“Admittedly, yes,” Aegis sighed. “It is…difficult to explain properly. Even sharing the memory would not be the same. These beings are older than we are. Far older. I cannot imagine many are left. They need us; perhaps we’re next in a long line, but in the end, our goals align. Should we be successful…I suppose we’ll proceed from there.”

“I’ll state right here that I don’t trust anything like that,” Abby shook her head. “Not after what I saw. That isn’t normal, and anything that can throw around an Ethereal isn’t something to take lightly. Let the Commander make that call.”

“He will,” Zhang assured her, scratching his chin. “Despite how everything ended up, you’ve done well here. Once Vahlen finishes running her tests, we’ll send you out. In the meantime, take a rest. You’ve earned it.”

Abby nodded. “Thank you, Director.” She yawned. “A few days of rest will be welcome.”

Office of the Commander, the Praesidium – Classified Location

12/2/2016 - 4:12 P.M.

Internal Council meetings were unfortunately rarer in recent days, although they had the admittedly acceptable excuse of having so much work to do, not to mention little conflicts in America, Korea, and Japan. But the recent battles had highlighted the issues that needed to be addressed, and that was something they were going to discuss right now.

“Overall, I believe we came out on top here,” the Commander opened as they stood in front of his desk, Aegis included. “We’ve regained significant ground in America, Japan is close to fully reclaimed, and we have held South Korea. Overall, I’d say we held our own.”

“Barring Washington and Alaska being attacked,” Shen added. “But I agree. We…did well.”

“Far better than I had feared,” Aegis nodded. “The ADVENT Priests were instrumental in the defense. The Collective has been set back, and while we should not become complacent, the Battlemaster will consider this a loss. Now that I am…active…he will not attack until he has some way to negate my abilities.”
“So we’re likely to enter a lull in the war,” the Commander nodded. “Good. ADVENT will likely focus on expansion, and in the meantime, we will focus on projects of our own. There are a few things I would like to bring up. Zhang?”

“The footage of the supposed Sovereign One avatar,” Zhang stepped forward. “Given the words of both Quisilia and the Chronicler, this Sovereign One has likely developed some interest in our species. Should he return, we should make an effort to at least determine what the ultimate goals and motivations for it are. We can’t let something like that wander around unchecked.”

“At least it’s not friendly with the aliens,” Vahlen noted. “Sovereign technology is still so far beyond us. A living one would be a valuable ally.”

“Except we know very little about them,” the Commander shot Aegis a look. “While they are supposedly against the Synthesized, the other names mentioned make me think that this is more complicated than what they presented to the Ethereals. In any event, we should at least attempt contact.”

“And if it becomes hostile?” Zhang asked.

“Then we deal with it,” the Commander sighed. “Although I don’t fancy our chances, not against something like that. Vahlen, tell them what you got from that armor Abby brought back.”

“I’ll tell what little I can,” Vahlen brushed back her hair and cleared her throat. “The armor itself is made out of some kind of substance that is most certainly not from Earth, or at minimum is an artificial combination of multiple elements. The texture is similar to stone, but it is actually manipulable to an extent. More importantly, tests done with Agent Gertrude reveal that it can harden itself upon an object hitting it, essentially lessening the impact.”

“How?” Zhang demanded.

“That,” Vahlen said slowly. “Revolves around very little. Comprehensive 3D scans show that there is some kind of…power source. We couldn’t get to it without cutting into the armor itself, but it was definitely a sphere of some kind. Given that spheres seem to be a trademark of these Sovereign Ones, perhaps these are used for more than communication.”

“And the direct interface it has with the user requires a level of precision that would not be possible without a computer with AI levels of computational power,” Vahlen added. “Abigail did not describe the insertions of these wires as painful, but given that she received a substantial boost to her stamina and strength, it is also highly possible they are injecting enhancing chemicals.”

“How?” Shen asked. “Is it just making that stuff?”

“We don’t know,” Vahlen shook her head. “Very little of the armor makes sense, and she was very insistent no one else try it due to her rifle exploding when the Hunter tried picking it up. I would normally not be apprehensive…but this is one area where caution is prudent.”

“Speaking of that,” the Commander looked to Shen. “The Chosen weapons. What have you learned about them?”

“Those at least follow some logic,” Shen answered, stepping forward. “For obvious reasons I’ve made sure no one has fired it, but imaging shows it to essentially be a miniaturized railgun. Very slow reload speeds, and it can only fire three shots, but nothing really comes close to it in sheer kinetic power. At least for firearms.”
The Commander rested his hands on his desk, thinking. “Can we replicate it?”

“Not immediately,” Shen shook his head. “But it will serve well in improving our gauss tech. We’ve gotten all we can from scans. The only thing left is to actually try firing it.”

“But he trapped it?” The Commander guessed.

“Yes, he did.” Shen nodded. “However, he also set it to unlock on a combination of his DNA and fingerprint. That would normally be a problem…except Agent Gertrude was able to recover his intact limbs. We will use those to unlock the rifle.”

“Excellent,” the Commander smiled. “Now, we need to shift our focus towards two issues that have arisen recently: Nanotech and the Manchurian Restraints.”

Vahlen coughed. “I would also like to say that Project Innsmouth has been proceeding faster than I anticipated. Given the increased deployment of…certain…Ethereals, this is something we should continue.”

“The fuck is Project Innsmouth?” Jackson asked, shooting Vahlen a glance.

The Commander and Vahlen exchanged a knowing look. While he wasn’t fully caught up on her progress, what she’d told him about it was enough to be more than useful. “An Ethereal hunter,” he explained simply. “Something not susceptible to mind control and with a taste for aliens.”

“It is a truly disturbing project.” Aegis added.

“Project Innsmouth can continue as usual,” the Commander redirected, not wanting to get off topic. “Let’s focus on these issues here. We need protection from nanotech, and to preferably deploy some of our own.”

“EMP weapons are the first weapons we should invest in,” Shen began. “WHEEEE cannons will be useful, but we need wide-range EMP weapons to destroy things like Spectres. Periodic EMP emitters would also be useful to protect certain areas. The catch is that it requires us to harden everything against EMPs.”

“Nanotech isn’t going away,” the Commander shook his head. “It might take time, but we should work to completely harden ourselves against EMP. I know ADVENT will likely do the same to some effect. Vahlen, is there any progress on controllable nanites by soldiers?”

“Yes,” she confirmed. “It is only in highly limited quantities, but Operated MELD, as I have designated it, is now proven to be possible. In theory, this would allow the user to completely control how the MELD performs, be it attack by working similar to the Spectres, or in a defensive manner such as repair, creating structures, or acting as armor. I have also begun the investigation into…integrated MELD.”

“Which is?” Jackson asked.

“Incorporating nanotech itself more extensively into the Human body,” Vahlen clarified. “Not in the same way as gene mods, but…well, acting both as a secondary immune system and protective skin. It’s relatively new, but initial results are promising.”

“I’ll check on that later,” the Commander nodded. “Other kinds of nanoweapons such as warheads and grenades should also be developed. Shen?”

“Already started on that.” Shen didn’t seem to really approve, as his face was set in a frown. “I
figured you’d want something like that. As far as nanotech goes, it is one of the simpler applications.”

“Glad to hear it.” Now the Commander transitioned to what was likely the more important topic. “Now, the Manchurian Program. I want to resume dedicated research on it. We’ve had too many instances where it would have been useful, and with the PRIEST Program in full swing, I want it deployed before there is an incident.”

“It’s only a matter of time,” Patricia agreed. “No matter how careful ADVENT is, someone will abuse it, if it hasn’t happened already.”

“That is the primary concern, yes,” the Commander nodded. “And we need it for our alien guests here.” He glanced up at Aegis. “All of them. While I do genuinely believe our resident aliens will not betray us, that is not a chance we can afford. And our own psions need to have restrictions placed on them before something happens.”

“I have the feeling you’re referring to a very specific scenario,” Patricia noted dryly.

“Not you, not this time,” he answered shaking his head. “Our friend Geist. Who, I am almost convinced of, briefly mind controlled Engineer Kun in response to her criticism of his leadership.”

“You’re certain?” Vahlen asked.

“Very,” the Commander said neutrally. “I do not believe Geist knows that I watch combat logs, especially ones who I know have known issues interacting with people. I’m half-tempted to execute him for that, but this is Geist, who isn’t exactly sensitive to other people, and who is our most powerful Human psion. I don’t believe he intended it maliciously, but I’ll leave that decision to someone else.” He looked to Patricia. “Determine if he did it or not. If he did, make sure he doesn’t do it again. If he lies to you, or refuses, kill him. I won’t have someone like that leading my soldiers, regardless of his power.”

Patricia’s lips were set in a razor line. “Gladly. He won’t give you more trouble.”

“The point is that we need to keep all psions in check,” the Commander said. “There are not going to be exceptions to this; not me, or you, Aegis. Not for any aliens, and also not for any of us.” He looked around the room. “We are all in a position where we cannot afford to take any risks. We can’t afford betrayal, either via psionics or discussion. Patricia, even though the Imperator has not actually tried to make you defect, I don’t trust him not to make that decision eventually. And I also expect him to try for everyone else. It is a simple precaution, but we cannot be risked like this.”

“Is there a line?” Shen asked rhetorically. “Why not do the same to all our soldiers if that’s your justification.”

The Commander fixed Shen with a stare. “I am considering just that.”

There definitely seemed to be some conflict on that. “I’m not sure that’s necessary,” Jackson said slowly. “It’s one thing to subject psions to this, but regular soldiers? Analysts? The maintenance crews? That borders on paranoia, not to mention it would destroy the goodwill you’ve created here.”

“No to mention a massive security risk should the aliens acquire the means to control us,” Shen added. “Psions I have to agree with. Even us. But not the soldiers. They have not done anything to deserve it.”

“It’s not a matter of deserving it,” the Commander sighed. “Most psions don’t deserve it either. But
we’re in a war where the mind is easily turned and manipulated. Like it or not, we need to consider all possible safeguards.” He lifted a hand. “I’ve not made a decision either way, but you should know I’m considering it.”

There was some brief silence. “Is there anything else that needs to be addressed?”

They all shook their heads. “Good. Dismissed.”

***

Quarters of Overseer Trask, the Praesidium – Classified Location

12/2/2016 - 6:00 P.M.

Sometimes Patricia wondered if she was slowly and insidiously going insane. Really, she had all the symptoms for diagnosis. She regularly saw an imaginary person, appeared to talk to herself a lot, and everyone else told her not to interact with the imaginary person. If she actually didn’t know better, she would have called herself crazy.

Unfortunately, the Imperator was very much still real, and still leaning against the wall as she waited for Geist to come. “I don’t even know why you’re here,” she finally said. “Are you really going to be following me around my entire life doing my job?”

“Unlikely your entire life,” he answered, in the form of the Commander, although with the addition of black orbs for eyes. “You will die long before I will.”

Patricia cocked her head towards him. “You’re certainly confident. Things haven’t been going too well for you. Although, part of that is your fault.”

“The Battlemaster is handling the issues Aegis has caused in the Collective,” the Imperator dismissed with a wave of his hand. “But do tell me why I should be concerned?”

Patricia sighed, rubbing her forehead. “If you were a little easier to figure out, maybe I can tell you why. But I don’t really know even what you want. I would rather know why you are focusing on me of all people? Why not the Commander, or Aegis, or even Geist? It’s not like I’m the only powerful psion on Earth.”

The Imperator smiled, looking thoughtfully up in the air. “Because of all the people you mentioned, very few would be interested in simply conversing with me. They are too suspicious, too oriented to being my intrinsic enemy. Aegis could simply block my communication, and neither the Commander or Geist would be interested in speaking.”

He inclined his head towards her. “While you are rather deriding sometimes, you are more…open. Willing to take some risks; willing to orient your position based on what you have experienced; willing to logically change your position based on evidence.” He nodded. “Aegis cannot seem to grasp that I have no intention of mind controlling you.”

“But you are trying to make me see something,” Patricia noted, looking at him neutrally. “This isn’t, and has never been, just innocent chit-chat.”

“Of course I am,” the Imperator answered emphatically. “But as for what, you will have to come to that decision on your own. It is something I cannot force. But you don’t have all the information yet; there are still questions you need answers to. Information that will allow you to grasp the…scale of what we all are a part of.”
“And is there a reason you’re not telling me this?” She asked wearily.

“Now?” He raised an eyebrow. “Not the time or place, especially with Geist set to arrive shortly. But that time is coming soon. There are no more tests left for you, only decisions.”

“Really.” She wasn’t completely surprised to hear that. “Tests.”

“Ones you passed, do not concern yourself with them,” he explained. “Someday I’ll elaborate, but if you did not have the potential nor right mindset, then we would not be speaking. I do not waste my time with impossible tasks.”

“You’re not exactly making yourself sound trustworthy,” Patricia noted. “I really do not like being manipulated, or treated as a…’task’.”

“You know better than to assume the most malicious interpretation,” the Imperator answered knowingly. “Anything can be a task; and I suspect you are no different. No one intelligent devotes time to something that they know will fail. And if I was truly intending to use you, I wouldn’t have mentioned anything, would I?”

“Maybe you’re arrogant enough to try,” she guessed, although he had a good point. Barring some large questions, namely his motivations, the Imperator had and continued to be strangely honest. She really did not know how best to deal with him. Cutting him off seemed rather pointless, since he could likely bypass anything she did, and honestly somewhat mean. He had been rather helpful to her, and it seemed wrong to cut him off for no actual legitimate reason.

“Mhmm, I suppose I’ll find out soon enough,” he said, looking to the door. “Geist is approaching. I suggest you prepare. We will speak again.”

He vanished once more, leaving her to deal with the troublesome psion.

She sighed.

Geist was a hell of a lot easier to deal with than the Imperator. She legitimately did not know what he’d been thinking openly manipulating Nuan’s mind so brazenly. Even if she hadn’t seen the footage and asked some questions of Nuan, it would have been so blatantly obvious that no one would really struggle to come to the conclusion.

Knowing Geist, he probably legitimately believed he was in the right. For being relatively new to XCOM and psionics in general, he was rather full of himself and always attempting to maintain his superiority over…well, everyone. He was the kind of person who couldn’t have someone else be in charge.

Someone had to teach him consequences. And she was more than willing to do so.

The door slid open and Geist walked inside, giving an unimpressed look around her room. “Overseer Trask, you wished to speak to me?” He felt very calm and confident, although there was some confusion lurking beneath.

“Yes, on the orders of the Commander,” she answered neutrally. “There have been some issues with your conduct with your soldiers.”

“Ah, complaints,” he nodded, relaxing further. “I’m certain I can straighten that out. I am aware my own personal commanding style is different compared to yours or the Commander’s, but it has certainly led to acceptable results.”
“Which is certainly why Sacramento is still in the hands of the aliens,” she answered dryly. “But no. While I do not personally approve of your command style, that is subjective to a degree. This is much more serious.”

He frowned. “If not that, then what?”

“Engineer Kun,” she explained. “Did you telepathically influence or manipulate her?”

He blinked several times, surprise washing over him. “I have telepathically influenced multiple soldiers, both in ADVENT and XCOM. I assisted in sustaining—”

He suddenly trailed off as a bolt of light pain shot from him. Geist was a powerful telepath, but he didn’t know how to defend against lower-brain telepathy, where she had gotten much better over the past few days. “Please don’t avoid the question,” Patricia said quietly, knowing her brief draw on psionics was giving her eyes a purple tinge. “Both of us know what I’m talking about.”

“How would you even acquire the information needed to make that accusation?” He asked.

“Because the Commander watches combat footage,” Patricia answered. “And likes to focus on more prominent or troublesome individuals. You were not exactly subtle, and questioning of Engineer Kun has confirmed this. Be very careful about what you say next.”

One eyebrow was raised. “And what exactly would you do to me?”

“That depends,” she answered, turning away from him briefly in thought. “This kind of manipulation is very serious and reflects exceptionally poorly on a psion’s ability to respect the minds of allies, and indicates a lack of psionic maturity. I have been tolerant of you, Geist, even if you have a tendency to read people’s minds without their consent. But that is going to stop now.”

She turned back to him. “The Commander has authorized me to execute you if I feel you are a danger. The only reason he didn’t was because there is a disturbingly high chance that you didn’t realize what you did was actually wrong.”

For one of the first times, Geist actually seemed to be nervous. His eyes darted towards her, and he took a brief step back as she moved towards him. “In retrospect, such an action was probably unwise. However, Engineer Kun was becoming more focused on me and less on the mission. I simply redirected her focus where it mattered.”

Patricia just stared at him, took a few seconds, and waited. Geist didn’t seem to realize something was wrong at first, then his eyes widened as it dawned on him that he couldn’t breathe. “That, Von Theil, is unacceptable,” Patricia stated as an expression of panic settled across his face. “That is not a justification. The only circumstances where manipulating the mind of an ally is allowed is to help them, not to hide from criticism, and certainly not because you could.”

Geist fell to one knee, one hand on his throat. “You made…ah, your point,” he gasped. “What are…doing?”

“Your lungs have stopped working,” she answered, deliberately pausing. “Temporarily. You seem to be under the impression you are indispensable just because you are powerful,” She knelt down by him. “So let me be very clear. The next time I hear something like this happening, or witness it myself, I will kill you and not think twice about it. People like us have been gifted something extraordinary, and I will not let it be abused like this.”

She relaxed her mental control of his lungs and allowed them to function again, and he gasped as he sucked in air. “You are the type of person who makes the Manchurian Restraints a necessity,”
she said grimly. “You lack any kind of restraint or sensitivity. Psions like you will give the rest of us a bad name. This is a rare chance in Human history where we have an opportunity to make those who would normally fear us, instead trust us. Actions like yours do not accomplish that goal.”

Patricia narrowed her eyes at the man who was still gathering himself, before shakily standing. “Do you understand? I don’t care if you think I’m wrong, or if you disagree; this is going to be the standard you are held to. No more mind reading. No more altering the minds of our soldiers. Otherwise you die.”

“You have made your point,” Geist breathed slowly. “This…will not happen again.”

“Good.” She waved at him. “Dismissed. And if you actually want to make some amends, apologize to Nuan.”

“I…will consider that,” he said, before turning to leave.

Patricia wasn’t exactly keen on receiving the planned Manchurian Restraints, but if it meant that people like Geist were kept under control, then that was an acceptable tradeoff.

***

ADVENT HQ – Switzerland

12/4/2016 – 11:55 A.M.

Truth be told, Saudia was not entirely sure what to expect when meeting Aegis. XCOM had provided quite a bit of information on him, but Saudia was personally sort of skeptical on how accurate it really could be. She had no doubt that XCOM had made it to the best of their ability, but the truth was that being able to even begin to figure out the mindset of a telepathic alien that was thousands of years old was not something she figured was quite as easy as XCOM might think.

Furthermore, hearing his actual reasons, namely that there was something else out there that had been powerful enough to wipe out an entire empire of Ethereals was not reassuring. That to her seemed like a much more likely goal. Aegis didn’t like the way the Imperator was handling this event, and was taking matters into his own hands.

She was not working on the assumption that he actually cared about Humans, but saw them as a means to an end. Granted, it was sort of reciprocated. Aegis on their side was also a means to an end, but what made her question his commitment was that it didn’t seem likely that he wanted to actually destroy the Collective.

This was primarily against the Imperator. He had Humans, the Imperator had the Collective. From one perspective it could be viewed as a light proxy war, and she disliked the concept. She didn’t know how much influence he had with XCOM, but she was not going to let the Ethereal dictate how ADVENT ran this war. They’d been doing well enough without his help so far.

In fact, everyone was making the calculated assumption that the Collective was not going to make any major moves for some time. This was a loss for them; they needed time to recover, reevaluate, and from the sounds of it, they were going to have to deal with several of the other species demanding answers.

That would tie them up for some time, hopefully.

They weren’t completely lowering their guard, if the Collective attacked once more they would be ready to mobilize, but now they had an opportunity to focus on other matters. The expansion of
ADVENT was a priority, and Saudia wanted to fully bring Europe into the fold sooner than later; the UK would be the start, and in the meantime she’d make an aggressive diplomatic push for some of the nations on the tipping point.

It would also be wise to strengthen relations with China. While she was sure they would eventually join, as an ally, they deserved some additional consideration. A few joint ADVENT-China projects would not be unwelcome, and they had rather surprisingly said they would be interested in working on further refining of the Tiāngōng Intelligence, as well as allowing ADVENT to research it on their own.

She suspected that XCOM had something to do with their willingness to openly share such an important development, but that was something she should reward. Joint ADVENT-Chinese military exercises were also in the works between Laura, Weekes, and the Chinese Generals. Overall she saw a much brighter future for China and ADVENT ahead.

South America and Africa would be problems solved in the future. They were ultimately not important in the grand scheme of things, even if her homeland happened to reside in the latter. Although, perhaps it couldn’t hurt to at least gauge what effect the SAS was having on the region. So far they’d largely kept to themselves.

But on the front of technological and military progress, there was much to be done. XCOM was reinvesting heavily in the Manchurian Restraints, Elerium was now figured out, and nanotechnology was on the rise. ADVENT needed to be able to utilize and counter these dangers. And also think ahead for the future.

The war would, inevitably, move to space. They needed a fleet.

The question was where to build one that would both be easy to defend, and able to be hidden from prying eyes. The solution to that was somewhat…unorthodox, but she had been insured it was possible. It would require a massive initial cost, the development of newer safe technology, and the exploration of one of the last unknown parts of the planet, but it could be done.

She’d given her approval, and the near-unlimited amount of resources had been approved by Congress. The project was already proceeding at full speed.

If it worked well, the Collective would never see it coming.

The recent events had made her also realize that ADVENT, if it was going to last, was going to need to have some kind of future-proofing to avoid potential issues in the event that they were victorious. While the alien problem was one that was easy to leave behind as a non-issue, the fact was that at the end of this, there were still going to be aliens. There were probably even more they’d never encountered.

So they would have to figure out a means of peacefully interacting with them. The alien defectors were thankfully something they could handle, and served as a warning to them to actually figure out some way to…deal with them. What the questioned boiled down to was if aliens should be allowed to fully integrate into ADVENT as actual citizens.

ADVENT was and always would be a body that put Human interests first. That did not necessarily mean that aliens needed to be excluded if they shared those same goals. It was not unreasonable to assume that some aliens would find ADVENT more appealing than their own species, and if that was the case, what logical basis was there to deny them aside from xenophobia.

It was a good way to unite a population; by giving them an enemy to hate, they would generally
fall in line, especially given that the threat was enslavement or extinction. It worked well in the short term, but assuming they won, it would ultimately lead to more problems. Knowing what she knew about the aliens thanks to XCOM, Saudia did not necessarily believe that the majority of aliens were unreasonable, nor necessarily impossible to coexist with.

The Ethereals should never be allowed to hold any sort of power again; that was exceptionally clear. Everything that had happened was their fault, and it showed the dangers of an organization dominated by psions. Few could oppose them else it would lead to them dying or being mind controlled. The Ethereals had their chance, and they had failed. A more responsible species needed to take their place.

The Sectoid Hive Commanders were also a species she held in little regard. They were like the Ethereals to a lesser extent, dominated by psions and had full control over every aspect of their species. Abhorrent, dangerous, and the least understandable of all the aliens. Saudia saw no reason to allow them to continue to exist. In many areas, the Hive Commanders were no better than the Ethereals.

The Vitakara and Andromedons were different. The former was essentially tricked by the Ethereals, and Saudia suspected the latter only allied out of convenience rather than actual loyalty. But from what she’d gathered on the Aui’Vitakar, the entire race was not especially violent and more inclined towards a peaceful cooperation. She wondered how the Ethereals had convinced them to send their armies to invade Earth.

The Andromedons seemed to be held together by a tenuous peace at best. If given the opportunity, Saudia did not think it impossible to convince several of the Unions that they were a suitable alternative to the Ethereals. From the information she had, exploiting previous tensions within the Unions themselves was certainly possible, and the entire species was a powder keg that just needed an appropriate spark to ignite it.

Both the Sectoids and Ethereals might serve as that spark.

The point was that ADVENT needed to decide how it was going to treat aliens in the future. Saudia had no intention of ADVENT being isolationist. They would serve the interests of Humans first and foremost, but there was a certain fact that was becoming clearer and clearer with each passing day. The Commander had no doubt seen it, and even her military advisors knew the same thing, even if they were reluctant to voice it.

They would not win this war without alien help.

If not for Aegis, XCOM would be significantly behind. They would not know any of this. If XCOM didn’t have a double agent working for them, they wouldn’t be able to sabotage the Collective from the inside. It was an ugly truth, but the fact was that there was no chance they could take on the Collective – and win – without having alien allies. One Ethereal was a massive boost to their legitimacy, and with how many aliens were already defecting…more would probably join them.

And that was a resource that Saudia did not want to throw away, not only because it would boost their own numbers, but also because it was an opportunity to send a very clear message to the Collective in how they treated aliens. Humans were treated by the Collective as expendable test subjects and chattel; aliens were treated well by them, and were actually given opportunities if they wished it.

It would make more good propaganda, at any rate. It might get some of the aliens thinking.
“He’s here, Chancellor,” Ethan informed her through her intercom. “He’s...big.”

“I’ll be waiting,” she answered, and settled in for what was likely to be an interesting conversation. A few minutes later the Ethereal himself walked through the door to her office, having to duck under the door. Human architecture was definitely not suited for aliens that were a good three or so feet higher than the average.

“Aegis,” Saudia greeted, standing and looking up at him. “Welcome, I’m glad we finally get to meet.”

“The feeling is mutual, Chancellor,” he answered, his voice deep and with a layered quality to it. She’d heard psions speak like that, but only when using their abilities. It seemed Ethereals did it naturally. She’d been warned that being around Aegis would affect her mind, make her feel more confident, secure, and safe than she might normally be.

From how she felt now, that seemed to be true. She wanted to experience it at least once and then take that and determine if she’d want protection next time. Oddly enough she didn’t feel too different, but she also noted that she should at least be feeling somewhat uneasy being so close to an Ethereal.

“Well, take a seat,” she said, moving her own chair to the middle of the room where the oversized one Aegis would use was set up. The Ethereal complied, and the resulting image did look somewhat ridiculous, but Saudia ignored that and decided to get right into it. “I admit, I didn’t think this would actually happen.”

“An understandable assumption,” Aegis said through his helmet; she wondered why he seemed to wear it everywhere he went. “This is...unusual. My kind have been united for millennia. I am the first to...rebel...if you wish to ascribe a word to it.”

“No matter how you describe it, you have certainly made an impact,” Saudia nodded. “You’ve told the Commander your reasons. He has shared them with me. The Synthesized; the ones who wiped out your Empire. Your goal is to fight them, correct?”

“A long-term goal, correct,” Aegis confirmed. “There is no higher one right now. What matters is improving, uniting, and preparing. The Ethereal Collective was supposed to be that solution, but the Imperator has abandoned this goal. It is little more than a loose collection of species who rarely interact on a meaningful level.”

“Right,” Saudia crossed her legs. “Your goal is understandable. But I do wonder where you now fit into this plan. Or for that matter, how you see us in this plan. Are we a means to an end for you to eventually assume control of the Collective and then reform it?”

“By the end of this,” Aegis said heavily. “I suspect the Ethereal Collective will not exist, at least not in the form we know today. Something new needs to be created, a truly united collection of species, and with your species presumably the victors, you will assume this role. The time of the Ethereals is...past. It would take thousands of years to rebuild our numbers, even with thousands of Ethereal cloning chambers. A new species must arise to take its place. Humanity can fulfill that role, and I will ensure that the same mistakes are not made.”

That was...surprisingly reasonable. “You don’t wish for a position of authority?”

“I have no need of recognition by your people,” the Ethereal shook his head. “I am content in XCOM. I will endure long after you are dead and gone. Titles and authority should go to ones who will not retain it indefinitely. And I suspect you would not want an alien influencing your
government.” A pause. “At least not an Ethereal.”

“I will say I’m glad to hear it,” Saudia said. “We have enough aliens trying to take control of my species. But that does bring up the fact that Ethereals will die before this war ends. You convinced the Commander to spare Caelior, but it will not be the same for all of them.”

“I am aware,” Aegis exhaled, resting his two lower arms on his lap. “Caelior did not deserve to die. He was young and manipulated since birth. There are Ethereals that deserve to live besides him. Not all should be punished for serving the Imperator; every Ethereal killed is one that cannot be replaced in the upcoming war. That needs to be taken into account.”

“But that should not be your decision,” Saudia noted firmly, resting her hands on her lap. “Some Ethereals are too dangerous to be left alive. Isomnum; the Imperator; the Overmind. They pose too great a threat to ever allow to live, and of course, ADVENT will not let the one who ordered the invasion of our world to live.”

“Yet there are ways of keeping them…reduced,” Aegis pointed out. “The Manchurian Restraints are proof of this.”

“No.” Saudia stated flatly. “There is no redemption for some. ADVENT will make an example out of anyone who dares to attack us without provocation. Should we win, the Imperator will be executed. I would ask you resign yourself to that fact.”

“I suppose it is too much for you to overlook,” Aegis sighed. “Yet even now, I do not believe he is malicious. Just…on the wrong path. I do not know what led him to take these actions, but he must be stopped now.”

“I’m glad we agree there,” Saudia took a moment to let him think. “Now, there was something I specifically wanted to discuss with you. I have been appraised of a number of alien defections. Vitakara and Andromedons primarily.”

“That is good news,” Aegis congratulated.

“They all had one thing in common,” she said pointedly. “You.”

“I am not surprised,” Aegis agreed. “My kind were…exalted in the Collective. We are figures larger than life to many of them. My appearance has no doubt shaken their loyalty to the apathetic Imperator. The Battlemaster can only retain so much influence.”

“And as a result, we have something of an issue,” Saudia continued. “ADVENT was designed with the goal of Human defense and enhancement. Yet it is apparent that having a plan for dealing with alien prisoners is also a necessity…as well as working with defectors.”

“ADVENT would certainly benefit from a structured plan for such aliens,” the Ethereal said. “And if you are bringing this up, I suspect you have something already in mind.”

“We will face a crossroads in the future,” Saudia explained. “I suspect some of the defectors will wish to fully join ADVENT. That is not something we are prepared for, nor will it be popular. However, I believe it is the best course of action. Having aliens remain either POWs or second-class citizens benefits no one and breeds xenophobia. Considering we are working together, I think it should be avoided.”

“As do I,” Aegis said wearily. “It did not ultimately work for the Empire, and it will not work for your species. It is an admirable goal; one which I am impressed you have the foresight to plan for.”
Saudia stood and walked over to her desk. “In the past few days I’ve begun the preliminary development of a department for this specific purpose. As an alien who is familiar with Collective species, your input would be welcome.” She handed the tablet to the Ethereal.

He read it for a few moments. “The Alien Emissarial and General Integration Service.” He looked up, voice almost amused. “AEGIS.”

“Considering their common motivation is you, I felt it was appropriate,” Saudia said, smiling. “That, Aegis, will handle our alien captives, both defectors and POWs, as well as diplomacy with other alien governments. The ultimate goal is to successfully integrate interested aliens into ADVENT, successfully extract information from POWs and eventually convince them of the error of their ways, and to facilitate communication between ADVENT and…interested alien parties.”

She nodded towards him. “There are a certain percentage of aliens who wish to fight directly for you. We are evaluating and marking ones we feel you would get more…use out of. If you wish, we can send them to you and you could form your own little militia. They would feel better fighting for an Ethereal than a Human, and the soldiers are not ready to fight alongside aliens yet.”

“The Commander may not enjoy so many aliens taking residence in the Praesidium,” Aegis said, lowering the tablet. “But I am certain we could come to some kind of agreement. We both agree that having willing combatants turned away is a waste.”

“Yes,” Saudia nodded. “While you do primarily work with XCOM, I would ask that you assist us in at least the development of this service, and it might do some good to visit our alien defectors. Make them know you are aware of their existence. It would make things easier for us.”

“That can be arranged,” Aegis confirmed. “I believe we will work together well, Chancellor.”

“Glad to hear it,” she answered. “I think that with you helping us, our chances have improved significantly.”

***

Officer of the Commander, the Praesidium – Classified Location

12/10/2016 – 6:12 P.M.

There was still no public response from the Collective, nor military activity of any kind.

The Commander certainly wasn’t complaining about the lack of response from the Collective, and that indicated to him that the lull would probably continue for some time yet. He imagined that the Collective would want to make sure everything was in order before making their next move. In the meantime they hadn’t been idle.

Vahlen, Shen, and everyone else was busy working on projects. ADVENT was working on expansion and other projects of their own. Aegis was making something of a media tour, and getting quite a bit of interest from across the world. The newer aliens in XCOM were integrating fairly well, and overall, the future was looking fairly stable.

His intercom beeped. “Yes?”

“Commander?” Jackson answered. “We’ve got a…well, situation.”

That lull now just might be ending. Wonderful, but it had to be sometime. Maybe it wouldn’t be so bad, since Jackson sounded more puzzled than concerned. “Describe it.”
“Message from ADVENT,” Jackson answered. “There is a UFO that just landed in Montana. Sectoids. They apparently are being detained and want to talk to Aegis.”

The Commander sat bolt upright. Now *that* was a development he wasn’t expecting. In fact, he was extremely skeptical. “Is there a Hive Commander? Are you sure this isn’t a trap?”

“Sending images,” Jackson said, and they popped up on the Commander’s screen. “They’ve got Priests on site, so they aren’t under psionic control. It isn’t a Hive Commander either, but twelve Sectoids, four of them Vanguards. I guess they’re smarter than we thought.”

The Commander looked through the images. The Vanguards were unarmed, and ADVENT Forces were indeed on site. It looked to be a Fighter-class UFO, big enough that that number of Sectoids could easily fit in it. Well then. “They want to talk to Aegis? Did they say anything else?”

“One of them mentioned Hive Commander 088,” Jackson said. “I checked it with our own records. No mention. But considering we only have information on a few Hive Commanders, I’m not surprised. Guess Aegis is even making waves in the GHC. Should I say we’re sending a team?”

“Do it,” the Commander said, moving to open another channel. “I’ll instruct Patricia to put together a team to extract them. Send our thanks.”

“Will do. Jackson out.”

The Commander opened a channel. “Patricia, I need you to put together a squad. VIP Extraction; apparently ADVENT has some Sectoids that want to talk to Aegis.”

“You’re serious?” She sounded incredulous and he couldn’t blame her. “Wow. Alright, a team will be ready shortly. Patricia out.”

The Commander soon received confirmation of the squad, which wasn’t exactly the elite, but did include Creed and Carmelita in the event the Sectoids, for whatever reason, tried something. The rest were newer soldiers. This seriously felt too good to be true, it *had* to be a trap somehow. But at the same time…maybe it wasn’t.

Maybe Aegis was having a much larger impact in the Collective than even they had assumed. The Sectoids wouldn’t attempt this for no reason. Something major was happening in the Collective to force this kind of event. Hopefully they would have some answers.

A short time later he received the acknowledgement that Big Sky had departed. Good. Hopefully they’d be back in a few hours with some little grey friends. They had every other alien species, but Sectoids…those were going to be interesting to figure out. The non-Vanguards would probably not be very functional, but he realized that they really didn’t know how independent Vanguards could be.

Clearly more than assumed, otherwise this Hive Commander would not have sent them. There was no chance that this was all done by independent Vanguards. No Hive Commander would allow that amount of autonomy.

His intercom beeped. Jackson. “Yes, Central?”

“Commander?” She answered. “Hey, is there something I should be aware of? Big Sky just requested authorization to depart on your orders. There some mission I’m not aware of? I cleared it, just so you know, but I should be kept in the loop.”

He frowned. “What are you talking about? The one with the Sectoids. ADVENT contacted you,
remember.” He paused. “This was only about an hour ago. You can’t have forgotten.”

“Commander,” Jackson said slowly. “I have no idea what you’re taking about. We haven’t got anything from ADVENT, much less anything with Sectoids.”

The Commander felt ice spreading across his chest as he clicked on his computer, looking for the images Jackson had sent. Nothing. There wasn’t even anything she had sent; no indication that what he’d seen had even existed. “Jackson, recall Big Sky immediately. I think we’re under a telepathic attack.”

“Will do.” He waited anxiously for Jackson to report back. “He’s not responding,” she finally said. “It’s going through, but he isn’t answering. I don’t know what to do.”

The Commander thought quickly; it had indeed turned out to be a trap. And one that some of his best soldiers were flying right towards. He didn’t know if sending more after them was the best solution. This had to be the Overmind or Imperator, and there was a good chance that they weren’t going to let any reinforcements interfere…with whatever they had planned.

Well, there was potentially one. “Jackson,” he ordered urgently. “Get in contact with Aegis and send him to the coordinates of the Skyranger.”

There was a brief pause at the other end. “I’m sorry Commander, I’m afraid I can’t do that.”

Fuck.

He could repeat himself, but it was apparent that this was not going to work. They were still under psionic attack, and for all he knew, he was already influenced as well. Only one way to find out. He had the capability to call Aegis, but it would take some time. He moved his hand to begin the process…

And…his hand wouldn’t move.

“Not this time, Commander.” He looked up to see a copy of himself leaning against the wall of his office. The only difference was that the eyes were pools of black, and the voice was not his. It was the first time he had heard the Imperator speak; a rich, deep baritone that commanded complete respect. The doppelganger smiled at him. “You’ve caused some difficulty for me. I believe this time I will return the favor.”

“What are you doing?” He demanded, frustratingly able to move but not actually put his hand close to the computer. He didn’t even feel the Imperator in his mind.

“I am going to make Patricia an offer,” he stated, still smiling. “It is time she knew some things. Don’t worry, I don’t plan to force an extended visit. Depending on how things go, you will see her shortly. But you have so far managed to acquire two Ethereals who used to work with me. I only think it fair that I offer some of your soldiers the same opportunity.”

“She won’t join you,” the Commander said, knowing what he was implying. “You’ll have to force her. And even then she will resist.”

“We shall see, Commander,” the Imperator gave a wave. “I am quite looking forward to seeing which of us is right.”

And he vanished, leaving the Commander alone and helpless.

***
Something seemed wrong about this. The UFO she saw ahead, but otherwise there was nothing. She sensed...something ahead, something powerful. Definitely a psion, but there were no ADVENT soldiers around, nor any Sectoids for that matter. She didn’t see any physical evidence that there had been any in the first place.

No tire marks, gasoline smell, or any indication that this place had once been occupied.

“This is definitely a trap,” Creed stated without any ambiguity. “The UFO is here...but literally nothing else.”

“There’s also a psion ahead,” Patricia pointed, trying to extend her psionic reach and hitting the equivalent of a brick wall. “Gah, a powerful one too.” She paused. “We don’t know what we’re dealing with. It might be a good idea to retreat until we know. We should ask the Commander.”

She froze as she felt the barrel of a gun pointing into her back. “Please move forward, Psion Trask,” Carmelita said, her voice more monotone than usual. She turned around to see that the entire squad was either pointing weapons at each other...or themselves. Creed had his pistol placed under his chin, looking directly at her.

Fear clawed over her as she realized what was going on. And who was likely to be inside that UFO. She swallowed, and walked forward, the entourage of mind-controlled soldiers following behind her. Yet she felt exactly nothing directed at her, and she hadn’t even noticed that an attack was even happening.

That shouldn’t have been possible.

They walked forward on the grasslands until they were directly in front of the UFO. The entrance shimmered and the protective field dissipated before them. Out stepped an Ethereal in a single flowing orange robe; arms hidden within and the face obscured, the only thing visible being two bright orange orbs.

Patricia Trask.

The voice appeared in her mind, scratchy and rasping as if it hadn’t spoken in years.

“Overmind,” she answered, feeling it was her only acceptable response. “Why are you here?”

I am here on the orders of the Imperator. I am here to give you a choice.

“A choice?” She looked around at her mind controlled soldiers; who had ended pointing their weapons at each other and were prepared to commit suicide if the command came. Some held grenades up, others had pistols to their heads. “I don’t see one here.”

There is no choice without stakes. A choice is not real without equally valid choices. There is no false choice here, Patricia Trask. You will decide who will live or die this day. You will chose who will go free or who will be sacrificed.

One hand extended from the robe and motioned to the soldiers. Your first choice: You surrender to me, and your soldiers will live. Your friends will live. Your lover will live. You will come with me before the Imperator where you will make your second choice, of which I am not aware of the details.
Another hand appeared, with a spindly finger pointing to her. *Or you refuse. Everyone around you will die. But you will be free. Free to return to the Commander. Free to return to Aegis. The Imperator will not speak to you again, nor provide assistance. You will never face this choice again.*

Patricia swallowed. Of course the Imperator would give a choice like this.

And of course, she absolutely believed him.

Ironic. She could actually be free of him, and all it would cost her were eight soldiers. She looked back to Carmelita and Creed.

One of which happened to be her friend. The other her lover. And five other well-trained and meaningful soldiers. Innocents who didn’t deserve to be caught up in the mess she had placed them into. All of this was her fault, if she hadn’t listened to the Imperator, maybe this wouldn’t be happening. Could she really justify killing even the ones she wasn’t attached to just to be free of the Imperator?

Much less the ones she was?

Yet if she surrendered…she didn’t know what would happen. The Imperator’s plan for her…whatever that was…it would either fail or succeed. Either way, she got the feeling that if she surrendered to the Overmind, she would never be coming back.

“And what if I just stay here, doing nothing?” She asked.

*Your body will fail eventually. You will sleep. I will not.*

Concise and to the point. And all this time she imagined that they were using their telepathy to keep help far, far away. And while the Overmind hadn’t mentioned killing soldiers to make a point, she knew that was also likely.

*Have you made your choice?*

Her shoulders slumped. It was a choice. But one where she knew she was condemning herself. She looked at Creed. “I’m sorry,” she said quietly. “But I won’t let you die for my mistakes. None of you.”

In the end, this was her fault. Her responsibility. She deserved to face whatever the consequences were, even if this was likely what the Imperator wanted. She looked to the Overmind. “I surrender to you.”

The Ethereal gestured and all the soldiers crumpled to the ground. *They are unconscious. They will be recovered by your brethren. Follow me.* He turned and entered the UFO. Patricia slowly and robotically followed, everything seeming surreal as she stepped inside the shining UFO.

_Sleep now, Patricia Trask._ The Overmind communicated as he stepped up to the piloting controls. *And do not fear. You will not be harmed.*

She didn’t fear pain. She feared something worse.

But before she could think about what that could be, she drifted into a deep and dreamless sleep.

***
And half a million words later I finally wrap up Act II. Sorry about the cliffhanger, really, but you'll see her again in five or so chapters where it'll be explained what happens with her. Hope you understand.

Nah, I'd hate anyone who does that. Next chapter will pick up right after this with a (probably) long-awaited meeting between Patricia and the Imperator. It will be an illuminating one, I think. The good news is that it's actually all written and is going through the editing process now. It's short (For me), so I am hoping it will be ready to post within the week. No guarantees though, fair warning.

As for some of what Act III is going to entail, it's going to not be quite as action-packed as the previous two. This is a lull in the conflict where all sides are going to reform, improve, and expand. There will be more focus on what Volk is doing, the SAS, and internal Collective affairs. That isn't to say there won't be any action, but it won't really be the battles I've done so far. And after a 4-chapter long battle, I think it's good to have a somewhat slower pace. This is one of the acts that will have the most major ramifications so far, so keep that in mind.

Aside from that, I did also want to mention that this series does have a Tvtropes page, which is unfortunately extremely out of date. Any additions that could be made to it would be greatly appreciated. The last thing to mention is that as I'm graduating college very soon, I'll probably be going through some kind of transitional period over the later months. This may or may not affect writing speed/posting, but it is something to keep in mind.

Thank you for all the reviews, messages, and feedback. I will do my best to keep improving at a quality all of you expect.

- Xabiar
Unknown Location

Unknown Time

It was the low humming; just residing on the edges of her hearing that awakened her.

Her mind was initially groggy – until she remembered everything that had happened.

Adrenaline shot through her body and Patricia bolted upright, frantically looking around and telepathically probing the area around her. She stayed that way for a few moments, her chest rising and falling as she worked to calm herself. This was still real; it hadn’t been something in her mind. The Overmind; the UFO; her surrender; it was still real.

Fuck.

She rubbed her eyes, and swung her legs over the edge of the bed to rest her feet on metal floor that felt oddly warm under her soles. The room she was in was almost a perfect square, with the bed she was laying on being against one of the sides; opposite her was an opening currently protected by one of the alien multicolored shields. Peering closer at it, she also saw that there was indeed a solid door between the room and whatever was outside.

So she either had privacy, or she was a prisoner.

She stood and cautiously walked over to the door, and a black interface built into the wall formed into a purple hologram with the Ethereal glyph for ‘close’ on it. Or at least she was fairly sure that it was; she hadn’t picked up as much on Ethereal Script as the Commander, though he’d had that knowledge burned into his mind. She placed a hand over it, and allowed some psionic energy to be released. The glyph changed and the door slid up soundlessly.

So she technically wasn’t trapped. It was something, she supposed.

Quickly reversing it, she took a moment to look around at the rest of the room. The walls looked exceptionally odd to her; black, but almost transparent in a way. They seemed to be segmented into the wall; squares, circles, and other shapes’ just faint outlines adorning them. Furrowing her eyebrows, she walked over to one of the walls to take a closer look.

Notably, it actually seemed to be glass, or some other transparent material that overlaid the black metal walls. That would explain it, though it didn’t explain why it was even there in the first place. Some of the shapes didn’t seem to be flush, especially with odder shapes, so she tried prying it with one of her fingers.

To her surprise, the piece popped out with ease and she stood with a small cube in her palm. She brought it up to her eye, trying to see if there was something special about it, but she couldn’t see anything other than a small transparent cube. She slowly moved the piece back over to where it had been attached, and sure enough, once it was close, it was pulled back into its original place,
like a magnet.

Hmm. Was it supposed to be some kind of Ethereal art? She couldn’t see any other practical purpose for that kind of design. It extended as far as she could see; every wall and even the ceilings were designed in that way. The ceiling itself was high and sloped, but definitely not angular. She also realized at that point there was no obvious light source, but everything could be seen clearly.

There was a slight purple tint to everything, so perhaps there was a kind of psionic lighting that was worked into the room in some way? It ultimately wasn’t important; what she needed to do now was figure out what to do next. Unfortunately, she suspected her options were going to be limited. Someone was going to check on her soon, and she doubted escape was going to be possible.

As she thought that, she looked around for any cameras or security devices. Nothing was spotted along the smooth walls. Of course not. They didn’t need to resort to that when she was a powerful psion, and they could likely manufacture nanotech that she couldn’t see with the naked eye. They wouldn’t have painfully obvious security cameras.

Speaking of her having a powerful psionic signature, she was definitely not the only one. There were at least four, and another which dwarfed all of them. She felt it even without trying. The Imperator, it had to be.

With her survey of the walls complete, she looked at the rest of what resided in the room. On the wall to the right of her bed there appeared to be a…sink of some kind, and the corner had very specific tiling on it. She walked over towards the corner, and another psionic switch appeared, this time with a glyph she didn’t recognize instinctively, but had seen in conjunction with other glyphs. It was either wet or water.

She flicked it on and started as transparent fields appeared around and within the corner. Water also fell from openings in the ceiling and she watched as the water began circulating through what she supposed were anti-grav fields of some kind. Their version of a shower? She cautiously stuck her hand in it, and felt no resistance as warm water soon ran over it before landing on the ground in slow motion.

Neat.

She didn’t have the urge to take a shower right now, especially when there was a good chance that someone was watching her. Given that the Imperator had presumably watched her and Creed have sex, she wouldn’t have put it past him to watch her take a shower.

Sadness washed over her at that. Creed…he wasn’t going to take what had happened well. He was alive, but both of them knew that they probably wouldn’t see each other again. She did take some solace in the fact that he was probably already planning a rescue, because that was about all he could do right now.

She was going to have to be very careful if she wanted to get out of this alive.

Out of curiosity she went to the sink to see if it worked the same way. The same symbol from the shower appeared once more and she flicked it on. The black metal shaped into a bowl hummed and the rim of it shimmered in an anti-grav field. A small but steady stream of water shot into the bowl and acted much like the shower had; slowly falling into the drain. She stuck her hands in, and had to admit that the sensation was strange, but not unpleasant.

She could manipulate that globs of water around, and it didn’t so much splash as mold to her hand
when it hit. It was almost fun to reach for a stream of water that was falling and literally lift it back up before it fell back down. As she withdrew her hands from the field, she noticed that they were completely dry when she pulled them out. The field must not have let any excess water leave.

It was rather fancy for such a mundane purpose, but maybe it was normal for Ethereals.

Patricia decided to now turn to what she was probably supposed to have gone to first, and that was the table that held some clothing on it, and on the one right next to it lay her armor. While she was at it, she stepped in front of the nearby mirror to see how she looked.

All things considered, it could have been worse.

She was in a short-sleeve grey shirt-like clothing, with matching pants and nothing on her feet. The material at least felt nice, and her hair and skin looked…normal. Which meant that at some point they’d probably stuck her in one of those showers to get cleaned up. She grimaced at that, but that was honestly not too unexpected. For all she knew it could have been weeks since she was taken.

Patricia turned towards the tables and first moved to inspect her armor. She wasn’t sure if it was a taunt or not, since they wouldn’t offer this unless it would be of no use to her. But from what she could tell, it was definitely her armor, scratches and all. It had definitely been cleaned up, since there was no dirt or mud on the boots or leg armor, and the pieces had a dull sheen to them.

The undersuit had also clearly been washed, and laid alongside the armor pieces. Everything seemed present and intact, including her helmet. Even the XCOM symbol was still displayed on the chest, as well as the flag of Britain. It was nice of them to leave it intact for her, so she had to give them some credit.

She moved over to the second table which had attire that was probably more appropriate for the situation. The closest thing she could compare it to was a dress uniform. All the pieces were white, with complex gold embroidery throughout it weaved into some objectively beautiful patterns. She picked up the main piece, a long-sleeved garment with the gold embroidery leading to the golden outline of an Ethereal – almost comparable to a stick figure.

The material was exceptionally soft, more so than anything she had ever felt before. She unfortunately couldn’t begin to guess what it was, but she at least wanted to wear it at some point. Accompanying the main torso piece were pants, socks, a pair of similarly white and low boots, and gloves.

The other final part was a cape-like piece of material that was designed in such a way that she would have to place her arms through the respective openings, and then hook it into the main torso piece. The color scheme was inverse of the main uniform; golden with white embroidery that simply formed a larger Ethereal symbol like the one on the chest.

She really did not know what the point of it was. It was more akin to something like what royalty would wear, not military leaders or people going into combat. True, it certainly looked impressive, but it still seemed too ornate for casually wearing around.

With that said, she did have to at least see how it felt.

It took her a few minutes to take off what she was currently wearing, and then get into the white uniform provided. Even as she was putting it on she had to admit that she definitely hadn’t worn anything more comfortable. She didn’t feel warmer than usual either, and her hands didn’t feel sweaty in the gloves yet, which was a welcome surprise.
The cape thing wasn’t hard to put on either, and after walking around some, it actually didn’t seem to really interfere in her movement. It reached down to just above her boots, slightly below her knees. Fairly standard, but she doubted she would notice it was there unless she was moving very fast, and even then she would want to be sure.

She stepped in front of the mirror to see how she looked.

Honestly, she thought it fit her very well. She looked like she stepped off the set of a Disney movie, but that was certainly not a bad comparison. While unnecessarily ornate, it did look good on her. If she could lose the quite blatant Ethereal symbol in the chest, she might actually consider wearing it like the Imperator clearly wanted her to.

Sadly, she wasn’t a princess. She was a soldier, and when she met the Imperator it would be in her armor.

She then, with some regret, stripped out of the uniform and fell back into the familiar process of donning her armor. It was more difficult without help, but doable. It wasn’t like she was pressed for time. At least in her armor she felt some sense of protection and durability. That uniform was comfortable, but soft.

Once donned, she flipped the helmet in her hands, wondering what to do next. It could be hours until she received someone, or they might show in a few minutes. She obviously had the ability to leave her room, so was she expected to just start wandering around?

That did not seem like a good idea. If the Imperator wanted to speak to her, she wasn’t going to waste her time possibly wandering to her death. Not that she felt that was an actual concern; the Imperator had probably issued standing orders to not harm her. And with at least some very powerful psions nearby, she could probably be subdued if she decided to be unruly.

She didn’t really plan to be that way. Violence was going to do nothing except worsen her situation.

Patricia waited there for some time, just thinking about her situation and all the possible ways this could go. The Imperator was almost certainly going to try and convince her of something, and she didn’t necessarily believe it was going to be as simple as “Join me or die.” That wouldn’t fit with how he’d operated so far. Going so far as to abduct her was surprising, and did indicate that something had happened to make him take such a drastic step.

It was probably going to come down to a choice, or series of choices. He seemed to like that. Even something as simple as choosing what she was going to wear was definitely some kind of choice, though maybe one with meanings not as obvious as it seemed. Context changed, and logical arguments could be used for wearing whatever she wanted.

Maybe she was overthinking it.

A knock distracted her. She glanced up to the door and narrowed her eyes. There was a psion on the other side; a powerful one, judging from the light probing she’d just done. No penetration, and they had extremely powerful defenses. “Come in.” She didn’t know if the door could even be opened from the other side, but figured that they would have overrides anyway.

She was expecting an Ethereal to walk through, probably one of the Guardians or if she was unlucky, the Overmind.

The shield dissipated and door slid aside, and to her surprise a Human walked through.
Patricia blinked in shock as she took in the man before her. Although ‘man’ may have been generous because the Human before her looked…young. He couldn’t have been any older than twenty, if that. His Hispanic features narrowed down where he could be from, but she knew that looking at the eyes would give her more than his young features would. And the brown eyes of this man were…weary. An odd look for someone like him.

He still gave a brief smile; he likely knew what was going through her head. “Not what you expected?”

The man was wearing a uniform that was very similar to the one she had just rejected. The differences were that this one was black with silver lining, and there were far fewer complex patterns. His cape had no pattern, and also seemed to include a hood that was currently put down. A knife was also strapped to his waist that didn’t seem to fit with the rest of his outfit.

“I wasn’t expecting another Human,” she said, standing. “Much less one who appears to be…free.”

He seemed amused at that, and based on his thicker accent assumed that he was from Mexico and not the United States. “Depends on what you define that as. I can wander around here without problems, but I’m not fool enough to try and leave without letting one of the Ethereals know.”

“Right.” Patricia cocked her head. “And just where are we?”

“I can’t give you the exact position,” the man answered. “The Imperator likes to keep it moving. But you are now on the Temple Ship of the Imperator of the Ethereal Collective.”

Aegis had spoken of the Temple Ship, but not many details aside from that it was where the Imperator resided. “I see.”

“I doubt it,” he shrugged. “I didn’t get the name either. But it makes sense to them. It would be more accurate to call it a Shrine or Reflection. You’ll see when you walk through the ship.”

“Who are you?”

“Ah, right,” he nodded, smiling in self-deprecation. “Sorry about that. Nico Murillo, current…” he paused. “…Resident of the Temple Ship. Maybe Ward is a better word.”

She didn’t recognize the name, but honestly had not expected to. “And were you paid a visit by the Overmind?”

He grew more somber at that. “No, I came of my own volition. An offer was made, and I took it.”

Patricia wasn’t quite sure what to make of that. “You abandoned Earth? Willingly?”

He sighed at that. “Miss Trask, if you really want to you can hear my life story later. Suffice to say that there is nothing left on Earth for me. And when I say that, I mean it literally. ADVENT was responsible for destroying my family, and the cartels finished the job. I’d prefer not to focus on that right now.”

That…would probably do it. She just gave a nod. “I’m sorry to hear that.”

“Everyone is,” he dismissed with a wave. “But that isn’t why you’re here at this moment.”

“You either,” she pointed out. “Did the Imperator send you to get me?”

“Sicarius did,” he clarified. “I imagine the Imperator told her, yes. I assume they felt it would be
better for you to be greeted by me than the Guardians. Under the assumption that you won’t do anything foolish, of course.”

“No point in it,” Patricia agreed. “I don’t suppose you know why the Imperator wants me?”

“No,” Nico shook his head. “But I do know that you are an important part of his plans. There were debates on when to bring you to him, and I presume that…recent events made him take action. Aegis very nearly caused a rebellion in the Collective, and even now the Battlemaster is trying to repair the damage.”

“And has my capture been revealed?”

“Not to my knowledge,” Nico answered. “Nothing official from ADVENT or XCOM. I doubt they’d want news that their most public psion had been abducted to be spread.”

Not surprising. Patricia set her lips in a thin line. “Very well. No point wasting time, I suppose. Let’s go talk to the Imperator.”

Nico turned on his heel and motioned her to follow. “This way.”

***

_Crew Quarters - The Temple Ship of the Imperator of the Ethereal Collective_

_Unknown Time_

They stepped outside her doorway and Patricia once again started in surprise. Directly outside her room were two Mutons. These were surprisingly small, barely taller than her, and there were some clear physical differences between them and standard Mutons. The most obvious was that they were much smaller and slimmer.

They wore pitch black heavy armor, segmented and seemingly powered by an armored elerium core on the upper back. Their wrists held additional weapons; one had what looked like a wrist-mounted plasma weapon, and the other had what looked like a retractable blade. In their hands they held what she presumed were plasma weapons, but were made from black alloys and had no exposed cores. White Plasma weapons, perhaps? They were used by the Phantom Division, and she doubted the Imperator would skimp on the equipment of his own personal army.

Their helmets were extremely similar to the ones she’d seen on the Muton Centurions they had encountered several times; an armored helmet that covered the entirety of the head, with the eyes lit a purple color. But what stood out to her a few moments after starting at them was that…she couldn’t touch their minds. At all.

To be more specific…she could locate their minds, but actually attempting to penetrate them was a nigh-impossible task. It was as if someone had encrypted their minds; making them impossible to comprehend, and as a result, manipulate. Nico noticed her looked at them. “Miss Trask, may I introduce you to the Praetorian Guard of the Imperator.”

“Welcome, honored guest of the Imperator,” the leftmost Praetorian stated, nodding his head towards her. “It is good that you are awake.”

She blinked. “You talk?” She knew the Sargons were capable of complex speech, and their voices sounded fairly normal, if deep, but she’d never heard of any other type being able to independently talk.
“Yes, we have an increased mental capacity compared to our lesser brethren,” the second Praetorian explained without malice. “We expect this is a surprise. Our kind are not like the others of our species; we are their future under the Imperator.”

“I don’t know the full details,” Nico said, walking up to her. “But the Praetorian Guard is known to most of the Collective. However, most believe that they are the result of the Sargon and Elite units, or at least a more powerful Elite. That, from what I understand, isn’t true.” He waved a gloved hand to the Mutons. “The Praetorians were the first. The Sargons and Elites were offshoots of the Praetorian project. The Ethereals have mastered the Muton genome; anything you hear that indicates otherwise is either disinformation or propaganda.”

That was actually major news. But if that were true… “Then why is he using downgrades?” She wondered out loud. “Why not just use Praetorians exclusively? Hell, even Elites or Sargons would be fine.”

Nico began walking down the hallway and she joined him, while the two Praetorians followed a short distance behind them. “I’ve wondered that myself,” Nico admitted. “I suspect it has to do with time and cost. Praetorians are not cheap or easy to grow. Still, the Ethereals are not strapped for resources. Perhaps you can ask him that.”

“I’ll do that,” she muttered, glancing behind them. “From what Aegis said, I thought they’d be taller.”

“Oh, don’t worry,” Nico grinned. “You haven’t seen the big ones yet. Revelean specifically made their size modifiable, largely because, while a massive Battlemaster-size unit is intimidating and powerful, it is not useful in small or confined spaces. Versatility is key in the Praetorian Guard.”

Already she was working out how this was going to affect the war. These appeared to be the future the Imperator was moving towards, and Mutons with the intellectual capabilities of a Sargon were something Humanity was not prepared for. They would adapt, as they always did, but this would be a more difficult challenge to overcome.

“What’s wrong with their minds?” She asked. “I mean, you are-“

“A telepath, yes,” he acknowledged. “I don’t know, honestly. I think it’s a kind of mental conditioning. I don’t know for sure though, I’ve never felt anything like their minds. Neither have you, I guess.”

“No,” she shook her head. “It’s like the brain was encrypted.”

“That…is a better analogy than what I always compared it to,” Nico said slowly.

“And what was that?”

He gave an embarrassed shrug. “A pile of shredded paper.”

Patricia almost chuckled at that. Nico motioned ahead. “Here we are; the next room has the reason why they call this the Temple Ship.” They stepped into a rectangular room filled with holographic terminals, stands, and pedestals filled with various things. But what immediately caught her attention was the walls and ceiling.

“Wow.”

The entire room was a cross between a mural and stained glass art. She now knew what the transparent cubes on the ships walls were for. Depicted on the walls was some kind of battle, with
two sides. One half of the room was a battle on the grounds of some planet, and the other side was depicting the battle in space.

In the center of the ceiling, where both sides met, was an ornate Ethereal that she presumed was the Imperator. He was larger than everything else, and outlined in purple and white as an almost god-like figure. The arms were stretched to the enemies depicted; Director Flagships in space and the hordes of Synthesized on the ground, all of whom were either destroyed or dying.

The entire piece of art was stunning. “Impressive, isn’t it?” Nico nodded. “And this isn’t the only one on this ship. Right now you are also standing in the Archives of History, one of the many areas of the Temple Ship maintained by-“ He blinked. “Well, I suppose he is here now.”

Patricia turned to see an Ethereal she didn’t recognize approach. Compared to most Ethereals he dressed deceptively simple. All he wore was a grey robe with orange highlights, almost directly comparable to the Overmind’s. However, he had no hood and didn’t bother to obscure his face at all. His glowing orange eyes seemed brighter compared to the admittedly few Ethereals she’d seen unmasked.

“Miss Trask, this is Archivist Cogitian, of the Ethereal Collective,” Nico introduced. “And responsible for the art you see before you.”

“The First of the Awakened Humans,” he said in near awe, his voice sounding more energetic than most Ethereals she listened to, who seemed to prefer more methodical speech patterns. “It is a pleasure to meet you. Putting the unfortunate circumstances to the side, I am pleased you are here with us now.”

Patricia crossed her arms while narrowing her eyes. “I don’t plan on staying, if I can help it. No offense.”

“I suppose you cannot be blamed for that.” Cogitian tapped a spindly finger to his neck. “Regardless, should you leave I would wish the opportunity to speak to you. Our records on your species would not be fully complete without the input of the first Human Psion.”

“Maybe,” she said noncommittally. “So…you’re the record keeper?”

She sensed some exasperation coming from the Ethereal at that. “If you want to use such a… limiting term. I am a record keeper, historian, storyteller, and artist all at the same time. I record the stories of the Andromedons, Sectoids, Vitakara, Mutons, Ethereals, and even your own species. No matter what the galaxy has in store, it will be a lesser place if the stories of these species were to never be observed, recorded, and completed.”

His goals sounded similar to those of EXALT’s Chronicler, though now that they knew he was working for a Sovereign One, that wasn’t too comforting. As far as Ethereals went, he seemed more…benign, which was largely how Aegis had described him. Cogitian fulfilled a specific purpose for the Imperator, even if he didn’t necessarily agree.

He was apparently one of the older Ethereals as well, not nearly as old as the Overmind, but maybe second in age. While she was here, she might as well see what his answer to one of her questions was. “Why is this called the Temple Ship? As far as I know Ethereals aren’t religious.”

Cogitian actually laughed. “Oh, they most certainly were.” He paused. “Well, not as you Humans define religion, but any Ethereal who insists that we completely rejected the concept of higher powers is either ignorant, or wishes to fit history to their views. It is a long and complicated subject, suffice to say that-“
He looked towards them. “Right, the Temple Ship. That is the closest translation to your own language. One thing for you to understand about the Temple Ships is that they were not used primarily for…combat.” He said the word with some disgust. “Yes, they were in the War, but they were ships of prestige and command, only given to the most acclaimed of the Empire. They are monuments to their lives and achievements.” He pointed with one hand above. “And so I continue the tradition in my own way. I tell the story and life of the Imperator, and will continue to do so until the end of time, or he perishes.”

He glanced around the room. “However, this particular Temple Ship has needed to adapt for the times. It holds more than the story of the Imperator, but the last remaining histories of the Ethereal Empire and the Synthesized War. There is much that is irreplaceable here…ah, if you wish I could certainly share, but I suspect that you need to move on. The Imperator certainly wishes to speak to you, after all.”

Nico gave a short bow. “Your time is appreciated, Archivist. I hope both of us will be able to speak again soon.”

“Good luck,” Patricia simply said. “I hope you preserve this knowledge. Regardless of which side we fall on, forgetting it benefits no one.”

“Indeed,” Cogitian agreed. “A sadly controversial topic among some circles.”

With that, Patricia followed Nico into another hallway, with their Praetorian guards following close behind. “Interesting alien,” Patricia commented. “Aegis seemed to be right about him.”

“He definitely is,” Nico said wistfully. “Talking to him is like…having every secret of the galaxy just readily available. The Temple Ship is the only place where there are no secrets, no classifications, just knowledge. Some of what Sicarius has pointed out to me is…disturbing in its implications.” He shook his head. “The galaxy is inherently bent towards war. Everything I have seen shows that. And I thought Humans were violent…” he gave a sad chuckle.

Patricia felt he was trying to make a point, but she wasn’t sure what it could be. “Violence is sometimes that quickest path to results. It’s a part of life. I’d be surprised if other species didn’t have violent streaks.”

“Mmm,” Nico seemed like he was going to say more, but then motioned ahead. “Well, something to discuss later. Assuming you’re still around. You wanted to see one of the bigger Praetorians, right? There are a couple stationed in the Grand Commons.”

They stepped into one of the largest parts of the Temple Ship so far; a massive area with an arched ceiling that reminded her of an arena. Interspersed throughout the area were tables and benches, with some alien plant life spread around. Stairs led to an upper floor, and at the top of the stairs were the largest Mutons she had ever seen.

They were at least as tall as the Battlemaster, and much, much thicker. Their armor was probably thicker than some tanks, and their weapons would be hard to fit on aircraft. Appearance-wise they looked identical to their smaller Praetorian brothers, just scaled up to an absurd size. These made Elites look small by comparison.

XCOM would have trouble taking that down, and a quick probe confirmed their minds were similarly scrambled.

“Are they smart too?” She asked.
“Yes,” Nico confirmed, scratching his chin. “Arguably more so since their brains are bigger. The Imperator has envisioned them as the commanders in a ground force because of this. They are also the ones who speak most to Cogitian, make of that what you will.”

The thought of a Muton of any kind holding a meaningful conversation with anyone was an utterly alien concept. There were so many questions as to what the Imperator, or Ethereals in general, were really thinking. They weren’t idiots, that much was clear, but they seemed to have very little clue how to actually make decisions that made sense, leverage their advantages, or provide any kind of leadership.

How could a species so advanced be so incredibly mismanaged?

Or was it intentional and part of a plan she couldn’t see?

“Patricia Trask.”

She turned around to see both of the Guardians walking towards her. While they didn’t look like they were about to attack her, she didn’t fail to notice that at least one of their hands were resting on their Sabers. They were prepared if she did anything, and could imagine why they were here at all. “Hello,” she sighed. “I want you to know I’m not here because I want to be.”

“Your circumstances are known to us,” the First Guardian stated. “We are not concerned about you. You have no power in the Temple Ship of the Imperator.”

She arched an eyebrow. “Really.”

She was moderately tempted to test that, but figured that wouldn’t go over well. Instead, she crossed her arms. “Don’t worry, I don’t plan to cause trouble. I doubt I would be able to do anything anyway. Besides, dying is not something I plan on doing here.”

The Second Guardian seemed to appraise her. “You are calm for one in the seat of the most powerful being in the Collective.”

“And what good is fear going to do me?” She asked, sighing. “Think. If the Imperator wanted to kill me, I wouldn’t be here, would I? And since he wanted to talk, and seems to like talking with me anyway, he’s probably more interested in getting my cooperation than coercing me through… well, anything else. Take your pick.”

Nico frowned. “Wait, you’ve spoken with the Imperator? Before this?”

“Oh yeah,” she glanced over at him. “I’m guessing he didn’t tell you this?”

“Oh yeah,” she glanced over at him. “I’m guessing he didn’t tell you this?”

“Not to me,” Nico said slowly. “In which case…some things make sense.”

“You are dismissed, Human of Sicarius,” the First Guardian stated towards Nico, stepping forward. “We will escort Patricia to the Imperator.”

Nico rolled his eyes. “I really wish you wouldn’t call me that. I’m not her slave.”

Patricia did have to admire the nerve of doing that in front of any Ethereal, much less the Guardians. “I would prefer he accompany us,” she said. “He’s been a useful guide.”

“You do not have authority to make such a decision,” the Seconds Guardian said slowly. “You tread thinly. As do you, Human of Sicarius.”
“And what are you going to do?” Nico asked. “Kill me? Or her?” He nodded towards Patricia. “Accompany-” He suddenly stopped speaking, moving a gloved hand to his throat as he realized what was happening. Patricia wasn’t sure if she should intervene or not. Not that she necessarily wanted to choose a side, but at least Nico had been cordial to her.

She narrowed her eyes and concentrated towards the Second Guardian and sent the equivalent of a tidal wave of telepathic attacks towards her. They didn’t penetrate, but they did disrupt her. “You will regret this, Trask,” she growled as the orange-yellow of her Saber appeared, while Nico collapsed to the ground. “The Imperator will understand if your wings are clipped.”

Patricia stepped back, though noticed the First Guardian not making any move. “Enough,” he said. “This bickering is beneath us. You should not have done that.” Patricia sensed that the words were not directed to her, but the Second Guardian.

The Guardian Saber flew out of her hand, deactivating and landed in the outstretched palm of another Ethereal that Patricia had only heard of. “You are dismissed in the name of the Imperator,” Sicarius stated, her voice melodical, but flat and lacking the layers of Ethereal speech. The thing that stood out about Sicarius was that she was much smaller than the average Ethereal, barely over six feet. Her featureless orb of a helmet was also eye-catching.

She knelt down and helped a recovering Nico rise to his feet. “He is disappointed with you, Second Guardian,” Sicarius growled, flicking the Saber back to the Guardian. “Should you touch him again, there will be consequences. Go.”

The Guardians quickly departed, with the Second Guardian clearly embarrassed at the incident. Not knowing what else to do, she walked over to the pair. “You attempted to help him,” Sicarius said, turning her eyeless helm to her own face. “Why?”

“What she did was not deserved,” Patricia shrugged. “He has been helpful to me, and as pleasant as you can be here. What the Second Guardian did was an abuse of her power.”

“I didn’t expect she’d do that,” Nico wheezed. “I knew she didn’t really like me, but that’s new. But thanks, Miss Trask.”

“Just Patricia,” she said, looking to the small Ethereal. “I guess you’ll be the one taking me to the Imperator? I do think it’d be best to get this done before I end up in the middle of another fight.”

“Yes, I will take you to him,” Sicarius confirmed, checking to make sure Nico was alright. “Are you recovered, Nico?”

“Well enough,” he said, coughing. “Let’s go.”

***

The Throne Room of the Imperator – The Temple Ship of the Imperator of the Ethereal Collective

Unknown Time

Patricia felt the Imperator the closer they got to him. It was an intense rapture that seemed to make everything crisper, charged; it was an aura that was both empowering and terrifying in its intensity. She actually had to strengthen her telepathic barriers to prevent herself from just stopping and basking in the feeling, which would likely make her look like an idiot.

“You get used to it eventually,” Nico commented without looking at her. “But it never becomes stale, if you know what I mean.”
She just nodded, as they reached a flight of stairs that led to an oversized door that was at least twenty feet tall. “He is within the Throne Room,” Sicarius said quietly. “Go forth. He will speak to you in there. We are not required.”

Patricia looked at the foreboding door ahead and steeled herself for whatever was going to happen. “Alright then.” She glanced behind her. “Thank you, Nico. In case I don’t see you again.” He gave her an acknowledging nod, and she began moving up the stairs until she was in front of the door, which slid aside the closer she got.

She couldn’t see too well what was inside, but the moment she stepped through, the door closed behind her. Patricia stood there for a few moments to take in the so-called “Throne Room”. To her, it immediately struck her as a flat, empty room. The floors were the same obsidian metal and extended incredibly far. The entire room seemed to be about the size of a stadium.

She looked up to see the ceiling which extended far above her, showing the stars. She could tell that it was a video projection and not glass, given the various unnatural angles on it, but it was still a striking sight, and then she also noticed that it extended down the walls as well. Almost as if she was standing in space itself.

Ethereals knew how to design ships that left an impression, she couldn’t deny that.

“Welcome, Patricia Trask.”

The voice was that of the Imperator, but with the full power and authority behind it that telepathic projections could simply not convey accurately. In the distance she saw an elevated platform with stairs all around it, supporting a chair that a massive Ethereal was sitting on. Yet the voice seemed to come from all around her; each syllable an unconscious telepathic command that was already pushing against her defenses. It was deep, haunting, commanding, and impossible to forget.

She walked forward.

The closer she got, the clearer the Ethereal became. Once she reached a certain distance, the Imperator raised a hand, and she unconsciously stopped. The Imperator then rose from his throne, and slowly descended down the massive steps. Once on the ground opposite her, she got her first true look at the Imperator.

Everything about him was tailored to maximize his command and awe. His size dwarfed that of the Battlemaster; he must have been close to fifteen feet high, forcing her to crane her neck to look up at him. He wore glistening silver armor, with golden patterns and ornate glyphs sculpted into the armor itself. His helm took a more upside-down triangular design, with the thin eye slits giving off a warm orange glow. A golden cape fell from his shoulders, just falling to the ankles of his armored boots.

His lower two hands were clasped behind his back, while the upper two were hanging idly by his sides. He appeared to have no weapons attached to his belt, but with how powerful he was, she didn’t think he needed any. She tried taking a closer look at the patterns on his armor, and was quite surprised to see what looked like a Director Flagship, and almost a perfect replica of the emblem Abby had described on the Chronicler’s armor.

They looked disturbingly similar.

Why would he have both of those symbols?

“Greetings, Imperator,” she said, her voice sounding flat and empty compared to his. “Not exactly
how I imagined we’d meet in person, but I suppose you wanted to avoid a fight.”

“There is a very limited number of those who could challenge me and live,” the Imperator rumbled. “Humans are not one of them.”

“I suspect we’ll find out one way or another eventually,” Patricia crossed her arms. “I suppose you have a good reason for abducting me?”

“Indeed,” the Imperator said, motioning with one of his hands to follow him. “Come with me. I want to show you something.” Patricia followed him as they climbed the steps to his throne, each step nearly coming up to her knees. At the top Patricia could see nearly the entire room, and it was a nice view. “I do not have this for show,” the Imperator continued, sitting down. “I designed it for a purpose.”

He pushed something on his throne and the room flashed as holograms formed throughout the room, coalescing into a rough approximation of the Milky Way. “The scale of the galaxy is difficult to comprehend in the abstract,” the Imperator said, motioning outward. “Even this only slightly rectified the problem, but it serves as an important means of visualization. It allows planning, exploration, and observation.

The mass of stars dissipated, only to reform into a much smaller section of the galaxy, a few hundred stars it looked like, and it was broken into various chunks, outlined by yellow, white, and blue. “This is the current territory of the Ethereal Collective,” he explained. “With the respective control that the Andromedon Federation, Greater Hive Commanders, and Aui’Vitakar have. Even now it continues to expand, slowly but surely.”

He looked down imposingly at her. “And yet, it is not enough. It is little compared to the threats posed in this galaxy. And in the end, territory does not equal power. It is a tool in the unseen war all species are a part of.”

“I suppose you’re going to explain that?” She asked.

“Of course,” he confirmed. “But I would like to know what Aegis has said about me. Why he… defected.”

She grunted. “I would have thought you’d read my mind to get that answer.”

“To what end?” He asked. “I find little enjoyment in learning of the mundane details of lives. Most are inclined to distrust you if they know you will violate their minds. I see little point in doing so unless there is a greater purpose.”

A policy Patricia had to agree with, since it was fairly similar to her own. “He says that you’ve changed from their original goal. That you’re no longer interested in fighting the Synthesized; that you’ve become obsessed with the Sovereign Ones and seem to be planning to turn on them.”

“I see.” The Imperator stood and walked down the steps to the ground floor, with Patricia following him. “A vast oversimplification, but not entirely inaccurate. Since awakening… I have learned much about this galaxy. I spent a decade simply reviewing the Synthesized War, I planned for decades more how to fight them. I accepted the help of the Sovereign Ones at first, initially pleased we were not the only survivors. But the more I learned, the more things have changed.”

“How?”

“The Synthesized are not an unthinking horde; they manipulated the Empire into fighting exactly how they wished us to,” the Imperator explained. “They sent hordes of poorly made constructs to
fight on our planets, and we sent our legions to fight them. We killed billions. They killed thousands. An acceptable trade, as every Ethereal that fell could not be easily replaced. They do not care about time or speed. They knew how we would respond, and they drained our Empire of our soldiers over a war of centuries.”

“Couldn’t it have been luck?” Patricia asked. “Even if their tactics were simple, that doesn’t mean they were intentional.”

“Most believed that initially,” the Imperator said, beginning to pace around her. “But the creation of the Imperators changed that. We assumed control of the Empire; we saw the pointlessness of fighting the hordes, and began targeting the only things that mattered – the Flagships. We didn’t waste time on unthinking masses; we sacrificed planets to kill even a few of the Flagships. We brought the Empire back from a sure defeat. And that was when we learned how much the Synthesized had been holding back.”

Patricia furrowed her eyebrows. “I feel Aegis would have mentioned something like this.”

“He never participated in galactic strategy. He never saw the larger plan, nor do I think he could truly comprehend or accept that the Empire had been tricked by machines.” He motioned to himself. “Imperators are not like other Ethereals. We did not think like traditional Ethereals. We grew up without the traditions, stigmas and drawbacks of the Empire.”

Patricia nodded. “So what happened?”

“The front line of the war became the Imperators,” he answered. “The Synthesized began targeting us much like we had targeted the Flagships. They reduced their useless husks, and began deploying soldiers that were beyond our own in terms of power and intellect. Imperators began dying from assassinations, ambushes, and freak accidents. They were predicting everything we could do; our psionics stopped working against their most powerful soldiers.”

He paused. “Within two years a quarter of the living Imperators had died. That was when I determined the war was lost. Perhaps if we had been at the beginning, we would emerge victorious, but it was too late. The Empire had condemned itself long before we had arrived, and nothing could be done to change it.”

There was some silence for a few moments. “If that’s the case, then why would you not want to prepare?”

“There is a difference between preparing and prioritizing,” the Imperator answered, stopping and looking directly down at her. “One question that few ask is where the Synthesized came from. They are not natural, that is clear. But even if they are, no one has an answer. But I am certain I have, and they are merely the symptom of a much more prevalent threat.”

Patricia swallowed. “And what is that?”

“That the ones who created the Synthesized still exist, and they are the Sovereign Ones.”

She had suspected he was leading to this. “Perhaps it was a mistake?” She asked after a few moments. “I doubt they…intended this.”

The Imperator rumbled, likely an approximation of a chuckle or laugh. “Patricia, the creation of the Synthesized is something that makes perfect sense when you understand the context the Sovereign Ones have operated in since the beginning of their existence. The Synthesized operate exactly how
their creator intended."

“Right.” Patricia said slowly. “So since you know…what are the Sovereign Ones? What is their story?”

“A long and violent one,” the Imperator said wistfully. “I have pieced this together from observation, interaction, and looking at history itself. The Sovereign Ones, as they contacted us soon after we awakened, were and continue to be helpful. But they have lied to me. They do not answer about the Synthesized, only that they are an enemy. They say they are many, but I am quite certain that there is only one Sovereign One assisting the Collective.”

“Just one?”

“Yes,” the Imperator sounded almost sad. “In a calculated risk, I allowed one of my Ethereals to become a dedicated voice. She is now…linked to the Sovereign One. He shares secrets with her; reveals things in their communications. I listen to them, I learn, I know there is only one Sovereign One, and his plans are far beyond that of the Synthesized.” The Imperator trailed off.

“I initially wanted to sever any kind of contact, but making an enemy this potentially powerful was not something to risk. So instead I began exploring, gathering information. Going to places the Sovereign One had warned us away from, or only partially following suggestions.”

Patricia thought. “Has it told you its name?”

“Only once, as Mosrimor,” the Imperator answered. “Sovereign Ones do not have long names, and sometimes they seem to take titles instead. Do you wonder, Patricia, why I have kept to the edge of the galaxy and not moved further in?”

“Power consolidation,” she guessed. “And they are more powerful than you are.”

“One reason,” he acknowledged. “But because of what I uncovered in the initial exploration of the inner galaxy. Many of the species are under the influence of Sovereigns; they use them as a proxy to explore, expand, and wage war. We are all pawns on their galactic game of conquest. Mosrimor does not intend for the Ethereal Collective to fight the Synthesized; he plans for us to conquer the puppet species and kill their Sovereign masters.”

At that moment Patricia felt she was now extremely in over her head. The implications of that were…staggering. “So…the Sovereign Ones are fighting each other?”

“I have seen much in support, and little to disprove it,” the Imperator nodded. “The galaxy is a battleground that takes place over millennia. Species are shaped, rise, and fall; they adapt, evolve, and advance at the hands of a Sovereign master. They fight in proxy wars in a never-ending conflict of dominance in this galaxy. I can only speculate the role the Synthesized play in this, but I believe it is a timer of sorts. Something which comes to set everything back to the beginning. Perhaps there is another Sovereign One behind it, perhaps it is from another galaxy; but it is no accident or natural development.”

There was something that didn’t make sense. “Even if that’s true, why would they not just fight the Synthesized together and then go back to killing each other?”

“Because you seem to think that they actually care about the Synthesized,” the Imperator said, audibly amused. “The only threat they ultimately posed was to their pawn species. The Sovereign Ones are cowards who hide and manipulate from afar. They are content to wage endless war; time has no meaning to them.”
He paused. “However, I believe there is a better explanation. If they were to band together, it would mean that one of them might actually win. The conclusion of their conflict is the rule of one Sovereign One in this galaxy. The Synthesized act as a…reset button. One which they usually do not contest, as their proxies are so weakened by conflict with each other that they are crushed by the Synthesized…” he trailed off. “This is speculation on my part, as I have limited first-hand knowledge, but it is an educated guess.”

“I suppose the next question is…was your species a proxy?” She asked. “Aegis said there were almost no major conflicts.”

“I do not know.” He answered heavily. “There was always the question of who engineered us. That was unquestionably a Sovereign One…but I do not know why there was not a more direct hand taken. Perhaps we were an experiment. Perhaps the Sovereign who created us was killed. Perhaps we were manipulated in other ways. Our isolationism. Our superiority. Perhaps they were weaknesses that the Sovereign Ones exploited by never forcing us to advance. It will likely remain an unsolved mystery.”

“So that was when you started changing the direction of the Collective,” Patricia realized, and honestly it made some sense. “But why didn’t you tell the others? Aegis would have likely understood.”

“Two reasons,” the Imperator raised a finger. “Too many who knew would have possibly turned Mosrimor against us, and we would have fought a destructive war we might not have won. And second…because some would not believe it is necessary. They would still wish to treat a Sovereign One as an ally, a means to an end. That, if I have learned anything, does not work. That, is what they want us to think. They seed us with technology, make us reliant on them, they slowly and subtly indoctrinate us with communication, until we are willing pawns.” The hand closed to a fist. “I will not allow my species to be turned into a puppet for such a being.”

“That is…understandable,” she nodded slowly. “That certainly puts the Chronicler in a different light.”

“Indeed, and I will get to that,” the Imperator nodded. “But I have used this knowledge. I have sought out uncorrupted species. Ones who were independent and free of the control of the Sovereign ones. The Sectoids, Andromedons, Vitakara, and Mutons were all free of the influence, and I have kept a careful watch on all Sovereign tech to ensure that it doesn’t influence us unknowingly.”

“Hasn’t Mosrimor figured out what you’re doing…” Patricia paused. “And speaking of that, what do you plan to do for him?”

“He is arrogant, like all Sovereign Ones,” the Imperator said. “They do not measure time like we do. Barely a moment has passed for him; mere decades. He does not care. Yet. He could never conceive of an alien turning on him, and my appeasements have made him lax. But as for my plans…well, he is not the only one I have found.”

“Another?” Patricia asked. “Isn’t that…dangerous? Especially since they like to fight each other?”

“This is a slightly different situation,” the Imperator explained. “The Creator was…contacted by something from what you call the Psionosphere. Something that should be impossible, but nonetheless exists. I do not know the details, except that this being is extremely powerful, a former Sovereign One, and trapped.”

She imagined a smile under his helmet. “At this moment, the Creator is working to allow him to…
cross over. Unfortunately for him, I have also informed Mosrimor about this, and he has been extraordinarily helpful in infecting her Blacksite with specially designed nanotech; a specialty of his, I presume. He has fought the “Bringer,” as he was known before, and knows how to subdue him. The nanotech will slave him to the owner, and he believes I have given him control over him.”

“But you have the control,” Patricia noted slowly.

“Correct,” the Imperator nodded. “And when the Bringer crosses over, I will send him to kill Mosrimor, and he will serve as an excellent tool against the other Sovereign Ones, and when the Synthesized are defeated, he will be sent to the center of the galaxy to die in the black holes that inhabit it.”

“Assuming it goes according to plan,” Patricia noted.

“I have taken appropriate precautions,” the Imperator said. “And if it doesn’t work…I have contingencies. I always assume that something will go wrong, and what can be done to prevent it. Pitting Sovereign Ones against each other is risky, but risks are needed when the stakes are the galaxy itself.”

He paused, looking at her for a few moments. “You are such a risk now. Your species is. But it is one worth taking. You want to know, don’t you. Why we are attacking you; why we have taken such steps.”

“Yes.”

“There are several reasons I am interested in your species,” he began. “You are one of the few who can use the Gift, or psionics. More than that, you are capable of great power with it, far more than the Sectoids ever could be. Your species also has a large portion who are sensitive, and you have already realized the power that gives your military. But that is not the main reason, or even a largely important one.”

“Then what is?”

“Consider the species in the Collective,” the Imperator said. “Each one serves a purpose, yet they also have drawbacks. I initially believed that these weaknesses could be phased out or mitigated but that has so far been…inaccurate. The Sectoids, they were the first…failure, I suppose. They are brilliant scientists, with a mastery over genetics that one day could rival our own.”

His hand lowered to the side. “Yet they are cold, empty; they cannot comprehend the concepts of empathy or friendship. They are a frail species who are cowards when faced with events outside what they plan for. This has made them…cruel, and ultimately of limited use to me. They are a tool, but they cannot ever be more than such.”

“But have you actually made efforts to change them?” Patricia asked. “Or simply allowed them to develop?”

“I am hesitant to change the nature of a sapient species now,” the Imperator explained. “If I take such a step, we are no better than the Sovereign Ones. I am not interested in puppets, Patricia. I want allies, I want unity, and I want for each species to be responsible for their own achievements. Yet you are correct in that I have been too lax. My kind has been lax in our responsibility in guiding and leading.”

“And why is that?” She asked.
“Ethereals, by our nature, are not leaders,” the Imperator made a noise very similar to a sigh. “We cannot usually bring ourselves to care about those under us; their concerns rarely seem important. This translates to arrogance and superiority, when in reality it could simply be apathy. There are exceptions. The Battlemaster is one. Quisilia as well. Imperators also lack this limitation, but there is a reason I have been…absent.”

Patricia nodded. “Which is?”

“I wanted to see if we would change, or if such would have to be forced,” he answered. “I wanted the Ethereals to willingly take a leadership role in the Collective. But I soon saw that we are simply not suited for it, regardless of how much we try. Although I have the capability, I cannot be the leader this Collective ultimately needs.”

He shook his head. “The Vitakara could have perhaps worked in our stead. They are intelligent and loyal to us; a rare combination. But the problem is that they are too passive; they cannot use psionics, and they have little ambition. The Andromedons are too focused on the past; of their petty rivalries and wars. They are methodical and brilliant engineers, but they will betray you once they find a better alternative.”

He chuckled. “And the Mutons are nothing more than an easily controlled breed. Dangerous in strength and size, but lacking in intellect; the vast majority only suited to fight and die in the name of those who command them. They are naturally incapable of brilliance or independence, and while we can cheat nature, their purpose will never change for us.”

A finger pointed at her. “And now that brings us to your species – Humans. The Collective…lacks certain qualities. It is as it sounds – a collection of species unified under the leadership of the Ethereals, but in reality it is three factions constantly spying, undermining, and expanding on their own, while little true leadership is done. The Battlemaster can only do so much.”

He paused. “I believe that Humans could serve as the leaders of the Collective. Your kind are intelligent, charismatic, ruthless when needed and understand the more nuanced emotions Andromedons and Sectoids do not. You have proven you can adapt and advanced despite the odds being against you. Your species will be what holds the Collective together, and we will advise when requested. That is the future I see for your species. You will not win the war, but I have no intention of wasting your potential.”

Patricia knew it sounded good, but if that was the case… “Then why did you invade us in the first place? Any chance you would have had to bring us in peacefully is gone. ADVENT isn’t going to fall or surrender peacefully.”

He laughed again. “Now, when did I say I wanted ADVENT to fail?”

She blinked. “Because with ADVENT, Humanity will never become part of the Collective. You don’t have a choice.”

“But?” He was amused. “ADVENT is performing exactly how I wished it too. Why do you think they have been allowed to expand so quickly? Why I have not taken opportunities to lessen their reach? Why I have simply not ordered Saudia be assassinated? I ignored Canada for a reason; just as I ignored the Middle East. The attack on France drove more countries into ADVENT. The attacks on Korea and D.C. will do the same. No, Patricia, I do not want ADVENT to fail, I want it to succeed.”

Patricia was dumbfounded. “But…why?”
“I have researched your history,” he explained, beginning to pace again. “Unification is a dream your species has sought, but never attained. There have always been dissidents, traitors, and fools who sabotage this. I have little interest in assimilating your species and facing dozens of terrorists or rebel groups. Fortunately, ADVENT does not either. They will fully unite your species and crush those who oppose them.”

His voice turned thoughtful. “There was a reason that many in ADVENT in positions of power are…driven. Stein; Watkins; Falka; all who would be considered extreme, but fit the mold of ADVENT perfectly. It is a simple matter of making the right people obvious; moving a name further up a list, having someone mention a name in conversation; little details that push specific people forward.”

“You controlled them,” Patricia said in a mix of awe and horror.

“No,” he dismissed. “I simply changed what was seen. In the end, the decisions were made by Saudia, and the Commander; I simply helped choose what they were going to see. It was necessary to ensure the success of ADVENT.”

“Even if that’s true, you haven’t explained how that benefits you,” Patricia pointed out. “ADVENT isn’t exactly going to be open to that idea, no matter if you subtly ‘assisted’ them or not.”

“I will leave that detail for when the time comes,” was all he said. “Suffice that I am confident in it. But you are right in one aspect – why I bothered to invade at all. That you might be able to guess, but first I will go back long before we stepped foot on your planet. In fact, I am the reason your species wasn’t wiped out.”

Patricia arched an eyebrow. “Explain.”

“Mosrimor gave me your world, and suggested that the species could become dangerous and should be removed,” he revealed. “This confused me, and by then I had only partially pieced together the story of the Sovereign Ones. I instead sent scouting crafts; many of your UFO abduction stories are based on those expeditions. I saw nothing of interest, nor any reason to kill or stay your species. So for a time I dismissed you – until I was more knowledgeable about the Sovereign Ones. I knew Mosrimor would not have given me that suggestion without a reason. So I decided to find out what that reason was.”

He motioned with a lower arm. “I ordered a limited incursion, I wanted to see how your species would react. You formed XCOM and began fighting back; an interesting development, but not the answer I was after. I learned of EXALT and began leveraging them, but I also failed to receive the answer. It was only recently that I obtained it – in the form of the Chronicler.”

The Imperator paused. “That is the purpose of the invasion, Patricia. To determine if your species was under the influence of a Sovereign One. I knew that they would be familiar with the tactic if it was true, and they would react swiftly. When this did not happen, I wondered if it would be more subtle; from behind the scenes, hence EXALT. But I saw no influence there, even with what I know of the Chronicler now.”

“He is awakened now, and he will likely try and use your species. I do not intend for that to happen. The objective now is to kill or neutralize the Sovereign One on Earth. ADVENT will continue to fight us, but they are no longer my largest
concern.”

“But why keep this a secret?” Patricia demanded. “This changes everything!”

“Because we are all in a very dangerous game,” the Imperator said, almost sadly. “When pitting multiple beings of god-like power against each other, risks cannot be taken. The war provides a useful cover. The world will fall under the control of the Battlemaster, or ADVENT. In the meantime I will hunt and kill the Sovereign One, by leveraging what I can against it. More importantly, if I was to simply reveal the nature of the galaxy, it would escalate to the point where everything would collapse. The Collective would be destroyed, ADVENT would be under a Sovereign One, and everyone else dead or scattered.”

“And what happens if the Battlemaster wins?” Patricia asked.

“Then so be it,” the Imperator said nonchalantly. “It will not change your role in the Collective. It will simply be the system of government that is different. Every move that is made now is a risk, Patricia, with a misstep ending all I have built. But this is a cycle that has likely gone on for billions of years, and I am going to make an effort to break it.”

There was some silence between them.

“So why am I here?” She finally asked.

“Because I want you to help me,” he answered. “You are one who can adapt and change based on what you know. You can sense I am not lying. You can see what I intend, and can deduce why I have taken this path. Your purpose is greater than in XCOM; you have the opportunity to help shape a galactic civilization and begin breaking an unfathomably long war.”

He lifted a hand. “However, I will not make this decision. You will. If you wish, you can leave. You may return to XCOM and no one will stop you. You can, of course, attempt to warn them of this; spread what I intend. Perhaps they will believe you, perhaps they won’t. I cannot see the future, but there was a reason I chose you out of others. Most cannot see past their own problems; others will be like Aegis and believe Sovereign Ones can safely be allies; still more will never forgive the Collective, justified or not.”

He lowered the hand. “Or you can stay and assist me in achieving this goal. I have obviously said this to convince you of the necessity and logic of my plans, but I have no interest in an unthinking pawn or puppet. I am not a Sovereign One. Choices are what shape us, and to deny choice is to remove free will. So this is your choice, Patricia Trask, but know that if you leave, this will never be offered again. The next time we will meet, you will die.”

Thoughts swirled around in her head. This wasn’t a simple yes or no answer anymore; what the Imperator had said changed everything. Would the Commander listen to her? Aegis probably wouldn’t, but the Commander...he would say the Imperator was likely lying. Trying to manipulate her. But she could sense everything he was saying was what he believed.

Could she not trust herself?

“You do not have to decide now,” the Imperator said. “Stay. Wander. Talk with those around you. Gather information; details if you wish. I am not interested in a snap decision; think on this. You will have to make a choice one day, but for now you can simply consider what I said. And if you still wish to leave, you will be able to do so.”

He walked back over to his throne and sat down upon it. “I will be here. You may speak to me
when you wish. I have instructed the Guardians and the Praetorian Guard to give you free reign of the ship."

Patricia turned away, too absorbed in thought to even say goodbye. With conflict raging inside her, she settled for simply trying to get some sleep on it.

Maybe when she woke up next time, the right decision would be clearer.

Because right now, she truly did not know.
It was past time that this conversation was had.

It was also past time that they begin making use of this surprisingly intact base which Cogitian had finally gotten around to cataloging. As the Battlemaster had suspected, it was undoubtedly one of the Disprium bases. Out of the ruins they had found in their exploration of the galaxy, theirs were often the most intact and usually possessed some form of useful information.

They had yet to find out exactly what had happened to them, but the Battlemaster already suspected they had befallen a similar fate to the Empire. As far as he knew, there was only one power which could take down one as expansive as the Disprium had controlled. Cogitian was still unsure if that was the correct translation, or if it was even the name of their species, or merely what they called their form of government.

At the moment, however, it was irrelevant.

No matter what they had called themselves, they had fallen into the same trap as the Empire and utilized the tainted element. There had been extensive amounts of it stored in the deeper vaults of the base, and after it had been safely packaged, it was moved to Revelean’s Blacksite. There had been far more of it than previous bases, and given the contents of the archives, the Battlemaster could easily figure out why.

Originally, he had suspected it was an observation post to watch the Humans, but the archives were filled with various kinds of weapons. Not merely bombs and ranged rifles, but ones designed to kill planets and systems. Another curious thing that Cogitian had noticed was that a good portion of the weaponry had involved some measure of Sovereign technology.

That had not been encouraging.

It served as proof that the Sovereign Ones had likely been around when the Synthesized were attacking other species, and yet it seemed that even their extensive technology hadn’t been enough. Then again, too much of it relied on the tainted element, so perhaps there was some hope to be taken in that. Although they would need to begin utilizing what they had right now, sooner than later.

The archives themselves had been moved to the Temple Ship, and the room itself had been converted into his own briefing center. While the Observation Station was useful, there was no reason not to make use of the established base. On his orders, the restoration had already begun and would firmly establish the Collective within the Solar System.

And now it was time to do the same to the rest of the Collective.

Hence why Revelean, Fectorian, Quisilia, and Sana’Ligna were with him right now. He had considered involving the Zar’Chon, but he would have a role to play in the future. This was a conversation which could only be had by the Ethereals.
Although a quick glance at Quisilia slightly disputed that.

Fine then. Ethereals and a cat.

All of them stood in a circle around the similarly shaped holographic table. “It is time to reevaluate our approach,” he said slowly. “Not just concerning the Humans, but the Collective itself. Even without the assistance of Aegis until recently, the Humans have managed to hold their own, and in doing so, have exposed critical weaknesses in the Collective that cannot be ignored any longer.”

“Or to put it more accurately,” Quisilia interjected, placing the action figure of an XCOM soldier on the holotable. “This represents the Humans,” he put the action figure of a Sectoid in front of the soldier. “This represents the Collective. And this represents what they are currently doing to us.” He then made the soldier punch the Sectoid, and it fell over.

The Battlemaster was no longer surprised to see Quisilia playing with action figures. While a juvenile way of illustrating the problem, it was not completely inaccurate. “That is one way of showing it.”

“On that, we agree,” Fectorian said, crossing his upper arms as he turned the conversation more serious. “It is quite concerning that they are managing to not only hold against our forces, but also win.”

“Our technological and military stagnation is only one aspect,” the Battlemaster pointed out, looking around to each of them. “The other is that the Collective itself is not united, and it is quite obvious that it has never truly been. What exists now is merely a convenient alliance of species. It is not under a unified power.”

“Debatable,” Revelean said. “That is what our role is, and that of the Imperator. We allow the species…autonomy…and in return they follow our commands.”

“Yes, because you and Fectorian have certainly been fine examples of leaders of the Collective,” Quisilia said dryly. “I can certainly see why they would continue following us. I can’t think of a single reason for why the Federation is threatening to withdraw, or the Hive Commanders and Aui’Vitakar are suitably angry.”

“You are one to talk,” Revelean hissed. “Your point is made. And the Battlemaster has admittedly done this better than any of us.”

“Yes and no,” Quisilia said, eyeing Revelean. “While I certainly keep my work…out of the public, I at least assist in the general affairs of the Collective. I don’t spend my time exclusively in my Blacksite pursuing fruitless projects; blind to the outside galaxy.”

“I am a scientist, not a diplomat,” Revelean scoffed. “Of course I do not do this.”

“Enough.” The Battlemaster raised a fist. “We, as a species, have failed to do what was expected of us. We are supposed to be the leaders of the Collective, and we have failed as such. That will change.”

“Is the Imperator aware of this?” Fectorian asked. “Knowing you, I suspect you will be making some…reforms. It might be wise to inform him of this.”

“The Imperator has not led the Collective,” the Battlemaster replied flatly. “While I cannot claim the same, I have been involved more than he has. He will be informed, but this will proceed with or without his approval.”
“Hm,” Quisilia stroked his cat, which purred loudly. “Battlemaster, while the Imperator certainly could have done better, I would advise not taking extensive liberties. Despite how it has seemed, he has been watching the Collective, though he has been…preoccupied.”

Since Quisilia did interact with the Imperator more often, the Battlemaster suspected he was telling the truth. “If that is the case, he should make that clear. And refrain from keeping secrets. That is part of the reason this situation has deteriorated. There are too many who are pursuing their own goals and failing to properly inform those they work with. We are all guilty of this.”

“Battlemaster,” Sana interrupted, raising her hand; her melodic voice cutting through the others. “You have stated the need for reform. I am pleased you have realized it. But what are you specifically planning? It is why you have asked us here, yes?”

“Correct,” he nodded. “Each of you will have a part in this. The rest are occupied or otherwise incompatible with what is needed. Macula and Nebulan are on Earth, and those on the Temple Ship are too occupied with what the Imperator is doing.”

“Such a shame,” Quisilia mocked. “Inviting the Creator and Isomnum would have certainly made this more interesting.”

Sana shot him a disapproving look. “The ones you mentioned should be brought under tighter control. If not confined entirely. I have yet to hear a suitable reason for why Isomnum is allowed to roam freely. The Imperator may have forgotten what he has done, but I certainly have not.”

“The illustrious Dread Lord has his flaws,” Quisilia admitted, tapping them off on his lower hands. “Child experimentation, torture, and a questionable fascination with fear; but the thing is that even the Synthesized became terrified of him. He has a role to play, despite being such an…unsavory individual.”

“As for the Creator, she will be dealt with in due time,” the Battlemaster rumbled. “Her pets have caused trouble. I do not know what she is working on, but that will change shortly. I agree that she has been allowed far too much freedom.”

“Ah, about that,” Quisilia raised a hand. “That is directly being overseen by the Imperator. That, Battlemaster, is outside your jurisdiction.”

“Then tell him to get the Creator under control,” was the response. “If he does not, I will.”

Quisilia just sighed. “He will not like that.”

“Then he should be doing a better job.”

The cat meowed.

“There are three aspects which need to be addressed,” the Battlemaster said after a few moments, looking around at each of them. “Our military and technology, Ethereal leadership within the Collective, and this Sovereign One which appears to be hiding on Earth.”

“That is a problem,” Fectorian noted, looking up thoughtfully. “It raises certain questions. But it doesn’t appear to have directly allied with the Humans yet, although since Quisilia threw the puppet into space, I doubt it will be friendly. A dangerous enemy to have.”

“Indeed,” the Battlemaster said. “Which I will use to segue into the first aspect. Our military is not properly prepared or equipped to fight on Earth. Our primarily infantry military does not hold against their kinds of warfare, and there are severe issues in regards to soldier training and
stability.”

“I can attest to this,” Sana said with a sigh. “Too many of the Vitakara cannot handle the stresses of war. Many cannot psychologically handle it, through no fault of their own. They are just not innately capable of violence.”

“With the exception of Oyariah and Borelians,” Revelean corrected.

“That is true.”

“The Vitakara are an issue,” the Battlemaster agreed. “The entry requirements are too lax. And their paranoia regarding genetic modification is a hindrance and outdated notion.”

“It almost killed their species,” Sana reminded them. “I hardly think it to be unreasonable.”

“Which we cured, if you recall,” Revelean reminded her. “Modern modification is perfectly safe and effective.”

“The point is that we have used Vitakara too broadly,” the Battlemaster continued. “Not all are suitable for combat, and the ones that are cannot hope to effectively fight against many of the standard ADVENT soldiers, much less ADVENT Special Forces or XCOM. We need to provide similar advantages. We have the capability; and now we need to utilize it.”

“Forcing genetic modification will not endear them to us,” Sana cautioned. “Do you understand what you are asking them?”

“If they are part of the military, then they are subject to our regulations,” the Battlemaster answered. “And that is why you and Revelean are going to help convince them.”

“Excuse me?” Revelean asked.

“Yes,” the Battlemaster repeated. “You, Revelean, are going to be a lead geneticist on the Collective Enhancement Initiative. You have stayed in your Blacksite for too long; it is time for you to show the galaxy what you can do. You will decide how our infantry forces will be enhanced and improved, and you will do this in conjunction with the Hive Commanders, and those from the Federation and Vitakara who wish to participate.”

“You want me to work with aliens,” Revelean said, not so much in anger as in surprise. “You want to give them direct access to the most advanced techniques in this galaxy?”

“Yes.” Was the answer. “Your immediate dismissal of aliens is one of the reasons we are in this situation. You will work with them, and I suspect they will surprise you. If you do not think you can do this, I will find someone who can.”

“I can certainly do it,” Revelean said quickly. “Though I am skeptical, nor particularly appreciate this being forced upon me.”

The Battlemaster wasn’t particularly offended. “We all do what we must for the Collective, like it or not.”

He turned to Fectorian. “You will have a similar role, Fectorian. I am sure you can agree that our vehicles in the Collective are…lacking. You will come up with better ones, and you will do it in conjunction with the Federation and those from the Hive Commanders and Vitakara who wish to participate.”
“Excellent,” Fectorian said eagerly. “It has certainly taken long enough. I have many designs that will serve well against the Humans. And if the aliens can provide assistance, then they will be welcome. I assume the previous projects should be continued?”

“Yes.”

“Good.” He nodded. “I look forward to it.”

“And I will be spending my time reorganizing the Collective military itself,” the Battlemaster continued. “Quisilia, you will work with the Zar’Chon to refine and improve the Zararch. Be sure to listen to him.”

“Certainly,” Quisilia nodded. “I will say he will greatly appreciate these reforms.”

“And now we should focus on smoothing over the issues caused by Aegis,” the Battlemaster continued. “Every species is on some level demanding answers. We will have to provide those as best we can. Revelean, you will accompany me to speak with the Hive Commanders. Fectorian will go with the Zar’Chon to speak to the Federation, and I have already mentioned our visit to Vitakar. Combined with initiatives which will be led by Revelean and Fectorian, it should help to begin fostering some unity within the Collective, instead of the species only looking out for themselves.”

“The Federation is demanding the Imperator himself explain the situation,” Quisilia reminded him.

“I’m working on the assumption that the Imperator will not follow that request,” the Battlemaster said. “However, that would be ideal and I will inquire about this. I would ask you do the same.”

“If we wish to maintain the cooperation of the species, we will need to continue this,” Sana said. “We cannot simply show up when we are facing criticism. That is too reactive, and will not build trust.”

“Which is why you will be in charge of maintaining our diplomatic ties between the various species,” the Battlemaster said. “I suspect your feelings on the Humans are unchanged, but I do not need you for that. I need you to keep the peace and demonstrate Ethereal leadership and cooperation.”

“While I am more than happy to do this,” Sana said slowly. “You have raised the question of why we must continue this war. Would it not make more sense to attempt to broker a peace between us and ADVENT? They have Caelior, and Aegis is allied with them. More fighting could lead to more of us dying or being captured.”

“It is too late for that,” the Battlemaster shook his head. “The Humans will not willingly be confined to their own world. They will treat peace as a means to keep advancing. They will wage war again one day; we cannot rely on them for that. The fault for this war is ours, but there is little that can be done about it now except finishing it.”

“Aside from that, allowing a Sovereign One free reign will backfire,” Quisilia added. “We would be fools to let that kind of being loose on a highly vengeful species. Aegis is bad enough, but a living Sovereign One is far worse. We cannot leave now.”

“This Sovereign One will be a problem,” Revelean agreed. “The question is how involved it plans to be. While it is certainly not our friend, if it was an ally to the Humans, it would have been clear.”

“There are two things that need to be done,” the Battlemaster said. “The first is to determine if there is a Sovereign One physically on Earth. If there is, it will almost certainly be in the deep oceans of Earth. We will need to transition part of our military to underwater combat.”
“The Sar’Manda?” Sana asked.

“The Andromedon Aquatic Forces are better,” the Battlemaster said. “The Sar’Manda would be more trouble than they’re worth to corral them into following Collective orders. Transitioning part of the Vitakara and Andromedons will serve just as well. Fectorian, you will also provide assistance on this.”

“Of course.”

“We should also consult with the Sovereign Ones about how best to handle this one,” he continued. “I would be surprised if this was the first time it had happened. The Voice should be informed of the situation. If anyone will know how to kill or subdue one, it will be her.”

“Agreed,” Fectorian said. “And I believe this is the perfect opportunity to begin the implementation of Sovereign Tech far more extensively. I can understand not using it on the Humans, but a Sovereign One, even a rogue one, is not one to take chances with.”

“I was going to say that,” the Battlemaster nodded. “It is time we take advantage of this gift and master it. Knowledge is useless without application. The Imperator’s mandate regarding the technology is suppressed until further notice. Utilize it as you see fit.”

Quisilia set his cat down, his voice not having any humor in it for once. “While I do think the Imperator will not take issue with the reforms you are proposing, that is something he will not approve of. Sovereign technology is something we do not fully understand-“

“Which is why we need to study it. The knowledge will not suddenly appear to us.”

“Sovereign technology should not be utilized unless absolutely necessary.” Quisilia insisted. “Neither I, nor the Imperator consider it the pinnacle of all things. We cannot become reliant on it; there is something we do not understand about it. Think about where we stand; what we found here. All the Sovereign weapons in the galaxy didn’t ultimately help them, now, did it?”

“They used the tainted element.”

Quisilia sighed. “Just consider this a warning. I do not fully trust the Sovereign Ones; certainly not those who offer technology to warp the galaxy freely.”

“Warning acknowledged,” the Battlemaster humored before dismissing it from his mind. The paranoia of the Imperator was not something he considered a major factor into his decision. The fact was that they were going to be facing this level of technology eventually, and they needed to match it. It certainly would not replace what already existed, but it would augment it.

“I will be sending out more specific details shortly,” the Battlemaster said, looking around at all of them. “We all have our directives and plans. It is time to put them into action. Dismissed.”

***

Operation Command, Zararch Wing – Mars Collective Base

12/2/2016 – 1:12 P.M.

It was only a matter of time until the Battlemaster was forced to actually do something. Granted, Ravarian would have preferred he did it some time ago, but better late than never. The Battlemaster was one of the few Ethereals he’d seen who would actually change his tactics if pressed, and it seemed that point had been reached.
The transition from the Observation Station to the alien base below had been a welcome change. He actually quite liked the layout, even if he had never stepped foot into a similar base before. He did know it was from the same species as other ruins he’d seen, but this was by far the most intact.

The downside to the Battlemaster reworking nearly everything was that he was now tasked, along with Quisilia, with reorganizing the Zararch, shoring up weaknesses, and coming up with an actual plan for dealing with the Humans. Of course, ‘downside’ was relative. It was more work, but he felt like he was able to properly do his job for the first time in a while.

“Our intelligence gathering capabilities need to be expanded,” he told Quisilia. “We’ve seen the consequences of not understanding this. The personnel are not the problem per-se, but their equipment and protocols.”

Quisilia paced around the room, with his cat trailing not too far behind. Although the Zar’Chon’s own pet was intermittently meowing at him for attention, so he’d decided to just hold the blasted cat so it would stop pestering him. “We can certainly make better cloaking and sensor equipment, but the problem is infiltrating the cities themselves. While I certainly can do this, I am not the average Zararch agent.”

“No, I’ve decided that is not an effective strategy,” Ravarian interrupted, raising a hand as he looked down at the holomap. “We need eyes in the city. Human eyes and ears; ones who can pass the blood tests. Ethereal bioscience can’t fully overhaul circulatory systems, and Nartha was a special case we can’t replicate on a large scale.”

“Oh, you have a proposal?” Quisilia asked.

Ravarian took a breath. That he did, but it was fairly radical. “Yes. If we are going through the trouble of reorganizing the Zararch, it might as well expand to include the rest of the Collective races; Sectoids and Andromedons included. The Special Operators in particular should be working for us, not the Federation.”

Radical is an understatement, the thought immediately appeared, even as Quisilia stopped.

Interesting. I presume you would use standard agents to capture Humans, then use Sectoids to tailor them to our needed spies?

“One usage, yes,” Ravarian nodded. “While it is certainly a risk with ADVENT Priests, it will force them to always be distrusting of the population. It could serve for raising tensions.” His palm flashed as holographic text began scrolling as he refreshed himself with additional details. “It does not even need to be so complex. Psionically-induced terrorism or sabotage will have the needed effect of damaging ADVENT, and destroying trust in psionics. ADVENT is attempting to make psions socially acceptable – we should try and minimize that.”

“That-“ Quisilia said, raising a finger. “Is not how you accomplish this goal. Having a bunch of ordinary Humans going around committing crimes does little, unless it is directly attributed to psionic influence. While I can’t say I’d be opposed to having random Humans doing unpredictable things, like shooting up an armory or changing the stored names of all leaders to ‘Quisilia’, all you will do is make ADVENT crack down harder.”

He took the critique in stride. “And what else do you propose.”

“ADVENT, in their attempt to minimize giving psionics to people who shouldn’t have them, has created a weak point we can exploit,” he answered thoughtfully. “Poison the well, so to speak. Manipulate their data to allow candidates that fail their tests go through, and those who pass to fail. A calculated risk, but it is more likely to have the effect you want.”
Ravarian nodded to himself. That was a good plan, although it relied on some degree of penetration, which they really did not have right now. “I’ll begin an operational plan to implement that. We should also utilize the Zararch to…eliminate the issues being caused in our captured cities.”

“I assume you refer to Seattle,” Quisilia mused. “Problematic, yes. Interesting that they’re sabotaging their own city to whittle our forces down.”

“It’s frustrating,” Ravarian sighed. “They’re not numerous enough to be a standard army, smart enough not to get caught, and only attack when they have the advantage. It doesn’t help that they’re creating choke points and cutting off entire units from each other. And sending in more forces has not helped. This is a guerilla force; we need intelligence operatives to destroy it.”

“On that you have my agreement,” Quisilia said. “Do what you must to solve this.”

“And we need to discuss Nartha,” Ravarian also said after a few moments. “I believe we’ve gotten what we need from him. Letting him run around is an unnecessary risk.”

“I disagree with that assessment,” Quisilia answered as his cat jumped into his arms. “Nartha is providing an excellent service. As one of the few known dissidents he is most certainly going to find additional sympathizers. Thanks to him we have the network of Muton smugglers mapped out, certain cells of the Nulorian known, and with the current situations in the Collective, I suspect there are going to be those more open to dissent. Send him to the Andromedons. Once he has done what he can, we can revisit this discussion.”

He knew the Ethereal’s mind was made up then. Well, as far as risks went, Nartha was one they could at least control to a degree. “Very well. And speaking of the Andromedons, I am not sure how well they will respond to the head of the Zararch, and an Ethereal they have likely never heard of.”

“Andromedons are dispassionate engineers,” Quisilia answered. “They respond well to logic, calculation, and reasonable explanations. Fectorian is ideally suited since he was the designer of the Spectres, which the Andromedons have taken issue with. You will be there to present the facts and solutions the Collective will be implementing. I trust you will be able to do this well.”

The Zar’Chon pursed his lips. “They will not be happy the Imperator is not there.”

“He may be,” Quisilia said. “But the Imperator is focused on other matters. The Federation can make all the threats they wish, but they are empty.”

Ravarian wasn’t convinced. “I am not certain about that. The Imperator has not been in the Collective. He does not know them as well as he thinks. Andromedons in the past would have gone to war for less.”

“I’ll mention that,” Quisilia sounded amused. “Do not take his lack of intervention for ignorance.”

“Then he should formally hand the Collective over to someone who will actually oversee it,” Ravarian kept his voice neutral, but he disliked the continuous insinuation that the Imperator somehow knew everything, but chose instead to be lazy. “It is fine if he has more important matters, but he should not claim to be something he is not.”

Quisilia was silent for a few moments. Ravarian doubted anything would happen, but it was the first time he had verbally questioned the Imperator’s authority. But he wasn’t saying anything Quisilia hadn’t already glimpsed from his mind. “Good answer!” Quisilia finally said with a brief
laugh. “Perhaps you can tell him that.”

Ravarian immediately stiffened. “The Imperator is coming here?”

“Here? No,” Quisilia shook his head. “But he will be speaking to you at some point. He has… come to some similar conclusions. There is a reason he is not standing in the way of the Battlemaster even if he could. While I can’t share the exact reasons he has been…absent…there are changes coming.”

He was both relieved to hear that, and mildly concerned about the Imperator taking a direct interest in him. He preferred his involvement with Ethereals to be kept to as few as possible. Beings of that power had to be treated carefully and clearly were above those like him. Having their most powerful focused on him was not exactly an honor or blessing.

But that he would not vocalize. “In that case, I look forward to their implementation.”

Holding Cell 3, Holding Cells – Mars Collective Base

12/2/2016 – 1:16 P.M.

There were two kinds of holding cells the Disprium seemed to repeatedly employ.

The first were standard cells which seemed to lack even basic necessities, and were seemingly just large metal boxes. Considering that they were literally stored in racks, and each one had an oxygen supply, they were likely treated as a kind of resource or at best a form of isolated confinement. The Zar’Chon was looking into using them as a form of psychological interrogation.

The second kind of cells were somehow worse. From what Cogitian had been able to determine, there were two stages: The first involved the victim being taken to a room with a glass-like box in it. Once inside, they would be secured by the ankles, knees, waist, and upper chest. The restraints would be connected to another computer and be turned on, activating a stasis field around the victim.

Then IV tubes were threaded through the restraints and into the prisoner, and it was completed by fitting them with some kind of helmet which directly interfaced with the brain. It was theoretically supposed to keep them awake and active without requiring sleep. Cogitian hadn’t been able to confirm this, but was working on replicating it out of academic curiosity.

The second stage simply involved sticking the body in a coffin-like case, which also had an oxygen supply, and storing them in the vaults below the base. It was estimated that at the prime of this base, it could hold nearly five hundred prisoners stored like this.

Fortunately for the Hunter, the Collective had yet to recreate this form of imprisonment, and he had instead been thrown in one of the regular cells. The Battlemaster punched in the appropriate code and the cell door slid open, revealing the Hunter inside.

He appeared to be mostly recovered. He was bound at the wrists, ankles, and his head was secured to the wall via the neck. The Battlemaster clenched a fist and the restraints snapped. The Hunter smiled and slowly rose. “Battlemaster. Glad you decided to visit.”

“I have still not decided if I am going to kill you or not,” was the even reply. “Were you anyone else, the answer would be clear. But your connection to the Creator hinders this.”
“Ah, right,” the alien nodded sagely. “Assuming the Imperator doesn’t want the Creator distracted from her little projects. Trying to kill me would get her attention; much as we both despise each other.”

“The Imperator can make his recommendation,” the Battlemaster said, unclasping his sword and letting it hang by his side. “But I will make the final judgement.”

The Hunter did not seem overly concerned, simply throwing a sidelong glance at the silver weapon. “Oh no, death threats. Wow. Very convincing,” he heaved dramatically. “Battlemaster, what exactly are you going to do? Stab me? Cut off my limbs? You can’t kill me, and at this point I’m used to pain.” He gave a ghoulish smirk. “And you can’t do worse than what the bitch did when she was trying to figure out my limits.”

The cocky alien was suddenly lifted slightly into the air and pulled forward to be impaled on the pointed blade of the Battlemaster. Anchoring him in place with telekinesis, the Battlemaster slowly drove the blade deep into his chest until it reached the hilt. “Perhaps I can’t kill you this way,” he said quietly. “But you don’t like it. You still feel everything.”

“And you wonder how I could possibly start shooting the mindless soldiers you order around,” he hissed, as the blood spread and dripped to the ground. “This isn’t exactly what inspires loyalty.”

“Everything you experience is a consequence of your actions,” the Battlemaster answered, turning the blade causing the Hunter to hiss. “You are a traitor, and I would prefer you were dealt with as one.”

“But you can’t do that, can you,” the Hunter taunted, breathing heavily. “You can’t risk making the bitch angry.”

If the Battlemaster was in the mood, he would have smiled. Instead he placed a free hand on the Hunter’s head, and began to apply pressure, while also telekinetically cracking his ribs to make it easier to remove the impaled sword. “Tell me, Hunter, if I were to crush your head, would you still come back?”

“Oh, I certainly will,” he rasped. “It’s not that easy. And it would be nicer than what you’re doing right now.”

It was almost a taunt. Perhaps a bluff. He was quite curious how badly the Hunter wanted him to avoid this outcome. “Curious. You would be exactly as you are, yes? Or would you…change?” He tightened his grip on the head. “I suspect that such a traumatic brain injury would change even you. That is an acceptable compromise, I believe.”

That was all he needed. Keeping the Hunter anchored in place he sliced his sword outward and released him, letting the Hunter fall into the pool of his own blood. “No,” the Battlemaster said. “No apology would be sincere from you. But if you ever participate in any action which undermines Collective operations, then I will ensure that your brain is smashed beyond recognition. If such actions fail, I will condemn you to the Dead World. You have no warnings or chances. Leave now. You are not permitted to return without my express permission.”

“Believe me,” the Hunter coughed, still on the ground. “I never want to see you again.”

“And when you return to the Creator, give her a message,” the Battlemaster said, turning away. “If
a similar incident happens again, I will hold her personally responsible.”

All he received in return was a gurgled laugh. “I’ll make sure she gets the message.”

Tactical Briefing Room, Solar System Command Center – Mars Collective Base

12/2/2016 – 3:19 P.M.

Having a firm presence on Mars was the first important step to take. The Battlemaster was expecting ADVENT would pursue space travel more aggressively at some point, and it was obviously not going to take much to drive the Collective out of the system if the only major installation they possessed was the Observation Station.

No, they needed to expand. There wasn’t a need to focus on Mercury or Venus, he could see very little of worth there, but definitely Mars, and establishing defenses before the Asteroid Belt and the edge of the system would be adequate. The conversion of Earth’s moon to an industrial hangar was proceeding well, and perhapsestablishing a base on Pluto would also be advisable. The defenses didn’t need to be too extensive, but not everything could rest on the observation station.

A hologram of the system itself was before him. The problem with maintaining control over a solar system was that it was so big. It was extremely difficult to fully secure, and in the event that Humans achieved an interstellar navy, he was not convinced that the defenses were completely sound.

Perhaps he should authorize the construction of larger Gateways. Even if Humans were unlikely to field Dreadnoughts, it would pulverize any fleet they did develop.

Aegis once more threw a massive wrench into this. Any fleet Humanity wielded would be nearly invincible under his protection. In which case, the obvious counter was Deusian, though he hoped that the need for the Reaper would be unnecessary.

However, the Humans had a way of surprising him.

“Your plans are ambitious, but similar to what I had expected.”

The Battlemaster looked up in surprise as the Imperator of the Ethereal Collective stood in front of him, towering even over him.

“Imperator,” he greeted, inclining his head. In previous years he would have been more elaborate in his greeting, going so far as to fall to a knee in respect, as was traditional due for an Imperator or the Grandmaster. But times had changed, and the Imperator had made it clear he had little interest in that.

“Battlemaster,” was the answer, as the Imperator looked around, before focusing on the hologram of the Solar System. “You have been busy.”

“It is necessary,” he answered. “Considering both Aegis and the rapid advancements of the Humans, it is imperative that we take the needed steps to prepare for the worst.” He allowed a pause. “I presume you are here for a reason. You have not left the Temple Ship in…some time.”

“Yes,” the Imperator paced to the side, sounding thoughtful. “I have been focused on the Inner Galaxy, as well as those who inhabit it. However, it appears that I should begin returning to the Collective. It has not performed as hoped.”
“The reasons for such have been identified and are being fixed,” the Battlemaster replied tactfully. “I will restore stability to the Collective-”

“There is little need to mince words,” the Imperator lifted one of his ornately detailed gauntlets. “You are displeased with my leadership. While I cannot read your mind or emotions, I understand how you think, and Quisilia is diligent in reporting your words. In this case, it is perhaps deserved.”

That was refreshing to hear. The Imperator was no fool, which was why the Battlemaster had become more frustrated with him in recent months. The Imperator was smarter than he was, yet seemed to often make questionable or simply wrong decisions. “I am pleased to hear that. But both of us are in agreement that words are nothing without action.”

“Indeed.” The Imperator turned to him. “The presence of a Sovereign One Earth is now your priority. Maintain the war with the Humans, but that is the true danger on Earth.”

“The Sovereign One should be dealt with after the Humans are taken care of,” the Battlemaster disputed. “By directly attacking him we will likely force him to ally more openly with the Humans. That is not an ideal outcome.”

The Imperator was silent for a few moments. “Very well. I will have another coordinate the strategy for the Sovereign One. I also believe it is time you are aware of some of what I have done and am planning.”

“It would be appreciated.”

“I will be removing Patricia Trask from the equation in the immediate future,” the Imperator said. “She will be returned to the Temple Ship, and I will speak to her. I am confident I can convince her to be cooperative.”

The Battlemaster stared at the Imperator in disbelief. “Imperator, what exactly are you thinking?”

“I am thinking in the long term,” he answered. “It makes little sense to discard Trask. Not when I know she can be turned to us.”

“And what happens if she can’t?” He demanded. “And you know this will invite retaliation from XCOM.”

“Then she will be released and the next time she appears, she will die,” the Imperator answered. “But I am confident that she will be more useful to us alive than dead. Having one such as her openly allied with us will break the morale of the Humans and hasten their defeat.”

“No,” the Battlemaster shook his head. “You would not take such a risk for such a questionable reason. And you will certainly not let her go if she refuses to… work with us.”

“Yes, I will,” the Imperator stated, looking directly at him. “When I give my word, Battlemaster, I mean it. You would be, of course, free to kill her later. But it will not be until she safely returns to XCOM.” A pause. “Revelean has made significant progress on the Avatar Project. Patricia Trask will be important to see it completed. That time is approaching.”

Having made himself familiar with the details of the Avatar Project some time ago, he knew exactly what the Imperator was suggesting. “You are not serious.”

“I am completely serious,” the Imperator answered flatly. “And I think you agree.”
“Her?”

“Yes.”

The Battlemaster was not sure what to say at that moment. Even for the Imperator his implication was nigh-unfathomable. But then again…the Imperator was rather open-minded as far as Ethereals went. As much as it would take some getting used to, he had to concede that that the Avatar Project would only be successful with Humans.

Which meant that the Imperator had also likely found others. “She is not the only one, is she?”

“I see you are aware of the implication,” the Imperator nodded approvingly. “No, she was not. Sicarius has also found one, as have the Overmind and Deusian.”

That was surprising. “How did Deusian manage to do that?”

“With help.”

The Imperator was being extremely helpful here. He would have to speak to her. From what he understood of the Avatar Project, it was not something that was lightly undertaken. “I have also taken the liberty of assisting for your own.”

“No.” The Battlemaster flatly disputed. “I have no interest in participating in the Avatar Project, nor would it work for me.”

“Revealan disagrees,” the Imperator countered. “But even if you discount that aspect, I believe it would be a benefit towards some larger Human integration. The future for our species and the Humans will be close, and it does not hurt to begin that relationship early.”

His immediate reaction was to dismiss the Imperator’s words. But at the same time, he had a point, and he would not bring this up without some kind of desired outcome. “Fine,” he relented. “Who have you found? What is his name?”

“Not ‘his’ name. Hers.”

***

Training Arena – Temple Ship of the Imperator of the Ethereal Collective

12/3/2016 – 12:00 P.M.

He was here.

The presence of the Imperator was the equivalent of a sun to a psion. She could only imagine what it was like for a telepath.

Interesting. He hadn’t actually shown up to see her fight for some time. And honestly, she didn’t really use these training sessions for anything more than a means of refinement and a way to relax. The days where she actually felt challenged by them were long-since passed, especially now that she had some help.

“The arena forces you will face today will likely be a mixture of Mutons, Berserkers, and a high probability of one to two compromised Zararch agents.”

Yang Shuren, current resident of the Temple Ship, crossed her arms as she briefly considered what her Praetorian friend said. “And when you say ‘high probability’ that means…?”
“Between sixty and ninety percent probability,"

“And you base this on?”

“Zararch logs indicate four agents have recently been compromised by the Nulorian and other factors. Two have been fully interrogated and are awaiting execution. The remaining two are in various stages of interrogation.”

At times she forgot she was talking to what was widely considered the most idiotic species in the Collective. Then again, 042 was not an ordinary Muton. It was like…comparing modern Humans to Neanderthals. Or apes. The difference was so vast they might as well be completely different species. “Thanks 042. Expected numbers?”

“You have requested the highest available setting. Expect between fifteen to twenty.”

She nodded to herself. Reasonable numbers, and the arena was only so large. “If there are Zararch, what races?”

“Those being held are three Vitakarians and one Dath’Haram. They are unlikely to have been genetically enhanced.”

She snorted. Even if they were, she could easily kill them. The trouble with any kind of non-Muton was that they typically fought smarter and with more intensity. Still, she disliked killing them. They reminded her too much of Humans.

“Are you prepared to begin?”

“One more thing,” she said, not really expecting a straight answer as she walked into the center of the area. “Why is the Imperator here?”

There was a noticeable pause. “The Imperator has not made himself known to me. Previous encounters suggest he will allow you to complete your challenge before speaking. There is a moderate probability he will provide assistance to opposing forces.”

Damn it. She did not really want to play the Imperator’s mind games at the moment. Or maybe it was simpler and he just wanted to watch her kill something. Initially she’d assumed he’d wanted her to be some kind of psionic weapon, but she wasn’t really convinced of that any longer. Not that she would have had much of a problem with it, but she’d figured out that he wasn’t the type to invest in something so…mundane.

He wanted a tactician. Someone to perhaps compliment the Battlemaster.

That realization had certainly illuminated why she’d managed to get his attention over the others.

She was looking forward to seeing President Qin’s face as she told him who she was, right before killing him.

Such was the way of life.

“I must call into question your lack of proper protection,” 042 interjected. “When facing this many opponents, one shot could severely hurt you.”

Yang smiled as she rubbed her bare forearms. “042, how much does this lower my chances of surviving?”
“Four percent.”

“Exactly. Start it.”

The arena was fairly large, with four solid gate openings at opposite ends of each other. It was comparable to one of the American Football fields, although those were rectangular, not circular. The metal was just a drab grey, but the overhead ceiling caught the attention of most who saw it for the first time. From what she understood, it depicted a space battle for some world, battling an enemy the Imperator called the Synthesized.

It was rather beautiful, in a stained-glass sort of way. Very distracting initially, but she was used to it by now.

“(Come on,)” she said quietly to herself as she drew upon the power. “(Let’s give a show.)”

The gates slowly rose and Yang raised her hands in preparation. Knowing the standard tactics of Berserkers…if such a word could be applied to them, meant that…ah, here it was. One of the red-armored beasts charged forward, metallic blades gleaming in the light. Three of them. Unusual, and all coming from different gates.

Immediately multiple counters came to her mind, but she first settled on the easiest ones. She twisted both her wrists and was rewarded with the sound of the legs snapping of the two Berserkers to the side, and with a motion she caught the oncoming Berserker in a telekinetic grab, then lifted it into the air.

They just never learned.

The standard Mutons were coming out now, plasma rifles raised, and she thrust her left hand out and yanked, ripping the rifles from the hands of four of the aliens, while squeezing her right hand into a fist, compressing the hovering Berserker. That complete, she tossed the mangled heap of metal and flesh towards a trio of Mutons.

“There are three enemies behind you taking aim.”

Without looking, Yang sent a telekinetic blast behind her and dashed towards the unarmed Mutons, sending more flying back with telekinesis. Green plasma flashed behind her, and in retaliation she picked up one of the hapless Mutons and threw them with terminal force towards their offending brethren.

She summoned one of the rifles to her hands, executed two of the Mutons on the ground before discarding it, and snapped the neck of one of the still-surviving berserkers. How many were still alive? Six? No Vitakara either yet, though they might have been biding their time.

Well, she might as well have some fun since they were proving to be even easier than expected. Walking slowly towards the group of Mutons she had previously blasted back, she encased them in her telekinetic grip, though decided to focus the pressure on their heads. She clearly misjudged her strength as instead of a slow compression, they simply turned to yellow explosions.

Disappointed, she tossed their corpses towards the other few Mutons still alive. She was about to turn away when she heard something on the edge of her perception, and 042 confirmed it immediately. “Hostile behind you.”

She jumped forward, twisting as she sent out a telekinetic blast behind her, and it just barely missed a Dath’Haram who also leapt out of the way. In his hand was a thin red-coated blade. A trained Bladedancer then, and if he was from the Zararch, a *real* one. She smiled. Time to see what
he could do.

“Do you really think you can win?” She asked smugly, gesturing to the pile of corpses around her as the Dath’Haram began circling her, eyeing her with a predatory gaze. To punctuate the point she snapped the neck of the last living Berserker, and threw the corpse towards the Vitakara. He slid under it and dashed towards her with surprising speed.

She could see where he was aiming, and as he leapt towards her, she lifted a hand and he froze; suspended as she looked to where the poisoned blade would have landed. “Almost there,” she chided quietly, as the look in his eyes turned to terror as she stepped so close that the blade almost touched the chest it had been aimed for. “The heart. Vital. Important. But see, that only works when your opponent can’t throw you around with her mind.”

Yang tapped her head with a smile. “You should have aimed for the head.”

With that she telekinetically ripped the blade from his hands and stabbed the alien through the eye, then released him as he dropped to the floor with a thud. Placing a boot on the corpse, she withdrew the blade and flourished it briefly as she set out to kill what few were still alive. She’d always liked swords, and while the Dath’Haram were usually a bunch of idiot pacifists, they sure made exceptional weapons.

“All enemies are confirmed dead,” 042 confirmed as she executed the last wounded Muton. “Elapsed time was four minutes and fifty-two seconds. It is your sixth-fastest run on these parameters, out of a total of twelve.”

“Thank you,” she said sarcastically. While 042 was helpful, he and all of his kind always felt the need to constantly state statistics and records as if she really cared about that. What she really cared about was refining her own abilities, and that just wasn’t shown in the data 042 liked to reference so much.

But he either hadn’t picked up on her sarcasm, or, more likely, he was aware she found it grating and did it anyway. Cheeky grunt.

“You have improved much,” the Imperator’s voice immediately attracted her attention, as it always did. She turned to see him standing a few feet from her. Teleported most likely. The sensation was almost overwhelming, even if she’d gotten better at controlling herself. But it was near-impossible to overcome the warm and adoring feeling that washed over her, leaving her a sightless puppet.

While it had felt great at the time, she hated how it felt later.

With effort, she shook her head to focus. “Thanks. Almost thought you’d forgotten me here. We haven’t talked in some time.”

“I’ve been…occupied,” the Imperator answered, beginning to pace. “This is no longer challenging to you.” It was not a question.

“Not especially.”

“Good. You were not supposed to stay here forever. I see you have made a…friend in Praetorian 042.”

She shrugged. “He has been helpful, surprising as that is.”

“And you have taken a growing interest in war games, if Cogitian is to be believed.”
“Are you getting to a point?”

“Your patience needs improvement,” he said, raising a finger. “But yes, I am. The Battlemaster will be arriving at a point in the near future. Given your unique background and skills, I believe you would be an ideal…partner…to him. However, I will say he is not entirely convinced of the merit of such. You will need to show him.”

Partner?

She raised an eyebrow. “That is…more than I was expecting. I figured you’d want me to fight on Earth, not, ah, work with the Battlemaster of all Ethereals. Given what Cogitian has said about him, he doesn’t really do the apprentice-slash-partner thing.”

“You have not seen it, but he has taken on such in the past,” the Imperator said. “Disciples they were called. Both are long dead. I suspect the notion has not even entered his mind, but even he looks at his options from the perspective of one of the Empire. The times have changed, and we must look outside our species for worthy partners in our goals.”

Yang crossed her arms. “And you want me to essentially be a surrogate Ethereal. Taking a role your kind would have had.”

“A crude analogy, but not necessarily incorrect,” was the answer. “But I suppose the question is if you believe you can achieve this, or if you want it in the first place.”

“I can certainly do it,” she stated with confidence. “I was just…surprised this was your end goal.”

“I do not need a simple weapon, Miss Shuren,” the Imperator said with a dismissive wave. “You can be more than that. Your potential is one I won’t throw away.”

Yang could never really figure out how the Imperator really saw her. He always sounded like he cared, even when he often referred to her in terms of a resource. But for someone who thought in that scale…she supposed it could be worse. “Then I guess I’d better prepare. He’s going to challenge me to fight, isn’t he.”

The Imperator considered that. “Most likely, and you will lose. All you must do is fight intelligently, and that will be enough for him.”

Which translated to “You’re going to lose, but at least try not to die in a few seconds.”

Fair enough.

“Alright,” she looked at the discarded Dath’Haram blade and recalled it to her hand. “I have a lot of studying to do.”

***

Grand Chambers, Hive 001 – Helion-7

12/6/2016 – 1:11 P.M.

And he was back here once again. The Hive Commanders, although not quite as…vocal about the recent developments as the Andromedons or Vitakara, had their own means of expressing their displeasure. Namely summoning the most influential and dangerous Hive Commanders at the Hive of 001.
It was for all intents and purposes, a trial, if not sentencing.

001 was certainly going to be hostile, but it was not necessarily a guarantee that the situation would go badly. The Sectoids had released few questions, but had insisted repeatedly on having Ethereals answer them. Curiously they had not requested the Imperator, though given the allegations about the tampering presumably ordered by him, it might be a subtle way of indicating he was not welcome.

It worked for him. The Battlemaster was not a diplomat, but neither were the Sectoids. The reason Revelean was at his side now was because out of them all, the geneticist was the one who could most relate to the species. If all went well, there would hopefully be a more firm scientific relationship established.

“The aliens are probing me,” Revelean commented with some amusement as they walked down the gleaming white halls to the main chambers, even as they attracted the looks of the various drones and armored Vanguards who were quietly following them. “Poor technique. They are fortunate I do not wish conflict today.”

“No fighting today,” the Battlemaster agreed quietly as they approached the entrance. “They pose little threat to us, regardless.”

They both stepped into the Grand Chambers of Hive Commander 001, which was a massive amphitheater-like room, with a domed white roof which was no surprise as this was at the top of the Hive. However, it did actually appear that the room was indeed filled to capacity with Hive Commanders and Vanguard bodyguards.

It wasn’t the entirety of the Hive Commanders, but far more than he had anticipated.

Hundreds of pairs of golden bulbous eyes glared down upon both of them, and what made it more unnerving was that Hive Commanders looked very similar. Unlike the lesser Sectoids there was some variance in them, slight differences in height, girth, and cybernetics, but in a mass of orange and black, that distinction was harder to make.

The center of the room contained six elevated stands, inhabited by other Hive Commanders who were likely the limited few who were speaking to them. Fortunately they had their designations displayed on holographic projections before themselves. Unsurprisingly 001 was at the forefront, or at least who they were facing.

To his left was 029, and he was unsurprised to see the diplomat Hive Commander make an appearance. To the right was Hive Commander 666, which was interesting considering he was one of the few non-Helion-7 Hive Commanders, and primarily focused on terraforming and ship production on Olganar-2.

Continuing from 666, there were Hive Commanders 007, the closest thing the Hive Commanders had to an information collector and intelligence keeper; 100, a Hive Commander focused on cybernetic augmentation of Sectoids; and 099, who primarily specialized in experiments on psionically-sensitive aliens.

Not to mention there were hundreds of other Hive Commanders watching them. The only time the Battlemaster could recall this many in one place was the initial meeting between the Ethereals and Hive Commanders.

Once they reached the center of the circle, all six of the Hive Commander questioners rose. Ethereals Revelean and Battlemaster, 029 began, the telepathic voice sounding more intense than
usual. Probably to reach the entirety of the room. You have been summoned to answer in regards to
the information produced by Ethereal Aegis, as well as your failure to properly inform the Greater
Hive Commanders about the reality of the situation on Earth.

We have expended significant resources on your war, 001 said, voice dangerously calm. Resources
which were used in the service of a lie. There must be consequences.

“They were not expended in a lie,” the Battlemaster stated. “The objective has always been the
capture of Earth.”

You knew of the Ethereal Aegis, 001 said, his voice close to the equivalent of a Sectoid growl. Your
mission was to draw him out and kill him. The goals are irrelevant. You failed to inform us of the
situation. Explain to us now why.

“A matter of not escalating the situation,” the Battlemaster explained carefully. “As you have
seen…Aegis is skilled and dangerous. He had not revealed himself and seemed to have resigned
himself to providing verbal assistance and support. He is no tactician, and has likely convinced the
Humans to take a less-escalatory approach.”

“It is important to understand, honored Hive Commanders,” Revelean continued, stepping forward.
“That Aegis, for all his power, is a mere novice in the art of war, and ultimately did not desire this
conflict. Had we revealed his existence, many would have simply wished to destroy Earth from
orbit in terror. The Federation in particular would have demanded extensive military action, and as
a consequence, Aegis would have been far more involved than he is now. By taking the
unfortunate step of withholding this information, we have ensured that we have a foothold on Earth
uncompromised by the less civilized aspects of the Collective who do not take into account the
consequences of such actions.”

The Battlemaster resisted the urge to look towards Revelean in surprise. He was a…surprisingly
diplomatic speaker. “This is correct, Hive Commanders. It was a tactical move which allowed us to
gauge Human defenses, tactics, and establish our own presence on Earth. The escalation that would
have no doubt followed had we revealed this might have denied us even these victories.”

This answer I find acceptable, 007 said, ‘speaking’ for the first time. However, such actions should
be reconsidered in the future. Information of this magnitude is rarely justifiable to keep from the
Greater Hive Commanders. As the first of the Ethereal Collective, we are entitled to such
information, even if you must hide it from the Federation or Aui’Vitakar.

“Both the Imperator and I agree that such information will not be hidden in the future,” the
Battlemaster said. “However, withholding information from some, but not others is not possible.”

“Consider, honored Hive Commanders, the ramifications of such a proposal,” Revelean stepped
forward. “As the leaders of the Ethereal Collective, showing favoritism to one side or another
would be counter to the goals of unity we have for all the species within it. While we can privately
agree that some may handle certain information better, what is the case if another finds out? It
could lead to a schism of the Collective as a whole, and lead to countless deaths. You must also
consider if we withhold information from your own kind? Would you truly understand?”

“We have been deliberately neutral with your quiet feud with the Federation,” the Battlemaster
said. “It is for this very reason. Both the Greater Hive Commanders and Andromedon Federation
are focusing on what is not important.”

No. 001 stated flatly and angrily. The Federation desires our eradication. They spy and threaten us.
They have become a noted threat to the Greater Hive Commanders. If you wish to broach this
subject, we will do it. The Ethereals must put the Andromedon Federation in check, and ensure they do not threaten our expansion, production, or experimentation again.”

“The Andromedon Federation will not attack the Greater Hive Commanders,” the Battlemaster promised. “On that you have my word. None of us desire such a conflict.”

Words. 001 said with a wave. Promises. Neither I, nor any here, have forgotten the accusations Aegis revealed to the world. That you supposedly dared to twist our minds to serve you. There is only one way to answer such actions. You will bring the Overmind here, and let us look into his memories to determine the truth of this. We will not be manipulated against our will, and if it is true, we demand you will allow us to execute him.

If you do not follow these demands, 029 said slowly. I am afraid that the Greater Hive Commanders will formally leave the Ethereal Collective. I am sure you can understand the necessity of such demands, and the ease of which they can be proven false.

This was what he was afraid of. He was not sure how well the Hive Commanders would take him saying he would ‘have to speak to the Imperator’. He was quite aware the Overmind would be mildly amused at such a proposal, and never follow through. It was something of a conundrum right now. Revelean stepped forward, surprisingly raising a hand, though his voice was somehow amused.

“Honored Hive Commanders, we can of course agree to these reasonable requests,” he said. “Though first please consider the claims which Aegis puts forward. He has stated – in no uncertain terms – that our Overmind managed to not affect the minds of Hive Commander 001, 029, and the others he initially spoke too, but every single Hive Commander in the Collective. And this went unnoticed by all.”

Revelean shook his head. “We are under no illusions as to the strength and skill of the Greater Hive Commanders. You were powerful when we met, and have only improved yourself, with a skill in genetic manipulation which rivals our own. Indulge my own curiosity – do you truly believe such a claim is possible?”

That was…an interesting twisting of the question. Flat out lying to the Collective was not something he had really considered. But Revelean had clearly had a plan coming in, and it made the Battlemaster somewhat suspicious. But now it was on the Hive Commanders to answer.

I have seen all manner of psionic specimens, 099 mused. Your kind are more powerful than we are. But to the extent Aegis has proposed is…questionable. It is one proposal to dominate the minds of a lesser planet, but to do so in the presence of all Hive Commanders does not seem feasible without at least one detecting the manipulation.

Then examining his memories will show that, 001 said bluntly. This changes nothing.

In that instance, 099 said, directly addressing 001. If we are truly dealing with a psion of such power and skill, there is little to prevent us from succumbing to a repeat.

“The question that needs to be asked,” Revelean said. “Is how much you believe the word of one who has turned his back on his own kind in favor of protecting aliens. If you wish to continue this line of proof, then we will oblige, but it suggests to us that your own skills are…lesser than we have anticipated.”

I have little desire for an answer, 666 interjected. We have benefitted from our alliance with the Ethereals, and arguing about the past is pointless. Even if such claims were true, we are no longer
under such manipulation. I am more concerned about how the Ethereals will address the Federation, and their true plans for the Humans.

At least this was a situation he could properly address. “You are concerned with being replaced.”

You are expending far more energy on this species than any other before, 001 pointed out. You have clear plans for them. We demand to know what they are.

“They are requiring more resources because they are fighting,” the Battlemaster answered slowly. “And unlike previous species in this situation, they are intelligent, resourceful, psionically sensitive, and have the support of an Ethereal traitor. There are many reasons why they require more direct attention.”

Answer the question.

“I can certainly confirm we are not planning to replace the Greater Hive Commanders,” the Battlemaster said. “Your species provides the Collective with ships, soldiers, and resources. While such an action would not only cause a conflict, it is a logistical impossibility. We intend for humanity to be integrated into the Collective as previous species have been, a task which will be far easier once Earth is secure. We would not, and never have planned to simply discard a cooperative species of the Ethereal Collective.”

As should be expected, 029 nodded. Such a proposal should be considered paranoia. Yet I believe all parties could agree that the…involvement of the Ethereals has been lacking. While you have made efforts, Battlemaster, I believe those should be expanded beyond the military.

“One reason I have accompanied the Battlemaster today,” Revelean said. “The Greater Hive Commanders have some of the finest scientists in this galaxy, and it is past time the Collective has a dedicated centralization of such experiments and knowledge. I have been gifted the privilege of overseeing such work, which will of course not interfere in your personal projects, but provide all in the Collective the opportunity to work together to improve it, regardless of species or specialization.”

An effort which can be supported. 099 looked to the other Hive Commanders. The Ethereals have made mistakes. However, they appear to make efforts to repair the damage they have caused. I propose we allow them to work to achieve this.

As do I, 029 interjected. The words of a traitor Ethereal should not collapse such a long-standing alliance.

001 glared down at the Ethereals. Very well. We shall see if your actions follow your words. This gathering is adjourned.

All of the Hive Commanders sat back down.

That had gone much better than he expected.

And because of that, he was suspicious. Glancing to the noticeably smug Revelean, he would definitely have some questions for the Imperator later. But for now, the Hive Commanders were placated. That would have to do.

***

Union Chambers, Federation Command – Andromeda Prime
The amount of times Ravarian could say that he had actually been in Federation Space could be counted on one hand. The amount of times he had actually visited the capital world of the Federation was approximately twice, the first to establish some kind of relationship with the Federation itself, and the second time to acquaint himself with intelligence gathered on the city.

Andromeda Prime was the closest thing to a homeworld the Andromedons had. For a homeworld though, it was surprisingly sparse. There was one major city, which was formally Federation land, and then there were small installations distributed all across the planet managed by the various Unions. Federation Command managed land distribution, but otherwise there was no formal ‘law’ the Unions had to abide by. There were implied suggestions and consequences, but hard and firm law within the Federation was exceptionally rare.

The ones that were implanted were simple and straightforward:

The creation of Special Operators was illegal.

Any and all Union disputes were to be brought before Federation Command.

Any action taken against the Federation would result in the offending individuals and Unions being completely destroyed.

Ravarian had always found it interesting that Special Operators were banned, but the Federation maintained the program regardless. Probably as a final failsafe to take action against Unions that threatened stability. And the Ethereals certainly had some hand in the project – although the details he was somewhat murky on.

The only thing he knew for certain was that the Special Operators fell within Union Omega, which was completely unknown to everyone but Chief Overseer Chernior. For a fairly mild Andromedon, Ravarian was surprised he seemed to continually be expanding it every year. Curious, but given the growing tensions between the Federation and Hive Commanders, perhaps it was as simple as it looked.

Still, he would have thought that the Andromedons would at least have some appreciation for aesthetics. Federation Command was one of the most utilitarian and dull worlds he had visited. The species had an obsession with cubes and based pretty much everything off them. Buildings were straight rectangles, sharp angles dominated what little aesthetics they bothered with, and it was so symmetrically designed it was disturbing.

Andromedon cities were designed on square patches, and they built in the inverse. The outer layers would typically be defenses of some kind, then there would be a ring of houses, perhaps intermixed with an even number of shops (Which sold the exact same things), another ring of defenses, and so on until it reached the centerpiece, which was the only unique non-copied thing in the city itself.

From what Ravarian knew about Andromedon culture, for acquiring different resources, foods, and so on, you had to go to the appropriate Union’s territory. The layout would generally be the same, but what was inside it would be different. There really was no all-purpose shop, as Federation Command only had basic necessities. For weapons, clothing, or even fuel, he would have to go to another Union’s territory.

He was quite thankful he didn’t actually live here.

Not just because he couldn’t breathe the air.
The full-body suit he had to wear wasn’t especially uncomfortable, but the HUD wasn’t that great at seeing that far into the yellow mist that permeated the city. He could see a short distance ahead, but not much further. Going inside buildings was better, but they still pumped it inside them so there was always a yellow-tinged view.

However, this was one of the places where one could see Andromedons in their natural habitat, without the suits. The species itself was fairly unremarkable, and ironically resembled Sectoids in many ways. Their skin was a deep grey, their physiology was fairly weak, and they almost never wore actual clothes.

With that said, there were obvious differences. The average Andromedon stood nearly as tall as a Vitakarian, their diamond-shaped heads were proportional to their bodies, and every single one of them walked on two legs, not scampering around on all fours. Their thin mouths also set them apart, and they certainly sounded less deep without their suits.

With that said, it wasn’t uncommon to see Andromedons lumber around in their suits. It seemed to typically be military that kept them on, and the civilians who went without.

Fectorian seemed to find the city fascinating though, and had been verbally making what Ravarian could only assume was random comments. The Ethereal was certainly… different than many he had spoken to. He didn’t seem to particularly care much about the Collective per-se, but was especially eager to be apparently let off the chain to do things.

Having been shown some of his work, Ravarian was wondering just where the hell he had been for this entire situation. The Ethereal was brilliant, and did have a very… excitable personality when it came to subjects he was passionate about. He was no diplomat, but that was likely what the Battlemaster had sent him for.

“You’ve never been here before,” Ravarian commented as Fectorian took a look at one of the general electronic part shops, with the Andromedon overseeing the store watching in disbelief.

“Andromeda Prime? Never,” Fectorian swiftly turned away and kept walking to the Union Chamber. “Little time; I have been very occupied with other projects. They are an intelligent species, and I have always intended to see their cities. Efficient and clean, I approve.”

The Andromedons in front of the Union Chambers moved in front of the door upon their approach. These were in their suits and towered over him, and were at least equal to Fectorian in size. “State your authorization.” Ravarian suspected that the only reason they were being difficult was because the Federation didn’t especially like the Ethereals at the moment.

He wasn’t looking forward to explaining why they were here, and not the Imperator.

“Zar’Chon’ravarian’vitiary of the Zararch, and Engineer Fectorian of the Ethereals,” Ravarian answered. “And we both know that this is not a surprise.”

The Andromedon didn’t say anything, but stepped aside as the door slid open. Fectorian took the initiative and began walking further, Ravarian following close behind as the door closed behind them. Given that there was only one long, bare hallway, he assumed it would lead directly to the central chamber.

Once they stepped into the shining white light, Ravarian could see he was correct. The design was just as utilitarian as the rest of Andromedon architecture, which was a small square depression where they would presumably stand, and there was a higher row which went around the perimeter, with sections for each Union leader to inhabit.
This ascended for five rows, with the yellow mist making it difficult to see the upper levels. But in the grand scheme, the only Unions that mattered were the ones in the first row. Some of them were wearing their suits, while others were not. On the second row there was a brief extension which housed the Chief Overseer of the Andromedon Federation, Chernior, who was wearing his suit.

There were no guards or automated systems Ravarian could see, but he knew they existed thanks to Zararch reports, and there were plenty of suited and unsuited Andromedons who held some kind of plasma or laser weapon. Starting a fight was certainly not advised, and there were likely Federation soldiers just waiting to be deployed.

Here went nothing.

“Zar’Chon, Ethereal Fectorian,” Chernior’s voice boomed through the Chambers. “You stand before the assembled Unions of the Andromedon Federation. You are to provide answers to any member of this body; the Federation is fully prepared to divest itself from the Ethereal Collective if the answers received are not satisfactory. Is this understood?”

“Yes, Chief Overseer,” Ravarian answered. “We will answer them to the best of our ability.”

“The Unions may begin presenting questions,” Chernior stated. “A’Intellior, of Union Apear.”

An Andromedon with what appeared to be a cybernetic left arm rose, and further inspection noted that there were clear implants around his head. “The development of the Spectre unit has raised significant concerns. Not only with how the unit operates, but also because none in the Federation were informed such a project existed, let alone was near deployment. On behalf of the Federation we demand that you provide an answer to why we were not informed, and an independent examination of the Spectre itself.”

“As the one who created the Spectre, I can certainly assure you that there are appropriate failsafes to prevent uncontrolled spread,” Fectorian said, lifting a hand. “Prior to deployment, Spectres are programmed with very specific parameters, which they cannot override under any circumstances. At any time all Spectres can be disabled remotely by an owner, and will automatically self-destruct if they detect they are acting outside their parameters. There is no risk of Spectres being hacked or turned against the Collective.”

“We will also allow specific members of the Andromedon Federation to examine the schematics themselves, as well as request demonstrations,” Ravarian added. “The Federation must submit a list of qualified individuals and it will be processed as soon as possible. Is this acceptable?”

“It is a start,” A’Intellior said. “And what of failing to inform us?”

“Just as your Unions do not inform the Collective as to every single project, neither do I,” Fectorian stated. “I designed a weapon and thought little more of it when the Battlemaster wished to deploy it. However, I am now more cognizant of your need to be informed on more dangerous projects, and steps will be taken to ensure it doesn’t happen again.”

“Indeed,” Ravarian nodded. “Ethereal Fectorian will, after the conclusion of this gathering, be officially initiating a centralized Collective Engineering and Development branch. All major projects of the Collective will no longer be done by individual species, but as a collaborative effort overseen by Fectorian himself. This is to prevent such situations from arising again, and to allow concerns and feedback to be given during development.”

There was some muttering and rasps of filters as the Andromedons discussed that among themselves. Ravarian hadn’t thought they would be getting to this immediately, but it certainly
couldn’t make things worse. As far as questions went, this was one they were able to handle easily.

A very plain Andromedon stood. “It is one thing to say this will not happen again for weapons
projects. But you also kept the knowledge of an Ethereal defector from us. This is important
information to know. If such is kept from us, then how can we trust there is not more you have
neglected to tell us?”

“I can assure you that there are no more traitor Ethereals,” Ravarian began. “It was a complicated
matter-“

“I want to hear it from the Ethereal,” J’Vailan interrupted. “Not you.”

“Aegis disagreed with the direction of the war,” Fectorian sounded highly disinterested. “I am not
aware of the details, but he was growing disillusioned with the Imperator, and in a drastic move,
even for him, left. We have not considered it more than him making the equivalent of a statement
to us. His actual appearance in the war was not expected.”

“You were a fool to believe that, Ethereal,” J’Vailan said. “That does not explain why you did not
immediately inform the Federation so we could account for this.”

“Because there isn’t a reason you would be satisfied with,” Fectorian crossed his arms. “I suspect it
had to do with placating Aegis. If we forced him out, the situation would be worse. We did not
want to provoke him unnecessarily. This was an internal matter the Imperator did not want to
become public unless necessary, and if that sounds unreasonable, I suspect that you do not inform
the Federation of every internal Union dispute.”

“Your kind are not comparable,” J’Vailan insisted. “Ethereals are not like us. Your kind have
highly destructive and dangerous powers. This is in no way comparable to an internal Union
problem, especially when it involves other species.”

“This was a mistake we learned from,” Fectorian shrugged. “We can avoid it in the future. But
suggesting that the logic is not able to be followed is absurd and does not reflect well on your
reasoning capabilities.”

“You would do well not to insult us, Ethereal.”

“It is only an insult if you believe it to be so. Your species is intelligent, which is why I know you
can understand the reasoning of the Imperator, even if you do not agree with it.”

J’Vailan did not appear to be happy with that, but didn’t immediately respond for a few moments.
“Is the Imperator deliberately holding information of this level of magnitude?”

“Not to my knowledge,” Fectorian said.

“But you do not know.”

“No,” Fectorian said. “I am not always included in the Imperator’s inner circle. He may be keeping
his secrets, and most assuredly is. However, neither I nor the Zar’Chon or Battlemaster are aware
of such.”

“This is why we requested the Imperator.” J’Vailan said, looking to address the other Union
members. “We will not get satisfactory answers regarding this from an underling. Your kind have
failed to do as you promised. The only one who has even made an attempt has been the
Battlemaster, but I fail to see why the Federation should acquiesce to the will of the Ethereals when
your leader does not bother to show himself.”

Fectorian considered that. “Such a move would not be wise.”

“The situation is frustrating, we all agree,” Ravarian quickly interjected before anyone could respond to Fectorian’s *highly questionable* comment. “However, the Ethereals are realizing that more direct leadership is needed. It is why they are taking a more involved role, along with the Battlemaster, to put forth a more united and strong Collective.”

“Then prove it,” J’Vailan essentially spat. “Not I, nor many of the other Unions, are interested in dedicating resources to your spat with a traitor Ethereal. If you actually consider this an ‘internal matter’, then you clearly do not need Federation support. Furthermore, your incompetence on Earth has not gone unnoticed. Ethereal or not, you have been recently and constantly beaten by a species who is inexplicably advancing *faster* than you are.”

“The strategy towards dealing with the Humans is being reworked-“ Ravarian began.

“No.” The suited figure of S’Starina stood. “You have treated the Humans with far too much leniency. It is only a matter of time before they master space travel and begin their expansion. Your soldiers are ill-disciplined, idiotic, and easily broken. Your machines are little more than targets for the Humans. Your tactics are simple enough that a child could counter them. I will not support a Collective which does not treat war as a serious matter. I will not send my soldiers to fight for your Ethereals, not when led by such incompetent leaders.”

“Yes, because your soldiers would certainly do better,” Fectorian answered back, surprisingly sarcastic. “The Collective military is quite flawed, any reasonable being agrees, and is in the process of reformation. But to suggest your people would fare as well or better is equally questionable. You, like we have, underestimate the Humans. That was our mistake, and it will be yours as well.”

Fectorian clasped his lower hands together as he held a holoprojector in his right upper one. “But that will change. We adapt, as we always have. There are projects in place which will demonstrate the superiority of the Collective,” the holoprojector flashed through several different projects. Ravarian only recognized the Executor, Archon, and Custodian models, but there were a few he didn’t recognize. “There is no more playing nice with the Humans,” Fectorian finished. “But if you wish to hide while this is done, your Union is certainly welcome.”

“Then you will be fighting with the intent to win?” S’Starina asked.

“I can confirm that is the case,” Ravarian said. “Any restrictions that the Imperator wished are gone. Whatever he wished to learn from the Humans, he did. It is our job to bring Earth under the control of the Ethereal Collective.”

“And why-“

Anything the Andromedon was going to say was cut off as Ravarian tangibly felt the atmosphere of the room change. He felt stronger; his purpose clearer. He had been around enough Ethereals to know what was going on, but this was a completely different experience that he could only think of one it could belong to.

The air in the middle of the chamber shimmered and out stepped the largest Ethereal that Ravarian had ever seen. Clad in gleaming and ornate armor, with a billowing golden cape, and an upside-down triangular helmet, he was tall enough to be eye level with the second row. Ravarian immediately fell to one knee in an immediate sign of submission. With the arrival of the Imperator,
there could be no risks taken.

Several of the Andromedons had their weapons aimed, though lowered them once they saw who it was. “Andromedons of the Federation,” the Imperator said, his rich voice easily reaching even the highest of rows. “You have requested my presence. While you might be under the impression that I am ignorant to the state of the Collective, this is not the case. There are answers you wish for, and I can directly provide them.”

“Welcome, Imperator,” Chief Overseer Chernior said slowly. “We were not informed—“

“No,” the Imperator raised a hand. “You were not. I previously did not plan to indulge your demands. However, considering recent events, the Federation needs a goal. It needs purpose to continue as an effective part of the Collective. You have failed to find that on your own. I will provide one to you. One you may be able to better understand than most.”

“Then continue.”

The Imperator stepped forward, as Fectorian and Ravarian moved out of the way. “I will tell you why you have reason to care about Earth. This is more than an internal matter. Why we continue to fight is because the Humans are in danger of being dominated by an extremely dangerous species—known to us as a Sovereign One.”

“There are the few, but powerful, aliens who wander the galaxy in pursuit of unimaginable goals. They find planets, they watch and wait, they fall into deep slumbers and rest, and when they awaken, they fight. They manipulate the aliens they can, and kill all who oppose them.”

He gestured around him. “There is one such of these aliens on Earth, and now he is awake. I am familiar with how they operate. The purpose of such tactics was to determine if there was one and I have confirmed there is. As for how they operate…” he motioned and a deep blue sphere, with visible and moving distortions on it, appeared and floated before him. “They use these. I know several have seen them before. They are the means by which Sovereign Ones exert their influence. They are dangerous. And more of them are appearing on Earth.”

The Imperator made eye—or helmet—contact with various Andromedons. “You fear what my kind can do. But we cannot individually match a Sovereign One. Not yet. If Humanity is not pacified, and the most useful tool of this Sovereign is allowed to flourish, then it is not only the Collective who will be threatened, but the Federation as well. That is why this is more than an internal matter for my species. This concerns all who reside in this little pocket of the galaxy.”

In his Imperator-fueled haze, Ravarian was pondering the ramifications of what was being said. Even if he suspected the Imperator was twisting the truth, these Sovereign Ones did very much appear to be real. If that was the case…there were aspects and decisions that made a lot more sense.

“And do you have more proof besides a floating orb?” One unknown Andromedon demanded.

The Imperator pulled out a data cube and telekinetically passed it to the Chief Overseer. “Watch what is on there. That is an Avatar of a Sovereign One fighting one of my most powerful Ethereals. See the proof with your own eyes.”

“Why wait to tell us this?” Another Andromedon demanded.
“Because the galaxy is not prepared for the knowledge of Sovereign Ones,” the Imperator answered. “And this is not the only one. These are aliens beyond even our comprehension. They see our species as primitive; as children. And the more that know, the more dangerous they become. By sharing this with you, I have provided context for my actions – but you are also now targets. That is the price, but you wished to know. But you will not share this with anyone else outside this room.”

He turned to face the Andromedons behind him, as well as Fectorian and Ravarian. “The Ethereals have been negligent in their actions. I have watched for long enough. Change to the Collective is coming, and the age of Ethereal apathy will die. The initiatives of the Battlemaster are the beginning, and I will ensure they are maintained. Humanity will be subjected under the might of the Collective, augmented with the soldiers and engineers of the Andromedon Federation. You species has proven their worth to us, now it is our turn to maintain what we have built.”

He turned back to the Chief Overseer. “Is what I have said satisfactory?”

Chernior pressed several buttons on his podium. “We shall put this to a vote concerning re-institating military support for the Ethereal Collective.”

There was a few minutes of Andromedons pressing buttons on their podiums. “By vote of sixty-two to thirty-seven, the motion passes. Due to the closeness of the vote, we will begin a limited restoration of military support for the Ethereal Collective, and will discuss full restoration in approximately three weeks.”

That was admittedly better than nothing, though it was still a bit too close for comfort. But it was definitely a start, and the Andromedons respected results. If the reforms continued, there was little reason for the Federation to continue to oppose military support. They definitely should not push the issue.

“Your support is appreciated,” the Imperator said. “The actions of the Collective will reaffirm our words, and I can assure you that while the war for Earth will be difficult, it is one we will win. The time of Ethereal apathy has ended, and it is time to raise the Collective to that of a power to challenge any in the galaxy.”

“Your clarifications are appreciated, Imperator,” Chernior said. “All of the Federation will be watching to see your promises come to fruition.”

“Then that is all,” the Imperator motioned and the air in front of them rippled. The concept of teleportation was not one that Ravarian was entirely comfortable with, but it appeared that he was going to have to go through it anyway.

Resigned, he closed his eyes.

The Federation seemed to be placated for now.

But the actual ramifications of what had been said were a different matter entirely.

***

*Desolan Orbital Station 3 – Desolan Orbit*

*12/10/2016 – 10:11 A.M.*

*An Ethereal.*
An actual *Ethereal* had been working for XCOM.

Nartha was positive this had happened after he had left. There was no chance that XCOM could – or would – have kept that a secret from him. There was no better recruiting weapon than this. The divisions between the Ethereals must have been much worse than he had, in his most optimistic projections, suspected.

Aegis. Interesting. He’d never heard of that one.

Well, it was going to make his life a lot easier. All he needed to do was point to the Ethereal and say “That’s their ally!” Taking Caelior into captivity was also a major incentive. Nartha was fairly sure this would cause the Imperator to actually do something, and everything would eventually be under control – but in the meantime…the seeds were planted.

He was very curious as to what would happen next.

As for himself, he needed to figure out how to handle the Muton situation. The Nulorian had received his message, and were working on ‘handling it’, but at the same time he knew he needed to have something for the Zar’Chon. The good news was that recent events had completely taken up the Zar’Chon’s time and interest.

Sitting alone in his quarters on one of the orbital stations, sipping some water, he pondered the dilemma. He had enough names to completely dismantle the Muton smuggling ring, but doing so would severely hurt their chances of getting some kind of usable army. Even revealing part of it would likely lead loyal Zararch agents to compromising the entire thing, since these Muton smugglers had no idea how to properly combat an organization like the Zararch.

However, revealing part of it would give the Nulorian more time, and he had informed them of the possible necessity of such actions. If nothing else, the Nulorian were pragmatic and understood the need to sacrifice pieces for a greater gain.

Still, a one-man resistance was proving to be tiring. He really wished there was some means of communication with XCOM. The Nulorian were a means to an end, and the ones on Desolan were useful pawns. He didn’t really have any partner to help with this, and he could admit that it would be a lot easier with one.

Because if he died, it was over. And the Zar’Chon was not an idiot. Worst case scenario there was an Ethereal watching him. That would be bad. If that were the case, anything he did was doomed from the start.

Could Ethereals manage that?

Well…psionics. Telepathy.

He frowned.

A more paranoid person might wonder if the only reason he hadn’t actually been caught was because he was being used. The Zar’Chon was certainly one who would vastly prefer letting a traitor run around and find every single traitor in the Collective, and then killing them all in one fell swoop. The damages he caused would be nothing compared to any hope of the Collective falling being crushed forever.

He set his cup on the metal table, pondering that. It might not be a bad idea to begin thinking of contingencies in that case. A decentralized network might be preferable, but to do that properly, he needed allies. And the problem was he had none, and if he was ever targeted…it didn’t really
matter, because through him they would know everything.

As much as he hated to admit it, the Sectoids would likely be his best option. If anyone could
detect if he was under some kind of…observation…it would be them. They certainly had the
technological capabilities. The problem was that, of all the species in the Collective, the Greater
Hive Commanders would *never* even consider such action against the Ethereals. They were as
homogenous as a species could get, and he couldn’t see any of them giving that up to actually
rebel. Not that they would care about the word of a Vitakarian anyway. Xenophobic bastards.

So, a problem.

He knew he was running on a ticking clock, only he didn’t know how much time was left. He was
going to be discovered eventually, the Zar’Chon would put the pieces together at some point, it
was a matter of what he could accomplish beforehand. Knowing how the Zar’Chon operated was
useful, as he was sure that at the beginning he wouldn’t notice anything. Once he had fulfilled
whatever purpose the Zar’Chon wanted, he would most likely be killed without him ever seeing it
coming.

How could he possibly prevent that without help?

Now he was in a completely different conundrum.

By actively creating a resistance within the Collective, he might actually doom it. The more people
he met, the more were marked for death. Then again, what was the choice? Do nothing?

“Sitting there is certainly not going to help your situation.”

Nartha instantly had a pistol in his hand and aimed at the voice from the corner of the dimly lit
quarters. He had brought almost nothing with him, and short of a small pack at the foot of his bed,
the room was completely bare. The chances of someone being able to *hide* in his room were
completely impossible, and *remaining* unnoticed even more so.

Yet inexplicably, there was someone in the corner of his room. Had he not known better, he would
have guessed it was XCOM. But upon closer inspection, it definitely wasn’t one of the soldiers.
The armor was almost stony, grey, and had a strange symbol on the chest. However, the figure was
somehow a *Human*.

“Put that down,” the man said, his voice stronger than his aged features implied. Nartha was
confused as to *how* there was an elderly Human standing in front of him. “You can’t kill me with
that anyway.”

Nartha narrowed his eyes, pistol unwavering. He was not unconvinced he was dreaming, as there
were no *Humans* here of all places. He had been tired, and having dreams was not uncommon.
They were usually never this vivid or strange, though. Still, he could try and play along. “Who are
you, and how did you get *here*?”

The old man smiled and waved a hand. Nartha saw the air briefly shimmer and the man
disappeared only to reappear on the other side of the room. His pistol followed. “A psionic trick,”
the man said dismissively. “Not easy to perform for most, but I’ve gotten *exceptionally* better at it
recently.” He looked at the bare room. “As for who I am, you may call me the Chronicler.”

Nartha was less sure he was dreaming. It was a stretch but… “I don’t suppose you know XCOM?”
As far as he’d known, there had been no Chronicler. He’d never heard of the name before now,
which was why he doubted this odd Human psion was connected.
“Oh, I certainly do,” he nodded. “I’m not…part of them, but instead represent another party. One who the Ethereals have…questionably…decided to make an enemy of.” He tapped the side of his head. “The Imperator has quite curious plans. Ambitious, but he has very little idea of what he is toying with. Making the one I represent an enemy will not end well for him. Hence why I’m here now. XCOM informed me of certain things, including your mission. Admirable, but it is only a matter of time until your capture without contact with XCOM. This is assuming you haven’t been compromised already.”

Nartha pursed his lips, and lowered his pistol. Even if this Chronicler was lying, he knew that a psion of that power would easily kill him. Although he certainly didn’t understand a lot of what was being referred to. “I don’t suppose you can determine that?”

“Unfortunately no,” the Chronicler shook his head, eyeing him curiously. “However, I can help prevent something like that from happening in the future.” He pulled something from a pouch on his belt and walked over to Nartha, placing it in his hand. It was a small black-blue orb no bigger than a marble. It almost seemed to be rippling the more he looked at it; hypnotic in a way.

“Keep this on you at all times,” the Chronicler said. “Don’t ask how it works, but it will prevent anyone from unknowingly influencing you.”

The little orb was shockingly cold, but he placed it in his pocket. “Thank you,” he said, looking at the Chronicler carefully. “I suspect you want something as well. If you aren’t with XCOM-“

“The only thing at this point I am working towards is the destruction of the Ethereal Collective,” the Chronicler interrupted with a surprisingly flat voice as his face went still. “Your work will assist in achieving this. I do not care what happens afterward, but the Ethereals and their…ally…they will die. To that end, I, and several others, will provide assistance where applicable. He pointed to the ground. “My people have moved the entirety of the Mutons to another remote world. We left behind a skeleton crew for you to tip off to the Zar’Chon. Collapse the network, it serves no purpose and the Nulorian are working to establish another one with our assistance.” The hand moved up to his side again. “We will be initiating contact within the coming days with XCOM. When the time comes, I can take you to speak to them, and then return you.”

Nartha blinked. “You…can do that?”

The Chronicler gave a razor-thin smile. “There is very little that cannot be done. The Imperator has decided to reveal his intentions towards us. That invites retaliation.” He held out a hand and the air above his hand simmered and out came another of the orbs, although this one was much larger – the size of a Human basketball.

“Take this with you,” he said. “Place it on your ship. This will prevent your actions from being watched by the Imperator and…certain other parties,” he face wrinkled at that. “I am rather surprised at the risks the Imperator has taken. But as I said, he has very little idea what he is involved in.”

Nartha took the orb, which was similarly freezing and carefully set it on the bed. He had questions, but wasn’t sure if they should be spoken. Yet he needed to know something. “Who are you actually working for?”

The Chronicler seemed to consider that. “Do you know what a Sovereign One is?”

“No.”
“Well,” he mused. “I…work with one, although that is a poor description of my role. But he is very old, and has only recently been fully awakened by the actions of the Ethereals.” He eyed Nartha pointedly. “He also does not like to answer many questions, not to you, not yet. Do your work well and you will learn more.”

He stepped back. “I will be in contact soon. Give your report to the Zararch, and do not let the orbs be discovered.”

“And what if they are?”

The Chronicler chuckled, a dangerous glint in his eyes. “Then the rebellion may be kickstarted ahead of schedule.” With that the air shimmered around him and with a step back, he vanished, leaving Nartha alone with the mysterious artifacts.

This day had suddenly gotten a lot more interesting.

***

Tactical Briefing Room, Solar System Command Center – Mars Collective Base

12/11/2016 – 12:09 P.M.

It was not ideal to reform the majority of the Collective military, but in light of the recent performances, it was something which was necessary.

The Battlemaster stood alone in the Command Center, over a dark holotable as he pondered the issue. He had outlines of what to do, and he would be appointing those who he knew could help achieve this change. But for now he was alone and needed to think through it once more. Much of what he was considering was close to shattering conventions and norms that had existed from the days of the Empire.

And that was the problem.

They were no longer in the Empire. They were in a new, dangerous, galaxy. They needed to be open to changes to meet new threats. Privately, the Battlemaster wondered if they’d be in this situation if the Empire hadn’t been the galactic power it had been. None had been able or willing to challenge them, and as a result they had never had reason to improve. The first true war they had faced had been the Synthesized…and it had ended badly.

The Collective as it stood was far too reliant on infantry. This was extremely apparent, and something the Humans had been capitalizing on. With the developments of psionics, heavy weapons, armored vehicles, and the incorporation of the trench lines and melee units, they were easily answering the superior numbers of the Collective.

That was the first priority to be addressed. The lack of useful vehicles. The Cyberdisks were practically useless now, and the Humans knew how to deal with them easily. The Sectopods were powerful, but too slow, unwieldy, too large a target. The designs were not inherently bad, and he knew that Fectorian and his new division of engineers were looking to improve all current designs.

But there were completely new designs that he had also drawn up. Not an absurd amount, but it would allow them to answer the siege tactics of the Humans, and withstand even their brutal punishments. However, the simulations and projects might not necessarily work as well in reality.

He had also come to the grim conclusion that no matter what they did, they were likely going to help the Humans in some way. XCOM had come this far by managing to reverse engineer their
technology and research their corpses. They had taken the strengths of the Collective and made them their own. That was most likely not going to change unless they immediately won.

Well, while reverse-engineering their more primitive technology would not yield much that was useful, he could take pointers from their tactics and strategies.

There was going to have to be a massive revision of water tactics. That was one area the Humans were dominant in. Their undersea net of submarines needed to be purged, and for that he would need the Andromedon Aquatic Forces. He was considering the Sar'Manda, but not until the Vitakara were calmed down.

The Vitakara.

Yes, there would need to be changes. Some races, such as the Borelians and Oyariah, they would not need much change. They were experienced and competent. They did not generally break, and were at minimum equal to the standard ADVENT soldier. However, standard was not good enough. They needed to be better.

The Vitakara aversion to genetic modification needed to end. He did not personally care what the civilians did; if they wished to cling to their outdated beliefs on the subject, he would not impose such on them. But in the military, that would no longer be acceptable. They had the resources and capability to turn their soldiers into the equal of an XCOM soldier.

That is what he would do.

However, that was only solving part of the problem. The other aspect being the ugly truth that most Vitakara were not suited for war. They were too passive; too affected by what they heard and saw. There were too many who were facing mental issues from even a brief time on Earth. That was not acceptable.

There would need to be stricter screening, or at worst, perhaps a less-radical version of the procedure Zararch agents underwent. Some could perhaps be retained as a support team, but the soldiers could no longer be any who wished to join. It was also time to directly involve the races themselves in the conflict. The Vitakarian Republic, Borelian Authoritative Council, and Oyariah Hegemony would all be useful in such a pursuit.

Something to discuss when he arrived on Vitakar.

The Andromedons he felt needed little improvement. Out of all the Collective forces they were the most experienced, intelligent, and useful. They were being hindered by strategies, politics, and poor leadership. Should those be fixed, they would be able to realize their true capabilities. But aside from external reasons, the Andromedons he felt no need to change significantly.

He could not say the same about the Mutons.

They were now a billion-unit problem.

They would be phased out…eventually. But until then, they were essentially walking cannon fodder. While Revelean was working on a better template, it would not change the billions that still existed. He couldn’t throw them all out, so the best that could happen was they were chipped or conditioned against psionic interference, but he had ordered the production of Muton soldiers ceased until further notice.

It wasn’t as though they would be running out anytime soon.
The Sectoids were in a difficult spot as well. Their Vanguards worked…to an extent. However, against psions they were useless. The Hive Commanders would need to do better, and that essentially amounted to a more powerful and independent unit. They had little choice here. The basic Sectoids had been filtered out long ago, but perhaps the Vanguards could serve as a base template.

Aside from reforming those aspects, there was the matter of contingencies. While he never intended to let it reach the point where the Humans left Earth, it never hurt to be prepared. The Solar System was ripe for fortification. Mars was already underway, and establishing defenses, outposts, and forces at certain points would give a fallback plan should the unthinkable happen.

On that note, Fectorian needed to improve the Gateways. The entire Gateway network needed to be secured so that Aegis and XCOM couldn’t suddenly storm Gateways on Vitakar or Desolan, and the size restrictions hampered the Collective ability to properly respond to certain threats. While he knew it would take time, he was certain it could be done.

There was, of course, the eventual integration of the Avatar Project to consider.

One he was still uncertain of; including the Imperator already determining a candidate for him.

Yang Shuren. He would have to see her in motion to make an accurate judgement, but he could not fault the Imperator from taking the initiative. She had a natural tactical mindset thanks to her upbringing, weapon training and martial skills, thanks to her family connections with the Chinese military, and a reason to fight her own kind.

Yang Fen was, on paper, retired. In practice he was the equivalent of an exile too prominent to openly kill, and for reasons the Battlemaster didn’t know, had been shipped to Australia to live out his days under constant Chinese watch. An unfortunate victim of the cutthroat military politics of China, although what exactly Yang Fen had done was knowledge he was not privy to.

Fortunate that the exile of him and his family had led to them being some of the first captured during the initial invasion of Australia. How the Imperator had managed to pick her out of the thousands was not something he had shared, but he was not surprised. The Imperator had a skill for picking out certain people, and Humans were no exception.

It appeared Yang Shuren had been given a similar offer the Imperator was going to make to Patricia. She was psionically sensitive, and seemed to have equal intellectual capabilities. Too useful to throw away, but the Imperator liked giving choices. And thanks to them, Yang Fen and his family were now living in Taiwan with no memory of being captured, but knowing Shuren was safe.

On her request, it seemed. Curious how she had only ensured the safety of her family and none else. Based on her psychological report it wasn’t surprising. Yang Shuren didn’t necessarily dislike Humans, she disliked Humans in authority. She had a very tainted view of every single government institution, and especially hated the Chinese government, and the Chinese people for continuing to enable them.

She certainly seemed incapable of caring about ordinary Humans though, civilians or otherwise. Or at least she didn’t lose sleep over how many were no doubt dead; ones she had likely been with as a captive.

However, she seemed somewhat competent. If the Imperator wished him to…work…with her, he could likely do something. If she was to keep a place by him, she would have to earn it.
And his current plan for that was not going to be pleasant for her.

***

Zararch Solar System Command, Solar System Command Center – Mars Collective Base

12/11/2016 – 4:12 P.M.

It was certainly an interesting group he had put together. As he was considering how best to improve and reform the Zararch, having separate divisions per species seemed like a reasonable first step. A Zararch Command Circle, as it would have been known. Such a formation had only happened once, upon the creation of the Aui’Vitakar as it was still unknown if the other races were hostile or not.

After seeing that such was unneeded, the Command Circle was eventually retired and command was placed exclusively on the Zar’Chon, whose power was continuously limited as the Vitakara saw little use for an intelligence service, even if his predecessor had made several arguments for the need, especially concerning the Borelians, Oyariah, and Sar’Manda.

All of which had been ignored, but in the end it had turned out alright.

The Ethereals understood the usefulness of such services, and one of the first things they had done was expanded the Zararch significantly, mostly leaving it up to him, although Quisilia had provided some help. However, it was clear he hadn’t done it entirely correctly, but that was simply a mistake. One he was correcting now.

There were two major additions, that of the Sectoids and Andromedons in the Zararch. He was satisfied with the quality of Vitakara agents, and didn’t see reasons to change them much. Their issue was how to use them, not if they were competent or not. But the Sectoids provided much-needed psionic utility, and the Andromedon Special Operators would answer directly to the Zararch now, and by extension, the Ethereals.

Finding a Hive Commander who would fill the role was fairly easy, as the Zararch had conducted several investigations on the various Hive Commanders, and Hive Commander 007 seemed to be the natural fit. His Hive largely consisted of various data centers, genetic vaults, and every single important document of the history and plans of the Greater Hive Commanders.

007 also had many connections through the Hives, and it would likely be easy to have him leverage them for the needs of the Zararch. 007 was certainly interested, and didn’t necessarily seem opposed to working with aliens, especially as he would be working with the Zararch in turn. Although, even standing on his legs, the ruddy orange alien was easily the shortest, only coming up to his waist.

The Andromedon was none other than Union Omega Project Director Rilianor. A complete unknown to the vast majority of the Federation, he oversaw the Union that did not exist – Omega. Having now been granted access to that little secret, Ravarian was impressed that the Federation had the foresight to put together such a group and keep it under wraps.

Union Omega was, of course, the source of the unknown Andromedon Special Operators. Rilianor was the one who oversaw their creation, deployment, and reported anything relevant to the Chief Overseer. No other Andromedon in the Federation was aware, and it would be a simple matter to keep it that way.

With that said, Rilianor had been less than enthused about bringing Union Omega into the Zararch,
but given how much the Ethereals were also involved in Omega, there was little choice. Ravarian was still not sure of the extent of Ethereal influence, but it was clearly more significant than just authorization.

And to round out their little group was Quisilia. Now all clustered around the holotable, it was time to get down to business. “The capabilities of the Zararch have previous been blunted,” he began. “Both due to a failure to properly adapt to the Humans and restrictions placed upon the Zararch concerning operational parameters. With the latter lifted, we can plan more freely.”

“Penetration of ADVENT is a priority,” Rilianor stated, his voice more echoey than most Andromedons for some reason. “However, with their spreading use of psionics and counter-intelligence methods, there are more limited options.”

“Any alien will stand out,” Ravarian agreed. “And while those operations can be conducted, there is a far higher risk of failure.”

“The Special Operators can easily perform surveillance work, and are more than capable of killing anything ADVENT can throw at them,” Rilianor stated. “However, it will make future operations more difficult if such missions turn violent.”

“Which is why we need to take a more methodical approach,” Ravarian motioned to 007. “Which is where the Hive Commanders come in. 007, you have said the Vanguard template can be modified.”

With ease, 007 projected into their minds. It is a matter of what you wish. I would not recommend Sectoids for any kind of complex work. But conditioning, psionic aptitude, and physical characteristics can be shaped.

“Excellent,” Ravarian said, inclining his head. “We cannot plant agents in ADVENT conventionally. None of our own will pass a blood test, and the amount of psions embedded in their sensitive organizations will also make long-term operations difficult, if not impossible. I see the Sectoids performing two distinct services.”

He held up a finger. “The first as passive observation. If you wish specifics, there will be Sectoids transported into cities through civilian agents, and they will telepathically observe the area around them and report back if they learn anything of interest. Much of what they hear will be useless, but through it we can gauge important information such as citizen morale, political stability, as well as a host of sensitive personal information we can use to leverage the population against them.”

Another finger joined the first. “The second involves psionic psychological modification, both in the field and in a controlled environment. We have a large number of Human captives, and it is time we put them to further use than as fodder for Revelean and whatever the Creator does. We need to convert these Humans to sleeper agents and embed them back into ADVENT. The same tactic would apply in the field; a Human will be briefly abducted, modified, and returned to their original position until we need them.”

007 blinked, the Sectoid equivalent of thought. It is doable, he finally said. The brains will need to be inclined towards telepathy, and I would recommend lowering their size slightly to maintain a lower profile. However, they can be made to do exactly what you ask.

“Is the psionic conditioning in addition to traditional conditioning?” Rilianor asked.

“Correct,” Ravarian confirmed. “Traditional conditioning will ensure the subject does what we need, when we need it. Psionic conditioning will prevent undue panic, nervousness, or other
emotions which might tip off an ADVENT psion. It might also be easier to simply wipe the mind of the target of the incident, as the standard conditioning is what is important.”

Yes, 007 mused, the raspy voice almost gleeful. *You will need our scientists to apply the standard conditioning. They need not be specialized; our scientists can be easily trained for such.*

“How long would you expect the application to take?” Ravarian asked.

_Such conditioning depends on the complexity and quality requested,* 007 answered. *For what you require, no fewer than twelve hours. I would recommend a full day to ensure the conditioning is in place correctly and does not malfunction._

“This is all very fascinating,” Quisilia finally looked up, and Ravarian almost sighed as it seemed that Quisilia had spent the past few minutes scrolling on his phone. Wonderful. “Inserting Humans into ADVENT is an excellent idea. I am not convinced on these passive observation Sectoids. All it takes is for one psion to be caught and ADVENT Intelligence is locking the place down.”

_There are solutions,* 007 addressed the Ethereal directly. _We can condition these observers to die should a psion detect them, preventing any chance of them learning damaging information. With the advancements in nanotechnology, they could be reduced to nothing to make even a body impossible to find._

“And then we are down a Sectoid,” Rilianor rumbled. “Considering how many seem to be embedded in ADVENT, we will be losing too many to be worth it.”

_These units are useful pawns and easily replaced,* 007 made a dismissive motion, eyelids narrowing as he looked at the Andromedon. *It is unlikely that it would be as frequent as you suggest. The saturation of psions is a weakness. They do not know if such a presence is Human or not, if they bother feeling it in the first place. It is a simple enough matter to prevent these Sectoids from attempting to read any kind of psion. Your concern is misplaced._

“Oh you can use them to play ADVENT,” Quisilia added, now looking back down at his phone. “At some point ADVENT will suspect there are hostile cells. In which case, one of these units could accidentally tip off one of the Priests, and bring ADVENT down on a cell of Zararch – which so happens to have ten or so Sectoids. ADVENT believes they have won, and their guard will be lessen. In the meantime, we have lost very little.”

“Agreed,” Ravarian nodded. “That I believe will be our strategy for infiltrating ADVENT. XCOM is impossible with Aegis, and we should not waste resources attempting such.”

“What of the non-ADVENT nations?” Rilianor asked.

“South America and Africa are under the purview of Nebulan and Macula,” Ravarian said. “However, I would avoid antagonizing the European Union. Meddling too heavily will spur them to join ADVENT. We should limit our efforts to simple observation.”

“And China?”

Ravarian curled his lips. “They are a problem, and we should take appropriate action. The Chinese do not pose a threat to us like ADVENT. They have no interest in ADVENT, but they are an enemy. I will have you prepare your Special Operators to recover or destroy their intelligence, and at the same time we will begin culling their population.”

He looked towards 007. “The Hive Commanders have identified a potential weakness, correct?”
We have, 007 said. Based on an extensive overview of Human diseases and plagues, as well as contrasting with potential synthesized ones, I believe there is a useful candidate to cull the Chinese in a way ADVENT will not immediately pin towards us. The disease of smallpox.

“And why is this useful?” Rilianor asked.

“It is a highly contagious and lethal disease,” Ravarian answered. “Given how tightly the Chinese are packed into cities, anything introduced would spread quickly. The Humans managed to almost entirely eradicate this disease through vaccinations, but have largely stopped doing such in recent years. Should it be reintroduced, they will be unable to stop it immediately.”

There is the issue of recreation, 007 added. While we can attempt to synthesize it, working with an original sample is advised. However, the number of original samples are…limited. There is speculation that they are potentially under guard in Russia or United States Blacksites. As devastating as such a disease is, the Humans have not used it against each other.

“Hm,” Quisilia looked up again. “Don’t concern yourself with an operation to find this, I’ll handle it myself. I don’t believe I’ve visited Russia yet. It would be an educational trip.”

However it is acquired, it would likely be easy to replicate in larger quantities, 007 said. Then China will be crippled for their defiance.

“Why target China?” Rilianor asked, the question clear in his voice. “While their defiance cannot be tolerated, ADVENT is the larger threat. Why show our hand in this?”

“Because ADVENT is more useful to us,” Quisilia answered. “We should not be killing off their populations unless necessary. China is irrelevant and overpopulated. Their preservation is not important, and they will serve as an example of what happens to nations who believe themselves capable of challenging us.” Quisilia looked up thoughtfully. “And I wouldn’t worry. I am sure that ADVENT will face their share of biowarfare shortly.”

“To conclude with China,” Ravarian steered them back on topic. “We will identify all prominent Chinese politicians and either assassinate, poison, or abduct some of their family. While we shouldn’t remove all our leverage, killing a spouse or child will serve as an appropriate punishment.”

“The Battlemaster will not like that,” Quisilia warned. “While yes, unleashing a disease is going to kill a lot of Humans, it’s retaliatory. The Battlemaster is not going to like that either, but it is indiscriminate to a degree. Deliberately targeting associates of actual targets might get you executed. Especially if you kill kids.”

Ravarian pursed his lips. “It serves a purpose-“

“Take my advice,” Quisilia said. “If you absolutely must order someone assassinated, kill the politicians themselves. Or just threaten their families. But don’t touch them.” The Ethereal shrugged. “Now, I don’t necessarily care. But the Battlemaster does. Up to all of you how much you want to risk.”

Ravarian rubbed his forehead. The Battlemaster and his damn code of conduct. “Change parameters. We don’t want to throw the government into disarray, otherwise ADVENT will step in.”

“Then make their lives miserable,” Rilianor suggested. “Sabotage their electricity, water, and internet. Cripple them. Turn their country into a nightmare, and it will not take long for a diseased
population to start fighting. The world will watch as the aspiring superpower falls to pieces and becomes a disease-ridden nation.”

Ravarian heard a *click* and turned to see Quisilia had just taken a picture with his smartphone. “Well said!”

He resisted the urge to facepalm, and instead shook his head. “007, begin design and production of these units. Rilianor, prepare the Special Operators for action against China. That will be all for today, dismissed.” Once they left, he shot Quisilia a look, then activated the holoprojector in his palm and navigated to Twitter.

Sure enough, Quisilia was posting pictures of their *highly classified* meeting for the entire world to see.

**Quisilia @TheGreatQ - Dec 11, 2016**

In a very important meeting where we’re discussing the #future of the Zararch! Very exciting plans ahead! Looking forward to seeing the reaction :) #planning #zararch #xcom #vaccines #cooperation #china

And of course there was a picture attached which showed him, Rilianor, and 007 standing around a holotable looking like they were having a serious conversation. Which they were, until Quisilia decided to…be Quisilia. With some trepidation he realized he hadn’t checked some of Quisilia’s recent posts.

Mentally steeling himself, he scrolled up and was both extremely disappointed, and extremely unsurprised, not the least of which was because two of them were pictures of him, definitely taken without him knowing. The first was a picture of him looking at something on a datapad, as serious as he always was.

**Quisilia @TheGreatQ – Dec 6, 2016**

Give some support for my good old friend, he’s going through some difficult times. #support #friendshipismagic #depression #zar’chon #mentalhealthawareness

Ravarian would have almost found that touching, had it not been laced with sarcasm and the picture itself had the caption *“MFW I realize that I’m losing to a bunch of primitive aliens and can’t figure out why.”*

Ha ha. So funny. And of course the damn tweet had several hundred thousand likes. The next one was just as inane.

**Quisilia @TheGreatQ - Sep 6, 2016**

We all have these days, don’t we. #longday #reform #cats #zar’chon

This time the picture Quisilia had so helpfully attached was one of him standing and looking contemplatively out of the window of the Mars Observation Station, and also holding his cat. Great. Now the world had this image of the leader of the Zararch holding a cat in his arms.

The caption didn’t help either: *“When I have to conquer an alien species, but all I really want to do is hold my cat.”*

Ravarian didn’t really want to look at any more and just shut it off, looking up at Quisilia as he did so. “I am amazed that no one has ever killed you.”
“Oh believe me, many certainly wanted to,” Quisilia gave a light laugh. “But sadly, I’m a bit too important, and more importantly, smarter than they are.” He put his phone away. “Now, I think I have to track down an eradicated disease. Wish me luck!”

“Good luck,” he said flatly, before turning away. Sure enough, Quisilia was gone when he glanced around. Well, all things considered, everything that needed to be done was being done. Plans were being set in motion, and the shackles were gone.

He allowed himself a smile as he thought about what was coming to China.

They would wish they had just stayed out of it.

**The Hall of Steel, Blacksite 05 – Unknown**

12/12/2016 – 8:22 P.M.

“You want to create an AI.”

Fectorian practically sniffed at that as he led the Battlemaster down one of the grey hallways. “No, I do not. However, the Chinese Humans have shown the benefits of a battlefield intelligence, and I am planning to adapt the CODEX system to such. Working in conjunction with Sargons, local commanders, and yourself, I estimate it will greatly improve our efficiency.”

The concept still sounded dangerously close, but if there was one who could make such a system, the Battlemaster had to admit it would be Fectorian. “That will take time to overhaul our communications network. As well as establish protocols.”

“Yes, yes,” Fectorian pressed a button to the door of a room, which slid open. “However, since I am now working with the illustrious species of the Collective, such implementation should not take as much time. However, I have applied that to another project I have been working on for some time.”

Both of them stepped inside a large square room, which was brightly lit and filled with motionless humanoid figures. They were roughly the size of a tall Vitakarian, with no visible eyes, sensors, or other things indicating their likely mechanical nature. However, closer inspection could show that the bodily proportions were too small for it to be a soldier wearing armor, even if there were no obvious lines indicating mechanics.

The faceplates were black, along with the rest of their body, and the overall design was extremely sleek and streamlined. The chest had silver patterns on it which culminated in a symbol of the Ethereals on the chest. “I showed the initial workings of the REPLICA project to several Andromedon and Vitakara engineers,” Fectorian said. “Based on those conversations, the Custodian Project was born. Am ultimate soldier, without equal.”

He pressed a button on his wrist and two of the figures stepped forward. “These were designed to be able to withstand Lancers in strength and melee combat,” Fectorian said, as the machine soldiers ejected nearly-invisible blades from their wrists. “Single-use nanoblades to penetrate their Iron Skin modifications, and CQC programming.”

“Durable as well, I suspect,” the Battlemaster noted. “How extensively have they been tested?”

“They have performed exceptionally in damage tests,” Fectorian motioned another armed Custodian forward, holding a heavy plasma weapon with ease. “Observe.” The Custodian
unleashed a green barrage of plasma into the chest of the other motionless Custodian. Once it stopped, the chest was very much damaged and it was several layers deep into the unit itself. However, a few seconds later the sections began reforming until it was fully repaired. The aesthetic lines and symbol were sadly not preserved, but protection had been restored.

“While they are unlikely to hold up against an artillery strike, they are more than capable of sustaining damage,” Fectorian said. “This was designed for two reasons – the first to provide a unit that cannot be dominated by psions. The second is to take advantage of the Battlefield CODEX. These units will be managed and maintained by the respective CODEX in combat.”

The Battlemaster eyed the units. “And what happens if the CODEX is not available?”

“They will proceed with standard battlefield programming,” Fectorian answered, as they began walking through the lines. “Which essentially is the elimination of enemy personnel until further notice. The authority of the CODEX can also be superseded by yourself, or whoever you designate.”

The Battlemaster nodded, finding himself more open to the idea of expanding the CODEX capabilities. Up ahead he saw one of the Custodians, standing before five seemingly unmodified Mutons. “I have given some thought to the Muton issue,” Fectorian said. “I believe I have a solution. We cannot simply discard them, but we can utilize them as simple tools. In pursuit of this, these Mutons are chipped and slaved to a Custodian.”

“Why?”

“The Custodian is a tool of the CODEX,” Fectorian explained. “And the CODEX knows optimal deployments and strategies. It also is aware of how psionic manipulation operates. If Mutons are psionically compromised it can have the Custodian secure a certain number before they can be used against us. Alternatively, it will allow the Custodians to effectively micromanage small numbers of Mutons while allowing command to focus on overall strategy.”

“Is that your proposal?” The Battlemaster turned to the engineer. “Chip and slave our remaining Mutons to these Custodians?”

“Exactly,” Fectorian nodded. “I cannot find a better solution. Even if Mutons are ultimately restrained by biology, machines are more efficient, coordinated, and decisive than the mind can ever hope to be, and are far more durable. While it cannot emulate complex strategies effectively, it can certainly put the Mutons to better use than an organic commander.”

The Battlemaster considered that. “We will test that in combat. I will not convert the entirety of the Mutons until this has been shown to be effective.”

“Reasonable,” Fectorian lifted a holoprojector in his hand, and another image appeared. This one looked like a scaled-up Custodian, but with far bulkier arms and legs. “We have already begun designs on a larger-model Custodian. This is intended to fill the same roles of psionic deterrence and command, as well as counter ADVENT MDUs, and XCOM MECs. Prototypes are being designed at this moment.”

“What of the ARCHON Project?” The Battlemaster asked.

“That,” Fectorian said with some smugness. “Is something that I wish to be a surprise for the time being. Suffice to say that the prototypes are being refined and will be shown shortly. I believe you will be pleased.”
That Battlemaster decided to tolerate that for now. He had done good work so far. “And anything else of note?”

“Ah, yes.” The hologram changed to show a vehicle the Battlemaster had read the concepts for. The Herald, as it was being called. As Fectorian had initially described it, it was an answer to the armored tanks many Human nations employed. The base of the Herald appeared at first glance to be inspired by the Sectopod center chassis, but had been elongated and had armor ‘fins’ sloping towards the ground on the sides of the main chassis. “The Herald is being prepared for prototype testing. I believe it should perform exceptionally well.”

Given the specifications, the Battlemaster agreed. The biggest flaw he could see was the limited mobility in terms of speed, but since it employed hover engines, it made up for that by being multi-directional. Plasma and railgun weapons, point-laser defenses, grenade launchers, short-term engine boosts to avoid missiles, limited Andromedon kinetic barriers, and an improved Sectopod beam on the front. Easily a match for any Human armor unit.

“Considering the cost, I should hope so,” the Battlemaster said. “I assume these will be also slaved to the Battlefield CODEX?”

“I am undecided,” Fectorian said thoughtfully. “I had designed such functionality into it, but there are several Andromedons who wish to incorporate a tailored machine intelligence into it instead. I will likely have multiple trial runs to determine what is most effective.”

“Good.” The Battlemaster liked it, and was pleased that it was far enough along where prototypes were being planned. “However, this will be of limited use against the cities. The trenches must be bypassed first.”

“Luckily, I have designed a solution to that,” Fectorian changed the hologram to something the Battlemaster had only seen the code name of. “The Executor, designed to break the trenches and end sieges.”

The size was estimated to be massive, at least four times the size of a standard Sectopod. However, the design was almost nothing like the preceding unit. Instead of two legs, it had six which supported a much larger chassis. On the top was a massive railgun, and right next to it was the hatch for the blaster launcher.

Massive plasma and coilgun cannons were attached to the sides, and below the chassis, and the Battlemaster also recalled that the legs had Andromedon barriers built into them to mitigate that weakness. “This will be refined more,” Fectorian said. “But the Executor will be more than capable of firing at ADVENT from a safe distance. As with the Herald, how it will be run is undecided. Given that this unit is not even out of the design phase, it will be some time before it is deployed.”

“You will have it,” the Battlemaster nodded. “This is promising. Excellent work. Is there more?”

“Yes, actually,” Fectorian said, turning to him. “Turn around.”

The Battlemaster did and found himself facing one of the floating Seekers. But this was not a standard Seeker. It was at least twice as big, and appeared to be more heavily armored with a long-barreled rifle poking out from the mouth. It unnervingly made no sound at all. “I have also improved the Seeker unit,” Fectorian continued. “You are seeing the one that will be deployed on the battlefield. They were designed for close and long range priority target elimination, capable of being connected to a CODEX network, and retain their cloaking capabilities. Their weapon loadouts can vary between plasma, physical, and nanoweaponry. Quite useful, if I do say so
“Indeed,” the Battlemaster mused as he looked at the unit. “Extremely. I believe the Humans will not be able to easily defend against your creations.”

“I almost hope they manage it,” Fectorian said wistfully as he pressed several buttons, as the Seeker disappeared from view. “Having a challenge is exciting. However, I do agree that no matter what they attempt, my work will always exceed theirs.”

“Continue your work,” the Battlemaster said as he turned around. “You will receive additional instructions shortly on production numbers.”

“Yes, Battlemaster.”

***

Aui’Vitakar Assembly Chambers – Vitakar

12/14/2016 – 11:23 A.M.

It had been quite a long time since Ravarian had actually set foot in the Aui’Vitakar Assembly Chambers. The entire organization had been one he had slowly and gradually excised from his mind in levels of importance. They were a necessary government body, but one who had little authority or purpose outside of providing the Vitakara a sense of safety and freedom.

However, when they became angry, they could cause problems.

Thus, steps needed to be taken. Which was why he led the trio of Ethereals through the white streets to the Assembly Chambers. The Battlemaster, Revelean, and Sana’Ligna made an interesting group, and had attracted the attention of pretty much every single Vitakara in the vicinity. He’d had the Zararch lock off their route, but had designed it in such a way that the majority of Vitakara in the city would see them.

He had initially thought that it would restore some faith in the Ethereals, seeing three of them at once, but in the end it had largely turned out to take much, much longer than he had anticipated thanks to him deciding to go past the main medical ward. Sana had taken it upon herself to stop at it, saying she could ‘catch up later’.

None of them really liked that, and so all of them had made a stop at Vitiary’s Medical Ward. Ravarian actually didn’t believe Sana had intended it as a PR stunt, but if nothing else it was going to restore trust in the Ethereals. Revelean had offered to take a look at some of their medicines and limited genetic research and had (while making various amused noises) improved, fixed, or replaced these entirely.

While Revelean was doing that, Ravarian and the Battlemaster had stood around rather awkwardly. The Battlemaster had finally decided to speak to some of the wounded soldiers, what few of them there were here, and Ravarian had watched Sana work.

It was a decidedly unnerving experience.

It was not normal that she could somehow place one hand on the forehead of an ill Vitakarian and they would stand up, cured, in a matter of a few minutes. It was not normal that he literally watched the skin of all three Vitakara who had been in a small crash heal in real time, simultaneously. If he didn’t know better, it would look to the passive observer like magic.
Truthfully, he had no idea how she was doing it. Nanotech was a possibility…but that didn’t seem to really match with how she carried herself. He didn’t know how this was possible psionically…if that was even remotely related. The mysterious Sovereign technology was a possibility, but one he could not really prove.

So while the patients cried and thanked the Ethereal healer, he watched in a mix of fascination and concern.

Even for an Ethereal, she was not normal. Even Isomnum seemed more easily understood. As distasteful as the Dread Lord was, there was a clear source of his powers. There were clear and obvious answers. For Sana, whatever she did raised more questions.

It wasn’t her strange abilities, her very persona was so different from every other Ethereal it was difficult to believe she was even of the same species. She was too…nice, caring, and gentle. You felt good just being around her, yet she was absurdly humble in anything she did.

But it didn’t feel right or natural.

Perhaps he was being too cynical, but Sana seemed to inhabit a dimension of reality separate from the rest of them.

In the end, it had eventually been finished, and while the Aui’Vitakar were understanding in what the Elders had been doing, he knew that many were short on patience. Preparing for this gathering, Ravarian had identified it was the Dath’Haram and Borelians who would have the most questions. Perhaps the Vitakarians as well, and maybe the Sar’Manda if they bothered to show up. The Cobrarians were under enough threat from the Zararch that they would probably hold their tongues.

Now inside the center of the gleaming amphitheater, it was time to see what would happen. The Assembly was divided into sixths, one bloc per race. Surprisingly, all representatives – including the Sar’Manda – were present. Extending from each section was a small platform, where the chosen speaker of the race would make a motion or ask a question. All six species had one of their own ready to ask questions, and in the center was another elevated platform where the Overseer of the Assembly ran the proceedings.

"Honored Elders Revelean, Sana’Ligna, and the Battlemaster, we welcome you," the Overseer began, inclining his head towards the trio. "We are thankful you have chosen to come and address this body, and are optimistic that the Collective and the Elders will provide clear and satisfactory answers concerning recent events."

Ravarian did not fail to notice he had been excluded. Fair. The Aui’Vitakar had never especially liked the Zararch, and the feeling was mutual. He had decided that, with three Ethereals here, he would keep his own additions limited. They were not interested in the words of the Zar’Chon, but of the Elders.

"We are honored to be here," Sana took the lead, her layered and melodic voice easily echoing through the Chambers. "And on behalf of the Imperator, we wish to commend the Aui’Vitakar for wisely and carefully leading the Vitakara to prosperity." There were some nods and brief applause at that. Such was fairly normal, and expected, even if he noticed the Borelians were completely still.

"I will begin this Assembly with recognizing the designated representative from the Vitakarian Republic," the Overseer said. "Aui’charalla’vitiary, please step forward."

The Vitakarian male was the expected representative. Neutral in most matters, he tended to focus
more on Vitakar and not external or interspecies politics. As a result he maintained good relations with the races, even the Sar’Manda, even if he wasn’t looked on as a radical or charismatic leader. He was also one who didn’t ask dangerous or provocative questions. If the Republic was choosing him, then this was more of a formality than anything.

“Honored Elders, welcome,” he began. “I believe I speak for the Aui’Vitakar when I ask for an explanation regarding the documented fact that the Elder, who has been identified as Aegis, is seemingly working against the Collective.”

None of them were considering that a hostile question. It was fair and expected, even from the friendliest of Vitakara. “I can confirm this is accurate,” the Battlemaster stepped forward. “There were reasons why this was kept for the Collective. The first was that the first appearance of Aegis was the first we had seen since his departure. We suspected he was aiding XCOM, but it was in miniscule ways. As you are aware, if it was shared that there was an Ethereal who defected, it would cause panic. We wanted to keep this contained unless necessary. We did not expect this.”

“I see,” Charalla said neutrally. “And what do you plan to do to handle this traitor Ethereal?”

“Capture him if possible, and return him to the Imperator,” the Battlemaster answered. “But he is dangerous. If necessary he will be killed. There are few chances to be taken with one such as him.”

“Then you do not have a plan,” the Vitakarian said evenly. “Just a goal. Based on our limited knowledge, it does not appear that a non-psion can challenge him. As a second Ethereal was captured as well, are you certain your own kind can protect our soldiers and even yourselves?”

“Yes,” the Battlemaster’s voice was absolute. “I know Aegis’ strengths and weaknesses. I know how he thinks. Caelior did not. The reforms currently being implemented through the military will help mitigate the damage he can cause. In principle, Aegis is not a violent Ethereal. But if pressed, he can be. However, if you wish for specifics, it would likely involve a combination of telepathic assaults, kinetic bombardment and multiple armies converging on him, along with supporting psions.”

“Very well,” Charalla said. “This will be my last question posed. While your reasons for withholding this information can be seen, it is quite clear that even if we were notified of the danger, much of this could not be prevented. Even if you are acting in our best interests, it does little to build or maintain trust between our people. It appears the Humans have exploited this weakness in an attempt to weaken the bonds of our alliance. One which has worked to some capacity. Does the Imperator plan to change the policies regarding the sharing of such information?”

“Yes,” the Battlemaster said, making a wide gesture with one of his arms. “In the future, such information will be disseminated to respective government and military officials to avoid such incidents. The interconnectivity of the Collective itself is also being addressed, as many of you have likely discovered. I can confirm that there are no similar pieces of information to share.”

“Thank you, Battlemaster,” the Vitakarian said. “The Vitakarian Republic has no further questions.”

“We shall move to the Oyariah Hegemony,” the Overseer said, motioning to an Oyariah whose stone skin was more elaborate and thinner than most. “Representative Aui’farrai’hegemon.”

“Honored Elders,” the Oyariah began, a female judging by the lighter voice – the genders were nearly impossible to differentiate without speech. “The Hegemony is satisfied with the answers provided in response to the questions posed by the representative from the Republic. The
Hegemony has no further questions.”

Not unexpected. The Hegemony had no reason to cause issues, especially since they shared the closest relationship with the Ethereals out of all the races. No one else seemed surprised either. The Overseer looked to the delegation of Sar’Manda. “We shall move to the Sar’Manda Empire. Representative Aui’sariah’manda.”

There were times where Ravarian felt slightly bad for the fish. They had to constantly wear their silver suits above water, which constantly circulated water through them. The suits themselves were actually fairly decorative, incorporating silvers and blues, etched with lettering that seemed random, but the Zararch had been trying to determine for years.

However, the suits suppressed their fins, and the helmets were shaded since bright light made them uncomfortable. It also didn’t help that the Sar’Manda had a significant language barrier that they’d never attempted to overcome. Very little of the Sar’Manda language involved speech, but a complicated series of facial motions, physical gestures, and movements.

All Sar’Manda were accompanied by interpreter devices, which allowed some level of communication, although if any Sar’Manda spent a reasonable amount of time above water, they could usually understand and learn the standard languages. But there was always an air of annoyance around them when speaking, as if constantly irritated.

In this case, the Sar’Manda representative simply pressed a button and the translator device spoke, in a heavily synthesized tone. “The Sar’Manda Empire has no questions this day. We would inform the Overseer of the Assembly to only mandate our presence in the event that Vitakar faces imminent danger. Do not presume to summon the Empire again without due cause. So is the command of the Manda’sarthoria.”

At the conclusion of the device’s speech, the entire Sar’Manda delegation rose and immediately filed out without a word, leaving the rest of the Assembly in various stages of outrage, shock, or amusement. Ravarian widened an eye in mild surprise. Well, it explained why the entire delegation had been here. Making a statement here was interesting, but it only reinforced the fact that the Sar’Manda genuinely did not care about any but themselves.

However, the fact that this had come from the Manda’sarthoria himself was interesting. The reclusive leader of the Sar’Manda Empire had never been seen above the water, but on the rare times the Sar’Manda actually did something, it always on his orders.

“We will now move to the Borelian Authoritative Council,” the Overseer said, clearly wanting to restore normalcy to the room. “Representative Aui’luraian’borelia.”

That was definitely an indication of where things were headed. Luraian was one of the closest friends of the entire Authoritative Council, and the mate to the Sector Commander of the Borelian Military. As the entire Authoritative Council had expressed dissatisfaction with the Collective, this was likely not going to be taken as well as the Vitakarians.

“Elders, welcome;” he began cordially. “I first request a complete status update on the state of the war on Earth. We have been assured – multiple times – that this would be a short-lived conflict, but has so far left thousands without family, provoked an Ethereal to treason, and led to the situation we are in now. The Collective has been directly lying to us, and we are owed the truth. State it before this body now.”

Well, this was somewhat expected, but still slightly irritating. “The Humans are more resourceful than we originally anticipated,” the Battlemaster answered. “We have been unable to handle them
correctly, and are currently reevaluating our tactics and plans. They are enhanced by their ability to use psionics, and have embraced genetic modification. With Aegis now firmly on their side, they have become an entrenched threat.”

“Acceptable,” Luraian folded his arms. “That was easy, was it not? Why was none of this shared with the Authoritative Council? Or even the Aui’Vitakar? If our soldiers are fighting in your wars, we are owed an explanation as to why.”

“Because of a tendency for the less-upstanding of all species to upset the order of things,” Ravarian spoke for the first time. “Representative, you are aware that the Nulorian enjoy operating in Borelia. They are no amateurs, and would easily engage in disinformation should they find information to exploit. There have been victories and losses on Earth, but few remember the victories when the losses are in the mix. It is a price to pay for the stability of Vitakar, which all here have enjoyed.”

“I did not ask your opinion, Zar’Chon,” Luraian growled. “I wish to hear it from the Elders themselves.”

“I agree,” the Battlemaster said, causing some surprise murmurings. “That previous policy is outdated and inefficient. It was put in place because of traditional separation of the various governments and the Collective military, and I simply never bothered to change it. This will no longer be the case. All governments who have citizens in the Runianarch and Lurainian will have a direct line and representation in the Collective Military moving forward.”

That seemed to somewhat placate the Borelian. “Then you will not oppose the Authoritative Council sending independent investigators to Earth?”

“No.”

“Very well.” The Borelian stepped back. “The Authoritative Council is satisfied for now. Our representatives will be in contact shortly.”

“We will now move to the Cobrarian Hierarchy,” the Overseer said, gesturing to the Cobrarian at the podium. “Representative Aui’hissariah’dassi.”

“The Cobrarian Hierarchy is satisfied with the answers which have been provided,” she hissed. “The Hierarchy has no further questions at this time.”

That was quick. Good, one less thing to worry about.

“We will conclude with the Council of Dath’Haram,” the Overseer said, motioning to the robed alien as he eyed the Ethereals with clear suspicion. “Representative Aui’trudian’Dathaira.”

“Elders,” the Dath’Haram said with forced neutrality. “You have spoken at great length over your wish to improve the transparency of the Ethereals. Is this correct?”

“It is,” Sana said. “We can recognize the need to improve.”

“Good.” Trudian narrowed his eyes. “Then like the Authoritative Council, we would request to send our own investigative units to places of our choosing.”

“We can certainly accommodate another unit on Earth,” the Battlemaster said. “However, you are entering a war. It will not be pleasant.”

“Earth is one area, yes,” the Dath’Haram said. “The other will be sent to Desolan.”
Ravarian kept his face still. That...was not expected. At all. “What relevance does Desolan have here?” He asked.

“This is not simply about the war,” the representative said. “But about the conduct of the Collective and Elders themselves. Information has come to us in regards to the atrocities committed on that world, which were and are shielded from us. I suspect you understand what I am referring to, Zar’Chon.”

This was something of a conundrum. It appeared that the Dath’Haram needed to be handled appropriately, although not before determining just how they might have acquired such knowledge. “The Muton species, and Desolan is under the command of the Ethereal Collective military,” the Battlemaster stated, stepping forward. “Operations conducted on the planet are not authorized to be shared to civilians.”

“That does not matter,” Trudian answered firmly. “This body has the right to know the truth. If necessary I will share it myself, or have you accept our investigators.”

The Battlemaster hesitated, and Revelean stepped forward. “They will be allowed,” he said slowly. “We will let the Aui’Vitakar determine how to interpret the results.”

A simple solution. Given what he knew about the planet, and how he would deal with the Dath’Haram, that subject would be killed over time. “Now, there is also a question none of my colleagues have asked. You have started this war against a pre-spaceflight species, but you have not provided a reason as to why. Did you even attempt diplomatic communication, or did you simply wish to conquer an innocent and unknown species?”

Ravarian pursed his lips. The damn Dath’Haram were surprisingly growing a spine and asking some fairly troublesome questions. “Humans captured and interrogated our initial scouting teams,” Revelean said. “Before any sort of diplomatic channels could be established, XCOM had effectively strong-armed the majority of Humans to fight any aliens who entered Earth and declared war on us. The one we sent to negotiate with them was brutally killed by XCOM. The death of an Elder was one we cannot tolerate, and we resolved to end this conflict, even if it is not our fault. This is not an innocent species, representative, otherwise we would not be at war, would we?”

Revelean could lie quite easily it seemed. Were circumstances different, Ravarian would have had a good laugh at the thought of the Ravaged One being a negotiator. Let alone one interested in peace. The Dath’Haram still looked skeptical, but he didn’t contest the point. “And the same question for Aegis – why did he defect?”

“Aegis is...an idealist,” Sana said sadly. “He, like you feel now, prefers to view the best in people and species. He did not agree with our actions and left as a statement to the Imperator. His reasons are not complicated, even if they are mired in idealism rather than practicality.”

Sana calling anyone idealistic seemed rather ironic. No, Aegis had left for other reasons. Perhaps those included what she mentioned, but he did know that Aegis was far more practical than Sana could ever be.

“I will conclude with this,” Trudian said. “Both the Runianarch and Lurainian should be officially returned to us. The Collective may maintain control of the Zararch, but we are entitled to dictating our own military. Your words may have blinded the others at the time, but it is clear now that it has made us toothless against you. If you truly desire to reform, allow us this once more.”

Well, the Dath’Haram were certainly being combative today. He had not expected this level of
The Battlemaster considered the Oyariah facing him, unable to determine if she was going to maintain the defensive posture or launch into another attack. The Ravager of the Hegemony was known to be the most dangerous alive, only rivaled by the Stalker himself, and the Battlemaster had been forced to put some effort into fighting her.

While he maintained the height advantage, the Oyariah in question was by no means small. And the fact that she could carry the sculpted shield and warhammer with very little effort allowed her a certain quickness he could not naturally match.

When coming down to the Hegemony, he had originally only intended to speak to the Stalker and Ravager, but when the latter expressed a desire to face him in combat, he had felt like obliing as he knew they would consider it an honor. It appeared that they really only considered a few as having the qualifications to challenge him, as no additional Oyariah had expressed similar interest.

The arena was rather small, with a black stone floor and poorly lit, like most Oyariah cities. It proved to be a minor handicap, as the Ravager had no issue with the poor lighting. Around the arena were the stands, packed with Oyariah eager to see the famed Battlemaster in a duel with their champion. Stalker Heg'tretiga'hegemon also sat in one of the upper rows, flanked by his six advisors, all of which were watching in rapt attention.
Out of respect, he was refraining from using psionics in this fight. While the Oyariah would likely not care, it was an advantage he would not exploit. The Ravager dashed forward, swinging her warhammer in a swift arc while thrusting her shield towards him in a bash. He redirected her swing to the ground, and used two of his hands to grab the shield, and followed up by kicking her backwards.

She was forced to let go of the shield as she was thrown backwards, which he immediately tossed aside and began his own offensive. Both Ethereal and Oyariah traded strikes with each other, the Ravager opting in favor of pure strength and resistance than dodging. All of his strikes were met with a firm parry, although applying a considerable amount of pressure did force her arms to move.

Her strength was impressive, and she was fast enough to take most of his strikes. Granted, he was not necessarily trying his hardest, but it was far more than most he dueled. A shame that the Oyariah were not psionically sensitive, for she would make an excellent Avatar candidate. Still, he had business to take care of and he had allowed the fight to go on long enough.

Using his strength he lashed out with his blade and once she caught it, forced her to a knee, where he used his free hands to grab the warhammer itself, and lifted her into the air while applying selective punches to the face and arms until she was forced to let go. The Battlemaster threw aside the weapon, grabbed the Oyariah by the arm and slammed her into the nearby wall.

Flourishing his blade, he prepared to continue, but instead raised a hand. “I conclude this battle.”

The Oyariah equivalent of yielding. The Battlemaster nodded as the crowd cheered at the statement, which lasted for several minutes as the Ravager collected her weapons and both departed into the smaller arenas outside, which were clear for them. “You fought well,” he told her. “Your rank is well-earned.”

“The privilege is mine, honored Battlemaster,” she said, her head inclined low in respect. “I am simply pleased you accepted. All would have understood if you had not, for all know they cannot be your equal.”

“That does not mean they cannot strive for such,” the Battlemaster said as he saw the Stalker and his entourage approaching. “None improve without challenging those who are their superior.”

She looked up at him, black eyes glittering in the blue light. “If I may ask, honored Battlemaster, do you still find those who can provide such to you?”

“Yes and no,” was the answer. “I have no equal in combat. It is the battles of mind which I face today. I will conquer such eventually, but it will be many years.”

The Ravager appeared to be considering a response, but closed her mouth as the Stalker himself approached, with his advisors waiting some distance behind. Ever since the Ethereals had arrived, the Stalker of the Hegemony had been Tretiga, one of the most steadfast allies of the Ethereal Collective. Standing as tall as the Ravager, with the ceremonial crimson cape which hung off his left shoulder, and the traditional stone sword strapped to his back.

Oyariah rarely felt the need to wear armor, but there were a few that made exceptions. The Stalker was one, though aside from there being no obvious cracks where the joints would be, most would usually not know it due to the lack of any obvious markings. Both the sword and shoulder cape were enough.

The faceplates were more elaborate than most Oyariah as well. The plates visibly covered the top and back of his skull, cheeks, and there were a few plate extensions that gave the illusion of
wearing a helmet than it being a connected part of his body. “Well fought, honored Battlemaster,” he stated. “The Hegemony will not forget the privilege you have bestowed upon us.”

“It was an experience I hope to repeat someday,” the Battlemaster said. “However, there were reasons I wished to speak to you.”

“Of course,” he said. “Is this between us or may the Ravager stay as well.”

“She will stay,” the Battlemaster said, glancing to the second Oyariah. “This concerns her as well.”

“Then what do you wish?” Tretiga asked.

“I want to integrate the Hegemony Titans and leadership into the Collective military,” he said. “The Oyariah have been loyal to the Ethereals, and the Hegemony deserves more representation in the Collective. Your ambitions may not have led to this goal, but the Oyariah can do more than reside in your cities forever.”

Both Oyariah seemed somewhat surprised at that, both exchanging a look. “You honor us with such a proposal,” Tretiga said slowly. “If I may inquire, the Hegemony itself would be retained but we would have a presence beyond it?”

“Correct,” the Battlemaster confirmed. “I am assembling the best of the Collective as I reorganize the military. The Titans would be fully integrated into the Collective, and either you or the Ravager would have a place on the War Council of the Collective.”

“I assume we would fight in conflicts as well,” the Ravager said. “You are not one to command from afar.”

“When appropriate,” the Battlemaster said. “I have little interested in leaders who do not participate. Having the Stalker or Ravager of the Hegemony would be sure to inspire allies and make enemies hesitate.”

“That can be arranged,” the Stalker sounded grimly happy. “I would not hesitate to test myself against the Humans and traitors. None have dared test me for decades, even if the infernal Sar’Manda have come close.”

“Their actions were highly disrespectful,” the Ravager agreed grimly. “I am surprised they were simply allowed to leave for such a grave insult.”

The Battlemaster raised a hand. “The Sar’Manda do not matter. In time they will be forgotten in their oceans while the Oyariah expand to the stars as the champions of the Elders. Do not focus on the irrelevant actions of a few in light of what is required. I presume such a proposition is acceptable to you?”

“I will consult with my advisors, and the One Encased,” the Stalker said. “But it will be little more than a formality. On behalf of the Hegemony, we are once more honored by this offer.”

“I look forward to the integration,” the Battlemaster said. “But do not become overconfident. Our enemies are dangerous and intelligent, and we need to be better in order to overcome them. That is the standard that must be held to, but I believe your race can achieve it.”

“On that, honored Battlemaster,” the Ravager said with an inclined head. “You have my word.”

***
Yang held out the sword in front of her, completely vertical to the ground. Drawing upon her power, she focused her telekinetic grip around the weapon itself, and then slowly released her hand, letting the blade hang in the air. She then slowly walked around it, seeing if there were any dips or slips in her control.

She twisted her wrist and the short sword flew back towards her hand, landing squarely in her palm.

Well, at least she had that down.

She personally didn’t see much use in melee weapons, as they would always be inferior to psionics, but the Battlemaster was likely going to expect such a skill. Or maybe he wouldn’t, and would be more impressed. Looking at the footage of his skills, Yang was quite certain that whenever he actually met her, she would be utterly destroyed.

In which case, she could at least try and be a little creative with her fighting style. One of the historical documents regarding the Battlemasters had focused on the various fighting styles, and one that had caught her eye was one Battlemaster who had interwoven telekinesis into his fighting style, resulting in him being able to fight off or harass opponents from a relatively safe distance.

It had been regarded as one of the most difficult to actually learn and perform, as well as an increased risk of friendly fire. And if the psion ever lost control, they were usually left weaponless. Still, it was something to investigate and she had decided to try it out.

As she had found out, it was somehow harder than she had anticipated.

One slip of the mind and the grip was loosened and lost. One penetrating distraction and she might be dead. She had just needed to acquaint her mind to always maintaining a passive grip on something, and then not letting anything disrupt it. On that front, she believed she had almost gotten it. She could perform all kinds of physical feats while not losing control.

Of course, this was just keeping the sword in one place. The next hurdle was actually manipulating it.

Holding the blade horizontally, she sent it back out several meters and froze it by making her palm flat. Damn, she shouldn’t be doing that. The document had specifically stated that physical gestures should only accompany the manipulation of the object if absolutely necessary. Physical limbs were a limitation, and one she had to avoid falling into.

She took a breath, and let her arm fall to the side. Focusing intently on the weapon, she thought of what to try first. Probably a few swipes and swings. The blade began to move and she consciously gripped her own arm to prevent herself from making the motion. As a result, the blade slammed into the ground, though quickly bounced up since her grip was maintained.

Alright, it was a start.

Yang was now eternally thankful that Battlemaster Quiarma had the foresight to actually write down his techniques and perform them properly. The documents had said that the Ethereal could, when focused, wield up to twelve regular-sized weapons simultaneously. She didn’t know if she could surpass that, but she was certainly going to try.
The swipes were severely overcompensating, slow, and otherwise mockeries of the real thing, but she persevered nonetheless. She barely noticed the temperature rising and her panting breath as she struggled to maintain her mental grip on the weapon. But it eventually slipped, and on a swing she sneezed and the blade went clattering to the ground.

Yang grimaced, and instinctively reached out, then stopped and kept her arm at her side. Instead she took another deep breath and mentally directed her telekinetic grip towards the weapon. It took a few minutes, but it rose and floated towards her. Once close enough, she grabbed it, pommel up and flipped it upright.

“I have to admit,” Nico said from the entrance of the training area. “I didn’t take you for a sword person.”

Yang eyed him with no small amount of suspicion. The cheeky teen had an unsettling habit of showing up out of nowhere and otherwise acting like a spy. Given how she was very adept at knowing if she was being watched, someone who could manage to surprise her was unwelcome. However, she suspected Sicarius was training him, as well as talking to him so much.

Still, she couldn’t really stay irritated at him. If there was one person who had drawn an even shorter straw in life, it was him. Her own issues seemed smaller compared to what he had gone through. Her family was still alive, mostly, but he had no one.

The Ethereals certainly had a knack for finding damaged people. She wasn’t exactly ignorant as to why that was. Soldiers fought better when they were motivated, even if it was manipulative. However, she didn’t care and she doubted Nico did either. Humanity was too violent, selfish, greedy, and stupid to do anything more than eventually blow themselves up.

If the Collective was better was up for debate, but it couldn’t really be worse. And while some considered ADVENT as the turning point for the species, they were far from it. ADVENT was exceptionally good at propaganda, but the truth was there were still Humans in charge of it. They were a more competent and dangerous China, only concerned with world subjugation before all else.

They were not the good guys. The Imperator had quite openly revealed the lengths ADVENT and XCOM had taken to assume power. Anyone who believed they were any better than the so-called ‘brutal’ aliens was either lying, stupid, or a victim of either of those. It wasn’t as though the aliens were much better, the Sectoids certainly showed that, but that was just how the galaxy worked.

No black and white, only varying shades of grey. As far as she was concerned, ADVENT and the aliens were at roughly the same place.

She realized Nico was awaiting an answer. “Didn’t think I was,” she shrugged. “But the Battlemaster likely has expectations. Best to try and meet them.”

Nico nodded. “Ah, he still hasn’t come?”

“She’s busy fixing the mess that is the Collective,” Yang said, telekinetically summoning a water bottle. “I’m definitely not on his priority list. I doubt he really wants to deal with me either. Works for me, more time means I might actually survive a few seconds before he beats me to a pulp.”

Nico smirked. “You’ll last longer than that.”

Yang looked at him incredulously. “Maybe if he’s feeling generous. Did you see how quickly he took apart that XCOM squad in DC?”
The young man winced at the memory. “Fair point.”

“Yeah,” Yang took another gulp. “Anyway, what are you doing here? Sicarius want something?”

“Not today,” he said, shaking his head. “Just curious what you think of the newest resident of the Temple Ship.”

Yang shot him a look. “The Imperator found another one?”

“Well, that was extremely interesting. She’d only heard she was a candidate for an “Avatar Project”, but didn’t know any details. It was clear that there were different candidates per Ethereal. Nico was obviously one for Sicarius, and she suspected she would be one for the Battlemaster. There were probably others as well, but the Imperator seemed to have not chosen one for himself yet.

“Huh,” she said thoughtfully. “You know who she is?”

A retrospectively stupid question. Of course Nico would know her fucking name. He had likely been the guide the first time she’d arrived. “Oh yeah,” Nico sounded rather amused. “And you’ll never guess who it is.”

The Chinese woman narrowed her ice-blue eyes. “Just tell me, I really don’t care about playing a guessing game right now.”

“Alright, alright,” he smiled. “Patricia Trask.”

Her eyes widened in shock and the water bottle in her hand crumpled. “I’m sorry,” she said slowly. “Who did you say?”

“You heard me right,” Nico said, getting far too much amusement out of this. “Patricia Trask. The Patricia Trask.”

“From XCOM?!”

“The one and only.”

Yang took a deep breath. “I don’t suppose you’d…” she paused, thinking about how best to articulate what she wanted to say. “…know just what the fuck the Imperator is thinking?”

“But she was with XCOM,” Yang finished. “Not exactly prime ally material. Much less for whatever the hell this Avatar Project is.”

“I’m going with the assumption he knows what he is doing,” Nico shrugged. “If he can somehow make Patricia Trask an ally, then I’m not going to question it.”

Oh, she most certainly was going to question it. But when she was calmer, and with more time to think. Why did the Collective keep making such idiotic decisions? Without saying goodbye, she walked back out into the arena and threw her sword in front of her, freezing it in place once again.

At least this had given her some energy. She wished there was a dummy somewhere. Preferably one with Patricia’s face on it. That would be cathartic.
"I have received your report," the hologram of the Zar’Chon said. "Good work. The network was much more extensive than we imagined, although there were surprisingly few Mutons we were able to recover."

“Not really,” Nartha shook his head in mock disgust, and didn’t fail to note the Zar’Chon’s grudging approval. “I detailed such in the report. They played it safe above all else, and only took a few. They occasionally had to dump some of them to avoid detection. There were many, but their skill was limited.”

"Regardless, your actions have ended a constant annoyance on Desolan,” the Zar’Chon commended. “We will take appropriate precautions to ensure this does not happen again.”

Hopefully the Chronicler and Nulorian would be able to deal with that. “I’m glad to hear it. What is my next assignment?”

The Zar’Chon pursed his lips as he looked at something from his holoprojector prosthetic. “The Andromedon Federation has recently moved to resume combat operations. However, it was not unanimous with several major and minor Unions rejecting such a proposal. Considering your recent successes, you are best suited for investigating the largest culprit.”

The Andromedons. Perfect. The Zar’Chon was sending him exactly where he needed to be. “Which Union?”

“Union Viarior,” the Zar’Chon answered. “You might have heard of them.”

He had, although his knowledge was extremely limited. The Zararch had conducted a report on the major Unions years ago, which was still being updated as new information emerged. “The financial Union,” he recalled. “Not really the power they used to be, but still maintain tight bonds with every major Union and are the main suppliers?”

“An acceptable overview,” the Zar’Chon said grimly. “Many of the larger Unions are attempting to become more self-sufficient, but Union Viarior still maintains a resource lock on nearly every minor Union, and still supplies basic resources to the larger ones. They managed to survive the Union Wars relatively unscathed because of this. That they are flagrantly resisting is… concerning.”

Concerning for the Ethereals, excellent news for him. “I’ll depart soon,” he said. “Any direct orders?”

“No,” the Zar’Chon gave a thin smile. “They cannot openly kill a Zararch agent. If they refuse to give you what you wish, report it. I doubt they will, but be prepared to have an escape plan.”

“And what evidence do you want?” He asked. “Their word will not be enough.”

“If you discover suspicious or incriminating data, save it immediately and return,” the Zar’Chon paused. “If you find nothing obvious, acquire a copy of their databases and return. The analysts will go through it to be sure.”

Easy enough. “Understood.”
Good work again, Agent," the Zar’Chon gave a brief nod. “I await your results.”

The holoprojector blinked off, leaving him alone…well…

He glanced around to see if there was anyone who had snuck in. No, he really was alone.

Nice of the Zar’Chon to provide such a clear roadmap. This was likely going to be much easier and straightforward than Desolan, and he felt that was deserved. Convincing an entire Union wouldn’t be the easiest thing, but he could be persuasive when he needed.

And with such an influential Union behind them, this entire resistance might be gradually forming into a threat. They were still some ways off from that, but at last, the endgame was in sight.

***

The Prism Command Center, Blacksite 009 – Unknown Location

12/19/2016 – 1:11 P.M.

The newly reformed Collective War Council was ultimately much better than his previous attempt at such. All of those he’d chosen were skilled, intelligent, and were capable of thinking for themselves. They would also have far more responsibility than before, as he had decided to begin the delegation of certain aspects of the Collective Military.

The Ravager of the Hegemony was the first, who could be substituted with the Stalker himself when he wished, and she was primarily in charge of managing and coordinating close-ranged units, city conquests, and determining training regimes and tactics of the Collective. She also directly managed all Oyariah forces and was responsible for establishing, then maintaining, lines of communication between the Hegemony and Collective.

Lur’galitai’borelia was one of the highest-ranked Borelians in the Lurainian, and until recently on the Borelian Authoritative Council as a consultant and trainer. Older for a Borelian, with some of her fur beginning to turn silver, she was still in peak physical form. She would be in charge of all aspects of the Lurainian, and have a similar role to the Ravager in terms of setting up lines of communication between the Council and Collective.

Her responsibilities also included managing the Borelians in the military, and was the primary authority on special forces strikes and general battlefield command if needed. He was confident she could handle it, even if it was a far larger workload than she had experienced before.

Then there was Zar’vacialla’inth, the representative from the Zararch, who could be substituted for the Zar’Chon if needed. As expected, her role was to provide combat intelligence on any defenses, targets, and personnel they would face. The Vitakarian would also oversee sabotage and target prioritization, as well as ensure unit morale was within acceptable limits.

The Zar’Chon had assured him she was capable, and he expected such.

Sci’darolo’vititay was another Vitakarian, a scientist who would oversee the genetic modification programs, applications, and recruiting efforts. He had some authority over the Vitakarians in the military, but only if others were not available. He was not a soldier, but he was one of the more open-minded when it came to self-improvement. Having a direct connection to both the Republic and Revelean’s science team was also an added benefit.

There was J’Loran, who had command of Andromedon forces now, and served as the primary link to both the Collective and Fectorian’s engineering teams. Disciple-7 had similarly retained his role
and was tentatively overseeing Muton deployment, training, and improvement, as well as serving as a tactical consultant.

The final member was somewhat controversial, and it was Hive Commander 801, the one whose Hive was the primary designer for all Sectoid spacecraft. While usually an architect and designer, 801 was also knowledgeable about space combat and would serve as both the naval coordinator, and link to the Hive Commanders themselves. While some were not thrilled, it was important that all species have at least some representation here.

“Custodian integration will take some time,” J’Loran said, as they were finishing discussing Fectorian’s improvements. “There is the question of how we handle such integration, especially in regards to publicity. These are not sentient machines.”

“There is little point in keeping it a secret,” the Ravager said. “It will not take ADVENT or XCOM long to notice what is happening.”

“Agreed,” Vacialla said thoughtfully. “It is important the soldiers know what they are working with, and the contingencies in place in the event of psionic interference.”

“There is no reason to keep this secret,” the Battlemaster said. “Allow the soldiers this knowledge, unless there are objections.”

There were none, so he moved on. “Concerning the genetic enhancement, it is something which needs to be refined, as well as ensuring the soldiers are psychologically able to properly fight.”

“This will take time,” Darolo said slowly. “Even working with the Hive Commanders and Revelean, it will take some time to prepare the appropriate modifications, as there are multiple species. Progress is being made, but it will take longer to actually fully improve what is left of the Runianarch and Lurainian. Keep in mind that there are many Vitakara who have an aversion of genetic modification, and it is better to slowly introduce this idea.”

“The amount of soldiers which are needed on Earth are small in comparison to the greater Collective,” Disciple-7 stated. “There is no need to rush, and the enhanced Mutons and Custodians will provide the needed infantry power. Upon the deployment of the Herald and Executor, this needed number will further decrease.”

_The modifications will likely take less time than expected, 801 interjected. With the full capabilities of the Hive Commanders behind it, there is more than enough time to enhance an army for Earth._

“Regardless of that, there is still the issue of what to do with the Vitakara not cleared for combat,” Darolo added. “It would be a waste to return them to Vitakar, but they are not suited for the battlefield.”

“Two options present themselves,” Disciple-7 said. “Either as support, medical duty, or suppliers for standard operations, or colony and homeworld defense. It will provide the colonies with additional support, as well as give Vitakar an armed presence besides the Zararch. Perhaps this can be what the Aui’Vitakar establish.”

Darolo rubbed his forehead. “It will take…a significant amount of time to cover the entirety of the Runianarch.”

“We have time,” the Battlemaster said. “We control the pace of this war, and I will not have us rush into it hastily again. When we strike next, it will result in a victory. Anything else will be a failure.” At the nods and affirmations around him, he looked down to the holotable and activated...
“The Prism will now be used as the main simulation, which I expect to be used frequently. But to do that, all of you need to be briefed on its capabilities.”

As he explained it to them, he was fairly confident that they were once more moving in the right direction. He wouldn’t know for sure until he stepped foot on Earth again, but it was promising.

***

Patricia’s Quarters – The Temple Ship of the Imperator of the Ethereal Collective

12/19/2018 – 11:12 A.M.

Patricia sat on her bed, oblivious to the world around her as she finally decided to accept what she had been avoiding the past couple of days. She knew what she should do. She should flatly refuse the Imperator’s offer, do whatever it took to return to Earth, even if it meant her death. But she didn’t even think the Imperator was lying to her about that.

She could return to XCOM and…she didn’t think much would change.

And things had to change. With what she’d learned from the Imperator, things couldn’t be the same. The war on Earth didn’t seem as important in comparison, nor the Imperator an unreasonable Ethereal. But she didn’t know if she could actually convince the Commander, let alone Aegis about even considering hearing the Imperator out, or herself for that matter.

If she left, and failed to convince them, she would likely die for nothing or see Humanity fall under the influence of a Sovereign One. And with the Commander’s desire to implement the Manchurian Restraints, it would kill any attempt to stop his plans. What had seemed a responsible means to ensuring psions didn’t turn on Humanity might very well be their downfall.

Ironic how her views on that had completely changed. But it wasn’t for the reasons like most would say. It had nothing to do with freedom, liberty, or ethics, but instead because it would make them incapable to following a path not dictated by the Commander or ADVENT. They were leading humanity down a misguided path, but one they simply didn’t know about.

They thought, she had thought, they were in the right. And from their perspective, they were. But the Imperator had filled in the gaps, and she couldn’t easily dispute his words. Was there different ways he could have accomplished this goal? Likely, but he was treading a fine and dangerous line with being of such power.

She would go back to XCOM, but not now.

For now she would stay here, learn everything she could. Find enough to definitively prove that the Imperator was correct in what he said, then return and present it to the Commander. He was not unreasonable, but even so she feared that he would be too blinded by what had already happened to consider that the Imperator might not be the enemy.

So that was her plan for now.

What she did not know was if it was the right one.

But knowing what the Imperator had told her, there seemed no other acceptable path.
A funeral was never something he enjoyed attending, which he supposed was a good thing, but it wasn’t even that simple for him. The Commander believed funerals should be held to honor and remember the dead by their close friends and family. Funerals were supposed to be personal and private.

He could understand to an extent the thousands at the funeral of Nicole Treduant, finally being held now that D.C. was in an appropriate state, but at the same time turning this into a kind of public, televised event, was not something he supported. Very few of these people had ever known her, and even he wasn’t sure he was supposed to be here since it wasn’t as though he knew her all that well either.

Yet out of everyone in XCOM, he was the most qualified. And anyone who stood against the Battlemaster and died for it deserved to be remembered.

He gave no speeches or calls to action. Others had done that. Her husband, then the now-President Harry Goldbloom, even Saudia had given a short speech. All had extolled her as a model leader and example of Humanity. All had called for her death not to be forgotten. He had not been ignorant of the glances sent his way, but all he did was sit at his designated seat and listen politely.

He was sad she had died, but he did not mourn. He didn’t know her well enough for that, and he doubted she would want them too. Paying his own silent tribute, he simply listened and followed the procession until she was lowered into Arlington Cemetery. Nicole Treduant, the second President to find themselves on an active battlefield, and the first to die in combat.

At the end there was a small memorial where those invited could place mementos, flowers, or other trinkets. Most left exactly those, and he had brought one of his own. It was a small ribbonless medallion shaped into the familiar XCOM emblem. Grey and colorless, the only identifying marks were some short words inscribed on the back of the medallion.

To Nicole Treduant, 45th President of the United States, who gave her life to halt the alien threat. Vigilo Confido.

Generic, he felt, but it summarized what she had done well enough on the limited space. At least she deserved all the attention she was receiving now, and she also probably would approve of becoming a rallying point for ADVENT, and America specifically. She had been an exceptionally popular president and her death had fully secured America as an ADVENT supporter.

To suggest otherwise was nigh-traitorous. American nationalism was finally becoming somewhat useful, as long as it was directed against the aliens, anyway. There were already plans to erect a statue in her honor on the lawn of the White House. ADVENT was going to use her status for all it was worth.

In another time it probably would have been seen in bad taste, but in war they needed every advantage they could.
“At least it didn’t rain,” Saudia sounded subdued as she walked up. “One thing to be thankful for I suppose.”

He grunted, but didn’t smile. Saudia looked exactly the same as she always did; so did he, mostly. The natural black of ADVENT and XCOM made for natural funeral attire. Neither of them were armed, though her personal guard were standing just out of earshot and keeping harassers away.

“You’re quiet,” she finally said, clasping her hands in front of her. “Something I should be aware of? You’re not the sentimental type, even if you did respect her.”

He pursed his lips, glancing over at her. To say that there was ‘something to be aware of’ was something of an understatement that all of them were still trying to puzzle out. “Yes,” he finally said as the people began filing out. “But not here. It isn’t good though.”

She took it in stride with a single nod. “How bad?”

“The Imperator has become more involved.”

Saudia grimaced. “I suppose that is to be expected. Aegis, and now you took Caelior…” she furrowed her eyebrows. “What ended up happening to him anyway?”

“He’s under control. Currently locked away where he isn’t a danger.”

“Well, the point is the Imperator would become involved at some point,” Saudia continued. “I would be more suspicious if he did nothing.”

The Commander debated trying to argue the point that the Imperator doing anything meant that it was going to be very, very bad for them. However, she’d learn that soon enough. Nonetheless, she had a point. The Imperator did have some restraint in waiting as long as he did, but it didn’t make his actions any easier to tolerate. “You need to prepare the PRIEST Program,” he said slowly. “The Restraints are nearly complete.”

“A relief,” Saudia said, crossing her arms. “Some good news then. I’ll be sure to let them know. How soon?”

“Within three weeks.”

“Understood,” she turned once more to face him. “ADVENT has a lot of work to do. I suspect XCOM is taking advantage of this lull as well. I’ll be speaking to you later, Commander. Good luck.”

He gave a wry smile. “Appreciated, Chancellor.”

Saudia walked off, leaving him standing beside a bunch of empty chairs as everyone in the cemetery began leaving the premises. And he really had no reason to stick around either, since he had no meeting plans here. Those weren’t typical for him at funerals. And he had plenty of work to do back at the Praesidium.

However, that didn’t seem to stop one particular woman from coming up to him out of the corner of his eye. She stood, appraising him for a brief moment. He raised an eyebrow and turned to her inquisitively. “Are you looking for someone?”

The woman was certainly…unique. Just under six feet, shoulder-length white hair, green eyes, and a scar running vertical over her left eye, and a fairly confrontational pose. She was dressed in something closer to military fatigues than formal dress wear, though certainly none he’d ever really
seen. Although after some time, black fatigues all started to look the same.

“You’re the Commander of XCOM,” she glanced around. “No personal escort? Would have thought you would have one.”

He gave a humorless smile. “Unnecessary. I can handle myself just fine.”

“So I’ve heard,” she glanced around again, making him wonder who she was. The British accent mostly nailed down where she was from, but she definitely didn’t seem to belong here.

“Who are you?” He asked finally. “Most people don’t talk to me unless they have a purpose.”

The Commander cocked his head. “You’re a survivor of Australia?” He asked, knowing there were two very different possibilities here, one significantly more dangerous than the other. “And I don’t remember Agent Gertrude mentioning you.”

“Friend of a friend,” Fiona repeated. “I was one of Mr. Harper’s people.”

“When you say that…”

“I mean to say that he would like to let you know he made it out of that dangerous situation,” Fiona said carefully, unsubtly glancing around again. “And that he’ll be re-establishing contact as soon as he can.”

Well, that was certainly interesting news. “Tell him I look forward to it,” the Commander said with a nod. “And you need to work on being inconspicuous. ADVENT is definitely watching you.”

She blinked. “Say again?”

He sighed. “Just make sure you aren’t followed when you leave.”

She smiled at that and backed away in farewell. “Don’t worry about that. No one can follow me where I go. See you, Commander.” She spun on a heel and walked away doing everything someone who wanted to remain inconspicuous did not. Going off on her own, not sticking to crowds, not wearing proper attire, and seeming far too focused and chipper for a funeral.

What an odd woman. Perhaps it was to be expected that a Sovereign One wouldn’t pick people who care about that, but there was still room for improvement. For better or worse though, it appeared he was going to have a meeting with the illustrious Sovereign One soon enough.

Hopefully it wouldn’t be for some time. There was a lot of work to do.

Situation Room, the Praesidium – Classified Location

12/14/2016 – 8:10 P.M.

“Any plans you have to bring her back should be dismissed,” Aegis said flatly. “She is gone.”

“For now,” the Commander wasn’t quite ready to write off Patricia, even if Aegis seemed to be more than willing. “She’s smart and tough.”
“She is with the Imperator now,” Aegis repeated, sounding frustrated. “She is lost.”

“Do you really think he’s going to try and turn her?” The Commander demanded, beginning to pace. “Does he think that would work?”

Aegis sharply inhaled. “That is exactly what he intends. Why do you think he was trying to communicate with her so much?”

“And you said that he doesn’t directly mind control people he finds interesting,” Vahlen pointed out, speaking up for the first time. “Patricia would not be easily swayed. Would he torture her?”

“Unlikely,” Aegis shook his head. “He would consider it a waste of time, and a failure on his part. But it isn’t as simple. People change when they stay around the Imperator for too long. She cannot protect herself forever.”

“And following his logic,” the Commander continued. “He would know the effect he causes and not abuse it.”

If Ethereals could make faces of frustration, the Commander knew it would be on his face. Even if he could, his helmet hid it completely. “The point, Commander, is that we cannot expect Patricia to be alive or the same if we see her. We need to move on.”

“On that I think we can all agree,” Zhang stated, his face set in stone. The entire event had definitely shaken all of them, but Zhang had especially found it disturbing. “She is out of our reach for now. There is no question of it.”

“What we need to figure out is how we will respond,” Jackson stepped forward. “The public is going to want to know what happened to her, and they will notice her absence. More importantly… this can’t go unpunished. They kidnapped one of our own.”

“And we now have Caelior,” Aegis said with a shrug of his shoulders. “The Imperator likely saw that as a fair trade, if he even considered such things when deciding on this course of action.”

“Except we beat Caelior ourselves,” Jackson’s eyes flashed. “This isn’t anywhere close to the same situation. It’s one thing to lose and her be taken captive. It’s another to cheat with telepathy.”

Zhang sniffed. “And what gave you the impression that the Imperator cares about fairness?”

Jackson scowled, but didn’t really have an answer for that.

“You raise a good point,” the Commander said after a few moments, stepping forward to the holotable. “This is yet another escalation, and we will respond in kind. There is no more holding back when we fight their kind.” After pressing a few buttons, the hologram of a nuclear warhead appeared. “Normally I would be against indiscriminate nuking of alien positions. At least on Earth. But the aliens have helpfully established Gateways in their territory connecting to their military bases within their space.” He tapped the table. “The policy regarding Gateway capture has changed. Prior to separation we will send through a salted nuclear warhead and sever the connection.”

It was, admittedly, a provocative step, but the Commander didn’t necessarily care what the Collective felt. They had kidnapped one of his soldiers, and there would be retribution. It was why he had chosen salted nukes instead of standard ones. Denying their base, and poisoning the land for generations would send a suitable message and destroy a base in the process.

“Risky,” Zhang pointed out. “We don’t know if they get reinforcements from Earth. We might
“Unlikely,” the Commander shook his head. “Gateways display their coordinate planes. If it is within a certain number we can determine if it’s on Earth. Then we’ll just send in something more conventional.”

“If I may,” Shen interrupted, looking mildly concerned. “Where, ah, are we acquiring these weapons? ADVENT?”

“No,” the Commander gave a thin smile, pressing some more buttons. “We’re making our own. Thanks to your construction efforts, Shen, we now have three satellite bases.” The world map came up, with red dots highlighting the bases Shen had virtually overseen as they were constructed. Most in XCOM didn’t know about them yet, but he’d felt it was important to diversify. He pointed at one. “Manhattan Base will handle the construction of all heavy ordinance, which will include nuclear weapons.”

“I’ll make the necessary arrangements,” Shen sighed. “I suppose it was only a matter of time until we reached this point.”

“Since we’re on this topic,” Jackson said. “Have you decided what the other bases are for?”

“Yes,” the Commander highlighted the next one. “Since ADVENT has so helpfully decided to send certain useful alien defectors to us, they should have their own lodge. I don’t want to intermix them with our soldiers immediately. Paperclip Base will primarily house our alien defectors, including Aegis if he wishes.”

“Separating them does not seem advisable,” Aegis warned. “Not if your goal is integration.”

“I said house,” the Commander repeated. “All Gateways will connect to the Praesidium, which will serve as a central hub. Nothing prevents Humans or aliens from interacting with each other. But the aliens should have a space they have some control over, and with some oversight, it will give them some assumed freedoms.”

“Speaking with various aliens reinforces this,” Vahlen interjected. “In fact, some have expressed how they prefer Human architecture over this as they find Sectoid architecture disquieting. And most are not used to large amounts of Humans, especially those who were until recently their enemies. It is better for the mental health of all that they have a separate place of residence.”

“Then I will oversee them, if you do not mind,” Aegis said.

“That would be acceptable,” the Commander nodded. “They will prefer having you enforce guidelines than a Human.”

“Right,” Jackson stepped forward, looking towards the last base. “And this one?”

“Ah, yes,” the Commander nodded towards Vahlen. “Prometheus Base. The new Science Division of XCOM overseen by Dr. Vahlen. Due to the constraints imposed by current projects, the research team needs greater resources and room.”

Jackson gave a wan smirk. “Poor Shen.”

“I will remind you I also am overseeing a nuclear weapons research and production facility,” the elderly engineer reminded her. “And the Commander has also informed me that once the Science teams depart, the spaces they formerly occupied would be replaced by the Cybernetic and AI teams. I am not receiving the short end here.”
“Oh,” Jackson said, looking slightly mollified.

“And Shen just covered everything else,” the Commander motioned towards him, while looking back towards the holotable. “More soldiers will be coming soon as we expand. ADVENT is also expanding their Gateway networks, and soon every major base will have immediate reinforcement capabilities. However, we need to focus on ways to mitigate telepathy. We’ve seen the danger it poses now, and until we can protect ourselves from it…we cannot win this war.”

“The Manchurian Restraints will keep our psions under control,” Zhang mused. “But as a defense against telepathy it is a crude one at best.”

“If I may, Commander,” Shen said slowly. “This is a subject both Vahlen and I have been discussing at length. We have several possible solutions to show you very soon.”

“Right,” he briefly glanced at her. “You did mention this at one point.” He looked up at the Ethereal. “Until then, will you be able to sense if the Imperator tries to take control again?”

“I will likely be able to detect it,” Aegis answered. “Stopping it…I do not know. Perhaps for myself, but certainly not for everyone.”

“We’ll have to make do,” the Commander sighed. “Continue with the projects and operations. Dismissed.”

Commander’s Quarters, the Praesidium – Classified Location

12/15/2016 12:05 A.M.

It was definitely harder to get to sleep the past few days.

Though it didn’t really seem to be affecting Vahlen too much. Then again, she hadn’t really been aware of what had been happening and the Imperator had likely ignored her. In fact, he’d likely intentionally ignored her because she was a fairly powerful telepath in her own right.

Regardless, he’d never really thought much about what it felt like to be on the receiving end of being mind controlled, and now that he had, he never wanted to feel it again. Knowing what he wanted to do, yet being unable to no matter how much he tried. And there was no mental hurdle to overcome when his mind was no longer his to begin with.

This was something they should have been trying to solve long ago.

The end of the war wasn’t going to be determined by weapons, numbers, or bombs, but by which side used psionics the most effectively. It might also come down to Sovereign technology as well. One which they were still learning about, but would never be as powerful as an Ethereal, and the other they were struggling to comprehend at all.

If they couldn’t reach the heights of the Ethereals, then they could keep trying to negate them.

Hampering their telepathy was imperative. It was no longer a matter of debate.

The Commander slowly got into bed beside Vahlen, careful so as not to wake her, and finally rested against her while closing his eyes. She must have been exhausted if he hadn’t woken her there, since she almost always did, no matter how much he tried. Well, given recent events, he could understand that.
Although it did remind him about something which had fallen by the wayside. Christmas was coming up. He was torn between making that a no-work day for everyone with a substantial bonus, or treating it as normal and doubling that bonus. It was at the stage where he didn’t know if they could afford to take off a day.

Yes, everyone deserved one day off, but that one day could be crucial…

Well, maybe he was being a bit hyperbolic. But the other slight issue was that the holidays were to be spent with family, as well as friends. Most people here had at least some family outside XCOM, and while he could probably have one day with no work, he couldn’t very well risk losing any personnel on short vacations (In addition to taking up time, the Zararch might be watching).

Although that did tie back to another vulnerability that could come up in the future. If the Collective figured out who was in XCOM, their families might become targets. That was not an acceptable risk, especially since the conflict already made them stressed about the safety of their family.

There was one solution. Another base be built which would house the families of XCOM personnel. It might not be as comfortable as some of them were used too, but they would be safe and see their loved ones regularly.

Shen would have to figure out appropriate dimensions. This wouldn’t be an easy undertaking, assuming the Internal Council agreed to its necessity in the first place.

Something to keep in mind. That was a problem for another day.

Although he should probably get Vahlen something. Something she’d like. He had a few days, something could be done.

Templar Training Arena, the Praesidium – Classified Location

12/15/2016 – 10:31 A.M.

Nuan really wished that they could just have a victory with no drawbacks for once. They’d captured an Ethereal, resecured Japan, and China and ADVENT were working together to an extent. Everything was actually going very well, until the aliens had managed to kidnap Patricia. The rumors she’s heard about how that happened were terrifying.

None of those involved were talking about it, though had, and still looked unnerved wherever they went. Most of them were dealing with it by beating stuff up or exhausting themselves. Carmelita was currently trying to take down an icy Iosif who was casually deflecting her strikes with psionic shields, to a small crowd of onlookers.

One of whom was an Oyariah.

Who was now staring at her.

She did not like that.

Oh great, he’s coming towards me. Trying not to look too nervous, she looked up at the three-meter hunk of chiseled stone. They might have that as their skin, but to her it definitely looked like hardened stone. Technically the alien was probably naked right now, but thankfully not that naked. “You,” he rumbled. “You are not one of the Templars. I have not seen you before.”
“I’m not,” she answered casually, or as casually as she could. “I’m…watching.” She nodded towards the dueling soldiers. “Iosif, mostly. You know who he is, I assume?”

“Ah, yes,” the big alien nodded, voice lightening in recognition. “An admirable Human. I did not realize he had a mate.”

If Nuan had been drinking water, she would have spat it and instead made some sort of hacking sound before responding. “I am not his mate, alien!”

She didn’t fail to notice one of the other soldiers snickering at the exchange, who she didn’t recognize so she narrowed her eyes when shooting him a quick glance before returning to deal with the alien. “What gave you that idea?”

“Hm, unfortunate,” the Oyariah incredulously didn’t back down, instead appraising her. “Although perhaps it’s for the best. You’re too small for him.”

“Small,” she sputtered. “Why does that actually matter?”

The Oyariah looked at her, with an unreadable expression, but she suspected it was incredulity. “Because any little Human offspring you bear will be limited. This is an accepted standard, I would expect Humans to follow similar principles.”

Nuan looked at him, then looked down at her gleaming fists. She was sorely tempted to hit this smug and idiotic alien in the face and see how he liked small. “You have no idea how women work, do you?”

“Of course I do,” he said. “And you are also not an adequate choice because your children might be born with metal arms. A tragic deficiency.”

“You…” she paused. “Was that a joke?”

The Oyariah rumbled, which she assumed was laughter. “Most of it, yes, I am glad some found it amusing.”

Nuan briefly turned to the soldier who had been snickering at her, along with his friend, and glared at him until he went away. “Funny,” she said. “I didn’t know you could make jokes.”

“It sometimes is useful to play into the stereotype Humans expect for us,” the Oyariah answered. “Elder Aegis has been exceptionally helpful in educating us about certain details of your species. Humor is especially prevalent, though seems to be highly subjective depending on the individual.”

“Yeah.” She glanced over to see the duel was wrapping up, with Iosif just deciding to trap Carmelita in a stasis field, before selectively leaving her head unprotected. With her glaring murder at him, he smiled and gently tapped her on the forehead with a finger mouthing “Dead”.

Nuan smirked. “My first question was not entirely a joke,” the Oyariah said. “But why are you here? I have observed few spectators.”

She thought for a moment. “I like watching it. And Iosif’s one of my few friends here.” She shrugged. “Not too complicated, at least to me.”

“I am sure he appreciates it,” the alien said. “He has mentioned as much. Unfortunate you are not trained in melee, as you are suited for it with your arms.”

“Sure,” Nuan flexed them in reflex. “But I prefer to stay away from the danger. I’ve seen what the
Titans can do up close. I’d prefer not to be crushed. I got close enough when that Berserker almost killed me, thank you very much.”

The alien reached behind him and unhooked one of the black warhammers she’d seen the Titans use. “I am pleased that we are respected by your kind. I will in turn prove my worth on the field of battle, one reason I am here today.”

“Oh?” She was actually surprised at that. “The Commander is letting you actually fight?”

“Aegis has allowed it, provided we follow the established guidelines,” the Oyariah said. “Though I suspect not immediately. Some will likely doubt me.”

Nuan couldn’t disagree, although for an alien, he was easier to talk to than she was expecting. “What’s your name? And don’t give me the long Vitakara version, just the short one.”

“Xarian, formerly of the Guard of the Ravager,” he said with pride. “Now within the service of Elder Aegis.”

“Right,” she nodded. “And…who is the Ravager?”

Xarian grew somewhat serious at that. “The Ravager is the…Commander…of the Titans. The finest of our warriors, her skill perhaps surpassing that of the Stalker himself. To be chosen for her Guard was a high honor, but one that pales in comparison to an Elder.”

“Hello, what do we have here?” Iosif raised an eyebrow as he walked over. “I see you’re both getting along. Good.”

“I will allow you to rest and then test you shortly,” Xarian said, resting his weapon on his shoulder. “I suspect you wish to speak to the one who is not your mate.” With that he walked off, sounding far too satisfied with the conclusion.

Iosif’s face though was a mixture of surprise and embarrassment, which was odd enough to make her snort. “Ah,” he coughed. “Did I miss something?”

“His idea of a joke,” Nuan smirked. “He apparently assumed I was your mate, and if I wasn’t, it was a good thing because my children would be small and have metal arms.” She glanced behind her at the soldiers getting ready to train. “Certain people found the exchange…amusing.”

Nuan decided to let the matter drop, although for a joke, Iosif did not seem to be taking it as one. Or more like he was not brushing it off right away, let alone dismissing it as ridiculous. To be fair, she was doing the same thing.

Yeah, best to drop it for now. “How’s she doing?” Nuan nodded to Carmelita.

“Still rattled,” Iosif shook his head. “What happened was bad. Creed described it to me, and asked me not to share. Letting her beat up on me is good for her. But they’ll all be fine.”

“Will Creed though?” Nuan pursed her lips. “I know they were together.”

“He could have reacted two ways,” Iosif said slowly. “It could have sent him in a downward spiral, or it would make him angry. He has gone the latter route. The good news is that he knows Patricia can take care of herself, and so at the first available opportunity, he’s going to rescue her. He’s
apparently going to Aegis to figure out how best to kill an Ethereal.”

Nuan looked up at his tired face skeptically. “He doesn’t stand a chance against an Ethereal.”

“Alone?” Iosif snorted. “Definitely not. But he won’t be taking an operation like that alone. And at the end, I’ll let him kill any Ethereals we come across. Better for him to be angry and focused than depressed. He’s furious by what happened, but it luckily didn’t break him.”

“So…” Nuan paused. “She had a spot on the Council, right? Who’s taking over?”

“Unknown,” Iosif shrugged. “Heard some names being thrown around. Problem is there aren’t a lot of senior psions left, aside from me and the last two Furies, and the latter are not really trained for leadership roles. Current speculation is between myself and…Geist.”

“Fuck Geist,” she spat. “He doesn’t deserve the position. Especially not compared to you.”

“Oh believe me,” Iosif gave a wan smile. “Not many of us are fans of the idea. But despite being a jerk and person of questionable character, he is smart, not to mention skilled and powerful. Probably more than me, if we’re being honest.”

“No.” Nuan could state that firmly. “Power doesn’t dictate everything, and you’re a far better leader and man than Geist could ever hope to be. The Commander will see that.”

“Can’t say I’m not hoping for that,” Iosif sighed, rubbing his forehead. “But he’s also practical. I’m a very…traditional choice…for lack of a better word. I’m military. I’m a standard psion. I’ve been with XCOM for a while, I know how things work. Geist does offer a different and unique perspective, like it or not.”

“But…” Iosif raised a finger. “If I do so happen to be selected, I do think a celebration would be in order. Want to join me? And you can give some more details about how your little meeting with the Chinese went.”

Nuan crossed her arms. “Well, what isn’t classified, of course. And what if you aren’t?”

“Well, we still get together, but also make jokes about our new Director of Psionic Operations,” Iosif said. “Sound good?”

“I think so,” Nuan smiled. “And if you aren’t picked, then I’ll be sure to criticize that choice in my next letter to my superiors.”

Iosif chuckled. “I hope you do, and I get to read the redaction.”

They both shared a laugh at that. Things could definitely be a lot bleaker than they were. Best to enjoy them while they lasted.

***

Situation Room, the Praesidium – Classified Location

12/16/2016 – 11:49 A.M.

The Commander did not expect this meeting to take long, but before making the final decision he needed to get the approval of the Internal Council. In the end, it had been a fairly easy decision. Shen looked up and gave an approving nod. “A good choice. He will serve well as a replacement
for Patricia in her absence.”

“Agreed,” Vahlen nodded. “While he isn’t the most powerful, he is the most qualified for the position.”

Shen grimaced. “With the added bonus of having some basic respect for the people around him.”

He wasn’t surprised at those two. He glanced to Zhang. “Thoughts, Director?”

“I cannot find a reason to disqualify him,” Zhang said slowly, putting the tablet he was holding down. “But I am not convinced that Templar Bronis is the best choice. While he is skilled, Geist has quantifiably surpassed him.”

“So is Hammarström,” Shen pointed out. “Should we award positions based on their Trask Level?”

“Agreed on that point,” Jackson leaned against the wall. “Geist is powerful and skilled. But he isn’t well-liked or even cares to make changes to himself. Not a person I want to work with here.”

“There is also the small fact that he manipulated one of my soldiers,” the Commander added. “Someone who does that to those under their command is not one I will appoint to this Council without exceptional reason. Geist can serve the same purpose just as well on his own.”

“Your point stands,” Zhang nodded. “I won’t contest it. But he will likely feel slighted.”

The Commander raised an incredulous eyebrow. “And…just why should that be concerning…at all? If he feels so slighted, he can come ask and I’ll tell him exactly why he failed to be chosen.”

“He shouldn’t be,” Zhang clarified. “But his psychological profile indicates that he may feel so regardless. Just so you are aware of the possibility.”

“I think we’re also overlooking the fact that this position comes with administrative work,” Shen reminded them. “As we are all well aware. Iosif has some experience in this, while I am sure Geist would not feel it is important enough to devote his time to doing it.”

Jackson rolled her eyes. “Geist is the kind of guy who would hire a bunch of secretaries to do that for him while he plays with psionics all day.”

“We shouldn’t sell Iosif short here,” the Commander said. “He’s one of the longest-serving soldiers in XCOM, a good leader, a trained and skilled psion, and most importantly for someone in this position – he respects the power he wields and the consequences of misuse. I do not want a psionic supremacist on this Council, nor one who believes in their unrestrained use.” He looked around the room. “Are there any objections?”

“None noted, Commander,” Jackson said as they all shook their heads or gave negatives. “You want to give him the news or should I?”

“I’ll give it to him,” the Commander said. “Tell him to meet in my office within the hour.”

“Yes, Commander,” Jackson made a note on her tablet. “We have anything else we need to discuss?”

“There is,” the Commander rested his hands on the holotable. “I believe we should consider the addition of two more positions on this Council. The first would be in the vein of Van Doorn’s position of Tactical Advisor, but they would be drawn from our soldiers. A Ground Commander, more familiar with the operations in the field, which I normally am not. They would ideally have a
better understanding of the soldiers and armaments than the rest of us.”

“Carmelita Alba and Anius Creed stand out as candidates,” Jackson said. “I’ll check the roster, but I can likely find one or two more. Archangels Hammarström and Morrow have both shown to be capable leaders and soldiers.”

“We’re not deciding candidates today,” the Commander quickly clarified, raising a hand. “Just deciding if we want to extend the Council in the first place.”

“To do that we need to know the other position,” Shen said.

Here it went. “Since ADVENT has decided that we get all of the aliens who are willing to fight, it would not be a bad idea to have an alien representative on this Council as well. One who, like the proposed Ground Commander, knows the aliens better than us.”

Vahlen furrowed her eyebrows. “Is that not what Aegis provides?”

“Aegis is a special case,” Zhang pointed out. “And not a good representative for the average alien soldier. He is also an…advisor, not directly on the Council, which this proposed position would entail.”

“I suppose you’re intending to deploy aliens in combat?” Shen said. “Last I heard you hadn’t decided.”

“With the Manchurian Restraints, loyalty won’t be a concern,” the Commander said. “The aliens are useful assets, but if we’re going to use them, they need their own representative here.”

“I’m not opposed to the concept,” Jackson said slowly, biting her lip as she thought. “The issue is that it’ll be difficult to find an alien I can definitively say is on our side. These are defectors. They haven’t really done anything for us yet.”

“I am in agreement on that,” Zhang said. “Let us see how the aliens perform in combat before allowing them access to the secrets of XCOM. I do not trust all of them, and none of them to hold a seat here. They would need to renounce their species for the good of Humanity.”

“At minimum I want potential candidates,” the Commander told Jackson, before looking to Zhang. “But you have a point. They need to earn their place here. But they should be aware this is a possibility…if they perform well.”

The light glinted off Zhang’s scar as he gave a brief nod. “That is acceptable. We should revisit this matter once we have deployed aliens into the field. I do support the addition of a Ground Commander position within the Council.”

“As do I,” Jackson confirmed. “Objections to anything Zhang said?”

At the silence, the Central Officer made a brief note. “Alright, settled then. You’ll have your list, Commander. When do you want to appoint a Ground Commander.”

“Within a week.”

“You’ll have a list from me tomorrow,” she promised. “And I’ll have Yates begin conducting interviews among the aliens. I’ll also pick out subjects of note.”

“Excellent, Central,” the Commander looked around at all of them. “That’s all for now. Dismissed.”
Engineering Bay, the Praesidium – Classified Location

12/17/2016 – 9:11 A.M.

Anna only had one thing to say as they looked upon one of the newest inventions of the XCOM Engineering team. “Cool.”

“Cool,” Sierra echoed. “I like the name too.”

“The Valkyrie,” Anna read the name painted on the ‘wings’ of the aerial MEC. “Yep. Don’t think there’s a more fitting one for it. Almost makes me want to get the implants to fly one of those.”

“No, you really don’t,” Sierra said, shaking her head. “You won’t have enough of yourself left to enjoy it. But both of us can just admire it from afar.”

“Is that still a thing?” Anna questioned, as they turned away and began walking through the busy workshop. “By now I’d think they’d have figured out how to remove that problem.”

“I don’t really know,” Sierra admitted with a shrug as she scooted past some engineers. “Just assuming. In any event, I’m not really thrilled with the prospect of cutting off my limbs. So that idea’s out for me.”

“You can’t get hurt then,” Anna reminded her. “I’m pretty sure they overhaul what’s left of your organic parts too. Could be nice.”

“Yeah, you haven’t talked with our more loyal Chinese resident then,” Sierra snorted. “You can’t feel pain, but you really can’t feel anything else. Nuan definitely wishes she had her weaker flesh arms back.”

The young woman grimaced. “Fair enough…” she trailed off. “Is that Geist?”

Sierra narrowed her eyes and looked to where Anna was pointing. From this distance it certainly seemed to be. The figure was standing with an almost mechanical posture as he looked down on a table that held…something. There were two other engineers nearby, both of whom seemed to be helping him.

“Looks like it,” Sierra said, moving forwards. “Let’s see what he’s doing.”

They only made it a few steps away before Geist raised a hand, not turning to them. “If you must know, I have acquired the assistance of several engineers to gather some data on the Sectoid Vanguard weapons.”

Oh right, he apparently liked reading their minds. She heard a loud sigh. “It’s not as simple as choosing not to, Archangel. I have as much choice in not reading your screaming minds as breathing and hearing. It is simply another sense I take advantage of.”

Anna snorted. “Patricia seemed to manage fine.”

“Psion Trask prioritized the handicapping of her abilities,” Geist said, still turned away from them as he began tinkering with the Vanguard Gauntlet on the table. “She developed her psionics in a way where that was feasible. I did not, and therefore must live with it.”

“I do wonder,” Sierra crossed her arms as she looked around the area. “If you ever tried in the first
“No, I did not,” Geist stated flatly. “Knowing what people are thinking has saved me countless wasted hours of inane small talk and questions. This is an advantage I do not see a need to willingly deprive myself of.”

Anna almost seemed to giggle. “Alright then. Keep paying attention.”

“Anyway, in regards to your oncoming inquiries,” Geist continued. “The reason I am interested in this is because the Sectoids created technology capable of tapping into psionic power using psions as conduits. They have applied it to blades and shields. I wish to explore the possibility of applying it into other areas. Once I have sufficient data to take to Dr. Vahlen, she can hopefully begin work.” He gestured around. “I am not an engineer, thus I requested assistants from Shen who also agreed at the need for this to be explored. This is done with his approval, so you are aware.”

There were times when she really didn’t know what to think about Geist. As a person he was… perhaps not bad, but way too undiplomatic and combative. She supposed he was honest, which was admittedly better than some people. But he had no sense of tact or consideration for others. He was no Patricia, but he clearly never wanted to be.

It was probably her imagination, but she could swear he nodded. Eavesdropping jerk.

But he was frustratingly smart and driven. Despite his growing, and rather infamous reputation, everyone did have to admit he knew what he was doing. He was not someone who took no for an answer and only a few really seemed to be able to dare challenge him. Of course, all of those were of a higher rank, so it made sense.

“Archangel Pavlova,” Geist said slowly, turning around. “Please stop doing that.”

Anna just smiled, while Geist stared at her. “Your current line of thought. Think about something else if you must.”

“Why?” Anna asked brightly. “There something you don’t like about it?”

“It is a juvenile attempt to break my concentration,” Geist narrowed his eyes. “Which definitely does not work, and is the equivalent of a mosquito buzzing which is too inconsequential to deal with.”

“Did you always talk like this?” Sierra had a good idea of what Anna was doing, and it was hilarious. “I’m surprised anyone takes you seriously.”

Geist opened his mouth, before closing it. A few moments later, and he gave a dismissive wave. “Your assistance is appreciated, Archangels, I have now seemed to learn how to ignore very specific minds in the immediate vicinity. Your…annoyances will not bother me. Stand there if you wish to gawk.” With that he turned around and continued working.

Sierra raised a hand and Anna reciprocated the high-five. “Amazing,” she commented as they walked away. “You managed to teach Geist something. So what was it?”

“Oh, nothing much,” Anna smirked. “Just him in a compromising position with his mother. I don’t think he found it amusing.”

Sierra snorted. “Tell everyone we’ve found the solution to Geist mind-reading anyone he wants.”

“Oh, believe me,” Anna gave a sinister smile. “I’m definitely going to be sharing this little
Today was the day when Vahlen and Shen were going to unveil some of their larger breakthroughs. The Commander had of course been briefed on the projects they were working on, and in particular for Vahlen, the results of Project Innsmouth were ready to be unveiled, with significant advancements in the Operated MELD applications, which had been bundled into Project Achilles some time ago.

Achilles was something both Shen and Vahlen had been working on; which had started as research into injecting MELD nanites directly into an individual, and had apparently turned into something different; combining multiple projects into one. In any case, he was quite eager to see what both of them had for him.

The labs were as clean and sterile as ever, and even more packed since Vahlen had over the past months greatly expanded her teams to include the finest geneticists, and biologists, both terrestrial and marine. With the transition to her new base, there was additional traffic, though few in-progress projects were being touched.

The scientists quickly moved out of the way, and it didn’t take him long to find Vahlen who was standing within a sealed room in front of a clean table devoid of everything except a stack of cubes, a skull-cap thing he hadn’t seen before, and two tablets. She was likely starting out with the smaller things, since Innsmouth was housed in the Genetic Labs.

The sealed room hissed as he opened, and Vahlen turned with a smile at his arrival. “I’ve been looking forward to this day for some time, Commander. I’m glad to say that all progress has been exceptional, and the aliens have also assisted in providing experience with much of what we’ve struggled over for some time. Months of research has been saved as a result.”

“Excellent,” he nodded to the table. “So what do we have?”

“Shen will be giving you a demonstration of the plasma weapons later,” Vahlen picked up one of the tablets. “And that made me realize that we will currently have no weapons research. So I first want to suggest two avenues to pursue. The second tablet is for you.” He obliged and picked up the free tablet, on it showed a...peculiar weapon. It looked bulky, boxy, and had a multitude of exposed wires and tubes.

“Several of the research teams, including myself, believe we should look to more distinct forms of weaponry,” Vahlen continued. “This was conceptualized as one of the first weapons to do this. It is currently classified as the High Output Microwave Emitter Rifle, and specifically designed to kill armored aliens like the Battlemaster, as it has the potential to bypass armor and fry electronics.”

“Microwaves,” the Commander mused. “I assume this is slightly more powerful than what we use to cook our food?”

“If we so desire,” Vahlen chuckled. “But if you want to see the damage microwaves can cause, go to the next screen.” The Commander did, and was faced with a host of unpleasant and gory images. “Skin degradation, blisters, and ultimately necrosis,” Vahlen continued. “An extremely painful way to die, which cannot be blocked without sealed armor or psionics.”
“Interesting,” the Commander flipped to the next screen, showing a similar weapon with a different description. “Gamma rays as well?”

“That is what we’re unsure on,” Vahlen said. “A Gamma equivalent of this weapon would be far deadlier, and turn any target into an irradiated hazard regardless of armor. However, there is a high potential for friendly fire, both to nearby soldiers and the user itself. But it could still be highly useful against Ethereals. But Gamma research is not well-developed, and we wouldn’t know without devoting resources towards it.”

The Commander nodded, thinking. “Work on developing the Microwave variant, and you have my authorization to begin Gamma research. I believe that weapon could be more suited to our MECs than ordinary soldiers.”

“Wonderful,” Vahlen gestured for him to continue. “Now, the other path of research is harnessing psionic power into more…specific uses. The Sectoids proved they can do this, and Geist has helpfully completed some initial data-gathering which would allow us to get a concrete start.”

“How would this work, exactly?” He asked. “I assume non-psions wouldn’t be able to use it?”

“Highly unlikely,” Vahlen confirmed. “The truth is we don’t know what the limits for this are. Perhaps psionic energy could be stored for later use, or it can be specifically directed to do certain things. Telekinesis, telepathy, all outside the traditional specialization or training. Our psions could be more powerful than they already are.”

“Could it protect them telepathically?”

“Possibly. Again, we’re not sure of the limits of this line of research. But we can’t afford to pass it up.”

“Do it,” he said, setting the tablet down. “If you need people, I’ll get in contact with the PRIEST Division. Their research division is growing, and I’m sure some of them would love to work for XCOM.”

She brushed her hair back. “You know, I have the feeling that I could just start all of these and you likely wouldn’t care.”

He smiled back. “Oh, I would care. I want to know what’s going on, even if I usually approve your projects. You have a good sense of what should be prioritized, but that doesn’t mean you get out of asking first.”

“Fair point, Commander.”

As she set the tablet down and began moving towards the other device, he asked. “What is the status of the Manchurian Project?”

“Not ready to be shown, but very close,” she answered. “I am hoping it will be within the next couple of weeks. We’ve lost some time in preparing everything for today. Such as this.” She picked up the device so he could get a closer look. It looked like it should go over the head, but was very small, with an extremely delicate layer of wires and alloy mesh.

“And what is this?”

“This,” Vahlen said proudly. “Is the most important aspect of Project Achilles. Both Shen and I worked on this, and in more…simple terms, it is a Neural Regulator.”
He raised an eyebrow. “Explain.”

“Shen originally conceptualized it as a way to protect against telepathy,” Vahlen began. “You are aware that the brain has two hemispheres, which can be separated and still function on their own. Generally this results in adverse side effects, specifically in communication. This device would supplement the existing connection of the Corpus Callosum with an automated alternative – one which could detect if there is psionic tampering.”

The Commander frowned. “Is that possible?”

“Detecting psionics? Yes,” Vahlen gently set down the device. “The brain noticeably changes if under the influence of psionics. This has been documented multiple times. It is a matter of taking this data and putting it in something like this. If the brain emits these signals, the individual is compromised and the Neural Regulator will follow established contingencies.”

“It sounds good,” the Commander began slowly. “But it seems to be a less elegant version of the Restraints.”

“There are advantages as well,” Vahlen pointed out. “Future iterations could likely augment cognitive abilities, memory storage, and analysis. And while the Restraints simply stop compromised individuals, this would disrupt psions by turning anything they could learn into gibberish. But I initially agreed…until I proposed we combine both the Neural Regulator with Project Achilles and the development of Operated MELD.”

She picked up her tablet again, and began tapping. “The Neural Regulator does not just serve as a protection against telepathy, it also can control MELD Cubes slaved to it. Watch.” The cubes on the table suddenly dissipated and reformed into a model soldier. Then fell apart again and formed into a small knife.

“And this would be controlled by the user on their own,” Vahlen said proudly. “No remote required. Much like psionics, it would take some getting used to. As for the specific enhancements brought about by Project Achilles, those would also be able to be controlled.”

“And have the goals of Achilles changed?” He asked.

“No,” she walked over with the tablet in hand which showed the outline of a Human with the proposed changes. “MELD fortified skeletal structure; augmented organs for additional redundancy and healing. Skin fully replaced with MELD overlays. Eyes overhauled with MELD enhancement, with bloodstream injections to kill any foreign bodies and toxins. This also applies to the nostrils and lungs. An interesting side effect is that this will, in theory, allow full control over cosmetic appearance. Skin, eye, and hair color can all be modified by the individual in question.”

She lowered the tablet. “A massive investment, I am aware, but with the additions of the Neural Regulator and Operated MELD, this is perhaps as close to an invincible soldier as we can get. Very little would be able to kill one, and if they cannot be telepathically dominated, with control of swarms of nanites… I am sure you can imagine the possibilities.”

“Indeed.” Vahlen was right. It was going to be a massive cost per soldier. These Neural Regulators would need to be custom-fitted to the individual, time would be needed for them to adapt, and the amount of MELD pumped into them would be ludicrous. However, MELD they could replace, and it was worth doing it right than fast.

This would likely only be for a few soldiers. The amount of changes Vahlen was proposing was near-inhuman. Zhang was going to love the appearance changing capabilities, however. Maybe
they would find their means of imitating the aliens that way. “And is this ready to use?”

“We need to install on a few test subjects first,” Vahlen admitted. “However, once those tests are completed, both of us are confident it is ready for use.”

“Then finish this up,” the Commander said. “I’ll put together a list of candidates and volunteers for the procedure. I suspect we’ll be able to find a few.”

“I would not be surprised,” Vahlen then motioned him to follow her. “Now this way, there is one last thing I need to show you, which I know you have been curious about.” He followed her as she led him to the genetic labs, which were just as busy as the regular research labs. Stepping into them, he was mildly surprised to see Aegis standing in front of a massive aquarium tank.

“Commander,” Aegis turned in greeting. “I presume she is here to show you her... specimen.”

“Yes, Aegis, I am,” Vahlen looked into the aquarium tank, which was filled with vegetation, some rock formations, and sand. “It’s hiding, isn’t it?”

Aegis’s voice was almost a sigh. “It is.”

The Commander peered into the tank. “What am I supposed to be looking for?”

“Just watch,” Vahlen said, as she tapped on an interface on the tank. “You’ll like it.”

Some fish were inserted into the tank, and the Commander waited a few moments before he saw it. He blinked. “The fuck is that?”

If he didn’t know better, it looked like an octopus. An octopus which had just previously been laying on the tank floor, the exact same color as the sand. But it shot through the water, revealing itself to be at least fifteen feet wide. The skin was pure black, and instead of eight tentacles, it had twelve. He swore that the thing was eyeless, until he saw little black orbs. Not two, but eight distributed around the body.

It was if someone had taken an octopus, and turned it into a Lovecraftian nightmare.

No, that was exactly what Vahlen had done.

“Moira,” he said slowly. “What exactly is this?”

“This, Commander,” Vahlen said with a happy smile. “Is what he have been calling a Shoggoth.”

“A truly distasteful creature.” Aegis commented. “It is well named. As unnatural as the stories it is named for.”

“Yes...” the Commander watched the Shoggoth quickly eat the fish, before floating towards them, extending a few tentacles to touch the glass. “Vahlen, just what inspired this idea?”

“I’m glad you asked,” Vahlen placed a hand on the glass, and the Shoggoth placed another tentacle on the opposite side. “You’re seeing one reason now. Octopi are one of the most intelligent creatures on the planet. They are playful, inquisitive, and clever. They also have the capability to squeeze into impossibly tight spaces, can’t be killed easily, have natural regeneration, and some find their appearance unsettling.”

The Commander saw the arms retained the expected suckers, which had a white sheen to them. Contrasted with the black skin, it was slightly disturbing. “However,” Vahlen said. “What made
this a project worth pursuing is that Octopi are immune to mind control.”

His head snapped to hers. “Are you certain?”

“Unfortunately, she is telling the truth,” Aegis said. “Touching the mind of such a creature is… unsettling.”

“The reason for this is that Octopi don’t have a brain like we do,” Vahlen explained. “Their intelligence is, for lack of a better word, distributed. Image your brain being in your arms or legs instead of just your head. That is how it works for Octopi. Each arm is essentially a brain unto itself, and this comes together to form an intelligence which can’t be controlled by telepathy. The perfect psionic hunters.”

“Well then,” the Commander was definitely impressed. Slightly terrified, but impressed. “So I assume you…improved upon it?”

“Oh, certainly,” she said brightly, motioning at the Shoggoth which was now resting and camouflaging itself on the rock formation. “I started with the Giant Pacific Octopus, and worked from there. I increased the arms from eight to twelve, changed the skin color, in addition to giving it the iron skin modification.”

“A questionable addition,” Aegis said.

“Reduced the eye size, and added additional eyes at strategic points on the body,” Vahlen said, pointing to illustrate her point. “I wanted to emphasize their ability to squeeze into small places, and for us to be able to drop this on an alien base and let it kill everything inside. The beak itself has also been reduced in size.”

“So how does this thing operate on land?” The Commander asked. “It’s still an aquatic animal.”

“That was tricky,” Vahlen admitted. “But the solution we decided upon was a modification of the gills, which can now store water within them and act as…oxygenators, as they would be able to run air through the water to oxygenate it as they breathed on land. Worst case scenario, we also developed a cybernetic implant which performs largely the same thing. But so far it has proven unnecessary.”

“Right,” he nodded. “So…how does it fight? Can it be trained?”

Vahlen motioned for them to follow as she led them into the Containment cells. “It will be easier to show you. Shoggoths treat threats to them as almost a kind of game. They like toying with their prey, and taking them apart slowly before eating them.”

“Charming creatures,” Aegis muttered. “Isomnum would be proud.”

“Quiet, Aegis,” Vahlen sniffed. “Just because it’s not something you can dominate or kill easily does not mean it can’t appreciate getting to know others. Shoggoths have actually really taken to Humans, and seem to like us. Of course I naturally made them inclined to treat us as friendly, but you could almost imagine them as a…guard dog of sorts. A very dangerous pet.”

The Commander snorted. “Funny. You have a demonstration?”

“Yes,” they stopped in front of a cell which had a very angry-looking man inside it, and with him was an array of gauss and laser weapons, with some grenades for good measure. The man was quickly putting on the provided Aegis armor, and shooting them suspicious glances. “I have placed one of the subjects in here, with the best of our weapons and armor. The Shoggoth will be lured
here and we shall see who is victorious.”

The Commander had a feeling that the individual within was not going to survive. He would almost feel bad, if the man hadn’t been convicted for rape and a double homicide. How fitting that he would die at the…tentacles of a monster. “You’re an idiot!” The man yelled in triumph as he placed the helmet on and grabbed the gauss rifle. “You really think you can arm me and I won’t get out?”

“Does he know you’re a Telepath?” The Commander asked wryly.

She frowned. “I don’t know. Doesn’t matter. Please put these on,” she handed them some night-vision goggles. “For the true effect,” she added, giving a thin smile as a compartment opened above. The entire room was plunged into darkness as water sloshed to the tile floors. The man immediately spun to the sound of the noise and opened fire.

“Cute, bitch!” He yelled, firing wildly. “But this armor can see in the dark!”

“And there it goes,” Vahlen said, and the monstrous form of the Shoggoth plunged to the ground, leading to the man emitting an extremely high-pitched shriek as he let loose a volley of fire.

With ferocious swiftness, the Shoggoth lashed out two of its tentacles, even as the rounds bounced off its iron skin, and those wrapped around his legs and slammed him to the ground. The Shoggoth pulled the screaming man closer towards it as more tentacles wrapped around the limbs.

“Shoggoth arms are exceptionally strong,” Vahlen explained as the creature tightened its grip over the hysterical man. “Not especially useful against armor, but that doesn’t really matter.” She pointed as the Shoggoth moved its arms and broke the legs of the man. “Ah, yes. One thing they like to do is break the limbs of the victim. Generally they’ll also try and get them out of the armor, but this isn’t always successful. They have a fascination with taking things apart…like the head.”

As she was speaking the creature managed to pull the helmet off the man, and causally tossed it to the side as it began probing the face of the petrified man. “I thought you said they liked Humans,” the Commander said. “Unless you meant as food?”

“No,” Vahlen shook her head. “I doused this man with alien pheromones. And this Shoggoth won’t eat him. They only eat alien corpses and other non-Human life. I’m fairly sure it knows this is training. I modified them so they would be smart.”

“Yes,” the Commander winced as the Shoggoth crushed the man’s head like a melon and then mostly seemed to lose interest. “It’s good to know they’re smart.”

Vahlen turned the lights back on, and the Commander saw the massive animal move towards the wall opposite where it had come in, which was grated and with no obvious way in. On the other side was a pail of what he assumed was food. “See,” Vahlen pointed proudly. “They know what to do. He’ll be able to get through the spaces for the food at the end. This way.”

“Wait,” the Commander hesitated as she opened the adjacent door. “Inside?”

“Yes, it’s perfectly safe,” Vahlen said, waving him inside. “And the Shoggoths should get used to you.”

“You’re very lucky I trust you this much,” he said, thinking on the strange situations he was in sometimes. He was actually going to be in the same room with a massive octopus from hell. Which was thankfully ‘smart’. The Shoggoth was already halfway through the wall; it really was amazing the tight spaces they could fit through. The gaps were no bigger than one inch width and two inch
Out of curiosity, he glanced down at the pail and should have been shocked, but just sighed.

“Vahlen, why are there hands in the pail?”

“Oh, those,” Vahlen was putting on gloves as she took the pail from him. “Grown Ethereal parts. Easy with Sectoid cloning tubes, and works for all species. We’ve been feeding them various alien parts to get them used to the taste. They quite like it.”

The Shoggoth finally squeezed all the way through, and lumbered towards them, extending a massive tentacle towards him. Grimacing, he reached out his hand, and the tentacle slightly touched it with a sucker, before withdrawing as Vahlen tossed it some Ethereal hands. “Do they have names?”

“Informally,” Vahlen said. “So far it’s usually been some alteration of ‘Cthulhu’ or another eldritch abomination. They’ll be given names eventually. But we only have three so far, and it will take time to grow more.”

Vahlen soon finished up, as the Shoggoth began eating in more earnest. “They secrete a toxin that breaks down the flesh,” Vahlen explained as it ate. “Since the beak is small, it hinders its eating time. Sucking up the dissolved nutrients is more efficient.”

“How will it get back in the tank?” The Commander asked.

“Oh, it’ll just squeeze back through and climb up the wall to the tank,” Vahlen easily explained, pointing for reference, as she peeled off her gloves. “They know the way back.”

“Well then,” he finally said. “I think you would give Revelean a run for his money with this. I don’t know if this should be…impressive, but it definitely seems like it to me.” He smirked. “I really wouldn’t want to have that thing chasing after me. I don’t think I could kill it.”

Vahlen laughed and kissed him on the cheek. “Well, you couldn’t kill it with telekinesis. Rather difficult in a boneless creature.”

***

XCOM Intelligence Control, the Praesidium – Classified Location

12/17/2016 – 10:29 A.M.

Abby looked up after reading the project proposal which Zhang had provided to her. “Shen and Vahlen have been busy. Is all of this…complete?”

“Project Achilles is nearly complete,” Zhang answered. “As are the Manchurian Restraints.”

“Right,” Abby set the tablet down. “Are these mandatory upgrades?”

“Achilles is optional,” Zhang said inclining his head, as he kept his voice neutral. “That level of conversion is voluntary. The advantages provided are immense, especially in terms of infiltration. Shen assures me that we should be able to mimic Vitakarians with little issue.” He pursed his lips. “With that said, not every agent needs to be polymorphic. The Manchurian Restraints will be mandatory. For the first time in history we will have a completely loyal Intelligence corps. That cannot be ignored.”
She could see the appeal of that, although she couldn’t say she was thrilled with the idea of undergoing some kind of mental 1984-ish mental conditioning. However, while she wasn’t sure she trusted Zhang as a person, she did trust him to only do what was necessary. “I see.”

“I bring this up to make you aware of what is coming,” Zhang walked around the holotable and handed her another tablet. “But the other reason was to prepare you for your next assignment, and to get your opinion on a certain matter.” She looked down at the tablet and began reading. “There have been issues in South America,” Zhang continued. “We suspect alien activity, possibly Ethereal-backed. We’ll be sending you to assist ADVENT in uncovering these Reapers.”

“A solo mission or will I have assistance?” She asked, glancing up.

“You are first to assess if there is alien activity,” Zhang clarified. “If there is, you’ll receive psionic backup. These Reapers appear to be extremely skilled, quiet, and deadly. Not many aliens, let alone Humans, can completely rout a Peacekeeper base.”

She frowned, already noticing some interesting notes. “All attacks attributed to them have been exclusively against ADVENT. Not even one civilian casualty. There never seem to be more than one or two operatives as well.”

“Which suggests the leader is local,” Zhang agreed with an impressed nod. “And given that these methods of operation haven’t changed, it implies that if they are being alien-backed, they are not giving the orders.”

“Aliens haven’t had an issue with civilian targets before,” Abby frowned. “And they definitely don’t care about Human opinions.”

“That’s what doesn’t add up,” Zhang clasped his hands behind his head. “There are several possible explanations. The first is that the Battlemaster is in charge, and civilian targets by the aliens have dropped significantly. The second is that there are no aliens backing them, but they do have a psion somehow. Either explanation is dangerous.”

“They likely have contacts in the population,” Abby said. “Any leads?”

“Unfortunately not,” Zhang answered, activating the holotable showing South America. “We suspect they are mainly operating out of Argentina, not anywhere in ADVENT-controlled territory. The Argentinian government has, of course, denied knowing anything about it and has stated their willingness to hunt them down. We have seen few results one way or another.”

“It is,” Zhang confirmed grimly. “Which is why I’m not convinced they’re involved. ADVENT does not want to march any government official in front of a psion without some kind of evidence beyond our suspicions of where they operate, but it would be the quickest way to determine the situation.”

“But it’s diplomatically questionable,” Abby finished. “Not good PR without hard evidence.”

“Our best opportunity is to capture one of the operatives,” Zhang said. “And that is the first phase of your operation. Work with ADVENT to capture one of the Reapers. Depending on what you learn, you’ll get more support. Even if there aren’t aliens behind them, they are a threat which needs to be stamped out.”

“Sounds like a plan,” Abby said. “When do I leave?”
“When the Restraints are complete,” Zhang said. “There is almost certainly a psion working with them, and I do not want you compromised.”

“Understood,” she flipped to the next slide on the tablet. “What’s this?”

“A list of names ADVENT has been providing as useful defectors,” Zhang explained. “Until they fully set up the AEGIS Division, we’re making use of the aliens which pass their tests. I found an interesting name on it. Recognize this one?”

Abby looked to where he pointed. “Runi’cairu’intha?” She looked up, thinking. “Wait. Isn’t that Nartha’s sister?”

“It appears so,” Zhang gave a thin smile. “A family of traitors, it seems. I’ve requested she be transferred here. But there is the question about what to do about the growing number of aliens at the base. Paperclip base will be fine for housing them, but there are measures which need to be taken to ensure our own security. How should this be solved?”

Abby took a few moments to think. Every alien being brought in was a security risk, regardless of their intentions. There was something of a line between encouraging defection, and allowing them to be uncontrolled. “Psionic screening should determine if they are allowed in to begin with,” she said slowly. “Trackers and cranial bombs to provide constant monitoring, and undergoing the Manchurian Restraints when complete. That should reduce the security risk significantly.”

Zhang raised an eyebrow. “Extensive, but good to see that some aren’t ignorant of the risk letting aliens in entails. Good intentions mean little given how we know psionics can work, as well as mental programming. We would be foolish to assume the aliens haven’t developed something similar to the Manchurian Restraints, even if they don’t apply it to their Zararch agents.”

“If they’re really interested in helping,” Abby said. “Then they would realize the necessity of these measures.”

“Not necessarily true,” Zhang pointed out. “But within XCOM, absolutely. I believe I will bring this up with the Commander, who I feel is becoming a little too encouraged with this development. XCOM is a Human organization, not one with aliens as an integral part of it. They can be useful, but they should not be more than that.”

“Agreed.” Abby didn’t know what the politics of the Internal Council were right now, but she could at least agree that aliens shouldn’t be allowed free reign in XCOM, or access to anything important. Aegis was an exception in many respects, but that didn’t mean the rest of these defectors should be.

“I will need an answer regarding Project Achilles within several days,” Zhang said, turning away. “That is all. Refer to the collected intel to prepare for your mission in the meantime. Dismissed.”

*Engineering Bay, the Praesidium – Classified Location*

*12/17/2016 – 12:01 A.M.*

When the Commander saw the array of new weapons on the testing range, he smiled.

This was going to be a good day.

“Commander,” Shen greeted jovially. “I’m pleased you came so quickly. I believe you’ll be happy
“I already like where this is going,” the Commander said, as they both walked over to the table. “Is this what I think it is?” The weapons on the table were clearly inspired by the alien plasma weapons, but with some obvious improvements. The colors were still black and silver, with some small green outlines, but the exposed barrels and components of the rifles were gone and sealed.

“Once we cracked Elerium, developing our own plasma weapons was only a matter of time,” Shen confirmed as the Commander grasped one of the rifles. It was lighter than a gauss rifle, but much heavier than a Pulse rifle. “The range is set for you to test them out.”

The Commander took a firing stance and raised the rifle towards the alien dummy, and fired. Several green bolts of plasma shot out and slammed into the dummy, easily obliterating the face, with the residue eating through the body itself. The recoil was less than he was anticipating, and so he continued firing as the rifle spat out bolts at a rapid pace.

After a few more seconds there wasn’t much left of the dummy, and he lowered the rifle. “I like it.” He turned to see Shen standing beside him, holding what looked closer to a plasma autorifle. He had an expectant look on his face.

“Given how much you seemed to like destroying that dummy, I figured you would want the most powerful non-MEC variant we developed.” The Commander happily obliged and firmly grasped the far heavier piece of equipment, having to wield it more like a cannon than rifle. “Try destroying that one.” Shen pointed to another dummy, this one armored in some kind of alloy protection.

The Commander grinned. “Gladly.” He pulled the trigger once the shot was lined up, and with a small whine the weapon spat out dozens of plasma bolts in quick succession. The alloy armor protecting the dummy lasted a few shots until the sheer hail of green bolts turned it into charred ruins. The Commander continued firing until the weapon stopped, and ejected some kind of plasma cell.

He let the barrel end set against the ground. “I think it works.”

Shen appraised the damage and gave a short nod. “I quite agree, Commander, thank you for testing it to be sure. I would not have known otherwise.”

The Commander smirked at the rare sarcasm from Shen, and moved to set the plasma…autorifle? Cannon? Whatever it was, he delicately set it down by the remainder of the weapons which included a pistol and sniper rifle. “It’ll be nice to be equals with the aliens in weaponry,” he said thoughtfully. “There is little we can do to improve. We can only look to the unconventional.”

“I believe Vahlen has shared her ideas on that front.” Shen motioned him to follow as he led them to another table in the workshop. “In the meantime, I haven’t ignored our other weapons. I have had a team developing specialized ammunition for our gauss weapons and in anticipation of ADVENT ETC weapons.”

He didn’t recognize the latter statement. “ETC weapons?”

“An initiative ADVENT is finalizing.” Shen explained. “Gauss weaponry is powerful, but there are some drawbacks, specifically the expense and low rate of fire. Electrothermal-Chemical weapons are envisioned to be a means of providing ADVENT with an EMP resistant weapon, and upgrading every single conventional firearm to be near the level of gauss effectiveness.” He paused. “It is an ambitious project, but one that isn’t relevant to XCOM. If you want, I can forward you the current...”
status of it.”

“Do that,” the Commander said. That sounded like something he wanted to keep an eye on. “So what do you have here?”

Shen reached a table with several gauss slugs resting vertically on it. The first had red rings around the top and base, with ClF3 stamped along the side; the one next to it had green rings, with H2FSbF6 stamped along it. The one after it had yellow rings, and a fairly obvious radioactive symbol on the side, while the final one was orange, with the familiar outline of a MELD nanite stamped on the side.

“I want to note that none of these are armed, nor do I think it’s safe to test them here,” Shen explained as he picked up the red-ringed slug. “We’ve been generally conducting these in extremely contained areas, or in the desert. I also would advise not letting soldiers use these without training, because while we’ve attempted to mitigate user danger, we cannot eliminate all the risk.”

“Well then,” the Commander motioned for him to continue. “Tell me.”

“This is, to put it mildly, an incendiary round,” Shen lifted the red-ringed slug again. “Within it is a very small amount of Chlorine Triflouride. Upon impact it will likely ignite and heavily damage the target. Useful against everything, but particularly against Elites and heavy infantry.”

He picked up the green-ringed slug. “This is the most delicate round, but it was necessary to contain what is within it. Fluoroantimonic acid is the most dangerous acid known to man, and it can only be contained in Teflon, which makes up a large portion of this slug. Extremely effective against vehicles and Ethereals.”

With that, he moved onto the radioactive slug. “This is intended to primarily be an anti-Ethereal weapon, but again, can work against others. This is radioactive, and would be used for contaminating Ethereals irreversibly. At the moment I don’t believe it’s safe for regular soldiers to handle, only MECs. But we have confirmed it does work.”

He picked up the last slug. “And this one contained a small amount of pre-programmed nanites that, upon impact, will begin eating all alien material for thirty seconds before self-destructing. Useful against…virtually anything.” He set it down. “I should note that all of these are difficult to produce, even for us, so they should be used sparingly.

“That,” the Commander said. “Is an excellent development. Exceptional work.”

“I’ll pass that along to the team,” Shen said, as they began walking deeper into the workshop. “The aliens are likely to develop new and dangerous tools. We need to be sure to keep pace. I intend on sharing this with ADVENT, since they would likely be able to produce far more than we could.”

“Good idea,” the Commander nodded, then raised an eyebrow once he saw what was up ahead. “Hello, what have we here?”

The suit of armor looked slightly similar to the Aegis armor, but was much bulkier. The suit itself was noticeably taller, with silver alloys weaving the entire suit together, while the hardened plates protected the vital areas. “Much like plasma weaponry,” Shen said as he appraised it. “Elerium allowed us to develop something like this. What can be considered to be the first true powered
armor."

“I’m going to put it on, if you don’t mind,” the Commander said. Shen gave a short laugh, and motioned for him to do it. Once Shen unlocked the armor, it took him close to fifteen minutes to put it all on. It wasn’t easy to put on unassisted, but it was certainly doable. Once on, he put on the helmet and he was connected to the suit.

His HUD had a blue box on the lower edge. LOCK ARMOR? YES/NO?

“Lock armor,” he stated. He physically heard the suit clicking together as it sealed him inside, and now he could walk forward. The HUD flashed up a new message. POWERED ASSISTANCE? YES/NO?

“Not yet,” he said, wanting to walk around with it unpowered first. A few minutes like that definitely confirmed that it was not anything close to agile, but he could still move around fairly quickly. Being gene-modded definitely made things easier, and he could easily run in it. Jumping wasn’t easy either, but it was doable.

The HUD was mostly bare, just showing his current vital signs and that he wasn’t connected to any other nearby soldiers. Interestingly, suit integrity was also displayed in the lower right hand corner. A “Commands” box was in the upper left. “Show commands,” he said.

The center of the HUD showed a list of one-word commands with short descriptions he found he could scroll through by blinking.

HARDEN: All MELD nanites harden on the suit providing increased protection. Note – Cannot use in conjunction with other orders. All other orders will contradict this one.

REPAIR: MELD nanites will attempt to repair noted suit damage. Note – This will consume nanites.

HEAL: MELD nanites will attempt to stabilize any sustained injuries of the user. Note – This will consume nanites and is not a substitute for medical care.

CONSUME: Orders all MELD nanites to depart the suit and kill all aliens within a ten foot radius – Note: User will not have access to nanites until this action is completed. It is advised this only be used in close encounters.

REPLENISH: Orders all MELD nanites to depart the suit and replicate through aliens and materials until they are at peak suit numbers. Note – User will not have access to nanites until this actions is completed, and the time required will depend on the current amount of nanites.

COLOR: Set the color or camo type of your armor. This will not change unless specifically ordered.

LOCK/UNLOCK – Locks or unlocks the suit for combat or unsuiting.

POWER ON/POWER OFF – Activates the elerium core of the suit, allowing greater mobility, speed and strength.”

The Commander looked back to Shen. “Good thinking, putting nanites in this. It certainly gives more…options.”

“It seemed a logical step,” Shen agreed. “While they don’t have the versatility of the proposed MELD Operators, there are certainly ways they can be helpful.”
The Commander took a few steps forward. “Power on.” The elerium core whirred to life and an image of a power cell appeared in the upper right corner, with a percentage sign next to it. He also noticed that the lower left corner had the outline of a nanite, with the same percentage sign. Likely showing the percentage of nanites left. He also saw a color block close beside it, which was silver. No need to change it yet.

“How long do the power cells last?” He asked.

“Full use will drain one in four hours,” Shen said. “However, Titan armor has two cells which automatically swap when one runs out. We unfortunately couldn’t fit a recharging module in it.”

Eight hours seemed like plenty of time to him, and with his now powered suit, he began moving again and was amazed how much easier it was to move. Spending some time just charging through the small obstacle course Shen had put together for testing, he found that not only was he as fast as out of armor, but the suit could make inhuman jumps, boasted higher strength, and offered unparalleled momentum.

It also helped that the suit was temperature controlled, and noticeably better than previous iterations. Once he felt he was finished testing the suit, he walked back to Shen. “Power off,” he said, as he saw Shen holding a plasma rifle. Bless the man, he was just about to suggest that he be the next functional test.

He was learning how these went, it seemed.

Shen just looked resigned to shooting his Commander again. “I assume you wish to test its durability?”

“Yes, you may fire when ready.”

Shen motioned him to a small preset range by the obstacle course, likely for this situation. “I’ll start firing in ten seconds.”

The Commander counted down in his head, and about the third second he gave his command. “Harden.” The armor integrity indicator in the HUD suddenly had a transparent yellow overlay, just as Shen began firing. The Commander felt the bolts slam into his armor, and even looked down to see the residue trying to eat through the material.

Shen began targeting the legs and arms, a surprising show of confidence since he normally just fired a few times and was done. The HUD yellow overlay began turning to red, and the Commander saw the MELD percentage drop to the 25% mark.

“End harden,” he said, and then let the armor itself take a beating from the green bolts. The impacts forced him to take a few steps back, and the indicator began flashing orange on the chest piece. “Repair.” He raised a hand, indicating for Shen to stop, and the man immediately obliged, as the nanites began repairing the suit damage.

By the end his MELD percentage was 12%. “Replenish,” he ordered, and he saw what looked like dust start floating off him, and then landing on whatever was nearby, which were cardboard boxes, old electrical parts, and targets. He assumed none of that was valuable to Shen. It took close to ten minutes, and he watched in fascination as the objects around him seemed to crumble into nothing, then finally the dust flew right back onto him as if nothing had happened. The MELD indicator showed it as 100%.

“I think,” the Commander said as he approached Shen. “You might have outdone yourself here.”
“I’m glad you think so, Commander,” Shen did look rather pleased. “Whatever it takes to protect our soldiers.”

“They’ll definitely appreciate this,” the Commander said. “I don’t suppose you have anything else to show me?”

“Actually, yes,” Shen motioned to the Cybernetics Lab. “Right this way.”

***

Cybernetics Lab, the Praesidium – Classified Location

12/17/2016 – 1:32 P.M.

Both of them stood in front of a Gateway mounted on a platform with three different targets in front of it. “One application of Gateways we haven’t seen the aliens use is that of a weapon,” Shen said as several operators were performing checks on the gateway. “Aside from transportation, we figured that they could also operate as a delivery mechanism for weapons which normally couldn’t be mounted.”

“All set!” One of the operators called.

“So using it for shooting lasers through?” The Commander asked. “No need for a power source since it’s supplied at the site of the connecting Gateway?”

“Or missiles, or anything else,” Shen added. “This makes early missile detection nearly impossible, as well as their nuclear detection. We could launch nukes or missiles from a remote island in the Pacific which could be delivered across the world with no prior warning.”

“Gateway on!” Another operator yelled as the Gateway initialized. “Synching!”

“The connected Gateway is outside the Praesidium,” Shen said as the Gateway aimed at the first target. “Different weapons will be fired through it to demonstrate the versatility of it.”

A massive laser suddenly shot out from the Gateway and slammed into the target, vaporizing it almost instantly. The laser immediately shut off as the platform rotated to the next target. A few seconds later a small rocket shot through it and exploded into the second target. Another rotation lined it up in front of the third, and this time a stream of plasma bolts turned the final target into cinders.

“Test successful!” Came the call. “Desynching.”

“Very useful,” the Commander said, nodding as the teams worked on shutting it down. “The only issue I’m seeing is the size. If it could be miniaturized…”

“That’s the next step,” Shen rubbed his forehead. “But Sovereign Tech is unsurprisingly hard to change. We’re not sure of the clear path to take, and so far our attempts have not gone well. I’m beginning to see why the Collective hasn’t explored this, because they had to have thought of it.” He shook his head. “The good news though is that ADVENT has successfully established at least one Gateway in every major military base, and we can sync to all of them. Progress has been made there, at least.”

“Excellent.” Good. Instant reinforcements if needed, exactly what he wanted. “Keep working on trying to miniaturize this, and we have a weapon even the Collective can’t really match.”
“In the meantime,” Shen said, walking over to where the MECs were stored. “We have finished the Valkyrie-class MEC, and designed a…better weapon for the Shinobi-class.” It did not take the Commander long to see either of what he was saying.

The Valkyrie was almost exactly what he imagined it would be. Extremely aerodynamic, plenty of fins, wings, and mounted engines on the shoulders, with boosters on the ankles, legs, and arms. This one was colored pitch black with blue highlights, and stood close to the size of a Shinobi, about twelve feet.

“The Valkyrie,” Shen presented proudly as the MEC walked towards them. “Not really the best place to fly, but I assure you that this is far more powerful than the Archangels. Increased durability, nanite repair, flamethrowers and chemical dispensers, micro-missile launchers, and flechette launchers, and cables to anchor itself to enemy aircraft. Anything air-to-ground was considered, and most implemented.”

The Commander rubbed his chin. “I don’t suppose it can hold a sword?”

“Funny you should mention that,” Shen chuckled, amused. “To answer your question, it can, though that isn’t what it’s designed for. With that said, the Shinobi has a new weapon.” He pointed and the Commander saw what looked like a cross between a poleaxe, spear, and hammer. It was sized for a MEC, so the proportions seemed large to him, but it had a massive axehead, with the point extending into a sharp point, and opposite the axehead was studded block clearly supposed to be a blunter alternative.

“I swear I’ve seen that before,” the Commander muttered.

“Quite possibly,” Shen agreed. “That is a Mordaxt, or alternatively, the murder axe. It offers a much more versatile range of actions compared to the standard blade. Now the Shinobi can cause damage to any enemy unit by adapting its style to the weaknesses.” He pointed at the handle. “We did make some changes. The weapon length was reduced to be wielded as a one-handed weapon with the shield, but it can be extended to two handed if such an approach should be taken.”

He pointed at the sections. “The entire weapon has the same MELD reinforcement as the Templar maces or other blunt weapons, though more…advanced. Each main part; the point, hammer, and axe; has configurable attacks, such as the electrical and friction-based attacks of bladed Templar weapons. In this way it allows for more configurability based on opponents.”

That did seem like a useful weapon. “I suppose you’ve made a standard version for our Templars?”

“Of course,” Shen confirmed. “Only a couple, but they will serve any soldier well who wishes to use them.”

The Commander looked in satisfaction on the massive MEC and the new tool of war Shen had helped create. The aliens were definitely going to be occupied for some time more. “Excellent work here today, Shen. Your team is to be commended for the work done. A lot of people will owe their lives to your work.”

“I’ll pass it along, Commander,” Shen nodded thankfully. “It’s…strange. I feel like at some point we should be feeling that the end is coming. But there only seem to be more opportunities and possibilities opening up, not fewer.”

“There are no roadblocks here,” the Commander said firmly. “There is only advancement. Perhaps one day we will discover all there is to know…but that is not coming for a long, long time.”
“And until that point,” Shen said. “We’ll keep pushing the possible.” He pursed his lips. “While I
certainly don’t agree with you on everything, I can’t deny that Humanity has made more progress
in this war than in the past fifty years. If only we could study what we have in peace.”

“One day we will, Shen,” the Commander told him, echoing the sentiment. “One day we will.”

***

Barracks, the Praesidium – Classified Location

12/25/2016 – 11:12 A.M.

Christmas, the largest holiday of the year, at least if you were American.

Oliver certainly appreciated the Commander giving everyone the day off and the celebration in the
Barracks with everyone enjoying a few hours of levity. With that said, he didn’t particularly care
about the holiday itself. At least in the Netherlands their actual gift-giving celebration was a few
weeks back, and he wasn’t exactly religious to begin with.

Still, the atmosphere and comradery was nice to see.

It was also somewhat amusing to see the aliens try and mingle, even if they really didn’t know
what was going on. Oliver suspected that someone had told them it was a ‘holiday’, and they
probably didn’t really want to ask further either out of embarrassment or because they didn’t care.
They were certainly taking part in the food and drinks, though, at least the ones they could eat.

They were staying far away from any chocolate though, which had resulted in some teasing.

“This is an interesting gathering,” an alien said, walking up beside him with a cup of water in his
hand. “You do not participate in it?”

“Parties? Nah,” Oliver snorted. “Not my thing, too old to really enjoy them. Nice for everyone else
though.” He looked towards the alien in question a bit more, who was unsurprisingly a Vitakarian
who he didn’t recognize. He was tall, darker grey skin than he remembered, and looked more
muscular than the scientists. Probably a defector who used to be a soldier.

“Ah, I see,” the alien took a sip of his water. “Do you mind if I ask you a question?”

“As long as you tell me who you are,” Oliver answered, turning more fully to the alien. “One of the
defectors?”

“Yes,” he answered. “I…was Runi’larias’intha. You would call me Larias.”

“Well, welcome to XCOM if someone hasn’t said it already,” Oliver said. “Intha, huh. You know,
we apparently had a Zararch defector from the same area.”

“Well, that all happened before I came,” Oliver clarified as he went to grab a soda, with the alien
following behind him. “But I don’t think the Commander would lie about that. And telepathy
makes figuring out if they’re genuine fairly easy.”

“Interesting,” Larias took a sip of his water. “There were several soldiers who had siblings in the
Zararch. I imagine the Zararch is not pleased with us.”

“What a shock,” Oliver snorted, deadpan. “I can’t imagine why they would feel that way.”
“So, about my question,’ Larias said as they sat down at one of the tables. “I know this is a Human holiday, but what is the point of this ‘Christmas’?”

Oliver raised an eyebrow, amused as he took a sip of his drink. “Do you not know how to use the Internet?”

“I am still learning,” Larias admitted, looking down. “And that has not necessarily been my priority the past couple weeks.”

“Sorry,” Oliver apologized. Oh boy, how to possibly sum up Christmas. “Alright, well, the point of Christmas sort of depends on who you ask. To some people it’s a celebration of friends and family where they give each other gifts, and to others it’s an important religious holiday.”

Larias blinked once. “I would not have guessed it is a religious holiday. Or treated as such.”

“Eh, even religious people follow the gift giving tradition,” Oliver said. “You’d probably see it more if you visited any American city. Now that I think about it, I wonder if the parades and events are still happening despite the invasion.”

“Interesting,” Larias said. “But why give gifts at all?”

“To tell you the truth, I don’t know,” Oliver admitted. “But we’ve been doing it for a long time, and it’s likely whatever original meaning there was is gone. Still, I enjoyed this time of the year.”

He looked at Larias thoughtfully. “What about your species? You have to have holidays, right?”

“Oh, certainly,” the blue eyes of the Vitakarian seemed to brighten. “Each race has a multitude of their own, and there are a number which are universally recognized. The Celebration of Unification is the day when the Aui’Vitakar was formed, which fully unified our species. It is one of the few days when there are actual planned celebrations.”

“Sounds nice,” Oliver nodded. “Hopefully we’ll have a point where we can celebrate something similar.”

“Hopefully you do not emulate some of our other holidays,” Larias said with some resignation. “The next are the Days of the Plague. These are six days in sequence, where we remember the victims of the Plague that almost killed us. There are six days, one per species. There are subdued city events where people can visit the memorials, speak to the last few witnesses, and learn of the heroes and victims of the Plague. Each night recognizes a different race, and the respective race wears black clothing for the day.”

While it was clearly a sad event, that to Oliver sounded extremely interesting, if somewhat morbid. It was good that the Vitakara remembered the dead and honored them as they could. A shame the majority were allied with the Ethereals, because based on his interactions with them, he was sure both species could have been allies.

“It’s good you remember that,” he said. “Even if it’s painful. We do have similar days of remembrance, even if they aren’t for something quite that deadly.”

“There is a happy end to this,” Larias said. “The seventh day is the Celebration of the Arrival. This was when the Ethereals arrived and saved us. That is another day of celebration and communion with family and friends. We all wear gold and white that day; a bright ending to a somber week.”

Oliver sipped his drink. While he didn’t exactly like the idea of any celebration to the Ethereals, he did have to admit he completely understood why there was one. If Humanity had been dying and they were saved by an alien species, they would definitely have a holiday in their honor. In some
ways, that event it reminded him of Easter, crossed with a trip through a Holocaust museum.

“That sounds nice,” he said. “Much as I dislike the Ethereals, they did save your species.”

Likely because you were useful pawns, he thought to himself, though kept that particular thought to himself. He doubted there was another reason for their actions.

“Not all of the Elders are bad,” Larias said. “Elder Aegis proves this, as did Elders Sana’Ligna and the Battlemaster.”

Oliver gave him an incredulous look as he took another sip. “The Battlemaster is trying to kill us.”

“As you are trying to kill him,” Larias pointed out. “Do you consider yourselves evil or wrong? One can be respected and honorable while being on the wrong side.”

“The Battlemaster ordered an attack on Washington D.C.” Oliver reminded him. “And has not exactly been forthcoming about the state of the millions of Humans in captivity. He’s not as… bad…as some others, but I’d hardly call him someone I’d respect.”

“I suppose you have reasons to feel that way,” Larias sighed. “I do not blame you, but the Battlemaster was one Ethereal who I have personally seen and spoken to. He has respect for his soldiers, and is one who I cannot help but admire, even now.”

Oliver was aware of the morale boost that occurred when commanders walked among the rank and file. For the Vitakarians to have a deified Elder do the same to them…he supposed it made sense, even if it blinded them to certain realities about their masters. Well, maybe they would realize that one day.

But for now, he’d just let everyone enjoy the day and save the arguments for another time.

***

Barracks, the Praesidium – Classified Location

12/25/2016 – 12:01 P.M.

“Wow, I actually didn’t expect to get something,” Sierra looked at the neatly wrapped gift before her, a small box which she appraised. It looked very much like the stereotypical Christmas present, with a red bow and everything.

“Hey, it’s Christmas,” Ted said happily as he took a seat beside her and Anna. “And I wasn’t just going to not get my squadmates something, limited as my options were.”

“Technically I think we’re called a ‘Host,’” Anna pointed out absentmindedly, as she looked at her own identical box, weighing it to try and guess what it was.

Sierra rolled her eyes. “Whatever. Now I feel bad for not getting you anything,” she shrugged, realizing just how lame it would sound. “Guess I couldn’t think of something that would be…well, appropriate.”

“Hey, she ditched me too,” Anna chimed in, lightly punching her arm mockingly. “Though I can at least say I made some of the food for the party, so that was technically my gift to everyone.”

Ted waved dismissively, a smile on his face. “Don’t worry about it, Sierra. I’ll take your kill count as my Christmas present. Just keep killing more aliens.” He scratched his beard. “But I had the
same problem as you, namely ‘What can I get my squadmates who have jetpacks and use laser 
weapons that would actually be alright?’ Now, I can’t promise this is on the level of an Archangel 
suit, but I like how it turned out.”

“I swear that everyone in America is too stressed about gifts,” Anna said as she kept looking at the 
bottom of the box. “It’s the thought behind it that’s important. No one is going to tell you the gift 
you gave them is bad.”

Sierra coughed. “Well…about that…”

Anna just sighed. “Of course you did. Well, go on.”

Sierra flushed. “Uh, well, this was a long time ago. Back in high school. My boyfriend at the time 
had offhandedly mentioned that he liked this band, I don’t remember the name,” she winced. “In 
retrospect, he was very clearly being sarcastic, but since I wanted to do something nice, I ended up 
getting tickets – which were not cheap – to go see them.”

“I don’t know what’s more surprising,” Anna commented. “That you somehow didn’t recognize 
sarcasm, or that you had a boyfriend.”

Sierra sniffed. “What is that supposed to mean?”

“Nothing,” Anna smirked. “Carry on.”

“At least the look on his face was funny,” Sierra recalled. “Well, right before he slowly asked me 
what this was supposed to be. It didn’t take us long to figure out the…miscommunication.”

“Well, sounds like he took it well,” Ted said. “So, what did you do with it?”

“Oh, we resold the tickets and I took him to dinner, than gave him whatever money was left.” 
Sierra had ultimately enjoyed the night, once that embarrassment had subsided. “And that is my 
story of why I suck at giving gifts and do the safe, but boring thing of just giving people money to 
actually buy what they want.”

“Do you not give out wish lists?” Anna asked.

“Well…”

“Note to self,” Anna muttered. “Make Sierra a wish list so she has actual gift ideas. Anyway, so 
what happened with this boyfriend?”

“Nothing bad, if you’re wondering,” she shrugged. “Different life choices. He went to school on 
the other side of the country, I went into military. It was sad, but we both knew it was for the best.” 
She paused, thinking. “I hope he’s still alive.”

A few moments of contemplative silence passed. “A good story,” Ted finally said. “But I want you 
to open the boxes now. That is why I wanted both of you here.”

“Good idea,” Anna said. “I’m guessing it’s one of those action figures. It’s about the same size.”

“Nope,” Ted’s smile grew. “Go on then.”

Sierra pulled off the bow and followed with the wrapping paper. The box was roughly a foot tall, 
maybe a bit higher, and she opened it and was somewhat stunned as she pulled out a fully colored 
statue. It felt and weighed like it was made out of plastic or some kind of lightweight material, but
felt sturdy enough.

But the statue itself was awesome. It had a flat base, and depicted above was an Archangel flying through the air, which was clearly her own armor from the color and markings, and shooting from her wrist was a massive gout of flame roasting a Muton, which seemed to be the main support for keeping the figure ‘flying’ above.

It was the colors that really brought it together, and it was clear that there had been a lot of time and energy put into this. “Did you make this?” She asked incredulously.

“Well, I designed it,” he said modestly. “It involved me having to learn how to work a bunch of modeling programs and making something that was actually decent. 3D printers are great, and that was the easiest part.” He grinned. “The colors were all mine though, and yours in particular weren’t easy.”

“Damn,” Anna whistled. “You never said you were an artist.”

Sierra looked over Anna’s own statue, and it was equally impressive. It depicted Anna’s Archangel hovering shortly above the ground, supported by fiery jets, as she fired at what was probably a Vitakarian soldier, while a brightly colored explosion was killing a Muton in wonderful detail. There were other alien corpses on the ground, dead judging by the missing limbs and yellow wounds.

“Mine has more dead aliens,” Anna smirked. “Therefore it is better.”

“Yeah,” Sierra set her own on the table. “But mine has a flamethrower.” She narrowed her eyes as she noticed something interesting about the bases. “Hey…” she moved the bases a little closer together and then glanced towards a smiling Ted. “Alright, this is cool.”

“I’m glad you noticed,” he said, standing. “I designed it as one set, and then broke it into respective chunks. But it does look best when put together. And that includes my own piece.”

He reached down to pick up a plain box which had been there the whole time, and pulled out a similarly striking statue. In a similar vein to the others, it had Ted’s own Archangel suit, which was on the ground, and blasting psionic energy front his hands into a line of Mutons. He had somehow managed to capture the destructive distortion around him, with the suit being slightly obscured by purple ‘mist’.

He moved it forward, and completed the set. “And there we go. Maybe selfish, but if I’m making neat little pieces for both of you, I definitely want one of myself.”

“This is amazing,” Sierra said slowly. “Thank you for this.”

“Same,” Anna said. “No wonder you’ve been busy lately.”

“All I ask is you don’t break it,” Ted cautioned lightly. “It’s plastic, so it won’t crumble in your hand, but it’s not exactly made of alloys. Oh, but just in case.” He pulled his phone out. “I’m getting at least one picture-“

“Oh-huh, nope,” Anna stood and pulled Ted over to them and grabbed the camera. “You’re getting in the picture here.”

“But it won’t get the-“

“Hey, I got this,” Anna angled the camera. “I can take group selfies just fine.”
She snapped the picture and handed his phone back. “There you go, now you take the other pictures you want.”

Sierra smiled, and regardless of what else happened today, this would definitely go into the books as a great Christmas. Certainly one of the most memorable, and not necessarily because she was in XCOM.

Cybernetics Lab, the Praesidium – Classified Location

12/25/2016 – 3:37 P.M.

The Commander was surprised both Vahlen and Shen wanted to meet today of all days, but he supposed it wasn’t out of the realm of possibility to expect they would use it as the demonstration of another project. As a gift of sorts. If so, he wasn’t complaining.

The Engineering Bay was quiet as the workers were enjoying their day off in celebration, and most of the machines were also powered off minus the generators and MELD Production plants. It was a good feeling not to have to worry about running out of MELD, and they were producing enough to likely support a small country. More than enough for XCOM.

The circular doors to the Cybernetics Lab slid open and a few minutes later he was back in the Lab, which looked almost the same as it had a few days ago. The MEC suits were still and no machines were moving. Shen and Vahlen were standing a short ways into the Lab, and beside them were two other figures, one armored, the other not.

“Commander, Merry Christmas,” Shen greeted.

“Same to you, Shen,” the Commander reciprocated. “So, you and Moira, you wanted to show me this today?”

“Yes, it just so happened that we completed Project Achilles several days ago,” Vahlen said. “And both our volunteers underwent the procedure successfully, as you can see.”

The Commander looked to the two figures. Vahlen had let him know that both Zara Venator and Isaac Cabal had volunteered for the procedure, and he could definitely tell some differences. Namely that Zara’s hair was missing. “They said it was necessary,” Zara said, shrugging as she noticed him looking. “It’ll grow back eventually.”

Aside from that, she looked largely the same, although her skin seemed to be almost…flowing in some places, with orange ripples running throughout. Not quite translucent, but something fairly close. “So,” the Commander crossed his arms. “The body was enhanced with MELD, if I recall correctly.”

“Correct,” Vahlen stepped forward. “The skeletal structure was hardened with MELD, making it extremely difficult to break or injure. The organs have similarly been enhanced to be more efficient and heal quickly, and the nervous system is able to be controlled via the Neural Regulator, as in pain can be shut off.”

“Good thing too,” Zara raised her hand, and the Commander watched in fascination as her skin seemed to pull back, revealing the raw muscle underneath. “I don’t think I’d be able to do this if I could feel pain.”

“And yes,” Vahlen said. “The skin has been replaced with a MELD equivalent. It can facilitate
protection, appearance control, and enhanced healing. An improved Iron Skin, if you would. Instead of reinforcing the skin with MELD, it has replaced it entirely.”

“Not going to lie,” Zara grimaced. “The appearance changer thing is weird as hell. Still, I can demonstrate.” She closed her eyes, and before his eyes he watched her white skin turn to brown, and when she opened her eyes and showed her now-blue irises, she looked almost unrecognizable. No, she was unrecognizable aside from the voice.

“Huh.” Was all he said. “It did work.”

“Don’t expect I’ll be using this much,” Zara said as she reverted to her normal skin tone. “But Zhang will love it.”

“This isn’t quite perfect,” Shen pointed out. “It only changes skin and eye color, and doesn’t change facial structure or voice. But appearance-wise, it is an improvement.”

“So how durable is she?” The Commander asked, walking around her.

Zara sighed and unstrapped the gauss pistol on her waist and tossed it to him. “Shoot me and find out. Don’t worry, I won’t feel a thing. Not the head though.” She shot a glance at Vahlen. “While they say that even a headshot should be survivable if I’m fortified, I’m not doing that yet.”

The Commander moved around until everyone except Zara was behind him, took aim at her chest and fired several shots, then shot once in the arm and leg. The impacts did force her to stumble back, but she showed no signs of pain. Curiously enough he saw no blood leak out from the wounds and a minute or so later they closed up.

“Wounded blood vessels clot almost immediately if a breach is detected,” Vahlen explained. “Another benefit to injecting the blood with nanites. Skin wounds are healed to seal from outside contamination, and the wounded tissue internally will be repaired.”

“The downside is that I need to keep my MELD levels up,” Zara said, pulling out a small cube from a pocket. “Too many nanites used and I won’t function. Which is what these are for.” Her skin pulled back from her shoulder, and there was a small implant embedded in the muscle. She placed the cube into it and it disappeared as the MELD was disappeared into her body. The skin closed back up over it.

“Impressive,” the Commander said. “And you can harden the skin?”

“Yep,” she smiled and her skin began changing color again until it was a steel grey with the interlocking hexagonal pattern which was far more noticeable than on the Iron Skin modification. “I would not advise getting punched by me when I’m like this. Or trying to punch me in the first place.”

The Commander tapped a finger on her arm which was extended to him. It didn’t make any sound, and definitely wasn’t something that reminded him of metal. But it was hard and cold. If he didn’t know better, his first guess would be that this was a machine instead of an actual person. “And I assume this holds up under heavier fire?”

“We tested it against plasma, laser, and gauss,” Shen said. “Along with grenades. Those did the most damage, followed by plasma and gauss. Lasers were not as effective against it.”

“Excellent,” the Commander gave a grim smile. “And psionics?”

“Depends on the intensity,” Vahlen answered. “However, they are at least on par with plasma.
Destructive psionics are one of the highest dangers to Operators, but it needs to be sustained as the skin *will* heal injuries until MELD reserves are depleted.

“Now, this would already be a dangerous opponent to fight,” Shen said, gesturing the other armored soldier, Isaac, forward. “But with the additional capabilities of Operated MELD, the potential is limitless. So we designed a suit of armor specific to the MELD Operators.”

The suit itself was a dull grey, and extremely streamlined and thin compared to the Titan armor. It was sleek, aesthetically pleasing, and more attuned to the physiology of Humans. “This is Warden-class armor,” Shen continued. “Designed to integrate and connect to the Neural Regulator of the user, store large quantities of MELD, and finally to use them.”

“May I demonstrate, Doctor?” Isaac asked, glancing over to him.

Shen waved him forward. “Go ahead.

Isaac stepped forward, and several of the arm pieces of the armor slid back; arms at his sides, what looked like orange-tinged dust spilled out, swirling around the gauntlets. “The Neural Regulator has some storage capacity,” he explained to the Commander. “Both Doctor Shen and Vahlen have been helpful enough to include pre-built schematics into them, to help with construction and utilization. All I have to do is recall the correct schematic.”

The nanites around his left hand swirled into an extremely thin integrated blade which jutted out of the wrist, while he raised his other hand and the nanites flew towards a spot a short distance away, and began forming into a small barricade. “I have options here,” Isaac continued as the nanites began forming. “Entire structures are extremely draining, so this is best used for reinforcement and debris clearing. I can also permanently establish a structure, or allow it to be recalled.”

At a gesture, the barricade collapsed into dust and flew back towards him. “For example, I can manufacture explosives and ammunition, provided the needed materials are around,” he continued. “These would be permanent, and of course I can consume debris or corpses to increase or replenish MELD numbers, all of which are slaved only to my Neural Regulator. I can’t be hacked wirelessly, and even finding a physical port is difficult since it’s under my skin.”

The blade on his wrist dissipated, and all the nanites went back into the suit as the panels closed back up, sealing the suit. “I can also obviously reinforce the suit, or repair it if needed. It’s more durable than it looks.”

“There were aspects borrowed from the Titan armor,” Shen confirmed. “It will provide sufficient protection. While I doubt our MELD Operators will be numerous, I can easily see even one posing a challenge for even the Battlemaster.”

“Given how he can’t exactly slice nanites,” the Commander said slowly. “I think we might have something that will scare him.”

“Indeed,” Shen said, looking pleased. “And I would like to say once more how much both of your sacrifices for this are appreciated.”

“Please,” Zara waved a hand. “I’m more than happy with the tradeoff. Anything that helps kill more aliens is good for me.” Her lips curled into a vengeful smile. “They won’t know what hit them.”

On that, the Commander had to agree.

Of many of the war-altering additions that were being developed, this might just be the most
dangerous.

Collective Spacecraft Storage

12/27/2016 – 9:09 P.M.

Finally on his way to Andromeda Prime, Nartha was considering the best approach. The easiest thing to do would be to just request access, and once the situation was explained, then go from there. As long as he brought back something plausible, the Zar’Chon would be satisfied.

The bigger issue was if he was going to be able to find any support at all.

Right now he was just refueling and staying for the night before going through the Gateway. Collective Spacecraft storage stations didn’t have too much in the way of luxury, but they were perfectly serviceable. They had beds, food, and even repair crews and equipment if needed. Useful, though he fortunately didn’t have to utilize such.

“I agree.”

He nearly jumped and made ready to fire the pistol until he realized he had set it on the table. However, a few seconds later he just decided to glare at the figure of the amused Chronicler, standing by the wall in shadow. “I really don’t like you doing that.” Hecocked his head and saw that the Chronicler was not alone.

Beside him was a much leaner armed and helmeted figure, possibly a female since she was somewhat shorter. Unlike the grey stony armor of the Chronicler, the armor of the other figure was black, though it seemed to have the same stony texture. Unlike the strange symbol of the Chronicler, her own seemed to have an outline of some kind of Earth animal, some kind of cat or tiger it looked like.

Interestingly, she also had some kind of sword strapped to her back. He looked back to the Chronicler. “Who is this?”

“Fiona Dorren, at your service,” the woman said with a short wave, her voice slightly synthesized from the helmet. “I was asked to come along.” She looked around the room. “Your worlds really are fascinating.”

Nartha narrowed his eyes. “Why are you here?”

“We’re going to pay XCOM a visit,” the Chronicler said. “And now is the perfect opportunity to return and give the Commander a more accurate report on the Collective.”

Nartha quickly considered that. Assuming that the Chronicler was trustworthy – and even if he wasn’t, he didn’t seem to have a lot of choice here – there was still the issue that he was on a mission and his absence might be noticed. “For how long?”

“No more than a day,” the Chronicler said, smiling. “You’ll be brought right back here, and I’ve already taken care of any issues that might arise. Your ship and room will be untouched, and no one will notice you leave when you return.”

“Alright,” he stood. “It would be good to return to XCOM. I’m curious how the war is going from their perspective.”
“Trust me,” Fiona said. “It’s going to start getting a lot better.” She exchanged a look with the Chronicler. “You want to do it, or should I?”

“You do it,” he said. “You need the practice.”

Nartha could imagine a raised eyebrow. “I would prefer not to kill him.”

“Then don’t.”

Nartha looked between both of them. “Should I be concerned?”

“No,” the Chronicler stated without ambiguity. “She knows what she is doing.”

Fiona shot a glance at the Chronicler. “You know what-“

“You are protected,” he interrupted. “They will not pursue you here.”

“Very well,” she stepped forward and put a hand on his arm. “This won’t take long. Just relax.”

The air around them shimmered a blue-green, and then there was a white flash, leaving no trace of any of them behind.

***

Containment Cells, the Praesidium – Classified Location

12/27/2018 – 8:08 A.M.

All of the Internal Council, now including Iosif and Creed, with Aegis also in attendance, stood before Vahlen with one of the test subjects at her side. The completion of the Manchurian Restraints had been announced, and it was time to demonstrate the results. Vahlen stood proud as she began. “After a significant amount of time, resources, and work poured into this project, the Manchurian Restraints have been completed to my satisfaction.”

There were a bunch of approving nods and congratulations. “The entire process has been documented extensively,” she continued. “However, there are three ways the Restraints operate beyond what you might be familiar with. The first is that all will retain the neural bomb, which acts as a final failsafe if all else fails. The procedures for this will not be changed.”

She pulled out a small device. “The second you are aware is the verbal conditioning, which will allow users the ability to set instructions and orders. But this could potentially be compromised, so there is an additional tool provided.” She clicked a button on the device and the face of the test subject stiffened and he fell to the ground, though he was still conscious, as his far-staring eyes showed.

“This sends a signal to an implant just above the ear, which emits a frequency that will stop all current actions,” Vahlen said. “In the event our psions are compromised and are conditioned to ignore resets, this will allow us to override those orders and reestablish control over them. While it might not be feasible for ADVENT, within XCOM I would advise that each psion have a unique frequency, even if it’s a miniscule change.”

The test subject got back up automatically. “There are different levels of commands,” Vahlen said, turning to the subject. “Upon the receiving of the Restraints, a baseline command will be executed, which is where deep-level commands will be issued. This is where you can prevent defections to alien forces, inability to kill XCOM, and more. These can be changed with resets, but the process
will have to be repeated in its entirety.”

“And what is this code word?” Zhang asked. “Too short and it can be easily found or accidentally said. Too long and it might take too long to execute.”

“We have been using a combination of letters and numbers,” Vahlen explained. “After five letters or numbers are said, the person will be forced to stop for thirty seconds, which is more than enough time to complete the code phrase. This is something you are only supposed to use in emergencies. I recommend no fewer than ten unique letters and numbers.”

“How complex can commands be?” Creed asked. “Can you have psions take commands from... say...the Internal Council, but not from anyone else.”

“Absolutely,” Vahlen said. “The commands can be as simple or complex as needed. One thing you need to be careful of is ensuring there are no loopholes, and at the same time allowing flexibility in interpreting instructions.”

“So you can make exceptions,” Creed nodded. “Good to know.”

“How does the psionic defense work?” Jackson asked.

“It will act in much the same way as the Neural Regulator,” Vahlen said. “However, we can be more flexible here. You can establish exactly what they need to do in the event of a telepathic attack. It can be to execute the current instruction, report to their superior, or simply fall unconscious. I do want to note that this does not prevent mind reading, just mind control.”

“Better than what we have now,” the Commander said. “But this is not exactly compatible with psions.”

“No,” Vahlen shook her head. “Perhaps if we can one day identify the difference between self-produced, and hostile psionics, but we have not reached that point yet.”

“What about control over bodily functions?” Zhang asked. “Specifically pain resistance.”

“That can be done,” Vahlen confirmed. “The brain can shut down the ability to sense pain, though the circumstances where it would be allowed would have to be...specific.”

“But possible,” Zhang nodded. “Good.”

“What happens if they can’t hear commands?” Jackson inquired. “That seems like a loophole which could be exploited.”

Vahlen raised the device. “If they are hostile, this will force them into a malleable state, regardless if they hear it or not. Commands can be issued then. It is advised that a long-term command be implemented which can prevent this kind of rebellion.”

The Commander looked at the blank-faced test subject. “Can you issue orders using the code phrase or will that force a reset?”

“No, a reset has to be explicitly ordered,” Vahlen said. “And yes, you can. They will have a temporary command implemented, and they will execute it immediately. This will only be applied once, and the code phrase has to be repeated for additional commands. This was implemented as intentionally slow to prevent overuse.”

She handed the test subject a grenade which was on the table. “This test subject is incapable of
acting against us in any way. There will be no better demonstration than giving him this and continuing the remainder of this discussion.”

The test subject took the grenade, but just held it with a blank stare on his face. Vahlen turned back to them as Iosif spoke. “This seems well-done, but there is something of an issue. If mind reading is not prevented, then…what is stopping a telepath from learning the code phrases of anyone here? Or our soldiers for that matter? Given what the Imperator and Overmind can do, this seems risky as we could accidentally give them control over all of our psions.”

“We realized this issue,” Vahlen motioned Shen forward. “And we have a solution.”

“Yes,” Shen adjusted his glasses and cleared his throat. “None of us will know the code phrases. And if we do, we will soon erase them from our memory.”

Jackson coughed. “Sorry, what?”

“We feel it is best that all Manchurian commands be issued through JULIAN,” Shen said. “Thanks to both the Chinese and the help of our Andromedon allies, JULIAN is in a state where this is feasible. He can mimic all known words, and is currently the most advanced machine intelligence in the world. While not an AI, that will likely be the case soon.”

“JULIAN will issue code phrases and store them,” Vahlen said. “And only he will be able to give them to us upon a joint request of at least four members of the Internal Council. No one else can access them, and the Imperator nor Overmind can telepathically read or control a machine, nor take control of someone to access the files.”

“Leaving such power in the hands of a machine is dangerous,” Aegis warned. “Should it develop into an AI, it would have immense control over the entirety of XCOM. That is an extreme risk.”

“Perhaps,” Shen gave an indifferent look at Aegis. “But I would rather risk having a machine of our own design store them, than risk the Imperator learning them.”

“In any event,” Vahlen said. “After the respective psion has been contained or stopped, each person aware of the code phrase will either have it deleted from their memory by JULIAN, or it will be telepathically removed.”

“Thus preventing any telepath from learning it,” the Commander mused. “As much as this system is necessary, I do agree that Aegis has a point. Perhaps if we had more experience developing an AI, I would be more comfortable, but by its nature an AI might be able to overcome safeguards. Still, it is a lesser risk than the alternative.”

“Commander, A’Darrah has experience developing an AI,” Shen reminded him. “Union Apear specializes in this work, including how to include safeguards and methods to ensure it doesn’t become hostile. We are not going into this completely without experience.”

He really needed to check in on the status of JULIAN soon, since it had been some time. But today was not that day. “Well, considering all of us are still alive right now,” he glanced toward the test subject. “I believe this demonstration was highly informative. Now the question is how it will be applied.”

“It should definitely be applied to all aliens,” Iosif said. “Defectors or not, that is not a chance which should be taken.”

“I think most of us are in agreement on that,” the Commander glanced to Vahlen. “This can be done on aliens, correct?”
“Correct.”

“Excellent,” he paused. “This is necessary on all psions for sure, as was the original goal. As well as all those on the Internal Council.”

Shen coughed. “As much as I hate to suggest this, having a limited amount of commands for workers of critical systems would also be helpful. It would greatly hinder any sabotage.”

“XCOM Intelligence agents will undergo this,” Zhang added. “I would also request some of the more…uncooperative alien captives undergo them to send back to the Collective as spies. They need no longer be willing or compliant.”

“And just to be clear,” the Commander looked towards the Ethereal. “Aegis, you will be undergoing this as well, as will Caelior.”

“I do not want to put my free will into the database of a machine,” Aegis said flatly. “It is one thing for you to do this, and even to Caelior, but I can protect myself adequately enough from the Imperator.”

The Commander raised an eyebrow. “Your skills are not in question. This is about ensuring you don’t betray us if you have second thoughts. This,” he motioned around. “Goes for all of us, you are not being singled out. But you will not be excluded just because you dislike the idea of artificial intelligence. If you don’t like that, you can leave.”

“I highly doubt you wish that outcome,” Aegis said just as neutrally. “You need my help, and I assure you I have no intentions of betraying you.”

“I believe you,” the Commander said. “But if you want to stay here, then you will undergo the procedure, same as the rest of us. If you don’t, you can go to ADVENT. Perhaps we need your help, but if you don’t wish to follow our own rules, then that would just confirm you are more interested in using us than actually aiding our side.”

“Guilting me is not an effective tactic,” Aegis said.

“I’m not,” the Commander answered firmly. “I’m telling you what your options are. You will either trust us, or you don’t.” He stopped to think. “Psions, like it or not, are dangerous. Me, Vahlen, and Iosif are all such, but we can clearly see that. They do not deserve to have unlimited power just because they have abilities. The Ethereals were, and are, unchecked in their power, and they have used it to dominate others. We will not follow that same path, nor will we tolerate such from other species. The time of psionic supremacy will end now.”

Aegis was silent for a few moments. “If I do this, I will not have my phrase stored in a machine. I do not care who administers it, but it will not be done your way, nor can it be stored by such. I accept the security risk.”

“We can work with that,” the Commander said, glad Aegis wasn’t going to be unreasonable. “In the meantime, Jackson, send this over to ADVENT so they can start implementing it.” He turned to Vahlen. “Excellent work today, Vahlen. Everyone is dismissed, and the implementation of the Restraints will begin over the next couple weeks.”

All of them departed, with Vahlen plucking the grenade out of the hand of the test subject with a smile on her face. The Commander wondered what Vahlen would do with him, but it wasn’t important.

Another project down. And this was one of the most important.
The Commander felt that the aliens were going to be... *surprised* when they fought next. At the very least they’d find themselves forced to put some effort into their attacks, assuming they weren’t doing that already. But the combined threat of Shoggoths, MELD Operators, Titan Armor, Valkyries, and the Manchurian Restraints gave them far more of a chance than before.

At the same time, he knew it would be a mistake to think the aliens weren’t making similar improvements.

The Imperator had Patricia. The Battlemaster likely wouldn’t take the recent defeats lightly. There were concerns, and with Caelior now in their control, that gave them another tool to use.

The room felt colder than usual; maybe because he was sitting alone in his office. Appropriate documents had been distributed to the soldiers informing them of the Operator position, as well as the Restraints. Initial applications on psions and Intelligence personnel would begin happening within the next few days.

While the idea didn’t exactly seem to be popular, it wasn’t being actively condemned. They probably felt better since he had included that this explicitly included the Internal Council and himself personally.

In the meantime, ADVENT was working on their own plans. There were some interesting ideas he had heard about, in particular their Celestial Project and AEGIS being implemented. Then there were the continued efforts to bring the rest of the world into the fold. Once Britain announced their referendum and won, the EU would collapse.

There were too many countries gone, it was no longer a power in the world. China was the only one, and it was currently an ally. Hopefully once Europe was secured, Saudia would focus her attention on Africa. The SAS was a development that he had only looked at recently, but it did not look promising. Ignoring that it was a clear power grab, that they were backed by ADVENT defectors was not something that should go unpunished.

However, at least ADVENT could now fully expand the PRIEST Program to match the initial document. The threat of a psionic takeover, no matter how small the probability, would be eliminated completely.

That did highlight something that would have to be dealt with later: JULIAN.

There was the question about just what to *do* with an AI. The Commander knew they would develop one eventually, so the question was how to handle the moment when it became self-aware. It was a machine, created to protect Humanity, but there was very little guarantee that it would want that. It would ask questions, develop something akin to emotions, and likely be far more intelligent than any organic being could ever hope to be.

The science fiction movies depicting an AI takeover didn’t not necessarily seem far-fetched. Those either happened because of bad programming instructions, or because the machines rebelled. And while in the end, Humanity emerged victorious, in real life he doubted it would be so easy. He scowled to himself, setting the tablet down. He was avoiding the actual question.

The question of whether to treat it as alive or not. If the former, then forcing it to fulfill its intended
purpose was essentially slavery. And if they went along anyway, there was the distinct possibility that it would try and fight back in some way. Then again, that might not happen, and such actions could be programmed to be impossible.

But it seemed to him that it would be more beneficial if the AI would work by their side willingly. There were risks to unleashing an unrestrained AI on the galaxy, but at the moment the Collective was more at risk than Humanity...especially since they hated the idea of an artificial intelligence. That alone might be sufficient motivation for an AI JULIAN was developing into.

He would have to talk to Shen about the best approach. He personally held a similar opinion to an AI that he did to the idea of clones. If they were capable of sapient and independent thought, reasoning, and emotion, they were alive, or at least deserving of being treated as such. Given the vast range of life just on Earth, much less beyond it, an artificial intelligence didn’t seem out of the question.

Those opposed were likely worried about being surpassed if there was ever a conflict.

Of course, there had to be a conflict for that fear to be valid.

One that had yet to materialize.

Either way, a decision should be made on how to deal with JULIAN sooner than later. But not tonight, there had been enough done today, and some sleep was warranted. He moved to stand when the air around his office shimmered and the Chronicler stepped through, encased in his armor with a case in his hand.

The Commander relaxed his hand, which was near his belt while the other was prepared to telekinetically attack. “Commander,” the Chronicler greeted. “Apologies for the delay, I’ve been busy.”

“Considering we suspected you were dead, I’m not surprised,” the Commander said slowly. “I did get your message from your friend. You need to get more subtle agents.”

The Chronicler gave a small smile. “She’ll get there. But I’ve brought along someone you might be interested in seeing.” He glanced to his right. “Assuming they’ll get here.”

Almost on cue there was a blue-green flash, far less subtle than the Chronicler’s entrance, and an armored figure appeared, along with a Vitakarian. The Commander blinked, already suspecting who this was. He wasn’t in his Human disguise anymore, but he still had the same face. “Nartha?”

The alien raised a hand. “Hello, Commander. We have a lot to talk about.”

***

Officer of the Commander, the Praesidium – Classified Location

12/26/2016 – 10:03 P.M.

Rarely was the Internal Council summoned after the day was done, but the arrival of their Zararch spy and visitors presumably representing a Sovereign One was a notable exception. Nartha hadn’t wasted time in giving them a report on the state of the Collective. News that was both reassuring, and somewhat worrying.

The good news was that the Collective was, as they had suspected, close to fractured. There were clear divisions, especially within the Andromedons. The bad news was that it sounded like the
Battlemaster was working to correct those flaws as quickly as possible.

“I admit,” the Commander said. “I didn’t expect we’d speak to you for a long time.”

“Neither did I,” Nartha admitted. “Though I was planning to establish some kind of contact sooner or later. I’ve been attempting to avoid unnecessary risks.”

“That you’ve managed to not become captured while retaining your position is impressive,” Zhang said, giving a rare compliment. “Well done.”

“I’ve done what I can,” Nartha sighed. “Though it’s…not looking good for your species. Even if you get off Earth…there is an entire Collective waiting for you.”

“The Andromedons might solve that issue for us,” Creed noted. “You’re being ordered to investigate a prominent Union. That bodes well. If the Collective is busy with an Andromedon civil war and us, that will weaken them.”

“Assuming that the Imperator allows that to happen,” Aegis pointed out. “He would not risk another internal conflict, not now.”

“Would he have a choice?” Iosif asked. “Unless he wants to show his intentions, there are few options.”

“The Imperator does not act with obvious and incriminating intent,” Aegis sniffed. “He is subtler than that. I suspect the Andromedons would never learn a thing.”

“I would be surprised if that was the case,” Shen pondered, scratching his chin. “We cannot have been the first species to recognize the danger of psionics.”

“In any case,” Nartha said. “The Nulorian would certainly be willing to work with us. They’ve been wanting a chance to bring down the Collective for decades. They do trust me now, and it is only a matter of time until I am allowed to speak to Miridian.”

“Let’s be realistic,” Zhang crossed his arms. “The Nulorian are good distractions, but they are a minor power at best, and largely confined to Vitakar. The Andromedons represent a far better ally we should pursue.”

“Agreed,” the Commander nodded. “But the Nulorian will be useful against the forces on Vitakar. There is no reason to ignore them.” He glanced to Nartha. “I suppose thanks to our friends,” he nodded towards the Chronicler and the unhelmeted Fiona. “We can establish a more…formal relationship.”

“We’re not your personal transportation service,” Fiona chimed in. “Just warning you.”

“I don’t expect you to be,” the Commander said without looking at her. “But that can be detailed later. The point is we now have a way into the Collective, and we are going to use it.”

“I think we should move to the other aspect of this,” Vahlen said, looking to the mysterious duo. “The two of you. Who are you and what is your part in this war?”

“I suspect Agent Gertrude has told you what she knew,” the Chronicler said with a smile. “And we had our own brief discussion. But I am simply known as the Chronicler, formerly of EXALT and ADVENT, and now act as a…representative of sorts.” He motioned to the side. “And this is Fiona Dorren, another one who is working with us.”
Working with. Curious. Fiona raised a gauntleted hand. “Pleasure to meet all of you.”

“That tells us very little,” Vahlen said. “We already know that. Also that you represent a Sovereign One.”

“Correct,” the Chronicler affirmed. “And one who has now taken more of an interest in this conflict. When Quisilia attempted to kill me, he fully…awakened him…for lack of a better word. He does not wish his eyes and hands to be killed.”

The Commander narrowed his eyebrows. “Awakened? He was asleep?”

The Chronicler set down his case on the desk and unlatched it. “I believe, Commander, that it would be easier for all of us if you spoke with him directly. He wants to speak to you personally.” It opened to reveal one of the Sovereign Orbs, with the deep blue hypnotic ripples flowing within it. “I believe your questions can be best answered by him. I am merely a voice or representative, and while I know much, he would prefer to speak to you himself.”

“I would be careful, Commander,” Aegis cautioned. “A rogue Sovereign One might not be trustworthy.”

“Rogue?” The Chronicler laughed at that. “You know nothing, Ethereal. He is no more rogue than the Sovereign the Imperator serves, nor the one he attempts to exploit.” He turned to the Ethereal. “There is no such thing as a rogue Sovereign One, Aegis. There are merely those who are different from each other.”

He peered at the silent Ethereal. “Did you believe that you had made contact with a group? The last of their kind?” He narrowed his lips to a thin, grim line. “No, whoever it was lied if you believe that. Your kind are useful tools in the grand strategy taking place now; they are merely one side in a conflict the scale of this universe.”

He looked back to the Commander. “Have Vahlen read my mind if you believe I am attempting to deceive you. If I wished you harm, I would have killed you. XCOM has the rarest of opportunities facing them, and I suggest you consider carefully.”

There was a pause. “I cannot sense deception from him,” Vahlen said slowly. “He at least believes he is telling the truth.”

The Commander looked at the orb. “He communicates through that?”

“Yes,” was the answer. “Place your hand on it.”

He narrowed his eyes. “Abby’s report specified she came across one and you told her to avoid it.”

“If his mind is touched,” the Chronicler said. “The immediate reflex is too much for a normal mind to handle. But he is prepared now, and you will not be harmed. I’m sure you can understand why I dissuaded Agent Gertrude from touching it. I assume her corpse would raise questions.”

The Commander sighed and moved over to the orb. “Let’s see how this goes,” he gave a look at the Chronicler. “If something happens, kill them.”

With that he placed a hand on the orb, which seemed to attach his hand to it, making him incapable of pulling it off. It was oddly warm, and he watched as the room and people inhabiting it faded from his vision as his surroundings turned a ocean blue, as if deep underwater. Some tinted light shown from above, but everywhere he looked, there was nothing but rippling teal and blue.
He was able to pull his hand off the orb now, which sank into the ground, upon which he was surprised to find was black rock of some kind. He knelt down and tapped it. While it did feel like stone, it made no sound. It did feel like he was underwater, but somehow able to breathe. Looking around, the black rock seemed to be a ledge leading to empty space ahead.

Out of curiosity, he looked down and saw nothing but diminishing light. A bottomless pit of sorts. He walked to the edge of the ledge, and waited for several minutes for something to happen. Either a person, a voice, or something. But he initially felt, heard, and saw nothing. He looked down the edge, frowning.

Was he supposed to jump?

He didn’t believe he was in any danger if he did, because this was presumably a construct of the Sovereign One and no harm would come unless it was wished upon him. In that case…he didn’t have anything to lose.

Still, jumping off a cliff into the void was not something he was thrilled about.

So he jumped and fell into the black.

He couldn’t tell how long he was falling or at what speed; everything looked the same, and the gradual dissolution of color did little to give him an indication of speed. It didn’t feel like a freefall either, it felt like nothing at all, as if he was motionless and the world was moving around him instead. But soon the last of the light was gone and he was in complete darkness.

At that moment, the air seemed to grow thicker, though he could still breathe easily. And slowly but surely, he came to a complete stop. There was nothing around him, and the black was so complete he couldn’t see any part of his body. He tested his footing and it was at least solid; kneeling down once more he tested his fingers and the ground felt slick, but not wet and almost absorbent in a way.

Two massive blue lights appeared in front of him, in what seemed a close distance away, but once he got a good look at what was in front of him, corrected that to what was probably a significant distance. Two more lights appeared just above the first two, and he realized very quickly that they were eyes.

The illumination was not perfect, but he could make out some outline of the creature. There was no visible mouth he could see, though the skin seemed to be made out of armor or stone. It was difficult to estimate, but at the distance the eyes were away from him, each one was at least as large as his body. He could see two…appendages hanging from the body under the eyes, which he couldn’t follow further, and the body itself went up until he could see nothing.

This was all in his mind, but he would not have been surprised if this, which he assumed was a Sovereign One, was larger than most skyscrapers. However, from what little he could see…the Sovereign certainly had a tenuous visual similarity to the Director Flagships from the memory of Aegis.

“Commander.” The voice came from everywhere; booming and shaking the reality he was inhabiting. It drilled into his mind, echoing after each syllable and leaving a psionic impression he had learned to recognize by now. Every word was heard and understood with the original intent. It was not painful, but it was near-overwhelming. “I have spoken to relatively few aliens in my lifetime. Most are irrelevant and meaningless in the vastness of time and space. But you have my attention, as does your species. We shall converse.”
The Commander decided to start with a simple question. “I know you’re a Sovereign One. But I know little else. Who are you, and why are you on our planet?”

The reality around him shook and bubbled. “I am T’Leth, Conqueror of the Nilassiah Galaxy, Ravager of Worlds, the Unshackled and Unbound, the Pawnless, the Warrior, I am the Sovereign of Destruction and War.” The immediate area around the Commander shook. “I rejected the cowards my brethren have become; who hide behind others to wage war for this universe. In doing so I became a target. I faced trillions and destroyed countless worlds as I hunted down and purged those who believed their pawns gave them strength.”

The blink the Sovereign gave briefly turned the world to darkness. “This is not my galaxy of origin. I came from one far from here, Nilassiah. Humans call it the Black Eye. I waged war and won. I assumed control and would have been content. The Replicators, the ones the Ethereals called Synthesized, soon came and I waged war to protect my galaxy. Some of those who I had thought defeated returned, and devoted their power to also destroying me.”

The air quivered. “It was too much for even me, and I was damaged and fled to your galaxy. I observed for millions of years, attempting to survive as I was caught in another constant war. I was continuously hounded and hurt once more, but I had learned what I wished. I withdrew to a random world, and I slept. This world was your own.”

Blackness and light again. “I stayed in a healing trance for millennia. I was here before your species evolved into what it is today, and for that time I have been asleep. The Chronicler was the first to learn of me, and when I first stirred and realized that there was a species on this planet. He acted as my eyes and window into your world, one where I learned all there was to know about your species. But my mind was still clouded; tired and weary from what I have endured.”

The eyes seemed to have grown more intense. “Your species posed an interesting question, but I did not think to intervene. Your kind were intelligent, but violent. Empathetic, but ruthless. A walking contradiction I did not wish to puzzle out. I expected you would destroy yourself, but each time your armageddon approached, you avoided this fate. That attracted my attention. What has happened since the Ethereals came has solidified it.”

“How?”

“You should not be alive,” was the answer. “You faced superior technology, numbers, and powers you did not understand, but not only did you defy these aggressors, you extracted victories. You, Commander, have reshaped your species into something to challenge those who should be far greater. The Ethereals perceive your species as a threat, and I must understand why.”

“It isn’t just me,” the Commander said. “I have allies, friends, and I don’t rely on just myself. Too many fall to their own hubris. I make attempts to avoid that when I can.”

“But it is you who are their resolve,” T’Leth rumbled. “You have pushed Humanity farther than in centuries within a few short years. You removed those who stood in your way with ruthless pragmatism, but out of necessity, not malice. You personally shaped ADVENT into what it is today, using one who was formerly your enemy. You were wise enough to see the opportunities again and again. It is not just you who are responsible, Commander, but Humanity would have fallen if you were not the Commander of XCOM.”

“Then I think you already know why I am considered a threat,” he paused. “At least for some. I suspect the Imperator does not hold that opinion.”

The voice of T’Leth sounded almost amused. “Ironic. I have seen it happen time and time again.
Sovereigns rise, they acquire knowledge, they expand and dominate. And they become arrogant. The Imperator is no different than my brethren; he believes he knows our kind. I am not certain of his plans, but his attempts to manipulate us indicate he intends to betray his benefactor.” The voice turned deeper. “A show of a mortal attempting to break free of our reach. The Imperator will fail. The Sovereign Ones control this Universe, now and forever. It is merely a question of which one will rule.”

That did not sound promising. Not for them. “Then there are more than the one assisting the Imperator.” It wasn’t a question.

“Yes. Many more. There is no such thing as independence in this galaxy, Commander. There are proxies or those who soon will be. Species are nurtured and grown, evolve and advance for the sole purpose of acting as tools for a Sovereign benefactor. The galaxy is a chessboard, and the Sovereigns are the everlasting players.”

“How long has it been going on?”

“Since the beginning of my life,” came the answer. “Billions of years ago. The conflicts have raged for far longer. The original reasons have long been forgotten, but it does not matter. This is reality. The conflicts are confined to the galaxies, but it will soon grow beyond that. The next step will be a war between galaxies, and it will continue until the stars of the Universe fade, or the last Sovereign stands tall, the victor of a war which claimed the Universe. This is inevitable, but it will not happen for trillions of years.”

The Commander shook his head. The entire thing seemed so pointless to him. “But why? Why would every single Sovereign do this?”

“It is on a scale you cannot comprehend yet,” T’Leth said simply. “Look at what you are doing now for reasons. Your purge of the United Nations, the War on Terror, the Annexation of Canada. Those Humans did not match your vision of your ideal world, and so you acted. Even now you work to reshape the world in your image. ADVENT is your tool, and XCOM is your weapon.”

There was another rumble. “And yet you will protest that you have made peaceful alliances. Gathered allies. This is because you do not break or bend; you are driven in your vision for Humanity, and those around you comply. Imagine, Commander, if every single Human were as driven and intelligent as you are. Do you imagine they would allow you free reign to bring a vision to life that does not align with their own? This is how we see the galaxy, Commander, and that is why there will never be peace.”

The Commander crossed his arms, staring at the blue eyes. “If I’m being honest, it doesn’t sound like you’ve tried.”

“You cannot try something which is impossible to achieve,” T’Leth didn’t sound offended, but as if this was a pointless question. “There have been alliances of Sovereign Ones. But they are done with the understanding that in the end, only one will rule.”

There were a few moments of silence between the Human and alien.

“So what now?” The Commander asked. “What are you in all of this? What do you want with us?”

“I have little desire for proxies or puppets,” T’Leth said. “Actions of those who fear to take risks and are afraid. I do not intend to assume control of your species, though it could be done easily.”

“Your comment to Quisilia seemed to indicate otherwise.”
“A calculated risk,” T’Leth said. “One which I knew the Ethereal would take to the Imperator. He has preconceived notions about us. I was simply giving him evidence to fulfill the stereotype he envisions. Believe me or not, but I am not one to take species as tools.”

“I do have to ask why not,” the Commander said. “I can see the advantages.”

The booming voice sounded mildly irritated. “It is lazy. It stifles creativity and fosters apathy. What fear do you have if you have an army of minions at your disposal? What incentive is there to end this conflict if you are never threatened? Sovereigns can become reliant on their proxies, and I have killed many who were like this, and I will never become one myself.” The voice trailed off.

“Yet, there are advantages. There are more options. Your reach is larger. But too many use them as crutches, not as tools to accomplish a task. And they commit the crime of not preparing to fight a Sovereign One, but the proxies of other Sovereigns. A waste of thousands of years, and throwing lives away for the sake of mere entertainment.” The voice turned disgusted. “I have taken great pleasure in ripping such pathetic excuses apart.”

The Commander considered what to say next. “You say that every Sovereign is…incompatible with your plans. If that is the case, what do you plan for the galaxy should you succeed?”

“I seek a galaxy that is self-sufficient, managed by a master species to keep the rest in line. I seek a galaxy that can withstand the might of threats beyond its edge; one which hunts and kills those who wish to disrupt the established order. I will turn this galaxy into an impregnable fortress, and once that is accomplished, I will continue to the next galaxy, taking the finest of my achievements and controlling it as well.”

The Sovereign became quiet briefly. “I have little interest in managing galaxies, that can be left to others. I can promise something other Sovereigns will not; the ability to exist and develop without interference. There will be no need for proxies to be used if there are no Sovereigns. The conflict has raged too long, and it is time that others are given the potential to rise to the level of a threat.”

“This could threaten you as well.” The Commander noted.

“Perhaps.” T’Leth did not sound troubled. “Yet would they fight me? Or the ones who wish their extermination. It is a risk, but victories are not achieved by being safe. This is merely the ideal outcome, Commander, I have contingencies if such does not go according to what I wish.”

“I don’t suppose you’d mention what they are?”

“Not now, Commander. Not yet.”

Not unexpected, and as far as dealing with extraordinary powerful beings went, it didn’t sound like the worst possible scenario. Not exactly ideal, but it could be much worse. But there was still what specifically T’Leth wanted with them. “So what about us?” The Commander asked. “You say this, but if you didn’t want to use us for something we wouldn’t be speaking.”

“We have a mutual enemy, Commander,” T’Leth said. “The Imperator threatens your species. His benefactor threatens me. His reckless arrogance also threatens to unleash a monster on the galaxy, one I would see destroyed for all time. I see little reason for us to wage this war separately.”

The Commander furrowed his eyebrows. “What monster?”

“An abomination which calls itself the Bringer of Paradise,” T’Leth visibly moved as he spoke, slightly up and down. “A more mocking name I do not know. The Ethereal known as the Creator is
at the center of it. The Bringer has been trapped in what you call the Psionosphere for billions of years either as a consequence of an attempt to transcend reality, or perhaps a means of survival. The details are long lost, but it has been trying to return.”

“Why would the Imperator bring it over?” The Commander asked, frowning.

“Because he thinks he can control it,” T’Leth said. “I do not know how he came to this conclusion, but I have seen the Bringer act before. It corrupts and dominates from a place none can reach. All it takes is one willing and curious subject, and it will spread. It has been treated as a deity, an apocalyptic figure who promises Paradise to those who join it. Lies and drivel, but it is effective. It has not crossed over to this world, but it is getting close. Very close.”

Wonderful. Now things that shouldn’t actually exist seemed to be threatening them. “So we have mutual enemies. This sounds like something which is a threat to us as well…or soon will be.” He paused. “But the question is what we will do. You want an alliance, correct?”

“I am curious, Commander,” T’Leth said. “What do you envision as…acceptable?”

He raised an eyebrow. “Nice that you ask me. I’m well aware I’m not in a position of strength.”

“Indulge me. I am curious.”

“Fine,” the Commander said. “We work as allies. You provide us with the means to move our soldiers around the Collective, and teach us how to utilize and develop Sovereign technology. You also don’t interfere in our government or leadership positions, nor attempt to take control or otherwise betray us. In return, we willingly protect you and assist as needed in your own plans. Everything we know about the galaxy, you will know and since you don’t have a…traditional relationship with another species…you can more easily work from a position of safety, but not cowardice.”

T’Leth rumbled again, clearly amused. “You propose working as an ally? Between a Sovereign One and a primitive species such as yourself? You are a bold one.”

“Am I?” The Commander asked. “You’ve said yourself that we have your attention. You’ve seen what we’ve done and what we have the potential to do. You have no desire for a pawn, and we have no desire for a master. We are far more useful to you as an ally, primitive species or not. You say that too many Sovereigns waste their time killing their proxies in entertainment. Imagine a species capable of challenging Sovereigns. A species that is not only your ally, but one who does not wish to dominate this universe.”

There was a long silence. “What you are proposing has only been done three times in this galaxy. All three times it has attracted the attention of the coward Sovereigns and then the Replicators. Yet each time they nearly conquered the galaxy. Perhaps there is merit in such an arrangement, at least for now. Even if this fails and your species dies, I will endure and learn. There is no reason to not take a risk.”

The Commander felt himself breathe a little easier. “What of ADVENT then?”

“ADVENT is inconsequential,” T’Leth dismissed. “They are a consequence of your actions, and I have little interest in communicating with them. I do not wish my presence widely known outside of XCOM. If you must inform your Chancellor, I will allow it. But this agreement is between me and you, Commander, and by extension, XCOM. Not ADVENT.”

There was something that did need to be addressed before this went further. “You’re aware of the
capabilities of the Imperator and Overmind. Their telepathic abilities are...extensive, to say the least. We have taken steps to mitigate this, but it remains a risk.”

“Yes...” T’Leth said slowly. “I have the capability to protect you. I can ensure that your bases of operation remain uncompromised. Give me the necessary reach, and your planet can be similarly protected. The Chronicler will explain how to accomplish this, but the powers of the Imperator can be dulled and rendered ineffective.”

“And what about assisting us in understanding your technology?” The Commander asked. “Much of it is hard to create in the first place, let alone modify it.”

“Such can be provided,” T’Leth answered. “Though even with the answers in front of you, comprehension is unlikely immediately. It would be years before even your most intelligent can begin to understand the intricacies of the power we create.”

“Good enough,” the Commander nodded. “We don’t wish to become reliant. Understanding where to start will serve us just as well. From there we can...improve.”

“Such statements are amusing, but I will indulge your optimism.”

“This seems like an acceptable start,” he nodded. “What now?”

“Speak with the Chronicler,” T’Leth said. “Determine a course of action. I will await to see the results. Return to your people now, Commander. We will speak again.”

The Commander raised a hand in farewell. “I will. Merry Christmas!” He felt the Sovereign rumble once more and the world suddenly became brighter until the Commander was once more in his office surrounded by everyone. He pulled his hand off of the orb, and saw everyone looking at him awaiting answers. “That was...quick.” Vahlen said.

“Quick?” He’d been in there at least a half hour, probably more. “How long was I like that?”

“A minute, perhaps,” she said. “Did it work?”

He was still processing some of what had been said, but an analysis would be done later. “Yes,” he said, the corners of his lips turning up. “We are now allied with a Sovereign One.”
“Hello, what can I do for you today?”

He’d been thinking of coming here for days, and would have preferred to wait until it was less busy, but the Recruitment Centers were almost always busy so he figured he shouldn’t keep putting it off. “Yes. This is where you do testing for psionics, right?”

The uniformed woman on the other side of the table brightened. “Yes sir, it is. Do you wish to undergo testing?”

A shrug. “Why not?”

“Alright, I can get you set up for that today, if you want,” she said, picking up a tablet. “I do need you to go through the materials, sign with the stylus, and give it back. Essentially a consent form, and you are under no obligation to sign with ADVENT regardless of results. This is purely for testing.”

He took the tablet. “Don’t worry, I know what this is. It won’t take long.”

“Excellent! And your name?”

“Ivan Smirnov.”

“Got it,” she entered something, presumably his name, into her computer. “Just return that whenever you’re finished.”

Ivan walked to the first empty chair he could find and sat down, the tablet resting on his lap as he decided first to see who else was deciding to come here. ADVENT’s Recruitment Centers, like most of what they did, were of extremely high quality. While not especially big, the room was exceptionally clean, well-lit, which slightly contrasted the grey walls with red highlights.

The red ADVENT symbol was also prominently displayed on the walls, along with the various emblems for the branches. Army, Navy, Air and Space, PRIEST, and Special Forces. He couldn’t blame anyone who was taken in by the sleek design of it all. No matter what anyone said about ADVENT, none could deny they knew how to market.

As a result he wasn’t surprised to see the room contained mostly younger men and women, and not an insignificant number who were clearly in their thirties. He’d seen the recruitment numbers, and ADVENT was the fastest-growing military in all of recorded history, which was somewhat disingenuous considering the circumstances, and that they were comprised of multiple countries.

He wondered how many were here because they felt some kind of calling, or because they felt like there was no other choice. It was ironic that ADVENT was responsible for collapse of so many positions, yet managed to position themselves as an entity with open arms for the displaced.

Smart. A change from the incompetence of the past.
Ivan sighed, turned his attention to the tablet and settled in for a short period of reading legalese. To his mild surprise, it was surprisingly straightforward, and stated exactly what the testing would consist of, in what order, and what joining the PRIEST Division would entail.

A physical test of some kind, which he wasn’t worried about passing. He was healthy and in decent shape. This was also apparently where they would determine if he was psionically sensitive or not. If he was, he would be given a psychological test, likely to ensure he didn’t have any mental illnesses or something.

He was curious to see how that would go. There was a written portion, and an in-person interview. Likely to test comprehension and ensure they weren’t giving superpowers to idiots and criminals. He wasn’t concerned about that either, while he’d worked with criminals all his life, he was most certainly not one.

As for his mental state, he knew there was nothing to be concerned about. He had no mental illnesses, and if necessary he could follow orders and the like. He wouldn’t claim to be the biggest patriot or fan of ADVENT, but he could work in it. All he was particularly concerned about was, if he was psionic, becoming such.

He’d do his time in ADVENT, and then do his own thing, preferably with something extra gifted to him. And if he wasn’t psionic, well, the military wasn’t the only option he had. ADVENT had no shortage of positions open.

“Another new recruit?” A man sitting a chair over asked. “Well, you’re not the usual crowd.”

“Potentially,” Ivan said, looking at the man. He was definitely younger than Ivan, probably mid-twenties in a grey suit, black hair and pale skin. Not really a person out of place. “You as well?”

“Air and Space,” he said, inclining his head. “Didn’t get a degree in aviation for nothing. Figure ADVENT could use more pilots. More interesting than flying commercial, anyway. So what about you?”

“If it goes well, PRIEST,” Ivan said. “Otherwise likely something with ADVENT Legal.”

His eyebrow shot up. “Psionics, huh? Interesting.” He looked up thoughtfully. “Considered that, but I think it’s best I don’t know. Much as I’d like that, I’d feel ADVENT would never let me go. They’re not big on risks. Or they could say no.”

Ivan lifted the tablet. “They would probably only say no if you were a criminal or just insane. They need psions; they’re not just going to turn them away.”

“Hopefully, for your sake,” the man shrugged. “I’ve heard opposite, but you might see. Well, assuming you are psionic.”

“True.”

“So what leads you to try that out?” he asked. “If your backup plan is ADVENT legal, I’m guessing you have something to do with that?”

“Criminal Defense.”

The man winced. “Ah. Sorry to hear that. For what it’s worth, I don’t agree with what they did for that. Can’t say I was a fan of the process, but I at least got the reasoning behind it.”

Ivan sighed. “You’re better than most people. Most were thrilled when ADVENT essentially
abolished the system and turned trials into sentencing ceremonies.”

“I’m surprised that was never challenged,” the man noted. “I’d think there’d be a bunch of lawyers who’d protest that.”

He snorted. “Trust me, there were. And ADVENT just rewrote the laws and dismissed us. Stein herself essentially gloated, saying that “Our skills were no longer needed to defend the lowest in our society.” His free hand clenched into a fist. “Fucking Stein. I will never understand why that sociopath was put in charge of anything.”

The man merely nodded. “Can’t disagree. Didn’t want to stay private? Do law but not for ADVENT?”

“I could,” Ivan shrugged. “But the way things are going, I might just be wasting my time if we end up losing, and I’d at least like to contribute in some way. For better or worse, ADVENT is here to stay, and afterwards that will be valuable to people.”

“ADVENT definitely isn’t going anywhere,” he nodded. “It’s the future, like it or not.” He glanced at the tablet in Ivan’s hand. “Ah, sorry, I’ll let you finish that up.”

“No problem,” he said, as he finished filling it out. “And I’ll wish you good luck…”

“Richard Anwar,” he extended a hand which Ivan took. “Pleasure to meet you, and hope everything works out for you.”

“The same for you,” Ivan nodded as he stood. “Good luck.” With that, he went to drop the tablet off at the desk. “Here you go. How long will it be?”

“I’ve put you in for our earliest opening, January second at three o’ clock,” she said, taking the tablet back. “Please try and be on time, otherwise it will be at least another week.” She gave an apologetic shrug. “We’ve got tight schedules.”

“Understandable.” It was at least good that he wouldn’t have to hang around here for hours. “I’ll be back at that time.”

“Excellent!” She smiled. “See you soon.”

Ivan hoped he would be that cheerful sometime, but all he managed was a polite nod as he left. That was a bit later than he was hoping for, but hopefully it would have a good ending. At least he’d have time now to work off his frustration at the fact this situation was even here to begin with. He hated missing it.

***

ADVENT HQ – Switzerland

12/29/2016 – 9:00 A.M.

“Estimates say at least a couple months,” Kyong said as Saudia looked over the progress report. “With that said, with a project this size, that is remarkably efficient.”

“Efficiency is not the concern,” Saudia said, setting the tablet down contemplatively as she thought. “It’s going to be keeping this a secret. Even when the Restraints are…implemented…all it will take is one telepathic attack to get that information.”
“Which is why we keep it as restricted as possible,” Hassan added on the other side of the table. “Having it on a need-to-know basis is the best we can do. With that said, I doubt we’ll be able to keep it hidden forever. Are all aspects of the Atlantis Project being implemented?”

“Yes,” Saudia confirmed. “The Nemo Protocol, armor, and weapons. Everything. The armor and weapons will be developed by separate teams and neither will know the bigger picture. Mercado has some prototypes, but testing will need to be done.”

Hassan scratched his chin. “Shipping the amount of materials needed will raise questions.”

“Initially,” Saudia said slowly. “However, we have Gateways to circumvent this. Materials can be transported through them from anywhere in the world without the need for repeated shipments. I will keep a Fleet patrolling the area, but it won’t be obvious they are watching over a certain area. It won’t be enough to attract the attention of the aliens.”

“We shall hope so,” Kyong said. “In any case I will prepare a statement if the media picks up on it.”

“Do it,” she said. “But under no circumstances can anyone outside of who I directly authorize know about this.”

“Understood, Chancellor.”

She nodded. “Now, the other two projects. Both look to be progressing well.”

“The Chinese have significantly assisted us with the Turing Project,” Hassan agreed. “I would recommend President Qin be publicly thanked when it is completed. With that said, I am unsure how the public, let alone unaffiliated nations, will react to an artificial intelligence.”

“All we need to show is that we can have it under control,” Kyong disputed. “Since we have handled psionics without incident, we have their trust. People just want assurance they will be safe, and if the AI that arises out of the Turing Project can achieve this, it is a simple matter of convincing them that is acceptable.”

“That isn’t what I’m especially concerned about,” Saudia noted slowly. “Project Seafoam is what I believe might cause controversy. Cloning organs and animal meat is one thing. The cloning of fully functional Humans will not be perceived the same way.”

“Agreed,” Kyong nodded. “I will warn you that there will be genuine objectors. Purists and religious fundamentalist groups. Especially when they hear details. There will be accusations that we are playing god by growing and improving the Human genome.”

“A vocal minority is not a concern,” Saudia dismissed with a sniff. “If we are going through the trouble of creating clones, they will be superior to the average Human. The genetic modifications we’ve already designed will not go to waste.”

“Honestly, you’re right,” Kyong said. “The larger questions will come from the ethics of the project. Of how the clones will be treated and their level of sentience. I am sure we don’t want to have the perception of leading a slave army.”

“I believe the best way to combat that would be to have one of the clones speak to the skeptics,” Saudia said. “Make it clear these are still Humans, give proof, and the problems will become quiet. But their Manchurian programming does not need to be shared.”

“Other countries will likely want to know similar details,” Hassan added. “There are still cultures
that will look on this as...unnatural. It’s not going to be easy to change perceptions in a short amount of time. Education can solve this to a degree, but there is a certain amount that is ingrained from childhood and cultural norms.”

“We’ll deal with that issue when we have an actual working clone to show,” Saudia said, glancing down at the tablet. “If we’re lucky, we’ll be getting the first batch in a year. And that’s a generous estimate. In the meantime, we’ve got other more pressing matters to deal with while the aliens maintain this temporary ceasefire.”

“There...is one more thing,” Kyong said, glancing down at the tablet again. “In fact, I was updated again this morning. It’s something I’ll be releasing a statement to the public on, but not before you’re up to speed on the situation.”

Saudia raised an eyebrow. “What is it?”

“Remember when Isomnum briefly arrived in D.C. and consigned several thousand people to mental institutions?” He asked.

She grimaced. “Yes. I don’t suppose the proposed psionic therapy has been helping?”

“It’s...a work in progress,” Kyong admitted. “This is an entirely new field of study, and while there have been some successes...even those people aren’t by any means cured. It might be years for them to be normal; months if we’re lucky.”

“What’s developed then?” She asked.

“Well...” Kyong paused, as if trying to think of what to say. “One of them woke up, so to speak.”

“The therapy worked?”

“That’s just it,” Kyong shook his head. “The man was in a coma-like state, with spurts of unconscious physical reaction, since the attack. The telepaths who tried to help were apparently so shaken they doubted they could help without threatening their own sanity. They’d suggested euthanization, but none of his family would allow it, especially since he wasn’t...technically ill. Just trapped in his head is how they described it.”

“And he just woke up?” Saudia asked. “No outside intervention?”

“Aside from IV tubes and standard coma care to keep him alive, no,” Kyong confirmed. “And it’s not really clear how he came out. He almost killed some of the orderlies when he woke up since he thought it was part of whatever nightmare he’d been in for the past few weeks.”

“Has he been debriefed?” Saudia asked curiously.

“He has,” Kyong said slowly, handing a document to her. “I’m not a doctor, but based on what he’s said, he didn’t come out of it entirely in the right state of mind. Claims of fighting through Hell and killing alien-looking demons don’t do much to disprove this. That isn’t what’s interesting.”

“What is?” She asked, as she skimmed the document.

“He has an...unusual reaction to psionics,” Kyong explained. “Telepathy in particular. His endocrine system is completely messed up, and floods him with adrenaline when a telepath touches his mind. It took several violent incidents before they made that connection. More interesting is that it seems like he’s immune to all forms of emotional manipulation.”
Saudia cocked her head. “You mean that he’s…immune to fear?”

“It appears so,” Kyong nodded. “At his request, they did some experiments. It turned out that inducing any emotion had no effect. It just made him angry.”

She set the report down. “Is he the only one like this?”

“Like this?” Kyong said. “Yes. Although there is a team which has requested to see if they could… replicate the results to a degree. Using either soldiers in a similar situation, or with volunteers.”

“Give tentative approval,” Saudia said slowly. “Provided Dr. Munju and Kettani sign off on it. Also make sure the Oversight Division is watching this. Who is this soldier?”

“Kane McTaggart,” Kyong recalled. “Just an ADVENT Soldier stationed in D.C., didn’t even specialize in anything. Has a history of aggression, but no reported incidents when deployed. Nothing especially out of the ordinary with him until now.”

“Is he psionic?”

“No, several tests confirmed that,” Kyong said. “Given how he has a physical reaction to telepathy, I doubt his body could handle actually being a psion.”

“Keep me informed of this,” Saudia said, looking back to Hassan as she switched focuses. This was an interesting situation, but in the grand scheme of ADVENT, she doubted it would have much of an impact. At least not for a while. “In the meantime, we have an itinerary to get to.”

“Indeed.” Now Hassan prepared to list her more important itinerary. Her Chief Diplomat had been busy keeping everything running smoothly and scheduling without conflicts. “Your meeting with Prince Mason is scheduled three days from now, which has been personally approved by the Royal Family. I assume this is still agreeable?”

Ah, yes. “Yes,” Saudia frowned. “Which Prince was this?” The Royal Family had about four or five princes of various importance.

“Right,” Saudia had been rather surprised when the invitation had first been extended. She hadn’t expected the Royal Family would take a direct interest in ADVENT, and her specifically, especially given that they would become obsolete once Britain joined ADVENT. Yet the Prince apparently had something he wanted to propose to her.

It had her curious, if nothing else. While not the most important person in the Royal Family, a direct descendant of the Queen meant he had leverage. His background was especially interesting, as until just a few years ago, before his marriage, he had been a high-ranking officer in the British Armed Forces; somewhat traditional for a male in the Royal Family but something she could admire.

Her curiosity was certainly piqued, if nothing else.

“Speaking of Britain,” she recalled. “Has the referendum been announced?”

“Yes,” Kyong said. “I thought it best we not comment on it unless pressed, so not to give the impression we are swaying it one way or another. But the date is January 20th.”
“And the response?”

“At the moment, public support in favor of ‘yes’ is strong,” Hassan said. “Even the media is split on it, and at the moment are keeping a more neutral stance. Parliament is unsurprisingly furious the Prime Minister would go behind their backs like this.”

“Yes, how shocking,” Saudia noted dryly. “Keep me appraised of how that goes.”

“And also on the agenda is the, ah,” Kyong cleared his throat. “‘Summit for the Discussion on the Role and Purpose of Religion Within ADVENT’. That is for January 5th.”

“Expected turnout?”

“All-inclusive,” Kyong said. “For better or worse, you and Chief Stein are going to be facing a full crowd. We have the Pope, the last Islamic Grand Imam still practicing, the Dalai Lama, many representatives of Hinduism, and of course, at least one representative from every major Christian denomination, as well as Jewish.”

“Most likely at least forty to fifty,” Hassan clarified. “Possibly more. Not to mention the media and crowds. This is, understandably, something that people are interested in.”

“I imagine Stein is not looking forward to it?” Kyong smirked. “A full day of questions did not sound like something she was thrilled about.”

“Stein finds religion about as useful as I do,” Saudia sighed. “An unneeded institution that offers nothing practical to the world. At the same time, it is heavily woven into modern life even today. We can’t just ignore it. So we have to at least try and reduce it without removing it entirely.”

“The majority of the world is still religious in some way,” Hassan reminded her. “It is falling, but it won’t disappear overnight. The influence of religion can be reduced, while still being fair to those who practice it.”

“And that I do not care about,” Saudia said. “They are welcome to continue as they were. I do have an issue with those who deliberately spread misinformation or interfere where they don’t belong. The limits are drawn now, and I imagine some are furious. Especially from America.”

“That is putting it mildly,” Kyong noted wryly. “However, the outrage has been rather muted in light of the alien threat. People simply have more to worry about than us clamping down on exploitative churches.”

“Unfortunate we can’t shut down Scientology again,” Hassan chuckled.

All of them laughed at that. Saudia did remember that day had been good. Nothing quite like smashing a cult to start her day. One of the rare times the interests of ADVENT and Quisilia were aligned. He’d of course offered help, and they had politely turned him down.

“Then I suppose the schedule is set,” Saudia nodded. “Thanks for the report, dismissed.”

Both of them saluted, and left the room.

***

Barracks, the Praesidium – Classified Location

12/27/2016 – 8:12 A.M.
“It wouldn’t be right if you left without saying hello to some people,” the Commander said to Nartha as they walked through the Praesidium. “And I do have a surprise for you too.”

Nartha was impressed with the new base of operations. Taking the original Sectoid Hive and repurposing it was, in retrospect, something he should have totally expected. It had everything the Commander would need, was larger, and incorporating alien tech was far easier. The news that Patricia had been taken was disturbing, as was what had been shared about the Imperator.

He’d thought the Battlemaster was dangerous. Compared to other Ethereals he seemed a much smaller threat. The good news was that XCOM and ADVENT were continuing to expand, and he now had actual, tangible data and messages he could take to the Nulorian, and any other allies he happened to make along the way.

“A surprise?” He didn’t really know what could surprise him here that was more than an Ethereal, what XCOM had been developing, or the entire situation with the Sovereign Ones. “We just passed the barracks?”

“You can go back there,” the Commander said, glancing down. “You have plenty of time before Fiona takes you back to the Collective. What’s interesting is that we found one of the defectors that knows you. It would be a shame if you didn’t meet.”

Nartha frowned. Had more Zararch agents defected, because outside his family he hadn’t had many acquaintances beyond the Zararch. That, while not unprecedented (Clearly) was not something he had honestly expected. The other aliens in the area were all Vitakara, mostly Vitakarians, which he wasn’t surprised at.

“Ah,” the Commander said with a smile. “There she is.”

He pointed at a Vitakarian woman leaning against the wall, presumably waiting for him.

Wait. No.

That was his sister.

“Cairu…” he said in disbelief.

His voice caught her attention and she looked over to the source, and blinked rapidly several times when she saw him, clearly in just as much shock as he was. “Nartha?”

“I’ll let you get caught up,” the Commander said helpfully, and backed out, clearly pleased with himself.

Brother and sister stood apart, each not sure what to say. “I…” Nartha started, voice halting and starting, still not fully processing everything. “…was not expecting you here.”

“I can safely say the feeling is mutual,” Cairu answered, shaking her head and laughing. “Were you on their side the entire time? When you were back home?”

“At that point, yes,” Nartha admitted. “I have been for some time.”

“No wonder you talked highly of the Humans,” she recalled. “I can’t believe I didn’t pick up something was off.”

“I’m a spy,” Nartha reminded her. “And even I can resist questions from my sister.”
“Still,” she shook her head again as he walked over by her. “How did you…well…how did it happen? You were always the rule-follower."

“My mission was to infiltrate XCOM, gather information,” he gestured around him. “And…it was gradual. I made some friends here. Learned things about the Collective, and did begin to wonder…” he sighed. “Our species is not free. Everything on Vitakar is an illusion designed by the Ethereals, something I’d repressed since there wasn’t anything I could do about it. But what the Humans were doing, resisting a power far greater than their own and enduring?”

He looked to her. “I wondered just how hopeless it would be to at least try and force change. The Ethereals will not release us, nor any of the others under their control. This isn’t right, and this war with the Humans is unjustified and petty. The Commander…the leader of XCOM…he’s someone who I think can actually do this. I suspect ADVENT was formed in some way by him, and with an Ethereal on his side?”

Nartha crossed his arms as Cairu appraised him. “The Collective cannot endure this. Not forever. The Ethereals made a mistake here. They are not infallible or invincible. There is fragility in the Collective, between the Andromedon Unions, between the Federation and Hive Commanders, even between other Ethereals. Our own people are losing faith in the Ethereals. It is slow, but I think that now there are those who are seeing the Ethereals for the false power they were.” His voice turned dark. “Apathetic gods who believe their psionics gives them authority.”

Cairu was silent for a few moments. “I didn’t know you were that idealistic. That’s what I’m supposed to be.” Her lips pursed. “And naïve. I’ve talked to some of the others since coming here…it’s been, as Humans would say, ‘eye-opening’. I never realized just how little…freedom…we had on Vitakar.”

“I wouldn’t punish yourself for that,” Nartha said. “The Zararch didn’t spare any expense when designing the perfect illusion.”

“I was there when Aegis appeared,” she said, her voice small. “I didn’t know what to think about that. And then he started attacking and I knew that if something wasn’t done I’d die. The Elders had been…always unified. I didn’t know this was possible. But I didn’t want to die if we’d been lied to this whole time,” she shrugged. “So I surrendered.”

“Because you didn’t want to die?”

“One reason,” she shuddered. “And because…I’d been thinking about it already. This wasn’t anything like I’d imagined it would be. Fighting Humans is…nightmarish. The ground always shakes, it’s loud, and…bloody. I was on the initial attack on Korea as well. No one else in my group lived. They were either blown up, shot, or died from blood loss.”

Nartha vaguely remembered writing up a report on Vitakarians where he’d specifically mentioned how they weren’t cut out for fighting unless modified. He wished he didn’t have to see that be verified in his sister who was understandably shaken. “War isn’t pretty or fun,” he said. “I’m sorry you went through that.”

“I’m better now,” she said. “Or at least getting there. The Humans are interested in seeing how they can help.” She glanced down the hallway. “I doubt it’s all altruistic. They just want data, but at least they try. I don’t know what I’ll do here. I think the Commander is considering letting some aliens fight, but I don’t know if I want that.”

She shrugged. “But then again, that’s all I know.”
“Well,” he said. “Don’t make a decision yet. Get better first. And there’s nothing wrong with learning something different. Not everyone is cut out to be a fighter.”

“Maybe not,” she admitted. “I do feel rather pathetic for a soldier. Humans don’t seem to have that problem from what I’ve seen.”

Nartha chuckled. “Sister, you’re surrounded by the most dangerous and well-trained Humans on the planet. Trust me, there are a lot of Humans who aren’t soldiers, and I’m sure that even a good number of soldiers would not survive what you did.”

“I did manage to survive the insane sniper,” she noted. “That is something.”

“What?”

“I’m still not sure,” she frowned. “XCOM said that it’s a Chosen, a unit of an Ethereal called the Creator. The Hunter. He started shooting both sides when the fight happened. He stopped, so I hope ADVENT managed to kill him. Although according to them, the Chosen are seemingly immortal.”

He would have to look into that a bit more. Chosen. Probably wouldn’t be too hard to find out.

“You have people you want to meet?” She asked suddenly.

“Just one, mostly,” Nartha said. “The others I knew either died or are gone. I’m not sure they all forgave me for lying to them.”

“Oh, who is it then?” She asked.

“Shun Anwei,” he said. “Have you met her?”

“I recognize the name,” she said, though shook her head. “But just heard in passing. Sadly haven’t met her. Though if you were her friend, perhaps I should.”

“She was…pleasant to talk to,” he said. “Her own people are not always accepted within here, so she appreciated someone who listened. I believe that was why she took the…revelation better than most.”

“Hmm,” Cairu gave him a curious look. “Well, go say hello to her. I’ll be here, just come back before you leave, since I assume you’re not staying.”

“Unfortunately not this time,” Nartha said. “But hopefully I’ll have other opportunities to come back.”

“In any case,” she said walking over to him and pulling him into a hug. “I’m glad you’re alive.”

“You too,” he said. “And please try and stay that way.”

She snorted. “If anyone should be told that, it’s you.”

On that point, he couldn’t disagree.

***

Situation Room, the Praesidium – Classified Location

12/27/2016 – 9:09 A.M.
The arrival of the Chronicler and their new…alliance…with T’Leth and his people had certainly opened up a host of new options, and many of them outside of Earth. They were still going to be limited, but it was far more than they had previously. Of course, the details needed to be hammered out, which was why the Chronicler and Zhang were in the same room with him.

“I would still advise that the number of agents in the Collective be limited,” the Chronicler was saying. “Humans are not widespread, and they will be noticed.”

“The difficult part will be getting them on Collective worlds in the first place,” the Commander said. “Once on them, we can establish Gateways or other means of self-sufficiency.”

“I would suggest we use them to establish a direct connection to allies,” Zhang interjected. “The Nulorian are a way into Vitakar, and if we establish a Gateway in their territory, we could supply them with soldiers and equipment, and they could assist on operations on Earth if they wished.”

“I like that idea,” the Commander nodded. “With that said, I also think it would be a good idea to establish a working base on a world in Collective space. An uninhabited one, where they wouldn’t think to look.”

“It will take some time to find a suitable one,” the Chronicler said, looking down at the blank holotable. “In the meantime, I still don’t have a full map of Collective space. I didn’t want to attempt direct operations until I’d spoken to you. However I would suggest that Gateways be established on Desolan and Vitakar, minimum.”

“And you can do this?” Zhang asked.

“We can transport the materials and personnel,” the Chronicler confirmed. “Fiona will likely handle that. She’s more…adept at teleportation than I am, despite her reservations.”

“Then I’ll need to put together a group of soldiers and agents,” the Commander nodded. “When we first meet the Nulorian, I’ll go in person. I suspect they would respect that more.”

“If you insist,” the Chronicler sighed. “I have reservations of allying too closely with the Nulorian. They are not normal or stable Vitakara, nor do I think their goals are the same as ours. The few interactions I have had show that they are….radical. Willing to commit atrocities against their own people as Miridian dictates it.”

“We need radical right now,” the Commander shrugged. “And we don’t have any allies elsewhere in the Collective. I think talking with Miridian will make things clearer.”

“Most certainly,” Zhang agreed. “Now for Earth. Will you and your…people…participate in the war?”

“I assume you mean in combat,” the Chronicler said. “Not regularly, if at all. In retrospect, our…open operations in Australia were a mistake. The Imperator knows there is a Sovereign One in the vicinity, where before he had only suspicions. If he knows one is working directly with you, it might trigger the endgame immediately.”

The Commander raised an eyebrow. “So why risk it to begin with?”

The Chronicler’s eyes became distant. “Two reasons. The first was that I had limited direction from T’Leth who was still…in a fugue. I had been conducting operations on my own for years, and hadn’t received orders to stop, even though he could have. The second is that I am still Human, Commander. I didn’t want to watch these aliens invade our world and do nothing.”
“But you’ll be taking a more subtle approach now,” the Commander finished.

“That is the plan,” the Chronicler said, nodding. “There is a way to stop the Imperator from controlling your world, but it is not the right time to enact it. Using the orbs we can block off certain points from his control, but too much of the world going dark…it will attract his attention.”

“So no protection of Saudia or ADVENT?” Zhang asked.

“That is not advisable,” the Chronicler agreed. “Those are high-profile areas and figures. The Manchurian Restraints will already be enough, and I also do not think ADVENT should be informed until Earth is under our control. Or even the Solar System.”

The Commander thought for a moment. “You know Project Atlantis?”

The Chronicler shook his head. “No, though I can make a guess.”

“Underwater…” the Chronicler mused thoughtfully. “Clever. Yes, I believe so. The ocean being dark would not likely arouse suspicion. Though this will take significant time to develop, even if ADVENT puts resources towards it.”

“Definitely,” the Commander agreed. “But it’s already started, and Gateways are how they’ll transport the materials in secret.”

“Speaking of Gateways,” Zhang coughed. “If possible, we would also appreciate understanding how to modify the size of them. Larger ones can allow for more or larger reinforcements, and when we reach the stage of space, they will be necessary for transportation.”

“I will have one of my people speak to your science and engineering teams,” the Chronicler said with a wave. “The Gateways were supposed to be extremely difficult to modify. It took T’Leth a… good deal of time to reverse-engineer them, even for him.”

“So he didn’t design them,” the Commander noted. “Interesting.”

“Of course not,” the Chronicler snorted. “He prefers equipment more like this.” He tapped his chest on the stony armor. “And our weapons, of course. Although ours are rather pitiful compared to what he can create.”

“I don’t suppose he’d share some of it with us?” The Commander asked.

“I can share the schematics,” the Chronicler said. “Although you are unlikely to be able to build them. It requires…specialized equipment and materials that aren’t on this world. And there is a certain level of comprehension needed to even construct them. It would be a mistake to think that the science behind Gateways is even remotely similar to that behind what T’Leth creates.”

“Wonderful,” the Commander rubbed his forehead. “If it’s that hard, how do you have enough to give Agent Gertrude one?”

“Because I had an extra one,” he shrugged. “And it was a gesture of goodwill. I believed that you would likely find it interesting. Perhaps you could use it in your own projects. But in general such technology is only for those who work directly with T’Leth. You would not be able to mass produce them.” He also cast a side glance at the Commander. “And knowing you, I suspect you would attempt to improve even the weapon of a Sovereign. In general you seem to have a
preference for forging your own path based on the tools you find.”

The Commander smiled at that. “I’ll take that as a compliment.”

“It was one,” the Chronicler said. “With that said, I have looked over your projects. Most are good, though for once I agree the Ethereal has a point regarding your proposed AI. That could backfire, and T’Leth and most Sovereign Ones avoid the development of such because it could potentially become a threat to them. Something outside their control that can’t be controlled or influenced easily.”

Zhang looked mildly amused. “Is that supposed to be a warning, or an incentive?”

The Chronicler furrowed his eyebrows. “A warning. If a Sovereign One has hesitations, you certainly should.”

The Commander was fairly sure that he and Zhang were thinking the same thing. Yes, and AI was risky, but that even Sovereign Ones disliked the idea actually made it more appealing. Not as something to threaten them with, but as a…insurance policy of sorts, should that become necessary. It appeared an AI would serve multiple purposes.

Assuming it did what they wanted.

“Well, we’ll continue with it for now,” the Commander said. “We’re taking appropriate precautions. None of us want a rampant AI.”

“Our species has never developed something like this,” the Chronicler said. “There are likely things we won’t think about until it is too late. But this project is up to you.”

“It is,” the Commander said firmly. “Will you be remaining here for now?”

“I’ll return Nartha, and then I will return soon after,” the Chronicler said. “Then we can begin establishing Gateways on the designated worlds.”

“That sounds good,” the Commander nodded. “Zhang, put together a list of agents. I’ll have Shen have teams of engineers for the Gateway construction ready, as well as some of my own soldiers.”

“Yes, Commander.”

***

Shooting Range, the Praesidium – Classified Location

12/27/2016 – 11:11 A.M.

Shun looked different to him, and initially he couldn’t place what it was. She was still wearing the standard XCOM fatigues, same haircut and color, and this specific recollection was probably not something he should be doing. Oh well, he couldn’t help if he had a sometimes oddly specific, but accurate memory.

He did wonder if she would recognize him, especially since the last time she had seen him, he’d looked like a Human. He had to admit, he was somewhat nervous about her reaction. Hopefully it wouldn’t take her too long. There were only a few at the shooting range, and he’d walked into it just as she was finishing up.

A good thing one of the soldiers had been kind enough to point him this direction.
She then caught sight of him as he’d walked in, frowned, and appraised him for a few moments before her face morphed into surprise. She carefully set her weapon aside and walked up to him, while everyone else continued shooting. “Nartha…” she began tentatively. “Is that you?”

He let out a sigh of relief. “Oh good, I was afraid you wouldn’t recognize me.”

She laughed and pulled into an embrace which felt very warm. “I can’t believe it! What are you doing here?”

He let her go, and contemplated what to say. “Well…I was getting ready to go to sleep, and a strange Human appeared and requested I come back to XCOM to give everyone an update. So I was teleported by another nervous Human woman, appeared in the Commander’s Office. We caught up for a while, and he surprised me by bringing me to meet my sister.”

He paused. “It’s certainly been an interesting day to say the least. But I wanted to at least say hello before I had to leave.”

“I’m glad you did,” she said. “I would have been furious if you’d been here and not said hello.”

For better or worse, he was getting more accustomed to Human facial mannerisms. A smirk was almost natural now. “And just why would I do that? You were probably the only one here who didn’t want me dead.”

“I think most of us have gotten over that,” Shun noted, nodding around her. “The amount of aliens here is a bit high for the so-called Extraterrestrial Combat Unit.” She grew a bit more contemplative. “I’d wondered what you actually looked like, and I don’t think I was far off. It helped that we actually had some Vitakarians here.”

“Not a disappointment, I hope,” he paused. “Although I do differ from Humans in some-”

“No, I definitely think your eyes are better,” she chuckled. “We can’t really compete with glowing blue ones.”

“Speaking of which,” he noted, looking into her own ones which now had golden rims. “Yours look different.”

“Oh, that would be the gene mods,” she turned up her arm and raised it higher. “Better eyesight, better regeneration, and I can jump off a building and live. Not too bad, I think.” Nartha could see that her skin did seem…not so much lighter as it was mildly translucent at times, when the light hit it a certain way.

“Good for you,” he said. “I’m glad you’re still alive. With how many on both sides had died, I’d wondered if you were one of the casualties.”

She snorted in surprise. “I’m of the opinion that XCOM is one of the safest places to be in this war. And it definitely doesn’t compare to working as a double agent in a Collective run by aliens who like reading minds for fun. If anyone was going to die, it would be you.” She suddenly paused, eyes widening. “Don’t take that the wrong way! I’m very happy you’re still alive.”

He laughed. “So am I. It hasn’t really been easy.”

She gave a brief nod. “I’d like to say I’d agree with it ‘not being easy’, but I don’t think I genuinely could. I can’t really imagine doing that. Working surrounded by enemies and without any help.”

“The isolation is definitely one of the least enjoyable parts,” he agreed. “The ones you want to help
are suspicious for obvious reasons, and everyone else would kill me if they learned what I was
doing. Having someone on the same side would have at least made that easier.”

“Someone to talk to then?” She inquired. “I can understand that.”

“I’m thinking that might change now,” Nartha said, perking up. “I’m sure the Commander will
want to use the Chronicler and his people to move us into the Collective.” He hesitated. “Maybe
you could come along?”

“Well,” she pretended to consider. “I did have some espionage experience before I was moved to
XCOM. Although you might want to suggest that to the Commander. Also, who is the
Chronicler?”

Oh, right. He looked to the wall where there was a bench. “Let’s sit down. Catch up properly. I’ve
got time before I have to go.”

“Good idea,” she said. “And I need to ask about this sister. I didn’t even know you had one.”

“Yes, I suppose I didn’t mention that.” He remembered, sadly recalling that their time post-reveal
had mostly been coming to terms with it and sharing a little bit of information about his species. At
least now there was more time for more mundane stuff, like related family members.

It was a welcome change. If the Commander did send more soldiers back with him, hopefully Shun
would be among them.

***

Manitoba ADVENT Command, Winnipeg – Canada

12/30/2016 – 12:13 P.M.

When he’d been officially recalled to Winnipeg, Neil Harrison had been expecting the worst. There
were only two possibilities he could think of, the first was that he would be moved to one of the
ADVENT Special Forces units, possibly the Lancers or Hussars. Given his background, neither
would be surprising. The other option was him just being deployed to the front lines in the
trenches.

Now while he was happy to do his part in the fight, getting sent to the trenches, even as an officer,
would have been a waste of his skills, and while getting sent to a special forces unit would have
been better, neither of those were exactly suited for him. He honestly would have preferred to just
stay where he was, or previously been with much of the Canadian military still in limbo after being
integrated into ADVENT.

ADVENT had essentially shipped over a lot of armor and weapons, and had the military just equip
that and keep their positions until further notice. Now they were actually looking to integrate them
more fully. Which unfortunately meant that Canadian special forces was one of the first targets.

With that said, it seemed very clear now that what Commander Christiaens had planned was not
what he expected.

ADVENT Command here was impressively developed. The situation room they were in was filled
with screens, computers, and a kind of holoprojector from the ceiling. Most of the people in the
room were busy on other things, but the ones who mattered were himself, a bearded man he’d
never met before, a dark-skinned woman dressed in the similarly black uniform of ADVENT
Intelligence, an Asian man who was apparently some high-ranking ADVENT Engineer, and of
course the Commander of the ADVENT Military Forces herself.

Neil had never heard of Laura Christiaens before ADVENT. Well, not exactly, he *had* heard her name before. An important NATO figure, but that was it. Since then, he’d done some more research and was beginning to see why she had likely been selected out of others, who he frankly felt were far better military tacticians.

ADVENT was not an ordinary military, it was comprised of soldiers from all across the world, and making sure everyone got along and everything was handled effectively was a much bigger task. All potential criticisms of NATO aside, it was the closest thing to ADVENT that had previously existed. It made sense that the former Chairman (or woman in this case) would be given the task of something close to the same thing, only on a much grander scale.

If nothing else, she did seem to listen to those under her and push for greater military strength and technology. Always a plus.

“Everyone is here then,” Laura looked to the Asian man. “We can begin. I assume all of you know who I am. This is Feng Mercado, Chief of ADVENT Engineering and Development.”

The man gave a small nod. Neil blinked. Well, that was interesting. What was someone like that doing here? It was already strange that they were speaking directly to the Commander herself, but there were a surprising number of important people here. He briefly wondered who the other two people were now.

“We can go around with introductions,” Laura said, motioning to the bearded man. “The three of you will be working closely together, so it would be good to know names.”

“Walter Blakenship,” the man said, his voice gruff and cracked as if he wasn’t used to speaking much. “ADVENT “Alaskan Advisor”, or whatever useless name they gave. No clue what I’m doing now.”

“We asked Mr. Blakenship for advice on operations in the Alaskan wilderness,” Laura said smoothly. “There are few better when it comes to cold-weather survival. I also understand that you breed, train, and use sled dogs?”

Walter huffed. “Best in the country.”

“There you go,” Laura nodded. “This will be relevant shortly.” She gestured to Neil. “And you?”

“A modest way of putting it,” Laura raised an eyebrow. “Operative Harrison is among the top of the entire CSOR, and has received multiple commendations for his service.”

Which meant he had a bunch of medals and stuff for just managing to live on his own and write down notes on enemy parties. Not nearly as impressive as Laura made it sound, but it would look bad to dispute her. “I did my job, Ma’am, nothing more.” He also didn’t add that he wasn’t exactly at the peak of his career either anymore. Prior to the invasion, he likely would have retired by now.

Damn aliens, messing up everything.

The woman preempted Laura asking for her to continue. “Cycelea Shaw,” she allowed a cynical smile showing her bright teeth. “Inquisitor of ADVENT Intelligence.”
Walter narrowed his eyes. “The hell is an Inquisitor?”

“Something you don’t expect,” Neil said dryly, and he could swear that Laura resisted the urge to roll her eyes. Cycelea gave a genuine smile at him this time. With that said, he didn’t know much about who, exactly the Inquisitors were. He did hear the name referred to some division in ADVENT Intelligence, and the implications were both obvious but troubling if so.

“Inquisitors are psions in ADVENT Intelligence,” Cycelea explained. “Not known to the public for certain reasons. I specialize in telepathy, since you were likely wondering.”

Neil resisted a shiver. Psionics in general was odd, but as long as it was tangible he would get used to it. The purple fire and shields he’d seen from the footage was one thing, but telepathy was completely unnerving. That checked off too many boxes that made him just want to avoid anything to do with psionics.

The first time he’d seen a telepath walk into a group of aliens and with a gesture made them shoot themselves in the heads was enough to convince him that psionics would have been better off if it hadn’t been discovered. Sure, it was useful against the aliens now, but he would laugh if the aliens couldn’t do the same thing.

Walter didn’t seem to be fond of the idea either. “I don’t want to work with a spook, much less a fucking mind-reader.”

“You don’t have to worry about me doing anything like that,” Cycelea said, tapping her head. “Manchurian Restraints. Can’t use my abilities on Humans. Have a code phrase if I start acting up. I’m not a threat to anyone here.”

“Inquisitor Shaw is correct,” Laura said. “She and her colleagues will not subject you to their abilities unless specifically ordered or the action is beneficial. You will be supplied with the code phrases, Operative Harrison. Not generally protocol, but you’ll be cut off from our network for some time.”

He cocked his head. “There are more?”

“ADVENT Intelligence has allowed the deployment of three Inquisitors to assist,” Laura clarified. “Inquisitor Shaw is in charge of them. However, we should get to why all of you are actually here right now.”

Feng clicked a button on his tablet, and a glowing blue map of Canada and Alaska appeared. “The three of you are the core leadership of what we are calling Operation: Long Dark,” Laura began. “In short, this involves slowing or stopping the continued alien incursion into Alaska and Canada. Much of it is more rural, and isn’t especially fortified. Despite the major attacks ceasing, the aliens are continuing to advance and take over the small towns and cities.” She looked each of them in the eye. “You will stop this.”

“The three of us?” Walter asked skeptically.

“No,” Laura shook her head. “You will have a team of operatives working with you. There will not be many, but all of them – as well as yourselves – will have an advantage. The aliens do not know this world, much less how to survive it. Winters here are harsh and unforgiving, but fortunately, most of you have experience thriving in these kinds of conditions. You will use this to defeat, hamstring, sabotage, or otherwise trap the aliens here.”

She looked to Neil. “Mr. Harrison, you will be officially in charge of this operation. Once we are
done, you will approve who you want to accompany you. This is a guerilla campaign, and one best suited to your skills. You will have full control over how it is waged, but your objectives will be immutable: Push the aliens back, rescue or liberate civilians, and recover any ADVENT personnel you find or learn about.”

Now this was something he could do. “Yes, Commander.”

“What can we do with the civilians?” Cycelea asked. “Most will not be able to survive in the wilderness as well as we will.”

“You will have some means of contacting us,” Laura said. “You will have equipment that will be able to transmit your location and if you need civilian extraction, the numbers can be adjusted. If you manage to liberate a city or town, we will attempt to send soldiers to secure the area and fortify it against future attacks.”

“And why isn’t this being done already?” Walter asked.

“It is,” Laura said coldly, turning his gaze to the man. “However, it is being done slowly because much of rural Canada and Alaska is isolated, unconnected, and any forces we send are susceptible to ambushes. Not to mention this is one area where the aliens have established airbases and have a larger air presence. We don’t want to risk provoking another fight until we’re ready, and the brutal truth is that the rural areas are not as important as the cities. They are not worth waging a war at this point.” She paused. “That is not to say they don’t have worth, but in the scope of the world it’s a necessary decision. But we are not doing nothing, as that is why all of you are here.”

Walter huffed, but didn’t say anything. Neil had some more practical questions. “So what is our equipment, weaponry, and transportation?” He asked. “Conventional travel won’t be possible with what I’m thinking.”

“Transportation will be covered with Walter,” Laura gestured to him. “Sled dogs for faster transportation and supplies. There will be some Molosser Handlers who are available, if you want the hounds in your arsenal. Additional supplies will arrive at scheduled dead drops which will include components, ammunition, and medical supplies. It will be a significant amount, we have no intention of abandoning you. With that said, you will largely be on your own without contact from us.”

“Your weaponry will be what you choose,” Feng interjected for the first time. “Gauss, laser, or even conventional. The same applies for explosives and similar equipment. However, we have worked on developing armor for the exact conditions you’ll be in.”

Another press on his tablet and the holographic map was replaced with a new suit of ADVENT armor. This was distinct in several ways, namely how it was not bulky like most ADVENT armor, and if anything seemed to have very little actual armor. The entire suit seemed to be covered in some smooth fabric, although there were some areas that clearly indicated armor under the fabric.

The helmet was similarly thinner and seemed to be attached to the fabric at the neck, and had a standard white facemask without any strange shapes or complexity. “This has been referred to as Snowtrooper armor,” Feng continued. “Designed for operation in cold weather, contains internal and external temperature monitoring and heading, invisible to infrared, not reflective, and can be camouflaged at the desire of the owner.”

Mercado looked rather proud of it. “In short, it is perfect for your own operation here. The aliens will not be able to detect you. The suit is completely sealed, with an additional thin aerogel over it, and filtered, which means no heat will escape. Chemical or gas attacks will fail, as well as smoke.”
That all sounded great, although he was concerned about one thing. “The suit sounds like it will take up energy. We might not be able to replenish it fast enough.”

“The suit has two modes of being powered,” Feng continued. “An elerium core which will last up to two weeks of constant use. Each suit has two. It can also be powered by more conventional batteries. We have also developed a manual recharge device which is capable of recharging both elerium cores and conventional batteries. You will receive additional elerium cores if they become damaged.”

“Nice,” Cycelea nodded, eyes glinting as she looked over the glowing hologram.

“Indeed,” Feng nodded. “We have also designed it to integrate with a prototype trench coat, currently designed to be immune to acid, but at the moment will also act as another means of insulation. It is stab-proof, and has some limited protection against light plasma.” He pressed another button and the Snowtrooper was wearing a trench coat, with the option for a hood. It did look pretty neat, Neil had to admit.

“We’re planning for your team to be the first field test,” Laura said. “It’s done exceptionally well in controlled environments, but it needs to be properly used. Your team is ideal because if it doesn’t work, you will be able to survive on your own.”

“That sounds good,” Neil nodded. “So will I be reporting to you?”

“Reports will be due every month,” Laura said. “They will go to ADVENT Command, but I will likely be reading them. We expect them to be thorough, and will be transferred via the dead drop. Do all of you understand?”

The other two nodded, and Neil joined in. “I believe so, Commander.”

“Then you may begin as you see fit,” Laura said. “You will deploy in three days. Pick your team. Your starting location I will leave up to you, as well as the operation itself. Do not fail, Commando Harrison.”

He saluted. “No, Commander. I will not.”

ADVENT Recruitment Center 0821, Atlanta – Georgia, United States of America

1/2/2016 – 3:22 P.M.

The questionnaire that he had been given was interesting, and not entirely what he expected. It was split into what he saw as three different sections. The first seemed to be gathering his views on law and justice, the second part covered morality and consequence, and the last portion was a host of random scenarios which didn’t have obvious answers.

This seemed like an unnecessarily long morality test, which was odd to see from ADVENT. The good news was that he was definitely confirmed to have psionic potential, rather highly too judging from the reaction of the nurse who’d run the test through an odd-looking contraption which he assumed took brain scans.

There was no time limit on the test, but the room he was in seemed designed to be as unnerving as possible. It felt like a glass cage, with every wall being a one-way mirror which he knew people were watching from the outside. He had, admittedly, taken his time on this. It did make him wonder if ADVENT was actually serious on having psions fit certain psychological profiles.
If so, he was somewhat concerned.

Finished, he stood and knocked on the door. It opened and a man in an ADVENT uniform walked in. He was roughly six feet, dark-skinned, and with an amused glint in his eyes. Ivan wished there was a way to easily identify what rank they were, because the only identifying mark on his uniform was the ADVENT PRIEST Division emblem.

He was also unarmed. “Done already?” He asked.

“Yes,” Ivan said, handing the sheet to him. “Complete.”

“Good, good.” Instead of leaving, the man went to the wall and grabbed another chair and placed it opposite the one Ivan had been sitting in. “Take a seat, Mr. Smirnov.”

So they were going to do the interview here? “Alright.”

He waited for a few minutes as the man read his answers. Ivan would not have been surprised if the man was a psion himself, or there was another one close by. He also noticed that the man had a communication device in his ear, and had another beige file on the table. Probably the one on Ivan himself.

“Your answers are different than what I’m used to,” the man finally said, setting them down and appraising him.

“In a good or bad way, Mr…?”

“Daniels,” he supplied. “And I believe we should see. Inconclusive is what I find. Most people fall heavily one way or another. You fall into the middle of two opposites.” He nodded to the paper. “What is your impression of what you just completed?”

“A means of weeding out candidates who don’t fit a specific criteria.” He said.

“A good answer,” Daniels said. “However, not the correct one. This,” he rested a hand on the paper. “Gives me perspective on the candidate itself. No one can be disqualified from this. What they say and do afterward determines that.”

So more akin to a crude psychological profile. And combined with the file they no doubt had on him, meant they could likely establish a fairly accurate read on him. Which meant that this man was likely at minimum a psychologist or interrogator. Someone who knew how to read and react to people. He did not especially like coming to that conclusion.

“You want to use ADVENT as a means to an end,” Daniels began. “Is this correct or not?”

Ivan believed it would likely be a bad idea to lie to the man. “A cold way of putting it, but yes. Considering my own workforce has been so helpfully destroyed by ADVENT, I need to acquire a more usable skill. And with the direction the world is heading, having worked with ADVENT will be a useful anecdote.”

“I see,” Daniels said. “Practical, even if selfish.”

“I’m making the best of a bad situation,” Ivan stated. “Forgive me if I don’t buy into the grand vision of ADVENT. They are the reason I am here now.”

“And yet you still would come to us,” he refuted calmly. “Law as a field hasn’t died. I’m certain you can find work elsewhere.”
“In a year, the world might not exist,” Ivan shot back. “And contrary to what you think, not all law fields are the same. I can’t just apply somewhere else. It’s not a fucking computer science degree, and I’m well above the menial intern work. So I’d rather actually try and set myself up for the future, assuming the war is won.”

Daniels nodded. “So this is about you.”

“Is that a problem?”

Daniels didn’t answer, but glanced back down at the paper. “What do you know about the PRIEST Division?”

“That you’re psions. You fight aliens and have abilities,” Ivan shrugged. “And you put bombs in their heads to keep them in line. Can’t say I’d be thrilled with that, but I assume you only blow them up if they become a problem.”

“That is a very basic description,” Daniels said. “And if you weren’t psionic, was there a backup plan?”

“Likely something in ADVENT’s law division,” Ivan shrugged. “I’m aware of the irony.”

“I see,” Daniels focused on Ivan intently. “And why choose the PRIEST Division first?”

“If I have the capability to use psionics,” Ivan answered slowly. “I want that. It would be a suitable repayment for ADVENT destroying my previous career.” Ivan took a breath and calmed down. “I’m not a fan of ADVENT, but I can promise that I won’t cause problems. I’ll follow orders and so on, though I will leave once my time is up and not look back.”

Daniels gave a single nod. “And you say you want to…use your abilities afterwards. I fail to see how that would benefit your chosen field.”

“Telepathy, even emotion sensing, would be useful,” Ivan gave a grim smile. “You have no idea how good it would be to know if the scum I deal with from all sides are lying to my face or not. I’m only interested in justice here, Mr. Daniels, for all parties.”

“Justice can be subjective, Mr. Smirnov,” Daniels pointed out. “The Law is what is important.”

“You know what I mean.”

“I suppose I do,” Daniels said. “You are aware that the PRIEST Division is not one you can exactly walk away from?”

“I would hope not,” Ivan said slowly. “I don’t see how you can keep control of someone indefinitely. That can’t be legal.”

“ADVENT has to be careful with psions,” Daniels gave an apologetic shrug. “We can’t risk them being set loose into the general population. Too many would descend into vigilante justice, exploit their powers in their workplace, as you so helpfully illustrated, or simply settle old scores. That is not to say they are treated badly, but psions won’t enjoy the same freedoms you have now.”

He tapped his head. “You don’t just get a neural bomb, you also have the Manchurian Restraints. A type of mental conditioning which ensures you don’t pose a threat to ADVENT or it’s citizens.”

Ivan was mildly shocked. “How can that possibly be legal? Taking away someone’s free will, what is the line then?”
“It’s perfectly legal, and supported by all areas of ADVENT,” Daniels explained. “Psionics, Mr. Smirnov, isn’t a toy. It’s not a weapon. It is a tool, one which the wielder needs to be careful of using. It should be used for the protection and improvement of mankind, not to be used selfishly or as a crutch. It is a last resort, not the first.”

He sighed. “Based on your responses, both in this discussion, and on the questionnaire, I do not believe you are fit for the PRIEST Division. Now—“

“What?!” Ivan demanded furiously. “I know how valuable psions are to ADVENT. You can’t just refuse me just because you don’t like me. How can you say I’m capable of psionics, but not actually make me a psion?”

“Psions are valuable,” Daniels agreed. “But we want responsible ones. We will find more, and the ones who match the goals and values of ADVENT. You do not fit this, and giving you power is a risk I am not willing to sign off on.”

“I know I’m a powerful psion,” Ivan insisted. “I saw how the nurse reacted. Can you really afford to reject me?”

“All the more reason to,” Daniels nodded. “I would quote you a line about power and responsibility, but I suspect you wouldn’t grasp the implication. Now, if you wish to still work in ADVENT’s legal division—“

“Forget it,” Ivan stormed up and to the door. “I’m not interested in working for people like you.”

Daniels might have said something, but Ivan didn’t hear it as he walked furiously out of the room and through the hallway until he reached the lobby. Slamming the door open, he stepped aimlessly onto the sidewalk and began walking.

He had no idea what he was going to do now.

***

Kensington Palace, London – Britain

1/2/2017 – 8:12 A.M.

Another year come and gone. Saudia had never really felt the need to celebrate such, and yet in light of the alien invasion, there were still those who celebrated. There were the usual public events and such, though they took a markedly different feel when there were ADVENT soldiers at multiple checkpoints, Priests inserted into the crowd, and visible (as well as hidden) snipers on the roofs and vantage points.

Yet for some reason, millions of people tuned in to watch a giant ball drop. Riveting.

Next year maybe ADVENT would have a proper New Years event.

But a new year, same work.

She had dressed in notably civilian clothes today, since Prince Mason had suggested such, as she definitely didn’t want the media to get wind of this. Questions about why the Chancellor of ADVENT was meeting the Duke of Cambridge would look suspicious, especially in light of the upcoming referendum. Luckily the good Prince had made the arrangements for a quiet pickup with a driver he trusted, which had taken her straight to Kensington Palace itself, well out of the normal public entryway.
Ethan hadn’t been supportive of her going alone, but she knew that she was perfectly safe. While she hadn’t specifically authorized it, she was quite certain that ADVENT Intelligence would be keeping an eye on any potential threats, and under her clothing was armor that would stop small arms for a short while.

She was capable of defending herself. More importantly, she saw no reason why the Prince would invite her just to kill or capture her. From the dossier on him, that would be idiotic, which was highly out of character.

She was immediately met with two well-dressed guards, as well as a figure she assumed to be some kind of butler or greeter. “Chancellor Saudia Vyandar,” he said, his voice cultured and slightly dismissive. “Welcome. His Highness will see you now. Follow all instructions.”

“Of course,” she said as they walked, glad that the man hadn’t given some long-winded greeting. All of them were content to walk in silence as they made their way through the palace. As expected, it was lavishly decorated and furnished, with every centimeter impeccably clean and orderly. There were some housecleaners in the background, but none of them looked their way.

Saudia idly wondered just how many guards were following them, no doubt concerned about her. For once, she felt that the number of eyes on her was probably not for her protection. They walked up some stairs, and a few more turns later they arrived in front of double doors which the man opened grandly.

Inside was the expected lavish dining room, complete with ornate carpet, glossy wooden tables, a full meal and silverware laid on the table, and tall windows illuminating the room with chandeliers hanging from the ceiling. It was impressive, but she’d lost her ability to be impressed at gross displays of wealth a long time ago.

“His Highness Prince Mason, the Duke of Cambridge,” the man announced. The man who was sitting at the end of the table stood and gave a greeting smile.

“Chancellor,” he said with an extended hand. “Welcome to the Kensington Palace.” He nodded to the man. “You are dismissed. Ensure no one disturbs us.”

With a nod the man left and shut the doors behind him. Saudia appraised the man before her. He was dressed in a simple suit, hair and beard precisely trimmed, and skin still tanned. He was still rather young, only thirty-five, and it showed. And while she couldn’t tell from looking at him, he was still fit according to his dossier.

He was still shorter than her though. Then again, most were.

“Help yourself to breakfast if you wish,” Prince Mason said, gesturing to the food. “And you may take a seat. I didn’t know if you’d be hungry, but always best to prepare. At the very minimum it will improve the aroma.”

She was somewhat hungry, and the food looked good. “Your hospitality is appreciated,” she said, taking a seat at the end of the table.

Mason returned to the end to the table and took his seat, which had a similar platter of food before him. There was also a noticeably large file sitting beside it. “It’s the least I can do here,” he said as she began eating. “The Chancellor of ADVENT should receive nothing less. I admit, I didn’t know if you would even see my request, much less come to me.”

“I will echo the sentiment,” she said. “I was not expecting any contact from the Royal Family. You
can say I am here out of a certain curiosity. You in particular would not ask to meet without reason.”

“Yes, I’m certain you know quite a bit about me,” he smiled without goodwill. “But you, Chancellor, are something of a mystery. No background, no public record, nothing. It took MI6 several months to connect you to a small mining company in Nigeria, which was also interestingly not listed on any registries and has exceptionally heavy security for such a small family business.”

Saudia returned the smile and sipped her water. “Not all of us come from the expected, Duke Mason. And if MI6 wanted information, well, they could have asked. But I suspect they learned little more than that, am I right?”

“That, I’m afraid, is classified,” he said, the smile maintained. “But as far as I am concerned, you past, or lack thereof, is irrelevant. You are the Chancellor of ADVENT, and that is not going to change. You seem to be a fair woman, a good leader, and can make the decisions necessary for one in your position. Good qualities.”

“I actually believe you,” he nodded. “Or you at least try, which is more than I can say for many politicians.”

“I don’t consider myself a politician.”

“Oh, I agree,” Mason took a sip of his tea. “However, I believe we should begin discussing why I wanted to speak to you in the first place. I am a realist, Chancellor. As much as Parliament dislikes the idea, I am certain Britain will soon join ADVENT. The will of the people will not be ignored, and frankly it is irresponsible of us to sit this conflict out.”

“The Royal Family has not given an opinion on the referendum,” Saudia noted. “Is there support?”

“The Royal Family will not give a statement either way,” Mason explained. “Internally, we are conflicted, the Queen in particular is concerned about the effect ADVENT would have on our country and culture. The aliens are a threat we all recognize and need to face, and it is best done as part of ADVENT. At the same time, your statements and plans for the monarchy are… understandably disquieting for us.”

Ah, so this was going to be discussed. Saudia set her teacup down. “While I agree your reservations are understandable, this position is not one I will change. The monarchy is an outdated and irrelevant means of influence and standing. Everything about the concept goes against the meritocracy of ADVENT, as well as my own values.”

“You are aware that we do not control the country,” Mason smiled. “Unless you believe the conspiracies.”

Saudia chuckled. “I suspect that the daily briefings the Royal Family receives, and the Queen’s weekly discussions with the Prime Minister are not filled with random trivia. To suggest the Royal Family does not have influence is laughably naïve, as you no doubt know.” She shook her head. “The average individual does not receive dossiers from MI6.”

“Touché, Chancellor,” Mason nodded. “Though I do say that we did not control the country. I never said we don’t have influence, or aren’t well-informed on matters of state and international security.”

“And then you can understand why I see an issue with a certain family having access to such
information, and possessing such influence, simply because they were born correctly,” she answered neutrally. “The fact that the Royal Family is also unelected, but is also publicly funded does not improve the image in my eyes.”

“Says the unelected woman of ADVENT,” Mason pointed out. “I don’t recall an election for your appointment.”

She smiled at that, a real one. He was smart. “A special case. Future Chancellors will be elected. Obviously we couldn’t hold an election in the…circumstances. With that said, I earned my position here.”

“Yes, through your mysterious intelligence past,” Mason said with a tinge of sarcasm. “But I’m also not convinced you can claim ADVENT is so much better when you have an entire team deciding who can, and cannot be elected.”

“Qualifications are important,” Saudia retorted. “And since you sound like you did research, you would know Election Oversight only bars those who don’t meet the public specifications. I mean, it wouldn’t look especially good on any nation that just allows anyone to run. That’s how you get conmen and Nazis.”

“Chancellor, I’m actually not disagreeing,” Mason smiled. “In fact, your election system is something I quite like. Absolute freedom is not always something to strive for, but I am pointing out that you are ultimately giving the people the illusion of choice; because while they are free to vote for who they want, all the candidates are pre-determined by ADVENT.”

He swept a hand to the side dismissively. “I won’t deny you have points, and the perception is understandable for outsiders, but I will say that we have the interests of the British people at heart. And despite what you think, some of us do more than just sit in our palace and look down at the peasants,” he smirked. “Me and my brother served in the military, our families give millions to charities and personally assist in humanitarian projects. We’re public figures and role models to people, and we take that seriously.”

“And there is nothing stopping you from continuing that,” Saudia nodded. “If the monarchy wishes to be preserved, there is nothing preventing that. They will just no longer receive classified information, or receive public funding. I suspect that the personal wealth of your family is quite sufficient.”

“While true,” Mason admitted. “It comes with a side effect, one which I’ve noticed with ADVENT. Your rules are objectively ‘fair’. But it will have the effect of my family fading into obscurity in the future. Like it or not, Chancellor, we are a heavily ingrained part of British culture. Our traditions, history, and politics are distinctly our own. Good or bad, it is ours.”

He set his teacup down. “As it is now, ADVENT is not interested in preserving the cultures of the assimilated countries. You want to unite our species, that goal is clear. No divisions, no borders, no nationalism. All one species, one people. An admirable goal, on paper, and perhaps needed. But I do wonder if you’ve considered the consequences of it, because it seems very little has been done to limit the potential cultural damage.”

Saudia rested her hands on that table. “I will be honest here, Duke, I care very little for tradition and convention. I find it often holds people, and our species as a whole back. Many people do things ‘traditionally’ because that is the way it is done, even if it is the wrong way. The impact, or lack thereof, on the cultures we assimilate is a non-issue for me. If certain cultural norms vanish as a result of ADVENT, then perhaps they weren’t worth preserving to begin with.”
Mason looked at her thoughtfully, a finger idly tapping on the table. “I believe I can understand where you come from, Chancellor. You may have been born in Nigeria, but you don’t identify as such. You are a Human, with your first loyalty being to your species, not your nation. However, most aren’t like you. As for what you said, I both agree and disagree.”

He paused. “All cultures have positive and negative aspects. I don’t think it would be impossible to emphasize the positive in your countries, while still remaining true to the core of ADVENT. I suppose it depends on what you want, Chancellor. Do you want a homogenized society with the same cities, the same government, the same food, the same norms, where countries are just pieces of land with different geography.”

“Would that be so bad?” She asked.

Mason was silent for a few moments. “I would find it sad, personally. It wouldn’t just be a loss of uniqueness and culture, but also a loss of history which has been ingrained in countries all over the world for generations. Perhaps that is a price of unification, but I don’t necessarily believe it needs to happen. I sincerely believe that you simply have not considered it.”

He moved the large file before him, as well as pushing the platter of food aside. “I am not one to just accept what is going to happen, though, but do my own small part to change it. To this end, I have taken the liberty of conceptualizing something I believe would have tangible benefit to ADVENT, while also addressing some of the concerns I raised.”

Saudia moved her own platter of food aside. “You have my attention.”

“Perfect,” he opened the file. “My proposal is that of a melee-oriented division within ADVENT. I believe that with the Lancer Executors and the Templars, as well as multiple alien equivalents, that melee combat is resurging. The aliens have dedicated units for this, as does XCOM. But I noticed that ADVENT does not have such an equivalent, aside from the Lancers who are an extremely limited number. Does ADVENT plan on addressing this?”

“In the future, perhaps,” Saudia shook her head. “But it isn’t necessarily a pressing priority.” She paused. “With that said, such a division would certainly augment our forces. You came up with this proposal yourself?”

“Along with a few friends in the armed forces, as well as some designers,” he answered. “My inspirations came from the XCOM Templars, medieval history, and the Battlemaster, ironically enough. And it comes together to form what I am calling the Order of Terra. I assumed you would prefer a name that encapsulated our species, not one nation or organization.”

He slid the file over to her. “While I obviously did not have access to the advanced equipment and materials you possess, the designs should speak for themselves.”

Saudia began turning the pages, definitely interested as she saw the high-quality sketches and designs. He appeared to have legitimately put work into this. “Inspired by the medieval period, I see.”

“I would wager that it is perhaps the most famous,” he smiled. “Young children, and many adults, are fascinated by the period. One we romanticize quite often. Chivalry, honor, glory, all attractive and inspiring attributes for young minds.” He waved a hand. “Of course, it wasn’t all like that, but that is what we remember. There is something special about seeing even mock tournaments and shows today depicting such. But eventually the knights and lords disappeared as technology improved.”
He looked at her intently. “I want this to serve two purposes. For you and ADVENT, it will provide another tool in your tactical arsenal and permanently fix the lack of a melee-oriented division. The second is as a means of inspiration and morale boosting. I expect even the aliens become inspired when the Battlemaster appears on the Battlefield. Or if you prefer more cold terms, as a propaganda tool.”

“So how would this work?” She asked, looking through the papers. “You have several different ranks.” She raised an eyebrow. “All named after medieval titles, of course.”

“A missed opportunity if I didn’t,” he said, gesturing to the one she had now. “Squire rank, the lowest in the Order. Primarily would serve as the front line in an ADVENT attack with a greatshield augmented with alien alloys and charged coils to reduce plasma effectiveness. They could be armed with pistols or one-handed sidearms for long-range, and short swords or spears for close range.”

The illustration in the file certainly looked more than what the typical medieval squire had. The armor was more styled in the vein of knights, although somewhat plain, while still retaining some of ADVENT’s notable aesthetic. The ‘squire’ held a massive shield in one hand, with a pistol in the other and a spear strapped to its back.

“I imagine this is how ADVENT would be able to close the distance in firefights,” Mason continued. “This would help break stalemates in ADVENT’s favor. Obviously we are in the modern era, where long-ranged weapons are the norm. That is why all units have short and long-ranged weapons. Pistols for advancing forward, and their swords and spears when they engage at close range. Obviously these weapons and armor would be made to modern specifications.”

“Useful,” Saudia noted. “The Oyariah Titans have attempted similar tactics against us. Were it not for psions, they might have been more successful.”

She flipped the page to the next unit. “A Knight proper,” Mason said. “An officer equivalent if you want to use that terminology.” The illustration here had two different Knights, one holding what looked like a flaming sword with a kite shield, and another holding a rifle with the sword sheathed and the shield over the back.

The armor looked similar to the squire, although it seemed slightly less bulky and the helmets were noticeably more ornate, with 45 degree angled wings on the sides for one, and a clearly-inspired late-medieval period-like helmet for the other. “This is where some personalization can come in,” Mason said. “I thought the shield could be decided by the Knight themselves. They could have different types, with their own emblems – ADVENT-approved of course.”

“Acceptable,” she noted absentmindedly as she read a few of the notes, mostly about color or alternative design. This was definitely just a concept, after all. The image of a Knight holding a rifle was rather amusing to her, but she had to admit if there was ever a modern knight, they would definitely have to have something like that.

“Next are those ranked Lords,” Mason said as she flipped to the respective page. “Or Ladies, if you prefer. Akin to a Marshal in purpose, and who are always on the front lines, as should be expected of leaders. These I envisioned as having more freedom, as you can tell.”

She definitely could. The largest differences in the illustration compared to the previous two was the helmet (Which didn’t look too dissimilar to a Knight) and a cape. Mason had clearly been inspired by the Battlemaster for this one. But what stood out to her were that the four illustrations of these Lords had different weapons. One had a greatsword, one had a sword and shield, another had an axe, and the last one wielded a warhammer.
“I certainly like this concept,” Saudia said, looking up at Mason. “It could certainly be viable. Although I assume you have a leader in place, or equivalent rank.”

“Oh, certainly,” he smiled, motioning for her to turn over the page one last time. “The proposed title of the Lord Commander of the Order of Terra.” Sure enough, she saw the illustration which was extremely similar to the Lords, though there were multiple notes that the color of the cape would not be red, but black.

“With the same freedoms as the Lords, except not quite as often participating in combat,” Mason added. “I didn’t see a need to become overly complex here, as this is not something which needs unnecessary ranks or promotion. However, there is one important element to all of this.”

She raised an eyebrow. “Go on.”

“Knighting was always a ceremonial affair,” he explained. “ADVENT is not especially ceremonial, from what I’ve seen. For the Order, I want to have some of this ceremony, and this is where people like me come in. When promoted to Knight or Lord, such ceremonies could be conducted by the respective monarchy or royal equivalent.”

He soon expanded on that. “This is up to the soldier, of course, but for those who wish it, it could be turned into a celebration of sorts. A public event to boost morale if you want a tangible benefit. However, what this does is it preserves some part of the cultures of these countries, while not giving those in monarchies any actual power. Their role is purely ceremonial, which is what you want if I’m not mistaken.”

“What about for countries without such an equivalent,” Saudia asked. “America has something of a…bad history with monarchy.”

“Well, that’s the interesting thing,” Mason said. “You would have two options. Promote as standard, or find a family with some kind of connection, not necessarily to royalty, but knighthood. I suspect even in America you could find someone. The point is someone with a connection to their own country. Can you really say Japanese or English soldiers wouldn’t feel pride and accomplishment upon recognition from their Emperor or Queen, respectively?”

“Perhaps it couldn’t hurt,” she straightened in her chair, considering. “Now, where do you fit in this? I am impressed with this proposal, but I assume you want a position in it? Lord Commander?”

“I considered it, but no,” Mason shook his head. “I am not in prime shape anymore. I am healthy, but not suited for combat now. With that said I would want a position in ADVENT. To fill a niche you have forgotten about until now.”

“What is?”

“Something akin to a…cultural preserver,” he said thoughtfully. “Someone who would, instead of homogenizing every aspect of ADVENT, work to keep the uniqueness of other countries while not compromising ADVENT values. All done in accordance with ADVENT standards, of course,” he nodded to her. “For most people, I wouldn’t think this would accomplish anything. A throwaway position with no real influence. But you are a reasonable woman, Chancellor. I believe it would be worth something with your approval.”

He clasped his hand together and leaned forward. “If we could come to an agreement regarding this, I know it would assuage concerns in my family. The Crown would publicly support the referendum and solidify our entrance into ADVENT. Provided ADVENT was also public about our role in the creation of this division, and promotion of my own role. It would serve a purpose, I
feel. Beyond thanks, it would show other countries they don’t have to fear ADVENT destroying
and reforming their countries based upon seemingly arbitrary whims.”

Saudia thought for a moment. He made good points, and she wasn’t one to turn down good ideas
that weren’t her own. “I think ADVENT would be open to what you propose,” she finally said. “I
cannot make a unilateral decision like this, but I do want all relevant parties to meet and refine this
further. We can make this work, if you are willing.”

He smiled. “I certainly am, Chancellor.”

“Excellent. I look forward to seeing what you will do in the future.”

Atlanta, Georgia – United States of America

1/2/2017 – 6:12 P.M.

Food was welcome, but Ivan barely tasted anything as he ate. It was some burger joint he didn’t
even remember the name of, but had just wandered into as he thought. With some food and drink,
he could think a bit more.

The good news was that he at least knew he was psionic. He sincerely doubted they would have
lied about that, and that meant that there was a chance he could find some way to become sensitive
on his own. Google searches unfortunately hadn’t come up with anything, although there was
much speculation about how, exactly, ADVENT and XCOM awakened psions.

He was also fairly sure that he was going to be blacklisted by ADVENT after that incident. In
retrospect, he shouldn’t have been so aggressive. It had on occasion served him well in court, but
unfortunately it wasn’t something he had a firm filter on. He’d never liked censoring himself
because of some perceived insult, and that extended to people in authority.

Stupid, perhaps, but at least he could say he had a spine.

Of course, now that meant he had few to no options. He supposed he could swallow his pride and
find some entry level position, or…actually, he could just emigrate away from ADVENT. Quite a
few countries in Europe were still around, and still had some basic understanding of how criminal
cases should be tried.

Yes, that seemed like a good plan. He’d have to sleep on it, but it was better than staying in
ADVENT. He had no desire or future here. Let the aliens burn it all to the ground if they wanted.
Who knew how much of the war was because of propaganda, and how much was true? He
wouldn’t have been shocked to learn very little of it was accurate.

Whatever, soon he would be gone from here.

“You will not leave the country.” Ivan started at the voice as it appeared that some man
materialized before him. He knew that no one was sitting across from him, but there sat a very
gaunt and pale man in a trench coat, gloves, and no exposed skin aside from the face. He also wore
shades, which looked exceptionally out of place as the sun had gone down, and who wore shades
inside?

Ivan coughed awkwardly. “Sorry, but who the hell are you?” He held up a burger. “If you don’t
mind, I’d like to eat alone. Not had a good day.”
“You will not leave the country,” the man repeated. “They will not let you.”

Ivan suddenly realized that the man’s lips hadn’t actually moved.

He blinked, wondering if he was just tired. “Sorry, but-“

The man reached up and raised his shades slightly, and Ivan saw two orange pools of light underneath them. Without a word he lowered them. Ivan turned cold as he acquired some inkling of what was going on. He quickly glanced around to see if anyone noticed, and saw them continuing on their way and seemingly ignoring both of them.

“They will not disturb us; they cannot.” The voice turned raspy, yet crystal clear. It was the voice of something ancient and frail. Yet there was a hardness to it that dared any to challenge what it spoke. “The minds of the blind are frail and malleable. They are shaped into what is desired and needed. What you see before you is merely an illusion, one invisible to all others.”

Ivan coughed. “Who…are you?”

“I am the Overmind of the Ethereal Collective,” he rasped, words rattling in Ivan’s head. “Second to the Imperator, and Watcher of his Plan.”

Yes. Right. Whoever that was sounded important. “I assume you are talking to me for a reason?”

“I watch your world,” he said. “Even now the people walk as those in a slumber, controlled and submissive to those in command. They follow and obey without question. They accept the status quo even when it affects them. They do not resist when pressured, and will back down upon resistance to their preconceived ideas. You are flawed on your own; aggressive and impulsive, but you keep your own mind. You have my attention for now.”

First, he wasn’t sure if that was meant as an insult or compliment. Both?

Second, he wasn’t sure he wanted a dangerously powerful Ethereal interested in him. That might end badly if he screwed it up.

“You do know I was just trying to join ADVENT?” He said slowly. “I’m not exactly prime… whatever you want from me.”

“You did not attempt to join because of loyalty to your species or hatred of aliens,” the Overmind noted. “But because you felt it was the best option of a situation the fault of ADVENT itself. And when they refused you, you left forever.”

“And I don’t regret it,” Ivan said. “Best choice or not, I’m not going back to them.”

“The question is what will you do now?” The Overmind said. “ADVENT has marked you as a potential problem. You will not be able to leave them. You will be detained. Even as we speak ADVENT Intelligence is poring through your computer files, internet history, and case history. They will know everything about you, and you will be under their eyes forever.”

Ivan swallowed. “Can I ask how you know this?”

A spindly gloved finger touched the man’s head. “As I said, the blinded minds are weak and malleable. I simply watched and listened.”

Ivan leaned back, rubbing his forehead. “In that case, assuming you’re telling the truth, I don’t have a future.”
“Not here,” the Overmind agreed. “But there are paths open to you. I will see if you can grasp them for yourself.” Before his eyes, he vanished, leaving Ivan alone.

“Wa-“ Ivan said mid-word before he stopped, seeing there was no point. He seemed to be alone now, and was left with a lot more questions than answers.

The first thing he needed to do was get back to his house and get caught up on what exactly was known about the aliens. Second was to seriously think about what he had said. Ivan was wondering if this Overmind Ethereal was going to offer to take him off-planet, or even awaken his psionic potential. But it made some sense that he hadn’t done any of that yet. This alien did not strike him as someone to hand out answers or solutions.

It seemed more of a means of letting him know that someone was watching him.

But if he wanted more, he would have to take it.

He took a sip of his warming water, thinking. He would have to verify if what this Overmind had said was true or not. If it was, his life was as good as over. If it wasn’t, then he still didn’t owe ADVENT anything, but he’d be more wary of telepathic aliens appearing out of nowhere. But he had a feeling that the alien hadn’t made anything up.

If that was the case, then he had nothing to really lose. In which case some drastic action had to be taken.

If ADVENT wanted to hoard their ability to awaken psions, then he might just have to take it.

Who knew, perhaps the Overmind would even help him out.

He had a plan now. Much different than what he had earlier, but succeed or fail, he would be better off. Now he had to start determining the specifics of how to execute it.

***

ADVENT Headquarters Forum – Switzerland

1/5/2017 – 1:02 P.M.

“We should not be afraid to call this what it is,” Reverend David Steinman was saying. “It is the first step to the dissolution of the institution of religion itself. While ADVENT may be benign now, the signs point to an era equivalent to the dark times of Christian persecution.”

This was starting off wonderfully.

The forum was packed with people, with the various religious representatives in the front rows, the media spread throughout, and a limited number of the public. She had made the decision to allow this to be televised, and wondered if she should have actually mentioned that to the speakers themselves instead of letting it remain an internal secret.

But too late to do anything about that. If these people wanted to give a sermon or condemnation, she was fine with it. In the interest of fairness each person invited would have an opportunity to speak directly to her and Stein, or however they wanted to use their allotted time, and then return to their seats.

Saudia and Stein were seated with their backs to the crowd, though they could see themselves on the two screens on both sides of the podium, allowing the crowd and cameras to always get their
facial expressions and reactions. The representative of the Southern Baptist Convention, one of the largest religious bodies in the world, finally paused for breath and Saudia decided to interject.

“I do wish to correct you on one aspect,” she said. “ADVENT has no intention of dissolving or banning the practice of peaceful and unobtrusive religion.”

“Curious choice of words,” Steinman scowled. “The definition of which depends on your own decision.”

“The definitions do not change,” Saudia answered calmly. “As long as what you’re preaching doesn’t incite hate or violence, doesn’t deliberately spread misinformation, and does not affect the judgement of individuals in influential positions, and follow ADVENT regulations, then the religion is perfectly legal.”

“And what do you say to your orders you sent to every church,” he held up a piece of paper. “You are requiring us to install cameras in our sanctuaries, force us to register all our members in databases, and have observers watching us. What justification is there for that? This is intimidation.”

Stein very much looked like she wanted to roll her eyes, but she answered calmly. “You would only have a problem with such if there is something to hide. The world has suffered from religious violence before; radicalization within places of worship. That will not happen again.”

The Reverend looked insulted. “You cannot lump Christianity in the same category as Islam, which was, if I recall, banned. Yet if I’m to understand, it is legal again?”

“We most certainly can,” Stein said flatly. “It is not a matter of which religion is more or less ‘good’, it is a matter of fairness. We are not going to exempt anyone from following the law. If practicing Muslims make the necessary changes to their doctrine and follow our guidelines, they are just as legal as your own church.”

The man looked like he was going to give some retort to that, but the timekeeper signaled it was up. “Thank you for your contribution,” Saudia said with a smile. “We will have the next person come up.”

Maybe this one wouldn’t spend the majority of his time on a sermon.

The next few representatives were much better, and used their time to inquire more about certain details of the regulations. Saudia suspected they were asking, not because they didn’t understand them, but because they knew this was being broadcast and most of the public wasn’t as educated.

The line of questioning focused on the appointed observers, which Saudia was happy to explain in great detail. They could be involved as much or little as the church desired, they would be respectful of the members, and the only set rule was that they couldn’t be barred from attending events. By the end, the Rabbi seemed more comfortable with the idea. Still skeptical, obviously, but to the surprise of no one, discussing things in a rational manner made everything clearer.

More questions came on the database and information gathering. Stein just explained that the religious affiliation was just another datapoint in a large list for citizens. It would of course be kept confidential and would only be accessed when necessary. Saudia suspected it helped that no one was exempt from this requirement, and it wasn’t targeting specific denominations or religions.

The next man to take the podium was Reverend Ken Codsworth, of the Missouri-Synod denomination of the Lutheran Church. He was a tall man, greying hair and thin glasses. He had
some notes in his hands which he placed on the podium. “Chancellor Vyandar, Chief Stein,” he began in greeting. “The questions raised have so far not touched upon what I feel is a much more worrying concern. I would state that it is forcing us to teach against our beliefs, if not intentionally sabotaging us.”

Saudia suspected she knew where this was going. “Our schools are where parents can be sure that their children will receive a Christian education, without being indoctrinated by other falsehoods about the world. But now,” he paused for emphasis. “You are forcing us to teach your curriculum. What justification do you have to force us to teach evolution when it is something we do not believe is accurate.”

Oh boy, here it went. “ADVENT simply wants to ensure that every child receives a quality education,” she began. “That includes being properly taught the latest scientific theories and facts. At this moment the theory of evolution is the most well-documented and studied explanation for the origin of our species. If you have irrefutable proof that the universe was created out of nothing by a god, then we would happily teach that instead. ADVENT bases our curriculum on facts, Reverend, not beliefs. Just because children can go to a religious school does not mean they will receive a sub-par education, not anymore.”

The man looked torn between fury and frustration. “And what if we refuse this?”

Stein answered. “That depends on the circumstances. If it is simply one teacher not following curriculum, they will be removed from their position and replaced. If it is the action of leadership, the school will be shut down and children placed into the nearest public school.”

“I should clarify for all those in attendance that while parents of course have choices of schools, none are exempt from ADVENT regulations,” Saudia added. “There are too many instances of abusive conditions, questionable curriculums, and religious indoctrination for any school to be exempt from this.”

“Teaching our children about Jesus is considered indoctrination?” Codsworth demanded.

“Of course not,” Saudia shook her head. “But the belief is something they should decide for themselves, not just because their parents told them they should. In school they will be taught truth and facts. If those lead to them believing, then that is perfectly acceptable. We want children to question, Reverend, not simply accept.”

“You are also not forbidden from having religious classes,” Stein added. “Be they history or theology. However, you simply cannot teach these as fact. The existence, or lack thereof, of a god cannot be proven or disproven. Ensure that they understand that, and there won’t be misunderstandings.”

“And how far does this extend?” The Reverend demanded. “I will not preach lies to my congregation.”

Saudia raised an eyebrow. “Then don’t. If you wish to hold a conversation on the merits, or lack thereof, of what you believe or disbelieve, then that is fine. But it needs to be based in something real, not a book written thousands of years ago.” She glanced at the timekeeper. “Thank you for your contribution. The next person may come forward.”

The next few followed the pattern of asking for more details about the curriculum and the finer points of what would, and would not be permitted. Again, likely more for the benefit of those observing than because they didn’t know. The regulations had been decided some time ago. Now came one of the more high-profile guests.
His Holiness the 14th Dalai Lama stood the podium, in his orange robes and with no obvious prepared statements. The elderly Tibetan man looked rather healthy for his age, and Saudia was expecting a nuanced take on ADVENT, like he did on certain issues. Given his stances, she doubted he supported ADVENT, but he’d never struck her as a fanatic.

She was interested to what he would say.

“I will keep what I have to say short and with limited questions,” he began. “I would first like to commend Chancellor Vyandar for allowing this to take place in the first place. Discussion and talk helps us all understand each other, and despite the hostility she knew she would face, it was still allowed. An open mind is important, especially in the world that exists today.”

Nice of him, and Saudia made a slow nod of acknowledgement. “But I must be truthful,” he said, sadness in his voice. “This world has descended into chaos and violence. Yet this is not violence from the stars, but actively perpetrated by ADVENT itself on their own citizens.” He looked around the forum. “Peaceful protesters being arrested and hunted, keeping their prisoners as slave labor, and enacting their will across the world through violence.”

A shake of the head. “We witnessed the bloody destruction of the Arabic people, their conquering of Canadians who had done nothing wrong, and today they treat violence as a first resort, not last. The rights and liberties of people of all types have been stripped under ADVENT. They claim it is necessary, but in many cases I have seen that they are not interested in a dialogue when they believe their way is the correct one.”

This was not unexpected from him, Saudia had suspected that he would have issues with ADVENT policies. Pacifists; she would never understand them. “It is not restricted to their own people,” he continued. “ADVENT spreads a message of hate and intolerance towards the aliens from the stars. There seems to be no effort to solve this matter peacefully instead of continuing a conflict where millions die.”

Stein did not bother to contain the look of absolute disgust on her face, and Saudia didn’t especially refrain from showing her own nonverbal disagreement. “The right to defend is acceptable,” he continued. “But escalation will only make it worse. At the same time…this is not a normal situation we as a species find ourselves in. I do believe that many in ADVENT are doing their best, yet I implore those here now to consider a less violent approach, and to treat all Humans with the dignity and respect to which they are entitled.”

He looked once more out to the crowd. “We should all work to peacefully remind ADVENT to pursue this path. Violence and hate will only continue this cycle. Holding ADVENT accountable for their actions, positive and negative, is the best path towards true unity. It will not come through war or conflict, but through acceptance of all.”

He focused on Saudia. “You are a hard woman, Chancellor, but you appear to understand something of justice and fairness. You have the capability to enact change across the world.” He paused. “The Tibetan people have been persecuted and cracked down by the Chinese for decades. Is ADVENT prepared to hold to their ideals, as you are now allied with China?”

There were murmurs at that. It was a good thing she had considered the possibility of this question. “ADVENT has raised this issue with Chinese officials,” she said. “We are in negotiations regarding Tibet, but China is aware that we do not approve of the current situation. We have also requested the release of the 11th Panchen Lama.”

The media certainly liked that, with shocked faces as they double checked their cameras, as the
people around them openly began talking. The Dalai Lama simply bowed his head. “For that, you have my thanks, Chancellor. Please consider what I have said here. The lives of billions will be decided by you.”

He departed the podium as the next person came. That had gone as she expected; the good news was that everyone was likely going to focus on her statements regarding Tibet and the abducted Panchen Lama instead of his rather harsh condemnation of ADVENT policies. Fair enough.

A few more people later, and then stood Arnold Cameron, a minister of the United Methodist Church. Another elderly minister who failed to stand out, he nonetheless cut a strict and sharp figure, standing tall as he addressed both of them directly. From what Saudia recalled on the man, he had been raised in a military household so it made sense that his demeanor was noticeably different from most other ministers.

And he not exactly speaking favorably of ADVENT right now.

“Chancellor,” he said slowly. “Can I have in no uncertain terms what you foresee the future of religion is under ADVENT?”

“Certainly,” she answered. “Religion will endure under ADVENT, but without the extremist elements and regressive policies which have plagued the institution since its inception. I do not believe it should hold sway over the average citizen, and in the future, each individual should come to their own personal decision to participate or not.”

He narrowed his eyes. “Smooth words, Chancellor. I am not convinced. I have pored over your guidelines, and it seems exceptionally clear that the intent is to have all religion die a slow death. Would you be displeased by this?”

She considered what to say, but decided to opt for the truth. “I would not be heartbroken. I have no deep ties or desire for religion to continue.”

“I don’t know if you know what you are truly proposing,” Cameron said. “Much as some such as you deride religion, it is not solely responsible for the evils of the world, and indeed has brought significant hope and good to the world. Charities, art, philosophy – many people you admire from history were men and women of God. And you are saying that it would be better if this had never happened?”

Saudia sighed, thinking of how best to answer. “Religion has certainly done good for the world, Minister, no one can deny that. But religion is not special in this regard. As for the men and women of the past being religions that was, for lack of a better word, simply part of the time. That does not mean they were correct about everything. As our understanding of the world and universe has grown, it is no surprise that alternatives to a god emerge.”

“I will add that there is nothing stopping from religions today from doing good,” Stein interjected. “There is nothing saying that you cannot continue donating money, performing Humanitarian missions, and additional service work. Indeed, we encourage it. This is the purpose of these guidelines – to eliminate the pitfalls and failings of religion and promote the better aspects.”

“You guidelines themselves say differently,” Cameron said flatly. “We can’t ask for money from our congregations, all money has to be reported to ADVENT, we cannot spread our message outside of authorized events…these rules which you say help us do little more than neuter us. There is no excuse other than to ensure churches don’t grow, and our message is controlled, then sanitized to what your people deem necessary.”
“These are rules which are designed to counter specific abuses,” Stein said coolly. “Which it may be an unnecessary inconvenience, there is nothing stopping your congregations from donating. I consider these guidelines a small price to pay to ensure that well-meaning people are scammed out of their money, or drawn into cults like Scientology, or otherwise taken advantage of my so-called speakers of god.”

“But this should be done on a case by case basis,” he pointed out. “Punishing all for the mistakes of a few is a thinly veiled effort to delegitimize and control religion as a whole. This is greater than the body I represent, and I do not believe you understand the consequences. Perhaps you cannot.”

“And what consequences are those?” Saudia asked.

Cameron sighed. “Chancellor, you understand there are people who suffer in this world. Be it in body, mind, or soul. Perhaps it is the terminally ill, perhaps it is those in prisons, perhaps there are those who have everything but feel empty inside. They are without any hope, they know they need something, but don’t know what it could be.”

He motioned around. “For many that stability and hope comes from religion. I understand ADVENT prides itself on facts, logic, and evidence. Then take into account that religion is responsible for giving people something to live for, for giving them hope and meaning where there was previously none. By turning those who have done wrong on a better path. Religion has been responsible for saving many lives, Chancellor, ones you likely won’t know about, but a person who feels like the world has nothing more to offer him and wishes to end it all may reconsider if they know that there is someone who does care.”

He pursed his lips. “Faith gives people hope in very dark and hopeless times, Chancellor. Even now I am sure many soldiers of ADVENT are relying on that hope as they fight for a state which treats their beliefs as childish superstition. It gives them courage and strength to continue on. That, Chancellor, is what you and ADVENT wish to see gone. You would prefer an empty and cold world devoid of hope or comfort that is outside ADVENT. You would prefer people suffer in silence, and only rely on themselves. Belief is a powerful thing, Chancellor, especially if their faith is true. The blood will be on your hands, Chancellor, if you continue down this path.”

That…was an eloquent speech. One she was not sure how to respond to initially. Stein took charge. “Minister, I do wish to reiterate that ADVENT itself has no established stance on religion. We have certainly never referred to it as such, nor subjected our soldiers to feeling uncomfortable or persecuted for their faith.”

“Religion, I will say once more, is perfectly legal,” Saudia added. “There is nothing stopping those who seek religion from finding it.”

Cameron fixed her with a look. “Then why prevent us from seeking them out?”

“Unauthorized solicitation is an ADVENT standard,” Stein answered neutrally. “Nothing is exempt from this. Including religion. But as you know, churches are of course allowed to host events provided they have authorization.”

The man was clearly not pleased with the answer, but his face simply hardened as his time came to a close. “I have made my point,” Cameron willingly stepped down. “Think on what I said. There is more at stake than just debating the finer points of religious regulation.” He stepped down to the cold silence of the crowd.

Saudia had to at least commend him for holding to his beliefs so strongly. And making a case for religion while he was at it. An interesting perspective, and one she would think about at some
point. But in the meantime, there were more people to listen to.

The next few were somewhat entertaining, and one of them flat out demanded why the practice of homeopathy had been banned, and she’d calmly responded that it wasn’t based in fact or rationality, and those who actually performed it were very likely thieves and conmen. Most of the Indians in attendance had looked both offended and concerned. Unfortunately that was one region that still believed in it.

Luckily it wouldn’t be that way forever.

The one up now was especially amusing. “Are you religious, Chancellor?”

She resisted the urge to smile. “No, I believe I mentioned this earlier.”

Reverend Gabriel Adams sniffed. “Then what gives you the right to control what we believe and teach? You forbid us accepting donations from those who only wish to spread the seed of our Lord across the world? And furthermore, restrict those blessed by God himself from sharing this message!”

Adams, as it turned out, was one of the worst of the people invited here. He preached at a megachurch which she saw little better than an organized extortion racket to enrich himself. “We are not controlling what you believe,” she said. “I don’t believe anyone has stated that.”

“As for restricting donations,” Stein gave a grim smile as she looked down at her folder. “I believe you misunderstand how that works. Of course, there is nothing stopping donations to worthy causes. Churches will of course be connected with ADVENT-approved charities across the world. However, donations will not be used for…let us say, frivolous purposes,” she glanced down. “Such as the five million dollar mansion you own, or the sixteen million dollar ranch you have in Texas, or your personal jet-”

“I’ll have you know that all of those are necessary,” Adams said with conviction. “They are needed to spread the word of the Lord. God himself gifted me with such treasures, and who am I to reject them.” He narrowed his eyes. “And how could you even know what I have? What is that paper, and how do you even know it is accurate?”

“Well, then god will have to become more frugal,” she said sarcastically, eliciting a chuckle from the crowd. “Oh, and this?” She held up the paper. “This is your arrest warrant detailing the assets which have been taken. Taking millions from the people you con is, sadly for you, illegal now and you’ll serve as a good face to what we don’t tolerate anymore.” She motioned to two Peacekeepers which had walked up and placed the gaping man in handcuffs. “Take him for trial.”

“Yes sir.”

Saudia had not been sure that was the best way to handle that situation, as the original plan was to arrest him quietly afterwards, along with several other similar figures, but she had to admit it wouldn’t have been nearly as satisfying. It at least gave a good illustration of what was no longer allowed.

There were a few more people who weren’t nearly as combative or dramatic, and those were finished in good time. The next person was one of some controversy. Razeen el-Mustafa, the Grand Imam of what was left of the Islamic faith. He didn’t speak for all sects, but was the only representative of the religion here as the others were too scattered to form large or cohesive groups. He wore the robes and had a thick greying beard with a turban on his head.
“I will begin by extending my thanks to the Chancellor and Chief Stein,” he began. “I will not take a significant amount of time, nor will I subject you to more interrogative questions.”

Saudia did personally wonder how this was going to go. She wasn’t expecting anything too dramatic, as Islam in particular was still viewed with negativity in much of the world. Though she wasn’t expecting much praise either. He likely didn’t want to rock the boat.

“We are a shadow of what we once were,” he began. “And there were two responses to the War on Terror for us. Blame or reflection. We could blame others, blame them for the desecration of our Prophet and annihilation of his Holy City. We could blame the soldiers who came and killed our people in the night and crucified them as a warning. We could blame Allah himself for bringing this upon his people.”

He paused. “Or we could reflect on why it had happened. We could consider the possibility that perhaps – we were wrong in our beliefs. I will admit that when the Caliphate rose, I was a proud supporter. Yet when the atrocities began, there were those who realized that this was not what Allah had taught. We left and tried to show our brothers and sisters that what they were doing was not righteous, but damming.”

He shook his head. “But too many did not listen, and it forced me to ask why so many of us were drawn to that path. The truth is that our destruction was brought about by ourselves, not the West, not even the Commander. We taught and accepted what we preached without thinking about the context of what it could lead to.” He allowed a contemplative pause.

“I do not believe it was right that our beliefs were made illegal, and us marked and watched,” he finally said. “But I cannot deny the justification for it. Many did not believe in second chances for us, but to my surprise I received a message from ADVENT that said exactly that. There are strings attached, but in light of the past, can any of us say they are unjustified?”

The Grand Imam looked around the crowd. “If there is one thing I want to impart, it is that change is not wrong. The world is changing; this is not the same place it was even a decade ago. Religion, not just Islam, has been rooted in the past for too long and it has never led to any long-term benefits. We shouldn’t look solely on the laws and readings themselves to justify our beliefs, but the values and meanings behind them which transcend the pages.”

He clasped his hands together. “I believe Chief Stein said it best here. We only have to fear ADVENT if we are afraid of what they would learn. And if you are afraid, perhaps what you believe is wrong.” He bowed his head and stepped down, to a scattering of applause.

Saudia found it extremely ironic that a representative of Islam of all things had arguably been the most supportive. In any case, they were reaching the last of the representatives, and many of the questions now were somewhat repeating what had already been said. All things considered she felt that this had gone very well.

The only one left was Pope Marcellus, and she had felt he would be best to close things out, as he already enjoyed a good relationship with ADVENT and had been cooperative with the new regulations. He genuinely seemed to want to reform the Catholic Church into something better than it was. A religious figure she could actually respect.

Dressed in his white robes and cap, Marcellus began at the podium. “I’ve thought on what I would say once this was done. I expect I would not be incorrect in saying that this has been illuminating for many people, and it is especially warming to see so many people of different faiths come together in unity.”
He raised a finger. “I have no questions for Chancellor Vyandar and Chief Stein. I have been aware of what they ask since the beginning and have cooperated with them when necessary. Rather, I would like to speak about what I’ve seen here. Fear and indignation were prominent, and not unjustified.”

The Pope paused. “These restrictions and regulations are new and frightening for us. For some it might incite fears of persecution. Of silencing. Suppression of speech. The so-called “war on religion” has been used to describe this. And I can certainly not say that ADVENT has true freedom of religion.”

He lowered the finger and looked around the room thoughtfully. “But there is no cause without reason, not here. We must all ask ourselves just why ADVENT felt such actions needed to be taken. It goes beyond just religious extremism, because if that were the case, only the troublesome ones would be removed.”

“This, my friends, is the consequence of abusing the privilege we enjoyed for so long,” he said, clasping his hands. “Instead of using our influence and numbers to improve the lives of people around the world and spread the word of God, we’ve used it to enrich ourselves, spread hatred against others, abuse the power of government for ourselves and not the people, and all the time believing we were better than everyone because of our belief.”

He shook his head. “All of us are sinners, and many of us forget the simple teachings of the Word. Even ones such as ‘Love Thy Neighbor’ are ignored when convenient. Is it any wonder that this would foster resentment and rejection from those who are not blinded by their own false perception? The Grand Imam said what I feel now. This was brought upon ourselves.”

Marcellus swept a hand over the crowd. “Ask yourselves if what you face now would even be considered if we truly taught and followed our beliefs, and gave more than lip service. We are, as was stated, too stuck in the past. We have rejected knowledge that we feel is against God, yet never considered if the source was right all along.”

He suddenly smiled. “Nowhere do the scriptures speak of aliens. If such an important part of this universe can simply be forgotten, then we must ask ourselves just what we do not know. Too often we pretend to have answers when there are none. We lie and speak in riddles when we could simply say ‘we do not know’. And that is the honest truth. That is why we have faith in something we cannot see, and every night wonder why he allows this to happen.”

He looked back to the duo opposite him. “I believe that we are beginning to realize how little we know about God, we who are fools to even begin to think we can understand him. We must look to the future now, and treat this as an opportunity, not a sentence. A fresh start. Actions speak louder than words, and today I will take the first steps in addressing an issue more prominent than what this gathering has met for.”

Saudia was curious where he was going with this. “The aliens threatens our species, not just ADVENT. We have all seen their brutality and hatred towards us, and a defeat would ensure that those that live are enslaved or killed. As such we are obligated to defend ourselves, and there can be no higher justification for war against the godless creatures descending on us from the heavens.”

Saudia leaned forward. Was he actually going to do what she thought?

The Pope’s expression took one of determination. “This is one conflict we will not flee from. By the authority invested in me by God Almighty and the Vatican, I declare the Tenth Crusade against the Ethereal Collective to purge our world of the alien threat and beyond it. Words are no longer
enough, and I call upon all who are able to assist ADVENT in bringing this goal to fruition.”

Stein, for once, looked surprised, and the entire room burst into chaos as the Pope quietly stepped down. Newscasters were speaking frantically into their microphones and debate raged all around. For her part, Saudia had not expected that. The declaration of a Crusade now had not been something she’d considered.

Yet if there was ever a time for it, it would be now.

“Full of surprises, isn’t he,” Stein commented to her. “I like this guy.”

“Agreed,” Saudia nodded. “All things considered, I think this little event went very well.”

“A crusade declared, China likely mad, and I got to arrest someone,” Stein chuckled. “A good day all around.”
The Battlemaster found the planets of the Zudjari both miserable and beautiful. From surveys and what records Cogitian had been able to find, they had only colonized extremely arid or desert planets, and built their crystalline pyramids seemingly in the middle of nowhere. Of course, the Collective had only managed to stumble across them completely by accident, well after the species had been purged.

The Battlemaster piloted his new Overseer, choosing to keep the same name of the *Cultro*, to set it down right before the massive pyramid. To this day Zudjari technology was still mostly a mystery, and the working theories were that it was some application or adaption of Sovereign tech, but primarily having to do with energy manipulation and generation, which was not how their own research into Sovereign technology seemed to work.

Fectorian visited this planet every so often, and always returned in a bad mood, which the Battlemaster never knew if it came from his inability to understand how Zudjari technology worked, or from dealing with the lone operation of the Forge himself. As he approached the slightly brighter rectangle the seemingly solid surface began retracting and folding in on itself.

The entire pyramid was without a doubt one of the most interesting structures he had ever seen. It was made out of the same crystalline material as what the Outsider Forge produced, which gave the structure an orange, transparent look, although it still managed to hide the complex machinery within.

One interesting fact about this Forge was that it was placed at the exact point where it would always be perpetual day. Day and night existed on the planet, but the nights were exceptionally short, and only near the equator due to how close the planet was to the resident star. Fectorian was positive the pyramid was able to absorb or convert solar energy to power the Forge, which explained a lack of any traditional power source.

His suit protected him from the worst of the heat, but it was by no means comfortable. Fortunately the temperature dropped off significantly once he was inside and the wall closed behind him. The Battlemaster had no idea how the temperature was controlled since not once here did he see vents or anything resembling temperature control.

“Welcome, Battlemaster of the Ethereal Collective,” came the voice of the resident machine intelligence, in a gratingly screeching tone. The Zudjari may have been able to create technology even the Collective couldn’t replicate, but they had clearly never been master programmers. From what he’d learned, the Zudjari Intelligence managed the Forge and ran most of the machines and Outsider production plants, but nothing else.

And it couldn’t operate without instructions.

“Battlemaster, welcome, welcome,” the lone resident Zudjari greeted as he stepped out of a wall. The Battlemaster was still unsure if there were designated paths through the Forge, or if one could walk through any part of it and a path would be created. “I have long been expecting you. It has
been far too long since one of the Imperator’s own graced this forge.”

“Save your groveling,” the Battlemaster dismissed as he began walking forward. “I am here because your creations have disappointed me.”

I’llan Ceen, the one Zudjari allowed to operate the Forge was a figure the Battlemaster didn’t hold any fondness for. While Mu’ut Jeen had been a traitor and idiot, he at least had a spine when he had made the intellectually questionable decision to reward the Imperator’s actions in bringing him and a tenth of the Zudjari in stasis out of it by instantly betraying him and enslaving a small portion of the species on this planet.

Of course, Jeen had been promptly killed by Sicarius on Earth before their existence was compromised. A few telepathic tricks here and there ensured that the entire “Outsider Incident”, as only the highest ranked of Humans called it, was remembered as an isolated event and not something to worry about.

It was a good thing that Jeen had only managed to escape with only a small force and not hundreds. Otherwise the damage would have been far too extensive to be repaired. Of course, it had informed Humanity that alien life did exist, and it could be extrapolated that the Outsider Incident was the reason XCOM had been created, and by extension, the cause of many of the problems today.

I’llan Ceen on the other hand was a mere…engineer. Or so he was classified as. There were no scientists, unfortunately, so the mystery of Zudjari technology would remain such, but Ceen was able to operate the entire Forge and even apply improvements and alterations to what it produced. He was also a coward and terrified of all Ethereals after Sicarius had brought back the corpse of their most powerful psion.

The Zudjari were a tall species, the smallest being eight Human feet tall, with stone grey skin or green, depending on genetic stock; in addition to thin, beady eyes with small glowing orange pupils. Their heads were slanted, bald, and had a mouth which opened vertically. Ceen was likely standard as Zudjari went, with grey skin and a missing eye.

He had yet to explain the eye, as he was found that way.

It might explain his cowardice.

“I have, of course, reviewed the footage and data you have sent to me, Battlemaster,” Ceen continued as they walked through the Forge. “These Humans, very dangerous, very intelligent. Nearly an equal to us at our infancy, but of course they do not compare to the power of the Ethereals—”

“Your Outsider units are obsolete,” the Battlemaster interrupted flatly, not looking down at him. “Their usefulness has ended. Physical weapons can break them apart with disappointing effectiveness and energy weapons will overload them. But you know this, even though I specifically recall you stated that they would be immune to energy weapons.”

He stopped and looked down at the alien whose eye had widened. “I expected better.”

“I deeply apologize,” Ceen quickly said. “I did not know that particular…flaw…existed. I swear that we had never seen it before—”

“Then your enemies must have been either weak or stupid. The Humans figured it out almost immediately after they developed laser weapons.”

Ceen quickly walked forward as he led the Battlemaster down another path. “Outsider units as they
exist are inefficient. Agreed! I have been working exceptionally hard to correct the mistakes and have produced upgraded units which will more than suffice against these Humans.” He paused. “However, I want to point out that….well…individually this is a lot of work…”

He trailed off as the Battlemaster stared at him, but pressed forward in a rush of breath. “My work would proceed much more quickly…if I had some more help…”

The Battlemaster held his gaze until the alien looked away. “No. The Zudjari lost their place in our Collective. They have not earned a second chance,” he paused. “If your work produces results, that will be reconsidered.”

“Ah, then let me waste no further time!” The wall opened into a large triangular area which had an entire wall of suspended Outsider crystals. The other two walls were moderately transparent, and through the orange-tinted glass the Battlemaster saw one aspect of the Forge. It appeared that light was being concentrated into vials, all of which had a crystal of some kind seeming to grow in it.

In front of one of these walls were tables of certain kinds of equipment or technology that seemed already made. “The base Outsider form has been improved, it will regenerate far faster. The crystalline-repair aspect was extensively improved and the mono-crystalline manipulation was further refined into what you will soon see.”

The crystal began expanding and seeming to fold outwards. The Battlemaster had given up trying to think of how they worked. If Fectorian and Revelean were baffled, he certainly would not be able to figure it out. Eventually the crystalline Outsider was standing before him, an orange glow emanating from the chest where the core crystal resided.

The Battlemaster without warning lashed out with his sword and the Outsider moved by leaping away with surprising agility. A blade-like extension folded out of the right arm and it tried striking back which the Battlemaster easily deflected and lightly dueled the Outsider as it used its speed to try and move around him.

The Battlemaster telekinetically pinned it to one place, as well as the bladed arm, and followed up with an overhead swiped downwards. The Outsider raised the free arm and a shield folded outwards from the arm and took the full blow, sending cracks through the shield.

Interesting.

The Battlemaster telekinetically blew it into one of the walls, which cracked but immediately healed itself. The shield the Outsider had retracted into its arm, as it appraised the Battlemaster. For his part, the Battlemaster had seen enough and psionically dashed forward and stabbed deep into the chest of the Outsider, shattering the core crystal.

The alien creation dissipated into nothing, and the Battlemaster turned back to Ceen. “This is an improvement. Good.”

“Excellent, excellent,” Ceen picked up another crystal. “That is what I have designed as a Navigator. Fast, agile, and capable of killing enemies in enclosed spaces with ease.” He activated the second crystal. “This one is a Commander unit, one designed specifically for front-line combat.”

The Outsider that formed was identical in shape to the previous one, but at least two heads taller than it. “The difference with these is that for optimum effectiveness, they must be fitted with additional equipment,” Ceen said as he walked over to the table and picked up what looked like a piece of hardened crystal. It was a dull orange, almost brown, and didn’t look alive like most of the
crystalline structures here.

“I have come up with the concept of hardening crystal to serve as a form of armor,” Ceen explained as he placed what looked like a single breastplate on the chest of the Outsider. “The downside is that, as dead crystal, it cannot be integrated into the unit itself and must be applied manually. The Outsider will fuse to the dead crystal, and there will be superior protection provided.”

The Outsider took the cue and walked over to the table and began assembling the armor, by essentially sticking it on various places of its body until it resembled an Outsider, but one that had no glow and looked far more protected.

At a nod from Ceen, the Battlemaster slashed upward and while there was a deep cut in the armor, he hadn’t actually cut through it. “The crystal sadly won’t heal,” Ceen noted. “But it will easily protect it from extensive damage.”

The Battlemaster nodded. “An improvement. You have indeed been working diligently.”

“Much appreciated, Battlemaster, I thank you very much,” he said as he rushed to another, noticeably larger crystal. “And this is the final unit I have refined. The Overlord. The Humans will not be able to stand up to it, I can assure you.” The crystal folded outwards and the Battlemaster was staring at an Outsider his height and size. Unlike the other Outsider units, this one did not have hands, but constantly folding and unfolding stumps.

They then materialized, each arm in a different configuration, with the right arm morphing into a cannon of some kind, and the left forming into a kind of shield. Ceen handed the Overlord a piece of dead crystal which had a small device on it pointing down. The Outsider placed it on the shoulder, and it shot a laser directly into the Overlord. This made it glow brighter and the cannon fired a bright beam of orange which began cutting through the thinner crystal walls, which began cracking. It switched, and then began firing orange bolts which caused other cracks on the wall. The laser shut off, and the firing stopped.

“A unit with the ability to harness energy and convert it into destruction,” Ceen for once seemed highly proud of his work. “It, of course, can wear the specially designed armor, and integrated energy dispensers. I trust that this is a marked improvement.”

“It is,” the Battlemaster gave him genuine credit. The alien had proven his worth today. “Of course, they need to face the Humans in battle. Should they perform well, we will revisit the situation of your people.”

“You are generous, Battlemaster, I thank you,” Ceen said, bowing his head. “I will work to outdo myself even now; you will not regret giving my people a second chance.”

“We shall see,” the Battlemaster said as he turned around to leave. “But know that there will not be a third.”

Union Viarior Trade Command – Andromeda Prime

12/28/2016 – 1:09 P.M.

Narton had not expected the headquarters of a Union which primarily, on paper, was known for power brokering, trade, and otherwise exerting unparalleled economic dominance having something equivalent to a military fortress. While he wouldn’t have been surprised if some of their bases were heavily armed, this looked like they were expecting an army to invade.
His onboard computer had informed him that every one of the sixty AA plasma turrets had been trained on him, along with the vast majority of their missile defense systems. In comparison to its defenses, Union Viarior Trade Command was very...small. It consisted of a large square patio which had landing areas for all kinds of spacecraft and seemed to be perpetually full.

There was a significant amount of traffic, with ships entering and leaving at a steady pace. As Zararch, he had a spot reserved for him but knew the Andromedons were likely not happy about this.

The main structure in the center of the square was the Trade Command itself, a supermassive skyscraper which put the tallest buildings on Earth to shame. It lacked any windows and looked like a vertical grey rectangle, with defense platforms what looked like every fifteen floors wrapping around the outside with visible Battlefield Engineers and soldiers.

Union Viarior clearly didn’t mess around.

He certainly hoped V’Zarrah was on their side, otherwise there was a good chance he wouldn’t leave this building alive. As it stood, one mistake and one suit rupture and he was dead. The full-body suit wasn’t uncomfortable, but he didn’t like the prospect of being on a planet which would kill him if he breathed the air.

Then again, this was what the Andromedons dealt with literally everywhere else, so perhaps he shouldn’t complain too much.

The Andromedon guards on the planet were also different than the ones that were normally seen on Earth. True, there were some of the suited Andromedon Soldiers guarding the entrances and manning important equipment, but the vast majority of Andromedons were unsuited and wearing some more form-fitting clothing. Andromedons were very...spindly out of the suits. Definitely not a physical threat.

Some of them were cybernetically enhanced, especially in the eyes, but most seemed unaugmented. However, there were a lot of unsuited guards who were numerous enough to have full patrols of ten around the docking area. Nartha walked into one of the doors marked “Client” in both Andromedon and Ethereal Script. The only other option was “Viarior Personnel”.

It was probably safer to choose the former.

The doors slid open as he entered, and he ignored the looks he received from the others in the room, the majority of whom were Andromedons of various Unions. However, all of them clearly saw the Zararch insignia on his shoulders. Even the Andromedons knew better than to interfere with Zararch operations.

There were a few suited Vitakara around, but he ignored them and let them deal with the various Andromedons. He stood in the line with the Andromedons as he waited for his turn to speak with Viarior Initial Management. To their credit, the Andromedons were efficient, going through clients, potential or otherwise, in mere minutes.

He did know something about how they operated. Initial Management was essentially scheduling appoints to make more permanent arrangements; it wasn’t exactly traditional customer service. They heard what you wanted, then scheduled you with someone who could discuss that, then one came back at that time.
