**XCOM: The Advent Directive**

by [Xabiar](http://archiveofourown.org/users/Xabiar)

**Summary**

Australia has been annexed, the United Nations is in chaos, the world is under siege and the Ethereals have taken the field. Facing the full might of the Ethereal Collective, the Commander must rally XCOM, the newly formed ADVENT, and several other allies and rivals to unite the divided nations by any means necessary, for failure now will mean the fall of humanity once and for all.
Introduction

This story is based on XCOM: Enemy Within with the Long War mod.

***

Please note that the reviews contain major spoilers.

***

This story may contain material some may find disturbing.

***
This story is a sequel to XCOM: The Atlas Protocol

***

I do not own any characters explicitly mentioned in XCOM: Enemy Unknown/Within/2

***

Beta Reader (Chapters 0 – 12): Ashardalon125

Beta Readers (Chapters 13 – 23): BloodsplatBOOM, Thuzan117 and Ashardalon125

Beta Readers (Chapters 24 – Present): BloodsplatBOOM, Edumesh, Thuzan117 and Ashardalon125

***

There are currently three spin-off stories written for this series by other authors, and mostly relate to subjects that appear as the story develops. It is recommended you read through Act III before starting them, but it is not required. All spin-off stories linked are considered canon in the in-universe continuity:

XCOM: New Blood by OfficialWeedTesterguy

XCOM: Pantheon Rising by Areleh

The Chronicles of Salvation by Edumesh

XCOM-Affiliated:

The Commander – The Commander of the XCOM

Ariel Jackson – Central Officer of XCOM Analysis and Communications

Moira Vahlen – Head of XCOM Research and Development

Raymond Shen – Head of XCOM Engineering
In the aftermath of the destruction of the alien Dreadnought, many different parties make moves to take advantage of the peaceful lull. The Council of Nations decrees to send a representative to keep an eye on XCOM and the increasingly independent Commander. As a compromise between the differing factions in the Council, Herman Diederick is chosen to represent the Council’s interests and sent to the Citadel to begin reporting. In addition to sending a public representative, the Council also creates a secret counterintelligence squad led by a former UN assassin to keep an eye on XCOM and their covert operations.

Around the same time, the illusive, ancient, and secretive organization known as EXALT forges a faux alliance with the aliens, planning to utilize them to gain their technology and remove the ones they view as standing in their way of total world control: XCOM and the United Nations. The aliens accept their agreement and begin providing them with advanced tech and weaponry.

XCOM continues work on developing tech and tactics to use against the alien threat, and begin devoting resources to several new XCOM initiatives: Genetic Modification and the MEC Project, both heavily based on the alien substance identified as MELD. In addition, the Commander orders
XCOM Intelligence to begin work to find out more about EXALT.

After stopping several alien attacks, EXALT lures XCOM into a trap and surprises them, taking out several of their best soldiers. Soon after XCOM Intelligence locates a shell company utilized by EXALT, and eventually locate one of their hidden bases with the help of the Council Shadow team. With the advantage of surprise, and the new MEC troopers, XCOM easily wipes out the EXALT installation.

Soon after the raid in EXALT, the Commander receives an offer from the President of Russia to visit, and they form a secret alliance, planning to send resources through proxy countries to circumvent the restriction on trading alien tech with Council Nations. Through this XCOM forges alliances with several more countries, including Ukraine and Armenia, much to the dismay of the Council, who are further antagonized when the Commander orders an airstrike in Newfoundland to destroy a chrysalid breeding ground.

Soon after that, Dr. Vahlen begins applying her genetic modifications to XCOM soldiers, after first performing experiments on prisoners to weed out adverse effects, and they prove to be extremely effective against EXALT and alien forces. Israel also begins acting suspiciously and XCOM Intelligence is directed to determine the reason for it. After infiltrating an Israeli military camp, they retrieve several major documents, including one entitled Operation: ADVENT, which detailed Israel’s plans to start a war with various Middle Eastern nations.

EXALT suffers several defeats at the hands of XCOM, prompting the aliens to begin questioning if their alliance is truly beneficial. Several times they remove psionic subjects that EXALT is experimenting on for their own purposes, though one escapes and EXALT sends out people to track her down.

Following a failed attempt by EXALT to discredit XCOM, the Supreme Leader of North Korea contacts the Commander, and after some negotiations, agree to join as an ally of XCOM. Shortly after that, an Ethereal by the name of Aegis telepathically contacts the Commander, and reveals the location of one of EXALT’s major bases. XCOM acts on this information, and takes control of the base and speaks for the first time with the Director of EXALT.

Due to the EXALT base being in China, and previous tensions between them and XCOM, China withdraws from the Council and pulls their funding. In response the Commander allies XCOM with Taiwan and ASEAN. Shortly after, an XCOM soldier turns himself into custody, revealing himself to be an alien infiltrator, and provides XCOM with a wealth of information, including the location of an alien base controlled by Sectoids on Earth. XCOM sends two squads to assault the base and they take it successfully, though suffer serious losses at the hands of a deadly psionic Hive Commander.

After the loss of their base, and EXALT consistently losses to XCOM, the Ethereals take a direct interest in EXALT and send down the Ethereal known as the Ravaged One to direct EXALT to their specific goals. The Ravaged One then lures XCOM into a trap and easily wipes out the squad, warning XCOM to surrender or face a war with the Ethereals.

Just after XCOM recovers from that attack, the Ravaged One launches an attack on New York, one that takes the lives of several more soldiers, and hundreds of thousands of civilians, but is ultimately driven back with the combined might of XCOM psions, soldiers and the local police and soldiers. EXALT at this point decides to put in motion their plan to betray the aliens, having made a tenuous truce with XCOM earlier for the sake of the world.

With the world in a precarious position, the Commander reveals the Advent Directive; his plan to replace the United Nations and establish a world government with true power and authority, one
which XCOM would be an ally to. He convinces multiple countries of the necessity, and prepares to unveil it when the time is right.

The aliens decrease their attacks, giving XCOM a brief period of peace which is shattered when the Ravaged One leads an attack directly against the Citadel, killing nearly a third of XCOM’s soldiers and several of their command staff before being killed by the combined might of the XCOM psions.

After the unsuccessful attack, EXALT puts their plan in motion to destabilize the world as a final requirement for their alliance, and manipulates Israel and Brazil into going to war with nearby nations, threatening to throw the world into chaos as the aliens prepare a retaliation. Soon after the Commander himself meets the Director, and he requests that she take command of the new ADVENT organization and disperse the remaining EXALT members into its ranks for the greater good, on the condition that EXALT has to die forever. She agrees and prepares to take control of the new world government.

It ends with the aliens launching an all-out attack on Australia and taking the continent. At the same time XCOM responds to an abduction report and discover the Ethereal Aegis waiting for them who turns himself into XCOM custody. As the aliens continue to stabilize Australia, the world frantically attempts to ready itself for a war they are unprepared for and the Commander wastes no times in preparing his first response, starting with the execution of the Demeter Contingency.
Prologue - The Last Command

Skyranger, en route to Council of Nations HQ

A little bit of extra practice.

The pistol in his hand levitated a few inches into the air and with a twitch of his fingers, he sent it lazily spinning in a circle.

It was getting much easier, and he was getting used to the stares that he got from a rather basic act of telekinesis. Especially from his former team.

Or what was left of them, anyway.

“That’s going to take some getting used to,” Ethan commented, eyeing the pistol as the Commander released his telekinetic hold on the weapon and it fell gently back into his hand. Ethan himself was clad in the new red and black armor of the ADVENT Officers, while the rest of them wore the new armor of the Lancer Division, most notably displaying the rounded black helmets derived from Israeli tech.

“I’ll keep it to a minimum,” the Commander promised, amused, and imagined several smiles were underneath the helmets of the men and women around him.

Reunions had been rather understated with everyone being busy preparing to reveal ADVENT, as well as trying to figure out the best way to defend against the upcoming attacks. It would take some time for the aliens to completely subdue Australia…but that time was very, very short.

Which meant that the Demeter Contingency had decisively gone into effect hours after the initial attack.

After Aegis had shown up and surrendered.

That…that was an issue that had to be dealt with later. Truthfully he wasn’t quite sure what to think of it yet. But he was sure that Aegis was not going to suddenly turn on them. He had no reason to, as he had shown during the brief fight with Patricia.

If he had wanted to win, he could have.

The question was why he hadn’t. That was a question to have answered after the Council was disposed of, the United Nations destroyed and ADVENT established. If all went according to plan, it would happen within the next day.

But he couldn’t quite shake the feeling like not everything was going to go according to plan. It never did. But the plan had been meticulous and he had the best team possible to carry it out. Franklin, Sophie, David, Hamilton, Rey, Travis, Jordan and Ethan. Some of his team that were still willing to fight beside him for one last mission.

A mission that was personal for all of them, but especially for his team. Though contrary to what it apparently seemed, he felt no need to take revenge. Like it or not, the Council had put him in charge of XCOM, and that deserved something. As the scope of the war progressed, the Council had gone from something of an irritating rival to a powerless, vindictive group. He could no longer
muster up any strong feelings for them. His rationale was simple now: They were an obstacle in uniting the human race, and needed to be removed.

But it was not the same for the rest of his team. It was the United Nations who had broken their promise for fair trials and it was the United Nations who had essentially sentenced them to torture and slow painful deaths, had EXALT not rescued them.

They deserved justice, and the Commander saw no reason to exclude them from the destruction of the organization that was responsible for the worst times of their lives. Revenge or justice, in this case it seemed the same to him. Unlike others, he never really considered the two mutually exclusive.

It hadn’t been hard to find volunteers. Every one of his former team had requested to join him, but in the end, there was only a limited number of spots on a skyranger, and he could only take the best. In this case, those around him.

If nothing else, he was happy that all of them had found a new life within EXALT, as questionable as the entire organization was. But they’d taken his people in, and that was something he couldn’t ignore. It really was fascinating just how well most of them had assimilated into EXALT. Almost all of them had spouses, and many had children.

Unfortunately, those children would grow up during an alien invasion, if they survived at all.

“Question,” Rey asked, lacing her fingers together and resting her arms on her armored knees. “Once you took over XCOM, did you try and find us?”

The Commander gave her a wry smile. “Of course I did. And then learned that everyone was dead. Executed, so the records went. EXALT did a good job, definitely fooled me.”

“Maybe a little too well,” Ethan grumbled. “I’d always wondered if it was a good idea to be that thorough, in case it turned out that some of us weren’t dead and would try to reconnect. Would kinda put a damper on that.”

“Be honest,” Franklin chided. “How many of us really expected the United Nations to spare the Commander?”

“Certainly not me,” the Commander answered, and all of them chuckled at that.

“I saw the execution,” Ethan said. “You had quite an audience for it as well.”

“No shortage of witnesses for that execution,” Sophie chimed in. “Guess the drugs were fake.”

“Oh no,” the Commander snorted at the memory. “Whatever they used was very real. And painful. They might not have wanted to kill me, but they sure didn’t have any problems being gentle.”

“Can’t blame them, I suppose,” Ethan conceded.

“This is Big Sky to Diamondback Team,” Big Sky said, making all of them snap to attention. “We’re coming in now. Showtime, Commander.”

“Copy that,” the Commander said, mentally running through the list while his soldiers turned to look at him as he stood up in the middle of the skyranger. “Stick to the plan, remember? When the time comes, I’ll send the signal.”

“Schematics and data still good?” Travis asked.
“Should be,” the Commander nodded. “Between eighteen and twenty-four security personnel, not including staff. Should be easy enough for you to take out.”

He could hear the smile in Rey’s voice. “Don’t worry about a thing, Commander. We’ve only gotten better since you last saw us.”

“Once I deal with the Council, I’ll help you clean up,” the Commander confirmed. “I don’t think it’ll take long. Most aren’t soldiers.”

“Don’t think it would matter one way or another,” Hamilton pointed out ruefully. “Not much you can do against someone who can lift you in the air with a thought.”

The Commander rolled his eyes, feeling their simultaneous amusement and trepidation at that. Showing it or not, they weren’t all entirely comfortable with the idea that he could lift things with a motion. “It doesn’t work quite like that,” he said. “And telekinesis is a lot more than just thinking it. You’re confusing it with telepathy.”

“Weird all the same,” Hamilton answered, quickly raising a hand. “Uh, no offense, Commander.”

“None taken,” he answered as the skyranger began dipping. “I don’t expect everyone to be on board with the whole idea.”

“Well, if there’s anyone who I would trust to use strange magical abilities, it’d be you.” Sophie said.

He smiled at her. “Appreciated.”

“Coming in for a landing,” Big Sky said, the skyranger shuddered as it rested itself on the ground. “Ramp deploying. Good luck, Commander.”

With a hiss the ramp began lowering, and he stepped forward to begin his descent down. He turned back to his team waiting in the shadowed skyranger and gave them his salute. With no hesitation, they returned it and he turned back down to continue forward to the waiting Council.

***

Black clouds darkened the skies as the Commander strode forward through a light drizzle that was no doubt going to get worse. Of course it was raining. Fitting, he supposed, it was an accurate reflection about how this day was going to go. The Council Headquarters was a lot more modest than he’d expected. In terms of size, at least. It was definitely one of the most ornate places he’d seen, even from the outside with the elegant landscaping, marble pathways and fresh-looking paint.

Directly at the entrance stood four security guards, looking more nervous than they usually were, though if that was because of him or the alien invasion, he couldn’t say. Likely the latter, but in any event he knew that their Kevlar vests and ballistic weapons would offer them no protection against Ethan and his team.

Leaning against a pillar and protected from the rain, behind the guards, stood Tamara Vasilisa, the former CT agent-turned-diplomat and current Councilor of Russia. Excellent, just the person he wanted to see and who would likely give him an idea of what to expect.

One of the guards held up a hand. “ID?”

All of them knew he was the Commander of XCOM, but protocols were necessary and he handed his XCOM ID and badge to them. They clearly didn’t want to delay him and waved him through
after a cursory glance. Now that he was near, he could definitely sense them better. They were nervous, but not of him.

The aliens then. Made sense.

Tamara pushed herself upright from the pillar and approached him, stone-faced with concern. Not a good omen, for what little that mattered. “You took your time getting here,” she muttered as they began walking towards the doors. “I know your opinion of the Council, but now is really not the time to be antagonizing them.”

“Relax,” the Commander told her calmly, pushing the door open. He found it interesting that she was dressed in a light bulletproof vest and bore the uniform of one expecting combat rather than one of a pure diplomat. He wouldn’t be surprised if they all were similarly prepared, especially given the circumstances. “I’m a little busy with the invasion of Australia if you didn’t notice that. The Council is a secondary priority.”

She rubbed her forehead. “Commander…I respect you here. I’m one of the few that still do, but even you have to realize this has gotten much bigger than what you can handle. You may think you and your…fifty soldiers can somehow protect the entire world, but—“

“I know,” the Commander interrupted, raising a hand as they passed several wide-eyed aides. “And I’ve made preparations. Preparations I assume President Savvin has yet to inform you of?”

She blinked, shooting him a sharp and confused look. “Explain.”

It wasn’t a request, but at the moment it would have to be treated as one. “I’ll explain after the meeting. But trust me, I know that XCOM can’t handle everything. It’s impossible.”

“I know it isn’t ideal,” Tamara admitted, returning her attention forward. “But we have to leverage the UN the best we can. Like it or not, they are the best chance that exists to try and form some kind of cohesive defense—“

“No.”

“Unless you prefer the countries going on their own, then yes,” she continued, not missing a beat. “Or do you know something I don’t?”

“The latter,” he confirmed, following her lead as they stopped in front of an ornate door. “I came to the same conclusion you did. But unfortunately, I don’t have time to fix broken systems. We don’t have time.”

She crossed her arms, fixing him with a piercing stare. “Commander, I don’t oppose radical changes, but the Council…I don’t think you know how bad it is now. Any support I, and you, had is pretty much gone. You’ve been too independent, you have too much history.”

The Commander sighed and rubbed his forehead. Well, he might as well know. Play along a little bit before it all went down. “How bad is it? Tell the truth.”

“They’re going to ask you to step down, firstly,” Tamara stated emotionlessly. “They have a majority and nothing is going to sway them. Agree and you might get an advising position in XCOM, maybe even retain some measure of command if you play your cards right. Refuse and they will arrest you here and now, and this time they will execute you.”

Tamara was clearly expecting him to be somewhat worried, but all he did was raise an eyebrow. “Is that right?” He said, more curious than anything. “Tell me…do they really think that will work?
Do they really think that XCOM is just going to accept that?”

Tamara pinched her nose, looking around to make sure they were alone. “I was afraid you were going to say that,” she muttered under her breath. “But think really carefully before you openly defy the Council. We need unity now and the United Nations isn’t going away. I can’t tell you what to do, but I’m not sure that breaking away will be the best strategy. Because this time…if XCOM becomes a rogue organization…the Council will go public with your identity.”

“Unsurprising,” the Commander commented. “But I’d like to know; how did it even get to this? Last I checked, there was more or less a stalemate.”

“It was after Herman gave his big speech and quit,” Tamara muttered. “One I agreed with, if I’m being honest. But it had the opposite effect he wanted. All it did was make the councilors feel insulted. No one likes being eloquently told they’re idiots. Then after the attack on the Citadel, it came to light that both Bradford and Van Doorn had been killed.”

She fixed him with a resigned stare. “Truthfully, Commander, that’s the main reason things are where they are. The only reason many agreed to let you work in peace was because they trusted Van Doorn, and to an extension, Bradford, to be a moderating influence. With them gone…your only known council is a radical scientist, a Chinese Triad leader and an elderly engineer.”

“I’m assuming they didn’t look at Central Officer Jackson,” the Commander muttered. “And for the record, Psion Patricia Trask is also in my council.”

“They don’t really expect you to promote people unless they agree with you to an extent,” Tamara pointed out. “Which is a legitimate concern.”

“If that were the case, I wouldn’t have put Van Doorn, Shen or Bradford on it,” the Commander stated, staring down at her. “But yes, it is a legitimate point, although one I contest.”

“And then there’s your alliances with…a large number of countries,” Tamara said slowly. “You do what you have to…but allying with the like of Iseul, Luana and Habicht isn’t doing you any favors. They’re dictators, or at least have the characteristics of some. There are quite a few who are worried about a power grab of sorts. And with XCOM refusing to condemn Israel…you can see the concern.”

“If you’re expecting me to have sympathy for the idiots who deciding provoking Israel was a good idea, then I’m afraid I’m going to have to disappoint you,” the Commander stated icily. “Unless Israel gives me a reason not to support them, I hope that they end that war quickly. With Russian and American help, of course.”

“Look, I agree that the Middle East needs to be dealt with,” Tamara said in resignation, frowning. “But I’m telling you why the Council doesn’t feel like you’re the best choice to lead the defense of humanity.”

“Fair enough,” the Commander said with a nod, then looked toward the door. “I think I’ve kept them waiting long enough. Let’s go in. And…” he glanced over at her. “Follow my lead exactly. I have this under control.”

He sensed she was highly skeptical of that claim, but elected not to follow up that particular statement. “Let’s go.”

***

It was more or less like what he’d pictured the actual Council Chambers to be like. A circular room
which held the councilors above the lone stand in the middle. The desks themselves were a
conjoined semi-circle, with the councilors spaced out between them. Nameplates were in front of
the respective people, which was useful for him since some of the pronunciations were…unique.

Tamara walked up and quietly took her seat as the Commander weathered the unflinching gazes of
all the councilors on him. The emotions in the air were mixed. Some were worried, others were
sad, still more felt justified and satisfied. In any case he had few friends here. This wasn’t the
meeting he had anticipated, it was a judgement.

One he suspected the verdict had already been decided upon.

Not that it mattered in the end. But he might as well be courteous for the time being. And try to
refrain from resting his hand on his gauss pistol.

There was nearly a half minute of silence before the Speaker leaned forward, his fingers laced
together with a gavel a few inches to his right. “Commander,” he began slowly. “Thank you for
coming.”

The Speaker in person actually wasn’t too far from the silhouette he’d been used to. The Speaker
was a bald man, with an older rounder face than he’d expected, with some wrinkles around the
mouth and cheeks. His voice was still the deep baritone, even without the synthesizing. But now he
distinctly looked resigned, which pretty much confirmed the worst was going to happen.

Still, his first choice of words were interesting. “Thank you, Speaker,” he answered, looking
around the room. “Though I do believe I was the one who suggested this meeting. I thought it was
time for something in-person.”

“And you still managed to be late,” Isabella Narmon, the UK councilor bit out. “Though I’m sure
you’re aware that time is precious at this point.”

He gave her a smile which seemed to infuriate her. “Of course, councilor. Though considering the
current crisis at the moment, that has to take priority for me. As I’ve said before, my focus is
protecting humanity, not-”

“Quiet.” Ennor practically spat, raising a hand. The man looked awful, and the Commander could
completely understand why. Losing the entire country, no, continent, to the aliens would take a toll
on anyone, and he did feel a measure of sympathy for his family who he did sincerely hope were
still alive. “You’ve made your feelings about the United Nations and this body very clear.”

“And I’m afraid that we cannot allow you to operate in the haphazard and dangerous way you have
been,” Councilor Adaora of Nigeria said, her voice hard as she looked down on him. “Your actions
are divisive and antagonistic. Thanks to your actions, we now have China, Germany and Brazil
working apart from us, major allies we need in the coming fights. Your support for Israel is
emboldening them to fight a pointless war at the wrong time, as it is with Brazil.”

The Commander raised an eyebrow. “I make no apologies for those so-called divisive actions.
Brazil’s collapse was due to EXALT meddling, China was simply reactionary and short-sighted
and I shouldn’t have to remind you about how you attempted to dismantle Germany in an attempt
to discredit me.” He raised a hand to forestall the coming comment. “Whether you realized your
mistake later or not is irrelevant, you helped drive Germany to collapse and I had nothing to do
with it.”

He saw several councilors frown at that and exchange looks. Unsurprising, given that that
particular operation hadn’t been approved by the whole Council, according to Ennor. It probably
wouldn’t change minds, but it did feel good to say.

“Nevertheless, you took advantage,” Councilor Meredith of Canada stated. “A true subordinate of the Council would have encouraged these countries to rejoin the Council. Not simply gather them for his own cabal of rogue nations.”

“And there is your mistake,” the Commander said. “You fail to see that our relationship, specifically between XCOM and the Council, is strictly that of an ally. I have and will maintain that I am perfectly willing to work with you, but I’m under no obligation to make you stronger or encourage nations to capitulate to your ineffective and destructive leadership.”

That certainly didn’t win him any friends if the intakes of breath and stoney faces were anything to go by. Fair enough. “If you were so concerned about me gathering allies outside the Council, then maybe you should have asked them to join you. But no, that would never occur to you. The countries I decided to work with are too small, too insignificant to compare to the world power your nations wield. You would never take Israel or North Korea because of your pride, just as you would never take Taiwan or the countries of ASEAN because of your cowardice.”

Yes, there was definitely anger in the room now, and Tamara was staring at him in disbelief. Clearly, she hadn’t expected him to be this confrontational. “If you’re angry about that,” the Commander continued. “Good. You should be. But actions speak louder than words, and unlike you, I actually follow through on what I believe. While you were obsessed with me, I was focused on actually uniting the world with one cause, and the only cause that matters.” He pointed upward. “Defending our species from the alien threat.”

“And in doing that you encouraged two wars, and the entire continent of Australia is wiped out!” Ennor shouted, face pulsing red. “You failed, Commander. If your goal was to protect the world, then you failed!”

“The first strike was always going to be a failure,” the Commander insisted calmly, looking Ennor calmly in the eyes. “There was nothing you, or I, could do about that. It could have easily been Russia or Argentina who was the first victim, and they would have likely met the same fates. I am sorry about what’s happened, but this needs to be looked at objectively, not out of emotion.”

“Tell that to me when your home has just been destroyed!” He growled. “You had a directive and you failed. End of story.”

“No,” the Commander stated, growing more serious. “We are at war now, not just XCOM, but the world. Your authority over military matters is no more. You don’t know anything about strategy, tactics or actually winning a war. I do. So let me do my job.”

“I’m afraid that there are going to have to be significant changes,” Councilor Lacy of France interrupted slowly, seemingly disturbed after what he’d said. “This war is no longer something that can be handled by one organization, even XCOM, wouldn’t you agree?”

He nodded towards her. “Certainly. I know XCOM can’t defend against this invasion alone.”

“Which is why XCOM is going to be turned over to direct UN control,” Lacy continued, watching him closely. “It will become an official public branch, and will act as the main army of the United Nations in conjunction with NATO.”

“Unfortunately, this will mean you cannot be the Commander of XCOM anymore,” Councilor Tiran of America said, admittedly looking unhappy. “So for the good of the world…we need to ask that you need to step down. I’m sorry, but do this, and we can discuss your role in this war, as we
agree that you still have a place.”

About what he expected. Before he gave his answer, the Commander looked at Ennor. “Let’s say that I step down willingly. Why should I believe you? As I recall, the United Nations has not been entirely reliable when it comes to making deals with me. You even lied to me about being executed.”

“Because Councilor Tiran is right,” Ennor said grimly. “Like it or not, you are still too useful a resource to just throw away. But your place is not as someone who can actually affect the world as you have been. And because I hold to deals I make, but believe what you will.”

“However, refuse and there will be…issues,” Councilor Meredith warned. “We cannot have XCOM acting as a rogue organization, and you will be arrested when you leave here. The loyalty of your soldiers is a problem that will take some time to sort out, but I’m certain your internal council will comply when they learn who you are.”

The Commander smiled at him, chuckling. “I’m afraid not, Councilor. They already know. Bradford and Van Doorn knew as well, as I told them before the attack on the Citadel. And I know they won’t just let me be taken away.”

That revelation appeared to take the councilors by surprise, except Meredith, who just narrowed his eyes. “Perhaps, assuming you aren’t lying. But it changes nothing.”

“Give us your answer, Commander,” the Speaker ordered, raising the gavel. “We cannot delay this any longer.”

“Very well,” the Commander took a breath. “No. I will not step down, and I will not surrender to the likes of you.”

He saw Ennor’s lips twitch, as he presumably struggled not to smile. “Your decision is noted. And this meeting is adjourned.”

The two guards at the end of the room began walking to him, presumably to escort him out. The Commander raised a hand, calling upon his power to make them stop in their tracks. The psionic energy wasn’t strong yet; they still had no idea, though he could sense the confusion of the soldiers. “Wait,” he said. “I do think I’m allowed to say one last thing.”

The Speaker nodded and motioned for the soldiers to remain stopped. With that the Commander released his power. “Go ahead, Commander.”

He smiled, and clicked the button on his wrist giving Ethan the signal. “Councilors, I think that you are unaware of why I actually called this meeting, and it wasn’t for the reason I gave.”

Ennor frowned. “And what other reason could there be?”

“To speak with you before I made my final decision,” the Commander answered. “To see if there was some way I could reasonably solve this situation. Unfortunately, that appears to be impossible.”

Lacy frowned. “You have the arrogance to believe that you could come here and negotiate or demand things from the Council?”

“I had wondered,” the Commander agreed. “For what I’ve done, you owe me that much. But no, Councilor, I didn’t come here for that.”
Now everyone was confused. “I think we’ve heard enough from this,” Ennor said, narrowing his eyes. “Stop talking in riddles or leave.”

“It’s actually very simple, Councilors,” the Commander said smoothly, his lips curling into a humorless smile. “I am not here to reason with you. I am not here to negotiate with you. I am here to kill you.”

Within an instant his hand had grabbed his pistol and he raised, aimed and fired. And the Council watched in shock as the Speaker’s head was blown apart by the gauss round. He turned around and shot the two guards, the magnetically-propelled rounds piercing their vests and helmets with ease, before turning back to the Council.

Now they were in a pure state of panic. Several of them were armed and were raising their weapons, while others were screaming and trying to hide. The Commander focused on Councilor Antonio of Mexico next and fired several rounds into him, sending his body collapsing back into the wall, blood spattering the desks and floor.

The Commander jumped forward towards the armed Councilor Lacy, an inhuman leap that they clearly hadn’t expected, given that he hadn’t told them about his genetic modification. He landed on top of her and quickly put a bullet through her head.

Two opposing sides. Now he gathered the power and focused it towards the two closest people, which happened to be Meredith and Councilor Kyo of Japan. His wrists became sheathed in distorted purple energy and they shouted as they were lifted in the air.

“He’s one of them!” Someone screamed, and he smiled.

He tossed Meredith towards several more councilors who were trying to flee, before turning his focus towards Kyo, concentrating the grip around his head with a twist of his hand, the head snapped sharply to the side and the Commander let him drop to the ground. Councilor Tiran was right behind him, a terrified expression on his face as he fired wildly towards the calm Commander.

The Commander extended a hand, directing his telekinetic grip towards the hand holding the pistol and twisted. Tiran screamed as his wrist was almost ripped off from being torn completely around. He fell to his knees, looking up just in time to see the Commander put a gauss round through his head.

He looked around, and focused on the group of councilors struggling to the door. He leapt towards them, cutting them off and causing them to stumble back in terror. “Alright, stop!” Councilor Adaora pleaded, tears running down her face. “We surrender! Please!”

“You don’t have to kill us!” Councilor Desta of Egypt insisted, face white as a sheet while he trembled. “We’re no threat! We’ll reconsider, I promise!”

The Commander pursed his lips. “The time for that is long passed. You signed your death sentence when you insisted I abandon XCOM.” With that he fired several rounds into each of their heads, ensuring that councilors Desta, Adaora and Kagiso would never serve again.

The Commander focused around the room, and sensed another councilor hiding under one of the desks and raised his pistol towards that spot and fired. A scream confirmed that he was killed. “Die! Monster!” He turned towards the shrill female voice just in time to see Councilor Isabella throw one of the wooden chairs at him; a pretty impressive throw, to be honest.
He raised a hand and telekinetically caught it, watching her face drop as she realized it hadn’t worked, then directed it back at her at a terminal velocity. The hard wood slammed into her face and crushed it in a spray of blood, cartilage and brain matter. One more down.

He caught a glimpse of Tamara huddled into a corner, trying to stay as out of it as possible. But she wasn’t a threat, not yet anyway. He leapt onto the elevated floor to hunt for the rest of them. He heard whimpering beneath one of the desks and fired until it stopped making noise. He glanced underneath and confirmed that Councilor Kanti of India was dead.

“You won’t get away with this,” Councilor Meredith breathed from the ground, his leg twisted at an odd angle. “The UN… they—”

He fired and ended his life. One left, by his count.

“He’s right,” the Commander turned to see Ennor standing against the wall, drained and defeated, accepting his fate. “You can’t win this. The UN will investigate. They will find you. And they will kill you like the monster you are. You’ve doomed the world with what you’ve done here.”

The Commander walked over to him, the same humorless smile on his face. “No, they won’t; no I haven’t and I’m going to tell you why.” He gestured at the carnage around the room. “The Council was never the whole issue. It was merely a symptom of another problem. One that is being cured at this very moment.”

His eyes widened as he realized what he was saying. “No… you can’t…”

“Today is the death of the United Nations,” the Commander stated, pointing a metallic finger towards him. “The end of a stagnant and threatening organization which cares more for politics and appeasement than the alien threat. There can be no united humanity when they exist. Which means they need to be removed and something else needs to be put in its place.”

The Commander lowered his hand. “You failed, Ennor. In attempting to destroy and discredit me, you’ve brought about the destruction of everything you care about. But before you die, know that I will win this war. Australia will be freed and the humanity will emerge stronger, safer and united.”

He raised the pistol, looking into the hopeless face of Ennor before pulling the trigger. “But not with you.”

The shot rang out and Ennor slumped to the ground, the blood staining the walls. No longer was he the proud, haughty councilor, now he was just a broken dead man. And the thing was… he honestly wished there had been another way. As much of a piece of work Ennor was… he didn’t deserve to die. None of them did.

But unfortunately, there was no other way.

He turned back towards where Tamara was standing, pistol in hand, looking at him with a combination of horror, disbelief and fear. “You killed them…” she said numbly. “You really killed all of them.”

“I did,” he confirmed, stopping as her pistol twitched. “Relax. If I was going to kill you, you would be dead by now.”

“And why let me live?” She demanded.

“Because I don’t kill my allies,” the Commander said simply. “Russia was always an ally here, and I intend to respect that.”
“Did Savvin know?” She demanded, nodding towards the dead councilors. “Did he know you would do this?”

“He knew I had a plan for the United Nations and Council,” the Commander answered. “Not details. Only a few people knew the full extent.”

“Right,” she swallowed and holstered her pistol. “What happens…?”

The Commander turned to the door and motioned her to follow him. “This way,”

They pushed the doors open and stepped into the scene of a slaughter. The bodies of guards and aides littered the halls, their limbs splayed and twisted in unusual angles, their bodies mangled by the gauss weapons, their faces bearing expressions of surprise and shock.

“Take them outside,” the synthesized voice of Ethan ordered and he saw him with Travis and Rey directing a group of about seven aides and staff forward, most of them were crying and shaking in terror. Ethan strode towards the two of them, his voice synthesized by the helmet. “The defenses have been eliminated, Commander. I presume the Council is dealt with?”

“Correct,” the Commander said. “And are the charges set?”

“The others are working on that now,” Ethan confirmed. “I’m moving the prisoners outside to make disposal easier. I estimate no more than five minutes. This isn’t a large establishment and the bodies here are easily treated.”

“Finish up, then meet me outside,” the Commander ordered, moving towards the exit, Tamara at his side.

“You’re going to blow it all up,” Tamara muttered, looking somewhat shocked at the bodies she stepped over.

“Yes, though this will only be a footnote in history,” the Commander said. “As influential as the Council is, that influence is only known to a few. This will simply be another alien attack which only drove home their intentions towards us after the destruction of the United Nations.”

“So you really weren’t making that up,” she said in amazement. “How…”

He smiled as they stepped outside into a raging rainstorm. “The same as here. Gather the leaders in one place, have a few dedicated people and bring down the establishment. The difficulty of such acts is overestimated. The hard part is what comes after.”

“And what does come after?” She asked with trepidation as they walked towards about a dozen prisoners kept under watch by Travis and Rey. They were soaked now, but neither seemed to mind.

“The creation of the new United Nations,” he answered, observing the building with his hands clasped behind his back. “ADVENT. You will see soon, and it will accomplish what the United Nations could not.”

“And what of me?” She asked. “I might attract suspicion since several people do know my role here.”

“There are several options,” the Commander said, turning to her. “You could have your identity changed and work somewhere within ADVENT suitable for your diplomatic skills. Or you could join XCOM. You were a CT agent and by all accounts, a good one. If you wish to apply those skills again, there would be a place for you with XCOM.”
She swallowed, and looked to the building as Ethan and his team came out. “I’m clearly not a good diplomat, Commander,” she said, quietly enough that he had to strain to hear it through the sound of the downpour. “When it mattered, I simply didn’t have what it took. This here…it’s partially my fault. I could have done something different and I didn’t. Being a soldier is simpler; less chance of…this.” She turned to the Commander. “I’ll join XCOM, if you’ll allow it.”

He nodded. “Gladly. But remember that what happened here is not your fault. That lies squarely at the feet of the likes of Ennor and Meredith. There is no reason to feel guilt for what happened, and in the end, I was the one to make the call, not you.”

She sighed. “I’ll keep that in mind.”

“Charges are set,” Ethan confirmed, pulling out a trigger. “Watch the fireworks.” He pressed the button and the Council headquarters exploded in a brilliant explosion of shrapnel, fire and the symbiote substance, giving the solidification of an alien attack. The napalm his team had distributed around the building earlier would also ensure the fires would burn long through the rainstorm.

“Well done,” he said, turning to the remaining prisoners. “Dispose of them.”

“Kill them?” Ethan asked, raising his weapon.

“Yes,” the Commander agreed. They might have been useful for ADVENT or XCOM test subjects, but seeing as how their only crime was being at the wrong place at the wrong time, being condemned to that fate was not something they deserved.

“Form a line,” the Commander ordered his team, drawing his pistol. At this point, the captives were figuring out what was happening and their voices pleaded and begged for them not to do this. But it didn’t matter what they wanted, or even what he wanted.

What mattered was necessity, and necessity demanded these people die.

“Fire,” the Commander ordered, and shot his pistol at a young woman, the first of them to fall dead. Within seconds the gauss rounds tore through their unprotected bodies and they collapsed in a heap of blood, bones and flesh.

“Clean this up,” he ordered with cold efficiency, and they began doctoring the bodies to make it seem like they had been killed by alien weaponry, or otherwise just torching the bodies. And with the building burning in the background, the rain pouring down and the bodies around him, he could rest assured that the first part of the Demeter Contingency had been completed.

The Council had been dealt with.

Now it was up to Zhang and XCOM Intelligence.

***

United Nations Headquarters, New York

Abby pulled out her rifle and slung it over her shoulder. That particular motion would generally not get any attention, as she was officially part of the security here and the United Nations was holding a general assembly at the moment, to discuss the response to the alien attack in Australia. All part of the plan, and she now had to do her part.

First, she needed to gain control of the security cameras and lockdown permissions. Something
she’d planned out extensively and knew exactly how to accomplish. For a place with so much
significance, they made the same problem with their security most did: Having it in one area.

Granted, the area was a bit larger than normal, but not enough to make her job difficult. She
glanced behind her to see Ciro, her partner on this op, also preparing. “Ready?”

“Ready as can be,” he answered with a nod. “Let’s go.”

Personally, Abby was somewhat nervous, because if their next contact was delayed, it would be…
problematic. The method that would be used to neutralize the entire building was extremely
effective, but very, very dangerous, and she knew better than anyone here how bad it could get.

But then again, she was the one responsible for dispersing the gas, so it wouldn’t start without her.

They stepped into the elevator and pressed the button taking them to the floor the building was on.
“Going up,” the pleasant female voice said.

“Just to be clear,” Ciro said under his breath. “We don’t need them alive?”

She fixed him with a cold glare. “We’ve been over this. No. We don’t.”

He swallowed. “Got it.”

The door opened with a pleasant ding and they stepped out into the busy hallway and began
walking to the security room. They had appropriate clearance so they simply presented their
badges to the guards standing in the hallway. “Expecting trouble?” One of them asked, half-joking.

Abby shrugged. “If the aliens can attack Australia…well, they could attack here.”

The second guard sighed. “Good point. Glad you’re making sure that doesn’t happen.”

“It’s my job,” she said, taking her badge back and continuing onward.

First door on the right was security and camera footage. They likely wouldn’t need their guns for
this, since it was a smaller room. They opened the unlocked door to reveal a room with a dozen
monitors spread out, with bored guards pretending to watch the footage.

One looked up, dark bags under his eyes indicating he was exhausted. “Yes? Who are you?”

“Inspecting,” Abby said, not actually answering the question as she took a look around. Six
personnel. Doable. “Just making sure everything is working.”

He shrugged and looked back at his screen, which happened to be on the General Assembly itself.
She nodded toward Ciro who moved to another analyst, to presumably ask a question. She leaned
down as if to do the same, pointing to the screen. “Everything functioning?”

“Yes-“ he began, just before she stabbed a knife into his throat, cutting off whatever he was going
to say. She held the blade in as the blood spurted out, coating her hand and his uniform. With her
other hand she clasped over his mouth, preventing him from making any noise. A few seconds later
she let him slump forward gently and glanced around quickly.

Good, no reaction and Ciro had performed similarly. She moved to the next target, a woman who
was watching the lobby with a bored expression on her face. Abby didn’t bother asking a question
and clamped a hand over her mouth and slit her throat with one smooth motion.

She’d never imagined she’d be using her surgical skills like this, but she’d cut well and the woman
fatally bled out very quickly. Abby supposed it helped that they wore headphones to get the best audio, though it blocked outside sounds pretty easily.

Ciro had also killed another, which left only two. With as little ceremony as the first two, she walked up behind the man and performed the same act as she had on the woman, and slit his throat then held him until he stopped moving.

“All done,” Ciro said, pushing the corpse onto the ground and kneeling down to pull out his EMP charge. She did the same and placed it on the computers closest to her. Not that it would make much of a difference, but she figured she might as well destroy the wiring itself beyond repair and pulled everything apart that she could.

“Let’s step outside now,” Abby suggested, leaning down to wipe the blood off her gloves as best she could. She really wished she’d brought a second pair now since the literal feeling of blood on her hands was thoroughly unpleasant. Unfortunate, but she’d be ditching this uniform soon anyway.

They stepped outside and she pressed the detonator. There was no sound, of course, but she did observe the cameras suddenly blinking off. Abby smiled. Excellent, one part down, now to lock down the rest of the building. She clicked a button on her wrist to let the rest of the agents on this mission know they were clear to execute their orders.

“Now the guards,” Ciro said, referring to the two guards that had cleared them. Even with suppressors on their rifles, Abby knew the sound would attract their attention and she didn’t want them calling backup.

She walked to the end of the hallway just before the corner. “Hey, could you help me?”

One of them sighed and began jogging to her. “Yes?” He asked as he got closer, rounding the corner.

She pointed at the now defunct camera. “Shouldn’t that be working?”

He blinked. “Huh, yeah, it should be. Hold o-“

He gasped as Abby stabbed him in the throat with her knife, grabbed his vest and swung him towards the nearby wall, pinning him to it with a dull thud as he slowly bled out, disbelief in his eyes as she kept pressure on the wound.

“Hey, we need help!” Ciro called to lure the final guard over.

She paid no attention to the sound of footsteps running over, nor the sudden gasp of “What?” just before Ciro killed him as well. Once she was certain the man in front of her was dead, she reached up and pulled his eyelids shut, stood and sighed. “Done. Let’s lock this place down.”

The final place they had to go was actually the third door on the left, which controlled everything else of import to the building. Namely the elevators, doors and alarms. Abby realized that by destroying everything in the security room, she had also likely disabled more sophisticated communication between the remaining guards. Quite a few people were probably going to be wondering why the Wi-Fi was down.

Unfortunately, they wouldn’t be able to call for help.

She opened the door to the room and stepped in. “Security issue,” she declared upon entry. “Who’s in charge?”
“I am,” a middle-aged woman stood up, eyebrows furrowed in confusion. “Is there a problem?”

“Potentially,” Abby confirmed. “We might need to lock the building down. Security cameras just went down across the building.”

The other seven people in the room gasped and exchanged worried glances. “Security’s been notified,” Abby continued, wondering how long the ruse could be pushed. “But we need to act for the safety of everyone here.”

“Al-alright,” the woman stuttered, clearly shaken. “But I need to contact your superior-”

“All you’re going to do is waste time,” Abby growled, stepping forward. “I was just in the security room. Everything’s fried, including communication with the outside. He sent me to tell you, so unless you want to be responsible for a catastrophe lock the building down.”

“Right, right, sorry,” she stuttered, motioning her over to a console and began typing. “Should I sound the alarm?”

“Lock it down first,” Abby ordered, taking a good look at the console. Good, everything was marked to easily be set or reversed. The woman complied, flipping each floor to a state of locked and protected.

“One,” she declared, moving to hit the alarm. “Tell him-“

She never finished as Abby blew her head off with her rifle and Ciro acted just as quickly, executing the two closest to him in quick succession. Abby instantly turned around and shot the first surprised, then terrified woman behind her, and her colleague sitting next to her. Ciro executed two more and Abby shot the last one in the head right before he was likely going to plead for his life.

It all happened within thirty seconds. Quick, precise and efficient.

And sickening.

But she had to ignore those feelings. A lot more people were going to die by her hand today, and theirs would be far more horrible. “Let’s go get our suits,” Abby said, unlocking the elevator which would take them to the ventilation control. And get the key so this is locked.

Ciro rummaged around the dead administrators pockets and pulled out a string of keys. “Got it,” he said. “Though we really should have someone here to watch it.”

“This floor is locked down,” Abby said. “No one is getting in here.”

“There are still other people on this floor,” Ciro reminded her.

Abby sighed. “Correct, but they can’t change anything now. We lock this door and head to ventilation. Got it?”

“Yes, ma’am,” he said and found the key to lock the door.

Abby sent the second signal to the rest of the agents, and together they rushed to the ventilation area, where their next team member was waiting to help.

***

United Nations Headquarters, Ventilation Control
“Perfect timing,” Agent Boran complimented as they rushed up. He was already in his gear. Unmarked XCOM Aegis armor that would provide protection from the gas that was about to be unleashed. “You both did well. Any trouble getting here?”

“None,” Abby said, shaking her head and immediately taking off her vest to get fitted into her own Aegis armor. “Everyone is confused, but calm. For now, and I don’t think that will last. But we have control here.”

“I’ll be heading down to control the lockdown directly again,” Ciro added as he also stripped and began fitting into the armor. “I see you got everything in alright.”

“Of course I did,” Boran stated, apparently surprised that was a concern. “As long as the manifests are in order and the documents are signed, people really don’t give trouble. Easy enough to smuggle the armor in…and the gas, of course.”

His voice became subdued as he finished. Abby had a good idea why. Of all the ways to die, Sarin gas was probably one of the worst. But of the agents she had researched, it was one of the most efficient and easiest to disperse. And speed and efficiency was what they needed now.

Once the gas was dispersed, everyone in the building would be dead within twenty minutes at most. Probably sooner since this particular batch was as pure as it came.

She flipped the black helmet in her hand and placed it over her head and heard it seal with a soft click. She really did like being back in armor again, and it was definitely an improvement from the previous iteration. The HUD booted up and immediately identified both agents, as well as schematics of the building.

Showtime.

“Where did you put the canisters?” She asked.

He motioned her to follow to one of the vents, one of which was open and primed for dispersion, the canisters were set in two neat rows beside it. “This is the master vent. We put it through this at full blast, and the entire building will be flooded. We have more than enough.”

“Ciro, get back to the lockdown room,” she ordered, lifting one of the canisters and attaching a nozzle to it. “Boran, turn on the vents on my mark.”

“Copy,” he said, and walked over to the station. “Ready and waiting.”

Keeping an eye on the canister pressure, she then went forward with the next steps of the protocol, setting her helmet to the correct channel. “This is Agent Gertrude. Gas dispersal imminent. Prepare to move forward.”

“In position,” one voice identified.

“Ready and waiting,” another said.

“Outside is under control, will send in the team on my mark,” the familiar voice of Patricia said. “Outside security is dealt with, and rest are unconscious.”

“Copy that,” Abby said. “Commencing dispersal.” She nodded toward Boran and he turned on the vent to roughly half-blast while she released sprayed the gas into the vents. To any observer, it would look like she was spraying nothing, but if they paid close attention they would notice small distortions around the nozzle.
Pure Sarin gas was odorless and colorless. No one would see the deadly gas come upon them, nor smell it. There was a reason it was a banned substance, but a highly effective one.

The canister ran out and she quickly switched to the next one and continued dispersing it into the vent. She repeated the process for each canister, taking about one minute for each. She had estimated it would take at least twenty gallons to properly kill everyone in the building, so she’d elected to ensure there would be twenty five. With each tank containing two and a half gallons, it should take her ten minutes, which would allow plenty of time for dispersal.

“Dispersion complete,” she announced, tossing the canister away. “Moving to ensure the General Assembly is taken out.”

“Confirmed,” Patricia acknowledged. “Teams are setting charges now. Ciro, remove lockdown for back entrance.”

“Affirmative, Psion.”

Abby stood and grasped her gauss rifle. “Let’s go,” she told Boran who followed her as they walked out of the room. They stepped out into a bloodless warzone. Corpses of the various people on this floor surrounded them, most clutching their throats or curled into balls on the floor. Abby didn’t bother to ensure they were dead. Sarin didn’t leave survivors, even if there’d been medical staff on site.

Abby grimaced as she stepped over the corpse of a young woman who had been trying to claw her way to the exit. The carnage didn’t stop there either. A dead elderly couple were seated on chairs; two businessmen passed out on the ground; a couple both holding onto each other just before expiring. Abby gritted her teeth and pressed on.

“Unlock elevator three,” she said as they walked into it. “Then prepare to unlock the general assembly doors.”

“Copy,” Ciro answered and they stepped into the elevator and she pressed the floor they were going to.

“Going down,” the infuriatingly pleasant voice said. As if everything was alright.

“Don’t dwell on it,” Boran said, guessing at what she was thinking. “We did what we had to. You were under orders.”

“I know,” she said quietly, staring aimlessly into the silver doors. “But I’m not going to forget what I’ve done here. They deserve that much.”

She wasn’t entirely sure, but she suspected that her kill count might now rival the Commander. At the very least she had become one of the most dangerous perpetrators of state-approved terrorism. All for the greater good.

The door dinged open and she stepped out to see that the Sarin gas had yet to fully complete its task here. If Hell existed, she was certain that some of it would be like this. The screams, pleas and sobs of men, women and children permeated the air, as people gasped, wheezed and choked around them.

Dozens writhed on the ground, others struggled for the exit, only collapsing after the gas took a deeper hold on them. Still more were already slumped to the ground, a firearm or knife in their hand as they’d killed themselves rather than suffer any longer.
Their arrival barely caught the attention of the dying crowd, blinded as they were by their own pain. “Help us!” A woman pleaded, stumbling toward them, coughing as she struggled for one breath.

And Abby did. She really wanted to.

But those weren’t her orders.

There was only one way she could help the woman. She raised her rifle and fired a round at her head, sparing her from a slow, suffocating death. Realizing that they weren’t here to help, the crowd that had managed to notice them stumbled back, trying to flee from the soldiers clad in black. Abby didn’t bother asking for directions to the general assembly. She knew the schematics.

“Lock down the elevator,” she ordered. “And release the lockdown on the general assembly.”

“Affirmative,” Ciro answered quietly.

Abby kept going forward, then stopped at the sight of a knot of dead children in front of her. A school tour group if their uniforms were anything to go by. Just taking a field trip to see the place where world leaders met. All dead now, collapsed over each other, one by a teacher who had wrapped a jacket around his face in a vain effort to prevent him from breathing the gas.

They’d probably died quickly.

Not that it was any consolation to her.

Tears pricked her eyes that she was unable to wipe away now, blurring her vision as she looked upon the corpses of the children she’d killed. She wanted to look away, purge it from her mind. But she couldn’t. She _needed_ to remember. Remember what she’d done here, use it to never forget what the price of victory and necessity was.

“Agent Gertrude…” A tentative voice asked, and a hand was laid on her shoulder. She looked back to see Boran staring at her through his helmet. “We have a mission to complete,” he finished quietly. “Keep it together a little longer, alright?”

At least he wasn’t diminishing what she was feeling here. And he was right. They had to make sure the General Assembly was dead. She blinked to clear away the tears and gripped her weapon firmly once more. “Yes sir. Let’s get this done.”

She really should have cut her external audio feed. It would have made it easier. But it would have been wrong to diminish the consequences of her actions here. So she listed.

She listened to the dying gasps, screams and sobs of hundreds around her.

She pushed past those stumbling, pleading for help.

She executed those crawling toward her, the only form of mercy she could display.

They stood in front of the general assembly and pushed it open to behold the mass of representatives, negotiators and politicians all in the same dying state as those outside. But they were in the last stages before death. Many were already lying on the floor, sightless eyes looking forward.

She actually recognized several of the people in the pool of corpses, their faces contorted in pain and suffering. No one here would die a peaceful death. As more and more fell over dead, Abby
pulled out her symbiote grenade and tossed it on several of the corpses. Boran followed her lead, and dropped several more throughout the room. If anyone managed to recover anything, they would find the clear evidence of alien meddling.

And direct their righteous fury at the aliens.

“Symbiote grenades planted,” Abby stated, pulling out the next tool. A new high-powered explosive referred to as X-4, specifically designed for destroying established structures. And it would need to be placed in specific places. So they did so, sticking the explosive where the schematics were marked.

“X-4 charges planted,” Abby said, looking around. “All of the general assembly is dead.”

“Return to exit coordinates,” Patricia instructed. “The rest of the teams are finished. Rendezvous at the pre-assigned coordinates.”

“Copy,” Abby confirmed and they existed that room and made their way back through the floor. Everyone had died now. All that were left were corpses of hundreds of personnel, aides and civilians. At least there were no more sounds.

So they just kept walking, right until they reached the exit and pushed it out and stepped into the cool night air.

It looked so peaceful. The lights of New York City twinkled around her as they made their way to the skyranger waiting for them. The others were there, already boarded.

“Everyone is here,” Patricia confirmed. “Detonating charges.”

A rumbling boom reached her ears, and she watched the United Nations Headquarters, seen by some as the symbol of global unity, collapse in front of her in a mix of steel, fire and rubble. The thundering crash was almost deafening, but then faded. With that the skyranger closed the ramp and they lifted up, then spent the journey in silence.

It was done.

The leadership of the United Nations was dead, and the collapse of the rest of it would be inevitable.

And she was a vital instrument of its destruction.

A hand rested on her shoulder, and she looked over to see it came from Patricia, who gave her a small nod. No words needed to be exchanged, Patricia likely knew how she was feeling, and was one who might be able to comprehend the burden all on board this skyranger now felt.

They were XCOM. They did whatever it took to protect humanity, no matter the cost.

Even if their own humanity was sacrificed in the process.

***

Supplementary Material

The Advent Directive

SECTION 0: Declaration and Overview
Subsection 0.1: Introduction and Purpose

Introduction: With the arrival of extraterrestrial beings to our planet, we recognize that we must adapt to these changes before it is too late. The world has been splintered over various conflicts of religious, political and ideological natures, and ADVENT recognizes that these divisions are detrimental to the future of our species.

We cannot afford to fight one another, human against human. For decades the world had held certain nations, cultures and people on pedestals, yet refused to offer the same to other countries. Ignorance and lying were allowed in the name of freedom. Corruption and broken promises became the laws on the land. The nations of the world were only focused on their own ambitions, not for the greater good of our species.

ADVENT rejects these failings and will seek to correct the mistakes of the past and bring our species into the future, united as one voice, one force, and one power. ADVENT will not uplift some countries while leaving others behind; all are equal and have one voice from which to voice the needs of their nation.

Ignorance will be replaced with knowledge, and those who intentionally attempt to deceive or lie will no longer be tolerated. The leaders of the world will be held accountable for their decisions, and corruption and greed will be purged from the governing body of ADVENT. Most important of all, there will be a singular vision that all in ADVENT share: The prosperity, security, and advancement of humanity.

Purpose: The goals of ADVENT are to enact the three core tenets of ADVENT: Prosperity, Security and Advancement.

Prosperity: Under ADVENT, citizens will no longer need to fear living without basic human necessities. All have a place within ADVENT, be that as a private citizen or in service to the State. Schooling will be free, allowing children to follow their purpose without fear of crippling debt. Medicine and healthcare will be provided to those who require it, and in time, the ills of poverty will be reduced to nothing. Law-abiding citizens under ADVENT will have a quality of life far beyond what they have experienced before, and ADVENT is dedicated to seeing this become a reality.

Security: Under ADVENT, citizens will be protected from threats beyond simply petty crime. The ADVENT Peacekeepers will no longer be a reactionary form or law enforcement, but one that proactively hunts down major threats to the State and its citizens. Dissent which poses a violent threat to the ordinary citizen will no longer be tolerated and will be put down and will help actively suppress dangerous ideologies.

ADVENT Peacekeepers will receive highly specialized training, and will have oversight from military, internal and civilian branches to prevent abuses of power, all abuses of which will be taken seriously in our goal to truly protect the citizens under ADVENT. Criminal justice will no longer be a process that takes years, and judgements will be handed down based on evidence, facts and science, not fear, wealth or public opinion. Prisoners will no longer simply be a burden on the taxpaying citizen, but will become a productive force utilized by the State for maximum efficiency.

Furthermore, the ADVENT military will protect its citizens from the greater threats, be they alien or terrestrial. ADVENT soldiers will be highly trained and drawn from the best our society has to offer, and will be the most advanced military force on this planet. ADVENT’s military leaders will no longer be bound by decisions of international bodies, but will be free to defend ADVENT’s citizens the best that it can with no fear of international condemnation. ADVENT will not tolerate systemic abuses of power by foreign nations on its citizens, and will intervene at the discretion of
ADVENT’s military body, and the Chancellor of ADVENT.

Advancement: Under ADVENT, there will be no dismissal or ignorance of the sciences which propel our species forward. Various scientific groups will be funded for both military and civilian purposes, and will all have the underlying goal of increasing the overall quality of life for all citizens in ADVENT.

Renewable solutions, genetic engineering, cloning, disease and medical research will all be initiatives undertaken and supported by the ADVENT, be they independent or State-sponsored. Military initiatives undertaken will be enhanced weaponry, chemical warfare and cleanup, and alien biological analysis and utilization.

It is also understood by ADVENT that scientific advancement comes with certain risks and needs, which is why ADVENT will fully support the usage of animal and specific human testing to help refine and improve the various projects undertaken within ADVENT, all of which will be heavily monitored to prevent unethical experimentation. In addition, scientists under ADVENT will not have certain projects restricted based on ethics, resources or apparent legality as all projects will first be approved by the ADVENT Research and Development agency.

Forward Observation Station, Mars Orbit

“Emergency crews are continuing to sweep the wreckage of the collapsed headquarters. To date there have been no confirmed survivors, and we have just been updated that multiple United Nations offices across the world have been destroyed. We continue-“

Swipe right.

“The immediate impact of the sudden loss of any sort of United Nations command structure has sent shockwaves throughout the world, even as the aliens continue to land in Australia. With no world leadership structure, the question is now how an effective defense can be mounted-”

A good question. Swipe right.

“We’re now receiving reports of multiple world leaders preparing for some major event. Details are still coming in, but it appears to be a response to the alien attack this morning on the United Nations leadership. Currently Presidents Tredvant and Savvin are confirmed to be attending as well as Chancellor Habicht of Germany and…uh…”

“We will be right back before we confirm further.”

It was infuriatingly going like he’d expected. Swipe right.

“XCOM has yet to make an official statement, but we have confirmation that they will be addressing both their plans to assist in handling Australia, and their response to these attacks on the United Nations.”

“Yes, and everything points to them also attending this announced event with what appears to be the national leadership of United Nations countries. There is a strong likelihood that this will be the first public appearance of the Commander of XCOM, who has been one of the most obscure figures in the world scene to date.”

“Off,” he ordered, and the holographic screens displaying the multiple human networks flashed off, letting him stare blankly into the red sand of the planet below him. Mars, so the humans called it. Named after a human deity of war, according to the history he’d read on them. Rather fitting, if he was being honest, and rather ironic that the grand strategy of the war was to be waged from here.

Even more intriguing was that despite the humans never setting foot on this planet, there was clear evidence of previous civilizations. Or previous watchers, which only added to his theory that this entire situation was not nearly as much of a surprise to the Ethereals as they were letting on. While Quisilia was irritatingly vague about what exactly had comprised the Ethereal Empire before their fall, he wouldn’t have been surprised if at one point this was an Ethereal installation.

Which would explain how they knew about the humans. The question was, of course, how long they had known.

And if they had known, why didn’t they act before now?
Dangerous thoughts. Especially since Mars was not the only planet in this system to contain obscure and dilapidated outposts and equipment. Pluto, Venus and Jupiter had all at one point been held by someone. But he supposed it didn’t matter; whoever it was, they were long gone now. But it would make for an interesting project after the Humans were assimilated.

Regardless, it was very clear that the Humans were going to make this as difficult as possible for them. All signs pointed to a unification, and if these planted attacks were any indication, the Commander was not concerned about it being a peaceful one. For it was the Commander who had to be behind this.

He was of the opinion that the Commander was the sole reason why the Humans were in this fight to begin with. Or at least how they’d survived so long without collapsing under their incredibly divided and schizophrenic political and cultural structures. The Commander reminded him of the old Union Leaders of the Andromedons; brutal, uncompromising, charismatic, intelligent and incredibly dangerous.

Although now he doubted the Commander, nor XCOM, was working on their own. He had no doubt been recruiting allies and the chances of the traitorous EXALT being involved was high. He sniffed at the thought. EXALT had been handled exceptionally poorly and bluntly, though that could all boil down to the Ethereals deciding they knew better.

And maybe they did, but from where he stood, things were not looking as successful as they could have been.

He heard the barrier dissipate behind him and he turned around to see his Vitakarian assistant walk in, her steel gray skin dully reflecting the pale light off her scalp. He frowned, her eyes seemed a less vibrant blue than it should be. Likely the oxygen levels fluctuating again, he’d have to look into that later.

“Zar’Chon,” she greeted stiffly, which immediately told him that she was nervous. He resisted the urge to sigh. Why they insisted on sending newer recruits than the veterans he’d requested was something he’d have to speak to his staff about. It was entirely possible that one or more of the Ethereals was intervening, since that seemed to be what they enjoyed doing most nowadays.

Hands still clasped behind his back, he inclined his head. “Zar’gamlia’usar, correct?”

She blinked. “Yes, though you can-“

“Gamlia then,” he interrupted, knowing what she was going to say. “I’m not normally this blunt, but we do have a mission to subdue and assimilate a hostile species. What exactly do you have for me?”

To her credit, she held together under his bluntness, as he should expect from one of the Zararch. “The latest plans from the Battlemaster regarding the status of the invasion and captured continent,” she pulled a small data drive and handed it to him. “In addition, the latest Zararch reports from our agents in the Collective are on it as well.”

“Thank you,” he answered, turning away. “Dismissed.”

He didn’t bother to see if she’d actually left. When his agents heard his orders, they followed. Time to see exactly what the Battlemaster was planning for Earth. He walked over to the small cylinder that stood in the middle of his briefing room and stuck the drive into it.

The holographic words “Authorization required.” Popped up as usual. A necessary security
measure, but one that was irritating most of the time. He held his right hand over the cylinder and let it scan the gray skin of his palm. The hologram then updated with the regular “Identification accepted: Zar’Chon’ravarian’vitiary.”

That out of the way, Zar’Chon Ravarian twisted his left wrist around and slid the small metal panel to the side and pressed the button that synched the augmented arm with the data from Gamlia’s drive. It flashed blue, he shut the panel, turned his wrist back over and opened up the holographic projector on his palm.

The file list came up and he quickly scrolled through it, once more thankful for his neural implants to perform the mundane acts like scrolling and selection and not have to do it manually. If that were the case, then there was very little point to using holograms for information. Still, it was going to take some time to go through everything.

Then he got that feeling again.

He could never figure out if it was just a strange extra sense he had, or if it was just Quisilia toying with him every time he decided to talk. “The Battlemaster is planning to first strike the land the Humans call Japan,” Ravarian said out loud, knowing the Ethereal would emerge sooner or later. “Battle strategy up now.” With his free hand he took the appropriate hologram and amplified it independent of the one on his palm.

The utterly silent Ethereal stepped out directly in front of him as if emerging from nothing, though by now, he knew better. His purple robe with the embroidered gold lines and patterns was as immaculate as ever, housing his entire body inside. The helm that the all Ethereals were so fond of was as polished as ever, a smooth blend of weak metal that extended below the neck into the robe, and formed into curves on the top, which also curved down over the eyes. What made Quisilia’s helm more unique than others was that the lower face was exposed, though he suspected that in battle, some covering would come down.

Which made it all the more disconcerting when Quisilia elected not to speak verbally. He tended to speak verbally for the most part, but definitely wasn’t above switching it up. Ravarian fixed him with a stare. “How long were you standing there?”

“Since the young Vitakara entered this room,” he answered, his low baritone accompanied by a rasping whisper at the end of each word. Tame by Ethereal standards. “And her presence here was nothing more than an error. I do not intend to make your job difficult.”

Ravarian nodded. “Good. Then I assume you’re up to date on the situation on Earth?”

Quisilia walked around to face the hologram, his footsteps making no noise. “Are you referring to our invasion or our attacks on the Human United Nations?”

“Both.”

“The Commander continues to surprise me,” Quisilia mused, pulling up the hologram of a muted Human news station. “His methods continue to show he will do whatever it takes to beat us. Admirable, and yet predictable.”

Ravarian frowned. “This is not new to us. I suggested we remove him after he played the German country against us. But as you told me, there are ‘plans.’” He motioned at the hologram. “With all due respect, we need to act, otherwise he is going to unite the Human nations into a true fighting force.”
Quisilia looked at him. *And you believe the humans are that great of a threat?*

“Only if we let them become one,” Ravarian answered, resisting the urge to react to the unnatural telepathy. “They killed the Ravaged One. That shouldn’t have happened. I know that you portray yourselves as invincible, but both of us know that isn’t the case. The Humans should not have been able to kill him.”

“The death of the Ravaged One was a necessary evil,” Quisilia said, not looking away. “But I agree. Unfortunately, assassinating the Commander is out of the picture.”

“Why?” He asked in disbelief.

“Before I answer, I will reiterate that nothing will be shared beyond us without my authorization,” Quisilia said, the helmeted eyes boring into him. “Aegis has defected to XCOM.”

That…had to be…bad? Although there was one problem. “Who, or what is Aegis?” He asked, puzzled. From the sound of it, it could be one of the many secret projects the Ethereals ran, or it could be one of the Andromedons. It probably wasn’t anything from the Zararch, otherwise he’d know about it.

“An Ethereal,” Quisilia answered simply. “One of our most influential.”

He was unable to keep a neutral expression, and his jaw lowered slightly. An Ethereal defecting wasn’t just *unthinkable*…it should have been *impossible*. He’d long suspected that the Ethereals weren’t as united as they’d let on…but he’d had no idea that it had been so divided to the point where one of their own would betray them.

*For good reason, Quisilia communicated. The disputes of our species would not be comprehended by the assimilated races. And the betrayal caught even us by surprise.*

Ravarian took a breath. Just one. “I see. That…complicates things.”

“Yes, the plan has changed,” Quisilia agreed. “But we are not concerned. We believe Aegis defected for…ideological reasons. He will not kill an Ethereal.”

“But he *will* kill Collective soldiers, give XCOM our technology, and protect the Humans,” Ravarian pointed out grimly. “I can’t say for sure since this is the first I’ve heard of him, but is that incorrect?”

“Our numbers can be replaced,” Quisilia dismissed, telling him all he needed to know. “Ultimately, this is irrelevant and will only delay us. The overall goal has not changed, but our immediate plans have. Before the anti-alien sentiment gets out of hand, I want the Zararch to make contact with pro-alien organizations or ones that can be swayed to us.”

About time. He’d only suggested that plan from the beginning. Better late than never though. “Of course. I have some targets in mind.” Ravarian pulled up a holographic globe and pointed to one of the continents. “This is South America, and thanks to EXALT, they have incited the country of Brazil to invade several nearby nations. Reading the psychological profile of the Human in charge, she is aggressive, easily manipulated and has a tendency to take a military approach.”

“We provide protection,” Quisilia mused. “A good start. What of the conflict in the Middle East?”

“Too ineffective,” Ravarian disagreed immediately. “There are too many nations interested in control for any sort of operation to be successful. A better target would be to attempt to take control of the Chinese criminal organizations.”
“That did not work last time, if I recall.”

“I made unfortunate assumptions about the species,” Ravarian admitted. “Mistakes I’ve learned from and will not repeat. But while I oversee those operations, the Battlemaster will conduct the ground campaign.”

“To great effect, I’m sure,” Quisilia said, turning lazily to look down on Mars. “What of the infiltrator you placed in XCOM?”

Ah, right. That was another mission that was past its time to end. “Nartha will be arriving within a few days. Gateways have not been established on Earth yet.”

“It is possible they won’t be for some time,” Quisilia warned. “With Aegis defecting, our normal strategies will need to be adapted or cut. But it is good to hear he will be returning…I will look forward to examining him.”

“In the meantime, it appears that the Humans are going to make an announcement about their defense against us,” Ravarian said, bringing the muted hologram to face him. “Let’s see what their plans are.”

***

Geneva, Switzerland

Saudia stood in front of the mirror, uncharacteristically…not nervous…but apprehensive. For the first time she was going to address the world. Not the small council she’d kept in EXALT, but millions of regular people across the world.

It highlighted just how much she’d hadn’t actually expected to take EXALT to the place it was now. It had been her goal, but now she was like the dog who’d caught the car it was chasing. Now she had to decide what to do with it. Thankfully, that was the easier part. But speaking to the world, as the voice of ADVENT? That was sticking out in her mind as much harder.

Not the least of which is that her emergence would no doubt bring questions. Questions she’d already heard whispered by the staff around her.

*Who is she?*

*Where did she come from?*

*Why is she in charge?*

*Why are we trusting her?*

*Because the Commander of XCOM trusts her.*

She snorted. How ironic that the main reason that people seemed to be willing to give her the benefit of the doubt was because of the Commander. Who she *did* admittedly owe her position to. She disliked the feeling of being indebted to him, but he’d made it clear he’d only put her in charge because of pure practicality.

She agreed with his reasoning…but knew that he wouldn’t hesitate to remove her if she suddenly posed a threat to him. He didn’t appear to expect her to act like a debt was owed, so she’d done her best to consider everything between them even.
It never would be, but she could try.

In the meantime, the entire planning of this event had been an experience for her. It was… interesting to interact with people on her level that weren’t part of EXALT. People like Gwan, Treduant, Habicht and Savvin. People who she’d conducted operations against without their knowledge. Ironic that they were all committed to one goal now.

And that goal was one she had made her central theme of her speech: *Unity*.

Surprisingly, or not so surprisingly, Iseul had been rather helpful when she wrote her speech. She supposed it made sense for the Supreme Leader to have a good grasp on what to say to a crowd to properly entrance them, but he appeared to have genuinely been interested in helping. Whatever his motivations, she was pleased with the result.

What she was to say would go down in history, so it was essential that it not only be passable, but memorable. It needed to remain in the minds of the people long after she’d spoken the last words, it needed to occupy their thoughts until they felt motivated to *do something*. Did she have that capability?

She had the potential. That at least she knew. She could understand the mind of a soldier. She could understand the motivations of a criminal or politician. But an ordinary civilian…that was alien. She couldn’t imagine going through life and not feeling motivated to *do* something with it, to at least *try* and make an impact. To change things in some way.

But those people made up the majority of the population, so they must be sufficiently motivated to contribute. If words failed, there were other ways.

But that was a worry for another day.

“You can comment anytime,” Saudia said to her silent husband who was leaning against the wall, clad in his armor minus the captain’s helmet. “Sufficient?” She asked, turning around.

“More than that,” Ethan answered, walking over to her with a smile. “You look like a Chancellor.”

When all was said and done, she had to admit that she definitely looked the part. In the end she’d decided on her dress uniform for EXALT, minus the emblem on the sash, which had been replaced with the stylized ADVENT logo which to her appeared to have more in common with the alien glyphs than human language.

Black pants, boots, a plain black jacket with the red sash going around her right shoulder to the opposite waist and matching gloves. Combined with her height and demeanor, and with a pistol strapped to her waist in plain view, she had to admit she could come across as an intimidating and commanding figure.

That would work to her advantage today. The media would honestly probably care more about the Commander speaking than her at the moment, since he was set to say something after her. But she was to set the tone, not just for ADVENT, but for her leadership.

“How are you feeling?” Ethan asked, taking her hands. “Ready?”

“I’m ready,” she admitted with a sigh, running her thumb over his armored fingers. “Though somewhat concerned, as always. A lot rides on this.”

“And you’ll do fine,” Ethan reassured her. “I read what you wrote, and it’s very good. Everyone here is behind you, even if they don’t know you well.”
“It’s not them I need to reach,” Saudia insisted, letting go of his hands to motion in the general direction around her. “It’s the people. I have to sell them unity, hope and ADVENT. And I know that I’m going to have enemies trying to discredit me everywhere. This is my only first impression, no matter how it goes, it will only go downhill from here.”

He grew a little more serious. “I know what you mean, and I’ll do whatever I can to help. But in the end, Saudia, they don’t matter. You know that.”

“Yes, I know,” she agreed. “But it makes things easier. A friendly population is much easier to utilize than a skeptical one.”

“Mhmm, words of wisdom,” Ethan said with a smile. “But you’ve done enough that one speech shouldn’t cause this much worry to such an accomplished woman.”

“Flatterer,” she chided, but ultimately felt a little more at ease. “Easy for you to say, you’re just going to stand behind me and look menacing.”

“Don’t discount that,” Ethan said, walking over to the couch to pick up his helmet. “In all seriousness, I do think the amount of military personnel here is making the media nervous. They aren’t used to seeing so many armored soldiers walking around them.”

“Good,” Saudia said, looking at the hanging clock in front of the door. “It might temper their wild speculation for the first day.”

“Well, we wouldn’t want to keep them waiting,” Ethan said, putting on his helmet, obscuring his face behind the red and black ornate helmet. He extended a hand formally to the door. “Would you like to take point, Chancellor, or should I?”

She smirked and strode forward. “I’ll take point, thank you. Let’s go.”

***

Exiting the building took slightly longer than she would have liked, mostly due to the unfamiliarity of the place, as well as having to stop and wait for her official guard, three other men and women wearing the same uniform as Ethan. The only thing that distinguished them as the Chancellor’s Guard from regular officers were that their shoulder capes were a pure white with the ADVENT insignia emblazoned in the center.

Saudia pushed the door open to the outside and was immediately hit with dozens of sudden flashes from cameras and shouts for her attention. They apparently weren’t expecting an armed guard, at least not one carrying fully loaded weapons, and the mass of journalists and media took a step back as she led them out.

“No questions for now,” she told them, sweeping her head around the throng as she kept going forward. “That will be at a different time.”

It of course didn’t stop them from yelling questions after her.

“What are you planning to do about the aliens?”

“What is happening to the United Nations?”

“Did XCOM have something to do with this?”

She ignored them, walking down the sidewalk which had ADVENT soldiers in their black armor
stationed regularly. She wanted this to be extremely controlled, and the soldiers would give anyone second thoughts about trying to start something, as well as keep the media in line. She did not plan to be lax in enforcing boundaries.

As a matter of fact, Ethan had reported that one reporter had been escorted off the premises after he’d tried to get into a restricted zone, despite a soldier telling him not to and the barriers with the words *do not enter* plastered on them. His own fault, and she had no issue kicking him out. It had seemed to have the intended effect, as the rest of them had stayed in their respective zone.

The leaves from the landscaped bushes around her rustled as a cool breeze blew through them. It was a beautiful day, one that couldn’t have been timed better. The sky was cloudy, a pleasant breeze was constant and the temperature was moderate. Compared to Antarctica, this really was a paradise. That being said, she missed the Bastion and it was unfortunate it had to be abandoned.

But considering that it was too isolated to really stage an effective defense, especially against the aliens, it was a necessary sacrifice. Geneva was a sufficient replacement, once it was improved to more…practical accommodations. Renovations to turn it into the official Executive Building were well underway, and she was looking forward to properly catching up on what her respective science and engineering divisions had accomplished since her first meeting with them.

“Let them begin coming to fill the area under the podium,” Saudia ordered as they approached the place where the speech was to take place. The elevated stone entrance to the columned building behind her made a suitable backdrop, and the open fields were large enough to accommodate the large crowd that had gathered, as well as her soldiers.

However, the ones waiting on the stage were almost as significant as her, at least in how so many of them were gathered together. It was a major deal for the leaders of just two countries to be in the same place together, here she counted….well, quite a few more than that.

The Presidents of America, Russia, South Korea, Armenia, Taiwan; the Supreme Leader of North Korea; The Prime Minister of Israel; the Chancellor of Germany and the Marshal of Brazil. All in all, it was a gathering of elites the world hadn’t seen in decades, perhaps ever. That alone should demonstrate the gravity and significance of ADVENT better than any speech could, and they would be in the background at all times, standing behind with their personal guards while she addressed the world.

“And so it begins,” the Commander said wistfully as he walked up beside her. Saudia motioned her guard to take their positions as she joined him in observing the multiple conversations taking place between the world leaders. “I didn’t think I would see something like this.”

“Not like this,” Saudia agreed, crossing her arms. “But it is…encouraging. At least for today.”

“They feel optimistic,” the Commander said, looking up at her. “While that will not last, it is good to know they are willing to work together.”

The Commander’s psionic abilities were still a concern, but there unfortunately wasn’t anything she could do about that. She was somewhat surprised in his own choice of attire. Instead of the traditional black XCOM fatigues he normally wore to diplomatic meetings, he’d instead chosen to show up in his scratched, scorched and dented silver armor.

She supposed it made sense, and would definitely make his purpose clear to those watching. While she had been relatively open about what her speech was going to consist of, the Commander had been incredibly secretive. Knowing him, he might deliver some scathing remark she didn’t entirely want to deal with. But the Commander wasn’t an idiot, and probably wouldn’t do something like
that on the first day.

“Chancellor,” Ethan said, coming up to her. “They’re ready.”

“Showtime,” the Commander said with a smile, and together they walked up the stone stairs. The respective leaders quieted and began lining up in neat rows, flanked on all sides by her ADVENT soldiers. The Commander was flanked by two of his own XCOM soldiers as he took a position in the back, but with a clear view to watch her.

Saudia stepped onto the podium, and her guard took their positions, two to each respective side of the podium, and two behind her. They stood in perfect military poise, their hands clasped behind their backs. She adjusted the microphones up a tad to accommodate her height, then rested her hands on the sides as she looked into the crowd.

Cameras, flashes and dozens of microphones were pointed towards her, with the faces of those in attendance waiting in rapt attention for her to begin. Complete silence filled the air, save for the breeze rustling the leaves around her. A light on her podium flashed to green, indicating she was cleared to begin.

So she did.

“Greetings, citizens from across the world. After the tragedies that have recently taken place in this world, you no doubt have questions, and are hoping for answers. While I will not be able to address every question or concern you may have, rest assured that I will be in the coming days, but for now it is imperative that some basic information be shared and understood by all.”

Saudia let her gaze sweep across the crowd. “I am Saudia Vyandar, the Chancellor of ADVENT, as designated by the esteemed leaders of the world behind me. My name is unfamiliar to you, but that is simply because of the nature of my work before my appointment here. I’ve led a global intelligence organization, working to prevent and protect everyday citizens from the numerous threats that arise in everyday life. This has led to me having firsthand experience with the alien threat we face today, and is ultimately why I was chosen, because I have the knowledge, drive and passion to understand the threat we face and defeat it.”

She paused. “But actions speak louder than words, and I intend to prove to you of my intentions. But beyond myself, there is much else that needs to be addressed. I can unfortunately confirm that the entire United Nations leadership is dead; murdered in the alien attack that killed thousands of innocent people. The motivations for this attack are still unknown, but they are done likely as an attempt to destroy our leadership, divide our people and cripple our resolve. The aliens believe that we are weak-willed enough to be stunned into submission or splinter out of fear, but I can assure you now, that will not happen.”

She gripped the podium tightly. “I value honesty, so the harsh reality is that this was a possible contingency that was planned for. This was the worst-case scenario that sadly came to fruition, despite our best efforts. But this will only have the exact opposite effect the aliens have intended for us. By attempting to weaken us with these acts of terror, the only thing they have accomplished is bringing us together, and we will emerge to face them as one.”

Saudia steeled her tone slightly to drive this point home. “And that is what we require now. I do not speak just for myself, the ones behind me or the soldiers on the front lines. But I speak for what is required if we want humanity to survive. We are a diverse species, with many differing beliefs, opinions and outlooks. We have become bogged down by trivial debates between each other, fights over superficial issues and topics and intolerance and polarization everywhere.”
“We must rise above that. We stand at the crossroads today. Australia was the wake-up call, and these attacks are the warning. We have to stand together as one united humanity. As one united people. We should not see each other as simply Russian, American, Chinese or Canadian, we cannot become solely defined by our nationality, nor should we believe their respective ones have all the answers. But we need to see each other as humans; humans fighting, living and surviving together in one common cause.”

Saudia raised her index finger upward. “The aliens? They are united and focused on one goal: the subjugation of our species. The answer to them is not simply our soldiers, weapons or technology, it is if we are united or divided. That will ultimately determine the outcome of this war. Divided by our differences we will lose this war, but united by our cause we can protect ourselves from the encroaching threat.”

Saudia paused for a brief moment to let it sink in. “This is the end to which ADVENT is established; an initiative that was to be introduced over a period of decades through the United Nations. But we cannot wait any longer, we cannot afford the delays and debates about the strengths and weaknesses. ADVENT is not simply a united army to push back the aliens, it is the future of humanity.”

“ADVENT exists to execute three specific directives,” she continued. “Security, prosperity and advancement. Under ADVENT our citizens will be protected by the best soldiers in the world; a true multinational army that will be dedicated to ensuring that the alien threat is pushed back and defeated. Crime will be stamped out under our Peacekeepers, as we can no longer afford to be lenient while the world is at stake. The nations will be protected by each other, and ADVENT will come to the aid of any member nation attacked by a hostile force, be they alien or otherwise.”

She swept her gaze once more on the crowd. “We also recognize that the future rests in the hands of the people, and thus it is appropriate to recognize you as such, and give you all the advantages necessary to ensure our continued survival. People will no longer need to worry about the crippling fear of debt acquired by medicine, schooling and living. It will be provided from ADVENT, to achieve our goal of improving the lives of all citizens, not just the influential or wealthy. Political representatives in ADVENT will no longer be leashed to the traditional political parties, businesses, lobbyists or wealth that has corrupted so many others, but will be qualified representatives of the people, and chosen by them in fair democratic elections.”

She still appeared to have their attention. “Finally, the goal of ADVENT is also not just to accept who we are as a species, but actively attempt to push past our boundaries to achieve that which we once thought impossible. Some believe that uniting our species is impossible, and yet I say that it will happen, as evidenced by the men and women behind me. Some believe that the aliens cannot be defeated, I say it is already possible, as evidenced by the fine work of XCOM. Some will also no doubt believe that the picture I paint at this moment is nothing more than a fantasy; a dream that cannot ever match up to reality.”

Saudia smiled. “And while I disagree, as will be demonstrated over the coming days, ask yourself this: Is it not what we should strive towards? Is it not the goal to achieve a global unity of our species? To have a society where all are taken care of and have the ability to advance on their merits? To have a military that protects the people from threats, and a government to represent them accordingly?”

Saudia smiled. “And while I disagree, as will be demonstrated over the coming days, ask yourself this: Is it not what we should strive towards? Is it not the goal to achieve a global unity of our species? To have a society where all are taken care of and have the ability to advance on their merits? To have a military that protects the people from threats, and a government to represent them accordingly?”

“In the end, the question truly is if our unification is not merely a solution to our survival, but a necessity. And if it must be a necessity, why not take the opportunity to craft the best iteration of our species possible? It is to this end that ADVENT was created, why I was chosen, and what I will continuously work towards during my tenure as Chancellor of ADVENT.”
“The nations of the world face a choice: Fight this threat alone, or join us and fight it together. What is decided will ultimately determine the fate of our species. So I say to them all, choose wisely, for the time has run out. There are no second chances in this war, and there is no turning back.”

Saudia stepped back. “That is all, and I believe that what will be unveiled over the coming days will prove both my and ADVENT’s intentions. And I am also pleased to present before you the Commander of XCOM, who’s led the major offenses against the alien threat to this date.” Saudia stepped off the podium and watched the Commander take the stage.

***

It wasn’t a bad speech, not at all. Had he not been responsible for the framework of ADVENT, the Commander would have personally been too cynical to really believe anything that Saudia was saying. He would have been the one saying it was impossible. But in this case, he knew better, though Saudia was downplaying the sacrifices that would undoubtedly come to bring the vision of ADVENT into reality.

And that was not going to make everyone happy.

And so he took the stand, looked out into the cameras as the people watched and waited for the shrouded leader of XCOM to reveal himself to the world. “As Chancellor Vyandar stated, I am the Commander of XCOM,” he began. “Since the first abductions, I have been orchestrating the defense against the alien threat, and the time has come to do so in a more open manner.”

He trailed off for a moment. “While our operations have been, and will remain, secret, our mission is the same as it always has been; to protect and defend humanity from extraterrestrial threats. Much like ADVENT, we were a contingency; a last-ditch effort that no one expected to use. But much has changed over the past year, and I, along with my senior advisors, have ensured that XCOM will lead the charge in the fight to defend our world.”

The Commander paused, sweeping his gaze around. “Vigilo Confido. That is the motto ascribed to us. Ever vigilant. Ever watchful. So we are and continue to be, and while our role will solely be related to the alien threat, we will be watching beyond them. The aliens are subtle, devious and intelligent. They do not solely rely on armies, and I have learned that their goal is not simply to conquer our species. It is not to enslave or kill.”

He looked directly into the main camera. “No, their vision for us is far more insidious. They want us to be what they cannot; adaptable, versatile and powerful. They want us as a willing subservient race, and will promise much to convince you that their plans aren’t solely for their own benefit, but for yours. But to accomplish their goals would only serve to strip out what makes us human. Our diversity, ingenuity and individuality. For under the aliens, there is no independence; there is no freedom; there is only subservience to their leaders.”

The air around him was charged with interest. Yes, he had their attention. “You have seen glimpses of the aliens themselves, and their leaders are as ethereal as I have been before today. They are beings of power that are said to be able to take on entire armies, New York was the result of one such being.”

The Commander’s lips curled into a toothless grin. “But they are not invincible. They are not omnipotent. They can be killed. They led an attack on our main base of operations with the intent to kill us once and for all. But they failed. They could not win against us before and XCOM will not let them win now.”
He motioned to the crowd. “Don’t be deceived into thinking that the aliens have every advantage. The soldiers around you can stand against their armies; ADVENT has been created to ensure that anything they can throw at us, we can defeat. And their leaders are few, they cannot simply be thrown at us, for each one killed will only makes us stronger.”

The Commander lowered his hand back to the podium. “This war is bigger than what I or XCOM can realistically counter. We lack the numbers to wage a war, but we have enough to make a difference. XCOM will support ADVENT as an independent ally, one as committed to defending our species as we are. Both our organizations will be communicating closely as the war progresses.”

The Commander paused, then lowered his voice slightly. “I do want to reiterate a point that Chancellor Vyandar stated in her own address to you today. She stressed the importance of a united humanity and I will do so as well now. This is not the first war I have partaken in, and I have seen firsthand how wars were won or lost because of the unity of each side or lack thereof.”

“Division and polarization have been the downfall of civilizations before, not just the armies. The people at home are often forgotten as inconsequential, even in the military. But they often hold just as much sway, they can be the reason for the push to victory, or their division is why the battle is lost. But there is another component that goes hand-in-hand with unity and that is trust.”

He smiled. “That is the one lingering question in the back of the minds of those watching, isn’t it? How can we trust you? How can we trust those leading us to make the right decisions? I stand with Chancellor Vyandar in believing that actions speak louder than words, so simply look at what XCOM has accomplished: We were responsible for responding to multiple alien incursions that have not graced the media; we were responsible for crashing the Dreadnought over China; we ensured that both Hamburg and New York were not razed to the ground; we have staved off direct attacks to our bases of operations and we dismantled the shadow organization known as EXALT. We have done more that you wouldn’t be able to confirm on your own, but I hope that is enough for you to trust that we are fully committed to our mission of defending you from the aliens.”

He paused. “The nature of Chancellor Vyandar’s work prevents me from giving the same reasons, but I can assure that she is just as dedicated not only to stopping the alien threat, but uplifting humanity into a new era of prosperity and security. She has extensive experience leading from behind the scenes, and I am confident that her skills are already translating well to preside over the most prestigious body this world has seen.”

The Commander looked to the center camera. “So in addition to a call for unity, I also call for trust. Trust in ADVENT leading you, and trust in XCOM for protecting you. And in turn, we place our trust in you in deciding the future of our species. As Chancellor Vyandar said…there are no second chances here. The crossroads for our future has appeared, and I will do everything in my power to ensure that we succeed in this war.”

He gave his salute and inclined his head. “Prepared or not, the time for action is now. Thank you, and Vigilo Confido.”

To his mild surprise, the ADVENT captains beside him imitated his salute and as he looked out, he saw the rest of the soldiers copying him. It was an unplanned, but uplifting display he couldn’t help but feel pride at. The rest of the reporters noticed as well, and it spoke to the level of respect and authority XCOM commanded to elicit this reaction from soldiers of another organization.

In any case, he couldn’t think of a better ending, and simply stepped down from the podium. And with that it was done, the announcement of ADVENT was complete. Now it was time for the real war to begin.
The lack of a crowd outside of the media made the lack of applause noticeable, but a faint murmuring soon filled the air as everyone started talking after it was clear that the speeches were over. From what she could tell, most of the people closest to her approved of the direction, at least Patricia hadn’t sensed any sort of anger, resentment or outrage that would accompany strong disagreement.

Although everyone had definitely wondered if the Commander was going to be the wildcard here, since he’d kept what he was going to say to himself, only revealing that it would be in line with Saudia’s speech, and lo and behold, it was.

The question Patricia had was what the reactions would be elsewhere. From her view it had gone well, though she was admittedly biased and ultimately knew that all the talk of unity was simply a means to get public pressure on the more reluctant nations to join ADVENT. That appeared to be Saudia’s playbook: Diplomacy first, force second.

Besides, there was still a lot that needed to be established, and just the countries involved now were going to take months to fully implement the entire military, intelligence and Peacekeeping Division. But it would happen, she’d seen enough proof of that from looking over the reports sent to the Commander.

Of course…that wasn’t what was occupying her mind now. It was past time they interrogated Aegis on why the hell he was here. And of course he had to show up right before the Demeter Contingency was activated and directly after that ADVENT had to be unveiled. Which left very little room to actually sit down with the Ethereal who’d so kindly surrendered to them.

Her face turned hard under her helmet as she watched the Commander and Saudia talk, recalling how Aegis had rather easily put down her entire squad. It would have been embarrassing if it wasn’t a terrifying implication of just how underdeveloped they were to properly combat the Ethereals. Aegis had of course been vague after they’d taken him on the skyranger.

It was one of the most awkward rides back she’d ever had, but they hadn’t exactly had much time to debate, and stuck him in alien containment where Vahlen had been analyzing the Ethereal with a rapt expression on her face. Everyone around Aegis had been strangely confident as they worked, with no hint of nervousness at all.

An unnatural lack of caution, that she suspected was attributed to the aura he emitted she’d sensed before. For whatever reason, he had the ability to harden the resolve of those around him; negate debilitating emotions and conditions like fear and caution. It was both useful and disturbing how easily she’d been affected, and even more insidious since she didn’t particularly feel the need to block it.

With the Ravaged One, it had been simple. Pain was bad and she’d been happy to block it. Aegis had the opposite effect. She wanted to feel secure about what she was doing; she wanted to be without fear. And because of that, she felt like there was some hidden catch she wasn’t aware of. So ever since then she’d fought to prevent herself from being affected by him in that way. Not until she knew how exactly it worked.

That being said, it was interesting. She wondered if all Ethereals had this kind of aura around them. A passive telepathic presence developed over likely centuries of practice. If so…hmm, perhaps it could be replicated. She supposed she could do it to a degree, seeing as how she’d mentally synched her squads together in the past, but that had been after intense concentration, not something she did on instinct.
Another question to ask him when they returned to the Praesidium.

“What did you think?” She asked Carmelita who stood beside her, clutching her alloy cannon. The woman had been tense ever since arriving here, and Patricia knew it was likely being in such close proximity to Iseul. Whatever the Commander thought of him, it wouldn’t erase the friends she’d lost during the Korean shadow war. The fact that both countries were now technically part of one government under ADVENT didn’t seem to help.

“Both of them weren’t telling the whole truth,” she answered flatly, admittedly relaxing a little bit. “I’ve seen enough propaganda to tell. Saudia’s speech had the mark of Iseul in places, and the Commander is attempting to appeal to the basic intelligence of the public.” She snorted. “Ha. It’s sad that even an alien invasion isn’t enough to get everyone to work together.”

“Agreed,” Patricia said wearily. “But I have a feeling that is going to change when the attacks start.”

“I suppose so,” Carmelita said, looking over to where Presidents Chia and Treduant were talking. Chia waved her over. “Looks like she wants me,” Carmelita said. “I’ll be back.”

“Go ahead,” Patricia said, admittely curious why Chia wanted to talk with her. But it admittedly would be a nice change from just standing around and looking intimidating. She felt extremely out of her league and out of place here. The sheer amount of presence these people exhibited was staggering, and little more than a year ago, she had been a mid-ranking soldier in the Royal Marines.

She had admittedly come a long way since then, but this made her…uncomfortable. She was a soldier and psion, not a politician. She also suspected that they wouldn’t be quite as friendly if they knew she could read their minds at any time.

Now there was someone coming up, a very distinct mind. “Patricia Trask, correct?” Iseul asked coming up beside her. Her armor made her tower over him by a few inches, but he didn’t seem perturbed. “I’m not sure we’ve been formally introduced.”

“Yes, correct,” she said, not sensing anything hostile from him, and took his extended hand. “Do you make a point to greet every soldier this way?”

He gave a humorless smile. “Only the ones worth knowing. The Commander does not choose just anyone to accompany him, and I can see the uses for a psion.”

She was somewhat surprised he knew, and she could easily sense he believed what he was saying and it wasn’t a trick of some sort. “I’m curious how you came to that conclusion.”

He nodded toward her. “Your armor. The color is rather distinct, and I have seen the footage of you from New York. Correct me if I am wrong, and besides…there is something different about you that I can’t place. Call it a feeling.”

Patricia raised an eyebrow. “You don’t make assumptions based on feelings. I know that much about you.”

“Correct, I make educated guesses on what I know to be true,” he answered easily. “And what I know for certain is that you are not like others, Psion. The Commander must trust you a great deal to permit you to work with him so closely.”

Ah, now she was beginning to see what his point was. “Be careful with accusations, Supreme Leader. No, I am not influencing the Commander.”
“So blunt,” he said with a smile. “So tell me then, is it possible for you to influence someone without them aware of it?”

She narrowed her eyes, aware that any effect was lost from behind her helmet. “Of course I can. That doesn’t mean I do it. And I’d appreciate it if you either got to your point, or accused me properly.”

Iseul turned completely serious. “If you insist. I’ve learned what I could about you, and by all accounts you do not seem a threat. But I am not convinced that psionics are something that can be properly handled by XCOM. The fact that you are so highly promoted within it is dangerous, since your kind are dangerous, would you disagree?”

“No, your concern is reasonable;” she had to admit. Much as she hated hearing ‘your kind’ he unfortunately had a point. “But you forget that this is the Commander. Do you really think he doesn’t have an answer for…us?”

“No, I think he does,” Iseul admitted. “But I’m not sure it is the correct one. If it was, you would not hold any position of influence.”

She almost chuckled. That meant that he was unaware that the Commander himself was a psion, which would prove…interesting when he found out. But at this point she was getting a little tired of this conversation, and didn’t exactly want Iseul raising unnecessary questions. She reached out to his mind, easing it open a little to make it easier to suggestion.

It was interesting that if the target was unaware, it was easier to sway an intelligent person than one less so. Their minds were organized to a fault, making it easier to spot crevices. She raised a hand and then simply lowered it to her side while saying. “The Commander has a plan, you don’t need to worry about it.”

She pressed those words into his mind as well, as he’d been distracted by the motion she’d done with her hand. “I suppose you have a point,” he repeated dully. “The plan the Commander has is likely sufficient. There are more important things to worry about.”

“Let’s move on then,” she said.

“I agree,” Iseul said, eyeing the Commander and Saudia speaking. “I will leave before your South Korean soldier comes back. I doubt she would like to see me.”

“No,” Patricia agreed as he walked away. “She wouldn’t.”

Iseul’s suspicion of psionics was a somewhat important piece of information to learn. It would probably be best if the Commander heard it from her before he accidentally revealed it himself. But she probably shouldn’t worry. The Commander was much better in these situations than she was.

***

The Praesidium, Barracks

Rare was the time where the soldiers crowded around the television to watch something on the news, but this was one such time. All of them had been silent as they watched the Commander and this new Chancellor give what essentially amounted to a replacement for the United Nations. Personally, Sierra Morrow found it…difficult…to believe that ADVENT was going to be some kind of utopia, especially given the current situation.
What she did think was that this had been in the works long before the alien attack on the United Nations had gone down. “The Commander’s been busy,” Leonid, one of the Russians commented. “There is no way he didn’t know this was happening.”

“Of course he knew,” Sierra agreed, swinging her arm absentmindedly over the couch, a habit she had yet to break. “I wouldn’t be surprised if he was involved in creating it. He was former CIA. They like doing this kind of stuff.”

“And I suppose you’re an expert on intelligence?” Mordecai said with a wry smile. “Special forces and intelligence work are not exactly synonymous.”

She resisted the urge to roll her eyes at him. “True, but I wager I know more US history than you, and more about the CIA.”

“Perhaps,” he said, standing up. “It will be interesting to see how this works out.”

“Yeah,” Sierra said, unable to keep a frown off her face. Despite how…encouraging it was that a global alliance was already being formed, she wasn’t entirely comfortable with how it had all come together. It all seemed too well planned, and she wasn’t thrilled with how an entire army had apparently just come out of nowhere.

“I’m kinda surprised America seems to be joining this ADVENT,” Karen Dais, one of the Canadian CSORs commented, flicking a pen lazily between her fingers. “Sierra, can the president do that?”

Sierra scratched her chin. “Hmm…let’s see…alliances would fall under the executive branch I believe…but this seems a lot bigger. It seems like whatever nation joins ADVENT is subject to its laws.”

“A world government,” Lesedi clarified, the South African sniper looking rather happy with the idea. “Never thought I’d see the day.”

“Agreed,” Jona, the Swiss Grenadier nodded, brushing her snow-white hair behind her ear. “It’s what we need, like it or not.”

Sierra and Leonid exchanged a glance, and from his blank expression she knew he wasn’t quite as on board with the idea of a world government as some of them. Neither was she. “You won’t have a peaceful transition to a world government,” Leonid said, leaning back in the couch. “One: The people aren’t going to like suddenly being under a world government that they feel doesn’t represent their interests. In particular, America and Russia are very…patriotic. Savvin might push for it, but I don’t see America following suit.”

“Don’t forget that China will probably just laugh and say no,” Sierra agreed. “And I can agree with America. For the record I’m not entirely sure America should join yet, not until Saudia proves herself and we know a little more about ADVENT. Anyway…” Sierra looked back to Karen. “To answer your question, no, something like this would need to pass Congress at the very least. And since it would likely nullify our Constitution, it is not going to get bipartisan support from the Democrats and Republicans. There is no way they will willingly submit to an international power.”

She was interrupted by a chuckle from another soldier sitting on a chair behind them, his black skin illuminated by the florescent light directly above. What was his name…Joseph? And some strange last one. She did remember he was a Green Beret. “What’s so funny?”

“You haven’t kept up with the news, I guess,” he said looking over to them, raising his tablet.
Sierra frowned. “What are you talking about?”

He tossed the tablet to her which she caught easily and looked at what appeared to be a government document. “Senate bill 117B,” he continued. “I have a habit of checking exactly how my representatives are voting and this bill was passed about a week ago.”

Sierra did a quick scroll-through, somewhat irritated at the length. “You can’t just throw something forty-one pages long at me and expect me to know what the hell I’m reading. So it’s a bill? They do it all the time.”

Joseph stood up and walked over to them. “Not just any bill, it was introduced by President Treduant herself. Want to guess what it does?”

“Stop being smug and tell her.” Leonid chimed in, crossing his arms.

“It gives every executive agency complete autonomy in times of declared war,” Joseph explained. “In essence, it renders the government free to operate without the legislative and judicial branches. And of course, the military answers to the Commander-in-Chief.”

Sierra went cold as she realized the implications. “She wouldn’t do that. There will be riots in the streets. This kind of decision can’t be made unilaterally.”

“Except that it can,” Joseph confirmed, taking his tablet from her fingers. “I have no idea how she managed to get this through both the House and Senate in so little time, but she did and I wondered what the purpose of this bill actually could be. Considering ADVENT, I think we know now.”

Leonid whistled. “And I thought Madam Treduant was the woman who listened to the people.”

Sierra raised an eyebrow. “Where the hell did you get that idea? She’s the one who gets things done, and admittedly that lines up with what people want most of the time. I liked her, she’s a principled woman…still,” she shook her head and glanced at the TV. “This is going way too far for her…assuming she does declare America is joining ADVENT.”

“She was at the address,” Karen pointed out quietly. “I think that’s exactly what she is going to do.”

“She’s probably doing what’s necessary,” Lesedi said. “We don’t have time for all the congresses to debate over if they should help fight the aliens.”

“It’s not that simple,” Sierra scowled, trying to think. “This isn’t just bypassing Congress, this is undermining our country. This is throwing out everything we’ve built in favor of whatever the hell ADVENT is. And I can guarantee that they won’t hold the same values and rules as our Constitution.”

“If it comes between defending against the aliens and your constitution, which would you prefer?” Lesedi challenged. “Because I don’t think there’s much of a choice, for America or anyone else.”

“You wait and see if the new world order is actually good before preemptively signing on,” Sierra countered. “We need information, facts and evidence before even considering joining something like this.”

“The Commander is backing it though,” Jona added. “He wouldn’t be doing it unless he was confident it would work. He’s American too, if that makes you feel better.”

“Eh, I don’t know if the Commander really sees himself as just American,” Leonid said, motioning
toward the TV. “I mean he did say kinda imply that nationalism was a problem and we needed to focus on the aliens. From everything I’ve seen of him, he’s going to do whatever works best against the aliens.”

Sierra had gotten that feeling as well. Worse was that she had a suspicion that what he would like wasn’t exactly democratic. It wasn’t much to go on, just from how he’d acted, what he’d written and how he operated. The contingencies in particular had unnerved her the first time she read them, clearly prioritizing efficiency and results above all else. And the thing was...a democratic republic wasn’t exactly the most efficient form of government. That he was working with Nowinski and Supreme Leader Gwan told her that he didn’t really care how people operated as long as they shared his goals.

“In any case, there isn’t much we can do,” Lesedi said, standing up. “We’re XCOM now.”

“Copy that,” Leonid smirked. “Probably better this way. I trust the Commander a hell of a lot more than any politician.”

“A shame he isn’t one,” Jona said, and they chuckled at that.

Sierra didn’t join in. She sort of wished she could just fully commit her loyalty to XCOM, but she was still American and that wouldn’t change. A glance with Karen shared the same feelings. And in terms of trusting the Commander...she respected him now, though she wasn’t quite sure she trusted him yet.

Well, she did trust him not to get her killed for no reason, but not necessarily about making the right decisions.

***

The Praesidium, Practice Range

Jamali still wasn’t entirely used to the curved and bubbly architecture of the Sectoids. The Praesidium was alien in every sense of the word, and he couldn’t shake the feeling that they didn’t belong here. The hum of the elerium generators was pervasive, yet he’d personally adapted to the pulses rather quickly, as had they all.

Still though, it felt unnatural. Out of place.

Like he did now.

It did speak to the level of respect all of them had for each other that none of them had made comments, insinuations or the like about where he’d come from. They weren’t exactly supportive, or anything like that, but they didn’t broach that topic and he returned the favor.

But it was never out of his mind and now it was coloring his outlook. He genuinely, truly, could not understand what unholy force had gripped the leaders of his nation to stoop so low as to not only assassinate foreign leaders, but kill their families as well. It was sickening, and he hadn’t slept the past nights after Israel had begun the attacks on Jordan, Syria, and soon to be, Iraq.

His homeland and first loyalty. A loyalty he wasn’t sure he could keep anymore.

True, it wasn’t without its faults to say the least. Iraq had embraced the extreme during the War on Terror and had paid the price. Jamali was well aware that many of his countryman were bitter and vengeful against Israel, the West, anyone who’d allowed the demon known as the Commander loose and hadn’t done anything to stop him until it was too late.
He’d been a lot younger then. And growing up seeing his country mocked and dismissed over the years had been troubling and difficult. But also as he grew older, he was able to tell it wasn’t without reason. It wasn’t undeserved, as harsh as that truth was. But it was a truth that he’d kept to himself as those around him wanted nothing more than revenge. They were too blinded to see that Islam, and by extension, Iraq, had been responsible for its own downfall. The religion had been hijacked by extremists, brought into the mainstream while purposefully ignoring aspects of the Quran that condemned everything the Caliphate stood for.

As he’d seen it now, after Mecca was destroyed, there should have been some serious internal self-examination after the Caliphate was finally defeated. And…there had. Though not by choice. Worse that the War had created a true hatred for the religion itself to the point that it wasn’t safe to openly practice it, even in western nations like the United States.

Laws had soon been passed regulating the practice significantly in multiple countries, and now the open practice of Islam was only openly tolerated in a very few places outside the Middle East, such as Canada and Switzerland. Jamali had wondered if the religion would ever recover, though with the attack on Israel, it seemed like that would be the actual death knell for Islam, as well as the regular way of life he’d experienced.

He scowled, once more trying to wonder what had possessed Saudi Arabia, Iran and Yemen to think that this was the solution. If it was simply vengeance, it would have happened a long time ago. Was it opportunism? An alien incursion would admittedly have everyone distracted, but if they seriously thought Israel was just going to ignore an attack, they must have been seriously impaired.

He finally reached the practice range set up. It was clearly modeled after the one in the Citadel; various cutouts and targets of various aliens populating the range at various distances. The room itself was empty, thankfully, all of the others watching the address by someone called Saudia. He’d never heard of her, but could guess what she was going to say: “This was such a horrible attack by the aliens, now unite and fight them.” Only with a lot more eloquence than he could be bothered to muster at this point. Not that he’d particularly believe her anyway.

ADVENT, the United Nations, he couldn’t muster up strong feelings for them. Truthfully he’d never really thought of them much, mainly because they’d never really done anything of note. What was truly horrible to him were the people who’d died in the attacks, not that the organization itself was coming apart.

And he supposed ADVENT was the replacement for the United Nations, maybe with a more military focus. He supposed he’d get the details later, but that conflict wasn’t the one he was watching now. And from the latest reports there, he needed to take his mind off it for a while. He took a stance, raised his pulse rifle and took aim at the cardboard cutout of a Borelian soldier, one of the recent additions.

The pulsing beam sliced through it with ease and he quickly moved to the next one, then the next until every target was sliced into charred, crisp pieces lying on the floor. He lowered his weapon and surveyed the damages. He really wondered if he was wasting his time here. Very rarely did he ever have shots that were hitting targets standing in the open, not to mention that pulse weapons weren’t like ballistics. A sustained beam pretty much negated any need for precise aiming even if it took far more power.

And his reflexes probably couldn’t improve more than they already were, although they did need to be maintained. However, this little jaunt did occupy him for…he glanced at his watch…thirty minutes. He grunted and turned to leave, hitting the button to notify that the targets needed to be
“You could have left some for me,” a voice chastised, a dry one with a soft tint. Jamali turned to see a smaller woman walk in, a gauss rifle slung over her shoulder. Short curly black hair framed a concerned face, which was overlooked by the scar from her right ear to lower chin. Right, even if he didn’t recognize her from her accent and brown skin, he would be able to tell by her posture that she was special forces, probably Israeli.

He shrugged. “They’ll replace them in a few minutes. Sorry.”

“Unneeded,” Fakhr al Din answered, raising a hand. “I’m curious why you aren’t watching up there with the rest of them. Seems pretty important.”

“Not to me,” Jamali answered, not wanting to elaborate. “I doubt it will change anything. Military alliances are expected.”

“Mhmm,” she said, crossing her arms. “Look, I know why you’re down here and I don’t blame you. Trust me when I say I know what it’s like to have Israel invade your home.”

He frowned and appraised the smaller woman. “You’re Israeli special forces though. Sayerert Makul if I remember you correctly.”

“Oh, I am,” she confirmed. “But I wasn’t always. You do remember Palestine, right?”

He winced. Ah, that made much more sense. “Right. I didn’t realize that happened to you.”

She sighed. “I don’t make a habit of telling. Anyway, in retrospect it makes sense why it happened. They antagonized Israel too much and they got sick of the threats and acted. If they went that far, I can’t say I’m surprised to see them take on the rest after they were attacked.”

“It makes sense,” Jamali said, frustrated. “But what I can’t figure out is why? None of it makes sense. They had to know what they were doing.”

Fakhr’s face contorted in confusion. “I agree. And I’m not sure we’ll ever really know. But for what it’s worth, I’m sorry it’s happening to you as well. Contrary to what you might think, not all of us want a war with your country.”

“Thank you,” he said with as much sincerity as he could muster. “But I’m curious…why join the IDF after what happened?”

She was silent for a few moments. “Guess I wanted to prove something. I can’t say the Israelis treated us badly, but they definitely looked down on us, were suspicious despite in theory being all ‘one nation’ now. No, we were Palestinians first, Israelis second, if at all. Never openly either, but there were enough looks, gestures and tones to get the general idea that we were not welcome.”

She shrugged. “The only way to change that is proving them wrong. So I did my part. People are stubborn in their prejudices and like it or not, Israel is my home and I feel obligated to defend it. And even if I can’t attribute it completely to me, I do like to think I changed the minds of several officers about fielding native Palestinians.”

Jamali nodded. “Good for you. Hopefully…it will end quickly,” he sighed. “The IDF is moving on Iraq now. Russia is moving into Iran and America is concentrating on Yemen and Saudi Arabia. I hope it ends before too many people die.”

Fakhr nodded, leaning against the wall. “I think that it will. Don’t forget we have the aliens to deal
with. Focus on that, and not something you have no control over. You’ll just make it worse for yourself.”

“Probably a good idea,” he agreed reluctantly, despite probably going to still keep up-to date on the status of the war. “I guess you saw the address, right? Anything interesting?”

She snorted. “Oh yes. And from what I’ve inferred and seen, I do think ADVENT is going to change the world.”

***

Supplementary Material

The Advent Directive

SECTION 1: Organization and Structure

Subsection 1.1: Introduction

Upon initialization of ADVENT, the organization of this body will be divided into several different branches, both civilian and military. The first of these will be federal or civilian positions, which will govern over the general population and represent their interests. The main organs of this are as follows:

- The Legislature, which consists of the ADVENT Congress of Nations, presided over by the Chancellor of ADVENT (See Section 2 for further details)
- The Judicial branch, which is responsible for the enforcement, sentencing and reviewing of ADVENT State law (See Section 3 for further details).
- The Executive branch, overseen by the Chancellor of ADVENT which includes multiple agencies responsible for ensuring that ADVENT remains in prime condition. The Executive Branch also has direct influence over the ADVENT Military and Peacekeeping Forces.

In addition to the civilian and federal branches, the final major organs of ADVENT are the ADVENT Military, ADVENT Peacekeepers and ADVENT Intelligence.

- The ADVENT Military consists of the armed forces of ADVENT, and oversees troop deployments, strategy, intervention and their internal research and engineering programs. The ADVENT Military is subject to the Executive Branch and the current Chancellor, though can be overridden if certain conditions are met (See Section 8 for further details).
- The ADVENT Peacekeeping Forces are responsible for the protection of ADVENT member nations, as well as the enforcement of laws passed by the Legislature. Peacekeepers will be strictly used to maintain domestic security which encompasses all criminal elements that occur in member states. Peacekeepers are subject to both the Judicial and Executive branches, though as with the ADVENT Military, exceptions are in place should certain conditions be met (See Section 7 for further details).
- ADVENT Intelligence focuses on information gathering, analysis and application. It is the organ used for covert ADVENT operations against both civilian and military application, at the discretion of the Intelligence Director. ADVENT Intelligence answers directly to the Executive branch and ADVENT Military Leadership (See Section 6 for more details).

SECTION 1 Table of Contents:

Brought to Light

The Praesidium

This was admittedly not what he was expecting. Although to be fair, Oliver Ilari had no idea what to expect from XCOM. Perhaps a base of clear alien design should have been obvious, but he’d always thought that XCOM had operated from a…well, human base.

Well, then again, the Commander had said that XCOM had been attacked, so it was plausible that this was a recent move. In which case it raised the question of just how exactly XCOM had an entirely alien base as a backup.

The discussions about XCOM itself had been wide and varied within NATO. No one could decide if it was UN-run or not. Some days it seemed to be, then the next it seemed completely independent of them. No one could figure out where they were operating out of, or who they answered to. The most common theory had been that XCOM was some American program, and Oliver had personally supported that.

None of them had actually given any legitimacy to the possibility that XCOM was independent.

And now all evidence seemed to point that it was, which was legitimately shocking for him. Although it only made him suspect that it was a recent development, since something this large couldn’t just come out of nowhere. Well, now it looked like he was going to get some of his longstanding questions answered.

The irony did not escape him.

“This is amazing!” Analyn Roxas said as they descended the ramp, her eyes widening as she looked at the glittering alien metal. He wondered if it would be enough to make her pause for a few seconds. The Filipino woman had chatted with him the entire flight, especially once she’d learned he’d been with NATO. She was in rather good spirits considering the state of the world at the moment.

“It certainly is…interesting,” Anna Pavlova said softly, hugging her pack to her chest. The muscular American was surprisingly soft-spoken, especially considering she part of the Air Force TRF. “I wonder if this base was once run by the aliens.”

“Wow, I wonder how you could come to that conclusion,” Nati Avraham commented brusquely, striding down without giving the architecture a glance. “Does this look human?”

Anna opened her mouth to answer, then closed it, her lips morphing to a disapproving frown as he clearly wasn’t interested in an answer. “Don’t pay him any mind,” Analyn said with a smile, nudging her as they began moving deeper into the base. “Israeli Military doesn’t have a sense of humor.”

Oliver snorted behind them. He couldn’t really contest that too much. The few encounters with the IDF that he recalled had been strictly business and the soldiers had treated it as exactly that. Not that he minded, it was one of the things he admired about their country. But it also seemed hard for them to switch ‘off’ when it was appropriate.

“Everything you hoped and dreamed?” Another soldier asked, walking up beside him. Another one who hadn’t spoken much on the flight over. He was definitely Asian, a bit smaller than Oliver and had short black hair.
“It’s certainly something,” Oliver agreed, now acutely aware of the pulsing he was feeling as they walked down the shimmering hallway. “I don’t believe I got your name?”

“Of course,” he said with a smile. “Sai-Kee Tan, Republic of China Armed Forces.”

Taiwanese then, interesting. “Oliver Ilari, NATO.”

Sai-Kee’s face grew somber. “Ah, I see. It’s unfortunate what’s happened.”

“That it is,” Oliver agreed with a sigh. “All indications are that NATO is going to be reformed into whatever ADVENT wants.”

Sai-Kee adjusted his pack as he looked over inquisitively. “You don’t approve? It seems logical.”

“Yeah, it’s logical,” Oliver agreed reluctantly. “But I’m not sure it’s what NATO should be doing. We were created to stand against Russian aggression, not fight aliens and definitely not answering to an unproven organization.”

“Isn’t that…” Sai-Kee looked forward, pausing a few seconds. “Somewhat…obsolete? Russia isn’t really a threat anymore. Don’t we have bigger issues to deal with?”

“Tell that to Iran right now,” Oliver said, shaking his head. “But you’re also right. I guess I’m sort of stuck in the past. Probably best to listen to the new Chancellor and the Commander and move past that. Seems petty when compared to the aliens.”

“Can’t disagree,” Sai-Kee nodded. “Even China doesn’t seem like such a big problem now. Guess realizing how small we are in the universe puts things into perspective. I mean,” he shrugged. “The aliens probably outnumber us a million to one. Even if every human were able to fight, we’re one planet. They have…well, we don’t know.”

Oliver noted a couple of XCOM soldiers walking past in full armor. “Maybe,” he said as they rounded a corner, somewhat keeping up with Anna and Analyn. “But I’m definitely not convinced their soldiers are better. XCOM has what? Under a hundred people? And by all accounts they’ve managed to hold on until this point.”

“True,” Sai-Kee agreed with a smile. “And we’re part of it now. Feels good.”

“Well, it should be an experience in any event,” Oliver said as they entered a room he assumed was the barracks. There were conventional bunks that seemed at odds with the alien architecture of the base. He found an unclaimed one and tossed his pack onto the cot, wondered where to go next.

Oddly enough there had been no welcoming committee, just instructions from the pilot on where to go.

It was interesting how…non-military it was. Which struck him as odd since by all accounts the Commander was a very organized person. Or maybe he just expects you to be able to find the damn barracks without an entire escort. He probably has more important stuff to worry about.

That rationale made quite a bit of sense. Although it was still unusual for new soldiers to be trusted like that with no guidance. Maybe it was even a test…

He grunted. Drop the conspiracies. You’re too old for that. “They’re still sending more,” a voice commented, and he looked over to see it belonging to a young Asian woman with her arms crossed and a wry smile on her face.

He raised an eyebrow. “How many have come so far?”
“Nearly thirty, by my count,” she answered. “Definitely not complaining though. We need everyone we can.” She extended a hand. “Shun Anwei, welcome to XCOM.”

He took it and gave a firm shake. “Oliver Ilari, NATO,” he paused and appraised her. “Hmm…let me guess. Japanese Intelligence?”

She raised an eyebrow. “Close, actually. How did you guess intelligence?”

He nodded towards her. “Your body. Not quite that of a soldier, even if that’s been your job recently. I’ve worked with enough soldiers and agents to know when one is transitioning to another. You must be skilled if someone thought you’d fit here better.”

She smiled. “I’m flattered. But not Japanese. Former Chinese Intelligence, the more militant aspect, anyway.”

Well, wasn’t that interesting. “Former Chinese Intelligence,” she emphasized. “Before you get too suspicious or excited,” her tone grew a little colder. “I’m not exactly welcome back in China now.”

That was even more interesting, though he could guess the reason. “You prioritized XCOM over China.”

“How observant,” she commented dryly. “Doesn’t help that I was essentially sent as a political pawn and set up. But I don’t regret it. It’s nice working for someone what actually has an interest in your well-being.”

Oliver nodded. “You mean the Commander.”

“Correct,” she said. “Probably not obvious right now, but you’ll understand when you meet him. You’re in good hands. All of us are.”

It must be true on some level; he must have had some kind of effect if he’d somehow convinced a Chinese agent of all people to virtually defect. Very curious. Oliver leaned against the bunk. “Well, you seem to know your way around. So what stuff should I know?”

She smiled. “You want the tour?”

“I think I would.”

“Then follow me,” Shun said, motioning for him to follow. “I should warn you that XCOM isn’t like anything you’ve been in before.”

“I’m getting that impression.” Oliver said, and followed her as she began showing him around the base.

***

The Praesidium, Training Area 1

Nuan Kun sized up the two people before her, one looking at her with outright hostility and the other appraising her with a cold impersonal stare. North Koreans were so easy to provoke, and she didn’t feel particularly bad about it. Chan Jin-Taek stood several inches taller, but if he hoped to intimidate her, he was sorely mistaken.

Iida Keyoko was roughly her height, and was managing to only stand there and look both annoyed and furious, but clearly trying to refrain from something she’d regret. Chan wasn’t so restrained.
“[Careful what you say, puppet. You’re not in China anymore.]”

Nuan didn’t give him the satisfaction of a reaction, only crossing her arms. “[And I’m not one of your brainwashed citizens. Or soldiers.]”

“[You’re one to talk,]” Iida almost spat. “[It’s not like China is known for its intelligent and independent populace…oh wait-]”

“[At least our citizens knew about the alien threat,]” Nuan said, resisting the urge to roll her eyes. “[How long did it take you to tell them?]” She clicked her tongue. “[I’m disappointed. All the money we sent to you, and your citizens probably can’t operate a computer, with how sheltered they are.]”

Iida took a step forward and this time it was Chan putting a hand on her arm to restrain her. “[No answer?]” Nuan asked with a raised eyebrow. “[I’m sure you’ve spent your whole life being told you’re some kind of superpower. Maybe you believe it. But you all tend to forget that the only reason your “great” Supreme Leader is in charge is because we allowed him to be.]”

“[Then that proves just how decrepit your idiot leaders are,]” Chan spat, no longer restraining Iida. “[Supreme Leader Gwan hasn’t been on your side for decades.]”

“[Oh, but he never acted on his traitorous urges until he was protected,]” Nuan pointed out with a smile. “[He wouldn’t have dared go against us unless he got protection from XCOM. He is a coward and an insignificant tool. We should have just annexed your country instead of trusting it with Gwan.]”

Her smile faded slightly as she noted both of them tense and ball up their fists. Perhaps she shouldn’t have said that. “[Remember what I said,]” Chan hissed, taking a step forward and Nuan resisted the urge to step back. “[You’re not in China anymore. And the Commander probably won’t mind if we teach some insolent Chinese agent a lesson.]”

“[Brawling is unbecoming of a soldier,]” Nuan warned. “[At least don’t act like savages.]”

She was hoping they actually listened, since she knew quite well that if it came to a fight, she wasn’t skilled enough to reasonably defend herself, especially against two. She hadn’t intended on this ending up quite so…volatile, but they had truthfully brought it on themselves. She’d just heard them commenting on what role they thought the Supreme Leader was going to play in ADVENT and she’d chimed in something along the lines of “Probably one that doesn’t require a lot of thought.”

How exactly was she to know they would become so offended? She’d heard of how bad North Korean brainwashing was, but this was ridiculous. And people called the Chinese indoctrinated communists, ha.

Although her ignorance of that little fact might now lead to her getting beaten up, and that was not exactly how she wanted to spend her first days in XCOM. As it happened, it seemed her appeal to their better natures was not working and they were coming in.

“Hey!”

The words yelled in English caught her attention and she looked to the right to see a small young Asian woman with cropped black hair storming up. There was something in the way her body was moving that immediately put Nuan on alert. It was like watching a predator approach, in complete control and bearing an expression devoid of any sympathy.
Nuan didn’t recognize her, but the two North Koreans clearly did and immediately pulled back. Now that she was closer Nuan noted that something was wrong with her eyes, they had some kind of golden rim to them that gave her an almost…demonic appearance. The fact that she was clearly angry didn’t dispel that image.

“[What is going on?]” She demanded in Korean, looking between the three of them.

Well, she could answer that. “[I believe the two of them were about to, ah, “Teach me a lesson”]”

The woman fixed her with unsympathetic and cold eyes. “[I could have guessed as much. What exactly prompted that?]”

“[I may have insulted them.]” Nuan admitted.

“[And just why would you think that is a good idea?]” The woman asked softly, Nuan just now realizing how melodic her voice really was.

Nuan shrugged. “[In retrospect, it wasn’t.]”

She narrowed her eyes. “[It usually isn’t. You’re one of the new recruits, correct?]”

“[Yes. Nuan Kun, Liberation Army Strategic Support.]”

“[Carmelita Alba.]” she answered in response. “[So here’s how it works. The general rule is not to insult people here, which should be common sense, but apparently something that some people need to be told. Stop provoking people.]”

Nuan felt herself flush at the reprimand, but then Carmelita turned to the North Koreans. “[And both of you need to stop getting offended every time someone says something vaguely negative about your precious country or Supreme Leader. Some people don’t like North Korea. Suck it up and deal with it. The world doesn’t revolve around you, so stop getting provoked over infuriatingly small things. It’s insulting to everyone else here.]”

Carmelita now looked between both parties. “[Where you come from doesn’t matter here. I don’t care what either country did to you in the past, but here you will be working with each other so you better get used to it. They-]” she pointed to the North Koreans. “[Are not your enemy. She-]” she pointed at Nuan. “[Is not your enemy. Our only enemy are those aliens coming from space. Nothing else matters. Do I make myself clear?]”

“[Yes, sir.]” Iida and Chan said instantly.

“[Understood.]” Nuan conceded, feeling somewhat mollified after that speech.

“[Good.]” Carmelita said, stepping back. “[I don’t want to have to find this again. If you must beat each other up, do it in the ring.]” At that, she abruptly turned away and strode off. Iida and Chan did the same, clearly wanting to get as far away from her as possible. Nuan just stood there, watching the space where Carmelita had walked off.

Who exactly was she? Probably a ranking soldier, especially since the two North Koreans had reacted so strongly and deferred so easily to her. Carmelita…an interesting name. Didn’t sound Korean, but exceptions existed, and the amount of immigrants that knew Korean was limited, so probably not from the west. Didn’t talk like a North Korean either…so…South Korean then?

Maybe?
It would seem exceptionally unlikely that such a woman would be able to tolerate North Koreans, let alone them actually deferring to her. “Ah, I see you met Carmelita,” a new voice said and she turned to see another man walking up, tall, with black hair and most interestingly, a metal hand. “She can be intense, but she’s one of the best soldiers I’ve worked with.”

“I can believe it,” Nuan said, turning to him. “And who might you be?”

“Mordecai Korhn,” he answered smoothly. “I must say I didn’t expect the Chinese to send anyone else. I assume you are here to to replace Miss Anwei?”

“I am here because China desires to be represented in the leading anti-alien defense,” Nuan answered carefully, trying to ignore mention of the traitor. “While XCOM and the People’s Republic have had differences—”

“Spare me,” he interrupted bluntly, raising his metal hand. “I was Kidon, and I know China quite well. And I can tell you that you’re going to make enemies if you flaunt who you are. We don’t care.” Mordecai crossed his arms. “We fight aliens, and that’s what’s important. All of us hate politics at this point since it’s sort of why this mess exists in the first place, and yes, that includes China. But do your job and we won’t judge you.”

He paused. “And if you think that’s too difficult, remember that Carmelita came from South Korea. If anyone has a right to be resentful of the North Koreans, it’s her, but she lost someone she cared about to the aliens. Most of us have and that puts things into perspective. As far as we’re concerned, this is a fresh start for everyone and we’re all working to the same goal. Understand that?”

Nuan narrowed her eyes. “I understand the reasoning.”

He gave a humorless smile. “You probably won’t for some time. But you will eventually. We all do,” he began walking away, then paused, a thoughtful look on his face. “Oh, and don’t hesitate to challenge someone to spar if you feel like a fight. You’ll find plenty of takers. And if you don’t know how…” he gave her an amused shrug. “Well, I’m sure you’ll find someone to teach you.”

He walked away and left her standing alone again. After a few minutes she scowled and strode over to the treadmills, thinking furiously. This was definitely not how she expected XCOM to be, so she would have to adapt as always.

At least it was more exciting than Beijing.

***

The Praesidium, Barracks

Patricia did really wonder what the Commander was waiting for. It was well past time they properly interrogate Aegis, but he was still apparently discussing something important with Saudia, though he’d presumably be back within several hours. In the end it probably didn’t matter, since Aegis clearly wasn’t going anywhere.

In the meantime, she was rather comfortable resting against Creed on the couch. “I assume you watched the address?” She asked as he adjusted his arm around her.

“Of course I did,” he answered. “Not bad ones, from either of them. I should really ask you what you thought of the whole thing, since you can read minds and all that.”

She shrugged against him, feeling several people have their curiosities piqued as they saw them
together. *Do something else,* she sent more as an afterthought, not really relishing having anyone eavesdrop on their conversations. Privacy was unfortunately something of a luxury that only a very few had here.

“It seemed positive overall,” she answered, sounding vague even to herself. “You know I don’t read specific thoughts unless I have reason to. Iseul might be a problem later.”

“No surprise,” Creed grunted. “He *is* the dictator of North Korea.”

“Not that,” she sighed, sitting up straight. “He’s very…distrustful of psions. Me in particular. He clearly thinks I’m a security risk and have “too much influence” over the Commander.”

Creed didn’t exactly feel surprised at that. “Only because he doesn’t know you. It’s a fair concern though, and then I assume he doesn’t know the Commander…”

“Doubt it,” Patricia said. “In any event, I made sure he won’t be causing problems for the time being.”

Creed looked down at her, frowning. “What do you mean?”

“I psionically suggested to him that it wasn’t an issue and he should focus on more important things,” she answered absentmindedly. “Worked surprisingly well.”

“Patricia…” Creed said slowly. “That…was probably something you should *not* have done. You do realize *that* is the reason he might have concerns?”

Patricia frowned and looked up at him, not having expected a rebuke. “No, it was justified. We have more important things to worry about now, and Iseul is the type that would start some kind of witch-hunt against all psions based on things he can’t prove. I prevented that from happening, at least for a while.”

Creed didn’t exactly seem convinced. “Maybe,” he admitted. “But that isn’t going to make people more…accepting of your abilities.”

“It’s not like I mind-controlled him,” Patricia defended. “But I’m not going to refuse to tamper with minds if I feel it’s warranted.”

“I’m not saying you’re necessarily wrong,” Creed placated, sighing. “At least in this case. But I’m just telling you how it might be perceived.”

Patricia appraised him for a few seconds, biting her lower lip. “You’re uncomfortable,” she said slowly after sensing his discomfort with the conversation…or with her. “With me.”

Creed snorted. “Come on, you know it’s a bit more complicated,” he said, picking up her cold hand and placing the palm against the side of his head. “You don’t have to try to figure things out from just my emotions. You’ve been in my head before, I don’t mind you checking occasionally. Prevents misunderstandings.”

She gave a warm smile. “I…thanks for reminding me. You’re-“ she cut herself off as she sensed a sharp and familiar mind coming up, unfortunately focused on them. She let her hand fall to his chest and let it trail down.

“That really is rather sweet,” the familiar accented voice said, which might have been mistaken for mocking had Patricia not sensed that she was just very amused. “I wouldn’t have expected it from either of you to be honest. Had no idea you were even a thing.”
Creed looked up in annoyance at the comically small woman walking around the couch, a face lined with scars and chopped brown hair framing it. “Hello Zara,” Patricia muttered as the soldier took one of the chairs opposite them. “Took you long enough to get here.”

“Wait…” Creed muttered, his features clenching as he pinned Zara with a hard stare. “We’ve met, haven’t we?”

“Do I really look that different without the bandanna?” She asked sarcastically. “Or is it the XCOM uniform?”

“You have got to be kidding me,” Creed stated flatly, disbelief emanating out of him. “You’re that EXALT soldier.”

Zara gave him several mocking claps. “Well done. In all seriousness, this base is really nice. Even better than the Bastion.”

Creed glanced at her, then at Patricia, then back at Zara. “Sorry, but what the fuck are you doing here?”

Zara leaned forward, resting her elbows on her knees. “Well, when the Commander came to us with his oh-so-generous offer to disband, I didn’t want to get stuck in some officer position in ADVENT, so I asked if I could join XCOM. And here I am.”

“You forgot to mention this to me,” Creed muttered to Patricia. “Just slipped your mind?”

“Somewhat,” Patricia admitted, realizing now that she probably should have said something. “But for what it’s worth, I did approve it.”

“She killed our soldiers!”

“Of course I did,” Zara said, raising an eyebrow. “We were enemies. Now we’re allies. Simple as that. And don’t hide behind dead soldiers as a reason to dislike me, since by my count, XCOM killed a lot more of my soldiers that we ever did yours. So as far as I’m concerned, we’re even. Sound fair?”

Creed closed his mouth and narrowed his eyes. “Well even if I wasn’t, I don’t think I have much choice here.”

“Nope,” Zara nodded. “But I don’t intend to betray you. We have a common enemy in the aliens and I’ll fight just as hard for XCOM as I did for EXALT to defeat them.”

“And after the war?” He asked.

“You expecting something to change?” Zara asked bluntly. “EXALT is dead and is never coming back if that’s what you’re worried about. Besides, I have no intention of making an enemy of the Commander.”

“Smart,” Patricia commented. “But I do think you’ll fit in provided you can follow orders.”

Zara pursed her lips. “Provided they don’t get me killed.”

Patricia’s wristband buzzed. Ah right, that would likely be Jackson wanting to discuss some recent developments. “Well, you two get to know each other,” she said, leaning up and giving Creed a quick peck on the cheek. “Duty calls.”
Jackson had one finger to her headset as they gathered around the holotable. It was somewhat strange doing this with the Commander not being present, but it needed to be done and he’d be sure to catch up later. “Big Sky just checked in,” Jackson informed them, letting her hand fall to her side. “Commander’s on his way back. Should only be a couple hours.”

“Then we interrogate the Ethereal,” Zhang grunted. “Should be illuminating.”

“Should be,” Jackson agreed, pressing several buttons on the holotable. “In the meantime, we need to be ready to respond to the aliens.”

Which was something Patricia was also acutely aware of. “What’s the status of Australia?”

Jackson brought the hologram to rest on the continent, which was covered in varying shades of orange and red. “The status is bad,” Jackson said unhelpfully. “The aliens have cut outside internet access and disrupted most forms of communication. They’ve taken the major cities and are beginning a concerted effort to annex the nearby cities.”

“The ADF is doing its best,” Zhang said, pointing at the center of the continent. “More of the army survived than it should have and they’re at the northern center to be evacuated. What’s left is being transitioned to a guerilla force. They know the area much better and can turn the land to their advantage.”

“They’ll still need support.” Patricia reminded him.

“Correct,” he nodded. “I’ll be sending them some additional agents. I know ADVENT will be supporting them as well. The information they’ve gathered so far has been…interesting, to say the least.”

Jackson raised an eyebrow. “Such as?”

Zhang picked up his tablet he’d set on the edge of the holotable. “Such as that Australia isn’t exactly being kind to them. The integration seems to be going slower than they’d like, and the aliens seem to be avoiding specific wildlife like spiders and oddly enough, bees.”

“Unknown still,” Zhang shrugged. “But it does seem to indicate that the aliens might be more susceptible to wildlife than we assumed. They also avoid the seas altogether. Smart considering the kind of life that inhabits them.”

Jackson scratched her chin, looking thoughtfully down at the holotable. “That is interesting. Do you think Vahlen…”

“Vahlen’s actually been working on some new genetic mods,” Patricia interrupted, picking up her own tablet and handing it to Jackson. “It is somewhat…invasive, even for her. She’s also been adapting some of the ideas EXALT had for genetic modification.”

Jackson looked up, her eyebrows scrunched together. “EXALT? They didn’t ever really apply MELD to their soldiers, correct?”

“We never fought them,” Patricia corrected, recalling reading the descriptions of the various
EXALT projects. “But they definitely tried. Actually got pretty far along in some of them. Once they transitioned into ADVENT, they send all their files to us. Vahlen took the most promising and has been working on them, in addition to her jellyfish project.”

“And the Manchurian Project, correct?” Zhang said.

“And that,” Patricia confirmed. “But the Commander wants most, if not all of our soldiers to get genetic enhancements. So Vahlen’s been trying to expand the pool of modifications.” Patricia sighed. “We’re going to need to get a new shipment of test subjects soon, make a note of that, Jackson.”

“Will do,” Jackson said wearily, dutifully making a note. “Does the Commander want to make modification mandatory? I thought he was against that.”

“He won’t make it mandatory,” Patricia shrugged. “But he’s going to push for it, at least the small ones. The Secondary Heart in particular is probably the least impactful, but will increase the stamina and survivability for all our soldiers. Vahlen’s also looking into…uh, generic, modification that just does something simple, like increased strength or reflexes. Weaker mods, but not as extensive as the muscle density one.”

“Seems fair enough,” Jackson nodded, rubbing her forehead. “I’m also going to suggest sometime that Vahlen focus her genetic programs beyond external. I wouldn’t turn down a modification that could let me function without sleep.”

“Go for it,” Patricia suggested. “But from talking with her, modifications directly to the brain are extremely difficult. It’s why she’s been hesitant on researching ways to try and enhance my psionics. She just doesn’t have enough information and we can’t really experiment on psionic prisoners.”

“EXALT tried that, apparently,” Zhang noted.

“And look how that turned out,” Patricia countered. “We can focus on psionic testing once Vahlen launches the Manchurian Program. In the meantime…”

“In the meantime, we need to prepare for when the aliens attack,” Jackson redirected, moving the map further north. “The next major attack will probably be Japan, China or somewhere in Africa. The aliens were smart in choosing Australia. They have a staging ground to launch attacks almost anywhere in the world.”

“China isn’t going to be much of a help.” Zhang grunted. “But they can hold their own, especially since they’ve got that dreadnought.”

“We can’t worry about China,” Jackson agreed with a nod. “But it appears that Saudia is sending quite a few soldiers to the Korean peninsula and Japan. They’re still not fully transitioned yet, so they’re relying on local ADVENT garrisons for the main defense. Several US carriers are also near Japan.”

Patricia looked at the map and frowned. “Why would the aliens attack there first? Wouldn’t it make sense to take the Philippines, New Zealand or any other nearby country?”

“It would,” Zhang confirmed somberly. “And I believe they will. But we don’t have any way to reasonably combat them. There aren’t enough soldiers that could be moved there, and the proximity is too close to Australia to be held for long.”

“So they’re being sacrificed.”
“Correct.”

Patricia sighed, but it unfortunately made sense. “What about the Americas?”

“If they really wanted to cause issues, they’d attack South America,” Jackson said, moving the map to the respective continent. “Marshal Luana is continuing her borderline illegal invasion of the neighboring countries and if reports are to be believed, the power has somewhat gone to her head.”

Zhang didn’t show it outwardly, but Patricia definitely sensed his agreement. “Luana may become a problem soon, and the contingent of Peacekeepers ADVENT is sending may only make it worse. I may send some more agents to determine exactly what she hopes to accomplish with this war. Retribution has already been taken, this is just overkill.”

“I could go,” Patricia suggested. “She wouldn’t be able to resist me, or any psion.”

“I agree,” Zhang nodded with a scowl. “But this is ADVENT’s jurisdiction now. Brazil is officially an ADVENT nation and is now subject to their laws, and there are specific conditions that allow the removal of heads of state, and the usage of psions. But XCOM is not to get officially involved.”

Patricia smirked on his emphasis on “officially.” “And unofficially?”

“Unofficially, this will be a good test for Saudia,” Zhang stated emotionlessly, though she sensed an iron resolve within him. “But I would not expect this to be resolved for a while. We and ADVENT have more important issues to deal with.”

“True,” Patricia muttered. “We also need more psions. I have a couple candidates I’m going to bring to the Commander.”

“Good to hear,” Jackson nodded. “And in other good news, Shen confirmed that the Goliath is ready to deploy.”

“Not a moment too soon,” Patricia said approvingly. “Let’s hope it works as well as he simulated.”

Jackson snorted. “You seen that thing? If there’s going to be anything the aliens will be terrified of, it’s a twenty-foot tall robot of death.”

“Don’t forget that the aliens also have their own vehicles we haven’t seen yet,” Zhang warned, narrowing his eyes. “And a target that big might would attract air attacks, not to mention the Ethereals will prioritize it with their psionics.”

“Stop killing our dreams,” Jackson chided. “Besides, Shen put quite a few anti-air countermeasures in the suit, so those should help.”

“Keep your expectations in check,” Zhang said. “That’s all I’m saying.” He picked up his tablet. “I have to delegate some assignments for my agents. Let me know when the Commander returns.”

“Will do,” Patricia promised as he walked out the door.

“Do you have your list of candidates?” Jackson asked once he’d left.

Patricia nodded, and sent another file to her. “Yes, here they are.”

“Thanks,” she answered, focusing on her tablet while Patricia rested her hands on the holomap, trying to envision how this world could be defended, and where the aliens would strike next.

***
This was such a substantial upgrade that Abby wasn’t even sure she was in the right place. While the original Intelligence Control had been functional, but very small, this was almost on the level of Mission Control. There were quite a few analysts in front of several of the dozen computers, with more hooked up to analytical and cryptanalysis equipment she still wasn’t sure how to work.

Soft white light illuminated the room, making the alloy the base was made of sparkle and reflect, further increasing the illumination. In the center was the now-expected holotable, at which Director Zhang was standing in front of now.

Abby took a breath at the entrance, then moved forward. An ironic metaphor right now for where she was emotionally. Don’t think about it. Not yet. Just keep pushing forward.

Move on. But even if psychology wasn’t her field, she knew it was only temporary and running away from what she’d done wouldn’t work out in the long run. But she really didn’t have a choice, or so she thought now. XCOM needed her now, there wasn’t time for periods of reflection. Zhang didn’t exactly seem to buy her explanation that she was ‘fine’ but he’d just frowned and told her to get some rest.

Although that wasn’t easy either. She never remembered her nightmares when she woke up, but she knew she had them because she would always wake up either nauseous or terrified, usually some combination of the two. It wasn’t hard to pinpoint the cause, and as a result any sort of rest she got was shot to hell.

If it got worse, it was eventually going to impact her performance in which case her options would likely be limited officially to some kind of psychiatrist. Which might help, but she felt…reluctant to share anything she was feeling with a stranger, even if objectively she knew that it was the best thing for her.

Unofficially…something in her needed to be removed. Her memories or feelings, because she couldn’t continue unaffected with both in her mind.

But that raised a host of new issues, so she was keeping psionic intervention as a last resort. But it was good to know that option existed, should it become necessary.

“Director,” she greeted, giving a brief salute. “What’s the assignment?”

He pressed a button on the holotable and the colored hologram of Australia was brought up. “If you were unaware, Australia is now alien-controlled territory,” he began, moving around the table until he was opposite her. “Based on the location, we can safely assume that the aliens intend to use it as a staging area for their future assaults.”

Abby nodded, she’d assumed as much when she’d heard about the attack. “Do we have an idea where they’ll strike next?”

“We have some guesses,” Zhang admitted. “In a few hours we might have more. But that is irrelevant to why you’re here.” He zoomed the hologram deeper into the continent, near the center north. “Our issue is that we don’t clearly know what is happening, and knowing how the aliens treat captured cities would be invaluable to our efforts to combat them, because more will fall.”

“And you want me to infiltrate one of the cities?” Abby asked. “Pose as a civilian?”

“No, initially you’ll be working with the
ADF, or what’s left of it.”

“Understood,” she nodded. “Who’s in charge?”

“Lincoln Harper, ADF Field Marshal,” Zhang answered, motioning her to a beige file that was resting on the holotable corner. Abby picked it up and one of the first images was of a man with graying hair, haggard face and weary blue eyes. Appeared to be the one, according to the note on the side. “He’s been rallying the ADF and transitioning the best soldiers he has into a guerilla force.”

“What about the rest?” Abby asked, looking into the passionless face of Zhang. “I doubt all of them would be suitable for guerilla tactics.”

“Correct,” Zhang confirmed. “The majority of the surviving military has evacuated with what civilians they could rescue. They are being integrated into ADVENT now, though most of them are still in Japan. What remains is mostly special forces, ones who know the territory and will exploit it as much as possible.”

Abby tried not to sound skeptical. “I somehow doubt the aliens are going to be scared by the wildlife.”

“That’s one reason I want you there,” Zhang continued, looking slightly amused. “Because the one agent I have there already does confirm that the aliens are definitely being more cautious in the wilderness than should be expected. If the aliens are concerned about the environment, we need to know exactly what that is.”

“What else?” Abby asked.

“We need to know the forces they are deploying, and how they’re keeping the cities under control,” Zhang said. “There are reports of new alien types we haven’t seen before.”

“Any Ethereals?”

“My contact there did appear to find one,” Zhang confirmed grimly. “Unfortunately we have no idea what it can do, except some kind of mass mind control. Furthermore, it hasn’t been seen anywhere since. But it’s entirely possible that there is at least one Ethereal in Australia…” He paused. “Speaking of which, there has been a development you need to keep in mind when discussing matters with Marshal Harper.”

Abby waited. “What is it?”

“Shortly after the first attack in Australia, we received reports of another abduction and quickly responded,” Zhang said, his piercing eyes pinning her own. It was an intensity she was unprepared for. “Psion Trask led a team and it turned out to be exactly what we didn’t expect. There was no abduction, the citizens were simply knocked out.”

Abby went cold. “It was an Ethereal. Did we…did we kill another one?”

The first thought had actually been to ask if everyone had survived, but since Patricia was clearly still alive, that was a silly question. But if it had gone wrong or right, she thought there would have been something said.

“It was an Ethereal,” Zhang confirmed slowly. “But no, we didn’t kill it. The Ethereal surrendered.”
Abby coughed, mostly out of not knowing what else to do. Zhang was the least humorous person she’d ever met in her life. He would not start making jokes now. “Sorry, sir…but…what?”

Zhang snorted. “About my reaction as well, Agent Gertrude. But yes, the Ethereal surrendered and is currently being held under heavy guard in the labs and the new alien containment, for what little good it does. He will be thoroughly interrogated within a few hours, which was delayed since we needed to execute both the Demeter Contingency and Advent Directive, but if he is to be believed, he wants to help.”

“And just why would you trust an Ethereal?” Abby demanded. “You do remember what they can do.”

“I don’t trust him,” Zhang growled at her, making her take a step back. “Give us some credit, Agent. But there are several reasons we believe he is mostly genuine. Patricia engaged the Ethereal at first and he beat the entire team with ease. The Ethereal that attacked the Citadel was apparently one of the weaker ones.”

“Damn it,” Abby muttered. “Of course it was.”

“The second reason is that this Ethereal is…known to us,” Zhang continued. “Aegis, he calls himself. He’s had intermittent telepathic contact with the Commander over the past few months, which he has kept us updated on.”

“The Commander somehow managed to convince an Ethereal to defect,” Abby said flatly. “You’re kidding.”

“That remains to be seen,” Zhang cautioned. “It is more likely that this Ethereal has an agenda of his own, and we are his best chance to enact it. We know very little about the Ethereals and their culture, this could be genuine or it could be a political move. They don’t think like us.” Zhang clasped his hands behind his back. “The point is that if Aegis’ defection is genuine, we will likely make rapid advancements and learn things we likely shouldn’t. Until the Commander deems it important, this information is not to be shared with anyone. Given what the public knows about the Ethereals, as well as ADVENT, the last thing we need is to have people believe we are compromised. Understood?”

“Understood,” she confirmed. “But what about the soldiers? They deserve to know we have an Ethereal here. How don’t they know already?”

“Because Aegis is in an area only very few can enter,” Zhang said. “Rest assured the Commander agrees. But he wants to interrogate Aegis first, learn what he knows, before sharing it with the rest of XCOM. So don’t mention it to anyone else at this point.”

“Got it,” Abby said. “When am I leaving?”

Zhang glanced at his watch. “One hour. Pack what you need and go to the Hangar. Shattered Sky will be taking you to Australia.”

Abby raised an eyebrow. “New pilot?”

“One of several,” Zhang confirmed. “And a slightly modified skyranger for intelligence operations.”

“Sounds good,” Abby said, saluting him. “I’ll report as soon as I arrive.”

“Understood, Agent Gertrude,” Zhang said, returning her salute. “And I will update you with any
pertinent information once Aegis is interrogated.”

“I almost wish I could watch.” Abby said.

“Be careful what you wish for,” Zhang said, his lips curling up. “If it goes well, you might have a chance to talk with him.”

Abby thought about what she would ask an Ethereal, shook her head and turned to exit. That train of thought would only lead to a bunch of questions she really didn’t have the energy to ponder. The revelation alone was enough to process, which she had a feeling she was going to do the entire ride to Australia.

***

The Praesidium, Alien Containment

The Commander held his hand over the sensor which displayed the XCOM logo as a hologram and drew upon his psionic power. The air around his hand distorted and the hologram flashed to a solid blue, and the door opened up.

“Do you want me to protect you from his aura?” Patricia asked as they walked into the containment areas. The room had once held likely dozens of alien species, prone as the Sectoids were to experimenting on them. They had prepared well. Each cell was designed with a kind of one-way substance, was completely isolated from each other, had complete environmental controls over temperature and oxygen and most interestingly, several had some kind of stasis generator that completely froze a subject in place.

Shen was still analyzing those machines to reverse-engineer them so they could be applied elsewhere. As of now there was no alien being held that warranted that, and though there were several Vitakara who hadn’t been sufficiently useful or trustworthy enough for Vahlen to use, there were a good amount of them working with her.

He still wouldn’t trust them until the Manchurian Project was finished, but until then, the chips in their brains and organs should be enough to deter any foolish rebellion. Not to mention Vahlen had made it very clear that should any one of them go against her orders, they would be the next test subjects.

As it was, she was standing in front of the circular glass container containing their Ethereal friend. It was almost the same as the one in the Citadel, but built from purely alien materials and created specifically for holding psionic individuals. Four arms extended from the ceiling of the cell with oval sensors that emanated a faint pulsing blue light, a form of disruption, Vahlen claimed, that would make it difficult for a psion to concentrate enough to unleash their powers.

The only issue he had was that, when the concept of alien containment had been created so long ago, it had been designed to hold a Sectoid. Not even a Hive Commander. Still, Vahlen had stressed that the cell was more to disrupt the psion, not suppress them. Even still, in the future that wouldn’t be good enough.

And it didn’t exactly appear to be working either. The unnatural sensation of embodiment and assurance was…not unpleasant. But he could sense the psionic suggestion affecting his mind, reinforcing those feelings. While he doubted that Aegis did it intentionally, he didn’t want to have his judgement impaired, nor anyone else’s.

“Shield us if you can,” he told Patricia as he approached them. She nodded and he immediately
sensed power gathering around her. Luckily she’d told him that it wasn’t particularly difficult, especially if she concentrated on an area, not specific people. All of them were here too, good. Time to get some answers.

“Has he done anything?” The Commander asked Vahlen. She turned, smiling as she saw him, though knew this wasn’t the time for any intimate moments.

“No,” she answered. “He’s just sat there, barely moving at all.”

The Commander looked into the white cell, at the true form of Aegis who’d taken an interest in him for unknown reasons. Like all the Ethereals they’d encountered, this one had a kind of robe that hid the body itself completely. Unlike the Ravaged One, Aegis’ was a navy blue, with what looked like silver embroidery running down the robe.

It was pristine as well, or just extremely well preserved like it had never been worn. Perhaps it was a quality of the material itself, or Aegis just preferred keeping his clothing in top shape. Either way, it only added to his intimidating appearance, culminating in the helmet.

The helmet itself seemed to have been based on the Ravaged One; at least it was very similar with the curved angles and edges hiding the eyes, and of course the gaping hole in the middle that he still wasn’t sure was supposed to represent a mouth or not. Like the rest of him, it was pristine and shining in the harsh light of the cell.

“Do we talk now, or should we let him out?” Zhang asked, his arms crossed.

“Does it make a difference?” Jackson asked. “Didn’t we only put him there because we didn’t know where else?”

“Good point,” Patricia said, her irises a deep purple as she suppressed Aegis’ aura which was fading almost instantly. “I think that if he wanted to hurt us, he would have done it by now.”

“If you decide to hold our conversation with this glass between us, I would ask you please shut off these… disruptors,” Aegis said, his deep echoing voice as loud and clear as if he was standing next to them. “It is an irritant that I have tolerated, but does nothing to limit my powers, Doctor Vahlen.”

Vahlen’s only response was a sigh and she moved to adjust the cell controls. “I suspected as much,” she muttered. “Unfortunate, but something to improve in the next iteration.” She looked behind her to the Commander. “Should I let him out?”

Objectively, the smartest thing to do would be to still hold this with some barrier between them, but the Commander saw no reason to actually do so. Whatever would happen, Aegis was unlikely to attack them. If he did, it was doubtful that any of them would survive, glass or no. “Do it.” he said.

A door behind Aegis opened and the Ethereal stood, and with a surprising amount of fluidity for an alien his size, turned and exited and walked down the ramp to face the small council. He really was extremely tall, the Commander noted, acutely aware of having to look up at the Ethereal. It was… strange being so close to not only an alien, but learning the secrets of what was likely the most powerful alien species in the galaxy.

“All of you have questions,” Aegis began, looking at each of them. “That is apparent, and I will answer what I can.”

All of them exchanged glances, and unconsciously waited for the Commander to continue. He supposed it didn’t make much of a difference who went first, as they wouldn’t be leaving until they had a reasonable amount of information. “Very well,” the Commander said. “Who are you,
“Who I said I was,” Aegis said. “I was the Aegis of the Skyllian Sector, once the domain of the Ethereal Empire. Now I am simply Aegis, again once of the Ethereal Collective.”

Already interesting information. “Aegis is a title then,” the Commander noted. “Not a name.”

“We have discussed this, Commander,” Aegis said, looking down at him. “Much like how your title is interwoven into who you are, so it is with me. An Aegis was... is a defender, protector and watcher, as am I. I would not have taken this as my name had I not embodied those ideals to the fullest.”

“You were once,” Patricia said. “I suppose your… Ethereal Empire… doesn’t exist anymore?”

“No.” Aegis said flatly. “It does not.”

“The Ethereal Collective is the successor to it, I assume?” The Commander guessed.

He sensed the Ethereal hesitating. “Yes and no, Commander. It is true that we are the leaders, but the Collective is no longer mostly comprised of Ethereals, nor is our directive the same.”

Vahlen raised an eyebrow. “And what directive is that?”

“To protect this galaxy and avenge our species,” Aegis answered. “The story is a long one, so I suggest you ask unrelated questions before I tell you.”

“Why are you here?” Zhang asked bluntly.

“The Collective or myself?”

“Both.”

Aegis nodded his helmet. “Because we were instructed to go here.”

Even the Commander felt the shock run through each other, as it did with him. If the Ethereals were instructed to come here… “When you say that you were instructed to come…”

“I mean my species, the ones you call Ethereals,” Aegis confirmed. “We received no explanation, no reason, just several sets of coordinates. We sent scouts which found your world and believed we had simply been given another species for our Collective.”

“Wait,” Patricia said, raising a hand. “You answer to another alien species?”

“Yes... and no,” Aegis said. “We are working towards the same goal. These aliens suffered a similar fate to our own and want to prevent it from happening again. We do not answer to them, but they are... suggestive. The Imperator suspects they may be as old as the galaxy itself, perhaps more. Billions of years, compared to our relatively short existence.”

“And what exactly do you know about them?” The Commander demanded. “How could you know that?”

“Because of their interactions with us,” Aegis said. “They are not the ones of a species that is concerned with even the affairs of our own species. There is an arrogance to them, a dismissal, they certainly have their own agenda and likely view us as a means to carry out their defense of the galaxy. They have no name for themselves, only identifying themselves as the Sovereign Ones.”
“Perhaps you should tell the whole story,” Vahlen suggested slowly. “From the beginning.”

“I will start where it is relevant,” Aegis stated. “Approximately two hundred thousand years ago the Ethereal Empire spanned roughly a quarter of the known galaxy, with further expansion against other alien races planned. Compared to your world, it was a utopia. Our mastery of genetic engineering had enabled us to eradicate disease, disability and undesirable traits that plague underdeveloped species, such as your own. All Ethereals were driven by one goal and one goal only: The ultimate perfection of our species.”

“So like the Sectoids.” Jackson commented. “An Empire dominated by those in charge-“

“Do not compare us to those beasts,” Aegis growled, his voice deepening. “Contrary to what you understand, Ethereals were not forced into achieving this goal, it was a natural desire. Selfishness, greed, hate, those traits we simply removed, leaving only the ones that would allow a positive impact. And it was working. Each generation of Ethereals was stronger, smarter and better than the last.”

“How was this achieved?” Vahlen asked curiously. “Was your species grown, or did modification happen in the womb…or however you gave birth?”

“Most Ethereals were grown, created from a combination of various stored DNA,” Aegis answered. “Natural births are rare for Ethereals, even before we developed technology allowing us to grow more of our kind. It was offset by our long lifespan, but true Ethereal children are gifts; and they were often the purest of us. Our biology naturally took the superior DNA from both parents and distilled it into the child. But as I said, it was very rare, even at the height of the Empire, but it was what all Ethereals strove for.”

“Out of curiosity, how long is your lifespan?” Patricia asked.

“Our natural lifespan was roughly one thousand years,” Aegis answered. “However, once we mastered genetic modification, aging was a problem we negated completely. Every Ethereal alive today is effectively immortal. We will never die of old age.”

“How?” Vahlen and Shen asked at the same time.

“I am not a scientist,” Aegis said, with what appeared to be a mimicry of a shrug. “But it was described once as a…switch. A genetic switch hidden within us that dictated our aging. Our modern bodies are simply engineered to never wear out or become slow. There is a…maintenance process of sorts, required genetic upkeep. But it is a trifling annoyance at worst. It is also not something we have been able to replicate with any other species. The Vitakara, Mutons, Andromedons…and Humans.”

The Commander frowned. “Andromedons?”

“The aliens in the armored suits who are fond of toxins,” Aegis explained. “I will describe them later. Only the Sectoids have a similar mastery over themselves, and even the Hive Commanders will only live for five thousand years.”

Andromedons. Huh. The Commander wondered if it was possibly related to the Andromeda galaxy. That would be an extremely massive coincidence if it wasn’t the case. “Narth said there were rumors that the Ethereals were suffering from some kind of genetic disease,” the Commander recalled. “Is that true?”

“Ah, the defector,” Aegis mused. “A rumor that is based in truth. Yes, some of us are beginning to
exhibit signs of genetic breakdown. Should it go untreated, we will all perish, it is true. But what Nartha did not know was that this is not the first time we have been afflicted with this “disease.” I believe that it will be the two hundredth and second time it has arisen, and we will cure it as we have before. It is related to our immortality, and the genetic maintenance I was referring to. Even if we did nothing, it would take nearly a century to actually kill us.”

“Fascinating,” Vahlen murmured. “You mentioned that your biology naturally takes the superior genetics to create a better Ethereal. Was it discovered your species was engineered by outside forces? Because I don’t know how you could find a switch on aging, not to mention the ability to remove unsavory traits, if you were completely natural.”

“It is not secret,” Aegis said. “It was… commonly accepted that we were the result of tampering from outside forces. Perhaps an attempt to create a perfect species, or perhaps a failed experiment. It mattered little to us, as whomever had created us was long gone. We simply continued their work.”

“And did you manage to do it?” Shen asked. “Create the perfect Ethereal?”

“The Empire was close to creating them,” Aegis said slowly. “Upon some reflection, I do not believe we would have ever reached our goal. ‘Perfect’ is subjective. A warrior will have a different idea of perfection than a scholar and so on. I now know that we didn’t create the perfect Ethereal, just yet one more superior iteration. Had we not been attacked, I believe these debates would have quickly consumed the Empire as the commonly accepted ‘perfection’ became splintered and divided.”

“Who were you attacked by?” The Commander asked. “A rival alien species?”

“Initially, yes,” Aegis confirmed. “All of them at once. Lesser species, of course, and we easily repelled their inferior numbers and technology. But it was a surprise, and it was also clear that there was something wrong with them. All of them had at one point been subjected to some kind of mind-alteration and were either driven insane or were autonomous versions of themselves, driven by some kind of mental programming.”

Aegis paused for a few seconds. “The attacks continued ceaselessly, as they threw their numbers against us with no regard for their own lives. By now we knew that these attacks and coordination were being orchestrated by something else, so we launched our own offensive into one of the territories and saw what had happened.”

“Which was?” Patricia asked.

“The first attacks were distractions, as we’d suspected,” Aegis continued. “The rest of the species were being converted into much more powerful and altered versions of themselves. Mixes of prosthetics, cybernetics and extensive genetic modification. All of them were designed specifically to nullify all of our advantages. Armored brutes to withstand our weapons and psionic storms; soldiers without brains to resist our mind control; psionic abilities we didn’t know existed and tools that nullified our weaponry. Discovering the first converted planet was a bloodbath, and we were easily destroyed. That was when the war began in earnest.”

Aegis’ tone grew more somber. “The attacks caught us flat-footed, as we knew there were no other species even close to us, and were too arrogant enough to treat this as a serious threat. Many outlying worlds fell to the Synthesized army, for that was the only term we deemed appropriate for what was described. It was an unending horde being produced from within the inner galaxy, and even with our weapons and psionics, one that began overwhelming us.”
“How did you have no idea this was happening?” Zhang demanded. “Did you not have spies? Any sort of reconnaissance?”

“We did,” Aegis admitted. “But we were not interested in the other species unless it suited our interests. Several lesser species once made the mistake of attacking us, and we responded by wiping out their species, stripping their genetic code, taking their traits and improving our own. Over time the other species learned to avoid us, unfortunately to our downfall.”

“Arrogance,” Zhang muttered under his breath.

“It was,” Aegis agreed. “But arrogance borne out of generations of being the apex species of the galaxy. It is irrelevant now, as a concerted war effort began within the Empire and we went to war.”

“And what does that look like?” Patricia wondered.

“It would be easier to show you,” Aegis said, withdrawing a purple hand, palm loosely raised in their direction. “A memory of what we once were.”

The Commander exchanged a look with Patricia, and she gave a nod. Aegis had been relatively straightforward so far, so this likely wasn’t a trick. “Go ahead,” he told Aegis. “Show us.”

“Then watch.” Aegis said, and his palm flashed purple and everything went white.

---

He stood in front of an army of ten thousand strong, the Ethereal soldiers standing in gleaming chrome armor, capes flapping in the wind as their unified helmets looked towards the Battlemasters and the ranking Aegis of this sector. Each soldier was armed according to their station, denoted by the colored stripe across their armor.

Blue denoted the defenders he would be leading, psionic masters specializing in defense on a smaller scale; green and yellow denoted the mid and long-range fighters, plasma and beam weapons in their hands, enhanced with cybernetics and focused by the aura of the Overminds. Purple revealed the destructive psions, whose power would rip this world and the Synthesized in it asunder; black showed the assassins, the ones who clouded the sensors and minds of the enemy and systematically slaughtered them.

And finally, those in red would be the ones fighting and dying on the front lines, under the directions of the Battlemasters, the large arrays of blades they wielded would soon be tested in a battle many were unprepared for. He stood on the elevated balcony, the spires of the Watchtower behind him as the Battlemaster of Skyllian stood to his right, and the respective Overmind further still. Behind them were still more; the elite of each, the lesser Overminds cloaked in orange robes and the disciples of the Battlemaster bearing greatswords and distinctive helms, a symbol of how far they had come.

The electronic scream that resonated in their ears far longer than it should have tore across the atmosphere, and he extended his power to the fleet above, discovering it was losing to the twisted ships of flesh and steel. He looked up and saw the first of the ships approaching, all on a suicide path to the Watchtower, and behind them was what they had dreaded.

A Director Flagship, what they all suspected to contain the leaders behind the Synthesized. It functioned in ways beyond simply a capital ship that dwarfed their own, but also had leg-like appendages that allowed it to land on planets and directly command the forces, and its unique
brand of the Gift was enough to test that of the Overminds.

He raised his hand, knowing what needed to be done and his hand flashed and a purple-tinted bubble formed around him, and expanded to encircle the entirely of the Watchtower within seconds. Ships crashed against his barrier or were shot out of the sky by the soldiers who were already moving towards the Director Flagship which had landed what appeared to be several miles away.

And with a roared command from the Battlemaster, the army of Ethereals began to wage war on the scourge that had come to take their home.

***

The Commander blinked and was suddenly back in the cells. The rest of them appeared similarly disoriented at first. “That…was certainly something,” Jackson coughed. “That Battlemaster…was he-“

“As it happens, yes, that is the same one alive today,” Aegis confirmed. “We were victorious that day, though it was one of the few victories we enjoyed, and most of those were early in the war. As more Ethereals fell to the Synthesized and their forces, our control became less and less.”

“The flagships,” Shen said, frowning. “What was special about them? Aside that they could operate in space and land.”

“Because they were somehow conduits for the Gift,” Aegis explained. “It was an amplifying force beyond anything we could conceive of, and it allowed unprecedented control over their own forces, and not even Ethereals were immune to its mental power. And roughly about mid-way through the war, a new problem emerged.”

“What was?” The Commander asked.

“Ethereals suddenly began betraying us,” Aegis said sadly. “For no explained reason they began fighting, sabotaging and killing us. Not just regular soldiers and citizens. Battlemasters, Aegis’ and Overminds were corrupted somehow, and it was only after capturing and analyzing them did we figure out that their minds had somehow been altered by the Synthesized themselves, psionically, though we never did learn how it was accomplished.”

Vahlen frowned. “Why not? That would seem to be rather important.”

“Because of two reasons,” Aegis explained. “A new tactic was being utilized, and it was, simply put, the destruction of worlds. The Director Flagships were the key, but waging conventional battle was costing too many Ethereals, so a way had to be devised to destroy the Flagships without sacrificing too many Ethereals. And a way was discovered.”

“You baited them to a planet?” Zhang guessed.

“Yes,” Aegis said. “Or we moved many Ethereals there and quickly evacuated them, or left civilian colonies or city planets mysteriously undefended, hoping that would bait them into landing and capturing the population.”

“And it worked.” Shen muttered under his breath.

“Initially, yes,” Aegis said slowly. “They would land and we would use one of the Reapers, Ethereals engineered for maximum psionic destructive potential. Their power was strong enough that those around them would begin disintegrating from the sheer power they wielded, and they
used that power to warp the worlds they faced, creating devastating psionic storms that wiped out planets in a matter of hours—including any Flagships on the surface.”

The Commander furrowed his eyebrows. “And just why didn’t you use them in conventional warfare? Why not against a fleet or army?”

“Because they were not fools,” Aegis hissed. “They knew the Reapers were the greatest threat they faced, and they prioritized them above all others. One Reaper might destroy a fleet, but the Flagships had an uncanny ability to pinpoint the location of one and kill them. It didn’t help that at their height, only one thousand Reapers existed. It was all that could be created because the remainder of resources had been poured into what was deemed the only hope for the Empire.”

“And what was that?” Zhang asked.

“The Imperators,” Aegis revealed. “The quintessential Ethereal, as perfect as it could be. The power of a Reaper, the defensive talent of an Aegis, the dominating telepathic might of an Overmind and the physical prowess of a Battlemaster. We knew the Imperators could turn the tide of the war and initially…they did. We regained ground, killed thousands of Flagships under the direction of the Imperators.”

“I am going to guess it didn’t work forever,” Patricia guessed. “Since you’re here right now.”

“No, because they adapted,” Aegis said. “Worlds were ignored in favor of Imperators, they continued somehow converting Ethereals into traitors, used for assassination and spying. It was costly, but they were killing Imperators faster than they could be regrown. We were going to lose everything, and finally one Imperator created a contingency plan for the species to survive.”

Aegis paused. “He persuaded several various Ethereals, the best, brightest and most powerful to give up the war and preserve themselves in cryostasis until the war ended and they could rebuild and analyze the threat unhindered. Some turned him down, and others, like myself, joined as we had realized that all that remained was a slow and agonizing defeat forestalled by each brief Imperator victory. And so we gathered on an unnamed planet hidden from even the other Imperators, with all the gathered knowledge the Imperator could gather, and froze ourselves and the war passed in an instant.”

“And when you woke, everything was gone,” Patricia whispered.

“ Barely ruins remained,” Aegis confirmed. “We had been resting for nearly two hundred thousand years, far beyond what was likely necessary, but the last Imperator had apparently taken no chances. Equipped with our knowledge, purpose and remaining technology, we began exploring what was equivalent to a new galaxy.”

“I expect that was…difficult,” Vahlen said. “Did you even have a plan? Or did you plan to wander aimlessly?”

Aegis fixed her with a helmeted stare that reeked of condescension. “Perhaps you should think about that for several minutes, Doctor Vahlen. Yes, the Imperator had a plan. We would locate other species, uplift them into soldiers with our knowledge with the ultimate goal being to prepare them for when the Synthesized would return, because we knew they would. We quickly found evidence of other alien species that had been destroyed in the centuries we were asleep, which told us that they would come again, but this time we would be prepared.”

“Which species did you encounter first?” The Commander asked.
“The Sectoids we made contact with accidentally,” Aegis said. “The Imperator sensed psionic potential and we found the Sectoids. They initially were…resistant to us, though the Overmind bent the minds of the Hive Commanders to work with us, a fact they are unaware of to this day. We quickly discovered that despite their potential, they lacked the psionic ability to be worthy commanders in our new Collective.”

“And the Vitakara?” Shen asked.

“They fulfilled the role of spies and intelligence quite well,” Aegis explained. “Though they are ultimately viewed as disposable due to their lack of psionic sensitivity, their genetic malleability and heightened intelligence makes them a worthwhile investment, and they are loyal to us as we saved them from their genetic plague.”

“A question,” the Commander interrupted. “Just how large is your Collective? In terms of planets or army size.”

“Not nearly large enough to wage a dedicated war with the Synthesized,” Aegis revealed. “The current size of the Collective is roughly one thousand occupied planets, with many being small colony worlds. It is enough to easily overwhelm your planet.” He shook his head. “But the size is less relevant than you think. Because soon after uplifting the Vitakara, we were contacted by the Sovereign Ones, who demanded to know what we were doing.”

Aegis’ tone was slightly amused. “They were apparently surprised that we were survivors of the Empire, much less that we were planning to rebuild an army to oppose the Synthesized. Once it was clear what our intentions were, they offered to help us, provide their knowledge and own technology to improve beyond what we currently had. We accepted mostly out of necessity, as their knowledge helped us map out the current galaxy, including what new alien species have advanced to the point of space travel, but those are irrelevant at the moment.”

“You don’t seem to know much about them,” Patricia noted. “Despite seemingly working with them.”

“Because we don’t,” Aegis said. “And that is a point of conflict within us. The Imperator does not trust them, and believes they are attempting to use us in some larger plot. I don’t dispute that the Sovereign Ones have their own agenda, but the fact is that they suffered the same fate as us once, and I believe they are fully committed to destroying the Synthesized. Not all gain their attention, and out of all the advanced species in the galaxy, they chose us to be the vanguard.”

Aegis looked directly at the Commander. “Or so I had thought. When they revealed the location of your world I wondered why they were intervening now, as they had not done so before. As the testing of your kind progressed, I believed it was because they had successfully identified a superior soldier species to our others, one that was capable of wielding the Gift…” Aegis trailed off.

“In some ways…the Imperator was justified in his sacrifice of the Ravaged One, because it confirmed to me why we had been shown your world. Why your species was important. It is because we are not the species that is destined to lead the defense of this galaxy,” he said, withdrawing a hand and pointing a finger at the Commander. “It is yours who is to be the vanguard.”

There was dead silence at that. Simply put, the Commander wasn’t sure what exactly to feel. On one hand, he doubted Aegis was lying, Patricia or Vahlen would have sensed something, and it explained why an Ethereal would defect to them. But on the other hand it seemed…frankly unbelievable, even with what they knew now. If what he was saying was true though…they were
in way over their heads.

And at the same time, it would explain why the Ethereals were so desperate to control them...or ally with them, as the case may be. “I suppose this particular theory isn’t exactly popular?” The Commander guessed.

“The Imperator flatly disputes it,” Aegis said. “But his judgement is...clouded. He has yet to come to the realization I have: Our species is dying. He believes eventually we can rebuild the Ethereals, rebuild the Empire of old, but I know better. Even clones would take half a century to grow at the minimum, and there are simply too few of us left. We may be among the most powerful beings in the galaxy...but humanity has the potential to be just as great as us. No one disputes that, the only question is what role we believe your species should play in the future. I happen to believe it should be as allies to us, with yours taking the lead while we advise from behind. The Imperator wants a subservient psionic army, one as powerful as the Empire but his to command. However, I fear he is no longer objective when it comes to preparing for the future. He is too suspicious of the Sovereign Ones, too certain of our own superiority, too arrogant to see the threat you pose not just to our species, but to others as well. If he missteps here, the galaxy will feel the repercussions for decades. I do not want to see the galaxy consumed by a pointless war several centuries in the future.”

“Unless he just decides to come down and end this quickly,” the Commander said. “We’ve done well, but an Ethereal that can destroy a planet is something we have very few defenses against.”

“You’re both underestimating and mischaracterizing,” Aegis hissed. “He does not want a mindless army of Humans. He wants to shape your species into what he views as a superior iteration of yourselves, ones rivaling us, but completely loyal to him. You do not accomplish that by destroying the world of the species you wish to use! He has a plan to accomplish this, and unfortunately, I do not know what that plan is. His contact was...intermittent recently, and by the end, I believe he suspected my loyalties were wavering. But by taking this drastic step I do believe that several others will begin to ask questions.”

“Such as what?” Vahlen asked.

“Such as why we went to Earth,” Aegis said. “The Sovereign Ones told us, yes, but the Imperator took the credit himself. His word is considered above reproach and I was the only one who went to confirm myself and found the truth. He will ignore the concerns of the others at his own peril.”

After a minute or so of silence, the Commander finally spoke again. “Well then. That was informative, and explains why this happening. The question now is where to go forward. How is the Ethereal Collective going to take Earth?”

Aegis audibly breathed heavily. “I do not know. Battle operations were obscured to me before I left, likely on orders of the Imperator. I can only speculate based on what I know of the Ethereals behind the invasion.”

Not what he was hoping for, but far better than nothing. “We can discuss specifics later, but what exactly did you bring to help us? Aside from your own skills, we did find that cube on you that we assume holds information.”

“If you wish to wage war against the Collective, you will need to be as advanced if not more than them,” Aegis said. “Within that cube are schematics for Sovereign-level plasma weapons, armor, aircraft, as well as several additional schematics that I believe you will find a use for. You have been...innovative with the substance you call MELD, though lack a way to recreate it. That is now corrected.”
Vahlen’s eyes widened and the Commander felt the excitement grow in the room. With the ability to manufacture MELD at will…that alone could change the course of the war. Of course there were probably drawbacks such as a lack of resources…but those were issues that could be circumvented.

“In addition, you will need access to the Gateways,” Aegis said. “They were given to us by the Sovereign Ones, a method of instantaneous travel between two points. It is our main method of transportation in the Collective. Our fleets do not travel thousands of light years over the course of weeks, but simply configure the nearest Gateway to the one built on the edge of your solar system.”

“You would likely be able to answer that better than I, Engineer Shen,” Aegis said. “The theory is…beyond me. Even Revelean, our leading scientist does not fully understand how it works, which naturally makes him suspicious. But they work, I can assure you, and with Gateways configured at the right points, XCOM would have the ability to reinforce anywhere in the world.”

The Commander smiled. Regardless of if the story Aegis had relayed was true or not, this was where his specialty was. He would sort out what to make of Aegis’ belief of humanity being some kind of chosen species to defend the galaxy later, but the fact remained that they were at war with the Ethereal Collective, and these were the kind of tools he would use to orchestrate their defeat.

They refused to simply conquer with force? Fine, he would play the Imperator’s game.

Then make him pay dearly for it. Willingly or not, he would not let Humanity become a pawn in an intergalactic game between species hundreds of thousands of years old. Perhaps it was arrogance to believe that he could overcome them despite their age, knowledge, technology and power, but he also knew that there was no other choice.

“Finally,” Aegis finished. “Your psions will need to be properly trained. They have made impressive strides, but there is no time for natural learning. You and your psions must become powerful enough to rival Ethereals, Patricia Trask, and I will provide the means to do so.”

Patricia smiled, her eyes glowing purple. “That, I look forward to.”

“I think I’ve heard enough to make a decision,” the Commander said. “We can debate the intricacies of our role in the greater galaxy later, but as it stands now, we have a planet to defend and a war to win. You can clearly help us, and seem to want to, so will you assist us against the Ethereals?”

Aegis inclined his head. “I will fight on your side, and protect your soldiers and species. But I will not kill an Ethereal. But I will not stop you from doing the same.”

The Commander nodded. “Acceptable enough, Aegis. Welcome to XCOM. We have a lot to do now.”

***

Supplementary Material

The Advent Directive

Subsection 1.2: Legislative, Judicial and Executive Structures
Legislative Structure:

Overview: The purpose of the ADVENT legislature is to provide each member nation with an equal voice in matters affecting the entire ADVENT state, and to ensure that misconduct, interference and obstruction are kept to a minimum:

Number of Representatives: Each member nation shall be limited to 1 representative in the ADVENT Congress of Nations. Each representative will have equal rights and privileges, and this status can be transferred between the current Head of State of a member nation and the representative under highly specific circumstances.

Head of the Congress of Nations: The Chancellor of ADVENT will act as the head the Congress of Nations, though will only be permitted to vote in the event of a tie.

Appointment: The representatives will be decided via a democratic election, with the candidates being approved by the current Executive Branch before such an election takes place. Representatives will hold their position for four years, up to a maximum of twelve. After this they are approved for several restricted State positions which are detailed further on.

Military Intervention: The ADVENT Congress of Nations does not have binding authority on the ADVENT Military, as well as the executive branch, though laws can be passed that can affect the military itself.

Bypassing of the ADVENT Chancellor: In the event that the Chancellor of ADVENT vetoes a passed bill, it can be overridden by a three-fourths majority. In addition, the overturning of executive actions by the chancellor must simply pass a majority vote.

Judicial Structure:

Levels of Judicial Courts:
- City
  - The lowest court that will deal with local disputes and minor crime.
- Ward
  - An equivalent court to the City level, but encompassing large cities with a population size of larger than 500,000
- Region
  - The court that deals with disputes and crime that affects multiple cities in the designated region.
- Nation
  - The highest court in the ADVENT member nation that holds court on issues and crime affecting the entire nation.
- Sector
  - The court that deals with cases that affect an entire continent mass, or equivalent area.
- Global
  - The highest court in ADVENT, settling disputes and issues that affect the entirety of ADVENT.
- Supreme
  - The court that hears challenges to laws to determine if they are in accordance with the Advent Directive. Note that this court is not higher than the Global Courts.
Types of Courts:

- Civil
  - Handles non-Criminal civil disputes such as vehicle accidents, divorce, etc.
- Non-violent Crime
  - Handles non-violent crime including financial crime, white-collar crime and illegal drug usage. Covers juvenile and adult cases.
- Violent Crime
  - Handles violent crime, including murder, rape, domestic abuse, armed robbery, etc. Covers juvenile and adult cases.
- Financial
  - Handles various financial cases, including bankruptcy, contract disputes, etc.
- Appeals
  - Hears closed cases where an appeal is made to reconsider the outcome.

Judge Appointment: Judges are appointed by the Executive Branch (See Section 3 for more details), which specifically is Mayors for City and Ward-level judges; Governors for Region-level judges; Heads of State for Nation-level judges; and the Chancellor of ADVENT for Sector, Global, and Supreme-level judges.

Executive Structure:

Authority: The level of authority largely depends on the current position of the executive in question. The main ranks are as follows:

- Mayor: Oversees a city, answers to the regional governor.
- Governor: Oversees a region, answers to the Head of State.
- Head of State: Oversees an ADVENT member nation, answers to the Chancellor of ADVENT,
- The Chancellor of ADVENT: Oversees the entirety of ADVENT and the military.

Appointment: Each will be chosen via democratic election with all candidates approved by ADVENT Election Oversight (See Section 5.7).

Cabinet Selection: All overseeing members of the Executive Branch are permitted to choose their own cabinet, as long as candidates are screened and approved by their respective Agencies as well as ADVENT Intelligence.

Agencies: The Chancellor of ADVENT has the authority to appoint the heads of the various ADVENT Agencies, pending approval from the ADVENT Congress of Nations, XCOM Intelligence and the respective agencies themselves (See Section 5 for more details).

Military Usage: The Chancellor of ADVENT has command over the entirety of the ADVENT Military, Intelligence and Peacekeepers, though can be overridden in specific circumstances by all three (See Sections 6, 7 and 8 for more details).
Envisioning the Future

ADVENT Command, Switzerland

The more Saudia looked at the glowing red hologlobe, the more she wondered what the point of it actually was. It wasn’t exactly an effective way of communicating information, but then again, she supposed that looks were important to an international organization. Not that it mattered, as she wouldn’t be using that expensive paperweight for any actual work. It would serve just as well impressing the various people that came through.

She looked at the tablet in her hand detailing her itinerary for the next few days. Literally all of her time was going to be spent familiarizing herself with the inner workings of ADVENT now that everything was in full production. She’d spent time appointing people to various agencies, but hadn’t visited every site yet, which she needed to do regardless since the situation was different now.

It was only a matter of time until the first attack, and all of them were scrambling to predict exactly where to prepare for. Then there was the matter of both the Middle East and Brazil, not to mention bringing more countries into ADVENT. International opinion at the moment seemed to be taking a wait-and-see approach with ADVENT, especially Europe which was vexing, but they would likely come into the fold shortly.

On top of that there was the much smaller issue of ensuring that the world didn’t undergo a financial collapse, but fortunately, she had planned for that ahead of time and had developed some ways to lessen the impact. The Americans were not going to like it, especially the larger companies, but unfortunately for them, she needed them working for ADVENT.

But that was something she’d discuss with Jasmine in more detail. Right now she was waiting for another of her recent hires who was supposed to be arriving…she glanced at the time on her tablet. Any minute now, it seemed. The door behind her swished open and in strode her new Chief Diplomat of ADVENT, Firdaus Hassan.

Hailing from Singapore, he was, by her estimation, exactly what was needed in a diplomat of any kind. Willing to negotiate and highly persuasive, but at the same time uncompromising in fulfilling his duties. Ultimatums were sometimes needed, and they had to be delivered with conviction, which was a quality Diplomat Hassan had expressed.

“Chancellor,” he greeted cordially, a clear, but not distracting accent coloring his voice. To her mild surprise, he placed his right fist over his heart, emulating the XCOM salute she’d witnessed. Interesting how that was catching on. She supposed it might as well be standardized soon since most assumed it was the proper way to begin with.

“Diplomat Hassan,” she greeted, inclining her head. “A pleasure to meet you again.”

He smiled and placed a small stack of files on a nearby table. “You as well, Chancellor. We have quite a lot to cover here.”

“That we do,” she agreed, walking over beside him. “And now that ADVENT is official, what is the reaction?”

“As of right now, mostly positive and at worst, neutral,” he answered, pulling out a neatly
annotated map. “Public opinion is high, but that is not surprising. That being said, most of the European countries are still holding out, largely at the insistence of the EU, whose leadership is extremely wary of us.”

“Unsurprising,” Saudia commented. “So bypass them.”

“Unfortunately it isn’t as simple as that,” Hassan cautioned. “The largest European countries are tied tightly to the EU, and leaving it is no easy matter.”

“They can leave,” Saudia pointed out. “Germany is proof of that.”

“Ah, technically, Germany is still part of the EU,” Hassan corrected. “There are very specific articles that allow the withdrawal from the EU, which Germany has not triggered, but for all intents and purposes, they are not a part of it, and the only reason the EU hasn’t economically sanctioned them is because they’re worried about German retaliation, and since they have access to alien technology, they don’t want to risk a Brazilian situation.”

Saudia frowned. “Understandable, but they can still leave, yes?”

“Yes, but the process takes years, even if they wanted to,” Hassan said, stepping back. “And both of us know there is no time for that. However, I don’t think we need to worry about that, provided that we appeal to their natures.”

“And I suspect you know what those are,” Saudia guessed, though she could make some assumptions of her own.

“Self-preservation is all well and good,” Hassan said. “But the fact is that at the moment, most of Europe is insulated from the greater alien threat.”

Saudia sniffed. “They’ll feel differently when the attacks hit.”

“I agree,” Hassan nodded. “But in the meantime, we need to show that ADVENT is superior economically and stronger than anything the EU can provide. And beyond the technology, military power and protection we can offer, you are looking into a new backed currency for ADVENT, correct?”

“Yes,” Saudia said.

“That will likely be just enough to convince them,” Hassan said with a smile. “All that remains is for them to simply ignore the EU. Once enough countries take part, they will collapse and the rest of Europe can be assimilated. Once the larger countries like the UK, France and Italy join, the smaller ones will quickly follow suit out of fear. Those will not be difficult to convince.”

“That covers Europe,” Saudia said, nodding. “But it doesn’t sound like those will be the source of any problems.”

“unlikely,” Hassan agreed. “As you have probably guessed, cooperation with China is unlikely to happen. Let me just say that they are not exactly happy that we’re encroaching on their territory. Now that Taiwan and all of ASEAN is protected by ADVENT, they consider themselves “boxed in.””

“Correct,” Saudia said. “But China isn’t stupid. They know they can’t win on their own.”

Hassan scratched his chin thoughtfully. “I’ve had dealings with the Chinese government, so here is what I believe their goals are: Yes, they know they can’t win the war on their own. They don’t
intend to. They want to survive it independent of ADVENT. And truthfully, should things remain static, they are one of the few nations who could do it.”

Saudia appraised the hologlobe. “They have manpower, alien material and economic clout. I wouldn’t imagine they would survive whole…but I see your point. They may value independence over assimilation.”

“China does not want to answer to any foreign power,” Hassan confirmed. “More to the point, they are more concerned that ADVENT would remove the Chinese government altogether and install the Taiwanese back in power.”

“Considering that Taiwan is technically the true government of China, I would not be opposed to that,” Saudia muttered. “Though that would be a matter for Congress, not me.”

“It’s not just that worry either,” Hassan continued, pointing towards west China. “There are countries that China has taken over that want their independence. Should China become part of ADVENT, there is a high likelihood that territories like Tibet will be granted independence from Chinese control. Thus leading to a crash of Chinese influence in the world, which they have come to enjoy. They are a global superpower and have enjoyed the benefits that brings, so it is understandable they would be loath to give that up under ADVENT.”

“Selfish,” Saudia muttered under her breath. “And a problem. China will be vital when the aliens begin concentrated attacks. We can’t lose that country because of idiotic governments.”

“Then might I suggest we make them more…amenable to our suggestions?” Hassan asked, raising an eyebrow. “China cannot be self-sufficient forever, but if they hold onto the wealth of trade agreements, imports and exports, they will last as long as we do.”

Saudia got an idea of what he was aiming for. “Starve them out,” she said approvingly. “Cease all trade with China until they join ADVENT. Supplement whatever we lose with that of other nations in ADVENT. Gradually, of course. Ceasing trade with China is impossible to happen overnight.”

“Agreed,” Hassan said. “Which is why I would suggest you make preparations for such immediately. I would prefer the Chinese ambassador know we are serious before we give him an initial ultimatum.”

“You expect him to refuse,” Saudia noted.

“Of course he will refuse.” Hassan waved a hand dismissively. “But the longer the war progresses, China will become weaker and weaker. They must be isolated completely first though before they will even contemplate joining us.”

“And in the worst case, we have the Directive itself.” Saudia said.

He frowned. “Yes, I’m aware. But I would be extremely careful. A war with China would be disastrous now.”

“You don’t need to remind me,” Saudia said, rubbing her forehead. “Two now are bad enough.”

“Though the outcome in the Middle East will likely end up benefiting us,” Hassan said, motioning to the region. “While the war itself is…regrettable…it removes the issue of the Middle East and the instability within it.”

“I somehow doubt it,” Saudia muttered, narrowing her eyes at the hologlobe. “For some reason, I doubt the populations are going to be receptive to Israeli control.”
“Of course they won’t,” Hassan amended. “But their political threat will be neutralized. And the Peacekeepers will deal with any unrest. Brazil is a larger concern for us, since Marshal Luana is not exactly acting in accordance with the Directive.”

“I’m aware of that,” Saudia said, grimacing in recollection. “The news is being overshadowed right now fortunately, but she is not doing wonders for our public image down there.”

“I will warn you that if she is to continue unrestricted, it will turn South America against us,” Hassan warned, lacing his fingers together as he appraised her. “Unfortunatly the good Marshal has a low opinion of diplomats and was not receptive to my suggestions. I’m afraid that the position has gone to her head.”

“I’ll deal with her myself,” Saudia said. “If she continues, she needs to be aware of the consequences. I believe she isn’t aware that breaking the Directive is grounds for immediate arrest by the Peacekeepers.”

“Oh, more likely, believes that she is too important to be replaced,” Hassan suggested with a smile. “In the meantime, I will attempt to ensure that she doesn’t start any additional unnecessary wars.”

“Luana will be dealt with,” Saudia promised. “What of North America?”

“A more challenging issue than I first anticipated,” Hassan admitted, looking to the hologlobe. “Mexico is remaining neutral for the moment and will likely continue to do so until we establish ourselves more firmly. They are moderately tied to China, though not exactly friendly with them. Should we begin isolating the Chinese, I believe that will make Mexico more amenable to joining ADVENT, especially if we can provide everything they would lose from the Chinese.”

“I would prefer they join sooner than later,” Saudia said. “They would be useful for agriculture exportation. But we can do for quite a while without them. What other challenges are there?”

“As expected, there has been an extreme amount of legislative backlash to President Treduant more or less unilaterally taking America into ADVENT,” Hassan revealed, sounding slightly amused. “Public opinion is extremely torn at the moment, and amusingly enough, it has had the effect of splitting the bases of both Republicans and Democrats.”

Saudia raised an eyebrow. “How so?” She’d always found the polarization between both main parties of American politics morbidly fascinating, so was curious how they were being affected.

“The Republicans are split between those who support it for the sole purpose of fighting the aliens, and then you have the odd mix of constitutionalists who believe her actions are ‘un-American’ and ‘traitorous’, and then the conspiracy theorists, anti-globalists and other extremists of the Republicans. An odd alliance if I must say so, but they are united in this.”

He motioned aimlessly with a free hand. “And on the other side, the Democrats are having somewhat of a crisis of faith, with the supporters of a more interconnected society and those also prioritizing the aliens supporting Treduant. And of course the opposition are, amusingly enough, angry at her for the same reason as Republican constitutionalists, seeing her as a ‘traitor’ and of course there is a sizable section that believes ADVENT is equivalent to a fascist government that will abuse its power through force.”

“That is a drastic generalization,” Saudia said, not particularly concerned with that point. “It’s certainly more authoritarian than the former United States government, but I do not see that as a bad thing.”
“Speaking bluntly, Chancellor, what you believe doesn’t matter,” Hassan stated. “Perception is key, and our initial actions are going to either dispel or reaffirm fears. Protestors are already organizing in the United States, and it is likely Congress is going to attempt impeachment.”

Saudia snorted. “The United States government has no power anymore. They cannot remove Treduant even if they wanted to, since their military and agencies are being incorporated into ADVENT. I’m not concerned with their opinion. If they present issues, there are procedures in place to deal with them. That’s what the Peacekeepers were established for. The laws are public, and they have no excuses if they break them.”

Hassan sighed. “Correct, but I’m warning you that full…enforcement…of the laws is not going to be perceived well my certain other countries. Namely Canada at the moment, since they have flatly refused to consider joining because they also see ADVENT as ‘An authoritarian superpower with the means and potential to silence dissent in the media, peaceful protest and selective candidacy for positions of government.’”

“Fear-mongering,” Saudia dismissed with a wave. “If they actually bothered to read the regulations on everything they supposedly have problems with, they would realize that ADVENT only targets media outlets who continuously publish false information, and deal severely with violent protest. And that anyone can apply to run for a government position, but unlike other previous iterations, there are actually standards that will need to be met. Money is no longer a guaranteed means of winning elections. And said candidates would be screened by an independent agency, not the Executive Branch.”

“I don’t disagree,” Hassan said tactfully. “But it is an issue of both trust and uncertainty. You are assuming that everyone in ADVENT will follow the regulations, but the Canadians see the possibility of abuse as too high. Frankly, Chancellor, it is not an entirely unreasonable position, and one you can’t disprove by words alone.”

“Perhaps not,” Saudia nodded. “Perhaps I’ll travel there myself and explain in more detail.”

“I would not suggest that unless it is an emergency,” Hassan advised. “That’s what I’m for. The aliens are a more pressing issue than Canada at the moment, and the situation is unlikely to change. There are better uses of your time than winning the Canadians over, and even if you went, they likely won’t be convinced by you.”

Saudia was silent for a few moments. While he was objectively right, the Canadian proclamation against ADVENT seemed almost like a dare for her to defend it. It was a challenge she didn’t want to ignore, especially since she knew she could refute it easily. But she supposed she might as well get used to the reality that she couldn’t manage or respond to every criticism of her or ADVENT.

“I suppose you’re right,” she said, turning back to him. “I believe that covers the diplomatic state of the world, though you also mentioned you had a breakthrough with Prime Minister Sakata?”

He brightened. “Yes, what I hope to be the first major ADVENT diplomatic success. Prime Minister Sakata is certain he can bring Japan into ADVENT, though wants to speak to you first before making it official.”

“Excellent,” Saudia smiled. “I want to do it as soon as possible then.”

“You are taking a trip to Asia within a few days, yes?” Hassan asked. “Should I add a short detour to Japan during that time to your itinerary?”

“Certainly,” Hassan promised with an easy smile. “A good start here, I think. I look forward to what else we can do.”

“As do I,” Saudia said, picking up her tablet and adding that to her list of things to do. One down, quite a few more tasks to complete.

***

Brazil, ADVENT Research Facility

One of the benefits of transferring EXALT resources into ADVENT was that all that had to be changed in most cases was the logo and bringing in new people. Brazil had served as the center of EXALT research, so Saudia saw no reason why that needed to change now. It was somewhat of a relief to not have to be as careful in selecting potential scientists, since secrecy was no longer a concern.

But still, the number of people who had the qualifications to lead research into the alien technology was limited, even with XCOM furnishing much of their own research to assist. Progress was, as Darian promised, ‘advancing’ but she preferred to see it for herself. The glass doors of the labs slid open soundlessly and she strode in, breathing in the sterile air.

Many new scientists filled the spaces that had once been exclusively held by the Eridan family, but times were changing and people had to be moved around. Though Saudia had ensured that all who were at this particular facility were experts in their field. However, this time she only wanted to speak to two of them who were standing on the end, one familiar, and the other new.

The two men seemed to be having an intense discussion, though paused as they saw her approach and turned to face her. “Chancellor,” Tygan greeted, inclining his head. “A pleasure to see you again, and I must congratulate you on your promotion.”

“That sentiment is shared, Chancellor,” Kim Munju, the new Chief of Alien Research, said. The aged scientist clearly had a mind sharp as ever, despite his graying hair, if the reports Supreme Leader Gwan had sent were true. Outside of XCOM, he was probably the only one with as much comparable experience with raw alien technology. “I have, of course, been working since my appointment, though there are certain issues that need to be solved.”

“Yes,” Tygan said slowly, giving his new colleague a disapproving look. “There are certain… disagreements… I have with Dr. Munju regarding our path forward.”

Saudia nodded. “Explain.”

“It concerns the MELD substance,” Kim explained, picking up a tablet. “Our current supply is limited, and thus that means aspects of research conducted must be prioritized until we either recover more, or XCOM provides us with some of their stockpile.”

“Nevertheless, that would not dismiss the current dilemma,” Tygan interrupted in his borderline robotic voice, raising a hand. “Were this another substance, there would be a clear line of authority. But as MELD relates to genetics as well as… other applications… this needs to be decided by either you or Dr. Eridan.”

“Noted,” Saudia said. “Dr. Tygan, where would you prefer we focus our research?”

“Cheap and simple genetic modification,” Tygan revealed, picking up a tablet and handing it to her. “I have conducted previous research that has shown the ability of the MELD substance beyond simple military applications. With a sufficient investment, I theorize that we could eliminate every
disease that has befallen humanity. Cancer, AIDS, Malaria, infertility, any genetic deficiency or virus could be eliminated with just a small application of MELD.”

That…was extremely significant. Saudia had admittedly not expected a focus on the potential civilian aspects of MELD, but it made sense. “How certain are you of this?” She asked, looking over the formulas and images, trying to understand them. It was simply gibberish to her, but she doubted Tygan would give her false information.

“Certain enough to believe it warrants further study,” Tygan reaffirmed, clasping his hands behind his back. “I am, of course, aware of our limited supply. I would not advise it unless I was confident in my theory. As you can imagine, the implications have a global impact, and of course they could be modified for any alien contagions we encounter.”

“An admittedly useful application for our soldiers,” Kim begrudgingly said, though he didn’t seem particularly pleased.

“In addition, I have not forgotten our military,” Tygan continued. “XCOM has clearly had success integrating non-human DNA into their soldiers, and I want to continue work, though in a way that increases the survivability of our soldiers. Thus I propose we open research into the regenerative capabilities of various animals, such as the jellyfish, and apply the rapid healing to our soldiers.”

That was an application that seemed almost too good to be true. “Is that even possible?” Saudia asked, crossing her arms.

“Anything is possible, Chancellor,” Tygan answered. “But the theory of integrating non-human DNA into humans was proven by XCOM. MELD in truth is highly advanced nanotechnology, and these nanites can be programmed to do whatever we wish. Imagine soldiers whose skin mends in seconds from burns or cuts, or bones that revert to a pre-programmed state whenever broken. With enough modification, one soldier could be almost impossible to kill.”

Tygan held up a finger. “This can also be applied to our equipment as well. MELD nanites could be programmed to fix broken or disabled parts, and if we truly wanted to invest resources, machines could be built to manufacture equipment or weapons in the field. The possibilities are many, Chancellor.”

Given what XCOM had accomplished, Saudia was sure that it was possible, and she was rather impressed by the line of research Tygan proposed. “Excellent work, Dr. Tygan. I’m curious as to how there can be dissent here? Dr. Munju, would you elaborate?”

“It is not a disagreement about the usefulness, but prioritization,” Kim disputed, inclining his head briefly as she turned her attention on him. “While curing disease and making our soldiers difficult to kill have nice, packaged and predictable results, they do little to solve our ultimate problem. What is our priority, Chancellor? Improving the quality of life for Earth, or stopping the aliens?”

Saudia frowned. “If the aliens aren’t stopped, the quality of life won’t matter.”

“Exactly,” Kim said approvingly. “While Dr. Tygan’s ideas are well suited for times of peace, one, we are at war, and two, they lack imagination. They are generic and predictable solutions when the application of MELD is only limited by what we can dream.”

He handed her several pictures of alligators, spiders, beetles and snakes. “If we wish to truly protect our soldiers, we cannot take half-measures and look to the superior qualities of other creatures. Alligator skin to protect soldiers from chryssalids and projectile attacks, adapting the web shooting of spiders and the venom projection of bombardier beetles and cobras to our own soldiers. XCOM
has taken the appropriate steps and it seems pointless not to continue their work to its fullest potential.”

“And at that point, what exactly do we have left?” Tygan demanded. “Can one who undergoes such changes even be considered Human any longer?”

“Humanity is not some static state,” Kim dismissed. “Why must we confine ourselves of one form when there are others we can become which are superior? We have the capability to do so, Tygan, why are we less human for enhancing ourselves. We are not the apex species here, but we have the potential to be.”

Saudia was certainly not opposed to integrating foreign DNA into humanity…but even she wasn’t entirely comfortable with the extreme level of conversion Kim was proposing. The Commander would likely see little issue with it, but she didn’t subscribe to that philosophy. At some point the human in question would not be technically a human, but some strange hybrid. Not inferior, but certainly not human, and definitely not more.

“In addition to the biological side, there is that to do with cybernetics that has not been fully explored,” Kim continued, handing her some sketches. “The MECs are one of the great achievements of XCOM that we should attempt to emulate. The robotic ones we currently plan on using are…sufficient, but lack a human mind to command. However, if we are to utilize MELD on vehicles and other heavy equipment, I do not think it should be focused on human integration. But for humans, with MELD we can craft a superior human, enhanced with prosthetics stronger and better than their current limbs.”

“And again at what point are we not improving soldiers, but merely creating robotic drones, who are barely different from machines?” Tygan demanded. “Why not just create machines if that is what you believe is superior?”

“Because the human mind is what is the essence of our species,” Kim stated fondly. “It is superior and cannot be simply replaced by a machine. There is a reason we have human operators behind all machines, because we can adapt and plan in ways a machine can’t.”

Kim waved a hand. “To continue beyond the scope of simple biological and cybernetic modifications, there is an aspect that even XCOM doesn’t cover, or at least one I haven’t found.”

“Which is?” Saudia asked.

“Weaponization,” Kim said with an eerie smile. “MELD is composed of nanites, so why not simply program those nanites to hunt and kill?” He held up a finger. “One MELD nanite is invisible to the naked eye, but with the correct programming it alone is enough to burrow into a brain and explode or tear it apart. What defense do the aliens have against that? Imagine battlefields saturated with a cloud of nanites that kills any alien that enters it, or better, hunts them.”

“And I only see potential for our own destruction in that application,” Tygan interrupted, wrinkling his nose. “The application holds merit, but the risks far outweigh the potential gains. We are then one mistake from either killing our soldiers, or worse, our species. And what happens, Dr. Munju, if a non-ADVENT state acquires these weapons or schematics? You have just introduced a weapon of mass destruction that could be nearly impossible to stop.”

Tygan shook his head. “No, Chancellor, I can support weapons that kill the aliens, but I cannot support a nearly unstoppable weapon that could be easily abused, or worse, turned against us. Even as a last resort, I maintain that option should never be used. MELD is a Pandora’s Box and if we do
not treat it as such, we risk our own destruction or worse.”

“And if we do not take every advantage, we are guaranteed our destruction!” Kim shot back. “If we have an application that can kill Ethereals, we should use it! Not shrink back in fear of what might happen. The worst case scenario can be applied to everything Dr. Tygan, do not hide behind it as a means to stall progress!”

“And is the possibility of extinction not worth extra consideration?” Tygan demanded, steel creeping into his voice, though he did not raise it. “Would you take that gamble?”

Kim fixed him with a cold stare. “If the future of our species is at stake, absolutely, doctor.”

“Enough!” Saudia commanded, raising a hand. Once she had their attention, she lowered it and continued. “You have both done well, and your ideas have merit, all of them. But you are right, Dr. Munju, we must prioritize. At the moment, I agree that we need to focus on keeping our soldiers alive. Dr. Tygan, I want you to begin research into applying regenerative capabilities to our soldiers and equipment.”

She looked towards Kim. “Take your most promising blueprints for cybernetic modification and begin research immediately. Should Tygan’s research prove successful, we can begin looking into other possible integrations. I also agree with Tygan regarding a nanite plague. While certainly useful, I am not confident it is safe enough to develop, and we are nowhere near the point where such a measure should be considered.”

He pursed his lips, but nodded. “Understood, Chancellor. Though I disagree with your and Dr. Tygan, your reasoning I can understand.”

Saudia narrowed her eyes. “And I am going to clarify that you will not open any projects related to weaponization of the MELD. Do I make myself clear?”

He nodded. “Of course, Chancellor. I will perform my tasks as directed.”

“Good,” Saudia stepped back. “Don’t waste any time. I suspect there are only days until the aliens attack and we must be ready to respond as soon as possible.”

“Yes, Chancellor,” Tygan affirmed, inclining his head. “I will begin research immediately.”

“I expect updates,” Saudia said, turning away. “Good luck to both of you and don’t forget we are counting on your results.”

“Trust me, Chancellor,” Kim promised, his eyes never leaving hers. “All of us are aware of the stakes. I assure you that we will not fail as we have no choice.”

***

Seoul, South Korea

“[Daddy? Wake up, daddy!]”

Duri Eun-Jung groaned as the sound of his daughter’s voice reached his ears. “[What is it, Mari?]” He muttered sleepily, not opening his eyes. “[Daddy’s sleeping.]”

He heard her giggle at that. “[The soldiers are marching,]” she said excitedly. “[They just passed us.]”
That drew him further from his stupor. They were marching? Why? Adrenaline shot through him instantly as the possibility of an attack reached his mind. No! No…calm down. If there’d been an attack there’d be alarms blaring and he’d be getting frantic calls from command. Still…he looked to the clock resting on the nightstand. Just after eight, still pretty early.

Which meant it was probably going to be a busy day.

He rolled his head back on the pillow until he was looking at the blank ceiling. “[You want to go watch them march?]”

He looked down to his eight-year old daughter who returned his gaze with bright eyes, unabashedly excited at the possibility. She’d always been fascinated with anything involving the military and he’d done his best to accommodate her, even if sometimes he was woken up on days he would really prefer to sleep in. “[Yes!]” She said excitedly. “[Can we? Before they finish?]”

“[Yes, sir!]” She said enthusiastically, snapping into a mock salute. The seriousness of her expression was extremely cute and he resisted the urge to chuckle, only waving her off as she quickly dashed off.

The sheets beside him shifted and Sandara opened her eyes blearily at him, careful not to wake their sleeping five-year old daughter who had once again snuck into their bed in the middle of the night. Nabi clearly preferred their bed to her own, and she was still young enough where he felt fine permitting it. Especially these days, the children needed all the comforting they could get.

“[Mari?]” She asked knowingly with a smile gracing her beautiful face.

“[Soldiers are marching and she wants to go watch them,]” he answered, reaching over and brushing a lone strand of black hair out of her eye. “[They’ll be wearing the new armor too, so I’m preparing for a lot of questions.]”

Sandara’s face immediately became concerned as she realized the implications. “[Early for them, isn’t it.]”

It wasn’t a question.

“[Seems so,]” he nodded grimly. “[There’s a good chance-]”

“[Don’t say it,]” she interrupted softly. “[Just…not until we know for sure.]”

“[Alright,]” he promised, leaning over and giving her a quick kiss on the forehead. “[Now I better not keep Mari waiting. I gave her ten minutes. Won’t look good if she beats me, would it?]”

Sandara gave a forced chuckle. “[No, it definitely won’t. Go on, I’ll see you later.]”

Careful not to disturb Nabi, he got up from the bed and quickly went into the restroom to make himself somewhat presentable. Throwing water on his face wiped away any last strands of fatigue and he stared at the reflection in the mirror, something he’d fallen into doing recently. The man that faced him was just another black-haired Korean, maybe with skin a shade darker than normal, brown eyes and a short nose. Not anyone unique by any means.

Duri Eun-Jung, alien fighter, defender of humanity. Not once had that been a title he’d ever thought he’d ascribe to himself, yet here he was. Of all the enemies he’d prepared to fight, the
North, the Chinese…aliens had never been on that list.

And yet, here they were. It was what he and his soldiers had been training for, but there was a difference between preparing to fight humans, and something alien. But he supposed soon he’d find out just how good they really were.

In the end, he supposed it didn’t matter what he looked like, because the only face that mattered was the black visor of the ADVENT Captains, the uniform of which stared at him though the mirror, propped up in preparation for actual use. While he wasn’t entirely comfortable wearing what had previously been North Korean armor, he had to admit it was better than anything he was used to.

“[Soon,]” he muttered to the armor as he got dressed, and put it out of his mind as he prepared to spend what might be the last outing with his daughter for a while.

Perhaps forever.

***

Russia, Center of ADVENT Engineering and Development

This meeting was one Saudia was personally interested in since it was one of the few where she’d felt confident placing a former EXALT member in charge. Feng Mercado was the most brilliant engineer EXALT had, and she could not find another who could really compare, though there had been several who’d come close and she’d given them appropriate positions.

However, she was aware that some of the other engineers were not exactly pleased to be working under someone they hadn’t heard of until several weeks ago.

This current installation had once been EXALT, similar to the Eridan research facility and had similarly been converted for ADVENT usage. Not as nice as the one that had been in China before XCOM had raided it, but it was more than sufficient for the development of experimental equipment and concepts.

The machines were humming and clanking in the background, which she tuned out and headed for two figures who were standing in front of a holographic projection displayed in red light of what she could only assume was a vehicle of some sort, though she suspected it was not to scale. Feng stood proudly in front of it, his hands clasped behind his back and looking as professional as ever in his suit with the ADVENT emblem proudly embroidered on the pocket.

Just by looking at him, most would imagine him to be too young to hold as much experience as he had. A popular stereotype was that Asians didn’t age, which Saudia found amusing, but it was oddly true for Feng. Completing the picture was the ever-neat moustache that somehow worked with his professional image.

In contrast was the woman standing next to him, who wore ADVENT work attire stained with grease, soot and other accumulated grime from the workshops. She definitely not be called neat, but it was definitely clear she wasn’t concerned about getting her hands dirty, although Saudia did note her hands were clean. Good that she had made an effort not to look like she’d just come from the workshops.

Saudia wouldn’t have really minded either way. The Chief of Fabrication was someone she expected to continuously be testing the equipment Feng designed and helping refine it. Ofelia De Leon had been somewhat of a surprise to find, hailing from Panama, but her resume and listed
experience was more than enough for Saudia to enlist her help in ADVENT.

“Chancellor,” Feng greeted smoothly as she approached. “A pleasure to see you again.”

“Same,” Ofelia grunted, the Hispanic woman adopting a similar stance to Feng as she walked up.

“At ease,” Saudia said, waving a hand indicating they could relax. “I assume you have updates for me.”

“That we do,” Feng confirmed with a smile. “Though I’ll let dear Ofelia here begin.”

“Stop calling me that,” Ofelia growled, stepping forward to the console controlling the massive holodisplay. She cleared her throat and continued. “We have begun full production on the initial iterations of the armor for our military, as per your directions.”

The holograms depicting the various armor sets appeared. “Already we’ve severely exhausted our supply of alloys, even diluting the content mixed with metals from Earth,” she continued, pointing at the sets. “But it will survive at least one direct blast from plasma weapons, and provides more than sufficient protection from ballistic weapons.”

Saudia raised an eyebrow. “You aren’t happy with it?”

“Of course I’m not,” Ofelia stated emotionlessly. “Our armor needs to survive more than one shot. But until we get more alloys, that’s not going to happen so I need to make do with what I’ve got.”

“The good news is that we have enough to outfit most of our military,” Feng interrupted. “Which is a more important point. It can be improved later, Ofelia, so no need to trouble yourself over it further.”

Ofelia ignored him and continued, keeping her gaze fixed on Saudia. “We’ve also been provided the Shieldbearer prototype, though development is being delayed until Dr. Mercado has refined the design. Until then, most of the Russian Shieldbearers will be helping Israel subdue the Middle East.”

“The Russians had an excellent concept,” Feng elaborated on, a smile on his face. “But their iteration is...flawed. The shielding technology is primitive and borderline useless, more a fault of the vision of the Russians than their engineers. It has the potential to be one of our most powerful units, but not as it currently stands.”

Saudia didn’t change her expression. “Elaborate.”

“Of course,” he continued without missing a beat. “The Russians conceptualized the Shieldbearer armor as a means to create some kind of invincible soldier. Understandable, but it has a severe lack of creativity.” Feng waved aimlessly. “Heavily armored units have their place, but it makes little sense to have multiple kinds. The Lancer Division fulfills that role quite easily.”

Feng pressed a button on the console and the suits were repositioned in a square, with the Shieldbearer in the middle. “I see a much more useful role the Shieldbearers can perform,” Feng continued. “The shield could be applied to other units beyond the unit itself.” He pressed another button and a simulated red shockwave emitted from the Shieldbearer and each armor set was overlaid by an additional barrier of red.

“I am still working out how to make it work correctly,” Feng admitted. “But I’m confident I will solve it in weeks. It is certainly possible. Ofelia?”
“Dr. Mercado is correct,” Ofelia confirmed with a nod in his direction. “Initial testing proves the theory is sound. The issue is both the range and power of the shield itself is extremely low.”

“Good enough,” Saudia nodded. “A unit like that could be extremely useful. I assume our weapons are also up to standard?”

“Without a doubt,” Ofelia confirmed, for the first time smiling brightly. “Arms manufacturing is not an issue. Gauss weapons can be developed without alien alloys in all variants.”

“Are there any downsides?” Saudia asked.

“Only in durability,” Ofelia clarified. “We were careful not to compromise power, but the weapons will eventually fall apart with repeated use. But we know exactly how long, and Dr. Mercado has devised a recommendation for the phasing out and renewal for the ADVENT military.”

“No need for such formalities, Ofelia,” Feng interrupted. “We’ve used first names so far, no point in changing for the Chancellor. Moving on, we’ve also looked into applying the laser weapon technology of XCOM.” He sniffed. “It is a highly inefficient implementation if I do say so myself.”

Well, wasn’t he confident. Saudia was amused at that, but kept her expression neutral. “How so?”

He pressed a button on the console and a holographic replica of a laser weapon appeared. “The problem with laser weapons is the incredible amount of energy they consume,” Feng continued. “In all other aspects, lasers are superior to gauss weapons against unarmored targets and only require an instant to kill. XCOM…” wrinkled his nose. “They like to use their laser weapons as equivalents to crude cutting tools. Wasting previous energy in the hopes they slice an alien in two.”

He shook his head. “The energy output makes it inefficient to put in human hands, else soldiers would run out of power in minutes. I am unsure how XCOM overcomes this issue, but it is irrelevant as I have devised a far more effective solution.”

He nodded to Ofelia who pressed another button on the console and the image of a bipedal mechanical unit appeared. Ah, right. The result of the American Mechanized Defense Unit Project. A ten-foot metal robot in white plating that clasped a massive machine gun all controlled by an angled and clearly robotic head. A rocket launcher was also attached to its back for good measure.

“Like the Russians, the Americans had the right concept,” Feng said, motioning proudly to the MECs. “And unlike the Russians, their vision was appropriate for what they wanted. I have simply updated the model to incorporate laser weaponry. Unlike humans, machines are precise and do not waste without purpose. I can think of no better application of it than to the machine itself.”

“Testing overwhelmingly supports this,” Ofelia added. “The MDU was tested and has eliminated up to six targets within two seconds by only using a fraction of the energy and with response times far beyond what a human can accomplish.”

“Ah, but wait, there’s more,” Feng smiled and the image of an armored turret appeared. “I simply adapted the technology for a turret design of mine. I believe we could easily install them on our bases, and since they incorporate laser technology, would eliminate most threats instantly. Lasers are near-instantaneous after all, and it only takes a millisecond for one beam to pierce an opening.”

And this was why she’d put him in charge. Not even XCOM had thought to employ the technology they had at their disposal in this way. “Excellent work,” she complimented. “Both of you. How soon will production begin?”

“Up to you, Chancellor,” Ofelia said with a shrug. “Both basic models can be built without using
alien alloys, though they will be substantially weaker, but incorporating laser weaponry will consume a portion of our stockpiles.”

“I want at least a several dozen fully upgraded MDUs,” Saudia said. “We need some to combat the aliens. But I also want those turrets at every major military installation, especially Japan and Korea, do not worry about fully armoring them. Is that feasible?”

“Certainly,” Feng said. “Earth metals are not difficult to come by, and the hit to our stockpiles for the laser upgrade will be negligible if they win us wars. Also,” he raised a finger, and several more variants appeared. “I’ve also taken the liberty of designing several additional types to fulfill other roles. One specializes in long-range combat,” he motioned towards a MDU with the rocket launcher extending several feet above it, and holding what appeared to be some kind of large sniper rifle. “And another utilizes that rocket launcher more frequently.” She looked to the unit in question which had a much larger rocket launcher attached to its back, and smaller ones built into the arms as well. It didn’t carry a weapon.

“Again, excellent job,” Saudia said approvingly. “Is there anything else?”

“That there is,” Feng said, scratching his chin. “For the immediate future, we will make do with the vehicles and aircraft currently, though I have made improvements incorporating Gaussian and laser technology, but there are no new models. But I am aware that more will be needed, and one such prototype I’ve developed is the ADVENT Troop Transport.”

The hologram changed to the vehicle she’d seen walking in. It appeared to be a smaller adaption of a helicopter body, but instead of any blades or landing gear, there were four pillar-like appendages attached to the sides, two in the front, two in the back. “As it stands now, current technology is ill-fitted for quick and safe deployment,” Feng continued, motioning to the vehicle. “This prototype would allow rapid inserting into hot zones within fifteen seconds or less and would be able to withstand barrages from enemy fire. I’m looking to incorporate aspects of the Shieldbearer technology into it as well, perhaps when soldiers deploy.”

He shook his head. “Plans for the future. But the Troop Transport would be one of the fastest aircraft, comparable to an XCOM skyranger in allowing rapid reinforcement from distant garrisons. And it will not be run using traditional fossil fuels, but instead a renewable source that I expect will become more common.”

“Elerium?” Saudia guessed, since the number of fuels that fit that was very small. She wasn’t sure that the strange alien substance was a fuel, but it had powered quite a few alien weapons and equipment, so it must emit some kind of energy.

“Correct,” Feng said with a nod. “Unfortunately, we are still in the process of learning how best to utilize it. XCOM’s research is…limited, and it will take some time to understand it. But when we solve the mystery, I will have the Troop Transport ready to deploy.”

“Keep me appraised,” Saudia ordered. “But again, both of you have done exceptionally well. Keep up the good work and if you need additional help, be sure to request it.”

“Oh, don’t worry,” Feng reassured her with a smile. “We will not hesitate, but if I may make a suggestion, please ensure we win the initial battles. Until we have a way to recreate or synthesize the alien alloys, our output will unfortunately be limited.”

Saudia gave him a humorless smile. “Rest assured, Dr. Mercado, I have no intention of losing this war.”
Japan, Tokyo

The Tokyo Metropolitan Government Building was one of the most interesting buildings Saudia had seen. There was something different about its architecture that made it stand out from the buildings around it, beyond that it was where the local government of Tokyo met and deliberated. It also made for an excellent spot to meet between two world leaders.

Prime Minister Sakata had certainly not spared his Security Police, since she’d been under the eyes of at least six officers she had seen at all times, and four were escorting her now. It made sense, though it was slightly annoying being barely able to move without bumping into one of them.

But better that than being assassinated.

The elevator dinged and it slid open. One of the officers motioned for her to exit and she followed his lead into the hallway. She was unfamiliar with the architecture, but trusted the officers would let her know when she was in front of the right door. Sure enough, one of the officers stopped her in front of a nondescript room. “This way, Chancellor,” he said, and unlocked the door with a key.

“Prime Minister Sakata is inside,” the officer said, stepping back. “We will remain here.”

She nodded and opened the door to step into what seemed to be nothing more than an ordinary conference room with a large oak table with chairs, and floor-to-ceiling windows displaying the vast expanse of Tokyo. Prime Minister Reizo Sakata of Japan stood facing the window, and immediately turned to her as the door opened. Sakata was not an old man, but he looked aged now compared to the pictures Saudia had seen, which was hardly a surprise considering the burden he must be facing.

“Chancellor, welcome,” Sakata greeted warmly, extending a hand which she took. “Thank you for speaking with me.”

“How altruistic,” Sakata commented dryly. “But it is appreciated nonetheless. I understand your time is likely limited, so I will get to the point. I have addressed the Diet and we believe joining ADVENT is in our interests.”

What she’d expected. “On behalf of ADVENT, I would be privileged to accept,” she said.

“And what would be the immediate effect?” Sakata asked slowly. “We are aware of the changes to our government that would be need to be made, but those will take time.”

Saudia clasped her hands behind her back. “The immediate effect would be the insertion of soldiers into Japan. I am certain you have guessed it, but we also believe the aliens will likely strike Japan next and we need to prepare. Much of civilian population would need to either enlist or evacuate.”

“A conclusion we have come to as well,” Sakata confirmed grimly. “There are bunkers that exist from World War II we could utilize, but those are insufficient to house the thousands of civilians that occupy just Tokyo. But it is good that your priorities are in the right place.”

“We have little time to waste,” Saudia told him. “I will be meeting with our Military commanders and the respective heads of North and South Korea as well as America so we can prepare. Now that Japan is with us, we will expect you there to help coordinate the defense.”
“A task I am willing to undertake,” Sakata promised, nodding. “The evacuation will take time, though. Several weeks at least.”

Saudia pursed her lips. “We don’t have that kind of time. If there is no other way, evacuate the coasts first since those will likely first fall under alien attack. Realize that we’re expecting an attack within days, not even a week. Fail to act in time and thousands will die.”

A single nod was her response. “With ADVENT’s help, we might be able to do it.”

“See to any other arrangements you need to make,” Saudia advised. “I have one stop to make in America and then will be coordinating with our Military until an attack happens somewhere.”

“I will inform the Emperor of our decision,” Sakata said. “An address by him will grab the attention of the public and perhaps lower panic.”

“Whatever you feel is appropriate,” Saudia said. “And—“

“One more thing,” Sakata interrupted, raising a hand. “I will also be announcing our decision immediately after this. Since you are here, I would like you to join me as a public statement of unity. It will certainly solidify our agreement internationally and the public deserves to see the woman leading the world.”

Saudia shrugged, not bothered by the idea either way. “If you insist, though I have no speech planned.”

“A pity,” he mused. “I was quite impressed with your address in Geneva, but in this case it isn’t needed. Just a few minutes afterwards posing for cameras, then you can be on your way.”

“Let’s do it,” Saudia said, inclining the head. “Our timetable isn’t getting any shorter. Japan is on borrowed time and I would prefer not to waste it.”

“I agree,” Sakata said with a smile, moving past her. “Then let’s go.”

***

New York, United States of America

The city was still recovering from both the alien attack, and the bombing of the UN Headquarters, but much of it still remained, and Saudia had wished she had made a trip to visit it at least once during her tenure as Director of EXALT. But the city was still impressive to her, even if it was clearly less busy than was typical.

There was also a franticness to the people walking around; there was no slow walking and enjoying the sights. Saudia had noted that it was not uncommon for people to glance up at the sky every once in a while, as if waiting for another UFO to come and begin bombing them. In general people seemed only interested in getting from one place to another, otherwise feeling exposed outside.

She could definitely understand that feeling, though was confident that nothing would happen today. Saudia intended her visit to be low-key here, given the current state of America, so was just wearing regular civilian attire which she knew looked odd when she entered one of the skyscrapers and was soon surrounded by well-dressed professionals.

The receptionist raised an eyebrow when she told her the appointment she had, but just shrugged when it appeared in the system. She gave her a keycard and Saudia set off for the the twelfth floor,
taking only took a few minutes to arrive. As expected, Jasmine Vailan, her Head of Economic Analysis was waiting right on time.

Jasmine had actually been someone Saudia was aware of long before the aliens had come. She was a relatively obscure economist compared to those working in the States, since she spent most of her time working with the governments of many third world countries to help establish, fix or stabilize various economies, to usual success. It was a cause Saudia found admirable, and her successes made her the right pick to apply her expertise on a much larger scale.

“Saudia!” She greeted jovially once she came in. Jasmine was surprisingly informal compared to most of her staff, though given her own attire, Saudia didn’t particularly mind. “You came fast.”

“Right from Japan,” Saudia answered, sitting down into a chair, though was careful not to let exhaustion overtake her. Last major stop, then she’d have something of a respite.

“I saw,” Jasmine said, settling in a seat at the end of the table. “Nice job by the way. Having Japan in ADVENT is extremely reassuring for the Stock Market.”

“Good,” Saudia said, straightening up and looking the young American in the eyes. “You’ve had time to observe the fallout, so what’s your analysis?”

Jasmine bit her lower lips before she began. “It’s a good thing you warned me there’d be some … instability. Even with that, it was difficult to convince the WTO, Wall Street and the Federal Reserve to not completely flip out. You have any idea just how close we came to a worldwide crash when the UN essentially ceased to exist?”

“Closer than is ideal?” Saudia guessed wryly.

“Actually, no, I don’t think so,” Jasmine interrupted bluntly. “You know how many people do business in China?”

“Of course I do,” Saudia defended. “And I also know that whatever China provides, someone else can provide more and better quality.”

“Quality isn’t the point,” Jasmine stated. “It’s cost. China is cheap and that’s appealing. Best case
scenario here is that you have the price of everything rise by several dollars, and we both know that isn’t going to help.”

“I agree, prices rising is not something we need now,” Saudia nodded. “The population needs to remain calm. But there are solutions to prevent a sudden price hike while the companies find new trade agreements.”

“I was afraid of that,” Jasmine sighed.

“Isn’t it possible?”

“Yes…” Jasmine said slowly. “But I’m just imagining the response I’m going to get when I give them the news.”

“States of emergency,” Saudia said. “The needs of ADVENT come before that of corporations. The major distributors will still retain control over their companies, they will just be subject to ADVENT control. It’s not as though they’re exactly poor.”

“I’m imagining the commercials,” Jasmine groaned. “Walmart, Save Money, Live better, now a Division of ADVENT. Working for the common people, or some other crap like that. And I assume you’re still wanting to take over the weapon manufactures?”

“Of course,” Saudia said. “And defense companies that was working for the United States and any weapons manufacturer of import will be working directly for ADVENT. We have a war to win and they will contribute.”

“Oh, boy,” Jasmine said, leaning back in her chair. “Solaris is going to be thrilled. When he expressed interest in helping ADVENT, I don’t think he had being completely taken over.”

Saudia resisted the urge not to smile. “I think he’ll come around. And don’t exaggerate, it’s not like I’m mandating that everyone be fired and replaced.”

“No, you just want ADVENT to have the final authority on every major decision,” Jasmine mocked. “Much better.”

“Enough with the sarcasm,” Saudia said, lacing her fingers together. “Now, is that possible, and what might be the impact?”

“Let me think,” Jasmine looked up for a couple minutes. “Alright, before we make any of this public, we have to both set up alternate trade agreements, establish state takeovers of corporations and keep everyone important informed. Then once that’s in place, we say, ‘hey, we’re not trading with you anymore China, fuck off’ sit back and watch the fireworks.”

She grew a little more serious. “Joking aside, if…if this goes off without major issues, we’re still going to have several really bad days in the stock market, though thanks to our price freezing, it won’t be felt by the public for some time. But since everything was decided ahead of time, there should not be that much instability, certainly not enough to bring financial ruin to corporations of import.”

She frowned. “Although, there are going to be a lot of small businesses that are going to go under because they heavily rely on imports from China. I suppose if we want to alleviate that, we could set up some sort of state-sponsored program to help out. I’d have to think on that, though.”

“If it will help, do it,” Saudia nodded. “And what of international economics?”
“They will likely fall into two categories,” Jasmine said slowly. “Either they follow suit, since because of this, China is going to lose a lot of economic clout and will be seen as a trading partner with diminishing returns, or China will do everything in their power to not lose the partners they have. Mexico and many South American countries will be targeted by this. Long term, this will severely cripple China…especially as ADVENT grows.”

“Good,” Saudia stated with satisfaction. “Exactly as I want.”

“You’re the Chancellor,” Jasmine said, shifting in her seat uncomfortably. “I know China isn’t exactly playing ball, but this is, if I may say so, a bit extreme. Essentially isolating them will make the citizens suffer, you know that right? They’ll be hit with this the hardest.”

“I have little choice,” Saudia stated coldly. “If China wants to fight this war alone, they will fight it alone and I will not support such selfishness from anyone, not even a previous superpower.”

“Have you considered that China might respond militarily?” Jasmine suggested slowly. “This is all but declaring war on them without explicitly stating it.”

“No.” Saudia declared, steel in her voice. “China knows that would be signing its death warrant, and if they were foolish enough to attack ADVENT, then I am almost certain XCOM would become involved. The War in the Middle East and South America is bad enough, but China starting one would not be something they would ignore.”

“Fair point,” Jasmine acknowledged. “Boy do I have a lot of work to do. And we need to discuss your future plans. You still like the idea I proposed?”

“A new currency backed by alien metals and tech?” Saudia recalled. “Yes. Extremely clever, I must say. Exact values still need to be determined, but the idea is solid and would allow us to dictate the market.”

“Influence,” Jasmine corrected quickly. “We can’t dictate the market, unless you want us to become communists. But control over the currency will definitely allow us to predict it, and an actual backed currency will definitely reassure Wall Street. Although they will probably kinda hate you later when we finalize the regulation aspects of banking and Wall Street.”

“A topic for another day,” Saudia said, standing up. “Good work, Jasmine.”

“That’s my job,” she affirmed. “And you’ve given me plenty to do. Keep things calm and I can do the same on my end.”

“I’ll do my best,” Saudia promised. “Trust me, stability is a goal everyone wants to achieve.”

***

Seoul, South Korea

“[What do you think the Major wants?]” Min asked while they walked through the Headquarters. He had on his new black ADVENT armor though like Duri, held the helmet under his arm. Truthfully the armor itself was extremely high-quality, but Duri had never really liked helmets, and would get used to it later. First he needed to know what Major Hye needed to speak to him.

“[We’re likely being deployed,]” was all he said as they rounded a corner. “[They don’t normally schedule large patrols early in the morning unless they’re worried about potential reprisal.]”

 “[Aliens,]” Min said.
“[Aliens,]” Duri repeated with a nod. “[Not surprised. It was only a matter of time before they moved past Australia.]”

“[Nervous?]”

Duri snorted. “[What do you think? I just hope the fighting is far away from Seoul.]”

“I doubt we’ll be attacked first,]” Min reassured him. “[The aliens have bigger fish. They’ve got China and Japan as much larger and appetizing targets.]”

“[Good point,]” Duri grunted. “[Alright, wait here. I don’t think this will take long.]” Min nodded and Duri stepped into the Spartan office of Major Hye. Said Major was sitting at his desk, and motioned for him to take a seat. Duri complied and noted that the gaunt face of Hye seemed even more drained than usual. He was old even by regular standards and Duri was continually surprised and impressed that the Major had yet to retire.

But he liked him, so he wasn’t eager for someone else to take his place. “[Sir, you wanted to see me?]”

“[Yes,]” Hye answered curtly. “[I’m sure you’re aware that some major restructuring is taking place to comply with ADVENT military standards.]”

“[To an extent,]” Duri admitted. “[I’ve not received much information either way.]”

Major Hye grunted. “[Not surprise, the kinks are still being worked out, but the short version is that you’re going to get a different unit very soon. A multi-national unit to be specific.]”

Duri frowned. That was…not what he was expecting. “[Why? I thought ADVENT was going to simply be restructuring the ranking, not completely changing military compositions.]”

“So did I,” Hye said with a shrug. “[But I suppose they want to do both. They really are intent on a fully international army, and have plans to phase it in. The ROK military proper won’t be affected directly for several months, but you will be since you’re being sent to Japan.]”

That was more expected. “[Why Japan?]”

“[Intel suggests that’s where the aliens are going to strike next,]” Hye said. “[ADVENT is rushing to get a reasonable defense prepared, and since you have experience with leading international units, I recommended you receive your own. Japan is going to be the first big test for ADVENT, and we need the best.]”

“I appreciate that, sir,” Duri said, pleased by the words. “[Although my experience is mostly limited to Americans.]”

“[And your unit is one of the best,]” Hye repeated. “[Stop complaining and accept it. I am going to warn you that your new squad is going to be slightly more diverse. Min will be going with you, but you’ll also be getting people from Sweden, Venezuela, America…and North Korea.]”

Duri grimaced. “[Was that really necessary?]”

“[The puppets are going to someone,]” Hye shrugged. “[I hate it too, but at least you know to watch them. XCOM might like Gwan, but I have no illusions as to his goals.]”

“[Are Sweden and Venezuela even part of ADVENT?]” Duri asked. “[Those seem…odd countries to be sending soldiers.]”
“[Sweden’s in talks at least,]” Hye said, clasping his hands together. “[Maybe they’re loaning a soldier or two. Venezuela was allied with XCOM, so I suppose they switched over to ADVENT when it was established. Doesn’t matter, you’ll need to work with all of them well. Can you do it?]”

Duri nodded. “[Yes, sir.]”

“[I believe it,]” Hye agreed, inclining his head. “[Get ready, you’ll be shipping out to Japan this evening. Eighteen hundred sharp, say your goodbyes and get what you need. We’re not relocating your family with you for obvious reasons.]”

Duri sighed. “[Understood, sir. I’ll prepare immediately.]”

“[Good luck,]” Hye told him. “[It was a pleasure to serve as your commanding officer.]”

Duri smiled. “[The feeling is mutual, sir. Don’t worry, I don’t intend to die over there.]”

“[I believe it,]” Hye said, a mischievous smile on his lips. “[Wipe those aliens out.]”

“[With pleasure, sir.]”

***

Seoul, South Korea

There was a distinctly different feeling being in the military-controlled sections of ADVENT member nations. Seeing the armored soldiers around her marching in squads, with officers saluting as she passed reminded her of the time she’d spent in Venator territory during her time of EXALT. There was a distinct organization and predictability that made her feel much more at ease than when dealing with diplomatic matters.

Probably because most military members were straightforward and predictable, which made dealing with them easy by comparison. They didn’t particularly enjoy politics and she could respect that here. At this time, no one could.

“Take a break,” she told her guard as she spotted the woman she needed to see. “I know where to go from here.”

They complied and she walked over to the woman who noticed her and dismissed the soldier she was talking to and turned to face the approaching Chancellor. She wore a similar dress uniform to Saudia’s, minus the red sash. When Saudia had chosen who would be in charge of the ADVENT military, there were a wide range of options, but one of the largest challenges would be managing the vast array of member nations and their respective militaries, a criteria that very few could fill.

Fortunately, one such candidate with those qualification was the Former Chairman of the NATO Military Committee, Laura Christiaens who had been the General of Belgian Land Component. While she was too old to physically fight on the front lines, her administrative and tactical mind was as sharp as ever.

“Chancellor,” she greeted, saluting. “Welcome to Seoul, and I’m glad you arrived safely.”

Saudia returned the salute and the two women began walking down the hallway. “No reason to be concerned about my safety,” she commented. “People have a vested interest in keeping me alive.”

“As they should,” Laura nodded. “While I hope the rest of your trip was productive, we need to get
down to business here.”

“Are the rest of the command here?” Saudia asked, admittedly expecting the answer.

“All have arrived today, per your request,” Laura confirmed with a sharp nod. “In addition to Presidents Chia and Prime Minister Sakata have arrived, as well as Supreme Leader Gwan.”

To her credit Laura’s expression remained neutral even though Saudia knew she didn’t exactly approve of Iseul. Too bad, he was going to be needed here since if Japan was attacked and they couldn’t defend it, the Korean peninsula would likely be the next target. “And did XCOM send one of their own?”

“Yes, a soldier,” Laura confirmed. “Carmelita Alba. Former South Korean special forces.”

“Interesting that the Commander would send a soldier,” Saudia muttered. “Why not one of his own council?”

“I didn’t ask,” Laura said as she reached the door. “But all we need to know from XCOM is what role they will play in a defense and so they are not surprised by our own tactics. I do not have major concerns about XCOM. If Van Doorn trusted them enough to join, I will respect that.”

Saudia looked down at the aged women. “I didn’t realize you knew him.”

Laura gave a sad smile. “Oh yes, I worked with him quite often. An exceptional man and soldier. His death was a blow, even if he was no longer part of NATO.”

“My condolences,” Saudia said, inclining her head.

“Appreciated,” Laura said, waving a hand. “But he’d prefer we focus on defeating the aliens.”

They stepped into the room where the rest of the heads of the ADVENT Military had gathered, all converging around a newly-installed holotable depicting Japan and surrounding regions.

“At attention!” Laura snapped as they walked in and all the military figures snapped to attention, and the various heads of state gave her their undivided attention. Saudia stopped at the center of the holotable, flanked by Laura and Prime Minister Sakata.

President Chia and Carmelita were on the left side, with the latter apparently having decided to come in full armor, a dangerous looking shotgun attached to the back of her armor. Opposing them was Supreme Leader Gwan and Elizabeth Falka, of ADVENT Intelligence. Opposite Saudia herself were the Chief of Peacekeeping Operations, Amalda Stein, formerly of the German Feldjäger, and the Chief of Lancer Operation Helion Weekes, the Former Commander of the USSOCOM.

“We’re all aware of the situation,” Saudia began without ceremony, nodding to Elizabeth. “What are we doing to prepare?”

“Intelligence from Australia seems to indicate that the aliens are preparing for some kind of strike,” Elizabeth began. “Large transport UFOs have been spotted arriving and leaving, although they could also be attempting to secure the continent itself.”

“Much of the surviving ADF forces are evacuated,” Laura followed up. “They are being integrated into the ADVENT military now.”

“What is the timeframe for an attack?” President Sakata asked.
“Technically it could be hours,” Elizabeth warned. “Realistically it seems they’re wanting to do this as carefully as possible, but I would not expect longer than one week before their first move.”

“There is a matter we have to settle,” Iseul said, looking down on the map. “We are assuming that Japan is the next target. What if we are wrong and caught blindsided?”

“Because we look at their current actions,” Laura said, adjusting the map closer to Australia. “They are already moving on the Philippines and New Zealand, and more than likely that at least makes Japan a similar primary target. And if they want to attack Asia, there are little better staging areas than Japan.”

“Fair point,” Iseul conceded, frowning. “But I am concerned that we are acting too predictably here. The aliens cannot have missed our actions.”

“Remember that the aliens will focus on primary targets,” Carmelita interrupted, and Saudia was fairly sure she’d never heard the woman speak before, since she would have likely remembered the melodic voice. “They focus on direct threats to them. That means we can reasonably eliminate South America and Africa from possible attack.”

“Which leaves the West Coast of America and Asia,” Helion finished, nodding at Carmelita. “And attacking Asia logically involves the capture of Japan. In which case I am concerned we are ignoring a possible attack on the United States.”

“The United States is not forgotten,” Saudia assured him. “But if the United States is attacked, we can respond. If we lose Japan, we will not retake it without a concentrated effort.”

“Conceded,” Helion said. “In which case, how is the evacuation progressing, Stein?”

“As fast as the Peacekeepers can work,” Amalda answered, her accent slightly more pronounced than the others. “It isn’t a fast process, evacuating an entire country. The coasts are almost finished and we are working inland. Worst case scenario, they can be hidden in the bunkers until the fighting ends.”

“Has there been resistance?” Saudia asked.

“No, the population is well aware of the danger,” Amalda said. “Some aren’t particularly happy about leaving their homes, but when informed about the immediate danger, most prefer being alive to certain death. The few that actually posed issues are safely detained.”

“There was also a surge of volunteers wanting to help with the defense,” Sakata said. “I spoke with Commander Laura about my concerns with putting civilians on the front, regardless of their willingness. Her solution was an excellent one.”

“A logical one,” Laura downplayed. “Since the majority of refugees are being redirected to South Korea, I propose that any civilians wishing training be given it here. After several months, if needed, they would be an excellent reserve force that can be close enough to assist or defend as the case may be.”

“We’ll of course begin initiatives to accomplish this,” Chia promised. “We’re experiencing the same from South Korean citizens as well. We will have no shortage of willing defenders.”

“Returning to Japan itself,” Laura continued. “I’ve deployed multiple divisions of soldiers along the coast. Entrenchment and fortification is beginning in earnest, and there are two carrier strike groups standing by for the initial attack. It is unlikely the attack will come from the sea, so Gaussian anti-aircraft emplacements and equipment have been placed across the entire island.”
“Will that be enough?” Sakata asked, looking at Laura. “Our forces are vulnerable to air attacks, and their aircraft are better than ours.”

“Which is why we’re heavily utilizing the THAAD missile defense system,” Laura reassured. “At the very least our forces should be relatively safe from missile attacks, even alien ones. Aircraft will be dealt with by the deployment of S-400 missiles and the respective SAM.”

“I think our biggest concern is the numbers game,” Helion stated grimly. “Like it or not we have inferior numbers and they could drive us back by that alone.”

“Kill enough and they’ll pull back,” Carmelita advised. “If a strategy isn’t working, they won’t keep doing it. We have the advantage of the land, and if we can hold them to the coasts, they’ll eventually retreat and try again later.”

“And what is XCOM’s role in this?” Saudia asked Carmelita. “Does the Commander have a plan?”

“We’ll go where the fighting is worst,” Carmelita said firmly. “That or areas that are at risk of falling. Or in the event that an Ethereal arrives. If that happens, I advise that all forces nearby immediately retreat. You cannot kill an Ethereal alone.”

Laura looked at her skeptically. “One alien is not sufficient to order a retreat, even a powerful one.”

“You’ve never fought one, I see,” Carmelita shot back. “Unless you want to throw away soldiers, you’ll let us handle them. And you better pray one doesn’t show up or it will be impossible to hold the coasts.”

“I think that’s what we’re all hoping,” Saudia interrupted, raising a hand to defuse the sudden tension. “If any Ethereals are spotted, XCOM will be notified.”

“If the overall strategy is laid out, I suggest we get into specifics,” Laura continued, looking down at the map. “If you want, Chancellor?”

“Agreed,” Saudia nodded. “Continue, Commander.”

***

Seoul, South Korea

Twilight was the backdrop for their goodbyes, and Duri couldn’t really think of a more appropriate one. Sandara had been distressed at the news, but both of them knew there wasn’t anything they could do about it and she had been resolved to appear fine for the girls. Nabi wasn’t entirely sure what was going on, except that daddy was going away for a while.

Mari knew better though, and she’d been really quiet after he’d told her, and he wasn’t sure how she was handling it. Now that they were all standing on the tarmac with the plane behind them, all of them looked like they wanted to cry, himself included.

But orders were orders.

He knelt down by Mari and gently rested his hands on her shoulders, looking into her watering eyes. “[Hey, don’t cry. I’m going to be coming back soon.]”

A few tears ran down her cheeks. “[But what if-]”

 “[Hey, none of that.]” he soothed pulling her into an embrace. “[Nothing is going to happen to me,
He felt her nod against him and he gently withdrew. “[You need to be strong for mommy, can you do that?]”

One jerky nod. “[Yes, sir.]”

He smiled and ruffled her hair. “[That’s right, don’t worry about me. I’ll be back before you know it.]”

He stood and walked over to his wife and youngest daughter who was clutching Sandara’s leg. “[Nabi, you be a good girl when I’m gone,]” he said, making his tone much lighter than he was feeling. “[I don’t want to hear mommy telling me you snuck into the kitchen and ate my cookies.]”

To his relief she giggled. “[No one likes your cookies, daddy.]”

He chuckled. “[Then I shouldn’t hear anything, should I?]”

She shook her head. “[Nope!]”

 “[Good girl,]” he congratulated. “[I’ll be back soon.]”

 “[Can we go to the park when you get back?]” She asked. “[We haven’t been there in a while.]”

 “[Yes we can,]” he promised. “[Count on it.]”

He stood and immediately drew his wife into an embrace, staying that way for a few minutes, not needing to say anything. “[Don’t worry too much,]” he told her quietly. “[There’s nothing you can do to stop it. I knew what I was signing up for.]”

 “[I know, I know.]” she said, just as softly. “[But I can’t help it. Just…try to come back, please.]”

He looked down at her worried face and gave her a reassuring smile. “[I don’t plan to die here. But there are some things in life out of our control. This is one of them.]”

 “[I suppose so,]” she said. “[I’ll be praying for you until you get back.]”

He smiled. “[I’ll second that. Two are more than one after all. I’ll keep in contact as much as I can. And don’t forget to look after yourself.]”

 “[I won’t,]” she promised. “[I love you.]”

 “[I love you too,]” he told her, stepping. “[Goodbye for now.]”

With the twilight at his back and his family waving goodbye, and their picture close to his heart, Duri Eun-Jung turned his back and became yet another soldier marching off to the war that would determine the future of humanity.

Supplementary Material

The Advent Directive

Subsection 1.3: ADVENT Agencies
Description and Functionality: The purpose of ADVENT agencies are to fulfill certain roles within the Executive Branch and regulate various aspects with a focus on safety, efficiency and undisputed. Following Agencies are defined below, and more may be added at the discretion of the Chancellor of ADVENT in accordance with the Congress of Nation. (Additional information on each agency is in Section 5)

**ADVENT Department of Energy and Renewable Sources:** Conducts research on new forms of energy and effective management of sources currently in usage.

**ADVENT Bureau of Education:** Oversees the structure and integration of schooling and education at all levels and types.

**ADVENT Research and Development:** Conducts experimental research for both military and civilian usage and integration.

**ADVENT Engineering and Advanced Technology:** Develops and creates improved technology and gadgets for military and civilian usage.

**ADVENT Internal Affairs and Oversight:** Performs the role of oversight for all ADVENT agencies, the Executive, Legislative and Judicial branches.

**ADVENT Election Oversight:** Oversees all aspects of elections, including the screening of candidates.

**ADVENT Diplomatic Service:** Performs the role of diplomats of ADVENT to all non-ADVENT nations.

**ADVENT Agriculture and Food Oversight:** Regulates and ensures that the agriculture industry produces high-quality products for usage within ADVENT.

**ADVENT Department of Infrastructure:** Oversees the creation, upkeep and architecture of infrastructure matters within ADVENT.

**ADVENT Adoption and Child Services:** Oversees and regulates all aspects relating to adoption and handles matters relating to child abuse or neglect.

**ADVENT Drug and Substance Research:** Conducts research on all known drugs, and determines ones acceptable for public consumption or usage in medical environments.

**ADVENT Department of Health and Medicine:** Oversees all aspects relating to civilian medicine and research. Also oversees regulation regarding doctors and additional medical professionals.

**ADVENT Department of Commerce and Economy:** Oversees all aspects of the ADVENT economy and handles enforcement of economical regulations on corporations, banks and investors.
Zanjan, Iran

If there was one thing Roman Kostov found somewhat tolerable in this country, it was that it wasn’t all desert. Cities were modernized and, aside from the heat, bearable. It was the outside deserts that made him feel very little outside of constant the irritation he held towards Iran. Although perhaps that was unfair to the country. After all, it wasn’t like it had a choice in whether or not it was a desert.

Didn’t mean he had to like it.

Anton and Elena took their positions beside the entrance, with Stanislav and Galina moving behind the house to protect against surprise exits. Maksim watched from afar, looking for stragglers and other unpleasant surprises. All of them were clad in the far superior ADVENT armor, although it had lost its black sheen after a single day in the Iranian deserts.

It was a purely cosmetic detail he appreciated about the Shieldbearer armor, that it was already white and he wasn’t as visibly affected by the elements as the other variants. The extra protection was a bonus, but it made the current offensives on Iran nearly trivial. Roman had very little idea where this tech had actually come from, but he was able to easily see the results.

The armor was more or less bulletproof against most conventional small arms used by the Iranians, which had allowed them to easily take the border cities with almost no casualties, and had additionally demonstrated the now-massive tech gap between the two militaries even without mentioning the Gauss weapons that punched holes through regular body armor. Not even Iranian tanks could survive a constant barrage of simple gauss rifles for long.

Simply put, they were taking a country in weeks when it should have taken months. The defense around Zanjan had been foreboding initially, with the Iranians taking entrenched positions in the city and setting up their missile launchers. Unfortunately their firepower was negated with the deployment of the new THAAD defense system, and their defensive line was easily broken by the Russian ADVENT soldiers.

It appeared the Iranians still hadn’t figured out that the best way to kill a Russian ADVENT soldier was to concentrate fire on him and exploit their dangerous sense of invincibility. That was an issue Roman was noticing. Soldiers were now taking risks they wouldn’t otherwise simply because they believed the armor would protect them. Admittedly in most cases it would, but it was a dangerous mindset to get into especially since Roman knew they would be moving to the aliens after this.

In the meantime, they were focused on purging the city of the remaining Iranian soldiers. After breaking their lines, most had gone into hiding or just surrendered. Marshal Vladimir had no wish for guerilla campaigns to begin in captured cities, and so he was mobilizing all the forces to systematically sweep the entire city of Iranian hostiles.

The mandate was very simple: Neutralize all hostile soldiers, capture if possible, arrest if suspect, subdue if resist. Do not prioritize civilian life over Russian soldiers.

Roman was unsurprised by the last order. Marshal Vladimir knew what desperate soldiers did when cornered, and hostage situations were inevitable. While not explicitly ordering them to ignore
the hostages, the implication was that a free Iranian soldier posed a threat to Russians, and that was simply not tolerable.

Roman didn’t mind. He viewed this entire operation likely how President Savvin did. An opportunity to purge the region of dissent, corrupting influences and terrorism for decades to come. It would of course not stop the inevitable uprisings, but Roman had been rather pleased to find out that this time there would be nothing stopping them from crushing the resistances irreparably.

But that would come later, and that was the job of the Peacekeepers.

His job was to deal with the threats here and now.

Elena put away her scanner and nodded up at him. Good, no explosives near the doors. Even ADVENT armor didn’t protect from mines or point-blank explosives. He slammed a fist on the door several times. “This is the ADVENT Russian Division! You are instructed to exit the building within thirty seconds and provide no resistance! Should you not comply we will enter and subdue any resistance. This is your only warning!”

He figured they didn’t understand Russian, so English the probably the next best thing. But it was not guaranteed and he wasn’t expecting them to actually come out since most soldiers weren’t keen on surrendering, and the civilians were either too confused or terrified to follow instructions. Nevertheless he stepped back and raised his rifle at the door. “[Anything?]” He asked through his helmet comlink to his squad, another wonderful feature of the ADVENT armor.

“[Negative,]” Stanislav answered from the back. “[Nothing on our ends]”

“[Same,]” Maksim reported from his sniping position. “[I’d say go for it. Pretty sure thirty seconds is up.]”

“[Guess so,]” Roman sighed, and readied his shield. “[Prepare to breach everyone, on the normal signal. Copy]”

“[Copy, Shieldbearer,]” Stanislav confirmed.

“[Copy.]” Elena nodded and Anton echoed her words.

Roman walked up to the door, fired a single gauss round at the locking mechanism and kicked it in with one practiced motion. A second later he activated the unique aspect of his armor: the shield itself. It manifested as a faint red covering over the armor itself, and had the useful ability of being able to deflect several bursts of projectiles. It never lasted more than a few, but those few were crucial when doing breaches of this nature. That being said, he still tried to avoid being hit. The batteries charging the suit did recharge over time but that took longer than was acceptable, He did have several spares in that case, but only a few.

How it actually worked was somewhat fuzzier, though he knew there were two variations of the shield. One for conventional weapons and one for alien ones. It utilized magnetic fields for the ballistic variant, which appeared to have the effect of deflection. He hadn’t had the opportunity to test the anti-alien weapon part, but figured it probably wouldn’t be quite as effective.

He swung his weapon around as he quickly scanned the small, but open living room. Nothing so far-a soldier in the tan uniform of the Iranian military sprang up from behind a counter and began firing his rifle while shouting at him in Persian. Roman sidestepped, took a quick second to aim before the fire became more accurate, and fired several shots at the man.

He screamed and went spinning backwards, crashing into a nearby table and knocking all the
dishes off, which fell to the ground with a crash. Roman grimaced, he’d taken a glancing blow. He took a brief second to look at the uniform, even as the man tried to right himself. Just a regular soldier, not worth trying to capture. Roman shot him several times in the head, turning it to mush and splattering the walls with red.

“[One hostile down,]” he reported as Anton and Elena came in behind him. Stanislav kicked in the back door and marched in, weapons raised with Galina close behind.

“[Exits are secured,]” Stanislav declared, motioning Galina to stay by the door.

“[Elena, with me,]” Roman ordered as they moved to the hallways. “[Anton, clear the rooms opposite mine.]”

“[Got it,]” Anton nodded and Roman and Elena walked into the segregated hallway from the rest of the living room. Roman motioned to the left and Elena followed as they reached the first door. He slowly reached over and turned the doorknob, pushing it open to reveal an empty bathroom. Just to be sure, he entered and pushed aside the shower curtains. Nothing.

“[Clear,]” he said and they proceeded to the next room. He repeated the same procedure and this time revealed what seemed to be a child’s room. Toys were strewn about on the floor, and the colors were of a much younger child, maybe between six and ten. “[Be advised we may have civilians,]” Roman warned.

They reached the room at the end of the hallway. “[Roman, got a stairway leading to a basement,]” Anton said. “[Instructions?]”

“[Hold position until the first floor is clear,]” Roman ordered, reaching over and turning to doorknob of the last room. “[Almost done.]”

He pushed in the door and swept the larger bedroom with his rifle until it rested on a two people, huddling in a corner. A terrified woman and a young girl who started crying the moment his rifle rested on her. “[Two civilians,]” Roman reported as the woman began shouting at him angrily in Persian while half-sobbing. “[Elena, take them outside and turn them in to the Peacekeepers for screening.]”

“[On it,]” Elena said, holstering her rifle and motioning the woman to follow her. Roman left her to take care of the civilians and walked back to Anton who was dutifully standing in front of the door that had a stairway leading down.

“[Ready?]” Anton asked, looking over as he approached.

“[I’ll take point,]” Roman said reaching over to the lightswitch. “[Killing the lights, switch to night-vision.]”

They made their way down, rifles raised as the stairs turned sharply a couple times until they were in what appeared to be a storage basement. Crates, barrels and boxes were stacked in ordered rows, which he didn’t fail to note were arranged in a way that could also form a barricade. Not that it would help against concentrated gauss fire.

“This is your final chance to surrender!” Roman called out as Anton took a position beside him.

Silence.

Roman pursed his lips and nodded to Anton. “[Killzone.]”
At that command they began firing into the crates, splintering the cheap wood and shattering the more fragile cases apart. The constant sound of gauss rifles was only briefly punctuated by several brief screams of pain. Both of them continued firing. If anyone was there, they had passed up their chance to surrender.

They had no time for mercy now.

“[Cease fire,]” Roman ordered, raising a palm. “[Forward.]”

They walked through the now-ruined basement, wood cracking and splintering where their boots touched. Glass and plastic crunched with each step they took. Roman spotted a corpse thrown against two broken barrels. His body was leaking blood and ripped apart from gauss rounds. “[One hostile down,]” he reported.

“[Make that two,]” Anton corrected, nodding towards a female corpse that no longer had a head. Roman nodded and kept walking until they reached the end.

“[House clear,]” he reported. “[We’re coming back up now.]”

“[Civilians are turned in to the Peacekeepers.]” Elena reported. “[Regroup outside. We’ve got a lot more houses to clear.]”

“[That we do,]” Roman grunted as they walked up the stairs, the sounds of more gunfire reaching his ears as more teams did their work purging the city of any resistance. That was just how it had to be. He looked down the street, at ordinary houses that nonetheless were all possible threats.

And it was their job to neutralize each one.

“[Come on,]” he ordered, reloading his gauss rifle. “[We’ve got work to do.]”

***

Zanjan ADVENT Command, Iran

“[I never thought my day would be spent raiding houses looking for isolated soldiers,]” Galina said as they strode into the temporary assigned barracks. It consisted of pretty much nothing but a few bunk beds and lockers, but it worked. Galina immediately plopped down on her bunk and pulled off her helmet and carefully set it at her side as she reached for her cloth she used for cleaning.

The rest of them did something similar. Roman pulled off his helmet and carefully set it down, then rested his head on the back of the wall and took a moment to breath. “[Look on the bright side,]” Anton said as he began taking off his armor. “[At least they couldn’t hurt us.]”

“[Yet,]” Konstantin grumbled as he laid on the cot, too exhausted to even take off his armor. “[They have to figure it out eventually.]”

“[Maybe,]” Galina shrugged, as she cleaned the bloodstains off her helmet. “[But I doubt it. We don’t leave enough alive to get something like that back to wherever their capital is.]”

“[Good point,]” Roman chuckled, straightening up again and appraising Galina. “[Question. Do you think we’d take more alive if any of us spoke Persian?]”

“[Doubt it,]” Stanislav said, rubbing his unkempt beard. “[People like this don’t surrender. Saw it all the time during the War on Terror. Fanatics don’t listen to reason or logic.]”
“[Bad example.]” Elena chided, coming to sit down by Roman, who lowered himself to also sit down by her. “[Those were terrorists, these are soldiers.]”

“[Still applies.]” Stanislav defended. “[They’re defending their home and are under orders. One or both of those, along with being isolated with invincible soldiers coming at you, probably means they aren’t thinking straight anymore.]”

He shrugged. “[But hey, I’m not here to psychoanalyze them. Just to put them down if they give us trouble.]”

“[Did that a little too well,]” Maksim commented, resting his sniper rifle on the wall and giving them disappointed looks. “[Do you have any idea just how boring today was?]”

Roman raised an eyebrow and they all chuckled. “[You would prefer getting shot at?]”

“[Yes, because you were so concerned about that,]” Maksim commented sarcastically. “[Seriously. Not fair if you have all the fun.]”

Konstantin took a sip from one of the water bottles he kept on him. “[Hey, I’d let one go to give you something to do, but I have no interest in getting chewed out, thank you very much. Trust me, I’ve never seen any operation like this run this tight.]”

“[I must have missed something,]” Elena said, looking to him. “[What do you mean?]”

Konstantin motioned outside. “[Out there I guarantee there are a couple hundred teams still working. This current operation is being run by Ivan, who you should know is extremely meticulous. He probably had everything mapped out before we even entered this region. Roman, help me out?]”

“[Can’t disagree,]” Roman admitted. “[Ivan was very clear that he wanted those houses we cleared done by a specific time.]”

“[Anything to make him happy,]” Galina said, brushing some blonde strands out of her eyes. “[At least we know that’s why you were in ‘no taking prisoners’ mode today.]”

Roman snorted. “[When am I not?]”

“[Eh, point taken,]” Galina conceded with a smile. “[But there have been times.]”

“[It’s nice to not have to worry about that,]” Maksim said wistfully. “[I’d always be worried some overly-naïve journalist will interview some poor widow who saw her terrorist husband shot in front of her, which will then lead to a global outcry and me getting discharged for doing my damn job.]”

“[Don’t need to worry about that anymore. Seriously,]” Roman said, pointing to his bunk where a file was poking from the edge. “[Read the ADVENT Rules of Engagement sometime. We’re pretty much allowed to defend ourselves if it’s justified. Someone pulls a gun on you, shoot them. They throw a punch, shoot them. And so on. Perfectly legal and justified, and if someone does complain….]” He tapped the armor. “[Why do you think we have body cameras?]”

“[Also explains why tampering gets you arrested,]” Anton noted. “[It’s sort of refreshing how this is written. Like they actually had a soldier do it.]”

Roman was about to say something when his earpiece beeped and he clicked it. “[Sir?]”

“[Come to my office,]” Colonel General Ivan Frolov ordered. “[We need to discuss moving
“[I’ll be there,]” he said and clicked the link off. “[Reporting to Ivan now. Wish me luck.]”

“[We’ll be ready to move if he needs us,]” Stanislav promised.

“[But I’ll be sleeping until then,]” Konstantin added into his pillow.

Roman smirked at that, grabbed his helmet and began walking to the “office” of Ivan which in reality was what had been more or less the center of government, now converted for military use. Roman looked over to the processing areas which had been set up shortly after occupation began. There were still long lines of civilians out the doors, and a short distance further were where the captured or surrendered Iranian soldiers were being processed. Roman didn’t know what they were doing to them, and frankly, didn’t care. It was a problem he was glad he wasn’t in charge of solving. Because prisoners were a serious liability with no redeeming features whatsoever here. All they accomplished was filling up jail space and otherwise served no useful purpose. Eh, but again, that wasn’t his problem, and he hadn’t looked into the ADVENT rules on prisoners of war.

The two captains stepped aside as he walked up. Aside from the color, Shieldbearer armor was bulkier and the helmet was more angular than regular troopers or captains. It was a much easier way to recognize superior officers without peering at badges. Ivan had set up his office close to the entrance, so it only took a minute to find it and Roman just walked in because the Colonel General didn’t like wasting time.

“[Shieldbearer,]” Ivan stated as he walked into the office. The aged man was looking over a holotable depicting Iran, color-coded to show territory captured by them so far. From his estimation it appeared that only a fifth of it was captured, which was admittedly more than it should have been at this point.

“[Colonel General,]” he returned, saluting and suddenly realizing that it was a hologram he was looking at. An actual hologram. They really were living in the future. “[You wanted to see me, sir?]” He asked, returning to the subject at hand.

“[Correct,]” Ivan said, his sharp eyes still on the map. “[I’m curious, what do you make of it?]”

“[We still have quite a bit to do,]” Roman said, not wanting to waste time wondering if this was some sort of test. Ivan didn’t work like that.

“[Of course we do,]” Ivan said, looking up at the first time to the veteran Russian soldier. “[But fortunately, the situation is much better than it appears.].” He pointed at the map. “[The land mass is large, but mostly unimportant. Once we take Tehran, the Iranians are effectively destroyed. It is their capital and once it falls, so does Iran.]”

Roman saw it now. “[We’re not far then.]”

Ivan gave a humorless smile. “[No, we are not. I have wanted to take the methodical approach to ensure that we push their army into Tehran, make it their final stand. But we are unfortunately going too slow.]”

“[I’m working my team as hard as possible, sir,]” Roman said. “[But work too fast-]”

“[That isn’t a comment on your performance, Shieldbearer,]” Ivan interrupted, raising a hand. “[You and your team have performed commendably. The issue is that in the grand scheme, this
war is nothing. A last gasp of an irrelevant and outdated culture, but one that will fight to the last breath."

"[The aliens.]" Roman nodded. "[We need to focus on them.]

"[You understand quickly,]" Ivan said approvingly. "[Good. But we unfortunately cannot simply leave the Middle East alone. They do not care about the aliens and must be brought in line with ADVENT. I have spoken with the officers in ADVENT Command. They want this war ended before the aliens begin multiple offensives. Impossible to end a war on this scale in months, let alone weeks, but Marshal Vladimir had given the orders to bring this war to a swift end and I intend to accomplish that.]"

Roman waited. "[How, sir?]"

Ivan straightened and clasped his hands behind his back. "[ADVENT rules of engagement are more lenient than I’m used to, so I intend to utilize that. See if you can find Hamedan on the map.]"

Roman complied and found the city south of where they were, and not far from Tehran itself. He pointed and Ivan nodded. "[That is our next target. And where I will test how far the Iranians are willing to go to protect their country.]"

"[Noted, sir,]" Roman said. "[I assume the engagement will be different?]

"[Correct,]" Ivan said. "[I see no point wasting time in drawn out firefights that take a week for us to move into the city where it can be done far sooner. What will happen is this: I will issue an offer for the city to surrender for one day only. Should they refuse, I will let them know that if they do not comply, I will raze the city to the ground.]

Roman blinked. He wasn’t exactly an empathetic person, but even he knew that was somewhat extreme, even for a pragmatist like Ivan. "[Sir, the civilians-]"

"[Will be warned as well,]" Ivan said dismissively. "[ADVENT ROE specifically states that civilian deaths are allowed if every attempt was made to prevent them. I will make it as clear as possible the attack is coming and give them adequate time to leave. If they stay, they have knowingly ignored the warning and have no special protections under ADVENT.]

Roman understood the logic, but still frowned. "[What if the Iranian Army doesn’t let them leave?]

Ivan looked at him with unflinching ice-cold eyes. "[This is not the way I want this war to go, Shieldbearer, but compared to the threat coming, this city is nothing, this war is irrelevant. If I must make an example of a city to end this war months earlier, then so be it.]

Roman looked at the map. "[This is a message to Tehran.]

"[Correct,]" Ivan stated, also looking at the map. "[I suspect Hamedan will not take my warning seriously. I do not expect them to comply and when their city is in ruins, it will send a message to Tehran that if they don’t comply, the same will happen to them. We will take over all Iranian channels and broadcast the footage from this over and over to make them see what we will do to them. If they will not listen to reason, then I will make them respond to fear.]

"[And what do you need from me, sir?]"

"[Your team will be one of those sweeping the ruins for survivors.]" Ivan stated coldly. "[You are to consider everything in that area hostile and remove them as such. We have enough prisoners as it is. Do you understand?]"
“[Yes, sir!]” Roman confirmed.

Ivan gave one nod. “[I understand what I am saying, but I also know you agree that we have little choice. Tell your team their assignment. The main bulk of our forces will move out in two days, and the Peacekeepers will keep order in the city. Prepare accordingly. Dismissed.]”

Roman saluted, and exited the office, a dark and grim cloud of responsibility hanging over him as he went to share the grisly details of their next assignment with his team. But Ivan was right. Their choices were limited and one war was more important than the other.

A few thousand lives were nothing compared to millions, after all.

***

Washington DC, United States of America

Traffic was always bad here, and today, of course, it was even worse. Had she not had larger things to worry about, Jaylin Tanika would be sufficiently irritated. Which wasn’t to say she wasn’t, but it was a more resigned irritation rather than something white-hot within her. It really was amazing how everything could change almost overnight.

At least it had seemed that way to her.

Not one day after the good Madame President had officially put the US into ADVENT, law enforcement had undergone major revisions. Ranks were being redone, laws were being changed to adopt the new rules of the ADVENT Peacekeepers of which she was now one, by virtue of previously being in Riot Control.

It had happened so quickly Jaylin still wasn’t sure if she should be pleased or not by the sudden decisions. It was likely dulled by the fact that her job was only getting harder after Treduant had made the proclamation. Because whenever something controversial happened, she damn well knew that there would be a lot of protests.

Especially in DC where anyone with any sort of political power now had one target: President Nicole Treduant.

And today was the day when they were expecting the largest protest in American history, and she was going to help make sure it didn’t devolve into rioting. In her experience though, that was exactly what she was expecting to happen. The projected demographics were all over the place, and over such a sensitive subject as independence, peaceful protest was not something she was expecting.

More importantly, for her it would be an interesting demonstration of how ADVENT wanted to run things. She doubted it would be too different, otherwise she doubted the chiefs would allow this Peacekeeper program to be integrated so smoothly. The good news for her was that it was at least looking like an upgrade.

When she’d seen the armor worn by the ADVENT soldiers, she had subconsciously wondered if they were due for a similar upgrade, and then dismissed it quickly. There was no way ADVENT would shell out that kind of money for their equivalent of a police force…but sure enough, they had and what she was wearing now was proof of it.

With the exception of the left arm, it was identical to the trooper armor with the addition of a white shoulder cape on whatever side the dominant arm was, which in her case was the right. The left arm was bulkier because it had a built-in transparent riot shield that could be activated with the
press of a button. And today Chief Rais had sent out a memo that their crowd-control equipment was also being overhauled, though he hadn’t been able to give out details.

Either way, Jaylin knew that there were going to be quite a few people upset. For some reason, there were people who had issues with police, and riot police in particular, and would no doubt try and discredit them in whatever way they could. It wasn’t difficult to cause controversy these days, and Jaylin found it somewhat irritating to be worrying about public response when she did her job.

Serve and Protect. That was the motto, but for her it did not extend to criminals and lawbreakers. You serve and protect the people who deserve it, it wasn’t an innate privilege and certainly not a right she was willing to afford to everyone. It wasn’t high standard either. Follow the law and you had nothing to worry about.

A sentiment that a certain portion of the populace didn’t seem to grasp.

Jaylin finally arrived at the station and quickly exited, nearly tripping over her boots as she still wasn’t used to the much heavier armor. Yet. It also appeared that not everyone had received the upgrade since as she walked by, most officers were in their regular uniforms, whistling in surprise and giving envious looks at the armor itself.

It did make sense that they would want to protect the riot police first, but she figured it was only a matter of time before the rest of the department got upgraded as well. “So how is it?” Secretary Vale asked as she walked up to check in, a pen tapping idly in his fingers as his vibrant gray eyes looked over her armor with unbridled curiosity.

“Heavy,” she answered, handing him her badge. “But actually pretty comfortable. I’m surprised they even gave it to us.”

“Can’t wait to get mine,” he chuckled as he scanned her badge. “Although they’ll probably only give them to patrol officers, not desk workers like me.”

“Guess we’ll see,” Jaylin shrugged. “Did the Chief leave any place he wanted me to go?”

“Shooting range,” Vale answered, handing her the badge back. “Got some new toys for you, I think.”

“Thanks,” she said, and began making her way to the shooting range. It only took a few minutes and she entered the packed shooting range with her colleagues all wearing the same black armor as her. Even unarmed they were an impressive sight. She spotted Rose and Troy chatting nearby and headed towards them.

Rose spotted her quickly and gave a wide smile. “Captain, glad you finally made it!”

“Have some faith,” Jaylin smirked. “You really think I would be late today of all days?”

“Not by choice,” Troy corrected, his neatly trimmed beard almost giving him a sinister appearance as he looked down at her. “It isn’t pretty out there.”

“That’s DC traffic,” Jaylin dismissed. “Tell me it isn’t pretty in a few hours. And speaking of that, what are we waiting for?”

“The chief to get down here,” Rose muttered, shooting an irritated look to the far exit. “He better hurry otherwise we’ll actually be putting down a riot. You know how these people are.”

“And they have a tendency to start early,” Troy added grimly, crossing his arms. “I just can’t wait.
How many outlets do you think will be covering this? Six?”

“This is getting national attention,” Jaylin grumbled, pushing a black strand of hair out of her face. “Every damn station will be covering this. No pressure on us, of course.”

Rose looked ready to agree before they were interrupted by the door opening and Chief Rais strode out, also wearing the same armor as them except for his shoulder cape which was white and red. “Listen up!” He ordered, his booming voice immediately silencing the chatter. Rais had a gift for commanding attention which completely matched his gruff and serious persona and face. If anyone saw it, they would (correctly) assume him to be someone who’d never had a happy thought in his life.

Although that wasn’t exactly fair, he just took his job way more seriously than was probably healthy.

“We have one mandate for today,” he continued, pacing back and forth in front of them. “Keep the peace. Failing that, control the situation. They’re expecting at least half a million people and we are not going to have DC turn into a warzone. Got it?”

“Yes, sir!”

“Right,” he continued. “You’ve already got your armor, now the new tools ADVENT has provided. And no, don’t ask me why, who or how. Either I don’t know or am not at liberty to say. Just be happy. You’ll have three main pieces of equipment.” He raised a grayish rifle thing, with a very odd barrel and no bullet cartridge she could see.

“First piece,” he bellowed. “The ARC Rifle, your main means of pacification and control. Fires bolts of electricity to stun or knock out troublemakers.” He turned away, aimed the rifle at a nearby dummy and fired. Jaylin didn’t see the bolt exit, but she heard the sharp static discharge and saw a blue flash hit the dummy. “Minimum setting is enough to knock out an adult,” Rais warned, turning back to them. “Can adjust up to lethal, but you are not allowed to do so without permission. Short version: This thing hurts so don’t use it unless you have to.”

Jaylin still had her eyes fixed on the rifle. Well that was something she hadn’t expected. That told her more about ADVENT’s priorities than some document ever could. You didn’t give that to your Peacekeepers unless you were expecting trouble, and you wanted that trouble gone. Regardless, she definitely wasn’t going to complain.

“You’ve got a short-range countermeasure as well,” Rais continued, pulling out what looked like a black stick an arm’s length long. There were bumps along the side, but Jaylin had a good idea of what it was. “The new and improved stun baton,” he continued. “Each blow delivers a shock when activated, and can be optimized to stun on impact.” To emphasize his point, he flipped a switch on the baton and odd white discharges manifested on the baton and vanished in milliseconds with sharp snaps. “Hurts like hell so don’t take these lightly. If we’re dealing with an insurrection, switch it to lethal mode.”

Jaylin blinked. Lethal mode? Rais shut off the electricity of the baton, turned the stick itself until she heard a click and when he pressed the button again, those bumps on the side snapped out into wicked-looking spikes, electricity arcing between the teeth. “These are just as sharp as they look,” Rais warned. “And the output is enough to send a healthy adult into cardiac arrest. As such you are only to use lethal mode when authorized and better yet, isolated. You have better chance of killing your partners than hostiles when this is active. If your life is genuinely in danger, that’s why you have this.”
He pulled out a black pistol, finger off the trigger. “The new standard-issue Gauss pistol. Again, don’t use this unless you fully intend to kill someone with it. This piece will tear any regular bulletproof vest to shreds and will pierce most cover. Packs a punch, so be careful with it. Questions? You.”

“Not that I’m complaining,” one black-haired officer said slowly—Robert, that was his name. “But this seems like a lot of…well, firepower. I thought there were restrictions on that for us.”

“There were,” Rais confirmed with a nod. “But the laws have changed thanks to ADVENT. Our job is to keep order and as long as it is done within the law, we are free to deal with criminals with appropriate prejudice.” He raised a finger. “Which brings me to a very important point.”

His gaze swept the room. “Just because you have the ability to neutralize someone, that does not mean you get to. You are only allowed to intervene if there is clear agitation. Someone throws bottles or rocks at you, knock them out and drag their ass to jail. That does not mean that you can shock someone who flips you off and calls you mean names.”

He tapped his chest. “So in case you didn’t know, we’ve got cameras in these now. You get someone killed? We’ll know if it’s justified. Someone tries to falsely accuse you of police brutality or whatnot? We can check and if they are lying, we punish them. Clear and simple. So the good news is that under ADVENT we have a lot more freedom to deal with criminals and deviants, so long as it is within the law. Bad news is that we’re under their oversight and it’s gonna be a lot more paperwork for everyone.”

He paused his pacing and faced them intently. “ADVENT wanted this point stressed: They will not tolerate any systemic abuses of power. You do that, you’re not getting a weeks-long review, you’re going to jail if the footage matches up. If they find you tampered with your suits camera, you’re going to jail. Cameras are always running on duty, and you are required to upload it weekly. Failure to do so will lead to prosecution. That clear?”

“Yes, sir!”

“Alright, that out of the way, let’s get to work,” Rais nodded. “There’s a good chance we’re going to have to stop the groups from fighting among themselves. Indications are that we’ve got the far-right militant groups marching with hippies, and so on, so don’t be surprised if you end up breaking up fights between them. More information will be given on the way. But we’re on a timetable, so let’s move out! Crates containing your new weapons are on the way.”

“This should be interesting,” Rose said as they followed the Chief out, and Jaylin could only nod in agreement.

Today was going to be a very interesting day indeed.

***

Kochi, Japan

Everything was going at full speed here. Entire squads dashed past him and engineering teams were moving missiles and THAAD Defense systems into place. More workers were establishing barricades on the coast for the inevitable attack. Duri took a few minutes to see what exactly they were doing.

To a certain extent, it appeared that the plan was to allow some space for the aliens to deploy soldiers, and have a line almost immediately after that of soldiers to shoot them down. It was bait,
without even counting the fact that Duri noted them setting mines on the ground. Kochi didn’t really have conventional beaches, and was packed with as many buildings as possible. Impressive, but not exactly helpful for defending against an attack.

On the flipside, it would be easy to outflank and outmaneuver the alien forces who wouldn’t be familiar with the territory. He supposed what he’d do would heavily depend on where he was stationed. But first he actually had to find where his team was supposed to be, which was—he unwrapped the paper in his hand—the converted barracks, region 42—not far from here.

Figuring it best not to waste time, he broke into a light jog and managed to hitch a ride on one of the carts going there and finally arrived at what had probably been a police station of sorts before being converted. It was highly disorganized, with unopened boxes and random scraps of metal and cloth strewn around as bunks were hastily erected and thin plastic walls were put up.

In any case, he finally found where his team was supposed to be, and sure enough they were all there. In fact they already seemed to be getting along. “Mutons,” one was saying, who Duri assumed was the North Korean of the team. He seemed awfully young with a flawless face and neatly trimmed black hair. He had a finger raised as he spoke to two others, a man and woman. “Those are the ones you need to be careful of.”

“The big ones,” the woman nodded, definitely an American from the accent. “I saw them from the New York attacks.”

The North Korean frowned. “I…no, those aren’t the usual ones. Those are a bigger version. The regular ones have green armor and are much smaller.”

“A relief, I guess,” the man said, who interestingly enough had a full, but neat beard. Duri couldn’t place the accent…Swedish, since he was pretty sure it wasn’t Venezuelan.

“Got company,” a Hispanic woman grunted from the corner, not pausing as she cleaned her sniper rifle. The rest of them looked at him, all standing at attention.

“At ease,” he said, flicking his hand. “Didn’t mean to interrupt,” he looked at the young North Korean. “Although names would be nice.”

“Captain Eun-Jung, correct?” The other man asked, approaching him and extending a hand. “Johan Eriksson, Swedish Army.”

“Duri’s fine,” he answered, taking the offered hand. “Pleasure to meet you.”

“Cara,” the American woman said with a smile and a lazily lifted hand. “US Army. Actually spent some time in South Korea a few years ago. Beautiful country.” She pointed at the woman cleaning her sniper rifle. “That’s Miss Sanchez, she mostly likes keeping to herself.”

“Shut up, Boreal,” Sanchez muttered, rising. “I can speak for myself, thank you.” Now that she stood, Duri noted that she was probably the tallest out of all of them, with her raven hair falling to just above her shoulders. “It’s Beatriz Sanchez, Captain, Venezuela Army Sniper Corps.”

Duri gave a slight smile. “Glad to have you here. Snipers are always useful.”

Her lips twitched a little at that. “Yeah, I guess so Captain.”

Hmm. There was definitely something with her he’d have to look into later. In the meantime, there was one final team member. “Kang Il Sim, Captain,” the North Korean said, inclining his head. “I was updating Cara and Johan on the aliens we are likely to face.”
“I heard,” Duri nodded. “Where did you learn that? It’s correct, but as far as I know only the Captains were given specific intel.”

“Information on specific alien types was distributed to the entirety of the North Korean military,” Kang explained without emotion. “It was initially gathered from our own encounters with the aliens, and I suspect XCOM updated our lists later on.”

“You might have saved me some time,” Duri said, pulling a roll of paper from a pouch in his armor. “Have experience with Andromedons?”

Kang furrowed his eyebrows. “I’m unfamiliar with that unit.”

“Is that a code-word or are they actually called that?” Cara asked skeptically.

“Don’t know,” Duri admitted, handing her the information he’d received on it. “But that’s what XCOM is calling it. Seems even worse than a muton, at least the green ones.”

“Not a psion, though,” Cara said after reading for a few minutes. “So that’s something.”

“As far as we’re aware, the only psions are Sectoids and Ethereals,” Duri confirmed. “And XCOM has their own.”

“I wonder if we’ll get our own too,” Johan wondered thoughtfully. “In all of ADVENT, there have to be some who can do it.”

Duri heard Beatriz snort in her corner. “Of course there are. Thing is that XCOM wants them all to themselves.”

“C’mon,” Cara said wearily. “You really believe that?”

“Call it a feeling,” she muttered. “Besides, I’ve seen the Commander of XCOM before.”

Duri looked at her in interest. “You know who he is?”

“Nope,” Beatriz admitted slowly, looking up at him with weary eyes. “But he came to Venezuela once, official visit I think. Definitely American. I don’t know what happened other than that all the command staff were really spooked for months afterwards.” She shrugged. “That was fifteen years ago though, pre-War on Terror for you younger ones. But I don’t trust him.”

“Well, I have to say you’re wrong,” Kang stated boldly, casting a disapproving eye on Beatriz. “If not for the Commander and XCOM, we would likely be in a much worse position.”

“You believe that?” Beatriz asked wearily, setting her sniper rifle on the wall. “Or do you just think that because your Supreme Leader said so?”

Oh dear, this was not what he wanted to deal with. “Enough,” he ordered, raising a hand before Kang could give a righteously indignant response. “Insulting each other is not going to be allowed. You can have your opinion Beatriz, and Kang, you have to respect that.”

Kang shut his mouth. “Yes, Captain.”

“Whatever XCOM is, or is not, that isn’t what we should focus on,” Duri continued. “We’re probably going to be under attack soon and we need to prepare for what we’re facing.” He set his pack down and pulled out the map he’d been given. “Break time’s over, I’ve got the location of where we’re going to be.” He went over and pulled a table to the center and they gathered around it...
and he laid the map flat on it. “Time to get started. Beatriz, if you’re our sniper, where do you think your best positions will be?”

***

**Washington DC, United States of America**

The ARC rifle was much lighter than any firearm she’d ever wielded in her life. It seemed to weight almost nothing as she held it in her hands, watching as the huge throng of people marched in front of the White House. Jaylin had wondered what presidents did when people protested outside what was essentially your house. If *she* were president, she’d probably not pay any attention and go about her day.

But Treduant had displayed some amount of cunning, and an intolerance for threats to her, so it was unlikely she was writing this off. Her loss, if this was any indication Treduant had nothing to worry about because these people had no unified message, they were only united in their belief that what was happening *now* was wrong, and Jaylin was certain that the solutions of the different factions would clash the moment they were proposed.

Echoes of chants and cheers were shouted every few minutes, repeated by the crowd jubilantly. Catchy in a way, but only served to keep up a crowd’s energy and enthusiasm. As usual there were the vast array of signs and banners that of course had contradicting goals and motivations.

*Take our country back!*

*Impeach Treduant!*

*Traitors will be punished!*

*Freedom before Tyranny!*

*Peace not War!*

Jaylin had to shake her head at some of them. Peace? Impeachment? Tyranny? It was clear that some of these people didn’t actually know what they were asking, nor what they were talking about. Did some want *peace* with the aliens? Why exactly should Treduant be impeached? *What* tyranny? Because Jaylin knew very well that if this was simply because they didn’t approve…well, they didn’t have any legal power to demand anything they were supposedly marching for.

But there was a very clear current of anger in the air. It was *real* and it was enough to unite complete opposite political ideologies into one controlled mob that would ultimately accomplish little except wasting all of their time. There were a dozen more important things Jaylin could be doing, but no, these people wanted to make a point and thus she was ordered to indulge them.

At least the armor was serving a secondary purpose beyond protection. It was fortunately intimidating to quite a few people, with many avoiding eye contact and keeping a healthy distance from the armored Riot Police. Or ADVENT Riot Control, as they were designated now. Although now that several hours had passed, they were getting bolder.

And angrier.

“*See that one in back?*” Troy asked through their helmet comlinks. “*The one with the alien on the operating table?*” Jaylin looked to where he was suggesting and saw the sign in question, it looked like a crudely drawn sectoid with red blood over it (She knew they actually bled yellow) and what looked like a knife stuck in it. How tragic, all underscored by the words “*They are lying to you*” on
“What does that even mean?” Jaylin asked wearily. “I never thought I would see conspiracy nuts out in the open.”

“I can answer that,” Rose said, likely smiling if her voice was any indication. “So apparently, the aliens are actually benevolent and they are actually attacking the evil government as punishment for experimenting on them for years. All they truly want is peace.”

Jaylin resisted the urge to facepalm. “Clearly these idiots didn’t pay attention to New York. Or Hamburg. Or fucking Australia.”

“Hey, I never said they were smart,” Rose teased. “Just the deluded fantasies they believed. Like that guy over there.”

Jaylin sighed and looked to where some guy was holding a sign that read “Treduant is a pawn of the New World Order!” It was of course complete with a badly photoshopped image of Treduant in the middle of a globe, and surrounding her were equally badly photoshopped world leaders, Savvin, Gwan and amusingly enough, the XCOM logo as well. To top off the ridiculous sign was that it rested on some kind of satanic symbol…implying that the New World Order was a satanic cult? She didn’t know if she wanted an answer to that. So she summed up her feelings as best as possible.

“What an idiot.”

“Technically, you could make the case that ADVENT is a New World Order,” Troy pointed out coyly. “But the issue is if that’s actually a bad thing.”

“Not to mention it doesn’t actually include the whole world?” Jaylin added. “Where do people get these ridiculous ideas?”

“Oh, you’ll like this,” Rose chuckled. “You know who Jonas Culbert is?”

“No.”

“He is a…how do I put this?” Rose paused. “A conspiracy ‘entertainer’ and I use that term very loosely. Has a pretty large online show. And runs such logical stories such as that XCOM is a secret US organization born out of MKUltra, ADVENT is the New World Order, and get this, he also believed that there was a legitimate Illuminati organization that secretly ruled the world. Although I’m actually not sure he believes this stuff. I really hope he doesn’t. But unfortunately, quite a few people buy that crap.”

Jaylin looked over at her nonchalant friend casually holding her own ARC rifle as she observed the crowd. “Do I want to know how you know all this?” She asked.

Rose shrugged. “Eh, some people watch movies and play games for entertainment. I just get mine from the idiots of the world. It is both depressing, and comforting to know that no matter how stupid I act, there will always be someone who believes the world is run by lizard people.”

“You know, maybe we’re taking the wrong approach with the aliens,” Troy joked. “Perhaps humanity had its chance and we deserve to face the consequences.”

They all chuckled at that. “Utterly hilarious, guys,” another officer said, Brandon, she believed. “Could we focus? They seem to be getting antsy.”
“Alright,” Jaylin said. “Game faces, everyone. Only a couple hours to go. We get out of here with no incidents and we don’t end up on the news.”

“Sufficient motivation for me,” Rose said. “Hey, is that Senator Martain?”

Jaylin peered into the crowd and spotted the silver-haired man walking with a throng of enthusiastic people, with some Capitol Police officers close behind him. “Yep, it seems so.”

“How truly a man of the people,” someone commented dryly. “You know he’s going to use this for whenever his presidential run is.”

“Not for a while,” Jaylin said as he walked past. “Not since Treduant postponed the elections.”

“She’ll have to open them eventually,” Troy said. “I can see the ads now. ‘I stood with the people who were brave enough to oppose the tyranny of ADVENT’ or something like that.”

Jaylin chuckled. “Man of the people, mind of a politician.”

“Shield!” Rose called and Jaylin hit the button on her arm and the transparent shield on her left arm snapped into place and she held it over her head and looked to see a brick hit Troy’s shield. She closed her own and raised her rifle.

“Lock down the area!” She ordered, adjusting the volume on her helmet projection system. “Attention citizens! Hold your positions until the area is swept! Do not attempt to leave.” She scanned crowd and spotted a hooded figure pushing through the crowd. “One spotted,” she informed, moving to follow. “Rose, with me, everyone else close ranks.”

“Burn in hell, traitors!” A voice shouted and several more blocks and a flaming bottle were flung at the line of officers. More hooded figures sprang up in the crowd, yelling more nonsense and slogans and that was all Jaylin needed. The body cams had sufficient evidence now.

“Lock this block down!” She snarled, raising her ARC rifle at one of the hooded figures. The crowd melted before her weapon as it spat electricity and the figure went down with a shriek. “One down,” she declared, moving onto the next target. “Do not attempt to leave this area!” She warned the crowd. “Unauthorized exits will lead to prosecution.”

Everyone seemed metaphorically stunned that she’d actually used the weapon in her hands and shrank back fearfully as she pursued through the crowd following the initial figure who’d started this.

“Two more are down,” Troy reported. “Three more a fleeing. In pursuit now.”

“Antifa?” Rose asked as they rounded a corner. “Or someone else.”

“We’ll ask them later,” Jaylin said, as she caught a glimpse of the black hood. “But it looks like it.”

“Wonderful,” Rose muttered.

Jaylin finally had a shot thanks to people moving out of the way. Her helmet projector at maximum, she shouted. “You in the hood! Put your hands in the air or I will shoot!”

He skidded to a stop, seeing more Riot Control closing the gap. He turned around and threw open his arms. “Go ahead!” He shouted. “Do it! Show what happens to people who dare defy the almighty ADVENT!”
“Just do it,” Rose said. “We have evidence.”

They did, but Jaylin wanted to make a point with this. If the little thug was determined to make a statement, she was more than willing to oblige once she discredited him. And if he showed some restraint? Well, good for him. Instead, she slung her ARC rifle over her shoulder into the neat holster in the back, and rested her hand on her stun baton.

“Come peacefully and I won’t need to,” she ordered the young man. “Get on the ground and put your hands up. You are under arrest for public disturbance and assault on multiple officers. We have footage of you, so the best thing you can do is-“

“Oh, go to hell!” He interrupted, eloquently flipping her off. She smirked and kept walking forward. She unfortunately knew exactly how this was going to end and did not feel any sympathy whatsoever.

She stopped right in front of the defiant thug. “Are you finished?” She asked, like a mother scolding a child. If there was anything that got these young anarchists riled up, it was being as patronizing as possible.

“You think this is a game?” He demanded. “At least I stand for something-“

“Yes, yes,” Jaylin dismissed with a wave of her hand. “Do you want to give me your speech now or in the car to your comfortable cell?”

He finally did it and swung a fist at her, and she allowed the young idiot to hurt his hand as it hit her hardened helmet. He gasped, and instead of backing down, pulled out a small knife. Jaylin immediately reacted. Fists were one thing, but she wasn’t going to risk getting stabbed to make a point. Besides, if he was dumb enough to try and hit an officer in public, he completely deserved this.

She pulled out the baton and jabbed the blunt end into him, causing him to shriek in pain as electricity pulsed through his body, freezing him up. He collapsed he fell to his knees, even as Jaylin kept the baton firmly on his body, only pulling it off when she was certain he was unconscious. That done, she shut off the baton, placed back on her belt and handcuffed the man and unceremoniously slung him over her shoulder.

At this point she realized there were at least a dozen cell phones and cameras pointed at her, no doubt capturing the entire event. Well, she no longer had to worry about footage being misconstrued. She had the whole event recorded, and had been completely justified in her response. “I’ve got one hostile secured,“ she reported. “Definitely seems to be Antifa.”

“We’ve got ours as well,” Troy reported. “Loading them into the van for processing. These stun weapons are so much better. Much easier without a resisting perp.”

“Unlock the event now,” Jaylin ordered. “Let them finish their protest. I think they’ll be more behaved this time.”

“You’re the boss here. Doing it now.”

Yes, today had indeed turned out interesting.

***

Washington DC, United States of America
Jaylin breathed a sigh of relief when she pulled into her garage. The day was over and it had gone…mostly according to plan. Luckily the rest of the protest had proceeded without incident, and the people had given every Riot Control Officer a wide berth and were much more…subdued, especially once word got around what had happened.

Although she was somewhat dreading going inside, turning on the TV and seeing herself.

But she might as well face the music now. Not that she had anything to worry about, since she’d turned everything over and informed Rais exactly what had happened. She’d followed the law and had nothing to worry about. However, Rais had warned that the major outlets were asking for the video and he was going to provide it.

It would be interesting to see how this was spun, but at least she wouldn’t suffer beyond the realm of public opinion, which didn’t mean much to her since her circle of friends didn’t extend far outside the department.

Reaching her room, she quickly got out of the armor, which took her a longer time than she’d been expecting due to her unfamiliarity. But after actually testing it out…yeah, definitely a major improvement. Perfect 10/10, would arrest thugs again, as the kids would say. Or at least they had, popular phrases and that seemed to change pretty frequently.

Now in a regular T-shirt and jeans, Jaylin walked to her kitchen and was reminded that she needed to stock up. She really should have stopped somewhere on the way back, and she really didn’t have the motivation to actually cook something tonight. Eh, a bag of chips would be sufficient for tonight. She’d deal with her woefully empty pantry tomorrow.

Her snack in hand, she walked over to her couch, which sat opposite her TV where she spent an hour or so a day in front of. It was really only useful for news, since she didn’t watch entertainment, and it didn’t take long for her to get irritated at the state of the world before she shut it off in disgust. Although it had become far more interesting recently, with the destruction of the UN and establishment of ADVENT.

She settled back and flipped on the news to some CNN anchors. She knew they had names, but they were really too boring for her to really bother to learn them, and as far as she was concerned, all of them were interchangeable. For the sake of it, today they were…Trevor and Rachael. Trevor was currently facing the camera and speaking in the ‘breaking news’ voice. “Now to provide an update on the situation that developed today during one of the largest protests ever to take place in DC. We have reached out to the department, and they have provided us both with the names of the officers involved, and the footage of the incident itself.”

“The footage that initially sparked online controversy appears to have been altered, compared to the raw footage provided to us,” Rachael added, shuffling some papers on her desk. “It appears to confirm that the young man in question attempted to attack the officer in question, Jaylin Tanika, and that was the reason for her swift response.”

“And that he was ignoring an officer,” Jaylin muttered, wincing as the picture of her appeared on the screen. It was probably the most unrepresentative picture of her that she could think of. They’d told her to smile and she’d given what now looked like a horribly fake parody of it. She looked like some suburban mom with that smile and loose black hair than an actual officer.

Although she did get some amusement knowing that, somewhere, there was some people who would be completely shocked at the knowledge that there was such a thing as a black female riot control officer. She smirked at the thought. At least this would dispel the accusations of racism that would have no doubt some up if she had literally had any other skin color.
“Nevertheless, this appears to raise some concerns about how ADVENT appears to conduct its law enforcement,” Trevor continued in a monotone voice. “There have been swift condemnation of the force used to subdue the disrupters in question, which one senator has called ‘disproportionate’. We have reached out to both the department and the Chief of the ADVENT Peacekeepers.”

“Chief Amalda Stein replied with, quote: ‘If they didn’t want to get arrested, they shouldn’t have attacked officers and attempted to flee,’” Rachael finished. Jaylin nodded in approval. She hadn’t heard of the Chief of the Peacekeepers, but she was liking her already. It was really common sense. Play stupid games, win stupid prizes that landed you in jail.

The talking heads began droning on about legislature response and were calling in so-called ‘experts’ who Jaylin had seen before and were so irrelevant they only fooled people who had no idea of how things were run today. Her phone buzzed suddenly and she pulled it out and frowned at the number. Why was Rais calling now?

“Hello?” She asked, continuing to eat her chips.

“Watching the news?” he asked.

“Yep,” she confirmed. “Not as bad as I was expecting.”

“Tends to happen when the main controversy is dispelled,” he grunted. “Didn’t say it earlier, but good job.”

She raised an eyebrow. “Thanks, Chief. Need me for something?” It was unheard of for him to call just to offer some support.

“I’ve got some good news for you actually,” he said. “And some news you might or might not find good.”

Well, now she was curious. “What is it?”

“ADVENT Peacekeeping command has decided to promote you to a mobile team captain,” he said. “Essentially that means you can be moved around where they need you, and you get a larger command, better pay and benefits. All in all, a good deal.”

That it was, even if she’d never heard of the position before. “I’m not complaining, but what’s the catch?”

There was a pause on the other end. “Have you been following the situation in South America?”

“A bit,” she admitted. “Not the most important news story to me at the moment.”

“Well, Brazil just completely captured Paraguay,” he said, making Jaylin think furiously. Where the hell was that? “The short version is that the population is not under control and they need Peacekeepers. In this case, that means you.”

Ohh, now she understood. “I’m going to Brazil? Do I get a say in this?”

“No, you do not,” Rais admitted. “Short of quitting, you’re going where they send you, and that is where you’re needed.”

Well…she wasn’t entirely opposed to the idea. It actually might be a good idea to get out of the country for a bit. Not forever, of course, but if she was better down in Brazil, eh, at least she’d be in the center of world-changing events. And if she got to help restore order there, all the better.
“Ok,” she said. “When do I leave?”

“Two days,” he said. “There’s some paperwork and stuff you need to fill out and look over, but we’ll discuss that tomorrow. Get some rest, you deserve it.”

“Thanks, Chief,” she said. “You too.”

She heard a chuckle. “I wish. But it’s looking like a bunch of sleepless nights for me in the future.”

He was probably right. If this was any indication, things were not going to improve in the next few months in the United States of America. Hopefully she’d be called back if it got too bad, but in the meantime, she was apparently going to be keeping order in a captured nation.

Never a dull moment, it seemed. But despite that, she was sort of excited to see what would come next.

***

**Hamedan, Iran**

There was something thoroughly incomparable about an assembled military bearing down on an opposing army. Roman felt nothing but patriotic pride at the sight of the army of Russian soldiers and vehicles preparing for the coming battle, for he now knew there would be one because the time that Colonel General Ivan had afforded Hamedan was over.

Missile launchers mounted on vehicles and entrenched in the ground itself were primed and aimed at the city of sand-blasted stone and metal. If the Iranians were preparing counter-attacks of their own, Ivan had not seen anything of it. The only indication that the military was doing anything was the soldiers on the perimeter and several small tanks rolling around. No doubt that they thought that Ivan wouldn’t go through with his threat. If it was anyone *other* than Ivan, Roman would have probably thought it smart to call their bluff.

But Roman knew that Ivan was not bluffing…even if it seemed extreme. Even his own team was half-skeptical that Ivan would take such a risk to end the war quicker.

“[Anything different?]” Roman asked Maksim as he stood beside him on a sandy hill before the city. Maksim had his sniper rifle slung over his shoulder and was looking through some high-powered binoculars.

“[Negative,]” Maksim said, sweeping his enhanced gaze over the city. “[They don’t seem to be worried about anything. Or maybe they just have orders. They haven’t stopped anyone leaving.]”

Roman gave a grim nod. “[At least some are listening.]”

He could hear the frown in Maksim’s voice. “[Not enough, though.]”

“[No,]” Roman agreed, looking down to see several of their tanks moving up. “[Not nearly enough.]”

“[All Shieldbearer teams report to your designated transports.]” Ivan commanded, an unusually grim undertone in his voice. “[Initial bombardment will commence in ten minutes.]”

“[Our cue,]” Roman said, tapping Maksim on the shoulder. “[Let’s go.]”

Maksim tucked the binoculars away and both of them dashed through the mass of soldiers,
vehicles, tanks and explosives to get to the rows of armored trucks which the Shieldbearer teams would ride in to take the city, with the heavier tanks and main bulk of soldiers following close behind. The Shieldbearer teams would eliminate and scatter what remained of any Iranian soldiers, and the main army would secure what would soon be a ruined city.

The rest of them were already by the transport, saluting as he walked up. “[Here we go.]” Elena said quietly as she looked to the city in the distance. Her helmet was removed, technically a breach of protocol in hostile territory, but considering the circumstances, Roman was willing to overlook it. Elena had clearly not been comfortable with the plan, going so far to question Ivan’s sanity, though of course not where any superiors could hear them.

She had calmed down later, but she’d been quieter than usual over the past couple days. But in the end, she was a Russian soldier, and she would do her duty, even if she didn’t like it. Roman saw Konstantin glance over to a clock set up in the camp.

“[Time’s up.]”

Not one minute later, the whirring of the gears in the machines aiming the explosives at the city began moving, until there were audible clicks heard throughout the entire arsenal. The entirety of the assembled ADVENT-Russian military watched in silence as several dozen missiles were launched with earth-shaking roars and streaked towards the city and exploded in the distance.

Cascades of fire and shrapnel soon dotted the buildings in the distance, and the next volley was already being primed, and a few seconds later, were fired into the air, and like the first round, decimated another section of the city. In the lull between volleys, the shouts and screams of the Iranians in the city became audible.

A roar overhead shook the ground and Roman saw several heavy bombers flying over and released a payload of much smaller bombs onto what untouched parts of the city still remained. Now crumbling, burning and utterly in chaos, the time to strike was now. Roman rested a hand on an Elena that was completely expressionless. “[Time to do our job.]” He said softly, then louder to the rest of them. “[Load up! Time to go!]”

There was a chorus of affirmation as they climbed into the transport and were immediately sped towards the now-devastated city. Roman held his rifle at the ready as Ivan made their orders crystal clear. “[Shieldbearer teams, remove any resistance that remains. Captures are not necessary. Remove all threats in the area quickly. Good luck.]”

Several minutes later they pulled slammed to a stop and Roman leapt out the back of the transport, his team close behind him as the other transports also drove up. More Shieldbearers and their teams poured out and began entering the city which was consumed with smoke, dust and sand that obscured their approach.

Now that they were near, the screams and cries for help in Persian were clear, and those were their target. Remove all resistance, for that was their directive. Marching through the dust they simply followed the sound of people. “[Two ahead!]” Stanislav called, and Roman raised his rifle at the sight of two soldiers trying to help one of their wounded comrades.

Perfect for an arrest, if they didn’t pose a threat. Regardless of what Ivan wanted, Roman would accept a surrender should they ask for it. But it wasn’t to be as one of the soldiers spotted them, and pulled out a pistol, shouting to his friend. Roman blew his head off with a single well-placed gauss rifle shot, while Galina and Maksim executed his friends.

“[We move inward.]” Roman ordered, activating his shield as he heard sounds of desperate Persian
calls likely trying to organize what remained of their army. “[We have a lot of ground to cover.]”

But once it was done, there would be one more city that had fallen before the soldiers of ADVENT.

***

Kochi, Japan

Duri stood with Beatriz in one of the skyscrapers that overlooked the area where they would be stationed. This was probably the dream defense for any army. The home field advantage was emphasized here, allowing friendly snipers an almost perfect view of the immediate battlefield. Beatriz had specifically chosen a building that wasn’t the highest in the area, but more in the middle-range, and slightly closer to the action, which as she said, would “Let her take better shots at more targets.”

Right now she had her sniper rifle resting on the balcony railing, her helmet off and peering through the scope into the ocean beyond. There was a light breeze and her hair whipped in it, though it didn’t seem to bother her as she scanned the area, stone-faced. “Looking for anything in particular?” He asked after a couple moments of silence.

“Just waiting,” she answered, lowering the rifle and glancing over at him. “Not much else to do until then, right?”

Duri raised an eyebrow. “Nervous?”

Her lips twitched. “Sure, aren’t you?”

“Not as much as I probably should be,” Duri admitted, resting his forearms on the balcony. “Maybe if we had no idea what we were facing. But we do, and I know they can be killed. It helps knowing that they bleed and die just like us.”

“I’m curious,” she said. “Have you actually fought?”

“No official wars, if that’s what you’re wondering,” Duri said. “Have some combat experience, but not military. I was law enforcement before joining the military. North Korea seemed a bigger threat to me than petty crime.”

“Hmm,” she looked back over the ocean. “And what do you make of Kang?”

Duri was personally skeptical, but knew that wouldn’t be in the best interests of the team. “It’ll take some getting used to for me,” was all he said. “But if he does his job, then all the better.”

“A good attitude to have,” Beatriz nodded. “Some people can’t work with former enemies.”

“There’s a difference between enemies and those on an opposing side,” Duri shrugged. “North Korea was an enemy, but Kang was just fighting for them. He’d been brought up in service to the state because he wasn’t given a choice. If anything, I almost feel sorry for him.”

Beatriz gave an unexpected light chuckle. “He likely won’t see it that way.”

“Probably not,” Duri agreed, pushing himself up. “I’m heading down to our little tent. You still want to just watch?”

“For now,” she said, returning to looking into the horizon. “It’s quiet out here. Gives me time to
“Ok,” he nodded. “Get some rest though. I don’t want you tired when the fighting starts.” She gave a brief nod and he descended the building and hitched a ride to where his tent was. Upon arriving he saw Cara and Kang were sitting at a table playing some kind of card game. Duri figured it was calm enough to unpack some of his own stuff.

He walked over to his locker and began unpacking everything properly, and storing his armor and weapons in order, as it should have been. He pulled out the picture of Sandara and affixed it to the inside of the locker door, a smile on his face as he looked upon the picture of his wife.

“Girlfriend?” A voice asked-Johan, he recognized.

“Wife,” Duri corrected, turning to him while reaching down for the two other pictures. “And this is Mari and Nabi.”

Johan whistled. “Daughters too? You are full of surprises,” he took the pictures, looking at them almost enviously.

Duri chuckled at that. “Is it that much of a surprise?”

“Eh, probably not,” Johan admitted, handing the pictures back. “I’m somewhat impressed. I’m not sure I’d want to marry in the military, let alone have kids.”

“It wasn’t too bad,” Duri explained. “I was stationed in Seoul, so there wasn’t much separation. This is really the first time we’ve been separated because of deployment.”

“Are you worried?” Johan asked. “We’re not that far from South Korea.”

“I know,” Duri said wearily. “It’s good motivation for me. Stop the aliens here, and then South Korea and my family are safe.”

“I think we’ll do it,” Johan said. “If that’s any consolation. I’ve been watching the videos of XCOM fighting. All the aliens really have going for them is their tech. Take that away…”

“Sadly, no,” he chuckled, leaning against the bunk. “But I plan to one day. Wanted to wait till I was out of the military before starting anything. Seemed smarter that way.”

Duri smiled. “I can tell you from experience that love has a tendency to destroy our previous plans. But that’s a different topic, got any family?”

“Parents in Sweden, and a sister, Mona,” Johan said. “She and I were pretty close. We actually enlisted together.”

“Oh, is she in ADVENT as well?” Duri asked curiously.

“Technically, but I’m pretty sure she’s still in Sweden,” Johan said. “She’s a bit too reckless for front line fighting. Last I heard she was talking about some role in special forces. Trust me, she’s real demon when she’s angry.” He smirked. “But she’s the best sister I could hope for.”

“That’s good to hear,” Duri said, closing his locker. “For better or worse, I grew up without any siblings. Sometimes wished I had one, but then again…”
“You could have gotten a really annoying one,” Johan finished, smiling.

“Exactly,” Duri said. “So, what are they doing?”

“Cara?” Johan asked, looking behind him at the table. “Got it in her head to teach Kang Poker.” His voice lowered. “I’m pretty sure she’s setting him up to take all the money he’s stupid enough to bet. She’s pretty damn good.”

“And how would you know?” Duri asked with a raised eyebrow.

“Eh, practice,” Johan said with a smile. “I was friends with several American soldiers in Sweden and that was something they did for fun. I personally suck at it, but I know how it works.”

“More than me,” Duri conceded. “Well, I’m getting some sleep now. See you in the morning.”

“Sweet dreams, Captain,” Johan nodded with a mock salute, and Duri climbed into the bunk and was asleep in mere minutes. It was a deep and dreamless sleep, undisturbed by anything…

Until the shriek of the alarm pulled him wide awake. Soldiers were shouting and the rest of his team was similarly startled awake by the commotion. “Alien forces approaching,” the loudspeaker blared. “All forces report to their designated positions.”

His heart began beating furiously. “Armor up and get ready to move out!” Duri ordered, immediately beginning to throw his own armor on. It was showtime now. Do or die. The direction of the war would be determined by this first battle.

And he was not going to break under the pressure. Too many were counting on him to fail now.

He placed his helmet over his head and waited for the HUD to materialize. “Move out!” He ordered at the rest of his armored team. “We have some aliens to kill.”

***

*The Praesidium, Barracks*

They were here. It was time for the first actual battle against the Ethereal Collective and Patricia felt strangely calm. She pulled on her gauntlets and glanced down at her hands and concentrated. The air around them rippled and flashed purple and she smiled. While the time with Aegis had been short, he had given her some advice in case an Ethereal did show up.

But for everything else…

Well, they stood no chance against her. Perhaps she was overly optimistic, but Patricia believed that the aliens were going to get a sharp kick in the teeth with the combined power of XCOM and ADVENT. The Goliath was online, and the other MECs were going to be wreaking even more havoc on the alien forces.

She placed her helmet over her head, waiting for it to click into place before turning to the assembled soldiers behind her. They were the best humanity had to offer, and there was no finer force she wanted to lead into battle for Earth.

“Load up!” She shouted, turning and beginning her march to the hangar. “Time to give the aliens a proper welcome to Earth!” Emboldened by the swelling anger, pride and confidence, Patricia had a good feeling about the coming battle.
All she had to do was make it a reality.

***

Supplementary Material

The Advent Directive

SECTION 7: ADVENT Peacekeeping Division

Subsection 7.1: Introduction

**Purpose:** The role of the Peacekeeping Division is the enforcement of laws established by the ADVENT Executive, Judicial and Legislative branches of the government to the fullest extent. It is to enforce order and curb disobedience to the state by the rights afforded to the Peacekeepers. It is to provide protection to the citizens of ADVENT from the criminal and degenerate elements of society and stamp them out by the methods afforded in this document.

**Subdivisions:** Within the Peacekeepers there are several subdivisions to focus on different aspects which will be elaborated on further in this section. A general overview is this:

**Subdivision 1:** State Officers – These officers fulfill the traditional role of law enforcement and will embark on regular patrols in designated areas and have the authority to arrest criminals they encounter and issue tickets and citations to lawbreakers. Upon the observation of suspicious activity, they are permitted to intervene with appropriate cause.

**Subdivision 2:** Riot Control and Pacification – These officers are utilized to put down disruptive and dangerous riots and violent outbreaks that pose a threat to ADVENT citizens. They will also be utilized to subdue the civilian populations of hostile areas to remove the threat of revolt or uprising. Riot Control officers are authorized to subdue hostile populations by what means they deem appropriate.

**Subdivision 3:** State Special Response (SSR) – SSR Officers act as the militant arm of the Peacekeepers, primarily used as anti-terrorism and for operations against criminal organizations, rogue government or military personnel, and gangs. SSR Officers answer directly to the Chief of the Peacekeeping Division, and have complete domestic authority in all matters related to the Peacekeepers.

**Brief Overview of Powers and Authority:** All officers have the right to defend themselves should their life be in danger, and this right cannot be struck down or changed. The proportional response will vary from officer to officer, but no effort shall be made to infringe upon the right of an officer to defend themselves.

This protection is afforded with the understanding that it will not be abused to exercise undue power over civilians including as such; any officer abusing their power will be stripped of all rights and charged accordingly with reparations given to the opposing party in question. Altering or destroying armor cam footage carries the same penalties, and shall not be tolerated by the Judicial Branch or Peacekeeping Division.

Officers have the expectation of complete obedience in the event of an arrest, and resisting or fleeing will result in extended sentences and that being used in courts against them. Officers do not have to give a reason for stopping a citizen, and are to be obeyed at all times. However, all civilian encounters must be documented with the Peacekeeping Division, or the penalties listed above will apply.
SECTION 7 Index:

7.1: Introduction
7.2: Structure
7.3: Officer Qualifications
7.4: Directive
7.5: State Officers
7.6: Riot Control and Pacification
7.7: State Special Response (SSR)
7.8: Authority and Powers
7.9: Oversight
7.10: Limitations and Regulations
Kochi, Japan

“Here they come!”

Duri wasn’t sure who called it out, but he immediately saw the glints on the horizon, sparkling metal reflecting the morning sunlight. He could see a US destroyer some ways out into the sea before Kochi, which looked almost pitiful compared to the coming swarm of alien ships.

One, two, six, ten…he swallowed as what seemed to be an uncountable swarm drew closer. “In positions!” He ordered his team, as they knelt behind established metal barricades, similar to the other twenty teams that had set up position in front of where they expected the aliens to land. There was just enough space to bait them into coming, but with almost zero cover.

Would they take the bait?

Well, if not, there were fortunately other backups. But it was becoming quickly apparent that this was not going to be a battle they might even have a chance of winning. The UFOs were much clearer now, and there was a tangible thrum in the air from what he could only assume was from the alien engines.

“ADVENT Command to Kochi Defense, be prepared for missile defense systems and naval warships to begin deterrent measures. Be prepared for insertion.”

“Copy,” Duri acknowledged into his helmet, and he heard the echo from the rest of the ADVENT Squad Officers. “Beatriz, you still have a clear shot? See anything?”

“Clear on my end, Officer.” A pause. “The ships are big. Very big.”

Duri glanced up as a squad of four fighter jets roared overhead towards the oncoming fleet, and were soon accompanied by several dozen more squads. “Calvary’s here,” Cara chuckled, lifting her aut rifle in preparation for the attack. “Good luck to them.”

And that was when the battle began.

The air around the fleet began to be filled with missiles, gunfire and flak from the ADVENT fighters, splitting the unified alien coalition. Circular UFOs rose from behind the transports and began returning green plasma fire at the fighters, blasting several out of the sky instantly. All the fighters broke off into evasive maneuvers and engaged in a true dogfight with the alien interceptors.

The Destroyer floating in the bay in front of the city began firing, as did the missile systems installed around the city, shaking the ground from the volume of projectiles launched into the air. The leading transport was hit with a devastating barrage that ripped several gaping holes in its sides, and a second barrage made it stutter in the air, and begin a slow collapse downwards.

The soldiers cheered as it crashed into the ocean in front of the destroyer. One problem dealt with.
The only problem was that it was only the leading transport; there were ten more following and there wasn’t nearly enough concentrated fire to take all of them down. “Weapons ready!” Duri roared as the rectangular transports hovered over the water just in front of the tiny beach.

He did a quick count, and the sounds of the battle waged elsewhere faded as he concentrated. Four transports so far, carrying God knew what. With a hiss they opened and out charged a mix of the green-armored Mutons and Vitakarian soldiers. Borelians and Vitakarians if he identified them correctly, clad in silver armor and fully covered for war. These must have been their regular infantry, since he was pretty sure they had never been encountered by XCOM before.

“Open fire!” He ordered, and the battlefield was filled with the sound of hundreds of rifles, pistols, shotguns and autorifles discharging at the exposed alien horde. The mutons didn’t even try to hide, but stood in the open and returned green plasma fire at the entrenched ADVENT soldiers. Several dozen of the hulking aliens were cut down in the initial barrage, as were many of the Vitakarian soldiers, but others were only grazed.

“They’re establishing cover!” Kang warned as he shot one of the two Borelians attempting to stab two connected pieces of metal into the ground. Duri soon saw what those did, as several teams managed to establish them successfully, and between the two pieces of metal projected what was likely a red energy shield of some kind.

He shot at one Borelian who was hiding behind it and noted that the shield did seem to stop gauss weaponry. Good to know. “Cara! Suppress the team moving up!”

“Acknowledged!” She shouted and turned her autorifle on the team of three Vitakarians charging forward, presumably to establish some kind of defensive perimeter.

“*Heads up towards the back,*” Beatriz warned as he fired at a muton shooting at another ADVENT soldier. The alien screamed as his shots connected, and fell to the ground dead a few seconds later. “*Got some new ones coming.*”

Duri focused at the transport and saw a team of a dozen of what appeared to be…Andromedons charging out. But these weren’t the green-helmeted ones. These Andromedons had red-tinted helmets even though their hulking suits were largely the same. But they also seemed to have some kind of drone flying over each one of them, with each drone seemingly being unique.

“*VIPs,*” Duri called. “Beatriz?”

“*Targeting.*”

They were definitely the most important ones for the aliens, if the reactions were anything to go by. The remaining mutons immediately went to form something of a guard around them, and he personally saw the strange Andromedons ordering and pointing the remaining alien forces. Unlike even the Mutons, these aliens seemed unperturbed by the chaos and danger around them, shrugging off direct hits and focusing intently on the shield spikes planted by the Vitakarian soldiers.

“What are they doing?” Johan called as he shot a Borelian to death, and began shooting at a Muton on one knee that was trying to fire back.

“I don’t-” Duri began, when the beach littered with alien blood and corpses seemed to *flash* and all the energy spikes planted suddenly interconnected into walls of light that extended above the Andromedons themselves, effectively protecting the entire beachhead in an imperfect semi-circle. *Fuck.* Those Vitakara weren’t planning them randomly, this was *planned.*
At least the targets were clear. “Shoot the poles!” Duri ordered.

“At least they can’t do anything either,” Cara commented as she fired on a section of the red shield wall.

Maybe not, but they were definitely planning something. The red-helmeted Andromedons were patrolling the shield with a mechanical precision that worried him. From the transports came the Drones that XCOM had fought, likely for the purpose of repairing the shield.

“Clever,” he muttered to himself. “ADVENT Command, this is Officer Eun-Jung of Squad Eagle-224, requesting artillery strike at the following coordinates. Copy?”

A few seconds of delay, and then. “Copy, Officer. Standing by to receive coordinates.”

“Provide covering fire!” He ordered, risking a stand and switched on the marker built into his armor. A weak laser pointer shot from the marker in his wrist, and he aimed it at the center of the shield which was being pounded with barrages of gauss fire. “Target locked,” a voice confirmed. “Stand by.”

“Incoming!” Duri yelled, as a few seconds later shells streaked over his head and lit up the beach in a series of massive explosions. As the smoke cleared, Duri noted that there were definitely gaps in the shield, and some of the poles were sparking, but it wasn’t nearly enough, and now the aliens were preparing to retaliate in full force.

Out came flying creatures from the transports, Floaters he believed, but these weren’t the horrific blends of flesh and metal XCOM had described. These were flying units clad in gray armor and carrying plasma cannons. They shot above the barrier and towards the line of ADVENT soldiers and began wreaking havoc.

It was an aerial threat fast enough to fully occupy them, and they were too slow. Soldiers screamed as plasma melted their armor from shots from the evasive Floaters. Duri shot one out of the sky, and another fell from Cara’s concentrated burst, but two more swept around their flanks and wiped out an entire team with a single well-thrown plasma grenade. They were both taken out by ADVENT snipers, but the damage was being done even as the Floaters were slowly brought under control.

Except they weren’t. Not really. It was after he’d shot one when he realized how little they were actually doing. He must have shot it somewhere vital, since it was leaking a yellow fluid and it infuriatingly managed to slip past his shots and retreat beyond the red barricade. He almost moved to another of the two dozen flying targets, when he noticed one of the Andromedons heading towards it, and appearing to repair it.

He watched in morbid fascination as the alien seemed to shudder in pain and throw its head back in a scream as the Andromedon and its drone worked on it, sparks flying off the body, but then a minute later the Floater was roaring back into the fight, nearly as good as new. “The Andromedons are repairing them!” He warned to all the squads. “You can’t just wound them!”

This was not good.

Two Floaters streaked towards him, firing wildly as they attempted a strafing run. Kang risked standing, lining up a shot, and hitting one of them in the head and it crashed to the ground a few meters from where he was standing. One more shot finished it. The other was thrown off course by another shot from somewhere else, and Johan took advantage and blasted the Floater in the chest several times, apparently hitting one of its engines, then watched it spiral into a building with a
small explosion.

“Beatriz! Can you get a shot on the Andromedons?”

“Negative!” She answered, voice strained. “They’re smart. Hiding behind the shield. I can’t damage it either since they fix it almost immediately!”

“What’s the plan, boss?” Kang demanded as they weathered another strafing run by another Floater. “Those things will kill a lot more of us than we them. And those other ones aren’t going anywhere.”

“I know!” He scowled, trying to think. He took several shots that missed against another Floater trying to outflank a separate squad. It fortunately couldn’t kill any of them, and was shot a few times, but it simply flew away and back behind the barricade where it was fixed up by the Andromedons and drones.

The other aliens were standing in an orderly line behind the barricade, watching expressionlessly as the Floaters slowly whittled the ADVENT army down to nothing. “Beatriz! How many Floaters are left?”

“Uh, hold on,” he heard a shot. “Eight? Ten? Something like that. We’re running out of people, Officer.”

“Ok, new orders,” Duri said. “Only target the ones who are wounded and heading back for repairs and kill them. Suggest that to the other snipers.”

“Will do.”

“Kang, Johan, pick a Floater and don’t stop shooting it till its dead,” Duri continued. “Cara, target one of the shield nodes. Take at least one Andromedon away from repairing Floaters.”

“ACKNOWLEDGED,” she yelled, and began shooting the shield. He raised his rifle towards a Floater that had just tossed a grenade at a duo of soldiers which killed them in the ensuing explosion, and fired his weapon, hitting the Floater square in the back. It didn’t damage the engine, clearly, but it was damaged apparently bad enough to send it flying back beyond the shield. Come on, Beatriz…

Then it blew apart with a miniature explosion as one sniper must have shot the engine. The corpse slammed into the shield and fell outside it as a charred wreck. “Good shot!” Duri called to whoever was listening. To his dismay, he saw a new wave of Mutons coming out of the transports, which meant that the aliens knew their borrowed time was up and they were preparing a new offensive.

“ADVENT Command, we’re under heavy attack from Floater units and the aliens are preparing for a massive strike. Requesting reinforcements.”

“Request received, stand by.”

“Got it!” Kang whooped as another Floater crashed into the yellow-soaked sand. “Johan, focus on the one to the left!”

“I see it!” Johan confirmed. “Stay still, you bastard…”

“Squad Officer Eun-Jung of Kochi Defense, this is Gray Sky,” a new voice said. “Request understood and reinforcements are on the way. Hope you have enough room.”

Duri frowned, not sure what that meant. Whatever, it was good. Was that an XCOM designation?
He supposed it didn’t matter as long as they were coming. “Glad to hear it,” he glanced at the Muton and Vitakara army preparing to attack, even as the remaining Floaters were eradicated. “But please make it fast.”

With that, he aimed his rifle at another Floater, and continued contributing to the defense of Japan, one pounding gauss shot at a time.

***

Skyranger, En route to Japan

Nuan stopped herself from unconsciously tapping her gloved hand on her knee. Whatever reservations that had flown through her mind about XCOM, the people she was with, and pretty much everything else had been pushed aside as the very real realization that she might die set upon her as they flew towards a battle that was said to cover the entire country.

She was very good at her job, no doubt about that. But it was one thing to work with a special team in a relatively safe environment, and another to be on the front lines, plasma and bullets flying over your head. Nuan was extremely grateful for the helmet that covered her face, since anyone who looked at her would be able to very clearly see that she was scared.

It shouldn’t have been like this. Why was she this affected? It wasn’t like she’d never been shot at before.

This is different, a voice told her. An annoying, persistent voice that spoke uncomfortable truths. This is war of thousands, and you are only one.

She looked around the silent skyranger, wondering if she was remotely alone. All the rest had their faces obscured, so they were as expressionless as she was. But she knew they were veterans. They had seen the aliens. Iosif, Gyeong, Seok, the EXALT woman Zara, even the traitor Shun had fought before, and if there was anything Inori was feeling right now, it was probably anger. She’d expect nothing less from someone defending his homeland.

Only Anna was as much of a rookie as her, and even she had the calm demeanor of one accustomed to battle. Don’t panic and you’ll live. Someone had told her that, and she hoped it would be enough. She was here to support XCOM and ADVENT, not be a goddamn hero.

Don’t throw your life away for nothing. Don’t take stupid risks. Use your brain.

Easy to repeat now, but would it hold up when they landed? Was she strong enough?

She didn’t know, and that scared her.

No matter what she thought of these people personally, she was going to be trusting them with her life, and conversely, theirs with her. She didn’t want to, of course, but she would rather put her life in the hands of foreigners than try to survive on her own. It didn’t work that way, but she couldn’t shake the suspicions she had about them, a paranoia instilled by years of service that she couldn’t forget overnight.

But she had no choice now. She had to turn her back to the assassins and trust them…and hope she survived the fallout.

She flinched as a hand rested on her arm, and looked right to see it belonged to Iosif. “Don’t worry,” he told her quietly. “You’re going to be fine. Just follow my orders and do your job.”
How did he...ah, she almost forgot he was a psion. He didn’t have that odd presence that Patricia had. With her you knew something was off about her the moment she entered a room. Iosif was much more subdued. It seemed he kept his talents to himself, which she could respect. But one constant with all psions is that they could sense emotions and read minds.

She flushed, not sure how she was comfortable she was with him reading her. But maybe it couldn’t be helped. Maybe she was screaming emotionally. But she was almost grateful, and gave him a small nod in return as she consciously tried to lower her heartbeat to a reasonable level. And she privately hoped he’d keep his hand on her. She needed some human contact from someone who wasn’t as worried as her.

“This is the Commander to all teams,” the Commander said. “The aliens have engaged ADVENT forces in Japan, as expected. We are deploying teams where the fighting is worst, though be prepared to redeploy if necessary. All teams report in.”

“Angel Team, reporting in,” Patricia said.

“Astro Team, reporting in,” Carmelita confirmed.

“Oriole Team, reporting in,” Iosif finished.

“Good luck, teams,” the Commander said. “The outcome today will set the tone for this war. Today XCOM shows the world that the aliens can be defeated and sent back to the stars. Your pilots have received directions. Vigilo Confido, Commander out.”

“This is Lightning Sky to Oriole Team,” a smooth British voice said over the comm. A new pilot if Nuan had understood correctly. “You are being deployed near Shibetsu, at the north end of the island, where the aliens have taken the beachhead and are moving inland. ADVENT has set up strong defenses close by, but require heavy support.”

“And information?” Iosif asked, flexing his free hand. “Enemy composition? Losses?”

“Stand by,” a pause and the pilot continued after a few moments. “Appears to be mostly Andromedon, a new kind we haven’t seen before. Not many details. Drones have also been spotted and some…mechanical thing. No details. ADVENT is holding steady, but are taken slow losses where it seems the Andromedons haven’t suffered a single one.”

“How?” Inori declared, outrage clear in his voice. “They lack the means to kill one?”

“Unknown and unconfirmed,” Lightning Sky answered calmly, as he physically lowered the altitude of the skyranger. “Regardless, it seems Andromedons are hard to kill.”

“Yep, you can say that,” Shun muttered. “It took twenty-some soldiers to kill four when the Citadel was attacked. I can only imagine an entire army.”

“Good news is that there are several Japanese and American warships shelling the beach,” Lightning Sky informed. “You’ll get some reprieve there, but limited air support, unfortunately.”

“Noted,” Iosif said coolly. “Stick to the plan, soldiers. We’re entering a warzone. Stay close to me until we can safely get to cover. I cannot protect all of you at once. Understood?”

“Yes, Overseer!” They shouted.

“Prepare for insertion, Oriole Team,” Lightning Sky said, and the skyranger lights flashed to a solid red. Regrettably, Iosif took his hand off her arm and she was alone inside the shell of her
armor. But she stayed very close to Iosif, beside him at the front as the skyranger shook when it lowered. She didn’t know who was behind her, but it wasn’t important.

Swallowing, she tightened her grip on her pulse rifle. “You can do it,” Iosif said quietly, not looking down to her. “Just stay close.”

Then that was what she would do. Stay close to the psion who would protect them. Even if he was a Russian.

“We are coming in for a landing,” Lightning Sky warned as there was a sudden drop, then a shudder as the aircraft touched down. “Godspeed, soldiers.”

“Same to you,” Iosif said with a smile in his voice. “Don’t get shot down. We need a ride home.”

“The damn aliens aren’t scratching the paint on this. But do kill as many as possible. Makes my job easier.”

Iosif gave a low chuckle at that, then raised his left hand, clenched in a tight fist and Nuan watched, mesmerized as a purple ball of energy manifested itself around the fist, then as he unclenched it, grew larger to expand until they were encased in a shimmering purple sphere, Iosif at the center.

“Again,” Iosif rumbled, his voice layered from the psionic power. “Stay close to me.”

And with that, the ramp lowered and the sounds of battle finally reached her ears.

She swallowed once more. Do or die.

***

Near Shibetsu, Japan

A town engulfed in flames was the first thing that Nuan saw, the second was the plasma beams in the air and the army in the distance. “Forward!” Iosif ordered and they charged out into the grasslands peppered by metal barricades with ADVENT soldiers fighting back against the encroaching aliens.

Behind them were established missile and artillery systems, and Nuan counted…hundreds of ADVENT soldiers, spread across the battlefield already marred with metal, bodies and blood. A green beam hit Iosif’s shield, but dissipated instantly and he kept going with no recognition of what had just happened.

“Dropping the shield,” he said. “Ten seconds, get to cover while we figure out what’s going on.”

“Understood!” Zara stated, already firing her plasma rifle into the aliens in the distance. Iosif nodded, and lowered his hand. He must have been also blocking out some of the sounds, since everything Nuan heard was much more intense. The artillery shook the ground, the air was filled with the sounds of gauss rounds being fired and plasma beams discharging.

Stay close to me.

So she stayed by Iosif as he pushed past the ADVENT lines who were continuously moving and reorganizing depending on where the attack was worst. “Situation report!” He demanded from an Officer organizing an ADVENT squad to target a group of Andromedons in the distance.

The Officer snapped to attention as she saw they were XCOM. “Not good, sir. We’ve lost the city decisively. We didn’t expect to get hit so hard here…and these aliens…they don’t die. We wound
them and they keep coming back. We can’t replace our own soldiers, but they seem to be doing it.”

Nuan surveyed the battlefield briefly as the Officer gave more details. A very open area, with some trees providing sparse cover between the ADVENT defenses and the city itself. No one was risking going beyond the safety, creating a no-man’s land that was almost certain death for anyone who tried to cross it.

The aliens also appeared to have locked their side down completely. They were definitely Andromedons, green-tinted helmets and all. Above them were drones, but aside from that, she spotted no other alien forces. She pursed her lips as she saw them taking turns firing at the ADVENT soldiers. Their rifles were different, or at least fired differently. Instead of bursts, it was a straight lance of plasma similar to a laser. Maybe more accurate and powerful, but likely not as efficient.

Nuan raised her rifle and started firing, using a concentrated beam to focus her shot. An Andromedon hiding behind a shed was skirted by her beam, and stepped out, arm smoking and leaking some kind of yellow gas. Interestingly, it immediately pointed her direction while she reloaded and…ran away?

A few seconds later two more Andromedons rushed over to where the first one had been and bean firing her direction. She ducked under the metal barricade as twin beams of plasma shot over her head. “You got their attention,” Zara commented as she slid into position near her, and began firing on the two Andromedons. “Anything interesting?”

“We’re getting shot at!” Nuan spit out, as she pulled out a smoke grenade, wondering if she should use it now. “What do you think is interesting?”

“Hold that thought,” Zara said, standing again. “Anna! Can I get some fire on those two?”

“I can’t hit anything from here!” She called back, standing regardless. “But I’ll do my best!”

The Andromedons fell into cover as the shed was almost torn to shreds from Anna’s gauss heavy autorifle. Nothing hit, of course, but it allowed Zara to set up a carefully aimed shot. “Stay still…” she murmured, just before the fiery laser spat from her own rifle and hit one Andromedon straight in the chest.

It immediately jumped back, but the damage was done, and it was leaking some black fluid, yellow gas and sparking from the hole in the suit. But similar to the last one, it ran off and the other Andromedon focused directly on Zara, forcing her back into cover.

“They have something repairing them,” Zara warned as more plasma beams flew overhead. “Each time they get hit, they run away and get help. No wonder they aren’t being killed.”

“I could have guessed that,” Nuan hissed. “But we’re too far away. Nothing is going to change until we gain some ground.”

“Nuan! Gyeong! Anna! Come with me!” Shun ordered, rushing up. “Iosif needs us.”

Nuan nodded and with Anna, dashed after Shun towards near the center of the ADVENT line where Iosif was standing with a team of ADVENT engineers and soldiers. “We’re going to advance forward,” Iosif stated, pointing to a distance about ten meters beyond the current wall. “Not much, but we need to do something otherwise we’re just going to get picked off one by one.”

“We protect them while they establish the defenses?” Nuan asked to confirm.
“Correct,” he revealed, shifting as a plasma bolt shot uncomfortably close over their heads. “I’ll provide protection, and you’ll need to provide covering fire as well.”

Nuan swallowed. “Understood.”

“I won’t be able to protect you forever,” Iosif warned the ADVENT soldiers and engineers. “Work fast.”

“Yes, sir!”

Iosif raised a fist and repeated the gesture he’d done earlier, and the entire group was soon encased in a purple sphere. “Move out!” He ordered, and they stepped into the exposed battlefield. Nuan took out a smoke grenade and popped it.

“Covering smoke!” She called and ignored her reservations and jumped to the front of the sphere, letting the smoke drift back and theoretically make it difficult for the Andromedons to get a clear shot. With one hand holding the smoke grenade, she used the other to pull out her gauss pistol and took some shots at the Andromedons.

Their move forward had attracted all of their attention, and Nuan couldn’t help but flinch as plasma pounded Iosif’s shield and she saw several shots that would have probably killed her outright. But luckily the sheer amount of firepower they were shooting out in return, particularly from Anna and a couple ADVENT gunners, was forcing them into their cover, with the rest of them adding what they could.

“Establish here!” Iosif called, falling to one knee seemingly to help him concentrate. The ADVENT engineers carrying the materials immediately began sticking them into the ground and creating a barricade. She would need to look over the schematics so she wouldn’t feel quite so useless next time. But now she could do her best to keep everyone alive.

The smoke grenade she’d been carrying was out and the cloud was dissipating, so she pulled out another one and planted it firmly in the ground and let the cloud cover them all, at the same time pulling out one of her flashbang grenades and throwing it towards a trio of Andromedons huddled behind a crashed car.

Unfortunately, it seemed to have no effect whatsoever.

As she also fell to one knee, shooting several beams towards other Andromedons, it made sense in retrospect. Why **would** aliens encased in suits be vulnerable to such a tool? They would have been idiots to not think that was a possibility. The ADVENT engineers, who were being helped by Gyeong, had finished constructing the barricade and Nuan quickly positioned herself behind it, grinning as she felt the firm metal at her back.

Alright. Alright. She was still alive.

“Now we actually need to kill some of them,” Iosif said, letting the shield collapse as they moved into actual cover. His voice was noticeably more strained compared to earlier. “Seok, you see that car?”

“I do,” came the voice of their rocketeer. “Is it volatile?”

“Appears so,” Iosif muttered, risking a glance out. “Let’s see how they like rockets. Everyone, pin the Andromedons behind that car down!”

Instantly that area was peppered with gauss and laser bursts, which had the desired effect of forcing
the trio of aliens hiding there to stay put. Only just a few seconds…”Rocket away!”

Nuan saw the projectile streak and slam into the car and it blew up with a massive explosion that blew one of the Andromedons in half, the other vaporized completely and the one who’d sensed the danger was blown back, the helmet completely destroyed.

And then it came back to life. “Problem!” Nuan called as the Andromedon suit shakily stood back up, the alien corpse within hanging out of the suit like a half-finished birth. It was scorched, leaking fluids and sparking like it would explode, but instead it tried to fire the ruined plasma weapon, which amusingly exploded in its hand, shredding the arm and a good portion of the upper suit itself.

“Shoot it before it runs away!” Anna called and Nuan fired her rifle at the legs of the suit. Luckily it was much slower without a conscious pilot and she cut through most of it before it began stumbling away, and to her immense satisfaction, it fell over and still tried crawling away. She pulled out a frag grenade, judged the distance, and threw it towards the ruined suit.

It landed a half-meter away and blew up and it stopped crawling. Nuan took a breath. One down… she glanced at the rest of the battlefield with a sinking heart. At least several hundred to go. “Seems they like explosives,” Anna called. “Iosif?”

“Agreed,” he nodded. “ADVENT Command, we need to request a bombing run on Shibetsu, now!”

“I’ve got another shot lined up,” Seok informed. “There’s a couple hiding behind some of those trees.”

“Take them out,” Iosif ordered, standing. “Officer! We need to make a stronger defense. Get some more engineers for round two. XCOM soldiers, with me!”

“Yes, Overseer!” They called and Nuan prepared herself for another harrowing run through the Andromedon gauntlet. She hoped Iosif wasn’t stretching himself too thin this early. He couldn’t do this forever. But until then, she’d do her best to keep him, and herself, alive. While they waited for the ADVENT engineers to prepare, Nuan and the rest of XCOM and ADVENT held down the line of Andromedons, doing little to definitively kill them, but preventing their advance.

Nuan hoped that bombing run hit soon and took out whatever that making sure these Andromedons didn’t die.

***

Shizuoka, Japan

“The aliens are moving into the city, and ADVENT is struggling to contain them,” Carmelita updated as the skyranger swept down and landed with sharp jolt. “Goal is simple: Kill as many as possible. Lesedi, get into some elevated position; Pelin, Fakhr, provide support to the ADVENT soldiers, keep that rocket ready.”

“Yes, sir!”

Carmelita turned to face them as the ramp opened up behind her and jabbed a finger at him and the other designated scout. “Jamali, Sai-Kee, split up and report on what you see past the main fighting! Everyone else with me.”

An explosion rattled the ground, and with a swift turn away, Carmelita led the charge out into the now-ravaged city. Jamali saw the fighting was largely concentrated in the main city highway, with
both armies taking cover behind dividers, vehicles and buildings, of which there were numerous.

ADVENT soldiers were shouting at each other as they held a thin line, while the aliens relentlessly
charged their position.

“Mutons!” Iida called, already aiming and firing at the squad of green-armored aliens who were
turning over trucks for better cover. Green plasma fire flew past his head uncomfortably close as he
slid into cover and tried to get a clean shot. There were so many targets it was difficult to
concentrate on just one.

Jamali heard some clanking behind him, and looked back and saw to his relief one of the Marauder
MECs also charging into the fray. “We push now!” Carmelita ordered, grasping her alloy cannon.
“Matthew! Amahle! With me, everyone else provide covering fire then continue your
assignments!”

To the chorus of affirmatives, Jamali watched as Carmelita made an inhuman leap of at least
fifteen meters to land in front of a clearly surprised muton just before she turned its face into mush
and repeated the same thing with the two other Mutons right next to it. Jamali also noted there
were several Vitakara soldiers in the mix as well, clearly also surprised by the sudden aggression as
they turned to focus on the temporarily vulnerable human.

All a distraction as Amahle also charged to the center of the fray, wrists already leaking flames
which soon turned into torrents as she turned her massive flamethrowers to the front line. The
aliens screamed in pain as they were engulfed in blue and orange flames, too distracted to return
fire or flee as the rest of the XCOM and ADVENT soldiers were firing relentlessly.

“Smoke at my position!” Carmelita called as she methodically executed Muton after Muton,
ducking, leaping and decimating the brutish aliens at close range to which there was little they
could do. The hulking aliens were just not fast enough against the augmented woman.

“Headed your way!” Pelin called, and tossed the canister to roughly her position and within half a
minute nearly half the street was engulfed in a pink smoke.

“Move forward!” One of the ADVENT Officers called and with a cheer the black-armored soldiers
with XCOM moved closer towards where the two augmented soldiers were destroying the alien
line.

“Reinforcements incoming!” Fakhr called, falling to one knee and pulling out her rocket launcher.
Jamali looked to where she’d indicated and saw a group of a half-dozen Vitakara running up…
Borelian and Vitakarian to be specific.

“Hold the rocket, Fakhr!” Matthew called, standing out in the open and lifting a hand. “Save it for
when we need it. Take your shots.” The psion was suddenly sheathed in a shimmering purple
energy as twisted his hand palm up, and lifted. The group of Vitakara was suddenly suspended in
the air, arms flailing as they fruitlessly tried to escape.

Jamali executed one with a headshot, and Sai-Kee, Iida and Lesedi each killed one as well. To their
credit, the initial survivors adapted quickly, and began aiming despite being so exposed. The dead
alien suddenly fell to the ground and Matthew clenched his fist and the last two began contorting;
bones breaking into unrecognizable shapes and the skeletons collapsing in on themselves and once
they were a misshapen mockery of a humanoid figure, Matthew thrust his hand down and the
corpse slammed into the unrelenting concrete with a splat.

The power faded around Matthew and he shook his hand as if it was asleep. “I’ve wanted to do that
for a long time,” he said, satisfaction clear in his voice. Jamali did recall that the aliens had kept
him as a prisoner and experimented on him for months, so it wasn’t surprising he’d go out of his way to brutalize them.

It certainly seemed to be having an effect. The aliens were in a full retreat, even as Carmelita and Amahle continued annihilating the stragglers, with Matthew lifting several up into the air at a time before either crushing them, or leaving them hanging to be shot. The ADVENT soldiers were glancing at the psion in awe as he strode into the fray along with the two leading women, and oddly enough, it was the psion that the aliens seemed to be most afraid of.

No wonder EXALT had been so keen to create a psion for themselves if this was what one could do. He wasn’t exactly a stranger to it, but all displays he’d seen had been mostly…telepathic. This was a far more visceral display.

Carmelita raised a fist as the few surviving aliens ran off. “Hold, we shouldn’t advance too far, else we’ll be flanked. Jamali, head to the next street and help them there.”

Jamali nodded. “Understood, I’ll report as soon as possible.”

She nodded and he dashed off as she turned to the rest of the soldiers, and ADVENT began also moving their line forward while he headed straight towards the sounds of fighting. Although halfway there, he skidded to a stop. Think. It wouldn’t do any good to get there as quickly as possible and be killed within seconds because he hadn’t seen a stray alien.

So he continued at a much more careful jog, pulse rifle raised as he mentally took stock of what he had. One frag, one flash-bang and one smoke. A limited supply, but he could make it work. The fighting was definitely much closer now, and he came to a building corner and carefully peeked around it.

Right in front of him was a much smaller firefight between a line of ADVENT soldiers and a small army of Mutons who were pushing against them. He did a quick count. Sixteen regular ones, and a larger one in black armor of some kind. He was sure he’d never seen it before. Unlike the others, it seemed to be a commander, pointing and giving orders, and more noticeably, its face was armored, the helmeted eyes emitting a glowing purple light. In its hands it also held what looked like a plasma cannon of some kind.

Several other Muton soldiers had died, but there were clearly a lot more dead ADVENT than alien, punctuated by the sight of a several ADVENT soldiers getting caught with a thrown plasma grenade, killing one instantly while mortally wounding the other, who was dragged away by medics and replaced by more ADVENT soldiers.

“Overseer, got a potential situation here,” he informed Carmelita, making sure that no aliens were coming up to surprise him. “ADVENT positions are under heavy fire from an all-Muton team. This one seems to have a clear commander. Helmeted, black armor, plasma cannon. Copy?”

“She answered, more sounds of combat coming from her end. “Engage at will, take out the leader if possible. I’ll send Iida and Sai-Kee your way.”

“Understood,” he finished, and briefly thought about the best way to approach this. He couldn’t spend much time, so he needed to create a distraction in a way that didn’t bring all of them down at him at once. He was behind all of them, so it would put them in a difficult position initially, but they would adapt and he needed to kill as many as possible in that brief time.

But he had an idea. Risky, but it would give him the most time. First he raised his rifle at one of the regular Mutons and fired, then immediately threw his smoke grenade to the other side of the street,
swung his weapon to the next muton and also shot it in the head. As that body fell to the ground, he threw the flash-bang towards a knot of four who howled and clutched their ears and shook their heads as they puzzled together where it was coming from.

He briefly refrained from firing, letting them draw their own conclusions. The Muton leader swung his cannon around, accurately noted the smoke and logically assumed that was where he was. He shouted something in their guttural language and began firing at the smoke, two more coming to help him. The rest returned to firing at ADVENT.

Jamali grinned. It wouldn’t last forever, but it was working. He lined up a shot on the Muton closest to him and fired. He moved the sights a few inches and shot the one next to it. All of them were stupidly lined up in a row, making it trivial to kill almost five within the same amount of seconds. These pulse weapons were insanely accurate.

And then they learned that the soldier wasn’t in the smoke, but on the opposite side. The Muton leader swung his cannon to his position and suddenly he was under a hail of green plasma. Now this was a problem. Jamali quickly took the opportunity to reload, acutely aware that he was extremely vulnerable to a grenade, and looked around.

He smashed the window next to him and leapt into the building, then rushed to the window facing the battle. Opportunity to kill another one. He fell to one knee, aimed, and shot an unprotected Muton with a clean beam of fire. The building shook as the corner where he’d taken cover earlier was vaporized by a plasma grenade.

Jamali dashed out of sight again, taking refuge in the middle of the wall where he couldn’t be seen. Ever so quietly, he inched towards the edge of the vaporized corner and pulled out his frag grenade. With any luck the Muton leader would either think he was dead, or at least moved from this spot.

He made sure a Muton wasn’t going to surprise him from the window he’d just been at, and peeked around the charred brick. The Muton leader was still scanning the area, definitely thinking he was still alive, but the other two Mutons were back to taking cover behind a car. Perfect.

Jamali pulled out the pin and tossed the grenade not at the duo, but right under the car which he noted was leaking gas. The grenade alone might not have killed them…but an exploding vehicle certainly did. The car blew with a massive fireball, and the shrapnel tore the faces of the aliens apart, likely killing them instantly. It also got the attention of the leader, who turned to face the human who’d single-handedly decimated his fighting force.

But that was fine. As long as the alien wasn’t firing at ADVENT, he was doing his job. All Jamali needed to do was wait for his reinforcements. But as the wall he was hiding behind began cracking, he hoped they would arrive sooner than later. He was going to run out of tricks eventually.

***

Shirako, Japan

Patricia sensed all these as the skyranger sped towards Shirako, where the aliens were taking a firm beachhead, apparently almost to the point of breaking the ADVENT lines, and without help they would be forced to consolidate and retreat. But it wasn’t an impossible task. Aliens had minds too, they were just…different. Just as malleable and vulnerable to suggestion.
Images from thousands of soldiers and alien beneath her appeared and vanished from her mind in milliseconds, individual sounds, voices and thoughts came together in an unintelligible whole, a broken symphony of minds that she had no idea of how to separate.

So she ignored them and let everything fade except for the men and women around her. Her breathing steadied and eyes closed. All of them were ready and prepared, focused and ready, thanks in part to her. She had unconsciously fallen into her battle trance during the flight over. All of them knew what to do and what their plan was, there was little need for her to repeat anything.

They were of one connected mind. The path ahead was clear.

Patricia didn’t bother to carry her heavy autorifle strapped to her armor. It was no longer her strength, nor main weapon any longer. She wondered if that was also why Ethereals didn’t seem to like using weapons. It was almost more of a distraction than anything else, since she was often using her hands for something else.

The skyranger shuddered as it landed and the muffled sounds of combat reached her through her heightened state, screams, gunfire and the cascade of emotions found on the battlefield. The instant the ramp descended, all of them charged out in perfect harmony and immediately began working as one unit.

Their sniper, Nati, immediately fell to one knee and began sniping from afar, picking off enemies with an enhanced focus that could only be induced by a psion. Blake and Analyn rushed to groups of wounded ADVENT soldiers and began fixing them up with a speed that was more than simply years of practice.

Their Engineer, Fiona, tossed out several smoke grenades in quick succession to ADVENT positions under immediate threat of collapse and then slid into cover, and began shooting at the closest aliens in sight. Charlotte followed suit, and readied her rocket launcher for the right moment to strike.

And Patricia herself stood for a few seconds, flanked by Allison and Creed who also began firing shots into the alien army. ADVENT had been pushed into the city limits, with the aliens in full control of the beach. The aliens had established plenty of cover and protection beyond the beach, although from the piles of corpses, ADVENT had made them pay dearly for taking even this much ground.

Luckily ADVENT had also set up plenty of defenses in the city perimeter itself, with snipers, missile launchers and artillery positioned in places of elevation that were doing the most to keep the aliens in their position. But if their line was broken…there wasn’t much left. Beyond the lines of human and aliens were the alien transports themselves, dozens of them lining the beach, with more possibly coming in.

UFOs streaked across the skies, pursued by US and Japanese fighters, while others attempted strafing runs and bombed entire buildings apart, although they seemed to be keen on avoiding the anti-air defenses ADVENT had established, and out in the distance, Patricia did see several US Destroyers, although they didn’t seem to be doing anything.

A plasma burst flew into a building near her and she frowned, figuring it was time to focus on the threat at hand. Drones. Mechtoids. And beyond them, she could sense…Sectoids, and their pet chryssalids. Why had they not used them yet…unless…

The psionic energy swirled around her as she extended an arm aimlessly ahead, and focused on the most prominent pool of psionic power and pushed. The alien had clearly not expected an attack and
its paltry defenses were crushed and she took control. Her familiarity with the Sectoid mind proved invaluable as she quickly found what she was looking for.

“They want to save the chrysalids for hunting,” she said, startling some nearby ADVENT soldiers with her psionically altered voice. “I will deal with them. Move up.”

Creed and Allison charged forward, dodging the plasma bolts flying their way. Patricia stood in the center, watching the mix of Sectoids, Mechtoids and drones take turns to shoot at ADVENT soldiers, and she risked closing her eyes to focus on the nearest alien minds. It was time to make her presence known.

“ADVENT Tokyo Command, this is XCOM Overseer Patricia Trask,” she said, concentrating to spread her reach as far as possible.

“Glad to have you, Overseer,” came a voice. “We could use it. Do you need anything?”

“Order all soldiers near Shirako to focus only on the mechanical units,” she said, her body tensing up and voice breaking as she gathered her power. “I will deal with the biological enemies.”

The man said something, but the chorus of alien voices drowned out whatever was said, and having broken into many of their minds at once, there was only room for simple commands, words and feelings. But she didn’t need much. Only one word to collapse an army.

Fire. You are burning.

One command, and with it brought the horrendous pain of burning alive. They were not physically suffering, of course, but to the mind, it made very little difference what was real or not. She opened her eyes and smiled.

The Mechtoids began emitting a mechanical screech, collapsing to the ground as they tried to process exactly what was happening, only knowing that they were dying. Sectoids fell down, writhing and screeching as their bodies were wracked with heatless flames. Drones exploded as ADVENT focused on them. A rocket from Charlotte turned a Cyberdisk into scrap, and the remaining mechanical units seemed to freeze for a few precious seconds as the entirety of the battle changed.

XCOM and ADVENT didn’t give them a chance to recover. Creed shot a couple drones out of the sky. Allison and several ADVENT soldiers combined their fire to destroy yet another cyberdisk. Blake and Analyn had spread out even further, fixing up ADVENT soldiers and saving them from a painful death or serious injury.

Nati was now focusing on the aliens debilitated from her psionic attack, placing direct headshots on downed Sectoids and Mechtoids with an inhuman precision. One shot, one alien. ADVENT soldiers were shouting words she didn’t hear, so deep in her trance that it was equivalent to being underwater. But in return, she could sense everything.

The soldiers, who had been resigned to retreat and death were hopeful and buoyant, and she enhanced those emotions with a brief thought. Every enemy spotted by her squad was noted in some part of her mind, and in the minds of each other, enabling them to move from enemy to enemy instantaneously, their actions so in sync with each other that there was never a time when XCOM’s presence wasn’t acutely felt.

And she felt death. Some human, but most of it alien. More foreign minds simply ceased to exist; it was a scale of death that was almost indescribable and as more alien minds winked out of
existence, the only path was forward.

A UFO sped across the sky, and she glanced up and locked on to the minds within. Simple Sectoid pilots. Weak and little more than tools, and tools they would remain. But not for the side they had once held. Very simple commands were all they understood, and thus, what she gave them.

*You will crash into your transport.*

No resistance. No question.

She watched, almost amused as the silver UFO streaked down from the sky with a piercing shriek right before it crashed into one of the transports with an explosion that brightened the day. ADVENT soldiers cheered at the sight, and all of them pressed forward against the now-disabled alien army.

“We’ll kill them at the beach!” One called gleefully. “Come on!”

Patricia reached the city perimeter, and looked across and noted with satisfaction that her effect had been as widespread as she’d been hoping. ADVENT had not advanced in a uniform line, but the remaining alien mechanical units were retreating. Drones were flying back and Cyberdisks had folded into disks and doing likewise.

*You are powerful, psion, but you cannot kill an army.*

The mocking, rasping voice of the Sectoid appeared in her mind, giving her a brief pause. A Hive Commander? No…Hive Commanders were…unique. The only ones who were allowed that luxury. This one here? The one attempting to threaten her? No, it was nothing.

So she struck back, located the most powerful psion that existed on the battlefield and forced herself in, much to its terror. *Perhaps not,* she communicated back. *But I can kill you. Kill your allies and turn your chryssalids loose on them.*

The command planted, she withdrew and stepped forward, trying to overlook the beach even though most of her view was blocked. She would likely not see the immediate aftermath of her order, but she knew she would see the carnage eventually.

“What is that?” Someone called, and Patricia glanced to the right to see…something walking out of one of the transports. It stood nearly fifteen feet high, dwarfing the mechtoids walking out with it, was supported by metal legs with clawed feet which were attached to some center pod with orange lights she guessed were photoreceptors.

Well, it had been a good possibility that the aliens hadn’t shown all their tricks. But even if she couldn’t control it, she had an additional army of chryssalids, Sectoids and Mechtoids to throw at it. She looked across the beach and saw at least twelve more of those machines walk out, with some accompanying forces.

Her targets were clear, now it was time to give the pawns their command. So she raised her hand, pinpointed the minds and began giving her orders to the alien masses beneath her.

***

*Kochi, Japan*

*Where the hell are our reinforcements?*
Duri risked another quick attack and was immediately forced back down by the wave of return plasma fire at his position. “Beatriz, what’s it looking like?”

“Bad,” was the response. “There are a lot of them coming up. You need to retreat if you don’t want to be overrun.”

“Not a bad idea!” Cara called, as she shredded the armor of a Muton charging her position and fired another volley to kill it off completely. “We hold this position, we’re going to die!”

There unfortunately wasn’t much time for a debate. He could either try and hold this position, kill a lot of aliens, but maybe get his team killed, or make a brief retreat. There was really only one smart option. “Fall back!” He ordered, standing and firing suppressive fire at the aliens, forcing them back into cover or slowing them down at the very least.

It seemed the other squads had the same idea, the other Officers were ordering their squads back as well. Although not with nearly as much success for some of them. Duri watched sadly as one of the teams was destroyed by the combined firepower of a Muton and Vitakara squad. Sliding behind a concrete block, Duri appraised his new situation.

Right. Now what? They were pushed back to nearly the city edge, with plenty of cover, but the problem now was that they’d lost the beach for good, and the aliens could actually take an entrenched position. They apparently could afford to throw away soldiers. ADVENT didn’t have that luxury, and he wouldn’t do that anyway.

Two Borelians began taking shots at Johan and Kang, and he quickly rose from cover and fired several bursts at them. One hit square in the head, and forced the other down. Cara was sweeping her heavy autorifle back and forth along a large swath of territory where the aliens has established themselves. One Vitakarian stood and immediately jerked back as a well-placed sniper’s bullet took it out.

Duri’s lips twitched. Thank God for snipers. “This is Gray Sky, coming in for a landing,” came the voice of the XCOM pilot. “Stand by for Goliath support.”

“Whatever the fuck that means,” Cara commented as she knelt into cover and quickly reloaded. “But I’ll take it!”

A roar overhead caught his attention, and that of the aliens as well as they shouted and immediately began firing at it. Duri saw why, for what was attached to the skyranger was…he blinked. No, he wouldn’t be hallucinating now.

The skyranger hovered right behind Duri and released the payload, which was a massive armored…machine that stood at least fifteen feet high. Maybe even taller, and had equally large weaponry to match. It was in some sort of compressed state when it landed, but it rose and surveyed the battlefield, even as plasma fire burned into it.

“Goliath unit providing support,” it said in a monotone, synthesized voice. “Firing initial barrage.”

Several panels built into the shoulders of the Goliath popped out, aimed at the line of aliens in front of Duri, and unleashed a payload of micromissiles that shredded everything in a fifteen-foot radius. The aliens that weren’t killed instantly were wounded beyond all salvation, and Duri put down the survivors, even as the massive Goliath lumbered forward.

“Where the fuck did XCOM get that?” Cara shouted in disbelief. “How the hell-?!” An explosion
cut her off, but Duri echoed the sentiment. He’d known XCOM had machines called MECs; powerful ones too. But there hadn’t been any inclination of anything of this scale.

Not that he was complaining.

The Goliath took out its primary weapon, which must have been gauss-based, and began aiming at various groups of aliens. The cannon physically vibrated the air around it, and was surprisingly accurate for such a large weapon. But it was a machine, and machines were precise. In any case that was apparently cause for concern among the aliens who immediately began retreating and firing at the Goliath, which seemed to be taking no damage whatsoever.

It then raised its cannon up, lowered a free fist and shot out a torrent of flame that Duri felt through his armor, and the Goliath directed the gouts of flame all across the beach, sentencing any who were unfortunate enough to be caught in it to an extremely painful death. “Move up!” Duri ordered, glad to give that command after the previous retreat.

Although the Goliath might not need much help, since it seemed fine roasting and shooting the aliens all on its own. It hadn’t touched the shield yet, where those Andromedons were still hiding behind, as well as several hundred more Mutons who Duri noted were taking positions in the UFO transports themselves.

The aliens were losing now, and they knew it. Would they retreat? Or fight to the last one?

Duri reloaded his rifle and took aim at one of the Andromedons retreating to a transport, even as the Goliath slammed a fist into the red energy shield and collapsed the entire thing.

The line was held. Now it was time to take the fight to their transports.

***

Near Shibetsu, Japan

“Inori! Get down!”

Nuan watched helplessly as Inori took a direct plasma shot to the chest from a lucky Andromedon shot, throwing him back onto the ground. She heard him coughing, and unsteadily push himself up against the barricade.

“I’m fine,” he gasped. “Don’t think I can take another one of those.”

“Stay down!” Iosif ordered, as he ducked back down as more Andromedons emerged from the city itself, dozens of them at a time now. They just didn’t stop coming.

“Stand by for airstrike,” a synthesized voice warned suddenly, and a squad of four fighter jets suddenly roared overhead, firing several missiles each that hit the town directly. Nuan couldn’t see the immediate aftermath, but based on the explosions, it appeared to be a hit. “Coming around for another run. Hang on-”

Plasma fire from several UFOs filled the skies and the fighters immediately broke off to deal with the new threat. “Did that actually accomplish anything?” Anna demanded as she tried to pin down a squad of Andromedons trying to take cover behind an exploded truck.

“Couldn’t have hurt,” Iosif called back, looking worriedly at the growing number of Andromedons. The damn aliens really were smart. Each time even one of them was partially wounded, they would just leave and be replaced by a healthy one. It was effectively a stalemate that Nuan had no idea
how to resolve. These aliens were at least partially machines, and would probably not tire as easily, but they were slower and easy targets, so they couldn’t just charge into the open.

Right?

“Think we’ve got a new one,” Zara commented, firing her weapon at a new squad of Andromedons emerging from the city. They were all regular soldiers barring one, an Andromedon with a similar green helmet, but the differences were that the helmet had some kind of symbol on it, and the left arm had some kind of attachment on it.

“I see it,” Iosif confirmed. “Possibly a leader.”

The assumption seemed to be correct, as the Andromedon began pointing and marching forward, and the Andromedons around him seemed to be reorganizing. The leader didn’t go into cover, just raise one massive hand, notably the one not holding the plasma rifle, and all Andromedon fire stopped, and they began pressing buttons on their suit.

“I do not like this,” Seok muttered. “We should take the leader.”

“Go for it,” Iosif ordered. “But good luck getting a shot to hit.”

Despite that, Nuan tried her best, but the beams were just off, and the Andromedon was just too far away to get anything accurate. “Acid!” Iosif suddenly shouted. “They shoot acid!” He thrust up his hands and the barricade was engulfed in a purple shield once more, just as every Andromedon on the field raised their left wrists and fired shells of green blobs, small on their own, but a deadly storm of corrosion when combined by the hundreds.

The barricade where they were at now was protected, thanks to Iosif, with the acid shells dissipating the moment they hit the shield, but the ADVENT line behind them wasn’t so fortunate, and Nuan heard screams of pain as the soldiers were hit by the barrage of sizzling liquid. “Check in!” Iosif called, as the Andromedons resumed their plasma attacks on them.

“I need a medic,” Seok hissed, gasping in pain. “Direct hit on my arm and leg. Hurts like hell, damn it!”

“I’m fine,” Zara said. “But that did its job. Quite a few soldiers got hit, and this area is now pretty much a toxic minefield. I don’t want to know if this stuff eats through boots.”

“You don’t have to sound so impressed,” Anna growled. “Shoot back!”

“Yes, of course,” Zara replied sarcastically, but continued shooting at the Andromedons.

“We need Patricia,” Iosif muttered, creating a psionic shield in front of an ADVENT team as they tried to repair their barricade. “Or a MEC. At some point they’re going to charge, and airstrikes and artillery are too imprecise.”

The ground suddenly shook and all of them exchanged looks. “That doesn’t sound good,” Nuan said slowly, and then she saw what the Andromedons had been waiting for. They were two-legged pods with clawed feet and a series of orange lights that resembled eyes.

“I think the Andromedons are as tired of this as we are,” Iosif said slowly. “We might be in trouble.”

One of the machines suddenly hissed, and several metal plates on the top part of the…main pod of the machine, she guessed, withdrew to reveal what she could only describe as a cannon of death.
The interior glowed red and she knew exactly what was coming next. Iosif saw it too. “Everyone get down!” He yelled as the shield was thrown up again and the machine fired.

Three massive laser bursts shot out of the machine with deep booms. The first Iosif didn’t waver, the second made the shield waver and the third one was barely absorbed with the barrier collapsing immediately afterwards, Iosif fell to the ground, breathing hard. Nuan rushed to him, and helped prop him up against the barricade.

“I can’t do that often,” he wheezed. “We need to fall back. We can’t hold this position if those things start firing again.”

“The other one is aiming here!” Anna called frantically. “Get down.”

“Everyone to me!” Iosif roared, standing up and weakly raising a hand to make the sphere materialize around them again. “We retreat toward the main barricade!”

“Copy!” They and the ADVENT soldiers yelled, consolidating around Iosif. The small ground was beginning to move back when the machine fired again, this time destroying the established barricade with a single laser volley, sending pieces of shrapnel flying everywhere, catching several ADVENT engineers and Inori who hadn’t managed to get under Iosif’s barricade.

“I’m getting him!” Gyeong called, preparing to move to pull Inori under Iosif’s protection.

“No! Stay!” Inori called, groaning in pain as he tried to reach for his rifle. “You need to get out of here!” Nuan was torn, he was right, and his leg was practically shredded by shrapnel so he would probably slow them down. But it felt wrong to just leave him.

“Get back here now!” Zara yelled. “They’re moving up. All of them are charging our position!”

Nuan looked back and she almost froze up on the spot. The Andromedons were coming after them now, eschewing cover and making a concerted push to take ADVENT's position. It was a slow, methodical march, and now she saw the elusive engineers that had been fixing the Andromedons so far emerge. These were similar in armor and stature, but had red-tinted helmets, didn’t carry weapons and were accompanied by a small drone-like machine.

“Everyone retreat!” One of the Officers screamed. “That machine is going to fire rockets.”

Nuan saw the machines seemingly plant themselves in the ground, and metal plates slid away from the top of their pods revealing what had to be missile tubes. A few seconds later all of them fired in quick succession with concussive booms.

That was what broke the ADVENT line, and all of them went scrambling back as the line was suddenly engulfed in multiple explosions that caught dozens of ADVENT soldiers before they could do anything but try and run away. “Everyone, run!” Iosif commanded, spinning around, and converting the sphere to a solid rectangle two dozen feet wide, giving everyone the chance to run away without fear of being shot in the back. “Now! I can’t hold this forever!”

The ADVENT soldiers and engineers complied, with the remaining XCOM soldiers still providing covering fire, even as they retreated step by step. The Andromedons had advanced to where Inori was, who was firing at what aliens he could. He screamed as one of the Andromedons shot his arm, while the leader reached down and picked him up by the throat.

With Inori firmly in his grasp, the Andromedon leader turned around and walked away while the remaining Andromedons continued their steady advance. “Are they gone?” Iosif demanded, the barrier wavering.
“They’re safe enough,” Gyeong assured him. “We didn’t lose any in the missile strike either. Zara’s got Seok and they’re behind us. We need to run too. We’ll have to make a stand at Nakashibetsu.”

“Alright, on my mark, run!” Iosif ordered. “Nuan, pop smoke now!”

“Done,” Nuan confirmed, dropping the canister and beginning a sprint away. Iosif lowered the barricade and they all dashed away as fast as they could, plasma fire lighting up the space behind them. And just like that, the aliens had captured their first city in Japan, a foothold had been established and they hadn’t been able to stop it.

Nuan sincerely hoped that the other battles were going much better than this one had.

***

Shirako Beachhead, Japan

Kill the machines.

That was the mental command Patricia emitted to every alien she could invade the mind of. The chryssalids screeched, spittle flying from their mouths as they swarmed the massive machines which laboriously turned to appraise the situation. A plasma turret popped out from the top of them, and began shooting the chryssalids with ease, negating what little danger they posed.

But the distraction was enough to get ADVENT forces into position, and begin firing on the machines and Cyberdisks that came out. Flanking the machines was a kind of Mechtoid she’d never seen before. It was as if the Sectoids had taken the basic shell of the Mechtoid, and turned it into what could only be described as a walking tank.

No longer did it simply have plasma cannons for arms, these now seemed augmented with missile launchers of some sort, even as they were already bulkier and taller than the original Mechtoid. But it unfortunately had one fatal flaw, and that was an organic pilot, and organic pilots could just be controlled.

Patricia extended a hand towards two approaching enhanced Mechtoids, and focused on their subdued mental states. Enslaved to implants and machines, they were similar to MECs in that they were difficult to detect, and broad psionic commands had little effect. But a side effect of their invisibility was that there was little in their minds of begin with.

The machines are your enemy. She sent. Destroy them and then each other.

Instantly they raised their weapons to the nearest machine and started shooting, getting the attention of the machine which stomped behind to face them. Meanwhile the other aliens under the influence of her were quickly dying off from the combined fire of the Cyberdisks and the machines.

“Take cover!” Creed called, and Patricia frowned as she saw one of the machines fire missiles from the top of its command pod and those crashed down on an ADVENT position several dozen meters away, killing most of the soldiers there.

“Support their position!” She ordered her soldiers, and they began shooting pulse lasers and gauss-propelled rounds at the massive machines, which seemed to have very little effect initially. Patricia focused on the enhanced Mechtoids close to the other machines, and easily converted them to betray the aliens, but it seemed that even plasma was doing little more than scorching the paint.
A shot from Nati neutralized the turret on the machine with a miniature explosion of green. Patricia quickly located the sniper on one knee and concentrated on him. Be calm and focused, she pressed upon him, even as she saw the effects. Enhanced by her power, he easily transitioned from one target to the next, shutting down the turrets on the machines with ease.

But it still wasn’t going to be good enough, the machines still had missiles and a massive laser. Patricia just saw being used on another ADVENT position. The machines needed to be taken out now and fast. But fortunately, she had an idea of what to do. “ADVENT Command,” she said. “Send all fighters under UFO attack to my position. I will deal with them.”

“Younderstood, Overseer,” a voice answered. “There’s a few heading over now.”

One of the enhanced Mechtoids was blown to pieces by a laser barrage from one of the machines, another was stomped into the ground by another. Charlotte fired several rockets at several cyberdisks, destroying one and heavily damaging the others. Blake and Analyn were in completely different places, trying to save what ADVENT soldiers they could.

Allison and Creed picked off drones one by one, and finished off damaged Cyberdisks near the machines, which did seem to unsteady some which were in close proximity to the explosive Cyberdisks. And she was running out of ways to psionically shape this fight. Almost all of the Sectoids were dead, either by the guns of their own or ADVENT soldiers who just shot all aliens in sight, not that she could blame them.

The chryssalids were also all dead, and the few Mechtoids, enhanced and normal, were almost wiped out as they stood no chance against the machines, although one had managed to damage the leg of one. Still didn’t save it as a rocket barrage from the machine blew it apart.

But the upside was that it freed her mind to pay attention to new arrivals, like the two UFOs streaking overhead, peppering several fighters with green bolts as the human pilots tried to fly away. Patricia closed her eyes and concentrated solely on the Sectoids piloting their fighters, letting the sounds, screams and voices of the battle around her fade.

Abandon the hunt, follow my orders.

Words would not be enough to illustrate the complexity of her order, so she instead impressed in their minds a clear image of what she wanted them to do. The Sectoids initially resisted, but like the rest, they were no match for an experienced psion.

The air around her began vibrating, and she opened her eyes to a purple-tinted vision of the battlefield. Hoping she was correct, she looked up and smiled. Roughly ten meters above her, much to the surprise and terror of the ADVENT soldiers, were the two UFOs, weapons ready and pointing towards the line of machines.

She pointed. Fire.

The pilots obeyed her commands without question, firing green barrages of plasma at the line of machines, and at an intensity and speed that actually seemed to be doing some damage. Realizing the UFOs were somehow friendly, the ADVENT soldiers shouted, cheered, and renewed their attack as the machines focused on the newest threat.

Patricia did not care as she saw the UFOs take brutal hits from the massive laser cannons. They were just pawns to be sacrificed, but she did not especially care to have a UFO crash directly on top of her. But the situation was not quite that dire yet. One of the machines succumbed to the continuous barrage of plasma fire and blew apart with an explosion of red and fire.
However, now one of the UFOs was in bad shape, judging from the panic and terror she felt from the crew. Fair enough, then there was one final command to give. *Finish the line*, she send, along with another image of what she wanted to see accomplished. The UFO, weeping fluids and smoke shot off into the sky, then swung around in a wide arc until it lined up roughly with the machines on the beach.

After a second of hesitation, it shot towards them, gathering speed as pieces of the UFO were visibly sheared off by the force, but nothing stopped the suicide crash that it was intending. It hit the first machine at what was probably the speed of sound, tearing it apart before slamming into the one next to it with almost as much force before hitting the beach and sliding forward into still two more, collapsing the machines as they were too crippled to regain their balance, before finally coming to a stop, just as the elerium power core inside exploded, killing any of the crew that might have survived.

Five more of the machines remained, but they showed no signs of retreat as they continued firing at the remaining UFO, in addition to concentrating on ADVENT positions. Barricades were annihilated with one pulse from the laser. Clustered squads were wiped out by missile barrages. The aliens were determined to make them pay dearly, and Patricia figured it had gone on long enough.

She physically gestured to the machines, echoing the sentiment in her mind to the UFO she controlled. *End this.* The UFO suddenly sped towards the two machines it had been shooting at with a speed that nearly knocked her over from the blowback, and it shredded them apart before burying itself deep within one of the UFO transports, pushing the UFO into the sea and submerging it below the water.

Up above she sensed more UFOs coming. There was no careful planning this time. No images or maneuvering to get them into a special position. These were not UFOs anymore, but guided missiles waiting for her command. Out of nowhere a UFO streaked out of the sky to impact another machine, the explosion sending out a shockwave that knocked everyone nearby off-balance and threw several to the ground.

In quick succession the other two UFOs fell out of the sky like silver meteors; the machines they hit were torn asunder with no defense as the sheer force negated whatever natural defense their armor allowed. What remained was a beach on fire, scraps, shards and shrapnel littering the sand and ocean. No alien showed itself and a silence descended upon the battlefield, aside from the whispering of flame.

All that might possibly be left were outsiders…but at most there were less than a hundred, nothing compared to the thousands of soldiers ADVENT commanded here. Still, the UFOs needed to be cleared and she planned to continue doing her part.

Or would have, if the world hadn’t suddenly blurred around her and she fell to a knee as the adrenaline and rush of power faded out of her. She heard a mix of voices above her, one seemed to be…Analyn? Blake? She managed to sense Creed close by…was he the one holding her hand?

And why was she on the ground with her helmet off?

But her mind and body demanded rest after what she’d done, and she had no choice but to comply, and hoped that she’d done enough to win the battle, and that someone would bring her back to it.

***

Shizuoka, Japan
A roar from the larger Muton prompted Jamali to get out of his position, just in time too, as the weakened wall finally gave out and shattered from the concentrated bursts of the plasma cannon. However, the Muton was not going to last much longer because ADVENT was advancing, and their gauss weapons were punching through even the Muton’s armor.

But at this point, Jamali was pretty sure the Muton didn’t care about ADVENT anymore, and was purely motivated by revenge. He couldn’t really blame it. He probably wouldn’t be thinking clearly either if one person had managed to almost kill his entire squad.

That being said, he didn’t particularly like it.

Jamali took cover behind a counter and quickly updated what he knew about the Muton. ADVENT soldiers were much closer, and they had hit the alien’s knee, so the Muton was confined to the ground, shooting now at the ADVENT soldiers, killing one who got too close. Now was his chance. Jamali lined up his pulse weapon and fired a sustained beam at the head of the alien.

It was a direct hit and hit directly in the purple eye of the helmet, drilling through in seconds and piercing the soft skin below. The Muton let out one final roar and fell back. Jamali didn’t give it a chance in case it was faking, and aimed another beam at the face, keeping the beam there for several seconds. Smoke rising from the holes he’d burned, he stood, reloaded and walked out to the ADVENT soldiers.

“Are there any more?” He asked the Officer, who was almost staring at him reverently. Come to notice it, all of them were.

But she quickly got over it. “No sir, I think that’s the last in that group.”

“There’ll be more,” he said. “Keep moving forward. A couple more XCOM soldiers should be coming-“

“Jamali!” He turned at the sound of his name and saw Iida and Sai-Kee rushing up, skidding to a stop as they observed the carnage.

“I guess you had things under control,” Sai-Kee commented. “New Muton?”

“Commander of some sort,” Jamali said as Iida knelt down by it. “You recognize it?”

“Never seen it before,” Iida shrugged, standing up. “Vahlen will love it though.”

“Let’s win the battle first,” Jamali suggested. “How’s the rest of the assault progressing?”

“Never seen anything like it,” Sai-Kee said in awe. “Carmelita and Matthew are making a mockery out of the alien army.”

“Good for them,” Jamali said, looking down the street as he spotted movement. “But we need to advance. Officer,” he turned to the woman standing attentively. “Do you have any idea where they came from?”

“A small UFO flew over before the attack here started,” she answered, pointing down the street. “About ten minutes later the Mutons showed up. I would guess the UFO is still there.”

“Then that’s our target,” Jamali nodded. “Carmelita, you there?”

“Here!” Was the almost snarled response. “Status?”
“Alive, and we think there’s a UFO at the end of this,” he updated. “Raider-class by the sound of it, not a transport. We’re heading there.”

“Good plan,” she agreed. “Stay in contact.”

“Will do, Overseer,” he said, and ended the call. “We have our target. Officer, follow us. I doubt that was all they had.”

“Will do,” she said, waving the soldiers forward. “Come on!”

They carefully made their way down the street, acutely aware of the sounds of more battle in the distance, but eventually they all felt it: the low thrum of an alien UFO. And then the alien reinforcements arrived.

“Vitakara!” Sai-Kee called, and all of them ducked, slid, or fell into some kind of cover. Jamali knelt behind a concrete divider, and peered down the scope at the alien approaching. A dozen Borelians, along with…he frowned. Were those snakes?

“What the fuck?” One of the ADVENT soldiers muttered in disbelief. “Snakes?”

Snakes they seemed to be. Three meters tall, with arms carrying plasma rifles and their thin body covered in silver armor. The faces reminded him of vipers, a sleek and symmetrical face that was what you would see in nightmares. The worst part was that these things were fast. They slithered into cover within seconds after being spotted, taking positions far beyond the main alien force.

“Oyariah!” Iida called out as she spotted the last hulking aliens. “Although these ones are…different.”

Jamali froze for a brief second. What the hell was an Oyariah-ah, right. The rarer subspecies of Vitakara that was extremely tall, strong and dangerous. They apparently killed some at the Fury base, but Jamali didn’t exactly recall them carrying black shields nearly as tall as him, and massive hammers along with them.

“Fire!” Jamali ordered as the Vitakara scattered into cover to avoid the hail of steel and fire heading down the street. All except the Oyariah, who raised their shields and absorbed the shots. At least there were only two of them, but that wouldn’t really matter much if those hulking aliens got close.

Their positions entrenched, the Borelians began firing at them, green plasma streaking past them or hitting their cover. Jamali took aim at one of the Borelians, fired, and watched as the alien fell back, a smoking hole in its head. Iida was focusing down two more Borelians, clipping one in the shoulder and keeping the other one in cover.

Sai-Kee tossed out a canister at the man-sized snakes who were trying to move forward, using their slim bodies to their fullest potential as they crawled along cover that would have been too small for ordinary bodies. They hissed fiercely as the flashbang went off, one close enough that the impact made it writhe on the ground, and Sai-Kee quickly shot it several times in the head.

And that was when the rest of them made their suicidal move. Their small frames made it extremely difficult to hit them, and they sped up on the front line and suicidally attacked it. An ADVENT soldier yelped as one of the aliens wrapped itself around him, constricting his movement and breathing as it shot another soldier several times in the chest and head. It squeezed its coiled muscles once, killing the soldier instantly with a sharp crack and unfurled itself and tried to move on.
Or it would have moved on had Jamali not shot it in the face, and so it died, wrapped around the body of the dead ADVENT soldier. The snakes had tried the same thing with several more soldiers, with largely the same results, killing one or two, before being shot to death.

“Back! Back!” Iida spat as she frantically stepped back, firing at the last remaining snake Vitakara which was hissing and dodging her fire, trying to wrap itself around her. Jamali fired a sustained laser beam and kept it in one place, leading the alien to unintentionally slice itself in half while trying to avoid Iida’s gauss fire.

The other half of the snake writhed on the ground, quickly stopped by Iida placing several gauss shots directly into its head. “Thanks for that,” Iida told him as they returned their focus to the main battle.

“Anytime,” Jamali said, aiming at another Borelian who was rushing forward, and fired. He didn’t kill the alien, but did slice its arm clean off, essentially putting it out of commission. “We need to deal with those Oyariah now!”

The lumbering aliens were almost to the front line, and once they arrived, it would probably make the snakes looks easy in comparison, because these aliens were armed and armored to survive close-quarters combat. So that meant some risks had to be taken.

“Sai-Kee, you take the right, I’ll take the left,” Jamali ordered, reloading his rifle. “We need to debilitate them. “Officer! Iida! Covering fire now! We’re going up.”

“Popping smoke!” Sai-Kee called, and tossed a canister at the front line which exploded in a pink cloud a few seconds later, allowing them to charge forward into the hail of plasma. They needed to get behind the Oyariah for this to work, so Jamali dashed past them, hoping they wouldn’t notice, and even if they did, his plan would still work.

He glanced behind him, and saw the aliens slowly advancing, struggling against the hail of gauss fire shot their way. He glanced over to see Sai-Kee also in position, extremely close to the Borelian line. A quick nod, and Jamali raised his rifle, targeted the leg joint, and fired a clean sustained beam of red energy.

The alien screamed as the laser burned into first his armor, then flesh. It tried to remain standing, but was unable to bear the weight, and fell to one knee. Jamali quickly transitioned to the next vulnerable point, the opposing ankle, and fired. The alien turned to him and began crawling towards him, ditching the shield as it was effectively crippled.

“Iida?” He called, aiming for the head.

The crimson beam burrowed into the black helm of the Oyariah, giving him a glimpse of the orange eyes underneath it, and a hail of bullets from Iida ensured that it never reached him, and the titan fell still, not even giving a last gasp.

“Need some help!” Sai-Kee shouted as the other Oyariah, while hit, wasn’t crippled and was heading towards the lone XCOM soldier, caught between the furious alien and line of Borelian soldiers. The Oyariah knew it as well, and frustratingly had positioned his shield to ensure that Jamali couldn’t get a clear shot at him, and certainly not cripple him.

The alien took a swipe at him which Sai-Kee leapt away from with ease, but unfortunately right into the firing line of the Borelians. One plasma shot glanced his shoulder, and the other slammed directly into his back, sending him sprawling to the ground as the Oyariah stormed forward to finish the job. “Get back!” Sai-Kee yelled to him, frantically waving behind the alien. “Kill it
Jamali understood what he was saying. Sai-Kee was going to die, but the brief moment would let him get a clear shot at the alien. So he dashed back to the ADVENT line, plasma fire scorching the paint of his armor several times and turned back once more to see the Oyariah bring the hammer down directly onto Sai-Kee’s head with a crack the he could almost feel.

By that point, Jamali was sure Sai-Kee was dead, but it seemed the alien wanted to make sure and raised the hammer again, and that was when Jamali aimed at the knee and fired, as did Iida and half a dozen other ADVENT soldiers. The alien roared and collapsed to the ground, not dead, but a grenade thrown by the ADVENT Officer made it stop moving.

Down one soldier, with at least eight Borelians left, not counting whatever else was left in that UFO which he knew would be an outsider of some kind. But now they outnumbered the aliens significantly, and one by one they soon fell to ADVENT rounds, his pulse laser, or Iida’s gauss rifle. Jamali cut the leg off one retreating Borelian, and it was soon executed by another ADVENT soldier with a few rounds to the back.

Iida shot another Borelian hiding behind a car, riddling the corpse with holes as they steadily advanced forward. The Borelians didn’t go down without a fight, killing their fair share of ADVENT soldiers with well-placed shots, but not enough to make a difference as Jamali ended the last one standing with a sustained pulse beam to the heart.

All of them paused for breath once the last one fell, taking a moment to get their bearings once more. Jamali looked back up the street and realized just how many people had died here. Human and alien corpses littered the streets, blood coloring the pavement crimson and yellow as each side fought to the bloody end.

He did a quick count. Six ADVENT left, plus an Officer, and both of them. “How are your soldiers?” He asked the Officer, who was also looking over her troops as they reloaded and bandaged their wounds.

“We’re still good,” she said, exhaustion clear in her voice nonetheless. “We’ve still got a UFO, yeah?”

“This has to be everything,” Iida said, looking down the street, the end in sight. “I think we’re only left with an outsider, and maybe a few Sectoids.”

Jamali hefted his rifle. “Let’s finish this then, move out.”

They jogged towards the edge of the street that transitioned to the small beachhead where the UFO was resting on. The area around it looked dead, empty and like a trap. Jamali sighed. In most cases, he knew XCOM would want to keep as much of the alien tech intact as possible, Dr. Vahlen in particular was particularly obsessive over functional tech.

But frankly, right now he didn’t really care what she wanted.

“You still have a rocket?” He asked one of the ADVENT soldiers carrying a rocket launcher.

“Yes, sir,” he nodded. “But I don’t think this is going to put a dent in it.”

“Those UFOs have outsiders,” Jamali explained, eyeing the entrance with the multicolored shield. “I don’t know about you, but I really don’t want to go through another fight. The alien UFOs are powered by elerium generators, which are exposed in the UFO itself. Aim for the back of the UFO through the entrance and you’ll destroy it. Sound good?”
“You got it,” he nodded and positioned himself in front of the UFO, loading the rocket. “Ready on your command.”

“Fire,” the Officer ordered, and he shot the rocket which sped into the UFO and the muffled explosion reached Jamali’s ears. Then a second later, the entire back of the UFO blew out and a wave of plasma and fire shot out all the exits. The UFO still burning, Jamali gave a firm nod.

“Mission accomplished, Carmelita, the UFO has been taken care of.”

“You mean you blew it up,” she corrected. “Good job. We’re finishing up here. Looks like this area is secure. Report back as soon as possible. Status of everyone?”

“Sai-Kee is dead,” Jamali updated. “Iida and I are unharmed.”

“Update that to just you,” Iida corrected, slumping to the ground. “Since the fighting’s done, I want proper treatment now.”

Jamali frowned and knelt down by her, removing her hand from her stomach which had suffered a direct hit. Her own gauntlet was bloody as he pulled it away, appraising the damage. It wasn’t fatal, but it must have hurt a lot. “We need medical treatment for Iida,” he corrected Carmelita, waving one of the ADVENT soldiers to get some bandages and medicine. “We’ll meet up as soon as possible.”

“Copy, and good job.”

Yes, good job. Even if the street was littered with dozens of alien and human corpses, Jamali suspected it could have gone much, much worse. And it occurred to him that if they were winning…then there was a good chance that the aliens had lost this battle.

And that was almost worth everything.

***

Kochi, Japan

“Push towards the UFO!” Duri ordered as the Goliath continued pulling all of the alien fire, even as it destroyed several aliens at a time every few seconds with a burst of its massive weapon. Duri gained quite a lot of satisfaction seeing one burst from the massive gauss cannon rip through one of those damned Andromedons, shattering the helmet.

Of course, even that didn’t kill them.

The suits continued fighting somehow, pulling out some small plasma rifles and shooting at the encroaching ADVENT army while the rest of the surviving Mutons and Vitakara were retreating towards the UFO transports themselves.

“Beatriz! Can you see anything in the transports?” Duri asked, as they overlooked the exposed beachhead, planning the best way to go forward. The aliens might be fine with sending out soldiers into the killzone that was the beach, but he didn’t have such aspirations.

“Negative, nothing beyond the initial entrance.”

Duri glanced over to the Goliath moving down the beach, killing any alien foolish enough to still be in the open. He also saw the rest of the remaining aliens in the UFO, stationed behind erected barricades within the ship, firing out at them. However, the good news was that with them
effectively boxed in, it limited their sight range and possible reactions.

“Reload and get ready,” Duri said, as he saw the other squads also preparing to perform some similar actions. “We’re going to thread between the two transports and set up along the side.”

“Good plan,” Cara said. “Or we could wait for the Goliath.”

Duri looked at the massive MEC to see it slowly fall to one knee in front of the transport, raise a fist towards the entrance, shrugging off the green plasma fire, and shot a cone of flame into the transport, sweeping its wrist from side to side.

“Let’s not let XCOM get all the credit,” Johan chuckled. “Besides, someone’s going to need to actually clear the craft.”

Duri raised his rifle. “Let’s go!” They charged out of their cover and dashed to the space in between the massive silver UFOs, some plasma fire coming incredibly close to hitting, but they managed to get to the edge of the craft and leaned against the metal, which was surprisingly warm. Duri motioned them to get closer, and they snuck to the edge and peered in.

There were actually not that many left. Only a dozen in total. Seven Mutons, three Vitakarians and two Borelians. No Andromedons, thankfully, or maybe they were just hiding. The UFO was designed rather intelligently from what he could see. The panels that had been erected had clearly once been in the floor, which allowed enough room to hold an army, but also provided defenses in case the UFO had to be defended, such as in the current situation.

“Grenade on the Mutons!” Duri called, and tossed one towards two of the hulking aliens who were stationed behind a short panel. It was a near-perfect throw, landing next to one and killing it instantly while severely wounding the other.

“Cara! Suppress!” Duri yelled and she took his position, swinging out and laying down a brief barrage of gauss fire that forced them back into cover while Johan and Kang moved to the opposite side of the transport entrance and he took a position within the UFO itself.

“Reinforcements are heading your way,” Beatriz updated. “Two more squads.”

“Excellent,” Duri grinned, and raised his rifle and took aim at one of the Vitakarian soldiers. “Let’s give them some cover!”

Another Muton succumbed to Kang’s rifle, and Cara and Johan took out a Borelian a few seconds later. More ADVENT soldiers rushed up, taking positions in deeper in the craft itself, with Duri at the front. An ADVENT soldier close to him was sniped by one of the Vitakarians, and received a grenade thrown by another Officer in retaliation.

“Up above!” Cara yelled, pointing to the back of the UFO hangar they were in, just before it transitioned to a new part of the ship. The entrance further in was seemingly protected by some kind of multi-colored shield, which dissipated as more aliens walked out. Outsiders. The guardians of UFOs, with a half-dozen Sectoids also accompanying them.

Duri pointed at one of the two glowing orange aliens. “Take those out now!”

“Targeting!” Cara confirmed and the crystalline alien was suddenly under a steady barrage of gauss fire, sparking off the body as the alien raised its rifle and began shooting.

“Preparing rocket!” One of the rocketeers called, the launcher already on his shoulder. “Firing!”
Duri saw the rocket speed past the Outsiders, and realized that the target wasn’t them, but the Sectoids who had been taking cover behind the elevated platform leading to the next section of the UFO. All the small gray aliens were killed by the explosion that followed, the shrapnel tearing apart whatever alien hadn’t been smashed to a pulp by the initial shockwave.

The Outsiders had finally been forced into cover as the last of the alien defenders fell. Cara paused to reload, while the other ADVENT gunners advanced relentlessly. Another Officer tossed his grenade towards one of the Outsiders, forcing to step out and it started cracking as it was instantly assaulted with the weapons of every ADVENT soldier in the UFO and disintegrated like a burning piece of paper.

The remaining Outsider suffered a similar fate, not even able to get a single kill as the ADVENT gunners ripped it apart at close range within several seconds. “Move in!” One of the Officers ordered, pointing deeper into the UFO, and all of them followed that order, but Duri was confident that they would find no more aliens. Outsiders only emerged when the ship was in danger of falling, and the Sectoids wouldn’t risk themselves unless there was no one else left.

So even as he went along clearing the various sections, he knew they’d won.

Kochi had been saved.

***

Nakashibetsu, Japan

“Hold him down,” Zara ordered her as she carefully removed Seok’s armor to treat his acid burns. The survivors had been picked up by ADVENT transports and were heading straight for Nakashibetsu, the next stronghold of ADVENT since the defense of Shibetsu had failed.

Nuan and Anna held a respective arm, while Zara sprayed the med-kit on his chest. “God, that stings,” Seok hissed, panting heavily. “You almost done?”

“Shut up,” Zara said. “Almost. Acid doesn’t just go away, even with these med-kits.”

“We need to find out how the rest of the attacks went,” Iosif said, rifle aimed out the back of the transport even though there were no aliens in sight. “The Commander needs to know Inori was captured.”

He adjusted something on his helmet. “Lightning Sky, you there?”

“Here, and I don’t think you guys need to worry about pursuit. The aliens are retreating to the town.”

Nuan looked up. “What?”

“This was essentially the only place they were able to establish any kind of foothold,” Lightning Sky explained. “Almost all of the other offenses have been pushed back. I don’t think they have the soldiers left to push forward.”

“So…we won?” Seok asked weakly, pushing himself up. “Even though we lost the town?”

“Well, the aliens attacked all across the coasts, and only managed one capture,” Lightning Sky said. Nuan almost visualized the shrug. “I’d say that this was an overall victory. And now we know where they’ll attack next.”
“In a way, it might be for the best the city was lost,” Zara commented. “The aliens will be concentrated in one place and we’ll be able to keep an eye on them.”

“Except they could attack Korea or China from there,” Nuan pointed out. “They only wanted Japan as a staging ground for attacking Asia. And now they’ve got one, no matter how small it is.”

“The aliens won’t attack Asia until they control most of the country,” Zara defended coolly. “Unless they want to prompt ADVENT to attack them now and then isolate whatever force they send to Asia, they won’t do anything until they actually control the country. Which now they do not.”

“At least it’s over,” Shun sighed. “For now, anyway. But at least Japan is safe.”

Nuan couldn’t disagree with her on that. More importantly, Japan was safe and most of them were alive. She’d lived through the attack and she felt…better about the future. If this was her trial by fire, then she was certain she’d passed it.

But unfortunately, she knew it would only get harder from here. The aliens would not take this defeat lightly.

***

*Forward Observation Station, Mars Orbit*

Several more transport icons turned red and Ravarian once more held his tongue. The holographic map of Japan was essentially now little more than a checklist of losses. They had nothing more to gain by sending more forces, and he was going to dissuade Caelior from continuing the attack if he kept up this insanity.

Luckily, he was pretty sure he wasn’t the only one who felt this way. At the moment he was grateful to Quisilia for putting a mental block around him so he wasn’t affected by the auras of multiple Ethereals simultaneously. He’d had that happen before and it had been…unpleasant. Although an advantage was that he learned that it worked both ways to an extent. The one emitting the aura also had their emotions revealed somewhat. Not plainly, of course, but there were spikes in intensity, and combined with verbal and visual cues, it essentially allowed him to read Ethereals to a small degree.

Before today he’d not even known Ethereal Caelior existed, and he was largely unimpressed with the Ethereal, and didn’t particularly care if the hooded Ethereal read his mind or not. His attire was certainly interesting, gray armor that only covered his torso, arms and legs, with a purple hood over the unseen helm of the Ethereal.

Ravarian finally put his hands on the holotable. “I trust you’ve seen enough, Ethereal Caelior?”

The hooded Ethereal looked down at him. “The battle is not lost yet,” he stated, the deep voice reverberating even deeper than other Ethereals. “You understand how paltry this number was, Zar’Chon?”

Caelior clearly intended that to be the end of it, but Ravarian had quite enough of it, which would be reckless at any other time, but the fact that Quisilia hadn’t telepathically dissuaded him in the first place indicated that the Unseen Ethereal was just as irritated as he was. “Perhaps not in the grand scheme of the war, Ethereal Caelior,” Ravarian continued, keeping his tone respectful. “But the losses are close to half a million, with very little ground gained to show for it. The tactics used were flawed, and we need to determine a different means of attack.” He pointed on the map. “We
now have a foothold. For now we should hold—"

His jaw suddenly clamped up and a firm pressure rested over his body, rendering him immobilized as Caelior simply looked at him. Quisilia materialized behind Caelior a second later, just as immobile as the Ethereal keeping him pinned in place. “Release the Zar’Chon, Caelior. Now.”

“If I wanted advice, Zar’Chon, I would have asked,” Caelior hissed. “You have little comprehension of our plans, do not presume to know otherwise.”

Ravarian was tempted to respond to that. However, he figured that might actually get him killed here. For the most part, the Ethereals he’d worked with had been…well, at least somewhat respectful to his position. Not Caelior though, for whatever reason. And now he wondered if Ethereals like Quisilia were the exception rather than the rule.

_No, Zar’Chon, the Little Storm is just upset that he failed so spectacularly._

Really. Well, he couldn’t really blame him in either case, although Ravarian now felt slightly vindicated because he’d predicted something like this _would_ happen if they simply threw their forces at the Humans. They weren’t _stupid_, and that was what Caelior had found out the hard way, at the cost of thousands of soldiers.

“Order the retreat.” Ravarian instinctively straightened at the voice of pure command, one that reverberated far longer in his mind than even Caelior’s. Off to the side, looking out into the stars and at Earth in the distance was the last figure in their small command room. An Ethereal who towered over all of them, clad in silver armor and crimson cape, with a scarred greatsword strapped to his back.

“The battle can still be salvaged,” Caelior said, turning to the Battlemaster. “We simply need more—”

“Order the retreat.” The Battlemaster repeated without turning to face him, raising an iron-clad fist to make his point. “You failed. I warned you not to underestimate the Humans and you did exactly that. I warned you what XCOM would do, and you did not prepare accordingly. I warned you that even with our advantages, our victory is not assured.”

The Battlemaster turned around to look down upon the Ethereal, who now almost seemed nervous. “And yet in your arrogance, believed that you knew better. That you would somehow be able to shape reality simply because you wield the Gift. You believed this battle so beneath you that you did not participate in it yourself, and hold yourself above all species. The Zar’Chon warned you of what _I_ warned you about, and you dismissed him simply because he is not one of us.”

The Battlemaster slowly and deliberately walked over to the hooded Ethereal, who Ravarian saw almost take a step back. “You are relieved of your command, Caelior. You lack the restraint, respect and courage required to command soldiers to fight and die for you. You are dismissed. Now _leave._”

Caelior wisely didn’t protest and almost fled the room, leaving Ravarian with a very smug satisfaction at the sight. But personal feelings aside, this was a setback they needed to recover from. “What is the next move, Battlemaster?” He asked, as the armored Ethereal appraised the holotable.

“We withdraw our forces and converge to hold the Human city of Shibetsu,” he answered. “We will establish an operational base there, which will hold against retaliation. But we can do little more at this point. The Humans won this battle. Let them celebrate their victory, for it was earned,
even if it was by incompetence and cowardice on our side. We will convene later, but now I must study their tactics to prepare for the invasion of America.”

“Understood,” Ravarian nodded. “I will begin work immediately.”

“Do so,” the Battlemaster said, turning away and heading for the exit. “Make this the last major victory they enjoy. And begin the acquisition of Special Operators. The Psions must be negated.”

“Yes, Battlemaster,” Ravarian promised, as the Battlemaster left the room and Quisilia vanished from sight, leaving him alone in the cold, dark room.

Supplementary Material

The Advent Directive

SECTION 8: ADVENT Military

Subsection 8.1: Introduction

_Purpose:_ The military of ADVENT is to protect and defend from all threats terrestrial and extraterrestrial, by the usage of lethal force; in addition to offensive directives to quickly neutralize rising threats to the state of ADVENT and terminate them quickly and decisively. The ADVENT military answers to the Executive Branch of ADVENT, and to the Chancellor of ADVENT.

_Structure Overview:_ The structure of the ADVENT Military is briefly composed as follows:

**ADVENT Military Command:** The central command of the ADVENT Military, composed of all ranking members with positions open for the Chancellor of ADVENT and the Chief of Peacekeeper Operations for increased coordination although the Commander of the ADVENT Military can override the Chancellor of ADVENT should certain conditions be met.

**ADVENT Divisions:** These are various specialized branches in ADVENT, currently composed of. All further breakdowns are composed within the branches listed below:

- ADVENT Army Division
- ADVENT Navy Division
- ADVENT Air and Space Division
- ADVENT Special Forces Division
- ADVENT Special Response Division
- ADVENT Oversight Division

**ADVENT Legion:** A legion within a division contains at least 100,000 personnel including support staff, and can be larger. Legions are to be used to serve as the standard defense force of a medium-sized country, in addition to additional legions from other divisions.

**ADVENT Battalion:** A battalion within a division contains at least 50,000 personnel, up to the size of a legion, and would ideally be used to defend regions within countries and also as an occupying force.

**ADVENT Garrison:** A garrison within a division contains at least 25,000 personal up to the size of a battalion, and is composed of companies.

**ADVENT Company:** A company contains at least 10,000 personnel, up to the size of a garrison
and in composed of units.

**ADVENT Unit:** A unit contains at a minimum 1,000 soldiers, and composed exclusively of squads excluding all support personnel.

**ADVENT Squad:** A Squad is composed of between 6-10 soldiers, excluding all supporting personnel, and can be composed of various specializations and combinations.

*Note:* All ranks have a single commanding Officer, as well as additional support staff at ranks higher than Unit.

**Military Directive Overview:** The ADVENT Military exists to ensure that those who threaten the state are swiftly and surely dealt with in a lawful manner, and are willing to attack, defend and destroy those who would threaten the citizens of ADVENT and take whatever measures are necessary to ensure that certain threats never rise again.

Chapter End Notes

First major battle complete. Hope it was good (Next chapter shouldn't take so long to get out). Anyway, most of you probably know about the upcoming expansion for XCOM 2 (Which looks interesting for a multitude of reasons), and might wonder if I plan on incorporating some or any of it into this.

The short answer is maybe. I'll have to play it to be sure, but there are elements I already have ideas for converting for usage here. Not everything, but it's early enough here that I can feasibly incorporate major expansion elements without it seeming forced. But don't expect those for a while, and I can guarentee it won't be everything since some of it is strictly for the XCOM 2 timeline.

But no zombies. That is one thing I am *not* going to use whatsoever.
A Crystal Ball

Transport to Mars Forward Observation Station

It was strange to finally be actually back in a spacecraft. Discounting the times he’d been inside the Sectoid spacecraft while with XCOM, it had been nearly a year since he’d been in a legitimate, working, Vitakarian craft, much less an Infiltrator. The craft was only large enough for two, a pilot and passenger, which was why it was often used by the Zararch for operations.

It was very angular like most Vitakara spacecraft, which Nartha suspected had to do with aerodynamics and the like, though if that had any actual effect in space, he didn’t know. What he did know was that it was very fast and would get him to the Mars base that had been established while he’d been on Earth.

According to the pilot Zar’hallin’aucity, the Zar’Chon himself was conducting operations from there, as well as several Ethereals, which immediately concerned him. The good news was that if there were Ethereals at the station, they almost never bothered with anyone outside the leaders, and occasionally some officers, so it was unlikely one would just stop him randomly.

Then again, they could read minds so they might make an exception for him.

What he was more concerned about was that there would be an Ethereal present when the Zar’Chon debriefed him, and if that happened, he was as good as dead. He didn’t know anything they didn’t already know, so XCOM would be as safe as before…but he didn’t exactly want to die. Not when there was a chance for him to make some kind of difference.

Australia being targeted first didn’t surprise him, nor that the Collective had taken it fairly quickly. The Commander was smart enough not to wage a pointless war there when that allowed him time to establish defenses elsewhere. ADVENT was a surprise, but again Nartha was not surprised the Commander had taken steps to establish something like that.

Putting the woman in charge of EXALT in power was surprisingly in character for him, but Nartha did wonder what the others in XCOM thought. He assumed there had been many arguments and exclamations of disbelief. Honestly, Nartha was unsure the Commander would be able to get all the countries to work together peacefully, but the Commander knew that too and likely had a plan.

And speaking of plans, he needed to make sure that he wasn’t overlooking an obvious flaw in his own plan. The Zar’Chon was going to have questions, and Nartha was going to walk a very fine line between the truth and outright lying. The trick would be to make the explanations seem plausible in a way that didn’t raise more questions.

So the obvious one that would come up would be why the information he’d sent was less and less substantial every month, and fortunately an easy answer was that he had no choice since XCOM had become aware of a spy in their midst and he’d had to lay low. A reasonable explanation and one he doubted the Zar’Chon wouldn’t press too hard.

He would probably ask if he’d participated in the defense of the Citadel, and for that Nartha opted to tell the truth, for the simple reason of preserving his cover. It would have been impossible to escape without being caught, and him staying had allowed him to gain access to some very interesting XCOM intel.
It was a gamble, but one the Commander had approved, and by the time they realized something was wrong, it would be too late to change much. The Zar’Chon would probably ask him a few more questions on specific details about XCOM, probably Patricia, the Commander and whoever else he deemed influential. Knowing the Zar’Chon, those would likely be tests since he would likely know the answers well beforehand.

The Zar’Chon was definitely suspicious of him, so he had to assuage that as best he could. All of it would depend on if an Ethereal was present.

He reached into his pocket and felt for the three vials containing the Sectoid Virus; still there, still intact. If everything went well and he was sent back to Vitakar as was normal after operations, there were several military installation stops that had heavy Sectoid traffic, which he fully intended to exploit. Whether was would be enough to start the plague he didn’t know, but he didn’t have a choice. Heading straight to Helion-7 was out of the question, so he had to take more subversive measures.

“Nartha, we’re close to the Mars Forward Observation Station. Strap in, I’d hate to explain to the Zar’Chon you died to your own stupidity.”

“Just keep flying,” Nartha smirked, and complied with the instructions. Hallin seemed to have a mildly humorous side, since that was not the first time during the flight where he’d made quips like that. Funnily enough, he almost reminded Nartha of some of the Humans in XCOM. The species in general appeared to use humor far more than most he’d encountered, even in sometimes the most inappropriate of situations.

He did wish the Infiltrator had windows, since he truly did enjoy the sights of spaceflight, and the chance to see Mars up close was something he was curious about, even if it was nothing more than red dust and rocks. Well, he’d probably see it from the station, provided he was still alive. The Infiltrator suddenly became still, and Nartha realized they were probably in the hangar and then it began descending.

The moment it hit the ground, Nartha unstrapped and walked to the exit. “Thanks for the ride,” he told Hallin.

“Thanks. Good luck with the Zar’Chon.”

He would need it. Nartha descended from the small ramp that extended from the exit and stepped onto the metal floor of the Hangar. Aliens of all species were rushing about, fixing Sectoid spacecraft and carrying away wounded soldiers. Nartha blinked. Well, something had clearly happened and he was exactly sure what.

The amount of Runianarch medics didn’t exactly bode well for what he would expect to be a ‘victorious’ battle. Had they attacked somewhere and the Humans…won? A victory so soon? He kept his expression neutral as he waded through the hundreds of rushing medics and soldiers, and headed straight to the lift. This station appeared to be built identically to other observation stations, so the Zar’Chon would probably be on the top one.

But he had to make a stop first. It would be an exceptionally bad idea to walk into a debriefing with the Sectoid Virus on him, and thus he had to find a place to stash it. Luckily there were plenty of places that would work fine.

Section 4 was the Scientific and Medical floor, so he selected that on the pad and stepped into the lift. The colorful light flashed around him, accompanied by the low thrumming, and a few seconds later, he was propelled upward until he was in front of the correct floor. A small push from behind
propelled him out and he stepped onto the floor without missing a beat.

The Sectoids may not have been a bastion of purity, but they did know how to make excellent tech. Anyway, now he was here, and now he needed to find a place to put this that wouldn’t attract attention. Being a Zararch agent, he did have access to most areas without raising many questions, and whatever had happened provided an acceptable cover for him being here in the first place.

Nartha stepped into one of the emergency rooms where medics were bandaging and treating wounded Vitakara of all races. The wounds clearly weren’t life-threatening, but they certainly weren’t pretty. Many were missing limbs, others were in medically-induced comas and yellow ichor stained most of the white material in the room.

He opened one of the cabinets and made a show of reaching for one of the unstained cloths while placing the vials close to it. It was unlikely that any of the medics would use an unmarked vial, and in the chaos here, they probably wouldn’t see it at all. Closing the cupboard, he turned to give the cloth to one of the Vitakarian medics who froze the instant she saw him before, relaxing slightly.

“Sorry, agent,” she said, taking the cloth and applying it to a wounded Borelian. “I thought…well, you look…”

“Human, I know,” Nartha nodded, realizing that he did really stand out here. He’d almost forgotten that he wasn’t converted back into his normal state. Being human had just been something he’d gotten used to. But he was looking forward to returning to normal. “What happened here? I’ve just returned from Earth.”

“We attacked the country the Humans call Japan,” she explained. “They won.”

He didn’t even have to fake the incredulity in his voice. “They won? How?”

“That is a very good question,” she practically spat. “I have no idea. I’m not a tactician either, but some of the soldiers were talking about how badly managed the entire operation was. The Humans knew how to fight us, and when XCOM showed up…” she motioned to the rows of wounded soldiers. “This shouldn’t have happened. How could they…I mean…”

“Whoever was in charge underestimated them,” Nartha frowned, wondering who had been in charge. “I found out down there that underestimating them is a fatal mistake.”

“Go tell that to the Zar’Chon,” she said grimly. “If he won’t come down and see the bodies for himself, maybe he’ll listen to one of his agents.”

She was dangerously close to insubordination of both whatever Ethereal had been in charge, and the Zar’Chon for being borderline accusatory towards him, but Nartha didn’t feel the need to enforce that at this point. He simply nodded. “I will. You have my word.”

“Appreciated,” she muttered before moving to another patient, and he exited the room, deciding it was probably best to see the Zar’Chon now and see if he could figure out what was going on, and hopefully survive his debriefing.

***

Northern Territory, Australia

Hot, humid and miserable.

That was exactly what Abby felt as she walked out of the skyranger into the Australian resistance
camp. Much of the vegetation that had existed where the tents and temporary structures were had been recently removed and chopped down. But they were still very much in the Australian wilderness, which Abby was somewhat curious about.

She’d heard plenty of stories about the supposed danger of the Australian wilds, and was curious how it matched up to reality. Then again, she wasn’t entirely sure she wanted to know. But first she had a job to do, and time was of the essence.

There were plenty of soldiers here milling around, standing guard or performing other tasks. All of them wore green camo of some sort, nothing identifying them as ADF in any way, which she noted was smart. Not that the aliens wouldn’t be able to accurately guess who they were, but no sense giving them an easy answer.

As the skyranger flew off, one soldier rushed over to her. “Agent Gertrude?” He asked, skidding to a stop, his hand twitching at his side, clearly unsure if he was supposed to salute or not. She didn’t really mind either way.

“Yes, that’s me,” she confirmed, appraising the soldier before her. Beard, brown hair, probably been scouting the past few days judging from his dirty clothes and mud splashed across his face. “And you are?”

“Jonah Fillion,” he answered. “I’ll take you to Harper’s team right away.”

She nodded and they began walking through the camp. Abby didn’t fail to note the white sheets over bodies and the general exhaustion that seemed to permeate the air. At times she wondered if her enhanced sight didn’t give her too many details of the people around her. Just from their facial cues she could fairly easily deduce what they had been or were feeling. Or at least make a very educated guess.

“It’s not good, is it?” She asked.

The young soldier grimaced. “The aliens are in control of our home. That alone is…difficult. The fact that we’re understaffed, resources are strained and everyone seems to have forgotten about us already in favor of…well, the rest of the world, yeah, things are ‘not good’ as you put it.”

“Not everyone has forgotten,” she reminded him. “I’m here, aren’t I?”

He shot her a weary look, then sighed. “True, and I do appreciate that. But, uh, don’t take this the wrong way, but you’re only one woman. Probably very good at your job, but only one.”

He did admittedly have a point. Still…“You’d be surprised what one person can do.”

“If you say so,” Jonah shrugged. “But if you do, then hey, I’ll take it.”

“I’ll do my best,” Abby promised. “Aside from Harper, anyone else I should know about?”

“That other XCOM agent, Hari May was here,” Jonah answered, nodding out into the wilderness. “She left a day or so ago. Might be on assignment.”

Right, Zhang had said there was another agent, whose mission appeared to be different from hers. “Has ADVENT sent anyone?”

“Yeah, some old guy,” Jonah said. “Some kind of tactician I think, though I’d never heard of him before. Lucas Harrison, name ring a bell?”
Abby shook her head. “No. Never heard of him.”

“He’s a bit strange,” Jonah admitted as they entered one of the temporary structures. “Brought a whole bunch of equipment that no one else is allowed to go near. Speaks a whole bunch of languages too. He had a fluent conversation in Spanish with Hari, and was talking to some Japanese official in their language. Guess he’s been useful since Harper keeps letting him stay.”

Interesting, but he probably wouldn’t be essential in whatever she was to do. “They’re through here.” Jonah gestured to the room in front separated by curtains. “Good luck.”

“Thanks,” Abby told him, and stepped through the curtains into the central command for the Australian resistance. It was surprisingly clean, albeit minimalist. The walls were a bare plastic white, with some maps of both local and global varieties posted, most with markings in blue and red sharpie. In the center was a wooden table with loose paper, pens, markers and files, with a map of Australia in the center of it.

Lincoln Harper, former Marshal of the ADF and now leader of the Australian Resistance stood over it, hands resting on the table as he poured over the map, his face as drawn and haggard as the image from the file Zhang had given her. Behind him was the only other piece of furniture in the room; a stand with a dull turquoise sphere on it, which seems to reflect the light around it, giving it a sort of underwater rippling effect.

“Marshal Harper?” She asked, making him look up. The man gave a weary nod.

“Agent, glad you made it safely. Send Director Zhang my thanks.” He began walking over to greet her properly. “Would you prefer to get started right away, or get settled here first?”

“I think it’s best we get to work,” Abby said. “The aliens won’t wait for us.”

Lincoln gave her a lopsided smile. “No, they won’t,” he said as he moved back to the table, with her close behind. “I appreciate the initiative you agents have. We need that. However, I do have some good news I just received. The aliens attacked Japan and were driven off.”

Her eyes widened. “That’s great!”

“It most certainly is,” a new voice interjected, one deep but weathered from age. Abby turned to see a new man enter the room, probably the ADVENT advisor Jonah had told her about. He was definitely an elder, with a full head of white hair and a wrinkled face. But surprisingly, he seemed extremely healthy, or maybe she just thought that because he was slightly taller than her. More than that, she couldn’t get any indication of what he was feeling from observing him. Not many people had that kind of control.

“Agent Gertrude, this is Lucas Harrison, who the Chancellor graciously sent to help us,” Lincoln introduced, nodding to the man as he took a side of the table between them. “He’s been helpful in planning our current strategy.”

“And with Agent Gertrude here, we can start putting it into motion,” Lucas finished with a slight smile, clasping his hands behind his back. “Miss Gertrude, how familiar are you with Australia?”

“How practical,” Lucas mused, looking down at the map. “I was more referring to your knowledge of the country itself. This continent is a fascinating place to study.”

Abby raised an eyebrow. “You’ve been here before?”
“Oh yes, many times,” he said, waving a hand dismissively. “The ecosystem in particular is an interest of mine, and one I will exploit here.”

“How?” Abby asked, crossing her arms. “It’s not exactly something we could control. And…well, this wildlife. Not exactly—”

“That’s where you’re wrong, though I don’t blame you,” Lincoln interrupted. “The aliens are surprisingly vulnerable to many of the same toxins we are, and Australia is home to some of the deadliest animals. Attract them to the right places, and they’ll take care of the aliens for us.”

“That still doesn’t explain how they can be controlled,” Abby insisted. “Or have you created a kind of lure?”

“Indeed,” Lucas nodded. “A creation of mine, modified for our needs. Initially I made it to repel all insect and dangerous wildlife away. I simply reversed the process to attract them. Almost too simple, though the range is still a slight issue.”

“Which admittedly still needs to be proven,” Lincoln said slowly, eyeing Lucas with a slightly suspicious glare. “You’ve been helpful here, but that particular strategy is one I’m skeptical of.”

“Of course,” he answered smoothly. “Which is why I want to run my field test now. Agent Gertrude and I will go to Warburton and prove it. Should it work, my theory is proved correct. Should it fail, then nothing is lost.”

Abby and Lincoln both looked at him. “I don’t think it’s safe for you to come along,” Abby suggested tactfully, not sure what he was thinking. “I’m more than capable of doing it on my own.”

“It’s far too much of a risk for one like you,” Lincoln pointed out. “You know how dangerous it is, and, to be blunt, you’re not in your prime.”

“I’m not as young as I was, it’s true,” he chuckled. “But I assure you, I’m perfectly capable to taking care of myself, and I will also remind you that I answer to the Chancellor, not you, and she has fully sanctioned any actions I take, including participating on operations.”

“My operations involve stealth,” Abby stated, staring the man in the eyes. “To also be blunt, you would compromise me. It’s too much of a risk that will get both of us killed.”

“And I don’t think you’re in a position to say that for certain until you see for yourself,” he defended easily. “I assure you, I am no stranger to the work you are familiar with. I promise to not be a hindrance.”

Abby looked away and down at the map, wondering how she could possibly handle this. Part of her wanted to continue to flat out refuse, since this was clearly a bad idea. Then again, it might create problems between ADVENT and XCOM and that was something that wouldn’t help anyone. Of course, the same thing would happen if Lucas was killed on the mission, and despite his assurances, Abby wasn’t quite the idiot he was hoping.

Another possibility is that it would sour relations here, since Lucas would not forget this…so perhaps her best solution was to try and perform the mission, take him along, and make sure he followed her instructions. A babysitting op was not what she had in mind, but it was maybe the only way this would go without it turning into an incident of some kind.

“Fine,” she relented. “But if you’re coming along, you’re following my orders exactly. Understand?”
“That is fair, agent,” Lucas conceded. “In which case, I suggest we should prepare. Harper, would you describe our operation zone?”

“Certainly,” he nodded, although he still didn’t seem comfortable with Lucas accompanying her. “Let’s begin.”

***

Zar’Chon Chambers, Mars Forward Observation Station

The doors slid open soundlessly as Nartha stepped into the circular chambers the Zar’Chon was so fond of. Nartha wasn’t sure if that was something all Zar’Chons had, or if it was a personal preference for the current one. It was elegant in its simplicity; he could appreciate that for sure. Half the chambers opened into windows out into space, lighting was minimal (if a bit overdramatic), though likely because the room was set up perfectly for displaying multiple holograms at once, from a control console in the middle of the room, and displayed from the soft blue lights above.

The Zar’Chon himself stood in the middle of the room, facing a hologram of an XCOM soldier standing and pointing at…something in the distance, while being oddly distorted. “Zar’Chon; reporting for debriefing.”

“I know,” the Zar’Chon answered without turning, and motioned him over with a gesture. “Do you recognize this soldier?”

Nartha walked over to the hologram to get a better look. Red armor, scarred, odd distortion, the autorifle on the back…combined with the helmet, and that he’d spent enough time in XCOM to tell the slight differences between males and females who wore the armor, there was really only one person who this could be, and who would make a gesture like that in battle. “Patricia Trask,” he said after a few seconds. “A psion. I assumed they learned the hard way not to underestimate her.”

“You failed to mention she could effectively neutralize an entire army,” the Zar’Chon said slowly, turning to face him fully.

Nartha frowned. “She’s powerful, but not that powerful. Unless she’s getting training from an Ethereal, I’m not sure how she could possibly do that. At least I didn’t note anything like that.”

The Zar’Chon pursed his lips. “It appears she’s more powerful than either of us assumed, then. I presume you saw the bodies.”

It wasn’t a question, since the Zar’Chon knew he wasn’t blind. He wanted to know how much Nartha knew already. “We launched an attack on Japan, which failed. I went to the Medical floor to get an extent of the damage. From what accounts I heard, the battle was…poorly managed and dysfunctional…” Nartha paused. “Which is surprising. We have an advantage over the Humans. How did we fail?”

“The one who orchestrated the attack is no longer in a position of authority,” the Zar’Chon stated, turning to shut off the hologram. “The Battlemaster has taken over operations for the time being. Japan is a setback, but in terms of overall loss, this will not be felt.”

Nartha was extremely curious who had orchestrated the attack. Since he had apparently been dismissed, it likely wasn’t an Ethereal since if an Ethereal was in charge, they probably wouldn’t have lost. Which really only left one of the Runianarch or Lurainian leaders. Perhaps one of the mysterious Andromedons he’d heard so much about.
Either way, the news that the Battlemaster was now in charge was extremely bad for the Humans. “Is he here?” Nartha asked.

“Yes,” the Zar’Chon answered. “But currently planning. In the meantime, we have much to discuss about your time in XCOM.”

“That we do, Zar’Chon,” Nartha agreed, steeling himself to lie to the leader of spies. At least there were no Ethereals here, so he could do this. “What do you want clarified?”

“Your intel became much sparser the longer you were undercover,” the Zar’Chon stated, clasping his hands behind his back and looking down at Nartha expressionlessly. “Why is that?”

“Because XCOM learned there was a mole,” Nartha explained calmly. “Which I know shouldn’t have been possible, but they appeared to have learned more about Ethereal Script, and that subsequently made breaking our cipher easier. Even if they didn’t know who sent it, they knew someone was. I did not anticipate that, and attempted less visible methods. By the end I suspected they had broken the code and didn’t want to reveal what I had discovered.”

“You do recall we had other means of communicating,” the Zar’Chon reminded him neutrally. “That was not the only cipher you could have used.”

“No, but it was the most inconspicuous,” Nartha answered, thankful he’d spent time preparing for this. “The Citadel was one of the most secure locations I have been in. Everything sent out of there is seen, it is just a matter of what is the most visible. If I had switched to a different cipher, that would have been noticed and perhaps spooked the Commander into doing something drastic. I know you know he is certainly capable of such in order to catch a spy. I believe they wanted to isolate and identify me, and then feed me false information.”

“And how do I know that they didn’t already?”

Nartha’s lips curled into a small smile. “Because you wouldn’t be talking to me right now. You would consider me compromised and I would have been executed or brought for interrogation.”

Now the Zar’Chon gave a small smile of amusement. “A good answer. But the information you sent to me recently was so vague that I would not be able to verify what exactly it was, let alone if it was a trap or not. Did you learn anything substantial?”

“I did,” Nartha nodded. “Something that could affect the course of the war.”

The Zar’Chon waited. “I trust you will share it, and that you have proof?”

“I certainly do,” Nartha nodded and pulled out a Human flash drive. “I’m certain you know that XCOM is interested in genetic modification. The data here shows exactly what they are researching and what they are planning. For better or worse, Dr. Vahlen is very detailed.”

The Zar’Chon took the drive and placed it in his pocket. “This will prove useful. Good work. And is there more?”

“There is,” Nartha confirmed, pulling out three vials of clear liquid. “XCOM is planning to exploit the genetic similarity of the Sectoids. They’ve created a plague that if released, will kill most of the Sectoid species, perhaps even the Hive Commanders. I’ve seen the results, Zar’Chon, its real.”

The Zar’Chon furrowed his brow and took one of the vials and held it up. “A clever move by XCOM, and an effective one despite the dangers of bioweapons such as these. Curious the Commander would take such a risk, especially since it could end up killing his own species.”
Nartha snorted. “I believe the Commander had the same thought. Do you really believe the Commander *isn’t* using Human test subjects?”

“A fair point,” the Zar’Chon admitted, pocketing the vial. “But it is still risky, although given his profile, I am not surprised genocide is in his list of tactics. His pragmatism is almost admirable.”

“Most of XCOM agrees,” Nartha nodded. “And I believe he isn’t going to receive much opposition to wiping out the Sectoids. The assault on the Sectoid Hive pretty much cemented their fate in the eyes of most Humans. Pacifism will not last in this war, and we cannot rely on that.”

“No, we have seen the Humans will turn violent should circumstances demand it,” the Zar’Chon mused. “Not since the Andromedons has a species been so willing to fight amongst itself.” Nartha was silent at that, largely since he didn’t know enough about the Andromedons to comment.

“You met and spoke with the Commander, correct?” The Zar’Chon asked after a few minutes, turning to face the window into the void. “What are your impressions?”

How to sum up the Commander? “Disarming,” Nartha began. “Whatever expectation you have of the Commander, he is unlikely to live up to it at first. I suspect he tailors his initial personality based on whoever he is speaking to at the time. If you walk in expecting a raving war criminal, he will be a calm and rational. Expect a detached leader and he will make himself as personable as possible, as if he were one of the soldiers. He has no issue interacting with those of a lower rank, and will elevate those who show merit.”

Nartha paused. “But the most dangerous trait he possesses is his *persuasiveness*. The Commander has an answer for everything, justified to the best of his ability that is difficult to refute. This persuasiveness breeds confidence, and with that, *loyalty*. XCOM *trusts* the Commander, regardless of what they are asked to do, because they believe they are *doing the right thing*. The Commander tolerates opposing opinions, but he will utterly take them apart if they come into conflict with his own.”

The Zar’Chon didn’t move as he finished. “It’s not apparent at first,” he finished. “But the Commander is *ruthless*. He is perfectly willing to murder half of the human race if it means victory over us. Civilians are just unfortunate casualties; cities are mere staging areas; politicians are puppets that are used and discarded as he deems fit and the world is simply a chessboard where land is strategically gained and sacrificed. Even his own soldiers are, at the end of the day, mere pawns in his game of war. You are not dealing with a regular Human, Zar’Chon, you’re dealing with the Commander.”

This description made the entire situation seem so very ironic. He could attest to the Commander’s unwavering confidence and persuasiveness because he had fallen under it himself. He knew, intrinsically, that he was just another tool in the Commander’s arsenal, but was perfectly content with that. Pawns could be useful, after all, and better a pawn to the leader who would change the status quo than a leader who would simply endure the continuing farce.

“That matches up with what I have learned about him,” the Zar’Chon nodded. “Brilliant and ruthless, a dangerous combination and an unexpected rival. I did not expect the Humans to put up this much resistance, but I suppose with the right people in charge, much is possible. Let us move on. Patricia Trask.”

“I don’t know as much about her,” Nartha admitted truthfully. “Soon after officially becoming a psion, she began working much closer with the Commander. I wasn’t close friends with her to begin with, but she was a very…analytical woman. An excellent Squad Overseer, and competent psion. She did beat a Hive Commander…and an Ethereal.”
“Which means you were there when we attacked the Citadel,” the Zar’Chon noted, turning back to him. “Why is that? Especially since you received the extraction order.”

“You gave me little more than a day to leave,” Nartha defended coldly. “You don’t just leave the Citadel. All I would have accomplished was getting myself captured and that wouldn’t have been ideal for any of us. I would have needed at least a week’s warning, and even then there were risks. Yes, I did fight for XCOM, but only to preserve my cover. In fact, that was the only reason I was able to acquire the information and virus you now hold in your hand. The genetic labs were off-limits to soldiers normally, but no one really cared when you were attacking.”

The Zar’Chon’s expression didn’t change, but he gave a brief nod. “In retrospect, you are right. It is unfortunate you were put in that situation, but considering what you acquired, perhaps it is for the best.”

Nartha held in a sigh of relief. “What are your opinions on the soldiers,” the Zar’Chon asked suddenly. “As a whole, what can we expect?”

Oh dear. “The soldiers are…complicated,” Nartha sighed. “They come from across the world, have their own opinions, dislikes and conflicts. But they do have a tendency to unite, and the bond between XCOM soldiers is one of the strongest I’ve seen. People from regions who should be enemies will work together for the common cause of, in their view, ‘defending Earth’. It is a strong sentiment that is not easily broken.”

“You sound almost envious,” the Zar’Chon noted.

“Perhaps I am,” Nartha admitted. “We both know such camaraderie isn’t common in the Zararch.”

“For good reason,” the Zar’Chon agreed. “But I agree that the ideal is admirable, so long as it doesn’t affect you. Did you become close to any of them?”

“I became friends with some of them,” Nartha said, thinking of Samuel and Shun, one now dead, the other quite possibly the same. “But as a means to an end, of course. Some of the Humans aren’t too different from us.”

“I find that hard to believe,” the Zar’Chon said. “But you have spent more time among them, so I will accept that as a possibility. Regardless, despite the difficulties, your mission has produced results, and I will mark it as a success.”

He’d done it. “Thank you, Zar’Chon. Where will I be deployed next?”

“For now, you’ll get your standard reprieve and return to Vitakar,” the Zar’Chon answered, turning back to the window. “When you are ready to return, I suspect the Humans will be largely brought under control.”

“I appreciate that,” Nartha said, thankful his plan was falling into place. “It will be good to be myself again, and to see Vitakar.”

“I suspect your family will also be happy to see you actually alive,” the Zar’Chon nodded. “I already have a team ready to return you to your normal self. Utilize it before you leave, if you wish.”

“I’ll do so,” Nartha said, relieved. “Thank you once again.”

“Don’t mention it,” the Zar’Chon replied coolly. “Dismissed, agent.”
The moment he heard the doors close, Ravarian turned around to see Quisilia also looking at the exit Nartha took. It was always bizarre just how Quisilia operated. His habit of toying with various agents by literally standing behind him the entire time they talked was initially disconcerting, especially since they never once wondered if something was off.

And he was quite aware he wasn’t immune to this.

“What did you think?” Quisilia asked, turning to him. He sounded amused, oddly enough.

Ravarian pulled out the vials Nartha had given him. “His story lines up for the most part. He is definitely not telling the whole truth, but in light of what he brought, I think that can be overlooked.”

“Why?” Quisilia questioned. “If he is lying…”

“It has nothing to do with his loyalty,” Ravarian clarified. “But don’t think he was as unaffected by his time with the Humans as he claimed. Even among aliens and enemies, it is always a risk to form attachments. His time on Vitakar should dispel that influence.”

“How optimistic,” Quisilia said dryly. “And what do you make of the information he brought?”

Ravarian frowned at the Ethereal. Quisilia didn’t normally ask this many rhetorical questions, especially since he’d likely read Nartha’s mind during their discussion. What exactly was the point of this? “This Sectoid bioweapon is dangerous and clever. Depending on how it is constructed, it could be just as deadly to us as the Sectoids. We’ll need to create a counter immediately.”

“Genetic bioweapons are dangerous,” Quisilia agreed. “But you will accomplish absolutely nothing if you use the ‘bioweapon’ Nartha provided.”

Ravarian sighed. “Please enlighten me why, Quisilia.”

“Because Nartha is a traitor,” Quisilia answered, almost smugly. “He is an agent of XCOM.”

Ravarian stiffened, swinging his head to stare at the motionless Ethereal. Impossible. That was his first reaction. There was no reason he could see why Nartha would betray the Collective. What could he possibly hope to accomplish? But Quisilia wouldn’t lie about something like this. Despite the Ethereal enjoying toying with people, he was one of the few exceptions, especially with matters this serious.

“How?” Ravarian demanded incredulously. “Is it some kind of conditioning?” It was admittedly a rarely researched method, at least for applications in intelligence work, but he could easily see the Commander attempting it, or more likely, psionically influencing him to betray the Collective.

“No,” Quisilia said bluntly. “Nartha is doing it entirely of his own free will, which is…surprising, even to me. He certainly was not lying when he attested to the persuasiveness of the Commander.”

Ravarian pursed his lips in a hard line. “Then why? I doubt it was a simple conversation with the Commander that turned him into a traitor.”

“His primary motivation is surprisingly noble, in his eyes,” Quisilia explained, almost letting a chuckle escape him. “It is to, ah, free the Vitakara from the oppressive regime of the tyrannical Ethereals.”
Ravarian stared at the Ethereal in disbelief, then shook his head in disappointment. “Foolish and concerning. Clearly Nartha has no idea what a truly tyrannical species is if… that is his reasoning.”

“He does not trust us,” Quisilia elaborated. “He seems to think that the Vitakara are… under some form of enslavement to us, and we take advantage of that.”

“Shortsighted,” Ravarian muttered. “He appears not to understand that this is a Collective, one which the Vitakara are a part of. Of course we answer to the leaders of one.” He sighed. “This is extremely concerning on a number of levels. He was one of my best agents, and if he has those sentiments in the back of his mind, then others certainly do as well.”

“The sentiment of a Vitakara species independent from us is not uncommon,” Quisilia revealed. “But I tolerate it since most will not act on it.”

“You should have shared that with me,” Ravarian said, glaring at the Ethereal. “This is perhaps the worst time for that, because if Nartha is a traitor, the only reason he is here, and why XCOM let him go, is to cause trouble for us. And worse, he knows that an Ethereal can die, he’s seen what the Humans can do. With that information he could inspire enough Vitakara to act.”

“Which is likely why the Commander sent him,” Quisilia agreed. “Although it appears he did not anticipate me being here.”

“Well, it essentially makes this useless,” Ravarian scowled, glaring down at the vial. “And the data he acquired is likely forged as well.”

“Not entirely,” Quisilia disputed, extending a hand from his robe and the flash drive suddenly flew towards it. “Nartha didn’t lie about what XCOM was doing. The Sectoid bioweapon is very real, and he plans to distribute it himself. He hid it and is likely going to retrieve the actual bioweapon now.”

Ravarian opened a panel on his wrist to prepare to make a call. “Well, I’m sure he’ll be very cooperative when we interrogate him—”

“Wait,” Quisilia interrupted, raising a hand. “Let him go for now. Nartha presents us with an opportunity we shouldn’t waste.”

It didn’t take long for him to come to the same conclusion. “You want to use him. That is dangerous for an agent like him.”

“We have very little to lose,” Quisilia stated. “We will extract nothing from Nartha aside from what we already know. But if we let him orchestrate his rebellion, we gather all the dissenters into one place and when the time is right, execute them all.”

“A risky play,” Ravarian warned, closing the panel on his wrist. “But if we could use him to wipe out the Nulorian… he might be useful.”

“If he becomes too much of an issue, I can simply kill him,” Quisilia said. “We know he is a traitor and he believes he is undetected. Let him perform his mission. Let him try and poison the Sectoids. We can simply lock down contaminated areas to prevent the spread of the virus. Besides, I want to see how effective this plague is. Sectoids are easily replaced.”

“I’m not comfortable with letting him go,” Ravarian said. “But I see the logic, and the final decision is up to you.”

“Then let us use the XCOM spy,” Quisilia confirmed. “The Nulorian will never reveal themselves
“Regardless, I want a Special Operator put on him,” Ravarian ordered. “We still have Earth to deal with. You said the others would be arriving shortly?”

“Yes,” Quisilia confirmed. “Momentous times are ahead, Zar’Chon. It is a wonderful feeling.”

Ravarian didn’t visibly respond either way. “If you say so. In which case I should update our Earth databases. Knowing the Battlemaster, he will not attack without the latest intel.”

_Medical Floor, Mars Forward Observation Station_

“Stand, walk several steps and return,” the medic instructed Nartha and he complied, taking care not to trip over everything. He’d thought adjustment back to a pure Vitakarian would not be difficult, since the differences between Humans and them were largely visual.

As it turned out, there were actually several very important differences, one of which was that everything was so much brighter now that his eyes were back to normal. They were also a distinct improvement from human sight, but he still winced after initially waking up. It was more disorienting than any flashbang, but the medic was helping him out just fine, and now he was getting more used to it.

“Excellent,” she encouraged, setting him down, picking up a tablet with a haptic display. “I took all of your vitals already, so all that remains is to log you into the system. This your first conversion?”

“Yes it is,” he confirmed with a nod. “An…interesting experience for sure.”

She grimaced. “You’re lucky Vitakarians and Humans looks so much alike. It’s much harder on Dath’Haram, or worse, Cobrian agents. The latter often have psychological issues when converting back. Most of the time there needs to be psionic intervention.”

“You’ve done this before?” Nartha asked curiously.

“Not independently,” she admitted, setting the tablet down. “But I’ve been trained and seen it before. I find it to be a fascinating process, although I doubt you would feel the same way.”

Nartha chuckled. “Probably not.”

“I’ve never asked,” she said. “How different is it? We don’t look that different from them, is it actually like that?”

Nartha appraised the Vitakarian medic. “The biggest difference is sight,” he explained. “Everything is much…darker, for Humans. They can’t see as well as we can. I almost forgot what it was like until I woke up.” He ran a hand over his bald scalp. “Hair is interesting as well. It’s…not irritating or anything like that, just…there. Humans have a fascination with it though. You would be surprised how creative they are.”

“Yes, it’s almost sad we’re fighting them,” she said wistfully. “They seem fascinating. Not brutes like Andromedons or Mutons. They have culture and history. I do want to visit Earth once the war is over and the Humans are assimilated. What’s it like?”

“Earth?” He wondered. “Very…ah, diverse. Similar to Vitakar, actually. They have deserts, jungles
and frozen landscapes. They seem to have been spared from most of the terrible weather as well. The worst they get are snowstorms and hurricanes,” he paused. “Although they like to call their snowstorms ‘blizzards’, but compared to Vitakar…it’s a snowstorm.”

Her tablet beeped and she sighed. “Thanks for talking with me, agent, but it seems I’m needed elsewhere.”

“Of course,” he said, standing up. “What is your name?”

“Zar’carida’noizar,” she answered, inclining her head.

“Keep up the good work,” he told her. “The more you can keep alive, the better.”

It wasn’t even a lie. He had no wish for his species to die in this war, and any saved was one more he might be able to turn away from the Collective. Now that he was free to leave, he had to make plans. The first step would be to disperse the Sectoid bioweapon in a discreet manner.

Since he could chart whichever path he wanted to Vitakar, he saw no reason not to take several stops near Sectoid territory. If the bioweapon was as potent as Vahlen claimed, then it would spread in days and not take full effect till much later, which unfortunately meant that he wouldn’t hear about the results for a while.

Once he was on Vitakar, things were going to get tricky. He would see his family, of course, perhaps even persuade them to help, which was sadly unlikely, but eventually begin work on his own. He’d have a limited amount of time to work before the Zar’Chon called him back, so he had to use it wisely.

Which left one obvious path: the Nulorian. The outcasts of Vitakar and the closest thing to organized crime that existed. That was being generous, compared to ‘organized crime’ on Earth, since the Nulorian would likely be little better than a well-organized gang if he was being honest. But they’d eluded the Zararch for decades and hated the Ethereals, so their motives weren’t unknown.

The issue was going to be getting them to trust him, and convincing them to help in the first place. Someone had to be working with them, otherwise the Zararch would have destroyed them by now. So he needed to find whoever that was and convince them to help. After that…well, he’d go from there. There was virtually no chance of turning any Sectoids or Mutons against the Collective, though he might have to actually learn a little about the Andromedons before dismissing them as well. They might like to keep to themselves, but if there was a chance…he had to take it.

Satisfied he had an outline, he stood and walked off to retrieve the vials of the Sectoid bioweapon he’d stashed earlier. He knew he was now on borrowed time before the Ethereals took notice, and began hunting him down.

***

Warburton, Australia

To his credit, Abby had to relent that Lucas actually did seem to be keeping up quite well. It had been a long ride, trek and hit to where they were, but at least with the sun down, it was at least tolerable weather-wise. And after seeing a spider the size of her hand, she’d avoided looking too closely at any one surface for too long, just for her own sanity.

Now the more luscious areas had given way to a sandy arid area, where vegetation-and cover-was scarce and with the small town up ahead, it was time to stop and think through what they were
going to do. Abby supposed it was time for Lucas to reveal his master strategy. If she was being perfectly honest, his idea sounded ridiculous, but given what XCOM had been able to accomplish, who was to say he couldn’t create some wildlife-attracting chemical.

“And there it is,” Lucas said wistfully. “Ground zero. What do you see?”

Abby focused in the distance, thankful her enhanced vision was actually coming in handy here. “Mutons are stationed around the perimeter. Looks like there are Vitakara snipers on roofs and I see several patrols, mostly composed of Muton and Borelians.”

“Do you see an Andromedon?” He asked.

She scanned the area. “No. Is that the leader?”

“I suspect so,” Lucas said with a nod. “They are well-suited to harsh environments like this. Much like the Mutons, I suppose.”

Abby began to nod, then frowned. “How did you know there was an Andromedon here?”

“Harper has his people scout the nearby towns,” he answered with a shrug. “I read up on the reports before coming. Nothing nefarious, I assure you.”

“Right,” Abby said, slightly mollified she’d assumed something was amiss. She appeared to be getting legitimately paranoid, but wasn’t sure that was a bad thing. “Don’t see any Humans though.”

“With a town this small, they probably relocated them,” Lucas noted, kneeling down and looking into the distance. “It’s one of the reasons I choose it. No chance of collateral damage; only aliens.”

Abby realized that she hadn’t even considered what she would do if there had been civilians in the area. She’d been focused only on the mission…she closed her eyes, trying to push away the guilt she felt at the realization.

Nothing would have changed.

A voice told her.

The mission still takes priority, civilians or no.

The voice of practicality talking again. At one point she had almost heard Ruth’s voice telling her that, now it was her own. Maybe there was no turning back now. She slowly relaxed, steeling herself from the conflicting emotions. There was a mission to complete. “I suppose it’s time to tell me what you need to do,” she said, her tone conspicuously flat. “You going to show what’s in that bag now.”

“Not yet,” he said with a slight smile, oblivious to her tone. “The first thing we need to do is get to the center of the town.”

“Why?”

He tapped his pack. “Range, of course. This will need to envelop the entire town, not simply part of it.”

“I got that,” Abby said, eyeing him suspiciously. “But how is this…chemical…so strong? Is it airborne? Aren’t we risking getting caught in the blast?”

He smiled. “Well, I suppose I’ll have to reveal it sooner or later. The truth, agent Gertrude, is that I lied. There is no miracle chemical, it was simply an excuse to get you to drag me out here.”

Abby stared at him in disbelief, debating how justifiable it would be to punch the old man in the
“You’re kidding.”

“Not in this case,” he said, his smile now infuriating. “But it was not a complete lie. I fully intend to take this town, but not in the way you think.”

“Then I suggest you better explain before I break your nose,” Abby hissed furiously. “You know I actually could have been doing something useful right now?”

“Yes, yes, you could have gathered some intel that would have no doubt changed little,” Lucas said dismissively. “Useful, and Harper would probably love it. However, I would prefer to ensure that Australia falls, and regular espionage work is tiresome. I prefer direct action.”

“Direct action, huh,” Abby scowled, pulling out her laser pistol and shoving it at the old man. “Fine. Go out there and shoot all those aliens.” When he didn’t move, she continued her low rant. “Oh, you don’t want to do that? There is a reason espionage is ‘tiresome’; because we prefer not to die!”

“Calm down,” he placated, not perturbed in the least. “Let me explain before you chew me out. Although it is entertaining.”

“Who are you?” She demanded. “Are you even from ADVENT?”

“Yes, I am,” he confirmed. “Although I was EXALT long before. Officially, at least.”

Wonderful. A fucking EXALT lunatic was now working with her, had dragged her out here on a lie and had the gall to stand there smiling as if everything was fine. “Tell me what’s going on or I’m going to knock you unconscious and send you back to Saudia.”

“If you insist,” he said, pulling off his backpack and opening it. “XCOM has yet to learn this, but there are specialized UFOs called Overseers. Actually, I take that back, you likely have seen one. I believe the Ravaged One used it.”

“What’s special about it?” Abby demanded.

“They are the personal transports of Ethereals,” Lucas said, reaching in and pulling out a clear black sphere. “Within each one are spheres such as this one, which are normally used for communication. The exact science I am unaware of, suffice to say that it can also act as a power amplifier for psions.”

Alright, he was making some sense. “I assume that’s what that orb is?”

“Yes,” Lucas confirmed. “Most are already powered by psionic energy in the Overseer UFOs, and emit a purple glow. Empty ones are just that – empty. But a trained psion can create a feedback loop of sorts with the artifact, and accomplish the same thing.”

“Right,” Abby nodded. “Just one problem – neither of us are psionic. I know, I was tested and came back negative. EXALT didn’t have psions. Why even go to all this trouble? Why not tell Harper? Or XCOM?”

“Ah, that is where you are mistaken, agent,” he said, smiling. “One of us is indeed capable of using this artifact.”

Abby furrowed her eyebrows then froze. “Impossible.”

He smiled and the orb began levitating above his palm. “It feels good not to hide it any longer, at
least for a little while.”

Abby was stunned. Questions blazed through her mind. “How are you…? Why didn’t…?”

The orb fell back into his hand and he gently placed it in the pack. “Let’s start walking,” he said, gesturing for her to follow. “It will take a short walk before we are in danger of being spotted. I’ll answer some of your obvious questions along the way.”

She bit her tongue and followed. “Now, I’m not entirely sure how my psionic ability was awakened,” he began. “I had an encounter as a child with a strange object, so I can only presume that was the cause, but I was soon able to do things others couldn’t. I’m sure you’re familiar as to what, so I’ll skip the boring bits of my life, suffice to say I trained myself and kept it a secret.”

They stepped over a rotting branch while he continued. “I found EXALT completely by accident, but decided I could make a difference there. History has always been fascinating, and I saw a chance to influence it in the future with them. So I officially became the Chronicler of EXALT, keeper of their secrets. I manipulated the leaders at the time into believing that they had always had such a position, and I was simply the latest to fill it.”

“They didn’t know what you really were,” Abby stated.

“There was no reason for them to,” Lucas said wistfully. “I was careful not to abuse my abilities too much, such actions draw attention, no matter how careful you are. But I provided nudges, guidance when needed and helped ensure the organization was strong enough to withstand most threats. Of course I was unsuccessful in some cases, but in the end, EXALT has fulfilled its purpose and I am free to do what I wish.”

“And so what are you going to do?” Abby asked. “You still haven’t explained why you can’t just explain this to Harper? And you’re a psion! Why not join XCOM?”

“Because to take Australia, we need an army,” Lucas explained. “And I don’t believe this war will allow XCOM or ADVENT a timely liberation. So the army must be of aliens under my command. The army will start here, and I will grow it. I only need you to help establish my base of operations, and then Harper can send you on whatever operations he wants.”

He paused. “As for XCOM? I do not want to answer to them. I am not unconvinced that the Commander will simply try to execute me because I was part of EXALT. I will do my part to fight the aliens, but I will not be a pawn in the Commander’s game. And it goes without saying that I would prefer you keep this knowledge to yourself.”

Abby frowned. “I’m not sure I can do that.”

“Expected,” he answered. “We’ll discuss that later. In the meantime, we need to prepare.”

They knelt down, just outside the town where she could watch the aliens making the rounds. “Shoot the ones on the roof,” Lucas suggested. “The ones on the ground won’t be difficult. Follow my lead.”

He stood and began walking forward out in the open. Abby winced and quickly followed, laser pistol in hand. The Vitakarian on a nearby roof was turned away, so she took the shot and fired, and the sizzling beam burned right into the skull and he fell dead. She quickly aimed at the next alien sniper and repeated the shot, accomplishing the same thing.

The Muton patrol noticed them walking forward, but Lucas simply raised a hand and they froze. Just like Patricia, his eyes were a glowing purple and the air vibrated about him as he took control
of the aliens. He then waved them along, and the Mutons shambled past, oblivious to them.

Abby nodded in approval and they proceeded forth. Any rooftop soldiers were quickly taken out by her, and Lucas took control of any other aliens they ran into. Eventually they reached a house, a lone one on the end of a sandy cul-de-sac. “We might draw attention,” Lucas warned as they entered. “This is where you’ll come in. This will take all of my concentration, defend me if they come.”

“I have a pistol,” she reminded him as she took a position at the door. “I can’t hold off an army.”

“Then delay them,” he said, as he pulled out the orb and set it on a wooden table. “Be ready, agent, I’m going to start now.”

She nodded, but couldn’t help but watch as he began…whatever he was doing. His body was suddenly surrounded in a shimmering purple and a faint blue spark in the orb appeared. Then the humming started. Imperceptible at first, but it was growing louder and louder until it was literally all she heard. It was silent, but deafening at the same time.

She gritted her teeth as it persisted, and a roar in the distance caught her attention and she glanced out to see a squad of five Mutons charging towards the house, roaring in apparent pain. She aimed her pistol and fired, the red beam hitting one square in the face while the others immediately dove for cover behind rocks, or fell to one knee and began firing at her.

The humming must have affected their shots, since most were wildly inaccurate, but considering she was wearing no armor, it would only take one to kill her. The humming became nearly a shriek, boring into her mind. With a shout, she fired several beams at the Mutons, all of which missed. “Hurry up!” She screamed as a wave of agony washed over her, and the Mutons outside fell to the ground.

“Cease your fight, child,” a voice that was not Lucas’ and still came from his mouth said, clenching a fist sheathed in purple flame. “The aliens are mine.”

Then everything fell silent and Abby slumped to the ground, breathing hard. She looked over to where Lucas was standing, now in front of an orb that rippled a faint turquoise and radiating a clear light despite no visible power source. “I thought you said it was purple,” she muttered, stumbling over.

“I did,” he muttered, also looking at the orb. “Interesting. Perhaps it changes depending on species. But it worked,” a smile spread across his face. “The aliens are under my command now. Your job is done.”

“How is that possible?” She asked, looking outside. “Did you just... take them over? Are you controlling them now?”

“I consider myself fairly talented,” he said with a smile. “But not quite that talented. No, all for now is I simply altered their minds to not consider humans a threat. I’ll have to fine-tune their reactions later, but for now they will be docile to us.”

Abby would have to ask Patricia later to confirm just how possible that was. She didn’t trust Lucas nearly enough to take him at his word. “Then I guess we head back?” She asked, wincing as some remnants of the humming manifested themselves. “And what was with your voice?”

“Yes, we head back and unfortunately inform Harper that my formula was a failure,” he said, amused. “And psionic distortion. I’m sure you’ve heard it before. The intensity was more because
of the artifact, I assume.”

“I suppose,” Abby admitted, not quite convinced. Even Patricia hadn’t sounded like a completely different person. “But if it’s all the same to you, I don’t want to do that again.”

“Don’t worry, Miss Gertrude,” he chuckled. “I have no intention of putting you through that again.”

“Right,” she said, beginning to exit. “Let’s go.”

“Of course,” he said, following her. “Although I do have one request.”

Abby sighed. “And that is?”

“I’d prefer you address me by my title, at least when we are alone,” Lucas said, wincing as she did so. “It’s disconcerting whenever you think of me as Lucas. My title is the Chronicler, and I would prefer it stay that way.”

So Lucas wasn’t his real name. How shocking. Abby shrugged. “If you want, Chronicler. But we have a lot to discuss when we get back.”

“That we do,” he agreed. “And I think everything will work out just fine.”

***

Central Command, Mars Forward Observation Station

It was rare to have two Ethereals in attendance at the same time. Three was unheard of.

Yet that was what was happening now. Ravarian had only expected himself, Quisilia and the Battlemaster to be in attendance as they discussed the attack on America. But no, the Battlemaster had apparently called anyone who was even remotely involved in this operation. Not that Ravarian minded, this was exactly what should be happening.

In addition to the three of them, Sicarius was also in attendance, standing in the shadows away from the main holotable, seemingly content to let them work out the details. Why she was here was probably something the Battlemaster was going to reveal. In addition the Battlemaster had also involved J’Loran and Lura’irinena’borelia, which told him that they were going to be heavily involved as well.

The Collective Andromedon Commander didn’t just appear for anyone, nor did the respected Director of the Lurainian. And now all of them were here. The Battlemaster stood opposite himself, flanked by J’Loran and Irinena, while Quisilia stood beside him.

“ADVENT will be expecting an attack,” the Battlemaster began, bringing up a map of the country. “Of all the countries in North America, the United States is the most important. Capture it, and we cripple ADVENT irreparably.”

“The campaign will take months to perform properly,” J’Loran warned in his slightly garbled and synthesized voice, which all Andromedons suffered from in wearing those bulky suits. “America will not fall easily, and there are many potential strongholds.”

“I am aware of that,” the Battlemaster stated coldly. “The Humans are intent on a war, and I intend to provide them with one. If it takes months or years, then so be it. Humans can only withstand so much conflict before breaking.”
“You have a strategy?” Ravarian asked, ready to get to the heart of the matter.

One thing he always appreciated about the Battlemaster was that he was always respectful to his subordinates, even when faced with rhetorical questions such as the one he’d posed. “Yes,” was all he said. “Irinena and Sicarius will first take Hawaii.”

“The island state?” Quisilia asked. “Is it necessary?”

“No, it is not,” the Battlemaster answered without apology. “But it will be a useful staging ground, small as it is. Its fall will serve us more symbolically.”

“But we’ll let them know we’re coming,” Ravarian pointed out. “Could we not attack the West Coast first, and then capture Hawaii? We would accomplish the same thing but with the element of surprise.”

“You are correct,” the Battlemaster said, looking down on him. “But I have no intention of a surprise attack. I want them to know we are coming. We suffered a defeat in Japan, and the Humans are overconfident. When they see the most powerful nation in the world fail to stop us, they will begin to panic and make mistakes.”

“Assuming we are successful,” Irinena said, baring her incisors. Ravarian suspected that the Borelian was not looking forward to capturing Hawaii, which by all accounts, was very hot. “XCOM is the unknown variable.”

“XCOM cannot stop an army alone,” J’Loran stated mechanically. “They have faced amateurs before. Wherever they strike, they will not find ground to stop us. I have studied them, I know what they can do now and my soldiers are prepared.”

“Be that as it may, if Patricia Trask or Aegis show up, we are going to have problems,” Ravarian insisted. “Ignoring that because of bravado is foolish.”

“We are not fools, Zar’Chon,” J’Loran responded. “If we are facing a superior foe, then we will retreat. But the truth is that the majority of XCOM is little more than slightly enhanced soldiers.”

“Let us return to the topic at hand,” Quisilia interrupted. “We capture Hawaii. Then what?”

“There are four major cities that we must take to establish a hold on the West Coast,” the Battlemaster began. “Los Angeles, San Francisco, Portland and Seattle. All well-known cities and the capture of them will be an additional blow to morale. Furthermore, the majority are inland, which will allow us to establish ourselves well before marching on the cities themselves.”

“I will coordinate the attacks on Portland and Seattle,” J’Loran said. “Irinena will assist in this.”

“And I will lead the attack on San Francisco,” the Battlemaster continued. “As it is on the coast, we will be most vulnerable there. I will personally target their military bases and then assist should Los Angeles still be standing.”

“I suppose we should attempt to prepare for XCOM,” Ravarian said. “The question is if they will head to where you are, or try and avoid you.”

“Either way, I am prepared,” the Battlemaster assured him. “Patricia is powerless against me.”

“By showing yourself, you risk drawing Aegis out,” Quisilia pointed out. “If he has truly sided with XCOM, he may feel obligated to-“
“Aegis will not emerge,” the armored Ethereal interrupted flatly. “I know him very well, and he will not place himself into the conflict yet. It is too soon. Nor do I expect him to have the courage to kill one of his own. This ‘defection’ is nothing more than an ideological protest against the Imperator. When the Humans are on the verge of defeat, he will come back, having made his point.”

“There is another concern,” Ravarian added. “Mexico is not an issue yet, but should we not do something about Canada? If we continue pressing forward into America, the Canadians can flank us from the north.”

“Canada is not to be disturbed, per the Imperator’s orders,” the Battlemaster stated. “We have little to fear from them regardless. They are isolated, and refuse to join ADVENT. They are not a threat.”

Ravarian frowned. “Why does the Imperator want to ignore Canada?”

“He did not give a reason, just orders,” the Battlemaster answered. “And his orders will be followed.”

“I believe that covers the overview,” Quisilia said. “Now the only question is timing. The longer we wait, the more time ADVENT has to prepare.”

“It will not matter,” the Battlemaster warned. “It will take two weeks to assemble my Division and prepare them for the attack. Let the Humans prepare. Let them become complacent. Their fate is sealed, Quisilia. When I give the command, they will fall before us and will flee in terror.”

And Ravarian believed it. He had only seen the Battlemaster at work once, and that had been enough to convince him that when the Battlemaster became involved, the ground would become soaked with the blood of thousands and the brave would flee for their lives.

Because the Battlemaster was not simply a warrior, he was a hunter. And now, the entire human race was his prey.

***

Supplementary Material

The Advent Directive

SECTION 6: ADVENT Intelligence

Subsection 6.1: Introduction

*Purpose:* ADVENT Intelligence serves to protect the members and nations of ADVENT from threats seen and unseen, known and unknown, outside and within. ADVENT Intelligence recognizes that many of the most dangerous threats start within, and only grow the longer they are left unchecked. Documented threats identified within the borders of ADVENT will be swiftly eliminated, regardless of status or position of the organization or person in question.

ADVENT Intelligence practices proactive intelligence, taking the initiative to identify potential issues and problems and then taking steps to deal with them. ADVENT Intelligence also recognizes the threats posed from foreign nations and extraterrestrial forces, and will work to negate, sabotage and remove any who would attempt to weaken or destroy ADVENT.

*Divisions:* ADVENT Intelligence is composed of several divisions, each with the purpose of
fulfilling a certain function within the organization.

- The Division of Field Operations (Foreign): This division focuses on operations that are directed towards foreign, non-ADVENT nations, the nature of which operations can vary drastically, though mostly focus on the removal and negation of government and military targets. The Chancellor of ADVENT must be appraised of all operations stemming from this division.

- The Division of Field Operations (Domestic): This division focuses on operations that are directed within ADVENT, the nature of these operations can also vary drastically, though is typically reserved for internal investigation of multiple State organizations. Because of the sensitive nature of these investigations, informing the Chancellor of ADVENT is left solely up to the discretion of the Director of ADVENT Intelligence.

- The Division of Field Operations (Extraterrestrial): This division focuses exclusively on intelligence operations against alien forces, using whatever means are necessary to negate the threat they pose to our planet. The Chancellor of ADVENT must be appraised of all operations stemming from this division.

- The Division of Analysis and Cryptography: This division focuses on the analysis of collected documents of all types and their usage thereof. It is also responsible for the encryption and decryption of all ADVENT ciphers and algorithms, as well as primarily responsible for breaking the codes of an alien or foreign nature.

- The Division of Cybersecurity: This division will focus exclusively on computer security for all facets of ADVENT, and be responsible for the creation, maintenance and protection of all security software to help ensure that all of ADVENT is securely protected from digital threats.

- The Division of Observation: This division watches private and state media within ADVENT to ensure that that all are in compliance with the directive and will take action if needed to neutralize those who are knowingly misleading or inciting people to violence. State media, private media, social media, all video streaming and posting sites, message boards and online forums, and the darknet are all under surveillance by this division.

- The Division of Computational Manipulation: This division is responsible for the offensive usage of computers against alien or foreign systems, as well as experimentation and development of new systems and algorithms of attack.

- The Division of Interrogation: This division oversees the questioning, debriefing and holding of people and aliens arrested by ADVENT Intelligence, and are responsible for the extraction of information from hostile agents, soldiers and terrorists.

- The Division of Intelligence Command: This division is technically overseeing all previously stated divisions, and is under the control of the Director of ADVENT Intelligence, and the support staff they have chosen. All major decisions regardless of division, must be approved by the Division of Intelligence Command.
It was a victory, and that concerned him.

If there was one thing that he could say for certain about the Ethereals, it was that they weren’t idiots. Yet from watching the various recordings and footage of the battle, he was surprised at the apparent lack of coordination and basic strategy. Were they really so overconfident to believe that if they simply threw enough soldiers at them they would win?

In all honesty, they probably could, but it would be an enormous and unnecessary investment for a war that he still didn’t believe they were fully invested in. True, they had held the advantage here, the defenders always would, but the defense had gone far better than he had anticipated. ADVENT had proven to be able to stand against the aliens on footing that slightly favored ADVENT, and that was greatly reassuring.

That being said, the fact that they had won…he didn’t want to say easily, but they had won without as much damage as he had anticipated, made him suspicious. Could this be a feint to lull them into a false sense of security? Or was it a genuine blunder? But if so, why would the Ethereals risk that to begin with?

At least there was an actual Ethereal on hand to discuss this with. Aegis, Zhang, and Jackson were all in attendance now to discuss the aftermath of the attack now that everything had calmed down. Patricia was getting some well-earned rest, and Vahlen and Shen were hard at work with their projects.

The Commander appreciated that Aegis was apparently…trying…to keep his aura under control, but he could see it visibly affecting Jackson and even Zhang to an extent. He was getting better at blocking it out, but every so often a cool confidence would overtake him, washing away all doubts and concerns.

Not what he wanted right now.

“Is this normally how ground campaigns are conducted?” The Commander asked Aegis as they stood around the holotable.

“No,” Aegis stated. “The Collective has never had to conduct a ‘ground campaign’ as you said. There has only been one major conflict in their history, and that was when the Battlemaster conquered the Mutons. This,” he gestured to the holotable. “Is unprecedented.”

Zhang grunted. “After hearing from Yates, I would have expected more from your strategy.”

“I agree,” Aegis said, curiosity tingling his voice. “This implies that there was someone inexperienced put in charge, or someone arrogant enough to automatically expect a victory.”

“And do you know who that would be?” The Commander asked.

Aegis breathed heavily. “I have some suspicions. It is possible that a Hive Commander or Andromedon was placed in charge, but even that is questionable.”
“I doubt it was an Andromedon,” Zhang muttered. “Those aliens were the only ones who actually knew what they were doing.”

“Agreed,” the Commander nodded. “After this battle, the Andromedons appear to be the most dangerous threat, outside of other Ethereals.”

“Andromedons are a double-edged sword, provided you can utilize them correctly,” Aegis dismissed. “They are powerful against almost every kind of infantry, but they are weak to psionics. The only reason they respect our authority in the Collective is because we have the means to control them anytime they wish.”

“Still, we can’t rely on that,” Jackson said. “But if Patricia could take them over like she did on the beach…” She smiled at the thought.

“The problem is that Patricia is only one woman,” the Commander pointed out. “Her display was impressive, but once the Collective puts a competent leader in charge, they will either spread Andromedons throughout their army evenly, or send something else to distract her.”

“You will not have to wait long for a competent leader,” Aegis warned ominously. “The Battlemaster will be taking command after this, you can be sure of it. The fact that he allowed this at all is surprising, and I can only assume he wanted to observe how ADVENT and XCOM operate. I am actually not dismissing the possibility of an Ethereal being in charge, albeit one without much experience.”

Zhang raised a skeptical eyebrow. “That seems unlikely.”

“Not as much as you might expect,” Aegis corrected. “Most Ethereals still do not believe you pose a credible threat, and likely believe you can be overwhelmed with sheer numbers. Arrogance and pride is an insidious ailment within our species, one which they will struggle to break, if they can at all.”

“Despite who was in charge, we can’t assume that it will always be this easy,” the Commander reflected, scratching his chin. “I expect the next time we will be faced with a much smarter enemy.”

“The question is where they will strike next,” Zhang said, looking down at the holotable. “They might try Japan again, or perhaps Africa.”

“If they were smart, they’d focus their efforts fully on Oceania,” Jackson pointed out. “But they seem to want to take that slowly and methodically. To their credit, the resistance forces there are making it hell for them.”

“Beyond strategic value, we should also consider the symbolic impact,” the Commander said after a few moments of thought. “The aliens will suffer a blow to morale, and they will want to make a statement. There is only one place where that would be possible: America.”

Jackson snorted. “Not if they’re smart. Sure, it would scare the people, but that would be the one thing that would destroy the brewing civil war over there. People aren’t going to speak out against ADVENT once they are saved from the aliens.”

“I agree,” Zhang nodded. “They would be smart to let America weaken itself as it debates over ADVENT. An attack would solidify their position for good.”

“Amusing,” Aegis interjected, and the Commander could almost imagine the Ethereal smirking. “You have illustrated the difference between Quisilia and the Battlemaster. Quisilia would likely
enjoy making America tear itself apart, no army required. The Battlemaster does not subscribe to that thought process. He will be looking to make a statement that solidifies the Collective as a dominant force. I agree with the Commander: America will come under attack next.”

Jackson almost grew somber at that, but perked up quickly. “If that actually happens, we have a good idea where they will attack.”

“The West Coast is the only realistic area,” the Commander agreed. “I’ll tell Saudia that she should reinforce that area. Maybe evacuate the larger cities.”

“I would be very careful in where you send your forces,” Aegis warned. “The Battlemaster will be leading the charge, and your soldiers as they are do not stand a chance against him. It is not an exaggeration to say that whatever city comes under direct attack by him is forfeit.”

“Perhaps we send Patricia once we have confirmation,” Jackson suggested. “She could certainly—”

“No.” Aegis hissed. “That is the worst possible answer. The Battlemaster is immune to mind control, and all you accomplish is losing your most powerful psion. The fact is that you do not have powerful enough psions to stop him.”

“Well, that’s why you’re here,” the Commander said. “Getting our psions powerful enough. And if pressed, you could participate as well.”

“Not yet,” Aegis refused. “It is too soon, and the potential consequences are not enough for me to expose myself yet. I will assist you in preparing your psions, but I will not fight the Battlemaster yet.”

“I am not,” Aegis answered. “But you should be. The Battlemaster will not end this war quickly. He is obsessed with ultimate victory. Territory will be taken methodically, all opposition destroyed along the way and he will leave behind cities locked down by his forces. He is perfectly willing to wage war for years to bring your species under control, but fortunately, that gives you time to fight back.”

“Then we probably shouldn’t delay,” the Commander nodded. “There is a lot we need to do. It’s time to bring roll out our genetic modification program for all our soldiers and psions. If what Vahlen has told me is accurate, they should be close to invincible.”

“A bold claim,” Zhang grunted. “I’d prefer she finished the Manchurian Program.”

The Commander shrugged. “I’m not concerned. Our science teams are large enough to run multiple projects at once. I have no doubt she’s working on it…although she does have a tendency to get personally involved in everything.”

“Just like you, apparently,” Jackson smirked. “No wonder you two are together.”

The Commander raised an eyebrow. “Very funny. So, anything else.”

“Actually, yes,” Jackson said, picking up her tablet. “I was forwarded this by ADVENT Intelligence. It’s…interesting.”

“Ah, right,” Zhang recalled. “I didn’t realize Elizabeth sent it to you as well.”

“What is it?” The Commander asked.
“Well, uh,” Jackson scowled. “It’s…a Twitter feed.”

“And this is interesting why?” The Commander wondered aloud.

“Well, take a look for yourself,” Jackson said, handing him the tablet. The Commander wasn’t exactly well-versed in much social media, but he knew how to operate it, and found himself quite surprised to see that the avatar of this particular user appeared to be a cartoon rendition of an Ethereal similar to Aegis, giving a thumbs up.

Well, he could already agree with Jackson’s assessment of interesting. That, and the user called itself @TheGreatQ. He looked up. “Is this real?”

“That was exactly what Elizabeth said when she sent this to me,” Zhang said, the faintest smile on his face.

“It got the attention of ADVENT Intelligence when it started apparently live-tweeting the battle,” Jackson continued, visibly trying to maintain some measure of professionalism. “That isn’t completely odd, but what was suspicious was the high quality of the images and video he referenced. That and the content was fairly graphic. Just look through the feed and you’ll see.”

With a growing sense of curiosity, the Commander began scrolling through, and the collection was…quite something. One was a short clip of some alien shooting an ADVENT soldier directly in the head, with the accompanying commentary:

Another soldier falls to the might of the Collective! #headshot #victory #winning

Then there was an image of a heated firefight between ADVENT and the aliens, with the caption:

The fighting has begun! Good luck to our liberating forces! #invasion #encouragement

It became more amusing when whoever this was realized the battle was being lost, as one of the later tweets was an image of the Star Trek facepalm meme with a battle photoshopped image of an Ethereal helm on the head, with the accompanying caption:

MFW our superior army gets beaten by a species that hasn’t even mastered spaceflight. #incompetent #sigh #invasion

The Commander looked up at Aegis. “Is this who I think it is?”

Aegis reached out and took the tablet, while Jackson gave some more information. “So yeah, and that apparently isn’t the only one like that. This account is linked to Facebook and Reddit account of similar names, and seems to be pretty active on them as well.”

“I’m not sure if I want this to be real or not,” the Commander said slowly. “That’s…bizarre.”

“You know him,” Zhang said to Aegis. “Is this something Quisilia would do?”

A pause. “Unfortunately, yes,” Aegis confirmed. “This is definitely something he would do for his own amusement.”

“That…seems like a really bad security issue,” the Commander said slowly. “He does know we can read this right?”

“Probably,” Aegis sighed. “He is likely expecting it.”

Zhang snorted. “The alien wants to get cute? Fine. At least human sites are easier to circumvent. He’s definitely making a mistake.”

“I wouldn’t dwell on it,” Aegis said. “This is likely a distraction from actual threats. I have an idea
on how to take advantage of this, but I will need to think on it some more.”

“We’ll deal with Twitter-using Ethereals later,” the Commander sighed, realizing how far off-topic they’d gone. “But we have more important work to do now. Dismissed.”

***

The Praesidium, Barracks

To date, Jamali had never been in a situation even remotely close to the chaos that was in Japan. He’d been in several skirmishes of course, as was to be expected in Iraq, but usually just fighting criminals and terrorists. Front-line combat was significantly different from the brief intense shootouts in abandoned alleys.

After destroying the UFO, he’d gotten Iida some medical attention and rejoined Carmelita as they mopped up what remained of the alien forces, which by then were in full retreat. Jamali wondered exactly how many kills Carmelita had gotten, since it seemed like whenever he looked, she was getting kill after kill, or wounding the ones she couldn’t.

It made him feel somewhat…mediocre in comparison. He was just a regular human, not enhanced like her or psionic like Matthew, who had wrecked a good portion of the alien forces all by himself. Although, he wasn’t sure he’d also enhance himself if given the chance either. It was…well, unnatural, no matter how you felt about it. Humans weren’t supposed to be able to jump entire stories or crush enemies with their minds.

He shook his head and pushed those thoughts out of his mind. Not the right time or place for such talk, especially in light of their victory. Although Sai-Kee had been killed and Inori presumably captured, the soldiers were in high spirits. He had been as well, before reality set back in and he realized that this would be the first of many such battles.

Still though, that would have been cause for celebration, and he might have even joined in had he not done the stupid thing and decided to check in on the state of the Middle East, which the majority of XCOM soldiers seemed to have forgotten about.

“You look oddly gloomy,” Fakhr commented, walking up with a smile. “Doesn’t suit you, especially since not many here can claim to have utterly executed an entire Muton team by themselves.”

Jamali flushed slightly at that. He hadn’t expected that particular feat to garner that much attention in comparison to Carmelita, or Patricia’s utter dominance of the alien forces. But it had spread pretty fast and he’d received compliments from multiple soldiers, congratulating him on his kill count and rallying an attack on a UFO with limited forces.

It was nice to be recognized, but it wasn’t as though it was an act of genius. Most people would have likely come up with something similar. Although they might not have been as good a shot as himself. “I guess you heard about it as well?” He told her.

“Better, I watched it,” she amended. “Suffice to say I was pretty impressed.”

She watched…oh, right. Jamali remembered that all footage from the armor cams was available to XCOM soldiers. Now that he remembered that, he was considering watching Carmelita’s footage. It would be interesting, or maybe Patricia’s. “Thanks,” he told Fakhr. “Though I’m sure you killed your fair share.”

“Oh yes,” she smirked. “Nothing quite like using rockets to blow up Mechtoids. The damn things
just like standing in one place and not moving. Makes them pitifully easy to deal with. But really
though,” she nodded down to the tablet in his hand. “What’s going on?”

Wasn’t she curious. “I’m checking on the situation in the Middle East,” he said evenly. “Nothing
more than that.”

That turned her more serious, and she fortunately didn’t question why he decided to look that up,
even knowing the likely answer. He supposed if there was anyone who would respect his
perspective it was her, which he found extremely ironic in light of where she was from. “What’s
changed?” She asked, taking a seat on the bunk opposite him.

“Israeli and American forces invaded Iraq,” he revealed as nonchalantly as possible. “Guess it’s all
technically ADVENT now, but those are the primary contributors.”

She pursed her lips. “I’m sorry that this is happening.”

He noticed she didn’t apologize, or say that what was happening wasn’t justified. Probably as close
to an apology as he could expect from her. He supposed what she was getting at was that she
sympathized with him, and he supposed that if the roles were reversed, he might not object to
invading Israel if they were behind an attempted assassination of Iraq’s leaders.

But it didn’t make it easier. “Thanks. I hope it ends quickly. They can’t hold out against ADVENT.
More people are just going to die unnecessarily.”

Fakhr nodded grimly, brushing a lone curl out of her face. “I don’t know what really to say. I want
to give some reassurance that things will work out, but…” she sighed. “I can’t promise that. Not all
Israeli officers are particularly lenient, especially after spending decades surrounded by enemies.”

“At least you’re honest,” Jamali said. “You don’t really have any control over it.”

“No,” she muttered. “But I can make some educated guesses. Do you have family?”

“Yes, my parents and three sisters,” he said, glad to somewhat change the subject. “All of them are
living in Baghdad, so they will likely be safe from the worst of the fighting.”

“three sisters?” She asked incredulously. “How did you survive?”

Despite himself, Jamali chuckled. “I managed. The oldest one was living away when I was young,
and the other two were younger than me, and mostly kept to themselves. Could have been worse,
but my sisters never gave me any trouble. What about you?”

“Only child,” she answered. “I could never decide if siblings were something I wanted or not. But
it all worked out alright, I suppose. I enjoyed the solitude even if it was sometimes lonely. Is
military service part of your family?”

“No really,” Jamali said. “One of my uncles was an officer, but nothing beyond that. Soldiers
made my parents nervous, especially during the War on Terror. Needless to say they were
surprised when I decided to join.”

“Well, they’d probably be proud to see you made it to XCOM,” Fakhr said with a small smile.
“Only the very best get here, so I’ve heard.”

Jamali pondered that. “I doubt they know. Even if they did, now they might consider me a traitor.
XCOM supports ADVENT, right?”
Fakhr’s lips twitched. “Yes we do. Officially, anyway. And I don’t see the Commander stepping in to stop it.”

“I doubt he could even if he wanted to,” Jamali shrugged. “XCOM isn’t supposed to meddle in these kind of affairs.”

“Maybe, but I wouldn’t count on ‘rules’ being something to stop the Commander,” Fakhr said. “I have a feeling that if he wanted something done, he’d do it regardless of what was expected. But I think this situation will get better soon.”

“I hope so,” Jamali sighed. “I really do.”

***

The Praesidium, Psionic Testing Chambers

The few days of rest was exactly what Patricia needed after the battle. She hadn’t anticipated how much that would take out of her, but given how she presumably single-handedly turned the tide of the battle, it probably wasn’t a surprise how easy it would be to tire herself out. Only thing to do was train to get better.

The Testing Chambers were perfect for this; open spaces she’d helped design with Shen to test out various powers on dummies, targets, and several prisoners Vahlen had loaned to hone telepathic abilities. She and Aegis were still working out the training program, but she believed it was good enough for now, and they needed psions.

Such as the woman in front of her, who was staring at her, apparently torn between confusion and disbelief. “You’re kidding,” Allison Monder said flatly. “I’m psionic?”

“According to Vahlen’s reports, yes,” Patricia said, glancing down at the tablet in her hand to double-check. “Fairly gifted as well, should you elect to undergo the awakening.”

Allison raised an eyebrow. “I’m getting a choice?”

“Yes,” Patricia affirmed. “More psions are needed, but is not something that everyone can, or should, wield. I believe you are capable of utilizing this gift responsibly, as does Haley here,” Haley gave a slight nod in affirmation, and an encouraging smile to the unsure woman. “But you know yourself best. If you turn this down, we will find others.”

“Wait,” Allison interrupted, raising a hand and turning her ice-blue eyes on the smiling psychologist. “Was that the reason you were asking all those prying questions earlier?”

“One of the reasons,” Haley admitted freely. “We can’t have unstable people running loose with highly destructive powers now, can we?”

“Allison bit her lip absently and Patricia could sense she was conflicted. The temptation to
peek into her mind was there, but Patricia knew that would be a dangerous road to go down. This was an important decision, and as such she was impressed Allison was treating it so seriously. However, she expected she would accept. Haley had correctly identified everyone so far, and only forwarded the ones who would likely be open to accepting, and so far she had been completely accurate.

“Do you want to think it over?” Patricia asked after a couple minutes of silence. “I would prefer the decision soon, but not necessarily right now.”

“No…” Allison said slowly. “I’m just…getting used to the idea. I honestly didn’t expect anything like this. I’ll do it, like you said, we need as many psions as possible.”

Patricia smiled. “Excellent. Haley, put her down for a time tomorrow.”

“Happily,” Haley confirmed, jotting it down immediately. “Miss Monder, I’ve forwarded everything you need for the appointment and some recommendations to your private mail.”

“Thank you,” Allison said, inclining her head. “I’ll be here on time.” With that, she saluted and marched off, leaving the two of them alone.

“You cut it close,” Patricia told Haley, turning to her. “I sensed her hesitating. She could have easily turned it down.”

“But she didn’t,” Haley said, almost smugly, but the woman hid it with her constant professional mannerisms. “Allison is conditioned to follow her superiors. She has been stuck in mediocrity her whole life, never excelling. Give her the opportunity for change, combined with a superior officer asking her, and I knew she would agree.”

“Can’t disagree with that.” Patricia agreed, once more impressed by Haley’s methodical assessment. She had been somewhat skeptical when the Commander suggested bringing her on, but after working with, and being examined by her, she knew why the Commander had insisted. She had an analytical mind that rivaled her own, and was a pure professional, as well as easy to talk to.

Privately, Patricia suspected that Haley wasn’t comfortable with psions, and her in particular, but as long as that didn’t interfere, she had no issues with it. “So in total we’ll have six new psions,” Patricia recalled. “Good enough, until you identify more.”

“Well won’t be for some time,” Haley said, slightly adjusting her glasses. “I’ll be closely monitoring this batch to ensure there are no negative mental side effects. Not everyone is as resilient as you. It will take time to get through the rest of the new batch of soldiers, and I’ve got my eye on several other ones.”

“Oh, who?” Patricia asked. “You have concerns?”

She could sense Haley’s cold concern, which fascinated her about the psychologist. Haley was highly focused on problems, not necessarily people, which was a far cry from what she expected, especially since their goal was to help people. And Haley did, but it came from a place of practicality, not concern for their well-being. A well-adjusted soldier was much better than an unstable one.

Although if she was truly a woman who cared about the well-being of everyone, she probably would have refused to work with XCOM out of pure principle, but she had been instrumental in helping identify weaknesses in potential political threats, aliens, and provided advice to help control Vahlen’s test subjects, as well as being heavily involved in the Manchurian Program.
Not an ordinary psychologist, that was for certain.

“Yes,” Haley looked up at Patricia. “You have heard about the situations in America and the Middle East?”

Patricia almost rolled her eyes. “Of course I have. Is that an issue?”

“No yet, but it could be soon,” Haley warned, crossing her arms. “One of the soldiers, Jamali Muhammad, is from Iraq, which is currently under attack from ADVENT. I might talk to him later, help him through any issues he’s having. Ignore him and he might become an issue, especially since XCOM supports ADVENT.”

“Fair enough,” Patricia nodded. “Though he seems fine, from what I can tell.”

Haley frowned. “No offense, Patricia, but you’re not exactly qualified to answer that question. I’d rather be sure, all the same. The bigger issue is the Americans.”

“I highly doubt that a few riots are going to cause issues,” Patricia said flatly. “Or how the Peacekeepers responded. They did their jobs, big deal.”

“Spoken like a true foreigner,” Haley chided. “Most Americans are nationalists, if you haven’t learned that by now, and most of their military is as well. Do remember that ADVENT is a foreign entity that has essentially taken over the United States. Naturally, that makes some people angry, and I highly doubt some of the Americans here are particularly happy knowing they’re now part of a world government without any diplomatic say.”

That was a good point. “And you think this is a big problem?”

“No,” was the not-quite-reassuring answer. “But I’ve been following the situation. In my estimation, it will get worse before it gets better. Once some news anchor gets arrested by Saudia’s Peacekeepers, all hell is going to break loose there. The point here is that the American soldiers with us might become disillusioned or resentful, neither of which are conducive.”

“Fair point,” Patricia nodded, frowning. “However, I don’t see much we can do. Unless you want me to psionically change their minds?”

It was a half-joke, but one Haley didn’t find funny judging from her sudden emotional flare and furrowed forehead. “No. All we can do is monitor them now. The good news is that the Commander is American, and as long as the aliens dominate their minds, they won’t think of other issues. Keep them focused on the real threat and we should be fine.”

“Shame he died,” Haley mused, tucking her tablet under her arm. “He seemed like a nice man. Smart and did his job well. But boring, which in this case would not be an issue.”
“I’ll let you do your job,” Patricia said, walking away. “Now that we have the psions, I need to talk with Aegis about how to properly introduce him.”

“Do that,” Haley nodded. “But please, for the love of God, don’t just bring them to Aegis. Break the news to them away from said Ethereal.”

Patricia chuckled. “Don’t worry, I’ll be sure to do that.”

***

The Praesidium, Barracks

Sierra was getting very distracted with the way Nati was idly tapping his finger on the table. It wasn’t anything deliberately distracting, but for whatever reason it kept getting her attention, maybe because she was too caught up thinking about what he was saying. “So basically what you’re saying is that it felt weird?”

Nati hesitated before answering. “I suppose so. Odd is a better word. Nothing was wrong, just… different. Clear.”

“Because of Patricia,” Sierra clarified, nodding. “And her mind tricks.”

“Hey, you should look at my kill count,” Nati said, raising an eyebrow. “I’m not complaining. Whatever she did, she definitely made me a lot better. Everything was so much clearer.”

“Alright,” Sierra said, resting her arms on the table. “So how does that work exactly?”

“You should ask her,” Nati shrugged. “I’m not a psion. But what also helped was that I somehow knew where most of the aliens were, even not seeing them myself. It’s sort of what I imagine a hive mind would be like, although without the drawbacks.”

“And that isn’t a little bit concerning?” Sierra asked incredulously. “That is not the best example you could have chosen to illustrate it. She’s reading your mind and you’re ok with it?”

“I don’t think it works like that,” Nati said, leaning back in his chair. “Why don’t you ask her, or maybe Creed? I don’t know her, but I do know that I definitely don’t have a problem with it. Thanks to her we did win pretty decisively.”

“Right, because of course she is going to give me a straight answer,” Sierra answered sarcastically. “’Noo, Sierra, I definitely don’t occasionally read people’s minds. You really have nothing to worry about.’ Please.”

“Why not ask Creed then?” Nati asked. “He says she doesn’t.”

“Because he is such an unbiased source,” Sierra retorted with a snort. “C’mon, really?”

Nati chuckled. “Fair point. Why so confrontational? I’d think you’d be happy we won?”

Sierra sighed, and rubbed her head. “Yeah, yeah, I know. And I am, and I really do want to actually get out there and fight. But this place is…strange to me. It’s weird. Things that should be bothering people are just overlooked, stuff that is questionable is just accepted. It’s like a place where reality only revolves around the damn aliens.”

Nati almost smirked at her. “You do realize you’re in XCOM, right? A place where our job is literally fighting aliens?”
“Smartass,” Sierra scowled. “Ignore the aliens for a minute and just think. If it was discovered that some humans had the ability to read thoughts and lift things into the air with their minds, what exactly do you think the reaction would be?”

“A lot of confusion and fear, probably,” Nati shrugged.

“Exactly,” Sierra nodded. “But I haven’t seen anything like that here. Everyone is way too convinced that every single psion can be trusted and that the Commander has our best interests in mind.”

“Have you considered that it might be true?” Nati asked slowly, looking at her seriously. “I’m as new as you, but from what I’ve seen the trust here in both Patricia and the Commander is well-placed. I’m not completely sure why you’re so suspicious. Do you know something I don’t?”

“Call it a gut feeling,” she muttered unconvincingly. “Yeah, I know, but in my experience, people with that kind of power don’t use it. They might be doing it for reasons they can justify, but that doesn’t mean it’s not happening. I guess I don’t like the idea of anyone reading my mind, good person or no.”

“Fair enough,” Nati nodded. “But like it or not, this is reality now. Psions are going to only get more common. Don’t forget that they’re still humans, not some alien hybrid.”

“I know,” she sighed. “But I’m not sure I trust the Commander to do the right thing with them.”

“Oh?” He raised an eyebrow. “Why is that?”

“Mainly because of the company he keeps,” Sierra explained, wondering if he would even care or understand. “I don’t suppose you’ve been keeping up with the rest of the world?”

“ADVENT invaded Iraq,” Nati said. “The Russian branch is going deep into Iran, but other than that, not much. Brazil is still flaunting their power, but I’m pretty sure the Chancellor is going to come down on them soon.”

“Not as big a story, but I don’t exactly like how ADVENT just took over America,” Sierra said. “And worse was that when some people protested it for obvious reasons, ADVENT just sent their so-called Peacekeepers and shut them down.”

“They were rioting, right?” Nati asked.

“It wasn’t a riot,” Sierra interrupted. “It was several idiots who decided to pick a fight and ruined it for everyone. Naturally ADVENT took that as reason enough to practically silence any other message that gathering might have sent. Which I guess fits in with what they want.”

“I sympathize, I do,” Nati said, scratching his chin. “Israel is also under ADVENT now too, remember. I think we differ in if that’s a bad thing or not. The world will need to come together eventually, and ultimately I think it’s for the best. No one likes change, but considering the circumstances, I think it was necessary here.”

“I might agree, if this Chancellor wasn’t from the fucking Illuminati,” Sierra clarified. “Seriously, just watch her anytime she speaks. She wants complete control over the world and she’s getting it. Have you looked at the people she’s put in charge of the various agencies?”

“I’m not familiar with the Chancellor’s cabinet, no,” Nati admitted. “But I doubt she’s picking unqualified people.”
“I guess that depends on what you view as unqualified,” Sierra said. “She put a psychopath in charge of the Peacekeepers, so I’m not exactly convinced she’s really concerned about the well-being of citizens.”

“Stein, right?” Nati asked, frowning. “I’ve heard of her before. ‘Psychopath’ never came to mind. A little cold, but nothing like that.”

“She did an interview a few days ago,” Sierra said, shifting in her seat. “I’m not exactly sure why Saudia allowed her to do it, unless it was to scare the hell out of people. Anyone who is fine with killing a child is not someone I want in charge of law enforcement.”

Nati snorted. “Come on, she didn’t really say that.”

“Oh, yes she did,” Sierra said. “She definitely said something along the lines of ‘if they commit murder, they deserve to die.’”

“Oh, that makes sense,” Nati nodded. “That…honestly isn’t an issue for me. Why shouldn’t they be punished?”

“You’re missing the point,” Sierra scowled. “There should be punishment, but I don’t think they should be killed for it. These are kids, remember, not adults.”

Nati pursed his lips. “That is a debate I don’t think we’ll agree on, but we’ve gotten off-topic. Why does all of this make you distrust the Commander? If Saudia ever steps out of line, I’m sure he has plans to keep her on track.”

“That’s the point,” Sierra stated. “He hasn’t done anything. Which implies, at least to me, that he’s perfectly ok with what’s happening. And since what is happening makes me uncomfortable, it makes me not trust him as much as everyone else seems to. Just because he’s good at fighting aliens doesn’t mean he should be influencing the world, because it doesn’t seem to be turning out that well.”

“Well, we wouldn’t have won that battle if not for ADVENT,” Nati pointed out. “You might not like them, but the fact is that they are a necessity, and the world is changing. It’ll take some getting used to, but it’s not going to be stopped and agonizing over all the bad news in the world is, quite honestly, pointless. If things get unreasonable, I’m sure the Commander will step in, but in the meantime, none of that is going to stop the aliens.”

“Right,” Sierra muttered. “Because that is the only thing we should be concerned about.”

“It is,” Nati said, standing up. “I was serious when I said you should talk to Patricia, or hell, even the Commander. This kind of distrust isn’t really healthy, and I do think they’d be willing to talk. If not that, maybe take some time for yourself. Beat up some people in the ring. Don’t stress yourself out over things you can’t control.”

“Duly noted,” Sierra said, half-sarcastically. “Thanks for talking anyway. Sorry to be such a downer.”

“No problem,” he smiled. “Tell you what, why not come with me to get some food. Otherwise I think you’re just going to sit there and get more depressed.”

“Probably,” Sierra admitted, standing up. “Alright, deal. I’m hungry anyway.”

Nati waved to the door. “After you, ma’am.”
“Cute,” Sierra mocked, rolling her eyes, but did take the lead as they left, and she did have to agree that some time focused on something else was probably for the best. For now, anyway.

***

The Praesidium, Barracks

It was much easier for Nuan to recount the actual events of the battle rather than enduring it herself. Common sense, but now that the adrenaline had long faded and she could objectively overview the situation, she had performed…adequately. Not exceptionally, to her shame, but good enough that the SSF would be satisfied.

While writing her report, she had debated trying to emphasize the chaotic nature of the combat, and had actually attempted it before realizing that she wasn’t nearly a good enough writer to convey what being in the center of that battle really was like. So instead she focused on what she knew: Cold, hard facts and analysis.

Details of the initial attacks, descriptions of the opposing forces (with video evidence included), tactics noted and used, as well as additional notes, concerns and descriptions as she saw fit. If nothing else, even if participating in the battle had scared her, she couldn’t deny that it gave her a perspective that she would never have known without being there.

No one had asked yet why she was sitting alone at a table with her laptop, typing away, but she didn’t mind. Being Chinese, she wasn’t surprised that a good portion of the soldiers avoided her, and at the moment that only helped her concentration. Although she had gotten a few curious looks, but didn’t feel the need to socialize with the soldiers yet, if ever. It was unlikely that she would be able to find common ground with many here; the differences between herself and the majority were too vast to be overlooked.

She paused typing to take a quick sip from her glass of water, a short break before moving to the section she was unsure how to properly document without causing a panic in the PLA commanders. Psionics was something China had been aggressively trying to research as soon as they learned XCOM had psions, but to the best of her knowledge, they had been unsuccessful.

At least in the SSR, there was a clear suspicion of psionics, with quite a few not wanting anything to do with them. Too much power for one person was always the issue, and after the displays she’d seen, Nuan was convinced that attempting to control a psion would be difficult at best. That being said…one such psion had been the only reason they’d gotten out alright, and another had been a major reason why the battle had been won in the first place.

It was going to be exceptionally difficult to portray them as extremely dangerous, but not necessarily a threat to China. As much as she disliked how the Commander treated China in the past, she didn’t believe he posed a threat, and neither did the psions under him. The problem was that every officer that read the description of one woman mind-controlling an entire army, or another making teams of soldiers invulnerable, or one lifting enemies into the air with a gesture was going to immediately jump to the worst-case scenario of “What if that is turned on us?”

Nuan sighed and pinched her forehead. That was the issue here: Keeping tensions between XCOM and China more or less even. She just needed to report on what was happening from the front, but the more she thought about it, the more the possibility of China overreacting was a possibility. It shouldn’t be, but if they read this and did something rash out of fear…then the Commander, or worse, ADVENT, might be fully justified in responding, which was the last thing she wanted.

She was beginning to realize why the Commander had been fine with her entering XCOM, despite
the bad blood between them and China. It was because he knew that China was essentially boxed in from doing anything to harm XCOM. Anything they did to try and curtail or respond, publically at least, would be a predictable response. He was planning for her to help drive China into a rash decision.

She scowled at that thought. Perhaps she was just tired and her mind was warped into thinking of conspiracies. The problem was that she wasn’t sure it was one. What if she was somehow contributing to the Commander’s grand plan regarding China? Because she definitely knew he had one. She looked at the bright screen with the document filled with black characters.

She seemed to have two options: Be as accurate as possible and describe what she’d seen and knew, while trying to emphasize the fact that XCOM wasn’t a threat yet. Or she could do something unthinkable.

Lie.

A lie of omission, but a lie nonetheless. Instead of giving the full story about the role psionics played, she could downplay it, make it seem like it was a useful tool, not an ability that could change the tide of an entire battle. Could she even do that and not be challenged? The only source that would completely dispute that would be the archived footage from their armor, and she knew China wouldn’t have that.

But…no, no. No possible way that would work. The battle was too public, she’d be either labeled as incompetent or a traitor, when neither were true. She quickly closed her laptop, taking short breaths as she realized what she had almost done. Never in her life had she considered lying or forging reports for her superiors. That was only something traitors considered, or the irredeemably desperate.

But she’d done it, if only for a minute, but not out of selfishness or as a way to damage China, but to potentially save it from doing something terrible. Did that make it…excusable? Or was it the rationale other traitors began considering before they defected? Maybe both. A voice said. It reminded her of a saying she’d heard from several Americans.

*The path to hell is paved with good intentions.*

And the path to treason was paved with lying to superiors. She shook her head, getting her breathing back under control. No. She had to do her job right, and hope that they were rational enough to consider carefully before doing anything rash.

“You look like you’ve seen a ghost,” a voice commented, making her jump.

“Sorry,” Iosif apologized, taking a seat opposite her. “Didn’t realize you were that deep in thought.”

“Accepted,” she said, flushing a little. “I didn’t see you.”

“Accepted,” she said, flushing a little. “I didn’t see you.”

“Hmm, true,” he acknowledged, smiling. “So what’s wrong?”

She blinked. “Nothing.”

He gave a dramatic sigh. “I may not be Patricia,” he told her. “But I can sense emotions. You were scared, briefly, but it was there. And you’ve been sitting at that table for four hours straight. Ignoring why, it doesn’t seem like you’re in the best frame of mind for anything.”

Oh, she wanted to facepalm before opening her mouth like that. It was one thing she needed to
emphasize about psions. You couldn’t distinguish them for regular people normally. Iosif himself only appeared to be a well-built, tall, brown-haired Russian. She would never suspect him of being a psion, or for that matter, any of them.

As for her response now, she wasn’t sure. Denying it would be pointless, but she didn’t want to explain the exact circumstance since he did probably work directly with Patricia, and her with the Commander. “Nothing…major,” she began. “But…have you ever considered doing a wrong thing for good reasons?”

“An interesting philosophical question,” Iosif answered, resting his arms on the table. “But to give you an answer, yes, of course. But I feel it was inevitable in my line of work.”

She searched her mind…what was Iosif before? Russian special forces probably. CT agent? Something else? Either way worked, but that kind of example wasn’t exactly the problem she had now. “Not something simple,” she clarified, struggling how best to articulate it. “Something…important. That your superiors might object to.”

“Now that is different,” Iosif paused, glancing up before answering. “I will admit that I’ve had ideas that my superiors definitely wouldn’t have approved of, although I never considered them good enough to actually risk. I’d probably only consider it if the potential consequences were worse than getting caught.”

All well and good, but the problem now was that there were too many factors to consider. Maybe she was being paranoid. Maybe she had too little faith in her superiors. Maybe she was just tired. How could she alone determine if the risk was appropriate? Not that it mattered, since she was going to purge that traitorous thought from her mind. “Makes sense. So what are you doing?”

“Talking to you,” he answered knowingly. “In all seriousness, I am curious exactly what you are working on there.” He nodded to her closed laptop.

Nuan supposed it wouldn’t hurt. It wasn’t as though it was a secret. “It’s my report to the PLA Strategic Support Force. Detailing the Battle of Japan.”

“Oh, you have to send report?” He asked, raising an eyebrow. “Interesting.”

“China wants to know the actual details of what is happening,” Nuan shrugged. “And that’s why I was sent here, to make sure any information isn’t distorted.”

“Alright, then question,” Iosif said. “What’s to stop you from sending XCOM secrets to the Chinese?”

“Impossible,” Nuan stated flatly. “The Commander isn’t an idiot. He has to approve each document before it gets sent. I’m not reporting any secrets of XCOM that aren’t already public. It’s a win-win for both parties. China stays informed, and XCOM gets a soldier.”

“I’ll admit, that’s surprisingly reasonable,” Iosif nodded, sounding impressed. “I was under the impression that China and XCOM don’t get along.”

“We don’t,” Nuan grunted. “But China knows XCOM is the most knowledgeable about the aliens, and for better or worse, will be instrumental in this war. It doesn’t do any good to have a poor relationship with them. We both want the aliens gone, and some compromises have to be made.”

“So you’re a peace offering?” Iosif questioned.

“In a sense,” Nuan agreed, albeit reluctantly. “Showing that both of us can work together.”
“And that’s it?” Iosif asked, with a slight smile. “Nothing to do with the last Chinese agent that got sent here.”

Nuan stiffened at the mention of Shun. “No.”

Iosif now had a full smile. “Remember, I can tell if someone is lying.”

“My mission has nothing to do with former agent Shun Anwei,” she said, keeping her voice cool and mechanical. “She is just a foreign agent.”

“Strong choice of words,” Iosif mused. “Although I’d think you’d prefer the term traitor.”

“Would that be inaccurate?” She asked coldly. “What would you call abandoning your country for a rival organization?”

“I never said it was inaccurate,” Iosif said, growing more serious as he leaned forward. “By your definition, she is most certainly a traitor to China, and were I in your position, I would likely be just as furious. But I have a question for you: Did you ever wonder why she switched her loyalty to XCOM?”

“No,” Nuan stated flatly. “And I do not care. Her reasons don’t change facts, and treason is something that can’t be forgiven or forgotten.”

Iosif nodded. “Perhaps not, but it can be understood.”

“And I suppose you know why?” Nuan asked.

“I don’t know the details, but I know she had good reasons,” Iosif answered. “I suppose your view on her would be if you value China over humanity. She chose the latter and stuck with XCOM, and I can’t disagree with her.”

“Those two things are not mutually exclusive,” Nuan pointed out. “I can be loyal to China and care about humanity at the same time. Please don’t defend her for the sake of it. You will not convince me otherwise.”

Iosif didn’t seem perturbed; instead simply nodding. “As you wish.”

There was a stretch of time that passes before Nuan sighed, not wanting it to end quite this way. “I wanted to say thank you. I doubt we would have survived without you.”

“Appreciated,” he said. “That is my job, after all. But you did your part; all of us did as best we could. No shame in retreating from unwinnable battles.”

“Still,” she insisted. “It wasn’t nothing.”

“Maybe not,” he chuckled. “Was that your first taste of combat?”

“On that scale,” she admitted, looking down at the polished table. “I’d been in some firefights, but I’m not a pure soldier like most here. I took the ‘support’ part of my job seriously. It was…well, almost overwhelming at first. But you probably felt that.”

“I suspected as much,” Iosif confirmed. “But you held up well. I was impressed. It only gets more natural from here and the calmer you are, the better you perform.”

“I hope so,” Nuan said, opening up her laptop again. “Thanks, Iosif. I should probably finish this soon. The Commander will need some time to review it, after all, and deadlines are taken
seriously.”

“I won’t keep you then,” he promised. “Although once you’re finished, I wouldn’t mind reading your take for myself.”

Nuan hesitated. “I’m not sure I can do that.”

“Ah well, worth a try,” he said, getting up. “See you around.”

He left her alone, and she returned to writing. Now that he had brought it up, she did wonder if she was allowed to show other soldiers her reports. Maybe she could include a short clarification when she sent this, maybe frame it as ‘additional consultants’ or something. Iosif might be useful, and maybe make her descriptions of psionics not as volatile as she probably was.

Something to think about for sure, but for later. Now she had to finish this report and hope she wasn’t making things worse.

Northern Territory, Australia

Abby glanced at the man on the cot while she put away her tools to be sterilized, and threw out her disposable gloves and mask. The good news was that here, the injuries were not extreme in the least and could be treated pretty easily. It felt good, putting her surgical skills to actual use, and she was pleased how easily everything came back to her. It was soothing in a way, much less thinking required than her trying to puzzle out exactly what to do next.

Her mission here had now become a lot more complicated, now with the Chronicler intending to build an army of aliens under his control to fight back. He was a powerful psion, that much was clear, and she figured she might as well hear him out before telling anyone else about him. And she had quite a few questions for the elderly man, who had proven to be a lot more than he seemed.

The wounded man was coming out of his drug-induced sleep, blinking slowly as he focused on her. “Am I dead?” He asked.

“Nope,” she answered, walking over and making some notes on her tablet. He’d come out of it pretty quickly and was speaking clearly. A good sign. “A nasty wound, but nothing I couldn’t handle.”

“Who are you?” He asked dizzily. “I didn’t think we had any medics…”

“You don’t,” Abby clarified. “I’m just doing this to help out. Rest now, ok? You’ll be fighting the aliens soon enough.”

“Right…” his eyes rolled back into his head and it fell back on the pillow. Abby smirked. He needed the rest and would pull through fine. Good news for Harper. She left him in the tent and walked out into the now-dark camp. She rubbed her eyes, realizing that she needed rest of her own.

“Thank you,” Harper said, coming up. “I didn’t expect you to do this much for us.”

“No need,” Abby said, giving a weary smile. “I…needed that. It’s feels good to actually help people again.”

“Lucas’s plan might not have worked, but you’re definitely helping people outside of that,” Harper encouraged. “But you deserve some rest now. I’ll have a more…traditional assignment for you in
the morning."

“I’ll see you then,” Abby promised, and walked off to her own tent, ready to just forget the past couple days for a few hours. But of course that wasn’t to be, as the Chronicler was waiting for her in the tent, sitting on one of the chairs, an expectant smile on his face.

“Agent Gertrude, glad you finally took a break,” he greeted. “I thought Harper might send you out before we had a chance to properly talk.”

“I’d prefer to talk when it isn’t close to midnight,” Abby muttered, sitting onto the makeshift bed with a thump. “There isn’t any better time?”

“Since Harper is planning to send you out early, unfortunately not,” the Chronicler apologized, with a small incline of his head. “And I need to get to work as well. An army isn’t going to grow itself.”

Abby narrowed her eyes. “You want to talk? Fine. Who the hell are you?”

“Originally an advisor to the now-Chancellor,” he said. “My job in EXALT was rather…mundane. As my title implies, I chronicled the history of the world, the true history, without the assumptions and manipulation of historians.”

Abby eyed him skeptically. “Sure. What were you actually doing?”

“How suspicious,” he tsks. “Well, I knew for decades that an alien force was real, and would be coming back someday. But I also knew that for humanity to effectively defend themselves, well, how do I put this? This world had to be…reorganized. It had to be united under one government and order. EXALT was the best chance to see that goal realized, and so I helped them achieve it.”

“You used them.” Abby said.

“Not in the way you were thinking,” the Chronicler corrected. “I helped them. I was just the unassuming voice in the back of their minds, offering suggestions, guidance and direction that they acted on. I never directly took control of them, but I did plant seeds that had the desired effects. Luckily I never had to try hard, as EXALT was filled with highly intelligent people. Saudia in particular is one of the best leaders EXALT has produced.”

“So is the only reason EXALT made peace was because you ‘suggested’ it?” Abby demanded incredulously.

“I would say it is a consequence, yes,” the Chronicler nodded. “I did not expect the aliens to return so soon. I also did not anticipate XCOM or the Commander. Otherwise my plans would have been different, but at one point I did make a point of telling Saudia that her enemies might become allies, and that our true enemy was the aliens. Everything that happened after that was all her.”

“And she doesn’t know what you are,” Abby finished.

“No, and it will remain that way,” he said, his voice turning a bit hard. “As far as I am concerned, my mission with EXALT is accomplished. Saudia will bring order to this world, and I will begin working on my own plans. No one knows about me aside from you. Not ADVENT, not XCOM and not the aliens, and I intend to use that to strike when the time is right.”

“Fine, let’s go with that,” Abby said. “But you don’t need to do it alone. The Commander isn’t an idiot. He would be a much better ally than enemy, and he will consider you an enemy if you don’t let him know what you are.”
“He isn’t an idiot,” the Chronicler said grimly. “But he would never allow a psion to be free that he
doesn’t control. He considers psions potential dangers and doesn’t trust anyone else outside of
XCOM to use their powers responsibly. At best I would be captured, at worst executed. The
Commander doesn’t negotiate about certain things, Abby, and I think you know this.”

He fixed her with a hard stare. “It is why you need to keep this to yourself. I assure you that I will
be a much better asset on my own than whatever the Commander plans for me.”

Abby frowned. “And how do I know you’re not lying to me?”

“Because we are having this conversation now,” the Chronicler sighed. “I do not use my abilities
on innocent people unless necessary. If I wanted to, I could simply force you to comply, but I
would prefer not to do that.”

“So you’re considering it,” Abby stated.

“I did,” he admitted. “Although it’s too late now. If I was to change your mind now, I would likely
have to wipe the past day out of your mind, and I have a feeling that would raise questions, and
with the right people, they would guess what would happen. The risk is too high, and now I must
hope I made the right decision.”

Abby sincerely wished Patricia was here, or someone who could tell if he was actually telling the
truth. On the surface he seemed to be genuine, and Abby didn’t especially think he posed a threat.
Maybe the Commander would see differently, but she didn’t know…”Let’s say I agree to keep this
to myself,” she said, crossing her legs. “What exactly is your plan?”

“As I said, build an army,” he repeated. “Many of the aliens are simple, and easy to manipulate.
The town I now control will house them, and they will naturally go about their business, until one
day I give the order. I will go to other camps, have them transfer over here and enslave them to me.
It is difficult to explain how I can assure this without you being a psion, but rest assured I know
what I am doing.”

Abby thought back to what she knew about psionics. In theory it was possible, and after seeing
what Patricia could do, it wasn’t hard to buy that the Chronicler could accomplish this. The mind
was a tricky thing, and if he could do as he promised…should she really mess with that?

If he is building an army, we need it.

That they did. But was it smart to not tell anyone in XCOM about this? It was an either-or
situation, since she knew the Chronicler would learn either way. He might say he wouldn’t read her
mind, but at the very least he would be able to tell if she was lying or not.

Why not give him a chance? Make him prove he can do as promised before deciding to tell
someone or not.

That idea seemed…fair. If he really was powerful enough to control an army of aliens, then he
should be able to prove it. If he did, then great, he was an asset she would tolerate. If he couldn’t,
then she’d report him to XCOM. Seemed fair, and it was a compromise she didn’t think he’d object
to. “Here’s what I’m thinking,” she said, looking him straight in the eyes. “If you can really build
your own private army, that’s too much of an asset to just throw away. But I want to see if you can
actually do it. Prove it, and I’ll let you keep working. If you can’t, then I’ll report you to XCOM.”

The Chronicler smiled. “I can work with that. How soon will you want results?”

“I don’t know how long I’ll be here,” Abby said, frowning. “But at least a month, probably. You
have three weeks to produce something. And no mind tricks either if you fail. Try that and I’ll have contingencies.”

“I’d expect nothing less,” he confirmed, sounding rather eager. “Very well then, Agent. You’ll see my army very soon. I think you’ll be impressed with what I can do.”

“Good luck,” Abby said, laying down on the bed. “Now I’d like to sleep, if you don’t mind.”

“Not at all,” he said, standing up in a smooth motion. “Rest easy, agent. I’ll see you in three weeks.”

Abby didn’t hear him exit, but she wouldn’t have heard anyway because she was asleep seconds after her head hit the firm pillow.

***

The Praesidium, Genetic Modification Labs

The Praesidium was perhaps the most perfect base he could have asked for research purposes. The Commander might despise the Sectoids, but they definitely knew what they were doing, and it had taken Vahlen a short amount of time to set up her multiple stations of research, from weapons, alien artifacts and genetic modification.

The Commander paused outside the room, raised his hand over the sensor and drew on some of his psionic energy. The XCOM logo turned blue and the door unlocked before him soundlessly. The Commander stepped through and heard the door click behind him as he started walking down the short corridor to the entry to the Modification Labs themselves.

As they slid open before him, he was continually impressed with how Vahlen ran an organized project. The room was massive, but quartered off into different sections. Once was dedicated autopsy table with scientists performing detailed analysis to the creature’s physiology, all connected to powerful computers that displayed HD screens and holographic representation.

The others were largely for scientific experimentation, with various pieces of unnamable equipment filling them up, all monitored by teams of scientists. One section was Vahlen’s dedicated zoo, where she stored all the animals she’d imported for genetic analysis. It was a…curious bunch, to say the least.

He didn’t see Vahlen yet, so walked over to where she was keeping her horde of test animals. Birds of prey, vultures, rats, dogs, jellyfish, he wasn’t entirely sure what her plan was for each, but no doubt they had a part to play in her designs. There were cats somewhere around as well, but Vahlen seemed content to let them wander around the labs.

Along the wall behind the cages were vats where Sectoids had once been grown, which were now used for Chryssalid creation. Vahlen was keeping the grown ones in stasis, and since they didn’t have an unlimited amount of space, she was refraining from growing more. The Commander wasn’t sure when the best time to use the Chryssalids would be, but he imagined it would be soon. He supposed Saudia deserved a heads-up before he unleashed them onto the field.

However, now he did notice a small addition to her collection, but it surprisingly appeared to be insects. Specifically a large ant farm, but something was horribly wrong with it. He took a closer look, peering into the glass. To his surprise, all of the ants were dead, and there was…something, growing out of their corpses. A fungus? It was white and definitely resembled one, but he wasn’t a biologist. Was this experimentation for a new weapon?
“A specialized weapon, yes,” Vahlen said, coming up behind him and feeling very pleased with herself. “You caught on quick.”

“Well, you don’t like to waste things without reason,” the Commander said, turning to her with a smile. “The options were limited. But since you *are* here now, perhaps you could explain?”

She returned his smile, and brushed a strand of hair behind her ear. “I suppose I can start with that. I do have a lot to show you,” she cleared her throat, and motioned to the ant farm. “Have you ever heard of the cordyceps?”

“No,” the Commander shook his head. “I assume that is the fungus?”

“Correct,” she affirmed with a nod. “A very deadly parasitic fungi that slowly kills the host, as well as taking over its mind.”

The Commander raised an eyebrow. “A mind-controlling fungi?”

“Bad explanation,” she apologized. “It is more accurate to say as it kills the host, it forces it to act irrationally and abnormally. I actually developed this to assist in the resistance groups holding out in the Oceanic nations. It’s only a matter of time before they start using Chryssalids, and I believe I have developed a way to assist in negating that.”

“You’ve weaponized it?” He asked, already impressed. “That was fast, especially since I remember you only mentioning something like this several weeks ago.”

“I’ve created a strain that can affect chryssalids,” she said, handing him a tablet. “Chryssalids are insects, so it required a minimal amount of work to successfully infect one.” The picture she showed was of a dead Chryssalid, similar white growths protruding from its body, eyes and legs. “The problem, of course, is that there needs to be some way of infecting the Chryssalid itself.”

“I assume you came up with a solution?” He asked. She nodded and beckoned him over to another table, this one with plants on them, and a fungi, as he saw.

“This is a cordyceps plant in its purest form,” Vahlen explained. “Normally the Chryssalids wouldn’t touch it, but I modified it to also excrete pheromones that make it irresistible to them. Once they eat, they become infected. I also sped up the rate of death to nearly a day instead of several. It will emit spores, but those will not affect large areas beyond the plant itself. And in addition to that, it will have an immediate impact.”

“So the resistance groups there can plant these around the islands to trick the Chryssalids,” the Commander nodded. “Smart.”

“I can create dozens in a few days,” Vahlen said, nodding towards the vats. “The cloning equipment the Sectoids have is exceptional, and far more versatile than I first assumed. Although there are several factors that I have not yet determined that should be taken into consideration.”

He nodded, turning back to her. “Such as?”

“This species is a parasite,” she reminded him, frowning. “Which means that it will affect native species as well. I’ve also designed it to spread to grow more after a certain amount of time. My point is that it could potentially disrupt the ecosystems there, perhaps permanently.”

“But it would stop the Chryssalids,” the Commander said, turning back to the fungi.

“It would,” Vahlen confirmed. “And I have naturally made our own Chryssalids immune to the
The Commander considered that for a moment. But it wasn’t a hard decision. If they didn’t get rid of the aliens, there wouldn’t exactly be an Earth left to fix. “Talk to Jackson to begin distribution,” he ordered Vahlen, turning back to her. “If this will keep the resistance groups alive, then I want to use it. If it causes environmental damage…we’ll fix it after the war.”

“I assumed you’d say that,” Vahlen said, a satisfied smile on her face. “I’ve already begun production of several dozen specimens. I wouldn’t concern yourself over the impact quite yet either. Negative change will likely not take effect for years, a decade at least for any real change to be noticed.”

“Well, one topic down,” he said, looking towards the Subject Chambers. “Now, what else have you been working on?”

She grinned and motioned for him to follow as they made their way towards the chambers where Vahlen performed her Human experimentation. “I’ve begun finalizing a new batch of genetic enhancements for our soldiers,” she explained as she unlocked the door psionically. “All that is really needed is your authorization, but I think you’ll be very impressed with what I’ve managed.”

“Do you still have enough subjects?” He asked as the door slid open and they walked through.

“I’ll need a new batch after I order these current ones to be harvested for MELD,” Vahlen mused, glancing down at her tablet. “But I’ve already made arrangements with Jackson.”

“Good,” the Commander nodded, taking stock of the brightly lit cells, all segmented by gray alien alloys and occupied by a Human subject of some kind. There was an aura of terror and pain that washed over him the second he stepped inside, and he could only imagine what it was like for Vahlen. He didn’t fail to note that their terror increased every time she glanced in their direction.

He couldn’t really blame them, though he also couldn’t muster up much sympathy for their current situation. After all, this was simply a consequence of their own actions. “Aegis has been extremely helpful in development,” Vahlen said, as they stopped in front of a cell with the occupant, a Caucasian man, laying on the ground. “He was helpful in applying what I learned from the Ravaged One’s autopsy.”

“What did you learn?” The Commander asked, looking down at the man whose skin was almost translucent, and screaming at every twitch of his muscles. “I know you mentioned the Ravaged One could be the key to one of your projects.”

“Indeed,” Vahlen nodded, also looking down at the man. “You noted how easily his skin was able to heal and wound itself at the same time? I wanted to apply that for our own soldiers. Make them heal wounds almost instantaneously, an idea I first got from the simple jellyfish. And thanks to the now deceased Ethereal, and our new ally, I have done it.”

The Commander raised an eyebrow. “He doesn’t look that good.”

“He was a failed experiment,” Vahlen explained. “Sort of. His skin does do what I wanted to, but somehow his brain interpreted it as any kind of position other than his initial one is a wound. Thus, he is essentially trapped in place. Painful, but since his body does perform what we needed it to, it is useful for gathering data. This one, however, is the finished product.”

They stepped over to the next cell, where another man was standing. His skin was also slightly translucent, or maybe it was just the light. In any case, it wasn’t nearly as noticeable as the temptation of this plant.”
previous subject. Also in the room was a small portable table, and on it were several different weapons. A knife, a gun, and several vials of various colored liquids. The moment he saw Vahlen, he began backing up, saying something the Commander couldn’t hear or read from his lips.

“I assume you’d like a demonstration?” Vahlen asked, turning to him.

The Commander smirked. “If you could. Though he doesn’t exactly seem cooperative.”

“Not an issue,” Vahlen promised, and turned her gaze to the man while placing a palm on the glass. The Commander watched, fascinated as her iris turned purple as she drew upon her own power to take over the man in the cell. The test subject suddenly became still, his own eyes turning a faint purple as Vahlen took over his mind.

Without any words, the man walked forward, picked up the knife and slashed his wrist without hesitation. Blood sprayed everywhere initially, and started pouring out, although in seconds had already slowed to a faint drip. The Commander watched in amazement as the skin around the wrist healed at a visible rate, until the only sign of injury was the slowly drying blood on his hand.

Vahlen took her hand off the glass and the man stumbled back as she withdrew her mind. “That also runs through the entire body. All internal organs heal the same way, which in effect makes our soldiers immune to chemical weapons.”

“Amazing,” he said, shaking his head in wonder. “A soldier would be almost invincible.”

“Almost, not quite,” Vahlen agreed. “A headshot will still kill them, and severed limbs can’t be regrown. Theoretically blood loss would also be a concern, and certain organs can’t be repaired if severely damaged enough, such as eyes, but for the most part, they would be…difficult to kill.”

The Commander nodded. “I’m curious. Why does the skin have that almost translucent effect?”

“A side effect of incorporating jellyfish genetics,” Vahlen explained quickly. “Their skin is extremely thin, if you’ve noticed, and that is a reason I found they were able to repair so fast. The skin of those with this genetic modification is thinner than regular Human skin, and does occasionally give a translucent effect under the right lighting.”

She then beckoned him to the next cell over. “However, I was curious about the opposite outcome. Instead of making the skin softer and easier to heal, I experimented with making it impenetrable. Aegis’ own skin is essentially impossible to penetrate with even our gauss weapons, so I wanted to apply that to humans.”

The Commander glanced over at her. “Aegis’ skin is that resistant?”

“Yes, a surprise to be sure,” Vahlen said, contemplating the female subject before her. “But a welcome one nonetheless. Apparently only a few Ethereals have it, combat-focused ones like the Battlemaster, him, and the Imperator. But I believe I was successful, and it only took one subject to bring about.”

The Commander looked inside the cell. The woman looked exhausted and terrified, and her skin seemed to shimmer with some kind of faint marking…he focused on it. It was unmistakable, almost imperceptible hexagons lined every piece of skin on her body, almost like near-invisible scales or armor. Clearly an effect of the modification.

Like the last cell, this one had an array of weapons, but of a much higher caliber. A gauss rifle, pistol and alloy cannon were all lined up on the cell wall. Vahlen repeated the same mind-control as she had with the previous test subject, and the woman fell into a blank state, walked over to the
table and picked up the pistol.

The Commander raised an eyebrow as she placed the pistol under her chin, but refrained from commenting. She pulled the trigger with a bang and she went stumbling back onto the ground. She didn’t rise, but the Commander noted she was still breathing. “She survived a point-blank pistol shot,” The Commander muttered. “Amazing.”

“I would still advise not getting shot in the head,” Vahlen suggested, releasing her control. “We have noted that there can be damage done to the brain and hearing, as you can see.” She frowned, looking at the motionless woman. “A loss, but she can be replaced. What is important is that it does provide invulnerability to almost all projectile-based arms, and even plasma weapons have a limited effect on their skin.”

Vahlen pursed her lips. “However, with this particular modification, there are a few downsides, the most obvious being that internal injuries would be difficult to heal in the field since it would be nearly impossible to penetrate their skin. That, and it is difficult to apply new modifications in addition to this one, so it a sense it would ‘lock out’, any new modifications for a specific individual.”

Vahlen smiled again. “Which is why I needed to develop a separate modification to help address some of these issues.” The Commander followed as she led him to yet another cell where a man was sitting on the ground, looking more bored than anything else. “Notice anything?” Vahlen asked.

The Commander looked over the man, but didn’t see any sort of obvious modification, and unlike the other subjects, this man only seemed mildly annoyed with them both staring at him. “No,” the Commander admitted. “Nothing out of the ordinary.”

“Exactly,” Vahlen smiled, clasping her hands behind her back proudly. “He is perfectly healthy. He has also been exposed to over thirty fatal diseases and induced cancers. All of which haven’t affected him in the least.”

“You made him immune to disease,” the Commander said, turning to her. “How? Modifying the regeneration modification for internal organs only?”

“Partially,” Vahlen clarified, smiling. “My main inspiration for this particular modification was the vulture. They are practically immune to disease, so I took what made that possible, and applied it to a Human. Before Aegis helped solve the regeneration modification, it was working, but not foolproof. There was always something that would get through and kill the subject. But once I applied the ability for the internal organs to heal themselves, as well as modifying the immune system itself, then I was able to create a disease-immune individual.” Vahlen pause briefly. “A perfect addition to the Iron Skin modification, or any other one for that matter.”

The Commander made a mental note to make her dinner the next time he got a chance, maybe attempt Rouladen again. She deserved something more than another raise for the work she was doing. “I don’t suppose you have anything else?” He asked, thinking her showcase was done.

“One more,” she said with a knowing smile, and motioned him over to one final cell. “This is an attempted offensive modification. You know armor is the greatest protection most of the aliens have, so I attempted to find a way to work around that. The best way I found was a means to strike the weak points of their armor and insert a toxin into their body.”

She waved an arm to the cell. “And I do believe I have done it.”
The subject in the cell seemed mostly normal, aside from a small bulge under his right wrist, that seemed to be holstering something vertical to his arm, inside a small opening that pointed outwards. The arm itself also appeared a big larger than the opposite one, but only slightly. Vahlen once more took control of the man, and a pale tentacle-like stand shot out from the opening until it was held up vertically, a translucent point at the end, dripping with something.

The appendage appeared at least as tall as the man himself, who was close to six feet, and it appeared to be held up under its own power. At what he presumed was Vahlen’s suggestion, the stinger appendage immediately retracted into the arm. “That is…different,” the Commander admitted. “How effective is it?”

“The toxin I created for it is derived from a variety of the most venomous creatures in the world,” Vahlen explained. “Let’s just say Aegis was hesitant to get near it. I’ve also made the stinger able to be fully manipulated by the individual for precise control, and it’s strong enough to resist cuts and will heal from any wounds it suffers. I’m curious how it will work on the battlefield outside of simulations.”

“Carmelita will probably like it,” the Commander said. “It’s certainly the most unique one I’ve seen from you. But exceptional job. I think it’s time to put our genetic modification program into full swing, especially since we have a surplus of MELD, with more on the way.”

“That we do,” Vahlen said with a smile. “The only other update I have is for the Manchurian Project, which has made progress, but unfortunately nothing substantial.” She motioned to the cells. “With the war becoming more intense, I believed this should be my priority before returning to it. But in short, the command system is down and specific instructions can be programmed into the individual.”

She frowned. “There is still an issue of not overwriting the personality of the individual in question, but that will be the next issue I tackle. Still, this should be enough to last for the next few months while improvements are made.”

“I couldn’t agree more,” the Commander nodded. “You’ve certainly done more than enough. Far more than I expected, truth be told. But I’m sure our soldiers will be thanking you for it. If it wasn’t clear, I approve all these modifications for use in the field.”

“Thank you, Commander,” Vahlen said gratefully. “I couldn’t have really done it without you.”

“Hey, all of this was you,” the Commander chided, giving in and finally pulling her into a tight hug. “I just let you do what you do best.”

She instantly relaxed into him. “And I think that’s one thing I like most about you. You trust me to make the right decisions.”

“You’ve certainly proven you can,” he said, leaning down to give her a quick kiss. “If anything, I think you deserve a break.”

“Mhmm, maybe,” Vahlen murmured, her eyes closed. “Maybe I’ll end work a few hours earlier. Although you would do well to do the same.”

He chuckled, stroking her hair. “I’ll see what I can do.”

***

The Praesidium, Office of the Commander
Now was the time to have the conversation that he personally was not entirely looking forward to: The future of psionics under XCOM. It was a necessary step, but one he didn’t exactly think would go over that well with the psions themselves. But it was necessary, and they needed to have a serious discussion on it, especially with Patricia and Aegis training a new batch.

Zhang and Aegis himself were going to be important here, and the Commander saw no reason to delay any longer. “I just spoke with Vahlen. The Manchurian Project is still underway, but I suspect it will be at least several months until it is in a position where I am comfortable utilizing it.”

Zhang frowned, then glanced up at the towering Ethereal next to him. “If that is the case, I am not comfortable training new psions that we cannot ensure the loyalty of.”

“Loyalty isn’t a concern yet,” the Commander dismissed. “Frankly, I don’t think it will become one until the war ends.”

“Do not make such assumptions,” Aegis warned. “All species are subject to the traps of arrogance and power. Even your soldiers are no exception here.”

“You’ve observed them,” the Commander noted. “Do you sense anything malevolent or concerning?”

Aegis was silent for a few moments. “No. Not yet. But people change over time, Commander, and power reveals the true nature of people. It is impossible for all of them to withstand corruption of some sort. I will do my best to mitigate it, but it will not last forever. Director Zhang is correct to be concerned.”

“ Appreciated,” Zhang said dryly, looking back at the Commander. “Psions are weapons of mass destruction, Commander. If even one goes rogue, then we have a problem. If one as powerful as Patricia ever does, we’ll have a catastrophe. Can we really afford to take that chance?”

“You don’t have to sell me on the necessity,” the Commander sighed. “I was the one who started the project, remember? It’s just taking longer than I’d like.”

“But I am saying it needs to be our priority,” Zhang insisted, his emotional state ice cold. “While Vahlen’s genius is no doubt something the soldiers will appreciate, you need to push her to finish the Project. Or is she reluctant because she would be subjected to it as well?”

“It’s not for personal reasons,” the Commander said, leaning against the cool wall. “She didn’t see it as the largest priority in comparison to the grand scheme of the war. That’s it. Now that her modification projects are complete, she can focus on this one.”

“This does raise a question I have yet to receive an answer to,” Aegis interrupted, curiosity tinged his tone. “Do you plan on subjecting yourself to the Manchurian Program once it is complete?”

“Yes,” the Commander answered. “There won’t be exceptions, you included.”

“We did not discuss this.” Aegis stated flatly.

“Not initially, no,” the Commander agreed, looking up at the silver helm of the Ethereal. “But of everyone here, you alone are the most dangerous. Sorry, but I’m not going to risk you betraying us, and I’m sure you can understand why.”

“You don’t even know if it can be applied to an Ethereal,” Aegis pointed out. “I would prefer you at least learn that before I allow your scientists to tamper with my brain.”
“Then I suppose we’ll have to capture one,” the Commander said, half-sarcastically. “I personally don’t like it either. I’m not exactly keen on being at the mercy of a code word, but it would be hypocritical to exempt myself or you from this program, wouldn’t it?”

“Not necessarily,” Aegis stated. “By subjecting yourself to a code, anyone who has access to it would be able to control you. That is a risk you should also consider. It is also an inherent flaw with this entire program. With the right information, your entire army of psions could be turned against you.”

“No, because we control the code words,” the Commander reminded him. “If on the off chance someone did learn of a code word and attacked, we could simply shut them down. Vahlen has developed contingencies and backups if anyone is somehow compromised. It isn’t as simple as a ‘single code word controls everything.’”

“And who would have your code word?” Aegis asked. “Vahlen?”

“No,” the Commander answered, shaking his head. “She is not exactly unbiased when it comes to me, nor I with her. Zhang or Jackson would have the code word for me, and I would likely not know it myself to prevent a psion from attempting to read my mind and learning it that way.”

“Honorable,” Aegis commented. “I see no reason to not exempt yourself, as you are one of the most important figures in this war. But if you insist, there is very little I can do on my own. The Battlemaster would likely approve.”

“Good for him,” the Commander shrugged. “But until the program is completed, train the psions as best you can. I have a feeling we’ll need them.”

“But watch Patricia,” Zhang suggested, glancing up at Aegis. “Make sure she isn’t compromised.”

The Commander snorted. “Please.”

“I would prefer we keep an eye on her,” Zhang said, now looking to the Commander. “You read the dossier from Yates. I see no reason not to ensure she is on our side.”

“If Patricia were not on our side, we would definitely know about it,” the Commander sighed, shaking his head in amusement. “People don’t just flip, Zhang. If, and I mean If, she ever decided to abandon XCOM, it’s not going to be without warning or reasons, and as the dossier noted, all she needs to be shown is that the plan is sound and correct.”

“Forgive me for not being so sure,” Zhang muttered sarcastically. “I would prefer a woman who can cripple entire armies with her mind be securely under our control.”

“Don’t worry about that,” the Commander promised. “Patricia doesn’t do things irrationally, and besides, once the Manchurian Program is complete we won’t have to ever worry about that.”

Zhang pursed his lips. “Then I suggest you make Vahlen finish it as soon as possible.”

“I’ll remind her,” the Commander promised. “But there are bigger things than the worse-case scenario here, Zhang. We still have a war to win, after all, and I suspect that the next battle will be upon us soon.”

***

The Praesidium, Engineering Bay
The Engineering Bay here was far less quiet than the one at the Citadel. Alien tech in general was much less abrasive than what Humans typically developed. But it was certainly no less potent. The Sectoids had left behind quite a few interesting pieces of tech that the Commander knew Shen was attempting to figure out, but in the meantime, had made do with what had been transported from the Citadel to here.

And now it was time to discuss the larger plans for what was to be created. Aegis had brought a wealth of knowledge, which was likely why Shen had asked the Ethereal to be present when they met. The Commander was going to try and shield Shen’s mind from the worst of Aegis’ aura, but he wasn’t nearly as skilled as Patricia or Vahlen.

Still though, his mind was rather distinct and the Commander weaved his way through the myriad of engineers and equipment until he stepped into the new Cybernetics Lab, which currently only housed Aegis and Shen, both of whom were already discussing schematics that were holographically displayed in front of them.

The MEC suits were also propped up along the walls, bent over and their chests exposed in a shutdown state. It put into perspective how tall they were when Aegis barely reached the shoulder of the Marauder-class MEC suit. The Commander focused on Shen’s mind, and visualized something of a buffer, attempting to block out Aegis’ influence which luckily wasn’t even trying to affect his brain.

Shen stiffened as he did so, then looked behind him to see the Commander walking up. “Glad you came so quickly,” Shen said, recovering quickly. “We have a lot to go over. Aegis and I were discussing where my teams should put their focus.”

“The Gateways will be paramount to the defense of your world,” Aegis said immediately, nodding towards the hologram. “The Collective can strike anywhere, and the response needs to be immediate.”

The Commander looked at the hologram, which appeared to be a structure that resembled a U with the curves slightly inward, but not touching. On the arms were additional features that he assumed were either energy projectors or focusers of some kind. In the middle of the structure was what he assumed was a visual representation of the energy field, which in this case looked like a miniature whirlpool.

“So explain this Gateway,” the Commander said, crossing his arms. “How exactly does it work?”

“The short version is that it acts like a portal,” Shen began. “Theoretically, it can allow instant transportation from one Gateway to another, distance is no object. As to how it works…” Shen trailed off. “It’s complicated enough that I’m still puzzling it out, and Aegis unfortunately has little idea either. From what I can decipher, it appears to act as a miniature controlled wormhole between two points. I’m considering bringing in a physicist specializing in these kind of theories to help sort this out. I can build it as-is, and it would probably work, but I do not like building pieces of equipment I do not understand.”

The Commander could sympathize. That being said… “But you can do it.”

Shen sighed. “I believe so, and Aegis knows how to set up configure the Gateways, so we could begin using them immediately.”

“Yes,” Aegis agreed. “And it might be advisable to send these to ADVENT as well. Gateways can be configured to each other, regardless of distance or time created. All that is needed is the Gateway number and coordinate numbers. The more Gateways established on Earth, the easier it
will be for both ADVENT and XCOM to defend.”

“Except that presents a problem,” Shen pointed out with a sudden frown. “If any Gateway can be linked to each other, what’s to stop the Collective from linking to a vulnerable one controlled by us?”

“An excellent question,” Aegis said, radiating approval. “Nothing. However, I highly doubt they will utilize this tactic for two reasons. The first is that the knowledge of both the Gateway codes and coordinate numbers should only be known to a select few people. Without that, they cannot act. However, it works both ways. I have lists of Gateways established in the Collective. Unless they wish to provoke me, they will not attempt something so…underhanded.”

The Commander appraised the Ethereal. “Interesting choice of words.”

“I would also not expect the Battlemaster to utilize such a tactic either,” Aegis added. “He would consider himself above it.”

“Well, I don’t have the same restriction,” the Commander said. “If you have Gateways, it would be a good idea to use them.”

“I agree,” Aegis said after a moment of silence. “But not now. If you were to attack through a Gateway, you would trigger a much larger response from the Collective than you could hope to handle. It would be a death warrant for not only XCOM, but the entire planet, and it shouldn’t be utilized until much later in the war. Preferably after Earth is secure.”

Aegis did have a point there. Still, it was something to keep in mind for the future. “The Collective will establish their own Gateways here, correct?”

“Assuredly,” Aegis confirmed. “I would be surprised if construction hasn’t begun in Australia, and possibly their foothold in Japan. From there they have a nearly unlimited supply of reinforcements.”

“Which is going to be a problem,” the Commander muttered. “Can the Gateways be transported?”

“Technically, yes,” Aegis said slowly. “However, Gateway Transports are rare due to the amount of power they consume. I do not foresee the Collective using them in the near future. Their cost would be unjustified, especially if the battle is lost. They are also distinct, so the ship could be easily targeted.”

“I assume that Gateways are not just limited to Earth?” Shen interjected, curious. “This could be useful beyond just military application.”

“Yes, it is the primary mode of long-distance travel in the Collective,” Aegis confirmed. “Each established system has its own Gateway, which can then be configured for any system in the Collective. It is highly efficient, and allows near-instantaneous reinforcement. Your own Solar system likely has one now as well.”

“Wonderful,” the Commander sighed. “So they can replenish their forces within days.”

“Precisely,” Aegis confirmed grimly. “But I wouldn’t overly concern yourself yet. The Battlemaster, for better or worse, with be methodical and slow. There will be plenty of time to react and plan.”

“Speaking of plans,” Shen interjected, changing the hologram. “I believe the design for the Firestorm is essentially complete. All that really remains is your authorization to begin
“Granted,” the Commander said without hesitation. “We need ships that can compete in the skies. The Ravens are good, but they won’t be enough.”

“In which case, it might be worthwhile to establish a dedicated Hangar,” he suggested, killing the hologram and turning to him. “If we want to build our own fleet, the Praesidium is simply not large enough.”

Shen raised a good point, and the Commander had also noted that particular issue, though didn’t think it would become one for a while. “We’d need someplace isolated, and preferably not affiliated with ADVENT.”

“I’ll confer with Jackson,” Shen said with a nod. “And concerning a fleet…there is something very interesting Aegis showed me.”

“A prototype Andromedon craft,” Aegis said, switching the hologram to display a new craft that was wholly unlike any before it. It appeared to be much blockier and angular than the regular alien crafts, and from the sides of the craft, at the front and back, were what he assumed were circular engines. “This was supposed to be a Strike-Battleship as they called it. Not the largest ship in their fleet, but one with enough firepower and maneuverability to destroy any modern flagship.”

“We don’t have the space or resources to construct it yet,” Shen admitted, giving the ghost of a smile as he looked at the hologram. “But if we complete it, we would be able to rival the alien fleet on Earth. Hence why I designated it as the Avenger Project.”

A bit melodramatic, but it was good to see Shen so eager to work. Maybe it was Aegis affecting him, but the elderly man looked more energetic than he had for a while. Or maybe it was all the information he was getting from Aegis that was beyond what he could have imagined.

“Is there anything else you want to show me?” The Commander asked.

“I’ve begun development on the Jaeger-class MEC,” Shen said, handing him a detailing schematic. Just like he’d envisioned, a much smaller humanoid and sleek suit with a built-in sniper rifle and melee weapons. From the designs, it appeared to only be as tall as Aegis, but if estimations were correct, strong enough to break the neck of a Muton. Fascinating. “I’ve also ordered construction of more Marauder, Ballista and Goliath-class MECs,” Shen finished. “I know it’s only a matter of time before we lose one.”

“Good thinking,” the Commander approved with a nod. “How is progress on plasma weaponry going?”

“Still slow,” Shen admitted. “Aegis gave us the schematics, but it requires small elerium cores, which he unfortunately doesn’t know how to create. We don’t know enough about elerium to create them, so until we do so, our weapons research is somewhat halted. There are just so many projects to work on.”

That they were. The Manchurian Project and Elerium both seemed pressing, and he wasn’t sure which he should have Vahlen focus on. But Zhang was right, the Manchurian program needed to be completed and their own weapons were dealing with the aliens fine. Until that changed…he’d keep her working on that.

“Thanks for keeping me up to date,” he told Shen. “Good luck on the development. I’ll also talk with Jackson about an external XCOM hangar.”
“Sounds good,” Shen nodded. “I’ll send a report shortly.” With that, the Commander left, more than happy with how things were progressing, though he had to be careful not to become too confident. Very little was more insidious than overconfidence, even that which was well-founded.

***

The Praesidium, Barracks

Oliver held the piece of paper in his hands, eyeing it with something resembling suspicion. “This is…different.”

“Indeed,” Anastaysia Shevchenko agreed, her fists propping up her cheeks. The young Ukrainian was almost petite, at least for a soldier. Or maybe he was just getting old. Either way, she’d been pleasant to talk to, and had provided an interesting perspective on the continuing war in the Middle East. That is, until several stacks of paper had been delivered and he’d picked one up.

He was expecting something to do with regulations, maybe arrangements to make things easier for the new batch of soldiers that was supposed to be coming soon. But no, it was something much stranger. “I don’t suppose you know if this is normal around here?”

She sniffed. “I’m as new as you. So no, I don’t. But considering some of the stuff I’ve seen around here, genetic modification seems perfectly possible to me.”

“I actually do believe the Commander writes this stuff,” Oliver commented. “It’s way too straightforward to have come from some PR department. It doesn’t have…hmm, finesse.”

“I don’t think I’ve ever heard that used to describe him,” Anastaysia said, absentmindedly messing with the paper with a free hand. “I kinda like that.”

“That being said, quite a bit of this stuff seems fake,” Oliver admitted. “Skin that heals in minutes? A stinger appendage and some sort of immunity to disease? That seems way too good to be true.”

“Well, they clearly did something to Carmelita,” Anastaysia shrugged. “Unless you want to tell me that was just her natural ability to jump fifteen feet forward.”

She did have a point. “Conceded. So are you thinking about it?”

“Hell yeah,” she said incredulously. “I mean, who wouldn’t? I don’t think XCOM would put out this opportunity if they couldn’t actually follow through.”

No, they probably wouldn’t. At least not publically. But in his experience, there was always a catch that came with stuff that was too good to be true, and he wanted to figure out what that was before potentially altering his body. A better idea might be to talk to Carmelita and find out exactly how legitimate this process was. Or maybe someone else who’d been here a while.

“What’s that?” Shun asked, striding over.

“An offer from the Commander,” Oliver answered, handing her the pamphlet. “Have you ever gotten tired of getting shot? Now with XCOM™ Genetic Modifications, you too don’t have to worry about bullets piercing your head ever again!”

“Brilliant sales pitch,” Anastaysia chuckled. “Apply to XCOM sales or something.”

“No, but seriously it looks like the Commander is wanting to push genetic modification,” Oliver said as Shun took a seat, looking over the paper intently. “You’ve been here a while. Do you think
“I…think so,” Shun said slowly. “Vahlen’s team has come up with some insane stuff. I wouldn’t be surprised if they figured this out as well. I’m thinking that if the Commander is making this public for all soldiers, it means that he’s expecting the war to escalate.”

“So how is all of this possible?” Anastaysia asked Shun. “Alien tech?”

“I think so,” Shun answered carefully. “I’ve heard the scientists talk about MELD. A kind of miracle tech if it can do half the stuff it’s apparently behind. Maybe not all true, but I do think it is responsible for a lot of the advances we’ve made. But I can say that whatever the Commander has approved, it is safe. He doesn’t risk soldiers for even Vahlen’s experiments.”

“Wait,” Oliver frowned. “How can he know it’s safe unless they’ve done tests on Humans?”

“Don’t know,” Shun admitted. “But Carmelita seems fine. The MECs are all mostly fine, and I know the Commander himself has undergone genetic modification. Whatever process they use, it seems to be working.”

“Right…” Oliver began, before trailing off. That set off all kinds of alarm bells in his head. On one hand, he believed Shun, and believed that the Commander wouldn’t put out something that would risk the lives of his soldiers. To do so would be a net negative, and the Commander didn’t seem like the type to take unnecessary risks.

But he didn’t buy for a second that there was a secret ‘process’ that made these procedures safe. Reality didn’t work like that. They were definitely performing tests on something or someone, but who or what that could be was a question he couldn’t answer, and wasn’t sure he wanted to. And if that was how the Commander was making these safe for everyone, he wasn’t sure he wanted any part of it.

Maybe it was necessary, but Oliver had never been a large believe of ‘ends justifying the means’. That being said, he understood the thought process behind such people even if it was morally questionable at best. It was one reason why NATO had been appealing to him. At least he could believe for the most part that they weren’t performing heinous acts behind the scenes. For better or worse, they’d stuck to their principles even when it would be easier to break them for the greater good.

But he’d seen for a while which way the world was going. The War on Terror had been the biggest indicator of the changing opinions on what was worth doing. For everyone decrying the Commander’s actions, there had been two more endorsing him for the simple fact that he was performing it on terrible people.

Empathy was a very selective feeling, with it arising in people depending on subjectivity, and the truth was that most people could not feel empathy for people who they considered evil. The Commander had known this, and exploited it to an incredible degree. And when the world leaders condemned him, they were content to let him work and only half-heartedly try to put a stop to it.

But they’d never really tried. Because the Commander had done what the darkest parts of them had dreamed of, turning the Caliphate’s dream of a world under Islamic rule into a nightmare. And so the UN, NATO and everyone else was content to sit back and silently endorse his actions while providing little more than lip service.

It raised an interesting quandary: Was an evil action justifiable if it was performed on equally evil people? It was a question he still didn’t have a satisfactory answer to, and still wasn’t sure where
he definitively stood on the issue. But if he had an option to do the right thing, he was going to do it, even if he was just left a regular Human.

But regular Human certainly wasn’t all bad. His head jerked up as he realized he’d missed part of Shun and Anastaysia’s conversation. “Ukraine?” Shun was saying. “I’m not sure we’ve had any soldiers from there.”

“Not as far as I know,” Anastaysia shrugged. “But I would have been involved regardless. If I wasn’t in XCOM, I’d probably be helping the Russians in Turkmenistan.”

“Turkmenistan?” Shun asked, frowning. “I thought it was Iran?”

“We were discussing that before the papers came,” Anastaysia said, nodding to Oliver. “And they are still in Iran, but they’re moving to the north and into Turkmenistan.”

“From everything I’ve seen, Iran is about to fold,” Oliver added. “It’s somewhat difficult to get reliable information, but the word is that the Iranian government is terrified about ADVENT. Don’t know what prompted that response.”

“Oh, I can answer that,” Anastaysia said knowingly. “I have a friend there now. Apparently, ADVENT isn’t exactly…eh, nice to the captured cities. It’s essentially a police state.”

“I’m somehow not surprised,” Oliver sighed. “ADVENT has not exactly put out the image of peace and tolerance. So what did they do? Round up all the men and segregate them?”

“Not just the men,” Anastaysia corrected, shaking her head. “But the women and children too. Entire families were taken into custody to be vetted. ADVENT is very thorough if what he’s told me is accurate. This was pretty early in their attacks. I’m guessing communications are forbidden now or something, since I haven’t heard from him in weeks.”

“Hopefully they’ll just surrender,” Shun sighed. “They have to know they can’t win.”

“It’s a point of pride,” Oliver explained. “Iran has seen the west as a rival at best, and enemy at worst for decades. To lose so decisively to them is humiliating, and they aren’t just going to lose, I can guarantee ADVENT will completely try to erase their culture and government. This war has been referred to by a large number of people as a purge, and I fear they are right.”

“Then maybe they should have thought before provoking Israel,” Shun shrugged. “Sorry, but I don’t have much sympathy for them. It’s bad that things aren’t good for the innocent people caught in the crossfire, but as far as I’m concerned, there are a lot more important things to worry about.”

“Copy that,” Anastaysia nodded firmly. “It’s not like this is a question. The Middle East is going to fall and hopefully all that instability will die along with it. Good riddance, I say.”

Oliver sighed, since it was a lot more complicated than that, but had the feeling that the two women wouldn’t really be open to that particular viewpoint and he had no desire for a debate. Right now, he really needed some time alone to think, what with the new genetic modifications and questions raised.

“It was a pleasure to meet you, Miss Anastaysia,” Oliver said, getting up. “But I think I’ll try and track down some more information on this genetic program. It’s certainly a lot to think about.”

“Just Ana, please,” she said with a smile. “The feeling is mutual, and good luck. Let me know if you learn anything important!”
“Will do,” he promised, and walked off with a bunch of unanswered questions haunting him every step of the way.

***

The Praesidium, Psionic Testing Chambers

It was excellent timing that the Commander had gone forward with the publicly distributed genetic modification, since it overlapped perfectly with the awakening of new psions which would allow them to be enhanced as well, which would probably help their transition significantly. It was long past time for her to be upgraded as well, and the results were…nice.

Being able to literally jump a couple dozen feet in the air and land unharmed was a feeling that couldn’t exactly be replicated, nor was being able to see absurd distances. Her eyes were essentially like small powerful cameras which she used at will to zoom in and retract as needed. It had taken a bit to get used to, but she’d learned quickly.

The secondary heart that now pumped in her chest had definitely given her a stamina boost, and she somehow felt more energized. Hopefully it would allow her to work harder before she collapsed, or even better, helped her ensure she didn’t overexert herself to begin with. She looked down at her arm, once more looking at it with curiosity.

It looked the same as normal here, but she’d found that under the right lighting, there was definitely a translucent quality to it which she had been told was normal. A side-effect of the Biomuscular regeneration modification, but if that was the price she had to pay to be able to heal almost immediately, there wasn’t a question.

Most of the other psions had chosen their modifications somewhat determined on their aptitude which Patricia and Aegis had been able to fairly easily determine. Not all of them had taken as many options as possible, but all of them at least had some, and at least one of the skin modifications Vahlen had developed.

To her mild surprise, there was an almost even split between the psions deciding between the Iron Skin and Biomuscular regeneration mods. Many of the Defense-aptitude psions had taken the Iron Skin modification, like Iosif, Allison and Said. On the flip side, most of the Attack-aptitude psions had, quite logically, taken the Biomuscular regeneration due to the damage that was otherwise inflicted on their bodies. Nataliya and Chan had both commented to her how much less pain they felt while training. Patricia had wished they had something like this when Annette was still alive. She’d known how much pain the young French woman had felt while using her considerable power.

The Telepaths and Telekinetics seemed pretty split, and beyond that people chose additional modifications as they saw fit. Most had taken the Secondary Heart, and all had the new Disease prevention mod. But there had been a few that had additionally taken the muscle-fiber density and the disconcerting Stinger modification as well. Several were still somewhat leery about genetic modification, but Patricia suspected they’d come around to it once they were able to put it into action.

Apparantly there had been a decent number of applicants for the program, and the modification of them had severely drained the MELD stores which would have to be replenished soon. But Shen was already working on that, and Patricia was sure they’d recover more when the aliens attacked next. But when they did, well, the aliens were going to be in for a big surprise.

But now she needed to focus on helping the psions here get more powerful. The introduction of
Aegis had actually gone pretty smoothly, all things considered. The telepaths had known right away something was off, and the rest had mostly just…accepted it, quite rightly assuming that they knew what they were doing.

Although Allison’s reaction had been rather amusing, something along the lines of “What the fuck?” with several other choice words thrown in there. Apparently, she’d had an unexpected run-in with Aegis at some point and it had apparently scarred her for life, and she’d chalked it up to an extremely strange hallucination.

It was made especially ironic since Allison was a Defense-aptitude psion, and would be training directly under Aegis. She had been thrilled to hear about it. But despite all of that, excellent progress was being made. Aegis, Iosif and Said together had quite a lot of experience, and were quickly training Dael and Allison to use their powers effectively.

The Commander was here today as well, and helping Matthew to teach Karen the more delicate aspects of Telekinetics. Quite honestly, telekinetics was rather self-explanatory, at least from what Patricia understood. Out of all of the designated specializations, it definitely seemed like the easiest to learn. It was more about directing and manipulating power, which honestly didn’t take much practice to get the hang of.

Since Karen was already lifting entire crates filled with metal in the air, she assumed it was going well. The Commander also seemed to be refining his powers, now more focused on more delicate control now that he knew he could lift the heavy stuff. Matthew still appeared to enjoy crushing things with his mind. Patricia wondered if he had some issues there. Oh well, as long as he took it out on the aliens, it was all good with her.

The lone Attack psions, Nataliya and Chan were unfortunately forced to experiment on their own, but Aegis had helped with some basics he knew, and already the psions were wreaking destruction on the helpless training dummies.

And she was assisting with the new Telepath, Jona, who had just grasped the basics of mind-control which she now planned to put it to the test. “Alright,” Patricia said, walking over to the wall where a metal cage was setting. “You can get into my mind when it’s undefended, now it’s time to try it on something else.”

“I did that once,” Jona mildly protested, looking at the cage apprehensively. “What exactly do you want me to –oh.”

Patricia snorted at the small oh at the end as Jona realized what was in the cage. The chittering Chryssalid was not exactly happy, but Patricia wasn’t concerned. It was one of Vahlen’s, so it wouldn’t attack humans. But Patricia sensed that Jona wasn’t exactly recalling that. “Animals are good for practice,” Patricia continued. “I had to learn as I went, but you don’t have to do that. Remember how you did it with me. Focus on the mind.”

“That’s a chryssalid,” Jona said, as if she was blind. “Are you sure…”

“Don’t worry,” Fatima encouraged, walking up and wiping her face with a towel. “The chryssalid won’t attack. They’re Vahlen’s and hers don’t attack humans.”

“Close your eyes if it helps,” Patricia suggested, focusing on Jona’s own mind to calm her slightly. “Sense the mind that you think is the chryssalid. It should be very distinct.”

Jona bit her lip, but complied and Patricia sensed her becoming calmed once she closed her eyes and drew upon her power. The air around her shimmered slightly, and Patricia unlocked the cage
and opened it silently. “Good. You sense it?”

“Yes,” Jona said, her voice distracted. “It’s…frantic. Basic.”

“Focus on it and isolate it with your power,” Patricia continued as the alien stumbled out, looking around frantically as it knew something was happening, but didn’t for sure. “Visualize it however you want, but apply your power to it.”

Patricia nodded in approval as she lifted her left arm, hand extended in the direction of the chryssalid. Good, she was already learning that physical motions were an excellent way to direct concentration. “I think I have it,” Jona said slowly, her form rigid. “I can’t make sense of it.”

“Don’t go too deep yet,” Patricia said. “That’s for later. Give it some commands. Impress your will onto it.”

Jona nodded imperceptibly and a minute or so later, the chryssalid suddenly laid down on the ground and closed it’s eyes. Patricia knelt down and nodded. Yep, it was definitely asleep. Not a difficult command, but it had worked. “It worked,” Jona said, almost sounding surprised as she came out of the psionic trance. “I actually did it.”

“And now you can neutralize a good portion of the alien army,” Patricia congratulated, clapping her on the back. “Mutons, Andromedons and Vitakara aren’t much different. You just need to isolate them and then give your commands. Though I’d suggest something a bit more potent than sleep.”

“So...what could I do?” Jona asked, looking down at the chryssalid in wonder.

“The only limit is your imagination,” Patricia said, tapping her own head. “Slave has a negative connotation for obvious reasons, but that is essentially anything under your control. Do you want to kill it? Incapacitate it? Turn it against its friends? You can do all of that with simple commands. Tell the mind it is burning and it will create the sensation. The mind is powerful, and it can be exploited.”

“Right, I can do that for one though,” Jona nodded. “But how were you able to do the same to a thousand at once?”

“Practice,” Patricia chuckled. “Practice and experience. One mind may be difficult now, but once you master it, five will seem like no big deal. Before you know it, you’ll be taking over entire armies.”

“It also doesn’t have to be used offensively,” Fatima added with a smile. “I personally have found it better to help my fellow soldiers. Patricia knows what I am talking about.”

“That’s a little more difficult,” Patricia warned lightly. “But she’s right. You can affect allies in much the same way, only emphasizing their strengths instead of exploiting weaknesses. It’s like a mind-merge of sorts, sort of like how Aegis affects people, except intentional instead of a side effect. It’s more instinctual to me, but I don’t see why you couldn’t learn it as well.”

“I could show you,” Fatima offered. “I’ve gotten rather good at it myself. Although I had a lot of practice.”

“Sure,” Jona agreed, walking off with her. “I might as well find out what I’m best at.”

Patricia took the opportunity to take a break and sipped from her water bottle, watching the other psions hone their abilities. “We’re making good progress, I think,” the Commander said, walking
up and taking a seat next to her. “You’ve done good work here. All of these people seem like good fits.”

“You can thank Haley for the choices,” Patricia downplayed. “She’s the one who put this roster together.”

“Sure, but you’ve put this entire training regimen together as well,” the Commander said, emanating approval. “Aegis believes that we can eventually get a Human to rival the power of an Ethereal, and I believe we’ll get there.”

“Well, we beat the Ravaged One,” Patricia said as she watched Karen throw a massive crate a Matthew who also caught it telekinetically. “I’d say we’re already there.”

“Although it did take every psion we had, and we still almost lost,” the Commander added ruefully. “But I’m pretty sure you’ll hit that before anyone else.”

“I think so as well,” she agreed, looking towards where Aegis was instructing Allison and Said. “And I’m going to do everything to make that a reality.”

***

The Praesidium, XCOM Intelligence Control

“I’m sending agents with Vahlen’s cordyceps plant to Indonesia and the Philippines,” Zhang informed the Commander, highlighting the area on the holomap. “The resistance groups should be able to distribute them quickly.”

“Excellent,” the Commander nodded. “Thanks to Aegis, I think we have a target to look for: The Gateways. I would expect them to be built in Australia, if not elsewhere.”

“Agreed,” Zhang nodded. “I’m going to send that to my contacts. I’ll have my agents locate and sabotage them as quickly as we can. Although we might need dedicated strike teams to carry out missions like this, especially if they are deep within alien territory.”

“A better idea is to phase out agents there with genetically modified ones,” the Commander suggested. “Some already are, I know, but one genetically modified agents might actually be enough to run single-man ops against entire alien strongholds.”

“Something to test,” Zhang nodded. “There are plenty of weaker alien strongholds in Australia to attempt that theory. But I tend to agree. It might be advisable to share some of these modifications with ADVENT.”

The Commander wasn’t entirely sure about that, largely because he didn’t entirely like the idea of ADVENT creating borderline-invincible soldiers that far outnumbered their own. With that being said, ADVENT wasn’t exactly a concern yet, and there were admittedly contingencies he could fall back on. The aliens were the priority and he had to trust that ADVENT would hold up in the meantime. “The Biomuscular Regeneration and Disease Prevention modifications would be appropriate, I think.”

Zhang gave a rare small smile. “I may not be psionic, Commander, but I know your hesitation. While ADVENT could benefit from our advances, I see no reason to let them be released without contingencies of our own. I trust Vahlen is smart enough to insert a fatal flaw into whatever we send, yes? Something that is otherwise impossible to exploit without previous knowledge.”

The Commander smiled. “I certainly believe she is, good thinking.”
“We’d have to keep Kim in the loop,” Zhang added, shutting off the holomap. “His partner, Tygan, might notice something is off and he needs to know about it to redirect him away. I also suspect Saudia would not be pleased if she learned of this. But it’s better than her getting it in her head that she’s invincible.”

“Which is why we have people like Kim keeping an eye on her,” the Commander said. “He’ll inform us if Saudia is developing anything major.”

“I am impressed with her restraint,” Zhang commented. “As was Kim. He expected her to be more interested in turning the MELD nanites into a weapon. Too dangerous, she said.”

“I tend to agree,” the Commander nodded. “But the idea is not without merit. But I intend to utilize that idea as a… sterilization weapon. On Earth it’s too risky, but the aliens have more than one.”

“The Muton homeworld,” Zhang suggested. “If Aegis has described it correctly, it is the heart of their military production. The loss of that would be catastrophic. Or Helion-7 for that matter.”

“Exactly,” the Commander nodded, a grim smile on his face. “Aegis is warning against escalation on Collective controlled territory, and he is right. But when the time is right, we have the numbers of the Gateways and only need to send one or two doomsday bombs through them and watch the fallout.”

“Of course, that would probably send out calls for an all-out assault on Earth.” Zhang pointed out.

“Yes,” the Commander nodded. “Which is why I don’t intend for development on that to fully start until we can fight on somewhat even footing with them. On their turf, not just on Earth.”

“Unless of course we need to enact the Apollo Contingency,” Zhang noted, scratching his chin. “But I don’t think the situation is dire enough yet.”

“Or the Artemis Contingency,” the Commander added. “But for that we need some kind of sample from the Ethereals. I somehow doubt that will be easy to acquire.”

“No,” Zhang agreed, looking at him. “What are you going to do if Aegis refuses to undergo the Manchurian Program?”

The Commander pursed his lips. “That is a good question. I’m not sure if I can do anything, not yet at least. Worst-case scenario, perhaps all of our psions could sedate him, but I feel that would only be a temporary solution. And should that fail, we are essentially screwed.”

“I was afraid of that,” Zhang sighed. “We need to discuss where we should be focusing most of our efforts after Vahlen completes the Manchurian Project. Improving our forces is all well and good, but both of us know that won’t win the war. The Ethereals are the only ones that matter and they cannot be replaced like their regular soldiers. Vahlen needs to begin researching anti-psionic technology to counter them. There is little use for an invincible soldier if they can be turned on us because an Ethereal mind-controls them.”

That was definitely going to be a major undertaking later in the war and Zhang was certainly correct there. “The Ethereals themselves seem to be holding back for now,” the Commander said. “We needed to focus on weathering their army. But once they realize they’ll need more…then yes, we’ll need ways to counter them beyond our own.”

“Beyond that, it’s also only a matter of time before ADVENT tries to make their own psions,” Zhang added. “When they figure out the crude methods involved, it won’t take long for them to refine it.”
“Hence why I added that to the Directive,” the Commander nodded. “By law they have to turn psions over to us as only we can help them adjust to their new abilities.”

Zhang snorted. “Do you really think they’re going to comply?”

The Commander smirked. “Actually, I do. If for no other reason than Saudia is in charge and she doesn’t want to risk me removing her. Aside from that, it’s not like you can hide a psion. We’ve got enough of our own to be able to tell if a Human is one or not. Once that gets out, ADVENT would suffer a serious loss of face, and also per the Directive, the penalty for unauthorized psionic experimentation is rather high.”

Zhang hmmed at that. “And with Stein in charge of the Peacekeepers, she would ensure they would be punished. Saudia may have done a little too well in choosing her. I suppose then that the risk is mitigated. Although later there may be questions raised about why ADVENT must turn them over to us.”

“We’ll deal with that when it arises,” the Commander said. “In the meantime…well, we keep preparing. I’m surprised there hasn’t been a retaliation yet.”

“The delay concerns me,” Zhang admitted, rubbing his forehead. “It means they’re likely preparing for a deadly strike. One we won’t be able to stop.”

“Stopping isn’t our goal for retaliation,” the Commander reminded him. “But to mitigate the threat. Because this time, I think that will be all we can do.”

***

*The Praesidium, Practice Range*

Sierra found herself liking the alloy cannon more and more the longer she used it. There was something very satisfying about completely shredding a dummy into pieces from metal shards. Considering her recent improvements, it might not be amiss to add it to her arsenal. After all, it wasn’t as though she only had to carry a rifle and pistol.

She had been rather skeptical of the initial message the Commander had put out regarding the genetic modifications…but after seeing that they were in fact legitimate, she felt it would be highly questionable at best not to take advantage. She had to admit that the idea of apparent invulnerability was tempting, and there were enough people she could personally observe and talk to that made it a pretty easy choice.

And the results were…well, exactly what was advertised. Granted, she hadn’t actually been shot at yet, but she felt physically harder. Her skin had a much tauter feeling, almost metallic, which made some sense. One of the apparent side-effects of the Iron Skin modification were these slightly translucent hexagons that ran over every part of her skin. It made her look a bit strange, especially when the light hit her at the right angle and gave the illusion of a body-length tattoo of small hexagons.

Apparently there was a scientific explanation for it, likely something to do with how that was how the skin was reinforced to stop actual projectiles. She’d done some…experimentation with the modification and it was a little disconcerting to realize how protected she actually was.

“I’m curious,” a voice said, coming up beside her. “How does it feel?”

She turned to see one of the oldest soldiers she’d seen here. It was because of that she remembered his name: Oliver. She was sort of surprised XCOM had recruited someone as old as him, since his
white hair and beard kinda gave away the fact that he wasn’t exactly young. Then again, he probably had a lot of experience fighting.

“Yes,” he nodded, unslinging his rifle from his back. “If you don’t mind me asking.”

She shrugged. “Sure. It’s honestly not that different. I feel stronger; definitely tougher than before.”

“Have you tested it out?” He asked curiously.

“I haven’t gotten shot if that’s what you were wondering,” she admitted with a laugh. “But I’m pretty sure it works. Here, watch this.” She motioned him over to a small table used for weapon cleaning and pulled out one of her knives.

“You don’t have to give a demonstration,” he began uncomfortably, realizing what she was going to do. “Really.”

“Don’t worry,” Sierra assured him, placing her hand on the table. “Trust me, I’m not going to hurt myself. Just showing you how it works.” She took a reverse grip of her knife, raised it and stabbed down on her arm, slightly amused at the sharp intake of breath behind her. But just as she expected, the blade slid off her skin and buried the tip in the table.

“That is…impressive,” Oliver admitted, looking slightly disturbed at her display. “Do you feel it?”

“I can feel something hit me there,” Sierra explained. “But it doesn’t hurt. Now, that might change if I get shot, but I’m actually feeling pretty confident about this. So what about you? Thinking about taking the Commander up on his offer?”

“Not at the moment,” he said, slightly smiling. “But I’m a little too suspicious for my own good, I think. Let’s just say I think there’s a catch to all of this that the Commander isn’t exactly being truthful about.”

The thing was, Sierra had wondered the same thing, but hadn’t been able to figure out what that possibly could be. The scientists had assured her that she wouldn’t be dependent on any drugs and that the modification wouldn’t fade over time. It performed as they said (Seemingly) and had also explained every possible side effect or consequence. Despite not exactly trusting the Commander, she did not expect him to lie to his soldiers, at least with this.

“I haven’t seen or felt anything irregular,” Sierra finally said with a shrug. “Maybe this is the one exception to the rule.”

“Perhaps,” Oliver admitted. “Although I’m also not entirely comfortable with how these genetic enhancements were probably discovered.”

“In a lab,” Sierra guessed. “Maybe they experimented on a Sectoid or two. Why does that matter?”

Oliver sighed. “Do you mind if I’m blunt?”

Sierra smirked and gestured him forward. “I welcome it.”

“You might regret that,” he warned. “But fine. What are the chances that XCOM could suddenly discover this miracle modification that makes soldiers immune to projectiles, and it’s also safe enough that it works 100% of the time when applied to soldiers? Now multiply that times four.
Which either means they’re extremely lucky or are using human test subjects.”

Sierra frowned, as admittedly that hadn’t crossed her mind. “Does that still make it bad?” She asked. “I’m pretty sure there are laws around that.”

Oliver just looked at her. “Under XCOM? Really? I can respect the Commander, but I absolutely know men like him. If something is illegal that hinders them, they will do everything they can to remedy that. Do you really believe he wouldn’t use humans for testing?”

“Fair point,” Sierra nodded. “That being said, the Commander isn’t…unreasonable. Or a sadist, even if I don’t entirely trust him. He probably used volunteers for testing. I do believe he does care about his soldiers.”

“Maybe,” Oliver didn’t sound convinced. “But the thing is, I don’t know, and as such I’m not sure I want to involve myself in it,” he gave a slight smile. “I’m content just staying a normal human for now.”

“I can respect that,” Sierra nodded, now wondering the answer to the question he raised. “Ideological decisions are pretty rare, nowadays.”

“Eh, maybe I’m just old,” he chuckled, shaking his head. “The world is sadly not a place where ideals win. Not anymore, I think. Or at least not the ones I support.”

“You were in NATO, right?” Sierra asked. “What happened to them?”

“As far as I know, they’re being incorporated into the ADVENT military,” he shrugged. “I’m not that surprised it was dissolved. There isn’t a need for a NATO now that the UN fell and ADVENT is in charge. I do like that Saudia put Chairman Christiaens in charge of the military. At least that is one person I can trust in ADVENT.”

“Oh?” Sierra asked. “You don’t trust them?”

“I trust them to fight the aliens,” Oliver amended. “Not necessarily to have the best interests of the people in mind.”

“I agree with that,” Sierra muttered. “Their military is probably why the Commander is turning a blind eye to them. Then again, I’m pretty sure he could force Saudia to do what he wants. The situation is probably even more complicated than I think.”

“Probably,” Oliver agreed. “I suppose all we can really do are our jobs. Whatever plans the Commander has, I’m pretty sure he won’t be telling us.”

“Unfortunately not,” Sierra agreed, tossing her rifle over her shoulder. “But I would be really curious to know what goes on that controlling head of his.”

***

The Praesidium, Mission Control

The Commander would normally be slightly irritated if he was woken out of bed in the middle of the night, especially since it was a night where Vahlen had gotten enough done that they could actually spend a night together, but considering the circumstances, he wished he was woken up for literally no reason.

“Status report!” He ordered Jackson, who was in front of the hologlobe, while analysts and
workers rushed around, speaking frantically into headsets. Jackson herself was talking rapidly with someone, but cut them off and snapped into a salute as he approached.

“Hawaii was just hit an hour ago,” she briefly updated. “They were completely cut off and overwhelmed. Networks and feed are dark over there. But we have to assume they’re going to hit the West Coast.”

“Why attack Hawaii?” Was the first thing he wondered aloud. There was no good reason they needed to attack that state unless…

Unless they wanted them to know an attack was coming. And if that was the goal, then they expected to win and more than that, wanted to make a decisive statement in the most powerful nation in the world.

“Unknown,” Jackson admitted. “But they’ve given us a valuable warning. ADVENT is already sending reinforcements to the coastal cities. What are your orders?”

“Assemble several squads of soldiers and I’ll fly with them to the Citadel to coordinate with ADVENT forces,” he ordered. “Prepare our Ravens for launch.”

“Understood,” Jackson nodded. “Good luck, Commander.”

He barely heard her as he left to go prepare. If he was correct about what they could expect, they would need all the luck they could get.

***

Supplementary Material

The Advent Directive

SECTION 5: ADVENT Agencies

Subsection 5.1: Overview

Purpose: ADVENT agencies exist to create, regulate and provide services to the citizens of ADVENT over the entirety of the organization itself. Agencies are instrumental in keeping ADVENT operating in a smooth manner that continually improves the lives of all people within it, and constantly looks to improve whenever the opportunity is presented.

Leadership Appointment: The leaders of the various agencies are proposed by the Chancellor of ADVENT, with several agencies also requiring the Chief of the Peacekeepers, the Commander of the ADVENT Military, and/or the Director of ADVENT Intelligence to also approve them before presenting the application to the ADVENT Congress of Nations.

Candidates can only be chosen from a pre-approved pool and must register beforehand before being considered for any agency position. Once a candidate is chosen, he or she is interrogated by the Congress of Nations for a time to be determined by them to determine if they are appropriate for the position. They will then vote on approving the candidate and should it pass, the candidate will assume the position.

If the Congress of Nations rejects the candidate, an explanation must be made with proof and evidence explaining the rejection. Said explanation will be given to the Judicial Courts for review, and if it is approved, then the candidate will be rejected from consideration. If the explanation is rejected by the court, then an additional hearing will be held and vote taken. A candidate can only
be rejected by the Congress of Nations via refuted explanation up to three times, after that the Chancellor can install them directly in the position. If the Congress of Nations fails to provide an explanation within fourteen days, then the Chancellor can install them directly in the position.

Abuse of this system (such as intentionally and spuriously delaying the appointment of a candidate for partisan reasons) will result in legal action. If there is dissent, it is expected to be brought to the attention of the Chancellor and candidate as soon as possible without any intentional delay. Authors of multiple refuted explanations may find themselves barred from further dissents or removed from office altogether.

*Agency Leadership Removal*: Heads of ADVENT agencies may hold the position for a minimum period of ten years, barring events like criminal activity, injury or assassination. Heads of these agencies may not unexpectedly retire without reason or explanation. At the end of their appointment, the Chancellor may approve them for another term, or legally replace them with a different candidate.

A Chancellor cannot replace the head of an agency without an acceptable reason that has been approved by the Judicial Courts. This is in effect regardless of if a new Chancellor is appointed who didn’t make any appointments to these agencies.

*ADVENT Agency List and Brief Overview:*

**ADVENT Department of Energy and Renewable Sources**: Responsible for the research and development for all energy matters related to ADVENT. They are also responsible for regulation and distribution of various resources and technology related to the field.

**ADVENT Bureau of Education**: Responsible for all facets of the ADVENT education system including structure, wages, and regulation over both State and private sector schools at all levels.

**ADVENT Research and Development**: Responsible for the concentrated research and development of multiple areas of ADVENT, including civilian and military advances in computing, science, biology and genetic enhancement.

**ADVENT Engineering and Advanced Technology**: Responsible for the research and creation of advanced technology including artificial intelligence, computing, manufacturing and development. They work in both a civilian and military capacity.

**ADVENT Internal Affairs and Oversight**: Responsible for ensuring that ADVENT is internally following the regulations set forth, and that all agencies are running as efficiently as possible. Internal disputes and legal issues within ADVENT are handled by this agency.

**ADVENT Election Oversight**: Responsible for the vetting, approval and integrity of all elections and candidates within ADVENT, and also has final control over regulations regarding specific elections.

**ADVENT Diplomatic Service**: Responsible for managing diplomatic relationships between foreign nations and alien governments.

**ADVENT Public Relations and Media Integrity**: Responsible for distributing accurate and direct information from the State and disseminating appropriate knowledge in a practical and efficient way. Also ensures that independent media is conforming to standards and not deliberately misleading the public.

**ADVENT Agriculture and Food Oversight**: Responsible for the regulation and inspection of all
food distributors and farms throughout ADVENT, as well as responsible for researching, proposing and improving various agricultural or distribution equipment or technology to increase efficiency.

**ADVENT Department of Infrastructure:** Responsible for the upkeep, creation and removal of all infrastructure within ADVENT, and is responsible for building regulation and maintenance of essential systems.

**ADVENT Adoption and Child Services:** Responsible for managing adoptions within and outside of ADVENT and completing them in a timely, safe, and confidential manner. They are also responsible for dealing with instances of child abuse, trafficking and inspection. They are also responsible for ensuring that children are appropriately registered and vaccinated and possess authority to inform the Peacekeepers if parents do not comply.

**ADVENT Drug and Substance Research:** Responsible for the exclusive research of medical and recreational drugs, including those that are illegal. This agency has the authority to approve a drug for recreational or medical use, and also the authority to recall or make various substances illegal provided proof can be show to the Judicial courts justifying decisions in both cases.

**ADVENT Department of Health and Medical Services:** Responsible for the creation, regulation and enforcement of all ADVENT medical standards and serves to also inspect and oversee them as well. They are also responsible for all patient and medical professional data.

**ADVENT Department of Commerce and Economy:** Responsible for the regulation and oversight of the economy, as well as having authority over foreign and domestic trade, currencies and economical positions.
March of the Battlemaster

Chapter Notes

See the end of the chapter for notes

The Cultro, En route to San Francisco

The Overseer-class craft sped silently across the skies, no indication within the craft itself that it was flying at all. The Sectoids may have been an inferior, vindictive and selfish species, but their intelligence could occasionally produce excellence. But everything in the craft itself was superficial to him; displays, seats and weapon stands. They had mistakenly believed that comfort was something he placed value on.

Fools. But he had no reason to dwell on it further. The city was approaching and the humans would no doubt be preparing for an army.

They would not expect only one, but a Battlemaster was far more dangerous than any army, as the humans would soon learn. Today was the day where XCOM would learn the price of defying the Imperator, and Aegis would realize the mistake he had made. He bore no ill will towards Aegis because unlike some Ethereals, he stood by his beliefs, although such a drastic step was strange, even for him.

It ultimately mattered little. Not even Aegis could resist him, and it had been a reason why he had made sure to learn all he could from Aegis, because he suspected the day would come when he could no longer rely on his friend.

The holographic humanoid figure suddenly materialized before him, a golden feminine projection who blinked and fizzed as if mere static. The figure had supposedly been based on a Vitakarian female, but it now reminded the Battlemaster more of Human females. The figure was faceless, obscured by a black mist with shining eyes.

He had programmed her for a military personality, so she appeared standing before him in an even stance, hands clasped behind her back. “Battlemaster,” she began, the synthesized voice transmitting directly into his communications implant. “We are approaching the Human city known as San Francisco. J’Loran, Disciple-7 and Lura’irinena’borelia are awaiting your command.”

“Connect me to them,” the Battlemaster commanded, rising and towering over the small projection.

“Connecting,” she said, then her form multiplied and morphed until he was standing before near-perfect, golden recreations of his subordinates, complete with the static fuzz. The CODEX system truly was one of the greatest unexpected creations of the Collective. He would not have imagined Cogitian’s archive system could have such widespread and practical usage.

“Begin your assault,” the Battlemaster commanded. “J’Loran, press your advantage. Bombard the city and draw Patricia to you. They will not be able to resist taking revenge on your species.”

“I am expecting her,” J’Loran boomed. “If the city is evacuated, we will raze it to the ground.”

“Capture any civilians you can,” the Battlemaster ordered. “Remember: Do not kill them unless
they are actively assisting ADVENT or otherwise fighting Collective forces.”

“Acknowledged,” J’Loran stated. “Beginning the assault now.”

The Battlemaster turned to the Borelian as J’Loran severed the connection. “Irinena, begin your own attack. Hold back initially until you see what they have.”

“It will be done, Battlemaster,” Irinena growled, baring her incisors before she placed the black helmet over her head. “May you find victory on the battlefield.”

As she blinked out of existence, he turned to the Sargon dutifully awaiting his orders. “Disciple-7, begin your own assault. Be prepared to counter the psions.”

“I understand, Battlemaster,” the Sargon stated, in guttural tones of his species. “I have analyzed the entirety of the city and estimate between thirty to fifty thousand ADVENT soldiers for defense and have adjusted my forces to account for this fact and the possibility of XCOM being introduced as a variable. Further variables within XCOM have also been taken into consideration.”

The Battlemaster nodded approvingly. He was continually disappointed when the Collective simply used the Sargons on pointless administrative duties and training. Disciple-7 had proven to be as competent as any subordinate, and possessed a near-perfect memory thanks to Ethereal genetic modification.

A shame it was often wasted on trivial tasks that could simply be run by a CODEX system.

“Good,” the Battlemaster said with an approving nod. “When you evacuate the civilians, destroy the city and hold your position. We cannot expect universal victory and will not push forward beyond our limits.”

“I obey, Battlemaster,” Disciple-7 confirmed, bowing his head. “Glory to the Ethereal Collective.”

The figure blinked out of existence and the CODEX appeared once more. “Battlemaster, the city approaches. We are close to the drop position.”

“Noted,” he said, and reached back with his upper right hand to grasp the greatsword strapped to his back. The weight felt familiar and comforting as he held it firmly at his side, letting the point rest on the cold alloy of the spacecraft. The scarred blade that had put millions to death would soon be submerged in blood once more, and he looked forward to testing his strength once more against an alien army.

This time, he hoped they would actually present a challenge.

***

The Citadel, Mission Control

It was almost nostalgic, being back here in the now-ADVENT controlled Citadel. They had turned it into a very fortified base that was stocked with what he could only assume were specially trained soldiers. This was apparently where the Lancer base of operations was, which made him wonder if ADVENT was planning on deploying Lancers to defend the West Coast.

The Commander wore his silver armor, helmet tucked under his arm and weapons attached to his back. He doubted that he would personally be participating in any fighting that took place, but it never hurt to be prepared and if nothing else, it gave a morale boost to the personnel here. Soldiers,
Officers and supporting staff all gave quick salutes to him as he walked past, relief clear on their faces and reflected in their emotions.

The doors slid open with a familiar hiss and he stepped through to the open area of Mission Control. It remained largely the same, but it seemed that the once-massive hologlobe was being used as more of a geoscape map, with the blue hologram displaying the majority of the west coast, and, it appeared, positioning of both ADVENT and Collective forces.

People in the room made way before him and he quickly approached the small group that was appraising the situation, and the woman who bore the red and white stripes of command straightened up as he approached, and turned to face him. “Commander,” Laura Christiaens greeted, not smiling but giving him a firm nod of acknowledgement. “It’s good that you’re here.”

“What’s the situation?” He asked, looking down at the geoscape portraying the massive battlefield. “I have three squads with MEC accompaniments ready to assist where needed.”

“Good,” Laura said, also returning her attention to the geoscape. “There have not been any hits I would consider major, but the first alien ships made landfall approximately twelve minutes ago here, here and here.” She pointed at southern California, Oregon and Washington. “All dead ahead of the major cities.”

The Commander appraised the map. “Seattle, Portland and LA. I don’t suppose this was unexpected?”

“It wasn’t,” Laura agreed, a grim ghost of a smile on her aged face. “We knew that the aliens would probably strike the major cities. Strangely enough, San Francisco appears to be clear, but that is likely to change.”

“What about the cities themselves?” The Commander asked. “Have they been evacuated?”

“Impossible to fully evacuate them,” Laura admitted, frustration clear in her tone. “I attempted to get permission to do that a week ago and was advised not to until there was a credible threat. It’s only been started in earnest two days ago, when I got permission from the Chancellor herself. At best the cities are half-evacuated, and I am assuming those that are outside are lost.”

“Unfortunate,” the Commander muttered. “But little we can do. Where are your forces stationed?”

“I knew they would be coming here eventually, and I made sure ADVENT is prepared,” Laura began, zooming the geoscape to focus on Portland. “Each city contains a Battalion of ADVENT soldiers who have been strategically positioned through the area. Portland itself has several choke points we can use. You see the river running through it?”

“Yes,” the Commander nodded.

“We pin the aliens there to start,” she explained. “Explosives have been rigged on the bridges in case they become overwhelmed. I’ve also stationed soldiers up the entire river beyond the Vancouver area, with more behind them to prevent us being surrounded. I imagine that will make it slightly difficult for the aliens, assuming they are fielding their heavier units.”

“They might be,” the Commander warned. “Cyberdisks and Floaters don’t need bridges to cross. However, the entire army is unlikely to be composed of them alone.”

“And indications are that the army heading that way is largely composed of Vitakara,” Laura pointed out.
“Which kinds?” The Commander asked.

“Not enough intel,” she shook her head. “But we can safely assume Borelians and Vitakarians.”

“What about Seattle?” The Commander asked.

“Supremely to our advantage,” Laura confirmed. “The city is on the coast of a lake, which means it is possible that we can repeat our defense that we used in Japan. Unfortunately, all indications are that the aliens learned from their mistake. We just got word that Olympia just went dark, which means they’re coming up the long way. I’ve just sent soldiers to reinforce Tacoma and Kent.”

The Commander could see what she meant. Olympia was southwest of the city itself, and if it followed the road up to Lakewood and then straight up, they could directly attack the city. But the good news was that it was very direct, and they would not be able to do anything but commit to it entirely. “Still easily defendable,” the Commander noted. “But they might attack from the North as well.”

“They are,” Laura confirmed. “But in a much smaller force. They are clearly bringing the main bulk of their army up from the south. What I’m concerned about is the composition. It appears to be mostly Andromedons and Mutons.”

Considering that the Andromedons were the reason the Collective had any ground in Japan whatsoever, that was concerning and raised several questions. “Seems odd to attack Seattle with such a large force,” he said slowly. “I would have guessed a larger or better defended city.”

“As did I,” Laura muttered, pressing her lips together in a thin like. “Which is why I think it is the most vulnerable. I didn’t anticipate an Andromedon-majority force.”

The Commander smiled. “That’s why we’re here. I’ll send my best team and psion to reinforce. The city will be defended.”

“I appreciate that,” Laura said, moving the geoscape towards the south. “California is where our strongest defenses are. San Francisco has an entrenched army large enough to withstand an Andromedon attack, and the aliens will likely have no choice but to either repeat what they did in Japan, or go out of their way to establish an isolated beachhead. The coast is highly useful here.”

“Perhaps that’s why they are leaving it alone,” the Commander mused, scratching his chin as he looked at the blue map. “However...”

“However, that will only work in the short term,” Laura finished, pointing at the state. “If we control San Francisco, we can effectively counter and outflank every alien force that moves further in. Ignoring it is a bad strategy.”

It was, and the Commander was getting a growing suspicion as to why the city was supposedly being left along. The Battlemaster wouldn’t make such an exploitable error, which meant there had to be some plan for the city...and unfortunately, he had a decent guess as to what that was. “What of LA?” He asked, wanting to know about that before voicing his concern.

“Almost the same deal,” Laura said. “But the aliens do have an opening here, which they are taking. Oxnard has been taken, and they are fighting into the city that way. More difficult for us, but they are almost all Mutons, which can be handled easily enough, especially since we have the advantage.”

“It might be a distraction,” the Commander wondered aloud, trying to puzzle out why an all-Moton force would be sent. “Perhaps a feint? They know Mutons don’t work well against us.”
“The attack seems straightforward,” Laura nodded. “Too straightforward. I’m missing something, but there have been no other attacks near the city. Just from the direction of Oxnard.”

“They might be holding some forces back to get you to weaken other positions,” the Commander suggested. “Maybe don’t take soldiers from the perimeter, but perhaps the inner city. They can’t land a force there without you noticing, but they can attempt to surround the city itself before you realize it.”

“Good point,” she nodded. “I’ll see-“

“We’ve got an alien craft heading towards San Francisco!” An analyst called out.

“Only a matter of time,” Laura grunted, moving over to the city. “How many?”

There was a pause; surprise clear in the analyst’s voice. “Just one.”

“One?” Laura narrowed her eyes suspiciously. “Is it a scout then?”

“No,” the Commander said slowly, a cold feeling building inside him. “San Francisco wasn’t forgotten by the aliens. It’s being targeted by the Battlemaster himself. And he is about to attack.”

“No one can take an entire city by themselves,” Laura said, looking at him in clear disbelief. “Not even an Ethereal. I doubt your telepath could do it either. And especially not the most protected city on the West Coast.”

“You need to prepare your forces to retreat if needed,” the Commander warned, making her face turn to stone. “I hope you are right, but these Ethereals are not like us, and I somehow don’t think that the Battlemaster is ignorant of the fact that it is supposedly impenetrable.”

“Ethereals are aliens, not gods,” Laura said coolly, turning away from him. “You proved that when you killed the one that attacked you. And you did it with under one hundred men. This Battlemaster faces a battalion of fifty thousand soldiers of ADVENT. No one can survive that alone, not even an Ethereal.”

“Maybe not,” the Commander muttered as he prepared to give his orders to the squads. “But I can guarantee that he is sure going to try.”

***

San Francisco, United States of America

“Dropping.”

The hatch underneath him opened up and the Battlemaster began falling towards the sandy beach below. The air whistled in his ears as he sped towards the ground, angling himself like an arrow, cape flapping in the wind. The army before him became more visible as he approached terminal velocity.

Lines of soldiers in black armor, red Officers dotted throughout and snipers, gunners and explosives experts all poised in preparation for an invading force. Unfortunate that they were insufficiently armed to deal with him. The greatsword in his hand was made out of metal that cut through the alloy harvested on Helion-3, and the armor these Humans wore was a diluted variant of that.

He was getting close to the ground…
He thrust his lower hands down to telekinetically stabilize himself, flipping right side up and landed in the shallow water with a moderate splash. Straightening up, he appraised the army before him, hidden behind barricades of black metal, with the city itself behind them. It truthfully did not matter where he was, all that did was the removal of ADVENT from this city.

The battlefield was dead silent as surprise emanated in waves from the Humans before him. The Battlemaster was not surprised as he placed one armored boot forward, the water lapping around his ankles. A telepath he was not, but he could easily imagine the thoughts running through their heads.

Is this it?

Only one?

He allowed himself a smile as he brandished his sword in the air; a formal salute of respect before the engagement of an enemy. The early sunlight turned the blade into a gleaming beacon of light, one that would soon be awash in crimson.

Then the order finally came: “Open fire!”

The beach was lit up with the sound of hundreds of gauss rifles all firing at once. Gouts of sand and water shot up before and around him as they indiscriminately fired in his direction.

Time to begin.

With slow, ponderous steps he marched toward the closest line of soldiers. Projectiles bounced off his armor like water, nowhere near powerful enough to even scratch the forged metal of the Battlemaster. His greatsword was held idly in his lower right hand as he walked forward, impervious to the weapons before him.

A rocket suddenly sped towards him and he casually held up a free hand to catch it telekinetically, then sent it back towards a line of soldiers without breaking stride. He barely heard the screams of pain as he fell upon the first group of victims.

“Fire!” One screamed frantically as all of them backed up. “Kill it now!”

Too late.

With speed that would be perceived as inhuman, the Battlemaster suddenly lashed out with his greatsword, decapitating the first solder, and transitioning into cut that sheared the arm of the woman next to him in two, then grabbed a third soldier telekinetically and pulled him forward to meet the point of the sword in his throat.

Without stopping, the Battlemaster threw the man back and dashed forward, impaling another soldier in the chest before grabbing another one by the head with a free hand and slamming it down into the corner of a crate, killing him instantly. One group down, time to pick up the pace.

A hail of projectiles slammed into his chest, temporarily giving him pause before he located the sources. Four gunners were concentrating their fire, under the direction of several Officers who were directing more regular soldiers to keep firing at him. More were running up, hoping to kill him by numbers alone.

The Battlemaster transitioned his hold on the greatsword to a reverse grip and threw it with
psionically-charged speed to impale one gunner in the chest, while with another hand he extended his telekinetic reach and *pulled*, then leapt towards the group of thirty soldiers as their weapons were ripped out of their hands.

He slammed into one soldier, then crushed one helmet under his boot before grabbing the two closest ones standing beside him and tossing them towards the others while tossing the grenades on their belts. Obliterated by their own weapons, he turned and telekinetically grasped another four soldiers and crushed their throats before they could even so much as gasp.

The greatsword returned to his hand with a telekinetic call and he continued butchering the soldiers who were still unsteady from his pull. He sliced the throat of a woman who’d tripped over another corpse; another fleeing soldier was lifted into the air and pulled backwards to be impaled on his blade; two more soldiers were decapitated with a single swing shortly after realizing there was no escape.

Blood and gore staining his once-sterling armor, he continued marching to the next enclave of humans, who were now trying a different tactic. They’d now organized into large teams of fifteen to twenty soldiers, and seemed to be splitting up to try and outflank him. He chuckled, even as projectiles flew all around him.

He clenched a fist and drew upon the psionic well inside him, engulfing his body in purple flame. The shouts of surprise and terror gave him direction as he picked the first group armed against him and *charged*. Power coursing through him, he sped toward the group of soldiers in a second, hitting one with enough force to break every bone in his body and send him flying back, while every soldier before him on the right fell to the ground, heads rolling away.

The Battlemaster completed the slash, decapitating the soldiers in a clean ring around him, before charging with the same force towards a nearby soldier, grabbing him by the helmet, and slamming it down on a nearby spike. He spun towards the three soldiers from the group that were still alive and dashed towards them with a bloody flourish that rent their bodies in pieces and sent the parts flying back.

The next group was trying to fall back, but there was no escape from him. He threw the greatsword towards one of them who gasped as the blade buried itself in her chest, then screamed as he seemingly materialized in front of her from a charge. He kicked her off his blade into two more soldiers and easily transitioned into a series of quick chops that decapitated, dismembered and otherwise maimed what remained of the entire group.

Remembering the third group, he spun on his heel to see them frantically retreating. He dug a foot into the sand and charged, turning his vision of the world around him into a blur, only focused on his targets. He hit the leader of the retreat with the force of a high-speed crashing Sectoid craft, pulverizing the poor woman and sending her flying in multiple directions, already dead from the fist-sized hole in her chest.

He switched hands, took a reverse grip and sliced backward, executing the immediate line behind him and impaling another soldier which he promptly stabbed into the ground before telekinetically lifting the remaining soldiers and letting them hang as he systematically dismembered them before letting their corpses fall to the ground in piles.

An explosion rocked the beach, then two more hit close beside him, and as he looked to the source, one hit him directly in the chest, the impact forcing him to take a step back. He looked at the line of soldiers armed with grenades and rocket launchers, all grouped up and hoping that sheer amount of explosives would be enough to kill him.
The surface of his armor was now a mixture of soot, gore and blood, with a good few scratches to add to the already present collection. Sand sprayed all over him as explosions rocked the ground near him, but he resumed his steady march through the minefield, sheathed in a purple aura that only burned brighter the longer he fought.

They were already beginning to back up, and now was the time to strike. He balled one hand into a fist and charged once more towards the line of soldiers, feeling the armor give way to flesh that split open, shattered bone, then emerged out the back. The scream of utter torment reached his ears and the Battlemaster pulled his fist out of the soldier’s chest and instantly decapitated the two shaken soldiers beside him, before grabbing another nearby one and charging towards a wall where he smashed her head on it with a sharp crack and a fairly large splatter.

The remaining fifty or so soldiers seemed to realize that running was pointless, and so instead stood their ground. Falling to their knees to line up shots, barking final commands and the persistent sound of gauss fire never let up once as they hoped and prayed for something, anything, to hit. They knew their lives were forfeit, and perhaps want to make a final sacrifice.

Their reasons mattered not, but he would oblige their wishes.

Sword strokes cut soldiers apart in seconds; a telekinetic grab crushed throats and skulls; men and women were decapitated and dismembered in surgical fashion as he wielded the greatsword as tall as some of them like it was made of air. More soldiers kept arriving from the flanks, all standing in the open, realizing cover was useless.

All of them fired gauss rounds, rockets, grenades; whatever they had on hand.

Nothing could touch him, and he continued his slaughter. First it was dozens who fell to his blade, psionics or hands, then the number or corpses around him grew as he sped from group to group, executing them in seconds before repeating the procedure with the inevitable reinforcements.

He lifted another soldier up with a hand and quickly stabbed him through the armpit before tossing his body towards another female soldier. A quick slash behind him bisected the soldier attempting a close flank with a splatter of blood. A quick application of telekinetic pressure crushed the woman’s skull into paste.

Projectiles ricocheted off his armor as he turned to see more soldiers approaching, but this time they had what was referred to as a tank. It rolled up, aimed its massive barrel at him and fired. He took the impact square in the chest and he was actually blown almost ten feet back, rolling onto the ground and reassuming his position.

He grinned, baring his teeth under the helmet. Already he could feel his body healing for the bruise that weapon had caused. A respectable try, but another futile effort. The tank was slow, and he was not. He charged, the world turning into a blur around him and transitioned into a spin that instantly executed the row of soldiers to the right of the tank.

He picked up the lone survivor, sped away, quickly line up his target and charged towards the massive barrel of the tank, the soldier still in hand. With a sickening splintering of metal and crunch of bone the soldier was bluntly impaled on the tank barrel, blood spurting from his wounds as he hung limply on the metal pole. A single swipe up cut through the barrel and it fell to the ground.

Several more chops and slices later, the remaining ADVENT forces on the opposite side of the tank were in pieces. The Battlemaster jumped onto the top of the tank and telekinetically opened the hatch, then pulled the first stunned driver out, snapping his neck and tossing him aside before
repeating the process for every one that was left.

The sound of more boots charging his position caught his attention and he turned to see what was at least fifty soldiers charging around the corner, weapons at the ready, then skidding to a stop when they saw what was before him. Whatever went through their minds, they still fired on him and he decided to just stand there and let them fire.

Let their terror grow as they realized what stood before him, right before he ended their lives.

For he was a Battlemaster and he was invincible.

***

Portland, United States of America

“Sierra, Matthew, and Mark, you will reinforce the ADVENT forces on the I-405 Bridge,” Zara ordered rapidly as the skyranger fell into a steep descent. “Me, Karen and Tamara will reinforce the bridge near their Waterfront Park. Nati, Charlie, you will reinforce the Goliath where it’s dropped. All clear!”

“Yes, Overseer!” They shouted in response.

“Then let’s kill some aliens,” Zara stated, intensity dripping from her voice. Sierra could easily imagine the woman smiling under the helmet. She steadied her gauss rifle in her hands, sincerely hoping that the Iron Skin mod would actually work as advertised. Not that she was going to try and get hit, but the possibility was extremely high.

Splitting up the squad seemed risky, but given how much ground needed to be covered, it seemed like there wasn’t much choice. The good news was that the alien were being forced into choke points on the bridges, so that had halted the assault severely.

The skyranger settled on the ground with a thud, the sounds of gunfire and concussive shots already reaching her ears in the distance. The door hissed open and Zara waved them out. “Go! Go! I’ll be in contact.”

“Copy!” Sierra shouted as she charged down, flanked by Matthew and Mark Castle, their medic for this op. They dashed down the street filled with trash, abandoned cars and scorched buildings. Artillery and tanks were set up on the streets and nearby buildings, firing shells and rockets across the river to the other side, hopefully hitting some alien encampments.

The entire area bordering the river had been haphazardly reinforced and heavily improvised, not with the standard ADVENT barricade, but with a mix of crates, trucks and cars that soldiers utilized as they exchanged potshots with the aliens across the river. In front of the bridge itself was a proper ADVENT barricade several layers deep that just barely encroached on the bridge itself.

There were several Officers directing the ADVENT forces who were doing their best to establish a killzone for the entire bridge, and from the dozens of alien corpses lining the road, they appeared to be doing a good job. “Officer!” She called to one of the red-armored men, who had just directed several ADVENT gunners to relieve two soldiers. “Report!”

He snapped to attention the moment he saw her. “Yes, Operative. We’ve been able to hold this bridge for the past hour, but it’s only a matter of time before they begin advancing.” He motioned to the bridge. “These appear to be mostly Vitakara. Borelians and Vitakarian soldiers. We haven’t seen any others.”
Alright, that was decent. “Are the bridges rigged?”

“Yes, but we’re only to detonate if we lose control of them,” the Officer answered, flinching as several plasma bolts flew dangerously close to his head. “We don’t want to isolate ourselves, and detonating the explosives on the bridges might force them to begin a concentrated shelling of the city, which would be catastrophic due to the-“

“Enough!” Matthew interrupted, raising a hand. “What is your objective?”

“Hold this position for now,” he answered. “As long as we control the bridge, we can kill them pretty easily.”

“If that’s the case, we need to press forward,” Sierra said, looking towards the bridge. “You can’t just stay here.”

“We can’t establish barriers,” the Officer protested as more alien fire slammed into a nearby truck, killing the soldiers behind it in a sudden explosion. “Anyone who goes onto the bridge is dead without protection. This works both ways.”

“Mark, go help them!” Sierra pointed towards the group of wounded and dead ADVENT.

“On it!” He answered and charged to help assist.

“He’s a medic,” Sierra explained briefly. “He’ll help with the wounded. And I get that. Do you have the capability to establish barricades?”

“Yes,” the Officer nodded. “There are several engineering teams. But I can’t send them out just to be killed.”

“Leave that to us!” Sierra promised, motioning Matthew to follow and they dashed to the front barricade directly before the bridge itself.

“You must have a plan,” Matthew said as she raised her rifle and began firing across the bridge while also taking stock of the situation before her.

“Something like one,” Sierra admitted, managing to snipe a Borelian who’d attempted to dash to the side. “What’s the range on your telekinetics?”

“Reasonably? Depends on the size,” he answered, looking down the road. “The bigger it is, the easier I can focus on it.”

“Good,” Sierra nodded. “See the cars the aliens are moving?”

“Of course I do.”

“Can you get rid of them?”

She could imagine the tight grin in his voice. “That I can. Cover me, would you?”

Matthew stood up and purple energy began flaring around him as he raised his right hand towards the alien forces. Sierra took a breath and leapt over the barricade and slid to a stray crate in the street that barely offered any protection as she knelt behind it, laying down a firm line of suppressive fire as plasma sprayed all around her.

One bolt clipped her shoulder, another hit her side, but she didn’t feel anything despite her armor being scorched where it was hit. She managed to hit a Vitakarian soldier, who was dragged away.
by another alien, possibly for treatment, and the plasma fire suddenly became a lot more concentrated on her. She gritted her teeth as more plasma bolts clipped her and scorched her once-clean forest green armor.

The integrity of the armor was still intact, barely, but if XCOM was right, the plasma shouldn’t be able to pierce her skin without several consecutive direct hits. Still, it was getting way too close for comfort. The cars that the aliens were hiding behind were suddenly lifted into the air, and the aliens seemed stunned, which she took advantage of, killing several Vitakara within a few seconds with a simple sweep of her rifle.

One car was tossed towards the opposite end of the bridge, killing and crushing a couple dozen Vitakara running to reinforce, and the other was tossed off the bridge into the deep blue water with a splash. Sierra stood and began walking forward, aiming at the now-exposed aliens and executing them methodically before they could react.

There was a lull in the return fire. She looked back at the ADVENT line. “Come on!” She yelled, waving her arm forward to get them moving. “They’re going to start again!”

That propelled the ADVENT soldiers to get moving, and she was soon flanked by men and women in black armor, sending a lethal hail of projectiles down the road as the engineers quickly began building a barricade about an eighth of the way into the bridge. Slow and methodical, that would work fine.

Sierra took the opportunity to contact Zara. “Overseer! We are beginning to take the bridge. Army composition is all Vitakarian and we’re in decent position. Copy?”

“Acknowledged,” came Zara’s cool response. “We’re doing the same. It does appear to be all Vitakara. Interesting, but we’re pushing them back. The Goliath is also holding well.”

“Good,” Sierra nodded. “I’ll update if there are any changes.”

“Reinforcements incoming!” An Officer shouted, and Sierra looked down the road to see a mix of Vitakara soldiers rushing up, with what looked like heavy weapons in their hands.

“Get down!” She yelled, as Matthew raised his hands.

“Stay put!” He shouted. “I’ve got this.”

The aliens fired simultaneously, shooting glowing green grenades and red-streaked projectiles at them, some of which would have certainly hit had the air directly in front and around them not suddenly became distorted, as if looking through water. The first grenade that hit the shimmering field froze in mid-air, and it was immediately clear that the field was acting as a trap for all the rockets and grenades shot their way.

Matthew waved his hand around, and thrust it out, and all of the projectiles were thrown the exact opposite direction. Some slammed into the bridge itself with brief plasma explosions, most hit the road, creating new holes in the asphalt, and some more hit the area around the alien line, killing a dozen instantly and wounding even more.

ADVENT cheered at the destruction of the Vitakara line and continued pressing forward with renewed enthusiasm. Sierra and Matthew still led at the front, killing the stragglers who hadn’t retreated off the bridge and the hail of ADVENT fire preventing any further retaliation.

Halfway across, with the engineers building a new barricade as several dozen soldiers provided covering fire and Matthew removing or killing any new alien offensive, Sierra began to develop a
hope that they just might be able to pull this off.

***

Los Angeles, United States of America

Compared to some of the soldiers he was sitting beside, Oliver felt uncomfortably normal even if he wasn’t the only unmodified human here. Catherine, Jesenia and Anna were similarly unmodified, but then again, most of them were just as new, or newer, than he was. They also didn’t have one, but two psions that specialized in offensive attacks. What those were was something he could only speculate, but beyond that some of them were modified in ways that quite frankly, made his skin crawl.

He had gotten the impression that Carmelita wasn’t entirely a stable individual, but possessed an unquenched hatred for the aliens and would do whatever it took to give herself an advantage. That apparently involved the installation of a strange tentacle/stinger into her fucking arm.

It apparently provided yet another tactical tool for her, but it was disconcerting to see the pale stinger extend out of her arm through her modified Aegis armor like some kind of worm or parasite. And of course she wasn’t the only one that had that particular improvement. Their other psion, Nataliya, had also elected to undergo the procedure.

Well, if nothing else they would probably decimate any aliens they came across. “Stand by for deployment, Mariner Team,” Lightning Sky informed as the skyranger lights flashed red. “Coming in for a landing.”

“Acknowledged,” Carmelita said, standing and the rest of them joined her. “Any notes on army composition?” She asked as she once more checked her alloy cannon.

“Appears to be largely Mutons, as suspected,” he answered as the Skyranger dipped. “Looks like they released Berserkers. ADVENT isn’t handling it well.”

“We’ll deal with them,” Carmelita said coolly, in a way that Oliver imagined she was smiling underneath her scarred helmet.

The skyranger set down, and the ramp extended onto the cracked asphalt. The roars of Mutons howling in pain, triumph and rage were everywhere, as was the constant barrage of ADVENT gauss fire. The buildings in the area had taken massive damage and some were even in danger of collapse. The ADVENT line directly in front of them was broken, with three Berserkers decimating the retreating ADVENT soldiers; wrist blades slick with blood.

“Lesedi, get into position; Nataliya, Chan, help me kill the Berserkers,” Carmelita ordered calmly as she took stock of the situation. “Everyone else reestablish that line now!”

“Yes, Overseer!” They shouted as they charged into the street. They were joined by several more ADVENT squads who were rushing to reinforce this position. The Muton soldiers themselves were well established, and Oliver immediately noticed something off about how they were composed.

All of them were in well-established cover, either abandoned vehicles or buildings, but were already different than the Mutons he expected because all of the soldiers had helmets over their faces. They didn’t seem complex, but they were covered up nonetheless. There were also several different kinds that he could see.

There were the soldiers, but there were also some that were holding heavier weapons such as
massive rocket launchers and packs filled with grenades. Behind the Muton lines were the black-armored Centurions, as XCOM had dubbed them, appearing to coordinate the attacks. That was also when Oliver noticed a distinct lack of Muton corpses on the other side.

Carmelita and the two psions wasted no time getting to work killing the Berserkers. Carmelita leapt towards one of the enraged aliens, blasting it in the chest with her alloy cannon, causing it to stumble back, then followed up by charging at the Berserker, alloy cannon raised and unloaded three successive shots directly into the head of the Berserker, killing it almost instantly.

Nataliya performed almost the exact same maneuver, given she was just as modified as Carmelita, but this time lashed out with her stinger, jabbing what he assumed was the point into the spot on its neck, before holstering her alloy cannon, raising her free hand and as she was suddenly engulfed in purple flame, squeezed and psionic rifts of energy materialized around the Berserker and began tearing it apart.

The alien flailed around, before it collapsed to the ground, dead or dying as Nataliya turned her attention to the established Muton army. Chan was less flashy, but far more direct in his own manifestations of psionic attacks. He drew his hand back, energy gathering in it before thrusting forward, sending a purple lance of energy that split the leg of the Berserker in two.

He repeated the same tactic, firing several more lances of energy, each one taking off an arm, another leg, and finally the head. Oliver slid into the ADVENT barricade which was also taken up by the respective reinforcements and began firing his rifle. If he got close enough, he would use his own alloy cannon, but for now the rifle was best.

Now the Centurions were coming up, grunting and roaring in their language as they pointed at the line of Humans. A purple energy shield covered them, and suddenly Oliver found himself under the barrage of its plasma cannon – and he wasn’t the only one.

“Pinned down!” Jesenia sputtered, plasma fire raining down nearby, rendering using her autolaser lethal.

“Same!” Catherine called, despite trying to contribute more to helping the wounded ADVENT soldiers.

“More Centurions are coming up!” One ADVENT soldier called, and Oliver risked a peek to see that they were right. There was an unprecedented six approaching, and it dawned on him that he realized what they were doing.

“They’re targeting us!” He called to Carmelita. “We need to get rid of them!”

“He’s hitting us! He’s hitting us!” She snarled from behind him, and soon she leapt over him to the front and landed directly beside a Centurion and fired point blank into its faceplate, piercing the metal and killing the alien while her stinger shot out of her raised wrist and impaled itself in a gap of the armor of a nearby Muton soldier.

Nataliya clenched a raised hand into a fist and another two Mutons were suddenly engulfed in energy storms that threatened to tear them apart. But the break in fire allowed him to rise and begin shooting. Or would have, had the ground suddenly not started shaking from the sound of explosions.

But not at them. “They’re targeting the building!” Catherine called in disbelief as she pointed towards the Mutons armed with rocket launchers and grenades who had fallen back and were purposefully targeting the building right next to them, firing a steady barrage of explosives. Oliver
frowned, trying to puzzle what-

“More Berserkers!” Jesenia called as six of the red-armored aliens charged into the fray. Two broke off to charge Carmelita, forcing her to leap back while firing almost non-stop and the other four charged them directly. A lance of psionic energy sliced through the head of one, but the others surprisingly simply ignored him and the ADVENT soldiers and it became clear what their goal was.

“The psions!” He called. “They’re targeting the psions!”

Not simply them either, but Carmelita had been specifically targeted as well. She was jumping all around the battlefield, firing her alloy cannon and using her stinger liberally, but while she could appear to handle one Berserker with ease, two was at least enough to keep her occupied, which Oliver was realizing was the whole point.

Whoever was leading these Mutons knew damn well what they were doing. They had expected a fight with XCOM and had a fucking plan to go along with it. But a Muton?

Or more than likely, there was another alien behind this. But a very, very smart one. “We need to get out of here and regroup!” Lesedi hissed into his earpiece, firing her sniper rifle from the roof of a building far behind him. “We’ve got a lot of trouble approaching.”

“Like what?” Oliver demanded as he fired a sustained burst at a soldier, and unfortunately only hit the leg, wounding it but not quite being able to kill it before it was dragged away. “I think we’ve got enough trouble.”

“There are twelve Muton Elites coming,” she hissed. “And some other Muton. Never seen one like it before. I think it’s in charge.”

Elites were not something that they could really handle right now. “Overseer! Orders?”

“We hold here,” she snarled, as she executed the final Berserker after her, splattering her armor in golden blood. “They want to fight us? Let them come.”

The two psions had taken care of their own Berserkers, but their delay had allowed more Mutons to take over and reinforce this street-turned-warzone. ADVENT soldiers were falling every few seconds as Muton fire continued unabated, and the number of ADVENT reinforcements was only getting smaller.

“We need help,” Chan declared in his altered voice as he executed another Centurion, psionic energy flowing off his killing arm. “We need reinforcements.”

“Lesedi! Call more in!” Carmelita commanded as she once more took point, executing Mutons and Centurions at close range, even as the aliens in the back turned a hail of plasma fire onto her, forcing her into temporary cover. The smaller woman’s armor was scorched, cracked and had clearly taken a beating, but she seemed no less determined than before.

“We need help,” Chan declared in his altered voice as he executed another Centurion, psionic energy flowing off his killing arm. “We need reinforcements.”

“ADVENT Command, we need more reinforcements on our position,” Lesedi called. “It appears that the commanding force is behind this attack. Current forces are insufficient to hold.”

A pause as the sounds of battle raged around them. “Copy,” came a male voice. “Redeploying several units to your position. Recalling the Marauder as well.”

“Acknowledged,” Lesedi finished. Oliver remembered that Amahle and her MEC had been deployed to a different part of the city, but he agreed that this was more pressing.
Something in the air caught his eye, but he ignored it, assuming it was an effect of one of the psions. Carmelita shot another Muton in the head while poisoning two more with her stinger which was proving to be a devastating addition to her own lethal arsenal. The roar of more Berserkers sounded in the distance, and he prepared for yet another wave. They only had to hold out a little longer before the reinforcements arrived.

“What the-!” Jesenia yelped as something materialized around her and manifested into a floating mechanical squid-creature. It wrapped its tentacles around her and began spewing a black mist into her face. Anna and Nataliya shouted in surprise as the same kind of creatures materialized around them as well.

He spun around, already reaching for his alloy cannon, and raised it just in time as the Seeker appeared behind him. He fired and it blew apart, splattering him in hot alloy and some alien fluid as the remains fell to the ground. Carmelita had simply grabbed the alien machine as it attempted to strangle her and ripped its tentacles off before finishing it off with an alloy cannon shot.

He was reminded that her enhancements did give her unnatural strength as a lucky side-effect. But before he could begin to help the other XCOM soldiers, the Muton grenadiers fired yet another barrage and with a sudden loud cracking and bending of steel, he realized what they had been trying to do. Sure enough, he looked up to the building and saw it was quickly going to fall down directly on the ADVENT line.

“Fall back!” He screamed as lethal chunks of concrete suddenly began falling around them. He took aim at the Seeker over Anna and fired, blowing it apart and hoisting her back, even as plasma fire flew around him.

The ADVENT soldiers were similarly retreating, and then Oliver realized that Jesenia and Nataliya were still being strangled by the Seekers. “Lesedi! Help them!” He called, trying to pull out his rifle as he realized it might be too late as the building was collapsing around them.

“There’s a Seeker up here!” She yelled back. “I’m trying to kill it now!”

He could spare a look and fired at the Seeker, but it paid him no mind as the gauss rounds missed. The Mutons on the other side were similarly retreating to avoid being crushed under the rubble. Carmelita was closest to the other side and leapt to follow, or at least retreat that way. He wasn’t concerned for her, because Carmelita could easily regroup later.

But despite firing desperately, even as Anna vomited up whatever black fluid the Seeker had forced down her throat, helmet tossed to the side, he watched helplessly as the building collapsed on top of the psion and XCOM soldier, burying them under tons of rubble and smashing the building on the opposite street into a ruined husk.

Down two soldiers already, with Carmelita stuck temporarily on the other side, Oliver was now very concerned that they had walked right into a trap, and worse, it was succeeding.

***

Seattle, United States of America

Even flying over the battle, at the edge of her consciousness, Patricia was able to easily distinguish the unique alien minds before her. It was getting easier to tell them apart now, and as a result, easier to target. What struck her as interesting was how uniform so many species were in how they worked and thought. For better or worse, most humans were unique and motivated by their own desires and fears. But the way their minds worked and how they rationalized their thoughts could
be done in a thousand different ways.

Not so with most species, it turned out, with the exception of the Vitakara and Ethereals themselves, though the latter would stand out anywhere. Muton minds were simple and focused; primitive thoughts like *kill, obey, fire*, and other repeated words. Multi-tasking was impossible for the soldiers, and thus why they were so persistent; their minds were very often taken up by only one single thought or action given to them by someone else. So they were easy to find in their utter simplicity and straightforwardness.

Andromedons, on the other hand, were almost mechanical in their thought processes. They didn’t feel emotion like humans, or at the very least, not as strongly. Their minds were filled with contingencies, plans and tactics, all being systematically updated throughout the battle. It was structured, organized, and clean, which made the domination of them that much simpler and easier to target.

Patricia closed her eyes, a hand slowly clenching into a fist as she drew upon the power and let her focus spread to the rest of the soldiers in the skyranger. Names, strengths, weaknesses, weapons, locations and plans were all instinctually known by all of them. A bond that was impossible to replicate any other way. A true united unit, no more, no less.

“Patricia, we’re coming up on the Federal Way,” Big Sky said over the comm. “Be ready. MEC soldier Cho is being dropped to the north to reinforce the defenses there.”

“Acknowledged,” Patricia stated, all of them rising as one and taking positions instinctively. Sung Cho was one of the newest MEC soldiers, and was currently commanding a Ballista-class MEC. XCOM couldn’t be everywhere, but a MEC would be a significant contribution to the defense of northern Seattle.

The skyranger turned sharply around while descending and now Patricia could faintly hear the sounds of gunfire, plasma, and explosions, occasionally punctuated with the sound of a Human or Muton scream, and an uncountable number of voices shouting names, commands and battle cries. The skyranger settled on the ground with a shudder and the ramp opened before them.

The instant the ramp hit the pavement they were all charging out, already firing at the aliens that were entrenched in the small city. They were close to a major intersection, and all sides had taken positions behind vehicles, buildings and other improvised barricades. Mutons were taking on the forefront of the alien lines, and Patricia sensed more in the parking lot behind them, interspersed with Andromedons who were no doubt commanding from the back.

Mordecai glanced up at the four-story office building and leapt up onto the roof, putting his own genetic enhancements to use. “Taking position,” he grunted as he immediately began sniping from the top. Two Mutons suddenly found their heads blown into beige and yellow pieces, likely regretting the lack of any helmets.

Not that it would have done much good.

Kim Yi began laying down a barrage of laser fire from his pulse autolaser at an entire section of Mutons who’d taken up cover behind a building corner. Creed and Rosario began firing towards the opposite side, the two infantry picking off Mutons who stupidly exposed themselves and wounding others.

Iaroslav and Liliyane stayed close to her as she strode out, not reaching for her heavy autorifle quite yet, wanting to assess the situation first. A cheer went up from the surviving ADVENT soldiers as they saw XCOM charging into battle. Patricia closed her eyes and quickly felt in the general
vicinity of the composition of enemies.

Mostly Mutons, thirty or so just in front of her, only a couple of Andromedons. *Your legs are broken,* she pressed into the minds of the Mutons. *They are shattered beyond repair.*

The command received, she turned her attention to the Andromedons and took over their minds directly. After a quick search of their minds, she sent the command: *Set suit to self-destruct in close proximity to allied units.*

Their organized minds filed the information away and they presumably went away to do just that. Patricia opened her eyes and saw through her HUD that her presence had already manifested results. Mutons were lying on the ground, howling in pain as XCOM and ADVENT charged forward. Mutons were summarily executed and shot through the head, while several booming explosions in the distance indicated that the Andromedons had accomplished their tasks.

Their Medic, Joseph, was quickly tending to the wounded ADVENT soldiers while the rest of them advanced to the alien-controlled parking lot. Patricia already saw more Mutons running in from the connecting streets immediately, before they could get past the intersection, and more Andromedons were coming from the building the parking lot was connected to.

Green plasma fire flew all around them, forcing the advance to a standstill. Mordecai was picking off any Muto foolish enough to poke its head out, but now there were Centurions in the mix. The black-armored Mutons directed the horde of aliens to focus on specific targets. The Andromedons were also issuing orders, and pointing to various soldiers are more Mutons reinforced them.

Patricia noted several Battlefield Engineer Andromedons holding back behind the main alien line. “Firing rocket!” Iaroslav yelled as he aimed at the group of Andromedons taking cover behind a semi-truck, and fired. One suit was blown apart, while the other two were severely crippled and the helmets broken, killing the Andromedons inside.

“Suits coming back,” Liliyane grunted in annoyance as she began firing at the reanimated machine. “Fucking can’t stay dead.”

Patricia raised a hand and once more reached out to the other Muton minds. *Turn on your leaders.* The Command was received instantly and suddenly all the Centurions were being shot in the back, or directly in the chest from Muton soldiers with purple light in their eyes. The fire on the Humans vanished almost instantly as the Andromedons and Centurions dealt with the sudden betrayal.

That was when it suddenly stopped. Out of the corner of her eye, Patricia saw one Andromedon near the back of the building tapping buttons calmly on his wrist, and *this* Andromedon was different even from the Battlefield Engineers. The suit seemed larger, had more subsystems attached to it like a dedicated chemical dispenser or flamethrower, as well as heavy weapons attached to the shoulder. An odd alien symbol was etched onto the yellow helmet.

This must have been some Andromedon commander, and the moment he stopped tapping, all of the Mutons suddenly started screaming. Harsh, howling wails filled the air as the Mutons stopped firing at the Centurions and Andromedons and returned fire on an unexpecting XCOM and Human force.

“Ah!” Iaroslav shouted as a plasma bolt hit him right in the leg as he had moved to take a forward position, mistakenly believing it was safe. Joseph quickly rushed over to him in the midst of the firefight and pulled him away to fix his leg, while she tried to figure out what was going on. This shouldn’t be possible!
Fine. She hissed in her mind, narrowing her eyes and extending her reach again. Then burn. The hottest fire she could imagine, she sent towards the Muton force and expected them to collapse in pain.

But they didn’t. They stood and howled, all the while shooting plasma weapons at them. But now the shots were erratic and she knew she was having an effect on them, but it for some reason wasn’t working.

“Patricia?” Creed called as he killed a Muton stumbling forward, suicidally firing as the fire rushed through his mind.

“I know!” She yelled back, deciding to try a different tactic. So, the Andromedons had done something to them. In that case, they could fix the problem. Kill the Mutons. She pressed on the closest Andromedon minds, and she felt them give way…all except for one. The commander, it had to be.

It should have been impossible. She knew the command had been impressed onto all of them, but instead…for that one, it was just being…ignored. She frowned and tried looking inside the mind, ignoring the inaccurate plasma around her. All she saw was a jumbled, scrambled mess that didn’t make any sense, even as she pushed deeper. Images, feelings, sounds, sights, she couldn’t grasp anything. No wonder it wasn’t taking her commands.

Unless that was the point?

In any case, the other Andromedons had gotten the message, and were turning their suits on the Muton army. One executed three in quick precision; another turned an entire section to acid; one more turned a Muton into an acid-burned husk before executing the two beside it. Ok, Patricia noted with a nod as the battle turned heavily in their favor, all enemy fire effectively stopped due to the Mutons being unable to fire properly, We’re fine.

And then that damned Andromedon leader in the back pulled up some kind of haptic display on his wrist and a few seconds later, all the other Andromedons froze briefly, and then turned their attention back towards the Humans.

Impossible! Patricia scowled in disbelief. That can’t be possible!

Regardless of what should have been happening, the fact was that the Andromedons were now firing against them. She focused on their minds and repeated the command. That was when she realized that it had worked and was working. But something had taken over the suits themselves and had locked the pilots out.

She couldn’t mind-control a machine, and that damn Andromedon commander had known that.

“We might have a problem,” she growled, reaching for her autorifle. “They’ve taken direct control of the suits. I can’t do anything to stop them.”

“What are our orders?” Creed shouted as he killed a few more Mutons and began focus-firing an Andromedon with Kim.

With her psionics apparently negated, she would have to win this the old-fashioned way. With guns, bullets, and blood. But not entirely, of course, her allies could certainly benefit from her abilities. “Kim, Creed, focus on the frontal Andromedon force,” she began. “Mordecai, target that leader in the back. Liliyane, Rosario, help suppress the left flank of Andromedons!”

“Yes, Overseer,” they shouted as they received ADVENT reinforcements of their own running in
behind them. The battle continuing in earnest, they quickly entrenched themselves. But command needed to know what was going on.

“Commander,” she said once she had established a line to him. “We have a problem.”

***

The Citadel, Mission Control

The Commander had faced quite a few challenges in his career. Very few people had given him pause and none a reason to legitimately fear them. Even the Ethereals were a force he was confident he would be able to overcome. He didn’t put see purpose in giving problems any more time than they deserved. People who opposed him were simply issues to be resolved later, armies were tools that could be sabotaged and systematically decimated. Weaknesses of opponents could simply be exploited. Every challenge he faced never gave him much pause, because he was confident he could develop a solution to it. The difficulty didn’t matter, only the knowledge of if it was possible.

Until now, it seemed.

He had never fully believed Aegis’ tales of Battlemasters that could take entire worlds single-handedly. Perhaps in specific circumstances, but not regularly. The Mutons had been simple primitives, so perhaps that was a simple explanation. But no, it seemed like Aegis had not exaggerated in the slightest.

Never in his life had he ever seen anything like the Battlemaster systematically slaughtering an army composed of fifty thousand soldiers single-handedly. Nothing could slow him down or kill him. Projectiles might as well not exist; missiles barely slowed him down; tank shots were little more than irritants; armor was little better than paper and tactics were a laughable proposition.

The twelve-foot tall Ethereal was fast enough to execute entire squads in seconds and make a mockery out of any advanced technology. He was a demon of the battlefield, speeding across it with inhuman speed and killing anything that stood in his way.

And he legitimately had no idea how he could stop him.

Airstrikes? Too imprecise for one alien, and would probably do nothing even if they did hit.

Overwhelming numbers? If fifty thousand wasn’t enough, then more than that would just be throwing soldiers away. Granted, he hadn’t killed the entire garrison, but with over a fifth of the soldiers dead with no progress, that didn’t paint a positive picture.

Nuking the city? He wasn’t even sure that would work against the Battlemaster. Or at least, figured the Battlemaster would be smart enough to get out of there quickly.

What else was there? Sending in an XCOM team? Dropping a building on top of him? Very unlikely to do anything either. There was no way he was sending in more soldiers now, especially since the other defenses were...not going well. And dropping a building might at best trap him, assuming he was dumb enough to get trapped in a building in the first place, and the airstrikes actually hit.

Laura’s face during the entire conflict had gone from confident, to surprised, to concerned and finally ashen as she’d watched the Battlemaster personally decimate ADVENT’s army. He couldn’t truly blame her; this should have been impossible, but they had to recognize that it was very much reality now. It wasn’t as though she hadn’t tried.
Smaller teams. Blatant numbers. Tanks. Bait. Smaller teams were killed in seconds; larger numbers only added to his kill count; tanks barely slowed him down and he walked into bait because he knew he wasn’t in true danger.

And that wasn’t including how the other defenses had, almost universally, not gone according to plan, especially with this new update from Patricia. “What do you mean ‘It’s not working?’” He demanded as he looked on the holomap where her team was.

“I mean I can’t control them!” Patricia hissed. “Whoever is leading this attack knows how to counter telepaths specifically. They did something to the Mutons, and took direct control of the suits. I slowed them down, but we’re barely holding out at best.”

“Hold your position and update if the situation changes,” the Commander ordered, scowling as he looked to the north. “Laura, reinforce the left flank before Mutons break through.”

“I see it,” she muttered tonelessly. “Ordering the twenty-fifth unit to reinforce.”

As she gave the order, the Commander looked at the other situations. Portland was the only place where he actually saw legitimate progress. The Vitakara-majority army was well-equipped for the standard ADVENT military, but were not prepared for XCOM soldiers of any kind. Sierra and Zara were leading their own charges, weakening the other alien offensives, and the Goliath was stubbornly holding its ground, no matter how much plasma fire was thrown its way.

However, LA was bad. He had underestimated the Muton force by a dangerous amount. Whoever was leading it actually knew how to use the Mutons, and now the Commander could see how dangerous they actually could be. He was legitimately considering retreating if the situation didn’t improve. Carmelita was cut off, one of the psions was dead, and every XCOM soldier was marked for death.

He had been played, he saw that now. The Battlemaster, for that was who he assumed was responsible for the offensive, had predicted his likely actions and he had seemingly performed them to the letter. It was very clear how easily he’d taken the bait.

The Battlemaster had known that, after Japan, Andromedons were considered one of the most, if not the most, dangerous enemy, so what was the best counter to them? One of his best XCOM teams, and his most powerful psion, which happened to be Patricia. And of course the force that awaited them was just so happened to be able to negate Patricia’s telepathy, putting them in a much more dangerous situation.

Not unsalvageable. Patricia was going to have to be more creative, but he did think the battle could still be won, although not without more casualties and time. It was going to be a grueling finish at best.

The Battlemaster had also known that, thanks to Japan and previous battles, the Mutons were considered the weak link, so naturally, it wouldn’t require an overly dangerous XCOM squad, or at least not a completely veteran one. But now they were in danger of losing LA because he’d relied on his assumptions on what could be expected.

Then there was Portland, and the Battlemaster had expected him to send a middle-tier XCOM squad, which was more or less what he’d done, but perhaps where the Battlemaster had erred was that a middle-tier XCOM squad with no obvious counters easily beat a Vitakara force. Which was maybe the only bright spot here.

Then of course, the Battlemaster had saved the most fortified city for himself, and the Commander
could only presume that it was for the sole purpose of sending a message: *You cannot stop me.* 

At this moment, he could believe that.

“You need to retreat from San Francisco,” he told Laura firmly. “All you’re going to do is lose more soldiers.”

“Not yet!” She scowled. “Not even he can last forever! He isn’t invincible! *Something* can kill him!”

“I agree,” the Commander nodded, keeping his voice even. “But do you really want to find out what that is by sending more men to their deaths? What other possible ideas do you have? You can’t kill him with what you have!”

“You want to sacrifice San Francisco because of *one alien*?” She demanded, glaring at him.

“That *one alien* has killed a fifth of your fifty-thousand garrison!” The Commander shot back, allowing some heat into his voice. “And it will be *five* fifths if you let your pride dictate your tactics! Retreating is *not a bad decision.*”

“I…” she shuddered. “One more try. If that fails, I’ll order the retreat.”

“Commander! Multiple attacks are being reported in LA!” An analyst called frantically. “Hesperia, Riverside and San Clemente are all falling under Muton attack! They say there are Elites in the mix!”

“Fuck,” Laura snarled under her breath. “They have us surrounded. And we have only a few reinforcements in the inner city. We sent most of them to reinforce the attacking forces. If they break through…”

“They are *going* to break through,” the Commander stated, seeing the grim reality of the situation. “How did they do that without *any* of us noticing? Armies of that size should have at least warranted UFO transports unless…”

It dawned on him that that actually wasn’t needed. Gateway transports were slow and vulnerable, Aegis had said, but deployed far enough away from the battle, and while he’d been focused on the frontal attack, they’d landed at specific points and prepared their strike force to attack. No UFO fleet required.

They’d been outplayed by fucking Mutons.

“Gateway transports,” he said to Laura. “They can receive an unlimited number of reinforcements unless we destroy the UFOs. Have your pilots survey the area and blow them up. That should distract them and allow us a retreat.”

“Retreat?” She balked. “First San Francisco and now LA? Do you realize-“

“Yes,” the Commander snapped. “And I also realize that if we stay, we will be sacrificing our soldiers for *nothing.*” He took a breath. “I have no authority over ADVENT, Commander, but I will withdraw XCOM before I lose too many of my own people. Retreat and I will have them clear a path out, but I won’t leave them to die.”

“Let’s wait before potentially abandoning a crucial city,” Laura suggested, raising a hand. “If we can hold…they might retreat, especially if we kill their Gateway transports. The battle isn’t lost yet.”
“Fine,” he relented, looking down at the holomap. “For now, but if the situation doesn’t improve, I’m not going to have much of a choice.”

***

Los Angeles, United States of America

“They’ll be coming this way!” Oliver called, as he led what remained of the XCOM and ADVENT forces down the street. In short, they were in…pretty bad shape, truth be told. Anna was still having trouble breathing, Lesedi had injured her leg and was limping alongside them and Chan was slowly becoming exhausted.

Oliver raised a fist as they came to a stop in front of another intersection. “Carmelita, you still coming?”

“Affirmative,” came the voice into his helmet. He’d attempted contacting Carmelita immediately after they’d somewhat recovered and thankfully she’d still been alive, albeit now stuck on the other side. She was trying to get an accurate count or something before she came back. “I’m almost to your position.”

“Oliver, this is the Commander,” a new voice interjected. “You’ve likely got a Muton force coming up behind you and from the leftmost intersection. Position accordingly.”

Oliver nodded, even though nobody could see it. “What should we expect?”

“Intel is not exact,” the Commander warned. “But there are Elites, soldiers, and Centurions. Probably Berserkers as well. Amahle is almost to your position, but we might be pulling you out if the situation worsens.”

“Copy,” Oliver grunted, casting an apprehensive glance around the area. Hm. More buildings, no established cover…they’d have to make do.

“Did you get that?” He muttered to Catherine, who was checking Anna’s vitals.

She nodded, while frowning at Anna’s throat. “It sounds bad. Pulling out…if we got hit hard…” he could tell she was stressed a lot more now because her French accent was heavily pronounced compared to earlier in the fight.

“I know,” Oliver sighed, motioning the ADVENT Officers over. “But we’re making a stand here, like it or not. I don’t think they can try dropping another building on us without catching our attention.”

He turned immediately to the other Officers. “Fortify your soldiers in the buildings. Intel suggests we’re going to get hit from behind and from the left. You know the drill I presume. Snipers on roofs, gunners up front and rocketeers in the back.” He paused. “And use your soldiers a little better. Have the gunners focus on suppressing the masses and use everyone else to target the specialized units.”

“Yes sir,” one of the Officers said, and all of them immediately ran back to their squads and began issuing orders. “Lesedi,” he continued, turning to the weary sniper. “Get up top again. See if you can get eyes on anything.”

“On it boss,” she nodded, and began climbing up the wall of the four-story building behind them. Right, he recalled, she had the modification that allowed her to climb walls, that was why her gloves were almost transparent. Some kind of gear modification to accommodate that, he
supposed. But as long as she got up there, he was fine with it.

Oliver smashed the window to the building and took a position in the corner which would let him shoot from both sides. Catherine, Anna and Chan also took up positions inside the building, just waiting for the aliens to come back. “Heads up!” Carmelita suddenly called over the comms and without warning she jumped into the middle of the street, almost making him fire his gun in surprise.

She looked completely and utterly terrible. Her Aegis armor was scorched, scratched, and falling apart. Her right arm had pretty much no armor left and she was missing her left gauntlet. Most of her shin armor looked on the verge of breaking, and her torso also looked bad, but it appeared to only be superficial damage. The giant gash through her helmet visor was by no means superficial though.

“There’s a lot of them coming,” she warned, pulling off her ruined helmet and shaking her short hair free. Interestingly enough she didn’t look tired in the least. Her golden-rimmed eyes held only fury and hate. Despite looking like she’d just gotten the shit beaten out of her, she only looked pissed off.

“Are you alright?” Catherine asked, rushing to her, med-kit in hand. “You look-“

“Fine.” Carmelita snapped, scowling as she reloaded her alloy cannon again. “Iron Skin. Best thing XCOM ever made. Don’t think these things can really hurt me, but they can sure slow me down. They want to kill all of us. This was a trap. They were expecting XCOM here.”

“No offense, but that gem of wisdom is pretty much common sense,” Anna managed, before breaking into a cough.

“Of course they expected us! They’d be idiots not to.”

“Clarification,” Carmelita growled, shooting the woman a scathing look. “Their leader knows how to fight us. And I’m pretty sure it’s a Muton leading them. Lesedi, remember that bigger green one? I’m pretty sure it’s a commander of some kind.”

“I didn’t know Mutons were that smart,” Chan commented. “Strong, yes, but not-“

“Yeah, I didn’t either,” Carmelita interrupted. “Ethereals probably did something to it. But I’m not underestimating it again. They’ve got Elites, Berserkers and Centurions coming our way-“

“Contact!” A voice shouted in the distance, and ADVENT soldiers began firing into the street leading into the intersection.

“Mutons coming from the left,” Lesedi updated. “Not taking cover, and no Berserkers yet. Twelve groups of four, one Centurion per group. Targeting now.”

A gauss sniper shot rang out and Chan turned his attention to down the street, as did Anna, raising her heavy autorifle in the direction of the thunderous boot steps that were reaching his ears. Carmelita leapt to the opposite end of the street and took a position near the corner as the Muton soldiers charged forward, pushing derelict cars as portable cover, Centurions behind them.

Oliver aimed for the wheels of the vehicles and fired, and they popped and deflated within seconds. He turned his rifle to the Muton pushing it and hit it several times, but it still tried, roaring in pain as he kept filling its body with gauss rounds. It finally collapsed, dead, and Carmelita began moving into the fray, a chilling smile on her face.

The Mutons seemed stunned that she was still alive, and more to the point, still killing them. Her stinger snapped out of her wrist like a pale snake, impaling itself in the necks of Muton soldiers
while she executed others at close range with her alloy cannon. Plasma hit her arms and torso, but it seemed to do little more than blacken her skin and armor, only eliciting a grimace as she systematically stopped the Muton advance.

On the left side the rest of XCOM was holding back the Muton offensive who were scrambling into cover, even as Lesedi was picking them off or they were being ripped apart by Anna’s weapon or Chan’s psionics. The North Korean was once more sheathed in waves of purple energy, and was angry. Oliver could feel it rippling off him in waves as he directed his destructive abilities at the hulking aliens, ripping them apart with deceptive ease.

Catherine was braving the midst of combat, mostly on the ADVENT lines who were rushing to take advantage of Carmelita’s attack. Quite a few were bleeding on the ground, and she was attempting to either drag them somewhere safe, or patch the wounds then and there in the heated battlefield. Oliver now realized he was doing very little back in the building. Carmelita was receiving too much heat now, he needed to do something.

He pulled out his alloy cannon and charged across the street, relying on Lesedi, Anna, and Chan to keep the left flank secure. Carmelita was actually backing up now, apparently seeing the new wave of two dozen soldiers rushing up. She took cover behind the car, and he behind the corner of a building.

The roar of a Berserker came from behind the Muton lines and Carmelita pursed her lips. “Hold this line,” she stated with crystalized ice in her tone. “I’ll handle the Berserker.”

“I’ll do my best,” he promised as the red-armored alien charged around the corner, and towards them. Carmelita jumped on the car and thrust her arm forward, the stinger lashing out, presumably stabbing it in the neck before it retracted to her wrist. She followed it up with an alloy cannon blast to the face, shredding the helmet, but not killing it.

“Come and get me!” She roared and leapt backwards, and luckily the enraged alien complied and charged after her. But now Oliver was left with the horde of Mutons who were surging forward. The car positioning actually worked to his advantage as it was easy to kill several Mutons who tried to take cover behind it.

Alloy cannon shards ripped into the armor, downing, if not killing them outright, and the Centurions were noticing him and holding the soldiers back. Now he found himself on the receiving end of the suppressive plasma cannons of two more Centurions. Plasma rained all around him, far too close for comfort.

“I’m pinned down!” He called, reaching for a grenade.

“We’ve got Elites coming up the left flank,” Lesedi warned. “Along with more soldiers and Centurions.”

Fucking wonderful. “Berserker killed,” Carmelita updated, and he saw her charging back into the fight. Her stamina was truly impressive, even if it was the result of genetic modification. “Moving to assist.”

Then he heard the sound of clamping metal on asphalt. “MEC soldier Amahle arriving to assist.” The Marauder-class MEC informed as it charge in from the right, flamethrowers at the ready. “Providing support.” Her wrists were raised and blue and orange flames spat out of them and she sprayed them in such a way as to engulf the entire street. Mutons and Centurions howled in pain as they were cooked inside their own armor.
The ten-foot MEC continued into the firestorm she’d started, shooting cones of flame at Muton squads who were scattering to the wind now that she’d come to assist. Carmelita took advantage of the chaos and leapt into their disorganized lines, poisoning and executing every Muton she could see…until she leaped back to the XCOM-ADVENT line.

“Elites!” She cursed. “And more Berserkers!”

“We’ve got a problem over here!” Chan called, and Oliver glanced to see that the entire XCOM line was being suppressed by the massive plasma cannons the Elites carried. They were split, two Elites per XCOM soldier, in essence pinning them in one place while the soldiers and Centurions advanced unhindered. To step out was to get annihilated on site. Even Lesedi was coming under fire, even as she dropped soldier after soldier.

“Mariner Team, stand by for evacuation,” the Commander informed. “ADVENT is coordinating a retreat of the city. Wait for Lightning Sky to pick you up. Under two minutes.”

Based on how quickly the Mutons were closing in, Oliver wasn’t sure they had that time. “Copy!” Carmelita yelled as two Berserkers charged around the corner and targeted the MEC. Amahle aimed her wrists at one and it was engulfed in flame while the other practically tried tackling her, and was summarily thrown into a wall, but disrupting her attack.

The Elites came right behind it, and began shooting at Amahle, who was not a small target. Carmelita assisted in finishing off the burned Berserker, but as Amahle was dealing with the remaining one, the half-dozen elites were firing every plasma rifle into her and it was taking a massive toll. The chassis sparked and melted under the green plasma, and one of the tanks was pierced by the Berserker and exploded, dismembering the alien, but damaging the MEC immensely.

“Critical system failure,” Amahle updated with mechanical coolness.

“Fall back!” Carmelita yelled as the skyranger roared overhead and set up on the street behind them. “Run!”

ADVENT was also taking the cue to get the hell out of there. Oliver tossed his grenade at the wounded Berserker as he ran and the explosion blew its leg apart, and Carmelita finished it off with an alloy cannon blast to the face. A yell from Chan caught his attention, and he saw the psion thrust his arms forward, sending out a light shockwave that briefly caused the Mutons to stumble, which gave them all the opportunity needed to escape.

Or almost all of them, anyway. As the Elites advanced, their focus on the MEC didn’t stop. They targeted the legs, busting and melting the joints beyond all repair as Amahle simply kept attempting to fight back, drawing the fire of the Mutons as the remaining XCOM soldiers retreated into the skyranger. Once a nameless Elite blasted the helmet of Amahle, the MEC went still and silent, only leaking oil and flammable liquid.

But she’d bought enough time for XCOM to escape, and Oliver watched with dismay as they flew up, the ramp closing in front of him as the aliens continued their conquest unchallenged. If they were retreating, it meant that the battle for Los Angeles was lost.

***

San Francisco, United States of America

One throw of his arm and a line of ADVENT soldiers were thrown back by a rippling psionic wave
and slammed into the unyielding stone walls behind them. They crumpled to the ground, not dead, but he would finish them off soon enough.

The Battlemaster leapt towards one Officer that was desperately ordering a retreat and cut him down with a downward slash, immediately transitioning to three quick slices that killed and dismembered the soldiers standing right next to him. One gunner was telekinetically pulled towards him and met with a blade to the heart, and the Battlemaster clenched an opposite fist, briefly lifting three more soldiers and crushing their windpipes, before tossing them down the street.

He had lost count how many had died already, yet they still kept coming before him to die. Everything was attempted, and everything failed. They failed to grasp that they could not kill him. Or maybe that was changing. The soldiers appeared to be mobilizing some kind of retreat. They still kept firing at him, but with far less frequency than before.

He began marching up the street, paying little mind to the gauss bullets shot his way. Up ahead was an ADVENT encampment built into the street. Here, these soldiers were entrenched; rocketeers were in position and gunners began spitting hot rounds towards his position.

But they were not moving to attack. Indeed, soldiers were moving away from the barricade and the ones that stayed were clearly hoping to buy time and slow him down.

It was all he could do not to laugh. Instead he let the tip of the bloodstained blade rest on the ruined concrete and waited for them to unleash whatever defenses they had left. Gauss rounds flew from their cannons and rifles and rockets from their launchers, even as they knew that the three rocketeers they had would be virtually useless.

The Battlemaster simply raised a free hand and the air shimmered before him. Caelior had taught him this trick once, and it appeared to do the trick.

All of the projectiles were suddenly stopped in mid-air, caught by the telekinetic barrier, and the Battlemaster watched with amusement as they continually filled the barrier up with small pieces of metal. But he was tired of waiting, and so kept walking forward, the barrier moving with him. The entrenched soldiers were frantically trying to find a weakness in the barrier, firing at his legs, arms, and even trying to ricochet rounds off the ground.

Rocketeers attempted to reload their launchers even as he stopped ten feet from the barricade itself and decided to end this farce. He did find it admirable that despite facing certain death, they were still attempting to stop him.

With another free hand he extended it towards the entrenched soldiers, at a minimum of twenty, and yanked back. The soldiers behind the barricade were slammed forward into it, the ones to the sides found their rifles yanked out of their hands, and the rocketeers tumbled to the ground. Even the ones near the back were thrown off-balance by the telekinetic grab.

The moment that happened, the Battlemaster dropped the barrier and charged towards the left side of the barricade, at what would likely appear to be the speed of light to the Humans.

He stabbed one soldier through the chest and transitioned to a slash within seconds, killing two more. With a free hand he focused on yet another human and squeezed, turning her head into paste. The final soldier he lifted up with a lower hand and brought down upon the bloody tip of his greatsword as he moved behind the barricade to kill the remaining soldiers.

To his mild disappointment, most of them were retreating in earnest, while only three gunners were
left, firing wildly at the massive target before them. He charged towards one and killed her with a quick slash, charged to the next and repeated the decapitation. He executed the last one the same way, pleased that he’d killed them all before the corpse of the first gunner hit the ground, heads and bodies landing in different places.

He turned to begin hunting the remaining soldiers that were running away, but paused as the sounds of chopping wind and loud engines from the sky caught his attention and he saw six helicopters coming at him from all directions. Sacrifices to slow him down most likely, allowing the survivors to flee while they could.

He did not begrudge them. There was little shame in retreating from a superior foe. Flourishing his blade at the machines in the sky, he prepared to kill them just the same. They spat more bullets at him from embedded guns which turned the area around him into a sparking mess. These were certainly a higher caliber of weapon, as the impact did force him to take a step back, and multiple angles of attack from high-powered gauss cannons might unbalance him altogether.

But they couldn’t keep up with him. He charged forward to two of the helicopters, all of which were lowering to hover just above the four-story buildings for better shots, and threw his greatsword towards the cockpit of one, extending all of his hands to focus his telekinetic power on the one next to it.

He had no intention of bringing it down. He lacked the power to do so, but all he had to do was make it stop. His telekinetically guided blade pierced the glass of the first helicopter, killing the pilot instantly, causing it to veer away and crash into the building next to it in a shower of metal, stone and bodies. The helicopter blades on the other vehicle suddenly froze, and the machine fell to the ground like a stone, unable to fly and it impacted the ground with another explosion that killed all inside.

Fifteen seconds. And now the other helicopters were approaching and firing, and underneath them were at least twenty more soldiers that skidded to a stop as they saw him. Perhaps they had thought this was a retreat, but now found themselves exactly where they didn’t want to be.

“Retreat!” One of them called out as the helicopters began spitting more bullets at him. The Battlemaster ignored the soldiers as he saw they run into a nearby building to the right, he would deal with them after he killed the machines.

He extended a hand to the downed helicopter and his greatsword flew back into his hand as he turned to face the helicopters. They wanted to sacrifice themselves to protect their comrades? Then he would oblige them and saw no reason to waste time, and repeated the greatsword throw at one of the cockpits, impaling the pilot instantly.

It crashed into the helicopter next to it and both fell to the ground, damaging the building itself and killing a few unlucky soldiers on the ground who hadn’t yet entered the building, while he telekinetically grabbed one of the ADVENT corpses around him and tossed it at the blades of the helicopters. It was enough to not only chop the corpse into pieces, but damage the blades themselves, and the helicopter slowly crashed into the ground, ending with a large fireball.

The last one actually began to pull back, but the Battlemaster had no intention of letting it run, and simply stopped the helicopter blades and watched it collapse onto the bloodied pavement which soon became scorched as yet another explosion rocked the street.

He paused, recalling the greatsword to his hand as he turned to the building the soldiers had gone into. Curious. Not retreating exactly, not running, but fortifying. Inside a building. Where they couldn’t possibly kill him. Clearly a trap, perhaps they would lure him inside before trying to
collapse the building on top of him?

His lips parted in a humorless grin under his helmet. Fine. He was curious if they were as predictable as that. They appeared to not know he had been fighting for centuries, and the concept of destroying a building to trap him was not a new one. He approached the door and kicked it in, shattering it as he knelt under the human-sized entrance and stood once more to his full height as the soldiers inside began firing.

Luckily the room itself was high enough so he could act unhindered, so he might as well take advantage. He took a reverse grip on his greatsword and threw it towards an Officer at the end of the room, which appeared to be a furniture store of some kind, and impaled him in the throat while burying the sword deep into the wall.

Their gauss weapons couldn’t hurt him, and so he slowly walked through the room, pulled soldiers into his hands and killing them with whatever he could find. Many had their heads slammed onto pointed furniture which cracked their skulls like eggs; others he killed telekinetically with a gesture and application of force; more were killed on his sword when he finally reached it.

The entire weapon was designed to kill, and that was why the hilt, crossguard and pommel all ended with a sharp spike. He picked up a nearby ADVENT Officer and dragged her to the greatsword buried in the wall still, and slammed the side of her head into the right crossguard, shattering the weaker helmet with a crack.

While blood seeped out of the now-limp body, he repeated the same attack with another ADVENT soldier who’d gotten too close, killing him with the opposite side. At the same time, with a free hand he yanked the greatsword free and charged towards a duo of soldiers and killed them with a single swipe.

Not all the soldiers were dead, but it was apparently enough for ADVENT as the building suddenly shook and an explosion hit one of the corners. Another one hit a few seconds later and the remaining humans were thrown to ground. One was knocked out, presumably, and the other two apparently realized what was happening, but more explosions prevented them from standing straight.

Unsurprising that the Humans were willing to sacrifice their own to try and kill him, but they were likely desperate now. Unshaken and unafraid by the trembling ceiling and rocking floor, he strode over to the soldiers and grabbed them by the first limb he could reach and made his way outside as a missile started the collapse of the building behind him.

Unwilling to risk being trapped, he charged out, and to the left as he saw the building collapsed behind him, crumbling into stone, steel and throwing up a wave of dust. He tossed the two soldiers onto the street, surrounded by their dead and mutilated brethren. He would kill them, but not then.

They seemed stunned they were still alive, coughing and looking around in disbelief, and up at him while they stood. He brandished his blade. “Defend yourselves.” He commanded and it dawned on them that they were still going to die, but facing a Battlemaster instead of crushed under stone. The left one grabbed a rifle and unloaded it on him, while the other reached for her pistol and also began firing.

His armor sparked as the projectiles made new scratches in the metal, but he saw no reason to attack yet. The woman’s pistol clicked and he flashed forward and stabbed diagonally upward through her throat, the blade puncturing out of the top of her helmet, killing her instantly. He pulled it out and swung in a dizzying arc, decapitating the man beside her.
Clean and quick kills, exactly what they deserved.

Curiously enough, the street was silent, and the ADVENT soldiers in the distance were officially in full retreat, shouts in all directions colored with fear and desperation. If they were truly retreating now, he would let them go. But until the city was secure, he had no intention of sparing any soldier he came across.

With a flash and flourish of his greatsword, he marched off to go hunting.

***

*Portland, United States of America*

“Down!” Sierra yelled as an ADVENT soldier was suddenly sniped in the head and collapsed onto the pavement. She ducked behind a burned-out car and reloaded her weapon. *Snipers*. Which meant they were either getting too close to established positions, or the aliens were getting a *lot* of reinforcements.

“I’ve got my sniper looking for them,” a Captain informed her as he slid into cover beside the front line of ADVENT and XCOM, even as more Vitakara were fortifying the end of the bridge. “What’s the plan?”

“I’ll try and draw their fire,” Sierra said, risking a peek out. “I can take some hits. Matthew! Give me some cover!”

“With pleasure!” He called, standing up and miming lifting his hands as purple energy flowed around him. The entire line of Vitakara was suddenly lifted into the air, incapacitating and providing some cover against the snipers. Sierra leapt over the car and began dashing towards the end of the bridge, firing at the now-exposed Vitakara.

One Borelian was killed by her rifle, and the rest were executed by the hail of ADVENT fire from the soldiers. Sierra practically slammed into the corner of the bridge and Matthew let the floating corpses and junk in his hold fall to the ground. Sierra wasted no time and began shooting the surprised Vitakara who were now attempting to reposition.

Two Vitakarians were killed by rifle fire, and three Borelians were wounded trying to get away. She grunted as he felt her arm get slammed with something hot and saw her forearm was hot with green plasma, forcing her to pull back into cover as the green faded slowly.

“Sectoids!” Someone called, and Sierra risked looking out to see a dozen or so Sectoids running up, their augmented black arms indicating they were Leaders. Curiously enough, no one could accurately say what these aliens could actually *do*, since all of them had been designated priority targets and killed almost on contact.

Unfortunately, they were probably going to find out now.

The alien forces were well-entrenched at the end of the bridge, taking cover on roofs, buildings and their own constructed alloy barricades as they began firing back against ADVENT in earnest. Most of the Borelian soldiers were concentrating all their fire on Matthew, and the Sectoids were now utilizing their own abilities.

She fired at one that was standing up, with purple energy beginning to surround it, and to her surprise it seemed to hit a barricade, and now she saw a faint distortion, similar to the one Matthew had erected earlier. A personal shield up, it raised the wicked-looking plasma cannon arm and fired at the front line.
Two shots missed, but one hit a reinforcing soldier in the back and flung him to the ground. Mark was close behind, and tried helping the wounded soldier to get back to cover, when the Leader chittered at it and sniper fire suddenly hit the area around Mark, and the XCOM soldier himself. Aegis armor could take a lot, but not even it could survive concentrated and coordinated sniper fire and after the helmet cracked under a flurry of plasma lances, the body went still.

It had happened in seconds, with nothing any of them could have done. Sierra gritted her teeth and renewed her assault on the front-line Sectoid, which had been joined by four more of the Leaders, who were projecting similar barriers in front of them and shooting plasma rounds at the ADVENT line, which was more or less neutralized.

Sierra pulled out a grenade and rolled it under the feet of one Leader who looked down, chittered, and was suddenly ripped apart by the explosion of shrapnel. It seemed the barriers only worked one way. Good to know.

Plasma suddenly rained down upon her position again, and she decided she might as well test the barrier and unloaded her rifle onto the nearest Leader she could. It spun to her with some surprise in its orange eyes, but didn’t waste time firing at her either, though it wasn’t very accurate. Behind it came another leader also emanating psionic energy, and it motioned in her direction.

Nothing seemed to happen at first, then she was wracked by a splitting migraine so bad she collapsed to the ground, rifle chattering to the ground as she grabbed her helmet, wanting the world to fade around her. It was like someone was taking a hammer repeatedly to her brain, and on some level she knew it was a psionic attack, but she just wanted the pain to stop.

The ground around her shook, and she thought someone was calling her name, but the migraine abated for a minute and she fixated on the alien that was causing her pain, and did perhaps the stupidest thing she could have: Charged at it. But she didn’t care, either she was going to go insane, or die if the fucking alien kept affecting her mind.

She barely paid attention to the other Leaders who chittered in surprise as she charged past them, aside from slamming the butt of her rifle into the head of one and firing an entire clip into the face of the Leader debilitating her, blowing the face into a gray and yellow stain. The migraine didn’t vanish instantly, but it did gradually get better and she fell into cover behind a silver barricade, and the Leaders realized they were in trouble.

She fired at one in the back, sending it sprawling forward, dead, and began focusing on another one when a direct plasma shot from a flanking Vitakarian soldier hit her arm, practically shattering the armor. Another bolt hit her skin and she looked down at it, expecting to see the arm gone and waiting for a flash of pain.

But it didn’t come. The green plasma sizzled on her arm, but she barely felt it. The Vitakarian seemed astonished she was still alive, and so she killed him with a burst of gauss fire to the face. Matthew had evidently taken an opening as well and had one arm extended to the group of Leaders attempting to reposition, and clenched his hand into a fist.

Their heads suddenly exploded in bursts of yellow and gray gore, and the headless corpses fell to the ground and Sierra shakily rose to a kneeling position, most of the migraine gone, and half of her armor destroyed. Iron skin. Best thing XCOM ever made.

She peered up at the top of the buildings were the snipers were established, a mixture of Cobrarians and Vitakarians, and fired. She hit one Cobrarian in the…neck? She supposed it was, anyway, and then forced the rest into cover as Matthew also took the initiative, sending a wave of energy towards the aliens that knocked them back or destabilized them.
One Vitakarian sniper was taken out by an opposing sniper, and now ADVENT was taking the frontwards alien barricades, and focusing on the snipers themselves, and now the rightmost Vitakara were focusing on her. Sierra scowled and turned her weapon on them, now wanting to test the limits of what exactly she could do.

She leapt over her cover and charged to the Vitakara line which seemed surprised at her frontal attack, but still attempted to fire. Plasma scorched her armor, but she felt nothing yet. One Vitakarian she executed instantly and grabbed the other one, easily overpowering him and forcing him to act as a body shield.

Or maybe it was a she? Sierra didn’t care as it tried to fight back, but the genetic modification had made her much stronger than the alien, and it did little more than annoy her as she began advancing on the flanking Vitakara barricades. They actually seemed hesitant to shoot her, which was interesting, but worked to her advantage and she fired her pistol at them, knowing firing a rifle properly was impossible.

Once she was close enough, she blew the brain out of her hostage and threw its corpse at the Borelian and fired several times quickly in the head. His friend fired directly into her chest, being absorbed by the armor, and she killed him with a few quick shots. She glanced around her…twelve left, and ADVENT was beginning to reinforce this position as Matthew led the attack on the other side.

Covered in plasma scoring, soot, and alien blood, Sierra reloaded her pistol and dashed towards the farthest alien that could flank her. Plasma flew over, behind and in front of her, but only a couple bolts grazed her. A few frantic shots from her pistol forced the Vitakarian into cover and she leapt on top of him, putting a bullet into his head point-blank, and shooting several shots into the side of the Borelian next to him.

It spun towards her, plasma rifle firing and hit her arm again, and now she felt it burning slightly. Grimacing, she fired a few more pistol shots into the Borelian’s head and ducked into cover as ADVENT advanced, and got the attention of the other Vitakara. She appraised her now-stinging arm which looked almost charred. Well, it seemed that she wasn’t invincible, and should probably not get hit there anymore.

But Sierra felt like she’d made enough of a difference. The Vitakara seemed to be retreating now, and more ADVENT soldiers were coming across the bridge and spreading into what had been Vitakarian territory. “Zara, we’re on the other side and establishing position. Mark is dead, but the aliens seem to be retreating.”

Zara’s voice held an iron tone. “Good work, I’m also on the other side of our bridge. Seems to be a general retreat. We lost Tamara and Nati is dead as well. They hit the area up by the Goliath harder than here, it seems. Charlie is wounded as well, but they held and they’re being pushed back. Everyone else is alright. Portland seems to be remaining under Human control.”

Sierra grinned at that pronouncement. That’s what they get for coming to my homeland. “I’ll assist ADVENT forces in securing the area then.”

“Correct,” Zara affirmed, gunfire in the background. “Good luck and stay alive. No more deaths today.”

Sierra went to retrieve her rifle and reloaded it while looking into the outskirts of the city as ADVENT advanced further in. Time to help with the offensive.

***
The good news: They were keeping the aliens from advancing any further.

The bad news: They weren’t making any progress against said aliens.

The Mutons may be awful shots while working through her attempted debilitation, but they were providing a large enough volume of fire to prevent anything from moving. Not to mention that they were almost instantly replaced by more. For every one they killed, another took its place within minutes.

The Andromedons were slower and more mechanical, if that was possible, but they could actually shoot with some precision, and whoever this Andromedon commander was, he was figuring out that it was actually much more efficient to use the acid all the Andromedons had.

“Back up!” Creed yelled to a squad of ADVENT soldiers as two Andromedons launched green pellets at their position which splashed and hissed where they had been. Patricia and Kim focused on the exposed aliens and fired, and the combined might of the heavy autorifles was able to bring one down.

Mordecai was still trying to get a bead on the leader, who Patricia could see still commanding from the back, personally ordering various Centurions and programming Andromedons suits to specific locations. He was irritatingly competent, and actually knew what he was doing for a change, which was in contrast to many alien leaders they’d had previously.

Of course he was going to have quite a lot of dead Andromedons when this was over, because even if Patricia couldn’t control the suits, the beings inside them were enslaved to her and she had simply ordered them to kill themselves. Most had accomplished this by smashing their heads on whatever control panels they had in the suit, or bodily harm some other way.

Regardless, she imagined it was going to be messy for whoever opened the suits, and it had probably been very painful for the Andromedons within. Not that she particularly cared, but if she’d expected an emotional response from the commanding Andromedon, she wasn’t getting it.

Liliyane and Creed shot up an entire Muton line, but they were almost immediately replaced, and a reinforcement pod of four Andromedon soldiers was now firing their plasma lances on them. Rosario and Kim fired at the Andromedons, and Patricia suddenly realized there was one weakness that they’d possibly overlooked.

“Weapons!” She called. “Shoot the weapons!”

The command spread through the ranks quickly, and Creed and Liliyane risked peeking out and returning fire. A shot from Mordecai hit the rifle an Andromedon was holding and it blew up in a small green explosion, taking off the entire arm. The commanding Andromedon looked up to where Mordecai was stationed and pointed.

Two things happened in quick succession. All of the Andromedons on the field eschewed all other ADVENT targets and focused exclusively on XCOM soldiers, including the one that had just gotten his arm blown off. In fact, it charged the line itself. The second was that all Muton fire was instantly concentrated on Mordecai’s position and one bolt actually hit his head directly.

It didn’t kill him, but it certainly stunned him and Patricia knew that he couldn’t take another shot there. But the plasma was doing far worse than hitting him, but it was weakening the floor he was standing on, and Muton Grenadiers were now firing grenades up towards the top that a dazed
Mordecai couldn’t respond to. “Get down from there!” She yelled up at him as she began shooting at an Andromedon suit targeting Rosario.

“I’m-“ he began and she saw the entire area where he’d gone up in a green explosion. *Fuck!* There was no way he was alive now, and the situation was getting worse. The wounded Andromedon had charged up to Kim’s position and raised its good arm and sprayed a green mist on him that he wasn’t able to avoid.

Friendly fire from the side brought the Andromedon down due to the sheer hail of it, but the acid was already eating through the weaker armor on the helmet and arms. Joseph was frantically trying to neutralize the acid with his med-kit, but the remaining Andromedon suits were still firing at him, and it was difficult for him to work in that condition.

More ADVENT soldiers were coming to reinforce, and Patricia figured they needed to do something now before things got even worse. She tuned to the ADVENT command frequency. “ADVENT Command this is Psion Trask. Requesting airstrike at coordinates that will be transmitted shortly. Acknowledge?”

“Acknowledged,” came a voice. “We’re standing by. We need exact coordinates though or the rockets might-“

“I know how this works!” She snarled, and pointed at the back where the Andromedon leader was. “Officers! Mark far back Andromedon for airstrike! Everyone else suppressive fire on the Andromedons!” Her body flared with psionic energy as she repeated attempting to mentally afflict the Mutons. Fine, if they wouldn’t follow her commands, they would not follow any commands.

But for that to happen, she had to break their minds apart. So she inflicted every possible curse that came to her mind. Blindness, being flayed alive, skewered with hot irons, the possibilities were endless, and she made sure to amplify every feeling a hundredfold and the screams of the Mutons took on a much louder pitch as she began driving them to insanity.

They were surprisingly resistant to pain, but even they had limits. They may have somehow been enslaved to disobey her commands, but their minds were still vulnerable to the effects. There were four Officers standing up and marking the Andromedon in the back, and the rest were firing at the Andromedon suits, some of which were now sparking and falling over in ruins.

An Officer was shot and killed, but Patricia heard the planes now. “Target locked,” the pilot said. “Firing.”

A few seconds later a barrage of missiles struck the building behind the Andromedon leader and the concussion blast blew him forward and he fell to the ground. The tank on his back seemed ruptured, and the missile launcher or equipment on his shoulder seemed damaged, but otherwise he was alive. However, the distraction was all Patricia needed to send one final mental push to the Mutons.

And they broke.

They started turning on each other, the Andromedons and the Humans. Inhuman screams dominated them as they tried to claw, shoot and rip everything around them apart. The Andromedon leader was backing up now, tapping hurriedly on his haptic display, but having very little success it seemed.

Several more Andromedon suits exploded as the combined fire of ADVENT and XCOM overwhelmed them, even as more ADVENT soldiers fell to the plasma lances and acid of the suits.
Then the Andromedon leader shouted something in the echoing and booming voice of their species, and the remaining suits began pulling back, making sure to contaminate the ground before them.

The Mutons seemed to be abandoned, and the Andromedons executed whichever ones tried to attack them, but left the rest to likely serve as a distraction. More Officers were arriving, and the engineers were beginning to making fortifications near the ruined battlefield, even as the Mutons continued killing each other.

“Commander,” Patricia said, taking stock of the still chaotic situation. “What’s the status of the attacks? Alien forces just retreated here.”

“Affirmative, good job,” the Commander answered approvingly, though the tightness in his voice was not reassuring. “The good news is that we are still holding strong. Whoever this leader was, he brought a lot of reinforcements just to attack you.” Patricia looked at the hundreds of alien corpses and suits littering the parking lot.

“I figured,” she said. “But if you say we’re still strong…”

“I mean that the aliens haven’t really retreated,” the Commander confirmed. “They’re pulling back in some places, but they haven’t lost much ground, and we haven’t either. This is more or less a stalemate for now, but the fighting itself is gradually dying down as both sides are regrouping. Forward offensives are too risky right now, especially not with this Andromedon leader.”

“Agreed,” Patricia grimaced. “He was prepared for us.”

“The battle isn’t lost or won yet,” the Commander continued. “You’re being recalled until the situation escalates again. We need to reevaluate our strategies against them so this doesn’t happen again.”

“We’re pulling back?” She asked, frowning.

“XCOM is,” the Commander said. “ADVENT can hold for now, and I don’t want to lose more soldiers unnecessarily.”

“We’ll be here, then,” Patricia said, wondering how the rest of the defenses had gone. The Commander never generally betrayed much emotion in his tone, especially during missions, but she had the feeling that this had not gone as well as they’d hoped.

***

San Francisco, United States of America

The Battlemaster stood on the outskirts of the city and watched as the ADVENT army retreated deeper into the country, away from him. They could run as far as they wished, at some point there would be nowhere left for them to go, but for now they could believe they escaped. His mission was a success and the city would now be claimed for the Collective.

The Cultro swooped down with a low hum and landed onto the ground beside him, and the CODEX figure materialized outside instantly. “The city is cleared of hostiles, Battlemaster. An estimated two-hundred to two-hundred-fifty thousand civilians remain.”

“Noted,” the Battlemaster said, turning around to face the city. “Give the order to bring forces to lock this city down. ADVENT is gone. The rest should be easy.”
“Confirmed,” the figure stated emotionlessly. “Pacification forces are now deployed.”

“Status of other offensives?” He demanded of the CODEX.

“ADVENT and XCOM forces at Los Angeles have been routed, and Sargon Disciple-7 is securing the city,” the CODEX stated. “J’Loran encountered Psion Patricia Trask, as expected, and there is currently a stalemate in the city between ADVENT and Collective forces. XCOM has retreated from the field of battle, though J’Loran is hesitant to press without reinforcements.”

The Battlemaster nodded. Excellent. One city captured, and a stalemate was just as acceptable an outcome. Once Gateways were established, ADVENT would not be able to feasibly hold out forever. “And what of Portland?”

“Collective forces have been pushed back,” the CODEX explained neutrally. “Analysis indicates the Vitakara forces had no suitable counters or strategies to XCOM MECs, psions or enhanced soldiers. Additional note: Multiple XCOM soldiers displayed additional enhanced abilities. Footage is available for review.”

“Archive it for access on the Temple Ship,” the Battlemaster ordered, turning on his heel and entering the Overseer. If there was any battle he predicted would be lost, it would have been the one at Portland. The Vitakara unfortunately were not hard counters to many of the more dangerous elements of XCOM, and in truth, were not exceptional front-line soldiers. This assault had confirmed it, and he would learn and capture the city another day.

Today was a victory for the Collective, and he knew the Imperator would be pleased. The beginning of the end of ADVENT and XCOM had begun with a statement the world could not ignore.

Now it was time to tighten the grip on the territories they controlled while the Humans puzzled over what to do next. He suspected that Quisilia would find it amusing.

*You wanted this, Aegis,* he thought as the Overseer rose and the indications of the allied transports appeared on his display. *Time for you to decide how far you want to take it.*

Whatever game Aegis was playing, the Battlemaster was content to play it to the end. They had been friends for too long to him to consider Aegis a traitor. There was another angle here, and he was going to find it.

But if Aegis was truly a traitor, then he would put him down without hesitation.

Supplementary Material

The Advent Directive

SECTION 8: ADVENT Military

Subsection 8.2: Structure

**Overview:** Below are the varying ranks and positions within the following divisions. Please note that sections specifically covering a division will only highlight relevant positions exclusive to that division. Genetic and standardized breakdowns are in the previous subsection.

**ADVENT Military Command:** Holds senior staff for all ADVENT branches and is the central body
for decisions that affect the entire ADVENT military and even ADVENT as a whole. The following positions are as follows:

- The Commander of the ADVENT Military
- The General of the Army Division
- The Chief Admiral of the Navy Division
- The Wing Commander of the Air and Space Division
- The Chief Operator of the Special Forces Division (Can be substituted with the Chief of Lancer Operations)
- The Chief Responder of the Special Response Division
- The Chief Overseer of the Oversight Division
- The Chancellor of ADVENT (Advisory position)
- The Chief of Peacekeeper Operations (Advisory Position)

**ADVENT Army Division:** Has responsibility over the majority of ADVENT ground and vehicle forces and the ranks are as follows by seniority:

- General (Oversees the ADVENT Army Division)
- Chief Marshal (Oversees Legions)
- Marshal (Oversees Garrisons)
- Colonel (Oversees Companies)
- Corporal (Oversees Units)
- Officer (Oversees Squads)
- Soldier

**ADVENT Navy Division:** Has responsibility over the majority of ADVENT naval ships and forces, and the ranks are as follows by seniority:

- Chief Admiral (Oversees the ADVENT Navy Division)
- Admiral (Oversees Legions)
- Major (Oversees Garrisons)
- Captain (Oversees Companies)
- Lieutenant (Oversees Units)
- Officer (Oversees Squads)
- Soldier

**ADVENT Air and Space Division:** Has responsibility over the majority of ADVENT air force and the ranks are as follows by seniority. Note: Does not follow standard breakdown of force composition and has no standard equivalent.

- Wing Commander (Oversees the ADVENT Air and Space Division)
- Wing Captain
- Wing Tactician
- Wing Officer
- Wing Pilot

**ADVENT Special Forces Division:** Has responsibility for the special forces of ADVENT and the ranks are as follows by seniority. Note: Does not follow standard breakdown of force composition and has no standard equivalent.

- Chief Operator
- Chief of Lancer Operations
- Primary Director of Special Operations
- Senior Operator
Lancer Officer
Lancer Operative

**ADVENT Special Response Division:** Has responsibility over various unique aspects of ADVENT including experimental units, specialized forces and other aspects that do not conform to standardized ADVENT forces, and are equipped to respond to asymmetrical or unknown threats. Note: Does not follow standard breakdown of force composition and has no standard equivalent.

- Chief Responder
- Unit Overseer: Psionic Response
- Unit Overseer: Extraterrestrial Response Commander
- Unit Overseer: Terrorist Response
- Unit Overseer: Domestic Response
- Unit Overseer: Military Reinforcement
- Unit Overseer: Non-sentient Response
- Officer
- Responder

**ADVENT Oversight Division:** Has responsibility for oversight of the ADVENT military to ensure that all divisions are in accordance with ADVENT standards and policy. Note: Does not follow standard breakdown of force composition and has no standard equivalent.

- Chief Overseer
- Overseer
- Commanding Investigator
- Chief Inspector
- Chief Interrogator
- Investigator
- Inspector
- Interrogator
- Officer
- Operative

Chapter End Notes

Music listened to while writing the Battlemaster scenes was To Glory and Pontiff Sulyvahn from Two Steps From Hell and Dark Souls III respectively, if you were curious about that. So yeah, this chapter was rather fun to write. I've also found out in that time that someone made a tvtropes page for my series, so if that's something you're interested in, check it out. I found it a good read, even if some of the information isn't quite accurate. Link: http://tvtropes.org/pmwiki/pmwiki.php/Fanfic/XCOMTheHadesContingency

Hopefully the next chapter shouldn't be too long a wait.

-Xabiar
Tenuous Diplomacy

The Citadel, Situation Room

Saudia fixed the Commander of the ADVENT Military with the most neutral expression she could muster, a feat that was more difficult for her than she liked. Perhaps she should have been here, but Ethan, Laura and the Commander himself had dissuaded her, seeing no reason to potentially risk herself if the aliens attacked the Citadel. They did know the location, after all.

However, after it had mostly gone to hell, Saudia figured a personal assessment was needed, since some of the initial reports were borderline ludicrous. None more so than the story concerning San Francisco.

“One Ethereal,” she stated flatly, looking Laura straight in the eyes. “One Ethereal forced a retreat of an entire garrison.”

To her credit, Laura faced her and gave a firm nod, her lips set in a thin line. “Yes, Chancellor.”

“With a sword.”

“…Yes, Chancellor.”

A short pause.

“It appeared to be a rather sharp sword.”

“Spare me,” Saudia muttered with a dismissive wave, wishing she could ignore it just based on how ludicrous it sounded. “I suppose you didn’t try and bomb it?”

“Chancellor, we tried almost every tactic short of dropping a nuke on the city,” Laura interrupted, exasperation leaking out of her voice. “It didn’t work. Nothing we did could hurt it!”

“Stop berating her for something she couldn’t control,” the Commander interrupted, pushing himself up from the wall and walking over to the holotable. He’d held back at the beginning, apparently content to let them talk, until now it seemed. But unlike Laura, he didn’t seem to have an issue speaking his mind as bluntly as possible. “I told you that the Ethereals were more powerful than you were anticipating.”

“Strong enough to beat an entire garrison?” Saudia demanded, whirling on him.

“If I had purely relied on what I’d heard, yes,” the Commander answered, his own lips pressed in a hard line. That was when she noticed that despite him trying to compose himself, he actually seemed worried. “I personally thought some of it was exaggerated. I knew the Battlemaster in particular was tough, but I didn’t not expect him to match, let alone exceed, what I’d heard. I messed up. Laura messed up. We all underestimated their power. Would you have anticipated that would happen?”

Saudia took a breath before answering. “No.”

“Since everyone here can be at fault, I propose we move on,” the Commander continued, resting his hands on the holotable and looking between each of them. “There is no point to bickering about
“Who made the worse decision.”

“With respect, I agree, Chancellor,” Laura nodded in agreement. “If nothing else…we have a better idea of just what we can expect.”

“We made mistakes,” the Commander sighed, rubbing his forehead. “Now we need to learn from them before the next attack.”

She had to admit that the Commander had the useful talent of focusing on what needed to be done and cutting out the superfluous details. While Saudia had expected better from both of them, they were also right in that in their place, she probably would have done just as well, or much worse.

“Then we continue. San Francisco is lost, that can be definitively stated.”

“Yes,” Laura said with a firm nod, glancing down and activating the holotable. A map of the West Coast appeared, and zoomed in on San Francisco. “Shortly after the retreat, alien transports arrived for what I presume to be an occupation force. No idea about numbers or units, but we can likely assume the civilians lost.”

Her face expressionless, Saudia asked. “How many?”

A twitch of her lips was Laura’s only visible reaction. “At minimum? At least two hundred thousand.”

That was not going to be easily downplayed. The capture of two of the most prominent cities in America was enough of a blow, before people began asking what exactly was happening to the people left in the cities. If word got out that one alien was responsible for the capture of one city, it could spread panic. The good news was that the only people who knew about that were the soldiers, ADVENT analysts in the Citadel, and the media that insisted on following the armies.

Or maybe not so good news. Those media personnel needed to be silenced somehow, albeit carefully. The Commander apparently had the same thought. “It would be best if San Francisco was downplayed. They don’t need to know how it fell.”

“And how exactly are we going to keep it quiet?” Laura sighed. “The soldiers aren’t going to talk about it, at least not outside the military. We can issue orders to refrain from discussing it with civilians, but the non-ADVENT personnel there are going to pose an issue to this plan.”

“I doubt it is a large problem,” the Commander shrugged. “Explain to them that this needs to be kept secret for now to avoid causing a panic. Have them sign a piece of paper swearing them to silence, and if they break it, they go to jail. Simple.”

Laura raised an eyebrow. “Commander, you haven’t dealt much with the media, have you?”

Saudia almost cracked a smile at that, and the Commander gave a sad one of his own. “I’m unfortunately familiar with them, and my general stance on them is to not give them an inch. If their work risks ADVENT stability, then stop it.”

“It’s one thing with XCOM,” Laura said slowly. “You’re not exactly beholden to any nation, nor are your operations large enough to warrant major attention. You must know how seriously journalists take censorship. This is how leaks happen, and then that muddies the waters even further.”

The Commander’s face turned as hard as stone. He straightened and looked directly at Saudia. “I will not tell you what decisions to make, but you have provisions in the Advent Directive to put a stop to illegal and destabilizing media. I suggest you use it.”
All of them had gotten tenser; Laura’s own tone was wary. “That would perhaps instigate more backlash.”

The Commander gave a cold smile. “And why, exactly, should you fear backlash, or are even sure it will last? Are you worried about riots? Civil war? This is what the Peacekeepers are for, Commander Christiaens, and why Saudia appointed Stein.”

“Fair point,” Laura muttered. “That decision is outside my jurisdiction anyway. Chancellor, we can discuss that later. Perhaps we should move on.”

“Portland,” Saudia immediately said, clasping her hands behind her back. “Our lone victory.”

“We can thank XCOM and the city structure for that,” Laura said, inclining her head to the Commander. “The choke points prevented our forces from being overwhelmed and I don’t know what you did to your soldiers…” she shook her head. “But they secured our victory.”

“I’ll pass that along,” the Commander affirmed. “We suffered losses of our own, but your soldiers performed well against the Vitakara. It would be foolish to say we alone saved Portland.”

“But you certainly helped,” Laura said, clearing her throat. “From observing footage of the battle itself, I’m not entirely sure why this battle went much better than the others.”

“Because the aliens didn’t do anything surprising,” the Commander answered immediately. “They sent in their army, and we defended. Much like Japan, we had the advantage here. They didn’t do anything creative, nor had any counter to my psions and MEC.”

“So what you’re saying is that we have a good chance of victory if the aliens don’t do anything unexpected?” Saudia asked, raising an eyebrow. “A bold assertion.”

“A better chance than usual,” the Commander amended, scratching his chin. “The thing is…here the aliens didn’t deploy anything but Vitakara and several of the Sectoid Leaders. No mechanical units of any kind. Would the battle have gone differently if that had changed? I’m not sure, but I believe we would have won Portland regardless because the aliens intentionally baited me specifically.”

The Commander admitting he’d messed up? That was…unexpected. “Explain?” Saudia asked, genuinely curious.

“It’s obvious in retrospect,” the Commander admitted. “Portland was the second-last city to be hit, with San Francisco being the last. He didn’t want or anticipate XCOM soldiers being sent there for whatever reason. Laura, remember the initial reports from Seattle and LA?”

“Andromedons in Seattle, Mutons in LA,” she recalled, a finger tapping on the holotable. “The units we considered the most and least dangerous, respectively.”

“They expected me to deploy my strongest soldiers to Seattle,” the Commander continued. “Which included Patricia. And I sent my less experienced squad to LA because I didn’t anticipate any surprises from the Mutons, who aren’t much for subtlety or strategy.”

“But you were wrong,” Saudia finished, seeing how it had happened. “They were prepared for both. And Portland was left with the middle squad. Standard, if you will.”

“Agreed,” the Commander nodded. “It’s that simple. However, the good news is that they won’t be able to do that again so easily.”
“How was Patricia negated?” Saudia asked. “After Japan, I didn’t think she could be stopped.”

“Vahlen is performing autopsies now on some of the corpses we recovered,” the Commander explained, looking down at the holotable. “Initial impressions are that these Mutons had their brains cybernetically modified. Whatever they did, it prevented full mind control. And the leader was also somehow immune to mind control, but not the Andromedon soldiers for some reason. The only issue was that the leader overrode the suits and let the system take over as if the owner had died. Clever, really.”

“How was Patricia negated?” Saudia asked.

“Vahlen is performing autopsies now on some of the corpses we recovered,” the Commander explained, looking down at the holotable. “Initial impressions are that these Mutons had their brains cybernetically modified. Whatever they did, it prevented full mind control. And the leader was also somehow immune to mind control, but not the Andromedon soldiers for some reason. The only issue was that the leader overrode the suits and let the system take over as if the owner had died. Clever, really.”

“Do we have any information on the leader then?” Saudia asked.

“We have images,” the Commander began hesitantly. “Based on the information I’ve gathered and…sources. It appears to be an Andromedon called J’Loran. Highly placed in the Battlemaster’s circle of trust; expert tactician; excellent soldier and dislikes psionics. Probably why he was chosen to develop a plan specifically to counter Patricia.”

That was…a lot of specific information. However, she wasn’t exactly concerned with where he got his information from as long as it was accurate. “What is to stop them from cybernetically modifying every Muton to make them immune?”

“Cost, probably,” Laura answered, glancing at the Commander. “It’s worth the investment if you want to negate a certain psion. However, it’s not exactly worth it if you don’t kill the psion in question. Besides, Mutons elsewhere are unmodified, and the mind-control immunity has some side effects. Namely, that they become much worse when mentally affected, and can be driven insane.”

“So it’s not perfect.” Saudia noted.

“Not yet,” the Commander said slowly, furrowing his eyebrows. “But after this, I think they’ll devote some time to investigating it. But the issue they’ll have is that this can be easily countered by simply sending additional or differently specialized psions. This will do absolutely nothing to stop a telekinetic or attack psion.”

Saudia felt a measure of relief at that. “That is good. What is the current status of Seattle?”

“Holding,” Laura said. “We’ve not gained, nor lost ground. However, much of that is due to my ordering airstrikes on territory they control. I’m trying to deny them as much ground as possible before they build AA defenses.”

“Realistically, do you think you can hold it?” The Commander asked.

“That depends on how badly we want to keep it.” Laura answered slowly. “Give me steady reinforcements, XCOM support, and reliable supply lines, and I can make sure it’s held, barring an increase in alien activity. But without those…They can keep throwing disposable Mutons at us, and Andromedons like to run before we hurt them too badly. Humans are smarter, but can’t be replaced as easily.”

“You’ll have what you need for now,” Saudia assured her. “We can’t lose Seattle right now. Otherwise they can simply come down to Portland and surround it. Now…LA. What happened?”

“Simply put, we underestimated them,” the Commander said bluntly, the corners of his lips twitching. “The Mutons were organized, directed and employed actual tactics and attempted unconventional attacks. A lot of Mutons died, but the majority were soldiers, and since they managed to kill several of my own, including a MEC, they probably consider that a fair trade.”
“They hit from a lot more angles than we were expecting,” Laura added. “They employed Gateway transports as well, but delayed attacking until they had a sizable force and hit us from the flanks. They slowly drained the reinforcements from the inner city until there were almost none left. We could have stayed and died, or tried fighting our way out. Both of us agreed the latter was preferable.”

“Then it must not have been a Muton leading them,” Saudia guessed, frowning. “That seems far too sophisticated for them, not to mention the precision you allege.”

“Not necessarily,” the Commander said. “There is one Muton type that is capable of such. They call it a Sargon. Very rare, normally used for overseeing territory. Using them in battle though, is almost unheard of. After this display, I’m wondering why.”

“If it is a Sargon.” Laura pointed out.

“One of my soldiers saw a Muton accompanied by Elites, and matched the description I’ve been provided on them,” the Commander shrugged. “I may be wrong, but Muton Elites flanking any Muton is unheard of. What else but a Sargon, or equally valuable Muton, would warrant a personal escort?”

Laura frowned. “Good point.”

Saudia pinched the bridge of her nose, thinking. “The fighting has stabilized…more or less. Treduant is making an address to try and reassure the population, and I’ll be giving one as well. It might be good to have you say something as well, Commander.”

“No,” he refused bluntly. “I need to return to the Praesidium and figure out how we’re going to kill this Battlemaster. That is the priority now for us and I won’t interfere in pacifying the population. That is your job now. Mine is to kill the aliens.”

“Be sure and keep us appraised of the developments,” Laura told him. “A lot more than the lives of just your soldiers is at stake.”

“I know,” the Commander assured her. “And we’ll be ready when the next attack hits. They won’t be able to pull this off so easy next time.”

“Let’s hope so,” Saudia warned as he straightened up. “Because we can’t take more defeats like this.”

“No, we can’t,” the Commander said, looking over to her. “However, the aliens have also presented you with an opportunity here. For whatever reason, they have ignored Canada. Perhaps the Prime Minister might be willing to help us here.”

“That’s a good note,” Laura nodded. “Why they ignored Canada is…interesting.”

That it was, and Saudia wasn’t exactly comfortable with that. “I’ll look into it,” she promised.

“Good luck then,” the Commander said, turning to leave. “We will be watching.”

Saudia didn’t know if the Commander had intended that to be reassuring or unnerving, but if it was the latter, she could safely say that it was successful. The Commander chose his words rather carefully, and she figured that the deliberate usage of what had been the former Council’s catchphrase was not accidental.

She’d puzzle it out later. There was much more important matters to attend to.
Washington DC, United States of America

“We all knew this war would come to our land, and now that it has we will utilize every resource at our disposal to fight back against the alien scourge and avenge our fallen brothers and sisters. America will not bend to alien pressure, and backed by ADVENT and XCOM, we will ultimately succeed!”

“Mute,” Nicole Treduant addressed the television as applause broke out at the end of her respective speech, and the commentators began discussing it once more. Saudia admired how the woman didn’t seem overly perturbed by any of the recent events. Although she’d been president for years, it likely came with the territory.

“Not a bad speech,” Elizabeth complimented from the couch she was seated on, an open laptop by her side and some scattered pieces of paper on the opposite side. Saudia was almost amused how much Elizabeth was uncomfortable just sitting quietly for an extended period of time. She always had to be doing something; walking, fiddling with laptops and rubix cubes or making notes on paper.

Even in the White House.

But no one seemed to mind. Disrupting the Director of ADVENT Intelligence was probably ill-advised, and Elizabeth was able to multitask to an extraordinary degree. Anything of substance that was discussed, she would recall it.

“Appreciated, Director,” Treduant sighed, leaning back into the couch and closing her eyes. “For what good it will do.”

“It will bring some amount of calm to the public,” the harsh voice of Amalda Stein stated, from the opposite couch of Elizabeth. “America is suitably paralyzed from the attack. I do not expect them to pose an organized threat.”

“Depends how the media treats this,” Elizabeth muttered, not looking up from her laptop. “In times like these, people are going to want to be informed. And ADVENT state media is not always their first choice.”

Treduant gave a loud exhale. “That’s what I’m afraid of. Congress is still trying to undermine me, and half the nation hates me. No offense, Saudia, but the media isn’t a fan of ADVENT. They might not try to frighten the population, but they will lay the blame for anything they can on me.”

Stein snorted, an odd sound coming from the armored woman. Stein had apparently taken up the Commander’s habit of showing up in full armor to benign meetings. The black plating of her riot control officer armor contrasted sharply with the lightly-colored room and made the cold German woman even more intimidating than she already was. “I would not expect them to go that far. If they continue making false claims, there are laws to prevent that.”

“While efficiency may be the most prudent response, allow me to interject my own humble opinion,” Firdaus Hassan interrupted smoothly, seated comfortably on the same couch as Elizabeth. “You will not like this, Madam President, but the best solution right now is to ignore anything the media might say about you. Other nations are watching how we react to this. Chancellor, we must decide the image we want to portray to the world: One united in our resolve to defeat the aliens, or one looking suppress harmful dissent?”
Stein fixed him with a raised eyebrow. “In the words of a dumb taco commercial, ‘Why not both?’”

“Because we can’t do both effectively,” Saudia said, her palms pressed together as she thought this situation through. “Taking a hard stance against the media would be impossible to ignore, and might give the populace the impression we are more concerned about our image than the aliens. It might be more beneficial in the long run, but I do not believe that is the optimal path right now.”

“Well said,” Hassan nodded. “Ultimately, the media cannot harm anything but your ego. The aliens pose a much larger threat we should focus on solving.”

“Then what should be our next moves?” Treduant asked, clasping her hands together. “If I want to keep the focus on our response, information will be vital. The people will be calmer if we present an active strategy.”

“ADVENT will be sending in reinforcements,” Saudia began. “Including some of ADVENT Engineering’s prototype MDUs. Mercado doesn’t feel like they are perfected yet, but I’ve instructed him to finish them up. And they will be highly effective against any new alien offensives. Laura has also assured me she can hold Seattle and Portland, provided she is given everything she needs.”

Treduant faced her with a look torn between skepticism and hope. “Be honest with me, Chancellor: How much good will that do if that…thing that took San Francisco shows up?”

Saudia set her lips in a hard line. “At this point? Nothing, Madam President. I cannot reliably say we would stand any better chance. However, XCOM has made the neutralization of this ‘Battlemaster’ their top priority.”

“A fitting name,” Elizabeth chimed in. “And as for what ADVENT Intelligence will be doing, I’ve begun organizing agents to begin attempted infiltration of alien-occupied cities. Given the size, we should be receiving accurate details within days. I’m coordinating with several local militia groups and landowners about how to deal with the aliens.”

“You’re arming them,” Stein stated, frowning. “I’m not sure that is responsible. Especially when a great many of the people you describe could be described as ‘patriots.’”

“Easy, Stein,” Elizabeth chided, giving her a cold smile. “I’m well aware of what I’m doing. These people may despise Treduant at the moment, but if there’s one thing they hate more than ‘tyranny,’” she added the appropriate air quotes to that word. “It’s literal illegal aliens invading their land. They are not hard to use, and arming them with weapons that might actually hurt the aliens is a sound strategic move. Right-wing fanatics some of them may be, but they know their firearms and how to use them.”

“I’ll take your word for it,” Stein said, shifting in her seat, a free hand resting lightly on her stun baton. “But if they prove unreliable, the Peacekeepers will arrest them.”

“Not a problem with me,” Elizabeth shrugged, biting her lip as she added some notes to a document. “But they aren’t that hard to use. If nothing else, they’ll slow down the aliens without risking any of our actual soldiers.”

“That’s enough for me to put something together,” Treduant nodded at both women in thanks. “The image of Americans taking the fight to the aliens will be especially effective.”

“I’ll be sure to get some footage,” Elizabeth promised, before looking to Yong. “Now, internationally, we need to make some decisions.”
“What has been the general response to the attack?” Saudia asked Yong.

“Let’s see…” he looked up as if in thought. “Cautionary if anything. The fact that America is breached at all has clearly shaken their confidence, but they all knew it was inevitable, and that the majority of the damage has been limited to a few cities on the West Coast is seen as almost acceptable.”

His voice suddenly became much more serious and he fixed Saudia with an uncharacteristically firm stare. “If you didn’t come to the same conclusion, keep everything about this Battlemaster suppressed. The knowledge that they have one alien who can rout our forces will be a devastating blow to international relations.” He raised a hand. “Yes, I am aware that these Ethereals are not completely representative of their forces, but that won’t really make a difference to them.”

“Don’t worry,” Saudia promised, exchanging a glance with Elizabeth. “Precautions are being taken.”

Satisfied, he continued. “With that out of the way, most of the EU still isn’t willing to join. From interactions with their diplomats, I’m getting the impression that they want to see how long America lasts before making a decision. Hold out for half a year or more, and then we can press them to join with a lot more confidence.”

Stein scowled at that. “Cowards. How fast do you think they’ll change their minds once they come under attack?”

“Quickly, I’d expect,” Hassan nodded with a slight smile. “Especially when ADVENT comes in to save the day. However, we are not at the point that they are needed. Strategically, North and South America have become essential in the way. Africa and China are non-issues at this point, and the latter hasn’t commented whatsoever.”

“Mexico and Canada,” Saudia nodded. “Both of them joining ADVENT would greatly boost our own defense of the United States. They have to know the war will reach them eventually.”

“I believe I can reach an agreement with Mexico,” Hassan agreed. “They recognize that the war is eventually going to spill into their territory if the aliens aren’t stopped. I believe if I emphasize the benefits of an alliance, along with a prominent declaration of our alliance, something along the lines of ‘fighting on the front lines’ or something like that, I believe they will join. In fact…”

He smiled and looked at Stein. “The President himself has heard a great deal about you, Chief Stein, and I do know that he has a rather strong feud with the many drug cartels that still operate in the cities. I do believe some assurances from you would actually help convince them of the benefits of ADVENT.”

Stein gave a smile devoid of emotion. “I would be happy to assure the President that my Peacekeepers would stamp out those criminals like the vermin they are.”

“Excellent!” Hassan nodded, making a note on his tablet. “I’ll arrange a meeting in the next few days, assuming you are free?”

“I’m heading down to Brazil immediately after we finish up here,” Stein told him, her smile never fading. “Apparenty Marshal Luana is having some issues subduing the population. I’m going to straighten that out now, and remind the good Marshal that she is not above the law.”

“Gee, I wonder why she’s having trouble,” Treduant muttered, shooting Stein a dark look. “And I’m rather surprised to hear that. Given that Luana started this out of her hatred from criminals, I’d
think you’d be best friends.”

“Cute, Madam President,” Stein chuckled. “Luana’s initial retaliation was justified, and her stances concerning crime are worthy of praise. But in her quest for vengeance, she has begun wars with countries unaffiliated with the initial revelations. They were started before I took my position and laws were adequately established, so I am allowing them to continue. However, should she expand her crusade, she will be removed. I am going to remind her of that.”

“Anyway,” Hassan interjected, clearing his throat. “Before we get too off-topic, there is the other matter to discuss: Canada.”

“I assume negotiations are going as well as before?” Elizabeth asked wearily, now fiddling with a rubix cube as she looked over at him.

“They are taking the alien’s refusal to attack as a sign they should continue to do nothing,” Hassan said with a grimace. “That was what their ambassador more or less implied.”

“Gutless cowards,” Stein swore. “What do they think the aliens are going to do if they win? Continue ignoring them?”

“That isn’t for me to say,” Hassan said, turning his head to Saudia. “However, Chancellor, I do believe that even if Canada is unwilling to join us, they would be instrumental in moving our military through them to perhaps attack a vulnerable alien position.”

“The question,” Saudia said thoughtfully. “Is if they’ll even agree to that.”

“They’re open to talking at least,” Hassan confirmed. “The Prime Minister has indicated that he will be willing discuss it with you in person.”

Well, that was some good news. “Then set up the meeting if you can,” Saudia ordered with a nod. “Perhaps he will be able to clear up why Canada is so against joining us.”

“Didn’t they make it pretty clear?” Elizabeth snorted. “Something about how we were too ‘authoritarian’?”

“To be fair, they aren’t wrong,” Hassan chuckled. “But they seem to view it as a completely bad thing.”

“I’m sure I’ll get some clearer answers from the Prime Minister,” Saudia interjected, before a discussion began on the pros and cons of that topic. She had learned a while ago that everyone in the room had rather strong opinions on the subject and were willing to discuss them. While interesting, they didn’t have time. “We have our plan. Let’s carry it out.”

***

_Tehran, Iran_

To Roman’s complete lack of surprise, the Iranians had not surrendered.

Oh, he was quite certain they would, but not before ADVENT stormed their capital and arrested or killed the leadership. Idiots. They had to know by now that resistance was pointless, and all they were accomplishing was getting their soldiers killed…and for what? A few more hours of freedom? A few more hours of lies they could tell their people? A few more hours clinging to their power and religion?
Roman smiled coldly under his helmet as he stood with the assembled ADVENT military several miles from the Iranian capital. Whatever happened now to the Iranians…they would have brought it completely down on themselves. Offers of surrender had been sent multiple times, and all had either been rejected or ignored.

Ivan had stated privately to all ranking officers under his command that they would not accept surrenders offered from any hostile soldiers or officers. A message needed to be sent loud and clear to the surrounding regions, and if the bombardment of a city wouldn’t elicit their compliance, then there was little point in trying to save them.

“[Anything?]” Roman asked Maksim, who was looking through his sniper rifle.

“[No,]” he answered. “[At least, nothing we’re not expecting.]” A snort. “[These people learned nothing.]”

“I doubt that,]” Galina interrupted, once more recalibrating the gauss cannon that had been issued to her. “[They just have nothing that can stop us.]”

“[On that we agree,]” Roman nodded, looking around at the assembled forces, and raising an eyebrow as a dozen shiny trucks pulled up and several Officers began going over and unlatching the backs. “[Looks like we’ve got some more backup.]”

“[What more do we need, actually?]” Konstantin asked sarcastically. “[An XCOM unit?]”

Roman watched the trucks curiously and sucked in his breath as he saw what stepped out. “[Hey, do you remember that rumor about the Americans building some kind of robotic war machine…?]” He jerked a thumb over to the trucks. “[Because it looks like ADVENT took it over.]”

The robots stood at least ten feet high, maybe more. They were a sandblasted tan, but shiny as if just off a production line. Their entire structure was streamlined and practical from the legs to the torso to the three-fingered hands that held a weapon that was almost as big as him, with a glowing red power source. The robot had no eyes on its head, which appeared to be an angular chunk of metal with a black strip down the middle. To top it off, there appeared to be some kind of missile system attached to the back.

“[Wow,]” Elena whistled. “[Those look really good.]”

Roman did a quick count of the war machines as they stomped over to the front lines and the soldiers quickly made room. Thirty? Forty? It was enough to cause some serious trouble at a minimum with them alone. “[Squads load into your designated transports,]” Ivan’s voice suddenly transmitted. “[Suppressive bombardment will begin commencement now.]”

Roman nodded. “[Load up!]” He ordered his squad and they joined the dozens of others who made their way to the transports as the missile trucks artillery began firing at the city. “Suppressive bombardment” largely meant bombing the city until the ground forces arrived. It would only target the outskirts and clear defensive encampments. They wanted the city largely intact, and at this point had figured out that Iranian weapons simply couldn’t stop them.

“[To all forces,]” Ivan continued as they got situated. Maksim took the open position so he could shoot as they rode up. “[ADVENT has been kind enough to provide us with their newest weapon, mechanized defense units, or MDUs. They are using this as a field test, and simulations seem to indicate they will be a large asset. Do not attempt to hinder them in any way, as ADVENT Engineering made it very clear their programming was not to be tampered with. Good luck, and let’s end the war here.]”
“[So stay away from the machines of death,]” Anton muttered, checking his rifle. “[Got it.]”

“[It’s actually a smart field test,]” Elena chimed in as the transport jolted as it sped towards the city. “[These conditions are terrible for machines like that. If it can work well here, it would probably work well anywhere.]”

Stanislav grunted. “[We’ll see. I don’t want that thing to shoot me because of some bad programming. Don’t trust machines like that, especially ones with rocket launchers.]”

“[We’re coming up,]” Maksim informed after a few minutes. “[Initial bombardment seems to have worked well. The MDUs are pretty fast too. No defender response so far.]”

“[I would have thought they would have had some artillery or defenses,]” Elena said as the transport slowed down. “[Seems odd to have nothing.]”

“[Oh, they did,]” Roman shrugged. “[They did this in the night, so I guess you wouldn’t have heard. They baited all the defenses they had by launching dummy missiles into the city. They just repeated until there was nothing. Their supply is cut off, so they couldn’t restock at all, let alone in time.]”

The transport slammed to a stop. “[Deploy!]” Roman ordered and they charged out into the defensive lines of Iranian soldiers. An entire row of buildings had been reduced to nothing and the Iranians were shouting and screaming at each other in a panic. Roman raised his rifle to fire—and never got a chance to fire as six red beams screamed past him within seconds, each hitting a soldier in the head.

He looked over to see one of the MDUs continue charging forward, continuing to fire beams of light that only lasted milliseconds, but were direct hits each and every time. Nothing was spared from the machines as they shot anything that moved. Roman winced as it shot two civilians who were trying to flee from the machine of death.

Konstantin swallowed. “[Shit.]”

“[Follow me,]” Roman ordered, ignoring the words but echoing the sentiment. Those machines seemed to be even more deadly than even he had anticipated. He was wondering if there would even be anything left for them to kill, so he decided to take the path that the MDU had not gone down. “[Right.]” He ordered and they marched down the street, past the sand-blasted buildings and empty shops.

“[Incoming,]” Maksim stated calmly as they spotted an encampment of a dozen Iranian soldiers who were taking cover behind improvised cover and crates. They shouted in Persian, and opened fire with their conventional rifles.

“[Cover,]” Roman almost sighed as they fell into their own cover behind buildings, inside houses and behind crates of their own. He activated his shields and firmly entrenched himself before he rose and took aim. A few bullets were redirected away and he responded by firing at two behind a crate and both fell back, their bodies riddled with bullets.

He swung to aim at one who was hiding behind the corner of a building and fired at it relentlessly, eventually piercing the corner and subsequently the soldier himself who fell to the ground with a scream. Maksim shot one in the head who was hiding behind a car; Konstantin and Galina had reduced another crate to splinters with their gauss cannons, and the body behind it was a bloody pulp.
With only three left, Roman motioned his gunners to suppress them while he moved up in the open. Truthfully, he was tired of this and wanted this pointless war over with. Stanislav and Elena were close behind him as he charged the remaining soldiers who were too afraid to point their heads out. “[Cease!]” Roman called as the line was reached.

One soldier opened his mouth in terror before Stanislav blew it into chunks; Elena executed another one behind a car, filling the torso with bloody holes while Roman finished off yet one more with a shot to the knee, and then head in quick succession. “[Clear,]” he grunted as he noticed one of the soldiers was still breathing, but leaned up against a building, blood staining the wall and sand around him. He was breathing heavily, a hand over his fatal wounds. His eyes met the faceless mask of Roman, pleading for help, or simply mercy.

Roman only shot him in the head.

He ignored the sigh from Elena as he turned to survey the area. He walked through the corpses, making sure all of them were dead. “[Woah!]” Galina called out as she was hit in the head with a frying pan from a hysterical woman who was screaming incoherently, and had apparently come out of nowhere.

Great. Exactly what he didn’t want to do. But orders were very clear. “[Take her out,]” he growled distastefully as he looked at the minimap in his HUD. “[We need to keep moving.]”

 “[One second,]” Galina answered and swung her gauss cannon sharply up, hitting the woman in the chin with a sharp crack and sending her sprawling to the ground. Blood trickling out of her mouth, Galina lowered her weapon and fired a short burst of gauss rounds, killing her instantly. “[Ready to go, Shieldbearer.]”

 “[Sorry that happened,]” he said as they kept moving. As irritating as civilians were, he disliked killing them.

 “[Not your fault,]” Galina shrugged, taking the position beside him. “[Only an idiot decides attacking heavily armed soldiers is a good idea.]”

 “[Or a hysterical wife whose husband was killed,]” Elena muttered. “[But hey, what do I know?]”

 “[We have our orders,]” Roman reminded her, shooting a glance at Elena. “[Like them or not, we have to follow them.]” He returned his attention to the city streets, screams and the sounds of laser weapon discharge in the distance. “[And in the end, these people brought this upon themselves. Now they must bear the consequences.]”

No one said anything else as they made their way through the streets, killing the soldiers they came across, and the civilians soon fled into their homes at the sight of his team coming down the street. They were now learning their fear of ADVENT was well founded, and the stories of the faceless men in armor were true.

Fear was not necessarily a bad thing, Roman contemplated as he shot a terrified soldier in the back as he struggled to get into a house that had locked their doors.

It certainly made his job easier.

***

ADVENT Intelligence Control, United States of America

True to herself, Elizabeth liked to have multiple locations for her headquarters. While in EXALT,
she’d restricted herself to only one for obvious reasons, but now that she was now in charge of multiple intelligence agencies, she was now coopting various ones to stage her operations. They largely coincided with where the operations were taking place themselves, and since America was where quite a few important events were taking place, Elizabeth had taken the former CIA headquarters in Langley as her current base of operations.

And now they stood in a small board room, with an oak table, empty chairs and bare walls. Nondescript, and that was how both of them liked it. “So what do you want to discuss first?” Elizabeth asked, consulting her tablet while pacing absentmindedly.

Saudia smiled, deciding to sit down in one of the chairs. “The Canadian Prime Minister.”

Elizabeth nodded and placed the tablet on the table and slid it over to her. “Jace Murphy, Prime Minister of Canada, New Democratic Party affiliation.” Saudia looked down at the tablet which showed a middle-aged man who looked inscrutable, but even from looking at the image his ice-blue eyes conveyed weariness. He didn’t appear that old either, and his neatly styled black hair had no touches of gray. She glanced down at the information accompanying the picture. Thirty-eight, yes, very young. Idealistic too, if his party affiliation was anything to go by.

“I know who he is,” Saudia said, looking back up at Elizabeth. “I need to know anything of importance. Like how he thinks.”

“How he thinks,” Elizabeth mused, continuing to pace as she thought. “As his party affiliation says, he is one of the New Democratic Party, who gained a lot more influence after the War on Terror, and he pretty much took full advantage of the situation. He was the one who set up the system allowing Canada to take thousands of Muslim refugees from the war. He won the election with very little contest.”

“An idealist and a civilian,” Saudia sighed. “Such a wonderful combination.”

“Essentially,” Elizabeth continued. “Though he has personal reasons for being, ah, anti-war, for lack of a better word. His sister died in the War on Terror. Nothing related to the Commander, thankfully, but pretty much made him work to abolish militarism throughout the government. Most of which was accepted, mind you, Canadians in general are a rather peaceful people.”

“I’m aware of the stereotype,” Saudia nodded. “And that means very little right now. What exactly did he do?”

“Well, military spending was drastically reduced,” Elizabeth began, ticking things off on her fingers. “Canada officially took a non-aggressive position in international politics, he filled his cabinet with people of similar ideologies—which means no former military or police, including the people who work with said branches. Let’s see…what else? Oh, that also includes slashed funding for CSIS, which has led to, I’ve found out, dangerous infiltration of United States, English, North Korean, and Chinese intelligence agents. At this point it’s really not fair to call the CSIS a Canadian intelligence organization.”

She shook her head, chuckling. “I never bothered to really infiltrate Canada, since its usefulness was limited, but now I wish I’d taken an interest. In truth, Canada’s irrelevance is the only reason no one has acted, since it could be turned into a puppet state within a few decades with how shockingly bad their security is.”

She trailed off. “Getting off topic. Ah, did I mention that this also includes law enforcement as well? Yes, law enforcement was also deemed ‘too militarized’ and drastically reformed. Crime isn’t exactly bad, but it’s certainly reduced their effectiveness.”
“He’s got a lot done, I can respect that,” Saudia grudgingly admitted. “So then, I suppose the question is where all this money was put into?”

“About what you’d expect,” Elizabeth shrugged. “Military spending was put into government programs, largely those focused on education, welfare, anti-discrimination initiatives largely focused on Muslims, and police spending was put into rehabilitation centers and programs.”

“Well, they’ve got a head start there,” Saudia admitted. “The rehabilitation centers will be useful once Canada joins ADVENT. Saves us the trouble of building them.”

“Yeah, but we’ll have to do pretty much everything else,” Elizabeth chuckled. “You should have seen Stein’s face when I told her about it. I really bet she’s hoping you’ll enact Section 9.8.”

“She’s going to be disappointed,” Saudia answered, lacing her fingers together. “Annexation is not the correct solution now.”

“Anyway,” Elizabeth continued, pausing to face her. “That’s who you’re dealing with. He more or less holds the exact opposite values we have, or at the very minimum opposes the ones that matter. He doesn’t seem the type to be intimidated, and my information on him suggests that he is suspicious of you personally. He does not trust you, he does not like ADVENT, and he especially dislikes XCOM.”

“Of course he does,” Saudia muttered. “He would know the Commander is in charge of XCOM. That’s only going to make things harder. Do we have anything we can use on him?”

“Not anything useful,” Elizabeth scowled. “The problem is that he’s one of the rare politicians that actually believes the stuff he says. He’s not taken bribes or favors from anyone, his inner circle is completely behind him, and his private life is clean. Single, actually. Currently dating some nice lady in Quebec who’s just as clean as he is.”

“I never thought that would make me disappointed,” Saudia said, shaking her head. “But no matter. I don’t need Canada to join ADVENT right now, and trust or no, this man doesn’t strike me as an idiot. He has to know the aliens are dangerous, and well worth bending his precious ethics to allow some foreign soldiers through his country.”

“Well, I want you to press him on both the aliens and ADVENT,” Elizabeth stated, looking her in the eyes. “I’m having my agents bug the places where your meeting is likely to take place, and the CSIS is too compromised to find them in time. If his views are...problematic, I want audio.”

Saudia curled her lips up. “Rest assured I plan to press him as hard as I can. Now,” she motioned to the tablet, “Oceania.”

“Yes,” Elizabeth nodded quickly, picking up the tablet. “I believe we should be sending more support down there. At the very least we need to keep the resistance groups there well-supplied. They’re actually doing quite well, and deserve our support. The longer we can tie the aliens up there, the more we have to prepare for when they hit next.”

“Granted,” Saudia nodded. She really didn’t see any reason to refuse to supply the ones fighting down there. “How goes Japan?”

“The aliens have set up laser-based AA weapons, denying airstrikes,” Elizabeth updated. “However, we’re keeping them pinned in their city. They’re under constant bombardment day and night, but my agents have reported that it looks like they’re building gateways. At least three, possibly as many as six. But I don’t think they’re planning to attack anytime soon.”
“Or maybe that’s what they want us to think,” Saudia said, rubbing her forehead. “The last thing we would expect or want is another attack in Japan.”

“Maybe,” Elizabeth admitted. “But I’ve got some failsafes in place. They won’t be able to suddenly spew out soldiers through the gateways without us noticing, or fly across the ocean without being detected. Just in case though, I’ve got my agents setting up small tactical nukes in the city itself. Enough to wipe it off the map if they try something.”

Saudia winced. “The Japanese will love that.”

“In agreement there,” Saudia nodded. “Thanks for the update, Director. Now,” she stood, “I believe Hassan wants to discuss the good Prime Minister with me himself before I go off to see him. Perhaps he’ll have a good way to handle him.”

“If you want my advice, Saudia,” Elizabeth said as she left, “Be your charming self. That is, make sure he knows just who really is in charge.”

Saudia gave her an emotionless smile. “I’ll keep that in mind, Director Falka. Thank you.” Then she left Elizabeth to continue her work, while she prepared for the first major diplomatic meeting between ADVENT and a foreign nation.

***

Outskirts of Cochabamba, Bolivia

Jaylin wasn’t sure what to expect when she’d arrived in Brazil and was immediately transferred to some city in Bolivia. But she hadn’t expected a military camp.

Because that was essentially what this was. A repurposed military camp from the former Bolivian army most likely, now converted for not only ADVENT Military activity, but specifically for the Peacekeepers. She swallowed. Oh boy, when the public found out that the Peacekeepers had legitimate military bases, they were going to flip out.

She adjusted her gauntlet as she walked through the base towards where the barracks supposedly were. She had to admire how smoothly everything seemed to be running. Everything was organized, black armored transports were lined up neatly. In the distance Peacekeepers were shooting their weapons at targets and there was also a training ring for Riot Control to practice with their batons.

She pulled her own out and looked down at it. Might be a good idea to become a little more familiar with it, since she figured she might need to use it in a couple of days. Or hours, depending on how things went. Everyone had been tight-lipped about what was actually going on beyond that Brazil had invaded Bolivia, Paraguay, and Peru last she’d heard, supposedly in retaliation for supporting criminal activity in the country.

Jaylin shrugged and slid her baton back into the holster on her leg. From what she’d read, Marshal Luana was something of a warmongering tyrant obsessed by power. A fanatic of sorts too, given how liberal she’d been in utilizing her military to both keep the population in check and hunt down anyone who broke the law.

She smirked. And all accounts were saying that was probably going to change since the Chief of Peacekeeper Operations herself had also come down to Brazil, likely to put the Marshal in her place. And now the Peacekeepers were left with three countries who were no doubt angry at Brazil.
and likely to cause...issues.

The door slid open as she walked inside the barracks and to her own bed. It was plain, but didn’t look too bad with a footlocker at the end and a cabinet at the head which she presumed was specifically for putting her armor in. She placed her helmet inside and began removing the various pieces of her armor.

“Officer Tanika, correct?” A voice asked.

She glanced up to see a man walk up, also decked out in riot control armor, helmet tucked under his arm. She kept herself seated as he raised a hand, indicating her to remain sitting. Informal then, she could do that. He had what she would call a ‘weathered’ face that also bore some pale scars on his forehead and his shaved head gave the appearance of a hardened veteran. Possibly military then. Based on this place, she wouldn’t be surprised.

“Yes, sir,” she answered with a nod, not sure who he was.

The left corner of his lip curled up in not-quite a smile. ‘I’m Charlie Vasir, Chief of this division of Riot Control,” he took a seat on the opposite cot. “Now that you’re here, you should be appraised of the current situation.”

Jaylin nodded, giving him her full attention. “I’m listening.”

“Good,” he began, lacing his fingers together. “The good news is that Bolivia is completely under ADVENT control militarily. The population, however, is not. Over the next couple of days we are expecting massive riots to break out in the capital. It will be under the guise of ‘protest’, but they will devolve into riots nonetheless.”

She frowned. “Can they not be stopped ahead of time?”

Vasir gave her a cold smile. “Of course we are, but the law is very clear: We can only investigate if they clearly show an intention towards violence. Very few have done that on social media and elsewhere. The majority are likely not intending for things to deteriorate so fast, but many are angry, and will see an opportunity to join in any chaos that follows.”

Jaylin gave one nod. “Prepare for the worst, hope for the best.”

“A good outlook to take,” he chuckled, the sound odd coming from him. “But essentially. If all they truly want is to protest, than we will allow that, as it is permitted by law. However, if it deteriorates they need to be put down quickly.”

“And how many are you expecting?” Jaylin asked slowly.

“A minimum of a hundred thousand,” he answered. “Probably more. I would practice with all your weapons, because if something goes bad, people are going to need to be stopped by the hundreds.” He eyed her coldly. “I trust that won’t be a problem.”

It wasn’t a question. “No sir,” she confirmed. “They break the law, they feel the consequences.”

“Exactly,” he nodded approvingly. “We’re letting it leak that Chief Stein is going to be there as well. Her reputation may make some of them think twice.”

Jaylin started. “Chief Stein is going to be there?”

“She said she would join after she finished up something in Brazil,” he answered. “I imagine she
wants to ‘set the tone’ as it were.”

She almost shivered. From some additional research on the new Chief, she figured that was probably a good idea. That woman made the Commander almost look tolerant in comparison and there was no way Stein would be quite as understanding about the situation these people were in. “Let’s hope it doesn’t get ugly.”

“That’s what we’re hoping for,” he agreed, standing back up. “But not what we’re expecting.” He gave her a slight smile. “Glad to finally welcome you to the Peacekeepers properly, Officer Tanika. I think you’ll fit in well here.”

And he left her there, wondering just what she was now caught up in. She had a bad feeling about the coming days, and what concerned her was that from the sounds of things, Stein already had a plan for putting down any riots, and it wasn’t going to be pretty.

***

_Tehran, Iran_

It was less of a battle and more of a massacre, judging from the piles of corpses that littered the city. Most of it largely came from the MDUs which had supposedly surpassed all expectations. Roman was half-convinced that they alone could have taken the city, but in really didn’t matter any longer. Tehran was captured, the Iranian army finally broken, and they could move on to the next country.

The Peacekeepers had arrived after the hostile leadership had been subdued, and he’d personally witnessed them being led, sometimes dragged, away in cuffs. Roman didn’t know what would happen to them, and personally didn’t care. Given how they’d repeatedly refused surrender and as enemies of the state, he was fairly certain they would be executed.

Sitting on his cot, cleaning off his armor, he couldn’t really muster up much pity for them, or anyone else here for that matter. He was just glad this battle was done, yet the war wasn’t nearly over yet. There were still quite a few more countries to deal with, but now that Iran had fallen in such a public fashion, perhaps it would make it easier.

He pursed his lips as he set his gauntlet into his locker. Unfortunately that likely wouldn’t be the case. These people were too prideful to willingly surrender. They would fight to the bitter end, and they would die believing that they would be rewarded in the afterlife; justified in their stupidity. He snorted. Fools, anyone who believed in a god with the state the world was in now was deluded. Unless said god had a sick sense of humor, which given what he knew about some of them, wouldn’t actually be that far-fetched.

“[Not celebrating our victory?]” Elena asked him, walking up. Like him she was dressed in plain black military fatigues and boots. She didn’t seem to have completely cleaned up yet either judging from the pale blonde hair plastered to her forehead, and the smudges of dirt on her pale skin. He imagined he looked similar, truth be told.

“[No,]” Roman told her, setting the armor piece he was cleaning to the side. “[Don’t feel like getting drunk tonight.]”

She snorted. “[Some Russian you are. But yeah, I get it,]” she grabbed a cheap plastic chair and set it opposite him, a foot or so away. “[Doesn’t seem very appropriate, which is why I’m hanging back as well.]”
Roman looked at her for a minute. She looked very tired, both tired and concerned, and given her overall attitude ever since Zanjan had been taken, he was wondering if today was going to be the day they’d have the talk. “[Do you want to punch me?]”

She started, eyes widening in surprise. “[What? No! Why?]”

He let a mirthless chuckle. “[I wouldn’t completely blame you if you said yes. But I’m not blind, Elena, I know you’ve had…issues…with some of the things we’ve done, that I’ve ordered. Figured it was only a matter of time before you wanted to let it out.]” he shrugged. “[So shoot.]”

She bit her lip, thinking carefully. “[I don’t blame you, if you were wondering. We have orders. We follow them. I just would like you to answer a question…]” she paused, then took a breath. “[Do you enjoy it?]”

He raised an eyebrow. “[Enjoy what? Killing? Not especially, I don’t see a reason to take pleasure from killing defenseless people…]” he trailed off, sighing as she no doubt wanted to know how he could so easily carry out orders which killed supposed innocent people. “[The truth is, Elena, I don’t care.]”

She frowned. “[About what?]”

 “[Any of this, really.]” he admitted. “[This entire war is meaningless, pointless for both sides and started by idiots. I hate this place, and I’m tired of killing people fanatical enough to die for an idiotic government. I’m tired of always being on my guard for some suicide bomber or assassin with a death wish. I’m tired of walking through these people wondering which one wants to kill me. So I don’t care anymore.]”

He waved a hand absentmindedly. “[These people don’t matter to me. I don’t see a reason to care if five hundred die or five thousand. It doesn’t matter. At the end of the day nothing will change. ADVENT will take the city and the world will go on. Is the world going to stop if I execute a wounded soldiers or shoot a grieving woman trying to attack me? No, because the world has changed. There isn’t a reason to hold back, there isn’t a reason to give them any consideration they don’t deserve.]”

His voice was growing bitter, but he didn’t stop. “[I want this over, Elena. The aliens are something I care about, but right now we’re stuck here. So I focus on ending this war quickly and permanently. More efficient to kill people instead of capture them, saves time and manpower that could be spent elsewhere. I don’t really enjoy it, Elena, but I don’t care enough to do anything more for anyone here. They could have fled, they didn’t. They could have stayed out of our way, they didn’t. It’s selfish and heartless, yeah, but I can’t bring myself to care enough to change it.]”

He looked up at her. “[That answer your question?]”

He couldn’t read the expression on her face, but she gave a small nod. “[I…think so. I get it, sort of…]” she sighed and looked away. “[But I guess we have different outlooks. I was taught life was to be valued and protected. I joined to protect our citizens from danger, and that’s why this is… troubling to me. Would an enemy be justified if they did this to Russian civilians?]”

“[I suppose it’s a matter of perspective.]” Roman sighed. “[You probably had a happy upbringing, parents that loved you, friends and so on,]” he paused. “[Not me, sadly, my parents were leaders in a rather nasty criminal organization. Harsh, cultured and violent. From the day I was born I was being groomed to be their successor. I killed my first man at fourteen. Don’t regret it, man was a serial rapist who had the misfortune to owe a debt to my family, but I did. Became very acquainted with death over the years.]”
He gave a slight smile at her surprised face. “[It’s not something I tell people often. But the result is I don’t have the same sanctity of life you hold. If there is one thing I learned from my parents, it’s that life is disposable and replaceable. If half the population was to suddenly die, in the end it would mean nothing because more would just take their place. Very few are worth caring about to actually actively protect. I might not like it, but in the grand scheme of things, the lives of those opposed to us, in any position, are worthless.]”

“[I didn’t know,]” she said in a small voice. “[How did you…]”

“[Join up?]” He finished. “[Well, to be honest, because I didn’t see the purpose in running a criminal organization. I didn’t care about wealth, power or anything like that. I needed a purpose beyond simply extorting people for money. Criminals don’t help people. They don’t make things better. So one night, my eighteenth birthday I believe, I killed the leadership, including my parents. They’d never shown any affection towards me, and so I returned the favor. I had been in contact with the police and brought them down upon the organization, killing it for good. Afterwards I joined the Russian military. Protecting my homeland was something I could care about, and it turned out they had use for me. Some years later, here I am.]”

“[Oh,]” she said, leaning forward. “[I…see. Thank you for telling me, Roman. I think I understand you a little better now.]”

“[That’s all I ask,]” he said. “[This won’t cause problems?]”

She cocked her head and stood, an unreadable expression on her face. “[No, it won’t. And I’ve changed my mind, I think I do need some kind of drink now. You know where Galina went?]”

His lips curled into a grin. “[One of the bars close to the city square. Don’t know which one, sorry.]”

“[Thanks anyway,]” she shrugged, offering a small smile to him. “[I’ll see you later then.]”

She walked away and left him alone once again. He grunted and returned to cleaning his gear, sighing when a familiar voice interrupted him once again. “[She took that story rather well. Couldn’t really tell what she was thinking.]”

“[Eavesdropping jerk,]” Roman muttered as Maksim walked up from behind him, a smile on his face. “[Should have expected as much. Besides, I told you that before.]”

“[Yeah, true, but the context was a little different,]” he answered, smirking as he leaned against the bunk. “[If I recall, I was asking how you could kill people so easily. It was a compliment. Not whatever that was.]”

“[Fair enough,]” Roman said as he finished another piece. “[But I agree, she didn’t really react as strongly as I expected.]”

“[Hm, yeah, I wonder why that could be,]” Maksim said, with a tinge of sarcasm. “[Come on. I’ll give you a prize for the top three guesses-]”

“[No,]” Roman interrupted with a sigh. “[I’m very sure it’s not anything like that. Besides, I’m not exactly an enticing person.]”

“[Oh, don’t see yourself short,]” Maksim commented. “[But for now, I agree. Not yet, anyway, but any woman who hears that story and doesn’t run off in terror is someone who’s at least interested enough to find out more. Besides, there’s some women who like taking on broken people like you. They like to ‘fix’ them.]”
Roman sniffed. “[‘Broken’ is not exactly how I would describe myself.]”

 “[I agree, but really, think about it.]]” Maksim continued humorously. “[Former criminal prodigy turns good, kills his family, joins the military and doesn’t care about much because of his messed up childhood. You, my friend, are a cheap romance novel waiting to happen.]”

Roman groaned, wishing he would shut up. “[Perhaps I do need a drink. And you need one as well from saying all that crap.]”

“[Hey, I’m heading there anyway,]” Maksim shrugged. “[And you’ve been cleaning that damn suit for too long. Take a break and have some fun.]”

“[Appreciated, but I’ll pass,]” Roman said, returning to work. “[I think I’ve had enough social interaction for the night.]”

“[Suit yourself,]” Maksim said with a wave. “[I’ll tell Elena you said hi if I see her.]”

Roman narrowed his eyes, but didn’t say anything. Knowing Maksim, he was tempted to follow to stop him from saying something stupid. But no, with any luck Elena would punch him in the face if he made any suggestions. With that amusing thought in his mind, he decided to finish this up and go to bed. Tomorrow would probably be another busy day.

***

The Praesidium, Situation Room

Aegis was not exactly gloating, but the impression that the Commander got from him that he practically emanated was I told you so. Luckily he hadn’t made any comments, but this warranted a full meeting of the Internal Council. All of them were standing around the holotable, he was flanked by Patricia and Vahlen; opposite him were Aegis and Shen, and on corresponding sides were Zhang and Jackson, respectively.

“We’re already up to date with how the offensive went,” the Commander began, sweeping his gaze over each of them. “So let’s not waste time and focus on fixing our issues. Vahlen, what did you find?”

She stepped forward, and plugged her tablet into the holotable and the holographic corpse of one of the Mutons appeared. “Your initial impression was correct, Patricia,” she began. “These Mutons were modified significantly. They were cybernetically modified to an invasive degree I did not expect. From what we were able to extract, it seems very possible that the Muton could be forced to obey very specific commands.”

“The technology itself appears to be a prototype,” Shen added, his face wrinkling in disgust. “It could certainly be improved and its sole function appears to be the negation of psionic abilities, but doesn’t make them more effective, if what you described is accurate, Patricia.”

“No, the psionic commands do disrupt their concentration,” Patricia confirmed, narrowing her eyes at the hologram. “With enough concentration, they can be driven insane. But it’s a disruption to my effectiveness either way.”

“Do you have a comment, Aegis?” Zhang asked, folding his arms.

“The implications are…concerning,” Aegis finally said. “The technology appears to be derived from the Andromedon Special Operators.”
“Did they use something similar?” The Commander asked.

“If the conversations I’ve had with them were accurate, they perfected this,” Aegis explained. “There was a reason Special Operators were banned, even by them. Even they have some lines they won’t cross, and cybernetic enslavement akin to your Manchurian Program was something they universally agreed was not to be supported.”

“But it’s apparently fine to apply to Mutons,” Jackson noted. “So a question: Could these Special Operators kill someone like Patricia?”

“Yes,” Aegis answered, with a tilt of his helm. “Without question. They would be completely immune to her attacks and Special Operators were some of the greatest threats during the Andromedon Union Wars.”

The Commander pursed his lips. “Then it’s only a matter of time before they start creating them again.”

“Not with the Battlemaster in charge,” Aegis said. “He won’t stoop to using assassins. However, if another Ethereal division joins, I cannot say the same. But I think even the Andromedons would be hesitant to authorize the creation of more Special Operators, even if allowed by the Imperator.”

“Special Operators or not, that doesn’t solve the biggest problem,” the Commander said, switching the hologram to an image of the Battlemaster. “This is now our priority.”

“And like I said in my report,” Aegis said, with a sigh. “You lack the weaponry to kill him. Your best chances are psions.”

“That is what Vahlen and Shen are for,” the Commander answered evenly. “The Battlemaster isn’t invincible, just difficult to kill.”

“Is the Battlemaster’s skin modifications the same as your own?” Vahlen asked.

“Slightly tougher,” Aegis answered. “But moderately so.”

Vahlen gave a single nod. “I’ll have to begin work to try and crack the Iron Skin mod, and subsequently fix any vulnerabilities in our own soldiers.”

“The problem I see is that almost all of our soldiers will be killed in seconds if they face him,” Jackson noted. “Even the Aegis armor won’t last long against his sword, or his telekinetics will end the battle just as fast. Maybe the Iron Skin soldiers could stand against him, but very few others.”

“Correct,” the Commander agreed. “Only genetically modified soldiers should be allowed to engage the Battlemaster. But it’s still the equivalent to a death sentence unless the goal is to hold him off.”

Shen raised a hand. “Actually, Commander, I might have a solution to this. One which may help us beyond handling the Battlemaster.” He turned to Aegis. “A question: can you create solid weapons out of pure psionic energy?”

The Commander raised an eyebrow at that request, and Aegis seemed similarly confused. “To an extent, Dr. Shen.” He extended a hand and a sword materialized in his hand, wisps of psionic energy floating off from the holographic blade. “If this is your idea, I do not see merit in it. It requires a degree of concentration your psions do not have, and it is not sharp.”

“That’s actually a good thing,” Shen nodded, picking up his own tablet. “And if I recall, you said
the Battlemaster has his own form of honor.”

Aegis nodded. “Yes.”

“So if a soldier was to issue a…challenge, for lack of a better word, he would take it?” Shen continued.

“Likely,” Aegis nodded. “But at best it would delay him, especially since your soldiers are not equipped to deal with a Battlemaster, let alone him.”

“I’m not finished,” Shen continued. “If I also recall, Ethereals disliked using ranged weapons outside of psionics, yet it appears that the majority of the Ethereal Collective uses ranged weapons.”

“Yes, but only because most are incapable of wielding psionics,” Aegis confirmed, a confused note still in his voice. “Non-psions have few ways to negate ranged weapons, especially those who wish to utilize melee combat.”

“That’s all I needed,” Shen said, a satisfied smile on his face. “Now, ever since Aegis told me both about the Battlemaster and their history, I knew that we might need to develop countermeasures and started work on some preliminary projects to specifically deal with the Battlemaster.” He plugged in his tablet and a very preliminary MEC design appeared, with much less detail than the previous ones.

What stood out about it was that it was much slimmer than the previous iterations, there were no additional weapon systems on it, but every part of it was securely armored. In the right hand it held a blade of some kind, and in the other it held a shield half as tall as itself. Specs displayed underneath showed it as just above twelve feet. “I present the Shinobi-class MEC,” Shen said, inclining his head. “A MEC specifically designed to counter the Battlemaster.”

“I’m impressed,” Zhang said. “You had the foresight to come up with this.”

“It will have to be worked on,” Shen amended. “But the concept is one that is solid.”

Jackson frowned. “The concept is good, yes, but in reality? That sword the Battlemaster has cuts through armor like butter. I’m not sure alien alloys will be much better.”

“I know,” Shen nodded. “Which is why the entire suit will have a MELD overlay which can be controlled by the pilot itself to either harden or repair. MELD is exceptionally tough, and if the suit can heal itself…”

“It won’t be able to be killed,” the Commander finished approvingly. “And without extra weight to slow it down, it might be fast enough to keep up with him.”

“Unless he does one of those charges,” Patricia noted. “Not even a MEC can keep track of something that fast.”

“I’m working on that,” Shen promised, looking to the Commander. “With your permission, I can begin devoting resources to this project.”

“Granted,” the Commander nodded. “You’ll have what you need.”

“Until that point, there was another idea I had,” Shen continued, replacing the MEC hologram with a sword. “Patricia, remember that discussion we had a few weeks ago?”
She blinked. “Yes, I do…” She smiled. “That would be perfect.”

The Commander turned to her. “Explain.”

“An idea Shen had,” Patricia explained. “Because the Battlemaster uses both melee combat and psionics, he was curious if our own soldiers could do the same. I told him in theory it was possible, but it would probably be a bad idea because they didn’t have the same protection Battlemasters had.”

The Commander got it. “But now with the Iron Skin modification…”

“Exactly,” Shen finished with a smile as he put the image of a streamlined sword on the holotable. “The swords I’ve conceptualized would work much the same way as the armor, strengthened with MELD nanites and would repair the blade it needed. Combined with a soldier with the Iron Skin, psionics…not many aliens would be able to stop them.”

“Ah, I see now,” Aegis nodded in revelation. “You want to assist in training your psions in swordsmanship in a way that won’t kill them. They would not hurt me with their weapons, nor I with mine. An intelligent plan, Dr. Shen.”

“That it is,” Zhang said with a rare, but cold smile. “Clever. To stop one Battlemaster, we make Battlemasters of our own.”

“I suppose I should get to work,” Patricia stated, a cold fire in her eyes. “The next time the Battlemaster shows up, I want to have a surprise for him.”

“I assume you already have some candidates for training?” Vahlen asked.

“Yes, I do,” Patricia said, shooting Aegis a look. “And today they’ll find out they’ve been selected for the Templar Program.”

“We’ve got work to do,” the Commander finished, clasping his hands behind his back. “Let’s get to it. We don’t know how much time we’ll have until the next attack. Dismissed.”

***

Sucre, Bolivia

Jaylin had never seen a crowd even remotely this big. Perhaps it was perspective, being in the city center in front of the capital building, but there were people as far as the eye could see, shouting in incomprehensible roars and waving signs with Spanish writing on them, which was pretty much useless against the mostly foreign Peacekeepers.

She did admit to feeling some slight intimidation at the sheer vitriol that was in the air, and it was almost enough to make her break her wide stance and bring up her riot shield. But she kept her hands clasped behind her back, tense as all hell as the people stood mere feet from her. She was rather glad she didn’t understand Spanish, because she was fairly certain that they were shouting some rather nasty things at her.

“How long is this supposed to last?” Leon asked through their private channels, another American like her. “At some point they have to go home, right?”

“Chief said he expected they would clear out within six hours,” Jaylin answered. “Provided nothing was started. How long has it been?”
A groan. “Thirty minutes.”

Jaylin smirked under her helmet. “Well, at least we can pass the time easier. You been here long?”

“Nah, just transferred from Seattle. Good thing too, I guess.”

Jaylin’s mood deteriorated at that. “I’m sorry. It’s…strange that America is under attack.”

She heard him exhale. “Could have been worse, I guess. Seattle is still being fought for.”

“At least you still have your country,” a new voice interrupted. “Think ADVENT’s pretty much written Australia off for now.”

“True,” Jaylin grimaced. “What’s your name?”

“Samantha Venator, a pleasure.” Huh, not that much of an accent. Jaylin was glad she’d clarified. The voice was surprisingly articulate and cultured. Not what she would have expected. “How long do you think they’ll last?”

“Before all hell breaks loose?” Jaylin asked, looking into the crowd. “Don’t see any obvious troublemakers yet. Maybe they haven’t shown up yet.”

Leon snorted. “For their sake, I hope they don’t cause trouble. Stein will put them all down without a second thought.”

Jaylin looked around the crowd, scanning it yet again. “Any of you seen where she went?”

“No,” Samantha said. “Figured she’s in the capital building. Probably coordinating the various RC groups. If I’ve heard right, she had enough Peacekeepers to completely surround the protestors.”

“What I expect-hold on, we might have trouble,” Jaylin scowled as a particularly angry group of people were heading her way. “Stay calm.” As she said that, she resisted the urge to pull out her ARC rifle with how close these people were, waving their arms dangerously close to her face. She switched her helmet modulator on. “I don’t speak Spanish,” she told them fruitlessly. “Se no habla espanol.”

She thought that was mostly correct. One of the men sneered, and suddenly Jaylin found herself on the receiving end of a pistol. The Peacekeepers reacted instantly and within seconds their ARC rifles were drawn and pointed in the crowd. Jaylin also saw a few other armed civilians also pointing weapons directly at Peacekeepers, and looked entirely unworried by the response.

“We’ve got a situation,” Leon was saying. “Armed and threatening protesters. Respond. I think they’re trying to start a riot.”

“I see. I am on my way.” Jaylin felt cold at the sheer lack of emotion from the voice of Stein.

“Stand down!” Jaylin shouted at them, and wondered how long she could hold them off. There were several people deep within the crowd, also armed and shouting stuff which was getting a rise out of them and it only became more heightened as the minutes ticked by. She switched again to her short range private link. “We need orders now. Fire now!”

“Do not worry, Officer Tanika,” Amalda Stein, Chief of Peacekeeper Operations, said as she walked up beside her. The woman was as chilling in person as her voice suggested. Her face was angular and hard as stone, and her green eyes held contempt for the people in front of her. Her
graying hair was pulled back perfectly, not a strand out of place. The woman was clad in the armor of a Riot Control Officer, which essentially meant the addition of white shoulder cap on her right shoulder, and a gray variant of the Officer helm, which she was not wearing now.

At her side was a State Officer, who Jaylin assumed was a translator of sorts. At the nod of Stein, he adjusted something in his helmet and nodded to her. “Silence!” Stein roared, raising a fist at a ninety-degree angle. Her translator repeated what she had said, louder, but with nowhere the same intensity.

Something must have caught the attention of the man pointing the gun at her, and he called back and eventually everything was much quieter; the roar dimming to a constant murmur. Stein looked at the man with absolute contempt. “Tell him who I am, and ask what he is doing.”

The translator nodded and repeated what she asked. The man answered quickly. “He says he wants ADVENT to leave Bolivia or there will be ‘trouble’ as he puts it. He seems to think the mob can overwhelm us.”

Stein sniffed. “I will not entertain his delusions. Tell him to order the crowd to disperse and his armed thugs to surrender their weapons or we will deal with them.”

Jaylin hoped they actually would, but the man simply shook his head, and directed a string of Spanish toward Stein specifically. “He said no,” the translator said diplomatically.

“I gathered that,” Stein said with a dangerous and humorless smile, her eyes not leaving the man. “Address the crowd. Disperse or be arrested. Their right to peacefully protest has been temporarily revoked in light of armed interference. Let the record reflect this. Continued refusal will result in lethal and non-lethal responses.”

The translator nodded and shouted the orders to the crowd that was now getting riled up again. The agitators in the back were yelling again, and the situation appeared to be worsening. “I don’t think they’re listening,” the translator said. “Orders, Chief?”

Stein turned a knob on her helmet. “All local Peacekeeping forces, you are authorized to remove armed protestors by lethal force if necessary. Subdue all other participants with non-lethal measures. On my signal.”

Stein turned back to the man holding the pistol at Jaylin, and with no ceremony pulled out her pistol and blew his head into red chunks, splattering the people around him with blood. Within seconds the other armed protesters were either subdued or killed, and Stein put on her helmet and withdrew her baton. “On the ground!” She roared. “I will pursue the ones in the back, Christian! Rosaline! With me!”

Now all hell broke loose as Stein stormed into the crowd, flanked by her two officers and the people that didn’t immediately get the hell out of her way she smacked with baton. In lethal mode. The rest of the crowd immediately broke into two groups. Stein’s translator had apparently shouted out the command to get on the ground, and a good portion of them did so, while the rest screamed and pushed against the line of Peacekeepers.

And they fell in droves as the bolts of electricity hit their defenseless bodies. Jaylin put down two people charging at her, and hit three more rushing Samantha. One had gotten close to Leon and he’d responded by smacking the butt of his ARC rifle in his face and following it up with a shock with his baton.

Even still, the now-rioting people knew better than to get in Stein’s way as there were a trail of
bodies of the people who had been foolish enough to stop her. Stein finally caught up with one of
the armed protester who decided to frantically, and stupidly, fire at her. Stein responded by
slamming the baton into leg and pulled, ripping the flesh easily, and with blood now on the spikes,
she slung the lethal baton into his neck and pulled, ripping out part of his neck and he fell to the
ground, dead from the lethal voltage.

“Press forward,” Stein ordered calmly as she continued her hunt into the crowd who now fled or
fell on the ground before her. “Reinforcements are coming to arrest the offending citizens.
Conscious people on the ground are not to be arrested.”

With that the line of Riot Control advanced, still shooting blue bolts of electricity at those foolish
enough to attack, and some were beginning to flee. Behind her, Jaylin noted a large amount of
State Officers who were pulling the unconscious bodies from the crowd behind them and
handcuffing them. Jaylin shook her head at that, returning her focus to subduing this riot.

They were going to need a lot more handcuffs by the time this was done.

***

Ottawa, Canada

“Right this way.”

Saudia followed the instructions of the guards and was soon escorted into a well-furnished, but
isolated room in Parliament Hill. Nowhere public thankfully, and it appeared that the Prime
Minister wanted to keep the meeting as low-key as she did. However, by now the Canadian media
would know it was taking place and she wasn’t looking forward to having to deal with them when
she left, as they would likely be impossible to ignore.

Bookshelves lined the walls, and there were several portraits of various people on the ends; an
ornamented rug laid in the middle of the room, a short coffee table on top of it and there were two
opposing couches, one of which held the Prime Minister of Canada himself. There were several
files on the table, arranged in an orderly fashion, and Prime Minister Murphy was sipping some
drink from a mug.

Upon hearing the door open, he rose and walked over to greet her. “Chancellor Vyandar,” he said,
extending a hand. “A pleasure to finally meet you.”

Saudia nodded, taking the hand and giving a firm shake. “The feeling is mutual, Prime Minister,
though I wish the circumstances were better.”

His lips turned up in what appeared to be a sad smile. “I agree, while our administrations have
disagreements, what is happening in America and around the world is a tragedy.” Saudia raised an
eyebrow as that last addition, as she was fairly certain he wasn’t just talking about the aliens.

“I’m glad you agree,” she finally said. “And with that in mind, I hope that we can work something
out to the benefit of both of our administrations, and the human race as a whole.”

“I hope the same,” he nodded, motioning her to take a seat on the couch opposite her. “Now, before
we begin, do you want anything? Tea? Coffee?”

“Unnecessary,” Saudia dismissed with a wave. “I would prefer we get straight to business. Time is
a luxury we can’t afford, and predicting where the aliens will strike next is…difficult.”

“I’d imagine so,” Murphy nodded, facing her seriously. “But it seems you do indeed prefer
bluntness, so I will oblige and make this clear from the start: Canada will not join ADVENT.”

She nodded. It wasn’t unexpected. “Given your administration’s words towards my own, I am not surprised. With that said, I did not come to convince you to join us, but to request your assistance in pushing back the alien threat.”

He laced his fingers together. “Then what is this request?”

“The aliens have ignored your country,” Saudia began. “We’re not sure why, but they seem content to ignore you and press forward in America. This may change, it may not. But what is for certain is that they have left themselves vulnerable to attacks from the north, specifically, Canada.”

He gave a short nod in agreement. “I was told the same. Attacks via the Canadian border would be far more effective than simple head-on attacks.”

Well, there was hope. “Exactly,” she confirmed. “Ultimately, what ADVENT and I request is simple: Permission to construct military bases near or on the border of Canada to facilitate quick surprise flanks on alien forces. With these in place, we will be able to both stall the alien advance, and damage them militarily. An additional bonus is should Canada come under attack, there would be forces on-site to immediately respond.”

He was silent for a few moments. “Why are bases necessary? Could you not just move through the border to your locations?”

Clearly not familiar with military or logistics. Saudia suppressed a sigh. “That is not recommended for several reasons, Prime Minister. We’re not talking about a small force of special forces, we’re talking thousands of soldiers, minimum. Simply marching an army across would be both a drain on resources, and certainly attract the attention of the aliens who may try and sabotage us beforehand. In addition, bases would allow us to gradually establish points so that no matter how deep the aliens penetrate, we will always be able to strike quickly. I do not plan to make this a simple gamble on one force alone. This is a war of both tactics and attrition, and since attrition is something I doubt we can match, our tactics must be smart, and superior.”

He pursed his lips into a thin line. “Let us say I agree. If you end up victorious in this war, what will happen afterwards? Will you leave?”

“Not immediately,” Saudia answered. “I suspect that by that time, Canada will have come under attack and more bases will need to be established to defend it. As Canada is still not a part of ADVENT at that time, bases will be decommissioned eventually, but not until we are sure that the last remnants of the aliens are destroyed.”

“I see,” Murphy leaned forward. “Then I’m afraid we have an issue. How do I know first, that ADVENT would actually leave, and second, that allowing you to do this won’t bring down the aliens upon my country?”

Saudia kept her tone even. “For your first question, because I’m telling you it will happen. The Advent Directive is very clear on respecting the territory of foreign nations, and failure to comply with that would likely lead to me being discharged at best.” She paused. “And I can offer no guarantees on the second. The aliens may take this as a provocation, but the truth, Prime Minister, is that you will not be able to ignore this war forever. Canada will come under attack eventually, and it is better to be prepared than caught unawares.”

“Then why, tell me, have we not been attacked?” He demanded.
“Again, we’re not sure,” Saudia sighed, keeping her exasperation to a minimum. “The most likely reason is because they don’t consider you a threat.”

He suddenly smiled. “And there I think you’ve hit a crucial point, Chancellor. We are not a threat and that is by design. The aliens behind this aren’t brainless creatures. If they don’t see us as a threat, why would they choose to attack us? All it would do is rally more to attack them.”

“Prime Minister,” Saudia said calmly. “With all due respect, this is not a simple territorial dispute. An attack by these aliens on one country is one on all of humanity. Do you really think they will ignore Canada forever?”

“No, I do not,” he answered. “And there are only two ways this war can end: Your victory, or theirs. And I suspect they would be more merciful to a country that has not harmed them than one who was an active participant.”

Saudia blinked. “You would surrender without even putting up a fight? Prime-“

“If that fight would needlessly get my people killed, yes,” he answered, a note of steel in his voice as he looked at her intently. “You may believe you can win this war. I am not so sure, and until I am I do not want to throw my people away just to die.”

“I don’t think there is much of a choice in this matter,” Saudia answered, some frustration creeping into her voice. “Let us entertain the possibility of a surrender to the aliens. Do you know what that would actually mean for your people?” She paused to let that sink in. “Humanity would become a subject species to the Ethereals, your people would be taken away, experimented on, killed. The rights your people enjoy would be curtailed beyond all measure. You would only work in service to the Ethereals. Free will means nothing to them. It is slavery in all but name, Prime Minister. That is what you are choosing by refusing to take a side.”

He opened his mouth to speak, but Saudia cut him off as she realized another point. “And I can safely say that the reason the aliens are ignoring you is not just because you are a threat. Remember Germany? Remember China? Remember Australia? The United Nations? What direct threat did they pose?”

“They supported XCOM,” he shrugged, although sounding uncertain. “They helped the Commander wage war. The UN enabled him and perhaps they viewed that as a military target.”

“Canada supported XCOM if I recall,” Saudia retorted coolly. “So that point can be dismissed. No. The actions of the aliens seem to be unpredictable, and relying on their mercy is as foolish as believing they don’t have plans for Canada.”

Murphy inhaled sharply. “Perhaps. Perhaps not, but truthfully, Chancellor, I am not sure you would be any better.”

Saudia stiffened. “I beg your pardon?”

“You heard correctly,” he stated with a humorless smile. “And don’t act too surprised. I am not blind to what ADVENT is doing in the world. I know you are bombing cities in the Middle East, executing civilians just for getting in their way. I know you kidnap people in the middle of the night on terrorism and criminal charges and convict with no jury or trial. You execute military leaders with no due process. Your “Peacekeepers” fire on crowds of civilians for daring to protest having their country taken from them without any semblance of democratic process.”

He shook his head. “Your administration is little better than that of North Korea, Chancellor,
although since they are a member of ADVENT, perhaps that isn’t surprising. Your administration is set up to trample anyone who dares question them, I’ve read your directive and it is terrifying. No one can enter a position of power without approval from the state, military leaders can order the indiscriminate killing of innocent civilians, and entire businesses can, and have been, taken over by your administration without any say in the matter.”

Saudia listened as he kept going on. “And this is not including the abhorrent people you have placed in positions of influence. Amalda Stein shouldn’t even be in charge of a unit, let alone the entire Law enforcement, and that isn’t counting the war hawk Treduant, dictator Iseul Gwan and a list of people who I’ve never heard of before. And of course, the Commander of XCOM.” The last words he practically spat out.

“You are a question mark, Chancellor,” he continued, eyeing her with open disdain. “I have no idea who you are or were and I am shocked that this isn’t terrifying anyone. I’ve attempted to come up with explanations as to where you come from, and each one is more worrying than the last. At best you are who you say you are, and someone in intelligence work as scrubbed as you should not be in such a position where millions of lives are at stake.”

He paused. “Or you lied and then the question is how you could have possible become the de facto leader of what is now more or less the new United Nations. Either you are a puppet or…something else. Your Intelligence Director, your engineering and science heads, your own husband. These people have no pasts and appeared as though from thin air. I do not want to imagine the implications of that, but I have and I can’t stop thinking about them.”

He sipped from his mug. ‘I’ve met people like you, Chancellor, and all of them were all the same. They have a fundamental lack of empathy. They think people can be forced or molded into whatever they wish. They think they can place everyone into neat little boxes, and rely on fear and subjugation of force the rest in line. People, Chancellor, are not like that. They are unique, they are not set in stone, they can change. A woman like Stein believes that a personality is immutable, a person like you is arrogant enough to believe that you know what people need better than themselves.”

He set his mug down. “On paper you have the semblance of a democracy, Chancellor, but in practice this is an elegant dictatorship. Authoritarianism with a delicacy I can’t help but admire in spite of how much it repels me. Your administration is the exact opposite of what is acceptable. It lacks empathy, it lacks freedom, it lacks humanity. It is potentially just as much of a threat to our species as the aliens themselves.”

His humorless smile vanished. “I was entertaining allowing your soldiers to pass through my country, but after this conversation I have decided against even that. Canada will not assist you in your fight against the aliens. We do not want, nor need your help. The aliens will be dealt with and without your interference.”

Saudia was as still as a stone, and then took a breath. “I think, Prime Minister, that we have a fundamental difference regarding our views on humanity. You have faith in the common person, but I lost that faith long ago. People do not know what is best for them. Some people even believe capitulating to an alien force is preferable to standing up for their ideals. Most people lack the will to make difficult decisions, and then demonize the ones who make the world safe for everyone. Most people, Prime Minister, are easily manipulated and influenced by what they see around them. Media, celebrities, news, and even their own leaders.”

Her tone hardened. “I do not apologize for doing what must be done, Prime Minister. I do not apologize for putting the survival of humanity above the so-called freedoms that have divided us
for generations. I do not apologize for subduing a region that has been awash in death for decades. I do not apologize for distributing justice to people who break the law. You can call ADVENT harsh, heartless or without humanity, as you so eloquently put it. But...” she suddenly smiled. “I do not particularly care. Because it. Is. Working. We have an army capable of withstanding an extraterrestrial force. We have peace between large portions of the world. We have leaders who, while you might despise, are professionals. We know what we are doing, Prime Minister, and I would be very careful openly declaring your intentions towards this war.”

“And why is that?” He demanded.

“Because, Prime Minister,” she answered smoothly. “ADVENT may not take action, but XCOM certainly would. You know what the Commander is capable of, and I believe if he heard what you just said to me, he would recommend your termination from your position. There are people who want me to authorize Section 9.8 of the Directive, Prime Minister.”

He stiffened at that. “I don’t want that, Prime Minister,” she continued coldly. “And I don’t believe that would be an appropriate course of action. But I would strongly reconsider your intentions towards the aliens, or at least keep them private. I will keep your words to myself out of respect for your position, but openly believing that capitulation to the aliens is possibly preferable will make enemies. And you do not want to make an enemy of ADVENT, and especially not XCOM.”

“Is this a threat?” He asked icily.

“No, it is not,” she shook her head. “It is a warning of what might happen. But understand that there are consequences to your actions, Prime Minister, and completely refusing to help will not endear you to those in my administration. I do want to come to some agreement, but perhaps next time it should be you that takes the initiative.” She stood. “I would strongly reconsider your position here, Prime Minister, but ultimately, you must decide. Good day, and remember that there is more at stake than just your country.”

Without waiting for a response she spun on a heel and marched to the door. Perhaps it was rude, but she didn’t see any reason to give any more consideration to someone who was arguably worse than a traitor. Ethan was waiting for her outside and immediately fell into step beside her as she marched past the Canadian guards.

“That bad?” Ethan muttered as they walked.

“An understatement,” Saudia muttered in return, keeping the fury in her voice controlled. “Let’s just say that the good Prime Minister just made a lot of new enemies.”

***

Supplementary Material

The Advent Directive

SECTION 9: Relations with Foreign Nations

Subsection 9.1: Introduction

Purpose: ADVENT seeks to have efficient and mutually beneficial relationships with various foreign nations that do not seek to join ADVENT, assimilate those that do, and firmly and decisively deal with foreign nations that pose a danger to ADVENT itself and its citizens. This section will detail the exact requirements for a nation to be permitted into ADVENT, and responses to hostile economic, espionage, and military action from foreign nations.
It will also detail the requirements for an alliance or pact (of any kind) between a foreign nation and ADVENT itself. ADVENT holds itself to a high standard, and expects the same out of those it works with to ensure both parties are mutually prosperous. Not every country will meet these qualifications, either for an alliance or assimilation, but it will demonstrate which ones truly desire such and which ones do not.

ADVENT will also take appropriate action against foreign nations that take hostile actions of either an economic, espionage or military nature, and the response will vary depending on the size, scope and current damages of such actions. Response may include sanctions, engineered collapse, or annexation. ADVENT will not tolerate a threat to its citizens or personnel.

Table of contents:

Section 9.1: Introduction

Section 9.2: Requirements for Non-Assimilating Alliance

Section 9.3: Qualifications for ADVENT Assimilation

Section 9.4: Procedure for the addition of New ADVENT Member Nation

Section 9.5: Response to Hostile Economic Action

Section 9.6: Response to Hostile Military Activity

Section 9.7: Response to Hostile Espionage Activity

Section 9.8: Requirements for Annexation

Section 9.9: Treatment of Hostile Nation Prisoners
Vitakar

Vitakar, Intha

Even if his time was unlikely to be quiet, Nartha was quite glad to be back on Vitakar. Earth had its charm, but it didn’t quite compare to his homeworld. Intha in particular was unlike most human cities. While Vitakarians didn’t build their cities into the environment like the Dath’Haram, they did build their cities in a way that incorporated the natural landscape.

Intha had massive rolling hills and the city spread for miles around. An additional stark difference between Human and Vitakara architecture was that cities were expansive. Vitakara built their buildings outward, not upwards. It wasn’t uncommon for ground to be excavated underneath if space was tight. The reason, Nartha believed, was probably due to the storm seasons when winds would reach lethal speeds. He imagined it hadn’t taken long after the first Vitakara skyscrapers collapsed when they decided they needed a better way to construct their buildings.

Besides, it seemed far safer in general. How Humans were fine with continuously working in those skyscrapers was something he didn’t quite grasp. He would never feel comfortable in one and it was worth the extra few minutes to get around without having to worry the building would collapse from a rather strong breeze.

Compared to some of the other Vitakarian cities, Intha was rather small. Only the Hangar had an internal transport system, whereas in a place such as the capital, almost every building in the city had their own internal transport. He supposed it wasn’t too different from Human elevators, but horizontally.

“Landed,” a pleasant female synthesized voice said. “Please exit to the right.”

Nartha unstrapped and stood, slinging his pack over his shoulder. The entirety of his belongings were rather small, and he wore simple civilian attire, a simple gray shirt, pants and boots. He was still wearing the black gloves from his Zararch uniform, no sense in leaving a trail when he could help it. He was glad he had decided for a more subdued approach on arriving. There weren’t many others in the transport with him.

There was a Dath’Haram, and a small family of Vitakarians who hadn’t paid him any attention, which would have doubtlessly happened had he advertised that he was Zararch. Probably had left to visit one of the colonies and were returning home.

Right, he stood in front of the door and waited for it to slide open. He needed to readjust to being among his own species again, and that meant using his position to the best of his ability. His family couldn’t know anything yet, and he couldn’t just say what was actually happening. But the Zararch had establishments everywhere, and there would no doubt be details on suspected Nulorian activity…and dissident activity in the Aui’Vitakar.

The good news so far was that the Sectoid Virus was successfully distributed without any major issues, and with any luck should spread to a good portion of the species within several weeks and months. He’d sincerely wished that he’d thought of contaminating himself before even leaving, because he could have spread the virus to everyone in the Mars Observation Station, including the Zar’Chon himself. Well, not much could be done about that now, but the damage would hopefully be significant.
The door slid open and he walked out into the dark chrome room where checkpoints were constructed before exit transports. Standard procedure was to verify identity, and he walked over to one where a young Vitakarian female was sitting, operating her haptic monitoring board. “Welcome back,” she greeted with a smile, no doubt a standard way to put new arrivals at ease. He suppressed one of his own, because just from her facial movements and the artificial inflection in her tone, he knew she was also a Zararch agent. Unsurprising that they would be monitoring new arrivals.

“Here you go,” he interrupted before she could continue, handing over his ID. “Always a pleasure to encounter one of our own.”

“Ah,” her glowing eyes widened as she saw who he was. “Did you come back from the Mars Station?”

“Earth, actually,” he answered, taking his ID back. “However, I don’t think I’m permitted to reveal more.”

“Of course,” she nodded vigorously, clearing her throat. Definitely a Zararch agent, but a junior one at best. “Is there anything I can do to help you?”

“You can,” Nartha nodded, tapping his wrist-map and ejecting a small chip, which he handed to her. “I need locations on major locations in Intha. It’s been awhile since I’ve been back. If you have access to the Zararch database, I would also like current operational objectives, and of course, clearance to enter the local Zararch base, if that is possible.”

“I can give you clearance,” she said, typing at her station. “However all operations are restricted externally. I’m sorry.”

“Not an issue,” Nartha said with a nod. “I’ll be going there anyway.”

“Here you go,” she said after a moment, handing the chip back, which he inserted into his wrist-map. “Do you require anything else, agent?”

“Not currently,” he assured her. “Thank you for your assistance.” With a final nod, he walked through the checkpoint and consulted his wrist-map. Humans had made good steps in mobile devices and GPS, but they were still too crude. The Vitakara wrist-map slid smoothly over the arm, and had both a normal screen display and haptic projector for better visualization. Highly useful, but right now, he didn’t quite need it yet.

He was positive his family home was still in the same place, and he knew that all of them were going to be waiting to see him.

He sighed. It was going to be tricky to balance what he could and should say to them. The Zararch were doubtless monitoring the house since his father was part of the Aui’Vitakar, but that was just going to be yet another obstacle he had to work around.

Once the obligatory family meeting was over, he could actually begin his work.

***

_Blacksite 004 – ID: “Sanctuary” – Overseer: Sana’Ligna_

The Battlemaster looked over his blade, inspecting it for any noticeable flaws or chips in the metal. To date there had yet to be anything that did more than scratch it, but as it had been several decades since it had actually been put into action, ensuring that it indeed was as resilient as before was
necessary.

In truth though, he knew perfectly well that the only metal that could damage his armor or sword came from the Dead World, and the idea that the Humans could find it, let alone survive on the planet was absurd. Aegis only knew the planet by reputation, and didn’t even know about what the Imperator, the Creator, and Sana’Ligna actually did there, let alone what the Battlemasters had done in the days of the Empire.

His chuckled in amusement. The Imperator had been wise to systematically cut Aegis out from the more sensitive projects of the Collective. A shame, in truth, but Aegis has proven the Imperator right and now couldn’t utterly cripple the Collective, even if he knew most of the Gateway network and had taken Sovereign-level technology to the humans.

Unfortunately, he was going to find much of it impossible to construct from materials found on Earth. Only the Gateways were possible, and even Fectorian and Revelean were still attempting to grasp the intricacies of Sovereign technology. The science was beyond him; he was a warrior and was perfectly content with that.

Times like this gave him the opportunity to reflect which was…refreshing…it had been too long since he had seen true combat, and during the battle, he was reminded of how rewarding it was to finally ply the trade which he had spent centuries honing. The Humans had been slaughtered easily, but the Battlemaster didn’t entirely fault them, not at first.

It was natural. Every species underestimated him until the fighting started, then they would either adapt, or die. He had been rather disappointed that the Commander had acted so predictably, and hadn’t sent an XCOM squad to face him. He doubted they would have stood more of a chance than the hapless ADVENT soldiers, but it would have been more interesting for sure.

The battle had indeed been a rout, but it wasn’t worthless and it did give some insight into how he could expect war to be waged against him significantly. It was unlikely the Commander would be so easily manipulated again, but it would also have the effect of him second-guessing himself, making him wonder if there were more traps hidden throughout the information and carnage. Perhaps it would not rattle him, but it would force him to think, and that was time he was not devoting to managing the battle himself.

The Battlemaster set the greatsword to the side and began to polish his helm, removing some of the dried blood from the crest. The various encounters his subordinates had with XCOM was telling, and gave him much to ponder. Patricia had been successfully negated, although J’Loran’s procedure with the Mutons was not foolproof. That being said, it had attracted Revelean’s attention, so it would likely be refined into something...manageable.

Both Disciple-7 and Irinena had said that the XCOM soldiers encountered were...enhanced. Based on the descriptions and reports, it was clearly genetic modification. The impenetrable skin was likely based on Aegis’ own, although the stinger appendages some of them had were more creative than he was expecting. It would be interesting to see if their Iron Skin could hold up to his own weapons.

A very useful piece of information was confirmation that, if pressed, XCOM and ADVENT would retreat, which was both good and bad. Good in that it would ultimately allow cities to be taken more easily, and bad in that it meant he was dealing with tacticians who were willing to pull back if it was clear they were losing, which doubtless implied they would certainly be developing technology to stop him.

It wasn’t a concern with ADVENT. There was very little they could do to develop weapons to use
against him, short of nuclear weapons, and he always had the Cultro observing overhead. The moment nuclear activity was detected, he would leave without hesitation while the Humans destroyed a city for nothing.

XCOM, on the other hand, was worth more consideration. It was only a matter of time until they began producing plasma weapons, and their psions reached a power threshold that might pose a threat. Still, such concerns were only valid if he was absolutely overwhelmed, else he would simply eliminate the threat the moment it appeared.

The haptic shield in front of his room dissipated and Chilis walked in, a neatly folded cape in her hands. As always, the Dath’Haram woman had a look of perpetual disapproval etched on her face, making those green eyes even more intimidating to the other aliens she interacted with. He personally found her demeanor amusing, even if others didn’t.

It was fortunate he’d been there when she’d not been as…respectful to Isomnum as he would have liked, and that Aegis had prevented his aura from affecting her. Had he not intervened, he suspected that Isomnum would have derived a great amount of pleasure tearing her mind to pieces and sending her to the Aui’Vitakar as a grim message in respect. He sniffed involuntarily. He viewed such as overly harsh. Ruling over mewling pawns was tiring and was something a good many of his kind had yet to learn.

Caelior, Macula, Isomnum, all of them seemed to think they were still in the Empire. Where they dealt with only equals and superiors daily and other species were lesser. He had thought so as well initially, but over time realized that was a flawed perspective. Objectively, an Ethereal was a superior being to most others, but taking into account the various personalities within the species… they weren’t radically different.

Andromedons, Vitakara, Humans, all of them had leaders, geniuses, prodigies and as many varied traits as Ethereals themselves. Dismissing them simply based on a lack of the Gift or genetic modification was not only a dangerous mistake, it was a foolish one. There was a reason he, Quisilia and even Sana and Fectorian had trusted alien subordinates, and it was a reason he was certain they would learn it themselves someday.

Not today, but if the war dragged on, they soon would.

If not then, when they subdued the inner-galactic species.

“I had forgotten how much of a mess you cause,” Chilis stated in her rasping baritone voice. “But I will say that it is good to actually do something useful for you.” She carefully placed the cape on the table where his helm rested.

“Thank you,” he said, nodding to her. Even sitting, he was just as tall as her, a fact that he knew made her uncomfortable. Some part of her was always scared of him, and he could understand why.

She cocked her head. “So, was it everything you were hoping?”

“It was what I expected,” he answered, standing and starting to armor up again. “The Humans will be a worthy opponent. They fell easily, but it will not be so simple next time.”

“And XCOM ignored you, I guess,” she noted, leaning against the wall and crossing her arms. “Disappointed?”

“Yes,” he said simply, attaching the cape to his shoulder armor. “But I am quite certain they’ll be
there when I strike next. The Commander knows he cannot ignore me now.”

Chilis shrugged. “If you say so. Sana also told me she wants to speak to you now. Don’t ask me what about.”

The Battlemaster actually had a pretty good idea about what she wanted to discuss. “I will head there now,” he said, putting on his helmet. “Inform the Temple Ship that I have some matters to attend to before I arrive.”

She inclined her head. “Yes, Battlemaster.”

He swept past her and exited his room. Time to see what Sana was doing with the Humans he had recovered.

***

Vitakar, Intha

Nartha stood in front of his family home, a small and quaint cube in the housing district. He did have to admit that Humans did have better housing architecture overall, but simple cubes quartered off into sections were admittedly more stable, defendable, and easy to maintain. He placed a hand over the haptic display by the door and waited for a confirmation.

Hopefully they hadn’t taken him off the list of pre-approved visitors.

Luckily, it seemed that they hadn’t as it flashed blue and the door slid open with a chime. He stepped inside the immaculately clean house and looked around, wondering the best way to introduce himself when a familiar droll voice greeted him from the right. “Well, entering without an announcement. How very expected from a spy.”

He smirked and turned to her. “Cairu. I’m so happy to be able to listen to your sarcastic comments again.”

His sister chuckled. “So am I, no one else is quite as tolerant. Come here.” He dropped his bag by the door and embraced her. Once they let go, he actually got a good look at what she was wearing. “Runianarch? You actually joined?”

“Yes, a lot has happened since you’ve been gone,” she said proudly, straightening up and fiddling with the bars designating her rank as a Runianarch officer. “I actually went through with it, although I think that father didn’t exactly approve.”

Nartha nodded. His sister had always been fascinated by the events outside of Vitakar, and had seen the Runianarch as a way to explore beyond the homeworld, and had devoted herself fully to that goal. Looking at her now, he suspected that she’d been in intensive training for the past five years, since she was much taller and visibly stronger than him, traits that the Runianarch trainers were responsible for. Vitakarians in particular were viewed as excellent soldiers because of their adaptability, and his sister has no exception.

“Probably nothing like when I joined the Zararch,” Nartha shrugged, inclining his head. “Going to try for the Lurainian?”

Her smile dimmed. “I…don’t think so. Mostly for the same reason I didn’t consider the Zararch like you. Some of the things I’ve heard are…well, not for me, really. Besides, I feel more comfortable working just with the Aui’Vitakar. Don’t trust the Zar’Chon, no offense.”
Nartha smiled. “None taken. What’s your assignment?”

“Colony defense, so far,” she answered wistfully. “It’s great, especially since they continually rotate colony planets. Get to see a lot of new planets. However…” she trailed off, and fixed him with a stare. “There’s talk of moving more forces to fight the Humans…do you know…well, anything about that?”

“I think I’d rather save the discussion on the Humans for when everyone is here,” he told her. “But I’ve been on Earth. You’d probably love it.”

“Oh?” Her eyes widened. “I’m more interested in the Humans. There isn’t much reliable information out there.”

Well, this was certainly going to be interesting. “Let’s find our parents, wherever they are. There’s a lot of catching up to do.”

***

**Blacksite 004 – ID: “Sanctuary” – Overseer: Sana’Ligna**

Warm white light bathed the half-clinic, half-laboratory Sana had control over, with much of it devoted to the former half. Her medics and scientists, all of whom were Vitakarians, were tending to the Humans, who were mostly all children. There had been a disgusting amount of practically abandoned children in the cities, and since they were clearly not missed, he had decided that they would fare better away from Earth.

Sana had been requesting younger humans for some time, and all the children processed from the Australian cities had been sent to Revelean and the Creator for…experiments, he supposed. Distasteful, but the Overmind had predictably overridden his request. He wasn’t opposed to the experimentation of other species…but he failed to see how experimenting on children actually achieved anything. They had yet to become fully developed, and thus it seemed a waste of time and resources except for professional curiosity.

At least none had gone to the Sectoids.

But to be fair, Sana was also going to run experiments on the children, but he could tolerate psychological and social engineering experiments because she very rarely killed or deliberately injured her subjects, especially children. Ironically, these children would likely lead a happier life than being forgotten on Earth.

He was slightly impressed at how curious the children were upon seeing him. He would have thought the sight of an alien four times taller than them would be…disquieting. It was likely the effect Sana emitted, which had been described to him once, since he would never be able to feel it. *Warm, comforting, protective;* unsurprising since she had been a well-respected doctor back in the Empire.

With that said, she was a powerful psion in her own right and had her…other abilities.

He pursed his lips under the helmet and strode forward to where Sana’Ligna was speaking to one of her Vitakarian assistants. Unlike almost every other Ethereal, she lacked a helm of any kind and as one of the few non-military Ethereals, her form was slimmer than most, and she only wore a simple white robe similar to Sicarius, only with much less armor.

“Battlemaster,” she greeted warmly as he walked up, the soothing voice ringing in his ears with an irritating echo. “I must thank you again for bringing the children to me.”
“They were abandoned,” he stated simply. “They would be an unnecessary drain on resources in
the captured cities, and you had mentioned needing more some time ago.”

“How practical,” Sana answered knowingly. “But both of us know they are no more a drain there
than here. It’s touching, truly.”

“My motivations or reasons are irrelevant here,” he said flatly, ignoring the comment. “I brought
them to you. Now I want to know how this will benefit us.”

“Of course,” she said, turning and gesturing him to follow. “This way.” He followed and she led
him to a wall with a panel in front of it. “I am afraid that the results of my experiments will likely
be of little value to you directly, but it will be necessary when we fully integrate the Humans into
our Collective.”

“I suspected as much,” the Battlemaster nodded. Sana’s experiments were often less immediately
usable, and longer term, largely focused on alien psychology and social attributes, although her
contributions to their genetic upkeep and advances in medicine were certainly significant. But that
wasn’t where her true interest lay; it never had.

Her interest was in the examination of other species, and how best to help them. Not improve, but
simply help.

The Battlemaster was continually fascinated why the Imperator had allowed such an…idealist to
survive the War. She was not unique among Ethereals back in the Empire, but here…she was
different, and now a source of irritation to the more cynical and practical Ethereals still alive.
Personally, she always offered a more refreshing perspective that was impossible to find anywhere
else. A naïve perspective, but one he grudgingly wished was reality.

Unfortunately, reality was much harsher than Sana wanted to believe. It always had been, even in
the Empire. The Overmind had informed him that the only reason the Ethereals had ascended to a
level free of infighting and weakness was through a war as bloody as any other species, and they
had genetically enslaved the survivors to follow the conquerors. The history that had been taught
was a lie meant to keep the peace and externally; it was no secret that entire species’ had been
wiped out at even the slightest provocation.

Several by his own hand.

But the truth was, he knew the real reason the Imperator had allowed Sana to survive. The only
possible reason was her connection to the Dead Ethereal himself, and if she truly believed that the
Imperator would not use him when it was warranted…she was lying to herself.

Brushing those thoughts away, he followed the self-proclaimed Healer into a seemingly empty
room with frosted glass for walls and bathed in a much harsher white light. “I’m first running
several experiments on human psychological reactions to various events,” she began, tapping a
haptic panel on the wall, which cleared up the glass on one side to reveal a fake Human house, one
which actually had a family inside right now seemingly going about their day without knowing
they were being watched.

“There are two types of experiments being run,” Sana said, the orange fire of her eyes brightening
as she continued. “Short term is reactions to sudden or traumatic events or news. Benign, mostly,
almost all of these subjects have had their memories completely altered to make the scenarios work. For
ordinary civilians captured I have generally limited the scenarios to non-physical. Receiving news
that a family member died, losing a job, witnessing a suicide, traumatic and potentially life-
threatening events.”
The Battlemaster suddenly wondered if his assumption that the children would be better off with Sana had been…premature. “Why?”

Sana sighed. “I can feel your disapproval. They are not being hurt, I assure you, but it is necessary. Human psychology is something I am still puzzling out. Mental illness is not something most Humans understand, and even fewer seem to want to fix. Thus, I must do the work myself. The techniques many Humans use are antiquated, and always have an unacceptable rate of failure.”

The Battlemaster nodded. It did make sense. “I don’t recall you doing this for the other species.”

“Because most are not as psychologically varied,” Sana explained. “Sectoids and Andromedons have a limited range of emotions, and almost no mental issues whatsoever. Vitakara eradicated their own mental illnesses long before we arrived. I have been forbidden from interfering with the Mutons, as you no doubt know,” her tone turned bitter at that. “Humans…they have not yet. They are as emotionally varied as the Vitakara and far more prone to violence. There are enough dangerous drugs and substances they can abuse and unfortunately, Humans often fight each other which raised a host of additional complications.”

“I see,” the Battlemaster gave a single nod. “You have your work cut out for you.”

“Yes, I do,” she agreed. “However, they will need to be solved if we are to successfully integrate them into the Collective. Which unfortunately includes some more...distasteful experiments that must be run if I am to fully understand Human psychology. The physical scenarios are more dangerous, domestic abuse, rape,” her nostrils flared. “How the Humans repeatedly allow this is sickening, but it must be observed. I will naturally be using the Human criminals you recovered from all the cities for these particular scenarios.”

Unfortunate, but he was slightly impressed that Sana would indeed go that far. Perhaps there were some ends that justified the means for her, even if even this wouldn’t hold a candle to something Revelean would run. Some of his experiments ran weeks, Sana would only have hers running a few hours at best, and keep them alive afterwards.

Revelean normally either killed the survivors or sent them to Isomnum for practice. The Battlemaster grimaced at that thought. Why the sadist felt the need to practice on Humans who literally went insane just being around him was beyond him. Practicing implied challenge and improvement, and he had yet to see how practice on ordinary humans actually did either.

Oh no, he knew exactly why Isomnum practiced. It was a childish attempt to feel powerful and the Battlemaster sorely looked forward to when he was actually challenged. Not enough to kill him, but certainly enough to make him realize that he wasn’t another Overmind or Imperator, let alone a Battlemaster.

“And what are the long-term experiments?” He asked, returning to the topic at hand.

“Twofold,” she answered, wringing her hands together. “The first involves placing Humans that are not related together in various configurations and observing any possible results. Some will have their memories altered to believe they have always been together, others have not. This is where some of the children will be useful, as I was only limited to adults before.”

Sana motioned behind her. “So for example, I would like to see if a Human male and female would raise a child differently if they knew it was theirs or not, or if they would eventually realize something is wrong despite the modified memories. The same thing with pairing a male and female together and making them believe they have been together even if they actually never met, would they care, or would they realize something is wrong? That is the first major series of experiments.”
She raised a hand that had a handheld holoprojector, which displayed a world he didn’t recognize. “Secondly, I want to allow some limited Human integration within the Collective. The Aui’Vitakar was kind enough to forward me plans for the establishment of a mostly Vitakarian colony, and I will be speaking to several of the applicants about their willingness to foster and raise Human children within it.”

The Battlemaster nodded. “I assume this has been cleared with the Imperator?”

“Yes,” she confirmed, shutting off the holoprojector. “He encouraged it, actually. I was… surprised, but pleased nonetheless. This will be extremely useful information in examining how Humans can be safely integrated into the Collective without major issues. If this experiment is successful, the next trial will be integrating families or adults into colonies and beyond that…” she trailed off. “Well, by that point, I would hope that the conflict is ended and we can begin preparations for the future.”

“I will attempt to make it so,” he promised, inclining his head. “But the Humans will not surrender willingly.”

Sana gave a sad sigh. “Why would they? We did attack them first.”

She was, unfortunately, correct. “Yes, we did. But the Imperator has his reasons.”

“I’m sure he does,” Sana sighed. “But sometimes I do wish he would say what those reasons were. Otherwise there seems to be little point to all of this. But there is little I can do about it, so I will attempt to help the Humans as best I can to adjust after you conquer them.”

“And I will end it as soon as I can,” he promised. “And should you need more Humans, be sure to inform me unless you want to give the Creator and Revelean more subjects.”

“I will,” she said, turning to the glass rooms of unwitting test subjects. “I’ll let you go, Battlemaster. Tell Revelean I said hello. Rub it in if you so feel like it.”

The Battlemaster smiled under his helmet as he turned to leave. “I will, Sana. Until next time.”

***

Vitakar, Intha

Despite his reservations, the evening with his family was very…relaxing.

His mother was as happy to see him as ever, which wasn’t surprising as she did her best to only focus on Vitakar and not pay attention to anything beyond that like the Zararch and Aui’Vitakar. Nartha found it interesting how she actually ended with a father who was a representative in the Aui’Vitakar, a son in the Zararch, and now a daughter in the Runianarch.

Nevertheless, much of the attention had been on him, and he found he was actually able to not reveal anything…sensitive just by speaking about the Humans and their culture. Privately, he wasn’t sure that the Zar’Chon would even approve of that, but Nartha would prefer they know that the Humans weren’t exactly primitive savages.

“A little,” Nartha agreed. “But it made it easier to blend in.”
“I’d imagine so,” his mother chuckled. “But I trust you were safe for the most part?”

Nartha thought back to all those times under XCOM, with plasma firing over his head and hid a smile while taking a sip of his water. Some things, like water, transcended species. “As safe as can be expected in the Zararch, Mother. It was never boring.” He shook his head. “Well, now I think it’s my turn for questions. What has happened on Vitakar recently?”

His father grunted. “Surprisingly little, at least compared to you. The Sar’Manda are as isolationist as ever, the Cobrarians are whining about their males migrating to other cities, the Borelians want to make our army even larger, the Dath’Haram are pushing for more investment in civil services, as well as curbing the Borelians, and of course, the Oyariah just want everything to stay the same.”

Nartha nodded. Typical. “So everything is going the same as always.”

His father’s eyes narrowed. “…For the most part, yes.”

And *that* was code for *I’ll tell you later*. Cairu and his mother were probably not cleared for high-level information the Aui’Vitakar had access to. Being one of the Zararch’s top agents, he was likely able to discuss events more…openly. Still though, he was curious.

“What is the response to the Humans?” He inquired. “Don’t tell me they don’t have an opinion.”

His father pursed his lips and rested his clasped hands on the marble table. “Let’s say that the Collective is keeping a very tight lid on anything regarding the Humans. We know their location, description and…several other factors. Simply put, we do not know enough about them to form a conclusive opinion. Most of what you just told me I had never heard before.”

Nartha blinked. “The Zararch didn’t share anything? I don’t believe it’s classified.”

“It isn’t,” his father shook his head. “Truthfully, the Human issue has…died down, until recently. The Andromedons have suddenly become a larger focal point.”

Cairu nodded. “I’ve heard some of the soldiers talking. Some of their ships came…close to our colonies. Which they shouldn’t have been allowed to do.”

“I suppose I’ll need to catch up on them,” Nartha said. “I’m not familiar with their species. Even in the Zararch they didn’t interfere much.”

“They generally don’t,” Cairu explained, a tinge of wistfulness in her voice. “I doubt any but the Elders truly know the whole story. They’re very isolationist, but powerful, if the rumors are true. They don’t let aliens go into their territory and don’t really seem to like any species other than their own.”

Hm. Yes, he’d definitely have to look into the Andromedons. Any species that wasn’t completely with the Collective may be something he could exploit. “Curious. What is the response?”

“Nothing, yet,” his father answered, taking a sip from his own water. “Supposedly they were chastised by the Zar’Chon or maybe an Ethereal. But that hasn’t really solved the issue. But recently that’s fallen to the wayside now that the Human planet has been invaded. The Ethereals personally getting involved is…of interest. The Battlemaster himself has called for the support of the Runianarch and Lurainian.”

“Right,” Cairu confirmed with a smile. “They apparently won a major battle a day ago. Everyone was talking about it. The word is that the Battlemaster *himself* participated.”
Oh, that was bad. He winced at the thought of that particular Ethereal facing the Humans. “I almost feel bad for them.”

“Well, the good news is that it will be over quickly if that is the case,” his mother said. “But your father is as cynical as ever when it comes to the Aui’Vitakar. There have been a surge of good things that have happened recently…”

He listened politely as his mother continued describing how the quality of life had improved significantly. Fourteen colonies had been successfully started, education standards were in the ninetieth percentile, science and engineering fields had grown by twenty percent and overall the entire species was doing well.

But the longer they talked, the more it sounded far too good to be true. A particular Human saying applied to this: “If it’s too good to be true, it probably is” and so he listened and asked questions of his own. What it revealed was that the Ethereals were truly insidious in their control.

The Aui’Vitakar were only representative of the Homeworld itself, and didn’t make decisions on intergalactic matters. All colonies were overseen and chosen by the Collective, and he knew from experience that the reason everyone was so…content…was thanks to the Zararch making sure those not in compliance with the Ethereals were removed, and more receptive leaders were installed.

He was well aware that not every Vitakarian conformed to, or was blind to the fact that this was a very elaborate gilded cage, but the Zararch was rarely public about such acts. People would disappear without fuss, and a cheerful explanation was provided if anyone else asked after them. Representatives themselves could vanish and a replacement appointed within the day.

Dissent certainly existed, but it was never given a chance to survive. With the exception of the Nulorian, no one who dared to ask very specific questions lived more than a week.

The good news was that this realization helped solidify the first steps he was going to take. As a Zararch agent himself, even on leave, he could assist in cases, and he would have access to the list of those under surveillance. And he formulated this plan in his mind while they continued chatting about irrelevant matters.

When the talking came to a natural break, his father suddenly stood, eyeing him carefully. “Nartha, if you don’t mind, I’d like to show you something.”

Nartha nodded, and smiled at his mother and sister as he stood up and followed his father into another room which at first glance looked like a cube with a curved ceiling, and then the walls and ceiling faded to reveal the night sky of Vitakar. “The glass can retract as well,” his father stated, closing the door. “But I figure we could use the privacy.”

Nartha turned serious and turned to him. “Good. But I still might not be able to tell you everything.”

“I didn’t expect you to,” he said grimly. “However, I want to know the actual situation on Earth. The Zar’Chon and everyone in the Collective is not giving us the full story. The fact that there is a war being declared is…surprising. If the species is as technologically limited as you said… subduing them shouldn’t be an issue.”

“The Humans are more dangerous than you know,” Nartha answered, knowing that as long as he didn’t reveal specifics, he was fine. He knew what level of clearance the Aui’Vitakar had. “They aren’t using primitive ballistics anymore. They have beam weaponry, and I expect if they are not
stopped, plasma will soon follow.”

“So they’re intelligent,” he nodded. “And strong enough not to be overrun.”

“No, they won’t be overrun,” Nartha confirmed. “What do you know of XCOM?”

His father chuckled. “Only that everyone does not like them.”

“They’re the reason the Humans have any chance at all,” Nartha explained. “They are the best soldiers of humanity. And scientists and engineers if that matters. One XCOM soldier is better than our Lurainian. They were able to kill a Hive Commander.”

His father started at that. “How?! And how did you-“

“I was assigned to observe XCOM,” Nartha interrupted, raising a hand. “I learned a great deal about them. As for how, Humans are capable of psionics.”

His father looked away, sucking in his breath. “That explains a lot. If the Humans have their own psions…the Zar’Chon will have to explain why he kept this from us. This is information we need to know and has been denied to us ever since this started.”

“No.” Nartha stated coldly, emphasizing that point as much as possible. “Do you want the Zar’Chon to remove you? Mother? Cairu? If the Aui’Vitakar start discussing the invasion publicly, people are going to ask questions, and the Zar’Chon does not want people asking questions now. Neither do the Ethereals.” He gave a weary smile. “Can’t dispel the propaganda, father. The Zararch wouldn’t allow it.”

“And yet you’re telling me this now,” he said slowly. “Why? Last time you wouldn’t even confirm things I already knew.”

“One, because the Zar’Chon didn’t say that information is classified above your clearance,” Nartha explained coolly. “He knows I’m related to you, and should have specified if he felt otherwise. Two, because I think the government of our species shouldn’t be in the dark, at least not to this extent. Three, because I’m not the same as I was last time we talked.”

His father appraised him for a few minutes, then gave an imperceptible nod. “I think I understand. You made friends with the Humans, didn’t you.”

It wasn’t a question. “Several,” he answered neutrally. “Though that isn’t exactly relevant here.”

“Then what do you think I should do with this?” He asked.

Nartha pondered that. If things got out of hand, if would be bad if the Zararch decided to purge the entire Aui’Vitakar, but it wouldn’t be out of the question. “You have representatives who want answers as well, yes?” At a nod, he continued. “Tell them what I said. Don’t do anything, and in person, public areas only. The Zararch have likely bugged offices and computers. From there…you have more diplomatic experience here. Perhaps you could speak to the Zar’Chon or better, introduce an order that withholds the Runianarch from participating in Collective activities without informing the Aui’Vitakar.” He paused. “It would have to be very public though. Public enough where if representatives…resigned, there would be questions raised. Too many for the Zararch to silence.”

His father now had a clear look of…not quite concern, but something close to it. “Nartha…you’re being very helpful about this. This is not what I expected from you.”
Nartha gave him a humorless smile as he walked back to the door to rejoin his mother and sister. “Like I said, I’m not the same. Let’s go back before they wonder what you’re actually talking to me about.”

***

Vitakar, Intha Zararch Base

“Identification,” a tall Dath’Haram guard stated as he approached the doors of the windowless black square that no doubt extended far underground.

“Of course,” Nartha answered with a nod, handing the ID which was quickly scanned and handed back.

“Apologies, agent,” he grunted. “But we have to check everyone now. Several Nulorian operatives managed to get into one of the bases in Borelia and it was clear that automation wasn’t working here.”

That was certainly interesting. “We were breached by the Nulorian?”

The Dath’Haram bared his teeth. “I should amend it to say that those particular Nulorians never got out. Once inside they were quickly captured. Fools, but the Zar’Chon doesn’t want this happening again.”

“Noted,” Nartha said, walking past him and into the lobby that was more or less black metal with an elevator at the end of the room. No one was inside, but he knew very well that the room was being monitored by analysts and plasma turrets would fall down from the ceiling if any threat was detected.

He entered the elevator and a haptic screen was immediately projected before him. And…Level 3 was the agent deployment room, where agents received assignments and information on specific targets was available. That was where he’d find the information he was seeking. He pressed the illuminated image and the elevator door closed behind him and it began lowering.

A few seconds later, the door slid open and he stepped into the bustling deployment room. Zararch agents of varying races were huddled in groups, armoring up, or discussing things with the various analysts in the room. The initial room itself was rather small, with a holographic projector displaying information about various targets of interest and operation statuses in the middle of the room, while the more specialized rooms were elsewhere.

To the left was the Target Library, which was where he needed to go. It was always filled with Operation Handlers and agents looking for gathered information on specific targets. The room was filled with dozens of the fastest computers in the Collective, and very little else. To his right was a briefing room where agents would receive instructions from Operational Handlers in person, and it served as a debriefing room as well.

There was a break lounge directly across from him, but he didn’t care about that now. The Armory and Training Area were likely other floors altogether. He swiftly moved to the Target Library and upon entering took one of the computers near the end, away from the other Vitakara already taking advantage of the wealth of information.

A quick tap of his fingers and the haptic display appeared, along with a virtual keyboard to begin making inquiries. It could be voice-controlled as well, but he didn’t want to advertise himself any more than necessary. He dismissed the haptic keyboard and a physical one slid out a second later
and he began entering his identification. He’d always preferred hardware for computer interactions.

Since he was a high-ranking agent, almost everything regarding operations on Vitakar was open to him, and quite a few beyond it, all extremely well organized by organization, species, city, and race. He considered looking over the operations concerning the other Collective Species, but also knew that too much unexpected interest would flag Zararch analysts if they looked into his search history.

No, better to keep on track here. He could always come back some other time.

Instead he touched the NULORIAN box, and narrowed down operations by CITY: INTHA. Perfect, there were currently four targets of interest, none of them assigned to other agents due to the low priority. He spent a good amount of time looking over the details regarding them and finally decided what he was going to do there.

All of the targets of interest were suspected of having ties to the Nulorian, none of them were suspected Nulorian Operatives, but suppliers or contacts at best. All intolerable to the Zararch, but in comparison to the wider galaxy, the Nulorian were a nuisance at best. That was going to work to his favor here.

It seemed his best option was to have a short chat with Mul’forial’intha, the only of the targets who had actually interacted with a confirmed Nulorian operative. There was a chance she had indeed not known who she was dealing with, but he had acquired quite a bit of supplies – all cold-weather survival – from her.

She also stood out because she was rather highly placed in the Mullestha, the species-wide organization responsible for supplying the entire planet and colonies. They worked directly for the Aui’Vitakar and were the suppliers of all major Vitakarian organizations including the Runianarch, Zararch and Lurainian.

Forial wasn’t the highest Mullestha in Intha, but highly placed enough to acquire a lot of specialized equipment in a short amount of time, from all across Vitakar, to a client who was a known criminal. She wasn’t stupid, and had clearly tried to make it seem as innocent as possible, but she was dealing with the Zararch, which made her an amateur at best.

However…there was potential. He knew how the Zararch worked and what would actually flag the analysts. If she really was working with the Nulorian, she could be his means to setting up a meeting which, he noted sourly, was going to go over very well with the suspicious organization. He was not unprepared for the possibility that they would refuse contact altogether just because of who he was.

But he had a plan for that as well.

He nodded to himself and immediately claimed that operation for himself. After this he’d go speak to the Operations Handler to let him know. That might raise some questions, but unlikely anything major since he was certain he actually outranked the Operations Handler here. In fact, he might use this as an opportunity to…establish some cover.

If all current targets of interest were closed, it would look like he was wanting to shut down any sort of criminal activity in his home city. Logical and wouldn’t draw suspicion, and at the same time, make the planet ‘safer for all’. And since he was the one who had pushed for it…well, if one of them was found innocent, then all the better.

In any case, he had another objective to investigate. He backed out of the NULORIAN operations
and switched to AUI’VITAKAR operations. He’d never personally participated in any of these, since he had largely worked off-world, but he knew that they were run differently than traditional Zararch ops. For starters, every representative had at least one Zararch spy in his or her entourage that reported on various aspects of the representative.

That was usually as far as it went for most, just another check to make sure the Aui’Vitakar didn’t do anything too radical. But sometimes the Zararch spies flagged representatives for various reasons and those required firmer investigation. Levels of investigation were color-coded based on impact and threat level. Green was normal; blue required additional investigation; yellow required immediate interrogation; red indicated confirmed Nulorian involvement; white indicated immediate replacement and interrogation; black was a demand for immediate execution.

To Nartha’s knowledge, white had only been used four times, and black only once. As it was right now, there were 100 blue-level flags which almost elicited a gasp. One entire third of the Aui’Vitakar under further investigation was unprecedented, which clearly meant his father was far from the only one beginning to ask questions.

He quickly acquired some more information on the demographics. Twenty-two were Vitakarians, which was a surprising amount, but not nearly as much as the thirty-three Borelians, which, in retrospect, wasn’t entirely that surprising since a war would warrant their attention. Four were Dath’Haram, which appeared small, but considering they were focused intrinsically on the Vitakara as a species and didn’t care about much beyond that, it at least showed some were willing to dig deeper.

There were zero for the Sar’Manda or Oyariah, which was entirely unsurprising since the Sar’Manda were more concerned with their underwater empire than the rest of the Vitakara, much less anything beyond the planet, and the Oyariah, of course, were blind supporters of the Ethereals who would never dare question them. Fools.

However, the Cobrarians had a staggering forty-one members flagged for further review. That was just past four-fifths of their elected legislature, which had to indicate that this was something likely felt in the leadership itself, and not a simple majority. At the very least, it required further analysis. He isolated the Cobrarian leaders flagged, and sorted by prominence.

Aui’sareech’hala, the former Cobrarian Hierarchy Leader, and now a simple representative. If she was being flagged, then the Hierarchy itself was no doubt also now flagged for review. If there was any representative that held major influence outside the Aui’Vitakar with the Hierarchy, then it would be her.

That alone was major, and indicated at the very least that the Cobrarians were concerned about something. Nartha wasn’t entirely sure it was the Humans, after reading some of the notes. Apparently there was something of a cultural crisis recently with Cobrarian males leaving the Nests in protest for having virtually no say in the Hierarchy which would be fine…had the ratio of female to males not been nine to one.

Simply put, the Cobrarian Hierarchy couldn’t really afford to alienate the male population too much, otherwise reproduction would be…difficult. But without some kind of controls, there would be nothing to limit the influence a male Cobrarian had within the Nest, and given how essential they were to breeding…it would be a lot.

He sighed, not envying the position the Cobrarian was in. Like he had told Shun, it was bound to happen eventually. But it bad timing for it to start happening now of all times. In either event, he needed to speak to Sareech as soon as possible, but after he attempted to determine a way into the Nulorian.
He quickly committed everything regarding the current investigation on Sareech to memory, and logged out of the computer. Standing, he turned to go and speak with the Operations Handler. Vacation was over, time to get to work.

***

*Mars Orbit, Forward Observation Station*

Ravarian was angry.

No, he amended with a sigh, *angry* was not the right word in this situation. He was *irritated*.

And the next logical question, would be *why* the Zar’Chon of the largest intelligence organization in the galaxy be angry? For once, it wasn’t about the situation on Earth, which was actually starting to stabilize, because the Battlemaster was an actual professional who had a job and did it well. Unlike *some* others in the current leadership.

No, he was irritated because the figure before him was the image of…he wasn’t entirely sure. But it certainly wasn’t the image of a competent professional Ethereal wanting to work with him. Quisilia was an Ethereal who could do as he pleased, but Ravarian was truly wishing for the days before being officially transferred here, when Quisilia was a fairly serious overseer who occasionally made a smart comment.

He actually wished Sicarius was back, at least she had let him do his job and didn’t interfere even if she clearly had no interest. Now he was constantly concerned that Quisilia was going to post something that compromised entire operations. He despised the fact that his morning routine consisted of waking up and immediately checking that infernal Human site *Twitter* and hoping that Quisilia hadn’t made some vague hint about future plans, or worse, posted a selfie *with his actual face* in some attempt to…taunt XCOM?

Ravarian was still not sure what Quisilia’s end game was, but he was always relieved if all that happened was Quisilia getting into a meme war, or better yet, being *completely silent*. He now had a Zararch analyst now watching all of the Ethereal’s social media, and all of them were torn between thinking it was fake or a traitor, because of course there was *no way* that it was an actual Ethereal.

Whatever his reasoning, Ravarian could barely fathom how…*stupid* Quisilia was sometimes. He’d raised the point – many times – that ADVENT and XCOM were watching. And the cheerful Ethereal *laughed* and said he hoped they were.

Well, if nothing else, this had assured Ravarian that Quisilia wasn’t going to ever kill him for gross disrespect. Some of the thoughts he had—including now—were not at all complementary to the good Ethereal before him, and Quisilia seemed more amused by that than anything else. But he was beginning to get a handle on his new eccentrics.

And now Quisilia had decided to go ahead and make himself look like even more of a joke. Because standing before him, in his regular robes and armor, Quisilia looked almost normal. Were it not for the white-haired cat cradled in one lower hand, with the other one affectionately stroking the top of its head. The infernal ball of fur was, of course, purring contentedly as Quisilia waited for him to begin.

Needless to say, he was not amused.

Even less so when Quisilia had said that the name of the cat was “Fluffy”. Ravarian gritted his
teeth as the ridiculousness of the picture became more apparent. He was about to have a serious discussion with an Ethereal who could kill everyone here without anyone noticing, that trolled people on the Internet for fun, and was now petting a cat.

“Quisilia, you did quarantine the stations Nartha visited, correct?” He began slowly.

“Yes, of course,” Quisilia confirmed. “I suspect that had we not known about his motives, we would have never suspected him until it is too late. But no matter, the facilities are temporarily closed until we know how best to stop this virus.”

Ravarian sighed. “Well clearly, something didn’t go according to plan. Sectoids across Helion-3 are apparently…ill.”

Quisilia stopped stroking the cat’s back. “Symptoms?”

“Sluggish, listless, and their limited telepathy is distorted,” Ravarian recalled grimly. “The ones most affected have yellow pus building in their eyes. The Sectoids have already isolated the contaminated workers, and are likely now affected as well.”

The Ethereal was silent for a few moments. Ravarian cocked his head. “Quisilia?”

The Elder chuckled. “A brilliant move, Commander.”

“I’m sorry?” Ravarian interrupted. “I highly doubt he was behind this since only Nartha had the agent.”

“No, I believe we are seeing the Commander’s plan at work,” Quisilia said, raising a free hand. “But we…miscalculated. We believed that Nartha only needed to distribute the bioweapon for it to work, but I do believe we didn’t account for him being infected beforehand.”

Ravarian started. “Impossible. He was screened for illnesses and agents. Nothing was detected.”

“Of course nothing was detected,” Quisilia answered. “It only affects Sectoids. And since it clearly is a genetically based bioweapon, our scanners wouldn’t have detected it, not to mention it would be difficult to notice unless you knew about it beforehand.”

“Damn it,” Ravarian cursed, borrowing a human phrase. “I think he mentioned it was specifically designed to be transferrable in every way possible. Air, liquid, food. He’s been a walking bioweapon ever since he arrived…” he sucked in his breath. “And since we were exposed to him…”

“We are as well,” Quisilia finished. “Nartha was not aware of this. I would have learned as much. But the Commander, or perhaps Vahlen, infected him without his knowledge so he wouldn’t be able to reveal it if he was caught. A brilliant contingency plan. One we have fallen for.”

Ravarian felt his grudging respect for the Commander go up a few notches. “And if that is the case, we have a possible catastrophe on our hands. We have to assume the worst and that everyone here is infected, and if one of the Sectoid planets is contaminated, one of the shipyards, then potentially much of the species is as well.”

“I will be informing Revelean of the immediate change of plans,” Quisilia nodded. “We need to figure this disease out before it completely decimates the Sectoid ranks. I will be speaking to the Hive Commanders about suspending all operations and purging contaminated systems.”

Ravarian nodded. “This is going to severely slow down operations, but better that than losing an
entire species.“

“Oh, all we lose of value is time,” Quisilia amended, beginning to stroke the cat’s head again, which nuzzled his hand affectionately. “The drones can be replaced, and only the Hive Commanders are of any real value. It will take time to clone replacements, but perhaps they’ll realize that their idiotic reliance on templates is highly flawed. The scientist Vahlen was clever. She used their genetic similarity against them and they are paying the price. An expensive one, but perhaps necessary. It will not affect operations on Earth. We have enough Andromedons, Mutons and Vitakara to handle one planet of Humans.”

Ravarian sighed and turned his mechanical hand palm up as a holographic report appeared as he recalled it from memory. “The Battlemaster will not be happy.”

“No, he’ll be overjoyed, I think,” Quisilia nodded. “He despises the little grays. It will not affect his plans in the least.”

Ravarian was no fan of the Sectoids either, truth be told they were unnerving in even a way Quisilia wasn’t, in a way the Ravaged One hadn’t been, but seeing Nartha’s own report, the initial signs of the bioweapon and the Commander’s own noted history, he wouldn’t wish a bioweapon dreamed up by him on anyone.

The Commander always had an ulterior motive here, there was always something deeper than mass genocide. The Commander exploited psychological warfare, and wouldn’t hesitate using an entire species as a giant message or warning that would say fight us and this will be you next. They might be able to suppress this, perhaps, but people were going to ask questions.

The soldiers would definitely be talking amongst themselves when Sectoids began disappearing, or worse, saw the infected ones. Morale would drop. The Andromedons would almost certainly demand answers, and the Hive Commanders would demand to know how something like this could ever happen to begin with.

It made his irritation of Quisilia and his cat trite by comparison. Although that cat was probably now a walking bioweapon as well.

“I need to consult with Revelean immediately,” Quisilia said, walking away. “Beyond the Sectoid problem, there are several recent events that need to be addressed.”

Ravarian eyed him as he left, turning partway towards the retreating Ethereal. “You are actually taking the cat?”

“Oh, of course,” Quisilia said, affectionately petting the animal on the head. “Fluffy always brightens up a room. I rather like the little furballs, the Humans were right to domesticate them. You should consider getting one yourself, it might reduce your stress.”

Ravarian snorted. “I don’t think so. I have-“ he stopped speaking as Quisilia vanished right before him, leaving him alone. With a sigh, he turned back to the list of operations he had to go over. He figured he might as well check on what Nartha was doing and make sure the traitor wasn’t causing any more damage than he already had.

***

Vitakar, Intha Mullesthia Distribution Center

Nartha ignored the large unloading area that was bustling with shipping airships landing and leaving, much of it automated with Mullesthia managers making sure everything was in order.
Instead, he decided that it would be more prudent to locate Forial as soon as possible and make sure no one could actually listen to their conversation.

The transparent barrier dissipated as he stepped through, and ignored the receptionist, flashing his Zararch ID at her before stepping into the main tram and directing it to the security section. The tram immediately shot to the right and a few minutes later, he stepped out into the clean security center lobby.

Two guards and a captain waited in front of the door which led to the more secure parts of the security center. All of them were Vitakarians, wearing gray vests that would survive perhaps one shot of plasma before penetration, with the Mullestha logo on the right shoulder patch. The two soldiers held Vitakarian plasma rifles, more streamlined and sleek than the ones the Mutons used, which gleamed with a faint silver sheen.

The soldiers wore simple face-obscuring helmets of the same gray color, with the exception of the captain who simply had an ear implant. He frowned upon Nartha’s approach. “I was not expecting company.”

Nartha smiled. “No, you weren’t. I need to access your security systems.” He raised his ID. “Zar’nartha’intha. I need some information.”

All of them stiffened, and the captain’s eyes widened in surprise…and fear. “I see, how can we assist, agent?”

“With luck, you won’t need to,” Nartha said. “Like I said, I need access to your security systems. I need to ask several questions of one of your associates. I doubt it will take long, but the fewer who are aware of this, the better.”

The captain nodded. “I see. Follow me, agent.” He turned and Nartha followed him into a narrow corridor and then to the second door on the right. The captain scanned his own ID and the metal panels parted and he stepped inside, Nartha close behind him.

Inside was a room with dozens of holoprojectors and haptic screens, all displaying footage from the various cameras, drones and other surveillance equipment installed throughout the facility grounds. An older Vitakarian woman walked up, in a similar uniform, a frown on her face. “Captain? Who are-“

“Zararch,” the captain cut off quickly, not needing to say any more.

She swallowed. “How can we help?”

Nartha turned to them, hands clasped behind his back. Good, he had their attention and the fear of the Zararch would come in use here. And perhaps if they were privy to some ‘confidential’ information, it might go even more smoothly. “I trust that both of you can be discreet?” He made sure to have the underlying threat in his voice. It was coming back rather naturally.

At their nods, he continued. “One of your associates, Mul’forial’intha has come under suspicion and I need to question her. I need her current location.”

The security officer nodded and gave the instructions to one of her subordinates while Nartha continued. “We have identified several possible Nulorian contacts, all of which are being…dealt with now. We do know that the Nulorian are watching this distribution center, and may have possibly compromised your security, especially if Forial is implicated.”

“Agent, I am positive our security has not been compromised,” the security chief said quickly. “If
you want-"

“I tend to agree,” Nartha interrupted, raising a hand to cut her off. “However, I will not take chances, and I do not want to tip them off if they have. Set all current surveillance equipment into a loop until I finish questioning her.”

The Vitakarian woman’s eyes widened. “All of-

“All. Of. It.” Nartha repeated slowly and deliberately, narrowing his own eyes to blue slits. “Do I need to repeat myself?”

She visibly swallowed. “We will do it-"

“Good,” he finished, turning around. “And I will return when I have finished to verify you have performed as asked.”

The captain quickly got his attention. “Forial is in her office. Manager Section, room 225.”

Nartha gave a nod. “Thank you, captain. Your assistance has been noted.” With that he walked away until her was back on the tram and directed it towards the appropriate sector. He was confident they would follow his directions, and he knew enough about standard Vitakarian computer systems to know if they were foolish enough to try and ignore his orders.

The fear and respect the populace still had for the Zararch clearly hadn’t dimmed, thankfully. It wasn’t pleasant, but it made his work much less noticeable and that was what he needed right now. He was in fairly nondescript clothing himself, the gray uniform of a Mullestha field unloader in fact. Uniforms were especially handy in places like these, and he didn’t stand out among the Vitakarians here.

Upon reaching his destination, he stepped out into a shining white lobby and, ignoring the receptionist and other Vitakara in the room, proceeded to the appropriate room. No one had yet stopped him, and presumed that he was supposed to be there or had some otherwise valid reason. The offices themselves were fairly small cubicles, all segmented from each other with white walls and harsh white light from the ceilings.

Nartha located room 225 and the door slid open as the sensor detected his approach. The Vitakarian woman looked up in surprise, eyes widening as she watched him enter smoothly, a knowing smile on his face as he carefully made sure to visibly lock the door behind her. “Mul’forial’intha, I presume?”

Forial was sitting behind a desk with a haptic screen displaying what he presumed was distribution information, and probably performing her normal tasks. “Yes…I am…” she answered hesitantly. “May I ask who you are?”

Nartha pulled out an audio disrupter, turned it on and set it on her desk. While he was sure the security footage would be set to a loop, there was a possibility that her room was already bugged, and he preferred not to have to worry about someone eavesdropping their conversation. The audio disruptor emitted an inaudible signal, but one that would turn any recording into high-pitched screeching.

“Zar’nartha’intha,” he answered, taking a seat opposite her. “I would like to ask just a few questions.”

He saw several quick thoughts flash through her eyes. Surprise, fear, panic, and immediately tried to clamp down on her expressions, but it was already too late. However, it wasn’t an admission of
guilt. Probably everyone would feel that way after receiving a visit from a Zararch agent. “What about?” She asked slowly, deliberately trying to keep her voice level.

Nartha smiled. “Normally I would ask several questions in an attempt to trap you, but I have neither the time nor inclination to do so. Thus, Forial, I will be blunt: You are currently under suspicion for connections to the Nulorian, specifically, this.” He withdrew his holoprojector and displayed the images of her speaking with the Nulorian operative, then it flashed to reveal the manifest of the items sold to him.

Forial’s eyes widened even more, and he turned his voice colder. “You have one chance to answer honestly, Forial. First, did you know he was Nulorian? And second, if so, I would like to know your reasons.” He shut off the projector. “Understand that if I even get a hint that you’re lying, I will take you to the Sectoids for psionic interrogation. Tell the truth and, well, let’s say it will turn out much better for you. For starters, you will not be arrested and all charges will be dropped in return for your cooperation.”

She bit her lower lip, trembling slightly. Until finally she relented. “I didn’t know he was Nulorian the first time, I swear. But…I did find out later.”

Nartha nodded. “Good. You’re smart enough to not lie. Why?”

“Because, Zar’narthaintha, I know what you’re doing,” she suddenly snarled, clearly expecting to die now that her treachery was revealed. “The Zararch, Lurainian, even the Aui’Vitakar. All of you are traitors to our species, thralls to your Elder puppetmasters and have the gall to lie to us every day. And anyone who even speaks out disappears.”

“Yes,” she hissed at him. “Not all of us are blind or stupid. When people suddenly go missing, we notice it. When people I know suddenly vanish it suddenly becomes very clear just who is in charge here.” She folded her arms. “I know about Vitakar-12, agent. And if I can help the Nulorian blow up the sick monsters responsible for that…then I’m certainly going to do it!”

Vitakar-12…He was unfamiliar with the name. He would have to look into that later. But the woman was a terrible spy, which fortunately suited his purposes well. He clasped his hands together. “Yes, I agree.”

“That’s what I—“ she froze, and narrowed her eyes to blue slits. “What?”

“An impressive speech, for sure,” he complimented. “And I agree. The Vitakara are too beholden to the Ethereals. The Zararch in particular are little more than direct tools. You’re very lucky I took this assignment, otherwise you would be facing a rather thorough interrogation from the Zararch. If the agent didn’t shoot you out of disgust. But it seems it’s your lucky day.”

She blinked rapidly. “Are you…what…? Why?”

Nartha sighed. “I don’t suppose you’ve heard about Earth? The Humans?”

“Some,” she admitted. “We don’t get much information about that. I’m focused on other duties anyway.”

“I’ve been there,” he said. “The Humans are fighting the Collective. I think they can win, and as I see it, this may be the only opportunity to free the Vitakara from the grip of the Ethereals.”

Forial straightened in her seat. “Victory against the Elders is impossible. Not completely. Even as much as I would like to believe it…the most the Nulorian will be able to do is avenge. Not openly rebel.”
Nartha pulled out a chip. “Perhaps I can make it clearer...the Humans killed an Elder. I have **proof**.”

She audibly gasped as he continued. “Everything on that chip is from a Human paramilitary group called XCOM. They’ve been fighting the Collective since the beginning. They have psions. They have acquired the technology. Like I said, they killed an Elder and I think they can ultimately win.” She took it with a trembling hand. “Unlike what you seem to believe...not everyone in the Zararch is blind to the reality. But most of us don’t see a way to change it. But change is never going to come by doing nothing. My time with the Humans was...inspiring in a way. I’ll probably die, but I believe a difference can be made now, and I’m going to take it.”

She nodded, looking back to him. “I...I guess you choose me for a reason then?”

“Yes,” he nodded. “When I return to the Zararch, I will simply say that you had no knowledge of his Nulorian connections, and I have coopted you as a contact should he appear again. The Zararch will file it away and you can go on with your life. You will have protection status as an asset, and I will take the role of your handler. I would suggest you be discreet, but your...purchases will likely not attract as much attention, especially if I say you are working to expose a Nulorian cell.”

He leaned back in his chair. “For what I need? Get that chip to the Nulorian. Tell them I want to help and will be attempting to forge connections in the Aui’Vitakar. They are not the enemy and are just as frustrated as you regarding the lack of answers. But I want to meet them, preferably sooner than later as the Zar’Chon will likely recall me within days. Tell them I’ve worked directly with XCOM, and have Level 2 Security Clearance.”

She sucked in her breath. “You are that highly placed?”

Nartha shrugged. “I did say I reported to the Zar’Chon. Can you do that?”

She nodded vigorously. “Yes, yes I can. How should I contact you?”

He handed her a piece of paper. “That is the encrypted line I’ve established. I don’t want it on record, but I should be able to be contacted on it. Pass it on to your Nulorian friends as well.”

“I will,” she promised. “I-“

“And I’ll add,” Nartha said. “Practice your acting. I have plausible deniability here. Betray me and I’ll ensure your entire family is sent to wherever Vitakar-12 is.”

Her pale gray skin turned a shade lighter. “Wait...you really don’t know?”

“No, I’ve never heard about it,” he admitted with a shrug, standing. “But after your little speech, I’m going to look into it. Perhaps you can give me an overview?”

She shuddered. “It’s where they send the dissidents,” she whispered. “Where they have the Sectoids experiment on us. I...I think the Nulorian should give you any specifics. Don’t try finding it either...they warned me that people that look into it also disappear.”

Nartha pursed his lips. She was unfortunately right. Looking into it, if it was really as...vile...as she suggested...he would imagine that the Zar’Chon would have no problem killing him to keep something that dark a secret. “Thank you for telling me. Until later, Mul’forial’inth’a.”

He exited the building, both elated that it had gone so well, and almost shaken at what the implications of Vitakar-12 really were. In truth...he wasn’t entirely surprised.
But he had thought the Zar’Chon better than sending dissidents to be test subjects for the Sectoids. That fate he wouldn’t wish upon anyone. The horrors of the Earth Sectoid Hive had been enough to drive that point home very clearly.

It was becoming clearer that he was doing the right thing. Small steps, but he was on the right path and just had to keep it that way without being discovered.

For now, anyway.

***

**Blacksite 002 – ID: “Forge” – Overseer: Revelean**

While the Battlemaster waited for Revelean to finish his current project, he was taking advantage of the geneticist’s own CODEX system to get status updates from his own subordinates, all of whom were present at this time.

“It appears ADVENT is determined to hold Seattle,” J’Loran stated. “If I am to break their lines, I will need a much larger force.”

“Alternative,” Disciple-7 interrupted in his grunting monotone. “Simply neutralize the city entirely. The civilian population is evacuated and there is no risk of collateral damage otherwise. I estimate that the destruction of such a well-known city would significantly damage the morale of local forces and United States civilian population.”

“And it might compel Aegis to act,” the Battlemaster pointed out. “I would prefer to avoid that at this time. J’Loran, how many modified Mutons are left?”

J’Loran paused before answering, his bulk oddly still. “There are...a fair amount. However, the iteration is flawed and I have begun modification on a newer generation. Now that Patricia has fought them, she is well aware of their weaknesses. They will not be nearly as effective the second time, and there is a greater chance XCOM will not retaliate with a telepath against me.”

The Battlemaster nodded, it was expected. “The fact remains that both Seattle and Portland need to be taken before we advance much further. The southwest is largely secured, thanks to my own efforts and Disciple-7. The civilian population is also placated and additional Sargons are maintaining order.”

“So it appears...,” Disciple-7 nodded. “I have already drafted plans to target Las Vegas. I expect that the population there will not pose much of a threat and there is little strategic work in keeping it secure for ADVENT. However, it is a major cultural icon that would no doubt have an adverse effect on the population. I estimate the risk of advancing there would be low, including factors such as that we have the southwest as you noted, and major cities are few and far between.”

Irinena growled, her golden form shimmering. “I have read about the city. I would simply burn it to the ground. There is little value in preserving such a hub of depravity.”

“I do not disagree, in fact,” Disciple-7 surprisingly supported. “The city has little worth to us, and serves primarily as a hub for Human entertainment and luxurious excess. Their wealth is of little value to us, and in my estimation, the morale of the United States population would be reduced three times as much by publicly destroying their icons as opposed to simply capturing the city.”

J’Loran hummed to himself. “I am continually impressed by your logical thinking, Sargon. Unfortunate that your brethren are so...restricted.”
"I am not opposed to destroying the city," Irinena noted, baring her teeth. "However, it would be handicapped by the presence of civilians, unless you wish to include them in the destruction."

“I will handle that," the Battlemaster dismissed with a nod. “I believe I can solve multiple issues at the same time. The Humans have apparently decided to suppress my involvement in subduing San Francisco. That will be remedied. I will inform ADVENT of our impending attack on Las Vegas. They may decide to abandon it, or they may defend it. Such is irrelevant. However, they will work to evacuate the civilian population. Once that is completed, I will raze the city to the ground, and broadcast it for all to see."

J’Loran chuckled. “Quisilia will love it.”

“Indeed,” the Battlemaster noted wryly. “However, what he likes is irrelevant. While I destroy Las Vegas, we will assault Portland and Seattle again in renewed numbers. Disciple-7, you will lead the attack on Portland once more, and J’Loran, you will take Seattle.”

Irinena was silent until he turned to her. “And you will perform a different function. I have been utilizing the Vitakara poorly and the Lurainian in particular. Using you as simple soldiers was not wise, and you do not have the correct mindset for large-scale warfare. So I will utilize you differently.” He waved a hand and another image appeared in the middle of them, the continent of Europe. “I want to distract XCOM. Europe is seen as impenetrable. And the reality is that it is without significant losses on our part. But they will not expect a quick strike.”

Irinena nodded faintly. “And my objective, Battlemaster? Destruction? Conquest?”

“Distraction,” the Battlemaster clarified. “You will take a Gateway Transport to France and deploy it in the middle of Paris, you are free to construct your attack however you wish, but the objective is to cause as much chaos and panic as possible. Provoke an XCOM response. Provoke an ADVENT response. Once they are fully occupied…we will launch our attacks in the United States. Retreat when my signal is transmitted.”

He changed the image to that of what appeared to be a floating orb with a glowing red ‘eye’. The metal plating around the eye was clearly able to be segmented, but otherwise it looked unremarkable. “In addition, you will be fielding a new creation from Blacksite 001, simply dubbed, the Gatekeeper. I have been assured that it will be able to defend the Gateway from unwanted assault. The full details will be sent to you.”

He looked around at all of them. “I do not want to destroy Seattle, not yet. Nor Portland. Create your battle plans and report to me within one week. I want to launch this assault no later than two weeks, and I will warn the Humans of the attack on Las Vegas within four standard days. Battlemaster out.”

The golden figures vanished and he swiftly turned and exited the CODEX communication center and into Revelean’s station of horrors. He didn’t know a more accurate way to describe it. The entire Blacksite was segmented into multiple sections. Each level was for running experiments on different species, and more were constructed should he need it. He had just added a Human level in fact. Right now he was on the Vitakara level, and what it contained was somewhat disconcerting, even for him.

The level was segmented not by experimentation type, like the others, but by race. Each segment had stacks of pods holding various Vitakara in stasis until they were used. Revelean had the interesting habit of preserving several specimens after death, and turning them into little more than realistic statues which he placed throughout the facility as decoration.
The Battlemaster snorted as he walked through the facility. To his dubious credit, Revelean was not overly cruel. Not like the Creator, though even her actions might be the mere result of her instability. It was a common sight to see Vitakara cut into various pieces or autopsied on tables, but they were always either dead or chemically sedated.

That being said, Revelean wasn’t opposed to inflicting pain. *Dispassionate.* That was the best word to describe him. It wasn’t uncommon for pain-tolerance tests to occur here, especially if he was testing out various genetic enhancements on them, and there of course were the test pens where he kept the results of his genetic manipulation. He was rather fond of splicing various traits of the races together, all of course to one final goal.

Revelean had determined long ago that the Vitakara races were useless and each one had strengths the other lacked. Thus, his somewhat dubious goal (In the Battlemaster’s eyes), was to eventually return all Vitakara into one singular race once more. He had listened to Revelean go on and on about the usefulness of such a process, because he was convinced that he could eventually evolve the Vitakara into shapeshifters.

*True* shapeshifters, not the Faceless creatures whose usefulness was sadly limited. It wasn’t surprising that Revelean also had quite a few of the lumbering wax-like creatures cut up here as well, since incorporation of their own genetic malleability would be essential to turning the Vitakara into a shapeshifter race.

Personally, the Battlemaster was skeptical that such a scheme could, or even should, be done. It was something he would have expected the Creator to try and do, but the fact that Revelean had begun to do so indicated to him that it was at least theoretically possible.

The genius Ethereal geneticist himself was currently maneuvering some incomprehensible machine over a Dath’Haram male, the arm specifically, probably going to try some new genetic sequence. Unlike most Ethereals, Revelean wore very modest clothing. He wore no robes or armor, but simple white form-fitting coverings over his torso, arms, legs and white gloves on his hands.

His helm was thinner and resembled something like an armored skullcap, fitting the shape of his head closely, and closing around his nose and mouth, while leaving the eyes exposed. His helm also had the capability to deploy magnifiers for each eye, one of which was over his right one as he worked on the Dath’Haram.

“I have finished,” the Battlemaster interrupted bluntly. “You wanted to talk with me?”

“Oh, certainly, Battlemaster,” the smooth reverberating voice answered, each syllable echoing at least a half second after it was uttered. “I trust that your plans are proceeding.”

The Battlemaster made a dismissive wave. “Yes. What do you want?”

“Patience,” Revelean chastised as he straightened, even at his full height of nine feet, the Battlemaster still towered over him. “I actually have some updates from the Creator herself. Or Blacksite 001, if you prefer.”

The Battlemaster cocked his head. “Interesting. Why would she inform us of her work now?”

Revelean chuckled. “Well, to be fair, I am fairly certain she was calling to brag. She now has yet another pet to add to her collection. You’re not going to believe what she did this time.”

The armored Ethereal sighed. By ‘pet’ he supposed it was yet another result of the Creator attempting to integrate Ethereal genetics into the various species. A fool idea that only someone as
unstable as her could conceive of as being clever. The first two ‘results’, that of combining Andromedon and Ethereal genetics, and Vitakarian and Ethereal genetics, had of course resulted in abominations just as insane, if not more so, than the Creator herself.

The first one had killed every assistant associated with its creation, and was a psychopathic bipolar wreck obsessed with pain, torture, combat, and a twisted sense of honor. Supposedly the Creator had to give her dozens of victims a month just to keep her sedated and from losing her mind completely. A useless creation that was far more costly than was worth it. The Creator didn’t care, of course, the mere fact that she had been able to construct such a being was reward enough for her.

The second one was much, much worse. Largely because it killed people by just talking with them and driving them insane. Why the Creator had taught the thing telepathy was beyond him, but the result was a twisted thing that was disturbingly intelligent and had unfortunately learned Quisilia’s sarcasm and believed itself a superior being, sometimes even to other Ethereals. Naturally he and Quisilia were friends. Typical. As was Isomnum of all Ethereals, though given his methods, the Battlemaster was not surprised.

Now of course she had done it again. Wonderful. “What happened?”

Revelean raised a finger on one hand. “She incorporated Ethereal and Muton genetics of all things.”

A low growl emanated from the Battlemaster’s throat. “She appears to believe that because her Blacksite is orbiting the Dead World, that she can do whatever she wants. I will be speaking to the Imperator about purging her creations if this continues.”

“For once, I agree with the idea of purging these scientifically momentous achievements,” Revelean nodded. “In truth, I was skeptical, and honestly see little reason to do it. But she has done it and that avenue of research is open to us, should we follow it. However, she should have terminated those abominations long ago. This new one in particular is a gibbering maniacal wreck overwhelmed by his psionics and trying to kill everything that gets close to him. The primitive mind of a Muton cannot simply comprehend the power of the Gift.”

He shook his head. “However, I did congratulate her. She has done excellent work recently, especially with the Gatekeeper, so I feel it appropriate to let her explore her irrational ideas. If the Imperator tires of her experiments, he will interfere, simple as that. But as interesting as this is, I did want to inform you of my latest orders from the Imperator.”

The Battlemaster narrowed his eyes. The Imperator almost never interfered or gave orders with Revelean, so this was…intriguing. “What are they?”

Revelean had an odd note in his voice. “The Imperator wants me to resume work on the Avatar Project.”

The Battlemaster was unable to hide his surprise. “It was deemed a failure centuries ago. We expanded too many resources to begin with. You determined it wasn’t possible.”

“The Imperator seems to disagree,” Revelean shrugged. “He thinks that Humans might be the key. Upon some initial investigation, I am wondering the same thing. Humanity is capable of psionics-“

“As were the Sectoids,” the Battlemaster reminded him. “Need I remind you of the Hive Commanders that immolated themselves or went insane? The Overmind was…displeased he had to personally alter the memories of the remaining Hive Commanders.”
“The point is that it deserves to be investigated,” Revelean interrupted. “Which is why I’d prefer you not kill any psions you find. Capture them and bring them to me.”

“No, but it is a matter of time,” Revelean admitted. “Humans at the psionic level and mastery that are useful here will take months or years to properly achieve. And the Imperator…well, I believe he wanted answers on even just if it was possible rather soon. I am, of course, awakening Humans, but I would prefer that to be a contingency, nothing more.”

The Battlemaster was silent, before sighing. “I will see what I can do.”

“I don’t expect it should pose too much of an issue,” Revelean stated with confidence. “After all, I have yet to see an instance of Humanity that would even give you pause.”

“Oh, we’re starting up the Avatar Project again?” A new voice interrupted, and the Battlemaster turning with some resignation to see Quisilia walking up to them. “This will be interesting.”

The Battlemaster stared. “Quisilia…why are you holding a cat?”

Indeed, the former Imperial Shadow was holding some white feline in his lower arms, absentmindedly petting it. The entire picture looked…wrong…to him. And disrupted the somber nature of the discussion. Which was not helped by Quisilia’s companion at his side. “And why is there a…tiger…with you.” The Battlemaster was convinced that animal at his side was such a creature. It was one of the animals from Earth that fascinated him.

The tiger actually seemed docile, and now that Quisilia had stopped, laid down around his feet and started purring, a low rumble that would have terrified any sane person. In truth, the animal was rather small compared to his own height; not even coming up to his knee, but he was still wondering what Quisilia was doing with such a creature.

Quisilia raised a free hand. “I’ll get to that, but Revelean, there is a slight issue with the Sectoids.”

“Really,” Revelean asked dryly. “What now?”

Quisilia cocked his head. “The short version is that I made an error. You recall the Sectoid bioweapon Nartha revealed that XCOM made?”

Revelean nodded. “And you said you had it under control and I could assume control of the Quarantine zones.”

“About that,” Quisilia said slowly. “It turned out that the bioweapon is indeed transferable cross-species, and Nartha was, unknowingly, infected with it. And in turn, infecting everyone around him, and ultimately leading to what I fear to be a majority of the Sectoid population being infected as well. If we do not act, I am afraid our Sectoid numbers will be decimated in the coming months.”

Revelean was silent for a few moments. “You will inform the Imperator of your error, since he was rather insistent that the Avatar Project be completed soon. This new situation takes precedence, but you will bear any punishment for this failure, Quisilia. And I will attempt to clean up your mess. I thought you insisted that you could control this traitor?”

“This had very little to do with Nartha,” Quisilia answered, shaking his head. “At least, knowingly. Even if I had killed him the moment I learned he was a traitor, the damage could still be done. He was a walking bioweapon the moment he landed on Mars and unknowingly contaminated hundreds
of workers. This situation would have still arisen. I will, of course, inform the Imperator.”

Privately, the Battlemaster could not have cared less about the Sectoids dying of a genetic bioweapon. He had half a mind to find some way to save the Human scientist who had conceived it for himself, since anyone smart enough to realize that the Sectoids were a blight upon the galaxy was one he wanted working for himself.

“Now, as for the tiger,” Quisilia said, turning to him. “I got him for you as a pet.”

The Battlemaster narrowed his eyes. “A pet?”

“Yes, a pet,” Quisilia repeated happily. “Fluffy here has made me realize how nice it is to have them. It’s very relaxing. The furballs are rather cute, and the Humans are smart to have realized that pets are an excellent quality of life improvement. Besides, cats pretty much take care of themselves, and more to the point, everyone else struggles to wrap their minds around me having one,” he finished with a laugh.

The Battlemaster was not convinced. “Self-sufficient or not, I don’t have time to devote to this animal. And why a tiger?”

“Please,” Quisilia dismissed. “A regular house cat is the size of one of your hands. You need something big enough that you won’t kill accidentally. Besides, I figure he would be useful in combat. Tigers are predators after all, and Humans fear them.”

The Battlemaster looked down at the feline stretching out on the ground and sighed. “I see why you get along with the Creator. Your ideas are as unhinged as hers.” Practically speaking, he could probably find a use for this tiger. Maybe not as a pet, but the only ones who could keep up with him in combat were chryssalids or other Ethereals, and since he would never use the former, perhaps it would be interesting to have a combat companion his speed.

Although…he eyed the tiger. It was going to have to be improved significantly. Otherwise it would be shot dead in seconds. Perhaps a project for Fectorian? A short distraction to cybernetically improve an Earth creature? Yes, he could see a way to present this to Fectorian.

“Not one for me?” Revelean asked mockingly.

“Absolutely not,” Quisilia stated, almost sounding offended. “If I gave one to you, it would end up on some cutting board and dissected. I only give cats to people who appreciate them, thank you very much.”

Revelean chuckled, a definitely strange conclusion to a meeting which would have ramifications across the entire Collective.

***

Vitakar, Aui’Vitakar Assembly Chambers

The center of Vitakarian government was just as impressive as ever. The Chambers themselves were massive, sleek and with soft white angles that protruded far above any other building in the capital. It was one of the only buildings to break convention and construct upwards instead of horizontal. However, Nartha would not be entering the physical chambers today and instead headed to the Cæranian Hierarchy Embassy, where all their representatives were stationed when not in session.

Everything had to be kept to regulation, which meant that there was no sand or vegetation in the
Embassy, which was no doubt something they would have wanted. Although there were special mats that were the equivalent of chairs for the Cobrarians, who coiled their lower bodies on them. The air was also arid and hotter than usual, which was to be expected. Even the mild climate of the Capital was almost cold for them, though many had adapted to it.

It was fairly busy, as many schools took groups of young Vitakara to the capital, although the goal was to learn more about the different races than specific government, so in addition to them, there were aides, soldiers, guards and other representatives going about their business. He slipped through the crowds unnoticed, acutely aware of how many Zararch agents were stationed throughout just this area, all watchers for the representatives. Some were aides, some were friends, and others were guards. All were spies keeping tabs on assuredly more than just their charges.

Sareech herself was fairly close, and her own personal aide, another young Cobrarian, Aui’histrath’lasa, was her unknown Zararch spy, a rare Cobrian Zararch agent. He had let her know beforehand that he was coming “on business” and she had agreed that he would not be disturbed. He outranked her by a significant margin, so it wasn’t difficult to get past her.

She actually inclined her head as he walked up, and the doors parted as he stepped into the office of the Cobrarian representative. It was fairly larger for an office, with clean white walls, chairs to accommodate all races and lit by a Cobrarian Heat Lamp, which had the adverse effect of making the entire room hot.

Sareech herself was behind a tan desk, her lower body coiled up on one of the mats, and her upper half was dressed in the typical Cobrian Representative uniform: A brown cloth vest-like garment that bore no markings aside from the emblem of the Hierarchy on the shoulder pad. The hood of the garment was down, exposing the reptilian face of the representative.

Nartha did admit that the Cobrarians were a race that did occasionally make him nervous being around. They were strikingly different from every other race, with perhaps the exception of the Sar’Manda. How they were even the same species was amazing, but such was the power of Vitakara genetics.

Sareech was fairly old, from what he could tell. Her scales were a pale yellow, scratched in places and her diamond-shaped head was actually turning white in some places. Nevertheless, she was one of the most influential figures in the Hierarchy, even if she was a mere representative now. She tilted her head as he walked in and took a seat. “[Hello, Vitakarian,]” she began in their language, unable to properly form words of the Basic language all other races used. Fortunate that he could understand it. “[May I help you?]”

“I hope so,” Nartha nodded. “I don’t suppose you know who I am?” At this he activated his Audio Disruptor.

She flicked out her forked tongue.”[…no, but you taste different than the others. You have been off world. Earth.]”

He widened his eyes. “Impressive. How did you know?”

She hissed, which was Cobrian for a chuckle. He hoped. “[Because I’ve spoken with those who have returned. Soldiers. Lurainian. Runianarch. Zararch. All who came from Earth tasted as you did, with the faint scent of the Humans on them. Which are you?]”

He inclined his head. “[Zararch, honored representative. Zar’nartha’inha.]”

She visibly tensed, coiling up tighter like a spring. “[Zararch…I see. And why would you wish to
speak to me, agent?"

Nartha laced his fingers together, and rested his hands on the table. “Let us say for now it is simple curiosity. I have disrupted any devices eavesdropping on us, so we can speak freely, although the cameras are still working. But returning to the topic at hand, I don’t suppose you are aware you have been marked as a potential issue by the Zararch? Or that forty of your fellow representatives have been flagged as such?”

She flicked out her tongue again. “[I suspected I was, it is no surprise. I am aware how you…operate. However…I did not realize it extended to so many of my sisters. Why?]”

“That, is what I want to determine,” Nartha continued. “Specifically, have you pressed for additional information on Earth? Introduced motions affecting Vitakara military policy? Supported controversial positions?”

Sareech shut off the haptic displays and eyed him curiously. “[The Hierarchy does not approve of how much is…unknown…regarding this new species. Naturally they have asked us, as representatives, to learn what we can. However it seems….few…are interested in the truth. The Runianarch and Lurainian say it’s too sensitive, and the Collective is not forthcoming either. I’m certain you can understand that, and with the…issues…currently in the Hierarchy, we have enough to deal with without wondering what is happening without our knowledge.]”

Nartha nodded. “I suspected as much. And that is why you are under watch, as well as an entire third of the Aui’Vitakar. The Collective does not wish anything involving the war to become public knowledge.”

 “[It does not need to be public!]” She hissed. “[But we have a right to know what our people are fighting and dying for! People come to us for answers and we can offer nothing. We have no choice, and if the Zararch doesn’t understand that-]”

“Calm, Representative,” Nartha placated, raising a hand. “I believe I can give you some information…provided you don’t use it recklessly.” His tone turned cold to drive home his point. “Understand that everything I will tell you will mark you for death by the Zararch should it be used carelessly. Do you still want me to explain?”

Hesitance, then a nod. “Good,” Nartha continued. “The war against the Humans is not going as well as you are hearing, if you have heard anything at all. They have reverse-engineered Collective technology and are using it to defend themselves. It has gotten to the point where the Elders themselves are taking part in the conquest. Most notably the Battlemaster and previously Ethereals Sicarius and the Ravaged One.”

She tilted her head. “[I do not recognize the names, save the Battlemaster.]”

“They are isolated figures,” Nartha clarified. “But what you need to know is that the Humans, specifically and organization called XCOM, killed the Ravaged One. I have proof, and I was there.”

She visibly recoiled. “[How could they kill an Elder?]” She hissed in amazement. “[It should be impossible…]”

Nartha gave a slight smile. “You can see why they want this information…suppressed. After the Ravaged One died, that was when the war began in earnest. Despite what you might have heard…the Humans have the ability to fight back, and possibly win. Their people are also capable of wielding psionics.”]”
“[This changes everything,]” Sareech hissed furiously. “[They truly thought they could keep this
down? They truly thought they could keep this
from us? We have tolerated the insolence of the Collective too long. We must demand answers!”

Good, she was on the right track. “I would avoid that,” he cautioned. “Trust me, I feel the same
way. Which is why I’m telling you this. But you can’t act immediately, not unless you want to
draw the Zararch out, and they will kill you. I wouldn’t even take this to the Hierarchy, not yet. It
would look too suspicious if you were to suddenly leave after we spoke. I wouldn’t mention this to
anyone yet either. But wait at least a few days, preferably, a week, then return to the Hierarchy.
Decide what to do then.”

He subtly left a chip on the table. “There is proof. And if you want to get answers of a different
sort…have you ever heard of Vitakar-12?”

She cocked her head. “[Sectoid naming convention? Are you referring to Viennith? It’s a dead
planet, desolate and abandoned. Why?]”

Nartha pursed his lips. “I’ve received some potential information that is…disturbing, if true.
However, you say it hasn’t been touched. Are there mineral deposits? Anything of use?”

 “[The entire moon could be mined for resources.]” she said slowly. “[It’s been on the lower end of
the agenda for decades. Never gets any traction when there are better projects.]”

“Perhaps you should bump it up,” Nartha suggested. “I hope I’m wrong about it, but I would prefer
we know everything in our home system. Please don’t ask questions. Not yet.”

She nodded. “[You have been…helpful…But I suspect this is a means to an end for you. This
information isn’t handed to me for a reason.]”

He stood. “Let us say I need a friend in the Aui’Vitakar who I can marginally trust. However…
before you make any public decisions, or even ones in the Aui’Vitakar relating to this…contact me
first. I would prefer you not attract the Zararch and be executed. They will not hesitate to remove
one even as influential as you. Now you know why.”

He paused. “Take the proof to the Hierarchy when the time comes. Think carefully about the
future of our species. Information on how to contact me is on the chip. Good day, Sareech.” He
turned around and exited.

That had gone…well…he supposed. The shock and outrage he’d seen was genuine, but he was
more concerned she would accidentally compromise him and do something rash. That was always
a risk, but he had to trust she wasn’t an idiot. But if he could get the Hierarchy on his side, things
just might start shaping up in his favor.

Assuming of course, he could still continue to trick the Zar’Chon into thinking he was still on the
side of the Collective.

Supplementary Material

The Advent Directive

SECTION 10: Guidelines for Extraterrestrial Civilizations

Subsection 10.1: Introduction
**Overview and Purpose:** As humanity is decisively no longer alone in the universe, we must prepare for contact, conflict and diplomacy with other alien civilizations beyond our own and ensure that we establish humanity and ADVENT as the unrelenting and proud voice of our species. We will ensure that humanity never bows or succumbs to alien influences and no alien civilization will hold power over our species without destroying our own in the process.

Alien civilizations must be made to understand that humanity can never operate or negotiate from a position where the alien benefits overwhelmingly from the arrangement or at the expense of Humanity, nor can they be allowed to believe that conflict would result in anything other than their own annihilation. To attack one Human is to attack our species, and ADVENT must take an unrelenting hand in dealing with alien civilizations and put the preservation of human life above all else.

At the same time, ADVENT realizes that not all aliens seek war or destruction with our own, and should be a strong and diplomatic leader to species who choose to ally or work with ADVENT. The extent of friendly relations will be determined on a case by case basis, but alien civilizations can rest assured that ADVENT will never attack unless provoked, be it openly or otherwise.

Humanity seeks not war, but will accept nothing less than total victory for those that oppose us.

**Table of Contents:**

10.1: Introduction

10.2: Diplomacy for Hostile Alien Forces

10.3: Diplomacy for Friendly/Neutral Alien Forces

10.4: Treatment of Captive Aliens

10.5: Economic Trade Between Friendly Alien Forces

10.6: Alien Citizenship in ADVENT

10.6: Requirements for Declaration of War on Non-Hostile Alien Species
Trials and Templars

The Praesidium, Situation Room

The Commander frowned at the report on his tablet, and looked up at Patricia, Aegis, and Zhang who had all arrived to discuss the latest development. “Does this seem genuine, Aegis?” All of them looked to the robed Ethereal as he studied the simple message which had been recently sent to ADVENT:

Las Vegas is next.

There was no signature or anything indicating identity, or even that it was alien in origin. But given the ominous nature of the message and the straightforward words, the Commander was suspecting it was the Battlemaster. “I would not be surprised if it were so,” Aegis finally said. “Though he is normally not so…open.”

Patricia crossed her arms. “It has to be a trap.”

“I agree,” Zhang nodded. “He’s trying to use Las Vegas as bait for some reason. He might not even attack there.”

“No, he would,” Aegis countered. “However, he is clearly expecting a specific reaction to this. The question is what it could be.”

“Assuming this is genuine in the first place,” Zhang pointed out grimly. “Is Las Vegas a city we should care about? What value does it have strategically?”

“Symbolism,” the Commander answered, looking down at the holomap of the state of Nevada. “Las Vegas is a cultural icon and seeing it captured would be a blow to morale and weaken the trust people have in ADVENT protecting them. Strategically, it’s not useful. It’s what it represents that’s the issue.”

“The question is if we should take the risk if it is fake,” Patricia noted, leaning forward and resting her hands on the table. “Even if it isn’t, the cities close to the fighting should evacuate. Yeah, it might ruin some vacations, but anyone actually going to Las Vegas for fun right now is an idiot.”

The Commander opened his mouth to speak and Aegis suddenly raised a hand. “Commander…would it be unreasonable to assume that the destruction of the city would have a larger impact than its capture?”

“Depends on how well it is publicized,” the Commander said with a shrug. “However, if they want to destroy it, I doubt there is anything we can do to stop them from broadcasting. ADVENT could lie, but it might backfire. Why?”

“A thought,” Aegis mused. “I wonder if that is what the Battlemaster plans. To destroy the city. He would not do so if there were civilians still living in the city, but if they were gone…”

“Ah,” Zhang suddenly smiled. “I see. ADVENT of course wants to reduce civilian casualties. Leak the attack ahead of time and they will evacuate, leaving nothing but soldiers. Clever.”

The Commander had to agree. “Interesting. That means he does not see any strategic value in
preserving it. Perhaps we can use that.”

“The question is how,” Patricia mused. “The easiest way to negate his plans would be to advise Saudia not to evacuate. It might prevent the Battlemaster from destroying the city right away—“

“No, it won’t,” the Commander interrupted. “All that will do is delay him. If he really just wants to destroy the city, he’ll just remove the civilians and do it anyway. We have little to gain by not evacuating.”

“We can’t forget that this may simply be a distraction,” Zhang reminded them. “I highly doubt the Battlemaster will just attack one city, if he even bothers to personally appear.”

“I agree,” Aegis nodded. “If I had to hypothesize, he is preparing another offensive in the United States. Likely to capture Portland and Seattle before continuing onward.”

The Commander frowned as he looked down at the holotable. With Canada unreliable, and the Battlemaster wanting to establish clear lines of territory as he advanced, reprisal was going to be... problematic, and he clearly wanted those cities. The Templar Program was proceeding...well...but he was very skeptical that they would do little more than slow the Battlemaster down. Whichever city he attacked was likely forfeit, but doing nothing was out of the question.

“If it is him, the Battlemaster is giving us a warning,” Patricia said slowly. “We need to take that. Negate as much damage as possible.”

“The good news is that all the civilians that were still in Portland and Seattle are gone,” Zhang noted. “I hate to suggest this... but I think we should begin thinking not of winning, but asset denial tactics and prepare in more fortified cities and use the natural barriers in the Midwest instead to trying to keep our hold on the West Coast cities.”

The Commander sighed. “Unfortunately, I don’t necessarily disagree. At the very least contingencies should be made if we do lose the cities. If the Battlemaster is indeed intent on destroying Las Vegas, we should make it as costly for him as possible.”

Patricia rubbed her forehead. “Saudia is not going to like this. The large decisions like this have to be approved by her.”

“She isn’t an idiot,” the Commander said. “And I think that we’ll all agree that if we do lose the cities, we make sure there isn’t much left for the aliens to use, or make it extremely costly.”

“So is that our recommendation?” Patricia asked. “Evacuate Las Vegas and prepare to sacrifice the cities?”

“It should be,” Aegis agreed. “Perhaps you can hold the cities where the Battlemaster is not attacking, but in the event you cannot, it is better to force the Battlemaster to delay than decide a few structures are worth preserving and allow him to capture them whole. And I will strive to continue preparing the Templars until the Battlemaster strikes.”

“I’m curious when you’ll actually decide to participate,” Zhang muttered, shooting a glare at the Ethereal. “Talk is all well and good, but actions speak louder than words, as we Humans say. If you really are on our side, you should show it.”

“I will help when the time is right,” Aegis answered calmly. “I do not wish to escalate the situation more than necessary. Yes, I could help you and perhaps save the West Coast. But you understand that by publicly taking a side, you will draw more Ethereals here, and it might be more than we can handle. I am not refraining from interference simply because of cowardice and not ‘taking a side’
as you put it. But because my public involvement could irrevocably doom your world.”

The Commander pinched the bridge of his nose. “I can understand that to a degree, but if the situation worsens…”

“I am not ignorant, Commander,” Aegis said. “If the situation becomes dire enough, I will intervene. You have my word.”

A word the Commander didn’t entirely trust, but then again, Aegis had been exceedingly helpful the past couple months, and perhaps he could be trusted to a degree. But it was still mildly frustrating dealing with his refusal to openly fight. “I suppose that’s it. I’ll have Jackson send our recommendation to Saudia. Dismissed.”

***

**Australia, Sydney Outskirts**

Abby put away her binoculars and observed the now-captured city from afar. The problem, from even the outside, was that it seemed impossible to get in without discovery. Whoever was in charge of defense was very smart. There were what looked like Zararch snipers, and every street entrance was guarded by Mutons and she had observed groups of Mutons led by Centurions or a Vitakara wandering the city streets.

No civilians whatsoever, at least wandering out in the open. What was curious was that there appeared be no supply lines of any kind. She’d carefully watched over the past couple days and nothing. Which immediately indicated to her that they had, or were building, Gateways within the city.

Which was not good.

She knew hard proof was needed, but again the problem was actually getting inside, and then once she learned what she needed. Exploring without a direction or general area was also a bad idea, as she would only waste time and increase the possibility of her capture. So no good options.

A glint in the sky caught her eye and she looked up to see a gray UFO transport come out of the sky, and maneuver towards the interior of the city, close to the center, and slowly land. She raised an eyebrow and brought up her binoculars. Hm. Well, that hadn’t been expected. The good news was that from her vantage point she could get an idea of what they were doing, since the area had been converted into a makeshift landing zone recently.

Her eyes widened even more as they began unloading a strange structure, almost an upright attached to a pedestal with glowing purple lenses throughout it…ah, now that made sense. They were receiving Gateways from offworld, not actually building them here. That made sense, but as she kept watching, she didn’t see more than two being unloaded.

In the grand scheme of things, that wasn’t a lot. It would be a problem, but unlikely to be game-changing especially if they were located and destroyed. She quickly noted that in her log, along with the time and location, as well as the areas it appeared the Gateways were being transported to. Harper would definitely prefer harder intel, but she simply didn’t have the equipment or information needed to successfully penetrate the city.

Well, she’d gotten what he wanted. Her goals were to learn if the aliens did have Gateways established and if possible, their locations. She knew the answer to one, and could narrow down the second. It would have to be good enough, and she’d need to talk with Zhang about additional
tactics or supplies she could use.

She waited until the sun went down and then began making her way back to the main camp with the little ATV Rover she’d been provided. It would at least suffice until she reached the helicopter, one of the few that was in operation. That reminded her…

She was fairly certain at this point the deal she had made with the Chronicler was up. She didn’t remember if it had been two or three weeks, but even if it was the latter, she knew it was past that. Once she reported to Harper, maybe it was time to pay the psion a visit and see if he was as useful as he’d promised.

Abby wasn’t sure she actually wanted him to have fulfilled his promise. If he had…it was going to make things a lot more complicated.

***

*The Praesidium, Templar Training Arena*

The thing Patricia especially liked about the Praesidium was how large it actually was. She had initially thought that the ones selected for the Templar program could train with the regular psions, but she’d dismissed that when the Commander had notified her of a large empty room that could be used as a training arena for them.

And so the Templar Training Area was born. It was largely empty and a massive rectangular room with one corner filled with various obstacles when either Aegis or Leng wanted to challenge the trainees. All of them were deep in practice now. There had been four she and Aegis had deemed appropriate as “trial” participants.

Iosif first, which was not a surprise as a defensive psion fit the program exceptionally well. Karen Dais had also been chosen, and Patricia did believe that a telekinetic psion could work almost as well as a defensive one. Chan Jin-Taek was more of a test case, since he was an attack psion and potentially vulnerable in a way none of the other ones were. He wouldn’t go up against the Battlemaster, but Aegis did believe an attack psion could easily decimate ordinary enemies.

The last one she’d added almost as an afterthought: Carmelita. While the combination of psionics and melee combat was *technically* what Patricia wanted, Carmelita was uniquely qualified to fill the role. She had experience with melee combat to a degree, was an expert at close quarters and ultimately, if she could wield a melee weapon…Patricia couldn’t see a reason to deny her that. She was really only accepted because she had the Iron Skin and Muscle Fiber Density modifications and could take damage that Templars would draw. But Patricia knew that Carmelita would be the exception here – not the rule.

Right now the Korean woman was dueling Leng who was still managing to fight her to a draw. Patricia shook her head in amazement as he continuously managed not to get brutally beaten by the genetically superior soldier. All the Templars were training in full armor, as Aegis and Leng both agreed that they should get used to wielding weapons in their gear.

Chan was currently cutting through a self-created scenario of haptic dummy projections, his greatsword flaring with purple mist as he swung the blade as if it weighed nothing. Karen was practicing telekinetically calling her weapon to her hand instinctively and throwing it again at a different target.

Iosif was currently attempting to duel Aegis and actually seemed to be doing decently. All in all, things were proceeding well. A month and they might have some exceptional duelists. As soon as
the Commander had authorized the program, Patricia had Jackson find an actual expert in historical melee weaponry and tactics, and she had found one: Aki Leng.

A middle-aged Japanese immigrant to America, he had been surprised at the offer, but definitely willing. She confirmed that he seemed trustworthy enough, and that he wouldn’t do anything to hinder their operations. He had been, well, somewhat disturbed seeing the Battlemaster in action, and the fact that one of the same aliens was working for XCOM didn’t exactly reassure him.

However, he did agree that their plan was solid, and had immediately gone along and shattered Shen’s vision for the Templars. Shen, and Patricia too for that matter, had envisioned the Templars as sword-wielding psions that killed enemies with ease and could slow the Battlemaster down, if not stop him altogether. Romantic for sure, and not practical at all according to Leng.

The first thing he had thrown out the window was the set goal of using swords as the base weapon. He had, rightfully, pointed out that stabbing the Battlemaster was going to accomplish absolutely nothing because of his armor, and would ultimately be little more than show. “He’s not going to get tired, he’s not going to have his armor breached, and he’s not going to care about your swords except laugh.” Leng had said. “You really want to slow him down? Damage him.”

So he had instead proposed that psions dueling the Battlemaster wield armor damaging weapons like war hammers, maces and flails. “Swords are useful,” he’d said. “But they are not a one-size-fits all weapon. It’s just another tool. You don’t use screwdriver to weld steel, so why should you use a sword against impenetrable armor?”

Aegis had been rather impressed he’d pointed that out. Apparently the Battlemasters in the Empire had not bound themselves by a single weapon either. Aegis recalled that while most did indeed use greatswords, there were a good number that duel-wielded, used axes, morning stars and energy-based alien weapons. So the next thing Leng had done was help each new Templar pick out a weapon that suited them the best.

Iosif had chosen a mace as his primary weapon, two of them in fact. A shorter one for regular enemies and a longer one for dealing with the Battlemaster specifically. Weight wasn’t much of a factor, as all of them were genetically enhanced and could swing heavy weapons easily. Patricia was very careful not to be around Iosif when he was swinging his mace around, since he could probably kill her with one lucky hit, or break most of her bones at the least.

Chan had developed a love of massive two-handed weapons that he could envelop in psionic energy. He was alternating between a massive double-headed war hammer which she was also trying to stay away from, and the Zweihander, which looked like a greatsword except somehow larger and with two parrying hooks on the blade, slightly above the hilt. From what she gathered, the Zweihander was for regular aliens and the war hammer was for the Battlemaster.

Karen had opted for complete annihilation tactics. Her primary weapons were two short swords which she planned to use against regular alien forces, throwing and recalling them in such a way that she was never unarmed, and a long-handled mace if she had to face the Battlemaster. In addition to all that, she had strapped half a dozen combat knives to her armor, and planned to telekinetically throw them when she deemed it appropriate.

As Carmelita was the lone non-psion in the group, her style was slightly different. Namely that her alloy cannon was one of her primary weapons, and her melee weapon would alternate between the standard longsword, and a flail. Why she had chosen such a dangerous weapon for her second option had been brought up by Leng, and Carmelita had shrugged and said something to the effect of “It’s unique.” Which Patricia knew from her emotions, that it was her way of saying she wanted to use it, and that was that.
Shen was designing special MELD and alien alloy enhanced variants of the weapons they would be using, but in practice they would always be using basic non-modified weapons. For one, it meant they could unload on Aegis to their heart’s content as he couldn’t be hurt by them, and the Aegis armor was strong enough that Leng could spar with swords and even flails and not get hurt.

She smiled as she felt Creed come up behind her and whistle. “Well, they seem to be coming along quite nicely. Not joining in?”

He meant it as a joke and she chuckled along with it. “Unfortunately not, I can’t use my own powers in melee combat. Wrong skill set.”

He smirked at her. “Nah, you’re just not thinking creatively enough,” he tapped his head. “It’s actually pretty simple: Invade their minds, say “freeze” and while they stand there you go up and slice their throats.”

She raised an eyebrow. “Or I could just shoot them. Never really liked making things more complicated for myself.”

“Fair enough,” he relented, coming up and putting his arms around her, pulling her into his chest while they watched the Templars train. “You trust the new guy?”

“Leng?” She asked. “For the most part. He’s done well here so far and he surprisingly gets along with Aegis well. I don’t think he’ll be a problem. Trust me, I’m keeping an eye on him.”

“Well, if anyone would know, it’s you,” Creed said. “I never thought medieval combat would actually return. Seeing XCOM soldiers wielding swords is strange, let alone a giant alien doing the same.”

“Neither did I,” Patricia admitted, listening to his steady heartbeat as the sounds of steel hitting steel rang in the foreground. “But then again, there’s a lot of things I didn’t expect recently.”

There was silence for a few minutes. “Do you think we can stop him?” Creed finally asked.

Patricia hesitated before answered, until she just slumped into him and sighed. “I don’t know,” she admitted. “Aegis is doing his best but…even with his help, even if we had everything…I don’t know if we can. And if we do…I’m worried what that would bring down on us. You…you don’t know, but the Battlemaster is far from the most dangerous Ethereal out there. I’m worried that even if we kill him, we’ll just draw down someone worse.”

“Then we’ll kill them too,” Creed reassured her, kissing her gently on the side of her head. “I trust you and I trust the Commander to figure out a solution to any problem that comes up. Think about it Patricia – We should have lost this war a long time ago, but we didn’t. All the aliens have accomplished is making our species stronger, and the longer they fight us, the better we’ll become. I don’t think the Ethereals have ever run into a species quite like ours, Patricia, they don’t know how to deal with an enemy that takes their strengths and turns it against them.”

He did believe the words he was saying, but he didn’t know what she knew about the Ethereals, the Collective, the Synthesized, Revelean, the Imperator himself. He was blissfully ignorant of the evidence that point to the fact that not only did the Ethereals know how adaptable Humanity was, they were counting on it.

For what purpose…Aegis said the Imperator wanted soldiers.

She wasn’t so sure anymore. She believed he was after something specific. There was a goal he wanted to accomplish that all of them were missing.
But she didn’t say anything to Creed, and just enjoyed being in his presence as they watched the Templars train for the inevitable duel with an Ethereal who’d spent centuries honing his craft.

***

*Japan, Nakashibetsu*

“Everything is so quiet.” Beatriz said softly as she peered through her sniper rifle, looking across the vast expanse of fields. “Do you think they’ve given up?”

“Doubt it,” Johan said with a shrug, still keeping his rifle at the ready. “But they’re probably done for the day.”

Duri agreed. The aliens attempted to press an attack of sorts every day, usually by sending a few dozen Andromedon and Vitakara soldiers. He was fairly sure it was a continuous probing attack to make sure ADVENT wasn’t planning a sudden attack on their one lone town. But it was always hectic, even if ADVENT had every advantage.

They had definitely not been idle, and Duri knew that fairly soon ADVENT was going to launch a retaliation attack on the town. Within Nakashibetsu itself, there were dozens of THAAD defense systems and artillery launchers, which was the primary reason they had suffered very few losses when the aliens attacked. There was simply no good cover for them to take, and what cover there had been was now wrecked. The once-tidy fields were now ravaged by artillery fire and turned into misshapen terrain of dirt, grass and plants.

More artillery and squads were being covertly deployed to encircle the town itself, and for the moment hadn’t been detected. Or they had been, but the aliens believed they were safe. Duri wouldn’t have been surprised if that was the case. ADVENT Intelligence agents had reportedly been working there, and the intel he’d heard was...concerning.

The agents reported that the aliens had enacted a red energy shield over the entire town, much like what he’d seen from the Andromedons from the first attack. On top of that they were utilizing a kind of laser-point defense system which was shooting down all the airstrikes that had been attempted there. Supposedly there were also several dozen Sectopods (What the massive alien machines were called, apparently), and a *lot* of Andromedon soldiers.

Duri had also heard talk of something called a Gateway, but he didn’t know what that was.

“Well, I think it’s past time we kicked these aliens off this island,” Cara muttered, her gauss autorifle still trained on the fields. “We should be in America.”

Duri pursed his lips under his helmet, not really sure what he should say to that. He could understand Cara wanting to defend her homeland, but he knew that keeping the aliens in check here was just as important. “They’ll be pushed back,” he reassured her. “But the aliens here are just as important.”

“No disrespect intended, but no,” Cara stated flatly. “If the aliens take America it’s probably over. Even if Japan is lost, it’s not a death blow. Not yet, anyway.”

“I’d be grateful, if anything,” Kang shrugged. “A lot of the people were killed in the attacks. The stuff I’ve heard about San Francisco is rather disturbing.”

“How about how that one alien killed a fifth of a garrison?” Cara snorted. “Yeah, I’ll wait for an official proclamation before I believe that. There probably was some super-alien, but not one *that* powerful. Sure, San Francisco was lost, but they should have at least owned up to it.”
“I’m not sure,” Beatriz commented softly. “In the official statement, there was no mention about how San Francisco was lost, and no mention of a super alien either. Not like LA. Maybe it isn’t like the rumors, but I think there was something there that has the leadership worried.”

“In any event, it doesn’t change our goal here,” Duri said, ready to refocus them before they became too focused on rumors. “We know ADVENT is preparing to decapitate the aliens here. Then we’ll see if they decide to redeploy us or not.”

“Speak for yourself, but I rather like it here,” Johan said easily. “Barring the slightly marred countryside, this is a rather beautiful place. We get to kill aliens and our chances of dying are low. In my experience, looking for fights normally leads to people dying in various horrible ways.”

“Here, here,” Beatriz agreed with a nod.

“Yeah, sure,” Cara sighed. “But you try being objective when it’s your country under attack.”

“We understand,” Duri told her, resting a gauntletted hand on her shoulder. “But all of us – no matter which country is attacked – need to remember that it’s bigger than just one nation. Even if we lose one battle, the war is far from lost. America will be reclaimed. I’m sure of it.”

“I hope so,” Cara relented, letting the barrel of her weapon rest on the ground. “But I want to be there when it happens.”

Duri smiled. “No promises, but if we finish off the aliens here…I’ll see about being deployed to America.”

“We get a vote in this?” Johan asked humorously.

“You say no?” Duri asked, raising an eyebrow even if Johan couldn’t see it under the helmet.

“What, me?” He asked sarcastically. “Nah, been awhile since I’ve been there, and as long as we’re killing aliens, I’m fine with it.”

“No suicide missions though,” Beatriz added.

All of them chuckled at that, and Duri did note that Cara seemed a little less tense as they continued their watch. Thing would hopefully be wrapped up in Japan soon, but Duri also had a feeling the aliens wouldn’t simply continue their probing attacks for long.

They would try another invasion soon, and this time he feared the aliens intended to ensure they couldn’t lose.

***

The Praesidium, Templar Training Arena

Nuan was now wondering on occasion if she’d died and was now living in some alternate reality because the scene in front of her didn’t make sense on a logical level. It was utterly fascinating, but not something a rational person would ever expect to see.

Specifically, Iosif and an Ethereal dueling. With a mace and whatever purple weapon Aegis was using.

The Commander had a certain gift for understatement, and of course he had decided to casually reveal XCOM was working with a living Ethereal in the most off-handed and normal way possible.
The first thing had involved him calling up groups to his office, where initially he outlined what XCOM was going to be doing to counter the Battlemaster (Which she was very thankful for). And Patricia had revealed the Templar program and what that entailed.

Everything seemed normal. Until someone asked how they could possibly train for something like the Battlemaster. And of course the Commander had said that they’d be training with the Ethereal that was working with them, who by the way, was called Aegis. In hindsight, Nuan believed that the Commander was secretly enjoying springing this bombshell on them.

Needless to say, none of them were permitted to share this with anyone outside XCOM. The Intelligence Director had made the not-so-subtle threat of what would happen if anyone did. So now she was stuck with game-changing information and couldn’t do anything with it. Perhaps…perhaps it was for the best. If the Chinese Government knew that XCOM was working directly with an Ethereal…well, she honestly wasn’t sure what they could do. But with that information, they could definitely use it against XCOM by implying that they were under the influence of this alien.

Her jaw locked up at that thought. That was exactly what she didn’t want to have happen. She didn’t believe they were under the influence of this Ethereal, otherwise why would XCOM still be fighting at all? But she did agree that at least ADVENT and the governments of the world needed to know about this. Not the public, obviously, but at least the people in charge.

So she’d decided it might be informative to actually go down and see this Aegis and Templar Program. The Templars she could at least report on, though the premise was not likely to make sense to them until they knew about the Battlemaster, which apparently was also being kept quiet. Another mistake in her opinion. It was going to get out eventually, and even if the news was terrifying, it was better than learning XCOM and ADVENT had deliberately kept quiet on it.

She’d said as much to the Commander, who had shook his head and said something about “Not creating more unnecessary panic. Morale is more important than truth at this point.” She could agree with that sentiment to a degree, it was almost Chinese in reasoning, but to flat out refuse to tell other militaries? Questionable.

However, what she had learned for an hour or so of observation was how much she enjoyed watching dueling. She was still somewhat confused as to why Iosif had chosen a mace of all things, but it was definitely enjoyable to watch him duel an opponent that towered over him.

The Ethereal himself was just as fascinating. From the way those dark blue robes were positioned over his body, she would have thought it would hinder his movement. But the Ethereal was surprisingly graceful, especially for his size. The sword-like weapon in one of his hands looked like it was made out of nothing but psionic energy, but it didn’t seem to be hurting Iosif when he got hit.

It was the voice that truly caught her attention. It was rich and deep, and seemed to make the air itself vibrate around him, and had some kind of echo after each syllable spoken. If she hadn’t liked the sound of it so much, it would definitely be something she would find disturbing. Then there was the aura the Commander had warned them about. She knew it was affecting her, even if she was rather far away, but she could tell she was close enough because she didn’t feel any concern or fear.

Normally, anything alien made her nervous, so an Ethereal should dredge up some kind of suspicious emotions, but those never came until after she left. That and she would have also been concerned about people swinging dangerous weapons around with intent to hurt or kill. Iosif was
clearly not holding back, even if Aegis was. But she strangely wasn’t concerned for his own safety.

Right now the alien and Human weren’t dueling, per-se, but had been going through repetitions, apparently to help Iosif improve his ability to integrate his abilities into combat. Aegis swung his sword from multiple angles, ordering “Deflect! Deflect! Block!” And at the word “Block” Iosif would raise a hand or forearm and a psionic shield would manifest itself in front of Aegis’ phantom blade before dissipating a second later.

Aegis was deceptively fast, and he attacked from every angle she could imagine, all while yelling out commands at the same time. Sometimes he’d order two blocks in a row and then nothing but deflects for a solid two minutes. By the time the twenty-minute marker had passed, Nuan was sure that Iosif was tired from the relentless assaults and commands. And then Aegis finally attacked with a swing he was unable to block and it sent him flying nearly a dozen feet to the side.

If Nuan could feel concern right now, she would have winced. But he didn’t seem hurt, and Aegis’ weapon dissipated and he withdrew the arm into his robes. “Well done,” he said. “Rest for now before you exhaust yourself.” Then turned and walked over to where some of the other Templars were training.

Iosif groaned and picked himself up, and once he had, pulled off his helmet and trudged over to her. The only indication of his surprise at seeing her was a raised eyebrow. “Hello Nuan, like what you see?”

She nodded. “Yes, it’s rather interesting. I definitely would not have expected anything like this before coming here.”

For some reason, Iosif seemed to find her answer funny. “But really,” he continued, reaching for a water bottle. “Why did you come down here?”

“I wanted to see this Templar Program in action,” she answered. “And the Ethereal. Speaking of which…did you know about him? The whole time?”

“Aegis?” Iosif glanced back. “Yeah, for quite a while. Figured the Commander would tell all of you eventually. Trust me, I was surprised to learn it. But really, Aegis isn’t all that bad. A bit overly dramatic and everything, with that getup, but I like him. He’s been helping all the psions and I’m guessing the Commander and his council.”

That seemed…reasonable. At least to a degree. A hostile Ethereal probably wouldn’t attempt to train Human psions. “Why is he here?” She asked.

“Supposedly because he isn’t happy with how the Ethereals are handling us,” Iosif shrugged. “So his response is apparently to defect and join their greatest enemy. Got to give him credit there. Doubt that’s the whole story, but I don’t think he’s a spy or anything like that. Otherwise we’d all be dead or captured.”

Nuan nodded. “Did that hurt? When you got hit?”

“It wasn’t fun,” Iosif emphasized, leaning his mace against the wall. “But it didn’t quite hurt. I don’t really feel that anymore thanks to my modification. But Aegis has been pressing me that no matter how bad it is here, the Battlemaster is going to be much, much harder.”

Nuan motioned toward the mace. “Why that instead of a sword?”

“Well, because I wanted it and because it’s more practical,” he explained, picking it up. “A sword is probably not going to pierce or slice his armor, but a mace might be able to put a dent into it and
make it difficult for him. A good blow to his head might also disorient him. Leng was rather insistent that all of us train in some kind of blunt weapon for heavily armored enemies.” He grabbed the haft and extended it to her. “Go ahead and hold it.”

She reached out with a hand and grasped the cool haft. “I’d grab it with two hands,” Iosif advised with a grin. “It’s heavier than you think.” She took his advice and grasped it firmly with both hands, eying the flanged head of the mace, which to her eye looked almost as big as her own head. He let go and the head almost dropped to the floor immediately.

She hissed and shifted her grip and managed to lift it in what was probably a mockery of an attack stance. The damn thing was heavy. She looked up at him incredulously. “How do you swing this thing around with one hand?”

“The beauty of genetic modification,” he smiled, taking the mace back at her insistence and casually twirling it in his hand. “Enhanced strength is a useful side effect. This isn’t really a ‘standard’ mace either. It’s a bigger adaption of the German Mace, with a longer haft and bigger head. Specifically for fighting the Battlemaster. I’ve got a much smaller one for regular enemies.”

“I’d hate to get hit with that thing,” Nuan shuddered at the thought of someone being smashed with that flanged weapon. “It might be worse than a sword.”

“Depends on where you get hit,” Iosif chuckled, letting it fall to his side. “The mace will break bones and cause a lot of blunt trauma. Although with the exception of head injuries, the wounds can be treated easier should there be medics on hand. People generally don’t die from broken bones, but they do die from amputated limbs and blood loss.” He set the mace back against the wall. “However, one good blow to the head is usually enough to kill most people.”

Nuan nodded, now wanting to ask a question that had been on her mind. “Why did you never block Aegis with your weapon? It was always a psionic shield.”

“His advice,” Iosif explained. “According to him, blocking the Battlemaster with your weapon is a quick way to die unless you’re as large as him. It’s better to deflect instead of outright block, saves energy and will stop you from being driven into the ground from the force of the blade alone. Aegis hits hard, and he’s quite pointedly told me that the Battlemaster hits much harder.”

That made sense, but didn’t seem like overly good news. “Does he have any weaknesses?” She asked.

Iosif pursed his lips. “In combat? Truthfully, very few, if any at all. According to Aegis, he’s had literal centuries of training and has seen probably anything we can throw at him. Even if we manage to break his armor or pierce it, his skin is strong enough to likely stop our weapons. Not to mention that he’s a telekinetic and does use his powers in combat.”

Iosif paused thoughtfully. “Aegis thinks that we might be able to use his height against him. The bastard is twelve feet tall, that’s twice as tall as me, and several heads taller than Aegis himself. Getting in close might hinder him more, and make it difficult for him defend himself at such close range. His only true weakness is psionic attacks, but no one but Chan can really do anything about that, and Aegis said that the Battlemaster is well aware of his flaws and he doesn’t usually let actual threats live very long.”

“You’re not exactly making me feel better.” Nuan stated slowly, slowly becoming a little concerned. Well, more than usual. Apparently Aegis was far enough away that he wasn’t affecting her anymore.
“What, you prefer I lie?” He asked sarcastically, with a smile. “Yep, there’s a good chance I’ll die, but we really don’t have a choice, do we?”

Nuan shook her head. “No, I guess not.”

“Hey, don’t count any of us out yet,” he said, resting a hand on her shoulder. “I think Shen and Vahlen are making some tools to help us. And don’t forget we’re getting help from an Ethereal that specializes in protection and defense. Trust me, I don’t plan to die.”

“I don’t think any of us want to,” Nuan said quietly. “But it seems…almost impossible, honestly.”

“Then give yourself every advantage you can,” Iosif suggested. “Do what I did. Don’t want to die? Make yourself as unkillable as possible. Get yourself genetically modified. Trust me, you won’t regret it. Train in melee combat, hand to hand, any weapon you can to survive in any situation. Sticking to one weapon only won’t help you forever.”

She bit her lip. The genetic modification was admittedly something she’d been considering, but wasn’t sure if it was an appropriate step to take, especially without permission from her superiors. However, maybe if it was to increase her survivability, they might not need to—no, she was doing it again.

Just because you can do something doesn’t mean you should. Going being their back like that would be just a traitorous as lying, especially since it meant subjecting herself to foreign procedures. The problem was that those thoughts were becoming more and more common, and she was finding it harder and harder to just ignore them or dismiss them as the treason that they were.

“Nuan? You alright?”

“I-“ she quickly glanced up at a now-concerned Iosif. “Yes.”

He appraised her for a few seconds. “Remember what I said about psions knowing if someone is lying? I somehow doubt it, Nuan. You’ve been doing that a lot recently.”

“I’m fine,” she repeated, hoping that would somehow make it better. “I’ll…I’ll think about what you suggested. You’re right, we all have to minimize our chances of losing. But…” she sucked in her breath, then slumped her shoulders. “Sorry. I have to go now. I’ll talk to you later.”

He didn’t seem entirely surprised, but definitely concerned. Still, he said nothing as she made a quick and highly suspicious exit. But she knew that if she’d stayed he’d probably start asking questions and she did not feel like discussing them with someone until she sorted herself out.

But the longer it continued, the more she was wondering if she even could.

***

Warburton, Australia

From the onset, Abby could tell there was something different about the little town the Chronicler was staying in. Every single alien on the outskirts still had the illusion of guards, but they were almost as motionless as statues. It was eerie, truth be told, and Abby wasn’t sure she wanted to just walk into it, even if the Chronicler had assured her that she would be safe.

But she didn’t exactly have much of a choice. She supposed it would be pretty simple. She expose herself far enough away where she could retreat if they actually were hostile. Still, she wasn’t overly keen on the idea.
Be calm, Agent Gertrude, my soldiers will not harm you.

She almost yelped at the Chronicler’s voice suddenly appearing in her head. *Don’t do that again,* she thought furiously, in case he was listening, but at least it was clear he was here. In fact, there was a small group of aliens coming directly towards her position. A Vitakarian soldier flanked by standard Muton soldiers.

She stayed in place, figuring they had been sent by him. Sure enough they stopped about five feet from her position. The Vitakarian inclined his head towards her. “Agent Gertrude of XCOM, follow us. The Chronicler wishes to speak to you.”

She frowned at the voice, the words were delivered in a dull monotone devoid of any semblance of expression. His eyes were impossible to read, since they were a solid blue, but the Mutons were more conventional and she could swear they looked glazed over, what she might expect a sleepwalker to have or something.

Was he controlling them even now?

“Take me to him,” she nodded, and joined the group as they escorted her into the town. It was even more unnerving as she walked around the empty buildings and houses. The entire town was dead silent, even with the dozens of aliens milling around or standing guard. Many of them turned to look at her, staring as she walked with unblinking eyes.

The atmosphere of this town was almost smothering. Something seemed badly off about all of this. Mind control was one thing, she’d seen it from Patricia, but this didn’t seem to be anything like that. Not really. She didn’t know what it was, but it was something strange and disturbing. The Chronicler had some explaining to do.

The problem was that even if he did have some kind of rational explanation…she wasn’t sure she could even verify that. She wasn’t a psion, and he wasn’t an idiot. She had no doubt he would exploit that somehow, yet it did seem like he actually had done as promised.

Which made this very complicated.

The Chronicler himself was sitting on a bench in the middle of a city square, reading something on his tablet. Two Andromedons stood behind him, the behemoths silent and foreboding. He set the tablet down as she approached, and greeted her with a wide smile. “Agent Gertrude! So, what do you think?”

She hesitated slightly before answering. “What did you do to them? This doesn’t look like just mind control?”

“Oh, but it is,” he answered, clasping his hands behind his back. “What you’ve no doubt seen is Patricia temporarily take control of various aliens. She has no need to tact or subtlety, all she wants is for them to kill each other. Useful, but hardly viable beyond the short term.” He gestured to the aliens around him. “True mind control, Miss Gertrude, is more subtle. It’s more than simply forcing a message into their little minds. You have to change their way of thinking, you have to establish firm mental commands over time. You have to spend time and constantly exert your will over them.”

He inclined his head towards her. “And for most people, it takes days. But with the Ethereal Orb and my decades of experience, I know how to do it rather quickly. It’s pleasant not having to constantly babysit aliens telepathically. Now I give commands and they carry them out. Useful, wouldn’t you say?”
“That depends on how they’re used,” Abby answered, crossing her arms. “I’m impressed. You actually did what you said. And what is your next move? Continue gathering soldiers? Eventually someone is going to notice.”

“Oh, they will,” the Chronicler smiled. “But as for what I do next, that, I think, depends a great deal on you.”

Abby raised an eyebrow. “I assume this refers to me telling the Commander about you or not.”

“Correct,” he nodded. “And I have changed my mind on that to a degree. I would prefer to keep working with you, agent. However that is best accomplished by having access to XCOM resources and information, both of which you can provide me access to. Look around and tell me what you see?”

Abby looked around at the aliens in the town, of all types. “Spies.” She said with a nod. “You can use them to penetrate the defenses.”

“Clever girl,” he confirmed. “They would have to be used sparingly at first, but I have no doubt more will come eventually. I have a plan for growing my own forces, but what is important to you is what I can do with them. Intel gathering, Gateway locations, troop numbers, sabotage, assassination, poison; the list, Agent Gertrude, is limitless.”

“But you want me to help,” Abby said slowly. “What do you want from me?”

“Reveal me to the Commander as a…contact,” the Chronicler explained slowly. “Someone who’s in the cities and can cause damage. My psionics will remain a secret of course, but this way I can more effectively coordinate my efforts to help XCOM, and the Resistance here, of course. I would hate to accidentally ruin your plans.”

Abby thought for a moment. “The Commander is not going to trust you at first. And if you do cause as much damage as you claim, then he’s going to ask questions.”

“I expect he will,” he nodded. “However, that is unimportant right now. I’m not asking much here, agent, and you stand to gain a lot more if you work with me. Quite frankly, with the Battlemaster in play, you need all the help you can get.”

Abby appraised him carefully. “And how do you know about that?”

He smiled and tapped the side of his head. “The Battlemaster is well-known in the Collective army. They spread the news of his conquest quite readily. I simply observe. So what do you say, agent? Help me liberate Australia? Or potentially doom it?”

“Cute phrasing,” Abby snorted as she thought. She still didn’t trust him, not completely. Anyone who could do…this, was dangerous, and she was entirely relying on him not taking control of her here. Yet the fact that he hadn’t yet told her that he probably wasn’t going mind control her. The question is whether she could do it all without him learning of it.

But the bigger question was if she should.

He’s right. We need all the help we can get.

Objectively, there wasn’t a question of working with him. It would make their operations much easier and could actually cause a great deal of damage to the aliens. Subjectively, she wasn’t entirely sure what would happen afterwards if they won. This had the makings of a deal with the devil, and she knew there would be some cost down the line.
If we lose, it won’t matter in the end.

Another good point. Would it actually be better if they lost because she was too skeptical of a psion? Was she being unreasonable here? Patricia was trustworthy, why did she have to be the only one? The other XCOM psions were likely the same, and aside from manipulating EXALT, the Chronicler didn’t seem completely evil. If he was, he’d have likely tried to take over the world long ago.

If he was, he wouldn’t even be bothering with giving her this choice in the first place. No, she was being paranoid here and needed to do her job. The Commander would understand, and if he ever learned, she could defend it.

Abby looked at the Chronicler and gave a single nod. “I’ll take your deal. You help us liberate Australia and I’ll keep your secret. For now. Move against XCOM or ADVENT and I’ll be sure to tell him.”

“Acceptable,” the Chronicler smiled. “I’m glad we could come to this agreement. And here.” He tossed the tablet at her which she caught. “Locations of the Gateways for Sydney and a few other cities. Give it to the Commander as a token of my authenticity. Also mention I know about the Battlemaster if he questions if they are accurate. Only those inside the cities or in ADVENT or XCOM know.”

“I will,” Abby promised, lowering the tablet. “I’ll be in contact soon.”

He gave a short melodramatic bow. “I look forward to it, Agent Gertrude. I look forward to working with XCOM.”

He probably did. Abby just hoped that she was making the right decision here, but it was done. Now she had to return and sort all of this out with Zhang in the Commander.

She was sure both of them were going to be thrilled.

***

The Praesidium, Engineering Bay

Shen had announced he had made a breakthrough in the Templar weapons, so the Commander had immediately come down to see what it was. No mention of the Shinobi-class MEC, but he didn’t expect that to be completed for some time. But if Shen was already finished with the weapons, then perhaps he would get the MEC done in short order as well.

Shen was standing over by a table with several different weapons laid on it, while engineers worked around him. Lily was also by him, surprisingly enough, and visibly brightened as he walked over. “Commander!”

He gave her a smile. “Hello, Lily. Long time no see.”

“I’m glad you came so quickly,” Shen nodded, seeming much more at ease with his daughter around him. “I think Lily here wants your opinion.”

“Oh,” he raised an eyebrow. “Did she make all of these?”

Shen laughed. “Well, not exactly. However, she did draw up the designs for the weapons before you. Dimensions, styles, and she asked the soldiers of any specific additions they wanted. She’s become quite the weaponsmith recently.”
“I’ve always been,” Lily protested. “Well, medieval weapons at least.”

“Lily always had an interest in that sort of thing,” Shen explained. “Honestly I didn’t think much of it, but she sadly has more experience with melee weapon design than most people here. So I figured I’d put her work under your eye.” He paused. “Although the designs weren’t the tricky part, it was making them durable.”

“Well, now I’m curious,” the Commander said, looking towards the table of weapons. “Show me what you’ve done.”

“Get the test dummies,” Shen asked his daughter, who ran off while he turned and picked up a mace from the table. “I’ll first show off the weapons easiest to do. Maces, from what I’ve learned, only need to damage armor and only cause blunt trauma. Nothing fancy here.” He handed the flanged mace to the Commander. “Here.”

The Commander tested it, moved it around and took a few mock swings. He was completely unfamiliar with maces, but the head seemed heavy. The entire weapon appeared to be a dark steel, and nothing else. “Seems good,” he said, looking at Shen. “Alloys I presume?”

“With a MELD overlay,” Shen corrected. “The nanites were programmed to harden over it. It can be damaged, but only by our pulse weapons and plasma. We haven’t been able to break it significantly any other way. It should certainly hold up against the Battlemaster’s sword.”

“Guess we’ll find out soon,” the Commander muttered, as he saw Lily rolling over a humanoid dummy with alloy armor of some kind over it. “That for practice?” He asked.

“Yes!” Lily said with a grin. “Try it! It’s fun!”

“The armor is several centimeters thick, minimum,” Shen added as the Commander walked over to the dummy. “It should give you an idea of the damage output.”

The Commander raised the mace, which was heavier than he was used to, and brought it down on the dummy’s head with all his might. And with perhaps a little too much vigor as the ‘helmet’ completely caved in and the head was smashed into little white chunks. The Commander lifted the mace, noting that the metal was now almost stuck on the weapon. He shook it off and the remains fell to the ground.

“Perhaps I should have been gentler,” he mused, turning back to them. “Even if it won’t dent the Battlemaster’s armor, it will probably wreck anything else on the battlefield. Well done.” He looked down at Lily. “I like the design too. What did you base it off of?”

“A German Mace,” she answered proudly. “Although not as spiky as some variants. I made that one more of as a proof-of-concept, Iosif’s will be bigger.”

“Yes,” Shen chuckled. “None of the weapons are designed to the Templar specifications, those will only come after your approval. Each weapon type will be approved before being tailored. Iosif for example seemed to like it…only bigger.”

“Can’t blame him,” the Commander said. “So, what next?”

“The war hammer is essentially the same concept,” Shen said, gesturing to the double-headed hammer almost as tall as him. “Forged of alien alloys and with a hardened MELD overlay. You can test it as well, though I can guarantee you’ll receive the same result.”

“I’ll trust you on that,” the Commander dismissed with a wave. “Now, you said that was the easy
“Lily?” Shen called, and the young girl reached for what looked like a standard longsword and handed it to him. To his surprise, the blade was almost…shimmering. Blue reflections appears and vanished on the silver blade as if it was reflecting water. “I wouldn’t touch it if I were you,” Shen warned, acutely noting his interest. “The largest problem with blades weapons is that, against any sort of defenses, they will suffer damage. They chip, split, and sometimes break. None of which are optimal.”

“Agreed,” the Commander nodded absentmindedly, turning the sword around in his hand. It certainly felt sturdy enough. “How did you fix it?”

“By using computers,” Shen answered with a proud smile of his own. “Embedded in each sword is a small, simple OS that has different states. And the thing is, this sword has a MELD overlay, but unlike the war hammer and mace, the MELD nanites can be in multiple states. Right now, the current mode is repair.”

“In essence it repairs any damage to the original structure,” he continued, pointing at the blade. “The original design is programmed into their memory, so they can ‘rebuild’ it, so to speak. Although it isn’t permanent and does take nanites to accomplish. In theory you could use all the nanites and the sword would be just…well, a sword.”

“Reapplying the MELD is a simple process,” Shen reassured, adjusting his glasses. “But you should be aware there are some drawbacks here.”

The Commander lowered the weapon. “So, this has multiple states? How many more?”

“Turn the pommel,” Shen suggested. The Commander looked down at the square pommel, and noted that there was a design on each side. The one now was currently a wrench. Repair, he assumed. He turned the pommel and it locked with a click once it was even and the blade suddenly turned the same dark gray steel as the blunt weapons. The pommel logo was a shield.

“That hardens the blade to an almost indestructible degree,” Shen explained as the Commander turned the blade, marveling at how it didn’t seem any heavier. “It was the first variant we developed, since we don’t want the blades breaking under the Battlemaster’s weapon. To date there is nothing, outside of pulse and plasma weaponry, that can damage the blade. Even edge-on-edge attacks don’t weaken or chip the sword.”

“And it’s just as effective as the other weapons?” The Commander asked, turning to the dummy which still had the chest plate. He drew the weapon back and stabbed into the armor. It definitely didn’t go through without resistance, but it impaled through the dummy easily enough. If it worked this well from direct penetration attacks, then it was a success to him.

“Well done,” he complimented. “Let’s see what’s next.”

He turned the pommel and this one had a lightning bolt implant. The blade suddenly reverted to its silver color, except now little bolts of electricity lined the blade, zapping in and out of existence within milliseconds. “The ARC setting,” Lily explained with a grin. “The nanites generate little jolts of electricity with each other, multiply that by a million and you have a weapon that can short out any mechanical enemy or system.”

“In theory,” Shen amended gently. “It’s worked well on our systems so far, and it would probably be best used on Andromedons, Drones, Cyberdisks and the like. One of the weaker physical blades, but I’m positive that it would stun enemies just from a single strike. Don’t discount that.”
“Better to have more options than none,” the Commander agreed, turning the pommel for a final time. This one had a flame on it. The blade suddenly turned a blazing orange. It wasn’t quite red-hot, perhaps orange-hot, but he felt no heat coming from the blade.

“The nanites generate friction together, which makes anything they touch melt,” Shen said. “The science is…complicated, but the short version is that this will melt anything it comes in contact with. It’s proven rather effective against armor, actually. Though I don’t think it would stand up to a direct hit from the Battlemaster.”

The Commander switched the blade back to the repair setting and handed it back to Lily. “You outdid yourselves here, both of you. All I wanted was swords and you managed to turn that into a damn Swiss army knife.”

“We appreciate that, Commander,” Shen smiled. “The greatsword operates virtually the same way, just on a larger scale. We can also apply this technology to other blades, should it be required. Even katanas and scythes, should someone ever want it.”

The Commander snorted. “I doubt we’ll need scythes. But well done. Have you shown the Templars yet?”

“Not in action,” Lily answered. “But they know how it works.”

“I’d show them,” the Commander suggested. “It would definitely give them something to look forward to. And is the Shinobi proceeding well?”

“Still designing,” Shen shrugged. “But I’m close to completing it.”

“Good,” the Commander said. “I’d get to work on the swords for the Templars. The Battlemaster could strike any day, and I want people ready to respond.”

“With pleasure, Commander,” Lily beamed, apparently thrilled he was happy. Her joy was infectious, and he almost wished he could be that optimistic. But for right now, he would just enjoy the feeling, even if it was just an echo of the real thing.

***

The Praesidium, Barracks

The gathering storm had finally broken.

Jamali had been expecting it ever since the Commander had revealed that they were actually sharing a base with a damn Ethereal, and had subsequently started taking people for some new psionic program. Then there was a lot of speculation that the aliens were going to launch another offensive in America, and specifically target Las Vegas.

The aliens had finally attacked, but much later than they had anticipated and in a completely different location.

Jamali flipped his helmet in his hands and placed it on his head. France of all places. And since France wasn’t part of ADVENT, and no one had expected such a…brazen attack there, the response was almost nothing. But XCOM was on the way, as was the rest of the French Army. ADVENT would probably respond as well, but it would take hours before they arrived.

Jamali grimaced as he grabbed his pulse rifle. The French were absolutely going to get slaughtered. The tech advantage the aliens had was too large and the French would be lucky to kill a few dozen.
Unless they just used explosives.

The good news was that there had been no reports of the Battlemaster, and they would definitely know by now if he was there. Although there was warning of some new alien construct. A floating mechanical ball if the reports were to be believed. Wonderful. Despite that, the Commander wasn’t taking chances and was sending one of his Templars along with them.

Chan he was called, an offensive psion with a massive greatsword held in his hands as he took some practice swipes. Sorry, no Chan had been very specific and called it a Zweihander, as if it made a difference. It was a massive sword that looked dangerous, and clearly forged out of alien alloys and MELD.

Chan had seemed very eager to test it out. Jamali was also reassured that Patricia was going along as well. If anyone could rally the people still alive there, it was her.

“Jamali! Hurry up!” Patricia called, and he decided it was time to stop ruminating, and prepare for the battle ahead.

***

Supplementary Material

The Advent Directive

SECTION 1: Organization and Structure

Subsection 1.4: ADVENT Member Nations

Overview: Countries which comprise ADVENT are known as member nations, and are afforded representation, funding, law enforcement, and additional support to ensure that each member nation is held to the highest possible standard possible; ensuring that ADVENT is strong enough to withstand any adversary or trial.

Member nations are afforded one representative in the Congress of Nations, and said representative is decided via appointment of the Head of States of a nation. However, the Head of State may take the place of a representative in certain circumstances. All representatives at all levels are expected to be of the highest caliber of candidates, and shall not engage in criminal or treasonous activity, which if ignored, will result in prosecution by the ADVENT Peacekeepers.

Member nations will be given a standing garrison, proportional to the size and population of the nations. The same will be done of the Peacekeeping forces, and the Head of State can directly petition the Executive Branch for additional support if needed. Note that while the soldiers are stationed within the nation, they do not ultimately answer to the Head of State or their cabinet, although they will be part of the leadership. All ADVENT forces ultimately answer to the Commander of the ADVENT Military and the Peacekeepers ultimately answer to the Chief of Peacekeeper Operations.

Taxes and funding directly from the State will be negotiated at the federal level, as there are multiple different variables that must be taken into account, making standardization less effective. But it will vary depending again on the size and population of the country, but ADVENT is committed to making sure every nation succeeds and will never intentionally force poor or malicious decisions on a nation. Should that happen, those responsible will be investigated and prosecuted by the Peacekeepers.

Heads of State are allowed to pick their own cabinet, although candidates must be reviewed by
ADVENT Internal Affairs and Oversight to ensure the appointees are truly best suited for the job. This does not apply to levels lower than that of the Head of State, though those must choose from a pool of pre-approved candidates. The Head of State is also permitted to retain their previous title before joining ADVENT, or simply be referred to as the Head of State of a certain nation.

Finally, ADVENT member nations are expected to completely comply to all laws and decisions made by the Congress of Nations, Executive Branch and the Chancellor, and the Judicial Courts. Failure to abide by the laws established will lead to the removal of current leadership, and emergency elections for replacements. Treason and criminal activity will not be tolerated under ADVENT, especially not in the highest levels of government.
Skyranger, En route to Paris, France

Jamali swore he could feel how angry Patricia was.

Given her abilities, he wouldn’t be surprised at all if that was the case. But it was a foreign feeling to him. He was no stranger to anger and injustice, but he would describe his output as more…hot. Intense, but would fade after a few minutes and cooler heads prevailed. He was never a persuasive speaker, and always tried to stay out of situations that he knew would risk a confrontation.

Patricia, on the other hand, was as cold as ice. He felt the cold analytical anger affect him, simmering below the surface. Every thought was logical and emotionless, his thoughts were not fury at their actions, but how to methodically disembowel them violently and brutally. He thought he glimpsed thoughts from her own mind, visions of aliens being driven to insanity while she strode through the throng.

But the rest he had a sickening feeling were of his own design. Patricia apparently had the effect of drawing out the darkest parts of people, and he wasn’t entirely happy that there was a part of himself that was this…brutal. He knew he had the capability…but he’d never wanted to act on it. Not until now.

“We’re expecting the French army to be heavily outclassed,” Patricia finally said, her arms resting on her knees in a deceptively nonchalant manner. “The French have given us the locations of where the fighting is the heaviest. We will be deploying near the Grand Palais, and the Goliath will be dropped near the Pantheon. The UFO supposedly landed at the Eiffel Tower, so that is where we will fight towards.”

Jamali noticed the hands of the soldiers in the skyranger were clenched as Patricia’s voice became harder. “We suspect they are using Gateway Transports. Only one, it seems. We fight towards them and destroy it. We take no prisoners with the exception of the leader. Kill the rest.”

“It will be a pleasure,” Catherine nodded, clenching her rifle. Jamali wasn’t surprised she sounded even harsher than Patricia. The native Frenchwoman had a much more personal reason for being here than the rest of them, which was a stark contrast to her normally friendly persona.

“What aliens are here?” Iida asked, as calm as always

“They seem to be all Vitakarians,” Patricia answered. “Likely Runianarch or Lurainian. Early reports suggest there might be something else in the Transport, but it’s likely Outsiders.”

“Psion Trask, we are approaching the LZ,” Big Sky interjected. “It’s looking bad.”

“Copy that,” Patricia answered calmly, standing. The rest of them quickly stood with her as she walked to the end of the skyranger, the new Templar Chan at her side. The Zweihander was held in a reverse grip, the point on the ground since Chan had no sheath and space was limited. To his eye, Chan seemed rather eager to see combat.
He stood next to Fakhr, and both shared mutual nods as they mentally prepared themselves for battle. As the skyranger dipped, Jamali found himself remarkably calm and the sounds around him slowly faded into the background. They were there, but his concentration was…elsewhere.

Patricia at work, he supposed.

The skyranger ramp opened and all of them charged into the fray. It was, without a doubt, a near rout of the French forces. Human bodies in French uniforms littered the grounds and streets, burned, dismembered, and malformed by alien weapons. A few alien bodies were scattered in the streets, but the majority of the small battlefield was stained with red blood.

They had landed behind the main alien force that was advancing, and there were more coming up from the side, as the French seemed to be making a last stand in the middle of a giant intersection, hiding behind concrete barricades and what limited cover there was. Jamali instinctively fell to one knee and aimed at a Vitakarian soldier and fired. The red laser instantly slammed into its face and it fell dead.

Patricia’s body was enveloped in a shimmering, and faintly purple field of energy, and she extended her hands towards both groups of aliens, along with the snarled message. “Kill them all.”

The effects were almost instantaneous. The main group attacking the French suddenly began fighting amongst themselves, and the reinforcements suddenly fell to the ground, screaming in apparent pain. Jamali immediately moved towards the crippled reinforcements and fired short pulse laser blasts at the writhing bodies. Fakhr and Liliyane assisted him in executing the hapless aliens and after a few minutes all the bodies stopped wriggling.

Jamali turned to see how the much larger alien group was being handled, and then saw the results of giving Chan a sword. If Patricia was lightly covered by psionic energy, Chan was engulfed in purple flames. These extended to his Zweihander which was wreathed in purple energy and seemed to only be making the damage worse.

Chan cut his way through the infighting Vitakarians with an emphasis on brutality. The swipes were wide enough to cut through multiple aliens at once, and he seemed to like leaving the ones not killed instantly to bleed to death on the ground. While decapitating a Borelian with one hand, he raised the opposite one and purple energy shot out from it and ravaged a couple of Vitakarians in the faces.

The rest of the XCOM soldiers assisted in executing the wounded Vitakarians not cut up by Chan and his sword. The French had stopped firing, seemingly not wanting to risk wounding the Templar that was cutting through the alien horde, which was still being affected by Patricia, and not even able to focus on the blade-wielding soldier as he cut them to pieces.

All of them advanced through the remnants of the alien force, who were incapable of retreating. Scattered and crazed by fighting each other, it was almost too easy for Jamali to pick off strays and the rest of them performed just as well. Catherine and Blake rushed to the French line, presumably to help treat injuries, while Patricia strode up to a Vitakarian soldier who was screaming on the ground, and roughly grabbed it by the head, and stood there for a few seconds.

Once she was done, she threw the soldier down and pulled out her gauss pistol and shot her in the head. A few more minutes of slaughtering the aliens, and the battlefield was almost silent. The psionic energy around both Patricia and Chan had faded, and Jamali noted that the dark gray of Chan’s sword was smudged and black.

“I have the location where the UFO is,” Patricia stated, as she marched over to the French line.
“We fight towards it on our own. It doesn’t appear that the aliens have forces that can combat me; at least they didn’t tell the soldiers about it.”

Catherine rushed up with what appeared to be a ranking French officer who looked both parts relieved they had arrived, and terrified after seeing what eight XCOM soldiers had done. “I assume he is the ranking offer?” Patricia asked, looking to Catherine.

“Yes,” she answered. “He-“

“It doesn’t matter,” Patricia interrupted, raising a hand. “Tell him I know where the UFO is and we’re going to destroy it. Tell him to have his superiors contact ADVENT if by some miracle they haven’t. We move out once you deliver that.”

Catherine quickly translated it to the officer while Patricia turned to them. “We need to wrap this up quickly. I have a feeling this isn’t a true attack. The information I extracted from the soldier’s mind indicated they were to cause as much damage to the military as possible and leave. This is a diversion to something.”

Jamali could easily imagine the scowl under Chan’s helmet. “You get that, Commander?”

“I did,” he confirmed grimly. “However we don’t have anything else to go on yet. Everything is normal.”

“I’ll keep you appraised,” Patricia stated as Catherine jogged up to them, signaling her readiness with a nod. “We move out now. I’ll let you know before we engage, but I don’t expect these aliens will pose a challenge to me.”

And with that, they marched off, Patricia leading the charge with the Templar at her side, the blade already soaked in golden blood.

***

The Cultro

“XCOM has entered the battle,” the CODEX system informed the Battlemaster as he flew over the desert sands, a small fleet of alien transports behind him. “Lura’irinena’borelia has reported that Patricia Trask is leading the attack, and a Goliath-class MEC is also fighting against her forces. In addition, there appears to be a few types of XCOM soldier. A psion wielding a greatsword, presumably in conjunction with his abilities. More information has yet to be obtained. At this point they are quickly marching toward the Gateway Transport.”

Well, that was unexpected.

Aegis was likely behind such an idea. He was rather impressed, honestly. These new XCOM soldiers had to be a direct response to him. Pale imitations of what a Battlemaster was, for sure, but it was an attempt that he was pleased they had undertaken. Perhaps it was foolish to dismiss them immediately, but he had faced down legions of Synthesized hordes, the best militaries of far more advanced species, and even once a Director Flagship.

At best they would make his conquest here more interesting. Hopefully.

“Time to Las Vegas?” He asked the CODEX.

Her golden figure flashed briefly. “Ten minutes. Additionally, we have officially attracted the attention of ADVENT forces. Defenses are likely being raised.”
“Good,” he nodded. “Order Irinena to retreat and deploy the Gatekeeper. The Creator has assured me that it can... disrupt... telepaths. I am curious to see if that is the case. Also order her to destroy the Eiffel Tower.”

“At once, Battlemaster.” She flashed again and disappeared. A few seconds later the forms of Disciple-7 and J’Loran appeared.

“Begin your assault,” he commanded. “I am close to Las Vegas and XCOM will respond soon. Take the cities and wipe out all the soldiers. We have no need of prisoners today.”

Disciple-7, in his full armor and helmet, gave a brief nod. “At once, Battlemaster. Portland will fall today.”

“As will Seattle,” J’Loran added. “Burn Las Vegas to the ground. J’Loran out.”

The two forms vanished and the CODEX figure appeared once more in front of him. “Initial scans of the city do not reveal any trace of nuclear weaponry or activity. However, there are large amounts of high-explosive materials laced throughout the city and perimeter. In addition, there appear to be a minimum of fifty thousand soldiers heavily entrenched in the city. I have also detected multiple mechanical manned and unmanned platforms. Aircraft is limited, but air support is likely.”

Good, the Humans had actually prepared for a fight, and he was curious to see what, if anything, they had learned from their first engagement with him. Many of his soldiers would likely die today, but he certainly would not. Overall, it was on the surface looking to be invigorating if nothing else.

Two armies facing each other in battle. It had been too long since he had participated in such, and hopefully XCOM didn’t disappoint him when they finally appeared.

A low growl reached his ears and he glanced down at the tiger Quisilia had gifted him with, now very much improved. Farath, he’d decided to call him, since Quisilia insisted he needed to name it. The Battlemaster had grudgingly accepted that maybe the animal wouldn’t be as useless as he feared, now that Fectorian had turned it into a cybernetic terror, and it was admittedly nice to have a somewhat loyal companion that didn’t need much.

Of course the creature had tried to attack him several times, to no effect of course, but it had eventually been broken in and was a rather efficient killer, and Fекторian had made sure that the creature was conditioned to never attack again, and had included specific code phrases he could use if he absolutely needed to take direct control. Although Fectorian wasn’t sure that would be necessary, since he did note that this creature was fairly intelligent.

Intimidating was the word the Battlemaster would have personally chosen, given the modifications. He wasn’t sure of the exact procedures Fectorian had used, but he was aware that specific implants had been inserted into various sections of the tiger’s body, which allowed heavy armor to be attached and removed at will. The armor itself covered the entire body and legs, while leaving the pads of the feet and tail untouched.

It was a sleek black, and the armor was configured in such a way that allowed a full range of motion, and the Battlemaster knew Fectorian had also cybernetically enhanced the bones and joints to allow it to carry the additional weight, and replaced elements like the teeth and claws with alloy alternatives which would allow penetration of ADVENT soldier armor.

Needless to say, the Battlemaster had been pleased with the result, and for the most part, Farath acted the same aside from not attacking him randomly. Which he appreciated. But today would be
the first real test, both for the animal and Fectorian’s work, since the engineer had himself declared it an experiment.

The Battlemaster rested an armored hand on Farath’s head, as they waited to reach their location. The CODEX appeared once more. “We are outside the city perimeter. Landing now and sending orders to remaining transports. Authorization?”

“Granted.” The Battlemaster declared with a nod.

The CODEX vanished and the Cultro dipped and within half a minute, had come to a stop and the Battlemaster felt it rest on the ground. The metal panel over the exit slid up and the multicolored barrier dissipated and the Battlemaster felt a rush of hot air enter the Overseer. Gripping his sword, he marched out into the desert with the shining city in the distance, his feline warrior at his side.

In the distance, he spotted the ADVENT encampments. In sight of them, he raised his sword in a salute, thousands of alien soldiers behind him disembarking. The Cultro rose and flew up into the air. The Battlemaster lowered his sword and spoke into his link with the CODEX. “Begin the transmission.”

***

The Praesidium, Mission Control

So he’d been right in suspecting that the Paris attack wasn’t what it seemed.

The Battlemaster wasn’t an idiot. He knew there was no way to hold a city like Paris without an actual army, and while the French were horribly outmatched, ADVENT was marching to the city and XCOM was already there and annihilating their forces. It seemed to be going exceptionally, which made him immediately suspicious.

Which was why he and Jackson had decided to prepare two additional squads and had sent them off to the Citadel if the Battlemaster decided to attack in America again. The worst that would happen is that nothing happened and this was just a poor tactical decision by the Battlemaster. But if the Battlemaster did attack, XCOM could be the difference between victory or defeat.

Jackson echoed his thoughts. “I’m glad we sent the skyrangers.”

The Commander only nodded as the hologlobe lit up with reports of the cities coming under attack. Seattle and Portland again, and Las Vegas as the Battlemaster had warned. The good news was that every city was prepared for an attack and wouldn’t fall easily, especially with XCOM support. However, they had only two skyranger teams, and there were three cities.

So choices had to be made. Seattle would get support, since the city was heavily contested, and the video on the screen now playing confirmed that Las Vegas would be receiving the second squad. The video had suddenly begun streaming on every social media and video streaming service minutes ago, and it was providing a bird’s eye view of the ADVENT defenders, and the aliens marching on their position.

Lead by the Battlemaster.

The Templars were going to get a trial by fire today. There were standing orders to retreat if too many died, but the Commander wondered if even the Templars would last that long, given how quickly the Battlemaster could kill his enemies. But it shouldn’t be a slaughter like San Francisco.

Hopefully.
ADVENT was already mobilizing the Air Force to bomb the alien armies to dust, with plans and contingencies that had been developed being put into motion. Even if it was futile, there were plans to deal with the Battlemaster, even if the usefulness of them was questionable. But it wasn’t as though there was a choice.

Commander Christiaens was also in constant communication with Zhang in the Situation Room, which he would be heading to in a few minutes, and no doubt the Chancellor was being appraised of the situation. He pursed his lips. Win or lose, this was going to likely have a net loss for ADVENT in terms of support and morale. Full-scale attacks on major cities in such a short time would be difficult for civilians to endure without some kind of damage.

No question about it now. If Seattle fell, Canada would have to give up their morally superior attitude and play ball with ADVENT. The United States could not be lost, and there needed to be significant steps taken to prevent that. Hopefully the Prime Minister would understand that, though given how Saudia described him, that didn’t seem likely.

Damn civilians.

If he thought Saudia was being unfair in their meeting, he was really not going to like her when she was angry. Unlikely most people in power, Saudia was not hesitant to make extremely controversial decisions. And if he made himself her enemy, his days in power were numbered.

That was a worst-case scenario though. Portland could probably be held, even without XCOM support. Seattle might be able to be as well, depending on the enemy composition and force size. Las Vegas was unlikely at best, now that the Battlemaster was in play with an entire army. But if the majority of the army could be killed, that was as close to a victory as they could get.

Jackson nodded at a voice coming in through her headset. “Dodger and Marlin Teams are approaching the cities. We should move to the Situation Room.”

“Agreed,” the Commander nodded as he turned to leave Mission Control. “Have Zhang prepare the armor cams and holotable. And keep that video running in the background. If the Battlemaster wants to give us more information, we’ll take it.”

Jackson conveyed his instructions, a hand on her headset earpiece, as they made their way to the Situation Room.

***

Las Vegas, United States of America

The Battlemaster was immediately besieged by thousands of gauss bullets and tank rounds flying at him. All of them bounced off his armor or missed him entirely. The majority of the forces behind him were Andromedons, and behind those were Muto Grenadiers and Runianarch Demolitionists.

He had come to destroy the city, and that was what he was going to do.

ADVENT was formed up in defensive lines of a dozen soldiers behind a chest-high black barricade, and those were scattered along the perimeter of the city. Tanks were behind those, and they were firing fairly rapidly, not always at him, but assuredly at the army at his back. No point in wasting time.

The Battlemaster leapt up into the air, picked a front-line group of soldiers, and charged, psionic energy flowing off of him and an armored hand tightened into a fist. It landed in the chest of an
ADVENT soldier, caving in her armor and he decapitated two more with a single swipe. He immediately transitioned into several quick slices that dismembered several more ADVENT soldiers.

“Blow it!” Someone screamed.

The Battlemaster knew instantly that he needed to get out of the immediate vicinity and quickly dashed backwards as the barricade itself exploded with several bright explosions, killing one of the remaining soldiers, and throwing the survivors to the ground, shrapnel riddling their armor. With a flourish of his blade, the Battlemaster turned his attention to the next group, who was now focusing on him.

Well, they were learning at least.

The Officers were shouting orders and frantically reorganizing soldiers in the back rows, but he decided to deal with that later. He dashed towards the second group, performed several quick slices and dashed away, leaving several dismembered corpses in his wake. A few seconds later he charged forward again, grabbed the heads of two soldiers with free hands and smashed their skulls into the barricade with enough force to preemptively set off the explosives which he immediately dashed away from, though feeling the rush of heat and wind in his wake.

He was suddenly throw back several feet from a tank blast, and he quickly spun to face the threat from the back. ADVENT Rocketeers were also firing grenade launchers towards him, and instead of dashing out of the way, he raised a hand and telekinetically caught the explosives in the air, and sent them back at their source with a flick of his hand.

He ignored the screams and explosions as he surveyed the new battlefield. His army was close enough now that they were beginning to exchange plasma fire with the ADVENT gauss weapons. Lances of green were striking dozens of soldiers every second, and even when the Andromedon line was damaged, they were simply phased out and replaced by a healthy soldiers while the Battlefield Engineers fixed the others.

The Runianarch and Muto soldiers were far behind the line, and were firing their own explosives up in the air, lighting up multiple ADVENT positions and blowing up valuable vehicles and barricades. “Light them up!” One officer screamed right before his life ended with a stab to the face.

The ground was suddenly rocked as the desert behind him exploded. Nearly half of the front-line Andromedon force was on the ground, helmets broken and armor sparking. Most of the Andromedons hit were clearly dead, and there were at minimum several hundred Mutons and Vitakara who had also perished.

Restraint. Impressive.

ADVENT was smart enough to know that explosives would probably not hurt him, so they hadn’t wasted them on him, and instead waited for the army to step over them and then detonate. He’d best be careful if he didn’t want to lose too many more soldiers. He was already underestimating their forces, best not to do it anymore.

Disruption in the back lines was needed, and so he charged towards the tank line which immediately began trying to maneuver away from him, to no avail. With one palm turned over, he telekinetically lifted one tank into the air, and threw it towards an ADVENT barricade which exploded in a shower of fire and metal.
He dashed toward another ADVENT line, grabbed one of the Rocketeers and threw her at another tank and she hit with enough force to explode, destroying the main barrel and rendering it inoperable. He then methodically made his way through the line of tanks, cutting off the barrels or damaging the tanks in other ways, stabbing in vital areas or reducing mobility.

He’d been sure to study the schematics after San Francisco.

Farath was also proving rather effective against the ADVENT soldiers, with bullets washing off his battle armor like water, and he seemed to be enjoying ripping the throats out of various ADVENT soldiers, while the others either tried to frantically retreat or fire at the armored feline. The cat was also smart enough to at least try to dodge explosives, although the armor was certainly dented and scorched, indicating that he had taken a few explosive hits.

“**Battlemaster, ADVENT aircraft approaching. Fighter and bomber class,**” The CODEX informed him through their link.

Would they risk airstrikes so close to friendly forces? Probably not a good idea to find out. “Request a squadron of Sectoid Fighters,” he ordered as he stabbed a Gunner through the chest. “All forces, charge the ADVENT line!”

A roar overhead caught his attention and he saw a squad of ADVENT fighters shoot overhead, missiles releasing and speeding towards his approaching army. Most of them took out multiple Andromedons, though thankfully mostly the damaged ones that were shambling forward, driven on only by their AI systems.

Still, they were already swooping around for another round. The Battlemaster gripped his blade tightly in his hands as he cut through another line of ADVENT soldiers, his blade now crimson and splattered with stained sand. He’d made a mistake disregarding the air force they had, seeing as how they hadn’t used it well initially. A mistake he would not repeat after this.

ADVENT also appeared to be retreating into the city, and he noted it was towards the apparently famous Las Vegas Strip, the heart of the city. It was clearly a strategic retreat, since it couldn’t yet be said they had lost enough to warrant a full one. Another aircraft roared overhead, this one the distinctive shape of a bomber.

The Battlemaster watched as a hatch opened on the belly of it, and dozens of small bombs fell out, and a bright line of explosions followed, one that killed hundreds more instantly and wounded even more from the shrapnel. More fatally damaged Andromedons rose from the sands, like metallic zombies as they resumed attacking retreating ADVENT forces further into the city.

“**Air support has arrived,**” the CODEX informed him as a dozen Sectoid crafts suddenly sped overhead and began engaging the ADVENT forces, but the Battlemaster saw more of the Human fighters flying in. It was going to result in a victory, but it would likely be a more costly one than he was anticipating.

He dashed towards various stragglers, executing them with single strokes of his sword, and the army behind him was now at his side, far smaller than before. From a simple visual standpoint, he had lost at least a third of his forces, even if the casualties ADVENT had suffered were equal or greater. But now they had the advantage, and destruction was the goal.

“Begin razing the city,” the Battlemaster ordered the demolitionists and grenadiers as he slowly advanced forward, crimson cape flapping in the wind. “ADVENT will be dealt with.”

The ground began shaking as pristine, expensive buildings and hotels began being bombarded with
plasma explosives, and Contamination Operatives poisoned the areas around the buildings, which would render them uninhabitable for decades.

And the army behind him marched forward, unrelenting in their quest for victory, led by the invincible Ethereal who was now only waiting for the inevitable challenge by XCOM.

***

Paris, France

“They’re falling back,” Jamali noted as he saw the Vitakara retreating through the streets, those that were either ignored or out of the range of Patricia’s mind control. “Why?”

“I would guess they don’t have a special counter to psions,” Iida said as she shot a Vitakarian in the leg, and then finished him off with a bolt to the head. “But I don’t like it either.”

“We’re getting close,” Patricia interrupted, as the Eiffel Tower loomed close by in the distance. “Six Dath’Haram are about to ambush you, Chan. Should I intervene?”

The Templar was finishing off a Borelian, stabbing it through the heart, psionic energy rolling off the blade. “Only if they fight you,” he stated as he pulled the blade from the body and turned to face the new threats as they leapt down from the buildings. These were the green-skinned Vitakara, Dath’Haram, covered in dark green clothing interspersed with silver armor coverings on the chest, arms and legs.

In their hands they held blades of their own, straight ones with no hilt. Almost medieval like were it not for the ornate handles and that the blades had been clearly covered in some kind of red fluid. Right now Jamali couldn’t tell if it was some kind of poison or blood, but it was apparent that these aliens knew how to use them.

Two of them scored hits on the back of Chan, though those bounced off the armor, and he retaliated by blasting one of them in the face with psionic energy from the raised hand, and began fighting off the other three with his blade. The Dath’Haram quickly realized that they faced the problem of their blades being too weak to stand up for long.

Perhaps if Chan’s blade wasn’t awash in purple flame, they could have prolonged the duel, but as it stood, each clash was visibly weakening the temperament of the metal. There were gouges and scorch marks on the metal after each blade met with Chan’s Zweihander. From what he could tell, they appeared to be mostly assassin weapons, not supposed to be used for any real dueling. They seemed too thin and short to be of any real use.

Two of them made the mistake of trying to attack Patricia who simply gestured at them, and they fell to the ground, writhing and screaming in the high-pitched alien wails. Jamali and Fakhr executed both of them with quick shots to the head. The remaining Dath’Haram were certainly trying to kill Chan, but it was simply not going to happen.

With a wide swing, Chan cut through both the blade the alien was using, and subsequently, his head. The momentum of the swing carried over to the next alien who got out of the way, but not fast enough before Chan raised his right hand and the Dath’Haram was suddenly engulfed by purple energy. The last alien he finished off with a quick stab to the heart after shattering the blade of the Dath’Haram with a strike of his sword.

All the aliens dead, they proceeded towards the location of the UFO, and finally came out into the area of the Eiffel Tower, the Gateway Transport landed right in front of it. And guarding it were at
least several hundred Vitakara of various types. All of whom were shouting and pointing at the new arrivals.

“Cover!” Patricia shouted as their area was swarmed with plasma weapons fire within seconds. Jamali slid into a small concrete column, and most of the other soldiers followed suit. He heard Catherine scream as several plasma bolts hit her in the armor, and the small gap in her shoulder. Not fatal, but she was clearly in pain as she pulled herself to a short concrete block.

“I’m fine!” She wheezed as she calmly pulled out her med-kit and began spraying the sizzling wounds. Jamali did actually believe her. If there was anyone who could say that after being shot, it would be a medic.

Patricia was once more distorted from drawing upon psionic energy of her own. “Give me a second,” she advised as she stood. “There are more here than I thought. I want to try something.”

Plasma bolts flying all around her, she extended a hand towards the mass of barricaded and entrenched aliens, and as the bolts became ever more accurate, she closed a fist and Jamali could almost swear he heard a deafening snap echo across the entire area. He glanced over to see Liliyane shake her head, and Fakhr and Blade exchange looks of confusion. Iida inhaled sharply and the purple energy enshrining Chan flickered and he stiffened like a statue.

Everything went silent for one brief, small, second.

Then madness broke out.

Jamali watched in fascinated horror as the once united aliens suddenly turned into shrieking crazed maniacs. Some of them still continued to attack XCOM, but the shots were wild and didn’t even seem close to intentional. No, they were focused on attacking each other. But this clearly wasn’t the same as Patricia directing them to turn on themselves. She appeared to have quite literally driven them insane.

Liliyane turned to glance at Patricia who now slowly lowered her arm, and quickly looked away. “Shit.”

“They’ll be occupied and should pose little threat,” Patricia stated calmly as she motioned them to move towards the UFO. “Catherine, how are your wounds.”

“Fine,” she grunted, walking noticeably stiffer, even if her rifle was at the ready. “Won’t be as fast as normal, but I’ll live.”

“Acceptable,” Patricia nodded, as she gestured as Vitakara in their way collapsed onto the ground, and the soldiers only spending brief seconds shooting them in the heads. Jamali almost considered it a mercy at this point. “I’d prefer we take the Gateway intact, but if need be, we destroy it. Expect Outsiders.”

“I’m curious how they’ll stand up to this,” Chan commented as he stabbed downwards on a neutralized Borelian. “Psionic-“ He stiffened, and fell to one knee. Patricia’s also calm walk turned to a shuffle and she rested a hand on her helmet.

“Patricia?” Iida demanded, moving forward to grab an arm to steady her, while Jamali grabbed the opposite one. “What’s wrong?”

“Look!” Fakhr shouted, raising her rifle. Out of the UFO came four massive Outsiders, and in the center was a… floating ball?
That’s what it seemed to be, anyway. A perfect white sphere with a glowing orange ‘eye’ in the middle. The ground under it was slightly distorted from the propulsion systems likely installed, but it didn’t appear to be anything more than that. It moved effortlessly through the air, oddly graceful as it swooped to a stop and appeared to notice them.

“What the hell?” Chan gasped, grunting and grasping the Zweihander with two hands. “What’s wrong with that thing? Patricia, can you feel it?”

Patricia had stabilized, and was, for the first time, reaching for her heavy autorifle. “I can feel it,” she said, her voice still slightly distorted. “It’s interfering with my psionics. I think it’s overwhelming me by psionically projecting its state over the entire area.”

Jamali froze. “That thing is psionic?”

“I think so,” Patricia said slowly as the odd alien squad began moving towards them. “And it’s screaming.”

***

Las Vegas, United States of America

Even with three Templars in the squad, Nuan did not have a good feeling about this mission. As far as she could tell, the squad had been designed specifically to counter the Battlemaster, and besides the three Templars, Iosif, Karen and Carmelita, there were the two snipers, Cassandra and Esinam, and two infantry for dealing with the other aliens, Antoni and Aya.

And herself, who would have the distinct pleasure of testing out some of the new grenade types, and the effectiveness of them against the Battlemaster. There was some kind of irony that despite her efforts at trying to stay alive, she was getting thrown into against perhaps the most dangerous being in the galaxy.

Armed with grenades.

Which she would normally consider fairly reliable, had she forgotten that the Battlemaster was a telekinetic and could turn them away with a gesture. She supposed that was what the Templars were here for: to distract him from the other XCOM squad members.

“What is the status on the advance?” Karen asked, one of her short swords resting idly in her hand, a cold dark steel. They were unlike any that Nuan had seen before, shorter than most swords, and they lacked a guard of any kind. Probably made it easier for Karen to telekinetically throw them.

“ADVENT is fighting back, but they’ve pushed their way a quarter down the Strip and are expanding outward,” Iosif answered grimly, the head of his mace resting on the ground. “They are also destroying everything in their way. The Battlemaster is at the front as expected.”

“So what do you want us to do?” Cassandra asked, her sniper rifle resting against her knees, nodding towards Esinam beside her. “Target the Battlemaster as well or assist ADVENT?”

“Assist ADVENT at the beginning,” Iosif ordered. “We need to halt their advance, and the three of us can deal with the Battlemaster. Nuan, Antoni, and Aya, the three of you stay back and hold the line against the aliens, Nuan, if you see an opportunity, use your grenades.”

Nuan swallowed and nodded. “Yes, Overseer.”

“I am best able to face the Battlemaster one-on-one,” Iosif continued, raising a palm and a small
purple shield manifested before them as he made his point. “I can take hits even if I’ll try to avoid
them. Karen, you’ll try and keep him in place with your weapons and telekinesis and Carmelita…”
he glanced over at the final Templar as if not sure what to do. “Hit his flanks when he is distracted.
I’ve seen you kill pretty much anything at close range, so see if you can add an Ethereal to your
list.”

Nuan had been uneasy around the woman for a while now, ever since their first heated exchange.
She had looked downright nice compared to the armored terror before Nuan now. Her armor was
night black, with the small visor in her helmet a pale white. Several high-explosive grenades were
strapped to her waist, and on her back was her alloy cannon and in her hands was an actual flail of
all weapons, which Nuan didn’t entirely understand.

Combined with her Iron Skin and Stinger modification, she was walking death for anything close
to her.

But still, a flail?

“Heads up,” Burning Sky informed them as the skyranger suddenly dipped. “We’re coming in hot.
Can’t stay long on the ground, explosions are everywhere. There’s a massive dogfight above as
well. Guess ADVENT remembered they have planes.”

The lights flashed to a solid red and Iosif stood, and they all prepared to disembark. Nuan was
beside Karen, who pulled out her second sword and held it in a reverse grip. The skyranger
shuddered, and the sounds of screaming, gauss weapons and plasma suddenly became audible. One
hand gripping his mace, Iosif raised the free one and a shimmering purple barrier appeared in front
of them.

“Advance!” He ordered as the ramp opened up and they charged out into the streets.

“Moving to higher ground!” Esinam called, speaking for the first time as he and Cassandra ran
towards opposite buildings to establish their positions.

“Copy!” Iosif acknowledged as ADVENT realized that XCOM was here. There were some audible
cheers, quickly drowned out by the constant barrage of explosions in the distance. Nuan almost
stumbled from the shockwaves in the ground every few seconds as she took in the scene before
her.

She had never been to Vegas, and only knew it by reputation. It was never a place she ever wanted
to visit, but she had to admit it was a beautiful city, if drowning in excess at times. And it said
something that even in the midst of a battle, it still retained some of its magnificence. But only
where the aliens hadn’t touched it yet.

What ADVENT controlled was simply marred, broken windows and scorched walls disturbed the
hotels and casinos around them. There was even a small amusement park, she noticed. But in the
distance, the aliens were leaving nothing behind.

Every building that wasn’t blown apart and collapsed was on fire, and that fire was spreading. She
winced as a hotel in the distance collapsed, shaking the ground in a deafening crash. The massive
black pyramid structure she’d seen pictures of was completely ruined, a smoking and deformed
structure of black metal and glass.

And the aliens themselves were still advancing, and she got her first glimpse of the Battlemaster.
He towered over even the Andromedons behind him, and somehow seemed even taller in person.
His charging ability was just as terrifying, as he seemed to move between doomed groups to
soldiers within seconds. She gripped her weapon tighter as she saw him kill an Officer and three other soldiers within five seconds with a few swipes of the massive bloody sword he held in his hands.

“Let’s get started,” she heard Carmelita mutter as she reached for her alloy cannon. “Engage, Overseer?”

“Let me get his attention first,” Iosif ordered, stopping in the middle of the street, the psionic barrier protecting the ADVENT line on the Strip and the soldiers beside him. The Battlemaster had definitely noticed now, and was just standing there, waiting. “Get into cover,” he ordered the non-Templars while Karen and Carmelita flanked him. “Don’t engage unless you have an opportunity.”

Nuan nodded and dashed behind an ADVENT barricade, and Antoni and Aya did the same, roughly spread out across the ADVENT line. Iosif let the shield drop when they were in position and twirled his mace in a flourish, until the head was pointed at the opposite army. “Battlemaster!”

The massive Ethereal glanced behind him and raised a free fist and the Andromedons stopped advancing, though still continued firing. Nuan thought she saw one of them give a slight nod, and almost immediately a few Battlefield Engineers began rushing forward, carrying those shield generators she knew had been used in Japan.

The gap between the alien and ADVENT line was still large, the entire width of the Strip and at least twenty meters between the armies. The Battlemaster clearly wanted some room to properly duel the Templars. The armored Ethereal took a forward stance, his own weapon raised in a salute. “Come, XCOM, show me what Aegis has taught you.”

Iosif gestured, and the Templars beside him immediately sprang into action. Karen nodded towards Nuan who pulled out a smoke grenade and tossed it to her, who telekinetically caught it and then blasted the grenade towards the Battlemaster, who just stood calmly by as the smoke engulfed him as Carmelita leapt towards him, firing her alloy cannon already.

Iosif’s entire body was covered in a personal psionic shield as he sprinted forward, gesturing towards Carmelita as the Battlemaster made his first move, and sliced at her. His blade was stopped cold by the small purple square that appeared in front of it, and he responded by extending a lower hand and Carmelita was suddenly blasted against a concrete wall form a telekinetic throw.

He immediately turned his attention towards Iosif who was preparing a first rapid strike, likely on one of the legs since the Battlemaster towered over him. The Battlemaster responded by performing a deceptively fast slash against him and Iosif barely managed to turn the blade upwards, deflecting it towards the sky.

Karen had gone around the other side of the Battlemaster, and now her swords were somehow covered in electricity, sparking with blue discharges and she telekinetically tossed one towards the Battlemaster which naturally deflected away, but it did seem to have briefly startled him as he spun to her position, of which she had already moved away from.

In the meantime, ADVENT and the aliens were still exchanging fire, less so than before for fear of hitting the ones in the middle. The Andromedons were establishing a red shield that provided ample cover, while allowing them to shoot back. Nuan saw that ADVENT was immediately rotating out the regular infantry, and replacing them with Grenadiers and Rocketeers.

She nodded in approval, she couldn’t be too distracted by the fight taking place in front of her.

Iosif was keeping the Battlemaster busy, always attempting to strike wherever he could, and always
blocked or dodged by the Battlemaster who still seemed content to not use his charge abilities, or any more telekinesis beyond the blast against Carmelita.

That worried her.

Carmelita herself was doing exactly what she was ordered, flanking the Battlemaster when he was focused on Iosif and Karen. She now had her flail in hand and was continually attempting quick strikes with it when she tried quick leap-by-attacks. She scored several hits, but only on the heavily armored back, and as far as Nuan could tell, she was doing no damage whatsoever.

Karen was still trying her tactic of throwing her electrified blades, but it was clear the Battlemaster was getting close to ignoring her. While not even looking at her, he raised a free hand while attempting a downward strike at Iosif and telekinetically caught the sword in mid-air, then sent it back slow enough to clearly mock her.

Carmelita tried another leaping flank attack and this time with lightning speed the Battlemaster thrust out with free hands at Iosif and Karen, the former of whom managed to resist the blast, but was briefly stunned, and sending the latter several feet back until she telekinetically stabilized herself. Immediately after that he spun and caught Carmelita in the air, and charged, reappearing a short distance away with Carmelita slammed into a nearby building, cracking it where she’d impacted.

The Battlemaster must have charged again, as he appeared once more in the center of the street, two of the three Templars briefly incapacitated and a low rumble reached her ears through the exchanged fire between the armies.

Laughter. The Ethereal was laughing.

Dread threatened to take over as the Battlemaster almost mockingly walked towards Iosif who prepared once more to defend as Carmelita shakily rose and Karen was clearly trying to figure out how to be effective.

This, Nuan concluded, was not going well.

***

Seattle, United States of America

“Deploy!” Creed ordered and all of them charged out into a battlefield that was far larger than any Oliver had ever seen before. Entire buildings had been leveled in the constant siege between alien and ADVENT forces, and the other side had the oppressive barrier of Andromedon energy shields protecting them.

There were small windows where the Andromedons and other aliens were fighting through, but there was a clear advantage towards the aliens, even if ADVENT had established an equally long black metal barricade, and was also using the buildings still standing as bases and establishments. It was a black metal wall manned by men and women constantly.

The no-man’s land in the center was nothing but charred and destroyed rubble and concrete. Rotting corpses of alien and human bodies were laid in the center, no side willing to attempt to recover their dead in the face of gauss and plasma fire. But now the aliens were launching a full attack again and ADVENT was just as willing to defend.

“I’m getting into position!” Lesedi called and she immediately jumped onto the nearby wall of a building and began climbing up. Oliver would have found it strange at any other time, but he didn’t
care as plasma fire was uncomfortably close by. The ADVENT soldiers and Officers made room for all of them as they charged up to the barricade, and Oliver got a good look at the actual situation.

The Andromedon line behind the shield was interspersed with Muton soldiers, and he could unfortunately see there were a lot of them. Although it was worse since hovering above the shield were deployed Cyberdisks, raining blazing projectiles down upon them. Above the sky there were full dogfights in motion as ADVENT jets shot at UFO fighters, although the UFOs seemed to currently have the upper hand.

“Strategy?” Oliver called to Creed, who was beginning to fire at one of the Andromedons with his pulse rifle.

“Take down the shield,” Creed stated, as their Rocketeer, Nio, took aim at the one of the shield projectors. “Gloria, prepare to barrage the line.”

“Copy,” Gloria Page, one of the new MEC pilots answered. “Establishing position.”

Oliver glanced back at the massive machine as she planted the feet of her Ballista-Class MEC in the ground, and raised her arms, and the rocket launchers on her shoulders began to prime in preparation for the order. Creed nodded toward Matthew. “Take it out.”

“With pleasure,” Matthew stated, a smile clear in his voice. “Allison, some protection?”

“On it,” Allison nodded, and extended her hand, psionic energy manifesting around it. Matthew was then encased in a shimmering psionic shield and stepped out onto the battlefield. He immediately attracted attention, and was immediately shot at by Cyberdisk rounds and plasma bolts, the latter of which were simply absorbed by the shield, and the former he telekinetically stopped in the air.

He extended a hand towards one of the Cyberdisks, as if grabbing it. The metal around the machine groaned and sparked, and Oliver watched in fascination as it was slowly crumpled into a ball of fluid and metal. He threw his arm to the ground, and the wreck was thrown into the bottom of the shield generators, and the entire area around the generator flickered momentarily.

“Lesedi! Jose! Nio! Fire!” Creed commanded. Nio and Jose fired his rocket at the weakened area and Lesedi began taking shots at the Battlefield Engineers that were coming to assist, driving them back momentarily as the rocket destroyed another shield generator, and then an entire section was suddenly offline.

Matthew extended his hands to another Cyberdisk and repeated the procedure, and another section of the shield was collapsed. “Barrage their position!” Creed ordered as the now-exposed aliens began scrambling back. The ground was wracked with tremors and booms filled the air as Gloria unloaded her arsenal on the exposed aliens.

Oliver felt some measure of satisfaction as he watched the missiles rain down upon the Mutons and Andromedons, most of them destroyed beyond repair or recovery. Then the aliens appeared to switch tactics entirely. All of the nearby Cyberdisks retracted into disks and flew behind enemy lines.

“How many?” Matthew demanded, as he lifted massive concrete chunks and tossed them at the
enemy line.

“At least twenty Elites,” Lesedi answered, another Muton falling from one of her shots. “Shit. Ten Berserkers at least. We might have made a mistake bringing that shield down. They definitely know we’re here.”

“We can handle that,” Allison said, still focusing on protecting Matthew. “But the Berserkers need to be stopped. I can’t maintain this while moving.”

“Ready barrage and rockets again,” Creed instructed, as he looked around at the ADVENT soldiers. “We’ve got Berserkers incoming! Prepare to fire on incoming on my command! Officers, ready your soldiers.”

“Will do, sir!” One of the Officers stated, tapping a button on her wrist. “Going to inform the Corporal Williams about the situation.”

“Do that,” Creed said, as he forced an Andromedon back from concentrate fire. “Also say that we’d appreciate an air strike here at some point.”

“I wouldn’t expect that anytime soon,” Shun growled as she tossed a grenade towards a pair of Mutons. “They seem pretty well occupied.”

As she said that, a UFO shot overhead, pursued by two ADVENT fighters. Another one in the distance was shot down by a UFO and crashed into an abandoned building. Oliver had to agree that the ADVENT Air Force likely had more pressing concerns, and with two psions, they could probably control the situation.

Then again, the last time they’d also had two psions and he remembered how that had gone.

A roar in the distance indicated the Berserkers were charging. “I’m going to freeze them when they get into position,” Matthew yelled, crossing his arms to help focus his power. “Don’t waste the shot!”

“Incoming,” Lesedi stated calmly. “Probably ten seconds.”

Creed raised a hand. “Be ready!”

Oliver immediately focused in on the massive Mutons the moment their silver helmets entered his sights. “Sighted!” The pack of Berserkers roared at the sight of the taunting psion in the wasteland, and began charging.

“And…stop!” Matthew yelled, extending his hands and the foremost Berserkers suddenly froze, faint psionic energy binding them. The ones behind them slammed into the trapped brutes, and Creed lowered his arm.

“Fire!”

At least a few dozen rockets, and another barrage from Gloria was rained down upon the trapped horde. That was not counting the hundreds of gauss rounds and laser pulse streams added to the slaughter. The entire small area was annihilated with multiple orange and fiery explosions, and when the smoke and shrapnel cleared, all the Mutons were clearly dead.

Shun whooped and Matthew lowered his arms, seemingly exhausted from the display. The ADVENT soldiers also cheered, although it was cut short by Lesedi. “Elites incoming, Matthew, you should probably get back and rest some. You can’t keep that up forever.”
“Fine, a short break,” he relented and began to slowly retreat when he was suddenly yanked backwards, a seeker materializing around him.

“Fucking machine!” He growled, squeezing a fist and the head of the Seeker crumpled, and fell off of him.

“Ah!” Shun and Allison shouted simultaneously as Seekers materialized behind them, and then around multiple Officers.

“Duck!” Creed yelled at him, and he threw himself to the ground and Creed shot right above him, and another Seeker wreck fell to the ground. The rest of them were trying to quickly shoot the ones holding Shun and Allison. The one behind Allison suddenly crumpled from a telekinetic grab as Matthew came stumbling back.

Nio shot the one above Shun and it collapsed to the ground after about a few seconds of sustained fire. She fell to her knees and tore off her helmet and immediately began vomiting up whatever that black poison was that the Seekers used. Allison fortunately seemed to not have been affected, likely protected by her psionics.

“There’s two of the things on me!” Lesedi yelled frantically from the roof of the building, obviously choking. “I can’t-“

She gurgled and cut off. “We need to help her!” Oliver demanded, looking up frantically where she was, even knowing that there was no way they could get up there in time.

“We need to help the living!” Matthew yelled back, as there were still multiple Officers being strangled by the Seekers, all up and down the line. The good news was that they were so isolated from the main force that they were killed before too many Officers choked to death, but the bad was that during that time, the aliens had taken full advantage of the confusion and moved forward.

As the last Seeker was destroyed, Oliver turned to see a line of towering Muton Elites in the distance, their plasma cannons firing massive bolts of plasma in their direction, and quickly advancing, more Mutons behind them, and in the distance were the roars of more Berserkers.

Swallowing, Oliver reloaded and prepared to face down the oncoming Muton horde.

Everything had gone wrong very fast.

And he knew it was likely going to get worse.

***

Las Vegas, United States of America

The Battlemaster was sufficiently pleased with XCOM’s attempts at fighting him. By themselves they were woefully inadequate, but together they were managing to force him to pay attention, even if they had yet to land a significant blow. They were an adequate challenge, which was admittedly more than he had expected given that this had to have been a recent development.

These particular XCOM soldiers would likely be rather devastating on his own army, but not even remotely close to the skill of a Battlemaster. He was pleasantly surprised with their weapon choices as well, it showed they had at least put some thought into how to realistically take him down, even if in practice it didn’t work nearly as well.
The one with the mace, Iosif, who he recalled from the intelligence gathered, was clearly the smartest one. He knew his limits and only played to his strengths and successfully demanded attention, and was skilled enough to deflect his strikes instead of meeting them head-on. The rare times the Battlemaster scored a direct hit, it had been blocked or negated with psionic shields.

He was decent, but not a particularly good duelist and didn’t have the appropriate speed to respond to his faster ripostes.

The telekinetic soldier was utterly useless, and outside of the gimmick of her electrified swords, posed no threat to him that he had seen. The trick had initially been welcome, but she hadn’t figured out the current needed to be sustained if it was to have any effect. Simply throwing her weapons at him would do next to nothing as they couldn’t pierce his armor.

So it amused him to continually return her weapons, knowing that she would only get more frustrated. She also had refrained from directly using her telekinesis directly on him, perhaps out of fear of provoking him to do the same. Commendable, since he would feel obligated to respond in kind, even if it was as weak as the rest of her fighting style.

The other one had been a mild surprise, and highly amusing. Carmelita was nothing more than a rage-driven berserker with a shotgun and ridiculous melee weapon. It could clearly hit fairly hard, but she was so predictable it was almost tiring. She was one of those fighters that only relied on strength and invincibility over strategy, and thus fell into traps and make mistakes rational fighters didn’t make.

She was tough though, he could respect that.

He felt one of them behind him and kicked out and hit air. He transitioned into a spin-slash downwards and barely missed Carmelita, who had dodged out the way, firing her ineffective alloy cannon as she retreated. The telekinetic woman had apparently decided she was tired trying ineffective strategies and had both her weapons in her hand, now glowing a bright orange.

Well, this should be interesting.

He swung towards Iosif who was too slow to get out of the way, but a psionic shield before his raised forearm stopped the blade in its tracks, although it was clearly draining. The telekinetic jumped forward, trying to slash at his leg. Because he was curious what would happen, he let her, though positioned his hand above her as her blades connected.

To his surprise, they sizzled on the armor on his thigh, and he actually noted they had left visible marks.

A problem then.

He reached down, grabbed the woman by her helmet and threw her into a nearby wall and immediately turned to deflect a blow from Iosif. With a free hand, he telekinetically grabbed the swords from the woman’s hand and threw them far behind the alien line. With any luck he would find them later and learn how exactly they were strong enough to even scratch his armor.

He felt Carmelita behind him and stuck out his arm, nailing her in the chest and sending her falling to the ground. He was rather tired of her now, so he spun around and angled his blade to stab into her body, and aimed right for her throat, it suddenly was halted a foot from Carmelita, and a yell of anger caught his attention and he turned to see the telekinetic with her hands extended to him, or rather, his sword.
Carmelita scrambled away and he turned to face the now-furious psion, the energy rippling off her. “You’re fast,” he said, inclining his head. “But I intended to kill her. Someone else must die in her place.”

He charged toward the ADVENT line, appeared in front of one of the XCOM soldiers, one he had no name for. All of them shouted and stumbled back, and he telekinetically grabbed one of the XCOM soldiers and forced him onto the blade, which stuck through his neck. The blade went through the gap smoothly, and with the body still on it, he slammed the point onto the ground, pinning the XCOM soldier to the ground.

The Battlemaster smoothly drew the blade from his neck and charged back towards the melee only to be stopped in his tracks by the telekinetic psion. He felt the energy covering his entire body, the bonds preventing it from moving. Or at least, trying to. It was no stasis field which was both easier to maintain and actually froze a target in place.

But it was enough for Iosif finally score a hit directly on his knee. The metal was slightly dented as a result, but it would take at least a dozen volleys before it did any possible damage. He contemplated letting her exhaust herself on this false imprisonment, but seeing as though Carmelita was also taking advantage and striking on the opposite knee, he figured it was best not to take chances.

He focused on the point where the telekinetic was, and squeezed. The effect was immediate and she fell to the ground, gasping as he cut off her air supply and circulation throughout her body. The instant he was free, he released her and slashed towards Iosif, scoring an actual hit and sending him flying backwards, a large gash in his armor.

He transitioned to a slash against Carmelita, but she had wisely gotten out of his way, and had returned to firing her alloy cannon at him. He heard a clicking sound and looked down to see a small canister at his feet which didn’t explode but released a white gas into the air. Curious-Ah, he knew what it was.

He charged out of the way just in time as a laser from the XCOM line shot towards the gas and hit it. The instant the laser hit, the cloud turned into an inferno and burned out a second later. He glanced towards the XCOM line where one of the soldiers was probably preparing another one. Clever. Although it likely wouldn’t have hurt him even if he’d been in the center of the inferno.

His legs were suddenly rooted to the ground and he saw the telekinetic woman yet again trying to pin him, several more grenades floating above another hand. She thrust it forward and he raised a hand to ‘catch’ them-

And they exploded, but not in shrapnel or fire. But black sticky fluid coated his arm and managed to reach his helmet. The black goo coated his eyepieces, unfortunately rendering him effectively blind.

That was new. He knew what it was. XCOM had dubbed them ‘symbiote grenades’. Used for incapacitation and a rather ingenious application of the green sap the Sectoids used in constructing the Civilian Pacifiers. Charging was risky since he couldn’t see, but he could still feel the Humans around him, and he charged approximately halfway towards where the ADVENT line was and briefly assessed the damage.

His one hand was completely covered in the black substance and he couldn’t move it at all. It was rubbery, and not completely unpleasant. But certainly immobilizing. He still had three other arms, but the front of his helmet was covered by the substance. He felt the soldiers converging on him again, and he quickly tested peeling the substance away, but to no avail. Perhaps if he had time.
But right now, he did not.

He smiled. Fighting blind was something he had not done in decades. All Battlemasters trained at one time or another, but it was seen as unnecessary and impractical. It was more for sport than a serious tactic.

But this was sport, was it not?

But the telekinetic woman had earned her death. He had considered capturing her for Revelean, but she had turned this into an interesting fight. She deserved a warrior’s death, not whatever the geneticist had planned. After all, there was still another psion he could capture.

He closed his eyes, reverting to his habits and focusing on his senses. He tuned the sounds of the still-raging battle around him out, and only focused on the three presences. One focused and determined – Iosif, likely. One victory and triumph – likely the telekinetic. One rage and hate – Carmelita.

In his mind he visualized the battlefield, with the XCOM soldiers as ghostly purple apparitions, and put their presences to the apparitions, and the sounds around them. Swishes of air and grunts of exertion. All allowing milliseconds of time to react.

But he was a Battlemaster. There was no question of if he could do it.

And so he charged forward toward the apparition of Iosif who moved back and the Battlemaster felt his blade meet nothing, which was a psionic shield. He felt Carmelita behind him, and spun to catch her, his fingers outstretched to catch where he presumed her position was, and was rewarded with grabbing her by the arm, and he threw her towards Iosif who probably caught her, he couldn’t exactly say.

He then charged toward the telekinetic, fully intending to kill her, but in a more respectable way. He slashed towards where her legs would probably be, he felt her rise slightly – jumping – and quickly transitioned to an overhead chop with blinding speed. A scream that echoed with psionic distortion sounded, and he realized that his blade was actually stuck in her body.

He heard her yell in pain, and the Battlemaster used the noise to pinpoint her exact location as he pried the blade from her body. The so-called Iron Skin modification. Strong, but not strong enough to resist his weapon. Focusing on her sounds of pain, he gripped his sword with two hands and swung towards where her head would be.

He felt resistance, but it was a clean cut.

The sounds stopped.

Her presence vanished.

He turned to the other two psions, their presences now tinged with panic and fear. They had indeed fought as well as could be expected. Perhaps he would kill them all anyway. It wasn’t as though he was never going to get another chance.

With the firefight still raging around him, the Battlemaster raised his sword in a final salute to them. The dance was coming to a close, and he was curious to see if there were any other tricks they had.

Then again…
He glanced toward where the other humans were, feeling their fear and terror at the sight of a blinded alien still handily beating their best soldiers.

Perhaps he should make a short diversion. Kill the rest of the XCOM soldiers first. Then the psions.

He gripped his weapon, smiled, and charged the line of Humans.

***

Paris, France

“Down!” Jamali yelled as the eye of the alien machine glowed brightly and a massive beam shot out of it, luckily missing all of them and slamming into a building behind them, leaving the wall cracked. The Outsiders were taking cover, as a good portion of the squad had Pulse weapons, the bane of the crystalline aliens.

Chan raised his hand, and shot purple energy towards the machine which whirred and floated behind the Outsiders, who began firing on the Templar. “Fakhr, can you blow them up?” Patricia demanded, as she began firing at one of the Outsiders shooting behind a concrete column.

“Give me a moment!” She yelled back as she pulled the rocket launcher from her shoulder and began loading the rocket inside. Jamali noticed the floating ball was moving back their way, the eye glowing again.

“It’s firing again!” Liliyane called while she ducked and the orange lance shot where her position had been. She responded by shooting her Pulse rifle at the floating ball, and scored a hit on the hull. Unfortunately, it didn’t seem to be having much of an effect, only seeming to scorch the armor.

Patricia managed to shatter one of the Outsiders into orange shards as he attempted rushing to a closer position. Iida and Catherine were pinning another one down, and Jamali, Blade and Chan were focusing on the other two. They were getting shots of their own off, and many of them were frighteningly close.

“Rocket ready!” Fakhr announced. “Target?”

“Shoot the machine!” Patricia called, seeming to improvise, as it just was floating there, and the eye was glowing a brighter orange as it probably was preparing to fire again. “Chan! Close range! Everyone else cover!”

“Copy!” They all shouted and Chan grasped his Zweihander and began charging one of the Outsiders while Jamali and the rest of them laid down dozens of gauss shots and laser bursts on the remaining Outsiders. Fakhr shot the rocket towards the ball and it just managed to float out of the way, but not before the rocket hit close by, and the shrapnel and fire actually seemed to penetrate it.

“Ah!” Patricia groaned, pausing her fire as she shook her head, perhaps in response to the pain of the floating ball? Was it actually alive then?

Chan was upon one of the Outsiders and slashed down at the alien. It raised a crystalline arm to block it, and did so, though the blade cut deep as it burned with purple energy. With the blade stuck midway down the arm, Chan took one of his hands off the grip to place a hand flaming with more purple fire onto the Outsider, and within seconds of his hand touching the alien, it was slowly engulfed in psionic energy and disintegrated as all Outsiders did in death.
Iida and Blade took the opportunity to charge forward to both flank the remaining Outsiders, and the floating alien. Fakhr was loading another rocket into her launcher, and Liliyane suddenly cried out as a plasma bolt from one of the Outsiders hit her directly in the shoulder, forcing her back down into cover.

At the same time, the floating alien suddenly began changing. Jamali watched in fascinated horror as the panels around the upper half of the eye suddenly retracted revealing a sickening...thing housed within. Literal tentacles wreathed in psionic energy emerged from the shell, four of them, all attached to a rolling and shifting mass that emitted the same purple aura.

The ball of flesh in the cell was utterly and completely unnatural, even by Jamali’s ever-changing standards. It wasn’t static, but was rolling and inverting, twisting into vaguely spherical shapes. He couldn’t tell if the flesh was naturally pink, or if it was simply an illusion from the psionic energy distorting it.

“What the fuck?!” Blake spat as he began focusing on the tentacle alien.

“What the fuck?!” Patricia shouted, focusing her weapon on the monstrosity. “Scatter!”

The thing began manipulating it’s tentacles around the air, and a purple sphere began converging in the center. It thrust it forward, sending the ball in their direction. Jamali leapt out of the way, and managed to get out of the small blast radius where it hit. But he saw the effects. The bodies caught in the blast suddenly turned black and disintegrated within seconds, and even Liliyane and Catherine who were on the edge of the radius had entire chunks of their armor just disintegrated off, and their entire suit was black and scorched.

“Damn that hurts!” Catherine cursed, as she frantically pulled out her med-kit. “Lily! Get over here!”

“Preparing rocket!” Fakhr yelled, aiming at the tentacle alien. “Firing!”

Her rocket sped towards the creature, but it simply shifted to the side and the rocket crashed nearby, managing to hit one of the Outsiders, but nothing close to where the rocket was intended. Jamali risked standing, taking a few precious seconds to aim at the mass of flesh, and fired.

The burning red lance was true and hit the rolling flesh dead center, and it swiftly turned to him. After three seconds of sustained fire, he ceased and looked at the damage he had caused. Only he saw that the effect had been almost nothing. The charred flesh and even the hole he had burned were already healing and within a few seconds, it was almost as though there had never been a wound at all.

It suddenly floated forward with surprising speed, and stopped right in front of Iida who began stumbling back in surprise, firing her weapon at the tentacled monstrosity in front of her. The thing lashed out with one of its tentacles, wrapping it around her leg, and another wrapped it around her arm and hoisted her up into the air.

“Shoot it now!” Jamali called frantically, but the alien was healing too fast for their shots to be of any use. Iida screamed as she was thrown into the rolling mass of flesh by the tentacles. Jamali could only watch in horror as the flesh enveloped her body, slowly consuming her and presumably dissolving her body within.

The tentacles suddenly withdrew into the shell, and the coverings slid over the flesh-brain, completely protecting it from harm. “Readying rocket,” Fakhr called. “Last one.”
The lone bit of good news he could see was that Chan had killed the last Outsider and was moving towards the alien...thing. The eye of the alien began heating up, but Chan struck it from behind, scoring what seemed to be a deep hit. It spun around, and seeing it was facing an enemy at close range, retracted it’s armor and the tentacles emerged again.

But Chan fortunately seemed to know what he was doing. When one tentacle lashed around his leg, he sliced down and the alien recoiled as he sliced the tentacle clean off. He severed another one with an uppercut. Yet even that didn’t seem to only be a temporary solution, as the alien was simply sticking the tentacle stump back into the mass of flesh, and it was emerging with a completely new tentacle.

Chan couldn’t keep it up forever, but he seemed to be wanting it to end. With that enemy the only one remaining, the surviving XCOM soldiers were circling around it, trying to shoot the mass of flesh encased within the shell, hoping that massive damage to it might manage to kill it. But at this point Jamali suspected that the only thing that would kill it is if the entire flesh-brain was destroyed at once.

Chan suddenly adjusted something on his sword, and the blade suddenly turned a white-hot orange, glowing bright as psionic flames wreathed around it. Grasping it with both hands, he plunged it directly into the eye of the alien horror, pushing it deeper and deeper, slowly as the creature seemed to go into some kind of shock, vibrating and flinging its tentacles in the air.

Patricia also shuddered and fell to one knee, clearly affected by whatever psionic thing that was being sent out by the alien. Chan shouted as well, but continued to push the sword further in until it was up to the hilt. “Firing!” Fakhr shouted, and the rocket sped towards the alien mass and hit the back of the shell.

The explosion of purple and orange threw Chan backwards and the shell suddenly fell to the ground. Jamali quickly assessed the damage as soon as the fumes cleared. All that remained in the shell was some purple goop and bits of flesh, though who’s it was he couldn’t tell. The entire front of Chan’s armor had been torn to shreds, and his helmet had open gashes, yet he stood. Shaky, but alive.

“What the actual fuck was that?” He sputtered, exhaustion tinged his voice, as he slumped.

“You sit the hell down,” Catherine demanded as she pulled out her med-kit. “We’ll deal with that later. You’re exhausted and you’re not killing yourself today.”

“Fine, doc,” he sighed, collapsing to the ground. “Lost my sword the first battle. Was hoping it would last a little longer.”

“I’d say it was a fair sacrifice,” Patricia commented, walking up. “That thing pretty much negated my telepathy. I don’t know how that...thing...did it, but I really hope there aren’t that many more of those things.” She motioned toward the UFO. “We’ve still got a mission here. Come on, let’s go secure the Gateway. But I think the hard part is done. I don’t sense anything more inside.”

Jamali sincerely hoped that was true.

He never wanted to experience anything like that again.

***

Seattle, United States of America

“I’m hit!” Jose yelled as a large bolt of plasma hit him square in the chest, the brunt of it luckily
absorbed, but leaving a small black crater in its wake, a danger that was becoming more and more prominent as the Elites continued pouring through the hole in the barrier and taking positions behind the rubble.

Oliver had heard the stories about how just six Elites and an Ethereal had nearly destroyed New York and fighting them now, he could easily see why. The hulking red-armored aliens with their ornate triangular masks would just. Not. Die.

He saw them shrug off *missile* attacks from Jose and Nio, if they even did cause any damage. But their skin beneath the armor seemed incredibly tough, and he was pretty sure they had been genetically modified to be able to heal wounds extremely quickly. The massive plasma cannons they wielded were powerful enough to kill any soldier in a few shots, and to make matters worse, they were beginning to be interspersed with ordinary Muton soldiers.

The smaller Mutons fortunately died much easier, although they were on the whole remarkably tough. But the problem was that they were in danger of losing the line, and as more Elites poured through, they were beginning to advance forward, and not even the two psions would be enough to turn the tide.

The air battle above had turned into essentially a victory for the aliens, as the UFOs now far outnumbered the ADVENT aircraft still in operation. Andromedon soldiers were also beginning to come through the gap, and were tactically disabling certain parts of the shield to allow their forces to advance. Normally that would be a bloodbath, but with the Elites leading the charge, it was giving them a fighting chance.

“Firing barrage,” Gloria informed, and raised the arms of her MEC and fired a trio of missiles directly at one of the Elites, all of which impacted on the upper chest and helmet. Large gaps of the armor fell off and Oliver and Shun fired at the openings, and the combined power managed to bring the behemoth to the ground with a thud.

One down, thirty to go?

It wasn’t the first Elite that had died, but they were few and far between. A roar from the back of the alien line sounded, and Oliver felt his heart drop even further. The Berserkers were back, and this time there wasn’t a coordinated missile strike to stop them. “Berserkers incoming!” Creed echoed, as he killed several more Muton soldiers.

Oliver quickly scanned the battlefield, trying to see how much they could realistically hold. The alien forces were roughly two-thirds through the rubble graveyard, and even though ADVENT was continuously rushing their forces to the defense, it was becoming overwhelming even for them. Soldiers died, were pulled away, and replaced, but now they were falling behind, and dozens of corpses now littered the area around him, along with the smell of ozone and burnt flesh.

If things didn’t improve soon, they would have to pull back.

Allison was selectively using her psionic shields, creating smaller and personal ones around wounded soldiers, those actually firing and also directly in front to alien weapons to temporarily negate the threat. The woman was distorted through her purple veil, but he could tell she was beginning to tire from the constant usage of her powers with no break.

Matthew was similarly weakened, and used his abilities with no wasted breath or finesse. Squeezed fists resulted in Muton heads imploding, and Elite armor crumpling. He alone had been responsible for the deaths of three Elites so far, and the rest of his energy was spent reshaping the battlefield, removing the cover the aliens hid behind, and throwing the concrete at more aliens, or against their
The Berserkers leapt forward as Oliver executed yet another Muton soldier, and immediately charged forward, wrist blades at the ready. They fortunately weren’t as armored as the Elites, or as large, but that was a small comfort since they still towered over all of the soldiers. “Target the Berserkers!” Creed yelled, and the hail of laser and gauss fire turned to the charging aliens.

Two immediately succumbed to the combined fire, and Matthew yelled as psionic energy convulsed around him, and two of the Berserkers were lifted into the air, and their armor visibly crushed as he threw them into the aliens at the back. Several Berserkers slammed directly into, or tripped over small psionic barriers manifested by Allison.

One was blown apart by rockets, but several managed to leap over the line, and immediately began wreaking havoc on the ill-prepared soldiers. Two ADVENT soldiers were thrown back by one punch from a Berserker, and Nio yelled as another one grabbed him and began beating him into the ground. Oliver frantically fired at the head of the beast, and managed to pierce it after a few volleys and lucky shots.

The Berserker collapsed to the ground, Nio still in its hand, limbs at contorted and unnatural angles and lying still. He was clearly dead. Another Berserker roared as its arms were literally ripped off by Matthew’s telekinesis, and the psion seemed to be growing surprisingly more powerful as things got worse. Creed, Shun, and the combined fire of ADVENT managed to take down the remaining Berserker, but during that entire time, the situation had worsened.

The Elites were almost upon them, and the Cyberdisks had nearly surrounded them as they had been focused on the Berserkers. They had been saved for just that moment, it seemed, when the majority of their tools were spent. Creed noticed too, and knew what had to be done. “Retreat! Allison, shield!”

“On it!” She responded, and raised her hands, the largest psionic shield he had seen from her yet appeared above them, blocking the Cyberdisk fire. The Officers were also yelling to their soldiers to fall back, and into their wrists as they communicated orders from their superiors. Matthew roared, and clenched a fist and six Cyberdisks promptly collapsed into wrecks, the entirety of the force that had been flanking them from above.

And he promptly collapsed.

“Grab him!” Creed ordered Oliver, and Allison readjusted her shield to face the Elites and Muton soldiers. “Lightning Sky, we need an evac now!”

“Oh approach,” was the response. “Stand by.”

Oliver hauled Matthew over his shoulder, grunting at the weight. It seemed that Matthew had not been getting stronger, but had simply expended everything he had left. Luckily, it seemed that might save them since they now didn’t have to worry about getting shot from above. The Mutons were now past the line, and one of the Officers waved back some of the still-retreating soldiers. “Stand clear!”

Oliver realized he was holding a detonator, and once his thumb hit the trigger, the first two buildings near the ADVENT line shuddered and suddenly collapsed from planted explosives inside. The rubble fell onto the Mutons, burying them if not killing them outright. “That’ll buy us some time,” the Officer said grimly. “But I don’t think we can hold the city.”

“Not in this condition,” Creed nodded, as the skyranger swooped down. “We’ve lost too many
people now.”

Having now participated in two losing battles, Oliver was not exactly feeling elated as he saw the skyranger land. The aliens seemed unstoppable when they put thought into it, and as shown, overwhelming numbers would kill the defenses even if the aliens weren’t as smart.

He could only hope the other battles were going somewhat better.

Although with the Battlemaster in one of them, he had a sinking feeling that wasn’t the case.

***

_Las Vegas, United States of America_

Nuan would have been awestruck that the reports and even footage of the Battlemaster in combat was somehow _understating_ what it was actually like to physically be around him.

If she hadn’t been completely terrified.

She had felt a faint glimmer of hope after Karen had blinded him with the symbiote grenades, but that had been quickly dispelled when he had proceeded to continue fighting _blind_. His subsequent execution of Karen had been excruciating to watch, and Nuan really felt the screaming urge to throw down her weapon and run.

But she didn’t.

She couldn’t leave everyone else to die to this thing.

Even as it butchered everyone around her.

Despite how it seemed on the surface to not be effecting him, Nuan somehow noted that the Battlemaster _was_ hindered by his blindness. His strikes were broader, not as precise. He amputated limbs off of soldiers when she could tell he had been going for kills. Right now he was hacking the soldiers around him into pieces, all grace and precision gone in favor of death.

Iosif and Carmelita were coming back to assist, but the Battlemaster had already killed half of the ADVENT forces around her. Aya was stumbling back, firing her pulse rifle as she tried to get out of the range of his swings, but she was suddenly picked up telekinetically, and a swing by the Battlemaster decapitated her without a sound.

Carmelita tried once more firing several rounds from her alloy cannon, which Nuan knew _had_ to be running low on ammo, but to the _exact same fucking effect_. Nuan felt an unreasonable anger at Carmelita’s so-called ‘tactics’. It _clearly wasn’t working_. Yet the idiot woman kept doing it over and over again expecting different results.

_Idiot!_

Iosif was trying to attract the Battlemaster’s attention again, actually using his brain, by attacking the flank of the towering alien. A low rumble emanated from the alien as he gestured and both Carmelita and Iosif were sent flying back, although Iosif managed to anchor himself to the ground after being pushed a few meters back.

The Battlemaster was now looking towards her side of the street, she swallowed and he suddenly performed his fake teleportation trick and appeared _right beside her_. She bit her tongue to keep from screaming as he slashed the soldiers around him, men and woman crying out in pain around
She stumbled back and tossed one of her flame primer grenades at his armored feet, refraining from firing until she was well out of range. And then the Battlemaster looked at her, the helmet encased in the black substance only adding to his terrifying visage. A second later the sword was coming towards her and she leapt to the side and felt the blade whistle horrifyingly past her face and she fell onto her back, thinking how lucky she was that she hadn’t been hit.

Until the pain hit her and she realized that he had hit her. Her arms felt as though they were on fire, and she tried to push herself up to get away, when the extent of her injuries became apparent.

She had no arms.

Panic enveloped her as her vision swam as the pain strangely dulled at the realization that two of his limbs didn’t exist anymore. She could feel the blood running out of the stumps, her life literally draining away as the sounds of the world faded to a mix of screams, gauss blasts and explosions.

She didn’t want to die like this, but she was too weak to fight anymore, too weak to even do more than look around. The sky was irritatingly bright blue and cheerful, almost as if there was no war going on.

Nuan wished with what she presumed was her final moments that the rest of them would leave now. Iosif, Cassandra, that other sniper, even that idiot Carmelita. They couldn’t win. Not against that thing.

Her vision flickered, and she noted with some dull interest that she felt herself behind lifted up by the shoulders and dragged…somewhere. Voices above her talked, but she couldn’t understand them. Were they even friends? Something was sprayed onto the stumps of her arms, blessedly hot and cold at the same time.

What an idiotic last thought to have.

And Nuan finally fell unconscious.

***

Supplementary Material

The Advent Directive

SECTION 8: ADVENT Military

Subsection 8.3: Soldier Qualifications

Overview: The ADVENT Military expects the best from its soldiers and that extends from the newly enlisted to the ranking officers themselves. There are standards that ADVENT will adhere to, thus ensuring that those enlisting are of the highest caliber to face the multiple challenges ADVENT will face from a military and diplomatic perspective.

The ADVENT Military must be more than a sword of the Executive Branch, only used as a blunt tool to destroy or negate opposition, but as a scalpel with the knowledge that a military response is not the only one, and exercise restraint when utilizing the ADVENT Military. However, when the time to deploy comes, each ADVENT soldier must follow their orders completely, and execute their enemies without mercy.
There can be no compromise against the enemies of ADVENT, except complete and utter surrender of the enemy. Those serving must be prepared to perform these acts and understand what joining ADVENT truly entails.

There are two points of entry: Enlisted and Officer, both with the potential for promotion.

The ADVENT Military does not discriminate based on age or gender. All positions are open to male and female soldiers, provided that they meet the minimum requirements.

**Educational Requirements:**

Enlisted: High School Degree – Lower education levels not accepted.

Officer: 4-Year College Degree Minimum – Lower education levels not accepted

**Physical Requirements:**

For both Officer and Enlisted: Must pass a physical fitness test which consists of the following:

- Pull-Ups: Minimum Requirement: 10
- Crunches: Minimum Requirement: 75
- 3-Mile Run: Minimum Requirement: 28:00 Minutes

Must not be missing one or more limbs, or have approved prosthetic replacements

Must not be suffering from any terminal or debilitating disease or illness.

**Personal Requirements:**

Minimum Age: 18 (17 with parental permission)

Must have a clean criminal record (Only exceptions can be made for misdemeanors)

Must not be affiliated with any known political or religious extremist groups (List is publically available)

Must be a legal citizen of ADVENT. Illegal applicants will be arrested and prosecuted.

**Psychological Requirements:**

Must not have a documented record of deception, bullying, or disruptive behavior.

Must not be under any medication that severely alters mental conditions.

Must not be suffering from one or more mental illnesses or social impairments.

Must participate in a Standard Psychological Examination (SPM) to establish psychological state:

- Those with pacifistic tendencies, or inclinations towards non-violent behavior in the face of danger will be dismissed. Alternate employment within various ADVENT agencies may be recommended instead.
- Those with sociopathic, psychopathic, or similar inclinations towards the taking of life to the extent that they pose a threat to combat and military security will be dismissed. Profiles fitting this description will be forwarded to ADVENT Intelligence or XCOM for possible
recruitment.

- Those who do not fall into either extreme will pass, though some may require monitoring for a period of 1 to 5 years.

Chapter End Notes

So, it's that time of year again where the college semester is starting. Like usual I'll post my standard disclaimer that college comes first and will take priority over writing. That being said, historically, there hasn't been a major change in updates, but if there is, that is the reason. What is going to stop writing briefly is the XCOM 2 expansion dropping next week. That'll be where my free time is spent until I beat it. I'm hoping to get another chapter in the pipeline before then, so you should hopefully not experience a drastic delay. No promises though, it's going to be an (obviously) big one.

And another thank you to everyone reading and/or giving feedback. This would not be nearly as good without you.

- Xabiar
The Praesidium, Situation Room

There was very little good news in the wake of the battles.

Patricia had returned to the Praesidium with her squad mostly intact, in addition to a UFO Transport and Gateway. That, and they managed to kill one of the little surprises the Battlemaster had left, which had apparently almost killed the entire squad. Even with the ease of which Patricia had disposed of the majority of the alien forces, the victory felt hollow since it had, in retrospect, not been anything more than a diversion.

Seattle was essentially lost, even though they had extracted a heavy toll from the alien forces, but destroyed most of the city in the process. The casualty list was massive, including several veteran XCOM soldiers, and it would have been far higher if he hadn’t insisted Saudia have the military prepare contingency plans in case of being overrun.

And that was the problem. No matter how skilled they were, no matter how intricate and detailed their plans were, none of that mattered when they could eventually just be overrun with sheer numbers. It was a stark reality he had…not ignored, not entirely, but certainly pushed to the back of his mind; reduced its importance; pretty much whatever to ignore the fact that no matter what, they would probably die from nothing more than being outnumbered.

Psionics did somewhat even the playing field, but not when there were clearly ways to counter it, and the enemy had psions of their own.

Aegis had given him the numbers before, and it put into perspective the…futility…of this war, even if everything somehow went right. Every single individual species’ army outnumbered the combined military might of every single human military, even with the increased numbers from recruitment. The Muton species alone was half the size of the Human race, and Aegis hadn’t clarified if that was for the entire species, or only combat-ready soldiers.

Humans were too easy to kill.

It was just that simple.

It wasn’t that the other species were innately superior to Humans. The battles had shown that. With the exception of the Ethereals, each species had shown that they could, in general, be overcome by Human weapons and tactics. Some easier than others, but it wasn’t hopeless. The issue was that there were just more of them than Humanity could ever hope to match in a reasonable amount of time.

Portland had, amazingly, been held, but it was another hollow victory because while ADVENT had managed to hold off the Muton army, they hadn’t been able to exact nearly enough enemy casualties to make a noticeable impact, and once whatever alien commander had realized that the best he could do was overrun with superior numbers, he had instead sabotaged the city outside the zones of control ADVENT held.
Electricity, water; all of that had been severed or sabotaged and immediately afterwards the alien army had retreated, content to force them to leave of their own volition, while keeping heavy watch on any efforts of ADVENT to repair it. Supply lines were being attacked, and planes shot down. The position was untenable, that much was clear, and it would only be a matter of time before ADVENT had to abandon it.

Vegas was little more than shiny rubble now, as the Battlemaster had made good on his promise to destroy the city. ADVENT had helped to an extent, strategically collapsing buildings onto hordes of aliens, similar to Seattle. The majority of the defenders were dead, and only around twenty thousand had managed to retreat safely.

They had admittedly killed at least three times their number of aliens, which would have been an acceptable loss had numbers actually meant anything to them. It didn’t matter how many Mutons, Vitakara, or Andromedons died, they were all ultimately replaceable and for every one that was killed, all it did was delay the inevitable a little longer.

Then there was the Battlemaster himself, and he was one of the only ones whose death would actually have an impact. The problem was that the very idea of managing to kill the Battlemaster seemed laughable. True, the Templars had only had mere weeks of training, yet the Battlemaster had disabled them with ease, going so far as to fight them while blinded.

Debriefing Iosif and Carmelita had been unpleasant from what they’d described to him. It had looked that way from the footage of the battle, but both Iosif and Carmelita were convinced that if the Battlemaster had really wanted to, he could have killed them within minutes. The only reason he seemed to keep them alive for so long was because he appeared to want practice.

**Practice.**

The Commander stared at the footage playing in front of him on the holotable. The same footage of the Battlemaster played over and over, from every perspective he could find. What was he hoping to find here? Weaknesses, tactics, anything that gave a sliver of hope that he could be beaten. And he could be, the Commander was certain of that. Everything had a weakness, some kind of vulnerability.

So he believed, but the more he learned, the more he was wondering if the Battlemaster was the rare exception to the rule. Aegis had given details on the Battlemaster a while ago and had noted much the same thing.

His armor was nigh-impenetrable, and Aegis suspected that only the same type of metal might be able to be strong enough to penetrate it, or defend against his sword. The only glimmer of optimism he could glean from this was that Shen’s swords, set to the high-friction setting, seemed to actually do more than just glance off the armor, but actually cut it in a minuscule way.

The Battlemaster had seemed to think the same thing, judging by how quickly he took Karen’s swords out of the picture.

So one possible weakness. Two if he counted offensive psionic powers. Chan might actually be able to cause of damage. Annette as well, had she still been alive. But that highlighted another problem: The Battlemaster didn’t tolerate threats. The instant it seemed like his life was in danger he stopped playing and removed the threat.

Karen’s swords had caused damage. Literally seconds later he had them telekinetically thrown far away. If a soldier posed something more than being irritating, he would just kill them outright. The Commander didn’t know if Karen had been a victim of this, or she was just unlucky and the first
one the Battlemaster had chosen to kill. But he was certain that if a psion like Chan was in play, the Battlemaster wouldn’t waste time toying with him, he would simply kill him within seconds.

The Commander had to admire his intelligence, even if he despised him at the same time.

So what was the solution? More Templars? New weapons? Try to overwhelm him with psions? Get Aegis to actually do something? Or was it time to take more drastic measures?

Problem: Humans were too easy to kill.

Problem: Aliens outnumbered Humans by an unfathomable amount.

Problem: The Battlemaster was almost impossible to stop, let alone kill.

Problem: There were other Ethereals actually worse than the Battlemaster.

Problem: Humans were still divided.

Problem: Every single one of those problems is too major to ignore.

And the issue was that none of them could be solved quickly or easily without taking drastic action. Traditional ethics was not something he held himself to, but he had standards and didn’t begrudge people for following them. He knew there would be some who viewed what Vahlen and her team were doing to the Human body as strange and unnatural, and wouldn’t want that anywhere near themselves.

He’d planned to let genetic modification be a choice each soldier made, like the MEC pilots. Now he was wondering if he could afford to do even that. Every soldier lost now was too major to ignore. Could he honestly say that approach was truly worth preserving? Did he even have a choice now that there was a very real possibility that they would lose if these steps weren’t taken?

There was a problem with his priorities. Even now he was still too idealistic. He was looking forward to the future too much, working with a failed fantasy where personal choice was an actual and legitimate option. Manchurian Project be damned, the last thing he needed now was Vahlen wasting time trying to keep Humans under control out of some apocalyptic fear that they could take over the world. That was a problem for after the war, that was a concern that should only be realized when the fighting was done and they had to pick up the pieces.

What was he actually concerned about? Defection? Betrayal?

He laughed to himself.

If there was one thing he was certain of, it was that every member of XCOM would rather die before letting the aliens win. No, betrayal had never been a reason, but his attempt to keep the most powerful people in the world from abusing their abilities on other humans. He was tackling a problem that had yet to manifest just because…why?

Was it to prove that, somewhere, he was not as bad as he knew he was? That he still respected human choice, and wanted for at least one of his achievements to be objectively seen with approval? This, from someone who cared nothing for superfluous praise and validation?

He scowled, hands gripping the holotable tightly as the footage played over and over in front of him.

He wasn’t a good person, so why should he pretend otherwise? Logic and pragmatism were far
superior, and that was why he had gotten this far; that was _why_ he was still alive. He saw lines and he crossed them if there was no other choice, so this should be no different. There were still so many problems in the world that he had refrained from interfering in out of the sake of being _apolitical_.

Apolitical.

Sure, that was what he wanted XCOM to be in the future. Work with ADVENT, not work for or control them. Don’t interfere in their matters. He’d given Saudia all the tools needed to create, if not a perfect society, one that was free of most of the failures of the past. And to her credit, Saudia was rising to the challenge, because she too understood what was really at stake.

He wasn’t blind to the fact that normally, after such a defeat, there should be people in the streets. There should be _some_ kind of outcry.

There wasn’t. Probably due to her wisely keeping it quiet.

Apolitical.

Was that even a word in this time? _Every_ decision had ramifications across the world now. For every country that did not join ADVENT, ADVENT was that much weaker. For every pointless Human war that persisted was one taking precious resources away from the alien invasion. All he needed to do was send Patricia over to China or that idiot in Canada and force them to join for the preservation of the Human race.

One XCOM squad could decapitate any minor threat the countries in the Middle East might pose. The time for surrender had long passed, as far as he could tell. The governments deserved nothing after seeing they stood no chance, and yet, persisting anyway. XCOM had collapsed governments before, but only as it related to the alien threat.

But that was a petty argument, since _everything_ now affected the war against the aliens.

He closed his eyes and took a breath.

He was stressed, tired and likely not thinking clearly.

But major decisions needed to be made.

“You can’t sleep?” He glanced up, partially surprised that Vahlen had managed to get this close without him noticing her. She looked like she had been sleeping, as she was out of her laboratory attire and was wearing more casual clothing for sleeping. He noted absently that her hair was also down and she hadn’t bothered putting on shoes before coming.

Probably waiting for him, he supposed, feeling somewhat guilty to keep her waiting without letting her know- “No,” she suddenly interrupted, raising a hand and walking around. “Don’t you even begin feeling that way. I should have guessed you’d be somewhere here.”

He shrugged, looking back down to the holotable. “For what good it does.”

“And is it working?” She asked, gently taking his chin between her fingers and turning it towards her. “How many times have you watched that? Ten? Twenty?”

He closed his eyes, sighing. “I have no idea.”

She reached over to grab his hands and he let her turn his body towards her. “And what exactly
Have you managed to find from that that we didn’t find at the meeting?”

He rested his forehead against hers. “That we’re all dead unless we make some big changes.”

“You know you shouldn’t do this all on your own,” she chastised, looking at him with concern both in her eyes and emanating out of her. “Ignoring pointless romantic comparisons, you’re going to make mistakes in judgement if you sneak up here in the middle of the night and dwell on how bad the situation seems.”

He let go of her left hand and used it to rub his eyes. “I’d kept all of you up far past what was needed. People need sleep, I can’t right now. No point in wasting time I say. I’m not—”

“You’re not well, mentally or otherwise,” Vahlen interrupted, more harshness in her voice than he was expecting. “I can feel how much stress and exhaustion you are under from the other end of the Praesidium. You’re probably making it impossible for any reasonably powerful telepath to sleep tonight. You need someone to share it with,” her voice softened. “So here I am.”

He simply pulled her into a hug.

They stood there for a while, both of them relaxing against each other, reminding themselves that they weren’t completely alone in the struggles facing both of them.

“Thank you,” he told her, knowing she could feel how much those words conveyed.

“Anytime you need it,” she answered softly against his chest. “That’s what we do for each other.”

“That it is,” he answered, just as softly. “Although I still don’t think I’m going to be able to sleep anytime soon. Unless you make me.”

“No, I’ve got a better idea,” she said, gently disengaging from him. “I saw what was in your head while walking up here. Difficult to ignore and you needed someone who sees how you think to really help.” She walked around to the opposite side of the holotable, brushed a few unruly strands of hair behind her ear and looked him directly in the eyes.

“We’re both not going to get to sleep, I think,” she continued, shutting off the footage of the Battlemaster. “So we’re going to start going through those thoughts and plans in your head. We’re going to think them through logically and clearly, which you were definitely not. And we’ll do that until Zhang, Jackson, or Patricia decide to check up on us.”

He had to smile at that. “I think that is an excellent idea. Since I was, ah, not ‘thinking clearly’, perhaps you should decide what we go over first.”

“Fine,” she said with a look of intense concentration on her face, already typing on a tablet she had picked up. “Your first identified problem: Humans are too easy to kill”

***

Switzerland, ADVENT Command

Saudia sat alone at her desk, no one nearby to disturb her as she dwelled alone on the ramifications of the past few days. She was thankful that the Commander had the foresight to include certain provisions in the Directive, and that she and Elizabeth had worked for this contingency well in advance.

Unfortunately, it was a so-called victory that she didn’t want to have. In fact, it only made things
more difficult for her.

Morale was dropping fast in the wake of the losses, and she couldn’t entirely blame everyone.

They were losing. Badly.

There was no way around that fact, and the worst part was that no easy answers presented themselves to her. Or plausible ones of any kind. No, if things stayed as they were, the aliens would win within one year, probably sooner.

She personally wasn’t as affected as everyone else, and was keeping her mind on the big picture. The war wasn’t lost. Not by a long shot. So, there were some facts she was keeping at the forefront of her mind:

One: The aliens only controlled a relatively limited section of the world. They had the major cities in Australia, a town in Japan, and some major cities on the American West Coast. All in all, not that many. Granted the losses were no good for morale, but they still held the advantage when it came to land mass.

Two: ADVENT could beat the aliens. They’d done it before, both with and without XCOM help. They just needed to be smarter and wiser than the aliens for it to happen, which was a somewhat difficult task since the Battlemaster was proving to be too competent for his own good. It was irritating, since she couldn’t help but respect him in a way.

The main problem that she had highlighted was that in the end, it would come down to a numbers game. Humanity could probably kill several billion aliens and they would still have some to throw at them. No, they couldn’t win this conventionally. They were playing within rules imposed in their minds.

Rules that were simply one species against another, winner take all.

Wasn’t fair and didn’t work. So a new strategy needed to be developed. The rules needed to be changed or they simply needed to cheat.

The question was how they should cheat. What would be the best answer to what the aliens were doing here?

That was something she knew she couldn’t figure out on her own. Luckily she had an excellent and competent team of advisors oversee the various departments and agencies. No, she didn’t believe the war was lost yet. The Battlemaster was a problem, but only because he was smart. She’d surprisingly noted that the Battlemaster seemed to have gotten into the Commander’s head, which she knew had to have been his intention.

The Commander was a man who rarely, if ever, lost. But when he did, it fucked with his head severely. He would second guess himself, become predictable, and try things as safely as possible. The trick with the so-called Templars had been novel, but Saudia had known the best they were going to do was slow the Battlemaster down.

Slowing him down was a pointless goal. He had to be killed. That was what they should be working towards. No surviving, or slowing him down, but purely killing him. But the Commander was almost preparing for defeat, he was acting almost hopeless and scared of the Battlemaster. That was, admittedly, completely justified, but it didn’t solve the problem.

Saudia drummed her fingers against the table, her chin resting on a propped up fist. To her it seemed simple: Kill the Battlemaster and they could win the war. Most of the aliens were inferior
to Humans, especially Vitakarians and Mutons. Take away their leaders and they were worse. They weren’t winning on skill, but numbers.

The Andromedons were a problem, but they were fewer and they would have many more weaknesses than the Battlemaster. And the Sectoids…come to think of it, she didn’t recall seeing them at all in the past few months. Though they were another inferior species, with laughably weak psions compared to Humans. With the exception of the Hive Commanders.

Of course, there was the likelihood of another Ethereal showing up if the Battlemaster was killed. But she had her doubts that he would somehow be worse than the Battlemaster, with the exception of this Imperator leading them. Still, even the weaker Ethereals were dangerous, and they had to deal with the problem at hand.

The Battlemaster was one Ethereal. One with a limited area of effect. Capturing cities was all well and good, but his reach was limited and he couldn’t be everywhere at once. The fact that he was, right now, seemingly invincible didn’t matter so much in that perspective. So that meant he needed to be kept off the front lines whenever possible.

ADVENT needed some kind of victory for PR if nothing else. There needed to be strikes against alien holds, or the razing of their armies. The Mutons might have been unfeeling brutes, but she suspected that even Andromedon and Vitakara morale could be damaged.

There had been enough toying around. The aliens were on Earth, and Earth belonged to the Humans.

It was time to remind them of that. Luckily she had several operations she could enact, ones that had been in the process for weeks, but now might need to be bumped up a few days. She needed to talk with the Commander as well. XCOM would probably be needed for some of these, and it was extremely possible that aliens would launch even more attacks soon.

The little bit of good news to come out of this entire debacle had been that the EU was finally coming around. France had begun making efforts to join after Paris was almost taken, and when they realized how unprepared they were for an actual alien army. And Hassan had told her that it would likely have a ripple effect.

Europe had now seen first-hand the strength of the aliens. She found it darkly amusing to have the knowledge that if the idiotic politicians in charge didn’t start using their brains, there were definitely some in the militaries that would be concerned enough to take matters into their own hands. But she felt it wouldn’t come to that. They would join ADVENT in the end and that was the end of story.

Canada was another issue that seemed almost petty in the scope of the threat. Prime Minister Jace might be idiotic enough to openly refuse to help, but she truthfully no longer cared about what he wanted. Necessity demanded that Canada cooperate, and she would ensure they would, one way or another.

But it would require some deftness not to make a martyr out of him, for the moronic pacifists that refused to accept that anything other than ADVENT would result in death. Then again, against her Peacekeepers and army she supposed it really didn’t make much difference what they wanted.

All they had were weak, hollow words and threats. They threatened nothing but her ego.

She had armies.
And it was perhaps time to consider bringing this world to order much more forcefully than she’d wanted. The survival of the human race now depended on it.

***

The Praesidium, Medical Bay

Nuan groggily opened her eyes, then rapidly closed them to hide the white light shining from the ceiling. What happened? Was the first thought to come to her head as she slowly adjusted to consciousness.

The battle…the Battlemaster…they were losing…Karen died…Carmelita was an ineffective idiot…

My arms!

Her eyes snapped open as adrenaline flowed through her at the realization. The first thing she did was look down as best she could to where her arms were.

Or should be.

Because right now they were just stumps, the ends covered with some kind of soft device, probably medical. The left one had lost about half of the forearm and the right had been amputated right up to the elbow. They didn’t hurt thankfully, but there was just…nothing.

Nuan swallowed as she unconsciously tried to move her fingers and arms, while also realizing that they weren’t there anymore. It was so alien as to be difficult to grasp. It was difficult to believe this was actually happening and not part of some nightmare.

The only good news to her was that she appeared to have been rescued by XCOM. She doubted the aliens would have tried taking care of her, and the room she was in was distinctly alien based on the shimmering gray metal and subconscious throbbing in the back of her mind. So that meant at least some XCOM soldiers had survived.

She hoped Iosif had made it.

The multicolored shield that constituted her ‘door’ suddenly dissipated and a bald man in a medical uniform walked in, a tablet in his hand. She’d seem him before, he’d been one of the soldiers who apparently was also a Praesidium Medic. “Calm down, Nuan,” he said slowly and deliberately as she jerked her head in his direction. “It’s going to be alright.”

“My arms are gone and that alien destroyed us like we were nothing!” She hissed. “How could it be alright?”

His forehead furrowed and lips parted slightly. “I’m sorry,” he said. “But I don’t speak Chinese.”

Oh, right. She consciously made sure she was speaking English to answer him now, although the initial burst of fury had dissipated, leaving only exhaustion. “It doesn’t look alright to me, doctor…”

“Harkin,” he answered. “Blake Harkin. I’m sure you’ve seen me around. I double as the chief battlefield surgeon when I’m not on missions. And it’s not as bad as it looks, trust me.”

Nuan attempted to relax, trying to ignore the feeling of nothing where her hands should be. “The others…?”
“Iosif, Carmelita, Esinam, and Cassandra managed to get out,” Harkin reassured her, consulting his tablet. “The Templars are the main reason you’re still alive. They pulled you out after you were wounded and called for an extraction nearby. They got everyone alive out before the Battlemaster remembered to kill them.”

Ok…that was some good news. “And the battle?”

Harkin grimaced. “No good news there. After XCOM evacuated the main ADVENT force received orders to retreat and enact contingency plans. They made the aliens pay dearly, but as it stands, the city of Las Vegas no longer exists.”

Nuan didn’t care at all about the city, it could eventually be rebuilt if the Americans really wanted it. But it seemed like such a waste of life now. What did they have that could possibly stop the Battlemaster? All fighting him seemed to accomplish was getting people killed, and had it not been for a liberal dose of luck, she would have been one of them.

“What about the other battles?” She suddenly recalled, also vaguely noting that he’d been on the Paris operation.

He scratched his chin as he hesitated answering, and she absentmindedly noted that the light shining down on him briefly highlighted the almost imperceptible hexagons on his skin. Gene-modded. Huh, she hadn’t known that. “We succeeded in pushing the aliens out of Paris,” he began slowly. “Although there were some complications. We did manage to recover one of their transports and a Gateway. Lost Iida, but we were lucky all things considered. Seattle though…the aliens control what’s left of it. XCOM was overwhelmed and was forced to retreat, and ADVENT didn’t have the numbers to hold.”

She supposed it was good Paris was safe. They’d probably join ADVENT now because of it. “Wasn’t there another city?” She remembered. “Botelan?”

“Portland,” he corrected automatically. “News is…mixed. ADVENT did manage to hold it, but we don’t know how long they can stay. The aliens, instead of striking the city proper, hit the utilities leading to it. Water, power, electricity, supplies. ADVENT doesn’t know how long they can hold the city without it becoming unfeasible. And the aliens didn’t take many casualties, although thankfully ADVENT didn’t either.”

“And everything is ‘alright’.” She repeated dully. “You Americans are optimistic.”

“Well, you’re clearly feeling better,” he sighed, rubbing his forehead. “I was more referring to your injuries than the current state of the war. I assume the Commander will be making some changes to our strategies in the coming days. Hopefully that Ethereal actually decides to help instead of sitting around doing nothing.”

Nuan glanced down at the stumps of her arms. “So what will you do?”

Harkin set down his tablet and fixed her with a stare that didn’t exactly instill confidence. “We can do a lot with MELD,” he began. “But we can’t regrow limbs. Haven’t really tried, truth be told, but that isn’t an option for you sadly. Which means you’ll be fitted with prosthetics if you want that. They’re functionally identical to the real thing and will actually be much stronger, if you want to look at the positives.”

She raised an eyebrow. “Considering my options, I’d rather have that than nothing. But…how similar is it to my- what my arms felt like? Is feeling there?”
Harkin’s lips twitched. “I know it’s not as sensitive as natural flesh, but like I said, it’s functional. There are forms of pain receptors, although they will be received differently by your brain. From speaking with some of the recipients, you won’t have the same…delicacy, I believe is the right word. You’ll likely not be able to play the piano very well, but you’ll be able to write as good as ever.”

But she’d have hands…which was better than nothing. Still, she felt a wave of sadness wash over her as she realized that there would be some sensations she would never feel again. Although she knew she-

“[Damn!]” She abruptly swore to herself. She’d somehow forgotten that she couldn’t-no-shouldn’t make any decisions without authorization by her superiors. Why had that not been the first thing she’d thought of when waking up? She didn’t even know if they wanted her in XCOM anymore, let alone if she should be taking their tech.

If you hadn’t been so loyal and gotten enhanced like Iosif suggested, you might have arms no-

No. She quickly crushed that line of thought. She knew her place and followed her orders. Unless she got permission, she shouldn’t make decisions like this without permission. And she certainly shouldn’t blame them for her condition now.

“It’s not that bad,” Harkin said, misinterpreting her outburst. “The Commander has one, and he’s described it as ‘different’ but it only takes some getting used to—"

“No! Not that,” she interrupted, sounding irritatingly emotions. “I need to contact my superiors.”

“Oh...” he said, nodding slowly. “Nuan, don’t worry about that. They’re appraised of your condition. They commended your bravery in fact. They also have authorized any prosthetics you need.”

“Show me;” she demanded. “I need official documents.”

Harkin smiled. “Lucky that Zhang demanded all of what they said in writing. Something about Chinese loyalty conditioning.”

She flushed as Harkin handed her his tablet. “Zhang can go straight to hell.” The insinuation that she was a conditioned puppet was almost as insulting to her as a criminal being so highly placed here. As if Zhang actually knew anything about loyalty outside of money. She bet he was only here to avoid spending the rest of his life in jail.

Nuan glanced over the documents, and did confirm they were genuine. She felt a warm glow as she read the words commending her. Praise was rare, and she immediately relaxed when she realized that they actually did care about her. Good, good, she would have to write up a detailed report as soon as possible. They needed to know the extent of the threat about the Battlemaster.

“Thank you,” she told Harkin, handing the tablet back. “When will I receive my prosthetics?”

“You’re scheduled for tomorrow,” he answered with a smile as he tucked the tablet under his arm. “You’ll need an additional few days for recovery while you’re prosthetics are calibrated. Then you’ll need at least a week to get used to them, to retrain your brain to remember all the actions you knew; eating, holding a gun, lifting. You likely won’t be able to develop finer motor control right away. I’d say you’ll be out of any combat operations for at least two weeks, possibly three.”

That was a remarkably quick recovery time, she knew, but at the same time it seemed like an eternity. But it was probably needed. “Then I guess the sooner the better.” She paused, hesitating
for some reason before speaking further. “Is Iosif fine?”

“Tired, but he’s recovering,” Harkin answered. “I don’t know what he’s been doing, honestly. I’m guessing the Commander’s debriefing him, and I know he’s spent a lot of time with Aegis. He did come by when you were out, and said he’d come visit sometime when you were awake. Might not be until after your surgery, although I’ll update him you’re up.”

She winced knowing that he’d come to see her when she was so…disfigured. Maybe he didn’t care as much, but she’d have preferred he had not seen her like that, it would be better if she was whole, if not exactly the same. “Tell him I’d like to see him after I get my prosthetics.”

“Got it,” he said with a firm nod. “Any other questions?”

Nuan shook her head as best she could on the pillow. “Not right now.”

“Then I’ll leave you to rest,” Harkin said. “Your sacrifice has and will not be forgotten. The Commander wants you to know that, and that goes for all of us as well.”

She wasn’t sure how she felt about that. All she’d done was fight like everyone else, and she’d gotten hurt for it. That she’d done her job didn’t make her feel more special than anyone else. Praise for something like that was strange…but she didn’t dislike it. It made her feel valued if nothing else, not just another soldier here.

“Thank you,” was all she said, closing her eyes.

At least she wouldn’t have to wake up too many times with the phantom pain where her arms had been.

***

*Lancer Operational Command, United States of America*

Saudia quite liked how the former USSOCOM Headquarters had been converted into now what was the headquarters of the Lancer division. From her understanding, it had formerly been known as the MacDill Air Force base and United States Special Forces just happened to have had a section to themselves.

That was gone now, and reorganized into a purely worldwide training and operations center. The Lancers were drawn from the best special forces units in the world, or at least those who hadn’t been recruited to XCOM. SEAL’s, Rangers, KSK, Special Forces Brigades; all working together and learning from each other.

Lancer Operational Command had also since been completely locked down to any civilian presence. Only the highest ranked in the ADVENT Military were able to enter; even representatives and politicians didn’t know the inner workings. Saudia had been sure to invest enough resources into making the Lancers the most effective and deadly special forces organization in the world, even aspiring to surpass XCOM, though that was unlikely.

Luckily the former Commander of the USSOCOM seemed to have a very good idea of how to effectively accomplish that goal. Helion Weekes was perhaps the most dangerous man she had promoted into a position of power. He didn’t command soldiers, he was one through and through. He was even taller than she was, and visibly stronger as well, though not in his prime any more.

From his history she knew Weekes had been a Navy SEAL and been one of the best operatives. Once he couldn’t perform up to standards he transitioned to a command position, and a few years
later he’d been in charge of the entirety of the United States Special Forces. Thus he’d seemed the perfect candidate to head a global equivalent. It helped that he was intelligent in addition to being a tactical mastermind.

Since being promoted, Weekes had been working with the Science and Engineering Agencies to ensure his soldiers were receiving the best equipment, in addition to closely following all ongoing developments. He’d also developed cross-national training regimes to eventually standardize the Lancer Corps into a superior fighting force, removing training and tactics that were inferior and only elevating the best.

In addition to that, he’d ordered construction of multiple science labs with genetic modification as a priority. Given that he hadn’t brought that up before, she was assuming that was going to be a topic of discussion in addition to the overall situation. That Dr. Tygan was also here indicated such, and of course Commander Christiaens was also present.

All of them stood around a holotable in the well-lit room, with the walls holding whiteboards and maps all marked with various markers and notes. This was clearly Weekes’s center of command. He stood opposite her, while Laura and Tygan were on opposite sides as they waited for him to start.

“The situation is bad,” he began, the deep baritone was often surprising to most for the first time in its intensity, which was unmitigated with age. “We know it, so I won’t repeat it again. The fact is that we need a solid plan. Sitting back and waiting for them to attack us is only going to cause us to lose ground and wastes soldiers.”

“I agree,” Laura said with a sigh. “Japan was unexpected and gave us a false impression of what we were facing. The fact is that our soldiers are inferior to a significant portion of the alien forces. And, to put it bluntly, they are too easy to kill.”

“The question then, is how we can solve that,” Saudia finished, clasping her hands behind her back. “We have a limited number of soldiers when compared to the aliens, and we can’t replenish them quickly. So we have to work on preserving the ones we have.”

“That’s only solving part of the problem,” Weekes shook his head in disagreement. “We’re acting too passive. We’re letting them come to us and not striking them where it hurts.”

“And where would you propose we strike?” Laura asked, raising an eyebrow. “If you haven’t noticed, we’re somewhat confined to one planet. It’s impossible for us to strike anywhere that would hurt them.”

“I will only buy that excuse when Earth is completely ours,” Weekes shot back, crossing his arms. “The aliens do control parts of Earth, right? That’s why we’re here after all. And how exactly can we not reach those?”

Saudia’s lips curled up at that point. He wasn’t entirely wrong. “I would say it is because the aliens are heavily fortified in the cities they control, Chief Weekes. But your point is correct. We cannot be passive forever. Should we rely on defenses to hold our ground, the Battlemaster will methodically destroy us.”

“Our method of handling the Battlemaster is also flawed,” Weekes added. “I think we can say for certain that throwing armies at him and expecting that to work is a bad idea. We need to start manipulating him; drawing him away from targets of interest, keeping him on edge. We need a deterrent.”
“If I may pose a query,” Tygan spoke for the first time, slightly inclining his head as he spoke. “Have we noticed him exhibit any caution to any of the current arsenal of the ADVENT Military?”

“He seemed eager to get out of a collapsing building in San Francisco,” Laura shrugged. “But that doesn’t mean much. Even he would probably suffocate trapped under tons of rubble.”

“I watched the combat footage in Las Vegas,” Weekes said thoughtfully. “Twice he seemed surprised, or at least reacted differently. When that XCOM soldier threw that grenade with flammable gas, he rushed out of the way. I also noted that he reacted very violently when that XCOM Templar attacked him with her swords. I did not see any visible damage, but it seemed to spook him rather quickly.”

“The symbiote weapon also seemed to slow him down temporarily,” Laura recalled with a nod towards her colleague. “Perhaps applied to a larger scale?”

“Mhmm, that is a feasible approach,” Tygan nodded. “I can speak to Dr. Munju on some potential applications. XCOM has also graciously forwarded a large number of research documents on their MELD and genetic engineering programs, presumably to assist us in enhancing their own forces.”

That more than anything made Saudia concerned. If XCOM was worried enough to share their own gathered information beyond essentials, it meant they didn’t think they had the time, or resources, to wait for ADVENT to advance to a point where it would pose a major threat. “Generous of them.”

“The Commander isn’t an idiot,” Weekes stated. “I know he’s probably hating the fact that he had to send them. But he knows XCOM isn’t enough to win. They’re skilled, but it will be us who win this war. Which brings me to how we should use this gift XCOM has given us.” He nodded to Tygan.

“Yes,” Tygan cleared his throat. “Several of the genetic enhancements XCOM has applied to their soldiers have been included here, in particular, the Iron Skin and Biomuscular Regeneration are of interest, as well as some that modify vision and disease resistance. I have determined that we can apply these enhancements to our own soldiers, should we choose to.”

“The other half of the problem,” Weekes continued, a fierce grin on his face. “We die too easily. We’re a physically weak species and that needs to change. Despite how it turned out, XCOM did have the right idea with their Templars. They keep the Battlemaster occupied. More than that, the aliens don’t have much of an answer for them as their work in Paris proved.”

“I assume you have a suggestion?” Laura said.

“First and most obvious, I want the entire Lancer Corps to undergo extensive genetic modification,” Weekes began, raising a finger. “Second, both the Battlemaster and the Templars highlight a weakness in the alien army – Namely, that they have few counters for melee combat outside of the Berserkers and those Oyariah. We should exploit that.”

“How?” Laura asked. “Giving all of our soldiers swords as well?”

“Exactly,” Weekes finished with a smile. “Not the entire Corps, of course, perhaps a quarter. But we’ve seen both how well modified soldiers perform in combat from XCOM, and that the aliens will be devastated in close quarters. I’ve looked over the schematics for their weapons they sent over. We have an opportunity here. Chancellor, with respect, I don’t think we have a choice.”
“Yes, but I would caution being overzealous with our supply of MELD,” Tygan interrupted slowly. “Modifying the entire Corps would be a significant investment, and without facilities to make more, we could risk ‘putting our eggs in one basket’ so to speak.”

“But we know how to manufacture MELD,” Laura pointed out. “So why aren’t we doing it?”

“It is largely due to the amount of, and limited supply of specific locations and components,” Tygan explained. “It also takes a respectable amount of time to manufacture in any large quantities—”

“Not good enough,” Saudia interrupted, raising a hand. “We need more. France has joined us. The EU will likely follow. I will be discussing plans in regards to building factories devoted exclusively to the manufacturing of MELD.” She looked at Weekes. “And you have my permission to proceed. Do what you think will suit us best. You have more experience than I in this. But do not waste our resources, do you understand?”

“Of course,” he answered, inclining his head. “And I never would ask unless it would have a tangible benefit.”

“Good,” Saudia nodded. “And as for your point about being idle…that needs to change. I have requested that XCOM join us for a joint operation. I expect they will respond soon and we can prepare an organized operation of retaliation.”

“Excellent,” Weekes said. “It is past time we begin to collaborate with them. They aren’t our rivals and whatever disagreements and tension between you and the Commander should stop. After all, we have larger problems to deal with.”

Saudia couldn’t entirely disagree, but then again, Weekes didn’t know the full context of what he was referring to.

The Commander would work with her, but he would never trust her.

***

*The Praesidium, Situation Room*

“We need to make changes.”

The Commander saw little reason to not be completely blunt. Everyone here was under no illusions. Aegis didn’t need to be here unless he was actually on their side, and the Commander was thinking it best that until that happened, they needed to start planning to win without him. If Aegis really wanted to know what they were planning, he’d have to actually make himself useful in combat against the aliens. Tech wasn’t going to cut it anymore.

“I think that’s obvious, Commander,” Jackson said with a nod. “I’m assuming you have some in mind?”

“I wouldn’t have called this meeting if I didn’t,” the Commander said, nodding towards Vahlen at his side. “Vahlen has been helping me, but I need everyone’s input on this before going forward.”

Patricia crossed her arms. “I don’t suppose you have an idea for the Battlemaster?”

“I have some ideas,” the Commander answered. “The first thing I am doing is authorizing the Artemis Contingency against the Battlemaster. I know the risks, but he warrants them.”
Shen pursed his lips. “I’ll have some of my team begin working on weaponizing the MELD…but I do feel the need to warn you that this could ultimately backfire.”

“I know,” the Commander answered grimly. “But in terms of options, we don’t have many. Weaponized MELD might be enough to actually kill him. The only other options are nukes, collapsing buildings and swords out of whatever metal his equipment is made out of.”

“The MELD swords did seem to damage the armor,” Zhang noted. “That’s useful—“

“Except he threw them away the instant he noticed that,” Patricia interrupted with a scowl. “He’s not a fucking idiot. That’s the problem. Even this MELD weapon is going to really have one chance to work and then he’ll know we have it. And what do you think he’s going to do when he sees a missile heading for him? Stand there and let it hit him.”

“No,” the Commander said, smiling for the first time. “But I do think there is a way we can play him a bit. Aegis told me that his UFO is equipped to detect nuclear activity. The moment he detects it, he bails out which does infer that a nuclear blast will kill him.”

Shen’s eyebrows furrowed. “That seems to be a large assumption. How exactly do you know he’ll flee if he detects nuclear activity?”

“Based on what Aegis has told me and my own observations,” the Commander answered. “The fact that the Battlemaster even has his personal ship equipped specifically to detect it means that at the very least it’s a concern of his. Aegis has also stated on multiple occasions that the Battlemaster doesn’t like taking risks, and an unknown or unexpected variable suddenly entering the equation would raise the risk significantly, and perhaps entice him to pull back and reassess.”

“He definitely doesn’t even tolerate things he knows can hurt him,” Patricia noted, nodding. “Like I said before. The instant he realized the swords could hurt him, he removed them. Thing is, one or multiple nuclear weapons heading towards him might be something he can’t personally handle. He doesn’t seem the type to risk his life unless the odds are something he can handle.”

“Then again,” Jackson shrugged. “It could be that he has common sense. I wouldn’t blame him at all if he got word of a nuclear missile incoming. I doubt even he could survive one, no matter what kind of bullshit magic armor he has.”

“Sarcasm,” Zhang said dryly.

“Sarcasm aside, it gives me an idea,” the Commander continued. “We don’t need to kill the Battlemaster to negate him. Just scare him away. Jackson…how feasible is it to fake nuclear signatures?”

Jackson’s eyes widened and she actually smiled. “I’d have to check that, but I don’t think it should be too hard. Vahlen might know more, actually.”

“Why even fake a signature?” Zhang asked. “Why not use live weapons and just not use them? Or even place them in cities as a deterrent. Sure, the Battlemaster could risk us not blowing up our soldiers, but he knows who you are…and that you’d nuke a city just to kill him. Would he risk that?”

“That depends,” Patricia mused. “He might call our bluff…the question is if we are prepared to blow up cities to kill him?”

“Of course we are,” the Commander sighed. “If that’s the only way to kill him. But I want to keep him guessing. If he always has the fear of nuclear weapons in the back of his mind, it might make
him not directly participate until he comes up with a solution.”

“What I’m concerned about is that he has to have prepared for something like this,” Shen noted slowly. “Or do you think this might be his weakness?”

“The unknown? Possibly,” the Commander shrugged. “However, if the Artemis Contingency fails, I’d much prefer him directing from the back than the front.”

“It sounds good,” Jackson nodded approvingly. “So what’s next?”

“We need more psions,” the Commander said. “The simple fact is that we’re far outnumbered and outgunned. So we can’t throw away people and treat everyone as disposable. The Templars performed as well as could be expected, and they’ll only get better. I’m going to expand that program and have Vahlen awaken as many psions as possible.”

Zhang narrowed his eyes. “The Manchurian Program-“

“Fuck the Manchurian Program,” the Commander sighed wearily. “It’s diverting our resources. I’m not worried about the potential of some psion going rogue. Not anymore. We need advantages, we need psions, we need everything we can get and wasting them on a safeguard that might not even be necessary is borderline moronic.”

He paused. “I’m not ordering research be stopped, but we need to prioritize. And another truth is that mandating that ADVENT shouldn’t have psions is self-defeating. I don’t completely trust Saudia, but I trust her willingness not to betray us now. ADVENT can recruit more, probably weaker psions than our own, and even a weak psion could make the difference.”

“That’s…surprisingly reasonable of you,” Shen commented, adjusting his glasses. “I didn’t think you’d risk giving ADVENT such a powerful tool.”

The Commander gave a humorless smirk at Shen. “I’m not going to be idiotic about it. When the Manchurian Program is complete, I will require that every ADVENT Psion undergo it, and we have access to their code words. Until then, I think a small bomb in their heads will ensure they don’t do anything stupid.”

“Not without flaws, but it should suffice for now,” Zhang said with a single nod. “As much as I dislike Saudia, we do need more psions, and ADVENT is the best means of accomplishing the acquisition of mass quantities.”

“We can have some of our own train them if needed,” Patricia nodded. “Or maybe let ADVENT develop their own methods. Aegis will help me with the psions we have here, and Iosif and the other Templars can help others in the Program. When are you going to tell her?”

“We’re going to tell her,” the Commander said. “It’s time we both meet and make plans together regarding the future of the war. A joint meeting of XCOM and ADVENT Command. Patricia, Zhang and Jackson, you’ll come with me to meet them.”

Vahlen stepped forward. “Before the Commander gives some details regarding what will be discussed, I also think we need to push the genetic modification for our soldiers. We can’t have them dying from stray plasma bolts anymore. It might be necessary to make it mandatory.”

“After this, I think you’re going to get a lot of additional volunteers,” Jackson noted. “But we have to watch our MELD stores. We have a lot, but even modifying half our force will drain them significantly.”
“Which is why we’re going to change that,” the Commander said, looking towards Shen. “I want you to take Aegis’ plans for the MELD manufacturing plant, and make twelve of them. Jackson will secure off-base locations if you need it, but I don’t want to have to worry about MELD stores again.”

“Ah, I’ll begin work immediately,” Shen promised, blinking rapidly. “Although we’ll need some raw materials—“

“You’ll have them,” the Commander dismissed with a wave. “On a similar point, what are you doing with the Gateway and recovered alien tech from the Transport?”

“We’ve stripped the alloys from the craft, and are analyzing the intact alien computers,” Shen explained. “Aegis said he was surprised that there was no CODEX system installed, which means this was one of the earliest iterations of the craft.”

“Or the Battlemaster removed it in case we won,” Patricia noted. “Everything sent on that mission he had to be able to lose.”

“In any event,” Shen continued slowly. “The intact Gateway is one of the only solid positives to come out of that battle. Schematics and theories are useful, but having an actual Gateway to observe will speed along our research significantly. The alien computers will also, I believe, allow us enough to finally reverse-engineer them completely.”

“And finalize the Firestorm Project?” Vahlen asked.

“I should think so,” Shen nodded. “Our largest hurdle was replicating the alien systems we’ve recovered from other UFOs. In theory we could simply use intact alien computers for Firestorms, but that ultimately means we’d always be limited by how many computers we had. It will also help us with every system in the Praesidium that runs on alien tech.”

“Well done,” the Commander agreed. “Now, the last major point. I’m going to suggest that ADVENT end this pointless war in the Middle East once and for all, and we’re going to help.”

Jackson frowned. “Isn’t that in clear, ah, violation of us being apolitical?”

“Depends on how you look at it,” the Commander shrugged, not bothering to hide his irritation with the whole situation. “On one hand, of course it is. But on the other, this is a drain on resources that ADVENT could be using to put towards the aliens. The Middle East is just sitting there not being useful, and it all comes down to the war having a detrimental impact on the actual war, and thus threatening humanity.”

The Commander rested his hands on the holotable, and fixed each of them with one unblinking glare. “We can end this war. So why shouldn’t we?”

No one disagreed.

Patricia finally spoke. “How then?”

The Commander straightened and his lips curled into a smile. “We cut off the heads.”

***

Japan, Nakashibetsu

“[How is it daddy?]” Mari asked through the screen, her face taking up around half of it while
Sandara stayed in the background, smiling to herself. “[What are you doing?]”

Ah, he’d missed them more than he realized. “[I’m keeping everyone safe from the aliens,]” he answered. “[I’m doing it with some really good people.]”

“[Did you shoot one?]” She asked.

“[Mari!]” Sandara chastised in the background.

Duri chuckled. “[Maybe, the fighting gets a little chaotic sometimes. But nothing for you to worry about. The aliens don’t stand a chance against us.]”

He sincerely wished he didn’t have to lie, but Mari didn’t need to know the horrors of war quite yet.

“[Well, duh.]” Mari said, rolling her eyes in exaggeration. “[They’re scared of you.]”

His chuckled was almost sad. “[I wish that were so.]”

“[Alright, the two of you off to bed,]” Sandara said, gently setting Nabi on the ground off her lap, and his younger daughter gave a final wave joined by Mari.

“[Good night daddy, talk to you soon.]”

Sandara hustled them off to bed and he waited until she eventually got back and let the facade drop. Damn, she looked like she was going to cry. “[Tell me the truth,]” she said quietly. “[How is it there, really?]”

He was silent for a few minutes. “[Here? Not that bad, in all honesty. We’re heavily fortified and the aliens can’t make a move without getting slaughtered. But…well, I assume you’ve been watching the news?]”

A nod.

He grimaced. “[I guess it depends if they hit here next or not. If they do…it’s not safe for any of us. I don’t know if we’ll live or not. I’m not going to get myself killed by being stupid, but the aliens just seem to be better than us.]”

“[Can’t you do something?]” She almost pleaded. “[You’re on the front lines! Can’t you be transferred somewhere safer?]”

He rubbed his forehead. “[I could, maybe. But this is where I’m best. My entire team has stayed alive so far, which is a small miracle in itself. All I would accomplish by asking to leave is condemning someone else to potentially die in my place. I don’t want that.]”

“[I know, I know.]” Sandara sighed, wiping her eyes. “[But it’s awful living here alone. The girls make it bearable, but I’m terrified that one day I’m going to have a soldier show up at my door and tell me you died ‘heroically’ or some equally meaningless story.]”

“[I’m sorry I can’t be there with you,]” Duri said quietly. “[With all my heart I want nothing more than to be with you right now. But we both knew this would happen one day. I’d say we were luckier than most. If it were any other place I’d have no problem with you living on-base, but Japan right now is no place for you or the girls. I won’t put you in danger willingly.]”

“[And I wouldn’t put the girls in danger like that,]” Sandara gave a weak smile. “[You should see
Mari. She’s so proud of you, she’d been telling everyone at school about how amazing you and all the other soldiers are. She’s made friends with a lot of girls going through the same thing. You would be proud of her."

He felt some tears pricking his eyes as his wife spoke. "[We raised her well.]"

"[And I need to be happy for her.]" Sandara said. "[She shouldn’t grow up afraid. None of them should. I’m glad you didn’t tell her what it’s really like. Not yet. She isn’t old enough yet.]"

Duri nodded. "[Hopefully the war will be over by the time she’s old enough. I pray so anyway.]"

"[So do I.]" she nodded. "[Please be safe. I love you.]"

"[And I love you too,]" he answered back. "[I’m always thinking of you.]"

They stared at each other for a few seconds, and then the screen went black. Duri just sat there in the chair for a few minutes numbly staring at the screen. He just wanted to see and hug them again, but the time to do that looked to be nowhere in sight. He hadn’t realized just how much he’d missed them until now, which he’d unconsciously buried in his work and friends.

"You alright?" Cara’s voice asked from just outside the makeshift video-conference room.

"Yeah," he said, rubbing his eyes and standing. "It’s just…well, I miss them."

She nodded, her blue eyes seeming brighter in the dim light. "No shit you do. Didn’t realize you even had a family until recently."

"Not something I really feel the need to bring up," he shrugged. "But what about you? Have a husband? Boyfriend? Family?"

She snorted. "No. Dates usually end poorly for me; guys can be idiots sometimes. For the best I think. Military doesn’t really fit that lifestyle." She eyed him sideways. "No offense."

"None taken," he said. "Times like this I realize why it’s discouraged."

"And as for family?" She shrugged. "No biological parents, at least none that I know of. I grew up in an orphanage for a time, me and my brother got adopted by another family. They’re in Florida thankfully. My brother is probably enlisting, like the patriotic fool he is."

Duri chuckled. "And you’re just here out of the goodness of your heart."

"Sorry, but I prefer my siblings alive," Cara answered back, only sounding partially sarcastic. "He just thinks he’s the next great thing, but he’s not a soldier. I’m only here because I wanted to kill people."

Duri started. "Sorry?"

"I met a lot of bad people growing up," Cara said emotionlessly. "But I couldn’t do anything about it. I’d hate to think what might have happened if I hadn’t been adopted. But I never forgot and I made plans. It seemed simple at the time. Bad people didn’t deserve to live and the military killed bad people. Seemed like an easy join."

She shrugged again, a bit more wearily. "I don’t know if I had a death wish or not. I always requested the most dangerous places, the hottest zones so to speak. Anything for a chance for me to actually remove some evil from the world."
Duri was wondering where this was going. “And did you?”

“And did you? Nope,” she answered nonchalantly. “But I killed a bunch of scared kids in the War on Terror. Brainwashed scared men who believed in some release from their miserable lives. Saw a lot of action in that war, killed a lot more people. Some of them bad, but it wasn’t all like I’d thought. It was the exact opposite of satisfying, revolting almost. You don’t shoot a teen in the head and come out alright.”

Her lips twitched. “Killing people fucks with your head, no matter who you are. There’s a reason veterans wake up screaming in the night. There’s stuff in their head that they did. I can handle it. But I don’t want it. My brother isn’t like me. He’d never be the same again in a war. And no, them being aliens doesn’t make a difference. They bleed, they scream, they die. They clearly think, they have some kind of emotions. I’m not a patriot Duri, I’m only here so someone else doesn’t have to be.”

She waved absentmindedly. “Guess you didn’t need to hear all that, but hey, you asked. Keep it to yourself alright, I don’t talk about it with everyone.” And with that she turned and walked off, leaving him alone.

He’d had no idea she’d had such a traumatic past. She’d certainly never shown it before.

Maybe that was the point. She put up a front for people, just like his wife did for their daughters.

“Don’t worry,” he told the air. “Your secret’s safe with me.”

***

_Tehran, Iran_

Roman stood together with the rest of the Shieldbearer Officers and ranking staff. The Colonel General apparently had something he wanted to update all the command staff on. He personally hoped that it was news about how the war was progressing in other parts of the Middle East. Iran had taken up several months, and there was still a decent amount of territory left.

All of them were in full combat armor, with the helmets off of course. If there was one thing Roman saw that was common with all of them, it was that they looked utterly exhausted. Not necessarily about the war, but that they were wasting their time. Sure, the Middle East probably had some value, but compared to what was happening in America, all of them were itching to actually fight something that was worth their time.

And the Middle East certainly was _not_.

But they did their jobs, like good soldiers.

Ivan Frolov stood in front of them, table before him which held nothing but a map, and a projector displayed it on the wall behind him as well. He was with two people Roman had never seen before, one of which was a fairly short and bald woman wearing the uniform of an ADVENT Officer, helmet removed of course. Interestingly enough her armor was a dull gray, not the traditional red he’d seen from the other officers. Her fair skin and softer features indicated that she wasn’t local or likely Russian either. American probably.

The other person was a man wearing no armor, but a black uniform of sorts that held no badges or means of identification, but if Roman had to guess, he was ADVENT Intelligence. Possibly Kidon since his skin was a darker brown, and he had heard him speaking with a noticeable Israeli accent.
Roman didn’t like him just based off his body language and false voice. Intelligence agents always made him uncomfortable, and the fact he felt the same way around this guy definitely made him think he was right in thinking this man was a spook.

“For the benefit of our guests, we will begin,” Ivan said, speaking English presumably for the two beside him to understand. It was a good thing most of them knew English, though Roman could hear some in the back mumbling to each other, translating to their friends who didn’t know. He presumed Ivan knew about it, which was why he paused after he began.

“This is Marshal Amy Kilian,” he continued, nodding to the woman. “And Operator Moshe Emanuel, from the American and Israeli Divisions respectively. They’ve been spearheading the American and Israeli operations below Israel.”

“And we personally thank you for your contributions to taking Iran,” Moshe said, inclining his head in respect. “Israel Command personally thanks you for your sacrifice here, and we will never forget your help.”

Well, it was the least they could do. Oddly enough Roman felt he was being sincere, and really, why wouldn’t he? Not every day you had major world powers working to help you take revenge. Because that was ultimately what this was about. The Middle Eastern nations had done something stupid and killed people in their government. Israel retaliated, with extreme prejudice.

Not that Roman didn’t like it, but thanking them seemed more like an obligation than anything.

“ADVENT wants this war ended,” Ivan continued. “I’ve received that loud and clear from the top. Based on recent events, I think we can all agree with that. Last I heard they are still planning details about what exactly the strategy will be, but Chief Weekes, Commander Christiaens, and the Chancellor herself are involved in this personally.”

That was actually significant news. The Commander and Lancer Chief in particular meant that ADVENT actually was not fucking around anymore. Which meant that this would be a massive operation when it actually happened. And if it was bad enough that they were getting involved, then it probably wasn’t going to be particularly gentle either.

Good.

“As of right now we’re unaware of the details of the plan,” Marshal Kilian continued, clasping her hands behind her back. “But we suspect it will involve taking out the leadership of the remaining nations opposed to us. But before we can proceed, everyone needs to be updated as to the status of the war itself.” She nodded to Moshe.

“Syria, Iraq, Jordan, and nearly half of Saudi Arabia are now under ADVENT control,” he said, pointing to the respective countries on the map. “Israeli strike forces have severely destabilized Yemen and Oman, and the American Division is preparing teams at this moment to take their capitals. With that we’ll have the capital of Saudi Arabia completely surrounded.”

“How is the Royal Family reacting?” One of the Shieldbearers asked.

“As expected,” Amy shrugged nonchalantly. “They’ve imposed martial law on the remaining cities they own and are pulling in every favor they can. They still have many foreign connections, especially in Russia and America and they’ve been leveraging them for money, resources and influence. Riyadh is a fortress that even we will be hard pressed to take.”

Moshe smiled lazily. “However, ADVENT Intelligence has identified the contacts the Royal
Family has been leveraging, and all of them are being prosecuted or sitting in jail cells now. They don’t have anyone left, and no allies they can call on. They will not surrender.”

Roman wasn’t entirely unhappy with that. As satisfying as it would be to see the Saudi King humiliate himself by surrendering, it would be far more satisfying for him to be dragged out into the street. Better yet, shot in the head. Maybe the rest of the family too. As far as he knew, there was no one worthy of any consideration in the Royal Family.

If there was, they’d have done something by now. Or knowing how those animals thought, they would have been killed for daring to suggest something as heretical as ‘surrender’.

“This leaves Turkmenistan, Uzbekistan, Afghanistan and Pakistan,” Ivan said, pointing towards the respective countries. “We have already started offensives in Turkmenistan, and we’ve received word that India is willing to help take Pakistan when the time comes.”

No surprise there. Roman knew that India and Pakistan hated each other, though didn’t know why. Which raised an interesting question. “Is India part of ADVENT?” He asked.

“Not currently,” Amy clarified. “However, I am under the impression that negotiations are taking place between the two parties. Their proximity to China is a matter of some concern, I believe. And it is entirely possible that they want to take control of Pakistan and I would not be surprised if ADVENT allows them to have it if they help, and respectively join.”

The soldiers in the room nodded. If it got India into ADVENT, Pakistan was a small price to pay. That would boost the war effort drastically. They had one of the largest populations in the world, along with the industrial power and resources to match.

Ivan’s face suddenly turned harder. “Pakistan in particular will need to be handled delicately, as they are a minor nuclear power in the region. The only ones aside from Israel to have that capability in the Middle East.”

Roman frowned and everyone around him began murmuring to themselves. “I thought their program was dismantled in the War on Terror?” One soldier asked.

“Halted, not dismantled,” Moshe corrected. “Or so we’ve been able to find out. Official records are…difficult to come by. Pakistan had been conducting nuclear research long before the Commander showed up, and with what the Indian Intelligence Bureau has been sharing with us, China likely helped them become a nuclear power, presumably to keep India in check.”

Well, this was definitely a problem. It was one thing to invade Iran, Saudi Arabia, and the like because the threat they posed was minimal. Their armies were outdated and tactics ineffective. Roman actually figured that the Pakistani army would be largely the same way. But if they had nukes, and their country was in danger of falling, Roman doubted that ADVENT could properly stand against even a small nuclear arsenal, much less the fallout afterwards.

“What are we specifically dealing with here?” He asked. “Do we have numbers? Equipment?”

Moshe and Amy exchanged a look. “The Intelligence Bureau estimates Pakistan has between fifteen and thirty-five nuclear weapons,” Moshe began. “We’re also not entirely positive of the distribution between missiles and bombs, but we suspect they have more missiles than bombs. And they might have one nuclear submarine. Perhaps two. The warheads themselves are likely being stored at a minimum of five separate silos and hidden locations. Nuclear launch procedures are not currently known, and ADVENT Intelligence and the Intelligence Bureau are working to ascertain said procedures.”
“Then what’s the plan of action?” Another Shieldbearer asked, her features scrunched in worry. “We go marching in, they shoot nukes. It’s not like they’ll have anything to lose. Sure, they all die, but they go out in a blaze of glory so to speak.”

“Like I said, it is being handled delicately,” Ivan placated. “I have been assured that ADVENT will not move forward until there is a plan in place to deal with the nuclear problem. But I am aware that the Lancers will take part, as well as top agents from XCOM Intelligence. And if negotiations continue well, the best of the Indian Para Special Forces.”

That ADVENT seemed to have a plan regarding this, or at minimum a healthy understanding of what they were dealing with was reassuring. A shame XCOM wasn’t getting involved, since they could probably make all of this simple by sending in one of those psions. What little he’d heard about them was…unsettling…to say the least, but in this case, mind control might actually be justifiable here.

Assuming all the stories coming out of America and Japan were true, of course.

“What about Kazakhstan?” Another Shieldbearer asked after a few seconds of silence.

“In talks, oddly enough,” Ivan said, his tone audibly lighter. “They’ve never been a major problem historically, and naturally want to keep their independence. Negotiations are going well, last I heard. Considering their strong relations with Uzbekistan, I believe ADVENT wants them to leverage them into surrendering to ADVENT control. I find it unlikely we’ll have to fight them, and they’ll also likely join ADVENT.”

Roman nodded. Since Kazakhstan shared a border with Russia, he knew a little about it. Though not that much, honestly, which was likely a point in their favor since the countries he tended to know a lot about were ones he was enemies of.

“What are they doing to prepare for us?” Someone asked. “Will they surrender?”

“Unlikely at this point,” Moshe shook his head. “They’re preparing as best they can. We can be thankful none of them ever developed nuclear weapons, else this would potentially be a problem. As it stands, they really have nothing that will stop us except time. They’ve apparently tried to solicit help from China, but have been stonewalled completely.”

Made sense. There was no way China was going to back a clearly losing side, much less deliberately antagonize ADVENT and XCOM. China wasn’t run by complete idiots, for better or worse, just very arrogant and prideful people.

Eh, China was something for people smarter than him to figure out.

“Now, for us, we will likely move into Afghanistan next,” Ivan continued, his hard gaze sweeping the room. “Once Israel and America clean up Saudi Arabia, they will assist us in taking the remaining nations. Depending on how negotiations go, we could have support from India and Kazakhstan as well. In short, this war is coming to a close and I suspect it will happen sooner than later.”

Roman smiled. Things were finally coming together. Hopefully he wouldn’t have to wait too long before the fighting started. He could feel the energy in the room from the other soldiers, their spirit renewed after learning how close the war could be to actually ending. They were ready to finish it.

All they needed was the word.

***
“The operation was largely a success,” Elizabeth finished, handing Saudia a piece of paper with a list of names. “These are the instigators and anarchists we arrested, all currently being held and awaiting prosecution. My agents’ evidence is indisputable, and I’m already ordering interrogations on some of the more influential ones for details on their groups.”

“Good,” Saudia nodded, glancing over at Stein who was standing straight and still at the other side of the table. “Both of you did good work. People are scared, but there aren’t riots in the streets.”

“I think we need to take the initiative now,” Stein stated bluntly. “Some of these people were connected to known anarchist groups, and there are others who have equally dangerous influence. That’s sufficient evidence in the Advent Directive to mandate the disbanding of their groups.”

“Assuming you’re referring to Antifa, it isn’t that simple,” Elizabeth mused, starting to pace. “They have a loose command structure, if you could even call it one. The problem is that it’s an ideology, and ideologies are hard to kill. You know about Anonymous?”

Stein raised an eyebrow. “That hacker group that had a big mouth?”

Saudia snorted at the description, and Elizabeth chuckled. “Yes, that’s the one. Effectiveness aside, they made Anonymous into something of a cultural phenomenon because they openly stated that it was an idea. It was something anyone could be. Antifa is similar, if more violent. Taking out their leaders won’t accomplish much because they know their strength is in decentralization.”

“This is still a simple problem,” Stein shrugged. “You just find the participants and arrest them. Kill the entire movement, not just the leaders. Instill terror in anyone even thinking of joining them. People are squeamish about using that word, but terror is more effective than leniency.”

“In certain cases,” Saudia interrupted. “Or it could have the opposite effect. We could do as you say and make this as public as possible. I think that is a bad idea simply due to the climate at the moment. The last things people need right now is to feel more terrified. Terrified people can sometimes feel they have nothing to lose.”

She glanced at Elizabeth. “That being said, I agree with Stein that these people need to be dealt with. But I want it done quietly.”

“I have a possible solution,” Elizabeth said suddenly, actually pausing her pacing. “One of the greatest strengths these people have is coordination and belonging. If they could be isolated, they could be negated since I highly doubt most of these people have actually met in person. The solution might actually be simple – we let them speak, but silence them.”

Stein frowned. “Come again?”

“I believe the internet term is shadowbanning,” Elizabeth explained. “In essence, it allows a person to post on a certain site, but no one else can see what they post. Essentially placing someone in a glass box that they can see out of, but not actually interact with. They would still have the illusion of freedom, but no one else could see it. Social media in particular is susceptible to this.”

Saudia scratched her chin. “What of the opposite effect? I presume it would be possible to amplify a voice or idea?”

“It certainly is,” Elizabeth nodded, smiling. “However, the Directive does have some restrictions on the extent to which we can interfere. Invisible promotion of certain ideologies is only acceptable to placate a populace on the verge of panic strong enough to destabilize ADVENT.”
“I’m not sure this would qualify then,” Stein noted dryly. “We’re not quite at that point yet.”

“That depends,” Saudia recalled. “I believe such an action has to be approved by either the Congress of Nations, or the Executive, Military, Peacekeeper and Intelligence branches jointly reaching the same conclusion. At least four of the five are needed, and that would give us that power for three months.”

“Requirements for evidence are strict though,” Elizabeth warned. “But I do think we have enough to make a case.”

“Then I want you to put something together with Treduant or Savvin,” Saudia said. “If this gets put through the Congress first, then the media won’t just be able to say this is some sort of power grab.”

Stein snorted. “The media can go to hell. What exactly can they do anyway? Strongly disapprove?”

“People watch the news in fact,” Elizabeth said dryly, eyeing Stein. “It’s still a massive demographic, and one we don’t entirely control. Speaking of which, Chancellor, the media is not exactly happy with you.”

She sniffed. “What a surprise.”

“They’re being clever about it,” Elizabeth said grimacing. “But the insinuation is clearly that ADVENT is failing and you are unfit to lead. They’re not going overboard with defamatory stories, not quite yet, but they are clearly cherry-picking coverage that paints you in a bad light.”

Stein frowned. “Aren’t there provisions in the Directive that require full context? Otherwise they’re breaking the law.”

“Not in opinion segments,” Elizabeth corrected. “Which is where a larger amount of the insinuations are coming from. The problem is that people don’t know how to separate fact from opinion, and they’ll trust these so-called ‘news anchors’ blindly without checking for themselves.”

“People are stupid,” Stein shrugged. “What else is new? But even still they can’t flat-out lie.”

“Hence why I said insinuations,” Elizabeth clarified again. “Bad news is that they’re targeting Treduant next it seems. Canadian media hates us for obvious reasons. Russia is fine, but it’s state-owned for the most part. Europe is right now running a lot of anti-ADVENT pieces. France joining is worrying for them, and they aren’t under the same restrictions media in ADVENT is.”

“Which I assume amounts to calling us a totalitarian nightmare,” Saudia guessed dryly. “Amusing. But I am not worried about them. Fear mongering only works until the aliens come. France was a warning to the people, and until the EU puts up their own plan, people are going to want to join the ones who are actually doing something about the alien problem.”

“Well, I’m ready to move whenever you give the word,” Stein said. “You said there are plans to end the war in the Middle East?”

“Yes there are,” Saudia nodded, her lips curling into a smile. “Both of you will be coming to the meeting with XCOM. It sounds like they want this war ended as badly as we do.”

Stein actually frowned. “Chancellor, that is more concerning than anything else. I thought XCOM was adamant about not getting involved.”

“So I thought,” Saudia shrugged. “But I suppose they came around.”
Stein narrowed her eyes. “From my few meetings with the Commander, I highly doubt that is the case. The only reason I can think of that they would suddenly be willing to help is if they were scared and know something we don’t.”

Saudia’s smile slowly faded. That had admittedly not crossed her mind. “A fair point.”

Stein shrugged. “Just warning you that I doubt XCOM is making this decision out of the goodness of their hearts or they saw the light or some other crap. The Commander is practical first and foremost. The only reason I can see him doing this is if he genuinely believed he didn’t have a choice.” She paused. “Just be aware of that when talking to them.”

Saudia nodded, wondering how much she should press the Commander for in private. If he really was this worried, it did not sound good for any of them.

***

Switzerland, ADVENT Command

This was going to be interesting.

Saudia brushed back her hair and checked her uniform to make sure everything was in place. She didn’t have the time or inclination to go to Canada, but she was certainly going to be as professional as possible when speaking to the Prime Minister via video conference. Low tech, especially with holographic displays being implemented in most ADVENT command centers, but she could make do.

She suspected that Prime Minister Murphy was not going to be entirely happy to see her, and the feeling was mutual. Nonetheless, they now needed Canada as a practical necessity. The situation had become more serious, and they needed to reassess their decisions. Her options were more limited, and she hoped he could see that.

The screen suddenly flashed and displayed Murphy’s face, and the Prime Minister was wearing his standard political attire, which amounted to a well-pressed suit. She couldn’t really see anything below that, and it didn’t matter. “Prime Minister,” she greeted cordially. “I trust you are well?”

“I am, Chancellor, and I thank you for your concern.” She wondered if he was being mildly sarcastic, though couldn’t tell it in his voice. “I am sorry about recent events. What the American population is dealing with right now is terrible.”

She actually believed he was being sincere here, but only because he had specifically noted the population, not the leadership or even ADVENT. Fit with his psyche profile. “Your concern in appreciated,” she answered, inclining her head. “We are doing our best to assuage the concerns of the public and reassess our strategies.”

“No doubt,” he nodded, and went silent.

There was nothing spoken between them for just over a minute. Saudia finally sighed. “I won’t sugarcoat this, Prime Minister, we both know why we’re speaking. I did not agree with your decision before, but I could work around it. I think we can agree that the situation has changed, has it not?”

“The situation in America has changed,” he answered evenly. “Canada is unaffected, last I checked.”

She carefully kept her face expressionless, though glared daggers into his irritatingly calm face.
“Indeed you are correct,” she said coolly. “The American situation has indeed become more serious. To be blunt, we are losing ground and need a way to halt the alien advance. In the interest of complete and full disclosure, we need Canada now. There is very little choice here.”

“There is always choice,” he answered. “Tell me, Chancellor, do the aliens control territory from border to border? Is there a straight line of aliens that just ends on the Canadian border? If not, then I do not see why allowing you to pass through our borders is necessary.”

He was arguing damn semantics. She would think he was an idiot if she didn’t know that wasn’t the case. The problem was that he was a damn civilian pacifist. “It’s not quite so simple,” she explained. “Of course the aliens don’t have something as simple as a line to prevent us from flanking them. But they do have sensors, they likely have satellites and scouts scanning the immediate area on their front line.”

She paused, thinking how best to illustrate this. “What Canada allows us to do is move large divisions that don’t only strike the aliens from an unexpected angle, but from where they are weak. Imagine, Prime Minister, if the ADVENT army struck Seattle again and began marching south. Suddenly the aliens are at risk of cities between ADVENT and the coast being cut off. They halt their advance, they pull back, and we begin boxing them in. That simply cannot be accomplished by moving within our borders.”

“And I suspect we would then be involved in your war,” Murphy said slowly. “I will also be blunt, Chancellor, I don’t entirely believe you can win. I’ve followed your conflicts. You’ve lost, XCOM has lost. The aliens are more advanced than us. What exactly are you accomplishing by throwing lives away? Let me pose a question to you: If you lose, will the aliens treat you better or worse than if you just surrendered?”

Saudia realized her fists were clenched in white-hot fury at this coward’s blindness. “I will not be responsible for enslaving the Human race to these aliens,” she almost snarled. “If you really believe these aliens will show mercy, you have not been paying attention. You saw the recorded footage from the Sectoid Hive. You saw what they were doing to us. You saw them take Australia. If you want to condemn your people to that fate, then I cannot do anything to dissuade you of that. But I would rather die than live under the thrall of an alien master.”

“You are too emotional,” he said, lips set in a thin line. “It’s going to be worse when you finally lose, and despite that, if you were anyone else, representing anyone else, I would help you. But I will not put my people under the thumb of a different master. I will not subject them to ADVENT willingly. Do I make myself clear, Chancellor?”

“You will not allow us to move within your borders?” She demanded icily.

“No,” he answered flatly. “My answer has not changed, and it will not. I can make it no clearer than that.”

Saudia took a deep breath. “Understand very carefully what you are saying, Prime Minister. By doing this you will stand in opposition to ADVENT protecting humanity. You might be annexed. Do I make myself clear?”

He surprisingly smiled. “No, Chancellor, you will not do anything outside speak empty threats. You are powerless to do anything. You have armies, you have influence, but you only keep it because you put so much effort into convincing people that you are benevolent and the ‘right side’. If you go so far as to annex a country that did nothing more than say ‘no’ to you, then you will be showing the world exactly what you are.”
“And this is what you are, Chancellor. You are a tyrant. You are prideful. You are emotional. You hide all of this from the people, but there can be no hiding such an act, there can be no justifying it in the eyes of the people. Do you really think the world will just accept you? Knowing that you’ll destroy anyone who dares speak against you?”

A pause. “No, Chancellor, they will not. So I do not fear your empty threats Chancellor Vyandar, your words are as hollow as your promises for a better life or hope against the aliens. You can certainly try, but know that you will not only make me a martyr, but the great nation of Canada as well. If that is required to have the world strip you of power…then I accept that. Good day, Chancellor, I wish you good fortune in your war.”

And the screen flashed to an idle setting.

Saudia stood there, both stunned at his audacity and his ignorance.

Yet she couldn’t help but almost admire him in a way. No, respect. He might be the embodiment of ignorance and idiocy when it came to the aliens, but he actually had a spine which is more than she could say for most people.

Unfortunately, he had sealed his fate with that little speech.

By refusing to help, Canada now stood in direct opposition of ADVENT operations that protected the entire Human race, and was eligible for annexation. Prime Minister Jace Murphy was no longer fit to hold office over Canada and the entire legislature was also no longer reliable.

She pulled out her phone and dialed Treduant’s number. “Yes, Chancellor?” She answered after Saudia had waited a minute to connect.

“Have your representative call for a special session in Congress,” she said coldly. “Canada has met the requirements for annexation. I want legislation introduced now.”

Silence on the other end. “I’ll need justifiable evidence.”

“You’ll have it,” Saudia promised. “I will begin gathering the needed authorizations on my end. Bring Iseul, Savvin, and Nowinski on this as well.”

“I’ll start now,” Treduant answered, sadness in her voice. “I wish it hadn’t come to this.”

“As do I,” Saudia said grimly. “But they made their choice. Now they must face the consequences.”

***

Command Chamber, Mars Forward Observation Station

The haptic shield dissipated as the Battlemaster strode into the room that only held one other occupant. Caelior stood in the center of the room, which was displaying a holographic projection of the first battle of Japan captured by one of the Overseer UFOs. Caelior was looking at the recreation of Patricia, her hand extended towards the aliens she was controlling.

“I have been analyzing their tactics here,” Caelior said as he turned his attention to the Battlemaster. “I understand my mistakes. Now the humans will not be able to stop me when I launch our retaliation.”

The Battlemaster gave a single nod. “And you will be accompanying them?”
Caelior raised one hand, palm up. The Battlemaster felt the room begin vibrating, and the metal and glass visibly shook, even his armor became slightly uncomfortable. “I will do more than accompany them,” he stated, venom lacing his voice. “The Humans are inferior and will not be able to stop me. I will crush their cities and splatter their armies. When Japan lies in ruins, I will move to the next country until Humanity submits or dies.”

He had spirit, if nothing else. But there were rules to follow. “Only destroy the cities if needed. We will need some form of shelter to establish our hold. It will delay us to build bases in ruins.”

“The voice of reason as ever, Battlemaster,” Quisilia said cheerfully, walking in with a purring cat in his lower arms. “But I wish you would impose some rule on melodrama.” He glanced over at Caelior, who was staring at Quisilia with unmasked irritation. “Honestly, do you understand how ridiculous you sound?” His voice became a poor imitation of Caelior’s. “’I will crush their skulls beneath my hands and bathe in the blood of my enemies. I will tear them apart limb from limb!’ Please, we’re not savages.”

“Leave,” Caelior hissed. “Or I will turn that little feline into white and red paste.”

Quisilia straightened and reassuringly petted the cat which purred up at him. “I doubt it, Little Storm. If you do, I’ll cut off one of your hands. Maybe two.” He set the cat on the ground, and it trotted out of the room, which amusingly told the Battlemaster that he was mildly concerned Caelior would follow through on his threat. “But I am going to be helpful here. You’re underestimating the Humans. Badly. What exactly are you going to do? Do the exact same thing, except you’ll be down there?”

“I have elevated some aliens to serve as overseers,” Caelior answered. “But my presence alone will-“ He hissed in surprise as Quisilia’s hand flashed and a dagger was suddenly buried in Caelior’s arm.

The blade was suddenly torn out and flew back into Quisilia’s hand, blue blood covering it and beginning to leak down his arm, even as the flesh itself began visibly healing. “This isn’t a game,” Quisilia stated, all humor gone from his voice. “Did you forget Aegis is down there? Do you really think he doesn’t know how to beat you? Kill you? Do you think he somehow hasn’t shared that little bit of information with XCOM?”

Quisilia hissed as he was suddenly telekinetically lifted into the air, Caelior’s lower hand clenched into a fist. “You give these Humans too much credit,” he growled. “Their weapons will not touch me, let alone kill me.”

“Little fool,” Quisilia sighed and Caelior suddenly groaned. Quisilia then dropped to the ground, staring at the Ethereal that had now fallen to one knee. The Battlemaster let him be; Caelior needed some lessons beaten into him, and he’d been coddled for too long. “I don’t suppose you realize that XCOM has lasers, yes? How exactly will you stop those? How exactly are you going to stop someone shooting you in the back? I wounded you from the front and you couldn’t stop me.”

Quisilia knelt down in front of an audibly panting Caelior, and pulled out a smartphone of all things. “Think very carefully before you dismiss what we have to say, Little Storm,” he said, pointing the smartphone at the Ethereal visibly in pain. “And if you ever try that little trick again, I will post this to twitter and make you the laughingstock of the Humans. Stop believing you’re somehow superior. I shouldn’t have to remind you that the Ravaged One died, and Aegis defected.”

Quisilia stood, even as Caelior groaned. “Do you wonder how the Battlemaster is winning so easily? It’s because he takes this seriously. He doesn’t consider every victory an absolute. He respects his enemies, and he certainly doesn’t make childish rants promising bloody vengeance.”
Quisilia put the phone away. “Think about that, Little Storm. The days of your incompetence are over, and if you still fail to learn, I will consider your death a benefit.” With that, Quisilia turned and strode out of the room, leaving a mentally tormented Caelior and silent Battlemaster alone. He considered himself above such displays of terror, but he did find some satisfaction in Quisilia reminding Caelior that he wasn’t invincible.

So while he waited for Caelior to recover, he decided to see what exactly Caelior had planned, and if needed, improve it. He glanced over to see Caelior had still not recovered, and figured that he’d be that way for a while.

Quisilia didn’t give lessons people forgot quickly.

***

Switzerland, ADVENT Command

As far as the Commander knew, this was the first time so many high-ranking and influential members of ADVENT and XCOM had come together to put together a plan of action. He recognized some of them from the brief meeting before Japan was attacked, even if he didn’t know them well outside their positions.

There was Helion Weekes, the Chief of the Lancer Corps. The Commander almost wished he could work for XCOM, since his record was one of the most impressive he’d seen. Saudia had chosen well in picking him for the role. Commander Christiaens and Elizabeth Falka were also here, in addition to Amalda Stein.

That was the leadership of the Lancers, ADVENT Military, ADVENT Intelligence and the Peacekeepers all in one room. And he’d brought along Patricia, Zhang, and Jackson. All of them stood around the holotable, ready to finally begin. “I am assuming everyone is aware of each other, by reputation if nothing else,” Saudia began, looking around the table. “With that in mind, we should begin. Commander, welcome.”

The Commander nodded beside her. “I’m glad we were able to set this up so quickly.”

Laura gave a humorless smile. “Don’t think we can afford not to, Commander. I’m assuming you’ve come to the same conclusion.”

“That I have,” he agreed, glancing at Saudia. “Chancellor, would you like to begin, or should I?”

“You first,” she relented, letting him take the center.

The Commander stepped forward and waited a few seconds before speaking. “The war in the Middle East has gone on long enough. All it is now is a drain on resources until every hostile nation is captured. In light of recent events, I do not think we can afford to drag it out any longer.”

“Agreed,” Weekes nodded. “We’re wasting time and soldiers.”

“Then how would you propose to speed it up?” Laura asked. “There are some things that cannot simply be bypassed.”

The Commander looked to his right. “Zhang?”

His Intelligence Director cleared his throat. “One thing that has become apparent as this war continues is that morale is fading drastically. These nation’s armies don’t want to fight, yet their governments are not going to surrender. ADVENT is solving the problem the wrong way. Yes,
“The solution is simple,” the Commander continued, clasping his hands behind his back. “We execute the governments of these hostile countries. Remove them from the equation. They will not surrender, and they have forfeited that right long ago. They must be eliminated. Not captured, not negotiated with, killed.”

“There will be immediate chaos,” Stein warned after a few seconds, her brow furrowing. “Provided that everything goes according to plan. And what happens if the armies still don’t surrender?”

“Then I suppose you have to kill them,” the Commander sighed. “But I highly doubt that would happen. Men can only fight so long and lose so much before they just stop. If their government is dead, their land captured, what more are they fighting for? How will they rationalize continuing the fight?”

“True,” Elizabeth said, rapping her fingers on the table, glancing up absentmindedly. “We could potentially exploit that. This isn’t even counting the citizens under martial law. With some well-placed propaganda, we can turn them into ultimately welcoming us.”

“I agree with the goal,” Weekes said, inclining his head in a sign of respect. “But it will take some of our best. The Lancers can do it, but it will cost lives, even if we wait for them to be genetically modified.”

“There is no need to worry,” Patricia interrupted, raising a hand and a smile on her face. “You don’t need an army everywhere. Point me towards any government and I will handle the rest. Give us information and we can send an XCOM team to wipe them out. We are willing to commit to this, and you don’t need armies of hundreds, or even dozens. Just one psion is enough for any Human army.”

“That’s…reassuring,” Saudia said after a few seconds. The Commander noted that all of the ADVENT personnel had become much stiffer and deliberately trying not to be affected by remembering that Patricia could read their minds. “I think that we are of one mind on this. We end this war quickly and effectively.”

“I will need to bring over several thousand Peacekeepers at least,” Stein told Saudia. “It’s going to be a nightmare to keep the population under control, especially in the rural cities.”

“Noted,” Saudia nodded, then looked over to Laura. “Commander Christiaens?”

“Necessary, I suppose,” she sighed. “In which case we need to decide on what we’re doing with India and Kazakhstan, right now India wants Pakistan minimum in addition to protection from China, they might ask for Afghanistan as well. Kazakhstan wants to keep Uzbekistan out of the fighting and for us to take them as a member state.”

“I’ll have Hassan handle it,” Saudia said. “He’ll know how much we can push them. But it’s superfluous anyway. Them joining ADVENT is worth quite a lot. With France now with us, it’s only a matter of time before the EU follows suit. And speaking of which…”

She stopped, and looked over at him, her lips in a thin pressed line. “Legislation has been introduced to annex Canada. I will be authorizing it and am in the process of acquiring the needed authorizations.”

The Commander raised an eyebrow. “He still wouldn’t listen to reason?”

Saudia’s lips twitched in amusement. “I’m afraid not. He…dislikes me. He had some choice words
at the end. Enough to convince me that he’s no longer someone who can have any sort of influence in this world. Preparations are being made to deal with the fallout.”

Good riddance. While he would have preferred Saudia refrain from annexing a rather peaceful country, the Prime Minister had brought it down upon himself quite frankly. She’d given him multiple chances and he’d spat on each one, which was intolerable in this day and age. Still, the Commander was somewhat impressed he’d actually had the gall to stand up to who was likely the most powerful woman in the world.

A shame. But Canada would be a massive boost to the war effort, India as well.

China would be furious.

He smiled at the thought.

“There is also something else I would like to make you aware of,” the Commander said after a few seconds. “I have drafted an amendment to the Advent Directive regarding the usage of psionics.”

All of them visibly reacted. Weekes and Laura stiffened in surprise, Stein raised an eyebrow and Saudia blinked rapidly. Elizabeth scratched her head in confusion. “Really?” Saudia finally said. “I didn’t expect it-“

“Neither did I,” he interrupted. “And this isn’t without conditions. As of this point we are working on something we are calling the Manchurian Project. In essence it is a form of mental conditioning that would allow the shutdown of a rogue or dangerous psion. This is something that will be applied to all psions, XCOM and ADVENT, when it is complete. And we will hold the code words for your psions but you will not have the same for ours. This is non-negotiable.”

“Guess you need some kind of power over us,” Elizabeth muttered. “But it’s a lot better than nothing, I’ll admit.”

“A question,” Stein said slowly. “How restrictive is this mental conditioning?”

“The goal is for normal functionality,” the Commander explained. “You should not be even able to tell if someone is under it, unless they act in a way they are specifically not programmed to do, or someone uses their code word.”

“Thank you,” she mused. “I approve. Psions cannot be running around without checks. The risk is too high and I’m glad you can see that.”

“You said it was being worked on,” Weekes recalled. “I suppose you will want some other form of insurance in the meantime?”

“Correct,” the Commander nodded. “Having explosive micro-chips inserted into their heads and providing us with the codes will be an acceptable alternative for now. Although the potential psions must be informed of this beforehand.” The Commander gestured to the side. “In addition, we will provide you will all our current research on Psionics and if requested, training from some of our own.”

He paused, and lowered his voice. “I don’t make this decision lightly. But I don’t believe you will abuse it, and frankly, I don’t think we have much of a choice. Our ability for psionics is one of our few advantages over the aliens. The more who can be awakened, the better. How you go about doing this is up to you.”

“It is appreciated,” Saudia finally said. “Unless there are objections, we will accept with the
conditions.”

He nodded towards Jackson. “Send it over, Central.” He turned back to the holotable. “In the meantime, I think we need to retaliate. We need a victory or to at least blunt the alien attacks. In short, we need to hit where they’re vulnerable.”

“That I agree with,” Weekes stated. “They’ve held that town in Japan for too long. It’s time we destroyed it. The same with America. We need to reestablish supply lines with Portland before we’re forced to pull out. I suppose you could assist us in this?”

“With pleasure,” Patricia nodded. “And we’ve drafted some potential tactics we can used against the Battlemaster. They might not work all the time, but we might be able to catch him off guard.”

Zhang’s eyebrows scrunched together. “You said ‘destroy’ the town in Japan. How? I believe it is surrounded by an energy shield and point-laser defense systems. The only way to take it is to march an army there, and a lot of people will die.”

Weekes pressed several buttons and a prototype unit suddenly came up. This was one of the most heavily armored soldiers that he’d seen. The colors were orange and black, and it held some kind of flamethrower in his hands, with an armored tank strapped to his back. “Dr. Mercado has been attempting to develop a suitable counter to close-range alien units. This is the result of the “Purifier” Project. Quite possibly the most dangerous unit in the entire military. While I’m sure Dr. Mercado would like to refine the final iteration a bit longer, I think the circumstances warrant an acceleration of his timeline. I have seen the unit in action and it will suffice.”

“Really?” The Commander said, trying not to sound too skeptical. “It might be useful in certain situations.”

“I’m afraid you don’t understand,” Weekes said with a smile. “Have you ever heard of chlorine trifluoride?”

“A pool chemical?” Jackson guessed lightly.

Weekes chuckled. “Not quite. But it’s possibly the most dangerous and flammable chemical in the world. It was so dangerous even the Nazis stopped working on it because of how bad the effects were. This chemical can burn through nearly anything, concrete, dirt, metal, aliens. Water only makes it worse. In short, a squad of these soldiers is enough to put some fear into the aliens.”

“Write that down,” he told Jackson, mildly surprised Vahlen had never informed him of the existence of such a chemical. “I stand corrected then. With the correct protection…yes, I think we can work with this very well.”

“And I will also have my agents in Australia perform some liberations of their own,” Zhang interjected. “One of my agents has a contact that is providing essential information. Enough for Harper’s resistance forces to launch an attack. If we coordinate several strikes at once…”

“The aliens will be briefly stunned,” Laura finished. “They’ll be surprised if nothing else.”

“Then I think it’s decided,” the Commander said, looking around. “With that in mind, I see no point in waiting any further. We have drafted some plans of attack, and this should be done in coordination with ADVENT. Should we begin?”

“I think that’s a rhetorical question, Commander,” Laura said with some amusement. “I think we’re all in favor of some retribution. Let’s begin.”
Supplementary Material

The Advent Directive

SECTION 7: ADVENT Peacekeeper Division

Subsection 7.2: Structure

**Overview:** Below are the varying ranks and positions within the following departments. Please note that sections specifically covering a division will only highlight relevant positions exclusive to that division. Generic and standardized breakdowns are in the previous subsection.

**ADVENT Peacekeeper Command:** Holds senior staff for all ADVENT Peacekeeper departments and is the central body for decisions that affect the entire Peacekeeper Division and even ADVENT as a whole. The following positions are as follows:

- Chief of Peacekeeper Operations
- Riot Control Commander
- Chief State Officer
- SSR Orchestrator

**ADVENT Peacekeeper Riot Control and Pacification:** Has responsibility over riot suppression and pacification against hostile civilian populations or violent civil unrest and the ranks are as follows by seniority:

- Regional Commander
- Riot Control Officer
- Riot Control Pacifier

**ADVENT Peacekeeper State Officers:** Has responsibility over enforcing the laws of ADVENT on a day to day basis and performing arrests, investigations, and protection in service of ADVENT citizens. The ranks are as follows by seniority:

- National Chief
- Regional Chief
- Department Chief
- State Officer

**ADVENT Peacekeeper State Special Response (SSR):** Is responsible for performing special operations in service of protecting ADVENT. Terrorism, organized crime and arrests of high-profile criminals are handled by the SSR. Ranks are as follows by seniority:

- SSR Watcher
- SSR Assassin
- SSR Saboteur
- SSR Executor
- SSR Operative

Chapter End Notes
So, War of the Chosen in certainly fun. If I had to guess, I'm probably a little more than halfway through my campaign (Avenger maxed out, beginning plasma weapons/warden armor, killed one Chosen, just did the Blacksite, etc). Although I have a tendency to delay major story missions until I'm sufficiently powered, so I may be further along. Given me plenty of story ideas, some you no doubt noticed here. Although as a general rule, my adaptions are probably going to be a lot more dangerous. One of my Purifiers would kill any XCOM squad if they were idiotic enough to actually let it fire at them.

Anyway, in some brief behind-the-scenes news, I've reorganized how my beta reading is done. I'd previously had it where one person did the main story, the other XCOM Files (Johnclaw Dragonhelm and BloodsplitBOOM respectively), but since both were making corrections, I figured everyone working on the same page was best. I also added another beta reader (Thuzan117) for a total of three. So I think the net result should end up being chapters that are much better than otherwise, this one alone had several spots revised thanks to their feedback.

Next chapter might be a while, all depends on how soon I finish the campaign. Then I've got XCOM Files to do as well, ha. Thanks as always for the feedback and reading. And go get the expansion if you can, it's definitely worth it.
The group consisted of many of the people who had been at the initial private meeting between ADVENT and XCOM, but now they were joined by the various Marshals, Admirals, and Commanders that made up the ADVENT military. The Commander and Commander Christiaens were at the forefront of the semi-large briefing room, facing a small crowd that stood at attention with a holographic projector displaying a blue, glowing map of the Middle East before them.

To his right and Laura’s left stood Patricia and Weekes respectively. The plan had been conceptualized by all of them, and the Commander was confident it would hold up, especially since they had so many tools at their disposal.

But the Middle East was only one part of the offensive, and ironically probably the least dangerous.

The strikes against the aliens held far more danger.

“Welcome and thank you all for arriving on time,” Laura began, stepping forward. “The operation that will be undertaken in the next twenty-four hours will likely be one of the most important, and dangerous, in human history. Myself and Chief Weekes have been closely working with XCOM during this time, as this is one point where we cannot afford mistakes.”

The Commander nodded, and also stepped forward. “The operation we have designated as ‘Deus Vult’ will have two primary objectives, and multiple angles of attack within each objective. The first objective, is the complete subjugation and capture of the Arab nations that stand against ADVENT, and by extension, our survival.”

He began pointing at the holomap. “The targets will be Saudi Arabia, Afghanistan, Turkmenistan, the United Arab Emirates, Yemen, Oman, and Pakistan.” He paused, and noted impressively that there wasn’t any background chatter as he revealed their goal. Given how high-ranking many of these men and women were, they had likely expected something similar.

“Yemen and Oman will likely be final cleanup operations,” Laura continued, nodding to one of the women in the room. “Thanks to the Israeli ADVENT Legion, we control the centers of power and just have to deal with the final military remnants. The other good news is that Kazakhstan and Uzbekistan have been convinced to stand down and assimilate as part of ADVENT.”

“That still leaves us with a few nations to capture,” the Commander warned. “Pakistan, as a nuclear power, is the largest threat to ADVENT. India has been working with us in preparation for our attack. It will have to be handled delicately, and since we know that Pakistan is heavily monitoring the situation thanks to the Intelligence Bureau and ADVENT Intelligence, there is a chance that they will recognize this as a final offensive and feel they are out of options.”

He clasped his hands behind his back. “As a result, Pakistan and their nuclear arsenal must be neutralized as soon as possible. To do that, both the Prime Minister and entire Pakistani Defense Council will need to be taken out in short order, as either one has the capability to order the launch of nuclear missiles.” He paused. “In theory, disrupting the chain of command should be enough to prevent nuclear launches due to supposedly strict protocols. In practice, if either the Prime Minister
or Defense Council feel they are at risk of falling, protocols will mean nothing.” He nodded towards a man raising a hand. “Yes?”

“How will this be accomplished without either of them acting then?” The officer asked. “Multiple strike teams? That would still give them time to react.”

“Yes, it will,” the Commander agreed. “Fortunately, we don’t have to rely on luck.” He waved Patricia forward, who was clad in her dark red Aegis armor, wearing her helmet for good measure.

“Patricia Trask, Head of the XCOM Psionic Division,” she introduced herself. “This is where I come in.” She pointed to the map. “I will be deployed first to Islamabad, where the Prime Minister is currently residing. The Pakistani military does not have any defense against psionics, so they will pose little threat to me. I will capture the Prime Minister, extract the locations and names related to the nuclear arsenal from his mind, and secure their nuclear football, from there we can determine the locations of all nuclear stockpiles.”

She pointed to a different part of the map. “With the locations established, multiple Lancer and Shieldbearer teams will prepare to take out the stockpiles, and I will deploy to Rawalpindi, where the Pakistani military command is. I will then extract as much information as is needed from the command staff, then terminate the entire base.”

“Once Patricia provides us with the relevant codes, we will then use the protocols to order their nuclear submarine, or submarines, to surface,” Laura continued. “And with the ones in command with the authorization to launch the missiles dead, the strikes against the nuclear stockpiles will begin and the Russian ADVENT Legion will march on the prominent cities in Pakistan and Afghanistan.”

“The neutralization of the Pakistani nuclear threat will be the signal to begin the rest of the operation,” the Commander said, motioning to Saudi Arabia. “I will lead the attack on Riyadh, along with one of the Israeli ADVENT Garrisons, while the rest of the Legion secures other points of interest in Saudi Arabia.”

“In the meantime, the majority of the American Legion deployed here will take Turkmenistan,” Laura said. “We will also receive some assistance from Uzbekistan and Kazakhstan in accomplishing this.”

“It should be made clear what our objectives are,” Weekes stated, speaking for the first time. “Let there be no ambiguity: The time for surrender has long past. This is about the complete decimation of the ones opposed to ADVENT. Our goal is to completely annihilate the opposing militaries by any means necessary. We no longer negotiate with enemies of the State. We are not capturing any soldiers, we are killing them. The only surrender that will accepted is soldiers who throw down their arms. Any others you are ordered to execute on sight, this goes for anyone foolish enough to attack you.”

“We will not risk any portion of the leadership of the Middle East surviving,” the Commander nodded. “The governments and leadership are not to be captured, nor is any surrender to be accepted. Those who are tasked with executing the governments will do nothing less. There will be no trial or capture. They are guilty according to the Advent Directive and mercy has long since been removed from consideration.”

Laura gave a slight frown, and glanced briefly at the Commander. “While harsh, that is correct. The only exceptions will be children, who are to be brought into custody. All other officials who are connected to the Pakistani, Afghanistan and Turkmenistan governments, and the Saudi Royal family are to be executed on sight. This doubly applies for the entire military leadership. Is that
understood?"

“Yes, Commander!” All of them shouted instantly.

The corners of the Commander’s lips twitched. It was somewhat amusing how the circle came to a close here. He’d been the one to first weaken these corrupt and problematic nations, and now he was going to finish the job. “Good. That is the first objective of this operation. The second is arguably more important, and far more dangerous: An initial retaliation against the aliens.”

The holomap flashed and it was replaced with an image of the state of Oregon. “There will be three major components to this operation,” he continued. “This first is the reestablishing of supply lines for Portland. The Sargon commanding the alien forces there has surrounded the city and cut off access. The American ADVENT Legion will lead the attack with XCOM support. With Portland secure, we have at least a better chance of repelling the alien advance.”

The holomap flashed to Australia. “XCOM and ADVENT Intelligence are coordinating in Australia to act on information where the aliens have lessened security around Mackay, a city on the coast. Both my agent on the ground and the current leader of the Resistance believe it’s primed for an unexpected strike to get the civilian population free. Transports to evacuate them have been sent to Resistance areas of control, and they are preparing to actually move on the city and evacuate the civilians in an efficient manner.”

“The final strike will be against the lone alien stronghold of Nakashibetsu,” Laura finished. “With XCOM support, we believe that the aliens won’t be able to maintain control of the city and it will give us undisputed, if temporary, control over the entirety of Japan. To accomplish this we will be deploying the new Purifier teams, and our intent is to reduce their fortifications and army to nothing.”

“You’ve been appraised of their volatility,” Weekes reminded them. “But I need to repeat, keep all your soldiers well away from the fire once it starts. The only ones who should be near the units are the XCOM psions protecting them.”

“MDU’s will also be deployed in all appropriate locations,” Laura updated. “Chief of Engineering Feng has cleared them for deployment, and they will provide a much-needed versatility to our forces across the globe.”

“Are there questions?” The Commander asked, looking around.

“What happens if we encounter the Battlemaster?” One officer asked, his brow furrowed in concern. “Portland is near his territory, so to speak.”

The Commander figured it was a fair question. “We have a contingency in that event. However, in the event that any team encounters the Battlemaster or any other Ethereal, you are to pull back and XCOM will assume control of the operation.”

He looked around once more. “Any more questions?”

No one said anything. “In that case, each of you will break into the respective teams for the various assaults. Kilian, Emanuel, Betos, come with me to go over the assault on Saudi Arabia in more detail.”

“The rest of you stay in place while I give each team specific instructions,” Laura continued as the three commanding officers broke off to follow the Commander. “Good luck to everyone, but now it rests on you.”
To the best of her knowledge, this was the first time Abby could remember Harper’s Resistance team actually all meeting in the same place. She’d seen each of them around occasionally, but not in the same place. Now all of them were here, as well as Hari May, the other XCOM Intelligence agent, the Chronicler (still called Lucas by everyone else) and two ADVENT Intelligence agents, Joseph Falka and Illena Desora.

She’d never met any of them before, but she wasn’t exactly thrilled that yet another former EXALT agent was now here.

All of them were standing around the wooden table, a map of Australia laid out on it, where the target of interest was marked in red sharpie and a pin stuck in the center for good measure. “Mackay is our target,” Harper began. “Thanks to a source of Abby’s, we have been able to confirm that the aliens have left themselves vulnerable in the city. Abby?”

*You’d better be right.* She thought towards the Chronicler, given that he was her ‘source’. As helpful as he was being right now, she still didn’t entirely trust him, nor was she comfortable with keeping him a secret from Zhang.

*Don’t worry, agent, I know I am.*

She shivered.

He still did that, and she hated it every time.

“I’ve been able to confirm myself, and Agent May can back me up,” Abby began. “For whatever reason, the aliens have been moving around the majority of their force, with at least some being sent to the larger cities like Sydney and others to the south.”

“It’s not inconceivable that they are also moving some to help secure the other Oceania states,” May added, tapping the map. “They’ve been having trouble with the guerilla forces there as well. We’ve been doing more reconnaissance work, and thus our impact has been minimal, so naturally, the aliens want to move resources to where they’re needed.”

“In the end, the reasons don’t matter,” Abby continued, refocusing on the map. “There are at least one hundred aliens, which are mostly standard Mutons, and a small portion of Runianarch soldiers, likely Vitakarian. Cobrarian if we’re unlucky, but we didn’t see any when we were there.”

“The more accurate estimates are between one-twenty-five and one-fifty,” May added, glancing around the table. “With the majority being Mutons, I think that we have more than enough to defeat them.”

“With the weapons agents Falka and Desora brought us, I agree,” Ahri Colonan, one of Harper’s best guerilla commandos, nodded. “We have more than ten times that number.”

“But our soldiers are not expendable,” Harper pointed out. “From what I’ve seen, the aliens can replenish their numbers easily. We can’t. We still have to be smart about this, but now that we’re getting actual ADVENT support, I agree that it’s definitely feasible now.”

“Always a pleasure,” Joseph noted, inclining his head with a smile. “While drawing attention to the Resistance here is dangerous, the time has come to hit them where it hurts. But remember the goal, which is *not* to take the city.”
“Right,” Harper nodded. “Evacuate the civilians. Your people will be at the designated point.”

“Absolutely,” Joseph assured him. “This is part of one of the largest military operations ever undertaken. It will be done. We just have to kill the aliens first.”

“That can be easily arranged,” Harper said with a smile. “The soldiers are eager to attack, and after we take one city, we’ll take the next until only the major ones are left.”

“Don’t go in arrogant,” Abby cautioned, frowning. “We know they have at least four Andromedons, and possibly higher-ranking aliens that we haven’t seen. Not to mention there may be Zararch agents seeded with the civilians. I wouldn’t put it past them to do that.”

“We’ll have to take that chance,” May shrugged. “We don’t have time to take a blood test of every civilian, and I doubt they’ll attack when surrounded by armed humans.”

“The aliens, like us, prefer to use resources wisely,” the Chronicler spoke for the first time, sounding vaguely amused. “If I had to guess, they have far more important usage of such Zararch agents than to place them in random towns.”

Abby narrowed her eyes.

Assuming he was insinuating what she thought, that was one concern averted.

“What happens if they begin taking hostages?” Ahri asked. “They will call for help, and we can’t afford delays.”

There was silence for a few moments. Abby and May exchanged a look, before she looked back to Harper. “That’s why we have snipers. We can’t exactly stop, because those people will be dead anyway. Hostages shouldn’t affect the plan whatsoever.”

Ahri looked at her, his face inscrutable, but she was fairly certain he disapproved. “You might be willing to do that, agent, but I don’t think the rest of the soldiers will be as willing.”

“That, sir, is why we are here,” Joseph interrupted smoothly. “We understand that some people have issues making decisions like that. Should a situation arise, one of us will take care of it. We’re trained for situations like these, and we will do everything we can to keep the civilians safe…” he shook his head. “That being said, we will not compromise the liberation of one hundred civilians for the sake of ten.”

Abby still despised what this was being reduced to, but he was right. She hated that he was right. “This conflict is one of resources and pawns. Like it or not, that’s what it is. The more civilians we rescue, the weaker the alien hold here is. The more that live, the higher morale is. The more held in cities, the lower the morale. The people we’re trying to free are people, yes, but they are also a crucial resource in this war. And like any resource, sometimes they must be used to achieve a greater result.”

Well said, the Chronicler’s voice in her mind said, very approvingly she noted.

Joseph raised an eyebrow in surprise. “A very practical outlook, Agent Gertrude. And one all of us in this room should understand.”

Harper’s lips were set in a grim line as he stared at her unblinkingly. “I won’t ever reduce the people I swore to protect as mere resources…but I don’t disagree to an extent. Hostages can’t stop this operation. Do what you must if the need arises…but I won’t order my soldiers to do it.”
“You won’t have to,” Joseph promised, tapping the sniper rifle attached to his back. “Like I said, that is our job.”

“Then I’ll tell my soldiers to prepare to move out,” Harper sighed. “Good work, all of you. And good luck in liberating the city. If we win today, this will send a message to the aliens they won’t forget anytime soon.”

Assuming everything went according to plan.

The Chronicler seemed oddly relaxed though, and she wondered exactly what part he planned to play in the conflict. He hadn’t said anything to her, but she knew he had a plan.

He always seemed to have some kind of angle, and since he’d given her this information, she was expecting he was getting something out of it.

_I believe I am getting another city, Agent Gertrude; assisting you in taking it is the least I can do._

_Get out of my head_, she growled in her mind, knowing he probably wouldn’t.

Well, at least that confirmed he was going to help.

Even with ADVENT support, the best in the Resistance, and XCOM and ADVENT agents working together, she believed they’d need all the help they could get.

***

_The Praesidium, Barracks_

Sierra had never seen everyone quite as active as now. This was being called the biggest operation ever undertaken by XCOM, and knowing the full extent of what was going to happen, she could believe it.

She hated that she felt conflicted of all things.

On one hand, she was going to help hit the aliens in America and free Portland from the supply lock the aliens had imposed on them. She was rather feeling up for killing a few dozen aliens. That was a cause she could fight for and feel like she was doing the right thing.

The only issue she had right now was that XCOM was getting involved in the Middle East war, and from the sounds of things, going to end it.

That bothered her.

Not that the war shouldn’t end…but she firmly believed that XCOM should not be interfering in it. It set the wrong precedent. This was ADVENT’s problem, and they should be the ones that fix it. Sure, the Commander probably had some justification, and it was admittedly probably a good one, but now that XCOM was getting involved, what was to stop XCOM now intervening whenever they perceived a country as making the ‘wrong’ decision?

The Commander was being irresponsible here, even though he’d never admit it. He had to know what sort of message this was going to send, and that he’d clearly decided to do it anyway indicated that he either didn’t care, or didn’t understand.

And she knew the Commander wasn’t an idiot.

Not that many people seemed to care one way or the other. The only ones who seemed even
vaguely affected were the ones who had originally come from the Middle East like Jamali and Fakhr, who were wisely staying quiet. At least the Commander was smart enough to send them to fight the aliens and not against their home region.

“You seem less excited than I thought you’d be,” Jona Mattis commented as she walked up. “I agree, for what it’s worth.”

Sierra wasn’t even bothered by the fact that Jona had apparently read her mind, or at least guessed correctly. At this point having telepaths around was just normal. “Not that I’m complaining about shooting aliens, but really, do we need to curb stomp the Middle East as well? It’d be one thing if it was close, but from what I’ve heard ADVENT is just laughing off bullets. This is just overkill, pardon the language.”

“Hmm, I understand,” Jona nodded, as they began walking with the other soldiers to the Hangar. “Although I think that the longer the Middle East is at war, the more people die. The sooner it’s ended the better, I think.”

“Oh, please, this isn’t about the people,” Sierra scowled at the woman’s naivety. “I’ve seen enough of the Commander to know that he doesn’t think like that at all. This is purely about power and resources. More power ADVENT has, the less people exist to question him. The more resources ADVENT has, the better the invasion can be stopped. If you think that he cares about people, you clearly didn’t see him put a damn Illuminati leader in charge of the world.” She paused. “No offense.”

Jona fortunately seemed to find that funny. “True, true, but while I can’t speak for the Commander, that is what I think. So regardless of his reasons, I think it’s the right move.”

“Yeah, sure, I just don’t have the greatest opinion of ADVENT right now, so forgive me for not thinking they have the best interests of the people in mind,” Sierra muttered, as they rounded a corner. She briefly checked her pulse rifle out of habit. “And before you ask why, I’m American. Tell you what, if you really want I’ll rant to you about it later.”

“I don’t think you’ll have many disagreements with me,” Jona said, flipping her helmet in her hands and placing it on her head. “I don’t exactly think ADVENT is quite as flawless as it thinks it is.”

“You can say that again,” Sierra snorted, mimicking her and placing her own helmet on.

“Seriously, the way some of those people speak they think they’re the second coming of Christ, coming to lift the stupid people into a new enlightened age. Pretentious twats. Stein in particular is the worst.”

She could imagine Jona’s eyebrow raising when she spoke. “You really want to punch her in, ah, ‘her smug little face’?”

“Very much so,” Sierra chuckled as they reached the Hangar. “But for today, I’ll settle for punching some aliens. Or better yet, shooting them from a distance.”

“I’ll stick to the back,” Jona added. “Telepathy doesn’t require getting in close.”

“Lucky you,” Sierra said. “But leave some for me.”

“No promises.”

In somewhat clearer spirits, Sierra and the rest of the XCOM soldiers began boarding the skyrangers, ready to exact retribution on the aliens who now believed their army couldn’t be
stopped. Something all of them were looking forward to clearly proving wrong.

***

Japan, Nakashibetsu

“They’re gearing up for a big assault,” Duri noted as a squad of four of the new flame units, or “Purifiers” as they were being referred to, walk by. “It’s only a matter of time now.”

The Purifiers didn’t even look like they were operated by Humans. The armor was much, much bulkier than even the Shieldbearer armor he’d seen, and it looked like every single component had been made out of pure alien alloys. There was a very clear difference in quality. ADVENT armor was good, but he knew it was a mixture of alloys and regular Earth metals, which sometimes gave the armor a plasticy look of all things, even if that clearly wasn’t the case.

Pure alien alloys had none of that. It reflected light like hardened metal. Purifiers looked more armored, and the armor alone was enough to make it stand at least six inches higher than he was in full armor. It even looked like each gauntlet was fully armored, which had to have been extremely resource intensive, even if it was clearly well-designed.

The helmet looked to have been inspired by the Shieldbearer, but even that was taken to a hardened extreme with each of the angles and shapes being even sharper than before. The armor was colored a dull orange with portions of the helmet and armor being painted black. The only symbol or identifying mark was a bright white word on both shoulders, the upper right chest and twice on the tanks attached to the back.

CIF3

The tanks themselves were octagonal tubes, two extremely close together and made out of the same metal as the rest of the suit. They extended the entire length of the back, and even up to nearly half the head itself. Duri assumed it contained the flammable liquid for the flamethrowers they held in their hands.

The flamethrowers themselves were sleek, symmetrical, and nearly as long as a sniper rifle. The barrel progressively got narrower towards the end, and he noticed there was a smaller tube hovering just below the main barrel. A way to add an additional accelerant? A starter flame? He didn’t know enough about flamethrowers to figure it out.

But he noticed that they moved so. Very. Slow. It was somewhat ridiculous, and reminded him of robots, except that he’d seen robots now and they could move at a reasonable speed. These Purifiers just lumbered along, never speeding up. If he didn’t know better, he’d say they were moving deliberately slowly because they could explode at any moment.

If only. No, if something really was that dangerous it was unlikely to actually be used. A shame, it could actually be useful against the aliens then. From what he could tell...he couldn’t see a point to the Purifiers. He supposed it would be nice if they sent Chryssalids or Berserkers, but in general they just seemed too situational to justify the obvious cost that was being spent on them.

And of course ADVENT was low-key hyping them up, with warnings like “Do not ever approach Purifiers in combat” and “Do not attempt to enter areas being attacked by Purifiers”. Someone in ADVENT really feared fire. Not that Duri minded. He would be very sure to steer far away from them if they started working. While the armor would protect him, he figured it was best not to risk it.
“They remind me of machines,” Johan noted, scratching his beard. “Kinda neat, if a little creepy.”

“What a waste of resources,” Cara snorted derisively. “Yes, ADVENT decided we needed a flame unit of all fucking things. How the hell are these guys going to get close enough to cause any damage? Do they have sniper rifle flamethrowers?”

They all chuckled. “Berserkers, maybe?” Kang asked with a shrug. “Or other close range units? I’m just guessing, I feel the usefulness is limited as well.”

“Hold on?” Beatriz narrowed her eyes and pushed herself up from the wall as she watched the Purifier team walk away. “What was that on their armor?”

“Sif-Three?” Duri answered. “Probably a unit number of some kind.”

“Was it Sif-Three or CIF3? Beatriz demanded suddenly.

“It was spelled CIF3,” Duri shrugged. “Does it really matter?”

Beatriz whistled. “What the actual hell, ADVENT? What are you thinking?”

Duri cocked his head, and the rest of them turned to her. “That mean something?” Cara asked.

“I only heard about it a while ago,” Beatriz said slowly. “But if it’s the same thing, no wonder those guys walk around like they’re afraid of exploding. They just might.”

Kang turned directly to her. “Explain?”

Beatriz took a breath. “The short answer is, if I remember correctly, CIF3 stands for Chlorine Trifluoride, and it is possibly the most dangerous chemical on the planet. That stuff can burn through concrete, and then the dirt under the concrete, and still keep burning. There are only like, three, ways to safely contain it, if that.”

“Oh,” Cara said in a small voice. “Well, hopefully they have a water team—“

“No,” Beatriz interrupted. “Water causes it to explode. You can’t put out a CIF3 fire. You can only wait for it to die naturally. The fucking Nazis thought it was too dangerous to use and when the Nazis think that…maybe, just maybe, it might not be a good idea to try it.”

“I stand corrected,” Kang said appreciatively. “Well, maybe these Purifiers will actually be useful then.”

“If they really are using CIF3, then I don’t think ADVENT wants to take the city,” Beatriz said slowly. “I think they want to destroy it. I don’t think even aliens would be able to survive it. If even some of it gets on you, you’re dead and suicide by water might actually be a mercy.”

“I guess we should pay attention to the warning that we should keep our distance from them,” Duri said. “I wish ADVENT would have actually given us this explanation.”

“Keep people from panicking, probably,” Beatriz guessed. “I mean, if just one of those Purifiers exploded, we’re pretty much screwed. It’s going to make them priority targets, but if they actually get close enough to the aliens, they will be the ones who are screwed. I don’t know even if whatever magic armor the Battlemaster has could survive that.”

“The question is getting them close,” Duri said. “Even without knowing what they can do, I don’t think the aliens are going to like a bunch of heavily armed flame units coming across the no-
“If I had to guess, I’d say they have a plan,” Johan said slowly. “It explains why the units are so armored, and why they walk that way. There is no way ADVENT overlooked that particular flaw in the plan. Maybe Shieldbearer tech?”

“Wouldn’t be surprised,” Duri answered, idly flipping his helmet in his hands. “If I were in charge, I’d do whatever was needed to make them as safe as possible.”

Beatriz chuckled. “There is no such thing as a ‘safe’ way to handle CIF3. There are only ways that have less risk.”

Well, the good news was that it seemed like the Purifiers might actually be useful.

But he was going to keep himself and his team as far away from them as possible. Death by fire was not how he wanted to go.

***

Islamabad, Pakistan

On edge, but not worried.

That was the general impression Patricia got from walking down the streets of Islamabad. There was very little urgency and fear. The people seemed to believe that only when they could easily see the enemy approaching, then that was cause to fear. Until then, they saw no reason to not go about their normal day.

She was dressed as inconspicuously as possible, in appropriate civilian clothing which consisted of tan pants, what felt like incredibly flimsy shoes, and a regular desert sweater over a light shirt. At the suggestion of Laura, she was also wearing an open-faced hijab and shawl, for no other purpose but to blend in. It was also entirely possible that the Pakistani government had acquired pictures of her and were telling people to watch for her.

Very unlikely, but possible.

Stifling as it was, it seemed to be working and she persisted towards the House of the Parliament of Pakistan. Not only was the Prime Minister working out of there most days recently, but it was the majority of the legislature in Pakistan. Should they be eliminated, the government would collapse completely, allowing ADVENT to only have to mop up.

She saw it up ahead now, a very blocky and white building to say the least. Not exactly creative architecture, but she believed she could tell where they were going. It was as if someone had taken the United States Capitol, and turned it into squares. There was one slightly taller square in the middle, and on each side were smaller squares with obvious levels.

What was very good was the high military presence. Excellent.

Pakistani soldiers marched in formation around the building, guards were stationed at every checkpoint, and there were even more in front of every entrance. People were being ID’d and escorted out if they failed to have the correct authorization. Paranoid, but they were smart in fearing an attack. There were probably enough soldiers here to defend it for at least thirty minutes against ADVENT.

Which was far too long if they had nuclear weapons.
But speculation was pointless, as reality was going to set in for these people very shortly. By the
time she was finished, everyone in that building would be dead or under her control.

Preferably the former. The mission was very clear.

*Extract the information from the Prime Minister, capture him until operation is complete, and
execute the entirety of Parliament.*

Easy enough.

Four guards had noticed her walking up, and moved to intercept her, visibly preparing to use their
rifles. “اعرض عملك!” One of them demanded harshly.

They stepped back in surprise when they saw her eyes flash a brief purple and tinted energy
manifested around her body, but she took control of their weak minds before they could so much as
speak. All that was needed a brief command: *Stop.*

Impressing that upon them, she took the opportunity to look into their minds, seeing what potential
issues the rest might pose. Images, voices, memories and random thoughts all rushed over her in
seconds, but she was experienced enough at this that she picked out and focused on the information
she needed and stopped the rest with a mental gesture.

*Layout,* she commanded, and she was bombarded with images of them walking the building, the
twists, turns and rooms all coming at her at a speed that would overwhelm a novice telepath, but
she was able to construct a useful recreation in her mind, aside from a few black spots where these
people had no access.

She would have to impress her will a little harder on the soldiers, as many of them didn’t have a
firm grasp of English, even if they understood a few words. Not a problem. Forcing the meaning of
her commands on them would take slightly more time, but she could work with it.

Let’s see…the Prime Minister.

A few mental commands for information about where Prime Minister Rafiq Sangrasi was and…
yes…while there wasn’t an *exact* location, he was definitely here, as the security around him was
always noted by one of these guards. Good enough, and she could work with that.

She opened her eyes and looked at the men staring at her dully, their minds completely in her grip.
“You will pay attention,” she said, the psionic undercurrent present in her voice, further driving her
words and will into their minds. The spoken word was often more effective for getting her
commands across, and she felt them immediately focus everything they had left on her. “In
approximately four hours, you will execute every Parliament member in this building with no
exceptions, as well as any who would protect them. You will also answer only to me, and ignore
my activities unless called upon. Do you understand?”

All nodded. She returned the gesture and released them directly from her control. “Go about your
duties.”

They wandered off, silent and mechanical as she proceeded deeper into the courtyard in front of
the building and walked to a small patch of grass close to the building, knelt on the ground, placed
her hands on her knees, closed her eyes and began her domination of the inhabitants of the building.

There were hundreds of people inside, with two very distinct mindsets from each other. One was
heavily organized, conditioned and protective – soldiers and military personnel, she assumed. That
was fine. The rest were largely more unique, some more busy or slow than others, but they lacked
the strict uniformity found in soldiers.

So first she focused on them, on all the civilians that were here, all the ones who were doing their jobs.

*Everything is normal. Nothing to be concerned about. Go about your business.*

She impressed these words on them until they dominated the thoughts of every civilian in the building, which was easier since many more of them understood English, and thus, the command registered. They might not know why they were thinking these thoughts, or why they were so certain ‘everything was fine’, but they would believe it nonetheless.

Now, for the soldiers.

*Come.*

She repeated that command to all those with the minds of soldiers, who suddenly felt compelled to abandon their posts and go to where she was, the exact location she planted in their minds, even as she tightened her grip on them. They did not understand what was happening to them, and she felt their brief terror before she smothered it and forced compliance.

It might have been an hour later, or perhaps only five minutes, but she eventually felt dozens of minds in close proximity to her own and opened her eyes, her purple-tinted vision showing a small army of soldiers in front of her. All of them stood as still as statues, their eyes sightless as they stood under her thrall.

The landscape was eerily quiet as they all stood waiting. “Now listen…” Patricia began, her voice distorted and low as psionic energy coursed through her, and she gave them the same instructions as she had given the first group of guards. The instant she was done, the spell of silence was broken and they all shuffled away, no conversation taking place.

“You. Stay,” She commanded one of the ranking officers who froze and turned to her. “Escort me to the Prime Minister.”

“Yes, sir,” he said dully. “Follow me.”

She followed the soldier as they finally entered the building, and ignored the civilians and legislators still scurrying around, oblivious to the entirety of their guard temporarily disappearing just as she’d hoped. The soldier escorted her into an elevator and pressed the top floor, and they waited patiently as it took them up.

They stepped out, and he escorted her through the ornate hallway with the red rugs until they arrived in front of double doors, trimmed in white and gold. No doubt where the Prime Minister was stationed. The guards she had affected here were back at their posts, and opened the door at her command.

“Dismissed,” she told them with a wave. “Return to your duties.”

They saluted and she walked into the office of Prime Minister Rafiq Sangrasi. It was well-furnished, with bookcases and expensive chairs and couches lining the room, and sitting at a desk, several aides around him was Rafiq himself. He had fairly light skin, no beard, and a graying head of black hair. Dressed in a simple traditional suit and tie, he didn’t look especially threatening or even intimidating.

He frowned as he noted her approach, and stiffened in outrage as she took the opportunity to
liberate her hair of the hijab, seeing no more need of it. “And just who are you?” He demanded, correctly assuming she only spoke English, and he was fortunately good enough that his accent was easily understandable.

“Patricia Trask,” she answered. “XCOM Psion.”

Fear spiked in him, and his mouth parted in terror. “Impossible! How could you-“

“You man has your version of the nuclear football, yes?” She interrupted, glancing at the man standing in the corner, holding onto a silver briefcase handcuffed to his hand. “You. Come here.”

She easily took control of his mind directly and he walked over mechanically. “ADVENT has grown tired of this war,” Patricia continued, sitting down in a chair opposite him, not feeling it was time to sift through the Prime Minister’s memories quite yet. “Thus, both XCOM and ADVENT agree it is prudent to end it. The problem is that you are, unfortunately, a nuclear power, and we can’t risk you killing millions of people in some form of revenge.”

At a mental commend, the man placed the nuclear football on the table in front of Rafiq. “This is what I need from you, Prime Minister,” Patricia continued, letting the psionic energy alter her voice, and was rewarded by Rafiq squirming in his seat and pushing away. “Your nuclear codes, your procedures, and who knows about them. You will start by unlocking the nuclear football.” At that the man began unlocking it, and opened it to reveal a simple GUI which prompted a code from the Prime Minister.

Rafiq swallowed. “And if I refuse?”

“Then I will take control of your mind, like I’ve done with your soldiers here,” she answered coldly, crossing her legs as if relaxed. “Your cooperation is not needed, but I feel an obligation to give you a choice.”

“And then what?” He suddenly snarled. “You expect me to just surrender to your western empire that has sought our destruction for decades? You would see me humiliate myself? And for what? For my life?”

“No,” Patricia answered. “To preserve the sanctity of your mind. It is something so personal and intimate that it being violated without consent scars people for the rest of their lives, no matter how short they are. You fear that happening to you now, and it can be prevented. I haven’t entered your mind yet, but I would certainly have no issues doing it.” Patricia paused. “That is the only reason. Your government will die today, Prime Minister, as will you, the people in this building, and your military command. If it’s any consolation, the war in Pakistan will be over quickly-“

He spat in her face.

Patricia was still for a moment, then sighed. She could almost admire his defiance, and she did have to admit that there weren’t many upsides to her offer. Fair enough. “I suppose that is a no then,” she said, wiping her face with the back of her hand. “As you wish.”

She extended the opposite hand to him and directly broke into his mind. She felt no need to be gentle as she probed through his memories, ones not even relevant, but she wanted to experiment somewhat here. It wasn’t as if she was pressed for time now, and she wanted to see if she could keep him aware of what she was doing throughout the whole thing.

She parsed through his memories of childhood, early life, intimate moments, the deals he’d made, the secrets he knew, in mere minutes, keeping him independent enough so he knew just what she
was seeing. It probably appeared to him like his life was literally flashing before his eyes, because it was, in a way.

She’d toyed with him enough. His mind was hers, and resistance was futile. “Enter the code,” she said, and he did so. It beeped in acceptance and the GUI switched to show a small map of Pakistan. The language was in Arabic, but she could see several spots she assumed were stockpiles or missiles. There was a colored radius in the Arabian Sea, which she assumed was the general area of the nuclear submarine.

“Thank you,” she said, pulling out her own tablet and entering the codes and information she’d extracted from his mind. She nodded and the aide closed the football and stepped back. “You have been helpful. Walk with me, Prime Minister, we have a plane to catch.”

Cognizant of how he was being controlled, but helpless to stop himself, the Prime Minister rose and followed her out, the nuclear football in her hand. She could feel both his terror and fury, obvious questions blazing in his head.

“You people will be treated fine, provided they follow the law,” she said in the elevator, in response to a question in his mind. “We do not kill people without reason, only those that stand in the way of defending Earth. You should have surrendered long ago, and now you and everyone here will pay the price.”

The elevator opened and they stepped out. “And I wouldn’t be reliant on your military launching a retaliatory strike,” she warned him with a smile as they walked through the ornate halls. “They will not know you are even gone, not until it is too late. That is where I am heading next, and ADVENT and XCOM teams will be moving to the nuclear sites as soon as your military command has fallen. Your country will be given to India afterwards, if you were interested.”

A sense of loathing enveloped him, a hate so strong she had to chuckle. “I don’t blame you for being angry,” she said, with a glance back at him. “I would be too. But the thing is, I know when I am beaten, and your arrogance and stupidity is not something I can sympathize with. If you must hate anyone, hate yourself.”

They stepped outside right on time, the skyranger was waiting with the ramp open and she escorted the Prime Minister onto it, and then mentally commanded himself to strap in. Once they had lifted off, she allowed him to talk. “Do you have anything you want to say? No one can hear you now.”

“Enjoy your life on this Earth,” he spat. “But an evil like you will not last forever. You will be punished one day for your crimes. You will be judged, in this life or the next.”

Patricia raised an eyebrow. “Perhaps, but I somehow doubt it. Your god didn’t intervene during the War on Terror, nor when your holy sites were destroyed, and not at all during this war. Your god is dead, Prime Minister. Or more likely, he never existed in the first place. There will be no afterlife for you, there will be no peace when you are executed. All you will have to look forward to is the void. You will die knowing you failed, and I want you to think of nothing else until that point.”

She added the psionic command to the end of her sentence. “Remember, Prime Minister, that you failed.”

That would be enough to start his mental deterioration, and she had more important things to worry about than the delusions of a dead man. The Pakistani military still needed to be neutralized, and she needed to prepare for that. Hmm…

The ordeal had drained her of quite a bit of energy, and while she was confident she could
complete the mission, no sense in taking chances. She did recall the one trick she’d used when they’d attacked the Mercado Estate, and when she’d drained one of the soldiers of his energy. She glanced at the Prime Minister.

Perhaps he _would_ serve an additional purpose before his death.

It wasn’t as though he’d be contributing to anything else.

***

*Portland, Oregon*

“Deploy!” Creed shouted and the entire XCOM squad charged out into an already heated firefight on the south side of Portland outside the alien-controlled perimeter. Sierra knew there were three major objectives in securing Portland. The aliens had the city nearly surrounded, and had deployed some kind of artillery to cut off any sort of support from the side that was free. The north, south, and west of the city was secured by the aliens, and the Muton-majority forces had somehow constructed fortifications around the city.

Sierra looked around as the ADVENT soldiers charged forward with them. Matthew, Zara and, surprisingly, herself, were leading the charge forward at the foreboding alien structure that seemed to be too well-built for it to have only been constructed mere weeks ago. It was simple, with a single command tower two stories high in the center, and around it were black alloy fortifications and barricades. No walls, but multiple levels of cover until the center.

And they were filled to the brim with Mutons.

Plasma fire flew past them, hitting a good many soldiers who fell screaming as the plasma ate through their armor. “Establish a position!” Creed roared as they all took what cover they could in the woods, on a hill that was just above the Muton stronghold. The Officers around them repeated the orders, pulling back their soldiers while the Engineers rushed through.

“MDUs moving to assist!” One of the Officers shouted at Creed. “Set to reinforce you!”

“Acknowledged!” Creed called. “XCOM! Prepare to move forward! Jona, you ready?”

“Yes, sir!” The telepath answered with a firm nod.

“Sierra, Zara, with me up front!” Creed ordered and they immediately moved to comply as the green camo MDUs came stomping up. “Jim, stay back and take out the bigger targets. I bet we’re going to have Elites and Berserkers showing up soon.”

The lean sniper nodded. “My pleasure.”

“Jamali, Fakhr, Jona, stay behind us,” Creed instructed, hefting his pulse rifle. “We can take the fire. Matthew, you’re also up front.”

“Looking forward to it,” Matthew answered, sounding almost happy. “I’m ready to crush some xenos.”

“Overseer!” One of the Corporals, as designated by their dark green armor, yelled, running up, a few plasma bolts coming uncomfortably close to her head. “I’m coordinating the Grenadier attacks if you need it. I’m also working to establish sniper cover.”

“Have your gunners move up to suppress the worst of it,” Sierra found herself suggesting, as a
cursory glance at the stronghold revealed the Mutons would overwhelm them with plasma otherwise. “The infantry aren’t going to do much good otherwise.”

The Corporal took it in stride. “A good suggestion, I’ll see what I can do.”

“Have your Grenadiers fire on my command,” Matthew suggested. “I can direct their initial volley much more accurately than they can.”

“Understood,” the Corporal nodded. “Good luck down there.”

“Same to you,” Creed said. “Move out!”

And they charged forward down the hill into the hail of plasma below. Jona fell to one knee and extended a hand towards the stronghold, her body sheathed in a light psionic aura. “Fall!”

Sierra watched in fascination as a knot of Mutons just inexplicably fell over, although they moved to rise quickly, but it caused a lull in the constant plasma fire, and that was when the MDUs were sent forth. The bipedal robots wasted no time in opening fire. Lasers struck with pinpoint accuracy against the helmeted Mutons, with repeated volleys killing them instantly.

The remaining plasma fire was suddenly split between the new threat and XCOM bearing down on them. Sierra also fell to one knee and began sniping with her own pulse rifle, sustaining the beam at the head of one Muton. Creed did the same. Zara was pushing forward, using her own plasma rifle to wreak more havoc on their position.

A roar suddenly rang out, and Sierra’s lips hardened into a line. Berserkers.

“Launch!” Matthew commanded, raising a hand, psionic energy surrounding his body. Sierra heard the ADVENT Corporal shouting in the background, and she glanced up to see an entire section of the air above her shimmering, a telekinetic net created by Matthew to catch any projectiles.

“Rocket prepped and ready,” Fakhr updated, the launcher on her shoulder. “Whenever you’re ready, Matthew.”

Six Berserkers suddenly came charging forward and Matthew threw his hand forward. “Now!” The four dozen or so grenades caught by Matthew, and Fakhr’s rocket were suddenly thrown with blinding speed and slammed into the armored Berserker horde with an explosion that lit up the battlefield.

Zara whooped and waved her hand forward, as she was close to the line. “Come on!”

The MDUs were right behind her, and causing almost as much damage as them. The Muton Grenadiers were rushing forward now, along with the soldier reinforcements, and this time they were specifically targeting the merciless machines. Two MDUs went down in a bright explosion, even as the majority of the XCOM team reached the first barricade.

“Silly Mutons,” Matthew chuckled, raising his hands toward the Grenadier line, and slowly squeezing. “Holding grenade launchers is not smart around me.” The entire line suddenly exploded in a bright flash of green as the plasma not only killed them, but vaporized the entire line instantly.

Sierra and Jamali leapt over the first barricade, and charged to the second one as more reinforcements came pouring out, this time with Elites supporting them. While not nearly as impressive as Patricia, Jona was doing her part in smaller ways, muttering words to herself in a trance. *Pain, fire, panic,* and *terror* were all regularly part of her vocabulary, and Sierra noted that there were Mutons that occasionally started roaring in pain, clutching their heads, or just falling
over. Those were quickly picked off by one of the soldiers or the MDUs.

Two more Berserkers suddenly leapt out from behind the Elites, and charged some of the MDUs. One slammed into the machine, clearly damaging its laser weapon, which the machine then tossed aside and started using its metal fists to pummel the Berserker in the face. The alien was clearly surprised, but in a match between a Berserker and machine, the Berserker would eventually win…

…Were it not for the intervention of psionics. Matthew noticed the situation and raised his hands in the direction of the Berserker, and lifted it into the air. The MDU was merciless as it struck with pinpoint accuracy at the designated weak point, which was the helmet, tore off the helmet, then dug its metal hands into the face as quickly and brutally as possible, turning it into unrecognizable pulp and gore, until it ripped what Sierra could only presume was part of its brain out.

And just like a machine, it immediately moved to the next target and began pummeling a surprised Muton soldier into the dirt. Sierra had to remember to send whoever had made them a congratulatory note. It was a beautiful combination of brutality and efficiency.

The Elites were backing up, and beginning to try and reform some semblance of a line with the remaining Muton soldiers. One suddenly turned and began attacking its brethren, and Fakhr took advantage of the distraction by loading another rocket and firing it into the crowd. The Elites staggered under the blast, but were torn between the mind-controlled alien, the MDUs who were circling in, and XCOM.

A cheer behind her caught her attention, and suddenly there were ADVENT soldiers by their side, firing at the remaining Mutons from positions of cover. Sierra grinned; she supposed that they’d done a good enough job to make it safe for ADVENT to actually come and reinforce their position. They were already doing good work.

Half a dozen Mutons were cut down from combined MDU and ADVENT fire, while Matthew was in the process of systematically crushing every limb, bone, and armor plates of a Muton Elite, his body language seeming to take great pleasure in making the alien suffer. A few other Mutons suddenly began freaking out, shooting the air, and stumbling around as if blind. Sierra and Jamali quickly put them down with sustained lasers.

The Muton force that was coming up from the west stronghold a few dozen feet away suddenly stopped, and the Elite suddenly began making motions for the force to retreat, and they quickly backed up, exposed and suddenly under a hail of gauss, laser and plasma from XCOM and ADVENT. An Elite corpse was thrown towards the small army, presumably by Matthew who stepped forward, psionic energy almost turning his form purple.

“You will not run!” He snarled, extending a hand, closing it into a grip and pulling. “Not today!”

The weapons of the front line of Mutons, including the Elites, were ripped from their hands and tossed onto the grass and dirt. Matthew’s other hand was flat to the ground, the air around it distorted and Sierra realized that there was clear distortion pulling down around the legs of the Muton force, meaning he’d effectively anchored them in place.

And so they killed each and every one of them. Not even Muton Elites could withstand the fury of hundreds of gauss rounds and lasers, especially with no means to fight back. Sierra killed Muton after Muton, melting their helmets and heads in short succession. The Elites and Berserkers died more slowly, suffering from dozens of small wounds that bled them dry, while the MDUs systematically targeted and hit the identified weak points.

Sierra now realized why EXALT had given Matthew the designation of a “Fury”. He was giving
Patricia a run for her money. Quite honestly, the only thing that was giving her more satisfaction than slaughtering Mutons was watching that weaponless MDU walk around, and beat the odd Muton into a tan and yellow pulp.

Sierra grinned, and realized that the day was only getting started for them.

Vengeance felt good.

***

Rawalpindi, Pakistan

The teams were ready to move, all that was needed was the neutralization of Pakistani Military command. No longer in civilian attire, Patricia wore her Aegis armor as she marched toward the Joint Staff Headquarters, which was fortunately near the General Headquarters of the Pakistani Army. Subtlety was not a concern as she simply forced the few that got in her way to sleep with a mental command.

Even if most of them started running the opposite way when they saw her.

Her energy and vigor restored, she was ready to close this chapter of history, and wanted it done as quickly as possible. The military checkpoints were coming up, and she simply reached out towards the nearby minds and gave simple commands: *Kill each other.*

She paid no mind to the sound of gunshots ahead of her, and strode through the checkpoint as the guards focused on killing each other. A team of soldiers came running up to see what the commotion was, their own weapons drawn and she froze them in place with a single command. One of them was an officer, so she quickly extracted as much information from his mind as possible, before giving them all the same command as the guards.

And she got an idea.

Why waste time commanding individual groups of soldiers when she could affect *everyone*?

She cocked her head in thought. In theory it was possible, and certainly Ethereals were capable of such feats. Aegis had said Humans were likely capable of replicating at least some of an Ethereal’s power, so why not this? Compared to destroying a planet, it was trivial.

But she would need an additional burst of energy to make it happen. Luckily, there were many sources around. She grasped one of the soldiers by the neck and focused on him, while simultaneously raising a hand in the general direction of the base to direct her power. She closed her eyes, and let the psionic power envelop her.

Then she slowly and deliberately expanded her influence, which she imagined as an arc effect, spreading out and catching minds in its wake like a trap. She knew she wouldn’t be able to give complicated commands, but she didn’t need to. Not yet. Like a parasite or virus, she wormed her way into dozens, then hundreds of minds over the course of at least a half hour.

Every time she felt her concentration wavering, she simply drew some of the focus of the man she had by the throat. She repeated this at least six times, as her control and range grew and the sheer number of images, thoughts, and voices of these people had contorted into a blur and voiceless *noise* in her head that threatened to drive her deaf and blind.

She figured there was no more she could do now. Perhaps the Command staff had been caught in it, perhaps not. Either way this would solve the problem one way or another. The time had come.
She could expand no more, and gave her command.

*Kill.*

She opened her eyes and let her mind contract into her own. She looked down at the man she had by the throat and noted that he had died, with some blood running out of his nose. Hm, so she actually could kill someone like that. Interesting. Not like it mattered as the man would have died today anyway.

At least it had been a useful death.

Machine gun fire sounded further into the base. Yelling and an explosion followed.

She smiled.

The walk through the Pakistani base was a fascinating demonstration of how just one command could reduce a man to little more than a raving beast. It turned out that *kill* wasn’t really specific enough. Some used guns, others used their hands, shovels, boxes, it didn’t matter as long as they had a target. Some of the bodies were so mutilated they would never be identified.

Others had clearly died excruciating deaths, and yet even then they had persisted in trying to kill something. All their faces were contorted in fury, rage and pain. Some of them even tried to attack her in their bloodlust, yet she simply redirected them with a simple mental wave. By the time she reached the Headquarters proper, she realized that her influence hadn’t quite reached here. It had gotten close, but the soldiers here clearly retained their minds, and she could sense their distress at having to gun down their own men.

She put them out of their misery quickly. *Kill yourselves* she sent, and they placed pistols to their heads and pulled the trigger, ending their lives quickly and painlessly. She secured the mind of someone within the base and forced them to open the door for her, then gave them the same command as the guards.

Though before that, she extracted the location of where the Military Command was situated. An underground bunker, that could only be accessed via elevator, and no one here had the codes to get into it. That might be a problem, had she not been able to access minds.

She didn’t need to be in the room to extract the information she seeked.

So she strode down to the elevator, locked of course, and after she had turned every resident in this building against each other, she knelt down and focused on the minds below her. Now she planned to be a little more delicate, since she had some detailed information to extract here. She pulled out her tablet, and accessed the first mind, which happened to be the Chief of Naval Staff.

He was quite a trove of useful information. After a dedicated half hour of stripping his mind of information, she had the means to contact not one, but *two* nuclear subs, and the protocols for them to surface, as well as specific details about the missiles they were carrying. Their general location wasn’t a surprise, but that was irrelevant, and of course the codes required were extracted as well.

The next few minds were not quite as useful, simple military leaders. She now had confirmations on the nuclear stockpiles and missile sites, all of which matched the ones from the nuclear football. Additional codes and protocols were also extracted, including all-clear and stand-down ones, which she figured could be used.

The next mind wasn’t exactly *important* per-se, but interesting nonetheless. He must have been a scientist or engineer, as he knew the complete technical capabilities of Pakistan’s nuclear arsenal,
including bomb sizes, impact radius, bomb yield, time needed to hit, and the maximum range. Yes, very useful, and would help them plan even more exact operations.

She also confirmed that they hadn’t sent any orders, for the simple reason that there clearly hadn’t been any ADVENT activity and this was being seen as an attempted military defection. They clearly wouldn’t risk their country being annihilated because of a military revolt. In the end, it had the same effect and they had ensured their destruction.

She sent all the information to ADVENT and the Commander. Her job was done, and all that was left was cutting off the head. But how to end them? She realized that she could use this time to experiment, maybe attempt to drive all of them to insanity or worse, since she hadn’t quite mastered that aspect yet.

In the end, she decided the simplest way was the best. Much as these people were the enemy, there was no reason to make them suffer unnecessarily. She could save that for the aliens.

*Kill yourselves.*

With the final command sent, she stood and walked back onto the general area of the base and surveyed her handiwork. Hundreds of bodies were sprawled across the airfields and barracks, with the remnants fighting to tear each other apart. Blood ran and stained the concrete, and the corpses were already beginning to fester in the sun.

Above her the skyranger flew overhead, and she made her way to where it was landing, a trail of death and insanity behind her, but it was worth it. Pakistan would no longer pose a threat to ADVENT or XCOM.

With her final command, she had secured the future of the Middle East and ended the final threat they posed.

***

*Nakashibetsu, Japan*

Duri certainly felt somewhat apprehensive as the ADVENT Army marched forward to retake the one alien stronghold in Japan. There had been a few skirmishes, which had been driven back almost instantly as the Andromedons encountered stomped away when they saw the size of the army approaching.

And it was a massive army. Duri had heard that there were at least five thousand soldiers being committed to this mission, which was *not* counting the MDUs that led the front of the line, nor the XCOM psions that also stood before them. Duri realized that as much as he’d heard about the fabled XCOM psions, he hadn’t actually seen one before.

They looked pretty normal, all things considered. Their armor was clearly more advanced and sleeker than ADVENT armor, but they didn’t look any different than regular XCOM soldiers. That was, until the fighting started. A large reason they hadn’t suffered any casualties yet was because they were in constant communication with the commanding officers, and apparently were able to sense where aliens were.

That, and when the aliens *did* appear, they raised their hands and purple shields appeared in front of where the alien weapons were, absorbing the plasma and allowing the aliens to get shredded by the MDUs. Even Andromedons weren’t safe from the laser weapons the bipedal robots wielded, because whoever had programmed them was *smart*, and they targeted specific weak points of the
armor, joints, tubes, and with literal laser-point accuracy, they caused the Andromedons to flee or die by a thousand cuts.

Duri glanced at the one psion leading the other two. Iosif he believed he was called, who was carrying a mace of all things. All of them were almost ripped out of some fantasy story; at times it seemed so bizarre just what was now possible. Plasma, aliens and tech made sense, and he could easily accept that.

Weird purple magic? That was something else entirely.

Still, he was more than happy to accept their help, because they would need it. The army formations were open, but at least the Corporals and Marshals had taken some care into how they were being put together. There were three main groups of soldiers, each group roughly one to two thousand strong. The majority were Officers and their squads, of which he was one of the ones leading in the front.

In the back, and in between each group were transports holding more soldiers, and carrying trailers of artillery pieces to deploy if needed. There were a few tanks leading the convoys, but the majority of vehicles here were mainly for transport and not direct combat, which Duri could understand since the number of vehicles suited for open combat was small, and the MDUs were much more useful in terrain like this, and especially in urban environments.

Around the midpoint between the Officer squads were Purifier teams, Duri believed there were about a hundred Purifiers total, spread throughout the groups. Interspersed within the Officer squads were teams of ADVENT Engineers who were carrying squares of metal that he understood was a new development from ADVENT R&D, actual portable cover.

The specs seemed fairly strong, but Duri wasn’t sure how reliable it would be under sustained fire, and curiously enough, all of the Engineers were armed with Symbiote grenades of all things. Correction: They had some kind of device that could spray that symbiote substance, which looked similar to the med-kits that the medics and XCOM used occasionally. Probably used to patch up weak points. Either way, they were dispersed in such a way where several layers of ADVENT lines could be established within minutes, which was essential in the open field they would be initially be fighting in.

In front of all the groups were the line of MDUs, colored a stark white presumably to get the attention of the aliens, which shouldn’t be a problem as the machines towered over the regular soldiers. And of course, leading the entire army were the XCOM psions.

“Who are the other two?” He asked his team, even as the red of the energy shield surrounding the captured alien city came into view. “The one with the mace is Iosif, I remember that.”

“Dael and Said,” Beatriz answered, the barrel of her sniper rifle resting on her shoulder while she carried it by the stock. “Don’t ask for their last names, I don’t think they ever said. Spooky if you ask me. Who the hell charges into a team of Andromedons?”

“And then bashes their little green heads in?” Cara finished with a chuckled. “Don’t know, but I like these guys. Anyone that crazy is someone I want on my side.”

Johan clicked his teeth. “Still though, why the hell would you use a mace?”

The psion Iosif suddenly raised a fist and the entire Army halted. Before them, Duri saw the alien stronghold in its full glory. All the bordering buildings had been fortified with alien alloys, and
reflected a dull gray. Alien snipers were stationed on the roofs, and before the buildings were three layers of alien barricades, all constructed with Andromedon body sizes in mind.

There were hundreds of Andromedons already behind the barricades, their plasma rifles primed and ready, pointed at the ADVENT army encroaching on them. And in front of them was the massive red energy shield that seemed to cover the entire city. There were poles of various heights he saw buried in the ground, presumably the power sources. Some of the sections of the shield were clear, which was probably to give the Andromedons a window to fire out of.

“Engineers!” Iosif, called out, hooking his mace in a slot on his belt. “Establish defenses at the designated coordinates. You will be protected!” At that, the bodies of the psions were suddenly surrounded in purple energy, and Duri watched in amazement as a purple energy shield materialized before them, small at first, but it grew to fill the entire front of the army.

“Wow,” Cara said.

Duri felt that was an appropriate choice of words, and the Engineers began rushing forward and establishing cover, and the aliens took that as their cue to fire. Green plasma flew towards them, but every single shot was negated by the psionic barrier, and the Engineers worked quickly, protected by the impenetrable barrier.

They set up the black squares, placing them vertically to the ground, and spikes shot into the ground, anchoring it in place initially, then metal panels extended out and interlocked with each other, until a full barrier was firmly established.

“Take positions!” One of the other psions ordered, the one with the Egyptian flag on his collar so that was…Said? Probably. It was more Egyptian than Dael.

“Move up!” Duri ordered and his team charged forward and quickly established themselves, holding their rifles at the ready and waiting for the order to fire.

“Target orders?” Beatriz asked, training her sniper rifle at the aliens. “I can get shots at the Andromedons or I can try to take out one of those generators.”

“Rocket also primed,” Kang stated, his rocket launcher aimed at the barricade. “Ready when you are.”

“Target the Andromedons,” Duri instructed Beatriz. “But don’t fire. I want to see what they’re going to do.”

The ‘plan’ as he’d heard it, was that XCOM was going to protect the Purifiers who were going to get relatively close and burn the aliens. In practice, Duri thought there would be some other plan. Maybe that was the public one, since the aliens likely had spies of their own. There had to be more than that.

“Shield will dissipate!” Iosif called. “Return fire at will!”

The purple barrier vanished almost instantly, and the battle officially began. “Open fire!” Duri ordered, as did every other Officer on the front. Plasma was returned with gauss shots, and the red energy shield flickered as it was bombarded with thousands of projectiles. Duri tried firing at the gaps in the shielding, but soon found that he was too far away for his rifle to be that useful.

But he was going to do his damn hardest to contribute.

Behind him the Engineers were already establishing secondary lines, and the Purifier units were
moving up. The MDUs were holding position, but were firing back as accurate as ever. They were managing to hit the energy generators, but the Battlefield Engineers behind them were replacing and repairing them just as fast.

“Purifiers! Forward!” Iosif shouted, his hands awash in purple energy. The Purifiers lumbered forward, as slow and methodical as ever, and Duri was instantly worried a stray plasma bolt was going to hit one and blow them all up.

But his worrying was needless, as the Purifiers were suddenly enveloped in what he could only describe as a personal psionic shield. It was partially translucent with a purple tint, but Duri could clearly make out the armored figure within it. How the psions were managing to project a shield on every one of the Purifiers was something Duri didn’t feel like questioning at the moment, but the Purifiers soon took the lead.

The psions themselves trailed behind them, their hands extended towards the Purifiers, and similar shields covered their own bodies. Iosif in particular marched forward, a fist encased in energy raised high in the air, while the other held his mace. Once the psions started marching, the MDUs began their own methodical march forward.

The aliens were now noticing the problem, and even if they didn’t know exactly what the Purifiers were, they knew they were probably dangerous. Duri gritted his teeth several times as a plasma bolt sometimes hit a Purifier directly, but the psionic barrier stopped it, and the Purifier kept marching forward unrelenting.

Duri also noticed that some of the Purifier units weren’t exactly the same. Instead of the armor being black and orange, the color was white and orange, and the label painted on their shoulder was oddly enough, the formula for water.

\[ \text{H}_2\text{O} \]

He assumed it stood for something else. However…

The Purifiers stopped at what was probably one hundred or one-fifty feet away, best as he could tell. The white-striped Purifiers stepped forward, raised their weapons and shot out blasts of… water?

Beatriz whistled. “Friend, you are crazy.”

She \textit{had} said that CIF3 reacted violently with water, didn’t she?

The water Purifiers continued spraying down the area in front of the shield, soaking the ground and the fronts of the generators. Then just as quickly, they stopped, and stepped behind the line of main Purifiers who now raised their flamethrowers, starting flames lit and extended far from the barrel.

The command was heard by everyone from Iosif.

\textit{“Light them up!”}

What followed Duri would never forget for the rest of his life. He’d always thought flamethrowers were little short-range weapons that were dangerous, but only if you acted like an idiot about them. Not so here. The idea that flamethrowers were ‘short-range’ was, as he saw now, a complete myth.

Cones of white-hot flame shot across the battlefield and into the shield, and the instant they made contact with the soaked ground, the entire front of the shield exploded in a series of white smoky blasts that initially forced him to look away. When he looked back, the shield was visibly
dissipating, and the Purifiers were moving forward, chemical flames blasting into the alien lines.

The water Purifiers behind them were aiming their water cannons into the air, and firing again, aiming to rain down water directly on the alien position, but Duri already knew it was complete overkill. Interestingly enough, the Andromedon suits were still intact, although on fire, but it was clear that whatever their helmets were made out of was not fireproof.

Duri was fortunate, or unfortunate, enough to see a Purifier fire directly into a pod of Andromedons who were trying to get the fuck away. The initial blast turned their armor black and set the metal on fire, and literally everything else that wasn’t an alien alloy melted or disintegrated into nothing. The green and red helmets of the Andromedons melted like butter and the moment the chemical flames touched the alien within, the suits exploded, leaving only scraps behind.

The ground was burning now, and the fire was spreading into the city as the Purifiers continued shooting white flames into the doomed aliens, and the loud pop of explosions was still heard as water rained down, soaking even more of the city, ticking and innocent time bombs as the fire reached further.

The few non-Andromedons might as well have been wearing nothing when the flames hit. Duri saw a Vitakarian evaporate, boil, or explode, he wasn’t sure which. And there were a group of… other aliens, sectoids maybe, that seemed to disappear the moment the flames covered them. Then there were the aliens that were on fire, and trying frantically to put it out, trying to pat it down, which only resulted in more of them catching on fire, or accidentally committing suicide by trying to douse themselves or others in water.

Cara summed up what most of them were feeling. “Holy shit.”

All of them could only agree, as the Purifiers began to move on to encircle the city, and creating a ring of fire the aliens would not be able to escape from. And ADVENT listened to the screams of their enemy, and watched the fire as it consumed everything in its path.

***

Nuclear Storage Base 2, Pakistan

Roman felt that if he were on the opposite side of the small military base before them, he would be sufficiently terrified. ADVENT had the base completely surrounded, with MDUs encircling the base at all intervals, guarding THAAD and Point-Laser defense systems being rolled into place if the soldiers tried to launch a nuclear missile.

The main bulk of the ADVENT army was at the ‘front’ of the base, where Roman could see at least a few hundred Pakistani soldiers preparing to fight, hunkering behind barricades of boxes and sandbags.

All of them were as good as dead.

XCOM had also deemed to send one of their own to assist, and she was probably the scariest woman he’d ever seen. Ignoring the actual sword she carried, and the massive alloy shotgun, her body language and tone screamed danger to him. She walked as purposefully and emotionlessly as the MDUs around them.

Carmelita, that was her name. Unique to him, which was probably why he remembered it. And she had been pacing back and forth for the past fifteen minutes, the sword held idly in her hand as she was waiting for the order to attack. She reminded him of a tiger, or another animal stalking its prey.
Every single person in there was marked for death, and Roman had the feeling that in a battle with this woman against everyone in the base…his money would be on the woman.

From what Roman could tell of the base itself, it was fairly small and ill-equipped for any kind of sustained attack. There was a main command building, and airfields for planes to take off, and that had actually been the initial response, which was to send up aircraft…which had immediately gotten blown out of the sky by the AA defenses established.

The Pakistani soldiers were looking to put up a good fight, if a fruitless one.

Roman had to admire their bravery in the face of death, but he wasn’t sure if it was bravery or just plain stupidity. Either way, it was time to get started and end this war once and for all.

Maksim looked down the scope of his sniper rifle. “[And so it will end. What a pointless death.]”

Galina shrugged. “[I’m just glad it will be over soon.]”

“[Agreed,]” Anton nodded. “[Past time we join the real war.]”

“Attack at will,” the orders came suddenly, and Roman’s team fell into formation and began slowly marching towards the base. There were six Shieldbearer teams, with even more behind them, and Carmelita led the pack, twirling the sword in her hand with the blade suddenly turned orange, as if red-hot.

“[Shield up,]” Roman stated, as he activated his gear. “[Open fire!]”

Everyone in ADVENT began firing at the opposing soldiers, sending a hail of gauss fire that tore through their flimsy defenses, killing the front line almost immediately, and the few shots in retaliation simply bounced off the armor or his shielding. Carmelita yelled and jumped at least twenty feet toward the back of the Pakistani line and Roman realized he was right to consider her dangerous.

Carmelita killed quickly and brutally. With several swipes she dismembered and decapitated the immediate soldiers around her, grabbed another hapless one and slammed the point of her sword through his skull from under the chin, and then she extended her left hand and…something came out of it.

It was some sort of nightmarish tentacle, which looked more suited for a jellyfish. It was pale and the stinger at the end glistening with some kind of liquid. It impaled itself in the eye of one soldier, and then wrapped itself around the throat of another, and choked him to death while Carmelita swung her free hand holding the sword in a wide arc, slicing open the chests of a few more soldiers.

Roman wasn’t sure if she was a typical representative of XCOM, but if so…no wonder ADVENT liked playing nice with them.

The remaining Pakistani soldiers were running deeper into the base, at this point running from the now-blood covered XCOM soldier who was now sheathing her sword in a slot on her back, and pulling out her shotgun and firing into the backs of retreating soldiers.

Konstantin snorted. “[Did we really need to come?]”

“[I’m wondering that myself,]” Roman commented as he shot two soldiers who were trying to hide behind some wooden crates. “[I guess we know why ADVENT is legally bound to fund XCOM. Can any of us do that?]”
That, which was now referring to Carmelita turning into some kind of leapfrog with a shotgun. He could swear he heard her chuckling as she leapt in front of fleeing soldiers, before unloading shotgun blasts in their chests, or beheading them with her sword. She seemed to be interchanging between them frequently.

“She’s practicing,” Elena noted calmly as she gunned down several soldiers trying to set up a mounted minigun. “This isn’t serious combat for her.”

“No shit,” Galina said sarcastically. “I’d like to see what she does if she is trying.”

“Hey, we need to secure those missiles!” Anton yelled, and pointed to a rack of missiles against a wall. Roman didn’t know if they were nuclear, but they needed to do so anyway.

“Secure them,” he ordered, and they began moving towards that location. The semblance of defense that the Pakistani army had promised had long since dissipated, and now it was simply a matter of hunting down any who didn’t surrender. And by the looks of it, no one had yet.

Maybe not a surprise. You didn’t get sent to guard a secret nuclear site without being sufficiently loyal. Most of these men probably didn’t know their government was abolished, and even if they did, he doubted they would have given up anyway. But in the end, it didn’t matter as he simply shot every enemy soldier he saw, and most of them were powerless to stop them.

The MDUs had entered the premises now, and Roman could now call it a massacre, although that wasn’t fair to ascribe that to this battle now. Because this wasn’t a battle, it was a slaughter and they were the butchers. Roman found himself feeling somewhat disappointed at how... easy it was.

But if it was the last time he had to fight in this damn desert, then it was worth it.

“Missiles secure,” he stated. “Status of the enemy forces?”

“Routed,” came the response. “Another team secured their nuclear arsenal here. I’m getting updates that the same is happening at the other locations. We all did it. The Pakistani threat is neutralized.”

Roman grinned. “That’s good news, sir.”

And now he could relax. At least for a few days until he was sent to fight aliens. But he felt every one of his team deserved some rest. The War for Pakistan was over, and the Middle East would soon fall.

Yes, they’d definitely earned a break.

***

Exterior of Riyadh, Saudi Arabia

Reduced in power as Saudi Arabia had been over the years, they had still managed to construct some impressive buildings. There were few buildings she would consider to be skyscrapers, but they towered over the lesser structures which she supposed were houses, businesses and the few remaining mosques in the world.

But even the tall buildings couldn’t completely hide that the days of Saudi influence had ended. The skyscrapers were dull, sand-blasted and blocky. Remnants of much more intricate designs were spread throughout the city, half-finished or abandoned, either from a lack of money or resources. Riyadh had at one point been considered luxurious, but those days were long past.
Perhaps they would come again, but it would not be from the Saudis. By tomorrow, they would be gone for good.

Marshal Helsa Betos, of one of the Israeli Garrisons, stood before the city, reflecting once more before what would likely be the final battle that took place here.

She was conflicted.

She was not a stranger to practicality or callousness; she would never have chosen a career in the military were it otherwise. Yet there was a point where she had to question just where such a line was. ADVENT Command was right, this war needed to be ended. She doubted any of them disputed that point. Yet the way it was to be ended was…extreme, even within the confines of the Directive.

It was something she had learned very quickly after Israel had joined ADVENT and their military had been restructured to conform to ADVENT standards. ADVENT did not have empathy. Betos genuinely didn’t believe any of those in charge could really fathom why these countries didn’t surrender to them. They couldn’t understand their continued defiance, when it flew in the face of logic and reason.

They didn’t seem to have any recognition that they might not be completely right. Betos agreed that the alien threat was the larger issue, but…again, ADVENT once more took the most extreme measure possible in subduing what they saw as a threat, which given how every Middle Eastern nation that had actually fought them was utterly decimated…she couldn’t see how ADVENT could see them as anything more than an annoyance.

They most certainly were not a threat.

It also didn’t help that many countrymen she knew were treating this war as a means of revenge, vengeance and retribution against the region that had once stood united in its hate for them, a hate that had never really faded. Israel demanded blood, and they were finally carrying out the mission many of them had dreamed of. Palestine had been the first step, and now they were finishing the job.

That, Betos believed, was not why a war should be fought. Nowinski had called it a neutralization of the enemies of Israel, but now it had turned into a campaign of revenge.

One that she was now a part of.

It was eerie how much people could change once rules were removed or lessened. Men and women she’d served with for years had given orders that would have been seen as war crimes before ADVENT, yet were perfectly permissible under the current administration. Words like mercy, surrender and respect had been thrown away in the quest towards total and complete victory. It wasn’t enough for ADVENT to win, they had to crush the enemy to absolutely nothing and salt the earth which they had died on.

Effective perhaps, but it came at a price.

Nothing solidified that she was living in a world where the rules were changed more than her time working with the Commander of XCOM. He was an enigma to her, a mix of contradictions and personalities that didn’t seem to match. On the surface she was immediately attracted to his calm demeanor and clear respect for his subordinates. He didn’t seem to see himself as innately superior to them, and had asked them for input quite often.
Betos could see why he had been put in charge of XCOM, and it helped that he was clearly smart as well.

Yet in direct contrast to his friendly demeanor to his subordinates...he was the embodiment of ADVENT’s military directive. If she didn’t know better, she’d swear he’d written the damn thing himself. It was chilling hearing him calmly describing the plan to execute an entire family, and draw up orders for the execution of all hostile military soldiers.

No one was worth any extra consideration in his eyes. Man or woman, the Commander marked them for death. His one line appeared to be children, but he clearly didn’t think about the effect it would have on the children, seeing their parents getting shot in front of them. It was worse since he had been explicitly clear that no surrender was to be accepted.

His rationale was just as practical as the rest of him. “Facing death reveals the true nature of people. Most will beg for their life in order to save it, regardless of why they are in that situation to begin with. These people have been given the opportunity and refused. Their chances are spent, and their tears will not change their feat.”

What was unnerving to her was that he had a way of presenting his plan as making sense. He operated on pure logic, and because of that, she couldn’t easily refute what he was saying. Morality was not a word in his used vocabulary, and one he seemed to hold some disdain for. The Commander didn’t really care about liberating the people here, or improving the Middle East, he only cared about the negation of a threat.

She recognized that was certainly a major part of strategy...but there had to be some kind of balance. She’d at least tried to treat the captured soldiers and civilians well, and she had the capability to empathize with what they were going through. She had some more perspective on that than most, and tried to apply that in this war.

The Advent Directive itself thankfully allowed for such small mercies, but it was abundantly clear now that the ones who really mattered only cared about the victory, and not the means or what even came after.

That bothered her. Did she really have a place in it then if this is what she could be repeatedly ordered to carry out? How long was it going to be before ADVENT started sending military forces to simply shut down people who peacefully opposed them?

She snorted.

Stein’s appointment suddenly made a lot more sense, now that she thought about it. That psychopath was a perfect fit for what ADVENT wanted, which was a state free of all dissent. At any cost.

“I don’t think the architecture is that interesting,” the familiar voice of her second-in-command stated as he walked up behind her. “I doubt some of it will be standing tomorrow.”

“What better time to memorize it, Mox?” She asked the towering soldier now at her side. “I doubt anyone else will care.”

He crossed his arms, his tone full of disapproval. “You actually sound surprised at that.”

She shrugged. “Maybe I’m too much of an idealist.”

“I don’t think the architecture is that interesting,” the familiar voice of her second-in-command stated as he walked up behind her. “I doubt some of it will be standing tomorrow.”

“What better time to memorize it, Mox?” She asked the towering soldier now at her side. “I doubt anyone else will care.”

He crossed his arms, his tone full of disapproval. “You actually sound surprised at that.”

She shrugged. “Maybe I’m too much of an idealist.”

“I don’t think the architecture is that interesting,” the familiar voice of her second-in-command stated as he walked up behind her. “I doubt some of it will be standing tomorrow.”

“What better time to memorize it, Mox?” She asked the towering soldier now at her side. “I doubt anyone else will care.”

He crossed his arms, his tone full of disapproval. “You actually sound surprised at that.”

She shrugged. “Maybe I’m too much of an idealist.”

“It died when ADVENT took over. We’re now all tools of the
state. I told you what these leaders were like, and you didn’t believe me. It’s changed, hasn’t it?”

She took off her helmet, and let the air wash over her bald scalp. “Maybe you were right,” she admitted. “These people aren’t like us.”

“Which is why you need to resist them,” Mox said grimly, moving around to face her. “At some point you have to make a stand. Do you really believe it’s necessary to kill off the entire Royal Family? Do you really think that all of them are equally influential?”

“Of course not!” She snapped, gritting her teeth. “But what exactly am I supposed to do? Defy a direct order from the Commander of XCOM? Do you even know what kind of man you’re talking about here? He doesn’t see innocence or guilt, only potential threats. And he eliminates threats, Mox. Until you’ve met him, don’t say that speaking against him is a viable option.”

Mox was silent for a few moments. “You’re a good woman. I’ve known that for years. But I’m worried you won’t be one if you keep…doing this. And I’m worried about myself as well. Both of us joined to protect people, and right now it doesn’t feel like we’re doing that.”

“No,” she agreed softly. “It doesn’t. But what other choice do we have? Leave?”

Both of them were silent, until Betos’ wrist chirped an incoming message. She quickly put on her helmet. “Marshal Betos. Status?”

“We’ve got a defector,” came the answer. “Says he’s part of the Royal Family. Appears to be legitimate, he brought his family and personal guard with him. We’ve taken them into custody, and he’s being escorted to the Commander now. He wants you there with him.”

That was unexpected. About time one of the Saudi’s got smart. “I’m on my way,” she said, then clicked off, looking up at Mox. “It appears one of the Royal Family defected. The Commander is going to speak to him now.”

“Really?” He visibly perked up. “Well, get going!”

She took his advice and dashed off at a quick jog, moving through the ADVENT camp where soldiers quickly got out of her way as she marched through the winding paths. The Command Structure was a quickly-constructed building made out of lightweight tiles and walls that snapped together to form a secure shelter stronger than a tent.

There wasn’t much room inside it, but enough for a small holotable and room enough for at least three or four other people. Betos opened the door to see the Commander standing on the far end of the holotable, dressed in his full Aegis armor. The silver gleamed in the light, and his gauss sniper rifle and pulse rifle were hooked to slots on his back. The helmet was resting on the holotable, and the Commander appeared more inquisitive than anything else. No surprise he was in armor, Betos knew he was going to participate in the battle.

The other man did appear to be a wealthy Saudi man. He was dressed in white and gold robes, and the traditional headdress with cloth that fell to his shoulders was affixed with the black band. She knew that particular piece had a name, she just didn’t remember it off the top of her head. His skin was a ruddy tan, and he had a full black beard which was neatly groomed.

“Betos, good, you’re here,” the Commander nodded in her direction. “Now, you may begin.”

“Yes,” the man said, bowing to her as she went and took a place by the Commander. “My name is Maqil bin Abdulaziz Al Saud, of the Royal Family of Saudi Arabia, brother to King Dhul Fiqar Abdulaziz Al Saud.”
The Commander gave a single nod. “Yes, I recognize you now. Surprising, that you’re standing here before me. I would not have expected someone so highly placed to defect at this stage.”

“You must understand, Commander…” He paused, waiting for the Commander to reveal his name.

“’Commander,’ will suffice,” was the answer.

“You must understand, Commander,” Maqil continued. “We are a proud people, we do not see the humiliation of surrender as something to aspire to. Call it arrogance if you wish, but the Royal Family sees this as an unjust war, and the aggressors as people who seek to destroy our culture and way of life.”

The Commander’s face hardened. “If it was an unjust war, we would not be in this situation. You coordinated with other Middle Eastern nations to attack Israel, and now you are paying the price. And I am most certainly here to destroy your culture and way of life. This is not my first time here, Maqil bin Abdulaziz, I have seen your so-called ‘culture’ and ‘way of life’ and it is an oppressive and restrictive monarchy. It has no place in the modern world, and it will be abolished and reconstructed. Change will only come to this region with force, and neither ADVENT nor I are hesitant to bring it about.”

Maqil seemed to not be expecting the rolling anger in the Commander’s voice. “Believe me or not, but my family had nothing to do with the egregious attack on Israel.” He shook his head. “However, I believe that is beside the point now. What is done is done, and I assume within the next few hours you will attack.”

“Yes,” the Commander stated.

“What are you planning to do?” Maqil asked. “What is to be the fate of my family and the citizens just living their lives? I do not ask for mercy for my brother, I suspect you have determined his fate, but I do ask that you treat the citizens and the innocent ones in my family fairly.”

“The extended Saudi family has little to worry about,” the Commander dismissed. “It would be impractical and pointless to hunt down those with very little real power. But the core of the family, they will be executed. No exceptions. The family will die, and it will never rise to power again, and I will not risk letting them live and attempt to influence their subjects from afar. The time for mercy for your family is long past. The civilians will be treated fairly, provided they follow ADVENT’s laws. If they are foolish enough to antagonize the soldiers, they will not be spared.”

Maqil visibly became deflated. “I suppose there is nothing I can do to convince you to simply take them alive?”

“No.” The Commander answered flatly. “They should have surrendered when they had the chance. That chance is gone. Why are you here, Maqil? You had to know your demands were unlikely.”

“First, to secure the lives of my wife and children,” he began. “And second…because I want to help ensure the city is taken as quickly and bloodlessly as possible.”

The Commander raised an eyebrow. “Is that right? How could you possibly help? Our military is far superior to your own.”

“Yes, it is,” Maqil quickly agreed, bobbing his head. “However, taking the city will only be the first step. The people will not respond well initially to a foreign power in charge, no matter your intentions. It will cause…problems, and I have seen how ADVENT responds to dissent, such as in Iran, and I have no wish for that to happen to the population.”
He spread his hands. “However, this can be avoided with my help. I am known to the people. They will react better if one of their own is seen with ADVENT, especially if it is me. Your problems can be easily avoided if you simply install me as a…temporary King, or at least until the population is sufficiently placated.”

Betos almost winced. She genuinely wasn’t sure if this was an opportunistic power grab or a legitimate strategy the man wanted to employ. On the surface, she would agree. The leaders of countries and even regions should reflect their citizens. It would be wrong for the Head of State for Saudi Arabia to be anything other than a Saudi, or at least someone of Arabic ethnicity.

The question was if the Commander would see it that way. As it was, he simply had one eyebrow raised.

“Quite convenient for you,” he commented. “You survive the purge of your family, and in return gain the power of King. As it happens, I do think it would make most sense for a Saudi to eventually preside as the Governor of Riyadh. But I’m not sure it should be you.”

The Commander raised a gauntleted finger at him. “Saudi Arabia will no longer be a sovereign power in the world. It will become a territory under ADVENT control, or might be given to Israel depending on what is negotiated. And concerning your own appointment, ADVENT does not work like that. After the peace is established, ADVENT will hold elections, with approved candidates, and the winner of said elections will preside as Governor of whatever is left of Saudi Arabia.”

The Commander paused. “If you wish to have this position, you must earn it. I don’t know if you are a good leader or not. I don’t know your qualifications. With that said, you have made the right decision siding with us, and I will remember that. The decision of allowing you to run for a government position is not up to me, but if you are sincere about wanting to, then I will personally approve you for Governor application. If you actually have the skills, than I see no problem allowing you to help. Is this acceptable for you?”

Maqil sighed. “I believe it will have to be. Nonetheless, my help is at your disposal, should you need it.”

“Good,” the Commander stated. “In the meantime, we will find a place for you here. The attack will take place in a few hours, and we will not have need of you until the military and political threat your family poses is removed. Be ready to be called upon.”

“Yes, Commander,” he said, bowing. “I will do what I can to assist.”

“Then dismissed,” the Commander stated, and then when Maqil left, he turned to her. “Betos, are the soldiers ready?”

She nodded. “Ready and waiting, Commander.”

“Then give the order,” he stated, reaching for his helmet. “We attack now.”

Betos blinked. “Now? But you told him that—“

“I find it suspicious that he happened to leave the city with no one stopping him,” the Commander said, his voice artificially harder from the helmet. “He seems genuine, at least in his desire to be a more, ah, ‘benevolent ruler’, and to acquire more power for himself. But I would not be surprised if there is one of his entourage that is compromised by the Saudi Family. Not that it matters, but I would prefer to catch them off guard then even give them a few hours to prepare. There is no need to delay, regardless. I think you want this over with as much as I.”
Betos could only nod. “I certainly do, Commander.”

“Then launch the attack,” he stated, walking past her. “Their threat ends today.”

***

*Riyadh, Saudi Arabia*

The perimeter of Riyadh lit up with muzzle flashes as the Saudi soldiers realized that ADVENT was actually attacking. Their bullets were answered with gauss rounds from ADVENT soldiers and lasers from the MDUs that led the front. The Commander fired his own pulse laser, cutting through several Saudi soldiers with ease, and in a few minutes that MDUs had neutralized most of the initial defense line.

Riyadh was a large city, and there was a lot of ground to cover between the Royal Palace and the city perimeter, but the Commander wasn’t exactly pressed for time at the moment. He’d have the MDUs surround the city, and all the major exits were covered in the unlikely event that the Royal Family tried to leave.

The Saudis had declared martial law a while ago, so that was hopefully going to keep the majority of the civilians out of the line of fire, and he sincerely doubted that the military would be stupid enough to use the citizens as human shields or hostages. Perhaps if this was a lesser city, but not the capital of Saudi Arabia itself.

The Commander leapt onto one of the roofs, pulled out his sniper rifle and sighted in on a group of soldiers rushing forward to defend the city. Four gauss shots later all of them were lying on the sandy concrete, dead from headshots, looks of complete surprise on their faces.

Good to see he hadn’t fallen out of practice.

He swept his scope around his immediate area, looking for more soldiers to take out, and helped ADVENT soldiers by taking out their opposition from afar. He really didn’t need to, as the ADVENT military was cutting through the Saudis like a wet piece of paper. Even their heavy equipment like mounted machine guns barely had enough power to even wound ADVENT soldiers.

It was apparent where the Saudis had been hit hardest after he’d executed the King and immediate family the last time he’d been here. No one wanted to deal with them, as the stigma was still too great. The Commander expected that hadn’t been a problem for countries like China, Russia and even the United States to make secret deals, as they still had oil.

Yet all of those countries were operating from clear positions of strength. Saudi Arabia didn’t have a choice if they wanted to make deals. They tended to be old weapons and arms, outdated and flawed weaponry that had been replaced with something better. It showed. Their weapons, armor, and even heavier pieces were irrelevant twenty-year old pieces of junk that the ones who had actually sold them were probably laughing at just how bad the Saudis had been ripped off.

In the end, he wasn’t disappointed the Saudis weren’t providing a challenge to him. He was just finally glad they were being dealt with decisively.

It all came full circle it seemed. Wasn’t that long ago that he was waging another war here. He’d technically won, but he had known he’d not solved the problem completely. The problem would never be solved as long as these countries still existed in these current forms.

He liked to think of this as finishing the job.
Fate had a sense of humor and irony, last time he’d been acting alone without government support. Now he was leading the armies against them.

ADVENT forces had now made major inroads in the city, and the Saudis were in full retreat. He’d been sure to bring the entire Garrison so they could effectively cut off all areas of retreat, and clear the streets systematically and quickly. So he kept going forward, leaping to different roofs as he assisted the various squads of soldiers and took out all opposition in their path.

The Commander quickly fell into a familiar pattern as they methodically advanced through the city. He leapt across the roofs of buildings, fell into position, and took out as many enemies as he could see until the ADVENT forces had pushed far enough that there were no more targets for him, and he leapt forward to the next building to repeat the same thing over again.

He didn’t know how long it took, but eventually, the Royal Palace was in sight, a compound that stood above all the rest of the plain city because it was clearly the most luxurious. The walls were a gleaming tan stone, and had silver trim. The ornate building in the middle had a domed top, many windows and surrounding it was expertly trimmed landscaping and decorative pieces like benches, arches and fountains.

The Commander only shook his head and sighed. Even now the Saudi Royal Family couldn’t let go of their wealth and power, even if it resulted in the rest of the country suffering by comparison. His lips set in a firm line, he systematically eliminated the guards around the palace, even as the ADVENT soldiers surrounded the gates.

Time for him to move in.

He jumped down and made his way over to the entrance where the soldiers had already blasted the gate apart, and were ready and waiting to advance forward. “Remember,” he instructed them. “With the exception of the children, kill all inside. Are there any traps being picked up?”

One of the Engineers shook his head. “No, Commander. Seems to be all clear.”

“No signs of any of them fleeing,” Betos updated, also walking up, her second in command, Pratel Mox, he remembered, close behind. “My soldiers have surrounded the palace and are sweeping the rest of the streets for stragglers.”

The Commander nodded. “Move in. I will deal with the King.”

With the soldiers at his back, the Commander marched forward, his pulse rifle at the ready as they reached the massive white doors leading into the palace. A sustained laser melted the locks, and they stepped inside the palace.

He knew foreigners were rarely allowed in, but the place had changed surprisingly little since the last time he’d been here. The obvious thing that stood out was that the palace was shiny. The stairways, floors and furniture all gleamed as if recently polished. There were some men and women standing in the small ballroom, who froze as they marched inside, and could barely react before they were cut down with gauss rounds.

The Commander knew where the King would be.

The same place where he’d killed the last one.

“There are two basement floors below this, and three above,” he told Betos. “I will go deal with the King now. Divide your soldiers accordingly.”
“Yes, Commander.”

With that he jumped up to the highest floor, which was easily accessible with the open architecture of the palace. He pulled himself over the railing and began walking down the luxurious hallways that were decorated with portraits, rugs, and golden lamps which lit his way.

One man suddenly rounded the corner and yelled in panic before trying to turn around, though not before the Commander telekinetically grasped him with a raised hand, psionic power converging around the prosthetic. He kept walking forward, even as the man struggled against the unrelenting grip. The Commander squeezed his hand and the man’s neck snapped with an audible crack, and the Commander let his body fall, slumping against the wall.

The Saudis didn’t have a ‘throne room’, even they weren’t that obnoxious, but they did have an equivalent of course. It was a grand ballroom, with a single massive table in the middle, under the golden domed top. It was honestly one of the most impressive rooms the Commander had ever seen; a shame it had to be here.

The massive double doors in front of him were closed, but the Commander forced them over with a simple telekinetic gesture and he stepped inside the ballroom. Complete silence met him as he stared across to the table where a man in similar attire to Maqil was seated, and by his side a woman who he presumed was the wife, in a rather pretty white dress, her raven hair expertly styled and falling just below her shoulders.

King Dhul Fiqar Abdulaziz Al Saud simply watched him as he walked forward, his footsteps echoing loudly in the silent room until he was at the opposite end of the polished table. “So, the fabled Commander of XCOM approaches,” King Dhul said, his voice low and rich. “No doubt here to gloat over your victory.”

“I don’t gloat, your majesty,” the Commander said, pulling out his pistol and setting it on the table. “Your soldiers didn’t put up enough of a fight for me to feel particularly good about gloating.”

“Then why are you here then?” He asked, lacing his fingers together. “To ask for my surrender? To take me into custody and parade me before the world? A last final humiliation.”

“No,” the Commander shook his head. “I am here to kill you, and your entire family.”

The King stiffened. “Even ADVENT would not be so monstrous as to do such a thing. You are many things, but you would not stoop to the level of murderers.”

“Executioners,” the Commander corrected. “Murder would imply the death is unjust. If I recall, you were given plenty of time to surrender. Offers were made, and all refused. You had your chance to live, and you refused. You are a threat to ADVENT, and will remain one as long as you live. We have enough problems to deal with without you.”

With that he raised the pistol and shot the woman beside him in the head, killing her instantly. The King bolted up, his fists clenched and face white with fury. “You will not get away with this! You may kill all of us, but your day of reckoning will come. The world will see you for what you are and rise against you.”

The Commander laughed. “That is very similar to what your predecessor said, right before I killed him.”

His eyebrows furrowed. “Impossible. The Commander killed him, and the Commander was executed. His time came, just as yours will.”
“Did it?” The Commander asked, pulling off his helmet with a short hiss. “I’m afraid you are mistaken, your majesty. I didn’t die after I surrendered to the UN.”

He paled even further. “You are dead! You cannot have survived! I watched you die!”

“Yes, I’m sure you did,” the Commander nodded with a smile. “But I’m not exactly a fan of dying, and the whole story of how I’m still alive is long and complicated, suffice to say that there were more people who recognized my worth than who wanted me dead.”

He slumped back into his chair. “Then all I can hope is that the world learns of—”

“No one cares,” the Commander interrupted bluntly. “No one will mourn your death, or the war against this region which has been nothing but problems for decades. Order will be brought here, and before you die, do know that you failed. You will be placed into an unmarked grave, and your name will fade into history.”

The Commander raised his gauss pistol and said the same words he’d said to the previous King. “Pray to your God, and pray he exists, for you will meet him now.”

He fired and blew the head of King Dhul Fiqar Abdulaziz Al Saud apart.

And thus, the battle of Saudi Arabia ended.

***

Mackay, Australia

“Targets in sight,” Joseph said from the foliage where he and Abby were situated, the rest of the Resistance soldiers were waiting in similar areas, and where the Chronicler was, Abby had no idea. So she was here waiting for the order to attack, gauss rifle in hand. Joseph had his sniper rifle at the ready, and was looking through the scope on one knee.

“Which ones?” She asked with some sarcasm, as there were a minimum of twenty aliens in the small town before them. Most were Muton soldiers, guarding the perimeter, with some Vitakara snipers on the roofs of the houses and buildings. No Andromedons, Elites or Berserkers, so that was good. But there had to be some deeper in the town.

“Snipers are the larger threat,” he answered, gesturing slightly with his rifle. “Mutons are stupid, large and brutish. Snipers cause more damage. Shoot the far left one, and go down the line until all of them are corpses.” His tone grew more mocking. “Idiots. They didn’t even bother to try and rig up a good sniper nest, no. They just stand up in the open.”

“Good enough,” Abby shrugged. “Whatever makes it easier for you.”

“Mhmm,” he nodded. “So, what’s your story agent? Call it intuition, but I get the feeling yours is interesting. More so than mine, anyway.”

“I doubt that,” Abby answered, shooting him a frown. “Not all of us were a part of a worldwide global conspiracy, Falka.”

“Ah, yes, I’d forgotten that isn’t exactly normal,” he chuckled. “I’ve sort of stopped thinking about it as anything special. It was just reality for years. So fine, I’m a little interesting. You didn’t answer my question though.”

“Fine,” she relented. “Short version is that I was an XCOM soldier, a medic specifically. Our
Intelligence Director thought I would be a good agent and made me an offer. I accepted, toured the world, shut down a few EXALT cells, ended with my team getting killed by a UN assassin of all things.” She glanced over at him. “I would say sorry for ruining your Russia cell, but I’m not.”

“Interesting,” he said, raising an eyebrow. “I’d never have guessed you were a medic, kinda goes against the stuff you said in the briefing.”

Abby looked back towards the town. “I changed.”

“So I see,” Joseph nodded, lowering his sniper rifle and looking at her. “Color me impressed. Not a lot of people can handle what we have to do in this job, much less people who used to save lives.”

“Depends on your perspective,” Abby said. “How many lives will we save right now?”

“A fair point,” he nodded. “One I happen to agree with. Even if you worked against us, I can respect what you did. Can’t say I wouldn’t have shot you in the head, were we still enemies, but you would have fit in well with us.”

“‘Us’ as in your family? Or EXALT?”

“One and the same,” he clarified. “Or at least it was. We’re all part of ADVENT now. But you have everything needed for a good Falka agent. You’re smart, resourceful, practical, attractive, and adaptable. What more could be useful in an agent?”

Abby flushed unexpectedly. “Cute. That doesn’t work on me, Falka.”

Joseph glanced over at her. “What, because I called you attractive? I wasn’t flirting with you, if that’s what you thought. I read the report on the Russia cell being compromised, and given some of the tactics used, I’d think you know more than most how fallible we are to our own mortal needs.” He finished with a smile.

Abby wished her mind hadn’t immediately jumped to that assumption. “Right, sorry.”

“Trust me,” Joseph chuckled. “I would be a lot more charming if I wanted to flirt with you.”

“And I would probably punch you.”

He was still amused. “Fair enough.”

“My turn,” Abby said. “What’s it like growing up in the Illuminati fan club?”

“And just where do you think that concept came from?” He asked knowingly. “EXALT didn’t always have its name. But your question is a good one, and I rarely get the privilege of talking to people who didn’t already know it. My family was a little different than most, and even in the family, my training was very different.”

“How so?”

He pinched his forehead. “Let’s see…alright, you have to understand what the goal of the Falka family was. Many times, members of the family are just…ordinary people. They have jobs, families, friends. But they really are spies. They spend their lives as sleeper agents of a sort, and they are effectively the reason why EXALT had such a reach around the world.”

It made Abby’s brain hurt just trying to grasp the scale of such an operation. The concept wasn’t so alien, but the fact that someone had actually done it was…disconcerting. It was enough to make
someone paranoid, as there really were spies all around. “Of course, they aren’t all Falka agents,” he clarified. “But most were. Then there were the dedicated “Intelligence” organs of the family, and that is what I was a part of. Specifically, I was identified as a good candidate for long-term undercover operations.”

“What made you stand out?” She asked.

“The first thing Falka children are taught, regardless of where they’re born, is how to lie,” he explained. “For obvious reasons, we can’t have children being a weak link. Kids tend to accidentally say stuff they shouldn’t. We teach them to lie instead. As it happened, I was very good at lying. Well, for a ten-year-old I guess.”

Abby was very glad she had never heard details of this family before. Every other family at least seemed somewhat…understandable, from what she knew of them. But this was just bizarre and creepy. Kids shouldn’t be able to do that kind of stuff, especially not being taught to do it. “So I pretty much spent my life training how to blend in and kill,” Joseph continued. “I might have had a good, successful career as an agent. Sadly, or perhaps not, the aliens threw a wrench into that plan. This is technically my first assignment.”

“Oh?” Abby raised an eyebrow, her lips twitching. “Not exactly what you were training for, is it?”

“Not really,” he admitted. “But I’m not going to complain about killing some aliens.”

“So,” Abby said, now openly amused. “Does this mean I technically have more experience than you? At least as an intelligence agent.”

“Perhaps if we want to get technical,” he admitted, apparently taking an interest in his sniper rifle again.

Abby kept her amusement to herself, and looked back over the town. If you’re finished with chatting up your partner, I do believe we’ve got a town to liberate.

And just like that, her good mood dissipated. I thought I told you to get the hell out of my head. Then try to a little more to keep your emotions in check. Every psion in this area can probably sense you. Who knew your secret was to comment on your looks?

Abby internally rolled her eyes. Do this again and I’ll report you to Zhang. Anyway, you ready?

Yes, yes. I believe the command will be given in the next few seconds.

Sure enough, a voice came on her earpiece. “Begin the attack.”

Joseph fired, and one of the snipers fell. All the aliens froze, and that gave him time to shoot several more in their heads, before they finally got wise and abandoned the roofs to get some real cover. With a yell the Resistance soldiers emerged from their ambush points, firing their gauss rifles at the unprepared alien horde.

Abby herself hefted her rifle and charged forward, feeling like she’d had a good night’s sleep and was fully energized and ready for battle. Two more Mutons fell to the ground from headshots, and all the aliens seemed to be reacting much slower than usual. They shuffled towards the buildings for cover, haphazardly as if drunk, and their return fire was wildly inaccurate, as opposed to the Resistance soldiers, who were seeming to hit everything with pinpoint accuracy.

Herself and the Resistance soldiers charged into the town, several beginning to knock on doors and
get the civilians themselves out, while the vanguard kept charging forward deeper into the city. Abby wasn’t sure why she was feeling like this, but everything for her seemed focused and clear. Her mind was fully directed on the task at hand, and it was as if all her senses and reflexes were enhanced.

She could swear she heard the hiss of a plasma rifle charging and managed to pull the soldier in front of her back just as a lance of green plasma shot past. They turned to see one of three Andromedons lower his rifle, and order the other Mutons around him to open fire, as well as the other Andromedons behind him.

“Cover!” One of the soldiers shouted, and all of them slid into cover behind boxes, crates, pillars and houses. Abby swung out, aimed her rifle at one of the Mutons and sighted in in what felt like milliseconds before pulling the trigger and seeing the gauss rounds tear the unprotected flesh apart with a golden spurt of blood.

The Andromedons realized that something was wrong with how accurate these Humans were, and they themselves seemed to be affected as well, moving slower and reacting too late as gauss rounds hit their torsos and helmets. One had its helmet cracked, and the other two were leaking fluids. One of the Andromedons raised a fist towards them, and several green projectiles shot out.

“Acid!” Abby warned. “Get down!”

Most heeded her warning, but there were a few that screamed as the green chemical hit them and began eating through their padding and skin. Abby hissed as a new surge of energy swept through her and she swung out with her rifle again, and somehow knew each major weak point of the Andromedon before her, and somehow managed to shoot a gauss round at each one within seconds.

She hadn’t been alone in the sudden increase in marksmanship, every other remaining soldier was affected as well, and the results were instantaneous. One of the masks of the Andromedons burst open, and the alien inside let out a shriek of agony before going silent. One Andromedon fell to the ground, joints on the armor ripped apart from sustained fire. The tank that was on the back of the last Andromedon exploded, and blew the top part of the helmet open, also killing the alien inside instantly.

The Resistance soldiers quickly pulled out grenades and threw them towards the damaged Andromedons, each one a perfect throw that landed in the cockpits of the suits themselves, frying the control systems before the AI could take over. Half a dozen soldiers sustained fire on the downed Andromedon, even as it crawled towards them, its legs destroyed.

But eventually the helmet broke, a grenade was tossed, and it crawled no longer.

There was silence, even as adrenaline pumped through her body.

What the hell was that?

She’d never felt like that, not at all during her time as a soldier, or anytime else for that matter. It had to have been the Chronicler. But even then she wasn’t sure. She’d heard some of the soldiers describe what it was like to be under the influence of Patricia, but this seemed far more intense and effective than what she’d been told.

She clicked her earpiece. “What’s the status of the teams? Casualties?”

The man on the other end actually sounded stunned. “Status is…ah, good, we did it. Teams are
getting the civilians out now. We barely took any casualties. The aliens were seriously not expecting us. I’m wondering if these were a defective batch.”

She breathed a sigh of relief, and looked around as if she expected the Chronicler to appear out of nowhere. She hadn’t been sure what to expect but…he’d turned a small guerilla army of Humans with gauss weapons into a force capable to taking an alien-controlled town with almost no casualties.

Abby almost wondered if he could match Patricia in simple power.

*Depends on the circumstances, Agent Gertrude, Patricia is powerful in her own right, but she does not understand subtlety like I do.*

Abby wasn’t even particularly mad at him entering her mind again. *I don’t suppose you could do that again?*

She could swear she heard him laughing in her mind. *Of course, Agent Gertrude. We both want the aliens off this world, after all.*

Abby found herself nodding along. If for no other reason than she didn’t want to antagonize him. Anyone this powerful had to be treated carefully. Doubly so if they could read your mind. She just hoped he wasn’t paying attention all the time.

***

*Kabul, Afghanistan*

When Oliver had joined up with XCOM, he had been expecting to fight aliens.

Clearly, that was no longer the case. And it made him uncomfortable.

He knew full well that the Middle East was, to be diplomatic, a mess. It needed to be reformed; it needed to be changed. But it seemed like the people in charge had a fundamental misunderstanding of how the best way to go about doing that would be. Oliver didn’t consider himself a diplomat, but he was certain that pretty much any plan that he came up with was better than…*this.*

Far as he understood, this had originally been retribution from Israel in response to several Middle Eastern nations being linked to the assassination of many in their government. Assuming that the Israelis weren’t lying, it was far past the point of retribution regardless. This was now ADVENT deciding to get rid of the problem once and for all.

Except that wouldn’t solve the fucking problem.

The thing no one in ADVENT seemed to understand, or the Commander for that matter, was that the people weren’t at fault here. The only ones at fault were the government, and yes, they should face some kind of punishment. But in reality, ADVENT was making no distinction between the two. Everyone was a potential enemy and Oliver knew that was only going to fester if ADVENT didn’t change their act right now.

Yes, the citizens were going to be furious at them, what a fucking shock. Who could have guessed they’d be angry and afraid of the people *literally* invading their country.
Then there was the matter of this little mission, and for that matter, the extreme response against the militaries and leading government. The thing was, Oliver didn’t necessarily disagree with it. To be completely honest, he had very little sympathy for the governments at this point. Yes, the war might be unfair; yes, it would be temporarily humiliating. But it did show him just how little they actually cared about their citizens.

Good leaders knew when they were defeated, and would surrender to protect their people. ADVENT, for all its faults, would honor deals. But since they hadn’t surrendered, they were going to come down hard, and it was the people who were going to suffer. Ironic that the leaders who had brought this on themselves would be granted a relatively quick death, while the ones that lived would have to suffer under increased scrutiny for months.

Still, he wouldn’t have personally killed the leaders. It wasn’t as though they would pose a threat. But he could understand why ADVENT was done with them.

He looked around the skyranger at the XCOM team preparing to deploy. Most of them were newer recruits like him, with only a few who he knew were veterans. The Templar Chan was acting as the squad overseer, his Zweihander resting on his lap. The only other psions were Allison, who specialized in defense, although how much that would be needed was unknown, and Fatima, a telepath and one of the so-called “Furies”.

Such charming names XCOM had for these people.

It spoke to ADVENT and XCOM’s confidence that this mission only required a single XCOM squad and Lancer Team. Oliver hadn’t heard of them before, but now knew they were essentially ADVENT’s Special Forces. And, according to Antia, one of the Americans in the squad, the Lancers were all as genetically modified as much as some XCOM soldiers.

They weren’t given a choice it seemed.

“Heads up,” Burning Sky informed them. “Coming in for a landing. Looks like the Lancers have made their entrance.”

Saar Aaron whistled, her voice almost excited. “Not wasting time, are they?”

“Everyone up!” Chan ordered, standing up and moving to the skyranger exit, even as the aircraft dipped. “Our orders are clear: Assist the Lancers in taking the capital, and execute the ruling government. No prisoners. Clear?”

“Yes, Overseer!” Was the affirmative.

Chan raised his Zweihander as the ramp descended. “Then deploy!”

All of them charged out into the sandy outskirts of the city. Burning Sky had been right, the Lancers had cleaned up nicely and Oliver got his first good look at them.

He recognized the armor design; it was from an Israeli prototype that had appeared a while ago. The armor itself had clearly been inspired by generation-2 XCOM armor, or whatever the design had been called before the Aegis iteration, but the helmet had a domed top, and was oddly reflective, with no visible place where the eyes or nose should go.

The other thing about the armor was that it was completely pitch black. No identifying marks or badges were on the armor, and the interesting thing was that many of these soldiers weren’t carrying guns. Some were carrying melee weapons; longswords, maces, and some of those Peacekeeper stun batons, set to lethal mode.
Someone had clearly been inspired by the Templars.

Even their weapons were pitch-black. It was strange seeing swords and other medieval weapons with shining black blades, and laser weapons that didn’t give any indication what they were. Several carried gauss rifles, but Oliver could see more were using pulse laser weapons.

And they were currently in the process of slaughtering the Afghan soldiers guarding the city outside. They were laughing off bullets, and cutting and shooting through them like they were toys. One Lancer cut through three soldiers with her sword within a few seconds, finishing each one off with a stab to the heart.

Two more Lancers were carving a group of six soldiers to pieces with their laser rifles, dismembering and decapitating at will. It was morbidly fascinating and efficient to watch. Fatima extended a hand as she walked, twisted her palm until it was facing the sky and closed it into a fist. The remaining soldiers suddenly clutched their ears as if they heard some loud noise.

All of them were quickly finished off by the Lancers.

Oliver did a quick count: There were twelve Lancers, and there were at least sixty Afghan soldiers lying dead on the sand. One of the Lancers, holding a laser rifle, walked up. “Welcome to the party, XCOM.”

“A pleasure,” Chan answered, resting the blade of his sword against his shoulder. “Although you could have saved some for us. Not fair if you have all the fun.”

“Trust me,” the man jabbed a thumb in the direction of the city. “There’s plenty more where they came from. I’ve got a few more teams pushing at them from other entrances. We actually caught a group of officials trying to sneak out earlier. A few less to deal with now.”

“No attempts of surrender?” Fatima asked curiously.

“None so far,” he confirmed. “Not really surprising. Not sure how many of these guys speak English. Anyway, ready to get going?”

“When you are,” Chan nodded.

“Overseer, if I may make a suggestion?” Fatima interrupted, raising a hand. At his nod, she continued. “If it makes it easier, I will remain out here and concentrate. I will be more effective utilizing my abilities here than in the field.”

The Lancer cocked his helmet at her. “Who are you?”

“Fatima,” she answered. “XCOM Psion, telepath.”

“Ah,” he nodded. “Up to you, Overseer, but I’m inclined to agree with her. A telepath is a damn powerful asset to have here.”

“Then do it,” Chan instructed. “Everyone else, let’s move in!”

And with that, the team of XCOM and Lancer forces entered the city. Oliver could definitely tell already that this was not exactly a prosperous nation. The houses were old, chipped and falling apart, and he glimpsed some moving shapes inside through broken windows. Good, the civilians needed to stay out of this.

They rounded a corner and suddenly found themselves facing a small Afghan army of at least
thirty soldiers, all in cover and even manning some mounted guns. At a shout all of them opened fire, and the rattling of machine-gun fire drowned out everything else.

The Lancers responded by charging forward, Chan leading the charge, now flaring with psionic energy; purple flames encircling his Zweihander. The rest of the soldiers fell to one knee or ducked into cover and returned fire. A purple shield was thrown up between them and the Afghan soldiers, clearly from Allison whose raised hand was wreathed in energy, which dissipated when she dissolved the shield once they were in position.

By the time Oliver had even lined up a shot, the Lancers and Chan had pretty much destroyed the opposing soldiers. They were woefully unprepared for attacks at close range and suffered getting their limbs chopped off or skulls bashed in from the Lancers and Templar. One screamed in agony as one Lancer stabbed him with a lethal stun baton, and two didn’t have any time to react as Chan decapitated them with a single swipe of his Zweihander.

“This is completely ridiculous,” Min-Su Song, another newer soldier muttered. “At least they could try and put up a fight.”

Oliver didn’t know if that was something they should be hoping for, but it was laughable how utterly invincible they were here. China was going to be more freaked out than they probably already were once word got to them of what had happened.

With the soldiers dead, the Lancers and XCOM advanced deeper into the city, and Fatima made her presence known via each soldier they came across. They were curled up on the ground, clutching their ears, muttering to themselves or screaming as the case went. All of them were executed with single shots to the head.

Oliver found it surreal walking through streets of soldiers just lying on the ground, driven down by such pain and misery that wouldn’t end. He shivered. What those psions could do now scared him. They were people, but they weren’t like other Humans. No one who could do something like this was normal.

It was a good thing she was on their side.

“Like shooting fish in a barrel,” Saar muttered to herself. “Good job Fatima.”

Up ahead was the Presidential Palace, the home to the current President and staff. The National Assembly was where the legislature was, and Oliver knew the other Lancer teams were converging on that specific location. Although at this time, he would expect any legislators to be in their homes or trying to flee.

He wished them good luck.

The guards were similarly debilitated, and were executed quickly. Oliver wondered if everyone inside was similarly affected, and the moment they entered the Palace itself, he got his answer. There were people strewn all around, men and women of all classes and positions lying on the ground, crying, gasping and yelling in their language, likely begging for some release from the torment.

Chills ran up his spine as he listened to the voices, not needing to comprehend the words to understand what they wanted. At a gesture from Chan, XCOM opened fire on those on the ground, bringing them some final solace.

Then they proceeded upward, and did the same to any they came across. The Lancers refrained
from overly painful deaths with their melee weapons, but did pull out pistols and execute all those they came across. All of them were silent as they carried out the grim task of execution. Even Saar and Min-Su, who’d complained about it being too easy, were quiet as they shot what essentially amounted to defenseless people.

Each room they swept, each floor cleared. Oliver didn’t even know if they’d actually killed the President yet. He wasn’t sure he would stand out from the other bodies, and in the end, it didn’t matter much.

Everyone in the building was going to die, and Oliver didn’t quite care anymore if one got out alive. If ADVENT wanted to make a statement, they had made it today. None of them would forget this day for the rest of their lives.

And briefly, very briefly, as they shot helpless men and women alike, Oliver wondered not if he was doing the right thing, but if he was on the right side.

This was nothing compared to the aliens, surely. But there had to be a better way to unite humanity than this.

***

Bolivia Peacekeeper Outpost

“Celebration?”

Jaylin looked up at Leon bringing her a glass filled with some kind of drink. “For what?” She asked. “And more importantly, what is that?”

He took a sip from his own glass. “This, Jaylin, is the local alcoholic beverage. I don’t remember the name, but it is exquisite. We’re off-duty now, so why not?”

She smirked and took the glass. “And what’s the occasion?”

“Well, essentially, the ‘war’, if would could call it that, is essentially over,” Leon explained satisfactorily. “So pretty much, we did our job, and we’ll probably be moved somewhere else. Not much use for Riot Control in a docile population.”

“Huh,” Jaylin said, taking a tentative sip from that glass. It was…interesting for sure. She didn’t usually drink unfamiliar beverages, but this wasn’t bad. Very tangy. “The people here were certainly subdued easily.”

“That’s if you buy the main story,” Leon amended knowingly. “I’m guessing it’s more of a propaganda thing than anything else. People here are still angry, but they aren’t going to do anything stupid, hopefully. They’ll calm down once some kind of normalcy has been restored. Now that Brazil has control of these countries, it should help normalize things.”

“Hopefully,” Jaylin nodded, taking another sip. “I’m just wondering where we’ll get sent next.”

“The goddamn Middle East,” Samantha interrupted, marching over without introduction, a different drink in her own hand. “You guys blind or something?”

Jaylin didn’t take offense. Samantha had a very…abrasive personality, and didn’t always mean the insults she said. Or at least meant them in sort of an endearing way. Leon seemed to find it funny. “Well, considering we’ve been on guard the past six hours, no,” he answered with a grin. “So do enlighten us, since you clearly want to.”
“Stop treating this as a joke,” she almost snarled. “ADVENT just wiped out the governments of Saudi Arabia, Afghanistan and Pakistan at once. And they took back that city in Japan using some kind of soldiers from Hell, and reestablished lines with Portland.”

Leon almost spat his drink out. “The fuck?!?”

Jaylin was equally stunned. “How? How did they do that at the same time?”

“I don’t fucking know!” Samantha answered, exasperated. “But XCOM was involved. My guess is that they told ADVENT that the war was wasting time and to end it. Word is that they were heavily involved.”

“Back up,” Leon said, raising a hand. “What was that about ‘soldiers from hell’?”

Samantha took a long drink, and set it down at the table with a thud. “Well! Apparently these new hell soldiers have flamethrowers that shoot fire hot enough to melt Andromedons. ADVENT calls them ‘Purifiers’, like this is some kind of witch hunt.”

Jaylin wondered just how tipsy Samantha was right now. “Sure, Samantha,” she placated. “Perhaps it melted the buildings they were in as well.” It sounded just as plausible. As nice as something like that would be, she was pretty sure Samantha had misread something, which in her state, didn’t really mean much.

“Oh, I think it actually did,” she clarified, her eyes widening. “Some of the footage released is amazing.”

“Perhaps we should go back to the fact that ADVENT just ended the war with the Middle East,” Jaylin redirected. “That’s going to seriously improve the war effort.”

“And our jobs are going to be so much fun,” Leon said sarcastically. “I have a feeling terrorism is going to make a comeback. Somehow I don’t think the people are going to be happy to see us.”

“Well, too bad,” Samantha quipped. “About time someone brought some actual order to that place. Maybe with the governments dead, some progress can actually be made.”

“Man, people are going to be shocked,” Leon said in an exaggerated voice. “Women driving in Saudi Arabia? Can you imagine such a thing?”

They all shared a laugh at that.

“Well, I’m going to get out of this armor,” Leon said. “Makes us look all intimidating, but it’s a bit heavy after a few hours.”

“Yeah, I’ll come with you,” Jaylin nodded, grabbing her helmet. “But I’m getting some sleep after this.”

“What the hell, I’ll come along,” Samantha said, trotting along beside them, noticeably smaller since she was out of her armor. “I’ve got nothing better to do.”

Jaylin shook her head, and smiled, while opening the door and they stepped out into the base courtyard. There were still plenty of Peacekeepers on and training, even this late in the evening. She nodded to some of the guards, and glanced down to adjust the stun baton on her belt. “So a question,” Samantha began. “Since you’re-“

A shot rang out and Samantha jerked back and fell to the ground, a red hole directly in her
forehead, her mouth still open mid-speech. “Sniper!” Jaylin yelled, throwing her helmet on and glancing frantically around, before looking back at Samantha, who she could see was clearly dead. It was a perfect headshot; she’d probably died instantly.

More shots rang out, and she looked around for the source. Another yell of pain and she saw two Peacekeeper guards fall to the ground. Jaylin raised her arm and established her riot shield. It could take ballistic fire and even some gauss shots. From that mild safety, she actually glimpsed a figure moving around the base, ducking behind crates and armories.

She couldn’t make out the gender, but they were definitely wearing some kind of hooded cloak, and it was ruddy and brown, tints of green were also present, perhaps for camouflage. “On your six!” Leon yelled, and she spun around and saw another one of the figures, raising their rifle at them. Under the hood she saw it was wearing some kind of mask, one with yellow lights for eyes, and it looked like it was some kind of gas mask.

It fired and her riot shield cracked, but absorbed the shot. It immediately dashed away once the shot missed, and both she and Leon fired at the escaping figure, even as more Peacekeepers were running out to defend the base which was now under attack.

“Where the hell are they?!” Leon yelled as they stood back to back, as more shots seemed to come out of nowhere, hitting Peacekeepers from odd angles and velocities. The good news was that they weren’t outright killing them anymore, but they were causing damage and they kept vanishing and reappearing like ghosts.

But the tide was now turning as more and more showed up. Finally the shooting seemed to stop, yet they didn’t have any bodies to show for it, just the corpses of their friends and comrades.

“Is that it?” Leon asked cautiously. “What the-“

Several different explosions cut off whatever he was going to say, as almost every single vehicle they had suddenly exploded in a barrage of rubber and shrapnel. The fuel depot also went up in a massive orange explosion. Jaylin had fallen to one knee to steady herself, riot shield still up and looking around for any sign of a renewed attack as the smoke began to clear.

The base courtyard was now riddled with flaming metal and rubber, the smell of smoke and burning fuel filled the air, and now that things were quieting down, the yells and screams of injured Peacekeepers became audible. Other Peacekeepers were now running to help provide medical assistance and put out fires.

“Terrorists.” Jaylin spat.

“Fuck,” Leon muttered, as he knelt down and closed Samantha’s eyes. “I have a feeling we’ll still be here for a while. This can’t be tolerated.”

“Agreed,” Jaylin stated, retracting her riot shield. “We won’t let this stand. Come on, let’s go help them.” And they rushed forward to help put out the fires, all under the watchful eyes of the shadows in the distance.

***

Forward Observation Station, Mars Orbit

Caelior, was, to put it mildly, displeased.

The Battlemaster was as well, but it wasn’t entirely unexpected. He was rather impressed XCOM
and ADVENT had managed to put a comprehensive plan together in so little time. He supposed this escalation was his fault, as XCOM likely felt they had little choice if they wanted to survive. Still, not only had ADVENT managed to win their little war in the Middle East, but also push the Collective completely off Japan, reestablish connections to Portland, and there had even been a town in Australia liberated.

All problems. Portland wasn’t unexpected, and neither was Japan, to an extent. But Australia being compromised this badly was a problem Caelior had neglected, and the Battlemaster knew it would only get worse the longer it was allowed to fester.

“What should I do?” Caelior finally asked.

The Battlemaster was, admittedly, surprised. He was expecting a rant from Caelior, a tirade promising fire and vengeance. Not a request for advice.

Perhaps he had been listening after all.

“What would you do, first?” He asked, curious what the young Ethereal was thinking.

“I want to burn Japan to the ground,” Caelior hissed, the air around him vibrating as his anger manifested. “I want to tear ADVENT apart piece by piece for this defeat. I want to flatten Sydney as punishment for their continued defiance. This is what I want to do, Battlemaster, but I do not think it is the right thing to do. I am too angry to make a rational decision.”

The Battlemaster nodded approvingly. “You are learning, good. You are right. This should not be tolerated, yet you must understand this comes with war. The enemy will retaliate, and sometimes you will lose. It does not matter how primitive or inferior you think they are, they can surprise you, especially the Humans.”

He paused. “You have been lax in Australian security. The resistance must be eliminated, and you have failed to adapt. I have not intervened yet, but I feel that if you do not make adjustments, I will have to. This is not something you can solve with armies, but with the Zararch, the Special Operators and other Vitakara units. Andromedons and Mutons are ill-suited to the task of fighting a guerilla force. My suggestion is to work with the Zar’Chon. He is an expert on these matters, and will be able to assist in solving your problems there. As for Japan…”

The Battlemaster appraised the Ethereal before him. “The Humans believe I am the worst they can face. That perception should change. You are more powerful than me, and the time to hide is over. The Humans believe they have won now. Tear down their victory in front of them. Attack Japan personally, exact your revenge on the Humans. Remind ADVENT and XCOM that they are inferior to us, regardless of what the traitor Aegis provides them.”

“Then that is what I will do,” Caelior nodded, his voice filled with venom. “But I will not go in without a plan. I learned from my last failure. Their… additions should be taken into account. But their armies will not be able to stop me, not this time.”

A haptic map of Japan appeared, and Caelior began appraising it, already calling up unit figures to simulate strategies. “Japan will fall once more, and the Humans will know my power.”

Dramatic, but he had spirit. The Battlemaster watched with approval as the young Ethereal began working on the plan to assault Japan, with him providing advice when asked. He almost felt sorry for the Humans, but then again, he had to figure out how to deal with Portland being secured.

These new flame units were of a potential concern, even to him. He would have to solve that before
entering the field again. ADVENT was stepping up their game, and now he must respond in kind.

***

Switzerland, ADVENT Command

It was done.

Saudia leaned back before her computer and let out a breath. Everything had gone perfectly, or as perfect as could be expected. The Middle East was secured, Japan was secured, the Australian town had been liberated, and Portland was reinforced. She could not have imagined a more perfect outcome to this operation.

There would be challenges ahead. The Middle East, even if it was under ADVENT control, was going to have to be significantly reformed for any hope of progress to be made. It would likely take years at a minimum, but there was now actual hope that it was possible.

The more important thing was that a good chunk of the ADVENT Military was now ready to be deployed against the aliens. The Peacekeepers could secure the Middle East, and any terrorist threats that popped up in response, and she had no doubt they would.

The Purifiers had performed beyond expectations, even if they had rendered the city uninhabitable for a few days. Still, it was a small price to pay for driving the aliens off Japan completely.

Now she had to think about retaliation. The aliens wouldn’t take these defeats lightly, and getting kicked off Japan in such a humiliating fashion would likely incite some kind of revenge. ADVENT had to be ready, and she suspected the Battlemaster would be making an appearance shortly. Nonetheless this was a major boon to the propaganda effort and general morale.

This showed the aliens could be beaten, and that perception was powerful now.

Once the PRIEST Program was up and running, ADVENT wouldn’t have to rely on XCOM for this kind of crucial support.

Privately, she had realized just how lucky they were that the XCOM psions were actually on their side. Reading the reports of how Patricia had effectively taken out the government and an entire military compound single-handedly, and how Fatima had paralyzed the entire opposing army, or how the three psions in Japan had shrugged off plasma fire with their shield like nothing…yes, they were very lucky the psions were working with them.

The Commander had said he was refocusing his efforts away from his Manchurian Program, and after seeing this display…she was wondering if that was a really wise idea. XCOM only recruited from the best, and the best were decent, if xenophobic, people. They were largely reliable. ADVENT wouldn’t have that luxury. Out of all the people in the world, even now, there would be some who used psionics for their own gain.

Which would be a problem.

She’d have to speak to him about that, since she agreed that something needed to be done to keep them in check.

But right now, she needed to make sure another problem was at least being taken care of before she could relax and enjoy her victory. The Middle East had been captured, and for the first time in a long time, it was...stable. For now at least. However, that was the easy part. Now they had to not only modernize the nations, but also undo decades of division, hate, and destructive religious
influences.

Not exactly a problem suitable in the midst of an alien invasion. If there wasn’t an alien invasion it would be a challenge. With an alien invasion it was going to be a nightmare to do correctly. Yet this was going to be the largest reformation in Human history, so there could be few mistakes, if any. Despite knowing quite a bit about the region, she knew she wasn’t suited to solving its problems, and while she was sure Stein or Zara would have preferred they just lock down the area with Peacekeepers until the war was decided one way or another, that was not solving the problem.

The Middle East had resources, and more importantly, people. They had engineers, scientists and managers. They had the potential to be productive citizens of ADVENT, although she supposed that right now they would not exactly be keen on such an offer. That would have to be changed, and the better ways she could see to dispel that notion would be to give them a problem to solve, and integrate them fully into ADVENT.

Luckily, there was someone that Saudia felt confident entrusting with such an enormous task, and she should be arriving right now. Her office door chimed, and Saudia pressed a button and it slid open and in walked a woman with pale skin and long blonde hair, dressed in an ADVENT uniform, carrying with her a tablet.

Karen Marshall, former Administrator of USAID, and now Head of the ADVENT Modernization and Development Agency. Saudia had found no better person for such a position, and as an extra bonus, Karen had been heavily involved in Middle Eastern aid and development before being promoted to Administrator of USAID.

If anyone knew how to fix the problems there, it would be her.

“Chancellor,” she greeted, with an extended hand as Saudia approached her. “Good to hear it’s all over.”

“For now, anyway,” Saudia answered, as she accepted the outstretched hand. “But thank you for coming so quickly.”

Karen gave a small smile. “Chancellor, I’ve spent a good portion of my life hoping for the day to have this opportunity, I’m not going to miss it even if it’s at an obscene hour of the morning.”

“You do believe it can be done even during the invasion?” Saudia asked. “I understand it isn’t an ideal time.”

“Not ideal, but not impossible,” Karen negated with a wave, opening up her tablet. “As it happens, it’s for the best. Peacekeepers will suffice for any law enforcement needed. The last thing these people need to see are more soldiers.” She paused. “Admittedly, the Peacekeepers don’t look much different, but it’s all in how it’s presented.”

She gestured her over. “So, Chancellor, the first thing to establish is boundaries. Obviously these nations can’t govern themselves now, and I doubt you want the borders staying the same. So for the moment, here are the current territories drawn up.” Saudia looked down as Karen continued.

“Israel is taking the countries of Syria, Lebanon and Jordan,” Karen said, pointing at the respective portions of the map. “They will be working with me in reorganizing the countries, although they will all be under the territory of Israel now. This was apparently decided once they joined ADVENT, and they don’t want to give up their new territories.”

Saudia nodded. “It seemed fair. Israel has been a consistent ally since the beginning, and this
seemed like a fair trade for their assistance.”

“I don’t begrudge them,” Karen said. “And the only other change in territory is Pakistan returning to Indian control. There will be…difficulties…in the transition, but I’m also going to be working with India to make the transition workable. However, India seems to have a good grasp on what needs to be done.”

She moved towards the heart of the Middle East. “Now, the remaining countries should be divided up a bit differently. At this point, I’ve divided them into two sections; the Eastern Arab States which consists of Iran, Turkmenistan, and Afghanistan. Then the Western Arab States will consist of Iraq, Saudi Arabia, Yemen, Kuwait, Oman, Qatar, Bahrain and the United Arab Emirates.”

Saudia nodded. “The division makes sense from a geographical perspective. I assume the countries will currently take the form of States?”

“That I have not decided yet,” Karen admitted. “At this current point, it is going to be better to work on a city-by-city basis, and once we have actual functioning governments, we can discuss if original borders should be restored or altered. I’m unsure how familiar you are with the region, Chancellor, but not all Arabic countries are the same, even within the same one, there can be multiple cultures and lifestyles. Some may be suited for a territory of their own, or joining with a nation of a similar culture.”

Saudia frowned. “Are you certain you are not overcomplicating this?”

“If anything, I’m oversimplifying it,” Karen sighed. “Chancellor, if I may, I don’t believe you understand just how large a project this will be. What do you estimate the timeframe of completion will be?”

“In an alien war?” Saudia paused. “A minimum of five years.”

Karen let out a laugh. “Chancellor, try twenty.”

Saudia’s frown turned deeper. “That seems excessively long.”

Karen rubbed her head. “You said you wanted to do this right? Well, this is what it will take. If you haven’t figured it out before, the Middle East is a mess, which I will add, was not helped by this war. Your decision to completely wipe out the ruling governments, tactical as it was, has alone set us back several years.”

She tapped her tablet. “That being said, it may be for the best. We’re starting from scratch here, and you have to understand, Chancellor, that they can’t simply be turned into productive ADVENT states overnight. Some of these countries don’t have democracies, or they are so corrupt they might as well not have governments at all. And no, it’s not as simple as establishing a democracy and going with it. These people don’t trust those in power, or have been conditioned to not know any other way, and the fact that ADVENT is seen as a predominantly Western power doesn’t help here.”

She took a breath. “You have to change their mindsets, Chancellor. You can’t just give them the tools for success without showing them how to use them. It’s like giving a gun to someone who doesn’t know how to use it and telling him to defend himself with it. Sure, he might figure it out and save himself, but he just as easily might hurt himself and make it more difficult in the long run.”

Saudia was not expecting to essentially be rebuked here, though took it in stride. “In that case…
what is your plan?”

“For the current plan, ADVENT will control all matters at a national level,” Karen said. “None of the countries are capable of doing such, and in the final phases, they will transition to a fully-fledged nation state. But for now, the most important thing is education. The rural areas especially have uneducated populations, and even the cities have had their perceptions warped by the former governments in power, as well as Islam. That has to be undone, and that is accomplished by proper schools for the children, and classes for adults.”

Karen sighed. “This is without mentioning that all the negative perceptions they have of ADVENT need to be undone. A lot of damage was done due to your overzealous Peacekeepers and…military strategy, no offense intended, but you need to understand those decisions have consequences here. This can only be undone by ADVENT helping them rebuild, and more importantly, modernize. Buildings need to be brought up to code, there needs to be reliable utilities, electricity, and food supplies. This applies more to the rural areas than capitals and cities, with perhaps the exception of countries like Afghanistan or Iraq.”

Saudia didn’t exactly agree that the so-called ‘overzealous’ Peacekeepers were entirely a bad thing, but Karen was not a military strategist, and far more empathetic than she was, so she refrained from saying anything. “And what of the government?”

“They need to be led by their own,” Karen said immediately, nodding to herself in emphasis as she looked down at her tablet. “I’m rather impressed the Commander didn’t execute the defecting Saudi Royal. That is more of a boon to us than you know. He will be instrumental in changing Saudi Arabia for the better. At this point, they will be far more willing to listen to someone who looks like them, and better yet, someone they recognize, than one of us. We simply need to identify leaders who will work with us to make this possible.”

“Good,” Saudia said. “Anything else?”

“While you would no doubt like to see their culture completely eradicated, I would advise against that,” Karen cautioned. “Much of that perception is due to the Islamic influence that’s permeated the countries. I do agree that it should be removed, but there are other aspects we should not ignore. We just need to emphasize the positive aspects and negate the negative ones. It will give them both a sense of independence from other ADVENT nations, and give them pride in their country. We should not force them to change important aspects of who they are for no reason other than that you feel your way is superior.”

Saudia pursed her lips. “Fair enough. If their so-called ‘culture’ is not a detriment to ADVENT, then I see no reason to change it. But you will work with Stein to make sure that is the case. As much as you know the region, Stein knows security and will be more unbiased than you when it comes to that. You see people, she will see vulnerabilities. She might not always be right, but I will not compromise the security of ADVENT because we wanted to appease some nations.”

Karen gave a nod. “Understood, Chancellor. But I’m well aware of the policy, you can trust I’ll keep it in mind. Is there anything else?”

“No,” Saudia shook her head. “I believe you covered everything important, and I will ensure you will have what you need to see this accomplished.”

“Thank you, Chancellor,” Karen answered, inclining her head. “I’m looking forward to starting.”

“As am I,” Saudia agreed. “Good luck.”
“Thanks,” Karen chuckled. “I’m going to need all the help I can get.”

***

Nakashibetsu, Japan

Duri awoke to the sound of klaxons blaring.

He wiped his eyes and stared dumbfounded at the door, hoping against hope that it didn’t mean that they were under *attack*. It had been mere *days* since they drove the aliens off Japan.

They couldn’t be back *already*?

Right?

He quickly woke everyone up, although the klaxon had already done that for him, and they all got armored up, in various stages of disbelief. Duri had expected the aliens to attack sometime again, but this was supposed to drive them off for a while. It wasn’t actually supposed to be a quick retaliation. They were *not* prepared for this.

“I have a bad feeling about this,” Cara said as she put on her helmet. “Anyone else?”

“Understatement of the week,” Kang said grimly. “I guess we might have pissed off the aliens a little too much this time.”

“We should have guessed fire was their weakness,” Johan said lightly. “I really hope we still have some of those Purifiers around.”

“Purifiers aren’t what’s needed,” Duri shook his head. “We need those psions.”

“Yes,” Beatriz said, checking her sniper rifle. “XCOM better be here, otherwise I think that this time, the aliens aren’t going to be beaten so easily.”

***

Supplementary Material

The Advent Directive

SECTION 8: ADVENT Military

Subsection 8.4: Directive

**Overview:** The ADVENT Military performs two major functions: To defend ADVENT and its citizens from military threats of all types, and to terminate those in opposition to ADVENT by any means necessary. The ADVENT Military must follow these two functions without fail to achieve a safe and secure society.

**Military Strategy and Limitations:** The ADVENT Military is not constrained in the methods they use to defeat enemies of the State. There are no limitations on utilizing experimental or dangerous technology and weaponry in combat, provided they have been proven to be effective and are a minimum risk for soldiers to use.

The ADVENT Military is authorized to strike areas with known civilian populations as long as one of the following conditions are met (Note that this doesn’t apply to Special Forces, Intelligence, or operations where no civilian casualties are expected):
1. The civilian population has been notified that their region is a military target
2. The civilian population is actively harboring or aiding the military target in question
3. The mission is time sensitive with a time window of twelve hours or less

ADVENT Military Officers have the freedom to construct their strategy as they feel is appropriate. Whenever possible, civilian casualties should be reduced, but if necessary, there are guidelines in place to provide additional options.

**Enemy Personnel:** There is no requirement to accept the surrender of enemy combatants during combat. Surrender must only be upheld if negotiated with respective enemy Officials beforehand. ADVENT is under no obligation to provide additional services or rights to enemy personnel and reserves the right to treat them as needed. Note that specific directions can be given by ADVENT Officers.

**Enemy Governments:** Governments must be offered a surrender twice: Once at the start of the recognized conflict, and once when the capital or center of government is marked as a military target. Other surrender opportunities are not required, and are subject to be given at the discretion of the commanding officer.

If necessary, the execution of the entire governmental structure, or any specific elements or people is permitted. However, the government in question must have refused surrender at all opportunities. Note that if this is pursued, an additional offer of surrender must be given before the execution of such an operation.

**Hostage Situations or Usage of Human Shields:** ADVENT does not negotiate with enemies of the state during combat, and under no circumstances is the presence of hostages and/or hostile forces using human shields to change mission objectives or parameters unless circumstances are extraneous. Attempts should be made to minimize civilian casualties, but it is not at the expense of the mission objectives.
Skyranger, En route to Osaka, Japan

It felt like they had just fought aliens here.

Granted, Sierra hadn’t actually fought in the battle itself, but the First Battle of Japan had been the first true battle against the aliens, which in retrospect…huh, now that she thought about it, it had been a while since that battle. Pretty much everything had gone downhill from there, and it was only a matter of time before they came back.

She supposed that that little surprise attack had made them a little angry.

Still, assuming the aliens had learned from their mistakes last time, XCOM and ADVENT had also improved significantly. They were really only screwed if the Battlemaster himself showed up… which was extremely possible now that she thought about it. At the very least she was expecting him to put competent aliens in charge.

She sincerely hated how irritatingly competent these aliens were sometimes.

Would it kill them to have one alien who wasn’t a tactical genius? Although every said that the first attack on Japan was extremely amateur…

She was mentally rambling, knowing that the aliens were not going to play so nice this time.

Which said a lot since she had never used that word to describe them. But XCOM had psions, a MEC, and the best soldiers in the world, even if she barely knew the names to some of them.

Carmelita was in charge, which Sierra was somewhat reassured by, even if she suspected the woman wasn’t entirely stable. She had a tendency to take extremely suicidal actions, but survived all of them. Crazy she may be, but she knew what she was doing, even if she went somewhat berserk once the shooting started.

Aarni, Antia, David, and Kiera were all newer soldiers, and she wasn’t entirely sure they’d actually seen combat against the aliens, but she did know they had experience. Good enough. Much as people went on about how different the battlefield was…it really wasn’t. Instead of bullets, there was plasma; instead of enemy humans, there were enemy aliens. You got shot too many times, you died. People around you died. The enemies died. That stuff didn’t somehow change.

Then again, she was something of a veteran at this, and couldn’t really get hurt like she used to, so her perspective was probably flawed to an extent. The two psions, Fatima and Said, were the real heavy-hitters here. Sierra wasn’t sure how wise it was to send people who were married into the same combat zone, but it wasn’t as though they couldn’t take care of themselves.

Both were freakishly powerful from what she’d seen. Fatima was a mini-Patricia and Said was at least as strong as Iosif when it came to defense psionics. They were definitely going to make any aliens who were idiotic enough to attack think twice. Assuming they could even think that independently.

“Ten minutes out,” came the voice of Burning Sky. “Initial reports are coming in. Osaka seems to be coming under attack from primarily Mutons. But there’s a lot of them.”
“Copy that,” Carmelita grunted, her longsword resting between her legs, the metal tip touching the floor. “No way that’s their only surprise.”

Sierra agreed. “Probing for what we have?”

“Likely,” Carmelita nodded. “Or they intend for it to be a distraction.”

David crossed his arms. “A distraction from what? The entire country is locked down. I looked over the defensive specs for some of the cities, Tokyo is a fucking fortress. They’re not going to be able to launch surprise attacks anywhere.”

“Yes,” Fatima agreed. “David is right. This is likely a simple way to test ADVENT, and perhaps us. The aliens view Mutons as expendable, once they determine the apparent weaknesses of the defenses, they would launch a more dangerous wave specifically constructed to destroy it.”

“Assuming the aliens are smart enough to do that,” Aarni pointed out. “The last time they attacked, they didn’t have much in the way of tactics other than ‘throw as many soldiers at them as possible.’”

“We’re likely fighting the Battlemaster here,” Sierra reminded him, rolling her eyes. “He’s not an idiot. In general it’s better to assume that you’re dealing with geniuses instead of idiots. Makes things easier if they actually are being commanded by idiots.”

“Speaking of which,” Kiera glanced over to Carmelita. “What’s the plan if the Battlemaster shows up?”

“I distract him while we wait for Purifier and MDU support,” Carmelita answered. “XCOM and ADVENT think the Purifiers might actually pose a threat to him. MDU’s might be able to keep up with his speed. But Aegis doesn’t think the Battlemaster will be on the field today. He thinks that the sudden appearance of the Purifiers will cause him to back off until he develops a way to kill them ‘safely.’ Who knows how long that will take?” Her right hand gripped the longsword. “Still, never hurts to be prepared.”

Sierra nodded. It seemed like a fair assessment. The Battlemaster, for all his power, did seem to take things very conservatively. It was almost paranoid in a way, but it was done in a methodical manner she once more found irritatingly smart. She supposed that when an entire Empire of those things had died, you learned not to rely on invincibility.

“Approaching the LZ,” Burning Sky updated. “Stand by for deployment.”

The skyranger’s lights flashed to red and Carmelita stood, with the rest of them following suit as the skyranger began to dip, the sounds of combat already reaching their ears. Carmelita stood up front, Said beside her, his hand partially raised and rippling with psionic energy. Sierra stood right behind Carmelita, David beside her.

With a shudder, the skyranger settled on the ground, and the ramp slowly lowered to the ground, human and alien screams mingling in the distance, along with the familiar hissing of plasma and rhythmic pounding thuds of gauss weapons. A purple shield suddenly appeared before them, and Carmelita pointed her sword towards the fighting; reminiscent of the knights of old charging into war.

“Deploy!” She shouted, and they charged out into the raging firefight.
“Prepare the lines!” Came the calls from behind him as ADVENT soldiers rushed all around him, filling up the erected barricades and reinforced buildings that still hadn’t fully recovered from the Purifier attack earlier. Duri could still make out the smell; he couldn’t place what it reminded him of, but the entire city smelled of it, and it was distracting.

“Beatriz, you in position?” He glanced back to the small two-story shop where she was situated on top of the roof, sniper rifle propped against the stone railing, ready for action.

“Ready as can be,” she answered, giving a thumbs up to him. “Not much going on up here right now. Nothing in the distance either.”

“Of course there isn’t anything yet,” Cara muttered to herself, hefting her autorifle. “Sensors start picking up stuff hours away. I don’t even know if that’ll be enough.”

“Do we even have anything major left here?” Kang asked, checking his rifle.

Duri nodded. “A lot of the MDU’s and Purifiers were immediately transferred to Tokyo, but we still have…” he paused. “Twenty-five MDU’s and forty Purifiers. That isn’t counting that Destroyer out in the water, and the rest of the regular soldiers. Like us.”

“They better keep the Purifiers way the fuck back,” Beatriz commented over the comms. “Those things are not front-line units.”

“Really, where should they be then?” Cara pointed out. “They aren’t exactly artillery.”

There was a brief pause on the other end. “Fair point. Let me amend that to saying that the Purifiers should be kept back until the battle is a little less..er, chaotic. Like when they could actually be sent out, burn a few aliens, and then pull back without as high a chance of getting shot right next to you.”

“Well, in that case,” Cara nodded to herself. “I agree. I think the Corporal knows what he’s doing with them though. No point wasting them.”

“Are we getting psion support?” Johan asked, changing the subject. His tone indicated a frown under his helmet as he spoke. “I have a feeling we’ll need it.”

Cara snorted. “Please, name me a situation where we wouldn’t need the purple demigods?”

Duri smiled under his helmet, and Kang stifled a chuckle. Still, a psion would be nice. Preferably an entire XCOM or Lancer squad. MDU’s were nice, but there weren’t enough to make him feel comfortable.

They had reinforced the city as best they could, considering the circumstances. The coast was mostly open beach, no cover whatsoever, and ADVENT had established lines much like the first time, at the edge of the city overlooking the beach. But this time they were being a bit cleverer. Mines had been placed throughout the entire beach, the ones furthest back, and the ones at the end under direct manual control in case the Andromedons tried any sort of shield tricks again. That, and there was the possibility of damaging the UFOs themselves.

Then there were some new turrets; recent ADVENT tech they’d been working on much like the MDU’s. They essentially were a black pillar of metal with a large laser weapon on the top, with a few panels around that to protect the inner workings. From the explanations he’d been given, they operated much like the MDU’s in that they were just as accurate and completely autonomous.
There were a dozen of those spread along the perimeter, and he knew there were a half-dozen more further in. ADVENT had also been sure to reinforce the interior of the city, in case the perimeter fell, so the army could have a secure place to fall back to. It was very elegantly planned, and Duri was grateful that at least someone was learning from the last time this place had fallen.

On top of all that, there was an entire Raven Squad and another plane which Cara had, quite excitedly, identified as a Warthog. According to Cara, it was the best thing they could have outside MDU’s, and it appeared to be an anti-tank plane of all things, which he’d thought would be very difficult to pull off, but it seemed the Americans had every kind of combination available.

He’d been somewhat surprised to learn that these Warthogs actually hadn’t been upgraded to Gaussian tech, which he would have thought would have been a priority. He’d casually brought it up with Cara who’d laughed and showed him a picture first of the gun, and then the size of bullet fired. After that she’d shown him some videos of the plane demolishing actual buildings with a single volley.

He conceded that maybe they didn’t need a gauss upgrade quite yet

So, that was air, sea, and ground support covered. A well-fortified city, or as well fortified as could be expected. Purifiers which could turn the entire beach (or city) to glass if needed. MDU’s and their sister turrets which didn’t fuck around with anything. All in all…they were as prepared as they could possibly be for this attack.

But if they’d learned from their mistakes, would the aliens follow suit?

“What do you think they’ll send this time?” Kang asked, as the minutes passed. “More Andromedons?”

“Please yes,” Cara said. “Let them come, set up their little shield, then send the Purifiers to burn them to death. Or Mutons. I’d be alright with Mutons.”

“They always send Mutons,” Johan muttered absentmindedly. “Well, almost always.”

“Realistically?” Duri paused. “A combination of air and heavy infantry units if they’re smart. Definitely the Floaters for harassment, basic Mutons for shock tactics, throw some Andromedons and Elites into the mix and you’d have a solid force we can beat. If they send any psions, Sectopods, or god forbid, the Battlemaster, things aren’t so good.”

“It’s not the units,” Cara shook her head. “It’s how they’re used. Hopefully they’ll have the same idiot running the battle that did the last one here. I like it when they use the ‘throw everyone at them’ strategy. Makes it much easier.”

“All soldiers, we have sighting of UFOs,” came the voice of the Colonel.

Duri quickly looked behind him. “Beatriz?”

“One second,” a pause. “Lots of glints in the distance. Definitely transports. Ugh, there are UFO fighters with them. Air support might be tied up if that’s the case.”

Duri looked back out into the horizon, and he also saw the shimmering glints in the distance. “How many?”

“Twenty, minimum,” was the answer. “And…uh, there’s three more lines behind them.”

“Sixty?” Johan asked incredulously. “For this?”
“Hold that thought,” Beatriz said, her voice wavering. “Ok, the first twenty are still going forward. All the rest are holding back.”

That made some measure of sense, there was only a limited amount of room on the beach, and too many soldiers would make it crowded. That was a small comfort, since there were twice that number of reinforcements following them. It was even worse if any of those transports had Gateways in them.

“Look at that.” Kang said in awe, and Duri squinted his eyes and focused onto the UFOs now clearly in view. Still small, but getting closer. But he immediately saw what Kang was talking about. “That doesn’t look like a transport.”

“No,” Beatriz agreed. “It definitely doesn’t.”

From what Duri could make out, it looked like the equivalent of a sideways teardrop, although with clear edges and lines on its sides. What immediately stood out was that the entire ship appeared to be transparent, or at least made out of a light-blue tinted substance. It reminded him of the Andromedon helmets and…the teardrop ship suddenly dipped and plunged into the ocean.

He blinked. “What was that?”

“Oh, that's not good,” Beatriz breathed. “I don’t know what that thing was, but there were Andromedons on that ship. Saw it plain as day. Going underwater isn’t an accident.”

“We have subs, right?” Johan asked.

“Don’t know,” Duri said, looking towards the Destroyer which was now starting to fire up at the transports. “But that Destroyer needs to get out of there now if we don’t.”

“Ready weapons!” Came the call from the front-line Officer, as the transports came ever closer.

Duri gripped his weapon, and steadied his aim towards the ocean, saying a quick prayer that all of them survived this battle.

But this time, he wasn’t sure they’d be so lucky.

***

Osaka, Japan

From a few minutes of hectic, dangerous, and chilling observation, Sierra knew that even if the aliens literally sent nothing but Mutons, this battle was not going to be won easily. The heaviest fighting was taking place in the Osaka bay, with ADVENT holding the perimeter of most of the areas around the circular bay, but the aliens had landed on the far ends, as well as some of the docks and platforms in the water.

The transports had actually landed on them, and the Mutons were mostly hunkering inside the transports, and occasionally sending teams to brave the hailstorm of gauss bullets shot in their direction. But what was actually bad news was that the island that was further back in the bay had clearly been taken over by aliens, and Sierra could clearly see at least a thousand marching forward into the city proper.

“Fatima! Take care of that island for us!” Carmelita demanded coldly, slowly appraising the situation herself as ADVENT soldiers ran past them to reinforce the front line.
“Overseer!”

They turned to see a green-tinted ADVENT Colonel dash up, flanked on either side by standard soldiers. “Colonel Chu, sir! Glad you could get here, we got hit harder—“

“So I see,” Carmelita interrupted, raising a hand. “Situation report.”

“Yes, sir,” he nodded, audibly wincing as a building closer to the front lines crumbled. “Short version is that the aliens have control of Awaji, that island over there. Right now the transports on the docks are keeping a good portion of our soldiers occupied. Air support is currently limited, so we can’t rely on that. We can’t make a concerted effort to press forward, since the Mutons are actually being smart this time.”

He pointed to the docked UFOs. “They haven’t done much more than stick their heads out this whole time. Only Mutons, but they’re being led by someone smart. A massive Muton force is going to hit Akashi, since the island connects.”

“Can’t you blow the bridge? Aarni asked, tilting his head.

“Bad move,” Sierra dismissed. “Should only be done as a last resort. That funnels the Mutons and makes it easier to kill them off.”

“Exactly,” Colonel Chu confirmed. “I’m not blowing the bridge until we’re sure they can’t hold. But there are going to be a lot of soldiers that die if they aren’t reinforced.”

“Copy, Overseer. Gray Sky out.”

Carmelita looked back to the Colonel. “A Ballista-Class MEC is being sent to that position. Fatima, you’re going too.” At that Fatima dashed off towards one of the Humvees that was carrying soldiers to and from the battle, hailing it down. “She’s a telepath,” Carmelita explained. “If that’s where the largest threat is, she should be able to handle them.”

“Great!” Colonel Chu said, clearly relieved. “I’ll inform the Captains of the updated situation. What about the rest of you?”

“We’ll deal with the transports,” Carmelita answered, looking back to the shores of the fighting. “Two at a time. Sierra, David, Antia, you’re with me. Aarni, find a sniping position and take out any priority targets you see.” She pointed to the Colonel. “I want Aarni tapped into your lines. He’ll take out any specific targets you want, within reason.”

She looked to Said. “Take the rest and hit another transport. Everyone got it!”

“Yes, Overseer!” They shouted. Carmelita looked to the Colonel.

“Anything else we should be aware of?”

“There are transports hovering beyond the bay,” he answered, pointing in the distance. “I assume they’re reinforcements. If we keep holding them off, they’ll likely send them.”

“Understood,” Carmelita stated, gripping her sword tighter. “Move out!”

With that they split into their respective teams and charged forward. Sierra knew Antia and David
would need to be a little more careful, since they didn’t have any genetic modification, while she had the Iron Skin, and Carmelita was extensively modified. Still, the aliens were about to be in for a world of hurt in the very near future.

Green plasma streaked overhead once they reached the front lines; ADVENT soldiers were hunkering behind their black alloy barricades, while Gunners provided steady streams of suppressive fire, which barely seemed to do more than irritate the armored aliens. Sierra also saw that some of the Muton bodies, which she assumed were from failed charges, had been stacked on top of each other into something of a makeshift cover, bound together by what looked suspiciously like the stuff in symbiote grenades.

Huh. Clever.

Seemed to be working too, since even those makeshift Muton barricades were filled with soldiers, and were withstanding direct plasma blasts. “I’m going to distract them,” Carmelita muttered as they stepped onto the metal docks, cover few and far between. “Keep both of them alive. I’ll hold them until you get here.”

Sierra opened her mouth to answer, but before she could, Carmelita jumped towards the open mouth of the transport, sword glistening in the morning light.

“What the fuck,” Antia said in disbelief.

Sierra heard surprised Muton grunts and the familiar sound of an alloy cannon. “Go forward! Now!” With the hail of plasma fire briefly stopped, the three of them charged through the winding docks, all of them hyperaware of just how exposed they were. But they finally got close enough to the transport and Antia and David slid into cover, while Sierra charged a bit further.

Carmelita had done a lot more than distract the Mutons.

She alone had already taken half of the transport bay, and Sierra saw eviscerated, stabbed, and headless bodies of Mutons who’d tried to stop her. Carmelita was right now behind some alloy cover that had been erected in the interior of the UFO, firing away with her alloy cannon every few seconds, which had the effect of keeping the Mutons pinned in place.

Sierra made it to the first barrier in the transport, lined up her shot, and fired. The cyclic red laser bored into the head of a Muton, leaving a small hole behind and the massive alien collapsed to the ground. She repeated the same with the one next to it before it realized what was happening.

Two more shots took down another Muton, and Sierra glanced over to see David and Antia were both here now, and taking positions behind the second layer of interior defenses. Sierra leapt over her own and decided to try something a bit risky. “Carmelita!” She yelled. “Flank them!”

“My pleasure!” She yelled back, and charged toward the right flank while Sierra took the left, and their positions were quickly taken up by their backup. The Mutons were not expecting another apparent suicidal charge forward and stepped back in surprise, before Sierra shot two of them in their unprotected faces, then pulled a small grenade and tossed it towards another one, ripping it apart.

Carmelita was far more brutal. She quickly executed two Mutons with alloy cannon shots to the face, turning their heads into mush, while a few seconds later she hooked the weapon to her waist, thrust out her left arm and that eerie stinger modification shot out like a cobra and directly into the eye of another Muton, burying itself deep while she pulled out her sword again and leapt towards two more Mutons, stabbing one directly in the face, and quickly repeating the same tactic with the
“Outsiders!” David called, and his and Antia’s fire immediately focused on them. Both had Pulse weapons, and they were quick enough to catch one Outsider by surprise, and the sudden influx of energy froze it, increasing the orange light inside the crystalline alien until it shattered.

The other two Outsiders were smarter and faster; ducking into cover immediately and firing on Sierra and Carmelita for all the good it would do them. One plasma bolt clipped her shoulder; scowling, she responded by raising her rifle and firing, forcing it to hide from the deadly laser.

Carmelita didn’t waste time with that, and simply jumped to the second level where the Outsiders were hunkering, landing beside one and unloading three full blasts of the alloy cannon into its face. Sierra quickly ran up the ramp to corner the second one, and the instant she had a sighting, she fired and shot directly into its leg, pinning it temporarily as Carmelita reloaded her weapon and stormed over, before repeating the same method of execution.

The area went relatively quiet, although the sounds of battle were still heard outside. “Said, report!” Carmelita demanded. “We’ve taken this UFO.”

“Just a few Outsiders to deal with here,” was the immediate response. “No injuries or anything. This’ll be taken care of soon.”

“One down, seven to go?” David asked hopefully.

“Think it’s probably more than seven,” Carmelita grunted, motioning them to follow her back outside. “But essentially. Still, if this is all they’ve got this will be laughably easy.”

She paused. “Colonel, any updates?”

“Whatever your telepath is doing, it’s amazing,” was his answer. “Don’t know what she’s done to the Mutons, but they’re pretty much killing themselves. That MEC is also picking up his fair share of kills and your sniper is softening up the transports for a counterattack. Air support is still tied up, but it’s much better.”

“We’re moving to the next UFO,” Carmelita informed him, briefly checking her alloy cannon. “We’ll do this as many times as needed.”

“Understood, I’m reorganizing our defenses to further assist.”

“Time to take the next one,” Carmelita said, and they charged back out into the fray. Sierra was just waiting for the hammer to come down. Carmelita was right. If this was it, it would be laughable. But the aliens never made things this easy, even if the same idiot was in charge of this attack.

Since the Mutons still didn’t have helmets, she suspected he was.

Arrogant aliens.

***

Nakashibetsu, Japan

“Fire!” One of the Corporals yelled and all the Rocketeers, Kang included, fired at the approaching transports. Rockets sped towards the ships in streaks of white and orange light, impacting with brilliant explosions that sadly only seemed to be doing superficial damage at best. With gauss
bullets bouncing off of them, the transports settled down, and a few moments later, the transports opened up and out came a horde of Mutons.

They were likely in straight lines before charging out, but those quickly deteriorated as the savage aliens roared and charged forward. These ones were wearing helmets, not stupidly exposed like the others. The helmets were the same green as their armor, but they thankfully didn’t seem to grant them more intelligence.

The first wave suddenly exploded as they triggered the mines, and the rest staggered to a stop in confusion, and some immediately fell to one knee and began firing at the ADVENT line, while others continued forward slowly, firing their plasma rifles; not even seeming to take into account the minefield they found themselves in.

Duri, Cara, and Johan all began firing their weapons at the encroaching horde, whose numbers at minimum matched their own, even if they had no concern for their own safety, and after a few minutes of battle, he realized that when the Mutons didn’t have such a blatant weakness…they were rather terrifying.

Cara unloaded an entire clip into one approaching Muton, but even as it bled ichor from its mangled chest, it still kept going, and was only killed when it stepped onto another mine. Johan and Duri managed to kill one by blowing away parts of its helmet, which was still fairly easy to target, since the alien made no attempt whatsoever to find cover.

“Shit, they have Grenadiers to the back,” Beatriz said urgently to him. “I’ll try to take some out. But they’re coming now.”

That was not good. “Grenadiers!” He called to the other soldiers. “Watch for explosives!”

“MDU’s moving forward,” Corporal Williams’s voice suddenly interjected. “Hold the line. We have plans for grenades.”

“You’d better,” Cara sneered as she managed to down another Muton that was getting uncomfortably close. “Because they’re coming up now!”

Duri saw the aforementioned Muton Grenadiers coming forward now. In all respects they appeared to be identical to the Soldiers, except that they had a couple dozen plasma grenades strapped to their belts and across their back, as well as holding what looked to be some kind of grenade launcher. He’d heard of these, even if he hadn’t fought them yet.

“Snipers, target the exposed grenades,” Williams ordered. “All Gunners, lay down immediate suppressive fire!”

There was a chorus of unacknowledged affirmations, and all the Gunners began spraying the battlefield with thousands of gauss rounds in wide arcs. The front line of Mutons was instantly halted, and some raised their arms as the hail of rounds slammed into them, some puncturing vital organs and body parts.

Behind the main Muton line, several Grenadiers suddenly exploded in green flashes, presumably from the snipers hitting the grenades strapped to them. “One down,” Beatriz said smugly. “Only several hundred more.”

“They’re getting ready to fire!” Another Officer called out.

The ADVENT Snipers fired again, as the regular soldiers, Rocketeers, and Officers picked up the suppressive tactic while the Gunners reloaded their weapons. A few more Grenadiers exploded
from sniper fire, but the majority loaded their grenades, raised, then fired them at the ADVENT line. The green-tinted projectiles were in the dozens, and Duri didn’t see how all of them could be stopped.

The short answer was that he was right.

But it wasn’t nearly as devastating as it would have been otherwise.

The MDU’s raised their weapons up, and streaks of lasers shot into the sky, and it was suddenly filled with green bubbles of plasma that dissipated seconds later as the MDU’s and Turrets shot the grenades out of the sky when they entered their range. But it still didn’t get all of them. ADVENT soldiers jumped out of the way, or tried to flee the range of the grenades, but some just weren’t fast enough.

The plasma blew them apart, or incinerated them entirely depending on how close they were to it. Entire fortifications were suddenly nothing, and even a few MDU’s succumbed to the plasma grenades. More green explosions from the back as the Snipers continued taking them out, a few more volleys, and they would have this under control.

The Muton advance had been mostly stopped, as the Mutons refused to find any sort of cover, but they were now adapting to that in a rather morbid way. Knowing they didn’t have to worry about grazing shots or even getting directly hit unless it was in the face, they were taking the corpses of their dead and piling them on top of each other, creating a temporary, but effective means of cover.

“We’ve got air support,” Corporal Williams updated. “Stand by for airstrike on concentrated Muton position. Officers, mark highest concentration of Muton forces.”

“Understood!” Duri responded, and activated the green tracking laser on his rifle and aimed it where the Mutons were establishing a massive semi-circle of dead aliens, and beginning to return fire from it. “Locked!” He shouted as the green laser turned red. He saw the lines from other Officers who were also marking the area.

“Stand by for airstrike in five seconds,” a deep voice suddenly said. “Targets marked.”

Duri suddenly heard a sound that seemed to come from a buzzsaw or really fast machine gun. Then out of nowhere thunderous streaks of white light rained down from the sky and cut the Muton concentration to pieces. Cara whooped as the plane that had fired the airstrike flew off into the distance for another round. “Fuck yes!”

He supposed that had been the Warthog she’d been so excited about.

Now he knew why.

The Muton forces were in complete disarray as the ones not ripped apart by the airstrike struggled to decide what to do next. “Purifier forces, perform area denial,” Corporal Williams ordered and two Purifiers suddenly began walking forward, taking advantage of the lull in the Muton plasma fire to perform area denial.

Duri could only hope things were going as well further up and down the beachhead, because this was a beautiful sight.

The Purifiers unleashed the white-hot cones of ClF3 towards the Muton fortifications, then swept them across as much of the beach as they were able to. The Mutons unfortunate enough to get caught in the blast panicked instantly, running around in circles, rolling on the ground to put out the fire, or worse, running into the water where they promptly exploded.
The fortification of Muton bodies was incinerated within minutes as Purifier fire swept over it, destroying the only defense on the beach. The sand underneath the fire was turned to glass that shattered and damaged the Mutons even more when they fell on it or set off more of the few mines that had remained untouched.

Duri’s lips curled into a grin. Perhaps it wasn’t hopeless after all.

Maybe they could win once more.

***

Tokyo, Japan

To Jamali’s surprise, there actually wasn’t any fighting going on in Tokyo.

Yet.

All of them exited the skyranger rather calmly, all things considered. They technically weren’t in Tokyo proper, but in one of the areas before it entered Tokyo Bay; Kawasaki he believed. But from what Jamali had seen already, the city would be able to withstand even the worst alien assault. There were, at a minimum, twenty-thousand ADVENT soldiers here alone, of all types.

That wasn’t counting the automated systems like MDU’s and turrets, which had been built throughout the entire area. Beyond the bay was also one of the massive US Carriers, a behemoth of the sea that was primed and ready for any conflict. Jamali also suspected that there were submarines also accompanying it.

Yet the aliens hadn’t attacked yet.

Interesting.

“Looks like we’ve got company,” Allison muttered as a group of ADVENT soldiers walked up. Definitely an ADVENT Marshal by her coloring and shoulder cape that was over her right shoulder. She was flanked by six Colonels and Corporals, likely the main Commanders of this entire defense. The squad Overseer, Dael Young, a recent promotion, stepped forward. “Marshal Kilani, Overseer Young, XCOM.”

The Marshal put a fist over her heart in an approximate ADVENT salute. “Glad you’re here. Satellite footage and readings all indicate that we’re going to get hit hard, and we’re going to need all the help we can get.”

“That’s why we’re here,” he nodded. “We have a Goliath getting dropped off in the city proper, and we’ll assist on fighting the front lines, wherever the fighting is the heaviest.” He motioned to Allison. “Both Psion Monder and I are defense specialists; Psion Mattis is a telepath. We’ll give extra protection and assistance when you need it.”

A nod from her. “Good. In the meantime the city is as prepared as I could make it. MDU’s, soldiers, Snipers, Gunners, Purifiers; all of them are situated and ready for whatever is coming. We’ve got the USS Washington out beyond the bay, which will provide us with air and sea support, should we need it.”

“How much air support will you have?” Jona Mattis asked.

“Worst case scenario?” Marshal Kilani asked. “A small fleet. That isn’t including the American Warthogs that were brought in for anti-infantry and anti-tank support. Our Ravens are weaker than
UFOs, but we can still shoot enough of them down to make a difference.”

“Don’t worry about them too much,” Jona tapped her head. “I picked up some tricks from Patricia. As long as they aren’t automated now, I should be able to take them over.”

“That’s good, but we’ll also need you on the ground,” Dael reminded her, before turning back to the Marshal. “In the meantime, where do you want us?”

“You’ll have two deployment helicopters for your own use,” she answered quickly. “In addition to your skyranger. You’re probably going to be moving around a lot, and I want you where we need you as quickly as possible. I’ve ordered them here—hold, new info.”

Well, that didn’t sound good. “Understood,” she finished grimly. “Good luck.” She looked back at them. “Change of plans. The large alien fleet we were worried about is going in completely different directions. Probably reinforcing other points of attack.”

“What?” Yasu and Sora, both XCOM soldiers of Japanese origin said at the same time. “Then we’re safe?” Sora finished, her voice hopeful.

“Not exactly,” Kilani corrected slowly, raising a hand. “There’s one UFO coming towards us. Small, seems to be the same class as the one used by the Battlemaster.”

Oh.

Jamali swallowed and exchanged looks with the rest of the XCOM soldiers. They were absolutely not the right ones to face the Battlemaster. “I see,” Dael said slowly. “If it is the Battlemaster coming, get your soldiers out, and gather as many Purifiers as you can. Those may be the only things that could actually hurt him.”

“Agreed,” she said, motioning to one of the Colonels to give the orders. “Estimation is that it’s ten minutes out. I’m ordering two squads of Ravens to try and take it down, since it appears to be alone.”

“Is that a good idea?” Gyeong asked, stepping forward. “Isn’t the Battlemaster a telekinetic?”

“He’s dangerous, but not a telekinetic,” Allison interrupted, shaking her head. “At least not a true one. He can use it, but it’s not his skill. And even if he managed to take down one, that leaves seven more. Not sure how well it’ll work either, but it’s the best plan outside of relying on Purifiers.”

“Look!” One of the Corporals shouted, looking through his sniper rifle. “UFO coming.”

“Right on time,” Marshal Kilani nodded and the squads of Ravens immediately streaked overhead towards the faint glint in the distance. “Fire at will, Wing Officer.”

Jamali watched as the glint slowly got larger until it was clearly what he believed XCOM had dubbed an Overseer-class UFO. The metal was a duller grey, but it still seemed a duplicate of the UFO scouts and fighters. The first of the Ravens fired at the UFO, as did the guns on the Carrier from the ground.

Except the missiles suddenly froze in mid-air and then plummeted towards the sea. In retrospect, that might not have been too unexpected. Missiles were small, and even the Battlemaster could
catch a half-dozen.

But what did shock not just him, but all of them, was all of the Ravens suddenly freezing in the air, jets still pushing forward, and then their metal frames suddenly collapsing in on themselves like cheap foil. Jamali blinked. “Officer!” Kilani demanded. “Come in!”

Something must have finally ruptured, because one of the Ravens exploded, and the rest of the planes were slowly turned into crumpled balls of steel. At that point Jamali realized that the UFO had stopped and was hovering. He also noticed that despite the Carrier firing, it seemed there was zero damage being done to the craft.

He swallowed. “I don’t like this,” Maria Pena said softly. “Could the Battlemaster do that?”

The crumpled Ravens were suddenly released from the invisible hold on them, and fell into the water with a splash and something dropped out of the bottom of the UFO, and began speeding towards them.

“Oh, fuck,” the Sniper Corporal breathed in terror. “It’s an Ethereal.”

Jamali quickly zoomed in on his own rifle and his eyes widened as he confirmed what had been said. But it wasn’t an Ethereal that they knew, this was a completely new one. The helmet was almost identical to the one Aegis wore, if having a couple more curves, but the rest of the Ethereal was completely new.

He, because he assumed it was a he, wore a mix of the Ethereal robes and battle armor. It was as if the material was interwoven with the armor, which covered the chest and legs. While a material skirt of sorts fell behind the Ethereal’s legs, it still allowed the Ethereal to move forward freely, and the arms were covered by sleeves of a purple material, with the hands encased in black gloves.

The Ethereal was on what seemed to be a kind of hoverboard, which was just large enough for him, and no more. The boots seemed welded into it, and the Ethereal flew with a familiarity that indicated that this was not the first time it had been used. His arms were held loosely at his side, and the Ethereal approached as if it had all the time in the world until it was just over the entrance to the Tokyo Bay, in perfect view of XCOM.

The Ethereal was still very far away, but Jamali wasn’t sure that really mattered.

“Humans!” Jamali and the rest of the soldiers on the rooftop involuntarily shivered as the amplified and echoing voice that permeated the air long seconds after the last syllable was uttered. “You have fought beyond what we could have predicted. You have scored victories, and killed hundreds of our soldiers. Your continued defiance is a testament to your will, although your intelligence has much to be desired.”

Marshal Kilani didn’t really seem to like his monologue. “Fire!” She yelled, and the area was suddenly alight with the flashes of gauss rifles and the sound of automatic fire. The Ethereal didn’t seem perturbed, and simply lowered a hand out towards them, palm down and the gauss rounds suddenly froze inches before they actually hit him.

“You time of insubordination is at an end,” the Ethereal continued. “Today the world will see the futility of resisting us and our power. You will die at the hand of Caelior, Destroyer of the Immortals, and Wielder of the Maelstrom. Prepare or flee before the might of the Storm.”

With that he thrust down another hand, and a visible wave appeared in the air and slammed down on several hundred ADVENT soldiers, all of whom were immediately crushed to the ground. He
extended another hand to a nearby building filled with soldiers and ADVENT emplacements and Jamali watched in awe and terror as it shook and suddenly collapsed from waves of energy that crushed it from all sides.

“Jona! Get into its head!” Dael yelled as all of the soldiers started firing. “Commander-“

“You can’t fight Caelior where you are,” came the urgent response. “Caelior will kill all of you at this range. Get back now and reconfigure a plan!”

“Copy!” Dael confirmed, as Caelior swooped down to another ADVENT position and raised one hand, clenching it into a fist. The soldiers below him began screaming as their armor compressed and he crushed them into masses of flesh, armor, and bone. He threw another hand as six MDU’s were tossed into the water like toys, right before he turned his eye to the carrier in the background.

Allison saw it too. “Impossible,” she breathed. “He can’t do that…”

Impossible or not, Caelior was going to try, and with one hand extended to the USS Washington, he turned his palm up as psionic energy encased his body. He raised the arm.

And the Carrier began to rise.

Water poured off it by the hundreds of gallons, everything not bolted down also slid into the black water as the ship rose by inches, until it was five, then ten, then twenty feet above the ocean, and still rising. Throughout it all, Caelior hadn’t been neglecting the enemies on the ground. He shot waves of energy which caused miniature earthquakes in the immediate area, destabilizing everyone, including the XCOM soldiers.

Most were flattened into the ground; unlucky ones were crushed with an unrelenting psionic grip; Purifier tanks exploded and set fire to nearby areas; MDU’s were crushed and ripped apart, and Jamali heard the Marshal yell for a retreat in the background. Then Caelior turned himself around, one hand raised high in the air, with the massive United States Carrier held suspended several hundred feet in the air.

It was all too clear what he was going to do: Throw it into the center of Tokyo.

“Get on the chopper!” Dael yelled, and all of them quickly boarded them, and were speeding to the city, trying desperately to formulate a plan that had even a hope of stopping the nightmare gradually getting closer.

But Jamali was no longer sure that was possible. Not with the time they had.

Their only hope was maybe Patricia.

And even then…they might be calling her to her death.

***

Nagoya, Japan

No words were needed as XCOM stormed out of their skyranger into the heated battle of Nagoya, where the aliens were not just attacking from the shore, but also from the east of where they’d landed, in farmlands and fields where they assumed ADVENT wouldn’t be expecting them.

Shortsighted fools the aliens were.
Connected as she was with all of her squad, she had no need to give orders and watched them charge off to their respective battles. Cassandra and Jim headed to appropriate sniping positions; Matthew led Bora and Leonid towards the docks where the alien were attacking, and Fakhr led Anna and their MEC Gloria to assist by the farmlands.

Patricia herself closed her eyes and knelt on the ground. It was easier this way, much less distraction than just standing up and relying on unneeded gestures to impress her will on the enemies of XCOM. She felt she was beyond that now. Not quite at the level of an Ethereal like Aegis…but she was getting closer every day.

She felt the frantic, chaotic, and fearful minds of the Humans around her. Flashes entered and exited her mind like water. Memories, stray thoughts, strong emotions…they were all present and amplified in the heat of battle. Love, hate, hope, and despair were all in equal measure, largely swinging between the extremes.

She listened with interest as she observed the Humans minds around her, fascinated at the thoughts that ran through their heads before winking out of existence. Some thought about their spouses and kids, others regretful at not achieving their goals, others had the faces of their mortal enemy seared into their minds right before they died.

Oddly enough, it wasn’t usually the faceless alien that killed them, but some mundane Human that had wronged them at some point. Harsh bosses, cheating friends, whoever had the strongest emotional connection tended to be the last person one thought of before death.

How curious.

Nevertheless, she had a battle to win, and a job to do.

*Be at ease,* she began, *focusing on the Human minds first, focus and stand firm in the knowledge that you will be victorious. Let go of the fear, clear your minds. Focus on the aliens.*

*Focus on them, and kill them.*

*Wipe them out.*

That she repeated until it was in the minds of the soldiers; it was their mantra, their singular goal for this day. Hopefully one they would never forget. And she felt the emotions around her change. The fear slowly faded and was replaced by cold resilience; resilience that only grew stronger as the minutes passed. Every death seemed to harden the resolve of those fighting; every injury only emboldened those alive to fight harder.

They fought by not letting the emotions humanity was so prone to rule them.

And perhaps that was why the Ethereals were so interested in them.

A human not ruled by emotion was a dangerous one indeed.

She smiled.

Now, the aliens.

They were all exclusively Mutons to her surprise. Odd that they would pick the most flawed species to fight today. A trap, or simple overconfidence? No matter, it only made her job easier and there were no tricks in the minds of these Mutons. Simple creatures, beings driven by instinct and whatever was drilled into them in the War Camps.
Such aliens were broken beyond repair. Whatever potential their species had held was now lost forever, crushed by the ambitions of the Ethereals and their quest for vengeance.

It was almost sad. Mutons didn’t have emotions like Humans, those had been purged long ago by the Ethereals. It had been purged by years of torturous training and beatings at the hands of Sargons, Sectoids, and Vitakara. The capacity for a Muton to feel anything beyond pain was no more.

And yet, there was a way.

She could make them feel again.

Their minds would not be able to process what they were feeling, nor would they be able to handle it without simply freezing up and standing still. And so she projected her feelings into their minds; opening them to what had been purged long ago. Hate for her enemies, sadness for the friends she’d lost, hope for the future, and love for her friends and Creed.

It all rushed over their simple minds, and as she suspected, they simply froze. They stopped, as if frozen in mid-thought, and in a way, they were. It would take their brains hours to fully process what they were feeling, and by that time, all of them would be dead.

Her smile grew as their minds suddenly vanished, winking out like stars in a galaxy, until there were only a few more left in the void. And the Humans pressed forward, ever confident and resilient in the face of overwhelming odds. Odds which were slowly shifting back to their favor.

Still, she wondered why they had only sent Mutons. With that, she went into the primitive mind of one looking for clues, and managed to reconstruct a fragmented thought.

*Enemy appraisement. Test current defenses.*

She frowned and mentally commanded the Muton to kill himself. Interesting. So they were probing ADVENT defenses? Seeing what they had before sending in-ah.

Well, they were getting better. Mutons were expendable. Better to tailor the second wave to the weaknesses of your enemy. It was probably the same for all the attacks then. Very clever, and an excellent usage of the superior numbers the aliens had, if a little useless. She frowned as there was something buzzing in the distance…what was…oh, right.

She returned to reality; the sounds and smells all coming back in a rush. “They’re testing the defenses,” she quickly said into her helmet. “The Mutons are just a front. The real attacks will be the second wave-“

“*Patricia! We need to get you to the skyranger now,*” the Commander interrupted. “*Big Sky is coming back for you now.*”

She frowned. She was never called away. “What’s happened?”

“*Caelior,*” the Commander confirmed with a word. “*And if we don’t get you there soon, he’s going to destroy Tokyo.*”

***

Tokyo, Japan

Jamali knew they were in a losing battle, though seeing the Ethereal float through Tokyo Bay, a
massive US carrier held hundreds of feet in the air, it didn’t seem entirely real. He prayed this was some kind of horrible dream, but he knew that if it was, he would have woken up by now.

He tried lining up his pulse rifle, and fired another burning lance at the distant Ethereal, missed of course, and quickly moved because that was the *one* thing that seemed to provoke Caelior. “Jump!” He yelled and Maria and Sora both complied as they moved to the next roof, and just in time as well.

He glanced back to see the building he had been standing on, a small two-story one, shimmer as it was surrounded by a slightly purple aura, before cracking and collapsing in on itself. Jamali’s heart pounded as the rubble settled, but the sounds and screams were still as prevalent as ever. There was *nothing* that seemed to be able to stop the rampaging Ethereal.

Gauss rounds slowed to a crawl the moment they got near him, rockets were turned back at ADVENT laughable ease, buildings were collapsed into rubble with a clenched fist from the Ethereal, and his range seemed only as limited as far as he could see.

And he could see *far*.

“Jona!” Jamali yelled. “Can you stop him?”

Their telepath had one hand extended futilely to the flying Ethereal, purple energy shimmering around her. “I can’t!” She yelled in frustration. “He’s too strong! I can’t do it without help!”

Jamali glanced up as the Ethereal was getting frightfully close to the city. “Come on, Patricia!” He muttered. She was literally their only chance here, since Jona wasn’t strong enough, and their weapons weren’t doing more than posing a minor annoyance to the Ethereal.

“Jamali! Allison! Get on!” Dael yelled from a helicopter that landed behind them. “Maria! You get on too. We’ve only got one shot at this before he gets close enough!”

Jamali didn’t hesitate and jumped onto the helicopter along with the others, as they took off and began circling the area. “What’s the-“ Jamali began, before Allison gasped and the building that they had just been on was suddenly surrounded by Caelior’s telekinetic hold, and shattered. With a grip strong enough to break stone, Jona, Sora, Gyeong, and Yasu weren’t nearly equipped to resist it, and their figures compressed into misshapen forms of humans, limbs bent in odd ways as their Aegis armor worked against them, making any injury far more painful.

He just blinked in surprise. Had it just been random bad luck? Or had Caelior been able to target them from Jona’s telepathic probe? But they were dead now; killed within seconds at the hands of the Ethereal.

Any slower and he might have been on the building when it imploded.

Allison’s voice was ragged. “Plan?”

“We trap him in stasis,” Dael answered grimly, summoning his power. “Both of us. That isn’t his specialty and we need to do it now.”

“But-“

“It won’t stop him, I know,” Dael answered. “Maria, Jamali, you shoot that glider-thing he’s riding. He’ll be invincible, but he’ll crash to the ground all the same. We drop a bomb down into the water and he might die.”
As far as plans went, it wasn’t the worst he’d heard, and see two skyscrapers collapse, knocking over even more buildings…they needed to act now. He exchanged a glance with Maria, who nodded and raised her pulse rifle. They could do this.

They got closer and closer. Jamali needed to learn the name of this pilot. He deserved a medal if they all survived this. “Now!” Dael yelled, and he and Allison extended their arms and Caelior was suddenly surrounded in a purple bubble that covered his body like a shell. Luckily his helmet was facing away, which meant he hadn’t seen their approach.

“Fire!” Jamali yelled, and red lances of fire spat out of their rifles and into the hoverboard Caelior was using, with them specifically targeting where the engines were. The silver board sparked, and the blue engines or anti-grav fields, Jamali didn’t know which, flickered out and failed.

And the board fell into the ocean.

But Caelior was still hovering in the air.

“Little foolish humans,” Caelior almost sounded amused, and the helicopter blades stopped. Jamali gasped as pressure covered his entire body, as if he was in a presser that was killing him by centimeters. “A clever tactic, and one that might have worked, had I not prepared for such a maneuver.”

The purple shell around Caelior had vanished, and the now-floating Ethereal spun around, one lower hand extended to the ground, another towards the helicopter now in his grasp, along with all the occupants. “You die here today, XCOM,” Caelior spat, as Jamali felt his bones begin cracking. Maria and Dael screamed in pain. “And you will die knowing you failed.”

Caelior closed his fist, and the helicopter crumbled like a cheap toy, and the people within it were just as doomed. Jamali didn’t have to think about how he died. Perhaps his skull caved in on itself; perhaps his spine broke; perhaps the pressure forced his body to explode. But all that he felt was a brief flash of intense pain, and before he even had time to form a final though, let alone scream, everything ended.

And the crumpled helicopter crashed into the water, then sank to the bottom, never to be recovered.

***

Osaka, Japan

The battle had suddenly and unexpectedly shifted. Everything had been going along relatively well, and both XCOM teams had taken several more of the landed UFOs, but now there were…issues. Sierra first noticed that something was different when they suddenly came under attack by Floaters. Not just the cheap and poorly made floaters, these were…different.

They were the result of someone taking the concept, and putting as much armor as possible over them. Whatever visible flesh was on the alien, it was gone and replaced by metal. These Heavies carried full plasma rifles as well, not the carbines the smaller ones used, and they were being used to great effect.

“Down!” Sierra yelled, and yanked David to the ground, before directing her weapon back up and firing at the Heavy that was trying to flank them. One of several dozen which were assailing the ADVENT lines, of which they were a part of now. Six went down from combined ADVENT and XCOM fire, but several dozen were shot in quick succession as a response.

What was worse was that the Floaters completely negated Carmelita’s advantage, since they could
stay above her, and largely out of the more accurate range of her alloy cannon. But even the aliens
couldn’t keep that up forever, and with every Heavy they lost, that was one less. The unarmored
Floaters weren’t that bad. One swipe with her sustained beam cut them right in half.

She glanced up over the water as damaged Heavies flew inside the transports hovering over it.
They seemed to be acting as a hangar of sorts, and Sierra suspected that there were probably
Battlefield Engineers inside.

“Said! Fatima! Status?” Carmelita demanded as she managed to blow a Floater apart that had come
a bit too close.

“Hold,” Said grunted, and Sierra looked over to where he, Kiera and Antia were defending the
docks. “The Floaters are whittling down the ADVENT forces. I can’t protect them all.”

“Another problem!” Sierra interrupted, as she saw two dozen shining disks coming across the water
in the distance, accompanied by the familiar black drones. “Cyberdisks!”

“It’s not good over here,” Fatima breathed heavily, and Sierra saw from a quick glance over at the
bridge that there was a lot of ground being lost. The Ballista-class MEC was smoking, and the
missile racks were almost depleted. Kenta needed to restock or get out of there, especially as she
saw three Sectopods stomp out of the woods before the bridge.

“My telepathy isn’t working on them anymore,” Fatima explained. “They’re using those mind-
slaved Mutons, and the Andromedons have their suits overridden. Everything else is mechanical,
and-gah!”

“Shit!” Carmelita cursed as a massive floating white ball suddenly joined the Sectopods.
“Gatekeeper!”

Alright, maybe there wasn’t an idiot in charge after all. All of this was way too specific to be a
coincidence. “It was a trap,” she muttered to herself as her laser sheared through one Floater that
tried an audacious flank. “They wanted us to kill the useless Mutons.”

“Thank them later,” came the voice of Aarni. “Carmelita, I need some priority targets. I can keep
shooting whatever comes into my sights, but there are too many to choose from effectively.”

“Can you hit the cyberdisks?” Carmelita demanded, as the disks transformed into their firing
mode.

“Yes,” came the answer. “Understood.”

“New plan,” Carmelita continued, all of them continuing to fire as the Cyberdisks shot golden-
trailing rounds onto ADVENT positions. “Said, you and me will go reinforce the bridge. Sierra,
make sure everyone else holds here.”

“Got it!” Sierra confirmed as Carmelita began dashing away towards the fight on the bridge. A
Cyberdisk suddenly flared and its insides caught fire, then fell into the water with a splash. Sierra
took a few seconds to aim, then surgically fired at one of the small gaps in the cyberdisk, cutting
through it easily and it fell into the water after a few seconds of sustained fire later.

That immediately attracted the attention of the aliens in the area, and she slid completely behind
cover as plasma and golden rounds hit everywhere around her. A couple ADVENT soldiers jerked
back as their bodies were pierced by the rounds and they fell still as she quickly reloaded a fresh
cell into her rifle, and turned around to line up another shot.
To her dismay there were even more Heavy Floaters in the air, almost reminding her of a swarm of insects. They were shrugging off ADVENT gauss fire like water, or at the very least it wasn’t affecting them. And they had figured out how to use their superior speed and protection most effectively. The Heavy Floaters were dive-bombing ADVENT soldiers, slamming into them, grabbing the unlucky ones and dragging them up into the air, where they either dropped them into water, or slammed them into walls or the ground with bone-shattering force.

“We can’t keep all of them off!” David yelled as two Heavies flanked him and the soldiers around him. They fired, killing one soldier and wounding the other. Sierra swung her rifle around to shoot them, and quickly fired, hitting one directly in its metal head, doing enough damage to kill it instantly. The other one fired at an exposed David, and scored several direct hits in the leg.

David fell to the ground in a heap, though managed to raise his own rifle high enough to hit the Floater directly in the center chest, causing it to flare out of control and crash into a nearby building. Sierra rushed over to him, glancing down at the wounded leg which had dissolved most of the thigh armor, and the plasma residue was eating into the leg.

“Out of the way,” Antia interrupted, pulling out her med-kit. “Let me fix him up.”

“Thanks,” Sierra said as she returned to the quickly worsening situation. The Cyberdisks and Floaters were ripping the ADVENT forces apart, and the bridge battle wasn’t going well at all. The Gatekeeper was engaged with the front ADVENT soldiers, its shell open and tentacles extended, and consuming them in horrific fashion.

Said was clearly trying to establish some kind of defense, but against a horde of Sectopods, Mutons, and Andromedons, he couldn’t hold out forever. The Sectopod fire was relentless, and Sierra blinked as one massive blast slammed directly into Kenta’s MEC, and it blew apart with a fiery explosion. She swallowed. That was the MEC gone, and with it, one of the main reasons ADVENT had been able to hold the bridge.

“Two on the right!” Kiera shouted frantically, and Sierra barely had time to dodge out of the way before one of them tossed a small plasma grenade at Kiera’s feet, exploding and blowing the lower half of her apart before she could even move. The Floaters were quickly taken apart, but the damage was done, and they were another soldier down.

“Carmelita!” Sierra yelled furiously as she stepped back, trying to draw some fire on her. “We’re getting overrun here!”

“Well, it’s not any nicer over here!” was the hissed response, with the familiar sound of alloy cannon shots in the background. “Kenta is down, Fatima is hurt, and Said can’t defend the bridge on his own. Now I’ve got a Gatekeeper to deal with.”

Sierra ground her teeth together as she shot a few more Floaters down. “We need to retreat. All we’re going to do is die if we stay!”

“I agree,” Carmelita answered grimly. “They knew exactly how to counter us. We were played here. I’ve informed Colonel Chu of the recommended course of action.”

“Is he going to do it?” Sierra demanded.

“All ADVENT Forces are ordered to immediately retreat to the designated regrouping area,” Chu suddenly interrupted on the comms. “Blowing the bridge in five minutes.”

“Time to get off here,” Carmelita said. “Sierra, get David and Antia to the designated extraction
“Understood,” Sierra answered, waving to Antia who was standing over David, trying to protect him as best she could. “Come on! We’re getting out of here!”

She dashed over, providing brief bursts of covering fire as Antia hauled David to his one good leg, who also grunted in pain. “I’m just going to slow you down,” he grunted, in obvious pain still. “Just go!”

“Give him to me,” Sierra ordered, and she clumsily switched places with Antia, who took up the role of bodyguard and area suppressor. “We’re not leaving you behind.” She told David, and with a grunt slung him over her shoulder. Were she not genetically enhanced, she probably would have collapsed. As it was, he was extremely heavy and she was not going to be able to protect herself.

“Aarni, cover our retreat!” She ordered as they began moving up the street as fast as possible, plasma and Cyberdisk rounds raining around the street and buildings.

“Copy that,” Sierra didn’t see what he was actually doing, her gaze was directly in front of her, moving forward as fast as possible; one foot in front of the other, even as she tried some means of making tracking difficult by moving in a zig-zag pattern, although she was probably too slow for it to make any real difference.

“We’re almost there,” Antia encouraged, sounding almost out of breath herself as they kept going. Sierra was purely following her HUD at this point, although the sounds of the battle had faded the more they got away from it. She was trying not to think of how close she’d probably come to dying. That wouldn’t serve any purpose.

But she’d come close today. Very, very close.

She took a breath. The battle here was probably lost.

Hopefully the others were going better. Assuming that the rest of the attacks had been more or less straightforward.

But she had a feeling that wasn’t the case. Whoever had planned this knew what they were doing.

Probably wasn’t that idiot from the first time then. Sierra sincerely wished that aliens would actually make some mistakes every once in a while. Because when they were smart, they were terrifying and almost unstoppable.

***

Nakashibetsu, Japan

The aliens were both doing what Duri expected, and not at the same time. He found it interesting that the reinforcements still hadn’t begun moving forward, and they seemed content to watch ADVENT utterly annihilate the remaining Muton forces, sending each and every last one to the grave. Some more Warthog barrages had targeted the transports some of the Mutons fled to, and that had resulted in several massive explosions as the Warthogs must have ruptured the elerium engines, destroying the craft completely.

That had prompted the aliens to send in several squads of alien fighters, and now there was a raging dogfight in the air, which essentially meant that they would not be getting any air support for a while. The destroyer had been constantly moving ever since that strange Andromedon craft plunged into the water, and as such wasn’t providing much assistance. At the speed it was going,
Duri would have guessed it was running for its life if he didn’t know better.

However, the lull on the ground was likely going to stop soon as the Corporal informed them of the latest development.

“We’ve got another UFO on approach-,” Corporal Williams suddenly informed the soldiers, with his voice halting unexpectedly at the end. “Purifier forces immediately move back. Confirmation of an Overseer-class UFO on approach. Possibility of Battlemaster engagement raised.”

Duri exchanged glances with his squad, expressions all hidden under the helmets, but any elation he’d felt had quickly faded at that. The Battlemaster. “Fuck.” Cara summed up for them eloquently, as she frantically reloaded her weapon. “And here I thought things were going well.”

“Rocketeers, ready weapons for launch,” Williams stated, as in the distance a small gray UFO appeared. Kang raised his weapon, as did all the Rocketeers in the area. Duri did not have high expectations that this would work, but there was always the chance. “Fire!” Williams ordered, and several dozen rockets sped towards the UFO.

Small red lasers shot out of small turrets which popped up the instant the missiles were launched, and quickly reduced the missile volley to dust and metal. “That went well,” Kang muttered as he switched back to his rifle.

“Looks like it’s landing,” Duri noted with some surprise, as he aimed his weapon at the entrance. “Weapons up!”

“Prepare for concentrated volley,” Williams ordered. “Fire the moment whatever’s inside steps out.”

“Copy,” Duri affirmed, and they waited.

And waited.

At five minutes, Cara was clearly starting to get restless. “He’s taking his sweet time,” she muttered. “Whoever this is doesn’t seem to care.”

“Or he’s being smart,” Johan pointed out. “Although that raises the question of why he’d come alone?”

The UFO was a fair distance down the beach, literally hovering a few inches above the water itself before the sand proper. It had landed in between two of the empty transports, and was grossly out of the range of the majority of their weapons. ADVENT was cautiously moving forward, and the MDU’s were marching forward slowly, accompanied by some Purifiers who stopped about a quarter of the way to the transport, which was still fairly far away, but at a range the Purifiers could reach.

“Purifiers, ignite the target,” Williams ordered, and the Purifiers kept walking forward, as if they hadn’t heard the command. “Hold your positions,” Williams repeated. “I repeat, hold your positions.”

The Purifiers spun around in perfect coordination and unleashed their flamethrowers on the completely exposed MDU’s. None of the machines stood a chance as they exploded and melted from the torrents of flame from the traitorous Purifiers. The chemical fire flared dangerously close to the ADVENT line, but for better or worse, the worst of it had been taken by the MDU’s and the Purifiers didn’t seem to want to continue firing, as they walked back towards the UFO, as slow and mechanical as metal zombies.
“Humans!” A deep bass voice rang out, as the alien inside the UFO finally stepped out, the area in front of him charred and broken glass, and the compromised Purifiers moved to form a pyramid of protection around him, although not close enough that if they exploded, they would harm him. Duri also noted that even if the alien was in range of a Purifier explosion, the chances of even a sniper hitting the tanks was extremely low.

Purifiers had been built specifically to withstand enemy fire like this.

The alien himself was not an Ethereal. Nor was it any other species Duri thought he had seen before.

The alien was massive, it stood nearly as tall as an MDU, with bulging muscles encased in segmented and seemingly ceremonial red armor. The fingers of its red gauntlets had tipped points, and the symbol in the center of his chest armor was clearly reminiscent of an Ethereal figure. If said Ethereal was a stick figure.

“What the hell is that?” Johan muttered.

It reminded Duri of a Muton, if that Muton was a little smaller, not quite as strong, and could talk. The face was that of a brute, ugly, with compressed features and a blockish head, not to mention scarred horrifically. The skin was a deep shade of purple, although the bald scalp was a mix of violet and purple from all of the scar tissue. The eyes were a deep purple, and seemed to burn with an unnatural purple fire.

Under his right arm he held a similarly ornate helmet, one reminiscent of the ones Mutons wore sometimes, which completely covered the face and only had slits for eyes. But this one had ornaments that were angular and jagged at the ears, and the back had some kind of hair or wig coming out of it.

Duri surmised that Johan had spoken for all of them.

Because he had no idea what this thing was.

Except that it was psionic.

“Humans!” The alien repeated, raising a pointed hand not holding the helmet at them. “You have stood in defiance of the Elders for far too long. You have insulted their generous nature, and your continued resistance is beyond merely insulting, it is heretical!”

The alien raised his hand to the sky. “The Elders wished to bestow great gifts upon your species, as they did to me! But like petulant children, you have squandered their goodwill, not even comprehending what you will lose in pursuit of your hollow victories! You are blind, arrogant, and weak!”

Duri wasn’t sure if he should be worried at how genuinely offended the alien sounded, or confused because he was literally monologuing in front of them. And the alien began to pace. “Snipers, set your sights on this thing,” Williams commanded, cold fury evident in his voice. “Let him keep wasting his breath.”

“…For even the generous Elders will not tolerate your rebellion any longer!” The alien continued ranting. “Their grace has been exhausted, for they have sent me! I am the Creator’s Greatest Champion™! Be honored, Humans! You stand in the presence of Senorium, Fist of the Creator and Warlock of the Elders!”

“Who the fuck is the Creator?” Cara muttered in disbelief.
“God?” Kang asked in equal confusion. “I mean, this guy seems to think the Ethereals are gods anyway. Who would have thought aliens have their religious fanatics as well.”

“Psionic religious fanatics who don’t shut up,” Duri added. “Look, he’s still going.”

“Fire,” Williams commanded, and all the Snipers in range shot their rifles in quick succession, discharges reaching his ears within milliseconds of each other. The alien actually reacted quickly, raising a hand and a small shield appeared in front of him, but Duri quite clearly saw one of the bullets hit the unprotected part of his throat, ripping it apart.

Purple blood spilled out, and the alien reached for it, looking more angry than in pain. “You wish a battle?” The Warlock gasped, straightening up as the wound closed before Duri’s eyes. He blinked. Impossible. He doubted even an enhanced XCOM soldier could survive a direct shot to the throat.

“You cannot kill me!” The Warlock roared, abandoning all pretense of civility as purple psionic flames encased him. “No mortal can hope to stand against me! You will die now!” All of ADVENT suddenly began firing at the Warlock as he surrounded himself in a psionic shield, while putting on his helmet.

He screamed some battle cry in a harsh, guttural language, and he raised a hand encased in psionic energy to the sky, as if lifting something, before pointing the other one at the ADVENT army. Then things immediately turned terrifying. Hundreds of purple figures appeared on the beach, materializing out of nowhere.

The moment they appeared they began running towards the ADVENT line which quickly turned to focusing on them. Duri didn’t know what these things could possibly be. They were humanoid figures, some clearly defined while others were little more than psionic mist in the shape of a humanoid. They held strange kinds of melee weapons in their hands, or maybe they were parts of their hands.

The soldiers were clearly afraid of what these things were, and firing frantically into the ghostly force charging towards them. Duri just fired and prayed that these things even could be killed. Luckily, at least some of them seemed to be vulnerable. The ones made out of little more than psionic mist dissipated after a couple shots, while the more defined and solid ones took a few volleys to completely be destroyed.

But Duri also noticed that they couldn’t be wounded or slowed down. Not in the conventional way. It was all or nothing. They were either destroyed or they were not. The only thing that indicated damage was that cracks appeared through the defined ghosts, and the immaterial ones became less visible.

The Warlock was laughing as he strode forward, a laugh torn between joy and pain. Psionic energy formed in his hands and he thrust them at a nearby ADVENT fortification. A maelstrom of destructive psionic energy materialized and tore the soldiers within it apart, as well as anything else caught in the storm.

The psionic ghosts that hadn’t been destroyed were now on the ADVENT line, and to Duri’s terror, they actually were more than just illusions. The ones of psionic wisps sliced and cut against the armor, and it had the same effect as if dangerous psionic energy was used on it. This resulted in the blades of psionic mist cutting and stabbing through armor easily.

The solid apparitions were thankfully much less dangerous. Their weapons were more blunt than sharp, and although they were harder to kill, they were not nearly as deadly as their glass cannon counterparts. Duri shot one of the immaterial ghosts, and it vanished, but there were two more solid
ones that were attempting to kill Cara.

One she blew apart with a volley, but the other sent her back with enough force to send her to the ground. Kang stepped up and killed that one, as well as another coming around the side. “They’re on me!” Johan shouted as three of the immaterial ghosts charged him; one he shot into nothing, and Duri managed to shoot the other, but none of them were fast enough to stop the last one from slicing down at him, then stabbing him in the neck with the psionic blade, which sizzled the skin it stabbed though, before it vanished as Duri killed it.

“We need to fall back!” Duri yelled as the seemingly endless wave of ghosts kept coming. The MDU’s were practically useless as their sensors likely didn’t recognize the immaterial forms, and thus couldn’t fire at them. Whoever was in charge of the MDU’s had ordered them back, but the machines were taking damage all the same, yet were unable to act on it.

The other ADVENT soldiers were still holding the lines, but the Warlock was continuously advancing, creating little psionic storms in secure fortifications, turning them into death traps. “All forces immediately retreat!” Corporal Williams ordered. “Retreat to interior defenses-“

He was suddenly cut off, and Duri didn’t waste time worrying about what that meant. “Come on!” He yelled to Cara and Kang, and they began backing up, firing at the apparitions continuously. Duri felt a pang of regret for having to leave Johan’s body behind but, there was no choice whatsoever. “Beatriz! Come in!”

“Y-yes?” She answered, her voice ragged and terrified. She sounded like she was going to hyperventilate. Fuck. He couldn’t have her break down now.

“Listen to me,” Duri commanded, putting some extra steel into his voice. “Keep calm. Stay where you are and do not move until we are at your position. How many of those ghosts are left?”

A pause. “I…I think a quarter of what they were. Maybe, I…”

Alright, that could be worked with. “Good,” he interrupted her. “Keep shooting them. Target the more immaterial ones. Those are more dangerous. Do you got that?”

“I…yes sir.”

“Good,” Duri nodded as he shot a few more psionic ghosts. “Stay calm. We’re on our way.”

And as they retreated deeper into the city, the insane laughing of the Warlock followed them as he pursued the soldiers, psionic energy rippling in his hands as he continued ripping them apart with his immense power. And behind him, the UFO Transports began moving.

This was somehow going to get worse.

***

Tokyo, Japan

“All of Twin Team has gone silent,” Big Sky informed Patricia as she stood alone in the skyranger. “They’re presumed dead, killed by Caelior."

“Understood,” Patricia said softly, even as she first felt the Ethereal himself. She didn’t know how close they were, but she could sense his power was immense. Vindication and triumph were emanating off him in equal measure, and he clearly took great joy in exercising his powers. “Open the ramp,” he ordered, wanting to see the battleground before deciding what to do.
“Patricia, this is the Commander,” he suddenly interrupted. “You’re not going to be able to stop him now. ADVENT is in full retreat from the city and we can’t afford to lose you as well.”

“I know!” She scowled. “But I’m going to see for myself before deciding.”

“I’ll try to stay out of his range,” Big Sky promised. “But even still…”

“Do it,” Patricia repeated, as she reached out to probe Caelior’s mental defenses. All background noise faded to silence as she tapped into the psionic power within her, and reached out to the alien below her.

She met the equivalent of a brick wall. It was a shell that completely blocked any access to his mind beyond the basic sensing of emotions. Not good. A quick survey didn’t reveal any significant weaknesses, and even if she were to press, he might be able to pinpoint exactly where she was, and that would only get her killed.

She needed support. Multiple telepaths minimum, people who could augment her strength or overwhelm Caelior’s mind. The technique had worked with the Ravaged One, it would probably work here, if she actually had anyone to help her.

The ramp opened up and she got a look at the destruction Caelior had already wreaked upon the city. It had started in the canal before Tokyo Bay, and it had only continued. Buildings and businesses had been turned to shattered rubble, leaving hundreds of gaps amidst the city, and the collapses had also destroyed other buildings beside them.

There were thousands of dead ADVENT soldiers, MDU’s, and aircraft littering the water and land. Every single one was mutilated in some way, from irregularly shaped limbs to complete pulverization of the bodies. Many would never be identified. Dozens of small fires were raging, dotting it in orange, likely from exploded Purifiers, and the fires would cause more damage before burning themselves out.

And she saw the floating US carrier, suspended high in the air, just as the Ethereal below it threw the raised hand forward, and the behemoth of steel was thrown forward, flying through the air almost in slow-motion as it careened towards the center of the city. It was almost elegantly thrown, up until it crashed into the first buildings.

The sound was deafening as skyscrapers were shattered and toppled as the carrier cut through the bases of the buildings like butter; each destroyed building raising clouds of smoke as it fell. The carrier cut through a good portion of the city before coming to a stop; complete destruction in its wake.

The Ethereal himself was suspended in the air, likely under his own power, observing his handiwork, before he continued drifting forward, telekinetic powers employed as he destroyed what ADVENT forces were left, and turning the buildings still standing into rubble.

“Head back,” Patricia said quietly. “We can’t do anything more here.”

“Yes, Psion Trask,” Big Sky answered just as somberly. “Leaving the area now.”

***

Nakashibetsu, Japan

“We’re getting surrounded,” Beatriz updated worriedly as Duri, Cara, and Kang continued retreating through the streets. More ADVENT soldiers were taking up positions behind the
barricades in the streets, and the turrets were primed and ready, as were the MDU’s left. It looked like the Purifiers were being moved to certain choke points.

Beatriz’s update was not exactly welcome. “How?” Cara demanded as she leapt over a barricade and positioned herself in a firing stance.

“They’ve landed UFO transports on the beach and east and west sides,” she explained. “Largely Mutons and Andromedons from each of them. I think there are a few Vitakara teams as well.”

“Set up here,” Duri instructed his team, as they joined several other squads at the barricade. “Beatriz, what’s coming up to us?” He glanced up at the roof she was positioned up on, along with a couple other snipers.

“Uh…” she audibly swallowed. “Andromedons.”

“Wonderful,” Cara grunted. “As long as that Warlock doesn’t show up with them, we should be fine.”

“Majority of ADVENT forces are in fortified positions,” Williams stated over the radio. “Purifier forces perform immediate area denial and retreat to safe position.”

The Purifier on their street immediately stepped forward, raised his flamethrower, and shot a torrent of white-orange flame which set the entire street alight, as well as the buildings on the ends. Duri didn’t feel comfortable being this close to the chemical, but it would force the Andromedons to find some other path.

Though it didn’t deter them for long.

“Andromedon!” One of the soldiers yelled, and immediately plasma lances came down on their position as the Andromedons began firing, not from the street, but from the buildings around it. Their angles of attack weren’t exceptional, but they had a line of sight to the ADVENT line. They were also constrained by how many could fire at a time.

And it trapped them. “Kang! Collapse it!” Duri ordered, and Kang immediately pulled out his rocket launcher again, and loaded in his final rocket.

“Marking now, syncing…” Duri continued, switching to his green laser sight, which pointed at one of the buildings containing an Andromedon force. The green beam turned red. “Locked!” He yelled.

Kang fired the rocket, which hit one of the Andromedons directly in its green-yellow helmet and blew apart the entire wall, and within a few seconds later, caused the building to collapse into the street. The rubble caught fire the moment it touched the burning street, and began spreading onto the nearby buildings.

“Nice shot!” Cara called, doing her best to lay down a suppressive barrage on another building holding Andromedon soldiers. “I think-” She was interrupted by a surprised gurgle as a soldier next to her fell over, a small hole in his forehead.

“Sniper!” Duri called, and all of them reflexively fell into cover. “Beatriz!”

“I can’t get a clear look!” She yelled back. “Might be two or more. Vitakara probably.”

Another lightning plasma bolt hit an Officer without warning, and the Andromedons were moving further up the buildings. “Got a shot,” Beatriz updated. “Firing.”
A few seconds. “One down.”

Duri let out a small sigh. Alright, this was still bad, but Beatriz and the Snipers could hopefully deal with the Vitakara. The larger problem were the Andromedons moving ever-closer. “Acid!” Kang shouted in warning as a half-dozen Andromedons stepped outside their protective buildings, raised their fists and shot out small green pellets at the ADVENT line and turrets.

Duri immediately fell behind protective cover, as small puddles of sizzling green acid landed around him. Soldiers yelled as they were hit and it began eating into them, and some landed on MDU’s and turret barrels, warping the metal and preventing it from working properly.

Some of the MDU’s, deprived of weapons, charged the Andromedons who’d shot the acid. Unlike the Mutons which Duri knew would try and fight back, hand-to-hand, the Andromedons simply raised their wrists and sprayed the MDU’s with acid which ate through the metal and destroyed the integrity of the limbs well before they were destroyed by the acid destroying vital systems.

The good news was that the Andromedons had exposed themselves to the surviving MDU’s and turrets, and those surgically destroyed their suits. An MDU blew apart the tubes on one of the Andromedons; the acid tanks on their backs were destroyed by some turrets, and with ADVENT now somewhat recovered, their combined fire was enough to completely kill the Andromedons, including before they could utilize their AI that activated after death.

Duri quickly looked around. They only had maybe fifteen soldiers left, and there weren’t any reinforcements coming that he could see. Whereas he couldn’t tell just how many Andromedons were left; there could be dozens or only a few. Given the rate of fire still being used on them, he figured they had plenty of soldiers left.

He quickly glanced upwards, and there were UFO fighters still streaking over, engaged in dogfights with some of the Ravens. No chance of any kind of air support then, as that was still tied up, they were too far for the Destroyer to help, provided it was even in any position to do anything. “Corporal,” he said on the channel. “We’re getting overwhelmed with Andromedons here. Requesting reinforcements.”

“I don’t have any to spare,” was the tight answer. “Every front is under attack.”

“Then we need to retreat out of the city,” Duri insisted, as he fired a few times at an exposed Andromedon. “We cannot hold this position without support!”

A pause on the end. “Orders will be coming shortly. Hold the line until then. Williams out.”

Duri actually hoped that shortly wasn’t code for death sentence, but the Corporal knew that they couldn’t win this now, especially if things were as bad as had been suggested. If there really were no reinforcements, then this attack was much bigger than he’d thought. “Stand by for orders!” He yelled, speaking to the remaining forces, since many of the Officers had died. “Hold the line!”

A plasma lance slammed into another soldier who collapsed to the ground. And now the Andromedons judged it was the time to strike, and they came pouring out, determined to simply tank the remaining damage ADVENT could put out. Duri had a choice now: Try and hold the line or retreat.

It wasn’t a hard one. “Fall back!” He ordered, waving a hand backwards. The soldiers immediately retreated dashing back a few steps, falling into whatever cover was around, and firing a few shots, while the Gunners performed a sustained fallback, firing as they went. “Ah!” Kang gasped as a plasma lance hit his leg, forcing him to the ground.
Cara stopped and began moving towards him, before he waved her off. “Go now!” She didn’t have much of a choice as the Andromedons quickly reached where he was, one lowered a gauntlet and sprayed his quivering body with acid, eliciting some loud and chilling screams before he died.

“Beatriz!” Duri called. “Get down here now!”

“I’m here,” she responded, dashing out of the building she’d been in, and firing with her drawn pistol. “We need to-“

“Yes! I know!” Duri yelled back, trying to prevent her from breaking down completely. Even through her armor he could tell her body was shaking horribly, turning her shots into wild misses. Her entire balance was off, and he wondered if she would be able to fully run without stumbling over herself.

He grabbed her arm and pulled her behind a crate. “Beatriz! Listen!” He yelled at her over the shooting. “Look at me! You understand?” A quick nod. “Take a breath and stay by me! We’re going to get out of this, do you understand?!”

Another nod. “Alright, let’s go!” He ordered, and they stood and continued to fall back, now with some distance put between themselves and the Andromedons. With no more Sniper support, the Vitakara snipers had returned to shooting the soldiers, killing several more with their plasma bolts.

“ADVENT forces are immediately ordered to begin retreating out of the city,” Williams finally updated. “Purifier forces are standing by for final area denial.”

Damn it, he was leaving another soldier behind. Two down. He couldn’t lose any more today. His HUD had the coordinates and pathing, so he directed the surviving soldiers that way. “Behind me and reload!” He ordered Cara, whose clip was running out. “Now-“

Another plasma bolt slammed past him and directly into Beatriz chest. She collapsed with a gasp, but the first thing Duri noticed when he knelt to check her was that she was still breathing. Barely. But she was breathing. The sniper had directly hit the hardest part of the armor, and it had absorbed the worst of it.

Not all of it, and he knew she would die if she didn’t get medical attention soon. Plasma wounds were like acid, but slower. By the time it fizzled out it might burn through her chest. He tossed aside his rifle and picked her up in both his arms. Throwing her over his shoulder would probably only make the wound worse, not to mention be extremely painful for her.

All he could do was pray they were out of the range of the snipers.

“Cara! Cover me!” He yelled as he dashed past her.

“On it!” She confirmed, still spraying gauss rounds down the street. Duri didn’t know how long they had been moving, running, and shooting, but the end was in sight. There were transports and Purifiers at a small city square, waiting for them.

There were only six of them left, as the MDU’s had long since been destroyed, and one of the six was injured. Upon seeing them running up, one of the Officers gestured and an ADVENT Medic came running up to him. “Direct plasma shot to chest,” he urgently told the Medic. “Armor seems to have taken the worst, but-“

“I’ve got it,” he assured Duri, waving for a few soldiers to come with a stretcher. “She’ll live. Don’t worry.”
Duri turned around and saw the two Purifiers begin their final area denial. They didn’t stop at just the streets this time. Every nearby building that didn’t immediately pose a threat to them was doused in the terrifying chemical. As the entire street burned, Duri felt that was a good metaphor for how this entire attack had gone.

Up in flames.

Everything they’d accomplished here was ultimately for nothing.

And he didn’t know what they would be able to do to make sure it didn’t happen again.

***

Supplementary Material

The Advent Directive

Section 8: ADVENT Military

Subsection 8.6: ADVENT Army (Abridged)

Overview: The ADVENT Army is the primary ground force of the ADVENT military, and is responsible for all ground combat waged. The structure and funding of the ADVENT Army is to be larger than other military divisions because of the increased areas of control and because the majority of armed forces are ground-based.

Structure:

- **General**: The general of the ADVENT Army oversees the major operations and deployments of the Army, and coordinates heavily with the other ADVENT Military.
- **Chief Marshal**: The Chief Marshal is the designated officer over ADVENT Army Legions, which are largely provided to member nations, although there are some held in reserve to deploy in cases of emergency. Coordinates often with the General of the ADVENT Army.
- **Marshal**: Marshals oversee Garrisons of ADVENT Legions, and are largely used to protect major cities within member or enemy nations. As they command Garrisons, they are more mobile than standard Legions, as are thus able to more accurately distribute their forces. Marshals report directly to the Chief Marshal.
- **Colonel**: Colonels oversee Companies of ADVENT Garrisons, and are largely used for specific and precise geological positioning, and are able to be one of the most mobile forces of the army. They are best suited in conjunction with other Companies or higher, or defending smaller towns. Colonels report directly to Marshals.
- **Corporal**: Corporals have direct authority over the management or positioning of Squads of soldiers which are composed of Units, many of which can be unique and specialize in multiple areas. Corporals are essential in reducing the workload of command, and are likely to be most involved in battlefield command. Corporals report directly to Colonels.
- **Officer**: Officers oversee four-man squads of ADVENT soldiers and are the primary battlefield commanders in the heat of combat. These are essential for maintaining battlefield discipline. Officers report directly to Corporals.
- **Specialty Units**: These are units that do not fall directly under a specific hierarchy of command, but generally answer at minimum to Corporals:
  - **Purifier**: Flame units that specialize in area denial and annihilation tactics.
  - **Medic**: Primary medical professionals specializing in battlefield medicine. Are armed with gauss rifles and pistols.
Engineer: Battlefield engineers that specialize in adapting equipment found on the
battlefield into usable equipment, as well as maintaining robotic and vehicular units in
and out of combat.
Soldier: ADVENT soldiers have several different specializations:
Gunner: Are heavy-fire units which should be utilized for suppression and area
denial. Their primary weapon is a gauss autorifle.
Infantry: The standard soldier of the ADVENT Army, who uses gauss rifles and
pistols.
Sniper: Long-range specialists that are utilized for single-target removal and surgical
sabotage. Armed with a sniper rifle and pistol.
Rocketeer: Heavy weapon and explosive specialists armed with a gauss rifle and
rocket launcher.

Chapter Notes
See the end of the chapter for notes

It was quiet.
Too quiet.

Patricia didn’t recognize where she was. She appeared to be in some circular hallway, with the windows outside showing red sand. Dust blew in gusts, and that was enough for her to become lucid enough to realize that she was dreaming. Immediately, she extended her psionic senses and…

She froze.

The Imperator.

It was unmistakable. There was no other Ethereal that had the same sheer aura of power, even within this mental construct. Caelior, and even Aegis were shadows compared to him, and he knew she was aware, and that she was afraid. She knew that he would likely be able to take over her mind, and there might not be much she could do.

But he seemed content to just let her come to him. She could sense where he was easily enough, and even though she didn’t know the layout of this place, it probably wouldn’t take her long. So she started walking, realizing she was in her armor, minus the helmet and autorifle. She pursed her lips, concentrated, and willed the familiar weapon into her hands.

For whatever good it would do.

She kept walking through the empty station, wondering where she actually was. The detail was too rich to merely be a construct. There were always signs of a purely mental creation, which meant that the Imperator was…well, even more powerful than she anticipated, or that this was drawn from a memory of this place.

She kept looking out the windows, and was fairly sure she wasn’t on Earth. Mars? Mercury? Her astrology really wasn’t the best, but she was pretty sure there weren’t any buildings on those planets, and at least some of them were completely uninhabitable. Then again, Mars was where they were pretty certain the main alien command was, so it would make sense that they had built some stations on the planet itself.

Patricia reached a door, with a green holographic circular lock in the center, which dissipated as she approached, and slid into the walls silently, and she continued. As she kept going, the walls becoming more exposed and revealed their internal workings, she became aware of a low hum in the back of her head. It reminded her of the UFOs, but this wasn’t nearly as pervasive. It was more like a machine running; not something that was jammed into your skull.

A few more winding hallways, and she suddenly found herself in what seemed to be some kind of…control center? There were computer stations that had no noticeable similarities to Human tech…or…she frowned. It even seemed different to Ethereal tech. There weren’t any kind of screens or interfaces, but they were definitely meant to be interacted with.
In the center was what they were all connected to. In the center was some kind of rectangular
device, green lit lines running along it, shielded by a similarly colored stasis field. It was utterly
unlike anything she’d seen, and still seemed to be…online. Assuming that it actually worked like
that, and wasn’t just a shiny monument.

“A repository,” the rumbling voice of the Imperator stated out of nowhere, stepping beside her.
“We were not the first to find your species.”

Patricia looked over, and saw that he’d assumed the form of…Patricia frowned. The name didn’t
come to the front of her mind right away, but she had seen him before. Ah, right. He was that old
guy that always accompanied Saudia. Why the Imperator was assuming his form of all things was
interesting, but at least it wasn’t her father again.

“Where are we?” She asked finally.

“Mars,” he answered. “Specifically, the ruins on the planet. The Collective Observation station is
in orbit, but there have been a few teams sent down here. A fascinating place it is, despite what
happened.”

Patricia sighed. “And I’m sure you’ll enlighten me?”

The Imperator stepped forward, a smile on his face as he looked at the strange artifact before them.
“Honestly, I can only speculate. All that is certain is that at one point, they were here, and then
seemingly vanished. The technology is even different from our own, and this is not the first time
we have encountered it.”

Patricia raised an eyebrow. “How perceptive. I could have guessed that.”

“You are missing the point, psion,” the Imperator chided. “Does that not remind you of
something? Or has Aegis been remiss in teaching you our history? The very reason we still
exist?”

Ah, she got it now. “You really think this alien species was killed by the Synthesized?”

“Or something equally as dangerous,” the Imperator nodded approvingly. “There are only two
forces that could simply wipe out a powerful galactic civilization, and time does not seem to be
something that hinders them. Perhaps it is the Synthesized, perhaps not. The point is that it is
unlikely that they have suffered the same fate. One day they will return.”

Patricia wondered at that. “But you don’t know.”

The Imperator smiled, an expression that looked alien on his Human avatar. “No. Not for sure. But
there is little point assuming without proof.”

Patricia crossed her arms. “Is there a point to this? Are you going to do something to me, or just
give me a history lesson?”

“Do you really think I care about your species fighting back?” The Imperator asked. “It does not
matter what happens. You only have one planet. Do you really think that I have not dealt with
upstart species before? You pose no threat to me, psion, and you still seem to believe you have a
chance against us. Every advancement you think will be the key to your victory will ultimately
mean nothing. The use of dangerous chemicals, nuclear weapons; tricks of technology, those will
only prolong the war, and not end it in your favor.”

He took a few steps towards her. “You think of us as arrogant, but I find it amusing to think that of
all species, yours will single-handedly topple a galactic collective composed of billions of soldiers
and spacecraft. Perspective is needed, psion. At the moment your greatest enemy is us, but who will it be next should you miraculously manage to win?”

Patricia shrugged. “Aegis has mentioned other alien species in the inner galaxy. Depending on how hostile they are-”

“Incorrect,” The Imperator stated flatly. “They are all puppets, controlled by those who are far more powerful and manipulative than they could ever hope to be. I am surprised your own species was ignored before we found you, though since we were directed here, I do wonder just what their plan was…” he trailed off contemplatively. “Win or lose, psion Trask, you will need to recognize who the true threats are, and they are not mere alien species, but beings much older and dangerous. Ones powerful enough to bring our Empire to the ground, or wage proxy wars using entire species over countless cycles. In the grand scheme of things, we are, to provide a Human analogy, a sand castle against a raging flood. But I believe that can be changed.”

“One of them, for certain,” the Imperator nodded. “But they may be gone. There are ones who are tangible and real to beware of. There is a reason we have avoided the puppet species so far.”

Patricia furrowed her eyebrows. “That isn’t an answer.”

“I will tell you,” the Imperator smiled again. “One day. But all I desire now is for you to think. Understand what you are really fighting for, and fighting against. Aegis does not accept certain realities, but I do not believe you will ignore the evidence once you make the connection. Fight well, Patricia. We will speak again.”

He inclined his head, and Patricia woke up.

***

The Praesidium, Patricia’s Quarters

She woke up with a short gasp.

A quick glance at the clock told her that she had been sleeping at least five hours, but she was strangely alert with no drowsiness whatsoever. Creed was right beside her, still breathing softly and one arm wrapped over her. She took a breath and took the opportunity to snuggle into him, even though she knew she wasn’t going to be getting any more sleep tonight.

One perk of being the Overseer of Psionic Operations was that she got her own room. Not too large, but it was enough for a two-person bed, a couple nightstands, and an armor rack and small armory. And it was all to herself, and anyone she wanted to share it with of course.

Mostly the man she was sleeping beside.

An argument could be made that her life had gone horribly wrong (as had every other Human’s on the planet), but this was one area of her life that certainly hadn’t. She’d quite honestly thought that any sort of relationship she’d develop would be after her military service, outside of the couple flings with those guys she’d found enjoyable, although that had quickly grown problematic as well. A lesson she’d learned was that relationships based solely on sex never really worked out. So eventually she just decided to focus on what she was good at.

It was a shame they really didn’t get any kind of vacation or shore leave, she figured her parents would like him. He really was the kind of guy her father would want her to marry, and while she
was not expecting that to be brought up for a long time, it was a possibility she could see happening. One day. But she wasn’t convinced it needed to happen for a while yet. It really wouldn’t do much aside from making it official, and there were quite a few more pressing matters at the moment.

Like her conversation with the Imperator.

She grew grim at that, and pushed herself tighter against Creed, as if that would do anything. It didn’t, but it was a comforting feeling. The Commander and Aegis were going to wonder what he was talking about, and that he still didn’t seem interested in…really doing anything. He’d shown up, talked with her, and left.

It was maddening. In a strange way, he reminded her of Quisilia, doing things that made no sense. Why would he tell her this, then just leave? A warning? His own strange way of expressing respect? Just part of his game? Maybe Aegis could answer it, but she wasn’t so sure. That, and there was definitely something on Mars…assuming the entire dream wasn’t an illusion.

That, however, was probably something Aegis could confirm. If they really had encountered that strange technology before, he’d likely be aware of it. If that was the case, then she did have to wonder at the power of something that could wipe out not just one, but multiple galactic civilizations.

That was when she also realized that she’d forgotten to ask the Imperator another rather important question. He’d said there were two capable of such a fear. If the Synthesized were one…

Then what the hell was the other?

And apparently, this was the larger threat, at least to the Imperator. Had Aegis forgotten to mention the other galactic threat or did he not know either? The Imperator seemed very keen on keeping secrets from those he didn’t trust, which then begged the question of why he was telling her this. Not to mention the strange warning about ‘knowing who the real threats are’.

Could that be, in a twisted form of a contingency, his way of warning them that even if they won, they would be forced to fight the same enemy in the future?

She frowned in the darkness. There were too many missing pieces. Too much was unknown. There was a lot more going on beyond Earth that they had no comprehension of; that Aegis might not know. The Imperator had said he didn’t care, and she believed him; she’d sensed no dishonesty when he’d spoken, although given his power, he was probably one of the few who would be able to lie to her and succeed.

But if he was being truthful, then that was troubling. If an entire species fighting against his Collective, developing psionics, and overall fighting better than they should have, not to mention one of the more powerful Ethereals defecting to their cause…if that wasn’t something he cared about, then what was?

Maybe she was making it too complicated. It was entirely possible that the Imperator just didn’t respect the threat they posed. He was too focused on the bigger picture; he was used to the scale of galaxies and planet clusters, not cities and continents. Such concerns were likely beneath him, and so he assigned his underlings to handle the rest.

Was their scope too narrow? Were they focusing too much on Earth right now and assigning importance to it that wasn’t deserved? At some point, assuming they were still alive…they would need to expand off Earth. There was the Vitakara, the Sectoids, the Andromedon Federation, and
the Mutons, all of whom held hundreds of planets, and outnumbered them by a ludicrous amount.

In some way, she had to admit the Imperator was right. Was it really not arrogant to believe that they, who hadn’t even mastered spacecraft yet, could manage to bring down a Collective whose sheer size dwarfed their miniscule one planet? True, they had psions, an Ethereal, soldiers, and Nartha who was doing whatever he could to disrupt things in the Collective, but even still…the odds were not in their favor.

They had a few trump cards left. Japan wasn’t the end, no one really believed that. But it was going to force them to make decisions on where to use them. Eventually, they wouldn’t have any left, and at this stage of the war, could they really afford to use them up too quickly?

She didn’t know. That wasn’t her call.

But the aliens were going to adapt, and at some point, they would decide to finish it, and unless a miracle happened, they wouldn’t be able to solve it.

With those cheery thoughts swirling through her mind, she stared blankly into the darkness, waiting and hoping she might fall back asleep, even if she wasn’t sure she’d really rest.

***

The Praesidium, Situation Room

Considering that they were juggling several crises at once, the Commander was not especially amused to hear that Patricia had been telepathically contacted by the Imperator.

Again.

He wasn’t sure if he should feel insulted or concerned that this marked the second time the Imperator had contacted her. Considering he was the Commander of XCOM, he would have expected himself or someone high in ADVENT like Saudia might be a target of the Imperator’s power. That he’d spoken to Patricia twice meant he’d specifically developed an interest in her.

Well, maybe Ethereals just had their favorites. Aegis had done much the same to him, but he figured it was more due to his position than anything else. Still, that begged the question of why the Imperator was contacting Patricia. From what it sounded like, he’d basically just talked to her (again) and made some vague points (again), and then left, even wishing that she fight well.

And in the process brought up a lot of…interesting…information. What the hell was it with Ethereals and just dropping crucial details like it was nothing? First Aegis, then Quisilia, and now the Imperator. It was like they were trying to make it easy for them sometimes.

That being said, this was not the right time for this kind of information. The Japan situation needed to be dealt with, and the Commander knew that the Canadian annexation was going to be executed soon. This was in addition to some reworks in XCOM strategy and helping prepare the Korean defense.

The good news was that this was hopefully going to prompt Aegis to actually act. Caelior was a clear escalation, and they needed to respond in kind. In the meantime, he was instead going to get grilled on some things he'd forgotten to mention. “This alien technology Patricia described,” Vahlen said, eyeing Aegis suspiciously. “What do you know about it?”

If Aegis felt anything regarding the borderline interrogation, he didn’t show it in his tone, body language, or emotions. “Very little,” he answered, apparently honestly. “Our interest is not in
archeology or ancient technology. The ruins and scraps we have recovered have not been examined in-depth, since Revelean and Fectorian determined that they were no more superior than our own. They mostly serve as a reminder to us; a symbol of the threat the Synthesized pose, and that it is more than our species that is at stake.”

Patricia rubbed her forehead, sighing. “And you never bothered to try and learn more about it?”

Aegis turned his helmet towards her. “What would the point be, Psion Trask, outside of academia? Time is precious, and while a curious development, the ultimate purpose it serves is likely limited.”

The Commander was grateful to see that none of them were particularly satisfied with that explanation. “Likely limited?” Shen noted, disapproval clear in his voice. “Then you don’t know for sure.”

A pause. “No, I do not know for sure,” Aegis admitted. “But I can only assume that if it had some value, either the Imperator or Sovereign Ones would have had us investigate.”

“Well, that gives us a goal then,” the Commander said. “If the Collective isn’t interested in this other technology, maybe we can find something from it. I guess then you wouldn’t know why there was one on Mars to begin with?”

Aegis shook his head.

“The Imperator mentioned the device was a repository,” Patricia recalled. “So he has some knowledge. Why he told me that, I don’t know.”

“Question of the hour,” the Commander muttered, leaning on the holotable. “I’m curious as to what his ultimate point was. Was it to say to us that ‘there are more important threats than me’?”

“Possibly,” Aegis said slowly. “Regardless of who wins this conflict, the Synthesized will likely return one day, and they will have to be fought. That will be us, or the Collective. The Imperator, for all his faults, is keenly aware of the threat, though not to the extent I had hoped he would be.”

“That’s a problem to deal with when we win,” the Commander shook his head. “The Synthesized, or any other galactic threat, do not have any bearing on the situation now. As of this point, the Collective poses the largest threat, and they need to be removed. Then we can talk about the Synthesized.”

“And these inner galactic species,” Jackson spoke up for the first time. “That the Imperator called them ‘puppets’ is not a good sign.” They all looked to Aegis.

“I am only aware they exist,” Aegis said, shaking his helmet again. “The Imperator made a very clear point that we were not to go anywhere near them until we were prepared. Based on his words, I wonder what exactly he learned, as he no doubt sent at least Sicarius and Quisilia to the inner galaxy. I know of no species outside us who could turn an entire species into ‘puppets’.”

There was a short uncomfortable pause.

The Commander furrowed his eyebrows. “Is it possible that there are other surviving Ethereals?”

“No,” Aegis stated flatly. “If that were the case, it would have not been hidden, even if the Imperator decided they were hostile. I can say for certain that these aliens are not Ethereals.”

“Or there is just as good a chance the Imperator is lying,” Zhang pointed out neutrally. “Whatever
he said, he is not simply talking to you because he is bored. This was done purely to get into your head, Patricia, and by extension, all of ours.” He stepped forward. “It does not matter what is beyond the Collective. It does not matter if these alien ruins are explored or not. The Synthesized are not a threat right now.” He nodded towards Aegis. “They are the only ones we should concern ourselves with. The Ethereals are our enemy. Once they are dead, then we can focus on whatever else this galaxy holds.”

The Commander nodded his approval. “Well said. Interesting as this is, it is not relevant. We have actual problems to deal with; namely what we’re going to do about Japan, not to mention Canada.”

There were nods all around the room, although Patricia didn’t look quite so satisfied. The Commander knew that the conversation was going to stick with her for some time, and he couldn’t really blame her. But they needed to move on, and information from a questionable source wasn’t worth dwelling on.

Still, he felt like Aegis knew more than he was letting on. That, however, was a conversation for another time. Preferably when there weren’t several other issues that demanded their attention.

“Concerning the new information that the Andromedons have a dedicated aquatic team, I think that we need to develop some kind of response…”

***

*Lancer Operational Command, United States of America*

In Saudia’s view, the situation could be worse.

Conversely, the situation could always be worse.

She realized she was staring at the small holotable for no specific reason, distracted by the recent events. Japan was, predictably, not going over well. The media knew for sure they were pulling out of Japan, and predictably, they were using that to indirectly imply that ADVENT was slowly falling apart, as well as questioning her leadership.

There was no mistake about it, they’d lost. Badly. While the decision to pull out completely perhaps sent the wrong message, it was the smartest move. Everyone of any import agreed, and it was by far the easiest decision she’d had to make throughout this. But they’d been outmaneuvered, outplayed, and outsmarted here. Like ADVENT, the aliens had learned from their mistakes.

She pursed her lips. The Ethereal, Caelior, he was by far the biggest problem. Saudia had been skeptical that the Battlemaster could be topped in terms of threat level, but that was before the alien had thrown a US carrier into Tokyo. Still no one knew if the nuclear reactors on the carrier had gone into meltdown or not, and she doubted that the aliens were going to care much one way or the other.

Laura’s autopsy of why they lost was a step in the right direction, and if nothing else, the woman was good at adapting quickly. But it would take time to actually implement, and implement well. Right now they had no idea where the aliens would strike next. America, Russia, and Korea were all valid targets, even China, though that was optimistic.

What complicated matters further was trying to reassure people that the situation was handled, when that was questionable at best. None of them had really gotten any sleep the past few days, and there was the upcoming annexation to deal with.

In short, the situation was not good, but manageable.
She could work with that.

“What are the reports from Japan?” Weekes asked Laura as they finally gathered around the holotable. “If we want to begin harassment operations, we shouldn’t delay.”

“Same as before,” Laura answered, shaking her head. “They seem to be establishing bases, and spreading pretty rapidly. We’re not sure if they’re getting ready to attack again soon or not. We’re preparing for the worst.”

“Regardless of what they’re planning, we need to be proactive,” Elizabeth interjected as she paced. “But Japan is a dead end, I think. They will be expecting strikes there. Perhaps now we should being focusing on Australia, wound them where they don’t expect it.”

“Or we do both,” Saudia said tiredly. “I’m certain XCOM would be willing to help. But I believe Japan would be a greater priority. Whatever happens next, it’s almost certain they’ll be launching an attack from there. We need to know what they’re doing and how.”

Laura leaned back into a wall, her shoulders slumping. “We need to do something soon. I’m about ready to shoot every TV screen that I see if I hear one more idiot commentator wondering ‘what this means for the future of ADVENT’. Maybe I should do an interview, maybe it would calm them down.”

Stein sniffed, her tone flat. “No. The Commander of the ADVENT Military has more important things to do than waste time with those packs of vultures. If you must send someone to placate them, I’m willing to speak to them.”

“No offense, but I don’t think scaring the hell out of them is a valid response,” Weekes interrupted. “Besides, you’re with the Peacekeepers, not military, sorry. I’m sure we could find some means of placation.”

“The Prime Minister?” Elizabeth suggested. “Perhaps the Emperor or one of the Royal Family? They would appear more trustworthy than us to them.”

Saudia nodded in approval. “The Prime Minister understands the situation fairly well. I believe he would be best, and it would especially be reassuring to the Japanese refugees to hear it from their leader.”

“We have another problem we’re going to have to deal with soon,” Weekes interjected. “South Korea needs to be evacuated immediately. At best we hold the aliens at the coast, but I don’t think one major military installation will be enough to hold them back.”

Laura nodded. “Seoul is where the real fight will be. Weekes is right. They need to be evacuated elsewhere.”

All of them knew the obvious answer to that. “North Korea,” Elizabeth finally said. “Everything comes back full circle. Gwan is going to be thrilled. Not to mention the South Koreans moving north.”

Laura tapped her chin thoughtfully. “Be that as it may…this could actually be a positive development. If there is anything that will bring the two nations together, them both helping each other will at least help relations. The symbolism of North Korean and South Korean soldiers fighting beside each other is a powerful image.”

“One we should exploit,” Elizabeth nodded.
Laura shot her a distasteful look. “Not everything has to be propaganda, Director.”

“No,” Elizabeth agreed. “But I’ll never turn down the opportunity when it arises.”

“I’ll begin organizing that immediately,” Saudia nodded, mentally adding another task to the massive list in her head. “The sooner that’s started, the better. Has China made any official response?”

“Not publically,” Laura denied. “But we received some official documents from them that revealed they were planning to move their soldiers to reinforce the most vulnerable cities. I suppose that is their way of saying they’re preparing for an attack as well. Nothing more than that though.”

“A shame,” Saudia said, looking down at the holomap. “At some point they have to come to the table. They can’t fight this war on their own and they know it.”

“I suspect once China is attacked, their tune will change,” Weekes shrugged. “Honestly, they are not something we should be concerned about right now. They stay out of our way, we stay out of theirs. We need to get the PRIEST Program up and running stat.”

“Don’t worry,” Laura soothed, her tone artificially controlled. “Initial recruitment is already underway. Everything related to this has been accelerated.”

“Speaking of which,” Elizabeth interjected. “XCOM just forwarded something…interesting. Several interesting things in fact.” She began tapping her tablet, biting her lower lip in concentration. “They sent schematics for some kind of psionic training device, a kind of focus tool of sorts, at least from the description. And an…interesting…amount of information on Caelior.”

“When you say interesting…?” Stein prompted.

“I mean interesting,” Elizabeth said, puzzled. “His general personality, his noted strengths, weaknesses. Stuff that I don’t think they should have. For that matter, there has been a lot of stuff they recently sent that was oddly advanced.”

Saudia cast a sidelong glance at Elizabeth. “That isn’t surprising, at least not to me. Remember there was at least one alien defector, and they have an entire team of Vitakara they took prisoner. I’m not surprised they’re exploiting them. Where else would they get that information from, an Ethereal?”

“I’m not daft,” Elizabeth muttered. “But that doesn’t match what we’ve seen, and know about the Ethereals. They are very secretive, even in their own Collective, they don’t reveal themselves unless they think it’s necessary. How does a random team of scientists and a traitor spy know personal details like this?”

“Does it matter?” Weekes asked.

“Depends,” Elizabeth said slowly. “It could mean they know more than they’re telling us. Even now.”

Laura sighed. “Based on what I know of XCOM, that’s always going to always be the case. They only recently decided it would be a good idea for us to have psions. They’re always going to have secrets, and frankly, we really don’t have a lot of resources to determine how much they really know.”

“I agree,” Saudia said, adding a dismissive wave. “There is also one final matter to discuss: Canada.”
“Oh dear,” Laura sighed once more. “I can’t be the only one to see that the timing of this is problematic to say the least. It won’t exactly help the situation.”

“Assuming you care about PR,” Stein commented bluntly, her eyes flashing. “Canada has proven to be unreasonable. We don’t have time to put up with their childish antics and they are denying us support purely on a political vendetta. That will not be tolerated.”

“While I wouldn’t have put it quite like that, I agree,” Weekes nodded. “Regardless of optics, Canada will be a massive boon to handling North America. With it under our control we can mount a concentrated push against the West Coast. We also get the resources their country has, and send a very clear message.”

“Authorization to Annex Canada just passed the Congress,” Saudia nodded. “All that we need to do is execute the plan. The media will have a field day, of course, but it’s all in presentation.” She straightened up. “I suspect that the population will be more accepting of our decision when they see what the Canadian government is actually defending.”

A smile graced Elizabeth’s face. “Their parody of an intelligence agency will be greatly beneficial. Despite what the good Prime Minister has the world believe, there are those in Canada who are rather…irritated…that the Prime Minister is acting like a tree-hugging moron. People I’ve reached out to.”

She tapped a few buttons on the holotable. “Benjamin Varys, a computer forensics expert currently employed with the Ottawa Police service. He’s a rather vocal opponent of Murphy, and since the good Prime Minister has made several questionable cuts to the police as a whole, there likely will not be much resistance to our occupation.”

Elizabeth set her tablet down. “Where Benjamin comes in is taking down the city grids. Much as most governments try to hide it, there is very little security on power grids and power plants in general. Thankfully no one usually exploits these, but for us it means that we can reliably take down the majority of the country provided we can access the plant computers. Benjamin has provided us a program to give us complete control, and has assured us that it will work. He supposedly tested it out on the Capitol Building grid.”

Saudia nodded. “Excellent. I’ll be sure to commend him once we take the country. Is there anyone else?”

Elizabeth pressed several more buttons. “Indeed, and this one is potentially the most important.” A new figure popped up, an older man with graying hair and a slightly ragged beard. “Logan Campbell, Commander of the Canadian Army. A useful figure, as you can imagine, and he’s apparently been butting heads with the legislature regarding the entire invasion. It wasn’t hard to convince him to work with us.”

Stein nodded approvingly. “Even in Canada, patriots do exist.”

“This is significant,” Weekes said, inclining his head to Elizabeth respectfully. “If he orders the Army to stand down, that removes the majority of what little threat they pose to us.”

Saudia glanced at Elizabeth. “While this is certainly good news, I assume they want something in return?”

“Yes, but it’s perfectly reasonable as far as I’m concerned,” Elizabeth confirmed. “Benjamin wants to work in the Peacekeepers, preferably in high-activity zones.”
“No issue,” Stein said immediately. “I would be more than happy to accommodate someone like him.”

“There is a bit of a complication,” Elizabeth admitted. “He’s a paraplegic. Front-line work might not be suitable for him—“

“Please,” Stein interrupted. “That isn’t a concern for me. Prosthetics have advanced to the point where his condition could be negated. I dare say it would be a positive image beyond the fact that I get a competent Peacekeeper, since all of you care about optics. Tell him he’ll get what he wants.”

“Noted,” Elizabeth nodded. “As for Logan, he wants to command the Canadian Legion when the military is reorganized. Laura?”

“Reasonable,” she agreed with a nod. “It would certainly be better to have one of their own in command; tell him his request will be granted.”

“Then it’s settled,” Saudia stated, looking at all of them. “Make the final preparations. I want Canada under our control within the week. Remember that we have the aliens to deal with as well, there is no time to delay.”

They all saluted her, and she adjourned the meeting, feeling rather pleased about the progress they’d made.

A shame Canada had to be annexed, but it was probably for the best.

---

**ADVENT Command, Switzerland**

The Commander set the tablet down and looked up at Saudia, giving a short nod. “A good plan, from what I can see. While there will be people who have issues with annexation, I suspect more people are going to be furious that the Canadians were even attempting to remain neutral in this situation.”

“The larger problem is going to be gauging the Canadian population response,” Saudia said, scratching her forehead. “Elizabeth seems to think they’re docile enough, but they might not take kindly to our occupation. They might decide to speak out in ways we can’t exactly legally stop.”

The Commander snorted. He wondered if she was being sarcastic or if her years in EXALT had made her blind to certain perceptions. “ADVENT is taking over the country. I would be more surprised if there isn’t an outcry. That being said, I don’t think the people are content to just sit by as the aliens kill us. Murphy thrives on public approval and his image. Destroy those, and the population will be too distracted to do anything.”

“The alien threat is damning,” Saudia nodded thoughtfully. “But for his idiotic ideals, he is annoyingly consistent. Much as I don’t like it, his response isn’t out of character.”

The Commander raised an eyebrow. “Then there is a simple tactic: Fabrication. If you believe that the soon-to-be deposed Prime Minister will retain some measure of influence, destroy whatever goodwill he had. It is allowed in the Advent Directive in these circumstances.”

“I’m not sure that will even be necessary,” Saudia countered. “While effective, I doubt that such a tactic is the best option. Everyone has something they want to hide, and I’m sure there is something we could exploit, should we even need it. Fabrication could backfire, and this is a case where I’m not sure the risk would be worth it.” Saudia shrugged. “I’ll have Elizabeth look into that...
regardless. Returning to the primary subject, I want you to be there when I announce the operation. The world needs to see us united on this, and the support of XCOM publically would be useful.”

“On that we are agreed,” the Commander confirmed. “I’ll be there. Although I doubt you need our support for the operation itself.”

“No,” Saudia dismissed with a wave. “The Canadian military does not pose a threat, and Commander Logan will salvage the majority of the Army. I expect resistance to be minimal at best, and in the end, I don’t know how many soldier and police will be willing to die for a leader who has repeatedly dismissed them over his career.”

The Commander was rather curious to see how accurate that really was. Patriotism was a thing, but it was typically constrained to America and wasn’t nearly as popular in the rest of the world, outside of dictatorships. Canada had never really embraced military patriotism or displayed extreme national pride. He imagined fighting for a leader who wished you didn’t exist was, in fact, one of the truest forms of patriotism.

But patriotism was doing what was best for the country, not for the leader.

If a leader didn’t respect the purpose the military and law enforcement served, then they didn’t deserve their loyalty.

Ironically, in a perfect world Murphy would be the ideal leader. The issue was that this wasn’t an ideal world, and to pretend otherwise was delusional. War would never cease, nor would crime. It was simply a matter of mitigation and defense. To willingly ignore the realities of the world was irresponsible and naïve.

The Prime Minister was undoubtedly a good man. Just not a very smart one.

“The international response will be interesting,” the Commander said, setting the tablet down. “I wonder if it will increase membership.”

“The southern half of South America and Africa are really the only areas where we don’t have influence,” Saudia said, bringing up the holomap. “I suspect that the response will be limited, especially from China.”

“China has gone out of their way to avoid provoking you,” the Commander noted, appraising the map. “It might not be a bad idea to try and open some kind of negotiations with them now. They aren’t idiots, and with the aliens right outside them, they may listen to reason.”

“Unlikely,” Saudia disagreed flatly. “Not yet at least. While they aren’t being deliberately provocative, they have unofficially made their stance clear. I have no problem with that, provided it stays that way.” She pointed at Europe. “I expect that the EU will fully collapse within a few months after this. France leaving will start a domino effect, and once the UK joins ADVENT, that spells the end for the EU.”

“You don’t think they’ll condemn this?” The Commander asked, curious.

“No,” she answered, a grim smile on her face. “I suspect they’ll be too scared to officially say anything, for fear of being annexed by us. Baseless for the moment, but the sentiment will be useful if it brings the rest of Europe into the fold. The only critics of this move will be the media and certain parties on the internet.”

The Commander looked at the serious figure of the Chancellor, staring over the holomap with an expression he could only describe as controlled on her face. He frowned. “Fear isn’t why we want
this to work. It has its uses, but it won’t build anything sustaining. While I would never base decisions on public perception, I think that it might not be a bad idea to focus on some of the more positive aspects of ADVENT. Neuter the media’s bite with the truth, all they have to talk about is how bad things are, and the so-called ‘imperialism’ and ‘brutality’ of ADVENT.”

Saudia cracked a smile and made a show of rolling her eyes. “The issue is that they are under no obligation to do it. Their only strict guideline, that you put in, was that they had to be factual. Technically, none of them have broken the law yet, and are subtly rebranding their stations to be ‘opinion’ based, which allows them to get away with direct criticism and lies.”

“Figures they’d find a way to abuse it,” the Commander sighed. “I also believe I put in some additional requirements to lessen that. Although those would be extreme steps.”

“I don’t think it’s a good idea to kill them off yet,” Saudia agreed slowly. “However, the issue is making them irrelevant. Too many people still listen to them, and while our own state-run platform is doing…decent…it’s boring. It is not easy to get people to care about the daily decisions and facts because the truth is boring. There is a reason the media has become sensationalized.”

The Commander thought for a moment. “Perhaps you’re handling them the wrong way. It’s about reaching the right audience, and the audience that we will need is the younger generations, and we do know that their preferred method of consuming entertainment is through the Internet; social media specifically.”

Saudia looked up, her eyes sightless as she thought. “Internet personalities are influential in their own right. It is an untapped market.”

“Just an idea,” the Commander said. “Propaganda has been lax, and that should change. We need to keep boosting recruitment, as well as focusing on the aliens and the heroic ADVENT and XCOM soldiers fighting for the planet. Dealing with the aliens is simpler than making the population want to support you. No matter how good you are, the majority are prone to manipulation by any party. They must be controlled by ADVENT, not foreign or media influences.”

“I think we can both agree on that,” Saudia said, rolling her shoulders. She was silent for a few moments. “It’s interesting. I thought that it would be…simpler…than this. I always wanted to unite the world, but there are factors that I hadn’t even thought to consider. Had our original plan succeeded, I suspect we would have lost control within years. We were too arrogant and would not have trusted anyone but ourselves with any sort of real power.” She chuckled. “Quite the opposite of reality. Oddly enough, I suspect you were the best thing that could happen to us.”

“We have similar goals,” the Commander answered. “And out of everyone, you were best suited to try and undertake this task. But you’re right. You would have been deposed eventually. Fortunate I suppose, that you understood the need to unite.”

“Mhmm, yes,” Saudia said softly. “I’ve wondered, what happens should we win? You are quite adamant that my place is here now, but I believe you never specified what would happen to me after, or anyone in EXALT for that matter.”

The Commander simply looked at her for a few moments. She did appear genuinely curious, and seemed resigned to whatever answer he gave. “That ultimately depends on if you do what is needed,” he answered. “Defend humanity to the best of your ability, and you have nothing to worry about. Fail, and I suspect you won’t live much longer.”

She gave a single nod. “Fair. I suppose it wouldn’t make much sense to dispose of someone useful,
simply based on their past.”

Now the Commander gave a nod. “If we were judged solely on past crimes, I would likely be dead. As far as I’m concerned, everything is reset. Our pasts are not important, only what we do now. Defeating the aliens is all that matters. We can sort out the aftermath when that is accomplished.”

“Focusing on the present is best,” Saudia agreed. “I’m glad you understand that.”

While he’d meant what he said, they both knew that even if their pasts were ignored, they would never be, nor should be, forgotten.

***

Riyadh ADVENT Command, Saudi Arabia

It had been…she didn’t even know how long it had been since she’d had a solid drink. Too long. At the same time, it still wasn’t enough to really help her.

If there was one thing Betos utterly hated, it was higher-ups considering their work done, giving a victory speech, and turning over a hostile country to them. The Commander had fucked right off after the battle, leaving the city in her immediate control. Thanks Commander, really glad you had such confidence in me.

She wasn’t sure if she should be flattered or not. The first days had been, predictably, chaotic, as the surrendered soldiers were processed, and she tried organizing some kind of system to let the citizens know what was going on. That had predictably gone over very well, and while the majority did seem to largely accept their new reality, there was a section that turned violent.

In the grand scheme of things, there hadn’t been much damage done. So far the death toll was up to fifteen, and quite a lot of property damage, not counting the fact that there were an unknown amount of civilians also caught in the suicide blasts, or simply were in the line of fire.

Then the Peacekeepers had arrived, which had initially been welcome, until she actually saw how they operated. These weren’t standard Peacekeepers either. SSR Officers, in heavy sleek black armor made up a considerable amount of the Peacekeeping force. For all intents and purposes, they were in charge of securing the city. She was just the Marshal of the Garrison, and terrorism was not her job.

Betos had always moved on quickly whenever they’d taken a town or city, waiting for the Peacekeepers to show up, and then moving onto the next destination. She’d never actually seen how they operated.

Now that she had, she wondered who had actually written up the guidelines for Peacekeepers.

ADVENT had more than a zero-tolerance policy for terrorism; anyone remotely associated with identified terrorists was a potential target. The SSR were not subtle, and Betos woke up to reports that the SSR had conducted multiple raids, and been in several shootouts throughout the night. She’d seen them fight once, and these guys were clearly special forces, and utterly unafraid of the threat these terrorists posed.

They didn’t negotiate, and they didn’t take prisoners. A small group of rebels had taken a few families hostage and the SSR had stormed the building anyway and killed them, though weren’t fast enough to save some of the hostages.

The regular Peacekeepers were not much better. They were the most visible face of ADVENT, but
they acted more like soldiers than law enforcement. Betos suspected many of these people were foreign to the region, and deeply suspicious of anyone who even so much as held a conversation. It wasn’t uncommon for Peacekeepers to go up to pairs or groups of citizens and ask for identification. Those who didn’t have it were immediately directed to the ADVENT Registry that had been enacted soon after the Peacekeepers had arrived.

Betos took another drink, sitting alone in her thoughts. It had been one thing to hear about the stories of Peacekeepers, the rumors all of them had dismissed as exaggerated. But that largely appeared to not be the case, and honestly, some part of her didn’t believe it was wholly unjustified. It ultimately worked. There was almost no kind of sedition anymore and the SSR had left, and sent a few more units of Peacekeepers.

Things were slowly returning to normal, and there were apparently ‘great plans’ for restructuring the entire region.

The entire situation had made her deeply uncomfortable. The Peacekeepers had been doing their job, but it still stung when she walked the streets, and any of the citizens drew back in terror. It shouldn’t be like that. ADVENT should inspire hope and respect.

Not fear.

But the damage was done, and she doubted that they would ever fully trust any of them, even if ADVENT ultimately helped them. She didn’t blame them, in their situation she’d be scared too. Hell, she was scared just how far they were willing to go. She swirled her drink around her glass. I’m sorry, she thought as an apology. I would have done things differently.

Would it have worked? Maybe, maybe not. Not much point thinking about it now. Sure, the terrorists were gone, but it came at a price she felt was too high.

“A bit early for that, isn’t it?” Mox asked, coming in and sitting down opposite her. They were alone in what passed for her quarters, which was just a bed and a table, of which she was now sitting at. He was one of the only ones who could stop by without an invitation; which people always got the wrong idea from.

“I’ve now got a city that’s terrified of us, and a bunch of Peacekeepers who don’t listen to me,” she answered bluntly. “I’m having a fucking drink.”

Mox’s lips twitched at that. “I hear you. This whole situation isn’t good.”

“Understatement,” Betos muttered, taking a long gulp. “ADVENT doesn’t understand that sometimes you don’t send in the damn SSR when there is a small amount of terrorist activity. They only made it worse.”

“Seems to be the standard ADVENT procedure,” Mox agreed bitterly. “First, do as much damage as possible and crush your enemies into dirt, then make them terrified of you, then actually try to help them. It’s an inverse of whatever that oath is that doctors take.”

“Yeah,” Betos muttered, resting her forehead in one of her hands. “And there is exactly nothing I can do about it except advise. It’s not like the Peacekeepers are doing anything illegal. The fact that this is legal is a problem to me.”

“You could always resign,” Mox suggested. “Helsa, what are we actually fighting for right now? Who are we actually working for?”

“Supposedly fighting against the aliens,” Betos shrugged. “That’s what we’re supposed to be
doing. Right now it seems mostly like whoever ADVENT doesn’t like at the moment. How long until China does something ADVENT doesn’t like. As for who?” She took another drink. “Really only for my soldiers. You. Even the people that hate us. Someone has to try to help them, might as well be me. It’s clear that ADVENT doesn’t care about people, only statistics.”

She waved the hand holding her glass aimlessly. “You don’t see the reports I get sent. I’m already getting orders to protect engineering teams who are setting up or renovating new oil refineries. ADVENT Intelligence is setting up propaganda campaigns targeting specific citizens based on psyche profiles for recruitment. ADVENT has plans for here, they don’t care about the people here, but they are going to put them to work. Weapon construction, city fortification, each person is another resource to use. It shouldn’t be like this.”

Mox cocked his head. “So quit. The only reason I’m still here is because you need every bit of support you can. Far as I can tell, no one else even remotely cares about the fact that we’re working for a dictator.”

Betos rubbed her eyes. “I’m not sure I’d go that far-”

“Really?” Mox raised an eyebrow, his tone bitter. “A dictator suppresses anything they don’t like, they rule by fear, they impose their will on the people who can’t fight back. They exploit and use whatever they can. And when they are smart, they are terrifying. This Chancellor, and everyone working with her, are systematically destroying anything resembling discourse. It is their way or off to the dungeon for you. These people weren’t even elected, and now they’re essentially in charge of the world.”

His jaw was clenched as he continued. “The Middle East started this, but it gave ADVENT an excuse to come here. They had a reason, even if we disagree with the methods. How long until they invade some country under the guise of simply refusing to help them as much as they’d like? You might have mentioned China in jest, but I think that’s not too far off.”

“I don’t know,” Betos admitted. “They keep saying they aren’t tyrants, authoritarians or whatever. They do something like that and that is exposed as a lie. People can’t ignore that.”

“And what are we doing here?” Mox asked. “ADVENT doesn’t deserve you trying to help the people. And you can’t change anything on your own. Listen, you aren’t the only one. I’ve been talking to the other officers and soldiers. They aren’t happy with how ADVENT is doing things, they’re furious at seeing what the Peacekeepers are doing.”

“And what do you want me to do?” She finally exploded, slamming her glass on the table furiously. “Desert? Quit? Do you want everything to get worse? I’ll probably be executed, and probably you as well, since ADVENT Intelligence doesn’t fuck around with loyalty. You aren’t exactly subtle. Resigning would just be cowardly, and I’d be shuffled somewhere quietly.”

“That depends on two things,” Mox said softly. “Where you go…and how many go with you.”

She stared at him in disbelief. “If you think anyone else would desert, I think-“

“Why?” Mox crossed his arms. “You know what I’ve found out? That every one of them thinks they’re alone in how they feel. All of them feel they’re trapped, thinking there’s something wrong with how this is being done. But no one ever talks about it, because they don’t want to get reported. They don’t want to seem disloyal. They are loyal to you, Helsa, not ADVENT.” The last word he spat out. “If you leave, I believe they would follow. Your soldiers are good people. Good people don’t belong in ADVENT.”
She drunkenly chuckled. “Let’s say I actually did something that stupid. On the off chance ADVENT didn’t execute us on sight, then where thefuck would we go?”

Mox clasped his hands together. “Africa.”

Betos coughed. “Sorry?”

“ADVENT has ignored Africa for whatever reason,” Mox continued. “But I know some people there. They haven’t ignored ADVENT, but they’re really worried that they might come. But they’re not united, even if some talks are taking place. If you come with even a portion of your soldiers, that might be the catalyst needed to unite them. It’s only a matter of time before ADVENT remembers them.”

“Or,” Betos pointed out. “I’d just bring ADVENT down on them. I don’t want to put them in a position where they either have to turn us over or face ADVENT invading. Unlike the US, ADVENT won’t settle for doing nothing.”

Mox shrugged. “There are ways around that. They have to know where you’d be, for starters. Can’t be justified in attacking, if they don’t know for sure. I guarantee that the leaders of these nations would lie to keep you safe. And honestly, there isn’t much choice.”

Betos leaned back in her chair, head swimming. “I’m way too drunk for my own good, since I’m actually considering this.”

Mox stood. “Keep thinking on it. Whatever you decide, I’ll stand with you. But remember that you’re not alone.” He left her alone then, letting her contemplate what they’d said.

Whatever happened, there would be no second chances.

She’d have to think about it, preferably when she was actually sober.

***

Australia, Northern Territory Resistance Camp

It would have been more of a celebration, if the news hadn’t come that Japan had officially fallen, but even still, Abby was fairly happy with their progress so far here. They’d freed two more small towns, and the Chronicler had more soldiers for whatever his plan was. Harper was happy, and had allowed an unofficial celebration of their progress.

Abby was personally concerned about Japan, but she wasn’t overly surprised it had fallen. This time the aliens would have probably applied overwhelming force, and defeat was inevitable. From the short conversation she’d had with Zhang, ADVENT was going to preserve the majority of their forces, and move the main battleground to Korea.

The biggest issue, he’d said, was another Ethereal. One called Caelior, some kind of telekinetic specialist. Based on his description, an Ethereal that powerful was a problem.

Obviously.

Still, Zhang had been pleased at how much they’d accomplished, and he had insinuated that both XCOM and ADVENT may be conducting dedicated strikes in Australia. That had also made Harper very happy. Once the major cities were liberated, that would open up a lot more options without worrying about too much collateral damage.
“No drink?” Joseph asked, walking up to her. “Not much for parties, are you?”

She gave him a sidelong look. “That’s a rather large presumption. Or is this your attempt at a pick-up line?”

“Oh,” he playfully winced. “Nah, just noticed you aren’t doing much. You just stand there and watch everything. Most people would try mingling a little bit. Or at least trying not to seem so conspicuous.”

“Well, you figured that out,” Abby shrugged. “Besides, I have quite a bit on my mind. Japan, and what’s next here.”

“Ahh, right,” he nodded, turning a little more serious. “Did anyone you know die?”

Abby shook her head. “No. But then again, I don’t really know a lot of the soldiers anymore. I saw a bunch of names, but none of them really registered.”

“Mhmm, I suppose that’s for the best,” Joseph agreed, leaning against the wall by her. “I don’t really know a lot of people in general. Well, I do, but not people I know well. Friends are something of a luxury.”

“They certainly seem that way now,” Abby agreed grimly. “I’m not sure how many people still remember me in XCOM. Everyone I knew in XCOM Intelligence died. Don’t really have anyone now.”

“Shame,” Joseph commented. “At least I’ve got a family, and I have people I trust. You really don’t have anyone?”

“My parents are still alive,” Abby shrugged. “I haven’t contacted them in years. We never got along, and I had no desire to talk to them again. I assume they’re fine. Had a couple friends in med school, but they moved on.”

“Do you want some unsolicited advice?” Joseph asked.

Abby sighed. “Go ahead.”

“I don’t know whatever problems you have with your parents,” Joseph continued, sounding interestingly genuine as he talked. “But I would at least let them know you’re alive. People can change over time, and in times like this, well…” he trailed off. “Past differences seem more trivial. Just something to think about.”

She thought about it for a few seconds. “Are you speaking from personal experience?”

“Partially, yes,” Joseph answered. “Though not in a negative way. Whatever you think of EXALT, family was an unbreakable pillar. Parents only wanted what was best for their children. I wouldn’t be where I am without them, and they are the only ones even today I can unconditionally trust. That’s special to me. It’s sad when others don’t have that for whatever reason.”

Abby felt somewhat envious at that. “Maybe I’ll do that,” she relented. “Whenever this assignment is done.”

“Well, at the rate we’re going, it might not be too much longer,” he said, looking at the groups of soldiers. “So, I’m curious. What’s your impression of our mutual elderly friend?”

Abby was careful not to betray anything. “Sorry?”
He motioned to the Chronicler who was chatting with Harper as they shared a drink. ‘Him. You two have talked, so I assume you know some things. Maybe he even told you his name. We just called him the Chronicler.”

“No luck with me,” Abby admitted. “He introduced himself the same way. What do you know about him?”

“Only what everyone knew,” Joseph answered wistfully. “An expert historian, been around as long as anyone can remember. It’s like he doesn’t age, and is extremely smart. His goal is apparently to chronicle the ‘true history of the world’ or something like that. More of a personal project, but you’d probably find it fascinating. My guess is that he’s still doing it. Far as I know he’s friends with Saudia, and he has a higher clearance than almost anyone, even in ADVENT Intelligence.”

Given what she knew about him, that didn’t surprise her. “I’m not sure I’d want to know just how much history differs from what I know.”

“I can understand that,” Joseph chuckled. “I mean, I don’t think people would be happy knowing that everything they understood was a lie. So, I’m curious just how much you know. Pick an event, and I’ll tell you what we did.”

Abby frowned. “Isn’t that against…some kind of secrecy agreement you have? You really want me to guess? And why would I even believe you?”

“XCOM and EXALT are working together,” he dismissed easily. “Besides, this is ancient history. I doubt you could do anything with it, and if anyone would believe you. As for trusting me? Well, that’s up to you.”

His eyes lit up. “I like that. Most people wouldn’t go back that far. Let’s see…” he tapped his chin. ”Well, we were very different back then. Honestly, EXALT, or the Illuminati as we were known then, we were more the secretive hired assassins who had very wealthy backers. Monarchies had mixed results with infiltration, but we saw potential in a democracy. In short, we identified some people who we thought would be useful, and convinced them to rebel.”

He smiled as he recounted the tale. “We didn’t invest heavily until it was clear that a certain George Washington gave the American forces a good chance of victory. Washington was not one of us, of course, but certain allies of his were. Benjamin Franklin was one, and he provided Washington with our soldiers. Don’t bother trying to look them up. Even most of the American soldiers didn’t know they existed, but the assassination, poisoning, and general sabotage of the British forces ultimately guaranteed victory. Despite what history says, the Revolution was never in danger of failure. When we backed it, their success was guaranteed.”

Considering what she knew about EXALT, that wasn’t as shocking as it might have been. Assuming Joseph was telling the truth, they really had been around centuries. “Why do I think this was part of a larger plan?”

“Because it was,” Joseph emphasized. “This was part of an operation to lessen the power of the monarchy. It was difficult and risky to properly manipulate, and the concept we felt was outdated. You will notice that America steadily increased in power, largely thanks to us, and we took action elsewhere. The French Revolution comes to mind, and we were rather satisfied with the result. The last remnants of the monarchy were systematically abolished over time, thanks in part to us.”
“Huh,” was all she said. She was now curious about what the Chronicler had written about. Perhaps she could ask him about it sometime. “So, how far back does EXALT actually go?”

“All the way back to the Crusades at the very least,” Joseph answered. “Although records are… scarce. I don’t think it’s remotely comparable. At some point they decided to create a Chronicler position, and that’s what their job is. I think the seventeenth century was the first time an actual line of documents were created, detailing various events and operations.”

So that would put the Chronicler at… four hundred years?

How could he possibly be alive? Did psionics extend life that much?

“The more you know,” Abby said quietly. “Thanks.”

“Anytime,” he said with a flashed smile. “Now, if you excuse me, I’m going to mingle some more. Let me know if you want more of the history of the world being shared. I’ve never gotten the chance to tell anyone before. I like it.”

Abby gave him a wan smile. “I’ll be sure and let you know.”

He gave a mock salute with two straight fingers, and strode off, leaving her with a lot of questions running through her mind. If nothing else, he was interesting to talk to. More straightforward than the Chronicler at any rate.

Abby wondered just what his actual plan was. Because he was clearly hiding something.

***

The Praesidium, Office of the Commander

The three women before him were in their regular XCOM fatigues, although Gloria really only had some loose garments to hide the extent of her cybernetics as a result of the MEC conversion. Liliyane had fully recovered, and he could sense that she was somewhat apprehensive about what she was being called up for, and was definitely a little fidgety.

Jasmine on the other hand emulated her MEC comrade, in her stoic stance, simply waiting for him to begin. “At ease,” he told them, setting down the tablet he had been holding. He’d been reviewing their profiles, and from what he could tell, there likely wouldn’t be many issues. Gloria was not an issue, since he doubted she would care as much as the result of her conversion, but Jasmine and Liliyane might have stronger feelings.

They did deserve to know beforehand that Canada was being annexed, and more importantly, why. While he doubted they would do something drastic, blindsiding them without so much as a warning was something he could not justify. It wasn’t as though they were going to warn the government.

“What did you want from us, Commander?” Jasmine asked, her unusually grey eyes focused intently on him.

“Seconded,” Liliyane added.

The Commander hesitated. “How much are you aware of the current relationship between Canada and ADVENT?”

Liliyane glanced over at Gloria and Jasmine, clearly wanting them to answer first. “I have not been
“I have not received any information from the Canadian government or military, nor am I familiar with current diplomatic and previous efforts.”

“The Prime Minister doesn’t seem to like ADVENT much,” Jasmine said, giving a more Human answer, although she was similarly confused. “Last I saw, relations were strained. Not hostile, but strained.”

Liliyane absentmindedly ran her hand through her cropped brown hair. “Eh, I don’t know much either. But I know you’re aware that I got authorization to be recalled, should I have taken it from the Canadian Army. That was weird, and I clearly turned it down, but that told me that they were offering me an out…though I didn’t know why.”

The Commander focused on her. “You never attempted to figure out why?”

“Why?” Liliyane shrugged. “Canada will come around eventually, and we need to fight the aliens. Even if the Prime Minister isn’t doing anything, I don’t want it to seem like there aren’t any Canadians that care about this.”

The Commander nodded. It matched up with what he’d suspected. He knew Liliyane was an immigrant from the Philippines, and in his experience, immigrants were sometimes the strongest patriots he knew. Not a surprise she wanted to represent Canada in the best light possible. He was not looking forward to explaining the actual situation.

“The short version is that the relationship between Canada and ADVENT is much worse than is known publicly,” the Commander revealed, his gaze sweeping over all of them. “For all intents and purposes, Canada has denied ADVENT any sort of aid or support whatsoever. They cite disagreements with how ADVENT is run, and mistakenly believe it to be an authoritarian and oppressive government.”

Jasmine furrowed her eyebrows. “While ADVENT is not exactly the same level of freedom as even the previous United States, and Canada, calling it that seems…inaccurate.”

“Prime Minister Jace Murphy is noted as a pacifist, anti-military, anti-police, and far left political affiliation,” Gloria suddenly said in the same tone. “Due to ADVENT restricting violent protest and pro-alien propaganda, as well as an advanced and expanded military, with clear authority within the ADVENT government; factors lead me to believe his opposition stems from idealism and personal morals, and not facts.” A pause. “Prior to my conversion, I know I did not like him.”

“Hey, Murphy’s not a bad guy,” Liliyane protested. “Although he didn’t have many friends in the military, and admittedly made some decisions that made us angry. He’s an idealist, nothing wrong with that.”

“Right or wrong, it doesn’t matter,” the Commander shook his head. “In light of the recent losses in Japan, and continued alien aggression, that Canada is refusing to cooperate under any circumstance is a major issue to ADVENT.” He paused. “Within twenty-four hours, Chancellor Vyandar will be announcing that ADVENT will annex Canada, and it will become a member state of ADVENT, and the current administration will be taken into custody.”

Gloria had no physical or emotional response whatsoever. Jasmine stiffened suddenly, and the color drained from Liliyane’s face. “What?” She asked in a small voice. “What?”

“Was the Prime Minister even aware this could happen?” Jasmine practically demanded, taking a step forward. “How strong of an attempt at diplomacy was there?”
“The Prime Minister was well aware of the possibility,” the Commander answered calmly, noting that while two of the three were shocked, that was it. For now. “And Saudia attempted several times to renegotiate an agreement, and was flatly rejected each time. There is proof, which she will be releasing when she announces the operation.”

“Fuck,” Liliyane breathed. “Is…is there no other way?”

“No,” The Commander answered.

Jasmine rubbed her forehead. “I wanted Canada to join the fight. But not like this.”

“No one wanted it like this,” the Commander said gently. “But there isn’t a choice. If Canada will not work with ADVENT, then there is little option. No action is not possible. Saudia has assured me that the casualties will be kept to a minimum, and they will be accepting any surrendering Canadian forces.”

There were a few moments of silence. “XCOM is supporting this, I guess?” Liliyane said, taking a few breaths.

The Commander nodded. “We are. XCOM will not participate, but in light of the circumstances, ADVENT is justified in annexation. This is the sole fault of the government, and Saudia realizes that. Should it go according to plan, Canada will be a full member state within several months, with full voting and legislative rights.”

“Small comfort, I guess,” Jasmine sighed. “Damn it! They don’t stand a chance if they fight!”

“If it goes well, that won’t happen,” the Commander said. “Commander Logan Campbell will be assisting ADVENT in securing the country. I think you know him, Mrs. Stark.”

Liliyane’s lips were a thin line. “Yes, I do. Not surprised, really. He’s hated Murphy for years. I know there are a lot in the military that feel the same way. I suppose he’ll order the Army to stand down, and I’d also guess there will be a lot of others that follow suit. Murphy is not someone you want to potentially die for.”

“I hope that they see it that way,” the Commander agreed. “But I thought you should be aware before the operation commences.”

Jasmine took a breath. “I…thank you, Commander. I wouldn’t exactly call it good news, but I’m glad you told us.”

“As am I,” Liliyane said, rubbing her eyes. “Just…gah, why would he be this stupid? He didn’t strike me as an idiot!”

“I don’t think he is,” the Commander said. “Not really. But he doesn’t accept the reality of the situation, and his own biases are affecting his judgement. There is little that can be done to change that.”

“And now Canada will pay the price for his pride,” Liliyane said sadly. “Hopefully ADVENT isn’t too…harsh.”

“Unlikely,” the Commander reassured her. “This isn’t the Middle East, and the population is not violent, and the military and law enforcement will not want to die for nothing. Like I said, should things go well, it will be resolved within a few months.”

“Then we should hope that the timetable is accurate,” Gloria said. “I estimate that when the
Collective learns of the annexation, they will classify Canada as a threat and act accordingly.”

The Commander nodded. “Likely. But that will take time, and in that time, we can prepare. So will there be any issues?”

Liliyane shook her head, and Jasmine followed suit. “This can be laid at the feet of the Prime Minister,” Jasmine said flatly. “Even if I had issues with it, you are not ADVENT. We’re XCOM. We fight aliens and for humanity now, not just one nation. That you didn’t hide this is something I won’t forget, and neither will Lily I think.”

“Seconded,” Liliyane said emphatically. “You’ll have no issues from us. Our loyalty is still firmly with humanity and XCOM.”

“There are no changes to my parameters,” Gloria added. “Priority threat is still the Collective. No additional information has changed that.”

The Commander felt rather proud. Any who could put the greater good above their past loyalties were those he was proud to have with him. “I appreciate that,” he told them. “You are dismissed.”

All the soldiers saluted, and then exited his office, leaving him alone; waiting until the time came to begin the operation.

***

**Fort McCoy, Wisconsin**

Roman had never been to the United States before, and he really didn’t think he’d seen enough to give an opinion one way or another, since the moment the Middle East had been wrapped up, he, and quite a few other teams, had been redeployed to the United States, and had spent the entire time running through a lot of training exercises.

He was slightly miffed that they hadn’t gotten a decent break. If he was coming to America, he wanted to experience it a little bit.

That being said, it was before Japan, and that had spooked all of them. If they needed to skip out on some vacation time, then so be it. Still, the training exercises were definitely preparing them for something, but what that something was they hadn’t bothered to tell them yet.

Until now.

Roman wasn’t sure if he’d heard correctly.

“Could you repeat that?” He asked his immediate superior officer, Corporal Hawkins, a comically short American woman whose face seemed perpetually irritated.

“You heard correctly,” she repeated. “Assemble your squad and report to the Hangar in one hour. We got orders that Canada is being annexed, and this strike is going to be quick and painless. Don’t want to give the aliens more time than necessary.”

So ADVENT could annex countries. Interesting. “Have they declared war on us?” He asked.

“Short of actually announcing it,” Hawkins answered, crossing her arms. “They have refused to work with ADVENT whatsoever, which is a problem when it comes to our operations in America. Guess the Chancellor got tired of putting up with them, and is going to solve the problem herself.”
That seemed extremely odd. What exactly did Canada have to lose with working with ADVENT? Did they not want to protect the planet? Unless…

He frowned. “Have they been compromised by alien infiltrators?” He knew such a thing was possible.

“If they have, no one’s told me,” Hawkins shrugged. “Wouldn’t surprise me though, and it would explain this kind of response. ADVENT wouldn’t do it unless it was serious. I also wouldn’t be surprised if they kept it quiet. That would unsettle a lot of people.”

Roman nodded. The reasons weren’t too important to him. The fact that any country was sitting out this war was borderline treasonous in and of itself. And if they were even refusing to work with the only entity that was doing something...well, he wasn’t too sympathetic to their reasons. Anyone who ignored the alien threat was either blind, stupid, or compromised.

“What will be our objectives?” He asked.

“Commander Logan Campbell of the Canadian Army is with us,” Hawkins said, picking up several pieces of paper from a nearby table. “Once he announces he is with us, and orders the Army to stand down, I think resistance will be minimal, if any at all. The team you’ll be with will be charged with securing Edmonton and the legislative body there. With any luck, the program provided by Benjamin, another Canadian helping us, will take down the power grid to the city and cut it off until the city is secured. You should not have much trouble.”

“Sounds good,” Roman agreed. The majority of the military not being an issue was a huge boon, and would make everything go much quicker. “Any restrictions I should know about?”

“No civilian casualties whenever possible,” Hawkins ordered. “Canada isn’t the Middle East. These people aren’t potential insurgents, and if any Canadian military or police do fight back, the chances of them employing terrorist methods or hostage situations is low. So watch your fire. The last thing we need is to give the media more ammo to use against ADVENT.”

Roman rubbed his forehead, his lips stretching into a grim smile. “I’ll do my best. There will be fallout from this.”

“Oh, I’m sure of it,” Hawkins agreed. “But that isn’t my problem or yours. The Chancellor has ordered this, and she can deal with the consequences. We do our jobs. Understood?”

“Yes, sir.”

“Dismissed, and good luck,” she said, inclining her head to him.

He saluted and left, wondering how his team was going to take this. ADVENT was a never-ending adventure it seemed. Of everything he had expected, annexing Canada of all countries had never crossed his mind as a possibility.

Oh well. With any luck this would be over quickly.

***

ADVENT Command Courtyard, Switzerland

Saudia stood in the same place as she had during her first official address, and oddly enough, with many of the same people behind her. Although there definitely seemed to be a lot more…ornamentation around the general area. The ADVENT Command Center had been getting a lot of
security upgrades and general aesthetic improvements, which largely consisted of liberal
dispersions of the ADVENT logo everywhere.

She didn’t really care either way, but it did seem to impress many of the reporters and media here,
who were taking pictures, video, and everything else they did. They packed the courtyard in front
of her, while ADVENT Peacekeepers stood at their posts, ever vigilant for the slightest sign of
trouble. She really wasn’t expecting anything, since these people had been screened well
beforehand.

But they were definitely curious at what she had to say. Rumors she heard said that they were
expecting her to speak about Japan and the current situation with the military.

Well, they were going to be in for a surprise.

They were quiet as she took the podium, at least one kind of representative of every ADVENT
member nation behind her; a show of unity that would be crucial as she made her speech. The
Commander, Treduant, Gwan, Habicht, all were behind and waiting along with the media. Behind
them was a massive projection screen which was playing a short spinning ADVENT logo, with red
and black tints. A placeholder for what she would be revealing later.

She grasped the sides of the podium with her hands, and began. “Citizens of ADVENT, and those
across the world, it is again a privilege to speak before so many today. Over the past months,
ADVENT has worked tirelessly to unite the world under one cause, repair the wounds that have
festered for generations, and defend our species against the ever encroaching threat of the aliens.”

Saudia was sure to work in some pauses into her speech, to allow for the translators to repeat what
she was saying. Everyone needed to hear this. “As with any war, there are victories, and there are
losses. It is a matter of mitigation and control. I want to assure the people that ADVENT is quickly
adapting to the situations as they arise, and heeding the lessons used in our defeat. To expect total
victory is unrealistic at this stage, yet despite our enemy being far more advanced, we have held
them to a single continent, Japan, and the West Coast of the United States.”

Might not be inspiring, but it was the heavily distilled truth. But it was all in presentation. “Yet
despite the few setbacks, ADVENT had not slowed in continuing to improve the lives of not just
our citizens, but those in the rest of the world. Our cities are growing more industrious and
prosperous, our people are united in our cause, and we have brought peace and security to the war-
torn regions of the Middle East, and quelled the misguided attacks and corruption plaguing South
America. Thanks to the efforts of our Peacekeepers, citizens within ADVENT are without a doubt,
the safest in the world.”

Oh, there were some people who were going to pick that line apart. There was no applause, but she
raised a hand up, more for attention than anything else. “But this is all leading to one singular
point; the one purpose for which ADVENT was conceptualized for. All our advancements and
achievements are for nothing, so long as the aliens exist. There can be no rest as long as they
threaten our lives and freedom. All within ADVENT leads to this; the defense of our species.”

Her voice rose. “This is larger than us; this is more than a government fighting its enemies. This
concerns the very fate of our species. ADVENT does not simply fight for those within its borders,
but for all Humans, regardless of where they live. This is no time for petty divides of ideology and
sovereignty. Our very future is at stake, our freedom, and our loved ones. Those are the stakes in
this war, the ones our soldiers fight for every day.”

That did get some scattered applause, and now came the turn. Her voice hardened. “And yet, there
are those that refuse to acknowledge this fact. They refuse to acknowledge the truth that this is not
a conflict that one can simply stand on the sidelines and watch. How can one be neutral when the defeat of ADVENT will spell the enslavement and decimation of the entire Human race? That, I am afraid, is not the reality some live in.

“There are those who believe that if they avoid the conflict, that if they stay out of it, that they will be spared. They would rather throw themselves on the mercy of the alien conquerors meekly, than stand and fight for our inherent right to live as a sovereign and independent species; free from any kind of alien control. Our fight is for freedom; their peace is slavery.”

Her gaze swept over the crowd, who were now somewhat unsettled by the venom in her voice. “That must end. These people are traitors of the worst kind, the cowards who hide and try to play both sides, hoping and praying that they will be spared by whoever emerges victorious. This is not something that can be ignored, nor will it.”

Her voice ripped through the crowd, who were furiously scribbling their notes and hanging on her words. “Canada has taken this path. Their leadership has capitulated to the lie of neutrality. Prime Minister Murphy believes the aliens can be reasoned with. They think that by refusing to assist us, they gain favor with the aliens, should we ultimately fall.”

“ADVENT does not seek to impose our methods on independent nations,” Saudia stated to them all. “We will work with these sovereign states, even if their ideologies are vastly different to our own. Canada has repeatedly refused to do even this; they would rather they retain their pride and superiority than assist us in repelling the alien threat in the United States. Because of their refusal to help, thousands of our soldiers have perished when there was no need. Their resistance was a matter of disagreement before; now it is a matter of priority.”

There was now muttering breaking out in the crowd, who were staring wide-eyed at her, some in clear disbelief. “Neither ADVENT, nor I, will put the sovereignty of one nation above the entire Human race,” Saudia continued, her voice letting the controlled fury free. “Diplomacy has failed, reason has failed, all methods to convince the Canadian government of the reality of the alien threat have failed. There are no other choices.”

She extended a hand, gesturing to the screen behind her. “But you may believe that is their right. Perhaps, but I would question the ones who would rather see our species enslaved than work with the ones fighting it. Judge for yourself if you wish to see us under their thrall or not.” The screen switched to the footage which she had prepared.

From what she knew, XCOM had kept this footage secret for obvious reasons, and it was one of the most chilling things Saudia had ever seen. Yet there was no more potent way to drive home what the aliens truly intended than to watch the footage XCOM had taken from the Sectoid Hive. The speakers blared the unsettling crying of half-grown Human children, thrown into grinding vats to be reduced to organic waste. The Hive had been a nightmare come to life, with the callously discarded bodies of Human babies experimented on only being one part of the show.

The footage jumped to different perspectives, with the XCOM soldiers talking in the background, but no one was paying attention to that. They were watching the cells of genetically mutated Humans; the machines where they were dissected while still alive; additional experimental footage the Sectoids had been so kind as to record, of them casually disassembling children and adults, all while they were still screaming.

Saudia’s gaze never wavered from the crowd, all of whom were either stunned, horrified, or most of them were looking away. One or two threw up in the background. “Shut it off!” Someone yelled, a sound between horror and sobbing. Saudia didn’t shut it off, but resumed speaking.
“This is what the Canadian government is willing to subject us to. They have seen what you are seeing now. They are under no illusions, but their response is still the same. They believe that we are more of a danger than these creatures doing these experiments to our species. It is said that evil only exists when good men do nothing. I have found nothing more evil than this. ADVENT is fighting to prevent this from being our future; they would welcome it, and accept this evil into our lives; meekly, without any fight, like cowards.”

Now came the final blow. “In light of the circumstances, evidence, and approval of the Congress of Nations, I have authorized the annexation of Canada, into a member state of ADVENT.”

The pretense of civility the reporters had was shattered, and they began yelling questions at her, or just talking in stunned disbelief. They had clearly not expected this. “ADVENT will be working to ensure this is done as efficiently and quickly as possible,” Saudia continued calmly. “Even as I speak to you now, our soldiers are arriving within Canadian territory. We have the support of the Commander of the Canadian Military, Logan Campbell. We have made formal demands for the remaining military forces to stand down, and for the current administration to surrender to our custody.”

Saudia allowed a pause. “For any Canadian citizens watching this, you are not our enemy. All that is required is your full cooperation with any ADVENT officials. We will be with you throughout this unfortunate incident. It is not what we wanted, but little choice has been left. We will not stand by and do nothing for that only serves to embolden the aliens. ADVENT will provide what your leaders could not; safety, security, and the willingness to fight for a future free of the alien threat.”

She took a step back. “There will be updates on the current situation hourly, and I look forward to us refocusing on the alien threat. There will be no questions taken today. May this incident be resolved peacefully,” she finished, giving the ADVENT salute with a fist over her heart, and every single Peacekeeper and soldier followed suit, and she imagined that the Commander was doing it as well.

But it was delivered, and her job was done.

Now it was time to see what happened next.

***

*Edmonton, Canada*

Roman was unsurprised to see that there weren’t many opposing soldiers outside the city as ADVENT marched on it; the latter soldiers still deploying from the helicopters, and even more were coming from armored carriers within hours. The numbers seemed pretty small, twenty-five hundred ADVENT personnel, but all of them were soldiers or officers, and the chances that the Canadian military would put up a fight were close to zero.

It was also apparent that some of the citizens had no idea what was going on, as there was a small stream of traffic leaving the city, although the cars almost immediately turned around when they realized they were driving towards an army, rifles raised in their direction.

“The Canadian Army is standing down,” Hawkins updated as they began entering the city perimeter, their target being the Alberta Legislature Building. The entirety of the Alberta government was to be taken into custody, and there were other teams going to the various residences with arrest warrants. “Power is down in the city, they should be paralyzed.”

“Acknowledged,” Roman stated, motioning that they continue as they were approached by some
clear Alberta police officers. Their own weapons were drawn, and looked laughably pitiful compared to the firepower ADVENT had. “We’ve got law enforcement coming up. Not hostile yet.”

“We’ll see how long that lasts,” Galina muttered, raising her rifle in conjunction with the other soldiers as Roman raised a fist, ordering them to stop. The soldiers behind them froze, and steadied their weapons at the growing number of law enforcement. The chief officer, or at least that was who Roman assumed he was, stepped forward.

“You aren’t supposed to be here,” he said, a hand resting on his pistol. “We weren’t expecting ADVENT, and I’m pretty sure we would have known if you were permitted to enter the city. Especially with an army.”

“I am ADVENT Shieldbearer Roman Kostov,” Roman greeted. “By order of Chancellor Saudia Vyandar, Canada is to be annexed and a general call for surrender has been sent out to the current administration and military. We have received confirmation that the Canadian Army is standing down, and our mission is to take the Alberta legislature into custody.”

The man didn’t seem surprised, which told Roman that he knew very well what was going on. “And what would you expect us to do? Just let you take control of our city?”

“That is up to you,” Roman said slowly. “If necessary, we will take the city by force. You will die, and unless your department has gauss weaponry or explosive equipment, I doubt you will kill even one of us. I have orders to avoid unnecessary conflict, but I will not hesitate to put you or your officers down if required. Before you throw away your life, think very carefully about what you will accomplish.”

There were a few tense moments of silence. “I suppose you have taken down the city grid,” the chief said. “If we…stand down…will it be restored?”

Roman cut off external speakers. “Corporal, are you listening?”

“Yes, Shieldbearer,” Hawkins confirmed. “Assuming they aren’t lying, we can do that. But before that, we will need their assistance in arresting the legislature.”

“Understood,” Roman nodded, and turned his external speakers back on. “If you stand down, we will restore power; but only after the Alberta legislature has been taken into custody.”

The man’s face grew grim. “I suppose that might have to do.” He stepped back. “We will stand down. But only if you refrain from harming the civilians and treat the legislature…well.”

Roman gave a firm nod. “We have no intention of harming the civilians, assuming they stay out of our way. The legislature will not be harmed either, provided they submit quickly. Are they in the Legislature Building?”

“Yes, most are,” he confirmed. “There was an emergency session called after the…announcement. The building went into lockdown when the power was cut. They are still in there, and I have officers guarding the building.”

That was going to make things easier. Roman waved the soldiers forward, and they kept marching. “ADVENT appreciates your cooperation,” he told the chief. “It will not be forgotten, and power will be restored as soon as possible. Ensure that the citizens are out of our way, and all your officers stand down.”

“Will do,” he agreed, stepping back and allowing Roman to proceed, and with several hundred
soldiers at his back, they marched through the streets, following the small mini-map in the upper right corner of their HUDs. The civilians out on the streets fled and stumbled out of the way as they approached, some gasping and staring in shock at the soldiers invading their city.

Shock, more than anything else, stood out on their faces. Roman didn’t know if it was because of ADVENT invading, or aftereffects of the horrific images the Chancellor had shown. Roman almost wished he hadn’t decided to pay close attention to what had been shown. He’d seen a lot of utterly revolting things, but nothing even remotely at that level of cruelty.

Yet he was sure of one thing. Anyone who could stand by knowing that was what the aliens wanted to do to their species…they were traitors, and as far as he was concerned, just as evil as the monsters they were fighting. Roman didn’t know what would happen to the Prime Minister, but he hoped it was something suitable for the coward he was.

Maybe he should be stuck on the front lines, and see just what the aliens were doing there. Either way was a win. ADVENT got a soldier, or he would die. Roman didn’t care either way, and it might redeem him in some way.

“Do you think they knew?” Stanislav questioned as they rounded street corners, the Legislature Building in the distance, looking very similar to the US Capitol Building. “Or did they really hide what the aliens were doing from them?”

Galina snorted. “If they showed that footage, and the people didn’t immediately demand Canada join, I would be utterly shocked. I don’t care what you think, if seeing…that….doesn’t make you feel at least somewhat inclined to help, then you’re an apathetic and selfish monster. So no, I don’t think they knew.”

“I never thought I would agree with this,” Elena said quietly. “But ADVENT is justified here. It’s one thing to think we’re wrong, it’s another to avoid the fight altogether and deny any help to the ones fighting. Even China knows the aliens are dangerous.”

“And unlike Canada, they’re actually preparing to fight,” Konstantin nodded, a hard edge to his voice. Out of all of them, it was him that Roman felt was the most affected, surprisingly enough. Or maybe not, since Roman had known that several family members of his had disappeared nearly a year ago. It might have been aliens, or it might have been simple kidnap and murder.

Roman hoped it had been the latter. Being a captive of the aliens was a fate worse than death.

They were now on the steps of the Legislative Building, and the Edmonton officers silently nodded and stepped aside and let them approach the door. “Get this open,” Roman ordered, and several Engineers approached, and pulled out laser torches, which cut through the hinges and locks within a few seconds. Working in tandem, Roman and his team got the doors open, and marched inside.

“We have a list of names,” Roman told them after they reached the entrance. “Galina, Maksim, set up a processing checkpoint here. Everyone else, you are authorized to take any people within this building into custody. Bring them back here immediately and do not use unnecessary force, or you will be punished accordingly. If they attack you, you are allowed to subdue them, but there are no circumstances where you should have to kill them. These people are not soldiers, and don’t have gauss weaponry. Is that clear?”

“Yes, Shieldbearer!” They shouted in unison.

“We clear this floor by floor,” Roman stated, turned around and beginning to walk forward. “Disperse and find them!”
At the chorus of affirmation, the ADVENT soldiers began moving through the building, dismantling the last Canadian branch that stood in the way of victory. Some ballistic gunshots went off, and the shouts and furious words of the people within were nothing against the might of ADVENT as they arrested them, one by one.

And at the end, they raised the ADVENT flag above the Legislature Building, the city of Edmonton now under the control of ADVENT.

***

Parliament Hill, Ottawa, Canada

“The Prime Minister and the gathered senators are inside,” Ethan informed Saudia as she walked up the steps of Parliament Hill, a place she’d been not too long ago. How things had changed.

Saudia had not been surprised in the least when the Prime Minister had ordered the police and Protective Service to stand down. A pacifist to the end, it seemed. ADVENT had quickly secured the city, and was now surrounding the building itself.

Stein stood beside her, several hundred Peacekeepers behind her, in her combat-ready armor, and one hand resting on her stun baton as she appraised the area before her. Saudia also wore an adapted version of ADVENT armor, since no one was going to let her go without some kind of protection, although she had the helmet tucked under her arm, since she found wearing it stifling.

“We are ready to move on your orders,” Stein stated, glancing at Saudia. “I believe it is time to finish this.”

“Agreed,” Saudia nodded. “Begin as you will.”

While Stein shouted orders, Saudia proceeded upward, where the Engineers had unlocked the doors, and opened them as she approached. The Peacekeepers marched inside, and immediately began arresting anyone they saw, and Saudia continued forward, Stein at her side as they made their way to the office of the Prime Minister.

ADVENT Intelligence had determined his most likely location, and it helped that Saudia had been here before, and had been sure to study the schematics well beforehand. “What are you going to do to him?” Stein asked as they walked. “There are several different options.”

“An early retirement and a gag order will likely be sufficient,” Saudia answered, as she had given some thought to this. “Murphy is not someone to be feared. If he is silenced, he will be forgotten about. I see no reason to push for the maximum penalty. The circumstances do not warrant it.”

“There is going to be enough backlash to this, regardless of the footage,” Saudia answered with a shrug. “Much as I would rather get rid of him for good, the circumstances and actions do not warrant execution or imprisonment, even if a case could be made for both.”

“Fair,” Stein said, looking back forward. “I’ll be busy in the Middle East for the foreseeable future. And there are problems in South America that warrant some kind of response. It will be useful to not have to prosecute a former world leader as well.”

Saudia flashed a small smile at that. “I do my best.”

“Here we are,” Ethan said, as they approached some double doors, the wood ornate and carved
into various shapes. He reached over and opened it, and they stepped inside to see Prime Minister Murphy sitting calmly in his seat, looking not the least bit surprised to see them.

“Chancellor,” he greeted calmly. “We meet again.”

Saudia’s face hardened. “I did warn you.”

“So you did,” he nodded. “I somehow believed you wouldn’t cross the one red line the world wouldn’t support. And yet you have. Masterfully handled, I must say.”

“The red line for most is the sight of children being cut up on alien tables,” Ethan spat, stepping forward. “And yet you lacked the conviction to even do that. History will not remember you well, Prime Minister.”

“We have covered this topic before,” Murphy dismissed Ethan’s words with an absent wave. “I feel no need to repeat it. I do not regret my stance. Regardless of the crimes of the aliens, that does not change that I do not believe ADVENT has the best interests of Humanity in mind. It does not matter what you show, the immutable fact is that you have invaded and captured a country that had done no crime other than to peacefully oppose you.”

“Except your peaceful opposition has hurt our efforts in America,” Saudia countered. “Your refusal to cooperate in any way has cost countless lives. You might not understand it, but there is blood on your hands for that. I didn’t want this, Prime Minister, but this is larger than your country, and especially you. If needed, I will annex the entire world if they oppose the destruction of the aliens.”

“All you have accomplished today is a hollow victory,” Murphy said calmly. “Today people have seen the brutality of ADVENT. You have gained many enemies, and now there will be those who will stand against you. Fear and terror cannot be sustained forever, and your little regime will collapse before your eyes. You are not the first tyrant who believed themselves justified, and you will pay the price one day.”

Saudia was sorely tempted to punch him in the face. She wanted to very badly. As it stood, Ethan seemed to want to as well and took a step forward. “No.” Stein said flatly, raising a hand, and Ethan stopped. “We have no need to listen to his words any longer.”

She stepped forward, a pair of handcuffs at the ready. “By order of the Chancellor, you are under arrest, Prime Minister Murphy. You will be tried and sentenced. Please extend your hands.”

Murphy stood, a slight smile on his lips. “Ah, Saudia’s attack dog. I’m sure this is satisfying for you, Stein. No. I will not comply. If you want to arrest me, you will have to drag me out into the streets so the world can see how you treat your prisoners.”

Saudia’s own smile turned cold, and she imagined Stein had a similar one on her face. “You will not be a martyr, Prime Minister. You will be removed and the people will forget about you. Understand that the current plan for you is a simple forced retirement, and an order never to interfere in public matters. Lenient, all things considering. Resisting arrest would upgrade the charges to twenty years in prison.” She tapped her armor. “All of this is being recorded. There will be no disputing the evidence. I ask you again, Prime Minister, please extend your hands.”

Murphy shook his head. “No. I will not be intimidated.”

Stein nodded, and turned to Saudia. “Let the record show repeated refusal to cooperate with law enforcement. Proceeding to subdue.” She whipped out her stun baton and slammed it into the bottom of the Prime Minister’s chin with a crack. The shock was set for the level just short of
lethal, and he was knocked out almost instantly, falling down unceremoniously.

“Good riddance,” Stein muttered, placing her baton back and she reached down and handcuffed the unconscious Prime Minister, then slung him over her shoulder. “Hope you enjoy your time in prison, Murphy. You and them will probably get along.”

Saudia didn’t feel too bad about the Prime Minister refusing to cooperate. Even when presented with no other options, he somehow still managed to make the wrong one.

Stein had summed it up well. Good riddance indeed.

There would be one less traitor to make her life more difficult, and hopefully this would send a strong warning to those who believed that they could sit out this war with no consequences. Canada had been the world’s wake-up call.

Now it would be interesting to see who was paying attention.

---

The Praesidium, Barracks

Sierra felt she wasn’t alone in feeling complete shock as the soldiers crowded around the TVs in the barracks, watching reporters announce, their own faces blank with shock, that ADVENT was actually annexing Canada. Sierra hadn’t even known that was something they could do, at least legally. At the same time, she shouldn’t have been surprised at that.

Sierra glanced at Liliyane and Jasmine, both of whom were blank masks as they watched. The Commander had apparently been gracious enough to let them know that ADVENT was going to take over their country, which she supposed was a point for him. Still, that meant that XCOM was definitely supporting this act.

And from the comments in the room, he wasn’t alone.

“Well, I guess this will help us,” the CT agent Timur said as news that Edmonton had been taken arrived. “Sounds like the Canadian military is supporting this.”

Sierra gave him an incredulous look. “You say that like it’s a fucking shock. They would be torn to pieces if they fought ADVENT.”

“Didn’t seem to deter the Middle East,” Fakhr pointed out. “They had no chance and they still fought.”

“There really isn’t much that can be done about it,” Liliyane sighed. “The Prime Minister made his choice; this ultimately comes down to the government acting like morons.”

“Seriously,” Matthew said, leaning back on the couch. “All they literally had to do was say, ‘yeah, you can go through our country and get all the benefits of ADVENT protection without having to actually join’. Sorry to you and Jasmine, Lily, but they completely had this coming.”

One of the North Koreans, Min-Su Song, stroked his beard thoughtfully. Sierra found it really weird to look at him; for some reason, beards just looked wrong on Asians. “I’m rather surprised the military put up with this Prime Minister’s obvious incompetence for so long,” he commented. “I suspect that had ADVENT not acted, there would have been a military coup in the future.”

Sierra rolled her eyes. “The world doesn’t follow Best Korea policies,” she answered. “The point of
loyalty is following your leaders even when you disagree.”

“Is it though?” Oliver interjected, surprisingly. The older man looked rather tired as he spoke. “The Chancellor did have a point. Can anyone stand by in good conscience knowing that if ADVENT fails, we’ll be treated like…” he gestured at the TV. “That? At what point are you complicit by neutrality? Look, even I’ll be the first to admit one of the biggest problems of the UN was that it didn’t do anything. They could have actually improved the world several times, but they held back for one reason or another. Right or wrong, the argument about not disturbing the sovereignty of a nation… it was valid.”

He shook his head. “But even I don’t think that is even a comparable thing. This isn’t just about some superficial disagreement. This is about our entire species. Is it right for ADVENT to completely annex the country? Maybe, hell I’d say probably. But are they justified? I think so.”

There was a chorus of agreement from the soldiers, and Oliver’s word did have some weight here. He’d openly said he disliked some ADVENT policies, but if even he was thinking that this was acceptable, then that might make up the minds of some who were torn on the entire subject.

Like herself.

The footage had been horrific; completely and utterly brutal, and it made her want to kill some aliens right now. But she couldn’t help but wonder if that was really the reason ADVENT was annexing Canada, or simply a convenient excuse to silence a vocal critic.

The problem Sierra had was that, regardless of the Prime Minister being a moron, annexation wasn’t necessary. She could bet that after showing that footage, there would have been an uproar from the population, and they would have pressured the government to do something. Maybe not join ADVENT, but at least ally with them.

The majority of people, even Canadians, weren’t anything like the Prime Minister. They wouldn’t stand by quietly. That was literally all ADVENT had to do, and watch the people turn against him. True, it might not work, but Canada was genuinely a place where she felt where public pressure would have an impact.

Then again, she was a regular American woman with no idea how Canada actually worked, so she could be completely wrong. Still though, at worst all ADVENT had to do was just ignore whatever Canada had said and go through the country anyway. Really, what could they do about it? Help the aliens?

It would likely be a lot more acceptable than just taking over the country entirely. By doing it, ADVENT has removed whatever moral high ground they had over Canada, or anyone else for that matter. Sierra realized that it wasn’t the specific act that was bugging her, but that the entire event was unnecessary. It didn’t feel like anything more than ADVENT sending a message to the rest of the world which boiled down to ‘Help us or we’ll take you over.’

But Oliver did have a point. Could they really apply regular morality to a war where defeat meant death and worse?

She didn’t know.

“I was in the Sectoid Hive,” Carmelita suddenly said, absentmindedly sitting away from the majority of soldiers, fingers absentmindedly rapping on the table, a faraway look in her golden-rimmed eyes. “When we first took it, before we turned it into this…” she gestured around the room. “What they showed was only part of it. I saw the other archives the Sectoids kept.
Meticulous bastards. It made me sick, some of the stuff they were doing. No matter what we as a species do, we will never come close to the aliens in sheer cruelty.” She looked up at the rest of them, a hand curled into a fist. “Canada doesn’t matter. Their reasons don’t matter. I don’t care if the coward Prime Minister was executed on live TV by ADVENT, if it leads to the complete and utter annihilation of the aliens, then it’s completely justified. Traitors don’t deserve anything, and ADVENT has every right to wipe them out. The Chancellor was correct. There is no middle ground here. There are either those who are willing to fight, or there are traitors.”

There were murmurs of agreement, and although Sierra didn’t exactly agree, she didn’t think it was a good idea to bring up some counterpoints to that. Besides, Carmelita wasn’t exactly the most objective person when it came to the aliens. Then again, if their positions were reversed, Sierra couldn’t say she wouldn’t be the same.

Sierra sank back into her chair as the discussion turned to something else. This was far more conflicting than it had any right to be. Maybe she just needed to sleep.

***

Forward Observation Station, Mars Orbit

Ravarian watched the four holographic screens showing various Human news stations reporting the latest developments. The voices and sounds all blended into one, and all were essentially saying the same thing. “Mute.” He finally said.

ADVENT making a public address had been expected, and he had not expected that it would be anything more than a reassurance.

He had not expected Saudia to announce the annexation of Canada. Not now at least. Ravarian was well aware that ADVENT could annex countries if certain criteria were filled, but at the same time, he had wondered if they would actually go through with it.

His lips pressed into a hard line as he watched the soundless newscasters. He hoped that Battlemaster was happy. Imperator or not, they had had the perfect opportunity to at the very least subvert Canada, if not outright convert it, and they had done nothing.

A perfect opportunity wasted for no good reason.

With this ADVENT now controlled the nearly the entirety of North America, with the exception of the small amount of cities the Collective controlled in the United States, and now that ADVENT had Canada, they could come from the north and bypass some of their stronger fortifications. What was worse was that Canada was not a place they could easily take either without a significant increase of soldiers.

Japan had been an excellent victory, but there were no signs of ADVENT slowing down. They would infuriatingly adapt, and had shown surprising foresight by quickly evacuating Japan, and preserving the majority of their forces. Korea would be the next obvious target, and from a logistics standpoint, it was one of the only ones available.

The three main targets from Japan were Korea, China, and Russia. While China could probably be dealt with relatively easily, it would take a significant amount of time to do properly, and there was simply no way a country of over a billion Humans would be taken in a timely manner. And that was time ADVENT would use to get stronger, or worst case, use China as a proxy which would eat up Collective resources while their centers of operation were continually protected.
At the same time, China would have to be dealt with eventually, and the Chinese were just as focused on defeating them as ADVENT, even if they clearly disliked their global neighbors. Infiltration was nearly impossible, at least anywhere effective. Their authoritarian regime was being utilized to its fullest effect, and Ravarian knew that after the first proper battle with China, they would immediately begin attempting to reverse-engineer their technology, or worst case, accidentally awaken psions.

Were China actively attempting to sabotage ADVENT, that might be beneficial to pit them against each other.

The problem was that they weren’t.

Hence, they were a potential problem in the future, but not necessarily one that needed to be dealt with right away.

Korea was going to be a complete warzone at the very least, and probably much worse than Japan had been. Unlike Japan, Korea was on an actual continent, and it could easily be supplied and reinforced, and reports from the Zararch indicated that the defenses gradually became more and more secure up until the border between North and South Korea.

No matter how he looked at it, Korea had the potential to be fought to a stalemate, even assuming ADVENT wasn’t trying to learn from their mistakes. Defenders always had the advantage, but the sheer amount of firepower in the country, as a consequence of both of them preparing for a war against each other, was not something that could be ignored.

The coast would likely be breached easy enough, but Seoul was going to be a nightmare to beat without Ethereal support. Which he supposed the Battlemaster would be more than willing to provide. But in theory it could hold out against their forces indefinitely. It depended on how much the Battlemaster wanted to devote to the conflict compared to other areas.

That wasn’t even considering North Korea.

Ravarian grew mildly annoyed at that. There was almost no information on it, but based on the previous North Korean army, which was clearly the basis for the base ADVENT soldier, they appeared far more advanced than South Korea, and he knew that Gwan had made a point to prepare for their invasion. Ravarian didn’t know who’d been the fool who’d ordered an attempted abduction in the country, but it had allowed the North Koreans to accelerate their research significantly after they captured it.

The unknown was the greatest risk here, and he was not expecting it to be an easy conquest without significant support. They couldn’t rely on Caelior or the Creator’s pets every time. And right now, Collective forces were displaying their weaknesses every time they fought, and just as the Humans were adapting, they needed to as well.

Russia he dismissed for the time being. Their strategy was going to need to change in the coming months. Winter was coming, and if there was one thing he had learned from Human history, it was that there were certain regions that should not be fought in during that time. Granted, that was for Humans, but Ravarian wasn’t confident that his soldiers would fare much better.

Mutons could survive in almost any environment, but performance was more important than simple survival, and they would suffer. Berserkers would be severely neutered in snow. Most Vitakara would perform at Human levels or slightly better, with the exception of Borelians and the Oyariah, although even the latter was questionable. Chryssalids would have the same problem as Berserkers, and Andromedons would perform depending on how bad the weather was. Even still,
their performance would be reduced.

The cold would also affect the vehicles, mostly because Cyberdisks, drones, and Sectopods had the slight issue of their joints locking in cold conditions, which was a design flaw the Sectoids had never bothered to correct since they rarely, if ever, fought in the cold. There were no seasons anymore on Helion-7, so it was likely that reality had never entered their minds. Since they were still being ravaged by the cursed XCOM bioweapon, they would be too distracted to upgrade their mechanical units.

That took Canada and Russia off the table in the short term, which meant the focus of the war should turn to the southern hemisphere. America could still be fought over, and they would have to begin targeting South America and Africa, the latter of which ADVENT was ignoring entirely. If they worked to build their influence in those regions in the winter months, they would be in excellent position to pen ADVENT in when spring came and the cold abated.

Provided there were no more questionable orders, like leaving Africa alone for some arbitrary reason.

Ravarian waved the haptic display off, and turned to leave. He sincerely hoped the Battlemaster and Imperator had learned their lesson here. ADVENT was taking this seriously, and contrary to what certain Ethereals seemed to believe, they should as well.

Speaking of which, he should have Quisilia check on Nartha. He’d been on Vitakar enough to do whatever he wanted. It was time to move him to Desolan next, since he had suspicions as to the level of dissent there.

If Quisilia wanted to use Nartha, use him they would. He sincerely hoped this wouldn’t turn out to be a mistake. Nartha wasn’t an idiot, and if they were too obvious, he would put the pieces together and…well, Quisilia would kill him.

So perhaps they were safer than he thought.

Still, never hurt to lessen the risk.

***

Riyadh Garrison, Saudi Arabia

Betos had to admit that the Chancellor knew how to handle a situation. Prior to this, she didn’t believe that it could be possible to make the indisputable invasion of a peaceful country seem reasonable…but the images of some of the monstrous things that aliens were supposedly doing were the most effective way to illustrate the threat.

She had almost been convinced to ignore the entire event, because it seemed rather small in the face of the alien brutality. Until Mox had wondered if the footage was even real.

She sat at her desk, a blank piece of paper in front of her. It was what she was going to say, and she didn’t know where to start, or if she should just throw it into the trash and try to do her best here. But now that Mox had put the possibility in her head, she couldn’t just ignore it. She hated how much she was reminding herself of those idiotic conspiracy theorists who liked talking about how Israel was secretly running the world.

The thing was, she had seen what was probably the darkest side of ADVENT, and she could see the higher-ups agreeing that something like this might be justified. There were several question to ask.
Would ADVENT be willing to stage the alien experiments? Yes, if the way they handled the Middle East was any indication. Their only justification was that no one could (or should) remain neutral in the war, and they would do whatever they deemed necessary to lessen the public outcry. Second question:

Did ADVENT have the resources to stage it? Undoubtedly. Betos suspected that if this was staged, then it probably had been done long ago, and they were saving even more for situations like this. No better way to cover up your crimes than showing ‘evidence’ that no matter how bad it was, the aliens were much worse, and therefore it was ok.

It boiled down to the simple fact that she didn’t trust ADVENT. The soldiers were just doing their jobs, they weren’t who she had issues with. It was the leadership and government. The Chancellor, her cabinet, and the Commander who seemed to have a disturbing amount of influence over ADVENT in general, not just military strategy. Something was off with XCOM, but that was a completely separate issue.

But true or false, it had at least made her see the situation in a less emotional light. ADVENT had ultimately invaded a country that had done nothing against them except be uncooperative. Was it idiotic? Yes. Was it wrong? Not to her. The thing was that there were some things that were either immutable or they were not.

ADVENT supposedly respected the sovereignty of independent nations. But apparently only to a certain point. That wasn’t acceptable to her. You either respected nations peacefully staying out of it, or you did not. ADVENT couldn’t play both sides here, much as some people were arguing that ‘here they were justified’. That was debatable, but now ADVENT had opened up the door to doing it anywhere.

Saudia had painted a clear line in the sand, and the insinuation had been clear: You are with ADVENT, or you are a traitor. Following that line of logic, ADVENT could target any non-ADVENT nation based on that alone. How long until China was targeted? Argentina? Hell, any of the remaining EU nations? ADVENT wouldn’t need manipulative footage, fake or not, in the future.

What was really concerning was that it was going to be all too easy for this to become commonplace. Betos was convinced this was only the beginning. It would be shocking now, but after it happened four or five times, people would simply stop caring. Easier to not think on if the ones in power were really doing the right thing or not.

Far as she could tell, it was already becoming commonplace. The methods used by the SSR; the riots put down by Peacekeepers; now annexation. There was only so much she personally could justify in the name of security and for the greater good. At some point those were just excuses; ones that conveniently hid the true motives.

She did agree with Saudia when she’d said the famous line where evil only continued to exist when good men did nothing. Was ADVENT evil?

She didn’t know. She really didn’t.

It was scarily possible that Saudia and the Commander genuinely thought every action they were taking was completely justified. It was entirely possible that this wasn’t done out of selfishness or power, but it was done out of fear. The impression that she’d gotten from the Commander was that he’d been skeptical of the ability of Humanity to govern itself.

That’s really what it felt like, now that she’d thought of it. ADVENT had given up on Humanity,
and it was going to force it to become what they believed their species should be. She’d certainly seen some of the worst of Humanity, but also the overwhelming good that could be done when Humans came together. She wondered if the Commander and Saudia had spent too long focusing on the problems, and had forgotten that the majority of people were ultimately good and just trying to live their lives.

Maybe ADVENT wasn’t evil. Not quite. But it was going down that path. How long would it be until ADVENT was performing similar acts on aliens or even Humans, while declaring it was necessary and that it was justice for their crimes of opposing ADVENT? It was easy to justify villainous actions if the victim was not worth defending.

No one was going to protest the rights of an alien or criminal, else they would be branded sympathizers or worse. It was insidious dehumanization, or dealienization, whatever the alien equivalent was. The most disturbing thing about ADVENT, was that they knew what they were doing. For better or worse, they understood how to manipulate the masses. They knew how to justify their actions.

And they might even genuinely believe they were in the right.

Maybe they were.

Perhaps she was the one who was wrong.

Then again, the question had to be raised: What good was it, if in defeating the aliens, humanity ended up becoming just like them?

Then they had substituted one form of slavery for another. And no one would be left to point that out.

She had often wondered if the men and women of the horrific regimes like the Nazis and USSR had encountered a similar crossroads. They had seen the beginning, and perhaps the slow declination of the government into tyranny and genocide. But they stayed in the end, maybe because they felt they had to, or because they felt they could be one of the ‘good ones’. And ultimately, by the time they realized they were complicit and nothing could be changed, it was too late.

She had a choice now: Stay, and bear responsibility for whatever came next, good or ill, or refuse to be a part of it any longer.

She picked up her pen and began writing.

***

The Praesidium, Engineering Bay

Nuan picked up her pencil, and tried once more to write on the notepad she’d brought with her.

[Arri, ye whw retuse tw be slavss]

[Wltf ouf filsh and blwd, let us boild a graat wail!]

Nuan scowled and rested her head back against the cool steel wall, resisting the urge to snap the pencil in two. The doctors had told her that it would take some time for her to regain enough motor control of her new prosthetics to write properly, but it was maddening that she could hardly put together even a remotely coherent sentence.
She grimaced as she looked through the lines above the ones she’d just written. It was sloppy and... *illegible*. She *knew* how to write, but her hands were not cooperating with her. There was some marginal progress as she saw where she’d started at the beginning, but the characters were still mostly wrong.

She punched the wall in a flash of anger, the bang lost in the crowd of sounds in the Engineering Bay. Didn’t do anything, but it made her feel slightly better, because it seemed that was all the prosthetics were good for. At least she didn’t have to worry about hurting her hand anymore. She looked down at the prosthetics, still finding the feeling somewhat surreal that this *actually* happened to her.

They were skeletal in a way, dark gray steel and the inner workings protected by sheaths of metal, but the joints exposed enough to perform every motion of the hand. She didn’t think that it was fully synched up to her brain either, because she’d try and do some motion, and it would either do it partway, or something else.

The first few times it had happened, it had nearly freaked her out that a part of her body wasn’t responding to her commands. The helpless feeling was almost as bad as when she’d woken up with no arms. Now she had arms, and sometimes they wouldn’t do what she wanted. What was truly bizarre, and what took some getting used to was that her arms *were* now metal and wires.

There were maintenance panels on her wrist, and it was fascinating in a morbid way for her to open up part of her arm, and look inside. Even stranger that she could sort of poke around inside and not feel a thing. The arms hadn’t been calibrated for pain, which she appreciated, but they could still detect differing temperatures and pressure.

Though even that was iffy. The prosthetics were *much* stronger than regular flesh and blood, and she’d unwittingly broken a few glasses and pencils by exerting too much pressure. She was keeping Human contact to a minimum until she was reasonably sure she wouldn’t accidentally hurt someone. At least she could punch things with impunity.

Well, mostly. It wasn’t recommended, but the doctor had insinuated that it helped people deal a little bit with the inevitable frustration. In moderation, of course. And *not* on people.

Ironically, she could still shoot a gun reasonably well, and suspected that was one motion they had been sure to hardcode in, or whatever; she wasn’t a prosthetics expert. But it would make sense that they would want to get her back in the fight quickly. The guns probably wouldn’t be crushed in her grip either, so that was a plus.

But she was really uncomfortable with fighting at the moment, since she didn’t completely feel in control of her arms yet. She’d get there, but she didn’t know how long that would take.

Still, she wasn’t going to sit around doing nothing. Thus, she was here. Sitting on the floor against one of the walls in the Engineering bay, the notepad on her legs as she tried to learn how to write again. It made her feel a little less embarrassed to do this where there weren’t other people watching.

It was difficult to concentrate much as well, since she was torn between a kind of fear and satisfaction. The Canadian Prime Minister had completely deserved to be deposed for his backwards opinions and outdated ideologies, and seeing him being hauled out had given her a strong feeling of *justice*. Saudia was right that anyone who wasn’t helping fight the alien threat—who didn’t have to be with ADVENT – was a traitor. That she could agree with wholeheartedly. Especially after the footage of the Sectoids experimenting on people.
It made the Praesidium a lot more menacing now, knowing that this was where such acts had taken place.

Yet at the same time, ADVENT had actually annexed a country.

China could be next, and that scared her. She couldn’t know if people on either side would understand that would be an unbelievably bad idea. She was expecting orders within hours demanding to know if she had known anything like that was coming. They were going to be freaked out, and rightfully so.

To the best of her knowledge almost no one had known this was even being considered, which meant that if China ever made ADVENT angry for some reason, they could strike without warning. And Nuan believed it wouldn’t be with a fucking press conference, but likely similar to how Pakistan was taken. No warning, no mercy, and no chance to stop it.

That ADVENT was going to get their own psionic program was cause for enough concern, but China was going to have to make some serious decisions in the future. She wasn’t appraised of the current technological level of the Chinese military, but last she checked, they were nowhere near ADVENT, and probably would remain that way until they made a deal with ADVENT or the aliens attacked the mainland.

The alien dreadnought they had would probably help with some developments, but it was nowhere near what was needed.

She took a deep breath. She was probably exaggerating. China wasn’t run by emotional people, they would handle this with level heads. They’d made it this far, they would endure like they always had, regardless of how much more powerful ADVENT was now.

Nuan unconsciously rubbed her forehead, and flinched when the metal fingers touched her head. She still wasn’t used to that. It felt like someone else touching her, even when it wasn’t. These prosthetics were going to take some getting used to, but she wasn’t convinced that everything about them would become normal.

But it was far better than having no hands at all.

###

*Undisclosed Location, Argentina*

Konstantine Volikov sat alone in his armored fortress, the unofficial headquarters of his little band of survivalists, or terrorists, depending on who you talked to. Technically this was one of many outposts they’d built across the country, but he’d stayed at this one long enough to think of it as almost a home.

He found it rather quaint, and exactly how he liked it. Minimal distractions, well-hidden, and well-stocked.

He shut off the TV in disgust, not exactly for what was on the screen, but because he knew he was distracting himself from something far, far worse. He glanced over to where the dreaded things lay on the collapsible plastic table, as undisturbed as when Elena had set them down and strode off without a word.

No point in procrastinating any longer. The damn report wasn’t going anywhere, and there was no way he was subjecting his clients to reading twenty pages of complete and utter boredom. He stood and walked over to the table and grabbed the report, and threw himself back into the chair, already
preparing himself for the worst.

He opened the page with some trepidation, and sighed as his worst fears were confirmed.

4:15: Team arrives on site and begins immediate preparations. Jason comments on the weather.

4:17: Rifle assembly delayed due to improper packing of equipment. Expected time delayed by twenty seconds, mission time delayed by same amount of time.

4:18: Faraday makes derogatory comment towards ADVENT Peacekeeper forces.

He loved Elena, but she was without a doubt the worst person to write a report he could even conceive of. He was going to have to read twenty pages of completely useless information and hopefully pull out stuff that he actually cared about. At the same time, she was by far the smartest one of them all, and it took her only a few hours to put together one of these. Times like these having a perfect memory would be extremely useful.

Anytime he brought that topic up though, she never answered. Maybe she didn’t know either.

As he continued the mind-numbing slog, he reflected on what he did know. The attack on the Peacekeeper forces had gone exactly as expected, and the casualties had been much higher than he’d hoped. That being said, it was only a matter of time before ADVENT actually started deploying some forces against them.

He smiled at the thought; his lips set in a grim line.

He wished them luck with that.

There was a reason he’d been sought out by the Argentineans, and their unofficial alliance with several other South American countries. When it came to survival, there was no one better than Volk, the Grim Reaper himself. How he’d gotten the label, he still didn’t know, although it might have had something to do with how everyone sent to kill him ended up dead.

Still, it wasn’t something he particularly sought out. Until now, at least. He would have been content to stay in one place, living off the land in peace. Unfortunately, he knew a bit too much for certain people to let him go. Savvin didn’t like people asking questions, and it was only after fleeing to Alaska and killing the CT Squad sent after him that he’d let him settle down peacefully.

And so he’d lived in Alaska for quite a few years, until some mysterious assassins had tried to kill him again, and this time he didn’t know if they had been sent from Russia, or the United States. From what he’d learned, the US hadn’t exactly been happy that he’d taken up residence in their country. Their loss, and so he’d finally decided to do something.

If no one was going to let him live in peace, he’d make their lives a living hell. So he started what he simply called a survivalist group, a cover that allowed him to train operatives; operatives that would be capable of getting certain political dissidents out of dangerous situations. China, Russia, Africa; all these places were havens for corruption and oppression.

He’d established contacts, and soon his name had gotten around as someone who could extradite people on the run from oppressive regimes. Sometimes he went himself, most of the time he sent his operatives to extract people and bring them back to his little hideout. Very often they weren’t anyone important, low ranking military or intelligence; journalists, very rarely was it anyone with any sort of actual power.

Not that it mattered to him. He wasn’t in it for the money, even though there were quite a few
organizations (usually those who came to him with job offers) who paid him, anonymously of course. And generally not in something worthless like the paper they used so often, but currency he could use. Weapons, food, supplies.

It was an arrangement he quite liked.

He knew he was bound to get the attention of someone important sooner or later, but had not imagined it would be ADVENT, who had sprung up out of nowhere, and within a few days of seeing them at work, he’d gotten the hell out of the United States, and to the next best place which wasn’t a sudden ADVENT member state: Argentina.

From there he’d tried to appraise the situation. The aliens had certainly been a surprise, but had been something on the horizon; something that didn’t affect his actual work. He was more focused on making sure the people were alive, before figuring out what to do next. It had become very clear that ADVENT was going to bring in a dark age for political oppression.

Had he been a heartless CEO who only cared about profits, ADVENT could have translated to more business for him, but ADVENT only made him worried. Even after a quick few days of investigation, he’d learned that ADVENT was not like the incompetent dictatorships he was used to dealing with. It was dangerous just how competent everyone seemed to be. It was completely bizarre. No one was ever putting people like this in charge.

Typically, Volk saw several different kinds of governments; ones with smart people, but bad systems; ones with good systems, but idiot leaders; and of course, ones with bad systems and idiot leaders. He had never seen what he would call a competent government, but then again, he’d worked against the worst of the worst.

The smart ones he’d never had any need to investigate. Until now.

Then in a strange twist of fate, the Argentinian government had made tentative contact, and asked to talk. He’d suspected a trap, of course, and had taken appropriate precautions. But they actually kept their word, and had a very interesting chat. As he’d wondered, they were worried about ADVENT expanding and taking them over, and Brazil especially was in the hands of a warmongering tyrant, posing another threat.

He could see their problem.

Now they of course couldn’t deter ADVENT, but they could distract them, which was where Volk and his people came in. Terrorism might have been a deterrent to some, but considering the target, Volk personally had no problem with it. When the Peacekeepers had opened fire on the protesting crowds, that had solidified his path.

And now ADVENT was indeed taking over countries they didn’t like. Wouldn’t be too long before they turned their attention to South America. The goal wasn’t to destroy ADVENT, he wasn’t delusional, but to make their occupation too costly to consider expanding. Of course Argentina couldn’t be connected to them, and this was all unofficial, else ADVENT would consider that reason to invade.

But he was a completely independent force. ADVENT didn’t know anything about him yet, and he intended to keep it that way.

He shook his head as he kept marking down actual relevant stuff from Elena’s report. The whole Canadian situation was one of the most manipulative pieces of propaganda he’d ever seen. Well handled, which again showed he was dealing with actual smart people, and the masses were going
to completely buy it, and the media would fawn over the Chancellor’s words like the gullible sheep they were, or at least until their ratings went down and realized bashing her was more profitable.

Volk didn’t know if the footage they showed was real or fake. It really didn’t matter. Wow. Shocking that the aliens were experimenting on Humans. Completely unexpected. Volk sniffed at the hypocrisy. If ADVENT wasn’t experimenting on Humans themselves, or aliens for that matter, in just as horrific and brutal ways, he wouldn’t just eat the headscarf around his head, he’d eat his damn uniform.

That this was shocking to anyone was a sad state of affairs. That was what people in power did, while at the same time using similar tactics to vilify their enemies. He’d known Russia had done Human experimentation, China had done it, and the United States had done it. There was no way ADVENT wasn’t doing it either. And especially on aliens, but Volk felt that if they had shown one of the Mutons getting a similar treatment, there would be people cheering for it.

Because aliens weren’t people, after all.

Volk didn’t care one way or another about the aliens anymore. No matter what narrative ADVENT wanted to push, they weren’t any better or worse than humans and as far as Volk was concerned, they were just as much a threat to the people as the aliens themselves. For all he knew, the aliens actually weren’t the completely evil puppy-kicking monsters they said. At this point he was considering everything they were saying as propaganda; they could say the sky was blue and he’d look out to actually check.

His life certainly wasn’t boring.

But now he had a mission to complete: Ruin ADVENT in South America. A challenging task, but he had several plans, which would hopefully culminate in the assassination of the bitch Luana herself. He might actually take the shot himself instead of assigning it to Elena.

It would depend on how he was feeling that day.

They were in his environment now, and guerilla warfare was one the ADVENT military was ill-prepared for. He knew the forest, he and his people could survive for weeks with nothing, and they couldn’t. He was looking forward to when the game actually began.

The door creaked open, and he looked up to see Elena walk through, her Vektor rifle slung over her shoulder and mask hooked to her belt. The hood of her trench coat was down, and she didn’t waste time taking off the mix of armor and cloth to get into something more comfortable. Everything had gone well then. If it hadn’t she would have said something.

Elena Dragunova, the woman who was ironically the reason all of this had started. No matter what happened, he would never forgive the Russian government for meddling in her life, and he was quite certain they would have terminated her had he not figured out the reason she was always different.

It had been a longstanding question he’d wondered. If the Russians actually wanted to kill him and be done with it, or get their guinea pig back as well.

He unconsciously stiffened just thinking about it. Over his dead body.

Although that had almost happened a few times.

Still, she’d been with him from the beginning, and had been the reason they’d managed to survive the first years. It had almost been unsettling how Elena had been able to predict where and when
they might be attacked based on contingencies and plans she’d only seen once, five years ago. It also helped that it was impossible to lie to her, and she’d saved him more than once from disguised assassins or infiltrators.

In some ways, she reminded him of a computer. A perfect memory, efficient, and dangerous. She was nearly as good as him with a Vektor rifle, and much better at close-quarters fighting. Despite how she was the most boring writer for AA reports, she was the person you wanted to lead the operation itself, because everything was accounted for.

He scribbled some notes down and stood. He could finish this up later. “Did you find anything unusual?” He asked her, as she finished hanging up her trench coat and taking off her boots.

“Negative,” she answered immediately, not pausing. “ADVENT Peacekeeping forces are reacting within expected contingencies. According to information provided to us by Argentina, it is likely that after a maximum to two additional attacks of similar scale and death toll, they will request additional assistance from ADVENT Intelligence or State Special Response forces.”

Volk nodded. Expected. Of the two, Intelligence was more dangerous than the SSR. SSR agents were little more than Peacekeeper special forces, and lacked any subtlety whatsoever. Easily dealt with, and their helmets were likely similarly weak to headshots. Hopefully. “Good. I think you’ve earned a break. Besides, I want you with me when we meet with our contact.”

She carefully placed her boots under her trench coat, and after giving everything a quick look over, she looked back up to him and smiled for the first time. He still hadn’t figured out what randomly prompted that. There were patterns to everything she did, yet there were moments when she acted completely normal when she saw someone she cared about. “At what time?”

He smiled in return, and motioned to her head. After a second, she tilted it and he straightened a wisp of loose hair, pushing it behind her ear. “Eight o’clock, two days from now. I think in the meantime I’ll look over the identified potential recruits.”

“If you are interested, I identified several more,” Elena suddenly said, turning away and quickly striding to get a notepad which she immediately began scribbling on. “I have yet to identify closing factors to solidify potential recruitment, but their age, ethnicity, economic status, and identified political affiliations warrant further attention.”

She handed him the quickly written notes, of which there were names, locations, and other pieces of information that would make his job much easier. Leave it to her to remember the little facts like that. “I never have to tell you what to do, do I?”

“No,” she answered as if it was a question, and tilting her forehead towards him. “You taught me to always be vigilant.”

He leaned in and kissed her on the forehead, pulling her close, which she allowed. “And you learned it well.” He let her go after a few seconds, and she glanced expectantly up at him.

“Are you finished for tonight?” She asked, and he inwardly sighed. No, not quite, but he didn’t want her to stay up waiting for him. Unfortunately, it was impossible to lie to her, and he knew there was zero chance of convincing her that it was alright to sleep. It was just something she did that he’d given up on her stopping.

“Almost,” he said. “It won’t be long.”

She nodded and went to sit at the foot of their bed, while he went back to his chair and resumed
noting down relevant stuff from her report. He wondered how she resisted becoming bored, because he would sometimes stay up for hours until his job was done, and she’d still be waiting in the same place, with the same expression, never once expressing annoyance.

He wondered if at some point she just flipped through books, committing them to memory and going back through them at points like this. He wasn’t even sure that was how it worked; something to ask a neurologist should he ever meet one.

Still, he wouldn’t keep her waiting too long.

He finally was satisfied with his notes; he’d type up a short one-page condensed report tomorrow morning and send it with one of his operatives. He really considered charging extra for the hassle of going through all of this, but they wanted reports, and reports he would write. He did write them extremely passive-aggressively as a form of revenge though.

Done, he shut off the lamp by his chair, and went to the bed, and on cue, Elena looked up and laid out on the bed, and he finally laid down beside her. No sooner had he hit the final lights was she snuggled up against him like always, and both of them fell into a peaceful sleep.

***

*Riyadh Garrison, Saudi Arabia*

Betos stood in full armor, Mox behind her as she looked out into the assembled soldiers, all of whom were similarly in full armor, although they didn’t know for what. She’d just ordered a general assembly, quite possibly the last order she would ever give.

There was the very real possibility that there wouldn’t be enough soldiers who agreed, and they might try and stop her. But if that was the case, then so be it. At the very least it would let people know that they were not a monolith of unthinking drones who followed orders as if by inherent programming.

Still, out of all the combat operations she’d been in, this was the riskiest thing she’d ever done in her life. She waved to the soldiers. “Helmets off if you wish, this isn’t formal.” She had her own tucked under her arm, and there was a symphony of rustles, hisses of air, and clicks as many of the soldiers followed suit.

She surveyed the crowd, seeing the men and women who she’d commanded over the past few months. There weren’t any that she would personally say were bad people, they were the people that ADVENT needed, but from what she’d seen, the ones with her were the exception, not the rule. She’d probably had something to do with that as well.

“By now you’ve probably heard the news of ADVENT ordering the annexation of Canada,” she began. “I’ve also assumed you’ve seen the video of the human experimentation they used to justify their invasion. I think there is no question that the aliens have performed horrific acts, and those are likely not the worst they are capable of.”

She paused. A speechmaker, she was not, but she could only do her best. “But this is not unique to just the aliens. If one thing has become apparent to me, it is that all organizations and armies have their own dark secrets. It doesn’t matter the nation or person, but on some level, everyone knows the difference between right and wrong, else they would not try so hard to hide their crimes.”

Betos started pacing before them, having their attention as her address was not going how they expected. “All of us are soldiers. I was from Israel. Were there things my government was
complicit in that were illegal? Very likely. I would challenge you to find a government that is not hypocritical in some way. But we’re all soldiers, we serve because ultimately, we believe they earned our loyalty, and we believe they are fighting for the greater good. We don’t have to worry about if we are on the right side or not, or question what we are doing, largely because we are not ordered to go against our internal sense of right and wrong.”

Betos stopped, and looked at the crowd, from left to right. “When the abuses are hidden, they can be ignored. We can go about our day ignorant, and that is how we rationalize it to ourselves, even though in some way, we suspect we are complicit in their actions by simply being loyal to them. But the question that I have been considering is what to do when the abuses are no longer hidden, but simply ordered and allowed.”

She shook her head. “ADVENT has allowed and ordered actions that I cannot support anymore. Their annexation of an independent nation, regardless of excuse, is something that cannot be ignored by me any longer. It is another in the list of abuse that has only become more apparent to me throughout our war in the Middle East.”

There was quiet muttering in the crowd now, but they were raptly focused on her. “We’ve been ordered to execute governments without capture or trial; we’ve been ordered to fire on civilian targets; we kill hostages to stop terrorists. All of this is done in the name of security and order. But at some point we can’t just ignore it any longer. ADVENT will not change, and for better or worse, their colors are on full display.”

She hesitated. “You can argue that it’s justified; that if such measures are not taken, we will die to the aliens. Perhaps, perhaps not. There is no way to know for sure. But I do know that ADVENT has taken the easiest path here, not necessarily the best. It is easier to kill than capture; it is easier to make war than peace; it is easier to command through fear than hope. It is a question of what humanity is to become.”

Her voice lowered. “I do not see a viable future for Humanity under ADVENT. I see an indisputable regime under the guise of freedom. The leaders of ADVENT are smart, they do not make the mistakes others do. Do they do it for the right reason? That I cannot say. But are they the best ones to lead humanity? No, that I do not believe anymore.”

“Every single one of us must make a choice here,” Betos continued. “Hiding behind the word *orders* is that of a coward. We are not programmed machines, we are beings of free will. There is no ambiguity that can be ignored. We either support ADVENT, or we do not. Ignorance is no longer valid, there can be no excuses. I do not support ADVENT, and will not be complicit in their actions any longer.”

Now people began muttering, forming a low rumble in the crowd. “I will leave today,” Betos said over the noise. “I have no doubt I’ll be considered a traitor, but that is something I’m willing to accept. But doing nothing is something I cannot do anymore, and I know I am not the only one who has had doubts about ADVENT. But action must be taken now before it is too late. So those that wish to follow me, you may do so.”

She paused as the crowd quieted down. “And if some of you feel compelled to stop me, then that is your right. But my choice is made. It is now time to make yours.”

She put on her helmet and walked forward, and the crowd of soldiers became silent and parted before her. Mox was right behind her, and there were no signs of anyone stopping her. A good sign, she supposed, which meant she at least might get out of here alive. Then a soldier stepped behind her and began following, then another, and soon it was a wave of soldiers at her back as she headed towards the compound exit.
Betos glanced back, and saw that there were a few staying in place, but they were making no effort whatsoever to stop the throng of soldiers leaving. At the edge, the two perimeter guards came up to her. Her announcement had been broadcast to the base, so they knew what was going on. But it appeared they did not intend to leave.

Betos raised a hand and the soldiers behind her stopped, as she faced the guards. “Are you going to stop me?”

There was a tense moment of silence. “We are technically not under orders to bring you in,” he said. “But I am obligated to report this at the next interval, which I believe, is in two hours. Unless of course the antenna was damaged.”

Betos had a sad smile under her helmet. “Thank you. And I understand.”

He nodded his head. “I’d leave as soon as you could. The Peacekeepers are not as lenient as we are. I doubt this will be allowed to be repeated.”

Betos gave a single nod of acknowledgement. “No, it will not.”

“Good luck, Marshal,” he said, stepping aside. “But don’t forget who the real enemy is, and no matter what you believe, it is not ADVENT.”

Betos didn’t answer, but motioned for the soldiers behind her to load up in the Humvees and helicopters on-base. It was going to be a good while before they arrived at their destination. “I hope your friends are ready for us,” she told Mox beside her. “I didn’t think so many would join me.”

“I think they’ll be rather happy,” Mox said. “And if they don’t have room, well, they’ll make some.”

“I hope you’re right about this,” Betos said quietly. “I’m not a diplomat.”

“You convinced several thousand soldiers to leave,” Mox chuckled. “Getting a few African countries to work together should be simple.”

“I guess we’ll find out.” Betos said as the sun set in the distance.

Next stop: Africa.

***

END OF ACT I

Chapter End Notes

And so Act I ends, and I’m rather happy with how it turned out. I admittedly did not expect it to be quite this long, but it was needed and sets up things nicely going forward. So now that this is something of a break, I think I'll write something up on what exactly my plan is for this going forward.

At this point I'm planning at least seven acts for the Advent Directive, and how long each of those acts lasts will vary. It's also entirely possible I'll add another one later on if I think it needs it. The short version is don't expect this to be finished anytime soon,
and I do have every intention of finishing it, one way or another. Without giving too much away, there is a lot of stuff going to happen in Act II.

The Reapers and Skirmishers (Who are not yet going by those names) are going to play a big role going forward, and Betos especially is going to have an extremely hard road ahead of her, as ADVENT isn't going to take her desertion lightly. The annexation of Canada is going to have lasting repercussions, and there is going to be a focus on the situations in other regions, especially in South America and Africa. ADVENT of course is going to keep doing what it's doing, but it's not going to be as easy going forward, as the aliens are going to actually try and be subtle. Or at least, more than they are.

And speaking of the aliens, more stuff with Nartha is actually coming, a lot more Ethereals are going to be introduced, and the Hunter and Assassin will make their debut relatively soon, though there will obviously be some different things from the expansion. Speaking of which, I'm not doing some of the more questionable things like the way the Chosen don't die, the Lost, and I still haven't decided if I'm going to actually put in the Templar psi-blades or not. Oh, and Geist will be showing up too.

And if any of you were unaware, I'm also writing a supplementary codex-like series that expands on quite a few topics, people, and units discussed in the story, and is usually updated after each chapter is posted with three or so files. It's in my profile as for those interested. You get to see Quisitia be snarky sometimes, so that may be incentive enough for some of you. Aliens and the Internet II will also be written sometime before Act II is finished, and maybe another file in a similar vein.

Thanks again to everyone reading this and providing their feedback. I plan for it to only get better from here.
Residence of the Chancellor, Switzerland

Saudia just needed to rest. Being the Director of EXALT had been an exhausting amount of work, but being the Chancellor was somehow more strenuous than that. And while she welcomed it to an extent, they were actually changing the world after all, there were some days where everything threatened to become overwhelming.

And today was one of those days.

The designated home of the Chancellor was very luxurious, and she’d ordered it to be designed as somewhat reminiscent of the Bastion, with the carpets, chandeliers in a red and gold color scheme. It had some familiarity compared to being far away from what had been her home for decades. It was a little overly large for her tastes, especially since the extra space wasn’t used much, but right now she didn’t care.

It occurred to her, as she opened the door, that she really hadn’t spent that much time here to begin with. Unsurprising in retrospect, since she got the majority of her sleep on planes, convoys, or just sleeping on couches in her office. Vacation was not something she was expecting to take anytime soon.

“Set up the usual perimeter,” she ordered her guard, not needing them to follow her inside. They nodded and began taking positions as she stepped inside. At least Ethan wasn’t on guard tonight, but he’d probably spent most of the day plotting out the guard rotations for her packed schedule of the next week.

That would have been enough of an ordeal, but the recent events had given her a lot more to be concerned about. Aside from the ever-present alien threat, which could strike from anywhere at any time, she now had to deal with the upcoming fallout from Canada, to some extent the Middle East, and now this desertion of soldiers.

Just thinking about the utter stupidity of pulling a stunt like that now was infuriating.

Unfortunately, she wasn’t sure it was wise to start a war with Africa to ensure that each and every one of those traitors was captured and executed. There were too many other, and somehow larger, concerns to deal with. The traitors could be obscured and their actions mitigated. It was the more visible issues that were pressing.

When those were dealt with, then the traitors could be dealt with.

“If you just want to go straight to bed, I won’t blame you,” Ethan said, walking in, dressed in a very casual gray shirt and shorts. He tossed the tablet in his hand onto a nearby couch once he saw her.

“Or you could go and shoot some targets. I know I’d want to.”

“What the fuck were they thinking?” Saudia growled, finally feeling free enough to speak her mind. “Do they not know we’re fighting a war?”

Ethan pursed his lips, took her stiffened form and guided her down to one of the leather couches in the room, which she sank into immediately. “The more likely explanation is that Betos was simply not fit to command, and she was given more authority than she should have had, despite her being
a red flag.”

“Yes, yes, I know,” Saudia sighed wearily, closing her eyes and resting her head back. “Laura told me she believed that, despite the reservations of some soldiers, the aliens would keep most of them focused on the big picture. On the actual threat.”

“Can’t really blame her,” Ethan admitted, putting an arm around her, which she held onto with the opposite arm. Human contact had really been missing from her life the past few weeks. Handshakes didn’t cut it. “Betos is just a very short-sighted and naïve woman. At least it’s been mostly contained.”

“Except that they’re still out there,” Saudia said. “And I get the feeling they’re not going to stay quiet. They’ve somehow made us the villain in this, which is ludicrous.”

Ethan actually chuckled. “I think that her effect will be minimal. There has been near-universal condemnation of any mention of that story from the other soldiers, especially those who’ve actually fought the aliens. And the public will likely feel the same way, especially after you showed the video from the Sectoid hive.”

Saudia opened her eyes, staring up into the dull orange light of the chandeliers above. “I don’t know how long that will last though. They’ll be shocked for a few days, but they’ll go back to being a potential concern if the media decides to become hostile again.”

“I’m not sure about that,” Ethan mused. “Just like how France was suddenly wanting to join us after they were attacked, I think seeing what you showed might have the same effect on at least ADVENT media. I doubt the foreigners will care too much.”

“Hassan is going to have an interesting report for me,” Saudia muttered, adjusting her body to get more comfortable. “Things can’t stay the same now. But at the very least we shouldn’t have a Canada situation again.”

“Depends the reaction when we locate the traitors and demand we turn them over,” Ethan said. “Is any nation going to risk a few thousand soldiers over their precious sovereignty?”

“The problem is that unless she goes to a border country, we’d have to go through quite a few countries in Africa to do it, none who are particularly friendly to us. We can beat them, but it’ll take time we can’t afford to waste now.”

“Mhmm,” was the answer, and they both fell silent.

“I sometimes miss EXALT,” Saudia finally said after a few minutes of silence. “It was much simpler. Not a crisis every single day. Our enemies were usually beatable. Now there’s none of that.”

Ethan looked to her. “I suppose that’s the cost of being the most powerful woman in the world.”

“True,” she conceded, smiling for the first time since she’d arrived. “I suppose it should be more challenging…” her voice dropped. “But the problem is that this isn’t an enemy we can easily outsmart or outmaneuver. It’s a mismatch in every sense of the word. It’s not futility, not yet at least, but you saw what one of those Ethereals can do. And there are at least a dozen more we don’t know about.”

“But they can be killed,” Ethan reassured her. “Everything can be. It’s just a matter of finding the right strategy or weapon. Once we have our own psions…the playing field becomes much more even.”
Or it’ll trigger a convergence of multiple Ethereals, Saudia thought grimly, though didn’t voice that thought. There was enough depressing news without her adding to it. “I suppose at worst, we’ll avoid ending up like the Vitakara or Mutons.”

“Really, I’m against ending up with anything that results in everyone dying,” Ethan said lightly. “And I think we both should rest before we think about any more depressing threats.”

“Good idea,” Saudia stood and gestured to the second floor. “I assume everything is set up?”

“Yep,” he said. “Housekeepers do their job well.”

“I’ll see you in a few minutes then,” Saudia said, heading towards there. “I need a shower first.”

***

ADVENT Intelligence Control, United States of America

Saudia and Elizabeth stood in front of a screen which displayed the figure of Helsa Betos on it, as well as some additional information about her. Aside from the apparent decision to shave her head, there was nothing about her that stood out. No marks, tattoos, or anything that said anything other than normal.

She looked rather plain, in all honesty; not what Saudia was expecting. Although she apparently was charismatic and was clearly intelligent, so appearances could be deceiving. Yet there was very clearly something off about her just from the picture. She couldn’t put her finger on it, but it was almost like Betos was too ordinary.

She’d have to think about it some more. And it wasn’t relevant to the issue. “Did you find where she is?” Saudia asked Elizabeth, not looking to her.

“She has an army several thousand strong,” Elizabeth answered, almost sarcastically. “It’s not hard to locate it. The problem is that Betos isn’t an idiot. Even if no intelligence agents deserted with her, she was a Marshal. She knows at minimum the basics of how we operate, and my agents are keeping well back.”

“You didn’t answer my question.”

“Still unknown,” Elizabeth audibly sighed. “She’s still going deeper south, but the list of probable countries is growing shorter by the day. She quite likely wants to establish some kind of alliance with one of the countries there. Only a few might be acceptable for her. Nigeria seems the most obvious, but perhaps Sudan or Chad as well. I would suggest South Africa, but that seems too far south for her right now. She’s on a timer and knows it.”

Saudia’s lips twisted into a humorless smile. Ironic that her birthplace would house an army of traitors. “I almost regret we didn’t invest more into ensuring their government was in our control back in the day,” she said, not directly referencing EXALT, since even here it wasn’t entirely safe from listeners. Well, it probably was, but she didn’t like taking chances. “I never viewed it as a worthwhile investment. It is pitiful just how corrupt the entire continent is.”

“Tell Europe thanks for that,” Elizabeth muttered. “But in this case, I don’t think that will actually hurt us. You saw the report?”

Saudia nodded. “We can only hope events play out like that.”

Elizabeth twirled a pen between her fingers absentmindedly as she thought. “Africa, right now,
does not care about the aliens. They’re stuck in their decades-long feuds and their politicians, or rather, dictators, are corrupt beyond measure. So what do you think is going to happen when one of those countries gets their hands on gauss level weaponry?”

“Point it at the nearest enemy and fire,” Saudia answered dismissively. “I know how they work. I grew up there, remember. If Betos starts an African Civil War, it might actually help us in the long run. Depending on who Betos encounters, she might decide to take action herself. Although then she would be an undisputed hypocrite.”

Elizabeth smiled. “Betos is an intelligent woman, in the traditional sense. But she has a much greater flaw, she is a good woman. She is naïve and ignorant as to how the world works. Whatever fantasies she may have of African nations are likely false. How exactly is she going to maintain her self-righteousness when she deals with countries that deal heavily in human trafficking? Ethnic cleansing? Africa is almost as much of a mess as the Middle East in some respects, but the battles there are small; skirmishes between natives or governments putting down opposing parties of citizens.”

Elizabeth sounded even more amused as she continued. “She is going to have to make a choice. Either ally with the abhorrent leaders there, or force change to happen. And if she does the latter, what exactly differentiates her from us who she supposedly despises? If the former? Well, the headlines write themselves,” she raised a hand in the air, as if spelling out a headline. “‘Traitor to Humanity makes deal with known slavers’ fitting, I’d say.”

Saudia felt a little better about the situation, now that it was clear this was not going to turn out like how Betos was expecting. “And the reasons for her desertion have been kept quiet?”

“One of the first things me and Stein did,” Elizabeth assured her. “While I doubt it would have actually started mass defections, it would have created unnecessary problems. All the majority know is that Betos is a traitor that abandoned them when she was needed. As you can imagine, the majority are furious at her and for good reason.”

“And what of her soldiers that didn’t defect?” Saudia asked.

“Also handled,” Elizabeth nodded. “They have all agreed not to share actual details, and are being transferred to different Legions at the moment. Many of them were helpful. The media will talk about this for a while, but they don’t have enough information to keep the story going. Not to mention there are actual events to cover that are not rumors.”

Saudia pinched the bridge of her nose. “And I suppose the fallout from Canada has started?”

“Yes, but some of it was inevitable,” Elizabeth answered, starting to pace. “Your presentation of the alien experiments has quelled most of the civilian dissent that would have come up otherwise. Public approval took a small hit, but there were quite a few that were actually supporting the action. The Canadian population is torn between outrage at us, or outrage at the former Prime Minister for not doing something. They will not be a problem.”

“Good,” Saudia said approvingly. “It’s nice to know we’re not facing an immediate civil uprising.”

Both women chuckled at that.

“I find it funny that the European media has now taken up the ‘the people must act to change ADVENT’ tactic,’” Elizabeth said with some amusement. “Really, what exactly are they going to do? March in protest? Attack us?”
“I think they forgot peaceful protest is legal,” Saudia said, feeling good enough to smile. “And it’s simple fear-mongering. What they still don’t realize is that an alien invasion takes priority. Everything else is secondary. If the image of humans being experimented on doesn’t make them realize that, well, then very little will. They will be reformed once the EU officially joins ADVENT.”

“In a refreshing change of pace, ADVENT media is actually deciding to focus on the aliens,” Elizabeth continued, grabbing a remote and switching to CNN. “The other part is all the pundits talking about the annexation and if it was ‘justified’ or not. But they’ve run stories on Japan, Portland, and France. Interviews with soldiers and everything. I doubt it will last, but at least the ones who control what’s broadcast aren’t completely blind.”

“And how are our operations against the aliens going?” Saudia asked, turning fully to Elizabeth.

“In comparison to everything else, very good,” she said. “Operations in Australia are proceeding very well, and the rest of Oceania is following suit. It’s only a matter of time before they appropriately respond, but all of our agents are prepared for that. Unfortunately no one in Japan yet, but given how tight the aliens have locked it down, it’s understandable.”

“We need more intel in the States,” Saudia said, turning back to the screen. “Information on alien positions, numbers, and plans will be crucial when we launch our counterattack.”

“Noted, and will do it,” Elizabeth confirmed, pulling out her tablet and making a note. “The problem is that the aliens have a tendency to make every city into a fortress. Infiltration is difficult, but possible. There is another potential concern to be aware of. There seems to be a new kind of terrorist force working in South America. Specifically in Bolivia.”

Saudia frowned. “Explain.”

“We don’t know that much about them,” Elizabeth admitted, setting her tablet down again. “That’s the problem. They show up, hit really hard, and seem to vanish. These aren’t suicide bombers, or the old Islamic extremists. These appear to be almost professional assassins. Numbers in each attack range from one to as many as four, and to date, we haven’t killed a single one. They all appear to be excellent marksmen, and kill through primarily headshots and IEDs.” She grimaced. “The attacks have been few, but they’ve caused enough damage to warrant attention.”

That was concerning. “And you don’t know who they could be?”

“Descriptions of their attire don’t sound familiar,” Elizabeth shook her head. “Some kind of gas mask, trench coats, some apparently have body armor. One of the rare images shows a weapon that looks suspiciously similar to a Russian rifle.”

Saudia’s eyebrows furrowed. “Russia?”

“I doubt they’re behind this,” Elizabeth refuted. “But at the very least this weapon was based off of it. A knock-off perhaps. I showed the picture to a Russian weapons expert and he’d never seen that kind before. What’s also interesting is that they appear to have no goals, or stated motivations, other than attacking us—and only us.”

“They’ve just hit military targets?” Saudia surmised.

“Yes,” Elizabeth confirmed. “Though this might only be because the number of attacks has been small. But we don’t know for sure, and that is the problem. It is possible this group is independent, but they seem too well-armed, well-trained, and dangerous to not be affiliated with someone. The
question is who.”

“I wouldn’t be surprised if they were independent, given how Luana has been acting,” Saudia sighed. “I thought Stein warned her to restrain herself.”

“She did,” Elizabeth said with a shrug. “I believe Luana is under the impression that because she allied with XCOM and joined ADVENT so quickly, that makes her immune to consequences. While she has brought some measure of order, I feel she’s causing more harm than good there.”

“She hasn’t officially broken a law yet,” Saudia reminded her. “But I will warn her that if she doesn’t restrain herself more, I’ll order her to be recalled. If you don’t mind, I’d ask you create a case supporting that order, because I have a feeling she’s going to force my hand sooner than later, especially if these terrorists continue attacking.”

“Copy that,” Elizabeth said with a nod. “The point is that I’m going to be dedicating a few agents to trying to figure out who is behind this. I doubt we’ll find them in the forests, but if they are being supported by a foreign government, that I can find much easier.”

“Then do it,” Saudia ordered. “And in the meantime, I’ll deal with the other issues that are left.”

***

Edmonton Garrison, Canada

It was a stark contrast to the Middle East, at least to Roman’s eyes.

For the most part, the Canadians were taking what was essentially an occupation very well. Either ADVENT was extremely efficient, or the citizens just wanted some normalcy to return, but within a few days most were back to their day jobs, most of which didn’t rely on the government. Not to say there wasn’t one, but ADVENT was handling that.

And so they’d been helping establish an actual Garrison outside the city the past few days. Roman really was impressed by just how fast ADVENT could be when they really wanted to. The actual places for them to bunk were constructed within a couple days, even if it was just a shell. Roman didn’t mind it that much, all of them were used to sleeping on uncomfortable beds.

But now it was shaping up to actually be able to defend against an attack. Watchtowers were going up, although they weren’t like any he’d seen before, and they weren’t just restricted to the Garrison itself. They were being built around the city perimeter.

“[Keeps,]” Konstantin said to his side, as they all stood guard, watching the engineers and laborers at work.

Roman glanced to him. “[What?]”

“[Keeps,]” Konstantin repeated, gesturing to the towers. “[That’s what they remind me of. Those massive towers back in the Middle Ages, which were the last line of defense, and extremely difficult to penetrate.]”

Roman actually found that an apt comparison. If said Keeps were at least eight stories tall, with each floor packed with laser and gauss weapons, and culminating at the top with a number of AA equipment and missile defense systems which could only be described as ‘overkill’.

Although with the aliens, ‘overkill’ might not even be enough.
“[It’s certainly impressive,]” Maksim commented. “[Fits right into the peaceful cityscape behind it.]”

“[You mock, but I bet those towers will come in handy if the aliens ever attack here,]” Roman chided. “[Do you want to go up against that thing?]”

“[Oh, no, I like it.]” Maksim corrected. “[But even you have to admit it’s not exactly fitting in.]”

“[At least this went off so smoothly,]” Galina added, taking the opportunity to clean her weapon since absolutely nothing was going on. “[If this were the Middle East, the Peacekeepers would be hunting down insurgents.]”

“[Luckily the Canadians are a bit more civilized,]” Stanislav said approvingly. “[And smart. A few days, and they see we’re not whatever lunatics the Prime Minister tried to sell them. Besides, I think some of them hate the former Prime Minister more than we did.]”

“[Wouldn’t you?]” Galina asked. “[If I saw my leaders refusing to do anything when…that…was happening, I’d happily join the coup myself. No wonder the military helped us. They aren’t cowards.]”

“[Well said,]” Roman complimented, nodding her way. “[Luckily people like the good PM are being dealt with. Do we even know what happened to him?]”

There was a brief pause. “[I think he was taken away for a trial.]” Anton said, his voice uncertain. “[Probably military and behind closed doors. Either way I’m pretty sure we’ve seen the last of him.]”

“[Good riddance.]” Maksim said, raising a mock glass in a toast. All of them chuckled.

“[I’m more curious about how long this was actually in the works,]” Stanislav mused. “[There was no way this was decided in a few days. How does the Chancellor authorize an annexation anyway? Just gives the order?]”

“[No, it’s actually pretty complicated,]” Elena spoke up, standing in a more relaxed position. Even if she hadn’t told him, Roman knew she quite liked the country for the sights alone. “[From the guidelines that are public, there are two ways of ordering an annexation that I know. One is directly from the Chancellor, but they have to have pretty much every single organization sign off on it. So the Army, Navy, Peacekeepers, Intelligence, et cetera.]”

“[And the second?]” Roman asked.

“[I’m getting to that.]” she chided. “[The second is through the Congress. From what I can tell it’s introduced like normal legislation, and they vote on if it should be approved. It has to be a very solid case, otherwise that supposedly has repercussions. None of this is public either, everything is done behind closed doors. And if they do pass it, all that is needed is for the Chancellor to authorize it.]”

“[Interesting.]” Galina said. “[So I wonder which one the Chancellor chose?]”

“[She said she was ‘authorizing’ it.]” Roman recalled. “[Might be the wording, but it sounds like this went through the Congress in that case. Makes it look more diplomatic too; like she isn’t doing this as some kind of power grab.]”

“[If that’s the case,]” Galina said slowly. “[It means that this was planned well before Japan. It might have just been a coincidence then. I wonder what made ADVENT angry enough to decide
annexation was a justified option, beyond the government acting like idiots?"]

“[Even if Japan hadn’t happened, they’d probably still get support,]” Konstantin said firmly. “[They knew the aliens were doing that kind of stuff to us and still decided to do nothing. You don’t get to be neutral in this war. It’s one thing if they help us, but don’t want to join, but something completely different if they refuse to help at all.]”

“[That’s what doesn’t make sense,]” Elena sighed. “[Why did they not just let us go through and flank the aliens on the West Coast? It costs them nothing and we respect that. Is it that much to ask?]”

Galina snorted. “[The very short answer to that is because the Prime Minister was a pacifistic coward. End of story. He was a traitor and was dealt with like one.]”

“[Hey, on the bright side, at least he didn’t desert,]” Maksim said with false levity. “[Did all of you hear about it? It just broke a few hours ago.]”

Roman swung his head sharply to the marksman. “[Excuse me?]”

“[Seconded,]” Galina added.

“[Well, apparently nearly an entire garrison stationed in Saudi Arabia just left,]” Maksim explained, his tone becoming audibly angry. “[I wish I was making it up. But yeah, they honestly just deserted. Speculation is that they went somewhere in Africa.]”

There was a stunned silence. Roman coughed. “[I genuinely hope they were all mind-controlled to do that.]”

“[No psionics that have been reported,]” Maksim said grimly. “[Not that ADVENT would confirm either way, but I don’t think that’s the case. No official motivations were given, but with the timing, I wonder if the annexation had anything to do with it.]”

“[Fucking traitors,]” Galina growled, standing up and completely tense. “[Did they forget we’re fighting a war!?]”

“[No Galina, remember, ADVENT is a fascist dictatorship and the actual enemy,]” Anton mocked, although he was clearly angry as well. “[Sarcasm, but I’ve actually seen posts like that online. That being said, I didn’t realize that those idiots were actually in the military.]”

Roman found it hard to comprehend why any soldier would desert now of all times. Were they scared? Too selfish? He couldn’t actually believe they genuinely deserted because they felt that ADVENT of all things was the enemy. The complete lack of logic to arrive at that conclusion was mind-boggling. “[Did they not see the video?]” He wondered out loud. “[Did they not see Japan, the United States, or Australia? How…]” He trailed off, shaking his head. “[What are they thinking?]”

“[I think,]” Galina said slowly. “[That they actually want to die, and they don’t want to get killed by aliens, so they make ADVENT hunt them down instead.]” She shrugged. “[Go and tell me that doesn’t make as much sense as whatever these traitors were thinking.]”

“[Suits me fine,]” Maksim agreed lightly. “[Well, I’m certainly rooting for ADVENT Intelligence to hunt them down. Not sure if I want them shot on sight or brought back alive for a highly public trial.]”

“[Waste of bodies,]” Stanislav shook his head. “[Put those traitors to something useful. Have their
sentence being sent to become Human test subjects. Preferably to XCOM. Get some use out of them before they die.

“[Is that even a thing?]” Konstantin asked, Roman could imagine his eyebrow being raised.

“I actually think so,” Stanislav nodded. “[I was going through one of the Peacekeeper documents and one of the substitutes for the death penalty was ‘usage of the convicted for civilian or military experimentation’ or something like that. If anyone deserves capital punishment, it’s traitors.]”

“If I had a cup, I’d drink to that,” Maksim said approvingly. “[Hopefully they get killed by some disease in those jungles.]”

While that would be an ironic death, Roman was much more in favor of bringing them back, putting them on trial, and then...hmm...either means of capital punishment would be good. But while Stanislav made a good point about not wasting bodies, Roman knew he would quite enjoy putting down traitors.

And the best way to carry that out was with a bullet between the eyes.

He almost hoped he’d get that opportunity. If he wasn’t killing aliens, killing traitors would be nearly as satisfying. Maybe even a little bit more.

***

ADVENT Command, Switzerland

Saudia was expecting Hassan to be somewhat miffed at the latest developments, but at least he had been informed about them beforehand. Still, she wasn’t surprised her Chief Diplomat wasn’t exactly pleased with how things had gone.

“Working with you is not boring,” was one of the first things he’d said. “I can say that much.”

Now that they were settled, and were standing in front of a holomap, Saudia waited for him to begin. “The good news is that the damage isn’t as bad as it could have been,” he started. “Annexing countries tends to get people nervous. Smart to add some emotional weight to the situation and give some plausible reasoning behind it.”

“Of course,” Saudia nodded. “Now what have been the major changes?”

“Well, France is fully integrated into ADVENT,” Hassan began, motioning to the map of Europe. “Prior to the annexation, that was a massive blow to the EU, and even afterwards there is a lot of talk of more countries joining us. Some of it is due to fear, but some of the smaller nations think they will have more influence with us than sticking to the continually weakening EU.”

“They would,” Saudia said. “No question.”

“A fact I’ve been stressing to make when talking with representatives,” Hassan nodded, looking rather pleased. “Iceland, Ireland, and Poland are in talks with joining, and if they leave, more will soon follow. The main holdouts that remain are Spain, the UK, Finland and Sweden. The rest appear to be in a more neutral position.”

Saudia’s brow furrowed. “Curious. Why those specific ones?”

“Presumably because they are heavily tied to the EU and retain quite a bit of influence over that. All of which would be lost under ADVENT. That, and in the case of Spain and the UK, they don’t
like the idea of not being independent. Finland hates Russia, and Sweden is more ideologically opposed to ADVENT, similar to Canada.”

At least Sweden wouldn’t give her nearly the same problems. Saudia couldn’t envision a scenario right now where they became relevant. At least not unless the war arrived in Europe. “They’ll come around eventually. All we need to do is keep weakening the EU bit by bit. If we start a domino effect, the rest will fall into place.”

“Exactly my thoughts,” Hassan confirmed with a nod. “But I think we can take our time with Europe for the moment. We slowly erode their power, and eventually assimilate them. I’ll focus on the three countries mentioned, and then move onto the next ones. The biggest issue coming from Europe isn’t the countries necessarily, but the media.”

“But the governments are staying quiet on the issues,” Saudia noted grimly, thinking. “They’re being rather cheeky. England especially since some of the organizations get government funding. Even if they aren’t giving the orders, simply allowing them to run anti-ADVENT propaganda is tantamount to supporting it.”

“Agreed,” Hassan said, handing her a sheet of paper. “I inquired about this, and the British Parliament sent this back which essentially says that ‘they will look into this’.”

“Translation: We aren’t going to do anything,” Saudia muttered as she read the piece of paper. “Unfortunately, there isn’t much we can do to stop it short of threats, and I would prefer not to resort to that.”

“Mhmm, and that brings up something I want to discuss,” Hassan said, moving around the other side of the holotable to face her. “Public opinion is highly polarized on ADVENT. Much as you want people to focus, quite rightly, on the aliens, most don’t think like that. People resist change, and to be brutally honest, you haven’t done that much to actually persuade people that ADVENT is indeed an improvement.”

He waved a hand aimlessly. “I’m surprised it’s taken this long for you to understand this. There are a lot of good things about ADVENT; progress that’s been stalled for decades. At the same time, ADVENT is far less forgiving of idiocy, and guess what ends up in the news? Videos of Peacekeepers putting down protesters and annexing countries. Remove context for the moment, that doesn’t look good.”

Saudia winced. “In the grand scheme of things, a focus on PR seemed minor compared to an alien invasion.”

“Fair enough, but it can quell some of the worries at home,” Hassan said. “TV interviews and your ADVENT reporting isn’t going to cut it. You’re relying on an educated and critically thinking population, which I’m afraid isn’t representative of most people. That won’t come for several generations, assuming we win.” He paused. “This isn’t my area of expertise, but you should put some effort into addressing this.”

“Don’t worry,” Saudia assured him. “I’ve established an actual Public Relations agency, which will go into effect soon. I already have someone tasked to lead it.”

An eyebrow rose. “Really? Excellent,” he cleared his throat. “Returning to the topic at hand, that wraps up most of Europe. Little has changed in the Middle East, aside from the desertion, and Karen is working as hard as she can to restore the area. Slow going, but things have…stabilized. But there is a potential liability in the region.”
Saudia waited. “Which is?”

“Two, actually,” he corrected. “Egypt and Turkey. This isn’t necessarily related to the Middle East conquest, but due to their status as *wildcards* of the region. Turkey especially should be addressed. They have a large standing army, and hold some crucial parts of land which lead directly to Russia and Europe, and coincidentally, right to the Middle East itself. Their position is largely why they were so valued in NATO.”

She frowned. “Do you think they might attack?”

“No,” Hassan said hesitantly. “But they might make life difficult for us there. Their army would be extremely useful, but there is a sizable part of their population that is, I would say, *fundamentalist*. Which translates to Islam is still practiced there, although not as much as it was, and as a result the people there are not exactly happy with us.”

“I suspect the issues don’t stop there,” Saudia guessed. “Armenia being part of ADVENT is likely something they aren’t thrilled with.”

A grim smile grew on Hassan’s face. “No, they certainly are not. And your under-the-radar acknowledgement of the Armenian Genocide is also something they take…issue with. The problem is that their government is much smarter than the rest of the Middle East, and stays out of truly extremist activities. They prefer working through proxies and the like. Unfortunately, I don’t think they’ll ever assimilate into ADVENT willingly, not with the current leadership.”

“So do you have a proposal?” Saudia asked.

“No, I’m not suggesting anything drastic yet. But I want to at least try and open negotiations with them. At the very minimum they might be willing to work with us.”

Saudia frowned. “They are a nuclear power. That should be taken into account.”

“Technically true,” Hassan acknowledged. “On paper. In practice…their nuclear weapons aren’t as much of a problem because they aren’t actually their own.”

Saudia recalled something like this now that he brought it up. “They were a part of the nuclear sharing agreement.”

“Correct,” Hassan nodded. “And it doesn’t help that the nuclear weapons they *do* have are simple bombs; nothing like modern nuclear weapons. If the United States were to request their bombs back, Turkey would likely comply because they know that if they don’t, it would give us a reason to deal with them permanently. Like I said, they might not like us, but I don’t think they’ll get in our way. Thus, negotiation for now.”

“Attempt it then,” Saudia nodded. “But don’t waste more time than necessary.”

“Understood,” Hassan focused to a new point of the map. “You’re already familiar with how things are in Canada and the United States, so I won’t repeat it. However, Mexico is finalizing their integration into ADVENT.”

Saudia smiled. “Excellent.”

“South America, on the other hand…” he scratched his chin. “Very little progress. The Southern nations like Argentina, Chile, and Peru are staunchly against any sort of integration, largely thanks to the infamous reputation of Miss Luana. I would encourage that she be put in charge of the
Brazilian Legion and get her out of what is essentially a perpetual military state. That isn’t representative of ADVENT, and she’s had plenty of time to put together at least preliminary elections.”

Saudia snorted. “Luana and elections? I see you haven’t actually met her. But I do agree. She’s becoming too unreliable, and Stein will step in if she doesn’t calm down soon. We’ll have to allow some time for things to settle, but I don’t think South America will become a major battleground for some time.” She didn’t mention that Elizabeth was looking into several of the mentioned nations. Depending on what she found, Luana may retain some usefulness then.

“Let us hope,” Hassan agreed. “Now…I have given your statement to various African representatives regarding turning over the traitors, should they request asylum. That being said, I’m not expecting much success. Many are unfortunately notorious and corrupt, which I’m sure you are aware of. Some of them would have no problem lying directly to us, and I suspect they are too focused on their own internal politics to really care what is happening outside their nations.”

“I am aware,” Saudia confirmed, resting her back against the wall. “I’m not concerned with them right now. If they cooperate, good, if not, we’ll take steps to correct that. But they are a secondary concern at best right now. What about China?”

“Radio silence,” Hassan answered immediately. “They are staying out of anything relating to ADVENT, and their diplomats have refused to give the ruling Communist Party’s official stance on our annexation of Canada. Or anything else for that matter. They appear to be very unsettled, and are going out of their way to not antagonize us, or even get our attention.”

“Interesting,” Saudia mused. “But nothing has changed aside from that?”

“Not especially,” he shrugged. “But their ranking diplomat did imply that if ADVENT required assistance, or something else from China, it might be provided.”

That was certainly good news. “That’s all we need,” she said approvingly. “In that case, they might be useful when the aliens attack Korea or when we counterattack Japan.”

“Hopefully,” Hassan said slowly. “But I don’t think we’ll know for certain unless we really need them. Until then we’ll just have to wait and see.”

“Or until the aliens attack China,” Saudia added. “That might force them to do something.”

“Given a choice between destruction and ADVENT, I would assume they’d choose ADVENT,” he agreed. “But I think that the aliens know this too. I’m not sure they would attack even if they could win easily.”

“Quite possibly,” Saudia noted grimly. “Anything else I should be aware of?”

“The only other event of note is the religious summit you wanted planned,” Hassan reminded her, cocking his head. “I do hope you actually remember that, yes?”

Ah. That. Truth be told Saudia had let it fall from her priorities in the past weeks, even if it was her idea initially. It was something that needed to happen sooner or later, and she’d rather have things figured out with the various religions before one of them decided to do something stupid. That being said, she was not relishing that particular meeting.

Although now that she was thinking about it, she figured she might as well get a head start on it. Maybe make it clear that certain things wouldn’t be tolerated under ADVENT, specifically with the Catholic Church. “When is the date again?” She asked. “I had it for next month, correct?”
He briefly looked down. “Yes, the twenty-first. Summons were sent out a few days ago, and only a few responses so far, which is to be expected.”

“Probably wondering what the goal is,” Saudia muttered. “But I want to meet a few of them ahead of time. Clear the air, so to speak.”

Hassan furrowed his eyebrows. “And that means?”

“That means I want a meeting scheduled with the Vatican,” Saudia said vaguely. “And put Elizabeth on this as well. Stein too.”

He smiled grimly as he saw her goal. “Is this an investigation or a meeting?”

She echoed his humorless smile. “Both, I think. And they won’t necessarily be the last either. Organized religion seems to attract criminals in some cases. That kind of hypocrisy is intolerable to me.”

“It will be done,” he promised. “I believe that covers everything important.”

Saudia nodded. “Keep up the good work. In the meantime, I need to actually speak with the new Manager of Public Relations.”

***

ADVENT Command, Switzerland

Saudia had considered an exhaustive list of candidates for a manager of public relations. Public spokesmen, diplomats, business managers, speechwriters, and even some filmmakers and artists. Anyone who could craft and design a message and more importantly, convince other people to believe it. Someone able to manage multiple media campaigns and equipped with an understanding of human psychology would also be essential.

Finding people who had those qualities wasn’t especially difficult. The problem was they would have to be reliable and especially have the motivation and loyalty to carry out what would be at the best of times, a difficult job. Unfortunately, not many of those people existed and she wanted to avoid people who hadn’t had experience on similarly sized projects. Relatively, at least.

The good news was that she had found such a person. Kyong Suk-Chul had over twenty years of experience managing public relations for an entire country, was extremely well-educated with degrees in psychology, telecommunications, and interestingly enough, English composition. He spoke English, Chinese, and Korean flawlessly, and had a rudimentary understanding of Russian and Spanish. At only forty-five, he was incredibly young for such an esteemed position.

Said esteemed position was the Head of the KCNA, the former state media of North Korea. On paper he was simply the head of one of the few media companies allowed in the country. In reality, he was the one in charge of North Korean propaganda.

That alone had made several advisors want to dismiss him, not because of the position itself, but because putting the one behind decades of North Korean propaganda in charge of PR might look suspicious. That was indeed a risk, but Kyong had successfully controlled the population of an entire country through mostly non-violent means, and that was the kind of expertise she needed here.

However, she’d entertained other suggestions, and they unsurprisingly hadn’t been able to come up with someone with similar or superior qualifications. Iseul had assured her that Kyong was perfect
for the job, and while she was taking *that* endorsement with a grain of salt, he quite clearly knew what he was doing.

The first major meeting was today, and she’d tasked him with designing a comprehensive strategy for reducing civilian unrest and increasing the perception of ADVENT in both a domestic and international sense. A tall order, and she was curious what he would have for her.

Saudia reached the designated room where he was to meet her, and opened the door after gesturing for her personal guard to leave her be. It was pretty clear that anything discussed in this room would be as confidential as possible. After making sure the door was locked, she turned to see Kyong Suk-Chul sitting at the end of the small square table, reading something on a tablet.

He looked up as she entered, and placed the tablet down next to a neat stack of folders, then stood. He was much smaller than her, but he didn’t seem concerned by the size difference, as it was only a few inches. His black hair that had strands of gray in it was neatly combed back, and his face was cleanly shaven.

“Chancellor,” he greeted, almost no trace of an accent in his voice. “A pleasure to see you again.”

“You as well,” she answered, inclining her head as she took his extended hand for a single shake. “I trust you’ve acclimated to your position?”

“Exceptionally,” he smiled. “What was not suitable to me, I simply requested changed. Having the freedom to establish this operation as I see fit has helped considerably, with your overall guidelines taken into account of course.”

Saudia clasped her hands behind her back. “I’m curious what you have to show me. You have a plan?”

Kyong motioned to the whiteboard behind him, on which he’d written a few boxes of text. “Perception is what needs to be controlled, Chancellor. Not an easy task by any means, but completely doable if you have the correct tools and the resources to apply them to a global scale. There are several major areas of focus regarding *perception*, and the most obvious are the Peacekeepers, the ADVENT Administration itself, the Military, and the aliens themselves.” He followed the drawing he had written on the board. “To further complicate matters, this has to be applied to the differing perspectives of both domestic and foreign populations. The goal is to not simply appease the ones living in ADVENT, but be alluring to the ones who live outside it as well.”

He looked briefly at Saudia. “Chancellor, what is a sign of an effective government?”

She thought for a few seconds. “A controlled population and effective legislature.”

“Generic, but I would tend to agree,” Kyong said. “But control is not enough. Squeeze too tight and you create an army with nothing to lose, and generate sympathy for them by those in power. Be too lax and you have anarchy. No, my experience has been that the most effective governments have populations that are *content*.”

Saudia frowned. “That could be subjective depending on the person.”

“I said *content*, not happy,” Kyong corrected. “*Happiness* is subjective. People need certain things in their life, and the standard of living has continually risen. Food, housing, medicine, internet, electricity, provide a person with the basic necessities, and they may not necessarily be *happy*, but they will be *content*. Why should they support a revolutionary or questionable politician when they
are being provided everything they need to survive?"

He waved a hand dismissively. “All that are left are ideologies. The suppression of media, the removal of freedoms, all of these can be defeated simply by a correct application of arguments and critical thinking. Morality is the one consistent argument against us, and it is weak; relying on traditional and outdated values that fail to hold up in this war. But the reason people rally behind ideologies isn’t necessarily that they believe them, they just view the commanding administration as worse. But should their basic needs be provided for; if they are shown again and again how ADVENT being in charge directly improves their life, any argument levied against it will be completely dismissed.”

He smiled. “The architects of the Advent Directive, whoever they were, appear to have understood this. To truly fix the mistakes of the old governments, new ones must be built from the ground up, free of political ideologies, money, or influence. I’m quite impressed by it.”

“I’ll be sure to pass it along,” Saudia commented. “Eloquent, but how do you plan to apply this?”

“Very simply,” Kyong began, picking up one of the folders. “The biggest issue right now is that much of the coverage surrounding ADVENT has been negative. And ADVENT media has been neutral at best, at times going after the lies published by media outlets and refuting them. While effective, after a certain point, the negativity can become overwhelming for people. Then it becomes a war over who can weaponize the negative coverage best.”

He raised a finger. “However, there is a very simple antidote to this: Positivity. No, it isn’t a joke. People always respond better to good news than bad. They attempt to control by manipulating and stoking fear, anger, negative emotions that they hope will be taken out on their opponents, while at the same time not offering any substance as to why they are any better.” He smiled grimly. “The United States political system was rather notorious for this.”

Saudia gave a wry smile at that. “Most democratic systems are.”

“Which is why there is a unique opportunity here,” Kyong continued. “The reason this has now become so prevalent is that the narrative is completely reactionary from ADVENT. You order a controversial action, and it soon gets weaponized by your opponents. By the time you attempt to clarify further, much of the damage is done. The media, Chancellor, is like a parrot. It repeats back whatever it sees, and only later is opinion added. To be fair, you haven’t given many positive stories to tell, and that does not need to be the case.”

He picked up one of the folders and handed it to her. “Read this, Chancellor,” She did. It was a list of names, none of which she recognized.

She cocked her head at him. “And this is?”

“As a result of the decriminalization of certain substances, you had given the order that prisoners incarcerated for those crimes were to be pardoned,” Kyong explained. “That is a sample of the list of names. And if I understand correctly, you were planning to officially do this rather quietly. Why?”

She thought back. That event had actually been one she’d ordered quite a while ago, something Stein had brought up when they were…well, doing something. It had seemed simple to her. No point keeping people imprisoned who were in jail for a crime that was no longer one. Besides, the people freed would no doubt remember ADVENT was the one who’d been behind this. “I didn’t see a reason to,” she answered with a shrug. “This is just the result of a policy change, and I believed there were more important aspects to have the focus be on.”
“With respect, Chancellor, that is completely incorrect,” Kyong said with a smile. “You vastly underestimate how much people don’t know about your new policy changes. Out of curiosity I looked at one of the few polls out there, and while I’m certain it wasn’t entirely accurate, there was an alarming percentage of people who don’t understand how ADVENT works.”

He tapped a finger on the table. “Assume we are dealing with an uneducated public, Chancellor, how is that fixed?”

“Exactly,” Kyong said approvingly. “We are dealing with two different generations here: Older and younger, each with different ways of influencing them. The traditional media is largely what the older generations, normally those fifty and older, consumes. Most of them get all their knowledge about politics from them, like it or not. Most people prefer to have others tell them what to think. There is no reason we cannot exploit that.”

He paused to take a breath. “Returning to the mass pardons, this is an exceptional opportunity to not only inform the population that ADVENT is not only harsh on criminals, but recognizes and executes justice. This will be a public event where Stein will make the announcement. I guarantee that it will be the main subject for days afterwards, provided there are no more alien attacks.”

Saudia quite liked the idea, with some reservations. “I’m not sure that will be portrayed as completely positive,” she said. “There are some people who will be opposed to it.”

“Largely older generations, and their relevance is fading,” Kyong dismissed. “And I’d think you’d be surprised. It’s all in presentation. But think on the other aspects of ADVENT that you could highlight with simple press conferences. Free healthcare to all citizens; tuition-free higher education; government investment in start-ups and small businesses. The goal, Chancellor, is to focus on what ADVENT actually is, not what it’s rumored to be. Run tours in Peacekeeper training, give demonstrations of the technology being used; give the media access to certain parts of the Congress of Nations; give them access to battlefields and show the alien threat first hand. Do you notice a theme in this?”

Saudia nodded once. “We control the narrative. They react to what we are doing, and can’t ignore it because if they do, someone else will cover it.”

“And turn their need for ratings against them,” Kyong finished smugly. “ADVENT is simply too big to ignore. We are the story, and they know it, and much as their agenda may not favor us, they need us right now.”

“I’m impressed,” Saudia said. “Your plan seems satisfactory so far.”

“Which is only one aspect,” Kyong said, picking up another folder and flipping through it. “Now, the other important part that needs to be dealt with are the younger generations. Millennials and below. Ultimately, they are the ones growing up in ADVENT, and will be responsible for the future when we are gone. They are the demographic that needs to be targeted. They are potential soldiers and members in ADVENT which we need. The question is, of course, how to reach them.”

“The internet,” Saudia supposed. “Social media, things like that.”

“No.” Kyong stated flatly. “At least not like how you’re thinking of it. While ADVENT certainly needs a social media presence, having a twitter account or Facebook page isn’t going to cut it. They’ll never trust a government entity, at least not completely. No, who has the most influence over the younger generations?”
Saudia grimaced. “Celebrities.”

Kyong chucked at her derision. “That they do, unfortunately. Artists, singers, filmmakers, vloggers; these are the people who they look up to and admire. So while they might not believe an ADVENT official telling them that the Peacekeepers aren’t a suppressive organization, if their favorite YouTube star were to say the same thing, they will likely believe it.” He smiled sardonically. “Remember, many people like to have their thinking done for them.”

He handed her the folder. “In there is a list of some of the largest so-called ‘internet personalities’. Most have millions of followers, subscribers, or some equivalent of numerical fame. The topics range from politics, weapons, history, debate, video games, whatever you can imagine. And I would say that those numbers are not entirely accurate since there are many who aren’t registered who follow these people.”

“So what is your suggestion?” Saudia asked. “Hire them to reach their fans?”

Kyong snorted. “I’d prefer not to be so blunt. It’s unnecessary. But certainly reach out to them, give them some kind of access to something relevant to their blog or channel. Interviews with people of actual influence, tours of the Congress of Nations and Military training bases. Daring ones could be taken to areas near the front lines, the possibilities are not exactly few.”

Saudia nodded slowly. She was honestly surprised by how much he knew about this subject. The population of North Korea was very different from the rest of the world, but he still understood it like an expert, and this was one area she hadn’t really put much thought into. “I like it. Although I suspect there are some who hold negative opinions towards us.”

“Oh, certainly,” Kyong dismissed. “But generally political focused personalities, and even then most seem split at best, largely because many look at information available to them. What is especially helpful is that it is not easy to put ADVENT into a very clear box most people are used to. Aspects are more right-wing, but others are left-wing. The combination of the two is something some people have issues grasping.”

That was something Saudia could easily believe. “While it may be more traditional, I think we should also expand our own media propaganda. Recruitment, PSAs, that sort of thing. It has been lax in that regard.”

“I couldn’t agree more,” Kyong nodded with a smile. “Short videos are best for that sort of thing. The better the presentation, the more people will be convinced. No need to do this internally. Do you really think the directors from what’s left of Hollywood wouldn’t jump at the chance to direct them with a nearly unlimited budget, and for a clearly good cause? Do you know how many artists out there would give up nearly everything to ply their craft not only for the cause, but to be officially recognized by ADVENT?” His smile grew. “I wouldn’t mind a return to the era of propaganda posters. Some of the art then really was excellent.”

“Perfect,” Saudia nodded. “What else is left?”

“I believe that covers the main points,” Kyong said slowly. “However, one thing to consider is that these are impersonal. The one thing that will change hearts and minds is people actually interacting with the men and woman of ADVENT, and if they have a personal stake in what is happening. This would be something that needs to be organized on local levels, but I believe Commander Christiaens has proposed bringing back the tactic of trench warfare?”

“Correct,” Saudia confirmed. “I will be discussing that with her later, in fact.”
“Exactly what is needed,” he said approvingly. “The task may be a daunting one, but people have attachments to their homes, do they not? Why not include them in the task of preparing their city for an attack? Compensate them of course, have it be organized, give them the tools and motivation needed to do the job. Soldier and civilian working side by side would do a lot to ease tensions and change minds.”

He looked up rather thoughtfully. “It doesn’t need to stop there. Send out emails and fliers advertising city events with Peacekeepers, leaders, and soldiers; give the public the ability to interact with ADVENT and ask questions. Let them know the Drug Recovery Centers and Mental Treatment Institutions are available for usage. Find the homeless on the streets and give them what they need to be productive and content members of society.” He paused briefly. “People believe propaganda is simply lies, and to an extent, it always is. But propaganda is the art of manipulating the narrative, and without question, the most effective propaganda, Chancellor, is that which is true.”

At that Saudia knew she’d made the right choice in appointing him. Propagandist or no, he was exactly what was needed. “Give me the details of what you need,” she ordered. “I want this implemented immediately.”

“Of course, Chancellor,” he answered with a smile. “I look forward to properly starting.”

***

Busan, South Korea

“[You need to evacuate Seoul,]” Duri told Sandara without any ambiguity. “[It’s too dangerous to stay there.]”

His wife looked utterly exhausted and wrecked, which wasn’t surprising given that he’d only managed to let her know he was actually alive in the past couple days, and it had taken a couple more to actually set up some time for them to speak. Japan had everyone in the region on edge, and Duri knew there were already efforts to begin evacuating people into North Korea.

The irony of the situation didn’t escape him.

But times changed and he knew very clearly that North Korea wasn’t an enemy anymore. They’d proven that they were more than capable of supporting soldiers that weren’t of their nation, as Kang had proven right before he’d died. Whatever the past, they were all united in fighting back the invasion. Still, he wasn’t excited about any of them going to North Korea without him, mostly because he didn’t know what was actually there.

“[And you’re just going to stay there?]” Sandara asked sadly. “[You almost died.]”

“[But I didn’t,]” he emphasized. “[And there are probably going to be a lot of times I’m put in danger before this ends. Not that I like it…but it’s what I signed up for. To protect people. To protect you and the girls.]”

“[I…]” she trailed off, looking away. “[I know. But it was almost impossible to get through those days. I’d thought you’d died there. And I wasn’t the only one.]”

Duri rubbed his forehead. “[Just remember that it always takes a few days to verify for certain. Don’t assume the worst right away.]”

“[A bit easier for you,]” she sighed. “[It’s not like you always have to worry about if we are in danger or not.]”
“[And I’m going to keep it that way,]” he said firmly. “[Your safety is more important than mine. As long as you’re safe that’s all I need to know.]”

A moment of silence lapsed between them. “[I’ll get ready to move. They’re encouraging evacuations here as well. The girls are nervous about the whole thing. They’re getting more scared and I don’t know what to say to them. I can’t twist everything as a big adventure.]”

“[Just keep reminding them that I’m fine and they’ll be safe up there,]” Duri told her. “[The aliens, for better or worse, are being methodical. We can accurately predict where they’re going to go next and what the next points of attack will be. If they reach Seoul…then you can start to worry. But they aren’t anywhere close to that.]”

“[Hopefully the next time we talk I’ll be able to tell you what it’s like up there,]” she said after a few seconds. “[You always did want to see what North Korea was like.]”

“[True,]” he recalled. “[Be sure to take pictures.]”

She gave a wan smile. “[Of course I will. Be safe.]”

“[I’m doing my best,]” he told her. “[I love you.]”

“[I love you too,]” she answered. “[I’ll see you later.]”

The screen cut out, and left Duri alone sitting there with his thoughts. He was tired and needed some decent amount of rest. It had been non-stop since they’d evacuated Japan, and he’d personally felt he was lucky to be one of the survivors in the face of…whatever that alien had been. Half his team was dead, Beatriz was still recovering, and in general things were not good.

No one knew just how soon the next attack was going to come, but they were preparing for the worst. Busan had the largest military base close to the coast, so it was likely where the aliens would attack next in this region. Preparations were still being made, but he suspected that the real focus was going to be on converting Seoul into a fortress in the event the coast fell.

It was harsh, but Duri could understand the need to focus on that city, even if it meant they were writing off the coast in all but words. Not that nothing was being done, it just wasn’t nearly ready.

And the whole situation with Japan was not counting that there had been a lot of other events happening in the world. Canada had been annexed, which he’d found surprising until he’d actually seen the Chancellor give her justification, and from seeing the aliens firsthand…he couldn’t exactly feel sympathetic to the Canadian government.

Anyone who wasn’t working to defeat the aliens weren’t people worthy of consideration at best, and should be considered traitors at worst. Or were cowards. It was unfortunate for the people, but hopefully ADVENT treated them well.

And then the news had broken of a group of soldiers who’d deserted.

Deserted.

Duri felt furious just thinking about that. He’d never wanted to personally kill someone before, but if he ever met those traitors then he’d be sorely tempted to do so. It was so unfathomably selfish that he’d almost gaped when he’d heard it. It was one thing to desert in a war, but it seemed on a completely different level to just…leave when the fate of their entire species was at stake.

He’d quite liked Cara’s take on it, which she’d so eloquently stated after throwing her cup into a
wall after he’d told her. “Kang and Johan are dead, Beatriz is still unconscious, the aliens are cutting up babies and killing us by the hundreds, but these fucking traitors ran like cowards because ADVENT had the fucking nerve to stop that fucking moron running Canada!”

Just thinking of that made him feel a little better. For some reason he’d thought that the stakes in this war would prevent that sort of thing from happening. But apparently not, which was rather sad. Still, he was certainly going to drink a toast to whoever ended up putting those traitors down, provided he was still alive.

He stood and walked out of the room. There wasn’t anything else to do at the moment, so he figured he might as well find where Cara had gone to. They’d likely get new soldiers in a few days, but for now all they could do was wait.

***

ADVENT Research Command, Brazil

“When XCOM provided much of their research to us, it expedited our own programs significantly,” Munju said as he guided Saudia into the lab. “Since many of XCOM’s own genetic projects were similar to our own, I have simply applied them as-is, and we are expanding further into areas XCOM has not. That we know of, that is.”

Saudia nodded as they stepped in front of several glass cages where there were multitudes of animals and flora inside them. “If that is the case, what are you making advances into?”

“Many of the new genetic enhancements are in the theoretical stages,” Munju explained, rubbing his chin. “At least as they are applied to Humans. I want to look into more…radical forms of alteration. Their Stinger modification was quite genius, and I want to look more into that particular line of research.”

He motioned her over to a small glass habitat, of which there were beetles inside. Saudia had never developed a fondness for insects, so she wasn’t particularly thrilled. “Beetles?”

“Bombardier beetles, to be specific,” Munju clarified with a smile. “Completely normal, aside from the defense mechanism where they eject a chemical spray. Harmless to Humans, of course, but that particular addition on a Human soldier might have a potent effect, especially if the chemical sprayed was a dangerous acid or poison. A promising line of research.”

He waved her forward, and she followed, curious. “But not the only one.”

Munju snorted. “Of course not. Although perhaps my easiest. This is one of my most radical.” They stopped in front of a glass cell, of which inside was what looked like a Human. But it was as if the Human was stretched and elongated, especially in the torso; stretching it out far beyond what was normal. Saudia almost winced, as it looked extremely painful and the subject was clearly still alive. “I suppose you have an explanation?”

“That is phase one,” Munju clarified, looking rather pleased. “First, to see if Human height, mass and overall size can be adjusted. This clearly proves they can be, but there are some…improvements that need to happen before I move forward at all. The proportions are…” he clicked his tongue. “Wrong. It looks unnatural, which should not be the goal.”

Saudia glanced down to him. “Yes, but what is the point?”

“The creation of a superior Human, of course,” he stated confidently. “Or at least one that can be specialized. I was inspired by the Ethereals themselves, and I believe a second set of limbs would
be a worthy goal to pursue. It would revolutionize nearly everything about our society.” He motioned to the test subject. “However, such an addition is impossible with Human body sizes, so those must naturally be changed.”

Saudia was slightly nonplussed at the image of that. While in some cases she could see how that would be an advantage, in a purely objective view, additional limbs seemed very unsettling. It was such a radical change that she wasn’t sure if that could really be classed as a Human, but something else. She definitely didn’t see it being applied to anything more than a few specialized soldiers; certainly not the entire species at large.

Innovation was good, but there was such a thing as too radical. It seemed to her like the manipulation of Human characteristics was more useful, rather than the straight addition of additional limbs. “Perhaps,” she relented carefully. “But I would prefer our focus be kept on immediate applications. While interesting, additional sets of limbs wouldn’t provide us with a clear advantage against the aliens.”

“Mhmm, I would argue otherwise,” Munju said thoughtfully. “But your point is made. In which case, I have another project to show you.”

She followed him through the sterile room until they were in what almost looked like a kennel due to how many dogs were in it. She noticed all of them were large, and had a history of being used for hunting. In fact, she was pretty sure there were several wolves in the mix. “The aliens have animals they have bred for war in those Chryssalids,” Munju began, motioning to the dogs. “I do believe we have our own equally valuable species. Dogs have always been excellent hunting companions historically, yet have fallen out of that particular role when their usefulness was reduced due to technology. However, with MELD we can turn them into highly effective and intelligent hunters of aliens.”

He specifically directed her to look at one of the dogs. It was a German Shepard, but this one was distinctly different. Its eyes were rimmed with gold, and its fur was thinner, allowing her to see the muscles bulging underneath it. Its mouth was open and its tongue hung out, showing its teeth which were longer than a normal dog’s and had a silver tint to them. Most noticeable of all, it stood nearly to her stomach, which had to have been twice its original height.

“This is the first success of Project Molosser,” Munju said proudly, pressing some buttons and opening up the glass cage, which slid up, and the dog happily trotted out. She resisted the urge to step back as the dog came to her, and she knew it was definitely capable to killing her if it wanted. But all it did was look up at her expectantly, and she tentatively held out her hand which the dog promptly sniffed.

“The good news is that canine minds are far simpler than Human minds,” Munju explained proudly, petting the dog on its head. “Some alterations to its mind make them incapable of attacking Humans, but that modification doesn’t seem to change their attitude towards us overmuch. We will likely remove such restrictions when we perfect the breed, but for now it is for our own safety. Their sense of smell and hearing have also been enhanced, even if they were already superior to our own, as well as their sight.” He paused briefly. “And I’ve applied the Iron Skin modification, which will make them extremely difficult to kill, and increased the strength of their jaws, allowing them to actually bite with some force.”

Now this was a project Saudia liked a lot. “An excellent idea,” she said, scratching the dog under the chin, while he wagged his tail happily. “Is it only successful for German Shepherds?”

“The German Shepherds have been the most reliable successes,” Munju explained, pulling out his tablet and scrolling through. “However, I believe that the Labrador, Husky and Grey Wolf breeds
will soon follow. I’ve removed breeds that don’t fit certain criteria, and those are the ones that I’ve deemed worth adapting."

Saudia wasn’t an expert in dogs, but did recall that those ones were known for their physical attributes and intelligence. She knew wolves weren’t technically dogs, but they were likely close enough that Munju wanted to use them. Perhaps she should get her own. She’d never really had a pet before and the idea of a war dog like this was appealing.

“I see that Dr. Munju is showing off his pets,” Tygan commented, almost with an air of disapproval as he walked into the room. “Chancellor, welcome once again.”

“You as well, Dr. Tygan,” she returned. “And I assume your own research is proceeding well?”

“Quite, Chancellor,” he confirmed, inclining his head. “In fact, I would be happy to show you, even if the recent output is not quite as…radical as that of my colleague.”

Munju actually chuckled. “He’s irritated that I had the idea before he did.”

Tygan sniffed indignantly. “It is more the fact that the amount of resources you expended upon this was higher than if I had been in charge. As an aside, the sight of dead animals is rather draining.”

“Such is the price of science,” Munju shrugged. “But do carry on and show the Chancellor your own contributions.” They both walked out of the kennel and into another lab which seemed to be dedicated to microbiology. She also noted that there were quite a few of the Sectoid cloning vats set up, and there were things growing in them.

But they passed all that and came to a table where there was, of all things, a burger. It sat on a white plate and looked…well, like a burger with a few leaves of lettuce, cheese and ketchup.

“Chancellor, if you wouldn’t mind, please sample what I’ve cooked today,” Tygan said, motioning a hand to the plate. “I’m quite curious what you think.”

Of all the people she would expect to play a joke on her, Tygan wasn’t one of them. Still, this seemed very odd. She didn’t really have strong feelings one way or another on burgers, so she decided to indulge him, wondering what the point of this was. After a few bites she did have to admit that it was pretty good, although she wasn’t much of an expert, and it might have simply been a while since she’d had one.

“What do you think?” Tygan asked.

“It’s good,” she said, setting the half-eaten burger on the plate. “I did eat before I got here, but I appreciate the thought.”

“There was a point to this,” Tygan said with a smile. “You would say that it is a good burger?”

Saudia eyed him suspiciously. “Yes? Are you telling me it isn’t?”

“Not in the traditional sense,” Tygan explained, clasping his hands behind his back. “What you just ate, Chancellor, was cloned meat.”

Ah, now she saw the point. “Really,” she noted. “I would never have guessed. It must have been a good cow.”

“Ah, but it’s better,” Tygan clarified. “The only part that we need for human consumption is the meat, so that is what was grown. No cows, cloned or otherwise, were harmed in the making of this burger. To put it simply, Chancellor, ADVENT has the ability to mass produce cheap, safe,
humane and delicious meat; and as this can be applied to other foods, it ensures that we will never face a food shortage again in our lifetimes.”

It took a second for the implications of that to reach her. She’d never truly thought about that particular application, but cloning food was something that could, and should, be done. No more famines, food shortages, no more unnecessary hunger. It might take some time for this to be turned into the size it needed to be, but Tygan just might have solved world hunger. It’s usefulness to the war was debatable, but then again, soldiers needed food, and if they didn’t have to worry about those resources, there was no reason they couldn’t have the best ADVENT could provide.

“Exceptionally done,” she complimented. “Every single humanitarian organization will thank you for your work here, not to mention those who have issues affording it.”

“As long as humanity benefits from this, that is all I require,” Tygan gracefully accepted. “But I would not delay this. The more hope that can be given to people, the better.”

“Your project was a very creative application of cloning,” Munju also complimented, tapping a finger on his chin and looking thoughtfully at the vats. “But I believe there are also ways it could be applied for the war effort, Chancellor. How much thought have you given to the idea of Human cloning?”

Saudia stood and thought for a few seconds. Truth be told she hadn’t given it much thought, mostly because she never thought it would be a feasible option. Although they could theoretically do it now, they had the technology. “Is that now a possibility?”

“Certainly.” Munju assured her confidently. “Though not much actual testing or research has been done. But that could certainly change, and from there the possibilities are extensive.” He turned to her, a hand extended to the vats behind him. “Chancellor, eventually we’re going to have a numbers problem. If not now, then in the future. We simply do not have enough soldiers to go to war with an intergalactic army. However, that could be negated by growing more Human soldiers, and we could apply MELD to them during the process, allowing them to be combat-ready the moment they step out of the vats.”

“Doctor, I do believe you are exaggerating the simplicity of such an undertaking,” Tygan warned cautiously. “This is not a slab of meat being grown, but a person. One that is far more complicated and with far more factors than simple vegetables or meat. Not to mention raising the question of simply bringing Humans into this world for the sole purpose of going to war.”

Munju sniffed. “I didn’t say it would be easy, but it would be worth it, and we will need to decide sooner or later. Chancellor, can we really afford to ignore this additional source of soldiers? We unfortunately can’t wait for the next generation of Humans to be born to replace the ones dying every day.”

Saudia wasn’t exactly put off by the ethics of the concept of cloning, but she did believe Munju might be a little overconfident in how easily this could be done. As far as she was concerned, clones wouldn’t have been born naturally anyway, so any kind of life was better than not existing in the first place. And it wasn’t as though, should they actually reach that point, that they would be treated badly.

Still, it would be a touchy subject for some people. But Munju was right, eventually they were going to need more soldiers, and cloning might allow them to even the odds there. That said, she didn’t think this was something she should immediately approve without some outside input. The Commander, Laura, Hassan, people who would have a better grasp on the possible social ramifications than she did.
“Chancellor, I perhaps have a much less controversial usage of cloning,” Tygan said slowly. “Since we do have the capability, I would suggest we utilize this technology to clone replacement limbs or organs; ones which would reduce any chance of rejection to the designated recipient. We could remove the need for organ donation and give millions their lives back.”

“I agree with Tygan here,” Munju said firmly. “Regardless on the status of Human cloning, there is no reason we cannot do this. As well as synthesizing blood, plasma, and other bodily fluids needed for survival. There should be no controversy over this.”

Saudia nodded. There was no question this was an immediately useful application. “Begin your work on that, and concerning Human cloning itself, I want both of you to begin preliminary research into it,” she ordered. “But no growing anything that could be considered a Human fetus. Determine equipment, possible template, but no actual implementation yet. This, at the moment, is not a priority, but I want to know just how feasible it is. Understood?”

“Of course, Chancellor,” Tygan said. “We will begin work on it as soon as possible.”

“Excellent,” Saudia said, stepping back. “Excellent work, both of you. I look forward to seeing your future projects.”

***

New York, United States of America

Saudia scratched her chin. “You want to launch it now? Isn’t it too preliminary?”

Jasmine gave a short nod. “Starting sooner rather than later is the best strategy. To give you a timeframe, Chancellor, if you want this to become the dominant currency, it will likely not be fully integrated until the war is over. The sooner we normalize it, the better.”

That did make sense, and since Saudia knew that the denominations were figured out, all that remained was actually releasing the new currency to the public. As it was based and backed by the alien alloys, both thought it prudent that the name of the currency would be the ADVENT Alloy. There had been some debate on if they would continue using paper denominations of money, but ultimately they’d decided to keep it since it was more useful for convenience and people were too used to them.

“I am aware it will take some time,” Saudia said. “So proceed. What will be your plan for deployment?”

“Very, very slowly of course,” Jasmine chuckled. “There are some preliminary legislative measures that need to be taken before we actually launch it. First the Congress will need to officially recognize it as the official currency, and then mandate that all banks and businesses accept the currency legally.”

“They’ve been aware this has been in the works for a while,” Saudia told her. “Your primary contact has been Congressman Caspari, yes? I’m certain he has legislation already prepared.”

“Oh, he does,” Jasmine quickly confirmed, pushing over a folder with what she assumed was the official bill the Swiss Congressman would introduce. “He started drafting it after I approached him. He knows quite a bit about how to best introduce it without any superfluous loopholes. I’ve looked it over with several lawyers and my team, and it’s solid.”

Saudia opened the file and noted that there were four rather large stapled documents, not just one. “Ambitious,” she noted. “How much are you planning to get through Congress?”
“The first bill obviously establishes the Alloy as the official currency,” Jasmine explained. “More of a formality and not very complicated. The others are more important.” She pointed at the second, much thicker, document underneath the first. “That is actually the mandate to ensure that everyone in ADVENT eventually moves to the new system.”

Saudia began reading through it. “Currencies used by the State will be phased out over a five-year period until they exclusively operate under the Alloys. Good. That gives us plenty of time to set it up.”

“That was the quickest it could be done and still be effective,” Jasmine agreed. “And the same goal is for the rest of ADVENT businesses and corporations, although it is over a twenty-year period, with exceptions for those that do business with foreign nations. By then I think that most will be using the Alloy, and this does regulate that new businesses created one year after this has passed must use the Alloy domestically, unless they do business with foreign companies.”

“That is fair,” Saudia nodded, looking up. “Twenty years is more than sufficient for it to be implemented. The larger issue is the people who want to take advantage of the new currency and go and exchange it for Alloys.”

“Scarcity and inflation was a massive problem,” Jasmine sighed, rubbing her forehead. “One that can’t ever fully be solved. We’ve set the price in relation to our current stockpile and how much we actually need if the wealthiest people decided to go all-in on this. It’s incredibly likely that as the war goes on, we’ll acquire more, and should we discover just how the alien alloys are made, we’ll potentially have an unlimited supply.”

She paused for a moment, considering. “The way this is set up, Chancellor, isn’t like most currencies. This is because the alloys are being considered as more of a resource; we consider it valuable right now because it’s useful. It can do something besides look shiny, unlike previous standards like gold. This makes it a little more difficult because hopefully, we will be able to manufacture it, and by current standards of inflation, make it worthless.”

“Or you could establish a minimum value,” Saudia noted. “Something that would only increase in value, but if it dropped, it would still be worth something.”

“That makes the most sense, and what we came to,” Jasmine said. “Although this is theoretical; nothing like this has ever been done before. Ideally, we want to reach a point where money isn’t something that most people have to worry about. But to get there without problems, we’ll have to get very lucky because the market will take advantage however it can.”

Saudia nodded. “The more alloys in circulation, the less each one is worth. And the prices go up and things stay the same.”

“Which is why to have a chance of it working, ADVENT has control over all deposits of alloys, and are the only ones who have authorization to manufacture or create them,” Jasmine finished. “If we have a degree of control over how much is being put into circulation, and any surplus is directly controlled by us, the better chance the Alloy will not fluctuate as much.”

It was an interesting subversion of that issue. “ADVENT uses the alloys in terms of usage cost,” Saudia said, thinking. “If surpluses were kept internal, they wouldn’t be devalued because we always have a use for them. Any extra could be put towards weapons, vehicles, structures, and more. It could potentially be used so that any surplus is quickly used before it can potentially affect markets, and if we do develop the ability to manufacture it, we would only make what was needed for certain projects, and not actually introduce it into the market as actual currency.”
But as a resource,” Jasmine finished. “Exactly. Except that this still may not ultimately work. Money is interesting, Chancellor. On some level the concept only works because we believe it does. Literally every currency before this is based on nothing, and we only give it worth because we believe it has worth. All we’re really doing is exchanging paper and pieces of metal.”

Saudia did have some understanding of how fragile the whole system actually was, which was why she wanted the new currency actually backed by something. But Jasmine was right; the only way to know for sure if it ended up working was to actually do it. But there was always the chance of failure. “What of the rest of the legislation?” She asked, motioning to the final two stacks of documents.

“One of them is just regulations for the manufacturing of the paper bills and minting coins,” Jasmine explained, reaching into her pocket and tossing her a coin. “Got one to show off to you. That is officially worth one ADVENT Alloy.”

Saudia caught the coin, and flipped it over in her palm. It was the size of a quarter and about as heavy. It was a dark gray, which told her that this was actually made out of an alloy. On one side was the official ADVENT logo, and on the other was a side view of a woman. She raised an eyebrow. “Is this supposed to be me?”

“Officially, no,” Jasmine smiled. “It’s just the head of a woman; identifying features unknown. Unofficially, you were who I had in mind when I decided to add it. I hope you don’t mind.”

“Not at all,” Saudia said, palming the coin and placing it in a pocket. “Although I didn’t ever expect to ever be on any currency; inspired or otherwise.”

“As one of the founding members of ADVENT, it would be idiotic not to have you included in some way,” Jasmine said. “It only seemed right.”

Saudia was somewhat amused by that. Even in EXALT she’d never really planned on doing anything like putting herself on money. If Jasmine had wanted to be accurate, putting the Commander on it would be more accurate, since he was the one who’d started all of this. But he’d also likely be just as satisfied either way. “I won’t complain,” she said. “So what is the last one?”

“A little project I’ve wanted to implement for some time,” Jasmine said with a smile. “As long as we’re redoing the entire economy, I wanted to make it a little safer. That,” she pointed at the final document. “Imposes some additional regulations on how banks store financial data and transactions. It essentially mandates a certain level of security on them, and that they have to improve their standards if their current encryption is not sufficient, or a more effective method is developed. While most are up to standards for now, the goal is to ensure that they are kept to the highest possible standard, and there are too many that won’t do something until a breach happens, and I don’t consider that acceptable.”

“It seems like a good idea,” Saudia said with a nod. “Good work. I look forward to seeing this put into practice.”

“Appreciated, Chancellor,” she said, pulling back the file. “If nothing else, this will be an interesting experiment.”

***

Intha, Vitakar

All things considered, the plan was going well. Nartha had played his role well, and helped the
Zararch remove some of the lesser dissidents and troublemakers, while misdirecting the ones who were actually who he considered useful. Sometimes he let them know, sometimes he didn’t. But his time on the planet was going to end soon, and he needed to firmly establish plans for moving forward.

The good news was that the Nulorian seemed to want to speak. He’d received a string of coordinates and a time, and nothing else through the communication link he’d established. Fair enough. By now they were probably aware that someone was slowing down the Zararch here, and he was the obvious candidate.

He doubted they would fully trust them, but he didn’t need that right now. All he needed was an ally, and in the meantime, Sareech was proving to be an exceptional ally in figuring out how to use the Aui’Vitakar. At the moment she’d kept much of what he’d shared with her to herself, but was making some small moves, particularly on Vienneth, which had quite curiously been killed the moment it had been introduced.

That had confirmed that there was indeed something there that the Ethereals did not want discovered. Unfortunately, he hadn’t been able to come away with much on his end, and everything related to that planet was classified. That being said, he was of a high enough rank to view it...provided he had the Zar’Chon’s permission.

He hadn’t come up with a reason to view it that wasn’t suspicious.

He might have to fabricate a reason to visit the planet himself. Perhaps he could say that one of the Nulorian he’d interrogated had mentioned there was a base there. Although he’d likely need proof for it to be credible, because the Zar’Chon was likely not going to just let him go if he was trying to keep something quiet.

However, he was following the actual reports from the war itself and things were not looking good for Earth. Japan had fallen and America was also slowly being conquered, and to make matters worse, it seemed ADVENT was taking advantage and capturing previously neutral countries. While he couldn’t exactly blame them, he wasn’t exactly comfortable with what was happening.

Then there was the new Ethereal, Caelior, who made the Battlemaster look weak by comparison. The Nulorian were going to either find that very useful, or very terrifying. Likely both. It didn’t bode well at all for their chances going forward, but there wasn’t much of a choice. They still had a chance, however slim.

Nartha finished his report to the Zar’Chon, with an addendum that he’d be investigating further in the Borelian Expanse, which would provide adequate cover to meet with the Nulorian, and buy him a few days. He sincerely hoped that they wouldn’t kill him if they decided he wasn’t trustworthy enough.

They were terrorists, after all.

***

Russia, Center of ADVENT Engineering and Development

Saudia was very interested to see what Feng and Ophelia had come up with since the last time she’d visited. Given that they apparently had some new developments to share, she was hoping to be as impressed as last time. Hopefully they wouldn’t disappoint.

She stepped into the main wing of the Robotics Division, where Feng had wanted to show her
something relating to the MDU project. At least she assumed it was related, but she wasn’t quite sure just how much more the MDUs could be improved. Which meant this was likely a new project utilizing similar concepts.

The room was fairly loud, and there were quite a few engineers working and testing various systems, or were welding or constructing additional units. But she did see Feng and Ophelia at the far end, and made her way towards them. Feng gave her a nod of greeting as she approached.

“Chancellor, thank you for coming.”

“You said you had made progress,” she answered. “I’m curious what you’ve done.”

“Of course,” he smiled proudly. “Outside of my work on the Flak Towers and Trench designs Commander Christiaens asked me to complete, we had made progress in multiple projects. The latest of which is before you.”

He gestured before him to the machine before them. It reached to about her waist, and to her eyes, looked like a massive machine gun barrel attached to a platform with treads in place of wheels. It was appropriately armored, and the barrel was on some kind of swivel, and it appeared rather intimidating. “What is this?” She asked. “A portable turret?”

“Not exactly,” Ophelia answered, stepping forward. “The MDU fulfills its role exceptionally well. But it’s expensive and has limited mobility in enclosed areas. We wanted to create a similarly robotic enemy to fill that role; one that is much cheaper and can be easily mobile in enclosed areas. This is the result, the Super Heavy Infantry Vehicle, internally known as the SHIV.”

Saudia cocked her head at the machine. “No lasers?”

“The processor isn’t as large or advanced as the ones in the MDU,” Ophelia explained. “But the AI is still sophisticated enough to be extremely dangerous, even at longer ranges. The role isn’t as a precise weapon like the MDU, but it would perform more defensive tasks which would be dangerous to our own soldiers. A team of SHIVs could effectively suppress an alien force which would allow our soldiers to reposition, advance, or retreat with far less danger.”

“Good,” Saudia nodded. “And these are gauss weapons I presume?”

“Correct,” Feng stated, also stepping forward. “And we have designed the SHIVs with the intention of being adaptable to specific terrains or scenarios,” He knelt down by the SHIV. “We have this one using treads, which is more appropriate for more rough terrain that would be found in trenches or a typical battlefield. However, these can be easily swapped out for traditional wheels for locomotion.”

“In addition to that, there are multiple modes the SHIV can be put into,” Ophelia said, holding a tablet into her hand and motioning Saudia over. “Mobile and Entrenched. Putting it into the ‘Entrenched’ mode does this.” She pressed several buttons, there was an audible locking sound, and four smaller legs extended from the sides, then were planted on the floor. “All SHIVs have 360 mobility in both positons,” Ophelia continued. “However in this position, firepower will be more stable and accurate since more power can be devoted to targeting.”

“Can I see that?” Saudia asked, and Ophelia gave her the tablet controlling the SHIV. There were quite a few additional sensors on it, and the main image was of the SHIV facing them, all of them showing up as red blimps, which she assumed was from heat sensors.

“How is the power consumption?” She asked.
“Twelve hours without any kind of recharge,” Feng answered, walking back towards her. “Batteries for it take approximately one hour to recharge, and can be replaced easily. We attempted to have a system of continuous battery replacement, but there simply wasn’t room to accommodate it.”

“That should be sufficient,” Saudia nodded, already rather happy with the machine. “Well done. These are ready for deployment?”

“Yes, at your command,” Feng confirmed.

“Put them into production,” Saudia ordered. “And be sure to designate some for the Peacekeepers. They could use a machine like this.”

“Excellent,” Feng said, and began walking to what he wanted to show her next, which was out of the Robotics Wing. “We’ve been puzzling out how best to improve the Shieldbearer Armor,” he continued as they walked in the hallway. “The initial concept is sound, but putting it into practice is difficult. We are not yet able to develop reliable kinetic shielding, and the magnetic repellent was only effective against traditional ballistics.”

“Have you solved this problem then?” Saudia asked as they rounded a corner.

“To an extent,” Feng admitted. “The issue is that we still have not developed proper plasma weapons, and are relying largely on simulations from data gathered in the field. XCOM has been instrumental in helping us in this project, since they do have one plasma weapon to test with.”

“To put it bluntly,” Ophelia said. “We think we have a way to protect against plasma fire.”

Saudia blinked. “As in stop it entirely?”

“In theory, yes,” Feng clarified. “In practice, it would at minimum reduce the overall danger of the plasma burst itself.” He motioned them into another room which actually looked like a room for testing weapons, and in the range was a suited Shieldbearer. The armor was slightly bulkier than the previous iteration, and there was some built-in pack attached to the armor.

“There had been research into plasma before the war,” Ophelia said as they stood in front of the Shieldbearer. “While the alien application is far more advanced, the principles remain the same, and thus, it has many of the same vulnerabilities. Plasma, Chancellor, is highly influenced by magnetism as it is an ionized gas. Without boring you with the physics, the best defense is the utilization of powerful magnetic fields.”

“Can that really be powerful enough to repel plasma?” Saudia asked skeptically.

“Yes,” Feng nodded. “A strong enough magnetic field should, in theory, completely deter plasma, or at the very minimum negate its overall damage. And that is what the new Shieldbearer accomplishes.” He motioned to the Shieldbearer who pressed a button on his armor and a short antenna shot up from the back of his armor. A few seconds later he was surrounded by a visible field that distorted the image of him.

“I would fire some plasma weapons to prove this works,” Feng sighed. “Unfortunately, we are only capable of producing small and weak bursts, which while helpful, I’m hesitant to call as appropriate field tests. However, XCOM has confirmed that it does perform as intended, and I doubt they would lie.”

“The aliens rely on plasma weaponry,” Saudia said slowly. “This could change the entire war. Their weaponry would be useless.”
“Don’t get too excited yet,” Ophelia grunted, although she seemed rather pleased. “One, this hasn’t been field-tested. And two, the power drain from this is extreme. The longest it has lasted is ten minutes, more or less, before it quit altogether, and we don’t know how it would stand against sustained plasma fire. The energy issue is the biggest hurdle, and that can hopefully be resolved when we figure out elerium.”

“Still,” Saudia said in amazement. “That can be worked around. We can supply the power right now. I assume you’ve made non-Shieldbearer emplacements which perform the same function?”

“Yes, of course,” Feng said. “But they have a fairly small range, and take some time to set up. But those could be protected and they don’t require exotic resources to be created. And I have taken the liberty of ordering several thousand already to be sent to America and Korea. I assumed you would want more, but that will require your authorization.”

Saudia snorted. “I should sign an order not to need my approval for certain tasks. Like providing equipment that negates plasma weapons.”

“Now, there is one final thing,” Feng said, turning on his heel and walking out. “You recall the last time I was designing a fast-response troop transport. The good news is that I was able to construct the proof-of-concept without much issue.”

More excellent news. “You solved the propulsion systems?” She asked. “I believe you said that was an issue.”

“Yes, though it wasn’t as difficult as I had feared,” Feng explained as they reached a massive hangar. “Now that we have enough intact UFOs, it was a matter of reverse-engineering the systems and applying them elsewhere. The larger problem was finding a power source to temporarily substitute in place of elerium.”

“Did you?” She asked.

“Yes, but as I said, this is only to show that it works,” he clarified. “Alien propulsion systems are simply impossible to use practically without elerium, but when we do solve it, we will be able to deploy these dropships immediately.” He pointed to a fully constructed ADVENT dropship, in all it’s uniquely designed glory.

It still seemed an odd design to her, but she assumed it was more due to incorporating the anti-grav mechanisms than anything else. The four ‘legs’ of the craft were likely the main means of propulsion, and probably a few stabilizing mechanisms were on the underside of the craft itself. It was still pretty small, but she could see it being useful for quick deployments or reinforcing certain areas.

“Start it up!” Feng called, and the room was suddenly filled with a low hum from the dropship and after a few seconds, it started rising, the air underneath the legs being completely distorted and tinted red from the anti-grav effects. There were similar effects under the main body of the craft itself, and after the legs shifted to a horizontal position, it shot forward and flew around the expansive hangar.

Saudia was impressed how quickly it could speed up and slow to a complete halt within seconds, and after a few more minutes of demonstrations, it shifted back into a landed position. As it settled on the ground, Saudia nodded approvingly. “For a proof of concept, I would say it passed. But it drains too much power to be deployed?”

“Unfortunately,” Feng confirmed. “It can last nearly a half hour, but none beyond that. Clearly not
feasible for actual usage, but it will be ready once elerium has been fully researched and ready to be used.

“I’ll have Munju and Tygan bump that up on their priority list,” Saudia promised. “Another job well done.”

“I would like to see the alien’s faces when they realize plasma doesn’t work quite as well,” Ophelia said with a grim smile. “That would be entertaining.”

***

Switzerland, Construction Fields

Saudia had never really appreciated just how secure Switzerland truly was before arriving. Once she’d realized that the country was an interlinked fortress, it hadn’t been a hard call to decide that it was going to be the official capital of ADVENT, although pretty much everyone she’d appointed in a military position had suggested the same thing.

It was also the place where Commander Christiaens had decided to test out potential tactics, structures, and equipment before deciding to actually deploy or utilize them. She’d essentially turned much of the country into a mixture of a testing ground and training area. And there was quite a bit to see here.

Right now both of them were walking through a small trench fortification, which gave her a much better idea of what Laura had said when she’d explained that she wanted to bring trench warfare back as an actual tactic. Saudia had been surprised to say the least, but Laura had said the concept was sound, and it would give them a much better chance to defend cities than only relying on barricades.

“The aliens are bad at open warfare,” Laura had said. “They don’t have any useful strategies aside from charging an open field and praying they live to find cover. Then they become dangerous. Several lines of trenches in front of any city will turn any charge into a massacre.”

She’d seen an obvious flaw then. “And what happens when there isn’t an open space in front of the city?”

“Then we clear out the area and make one,” she answered evenly. “Our strategies aren’t good enough right now, Chancellor, we need to adapt and pull out every trick we can.”

The stories of trench warfare were horrific, and despite their use, Saudia wasn’t keen on putting soldiers through that, but it had admittedly been at a time when conditions were much worse and technology nowhere what it was today. Laura had said that there were obvious places for improvement, and she appeared to have followed through on that.

To start with, the actual digging of the trench wasn’t done with crude shovels or by hand anymore. Laura had said it still could be, but with access to modern construction equipment, there wasn’t a need. The exact depth of the trench was seven feet, without counting the steel barricades placed along the edge of the trench facing outward, with the ground slanted upward for soldiers to move up to shoot out of. Along the short barricade were openings for soldiers to shoot through, while lessening the chance of getting hit in return. The width was seven feet, and on the ground there were ridged steel slabs perfectly cut to fit into the trench that could be cleaned, which made the trench ultimately more sanitary and safe.

Every ten feet there were what Laura described as ‘Emplacements’, which is to say, small armored
bunkers that had an M2 Browning deployed within. It was just high enough where the barrel reached a few inches off the ground, but there was enough room in the bunker to aim it in multiple directions. While obvious targets, they did give some more stationary firepower to the defensive line.

“There are designated ammo and medical stockpiles every twenty-five feet,” Laura explained as they continued walking. “Nothing fancy, just cut-out sections of the trench, but they are always available and can be resupplied from trench lines further back.” Unlike most of the trench she was in, this one had an armored cover tall enough that she could almost stand up in it. There was some basic lighting, stacks of ammo boxes, and med-kits.

That was another improvement Laura had ordered. There was intermittent lighting throughout the trenches, that would be directly connected to the city. It ran along the ground level of the trench, and the floor was also lit well.

“This is something that can be added should the aliens begin to use shelling or gas weaponry,” Laura said as they came to a new section. It was identical in function to where they’d been previously, but instead of the short barricade in front that allowed soldiers to shoot out of it, a metal ceiling extended over the entire trench and rested on the other side. It wasn’t fancy and more like fitting a particular piece together than something sturdy, but it provided more protection than open air. “The basic design of the trench allows armoring if needed,” Laura continued. “It will get stifling and uncomfortable, which is the downside, but it’s easy to set up and take down, and will protect against bombardments to a degree.”

“You could integrate a point-laser system to shoot down incoming munitions,” Saudia noted. “That could also negate the problem.”

“Agreed, but that’s not something that could be built easily,” Laura amended. “For the larger cities, absolutely. But for smaller ones it’s not justified in terms of resource cost.”

“Fair,” Saudia nodded as they finished walking through the armored trench, and exited above ground where both of them overlooked the long trench. “I’m impressed. You made significant improvements to the design here.”

“It needed to happen,” Laura said slowly. “I wouldn’t think of reviving them if there weren’t improvements to be made. The aliens themselves don’t have many good counters to this. They seem to lack any sort of heavy vehicles outside of the Sectopod, and that moves slowly enough where we can destroy it before it does much damage.” She stretched her hand out, illustrating the trench line. “At the very back we can place our conventional tanks and artillery to fire at the aliens. Their systems are good, but even they have to have limits. We’ve also not seen their aircraft have any kind of bombers, which negates that threat.”

The more Saudia thought about it, the more there seemed to be some holes in the alien military. They appeared to be largely infantry-based, which while varied, were also much easier to kill. They didn’t have many military vehicles, outside of the Sectopod and Cyberdisk, the latter of which didn’t seem to fill the role of a conventional tank.

They did appear to have some aquatic capabilities, strangely enough, but they didn’t seem to have any artillery whatsoever. Then there were the odd gaps in the air force. There were no bombers as Laura had noted, and no indication there was anything larger than a transport that was used regularly. They clearly had the capability to create larger ships, as the alien Dreadnought had shown, but ever since then there hadn’t been anything close to that size. She suspected it was because they had gotten used to a different form of warfare, or maybe believed psionics could substitute for anything.
But it all seemed very...conventional. She didn’t know a better way to describe it. Which made her wonder just how much of the alien technology was being hidden from them. Surely they had to have more than billions of soldiers?

Right?

She did sincerely hope she was wrong, but another part of her would be sorely disappointed if the aliens did turn out to be that unimaginative. “And all of this will be covered by the Flak Towers,” Laura continued. “Those will definitely take the most fire, but I’ve been sure to have them be as structurally sound as possible.”

“I would incorporate Feng and Ophelia’s plasma dissipaters into them,” Saudia suggested as they walked to the massive tower. “That would negate almost all of the damage at this point.”

“For future iterations,” Laura agreed. “But for now these will hold up well. This way, Chancellor.” Saudia followed her into the first floor of the eight-story tower. The sheer amount of firepower on display was something Saudia found very satisfying. In front of every opening was an M2 Browning or a stationary weapon of similar power. Ammo boxes were stockpiled in quartered sections throughout the entire open floor. In the center was the spiral staircase leading up. And in the middle of the staircase was a fireman’s pole which extended from the top, a contingency in case the stairs were destroyed or otherwise blocked.

“Did you think about the proposal Munju had?” Saudia asked as they climbed.

“Cloning?” Laura said, somewhat distastefully. “Yes, somewhat. I can’t deny that it would be useful if they can make it work. But...I’m not exactly thrilled with the idea of growing Humans just to send them to fight in a war. The concept itself is personally unsettling to me, so I’m not sure I’m the one best to answer the question. If you decide to approve it, I’ll use them to the best of my ability.”

“And that’s all you should need to do,” Saudia nodded. “But that is something that does have to be decided sooner than later. If you have objections, I’d want to know now.”

“That depends on your plan for them,” Laura said slowly, stopping and looking back at Saudia. “Would they have a place in ADVENT besides being soldiers?”

“To a degree,” Saudia said. “Those aspects haven’t been fully discussed. This is more about the concept itself.”

“Well, that ties into how I feel about it,” Laura pointed out. “I suppose my question is if they would be treated as Humans or not?”

“That is the goal,” Saudia shrugged. “Does that answer your question?”

Laura looked at her for a few moments. “For now, Chancellor. I need to think about it some more. Besides, there is still more to show you.” They reached what Saudia believed was the fourth floor, which was almost identical to the first floor, except that there were several AA weapons instead of stationary machine guns.

“Each floor can be locked down in case the lower ones are under attack.” Laura said, pointing to a lever on the floor near where the staircase had arrived. She pulled it, and the metal sheets built into the floor slid out, completely covering the entrance. “Useful,” Saudia nodded as Laura retracted the covering. “Continue.”

They proceeded further up, and the higher they went, the more weapons were specifically anti-air,
and there were now a decent number of precision laser weapons in addition to gauss defenses. They finally arrived at the top, where almost every single available space had a massive AA turret, and on each of the corners was a heavy precision laser to further augment the death trap that was the Flak Tower.

“I’d hate to be the first UFO that tries to run this,” Saudia said approvingly, clasping her hands behind her back as she overlooked the landscape. “I believe we just might be ready for when the aliens attack next. No more easy victories for them.”

“We just have to make sure they don’t get control of these towers,” Laura noted ruefully. “I don’t fancy our chances if we end up on the wrong side of these guns.”

“I assume you have a plan for if we do have to retreat from them?” Saudia asked.

“A crude one, but it should do the job if needed,” Laura explained. “There are several contingency explosives on the first, forth, and seventh levels that can be deployed if we’re going to lose the towers, which can be detonated remotely after setting them up. There isn’t much of a chance of the explosives going off accidentally since they aren’t primed, and it’s better than having an integrated self-destruct system the aliens might accidentally exploit.”

“Good planning,” Saudia nodded approvingly. “Better to have contingencies in place. I don’t consider it likely that we will never lose a Tower.”

“Still,” Laura said, looking away. “I’d prefer to avoid that contingency.”

Saudia smiled grimly. “Well, we’ll have to be sure not to lose them then.”

***

Undisclosed Location, United States of America

Saudia had wondered what it was like to be a psion. The idea itself was alien to her, and the few discussions she’d had with psions had been…limited. Well, those had been limited to Patricia and the Commander, both of whom had generally been focused on other topics. Still, the power to dominate the minds of others was one she wouldn’t mind.

Out of curiosity, she’d wondered if she could be psionically awakened as well, and the standardized test to determine sensitivity had come back negative. A shame, but perhaps it was for the best. She’d prefer not to go around with a bomb in her head, or have any kind of mental conditioning, both of which she knew the Commander would require, especially for her.

But the ADVENT Psionic Research, Investigation, Enhancement, Specialization and Training Program, shortened to PRIEST, could very well be the most important weapon in this war against the aliens. The Ethereals might not have put much effort into developing conventional warfare, but with psions as powerful as they had, they didn’t necessarily need to.

The research XCOM had shared with them seemed to indicate that Humans weren’t as psionically capable as Ethereals, but equal with or surpassing most Sectoids. Psions on the level of Patricia or the Furies appeared to be rare, but even the weaker ones were more than capable of destroying conventional alien forces. It was ironic that in her quest to give EXALT psions, they had ended up giving XCOM one of their greatest weapons in the Furies.

At least something good had come out of that program. A shame Subject Four…Durand, was it? Well, it was a shame she’d died. Her power had been extraordinary.
“Chancellor?” Saudia turned away from the psionic pod she’d been looking at to see the Director of the PRIEST Program, Dr. Akilah Kettani, one of the leading neuroscientists in the world. As there weren’t any experts outside of XCOM in the field of psionics, she’d had to make do. If there was anyone who could puzzle out how best to figure out the phenomenon, it would be an expert on the brain itself.

“Dr. Kettani,” she greeted. “It looks like you have everything up and running.”

“Quite, Chancellor,” he agreed with a smile. “The next step is finding appropriate candidates for awakening. I know that the military is currently cycling through their forces, but I believe we should also begin expanding to civilian populations immediately.”

“You’ve mentioned this,” Saudia said as they began to walk down the corridor. “I’m not convinced that it would be a good idea to pair civilians with soldiers quite yet; unless of course the number of psions we acquire is too small to be useful.”

“You have the final say, but I would advise against that,” Kettani said, his ice-blue eyes looking pointedly at her. “If my calculations are correct, there is a sizable portion of the Human population that is psionically sensitive, and the majority of Humans are not currently serving. Psions are not soldiers and shouldn’t be treated exactly like them; civilians can learn, and they can be useful.”

Saudia raised an eyebrow. “When you say a sizable portion, what does that translate to?”

Kettani heisted, glancing up for a few seconds. “Right now I am only going by the number of psions that have been in XCOM, but I will not know for sure without a far larger sample size. However, given that XCOM has had a minimum of one hundred soldiers, and at least ten of those have been psions, that implies that five to fifteen percent of the Human population is at least capable of minimal psionic manipulation.

Saudia immediately tried to run some numbers in her head. There were about seven and a half billion people on the planet, just five percent of that would be... “Three hundred and eighty million, minimum,” Kettani said, anticipating her calculations. “Greater percentiles are over one billion. If even a fraction of those are awakened, it might be enough to overwhelm an Ethereal.”

Saudia nodded numbly. She’d believed that there would be only a few who could be awakened, maybe thousands at most. But if Kettani was correct, that would do more than give them a fighting chance, it might even turn the war in their favor. “That being said, this is still unknown,” Kettani cautioned as they entered another brightly lit room. “But I’m confident that there are more than enough potential psions to be awakened.”

“You have my authorization to proceed with recruitment,” Saudia said firmly. “And of course be sure that if there are civilians who join…that they understand the conditions and risks. I don’t want unwilling psions in my army.”

“Of course,” Kettani nodded as he guided her over to a table with a curious device resting on it. It looked like one end was a handle, which was connected to a block of equal width, possibly a power source, and two prongs extended upwards, angling towards each other but not meeting.

“Is this a weapon?” She asked, picking up the strange device. It definitely looked alien in origin, and not something she was even aware was being developed.

“Not exactly,” Kettani said, frowning as he looked at the weapon, reaching over and hitting a switch. Saudia almost jumped as a small ball of purple energy converged in the center of the two prongs. It had to be psionic in origin, but she didn’t know how that was possible.
“This was something XCOM gave to us,” Kettani explained. “They referred to it as a ‘Training Amp’ for newer psions, or those of lesser power. This is technically a misnomer though, as for one, from what I understand, it acts more as a focus than an actual amplification of power, and second, that isn’t actually psionic energy.”

Saudia glanced at him. “Then what is it?”

Kettani furrowed his brow. “I don’t know. XCOM didn’t explain, and even though they provided the full schematics…no one I’ve shown it to has been able to comprehend how this thing actually works. We can assemble it, and the power source comes from an elerium crystal specially treated with psionics…but how this actually produces the result, I haven’t been able to puzzle out.”

Saudia looked back at the device, which glowed brightly. “XCOM must have been able to figure it out.”

Kettani looked down at the amp as she turned it off. “I’m not so sure. But it’s irrelevant. They appear to work and will supposedly help with training.”

“And speaking of which,” Saudia said, taking the opportunity to change the subject. “How is that going to be handled?”

“In the beginning XCOM has promised to assist with the first generation of psions,” Kettani explained as they walked over to a window which overlooked a white room the size of a gym, which she assumed would be used for training. “I believe they want to maintain a presence here permanently, if for no other reason than they get their pick of psions.”

Saudia pursed her lips. “That I am not surprised at.” It had been another condition the Commander had added to approving the PRIEST Program, XCOM had the authority to select certain psions for XCOM and they had to turn them over. It was clearly a means of ensuring that ADVENT didn’t have the most powerful psions, but she didn’t consider it worth challenging. The Commander had promised not to abuse that agreement too much, but Saudia wasn’t holding her breath.

“XCOM identified four major disciplines of psionic power,” Kettani continued. “Offensive, Defensive, Telekinesis, and Telepathy. The XCOM Psion Trask has said that it’s possible for a psion to master multiple disciplines, but that is exceedingly difficult and rare, and each one will naturally gravitate towards the one they are most inclined towards. Training regimes will be built around these disciplines, and more can be developed for hybrid specializations in the future.”

“That takes care of that,” Saudia said, resting her chin on her hand as she thought. “The larger question is determining how powerful each psion is. Not all are equal, and there needs to be a way of determining weaker psions from stronger ones.”

“No worries there, Chancellor,” Kettani assured her, placing a tablet in her hand. “That has already been solved. The good news is that psionic potential is static, cannot be changed, and is easily determined. Measuring it was a rather exciting development as we needed to create the unit of measurement ourselves, as there is no baseline of power that is equivalent. As Patricia Trask was the first known Human psion, the unit of measurement we created is designated the Trask.”

Trask. That was not going to be a context that Saudia was going to get used to quickly, but it did make sense that the unit designating psionic power would be named after her. Seeing as how many units of measurement were named after people in the sciences, it seemed only fair. “I wonder if she approves,” Saudia wondered aloud. “I somehow doubt it was her idea.”

“She seemed rather indifferent,” Kettani shrugged. “But she did consider it an honor. Unless you
want the scientifically complex version as to how much a Trask is worth, I can simply explain the
system itself.”

“I would prefer that,” Saudia said.

“It’s actually simple,” Kettani said, motioning to her tablet where there were a list of ranks and
names. “The Trask Scale goes from one to one hundred, although it could be expanded, but the
chances of a psion exceeding one hundred Trasks is nearly impossible. One is very weak, one
hundred is exceptionally strong. A simple format.”

He nodded towards the list she was reading. “There are five ranks of psionic power; a psion who is
in the range of one to twenty Trasks is Awakened; twenty-one to forty is an Adept; forty-one to
sixty is a Psion proper; sixty-one to eighty is a Magus; and eighty-one to one hundred is a
Leviathan.”

“And the ranks are permanent?” Saudia said, looking up to clarify.

“Yes,” Kettani confirmed. “The Trask level of a psion cannot be changed. An Adept will always be
an Adept. Psionic sensitivity is genetic, or at least all current research indicates that it is, and there
is no research right now into genetic modification to increase psionic sensitivity, although that is
certainly possible.”

That was very useful, and would make it much easier to decide how best to use psions in combat.
“I’m curious,” Saudia said. “Did Patricia score well?”

“She is an eighty-four on the Trask Scale,” Kettani said with a smile. “The chances of another
psion with her raw power is slim, but possible. I suspect only an Ethereal would outclass a
Leviathan-Rank psion.”

Saudia was wondering what an Offensive Leviathan would look like, or even a Telekinetic
Leviathan. Probably something like Caelior. For that matter, she wondered where he would place
on this chart.

Likely exceed it. If there was one thing the Ethereals specialized in, it was psionic enhancement.
“Excellent work,” she said. “How long before we can expect psionic soldiers?”

“Several months, minimum,” Kettani said flatly, running a hand through his short hair. “We first
have to find suitable candidates, awaken them, and then train them so they aren’t completely
useless. But after the initial start-up period, we should fall into a pattern where batches can be
deployed regularly. I will also add that the more facilities for training, the faster it will go, and the
larger the batches.”

“Send over what you believe would be ideal,” Saudia ordered. “I’ll be sure you get what you need.
The outcome of the war could rest on this; and I will not throw this opportunity away.”

“Then I will begin recruitment,” he said, turning to look out into the empty training area. “No time
to waste.”

***

New York, Peacekeeper Command

Saudia wouldn’t have expected that the visit to Stein’s headquarters would be the most relaxing
part of her trip, but it was. Stein had simply suggested that they have lunch and go over whatever
they needed to discuss, and had added in a deadpan voice “You’re probably tired of people walking
around and showing you stuff.” Which wasn’t technically true, but it had been an exhausting week, even by her standards.

“Cloning,” Stein commented thoughtfully as Saudia finished explaining the newest developments in the realms of science. “Interesting. People are squeamish about the subject for some reason.”

“And I suppose you’re not,” Saudia commented ruefully as she ate her salad. “I’m somehow not surprised.”

“There isn’t a reason to be,” Stein said neutrally. “The concept is good. It will allow us a disposable army while we can save our actual soldiers for missions of actual importance.”

Saudia frowned. “Considering that they will likely take several years at minimum to grow, I’m not in favor of throwing them away. This would not be a small investment.”

Stein snorted. “Bad phrasing, what I should have said was that will allow us to use them for riskier or dangerous assignments; ones that we’d be hesitant to sacrifice actual Humans for.”

Hm. Saudia wasn’t exactly pleased Stein had immediately gone the whole ‘clone equals not human’ route. “If we do this, the clones will likely be just as functional as us. There isn’t much of a point in growing more Humans only to discard them as lesser beings,” she said. “Otherwise we might as well just build drones.”

Stein took a sip of water, looking at her for a few long seconds. “Interesting. I wouldn’t have expected you to be sentimental about the topic. You would equate a natural-born human with one grown in a tank?”

“If there wasn’t a difference, then yes,” Saudia said. “I don’t see a reason not to.”

“Aside from the fact that one was born as the result of a mother and father, and another was grown like a plant?” Stein countered. “The differences may be hidden, but arguing that clones are the same as actual people is not correct in the slightest. And really Saudia, what is the point of growing an entire army if not to save Human lives? Because when it comes down to it, if given the choice between saving a Human and saving a clone, we save the Human every time. That is what I, and most other people would do. Good on you for giving them consideration, but we both know a clone army would ultimately be a means to an end.”

“Obviously,” Saudia said. “However, that doesn’t mean we have to be frivolous about it.”

“Of course not,” Stein nodded. “Another resource to be managed correctly. However, I’m more interested in where the PRIEST Program is going. In fact, I have a request.”

Saudia waited. “Go on.”

“I want some psions of my own,” Stein said, resting her arms on the table. “And I want to install them as justices. After we develop a stronger means of conditioning beyond a bomb in their head, of course.”

“Judges, you mean?” Saudia asked. “You want psions as judges?”

“Both are interchangeable, you understand the request,” Stein sighed exasperatedly. “I’ve been thinking about this quite a bit. We’re ultimately relying on the same standards of trial and judgement as we always have, and that works very well for some cases. Much of my work removing these troublesome dissidents is a simple matter of recovering evidence from their phones or internet posts, and passing judgement.”
She took a breath. “But it’s not perfect. Forensic evidence has its own set of problems, even if it is useful, and there are far too many cases everyday where it’s a matter of one person’s word against another, and then throwing the biases of a judge or jury into it.”

“We don’t have juries anymore,” Saudia reminded her.

“The point is that there are too many instances where criminals walk free because there isn’t enough evidence,” Stein said. “Or worse, are wrongly convicted. The PRIEST Program can get rid of the uncertainty once and for all. No more unanswered questions. No more wrongful convictions. No more criminals walking free. Only clear and undisputed justice.”

She took another long sip of water, then refocused on Saudia, her eyes intense. “I am personally quite sick of people deriding my work just because I do my fucking job. ‘I’m too harsh on protesters,’ ‘I’m a violent sadist who gets off on shooting people,’ ‘I’m only your loyal attack dog getting rid of your enemies,’ I can deal with all that idiotic crap, but what I hate is when people say I’m deliberately throwing innocent people in jail, or doing it for no reason at all.”

Her hand around her glass was clenched so tight Saudia wondered if she’d break it. “I want to silence those insults once and for all,” she growled. “Let the psions judge the accused, and there will be no disputing what is true or false. Kyong was right when we spoke; I need to do more to change the minds of people. I have enemies who will never change, but I should do what I can to ensure that people who are watching know all I’m doing is my job. If there are people who have been wrongly convicted, I want them freed, and then I want to go after the people who’ve eluded justice for decades. This time they won’t escape it.”

Saudia was silent for a few moments. “If there were some way to ensure the psion couldn’t lie, then I agree with this. But not before that.”

“Understandable,” Stein nodded. “That’s all I wanted to hear. But if the numbers you were giving on the PRIEST Program are anything close to what you were describing…not developing any kind of Manchurian Program or similar conditioning will backfire. We both know how powerful they could be, and we should risk it on this scale.”

“I agree,” Saudia said. “But for now we have to take every advantage we got.”

“Well, the future doesn’t look quite as grim,” Stein commented. “The question is what the aliens have been doing in the meantime.”

“Hopefully nothing important,” Saudia said. “But I somehow don’t think we’re going to be that lucky.”

Stein’s lips were set in a faint grin. “There isn’t luck in war, Chancellor, there is only intelligence and strategy. And I think in that respect, we can match them.”

“I suppose we’ll find out soon,” Saudia said, looking out to where Peacekeepers were patrolling. “It is only a matter of time before the storm breaks again.”
The long line of ADVENT vehicles and soldiers made for what Betos would call an intimidating sight. She was certain there were people who thought that they were being invaded by some hostile military, which was why she’d mostly plotted their path mostly along less-traveled routes. Although they were now getting close to the capital, so she’d had the majority of her soldiers set up a camp near Sarkin Pawa, which was one of the more desolate places in Nigeria.

It wouldn’t be permanent, but it would suffice long enough for her to have a proper talk with the President of Nigeria. She didn’t think it would look that good for her to march into their capital with an entire army behind her.

So she was instead just taking a few of her officers, Mox included, in full armor, since she wasn’t going to be stupid about this.

Mox had assured her that she would be safe, but she didn’t see a reason to take chances. She did believe Mox, but the President was only one person, and she could imagine that there might be some of his advisors who wouldn’t be thrilled with her showing up. Not that she could particularly blame them in this case, since she’d be suspicious too if a small army showed up with the so-called intention to help.

“How do you even know him?” Betos asked Mox as they drove to Abuja. “I never asked that.”

All of them had their helmets off, since it was far more comfortable without them on in the heat and humidity. Mox shrugged, his face not giving away what he was thinking. “Mutual acquaintance, he introduced us a while ago and we’ve kept in contact since. Nothing frequent mind you, and I wouldn’t call us ‘good friends’, but I know enough about him to say I trust him.”

“This acquaintance the same Mossad agent you joked about knowing?” Betos asked, amused. She’d always assumed he’d made that up, and it had been something of an inside joke between them for years, and she wouldn’t have been surprised to learn he did have someone like that he was friends with. Mox was very easy to talk to.

“What? No,” he chuckled. “He was from the Ministry of Foreign Affairs, nice guy, don’t know where he is now. I think he was transferred to a more sensitive position. But he knew quite a few important people.”

“And so…what?” Betos asked, looking out the window at the dry land. “You just write the President when you feel like it?”

“To some extent,” Mox explained. “But there was a reason I was usually chosen as an escort whenever Israel sent someone down to Nigeria. They knew I was a friend and thought that would improve relations. They asked me to keep that quiet, which is why I never told you.”

“Fair,” Betos shrugged. “Hopefully he’s…reasonable about this.”

“Oh, he’ll be perfectly happy to accept your help,” Mox said, then paused. “Although when he hears about your larger plan, this might not be as easy as we thought.”

“It never is,” Betos sighed. “I’m more concerned he’ll want to use whatever we provide him to strengthen his own position, or worse, turn it against his neighbors.”
“He won’t support that,” Mox disputed. “His cabinet? Different story. A problem that I didn’t properly consider is that some of these countries…well, they aren’t exactly friends. In fact, some of them hate each other.”

“We don’t need the people to accept each other right away,” Betos said. “But if the governments work together, then the rest of the details can be worked out. Even if they don’t like each other, it shouldn’t be difficult to show them that ADVENT is a much more present threat. Besides,” she tapped the pistol at her waist. “If that won’t get them to at least listen to us, then what we can offer them will.”

“That it will,” Mox nodded. “I wonder if ADVENT has already covered up what we did.”

Betos looked back out the window while she answered. “The few times we’ve got internet access, I didn’t see anything major. Very likely they’re keeping this quiet.”

“Typical,” Mox snorted.

“We expected as much,” Betos said. “Should we become more established, we can work on making ourselves impossible to ignore. The greater concern is ADVENT taking preemptive action. They won’t take long to figure out where we are.”

“They have to go down half the continent,” Mox pointed out as they turned onto another street. “No way are they getting that far without either the nations being aware, or fighting back. And I don’t think they want to perform another hostile military attack so soon after Canada.”

Betos shook her head. “I’m not worried about that. They aren’t idiots. If they’re smart, they’ll be using XCOM Intelligence to keep an eye on us. I think we’re too large to all suddenly turn up dead, but I wouldn’t put it past them to assassinate you or me. Or anyone important who associates with us.”

“Mhmm, true,” Mox grunted. “We need to set up your own protection service. It’s not like we’re going back alive, so assassination is a valid concern.”

“Or we need to establish a clear plan and chain of command if I die,” Betos countered. “If ADVENT wants to kill me…realistically, I don’t know how much we can do to stop them. I wasn’t Intelligence, so I don’t know their latest methods, but I was a Marshal. That isn’t something I can predict well, and we don’t have any former agents with us.”

“I don’t think ADVENT will be particularly creative if they want you dead,” Mox stated, wiping some sweat off his forehead. “They are legally permitted to kill any of us now. It’s not like they need plausible deniability.”

That raised some alarm bells in her head, because Mox was right. “If that is the case…why aren’t they doing anything?”

“My opinion?” Mox asked rhetorically. “They’re likely predicting your plan, and they want you to fail at it. Best case for them is that it fails and distracts the most powerful countries in Africa, and worst they hope you otherwise weaken them, as well as yourselves. Or it could be because they don’t see us as a threat.”

“We aren’t one,” Betos said warily. “Not yet. Even if by some miracle we unite the African countries in an actual military alliance, they still aren’t strong enough to hold out against ADVENT.”

“Yet,” Mox clarified. “And they don’t need to be. They just need to be strong enough to give
ADVENT pause. If Africa is too much trouble for them, then they’ll move on.”

“In an ideal world,” Betos nodded. “However, I don’t expect things to work out that easily.”

And they drove in silence the rest of the way to the capital, as Betos prepared for what would be the first diplomatic attempt of her life. Hopefully she wouldn’t screw it up.

***

Vitakar, En route to designated coordinates

From the moment Nartha had strapped himself into his speeder, he was certain someone was watching him. However, now that the Nulorian knew who he was, he would have been more surprised if they weren’t keeping tabs on him. There were no Zararch watching him, he was certain of that, having made sure to check and alter Zararch schedules as needed.

No, all they knew was that he was going to be investigating Nulorian activity in the Borelian Wastes. It would take him some time to get there, even with the speeder, but he knew he would make it on time.

Using the speeder was a bit conspicuous, since personal vehicles were rare, and most relied on the interconnected trains between and within cities. Personal vehicles were seen as unnecessary, and were usually only allowed for government workers. That had been one of the first shocking things about Earth, how it was more uncommon not to have a form of personal transportation.

Humans in general didn’t seem to be fans of such concepts. They did exist, especially in the cases of planes and cruise ships, but those were only ever used for long distances. Public transportation was an afterthought from what he’d seen. Well, with a few exceptions, namely Europe. But it wasn’t just owning a personal vehicle that was interesting to him, but how seriously some Humans took it.

Nartha liked his speeder. It was useful and got him places. But it was one of three models, different ones for different climates, and all of them were colored a dark gray. But some of the lengths Humans went to show off their vehicles, and the sheer amount of choice they had was amazing. He almost wished they could take some inspiration from the Humans and add some color to the speeders. It couldn’t hurt.

He looked over at his GPS which showed him approaching the coordinates. It was going to be right on the Borial Strait, which led into the Manda, the ocean that surrounded the entire continent, and home of the Sar’Manda Empire. Wonderful. Hopefully the Nulorian knew better than to encroach on Sar’Manda territory, although technically the entire ocean was Sar’Manda territory.

In theory.

Nartha had always found the Sar’Manda both curious, and extremely annoying. The way they had evolved was so different from any other race, it was virtually an alien species all to itself. Their way of life, technology, food, clothing; almost every aspect of their society was alien, even to other Vitakara. They became annoying when it was apparent that they didn’t care about anyone but themselves.

He was pretty sure the only reason they joined the Aui’Vitakar was because of some obligation, which they never did anything more than the bare minimum. If it didn’t affect the Empire, they abstained, and if it affected the Empire negatively, they usually ignored it. Because really, how could you regulate an Empire that is completely underwater?
So the end result was that the Sar’Manda never really did anything, and the rest of the races ignored them, and everyone was fine with it. But it was still irritating to deal with them, especially when they refused to use translators. Even the Oyariah at least participated in government, even if they were Ethereal puppets.

He shook his head. He wasn’t quite sure where that tangent had come from, but it did make him realize that the Sar’Manda would be rather useful if he hoped to turn the Vitakara against the Ethereals. Unfortunately, he wasn’t even sure they’d care. To his knowledge, they had never actually hosted an Ethereal in their Empire.

But that was a problem for another day.

“Arriving at destination,” the metallic voice stated as he pulled up to the edge of the Strait. “Disembark when ready.”

“Here we go,” he muttered to himself and popped open the hood with a hiss, then winced as the freezing air washed over him. He stepped out into the snow and took a few deep breaths; acclimating to the new climate. He was bundled well, but even without it, Vitakarians were very difficult to kill with extreme weather alone.

Adaptability truly was a gift.

It appeared the Nulorian hadn’t shown up yet, so he rested against the speeder and looked around the so-called “Wastes”. That pretty much translated to endless dunes of snow, not so much ‘wastes’ as the traditional word implied. It was beautiful though, especially from the moonlight shining down on it, giving it a sparkling quality.

The water in the Strait rushed noisily along, fairly rough for a river, but Nartha knew that it could be easily navigated with proper naval equipment. Then the water suddenly bubbled and a submarine emerged.

Nartha drew his weapon; eyeing the submarine warily. It definitely looked to be Sar’Manda, since they were the only ones who put any effort into naval tech, and this was not a commercial sub, but one used for personal use, or small groups. Given the circumstances, he supposed that the Nulorian had stolen one and were using it in their own operations.

A new thought struck him.

Maybe the reason the Zararch had never been able to track down the Nulorian was because their main base was only accessible by submarine. Which begged the question…how had they acquired it? Sar’Manda were notoriously hostile towards outsiders, and he couldn’t imagine something like this would be ignored by them…unless they’d struck a deal?

Nartha snorted at that, even as he kept his weapon up. It would definitely be like the Sar’Manda to ignore a terrorist organization if they promised not to harm the Empire. It would fall within their expected behaviors. The ‘roof’ of the torpedo-shaped submarine slid down and three figures stepped out.

Two were Vitakarians, both bundled and helmeted with stolen Runianarch gear, painted with the glyph of the Nulorian, and there were other writings in Ethereal script that roughly translated to defiant, defender, and a phrase that roughly translated to bane of the puppets. Very melodramatic, and what he expected from such groups.

Although the armor of the other one simply had numbers, which he didn’t know if they were kill
counts or something else. The final figure was a Borelian, also kitted out in stolen Runianarch gear. However, the leader appeared to be the one with the numbers on his armor. The figure gestured and the other two raised their plasma weapons. Nartha didn’t lower his own.

“You are Zar’nartha’inha?” The figure asked in an altered voice, albeit clearly male.

Nartha gave a single nod. “Yes.”

“You wanted to meet with us.” It was a statement, not a question.

“I suppose you did as well,” he answered back. “Else you wouldn’t be here.” Nartha motioned towards the sub. “Interesting piece of equipment you have. Sar’Manda wouldn’t give that up easily.”

“Most aren’t willing to give up what they own easily,” he answered back neutrally. “We don’t have issues taking from the puppets.”

Well, maybe the Nulorian were brazen enough to steal Sar’Manda equipment and get away with it. “You know why I’m here,” he continued. “Are you still interested in what I have to say?”

The leader motioned to the other Vitakarian who pulled out a kind of scanner and began approaching his speeder. “You’ve surprised us,” the leader said. “Yet we also know you turned over valuable assets while preserving others. You may be genuine, but your methods have cost us.”

“I am in the Zararch,” Nartha reminded him easily. “It is unfortunate I had to turn over your allies, but I have to ensure my own treason is not discovered. If you noticed, I preserved the more useful ones for you.”

“Asset classification is not up to you,” the leader continued. “But there are considerations that have to be acknowledged. We are acting under the assumption that you will prove more valuable than them.” There was a pause. “If that is not the case, we will be...disappointed.”

Nartha gave a single nod. “Understood. Are we going to have this discussion here?”

“No,” the leader said. “But before we leave, we need to confirm you are not bugged or otherwise compromised. I would request you leave your weapon as well.”

“No,” Nartha warned. “I am well aware of your reputation, and going wherever you are taking me unarmed is not something I will do.”

The Nulorian leader eyed him for a moment. “Then understand that any sudden movements will lead to your immediate termination. We do not take chances, especially with traitor Zararch agents.”

“Forgive us for not trusting you yet,” the Borelian rumbled. “But I’m sure you can understand our hesitation.”

“I can,” Nartha agreed. “I don’t suppose you’d share your name?”

“That is not relevant,” the leader said unsurprisingly. It had been worth a shot. “The less you know, the better. If in fact you are genuine, that doesn’t mean you will elude the Zararch forever. No one can withstand Sectoid psionic reading.”

Another fair point. Nartha glanced backwards to the other Nulorian. “You’re not going to find anything.”
“I’ll be the judge of that,” the female Nulorian said as she continued. “But I doubt you’d be stupid enough to try and trick us.”

“Stay and watch if anyone has followed him,” the leader ordered her. “Nartha, come with us.” They waved him toward the sub which had just enough room for one person per seat, and it was four seats long. They were larger than would likely be needed, but he could imagine the Borelian was thankful for the extra size.

“Second seat, mind the gap,” the leader said as he stepped into the pilot seat and began powering the haptic display. “Strap in. Submarine travel isn’t as smooth as you’re imagining.”

“Largely because of your driving,” the Borelian commented dryly. Nartha almost started at a Borelian of all things making a joke. He shook his head in disbelief and stepped into the seat and strapped in. “No hard feelings Nartha, but I’ll be holding a gun to your head the entire time,” the Borelian said as she took the seat behind him. “No hard feelings.”

Nartha just sighed and accepted that this was going to be an interesting ride. Joking Borelians and nameless Nulorian leaders who were bad submarine drivers. Whatever happened, he was looking forward to actually seeing how the Nulorian operated.

***

Argentina

Seasons were really strange in Argentina. Volk had been surprised to find that it was almost entirely flipped from the United States, or pretty much North America entirely. Winter was Summer, and Fall was Spring, and even then it varied depending on where exactly in Argentina you were. Being in the middle of the country, the climate wasn’t…bad, especially since it was mild in the traditionally “fall” months.

Not that it really made a difference to him. The climate didn’t matter, he and his people could survive it.

Didn’t mean he couldn’t have preferences.

Most people would, before a meeting with a fairly influential government, do some kind of preparation. Maybe dress up a bit, review the material that would likely be discussed, or leave a few minutes early. And had this been a meeting he considered actually important, then he might do that as well.

But Volk knew exactly how this was going to go. Government rep (he didn’t care enough to learn the name; didn’t matter anyway) would review what they did, he would agree, they would say ‘thank you, here is your next list of targets’ he would accept, take the equipment they brought as payment, and leave. Rinse and repeat.

Or more unlikely, they would just terminate their contract and he was on his own.

Volk did not personally care if the Argentinians wanted to work with him or not. If they did, great, if not, then it wasn’t as though there was a shortage of work. Elena regularly brought at least a dozen letters every week from people requesting help, and if one seemed like a worthy cause, he’d send one of his people to extract them.

Barack managed all incoming messages, and Volk was happy to let him do the advertising/moderating. He had helped set up the initial points of contact, but over the past five years it had gotten much larger than he’d expected. Generally, most people were respectful of his
time and only tried contacting if they were in mortal danger. Then there were the idiots who thought that being censored on the internet was equivalent to being held in prison for writing an expose on a powerful government official.

Whatever, the point was he was never short on work, and with ADVENT on the rise, business would definitely not slow down.

He set the book he was reading down on his lap as he mused on the state of the world now. ADVENT became more and more odd the more he looked into it. It was a strange juxtaposition of differing countries and cultures trying to form a unified front. There were places where people were treated badly like all Brazil under the lunatic Luana, and then there was the Middle East, which, from the accounts he had gotten, was potentially worse.

And on the other hand, the other countries with established democracies like the United States were…he had to admit, not exactly what he would call ‘problematic’. The only issue was that ADVENT had shown a clear willingness to use their power to shut down those who stood against them, and Brazil, the Middle East, and Canada were proof that no matter how reasonable ADVENT presented themselves, they were ultimately ruthless and merciless to those they disagreed with.

Well, he wasn’t going to bring it crashing down, but he’d do his part to help out the people affected by them. And if he got paid for it, that was just a nice bonus.

He heard a couple people walking towards him and looked up to see Elena and Ali, one of his best operatives, walking up. Both were fully armed and armored, filtering masks strapped to their waists. “Good book?” Ali asked rhetorically. He’d never thought Volk’s habit of reading was a particularly good usage of time, and made sure to rib him about it whenever it came up.

Not that Volk cared that much. Reading was one of the few things he enjoyed, and if someone didn’t like it, then that was just too bad. He was entitled to some entertainment now and again. “It isn’t bad,” he asked, holding it up. “Thought it was rather topical.”

Ali snorted once he saw the cover. “War of the Worlds. Ha ha, very funny.”

“Keep your sarcasm,” Volk chuckled, bookmarking his spot and standing. “I like it.”

He’d gone on something of a science fiction-alien invasion binge lately for obvious reasons. It amused him quite a lot to read about how different people imagined aliens would be. All of them were mostly wrong, but that was to be expected. Some were closer than others in descriptions, some were even more alien than the real ones.

Volk wondered if any aliens had actually read any books of the genre, or watched any movies for that matter. The mental image of one of those Sectoids watching Independence Day and taking notes about what not to do was one he found especially funny. It was nice reading about how the Humans managed to find the one weakness of the alien, or otherwise defeated them with Human ingenuity.

Unfortunate that was likely not going to happen in the real world. He was certain ADVENT would try their best though, and he would certainly watch with interest.

“Anyway, we’re ready to go,” Ali said, bringing him back to reality. “Don’t want to keep the suits waiting.”

“It won’t kill them to wait a few minutes,” Volk said, slinging his own rifle over his shoulder. “But
they are paying clients, so best stay on good terms. Let’s go.”

***

Vitakar, Unknown

The Borelian had been right. Or maybe all submarine trips were like that. Either way, the pilot had driven like what appeared to be like a madman, but what Nartha suspected was an attempt to completely disorient him. Spinning, complete reversals of direction, sudden plunges and rises, it was a good thing he didn’t get sick from this.

If disorientation had actually been the goal, it had succeeded without question. Nartha had absolutely no idea where they were, and were now rising into what appeared to be a cave.

“Up and out,” the leader said, as the top opened up and cool air rushed in. So likely still in Borelia somewhere. Definitely a natural cave, which was currently kitted out with elerium-powered lights, caches of non-perishable food and a lot of weapon caches. Not just knockoffs either, but genuine Runianarch plasma rifles.

The Nulorian should not have had this much high-end equipment.

There were more Nulorian in the cave itself, mostly Vitakarian, but there were a few Borelians in the mix as well, all of them either had weapons pointed at him, or were eyeing him suspiciously. Nartha figured the only reason he hadn’t seen different races was because of the climate. It was a documented fact that there was at least one person of every race, with the exception of the Sar’Manda, who was at one point Nulorian. Oyariah were almost unheard of, and the climate here was bad for Dath’Haram and Cembrarian. They likely occupied warmer bases.

“So, where to?” Nartha asked lightly as the leader walked forward, and the Borelian gestured for him to follow.

“Just follow me,” was all the leader said as they walked into a stony corridor. “You’ll talk to one of the Nularis, leaders of our cells. Don’t bother asking for names again, he won’t give you his.”

“Not that you’ll need it,” the Borelian said behind him. “You’re getting to speak to him. Be grateful we aren’t just interrogating you.”

Nartha sniffed. “It would be a pointless interrogation, and you’d be fools to assume I don’t have something in mind should you betray me.”

“Typical Zararch,” the leader muttered as the corridor turned. “That is a reason, yes, but you wouldn’t be the first Zararch agent I’ve killed.”

It appeared this was somewhat personal then. Fair enough. Nartha was somewhat disappointed he wasn’t actually meeting Miridian, the infamous leader of the Nulorian, but he wasn’t surprised. He assumed that should this go well, and he continued helping the Nulorian, he’d meet him eventually. But for now, one of these Nularis would suffice.

“In there,” the leader said, stopping to unlock a metal door. “Take as much time as you need.”

“Thank you,” Nartha said and stepped into the room.

It was much dimmer than the well-lit corridor, with only a few light posts in the small room. In roughly the center was a massive figure sitting at a beautifully carved Dath’Haram treetable, reading something on a haptic pad.
An Oyariah.

Well, this was certainly interesting. He wasn’t entirely shocked they existed in the Nulorian, but one in a relative position of power was an unexpected twist to this operation. No wonder the other Nulorian had felt comfortable leaving him in here alone. Oyariah were almost impossible to kill without specialized equipment, and his plasma rifle wouldn’t be powerful enough on its own to kill him.

Oyariah themselves had always been an intimidating race, even though their numbers were much smaller. They towered over every other race by several heads, even their smallest ones were eight feet high in Human measurements. But that wasn’t what made them dangerous.

The race itself had armor for skin. Nartha wasn’t completely sure of the biology behind it, but Oyariah had a simple weak layer of skin like most, and over time they would go through a scaling process which eventually hardened to something resembling stone. Over a period of years they would eventually grow what essentially amounted to their own suit of armor.

Most Oyariah, once the armor reached a certain point, began maintaining it more strictly. It wasn’t uncommon for them to sculpt their bodies into different patterns and styles. Some opted to only have what amounted to light armor, while others allowed their bodies to be as difficult to kill as possible.

But what most people found unnerving about the Oyariah were their faces. Or more specifically, the lack thereof.

Every part of their body grew armor, and their faces were no exception. Because of this, and due to evolving in underground caves, and facing the monstrous animals that dwelled down there, the senses of Oyariah were the best of any race, although they were naturally blind. Their eyes still existed, but had they not surfaced and joined the Aui’Vitakar, it was entirely possible they would have lost them altogether.

Since sight wasn’t needed in their underground cities, most Oyariah simply let the armor cover their eyes, permanently blinding them. Their mouths functioned mostly the same as the other races, but like the rest of their bodies, they had to carefully maintain the armor growth if they wanted to use it properly, else it would cover the mouth.

There were some Oyariah that let this happen, especially the Runianarch Titans, who instead took nutrient injections in place of actual food. It offered great protection, but there was a high price to pay.

This Oyariah had his mouth visible, as well as the eyes which were a silky white, although the armor around those parts was delicately designed to what appeared to be overlapping layers and Oyariah Hieroglyphs cut into the cheeks. Genetic engineering made it possible for Oyariah to see, and it was one of the few genetic procedures that was still allowed on Vitakar, and almost all Oyariah who visited the surface underwent it.

Including Nulorian, it seemed.

“You are Nartha,” the Oyariah rumbled in a gravelly voice. “The Zararch agent who has supposedly turned against the puppets.”

Nartha gave a single nod. “That is correct.”

The Oyariah set down the haptic pad to look at him fully. He stared for a long enough time that
Nartha was wondering if he was waiting for something. “Vitakarian. Recent genetic tampering. You were on Earth.”

Another nod. “I believe I mentioned this.”

“Zararch agents lie,” the Oyariah growled. “You could have made that up. You can forge documents with us none the wiser. You have resources we don’t. I do not trust without proof, and now I have it.”

Nartha crossed his arms. “And how did you determine that?”

The Oyariah pointed. “You still bear the smell of a species that I have never encountered. Your body reeks of the chemicals of genetic modification. The Zararch were attempting to replicate human likenesses. I know this. You were one of them. You were turned into an infiltrator, then you reverted to your natural form. The appearances change, but your body chemistry is forever altered.”

The Oyariah drew in a nasally breath. “It is not surprising you are unfamiliar with the capabilities of my race, but you are not a liar. Not yet. We shall continue.”

Nartha took a few steps forward. “I assume you acquired the contents of what I wanted delivered to you.”

“Yes.” The Oyariah stated, resting his thick black-armored hands on the treetable. “I was skeptical. But I cannot prove what you provided is not genuine; and if it is, that is something we can exploit. If the Elders can die to these primitive Humans, then they can die to us.”

“Whatever the Humans are, they are not primitive,” Nartha shook his head. “The Ethereals made that mistake, and now one of them is dead. They are fighting when they should have died. Underestimating Humanity is a mistake, and they are the reason I am here to begin with.”

“So you say,” the Oyariah said, the black skin armor seeming to absorb all light in the room. “The Humans do not matter now. They cannot affect Vitakar, and until they can, their accomplishments are pointless to us. Let them fight the Elders and die. I did not approve your visit to discuss what the Humans can do for us, but what you can.”

Nartha couldn’t entirely blame the Nulorian for dismissing the Humans right away. Right now there wasn’t anything that could be done. However, once the Humans figured out Gateways, that would be a different story. “Fair enough…Nularis,” he said, deciding a title was better than no name at all. “You know where I am placed, and I can help you.”

“You are ruthless with my contacts, but you do possess some tactical insight,” the Oyariah growled, standing. “Despite systematically dismantling our operations in Intha, you did preserve our most useful assets, if not coopted them. Some of my brethren do not approve, but we all have roles to play. You have proven so far your intentions are genuine, so I am willing to entertain what you can do.”

“You would depend on what you want,” Nartha said slowly. “I cannot predict where I will be sent next, but I can make impacts in other ways. Dropped Zararch interest. Vulnerable equipment shipments. Recruitment. What exactly do you envision for a Zararch mole?”

The Oyariah stared down at him intensely. “I want you to damage the Collective and the puppets that rule it. Kill, sabotage, or otherwise disrupt the war machine of the Collective. You will not ever be one of us, but that does not mean you cannot help us accomplish our objective, and we need to spread.”
“To the colonies,” Nartha said. “Desolan. The science facilities.”

“A means to an end,” the Oyariah dismissed. “Yes, but those places are irrelevant, with the possible exception of Desolan. The only damage is to hit the military. The Lurainian. The Runianarch. The Zararch. We need our people in there. That is how you can help us.”

Nartha considered a few moments. “Understand that I can’t just allow large quantities, nor do it often,” he warned. “It would draw attention. It is possible, but be realistic about the-“

“I do not require dozens of operatives,” the massive stone-covered figure rumbled. “One or two will suffice for now. Provided you follow through, of course.”

“As for colonies…” Nartha paused. “That might be easier. I have a contact in the Aui’Vitakar who would likely take care of the…more legal aspects. If one or two were to be added, that could be arranged.”

The Oyariah turned his head slightly. “I don’t suppose you’d share who this is?”

“She is in the Cembrarian Hierarchy,” Nartha said simply. “That is all you need to know.”

“Good,” the Oyariah sat back down. “I don’t care how you do it, only that it gets done. Our communication is established, and we will continue with it until notified otherwise.”

This was going much smoother than he’d anticipated. Excellent. “Then that will be all. I expect I will be recalled soon. And as a final warning, I would abandon this location, as I will be including the ‘clear remnants of a Nulorian base’ in my report.”

“Anticipated,” the Oyariah stated bluntly. “We will be gone. Understand this, Nartha, whatever goals you have for working with us, they are not the same as ours. You may wish to inspire us to fight for some ideal of freedom, but none of us care about that. All that matters is that we kill as many of the puppets as possible. That is our goal, nothing more.”

Nartha pursed his lips. “I’m aware of your methods. But I hope you see that can change.”

“That is a discussion for the future,” the Oyariah said, picking up the haptic pad again. “But I am not optimistic. Fare well, Zar’narthath’inha, may the Elders rot in the void.”

On that clear dismissal, Nartha turned and left. The Nulorian would be a useful blunt instrument to wield against the Collective to destroy the worst aspects of it, and weaken it overall. However, that wasn’t going to be the goal of his mission. It was something that could be achieved; he just had to work hard to realize it.

Besides, if the Nulorian didn’t come around, there were plenty of others that would.

***

Nigeria, Abuja

Betos was fairly sure that this was the largest city in the entire country, or at least the most sophisticated from a modern standpoint. It didn’t seem too different from some of the cities in Israel, not even taking into account the various European and American cities. Still, at least here it wasn’t the third world country she had feared. Good.

And right now she was being escorted by the Nigerian Armed Forces to meet President Ndulue Okon, with Mox at her side. There was a decent amount of attention from the civilians who were
She frowned at that. While she could see why the President didn’t want this to be a major public event, that didn’t exactly give a good impression. Then again, ADVENT was surely watching local media...

No, ADVENT would know where she was. Trying to hide it was pointless. She’d have to bring this up with him once they met.

They entered the Presidential Villa which seemed to be a pleasant place just from the well-maintained landscaping and expensive furniture in the villa itself. The floors were tiled; a shiny tan for the color which their boots clacked on while they walked. Betos ignored most of the luxury, instead thinking about what was coming next.

Almost none of the soldiers had addressed them directly, except for the captain who had given instructions to follow. She wasn’t sure if they even understood English, but they had most certainly been taking second looks at their armor and weapons. “In here,” the captain said, stopping in front of two wooden double doors.

He opened them and Betos and Mox stepped into it, and were immediately greeted with a room that equaled the other ones in terms of luxury, with an abundance of the color white. The walls, tile, and most of the furniture was white, and bookshelves lined the walls, while in the center was a table prepared for three with the President standing and waiting for them.

He wasted no time. “Marshal Betos,” he greeted, stepping forward and extending a hand. “Welcome to my capital.”

Betos took the extended hand, getting a good look at the president. “A pleasure, President Odon.” He stood slightly taller than her, maybe six feet, had short graying hair, with a short beard to match. He wore some small-rimmed glasses as well, which gave him a more scholarly look than anything else.

He wore a standard black suit that contrasted sharply with the colors of the room. For that matter, all of them were in contrast to the color scheme. Well, not like they were trying to win any contests. “Mox,” he also greeted. “A pleasure to see you again.”

Mox inclined his head. “The feeling is mutual, Mr. President. I wish it were under better circumstances.”

“Indeed,” Okon nodded, motioning to the table. “However, this is the world we now live in. While we discuss this, I had food prepared so we can talk like civilized people.”

“Appreciated,” Betos said automatically. In truth she wasn’t really hungry, but no point in turning down a gesture of hospitality. They took their seats, her and Mox opposite each other, with President Okon in the middle. She looked at the dish before her. Some kind of steak she guessed, with a mixture of vegetables on the side. Not bad.

“I was surprised to hear from you, Mox,” Okon finally said as they tentatively ate. “Especially when you asked for what I can only assume is asylum.”

“Not asylum,” Mox immediately dismissed, shaking his head. “But a potential opportunity. You have been keeping track of the events in the world, I presume?”

Okon gave a grave nod. “It is troubling. Both the aliens and ADVENT.”
“And what is your opinion towards ADVENT?” Betos asked. “Do you foresee Nigeria joining?”

Okon gave a short laugh. “If that were the case, we would not be speaking. ADVENT is too...dangerous...for my tastes. For such a powerful organization to arise in such a short time...” he shook his head. “Whether this was planned ahead of time, or merely a coincidence is irrelevant. I will not willingly bend the knee to such an organization.”

Betos quietly set her fork down. “You would not be able to stop them.”

“No,” Okon admitted grimly. “That is unlikely. All that can be realistically hoped is for ADVENT to ignore us. We have our own problems here, and if we focus on them, we can hopefully avoid both the aliens or ADVENT.”

“You do not consider the aliens a threat?” Mox asked.

Okon took a sip of water. “Perhaps. I am more familiar with the aliens than you might expect. Nigeria was one of the countries to initially fund XCOM. However...XCOM was never completely on our side. By the end they were deliberately defying the sensible members of the overseeing body,” he paused, shaking his head. “The Commander of XCOM is not...someone who can or should be trusted. Seeing him have such influence in ADVENT is concerning.”

This was interesting. She and Mox exchanged glances. “Why?” Betos asked.

The President was silent for several moments. “I will not give details, Marshal, suffice to say I do not trust someone who would burn half of Earth if it meant defeating the aliens. Everything is expendable to him, and men like that in such positions are dangerous. Suffice to say I want nothing to do with him. Do not ask for more.”

His tone was even throughout, but Betos was fairly certain he was actually afraid of the Commander of XCOM.

Why?

He was ruthless, for certain, but that was not much different from quite a few people in ADVENT. What made him so much worse?

Either way, it sounded like that was a big reason why the President was so leery of ADVENT. Curious, but something she could look into later. “ADVENT wants to unite the world under their rule,” Betos said, changing topics. “It might not be now, it might not even be until the war is concluded, but they will try and see this accomplished. If nothing is done, that will happen to not just Nigeria, but Africa itself.”

Okon looked skeptical. “Unlikely. It would be far too much trouble than it is worth.”

“No, Mr. President, it would not,” Betos disputed calmly. “ADVENT captured the Middle East in roughly a day. Do you really think taking a continent would be something impossible for them?”

“China perhaps has the right idea,” Okon said. “Stay out of their way, and they will overlook us. I do hope you are not suggesting we fight them?”

“Oh course not,” Betos shook her head. “That would be suicidal. No, the only reason they do not want China now is because they would be too troublesome to properly deal with, especially during the alien invasion. And the more important reason is because China is large.”

“Size didn’t stop Canada,” Okon noted.
“There were some additional factors,” Mox chimed in. “Namely that the military betrayed the government to help ADVENT. Had that not happened, they would not have annexed the country so easily.”

Okon looked at her, his eyebrow raised. “You have an idea, Marshal?”

“If you wish to preserve any sort of autonomy, you need to establish yourself as a continental power like China has,” Betos began. “You, to be honest, are too small for ADVENT to consider any kind of threat, let alone a diplomatic power. But if several of the countries were to unite under one unified alliance, that would be a different story.”

Okon stared at her in what she could only describe as disbelief. “You want to unite the African nations?”

“That is the simple explanation,” Betos confirmed with a nod. “Not the non-binding alliance you have now. An actual military and economic alliance. It is the only thing ADVENT would recognize.”

“You would have us ally with Sudan, Libya, and Congo?” He asked in shock. “And be as equals?”

“Ideally,” Betos nodded. “It’s-

“I do not believe you know what you are saying,” Okon said, his tone suddenly cold. “It is one thing to maintain diplomatic relations with these countries. That does not mean that they are worth allying with, let alone trusting.”

“Betos meant no offense,” Mox quickly interjected. “And it doesn’t necessarily mean that they would be equals per-se. This would need a leader, after all.”

No, Betos thought, that’s not how this should work. But she held her tongue since she had badly underestimated just how strongly the President felt on the idea. “I did not mean to insult you,” she said carefully. “But please look at this from a logical standpoint. Trust is not required yet, but even if it is tenuous, it will send a signal to ADVENT that they can’t do whatever they please without consequences.”

Okon took an audible breath. “You are excused this time, Marshal, but do not suggest again such a notion that they would be of equal importance to us. The more important question right now is what you can offer us. If I am to…support…such an idea, with us dictating the terms, then we will need something from you.”

Betos carefully and slowly set her pistol on the table. “We have the schematics to develop the gauss weaponry ADVENT uses. If it could be mass-produced, your army has the means to potentially equal ADVENT’s own. It would give them more pause than conventional weaponry. In addition, you’ll have the support of my own soldiers.”

“I see,” the President said, his original calm returning. “Quite an offer. One no one else would have here.”

Betos was not exactly reassured by that phrasing. “I assume that this weaponry we are gifting you would be used responsibly,” she said neutrally. “It should be as a deterrent to ADVENT, as well as any other threats.”

“Of course,” the President said quickly. “We would not want to emulate ADVENT, would we?”

“We would need a more permanent location to stay,” Betos continued. “But we would help
construct it, of course, as well as training your own forces on ADVENT tactics.”

“I believe I can permit this,” President Okon nodded. “But you must first prove what you say is true. Once we have the schematics, you and your soldiers will be relocated to a more suitable location.”

She wasn’t comfortable with the deal hinging on if she was willing to give him the weapons. That was not her goal, but it seemed to be what he was focusing on. Perhaps wisely, since it would provide an effective deterrent to ADVENT.

And in the end, there wasn’t much of a choice if she wanted this to work. “Done.”

He gave a broad smile. “Excellent! I very much look forward to working together, Marshal Betos. I have a feeling that we will bring great change to the continent. In the interest of cooperation, of course.”

As they shook once on the deal, Betos couldn’t decide if the President was mocking her or not, but either way she couldn’t help but feel this was not going to turn out as well as she was hoping. But she was committed now, and would do her best to make this work.

Vitakar, Intha Zararch Base

“For your time off, you certainly accomplished a lot,” the hologram of the Zar’Chon said as he addressed Nartha from the Communication Room of the Zararch base. This was one area where there was no question of which species had the better technology. Humans still hadn’t mastered or really even completely figured out having simultaneous worldwide communications in a realistic fashion.

Vitakara communication rooms were essentially a small circular radius with a holoprojector above, which could be configured for haptic displays as well, although that wasn’t needed as much. The holograms themselves were nearly photorealistic, with the figures only having a faint shimmering outline that you had to intentionally look for to truly notice.

He might have to see about getting this to XCOM. They could probably use it.

“Thank you,” he answered the Zar’Chon, inclining his head. “The Nulorian presence in Intha should be crippled for the foreseeable future.”

“They have spread farther than I am comfortable with,” the Zar’Chon muttered, looking at the hololist displayed from his prosthetic limb. “Nearly a half of one percent of the population of Intha was suspected Nulorian, and three quarters of them actually were. Unacceptable. We will need to take steps.”

Nartha internally winced. That was not good, but the Nulorian had to be expecting it with how they were becoming more brazen and recruiting more people. At some point the Zararch were going to come down on them hard. And unfortunately, he wouldn’t be there every time. However, he was curious if the Zar’Chon knew anything he didn’t. “Based on what I’ve found, the Nulorian are getting prime weapon models smuggled to them,” he said. “That shouldn’t be possible. Every weapons shipment is checked. And given the hideout I found, they also have submarine tech, which has the same sort of restrictions. Even more so since all commercial submarines are from the Sar’Manda Empire.”

“The Sar’Manda are being questioned now,” the Zar’Chon said coolly. “They did appear to have
notified us that one of their submarines were stolen.”

Nartha frowned. “And we never acted.”

“No, we did,” the Zar’Chon said slowly. “We recovered the sub. However, perhaps they forgot to inform us of a second one.”

“Or that hideout was older than I thought,” Nartha noted. “It is not like the Sar’Manda to lie.”

“No, it isn’t,” the Zar’Chon agreed with a nod, his eyes seeming to grow brighter. “Regardless, that is not your concern. The Nulorian are not a major concern at this moment, and they will likely not become one. Your job here is done.”

“Understood,” Nartha nodded. “What is my next assignment?”

The Zar’Chon glanced down at the hololist projecting from his hand. “We have a potential problem on Desolan. There have been several instances where Muton Berserkers have died due to unexplained chemical overdoses. This would not normally be a problem, except that is has been happening every day for the past two weeks. This indicates this was a staggered attack, as well as sophisticated.”

Nartha thought for a moment. “The number of people who both have access to chemicals of that potency as well as the knowledge to apply them can’t be high.”

“Desolan is home to nearly a billion non-Mutons,” the Zar’Chon reminded him. “Not including the ones in orbital stations. The list is exhaustive, which is why you will only be tasked with a specific list. I have multiple Zararch agents who are going to take other parts. I don’t know if this is a larger or coordinated effort, but it needs to be stopped.”

Wonderful. Well, he had a clear objective, one to possibly subvert, but to do so he would have a suspect list that would likely number in the thousands, and also be working against dozens of other Zararch agents. That was going to be a daunting task, but he kept a straight face. “I’ll head there immediately. Is there anything else?”

“Yes,” the Zar’Chon nodded gravely. “This Berserker incident is unfortunate, but one which doesn’t hurt our output. The larger concern is that there are entire groups of young Mutons who have disappeared. This has been happening over the past year, and is subtle enough that we haven’t been asked to look into it until recently.”

Nartha blinked. “How do entire groups just disappear?”

“Mutan development is not a well-documented ordeal,” the Zar’Chon said emotionlessly. “Many Mutons die before reaching a useful stage. Most bodies are accounted for, but in general no one cares if some are left unknown. This was all well and good until we realized that there have been as many as fifty-thousand to one-hundred thousand Mutons that are not accounted for.”

Now that was interesting. Barely a drop in the Muton war machine, but it was still a significant amount. “My point still stands,” Nartha repeated. “If even a fraction of those are legitimately unaccounted for, there is no way they could be hidden easily. The entire planet is War Camps if I recall correctly.”

There was a brief pause. “That is what I want you to find out,” the Zar’Chon said. “I suspect that there are sometraitors in the ranks. Running the camps isn’t glamorous, but it is necessary. Unfortunately, there are some who don’t believe the treatment of them is humane and might be ‘liberating’ them as a form of penance.”
Nartha was not familiar with the Muton situation, but he found it somewhat hard to believe that. Mutons were barely sapient, and while conditions might not be ideal, risking both their life and position to help them seemed preposterous. Perhaps there was something to this he wasn’t seeing. Mutons were a weapon, and if he could locate the ones behind this, a Muton army that size would come in handy.

Assuming of course, he actually could find these people while keeping the Zar’Chon happy. But that was a problem he could puzzle out later. “I’ll find these traitors,” he promised. “Do you want me to prioritize this issue, or the Berserker one?”

“The Muton disappearances are more pressing,” the Zar’Chon said. “Focus on that, although do some investigation into the Berserker overdoses as well.”

“Acknowledged and understood,” Nartha nodded. “I’ll head there now.”

“Good luck,” the Zar’Chon said, and promptly severed the connection, leaving Nartha alone in the room.

He’d wanted to ask about Earth, but figured that could be saved until next time. As he turned to leave, he began formulating potential plans as to solve these next problems. The Nulorian were certainly going to find this interesting, and he’d best keep them informed of his position. Maybe he could even help smuggle some agents to help assist with this.

The Nulorian could do a lot with a group of Mutons, and perhaps this rogue Vitakara poisoning Berserkers.

But it was going to be a lot more difficult than Vitakar. Time to get back to doing what he was good at.

***

Argentina, Undisclosed Location

Volk was continuously amused that no matter the situation, government types always had to be as conspicuous as possible when ‘acting officially’. He would personally have dressed in something a little less conspicuous if he was meeting a small group of assassins/terrorists, but no, they still showed up in their suits like the good mouthpieces they were.

To be fair, there was no one around the area. Volk had several of his people scouting the area to make sure no one was listening in, while the meeting itself took place in a small house which was falling apart. The smell of rot and decay permeated the house, but Volk had been in worse. The two suits before him clearly hated it though. He’d hate to see how they’d like living in the wilderness.

Nonetheless, they had fulfilled their end of the deal and two more of his people were loading the supplies into their own vehicles as they discussed the finer points of their arrangement. Volk only had Elena with him, because she was one of the few he trusted with his life; because she visibly unnerved the suits, especially with her mask and robotic demeanor; and most importantly, because she would know if they lied to him.

He really hated liars.

While he’d been summarizing their operations, Elena had her right hand placed directly on his shoulder, while the other held a pistol. While it was certainly a kind of public intimacy, it meant something much different to Elena. For whatever reason, that was their method of communication during these conversations. If either one of the suits lied, she’d let him know without making a
“So to sum up,” Volk finished. “We did our job, the Peacekeeper bases you wanted hit were and we didn’t take any casualties. All in a day’s work for us. Questions?”

The first suit rested his folded hands on the rotting table, looking intently at him. Of the two he looked the most normal, with darker skin and cropped black hair, even if he was looking a little too intently at him. “You and your people have performed well. We are pleased.”

“Wonderful,” Volk said without any joy. It was exactly what he’d expected. “So, you want us to do it again, or do you not need us anymore?”

The second and more conspicuous man narrowed his one good eye at him. “You seem awfully dismissive of a potential government funded opportunity.”

Volk snorted. “No offense, but I like spending my time wisely. Honestly, these briefings are pretty much telling you what you already know. You either like it or you don’t, and you’re happy. So we either keep it going, or we don’t. Simple.”

“We are satisfied,” the first suit reiterated. “And we wish to continue working with you. However, this next task will be slightly more challenging than the last.”

He pulled out a small map and placed it on the table. “How familiar are you with Uruguay?”

Volk frowned, looking on the map. “Never been there. Why?”

The second suit stared at him. “A question for you, as it relates to your skills. Could you launch an attack and make it appear as though it came from a specific country, but not be able to prove it?”

Volk cocked his head. Well, this was going to be a little different. “Frame a country? Quite likely, it isn’t hard.”

“Without being able to prove it definitively,” the second suit emphasized. “This little detail is important.”

Volk didn’t like it. “Again, I certainly have the capability, but I’ve never felt the need to do that.”

“Then this will be your first opportunity to put that to the test,” the first suit said. “We need you and your people to attack ADVENT, and subtly implicate Uruguay in doing so.”

Volk stared at them in disbelief. “And just why the fuck would I do that?”

The first suit frowned. “Good assassins generally don’t ask questions.”

Volk heaved a dramatic sigh. “I do a lot more than just kill people you know. Contrary to what you
like to believe, that isn’t the main purpose my little band of people exists. Yeah, sometimes my job involves killing people, but please, don’t pretend like you think I’m a damn assassin. So give me an actual reason or I’m done.”

The suits were clearly baffled, which he found unreasonably amusing. “This is a once-in-a-lifetime opportunity to work with us. Whatever your other clients, they cannot provide as much or as high quality as we can. You are a professional, and we are more than capable of paying professionals well. You would not walk away from this.”

“I don’t need you,” Volk said bluntly. “Yeah, your gear is nice and fancy, thanks for that, but please, don’t act like you’re the greatest thing since the toaster. Guess what? I was around before you guys found me, and I’m definitely not short on work. While I’m sure the idea of doing something just because it’s the decent Human thing to do eludes you, I don’t live by that same philosophy. I’m not in this for the damn payment, so promising it isn’t going to change my decision at all.”

He looked pointedly at the suits. “So, make up your minds. You going to tell me or not?”

They exchanged a look, clearly unhappy with how this was going, then the first suit sighed and began talking. “Argentina is currently in talks with several other South American nations, all of whom are concerned about ADVENT. Argentina wants to establish a continental alliance to maintain some level of autonomy in the future, since we’re certain ADVENT has their sights set on us.”

“Unfortunately, no country right now wants to risk dealing with ADVENT,” the second suit continued. “They are under the impression that if they stay quiet, they will evade ADVENT’s notice. It is a foolish and shortsighted decision, and so we are looking into ways to propel them to the table.”

“Marshal Luana is unstable, and highly reactionary,” the first suit said, a finger resting on Uruguay. “Her irrationality can be exploited, and if she can be provoked, say, to unjustly invade a small defenseless country…that might be enough to convince the holdouts that ADVENT doesn’t care if you follow their rules. If they think you’re a problem, they’ll take you out.”

Volk sat back. There was no pressure on his shoulder from Elena, so they were almost certainly telling the truth. The story made sense, and from a purely logical standpoint he could appreciate the tactic. It was brutal, targeted, and effective.

Very ADVENT-like.

“Interesting strategy,” he finally said. “You could have just said that from the beginning.” Volk then leaned forward, resting his arms on the table. “However, my answer remains the same. I could do what you ask, but I’m not going to.”

The face on the first suit hardened. “And why not?”

“Because, representative, I’m not in this for the same reasons you are,” Volk answered, his voice even. “Your government talks in terms of alliances, power dynamics, and practicality. I talk in terms of people, and there will be a lot of people hurt if ADVENT is provoked into invading another country. People are the first things taken out of consideration in decisions like this, so someone has to step up, and in this case it’s me.”

He took a breath. “I’m not going to intentionally bring ADVENT down on Uruguay just because you want it, no matter how justified you think you are. I think ADVENT is a problem, and worth
fighting, but not at the expense of the very people you claim to want to protect. Send us to hit some ADVENT Peacekeeper outposts near Uruguay if you want, that I can do. If ADVENT comes to that conclusion, then well, too bad. But my role is only going to be one of killing Peacekeepers. You get that?”

The first suit nodded. “A real god damn robin hood,” the second suit muttered under his breath.

Volk smiled at that; he was more altruistic than most, certainly, but he wouldn’t go that far. Still, he liked that nickname better than the melodramatic and childish ‘Grim Reaper’. Please, he was deserving of a much better nickname than that.

“Fine,” the first suit finally said, standing up. “Give us a couple days to put together a list of attack points as well as your compensation. No need for us to meet again; we will convey what we want through one of your contacts. Do not disappoint us.”

“Save your threatening insinuations,” Volk dismissed with a wave, which infuriated the second suit even more. “We’ll get the job done.”

The suits didn’t say another word, and left the building, leaving him and Elena alone. She took her hand off his shoulder and he glanced up at her with a smile. “I don’t think they like me very much.”

“I estimated there was a one in two hundred chance they wished to cause you harm,” she said calmly. “Had that number risen much further, I would have shot them.”

Volk chuckled. He still wasn’t sure if that was Elena’s version of a joke, or if she actually had calculations running in her head during all conversations like this. He definitely knew she would kill them without hesitation if she felt they posed a direct threat to his life. It was rather sweet, but he really hoped she was joking in this instance.

Well, he’d treat it as such until something actually happened. “Well,” Volk said as he stood and began walking out of the house. “I guess we should start looking at Peacekeeper outposts near Uruguay.”

***

Mars, Forward Observation Station

Ravarian was relaxing, which was quite different to what other people prescribed that word to. He considered relaxing as time for reflection on what had happened so far and what might happen in the future. Not even in the context of likely outcomes based on fact, but simple unfiltered and unfounded speculation. Highly unprofessional, but no one but Quisilia would ever know he was thinking it.

He sat on a comfortable chair which displayed a truly wonderful view of space, as he had his windows configured to an outside display. In the distance were the stars and the occasional moons of Mars. Every so often it would configure to a different set of cameras, sometimes focused on Mars itself, or Earth from the Moon Forward Establishment. Not quite the same as having windows to the galaxy, but there was no way the Zar’Chon’s chambers would have such a clear weakness.

What also helped his relaxed mood was the small gray feline curled up in his lap. Quisilia, much to his chagrin, had actually gone through with his offer to get him one of the infernal furballs, and a box had suddenly materialized in front of him one day, with a message attached which said “She
And with dread in his heart, he’d opened the box, and sure enough there was a small gray cat within it, a kitten from the size but one old enough to walk around and constantly meow. He’d considered giving it to one of the staff here; one of his analysts had expressed affection for the felines, but after watching it look up at him with those big eyes and meowing, he didn’t have the heart to get rid of it.

So he’d let it follow him around, and to the little furballs credit, it didn’t seem to mind him not giving it attention as much as a normal person would. Taking care of it was far more trivial than he’d expected, thankfully. He’d set up automated food and water dispensers, as well as specific waste disposal, although it took a few days to get the stupid animal to realize that was where it should defecate.

But otherwise the cat took care of itself. It ate, drank, cleaned itself, and much as he didn’t want to, Ravarian found himself liking the animal, and it was a pleasant feeling when the cat suddenly jumped into his lap and made itself comfortable, purring all the while of course. But it seemed to know when it was appropriate to do it or not, and if that was Quisilia’s influence, then he would have to thank the Ethereal for that.

He supposed that if he was adopting this cat, it did deserve a proper name. He’d settled on Cali’Zar’Chon, or the Little Hunter of the Zar’Chon. Much better than naming it something idiotic like Fluffy.

So he sat there, petting the cat occasionally, and thinking.

Things were starting to stabilize on Earth. The annexation of Canada was disappointing, but the Zar’Chon knew things were at a turning point now. Someday, future Zar’Chons would look back on this entire operation and wonder how it could have ever been bungled so badly. In retrospect, this entire situation was the result of a series of mistakes and freak coincidences.

The Ethereals and their inexplicable tests were certainly something to consider, but there were factors they’d had little control over initially. It was unlikely the situation would be nearly as threatening if the United Nations hadn’t decided to put the Commander in charge of XCOM. Remove the Commander, and you remove EXALT, ADVENT, and likely XCOM itself from consideration. He was the catalyst to everything, and even should he die now, it wouldn’t reverse what he had set in motion.

EXALT was another instance of this, but to a lesser effect. The Ravaged One had overestimated his control and power, and as a result left a nearly broken Saudia alive. Foolish. He should have either killed the leadership or not intervened at all. All he’d done was turn Saudia against them. Remove her, and the current incarnation of ADVENT ceased to be.

One pattern, regardless of the big picture, kept emerging. They kept underestimating the Humans at every turn. There had even been talk before this entire situation if the Humans would last a month, but they had responded in the form of XCOM. The Collective had slowly ramped up operations in intensity, and they had responded by adapting their technology and fighting back.

They had attempted to terrorize the Humans, a poor tactic, and XCOM had responded by solidifying Germany as a nation against the aliens. They had retaliated by trying to destroy Beijing, and XCOM had destroyed the Dreadnought that was sent.

Ravarian grimaced as he continued remembering. They had believed they could control EXALT, and had ultimately been subverted by the fiendish Humans. The attack on the Citadel had ended
with the death of an Ethereal. The invasion had prompted a violent unification of Humanity. Even now the Humans were not panicking, but only escalating their tactics.

From an objective standpoint, it was both impressive and admirable.

And concerning that only he and the Battlemaster seemed to acknowledge it. He had accepted at this point the Humans would not surrender, and it was only a matter of time before they developed psions en masse. Then the situation would get problematic.

Once more, he had to wonder what the Imperator was thinking.

Humoring the Humans made no logical, tactical, or practical sense.

So why do it?

“Because the Humans ultimately do not pose a threat,” Quisilia answered, appearing before him. “He has plans in motion, Zar’Chon, and the notion that a single species, on a single planet could stop them is laughable.”

“Hello to you too,” Ravarian said, not being remotely surprised. Quisilia had lost the ability to surprise him a long time ago. “I assume there is news?”

“Of a sort,” Quisilia said humorously. “I’m quite glad I accompanied Nartha on his little adventure. Truly interesting. An Oyariah Nulorian, not something seen every day.”

“He certainly covered his tracks well,” Ravarian grunted. “Had we not discovered he was a traitor, I would not have suspected much. He did locate and remove Nulorian collaborators, but not all of them.”

“Oh, he seemed quite proud of that,” Quisilia said with a wave. “Not important, and those Nulorian are quite barbaric. Had I not been there, the initial team sent to meet him would have interrogated him for information and killed him.”

Ravarian frowned. “I thought they would be smarter.”

“Oh, their leader certainly was,” Quisilia amended. “That Oyariah I mentioned. Too bad he was stupid enough to send operatives that hate Zararch. They planned to just say he attacked and were forced to kill him. Foolish, but they’ll be on the receiving end soon enough. Won’t be quite as funny when it’s revealed that one of them is Zararch.” Quisilia finished with a laugh. Ravarian suppressed a sigh at what passed for the Ethereal’s more tangible form of entertainment.

“So he has established contact with the Nulorian,” Ravarian said, focusing on the main topic. “I presume you have the method how?”

“Of course,” Quisilia confirmed easily. “What is also interesting is his little talk with Sareech. I believe a visit to the Hierarchy is in order. I doubt they’d like the loyalist males being summarily executed for their treason. At the hand of an elder, some might even consider it an honor.”

“I’d prefer we deal with the Hierarchy in a more subtle way,” Ravarian cautioned. “Let them work for now. If Sareech becomes a larger problem, I will remove her. But remove her, and it might spook Nartha. Unless you feel he’s served his purpose?”

“Not yet,” Quisilia said. “Sending him to Desolan is good, but I’d prefer you give him some reason to visit the Federation. The Nulorian are not a threat. The Andromedons are different, and I would rather not take my chances quite yet with the Federation. Their distrust of telepaths is rather
inconvenient at times."

“Noted,” Ravarian said. “Then Nartha will stay a hostile asset for a while longer.”

“My work is done for now,” Quisilia said, walking away. “I believe the Battlemaster is working on the next phases of Earth operations. I expect he’ll notify you of them shortly.”

“Understood,” Ravarian said, then sighed as he decided to give the Ethereal a small victory. “And Quisilia?”

The robed Ethereal turned around. “Yes?”

“Thank you for the cat.”
The Praesidium, Research Labs

Sierra had recently realized that there was still quite a bit of the Praesidium that she wasn’t familiar with, beyond the training rooms, armories, and barracks. Science and engineering had never been of much interest to her, but now being with XCOM several months, she did have to admit she was curious about some of the stuff going on behind the scenes.

These people were making the stuff that was keeping them alive after all; might not hurt to go down and see some of the process.

The general labs were open to everyone; it was only a few areas that were actually restricted. Of course, those were the interesting ones, which if Sierra recalled, were the genetic labs. It was quite possible this was due to biohazards, but Sierra suspected it was because XCOM was doing stuff that wouldn’t exactly be looked upon favorably.

As to what that could entail…well, she could imagine quite a bit.

She did feel quite a bit out of place as she walked through the labs in her regular fatigues, but the scientists working didn’t seem to care about her, and kept working at their stations. XCOM had fully embraced a fusion of alien and Human tech, using devices that she’d never seen before with large running computers. Hologram and haptic displays were also used prominently, with them portraying genetic sequences, biological data, and other stuff she didn’t bother to try and puzzle out.

Sierra stopped as something caught her eye. It was a hologram recreation of what appeared to be a new suit of armor, which seemed to be like the Aegis armor, but with several attachments to the back. The blue hologram was deconstructing and reconstructing on set cycles, and she stepped forward to get a closer look.

No one was at this station, so Sierra watched it for a few minutes, reading the information that accompanied the disassembled pieces before they reconstructed into the suit again. From what she could determine, this was an attempt by XCOM to incorporate the elerium substance into armor for some kind of flight system.

Interesting.

“Tap on it if you want to pause,” a new voice interrupted. Sierra nodded at that, and reached forward.

“Thanks—“ she began glancing over to whatever scientist was speaking and almost had a heart attack when she saw the voice belonged to an alien; a female Vitakarian. She froze for several seconds, paralyzed as she wondered how there was an alien standing—

Oh. Wait. This was one of the Vitakarian captives XCOM had from the Fury Base. She relaxed slightly, even if her heart was still pounding.

It didn’t help that the Vitakarian was staring at her in a way that suggested that she’d had this same effect on other people before. Sierra still wasn’t completely used to how tall they were. Even their small ones were over six feet, and this one was a good few inches taller than her, dressed in a
greyish uniform that had the XCOM emblem on the upper right chest, and some other logo she didn’t recognize opposite it. A special kind of uniform.

The eyes were definitely the most disconcerting part, and it wasn’t even a soft blue light, but it was as harsh as was likely possible for their biology. Figures. Objectively, it was a pretty neat part of their biology, but it made all of them inherently intimidating. “Sorry,” Sierra said, once more attempting to relax. “I forgot that—”

“That there are aliens beyond the Elder in XCOM,” the Vitakarian answered, deadpan. “Understandable. Soldiers rarely come down, and you were not among the number who assaulted the Fury Base.”

“Yes,” Sierra confirmed. “Don’t often see you this close unless I’m fighting you.” She appraised the Vitakarian. “Always forget how tall you are.”

The Vitakarian cocked her head, trying to do an imitation of a smile. “Your species is rather short as a rule. Why are you down here…Who are you?”

“Sierra,” she said. “Mostly because I’m curious. I was wondering what stuff XCOM is working on.”

The eyes of the Vitakarian widened, but Sierra didn’t know what that meant. “That could cover a lot of topics, Sierra,” she said slowly. “But it has largely been focused on elerium, and the integration of it into your technology.” She motioned to the hologram. “This is the Icarus Project, originally conceptualized as a counter to Floaters, and as an infantry air unit.”

Sierra’s eyes lit up. “So a jetpack?”

The Vitakarian pursed her lips. “I do not understand that reference.”

Sierra waved her arm dismissively. “So anyone who wears the armor could fly?”

“This is correct,” she said. “We have taken the initiative and made some improvements to the absorption capabilities of the armor, so it won’t be immediately shot out of the sky. In addition to that…” she stepped forward and began manipulating the console next to the holographic stand. “Air combat is significantly different from ground combat, with its own strengths and weaknesses. While this is not my area of expertise, additional weapons are being developed to take advantage of what is being referred to as the Archangel armor.”

A new series of images appeared, what appeared to be various improvised explosives, wrist weapons like flamethrowers. “To be used effectively, there will have to be a minor neurological link,” the Vitakarian continued. “To manipulate flight controls in combat is impossible otherwise.”

Well, there would have to be some kind of drawback. “So like a MEC?”

“No,” she denied, shaking her head. “Nothing nearly as invasive. It would only be some simple commands and instructions, no side effects like personality degeneration in first-generation MEC pilots. With that said, the MECs will also be getting their own variant of this.”

She brought up another hologram, of what Sierra could describe as a MEC that seemed to be streamlined, sleek, and with bladed wing-like attachments on various parts of the body. “The Valkyrie-Class,” she said, with what sounded like pride in her voice. “The first prototype is nearing completion. I suspect both these projects will be completed relatively soon.”

Times like this Sierra felt like she was in a science fiction movie, complete with jetpacks, giant
robots, aliens, and weird purple space magic. Too bad there was a not-insignificant chance they might die. “Well, sign me up for that,” she said, then frowned, looking over at the Vitakarian. “You know, for being a captive, you don’t seem too upset.”

The Vitakarian looked at her for a few long seconds. Hm, maybe she shouldn’t have asked. “XCOM has treated us well,” she finally said. “And Aegis has revealed to us how badly our species has been used. It is difficult to feel loyalty to the Collective anymore, knowing what they have and are doing to us.” She looked away. “Not that any of us have much of a choice. We could either work for XCOM or die. Faced with that, at least I can take some satisfaction in my work.”

She shut off the console absentmindedly. “With that said, I do not enjoy knowing that my work will lead to many of my own being killed. But again, I have little choice in the matter.”

“Well, you’ve had a while to observe us,” Sierra said. “What do you think about us?”

“Your inclination and satisfaction you take towards violence is alien to me,” she said bluntly. “Your species is strange. Why you would not band together and unite despite what is happening is difficult to understand. Many of your kind seem obsessed with power and control, more motivations that I cannot realistically understand.”

She blinked once. “However, your species is brilliant and capable of incredible advancement. Within two years you have managed to reverse-engineer our technology for your own usage, and you have a capacity to adapt tactically that I have not seen in other species. I also find it fascinating that in the face of almost impossible odds, many of you do not seem to even think about surrender, even though you would most certainly live.”

“Depends,” Sierra said with a sigh. “All surrender would accomplish at this point would be ensuring we either die quick deaths, or long drawn out ones. I doubt they’d let any of XCOM live, and we would not do well as slaves or subjects to a higher alien power. That isn’t how we’re built.”

“I am curious,” the Vitakarian said. “If the Collective were to…the term is ‘sue for peace’, I believe, would you accept it?”

Sierra actually thought for a few moments. The possibility had never really entered her mind. It seemed to be an all or nothing outcome to this invasion. Either Humanity would win, or the Collective would. She didn’t see a scenario where the Ethereals would give up willingly, or one where Humanity just accepted, despite everything that happened.

Humans didn’t forget, and Sierra suspected most would not forgive in this case.

“I don’t know,” she answered honestly. “If they were actually genuine, and left us alone, maybe, but that’s just my opinion. I doubt the Commander will be satisfied until the Collective is destroyed. ADVENT either for that matter. They attacked us unprovoked, without even trying to contact us; there is no reason for us to believe they wouldn’t do it again.”

“I understand that perspective to a reasonable extent,” the Vitakarian admitted. “While I would prefer this war to be settled peacefully, you are correct in saying that you have no reason to trust the Ethereals. Why they have done this is a question I have continually asked myself. There was no reason to go to war with you, yet they did without so much as a chance to negotiate.”

Sierra snorted. “More likely they felt themselves above the lowly primitives.”

A nod. “That is another possibility.”

There were a few moments of silence as Sierra crossed her arms. “I never asked your name.”
“Sala’calintha’valian.”

Sierra nodded. “Well, you seem alright for an alien. Whatever side you were on before, you’re doing good work now.”

“I suppose I will take that as a compliment,” Calintha said slowly. “Thank you?”

Sierra grinned. “Just keep making jetpack armor and you’ll remain on everyone’s good side. We always like new tech.”

“Which I should return to,” Calintha said, turning the holographic console back on. “I look forward to when you can use what we are developing here for yourselves.”

Sierra chuckled. “So do I.”

***

The Praesidium, Templar Training Arena

When he was much, much younger, Oliver remembered when he and his friends had all become obsessed with the medieval period, and for a time had gone all-out in pretending to be knights and kings. He had fond memories of holding mock battles and dueling his friends with cardboard swords. Eventually he’d grown out of it and realized that that period was never going to return.

Although now that seemed like it was going to change. Turned out all you needed to revive the age of melee combat was stronger armor, psionics, and upgraded weapons. There weren’t many Templars at the moment, but given that XCOM was primed to be getting a new batch of soldiers in the coming weeks, that was likely going to change.

Still, there was rarely a time where there weren’t at least a few people watching the Templars train. Sometimes Aegis was there, sometimes he wasn’t, but it didn’t entirely matter since they always came up with different ways to practice. Right now there was a mock duel taking place between Iosif and the two-man team of Carmelita and Chan.

Oliver had, quite foolishly in retrospect, thought that this would be a relatively tame affair, but from the way they had been warming up, they were clearly planning to go all out. The weapons weren’t actually XCOM standard, but the psionics certainly were. Carmelita wasn’t using her alloy cannon either in this scenario.

“Place your bets,” Oliver said lightly to the other person in the room; Nuan she’d called herself. He was pretty sure they’d talked a few times before, but not recently. She’d mostly kept to herself after first getting her arms chopped off, and then replaced. The prosthetics did look very well-crafted, but he didn’t know how well they actually functioned for her.

He wasn’t sure if it was normal or not, but he couldn’t help but notice her fingers continuously twitching and spasming. She also had a habit of flinching occasionally. If these were indications that she still wasn’t fully comfortable with the prosthetics, he didn’t know, but from what he’d seen, it seemed likely.

The Chinese woman raised an eyebrow. “Out of curiosity, who are you going for?”

“Two on one,” Oliver gestured as the Templars began preparing to duel each other. “They have the numerical advantage. Gonna have to go with them for this.”

She answered with a smile that didn’t quite seem sincere. “Well, someone has to root for the
underdog. But Iosif will win this. I’ve seen him do it before.”

Oh really? “You come here often?”

She shrugged. “Not really much else for me to do while I get used to these,” she raised a prosthetic arm. “And with all the stuff happening, I doubt people want to see a Chinese soldier. Besides, I don’t like people staring.”

“Fair enough,” he nodded. “I’ll try not to stare.”

“Which you have already failed at,” she dryly pointed out. “Quiet, they’re starting now.”

Oliver complied and turned his attention to the duel. All of them were wearing Aegis armor, with Carmelita armed with her longsword, Chan with a Zweihander, and Iosif with a ball mace, not the flanged one he usually had. Probably less dangerous.

Iosif made a gesture and his body was immediately enshrouded in a purple shield that seemed to fit over him like another layer of armor. Chan dashed ahead, stabbing forward, which was immediately deflected by Iosif with a swipe of his weapon hand. Chan took advantage by letting the deflection carry and released one hand, flaring with psionic energy which he directed at Iosif.

The directed barrage of purple energy aimed directly at Iosif’s face was blocked by another square shield Iosif constructed a second later. While that was happening, Carmelita leapt behind him and began attacking from behind, and he immediately backed to the side so he had both of them in view. One hand was kept up, maintaining the shield while he traded blows with Carmelita with the other.

The shield dissipated and Chan resumed taking the offensive, with Carmelita backing off to let him move unrestricted. It was clear that in this instance, Chan had the superior weapon. Iosif’s mace was just not long enough to get anywhere close to striking back, but to his credit, he was deflecting the blows well with the mace and minute applications of psionic shields.

Carmelita circled behind him and thrust out her left arm, and that stinger/tentacle thing shot out and wrapped itself around his arm for a brief moment, and he couldn’t physically defend against the coming strike from Chan which slammed directly into his head.

Oliver winced.

Carmelita retracted her stringer before Iosif could rip it off or otherwise harm it, and leapt towards the vulnerable Templar. Chan immediately made another strike, but Iosif had created another, larger, psionic shield which would briefly cover where he was being attacked. At the same time he raised a hand towards Carmelita and a psionic shield suddenly appeared in the middle of the air, which she promptly slammed into, falling to the ground with a thud.

Nuan snickered. “Idiot.”

To her credit, Carmelita recovered quickly, though she seemed shaken, and it allowed Iosif to rise to his feet and he seemed rather angry. He started attacking Chan with a combination of strikes and rather creative uses of offensive psionic shields, which were used to unbalance Chan, especially around his shoulders and ankles.

Chan stabbed forward, his Zweihander engulfed in psionic flames, with his hand positioned to blast Iosif with psionic energy at the same time. Carmelita threw out her stinger again, this time wrapping it around his neck and pulling. It wasn’t strong, but it was hindering Iosif who was focusing everything on blocking the psionic torrent of energy.
Iosif dropped his mace and twisted so Chan and Carmelita were roughly on opposite sides, and he gestured with a free hand at Carmelita, who stumbled back as a small horizontal shield hit her, forcing her to retract her stinger. Iosif’s hand briefly contracted and expanded, and Carmelita was suddenly in the middle of four psionic shields, practically imprisoning her.

Keeping his focus on her, he jumped backward and repeated a similar gesture towards Chan who realized the danger. But he was too late and four similar shields appeared around him. Chan immediately raised a hand with psionic energy and pressed it against one of the shields, and Carmelita began testing their strength with her sword.

For now, at least, it looked pretty even. Even if Iosif currently had them in makeshift prisons, it wouldn’t last forever and neither of them were hurt. “Alright,” Iosif said. “We’ll call it a draw.”

He let his arms drop and the shields dissipated, he went to pick up his mace while Carmelita sheathed her sword and Chan ceased his psionic energy output. “Well, I guess neither of us win anything today,” Oliver said to Nuan. “Shame.”

“They’re getting better,” Nuan nodded. “Although Carmelita still falls for the mid-air block. That’s generally how he wins. She goes too fast and he knocks her out. Or he dazes her for a short time and forces Chan to concede with a little addition to the psionic prison.”

Oliver glanced over at her. “Which is?”

“He adds a covering shield that slowly lowers itself,” she explained. “Like a juice press, except with people at the bottom. I don’t know if it’s actually viable or just for intimidation, but he said it’s very difficult to pull that off. Aegis taught him that too.”

“He should try that with the Battlemaster,” Oliver suggested. “It might slow him down.”

“Or make him angry,” Nuan winced. “I’d rather he not be faced at all until we can beat him. Otherwise it’s a suicide mission.”

“Can’t disagree there,” Oliver said as the Templars returned to individual exercises. “But I think we’ll be able to beat him eventually.”

***

*Australia, Near Pippingarra*

Abby was honestly not sure what Harper or the Chronicler expected her to accomplish here. Her mission was to investigate Port Harland, a fairly large city, albeit not nearly on the level of Sydney. Still, losing it would hurt the hold the Collective had on the continent. But everything she had observed was that it was going to be impossible to liberate without a small army.

The Australian Resistance was not going to risk so much for what was honestly a temporary victory. She had observed Zararch snipers, Mutons, and Andromedons. They appeared to be using the population of Humans there to build…something. They were turning large portions of the city into what seemed to be factories of some kind.

Spaceports?

It wasn’t Gateways, because she had located three already deployed at various parts of the city, spread out enough that even if one was shut down, there would be at least another that could bring in reinforcements. So a straight attack was out of the question, and unless there was a significant amount of agents on hand, who somehow would manage to sabotage all Gateways at once, that still
left the army problem.

The other alternative was the Chronicler deciding to take a more...direct approach, but even she wasn’t sure he alone could beat an entire army. At least not without help. Well, she was supposed to meet one of Harper’s people to give a report. Unfortunate that it was going to be bad news.

Abby chewed a ration bar as the sun set. She’d gotten quite a lot of survival experience out of this whole operation, which she’d never really expected. Once the war was over, assuming she was still alive, she would have quite a few career paths available to her. Although it was unlikely that she would ever become a civilian again, she couldn’t go back to that kind of life after what she’d done and seen.

The bushes rustled and her pistol was immediately raised in the direction of the sound. She lowered it and scowled when she saw who it was. “What are you doing here?” She asked the Chronicler, who casually walked over and sat on a nearby stump.

“Getting my report, of course,” he answered, lacing his fingers together. “I’ve had my eye on this place for a while, and having Harper send you out gave me a good reason to execute my plan here.”

Abby narrowed her eyes. “This whole thing was your idea.”

“Of course it was,” the Chronicler answered easily. “Harper, while having good intentions, will not win this without some nudging here and there. Attacking small cities will accomplish nothing, but the bigger ones? Those will hurt the Collective.” He nodded in the direction of the city. “So, what do you think they’re building there?”

“They’re having the civilians connect, destroy, or renovate entire blocks,” Abby reported. “I couldn’t find out exactly for what, but it seems to be factories for either weapons, vehicles or spacecraft.”

“Spacecraft,” the Chronicler confirmed with a nod. “I’ve been able to confirm that from my alien operatives. The Collective wants to establish a presence on Earth beyond the Moon. Japan and Australia are the primary grounds for this. If they are allowed to continue, they’ll be fully operational in a matter of months, after which they will be that much harder to destroy.”

Abby bit her lower lip. “This might be a time where we call in XCOM or the Lancers for a strike. The Resistance doesn’t have the resources, and the aliens will beat any army sent. And even if one is successful, all that will accomplish is the aliens devoting more resources to protecting them.” She sighed, shaking her head. “They have three Gateways here. It would need to be an extremely coordinated attack, and we don’t have the manpower for it right now.”

“Mhmm,” the Chronicler mused. “Then I suppose we’ll have to improvise. Luckily, I have a plan for such an endeavor.” He lifted a hand, gesturing towards the brush and Abby froze as a half-dozen Vitakara, Vitakarians and Borelians, stepped out, fully armored and armed. Behind them she even saw two Andromedons.

“I have help for this,” the Chronicler smiled. “There is little point in having an army if I never use it.”

“And we are happy to help with this,” one of the helmeted Vitakarians said. “What the Chronicler has revealed to us has been illuminating.”

“You talk?” Maybe it was rude, but Abby was not expecting the aliens to be more than drones to
“Of course,” the Vitakarian answered as if that were obvious.

Having an army that cannot think for itself is useless, the Chronicler’s voice said in her head. It is not hard to ensure loyalty. It is a simple matter of changing how they think, what their motivations are, how they perceive the world. Direct mind control is a crude tool, and one that does not produce needed results. My army is loyal, but capable of independent thought, which is all I require.

How do they just follow you? Abby thought back. Don’t they wonder why they follow a Human?

I explained who I am, the Chronicler thought, almost smugly. It puts things into perspective for them.

That just made Abby more confused. Why do they care who you are?

I’ll explain sometime soon, was all he thought. But they are quite good company otherwise.

Speaking aloud, he said: “This is how we will disable the Gateways. Three teams, each who will await my signal, and then will act.”

“So that will take care of that problem,” Abby nodded slowly. “But we will still have the army to deal with. Not that I don’t doubt you could use your psionics to make them turn on each other, but this will get their attention, especially since they will wonder how the Resistance could take out a city on this scale. Aside from that, what about all the civilians?”

“We are not going to save the civilians,” the Chronicler said calmly, standing and clasping his hands behind his back. “This will be the first instance of a revolt. At the right time, every single Human will rise up against the aliens and begin fighting back. They outnumber the Collective significantly, and they will serve as an excellent reason for how such destruction could occur.”

Abby blinked. It was one thing to not let civilians affect the plan, it was one thing to kill innocent bystanders, but it seemed on another level to forcibly send many of them to their likely deaths. And how is that different? The logical voice in her head said. They will die either way, and this way at least they will serve a purpose.

She couldn’t deny that it likely would be a good cover for the actual means to destroy the city. An uprising would catch them off guard, and they might just assume this was a fluke to not be repeated. Yet they were civilians. They would be slaughtered, and she doubted the Chronicler would differentiate between the elderly and children.

He had to have known her thoughts on this, which was likely why he was being silent and staying out of her head.

“Why can’t you use your psionics on the aliens?” Abby asked.

“I could,” the Chronicler confirmed with a short nod. “But for one, Humans are easier, and revolt should be as authentic as possible. Assuming I simply took control of the aliens, then we now have the question of where to put all these people, and that would undoubtedly attract attention. Attention that would put the Resistance at risk, not to mention make them wonder how such an operation is possible.”

He shook his head. “No. This is necessary, as difficult as it may be to carry out.”
Abby wished she could simply dismiss the cloying feelings of guilt, loathing, resignation, and sorrow, but she kept finding herself unable to each time something happened that pushed her further down the path of no return.

*It’s not like you’re pulling the trigger here. He has the telepathy, not you.*

She shook her head at that. That was a coward’s excuse to avoid taking responsibility. If she helped, she was endorsing this action. Yet he was right, the spacecraft factories would have to be destroyed, and if they didn’t do something, a worse decision would have to be made down the line.

The longer the war went on, the more difficult the decisions would get.

The more people would die.

She’d performed horrific acts and seen worse in the service of protecting Humanity. One more couldn’t damn her more than she already was.

The Chronicler smiled.

“Fine,” she stood up. “Let’s get started.”

* ***

*The Praesidium, Psionic Training Area*

Patricia gritted her teeth as she slammed into the padded wall. She quickly reoriented herself as Aegis kept advancing on her in his slow and methodical fashion. Despite this being the third time facing him today, she was still amazed at just how powerful he actually was, and how inadequate she was against him.

And he was holding back.

She’d seen him training the psions with defensive affinities. He could manipulate those shields to crush her like an insect as well as trap her in stasis while he compromised her mind. But no, he decided to ‘play fair’ and restrict himself to telepathic attacks and wielding his blunt, psionically manifested sword to throw her around. He even wasn’t using his telekinetics.

With a yell, she flared with psionic power, distorting the air around her, including her own vision as she assaulted the wall that was the mind of the Ethereal. But no matter how much she tried, there was no way to break it. It was like a crystalline sphere, without flaw or blemish, and everything simply slid off it like water.

Aegis gestured, his own bared arm encircled in psionic energy, and Patricia was suddenly assaulted with a barrage of sounds. Bells, shouts, noises she had no words for, all happening at once in her head. She shook her head, trying to block it out even as she felt Aegis begin to actually assault her own mind.

It was similar to being in quicksand. Or at least that was closest she could think of in her scattered thought process. Maybe being battered with waves repeatedly. A dam, that was the best description. Right now she was one that was cracking even as the sounds got louder and louder until she could finally hold no more and collapsed to the ground.

And even on the ground, the sounds in her head got louder and louder as her vision blurred and flickered. The Ethereal was in her head now, and she had no idea where he even was, let alone how to even begin to get him out. This own private hell of hers continued for hours, or maybe it was
only a few minutes. Aegis had complete control of her and could have warped her perception of
time easily.

But she was beaten, completely and utterly.

When light began leaking back into her eyes and everything faded to relative silence, she found
herself on the ground of the training area, still in her armor and her throat raw. Had she been
screaming? She wouldn’t have been surprised, given how awful all around she generally felt. She
pushed herself up, and saw Aegis still standing above her, looking down upon her.

“You fucking done?” She growled, unlatching her helmet and letting it fall to the ground, feeling
the cool air of the arena wash over her face.

“Any further and your mind would be gone,” Aegis said simply. “I believed that was sufficient.”

She scowled. “Thank you for being so considerate. But I think you forgot I’m not a bloody
Ethereal.”

“Unfortunately, we do not have the luxury of that distinction,” Aegis said. “Or I should say, you do
not. The Battlemaster, despite his threat, is not who you should fear. Isomnum, Macula, or Quisilia
would break your mind apart and laugh while doing so. What I demonstrated would be considered
merciful compared to what they can do. And I need not mention the Overmind or Imperator.”

Aegis’s tone turned unexpectedly colder. “Your telepathy, Patricia, is not impressive. You recently
appear to have gotten the impression that the mind control of hundreds is a feat worthy of praise.
For a new species learning their power, perhaps it is, but right now you have perhaps the skill of an
Aegis in training; not a full one, and certainly not the skill of an Overmind.”

Patricia’s shoulders slumped. Were she actually mentally functioning, she might have had a few
words to say to him, but as it stood, she couldn’t think of anything, nor could she completely
disagree with him. “Then what am I supposed to do?” She asked tiredly. “Nothing works against
you. I’ve tried everything I can think of. You don’t have any weaknesses.”

Aegis’s helmet nodded. “Why do you have to beat me psionically?”

Patricia gave him her best ‘are you kidding me?’ look. “Read my mind if you want that idiotic
question answered.”

“Apologies,” Aegis said. “I phrased that wrong. What I should ask is why you believe sheer power
is the best way to defeat me, or any other psion?”

Patricia opened her mouth, then paused, actually thinking about it briefly. “It depends on the
context, I suppose,” she said. “But against someone like you, there is no other attack that will work
as well. You don’t have any clear weaknesses, and on top of that, you’re more powerful that I am.
Your Trask level is what, one-thirty?”

“One-thirty-eight,” Aegis corrected briefly. “But that doesn’t excuse your rather poor grasp of
tactics. What you are doing right now is the equivalent of taking a hammer and tapping a wall to
destroy it. It doesn’t work. So how would you solve that?”

“The easy way?” Patricia raised an eyebrow. “Plant explosives at the base, detonate, and watch the
wall fall down. And get a better tool than a hammer.”

“Good enough,” Aegis agreed. “So why not do the same thing here?”
Aegis was fixating on this, so she tried to force her mind to think about how best to figure this out. Alright. So Aegis’s mind was a wall, one he was focused on defending. So, what would be the best thing to do? If assaulting the wall itself didn’t work, then the next step was to weaken it. In this case, everything relied on Aegis’s own focus.

Ah, there was an idea. Disrupt his focus.

Now what was a good means of accomplishing that? The ideal thing would be to send mind-controlled drones at him, maybe force him to defend himself. That would weaken him a little bit. Then there would be her own weapons, for all the good it would do her. But it could still help make an impact.

Hmm…

“What were you doing to me?” Patricia asked. “You overwhelmed my senses, even without taking control of my mind. You used that to distract me; disrupt my own focus on defenses.”

“Exactly,” Aegis said approvingly, and she realized that she was getting enough energy back to begin sensing people beyond the immediate area. “You are familiar with how a network denial of service attack works? This is much the same concept. If you cannot penetrate the mind of the target, overwhelm them with noise. Trap them inside their heads; break their concentration; force them to either focus on defense or continue with a weakened attack. Either can be exploited.”

He looked away from her. “Your power is immense for a Human, Patricia, but against an Ethereal, you cannot simply overpower them. Even weaker ones like Revelean or the Creator have centuries of training and experience. They know how to defeat those more powerful than them, and that is because they think tactically. That is what you need to learn. Brute strength will not serve you well in this fight.”

Patricia nodded. “I understand that. Thank you, Aegis.”

“I think that is sufficient for now,” Aegis dismissed, turning away from her. “Rest and recover, Patricia, return to your lover. The time for more training will come soon enough.”

Patricia wouldn’t really disagree with that. At the moment, she just wanted to sleep, cuddle, or otherwise enjoy a break before the gathering storm broke. The aliens were being very quiet, and that had everyone increasingly worried.

They were preparing for something, and after this, she wasn’t sure she could handle it.

***

Switzerland, ADVENT Command

“They have been very quiet recently,” Saudia mused as she looked at the holomap of the current alien-controlled territory. “Pulling back after their victory seems… odd.”

“Not if you think about their goals,” Laura interrupted opposite her. “I think it’s clear now that they don’t just want to win this war, they want to win completely. In theory, they could attack wherever they pleased. But they won’t do that, because we still control the majority of land and could quickly outmaneuver them.”

“Their actions make sense,” Elizabeth agreed, tapping a pen absentmindedly on the edge of the holotable. “Everything I’ve gathered indicates they are fortifying what they do have. They’re converting large swaths of Japan into factories, and I can only assume they’re doing the same in
Australia too.”

“And in America?” Saudia asked.

Elizabeth pursed her lips. “Unknown. No factories or anything like that, but they are rotating out groups of soldiers. They’re fortifying their strongholds there. They are going to make themselves as hard to dislodge as possible.”

“Expected,” Laura nodded. “They have to know our counterattack is coming. But it is interesting that they haven’t done anything, even if it’s not a full attack.”

“Speak for yourself,” Elizabeth muttered. “I’ve got to deal with a shitposting Ethereal every day and see if he’s revealing some secret alien strategy. I swear he’s intentionally trying to drive my agents insane.”

Laura rolled her eyes. “Yes, following his twitter is a draining task for you I’m sure.”

“Oh, fuck you,” Elizabeth muttered good-naturedly. “Here, look at this.”

Saudia was now curious and walked over to Elizabeth who held up her tablet for both of them to see it. The tweet she had up was suitably and unrealistically happy.

Quisilia @TheGreatQ – Oct 28, 2016

Save the date people! 10/31/2017 Big things are coming! Be prepared to hit that subscribe button! #OctoberSurprise #Halloween #suspense #hello #ADVENT #xcom #teaser #promo #capitalist #food #insinuation

Saudia smirked at that involuntarily, and that was before she saw the photo attached, which was a selfie of Quisilia with a white sheet over his helmet (which quite clearly didn’t look natural) and some crudely drawn eyes and mouth. She…thought he was trying (badly) to mimic a ghost. And of course he was holding up a hand with two fingers in the ‘peace’ slang sign.

Laura just looked confused. “What does that even mean?”

“Exactly,” Elizabeth muttered, setting the tablet down. “He does this every week, gives a date and hypes it up, and deliberately makes sure we know it there, and we have to spend time trying to figure out what he’s actually doing. He just might actually reveal some alien operation so we have to look into it.” She facepalmed. “So I don’t know if he’s opening up a fucking puppy shop on Halloween or teasing that Korea is going to be attacked.”

Saudia understood her concern, but it all seemed unreasonably funny. “Well, I suppose we could have Twitter ban him.”

“Not going to happen,” Elizabeth sighed. “One: Someday he’s probably actually going to give us something useful; Two: He’d just make another one, and three: He’s, ah, on the board of directors.”

Both women stared at her in disbelief. Saudia coughed. “Ah, how?”

“The short version is that he bought a ten percent stake in the company,” Elizabeth answered. “And yes, they did let us know what was going on. I let them give him the position, since he might actually let something slip. Technically he’s an ‘honorary member’, but he’ll likely become a legitimate one whenever they have the next stockholder vote.”
“What the actual hell?” Laura said to no one in particular.

“It’s bizarre,” Elizabeth agreed. “And by all accounts, he’s actually being a contributing member. He joins as many board meetings as he can by video conference, all without any disguise, of course, and when he can’t be there, he has his ‘intern’ take his place. An Andromedon of all things. Very polite too.”

“I feel like I’ve entered some alternate dimension where things don’t make any logical sense,” Laura said flatly. “An Ethereal is on a board of directors of one of the largest social media platforms in the world and is actually helping them.”

“Welcome to the Quisiliaphere,” Elizabeth said wearily. “What I’ve labeled for anything relating to him where reason and expectation are thrown out, along with most of your sanity. So,” she turned back to Saudia. “Let’s return both to something actually important, and which follows logic to boot. Our counterattack.”

“Yes,” Saudia nodded. “Laura, Weekes, and the senior commanders will be meeting and coordinating with XCOM on November first. In the meantime, we’re using that time to gather our forces and create more plasma dissipators, Shieldbearers, and SHIVs for the attack. We won’t have anyone from the PRIEST Program yet, but we should have some preliminary soldiers by the end of November.”

“Everything is on schedule,” Laura confirmed to Elizabeth with a nod. “Seattle and Las Vegas are the main targets, as well as pushing beyond Portland. We won’t take California and most of Nevada back, but we hit their major strongholds and that’ll loosen their hold there.”

“The Battlemaster probably won’t stay out of it,” Elizabeth pointed out. “Or Caelior.”

Laura smiled, and Saudia joined her. “We actually have something that might deter the Battlemaster,” Laura said. “Caelior too, for that matter. Risky, but the chances of it working are above fifty percent. We keep the Ethereals away, we can win with XCOM support.”

“Well, I’ll press for more details at the meeting,” Elizabeth nodded, looking down at her tablet. “You, Chancellor, have a busy few days.”

“Yes, my big meeting at the Vatican,” Saudia remembered. “That will be interesting.” She smiled as she thought about how that was going to go down.

“Considering what you’ve had me and Stein coordinate on the past few weeks, I’d imagine so,” Elizabeth smirked. “I mean sure, why not move against the most influential religion in the world? Joking aside, I want video.”

“Seems oddly timed,” Laura noted. “I mean, I can understand doing this normally, but it seems almost unimportant when the invasion is happening.”

“A few reasons,” Saudia said, tapping her fingers on the holotable. “This is more a Peacekeeping operation, not a military one, so the resources can be justified. Next, just because there is an alien invasion doesn’t mean we can’t multitask. In addition, having the Catholic Church on our side will be a large boost to recruitment and PR if they endorse ADVENT. And I want to get this out of the way before the Religious Summit. The Pope falls in line, everyone else will too.”

“I don’t think you understand how religion works,” Laura said skeptically. “They very likely might not endorse you because one, you aren’t religious, and two, their holy books might not allow it. Have you ever had a debate with a religious person before? They can be stubborn.”
Saudia sniffed. “In my experience, the leaders of these religions generally aren’t idiots, or suicidal fanatics. I don’t care about the regular believer, but their leaders can be swayed. If nothing else, they should realize that getting killed by aliens is not what their god would want.”

All Laura did was sigh. “Well, I wish you luck on that. I second Elizabeth. Take pictures.”

Elizabeth suddenly laughed. “Did you schedule this intentionally, Saudia?”

Saudia cocked her head. “Sorry?”

“You meet the Vatican on the thirty-first,” Elizabeth said with a grin. “The Reformation? The day when Luther rebelled against the Catholic Church?”

Laura snorted and Saudia smiled. “I wondered if they’d notice. I thought it was fitting. The world itself is reforming, and it is time for religion to join it.”

“I’d almost recommend against it since it’s completely insulting,” Elizabeth said humorously. “But I quite like the idea. Give the Pope my regards.”

“Don’t worry,” Saudia assured her. “I certainly will.”

***

Busan ADVENT Base, South Korea

“We’re getting an extra one?” Cara half-asked, half-noted as they walked toward their designated part of the barracks, sidestepping the other soldiers in their way. “Generous of them.”

“Apparently ADVENT didn’t put some of their squads together as well as they should have the first time,” Duri explained, as he also twisted to avoid some soldiers. Maybe he should have put his helmet on instead of holding it by his side. “The squads were either too small, or didn’t have a good composition. Like mostly soldiers and no medics, for example. Have you ever seen an XCOM squad?”

Cara shook her head. “Not in person.”

“Pretty much every single soldier fulfills a specific role,” Duri explained. “Sometimes there is some overlap, but in general one XCOM squad is diverse enough to handle almost every single situation. The problem ADVENT seems to have run into is some squads being extremely useful in some instances, and utterly terrible in others.”

“So they’re going for jack-of-all-trades squads,” Cara grunted. “Fair, I guess. I hope that this works out better for us.”

“Far as I’ve been told, there will still be exclusive Engineering and Medic teams,” Duri said as they turned a corner. “But, for example, squads like ours will get one of each.”

“So who are we getting?” Cara asked.

“A Medic, Engineer, standard infantryman, and a Shieldbearer,” Duri listed off. “Apparently the Shieldbearers got an upgrade recently. They can supposedly deflect plasma.”

Cara’s eyes widened. “Seriously?”

“Memo sent out to all officers,” Duri said, pulling out the printed memo. “And yes, it seems to be just as big a game changer as implied. I need to do some scenarios with it in action, but ADVENT
is actually making stuff to help us. I’m sufficiently impressed.”

“I’m not surprised they’re trying to outthink the aliens,” Cara said, her voice slightly stunned at the implications. “But that they did it this fast. Really, how long was it since Japan? A few weeks?”

“They’ve probably been working on a project like this since the start,” Duri said. “It’s just taken until now to actually make something out of it. I wouldn’t be surprised if they’ve got stuff that can kill Ethereals in one shot in the works. Now if they ever deploy them is another story.”

“Think they should try for the smaller stuff first,” Cara muttered, looking back forward. “Figure out how to kill the Warlock aliens before trying for Ethereals. Honestly, what could kill something that pretty much single-handedly beat us?”

“Nukes?” Duri suggested, shrugging in his armor. “Really, I don’t know. But they must be working on something like that. They’d be stupid not too.”

“Agreed,” Cara nodded. “Normally I’d make a joke about how government and intelligence are not something that can be combined, but that seems somewhat false now. Maybe ADVENT is the real deal this time.”

Duri smiled grimly. “Maybe. Shame it took the threat of extinction to get it started.”

He hit the door to the squad barracks and it slid open, and both of them entered where the new members of his team, with said team being re-designated as Carolus Squad. That seemed to imply that it was unique, and he was treating it like that until being told otherwise. Given how extensive not only the English language was, but every other language, it probably wouldn’t be too difficult for each squad to have their own unique designation.

It was better than Squad 001 or something like that.

The soldiers in the room immediately stood at attention. Half of them were wearing their armor, the other two were not. Didn’t matter to him right now, he’d shown up in armor because he felt it appropriate to make a good first impression, but they weren’t technically on-duty, so he wasn’t going to be stuck up about it.

“Good, everyone’s here,” he began, looking over his new soldiers. “I’m Captain Duri Eun-Jung, or just Duri. Our Sniper Beatriz is still recovering from injuries sustained in Japan, but she should be back with us in a few days,” he gestured to his side. “This is Cara, Gunner.”

“Don’t have my gun here, sadly,” she added. “But yeah, hi everyone. Looking forward to killing aliens with you all.”

Duri nodded to the man furthest to the left, a man with the black armor of a soldier. He looked fairly young compared to everyone else. “Soldier Mana Kalei,” he said, giving a salute with a fist over his heart. “Former American Navy, Hawaiian deployment. Since that division is pretty much gone, they sent me out here.”

Cara visibly winced. “I’m sorry.”

Duri wasn’t familiar with the details about how Hawaii fell, but he did know there had been a fairly intense battle before ADVENT was forced to give it up. Now that he’d stated where he was from, Duri could definitely tell Mana was an islander, likely a Hawaii native. All the short dossier had said was ‘American’. This would have been some information he would have liked to know beforehand.
“We’ll take it back eventually,” Mana said evenly. “But priorities. We’re all needed more here right now.”

“That we are,” Duri said. “Your turn.”

“Aleksandra Savelievna,” the tall Russian woman said, her accent making her sound harsher than he words implied. “Shieldbearer Mark Two, Deus Vult freed us to be deployed elsewhere. Awaiting your orders.”

She wasn’t wearing her armor, but Duri had seen Shieldbearer armor, and it was much bulkier and heavier than regular armor, so he could understand why she was only wearing her fatigues. “I’ve seen the reports,” he said. “Have you tested to see if the armor can do what Command says?”

She smiled, or more accurately, essentially bared her teeth. “The armor works to all simulations, Captain, but only way to know is fighting aliens.”

Since ADVENT didn’t have plasma weaponry, Duri supposed that was the best he was going to get. “Good enough for now. Next.”

“Nobuatsu Yoshitaka,” the Japanese man answered immediately, also in his armor. At thirty-seven, he was the oldest of the group, and had an overall serious demeanor. His expression was also suitably intense. “But Nobu will suffice. Medic. Served in both Battles of Japan. Well aware of their capabilities, and hope to prevent more situations similar to Sniper Beatriz.”

About time they got a Medic. “Glad to hear it,” Duri agreed. “Your skills would have come in handy then.”

“I’ve gotten quite good at shooting xenos in addition to field triage,” Nobu said evenly, the corners of his lips curling up. “Acquired skill, and one I’m quite proud of. I would not want to be a liability in the battle.”

“And we appreciate that,” Aleksandra added approvingly. “No one likes bystander. You Medics are notorious for this.”

“Considering these aliens have my country, I’ve been willing to put aside my distaste for combat,” Nobu said coldly, the same grim smile on his face. “Bullets are a kind of preventative medicine; if we wish to get technical.”

Some of them chuckled at that. “I like you,” Cara nodded. “Doubt you’ll beat my record, but I wish you luck.”

“Alright, last one,” Duri said, turning to the final man. He was wearing Engineer fatigues, with plenty of tools strapped to him, all well-organized. To his side was one of the new SHIVs. Duri had never actually seen one of them before, only read the reports. He’d thought they were much smaller, but the SHIV came up to mid-chest in armor.

It made him somewhat uncomfortable how dangerous it looked. “Miguel Capmany,” the man said with a nod and salute. “Former Mexican Army Engineer, now ADVENT Engineer. I also maintain our new SHIV, which will help us in killing the aliens.”

Duri raised an eyebrow. “It’s bigger than I thought.”

Miguel chuckled. “ADVENT’s not making little drones, Captain. They need machines to kill aliens, and this little guy can chew through a Muton, armor and all.”

Miguel sighed. “This isn’t like the MDU. The intelligence isn’t as sophisticated.”

“And that is supposed to make me feel better?” She asked, deadpan.

“Have some faith,” Miguel chided. “I’ve looked at how this machine works. It doesn’t even go into a firing mode until we designate it. Even then, it only targets aliens, and even then, only ones the controller tells it to.”

“I don’t suppose we get our own MDU as well?” Cara asked hopefully.

“Unfortunately not,” Duri said. “They want to save those for larger operations.”

“No Purifier either,” Mana chided at them. “I’m disappointed.”

“No offense to them,” Cara said flippantly. “But I’d honestly sleep better without tanks of liquid fire anywhere in the building.”

Duri smiled, and Miguel chuckled at that. He didn’t completely disagree with Cara here. ClF3 was something he didn’t want to get near, let alone have to deal with it on a daily basis. Well, didn’t seem like there would be many problems here. Everyone was here, willing, and wanting to kill aliens. “Alright everyone, we’ll begin exercises tomorrow morning. Given the alien’s track record, I don’t want us to be caught unprepared, and we know they can attack at anytime.”

“I agree,” Aleksandra stated. “Whenever the attack, we need to be ready.”

“In that case, we get some sleep,” Miguel said. “Been awhile since I’ve looked forward to training exercises, but given all the new tech we have…” he looked around. “Well, I’m looking forward to seeing it in action.”

***

Australia, Port Hedland

It might have just been her imagination, but the night itself seemed extremely ominous. The moon was obscured by clouds and a cool wind cut through her clothes, making her shiver involuntarily every so often. The plasma weapon one of the Chronicler’s Vitakara had given her was extremely cold to the touch.

The Chronicler was also wearing a special kind of armor that one of his aliens had brought him. His reason for not wearing it to begin with was because it was heavy and hot, though Abby suspected that he was not being entirely truthful. The armor itself was nothing like she had ever seen. It was a deep black, which reminded her more of a void than the color itself. The material it was made out of wasn’t standard alien alloys either, but some kind of porous stone that covered all his limbs and yet still allowed him to move freely.

The chest, legs, arms, and boots had another layer of this strange substance. There was some kind of strange text going down the sides of his chest armor, a language Abby had never seen before, not even from the Ethereals. On the chest was the simple outline of a galaxy, with some kind of strange…thing…above it. Something that reminded her of an outstretched hand.

It made her feel uncomfortable just looking at the armor, let alone the odd symbols on it. Whatever it was, it was not Human, and the longer she spent around him, the more she wondered just who he really was.
“Move forward to the Gateway positions,” the Chronicler ordered calmly to his alien subordinates who began moving wordlessly towards the city. “Await my signal.”

Abby frowned as they walked to the city. “Will they just be let in?”

A ghost of a smile made its way onto the Chronicler’s lips. “No, and that will have to be corrected. Wish me luck.” With that he placed the accompanying helmet on, a piece that was just as odd as the rest of the armor. It was a simple covering, with no visible additions, external feeds, eyeholes, or breathing apparatuses.

“Ah, now this is how it works,” Abby stared at the Chronicler as he raised a hand towards the city. His voice was not the same, it had a deep echo to it, as if two voices were speaking concurrently. It was not the layering effect that she’d heard from other psions like Patricia. This was a completely different voice.

Much like the first time she’d helped him.

“Little reason to be alarmed, Agent Gertrude,” the Chronicler said as the air around him became visibly distorted. He spread his fingers and it seemed as though the entire city briefly blurred. “I am simply getting used to the armor.”

“What is it?” She asked, her voice much smaller as he lowered his hand.

“A gift,” the Chronicler said without a further explanation. “One I had hoped would never be needed, yet it appears my concerns were for naught. Let us continue, agent, we cannot be stopped now.”

He clasped his hands behind his back and began walking forward, and Abby uncomfortably followed, her plasma rifle at the ready. “What did you do?” She asked as they walked up the deserted road.

“Simply altered their memories to recognize my own subordinates,” he said as if it were nothing. “And the minds of the humans are primed. They will respond to my signal.”

Abby blinked. “You only took a few seconds!”

“The method isn’t important, Agent,” he said without looking to her. “Now be prepared, we are approaching now.”

The entrance was guarded by a half-dozen mutons, two Zararch snipers above and three Runianarch soldiers. They raised their weapons as Abby and the Chronicler approached. The leading Vitakarian yelled something, and the Chronicler simply gestured a hand forward and sent a crackling wave of energy towards them.

The wave didn’t just throw them back, it tore through them, and to Abby’s perspective, vaporized them into nothing. The Chronicler kept walking, putting his hand behind his back like he had the entire time. Abby was stunned. She’d never seen that kind of power from anyone, human or alien. “How did you do that?” she demanded, wondering if she’d even need to fire a shot during this.

“The technique isn’t complicated,” was all he said. “It is a minor application of destructive psionics. It is rather small compared to the feats of the Ethereal Empire. The Reapers and the Division of the Maelstrom were far more impressive in their feats.”

Abby recalled that the Reapers were a group of Ethereals that…what did they do?
Destroy planets.

Right. That.

So maybe vaporizing a small group of aliens wasn’t impressive in that context, but still...Whatever the Chronicler was doing here, he had to be more useful in the actual war. Whatever he said, being stuck in Australia wasn’t where he belonged.

The Chronicler stopped at the checkpoint. “And now, let it begin.”

Nothing happened at first, but the air around her suddenly became more and more distorted, and she eventually realized it was coming from the Chronicler himself, who was almost indistinguishable in the distorted energy wave. The air itself had seemed to change as well, it was like her ears had just popped and everything seemed different.

Then the yells and shouts started. Few in the beginning, but they grew in size and intensity the longer they waited. Now there were Humans coming out into the street, soundless and yet with purpose. Without any words, they stripped the immediate area for weapons. There was little outside of steel beams and scraps of alien alloys, but they grabbed them all the same.

Men, women, elderly, children, all were under the Chronicler’s spell as they moved deeper into the city. It was also disconcerting that their eyes were tinged red. It was subtle, and only in what she saw as flashes, but it was there. Much like the effect Patricia had on mind-controlled victims, except then the eyes were turned a shade of purple.

She hoped she was just seeing things, and given how surreal this experience was becoming, she wasn’t sure she could trust her sight.

“Let us continue,” the Chronicler said, marching forward, and she carefully followed. “The first conflict is up ahead. Intervene if you wish, it will not change the outcome of this battle.”

That sounded ominous. But even through her distorted vision she could follow the sounds of battle. There were shouts, grunts, and weapons fire up ahead, but as she listened closer, she realized that she’d been wrong earlier. Alien screams were not the same as Human ones; they were as a rule noticeably deeper and she hadn’t heard a single Human one yet.

She rounded a corner, breaking into a jog, and stepped into what was complete and utter carnage. Hundreds of Human and alien corpses littered what was a street leading into a town square. Humans were attacking the remaining forty or so aliens, mostly Mutons, and it was going as well as she’d expected. Volleys of plasma were taking them down, but there were groups of Humans stripping the alien corpses for grenades and other explosives, since the plasma weapons broke upon death.

But what was completely unnerving was that it was done in near silence. The Humans didn’t speak, not even when getting shot. Further still, they didn’t seem to feel pain like normal. The Mutons seemed to have initially made the mistake of thinking that, and turned their attention away after the first plasma volley had knocked down the first wave, and then they’d been surprised when they had stood once more, missing limbs or flesh melting, but just as determined to kill as before.

Even the Humans on the ground that were not dead were pulling themselves forward, makeshift weapons in their hands. The latest wave of Humans was employing tactics now, some were holding sheets of metal and constructing barricades, while others were lobbing grenades at the Mutons, and an explosion just then killed another.
The Chronicler had said it didn’t matter what she did here, whatever that meant, so she was going to help. She raised her plasma rifle and fired at one of the Mutons. Three plasma bolts shot out in quick succession, with surprisingly little recoil. It slammed into the head of the Muton, and they suddenly realized there was another threat to contend with.

The other Humans used that distraction as a way to launch a coordinated charge with the front shielded by metal sheets and behind them a dozen more Humans with sharp kitchen knives, broken broomsticks, shovels and other improvised weapons. Abby fired a few more volleys at the aliens, who quickly scrambled back into some kind of cover.

Then the charge hit the Muton flank and Abby was initially taken aback at the brutal savagery of the Humans, who immediately aimed or dove for the exposed heads, hitting them in the exposed flesh and stabbing their eyes out, and repeating it several times until they were sure the alien was dead before getting up to move on to the next one.

Most of them were killed before they could even kill a fourth, even as she took out another one. Not that it mattered much as none of the surviving Humans seemed demoralized or concerned their counterattack didn’t work. Abby saw they were already organizing another similar attack. She wished the Chronicler could stop his reality-warping effect, since the distortions were making it difficult for her to line up accurate shots.

She’d taken out another one when a purple maelstrom appeared in the final group of aliens and vaporized them. The surviving Humans wasted no time and began walking to other parts of the city to assist other assaulted areas. “The attack is going well,” the Chronicler said as he walked up to her. “The pockets of alien resistance are slowly but surely falling. Let us move to the factory itself. I expect your superiors will appreciate information on what the aliens are doing.”

“What did you do to them?” Abby asked, looking at the mass of bodies around her.

“Helped them,” was the answer. “Humans are fighters to a degree, but at times there needs to be a nudge in the right direction. Pain is useless to me, as is unneeded noise. They are extensions of my will, and know what needs to be done to achieve their objectives.”

Abby shivered. Even Patricia hadn’t gone to that degree to her knowledge. It was enough for her to turn their enemies against each other, but this seemed both a step above and beyond that. Sheer numbers shouldn’t have been enough to beat an entrenched alien army, but that appeared to be exactly what was happening.

“Have you ever wondered how the Sectoids once waged war?” The Chronicler mused suddenly as they walked. “Much like this. A skill they have fallen out of practice in, but nonetheless an effective one.” He gestured around. “These people are linked, a forced link, but one where they can coordinate to a degree that is impossible to be replicated through speech alone. That is how all of them are adapting, remaining calm, and strategizing without speaking. They are in a pseudo-hivemind, one under my own control.”

Abby didn’t add on to that. The concept alone was something she would hate to be subjected to. Humans weren’t supposed to be these soulless drones dying in waves against an enemy, even if they ultimately won. Smoke was in the air now, and she looked in the distance to see fires beginning to rise as the triumphant Humans began torching the city.

Given the lack of reinforcements, she supposed that the Gateways had been destroyed as the Chronicler promised. Now the factories were up ahead. They were right now ugly combinations of Human architecture and interconnected alien alloys. Some buildings were destroyed, others were in the process of being connected together.
She followed the Chronicler as he stepped into one of the larger ones, and found more bodies inside, along with dozens of Vitakara dead; probably surprise attacks from the Humans working here who’d suddenly turned on them. There were welding torches, drills, saws, all kinds of improvised weaponry.

They stepped into an open conveyor belt area, where half a dozen were set up, and where there was a lot of screaming in pain. Alien screams. And she soon saw why. The Humans were continuing to execute the aliens still alive here, mostly who looked to be overseer types with no armor. Two or three Humans held them back while another one executed the alien with the weapons they had available.

One was using a chainsaw to cut up one of the aliens, another was using a blowtorch to melt the skin off another, all of them seemed to be killing the aliens in as painful a way as possible. “Many of the people here have fantasized about what to subject the aliens to,” the Chronicler noted, sounding amused as they walked through the factory construction. “I see little wrong with letting them execute these aliens as they wish. Considering what they have been subjected to, it is only just.”

Abby wasn’t sure about that. Drawing out the death of an enemy seemed little more than sadistic. It was one thing if there was a goal, but for simple revenge? It seemed wrong.

Then again, she couldn’t say she wouldn’t do the same in their position.

They stopped in front of an alien console, and the Chronicler began manipulating a haptic pad and accessing the alien HUD which Abby couldn’t begin to comprehend. “This is the mainframe for their operations here,” he explained. “While they will undoubtedly be abandoned now, I suspect this will provide your superiors with some crucial information as to what their plans are for the region.”

A small cube ejected from the console, and the Chronicler gingerly picked it up, and handed it to her. She couldn’t tell under the helmet, but he was likely smiling. “Thank you, Agent Gertrude. Your participation here is appreciated.”

Abby just stared at him. “Maybe you can tell me exactly what I did here? Or did you just want to show off?”

“You are ensuring that XCOM and ADVENT receive the benefits of my service, and allowing me to keep my anonymity,” he answered nonchalantly. “While I most certainly could do most of this without you, it would take longer and I would be forced to expose myself, and in these times, that is something I would not be able to use as an excuse not to intervene.”

That didn’t make much sense to Abby, but it was probably best she didn’t press the psion too much. Not now. It was very clear he had some ulterior motive besides just ‘helping XCOM out’, and the more she saw of what he could do…she was becoming scared at what that could be. “You may leave and report back,” he said, turning away. “Simply say you witnessed the revolt and took the opportunity to gather some information. By the time anyone returns, the aliens will undoubtedly be back in charge.”

She started. “I thought the goal was to destroy this place!”

“Originally, yes,” he shrugged. “But the plan has changed. When the aliens send their reinforcements, I will be waiting and turn them as I did the others. The factories will be burnt to the ground, and my forces will control whatever is built in their place. The end result is the same, Agent Gertrude, you do not want to press me further at this time.”
No, she certainly did not.

She quickly turned around, the alien data cube in-hand, and got out of there as fast as she could.

***

**Vatican City**

Saudia had always wanted to visit the Vatican. Aside from the history of the place, it was very much one of the most impressive locations in the world. Still, it was one area that would have been extremely difficult to actually visit in the EXALT era since the risk of exposure or compromise would be too great.

There was even more security around the building than usual, and Saudia had brought a small army with her of Peacekeepers with her for ‘security purposes’. A reasonable enough explanation and one the Vatican had permitted due to her status and importance in the world. It wasn’t every day that the most influential woman in the world came to meet the Pope.

Well, the Peacekeepers weren’t all she had with her. Even the regular Riot Control outnumbered the Vatican soldiers, although no aggressive moves were being exchanged. Her own Personal Guard accompanied her as they walked into the empty halls of the Vatican, along with Stein who was in full Peacekeeper armor, her helmet under her arm.

Saudia was simply wearing her standard black uniform with the red sash across her shoulder, and a pistol at her hip. While there were no weapons allowed at the Vatican normally, there were exceptions that had to be made, and the Pope wasn’t *that* stubborn.

“I don’t suppose you’ve met him before?” Saudia said to make some conversation as they walked the ornate hallways.

“His Holiness Pope Marcellus the Third?” Stein asked sarcastically. “When the hell would I have met him?”

Saudia smiled to herself. “Fair point. Was just curious. I’ve never had the pleasure, so this should be interesting.”

“Elizabeth put together a dossier,” Stein reminded her. “You might know him better than maybe anyone else at this point.”

The priest that was leading them forward suddenly stopped in front of a massive double door, and the two robed figures beside it opened it up to let them in. In the interior was a massive wooden table with ornate walls and chairs. The room itself had a domed top, which was painted with a scene Saudia didn’t recognize.

In the room were eight elderly men in black cassocks with red bands around their waists; Cardinals of the Vatican and all advisors to Pope Marcellus. In the center was the Pope himself, wearing his formal white choir robe with the white cap.

“Chancellor Saudia Vyandar of ADVENT,” the priest said as they entered the room. “His Holiness Marcellus the Third, Bishop of Rome, Vicar of Jesus Christ, Successor of the Prince of the Apostles, Supreme Pontiff of the Universal Church, Primate of Italy, Archbishop and Metropolitan of the Roman Province, Sovereign of the Vatican City State, Servant of the servants of God.”

She could practically envision Stein resisting the urge to roll her eyes at the ridiculous number of titles the Pope had. Saudia found it a bit excessive as well, but knew that level of embellishment
wasn’t used very often, so she treated it as something of an honor. Although she didn’t know how accurate that was.

She nodded to her guard and they waited outside. “If you would, Chancellor,” the Pope said, his voice soft. “I would prefer we conduct this meeting privately.”

Saudia could allow that. It wouldn’t change much. She was here to have a productive conversation after all. “As would I, your Holiness,” she nodded to Stein, who also nodded in acknowledgement and left. The Cardinals silently filed out of the room and Saudia walked over to the Pope, maneuvering a chair to sit opposite him.

“I appreciate you taking the opportunity to speak,” Saudia said as the Pope took a seat opposite her. The elderly man had an aura of calm around him, which she wasn’t surprised at given his position. He wore some spectacles, but otherwise was fairly ordinary outside the position itself. From what Elizabeth had been able to find, he was clear of any wrongdoing and seemed to more or less generally care about people under him and the common folk, as it were.

She didn’t have much inherent respect for religious leaders, but out of all of them, Pope Marcellus was one of the least offensive. She hoped this would translate to him being reasonable as well.

“For a woman in your position, I would think it foolish not to meet,” Pope Marcellus said. “You are one of the few who wield great influence in this world, and it would be irresponsible of me to not at least attempt to convince you to use it wisely.”

Saudia gave a small, humorless smile. “I do my best to both protect our species and maintain order. I am well aware of the responsibility of my position.”

“I cannot disagree with that,” the Pope agreed surprisingly. “You have your flaws, but we all do, and you seem committed to the people in a less traditional way.”

Saudia crossed her legs. “Crime and disorder should not be tolerated, Holiness. Being lax serves no one, nor does apathy and neutrality. While I don’t claim to be perfect, I believe it is time to hold our species to a higher standard. I believe you might understand this better than most. Sin deserves punishment, does it not?”

The Pope gave a similarly grim smile. “That it does, but the difference is that our sins can be atoned for and forgiven. There is no forgiveness under your administration, only punishment.”

“Justice, Holiness,” Saudia disagreed calmly. “Forgiveness should be reserved for the ones whose crimes have not ruined the lives of others. There is, I believe, a difference between a child disobeying his mother, and a man murdering a citizen. Would you truly believe these to be equally worthy of forgiveness?”

“All can be forgiven if they are repentant,” the Pope answered. “Yet I do agree that one is worthy of punishment and the other is not. But it is one thing to administer punishment, it is another to dehumanize them in the process.” He paused. “I can say little for this war with the aliens. I do not have answers for it, but I can look out for the people of this world. I can offer little that you would consider useful in military matters.”

Saudia sighed. “Punishment is supposed to be just that, Holiness, something unpleasant. I see little difference between our treatment of convicted criminals and the Hell you believe in. One is theoretically worse than the other.”

“Hell is only for the deserving,” the Pope shook his head. “Yet there are crimes of disproportionate
magnitude you punish. I do not suggest to remove it entirely, that would be irresponsible, but perhaps use this opportunity to reform the convicted into something better. People can change, Chancellor, and this is true of even the murderers, rapists, and thieves you take delight in punishing.”

“Reformation, Holiness, is something I believe needs to be earned,” she stated flatly. “I am not as draconic as Stein, but I do not believe in reformation for all. Truthfully, the world would be better off without certain people in it. We do not abuse our prisoners, if they do their job, they will receive food and medical treatment. If they maintain good behavior throughout the entirety of their sentence, then they are released with a blank slate. Reformation is a result of reflection, and those in prison will either reflect on their crimes and come to the conclusion they need to change, or they will not.”

The Pope was silent for a few seconds. “I would ask that you at some point speak to those in your system, perhaps that is the only way to understand that not everyone is beyond redemption. I am curious, Chancellor, I have wanted to speak to you, but what reason would you have to speak to me? You are not, I believe, a religious woman.”

Saudia gave him another smile. “No, I am not. But the Catholic Church is the largest unified religious body in the world, and I would prefer we meet before the religious summit itself. Many countries in ADVENT have Catholic populations, and if ADVENT had the support of the Vatican, it would be a substantial boon to both morale, and to reassure the population that we are not the villains we are sometimes portrayed as. The Catholic Church has been largely quiet in regards to ADVENT, so I would ask you, where does the Church stand?”

“ADVENT, as it stands, is flawed, but not what anyone would consider evil,” the Pope said after a minute of thought. “Your intentions are noble, you try and care for your citizens, you provide for the poor. You are committed to Humanity, but only a Humanity you believe to be superior. ADVENT is prideful, it is vicious to its enemies, it will be harsh when given the chance to show empathy, it will use violence to solve problems instead of diplomacy. And I am certain you believe that you are doing the right thing.”

“Without a doubt,” Saudia nodded. “Holiness, Humanity has to change. We have been plagued with division, corruption, and worse through these past decades. Your Church is not immune to it. It reached the point where democracies no longer represented the wills of the people; justice depended on money and skin color; power was seen as the end goal for government; countries stood by as thousands were killed in the name of radical ideology.”

She shook her head. “There will never be an organization that is perfect, but ADVENT is the best that has existed so far. Our leaders are intelligent; we are not subjected to fanatical ideologies; we punish crime justly; money does not control us; and influence and status is only a footnote. No one is immune to our reach, Holiness, and unlike the United Nations of old, we do not simply stand by as injustice and death happens in the world. We act.”

“No one can deny your proactivity, Chancellor,” the Pope agreed. “Yet you seek to impose your rule over every other one. Can you be so certain you are correct?”

Saudia eyed him evenly. “With the information I know right now? Yes, I can say that ADVENT is correct. Not all ideas, ideologies, and religions are equal, and they should not be treated as such. The days of entertaining the Nazis, anarchists, dictators, slavers, and racists in the name of ‘tolerance’ or ‘free speech’ are over. I do not apologize for this, and I suspect you will not be able to refute me without resorting to moralistic arguments.”

“I do not know you, Chancellor, but may I ask you a question?” He asked evenly in return. At her
nod he continued. “You are a practical woman, that is evident, but I am curious by what your measure of humanity is. Our morality is how we know right from wrong; empathy, kindness, and love are parts of what makes us Human. Our ability to care. Chancellor, do you care about, or love someone?”

“Yes,” she answered immediately. “And I actually agree to an extent. Our morality is how we know murder is wrong. It is something that separates us from an alien race like the Sectoids. But morality must also adapt as Humanity does. And morality, I would add, is highly subjective. Highly reliant on religion too I would add.” She paused briefly. “Empathy, kindness, love, there are places for these emotions, but they are no more or less valid than other emotions we experience. Anger, pain, hope, we should not be continuously subject to them, because emotions make us unreliable. Emotion rarely leads to sound results, I have found, and that must change within us as well.”

She laced her fingers together and leaned back into her chair. “Logic over emotion, justice over mercy, practicality over empathy, victory over restraint. These must happen if we, as a species, are to truly become something great and united, not to mention if we want to merely survive.”

Saudia leaned forward. “I do not need the Catholic Church to agree with me, I do not need you to like me, but I would like to ask a question of you as well: Do you believe that the aliens are a threat, and that they can be beaten without us?”

“The aliens have shown a desire to kill or enslave us,” he said simply. “I am not blind. We did not start this conflict, and I would never suggest that we simply give up. I do not know if you are our only hope, but at this point there is no one else.”

Saudia nodded. “Without ADVENT, the Catholic Church will be destroyed. I don’t know the aliens’ policy towards religions, but I doubt you would survive, or if you did, the result would be a twisted version of the religion you believe in.”

“And so that is your main argument,” the Pope seemed amused. “We are standing between you and death, therefore you should support us.”

“You could calm the populations of those who are apprehensive,” Saudia said. “You could play an important role in this war. I am not asking you to call a Crusade, but simply say that in light of the alien invasion, and visiting ADVENT countries, you will give the support of the Church.”

The Pope laced his fingers together. “Even if I were to do that, you do understand that this is not a unilateral decision. While I speak for the Church, I do not make decisions of this scale alone.”

Saudia rapped her fingers absentmindedly on the arm of the chair, wondering just how much to tell him. “And what is the current mood of them toward ADVENT?”

He cocked his head. “Some support you, many do not. They feel you are too extreme, and a threat to the Catholic Church.”

“Cardinals Francis, Medina, and Piacenza?” Saudia asked evenly. “I don’t suppose they are ones who have issues with ADVENT?”

He blinked in surprise. “I am curious, Chancellor, how would you know that? I suppose it would not be beyond you to place spies at the Vatican.”

She had a choice here. Let things play out like planned, or let the Pope in on what was going to happen. It depended on if he could be trusted, and despite his conflicting views, he did seem to
genuinely believe what he said. Which meant she would want him as an ally here. “Not so complicated as that,” she said. “Holiness, do you know why I brought Stein with me?”

“To perhaps put us on guard, or intimidate us?” He answered wryly. “If that was the goal, it failed. Neither I, nor my Cardinals, succumb to intimidation easily.”

“No, Holiness,” Saudia said. “It is because at the end of our meeting, the SSR will storm the Vatican and arrest the following list of people.” She reached into her pocket and pulled out a copy of the warrant Stein had. “You are, of course, aware that there have been cases of sexual abuse by priests.”

The Pope stiffened. “Yes, of course. And I have made strides to make sure-“

“To put it bluntly, you failed,” Saudia interrupted, handing him the warrant. “You are not under suspicion, my Director of Intelligence personally cleared you. However, that is not the case for your advisors. We have started at the churches, and gone up from there. This is a systemic problem in the church that has been covered up for decades, and today will be the day this rot is removed from the world.”

As the Pope read the names, she continued. “Your Cardinals are thankfully not pedophiles, but they are arguably worse. They have helped cover up the cases that were reported, and they have also been responsible for monetary fraud and laundering. The paper trail and string of witnesses led us here. It took surprisingly little time to determine the culprits. Catholics are poor criminals, it seems.”

“And you are suggesting that their opposition to ADVENT is because of their crimes?” he said, his voice bordering on furious.

“It is certainly a part,” Saudia nodded. “I had never met you before today, so I was not sure how you would respond. We have our differences, but I believe you can be trusted. The image of the Church has suffered because of men like this, and you will not be able to change it without effort and pain. You were falsely lulled into believing this problem was close to being solved, and now you see you were wrong.”

He gave a single nod. “It is clear to me now.”

“We both have different views on punishment,” Saudia said. “But we can both agree that men like this deserve to be found and removed. ADVENT can help with this. We can give you the means to truly reform the Catholic Church into what you want it to be. We do not care about position, influence, or money. Justice will be served, and despite our differing ideologies, we are willing to do it.”

The Pope handed her back the warrant. “I do not suppose you have fully exposed the disgraces of the Church?”

“Not everywhere,” Saudia shook her head. “Not even in all ADVENT states. We cannot and will not start investigations in foreign nations, but we can follow evidence that leads to there.”

“And you were planning to do this without mentioning it to me, unless I passed your test of trust,” he said slowly.

Saudia gave a nod. “As I said, Holiness, we do not stand by when injustice is prevalent. If you had been implicated, you would be marched before the courts now. We do not care who you are, we only care about bringing justice to those who deserve it.”
He stared at her for a few moments, and seemed to come to a decision. “You have commitment, Chancellor, and more courage than I have seen in a leader in a very long while. I will need to consider what to do next, but after I make some changes to my advisors,” he pursed his lips. “You may start with arresting the criminals who have perverted this holy place.”

They stood and the Pope tapped a button on his wrist, and a few moments later some of the guards came in. He talked with them for a few moments, they nodded, and then left. “Do what you must,” he said, taking his place at the head of the table, Saudia beside him. A few minutes later the doors opened and the Cardinals, together with Stein walked in. That was the cue.

Saudia gave her a brief smile, and Stein returned it, ice in her eyes as she took her place opposite them. The Cardinals moved to their places. “Your Holiness, was your meeting productive?” Cardinal Francis asked, looking confused as he saw Saudia still standing.

“Indeed it was,” he answered, without looking over. “Chancellor Vyandar has reached an agreement with me.”

“Truly?” Cardinal Daniels, likely the youngest Cardinal in the room, said.

“Yes,” the Pope said, looking around at the small audience. “The Chancellor has exposed to me that the filth that permeates the Church is still alive and well, and worse, hidden by ones I considered friends and brothers.”

“Your Holiness,” Cardinal Medina said nervously, now eyeing Stein with obvious fear. “Please do not jump to any hasty conclusions. It is not beyond ADVENT to simply lie to achieve what they want!”

“How fortunate then that we don’t lie,” Stein said smugly, pulling out a thick file from a bag she must have received while Saudia and the Pope were having their conversation. “Please, Cardinal, read this and tell me if we are lying. She placed it on the smooth table and pushed it to them. No one moved to pick it up.

“Father,” Cardinal Farina said quietly. “What is going on-ah!”

All of them gasped as a dozen SSR agents stormed into the room, rifles bared and in full armor. Saudia smiled at their entrance. The SSR were the absolute last people you wanted to meet if you were a criminal. Their armor was similar to that of the Shieldbearers, and were specifically designed for armed hostile encounters. Their faceplates of their helmets were slanted in a downwards V, and the rest had been inspired by the Shieldbearer ones as well. Their armor was pure black, and they didn’t speak except through internal comms.

They only acted.

“Cardinals Francis, Medina, and Piacenza, you are under arrest for obstruction of justice, witness intimidation, money laundering, and failure to report criminal activity,” Stein declared as the SSR began roughly grabbing the gasping Cardinals that were named, tightening cuffs around their wrists and ankles. Perhaps a bit extreme, but it was standard procedure for any arrests done by the SSR to cuff them in multiple places.

“You will be tried, sentenced, and convicted under ADVENT law,” Stein continued, a satisfied smile on her face. “You will provide us with any additional information relating to crimes within the Roman Catholic Church and elsewhere. Failure to cooperate or perjury will result in an extension of your sentence. May God be with you, because we will have no mercy and you will be punished like the vermin you are.” She motioned to the SSR. “Take them away, put them with the
Without another word the SSR agents slung the protesting Cardinals over their shoulders and began marching out, leaving the rest of them alone, and the ones who were not expecting it, stunned.

"Thank you for your cooperation, Holiness," Stein told the Pope, inclining her head. "ADVENT appreciates it."

"It was needed," the Pope admitted. "I was not aware this had still festered. Understand this," he looked around at the remaining Cardinals. "As of today this will no longer be tolerated, and it will not simply be swept aside in the name of greater concerns. ADVENT has promised to help us rid the Church of these abusers, and I will be certain they are allowed to work." He nodded at Saudia. "You are right about one thing. We must change, and this includes the Church. And change must start from the top."

Saudia smiled. "I could not agree more."

---

*Undisclosed Location, United States of America*

Saudia was rather happy with how that had turned out, so much so that she wasn’t miffed at Dr. Kettani calling her in to discuss something that apparently had to be in person. She knew he was beginning his recruitment efforts, and she hadn’t expected anything beyond updates for a while. So for him to contact her either meant that something was wrong, or there was a development so serious he needed her to review it.

She walked down to what were the acclimation rooms, where there were already some people waiting inside. They were white rooms that the potential psions waited in before being awakened, or at least that was their intended function. They were more or less glorified waiting rooms, while the doctors made the last-minute preparations.

Kettani was roughly two-thirds down the current hallway, with a few more doctors beside him, all muttering amongst themselves. "Doctor," she greeted, walking up. "What was so urgent that you needed me here?"

"Ah, Chancellor," he said, immediately turning to her. "Thank you for coming so quickly. To summarize quickly, we've hit something of an...unexpected development."

Saudia sighed. "Elaborate?"

"Do you remember how I said we probably wouldn’t be able to find many psions of similar power to Patricia?" He asked, clearing his throat. "Well...we did find one. A ninety-three on the Trask Scale."

Saudia blinked. "You’re certain?"

"We triple checked," Kettani assured her, handing a tablet with graphs and charts on it. "At some point we expected one like him, but not immediately. Normally, I wouldn’t bother you, but something this powerful will be a little harder to keep a hold of. Imagine Patricia, but potentially more powerful."

Saudia nodded. "What do we know of him? He had to have passed the psychological tests."

"That’s the thing," Kettani shook his head. "He seems completely fine. Normal. Lukas Von Theil, German Chemistry teacher, no criminal record, no military service, has a habit of posting in science..."
forums online, but otherwise nothing out of the ordinary. Has an interest in alien technology, which
was a reason he gave for expressing interest.”

Normal. Well, that wasn’t a word she’d really used in a while. Normal was definitely strange right
now, but she supposed that was just how it worked sometimes. Completely ordinary people were
elevated beyond what they could have expected. “I asked Elizabeth to put together a profile on
him,” Kettani said as they moved towards the window. “Also as innocent as you’d expect.”

In the center, sitting calmly on the cushy chair was Lukas Von Theil, who didn’t immediately
strike her as normal. Just from his posture she could tell he was a very controlled and deliberate
person, and his speech was likely the same. He had a buzz cut with his light brown hair barely
standing out on his pale skin.

“Intermittent relationships with various women,” Kettani continued. “Nothing malicious, but
everything seems to indicate he almost grows bored of them and breaks up with them when they
aren’t what he considers interesting.”

Saudia raised an eyebrow at that. “Odd.”

“He has very high student reviews too,” Kettani said. “He is, and I quote ‘Very laid back’,
‘Actually tells us interesting stuff’, and ‘Anyone who uses fire is cool in my book’. The last one, I
believe references an incident where Von Theil was almost kicked out for performing what was
designated ‘unsafe experiments’. When asked for his defense, the answer was, ‘Because students
aren’t interested in a damn baking soda volcano. They want something to remember.’”

“Fun guy,” Saudia commented. “Anything else interesting?”

“His online profile is ‘Geist’,” Kettani said. “Mostly restricts himself to scientific forums that I
mentioned earlier. Search history is mostly benign, chemical formulas, subjects, and he has also
been following the war closely.” Kettani paused. “What else? No stated religious beliefs or
political affiliation, no social media, keeps the very few relationships he has purely professional.
He appears to be a loner through and through.”

“So he seems to be clean, if somewhat odd,” Saudia said. “Why do you need me?”

“Because something about him is just off,” Kettani scowled. “It’s not just me either, everyone else
who speaks to him is the same way. Even the psion I had question him to determine without any
doubt how trustworthy he was said she felt uncomfortable performing the examinations. She
described it being like he knew she was going through his head, and like she was being watched
inside it.”

He shook his head. “Again, if this were anyone else, I’d just go ahead and do it. But considering
the ramifications, I don’t want to awaken a ninety-three power psion without explicit approval
when things are like this.”

Saudia thought for a moment. “Let me talk to him.”

“Be my guest,” Kettani said as he unlocked the door, and she stepped in. Lukas looked up as she
walked in. He didn’t get up, instead looking at her with unblinking grey eyes. His expression hadn’t
changed a bit as he looked her over. Already she felt what Kettani had described in how something
seemed off about him. It was like she was being visibly dissected, which was not a feeling she was
used too.

“Chancellor Saudia Vyandar,” he said, his voice not what she was expecting. It was sort of what
she was used to, but he rolled and accented his a’s, making it sound like he was drawing out parts of her name. “I did not expect you to take an interest in me.”

“How much has Dr. Kettani told you?” She asked.

“Oh, very little, but I was able to deduce enough,” he said dismissively. “You would only go through all these hoops because I would be considered a possible threat to your precious ADVENT.” He gave an eerie smile. “I assure you, Chancellor, I have no intention of breaking the terms of our agreement. You wish control, you have it, I only wish to awaken this gift inside me now.”

Saudia kept her expression blank. Yes, this person was not normal, no matter what Kettani said. “And why exactly did you contact the PRIEST Program?” She asked. “You understand the conditions.”

“Psionics has fascinated me since I first heard of it,” he said wistfully. “Ever since I have wanted to master the secrets of this existential and mysterious gift. Your PRIEST Program was the perfect avenue, and I appear to have reached the final stage. All I suppose remains is your approval. You would not meet with someone of minor power, Chancellor, so I know that I am already useful to you. I have no fear you will abuse the bomb in my head, because as of now, I am too useful for you to kill in a childish fit of rage or fear.”

Saudia’s lips curled up. “You seem awfully sure of that. You don’t know me.”

“I know that you are a woman of practicality,” Lukas said with no trace of doubt. “You do not tolerate those whose inhibitions prevent excellence. You do not hesitate when making decisions, you act. I am good at reading people, Chancellor, and if I did not believe you are who I think you are, we would not be speaking now.”

“And just who do you think I am?” She asked.

“Someone who wants to bring humanity under her control,” he stated calmly. “Someone who has a past they do not want questioned, and someone who will stop at nothing to destroy the aliens and the plans they have for our species. I do not care where you came from Chancellor, I suspect I will learn that in good time, but my place in this world has been one of little import by design. I know my strengths and limitations, and I intentionally placed myself where I would have the most impact. Those parameters have changed. Here is where my impact will be the greatest, and you will help me achieve that.”

This man reminded her of the Commander in his reading of her and complete assurance. It was discomforting how certain he seemed, like he knew what was going to happen. From his perspective it sounded like he was simply using her to achieve ‘his place’, or get wherever he had the most ‘impact’ which could mean a number of things. He didn’t strike her as an altruist, but if his intent had been otherwise, she would have been told.

Still, he had passed every test, and if a psion had gone through his mind and there was nothing… there was no reason to deny his awakening. Not that there had really been a question of throwing away someone who was a ninety-three on the Trask scale. She sincerely hoped he wasn’t a telepath.

Someone like that with telepathy was concerning indeed, bomb in the head or no.

“Thank you for speaking with me,” Saudia said. “Your awakening will begin shortly, Mr. Von Theil.”
“Geist,” he interrupted. “I would prefer to be referred to as Geist from now on. I never much cared for my name, and now is as good a time as any to change it.”

Saudia shrugged. An odd request, but she didn’t particularly care about this one. “As you wish… Geist.” Kettani would have to update paperwork, but that wouldn’t be too much trouble. She stepped out and closed the door before turning to Kettani.

“There is something strange about him,” she said. “But there is no factual basis to not use him. Put him in the pod. With that said…” she paused. “Have another bomb implanted in his chest. I think we would both feel better if we are not relying on one contingency.”

“Yes, Chancellor.”

***

The Citadel, Situation Room

And here they were back again.

It didn’t seem that long since the Commander had been here during the first attack on the United States, and this would definitely not be the last. Saudia had been busy too, first with receiving reports of the newest tactics and technological advances ADVENT had made, some of them XCOM hadn’t anticipated. Then she had gone on to purge the Catholic Church of the degenerates in it, and otherwise demonstrate ADVENT’s reach and intent.

Good for her. This was what ADVENT should be doing. Enforcing the law, wherever it was established, borders be damned.

And now they were all preparing to perform one of the most significant counter-attack operations of the war. One he felt the aliens would be unprepared for. “Let us begin,” he said, and the holotable came up showing the West Coast. “Commander Christiaens, you can start.”

“Very well,” Laura first pointed at the top of the map. “There will be several objectives in this operation. We have to be very careful not to overextend otherwise the aliens will exploit that. If possible, we need to take the northwest completely, which amounts to Washington State and Oregon.”

“This means Seattle is taken and Portland is completely secured,” Weekes clarified. “From there, the Navy can reinforce the coasts and we can immediately begin establishing proper bases to corner the southwest.”

“At the same time, we take back the major Nevada bases and cities,” Laura continued, pointing for reference. “Las Vegas is destroyed, but the aliens have been making the remains and nearby bases into strongholds of their own. Should they be allowed to finish, it will severely hinder any further military operations.”

“So is that the priority?” The Commander asked, looking up at her. “I need to know where best to deploy my own soldiers.”

“Negative,” Laura shook her head. “Las Vegas would be an excellent bonus, but the bulk of our forces should focus on securing the northwest. Seattle and Portland for sure.”

The Commander nodded at Patricia. “Noted, we’ll have our best there.”

“We will still conduct a large attack on the Las Vegas area,” Laura reminded him. “But it’ll be a
much harder fight, both since the aliens are entrenched and the conditions are not favorable. But I believe it is possible to take.”

“I can assign some additional psions to help,” the Commander nodded, scratching his chin. “Our concern is not the aliens themselves, but if the Ethereals interfere. That will be the deciding factor.”

“America has been the Battlemaster’s theater,” Weekes said with a grim smile. “So we spook him. We fake a nuclear launch and chase him off. He won’t risk getting killed by a bomb.”

“Viable,” the Commander nodded, thinking. “Assuming he doesn’t come back immediately.”

“We’ll be watching for his transport,” Weekes said. “It’s an Overseer-class, and I believe we can take that out with enough Ravens. If we chase him into space, I’ll consider that a win.”

“And if he calls our bluff…” Laura shrugged. “We have Purifier teams for each operation. They’ll be held back in reserve unless he’s seen. All we need is to clip him and the chemical will do the rest. MDUs will also provide assistance if needed. It will be interesting to see if the Battlemaster is faster than a computer.”

Considering what he knew of the Battlemaster, the Commander was skeptical that any of that would actually work, but it was much better than nothing. They had plans for the Battlemaster, and if Caelior showed up…they could use the nuclear spoof. It might work once, but not for very long. “There is some news from Australia,” the Commander updated them. “Apparently the aliens are having some trouble keeping the populations in check. One city revolted and took out what appears to have been a spacecraft construction factory.”

He held up a USB drive. “And we also know why they’ve been quiet for so long. It’s like we suspected, they want to fortify the areas they do have. And they also want to purge the resistance elements from their controlled areas. That is currently having mixed results, but it’s buying us some time before their next attack.”

“Anything about Korea or China?” Laura asked.

“No,” the Commander shook his head. “Strictly related to the Oceanic nations. But we strike soon, and we delay them even longer. The Battlemaster does not seem to want to run a multi-front attack unless it is a diversion, so we can use that to our advantage. Let us keep him in the American theater for now.”

“That’s the plan,” Laura said. “A victory here would be a much-needed morale boost after the string of defeats. Considering what we have now…it can be done.”

The Commander smiled. “It certainly can. Now we just have to make sure not to screw it up.”
Research and Engineering VIII coming next (Bunch of XCOM files on the Sectoids should be coming soon too), and then there will be an actual battle. Been a while since there was one of those, but it'll be worth it, and then it will ramp up from there. Anyway, on an unrelated note, if anyone knows of any good artists, I'm thinking about commissioning some for the major characters/events written so far. Depending if I find a good one of course, which is why I'm asking around in addition to doing my own research. The more photorealism, the better, not interested in more cartoonish drawings.

So thanks in advance, and for reading as well!

*Blacksite 009 – ID: “The Prism” – Overseer: The Battlemaster*

The Battlemaster thrust out his hand and an entire squad of ADVENT soldiers went flying into the air. He immediately transitioned with his sword hand into a slash that killed an Officer and Gunner. Gauss slugs were screaming through the air at such a high rate and velocity that it was actually beginning to slow him down.

A problem.

He dashed a short distance until he was back on the rocky shore of the city beach. He raised a hand and the air directly in front of him rippled, catching the gauss slugs shot his way while he observed his current situation.

The extended beachhead was covered in at least several thousand soldiers, a result of what happened when ADVENT decided to send overwhelming numbers at him. Not that it was helping, and he was now convinced that it was just to buy time until the bigger guns were sent his way. Theoretically, they would be distracted by several other attacks, but maybe that wasn’t the case here.

 Normally, he would have moved further into the city at this point, but he knew there were Purifiers in the army, and that would make it significantly harder for him if he was caught even in just an alley or street. Then there were the MDUs, which would be inherently harder to kill, especially in larger numbers.

It was actually nice to consider an opponent a threat for once.

Ah, there they were.

The MDUs charged out, along with a few hundred more ADVENT squads. The Officers were shouting and yelling at their subordinates to get into position, and the Engineers were using the bodies to form makeshift barricades, sealing them in place with Symbiote dispensers. The Battlemaster spent a few more seconds looking over the composition.
He couldn’t stay here forever, but once he charged in again, he would be committed and vulnerable. There was the additional risk of an XCOM squad showing up, but if they had been interested in fighting him, they would have likely come by now. How many were supposed to be here? A minimum of ten thousand, so he still had a long way to go, provided they didn’t retreat.

The lasers were starting to hit him, and even if they just sparked off his armor, sustained blasts would weaken its integrity. Luckily, he knew how to disrupt computer processors. The soldiers could be ignored for the moment, the MDUs were the primary threat. He executed several dashes in quick succession, all zig-zag patterns, until he was close enough to one of the machines. He lifted one up telekinetically, crushed it, and threw the scrap metal towards another one, and at the same time telekinetically grabbed a squad of soldiers around him with another hand, throwing it at another MDU.

With two temporarily taken care of, he stabbed forward at another MDU, through its center, where he knew the actual processor core was. ADVENT’s engineers had been clever, using the head as a decoy that didn’t actually control the machine. It was an easy target, but too easy, and he’d been fooled exactly once when he’d decapitated one and it had still kept attacking him.

So he didn’t do that anymore.

He threw his sword towards another MDU, accelerating it to a speed that would penetrate a Sectopod, while extending his left hands towards another group of MDUs, twisting them and forcing their arms to crumple and ruin their weapons, which exploded in their hands. Unfortunately it didn’t kill them, and they charged his position, still looking to beat him to death.

He was hoping they would try that.

He sent out a telekinetic wave which blew back any ADVENT soldiers near him and took the initiative by charging the machines himself. For most this would be suicide, but he was still taller than the MDUs by a significant margin. If anything, they were the only opponents ADVENT and XCOM had that were a reasonable size to face him.

One punch almost punctured the armor of one completely, while he grabbed another by the head and squeezed, crushing whatever was in there, then forcing his hand down into the more delicate systems. That one taken care of. He kicked another, sending it flying back and grabbing the damaged one, quickly twisting the limbs off, leaving the machine in pieces.

He extended a hand to where his sword was, and it flew into his hand, slick with oil and blood. More MDUs were coming forward, and soldiers were running away in terror to better positions, and he turned to face them, until he glimpsed the orange armor of a Purifier. He didn’t even waste a second to clarify, but charged away, which in this case was to the right, unfortunately away from the water, which even if it wouldn’t protect him, gave him a lot more room to maneuver.

Just in time, as the Purifier’s flamethrower turned the immediate area he was in to a chemical inferno, killing several of their own soldiers. The Battlemaster quickly assessed if there were any more, and at the moment there were only three.

This was a problem.

One he could deal with. Two were dangerous. Three were deadly. The range of their weapons was extensive, he couldn’t just charge up and slash them without risking them blowing up, and getting close enough to perform telekinesis would take a minimum of a half second, which could allow the remaining ones to easily cover his immediate area.
He dashed again as they began shooting the white-orange chemical at him, and the other two were spraying the places he was being led towards. A clear trap, but one he couldn’t escape easily, since he couldn’t even let those flames touch him because even if he wasn’t in immediate danger, it would burn him, and Revelean had tested it enough to know it couldn’t be put out by anything they currently had.

Jumping over it was also risky, though not to the extent where it was a high chance of him becoming wounded. The problem was that he was also a big target, and again, there was no way to put out the flame. He was going to have to solve this issue soon, so he might as well take a risk. Instead of continuously dodging to the sides, he charged forward and performed a slash of a precision he hadn’t attempted in years.

And it was almost good enough. His intent had been to carefully sever the head of the Purifier, and he had, but had also clipped the tank. He immediately thrust out a hand sending the body flying backwards, while another hand shot out at the nearby Purifier also throwing him back. The decapitated one exploded, and the third one fired, and had started to fire as soon as he killed the first one.

He charged out of the way, but this time was too slow. Both of his arms were currently being burned, and his armor had locked up. Not good, and that brief pause had given the Purifier on the ground time to recover, and he was shooting another torrent of flame in his direction, this time scorching his right leg, which locked up alongside his arms.

And here it ended again. There was no way he could now get out of this, and both remaining Purifiers focused their weapons on him again and engulfed him in a final torrent of flame.

“Resetting field,” came the voice of the CODEX system overseeing the simulation. “Unlocking armor.”

The Battlemaster could move again, and the entire room disappeared, settling back down into a massive, flat room. The Prism, on its own, was comparable to a medium-sized Human city, like Las Vegas, now that he thought about it. The main part in any case. Very rarely was the entire size needed, but it was exceptionally helpful for actually simulating a battlefield.

The Battlemaster sighed and placed his sword on his back. It was a very good thing the Prism existed, otherwise he wouldn’t be nearly as effective as he was today. The Purifiers were a much bigger problem than he had expected, even more so than the majority of XCOM or the MDUs. How the Humans had even discovered a chemical that dangerous, and thought to weaponize it, was something he was impressed by.

And should he get into a bad situation, there was a good chance he might lose. Right now the rate was close to fifty-fifty for more than three at a time. He could now handle two reliably, but three was still an issue. It was unlikely they would pose a threat for the more powerful Ethereals like Caelior, but they were a concern for him.

The good news was that in simulated full-scale battles, there was still a perfect success rate. Even now in order to fully be concerned about the Purifiers, they needed to be desperate. If he stayed within ADVENT lines, they would not fire on their own. The CODEX was ruthless sometimes, and that was likely contributing to some of his defeats.

Correction, the CODEX was as ruthless as he allowed.

It was unlikely that ADVENT or XCOM would be as smart, or as practical as some of the scenarios here, but his general rule was to assume his enemy was smarter than he was, and prepare
for the worst. To date, the worst had not actually happened, but it made for an interesting practice. At least the Humans had something that gave him some pause, Sectoids were laughable, every last one of them; the Muton Praetorians and Sargons were a challenge, but the CODEX was still not good at processing how smart a Sargon actually was, but at least none of them could instantly kill him. Most Vitakara were weak and easily dispatched, with the possible exception of the Oyariah Titans, but even those were more entertainment than anything else.

Andromedons were the largest challenge, since they both had the Special Operators and had direct psionic counters. The issues were that the CODEX still hadn’t got their more sophisticated tactics right, and the basic Andromedons were still easy enough to kill.

Where things got very interesting was whenever he put another Ethereal in the scenario, mostly Aegis, and he was more and more concerned with the results.

Namely, that there hadn’t been a scenario where he had won against a fully hostile Aegis. Even if the CODEX was not as sophisticated as he’d liked, that didn’t bode well for an actual encounter with Aegis. It was very likely that should he be encountered in the field, he was simply not strong enough to kill him. Only another, stronger, one could.

That immediately ruled out himself, Sicarius, perhaps both of the Guardians and Quisilia. In his mind, the best one to fight Aegis would be Caelior, Isomnum, Deusian, and perhaps Macula. This was one instance where he felt this would be best handled by the Imperator himself. There were simply too many unknowns, and the simulator wasn’t able to properly detect or exhibit telepathy.

But for the moment, it was sufficient.

The main Prism room fell silent, and the Battlemaster waited for the CODEX to appear before him again. The room itself was a bright white when unsimulated, and composed of millions of ‘blocks’ which rose and fell to simulate terrain, buildings, and other physical scenarios. The Prism itself had three main levels, the lower two could combine into one massive one, although this was only used in space combat scenarios.

The top floor was more or less an armory of his weapons and suits, along with anything else that piqued his interest. Aside from that, it was rather bare and he hadn’t really figured out what to do with the extra space, so he’d more or less converted it to guest barracks, as the Lurainian did train here on occasion, as did the Zararch.

The CODEX materialized in front of him. “Battlemaster, would you like to repeat the scenario or choose a new one?”

The Battlemaster realized that the gravity still felt off. “Revert to standard gravity, and no, shut down for today.”

“Acknowledged,” she said, and the Battlemaster felt the gravity return to normal. Most would likely not train on three times the standard gravity, but it certainly came in handy and allowed him to move unhindered even on high-gravity planets like Desolan. It was more tiring than usual, but it was a temporary pain he could endure.

The CODEX disappeared and the Battlemaster turned before pausing. “CODEX, countermand that order.” He was suddenly feeling in a mood to relax a bit, and he felt he deserved an easier scenario. It wasn’t as though he had anything pressing at the moment.

The CODEX appeared before him. “Acknowledged. Please state a scenario or create a new one. If you have any additional modifiers, please also state them.”

“Any additional allied or hostile forces?” The CODEX asked.

“No.” He stated. “Only me, and only Sectoid forces inside.”

“Additional objectives?”

“None, extermination.”

“Any additional modifiers?”

The Battlemaster considered for a moment. Well, since this was not a serious scenario, he could afford to enjoy himself some. “Begin designated music tracklist upon start of scenario, Audiomachine, run on loop until end of scenario.”

“Understood,” she said. “Any additional modifiers?”

“No, begin construction.”

“Bringing Spacesuit from armory,” she said and disappeared, and he walked over to where it was coming down from to top floor as the room began darkening and changing. The Prism was the result of what happened when Sovereign technology was properly created and applied. Why the Imperator was so hesitant to use their tech was something he had avoided thinking about, but whenever he did, it made little sense.

It wasn’t just the Imperator either, the majority of Ethereals were surprisingly suspicious of their technology, and he couldn’t figure out why. On some level he suspected it had to do with pride, as Sovereign tech was far beyond even Imperial technology, but if that were the case, they would not be using Gateways.

There was clearly some suspicion on if it affected the users, and it did come down on some level to trusting the Sovereign Ones, which he had considered a valid reason at first, but at this point, he no longer believed that. If there were truly detrimental effects of Sovereign technology, the majority of the Collective would be affected simply because of the Gateways, not to mention constructs like the Prism itself.

On some level it was probably the Creator, and others unfortunately applied her insanity to Sovereign tech as a whole, even though her deteriorating mental state was likely due more to unrestricted boundaries and actual communication with the Sovereign Ones than use of their technology.

So what was the reason?

That was something to be solved after Earth was dealt with. But at least there were some who understood the value. Ironic that he and the Creator actually agreed on something. Fectorian was the only other one who was actively trying to figure out just how Sovereign tech actually worked, and the Battlemaster had been surprised to learn that the Imperator had ordered him to cease work on that, and instead focus on other, trivial projects.

Like that Avatar Project.

He shook his head as he changed into the space worthy variant of his armor. The Avatar Project
was useful in theory, but he failed to see how it was the game changer the Imperator seemed to think it was. Perhaps it was simpler than that. Revelean was one who believed there were some aspects of the universe that should not be tampered with, and he suspected the Imperator might agree with regards to specific aspects of Sovereign tech.

In the Prism’s instance, one reason only Fectorian had worked on it was because the technology used to make it function as well as it did involved the manipulation of dark energy. It was how the scenarios were able to be so realistic. The opponents fought were more than just projections, dark energy was able to be concentrated in specific points to give the illusion that he was cutting through something, and he could feel cutting through something. Just as he could feel the fake gauss slugs hitting him.

Some aspects couldn’t be replicated of course, like pain, burning, most forms of psionics, but it was far superior to nothing at all. If he suffered injuries, his suit would simply lock up and he couldn’t use it. Apparently Fectorian still didn’t understand how the manipulation of dark energy worked, because the Sovereign Ones had given him the exact schematics and instructions on how to build it, after he had inquired as to building a kind of simulator the Battlemaster had suggested once.

Implying that the Sovereign Ones had either had this already planned out, or they managed to come up with it in the space of a conversation. The Battlemaster was ignorant about much of the greater mysteries of the universe, but he suspected that being able to manipulate dark energy would be useful against the Synthesized.
