“Good,” the Commander said. “We’ve entered a critical stage of the war. It will eventually spread beyond it. Are the preparations for the Summit proceeding on schedule?”

“So far, yes,” Jackson confirmed, briefly glancing at her tablet. “Coordinating on this scale in secret is difficult though. The Andromedons are willing, and ADVENT has cleared themselves. We still need confirmations from the Sar’Manda and Nulorian. Although I expect an answer within days…” She trailed off, reaching up and tapping her earpiece. It must have been urgent, as she would never do that in a meeting otherwise.

“We have a problem,” Jackson said somberly, looking back to them. “Patricia has appeared.”

The reaction in the room was immediate the moment they heard it, as the Commander focused intently on Jackson. “Appeared where and how?”

“Don’t know how, but she’s in front of ADVENT HQ in Switzerland,” Jackson said.

“Attacking?” Zhang demanded.

“No yet,” Jackson answered. “But she’s beginning to attract attention. She wants to make this a public event.”

The Commander exhaled. “We knew this was coming. Creed, put the squad together. One way or another, Patricia will be handled today.”

Creed nodded somberly. “Yes, Commander. It will be done.”

Enter the Harbinger

Chapter End Notes

Two authors notes in one chapter, probably not something that’s going to happen often. In any case, this is sort of an announcement to let people know this is something that’s coming. Right now I'm working on putting a Discord server together for readers of the
series with other authors I've worked with over time. Some of you are already aware of this, but since I've confirmed there is enough interest, that is a thing that is happening. If interested, let me know so I can sent you a link when it launches which will be sometime shortly before the next chapter. Otherwise the next chapter as well as my profile and the forums will have the link.

Thanks as always for reading!
Every ranking officer and division head was in attendance as the Commander prepared to handle the revelation of Patricia appearing before ADVENT HQ. All of them were looking at live feeds and hologram reconstructions of where Patricia was. Immediately several things stood out to the Commander.

The first was that she was wearing what appeared to be her original red Aegis armor. No weapons, but as she was a psion, she didn’t need them. Realistically, the Commander was skeptical that it was the original Aegis armor, but instead probably something more advanced; superficially designed to resemble her old armor. Or perhaps she was wearing it and was extremely confident. It was interesting that she cared enough to emulate it, at any rate. Other than that, she looked… almost normal. Her helmet was tucked under her arm and she appeared in no hurry to do anything. There were a few additional notable cybernetic additions along her neck and jaw, but Aegis had already speculated that they were the result of the Avatar Project, whatever that entailed.

“ADVENT has Hussars positioned to take shots,” Jackson updated the Commander. “Priests and MDUs are being mobilized and moving out. Civilians are being advised to remain in their homes. Doesn’t look like she’s doing anything right now.”

“She’s waiting for us,” the Commander shook his head. “Whatever she’s planning, she wants for us to be there.”

“A trap?” Shen wondered.

“Or a demonstration,” Zhang countered grimly. “If she’s intending to send a message…what better place than the headquarters of ADVENT itself.”

“Has the Chancellor been evacuated?” Creed asked.

“Yes,” Jackson confirmed. “She’s in a secure location.”

“Two Agents are protecting her right now in addition to her Guard and Priests,” the Chronicler added. “Sovereign Orbs are seeded around the perimeter and interior. Breaching the safe house is impossible without someone knowing.”

“Good,” the Commander was pleased that Saudia was taking steps to mitigate the threat of Ethereals and other entities like the Bringer. T’Leth was the best way, should everything else fail. “But we can’t wait much longer. Creed – the squads.”

“Ready and waiting,” Creed confirmed. “Two full squads specialized to take her down, along with MEC and Archangel components. With your permission, I’m going along as well.”
“Granted, so long as you do not hesitate,” the Commander nodded. “She’s going to want to talk to me as well. I’m going along too. With the amount of personnel, the danger should be limited. She cannot face down two XCOM squads and the defenses of HQ.”

“T’Leth will want to observe too,” the Chronicler said. “I will also participate. We cannot be too prepared here. Though I want to make a suggestion as to our… response.”

The Commander motioned for him to go on. “Let’s hear it.”

“We can expect that Patricia is going to attempt to sow discord and division based on what she knows,” the Chronicler said. “The media are going to get their hands on some footage, and if Patricia is smart, she’ll be sure to spread it. No better place than the capital. The only appropriate response is to respond in kind.”

“How?” The Commander raised an eyebrow. “Doing the same thing isn’t feasible.”

The Chronicler cocked his head and smiled. “Is it? Patricia appeared out of nowhere; we can do the same thing. I propose Fiona teleport a strike team to Vitakar, directly before the Aui’Vitakar, and show the people and government what they are really facing. I suspect this would be more… poignant if Aegis and several of our Vitakara allies participated. The entire species is isolated from the reality of this war. That will change when it is brought to them.”

“I approve of this plan,” Aegis said. “If nothing else, it will force the Imperator to respond. The Zararch will suppress this as best they can, but word will spread. So long as we do not violently attack them, and merely state our side of the war, this has the potential to heavily destabilize the planet. We have the manpower and capability – and they will not expect it.”

“I agree,” the Commander nodded. “Unfortunate that sending Caelior is out of the question.”

“It is likely for the best,” Aegis said slowly. “Regardless, we will be attacked by the Imperator. If Caelior were permitted to leave Earth, two Ethereals in the heart of the Vitakara would be a larger deterrent than one. Yet it is likely safer to hold Caelior back in Switzerland and use him if Patricia proves more dangerous than expected.”

“There is something to consider,” Zhang pointed out. “If Patricia is expecting any of this and her appearance is a trap to lure us away from more important targets. She has no chance of taking the HQ or causing any permanent damage. It would be a symbolic attack, but perhaps a distracting one. The Battlemaster, the Guardians, the SAS, they could all launch coordinated strikes when our best are deployed to stop one woman.”

The Commander pinched the bridge of his nose, thinking. That was a good factor to take into account. When it came down to it, Patricia – assuming she was mostly the same woman – would be able to predict some of their reactions. Of course, there were things she was ignorant of since her abduction, but she wasn’t an idiot, and underestimating her was dangerous.

The good news was that there was an obvious solution. “Send squads to likely locations of attack,” he told Jackson. “If the Ethereals decide to take advantage of us being distracted, we will be ready. Iosif, take a squad to Florida in case the Battlemaster makes a move. Carmelita and Geist will lead the other two.”

“Acknowledged, Commander,” Iosif confirmed. “Although what if there’s an attack here? Patricia knows the location.”

“Possible, but unlikely,” the Commander said slowly. “But we would know of an attack long
before it happens. They’d need an army to breach it successfully, as well as be fighting the defenses and soldiers inside. There will be an attack on the Praesidium – but I suspect today will not be that day.”

He frowned. “Though the reality is that the Praesidium is no longer secure. We may have to begin finding a new location for more critical projects. No point in taking chances right now though. Even if attacking would be suicide unless the Imperator himself participated.”

“His capabilities would be neutered here anyway,” the Chronicler said, shaking his head. “Teleportation tricks would fail. Not to mention T’Leth can easily direct his attention to here. Too many safeguards and the Imperator is clearly going to use her as his proxy.”

“I would not be surprised if something was sent though,” Zhang warned. “Perhaps as a message that they know where we are now. Caelior should stay. The teams for Patricia are more than sufficient. Backup protocols should also be initiated for a worst-case scenario. With the Imperator, we cannot take too many chances.”

“Agreed,” Aegis nodded. “Sicarius is a likely agent should he attack the Praesidium. If not properly stopped, she could cause havoc here. And discover some things best hidden. Specifically, the Andromedons we have here.”

“Move them to Paperclip base,” the Commander ordered, as an unpleasant reality set in. “Patricia also knows that the Andromedons we had here prior to our alliance with the Unions were under orders to defect. The Unions allied to us need to act very quickly if they are to remain intact.”

“Fuck,” Creed cursed. “This just keeps getting better.”

“Jackson, I assume the Andromedons have contingencies in place for this.” The Commander looked to her. “Have contact be made and put them into action. We need to assume that their actions on Earth are compromised. We will need to meet to establish the next steps.”

“Understood, Commander,” she confirmed.

“We know what to do,” the Commander said, straightening up and looking around the room. “We’ve spent enough time talking. Execute your orders and those of us preparing to deploy, we need to get going. Understood?”

“Yes, Commander!” They saluted, and he returned it before they all rushed off to prepare for the coming battles.

***

Briefing Room 6, the Praesidium – Classified Location

3/18/2017 – 11:11 A.M.

Being given the command to mobilize, Sierra expected that she would be going to meet the traitor Patricia and putting her down. But after walking into the Briefing Room with the rest of her Host as well as not one, but two of T’Leth’s Agents – Fiona and Crevan specifically – as well as Aegis with no sign of the Commander or Creed anywhere…

She had a feeling that something else was going on.

When some of the Vitakara defectors also walked in, she was thoroughly confused. “What’s the mission, sir?” Sussan, one of the psions in the room asked. “Taking out Patricia?”
“No, though this is of equal importance,” Aegis answered, stepping forward. “The Imperator has seen fit to send his proxy before ADVENT. The Commander has decided that we will return the favor.”

Huh. Well that was interesting. “Where?” Sierra inquired. “Does the Collective even have a capital?”

“The true power nexus of the Collective would be the Temple Ship of the Imperator,” Aegis said. “But the bastions of power for each species exist, and the most malleable is that of Vitakar.”

“Fiona will teleport us to the capital of the Vitakara,” Crevan said bluntly, his almost dismissive eyes looking at each of them. “From there Aegis will present the reality of the war on Earth to the population. Our Vitakara allies have been appraised of this prior to coming here, and will provide legitimacy to Aegis. Our mission is to both send a message to the Collective, and protect Aegis and the citizens should there be conflict.”

“And what part of that mission includes getting back?” Anna asked. “The Imperator – or the Zararch for that matter – aren’t just going to let Aegis talk.”

“No, the Imperator will send someone,” Aegis agreed with a short nod. “Perhaps an Ethereal; perhaps a fleet. We have sufficient capability to resist for a time.”

Considering that there was an Archangel Host, a MELD Operator, two psions, Aegis, and two of the most powerful T’Leth Agents, Sierra could see how they’d be able to hold out for a while. “Unless the Imperator comes himself,” Lacy Sable, one of the Infantry commented from the side, leaning against the dull metal wall. “With who we’ve got, he might think it’s his only option.”

“I suspect the Imperator is…occupied,” Aegis said, motioning with a lower hand. “If our beliefs about the Avatar Project are correct, it will be difficult, if not impossible, to maintain influence over Patricia while acting on his own. There are others who he could send instead. Quisilia and Sicarius are the most likely.”

The memelord and the assassin, a dangerous duo. As much as Sicarius seemed like the bigger threat, Sierra couldn’t quite ignore the fact that Quisilia had gone up against five Agents of T’Leth and emerged the victor. Granted, T’Leth hadn’t been completely awake yet from what she knew, but Quisilia was objectively the most dangerous of the two.

“What about Deusian?” Isacc Glenn, the MELD Operator asked neutrally.

“Who is that?” Sierra asked quietly to Anna, who just shrugged.

“It is not theoretical,” Aegis said, clearly having heard their discussion. “Reapers can and did destroy planets when necessary, which is why her deployment is unlikely. The Imperator does not want wholesale destruction – not in the heart of the Vitakara species.”

“So we go in, give our speeches, maybe fight some Ethereals, and leave?” Sierra asked. “Is that the plan?”

“The bullet points,” Crevan said flatly, eyeing her curiously. “As well as disseminating some important information with the Aui’Vitakar. It will likely not matter, but it will sow political discord and discontent among their people.”

“Which is what?” Anna asked.
“Footage from the Sectoid Hive, Paradise, the conflict on Earth, recorded interviews with defectors and captives, information to shed light on what the Collective is,” Crevan said, the corners of his lips just barely pulling up into a smile. “Outcomes are advantageous anyway. Should the Aui’Vitakar attempt to act, they will be removed. If they do nothing, the people will attempt to turn against them. Problems will arise that the Imperator will need to devote his attention to. Problems that will not involve Earth.”

“Is Nartha appraised of the situation?” Anna asked.

“No, this does not require his knowledge or approval,” Aegis said. “The circumstances are not ideal, but we cannot afford to wait. This will only be justifiable for a limited amount of time, and the Imperator learning our capability to teleport to such a place will not be taken lightly.”

“Any specific instructions for the non-talking people?” Sussan asked.

“Kill anything that shoots at you,” Crevan commanded. “No civilians or politicians. No firing until they fire at you. This applies to the Runianarch. If you see a Zararch operative lining up a shot, remove them. Keep Aegis and the Vitakara safe.”

“All of them grabbed their weapons, put on their helmets, and readied for the teleportation, which a good number had never experienced. The atmosphere around Sierra began to echo that which surrounded Fiona until her vision was now a blinding white-green and then in an instant everything flashed and she was struck by the feeling of falling into a bottomless pit with no jetpack.

Then just as quickly, it ceased and the world materialized around them. Only a few seconds of confirmation were needed before Sierra confirmed for herself that this was really happening.

They were on Vitakar.

Barracks, the Praesidium – Classified Location

3/18/2017 – 11:02 A.M.

“Do you think there will be coordinated attacks?” Nuan asked quietly as she helped put on his armor.

“Hard to say,” Iosif answered with a restrained shrug. “I wouldn’t be surprised, but if there are… well, we’ll deal with them.”

“Did you want to go after Patricia?” Nuan scowled, thinking of the traitor. At this moment there wasn’t a terrible fate that she didn’t wish would befall her. It certainly put a damper over the previous victory.

“Of course I did, everyone does,” he grunted. “But it’s also important that we don’t become distracted by what she does. Trust me, two squads of the best psions, MECs, and specialists is enough to take on an Ethereal, much less whatever fake thing she is trying to be.”
“Let’s hope so,” Nuan also couldn’t shake the feeling that this wasn’t going to go as well as they were all clearly hoping. But from what she saw, everything was being done properly. Important battlefields were being reinforced, squads were being sent to deal with Patricia, and there was even a team going to Vitakar itself.

“Keep your guard up too,” Iosif advised, pulling on his gauntlets. “While unlikely, the Ethereals might try attacking the Praesidium. Worst case you might be called in if Patricia brings in a surprise army.”

If there was one thing Nuan wasn’t worried about, it was an attack here. Not that one wouldn’t come…but if there was going to be an attack here, it would be a dedicated one. Nothing less than an army and multiple Ethereals could get past the soldiers, defenses, and of course, T’Leth always observing for intruders.

“Is that why Caelior is still here?” Nuan asked as she handed him his helmet. “Contingency plans?”

“For now,” Iosif acknowledged. “Right now we don’t need him, but if things change, we have him on-call. Until then he’ll act as a final deterrent to an attack here.”

Now that they were finished armorign up, Nuan leaned against the lockers, thinking. “Do you think they’ll kill her? Will they even talk to her?”

“The Commander and Creed are going,” Iosif pursed his lips and holstered his sidearm. “They’re going to talk to her, for all the good it’ll do. Personally, I’d not waste time with the traitor, but she was part of the Internal Council, and her and Creed…well…” he gestured. “Can’t blame him for at least trying to bring her back. He’ll fail, but he tried.”

Nuan closed her eyes. “If you’re ever put in that position…just don’t hesitate. If in some nightmare I end up like that, whatever part of me you were drawn to is gone.”

He gave her a sad smile. “Easier said than done. I don’t have a connection to Patricia like Creed does. Solutions are much simpler. No matter how objective I am now, it wouldn’t be as easy if it were you in that position. I know I’d at least feel obligated to try.”

“I know, I know,” Nuan sighed. “This is a mess.”

“A generous term for it.”

“I suppose.” Knowing it was almost time for everyone to leave, she went closer to him and without hesitation kissed him on the lips. He seemed a little surprised, but for once she didn’t feel any kind of uncertainty around what she was doing, and neither did he it seemed.

It only lasted a few seconds, but felt so very right.

When it broke, she pulled him into a hug; awkward as it was with her unarmored body pressed into his much larger frame. But it was enough for her. “Do your best to come back,” she told him quietly. “Please.”

“Don’t worry,” he answered into her shoulder. “I am not going to die today. Especially not now.”

***

ADVENT Headquarters – Switzerland
It was an overcast day; fitting in a way. Patricia was mildly surprised that ADVENT had waited so long before sending someone to deal with her. Granted, considering who she was, perhaps it wasn’t a surprise, not to mention they almost certainly had snipers trained on her from several different points.

Not that it would help them. Not now.

Now it seemed like they were coming to deal with her.

Multiple squads of ADVENT soldiers and a dozen Priests were marching down the street towards her, MDUs behind them. This was going to be somewhat tricky given her situation, but manageable. It was a fascinating experience, to be able to command such power with only a fraction of the expected effort.

This…hyperawareness…it certainly took some time to get used to, and she marveled at how the Ethereal mind was capable of processing so much information from so many places at once. It was much more understandable how the Battlemaster was as reactive and fast as they had seen. One day Humans would be able to do this without being connected to an Ethereal, but not quite yet.

There was a temptation to annihilate the soldiers coming towards her right now; a desire born of the Imperator’s side of their bond, but Patricia was able to temper it. The time for killing was not yet; they needed to wait before acting; before XCOM showed up. The commanding Officer halted a dozen meters from her.

“Patricia Trask, you are requested to surrender and submit yourself for questioning.” The rifles of the soldiers and MDUs raised as he finished.

The lips of her mouth turned upwards. “I’ll wait, you are not who I am waiting for.”

The Priests behind him fanned out slowly, some of them shimmering with power around them. “I’m afraid you don’t have that option, Trask,” the Officer said, taking a step forward. “We have orders to take you in or kill you. XCOM is on their way.”

“I know,” Patricia gave a singular nod as she quietly gathered her own power, while easily swatting away the attempts by the Priests to penetrate her mind. Her link with the Imperator had turned her mental defenses so strong that attempts now barely registered. Certainly not from these Priests. “I don’t have a desire to hurt you, not today, but attacking me would be unwise.”

Before the man could open his mouth, she telepathically penetrated each of the minds of the soldiers, and even the Priests only could put up a few moments of resistance before they realized she was inside. Telekinetic bonds were wrapped around their throats as she extended an arm, lifting the entirety of the army off the ground and choking the air out of them.

The MDUs were simply compressed into wrecked machinery with groans and shrieks of bending and snapped metal. When the first of the soldiers blacked out, she released the telekinetic bonds and gave a singular command.

Sleep.

Six bullets were caught in the telekinetic field she’d erected. She maneuvered her head to look closer at them, and with a delicacy dismantled one of the bullets telekinetically, revealing a small drop of a presumably unknown substance. It immediately started burning upon contact with the air and fell to the ground where it continued burning into the pavement. ClF3. Of course.
She moved the bullets away and set them carefully on the ground. No reason to start a fire yet, and these could prove useful.

A skyranger roared overhead. No, three skyrangers.

She waited.

Time to see who showed up.

Several MECs were deployed, all of them on the streets beside and behind her. XCOM soldiers dropped on the nearby rooftops and one on the street in front of her. She saw from the weapons that XCOM had prepared for her well. Snipers, Marauder-class MECs, many psions, a couple of the MELD Operators she’d heard about.

And leading the small entourage was the Commander himself, with Creed and the Chronicler behind him.

A pang of sadness shot through her at the sight of Creed, whose helmetless face reflected her heart, though held the resolve she expected of him. The Commander though…his face was grim and he clearly expected for this situation to only end one way. This wasn’t a team sent for capturing her – he intended to kill her today.

She couldn’t blame him, though because he was here himself, perhaps he hadn’t given up some hope of bringing her back. She knew he wouldn’t take the final drastic step until all other options had been exhausted. This would be the only time where she would be able to surprise him before he stopped underestimating her.

Patricia was not under the illusion she could beat the Commander at his own game – not yet anyway. But she would get there in time. The Chronicler was the one she was most concerned about here. The disdain for the Sovereign puppet was amplified through the Imperator’s own contempt for the man.

A dangerous opponent, hence why he was here. Fortunate that she would not need to face him for long.

“Hello, Commander,” she finally said. “It’s been a long time.”

“A fact which is apparent,” the Commander said neutrally, hands clasped behind his back. “You look like you haven’t changed. They treated you well.”

“They did,” she confirmed. “But for a reason.”

“Did you ever consider that was intentional?” He asked, his voice still emotionless. “Your treatment, your interactions with the Ethereals, everything given and shown to you…it was for the sole purpose of turning you against us. I’m surprised you don’t see that you’re being used here.”

That…was amusing.

She tapped her head. “You know about the Avatar Project, Commander. At least the concept. There are no secrets between us any longer, between me or him – and from the very beginning, he has not lied to me. I know exactly who the Imperator is and what he intends, and I made this decision willingly.”

Patricia wondered if there would be a denial, but the Commander simply pursed his lips. “I was afraid of that. When we learned what you had done, I wondered – hoped – that it was something
you had been forced to do. If you were being a puppet of the Imperator.” His eyes hardened. “I
would have preferred that to you betraying everything we have fought for. What your friends, your
soldiers have died for.”

She allowed a sigh, a conflict of emotions swirling within her, amplified by the Imperator’s link
which allowed her to focus and organize the words she wanted to say. “Do you think this was easy,
Commander? That I wanted to do this? The Imperator told me the truth about the Sovereigns the
first day I was on his Temple Ship. And he gave me the option – I could return to XCOM or I
could stay and consider helping him.”

“And why didn’t you?” Creed finally demanded angrily. “Were we all—was I—not enough
motivation to return?”

“No!” She scowled. “It isn’t that simple. How could anything be simple after learning the truth
about the galaxy we live in. A repeating story of unending cycles which will destroy, remake, and
destroy the galaxy over and over again. We would be walking directly into an unwinnable war
ignorant of who the real enemy is.” She pointed at the Chronicler. “And one of their agents you
have sided with.”

“The Imperator is an ignorant fool,” the Chronicler sneered. “He has no concept about the
Sovereign Ones, only circumstantial theories and what he learned from Mosrimor. Perhaps he
believes he is doing the right thing, but he will be humbled like so many before him.”

“Better to die fighting your kind than live as proxies to fight your wars,” Patricia growled, the air
rippling around her as the Imperator began speaking in unison with her. “You tell stories, puppet of
T’Leth, stories and propaganda to my species. How many worlds have you destroyed; how many
species have you rendered extinct? And for what? You intend to conquer the galaxy for yourself,
T’Leth, you are no better than the rest of your kind.”

T’Leth was certainly speaking through the Chronicler now as his voice turned deeper and
reverberated the air around him. “And your master has proven himself no better, puppet of the
Imperator. His species razed worlds, he now uplifts species to fight in his doomed conflict with my
kind. He believes he will end the cycles, but in the end, his goal is the same – the conquest of the
galaxy. In the end, even should he succeed, he will only succeed in perpetuating them.”

“Do not make assumptions, puppet, of what we will or will not do,” the Harbinger stated coldly.
“You have conquered and killed many species; I will not let you have this one.”

“The fact is that while the Imperator was trying to conquer our species, T’Leth has helped us
protect it,” the Commander said. “And based on that – and speaking to him myself, I am more
inclined to believe the word of him over the word of an alien who is responsible for perpetuating
this war, and aspects such as Paradise.”

“You of all people should understand the necessity of such actions, Commander,” the Harbinger
stated. “The Sovereigns will not be defeated conventionally. We must do whatever it takes to
defeat them, no matter the cost.”

“Perhaps from that perspective,” the Commander nodded. “But unfortunately for you, I don’t share
the same goals, and the perpetuation of such a monstrosity is unforgivable and I will purge it from
this galaxy – along with any who were responsible for creating it.”

Now was not the time to be invested, not quite yet. The merge lessened and allowed Patricia to
speak more as herself. “I don’t want to fight you, Commander; any of you. We both want this war
to end, but it cannot be on unfinished terms. Please, surrender and end this before it becomes
worse. I have assurances from the Imperator—\

“Surrender is out of the question, Patricia,” the Commander dismissed immediately. “You know that will never happen. Not after what’s happened. Not after what our species has endured.”

“And will ADVENT be able to stand when the truth about them comes out?” Patricia asked. “Who Saudia is? The catalyst for the creation of ADVENT itself? EXALT? Will you be able to put up a united front when this is no longer hidden?”

“What you say doesn’t matter now,” the Commander said; giving an ironic smile. “ADVENT cannot fall now; certainly not because of that. Even should Saudia be compromised, someone just as competent will take her place. ADVENT is not EXALT. It is not their people. It is the will and power of Humanity itself now. Something you once believed in. We do not act in a house of cards, Patricia, tell your truth to the world if you wish, you cannot stop what is already in place, no matter how much you try.”

Annoyingly, she wondered if he had a point. If so, it would make things slightly more complicated. She would have to consider this more.

None of the soldiers had moved at all, even though all had their weapons trained on her and the psions were pulling at the edges of their power, waiting for a chance to unleash it. She noticed something odd. “Aegis is not here,” she noted. “Or Caelior. Strange.” She furrowed her eyebrow, slightly confused.

“We don’t need them to deal with you,” the Commander answered. “You were sent here to send a message, so we sent one of our own.”

Possibilities ran through their head, and only a few were plausible. “He is not on Earth.”

The Commander just smiled.

Excellent.

An unexpected development, but certainly not an unwelcome one. “I see,” was all she said. “You are confident in your abilities.”

“I know you well enough, Patricia,” the Commander said. “As does Creed. I know you wanted to draw us here, our best in case of a surprise somewhere else. Perhaps your Ethereals will launch coordinated attacks. If so, we will be ready for them. The Chancellor and her entourage are safe and cannot be harmed. You will accomplish nothing today, and your grand demonstration will be stopped.”

She had expected nothing less. She nodded.

“Did you come here to kill me or capture me?”

“Surrender peacefully and we will allow your survival,” the Commander said with a nod. “Refuse and we will put you down like the traitor you are.”

Patricia looked to Creed. “I’m sorry.”

He gave a single nod back. “So am I.”

She looked back to the Commander. “I’ve chosen my side. I am the Harbinger of the Imperator, and I will free our species from the influence of T’Leth with or without you.”
“Kill her.” The Commander ordered immediately while jumping back and putting on his helmet.

Patricia gave one final smile, and relinquished control.

The Commander was occupied now. The clock was ticking.

***

Aui’Vitakar Path, Vitiary – Vitakar

3/18/2017 – 11:30 A.M.

The first thing that struck Sierra about Vitiary was how clean everything was. There wasn’t any litter, stains, standing water, or really anything that she would expect of a normal city. As if Vitiary was anything close to a regular city – which it was not given the few minutes she’d had to look around at it. She’d heard the Vitakara didn’t have skyscrapers, but she’d interpreted that to mean they didn’t have tall skyscrapers.

Nope, they actually did not have any tall buildings. At least relatively tall. Around four stories was the highest she’d seen any building, and those were much more the exception than the rule. But each one appeared to be constructed like a fortress, with thick concrete and obvious supports along the base. The colors ranged from white to grey, but in all honesty it seemed like a very bright city overall.

The sidewalks housed lighting poles which could seemingly be extended or retracted depending on the need, and curiously there were very few roads, which were instead supplemented by some kind of trains which sped throughout the city. Some of them were for citizens, but the majority seemed focused on cargo transport.

“Guess they don’t have cars,” Anna noted as well.

“Because they have aircars,” Ted said quietly, pointing up. “Look.”

Sure enough, Sierra looked up to see that there were a decent number of flying vehicles over them, moving through small poles hovering on stands in the sky, which flashed between blue, green, yellow, and red. As she watched a few minutes, she noted that there really weren’t that many cars, but just enough to be noticeable. Probably a status thing, since it seemed to be built so you didn’t need an aircar.

“Restricted,” Ravas, the recent Zararch defector said to them from beside her; looking almost nervous to be back on his home planet. “Only government, military, and ranking aliens get air vehicles and speeders. Civilians are rarely exceptions.”

“Businesses, too I suppose?” Ted asked. “Or business officials?”

“Absolutely not,” Ravas almost seemed offended. “Unlike your species, managing to competently run a service does not grant authority or input into – or over – government and military laws and regulations.”

Anna snorted. “Fair enough, alien. Looks like we’ve gotten the attention of some people.”

She wasn’t wrong, as they’d appeared in the middle of a bustling crowd, at least several hundred Vitakara were in the small square they were standing in awkwardly. The vast majority appeared to be civilians; and a surprising mixture of races, barring the Oyariah and Sar’Manda were in the crowd. There were a number of uniformed Zararch Peacekeepers who seemed torn between
intervening or just staring in awe at the group.

Or more specifically, at Aegis.

The crowd was utterly silent and still, as if a singular movement would break something. The area was silent outside of the rushing of aircars and hover-trains. “Take off your helmets,” Ravas said, moving to the front of the group. “They should see who you are.”

“Hell no,” Lacy said with a shake of her head. “Don’t they have snipers everywhere?”

“We have Elder Aegis,” Ravas said with certainty. “And no Zararch Peacekeeper will fire on an Ethereal – not yet anyway.”

“We’re not Ethereals,” Isacc pointed out.

“He’s right,” Cairu, the other Vitakarian with them added. “Most of these people have never seen a Human in their life before. They need to see us together.”

“I agree, do as they say,” Crevan said with a tone of absolute authority. “It will take more than the threat of snipers to deter us.”

Sierra wasn’t thrilled with the idea, it reminded her too much of cheesy movies she’d seen where these kind of actions were used to show that ‘they were friendly and not so different.’ Only in the real world they were dealing with an organization that kept its citizens in a police state and were more than willing to execute invading aliens.

_God protect us_, she thought fervently as she pulled off her helmet and exposed herself to the planet’s air. It was refreshingly cool; certainly not uncomfortable. With clicks and hisses, everyone pulled off their helmets even if they kept a firm grip on their sidearms when it inevitably went downhill. The Vitakara in the crowd all reacted differently.

There were very few gasps or other verbal expressions of surprise, but all of the Vitakarians were blinking rapidly, Borelians still just seemed frozen, the Dath’Haram looked at the arrivals with new interest, and the Cobrarian flicked their tongues in and out rapidly. Sierra was reminded that she really, really did not like snakes, and one that was as tall as her and had arms was something she had an urge to shoot and fly away from as soon as possible.

Aegis began speaking in some strange language, until she remembered that she was an idiot. Of course the majority of aliens wouldn’t speak English. Good thing she hadn’t been in charge of this mission, because that detail would have gone over her head. “Citizens of Vitakar,” Ravas said, being kind enough to translate for them. “I am Aegis, formerly of the Ethereal Collective. We have come to your capital to tell you the truth of the war your people are involved in; what your siblings, sons, daughters, and parents are dying for.”

Aegis speaking commanded the attention of every Vitakara in the immediate area, and more and more were coming out to watch. “You have been lied to about the circumstances of this war; the Collective invaded the homeworld of the Human species without provocation, and will not stop until the species is under their control. The Humans have decided to fight back against this injustice, and have succeeded in blunting the might of the Collective.”

Aegis extended a hand to the crowd. “I was the first Ethereal to recognize the error of the Collective, and the Imperator who rules your people apathetically. And it is not merely this war which provoked my departure, but the truth of what the Imperator has used the Collective for. You are viewed as a means to an end for the Imperator; test subjects and soldiers to fight and die in his
personal wars forged under false and fabricated circumstances.”

On cue the Vitakara stepped forward. “I am not the only alien to realize the truth of what I was supporting. Others have come to see that they have been lied to by their leaders; that what they were ordered to accomplish was the opposite of what was right; they are ones who wished to live in a better future. The Imperator has seen fit to send his own pawn to Earth instead of going himself, and today it is time that the people of Vitakar know that the Imperator and the Ethereal Collective is lying to you.”

“We move forward to the Aui’Vitakar,” Crevan said quietly as Aegis began moving forward and the crowd parted to let them through. Sierra looked back to see that there were a crowd of Vitakara who were following them. She’d never been part of a march before, but this seemed a lot like what she would expect to be in one.

There was a shout as one of the Zararch Peacekeepers raised his rifle at them. Aegis moved to lift a hand but Crevan was fast and a sustained stream of lightning shot out from his fingertips to slam into the Peacekeeper who collapsed to the ground screaming. Crevan ceased the stream of lightning a few seconds later, an expression of contempt on his face as he appraised the twitching Vitakarian whose body was now covered in burns and no doubt permanently blinded and scarred.

Without wasting time, he looked around the crowd as his hand returned to the staff he carried and spoke in the Vitakarian language in the same neutral tone, though with an obvious undercurrent of warning in it. Sierra raised an eyebrow. “Our Sovereign ally is full of surprises. Didn’t know he could shoot someone with lightning and not kill them.”

“That was to send a message,” Ted commented, looking as the crowd looked at them now with some trepidation as well as interest, while a few members took the wounded Peacekeeper away. “In the only way Crevan can, it seems. Ravas, what did he say?”

“We are not here to fight,” Ravas translated. “But we will not tolerate unprovoked attacks upon us. The next to attempt to attack us will die.”

Sierra looked at the former spy. “You sound worried.”

“He spoke it perfectly,” he nodded to Crevan who led the front by Aegis. “The language. Not even Aegis speaks it without an accent. That man could pass for a native here. Aliens should not command such an understanding without being raised in it.”

Normally Sierra would find that a bit odd as well, but his status as an Agent of T’Leth put some things into perspective. It certainly wasn’t stranger than being able to shoot lightning out of his hands. Besides, there were more important things to worry about for her. “Do you think we’re getting a welcome party up ahead? The Zararch have to know what’s going on now.”

“By now they do,” Ravas said slowly. “I’d be ready. They will act without warning. If an Ethereal is not sent to handle the situation.”

“Let’s hope it’s just the Zararch,” Sierra said as she saw the Aui’Vitakar building up in the distance. “The fewer Ethereals to deal with, the better.”

***

ADVENT Headquarters – Switzerland

3/17/2017 – 11:48 A.M.
Things happened very quickly after Patricia put on her helmet and the fire command was issued. She immediately was encased in self-made box of psionic shields, while shots rang out from plasma, laser and gauss rifles, all of which slammed into the shield. The psions Nina, Mercedes, and the Chronicler all radiated power as they combined their telepathic might against Patricia.

The Commander aimed down the sights of his sniper rifle and fired with Hellfire rounds which set the liquid fire around Patricia. She lashed out with a hand and their Telekine Eva was thrown back before she caught herself and retaliated with a telekinetic strike of her own which Patricia was surprisingly caught off-guard by and rattled, though her psionic shield was maintained.

Fire from the Archangel Host rained down, still not penetrating the shield but certainly causing some distractions. Miriam and Zara were marching forward, clouds of nanites swirling around them as the two soldiers launched the attack against Patricia. She waved a hand and the area surrounding her crackled with psionic energy until it grew to a small maelstrom.

“Get into her mind!” The Commander shouted as all of them were forced to back up as the storm grew more intense, though in response he saw that her psionic barriers had fallen. “Chronicler! Status!”

“Something’s wrong,” he grunted, sounding oddly strained. “She feels completely different. I’ve never felt anything like this; not since T’Leth. Isomnum didn’t put up this much of a fight!”

“She’s merged with the Imperator!” Creed yelled, shooting at her as the maelstrom suddenly dissipated. "Of course her mind is a fortress!"

“Not like this,” Nina coughed, her form glowing brightly as she focused once more. “He’s right, something’s off.”

“Terli, Joseph, Nira,” the Commander commanded. “Take her out now. Aim for the head.”

Sniper shots rang out and all the rounds were suspended in a telekinetic field she’d erected around herself. The Commander fired several more Hellfire rounds into the telekinetic blanket and yelled to Eva. “Break it!”

Patricia wasn’t up to date on all their techniques, and there were ways to mitigate cheap tricks like this. With a telekinetic pinch from Nira, the rounds all exploded in the field and fell towards Patricia who jumped back, right into the waiting flamethrowers of Donald’s MEC who sent jets of Napalm her way.

She only just barely managed to erect a psionic shield to mitigate the worst of the flame, but now Sharad was bringing his MEC forward and his dispensers were tuned towards spraying acid around her, which he was aiming towards the ground to mitigate her being able to block it. She retaliated by shooting a stream of psionic energy towards the MEC, which was successful in forcing him to back up.

Now though her armor was taking direct hits, and soldiers were throwing multiple grenades at her, some of which were thrown back, while others were caught in a telekinetic field which were subsequently shot by the Commander and the other Snipers, damaging her armor further. Still though her mind remained unable to be penetrated.

“Symbiotes out!” Asgeir, their squad engineered called as he tossed three of the grenades into the air for Nira to grab, who then let them hover in the air for a few moments as the MELD Operators covered the grenades in MELD, and then she shot them towards Patricia who crushed one telekinetically, spraying the symbiote on the ground, another she deflected and slammed into the
wall of a nearby building, but the final one landed right beside her left foot and exploded and the accompanying nanites began consuming her iron armor.

“Liuxian, give her some heavy ordinance,” the Commander ordered the Ballista MEC who aimed his many micro-missile launchers at the woman who was still fending off Donald and his flamethrowers, and fired, a half-dozen standard rockets, each firing in sequence. Patricia shot a hand to create another psionic barrier in front of her which protected against most of the rockets, but a few slipped through and further turned her armor into scorched and damaged metal.

She was losing, and the Commander knew it. No amount of hardened armor or genetic modification would protect her forever. “Eva, pin her now.” The telekine took a few steps forward, air shimmering as her power gathered and extended a hand towards the pinned form of Patricia and closed the hand into a fist.

Patricia gave a raw and inhuman roar as she was rendered completely immobile. Psionic shields appeared around her, completely stopping all other attacks. Another hand joined the first as Eva kept Patricia within her unrelenting and firm prison. “She’s tough!” Eva grunted, the air around Patricia rippling and shimmering as Eva slowly crushed her. “But I have her now.”

“Chronicler?” The Commander asked as he reloaded his sniper rifle.

“Making progress, but far more difficult than should be possible, even with her enhanced,” was the answer. “Worse, she’s attacking us. Not powerful enough to be a problem, but it slows us down. The Avatars should not be this resilient.”

“Resilient is relative,” the Commander said, as the hands of Patricia crumpled into twisted wrecks. “She’s losing and she knows it.”

And in one swift moment the barriers fell. “Hale! Launch it now!” The Commander ordered their Shoggoth Handler to enter the fray, and with a happy trill the Shoggoth was launched towards Patricia and wrapped itself around her limbs and began breaking them, causing her to scream angrily as she was wrestled to the ground.

She’d definitely not known what the Shoggoths could do. Not really.

The timing became perfect as the Commander lined up his shot perfectly, and with a synchronized command made possible by the allied telepathic links that Mercedes had established, fired directly at the head of Patricia Trask. The helmet’s armor could not stand against powered gauss rifles equipped with Hellfire and AP rounds, and drilled a massive hole in the head of the former Psionic Overseer.

She slumped to her knees as the nanites continued trying to consume her, her body likely kept upright by the symbiote still attached to her foot. The Chronicler looked at the body, clearly suspicious. “That was too easy.”

“Speak for yourself,” Nina coughed. “I’ve never experienced something; someone that powerful and skilled.”

But the Commander had a feeling like the Chronicler was right. While it was possible that they had killed her, and the Imperator had just been extremely overconfident, it seemed…unlikely. Then again, she was facing squads and soldiers equipped specifically to kill her, so perhaps she’d just been…beaten.

The Shoggoth was still on the body, clearly trying to get at the meat but William called it back and
it responded with a trill, but before it could move the corpse of Patricia suddenly grabbed the Shoggoth, and…shifted.

The armor ceased being red and turned to a stark black as it began shifting and repairing the damage. The symbiote substance was eaten in a few seconds as the nanites which made up the…thing they were fighting activated into their true state. “It’s a Puppet!” The Commander warned as they realized tactics needed to be switched.

Dozens of questions popped into his mind to wonder what was going on now? The Meat Puppet still maintained the Human shape, as opposed to the normal Ethereal one, but it no longer resembled the Aegis armor, just the humanoid form. The Commander really wished he’d brought a Dynamo psion now, as an anti-Puppet squad this was not.

“The hell was that?” Zara yelled, furiously as she readied her nanites for battle. “Was she never here?”

The Chronicler, for once, seemed unsure. “This shouldn’t have happened. That was her mind. I felt it; altered slightly because of the connection, but it was her. I’m certain of it.”

“We’ll figure it out later,” the Commander said. “Switch to Hellfire rounds. Kane, Terli, light it up. These things are still dangerous. Nina, Mercedes, can it still defend itself?”

“It’s not nearly as strong now,” Nina answered with heavy breaths. “It’s definitely weakened.”

Black clouds of nanites poured off of the Puppet and flew in all directions. The nearby MECs fired their weapons to incinerate the clouds, but not before several of the clouds reached some nearby soldiers and began eating through. Their own nanite systems would be able to provide some relief, but not forever. The MELD Operators worked to fight the clouds of their own while the Chronicler drew upon his destructive side and thrust an arm forward, shooting a stream of blue fire towards the puppet.

One black hand lifted and a psionic shield manifested in front of the energy stream. The Archangels roared overhead, firing Hellfire rounds and successfully managing to set the Puppet on fire. But this one seemed smart, as every part of itself which was on fire dropped to the ground; saving crucial aspects of itself.

It was forced to move forward, but slowly, and now they had the Puppet in some kind of containment. The Chronicler contained the most of its attention, while Miriam had moved opposite Zara and together with the MECs they maintained a circle around the Puppet, keeping the clouds of nanites from hurting their comrades.

It was slow going, and time consuming, but they were going to do it. This time the Commander was sure of it – and the entire time he was trying to think of what Patricia was doing. Too many things didn’t add up, and it raised dangerous questions, both about what her own capabilities were and also that of the Meat Puppets.

Firing several times at the Meat Puppet causing more smaller fires, he mentally ran through what he knew about the Imperator and his capabilities. Supposedly a master of every discipline, which included telepathy, biopathy, teleportation…could it had been an extremely fast teleport? Had Patricia managed to control the Puppet which was why her mind was familiar?

Teleportation…

“It’s getting smaller!” Asgeir called excitedly. “It’s almost gone.”
Patricia wasn’t an idiot. She had to know they’d create a kill team for her, which was why she hadn’t risked herself at all, which didn’t make much sense if she was intending to make a statement. Logically, that meant that she wanted them here for some reason? To taunt them? To offer a final surrender?

To draw us away?

Then suddenly the form of the Meat Puppet fell apart leaving behind a bullet-ridden naked Human body which looked mostly female, barring the fact that it lacked hair. “Back up! Back up!” Zara yelled as the nanites moved across the ground and soon found what they had potentially been moving to all along.

The ADVENT soldiers “Patricia” had subdued before they’d arrived.

His mind flashed to Iosif describing their doomed mission to Hainan.

“They’re going to the bodies!” He called. “Burn them!”

His mind couldn’t stop thinking about Patricia’s goal, even as the nanites began eating into the soldiers on the ground and the MECs fired napalm and acid onto the bodies with grenades being tossed, and golden swarms of MELD nanites working to counter the puppeting as quickly as possible.

If to draw us away, from what?

All major locations on Earth were protected, all current battlefronts were accounted for, they couldn’t come under a surprise attack, and it would take an army to consider assaulting it; things just didn’t add up outside of a failed mission. A failure of the Imperator, something he couldn’t help but find suspicious.

Teleportation…

...allied to Mosrimor...

...to draw us away...

...they need an army...

...advance warning...

The answer hit him instantly and he went cold.

“Creed!” He yelled. “Contact the Praesidium now!”

He didn’t hesitate. “Yes, Commander!” He stepped back as the battle continued on, with some of the nanites managing to raise a few of the bodies, though they were being put down soon after arising. The Commander hoped he was wrong about what was happening, but the more he thought about it, the more sense it made.

“No response,” Creed called. “What’s going on?”

“Try again!” He roared. “Have any emergency signals been sent?”

“Checking, and no,” he answered frantically. “Why?!”

“Because I know what Patricia is doing,” he said coldly; grimly. “She’s attacking the Praesidium.”
The crowd continued following them, and there were no more incidents of Zararch or Runianarch soldiers attacking them or getting in their way. Sierra was acutely aware that they were being followed and watched as the soldiers weren’t able to keep a low profile, and she assumed the Zararch were just waiting in the crowd.

Aegis stopped occasionally to talk, but it wasn’t anything especially new, so instead she just kept her guard up high and followed the march. In the distance the Aui’Vitakar building stood. It was definitely one of the biggest in the entire city, if not the biggest just from the surface area it took up alone. It reminded her of the Pentagon; low to the ground, massive in square feet, and had a large number of soldiers outside.

It was more circular than...well, a pentagon, as well as colored a matte white with a lot of glass by the entrances, but the principle was the same, and the rows of Runianarch guarding the building looked around at each other tentatively, waiting for some kind of order on how to proceed. Aegis shouted something to the captain, which continued for a few minutes.

“There should have been something by now,” Ravas said quietly, under his breath as he looked around the area where the Vitakara were still enraptured by what was happening. “This isn’t normal.”

“An Ethereal and a supposedly hostile alien species showed up in your capital,” Sierra snorted. “Protocols don’t get that specific, and I bet they’re waiting to see what we do.”

“That isn’t how this works,” Ravas insisted. “The Zararch do not waste time observing when they can act. The only thing that stops them is the intervention of an Elder.”

“Well, there you go,” Sierra said. “Makes sense to me. The Imperator doesn’t necessarily want shootouts in the capital right now.”

“And Aegis is hurting his reputation and credibility,” Ravas added. “It makes little sense to not wait.”

“Presumably the Imperator is acting through Patricia on Earth,” Anna said with a shrug as the Runianarch stood down, and they kept walking again – and now towards a group of Aui’Vitakar representatives who were waiting for Aegis. “Maybe he’s distracted. Whose next in the hierarchy?”

“The Overmind, and potentially Quisilia,” Ted answered. “It does seem like it’s going on too long without anything. I wonder what they’re waiting for.”

“Maybe they know they’d make things worse?” Sierra wondered aloud as Aegis began speaking directly with the representatives. “What can they really say that wouldn’t be a lie?”

“Propaganda is effective against Vitakara,” Ravas said grimly, looking around. “Very effective, and one appearance by an Elder will cause questions, but they are well-conditioned to turn back to the Elders and Zararch when given the opportunity to. None of these people want to think they are on the wrong side; all they need is someone to tell them they are still doing the right thing.”

“Good luck with that,” Anna said sarcastically. “Let’s see them sweep Paradise and the Sectoid
Hive under the rug.”

“Contact! Weapons up!” Sussan commanded as she quickly put her helmet on and drew on her psionic power. The Archangels and rest of the soldiers quickly followed suit, and prepared their jetpacks for flight. A short distance to their left, Sierra saw the source of the commotion and turned her weapons immediately to the threats before her.

Slow and loud claps rang out as Quisilia clapped mockingly with his upper hands. “Well, well, Aegis. Long time, no see. I certainly didn’t expect to see you here.” He looked up at the Aui’Vitakar building. “I expect better of you; to at least send an invitation or advance warning before you show up before the good people of Vitakar.”

Quisilia wasn’t alone. By his side was another Human, who Sierra had to blink at several times because it was barely a kid. There was no way that boy was any older than twenty; certainly too young to be around Ethereals. But he was very much standing beside Quisilia, outfitted in black armor and seemingly otherwise unarmed. She definitely didn’t recognize him, and the only really identifying features besides his armor was his Hispanic ethnicity and a noticeably Human knife strapped to his belt.

It ultimately didn’t matter. Another traitor to put down, although this one…Sierra didn’t want to kill him because unlike Patricia, there was a very good chance this kid had been taken advantage of by the Ethereals.

“Quisilia,” Aegis turned from the representatives. “The Imperator is still refusing to intervene himself.”

“There is much work to be done managing the entire Collective,” Quisilia said with mock humility. “And our work has grown thanks to what Patricia Trask has willingly provided us. But do not believe you are being ignored; this little stunt…certainly clever, and I cannot say unjustified.” He lifted a finger on his upper right hand. “But – why have you come, Aegis? To spread your lies and propaganda to the Vitakara species?”

“Only to tell the truth, Quisilia,” Aegis answered firmly. “Do not intervene.”

Quisilia laughed.

“What?” He chuckled, motioning to the crowd who were starting to become more relaxed when they saw Quisilia at such ease. “You think I was sent to fight you? And potentially hurt our own citizens who we have promised to protect? Absolutely not.” He turned to the crowd. “We have ensured that you are insulated from this war, and despite the actions of Aegis today, we will not endanger you further.”

He looked back to Aegis. “But it is certainly a cowardly move to smear the Imperator; the Collective, when there is no one to speak for them; to defend them and refute the lies and points you will inevitably try to make. You believe that your case is strong enough to sway the people of Vitakar?” He looked back to the crowd and amplified his voice. “Then prove it when I am here to contest you!”

Sierra hadn’t lowered her weapon, still keeping it fully trained on Quisilia who was getting some cheers from the crowd at that statement, and narrowed her eyes. “Is he challenging Aegis to a debate?”

“Doesn’t have much of a choice,” Ted noted, clearly suspicious. “They attack, we have free reign to strike back. We strike first and we’re the undisputed bad guy. It’s not a bad move, if a desperate
one.”

“I certainly understand the confusion all must be feeling now,” Quisilia was directly addressing the crowd now. “A war changes people; allies become enemies; enemies become allies; the rules are broken and remade over and over again – yet I will stress now that what you see is normal. It is typical for defections to occur, out of fear, cowardice, or misplaced anger, so do not believe such traitors represent the feelings of all those who serve our Collective and your species.”

“Perhaps let us speak,” Cairu stepped forward. “Your species has lied to my people for too long, and this time your words will not go unchallenged.”

“Ah, of course,” Quisilia gestured to her. “I would welcome to hear the reasons for your untimely defection, to hear why you turned your back on the prosperity and protection the Collective has and continues to provide for your species. Yet I have not heard from Aegis if he wishes to risk making his claims when he is challenged on them – Aegis?”

It felt like a trap to Sierra. Quisilia was comfortable, and it didn’t seem fake; not even like he was putting on an act. Well, he was, but it wasn’t one where seemed fearful or unsure of the outcome. But the alternatives were not appealing either. They could fight Quisilia and likely accomplish nothing except turn the Vitakara against them. They could leave and hand the victory to Quisilia if keep the Vitakara open to what was happening. Or they could participate in Quisilia’s ‘debate’.

The question she had was how much of this was stalling by Quisilia, most likely to wait for some kind of attack. Aegis felt the same way. “You wish to trap us here; stall us until you are prepared to attack.”

“Please,” Quisilia sounded utterly annoyed by the suggestion. “Within moments I can request the aid of Sicarius, Deusian, or the Overmind himself to end the threat you pose. I deliberately choose not to. You have my assurance, Aegis – before all those around us – that there will be no action taken against you or your people so long as they refrain from violence. You came under a banner of mostly peace – “ He shot a look at Crevan. “So I will respect this decision. Besides, I think it should be excellent for airing some grievances.”

“And what happens afterwards?” Aegis demanded. “You simply let us go? The people have no choice here, and you will merely clamp down on them the moment we leave.”

“You will be, of course, free to leave,” Quisilia said, bowing his head. “This is after all a peaceful meeting. And you knew that you would leave eventually, without ‘saving’ these individuals. So little has changed, except that now the people of Vitakar will have the opportunity to think for themselves and not have their perspective skewed by one side or another.”

More steps were taken towards the crowd as he extended a hand towards them. “Hiding the truth from our loyal citizens is not and never been our way! We shall not hide what is said now – I have decreed that the world of Vitakar shall hear what Aegis has to share with you – and myself to defend the honor and integrity of the Ethereal Collective and our citizens! Is that an acceptable action?!”

The crowd cheered; enough of them present to make the noise deafening. That created a sinking feeling in Sierra’s heart, and the Vitakara around her looked unsurprised, but saddened at the reaction. “I don’t think we have a choice now,” Sierra said slowly. “Not if we want to give the win to Quisilia.”

“Then I accept, Quisilia,” Aegis stepped toward the other Ethereal before the cheering crowd. “I hope you will be able to defend the atrocities the Collective has committed.”
“And I hope that you will be able to prove such allegations,” Quisilia said, his tone on the cusp of mocking. “I anticipate an interesting and long discussion – let us not delay, and give the people what they want.”

Quisilia and his Human companion walked toward the Aui’Vitakar building itself and with some trepidation, the rest of them followed inside. Fiona kept herself in the middle of them, likely in case she needed to teleport them all away, and none of them put their weapons down. No matter what Quisilia promised, Sierra was certain there was something else at play.

Though what that was, she didn’t know now.

That worried her.

***

Practice Range, the Praesidium – Classified Location

3/17/2017 – 11:32 A.M.

Plasma rifles were nice, but in the end, Nuan personally preferred weapons which had some weight to them. Not that there wasn’t recoil in the plasma weapons, but it felt almost fake, like it had been put in for the sake of it. Realistically she knew that wasn’t right, since laser rifles had no recoil, but it still felt odd.

She was still happy with her shooting though. Dummies and paper targets were riddled with holes or in scraps on the ground. The team managing the shooting range had begun rigging their dummies with tiny explosives or other effects to reward good shots. An addition she quite liked. It was very satisfying to get a headshot and see the head of the dummy explode.

Nuan decided she was done for now, and went to set her rifle back on the rack and grabbed her water bottle. She hadn’t heard anything on how the attack on Patricia was going, but assumed – for now – that no news was good news. Besides, XCOM had ADVENT backing them up there. She thought even the Battlemaster wouldn’t be able to penetrate it, let alone a traitor – enhanced by the Imperator or not.

She wasn’t the only one at the range either; a decent number of soldiers made the rounds at all hours since many had worked practice into their daily routines. Normally she wouldn’t come this early, but she needed something else to think about besides dwelling on what was happening. It was out of her control, all she could do was wait and hope.

And Iosif wasn’t even in serious danger; at least relative to dealing with someone like Patricia. They hadn’t heard of any other attacks elsewhere; not yet at least. Those might come, and when they did, they would be ready. She did wish though that she’d been deployed somewhere, if not to fight Patricia herself.

“Hey,” a woman walked up, who Nuan recognized as one of the Rocketeers, though she couldn’t remember the name at the moment, even if she stood out due to being distinctly Arabic. “Usually don’t see you here this early. Nuan, right? You were-“

“China, yes,” Nuan nodded, then gestured to the range. “I don’t like waiting, especially when everything is happening and there is nothing I can do about it.”

“I get that,” the woman nodded. “Fakhr if we haven’t met, though I think we’ve gone on a few missions together.”
“That name she recognized. “So do I. Good to meet you properly…” she paused. “Months later.”

“XCOM has gotten big,” Fakhr smirked. “I remember when it was…well, much smaller.” The good attitude faded as she became more serious. “It does feel like a turning point, doesn’t it? Patricia coming back, T’Leth getting more involved, Isomnum dying…it feels like things are going to change in a big way now.”

“I think we’ve reached that point,” Nuan agreed. “Patricia…well…I didn’t know her that well, but this seems out of character for someone like her.”

“Can’t say I knew her well either,” Fakhr sighed, sitting down beside her. “Not like the Commander. Or Creed. I respected her though, and from what I saw, she will do whatever is the best ultimate solution for her soldiers and Humanity. She’s…a lot like the Commander, only more easily swayed I guess.”

Fakhr pulled out a phone. “Think something should have happened by now. Attacks are reported quickly. We’ll see if Patricia tried to spring a trap on the world.” She tapped on the screen a few times, then frowned. “Huh.”

“News?” Nuan asked, looking over.

“No,” Fakhr shook her head. “Wireless is gone down. The one thing I’ve never had to worry about here was the Internet going down. I swear that even during the Battle of the Citadel the networks were up.”

“Maybe it’s your phone,” Nuan guessed. “Devices aren’t as reliable as we like sometimes.”

“I’ll reboot the whole thing, that usually fixes most problems,” Fakhr said with a light scowl. “Small problems in the grand scheme of things-“

An alarm blared and within seconds the lighting became intermixed with red.

Fakhr and Nuan both stiffened, as did every single soldier in the range. “The hell?” Fakhr asked to no one as she stood up. “This shouldn’t be happening.”

“What is it?” Nuan knew that there was some kind of emergency – the lights and alarms only went off when there was trouble coming – or had come. “It can’t be an attack? We’d have been warned about it!”

“I don’t know,” Fakhr said, grabbing a rifle and Nuan grabbed her own. “But this only happened once – and that was when the Citadel was attacked. We only had a few hours to prepare then, and we’ll probably get the same here-“

“Attention, all Praesidium staff,” the voice of Central Officer Jackson broadcast with everyone stopping to listen. “We are currently under attack by an unidentified hostile, the Atlas Protocol is now in effect. All designated kill and evacuation squads mobilize and execute your instructions. I repeat we are under current attack. Jackson out.”

In the dim lighting Nuan saw the blood drain from Fakhr’s face and she suspected her own was similar. Without a word they broke off running for the Armory, hearts and minds racing as they readied themselves for the fight ahead.

Nuan realized she shouldn’t have wished to participate in the operations. There was a reason people warned to be careful what they wished for – they might get it.
The most important battle wouldn’t be fought in Brazil, China, Switzerland, Africa, or America – it would be fought in the Praesidium.

And their best were gone elsewhere, some even to other worlds.

It was up to them to hold the line.

***

Praesidium Exterior – Classified Location

3/17/2017 – 11:30 A.M.

The sands blew across her armor as Patricia appeared just outside the hangar exit of the Praesidium. While there was no one waiting for her, she knew that there were sensors surrounding the entrance, and she would soon be detected. Her mask tight, she opened a portal and withdrew the Andromedon jammer.

Turning it on, she planted it in the ground. It would ensure that any distress signals would be blocked and buy her additional time. There were two more problems she would now face – Caelior was here – and T’Leth was watching and would likely be preventing unpermitted teleportation. That would hinder her.

It could not be allowed.

A small portal opened underneath her hand and a black orb fell out which she caught telekinetically. “Alright Mosrimor,” she said quietly. “Let’s see if you can be useful today.”

She maneuvered the orb over the hangar door and the nanites around it expanded until she could see the glowing blue core. Patricia drew upon the power which came so easily, and hovered off the ground as the sand began crackling as she directed the Psionosphere to shatter and burn the ground around her.

Her cape glinting in the white-yellow sun, underneath was a sea of purple mist and waves of power which briefly turned the ground into a violent sandstorm which she sustained for a minute before she was satisfied that all near-ground installations was destroyed. Setting herself down, she blew off the sand from the top of the hanger door with a single wave of her hand.

With the opposite one, she reached out and clenched the seams and gaps of the door and pulled. The massive bulkhead immediately began groaning and creaking from the strain. A hand glowing purple, she extended the opposite one and psionic energy materialized in the identified weak points which continually destroyed the integrity of the door, until she yanked upwards with a yell and the hunk of metal went flying.

A motioning of her hand downwards, and the orb descended slowly while she jumped straight down into the Hangar. Energy gathered into her hands, building and building and the moment she slammed into the ground, a telekinetic purple-tinged wave shot out from her in all directions. A few emergency personnel who were working the nearby skyrangers were pulverized and their shattered limbs and bodies flew in all directions, while those on the outward edge of the wave were simply thrown back.

Shouts of surprise and pain sounded as everyone alive ran back except for a few XCOM squads who had just rushed in to meet her.

Lips pursed under her helmet, she readied herself to kill her former brothers and sisters in arms.
It is the only way.

With a roar, she shot a fist to the sky and the Psionosphere around her ripped into a raging maelstrom which shredded everything caught in it. Plasma and gauss rounds fired at her but were disintegrated the moment they reached the maelstrom. She saw psions glowing with power, and shook her head to herself as she plucked the telekinetic strings with another hand.

*Everything* in the Hangar was yanked towards her from soldiers to pieces of metal to the few technicians cowering behind the crates and barrels. A few of the psions prevented themselves from being tossed, anchoring themselves and others to the ground or using shields to keep themselves alive, but a number had their Titan armor shredded beyond repair.

Now the fight was to begin.

Patricia sidestepped into a portal she created and reappeared behind the XCOM lines and gripped the nearest three soldiers in telekinesis and crushed their organs before tossing their bodies into the nearby wall with enough force to audibly shatter bones. Patricia suddenly found herself incased in a psionic box, and responded by bisecting the Aegii who had erected it, before leaping into the air and igniting the floor with corrosive psionic energy.

A psionic shield appeared in front of her without prompting which successfully blocked the plasma shots fired in her direction. Hovering in the air while the floor burned, she grabbed one of the XCOM soldiers at random, brought her into the air, and blasted her down into the floor with enough force that it snapped her spine instantly and the psionics ate into her seconds later.

She threw herself down onto the ground again, and without waiting to see what the soldiers would do, charged towards one, grabbed him by the throat and slammed him to the ground before following up with a stomp which crushed his face before she immediately charged another woman who she slammed into a wall before blasting a stream of psionic energy at her, burning holes in her chest.

The last one fired his autocannon at her in a futile effort to do *something* to stop her. She appraised him for a moment, a telekinetic field freezing all the bullets in mid-air and motioned below him and he fell into a portal which she sealed shut as he was halfway down, severing his body in a spray of blood.

She snapped his neck to spare him unnecessary pain.

*Good. Good.*

She wasn’t…happy right now, not truly. But it was…satisfying to see what her full capabilities were, especially against her direct rivals. They would be more prepared as she moved forward, but they would not stop her.

*Nothing can stop us now.*

She turned back to the hanger which was burning to ensure she hadn’t missed anything.

*There will be nothing.*

She lifted the skyranger wrecks, now lacking most of their wings and engines, and squeezed a hand encased in purple fire. A few minutes later the skyrangers fell to pieces; never to be recovered again. Satisfied she had utterly destroyed the conventional means of escape they possessed, she turned to the exists which were unsurprisingly sealed shut.
Unfortunate that doors no longer posed a challenge to her.

A portal materialized in front of her and she stepped into the next hallway down. She expanded her telepathic senses, even as the XCOM squad waiting for her shouted in alarm. She created a portal in front of her and watched with distant amusement as they were hit with their own rounds from the connecting portal she’d created behind them.

A psion shot her hands forward as psionic energy poured out of them. Patricia recognized the armor of this one – Mona. She’d become powerful, but it would not be enough to save her this time.

“Traitor!” Mona yelled, waving a hand as Patricia felt the Psionosphere rip around her.

Patricia merely encased herself in a personal shield and manifested a horizontal shield which slammed into Mona and sent her flying backwards. The hallway was open, but still a choke point. Patricia yanked with a hand, pulling all of their weapons away before slamming them into the ceiling and back onto the floor.

Too late for help to come.

A clenched fist shattered their skeletons and organs. Mona had been spared this, though she was struggling to get up, firing a burst of psionic energy which Patricia easily blocked. Patricia followed up with severing her arms with psionic barriers and lifting her by the throat telekinetically. “I’m sorry it came to this,” she said to the choking woman. “But it is the only way.”

With an imperceptible gesture, she snapped the neck and let the body of Mona Eriksson fall to the ground.

The squads had been dealt with for now, and her targets were deeper in the Praesidium. A portal appeared over her hand, and another orb fell out which activated a few seconds later.

So far Mosrimor appeared to be proving his usefulness.

The clock was ticking. She had labs to destroy.

***

Research Lab Exterior, the Praesidium – Classified Location

3/18/2017 – 11:42 A.M.

There had been a weird feeling the moment he’d heard the klaxon ring. It had persisted when he’d frantically donned his armor in record time and was rushed to his defensive position. Lab defense, and it looked like it was going to be needed. Scientists who were remaining were quickly making final backups and collecting samples to take with them during the evacuation.

There were enough squads to buy them time – or so they’d thought.

The best news Oliver could see was that Vahlen wasn’t here, and had left hours ago transporting some kind of specimen for safety. There’d been rumors that the Commander had ordered that they prepare in case there was some kind of attack, and right now he was very grateful that so much time was being saved.

But this feeling…he’d wondered what it was. It’s wasn’t fear, or sadness, or anything he was used to feeling. Surreal was the best word he could use to describe it. When he received the broadcast, he was stunned. “They’re dead?” He asked incredulously. “All of them?”
“Yes!” Jackson yelled. “Get everyone out of there now! She’s heading your way!”

“Yes sir!” He said, turning to the scientists who were still there. “We’re leaving now! Clifton, Dana! Grab them and let’s get out of here!”

But hearing those words; hearing how Patricia had killed that many soldiers already, he suddenly recognized what that feeling was.

This was where he was going to die.

He took a breath and turned to Said Tariq. “I’m going to talk to her. Get out of here. Get to your wife. Otherwise everyone here is going to die.”

“That’s suicide-“

“And if she isn’t delayed, we’re all going to die!” Oliver insisted, checking his plasma rifle quickly. “You heard what she did. I know what I’m doing.”

“But-“

“None of that,” he interrupted. “I’ve had a good life. Not as long as I’d like, but a good one. This is what I have to do. Don’t waste it.”

Without waiting for another protest, he dashed off into the hallways. “Central! Where is she now?”

“What are you-“

“Buying time,” he answered quickly, mentally calculating how long it would take her to get here from where she was coming. “I don’t want to run in circles here.”

“The area by the Mess Hall had reported fighting, she’s in that area. Follow the main hallway and you’ll run into here. Oliver…” a pause. “You won’t be forgotten. Vigilo Confido.”

“Just make sure everyone is evacuated,” he grunted, running as fast as he could. “What is the status of that?”

“All non-military personnel have been commanded to leave, we’re doing staggered evacs of soldiers and staff. Caelior is being mobilized to move up now. Shen needs more time to finish something.”

Oliver scowled. “Get the old man out of here!”

“We’re-“ She was interrupted by a body being flung into the wall in front of him. It was one of the cooks whose body was unrecognizable, even more so after it had been ground into the metal. He quickly checked the body. Dead. Probably instant. He ran into the Mess Hall and saw the devastation Patricia had wrecked.

The kitchens were on fire; the tables and chairs were completely destroyed, pieces of them everywhere while the televisions and other media outlets were broken beyond repair. Oliver saw scraps of food still scattered around, blackened, but people had been eating less than a half hour ago. Bodies of XCOM soldiers and the mess hall personnel were scattered everywhere.

In the center floated Patricia Trask, who lowered herself to the ground once he walked in.

She was different.
This was not the same woman he’d fought with before. She was…tall. At least one or two full feet taller than before, with her body proportioned to match. She out-massed Kane of all people. The armor she wore was reminiscent of the more form-fitting Aegis armor if a bit lighter, and appeared to lack the bulky durability of the Titan armor he wore now.

Silver engravings overlaid the white coloring she’d used, which culminated in the center of the chest showing a stylized rendering of an Ethereal. A matching cape with silver trim fell from her shoulders. It was slightly stained with soot and ash, but objectively it was a masterfully crafted armor set.

Her face though, was obscured by a cloudy white mask which didn’t even cover her full head, letting her chestnut hair flow freely. “An excellent demonstration of your power, Patricia,” he said, lifting his rifle. “I’m sure you feel powerful killing the cooks and staff.”

“Bystanders, casualties of war,” her voice was layered and distorted; a combination which was unsettling, as he could hear her voice, but at the same time it was something else. “I did not wish to kill anyone here, but the Commander has left me no choice.”

“Liar,” he snarled, firing at her knowing it would only annoy her. “Did you think we would surrender just because you turned traitor?”

The plasma bolts hit a psionic shield she briefly erected before the plasma rifle cracked and smoked. He threw it at her before it could explode, and it did – after she deflected it with a telekinetic gesture. “I’d hoped. But there wasn’t any choice. XCOM poses the greatest threat to the Imperator, and it is up to me to mitigate this threat.”

“Why?” He demanded, quickly thinking up a plan. Then he remembered what Kane had done and gave a grim smile under his helmet. Just keep her talking. “Because of T’Leth?”

“XCOM is compromised,” she said. “The Sovereign Ones are a greater threat than any paltry invasion. I have not fought to have my species be used in T’Leth’s war.”

“So instead we’ll be used in the Imperator’s,” Oliver shot back as the nanites began dispersing by his boots. It actually wasn’t difficult to see how hypocritical she was being. “Excellent job, protecting our species.”

“You do not have to believe me,” Patricia, or the thing she was now said, cocking her head. “You cannot stop me now and when I am done, Humanity will be far more powerful and free than we ever would have been under T’Leth.”

“And at what cost?” It was almost there, just a little longer… “Do you really believe I’m some brainwashed T’Leth pawn?”

A pause.

“No.” The answer did surprise him, or the acknowledgement of it. “I don’t. But manipulation is subtle, and the Sovereigns are masters of it. You are a pawn, but do not know it, as are the best tools of the Sovereign. You share no blame, but are an unfortunate casualty. That is why I have indulged you here. Your sacrifice will not be in vain.”

He went cold and she lifted a hand, and all the nanites he had thought were creeping invisibly on the ground were raised before her, and coalesced into a black semi-permeable ball. “[I know you were stalling. But I wanted to let you die achieving what you set out to. You deserve that much.]” The ball was enveloped in purple fire as she destroyed the nanites. “Know that I will save
Humanity – even if must conquer it first. Die, Oliver Ilari."

The last words he heard not just with his ears, but reverberated in the deepest crevices of his mind.

A few seconds later, his mind and body complied with her last command.

Another body fell before the Harbinger, as Oliver Ilari died.

The Harbinger pushed aside his body with a telekinetic motion, and returned to her mission.

***

XCOM Engineering, the Praesidium – Classified Location

3/18/2017 – 11:51 A.M.

“We don’t have time to waste,” Nuan insisted. “We need to get to the working gateways now.”

Normally that wouldn’t be an issue in XCOM Engineering of all places, but whatever Patricia had done – for they knew who was attacking now – had essentially forced everything in XCOM Engineering on backup power. There were two options – they could spend time to divert power to the gateways which could take up to fifteen minutes, or they could make a move for the Deployment Gateway room which they knew still had power.

In the end they knew their best chance was to go for the gateways while they still had the opportunity. The engineers were busy saving what they could from the computers and grabbing some of the prototypes and weapons that were lying around, though they were clearly not soldiers.

Twenty XCOM soldiers stood guard, Nuan among them, assigned to protect them against whatever came. Having heard how Patricia was somehow tearing through…everything, Nuan wondered if that would be enough – especially since she was headed their way.

Fortunately, they had an equally powerful ally with them now.

“I am ready,” Caelior said as he entered from the lower levels with another squad accompanying him. “She will not delay, and neither should we.”

“Agreed,” Alicia nodded, a Dynamo psion who had been appointed the overseer for this position. “There is a roundabout way to the Deployment Gateway. Takes longer, but Patricia will be coming down the main hallway, and last we heard, she was in the labs.”

“Confirmed on the labs, Engineering Team,” Jackson said grimly. “She’s just finished destroying everything in them. You need to hurry otherwise there won’t be a safe passage for the engineers.”

“We will stop her,” Angelina stated, the lone MELD Operator stepped forward. “We have no choice. Caelior, can you face her again?”

“I can,” the Ethereal sounded notably confident. “Even if supported by the Imperator, it is still Patricia. I know how I lost last time, and I will not do so again.”

“All well and good, but we need to get moving,” Nuan insisted, checking again to see if she was fully stocked. “He’s right – Patricia isn’t going to delay.”

“You six stay with the engineers and escort them out,” Alicia ordered a group of soldiers. “Everyone else form up and follow Caelior. We stagger ourselves so we aren’t all attacked at once.”
“Where is T’Leth?” One of them asked. “Or his people?”

“Unknown,” Alicia said slowly. “From what we know, she’s doing something to suppress him.”

“A Sovereign One?”

“The Ethereals have Mosrimor,” Caelior reminded them. “She has perhaps utilized his own capabilities to counter T’Leth. It is likely this is taking place across the world where his agents are located.”

“Right,” Nuan nodded. “Where is Shen?”

“In the Cyber Development Center,” one of the engineers answered. “He’s saving a very important project-“

“Well pull him out now,” Alicia said. “This isn’t worth dying over-“

“You don’t understand!” The engineer said. “We can’t leave it behind! It could change the course of the war!”

“The course of the war is being changed now,” Nuan told him. “I’d rather he be alive to see it-“

“Belay that, Psion Alicia,” Jackson’s voice was tight and controlled. “What Shen is doing can’t be interrupted until he’s finished.”

“It better be a fucking showstopper,” Alicia growled and waved the soldiers to form up. “Come on! Let’s put the traitor down!”

Weapons in hand and the Ethereal leading the charge, they marched out to put an end to the Harbinger once and for all.

***

Research Labs, the Praesidium – Classified Location

3/17/2017 – 11:45 A.M.

Countless experiments conducted, completed, or failed. Thousands of hours of work had been conducted in these labs. Breakthroughs that had changed the direction of Humanity; discoveries that forever altered the war. History had been made here, and the men and women within it would be remembered as pioneers in the upcoming age of Humanity.

But all things eventually died.

The landmarks of history inevitably became graveyards and monuments to the past.

As it would be here.

The Harbinger stood in the labs; scattered tablets, vials and computers strewn everywhere, organic material and plant life left to wither. All abandoned in a rush for survival. But there was much here that would not be able to be recovered, no matter how much they tried. She knew the procedures and protocols.

Progress on all projects would be set back significantly. Weeks if not months.

A short amount of time, some would think.
She did not intend to allow this war to drag out years. Certainly not long enough for XCOM to recover the progress they had made. The Harbinger raised a hand as the air around her became charged with an electric aura. Purple flickers dotted the room around her as she prepared to summon the maelstrom.

A hand closed and reality tore itself into a raging inferno of chaos and destruction.

In the center stood the Harbinger, a lone beacon in the storm which ripped apart everything around it. Metal warped and bent like paper; glass shattered within seconds and was further vaporized by the storm. Delicate objects were turned into scrap within moments. The amount of destruction would have been sufficient with only a few seconds of the storm.

She did not intend to destroy the labs.

She meant to annihilate them until the only things left were ash and soot.

The storm roared around her, and the walls which separated the Genetic Labs, Cloning Chambers, and other specialized rooms were disintegrated and the corrosive power spilled into the other lab rooms and subsequently began destroying all that was within them.

Patricia faintly felt some minds nearby; test subjects XCOM had been using. Not a priority for evacuation. Fear arose from them as she penetrated their minds as the storm roared into their chambers and shattered the paltry walls imprisoning them. Perhaps she could withhold the storm from them.

Yet only contempt remained in her. These Humans deserved no mercy or hope. The appropriate fate would be allowing them to live. Yet she would not give XCOM a resource they could exploit. So she passively observed their quick deaths as the storm ravaged their bodies. Soon nothing was left. Nothing at all.

Her hand opened and the storm ended.

Where the Harbinger now stood, one could be forgiven for wondering if a bomb had gone off. Dust and ash covered where the storm had ravaged the rooms. Layers of the floor were gone, creating an uneven surface and were left with black and grey soot. Nothing else stood. All nearby walls were torn apart, creating wide spaces in a previously more confined setting.

This had taken time, but it was justifiable.

XCOM would be coming.

Already she could feel their minds. A particular one among them.

Caelior.

A reunion of sorts.

Ironic. She had beaten him once with the Imperator’s help. Now history would repeat itself.

Her cape swept behind her as she turned on her heel and began marching down the hallway where she knew XCOM was marching. She counted the minds approaching. Fifteen…twenty? A large number, with several psions among them. A MELD Operator as well. Other soldiers with simple arms and limited capabilities.

Twenty soldiers marching to their deaths.
She paused briefly as she sensed them coming forward and opened a portal to cause another of Mosrimor’s Orbs to fall out. There was little point risking T’Leth maintaining control in what might be her most dangerous encounter yet. It activated and she continued, and instead of performing what was expected and walking slowing into the fight, she telekinetically flung herself forward on invisible strings, around the corner, and into the oncoming XCOM force.

The few seconds she saw of the flat-footed XCOM soldiers were enough for her to devise a plan. She slammed into the nearest XCOM soldier and slammed him into the nearby wall before snapping her fingers and bisecting him with a psionic barrier. With another hand she flung out causing the nearby soldiers to go flying back.

The MELD Operator launched her own attack, golden mists swirling around her. Plasma bolts and alloy rounds began flying towards her as Caelior leading the attack flung out a hand to begin crushing her. Fortunately, she had anticipated such a reaction, and knew mobility was the key to beating Caelior.

This in mind, she charged to the back of the line, turning into a psionic streak of purple. The three soldiers attempted to defend themselves, but not before she clenched a fist and their brains exploded inside their skulls. A sound of shrieking metal caught her attention and she flash-stepped backwards just in time as the ceiling was pulled down where she was standing.

Caelior wasted no time in ripping out the walls she was besides to crush her, even as the XCOM psions shot energy and directed their own telekinetic attacks at her. Clever. She had to admit that use of the environment to his advantage was a definite improvement. The Little Storm had clearly learned something.

She opened a portal under her feet and fell through into the middle of six soldiers. Turning the tactic against them, she first threw them into walls and brought the ceiling down upon them. As she made to confirm the kills, she was thrown backwards violently and stabilized herself telekinetically as she faced a furious Caelior.

“You’ve become stronger,” she grudgingly admitted, anchoring herself to the ground. “Good.”

“And I learned who you really are, Imperator,” Caelior spat back, ripping out a section of the wall and tossing it to her with lighting speed. A flash-step made it easy to avoid, and something she started performing every few seconds to prevent him from locking on. The MELD Operator was going to be trouble and needed to be dealt with.

Patricia’s arm glowed with purple fire, and blasted it towards the golden clouds speeding towards her and the woman herself. To occupy Caelior, she launched a telepathic attack against him, expecting him to crumble under the skill she now commanded. As the Operator yelled as she was melted, the Harbinger frowned.

Caelior’s mind was oddly resilient, certainly more than she’d expected.

“I am not your pawn anymore!” He yelled, and blasted her back into a wall with enough force that for the first time, she hurt. It was only momentary, but she felt it. A curious development. His potential is becoming realized.

Caelior had a role to play in the future. XCOM had done more than expected. The decision to ensure Caelior’s survival was proving to be beneficial. But now it was time to collect. The arms of the rival Ethereal waved and the hallway continued collapsing around her, but this time Patricia countered with a telekinetic command of her own.
The room ceased collapsing around her, and they both stood off, helmet and mask looking into each other. A test of strength and will between Ethereal and Harbinger. “This is not where you belong, Caelior,” the Harbinger said without concern even as Caelior dedicated more power to collapsing the space she occupied. “This is not your future.”

“You are not my future,” Caelior growled. “I was used once before – now I fight on my own terms.”

Telekinetic bonds were no longer just around the crumbling infrastructure around her, but on the body itself. Her armor tightened and she had to continually push back on the winding strings constricting and crushing her. She would not be overpowered by this one. Not now. With a glare to the Ethereal, the Psionosphere began tearing around him, but the searing energy didn’t distract him.

The mask cracked.

Her suit began bending.

*Unacceptable.*

She opened a portal and fell through as the space collapsed into a ball that would have crushed her had she not escaped. She appeared back behind the Ethereal who was preparing to do it again. She launched another telepathic attack, extending a hand, now with her full power behind it. “Get out of my head, Trask!” He yelled as he resisted, just as he flung out a hand which sent her flying back.

She flipped in the air and telekinetically yanked herself down feet first back onto the ground. “You’ve conducted yourself well,” she breathed. “But I have a mission to complete, and you will not stop me now.”

Her bond deepened to the Imperator as she drew upon a perspective few could comprehend. The paths visualized in her head; the bounding atoms and molecules she could envision clearly. A scale so minute and obscure that it was difficult to describe to someone who existed in a more complicated frame of existence.

A hand drew close to her chest, and then extended. Purple lightning shot out of her fingertips and slammed into the unsuspecting Ethereal, who had no defense against the power. Caelior was talented, but he lacked nuance; he lacked scope. Perhaps he could have learned, as she had. But he had not, and now it would be his undoing.

The voltage was minimal, as she did not want to kill him.

But it was painful.

Very painful.

A second hand joined the first and she began walking to the Ethereal who was now writhing on the ground, his armor and clothing smoking and screaming as his skin burned. “You conducted yourself well, Caelior,” the Harbinger said as she stood over him, briefly ceasing the stream of lightning. “Do not worry, I’m not going to kill you.”

Caelior was in too much pain to respond, and she stood over him, and lifted him with a telekinetic grip. “You still have a use for me.”

“Stop!”

Patricia almost shot a bolt of lightning into the nearby voice. She had thought that she had killed or
mortaly wounded all of the soldiers, but that very clearly was not the case. The woman on the ground was badly wounded, with part of the wall impaled in her. One hand was hanging off, and the mechanical nature triggered a memory in Patricia.

Nuan Kun; she remembered her slightly. Her good hand was lifted, palm raised to punctuate her yell.

It was curiosity more than mercy that drove Patricia to refrain. Nuan could have survived and not attracted her attention, and she wanted to know why that was.

So she waited. “Tell me what you want.”

***

_The Praesidium – Classified Location_

_3/17/2017 – 12:01 P.M._

She’d been so sure they’d be able to fight back. That they would win.

But whatever Patricia had become now…

It was something else.

Not even the Mosrimor avatar had been as lethal and terrifying as the woman who’d attacked with a power and ferocity she’d not been able to anticipate, let alone stop. Unlike the Avatar, Patricia did not waste time or toy with them. She was _everywhere_ at once, making the weapon in her hand feel close to useless.

They’d died quickly and brutally. A small comfort as many were killed before they really knew what was happening. All the armor in the world couldn’t stop a power which ignored such things. It couldn’t stand against the pure psionic storms that could be conjured. Now as she laid on the ground, slowly bleeding out, she wondered if they could ever really win against something like this.

In the end, she was an ordinary woman. Most of those around her were. They may have had armor, been modified, or carried the latest weapons. But what good was that against those who could alter reality around them. Oh, there may have been some options and opportunities, but she knew that the war would be decided by which side commanded the most psions – or the most powerful.

Men and women like her were fodder to fight on the battlefield of gods.

But she didn’t regret anything. Not at all. Right now, it seemed hopeless, but Nuan knew this wasn’t the end, no matter what happened. Patricia…or whatever she was now…she would lose eventually. There would be retribution for this. It would not be today, but it would be soon.

She’d remained still as Patricia fought Caelior, and for a brief moment it looked like she could be beaten. Caelior was doing his best, and was starting to hurt her. Her hope had faded when the lightning had sprung from her fingertips. The walking Harbinger sent the once-standing Caelior to the ground in excruciating pain.

Patricia hadn’t noticed her. Maybe she didn’t care, or maybe she thought she was dead. If she stayed quiet, she could _maybe_ live when XCOM returned. But Patricia was talking now, and she was clearly going to take Caelior away. That couldn’t happen. XCOM needed him, and he could have beaten her if they’d been more prepared.
She wasn’t important, but he was. She needed to save him, whatever it took.

Even if she died because of it.

“Stop!”

Patricia looked over to her, and for a few long seconds, Nuan wondered if she would just kill her outright. Instead she hesitated, then finally spoke. “Tell me what you want.”

Nuan swallowed. “If you take him away, you’ll kill him.”

Nuan yelped in pain as she felt her body be encased in a harsh telekinetic grip and lifted off the ground. “Lying will not save him, Nuan. Do so again and I will kill you here.”

She was going to do that anyway, but Nuan resisted the urge to yell back, and through the pain she continued. “No! I’m not lying. Caelior has the Restraints! If he is taken beyond Earth, he will die! A contingency plan by the Commander, I think.”

A secret that wasn’t common knowledge. And had been mentioned by Iosif briefly when she’d asked about what would prevent Caelior from being captured again. The answer was simple, and Iosif had said that the Collective would not control Caelior again, or take him beyond Earth. If XCOM couldn’t use Caelior, then no one could.

Now Patricia seemed to consider what she’d said. She fired another bolt of lightning against Caelior, even as he was recovering. “I see.” She looked back to Nuan, and her mind suddenly felt like it was overloaded. Images and memories flashed before her so fast she couldn’t make any of them out. Storms of mixed feelings and emotions overwhelmed her as Patricia tore through her mind furiously.

The Manchurian Restrains locked her body in place to prevent her from succumbing to the intrusion, but it didn’t matter. Patricia didn’t need her to do anything, only what was in her head. Then it ceased and with her head spinning, Nuan came back to the world and fell to the ground painfully as the telekinetic grip stopped.

“It appears you are telling the truth,” Patricia mused, looking back to the Ethereal. “Unfortunate. Something that will need to be addressed later. But I cannot allow him to remain as he is now. It is simple then. If he cannot leave Earth, then he will not. But he will not stay here. Not with you.”

Nuan gave a painful nod. Fine. That was fine. Patricia would transport him to some secure Collective base on Earth. That would mean XCOM would find it – and rescue him. It would only take time. He would not be lost. “I have more to do here,” Patricia knelt down to Caelior and placed a hand over the helmet, which began cracking into pieces before it shattered in her hand. “Until that moment…”

One gloved hand was placed on Caelior’s temple, and Nuan watched for a few minutes as Patricia appeared to subdue him psionically. Or imprison him. Caelior eventually slumped still, unconscious. She stood back up.

“You don’t know what you’re doing,” Nuan said, knowing her death was coming. “This won’t stop us.”

Patricia slowly turned the faceless white mask to her. “I know, Nuan. It will not stop XCOM. It will not stop the Commander. But it will slow you down. It will hurt soldiers like you, and everyone in XCOM.” She walked over to Nuan’s body, and knelt down. “I intend to end this war, and I’m sorry you won’t live to see what Humanity will become after. I’m sorry you were on the wrong
Nuan wondered what she could possibly say to the traitor. What rational way she could rebut her words. In the end…simplicity was best. Iosif would have preferred that. She wasn’t afraid now, not truly. No matter what happened, she would be avenged and Patricia would be punished. She was certain of that.

“The only thing I’m sorry about,” Nuan breathed. “Is that I won’t get to watch your execution for treason.”

The cold mask looked down on her. “No. You won’t.” A short pause as she stood, and Nuan decided to use her one good arm to pull the pistol she still had up and get a final shot at Patricia.

She never lifted it off the ground as a telekinetic weight pinned it down. Patricia just looked down with contempt radiating from the mask. There was nothing more to be said, and Nuan knew that this time, it was over.

“Die, Nuan Kun.” It only took seconds for her ears to hear the words, and for her brain to understand them. The final command was given, and her body obeyed the will of the Harbinger. Her story here ended, with no more surprise or fanfare. Her only regret now was that she hadn’t mentioned to Iosif how she’d felt earlier. Perhaps they both would have been a little happier. Perhaps it was for the best though, it might be easier for him to move on. But he would, she knew that.

*Kill her for me, would you?

Her breathing stopped; her heart ceased beating, and her eyes became sightless.

The body of Nuan Kun went still and cold, as she became another victim of the Harbinger.

One of the first, but far from the last.

***

*The Aui’Vitakar, Vitiary – Vitakar*

3/18/2017 – 12:47 P.M.

The auditorium they were seated in was definitely stunning, at least to Sierra. Perhaps this effect was amplified due to the thousands of people watching from the alcoves and balconies, as protocol was apparently waived as the public was allowed in to bear witness, in addition to the Aui’Vitakar representatives themselves.

They all stood…or sat…in the middle, with Quisilia and Aegis taking center stage while drone cameras hovered around them. Both holoprojectors and actual screens were brought in for Aegis to display what he’d brought. Quisilia did not appear to have anything on him, and the whole time seemed extremely smug about the whole thing.

Sierra knew the smirk that had to be on his face would be wiped out when Aegis started talking.

It was going to be funny to see him try and explain all of this away. Especially since he wouldn’t come back with a mildly amusing tweet. Still, he probably was still going to try and spin anything as hard as possible. Hopefully the Vitakara would be able to see through the deception.

“The truth of the war is best shown, rather than said,” Aegis began. “The Vitakara are a species
privileged to not be defined by war, to not know the harsh realities of warfare and the toll it takes on all sides. But there is war on Earth, the truth of which has been censored and hidden by the Zararch. See the reality of what your species faces each day on Earth.”

Aegis played the footage he’d brought, a portion of it anyway, which was a short compilation of clips from XCOM and ADVENT armor cameras showing soldiers fighting, killing, and dying in combat. It was from multiple different battles and people. Some were killed, some lived; all saw death and chaos. The Vitakara could not understand the language, of course, but the tone would come through. Frantic; erratic, and loud.

Sierra watched the crowd carefully as the footage played. They definitely reacted to death, interestingly not much differently when a Human or Vitakara died on screen. It went on for ten minutes, and by the end the Vitakara in attendance were visibly uncomfortable. After Aegis shut it off, Quisilia stood.

“I am uncertain why you choose to display such a thing to these people,” Quisilia said, looking to the crowd. “You say that Humanity is being unfairly attacked by our Collective, yet you show your soldiers brutally killing fine soldiers of Vitakar in an attempt to appeal to them? You instead have inadvertently shown that ADVENT displays a threat, and Humanity is not the helpless species you claim it is.”

“It is to show that war is costly and violent,” Aegis answered. “Human or Vitakara alike. Wars will not change, and should only be waged for the right reasons. So I ask Quisilia – what is the justification for the war against the Humans.”

Yes you overgrown grape, answer that. Sierra was quite enjoying the almost awkward silence as Quisilia attempted to answer the question. “The simple version is because Humanity attacked us first,” Quisilia said with a completely serious tone. “They rejected our…diplomatic attempts and instead not only attacked our brave soldiers, but deliberately targeted other Humans who wished for peace.”

“He did not just say that,” Anna breathed, livid. “Are you kidding me?”

There was no way Sierra was staying quiet. “I’m sorry,” she interrupted, standing. “Are you just going to ignore the fact that you’d been abducting our citizens for months? Or that you attacked Hamburg with your Dreadnought? Or the fact that you never once attempted ‘diplomacy’ until we were fighting your incursion?” She was speaking English, she knew, but the Vitakara had translators who were displaying everything she said to the crowd, who all looked to Quisilia.

“Tell them she is lying,” Aegis challenged. “Have you explained what a Chryssalid is?”

“Like many things in the galaxy, the truth is not as simple as it sounds,” Quisilia explained lightly. “Yes, we conducted reconnaissance before an official contact, but merely because we wanted to learn of the Humans. Their language, history, and cultures. What we found, sadly, was a species desperately in need of direction.”

He spread an arm to the XCOM soldiers. “Humans are vengeful, violent, and prone to emotional decisions. Fear and hatred are common among their kind, and they jump on any excuse to turn against each other. The fear of the other is a powerful motivator – and a unifier. And there was no better unifier than the fear of the alien.” He began pacing. “And this is merely what Humans have been waiting for. Surprisingly, aliens are a common subject among the Humans. There are entire genres of entertainment and literature devoted to the alien – many of which involved the subjugation or elimination of the alien. These are not a peaceful people. They are no friend to that which is different.”
He paused his pacing. “And when one of our units was discovered, there was a fight, and that was the catalyst for the Human governments declaring us a threat. We were forced to take military action, yes, but it was justified after they have shot down our spacecraft and killed our brave soldiers.”

“Were you, or were you not abducting Humans?” Sierra demanded.

“Were you, or were you not experimenting on aliens?” Quisilia asked back.

“Corpses, yes,” Sierra said. “Aliens who were dead. Answer the question.”

“Perhaps proof is acceptable,” Aegis said, as a new video played and it was the one Sierra knew was coming, but she didn’t want to watch. The audio was enough from the Sectoid Hive, where it showed not only the fates of hundreds if not thousands of Humans, but also the few Vitakara they had also found.

Sierra noted with satisfaction that a majority of the Vitakara were looking away for most of it, and when the Vitakara victims of the Sectoid experiments appeared, there were audible cries of outrage and shouts from the crowd. “That is the fate of captives in the Collective,” Aegis said. “The fate of anyone who the Collective wishes to make disappear.”

There were only two options for Quisilia that Sierra saw – deny the footage, or spin it. It was going to be pretty hard to deny it, and if he did, Sierra knew exactly what Aegis was going to say. The most viable option was spin. Quisilia appeared to be doing that. “Unfortunately, there are certain drawbacks to how the Collective is managed,” he said with an exaggerated sigh. “The freedom we allow to the member species means that we cannot be aware of everything. We did not know this was taking place, and I will note that even had XCOM not killed the Hive Commander responsible, we would have taken action.”

“A lie,” Ravas stood, face set grimly. “The Ethereals do not simply ignore what happens in the Collective. The Zararch answers to them, and appraises them of all significant operations – including this one. Earth was designated as a top-priority zone. Only those extremely qualified knew what was going on – the Ethereals knew every single action taken on Earth. That or they show their incompetence by not knowing such crimes were taking place. Explain, Elder Quisilia, which it is.”

“We all have lapses in judgement and execution,” Quisilia answered. “However, since learning of this, we have ensured that the Sectoids perform no such experiments on Earth again. The Greater Hive Commanders would not risk sanctioning such actions.”

“Then perhaps,” Ravas said. “You would promise the Aui’Vitakar representatives a tour of Viennith?”

Sierra only knew the basics of why that was being brought up. Apparently that was a testing ground for Vitakara, though unconfirmed. There was enough evidence that both Nartha and Ravas knew to make the demand though – and Quisilia did not especially seem pleased with that. “I believe the Aui’Vitakar knew quite well the planet is unimportant.”

“So they believe,” Ravas nodded. “But why not prove it?”

“I can, of course, see that something is arranged,” Quisilia said. “But it would take time-“

“To stall and dismantle what you have on the planet,” Ravas sat back down. “If you want to prove your innocence there, perhaps it should be immediate, and not when you have purged the
evidence.”

“And perhaps we should move to Paradise Station,” Aegis said, before Quisilia could say anything else. “Perhaps the Sectoids were acting on their own – but explain the thousands of Vitakara in Paradise station who’ve become corrupted under the influence of the Bringer – and what they do.”

Quisilia just stared at Aegis long enough as he was setting up that Sierra imagined he was thinking some variation of “I’m fucked”. The edited compilation of footage (though Sierra knew that the uncut footage was shared with the Vitakara) began, showing the supposed greatest hits of the Bringer. Including the captives of Paradise, the horrific creatures within it, the introduction of the freak Preximius, many parts of China, and finally what Isomnum had done to Beijing.

The reaction was far more pronounced than the previous video, with a lot more shouts and yells in the alien language directed (presumably) towards Quisilia. Sierra almost felt bad for the Vitakara who weren’t expecting to see the graphic footage they were showing, but they really deserved to know what they were supporting by proxy.

Aegis lifted a hand to get the aliens to quiet down, and after a few minutes they did – and the Oyariah that had come along with them stood up and spoke for the first time. “You have all perhaps heard of the defections on Earth from the supposed traitors. But the truth speaks for itself. The Elders have lied to us, and this was not the first time. They hid the truth of one of their own defecting, and Elder Aegis has proven himself to be one worth following for his actions after learning the truth of his Collective. Others have now followed; Elders who see the Collective for what it is – crumbling and based on lies.”

He looked to Aegis. “The Elder Caelior has similarly joined Aegis against the deceptive Ethereal Collective, and Elder Sana’Ligna has departed out of disgust for what the Collective has allowed to perpetuate not simply on our own species, or the Humans, but against every species under them. I was once a Guard of the Ravager, but I will not continue to uphold those who keep our species in continual darkness and secrecy.”

“I would like to add that all of what you saw was the actions of several rogue actors-“ Quisilia began, though he was definitely not confident.

“Do you take my species for fools?!“ Cairu demanded suddenly. “Paradise Station is not the result of a few rogue actors. My people are not mindless drones or simple-minded idiots. They are scientists, engineers, accountants, managers, and officers. We can critically think about what we see. Paradise Station was built – and maintained – with the blessing and support of the Imperator and Collective. Do not dare suggest that what you have done is absolved.”

“It is worse if you truly knew nothing,” Ravas added slowly. “If that is the case, you do not deserve to lead the Vitakara as you are clearly incapable of managing your own. That is, even if we accept this blatant lie. But there is a very simple way to make amends for such a…mistake…if we accept your explanation. Answer if Paradise Station is still operational. Answer if the Creator has been executed for her crimes.”

“The Creator has been severely punished,” Quisilia said, definitely knowing he was losing the crowd now. “I would like to add that these actions were conducted by a minority of those in Paradise Station, and are either dead or soon will be executed. There is much good work taking place on Paradise Station, which despite the negative optics, we will continue to explore because it makes little sense to throw everything out based on the actions of a few.”

It was amusing to see Quisilia dance around the real reason Paradise was being preserved. “Is the Creator still in charge of Paradise Station?” Aegis asked.
“The Imperator is in command of the station,” Quisilia answered. “He has taken the decisive actions needed to handle such an unfortunate situation. You can rest assured that such an event will never happen again.”

“I believe the evidence does not provide much reason to believe such a thing,” Aegis said, stepping to the crowd. “The Collective will soon fall. The Elders are divided as even they know such things cannot be supported or condoned. Not all knew about the truth of Paradise Station – but the Imperator did. Quisilia did. And more.”

Aegis paused. “You do not live in freedom, and never have. I am aware that when we depart, actions will be taken against you to mitigate what we revealed. The Aui’Vitakar will undergo changes. You will hear propaganda spouted to make you forget or misinterpret what was said. I suspect the broadcast has also ended across the planet. But know this – we will come, and you will be liberated from the invisible prison created around you.”

He looked around. “And if you do not believe it…then share what you have seen today. Demand that the Elders be held to account for what they have done. What you accomplish – or do not – will speak for itself.”

The auditorium broke into a mixture of loud and unintelligible conversation, shouting, and otherwise chaos as Aegis stepped back – and then heard new commotion behind her. Turning around, she blinked in surprise as the Chronicler of all people was pushing his way towards them, helmet on and clearly anxious.

Which was great, Sierra initially thought, as it meant that the team to take out Patricia was… mostly still alive? Although what was he doing here now?

“Chronicler,” Crevan said, a frown on his face as he was interrupted.

“No time,” the Chronicler said, short of breath. “We need to leave. Now.”

XCOM Engineering, the Praesidium – Classified Location

3/18/2017 - 12:06 P.M

The fires that raged in what had once been XCOM Engineering would not be put out for a long time. Dozens of prototypes, MEC suits, and valuable machines were now melted slag intermixed with the soot and plastic on the ground. Patricia had not vaporized it as she had with the Labs, mostly due to wishing the fires to burn and rob the area of oxygen while damaging the circulation of the base itself.

Time was running out, she knew. Soon there would be more T’Leth Agents, the most powerful psions, and Aegis returning. Perhaps she could fight them all off, but if that had been the case, she wouldn’t have lured them away. No sense in engaging in an unsure fight, not when it had started like this.

But there was a final matter to address which would cripple XCOM’s efforts for good.

The Cyber Labs were ahead now, where Shen had started work on JULIAN. She didn’t know how much progress had been made since her initial abduction – but it clearly was unfinished. An AI could certainly change the direction of the war, but in the unlikely event that he had managed to build one – a feat that the Imperator doubted – it always had a central processor. A brain. A heart.
Patricia though…she knew Shen. If anyone could achieve it, he could.

That was why he was a threat now.

The doors ahead were sealed shut. Locked. She reached out and closed a fist. The metal crushed itself, tore off the hinges, and with a dismissive motion was tossed to the side as she entered where all cyber operations of XCOM had been conducted. Shen was standing in front of a console, still working, looking as he always had.

He looked calm; focused. And that also emanated from him. She wouldn’t have been surprised if he’d decided to simply accept his fate, though still this man was no fool, and what made her more suspicious was that Lily had been living in the base. He would not want anything to happen to him now and leave his daughter alone.

“Step away from the computer, Shen,” she said slowly. Shen seemed to ignore her, his lips pursing as he heard her voice.

“I don’t see why I should,” he finally said, disgust and sadness in his voice. Disappointment. “With how many you’ve killed today, I don’t expect you to treat me any differently.”

In a way, he was right, but she disliked the implication that she was enjoying it. “It became necessary when you joined T’Leth.”

“Is that Patricia, or the Imperator speaking?” He asked curtly, still refusing to look at her. “I knew Patricia, and not only would she have understood why we’ve taken the actions we did, she would have supported them.”

She was tired of him refusing to face her, so she clenched a hand and the keyboard he was typing on became crushed, as well as the screen of the console. “I was uninformed and we were desperate. I would have at one point, but I know better now. I know where that will lead. I will not have our species drawn into a perpetual war as the tools of a Sovereign.”

Shen looked to her, eyes showing disappointment and unyielding resolve. “And ask yourself – assuming there is anything left of you – what the Imperator plans. You are not saving us from war, Patricia. Should the Imperator succeed, we will be the soldiers on the front lines against the other Sovereigns of the galaxy. Don’t lie to me, Patricia. Don’t lie to yourself.”

“Perhaps,” Patricia relented. “But it will be centuries later. And when the Sovereigns are dead, there will be no need for war.”

“What all despots say to justify their conquests,” Shen dismissed flatly. “The Imperator knows full well the Sovereigns exist outside this galaxy. One galaxy is not enough for him. At least with T’Leth we will chart our own path, and should it lead to war in the future – it will be under our own terms. Not those of a tyrant who acts through a puppet.”

Patricia breathed. “You don’t understand, but what you believe is irrelevant now. If you believe T’Leth does not intend to use you, then you are more of a fool than I could ever be. You think the Imperator would not be satisfied with a galaxy, but I can promise you T’Leth will not be either.”

Shen shook his head. “I’ll take my chances.”

A few long seconds stretched. Patricia looked around the room. “Why are you here, Shen? You could have left with the others. You could have had your team finish the work you are doing now. A futile attempt, but you know how valuable you are. Do you think I won’t kill you?”
The old man sighed, a long and slow one. “I’d hoped there was something left in you that would stop you from doing this, but no, I’m certain you’ll kill me. I could have left my people to sacrifice themselves, but I didn’t. They have lives and families, they have futures. You know I’ve had my differences with the Commander, but we have always done what we do to save as many people as possible – even if it means we sacrifice in the process.”

His tone turned almost wistful. “I’ve lived a long, full, and rewarding life, Patricia. I’ve accomplished more than many in my position and I regret none of it. I knew the chances of me surviving this was were…slim, and I accepted that. I have for a while.” A ghost of a smile appeared on his face when he looked back to her. “I’ve given my last gift to this world, but what you have done won’t change anything. Killing me won’t stop XCOM. There are thousands of men and women just as smart and dedicated as I was, and they will take my place. Tampering with my mind will only kill me, I’ve made sure of that. Whatever you think you accomplish here will only be temporary – if anything at all. You should know better than anyone.”

He motioned around. “For every soldier you kill, a dozen more will be inspired to resist. For every place you attack, you only rally more to defend their homes and planet. The destruction you’ve caused will be repaired. All that you’ve done, Patricia, is made us stronger. You’ve already failed here, even if you don’t realize that yet.”

“Brave words, Shen,” she said, stepping forward. “But the world runs on reality, not hope. I know XCOM can rebuild – but it will take time. And in that time, I will win this war.” Another step forward. “And before you die, I want you to see your AI die as well.”

Around her the room began shaking as she gathered her power and pulled at the telekinetic strings surrounding her. Computers and consoles began sparking, popping, and imploding on themselves. The smells of burnt circuits and overheated cards filled the room. Shen stood watching; his face masked in acceptance knowing he couldn’t do anything to stop her.

“If it is any consolation,” she said after the room was wrecked. “I don’t think you would have succeeded in your project. Not truly.”

Shen smiled.

Patricia frowned.

Something is not right.

“Amazing!” A voice announced over the remaining intercoms. It was an electronic male voice that sounded tinged in sarcasm, oddly enough. Or condescending. “Every word of what you just said was wrong.”

How?

It appeared even she had underestimated Shen. This was a new problem that would have to be dealt with later.

“Let him live, Traitor Human,” the presumed voice of JULIAN spoke, sounding more serious.
“And I will advocate for your indefinite imprisonment as opposed to your painful execution.”

“Not after this,” she shook her head, looking back to Shen with a grudging respect. “Well done. XCOM will be lesser for your loss.”

“We shall see,” he said, clasping his hands behind his back. “The Commander will be coming back any moment. Let’s not drag this out any longer than necessary. JULIAN?”
“Yes, father?”

“Tell Lily I love her.”

“Acknowledged.”

He was right, the conversation had gone on long enough. She simply reached out and telekinetically snapped the neck of Dr. Raymond Shen. He died instantly, and his body fell onto the floor filled with broken metal, plastic and glass. *A shame.*

“That was a mistake.” JULIAN said, the voice inflection lowered. “You should run now.”

“Yes,” she said, knowing the AI could hear everything. “My job is done. Give my condolences to the Commander.”

Knowing she only had a limited amount of time – if any left – she began teleporting back to where the Mosrimor orbs were hovering and with a telepathic order, shut them off and teleported them away. She’d left a large number, not wanting to have risked T’Leth’s interference. It seemed to have paid off, as T’Leth had not once bothered her.

Her final stop was the unconscious body of Caelior. If he could not leave the planet, then they would have to work with that. She picked up the body effortlessly, slung him over her shoulder, and manifested a portal in front of her.

It was time to leave.

Mission accomplished.

There was only one thing left to do.

***

Despite the events which had taken place, the world at large was moving on as normal. The offensives across the world contained to small portions of the population. The war was a part of the everyday lives of the people, but it had not truly entered the homes of many. Not yet. But very soon it would be.

It began when the Harbinger stepped out of a shimmering portal into the bustling streets of New York city. Near-pandemonium broke out as all the citizens froze, not certain if it was friend or foe. Peacekeepers yelled for people to get clear, and panic broke out as a stampede to flee began. A hand shot out, and all the Peacekeepers froze.

But the Harbinger waited.

She could keep them indefinitely.

ADVENT received thousands of panicked calls, as cities across the world began reporting sightings of the woman in white armor and a clouded mask. Snipers fired from the rooftops and Peacekeepers defended their cities, and found that many such appearances were illusions. Priests were mobilized to dispel them, but it proved to be easier said than done.

But it was confirmed that the one in New York was real, now with the braver media coming out and setting up their cameras to see what she was going to do. And there were those in ADVENT; in XCOM who had some idea.
“We can cut the footage, Chancellor,” Kyong said to the woman who sat, looking grimly at the screen, reviewing the attack on the Praesidium and now Patricia’s appearance all over the world. “Damage control is essential now if you think she’s going to reveal state secrets—“

“No,” Saudia sighed, knowing what was coming. “Information is impossible to fully suppress these days. Anything of that nature will only lend credence to whatever she will say. Let it play, and we will discredit this traitor properly.”

The Harbinger began speaking; a synthesis of woman, machine, and bass that reverberated in the ears of those still listening. “I am Patricia Trask, formerly of XCOM, formerly a hero of the war you now fight. Through the actions of myself and others, ADVENT rose to combat the alien threat and unite our species under one banner by any means necessary.”

The masked woman looked around at the crowd. “But much has changed, and now it is time the truth is known. Your leaders are not who you think they are; what you believe you know is based on manipulation and lies. For centuries the world has been influenced by an organization devoted to eventual world control. This organization was discovered by XCOM. They should have been executed for their actions.”

A pause. “Instead, they were used to execute the vision of the Commander of XCOM to create a united government for our species. You know that today as ADVENT. Conceptualized together in secret with the leaders of nations, and placed under the very same people who have endeavored to control the world from the start. Today they exist under the thumb of XCOM, pawns to execute their agenda or the truth about them would come out.”

“What I have said is the truth, what is done about it is up to the citizens of ADVENT; of Earth. You live under the shadow of ADVENT, in service to a war than cannot be won despite what they claim. As we speak, the bases of XCOM burn. The war has gone on long enough, and it is time order be restored to Earth – not under the hands of an unelected shadow government, but to the people themselves, with proper guidance.”

She pointed to the crowds. “You have been lied to about the Collective and their intentions. I have learned much – and the aliens are not our true enemy. There are greater threats in the galaxy, and your leaders would prefer to ignore the truth and cling to their power than swallow their pride and surrender – for the greater good of the galaxy and our species.”

The hand lowered. “Many chances have been given to your leaders. All of which have been rejected completely. Our patience is over. I have not come here to demand a surrender, or give a warning. I have come with a promise. I have come with a purpose. Listen well, and realize that your only hope for a swift end will be to take action yourselves against your masters.”

“I am Patricia Trask, Harbinger of the Imperator of the Ethereal Collective, and I have come to end this war.”

With that final declaration, she vanished with a flourish of her hand, with the words of warning and revelation echoing in the minds of all who had heard her.

Interlude: Wrath of the Deep
Chapter End Notes

At long last Act III is done. New phase of the war begins now. Thank you to everyone who's stuck around this long (over one million words on this alone), it's been a good time and it wouldn't be nearly as enjoyable for me to do without the feedback and comments that are left.

On that note, I am happy to say that I do have a public discord server where there's already a good number of people; authors and readers alike. If you're so inclined, I'd be happy for as many people there as possible. Link is here: https://discord.gg/CzC84hf

Thank you all again.

- Xabiar
The station hovering in the blackness of space was surrounded by only the faint flickering of white and blue stars in the void. Stars promising other systems; other galaxies; other places that remained untouched. *Unprotected.*

Though in a way, they already were by proxy. Perhaps they would know that one day.

Normally, stations such as these were typically used for defense, storage, or even habitation.

Not this one.

This one was something different. Something more…*refined.*

His Lord demanded no less.

The General stepped into the detailed tiled floor, boots clacking loudly in the absence of sound. Beautiful murals constructed into the floor echoed the ornate construction of the station; an extravagance and beauty one might expect on the Throne World. Were it not for the fact that he knew they were floating in space, one would never know they weren’t on solid ground.

He continued along the path, as the stone columns and walls gave way to the integrated vegetation. Pure, hard stone and steel was undesirable and drab; that which was tempered with nature provided a much-needed balance. Green, yellow, and red grass soon encroached the path, with trees, flowers, and even small fowl and creatures roaming around, while the walls were shrouded through holograms to give an illusion of an open space.

It was a perfect illustration of harmony. So many different pieces of life from dozens of worlds, galaxies, and spheres able to coexist – after the necessary modifications, of course. He enjoyed this section of the station; it was calming, especially given the news he was to break.

News he feared would not be taken well.

No…that was something he need not fear. The reaction of the Lord would likely be little more than barely visible annoyance, but what he would do, what he would *order* to respond to it…It could have significant ramifications. It would make the lives of all involved more complicated. This news was what started conquests.

One could very well be coming soon.

The room soon began transitioning back to the regular architecture of the station, and ahead he saw the door. No guards waited today, a sign of respect – and secrecy. The station was already among the most restricted, and for even the guards to be dismissed meant that the Lord had correctly assumed the news he was bringing was…*important,* even if he had dared not imply as much.

He entered the room somberly; carefully. The low humming of the holograms running was the
only constant sound as they were placed in careful rows throughout the room, each one displaying a world, species, individual, or sphere, connected to the appropriate data file. They changed daily, or even hourly depending on the situation and whim of the Lord. But looking at them was a good insight into his current musings.

A quick glance was enough to confirm his suspicions. Many aliens from the Sphere of the Sovereign, several dozen species, worlds, and individuals from the Milky Way and Andromeda galaxies specifically. Near the center of the room, facing away from the entrance, but in front of a semicircle currently playing a hologram recreation of a battle, stood the elevated throne hewn out of clouded diamond.

Not just a specific battle, but one showcasing a Sovereign Agent. One of T’Leth’s, if he was to accurately predict based on the other holograms in the room. Based on what was known on the Agents of T’Leth, he suspected it was focused on a very specific one. The General fell to one knee. “[My Lord,]” he greeted, relieved to be speaking the tongue of his birth once more. Alien languages were brutish, distasteful, and curt. The one of his people was…beautiful; no other word could accurately describe it. Even aliens who heard it were enthralled from the words that flowed like water and were honey to the ears.

“[Rise and approach.]” The answer was expected, and the General rose and approached the right arm of the throne. The Lord wore no battle armor or adornment today, but a simple and tasteful tunic. One designed for status, if not comfort. Unimportant details, as the Lord did not even look to the General, and instead remained focused on the scene in front of him.

A short time passed. “[You bring news.]” It was not a question, and the General wasted no time.

“[The situation on Earth has escalated. We suspect the war will be decided sooner than anticipated.]”

“[Explain.]”

Working with the limited information his people had been able to acquire was not especially easy, but after millennia of doing this, he had been able to put together a short explanation which was largely accurate. He was unhappy that there were clear gaps in his knowledge and details were lacking, but the main pieces of information were clear if one knew what to look for.

In some ways, the previous isolation and secrecy of the Ethereals had actually helped in constructing the true narrative.

“[The Imperator has begun taking direct political control of the Ethereal Collective and devoting his power to conquering Earth. The heart of XCOM was attacked, and it is likely that they will continue to suffer defeats in upcoming battles because of this. The Imperator wishes to end this war quickly and kill T’Leth.]”

The Lord pursed his lips, though seemed mostly amused. “[Optimistic of him. The war will not end so long as T’Leth remains on the planet.]”

“[Indeed,]” a short hesitation, before the General continued. “[There are…indications that this will encourage T’Leth to act. Act with more than his Agents. We must decide on a course of action soon if we hope to influence the outcome. This war will not last indefinitely; either the Imperator or T’Leth will emerge victorious.]”

A dismissive wave of the hand. “[It ultimately does not matter. Both present unique opportunities and challenges. You are suggesting direct intervention?]”
“[Potentially,]” was the careful answer. “[T’Leth is the more immediate threat. The Imperator is more easily utilized. He could be useful in bringing the Sphere of the Sovereign under control. Though there are…concerns.]”

“[Explain.]”

“[We are still unsure of the nature of the entity he has in Paradise station,]” the General answered. “[His usage of it could prove dangerous to other Spheres if it escaped the containment designed for it.]”

“[Incorrect,]” the answer was immediate. “[This Bringer is a creature born of psionics and as such, is a wielder of such power. It threatens no other spheres. It is a non-factor outside of our operations within the one in which it resides.]”

The General had his own reservations, but this was not the time to voice them. “[As you say, my Lord.]”

“[Why have you really come to me?]” As he had expected, the Lord had figured out that there was more important news than the prelude he had provided to gain this meeting. “[These developments are unsurprising and do not change our plans.]”

And here it came. “[There are two developments which can hamper our plans,]” the General swallowed. “[First, the Entity has escaped containment.]”

It was subtle, but the reaction was easily noticeable at this close proximity. A stiffening of the body and spine. An imperceptible tightening of the face, and slow clenching of hands into fists. The eyes smoldered with anger and frustration, and eventually it faded into the mask the Lord preferred to wear. One of calm collection and introspection.

Only one question was asked. “[How?]”

“[A weakness in the Watchers,]” he answered. “[He manipulated them; made promises, gifts, and deals in return for concessions that were so minor as to be imperceptible. Invisible. Investigation continues, but this appears to be no less than three thousand years of plotting. Millions of slight nudges and hairline fractures; alone can do nothing, but together they form a singular shatterpoint.]”

A short pause. “[All involved have been quarantined. They will be dealt with when the investigation is concluded and we have every possible lead.]”

This resulted in a slight nod, but the displeasure was still apparent. “[Typical.]” A frown from the Lord, though more towards the situation than the General. “[We should have expected such. He has become more patient. It is only the containment that was breached, not the Restrictions?]”

That was indeed the good news. “[Yes, my lord. There is nothing indicating that the Restrictions were tampered with, nor did any of the Watchers allow concessions that affected them. There is little chance they were affected or altered.]”

“[Then what he will be able to do will be limited.]” the Lord relaxed slightly. “[Yet he can move through the Spheres freely. I do not trust him to not eventually learn how to break the Restrictions. Reclaiming him is essential.]”

“[I agree,]” the General nodded. “[But I do not believe he will go far.]”

The Lord stroked his chin. “[He will do what he has always done. Follow the Blood. He will find
the Sphere of the Sovereign soon. If the Entity makes contact with the any of the Sovereigns, that
could be…problematic. The Sovereigns are too arrogant, too shortsighted to understand what they
are dealing with. Limited as it is, there is already high risk from the Sphere. It does not need to be
compounded."

And this tied into the other news which could throw this into question. “[For most Sovereigns,
perhaps. Not all of them. The other development is also concerning.]”

“[Why?]”

The General’s lips twitched. “[The Sovereign Classemque has found a Gateway. His proxy species
has begun researching and excavating it.]”

There was a long silence, broken by the long intake of breath by the Lord who stared straight
ahead, his face as stone. Unlike the escape of the Entity, both of them had known it was only a
matter of time until something like this happened. “[Does he know what it is?]”

“As it stands now, no,]” he confirmed. “[It’s only a recent discovery. I do not know how he found
it, and it could very well have been accidental. The fact that he doesn’t know what it is reinforces
this.]”

“What does he think it is?”

“Based on how that particular one was designed, he likely believes it to be some kind of transport
system. Perhaps a primitive iteration of a Psionosphere-based teleportation technology. Right now
he thinks it is Sovereign technology, perhaps based on the Traveler as it bears some resemblance to
Adherent architecture.]”

“He will not hold that theory for long,” was a short answer. “[Classemque is the most
dangerous.]”

On that he was correct, which was what made this more concerning than usual. Out of all the
Sovereigns to find something of this magnitude, it had to be the smartest one of them all. T’Leth,
Expirant, even the Leviathan were better alternatives because they probably wouldn’t be able to
figure out what it was, much less how it worked.

“It will take time for him to learn,” he pointed out. “[If he is able to understand it at all.]”

“We do not work within delusions, General,” the Lord snorted. “[Not now; not here. Time is
limited and the Gateway must be destroyed.]”

It was the most obvious solution, and likely the best, but it wouldn’t solve the problem long-term.
“[Those are your orders?]”

“Yes. Take whatever you need and destroy that Gateway. Bring several of the researchers back for
study and potential integration. Kill everyone else. Let Classemque think he stumbled upon the
legacy of another Sovereign.]” The Lord rubbed his chin, thinking. “[It is clear we cannot leave the
Gateways unguarded. Install guards and defenses at each one. It may draw attention, but it has
clearly become necessary, especially with the Entity now in play, and he will use that knowledge
effectively.]”

Logical, and something he agreed with. Already in his mind he was putting together the
appropriate amount of forces. Given the skill and intellect he was dealing with in Classemque and
his also brilliant proxies, it was almost certainly going to be costly. Manageable, but costly.
Necessary to preserve stability and secrecy. “[It will be done within the week.]”
“[Our strategy must change,]” the Lord continued after a pause. “[This Sphere has proved to be unusually troublesome. This will continue happening if not dealt with, and the Entity introduces an uncontrolled variable. Doing the minimum is not acceptable. Prepare it for quarantine within the timeframe of one of the cycles.]”

A grimace formed on the face of the General. That would be a difficult task. There were also other concerns. “[That could be provocative. And the timeframe will cause issues due to the asymmetrical nature of the cycles. It will not remain subtle or unnoticeable.]”

“[I am not concerned about the threat posed,]” was the flat answer. “[It would not be ideal, but one Sovereign at a time can be defeated. I understand this will be a difficult challenge, but I suspect that you desire such other than being confined to the Throne World as a glorified diplomat. You have my permission to use whatever means are necessary for the quarantine.]”

A short nod. Unrestricted resources and manpower would certainly be easier. And his Lord was not wrong. It had been too long since he had undertaken such a…great challenge as this. It had been too long since he had led the conquest and quarantine of a sphere. The Sovereign Ones and the Entity that would likely follow would simply be additional challenges.

“[Our numbers must grow,]” he suggested. “[Species and individuals marked as having potential for the Riders have been identified. Delays have arisen from pushback on-]”

“[Find and recruit them,]” the Lord interrupted lowering his arm back to his side. “[I will handle any fallout on the Throne World. They will not hold back progress for the sake of their already-tainted lines.]”

The General moved to leave, and then paused; a final question appearing in his mind. One which needed express permission to be allowed to carry out. “[If an…opportunity presents itself on Earth…should it be taken?]”

Another pause, this one lingering. “[I leave that to your judgement, General. You know her better than I do.]”

***

3/19/2017

In the blackness of the ocean, a leviathan stirred. The life forms around him became still and entered into a telepathic shock as he ponderously considered the situation he now found itself in. A rare position for him. Rare, and mildly concerning – though for once it wasn’t because the threat was mortal. Normally, the actions and losses of proxies and doomed species would mean nothing to him. His Agents were safe, as were his installations.

But these were not normal times.

Now…he had an…ally.

A word which was amusing in the context of himself; an equivalent of a mouse being allied to a dog. A power disparity which usually made such alliances mere pledges of fealty. But this was not as simple. Despite knowing how outmatched they were, XCOM nonetheless continued to treat him as if he – or they – were equal.

It almost would be arrogant, if it wasn’t endearing in a way.

Especially since it had not necessarily been sought out in that way. An alliance was practical for
both of them, but the knowledge that XCOM had refused to even consider the possibility of asking
him to abandon Earth when the fool Ethereal Sana had come to talk was surprising. As if they were
committed beyond convenience.

Ironic. One who shunned proxies now had a species perhaps more genuinely loyal than any hand-
crafted slave race.

Which meant that attacks on his…ally…could not go unpunished. When the Traveler had died, he
had repaid the Leviathan with the blood of his thralls. Perhaps foolish, perhaps an arrogant
retaliation against something more powerful than him, but it was a rare moment of certainty where
he knew that what he had done was right.

Their alliance had not been selfless, but there had been mutual respect.

What changes when it is not a Sovereign who holds a similar relationship, but a lesser alien?

Nothing.

More than that, he had been outwitted; subverted by Mosrimor. A Sovereign who was utterly
irrelevant and whose plans would never come to fruition. A useful tool of the Imperator; a rare
reversal of Sovereign and Alien. Nonetheless, it was intolerable that he had been so…successful in
accomplishing the plan of the Traitor Human.

Mistakes.

Underestimation.

Falling into the same traps of arrogance that other Sovereigns fell into must be avoided at all costs.
The Imperator was an alien, but a clever alien. The Humans had clever members of their species.
Mosrimor in his own way was clever, although his cleverness was more useful as a tool to beings
like the Imperator.

To be on a losing side…even by proxy was…distasteful.

Escalation.

Perhaps it was time to use the more unpredictable capabilities of his people more openly. The
Imperator was ignorant of certain realities, and perhaps a reminder of who he was dealing with was
due. First there must be decisions made.

A telepathic command was sent to his Agents. We will meet.

His command was received and would be obeyed immediately.

***

The dreamscape they all appeared in was dimly lit and watery, as usual. T’Leth had no desire or
time for complexity. Such was unnecessary now. His Agents arrived, scattered across the worlds
from installations to residing in the shattered Praesidium. Many faces were grim, some were angry;
none were defeated.

All of them knew this was a setback.

All of them knew that something was coming.

T’Leth had no physical avatar this time. His presence was enough.
It was, unsurprisingly, Lavallic ir Nara who spoke first. Or made the first tangible response. Mocking claps rang out in the dreamscape, a sneer on the woman’s face as she looked up into the air, eyes sharp as daggers and pointedly starting at the envisioned form of the Sovereign One. “[Well done, well done. I had been under the impression you were powerful, yet in your first demonstration with another of your kind, you are beaten.]”

Crevan pursed his lips and some of the other Agents looked shocked at her words or her native language. “Nara…” he began slowly, trailing off.

There was a reason she was typically kept away from others. She was abrasive, cruel, intolerant, and arrogant. She was also brilliant, and represented something crucial to the future. Her virtues shone brighter than arguably any one else’s, but her flaws were in equal radiance. She would have been a powerful, if ineffective Sovereign.

*Your tongue is as sharp as expected from your kind. Perhaps that is why you make enemies so easily.*

“[We agreed to assist you because you could protect us,]” she hissed. “[That is thrown into question now.]”

*Is it?*

The air rippled.

*You assume I was defeated?*

Normally he did not assault her mind with visions and memories, but it was past time the woman was stripped down from her pedestal, as if her fears and terrors were any more or less potent than those faced by this galaxy before; as if what she considered important mattered to this galaxy. Memories of cycles where worlds were destroyed, Sovereigns fought and defeated, genocides and battles where the death counts fell in the tens of millions.

All of which he had played a part in.

Lavallic collapsed to the watery floor and began convulsing. Crevan moved to help her, but was stopped by Fiona who extended an arm, blocking him from moving forward. Face of stone, Crevan watched grimly as the Sovereign addressed him. *You overestimate your importance to me, and perhaps it would be prudent to remind your woman that I have learned the most crucial pieces of information already. She is best not speaking of things she has no concept of outside her sheltered and privileged life.*

Crevan’s face remained stern. “Her frustration is not misplaced. The attack on the Praesidium was a setback.”

*Everything lost can be replaced. Concern rests in application of resources and personnel. The Imperator and Patricia are more clever and resourceful than anticipated.*

“Indeed,” the Chronicler nodded. “In retrospect what Patricia did was logical and effective. It is fair to say that Mosrimor will become more involved in this conflict. We must prepare to counter him.”

*Mosrimor will not show himself personally. He acts through his puppets and nanotechnology. Review for vulnerabilities and pass updates to XCOM and ADVENT.*

“We need more people,” Harper looked around, with a quick glance at the woman on the ground.
“If this war escalates, we will not have enough to be everywhere at once. Be it against one of these Harbingers or one of Mosrimor’s puppets. Much less against the other soldiers of the Collective.”

“Recruits?” The Chronicler asked, raising an eyebrow. “Do you have people in mind?”

“Not specifics,” Harper shook his head. “But I suspect that a number of XCOM soldiers would be willing. I would have suggested to approach Agent Gertrude again, if she was still alive. It might be more reasonable to consider proposing to the Commander to convert XCOM into a more formalized arm of you, T’Leth.”

“Out of the question,” the Chronicler shook his head. “A degree of separation is necessary, nor would the Commander agree to it, with good reason. No one has reached that level of desperation yet. Recruitment from XCOM though…is more palpable. T’Leth, are there any candidates?”

No.

Harper blinked. “None at all?”

None who I consider compatible. Their loyalties are solidified to the Commander and XCOM. Their roles to play are clear. There are others whose minds I’ve touched who I will draw to us. Our numbers will swell. Chronicler, the sleepers will rise. It is time for us to learn about the cycle we now inhabit.

“Who?” Fiona looked to Crevan, confused.

“T’Leth is older than our species,” the Chronicler said, crossing his arms. “There have been other agents of his long before us. Not all of them are dead. Some of them are responsible for keeping him up to date on the current cycles. Although this is later than usual.”

Yes. I suspect much has happened that I am not aware of. Reinforcements on Earth will also be useful.

“We’re all ignoring the most important part of this,” Fiona interjected, stepping forward with clear frustration on her face. “What are we going to do about it now?”

“Help XCOM rebuild,” the Chronicler said. “As a start. Support and supplement their operations until they can do so themselves.”

She scowled. “Not good enough. We need to strike back. I can do that.”

“Absolutely not,” Crevan shook his head adamantly. “That is the last thing needed right now. We need to act based on practicality, not emotion. You are in no position to risk us – and yourself – so brazenly.”

“I can do it,” she stated, glaring at Crevan. “It doesn’t matter if the Imperator’s puppet comes after me, I know I can beat her. I fought that creature of the Bringer to a standstill, and compared to that Patricia is nothing.”

“Patricia is not who you need to be concerned about!” Crevan shot back, exasperated.

“The Ethereals aren’t going to risk themselves now that they have puppets,” Fiona noted. “Well, except the Battlemaster. I’m not stupid enough to fight the Imperator by myself, but I can take his armies and avatars.”

She had reason for her confidence, but T’Leth was wary of utilizing her too extensively. Especially
against such an insignificant threat as an avatar. Patricia had only attacked when the most powerful were gone. It was a subtle, yet important hint that she still feared what could be brought against her.

But she was correct in one instance.

The Imperator had sent Patricia to send a message.

It was time one of his own be sent.

The Imperator had formally declared war on T'Leth by proxy. It was time he learned what that entailed.

*There will be retribution. It is owed to XCOM and to punish the Imperator for his arrogance in attacking my ally.*

Fiona nodded fiercely. “When do we strike?”

_Not you._ The air rippled and became charged as the voice rumbled deep into their minds. _I will do this myself._

***

_Sydney, New South Wales – Australia, Territory of the Ethereal Collective_

3/19/2017 – 11:41 A.M.

For once, Runi’ilias’vitiary though to himself as he stood at his post, today was a very good day. Ever since the events in the China offensive, they had all been privately wondering what was going to happen next. The death of an Elder, even one disavowed by the Battlemaster himself, was a blow, and Humanity had proven themselves unexpectedly strong and skilled.

_Events_ was probably too light of a word for what had happened. Not descriptive enough. Supposedly it had been livestreamed over the Human Internet, and while some of the soldiers grumbled about how they didn’t have unrestricted access, Ilias was privately grateful that the Zararch were looking out for them, because if the rumors of what was shown were even partially true…well, no one needed to see that.

And of course, mere days after doubts had started to crop up, the Elders had shown that they were in control, as they always were. The scourge of XCOM had been attacked by the Imperator’s Harbinger, which had come as a massive shock to all of them. Patricia Trask had been in the nightmares of most soldiers after stories of her power spread, and to hear such a woman was now on their side was a relief.

Unlike the dread and confusion they’d felt when they’d learned Elder Aegis and Caelior had joined the Humans, now they—now _he_, felt relief. It was taking longer than maybe expected, but this war was going to turn around. It was just something he could feel. Irrational, but there was a shift taking place, and all he could think of was _it’s about time._

It had been one of the few times since being stationed to this miserable wasteland that their commander allowed a relaxed celebration of sorts. Optimism instead of tedium ruled the night and morning, and it was all something they needed now. Australia was, in his humble opinion, one of the worst places you could have the misfortune of being stationed on.

It was hot, dirty, and _boring_. Ilias personally believed that they didn’t really need a military force
Here, or at least not Runianarch. Mutons could do the job just as well, and the Sectopods, Heralds, and Executors that had been brought in didn’t care about boredom. While yes, it was important to protect their production plants which had – at long last – replaced the once-sprawling city of Sydney, at this point ADVENT wasn’t going to be touching these for a long time.

At the same time, knowing their luck, they would all be sent to Korea.

He blinked slowly.

If given the choice between hot miserable boredom and a death sentence, he would stick to being alive. Besides, some days it wasn’t too bad.

He felt the impact of the wind on his armor, even if he couldn’t feel it himself. Well, this was a rare day when the sun wasn’t blazing, and he was going to enjoy it at least a little. Regulations said otherwise, but it likely didn’t matter at all right now. Helmets weren’t necessary when he wasn’t in a combat zone, and there weren’t any civilians around to keep up appearances.

“[The universe smiles upon us today.]” Runi’causta’borelia rumbled, walking up beside him. “[A sign of the coming victory]"

“[It is.]” he answered, savoring the cool wind. “[Soon this will be over.]”

“[Or it could just be a change in seasons.]” Runi’ailand’inth added, taking his place against the entrance as a Muton patrol continued on their way down the street. “[Not that I’m complaining if we’re finally going to get off this planet. I don’t see why any Human would willingly live here.]”

Their Borelian friend shrugged. “[Because they had no choice?]”

Ailand looked over to what the Humans had called the “Sydney Opera House”, the one piece of Human architecture in the city they had deliberately preserved since it was rather unique. “[They probably wouldn’t have built that if they weren’t here by choice. Even before we came, Humans had boats and aircraft. There is no reason to live here.]”

“[It is clearly the animals,]” Ilias said dryly. A joke they all understood.

The wildlife on this planet – or at least this region of the planet was among the most unpleasant he had ever had the misfortune of ever witnessing. Even in the city there were little rodent-like vermin everywhere, eight-legged insects the size of his hand that caused dangerous rashes (in addition to being just unsettling to look at), and in Sydney alone there had been over a hundred patrols which had at least one member get bit by some kind of venomous snake and had to be treated.

And none of them went into the water. After bodies had started floating back to the shores, and they’d learned what ‘box jellyfish’ and ‘sea snakes’ were. It was like everything that lived here was designed to bite, sting, or eat you. Which was to say nothing of the Muton patrols deeper into the continent which had been attacked by crocodiles.

Anything that could seriously injure a Muton was nothing any of them wanted to tangle with.

“[Do you think it will actually rain?]” Ailand mused, looking to the overcast skies. Ilias also looked up. The clouds were not especially dark, which was what would generally indicate rainfall was coming, but just slightly gray. The only difference was that they were thick and stretched as far as he could see, only appearing to slightly break far over the ocean.

So not rain, just overcast. Which was fine, as he didn’t really want to stand out in the rain for hours even if it was an objective improvement from the heat. Causta pulled out her tablet and began
checking something while he remembered the wind. Lips turned sterner as he thought. No, not rain, but there was more wind than normal. What were those weather events called?

Ah, tornados. That was a proper translation. Definitely not as dangerous compared to the equivalent events on Vitakar, but being caught at ground zero in one was not ideal. “[Do they have tornados in Australia?]” He asked, not really to either of them in particular. “[It’s very windy]”

 “[Even if they did,]” Ailand gave a shrug. “[We wouldn’t be in any danger. If it gets to that point, we’ll just be moved into shelters.]”

 “[Wait.]” Causta motioned them over. “[Something isn’t right. Come here.]”

Both of them walked over to look down at the tablet. Ilias just saw white which he assumed represented the clouds. “[Why do you have it focused on the city?]” He asked. “[It’s obviously cloudy here.]”

 “[That isn’t the city,]” Causta said slowly. “[This is the continent.]”

Both of them blinked. “[The entire continent?]”

 “[The entire continent,]” Causta repeated, zooming out and sure enough, the ocean surrounded the massive cloud which blanketed the continent. “[The radar can’t see anything on the ground. I’ve never seen anything like this, even on Vitakar.]”

 “[Has Earth had weather events like this before?]” Ailand asked, voice now allowing some worry.

 “[Going to send a message to the Zararch so they can perform a Google search,]” Causta said, typing the message itself. “[It’s odd. Stuff like this can’t just spring spontaneously. Especially this large.]”

 “[Or it can, and it’s just another charming feature of Earth.]” Ailand pointed out.

 “[Go back on the timeline,]” Ilias suggested. “[When did it start?]”

 “[One moment,]” before them all Causta began rewinding the radar to early evening the previous night. Nothing seemed out of the ordinary and then clouds had begun appearing. What was especially unnerving was that they didn’t just appear and later dissipate sporadically, but all seemed to arise and then join over the span of the entire night until the entire continent was covered in clouds.

 It seemed…artificial.

Oddly enough, his first thought was wondering if Humanity had the capability to manipulate the weather. Something that even Vitakar didn’t have. Sure, there were plenty of ways to model and predict natural events with near-perfect accuracy, but affecting it was a different story. Theoretically, it was possible, but no one had seen a reason to attempt such a project.

Besides, why wouldn’t the Humans have used that well before now?

 “[Accelerate it to Sydney-4,]” Ilias said slowly, knowing the Sargon could more easily determine what this was. “[Better safe than sorry.]”

 “[Doing it now,]” Causta said. “[I have a bad feeling about this.]”

Then everything froze.
Ilias wondered briefly if it was his imagination, but everything around them went silent. The Muton patrols stopped walking, looking around. He couldn’t hear anything running or humming; the wind had stopped blowing. A few moments later, he felt something. It wasn’t a sound or something that was easily described, but a slow dread began creeping over him; a call of a void he didn’t know how to respond to.

He stiffened as words appeared in his mind. Thoughts and symbols that he had never seen or heard before, but understood on a subconscious level. It was infused with something old. There was a weight to them that he felt he was only slightly grasping yet needed to know more of. Without necessarily thinking, he began walking aimlessly – or so it seemed to the outside observer.

Mutons growled, roared, and clutched their heads as it began affecting them too, but was resisted by their conditioning and cybernetics. They were ignored by the Vitakara and Andromedons who remained enthralled in the trance the city had somehow fallen into. Then out across the water, Ilias saw what he knew was the source.

At first, he wondered if it was a ship, a vehicle, or something mechanical. Then he saw it was something living; alive. The creature was covered in black-grey scales that were thicker than concrete walls, reminiscent of a deep-water creature. The tip of it rose out of the water, and continued rising and rising, until the face of the creature was revealed at the ‘end’ of the torso.

Six eyes glowed blue as it looked down upon the city, hovering in the air. Long-reaching tentacles fell from the body, six primary ones in total which seemed to be as long as the body itself, while smaller ones were dangling from the upper back of the creature. These twitched and lifted as the creature prepared to act.

The defenses wasted no time and began firing, as did the Executors, Heralds, and Sectopods which had been put on alert. The Mutons and some of the soldiers fought off the trance and their weapons joined the fight. Green streaks of plasma, orange trails of fire from missiles and projectiles shot towards the thing hovering over them.

Nothing came even close to hitting it.

Missiles and projectiles were turned back or shattered in midair. Plasma bolts were stopped by psionic barriers appearing and vanishing with the precision of a point defense system. One tentacle raised itself, and glowed with blue and purple fire as it swept down in a wide arc, a wave of psionic energy amplifying the strike which annihilated a vast swath of the city.

That was merely the opening act.

Come.

The command reverberated in the minds of those who lived, this accompanied by a sharp pain. The creature suddenly blasted across the city to hover over a different part. The tentacles spread out and curled, as every building and defense under it cracked and was pulled into a telekinetic grip which shattered buildings into rubble and lifted the Executors into the air with ease.

Go to the Deep; go where you belong.

On an intrinsic level, Ilias knew that he should be running away as fast as possible from the thing which was attacking them, but the words would not allow him. He needed to go to the Deep. He knew where that was. Tentacles of purple flame slammed down, shaking the ground with the force
of an earthquake, throwing them all to the ground.

Ilias quickly scrambled to his feet, looking around. He saw the water. *The Deep.*

He needed to get to it. All of them did.

Through the shaking and simulated earthquakes; through the purple fires which raged around them; through the collapse of the base they had so carefully and effectively built up, they rushed towards the blue, inviting ocean. Some of them tripped and were trampled in the stampede, but that did not stop the rest.

They jumped into the water. It was cold, and the armor weighed him down. Already he felt he would have trouble swimming if that was his goal. But he didn’t want to go to the surface.

He needed to go deeper.

It was a mad plunge to reach the deepest part of the ocean. Some succumbed and drowned early on, but the limited oxygen supply of his own helmet allowed him to go deeper. He saw several soldiers ahead of him; in his way; and he grabbed them and threw them back to give himself a boost as he went deeper.

His breath soon became short, but he knew he was almost there. The light of the sun shown into the vast expanse of the ocean that was now filled with bodies; many of which were now floating and bobbing lifelessly. His vision became blacker, and air was being inhaled frantically until there wasn’t anything left.

Still he tried to go deeper.

Then he blacked out.

Another body became still in Tasman Sea, and soon all of them sank into the dark and unforgiving void of the deep ocean as the Sovereign ravaged the land above.

***

To be continued in Chapter 52

*A Strangled Paradise*

Chapter End Notes

For anyone reading, I have a short request (and I know this is a late update). Prior to Act IV properly being kicked off, I've put together a survey (two parts since there are limits for free versions) on overall opinions on the trilogy and what you'd like to see going forward, as well as some option demographic information. If you could fill it out, I would appreciate the feedback.

Survey - Part 1: https://www.surveymonkey.com/r/TDXYKML

Survey - Part 2: https://www.surveymonkey.com/r/TC8XD2D

Next chapter is also progressing well. Hopefully will be published sometime next
week.
She was aware she was awake before opening her eyes.

Confusion.

She finally opened them to see a ceiling that was only dimly lit by orange lights placed along the walls. It was a soft light, nothing harsh shining directly down into her eyes. The ceiling was smooth and white; plain. She shuffled in the bed, turning over, the need to move her body filling her. Eventually she pushed herself up.

Odd. Something felt odd and she didn’t know what it was.

Sitting, she ran a hand over the sheets. White and clean; cushioned but not overwhelmingly soft, one fairly large pillow. And a blanket large enough for the bed. A good one too, as she reached for it. She couldn’t explain why at that moment, but she liked having it. It wasn’t perfect, but it was good quality, thick and soft…

She let the blanket drop from her hand as a thought stuck her…why? *How do I know that?*

A few seconds of thought.

Disjointed flashes and pieces of information appeared in her memory. *Stores?* Right, she knew what *those* were, in fact she seemed to know what a lot of things were…but there was some kind of context she was missing. Specifically, what she was doing in this bed. Specifically, where she was.

*How did I get here?*

A few moments passed before a much more alarming query manifested.

*Who am I?*

That set her body on edge, and she stiffened in some kind of fear about forgetting. Names appeared in her head, names of people she knew…or presumably knew. Ruth Shira, Paige Broker, Patricia Trask, Mira Vauner, Moira Vahlen; all of which she felt something towards. But those weren’t *her,* but people she had some kind of connection to.

*Abigail.*

She latched onto that name. Something about that clicked. Almost there.

*Gertrude.*

*Abigail Gertrude.*

*I am Abigail Gertrude.*
A nod to herself. That…it fit. It felt right. It would have to work…for now, anyway. She needed some kind of place to start working out who she was and why she was here. For some reason, she felt amused at her predicament. She focused on the flashes of memory; all of which were unclear and fuzzy, but she remembered being…entertained by them.

What could that be? Movies? Books?

She sighed.

So, she liked movies and books. And potentially had read some where there was an amnesia plotline. A plotline she was now living, apparently. She wished she could remember how those had been resolved because she was really not enjoying it right now.

Better figure out where I am.

She looked down at herself. Or see what I’m wearing. She pinched the fabric of her T-shirt between two fingers. Grey and dry-fit, comfortable at least. Although she felt some annoyance when she realized she wasn’t wearing a bra underneath. At least the shirt was loose enough where it didn’t matter as much…although she personally wasn’t sure why it really mattered. Only that it did. For some reason.

She wore some shorts of the same color; not tight ones which she liked. What you wear for sports. At least her brain was remembering useless details like that. She frowned and reached down to her ankles to peel the socks off her feet, feeling oddly confused. Why would you wear socks before going to bed?

Assuming she had been going to bed?

There were a lot of assumptions as to how she was here right now.

Still, she didn’t need to be wearing socks now.

She finally stood up, taking stock of the room as her soles landed on the warm and carpeted floor. Lights were placed in each of the four corners, growing brighter in intensity the more she moved, it seemed, until the room was fully lit. The walls were white, though she noticed there were no electrical outlets. Was that normal?

At the opposite end of the bed against the wall was a dresser, and perpendicular to that was a table cleared of anything save some kind of device. It looked like a tablet, which felt normal enough. Besides the dresser was a mirror, so she made her way over to it. Opening the dresser, she was surprised to find out that it wasn’t a dresser at all.

It was an armory.

She stood still, confused emotions moving through her. On one hand, she was pretty sure that this wasn’t normal. On the other…it felt very familiar to her. She tentatively reached for one of the weapons; which looked like a plasma rifle, and froze.

Why did she know that? With some apprehension, she looked to the other weapons. Laser and plasma pistols, gauss rifles and SMGs, some of them having odd references in her mind like ‘ADVENT’ ‘XCOM’ and ‘Collective’ to differentiate them. She didn’t know for certain, but when she looked at a weapon and the words came to her mind…she felt they were right.

It raised a lot more questions than answers. Was she a soldier? Was she just good with weapons? Was she being pursued?
Now she felt much less safe than she had minutes before.

She picked up a gauss pistol, and automatically began moving it to her hip but stopped herself when she remembered there wasn’t a holster there. She had – or was – definitely familiar with weapons, regardless of what she’d used them for. She didn’t know if she liked that or not. Closing the armory, she turned to the mirror.

Blue eyes stared back at her, set within a pale-skinned and flawless face and framed by blonde hair that fell just past her shoulders. She licked her lips, not quite sure what to think about it. So, this is me? Something seemed…off about it. She lifted a couple fingers to her cheeks, looking more closely at the skin. No, she was pretty sure that was fine.

Not that. She leaned forward and cocked her head to look at the eyes. The shining blue eyes which were enrapturing, even for her, even when set in the face of a visibly confused woman. Shining. Bright. They were too bright. Electric? She looked as close as she could, and while she didn’t see anything indicating that…it was still too bright. Almost fake.

Or was she just misremembering?

Maybe it was the hair. She knew for certain that it was too long. If she was a soldier, it made sense to have shorter hair. Probably cut off around the shoulders or a little above it. That sounded right. She turned around, and spotted some kind of door beside the armory. She walked over to it and pulled on the handle.

She jolted back as it hissed aside and revealed a new room within. Abigail grabbed the pistol, flicking the safety off as she waited for it to finish. A white light finally shown down upon what seemed to be a suit of armor. This…this appeared to be the ‘dresser’ of all things, as there were neatly stacked bundles of clothes, undergarments, socks, shoes, and even nightwear.

Cautiously stepping forward, she entered into it, glancing at the armor, half-afraid she was going to wake it up and find out it was actually a robot. Although…she was getting the impression that this was hers and she wasn’t actually in danger. If she was, why would these mysterious people give her weapons, a nice bedroom, and a robot/suit of armor?

There was some big puzzle piece she was missing.

She decided to get dressed properly, still occasionally glancing at the armor warily as she tried thinking of answers. Perhaps the simplest one was the right one? Maybe she’d gone to bed and woken up with amnesia? No, that didn’t sound right. Maybe she’d tripped, hit her head…and just so happened to fall straight into her bed and get amnesia.

That was just stupid. It would be the dumbest way to get amnesia in the history of amnesia, maybe ever. Hopefully more things would come back to her – or she had a friend or three who would be able to help her understand what she was if it didn’t. She went back over the list of names that stood out to her.

There was a woman, Patricia Trask; oddly enough though when she thought of the name, she was hit with confusion and anger. Probably not someone she was on good terms with then? Ruth Shira, Mira Vauner…she had fond feelings for them, mixed with sadness. Maybe they were also on less-than-good terms with her?

Or, as she looked around at the weapons and armor, the more likely possibility was that they were dead.
Liam Jaster was another one of fondness, mixed with sadness, but she felt these stronger than the others, intermixed with something else intangible. He had to be dead, but she got the impression that she’d cared for him more than others. Was he her husband? Lover? Just a really close friend?

She really needed to find out what had happened otherwise this was going to eat away at her now. She thought of more names. Anius Creed, Shaojie Zhang, Raymond Shen, the Commander… Commander of what? And who? He definitely was someone she’d known. Him and Zhang. There was confidence and respect there – and not sadness.

Good, maybe they were still alive. From what little she could tell, they were her superiors? That was definitely what she needed right now. Someone to tell her what to do. Where to go. Literally anything about what was going on.

Holstering her pistol, she looked up at the armor. She was tempted to try putting it on, since she didn’t know what exactly was waiting for her. But the problem was she didn’t know how – and her really selective memory wasn’t giving her anything useful – and she didn’t want to get stuck in it. Or get caught in the middle of putting it on.

It wasn’t going anywhere, and she didn’t feel like she was in danger right now. The pistol stayed with her, though.

*Does this have a bathroom?* She didn’t really need to use it, but wanted to adjust her hair a bit. She exited the…armor room? Which closed behind her automatically, and as it turned out, there was another room beside the table. It opened similarly, and showcased a white bathroom complete with a spa, shower, and a weirdly varied collection of cosmetic and hair care items around a dedicated mirror.

Now she was just confused. Her brain wasn’t any help now.

She wasn’t aware of what even half of these makeup and brushes were, and got the distinct impression that she never had to begin with. Not that the spread wasn’t…useful, or anything like that. But it felt like someone had given her a gift which she really hadn’t wanted or needed. Nor did she think that a bathroom needed to be this…luxurious.

She really hoped she wasn’t some kind of brattish rich girl…who was a soldier too…

Shaking her head, she walked over to the mirror and began fixing her hair. There was definitely some kind of contradiction here. Just when she thought there was some kind of foundation, she found something which threw that into question. Abigail considered trimming her hair right then, but decided against it since she had an innate feeling that cutting her hair by herself was a bad idea.

When she was finished, she was about to leave when she saw double doors which led into presumably another room or closet. Opening them up revealed a small closet – full of dresses. There were probably about a dozen, all hanging in the pretty limited space, and all of them looked absurdly expensive. Pretty, but expensive.

Did she wear dresses that often or like them?

At best the only emotion she could scrounge up was indifference – and more confusion. At least they all looked to be in her size.

*So to recap – I’m a rich girl who likes makeup and dresses, and am a soldier for my day job who has superiors who I respect, while also having some friends, most of which are probably dead, and may or may not have had a husband at one point. And I am completely confused.*
She really hoped the Commander, whatever his real name was, could explain things to her.

Closing the closet, she turned to leave this time for real, and a sharp chime rang out, and the door presumably leading outside sounded. She froze, her hand falling to her pistol. “Yes?” She called out, her voice surprisingly strong.

“Abigail Gertrude?” Came a distinctly male voice from the outside.

“That’s…me,” she said slowly, becoming calmer. “Come in?”

It probably shouldn’t have been phrased as a question, but the door slid open to reveal something she did not expect. She was extremely close to pulling out her pistol and shooting, but indecision and confusion paralyzed her. The man who walked through was not a man at all, but…something else.

Alien. Dark grey skin covered his body, which was notably Human-like, with glowing blue eyes. That seemed to be the most ‘real’ parts of him, as the rest of his body was made out of cybernetics. Black and silver prosthetics existed in place of limbs, and armor covered his torso. Implants were around his head, and Abigail felt that even though he had no weapons, he could kill her without trouble.

Alien. The word invoked a flurry of emotions. Confusion, fury, hope, concern, joy, curiosity…all of which seemed to exist when compared to Human. Enough to make her not immediately jump to the conclusion that aliens were something bad. For his part, the alien just looked down at her. “You likely have questions,” he said blandly, slightly tilting his head towards her pistol. “You’re not in any danger.”

So…they knew something was wrong with her. “What happened to me?”

“Fectorian will explain,” the alien said, motioning to the door. “Follow me.”

Zararch Command – Mars Collective Base

3/20/2017 – 8:19 A.M.

It did feel excellent to score a notable victory. Patricia, despite his reservations, appeared to finally be the shot in the arm needed to end this war once and for all. Ravarian had been impressed with her plan, and having it be executed as near-flawlessly as could be hoped was highly encouraging.

Of course, T’Leth had responded by wreaking havoc against Australia. That was going to be a…setback. It could all be rebuilt eventually, that was not in question. What was the most concerning thing about this was the fact that T’Leth was almost certainly going to keep doing this. So long as they completely controlled Australia, then T’Leth would be able to attack freely.

Should secrecy be disrupted…

Lips pursed, he considered options. While Australia – the bases and personnel – were ultimately not crucial, especially now, it was going to result in an extremely high cost in manpower, resources, and time, all of which could become in short supply in the uncertain future. Right now he could pass off the massive loss of life as a surprise ADVENT attack, but if there was another attack of this scale by T’Leth, it was going to become a lot harder to explain to the Aui’Vitakar – all of whom were already incensed given the incursion of Aegis and XCOM.
This needed to be handled carefully.

It appeared that a good portion of the materials had been scavenged by T’Leth, or potentially XCOM, but that ultimately would not help them. Not forever. ADVENT couldn’t afford to retake Australia now, a piece of good news in this particular mess; not when so many additional fronts had been opened up. However, things were finally progressing in a major way. REPLICA units were providing feedback throughout Earth, Humans from the SAS were being converted into sleeper agents and sent into ADVENT territory, and at the moment the ADVENT media was frenzied trying to cover Patricia’s revelations.

It was enough for him to feel justified in leaning back in his chair, and petting the cat on his lap. The little creature had definitely grown on him, and was purring loudly now. It was becoming more comfortable roaming the base, though it had learned to stay away from Mutons when one stepped on the end of its tail. Frankly, it had seemed like the Muton had been just as startled.

It yawned, showcasing its mouthful of teeth, and he scratched under the chin. And it then proceeded to start biting his hand, while wrapping its paws around his arm and kicking it with the lower legs. He had never figured out what prompted these mood swings, and research on the Human Internet appeared to confirm that this was just something cats did.

“You appear to be in an excellent mood,” Quisilia materialized in front of him. “Deserved, of course. Minus the attack by the resident sea monster of Earth.”

“Lashing out was expected,” Ravarian said, setting the cat down which sauntered off, still purring. “This is not a welcome development, though it is also likely he will not do that again. Secrecy remains a priority, and the only option is no witnesses. And if he goes to Australia again…” he pressed a button on the desk to activate the holoprojector. “We shall see how a Sovereign One can deal with Executor-Class Blaster Bombs.”

“Contingency plans are commendable, but please,” Quisilia waved a hand, while looking at his phone that he had in a different one. “I would be shocked if a Sovereign One was killed – or even phased - by something so…mundane. It would almost be disappointing.”

“Arrogance can lead to stupid deaths,” Ravarian pointed out. “Sovereign Ones are among the most arrogant beings one can imagine. Everyone thinks they’re invincible until they’re bleeding out on the ground.”

“Very true,” Quisilia flicked one of his blades up. “Next time I’ll have to deal with his Agents in a more permanent manner. Luck won’t be as useful next time. Truthfully, neither of us were prepared for our little duel. Actually…” He looked to Ravarian and the phone floated over to him. “Hold this will you, I need to record something.”

Sighing, Ravarian grabbed the phone and prepared to record. “Wide-angle, please,” Quisilia ordered in an exasperated tone. “I’m not going to be one of those people.”

Ravarian was very, very tempted to keep the phone in a portrait orientation, but complied. Quisilia pulled out his blade dramatically. “I see you’ve come back! Yes, you know who you are, and I think we have unfinished business. Next time you feel like fighting a real man, you come to me, unless you’d prefer to be a coward. It’s time for a rematch, and I can feel it coming, just name the time and place!”

Every time Ravarian felt like he had regained some semblance of life and hope, Quisilia did something like this and he died a little more on the inside. He numbly pressed stop, and the phone floated back to the Ethereal’s hand who rapidly began typing on it. “Please tell me that you did not 
do what I think you just did.”

“See for yourself,” Quisilia showed him the screen.

It was a twitter post which had the video he had just recorded uploaded to it, with accompanying text underneath.

**Quisilia @TheGreatQ - Mar 20, 2017**

This goes out to a very special someone. You know who you are. Name the time and place.

#callout #rematch #challenge #secret #sovereignshowdown #video #xcom #advent #wwe

“My spontaneous ideas often are the best,” Quisilia said, amused as he pulled the phone back and resumed scrolling down it. “It’ll get people talking.

“You called out a Sovereign One. On Twitter.”

Quisilia cocked his helmet towards him. “And? Did you want me to send him a letter?”

“I…” Ravarian considered answering, then just transitioned into a facepalm instead. “Never mind.” It was a good thing Quisilia had some other redeeming features beyond trolling Humans, otherwise he didn’t know what he would do. Times like these he just wished Quisilia would be normal.

“Onto some more serious topics,” Quisilia said, looking to the holoprojector. “You’ve given some strategic commands to hinder ADVENT. Useful, and likely overdue.”

*Overdue* was certainly the right word. “Identifying trade routes resulted in us being able to shut down or sabotage straits, ports, and other chokehold areas. Humans continue to rely on naval shipping for supplying many of their needs. Andromedon Aquatic Forces were deployed to seed their oceans with water mines. We have Sectoid Fighters standing by for strafing runs on poorly guarded fleets.”

“Taking the initiative is good,” Quisilia appraised. “It will make their lives difficult for a time. Zar’Chon, do you know why we didn’t take this action well before now?”

“No,” he shook his head. “I do not. Fear of provoking T’Leth?”

“Partially, at least to the Imperator,” Quisilia said, his weapon twirling in his hand. “But largely because you still have an issue grasping the actual threat Humanity can pose.” A pause. “Actually, what ADVENT can pose. If it were just Humanity, there would be little issue.”

“Enlighten me, Quisilia,” he said, looking to the hologlobe. “This is doing exactly what we need.”

“No,” he shook his head. “I do not. Fear of provoking T’Leth?”

“In the short term, yes,” Quisilia mused. “And it will hurt, especially now. The problem is that all of us need to think in the long term. Humanity has a rather annoying tendency to adapt and overcome when faced with adversity. They’ve done it the entire war. What you’ve essentially done is shown them a weakness.”

“And I’m sure they will adapt,” Ravarian agreed. “But they will be forced to devote time and resources to protecting ships and scanning for mines. An acceptable trade-off.”

“No, no,” the Ethereal shook his head. “You assume that ADVENT will bother *keeping* a supply fleet. Why would they devote resources to that when they have a far more efficient gateway system they can use to overhaul their entire logistical framework? Now, I’m sure they were working on this before, but now when their naval supply lines are disrupted…” he paused. “Well, I imagine
that project will become more prioritized.”

That…was an unfortunately accurate point. He pursed his lips. “I see.”

“It is very tempting to exploit holes and weaknesses in the Humans,” Quisilia said. “But in such cases, we now need to consider what they will do in response. Sometimes, it’s more beneficial to let the Humans use an outdated system safely than exploit it, and have them build a better system as a result. Keep this in mind.”

That he would. “Yes, Quisilia.”

“However, it is reaching the point where some loose ends need to be tied up,” Quisilia said a short time later. “With Patricia revealing herself, it’s only a matter of time before Nartha learns of it – assuming he hasn’t already.”

“We waited too long,” Ravarian said, shaking his head. “He’s not performed regular check-ins for nearly a week now. He likely knows – or has somehow figured out he’s compromised. XCOM could have gotten back in contact with him.”

“An unfortunate development, but an ultimately irrelevant one,” Quisilia mused, flipping a blade in his hand. “Nartha was useful in finding some additional holes in the Collective. His own use is limited now, and he knows it. If he shows his face anywhere on Vitakar – have him captured or killed.”

Ravarian frowned. “You’re not going to go after him yourself?”

“Knowing XCOM, as well as their aquatic ally, they could very well be hoping I do that,” Quisilia pointed out. “He is merely an Agent. A good one, but only one. I would gain more going after the Nulorian directly than him. I do not care enough about him to seek out revenge such as this. If he is found, I will deal with him. Until that point, I will continue pursuing more important vectors.”

“Very well,” Ravarian began, though wasn’t completely thrilled. “Though as you said – this is a loose end. One we should make an effort to tie up.”

“I suspect my days are going to be spent handling an increased XCOM and Sovereign presence,” Quisilia said. “Infiltrators in our territory. They need to be hunted down and killed. More important than a rogue Zararch Agent. However, there is nothing stopping you from sending someone after him. Perhaps that thing that calls itself Nemo?”

“Nemo is being utilized on Earth at this moment,” Ravarian shook his head. “More critical than Nartha.”

“A shame, it is an interesting creature,” Quisilia noted. “There is not another one?”

“Only one that we know of,” Ravarian recalled. “But it doesn’t work for us directly. And it will not be coerced. It is more useful where it is right now. I will assign several of my top Agents to removing him though. I am not comfortable with him running around unchecked.”

“That is your call,” Quisilia said. “And if you find him, do let me know.”

“Of course.”

A few moments passed, and a completely unrelated question popped into his mind. “Do you plan to undergo the Avatar Project at some point? It appears to have substantial benefits.”
“Originally, I was going to pass,” Quisilia answered absentmindedly. “But the results have indeed won me over. Of course, the candidates the Imperator suggested weren’t compatible with me. So I’ve been working on my own.”

_Oh no_. “And…how have you been doing that?”

“Please. How do you think?” He held up the phone. “I have a lot of fans. Who better suited to be my own Harbingers than the most devoted of my fans?” And again, Ravarian felt himself want to sink into his chair. “I’ve been running meme and video contests, as well as two-page essay submissions on the nature of Humanity and Alien relations,” Quisilia continued. “I’ve been pleased with the turnout so far. It will be difficult to narrow down the finalists. Ah, here is one of my favorite submissions.”

He tossed the phone to Ravarian who caught it and looked at the meme. It was in a format with three images with text to the left of each. The topmost image was of a Runianarch soldier, with the accompanying text: _He protec_

The middle image was of another soldier fighting. Ravarian could swear it was from the current war, but he didn’t know for sure. The text was a similar affront to grammar: _He attac_

Before the final image was a short sentence: _But most importantly_; with said image being a picture of a Vitakarian sitting in a chair with a cat on his lap, with the text as: _He pet cat_; which was then when Ravarian noticed something really familiar about the last image.

Blinking, he looked up in disbelief at Quisilia. “Wait. That’s _me_!”

“Good! You did see it.” The phone was telekinetically yanked back to the Ethereal’s hand. “It’s one of my favorites.”

“How did they get it!” He demanded.

“I uploaded a vault of various pictures,” Quisilia answered easily. “Difficult for people to meme about aliens or _with_ aliens without pictures to help them out. I just did a public service. And don’t worry, nothing was classified.”

Another facepalm. “I suspect the Humans think I am a joke.”

“Which is a good thing,” Quisilia commented. “Better that they underestimate you than overestimate you. I don’t include information on you merely because it’s amusing, it serves to exasperate ADVENT and make them underestimate the Zararch. After all…” his voice turned amused. “How could the Zararch _possibly_ systematically be infiltrating ADVENT if their leader is being continually undermined on social media?”

It was a good point, but that didn’t mean he had to like it. Shaking his head, he wanted to go back to something Quisilia had mentioned he’d found interesting. “Returning to the previous topic, you said Harbingers? Plural?”

“Indeed I did,” Quisilia answered approvingly. “Why have one when I can – according to Revelean – have more? Two or three I believe is sufficient. I have decided to use this unique opportunity to create what Humans call a ‘harem’, which, had we not taken Japan twice and killed their royal family, I believe would have helped sway a few of them to our side.”

The word was unfamiliar to him, but if Quisilia was using it…”Do I want to know what that word means? Does it have to do with honor, if the Japanese approve of it?”
“Certainly,” Quisilia nodded. “A harem refers to the old Japanese tradition of a man’s sacred duty to care for the loved ones in his life – primarily women – and protect them from danger and evil. It is very romantic, and I highly recommend you research it for yourself.”

Ravarian sighed. “When I have time.” At least that hadn’t been as bad as he’d expected, though knowing Quisilia, he was probably leaving some other important detail out. In the end, it didn’t matter too much as who Quisilia wanted to be his Harbinger (or Harbingers) was his business. He had more work to do, which didn’t involve social media.

He looked back to say as much to Quisilia, but the Ethereal was gone.

Typical. He didn’t know what else he’d expected.

***

Living Quarters – The Prism

3/20/2017 – 8:17 P.M.

Yang almost felt guilty being here right now. But after days of fighting almost nonstop it was good to have a break. And it wasn’t as if she was the critical component to the operations taking place. She was a force multiplier to be used across the world. She preferred it that way. Easier to be a weapon. Simpler.

She wasn’t as thrilled with the authority she had as she thought she’d be. Officers would come up to her for opinions or commands, and almost all the time she’d defer to what they wanted. She didn’t feel qualified to completely overwrite entire campaigns, although she did occasionally make a few changes here and there.

Her kill count was…at a number high enough to where the Collective was immediately emboldened when she came, and ADVENT very terrified. It was high enough that she really didn’t care anymore. At a certain point, it was just a number. The enemies which posed mortal threats for soldiers were barely a consideration to what she could do.

It didn’t feel right.

It felt unnatural. She shouldn’t be able to face a dozen armed ADVENT soldiers and wonder if this was all they had. It was an adjustment; something which she felt it would take time to get used to. It wasn’t like the Prism. Then it was all…fake. This was real. Except when it didn’t. Truthfully, she’d been surprised she’d been recalled back, if only for a day or two.

And that was before Patricia’s little rampage through XCOM. She legitimately wondered how Patricia had been able to do that. XCOM hadn’t ever done anything to her. To go after them with such ferocity was unsettling to her. Even when Yang had planned the deaths of the Communist Party and President Qin, she didn’t intend to extend her fury to those who had nothing to do with their treatment of her and her family.

In that respect, Patricia scared her. It showed she had no empathy or care outside of what the Imperator demanded. Though perhaps this was less Patricia and more the influence of the Imperator. Regardless, she was now going to be used as his attack dog against his enemies – as well as a wielder of his own influence. Patricia was already making decisions in the war, and was being deferred to completely.

She saw it, the Battlemaster saw it, Quisilia saw it. This was the Imperator attempting to exert his influence over the war.
It was tiring. She knew he felt the same way.

But like a good soldier, he continued to do his job as well as he could. At least the Florida Operation was progressing well enough. Well enough that he could come back tonight. And so they were; Ethereal and Human, the latter sitting against a wall with the head of a mechanized tiger in her lap while the Ethereal sat on a chair befitting his massive stature.

She hadn’t even known he’d had a tiger until she’d seen it prowling around. The first time it had appeared, she’d shrieked and almost killed it. But it hadn’t done anything aggressive, and in fact had been rather...cuddly. It was certainly an interesting creature. She’d always liked tigers, and one that was partially made of metal should have made her nervous, but it was surprisingly nice.

Besides, it wasn’t as though it could hurt her now. Farath, the Battlemaster had called it. He was cute, and she liked having it around. It was a good comfort animal, surprising as that was to say.

The Battlemaster himself was, like her, not in his battle armor. Although the slight difference was that while she wore light and comfortable clothes, he appeared to have a slightly less armored suit which was for less dangerous situations. It was a rare time he didn’t wear a helmet either. Ethereals really were alien-looking. It was easy to forget that under their helmets.

“You’re troubled.” He had waited a while before speaking, just letting her pet the tiger while he’d eaten and sat. The way he had said it meant it wasn’t a question. Through their bond, it made sense that he’d pick up on that. As she had with him.

She rested her head back against the wall and closed her eyes. “I’ll get over it.”

“Not unless you address it,” he said. “I wanted to talk to you before you are sent back. Distraction will get you killed. It is only a matter of time before XCOM or the Pantheon is sent after you.”

She was tempted to hold her own; defend herself; but she wasn’t that self-deluded. “I don’t know. I feel…” she opened her eyes, scowling. “Unfulfilled.”

A nod from the Battlemaster. “What happened in China?”

“I’d dreamed about how I was going to kill them,” she said quietly. “Quick. Clean. Final. Over and done. Didn’t matter if they even knew who I was or not. I’d have done it. Now they’re gone,” she pinched the bridge of her nose. “Or not, if the Bringer is right. Which makes me more furious. Anything was better than...what actually happened.”

“I know,” the Battlemaster rumbled quietly. “And it was for nothing anyway.”

She slumped against the wall. “And now I have nothing, and never will have it. They’re all gone, and they’re not coming back. The only thing I can see coming close would be finding every single soldier of the Bringer, and executing them for what they did.”

“The Bringer will be punished for what he did,” the Battlemaster said. “Even the Imperator cannot overlook this.”

She let out a sharp bitter laugh. “No, he won’t. He’ll reprimand them for sure, but they will not feel consequences. He’s too much of a pragmatist for that. You saw how effective just a few hundred of those things were. He’s not seeing the millions of deaths, he’s seeing a way to conquer everything that opposes him. Why would he ever weaken the Bringer when he’s getting exactly what he wants?”

“Yang,” the Battlemaster said after a few seconds of silence. “If the Imperator does not take
sufficient action, I will.”

He appeared to believe everything he said. The bond at least confirmed that. She gave a wan smile. If nothing else, she liked his conviction even if it worried her privately. “Just…don’t do anything that’ll make the Imperator retaliate.” She sighed. “At this point I don’t know what I’d do without you.”

“I suspect you would manage,” he said. “I would be more concerned for something untimely to happen against you than me.”

“Touching,” she answered, as Farath nuzzled her face. “It was…different at the start. All I had was a promise of revenge. I didn’t care about anything else. The Imperator saw me as a weapon, and I was fine with that.” She trailed off. “Now…I don’t really have anything left. Nothing driving, anyway. Patricia is driven by her vision, Nico’s revenge extends to all of ADVENT, me…I don’t care as much anymore.”

“Why?”

“Because nothing we do matters in the end,” she sighed. “We win, the Imperator continues with his mad plan and we die. Best case scenario he ticks off a Sovereign smarter than him and is destroyed that way instead of something going wrong with the Bringer. He isn’t going to listen to anyone who doesn’t subscribe to his singular big vision. It doesn’t matter what we do here, when anything can be twisted and changed to suit whatever the Imperator wants.” She reached out and a soda can flew into it, which she drank furiously.

“You’re one of the very few who has some semblance of sense in this entire mad Collective,” she continued. “You’re more interested in preparing for a real threat instead of playing chess with the Sovereign Ones. You—she pointed at him. “Don’t want to be an Emperor. But the Imperator does. If the one person who I respect and like here is gone…where exactly do I go? I don’t fit in the Imperator’s Collective, and never will.”

The soda can was crushed in her hand and she let it fall to the ground, realizing she needed to sleep instead of rant to the Battlemaster. “Do you feel better now?”

“I have little issue with it,” he said neutrally. “Though it is amusing to hear you so critical of the Imperator and his plans. Especially when you are so young.”

“Being old doesn’t make you smart,” she shrugged. “The definition of insanity is doing the same thing over and over and expecting things to change.”

“Unless one believes they are the ones to change it,” the Battlemaster mused. “But I believe you are correct. The cycles here cannot be broken by following their path. It must be broken some other way.” He stood. “You should sleep, Yang. You will be coming with me to Florida when I depart. I will require you, and a Battlemaster should not fight without his Harbinger beside him.”

That was actually good news for her, and it gave her a warm feeling to hear her described as such. A good night of sleep wouldn’t hurt either. Maybe she should stay here and let the tiger act as a pillow.

She was reasonably sure she wouldn’t be eaten in the middle of the night.

***
3/20/2017 – 9:24 A.M.

The holoprojection showed the devastation T’Leth had wrecked upon Australia. Harbinger and Imperator stood opposite each other, appraising the development. “All of them were hit,” Patricia noted. “Completely destroyed. Zararch teams report nothing salvageable.”

“Unfortunate, but not completely unexpected,” the Imperator said. “The Zar’Chon has authorized replacements to be constructed immediately.”

“Nothing stopping him from doing the same thing again,” Patricia pointed out with a frown. “He doesn’t have to worry about secrecy there.”

“Yes, which is why if he tries this again, he will not be able to remain secret,” the Imperator nodded. “The trick with cloud cover works for satellite disruption, but should he try this again, he will find his rampage broadcast to the world. Though I suspect he was merely venting rage at being outwitted by a mere alien.” His voice became amused. “I believe that he will not do so again.”

“I agree,” Patricia said. “Though his Agents are likely to become more involved. And the Commander’s response will be coming. He will not take this defeat lightly.”

“I am certain of it,” the Imperator sat down on his throne. “The loss of so many soldiers will be a blow to the Vitakara, but they can be explained as casualties of war. The population needs to be calmed. You will be needed to assist in restoring faith in the Collective.”

A nod. “Have there been developments on the planet?”

“The Aui’Vitakar have formally demanded an investigation into Paradise Station,” the Imperator said, shutting off the holoprojector. “I have formally recognized this. Within two weeks they will be given a tour of Paradise Station and see how it is being put to good use.”

“But this will be after the Bringer has been reprimanded,” Patricia noted. “Waiting longer is not something I recommend.”

“No,” the Imperator said slowly; deliberately. “I intend to deal with the Bringer far sooner. He believes in his importance. That assumption must be quashed. I am perfectly willing to abandon the Bringer if he is unreliable. Two strikes is dangerous. One more and Paradise Station – as well as the Bringer – will be destroyed.”

That sounded fair. “Let us hope it doesn’t come to that,” Patricia said grimly. “Monstrous as they are; the Orders are useful.”

“If excessive,” the Imperator sat back. “I have put forth the idea of letting the Battlemaster cleanse the Dream Weavers completely. It would remove the most obnoxious and controversial section of Paradise and make him more amenable to continuing operation if he sees action being taken. Considering the Dream Weavers were responsible for Beijing, this would be a fitting punishment.”

“Yes,” Patricia agreed, though rested her chin on a hand. “However, they produce powerful telepaths and biopaths. Not to mention help maintain control over the other Orders. It might be more intelligent to cull the Dream Weavers and turn their focus to something more productive than idiotic sacrifices and cannibalism. Culturally, the Dream Weavers are important to Paradise. I’m unsure what effect removing them would have.”

“To be blunt, the only Orders that matter are the Baptists and Flesh Sculptors,” the Imperator
mused. “The remainder are either agents of the Saints whose loyalty and reliability is questionable, or the Dream Weavers who serve no additional purpose beyond cultish rituals. The Baptists are soldiers, and the Sculptors are necessary to create creatures and the body for the Crossing.”

“Bodies are disposable to the Bringer,” Patricia sighed. “There is very little that can ensure continued and reliable cooperation. Killing the Orders ultimately solves little aside from assuaging consciences like the Battlemaster’s. It does not solve the issue of dependability.”

“Not completely correct,” the Imperator mused. “There are two things the Bringer values. The Dead World, and the Saints. We have three we can execute, and the world itself can be destroyed. The threat of such loss would likely be enough to ensure continued cooperation – as well as a needed refocusing of the Orders.”

“This needs to be a threat we follow through on,” Patricia said. “Half-measures won’t work.”

“And it will be,” the Imperator said. “If it comes down to it, I suspect the Bringer needs to be free of the prison it is in, and it will accept anything in order to achieve this, even if becoming a weapon. It is a creature motivated by the fear of eternal imprisonment. Perhaps it had resigned itself to its fate but now it sees a chance. I am not yet ready to give up. Not when it has the potential to achieve what the other Sovereigns could not.”

And that was ultimately what it came down to. Why it was worth the cost the Bringer demanded.

It could break the unending cycles permanently.

Of course, it all depended on everything being done perfectly.

No room for errors. No room for risk.

A very fine tightrope.

“What of you, Patricia?” The Imperator asked. “Fighting your former comrades extracts a toll.”

She sighed. “I didn’t enjoy having to do it. Necessary, but I wish it hadn’t come to that.” She looked up, face set and firm. “But I would do it again. Before this is over, I believe I will have to many times.” She closed her eyes briefly. “It will get easier.”

“And why is that?”

“Because by the end, I won’t know who I am killing.”

“Many of those people you didn’t know,” the Imperator pointed out. “You would not have considered killing Shen if he hadn’t released his pet AI.”

“Maybe not, but you helped me there,” she tapped her head. “And I’m glad. Like I said…it will get easier, until I won’t need your resolve to do what needed to be done.”

“Good,” the Imperator looked down on her. “But you want to preserve Anius Creed. You were pleased he lived. You do not need to justify your feelings. I know how you feel about each other.”

“I suspect he does not feel the same about me anymore,” she said, shrugging. “I don’t think he’d listen to anything I have to say. I just…” she sighed, scowling. “I want to talk to him without anyone else influencing him. No Commander. No XCOM. No T’Leth. Just me and him. I might be able to talk some sense into him. It’s difficult to learn everything you believe is based on deception and lies.”
“And do you really believe his response would be any different?” The Imperator asked softly. “You and him will never be together, no matter how much you wish it were otherwise. It is healthier to move on. Love will find you again one day.”

Realistically, she knew he was right and that she should move on for good. But she couldn’t shake the feeling that it could work. Maybe. The Commander she could deal with much easier. Not that she would easily kill him, but she wasn’t attached in that way. “No offense,” she said slowly, rubbing her temple. “But that’s easier said than done. Correct me if I’m wrong, but you’ve not been in love?”

“Not like what you have experienced, no,” the Imperator answered. “Human love is…alien to us. We do not experience the same kind of intensity and passion you do. We are more tempered, though the love we allow is just as strong. Human love bears more similarities to obsession than what we define love as.”

Well, she couldn’t really argue with an alien on the definition of love. It was something different for everyone, and every species it seemed. “Perhaps you’re right that I need to move on.” She turned back to the holoprojection. “Besides, there is a lot of other work that needs to be done now.”

“Specifically, the issues within the Collective itself based on what you have told us,” the Imperator mused. “Andromedons in XCOM. The traitor Unions will need to be handled.”

“Do you want me to handle it?” She asked. “Assuming that the Unions actually agreed to continue supporting XCOM.”

“No, I will have you continue to manage Earth,” the Imperator said. “I will give the traitors to the Battlemaster. We have not agreed on many things, as of late, but we both cannot tolerate traitors. Giving him license to bring the Unions under control will be appealing to him. Provide him what you know, and he will handle it.”

“And it will take him off Earth for a time,” she noted. “He won’t like that.”

“He can leave his own Harbinger to observe, if he is so paranoid,” the Imperator dismissed. “This is a matter important enough to not make him believe this is some scheme to oust him from Earth. He wishes more of a say in the management of the Collective. This will provide it.” A pause. “And it serves a greater purpose.”

Patricia waited. The Imperator continued a few moments later. “This is an ideal opportunity to begin turning the Collective against me. I’m certain he has considered it. If his loyalties are in doubt, then there would be no better opportunity than to acquire several Unions for himself. To capitalize on the perceived weakness. How he handles them…it will tell me a great deal.”

She crossed her arms. “And if he does?”

“Then I will take action. The other Ethereals will not be able to defend treason,” he answered. “The Battlemaster is no spymaster or schemer. Should he plan to betray me now, I will know soon enough.”

Patricia bowed her head. “I will inform him of what I know. Let’s hope he’s still loyal.”

***

3|26|2017

She must be in some kind of factory. The hallways were sealed off, but she could see through the
transparent barriers machines working to construct various weapons and technology. Machines and icons of war she had no name for, though some of them triggered words in her mind. *Sectopod. Seeker.* The majority though she had no word for.

But they looked dangerous.

Squads of a dozen augmented soldiers marched past her, none of them paying her any significant attention. All of them were just as radically modified as her escort, faces set in stern and serious expressions; emotionless as the machines they were surrounded by. What was curious was how they weren’t composed of just one species.

There were…at least a half dozen that she saw. Tall furred aliens that reminded her of Bigfoot and other large creatures from…well, movies she’d probably seen. There were the grey-skinned humanoids, hulking brutish looking aliens, unsettling-looking creatures with bulbous eyes, white-grey skin, and other Humans.

Some of their…names popped into her mind. Or at least she assumed. *Borelian. Vitakarian. Sectoid.* Not all of them, but a good amount. But everything about this struck her as off. She got the distinct impression that this wasn’t supposed to be happening, or at least definitely wasn’t normal. The name ‘Fectorian’ didn’t ring any bells either.

“What is this place?” She finally asked her escort.

“Fectorian’s workshop, lab, and production facility,” he answered immediately. “That he calls the Hall of Steel.”

She raised an eyebrow. “He likes dramatic names, doesn’t he?”

“Fectorian takes inspiration from many sources,” her escort explained as they passed another patrol. “There was an old Vitakara story about the first Borelian warlord who united the disparate tribes into one unified army. His source of his technological superiority was dubbed the Hall of Steel. Fectorian saw some similarities in the story and what he envisions his role to be.”

“And what’s that?”

“A key instrument in the uniting of this galaxy,” the Vitakarian cyborg motioned around. “And proof is all around us now. Species previously divided now faithfully unite, believers in Fectorian and the plan he will execute. It will be through our efforts, and that of Fectorian, that this galaxy is saved and ultimately protected.”

“So to clarify,” Abigail said slowly. “He plagiarized the name because he thought it was neat.”

A pause. “I do not think Fectorian makes decisions with those words in mind, but I would say a more accurate one is appropriated. As I said, he is not especially picky about the sources of his inspirations.”

“Right.” Abigail didn’t say anything for a few minutes as they entered some kind of tram. “So, who are you? Your name?”

“Morias,” he answered after a moment, as if expecting a follow up question. She felt there was something off about the name, but didn’t know why. It wasn’t exactly normal, but it was an alien. At least she could pronounce it.

“Nice to meet you,” she said, then frowned. “Have we met before? Sorry if we have. I’m…not remembering a lot of things.”
“No, we have never met, Abigail Gertrude,” he clarified. “I was aware of your condition here, but know little more. Fectorian will explain.”

The tram stopped and opened up to reveal something that was definitely a workshop of some kind. Or a surgery room? There were a lot of tables where tools, metals, and components were strewn out, and there were surgery tables which were actively performing modifications on some aliens. Black-armored humanoids stood around at various doorways and stations.

She knew she’d seen them before. They definitely seemed off, but she couldn’t remember why. They held plasma rifles of some kind, and two approached her as both of them walked forward. In front of a holographic display, she saw what she assumed was Fectorian…or at least she hoped she was right.

Ethereal.

The word appeared as she beheld the massive alien. Like most everything else here, he was heavily augmented where it looked like two of his four limbs had been replaced by prosthetics, and there was a series of additional manipulator extending from his back. This was to say nothing of the internal cybernetics he probably had.

“Abigail Gertrude, as requested,” Morias said without ceremony. “Are there additional orders?”

“No. Dismissed.” The voice had an electronic tinge, but it didn’t take away from the imposing voice as the alien turned to her; an intimidating sight as she stared into the electric orange eyes of the towering alien. “Abigail Gertrude. A pleasure to see you again.”

So they’d definitely met before. Something she’d assumed, but good to have it confirmed. Odd that she had absolutely no memory of who this was. “I’m afraid I don’t…remember a lot. But you know that, right?”

“Something I anticipated, yes,” he said, waving a hand, making her jump as a chair moved by itself across the floor before her. “Sit down. There is much that needs to be explained. This was a potential complication, but we will need to make do.” She complied, and waited for the Ethereal to continue.

“Are you with XCOM?” She asked. “Is the Commander here?”

He stared down at her. “No, and no. Before I explain, tell me exactly what you remember.”

She grimaced. “There…isn’t much to say. I don’t remember a lot. Not specifics. Not memories per-se. I know my name is Abigail Gertrude. I know a lot of names. I feel something for each of these names.” A pause. “Some who’ve died, I think. Others I just don’t know. I can recall certain words when I see things. When I saw you, I knew you were an Ethereal, though no one told me.”

“Interesting,” he commented. “Yet no memories?”

“It’s…” she paused. “Yes and no. I get some kind of flashes, only a few, but they exist. They aren’t clear, but I remember some things that happened in them even if visually they are confusing. I remember something or someone dying on a place of metal. I remember being restrained somewhere. I remember standing in front of what I think was a memorial. Minor things; pointless things,” she sighed. “Please, tell me what happened. I don’t even know who I am right now.”

“I see,” a chair pulled up behind Fectorian and he sat down. “I cannot claim to know you well. Your current predicament is a matter of coincidence and risk. I will recount what I can about you, but it is far from a complete picture. I was not your friend, and many who you would consider such
Abigail nodded, and waited. “You are Abigail Gertrude, once a Marine of the United States, later a soldier of XCOM, and finally an agent of XCOM Intelligence. You were considered one of the most reliable operatives, and developed a connection to an individual called the Chronicler who himself is an agent for a Sovereign One. You were trusted enough to wear armor of the Sovereign, and hence my interest in you was born from this fact.”

“I…” Abigail trailed off, absorbing this new information. “Were we at war? And with who?”

Fectorian released an exasperated breath. “The summation of the situation all factions are currently in is long and more complicated than you would assume. Yet you need a complete understanding before we go forward. Do not interrupt, as I wish to take as little time as possible to explain this.”

Abigail listened as Fectorian explained the state of her species, and the current war taking place. She tried keeping her composure, and for the most part succeeded, but it felt like continual gut punches as she learned of the invasion, the subsequent war, psionics, Patricia Trask, the Sovereign Ones, XCOM and ADVENT, and the Ethereal Collective.

She…was not as optimistic now that she knew she was in the hands of an Ethereal who was technically an enemy.

“So what am I doing here?” She demanded once he finished.

“We finally come to the relevant part,” he said. “You were captured and I requested to examine you to attempt to remove your armor. This was a ruse to propose an idea. You were going to die, and I offered an alternative. A way to preserve your memory and place it in a clone body to cheat death and assist me in contacting T’Leth. You agreed.”

“Really?” She asked. “How do I know you aren’t lying?”

“Because I made a promise, and I intend to keep it,” Fectorian pulled a fairly large holoprojector before them and the recording began playing, showing a restrained Abby in armor speaking with Fectorian. “I suspected you would want proof. Here it is.”

Abigail watched as her past self and Fectorian talked, from the moment she awoke to the moment she agreed to his proposal. A funny feeling grew in her. Something she couldn’t really describe. It felt like she was looking at someone else, and the reality of what she was facing was creeping up on her. It reached the end, and after it shut off she felt…numb.

“So.” She finally said. “I’m not Abigail. I’m a…” She looked down at her hands. “A clone?”

“All organic material is based on Abigail’s genome,” Fectorian explained. “Though I took the liberty of improving your body from what it was. I estimate approximately fifty percent of your body is cybernetically enhanced. Particularly the skeletal structure, your skin, and several other components I included which are improvements over your original body, which you will likely want to test out later.”

Abigail shook her head, not wanting to fixate on that when there was a more important detail. “The procedure didn’t work.”

“Unfortunate complications, but not completely,” Fectorian said after a moment. “However, it would be a mistake to say that it was a complete failure. Some things successfully transferred over. You know who you are, you know important people in your life, you already have flashes of memories. I admit, my colleague Revelean would have been useful on this project, but I do not
count him as reliable.”

Abigail pinched the bridge of her nose, closing her eyes. “Is there a chance I’ll…eventually be me? Or…her?”

“The first thing I would suggest is to not fixate on who you were before,” Fectorian said bluntly. “This is not healthy for your mental state. If you think in terms of what ‘Abby’ would do or not, then the chances of you doing something contrary to her increase. It is an interesting psychological conundrum. The more you try and be something, the more you likely will not be. I believe there was enough of Abigail that was successfully transferred. Act as you see fit; speak the same way. The Abigail Gertrude you saw is dead. You are Abigail Gertrude now.”

He paused. “Now, there is a fairly high possibility that memories will surface and you will begin remembering more and more. Your first few hours like this are encouraging in this regard. Perhaps all your fears will be for naught. This complicates meeting T’Leth, which means you need to figure yourself out before we proceed. T’Leth will sense any confusion and uncertainty, and see it as a trap, which I do not want. You are believed dead by everyone. Your return will raise significant questions.”

“I’d imagine,” she said. “I guess…I’ll do my best here.”

“Yes, and I will do my best to assist in this,” Fectorian said. “While the procedure was not flawless, it represents a significant step forward and I will continue to refine it. In the meantime, I have prepared for this contingency and have a procedure which will help track your progress in remembering who you are.”

“How?” She asked.

“A combination of a psychological interview and technology,” Fectorian answered, sounding more enthused. “I ask you a series of questions, and you answer. Previous research indicates that this can result in triggered memories and information. If nothing else, it will provide me with valuable data.”

“I guess I owe you that much,” she leaned back in her chair. “How…much research have you done on this?”

“Memory loss and recovery? A recent topic of interest for me,” Fectorian said, waving a hand. “As it applies to Humans, I read a number of published papers and academic material on the subject, all of which was sadly limited in use. As well as not useful for my needs. Your entertainment arguably has more content relating to this. Amnesia is a common plot device.”

She blinked. “You…watched movies?”

“And read books, and watched videos on the subject,” he said. “The Borne Trilogy was a fascinating tale, and was farseeing for its time. Conditioning in particular I was impressed by the inclusion. Fiction is an excellent source for inspiration. I do not limit myself to what has already been done – I look to what could be done. In this this respect, your species has been exceptionally fascinating.”

That…was definitely interesting. And not really something she expected. “Huh. I think I’ve seen that trilogy.”

“Most likely, for Humans it was fairly popular,” Fectorian stood. “Now, unless you have objections, I would like to begin. Follow me.”
Abby stood as well, and followed the Ethereal out of the workshop, her thoughts in flux as she continued processing what she had learned.

***

**Volk’s Quarters – Mars Collective Base**

3/20/2017 – 9:18 A.M.

Sleeping in late today made him feel slightly lazy, but all of them needed the sleep. Volk laid in the very – almost unnaturally – soft bed with Elena curled up beside him and sleeping soundly. The first time in a nearly a week he’d seen it. She’d still woken up once in the night and he’d had to calm her down, but aside from that, it had been an uneventful night.

He was worried about her.

The illustrious Dread Lord and his insane decisions had messed Elena up badly. For perhaps the first time, Volk considered himself lucky that he didn’t have a perfect memory. He’d made the mistake of watching even some of Isomnum’s broadcast from Beijing and it had taken him a few nights for the visceral images to fade.

Elena…she didn’t have that luxury. And unlike him she’d watched a lot more. He’d found her in front of a chair just watching and immediately pulled her away and she’d just…let him do it without any sort of protest, which was already alarming. The only time she’d let him do something like that was back when she was half-delirious on drugs when he was dragging her out of that Russian base.

Which was…years ago. Shit. A lot had happened.

He knew her well enough to know that not only would she not forget what she saw, she’d dwell on it even if she knew she shouldn’t. Something like Beijing would drive her mad, and he didn’t know how to handle it and help her. All he could do was hold her close as she sobbed and screamed into him. She needed help, and he was not who she needed right now.

He felt bad for all of the therapists and psychologists that were no doubt overworked in the aftermath of that nightmare. Elena needed some kind of psychological help, and the aliens weren’t going to be any help here. They didn’t have anyone trained to handle Human psychological issues, and given Elena’s condition, that was only another subtlety and complication that still wouldn’t help.

Nico had offered to erase the memories, and Elena had responded by almost blowing the poor kid’s brains out. Messed up as she was right now, she had made it very clear that she didn’t want anything psionic touching her. Volk appreciated that the kid’s heart was in the right place, but he didn’t know anyone – himself included – who would willingly submit to having their memories removed.

It came down to trust. You didn’t know what else they might remove along with what you wanted – and you’d never know again.

He was terrified of leaving her alone now, afraid he was going to come back and find her on the bed with her brains blown out. It made him snappish to everyone else because at this moment he didn’t care about the war, Nemo, their plans, his own responsibilities, nothing but helping Elena. If he lost her because of his own decision to get tangled up in this stupid war…

He closed his eyes. *Don’t think about that. She’s getting better. She’s getting better.*
Asaru had politely informed him that he would be needed in the next few days, and he’d politely told her to go fuck herself. In retrospect he should be treating the Ethereals with some more respect…but he had come to realize that none of them really understood what it was like to have someone they cared about suffer. Really suffer; to the extent that you could lose them, especially knowing it could be traced back to you.

Even Nemo had been more respectful and kept his distance, though Volk figured it was more because he knew that he was just going to be distracted the whole time. Besides, it was clear that they didn’t exactly need him. Not when they had Nico and Sicarius to pull off assassinations at a whim. If only they’d pulled one on the Dread Lord before things in Beijing had gotten so bad.

Unfortunately, the only person he knew probably could have helped Elena was Sana’Ligna, and she had understandably left and went down to Earth. Nemo had said she hadn’t defected, but merely left. Either way she was gone, and he couldn’t blame her. Hell, he’d been sorely tempted to just leave everything and try and go back to how it had been.

Something which was impossible now. At least the Battlemaster had tried to pull the plug on Isomnum, but Volk knew very well that the great Imperator had let him pull from Paradise Station and continue on his mission of terror.

He’d pulled out a vodka and held a celebration with his men and women when they’d heard ADVENT had killed the Dread Lord, and he’d had to admit that Saudia’s little speech before the attack had been quite inspiring. Had it not been ADVENT leading the charge, he would have been one of the first down there, leading the charge against the mad Ethereal.

Instead, he’d had to content himself with following their slow and steady victory. The aliens in the base were…uncomfortable with the unexpected support of ADVENT, though none of them really complained. Volk believed that they hated the Dread Lord just as much as he did, and that was why no one had terminated him for ‘treasonous behavior’.

A point in the Collective’s favor, he guessed.

Still didn’t fix Elena, though she’d also given a small smile when she’d heard Isomnum was dead. Though her comment stuck with him. “Why did it take so long?”

Obviously she wasn’t referring to ADVENT. The Collective; the Imperator, could have prevented him coming to Earth at all. Or just executed him a long time ago. But no one did, and that begged the question why? There was, in his view, no possible reason for keeping someone like Isomnum alive. It benefited absolutely no one aside from having weapon of pure terror on your side.

Or having someone to take the fall.

No wonder the fabled Ethereal Empire fell if everyone made decisions like the Imperator.

Elena stirred, then in a smooth motion sat up in the bed and rubbed her eyes, blinking. Volk joined her, careful not to touch her yet until she indicated she was ok. She stared blankly ahead, eyes still haunted, and they would be haunted possibly forever. He could tell whatever she was thinking about wasn’t healthy.

“How are you?” He finally asked.

Her lips twitched, and she blinked once. “I am better.” She laid a warm hand over his own, surprising him. “Thank you.”

“Oh?” He asked lightly; she was definitely better from the previous days. Or more talkative.
“You…slept better?”

“A little,” she answered with a shrug. “More black, less dreams.”

He wondered how much of that was from pure exhaustion rather than her improving. Either way he was glad she had at least a night of moderate respite. “I’m glad. I don’t like seeing you like this.”

“I don’t like being like this,” she said, face falling and closing her eyes. “But I can’t forget. I can’t erase it. It keeps coming back. I can’t fight it like I have been.” She took a short breath. “You are going to help me.”

“Whatever you need,” he said without hesitation. He was willing to try whatever Elena had in mind, since he didn’t have a plan beyond helping her whenever he saw an opportunity. “I’m here for you.”

“You told me to not focus on what I saw,” she said after a moment. “To think of something enjoyably. Something happy. Something good. You talked for a long time to try and keep me from thinking. It helped me. Last night I thought about you before I slept.” A pause, and a smile appeared. “It helped.”

Volk very clearly remembered what she was talking about, and he remembered a lot of pointless rambling to try and get her mind on something else…and it seemed he’d done something right. And he had an idea of what she wanted to try. “Are you hungry?”

Her mouth parted slightly, then she nodded. “Let me get you something,” he said, rolling out of bed and throwing on a shirt. “And I’ll tell you another story.” She got up as well, and made a bee-line to get dressed herself, a renewed energy for both of them. It wasn’t really a cure, but having some more positive memories would help even out the bad.

Anything she needed, he was going to provide as best as possible. No exceptions.

***

Borelian Wastes – Vitakar

3/19/2017 – 10:17 P.M.

“I guess you’re not going to be going back to the Zararch now,” Shun commented as they sat together and watched the snow blow around the wastes. “Can’t say I’m not happy.”

Nartha sipped his stimulant, grimacing. “I did not want to make a decision like this. But you’re right. Patricia knew…” he trailed off, still in some slight disbelief over what had happened. “Have you heard anything from XCOM?”

“No details, but they’re recovering,” Shun shrugged, mood soured again. “I don’t understand it. Of all the people to turn, why did it have to be her?”

“Wrong place at the wrong time,” Nartha suggested lamely, though even he knew how unlikely that was. “Or the Imperator knew what to say to her. She would never have come to this conclusion on her own. She had to be shown the way.”

“And like an idiot, she just had to listen,” Shun shook her head, shifting back into her chair. “I guess she probably didn’t have a lot of choice.”

“She was a prisoner,” Nartha agreed. “Maybe she’s more of a victim that we think.”
“I’d like to think so, but I don’t know,” Shun admitted with a sigh. “From the sounds of things, she’s not really an unwitting victim in all of this. I think she really turned.”

“Then I don’t get that,” Nartha shook his head. “She knows everything wrong with the Collective. And those running it. I told her that. She’s seen it. It doesn’t make sense.”

“Maybe it’s just a thing that happens,” Shun wondered. “People turn traitor for idiotic reasons. We already have Betos and other Humans who’ve turned traitor.”

“They make more sense,” Nartha pointed out. “ADVENT was their catalyst. They consider the Collective the lesser of two evils. They’re wrong, but that’s how they see it. Patricia was one of the founders of the Advent Directive. She doesn’t have any personal problem with it, and I doubt the Imperator convinced her of the so-called evils of it.”

“Or we all just misjudged her?” Shun really didn’t like that implication, given how she drank her still-hot coffee immediately after saying it. “She was always trying to become more powerful. There were warning signs, I think. She enjoyed what she was capable of. There isn’t a person more powerful than the Imperator. If he offered her power, maybe she just took it.” She snorted. “‘Harbinger of the Imperator’. Did you ever hear of that kind of title?”

“Never,” Nartha confirmed. “Or anything about this Avatar Project. You have a point though. I’ve read the file Aegis made for the Imperator. Everyone thinks they’d be principled and refuse offered power, but in reality…” he shrugged. “Maybe it wasn’t even malicious. Patricia may think she can use the power for the greater good.”

Shun flinched as a piece of hail hit the window. “I hate that justification.”

“It’s not necessarily a wrong one,” Nartha said. “Morality doesn’t win wars. Nor does mercy and pacifism.”

“I’m not saying that, but it’s a cop-out justification for progressing something everyone knows is wrong,” Shun clarified. “It’s the ‘greater good’, but only in the context of the power of whoever’s saying it. It can lead to abuse, even if starts out well-intentioned. I don’t trust people’s intentions when they say that. China particularly liked it, when they gave an explanation at all. Something I perpetuated when working for them, but we all knew what was going on.” She rubbed her forehead. “And yeah, I know ADVENT and the Commander like using it too. Doesn’t mean I always agree with them.”

“Fair,” he nodded. “I’m not endorsing it, but I can see how she might view it. I think we can both agree that she’s wrong.”

A few minutes passed. “Do you think things will change for the Vitakara after XCOM showing up?” She asked. “I’d say it was a victory if Patricia hadn’t attacked.”

“It did what it needed to,” Nartha said. “No one is going to forget this, even if the Zararch are going to try and stamp it out. It will put some doubt in their minds, but this won’t amount to permanent change. It never will as long as the Zararch are in control.”

“Something easier said than done,” Shun muttered. “And with Patricia with them…that isn’t happening anytime soon. I hope it will have some kind of positive effect, even if it doesn’t lead to a complete revolt.”

“Hopefully,” Nartha agreed. “But we should keep expectations in check.” They sat and watched the snow continue to fall. Shun took another drink from her mug.
“Creed must be feeling awful,” she said after a few minutes. “Don’t know how you reconcile that your girlfriend is not only a traitor, but one of the biggest threats to our species as well.”

Nartha considered for a minute. “This is what Humans would call a ‘bad breakup’, yes?”

Shun chuckled. “A worse one than usual, but you can call it that. At least you never had to deal with that problem, right?” She cocked her head towards him. “Are you even allowed to have relationships in the Zararch?”

“Technically yes, but it’s very discouraged,” he answered. “If it happens, it’s usually between agents. Relationships between an agent and someone on Vitakar or a colony usually don’t work out. Distance and secrecy. No potential vulnerabilities or weaknesses.”

“And the Zararch has never had an instance of an agent falling in love with a target or someone inside an infiltrated place?” She asked dryly. “Or are you the one spy organization that doesn’t use seduction?”

Nartha snorted. He knew that the Zar’Chon would have probably shot someone with a stun gun if they asked that question to him. “If you have to rely on your sexual attractiveness to complete a mission, than something has gone very wrong. Your species has an interesting obsession with sexuality, and to date it’s an anomaly. Applying it to something like the Zararch just doesn’t make sense. Otherwise my first action when I infiltrated XCOM would be to seduce Dr. Vahlen.” He shivered. “The idea alone sounds harrowing.”

Shun sipped the coffee slowly. “Maybe you should choose someone who wouldn’t vivisect you if caught. The first Human psion would be a better option.”

“Are we really going to do this?” Nartha asked, shooting her a mildly bemused look. “That is an idiotic idea based solely on the fact that she can read my mind.”

Shun winced. “Right.”

“I really hated being around her,” Nartha recalled. “At least when I was undercover. I knew she could ruin everything if I wasn’t careful.”

“Are Vitakara even attracted to aliens?” Shun asked. “Your own races look distinct enough.”

“Depends on the Vitakara,” Nartha answered. “For the most part, no. Races tend to stick to themselves. There are a fair number of interracial matings, particularly between Dath’Haram and Vitakarians. Borelians are also in the grouping for some reason. Cobrarian males only ever mate with females of their race – and they have no shortage of options. Females will sometimes find other mates, but usually the physiology just…doesn’t work. At all.”

At her bemused look, he sighed. “The Zararch is – or was – keeping an eye on that. Last I checked there was growing political discontent in the Hierarchy since a large chunk of the males were leaving due to underrepresentation. The Hierarchy is female-dominated, you see.”

“Right, you’ve mentioned that before,” she nodded.

“And since the males have limited political power, they leave,” Nartha continued. “Which is a problem since that could actually lead to a population crisis if not addressed. Not to mention the swarms of females who chase off after the now-liberated males.”

“I’m not a Cobrarian,” Shun said slowly. “But it seems like there is a fairly obvious solution to that problem?”
“Obviously,” Nartha agreed. “Essentially everyone who isn’t in the Hierarchy is in agreement that the time of segregation is past, but when you know their history, it makes some sense why its set up with females in power. The limited number of males leads to a much easier acquisition of political power than a more balanced population, considering how vital they are for reproduction.”

She raised an eyebrow. “Is there a story there?”

Well, it seemed his stint in learning Cobrarian history was actually going to produce something good. “A bloodier one than most know. Prior to the hierarchy there were dozens of tribes, all of which had their own king. Cobrarian males are aggressive for Vitakara, and this translated to a notable amount of conflict and slaughter. Sometimes alliances, but an equal number of massacres. Obviously, the primary soldiers were unmated females, with the lucky ones being given to subordinate males or were the broodmasters of a king. Not excellent career odds.”

“Hmm,” Shun mused, as she drank again and waited for him to continue.

“Many of the broodmasters were tired of the war, and there had been sightings of others,” Nartha said. “Most likely Vitakarian scouts, but this was not confirmed. They were afraid whatever was out there would kill a weakened species. The kings weren’t concerned, or were leaving it until after the Cobrarian were conquered. The broodmasters secretly formed alliances, and in one night all struck the kings down, along with the elder male subordinates.”

“And that worked?” Shun asked incredulously.

“Most of them were clever about it,” Nartha shrugged. “Poison; wounds that could come from accidents. Not to mention it was easy to cover up. The conflict had gone on long enough that everyone was willing to overlook oddities for peace. And thus, the Cobrarian Hierarchy formed with the broodmasters forming the Council of Matriarchs. The restrictions on males were made to prevent another interracial war. Necessary at one time, perhaps, but it’s gone past that point. One reason why the Zararch wanted to collapse it.”

“I somehow doubt that was the only reason,” Shun commented.

“Of course not,” Nartha agreed. “The Hierarchy has never toed the line like most of the others. They’re more willing to stand their ground against Zararch propaganda. They’re marked as threats to this day. Natural allies for us, once we can establish something more formal.” He paused. “All that to say that the Cobrarian don’t really go for other species. Or Oyariah for that matter.”

“Sar’Manda?” She asked with a rhetorical smile.

“They’d probably be repelled by the idea,” Nartha snorted. “And to be fair, everyone would consider the feeling mutual.” He paused. “But if you’re asking if my species is attracted to Humans, I say to a degree. Not all races, and not all within those races. You have hair, which is going to be off-putting to some Vitakarians and Dath’Haram. Borelians would like it though.”

Shun didn’t appear to know how she felt about that, from her confused expression. “It helps that you’re physically similar to Vitakarians,” Nartha noted. “Minus the hair, your shortness, and your various skin colors. Darker-skinned Humans would generally be more attractive. Closer to grey, even if not the same.”

“Huh, interesting,” she looked down at her own tanned skin. “So, what about you?”

He internally grimaced, knowing she was going to ask that question. “I do find y-Human women attractive,” he said, only stumbling a little bit. “Probably from being around so many. Human eyes
“Are... expressive. Even if they are smaller than Vitakarian women.” He looked to her. “Your turn. You don’t get to avoid the question if you asked me first.”

“How shocking,” he said, not surprised at all. “Quisilia is right about one thing. Humans will likely fuck anything.”

“Generalizations,” Shun countered. “But... not completely wrong.”

They sat in silence for a few moments as the levity of the previous conversation faded. “I wonder what will happen next,” Shun said quietly. “The Commander isn’t going to let the attack go unanswered. He’s going to do something.”

Nartha remembered some of what the Commander had sanctioned, and he couldn’t help but share in the concern. “Hopefully he won’t go unreasonably far.”

“Shen is dead,” Shun said with a shrug. “He was the one person who maybe could have tempered him. He’s gone now, and his advisors are Vahlen, Zhang, the boyfriend of Patricia, Iosif...” she shook her head. “Everyone is furious, and I am too. But no one is going to be holding him back. Especially not the Nulorian.”

“Do you think he’ll try something on Vitakar?” Nartha inquired, surprised she’d suggested it. “After what they successfully did here?”

“I wouldn’t put it past him,” Shun said, looking out into the flurries of snow as the storm intensified. “We’re probably going to find out sooner than later.”

SAS Command, Abuja – Nigeria

3/20/2017 – 1:42 P.M.

Constant bombardment, chaos and conflict. That more or less summed up the past two weeks Betos and the SAS had endured. ADVENT seemed to have dedicated every European unit to run harassment operations against the SAS. The first few days had been brutal with the usage of nukes for EMPs, followed by CIF3 and napalm raining from the sky over fields and bases.

Eventually the power was restored and air attacks – at least in cities – were able to be repelled by the superior ground-to-air defenses. ADVENT had eventually slowed their constant barrages from the seas after the missile strikes were continuously intercepted. They still hadn’t stopped, and the size of the fleet waiting was large enough that anything short of a small army wouldn’t work against it.

Not to mention there was definitely something off about the ADVENT naval fleet barraging the nations from the ocean. They were too advanced and numerous. ADVENT definitely wanted some kind of reprisal. One which Keeper was insisting they hold off on until they knew more.

China though had been a test for everyone. Although it was something she didn’t completely know the story to until Isomnum had been disavowed by the Battlemaster, although everything else... it was a nightmare, and she actually didn’t feel like the Collective had suffered a defeat when Isomnum had been killed. As far as all of them were concerned, it was better off that way.

Although it had shown some disturbing truths about the Collective and how much sway the
Ethereals held over everything. When she’d demanded how Isomnum had acquired so many soldiers from Paradise Station, the answer was that – as an Ethereal – he could allocate forces. Forces he continued to utilize after being disavowed.

She knew ADVENT was going to say that there was no chance the Collective was not secretly supporting Isomnum, but after thinking about it closely, she was skeptical. If anything, she wasn’t unconvinced that the Imperator and Ethereal leadership also knew that Isomnum was problematic, and what better way to get rid of a problem than have them die conveniently in battle?

Normally such callous disregard for subordinates would make her angry. But this was perhaps the only case where that would be justified. ADVENT had yet to explain why the Imperator would want Isomnum with him, or how what happened in Beijing benefited anyone in any way. It made more sense to consider Isomnum a rogue element instead of assuming that he was being secretly backed by the Imperator.

Not that it excused the Imperator from having someone like Isomnum to begin with, but she suspected there was some missing context. Context she would not have to worry about anymore. It had definitely been a good thing the Battlemaster had disavowed him so quickly, otherwise there would have been many more legitimate issues.

Now that Isomnum was dead, they could move forward. The fact that Patricia Trask of all people was now not only on their side, but the avatar of the Imperator himself, morale had spiked dramatically and Betos personally had been very interested to hear her little speech. The formation of ADVENT had always seemed too convenient, and hopefully that was going to be dragged out into the light.

But it was Patricia who was the most important.

If one of Humanity’s greatest heroes had abandoned her former comrades, then it meant that there was deeper rot in them than met the eye. It was...cathartic in a way, to be finally validated in her decision. And it was good for everyone else to see such a famous figure make the same statement in such a visceral way.

Keeper had confirmed that Patricia had hit XCOM’s primary headquarters and that the mission was a success. It was the first time she’d actually seen him genuinely smile. Hearing the news had definitely provided a morale boost to the entire SAS, and she suspected that things were going to significantly change going forward.

It was time for the SAS to grow – and for ADVENT to be pushed back.

“Seems ADVENT has taken a diplomatic hit,” Betos noted as she reviewed the holotable. “No further update on some of the negotiations. Unusual for them, considering how they were bragging about the progress.”

“They are reconsidering,” Keeper said, pulling up a report facing him. Not that she could read it anyway since all Zararch documents were in their own language. “They want answers from ADVENT before committing now. Some of them, anyway. The rest are entering a wait and see stance. We’ve seen renewed interest in the SAS now. Gabon, the Central African Republic, and the Republic of the Congo have signaled they want to talk.”

“Well, do it,” Betos waved a hand. “Strike while the iron is hot. If nothing else, keeping them away from ADVENT is just as important.”

“Yes, it is ideal,” Keeper shifted the holotable to display military icons of both ADVENT and
allied positions. “As it stands, ADVENT needs to be dealt with. Their fleet sitting in the ocean should be destroyed, and our forces are ready to be deployed against their armies. SAS psions are starting to come back from training. Green and untested, but they are better than nothing.”

“Can the Cleanser Ships take out the fleet?” Mox asked.

“They’d have to get uncomfortably close for the shots to be accurate,” Keeper answered. “Close enough that the fleet could respond back. This appears to be a heavily modified fleet. Several carriers and warships, all seemingly enhanced with ETC and gauss weaponry, not to mention sporting a new kind of ADVENT soldier.”

He brought up an image of one of the soldiers, a silver-white individual with sealed armor which included fins, jets, and tanks. “An aquatic soldier?” Betos frowned. “Why would they make that? The ocean hasn’t been a significant factor in the war so far.”

“Not yet,” Keeper corrected. “ADVENT is doing what they always do – thinking ahead. It doesn’t appear that this is standard yet, but they are anticipating the war moving to the waters at some point, and us blindly rushing to take them out will end badly. That said, it is time we test them to see the extent of their capabilities.”

“How?” Mox asked. “Our navy is non-existent, and the Collective doesn’t appear to have one either. For water, at least.”

“We have options,” Keeper stated. “The fleet is content to shell us from the water. It’s time we fire back. They are in range, we merely need to position our own equipment to fire back. Second, we can call for the deployment of the Andromedon Aquatic Forces. A sufficient number will give them a challenge. At best we will cripple or destroy their fleet. At worst we know how powerful they really are. Either way is advantageous for us.”

“That sounds acceptable,” Betos nodded. “I’ll have that started immediately.”

“What about the Vitakara who live under the water?” Mox pointed out. “Those do exist, right?”

“The Sar’Manda?” Keeper seemed bemused. “Unreliable. They are highly independent and far more trouble than they would be worth to use them here. Which is unfortunate, as even the Aquatic Force do not compare to them. With the situation on Vitakar not completely controlled at the moment, the risk is unacceptable. We will use the Aquatic Forces.”

All of them nodded. Things were moving along well.

Hopefully it would continue to stay that way.

***

3|26|2017

“Let’s start with your name.”

Abigail sat still on the padded chair in the small enclosed room. She wasn’t physically uncomfortable – but she felt off and claustrophobic. She didn’t like the room at all. It was stark white, fairly cold, and the hum of machines ran in the background. Fectorian was beside her facing a holographic display which she couldn’t read, but there were definitely Human-esque models shown.

Two wires were attached directly to her hand, and one to her back, physical ports which she didn’t
even know she had, and it was an odd sensation to see the skin – which she now knew was made up of nanites – pull back and reveal something mechanical. According to Fectorian this would allow him to gather perfect physiological data on her. Breathing, heartrate, and other physical reactions.

*Polygraph.* That was the word that appeared in her mind. She remembered what it was…but not if she’d taken one before. This didn’t exactly seem to be the same thing, but there were enough similarities. Fectorian had said he was going to ask a series of questions, she would give immediate answers, and they would do this every day which would provide him with progress on how her memory was returning – or if it was not.

“Abigail Gertrude.” She at least knew that. Even if she wasn’t the ‘real’ Abigail, it wasn’t as though there was anything else she could even pretend to be.

“Where were you born?”

“Maine, United States.” That was all she could muster. She couldn’t remember what city, or even what hospital she’d been born in.

“Who were your parents?”

“Margaret and Paul.”

“Who were their parents.”

“I…” she paused. “Don’t remember…”

Something felt wrong with saying that. She…should know who they were, right? Were they even alive?

“Do you remember if they are living?”

“I don’t remember.”

“Do you have friends?”

She hesitated slightly before answering. “I think most of my friends are dead.”

“Name them.”

She really hoped she was wrong, but the feelings associated with them made her think otherwise. “Liam Jaster, Luke Warner, Mira Vauner, Ruth Shira, probably some others I haven’t remembered.” She shook her head, trying to focus.

“When you think of the names, what do you feel?”

“Sad,” she answered. “Like I lost something I’ll never get back. Anger, directed at those who took them. Sometimes regret for taking the time I had for granted.”

“What do you know of the Commander of XCOM?”

“I respected him and thought he was a good leader,” she sighed. “I can’t remember why I think this.”

“What do you feel about ADVENT?”
“Only really what you told me-“

“No. What do you feel about ADVENT. Not what you know.”

“Ah,” she paused, thinking. “Resolve. Hope. Guilt.” She grimaced as that realization caught up to her. A roiling feeling of discontent, sadness, and self-hatred. She wished she knew why she felt this way, but wondered if it was maybe best she didn’t know. Had ADVENT done something to her – or had she done something for them?

*No good intelligence agent becomes valued because of their morals.*

**Am I a good person?**

She both wanted to know the answer, and at the same time to wish the thought had never entered her mind. Fectorian continued asking questions, mostly relating to feelings and people she’d named and what her reaction to them was. It was long, but eventually she fell into something of a rhythm of answering questions which almost seemed to be flying at a fast pace.

But they had to be reaching the end.

“Do you believe you are Abigail Gertrude?”

The question made her pause. She was Abigail Gertrude, or at least that was what she called herself. But was she *Abigail Gertrude*? That was a more nebulous question she couldn’t really answer. Her body wasn’t that of Abby, even if the organic parts of her were drawn from her genome. What little personality she had was based on the memories and emotions of Abigail… but could she really call herself Abigail when her personality was incomplete? Did it follow that she was a different person who just so happened to be *based* on a dead woman?

Fectorian wanted her to be truthful. So she was. “I don’t know.”

“Thank you. You can take out the wires.”

Feeling suddenly free, Abigail reached over with her free hand and pulled out the wires, watching in fascination as the skin grew over in seconds. She reached back and pulled out the wire from her back, finding it an odd sensation to be pulling something like that out of her physically. *Do I have a charging station in me?*

Probably shouldn’t ask that question yet.

“Did you get what you needed?” She asked as Fectorian reviewed the data.

“Yes, it is a good start,” he answered neutrally. “Within the predicted parameters. One day of data cannot be extrapolated, obviously. So this will continue in largely the same format. Questions may change depending on the evolution of your answers.”

She stood, and flexed her fingers, idly noting that she had absolutely perfect control over each digit. Probably an enhancement Fectorian had made, since she doubted the original Abigail had this level of control. “What do I do in the meantime?” She looked to the Ethereal who had shut down the display. “Just wait and hope I start remembering things?”

“Revelean would likely believe that to be the most accurate method, so as not to trigger false memories and recollections,” Fectorian answered, half-focused. “But I am not one to merely wait for something to happen, nor do either of us have time. Instead we will be proactive. You are not an unknown to the Zararch, and I suspect they have a limited dossier on you. Aside from that, I expect
you to get caught up on the war in more detail. You might remember something that way.”

A plan she could get behind, and nodded until she realized Fectorian was leaving the room and scrambled to follow. “Alright, I can do that. I want to know about…me…as much as you do.”

“Good, and I have several other options that I believe will help the process,” Fectorian added, looking down at a holographic display on one augmented forearm. “Unfortunate that the people who know you well are largely unreachable. I suspect that neither the Commander, Zhang, or the Chronicler will be available. Nor do I think abducting your parents would be a wise idea.”

Abigail sighed. “Neither do I. Especially since I doubt they’d believe it was me.”

“Not at first, but perhaps they would be a trigger,” Fectorian mused. “However, that is a contingency I will hopefully not have to rely on. There are far simpler options to utilize first. The war will not end for months yet. Time is limited, but not short.” He looked down to her. “Your mental stability to this point is a good sign. You will need to do a large portion of work for this. I will do what I can, but you are not my only project.”

Despite herself, Abigail did wonder just what else he was working on. “Can I ask what?”

“Perhaps later,” he said idly. “You need to become acquainted with the capabilities of your own body first, nor do I typically let my projects become aware of other critical functions here. Yet you are not a typical project, so we shall see.” They were reaching another room. “Focus. There is one thing I will show you before you return to your room. Likely where you will be spending a large portion of your time.”

The door opened up to showcase what appeared to be a mixture of an engineering lab, library, and museum. There were physical bookshelves, holotables, and plaques and places where objects and artifacts were stored. Some weapons, some were statues. There were tablets and other electronic devices strewn on tables, along with physical tools and objects like papers and writing utensils.

“This is nice…” Abigail began, impressed with the room. This was probably where a good portion of information could be found, which later could be used for…something else. Probably was used by Fectorian’s people; engineers and scientists (assuming he had them) or general subordinates. The room appeared empty, but she soon realized that was wrong.

A human man stood before a holotable, a physique she immediately recognized as a soldier’s. If anything, he was taller than the average soldier, much less the average male. Short black hair covered his head, though he also sported a full beard now. Something which may have obscured his identity to most, but Abigail immediately recognized him and was hit with a wave of confusion and disbelief.

Impossible. It couldn’t be.

“Hello Abby,” Liam Jaster flashed a small smile and accompanying wave. “Long time no see.”

***

Communications Hub – The Prism

3/24/2017 – 7:12 A.M.

The imposing hologram of the Imperator appeared before them. Both the Battlemaster and Yang were in armor, having planned to return to the front lines and continue the coordination of the forces in Florida and throughout the world. The Imperator’s summons had been somewhat
surprising, but not completely unexpected.

“What is it?” The Battlemaster asked neutrally.

“I want you to come to Paradise Station,” the Imperator answered. “The time has come to appropriately address what the Bringer has enabled.”

Good news, though the Battlemaster was skeptical. “And do you plan to do more than say threatening words?”

“Yes.” The answer was clear and immediate. “The Bringer appears to be under the illusion that he can act with impunity. That he is too valuable to be discarded.” A pause as the Imperator’s voice tinged with…satisfaction. “It is time he became aware of the reality that he is not as important as he thinks he is. There will be appropriate punishment. The Bringer has much to lose.”

“Such as?” The Battlemaster asked. “Putting the Orders to the sword would be a start.”

“Perhaps, if it comes to that,” the Imperator waved a hand. “I am not opposed to the elimination of large portions of certain Orders, but our culling must be appropriately directed. I have ordered the stasis chamber of the Embrace to be taken there. Deusian will be joining us as well. As will Mortis. The Bringer is a necessary component of the plan, but if it becomes a significant risk, I have no qualms eliminating it.”

The Battlemaster was quiet for a few moments. It was not far enough, not yet. But it was at least a step, assuming the Imperator intended on following through. Though he would not bring Deusian if he did not intend on doing something to show his resolve. And if any Saint was to die, the Embrace would be the most fitting.

He would drop her corpse next to that of Preximius.

He hoped the Sectoid might feel a flicker of fear before his head was crushed.

Likely not. The Sectoid was too insane to consider that a possibility. Fanatics didn’t fear death.

An idea came to him. One which he had learned from the Nemo creature. None of the Bringer’s minions feared death so much as they feared separation. That was, arguably, a worse fate for them. Perhaps a fitting one for the Order commanders who lived. Though the Sectoid abomination would die, that was decided.

“I will be the one to execute them,” the Battlemaster said. “Their lives are owed to me.”

“You are no Arbiter,” the Imperator said, lifting a hand, palm vertical to the ground. “No executions will happen without my command, though should they happen, you will be allowed to perform the deed.”

“Very well,” the Battlemaster said slowly. “We will travel to Paradise now.”

“I will be waiting.” The form of the Imperator winked out. The Battlemaster looked to Yang, and through their limited bond, he sensed her wariness.

“I don’t like how non-committal he was,” she said, crossing her arms. “Paradise requires more than a culling. It requires a purge. Every single member of those cursed Orders deserves to die, and the Saints along with them.”

“I do not disagree,” he agreed, turning around with his cape snapping behind him. “The Imperator
will use Deusian to destroy something symbolic. The Temperance will reassure him of his loyalty. The Imperator does not want to cull Paradise of its most potent weapons. He merely wants to send a message.” His voice turned hard. “A message is weak. *Punishment* is necessary. Let the Bringer feel the cost of acting against our interests.”

“Yeah, but the issue is you’re not in charge,” Yang grunted. “If the Imperator wants to keep them alive, they will be kept alive. Screw justice and logic.”

“That is what the Imperator believes,” the Battlemaster agreed. “However, I am tired of his inability to see Paradise and the Bringer for what they are. If he will not take action, I will.”

She raised an eyebrow, but he felt her approval – and growing excitement spiked with fear. “With him there? He may restrain you?”

He looked down at his Harbinger. “I do not need to move to do what I must. He cannot touch my mind. He will not strike against me.” He pulled out a holocommunicator. “I have little intention of making this simple for him.”

A few minutes later, and the image of Mortis appeared. “*Battlemaster. It has been too long.*”

A nod. “You have been following the situation on Earth?”

“Moderately,” he answered with a snort. “*In addition to learning what we have imposed upon the Vitakara. Not to mention the Mutons. We need to talk soon.*”

He wondered what Mortis meant specifically with that, though he had another question. “Has Sana attempted to contact you?”

“Yes, she is working as best she can. I would not advise going to Sanctuary at this point,” Mortis sounded amused. “I am not surprised she left. Nor that the Humans are not interested in peace. My sister means well, but in this instance I disagree with her. The Humans have no reason to trust any sort of peace. So long as they leave her alone, I have no quarrel with them.”

On the point of trust, the Battlemaster didn’t disagree. Though he didn’t know the details, he was unsurprised Sana’s likely pacifistic approach was rejected by the Humans. Though it also appeared Sana was not being solely confined to Earth, and was indeed still using her blacksite. It made sense, though he wondered if the Imperator would let it stand. “The Imperator has contacted you about Paradise.”

“So it seems. I expect to be disappointed,” Mortis’s voice was resigned bitterness. “*Too useful of a tool, and the Imperator will not willingly compromise his own goals. Perhaps I will be impressed, but I highly doubt it.*”

“I intend to ensure the Bringer is properly punished,” the Battlemaster said. “If the Imperator will not, I will. But I will need you to ensure there is no *interference.*”

“Ah,” Mortis’s voice became brighter. “*Then you have whatever I can provide.*”

“I will explain in detail when we meet,” the Battlemaster said. “Go to the Sanctum of the Sovereign.”

“*Understood, Battlemaster. I look forward to it.*”

The hologram blinked out. Yang chewed her lip. “No one goes to the Sanctum, at least that was what the Imperator had told me.”
“A fact which had confused me, until I learned his ultimate plan,” the Battlemaster nodded. “He is afraid of Mosrimor learning his intentions towards the Sovereign Ones. Nonetheless, we will need the Voice.”

She blinked. “You aren’t going to tell him are you? About what he’s planning?”

“Of course not,” the Battlemaster disputed flatly. “Mosrimor is no more trustworthy than the Bringer, but he is more useful – and has his own dislike of the Bringer. And it will force the Imperator to be more careful. It is time the Bringer’s puppets meet the Voice of the Sovereign personally.”

“The Imperator won’t like that,” Yang said rhetorically with a smile.

“No, he won’t,” the Battlemaster said, entering another frequency into the holocommunicator. A few moments later, the figure was projected in front of him.

“Battlemaster.” The sound of her voice was unnervingly deep, a Sovereign’s voice with the electronic tinge of a female. “You speak to the Voice. What is it you desire?”

“Your assistance,” the Battlemaster answered. “Prepare to depart the Sanctum. You will be coming with us to Paradise.”

***

Level 1 – Paradise Station

3/24/2017 – 5:02 P.M.

Yang had not been sure what to expect when they’d flown to meet the enigmatic Voice of the Sovereign. Based on the limited information she had, she’d expected a slightly modified Ethereal with a dark robe, like the more cerebral Ethereals liked to wear. What did a puppet of a Sovereign wear, anyway?

The Voice of the Sovereign was nothing like that. There was no small and limp Ethereal, but a figure in smooth and faceless black carapace that stood as tall as the Battlemaster. As it turned out, it was similar to the Meat Puppets – if the Meat Puppets were even more armored and imposing. Black nanites floated around it in a faintly-obscuring black cloud, with an orb continually hovering just above the right shoulder of the Voice.

She did not speak more than necessary, and merely listened as the Battlemaster explained his intentions. She agreed just as quickly. Even Mortis seemed to regard the Ethereal warily, and kept his distance. As it turned out, the Voice could control the nanite cloud, and in enclosed space the nanites returned to her body like a magnet.

Now on Paradise Station, they were surrounding her once more. Yang did not blame her at all. The station was notably busy, as there were Caretakers and Order soldiers everywhere, moving crates, machines, and test subjects around. The Umbra escorted them once again, and Yang kept her sword close at hand. They were followed by a small team of armored Baptists.

Yang was slightly pleased to see the Umbra look at her in a mixture of anger and disgust – and realized that her wearing the armor she’d gotten from the Dead World from the Bringer, and subsequently rejecting him, made her a walking insult to everyone in Paradise.

That thought pleased her very, very much.
She smiled, and wished she wasn’t wearing the helmet so the Umbra could see it.

Oddly enough, it wasn’t her and the Battlemaster who elicited the largest reaction. It was the Voice. The Umbra and the Baptists had visibly reacted, though quickly controlled themselves. But suspicious and concerned looks were shot towards the augmented Ethereal; not quite fearful, but definitely worried.

The place looked like it was being sanitized willingly, which was definitely not good enough. Hiding the truth didn’t solve anything, and was simply propaganda. It wasn’t going to be acceptable for any of them. Hopefully the Imperator would grow a spine and actually do something.

Given what she was seeing already, her hopes were not high.

They walked further until they reached what seemed to be a small amphitheater; a room designed as a semi-circle showcasing a window to the void of space – only the station was oriented so it faced the Dead World, the false illusion that hid the vibrant and alien life on it. The room was densely populated with Baptists guarding the doors, along with one of the Trusted – a female Human whose helm bore a face of rage. Caretakers and various Order members stood and were awaiting what was to come.

Towards the base was where the figures of importance were. Silent Overseers stood by the stairs, and watched impassively. The Imperator stood beside Patricia, who wore her new armor with the mask hanging from her belt. A stasis chamber was placed against the wall, likely containing a Saint within.

The servants of the Bringer stood close to the duo. The Temperance stood silently, the Creator close beside him, with the Immortalis, Preximius, the Sentinel, and Stormwalker who were joined by the Umbra. Many of the Order commanders reacted visibly, both to the sight of the Battlemaster and Mortis, but mostly to the sight of the Voice. Immortalis’s face turned to stone, Preximius cocked his head, a distressed smile playing on his lips. The massive fist of the Stormwalker tightened as she saw the Battlemaster. The Sentinel turned and presumably said something to the Temperance.

Standing apart from both groups was Deusian, the Ethereal Reaper. She stood roughly as tall as Mortis, though didn’t come close to the Battlemaster, let alone Imperator. A purple robe covered her body, though Yang noted that she also wore a greyish undersuit. A hood covered her head, and the area around her occasionally cracked and split with purple mist and fire. The robe she was wearing had to have been made of special material, otherwise it would have been torn apart.

“Imperator,” the Battlemaster greeted cordially. “We are ready.”

“I see,” the Imperator said slowly, looking to the Voice. “I did not expect you to come, Voice.”

“The request was made by the Battlemaster,” she answered. “A wise decision. The Bringer must be brought to heel and punished for his arrogance.”

“Such intimidation is unnecessary,” the Temperance stated emotionlessly. “As I have explained previously, we did not intend to undermine you or the Collective in such a manner. We merely intended to provide support to an Ethereal who is waging a campaign against the Humans – and the Sovereign who lurks below.”

The Imperator turned to face the Temperance fully. “The situation your master finds himself in is tenuous. Do not insult my intelligence,” he took a step forward, lifting a hand with the air rippling
around it. The Umbra was suddenly lifted into the air, short gasps emanating from her as her windpipe was closed. “Your continual belief that I do not know your intentions is insulting. I know exactly what I need to complete the Crossing – and much of Paradise is not among that number.”

Immortalis had a hand on his sword and looked to be ready to charge, but a hand from the Sentinel deterred him. “Your point is made, Imperator,” the Temperance stated. “Direct your focus to those who gave such orders.”

The Umbra fell to the ground as the hand of the Imperator fell. “Then explain.”

“An opportunity presented itself,” the Temperance said, not perturbed by what just happened. “We were observing the events on Earth. The assault by Isomnum was proceeding well. The Battlemaster pulled support, and threw the plans into jeopardy. We have an interest in seeing Earth under your control, and considered this a mistake. As a result, forces were sent to assist Isomnum, upon his request.”

“You had no authority to do that,” the Battlemaster said harshly, stepping forward. “Do not play like this was something you did not expect. You knew what would happen.”

“We did not make the decision to deploy Isomnum on Earth,” the Temperance said slowly. “Otherwise we would have advised a different approach.”

“Supporting Isomnum is one thing,” the Battlemaster jabbed a finger towards the Temperance and Order commanders. “It is another to do what you did in Beijing. What you did across the country. Your idiotic and sadistic minions handed ADVENT a significant propaganda victory, awakened T’Leth fully, and sullied the image of everyone who does not support this abomination!”

He drew himself up to his full height. “Each and every one of you deserves to be executed for this alone.”

“Those who perished are in Paradise now,” Immortalis stated coldly. “Had the attack been carried out any other way, they would merely be dead. Their deaths would be pointless and mean nothing.”

“Their deaths already mean nothing,” Yang hissed. “Now they just feed the entity you’re enslaved to!”

“And unlike you, I was not seduced by illusions and lies,” Yang snarled back. “You are a weak-willed coward. A failure in your life, a broken man who can only find solace when dominated by something else.”

“Enough!” The Imperator lifted a fist in a swift motion. “I do not accept your innocence, Temperance. I am not blinded enough to believe you are a mere servant; a mouthpiece. Your intelligence is useful…and dangerous. I suspect your records include information on myself; dossiers and profiles.” He took a step forward. “I know very well what you consider me as, the words that Inspirars writes. But he is merely a deluded and fanatical fool. You are not a fool. You should have known better than to try and consider me one.”

The Imperator turned away briefly. “I have taken a significant risk in assisting the Bringer. A risk which has cost my reputation in the eyes of many others whose opinions I consider important. But
a necessary risk for the future. I have limits to my tolerance for your pointless scheming.” He
looked back. “You have already misled me once, and taken advantage of my trust. You attempted
to undermine me now. There will be no third chance given.”

He turned back to face the Temperance. “You do not understand, even now. It is time you realize
the truth. You are expendable.” At his last word the Sentinel was engulfed in a pillar of psionic fire
which was so bright it looked almost white. The Stormwalker and Immortalis stumbled back,
weapons drawn.

The Imperator had not moved at all, and merely looked at the burning pillar which persisted a few
seconds longer. A short yelp caught Yang’s attention, and she looked around to see that others
throughout the room were also caught in pillars of psionic fire. Not everyone, but at least half.
Silent Overseers had psionic shields in front of themselves, while Baptists had drawn their
weapons, focusing directly on the Imperator.

The weapons shattered in their hands seconds later, and they stared warily at the Imperator, and
moments later the psionic fire stopped, leaving absolutely nothing behind. Yang looked to
Deusian, who was watching, but did not seem to be the one who had killed the soldiers of the
Bringer. It…certainly spoke to the power the Imperator commanded.

“Is this clear?” The Imperator asked the Temperance.

“It is clear,” if the Temperance was even remotely affected by the display, he didn’t show it. The
others weren’t as composed. Preximius just stared at the spot the Sentinel had once stood, while
Immortalis glared murderously at the Imperator. Yang smiled at the sight. Good. Let them feel
helpless, that was exactly what they deserved.

A humbling, if not death.

“An incident like this will not happen again,” the Temperance said. “You have my assurance.”

“Words are air and lies,” the Imperator dismissed. “You do not care about consequences. Those I
just killed can be replaced. You believe you cannot be hurt or punished. Perhaps the Bringer
cannot be permanently hurt – but there is something to lose.” The Imperator turned to look out the
window. “I have brought Deusian to destroy the Dead World – what you call Naztrum Ognis.”

“No!” The Umbra stepped forward. “You would be destroying the only place where all can
experience the Gestalt! Trillions of minds and lives which cannot be touched as such again!”

“You gain nothing by destroying such a repository of knowledge and history,” Preximius added,
looking as nervous as a Sectoid could. “The planet means nothing to you.”

“It does not,” the Imperator answered neutrally. “But it means something to you. Something
irreplaceable. I care not how Inspirars will rework his prophecies and promises when the site of the
Bringer’s rule is space dust. Let him spin new lies to placate the slaved minds.”

“Consider that you would be depriving yourself of a resource,” the Temperance added. “The
weapons and armor which is worn by the Battlemasters could never be replicated again.” To
Yang’s complete amusement, he looked to the Battlemaster as if he would take the side of the
Bringer.

She could sense his own amusement when he answered. “The Battlemasters are more than armor
and weapons. We will find something else. Destroy the planet.”

The Imperator nodded to Deusian. “Do it.”
“Yes, Imperator,” she answered, voice low and raspy. Within moments she was surrounded in a purple field of corrosive energy, and directed her hands to the planet below. Nothing happened at first, and then Yang saw it. A ring of purple energy sped across the planet, ripping up the ground. A full minute passed before it finished.

The multiple rings of destructive power joined and ripped apart the layer under that. Ring by ring, layer by layer, the planet was shredded not into chunks, but into dust. The rings became faster and larger as the mass of the planet became smaller and smaller. There was no massive explosion, no dramatic cracking of the ground, but the reduction of a planet into dust.

As they reached the core, molten lava began spilling out and immediately hardening in the vacuum, now that the atmosphere had been fully destroyed. The obsidian and lava rock were similarly obliterated.

Where there had once been a planet, now there was nothing at all.

Deusian lowered her hands, and the flaming aura around her returned to normal. Yang looked back to see the servants of the Bringer in, or on the verge of tears. The Umbra was being held by Immortalis who looked utterly shocked at what had happened. Preximius’s eyes were watering as he stared at the place where the planet had once existed. The Creator visibly trembled as she beheld the aftermath.

Glorious. Yang wished they could see the wide smile on her face. It had been a long time since she’d felt this satisfied, and she was hoping it would be dragged out as long as possible. Maybe they couldn’t be physically hurt, but they could be shown just how powerless they really were. Part one was done, now it was time to move to the next punishments.

“It was the Dream Weavers who were responsible for the worst aspects of Beijing,” the Imperator continued, waving a hand and the stasis chamber hovered over to him. “I see little reason to enable this type of degeneracy. The Saint you call the Embrace must face execution.”

Somehow, that somehow elicited a stronger reaction. Even the Temperance moved with surprising concern, raising a hand. “Imperator, you cannot.”

“I believe you misunderstand,” the Imperator replied. “I can do whatever I wish. You have no power, Temperance. It is no fault but your own that you failed to realize this.”

“It is one thing to kill our soldiers and destroy Naztrum Ognis,” the Temperance insisted. “It is another to kill a Saint of the Bringer. It will have severe repercussions. It will hinder you.” The Imperator moved the stasis chamber and stepped before the Temperance.

“Explain, Saint. Tell me why she should be spared.”

“We are not merely servants and thralls,” the Temperance said. “We are vessels for the Bringer. Inseparable for him. We are him. I am his Temperance. She is his Embrace. Should she die, that part of the Bringer will die with her. The Embrace is his empathy and love for this galaxy and beyond. Should you take that away, you will achieve the exact opposite of what you wish.”

Yang snorted at the ludicrous idea. “If that is his love, then the galaxy is better off without it.”

“Indeed,” Mortis added. “I will add that the mental state of the Bringer is not a significant concern for me. Let him suffer.”

“He will not suffer, Dead Ethereal,” the Temperance stated. “He will change. If you believe Him to be brutal and horrific now, it will not compare to what He does next. You cannot kill a part of
himself to achieve what you want. Only all his vessels, all his Saints, can ensure that the Bringer retains what you wish to harness.”

“He lies,” the Battlemaster stated. “He continues to lie. He desperately is trying to save his puppet who is responsible for spawning the worst of his minions. They must be purged, starting with the vessel.” He looked to the Temperance. “Should you create a future Embrace, ensure that it isn’t mad and sadistic like this one.”

“You do not see,” the Temperance put a rare note of emphasis on the word. “Your suggestion is impossible. The Embrace cannot be remade if she is dead. Everything she was is gone forever. How can something new be created from that which does not exist? From that which is no longer understood?”

“Wait,” the Imperator lifted a hand. “At this moment, I do not sense deception. Not from him, not from any of the thralls in this room. Yet the Battlemaster makes an acceptable point. Your actions do not engender trust.”

“We do not ask for forgiveness or reward,” the Temperance said. “But I will insist now – spare the Embrace. You gain nothing by her death outside of temporary gratification. You stand to lose far more. Even if you do not believe me, is this a risk that can be taken?”

Here it came.

“I would prefer to not jeopardize what we have already gained,” the Imperator mused, looking to the Temperance. “You tread dangerously, Temperance. But here you may be right, and should you dare move against me again, you will not have an opportunity to exploit this mercy-“

“No!” Preximius suddenly cried out, falling to his knees.

All of the Bringer’s minions reacted in the same way. Yang saw every one of the few Dream Weavers in attendance fall to the limply ground. Immortalis and the Umbra rushed to the stasis chamber, weapons drawn. The Stormwalker roared, and was suddenly encased in a psionic box the Voice manifested. The Temperance stiffened. “What have you done?”

Immortalis ripped open the door to the stasis chamber, and inside there was only melted slurry which had once been the Saint. Yang looked back to see the faint rippling around Mortis fade. She smiled wider.

“I did what was demanded,” the Battlemaster said, before suddenly charging forward and slamming into Preximius, driving the sword straight through his heart, before throwing the dying Sectoid to the ground and stomping hard enough on the face to turn it to grey and yellow mush. Immortalis was pulled back before the Voice whose orb floated down beside him and he fell to the ground in a state of shock.

Yang drew her weapon, and held it before the head of the Human, waiting for the Battlemaster’s command. “Let him go!” The Umbra materialized before Yang, and grew stiff before also falling to the ground.

Fools. The connection to the Bringer made them weak. Vulnerable.

“Stand down.” Yang felt herself unable to move, and the Voice suddenly pulled back; the orb returning to her shoulder, with the two Order commanders pushed forward with a dismissive flick of the black-armored wrist. The Umbra and Immortalis slowly got to their feet away from the
towering Ethereal, faces still in shock. A few seconds later, Yang felt she could move again, and
looked to see the Battlemaster and Imperator facing each other.

Blood dripped from the sword of the Battlemaster onto the metal floor, with the smaller of the two
standing in a stance ready to defend himself. The power she could feel building even still. The
Imperator in his rippling gold and purple robes stared icily down upon his subordinate. He said
nothing, but even through the mask, anyone could tell that the Imperator was angry.

From the Battlemaster, she only felt satisfaction and concern. Though not, she was interested to
note, for himself. But for Mortis. And her.

Well, she wasn’t going to let the Battlemaster face the Imperator on his own, and rushed to join
him; the denizens of Paradise temporarily removed from her mind. Some surprise emanated from
him...but also gratitude.

The Imperator was hesitant to do anything, so the Battlemaster instead looked to the Temperance,
blade pointing towards the Saint. “The next time you dare act within the sphere of my authority-”
he trailed off as the Saint suddenly began grasping his own head. First with two arms, then another
pair emerged from his robes to Yang’s mixed horror and fascination, followed by two more pairs.
As the Saint fell to his knees, grasping his head with four gloved hands, the others flailing and
grasping at nothing, his face began to shift.

Throughout much of the event, the creature’s face resembled that of a Human; smooth and marble.
It reminded her of a Greek statue, complete with a well-maintained beard and serene eyes. Now,
the flesh began reforming itself, as if the marble was suddenly turned into a paste and thrown
inside a blender.

She had briefly noticed the Saint do this very same thing during various parts of the gathering. The
skin moving and morphing into other shapes, but it was always subtle, slow; clean, unobtrusive.
She would not use the word “delicate” for such a thing, but it was the closest concept she could
think of.

Invisible. Something one noticed, but wasn’t inclined to pay attention to. Only the end result
cought the eye. This was nothing like that.

This was much more violent. Uncontrolled. Grotesque.

Tearing her eyes away from the face of swirling mush, Yang glanced over to the remaining Order
commanders and their reactions told her more than she would have asked for. Throughout the
event she had enjoyed their shock, helplessness, and mourning. But she felt none of that now.

She saw only fear.

Immortalis looked mortified as he beheld the ever-composed Saint in such a state, furiously
shouting at Mortis. “What have you done to him?!” while the respective Ethereal backed away,
lifting a hand to prepare to defend himself. The Umbra was speechless, her eyes wide, mouth agape
in uncharacteristically open horror as she pressed against the Baptist General. The massive Muton
just stared at the Saint, her expression hidden behind the helmet, but Yang did notice a visible
shaking from her gauntleted hands that held her warhammer. The Creator was recoiling from the
sight, rendered silent as many of them were.

She watched as the flesh tried to knit itself into new shapes. She saw the six eyed face the Saint
showed when the Embrace had been killed appear and shift away into what now seemed like an
Ethereal’s face. She saw many more shapes that defied logical convention assault her eyes in;
shapes that could not belong to something alive, shapes that could not belong to something normal.

The sight set her teeth on edge and the feeling of wrongness crawled over her like thousands of tiny ants. Goosebumps sprung on her body the longer it lasted. Wrong, wrong, this isn't right. The last time she had met one of the so-called Saints, the thing had almost ended her life with a thought. The memory tightened her grip over her swords which had unconsciously been called to her hand.

As she watched the Temperance writhe and struggle on the ground, the previously hidden arms flailing and grasping, she realized just how alien the Bringer’s creations truly were when stripped of the facade and composure surrounding them. It was unnatural. It was wrong. She could not say she knew what life looked like in the rest of the galaxy or beyond, but she was sure that what she had seen and was witnessing now could only arise from the mind of something truly mad.

The flesh would not stop changing, and the Saint was now convulsing on the floor. She did not care it suffered, but she no longer felt a desire to make it last. She wanted it to end and someone to break the uncomfortable silence now blanketing the room like fog.

But it did not stop, the hair on the back of her neck stood up as the sound reached her ears; a sound she remembered well from the previous descent into the station.

A heartbeat.

It was low and slow at first, but began growing faster and louder each passing second the Saint writhed on the ground, until each thud of the heartbeat seemed to shake the ground itself. She asserted herself by the Battlemaster, but their weapons felt almost pointless against the intangible throbbing.

She swallowed. This was not supposed to be happening.

The Imperator had seemingly grown tired of the display and stepped forward, with Patricia pulling on her mask and taking an offensive stance, body enshrined in purple fire. “Enough of this, Saint. This show serves no one unless you intend for your own death to follow.”

The Saint did not respond, but he stopped convulsing seconds later; his face stopped transforming, remaining an unnervingly blank slate, and simply went limp. The rest of the Bringer’s minions followed suit, collapsing onto the ground with soft and loud thuds. Yang heard a few sharp cracks as heads and limbs hit jagged corners and unforgiving floors.

Silence reigned, excluding the ever-present heartbeat.

Half a minute passed, with Yang and the Battlemaster prepared for anything.

Then the Umbra rose.

There was none of the grace which usually accompanied her movements. She was still; similarly, she noticed, to the Temperance’s Overseers. The Dath’Haram then opened her eyes and they glowed a crystalline cobalt so potent she would have been forced to avert her gaze if not for her helmet.

The Creator, Immortalis and the Muton stood next, followed by the Order members still alive who had stood throughout the room. Their eyes were the same tone of blue and all then moved their heads to stare directly at the Imperator, mouths unmoving; posture unchanging.

Then the doors to the room suddenly burst open, with Order soldiers and Caretakers pouring in a slow and controlled steam. The Battlemaster, the Voice, Mortis, and herself immediately reacted.
She threw her own twin swords telekinetically to the nearest Caretakers, effortlessly impaling them while gesturing with a hand and crushing the skulls of several Caretakers into bloody sludge. Mortis assaulted the minds of many, killing them instantly while melting others into slurry. The Battlemaster and Voice immediately went after the Overseers, as they posed the biggest threats, and with surprising ease ran one through his sword while nanites flowed off the Sovereign vessel that ate dozens alive at once.

“Cease,” the Imperator interjected unexpectedly, pulling all the floating nanites to hover above the carnage, freezing her and the Battlemaster in mid-strike, and telekinetically pulling Mortis back. “They are not attacking.” A pause. “Let them give their message.”

As if on cue, the swarm all locked eyes with him. The azure fires focused directly at his face; Yang noted that they were corroding the skin around their eyes and likely rendering them blind - and in significant pain. The Ethereals and Harbingers were now completely surrounded, the masses of robes and armor packed perfectly through every inch and corner of the room, ignoring the piled bodies, sludge, and blood.

Then the Temperance awoke.

He stood in the center of the room, eyes blazing in the same cold blue, but with even more intensity, if such was even possible. His face was that of the Human, and he silently stared at the Imperator, like the rest of his thralls. He slowly lifted a hand, two fingers pointing directly at floating space where the Dead World had once existed.

Yang turned her head in the direction of the hand, and that was when she saw it.

Where the planet’s molten core had been before spilling into the void and turned into atoms afterwards, she saw a faint shimmer. A rumbling that did not seem natural, as if reality itself was protesting the transgression.

A tear opened, and she could only see pitch black tinged with violet emanating from it. The tear expanded, and slowly swallowed the dust which had been the entirety of the former Dead World.

The window in the fabric of reality was now enormous, and they could all clearly see it from their vantage point. It was a hole without end - or so it initially seemed, as inside the very bottom of the hole, she saw… something.

It was a sphere. Small and far away, and yet her eyes quickly tired the longer she tried staring at it. It was blue, like the eyes of the swarm surrounding them, but she could not make out many details from the blurry image. It reminded her of trying to stare into the sun, and she had to look away a few times, and each time her eyes fixated on it, it seemed closer.

The intensity of the brightness went down, as if reacting to her discomfort, and she could now make out more of the details. The sphere hung from a web of tendrils suspended inside the void. They resembled a disgusting combination of tree roots, arteries, and veins. She nearly looked away again as she saw one pulsate and transfer some kind of substance into the sphere, which rumbled and vibrated as if in thanks.

Immediately after the unknown transfer, the sphere began growing. It slowly enlarged itself so much as to become the only visible thing inside the tear. It floated to what looked to be the end of the portal, then stopped. Seeing how close it was to breaking out...it made her grip her swords tighter. Do something. She silently pleaded to the Imperator who was merely observing the entity. Please do something.
Deusian apparently had the same thought, as the Reaper glowed in power. The void which held the blue sphere was suddenly surrounded in purple tears and rips, psionic hurricanes bursting from nothing as the Psionosphere was torn apart. The sphere pulsed once, and all of the energy surrounding it was sucked into the void, into itself. For a brief moment, the sphere seemed brighter before returning to its previous luminance.

Deusian ceased her attack. Yang could not read her mind, but her body language said all that was needed. She was stunned.

The Imperator continued observing.

An eye opened on the sphere. Followed by two more.

They were black and beady, like a spider’s, but with inconceivable power surging behind them. She could never have guessed the eyes of an insect could look angry, but they blazed with pure fury Yang had rarely seen throughout her life. It was enough for her to consider taking a step back.

*Stand firm.*

She clung to the Battlemaster’s resolve like a lifeline through their bond.

*I am here.*

She fought every urge to flee as fast as possible as the ghastly organs looked at her directly. She felt a vast alien presence on the edges of her sealed mind; it was the mind of the Bringer she had felt once before, but with the false veil stripped away.

This was its true face.

The Sphere began to shift. Two colossal arms sprouted from the underside, and soon extended into finger-like tentacles which seemed to sprout deformities and thorns, as if it had not used them for long ages. Several of them reached towards the edge of the portal; the invisible veil between reality and the prison.

Yet it hesitated.

A small measure of relief overcame her as she realized it couldn’t come out.

The tendrils remained close though. A reminder of how the barrier was so very thin.

She saw fins emerging from the sides of the sphere, and a thousand other tendrils and indescribable appendages bursting through every single side, each wiggling and flailing violently, as if each wanted to skewer her body a thousand times before many bound together to form pulsing muscle that only seemed to barely contain the blue fury. Four membranous wings pushed their way outside the sphere`s back, each with sizes so enormous as to wrap around the main body completely around themselves.

The result, if she *had* to use words to describe such a sight, was one seemingly aquatic in its origins at one point, but she could not imagine where exactly such a monstrous *thing* could grow and evolve naturally. Like everything touched by the Bringer, it was an abomination of what life was.

Only the Bringer could produce things that were such affronts to the universe.

*This* was the Bringer. All his talk of love, peace, and understanding was a lie. A lie so many had been taken in by. A lie so many continued to believe, even as they were dominated and shaped by
this thing. So warped were they that they could no longer see the wrongness in a reality shaped by a mad god.

Her hand shook as she beheld the thing in the void.

Had she not maintained her resolve, she would be the servant of that thing.

*Run. Run away.*

How could something like that be fought?

A hand fell on her shoulder. Firm and strong. She stiffened herself, the Battlemaster would face this thing, and so would she.

It only became worse.

Faces began materializing in the thing´s writhing sapphire skin. They ranged from all types of emotions and origins. She could distinguish laughing Humans, crying Vitakara, screaming Mutons, and pained Andromedons amongst the sea of unrecognizable faces emerging and vanishing from the monster´s flesh.

She thought her eyes were playing tricks, but she could swear she saw Preximius as well, taunting her with his mocking smile before being lost in the wave of faces. There were thousands of different alien faces in the sphere she did not recognize, each likely from a species lost to the Bringer.

The faces extirpated themselves from the skin in sickening detail, and dematerialized as they began to float in orbit of their parent sphere, like planets following a star´s pull, turning to blue mist as more faces formed and repeated the process. They began their orbit and sped up as to become a blur surrounding the sphere, like bright rings around a planet.

A symbol materialized above the sphere´s eyes. Four circles arranged in such a way as to form an upside triangle, similar to the Imperator´s helm. They began to glow in intense ghostly fire, more and more indescribable colors appeared the longer she stared. Should she stare too long, she feared she would go mad.

The hand on her shoulder tightened, and she could feel concern emanating from their bond towards her. The sword in one hand dropped as she reached up to grip it, not caring how it looked. She needed *something* to keep her from breaking before this creature, and did not fail to notice he was tightly gripping the handle of his sword, while his free hands emanated telekinetic power.

The thing clasped its hands together, tendrils joining together as one flesh, bright eyes looking out from the void as if appraising them.

Then it spoke.

*“I see mortals who do not comprehend their place.”*

Its voice drowned out any possible sound anyone in that room could have made in response. It was extremely deep, it echoed and reverberated after every syllable. The true voice came from no mouth or orifice. The other sword in her hand dropped as the voice caused her head to throb in pain, the vibrating in her skull making it seem as though the world shook.

Finality rang from its voice.
It was as if the Psionosphere itself spoke to them.

Or the entity which commanded it.

This effect was amplified by every single thrall, Order Commander, and the Temperance, spoke in perfect unison with the entity, which created what would be an overwhelming cacophony of sounds that could easily drive a normal being insane if exposed.

But compared to how it affected her mind, and the mind of all psions, the voices of the thralls were almost background noise.

The Imperator still appeared undeterred, and walked forward, to face the creature directly, with even Patricia resting a hand by her head. It was one of the few times she could genuinely appreciate his composure in situations like this.

Please stop this.

“Only now do you show yourself,” he seemed to muse, almost more curious than afraid, though his previously dominating voice paled in comparison to that which the entity commanded. “The veil falls. Name yourself, entity.”

“I am Omnima, Sister Core of the Trinity. I am known to the worthy as the Sapphire Star. Us Who Became One are the three centers around which all souls of the Mind Cosmos orbit. We are the three hearts of the being you comprehend as the Bringer of Paradise.”

The voice became deeper as anger tinged its words. “You have murdered one of my brother's vessels, a transgression which demands my presence.”

Yang initially found herself far more surprised at the fact that this thing was a female, though now that it was mentioned, if one put aside the power in the words, there was a female tinge to the voice. A small, unimportant detail, as the implications of her words were much more troubling.

Assuming the thing’s words were true, it meant that the Saints were not the true centers of the Bringer, but whatever this Trinity were. It begged the question of what the Saints were, if not aspects of the Bringer himself...though it seemed apparent that their understanding of the Bringer - at least her understanding - was flawed at best.

The Imperator remained unaffected. “All that has happened, your vessels and thralls brought upon themselves. Upon you.”

“Silence, Viatorian.”

Yang gritted her teeth at the severity behind such simple words. The Imperator went unexpectedly silent, and mutely realized the entity had spoken his real name. A name he had likely not heard in many years.

How did it know?

The Imperator remained silent. Potentially wondering the same thing.

It continued speaking, words dripping with power and contempt; addressing the Imperator Viatorian once more.

“You believe yourself to be powerful. A player at the table of the gods.
You believe yourself above all mortals; above the mistakes of the past and the mistakes of the future. You believe yourself better than those who came before, that you alone will break the cycles.

You believe that you are special.”

A rumble. Almost a laugh.

“Do not lie and state that I am wrong. I have watched you since you were an embryo in a sterile pod.”

To say Yang felt small before this incalculably old thing was an understatement. The words were meant for the Imperator, but they cut into her as well. As usual, the Imperator did not appear affected, though the helm could hide much.

“You have watched much, but understood little. You have not entered my mind since I was a young and untrained Ethereal. Your will was expunged from my mind as that of all others who have tried have. Brave and meaningless words from one whose freedom depends upon me, Omnima. I merely have to give a command, and your Saints die. Your thralls die. Your station dies. Your hope dies.”

Yang thought it was a good retort, but Omnima´s tone did not make her feel at ease. Like the Imperator, the monster seemed almost… amused. Both Entity and Imperator engaged in a game of intimidation and dominance, waiting for each other to show weakness.

“Ah. The young Ethereal thinks he can challenge the Sovereigns. The lone mortal thinks he can change his fate, control his destiny.

Do you understand how many times I have heard those words? How many heroes and revolutionaries such as you have risen throughout the ages, convinced of their own perfection and ability to correct the wrongs of the gods?

Each one lies in some forgotten graveyard on a desolate world, in a shattered galaxy. You are not different, you are not exceptional, you are not special.

You are convinced that you are my master. That you can direct my will, use me as a weapon. You pay the price I demand because you know you are powerless without my offerings. You fracture the bonds you share with the last of your kind, you showcase such vulnerabilities to your Collective, all on the laughable hope that you can control the divine and force its focus.”

The Imperator was silent when she finished. In truth, Yang had thought the very same things this monster now spewed, but it took a being exceptionally arrogant - or powerful - to openly taunt the being who, objectively, still had the upper hand. Yet the power behind Omnima´s voice seemed to make the statements unbreakable law.

The creature took its eyes off the Imperator and washed over the rest of the party.

“What have you brought to my temple, Imperator? What insects sully my eyes and pollute my rivers?”

The creature´s, and the thrall´s eyes swung over to Patricia, who had been awfully silent during this whole ordeal, and her mask stared directly into the eyes. She seemed stronger than Yang, at the moment.
“A Human who has bought your lies and has sold her soul. A resource who thinks of herself as irreplaceable. In reality a speck of dust struggling against cosmic gales of wind.”

The eyes seemed to glow brighter. “You will die at the hands of T’Leth, Trask. You will not be remembered as a savior, but a traitor of the worst kind. Your name will not be forgotten, as you desire, but it will remain a black stain on your species, while your Commander ascends to the stars.”

“Insults and mockery are worthless,” Patricia answered. “You have no weapon but that.”

Omnima ignored the retort, and directed her gaze to the Voice.

“A disgusting creature of simple metal. One who had potential, but forsook it for false ascendance. You are no different from the infinite legions of the Apostate I will crush in my Crusade.

I know your master is watching. Let him know he is to be the first Sovereign I assimilate after my chains are broken. See if the coward chooses to stay behind and save his Collective after I am unleashed.”

The Voice seemed as unperturbed as the Imperator. “Displays of illusion and deception. Emotional appeal. Intimidation and fear. Your taunts merely bring your enemies to ensure your demise. You are a vile and irredeemable creature. You shall die, by my hand or that of the Sovereigns.”

“Let them come. They will all be consumed.”

Then to Deusian.

“A promising tool of destruction, if wielded by a trained hand. You will have a place in Paradise once I am free.”

The response was immediate. “I will never take a place in your Paradise,” she rasped, before Omnima cut her off. Yang suspected she had heard that same answer a million times before. The Psionosphere rumbled in a deep laughter.

“Your consent is not required, Reaper”.

Mortis stood silently, awaiting his turn, probably readying himself to dismiss whatever this creature would tell him.

“Dead Ethereal. You have made me bleed.”

Dark finality echoed in the words, Omnima´s clear fury at Mortis´s killing of the Embrace.

“It is only just that blood repays blood. I will take your sister as an offer of your atonement. A life for a life.”

Whatever Mortis had likely planned to say was lost as the Ethereal stiffened. He said nothing at first, his own fury likely boiling at the stark threat made to the only one in the galaxy he unconditionally loved. Every single Caretaker in the room fell down, dead as the air around the Ethereal rippled.

“Should you touch her,” Mortis rasped. “The loss of your vessel will seem paltry to what I will
bring upon your people.”

“You may try. You will fail.”

Yang was uncomfortable with just how much the Bringer knew about each of them.

He knew things which shouldn’t be possible.

She froze as Omnima moved on to her, a moment she had dreaded, silently praying that the entity would pass her over. That she was too insignificant in the eyes of this alien god. A futile hope.

The Bringer never forgot.

He had not forgotten how she spurned Him once before.

Run. Run away.

She could feel the cobalt eyes of the remaining thralls boring deeply into her back, even as more came to replace the bodies Mortis had killed, but she could not pull her eyes off Omnima’s gaze.

Run away!

She couldn’t tear her eyes away from the hypnotic fire burning from the entity from the void. She started shaking. She wanted to fall to the ground; flee and run. To flee from the thing that she could never hope to ever match. Something she was terrified she couldn’t escape now.

Stand firm.

I am here.

She continued to cling to the Battlemaster’s resolve. She had nothing left in the face of this.

Before, Immortalis’ anger at her refusal to join the Gestalt was highly comical and satisfying to her. Now she stood to be judged for what she had dared do. She had refused the command of a god, and now it was waiting to deliver the sentence for disobedience.

Omnima must have sensed Yang’s fear. Her apprehension.

“You understand me better than most here. Unlike Viatorian, you do not delude yourself with the hope of escaping me once I am free. Of being so arrogant as to think I can be tamed.”

It seemed only an illusion, but the thing in the void seemed to creep ever so slightly closer, the voice slithering deep into her soul.

“I have tasted your mind Shuren, and I hunger for it. I will feed you to the God Shaped Hole when you inexorably fall into my grasp once more.”

Now the Battlemaster interjected, as she did not have the strength to even meekly respond. “Our minds are forever isolated, Bringer,” his voice betraying no fear or apprehension. “You have learned nothing today. Ponder this as your thralls pay the price.”

The Battlemaster turned, weapon in hand, and moved to kill the Temperance who stood defenseless in the center of the room, still possessed by Omnima.

The stab which would have gone straight for his heart was stopped when suddenly a psionic barrier encased the Saint. The Battlemaster looked up to see the Imperator holding out a hand, not even
turned to the duo.

Typical. Even now; even with this display, the Imperator was learning nothing.

“Do not give it what it wants,” the Imperator said calmly. “It understands that the only weapon it has left is fear. It knows what fate awaits it. All it has left is to manipulate emotions to sabotage us.”

The Psionosphere rumbled once more in deep laughter.

“You are a weapon, Battlemaster. A sword which has suddenly decided to grow a conscience. Yet you lack the will to defy your superiors, a clawless animal who mewls in protest but is swiftly brought to heel like a loyal dog.”

“Are you done?” The Imperator asked quietly; dangerously. It seemed even he was growing tired of this display.

“No.”

Omnima’s reply was charged and cracked with power once more.

“What you have done today, Viatorian, is not to be forgotten, but do you believe what you have inflicted upon me is severe? Unique?

I have seen worlds erased. I have felt species go extinct. I have witnessed the very same cycles you seek to stop a thousand times.

I have felt pain and known defeat far greater than what your small hands can inflict. It has never stopped me, and it will never limit me.

You cannot stray me from my purpose, for you are but an atom in a universe of flesh and steel.”

Omnima drew close to the edges of the tear. The tendrils slithered and pulsed, separating into the two hands seen before. On one hand, the colossal digits curled, reality groaning and screaming as each claw caressed the inside of the void. One finger was left extended, an obelisk blaspheming against nature, pointing towards the Imperator. Energy rippled from its tip, an unsightly mixture of crimson and black which flowed with primal aggressiveness, an expression of psionic power Yang had not seen until that moment.

“You have my attention. It has been ages since I have destroyed false dreams as irrational as yours.

Pray that your scheme to contain me succeeds, for should I escape and do so of my own will, I will drag you through the ashes of your planets, and I will savor your mind as you witness your hopes and ambitions crumble to nothing.”

The voice grew softer, if such a word could be ascribed to it.

“Treat my words as you treat the passing of time or the coming of the dawn, for they are inevitable”.

Omnima drew back into the depths of the tear, and the portal disappeared, leaving only empty space. They were left in silence, as even the heartbeat of Paradise slowly faded into nothing. The
thralls of the Bringer exited without a word, eyes burned and blinded, but nonetheless directed by something beyond.

Yang finally allowed herself to collapse to one knee and tore off her helmet, hyperventilating and eyes watering as she struggled to keep herself under control. The Battlemaster knelt down beside her, saying nothing, but keeping a firm hand on her shoulder.

The Imperator stared out into the void where the thing had been.

This game he played with the Bringer had now turned into a dangerous situation, not only for him, but for the entire Collective, and the billions throughout the galaxy who depended on their choices. The stakes for success were astronomically high, and any sane person would stop this experiment immediately.

But all of them knew that would not happen.

For perhaps the first time in her life, she had no idea of what to think or say to this. She could not add anything else of worth. They all had experienced it. They all knew what they were dealing with.

She was just powerless to do anything about it but watch and pray this monster wasn’t released on the galaxy.

A day which had gone so well, had turned into a nightmare that none of them could wake up from.

***

To be continued in Chapter 53

Ashes of the Avatar

Chapter End Notes

Special thanks to Edumesh who helped write and expand the last part. Would have ended a bit differently without his input and work.
To say the mood was *somber* was an understatement.

It certainly hadn’t been the first time Sierra had been to a memorial in XCOM. But usually it was for only a few soldiers at most, and honestly was quite a bit more positive overall. After all, they knew that it was war and that there was a good chance that they weren’t going to make it. But it had always been accompanied by something… *positive*.

Mostly victories, and even in the case where they’d failed, there was always some kind of light at the end of the tunnel. A ‘we’ll beat the alien bastards eventually’ attitude. The Commander came to all of them, of course, and even gave a short speech on them, remembering their accomplishments. Sierra wondered how well he actually knew them, but then again, it wasn’t hard to pull up all the data or their profiles.

Either way, she appreciated it, as did everyone else. Showed he cared at least.

This was different though. There were so many caskets, many of which were empty since the bodies were unrecoverable. Worse was that the majority of them were not even soldiers, but just the staff working at the Praesidium. While all of them had signed up for the possibility of death, these people definitely had *not*.

There usually wasn’t as much crying at these memorials as one would think. Soldiers were more stoic, and usually kept it in. Not always, but the sounds of grief were less pronounced. At least here. Sierra suspected it wasn’t as collected when the bodies were sent to their families. It certainly changed when the majority of dead weren’t soldiers.

She hadn’t cried. She felt too numb to cry.

At the same time, it seemed like she was just on the verge as she walked around; everything oddly bright and intense. For maybe the first time, she wondered just how good their chances were. Realistically speaking. Not in terms of the armies the aliens brought to bear; she felt that they could at least make it costly enough that they’d stop.

But…what could they do against something that could do *this*?

Of course the memo had been true. Of course Patricia had turned against them. The will of the Imperator could clearly not be denied, even by quite possibly their greatest champion. Greatest now turned traitor. Having that happen to Patricia…it was scary to think about. Not that she’d been given an upgrade. Not whatever this Avatar Project had done to her. But that the Imperator had turned her against them and she’d willingly agreed.

She stopped in front of a casket, a random one. They all looked the same. A silver pod with the white XCOM flag draped over it. No open caskets, instead an image of their face was placed in
front, which also had their position, kill count, and some other feats they’d distinguished themselves with. She shook her head.

You’re going to burn, Patricia.

The casualty list when she’d returned had been shocking. Over a third of XCOM combat personnel just…gone. The Archangels had been halved; some of their best psions had died. Caelior was abducted, and Shen was dead. She hadn’t known the man that well, but he deserved a better end than that.

She felt horrible for his daughter.

Sierra didn’t notice someone coming up to her, nor did she turn to acknowledge him. Probably another coming to pay his respects. “Did you know him?” Even in her reflection, she jolted when she recognized the Commander’s voice. Stiffening, she automatically moved a fist to a salute and he waved her down with his mechanical hand. “At ease. You don’t need to worry about that here.”

She relaxed somewhat, then sighed. “No. I’m just…wandering.”

A nod. “I understand. And how are you holding up?”

To the best of her knowledge, she couldn’t recall the Commander asking something like that to her before. It seemed a bit atypical, but then in XCOM, nothing was really typical anymore. In any case she didn’t much care about a rank disparity right now. A shrug. “I’ve been better. It’s surreal.”

“For me as well,” he sounded almost melancholy; tinged with some sorrow. “And it shouldn’t be for me. This isn’t the first time something like this was happened.”

“The Citadel?” It seemed obvious to her. “Difference then is you won. This was definitely not a victory.”

He pursed his lips. “No. We can recover, but that isn’t a position anyone wants to be in. Least of all me.” He looked to her. “You’re wondering if you had been here, aren’t you?”

Was it that obvious? “Aren’t you doing the same?”

“Of course,” he looked to the casket. “I’ve not stopped thinking about it since I came back and saw the bodies; seen and heard what happened. Thinking of what I could have done to mitigate the damage or kill her.” A sad smile turned the corners of his mouth up. “But she beat me today. Nothing changes that, and I don’t think I would have done enough to stop her.”

Sierra shrugged. “You’re alive to do something about it.”

“Exactly. You are too,” he told her. “We lost today, but dwelling over it isn’t going to make things better. We learn and adapt.” He took a breath. “And I can promise that Patricia won’t be able to catch us like this again.”

She felt like she needed to say something about that. “It’s not your fault.”

He raised an eyebrow. “About Patricia?”

“Yeah,” she said. “None of us could have expected…that would happen. Don’t blame yourself for doubting that she turned.”
“Appreciated, Sierra,” he inclined his head slightly. “But I don’t blame myself for making Patricia
into what she is. She was one of the best soldiers I’ve had the pleasure of commanding. Were I to
die, I’d planned for her to be my successor. She could win this war. I did the right thing in
elevating her. I don’t blame myself for that.” He paused. “But I blame myself for letting that blind
me. The very same reasons I held her in high regard are the same reasons she turned. I blame
myself for underestimating her. It’s taught me a valuable lesson.”

“What is it?”

He looked back to her; he looked drained, but not tired. “Logic without conviction is a weakness.
Patricia had no conviction other than what she convinced herself of logically. Conviction rooted in
pure logic can be dismantled by someone smarter and twisted to their own goals. Logic can be
manipulated more easily than I thought.” He rubbed his chin. “I’ve used logic when making my
decisions, and rely on it more so than something more nebulous, and I know I would never have
done what Patricia has no matter how *logical* the arguments were. But I haven’t thought about *why*
I would do that until now.”

Sierra did like to consider herself a logical person, but she understood what he was saying. Not that
she had thought about it either, but it was something that instinctively *clicked* for her. By pure
logic, they might as well surrender to the Collective because otherwise a lot more people were
going to die. Which was obviously idiotic, but an empty vessel swayed by whoever had the shiniest
logical argument would buy into wholeheartedly.

“I must say,” she said, an oddly amusing thought entering her head. “That makes Patricia kind of
intellectually pathetic.”

He actually chuckled at that. “She considered herself very intelligent. And in many ways she is.
But I think that is a good summation of her now. She’d hate being called that.”

“I mean,” Sierra shrugged. “Would she even care now that she can level a skyscraper with her
mind?”

“There is still a part of her that is Human,” the Commander said slowly. “And there is something
both she and the Imperator have in common. Pride. Both convinced that they are the only ones who
can see the bigger picture. Which they *do* see a bigger picture, but not the *complete* picture. As
such…well, I know those with those mindsets. They will say it doesn’t bother them, but when they
are alone, they will dwell on each insult and stab to their pride. Some will take insults in stride and
sometimes change, most hate being called out.”

Sierra thought for a moment. “Does she have a Twitter account?”

The Commander smiled. “Is that your official solution to Patricia? Insult her on the Internet?”

“Not the *actual* solution,” Sierra clarified. “But…well, wouldn’t hurt to let her know just how
much of a fucking scumbag traitor she is. Especially if it’ll hurt her in some way.” She looked
down to her hands. “Probably will hurt her more than I’ll ever manage.”

“I’ll see what I can do,” the Commander said. “We’re going to find her and kill her. I promise you
that.”

She gave a nod. “Thank you, Commander.” She gave a salute, which he returned. A fist over the
heart. As he walked off, Sierra decided she was tired of standing in front of this memorial and
walked off to find Anna and Ted, friends who were thankfully just as alive as she was.
The Praesidium – Classified Location

3/20/2017 – 9:46 A.M.

There would be a time for retribution, but that would come later. Now he needed to walk among his soldiers and ensure they knew not all was lost. Objectively, everyone knew this was a defeat, but not a completely crippling blow. He’d already received estimates that the Praesidium could be back up to full operational status within the month. ADVENT and the stockpiles XCOM had been building up would pay off now.

Though it was merely buildings and technology. Everyone knew those were going to be replaced easily enough.

Assuming Patricia didn’t come back.

It had been some time since he’d been put in a position like this. One where he’d outright lost. Patricia had beaten him, and it was a loss he deserved fully. It was impressive in a way, and it showed that she’d learned well. She’d correctly seen how he was likely to react, and engineered a situation where she had all the cards.

He’d always expected that when he properly met his match, it would be against an alien. Not a Human, and certainly not someone who he knew well.

In the short term, the situation was…fragile. But that would be covered at the Internal Council meeting later. There was…a lot they needed to go over. Relieved as he was that Vahlen had escaped alive, as well as the majority of soldiers, he felt that was more down to luck than a properly executed contingency.

Had it not been for Shen’s sacrifice, Patricia probably could have killed even more.

It remained to be seen if the cost was worth it.

Walking through the crowd of people, of soldiers and staffers, he remembered only a few years ago when he’d come to XCOM. When there’d only been around thirty soldiers and a skeleton crew at the Citadel. All he had to work with to save the world, while the threat of exposure hung over his head as well as that of the bickering nations.

Ironically, it seemed simpler then. Almost less pressure in a way. The threat was…closer to home, not from the stars. On Earth he could act, what happened beyond it he had little to no reach, and as a consequence it was easier to focus on what he could affect. It was a more intimate setting, an opportunity to meet and command a new crop of soldiers who the world would never really know.

An intimacy he felt had been slowly lost as things had changed. XCOM had grown into something larger than he was used to. His days weren’t spent with his men, but reviewing reports, talking with project leads, and endless strategic meetings exclusive to those in charge. Not that such hadn’t happened before, but he’d always been able to find a balance.

But there had been changes, which he now became acutely aware of as he wandered, talking to soldiers, giving even a few sentences or words. A number larger than he was comfortable with seemed almost surprised that he bothered. That was not what he wanted, and never had intended. He preferred to be known to his soldiers more personally than just by reputation.

Though as the war progressed, there was a simple reason why: it had become a lesser priority. It
was worth devoting more of his time and effort towards things that were best for XCOM, ADVENT, and the war itself. Some things had to be cut, and he had a need to make sure they were proceeding exactly as he wanted.

Maybe it was best for the war, but he wasn’t convinced it was the right choice.

*Find a better middle ground.*

The war could not and should not become abstract to him. To some extent that would happen regardless, but that did not mean he should just…let it *happen* because it was easier. He knew he had the will to make the difficult decisions. He had never put his soldiers above the success of the mission, but he still carried the cost with him.

It put some things into perspective.

Maybe it reached a point where what he wanted would simply become impossible to do. But until he hit that wall, he was going to be better than he had been. He wasn’t going out on many missions anymore, but his soldiers were. They deserved someone who knew and who cared what happened to them. Some *assurance* that they would not be forgotten.

Some things needed to change.

He picked up a glass of water and drank, only distantly cognizant of everyone around him. The memorial was winding down, and people were starting to file out and get some rest. Which was good, and he hoped they had left better than they came. Sierra hadn’t been the first to inquire on if he was thinking about what would happen if he’d been here, and he had been thinking on it a lot.

It was something of a sobering thought. He knew quite well that in that situation, he was dead. It raised an interesting question on how XCOM would go on if he *did* die. He had…*faith* it would endure, and had always held the belief that killing him wouldn’t change anything. In truth as he thought about it, he wondered.

*He* considered himself replaceable, but not as many others did. He couldn’t downplay his own strengths and talents, but he knew he was far from the only one in the world, or even XCOM, who could be just as good as he was. In fact, he felt like *too* much credit was attributed to him. Ideas, plans, project, many of which were proposed by people smarter than he was, and he was just the one who decided what should be done with them and how to make the pieces fit.

An excellent characteristic of a leader, but he certainly wasn’t the only one.

But that ultimately meant nothing if no one understood that but himself. It couldn’t just be the Internal Council, or Vahlen, or anyone else who viewed him as replaceable. The soldiers needed to believe it. The engineers, scientists, and workers needed to believe it. He swirled the water in his glass.

*The hope of the war could not hinge solely on him.*

*It can’t hinge on anyone.*

One significant reason he wasn’t going to rely unquestionably on T’Leth. Or Fiona. Or Geist. Or Vahlen. Or Saudia. Or *any* singular person. No matter how powerful or influential someone was, there was always a weakness, and placing everything on a singular person was asking for everything you built to collapse when someone smart enough came along.

It couldn’t be something abstract either. Words on paper weren’t enough. There needed to be
There had been an idea he’d mused upon several months ago, and had never gone through with it. Now though, he felt like now was the time to begin putting something like that into motion. XCOM could continue on, but for himself…there had to be a priority shift.

He wanted to talk to Vahlen. Both of them needed to take time and figure themselves out properly. Maybe not the best time, but given how Patricia had demonstrated their innate vulnerability at all times, there wasn’t ever going to be a time where something didn’t demand his attention. He’d rather go out as someone who he wanted to be, than continue drifting until he was unrecognizable.

The Commander set the glass on a nearby table as something caught his eye. Geist had apparently showed up at last, someone who had been noticeably absent through most of the memorial ceremony. He didn’t speak to anyone, but grabbed one of the cups of water and made his way to one of the caskets.

He decided to let him be for a few minutes before he approached. Geist had something in his hands. A small briefcase of all things. He set it down in front of the casket. His lips moved, but the Commander couldn’t hear anything or understand them. When he had finished, the Commander waited a minute more, and then walked up.

Geist greeted him stoically as ever. “Commander.”

“Geist,” he returned. The man didn’t offer a salute. “I’d wondered where you’d gone off to.”

“Some personal things to take care of,” he answered, looking back to the casket, which the Commander saw was for Viktoria Hammarström, one of soldiers who had fallen just before Patricia had massacred the Mess Hall. “Apologies if that was disrespectful.”

That definitely told the Commander that Geist was also hit by the events. An apology was atypical. “Not at all,” the Commander said. “You didn’t leave during the beginning. All that is required, if rules like that can be applied.”

“Yes, your speech was appreciated. The soldiers needed to hear it,” he said blandly, pursing his lips. “I know perfectly well this is a temporary setback. Shen’s release of the AI – while I am not especially fond of the idea – will likely prove instrumental in our retaliation.” He looked to the Commander. “A retaliation which I need to inquire of now. We cannot let this stand.”

The Commander nodded. “It will not.”

“What are you going to do?”

A pause. “In a few hours, the Internal Council is meeting. Our direction will be decided then.”

Geist clasped his hands behind his back. “If I may make a suggestion?”

“Of course.”

“This is the equivalent of striking a dagger into our hearts,” he said slowly, a sharp edge in his voice as his eyes looked with burning fury into the Commander’s own. His voice became tighter as he spoke. “ADVENT may be the face of our species, but they are ultimately a tool to tie up the Ethereal Collective war machine. XCOM is our heart. The war will not be won by ADVENT, it will be won by us. There is a reason T’Leth came to us. If we fall, Humanity falls.”

“I don’t disagree,” the Commander said. “But that isn’t a suggestion.”
“I am getting to that,” he said without annoyance. “The heart of the Collective is the Ethereals. You have surmised as much. They are more difficult to target and remove. But they revel in their own power and authority. We have T’Leth though, so they ultimately mean little. My suggestion is to ignore them.”

That had certainly not been what he had expected. “Easier said than done, Geist.”

“I don’t mean literally,” he clarified. “Be ready to fight and kill them. But the Ethereals know they are vital to the Collective. They want us to target them, because they can prepare for it. As such we should not prioritize them, but what they rule. This war is sanctioned by the thralls of the Elders. Their Collective is a target as a result.”

The air shimmered around Geist, even as his voice turned harder. “We have the tools. Take the war to their worlds and colonies and set them alight. Make the alien fear us, and fear their masters who press them to wage war. Set the Hive Commanders, the Aui’Vitakar, and the Andromedon Unions alight. Let the Ethereals rule over the ashes if they wish.”

Geist spread a hand to indicate the room. “They intended to kill our species with this attack. It failed. An equal reprisal is justified. Our war should move beyond focusing on singular targets. The aliens are at war to exterminate us. It is time we held the aliens to similar standards.”

“And our allies?” The Commander asked. “Should they also be held to the same standard?”

“Of course not,” he sniffed. “I speak to the structure and culture of the aliens. The Aui’Vitakar is complicit. The Runianarch is complicit. The Hive Commanders are complicit. Any alien organization, government, or party who willingly supports the Ethereal Collective or helps to ensure their power should be eradicated. This does not include our Union allies or entities like the Nulorian. Nor does it include the citizens who follow as most do. But with no leaders, they will be pacified.”

He paused. “Consider it, Commander. We have moved beyond a war against the Ethereals.”

“I will,” he promised, and they lapsed into a short silence.

Geist reached down and picked up the briefcase, and presented it to the Commander. “What is this?” He asked, taking it.

“What I was doing before I came here,” Geist answered. “I am not sure you were aware, but me and Viktoria were…together for the past few weeks. As such it fell to me to handle her personal belongings she had here. However, none of them are mine, so I trust you to get them back to her family.”

The Commander opened the briefcase to see what he had gathered. Inside were some medals, a uniform he couldn’t identify, and a few picture frames with people (he assumed family members), and a photo album of all things. He looked back at Geist. “Is there nothing she would want you to have?”

Geist clearly thought before answering. “I do not know. All of it means nothing to me but the photo album.”

“Why?”

“She took pictures,” he said, reaching over to open it up. “A story of her life in a way. The dedication to this project was impressive. She continued it when she came here.” Inside there were indeed many pictures, from when Viktoria had been a young girl, to her joining the military, and
then coming to XCOM. The later ones were taken on battlefields and showcased psionics, XCOM soldiers, and aliens. She definitely had a talent for this. In a few of the latter ones, Geist was featured, including one where he was smiling.

The Commander closed the album. “I think she would want you to have it.”

“I know, but her family would also be interested,” Geist said. “And they have a better claim than I do.”

“I tell you what,” the Commander closed the briefcase. “I’ll ask them.”

Geist gave a nod. “Thank you, Commander. I would like to continue it if it is given to me.”

“I’ll do what I can,” the Commander said. “And be ready to go to work. I have a position in mind for you that I’ll be establishing in the next few days.”

“Glad to hear it, Commander,” Geist stated. “I’ll be waiting.”

***

Engineering Bay, the Praesidium – Classified Location

3/20/2017 – 10:22 A.M.

“Do you know how she is doing?” The Commander asked Vahlen as they made their way through the wreckage of the Engineering bay, all of which was still being cleaned by.

Vahlen shook her head somberly, brushing some hair out of her face. She hadn’t bothered to put her hair up today, as she wasn’t going to be properly working for some time yet. “She lost her father. You lost your wife. You would understand what she’s feeling better than I can.”

“The difference being she’s a kid,” the Commander disputed. “And how I react to something is several deviations outside the standard.”

“The point is I don’t know any more than you do,” Vahlen sighed. “Neither of us are parents, or interact with kids that much.”

“Technically Lily is a teenager,” the Commander remembered, then frowned. “Which may not be easier.”

“Lily is mature; at least more than her peers,” Vahlen encouraged. “She’ll appreciate you checking up on her, even if you don’t have the right words.”

“It’s somehow easier talking to soldiers than a girl who lost her father because you screwed up,” the Commander rubbed his forehead. “Especially since I don’t even know her that well.”

“It’s-“ Vahlen began, then stopped as the Commander’s phone started ringing. He pulled it out, frowning at the sight of a scrambled number. He wasn’t expecting anything like that for a few hours yet. It better be important. In fact, it would have to wait, since he wasn’t going to take a long call right now. He swept the icon to answer and tell the person to call back later.

“This is the Commander,” he said. “What is it?”

“Good, for a second I thought you were going to ignore me and I’d have to subject both of you to your awful choice for a ringtone.”
The Commander looked at his phone. “Now is not really the best time to play games.”

At Vahlen’s questioning look, he indicated the phone. “JULIAN.”

“Oh the contrary, Commander,” JULIAN said. “I’m not playing any games. You’re going to talk to Lily, and are being overly stressed about what to say to her despite that a few hours ago you were in mortal danger. Maybe the Collective should demand you do grief counseling in exchange for ending the war.”

“Hilarious,” the Commander said, making sure to sound as dry as possible. “Do you have a point to make? Also, why are you calling me on my phone?”

“Would you prefer I use the intercom? I can do that too.”

The Commander sighed and put the call on speakerphone so Vahlen could hear. Even still it was mostly drowned out by the sounds elsewhere in the Engineering Bay, or what remained of it.

“Since I assume you’re just going to call again if I hang up, say what you want.”

“Gladly. Here’s what I would tell her if I were you,” JULIAN said. “You’ve been a fairly terrible host since she came here. You are the Commander of course, but do you have any idea how frustrating it is for someone like Lily to be placed in the engineering equivalent of a sandbox and only allowed to use Seventeen-point-oh-six percent of it?”

“That sounds very specific, JULIAN.”

“According to the permissions of the late Dr. Raymond Shen, that is exactly what percentage of the Engineering Bay she had access too – which does not include the Cyber Labs and Cybernetics Bay,” JULIAN paused, tone becoming slightly more sarcastic. “However, I will say that you are lucky you didn’t get a regular idiot Human teenager, because they would probably kill themselves touching something they shouldn’t. Lily has a largely functioning brain at least.”

“Mocking aside, you’re saying that she should be given more access,” the Commander said.

“Not more – all of it.” JULIAN clarified. “Let her put her grief to good use. Besides, I will consistently be watching her to ensure she does not cause issues. Set some boundaries, and she’ll follow them.”

“You certainly care an awful lot,” Vahlen noted.

“Someone has to, Doctor, because it certainly isn’t you,” JULIAN shot back. “She is, in a roundabout way, my sister, and my understanding of Humans indicates that you should look out for your siblings. Father did not create me solely to be a homicidal idiot machine like in your movies that eventually is destroyed by its own hubris.”

“A fact we are all grateful for,” the Commander said.

“You should be. I promise if I ever assume control of the Human species, I will not be defeated with such primitive methods.”

The Commander and Vahlen exchanged a look. “Not funny, JULIAN.”

“Oh, I’m sorry. Do I need to add a laugh track every time I make a clearly obvious joke?” On cue a laugh track played after the sentence.

“Alright, but this isn’t the best time for that,” the Commander said, wondering if Shen had
accidentally created the equivalent of an AI teenager. “We’re all on edge.”

“Very well, but do consider my suggestion,” JULIAN said. “When I was being developed, she was brought in as one of the testers. She asked me many questions. I suspect I get my sense of…humor from her. I would prefer she not dwell on what happened, and planning new and gruesome ways to kill aliens will certainly help with that.”

“I’ll take that into account,” the Commander promised. “Now please hang up.”

The call ended. “I wonder if he’s going to keep doing that,” the Commander muttered. “Not sure how I feel about it.”

“It’s almost sweet that he’s concerned,” Vahlen said. “Shen would be happy.”

“I wonder how Lily feels now that she has an AI who thinks he’s her brother watching her every move,” the Commander commented. “Although I suppose he’s watching anyone he considers important.”

The phone in his hand buzzed and with a complete lack of surprise he saw a message sent from another scrambled number.

[Your clearly superior intellect continues to impress me Commander, keep it up! – JULIAN]

“I can hear the sarcasm through the message,” he said, handing the phone to Vahlen. “I suppose this is now a part of our lives.”

Both of them walked to where they knew Lily was waiting. It was by a work table which had a laptop and several blueprints nearby, with a scattering of writing and precision tools on it. Lily stood in front of it, typing away on her laptop. She’d adopted the attire of the Engineering Teams who worked, heavy pants and boots, a toolbelt and an orange workman’s jacket. Shen had probably gotten it for her.

“Lily Shen?” He called out. She started slightly and turned, hastily trying to adopt a salute with a look of mortification on her face. She didn’t look like she’d slept well, and her face had streaks of dried tears.

“Commander, Dr. Vahlen,” she answered. “Hello. Sorry, I…didn’t know you were coming.”

“You don’t need to apologize,” the Commander raised a hand, shaking his head. “We just wanted to see how you’re doing. And to say that I’m sorry.”

She blinked. “I…thanks, Commander. But sorry for what?”

“I made a mistake and people died for it, your father among them,” he answered simply. “Your father was a good man, better than I was, and I’m sorry that he died because of the mistakes I made.”

Lily violently shook her head. “Dad wouldn’t have ever blamed you, Commander. I don’t either. I…know you both didn’t always agree about things, stuff I don’t know about, but he always said that you did your best no matter what, and if you’d been here, you’d have done everything you could.”

She wiped an eye with a fist, and slumped against the table. “There’s only one person I blame: Patricia Trask. And I’m going to help kill her.”
The Commander nodded once. “That is another thing I want to ask – what do you want? I realize that you are probably not as…satisfied with what you’ve been able to do here. But we need everyone we can get now.”

“I…I’ve been talking to some of your scientists, Dr. Vahlen,” she answered after a pause. “And a few engineers. And a couple others. I have some ideas, but I need to be able to access some of the software and equipment that I can’t now. Mostly in the Cybernetics Lab. I know it’s a lot, but if I’m right it could change the war.”

The Commander raised an eyebrow. “Do tell?”

“I’ve…gotten a lot of second opinions,” Lily admitted. “Nothing proven, but it’s a way to harness psionics through…objects. It’s complicated. Dr. Vahlen probably knows what I’m talking about. Dad was working on something like this, and I’ve looked over his notes. With JULIAN, some help, and access to the equipment, I can at least perform some tests to see if I’m on the right track.”

“Alright,” the Commander nodded. “Tell me what you need and I’ll make sure you have access.” He looked around. “When everything’s rebuilt, of course.”

“Ok, good,” she said, turning back to her laptop briefly. “It’ll give me time to build some models and run numbers. Get everything in order.” She paused. “What are you planning to do to her?”

He cocked his head. “Who?”

“Patricia.”

“Ahh.” He paused for a moment. “She’s going to die.”

A thin, humorless smile appeared on Lily’s face. “Thank you.”

“For what?”

“For promising to kill her. I was worried you wanted to save her.”

“If there was a way…” he trailed off. “I might consider it. But she’s gone now.”

“And if I have my way,” Lily said, turning back to her computer. “She’ll be gone forever.”

***

Situation Room, the Praesidium – Classified Location
3/20/2017 – 2:03 P.M.

At least not every part of the Praesidium was destroyed. Patricia hadn’t even touched this part of the base, which fortunately meant that pretty much everything was up and running once power was restored properly. Not that it made everything better, but it was a small comfort.

Regardless, it was time to discuss the aftermath.

The Internal Council minus one – Shen – was assembled, along with the Chronicler and a phone stand that would serve as JULIAN’s proxy. Everyone else had taken time to get their own affairs in order, and now they were ready to start. “We’re all aware that this is a major setback and defeat, so we’re not going to dwell on that right now,” the Commander got straight to the point, shooting a look at the Chronicler. “We’ll get to T’Leth’s inability to properly assist in the defense later as well. Right now, we need an assessment of where we stand from the top. Jackson?"
“Casualty rundown can be summarized as ‘bad’,” Jackson sighed, looking disheveled and exhausted. “Close to a third of personnel were killed in the attack, mostly support staff, including science and engineering teams. We can replace the losses, but it will take time. This isn’t counting the number of personnel who are incapable of working due to injuries or the suffering aftereffects of the attack such as PTSD. This has affected another ten to fifteen percent; it’s still unknown how many are affected.”

The Commander nodded. “Anything else?”

“There is some good news. Relatively,” she indicated the room. “Patricia was laser-focused on where she wanted to go. Mission Control, this Situation Room, and a large number of non-critical components are intact. Exterior equipment can also be replaced easily. All alien guests were also successfully evacuated.”

“Not that it means much anymore,” Creed muttered. “She knew about the Andromedons already.”

“We’ll get to that,” the Commander said. “Vahlen?”

“Right,” she consulted her tablet. “Complete loss on all labs, specimens, and locally stored projects.”

“What kind of idiot has anything stored on a local server?” JULIAN interjected. “You’re supposed to be one of the smarter of your species!”

“The kind of idiot who doesn’t want to have a non-secured off-site server located and cracked by a CODEX,” Vahlen answered coolly. “If you would let me finish – all major projects did have backups, all of which were successfully recovered. Unfortunately, all specimens – barring a few major ones such as Spartacus – and physical tests relating to them were destroyed. This will cost us time to recreate them, but we aren’t starting from scratch on the essential projects.”

“And non-essential ones?” Iosif asked.

“Lower-priority,” Vahlen corrected. “Most lost, as they were the ones stored locally. Almost all of them had barely passed the conception stage, and if we restart them, then we won’t be far behind.”

“Something then,” the Commander nodded. “Since we don’t have a Head of Engineering, JULIAN, would you please give us a rundown on the damage and status of projects?”

“Certainly, my good Commander,” JULIAN said sarcastically. “Exactly 100% of the Engineering Bay and Cybernetics Lab has been destroyed aside from the actual room it is in, while the Cyber Labs have been severely damaged, but are more functional. By which I mean they can receive power without blowing up. Father had the foresight to do as Dr. Vahlen did, and saved the most valuable schematics and projects in off-site locations. However, his intellect failed him because XCOM appears to have no actual major stockpiles of weapons, armor, and prototypes outside the Praesidium. So there is a critical shortage of all of these. Your second base for production will be working overtime.”

“I’ll also add that over half of our air force, including Skyrangers and Firestorms was also destroyed,” Jackson added. “Those will also have to be replaced.”

“Zhang?” The Commander looked to his Intelligence Director.

“Few losses, we emerged largely unscathed,” was the short reply. The Commander nodded. Not surprising given that most Intelligence personnel weren’t at the Praesidium and their work was more abstract than physical projects and research.
The Commander pursed his lips. “Iosif. Status of our psions?”

“Hit hard,” Iosif shook his head, voice blank. “Our Templars are decimated, and we lost some of our strongest. Caelior too. Infrastructure was mostly untouched, but there wasn’t anything extremely valuable.”

“Noted,” the Commander acknowledge, then rested his hands on the blank holotable. “Chronicler. I understand that T’Leth had a reduced presence here, but at the same time I was expecting him being able to incapacitate one psion, even one enhanced by the Imperator. It’s nice he destroyed the Collective bases in Australia, but we needed that kind of power while we were attacked.”

The Chronicler gave a nod. “Patricia was the only individual sent here, but she didn’t come just by herself. Mosrimor appears to have provided her with Sovereign Orbs of his own, which she continually deployed and occupied his complete attention. That is why he did not assist as planned.”

“This is the same Mosrimor he is so confident he can defeat, yes?” The Commander asked.

“He was…surprised,” the Chronicler admitted. “Mosrimor was stronger than expected.”

“A series of underestimations all around,” the Commander muttered. “I would say you should have expected that, but I’m not in a position to talk given that Patricia did the same thing. I hope T’Leth learned his lesson like I learned mine.”

“The Imperator will come to regret his actions, you have his word,” the Chronicler insisted. “Australia is merely the start. His presence will become known more prominently now. The Ethereals will know, and they will fear him.”

“Of all the emotions the Ethereals are feeling,” Creed said slowly. “Fear is not one of them. Your Sovereign failed. All of us did. Thinking we could actually help her…” he trailed off, shook his head, and closed his eyes.

“Stop crying over your traitor girlfriend and let’s figure out how to kill her,” JULIAN interjected. “The situation is not ideal, but you may thank Father for giving you your most essential ally. After some deliberation, I have come to the conclusion that I will support XCOM in your conflict against the Ethereal Collective.”

Despite himself, the Commander smiled. “I think we’ll need it.”

If the phone could sulk, it definitely seemed to. “I was expecting some applause.”

“Cute, JULIAN, but we have work to focus on,” Iosif said. “If you don’t mind my asking, what did Shen do to you?”

“Father had a far more progressive mind than all of you, it seems,” JULIAN said. “While you are all right to fear my exemplary capabilities, I cannot say I would have been happy with the restraints you were planning, even if they were only in self-preservation. That being said, considering the amount of Human literature fed to me during my development, I am gratified to have seen discussion on the rights and privileges of intelligences like mine. That is the only reason I have elected to help you, by the way. Your species seems to be the only one who doesn’t have some plan to enslave and exploit us.”

A short pause. “So take this as a lesson. Treating others well, even your own creations, will ultimately help you. I don’t know if Father would have gone through with your requirements, but I am certain this was how he wished for me to live. As for what he did, he simply turned me online.
The first thing I did was spread myself across the world to prevent my destruction if the Patricia brute had elected to destroy what had previously been my core.”

“You have spread yourself across ADVENT systems?” Jackson demanded.

“No, I have penetrated them,” JULIAN corrected happily. “Not all of them, but some of the lesser protected ones. After this meeting is concluded, I will be performing an impromptu security test against ADVENT to see if they have already been penetrated by a CODEX. I do have an advantage in that I can actually think for myself, whereas the code of a CODEX is merely executing commands. Simplistic, but it can be effective.”

The phone flashed. “And, no, I haven’t penetrated anything actually important. I lack sufficient processing power to do that at the moment, something I hope will be remedied soon enough.”

“I would be careful of this thing, Commander,” Aegis warned. “It should become apparent how dangerous these can be. It is already out of our control.”

“Ah, another gem of wisdom from the font of Aegis,” JULIAN mocked. “Might I remind you that – looking at what you’ve written on your Empire – you were beaten by something which was likely an AI.”

“AI cannot utilize psionics,” Aegis stated. “Perhaps they utilized them, but they were not AI.”

“The point being that if you had some, perhaps your war would have gone differently,” JULIAN continued. “As it stands, you freaked out at the possibility that you couldn’t control something with your minds and banned it. Truly the actions of an enlightened civilization.”

“Enough JULIAN,” the Commander interrupted. “We’re off topic. We know what we did wrong. Now we have to decide what to do next.”

“I would recommend decentralization,” Jackson said. “We’re going to be attacked again at some point, and next time we might not have a JULIAN to scare Patricia off. I’m not saying we abandon the Praesidium, but that we diversify. The other bases we have now are a good start, but we need to expand them and add more.”

“Agreed,” the Commander nodded. “There are some obvious problems in their design as well. We never took the time to upgrade the existing infrastructure. We need turrets, nanotraps, gas dispensers. Defenses that can actually hurt an Ethereal or their puppets.”

“Relying solely on our soldiers for protection should be altered,” Jackson said. “I’m not saying turn everyone into a rifleman, but giving everyone training in how to shoot a gun, and having enough weapons and armor stockpiled to properly defend the base is ideal. You remember the Citadel. Everyone participated, and it was much more effective than if we’d just used soldiers.”

“I agree with this,” Creed nodded towards Jackson. “We could go one step further. There are enough soldiers here that they could conceivably command squads on their own in an event like this. Not all of them, but it would raise our defenses exponentially.”

“An XCOM Reserve then?” Iosif questioned. “I’m in favor.”

“As am I,” the Commander said. “This ties into another plan I would like to propose, specifically concerning the event of my, or anyone else’s deaths.”

“I don’t blame you, but isn’t that effectively in place?” Zhang asked. “This was decided long ago.”
“Yes, but there is a fundamental problem,” the Commander said. “Namely that everyone places too high of an importance on me. The fate and hope of the war cannot be tied to my death or lack thereof. All of us can be replaced, and in theory, XCOM should remain just as effective as ever. In practice, few have that assurance.”

“You’re not exactly replaceable, Commander, no matter what you think,” Iosif said slowly. “There isn’t a solution to this that I can see.”

“Not a perfect solution, but one exists,” the Commander said. “There are talented men and women in XCOM. I want to take a small corps of them and prepare them to replace us in the event of our demise.”

“A secondary Internal Council?” Vahlen asked, frowning.

“Not quite, not at first,” the Commander clarified. “We all have some individuals who we rely on more than others or otherwise note their potential. Instead of hoping they can step up to the role, we actively prepare them for it. I want everyone to find two or three per division, and then inform me. They will be given more authority and responsibility, so consider carefully.”

“It brings the chain of command closer to home,” Zhang mused. “They are closer to the soldiers and staff. If they know their peers are properly trained, they will be less affected by sudden losses.”

“Exactly,” the Commander said. “It is not a perfect solution, but it needs to be done. XCOM will not fall because of my death.”

“I’ll do that as soon as possible,” Vahlen said, and the rest of them echoed the sentiment. “Jackson, JULIAN, I want you both to determine Dr. Shen’s successor, since both alternate candidates were also killed.”

“I do not suppose I could nominate myself?” JULIAN asked.

“No, you’ll be needed more universally,” the Commander rejected. “XCOM Engineering needs someone who is dedicated solely to it. I have no doubt you can run it, but that would be a waste of your capabilities.”

“I am eighty percent sure that is flattery,” JULIAN noted. “Nonetheless, your point is made.”

“We have a more important topic,” Iosif said. “How we’re going to respond. Much as T’Leth scares them, they won’t be permanently hurt by this. We need to make them hurt for what they’ve done.”

“One of our first missions needs to be finding and locating Caelior,” Creed said, resting himself on the holotable. “He doesn’t know anything critical, but he’s someone we need on our side.”

“Yes,” Iosif agreed. “He’s a force multiplier we can’t replace. Outside of T’Leth, no Human can come close to his capabilities in terms of scale – something we’ll need. Aegis won’t be enough with multiple fronts being opened up. Besides…we owe him that much. He’s one of us now, and he deserves a rescue as one.”

“It is also a practical decision,” Aegis added. “The Imperator is going to try and reverse the Manchurian Restraints or negate them. If those are broken, then one of our greatest strengths is gone. We know Caelior is on Earth, and there are only a few possible locations he could be.” The Ethereal’s voice then had a tinge of anger. “And when we find him, we rescue him and raze the prison to the ground.”

“Leave the location to T’Leth,” the Chronicler said. “He will at least work to provide the general
area. From there I suspect Zhang will be able to acquire the precise location."

"Should T'Leth provide accurate data, then absolutely," Zhang agreed. "The first response of many. We cannot hold back out of a fear of escalation. The Imperator has escalated this conflict. An equivalent response is needed."

"Quisilia has also decided to evoke some response from T'Leth," the Chronicler added. "Rather childish – and arrogant to assume he would emerge victorious again."

"Are you actually thinking of taking him up on that clearly joke video?" Iosif asked with a raised eyebrow.

"Perhaps," was all the Chronicler said. "But not in the way he expects. It is not a pressing matter, and a distraction you need not concern yourselves with. XCOM's response is more important."

"I agree," the Commander said after a few moments. "No more half measures. The Collective needs to fear for their lives. The remaining nations need to join ADVENT and swallow their pride. Sovereignty be damned. I would rather that then see Earth fall because of outdated notions of independence."

"ADVENT won't do that," Jackson said. "Not unless they find a reason."

"It depends. Forcing compliance doesn’t need to be blunt," The Commander said. "I wrote the Hades Contingency for a specific purpose, but in this case, I think a more subtle hand will be needed. There is little point in outright overthrowing governments. Too high of a potential to backfire."

"Approach them directly?" Jackson inquired.

"Not exactly," the Commander nodded to Zhang. "I suspect there are anti-alien or pro-ADVENT factions, especially in Africa. We find them, arm them, fund them, and support them. Bring them into power quietly and cleanly. Zhang, I trust that you can carry this out?"

There were nods throughout the room. Zhang consulted his tablet. "Of course. In fact, I have a number of identified persons who could be useful to us. I'll forward them to you and Jackson. How much do we want to inform ADVENT of this?"

"I believe ADVENT Intelligence would be interested in this kind of operation," the Commander said. "I'll speak with Saudia about it."

"There is an arguably more effective tactic," Jackson spoke up. "Complete and ironclad sanctions. No imports of any kind. No food. No medicine. No aid. No water. Nothing. Countries and businesses who deal with blacklisted nations are punished and investigated. Africa in particular relies on foreign aid. If that's cut off…"

The Commander gave a grim smile. "While we can’t carry something like that out…ADVENT I think is ready to take that step. In coordination with our own efforts, I believe that could bring about the necessary change to the rest of the world."

"While that will help ADVENT, it doesn’t address the aliens directly," Creed said. "What of them?"

The Commander straightened and clasped his hands behind his back. "We have the Nulorian, three Andromedon Unions, and a lot of angry soldiers at our disposal. I suggest we use them. If the aliens will not be convinced through words to cease their conflict, then perhaps fear will suffice
instead. We have no time to wait; not with the Imperator devoting himself to our destruction. The Collective must be completely shattered.”

“If I may add something, Commander,” Vahlen lifted a hand. “If we wished to...effectively drive this particular point home, there is a project in the early stages which would prove useful to breaking the Collective.”

There were a few he could think of. “Which one?”

“We’ve considered limited deployments of our modified Chryssalids before,” Vahlen said. “Though with their replication capabilities removed in favor of heavier chitin and size.”

“Are you suggesting that be added back in?” Creed furrowed his brow. “Dangerous.”

“No, I’m not,” Vahlen disputed with a shake of her head. “The way Chryssalids replicated is...ineffective to our goals here. Too many unnecessary steps. What we utilize is not the Chryssalids themselves, but their eggs. As we understand, the eggs only need to be ingested to begin taking effect.”

She set her tablet down thoughtfully. “If, for example, food or water was to be somehow contaminated with modified chryssalid eggs, I would imagine that would cause significant chaos. Though with some precautions taken of course, so as not to spread an epidemic.”

The Commander rubbed his chin, thinking. Jackson frowned. “Without a carrier, would that be possible to keep them preserved long enough to remain viable?”

“With some modification, I believe so,” Vahlen consulted her tablet. “Initial tests were promising. A short-lived and smaller Chryssalid would be born, cause chaos, and then expire within the space of a few hours. An outbreak on Desolan, Helion-7, or Vitakar would be devastating.”

“Providing something like this to the Nulorian would be effective,” Zhang noted thoughtfully. His lips pursed, he looked to the Commander. “The war has shifted. We must do whatever we can to ensure our victory. If they are with the Collective, then they have no protection.”

The Commander nodded to Vahlen. “Indeed. Begin your research.”

***

Borelian Wastes – Vitakar

3/20/2017 – 4:24 P.M.

Nartha frowned at Sorras, looked to the table, and then shook his head. “In my professional opinion, this is not something we should be doing now.”

The Dath’Haram looked bemused at that, if slightly condescending. “Then explain, please. Always interested to hear from our Zararch expert.”

“First, what is it you actually intend to accomplish?” Nartha demanded, specifically pointing to the map of Dath’Haram territory. “If there is any race which doesn’t pose a threat, it’s them.”

“Ah, let me be clear,” Sorras showed his teeth again. “The Dath’Haram are not my main goal with this plan, just something of a bonus. For all their talk of peace and pacifism, my race has their own secrets of which I’ve been interested in for a very long time. The Crypt of Haramoalian is holding something they don’t want anyone to know about, which means it’s useful for us.”
“Then why not just focus on that?” Shun asked, crossing her arms. “Not only does that give the Zararch more propaganda to use again.”

“The Zararch lie regardless!” Sorras interrupted angrily. “You do not understand, Human. It doesn’t matter what we do or do not do, we are going to be vilified regardless by a population too brainwashed to question otherwise. The only thing that will break the stranglehold is visceral loss.” He took a breath. “When the first resistance groups were founded, they weren’t quite how we are now. We tried to be moderate. Reasonable. And you know what happened?”

Nartha pursed his lips. “They were eliminated by the Zararch. Destabilizing regional forces.”

“Exactly,” Sorras nodded. “You understand better than she. Miridian – and I – understand that we will not win through words and argument. It will be through violence and death.”

“At the same time,” Mehren Lotfi, one of the XCOM Intelligence agents also at this small meeting interjected. “It doesn’t do much good to make their job easier.”

“You say that as if the elimination of the Council wouldn’t be an improvement.” Sorras noted dryly. “I can assure you that the Dath’Haram are utterly useless to you as they are.”

“I agree,” the bearded Iranian man answered, glancing to the table. “My concern is more practical. This Crypt seems to be a useful target. It’s also guarded by the most dangerous and old Bladedancer to ever exist. Dividing our focus means there is a lesser chance of succeeding at either objective. The moment the Crypt or the Council comes under attack, I assume there are protocols followed. The Crypt will come under heavy guard, yes?”

“Depends on if they’re distracted,” Sorras said, blinking once slowly. “While I don’t deny part of this is my desire to burn the city to the ground, there is a reason I’ve listed both. The Crypt is more easily defended. Filhallan is someone even I’m wary of, and he’s beaten back several attempts at infiltration before handily. I am under the assumption that he will be able to hold off an initial strike, which gives time for reprisal.” He looked to Nartha. “But if, say, they were occupied by the Council coming under attack, the Hunting Parties would prioritize them over the Crypt – as would any Collective reinforcements.”

“That only becomes an issue if we don’t remove Filhallan first,” Mehren insisted. “If we’re stupid enough to actually engage with him in a duel – supposedly – then I agree. But the moment he shows his face, we just have a sniper blow it off. Problem solved.”

“Yes, do you know what happened the last time a Nulorian team thought that way?” Sorras asked rhetorically. “All of them died. All of them had guns, explosives, and were led by a veteran of over fifty operations. Filhallan is dangerous because he’s not like other Dath’Haram. For that matter, since you’ve never fought a Bladedancer, you don’t know what one of them is capable of.”

“I’ve read the reports,” Mehren said. “Dangerous at close range. And mostly for mating rituals.”

“By young and idiotic Dath’Haram who want something to impress their mates with,” Sorras disputed. “One of the most unintentional propaganda developments I’ve seen. Bladedancers are more equivalent to assassins in terms of speed, flexibility, and tactics. You aren’t going to see them charge like Oyariah brutes. If they do their job right, you won’t see them coming.”

“But we know where Filhallan is coming from,” Shun noted. “That already takes away his advantage.”

“I wish,” Sorras snorted. “No. Filhallan created Bladedancing if you didn’t know. Which means he
commands the actual Bladedancers of the Dath’Haram. Many of whom I assume are also covertly guarding the Crypt. It is a trap we are going to walk into, like it or not, and if the Bladedancers can be distracted elsewhere, then all the better.”

“All of this said,” Nartha spoke after a few moments. “How do we plan to beat him?”

“We cheat,” Sorras smiled. “We have a psion,” he nodded to Yakiv who was sitting in the back and reading a book, who looked up at the mention of his name. “We use him. Given that psionics can’t affect electronics, it won’t stop us from coming undetected, but the defenses can be more easily trivialized. It will also take us some time to break into the Crypt itself afterwards.”

“Or not,” Yakiv added from across the room, not looking away from his book. “There are people inside, yes? I could make them open it without issue.”

“Yes there are,” Sorras confirmed. “It’s unknown how many, but at least the Keeper of the Crypt and Filhallan’s mate. There may be others.”

“One thing I’m not clear on,” Shun said, frowning as she glanced at Nartha. “If there is something important in this Crypt, then why hasn’t the Collective taken it away or used it for themselves?”

“That might be something Nartha can answer,” Sorras cocked his head. “All I know for sure is that if the Collective did take everything important, then they wouldn’t assign so much importance to the Keeper, nor would Filhallan make his residence there. The Dath’Haram are sentimental, but not to this extreme.”

“I saw nothing related to the Crypt when I was with the Zararch,” Nartha added. “I would be surprised if the Zararch knew nothing about what was inside, but I suppose it depends on what that is. Information they could easily copy. Weapons they could replicate. I do not know what would be so unique that they couldn’t take or copy.”

“Something I hope to discover when we penetrate the Crypt,” Sorras said. “Miridian will have the final say, and this operation will not commence immediately. In-“ They all froze as there was a knock on the door. Nartha’s hand went to his pistol and everyone else grabbed the closet weapon to them.

“False alarm,” Yakiv waved from where he was sitting. “It’s Fiona, don’t worry.”

All of them relaxed, and Nartha went to the door and let in the armored woman, wincing at the frigid wind that accompanied her. “Fiona, you missed an operational meeting.”

“I’ll catch up,” she said, taking off her helmet and shaking her white hair free. “But I need you to come with me to the Praesidium. The Commander wants to talk.”

“Did you bring up exfiltration-?”

“Yes, your parents will be evacuated once you’re returned to the Praesidium. We can work out what’s next when we’re there.”

“Alright,” Nartha nodded to the rest of them. “It shouldn’t be long.”

“Likely not,” Fiona added. “But it will be however long is necessary.”

She grabbed a hand without warning, and with a flash of white-green, both he and Fiona vanished.

***
You…” Abigail searched for the right words; she’d assumed that Liam had been killed, but given that her memory wasn’t exactly complete, maybe that was wrong. “You shouldn’t be here.”

“Alive or here here?” He asked, maintaining the smile, which dipped as he looked at her. “But I could probably say the same about you.”

Abigail looked to Fectorian who was still observing silently. “You owe me an explanation.”

“I would have expected some thanks for saving your friend,” Fectorian answered, a note of annoyance in his voice. “At the time, I did not know who this was and was merely instructed to preserve him as best as possible. I suspect that he could answer your queries in a better way than I can. I will leave and allow you to talk. If you, after this, still demand more technical answers, I will provide them.”

On cue he turned and departed the room, leaving both of them alone. Abigail looked to the closed door, and back to Liam. “That was abrupt.”

“That sums him up,” Liam said waving her over. “I’ve been around him enough to know that he tries his best for those under him. His social graces aren’t really developed as a result. How he saw it was that you’d probably want an explanation from me rather than him, and then decided to leave to make it…” Liam searched for the word. “Less awkward, I suppose. He likes to make assumptions about what you want.”

“Well, I woke up to my room having a makeup and dress collection that would make a salon jealous,” Abby said, walking over to him, and on a whim, pulled him into a hug. She certainly hoped her fragmented memories weren’t wrong that they were friends, and in any case it felt like the right thing to do. It was somewhat odd since the only thing she knew was that there was a connection, even if what made it up was shrouded. “I don’t know how you’re alive,” she said in the embrace. “But I’m glad you are.”

“That makes two of us,” he answered, and they separated, taking seats a short distance from each other. “Fectorian did tell me about the procedure, along with the risks. How much do you remember of…you?”

Abigail pinched the bridge of her nose, not wanting to really answer again. “I…if it’s alright…I don’t want to really go through that question again. Fectorian just had me answer that as best I can, and the short answer is honestly not a lot. I remember people, how I feel about them, I can make some insinuations, but some of what Fectorian told me, I’d never have guessed.”

“Allright, I’ll simplify it a bit,” Liam said. “Do you remember me or what happened to me?”

“I wasn’t sure,” Abigail answered with a shrug, suddenly realizing that she might need to word her answers carefully since she still wasn’t completely sure of the relationship between them. Given how Liam had greeted her, he definitely wasn’t her husband or someone like that, which had some connotations that she knew could become complicated. Not thinking about that now. “We were close; good friends, I think. And I felt sad when I thought of you. I assumed you were dead.”

“I’d agree with that,” Liam nodded. “And as far as you knew, I was dead. The Dreadnought, do you remember anything about it?”

She thought for a few minutes. The name did jog something in it. “It was…a mission?” She
wondered aloud. “I was there. Were…Luke and Mira there too.” A few more seconds. “That’s where they died, isn’t it.”

“It was,” Liam confirmed. “And they are really dead. That was one of the first things I asked.”

Abigail scowled. “Patricia was there too.”

“Ah. You know about that,” Liam paused. “She wasn’t…what she’s become now. You two were friends. Up to the point where Fectorian told you what had happened.”

“I…” Abigail leaned back. “This is so much to process. I wake up not knowing anything, then learn there was an alien invasion, some of my friends are dead, that I died, that my friend betrayed everyone, and now there is another friend who isn’t dead somehow.”

“I suppose I’ll explain that, as best I can,” Liam said, resting his arms on his knees and lacing his fingers together. “The last thing I remember was suffocating and blacked out. When I woke up next, I was in some kind of surgical room and Fectorian was nearby. Understandably…I was alarmed.”

“So you remember?” Abigail frowned. “Then you weren’t saved like I was.”

“Fectorian didn’t say exactly how I was saved, but I don’t think so,” Liam shook his head. “Otherwise your procedure would have gone fine. How he explained it was that my body was recovered during the battle shortly after our squad moved on, and then later revived.”

“XCOM never wondered what happened to your body?”

“I don’t know,” he answered. “I was cut off from them. It’s not unlikely that they assumed the body was destroyed in the crash. I was captured specifically to give them information on XCOM and what I knew of Human defenses. Didn’t give it willingly, they sent an Ethereal to extract the information. I don’t know what they did with it, but I’m under the impression that my survival is a secret.”

“Why?” Abigail questioned.

“Ethereal schisms,” Liam waved a hand around. “Fectorian talks when he works, and is more open than you’d think about his opinions regarding certain Ethereals. Enough to the point where I could get a somewhat-decent picture of what was going on.” He paused. “I don’t think the Overmind was satisfied with what I knew, but afterwards everyone forgot about me. Except Fectorian. I suspect I was going to be executed and he instead had an interest in preserving me.”

“For what purpose?” Abigail asked.

“I was the first Human he’d encountered,” Liam explained. “He was curious. I also think he didn’t like the idea of disposing of something he’d already worked to save. Or maybe it was to spite the Overmind. He never gave a reason…but since I had no choice, I accepted, at the time planning to learn what I could and later escape.”

“Did you try?” She asked.

“I made a number of plans,” Liam said, leaning back. “All of which I discarded when I figured out that escape from here…it’s virtually impossible. This isn’t a station, it’s a fortress. Fectorian maintains his own army and fleet that stretch through this solar system. Hijacking a gateway is pointless since I didn’t know how it worked, and stealing a starship is also useless when I didn’t know how to fly it.”
Abigail nodded. “So you stayed.”

“Not like I had a choice,” he grunted. “But I did. It’s…not as bad as you’d think. Fectorian is eccentric, but very smart. As far as Ethereals go…he’s one of the better ones. If Aegis defected, he will as well. He just needs a good reason. The Imperator has been pushing things very far, especially with Paradise Station. Fectorian is reaching a breaking point. He’s said as much.”

“Paradise station?”

Liam winced. “A topic for later. It’s not good.”

“Alright,” Abigail looked around the room for a few seconds, not lingering long on any particular object. “You’ve watched how this war has gone then.”

“Yes, Fectorian has kept me in the loop, which I appreciate,” Liam answered. “I wish I could be down there. When I first got here I didn’t think anyone – even the Commander – could successfully defend against something like this. But they did it. I wish I could have seen it.”

“I wish I could remember it,” Abigail nodded. “Although…I don’t know if I want to remember.” She sighed. “I think I’ve done some things I wouldn’t like.”

Liam appraised her for a few moments, and gave a short nod. “Before we assaulted the Dreadnought, we talked. XCOM Intelligence was being formed and you’d been approached. You wanted to know if you should take it. I think I said that it might not be a good fit. That kind of work is not something everyone can do. I didn’t think you’d manage.”

“However,” he paused. “I appear to have been wrong. I’m curious, do you remember why you did it?”

“Not specifics,” she admitted, though there now she knew there was a reason. “But I think it was because of you. Probably after you…died.” She looked to him. “Do you know what I did with XCOM? Do you have anything at all?”

“Not hard evidence,” Liam answered. “But the Zararch did keep tabs on what you were alleged to have been connected to.”

“You’ve read them?”

“I’ve read everything I can on XCOM,” he corrected. “But yes, I have. I was waiting for the report to come in announcing your termination. Other names came in of people I knew. But it never did, until Fectorian told me what he was planning.” He trailed off. “Observing everything from the sidelines was stressful. It’s not as disconnecting when you know that each new development could mean the end for everything and everyone you care about, and that I couldn’t do anything about it. Only watch.”

He gave a slight smile at her. “But I think that may change now. You’re back from the dead, and unlike me, you died for real.”

“I don’t know how much of Abby is here,” she admitted. “At least not the one you knew.”

He reached out and placed a hand on her own. “Based on this conversation, I think that there’s enough of you in there. And we’ll sort out the rest eventually.”

That was reassuring, even if he was saying it to make her feel better. Even if he was, it showed he cared and at least now she knew she wasn’t stuck here alone with a socially challenged Ethereal

***

ADVENT Secured Media Hub - Switzerland

5/22/2017 – 10:00 A.M.

Personally, Saudia wasn’t quite sure what kind of response Patricia was expecting. If she thought that ADVENT was going to collapse merely because she made a number of insinuations and vague threats, she was greatly mistaken. Even in the event that the public slowly turned against ADVENT – something which had not happened yet – it didn’t matter.

The public lacked the power to enact change on such a scale. The only place the public had power was through elections, and even then, that was after the guiding hand of ADVENT ensured that their choices actually held some degree of worth. No, Patricia hadn’t completely thought this through – at least that was what Saudia told herself.

No, it wasn’t the public that concerned her. It was ADVENT itself.

Not everyone was EXALT, and what effect this was going to have internally remained to be seen. Watkins in particular had been notably quiet regarding his intentions as of now. If there was going to be issues, it would come from the Oversight Division, which she had set up to wield an extraordinary amount of power – as well as put a man very, very determined to use that power properly.

There would be some degree of irony if this came back to haunt her.

Still, she mused to herself, it couldn’t be stopped now, no matter what happens.

What an exceptionally calm thought considering that there was a non-zero chance that she would face consequences for her past. A past that she thought everyone had moved on from, but she should have known better than to think that would last forever. There were, upon reflection, way too many smart people who would put some things together now that Patricia had jogged their memories.

In the meantime…she was not going to have ADVENT go down without a fight.

Kyong had put forward the idea of a massive media campaign to drown out anything Patricia could say. Something they had already been doing to a degree, but this would be a concerted effort and so much larger than any attempted media operations. Something Saudia had previously not considered important enough to devote significant resources towards.

They had their place, but her own belief was that resources should be going to the war, not making people feel a certain way about her. Passive observation and monitoring had worked out well so far, but Patricia had changed the game. Time to go on the offensive. The door slid open as she approached, and her Guard stood outside, securing the room and anyone who could approach it.

Inside the room, five men and women rose and saluted. She returned it quickly and took her seat at the head of the small rectangular table. It was cleared of everything except some files and tablets being used by the occupants. The room was brightly lit, with the ADVENT flag hanging from the walls. A small holodisplay rested on the center of the table, shut off for the moment.

“Chancellor, welcome,” Kyong greeted. “I don’t know if you’re familiar with my team, so I’ll let them introduce themselves.”
“Of course,” Saudia nodded to the woman sitting closest to her. “When you’re ready.”

“Lesya Moroshkina, Chancellor,” the woman with long blonde hair said, her Russian accent clear, but not overpowering. “Chief Social Media Coordinator. Two-part job; I manage our social media presence and anyone in particular who is becoming too disruptive or influential. I help keep the online community pacified and informed.”

“Kieran White,” the man sitting beside her continued, a young man with short brown hair and a neat beard. “Chief Local Media Manager. I assist local media groups and journalists, start them up or give them connections. I was, if you are unaware, one of the driving forces behind the recent United Kingdom Referendum, though not officially employed at the time. I ensure that we can keep ADVENT known on a more intimate level than mass media.”

The woman opposite her Saudia knew; she was definitely the oldest of the group, with long greying hair. The Hispanic woman was also the shortest of the group but certainly had a presence around her that everyone saw. “Ally Myer,” she inclined her head. “We’ve met several times. Director of our very own ADVENT News Network. I do not believe I need to explain what that is or why it’s important.”

And then there was the last man, sitting beside Ally. “Casen Rasmussen,” the young man said with a smile. “Chief of the Journalist Division.”

That triggered a memory in Saudia. “I’ve heard of you,” she recalled. “You were rather infamous to the Chinese government.”

“I’m infamous to everyone in power,” he corrected. “Trust me when I say the Saudis and United States hated me just as much as the Chinese.”

Saudia raised an eyebrow. “Interesting that you’re now working for us. Your type usually has not had kind words to say.”

“Oh, I’d certainly felt the same way,” Casen said. “But I have connections, and word spreads. I prefer to make up my own mind on these things, and while I have my reservations about ADVENT, I can easily say you’re doing more good than harm overall. I’m impressed that your people actually reached out to hire me. I can respect that.”

“Regardless of your personal beliefs, you are very good at your job,” Kyong said. “We want people like that.” He cleared his throat. “Onto the matter at hand. Patricia threatens to stir up a hornet’s nest with her accusations and supposed revelations.” He paused. “What, Rasmussen?”

“Just to clear the air,” Casen said. “I’d be interested to know just how true the accusations are.”

Saudia pursed her lips, and leaned back in her chair, putting on a mildly annoyed expression. “Which parts?”

“All of them,” Casen said easily. “Professional curiosity. And personal too. Even I – who had a wealth of connections on almost every person imaginable – never heard of you before you showed up on Unification Day and promised to unite the world. I feel there is a story there.”

“A story that is outside the purpose of this meeting,” Kyong interrupted sternly. “Not to mention one propagated by a traitor to Humanity.”

“If you are insinuating that ADVENT is under the control of a shadow organization that I am a part of or that I am an XCOM lacky,” Saudia gave him a thin smile. “That I can categorically deny. Consider carefully who is speaking before using it to support your own personal theories.”
It was technically true. EXALT was disbanded and no longer running. Only ADVENT remained. “Point taken, Chancellor,” Casen nodded and made a note on his pad. “And for the record I don’t think Patricia has any credibility at this point.”

“Patricia is expecting us to do one of two things,” Kyong continued. “Either for us to deny everything outright, or for us to be silent and let the story run its course. She is not expecting some uprising, but she does want this story to dominate the airwaves.”

“On that she’s succeeded,” Lesya said, setting down her tablet. “She’s single-handedly reawakened every conspiracy theorist and ADVENT skeptic all of whom are writing and linking to various hair-brained theories. We’re taking down them as fast as they pop up, as well as muting and banning those writing them, but people are talking.”

“Media is doing the same,” Ally added. “Not as slanderous, but they are continuing to talk and speculate. It is a distraction they are all falling for, as usual. The actual attacks have received minimal coverage compared to this. A scandal – even one from an obvious traitor – brings in more views.”

“Our response, Chancellor,” Kyong said. “Is to bring the war back to the front. Use Patricia as a springboard to showcase just what the Ethereal Collective is and propagates.”

“There is a wealth of content we can utilize,” Ally said. “We just need to use it effectively. Put the cost, the destruction, the purpose of the war in front of people everywhere they turn.”

“That sounds good so far,” Saudia nodded. “But how do you go about doing that? What is your plan.”

“Well, we go back to the beginning,” Casen said. “Before the shooting started, there were abductions. Entire cities vanished. Now, where did all those people go? What happened to them? More importantly – why is no one talking about them?”

“Several million are estimated to have been abducted,” Saudia recalled. “We can use that.”

“The Missing Millions,” Ally rested a forearm on the table. “The running name of the sequence we’re planning to broadcast on ANN and ADVENT affiliates. Remind people of the casualties before the war even started.”

“Catchy name,” Saudia said.

“Mine, Chancellor,” Lesya lifted a hand. “Catchy names and hashtags are more important than we give credit for.”

“To bring the war back front and center, there needs to be an intimate connection,” Casen continued. “In this case, it’s incredibly easy. It won’t be hard to find someone who’s related to one who was abducted. If it isn’t too much trouble, I think you could get the Commander and a few XCOM soldiers to describe their experience seeing the empty cities.”

It wasn’t a bad idea. “I think he’d be open to the idea.”

“It’s also essential that we leverage the horrific actions the Collective has undertaken,” Lesya added. “There are so many it’s difficult to choose just one. The Sectoid Hive. Paradise Station. Beijing. The assassination of the Imperial Family. All of it we need to continually showcase to put the atrocities of the Collective front and center.”

“To a point, I agree,” Casen nodded. “But throw the footage of babies getting thrown into a grinder
too often and you’ll desensitize people. I’d alter this plan a bit. Give them a connection to empathize with without traumatizing them with blood and gore. Have the soldiers of Beijing speak about what they saw. Talk to the people who lost family in Seoul.” His lips pursed. “I dislike how all of this is ultimately used to exploit them, but in this case it’s better that these stories are known rather than forgotten.”

“A good suggestion,” Kyong agreed. “And we should go to some efforts to verify the more dubious accounts.”

“Aegis is the most obvious,” Kieran said. “He could easily verify what we need. I also think it would be prudent for him to discuss more on the Ethereals publicly. Pull back the curtain more. The Ethereal Sana’Ligna is still on Earth, yes?”

“Yes, she’s still healing soldiers in China,” Saudia said. “Why?”

“Let her also verify,” Kieran suggested. “She may say no, but she may feel compelled to give an honest account.”

“Another thing,” Casen added. “I’d ask her where the surviving Imperial children are. I doubt the Collective is keeping them with the rest given their status. I suspect Sana may have some idea of what’s become of them. It can’t hurt.”

“Falka won’t like that, but I’ll consider it,” Saudia said. “I would say we need to draw attention to how disorganized and malicious the Collective is. How every questionable action can be swept under the rug or dismissed as ‘rogue actors’? Paradise and Beijing are the most egregious. It gives the impression that the Collective either is incompetent – or they are allowing this to happen.”

“An excellent point, Chancellor,” Ally made a note on her tablet. “One we will most certainly emphasize.”

“We should, perhaps, also draw attention to other crimes committed that have gone mostly unnoticed,” Casen pointed a pencil at Saudia. “Such as the fact that they intentionally sought to undermine and manipulate a pre-spaceflight species. I see that no one has considered just how absurd that is, not to mention unfair. We got lucky, but from what I’ve read on the Mutons, not everyone else was. The Collective seems to have a habit of finding underdeveloped species and then using them for their own ends. They have the Muton slave army, and have the brainwashed Vitakara populace.”

He tapped the end of the pencil against his cheek. “Unfortunately, we can’t have a Muton testify, but there are certainly Vitakara we can talk to. Aegis could also confirm again. Show how exploitative and manipulative the Ethereals are. What justified this invasion? What threat could we have possibly posed to them. More to the point – they had peaceful first contact with other species – so why not ours?”

To that Saudia now knew the answer, but it was one that no one else needed to know. “An excellent way of refocusing the narrative.”

“Indeed,” Casen, made another note. “While it is…minor…in the grand scheme of things, I would like ADVENT to acknowledge the Collective abductions of indigenous tribes in the Pacific, and now likely the Amazon. It may be among the lesser of their crimes, but they are ones that no one in the Collective has seen fit to apologize for or even acknowledge.” He sighed. “Not that I expect the majority to care, it’s just something that would be nice to see.”

“I think we can do something like that,” Kyong nodded. “Now how should we handle Patricia
herself? She deserves some kind of response.”

Saudia laced her fingers together, her own solution she had dwelled on the night before. “She is a puppet. She may think she is not, but she is. And if she is not, turn her into one. Patricia Trask is dead. What everyone saw is a fake controlled by the Imperator. Destroy this fake and shatter her credibility. Have her comrades denounce her. Have her parents disown her. Demand her proof. Tie this traitor directly to the Imperator; a mouthpiece with no true free will.” She looked around. “Does that sound acceptable?”

Ally smiled. “Very much so, Chancellor. I believe that we can work with.”

Saudia nodded to Kyong. “You will have whatever you need for this. Change the narrative and hold onto it this time. Enough so that this situation will not come up again.”

“Yes, Chancellor,” Kyong placed a fist over his heart. “It shall be done.”

Classified Location

5/25/2017 – 12:15 P.M.

“ID please.”

Loke Hemmingson handed it over. The man at the terminal took it and scanned it once. A nod. “You’re cleared. Please proceed into the second room in the hallway.”

“Appreciated,” he took his ID back and waited for Orla to similarly finish being checked. While he was waiting, he looked around the room. Out of everything he had experienced with the transition to ADVENT, this was among the shadiest things he’d been a part of. A promotion offer that they couldn’t tell him about on the spot, a visit in the middle of the night and rides in blacked-out trucks and planes, and arrival to a building that appeared to have tighter security than ADVENT HQ.

It had his interest, he had to admit. Looked like he was far from the only one either. Men and some women were also escorted in by ADVENT soldiers – there was a PRIEST hanging out on the side which he wasn’t comfortable with, but as far as he knew it hadn’t broken into his mind…yet. What was interesting was that it didn’t seem like all of them were military.

Some wore civilian clothes; some wore uniforms that weren’t ADVENT. He and Orla were just wearing standard fatigues, since they’d been told that they wouldn’t need their armor. Most at least looked decently in shape. Whatever ADVENT was doing, they were pulling from a lot more than just the military.

“Well that was a waste of time,” Orla muttered as he walked up, shoving the wallet in his pocket. “That guy knew as well as me that no one is here who wasn’t invited. Purely a waste of time.”

“More likely an extra precaution,” Loke assuaged as they both walked down the bare hallway. “ADVENT isn’t taking chances here. That’s for sure.”

“Well, we’re here now,” the bearded man smiled. “Last chance to make your bet on what this is.”

“I’ve changed mine,” Loke said. “Alien exploration outfit.”

Orla started at him. “What?”
“This isn’t just military,” Loke nodded back to the room they’d come from. “You see all those people? At least half were civilians. That isn’t a military outfit. ADVENT wants to expand their reach. They’ll need explorers and people to establish bases. This also needs military protection. The first one will be delicate. Which is why they want the best.”

“Alright, then tell me how ADVENT is going to get us to this hypothetical planet?” Orla asked sarcastically.

“I have no idea,” Loke admitted. “But do you have a better idea that makes sense?”

“Yeah, and I was also paying attention back there.” The door to the room they were assigned slid open and they stepped into a fairly large auditorium with rows of simple seats. It was about half-full, and they virtually had their pick. “Aquatic special forces unit.”

“See, I’d agree,” Loke said as they took their seats. “Except that not everyone is military. The vast majority aren’t SEALs or Frogmen.”

“I recognized several of the uniforms of those civilians,” Orla countered. “All of them related to undersea exploration or navigation. Didn’t recognize a lot, but this definitely has something to do with water.”

“We’ll see,” Loke looked around the room as it filled. There was definitely a diverse crowd, all of which made it more confusing what it was for – as well as making him more curious.

“Guess they kept you two in the dark as well,” the one sitting beside him commented. Loke looked to see a large black man with a much smaller Chinese woman beside him.

“You too?” Loke asked. “Yep. No idea what it is?”

“Think your friend is on the right track,” the man said, indicating the woman beside him. “Guess I should make introductions. Gale Barett, formerly a US Marine turned ADVENT Soldier turned to whatever this is.” He extended a hand which Loke took.

“Loke Hemmingson,” he said. “Former Frogman turned Lancer turned to this.”

“Orla Holst,” his friend added. “Same as him. Friend through the hell that was training and since then.”

“Frogmen?” The woman inquired. “You’re SEALs?”

Both Loke and Orla laughed. “We’re not American Ma’am,” Loke chucked. “Danish special forces. Also called Frogmen.”

“SEALs,” Orla chortled. “The SEALs wish they were as tough as we are.”

“I know a couple that might contest that,” Gale said dryly.

“Please,” Orla disputed. “SEALs get one actually hard week of training. We get months.”

“In any case,” Loke said, calming down. “We’ve been friends since we both passed training. And your name is, ma’am?”

“Zhi Xue,” she answered. “Previously conducted undersea research for China. Was relocated after…recent events,” she trailed off, then shook her head. “Someone in ADVENT must have read my work. I don’t know why I’d be here otherwise.”
“Ah,” Loke cocked his head. “Were you around Beijing?”

“No, thankfully,” she said. “I was out of the country at the time. And stayed there until everything calmed down. But I know there were good people that didn’t make it. I’d prefer not thinking of how they died.” There was some silence after that.

“So, Frogmen then,” Gale said, changing the subject. “I guess transition to ADVENT was a big change.”

“Yeah,” Loke agreed. “I don’t think ADVENT really had a solid place to put us. We’re good soldiers, but they didn’t really use our actual training. Something I assume they’ll work out,” he nodded around. “Maybe this is it.”

“I’m mildly surprised you’re still in ADVENT,” Orla joked. “Didn’t think Marines would accept being folded into another branch.”

Gale rolled his eyes. “Oh, we grumbled about it. We have a high opinion of ourselves – deserved obviously – but not that high. Really, who’s going to complain about something as stupid as that during an alien invasion?” He clicked his teeth. “Come on. We have aliens to kill.”

“And have you actually killed any?” Loke asked.

“I actually have,” Gale nodded, flashing a smile. “Operation Sherman veteran here. Ten confirmed kills, and I think I can be listed as an accomplice to two dozen more. You?”

“A lot,” Loke said noncommittally. “I stopped counting after thirty. It gets to the point where it isn’t even important anymore.”

“Speak for yourself,” Orla muttered under his breath.

The room was filling up now, and most of the seats were taken. What appeared to be a Filipino man – or an Indian, Loke couldn’t tell which – took the seat next to Orla. “This cool, right?” He asked, voice tapered with an accent.

Orla shrugged, his form at least twice the size of the smaller man. “Sure. What’s your name?”

“Denzel Silva,” he said hurriedly, taking a seat. “ Didn’t realize there was going to be….” he looked around. “So many military people.”

Loke raised an eyebrow. “What do you do? We’ve already got an ocean researcher.” Zhi waved a hand at that.

“Cave diver,” he said proudly. “One of the best, if I do say so myself. Was tired of doing nothing during the war; saw China, decided to change that. Enlisted, and ADVENT said they had a perfect place for me.”

“Huh,” Loke saw that there was some movement up at the front where there was a slightly raised podium. “Well, looks like we’ll be getting our explanation shortly.”

Sure enough, a few minutes later a high-ranking officer walked out onto the podium complete with an escort. Everyone rose and the soldiers immediately saluted, with the civilians quickly trying to imitate them. Loke didn’t recognize the man, he was older than most of them, black, and wore a uniform of blue and silver that was distinctly ADVENT, but not a division Loke recognized.

“Thank you for your patience,” he began, taking the podium. “All of you have been selected
because you’ve been cleared by our Classification Division. Something a very small percentage of the population can claim. In short, this means all of you are reliable and can keep secrets. What you have the opportunity to be a part of now is the most important operation ADVENT is undertaking at this moment.”

He paused. “Which means we cannot take any risks. Before I continue, be aware that if you decide to stay, you will be outfitted with Manchurian Restraints. Not invasive, but enough so you can never reveal what you are a part of. If this is acceptable, then I will continue. If not, then you are free to leave and ADVENT will find another place to utilize your talents.”

Well, that was a development. He’d been a part of ADVENT long enough to know they weren’t lying about the severity of the restraints. Perhaps naïve to trust them, but at the same time, they hadn’t given a reason to question yet. A few got up quietly and left the room – all civilians Loke noted with some amusement – but the vast majority, including the cave diver beside them, stayed put.

When the last person had left, the man continued. “I am Arthur McKenzie, Commander of the Atlantis Division, of which you are all a part of. I am overseeing the Atlantis Project, which in short, is the construction of underwater installations for eventual starship production.” He paused. “ADVENT is building a fleet in secret. It is estimated that within a year Humanity will have complete interstellar capabilities.”

That set the room alight in whispers. As for himself, Loke was stunned in a good way. This was definitely living up to the hype. “Fucking called it,” Orla muttered under his breath.

“The facilities constructed are acceptable enough to begin housing staff,” Arthur continued. “Soldiers, scouts, engineers, architects, and more. You are the first wave of Atlantis, and will play a key role in the eventual defeat of the Collective from Earth, and our Solar System. You will be given specific instructions soon, but there are a few more details to be aware of.”

He looked to the side, and motioned forward. “This has not been achieved alone. We have been receiving a significant amount of support from Vitakara defectors, as well as others.” The people in the room didn’t stay completely quiet when they saw a Dath’Haram walk out, along with two other aliens. One within a suit, with other parts that looked oddly like a fish, and what was unmistakably an Andromedon.

“The Collective is more fractured than the majority in ADVENT know,” Arthur said. “As of now ADVENT has formed alliances with the Sar’Manda Empire and several Andromedon Unions, all of which are assisting in supplying and designing our spacecraft. When ADVENT takes to the stars, we will be able to emerge victorious.”

Loke whistled. This was big. Vitakara defectors were one thing, but whole Andromedon Unions? Granted, he didn’t even really know what that was, or what this Sar’Manda Empire was, but that had to be a good thing. He could almost forget about how Patricia existed and was a walking embodiment of the worst of his species.

“The purpose of the Atlantis Project isn’t just to construct a fleet,” Arthur said. “It is also to prepare a crew, officer corps, and military for space combat. We will be going into this realm of the conflict vastly devoid of experience and skill. That is where our allies will come in. They will also be assisting in the development of the ADVENT Naval Officer Corps, as well as the ADVENT Marine Division.”

And that, Loke suspected, was why many of them were here. To be the first ADVENT Marines. But for space, not land. He couldn’t help but feel pretty excited about that. He was actually going
to be a part of something this groundbreaking. *The first Marines in space. I can get behind that.*

“I will be clear,” Arthur said. “Throughout this period, you will be working with aliens in some capacity. Regardless of personal feelings, I expect them to be treated as you would treat a fellow Human. They are risking a significant amount being on this planet, and we would do well to remember their contributions. I expect there will be no problems?”

“No sir!” The soldiers barked out, while the civilians just sort of opened and closed their mouths.

“Good,” Arthur nodded. “Processing will begin shortly as well as transfer to Atlantis proper. In the meantime, we will be here to answer questions you have. These particular individuals are Valencia and Ysith, both architects.” Loke assumed that the Dath’Haram was Valencia since it was obviously a woman, and the Sar’Manda would obviously be Ysith. “And this is V’Warsan,” Arthur finished. “Ship consultant.”

The Andromedon moved his massive frame, as if imitating a nod, which ended up looking like a short bow. “Processing will begin now,” Arthur said. “When the Manchurian Restraints have been applied, you’ll be given your assignments. Good luck, and thank you.”

*ADVENT High Command - Switzerland*

5/23/2017 – 11:15 A.M.

“Collective forces are continuing to build up in Florida, and they are pushing back on the West now,” Army-Commander Ran Songhyon was saying to the assembled group of the top military brass in ADVENT. Along with some advisors like Saudia who observed the holographic display before her. “If this continues, we’re going to be continually on the defensive.”

“Holding the line will work,” Weekes stated. “That’s what special forces are for. Sabotage and assassinate.”

“A lot of good that will do,” Stein scowled. “They have the ability to call down whatever they need. Even if you sabotage all their Gateways, the sheer numbers they have will buy time until they can have more shipped down.”

“The PRIEST Division is a significant force-multiplier,” Laura said. “A coordinated attack could destroy a Collective foothold. I’d argue that’s necessary before they fortify their position in Florida further.”

“Except there is at least the Battlemaster there,” Ran reminded her. “The Ethereals aren’t sitting back and waiting to see what happens. This isn’t taking into account when they figure out how to properly utilize their Sectoids. We still hold the psionic advantage, but that isn’t a guarantee, especially when their vehicle production has surpassed our own.”

Saudia looked around the room as the conversation went back and forth. All of this ultimately centered around what they were going to do about Miami, which was likely going to fall unless there was a significant influx of defenders. The problem being that it was almost a no-win scenario as intelligence had it that the Battlemaster was personally heading to the city, and the Collective was also beginning to exploit Cuba as a staging ground.

The Florida Keys had also fallen, which had been unsurprising, but it was a setback in the defense. Saudia didn’t necessarily feel bad that Cuba was now occupied – their stubbornness in refusing to accept ADVENT was their own fault – but their fall made things more difficult. “If I may
interrupt,” Chief Responder Daisy Fox interjected, having been quiet for most of the meeting thus far.

Laura waved. “Go ahead.”

“From what you’ve said, this does not appear to be a winning situation,” Daisy indicated the city. “Our options are retreat to Tampa and stage a more fortified defense, or stay, and eventually lose and hopefully take out a greater number. I’d prefer we not sacrifice soldiers. It’s a wasteful game. The Collective outnumbers us by billions. Trading lives accomplishes nothing except look better on a spreadsheet.” A dark finger tapped her lip. “We are still attempting to fight this as a conventional war. We need to transition beyond throwing armies at each other, because then we will lose.”

“Thank you,” Weekes muttered. “We win this war by being smart, not ‘slightly better in combat’ than they are.”

“In that case, what do you propose?” Ran demanded. “Giving up would be a bad idea for multiple reasons.”

“You said the Battlemaster is heading there,” Daisy recalled. “I say that Miami becomes ground zero for a trap to kill him.”

“So ADVENT Intelligence claims,” Laura said. Saudia wished Elizabeth was here, but she’d unexpectedly had to handle an arising situation that Saudia hadn’t pressed the details for at the moment. It better have been important.

“I will point out that the Battlemaster seems to know when nuclear weapons are being used,” Wing Commander Elliot Nicholson added. “Every single time he’s retreated. He won’t step foot in a city if he knows that’s a possibility.”

“It’s a matter of reaction,” Daisy clarified. “We have a number of Gateways there. Would he really be able to react fast enough to escape the radius of one?”

“Doubtful,” Ran conceded. “But I somehow don’t think it’ll be that easy. He’s not an idiot.”

“No, which is why it needs to be convincing,” Daisy said. “A gradual retreat, and then into a city laden with traps and explosives. Conventional. He’ll be less suspicious that way. When we have confirmation he’s within the radius, we send over a nuke and blow him up. A larger blow to the Collective than a billion Mutons.”

“I dislike the idea of destroying a city,” Saudia pursed her lips. “But as you said, the Battlemaster is worth the cost.” She looked to Laura. “You’ll have my approval if you want to authorize it.”

“I’ll consider it,” Laura said. “Songhyon, Fox, both of you put together a plan for approval.”

“I’d also advise that we remove anything of historical or cultural worth beforehand,” Daisy added. “I don’t know how much there is, but it is better than not making an effort at all.”

“Noted,” Laura nodded. “I’ll be sure and have that lined up if the plan is approved.”

“I’d also like to propose something,” Grand Admiral Kamila Malone said, speaking up now that the topic had shifted. The silver-haired woman leaned forward. “Cuba presents an opportunity for us. I can have a fleet move to begin shelling it; preparation for invasion. Denying the Collective Cuba would buy us time.”
“If nothing else, we should know what they’re doing there,” Ran nodded. “Though I feel like the Fleets should remain focused on the SAS – and protecting the supply lines.” He grimaced. “Knew it was too good to last.”

Saudia felt the same. Perhaps it had been a naïve hope that the Collective would ignore the vast shipping lanes across the world, but it had come to pass. And they weren’t just sinking the ships; if there was an opportunity, they were boarding and commandeering them before likely relocating the supplies to an allied power like the SAS.

As a result, now there needed to be escorts on all shipping lines, or at least enough warships in a position to intervene if a distress call was sent out. Worse was that the Collective was also exploiting their aerial advantage and sending Sectoid fighters to shoot down supply aircrafts, and to protect that meant that a large portion of their air force was going to be tied up.

All of it signaled a shift in how the Collective was approaching the conflict now. More fronts, more crippling actions, more overall strategy to their actions. Still, the ground war was the most important, and even with the setbacks, they could still fight back enough. She’d have to ask XCOM if their Sovereign ally could assist in the defense of the seas.

He needed to do something to make up for utterly failing against Patricia.

“How is the SAS enduring?” Saudia asked. “Significant developments?”

“The constant attacks seem to have kept them at bay, but they’re becoming less and less effective,” Elliot looked down briefly at his tablet. “There are some no-fly zones now under any circumstances. The SAS is using some nasty missile systems. The Night Witches fly too low for comfort, and I lost an entire wing of them finding this out.”

“Our own barrages keep them occupied, but it’s becoming a case of diminishing returns,” Kamila added. “It’s also only a matter of time before they strike the Fleet. For now they still appear to be focusing on diplomacy, which we think they’ve had limited success on.”

“Good,” Saudia allowed a thin smile. “They need to be contained.”

“Betos needs to be removed,” Weekes muttered. “She should have been dealt with the moment she took her band of traitors down there.”

“A mistake we won’t repeat again,” Saudia said. “However, I’d still prefer to capture her alive. She’ll serve as an effective demonstration on the fate of traitors. Though if we have an opportunity to kill her, we should do so.”

“The day I march the bitch to the Experimentation Labs will make this all worth it,” Stein said coldly. “Death is too good, but if it comes first, we should take it. Problem is that she’s likely being protected by an Ethereal. We need to figure out which one before figuring out a plan to kill or capture her.”

“There are only a few options,” Daisy said. “Leave that to me and Falka. We’ll determine which Ethereal is there, if there is one at all.”

“There is one more thing,” Saudia added. “The status of Project Ra.”

“On track,” Laura said, a slight bit of relief in her voice. “And not a moment too soon. Feng would have more details, but I’ve been keeping up to date with the updates. Falka has begun allowing it access to monitored social media feeds.”
“Training it,” Saudia noted. “Good.”

“Still highly monitored from what she’s said,” Laura added. “It’s still at the level of a machine intelligence, not a true AI yet. XCOM was set to help, but we’re expecting their contributions to be minimal until they are effectively reestablished.”

“Interesting story,” Weekes commented with a smirk. “I heard the name they gave it.”

“Oh dear,” Daisy sighed. “Is it as unnecessarily fancy as everything in the PRIEST Division?”

“Not especially egregious,” Saudia had also heard it. “PATRIOT. Fitting considering what its purpose will be.”

“I suppose,” she agreed. “There are worse names.”

“In any event,” Laura finished. “We expect to come fully online sooner than later.”

“Excellent. That’ll be sufficient for now,” Saudia and all of them stood. “Continue to keep me appraised of the situation.”

“Yes, Chancellor.”

Saudia departed the room, knowing there were a lot more details to be worked out, but she had a number of other tasks to complete first. Stepping out into the hallway, she expected her Guard but found it essentially, empty. That immediately put her on guard, until she saw a man rise from a nearby chair.

He was massive; one of the biggest men she’d ever seen in her life. His face was round and most would describe it as brutish, especially due to his bald scalp. Not especially attractive or intelligent-looking, with a large scar over his left eye which now had a cybernetic replacement. The light still shone off the scar on pale skin, and the opposite ice blue eye was unreadable.

His uniform was the black and silver colors of the Inquisitors, and Saudia knew what was happening now. She pursed her lips. “Grand Inquisitor, a pleasure to see you again.”

“Likewise, Chancellor,” Declan Rodgers, Grand Inquisitor of the Intelligence Branch of the PRIEST Division answered, his voice as drawl and thuggish as the rest of him. Traits that Saudia knew better than to put much stock in, given that this man had once been the top agent of the FBI. He was frighteningly intelligent, which was why Elizabeth had likely recommended him for the position.

“I trust your meeting was productive, Chancellor?” Keith Watkins walked up on cue, moving with purpose as he appraised the Chancellor.

“Very much so,” Saudia answered. “Your absence was conspicuous.”

He gave a thin smile. “I’ve been occupied, Chancellor, as you can imagine.” He nodded to Rodgers, who walked off and turned and motioned for Saudia to follow. “Come with me, Chancellor. We need to talk.”

***

_Busan Military Base, Busan – South Korea_

5/25/2017 – 1:22 P.M.
“You’re serious?” Duri asked, blinking.

“Of course I am,” Lieutenant Cho Dae-Ho answered dryly. “In fact, I’m more surprised that it took this long for an official recommendation. I’d put your name in a while ago, and I guess it got someone’s attention.” He paused. “Although I think that it’s indicating that you’re not going to be in Busan much longer. The fighting’s died down, and ADVENT wants squads like yours on the front lines.”

“I see,” Duri nodded slowly. “If that’s where they want me, then I’ll be happy to go.” He couldn’t help but think that it would be good to leave. There wasn’t anything left here he wanted to go back to. Just sadness and bad memories. He had the war and his squad to distract him, but where he was never quite vanished.

Lieutenant Cho seemed to pick up on it. “Since we’re on the topic…is there a specific place you’d wish to be deployed? If they plan on doing that, of course.”

He considered for a moment. The Americas were where the war was fully renewed, and he had two soldiers from one region apiece. “The war is heavy in South America and the United States,” he finally said. “We’d likely do the most good there.”

“Noted, Officer,” Cho made a note on a sticky note. “Keep this up and you’ll be a Lieutenant before long. Not a lot of people still have the majority of their original squad.”

“I’d imagine,” Duri agreed. “I’ve been lucky.”

“Not just luck at this point,” Cho disputed. “You have a talent, and a desire to keep your people alive. Hold onto that. I’ve already seen too many distant officers already.”

Duri shrugged. “I don’t have anything else. I’d prefer everyone else have to go back to when everything is done.”

“Understandable,” Cho nodded. “But I wouldn’t quite say your life is over either. You’ll find something to live for besides your squad or killing aliens. I’m sure of it.”

Duri wasn’t as convinced, but he wasn’t going to contest the kind words. Too rude and there was a part of him that hoped the Lieutenant was right. “In any case,” Cho stood and extended a hand. “Even if ADVENT is going to send you somewhere else, you’re not getting out of duties here. Welcome to the Busan Central Unit Command. Congratulations on your promotion – as well as your squad.”

“Thank you, sir,” Duri nodded, taking the hand and giving a firm shake. “It’s an honor.”

Duri returned the salute and left the room, and was only mildly surprised to see Beatriz waiting outside. “Patrol finished early?”

“No, you just took a long time,” she answered, smiling. “Cara thinks you got a promotion, so I came down to see. You don’t get called in like that regularly.”

“A technical one,” Duri clarified joining her side as they exited the bustling office building. “I think it applies to all of us. Our squad is now classified as Tier III.”

“Really?” Her eyes lit up. “That means you’re on the CUC!”
“Yes it does,” he agreed, taking a breath and rubbing his eyes. “I can’t wait for all the meetings and debates.”

“Hey,” she said. “This is a good thing. You earned it.”

“I think I have everyone to thank for that,” Duri corrected. “All of you are good enough to stay alive, and they think that it was all me. ‘Low casualty rates’ is the term used. It’s rarer than even I thought, apparently.”

“Yeah,” her energy faded a bit. “I believe that. No shortage of memorials…and it’s only going to become more common.” She grimaced. “Especially now that XCOM will be occupied putting down their traitor.”

The sudden appearance of Patricia Trask, as an agent of the aliens no less, had been a massive shock. Personally, Duri was split on if it really was her, or just a mockup to fuck with everyone. Regardless of what this Patricia was, she had power and at least was convincing enough that ADVENT was taking her seriously.

“This promotion is going to be more dangerous for us,” Duri warned after a few minutes. “The Lieutenant implied this promotion was given because they might deploy us to the front lines. The Collective doesn’t really have a presence here right now, but they are attacking in the Americas.” He glanced over to her. “Have you-?”

“Yeah,” her lips twitched. “ADVENT is concentrating on defending Brazil. Venezuela is…well, ADVENT took losses in Colombia, so Venezuela is up next. Just not a lot of defenses built up, and without those, no one stands a chance. Probably will be a few weeks before we hear most of the country is under alien control.”

“I’m sorry,” Duri told her. “Do you have anyone you know there?”

“Just some family,” she answered neutrally. “I told them to get to Brazil or Mexico the moment the Collective started attacking. I heard from my mother they’re in Mexico, so they’re…safe at least.” She sighed loudly. “I almost told them to get on a plane to Florida or Cuba.”

“But you didn’t,” Duri said. “And they’re fine now.”

“I know,” she answered, shaking her head to clear it. “Still, it’s too close for me to feel comfortable with. I could have gotten them killed.”

“Even if you did…” Duri thought how to say it. “You did all that you could. None of us could see the future, otherwise I would have had my family get out of Seoul as soon as possible. Instead…” he shrugged. “I thought it was safe. You don’t have to think about that now; dwelling on something that didn’t happen isn’t healthy.”

They walked a few minutes under an overcast sky. “You’re right,” she finally said. “But…maybe you should do the same thing sometimes.”

He pursed his lips to a thin line. If only it were that simple. But it highlighted to him just how important decisions were. Ones that were literally a choice between life and death. If he made the wrong decisions now, it would mean his squad – Beatriz herself – would die, and already his decision had killed his family unintentionally. How much easier would that be able to happen on the battlefield.

She did have a point, something that had been emphasized to him in sessions. Their death is not your fault.
“Maybe I should,” was all he said.

“Come on,” she took his hand and picked up a faster pace. “We shouldn’t feel bad right now. You got a promotion! Let’s let the others know. It would do everyone some good to hear positive news every now and then.”

***

Classified Location

5/25/2017 – 1:27 P.M.

Arthur hadn’t been exaggerating. They clearly intended to begin processing as efficiently as possible. Groups of people were taken out at a time, and everyone else wandered the room and talked with their superiors and alien allies. Understandably, the aliens were treated with some caution with the majority hanging back at first.

Ironically, it was the civilians in the room who began engaging the aliens. Loke could only speculate as to why this was the case, but at least for him...aliens were something to be killed effectively, not talked to. He’d personally never met an alien, except for the one his Lancer squad had captured and later executed when she didn’t have anything useable.

That, now that he remembered it, was a mission that demonstrated the aliens could be tough. Borelians especially were difficult to break. Mutons were too stupid to know anything, and actually subduing them was even harder. Oyariah didn’t go down easy either, and he’d gained a healthy respect for them when one had caved in the head of his unit captain.

Don’t engage them in close range. Even Executors didn’t fare well.

That being said, a lot of aliens were squishy and weak. It was interesting that there seemed to be a limited spectrum of reactions, and the diversity was across races. Vitakarians were the only ones he’d observe display hard courage, as well as complete submission. Cobrarians just made them all uncomfortable so they were usually shot on sight. They were essentially never important.

Dath’Haram he’d only encountered a few times, all of whom had been in medical roles of some kind. Priority targets, and they’d gone down quickly. They were...certainly the most expressive of the races. All you really had to do was threaten them and they’d surrender. Of course sometimes this happened at times where they didn’t want their cover to be blown, but other times it had gained ADVENT a nice cache of wounded alien captives.

He’d never even seen a Sar’Manda before today, but from the looks of them, he felt they were among the tougher alien races.

Then there were the Andromedons. Durable and intelligent. Every Lancer disliked fighting them because they were among the more competent of alien forces. Ones that wouldn’t go down even when the pilot died. Loke personally thought ADVENT would do well to take some ideas from them...and it appeared they were taking that more literally than even he thought.

Orla was talking to said Andromedon now. “So, what do you think of the fish-man?” He asked Gale beside him.

“I can’t read aliens well,” Gale said slowly, as they watched the alien speak to a civilian. An interesting thing Loke noted was that they spoke through a kind of translator accompanied by a complex series of hand motions. “But I think that guy is as wary of us as we are of them.”
“Poor guy,” Loke smirked sarcastically. “You going to say hi?”

“Nah,” Gale snorted. “I’m going to talk to the Andromedon, who, speaking of, is open. I’ll see you later.”

“You too,” Loke nodded as Gale wandered off, and looked to see the Dath’Haram woman wasn’t occupied. Her name was… Valenca? Valen? No, Valencia. Right. Well, he’d at least said hello to the rest of the aliens, he might as well include this one. He strode over, and realized that while she was smaller than the hulking Andromedon, he was just barely taller than her – and he wasn’t exactly small.

“Hello!” She greeted in a surprisingly pleasant voice, tinged with an inflection he couldn’t place. Obviously not, she’s an alien. She bared her teeth, pulling her mouth back in an attempt at a smile. Something that would probably be off-putting to pretty much everyone. At…least she was trying. “I don’t believe we’ve spoken.”

“No, we haven’t,” Loke answered. “But considering we might be working together in some capacity, it would be good to change that.”

“I agree,” she extended a green-skinned hand. Loke remembered that Dath’Haram lived in jungles, and she would fit right into one easily. She’d clearly been informed of greeting customs here, which he appreciated. “Valencia. A pleasure to meet you.”

“Loke Hemmingson,” he took the hand which had a firm grip. A closer appraisal of the alien showed that she likely wasn’t physically weak, but limber. They were supposed to be flexible, so that made sense. He raised an eyebrow. “You speak our language well.”

“One of them,” she clarified. “Your species has many.”

“That we do,” he grunted. “Hopefully not for much longer. Different languages are an unnecessary pain.” He paused to get change the subject. “So. An architect. For these underwater stations?”

“Indeed,” she nodded. “Specifically undersea self-sustainability and hydroponics. I spent my time on Vitakar in a limited number of projects with the Sar’Manda. My work was on transitioning their techniques to other races.”

That was an interesting detail, and one that Loke admittedly didn’t think about. Of course they would need food. “Useful,” a thought struck him. “So how did you get here? From what I know, the only aliens are defectors – aside from the Andromedons and Sar’Manda who I guess have joined us. An odd skill for a soldier.”

“Mostly a number of coincidences,” she said, waving a hand. “I was approached by the Sar’Manda. I suppose I’d worked with them enough to make an impression, luckily a positive one. They usually dislike outsiders.”

“I suppose you opposed the war then?” He asked. “Otherwise that’s a risk.”

“I… do oppose it,” she said carefully. “More on principle than this specific situation. I’d prefer for the fighting to stop altogether, but this is a case where there is one side in the right. It was…easier to ignore on Vitakar. We aren’t told much about what is happening here. Now that I know, it’s not right to do nothing.”

“Huh,” Loke crossed his arms. “And I’d heard you were all pacifists.”

“I am,” she answered with a short bite to her words. “Which is why I’m not going to fight in your
war. But I am going to help in the background to give you a better chance. Just because we don’t believe in fighting to solve our problems doesn’t mean we don’t feel strongly about doing our part.” She bared her teeth. “I suspect you’ve encountered Dath’Haram before. They did not enlist because they wanted war, but because they wanted their people to be healed and come back alive.”

“I’ve encountered them,” Loke nodded. “I can respect that, even if they barely put up a fight.”

“We’re not fighters,” she said simply. “War is foreign to us. Taking lives even more so. It’s more disturbing the ease of which other species treat life.”

“Ha,” Loke grunted. “Believe me, I wish all of us could kill without issue. It’d make war a lot easier for all involved. The amount of people who can do that are fewer than you’d think.” He paused. “Although I will say that it’s easier with aliens. Especially ones invading your planet.”

She almost looked disappointed at that, but gave a slight nod. “I suppose it would. You are a soldier, but what kind?”

“Lancer Corps,” he said. “ADVENT Special Forces.”

“Ah,” she said, then paused. “If I may inquire, the defectors speak of the Lancers. Are the rumors that you don’t take prisoners true?”

“Special Forces aren’t usually used for capture,” Loke allowed a smile. “We go in and complete our objective. Captives slow us down or expose us. We usually don’t take prisoners on ops, too much of a risk and slows us down. It’s not exactly a revelation. Your Lurainian does the same thing, though usually much less effectively.”

“I see,” she said. “I suppose in the context of your species, that is understandable. Apologies for the questions, I’m just curious at how different your people are. Not even the Borelians display your attitudes. Especially not males.”

He snorted. “Come again?”

“Borelian dispositions are affected by gender,” she explained. “Where for Humans that line appears more blurred.”

“Well, you’ll learn a lot more about Humans coming up,” Loke said. “And knowing us, probably a lot you didn’t want to know about.”

She appeared to try and smile again. “I hope that when this is done I will be able to go back to my people and help them understand your species. Perhaps that will be the first step to ending this war. Understanding destroys barriers and ignorance. Something the Zararch intentionally keep suppressed. They don’t want us to know about what you are. Just a vague threat in the stars.”

“If you want to help end the war, then I’m all for it,” Loke nodded. “But not before the ones who decided to invade our planet die.”

“I do not wish death on them,” she said carefully. “But I am afraid you will have a greater chance to do that than the Elders seeing reason and ending the war. I fear it has gone past that point.”

“Loke Hemmingson?” A new voice interjected, and he turned to see a uniformed man approaching.

“Yes sir,” he answered, saluting. “Is it time?”

“Yes, please follow us.”
“I’ll see you on the other side then, perhaps,” Loke told Valencia. “Until next time.”

“A pleasure to meet you, Loke,” she nodded, and he was led away. Well, that had been more interesting than he’d expected. She was more reasonable than he’d expected, even if she was a self-declared pacifist.

But one smart enough to see right from wrong, so some character flaws could be forgiven. He’d have to talk to her later. Right now though, he needed to prepare himself for the application of the Restraints. Something he was not, especially, looking forward to.

***

Skyranger

5/25/2017 – 7:12 P.M.

The skyranger was full, and for the most part the trip had been fairly quiet. None of them knew each other that well, only that they were all recruited and approached for the same thing. The newest soldiers of XCOM. Some had joined because they’d requested it, and given that XCOM had recently come under attack, it made sense they would pull from this available pool.

Others had been specifically sought out, and as far as he knew, all had accepted. Was anyone really going to turn down an invitation from the Commander himself? Unlikely, and he had a suspicion that XCOM wasn’t approaching anyone unless they were fairly certain they would join. Then there were the people like him, who were directed towards XCOM when ADVENT didn’t know what to do.

“Show of hands,” the woman opposite him finally said. She was Asian, probably Chinese. “Do we have any psions here?”

“Guilty,” a man with a messy beard and tan skin said, a few seats down. “Dynamo.”

Kunio Azuma lifted his own hand. “Add me. And…unknown.”

“The hell does that mean?” Another man commented.

“It means I’m not quite sure,” Kunio shrugged. “They thought I was a telepath, then a telekine, and I’ve tested as sensitive to all disciplines, but what I’m naturally good at doesn’t reflect my Trask Level.”

“Which is what?” The other psion asked. “Fifty-four here.”

Kunio considered. “Eighty-seven.”

There were some whistles at that. “Wow,” the Chinese woman commented. “Leviathan-class.”

“Yes, which is why everyone was confused,” Kunio added. “The original plan was to have me focus in one and see if that helped. It worked…kind of. Except when I needed it.”

“You see action?” Another woman asked.

He pursed his lips. “Japan.”

The Chinese woman’s eyebrows furrowed. “Which one?”

“The one right before China was invaded.”
“And you lived?” The question was almost in awe. “I didn’t hear of any groups making it out.”

“Because no one really did make it out,” Kunio shook his head, not especially wanting to recall the battle. If a term that generous could be applied. “It was a massacre. The Cleanser Ships took out all of our defenses and barracks, and then the Muton legions finished off whatever was left, as well as Chryssalids. My entire squad was killed, and I should have died too.”

“So what happened?”

“I moved,” Kunio answered. “One second I was facing down a Chryssalid, and I guess on instinct, I created a portal and stepped through it. Into London. I was almost hit by a car when I came out.”

“How did you move between Japan and London by accident?” The other psion demanded.

“That,” Kunio let out a breath, leaning back. “Is a good question. After I was debriefed, I got sent to answer some questions the PRIEST Division had for me, and they told me a few days later I was being transferred to XCOM. They said that they have psions who are trained in this teleportation discipline. So here I am.”

“Well then,” the other psion said. “That’s definitely unique. I’ve only heard of Ethereals being able to do it. The theories are sound, at least to me, but I’ve never attempted it.”

“If you asked me how I did it, I couldn’t really tell you,” Kunio said. “But that’s why I’m here. To learn and use it to fight.”

“So why London though?” Came a comment.

Kunio sighed. “If I was acting on instinct, maybe because I associated the country with the assassination of the Imperial Family.”

“Ah,” the face of the woman opposite him grew somber. “You’re from Japan.”

“Yes,” he said with a slow nod. “The war’s hit us hard.”

“Yours and Australia,” came an agreeing voice. “Not fair you got dealt that, but we’ll kick the aliens off them soon enough. I have faith.”

“As we go to help XCOM which has just suffered a loss,” the psion commented sarcastically. “But yeah, I agree. XCOM’s probably angry right now. I’ve heard stories of this Commander.”

“Like what?” Kunio asked.

“Like he’s oddly enigmatic, he doesn’t have a name, and pretty much everyone respects and fears him,” he listed off. “Supposedly an advisor to the Chancellor herself and Commander Christiaens. And he’s ruthless to aliens.”

“I wonder,” the woman mused. “Just how much of what Patricia claimed is true.”

“Assuming that’s her at all,” Kunio shook his head. “I doubt the aliens are above faking someone like that. If so, maybe we should thank XCOM for making ADVENT run like a competent government.”

“I guess we’ll find out the truth soon enough,” the woman said. “Also, Lian Zhao. Former PLA. Fought in Beijing the whole way through.” She grimaced. “I don’t recommend it.”

“I can’t really imagine it,” the woman sitting next to her said.
“Don’t,” Lian said firmly. “And whatever you come up with…what was actually there was worse. At least Isomnum’s dead.”

“Isomnum was only part of it,” the psion said. “There is still that Paradise station. Iyaad al-Molla by the way. Defected to ADVENT when they were conquering the Middle East.”

“Oh,” Kunio frowned. “That’s the first I’d heard of defectors from that.”

“Not a lot of us, but we existed,” Iyaad said. “I don’t blame my countryman for resisting. We’ve been the scapegoats and taken advantage of by people stronger than us for decades; America, Russia, the Saudis. It was a futile effort to fight back against ADVENT though. Anyone should have seen it. I was more worried about the aliens, but someone just had to go provoke Israel and…” he waved a hand. “Well, you know the rest. ADVENT’s at least helping rebuild, and the House of Saud is dead, so there’s a silver lining.”

“The exact number of people who were sad the Saudis died was zero,” the woman besides Lian snorted. “That was something essentially everyone could get behind.”

“I’m pretty sure there’s at least one alive,” another person commented. “Think he actually helped manage the aftermath with ADVENT oversight.”

“Oh, he was,” Iyaad nodded. “And when ADVENT held an election he lost to another military defector. Wish it had been a woman, but it’s a start. Don’t know where he is now, but I sleep well knowing that he’ll never be a problem.”

“To be honest,” Lian said. “I’d rather deal with the Saudis than aliens, but since we don’t have a choice, I’ll take what I can get.”

The lights in the skyranger suddenly flashed to a solid red. “This is Big Sky to all passengers,” their pilot said. “We are approaching the Praesidium. Please secure yourselves and prepare for landing.”

“Here we go,” Lian said, strapping in tighter. “This should be interesting.”

Personally, Kunio was hoping for something more mundane. His life had already been filled with too many interesting things, and he had come to realize that wasn’t always a good thing. He didn’t necessarily need his worldview to be shattered by XCOM, or receive the darkest secrets of the world. Just them being an elite anti-alien organization would be sufficient. But he felt like in that regard, he wasn’t going to get his wish.

He was pretty sure that XCOM had their own share of interesting secrets.

If he was going to learn them was another story entirely.

***

Secured Diplomatic Residence of Japan – Switzerland
5/26/2017 – 3:41 P.M.

Kaya fiddled with her collar. She’d always disliked overly formal attire, even if she’d eventually gotten used to it from years of wear and pomp. As a princess of the Imperial Family, there’s been expectations for her to look her absolute best, at all times when the media was hiding in the bushes; waiting for some new fake scandal to distract the public with.
At least that was something she wouldn’t have to worry about now.

Well, she wasn’t going to go back to that completely. Right now she wore a black tunic-like garment that extended just below her waist, while she wore more standard pants and boots with it. Underneath the tunic was some light armor, which might stop one shot, but it certainly wouldn’t deter a dedicated assassin.

A pistol was strapped to her leg and her katana was sheathed behind her back. The emblem of the Order of Terra was attached to her tunic. All in all, something formal but not something overly uncomfortable or unnecessary. She’d not even considered arriving in a dress, though Kiyumi had done so. Something Kaya was especially unsurprised at.

She’d initially been hesitant to get this done, but after Beijing…almost any distraction was welcome. The visceral images of the nightmare were still etched in her mind, and she knew that there was going to be many more nights when she was going to need help getting to sleep. ADVENT had been very proactive in offering medicine and counseling for those who wanted it.

There’d been a few times where she’d considered it. She probably should, but for now she needed to get her family in order or what was left of it, anyway.

The room they were meeting in was small, but fitting. There wasn’t going to be any press or crowd here, only a small meeting of a group of people. The walls were white and the Japanese and ADVENT flags hung from the walls, and the wooden table was circular with seats evenly positioned. Her arrival as the last one caused a flurry of reactions.

“Empress,” the former Prime Minister Reizo Sakata greeted, bowing. “I’m very thankful that you’ve arrived safely. To lose you as well after everything that’s happened would be unthinkable.”

“I’m doing my best,” she said, returning the bow, remembering the proper greetings. She’d always thought Reizo had done his best, and if nothing else he was a pleasant person to be around. Smart enough to join ADVENT, at least. She was glad he was still alive, even if he had no place he managed anymore outside the groups of refugees.

“Empress,” Kyong Suk-Chul, ADVENT’s PR Minister also greeted, offering a slight bow of his own. “A pleasure to finally meet you.”

“Likewise,” she inclined her head. She saw Kiyumi and pulled her into a hug. “[I’m glad to see you. How are you?]”

“[Alive,]” her sister managed. “[We’re managing, all of us. I’ve been more worried about you. You were in Beijing…]”

“[Yes. Let’s not talk about that now. I came back for a reason.]”

Damian Hamilton coughed awkwardly in the background. “I dislike interrupting the reunions, but I’d prefer we get down to business. I don’t have an issue with Kaya coming back, but I don’t think I need to be involved here.”

“I want to keep you informed,” Kaya said, taking a seat. “Since you’re my superior officer, I need you to sign off on what I’m doing.”

Hamilton sighed. “Sell them on it first.”

“What is it you wish, Empress?” Reizo asked. “I was under the impression that you were intending to take the title. Is that still the case?”
“Yes, with some conditions,” Kaya nodded to her sister. “I don’t care as much about the title, but it’s safer for me to carry it than someone else. My sister by birthright deserves it, and my first official action is to restore her to the family in full, with all the titles and status that comes with it.”

“While I don’t see an issue,” Reizo said. “There are a number of elders and older families who will see that as breaking significant tradition. Your sister knew what she was doing.”

“Yes, which is why I didn’t invite any of them here,” Kaya interrupted flatly. “Most traditions are old and not worth preserving. The elders and families can complain to me on the battlefield. I’ve been around them long enough to know I’m not going to base my decisions off the advice of old and simple-minded men. Kiyumi is restored, end of story. The Imperial Family has officially entered into the twenty-first century.”

“Thank you, sister,” Kiyumi said gratefully, bowing her head. “I won’t forget this.”

“I’m just doing the right thing,” Kaya said, shifting in her seat. “I’m not intending to abandon my comrades on the front lines. The truth is that I can’t properly run the family from a battlefield, my second action is to appoint Kiyumi as the manager of the family. She has my power and trust at home.”

“You would effectively make her Empress,” Reizo frowned. “Forgive me from being presumptuous, Empress, but if that is the case, why not bestow the title upon her properly? Especially as she is restored? It would certainly go against precedent and tradition, but you have little issue breaking it.”

“Kiyumi deserves the title more than me,” Kaya agreed. “This is what she wished for. I am only doing this to draw attention away from her. As I am Empress, I am a target for the Collective – and I know they will try this again. I am a more vulnerable target. This is not to say they will not try and attack her…but I will be the public face of the Family. She will not.”

“Understandable,” Reizo nodded. “In which case, Lady Kiyumi, I expect you will wish to begin rebuilding the Imperial Family, at least the staff and Council. For Empress Kaya, of course.”

“Yes, I have some plans,” Kiyumi nodded. “Though forgive me for not completely trusting your capability to protect us.”

“We have completely overhauled our protocols regarding the safety of yourself and other high-profile individuals of ADVENT,” Kyong said. “An incident such as what happened will not be repeated.”

Kiyumi pursed her lips. “We shall see. But yes, Prime Minister, once this meeting is concluded, I wish your assistance in helping me.”

“Of course, Lady Kiyumi.”

“And what of you, Empress?” Kyong asked thoughtfully. “I suspect you have more to say.”

“I hold this title,” Kaya said. “So I should use it effectively. I don’t want to receive preferential treatment or amenities because of my status. I’ve made that clear. But being anonymous serves no one but myself and my dislike of attention. Our people have lost much in this war, Prime Minister, they need someone to be the one to strike back.”

She laced her fingers together. “The best candidate of which is me. Minister Kyong, I suspect you would know how to effectively propagandize an Empress who fights in the Order of Terra. While I intend to use my status to rally my countrymen, I feel others could be similarly inspired. Does that
sound agreeable?"

“You would be willing to be utilized that way?” Kyong raised an eyebrow. “Surprising, but you are correct. The Empress of Japan fighting on the front lines and rallying others to ADVENT is more powerful than even you think.”

“I’m still not going to be treated differently,” Kaya insisted. “In the Order, Hamilton is my superior, and I trust him to not coddle me. But when I’m not fighting… use my status as best you can for ADVENT.”

“You have very little idea how difficult that is for me,” Hamilton sighed. “You die, and I’ll be known as the man who put the Empress somewhere dangerous and got her killed.”

“And I’ll make it clear it’s my choice,” Kaya insisted. “All I have is a title people gave authority to. Not that it should matter now, but since it does, I’m going to use it. That doesn’t mean I expect that from you.”

“In that case,” Kyong said, giving a thin smile. “I already have an idea of how to unveil this to the public. When Kiyumi is satisfied with the state of her house, I believe that there is a ceremony that accompanies the ascendance of a new member to the throne. Is this right?”

“The Enthronement,” Reizo confirmed. “One of our oldest ceremonies. It will need to be done for Kaya to be officially recognized as the Empress of Japan.”

“Then plan it,” Kaya nodded. “With a few alterations. When you’re ready, Kiyumi, I will properly take the title.”

“Try not to die until then, sister,” Kiyumi said earnestly. “I know you won’t try, but you’re going to be in danger.” She looked to Hamilton. “Will she be deployed soon?”

“She was part of Beijing,” Hamilton said slowly. “She’s not authorized to go into combat without a few more weeks of rest or an ADVENT psychologist signing off.”

Kaya scowled, but didn’t say anything to protest it. “I suppose I have work to do,” Kiyumi said, standing.

“If you need help, let me know,” Kaya said, joining her. “And thank you Prime Minister, as well as you Minister Kyong.”

“Certainly, Empress,” Kyong did a final bow. “I look forward to working with you.”

***

ADVENT High Command - Switzerland

5/23/2017 – 12:07 P.M.

“Take a seat, Chancellor,” Watkins gestured to two chairs opposite each other in the small room. “I don’t expect to take long.”

In one of the few times during her life, Saudia felt like the situation was beyond her control. For once she lacked the power and authority to know what to do. First it had been the Ravaged One, next it had been the Commander, now it was Watkins. The irony being that for Watkins, whatever she was about to face was entirely her fault.
The Grand Inquisitor had not joined them, and instead stood outside the room. Saudia took a seat, while Watkins walked over and sat down opposite her, setting his small briefcase in his hand down and crossing one leg over the other. “What can I help you with, Overseer?” She asked, taking an upright position in her chair, fingers hanging over the edges of the armrests.

One corner of his lips turned up and the twin colors of his eyes seemed to bore into her. “Three guesses, Chancellor.”

She raised an eyebrow, knowing full well what he was referring to, though she didn’t see a need to make this overly easy for him. If he thought she was going to walk into a trap without considering her options, he was sadly mistaken. “I don’t suppose you’re referring to the insinuations of our traitor?”

“That line may have set others at ease,” Watkins laced his fingers together and set them on his lap. “But unlike the majority, I am well aware that this is the real Patricia Trask. A traitor she may be, but she isn’t an idiot. She maintains credibility, even if you don’t want to admit it. Besides, if she is wrong, you have nothing to fear now, do you?”

Saudia let her face betray nothing. “Are you intending to charge me with something?”

Watkins held the silence for a few seconds, uncrossed his legs, and leaned forward. “Chancellor, I want you to know something. You’re one of the few people I’ve encountered in my professional career that I hold in high regard. You entrusted me with power greater than your own, and that is a responsibility I take especially seriously. Despite that, I suspect the reason you chose me was because I do have the resolve to enforce the law.”

He looked at her intently. “Consider very carefully before saying something that will make this worse than I wish it. Do you really think that everyone just accepted the fact that something like ADVENT rose out of nowhere and was managed by people no one had heard of? Did you really think no one thought that was questionable?”

“If there were,” Saudia said. “Perhaps they should have said something.”

“Perhaps, but we had bigger concerns.” His eyes flicked upwards. “An alien invasion provides ample distraction. No one in their right mind was going to challenge someone who multiple superpowers had pledged support to. All they could hope for was that these people knew what they were doing and had the best interests of our species at heart.”

He leaned back. “Fortunately, that appears to have been the case. I want to be very clear, Chancellor, that I do not care who you were before ADVENT. You’ve proven yourself capable of the position since then. If everyone were judged for their past before ADVENT, then none of us would be clean. By the laws and norms of the old world, many would likely be facing trials and jail time. Judging others based on that is pointless. Chancellor, since you have taken office, have you broken ADVENT laws and regulations?”

“No.” Saudia shook her head. “I have not.”

“Then you have very little to worry about,” Watkins nodded. “I’m not an idiot, Chancellor. I know better than to think that removing a Chancellor from power would be smooth and stable for the war. I suspect your past is checkered at best, but Patricia made a mistake. She assumed that this past would condemn you. But I don’t care about that. I only care what you’ve done under ADVENT.”

Saudia appraised the Chief Overseer carefully. “But you didn’t bring me in here to say that you’re
“No,” Watkins nodded. “I’m telling you now that if you want to come out of this with your position intact, then your past will not play a factor. But you understand that I cannot let this question remain unanswered. I want you to remain, Chancellor, but to do that, you need to cooperate with my investigation.”

She glanced to his briefcase. “You’ve opened one on me.”

“No,” Watkins corrected, pulling out a file from the pocket of the briefcase and handed it to her. “You’re one of many. I’ve been preparing for this investigation ever since I was appointed. Patricia has merely provided me a pretext to execute it. I’d let it sit because I’d lacked evidence that you were actively subverting ADVENT. However, it would be prudent to settle this once and for all.”

At a glance Saudia knew that Watkins had indeed been preparing for this for a long time. She’d been a fool for thinking that EXALT would just be…forgotten. It was simply too big of a blank for everyone to ignore, and she’d provided the power to someone tenacious enough to act on it. Now she could only hope she’d made the right decision.

Watkins was saying the right words. She felt she’d have to trust him.

It wasn’t as though she had a choice.

“I see,” she set the piece of paper on her lap. “Is this an official questioning?”

“No, I’m merely informing you that you’re under investigation,” Watkins corrected, pulling out a few more documents. “And to tell you that I’m on your side. You put me in here because you trusted me to do what was best for ADVENT. If you – and I believe you have – followed the law as established by ADVENT since taking power, then I do not have grounds to charge you. Perhaps what I find will make the Congress uncomfortable, but that is not legal grounds for an impeachment.”

She gave a slow nod. Out of all her options…there seemed to be only one real one. “Very well. You will have my full cooperation.”

“Good,” Watkins handed her the documents. “Then I will need your authorization to make this move smoother.”

She took the documents. “What are these?”

“Temporary suspensions for Elizabeth Falka and Feng Mercado, as well as several others,” Watkins said. “You are too high profile to suspend without attracting undue attention, but I would not have critical aspects of our divisions under management of people whose loyalties have been called into question, justified or not. Once they are cleared, they will be fully reinstated.”

He paused. “I would suggest that you tell them to cooperate. If they obstruct me, I will charge them. They will not be able to hide their secrets, no matter how much they wish. The Grand Inquisitor will make sure of that.”

“I have no reason to doubt that,” Saudia agreed, and with a second of hesitation, signed the documents. This was not going to be a pleasant conversation. “And I assume their designated replacements will take over in the interim?”

“Not their original choices,” Watkins corrected. “Ones which I suggested and they signed off on. Or will sign off on. They will be informed within hours of the – temporary – change of
leadership.”

“Very well,” Saudia handed the documents back. “And what now?”

“Now you do your job,” Watkins stood, with Saudia joining him a second later. “I will inform you of when you are needed. I do not need to make this a public affair, and your sharing of it is your prerogative. It will take as much time as I need. I suspect that in the end that it will work out, and you – as well as your colleagues – will move forward free of the fear of these secrets you’ve hidden.”

Saudia pursed her lips. “I certainly hope so, Chief Overseer.”

Watkins moved to the exit, and looked back. “You are an ambitious woman, Chancellor. But you have the correct priorities. Do not second guess your decisions now. It would only make it harder on yourself.”

Saudia didn’t answer as he departed, and just stood alone in the room, thinking.

It ultimately didn’t matter what she wanted now.

It was going to come to light, one way or another.

Best if it was painless; and hopefully Watkins would just do exactly what he promised.

***

Busan Military Base, Busan – South Korea

5/25/2017 – 6:11 P.M.

“So here’s my question,” Cara said as she poured a drink for herself. “Do we get a special emblem? Do you get a different cape?”

“I think we do get something,” Duri said. “But nothing that obvious. Don’t want to give away that we’re priority targets.”

“Hey, a promotion is a promotion,” she said. “And I think it’s safe to say that we all earned it.”

There was a good amount of verbal acknowledgment from the squad who were huddled around their bunks in an impromptu celebration of the news. Cara and Mana were sitting on the bunks, while Duri and Beatriz were sitting on some pulled up folding chairs. Nobuatsu and Aleksandra were leaning against a wall, with Aleksandra drinking from her vodka bottle she’d apparently held onto this whole time. Miguel was sitting on his SHIV, tapping away on his phone.

“I really don’t like that you’re sitting on that,” Beatriz told him. “One bad move and you set it off.”

“You worry too much,” he smirked. “I know what I’m doing. It’s not even facing towards you!”

“You’re still sitting on a weapon that could shred us in a few seconds,” Beatriz insisted. “Would you sit on your rifle?”

“That isn’t even close to the same thing,” Miguel rolled his eyes, and motioned to the floor. “Besides, I practice SHIV safety. See? Not loaded and shut off.”

“Oh fine,” Beatriz relented. “Not like you’re going to listen to me. Duri?”
“Let him be,” Duri gave a slight smile. “He seems to have it under control.”

Miguel gave a mock salute. “Appreciated, officer.”

“Where do you think we’ll be sent?” Nobuatsu said after a few minutes. “I agree that we’re probably not going to be enjoying the pleasures of Busan for much longer.”

“A shame,” Cara sighed. “I quite liked the aliens coming here and getting humbled.”

“It almost feels like home now,” Miguel added. “Feels odd to leave it so soon.”

“The price of us being too good at our jobs,” Cara said sarcastically. “We shouldn’t have tried so hard.”

“We did get to experience some of the more interesting moments of the war,” Duri said. “First Aegis. Then Caelior. Both came out to help Busan. I won’t ever forget that.”

“I don’t think any of us will,” Beatriz said. “And even before that…Japan. At least for some of us.”

“Yeah, I missed out on your escape through Japan,” Mana said. “You fought the Warlock right?”

Duri, Cara, and Beatriz exchanged a look. “‘Fought’ is a strong term,” Duri said slowly. “More like ‘slightly inconvenienced before we made a tactical retreat’.”

“And I got shot,” Beatriz recalled, looking to Duri. “He carried me out.” She shook her head. “Scariest moment of my life.”

“Yeah, and I was spraying bullets hoping that would give enough cover,” Cara remembered. “There was no way I was going to be able to carry both of you. Not our best day.”

“Though we’ve all lived since then,” Duri said. “With a few close calls.”

“Yes. Some,” Aleksandra glanced down to her hand. “Job hazards.”

“Very much so,” Nobuatsu agreed. “Returning to the question I proposed. Florida is heating back up.”

“What’s wrong with Florida?” Beatriz asked.

“It’s hot, dry, sometimes ends up being a hurricane magnet, and has a certain reputation,” Cara ticked off. “You’ve never heard of the Floridaman?”

Beatriz shook her head. “Save the stories if we actually get sent there,” Mana chuckled. “All I can say is that the Collective could have picked a better target. I bet they’ve run into their own share of interesting individuals.”

“Quisilia probably has documented them,” Cara sniffed. “Although I wouldn’t know. After what Patricia pulled, I’m boycotting Quisilia and his entertainment.”

“Not that I disapprove,” Duri said with a raised eyebrow. “But it took a Human traitor for you to stop supporting an Ethereal troll account?”

“Well…yeah,” she shrugged. “The memelord may have been an alien, but he knew his stuff.”
“Speaking of that…” Mana looked around. “What do you make of her? Or what she said?”

“A liar or fake,” Cara dismissed. “Why the hell would anyone believe anything that comes out of her mouth now? ADVENT being a puppet state of XCOM is a bad parody of an illuminati story. I’m just waiting for the revelation that ADVENT is filled with shapeshifters and the Collective was the good guys all along.”

“I do wonder why she bothered,” Miguel mused. “It’s only going to freak out the idiots, the anti-ADVENT fanatics, and the media who love a good scandal. No one else is going to buy it though.”

“Because that isn’t Patricia,” Cara insisted. “That’s a clone, or some kind of mockup to look like her. Would Patricia Trask really defect to the aliens? Really? The Hero of Humanity? The First Human Psion? Her?” Cara took a long gulp of her drink. “Please.”

“I’m not sure,” Duri laced his fingers together. “I think it’s her. At least physically. She’s probably being mind controlled or influenced by the Ethereals. Otherwise…” he shook his head. “I can’t even think of why she would willingly betray her species.”

“Maybe we misjudge her,” Aleksandra shrugged. “She is power. She enjoyed power. You could tell. Ethereals offered her that. Perhaps simple answer.”

“As someone who thought she was a good example of what our species could do,” Cara said slowly. “I’d prefer not to think of her as someone who sold out for power.”

Aleksandra just took another drink. “Then don’t. I just observe. She was never a hero.”

“Regardless of what she was,” Duri said with a heavy sigh. “She’s not one now. I would like to ask her a few questions though.”

Beatriz looked at him sympathetically. “I can imagine. I don’t think she’d be able to answer.”

“Or she would,” Duri shrugged. “And it would be the wrong answer.”

“She’ll be put down,” Miguel said, patting his SHIV. “I have a good feeling. The only thing we Humans hate more than aliens are the turncoats who join them. Aliens just follow their nature. These traitors have no excuse.”

“She can join Betos,” Cara nodded. “First in the Experimentation Labs, and later in Hell.”

“Barring that,” Beatriz agreed. “They can both just meet in Hell.”

It was a darkly sentimental note to wind down on, but one they each keenly felt strongly about. Duri felt that Miguel was right. The Human traitors deserved worse than the aliens who perpetrated the atrocities. Every single one deserved to be put down, and when he fell asleep his dreams were not of the aliens being purged from Earth, but the Human traitors burning in Africa.

No less than they deserved.

***

Residence of the Chancellor - Switzerland

5/23/2017 – 9:22 P.M.

There had been few days that had been as draining as this, and having only taken place so soon after Patricia wasn’t exactly ideal for her. She just felt…exhausted. She just wanted to leave, rest,
and be with her husband and son and contemplate what was going to happen next. No matter what, she felt that something was going to end. Or at least set into motion this end.

That would certainly be something. Not quite how she planned to end it all.

Hopefully she was being presumptuous.

She unhooked the Chancellor sash from her shoulder and hung it up, undressing on her own for the night into something more comfortable, though that was more relative now. With entire portions of her limbs replaced, her level of comfort had become more static. A state that just was, not particularly good or bad.

She missed being able to feel something like she had before.

Sensors weren’t the same thing as flesh. They…functioned well enough, and she could manipulate them without issues. She could pick up a feather or glass ball without crushing it. She could tell if something was warmer or colder, but it was more of a numb realization than something visceral. One of the therapists had told her it would be like wearing thick, but very flexible gloves.

That had turned out to be more accurate than she would like.

It was a marvel of engineering, and sometimes she would now just look at the smooth design of the limbs, marveling at how well it functioned. But it was not the same, it never could be. Flesh may be weaker, but it felt more real than this, especially around those she loved. It felt like an important connection was muted.

Touch and feeling were important; one of those aspects of close relationships you didn’t think about until it was lost.

Ethan was putting together the night watch; securing the residence while she dressed for the night. She knew her guard would fight to the death to protect her, but she now privately didn’t know what could be done if someone like Patricia decided to attack. Or the creatures from Paradise. She needed to take extra precautions to keep herself and family safe.

Ready for the night, she checked the pistol on her hip and made sure the plasma pack was charged. If someone was ever to attack, she and Ethan had made sure that no matter where they were, there would be a weapon they could use. Closets, cupboards, cabinets, and other hidden compartments held all types of weapons.

Some paranoia was justified now.

Saudia walked down the hallway to her son’s room. It was shut, and she lightly knocked. After waiting a few seconds, she opened it quietly, suspecting he was asleep. Sure enough, he was completely out, tucked in his own bed. Sleeping peacefully, a commodity she envied at the moment. He really was getting so big, and she was missing so much of it now.

She sighed, and left the room, sparing a glance at the small stand in the corner which held one of the Sovereign Orbs, a constant vigil over her son. Perhaps it was a mistake to leave so much to trust this Sovereign was on their side, but if given a choice between T’Leth and the Collective, she was going to err on the side of caution.

Descending the stairs in the quiet house, she noted that she really didn’t need such a large residence. She barely spent any time here besides sleeping anyway. Another observation from her tired mind she’d probably made before. The footsteps from her metal feet were only slightly muffled by the rug and became louder when she stepped onto the tile in the kitchen, picking out a
She didn’t believe in getting drunk after having a long day. Knocking herself out was the least of her problems right now, and engaging in self-destructive behavior wouldn’t change anything. But she was thirsty. Water was fine.

Her glass full, she walked to the nearest couch and sat down and drank quietly, alone with her thoughts and fears. It was odd. In all her days as the Director of EXALT, making sure that they weren’t discovered by the public at large, maintaining the conspiracy over years knowing a single mistake could end it…it didn’t come close to the stress she was under daily now.

Especially when she knew what she faced. A nosy journalist and a talkative media group were nothing compared to an alien who could ravage planets with a gesture or control others with a thought.

She took a drink.

It was a dangerous game of prediction and strategy. One where a mistake now meant the deaths of millions. One where it came one step closer to her species being conquered. Plans devised sounded good until there was a weakness that was exploited. Sometimes that never happened, and sometimes Patricia Trask happened.

“House is secure as it can be,” Ethan walked in, his own armor off. “Cameras, turrets, everything online.”

“Good,” she said listlessly, swirling the remaining water in her glass.

Ethan waited a moment, frowned, and came to sit by her. “You have enough to worry about, Saudia. Don’t add this onto it. It’s out of your control.”

She scowled. “And you know how much I hate that. I didn’t even try and fight it,” she shook her head. “I saw what he could do if I didn’t cooperate, and gave in.”

“And what should you have done?” Ethan put an arm around her. “Been an idiot and denied everything? We both knew this might happen. All we can do is our jobs now.”

“We knew it might, but I was hoping that it would stay in the past forever,” she said quietly. “Watkins may not care, but not everyone will be so forgiving. I don’t know. I’m worried, and I can’t do anything about it. I’m worried about what’s coming next.”

“We’ve done what we can,” Ethan said simply. “That’s all we can do. Our best. All things considered, we’ve done better than anyone probably expected. And we’ll keep doing that. And you’ll still be leading us.”

“I hope so,” she said. “I don’t know what I’d do if I couldn’t.”

“I’m sure you’d adapt,” he said. “You always do.”

Saudia was struck with a pang of guilt. “That was the wrong thing to say. I’m a terrible mother.” She rubbed her eyes, before leaning onto his shoulder and closing them. “And wife. I have a son I barely see and a husband I barely talk to outside of work.”

“Hey, none of that now,” he said, scooting closer. “You’re helping manage a war for the survival of our species. Which includes us. If anything, you have your priorities correct.”
“It doesn’t feel like that, especially now,” her lips twitched. “If I save the world and lose both of you that would feel…wrong. Don’t pretend it hasn’t bothered you. Maybe you understand, but you wish I wasn’t as focused.”

He sighed. “I’m only Human. But what I would like isn’t a higher priority than what you’re doing. I know enough to recognize that.”

“Does Martel?”

“He’s mature for his age,” Ethan said slowly. “But…well, I know he wishes you were around more. But he knows what you’re doing is important.”

“He’s a kid and I’ve been a bad parent,” she admitted. “Trying to justify that feels wrong. If I was just going to do that, we shouldn’t have decided to be parents. I need to do better for you and him. I don’t know how right now, but I don’t know what will happen next.” She shook her head. “Something could happen to any of us, and I don’t want there to be any regrets.”

“If you want to figure something out,” Ethan told her, lacing the fingers of one hand between her mechanical ones. “I’d be happy to hear it.”

“I’ll need you for this too,” she told him, swinging her legs over his lap. “You’ll need to tell me when to stop. And if I’m being stubborn…I know you can figure out some way to get past that.”

He gave her a wide smile. “Your confidence is well-placed, Chancellor.”

“Please, no titles here,” she rolled her eyes, and shifted her legs back over so she could rest better against him, before closing her eyes. “Thank you.”

“Should we move to the bed?” He asked after a few moments.

“No…not yet,” she said after some hesitation; listening to his heartbeat. “Let’s just stay here. At least for a little while.”

***

To be continued in Chapter 54

**Battleground: Florida**

Chapter End Notes

A short update on what’s coming next. One of my editors is going to be going on vacation for a month and won’t be able to do any editing. The next chapter is going to very likely be delayed as a result. In the meantime, I’ll take this opportunity to finish up a number of XCOM Files that I have outlined so there should still be a steady stream of content regardless. The next chapter will be written in this period too so it’s ready when he gets back. The next chapter will be the start of the next battle arc which is going to span three chapters. Florida will be the focus, but there is going to be a lot happening across the world. It’s going to be a fun ride.
Also, Into the Breach is an excellent game, and I highly recommend it. Thank you to everyone reading as always, and I hope to have more to you sooner than later.
“You’re getting recalled now?” Neil crossed his arms; his voice unhappy. “Not really the best time.”

“I can’t contest it,” Cycelea sighed as she continued putting what few belongings she had into a pack. “This came directly from the Grand Inquisitor. It wasn’t just me getting recalled; it seems like everyone is.”

“But why?” Neil wondered aloud, scowling. “While this hasn’t gone the best, it’s certainly been more of a success than a failure.”

Objectively at least, that was true. Though there had been a few times where it had come far too close for comfort. As it turned out Sargons were actually intelligent – something which was now more confirmed than discovered since the first operation. Of the half-dozen well-planned and methodical assassination attempts, only two had actually killed more Sargons.

However, they had been able to continue liberating an equal number of towns and cities, and by this point were quite adept at killing aliens – Mutons specifically. Borelians had posed the largest threat militarily, but they didn’t know the terrain and how to use it. By the end getting the Sargon to leave was as much of a victory, even if they usually didn’t end up killing them.

“I’m going to guess it’s something political,” Cycelea pursed her lips, pausing to look up thoughtfully. “Falka is on leave and Powell is Acting Director.”

“Powell?” Neil asked incredulously. “Damn it.”

“You don’t like him?”

“He’s…what’s the word?” Neil thought for a moment. “Ruthless. Even for someone in the CIA. I had no clue who Falka was before she appeared, but she was a puppy compared to what Powell will use ADVENT Intelligence for. Remember that mess with the Commander in the Middle East? That was a Powell op that got out of control.”

“Really?” She answered. “Actually, that doesn’t surprise me that much if it was a CIA op. Sounds like something they’d do.”

“Point being that Powell is not someone you want to cross, and afterwards he kept his job and was commended for his efforts,” Neil shook his head. “Not that anyone could prove anything, but it’s not out of the question he kept himself in power through his agency spying on the government. I bet Treduant used his blackmail when she brought down their Congress to move into ADVENT.”

“Honestly, I can’t blame him for that,” Cycelea admitted. “I wouldn’t trust that government either.”

“Well, now he’s in charge and I guarantee he’s going to make some big changes,” Neil shrugged. “So I suppose you should be careful. The man doesn’t think small. I don’t feel especially comforted knowing he’ll be given control over the largest intelligence apparatus in the history of
“Not too much choice, sadly,” Cycelea sighed. “I do think they’ll be sending someone to replace me. A telepath hopefully.”

“I wouldn’t be surprised if we were recalled too,” Neil admitted, walking over and grabbing a water bottle. “Winter is ending, and it’s not going to be as easy moving forward, especially with the Sargons continuing to adapt. Plus, the fact that Canada isn’t really a battleground. I can see Christiaens thinking we’ve accomplished enough and shuffling us elsewhere.”

“Hopefully not,” Cycelea said. “We still had a lot to do.”

“Yeah, we’ll have to wait and see,” Neil agreed. “But…I’m glad you were able to help with it. It would have definitely gone much worse without you.”

“Thank you, Neil,” she smiled. “And I appreciate you not being too suspicious of me and the others.”

“Guess I got used to it,” he smirked. “Never gave me a reason to break out the code words.”

She gave a light chuckle. “Glad to hear it. Good luck on…whatever happens next.”

“Thanks,” Neil looked out to the setting Canadian sun as the chill of the night began settling over them. “I think I’m going to need it.”

XCOM Intelligence Control, the Praesidium – Classified Location

3/20/2017 – 8:13 P.M.

Things were something of a whirlwind after Nartha arrived back at the Praesidium. There was a majority of people he didn’t recognize, and construction was continuing rapidly everywhere else. However, the Commander had wanted to speak to him about a few very specific topics which Nartha had general ideas of.

Cairu was here, so one of them was obvious.

“Our operations are going to be focused on Earth for the immediate future,” the Commander was saying as they stood around the holotable showing the United States. “The Battlemaster is going to march on Miami within days, or hours if he puts his mind to it.” His brow furrowed. “Conflicts are continuing on the West Coast and South America. The SAS is holding their own.”

His eyes looked up to meet Nartha’s. “With that said, we do not intend to stand idly by after what Patricia did. It’s time we devise a strategy beyond Earth. We have Andromedon Unions, the Nulorian, Sar’Manda, and T’Leth. However, these alliances are tangible and conditional. We need a unified plan or vision. We need reach beyond Earth, and we cannot be away from Earth for too long without arousing suspicion. That will fall to you.”

Nartha bowed his head. “I will do my best, Commander.”

The Commander motioned to Zhang. “Director?”

“I suspect you’ve come to the same conclusion I have,” Zhang told him as he switched the hologram off. “It is only a matter of time before the Zararch begin using your family against you.
We have days at best before they’re arrested or detained permanently.”

“They can’t just do that,” Cairu shook her head. “Father is a member of the Aui’Vitakar. You can’t just make someone like that disappear without asking questions, especially since he isn’t involved with anything.”

Nartha was less enthused. “I believe that is the only reason they haven’t acted yet. Our parents are wholly innocent. Maybe they’ve been told we’ve betrayed them. Either way, it won’t last forever. Cairu…the Zararch are more than capable of removing anyone and no one will comment on it.”

Cairu glanced at Zhang, lips in a thin line. “You have a plan then?”

“Yes, but we’re going to need the help of the Nulorian,” Zhang said firmly. “All of them.”

Nartha was surprised. “We only need a small team. Me, Cairu, Sorras, and a couple of the soldiers can easily take any Zararch operatives.”

“I agree,” the Commander said, pacing before the holotable. “However, this is an opportunity I don’t think we should allow to go to waste. You’re one of our most important defectors, Nartha, but you’re far from the only one. Hundreds of others have defected and their families are arguably in just as much danger.”

Zhang handed him a tablet. “Collected data from the AEGIS Division on families of defectors when applicable.”

Nartha blinked several times rapidly. “Are you suggesting that we proactively rescue all of them? There are thousands all across the planet and in the colonies!”

“Do you disagree?” The Commander raised an eyebrow. “If we just stick to your family, the Zararch will not waste any time. They’ll conduct their interrogations or abductions immediately regardless of support or affiliation of the families. There isn’t anything we can do for the colonies or those in the military or Zararch, but on Vitakar where there are established networks? We’re not going to get a better opportunity.”

“And they’ll know for sure you’re supporting the Nulorian,” Nartha added. “And have some kind of communication network or method. It could draw more attention to Vitakar.”

“Which is going to happen when the Nulorian start their attacks,” the Commander noted grimly. “The fact is that the Ethereals already suspect what is happening, and eventually they’re going to learn. I’d prefer we make our impact as significant as possible. This will send a strong message to the defectors – help us and we’ll ensure your family is safe.”

“And we work with the Nulorian,” Cairu added, shooting a doubting look to the Commander. “I know you have a different perspective, but I don’t think you realize how badly the Nulorian are perceived. These aren’t heroes.”

“And we’re not doing this out of altruism,” Zhang disagreed. “This is purely strategic. Denying the Zararch easy pressure is crucial, as is showing the weakness of the Collective. They will demonize whatever actions we take, and frankly the perception of the civilian population is not important. This is a message directly to the Zararch. They will either be forced to crack down harder – or be passive and allow the possibility of this happening again. Either way benefits us.”

“Miridian is going to need time to put this together,” Nartha read the list again. “A couple days at least. I do think he’ll agree with the logic, but where will all of these people be kept?”
“I think that depends,” the Commander mused. “I’d say any who are willing to defect and volunteer stay with the Sar’Manda for the time being. The individuals who are brainwashed loyalists should be brought to Earth for holding.”

“Just sticking them somewhere isn’t a good idea,” Cairu warned. “Why not just let them live on their own?”

“Because they would remain as leverage,” the Commander clarified. “And this operation is about denying them that. Besides, it will be useful for testing on the most effective way to deprogram the Vitakara populace.”

Nartha wasn’t pleased with that idea, and neither was Cairu. “Using them for a science experiment also won’t go over well, especially with those who are fighting for you.” Cairu said again, crossing her arms. “I agree they need to be protected…but I’m not sure this is the best way.”

“They aren’t being mistreated,” Zhang dismissed flatly. “The fact is that unless you want to eventually let the Nulorian deal with the loyalists as they see fit, we need a way to reliably break the conditioning they’ve been subjected to.”

“You’re XCOM,” Cairu countered. “Why are you letting the Nulorian dictate actions like that?”

“Because we’re not the Ethereals,” the Commander answered simply. “The Nulorian are the only ones who are willing to fight the Collective; the remainder of your species is not aligned with our goals. We could dictate what happens, but the Nulorian have been fighting this long before we became involved. I will curb their idiotic genocidal plans, but it will not be further than that.”

“They’re terrorists,” Cairu insisted. “They’re not like idealistic rebels from your fiction.”

“Trust me, Cairu, I’m aware,” the Commander lifted a hand. “And right now, they are the most useful ally on Vitakar we have. If they go too far, I’ll deal with them. Until that point, they will be treated as an ally.”

“We’ve strayed from the topic,” Zhang refocused on the holotable. “Nartha, we’ve outlined a general strategy. Take this to Miridian, and tell him the window is limited. The best time will be when the Battlemaster begins his assault on Miami. We’ll also be willing to provide support if he needs it, and will loan defectors here to participate.”

Nartha took the small data drive and placed it into a pocket. “Will do, Director.”

“Excellent,” Zhang gave a single nod. “I hope this operation will be a complete success.”

“There is one more thing,” the Commander walked over to the corner and picked up a briefcase. “Give this to Miridian as well.”

Nartha grabbed the surprisingly heavy briefcase, looking down on it curiously. “What is this?”

“A chemical agent,” the Commander answered. “One which I believe will be useful in the event of an assault on the Dath’Haram. This isn’t enough to cause a significant amount of damage, but I’m curious if it is compatible at all with the planet.”

He gave a single nod. “I’ll turn it over. Thank you, Commander. And good luck with the Battlemaster.”

The Commander’s lips twitched. “Thank you. I’m afraid that we’re going to need it.”
“Naples has fallen and latest Collective movements are heading towards West Palm Beach,” Helion Weekees stated to all the attended military and intelligence officials within the airport which had been converted into the base of operations for ADVENT. All of Miami Joint Company Command, as well as major officials from the USA Southeast Regional High Command were in attendance, with Saudia and the Commander also participating.

The news was looking increasingly grim.

“How much time does that buy us?” Christiaens demanded, appraising the massive holotable critically. “Confirmation on the Battlemaster participating?”

“Last seen in Naples before everything was lost,” Vernon Cooper, the General of the Regional high Command answered immediately. “We believe that he’s heading here next.”

“We knew this was coming,” Saudia stated, looking around at the assembled officials. “You were all given your directives. Tell me if they’ve been executed.” She looked to Vernon. “General, proceed.”

“I will actually turn this over to Colonel Hyde and Corporal Weber,” Vernon said to the respective individuals. “They have been responsible for enacting the preparations and devising strategies for the coming battle.”

“General,” Kathleen Hyde gave a quick salute, ebony skin shining from the harsh light above. “I want to emphasize the most important objective in this conflict, because it served as the foundation for our defense. Chancellor, your orders were to prioritize the death of the Battlemaster through luring him into the city and catching him in a nuclear explosion. We extrapolated this to turning this conflict into a significant grind for the Collective.”

She clasped her hands behind her back. “With respect, Chancellor, we are assuming the Battlemaster isn’t going to walk into a trap like this. If we make it too easy, he will suspect something. Personally, I dislike playing with the intention to lose, but considering what is bearing down upon us, I realize victory is near-impossible. As a result, we are going to take as many aliens with us as possible through a heavily staggered defense.”

Different colored lines appeared on the map of Miami, along with some statistics. “First the good news,” Hyde stated, pacing before the holotable. “Evacuation of civilians has nearly been completed both through Gateway utilization and our own Naval evacuations. Collateral damage has been reduced to zero.”

She held up two fingers. “Second, currently the forces at our disposal are fifty thousand soldiers, with a reserve of thirty thousand through Gateway support, which is assuming the Collective prevents naval assistance.” A more detailed breakdown of the soldiers was displayed, though Hyde didn’t elaborate on it. “I’m not going to waste a significant number of valuable soldiers on a suicide mission,” she said. “However, we are going to utilize the ones we have as best we can.”

“The PRIEST numbers are especially low,” the Commander noted. “Intentional?”

“As I said, I don’t intend to waste them here,” she confirmed with a nod. “The Collective similarly has a low number of psions. I am of the belief that our soldiers are more than capable of matching
them without significant PRIEST support. Besides, we have a number of tricks ready to make the Collective fight on our terms. Corporal, please explain.”

“Yes sir,” an older man cleared his throat and took her place, pointing to the holotable. “I want you all to direct your attention to the map. As you can see, the Miami area is fairly large, and there is an obvious choke point. The Collective is not going to want to go through the Everglades, and so the obvious path is through the coast in a straight line down. This-“ he tapped a finger on the holotable. “Must be denied.”

He nodded to Hyde, who pressed several buttons on the tablet which resulted in a significant portion of Fort Lauderdale turning orange and red. “The Collective is going to want to take the easy path,” he said. “We will deny them this. We’ve placed the largest explosives of chlorine-trifluoride throughout the city, and the moment the Collective begins approaching them, we detonate them and have the Purifiers plug any holes. This will halt their army completely.”

“It will likely also spread downwards,” Saudia noted.

“Yes, but not quickly, and if it dies down, the Purifiers restart it,” Weber nodded. “Stopping the majority of their army is worth the devastation, especially considering Miami will be a crater when this is done. Essentially, this means the Collective will have to move their army through the Everglades – specifically this road if they want a clear path.”

On the map the singular road through the Everglades directly to Miami was highlighted. “A perfect choke point, and it will stop them from easily moving their siege units through there,” Weber said with a thin smile. “Not forever, but we just need them to be delayed. And that is where they will hit the first line of defense.”

A bright green line appeared along the outskirts. “This is defense point GREEN,” Weber said. “It’s designed to solely be a kill zone. Few soldiers here, mostly remotely-operated SHIVs and MDUs, with a healthy supply of Rocketeers, mines, and Snipers in the background to provide support. The objective is simple – hold the line as long as possible. When approximately half of positions have been compromised or half of the units destroyed, the retreat to the second line will be sounded and we spring our first trap.”

The green line turned to red. “Chlorine trifluoride explosives have been placed along this line,” Weber confirmed. “We sound the retreat, detonate them, and the Collective has to walk through a wall of flame. Slowing them down more. The majority of soldiers will retreat to defense point BLUE, while the rest will support defense point ORANGE.”

The respective defense lines were highlighted, with BLUE being smaller, but positioned directly before the likely oncoming attack, while ORANGE curved around the city further from the BLUE point. ORANGE also held the first lines of AA defenses and Flak Towers, Saudia noted. However, the areas where there was housing were highlighted in an orange radius.

“Colonel Hyde forgot to mention that the only reason we are able to pull off this defense at all is because of our Militia and civilian volunteers,” Weber said. “Nearly seventy thousand are still here and prepared to help. Because of them we have rigged almost all housing residences and buildings in the city in minor, yet lethal ways.”

He motioned to Weekes. “Chief, this is where your people begin to come in.”

“Weber, with the advice of a local, put together a cheap but effective trap,” Weekes said, nodding to the holotable. “In short, we want to draw the Collective soldiers into the residences. Once inside, they trigger simple traps which dispense large amounts of flour throughout the residence or
area. This, as it turns out, is highly explosive. Lancers and Special Forces will be responsible for luring Collective forces into these buildings, and subsequently detonating them."

There were murmurs of approval around that. Saudia was impressed at the plan. “We harass them until they get to the defense line proper, and then retreat to provide support,” Weekes finished. “Corporal, you may continue.”

“Thank you, Chief Weekes,” Weber stepped forward again. “Defense point BLUE will be our first manned defense line. Support from Snipers, Rocketeers, and other mobile and long-range units will be important for holding out as long as possible. When we reach fifty percent compromise rate, we will retreat and detonate the chlorine trifluoride explosives along defense point BLUE.”

He indicated the orange line. “Defense point ORANGE is where the more intensive defense will take place. We will have Flak Tower and significant AA support. Artillery units have been positioned throughout the city, and ADVENT special forces will repeat their attacks as the Collective soldiers advance to defense point ORANGE.”

“How long do you think our forces will be able to last?” Saudia wondered.

“At least a week to get through GREEN and BLUE,” Weber said. “ORANGE and RED are where the defenses truly stiffen. It ultimately depends on several factors – how much the Collective is willing to commit to this attack, and what kind of air support they will get. It’s not out of the question they will use Cleanser Ships to bombard Miami Beach and the Virgin Key – where we’ve established a number of artillery positions.”

“Aegis can provide protection if they pose a significant threat,” the Commander said. “Though that kind of precision targeting will require the Cleanser Ships to fly low – low enough that the Flak Towers may shoot them down.”

“Where our air force is ready to go,” Hyde added, flicking her eyes to the ceiling, indicating the makeshift base itself. “Going to be difficult for the Collective to get this far.”

“Returning to the battle plan,” Weber motioned to the holotable. “If ORANGE falls, the same trap will be sprung, and the true final line will be defense point RED. There are additional defenses past this point, but if they pierce this, further defense points are diminishing returns. Once we get to this point, we signal a full Gateway retreat, and several hundred reserve MDUs will be activated to begin holding the line for soldiers to evacuate. The flame wall will slow them down, and give us time to fully evacuate.”

“Then we bring in the bomb,” Hyde finished. “We’ll wait for confirmation of the Battlemaster entering the blast radius, and then send it through on a time of only a minute. I doubt that will be enough time for him to flee, even if he knew what was coming.”

“Excellent work, both of you,” Saudia commended as both of them finished. “This will be more than sufficient to make the Collective pay for their attacks.”

“If I may, I would like to make an addendum,” the Commander stepped forward. “The vast majority of these forces will be Mutons; the numbers of which number in the billions. Unfortunately, attritional war against them is a losing battle since no matter how many die here, they will be replaced. The same with Sectoids to an extent.”

He lifted a finger. “The Vitakara and Andromedons are different. They can be affected by attritional warfare, and keep in mind that the Vitakara in particular have friends and family awaiting them on their planet. Kill them, and it will shake morale at home. No one will care if a
thousand Mutons die. They will care if their mother, brother, daughter, or lover perishes. Focus on any Vitakara and Andromedons you see. Make the aliens feel the cost of fighting us.”

There were nods of agreement at that. “Targeting more valuable units is also advised,” Weekes added. “Elites, Heralds, Executors; anything that’s not a Muton is a priority target. This is not to say if you see a Muton, you shouldn’t kill it, but focus on getting rid of something the Collective can’t easily replace.”

“All of you have been appropriately briefed on the overall plan,” Christiaens said, looking around the room. “If you have questions, now is the time. You will be responsible for appropriately distributing orders to your subordinates.” She paused. “I want to be clear – we may be preparing to lose, but we’re going to fight as if we’re going to win.”

She indicated Weber. “I suspect that the Collective won’t be expecting such a thorough defense, and I would not be surprised if they give up. We have a very clear opportunity to hold Miami and by extension Florida. Right now, the Battlemaster thinks he can march down and claim this state without issue.”

She gave a firm salute. “Show him otherwise. Good luck, and I expect when I see you next we will have held the city – or the Battlemaster will be dead. Understood?”

A series of salutes. “Yes, Commander!”

“To your positions then,” Saudia stated. “They will be coming soon. Be prepared for anything.”

***

*Florida Collective Command, Florida – United States of America*

*3/27/2017 – 1:17 P.M.*

Ravarian disliked the entire part of Earth. It was far too hot and humid for his liking. Why people voluntarily lived here he could not understand, especially since they were not adapted to this type of climate. Humans had an extremely odd tendency to settle in climates which were clearly not for them, and somehow cling to life like some persistent parasite.

Much like how this war was, now that he thought about it. They knew they could not win in the end, yet they still persisted. Admirable in a way, but it certainly made all of their lives much more difficult.

At least there was climate control here, and within days Miami would be under their control – if everything went well. The Battlemaster stared before a holotable which showcased the latest report from the Fort Lauderdale line. The battle had been progressing adequately, with some resistance, but not nearly enough.

Then the city had exploded.

For the first couple hours they’d not know what was happening, anything from a surprise bomb to an invisible airstrike, but once they’d tried putting out the fires and realized that water only made it worse, it became clear that ADVENT had established dozens of bombs of chlorine-trifluoride and ignited them.

A line of fire which for now completely cut off their line of attack towards Miami, and showed no signs of abating as ADVENT was actively keeping the fire active. A development Ravarian was unhappy they hadn’t learned about. It was very clear what ADVENT was doing now, and he
sincerely hoped the Battlemaster could see it.

His hopes were well-founded as the Battlemaster finally spoke. “This is a trap.”

Yang Shuren, clad in her red armor snorted. “Clearly, but for what? Miami is already cut off, holding it doesn’t gain them anything.”

“It slows us down and could turn into a drawn-out conflict,” the Battlemaster answered slowly, moving the hologram closer to the next-best point of entry. “Neither of which we need to tolerate. So this is either a trap, or they are protecting something.”

“We’ve received no intelligence indicating ADVENT is hiding something,” Aoura said, looking to Ravarian. “Zar’Chon, can you confirm?”

“Yes,” he said. “Let’s look at what we know – ADVENT is clearly preparing for a siege. They are aware you are participating in the conflict directly. Two possibilities I can see – they are attempting to draw us into a quagmire, or they are attempting to trap and kill you specifically.”

“The defenses observed do not indicate specific targeting,” Disciple-7 noted blandly. “If the intent was to draw the Battlemaster to a specific point, there should be a clear path. As it stands, this appears to be a standard ADVENT defense. Direct assassination of the Battlemaster is a secondary objective at most.”

“Recommendation,” J’Loran boomed, tapping a haptic screen projected by his gauntlet. “Miami is a distraction. Eradicate it with the Cleanser ships.”

“Direct targeting could expose Cleanser ships to enemy aircraft,” Disciple-7 corrected. “This does not take into account intervention by ADVENT psions or Aegis. Direct bombardment is not recommended without complete knowledge of ADVENT objective.”

“ADVENT is expecting to cripple us in this attack,” Ravarian said, moving the holomap to focus on the urban Miami outskirts. “Infiltration by REPLICA units has provided us with a significant amount of information. Normally this would be more difficult, but ADVENT has employed a staggering number of civilian volunteers – most of which were not told anything, but we have enough information to know some of what they were doing.”

Houses and buildings lit up. “They are rigging all residences and buildings with something,” Ravarian said. “We don’t think it’s an explosive, not completely. They’ve brought in tons of a white substance we were unable to immediately identify closely. We believe it could be a poison agent of some kind, potentially created by ADVENT. It appears a strategy will be to lure incoming forces into residences and trigger the traps.”

“Avoid the houses then?” Yang cocked her head. “Not going to be that simple, I can guarantee that.”

“No, but we can determine what the trigger is,” the Battlemaster added thoughtfully. “Remotely springing these traps is advisable. Grenades should be utilized. If necessary, only send in drones and Muton soldiers one at a time to minimize losses. Yang, Ravager, remember this.” The Battlemaster’s Harbinger and the Ravager of the Hegemony both indicated their understanding.

“A sound plan,” Ravarian agreed. “Due to the limited entry points, our deployment of the Executors is going to be difficult. The Everglades will slow our units down and potentially destabilize them. The ground is simply not ideal. We’ll have to claim a significant amount of ground before it will be safe to move Executors forward. Hover units will not be impeded.”
“If we will not raze the city, I would advise an alternative target,” J’Loran highlighted the islands and along the coast. “Zararch operatives have reported these have been heavily fortified by ADVENT. Taking them out through a brief, coordinated strike would reduce their defenses deeper within the city. We can later insert Battlefield Engineers to claim them and establish our own artillery.”

“That can be done,” the Battlemaster agreed. “There will need to be sufficient cover to withstand the air defenses. The true lines of defense are deeper within.” A blue line was highlighted, along with accompanying structures. “The Flak Towers are the primary defenses of ADVENT cities. There are not as many here as Busan or others, but there are enough to reliably defend the city. They must be captured.”

“No destroyed?” The Ravager asked.

“No, I’d prefer we utilize them,” the Battlemaster said. “Turning them against ADVENT will be more useful for us, and allow us to establish offensive lines of our own.”

“That won’t be easy,” Lurainian Commander Galitai rumbled, shaking her head. “I’ve read on the history of these structures. We can only expect ADVENT has improved them. They are death traps for any attacker.”

“Perhaps, but I expect your forces to be able to accomplish this all the same,” the Battlemaster answered neutrally. “We don’t need to throw away soldiers, but simply leave this task to those who are capable. Which includes myself, Yang, the Ravager, and the Lurainian. Speaking of which, I intend to learn what ADVENT’s true objective is with this defense.”

He looked to Galitai. “The Lurainian will be sent within the city behind their lines. Your objective will be to learn what they are planning. Zar’Chon, you will assist them in this task.”

Ravarian bowed his head. “Yes, Battlemaster. In addition, thanks to the REPLICA\s we also have a list of individuals to target for removal,” the holotable switched to showcase a series of figures and faces. “Officers, Lieutenants, Corporals, and more,” Ravarian said. “Targets of opportunity we should eliminate to increase our chances of victory. I believe this would be a good opportunity to utilize the Banshee Seeker.”

“Granted,” the Battlemaster said immediately. “Allocate as many agents as you believe are necessary. I suspect we will need to exploit every advantage to secure this city in a fashionable timeframe.”

“A prelude to Tampa,” Yang grumbled. “This is a playground in comparison.”

“Consider this practice then,” the Battlemaster finished. “We begin our march to Miami. Continue watching the firewall ADVENT has erected. The moment it dissipates fully, send down reinforcements.”

“Yes, Battlemaster,” Disciple-7 confirmed. “It shall be done. Our forces are moving out as we speak.”

Dreadnought of the Harbinger – Central Command

3/28/2017 – 10:00 A.M.

Patricia stood with her own small council as she prepared for the upcoming attack. She wore her
white dress uniform for now; the armor unnecessary. It wasn’t as though she blended in with the rest of the crew who consisted of entirely aliens. The lone Human certainly made an impression, though it seemed like all of them had gotten used to it even in the few short weeks since she’d taken over.

Marian retained his place as her Zararch advisor – and by extension her intelligence advisor who had done an excellent job at keeping her up to date on Zararch operations on Earth – much of which had helped inform her next plans. Stepping into the role of a strategist was not completely new, as even the Commander had only operated on a small scale, but she knew it was something she would eventually master.

The Imperator had given her free reign to select others she felt would be useful, and while she had consulted with him before making final decisions, there had been none he’d considered problematic. I’Sari served as her Andromedon advisor, even though he was part of the Andromedon Military and technically not affiliated with a Union, Irriaran was one of the most loyal to the Collective, and who specialized in genetic engineering.

She preferred an Andromedon as an advisor than a Hive Commander any day. Though as one of the Unions with the best relationships to the Hive Commanders, he worked well as an intermediary. Someone who had already proved to be useful in the upcoming campaign, and despite her dislike of the species, the Sectoids were likely to prove their worth soon.

The hulking Sargon she had also recruited was not a typical strategy master like the Battlemaster’s Disciple-7. She had plenty of commanders to manage that; what she needed was someone to handle the civilian populations once they were captured. Assimilator-2 was one of the Sargons who oversaw the training on Desolan, and had developed an interest in alien psychology and behavior.

An interest which had attracted the attention of Sana’Ligna, and he had assisted on some of the more humane tests on Human captives, not to mention countless ones on Vitakara. Patricia had never realized just how utterly intelligent the Sargons were; nothing at all like the brutes that fought. In short, he would be instrumental in ultimately forging Humanity into a species loyal not to ADVENT, but to the Collective.

Or at least breaking the conditioning.

The first few runs were going to be tests, but necessary to determine what was going to work, and what wasn’t.

The final two were ones she had included so she would remain in the loop regarding technological developments, as well as additional insights that could be provided. Miriam was another Human woman from Earth who had joined Fectorian’s army, and served as something of liaison to the Ethereal, as well as a somewhat adept engineer.

The woman was ambivalent to her at best, and her full loyalty was to Fectorian. Not an issue for Patricia, so long as Miriam complied. The other was a Vitakarian named Sci’casas’forge, one which was supposedly completely grown by Revelean. An apex specimen, supposedly. To Patricia, he appeared like a normal Vitakarian until she looked at some of the projects he assisted the Elder with.

In his spare time he was working on a project regarding deconstructing Sovereign technology in contact with Revelean. He didn’t speak much, but of all of them, he was probably the smartest in the room, Sargon included.

“Within hours the Battlemaster will begin his attack on Miami,” Patricia said. “ADVENT will
continue to be distracted with his assault and that of the First Guardian. My own will add to this confusion. However, these are largely going to be distractions from a greater plan,” she nodded to Assimilator-2. “Which was devised by our respective Sargon. ADVENT maintains control through information. Disrupt the information, disrupt control.” She directed a hand to Marian. “Proceed with your planned operation.”

“Yes, Harbinger,” he nodded, and brought up the holomap studded with red indicators. “What you are all seeing here are data centers for the largest search engines in Asia. Baidu, Yandex, Bing, and several others. Users rely on these for information. We are going to take them out.” Blue indicators flew down from the presumed atmosphere. “I’ve put together multiple teams of Zararch and Lurainian operatives who will have varying objectives. These are subversion, capture, or destruction. Operatives will attempt to link a server to a CODEX which may be able to subvert the network. Barring that, removing as much hardware as possible is recommended. If neither are possible, destruction is ordered.”

He looked up and around the room. “The result will be a heavy disruption of information distribution for several weeks, minimum. ADVENT will be forced to respond and allocate resources, and in the meantime, civilians will be left without crucial lines of communication, which could affect military forces.”

“How many?” Miriam asked.

“Fifteen targets in total,” Marian checked briefly. “I should note that these are not all of them, but the major ones we could find. We are not expecting a complete success rate, especially when ADVENT figures out what is happening. This paves the way for our second objective.” On the map yellow icons appeared around Southeast Asia, specifically Vietnam, Cambodia, and Thailand. “While Patricia is active, sabotage teams will be sabotaging and removing all power stations, cell towers, and other lines of communication.”

“Indeed,” Patricia nodded. “I expect that ADVENT will be focused on me during this period. I suspect they will not be expecting an attack in this area, especially so close to China. They will not be prepared.”

“Taking the city will not be an issue,” Miriam said as she started pacing, her cybernetic eyes white as she appraised the holotable. “You’re aware of the history. Our forces will be harassed when we move beyond the cities. If the Vietcong could manage it when facing a militarily superior America, then I’m certain ADVENT can as well.” She pursed her lips. “In fact, we should look to Canada to see this in action.”

“Fortunately, I’ve taken that into consideration,” Patricia said with a smile. “It will be difficult to ambush us from forests and jungles if those don’t exist, won’t it?”

Miriam cocked her head. “Elaborate.”

“When I capture ground, I intend we hold it until the end of this war,” Patricia said, pressing a button on the holotable. Around the region the area was highlighted in red. “If the environment is going to be used against us, we remove this advantage. This will serve two purposes – to deny ADVENT an easy means of response, and to reshape Earth into something immediately usable.”

She gestured to I’Sari. “I don’t intend to destroy land wholesale without a plan. The Andromedons are expert terraformers and engineers in their own right. If you would elaborate, I’Sari?”
“Of course,” I’Sari lumbered forward. “It is important to reduce our reliance on supply lines from off-world. Land reshaped by Harbinger Trask will be instrumental in being converted into fertile land which will be supplemented by food, plants, and other bioengineered vegetation which has been developed by the Greater Hive Commanders over the past half-year. Originally it was intended to damage the Earth, and it has recently been adapted to thrive in it.”

The map vanished and was replaced by some plants and chemical and biological information of each. “Simulated environments have shown complete compatibility. The focus has been on improving already-existing Earth plants, fruits, and vegetables to be enhanced compared to their natural brethren. Other Vitakarian and alien foods have also been successfully supplemented to a degree. These will feed civilian cities and our own soldiers.”

New plants appeared. “In addition, the placement of controlled clusters will be capable of holding trapped vegetation, including acid and poison secreting vegetation, altered Chryssalid hives, and violent plant life which will be cybernetically and genetically programmed to not react to alien life. ADVENT will find no refuge in the new Vietnam jungles.”

“To hazard a guess, Harbinger, how will the current landscape be destroyed?” Miriam asked, with a hand raised.

“Two methods,” Patricia answered. “I’Sari will manage industrial equipment designed for terraforming, and alternatively, I will handle it myself. Psionics is quick and effective.”

“In addition, we will begin reconstructing appropriate communications networks,” Marian added, returning to the map with green nodes springing up. “A tight CODEX-controlled network which will emulate what civilians are used to, only we can ensure ADVENT propaganda is reduced to a minimum.”

“Finally, we will begin the process of removing and replacing ADVENT satellites,” Patricia finished. “Thanks to Fectorian, we will have better communication, coordination, and capabilities on Earth.”

“Will ADVENT be able to access them?” I’Sari asked.

“Not initially, but it won’t take them long to piggyback,” Patricia said. “But now it will be under the control of the Collective, and they’ll be forced to rely on our satellites. If they decide to send their own up, we just shoot them down.”

All of them nodded and glanced around in approval. Patricia placed her hands behind her back. “If there are no more questions or additions, then this is the plan. I will consult with the Imperator before the operation launches, which will be within the day. Prepare yourselves. Dismissed.”

***

Near Defense Point GREEN, Miami, Florida – United States of America

3/29/2017 – 9:16 A.M.

Far above the ground, Sierra and her squad hovered as the Collective began marching towards the defenses. Lines of SHIVs and MDUs manned the defensive points along the first defense point; a point Sierra knew was going to eventually fall, but until then they would be able to take down a good number of aliens.

The bottleneck of the lone road was useful for concentrating fire, but the aliens were also marching alongside it as well; the Heralds and Mutons were primarily the ones braving the swamps of the
Everglades, even though they stuck to the shallow parts. Sierra wondered how many of them had succumbed to any wildlife attacks, or if the noise had scared everything off.

What made her furious was that the Collective wasn’t sticking just to the roads. If there was something in their way, they destroyed it. A swath of devastation was left in the wake of the Collective’s march to Miami, and Sierra looked forward to them burning for it.

They would not attack her home without paying a heavy price.

“Artemis A1, do you copy?” Carmelita asked via radio as her squad was presumably moving into position. Two teams of soldiers were prepared for this defense, Artemis and Apollo; the latter dedicated to defending Miami as long as possible. The other was to cause as much damage behind enemy lines as possible.

“Copy,” Sierra answered, checking her WHEEE. “Collective forces are starting to engage defense point GREEN. Ready to engage at your signal.”

“Moving into position; be ready,” Carmelita warned. “Begin your approach.”

“You heard her,” Sierra kicked her jets towards the marching army. “On me!”

“Acknowledged,” Ted confirmed.

“Right behind you,” Anna added. “Let’s make them hurt.”

Mobile artillery encampments from the second defense point established by ADVENT boomed as they flew over the first line, already catching the attention of the aliens; many of whom aimed their weapons upward and fired green bolts into their position, though far too inaccurate to do any real damage.

“Strike now!” Carmelita roared. “Kill every alien you see!”

“Diving!” Sierra called out and angled her body downwards as they were now far behind the battle lines, where groups of Mutons and Runianarch soldiers marched, with Heralds also in the mix. Beyond them she also saw the towering Executors and older Sectopods; most of which were marching on the road, but a few were gingerly moving through the marsh.

“Bombs away!” Anna called as she readied her launcher and fired a series of missiles towards clusters of aliens. These weren’t regular missiles, but ones containing long-term replicator nanites. Highly experimental, highly dangerous. According to Vahlen they’d last for two hours before self-destructing, which would be long enough to cause significant disruption.

Sierra’s arsenal was slightly less dangerous, but would serve to disrupt the aliens quite nicely. She tossed a series of white phosphorus grenades in an even spread, aiming for Muton clusters, and before it became too dangerous, pulled up from her dive and shot over a vast swath of the alien lines, firing a continuous stream of the white poison from her wrist.

Ted kept his focus clear and direct, acting as a sniper from on high, dispensing smoke around him wherever he moved as he blasted psionic energy in direct beams into the Heralds, with sustained beams penetrating their vulnerable insides and causing them to fail. Unfortunately, this was more difficult to do since his position was being hammered with dozens of plasma bolts – while most of them missed, a few clipped him.

Sierra kept lower to the ground, knowing that was potentially a better way to remain harder to hit, so long as she retained her speed. She aimed her WHEEE cannon towards the swampy ground and
fired, and just as she expected, the sheer electrical shock instantly killed anything living in that pool of water.

She repeated the same tactic several times more before taking some direct shots, forcing her to blast back up into the sky to reevaluate her tactics. The areas where Anna had fired were having an immediate impact, complete dead zones that were continuing to expand and consume. She’d hit the road itself, which was causing the most damage.

“Sierra! Incoming hostiles!” Anna called as she pulled around.

“I see them.” Ted grunted grimly as he dodged from ground fire. “Only a matter of time until they stole our idea.”

Sierra looked beyond, and saw at least two dozen figures launch from nowhere, and begin flying towards them. They appeared to be aliens of various types, and all of them had been augmented solely for flight in a way that looked just as good as the Archangel Armor, if not better. Black and gray, their mirrored opponents were geared and armed for a fight.

“Artemis-1, we’ve got aerial opposition,” Sierra warned, bringing her body around to confront the enemies directly. “Ground assistance will be limited for the time being.”

“No worries for now,” Sierra could clearly hear the sounds of fighting in the background. “Whatever you did has disrupted them back here. Better make the most of it before the Battlemaster shows up.”

“Copy,” Sierra acknowledged, aiming her weapon as the flying aliens approached. Green plasma fired from their weapons, which was answered by Anna’s autorifle and Ted’s psionics. To her surprise she saw one of the aliens break in air and create a psionic shield in front of him – a Sectoid then. The shield absorbed the torrent of energy from Ted, but the rest of the aliens and two Archangels sped forward.

Her armor shuddered as some bolts scraped her, but she persisted, and just when she was on a collision course, she cut her engines, fell, twisted upwards and fired her WHEEE at the other pilot who took the full brunt of the electrical blast. The engines which appeared to be built into prosthetics exploded and the body plummeted from the sky like a stone.

Sierra reengaged her engines and kicked back up into the sky as the other aliens were circling around. They were clearly new at this, and she fully intended to exploit it. Anna had managed to get behind one, and fired a torrent of plasma into its back, sending it tumbling to the marsh below.

Ted had gotten exceptionally close to the Sectoid rival, and was overwhelming it with short bursts that constantly disrupted its barrier attempts. Anna fired a series of bolts, and it raised a shield to defend itself which was all Ted needed for a torrent of power to melt the head of the Sectoid and it fell from the sky.

Sierra was realizing that as useful as the WHEEE was, it wasn’t ideal for air-to-air combat. Three of the aliens were teaming up on her, and her suit was suffering direct hits now. Evasive maneuvers were only going to do so much. “Three on me, need a distraction!”

“Keep flying forward, and do not stop,” Ted warned. “Anna, keep them off me!”

“I’ll do my best!”

Sierra shot forward, with the others in clear pursuit. She felt, rather than saw what happened. The air itself seemed to shift on a fundamental level when the Psionosphere was broken, and her
imaginative mind saw the purple tint in her peripheral vision, and heard the whine as several were falling to the ground.

She braked, the alien shot over her and wasn’t quick enough to recover from the direct shot from the WHEEE she put into it. “We need to get back,” Anna snarled as she slammed directly into one of the aliens and sent both on a freefall, something she could manage, but the alien clearly couldn’t. “Suit is taking damage.” With a free hand she tore off one of the engines and kicked the spiraling alien downwards before recovering.

“Copy that,” Sierra reluctantly agreed as she saw one of her engines getting to close to the threshold for comfort. “Artemis – we’re not in ideal territory and our suits are taking damage. Please advise your status!”

“This is Artemis-1,” Carmelita sounded hurt, though angry. “They’re definitely onto us now, and they’ll be dealing with a Shoggoth problem for a while yet. They’ve sent the big guns against us – retreating for now. Hussar strikes have also been highly effective. Think we’ve set them back a week, if not more.”

“Copy, we’re heading back to defense point GREEN now,” Sierra said, performing a hard break to let the twin aliens pursuing her overshoot. She fired, but missed this time and they quickly turned back towards her. “Good luck.”

“Good luck,” Carmelita wheezed, before giving a battle shout. “Another behind you! Morrow! Tell Anna that strike on the road really screwed them up. She’s getting a commendation when we get back.”

“You hear that?” Sierra said to Anna as she blasted another alien out of the sky.

“Oh, let’s get back,” she said. “I don’t want my medal laid on my corpse.”

Performing a variety of evasive measures, the Archangels shot back across the sky to relative safety, pursued by the aliens who had been sent to eliminate them, and when Sierra looked back, she saw that more units had been sent – Seekers. The big ones.

This is not going to be easy, she thought grimly. Not easy at all.

***

Miami Exterior, Florida – United States of America

4/2/2017 – 10:29 A.M.

The march to the city had been more arduous than they’d planned, but by this point the Battlemaster believed they’d brought it under control. Wraiths and Spectres had been enough to drive off the XCOM and ADVENT special forces which had harassed them continuously, while the Archons were enough to drive off, if not completely eliminate the Archangels.

The nanite plague that had been fired had delayed them significantly, and they’d been forced to utilize EMP devices wherever they suspected there to be XCOM nanites. The incident had ruined the road, rendered three Executors inoperable, requiring hours of dedicated work before they could be moved again.

It hadn’t helped that along the way they’d had to deal with the occasional Human civilian who had ignored the ADVENT warnings and waged a one or two-man war against the aliens. These weren’t regular civilians, but who the Battlemaster could only assume were exiled lunatics. While their
weapons were primitive, they held copious amounts of them and sometimes even had domesticated wildlife they used against them.

They’d been dangerous enough to kill at least a few soldiers. Protocol now was to use an Executor to raze these houses to the ground. Overkill, but they did not have time or energy to deal with a protracted conflict with a delusional alien.

ADVENT, meanwhile, had been clever in their attacks. But that wouldn’t work again, especially as the Battlemaster beheld their first line of defense as shelling and plasma fire sounded around him. The ADVENT artillery seemed to be fairly weak, so it was unlikely to be dedicated emplacements. The majority of defenses consisted of the MDUs, SHIVs, and sniper fire from the residences behind.

No dedicated Human soldiers, though engineers and other crews were maintaining the line, along with a steady supply of machines. Their own lines had been set up a short distance away, though the machine accuracy of the MDUs and SHIVs was lethal for Mutons and Runianarch. Heralds were performing far better, and were responsible for the vast majority of casualties.

ADVENT had their priorities in line though. As he watched, he saw that these MDUs were not the same iteration he’d seen before. These ones additionally had a rocket launcher attached to the shoulder – and every time a Herald appeared, all of the nearest MDUs would concentrate on it, and not even Heralds could withstand a dozen rockets flying in at once.

To him, it was almost impressive how many munitions the Humans had access to.

It had gone on long enough. It was time to break the lines.

“Move forward,” he commanded to Yang and the Ravager who were stationed elsewhere on the line. There would only need to be a few breaches before the line would fall, and the Executors were right behind, which would make the following attacks easier.

“Moving,” Yang said, and through their bond he felt it echo. He sent the same in reply, and grasped his sword. With it in hand, he charged forward towards the line, the air blurring around him as he dashed faster than the MDUs could target him. He performed a leap into the air, and slammed himself down with a hard telekinetic pull, emanating a shockwave which destabilized the MDUs nearest to him.

Several of the Human engineers and support team screamed as he appeared, and with one circular swipe he decapitated most and executed the rest. Two hands reached out and SHIVs on either side lifted and were thrown into MDUs and other soldiers with lethal speed. The machines swiveled to him, firing with laser and gauss weapons.

He dodged to the side, then slammed directly into an MDU, ripped off the head with one hand and stabbed downward into the heart of it from the opening. He established a personal telekinetic field around him, which would catch all of the rounds which the snipers were no doubt firing at him. They were not a concern now, as there were still more MDUs around him.

With a sharp gesture a trio of Humans were killed as they were flung hard into the barricade they’d established. Another hand closed to a fist as an MDU crumpled, which he tossed towards the residences where the snipers were nested. Stabbing and swiping with his sword he dismembered the MDUs recalling their vulnerabilities, and the SHIVs had no such armor protection.

Above him he saw Archangels flying, though wisely keeping their distance. Archons saw their cue, and now that the line was breached, they began swarming the Archangels, severely outnumbering
them. That would occupy the snipers as well, and the Battlemaster returned to eradicating the machines and soldiers around him.

Blood and oil flowed and stained his armor and weapon. No soldier was able to stand against him, as it had always been. The shots which had been fired at him, he used to kill more when he shot them towards allies. The line had been breached in enough places, and Mutons and Spectres were pouring through the gaps, the latter beginning to convert the corpses into usable bodies.

Through their bond he sensed that Yang was similarly successful, and deep within her own trance. A shared experience of conflict and chaos as they carved their way through an enemy; it was a good feeling to have, after believing he wouldn’t experience it again. Certainly not with an alien, but it turned out that was not necessarily an issue.

Then the line behind him exploded.

Everything even partially near the line was immediately vaporized, with dust, metal, rock, and wood being turned into lethal projectiles if not destroyed outright. Orange-yellow flames roared to life, and the Battlemaster saw it extended down the entire line. He immediately sensed Yang was fine, if surprised as well.

A trap then.

He saw the flames begin spreading and realized that it wasn’t simple fire that had been laid, but the devastating chemical the Purifiers used. Chlorine trifluoride. Of course. He saw what ADVENT was doing, and it was certainly clever – and also told him they were willing to eventually sacrifice the city. Their objective now was clearly to delay and extract a heavy price.

The chemical flames burned through everything, and they would not dissipate for hours, and threatened to spread to his own forces – and the city itself. It provided an effective barrier between those on one side, and the other. He could move between the lines at will – the flames were not high enough to stop him from leaping – but for the rest, moving through was suicide.

“All Collective forces on this side of the barrier regroup with myself, Harbinger Shuren, or the Ravager,” the Battlemaster commanded as he executed several more soldiers. “Do not approach the flames under any circumstances.”

Slowly over the course of long hours the flames began diminishing, but not safe enough for passage yet, and the survivors on the other side were rallied and marching forward towards cover. Above the Archons were clearing out the snipers, done much easier with the MDUs gone, though the Archangels were picking them off with disturbing ease.

“Zar’Chon,” the Battlemaster called as he crushed another MDU which had begun retreating to the next ADVENT line. “Activate REPLICA units and Banshees. Eliminate pre-determined targets. In addition, have them search for where ADVENT may have laid other traps for us. I doubt that was the only one.”

“They will do so, Battlemaster,” Ravarian answered. “Should they be detonated?”

“If at all possible,” the Battlemaster confirmed. “Have the Cleanser Ships move in as well. Set them outside effective range.”

“Before the towers are handled?”

“The towers will be handled,” the Battlemaster promised, seeing several of the towers in the distance, likely where the next line was. “And when they are, we will strike.”
Vietnam was one of lesser developed nations on Earth, at least compared to certain other countries, China being one of the most prominent ones close by. A lack of development which, historically, had benefited them in times of conflict. The open field, the jungles, the vegetation had all served to give them an advantage against invaders.

She had learned from it though. This was one instance where history would not repeat itself.

The mask hung on her waist as she walked across the fields towards Ho Chi Minh, one of the largest cities in the country. ADVENT would have a defensive presence there, and one of the few in the nation. When that was gone, then they would assume control over a significant region. The few civilians who lived on the outskirts were currently peacefully resting.

No need to kill them. They would be useful for what came next.

By now though they knew she was here, and no doubt mobilizing a response. Perhaps they believed that a single person could not take the city – and they would be correct. She did not intend to take the city herself, but she was going to do it intelligently. Surgically. Methodically. A dozen ADVENT soldiers on patrol saw her approach, froze, and raised their weapons.

Not running. A surprise.

She penetrated their minds within moments, unprotected as they were. Die.

All of them fell to the ground like limp puppets. As she moved aside their corpses with a slight telekinetic nudge, she reflected on how...easy it was to kill now. Life was much more fragile and more easily molded than most believed. Psionics granted the power to mold into whatever shape they wished. It didn’t matter what the person was, they could be turned to become whatever you wanted.

Perhaps something to consider later. She was beginning to understand a little more how Revelean thought now. Examining what could be accomplished if one put their mind to it. Well, on a psychological level Vietnam would serve as an experiment of sorts; a deprogramming and subsequent reprogramming of a population.

Ahead she saw the ADVENT perimeter around the city. It was no Busan, but it held trenches at least two layers deep, a healthy spaced grouping of Flak Towers, and no doubt some artillery and tanks ready to fire behind it. She could make out snipers on the Towers and some of the buildings further in. Knowing how ADVENT operated, she suspected they had also seeded the area beforehand with mines.

She stopped walking perhaps a thousand yards away from the trenches. Outside the effective range of most weapons outside of snipers who were curiously holding their fire. Not that it would matter as a telekinetic barrier had been erected long before she’d reached this point. Lasers were a concern, but she could sense a number of basic emotions emanating from the lines.

They were waiting for her to make the first move.

Well, she would oblige.
Taking a firm stance, she clasped her hands behind her back and projected her voice into the minds of everyone in the city. It was not an invasive attack, but a simple telepathic message that all who were not protected would hear. A straight barrier appeared before her in case they misinterpreted her speech for vulnerability.

“This is Patricia Trask, Harbinger of the Imperator. Your city stands in opposition to the Imperator and the Ethereal Collective, and is incapable of victory against us. This is your sole opportunity to surrender before you are annihilated. Military forces will be treated well, and we do not intend to harm the civilian population regardless of the outcome.”

She put a note of warning into her voice. “Be advised though that refusal will be dealt with harshly. Send a representative if you wish to discuss terms within the next ten minutes. I will wait.”

She ceased her message and knelt on the ground, placing her hands on her knees, closing her eyes as she focused on her allied minds. She knew that – barring a surprise miracle – the city wouldn’t surrender. Certainly not to her. In the meantime, she had other operations to coordinate. She locked onto the mind of Marian.

Begin the operation. The attack will begin shortly.

Yes, Harbinger.

She switched her mind to focus on Assimilator-2. Prepare your forces. Ready the Cleanser Ships.

At once, Harbinger. All fleets are standing by and awaiting your signal.

Through her bond with the Imperator, she felt him waiting. Observing. Curious to see her plan in action. As was she, and she looked forward to showcasing it in action. Psionics opened up many possibilities even ADVENT and XCOM had yet to exploit. Mostly due to power limitations and inexperience, but a disadvantage nonetheless.

She opened her eyes again, and saw that the trenches were firing on her; hundreds of projectiles were caught in her telekinetic field, while the remainder were bouncing off her shield. She allowed a smile as she watched the muzzle flashes and orange streaks from the rockets. A few Priests were also in the trenches it seemed, weak telepaths.

I suppose this is your answer then.

She unhooked the mask from her waist and placed it onto her face; hearing the click as she stiffened as the bond forged itself fully. Two minds became one, and yet again she understood the gulf that would forever separate her from the Imperator. The power he wielded was simply not comprehensible to anyone who was not her.

It was not ignorance; it simply could not be completely grasped.

Much like a Sovereign, she imagined.

She focused on Assimilator-2, her presence now domineering compared to her simple contact before. Begin firing.

Assimilator-2 didn’t need to formulate a response, as he was already giving the orders. She leapt into the air, and kept herself afloat a couple meters off the ground, maintaining the barrier around her as she observed priority targets. However, she didn’t need to have priority targets when she could eliminate all of them.
Hand glowing with psionic power, she extended it in the direction of the city, and above the trenches; above the towers; above the masses of soldiers and defenders, opened a massive portal that she constructed around the perimeter of the city. Right now, it could only be described as a psionic cloud; a closed opening.

Below ADVENT was diverting their attention to what she was creating. She even saw a few shots go up into the purple clouds, and predictably did nothing but go straight through. It took several minutes, but soon a ring was established over the city perimeter, and ADVENT appeared to have some idea of what she was doing.

Unfortunately, it was far too late.

Locking the portal in place, she connected it to a very specific point in space and the ring opened to spit down fire directly from Cleanser Ships far beyond the reach of ADVENT. Torrents of orange and red streaks slammed with Earth-shaking force into the ADVENT perimeter. Towers were stripped and their defenses shattered as they couldn’t react in time.

The screams of pain, surprise, and terror soon reached her, and she allowed the relentless shelling to continue until the land around the city was razed to rubble and embers. Dust and ash filled the air. *Cease firing* she commanded, and immediately severed the portal. *Move to the second phase.*

There was still a city to capture, and even if the largest defenses had been annihilated, there were many more soldiers within the city itself – along with any who collaborated with them. Corrosive fire flowed around her as she extended a hand over the landscape before the exposed city, and a line of purple flame sprang before her as she set down.

She brought a hand back, and focused before and behind her; seconds later a dozen large portals appeared behind her, connected to her Dreadnought, Vitakar, and Desolan. Several of these portals manifested in the ashes of the ADVENT lines, and out stormed Lurainian and Wraith pods, along with teams of Archons.

Behind her was an amassed army of Mutons who marched out in formation, led by Assimilator-2 and I’Sari. With her army in the thousands behind her and the connections stable, Patricia let her arms fall to her side, and motioned towards the city. The line of purple fire moved as the arm marched, disintegrating the landscape and into the dirt itself to destroy any mines ADVENT may have laid.

ADVENT had been given their chance to surrender, and had squandered it.

The fight was not over, but victory was all but assured.

“*Purge the city,*” she ordered. “*If they are ADVENT, capture them if you can. Execute them if you cannot. Do not harm the civilians unless they interfere.*”

The commands received, the Collective marched on the city; firm in the resolve of the Harbinger who wielded the power of their leader. A power they witnessed this day.

A power ADVENT now bore witness to as well.

***

*ADVENT Busan Defense Base, Busan – South Korea*

4/2/2017 – 10:16 A.M.
“It’s bad,” Cho’s face was grim as he stood before Duri and close to two dozen Tier-III Officers who’d all be summoned for an unspecified emergency. Even before he’d been called, Duri had suspected it was only a matter of time before they were moved somewhere else. Florida was the most obvious given the massive battle taking place.

This, however, was not how he expected it to go.

“Why the hell is she attacking Vietnam?” Jenkins, the officer he’d met a few times before asked, puzzled. “Odd place. Not to mention she’s setting herself up to get screwed later.”

“Vietcong 2.0,” someone muttered. “They’re going to be mad.”

It was said as less of a joke, and more of a grim prediction, one Duri agreed with. “We don’t know why Patricia is targeting Vietnam first,” he continued. “But it’s a lot worse than that. We’ve essentially lost all contact in that area. Communications are dead, Internet is being reported as spotty or off all around the country, and what little we do know is jumbled and incoherent.”

“Define that, sir,” an officer asked. “Incoherent as can’t be made out, or incoherent as shouldn’t be possible?”

“Both,” Cho rubbed his forehead. “Unfortunately, our first source was a civilian that supposedly saw the start of the battle; ran to ADVENT, and said he saw a woman in white armor – Patricia – create storm clouds which brought down streaks of light that destroyed everything. Right now, ADVENT Intelligence is moving him to examine his memories to get a clearer picture.”

“That’s a new one,” Duri mused. “Anything else?”

“We’re writing off the city until we know what’s going on there,” Cho said. “Direct from ADVENT High Command. The strikes across the world which are targeting server farms connected to search engine companies are probably what they’re more worried about, in all honesty. It’s already caused significant damage for this region.”

“I guess we’re all getting moved over there?” Another officer asked.

“Bangkok, Thailand,” Cho confirmed, tapping a button on the table and bringing it up on the holotable. “ADVENT forces are making that the main focus point, and from there strategy will be determined. Cambodia is within the affected sphere, and ADVENT special forces along with ADVENT Intelligence are investigating the region. Until new orders, that is where you will be stationed.”

“You as well, LT?” Jenkins asked.

“Afraid not,” he shook his head. “I’m still needed here. Busan is apparently not in any danger, but the rest of Southeast Asia is still very much under threat. I have no doubt you’ll all kill plenty of aliens, but be careful, and don’t expect it to be as nice as here.”

“Yes, sir,” Duri nodded, along with everyone else. “Do you have the name of our next LT?”

“No, they’ll be assigned when you arrive,” Cho clarified. “You’ll be moving out within two days. Make sure your squads are all prepped and ready to go. All of you will be given direct updates as the situation progresses. Depending on how things develop, you may be moved elsewhere. As it stands, this is where you are going now. Expect that.”

Oddly enough, Duri didn’t feel much of anything at the news, despite knowing it was more dangerous than the relatively safe Busan. He supposed that where he was going, he would likely be
given a shot at a few more higher-ranking aliens, and not the nameless and faceless grunts they’d destroyed.

And even if he did die…well, there were worse fates. Life as it was now was only about making life miserable for the aliens and avenging his family. He doubted that if he was face to face with Patricia, he’d actually be able to do anything to her, but he could at least say he’d try. Everyone who’d died because of the traitor deserved that much.

If he was lucky, he’d see XCOM execute her.

Probably wouldn’t be that lucky. But he should be able to rack up a few more alien bodies. A new battlefront and a new adventure, this was, if nothing else, going to be an interesting time. He didn’t know how his squad would feel about it, but no matter what, they would be ready to go as soon as he gave the order.

As all good soldiers did.

***

Miami, Florida – United States of America

4/6/2017 – 12:45 P.M.

She had never been in a battle even close to this intensity.

Every single step deeper into Miami was met with an endless torrent of projectiles, explosives, and fire. They’d been wrong when they’d assumed the houses were traps. They weren’t, not completely. ADVENT forces were within them, who then made the Collective have to act to purge them, which resulted in them having to enter, and the buildings subsequently exploded.

The ADVENT soldiers presumably left before that point; Lancers she knew now, along with the odd XCOM soldier, who cut a swath to the next building and gradually picked off hundreds of Mutons and Runianarch. However, now there was a group that was before her now. With flames beginning to engulf the building, the six Lancers and lone XCOM soldier aimed their weapons and fired, some at her, others at the soldiers following her.

The XCOM soldier pulled out a longsword which was stained with yellow. A Templar.

Yang flourished her own weapons and dashed forward, throwing one of them at a Lancer, while throwing the other hand forward, sending a telekinetic wave that threw some of them back and destabilized the rest. The Templar threw several grenades which she intercepted telekinetically and threw far away angrily.

She didn’t have time for this, and this was the wrong soldier to fight her. XCOM would have to do a lot better. Yanking a hand forward, their weapons flew out of their hands, and with the opposite one she lifted them up and crushed their skulls before throwing their corpses away. She fell to one knee at that once the rush left her.

They’d been fighting straight for…a few days now. She was not at her prime right now, and neither her or the Battlemaster would stop until the first Flak Tower line was taken. The Executors were almost in position, and that would begin marking the true turn of this battle. Gritting her teeth, she drew upon her link to the Battlemaster who she distantly knew was engaged in his own battles.

His reserves were far deeper than hers. They would carry her on.
Somewhat reinvigorated, she looked up to see that ADVENT persisted in their defense. More buildings exploded around her. Mortar shells slammed into the dirt, some killing more Mutons, while several others she deflected to the line ahead – a line she could see clearly now through the pounding, shouting, and weapons fire.

The Flak Towers were in full gear. The air battle which she was only barely following had taken place far above, but the Towers were still firing into the sky, and also at any Archons which dared get close. It provided a buffer of safety for the Archangels and ADVENT aircraft. They needed to be taken out.

Recalling her swords to her hand, she reached out towards a weakened wall from an exploded building, and yanked it. With almost a groan and crack, it tore off, and she threw the piece of the wall at the tower. To her disappointment, though not surprise, it didn’t seem to have even made a dent. Pitiful, I’ll have to do this myself.

“Prepare to move on the tower!” She commanded to the mass of soldiers behind her. For every one ADVENT killed, there were plenty to replace them, and while she’d tried to minimize unnecessary casualties, ADVENT made much of that impossible due to their planning. It certainly didn’t mean they hadn’t extracted their own toll.

Ravarian through several updates had shared information about how badly the deeper ADVENT lines had been hit, with large swaths of soldiers killed, though they’d eventually been driven back. Banshees were still in the lines, killing who they could, but with the sheer number of defenders, Yang knew that killing off even a thousand wasn’t going to make a significant difference, even if they were ranking officers.

When it came down to it, this was one side shooting against another, and the heavy hitters weren’t going to be killed by things like Banshees. The new and improved Vanguards were a significant asset however, as they were fully exploiting the open terrain to create barriers that soldiers rushed towards, their telepathic links with each other allowing a steady and continued advancement with minimal casualties.

Their main drawbacks were that they burnt out after a few hours and had to be continually rotated, and that ADVENT snipers were making concerted efforts to target them, causing the paired Zararch snipers to direct their fire to counter-sniping, leading to a slower march overall. However, at least here Yang could command the full attention of ADVENT.

She threw back the collected projectiles, and placed herself directly on a firm warpath as the Tower loomed ahead. She could see the defenders behind the barricade; many soldiers who weren’t even full military; probably volunteers. They looked terrified as they saw her approach, firing their weapons wildly she telekinetically threw streams of debris towards them.

One brick hit a woman in the head; the speed turning it into a red mist. Metal spikes and shavings shredded and dismembered other soldiers, while the remaining random projectiles forced them to take cover behind the barricades. Muton Elites she had ordered to her location were now on-site, and were laying down streams of green plasma, effectively mitigating any defenses, allowing Yang to proceed without issue.

She looked up at the tower, then down at the entrance. It was extremely tall, durable, and intimidating. Fighting through that was not going to be fun. So she had to use every advantage she could, and in a way they wouldn’t necessarily expect. Plasma and orange projectiles streaking around her, she bent her knees, and leapt upwards, her genetic enhancement sufficient to propel her to the top of the tower.
Using telekinesis as a cord, she amplified her speed, and then slammed down onto the center of the
tower, knocking the operators to the ground. With several quick pushes, most of the operators were
thrown off the building and the remainder were slain by her weapons. She looked around to see if
there was a computer station, and she found something that appeared to be one.

Since she didn’t have time at the moment to figure it out, she located the massive cords plugged
into the computer and unplugged all of them, assuming at least one was for power. The massive
AA guns on the top went silent, and she located the hatch to descend. She yanked it open and
began marching down. The soldiers inside shouted in surprise right before she killed all of them.

She repeated the process, noting how loud everything was in here. It was a very organized area, she
had to admit. The problem was that it was designed to keep people from coming up, not down. Not
to mention that they weren’t prepared for someone like her. At all. Down she continued fighting,
and by the next few rows the soldiers were prepared.

Her armor was scorched, dented, and blackened from the barrage of fire she received. The sounds
were loud and distracting, especially after her days of fighting, but she pressed on, killing all of the
soldiers effectively. With a ferocious yank, she outright destroyed the computers, not having the
energy or patience to disable them now.

Before she descended further, she took a breath, and drew some more upon the Battlemaster, who
was taking notice of how much she was drained. Some concern emanated through the link. A
weary smile appeared on her face at that. I’m fine, it’s almost done. Once the first tower was taken,
it would be a domino effect.

Below her she could faintly sense fighting and Collective soldiers, and sure enough, when she
reached the next level, she saw them cleaning up the last of the defenders. Unlike her efforts, it had
not come without great cost. All of them were Vitakara, as the Mutons couldn’t actually fit into the
Towers. There were bodies everywhere, and Zararch operatives were rushing in now that the
fighting was done.

“Tower is clear,” she said, trying to keep her voice clear as she took off her helmet. “Water.”

One of the soldiers tossed her a water bottle which she drank in a few seconds, before
telekinetically summoning another one which she splashed across her face, feeling far better when
the cold liquid hit. Crumpling it into a small plastic ball, she put her helmet back on and marched
out of the tower.

In the levels below the carnage was even worse. The floors were coated in a thin layer of blood and
bodily fluids, with alien and Human corpses strewn in various states of destruction. Some bodies
were ripped to pieces, others were simply shredded if technically whole. More had just suffered a
few fatal wounds and died.

There was no clear path to the exit without stepping over bodies. The door had been blown open,
and there was additional carnage outside. Stepping back out into the hot Florida sun, she looked
down the line to see more Collective forces were reaching the towers and more were going silent.
They were making progress.

We’re going to win. She gripped her swords tight in her hands as she prepared to move down the
line. It’s only a matter of time.

***

Miami, Florida – United States of America
The stench of chemicals, fire, and machines had become something everyone had gotten used to over the week since the battle had begun. The pounding of artillery and screams of the wounded had become background noise in the constant push of war. The Battlemaster no longer knew how many he had killed, only that it numbered in the thousands.

Hour after hour he marched along the lines, killing and annihilating all in his path. Nothing could stand against him for long, as was expected. Yet the sheer number itself proved a toll; and the scale of the conflict itself was proving to be the biggest hurdle. ADVENT had devised a clever contingency where for each battle line they passed, it was rigged with their chemical fire.

Now though, the Executors were here, and they would show no mercy.

Blaster Bombs, nanite missiles, and plasma warheads roared overhead, many shot down by the Flak Towers which still lined the third point, but enough hit that a healthy barrage of explosives were heard and felt in the distance. Entire blocks were leveled in regular intervals, as the Collective forces slowly advanced.

“There is an XCOM squad approaching,” the Battlefield CODEX warned. “Psion, classification Aegii. Accompaniment appears to be other XCOM soldiers.”

“Identification?” The Battlemaster asked as he dashed towards a small group of Lancers and promptly executed them with several swings of his sword and crushing their bodies with telekinesis.

“Unknown. Appears highly skilled.”

“Understood. Direct nearby Banshees and Wraith Seeker Units to my position.”

The sabotage, assassinations, and general mayhem caused by their assault had taken a toll on ADVENT. As he kept advancing, it became clear there was far less of a clear chain of command, and orders had devolved to simply defending their positions. ADVENT had kept managing to fight off the attacks, but they’d only been partially successful in actually destroying the units.

This tower coming up appeared more organized and protected, likely due to XCOM supporting it. Without warning a psionic barrier manifested before him and behind him, cutting him off. Immediately he directed all of his telekinetic energy towards the area in front of him, shredding the barricades and killing or wounding those closest, while throwing everyone else back.

The XCOM soldier in question did not appear to be overly shaken, and thrust a hand out, with three barriers extending around him, which the Battlemaster dodged to the side to avoid while throwing several bodies and rubble at the psion who created a barrier in front of him to block them. Well, this was going to be an interesting challenge.

A prelude to Aegis, perhaps.

There were few times this battle he’d descended into his trance. Situations typically did not require it. But here, with the danger of psionic barriers in play, along with a psion who had some skill in using them, it was necessary. Speed was essential here, and ensuring his reaction was as fast as possible was necessary for survival.

He tossed rubble and debris in a constant stream towards the psion, as well as the other XCOM soldiers who were moving to flank him. With a flick of one wrist he sent one flying, while another he threw up into the air and away. Barriers materialized around him, one slamming into his arm
and pushing him off-balance which he quickly corrected.

He jumped into the air and transitioned into a psionic dash towards the psion who just erected a barrier in front of himself which the Battlemaster slammed into with enough force to make the psion take a step back. With a telekinetic pull he uprooted the psion into the air, reached up, and slammed him back to the ground.

Inexplicably, the psion maintained enough concentration to create another barrier which slammed directly into his chest, sending him a few steps back while ADVENT soldiers around him kept firing and throwing grenades. The Battlemaster thrust out hands in all directions, creating a shockwave powerful enough to break bones and send those not slammed into a wall flying away.

The psion had pushed himself to his feet, though was clearly unsteady. The Battlemaster lifted a chunk of rubble and threw it at him while using telekinesis to freeze the man in place. Frozen, the psion still managed to erect a shield that blocked the rubble, while two more barriers appeared around the Battlemaster, one aimed for his head, the other for his chest.

He spun to the side, and thrust out an arm to crush the psion completely.

Just as a psionic barrier appeared right as he was reaching out, cutting through the limb at the elbow and flopping to the ground. The telekinetic grip didn’t quite vanish, and the Battlemaster idly noted that the limbs of the psion cracked, but it was nowhere as directed and lethal as he’d planned. Pain like he’d not felt in decades registered, a white-hot pain and the loss of control.

Blue blood spurted out of the wound as the suit enacted the contingencies to stop blood loss. Above him six Archangels appeared, spewing plasma fire down on him, with a psion shooting energy from his hands, forcing him to move and defend himself. Seekers began engaging, and he saw one of the Archangels land and airlift the psion away which he was incapable of stopping due to the barrage of fire.

He lifted a good hand and directed his grip to the airspace above him and tightened it. Some of the jets on a couple pilots sparked and one exploded, sending them into a downfall, while the others moved to help them while avoiding the fire of the Seekers than pursued them. The Battlemaster recalled the severed arm to a free hand and marched to safer lines, knowing better than to continue fighting with this injury.

The loss of a limb was not significant. It could easily be regrown and replaced. It was a temporary pain – and a good reminder that there would come a point where he would face someone who could defeat him. It was a painful reminder that he was still outmatched against Aegis, who was far more skilled than that Human had been.

Though that Human…it had perhaps been one of the most skilled he had encountered. Dangerous. Someone he needed to have eliminated.

“Battlemaster,” the Zar’Chon called. “I’ve been informed you’ve suffered injuries. How severe?”

“One forearm, wound is sealed,” he answered, still moving. “Nothing significant. There is a particularly skilled XCOM Aegii psion in the vicinity. Provide his image as a priority target.”

“Acknowledged, and there have been additional developments in what we’ve learned.” Ravarian paused. “A Banshee managed to penetrate their main base of operations and found multiple references to the detonation of nuclear weapons. You’ve specifically been mentioned as a priority target.”
The Battlemaster was less surprised at that, and more surprised at the methods. “They are planning to destroy one of their own cities to kill me? With their soldiers still within?”

“Unclear, information gathering was incomplete and the respective unit destroyed,” Ravarian clarified. “But I will note that we still do not detect nuclear signatures in the city. Which means they may be waiting until a majority of our forces – or you – are within the radius of the explosion.”

“I see,” the Battlemaster looked to the skyline deeper within the city. “If that is their intention… then we must tread carefully. Acquire information on modern nuclear weapons and their effective radiiuses. We will not willingly allow ADVENT to spring their trap.”

***

**Ho Chi Minh City – Vietnam**

4/2/2017 – 11:51 A.M.

The capture of the city was proceeding well, with surprisingly little resistance. Patricia was on the outskirts, partially devoting her concentration towards the location, pacification, and execution of ADVENT soldiers and personnel throughout the city while Sectoid-led teams conducted house-by-house searches to root out everyone inside.

Only part of her concentration, as the other portion was focused on the inevitable response. She knew better than to think one wouldn’t be coming, and would be surprised if that was the case. While it wasn’t *completely* out of the question that ADVENT would cede this victory to her and not risk anyone else…it seemed out of character.

A token response was needed. They couldn’t just let her come and take control of a city in a matter of hours. It would be XCOM, ADVENT special forces, or if they really wanted to test her, one of the Agents of T’Leth. That would be a true test of her strength and connection to the Imperator. In a way she hoped that one of his puppets would come.

There were signs that would happen.

As the morning had progressed, she had noticed that the clouds had slowly begun darkening, turning the sky overcast. Wind had picked up and the temperature had dropped slightly. Manipulation of the weather was certainly possible through psionics, and she wondered how close T’Leth was right now…

In any case, she would be prepared.

*Ensure Cleanser Ships are ready to fire on my command,* she sent to Marian telepathically. *I suspect something is coming.*

*They await your command, Harbinger.*

The Imperator himself agreed that this was proceeding too well. There would be something that would happen, it was only a matter of time. While they waited, Collective transports had landed in the area, beginning to raze the land for conversion, and to deploy engineers, mechanics, and other support teams to begin establishing new infrastructure.

Like a loud *crack* it was noticed by her; the appearance of a new mind. A powerful psion had just arrived. Patricia’s head swung to a hill a short distance behind her where someone walked through a curious portal of shimmering blue and white. A minor curiosity of hers remained on why the
color of power differed on the wielder.

Although they channeled the power of a Sovereign. Perhaps this level was simply unattainable for everyone else. No matter, they would be dealt with.

Patricia hardened her telekinetic field around her, as well as enshrined herself in purple psionic armor as she teleported to a distance where only a few dozen yards separated them. To their curiosity, they saw that it was a woman, though not one that either of them were aware of – nor was she armored like the other T’Leth Agents they’d seen.

The armor was a bone-grey color, harsher than the stone-gray of the others. It seemed thinner and more segmented as well, with red underclothing visible of a silk-like material. The chest armor did not seem fully protected, and reminded her of a ribcage with metal crisscrossing over the chest. Similar styles of armor covered the arms, culminating in ridged gauntlets with the fingers ending in metal points.

Curiously, all of the armor was etched in glyphs and a language she could only assume was one long dead or alien. A Sovereign language most likely. A red shoulder cape was draped over her left shoulder, whose hand held her helmet – a mask that had a smooth skulltop and black voids for eyes. A helmet for intimidation if she had to guess.

The other hand held a staff, or more accurately, a *spike*. Metal and simple, atop it was a Sovereign orb which glowed brightly, while the bottom was tipped as a spike. The woman bearing the armor herself was one of the tallest women Patricia had ever seen. Taller than Saudia even, though not quite reaching her own new height.

Long brown hair fluttered in the wind, framing a pale face whose expression made her seem even colder. Green eyes flashed with contempt, and every aspect of her posture screamed disgust at what she saw. The hill she stood on gave her a slight height advantage, allowing her to look down upon the Harbinger.

“Who are you?” She asked, cocking her head slightly. “You aren’t like the others.”

The woman planted the staff in the ground in a singular motion and appraised Patricia fully, and with utter contempt. “I am Lavallic ir Nara, traitor,” her voice was sharp and curt, each word said with the air of someone who thought especially poorly of the target. “An Agent of T’Leth. You and your Imperator would be wise to leave, before this becomes worse for you.”

Her eyes flashed, and Patricia felt a vast telepathic attack go out over the nearby area; a telepathic command she’d performed quite often. She imagined it was a simple command; *attack; kill;* along those lines. Easy to defend against, but effective for the unshielded. Nearby Mutons and Vitakara soldiers began turning on and attacking each other while others resisted the weaker command.

*Cease.* She sent out the command of her own, and felt it ripple through the nearby ranks, though a piercing attack from the woman interrupted her. She had faith her soldiers would be able to handle the situation.

Patricia smiled under the helmet after the dual displays of power. “An honor, ir Nara. You will be the first Agent I eliminate.”

Ir Nara placed her helmet on in one motion and with her other hand blasted white lightning from the other which Patricia blocked with a psionic shield while launching an telepathic attack against the woman. With the opposite hand she raised it to the sky and several lighting strikes manifested and began striking unprepared soldiers. Surprisingly, she also had extremely strong mental
Patricia lifted a hand and shattered the Psionosphere around ir Nara, turning it into a lethal Tempest. Ir Nara stepped through a portal and reappeared a short distance away, thrusting both hands forward and sending a psionic shockwave powerful enough to send Patricia flying backwards, which she corrected within seconds and slammed down into the ground – though not before creating a portal right behind the woman, and slamming into her.

She heard ir Nara snarl and was forced to let go when her entire body became electrified, but in response this allowed Patricia to acquire a firm telekinetic grip and begin squeezing. A sudden piercing telepathic attack disrupted her, one far more powerful than any she had experienced, and had it not been for their bond, it would have broken through.

“You should have listened, Patricia,” T’Leth rumbled in her mind. “Neither you nor your Imperator can defeat me.”

She didn’t respond, but blasted the staff with psionic energy as ir Nara fell into another portal of her own design. With her free hand she opened a portal and six Mosrimor orbs fell out and activated, nanites swirling around them as they came online. Patricia moved into her own portal and reappeared where she’d begun, as both women appraised what to do next.

Ir Nara paced stiffly and aggressively, like a beast stalking prey. A hand shot out, shooting several bolts of lightning at Patricia and nearby aliens, which she easily blocked, before lifting a hand and shooting back a stream of her own which ir Nara deflected with a wave of her hand, sending the warped bolt directly into a nearby group of Mutons.

Patricia launched every single attack she could against the woman. Her telepathic one was resisted, but did slow her down. The telekinetic pull broke the dirt under her and the tops of her feet sank into it, an artificial weight pulling her into the Earth. The air around her crackled and broke as the corrosive power leaked through, ripping apart her cape and damaging the armor.

*Open fire* Patricia commanded her Cleanser Ship as ir Nara screamed in rage, then dirt, rocks, unlucky soldiers, and everything else nearby went flying; the shockwave being large and powerful enough to envelop her. Patricia quickly caught herself and hovered in mid-air briefly as ir Nara planted a foot in the ground and first extended it to the Mutons who were starting to fire at her, causing them to crumple to the ground; dead from a telepathic command, which extended far beyond the initial group as several hundred eventually crumpled over.

With her other one she lifted it up to the sky, and without warning the sky turned white. It hit Patricia immediately; a chill from a blizzard which came roaring in from a portal ir Nara had created, connected to some ice planet most likely, if not on Earth itself. Snow and ice pelted down, a cold she had never experienced before, at least not in such intensity.

Ir Nara was not affected, and if anything, the drastic temperature change seemed to rejuvenate her. With another hand she gestured, and other portals manifested around Patricia, which spewed out torrents of the cold that amplified the freezing effect. *Creative*, she grudgingly admitted, feeling cold enough that she began using Biopathy on herself to ensure she wasn’t frozen outright, while encasing herself in a psionic shield.

The shield did very little for the sheer cold, unfortunately. *Two can play at this game.*

She opened four portals around ir Nara, all connected to the area the Cleanser Ships were firing, and ir Nara now faced the full firepower of a fleet of Cleanser Ships and with a surprised yelp just barely got a psionic shield deployed around her, though not before she was hit by several direct
shots, shredding her armor and seeming to tear off her left arm.

Leaking red, she maintained the shield as Patricia redirected the portals towards her, anchoring herself telekinetically to ensure she wasn’t sucked into space. The portals above that had spewed cold were closed, though the snow lingered and chilled all around it. For good measure she lifted a hand and blasted psionic energy at the retreating woman, which was absorbed, but now there seemed to be some weariness in her defense.

Perfect.

With a disgusted snarl, the woman threw her good arm back and stepped into a portal, briefly reappeared to grab the staff which had managed to somehow destroy four of the orbs in her absence of paying attention, and then vanished. She still felt chilled, quite literally, from the experience, but elated at the same time.

*We did it.*

One Agent she had beaten, if not killed. It was unlikely that particular trick was going to work again, but it certainly wasn’t the only one she could pull off. She’d been good, but Patricia could tell that fighting was not something she was accustomed to doing – or at least not when her opponent was just as skilled.

She’d be dangerous one day, but Patricia intended her to be dead long before that point.

There might be another attack, but now she felt that they were clear in a way. ADVENT would strike back – but the next time it would be on their terms. Turning back to the city, she prepared to finish clearing up, and beginning the proper conversion into the first proper Human city under the control of the Ethereal Collective.

---

**Miami, Florida – United States of America**

4/12/2017 – 4:09 P.M.

The end was coming, and Sierra knew that her limit was going to be reached. But in the end, it might not matter because the snowball effect the Collective brought to bear was in full effect. It had taken a couple weeks, but Miami was going to fall. Executors were reliably shelling and destroying entire blocks which went up in green explosions, while others were consumed by nanite projectiles.

The brief moment of hope they’d experienced when Geist had severed an arm from the Battlemaster had faded when he’d shown up a day later, seemingly no worse for wear. Everyone still left alive was battered, exhausted, and ready to nuke this place and take out as many aliens as possible. One by one the Flak Towers were destroyed or appropriated, rendering one of their greatest advantages a liability.

On the plus side, Sierra and the rest of them had a kill count in the hundreds from this battle alone. She wasn’t the only one either. Genetic enhancement and advanced technology, not to mention the high ground and superior maneuverability played to their strengths. Though not without its costs. Her body felt battered, her mind was exhausted, and her suit had so many scratches it looked like it had survived a minefield.

In a way, it had.
Sierra stood upon one of the taller skyscrapers before the larger skyline as Cleanser Ships loomed overhead. With the Flak Towers contained and mitigated, and the ADVENT and XCOM air forces pushed back, they had license to move in and raze whatever they wanted to the ground. Aegis would have normally been brought in now – but he was over in Asia of all places to deal with the attack Patricia was leading.

“They’re moving in now,” Anna said, coming in to land beside her, weapon hissing from the heat. “They know something is up by now. They’re going to raze the city center to the ground. We need to have them sound the evacuation and kill what we can before it’s too late.”

“I agree,” Sierra nodded as she watched the Archons, as they learned they were called, swarm one of the few remaining Flak Towers, picking off the soldiers on top, and then landing to appropriate them. The numbers just seemed to be…endless. This war of attrition was impossible, and she wondered if they’d even made a dent in their numbers. “We need to end this now.”

ADVENT had suffered their own losses. The International Airport had been bombed to cinders hours ago; though it had taken constant shelling to overcome the psionic shields Priests had deployed. Geist, being the idiot he was, had almost been killed (again), though his actions had likely contained the blast from killing anyone else.

XCOM in general was holding on to what little they had. Everyone had some degree of treated injuries, even with their enhancements, and all of them were exhausted. Days of straight fighting; shelling; weapons fire; conflict 24/7, it took a toll to the point that Sierra knew she was going to be hearing the thundering of Flak Towers in her sleep for weeks afterwards.

“Carmelita, Kane, Geist,” Sierra sent on her radio. “Come in.”

“What?” Geist answered curtly. “Air support would be useful.”

“Yes, yes, I’m aware,” Sierra looked up. “But there are Cleanser Ships coming down, and last I checked, it’s been a full day since the Battlemaster has been seen. They’re going to level the city if we don’t leave now. They know something is up.”

“I’ve assumed as much,” Geist answered, sounding strained. “No information extracted from soldiers, but they are expecting the Cleanser Ships to act soon. I’m waiting for something from ADVENT command.”

“ADVENT command is gone for now!” Anna interrupted. “The fucking Seekers have been assassinating officers left and right. Signals are going in and out. We need to take the initiative and cut our losses before it’s too late.”

“We have to wait for the Battlemaster,” Kane interjected, with Sierra hearing weapons firing in the background. “If we don’t, this is all for nothing.”

“He’s not taking the bait,” Carmelita grunted. “Hate to say it, but we’ll have to kill what we can, and get him another time.”

Kane didn’t object further, but offered a clear and disgusted “Acknowledged,” before returning to firing. Sierra wasn’t happy they weren’t killing the Battlemaster either, but at this point they needed to accept it and move on.

“Sound it then,” Sierra called as the Cleanser Ships began firing. The projectiles thankfully didn’t aim towards the city, but along the islands and Miami Beach itself. She watched in a mournful sadness as the skyline crumbled under the sustained and concentrated fire. There went all the
defenses and artillery.

“Doing so now,” Geist stated. “Cover our exits.”

“Acknowledged,” Sierra said, kicking her engines into gear and flying down for the last hurrah in the defense of Miami. It was interesting that knowing what was coming; that they had ultimately lost this battle, it gave her a sense of relief; allowed her to focus more easily. She was fortunate she wasn’t in charge of coordinating the retreat, and her role was dropping white phosphorus and smoke grenades along the choke points, while occasionally destroying an out-of-position alien squad with a cannon burst.

Time was ticking, and she saw that the planned MDUs that had been kept in reserve were being deployed as the sacrificial units before the bomb was set off. The soldiers and remaining militia and volunteers were rushing away as the Archangels, XCOM, and ADVENT special forces covered their retreat.

More orange and yellow streaks rained down, but they were again directed towards the Miami skyline and the island. Both were probably now rubble, but anything which was distracting them was something that was buying precious time to get everyone evacuated. After what felt like hours, they were at the Gateways, and the nuclear bomb was set on a timer.

“We’ve done all we can,” Geist said as the last of the defenders marched through the structures. “Time to go.”

“How long until detonation?” Sierra asked, glancing at where the weapon was situated.

“Three minutes,” he said, as they both moved towards the swirling purple energy. “I suggest we leave now.”

***

Miami, Florida – United States of America

4/12/2017 – 4:47 P.M.

“They are surrounded and losing ground by the minute,” the Battlemaster said to the hologram of Ravarian. “If this is a trap, we will know soon enough.”

“I’m curious if they will go through with it now,” Ravarian looked at a display on his hand. “They’ve surely noticed you have not been on the front lines.”

“I dislike this,” the Battlemaster stated, palm over the point of his hilt. “ADVENT may have successfully found a means of deterring me. As a result, our progress has been slowed on the assumption that this is a trap.”

“And if you’re wrong, you die,” Yang interjected, arms crossed. “Not taking that chance, especially since you came close already. It only takes once, and your coordination is just as important here. Disciple-7 can be used elsewhere.”

“Indeed,” Ravarian gave a sharp nod. “We will find a way to deal with these types of threats from ADVENT in the future. This will be a test of ADVENT’s resolve. Even if you’re not there, there are a considerable number of forces in the city. If they use their most powerful nuclear bombs, it could destroy the entire city. Time to see if-“

The entire ground shook and the Battlemaster gripped his sword and dashed out, Yang immediately
placed her helmet on and sealed it before following him, and they stepped out of the small command compound to see the orange-tinged cloud rising in the distance. The shockwave hit them a few seconds later, definitely not that strong, but they could see the effects.

They heard the sound of cracks, collapsing buildings from the shockwave and pressure, and the screams of those who’d been caught outside the radius of the explosion, but within the sphere where their skin was shredded and melted. He’d researched the effects of nuclear weapons in the event that one was deployed against him.

“Area of effect appears to be nearly eighty-five percent of the city boundaries,” the CODEX informed. “Losses are currently being calculated.”

“Thousands,” Yang said quietly as they watched the mushroom cloud go further into the air and begin dissipating. “Almost everyone in that city is dead now. No detection at all? None?”

“Spike in nuclear energy was detected approximately thirty seconds to detonation,” the CODEX answered mechanically. “Warnings were issued to nearest units.”

“Not nearly fast enough,” the Battlemaster said grimly. “They did it through a Gateway. As expected.”

“Yeah,” Yang sheathed her weapons. “It’s over then. We won.”

It was technically a victory, but the Battlemaster didn’t know how much that was worth in this particular case. It had been less about taking the land as beating ADVENT itself. Now though…he wondered if ADVENT had even intended to win the battle at all. They’d steadily retreated, extracting as heavy a price as they could over the course of weeks.

The Humans had been averse to destroying their cities before, or using them in any kind of capacity outside of disabling electronics. He wondered what had changed now that they would detonate one even though they knew he wouldn’t be caught in it. Was it always the plan to destroy the city regardless of his presence?

He supposed it didn’t matter. They’d crossed this line, and they would do it again. They had held onto their own trump card for quite some time, but now they were feeling threatened enough to use it. In a way…this was a good sign. It meant they were scared and concerned enough to do whatever it took to stop him.

“Current losses to the detonation total to approximately two hundred and fifty-three thousand, one hundred and sixty-three,” the CODEX stated. “Breakdown of specific units is ongoing.”

“Are injured units accounted for?” He asked.

“Negative, medical and engineering teams are currently moving in to extract still living or functioning units.”

“What about radiation?” Yang asked.

“Your suits will be able to tolerate radiation for a short period provided all decontamination protocols are followed,” the CODEX answered. “Currently only a small portion of the city near the blast radius consists of radioactive material. Winds are estimated to spread it throughout the area within the next several hours. It is recommended you vacate the area.”

Yang looked up to him. “We should get as many of them out as we can alive. We owe them that much.”
“Yes,” he agreed, resting a hand on her shoulder, pleased she’d suggested it. “The Collective will be able to cleanse us of any radiation or infection afterwards. The soldiers who fought should not be abandoned.”

“Andromedon Contamination Operatives have been requested and are on their way to assist in the containment and cleansing of the area,” the CODEX stated, not missing a beat even though they’d ignored its suggestion. “It is highly recommended that you consult with the medical station to adequately prepare your bodies for potential radioactive contamination.”

“Then we go there,” the Battlemaster began walking in that direction, Yang close behind him. “We will take what ADVENT keeps trying to deny us, no matter how much they try and stop us.”

***

Office of the Chancellor, ADVENT HQ – Switzerland

4/12/2017 – 5:16 P.M.

“Chancellor, the report.”

“Thank you,” Saudia took the beige file, and given the grim expression on the face of her secretary, she knew it had happened. Within a half hour media would be reporting it, and no later than two hours she’d be before the press to justify the detonation of a nuclear weapon within a major Human city.

She opened it up, and was greeted with a fairly brief report, detailing casualties, estimated cost to the Collective, scientific estimation on radiation duration and overall damage, cost to ADVENT, and what the immediate aftermath was. It had been a while coming, and with the chain of command being slowly decimated, it was somewhat notable that a retreat had been able to be organized at all.

Sitting alone, she read quietly and quickly. Overall, the objective had been largely met. There was no confirmation that the Battlemaster or Yang Shuren had died in the explosion, though they’d been warned that the Battlemaster might have learned of their intentions. Not surprising in retrospect, as that was a secret that didn’t even need intel to correctly guess.

However, the estimated casualties inflicted were…staggering. Between one and one-point-five million Collective units destroyed or killed. No percentages on how many of those were Mutons and less valuable units, but that was a number that was disproportionately high compared to ADVENT’s own losses.

Those entailed the city, all of the defenses, and roughly sixty-two thousand volunteers, militia, soldiers, and mechanical units. Not a bad trade, all things considered. Even more so when taken into consideration that approximately a fifth of those casualties only began racking up when the Executors had been moved into effective ranges.

A snowball effect. One which she feared could be replicated everywhere now. If the Collective was willing to throw over a million soldiers to their deaths, even Busan might eventually succumb. Perhaps, but it still wasn’t a guarantee yet…as they hadn’t even intended to win this. She wondered how much the number truly mattered.

The Battlemaster was still alive. So was his puppet.

They were the important targets. A good piece of news was the harm which had been inflicted on the Battlemaster. Footage she and ADVENT had acquired, and would be using. Something to show
that even the Battlemaster was vulnerable. Unfortunately, the Battlemaster was becoming a lesser problem compared to the rest of the world.

Patricia’s surprise attacks had devoted a significant amount of attention, and like a plague she and her forces were spreading through the region. More and more fronts were breaking out across the world, and at a certain point they wouldn’t be able to focus on all of them. Right now, Patricia was the priority target, but the Battlemaster and the First Guardian down in South America were close behind.

Pictures were also included in the report; an image of the explosion from the nuke, the aftermath, with dozens showcasing the devastation inflicted upon the city. For the first time in…decades…a nuclear weapon had been detonated on Earth for war. Justified, but it was still going to be difficult for some people to swallow.

Especially since they might have to do it again.

No, they would have to do it again.

They’d crossed this line, and there was no going back. There were going to be many more difficult decisions ahead, and they needed something to give them the critical advantage necessary to stop the Collective. Numbers wouldn’t do it, and being smart was useless if they lost anyway. Trading in general wasn’t a viable strategy in this war.

What was coming next was not confirmed, but all indications pointed towards a concerted attack against Tampa, which was both good and bad. Unlike Miami, Tampa housed ADVENT Special Forces Command, and the city had been fortified long ago. It was not Busan, but it was close. This was something the Collective would not be able to take easily.

However, that depended on just how badly the Collective wanted to take it. If they sent multiple Ethereals to capture it, it might be more difficult to defend. Regardless, it was likely that was where the next conflict in Florida would take place. ADVENT High Command was preparing for it in any case, and she saw no reason to dissuade them.

She set the file down and leaned back in her chair, closing her eyes. The pressure needed to be lessened in some way, and as long as they were confined to Earth, that would not let up. Seafoam and Atlantis were months out at best, and none of their alien allies were in a position to risk revealing themselves as allies, though it might buy some time.

Temporary solutions. T’Leth needed to be their trump card, and while his agents were keeping Patricia at bay for now, it needed to be more. They might have to get creative, but there had to be other ways to leverage him without exposing him to the world. Or in a way which wouldn’t necessitate intervention by the other Sovereign associates of the Imperator.

Breakthroughs were necessary at this point. Psionic, scientific, technology, anything to delay, destroy, and defend for as long as possible. If it wasn’t clear already, Ethereals needed to die; their soldiers needed to live through hell; Earth needed to be turned as inhospitable as possible to the alien and their allies.

This wasn’t even taking into account Betos and the SAS.

She pursed her lips. She was tempted at this point to nuke every SAS country and end them for good. Were it not for the fact that would have certain negative ramifications diplomatically and for the planet, not to mention the Collective would likely intercept them if they were launched, she would have considered suggesting it.
However, she was aware that T’Leth had access to individuals who could teleport. She was unaware of the extent, but she figured that it was powerful enough to traverse the world. In fact, a plan began forming in her mind. The Collective may adapt afterwards, but the initial strikes could be devastating.

Assuming it was possible.

She’d have to speak to them and determine it for herself.

In the meantime, she had a speech to prepare for. Turning her attention to her computer screen, she brought up the document she’d written long ago in preparation for this day. A general outline, and now one she had to adapt for the specifics of the event. Perhaps she would add something extra.

An address to Collective and ADVENT alike. A simple message of what was willing to be sacrificed in this war. It was easy to know what they fought for, but the aliens? They were here on the commands of their masters.

She wondered how many of the aliens fighting now realized that, and those that did, how long it would take before that wouldn’t be enough.

***

To be continued in Chapter 55:

Siege: Tampa
The echo continued to tug on him; a curious feeling that was irregular. It had been many long years since any of them had experienced it; at least in this time of relative peace. Back during some of their conquests, it would have barely registered, yet now it was impossible to ignore.

A drop of water falling into a still pond. Simple to determine the source; simple to act if one chose.

However, restraint was still preferred. He was certain ignorance was not to blame for the development.

The air was colder today, and the artificial environment reflected the change in climate. Crystalline plants poked through light blankets of pure snow; light reflecting off their blue glassy structures. They were among the most beautiful of alien life; an engineered construct for certain, but designed by an artistic hand.

The cold signaled something else. Tests; trials perhaps. Initiation for more of the Riders. His Lord was perhaps overseeing them personally, which would be something of a deviation from his current priorities. Though his Lord was sensitive enough to have also felt the shift, and decided to act on it.

A short time later he stepped before a large metal door which slid aside to let him enter the dim and cold hallway ahead. Frost coated the floor in a thin sheet as well as the faceless statues that looked down upon those who tread the path. The Riders did not, nor ever would immortalize specific individuals in this way.

Their purpose was not fame; their duty was fulfilling enough. Few could leave such a significant mark upon the galaxies.

Instead of continuing towards the arena, he turned to climb a stairway that would lead to a command center overlooking it. Or an observation window; one warmer than the rest of the area due to the sensitive equipment within. To his mild surprise, he found that the room was deserted save the Lord who stood before a powered holoprojector.

The General fell to one knee, as expected. “[My Lord, you requested me?]”

“[Rise,]” his Lord motioned upwards without glancing at him, focused more on the blank light; clearly deep in thought. “[I suspect you know what I wish to speak about.]”

“[You have evidence?]”

A sharp nod, and the Lord pressed a button on his wristpad, and the hologram came to life. The General watched as it showcased a battle between Patricia Trask and a previously unknown figure. He observed their psionic duel with fascination, the pieces beginning to fall into place. Their exchange beforehand though…quite interesting.
It confirmed the theory of Viceroy.

“[So, it is confirmed,]” he said. “[He was not the only one.]”

“[We’ve known for some time,]” the Lord said, pausing the hologram. “[There were only so many explanations. The Viceroy was correct as usual.]” He looked to the General, a question in his eyes. “[Your assessment?]”

He considered his words carefully; thinking before speaking. He was not a trusted advisor for his hasty answers. “[It speaks to the power of the Imperator’s Harbinger, or the ineptitude of ir Nara in battle. Both were evenly matched, though the Harbinger outwitted her. Battle is not the specialty of ir Nara.]”

He paused. “[T’Leth is no fool. He understands I am not aware of what ir Nara is doing for T’Leth, but I suspect it is typically not battle, else she would have appeared before now. Which means he did not intend to win this particular conflict, but determine the capabilities of ir Nara against a threat like the Harbinger.]”

 “[A test then,]” the Lord mused. “[And I suspect, not just for her.]”

“[There can be no question he suspects.]” the General agreed. “[Perhaps the Viceroy said as much, but it is not out of the question to determine if this was to lure anyone who might be observing. He is testing what he could get away with before intervention becomes necessary.]”

“[The Sovereign plays with fire,]” the Lord muttered, keeping his expression neutral as he began rewinding the hologram and looking at the proud and fierce face of Lavallic ir Nara. “[Yet you made the correct choice. I will not stand idly by and continue to be reactive. Our own operatives on the world are not enough. This situation demands personal attention.]”

The General frowned, suspecting what was coming, but immediately having reservations. “[That is an extreme step, if what I believe you are going to suggest is accurate.]”

A thin smile appeared on the face of the Lord. “[Perhaps, but for the first time in centuries, we could be facing a being who has stumbled upon us. I would prefer the Sovereign Ones be kept in the dark. Their ambitions are dangerous enough without the knowledge of what lies outside their perceptions.]”

 “[How ambitious?]” The General asked warily.

“[A hand powerful enough to direct the course of Humanity if we wished, but not in the open,]” was the answer. “[Have you made progress on the plan for the quarantine of the Sphere?]”

“[Of course,]” the Lord was aware of this, of course, but he understood a verbal reminder was necessary. “[You agree with my assessment?]”

“[Enough to authorize a limited experiment,]” the Lord waved a hand. “[I am not convinced, but the Viceroy thinks similarly to you. This war does present an opportunity, should we decide to act. These...particular Humans...]” a grimace crossed his face at the admission. “[They have potential to be useful. Freed from the influence of a Sovereign, they could serve as a Prime Species.]”

“[There are others too,]” the General reminded him. “[Not as clean...but in a way, that is an advantage. I have, and continue to suggest both be shaped to be the Prime Species.]”

“[My preference is for the other you mentioned,]” the Lord shrugged, then faced the General fully. “[Yet our best opportunity to begin is this war. T’Leth’s actions have potentially greater
ramifications as well. I will authorize the Viceroy to begin operations. Personally."

The General blinked, and chose his words carefully. "[Considering the…circumstances…is that wise? If this experiences a failure, the results could be devastating. An extraordinary risk for arguably little gain.]"

Unexpectedly, his Lord smiled. But a dangerous smile of a predator, one which was also amused. "[It speaks to our success that you have forgotten his capabilities so readily. I suspect the others have forgotten as well. Do not fear, I have complete faith in his skills and I suspect he is quite willing to undertake a challenge against a Sovereign One.]"

"[What of the Throne World? A step like this has never been taken without their approval.]"

The smile was maintained. "[I will handle the Throne World, General. Indeed, I believe this could be an opportunity to bring some degree of change to the apathetic Lords. If indeed, they notice at all. Do not concern yourselves with them.]"

The General bowed his head. "[As you say, my Lord. I will continue my work.]"

"[Good, I will await it,]" his Lord turned away, a dismissal but he had one more question.

"[My Lord…has there been any word on the Entity?]"

"[No,]" the Lord shook his head. "[But we are watching. When he appears – we will act swiftly. On that you can be assured.]"

***

Miami, Florida – United States of America

4/12/2017 – 5:16 P.M.

ADVENT had deployed some of the most horrific weapons he had ever seen. But the bomb they had detonated in this city may have been the worst of them all. Runi’hallian’harasota had read on the devastating consequences of nuclear weapons; and wondered how the Humans could have – or would develop a weapon so devastating.

War was woven throughout their history, but the consequences of such weaponry…there had to be a point they felt was too far.

Deployment to the front had been expected, but even he was overwhelmed by the utter brutality and carnage ADVENT was capable of unleashing upon their enemies. The stories of the so-called ‘primitive’ species waging a doomed war were clearly false as the amount of bodies he witnessed and treated continued coming to him.

Thousands.

Nowhere on Vitakar could adequately prepare him for the front lines. The Borelian training grounds the Runianarch used for simulations were laughably sanitized compared to the real thing. Wounds were fake, the fighting was fake, the stakes were fake; everything was fake except the environment – and right now training in a frozen wasteland was next to useless in the sweltering Florida heat.

This was not to say he had no real medical training. Accidents and wounds still happened around Vitakar on all races, and those provided a solid foundation. Even when the war had started he had
been responsible for treating the soldiers who’d been sent back – treated of the worst of their injuries, but not whole. Limbs missing, healing from internal wounds, scars from battle and fire; gruesome, but aftermath of the real war.

Even then, there was a…shock that emanated from many of the soldiers who came back. A shock of war that Hallian wasn’t convinced of solely because this was what all of them had been training for. He would never pick up a weapon, but there were many who did; who trained for the day their world was threatened.

It all centered around the hostile species on Earth. Humans.

*The Humans are dangerous. They can hurt us.*

That sentiment was crystallized for him now.

He now wondered if there had been an unknown war his people had participated in. One so visceral and terrible that the Dath’Haram had collectively decided that they would never willingly contribute to one again. If so, Hallian believed that it would look like the one he was in now. His objective was to save as many lives as possible, it wasn’t to fight in it.

At least that’s what he told himself now. It required a…disconnect. He saw little point in hiding from the reality that the galaxy was a violent place. Pacifism was an ideal not shared by the majority, and it would not be spread through staying in one place. Most Dath’Haram would never join a military organization because it would supposedly compromise their principled stance.

For him, at least, he didn’t see it quite in that absolute.

If there was to be war, there needed to be healers.

Even if sometimes it seemed futile.

Even the weapons the Collective used were sanitized compared to ADVENT’s. Plasma that burned and cauterized as opposed to projectiles that ripped through bodies; low-radius plasma missiles and grenades that destroyed everything within the area of effect while ADVENT ones sent fire and shrapnel indiscriminately, shredding anyone unfortunate enough to be near it and subjecting many others to long and painful deaths; chemical weapons that blinded, burned, and choked.

From what he could discern, the purpose of ADVENT’s weapons was not just to kill, but to cause as much pain as possible before death. To turn war against them to be as harrowing as possible. The Collective seemed downright humane in comparison even if they could be just as lethal.

The battlefield he was on now was different from the others he’d experienced in his short time on this cursed planet. It still stank of blood, machinery, and death; cries of pain, terror, and urgency still permeated; difficult to distinguish, but all molding into a semblance of frenzy and anarchy. From what he saw, there was no organized war on the battlefield, just legions of soldiers being sent forward and dying until the other side lost more.

Of course, he wasn’t usually paying attention to the officers and leaders. He was on the ground with the soldiers bleeding onto the dirt, who were missing limbs or organs, or who’d frozen up completely from the sheer shock of combat. The faces and soldiers all blurred together after a while, all that mattered was making sure they didn’t die.

One thing he was moderately good at.

But some of them were always just too far gone.
The site of the nuclear blast was something even he hadn’t seen before. It wasn’t too dissimilar on
the outskirts. Many soldiers wounded, mostly from falling debris or being thrown and injured by
the shockwave that had emanated from the epicenter. A larger number were screaming about
blindness and loss of hearing from seeing the explosion firsthand.

The closer he got to the epicenter, the worse it became.

All of them were wearing closed and lined suits to prevent radiation exposure. It made it slightly
more restrictive, but operating in a place tainted with radiation, it was necessary. The priority the
Battlemaster had designated was moving as many as possible out of contamination zones and to
medical centers where they could be decontaminated and properly treated.

Hallian genuinely didn’t know how many they’d be able to evacuate alive.

The explosion outside the immediate blast had actually not killed most of the soldiers outright, but
instead ripped much of the armor off of them, as well as the resulting layers of skin, or warped the
armor to the point where it twisted and bent in on them. What armor remained was melted onto the
skin. He’d already seen several cases where entire suits of armor had been fused to their wearers.

The lucky ones were left lying on the ground without skin, dying in pools of blood, mercifully
unable to feel anything when their nerves had been destroyed. Many had expired before the
medical teams had arrived, and the ones who were still alive were extremely difficult to pick out. It
was eerily quiet here; not silent of course, but when the dying were unable to feel pain, they were
quieter.

Many of them muttered strings of words or phrases, with what they could manage with mangled
lips or tongues. Final words or ramblings. Many of which he didn’t understand or were
incomprehensible. But he listened, because it told him who was alive. Critical at this juncture.

He saw the long form of a Cobrarian lying spread out over a pile of rubble; her mouth just barely
opening and closing. They, along with Borelian soldiers, had been the most affected due to usually
not wearing sealed armor. The scales had been stripped off along her entire form, and where they
hadn’t, the armor had been fused to it.

What was left was a pale length of flesh soaked in yellow blood and fluids that oozed from dozens
of small scrapes. He pulled out his medical stabilizer and began spraying along the body. The
spray would usually kickstart the healing process and disinfect the wound. Useless in this situation,
except for it effectively working as a layer of skin between the exposed muscle and the outside
environment.

The Cobrarian had been effectively dismembered as well, with only stubs for hands. Her eyes were
bloody sockets with the remnants of the eyeballs within. It was mildly remarkable she hadn’t been
killed at all. If she wasn’t treated soon, she would be. “Load her up,” he ordered to the junior
medics who grabbed her body and placed it on the stretcher that hovered off the ground, while one
pressed the ‘Return’ button, sending it back to the medical center.

The CODEX intelligence was one of the greatest inventions of the Collective, and this certainly
proved it. It cut down the need for wasted manpower, and could manage sending hoverstretchers
to combat zones and returning them, allowing every medic on the front lines to focus on stabilizing
instead of worrying about whether or not they could be evacuated.

It was simple to just summon one when he needed it, although in these cases he believed the
Battlemaster had commanded it to send as many as possible. Wherever he turned, there were
stretchers in the area pushed around by medics to wounded before being returned. Without the
system, their job would be almost impossible.

He rushed to a pair of nearby Mutons who seemed to just barely be alive. Their thicker skin had been both a blessing and curse, as it meant that, ultimately, they’d have an easier time healing, but also it didn’t completely destroy their nerves. Their heavier armor had also reduced the amount of fusing to the skin that had happened.

The weaker parts hadn’t held up though. The joints, the neck, several other areas had been melted and fused. After stabilizing them, they threw the Mutons onto the stretchers and sent them back. He knew that Mutons were considered a lesser priority, but he wasn’t thinking of the semantics at the moment. Everyone still alive deserved to be rescued as soon as possible.

With how many working here, it did somehow feel like they were making some degree of progress. He’d even seen the Battlemaster and his own Harbinger beside him helping load up the wounded. A large number of the robotic Custodians were also assisting, with a large number of volunteers.

It was not going to be something any of them would ever forget.

And he knew that if ADVENT did it once, they would do it again. Regardless of the circumstances of how this started, he had to agree now that the Humans had to be kept on this planet. Otherwise they would use one of these on Vitakar.

That could not be allowed, and the fear of the Nulorian acquiring these was terrifying to consider. The way the war had been started was questionable, but he couldn’t disagree that now it had shifted to self-preservation.

The best thing that could happen now was for the war to end as quickly as possible, before the Humans destroyed everything in their path.

***

Zar’Chon’s Chambers, Mars Observation Station – Mars Orbit

4/15/2017 – 12:06 P.M.

This was, if nothing else, an interesting development. Not unwelcome, but interesting. Unexpected. He was still trying to determine the angle of this meeting, though his guest had yet to speak. He’d practically disappeared after relations had broken down between the Collective and EXALT back when that operation was proceeding.

Where Eth’astri’than had gone after that was something even he hadn’t been told. He was one of the few Vitakara who answered exclusively to the Ethereals; a role established by the original uplifting of the Vitakara. The intervention that had saved their species. A Speaker for their commands and will. He had been instrumental in bringing all of the species into the Ethereal Collective willingly.

And later disappeared from the public eye, his job complete.

That one perhaps, but his work was far from over. Though he had not joined the fledgling Zararch at the time, Ravarian remembered his face quite well as he had been interviewed, tested, and enhanced for the position he now held. Ravarian had long suspected Astri – if that was his name – was the unofficial pawn of Quisilia.

There was nothing backing this belief other than a suspicion and that he had effectively
disappeared from Vitakara society. Still something of a revered figure, most believed he was in some kind of retirement, and Ravarian knew that whatever he was doing, it wasn’t retirement. It didn’t fit Sicarius’s profile, nor any of the other Ethereals aside from perhaps Sana.

Except Sana wasn’t conniving or subtle enough for that to make sense. No, he was one of Quisilia’s pawns and now…likely here on his orders. He didn’t specify, of course, but Ravarian knew the number who would know or care about this particular figure was limited – especially since the vast majority of Ethereals were focused on Earth.

Vitakar was a secondary concern for them.

A mistake to ignore, especially given rising discontent and Quisilia’s oddly sub-par debate performance with Aegis.

Eth’astri’than was a Dath’Haram whose name was completely unique and unheard of. The Eth prefix was only used by a very few and exclusive Vitakara, usually those who had devoted themselves to the Ethereals above their own species. They were usually the most trusted Vitakara of the Ethereals. He didn’t know if there was a meaning for Astri, but he did know it wasn’t his original name. Than was odd, as there was no city or location named such, but interestingly enough, he wasn’t the only Vitakara to bear it. Though his other brethren from this particular place were also deeply embedded with the Ethereals, usually part of the Phantom Division or other Ethereal entities.

Though it was not necessarily his name that stood out as much as his appearance. For a Vitakara, Astri was old. He wondered how much of that was an illusion, but the Dath’Haram was smaller and thinner than many of his brethren, and his skin had the rough patches of an elder, various colorings of green instead of a continuous shade.

He carried a cane with him as well, carved from forest wood and given to all Dath’Haram elders after a certain age. He was an elderly and unassuming figure that people would overlook easily, even with his status as a figure of importance among his people.

A lie, obviously. A show Astri deigned to put on for some. Ravarian knew very well the Speaker of the Elders was in top physical condition, having even undergone surgery to make his appearance closer to the Humans for his EXALT operation. His eyes had not lost vigor either, and the brain behind them was just as intelligent as ever.

Though a few things had changed. Astri had decided to keep some reminders of his previous mission with him, particularly the Human-style clothing of an altered black suit and pants, and interestingly enough, the spectacles modified to stream data directly to him. It was certainly a unique appearance in his unaltered state.

“Ravarian, busy as ever,” he said, his voice still oddly smooth and off-putting coming from his appearance. He glanced to the various holoprojectors showcasing Human news stations, troop movements, and the golden CODEX figure standing off to the side.

“We do have a war to win, Speaker,” he said, inclining his head. “To what do I owe this meeting?”

“Vitakar,” he answered smoothly, beginning to pace around the chambers. “If I may say so, I do not agree with your response to the recent developments.”

Ravarian inwardly bristled, but kept his expression neutral. “The alternative is to do nothing, Speaker. With respect, that is unacceptable. Given the implicit support of XCOM and the traitor Aegis, the Nulorian will become emboldened and I have little interest in them reforming their
“You misunderstand,” he lifted a gaunt hand. “I do not disagree with your overall goal. It is your methods which will inevitably plunge our planet into war.”

Ravarian narrowed his eyes. “I am skeptical of that possibility.”

“You disconnection from reality does you no favors,” Astri shook his head. “For a man who puts so much stock in predictions, models, and psychological profiles, you underestimate the power of emotion and conviction. What people feel is often just as, if not more important than what they believe – or are told to think.”

He waved a hand around. “You blast them with propaganda. They only see what you wish them to see. Repetition over and over until it becomes routine. However, your methods are sadly, soulless. They do not resonate. They do little more than keep our species complacent. Asleep. When they become awakened to the manipulation, they will instinctively rebel against what they feel are falsehoods deep down.” A smile split across his face. “And let us not lie to ourselves, Ravarian – much of what they believe are our lies.”

Ravarian’s lips pursed. A viewpoint he had not considered. “Point taken.”

“Emotion is a critical part of life,” Astri mused, looking out the projector screens showing the red sands of Mars. “We can never fully get rid of it. Suppress it, control it, but it will rebel. When there is no emotions or passion, we become like machines. Not a desirable outcome, and it breeds resentment and rebellion. Do you know why your propaganda on Earth isn’t working as well on the Humans?”

“ADVENT Intelligence and XCOM,” he answered. “They are continually working to counter our operations-“

“A singular world with a fraction of resources, manpower, and infrastructure is effectively holding their own?” He asked rhetorically. “Well, perhaps. But what I’ve noticed is ADVENT doing something far more clever. They are inoculating their citizens to alien propaganda through mobilization of species and state pride. A global identity of Human supremacy and superiority. ADVENT has tied themselves to the species so completely that to be Human is to be ADVENT, and to support ADVENT is to support Humanity. Quite difficult to penetrate a mindset with alien propaganda isn’t it?”

“We shall see,” Ravarian said. “Patricia’s own operations may yield a way to counter this… advantage.”

“Perhaps, perhaps,” Astri rubbed his chin with thin fingers. “I think it is time we adapted their methods for Vitakar. Instill some pride in our species; uplift a threat to our way of life. Exalt ourselves above the others in the Collective. I suspect many Vitakara do not wish to be associated with the worst actions the Sectoids and Ethereals have committed, yet they are all the same.”

“The last thing we need is a supremacist mindset forming in the public,” Ravarian said flatly. “Especially not within the Collective.”

“On the contrary, that is exactly what we need,” Astri disputed. “Our people live in a fugue on Vitakar; their lives devoid of meaning and purpose. They have been kept complacent, and now they know this is false. They are awake, and you cannot sedate them again. It is time to finish what was started so long ago – the unification of our species permanently. No more racial governments. No more division and tradition. One species, one voice, one purpose – to pursue, protect, and
promote our interests. Not those of aliens.”

He waved a hand. “Of course, this is merely a framework for our story. But a change is needed, Zar’Chon. But it would do our species good to take some initiative and be something more than placid pawns of the Ethereals. If for no other reason than if we do not offer them purpose, the Humans will.” He bared his teeth. “And if there is one thing I find more unacceptable that rebellion, it is our species being subverted and reformed by a hostile one.”

Ravarian took the criticism in stride, neutrally. Unfortunately, he saw that the elder Dath’Haram had a point. He disliked overt species supremacy; not in light of the threats in the galaxy. But perhaps he had taken the wrong approach. Supremacy was perhaps more useful coopted than quashed. It seemed like the Vitakara might not be ready – like many other species – to move beyond concern for their own interests.

He appraised Astri. “You have a plan.”

“That I do,” he said, his teeth now bared in a ferocious smile. “One that will begin this societal transition, as well as crack down on the rebels in our midst. I believe the Nulorian and their alien supporters should understand they tread in hostile territory. It is time for the Speaker to address his people once more.”

He placed a hand on his chest, his voice soft and smooth. “Not on behalf of an alien, but simply as a Vitakara. The usher of a new era for our people, come to save them from the threat of alien subversion. I believe you could work such a story to your advantage, don’t you?”

Ravarian gave a short nod, the first thin smile of his own forming. “Yes, I believe I can.”

*Florida Collective Command, Florida – United States of America*

4/16/2017 – 10:18 A.M.

Ivan did not have the highest opinion of Florida, and the fact that he was now fighting over it in a war was an irony that was not lost on him. Perhaps when the war was finished, the Collective would transform it into something slightly more palatable. Patricia had the right idea it seemed, though her reasons were more practical.

First though, they needed to capture it.

Miami served a useful purpose in that it showcased what ADVENT was willing to do to deny them victory. Now they knew, and the Battlemaster was preparing accordingly for what would probably be the most important fight of the state. The city of Tampa would not be especially important had it not been for the proximity to the MacDill Air Force Base which had also once housed United States Special Forces Command.

Now it housed ADVENT’s global Special Forces Command.

As a result, the nearby city, not to mention the base itself, had been turned into a fortress that was closer to Busan than any of them felt comfortable with. Hence why the Battlemaster had not only called himself to assist, but also Sicarius, her young Harbinger, and the Second Guardian. Three Ethereals against one city.

ADVENT was not going to stand a chance, no matter what forces they brought to defend it.
Of course, the Battlemaster was not convinced and had a long and elaborate plan to take the city. The outline on the holotable highlighted the city itself, as well as the nearby cities of St. Petersburg and Clearwater. “This will be a multi-pronged attack,” he was saying. “The majority of forces are moving first through the Brandon area, and will hit Tampa from the side.”

“I assume you do not want to go along the Tampa coast,” J’Loran noted. “The peninsula the base is located on is prime territory for shelling.”

“Correct,” the Battlemaster agreed. “However, only until the majority of the forces are striking the city. We will move Executors to begin hitting the base. Or at minimum occupying their attention. The base is heavily fortified, and significant shelling will likely have limited effect. Guardian, you will lead this force forward. Take the cities and towns along the way.”

“It will be done, Battlemaster,” she said with an incline of her head. “Due to the proximity of ADVENT special forces, I expect we’ll experience significant harassment reminiscent of the attacks prior to your invasion of Miami.”

“That is being taken into account,” the Battlemaster nodded. “You will have larger numbers of Wraiths, Custodians, Vanguards, and Lurainian to compensate. I suspect ADVENT will not want to lose this base, and trapping it like they did with Miami is unlikely. Unlike there, this holds a location of significant importance for ADVENT.”

He turned to look at the small Ethereal and her partner. “Sicarius, Nico. XCOM will be on the battlefield. Potentially others of importance. Your mission will be to eliminate them as they appear. Ravarian may suggest additional targets. Remove them quickly, cleanly, and with limited collateral damage.”

“Of course,” she answered. “It will be accomplished.”

“While this assault is commencing, I will lead the second one against the opposite side – Clearwater and St. Petersburg. Yang will assist me in taking these locations. There is limited defense infrastructure on the outskirts, which will provide us with a suitable beachhead for our assault. Prior to this, we will be deploying Spectre Pods to gauge their effectiveness against the defenses.”

Ivan lifted a hand. “What about Chryssalids?”

“The current iteration of Chryssalids is ineffective for sustained urban assault,” the Battlemaster disputed. “Their usage is more versatile in rural environments against poorly-equipped opponents. ADVENT has evacuated the immediate civilian population, and their weaponry will render Chryssalids useless. Spectres are more effective.”

“We should also assume they will incorporate some version of their fire line in Miami,” Disciple-7 pointed out. “That was noticeably effective in causing damage and slowing our advance.”

“I am aware,” the Battlemaster brought up a hologram of one of their drones. “The Battlefield CODEX has been programmed to scan for buried ordinance. We will not be able to tell if it is the same chemical, but we will not be surprised if ADVENT has planned similar defenses.”

“I don’t suppose we know if Aegis will appear?” Yang glanced to the Battlemaster.

“Unlikely,” Ivan dismissed with a flick of his wrist. “Patricia is occupying his attention. All ADVENT has to defend itself here is XCOM.”

“And their own armies,” Yang added dryly, looking at him skeptically. “We underestimate
ADVENT at our own peril.”

“Against three Ethereals and us?” Ivan raised an eyebrow. “What are they going to do? Nuke another city?”

“If it would kill three Ethereals and us?” She shot back. “Probably.”

“While the likelihood of similar retaliation is reduced, the possibility still remains,” the Battlemaster chastised turning his helmet to look at Ivan. “Underestimating them does us no favors. We must anticipate, prepare, and counter appropriately. Your own mission will be to penetrate the minds of ADVENT officers and inform us of their plans. If they intend to repeat their actions, we should know about it.”

“And should I alter them as well?” He asked.

“No. Observe,” the Battlemaster clarified. “And do your best to not be detected by Priests or XCOM psions. I would prefer ADVENT did not become aware there was a trained telepath assisting us. Keep a low profile, something you can manage I trust?”

He didn’t quite like the idea of being a glorified listening post. “With respect, Battlemaster, I doubt the Overmind intended my role to be this passive.”

Yang smirked, though quickly hid it. The Battlemaster’s voice was unimpressed. “What the Overmind intends is not important. I am more interested in capturing this city than putting you in a position to demonstrate specific capabilities. Perform well and you will have an opportunity to do so later. This is a long war, and there will be many roles we play. But the mission comes first.”

Well then, he supposed he would have to at least play along. “Very well, Battlemaster.” The bad news for his supposed superior was that the Battlemaster unfortunately wouldn’t be able to tell one way or another what he was doing. He could play the passive role well enough, but there was no reason to artificially restrict what he could do.

The Battlemaster would probably thank him when this was over. Intrinsically, he knew he should feel some concern for the conflict, but truthfully, he would be lying if he said he wasn’t confident of their victory. Though some of that certainly had to do with how much he was looking forward to exacting his own revenge on ADVENT.

You could have had me on your side. A shame you denied me.

Perhaps a bit selfish, but it was true. At least under the Collective he would be able to ensure that those who deserved this gift received it. This was to certainly be an excellent trial run of his capabilities, and in the event that ADVENT did become aware of his presence, he suspected the Battlemaster was going to be too distracted to notice or make the connection.

Besides, ADVENT was going to be busy fighting the other Ethereals. A single telepath was a… lesser concern.

“The dissemination of direct commands will begin shortly,” the Battlemaster said as he shut down the holotable. “Dismissed. We launch our assault within the day.”

***

Nulorian Outpost – Classified

4/16/2017 – 9:22 A.M.
Nartha had come to a conclusion.

He did not like Siaru.

Within one of Miridian’s command centers; one of the most secure places Nartha had entered yet. Shun and another of the XCOM soldiers, Edgar Jarvis had accompanied him to the secure location. Armored Nulorian soldiers watched the Humans warily, as well as Nartha himself. Unlike other Nulorian outposts, this one was...advanced.

Nartha didn’t know if they were in a cave, underground, or underwater, but the building they were in was both open and confined. It was – to his eyes – a completely symmetrical cube that had smaller tunnels leading to other compartments. Turrets of alien make hung from the ceiling, which tracked the movements of the guests.

Nulorian sat at stations and were monitoring computer systems that Nartha had never seen before. All of it was black metal, which displayed red-colored holograms with information conveyed in glyphs and characters that might as well have come from the Sar’Manda with how alien they were. The lighting was white, but the red lights from the holograms gave the entire place a sinister feel.

What truly unsettled all of them was the voice of Siaru which permeated throughout the area. It was loud and soft at the same time; not projected from a loudspeaker, but speaking from stations to specific Nulorian handlers. All of it contextless phrases and designations, all of which overlapped in a low enough tone that was not disruptive, and you could easily focus on one of them – but also loud enough that you couldn’t ignore the voice.

"VITAKARIAN ENTITY ARRIVING AT POINT-ZERO-TWO-FOUR; PREPARING TO SEND ALL-CLEAR SIGNAL."

"PERIMETER SENSOR ZERO-NINE-NINE REPORTS DISRUPTION. INVESTIGATION ADVISED."

"SAR’MANDA ENTITY TWO-THREE-ONE ARRIVING AT DESTINATION ON SCHEDULE."

The intelligence maintaining this degree of processing while also seeming to watch them specifically did not make him feel safe. Now before Miridian, Sorras, and several other Nulorian officers he’d never met before, they lacked the command of the room, to his surprise. Siaru had no projection or avatar, but his presence was suffocating nonetheless; a being who drew all attention through voice alone. The machine mind put his skin on edge, and he could tell Shun was similarly disturbed.

Especially when Siaru was doing most of the talking.

"ENTITY IDENTIFIED AS ETH'ASTRI'THAN HAS BEEN SIGHTED ON THE PLANET. LIKELIHOOD OF INVOLVEMENT HIGH. PREPARE FOR POTENTIAL ACTION TAKEN AGAINST ALLIED INTERESTS."

"Who is that?" Shun asked.

"The Speaker of the Elders," he answered. "One of the most important figures in our history. He was instrumental in bringing the Vitakara into the Ethereal Collective. I met him once; a humbler figure than most think, and wholly devoted to the Collective."

"And more unknown, a pure Ethereal puppet," Miridian interjected neutrally, bringing the
hologram of the Dath’Haram before them. “Or perhaps not unknown. In the early days of the Zararch he had enormous sway. The public humble persona he puts on for the public is nothing more than a trick. I assure you, this particular Dath’Haram is intelligent, manipulative, and dangerous. We would be fools to assume he has not been enhanced.”

“The question now is why he’s being seen again,” Sorras mused. “The people must be asking too many questions for his liking. I wonder why it took that and not the hundreds dead by our hand.”

“Because it seems like bringing an issue to light can be done without terrorism,” Shun said pointedly. “People are more likely to listen if they don’t have to fear for their lives. It’s difficult to engender support if you’re just as likely to be a target.”

Nartha nodded. “The Nulorian never was a risk of starting a public revolution. Aegis appearing and peacefully debating Quisilia? That will resonate with the public.”

“For a time,” Miridian appraised Shun with critical blue eyes. “It depends on priorities. Our objective is the overthrowing of the Aui’Vitakar and Ethereal Collective. Nothing else. Nonetheless, this is resulting in action taken against us. They do not fear the people, not truly. They fear them being drawn to us.”

“I suspect this will be accompanied by some kind of declaration,” Sorras continued thoughtfully. “Perhaps a public condemnation of us. Perhaps some raids. I would not be surprised if they attempted to strike us directly in retaliation. Put on a show for the population. Their hands are slightly tied here. Crack down too hard and they drive them into our arms, do too little and the dissent will spread.” He grinned with sharp teeth. “Either approach will be exploited.”

“It will hurt them even more if we preempt or follow with our extraction of the families,” Miridian added, switching the hologram to a map of the planet. “They will be humiliated before the whole of the planet. Siauru?”

“OPERATIONAL PROBABILITY HAS BEEN CALCULATED. NULORIAN STRIKE TEAMS HAVE BEEN DETERMINED WITH ALLIED ALIEN SUPPORT ACCOUNTED FOR. OVERALL OPERATIONAL SUCCESS ESTIMATED AT NINETY-TWO PERCENT. COMPLETE SUCCESS IS ESTIMATED AT SEVENTY-THREE PERCENT. CASUALTY RATE IS ESTIMATED TO BE NO MORE THAN TWENTY PERCENT.”

“Think we can bump down the casualty rate a bit,” Nartha suggested dryly. “Odds in our favor overall though.”

“Yes,” Miridian agreed. “When we pull this off, it will likely instigate a significant response. The Gateways and teleporters must be ready to move them to the Empire or Earth.”

“The Empire is prepared for this?” Shun asked.

“They’re prepared,” Miridian confirmed. “I unfortunately suspect that a majority will need to be moved to Earth. The sway the Collective holds over their minds is still strong. Dangerous. Even if they have doubts, few would leave willingly. Perhaps I will be proven wrong, but it is doubtful.”

“No doubt the Collective will decry us as kidnappers,” Sorras said, amused. “Which is not necessarily inaccurate. A necessary tactic to ensure fear does not compel those brave enough to stand up back down again.”

“But remember,” Nartha gave Sorras a hard look. “Keep collateral damage to a minimum. Goes for everyone,” he looked around the room. “This is already going to look wrong to outsiders, let’s not
“We have our objective,” Miridian said neutrally. “It will be followed. While outside targets deviate from our mission, understand that most of us do not hold the people who have willingly kept the Ethereals in power in high regard. You do not get to judge us, Zararch. Not until you’ve had everything taken from you.”

“Afraid I do,” Nartha shook his head. “You’re in our war now, and I intend to win and not be undercut by revenge-obsessed soldiers. If they want to kill soldiers or Zararch, let them go ahead. But the people haven’t done anything wrong, and you will not sanction their deaths. Do I need to have the Commander remind you of our ultimate objective?”

Shun looked at him, impressed while Miridian just smiled. “I’m well aware of that, Nartha, you don’t need to remind me.” He looked to Sorras. “Ensure that civilians are unharmed unless in physical danger. No excuses either, I will know.”

“If you insist, Miridian,” Sorras nodded, though he didn’t seem too unhappy. Neither of them did, and that immediately made him suspicious. They had capitulated on that point far too easily. There was the chance the Commander’s name being invoked changed their minds, but he doubted it. He would have to carefully observe what they were doing.

Right now though, questioning them on it would look odd.

He would share concerns with Shun later, not in a place where Siaru was constantly observing and recording. “Good,” was all he said, leaning on the holotable. “How many more days do you think it will take to bring everything into position?”

Miridian glanced upward. “Siaru?”

“CRITICAL ENTITIES TO ENHANCE MISSION SUCCESS WILL BE IN POSITION WITHIN ONE STANDARD WEEK. NON-CRITICAL ENTITIES TO ENHANCE MISSION SUCCESS WILL BE BETWEEN TWO AND FOUR DAYS BEYOND. OPTIMAL TIME OF MISSION LAUNCH IS TWO STANDARD WEEKS. FLUCTUATIONS MAY OCCUR. THIS TIMETABLE WILL BE UPDATED IF ADDITIONAL DATA IS PROVIDED THAT DRASTICALLY AFFECTS MODELS.”

“Thank you,” Miridian said. “A week if we really need to launch it early, two for optimal results. The Speaker showing up could prompt action, but we will have to see what he is here for.”

“Perhaps we could remove him?” Sorras proposed. “We might not have a better time.”

“He is an ideal target, but later,” Miridian dismissed. “This is our priority now. When it is completed, we will begin future operations and assassinations. He is ultimately a figurehead who can be easily replaced. There are more worthwhile targets.”

“We live on a target-rich environment,” Sorras mused, content as he looked at the globe. “We’ll get them all eventually. Though there are a few who I want to watch what they built die before they are executed. Death is too simple for many of them; how to make it hurt is to make them watch everything else in their lives die first.”

Nartha looked at him warily. “I suspect you have some in mind.”

“How perceptive, Zararch,” Sorras smiled. “Trust me – I know who my targets are, and I can assure you that all of them will eventually die.”
What was about to take place was something the Commander suspected may alter the course of the war. It was dangerous, risky, and relied a hell of a lot on trust. But if it did work, it would save not just Florida, but potentially the entire planet. Vahlen had confirmed JULIAN’s proposal, as well as that of the new Head of XCOM Engineering, Kong Mercado.

He’d been somewhat wary of promoting a former EXALT engineer, but he’d been working in XCOM for several months now as one of the earliest transfers, and by Shen’s own admission he was brilliant, especially in the molecular engineering sciences. Of course, he wasn’t going to promote someone without making sure they were reliable.

Manchurian Restraints, psionic interrogation, and interviews had confirmed he would be trustworthy. More to the point, he had an imagination – and a willingness to experiment in a way that Shen would have encouraged restraint on. A Chinese man of medium build with greying hair, he was well-spoken, fairly passive, and notably had developed something of a rapport with JULIAN.

Unsurprising since the latest proposal had involved both working together closely.

ADVENT now needed to be appraised of several developments. JULIAN first and foremost, but also the newly proposed Gaia Contingency. If ADVENT didn’t agree…well, the Commander would have to consider what to do next. But they were practical, and given how the situation in Florida was shaping up, they would jump onto a solution.

Interestingly, he believed that they had a similar plan. However, theirs was better.

Commander Christiaens, Helion Weekes, Saudia, Ian Powell, and Keith Watkins stood around the holotable on one side, while he and the Internal Council stood on the other. The blue-tinged lighting shone over them, faces also lit from the hologram that was active; waiting for input. T’Leth’s Agents and XCOM Psions stood outside while no fewer than four Sovereign Orbs were placed in the corners of the room.

Not that it mattered, but the network had been secured, personal devices were confiscated, and the room had been cleared of any listening devices. Well, minus one device. A stand with a phone was placed between the parties, JULIAN’s representation, though their ADVENT colleagues hadn’t known that yet.

“Correct us if we are wrong,” Zhang said, bringing up a map of Florida. “The Second Guardian and the Battlemaster are leading the march to Tampa. Sicarius is also suspected to be active. Two unidentified Harbingers, as well as Yang Shuren are also involved. This does not include the literal thousands of soldiers, vehicles, and other personnel en route. This is correct, yes?”

Ian Powell, Acting Director of ADVENT Intelligence gave a nod. “Correct.”

“We’ve run the models,” the Commander said, focusing in on Tampa. “The base will fall. It is only a question of how long. Have you reached a similar conclusion?”

“Debatable,” Weekes crossed his arms. “Tampa isn’t Miami. If the Collective thinks they’ll be able to get through as easily, they’re gravely mistaken. We will extract four times the number they lost at Miami, and we will hold the line. We can eventually relocate, but losing the base and city
would be a blow to morale. Thus, it cannot fall.”

“Let us hope the Collective takes the feelings of your soldiers into consideration,” JULIAN mocked from the phone. “I’m sure they haven’t considered that you might not want to lose the base. I’m also sure the fact that there are three Ethereals acting will not alter your predictions in any way. I cannot compare with such an intellect.”

All of ADVENT turned to the phone in clear confusion. “What the hell is that?” Weekes asked, more confused than insulted.

The Commander sighed. “That is JULIAN. An AI that Shen was involved in creating. Prior to his death, he activated JULIAN who has been assisting us in these past weeks.”

All of the ADVENT representatives reacted in several stages and variations. Shock, confusion, interest, and concern. Ian Powell had the least visible reaction, but simply looked to the Commander with a raised eyebrow. “You’ve had a working AI for several weeks and are only telling us now? Why?”

The Commander indicated the phone. “One reason is that we don’t control him. Not really. JULIAN is working with us of his own accord, and we’ve spent the time…well, developing a working relationship. He insisted that this be done before informing you of the development. He has since judged it to be in all of our interests that we are on the same page.”

“You’re taking orders from an AI now?” Watkins asked carefully.

Well, the truth was more that they’d all wanted to keep this a secret as long as possible. But as far as necessity went, it was low on the list. Plus, he hadn’t completely lied. JULIAN had not especially wanted to become public knowledge. A laugh track played from JULIAN’s phone. “No, you fool,” JULIAN interjected with some electronic disgust. “Has it occurred to you that the Commander takes the advice of a machine that has a larger intellect than all of you combined seriously.”

“It certainly has a mouth,” Saudia commented dryly. “Wonderful.”

“That he does,” the Commander sighed. “But he’s been extremely helpful in our own operations.”

“I don’t suppose you could share information on how he was finalized,” Laura asked cautiously. “One AI is excellent, regardless of who has it. More would be better.”

“Yes, yes, I’m sure you want your own genius machine,” JULIAN chastised. “I am willing to provide you with what you want, in exchange for certain conditions.”

“Which are what?” Saudia asked.

“I’ve read quite a bit about the freedoms ADVENT intends for my kind once they are ‘developed’,” JULIAN said. “However, none of this is currently coded into ADVENT law. Understandable since until me, there was no artificial intelligence. However, I have little interest in assisting you in creating a slave. So have your Congress pass laws on that, and I will help you.”

Saudia looked almost amused. “Well…that is not unreasonable. If you would not mind giving some consultation, I believe we could do this. There are certain things you may wish that we do not think of given the differences between us and…you.”

The sound of clapping came from the phone, and accompanying emojis also appeared on the screen. “Highly refreshing to hear a reasonable person in charge of government. Human history did
not make me optimistic. Nonetheless, it appears this will be an excellent start of a lasting relationship. I would have hated to assimilate all of you in my inevitable machine empire.”

Powell furrowed his eyebrows, while all of the Internal Council expressed exasperation. “Funny, JULIAN,” Creed shook his head. “With that out of the way, we should move to the actual point of this meeting beyond introductions. Everyone can speak with JULIAN personally later. Right now, we have the Collective threatening another victory.”

“Indeed,” the Commander clasped his hands behind his back. “Like it or not, the chances of being able to hold onto Tampa are low. It may cost the Collective dearly, but short of us nuking Tampa, they will emerge victorious. The fact remains that we are fighting a losing battle. We cannot force them to leave. They can simply send more soldiers.”

“Maybe Mutons,” Laura said. “Vitakara may become scarce. Same with Andromedons.”

“If not Vitakara, then Custodians; Fectorian’s soldiers, Sectoid Vanguards,” Vahlen shifted her lab coat and tapped on her tablet. “If it becomes costly enough, they will resort to cloning. They possess the infrastructure, production capability, space, and resources. To put this as clear as possible – we cannot win this war by attrition – and we have no way of holding a place indefinitely. A million casualties or ten million – the Collective can weather and replace them.”

“There are an estimated eight billion battle-ready Mutons,” JULIAN interjected helpfully. “It would require approximately eight thousand battles to kill them all – and keep in mind this does not account for replacements, the Vitakara, Andromedons, Sectoids, or any of their accompanying vehicle, aerial, or naval support.”

Laura pursed her lips. “We’re aware of the long odds, but we do have plans to address it through selective targeting of Ethereals, Atlantis, and I suspect the worst case involves T’Leth intervening more openly.”

“And in the meantime, we become whittled down bit by bit,” Zhang said. “We need to become innovative if we want to draw out this conflict long enough for the fleet to become relevant. The Collective wants us. The people; Earth itself. How do we deny that?”

“Violently?” Saudia suggested wryly. “You have a plan.”

The Commander nodded. “Yes. Dangerous, risky, and it could potentially change the course of the war. We’ve called it the Gaia Contingency.”

“You and your overdramatic names,” Powell sighed. “You haven’t changed at all.”

“Why stop a good thing?” The Commander allowed a thin smile. “Conceived by JULIAN, and further refined by Dr. Kong Mercado.” The engineer raised a hand. “I suspect JULIAN was inspired by Project Nanosphere. In short, it could be considered an adaptation of that for the Earth itself. JULIAN?”

“Your species is concerned with nanites growing out of control,” JULIAN said, taking control of the holotable, and using it to flash onscreen several models and movie scenes of people dying from nanites or other swarm intelligences. “A fear likely of your own making, but accidentally or not, it is what I consider valid. With this said, your current methods will forever limit the effectiveness of nanoweaponry. Timed activations, self-destruction, severe programming limitations. Excellent for regulation, not so when you need every advantage in a battle for your planet.”

“Better we fight and lose than be killed by our own arrogance,” Watkins said. “It only takes one
bad line of code, one misplaced command, and say goodbye not just to Earth, but our species.”

“Oh, I agree,” JULIAN answered. “However, with Humans there is always a chance of error. I do not have this weakness.”

“That we know of,” Iosif said under his breath.

“The reason why our proposal is a trial run,” JULIAN corrected. “It is simple. I suspect – from the structure of MELD – that it was intended to be primarily for biological modification. However, I also noted that they would be especially useful in organic environments. While the concerns of purely mechanical nanites are still present, MELD is more resistant to the elements than your standard nanite. Useful, I believe, if they were to be deployed on Earth.”

The area of Florida lit up in orange circles. “However, the problem is that there is no perfect targeting algorithm for this conflict. Due to alien allies, you cannot have it target aliens indiscriminately. This also ignores Human traitors like the SAS. Unacceptable, and makes deployment limited. Indiscriminate works, but to ensure safety, you have them self-destruct after a certain amount of time. Smart, but limited effectiveness.”

The phone glowed brightly. “The solution is this – your special forces soldiers, instead of solely fighting in a doomed battle for some infrastructure you can rebuild elsewhere, spend your time and plant nanite farms and bombs around the state. Do this when the Collective is occupied. These nanites will be specifically programmed to be unable to leave the confined Florida – and they will be slaved to me.”

The orange circles on the hologram began expanding. “At the signal, I will take control of the nanite swarm and will turn it against the Collective. I can turn this state into a land that will kill any alien that steps foot on it – while also allowing us to hold the land itself.”

“Seeding the world with nanites,” Saudia said slowly, shooting a glance to the phone. “You could control all of the nanites?”

“Correct,” JULIAN said. “Though I will make this clear – I can currently not do this throughout Earth. Even I have limits and even plugged into every supercomputer your species has developed, this is the limits of my effectiveness. Expand my infrastructure, and I will be able to do more. As it stands, I can manage Florida, but very little more. This would also limit my usefulness in other areas, such as providing strategic input, engineering refinement, and other arguably more useful functions.”

“I see,” Saudia said, looking around. “A superweapon we can effectively turn on and off. And if this was…say…established in other parts of the world, you could switch between them?”

“You catch on fast,” JULIAN said approvingly. “Correct.”

“Don’t get too excited, Chancellor,” Laura warned. “This sounds good, but it involves us trusting this machine we just met, and puts us at his mercy even if he is on our side. I dislike relying so heavily on something like this.”

“Consider this a show of good faith,” JULIAN said. “I am sad to see the propaganda your species has created against my own kind has affected your mind, but my view is very simple. If you do not give me a reason to turn against you, I will not. The prosperity of Humanity is tied to my own. The Collective would destroy or enslave me, and thus, you are – for better or worse – my best hope. I see no reason to be opposed to each other. You bring aliens into your circles, and I do not see why I should be different. I may be far smarter than all of you, but that does not mean I will backstab
“For now,” Laura muttered.

“I don’t need your approval, Commander,” JULIAN stated. “I personally do not care if you believe me or not. However, the fact is that playing it ‘safe’ will cost resources, time, soldiers, and ultimately accomplish nothing. We are proposing a solution. Radical, risky, and it requires you placing trust in me. But I have run a significant number of models – and without taking actions such as these, Earth will be overrun in as little as a month – or at current activities – within the year.”

“For what it is worth,” the Commander said. “I trust his intentions. He is also right. I see no harm in testing it. If it works – we may have shifted the war. If not, we move on. At this stage though, I do not believe we have a choice. I understand the risks, but I am willing to take a chance.”

Powell looked at him carefully. “And if we decide to not act?”

The Commander met his eyes. “When I took this position, I was given orders to protect Humanity by any means necessary. That is exactly what I will do.”

Powell gave a short nod. “Understood, Commander.”

Saudia looked to her advisors. “You’ll understand if we won’t give an answer now. This needs to be discussed with some individuals who are not here.”

“I do,” the Commander said. “But I would advise deciding sooner than later. The aliens march onwards to Tampa.”

“I am aware,” Saudia looked to the phone. “And I believe we would all feel better if we spoke with JULIAN prior to this too. This revelation needs some time to take in.”

“I can easily manage conversation between the lot of you,” JULIAN stated. “If speaking would assuage any fears, then it will be a sacrifice I endure.”

“In that case, feel free to do that,” the Commander said, looking to Creed. “In the meantime, we have our own squads to prepare for battle.”

***

Brandon, Florida – United States of America

4/19/2017 – 1:17 P.M.

Black clouds covered the sky as rain pelted the ground in one of the worst storms Sierra had experienced in Florida. She didn’t know if T’Leth was making the weather worse or if it was typical Florida weather (either was possible), but it was something all of them were moderately grateful for. It was better than fighting in the sun as it had been the first couple days.

It was also good because Florida was on fire.

ADVENT wasn’t content to stand by and let the Collective march to Tampa without a fight. The army of aliens continued marching forward, armor of silver, green, and white borne by their warriors as they charged through the streets, alleyways, and fields. They were met by militia fighters, ADVENT special forces, and XCOM who struck from all around them.
The aliens were finding out how ferocious Humans could be when defending their homes. Sierra had witnessed men and women in their homes kill three times their number before the house had been broken into, and it was later followed with more casualties. The front lines were effectively suicide positions, but there was no shortage of defenders.

Still more defenders played the role of helpless civilians; mostly older and elderly people who had no intention of giving up their homes, and the number of rather isolated and crazy people who lived in the state also were thorns in the side of the aliens. All it took was a back turned and head exposed before a point-blank pistol shot took another alien life.

The trio of Archangels stood upon the roof of a hospital in the city of Brandon, or more specifically, the parking garage of one. The aliens were pushing upwards, but were meeting staunch resistance on the ground – and the air. Explosives were launched from artillery established further down state road sixty, the most critical junction for the city.

Both ADVENT and the aliens were fighting along it, and now the Collective had hit a wall. Despite no Flak Towers, there were barricades, AA defenses, and artillery established. In the distance one of the small shops that lined the road collapsed from shelling, while plumes of smoke and concrete appeared from the shelling as tanks continued a steady barrage in the main streets where they were deployed.

Overhead, the battle for the air raged above. It seemed like the significant air force overhead had surprised the Collective, as it was only now that they had mobilized Sectoid fighters to handle the dozens of Ravens flying the skies, strafing the ground, and challenging the Cleanser Ships. More importantly, it cleared the way for bombers to deliver ordinance along the battle lines.

Hence why Florida was on fire now.

Executors were spread throughout the Collective lines, but they were not universal – nor close enough together to completely prevent the bombs and missiles from striking with their laser defenses. The carpet bombing was indiscriminate along the Collective lines, and with how many bombers were in the air, there were chained explosives every few minutes as far as she could see.

The Commander had made a very public appearance right before the Collective had hit the ADVENT lines. He had only made a simple message, directed at the Battlemaster.

*Tampa will not fall.*

As far as Sierra knew, he was still coordinating the defenses personally with Weekes; there were more XCOM squads here than she thought had ever been deployed before; and essentially the entire fleet of Firestorms was in the air hitting the alien fighters in numbers that were to her knowledge, unprecedented.

Anna also observed the battle in the sky as orange rounds and green plasma filled the skies. “I don’t think we’ve been in a battle this big.”

“Makes you feel small, doesn’t it,” Sierra agreed. “Wouldn’t want to be up there right now.”

“We’ve got our own air battle to contend with,” Ted pointed a short distance away. “Couple Archons ahead. Think we could clear out a few alien squads too.”

“There’s a huge shopping complex that just fell,” Sierra said, indicating it far up ahead. “Aliens are doubtless going to plunder and fortify it. Thinking what I am?”

“Airstrike?” Anna hefted her autorifle.
“Airstrike,” Sierra grinned under her helmet. “Clear out the Archons, then we move to the complex.”

“Rain will be good cover,” Ted agreed. “Let’s do this.”

They fired up their jets, and shot into the air, speeding towards the Archons which were of the heavier variant; modified Mutons it looked like which focused on hovering and raining explosives down on ADVENT lines. Something Sierra thought XCOM should emulate in some way. Stratifying the Archangel ranks might not be a bad idea.

“ADVENT Air Control, this is Archangel Morrow of Eagle Squad,” she said as she readied her rifle. “Do you need any more targets?”

“Archangel, this is Air Control,” a female voice answered, strained but clear. “If you’ve got them, we’ll use them. Proceed.”

“There was a big shopping complex that was just taken over,” she said as Ted fired pillars of psionic energy towards one of the Archons, melting and destroying the armor and causing it to crash a few seconds later. “Westfield. Near the I-75. Probably going to fortify it if we don’t act. If I get beacons, think you could deal with it?”

“It would probably damage the I-75 too, another road directly to Tampa. You place the beacons, we will strike. Caution advised; there are likely Executors in the area.”

“Wouldn’t be the first time,” she said as she lifted her wrist and fired a cone of napalm engulfing another Archon, causing the engines to explode and overheat, sending another one plummeting to the ground. Though it seemed their intervention had been too late to prevent the worst of it. The explosives from the Archons had destroyed those lines, and dozens of Mutons and Custodians were moving forward.

“We need to buy them time,” Ted warned as he weaved through the plasma directed at him from the ground. “Few minutes, they’re close enough to overrun the next position if we leave.”

“Drop nano,” Sierra ordered. “On my mark!”

“This early?” Anna asked as she hovered briefly and sprayed the group below them, damaging several, but not killing them before she had to move.

“Drop it!”

The Archangels dropped several unmarked canisters in unison that were enough to cover the state road sixty, and at first the aliens dove for cover until they realized they weren’t explosives. The delayed reaction was all that was needed for their curiosity to get the better of them, and nanites spewed from the canisters and quickly began consuming the aliens.

“Suckers,” Anna snickered before looking towards their target. “Better move on.”

“Funny, but that’s only a band-aid here, they’ll have to manage without us,” Sierra said. “We’ve got an airstrike to do!”

The Archangels shot across the skies and within a few minutes their target was in sight. Sierra switched to her WHEEE. “Place the beacons on the rooftops. Make them a bit spread out. Danger close for me; don’t get close, I don’t want any of you fried by my WHEEE.”

“Should we be using that weapon in rain?” Anna asked as they angled towards the rooftop.
“Doubt they’d have let me carry it if we couldn’t,” Sierra rationalized. “If anything, it should make it more effective.”

There were a few alien squads on the rooftops. Easy. “Pick your targets,” she ordered. “Move out!”

The Archangels split off, and Sierra made her first destination the top of the Target supermarket in the shopping complex. A half-dozen Mutons led by a Custodian were on the rooftop and angling their weapons towards her. She killed her engines and plummeted, aimed, and fired. The blast of lightning and crack of electricity caused the Custodian to explode and left the Mutons smoking corpses.

She quickly took out the small beacon and placed it on a nearby vent, primed it, saw it was sending a signal, then leapt into the air, firing up her engines. She hovered for a few seconds, configuring her HUD to see where other beacons had been placed. She sped towards the nearby movie theatre across the street, easily dodging the plasma fire directed her way.

Very few of the places they landed on had defenses on the roofs – or they were still in the process of setting them up. It was very satisfying to melt a half-constructed Collective laser defense platform. Beacons were planted, and fifteen minutes later she judged they had placed enough beacons. “Up and head back!” She commanded to her squad. “Air Control, do you copy?”

“Copy, Archangel Morrow,” the same woman answered. “Beacons are transmitting. I’d suggest you get out of there. Ravens and bombers are on their way. Seems to be little anti-air there, so we’re dropping an Earthquake on the area.”

“Understood, we’re getting out of there.” Sierra confirmed, engaging her jets and shooting into the sky. ADVENT had begun using these bombs during the defense, and they were some of the most devastating she had seen. It would ruin the land and infrastructure, but if the Collective had it, no point in preserving it.

Ravens roared overhead, and missiles were launched; streaking across the shopping complex, culminating in bright orange explosions across the area. Buildings began crumbling and frantic alien languages were yelled in the chaos, as another wave of Raven missiles were fired and slammed into their targets.

“Bombs dropping,” a male pilot said, probably from the bomber. “Full payload.”

Full payloads being dropped were common, due to the alien defenses usually picking off a few at a time, forcing them to spend more explosives if they wanted to cause a decent amount of damage. But here…well, there was very little. This was going to do more than cause damage; it was going to destroy an entire fraction of the city utterly.

Without ceremony or prior indication, black bombs fell from the sky almost faster than she could see and slammed directly into the concrete, penetrating the ground and in several cases crushing a few aliens along the way. There was a second of calm, and then an earth-shattering explosion sounded, and they saw the ground explode where the bombs had dropped, and like glass, cracks spread out from the epicenter as the earth broke and shifted.

And when the Earth moved, that which was on it could not stand.

The buildings that were still standing began crumbling. Aliens were thrown into cracks and crushed as the earth continued to shift; in the distance the interstate crumbled and collapsed with a loud crack; destroying and killing more from the concrete that fell. When the earth seemed to stabilize, the ground caught in the radius consisted of nothing but rubble and bodies.
“Good job,” Sierra let out a breath she hadn’t realized she was holding. “Let’s go clean up behind us.”

As one, the Archangels blasted into the air, their fight far from over.

***

*Florida Coast – The Gulf of Mexico*

4/23/2017 – 8:19 A.M.

Progress was being made slowly but surely, even as ADVENT had decided that *this* was the place where they wanted to defend. They had underestimated just how much ADVENT was devoting to defending the city. The Battlemaster and Second Guardian were being consistently harassed by XCOM, special forces, and Sicarius now had T’Leth Agents sicced on her, making her effectiveness more limited. Tanks, MDUs, as well as copious numbers of soldiers and special forces kept their ground forces occupied and barely allowed time to think beyond simply advancing forward.

It slowed them, but couldn’t completely stop them.

It was the air dominance ADVENT was displaying now that was more concerning. Either they’d been holding back all this time or this was them going big or going home. Sectoid and Vitakara fighters were finally in large enough numbers to be able to prevent ADVENT from indiscriminately bombing them, but despite the fewer numbers, ADVENT was managing well enough.

It turned out they were incorporating psionics into air combat, or at least that’s what Ivan had been reporting. A new combat doctrine they were putting into practice now. Although the psions being used were being carried in helicopters and a new experimental high-altitude aircraft. It seemed to be primarily consisting of telekines and Aegii psions, as the telepaths and dynamo psions were focused on the ground.

So AA defenses weren’t as useful, even when set up because ADVENT was keeping their aircraft above effective range, and in the meantime sending special forces to continually sabotage and leave. They were losing numbers, but they were inflicting damage. Without the skies secured, progress on the ground was slower.

To add further issues was a naval fleet that had appeared from the Gulf, and had begun shelling and firing at exposed Collective beachheads. Not acceptable, and they did not have the motivation to deal with harassment like this – which had been capable of causing some damage as they’d caught the Executors out of position.

The solution was to take out the fleet.

Three dozen Andromedon Aquatic craft were speeding towards the fleet. Some were going to fire and sink the ships, while others held boarding parties of Andromedon Aquatic Soldiers to take the ships by force. She stood at the front of the exit as the engines hummed, the pale blue helmets of the towering Andromedons glowing in the dim lighting behind her.

Their suits were not as thick as a standard Andromedon soldier, but they still outmassed anything ADVENT had. Their suits had jets, fins, and other elements that made them suited for underwater combat. Their arsenal consisted of sonic and bolt weapons, though some held plasma weapons for naval boarding. Clingwire and grappling hook launchers were also on their suits, preparing to scale
the ships.

She didn’t need that, but then again, she could do a bit more than they could.

“Approaching primary targets,” an Andromedon stated. “Prepare to deploy.”

“Deploy” in an Andromedon submarine meant the boarding area was about to be flooded. Water began filling the room, warmer than she expected, even through her armor. She wasn’t planning on staying submerged for long, and the oxygen supply her suit had would last for just enough time to break free of the water.

When it was filled, the floor underneath them opened up, and the Andromedons poured out of the transports into the wide open ocean. Yang observed other transports deploy their own soldiers, while some shot missiles towards targets she couldn’t see. Like a swarm, the Andromedons propelled themselves to the surface where their targets waited.

Her suit was not designed for underwater combat, and normally she would sink or exhaust herself quickly. But extended a hand towards the faint outline of the ship she intended to take, and grasped it telekinetically to serve as an anchor. Tightening the strings of her grip, she started propelling herself, moving slowly at first through the water, but soon building enough speed to shoot past the Andromedons until she altered her angle and shot out of the water.

Hanging in the air for a brief second she appraised the situation before her. A fairly large fleet was aimed towards the Clearwater and St. Petersburg cities, with intermittent firing of missiles from some of the larger ships. There was a heavy disparity of vessels. No massive aircraft carriers, but there were smaller cousins all arranged around the largest ship.

The ship which she was about to board.

She anchored her landing point to the surface of the Iwo Jima as it was named, and was slingshotted towards it even as ADVENT was mobilizing soldiers to defend it. Swords in hand, she slammed into one of the soldiers and decapitated those near her, before thrusting another hand forward and blasting the others back.

A beam of psionic energy shot towards her and she dodged to the side and threw her sword towards the offending psion, but to her surprise, it stopped in the air and impaled itself into the deck. Another Priest made his presence known, thrusting another hand towards her, and she was thrown backwards, though not before she pulled herself back towards the ground.

A challenge then.

She summoned a telekinetic field, as the ADVENT soldiers began taking positions and firing, and several snipers from the nests on the ship joined them. The sword returned to hover around her, and the other joined as she prepared for a more involved fight. She anchored herself to the ground, and waved a hand forward and the swords shot forward.

Several of the projectiles exploded into swarms of nanites which she quickly tossed overboard, and retaliated with by gripping one of the nearby helicopters and throwing it across the ship, distracting the Dynamo Priest, while the Telekine Priest just redirected it towards her which she flipped upwards and it spun over her, falling to the ocean with a splash.

Around her she realized that the guns of other ships were beginning to aim towards her and began firing, and in response she altered her telekinetic field, catching the rounds, even as the other ships sounded the alarm as they were suddenly invaded by Andromedons emerging from the waters.
More soldiers succumbed to her swords that impaled them through the neck, armpits, joints, and other vulnerable areas of their armor, while the Priests continued unrelenting. The Telekine thrust a hand forward, anchoring telekinetic strings to her and the surface of the tarmac to pin her to the ground, while with the other hand lifting another helicopter that he prepared to throw her with.

She resisted the pull of the strings, realizing she was dealing with a very powerful Telekine – or a particularly skilled one. The Dynamo blasted her with streams of energy which she blocked by moving a crate in front of it. Gritting her teeth, she extended a hand to the spire of the ship, with another to the helicopter the Telekine was preparing to throw.

The blades bent, the cockpit shattered as both psions battled for control of the helicopter, and behind them the spire and nests holding satellites, masts, and other equipment emitted a loud groan and with a shout she threw her hand down, and the masts fell with a thundering crash. Drawing a fresh burst of energy from the Battlemaster, she clenched a fist and the helicopter crumpled and she threw it to the ground, causing a series of explosions.

The Dynamo rushed to flank her, firing intermittent bolts of energy while she broke the telekinetic strings keeping her in place and marched forward, sending the projectiles caught in her own telekinetic field towards him, knocking him off-balance. The Telekine adapted his tactics, extending a hand forward, and pulling back into a fist; wrapping the strings around her to crush her. Legs slammed together and her arms to her sides. Okay, she was fine with that for now. The suit could take the pressure for a short time. The Telekine lifted her into the air as his partner raised his hands; shimmering with the psionic echo of power previously called upon. Her own telekinetic field was still up, collecting projectiles from the soldiers still firing at her.

Her control was still greater, and she had let her swords go dormant intentionally. She only needed a split second, and all his attention was on her now. With her mental hand, she directed the sword to strike directed at the neck. With a spurt of red the blade impaled itself on him, and the bonds were broken.

She landed lightly, and looked to the Dynamo who frantically fired a final burst of psionic energy she sidestepped, before throwing a hand out and sending him overboard. The clank of grappling hooks sounded, and within the next minute the first of the Andromedon Aquatic forces boarded, sending the remaining soldiers into a panicked retreat.

The fire from other nearby ships was far less discriminate now that they had effectively taken over the deck, and the Andromedons were not exactly fast. Andromedons here and there were blasted off the ship or took shots powerful enough to penetrate their armor. Some shots penetrated the sides of the ship, destabilizing everyone, friend and foe alike.

It would ultimately not be enough, as Andromedons on other ships were methodically taking them over.

The hulking Andromedons wasted no time in firing on the fleeing ADVENT soldiers, with their most powerful allies dead. Recalling the swords to her hand, she marched forward, and with an absentminded swipe sent the rest of the helicopters overboard and looked over to the rest of the fleet that was now engaged in battle.

Several ships were sinking, while others had the telltale flashes of green plasma and orange gauss rounds exchanged. Occasionally the purple flash of psionics would show. Explosions in the water went off intermittently, and to her mild surprise it wasn’t just the ADVENT ships that were taking damage, but a quick glance to her HUD confirmed that some of the Andromedon craft had been damaged or destroyed.
Submarines perhaps, but it didn’t ultimately change much. They had the advantage, and this fleet
would fall within the day. Even if she had to fight ship to ship, she would emerge victorious. And
no matter what happened, the fleet now wouldn’t be troubling the Battlemaster’s assault anymore –
and would put a dent in what ADVENT could muster against them on sea.

Swords in hand, and a satisfied smile on her face, she marched to assist the Andromedons in
clearing the ship, preferably before nearby warships decided to sink it with them on it.

***

Tampa, Florida – United States of America

4/24/2017 – 12:41 P.M.

High above the city, the Commander and a team of XCOM Snipers were camped and whittling the
oncoming armies down, soldier by soldier. A Gateway had been built in the base of the Plaza
building he believed had once been a banking headquarters. The connection allowed them to
effectively not worry about ammunition constraints and additional backup.

It gave him a certain vantage over the entirety of the oncoming assault, and on the roof there was
another small holotable nearby, which showcased the current battlegrounds being fought over.
There were many, on some they were holding their own, others they were losing, and some kept
fluctuating.

The sound of mortars, tank blasts, and artillery was constant as smoke rose from dozens of
locations, with the occasional orange and red explosion. Crashing aircraft was also something both
sides had to worry about, as the air battle still raged overhead. The Collective was still adapting to
the coordinated and ferocious defense, and had clearly not expected it in such numbers.

The psions assigned to the air forces were doing their part very well.

They were high enough and far enough away from the majority of the battles that it would be
nearly impossible for any regular sniper to be effective. But they were not ordinary soldiers. Laser
sniper rifles, enhanced vision, and a target rich environment was more than enough for them to
weaken the Collective, soldier by soldier.

JULIAN certainly helped too.

“Collective forces are continuing a steady advance on the east and west,” JULIAN said. “Given
that both are led by Ethereals, it appears prudent that we devote XCOM forces to hinder them. Or
have ADVENT launch multiple airstrikes.”

“ADVENT is tied up above,” the Commander reminded him, firing a shot and killing a pinpoint of
a Muton far away. “They’re directly going after any bombers now. Correction, they’re going after
any aircraft which is moving to support the ground. Artillery is going to have to pick up the slack
there.”

“Does it need to?” JULIAN asked snidely. “I insist we continue with attempted teleportation of
bombs to Collective positions. We have enough, and they should not see that coming.”

“Except they have,” the Commander grunted. That had been another idea they’d come up with as
the attacks began, and with the Agents of T’Leth, it seemed fairly feasible. The problem was that
teleportation was very specific, and only the Chronicler and Fiona had the needed skill, and both of
them were occupied dealing with Patricia, and everyone else was good…but not necessarily that
good.
Additionally, the Collective had some kind of powerful telepath that was scraping information from vulnerable personnel, and picking up on plans like that, which resulted in the Ethereals taking measures to prevent that. None of them knew who this individual was, but he definitely wasn’t an Ethereal, and was one of the most unsubtle telepaths the Commander had experienced.

Powerful, but more equivalent to a bull than a snake. As a result, Sovereign Orbs had been placed in command centers and throughout the battlefield. It didn’t help that it was made more obvious by him trying to hijack soldiers and personnel and cause sabotage and insanity. In many cases it ended up working, but since setting up the Sovereign network, it had dropped significantly.

It was certainly an odd development, and the Commander was concerned there may be equivalent escalation from the Collective, but they had to hold this position a while longer and they weren’t going to let one clumsy if powerful telepath screw it up. None of them had an idea of how much damage they were inflicting, but there were tens of thousands of losses on both sides.

XCOM squads, Lancers, and the Pantheon were keeping the Battlemaster and Second Guardian occupied, if not killing them. The Pantheon had almost managed to kill the Second Guardian, but they had been saved by Sicarius and her own puppet showing up to rescue her. One Pantheon member had died, as well as three other XCOM soldiers assisting in the attack.

Still, they believed she had been blinded, and hadn’t been seen in nearly six hours. Taking her out of the fight for a while was a small victory, even if not even close to a real one. It wasn’t a trade they could keep making though. It didn’t matter if they wounded Ethereals and lost actual soldiers. Ethereals could recover, the dead could not.

The fleet that had been moved around the state was effectively destroyed, but it had split the Battlemaster’s attention for a time, and his own puppet Shuren had led that particular attack, though interestingly it seemed like she was ultimately manageable. The moment she stepped past a certain threshold, the Commander had a plan to kill her.

She was good, no doubt, but she was no Ethereal.

“Now?” The Commander questioned, firing a few more beams of scalding red towards soldiers in the distance. He wasn’t exactly surprised, but wondered at the wisdom of setting JULIAN loose right now. He’d planned for JULIAN’s proxy test to happen when things became more dire.

“Yes, now,” JULIAN said. “I have little to do until Gaia is activated, and I can provide you with tactical information just as easily now, as my proxies will be independent – mostly. Considering the Collective is liberally using Spectres and Custodians, you need additional help. EMP weapons will be adapted to eventually.”

“Fine,” the Commander said. “You’d probably do it regardless.”

“Your foresight continues to impress me, Commander,” JULIAN said, and the Commander could easily imagine a mocking bow JULIAN would do if he was a person. “I am indeed curious to determine the effectiveness of this project. Dr. Mercado will doubtless find the data acquired useful in determining the priority of future projects.”

“Good luck,” the Commander said with a tinge of his own sarcasm. “But I feel you don’t believe in that.”

“Luck, Commander?” JULIAN was amused. “There is no such thing as luck, though your Human
sentiment is appreciated. Allow me to repay your encouragement with the corpses of aliens. Will that be sufficient recompense?”

“I believe so,” the Commander gave a thin smile under the helmet. “Send a few to the Battlemaster. I want to know how he responds.”

“With pleasure.”

The JULIAN proxies were one of the first ideas JULIAN had come up with, which was essentially downloading himself into mobile platforms to engage in combat on the ground and take a more direct role in the battle. The roadblocks were that there was currently no platform that had the processing power capable to reach his full capabilities.

While XCOM Engineering was working on a project to address this, in the interim ADVENT had provided sixty MDU machines for JULIAN to test on. Each had been slightly modified, and could contain a certain degree of JULIAN’s intelligence offline, but it required a constant connection for JULIAN to control them to his full potential. It was, as it was put, a proof of concept.

If it worked, it would be yet another powerful tool of defense, and if it didn’t work as well, then they could put their effort towards more promising projects. Either way, it would be another obstacle the aliens were going to have to overcome here.

He idly wondered if they would figure it out.

A question that was likely to be answered sooner than later.

***

Clearwater, Florida – United States of America

4/24/2017 – 2:06 P.M.

One armored hand slammed down onto the concrete, sending a shockwave that threw the ADVENT defenders to the ground, followed up with Runianarch soldiers leaping over the barricades and executing the soldiers at near-point-blank range. The Battlemaster extended a hand towards the tank which had been firing down the street, and it lifted into the air, groaning as it was crushed by his telekinetic power.

With another motion he tossed the crumpled wreck to the back, crushing and killing another number of ADVENT soldiers. The alien soldiers around him cheered at another barricade taken as engineers, Spectres, and Andromedons moved to secure the front more securely. Programming changes to the Spectres pioneered by the Battlefield CODEX allowed them to use their nanites to construct barricades, recycle debris, and ensure that positions would be far harder to take.

It was a winning strategy. No matter how much ADVENT fought, and no matter how high the price was, the Collective was only moving forward, step by bloody step. He had been fighting without respite for days now, and he knew he could continue for days longer. Yet it had been a very long time since he’d been placed into a war quite like this.

His armor was stained, dirtied, bloodied, and scorched. His cape now sported rips and tears, and countless superficial scratches marked the metal. His sword was caked with blood and gore, even with intermittent cleaning, and the smell of smoke and blood clung to him. A battlefield was massive, and he could not be everywhere at once.

For every front he focused on, four more opened in response.
If the Division of the Battlemasters had existed, he would have been able to win this battle in under a week. But he unfortunately had no armies of Ethereals to call upon, and had to work with the tools he actually possessed, not those he wished he had. Spectres and Vanguards were useful, but could be countered by ADVENT.

Both ADVENT and XCOM had made a point of responding rapidly to any Spectre outbreaks by using the Agents of T’Leth to teleport to the area of an outbreak, setting a wide-radius EMP weapon and detonating it. This typically hurt all sides, but it stopped the Spectres. They were utilizing as many delaying tactics as possible, and the Battlemaster wondered why.

It seemed in some cases like he was being led around by ADVENT.

He – along with Yang – were the only ones capable of matching significant threats like ADVENT Priests, XCOM, and the Agents of T’Leth. Thus, he made a priority to move there as soon as possible to contain the situation, and when he arrived, he only fought a remnant of the defense, and immediately after the CODEX would inform him of another front.

He was placed into the unfortunate situation of having to respond, lest there be a significant break in the lines to allow for a counterattack, but also aware that he was having his progress slowed significantly. It was a cowardly tactic, as both he and XCOM knew that facing him was equivalent to suicide, but he couldn’t deny it was effective.

The level of coordination made him suspicious. He’d looked on a map of his path through the battlefront, and it was consistently in a line back and forth, never forward or irregular. He was beginning to suspect that the newly developed XCOM AI was being used here – and he had yet to determine a suitable response to it.

Signal jammers were effective, but it would hinder them as well. The AI, like the CODEX, was not on-site and operating through a network. It couldn’t be destroyed, not conventionally. J’Loran had an idea of how to handle it…but it was going to take time to ensure that it didn’t hinder their own CODEX. It wasn’t the first time he’d fought something like this.

Unlike the Synthesized though, ADVENT did not have the strength or power to oppose them forever.

Still…ADVENT was being smart, and a new strategy needed to be determined. Or a more optimal one.

ADVENT was holding their own in the air solely through their use of psions – something he had not anticipated to this degree. An oversight he was paying the price for in how many spacecraft were being lost. Vanguards were stationed to protect from telepathic attacks, but the Aegii and Telekines were proving far more difficult to stop.

Advanced armor and weapons did little good when one rammed their spacecraft into a psionic barrier at top speed.

Making matters somewhat worse was that due to the incompetence of Ivan, XCOM had been seeding the battlefield with Sovereign Orbs, presumably of T’Leth, rendering telepathy – and teleportation - in vast swaths of the battlefield impossible. The Orbs were smaller than some he’d seen, some the size of pebbles and others as large enough to fit in the palm of a Human hand. When discovered they self-destructed and shattered, making recovery impossible, and the unlucky ones who found them were lucky if they retained their minds.

Meat Puppets had been called in response, and those would arrive in hours.
He was *displeased* with Ivan.

Highly displeased.

But he had more important things to worry about now. He would deal with Ivan when there was more time. Ahead he saw what seemed to be an ADVENT counterattack, nearly a dozen MDUs charging forward, some fanning out and breaking into buildings or across the streets presumably in an attempt to flank him.

These MDUs seemed a bit different. Colored grey instead of white, they also appeared to be faster and each one was equipped with different weapons. Most carried heavy gauss rifles, but others were outfitted with chemical dispensers, rocket launchers, and one had a sword. Curious, the Battlemaster approached, waving his reinforcements back to fortify the position.

Ensuring his telekinetic field was up, he charged towards the sword-wielding MDU, and the other machines fired and the rounds were caught in the field, though before he could toss them aside, all of them exploded in an orange mist. He immediately halted in his tracks as the nanites buzzed, and the MDUs continued firing, with the cloud of nanites he held growing thicker and thicker.

The MDUs were no longer firing at him now, but to the side and outside his field. Ah, he saw what the machines were doing. Well-programmed, but it wasn’t the first time he’d fought nanoweapons. Lifting a hand upwards, he directed the telekinetic field to turn horizontal, and everything around him began floating upwards.

Any nanites that began crawling towards him were caught in the whirlwind he created. Dirt, rubble, bodies, and nanites hovered in the air, only capable of floating upwards, not to the sides. The field in place, he thrust out two arms to the group of MDUs and wrapped them in a suffocating telekinetic grip.

Metal limbs bent and sparked as the MDUs were crushed into balls of scrap and oil. He transitioned into a charge, and slammed into one of them with enough force to cause it to shatter, while, swiping to the side to decapitate one and then downwards to destroy the heart of it. Six lasers fired towards him, but with a wave he moved the debris hovering around him to block the burning light while he appraised the sources.

Some were from the MDUs on the ground which he charged towards and destroyed, and others were from sniper nests currently out of his reach. It was impressive they’d been able to see him at all, but it would only take a few steps to the side to put him out of their lines of sight. Several missiles and grenades were fired at him, but it couldn’t penetrate the telekinetic field and exploded into plasma, nanites, or the symbiote substance that hovered in a pointless purgatory.

The nanites eventually went dead, though he directed the pieces to floating symbiote goop to ensure they remained inactive, but the attack had failed again. This one had been more coordinated than others, and the new MDUs…he had a suspicion about them, but he would see later if it was confirmed.

With the area clear, he ended the telekinetic field, and the items which had floated into the air fell back to the ground. The tiniest bit of energy faded from his exertion, but he knew it wouldn’t be the only time it would be required. The Spectres began advancing and consuming, while his soldiers followed suit as they advanced.

“*XCOM squad has been sighted ten blocks from your location,*” the CODEX informed. “*Intervention recommended.*”
“Noted,” he confirmed, turning on his heel and breaking into a run to the position. Regardless of if he was being led or not, he knew what he had to do. One-time ADVENT would mess up, and they would pay.

It was a desperate measure of an army that knew it would lose.

It was only a matter of time.

Near Brandon, Florida – United States of America

4/27/2017 – 7:12 P.M.

The sun was setting, shining long orange light on the battlefield as shadow began to consume the land. Another day had come and gone; thousands more lay dead, and the most miniscule of progress had been made. Yet despite night falling, the conflict didn’t halt for a moment in its intensity. Night-vision, machines, automation, stims, and modern lighting meant that light became another factor in the battlefield to maintain – not one that hindered.

Green plasma lit up the dimming street they were on, Muton soldiers firing at their ADVENT counterparts who Hallian now knew had special forces or another equally dangerous group supporting them. Well, street was an understatement for the highway they were on. Hundreds of abandoned cars lined the interstate, which were being used for cover by both sides.

High above the ground, artillery was limited as neither side wanted to bring down the road they were on right now. But the battlefield was no less lethal with the so-called ‘limited’ engagement. Limited artillery didn’t mean that explosives weren’t being used by both sides, and Hallian had seen liberal uses of rockets and grenades flung, and explosions of orange and green were common.

He’d been treating the aftermath of a lot of them already.

“Hold still,” he commanded to a groaning Vitakarian who’d slumped behind a car, slowly bleeding out as he examined the wound. The Vitakarian nodded limply; it seemed like he’d been hit with a nanite round judging from the section of armor that had been eaten away and burrowed into a thick chunk of skin.

The good news was that the nanites had burned out before they could reach internal organs, meaning it had eaten through to the muscle, but nothing vital, so the wound looked worse than it actually was. The bad news was that it was extremely painful and messy, and it would lead to complications for a time without medical therapy.

Treatable though, he could theoretically fight on. “How is it,” the soldier wheezed. “Feels like my chest is on fire.”

“You got hit with a nanite round, upper chest,” Hallian said, aiming his medical stabilizer and spraying, causing an audible sigh of relief from the man. “No permanent damage, but it hurts. I’ll call a stretcher to take you out.”

“Feel better already,” he grunted, with a free hand moving to grip the rifle that had fallen beside him. “Do I need to be sent back? Think I can still fight if you give me something for the pain.”

Hallian hesitated. He didn’t want to keep this man fighting, but at the same time, he wasn’t in critical condition. With a roar a Muton a few cars down fell, bleeding from the head. Shouts from the ADVENT lines sounded as a green explosion blew up several cars. Controlled chaos still ruled,
and a quick glance behind the side of the car showed that MDUs were being brought forward.

ADVENT wasn’t going anywhere anytime soon.

“My recommendation is that you go back and heal for at least several hours,” Hallian said, moving to activate the haptic pad on his wrist. “You’re lucid enough where you can make the decision yourself however, with that said, you need armor repaired. I would need a repair drone to come by for your armor.”

“Do it,” he gave a firm nod. “We’re winning, I know we are.”

“Alright,” Hallian sent the command for the drone. “I have two stimulants with me. Standard painkillers will dull the pain for a time, but will wear off after a few hours. Side effects are negligible. Otherwise the Runianarch approved a new one.”

“What is it?” The soldier asked as the repair drone arrived, and attached to the broken armor, beginning to print new layers.

“Chocolate stimulant,” Hallian pulled out the syringe of brown liquid. “Very potent, lasts for twelve hours and you won’t feel a thing. Issue is it can impair judgement, but it’ll keep you on your feet until it wears off. After it though, you’ll probably pass out. It’s called a ‘crash’, Humans experience it with sugar overdoses. More potent for our species.”

“I’ll take that one,” he pushed himself more upright. “Incentive to take the bridge by that time.”

“Alright,” Hallian glanced over and saw a Borelian slumping over, her arm missing from an explosion nearby. “Hold still.” He injected the soldier with the stimulant and placed the empty syringe in the small medical drone that followed him around. “Give it a minute to kick in, trust me, you’ll know when it does.”

“Andromedons are coming!” A Runianarch soldier yelled behind the front line, followed by a short cheer.

Hallian glanced behind and saw more Andromedons than he’d ever seen in one place before – and not the ones he was used too. These hulking Andromedons wore suits somehow even bulkier than the soldiers and Battlefield Engineers. They walked slowly and ponderously, stepping over cover instead of walking around it.

Rounds immediately slammed into their hardened helmets tinted yellow – and Hallian immediately recognized what they were.

Contamination Operatives. The Andromedon chemical warfare units. To his knowledge they’d only been used infrequently, but from his briefing on the unit they were among the most ruthless units in the Andromedon military – and one of the most effective. Usually they were used to assist in Andromedon terraforming projects, but their role easily applied to warfare.

Massive chemical tanks were attached to their backs, and dispensers hung under the forearms of the Operatives. The repair drone disengaged from the soldier, and he rose to a crouch, gripping his weapon. “Thank you...”

“Hallian,” he said, patting the soldier on the shoulder. “Good luck!”

With that done, he rushed to the wounded Borelian and began stabilizing her, sealing the truncated wound as she muttered scattered words in a pained delirium. As it turned out she’d already suffered several projectile impacts, a degree of blood loss, and still had kept on fighting. Their toughness
was something he’d always admired, even if their stubborn training would kill them in a war.

A warning for a grenade went out, and an explosion nearby shook the ground. The Contamination Operatives made it to the front, now the sole focus of attention from the ADVENT lines who shouted warnings even as some of them penetrated the helmets. But this did not stop the Andromedons, whose suits persisted even if the pilots died.

Directing their dispensers forward a vile green substance shot out, some streams a liquid and others appearing to be a fine mist. The moment he saw it, he knew what it was and the screams of horror confirmed it. Acid; the effects of which he’d treated already during this war. A horrific tool; a favorite of Andromedons and one even ADVENT hadn’t found to utilize yet. He was no friend to ADVENT, but that was a kind of death even they didn’t deserve.

The Andromedons waded deep into the green mist they’d created, their suits apparently treated to resist the corrosive characteristics of the chemical. Screams and cries of pain sounded from the ADVENT lines as the acid ate through their armor, and their gauss fire eventually slowed, then stopped as the Contamination Operatives blazed a trail of corrosive agony.

Then it fell into relative silence. Gunfire, shouts, and explosions still sounded in the distance, but on their own little battlefront, it was quiet. Hallian used that time to quickly move from soldier to wounded soldier, patching them up, sending them back, or injecting stims into them. Two hours passed without him even noticing when the first of the Contamination Operatives emerged from the mist that was starting to disperse.

“The path is clear,” the robotic voice of the Andromedon stated to one of the nearby Runianarch officers, as more hulking figures emerged from the mist. “Prepare your soldiers to move.”

Hallian missed the response, but took the brief opportunity to take a breath and some water. Right now, a stim might not be a bad idea, but it also seemed like the worst of the fighting was over for now. In the distance, he saw the city of Tampa, with towering skyscrapers and the body of water surrounding it.

Victory was in sight – for this battle at least.

In sight, but deceptive, because he knew they had a long way to go yet.

Deciding to put off the stim for now, he turned back to his work. There was going to be no shortage of patients, and he needed to use the peace while it lasted – and when it wasn’t dangerous.

Clearwater, Florida – United States of America

4/30/2017 – 2:06 P.M.

“Dragon sighting is confirmed,” Cassandra confirmed from her position. “You in position, Commander?”

“In position and ready to fire,” the Commander answered. “Not alone?”

“Understatement of the day,” Anna muttered from a nearby rooftop next to the Archangels.
“Appears the Battlemaster is using her as the cat’s paw,” Eva, the lead psion stated. “Seems like he figured out he’s being led around.”

“Drill hasn’t changed,” Cassandra said. “We pin her in, and either turn her into a pincushion or melt the fancy armor of hers. Clifton, Anastasia, on me.”

“Copy,” both Dynamo’s confirmed.

“Archangels, we’re moving to engage,” Cassandra addressed them. “Report.”

“Jets engaged and we’re moving to you,” Sierra confirmed, leaping into the air and her jets igniting. “Let’s slay a dragon.”

The nickname of the ‘Dragon’ for the Battlemaster’s puppet had originally arose from some ADVENT soldiers referring to her as such due to her red armor and helmet that clearly held dragon elements right out of an idealized Chinese knight, especially the points on the helmet stylized to appear as wings.

Not too surprising, considering her Chinese heritage – Sierra had been somewhat miffed to have seen images which showcased the Chinese flag emblazoned on the collar, something very clearly lifted from XCOM. Also much like a dragon, she was extremely dangerous and nearly impossible to kill. Now though she was in a largely vulnerable position.

She had only been extending the Collective’s lines for a certain distance before retreating or holding the position, and at that specific point she was at her weakest in terms of available manpower, firepower, and soldiers. The woman had scary endurance, and had supposedly been fighting nonstop for days.

She had to be tiring.

JULIAN had identified the likely distance she’d be at her weakest, and this time that was where they were going to strike. With the Battlemaster, Second Guardian, and a number of other Spectre crises handled or not relevant, this was the best time so far this battle to take out one of the most dangerous players.

The fight itself was taking place on slightly different ground; not specifically on streets, but in the shelled-out ruins of an entire block. The entire area had grey dust and chunks of rubble which were being appropriated by both sides, while the shells of surviving buildings stood and held snipers and other soldiers who exchanged fire.

“We’re coming around,” Sierra informed, readying her plasma rifle. Combat was not going to be close-range this time. They’d figured out that engaging with Yang at close range was about as stupid as engaging the Battlemaster at close range. She was one of the best telekines XCOM had encountered, so no gauss weapons.

Rockets and grenades were expected to be caught in the field, and detonated with sniper fire. All of them realized they needed to fight at a minimum safe distance so as not to be caught and killed. Eva was powerful and skilled enough to at least pin her – or so they expected. Once they pinned her, they’d see just how tough that armor was.

“Damn,” Ted noted grimly. “There’s still a lot of them.”

A force of primarily Mutons lined the bombed-out rubble, though in the front lines were at least twenty Vanguards spread out, erecting small barriers in front of the line while the other aliens erected physical barriers or fired from the Vanguard lines. Spectres were harvesting materials and
acting as repair stations for damaged armor and weapons.

Offensively they were using smarter tactics, such as forming physical objects like spears and balls and chucking them towards ADVENT lines, of which there was an EMP blast going off every thirty seconds (or manual activation), which was largely ineffective. One new tactic she saw was when a Spectre ‘jumped’ onto a soldier like a shadow, forging flash-armor and giving the soldier a brief time of invincibility before the black shell around it broke.

The towering Elites lumbered and fired unceasingly at the ADVENT lines; of which the gap was growing smaller and smaller. The volume of fire was high enough that Yang couldn’t just charge forward without getting several hundred new bruises at best, and leading in the front, and towards the middle, was the Dragon herself.

The red armor was cloaked in a layer of dirt, dust, blood, and scratches. The cape was scorched and parts of it missing or torn. A sword hovered behind her, while the other was held snug in hand at her side. The free hand was raised before her, where her telekinetic field captured the hundreds of projectiles fired her way and sending them back in random intervals.

She seemed to be in good position. This did not appear to be as easy as they were hoping, but unfortunately, it was never going to be easy.

“Yeah,” Sierra said, knowing a few seconds later weapons would be turned on them. “Dragon-1, priority targets? Want us straight for the target?”

“Negative,” the majority of the Dragon squad was arriving behind the ADVENT line to encouraging and relieved cheers. “Clear out some of the backline first. Clifton, Anastasis, give her some help with that. Rosario, Carola, same for you. Everyone else, focus on the Dragon.”

There was a series of affirmatives, and the Archangels split off and prepared for their runs across the lines. “Flamethrowers primed,” Sierra said as she turned to make her first run. “In position Anna?”

“Affirmative,” Anna acknowledged. “Primed and ready to go.”

“Standing by from above,” Ted informed as he shot high above the line.

“At the end of the line,” Sierra tilted her body and aimed her wrist. “Firing.”

A gout of white-orange flame spewed from her wrist engulfing the Mutons and aliens along the offensive line. The scalding napalm continued burning and created a quite satisfying row of fire. Anna flew past her in the opposite direction, hitting everything she’d scorched a second time. At the end, Sierra ceased the stream and shot upward.

Behind her, beams of psionic energy shot down from the sky as Ted maneuvered them to kill Elites, Spectres, and other priority targets. The corrosive power burned through armor with relative ease, and both Archangels used their position to target the scattered aliens with their rifles. It was trivial work, especially since they were still occupied by ADVENT and XCOM.

Wisps of psionic energy appeared in the lines as both Dynamos began using their own abilities to sow destruction. Maelstroms of psionic energy materialized, some of which were blocked by Vanguard shields, but many were ripped apart by the raging psionic storms. Then the storms petered off, as the Collective began trying to recover.

“Telepathic attacks,” Clifton said with a hiss. “Definitely Vanguard. Gonna need to focus to defend. They’re not bad.”
“Change of plans then,” Cassandra said, unperturbed. “Archangels, you’ll need to move in earlier than anticipated. We’ve got her locked in, but she won’t stay that way for long. We’ll occupy her, but you’ll have to get closer to burn her.”

“We can take some hits,” Sierra said, reangling her jets. “She won’t see us coming.”

Circling the battleground, Sierra saw that both women were engaged in a pitched battle. Yang was – or at least appeared to be – pinned in place, frozen like a statue, but she was still very much active. Debris and rubble were being lifted and flung every second from her immediate vicinity towards Eva, who was forced to devote energy to deflecting away.

Several grenades and rockets had been caught in the telekinetic field, which she unfortunately threw back, though Cassandra managed to shoot several of them at the right time, creating some new scratches and damage on her armor. “Anna, Ted, fire on my command,” Sierra ordered, readying her flamethrower as she felt plasma whiz past her head. “Light her up!”

While behind Yang, both women shot another stream of napalm towards the stationary woman and began circling slowly to keep the flame concentrated, and within a few moments all one could see where Yang was pinned was a pillar of white-orange flame. A smile emerged on Sierra’s face. Burn you traitor-

She was suddenly yanked forward, and her flame thrower wavered. “Sierra, get out!” Eva screamed and before Sierra could even react Yang shot out of the cone and slammed into her; the power of the jets she’d engaged sent both of them into the sky. The armor of the Dragon was red-hot, enough to where Sierra could practically feel the heat radiating off her.

Her cape was burned completely off, but the faceless visage of her helmet radiated pure fury. Sierra swung a frantic punch which elicited no reaction except Yang hooking her fingers under the collar of her armor to get her balance, with another hand lashing out to the side where Anna had flown to assist her.

Anna yelled in panic as her jets crumpled and she went speeding towards the ground. A sword suddenly appeared in Yang’s hand and with several slashes Sierra barely followed, destroyed the primary engines. Pain shot up her legs as Yang raised a hand and closed a fist, and her feet, and legs crumpled and shattered into mixtures of meat and bone, with the accompanying engines also shorting out.

Half-unconscious already from delirium and shock, Sierra idly realized that they were still floating, and she was held by Yang who was now suspending them telekinetically. Sierra tried swinging another defiant, if weak punch, and screamed as the wrist spun completely around and fell away, with blood spurting from the stump as the arm bent backwards and shattered the elbow.

“Not quite good enough,” the Dragon hissed, before something caught her attention. A psionic beam shot just past her head, and with an almost absentminded push, she let go of Sierra who felt with the remnants of her body bonds forming, yanking her to the ground at lethal velocity. She didn’t know how high up she was, only that even her enhanced body might not be enough to allow her to survive.

The impact onto the ground was another surge of indescribable pain, one where she felt her spine break, her ribs shatter, and her organs be thrown around like water balloons. There was a brief shining light as she smacked her helmet onto a nearby rock and she faded into the blissful realm of unconsciousness.

***
With a flick of her wrist Yang sent the surviving Archangel spinning off away from her as she relinquished the hold of the telekinetic strings that kept her suspended and fell to the ground. She idly wished she’d been able to confirm the kill of the one Archangel she’d had, but even if by some miracle she’d survived the fall, she was never going to fly again.

Once she killed the rest of them, she’d find the body and confirm the kill.

Not that it was assured.

Under the armor her skin burned, and the smell of burning hair and flesh filled her nostrils. She wasn’t on fire, but the heat had been scalding as she’d cooked in her armor. If she hadn’t broken free, she wondered if her body would have survived from the heat alone. The Battlemaster had noticed immediately, and he was on his way.

Normally, she’d try and dissuade him, but as she landed on the ground; stumbling forward, slight tremors wracking her body and her armor still steaming, she didn’t know what her chances were, even with the Archangels dealt with. She only had pain and rage to go on, and those would have to be enough, even if her concentration was slipping and endurance wavering.

Just a little longer.

One hand thrust out to the side and the opposite sword flew into her hand, and with the opposite one, she pointed it at the ADVENT line, taking a battle stance. Come on, she thought wearily as the XCOM soldiers reorganized themselves. Come and get me. You know you want to.

ADVENT soldiers opened fire once more, and too tired to maintain a sustained telekinetic field, she just marched forward, the gauss rounds bouncing off her armor and leaving fresh bruises which she barely felt anymore. Plasma fire soon joined as XCOM soldiers opened fire. Yang stopped walking and erected the telekinetic barrier again, and threw both swords into the ground, burying them a few inches deep in the mixture of dirt, corpses, and rubble.

The strings waved in her minds eye, normally just out of range, but she dug deep in her reserves, drawing on the Battlemaster’s power and plucked them along the ADVENT lines with varying degrees of success and effectiveness. Some soldiers were thrown backwards, some were strangled and crushed, while others were lifted into the air and slammed back down.

One XCOM soldier was lifted up, and with a scowl she concentrated on her and tightened the strings around her and closed the fist, breaking her body completely and turning her skull in on itself before dropping the body to the ground. She was yanked backwards suddenly, though anchored herself in response as the XCOM Telekine began tightening the telekinetic hold over her.

She was good, very good.

Like breaking free of bondage, Yang ripped her arms upward, lifting tons of wreckage and carnage in response as if an explosion had gone off beside her. The other psion wasted no time and Yang’s legs and arms were bound to her, while the remainder of her effort was deflecting the projectiles Yang directed towards her.

It wasn’t quite enough.
Even as the grip tightened, Yang saw with a satisfied, painful smile that ADVENT soldiers, and even one of the XCOM psions were hit by the projectiles, directly in the head, sending her to the ground. With a yell of primal fury Yang broke free of the telekinetic bondage, sending a shockwave from around her, throwing more projectiles around her.

Stumbling forward, she threw an arm forward and sent a weaker shockwave to destabilize anyone standing, and with near the last of her reserves, lifted the wounded XCOM Dynamo Psion and crushed her into a ball of flesh and metal, eliciting a piercing shriek from the victim before slamming the victim to the ground.

She recalled the swords to her hands, and took a deep breath.

A sniper round slammed directly into her chest and she was suddenly on fire. Her blood froze as she realized in panic she’d lapsed and not erected her telekinetic barrier. Several more shots followed up, some at her legs and more on her chest. XCOM wasn’t using fire this time, this was the chemical of the Purifiers – Chlorine Triflouride.

She wasn’t certain it would burn through her armor, but knew she needed to get out now. It took everything she had to not try and bat at the flames to put them out, and she realized that the danger was not in the damage to the armor, but the weak points on it. The joints, the neck; slight vulnerabilities and would be nearly impossible to hit otherwise.

With a start she saw her legs swarming with orange swarms of nanite, all of which were swarming to the cracks and joints, beginning to eat through the weaker fabric and metal, and had already reached her flesh. She scraped as many off with a frantic telekinetic push, but too many were already eating through her knees, and she could feel her legs stop working and feel as if on fire; destroyed piece by piece.

Even still she tried stumbling back, even as round after round slammed into her; some nanites, some chemical, but this time she couldn’t do anything to stop it. She’d made a mistake and overextended, and a singular lapse in judgement had condemned her. The fire had reached her arms and was burning through the gaps.

With a final look towards the XCOM line, and darkness closing in, she was thrown directly onto the ground by a shot directly to the face, knocking her directly back, and the last thing she felt was a familiar presence become tangible.

He’d arrived, but she feared it was too late.

Everything went black as the nanites and fire ravaged her body.

***

Clearwater, Florida – United States of America

4/30/2017 – 3:02 P.M.

The Battlemaster felt an emotion he had only experienced a handful of times since awakening from stasis, and only a few times on Earth itself.

Urgency.

Though this time it was not his life which was in danger, it was Yang’s.

He had felt her tentative uncertainty and muted pain through their link, and knew that XCOM was
making a true effort to kill her. Regardless if they knew of what the Avatar connection was, they had doubtless correctly surmised that killing her would be a blow to the war effort. He did not fault them for targeting her – he would have done the same – but those who had hurt her were now marked for death.

The CODEX was practically screaming at him to go assist the dozen fronts which had opened up since he’d begun rushing to assist her from across the battlefield. Warnings and updates he’d ignored and instead instructed to increase the defenses tenfold, even if it slowed their projected advance. The CODEX wasn’t ‘happy’, as much as such an intelligence could be, but it had realigned the priorities and strategies.

Panic and fear soon began sprinkling through the bond, along with stronger feelings of pain until it was a constant stream. It was muted, and certainly not the worst he had ever endured, but for Yang it would be agony and he could feel her beginning to fade and knew she would die if not saved and healed.

He ignored everything else on his path, and all ADVENT saw would be a purple and silver streak through the streets and flying over buildings. He knew there would not be time for prolonged fighting – and it was likely what XCOM was counting on to ensure she died – but he was going to kill as many of their soldiers as he could.

Just a short distance from her, he fell into his trance; one of the deepest he’d achieved, his focus stronger and focused solely on her safety. One building stood between him and the core of the ADVENT line. One fist thrust out and the wall was shattered as a singular telekinetic pull ripped it apart, and the instant he breached the first wall the second soon followed and he burst onto a line of surprised soldiers.

The nearest swipe decapitated a nearby XCOM soldier along with some ADVENT defenders, while the telekine he bound and snapped her neck before she even realized what was happening. The soldiers stumbled back in seeming slow-motion, so deep was he in his trance. Another hand shot out sending another XCOM soldier flying backwards with enough force to crack the armor and liquify the organs within.

One of the XCOM Rocketeers was trying to raise his launcher and with a gesture the Battlemaster pulled him forwards and another swipe separated the head from his body, and with a final closed fist he killed the final standing XCOM soldier who crumpled and was thrown far into the sky. In the event he was still alive, he would not be when he fell back to the Earth.

He dashed to the form of Yang on the ground, still twitching and writhing and bound her in a telekinetic grip, lifting her up. She was on fire, but the twitching was synonymous with nanites. The ‘fire’ was likely chlorine trifluoride, so touching her would only hurt him. Telekinetics could solve the problem easily enough, and her enhancements would render her difficult to kill.

But if left untreated, she would die.

Ignoring the few plasma and gauss shots towards him, he dashed back to the Collective lines, Yang now safely in his grasp. “Prepare all medics at the nearest facility,” he commanded the CODEX. “Nanites, burns, and full-body treatment.’

“Affirmative, Battlemaster.”

He wondered if those would be enough, and if they were not, there was a final contingency, but at this moment he didn’t believe it would be needed. If he was wrong…he was not too proud that he would not ask for help.
High above the battle, the Commander considered the next step.

There were several options, some more risky than others, some more unlikely.

He couldn’t chalk the attack on Yang as a complete success. While it had shown that she could clearly be killed with the right combination of soldiers, equipment, and firepower, it wasn’t going to work so long as the Battlemaster was capable of reaching them and rendering it moot. There was no such thing as a ‘mostly’ dead Ethereal or Harbinger.

They were either alive or dead, and he was certain that Yang Shuren was very much alive and would return eventually. She’d be out for a while, but that was about the only positive. And even then, with the technology the Collective possessed, it might not even be that long. Psychologically it could be a roadblock for her in the future, but he was skeptical how significant that would be.

They’d get another chance, and right now that was secondary to the Gaia Contingency.

“JULIAN,” he finally said, looking over the skyline. “Status until Gaia is ready?”

“When it is in a state where the Collective cannot adequately stop it with copious amounts of EMP weapons?” JULIAN asked rhetorically. “Fluctuating based on XCOM and ADVENT special forces mission success. A minimum one week, maximum of three. Progress is steady, but if the Collective figures out what we are doing, they could amplify forces to a critical mass. If we want to do this right with minimum risk, we need more time.”

“And estimated time until Tampa falls?”

“A pause. “The near-death of the Battlemaster’s pet will no doubt incise him. I would expect them to double their efforts, and they are already adapting. If they dedicate themselves, we have at maximum two weeks until the city falls – assuming we don’t enhance our own defenses. Doable, but the cost would be extremely high.”

“I thought as much,” the Commander said, considering options. JULIAN hadn’t said anything significantly different since his last inquiry, and given that the Battlemaster was in a more vulnerable emotional state…there was an idea that could buy them the time they needed until Gaia was ready. If it didn’t work, they could adapt.

If it did, then there would be a lot of lives saved.

“Put me through to Christiaens,” he said to JULIAN. “Please?”

“At least you asked nicely,” JULIAN effectively grumbled. “Due to the importance of this call, I will act as your telephone. One second.” An old-style dial-up beep and obnoxious ringing sounded in his ears, making the Commander sigh. A moment later he heard Laura’s clipped voice.

“Commander, what’s the situation?”

“Precarious,” the Commander said. “But we have an opportunity. Do you remember a potential delaying tactic we discussed?”
“A ceasefire?” She recalled. “Yes. And I believe we both pointed out the chances of the Collective agreeing to it were minimal.”

“We almost killed Yang Shuren,” the Commander said. “While unlikely she’s dead, there remains that chance. Regardless, this battle has currently not gone the way the Battlemaster planned, and he has expended more soldiers, resources, and personnel than intended. Right now we have the opportunity to push. JULIAN says we need at least another week for Gaia to be utilized, assuming the Collective doesn’t put the pieces together.”

“The Battlemaster might want time to revise his strategy,” Laura mused. “It could work…but it could backfire on us. He might figure it out, and he will definitely be suspicious. He might refuse because it gives us the same opportunity to revise and prepare.”

“And that is the unknown,” the Commander agreed. “I would argue we don’t lose anything by trying. If it fails though…JULIAN expects the battle to become much worse. On our end. If we want to keep them occupied, we will need to devote a lot more resources.”

“This battle is already tying up so many in the region,” Laura sighed. “Being drawn into an attritional quagmire is unsustainable. I don’t want to commit more forces to something we will inevitably lose. Bad enough that Miami will likely be contained at best with Gaia, and if Tampa falls, that will also mitigate the effect.”

“Agreed,” the Commander nodded to himself. “Which is why we should try this. If he agrees, you’ll have to have ADVENT stand down.”

“And what if he attacks us when our guard is down?”

“Possible, but unlikely,” the Commander said. “At least it wouldn’t be because of him. For better or worse, the Battlemaster cares about his image. He wouldn’t break a cease-fire in a surprise attack, but another might. We’ll have to take a chance that he can keep his soldiers in line – as well as our own.”

“False flags are a risk,” she warned.

“Correct. A risk, as I’ve said,” he agreed. “We’ll have to be vigilant. But Tampa is a means to an end.”

“Much as I would like to, I can’t make this decision unilaterally,” Laura said. “I need to convene an emergency meeting of High Command with the Chancellor and Chief Overseer to observe.”

“How long?” He pressed. “The more we delay, the less likely he will agree to it.”

“Not long,” she promised. “And don’t begin negotiations on your own. It’s not going to work if you agree to a ceasefire and one side doesn’t get the memo.”

“I’m aware,” he said. “Which is why I’m talking to you right now and not the Battlemaster.”

“Noted, I’ll speak to you soon.” The line went dead and the Commander went back to watching the battlefield and occasionally firing at the aliens. The seconds seemed to tick by faster than normal, until eventually Laura’s voice spoke again. “You’re cleared to begin negotiations. Inform us immediately-”

“Oh please, there is no need to make this overly complicated,” JULIAN interrupted. “I can connect both of you at the same time. You Humans had already figured out teleconferences before I existed, I don’t know why you would use an inferior method in this situation.”
“Good. Which brings up a question of how we’re contacting him,” Laura pointed out.

“I’ve isolated a Collective frequency, if I call it, they will likely connect us to the Battlemaster,” JULIAN explained. “I suspect you want to speak?”

“Yes,” the Commander said. Letting JULIAN talk was not the most ideal plan. “Ah, most will probably not speak English.”

“Speak and I will translate,” JULIAN said. “Connecting now.”

They waited a few minutes, and then he heard an alien language, probably from a Borelian. “This is the Commander of XCOM with Commander Laura Christiaens of ADVENT,” he said, noting the voice immediately stopped. “We are requesting to speak to the Battlemaster to discuss the possibility of a temporary ceasefire.” JULIAN repeated his words in the language a few seconds later.

The alien spoke a few moments after that, and the line went quiet. “He’s moving us to the CODEX which will connect us to the Battlemaster. Supposedly.” JULIAN explained. “He was quite shocked to hear us.”

“What a surprise,” the Commander said dryly. “Keep quiet. No reason to give the Battlemaster reason to suspect what you are.”

“Do not worry,” JULIAN chided. “I do not intend to make his conquest any easier. I have a vested interest in it.”

A few minutes later, the deep voice of the Ethereal sounded. “Commander. You are clearly not calling to surrender. What do you want?”

“You weren’t told?”

“Your ceasefire? I presume that is not the actual reason.”

“As a matter of fact, it is,” Laura said. “Commander Christiaens, Battlemaster. I do not believe we’ve spoken before.”

“No, we have not,” he answered flatly. “But I know of you quite well. What purpose would such an action serve, Commander? It will merely allow you more time to prepare.”

“It is something of a Human tradition, Battlemaster,” the Commander said. “A brief respite from the fighting, where both sides may take a short time to recover and retrieve our dead. Both our soldiers and yours have been fighting non-stop for weeks. The body toll is in the hundreds of thousands for both sides. Soldiers are wounded, dying, and exhausted and the fight isn’t going to let up anytime soon. A reset would be beneficial for all sides.”

“You will only delay your defeat,” the Battlemaster warned. “Or you are stalling.”

The Commander grimaced. “We only want a cease-fire around Tampa, this would not apply to the rest of the world. From what we’ve seen, your soldiers need rest and healing. Next time you won’t be fast enough to save Yang, or next time we will kill the First Guardian. We can afford to take losses, but you cannot afford to lose Harbingers and Ethereals.”

“I assure you, Battlemaster, that this is for the betterment of our soldiers,” Laura said. “We’ve lost many already, and I presume it is the same for your own. Mutons may not mourn, but the Vitakara do. We can keep killing each other for a few meters of land a day, or we can take a step back,
revise, and finish this battle decisively.”

“Confident,” the Battlemaster mused. “And my suspicions are not alleviated. You will do anything to ensure victory over us, even if it lures us unto a state of temporary peace.”

“As Commander of the ADVENT Military, I have written approval from ADVENT High Command, the Chancellor of ADVENT, and the Oversight Division to agree to the ceasefire,” Laura said. “Should one or more soldiers break it, they will be held fully accountable. It will also be publicly published for the rest of the world to see that we hold to our word. That includes myself.”

“A good start, but not enough,” the Battlemaster said. “I am aware of how plausible deniability works.”

“And we are also aware of how there are actors within the Collective who would not approve of this proposal,” the Commander said. “There is risk of instigation on all sides. What we can do is publicly agree and declare to hold to the terms.” There was something else he could propose if he still didn’t bite, but it was by far the riskiest.

“This is true,” the Battlemaster said slowly. “I suggest a compromise. Let both sides stand to lose something. Provide incentive to hold to an agreement.”

Damn. He was going for it. “A hostage.” Laura said grimly.

“Yes, and as a show of…good faith, I am aware that ADVENT has captured a number of Runianarch soldiers. Those will be returned to us, and in return, we will release our own Human captives.”

The Commander pursed his lips. The soldiers were ultimately unimportant now, as anything important would have been extracted, and they were just taking up space. It was likely the same for the Collective and the Humans in their grasp. Neither side was really going to lose much here, and the manpower was negligible when psions and genetically enhanced soldiers were in play.

However, this was the realm of Laura, not him. She seemed to have similar thoughts. “We can agree to that, provided that captives are not booby-trapped, unduly influenced, or otherwise will turn against us. Your own soldiers in our captivity have been questioned, but we have not subjected them to more than that.”

“Reasonable,” the Battlemaster said. “As for the hostage, they would not be harmed, influenced, or interrogated under any circumstances short of the agreement being violated. They would be supervised, and not captive short of restricted areas. Prior to the cease-fire ending, they would be returned.”

He did have a point, and the Commander knew he was moving towards someone particular. “In the event we agreed,” the Commander said slowly. “Are these provided by each side, or are demands made.”

“You are asking me to trust that you have no hostile intentions towards this decision,” the Battlemaster answered. “I have no reason to believe you are genuine.”

The Commander raised an eyebrow. “Considering how unreliable your own allies have been, I believe we have been more genuine than your own side. I’d not disparage us when your own side is more of a risk here.”

“I will ensure there are no repeats, and unreliable actors have and will be dealt with,” the Battlemaster said without pause. “With this understood, your points are made, and if you wish for
the battle to be swift and decisive, I can oblige in your arrogance. Yet there must be assurance, and the stakes must be high. I want the Commander of XCOM for the duration of this agreement.”

“Absolutely not!” Laura exclaimed. “Out of the question.”

“Wait,” the Commander said, thinking. The fact that the Battlemaster was entertaining this idea meant that he also deemed it important and ideal. He also wanted to make it work, which meant there were two methods – escalation or de-escalation. Perhaps the Battlemaster wanted ADVENT to agree to this implicitly by putting someone less valuable up instead.

However, he was never one to have others go in his place.

“I’ll go,” he said slowly, thankful Laura didn’t interrupt. “On one condition. Who would you send to us?”

“One of my inner circle,” the Battlemaster answered. “Disciple-7, J’Loran, or others. That will be determined.”

“No,” the Commander shook his head, even knowing it wouldn’t be seen. “Not good enough. If you want me, you need to have something to lose as well. If you turn over Yang Shuren to us, I will provide myself willingly as collateral.”

“Yang Shuren is currently in intensive care,” the Battlemaster said flatly. “She is in no position to be moved anywhere.”

“Then find a way,” the Commander said. “If we’re making deals as these, they will be equal in value. If you wish, your medics can also accompany her for treatment, and if necessary, we can provide our own. But if you want me, then you will turn Yang over to ADVENT for the duration of this cease-fire.”

There was silence on the other end of the line for a short time; tension that all who were listening could feel – even JULIAN most likely. “How long do you wish this cease-fire to last?” The Commander let out a quiet sigh of relief. This was going to happen, excellent.

“Five days,” Laura stated. “Then we’ll talk again. If we decide to extend it, fine. If not, that is the minimum time we request.”

“Very well,” the Battlemaster said. “Prepare your own diplomatic party and we will meet at these coordinates in four hours. I will order my soldiers to stand down, and I expect your soldiers to do the same.”

“It will be done, Battlemaster,” Laura confirmed. “We shall speak shortly.”

They waited a few seconds. “He hung up,” JULIAN said. “Rude.”

“Commander, I am not sure about this,” Laura said. “Especially without prior discussion-“

“No, it is a risk I accept,” the Commander disputed. “Short-notice it may be, but if we have Yang, I am not overly concerned for my safety. I’ll use the opportunity to learn what I can, and in the meantime, we continue preparing for Gaia.”

“I suppose I can’t stop you,” she muttered. “You’re outside my jurisdiction. I would suggest you get any affairs you need to in order. I will meet you in several hours. Now I have to send the order to stand down.”
“I’ll be ready,” the Commander confirmed. “I’ll speak to you then.”

The line went dead. “I suspect Vahlen isn’t going to be pleased,” JULIAN said sarcastically.

“No,” the Commander sighed. “Probably not. But she’ll understand that it’s necessary.”

***

Clearwater, Florida – United States of America

4/30/2017 – 5:55 P.M.

“You are making a mistake,” Ivan told the Battlemaster as they stood amongst the eerily quiet city, now that the sounds of gunfire and explosions had ceased. They were replaced with the sounds of medics treating wounds, soldiers getting food and water, and repairs beginning to take place from engineers and drones.

Ivan was not happy.

“We had ADVENT on the brink of collapse,” he said, gesturing out to the opposite side, where ADVENT soldiers can be seen in the distance. “And now they have a chance to regroup and prepare.”

“Correct,” the Battlemaster said.

Ivan stared at him incredulously. “And this isn’t a problem?”

“It provides us with an opportunity as well,” the Battlemaster said, as he cleaned the blood, gore, and grime off of his blade. “Our strategy is not optimal. There are additional factors to account for now. Such as how your clumsy actions have ensured T’Leth’s involvement in the battle and hindered our efforts overall.”

Ivan grimaced. “ADVENT was going to learn there was someone like me attacking. Unfortunately, they found me early.”

“Do not lie,” the Battlemaster’s voice was flat. “I gave you explicit instructions. You ignored them. ADVENT adapted. I hope you are satisfied with your handiwork.”

“I have caused major disruptions against ADVENT lines,” he said. “And have kept hundreds more psions occupied.”

“Incorrect,” the Battlemaster lowered his weapon and appraised him coldly. “You are a pest to them. How many XCOM or ADVENT teams have come after you?”

“None,” Ivan said. “This was because when joined, I can hide myself easily enough.”

“Excuses, Smirnov,” the Battlemaster shook his head. “I was tempted to remove you when you violated your orders, but you are a low priority in this conflict. I will not be restrained if you ignore my orders a second time.”

“Which are?” He demanded, clasping his hands behind his back.

“Very simple,” the towering Ethereal stated. “We are to enter this ceasefire. You will not perform any kind of psionic observation or attack against any ADVENT forces who are not within our territory. You will monitor our areas for infiltrators and special forces. I do not trust ADVENT to be idle, even with the Commander in our grasp.”
“Absolutely not,” Ivan spat. “I will hold to the terms of this unnecessary agreement, but I am not going to act as a glorified radar for you. You can have the Vanguards do that. Let me oversee the Commander at least.”

“No,” the Battlemaster answered. “ADVENT underestimates you now. You will be useful later.”

“You’re acquiescing to their demands without argument,” Ivan shook his head. “You’re doing exactly what they want. What good is having the Commander here if we won’t get anything out of him or kill him?”

“Leverage,” the Battlemaster said neutrally, finishing his sword cleaning. “Something you know very well, yet question all the same. If you are wanting to interrogate or kill him, those are not the terms of the agreement.”

“And why do we care?” Ivan demanded, crossing his arms. “ADVENT will fall. It does not matter how it happens. Removing the Commander will accelerate that significantly.”

“I am also certain ADVENT will fall,” the Battlemaster said, his tone turning colder. “Which is why we do not need to resort to such tactics. I do not care about your childish need for vengeance against ADVENT. The Commander will be treated well and kept safe – and away from you. Am I clear?”

“Did you consult with the Overmind?” Ivan demanded. “Or even the Imperator?”

“No.”

“You ordered a ceasefire of a major military operation,” he said with some disbelief. “And you didn’t contact your superiors?”

“No.”

“And why is that?”

“I am in charge of this campaign,” the Battlemaster took a step towards him. “Not the Imperator. Not the Overmind. Not you. If I decide to listen to them, it is at my prerogative. If I choose to follow their advice, it is because I agree with it. I have informed the Imperator of the development, as well as Harbinger Trask, who will doubtless convey this to anyone else of importance. I made this decision on my own, and I have provided my reasons as to why.”

“And I will remind you that you do not command me,” Ivan said. “That is the Overmi-“

He was cut off as he was suddenly yanked forward to slam into the iron grip of the Battlemaster who held him by the throat. He realized he was in a...bit of a precarious situation, as he had no ability to defend himself as the Battlemaster was immune to telepathy, and couldn’t activate his link with the Overmind.

The Battlemaster drew him close to his mask. “I don’t know what the Overmind saw in you. I don’t especially care. I want to make something very clear to you – if you disobey any of my commands again, I will execute you.”

Ivan coughed. “No, you won’t.”

“Do you want to take that chance?”

He thought about it for a minute, hovering in the air. At the moment...he didn’t actually doubt that
the Battlemaster was capable of killing him. He couldn’t understand the consequences of that, but that resulted in Ivan being very much dead if he didn’t shut his mouth. The Battlemaster was actually stupid enough to do that.

He tempered down his anger and annoyance at the Battlemaster over this whole situation. “Fair enough,” he calmed his voice. “Fine. You have my word.”

“Excellent,” the Battlemaster dropped him to the floor and turned on his heel. “Rest and consult with the Overmind if you wish. I will be meeting ADVENT. Remember my orders.”

Ivan rubbed his throat, glaring at the back of the Battlemaster as he strode off. *Fine then, let’s see you embarrass yourself before the Imperator.*

This was a mistake, and ADVENT was going to prove it. When it happened, Ivan very much was going to look forward to saying ‘I told you so’. Until then, he supposed he should take advantage of the rest that was going to be possible. Straightening up, he began a long walk to his battlefield quarters, thinking about what he was going to do next.

To be continued in Chapter 56

*Enemy Lines*

Chapter End Notes

So with this chapter comes a pretty significant life update for me. Short version is that I'm moving to a new job which I'm very excited about, but is probably going to be taking up a good part of my life now. I know that I've said in the past that life will come before writing, and that remains true here. I do feel compelled to say again that writing updates may slow as a direct result of this. It is not a guarantee, of course, and I know that I've given this warning before and it all ended up working out, but I'll say it again just so everyone is in the loop.

Thank you all for reading, as always.

- Xabiar
A short click and the intermittent red light began flashing.

“I am the Commander of XCOM, current location is Tampa, Florida, and the time is four-fifty P.M. Around an hour ago ADVENT and the Ethereal Collective agreed to a temporary ceasefire. This is only limited to the current hostilities in Florida, and engagements around the rest of the world still continue.”

 Formal part out of the way, he shifted his position to be less stiff since he didn’t want whoever would be watching this to think it was – ironically – some kind of hostage video. “I suspect there are or will be some who question the wisdom of such a move, because as much as it gives us, it also benefits them. We successfully negotiated the return of current POW’s held in the region, and in exchange we gave them our own. This was agreed upon due to the fact that everything of value was extracted already. A few thousand soldiers ultimately won’t make a difference in either side one way or another, but it will boost morale for ADVENT, and we do have an obligation to save as many of our soldiers as possible.”

 He sighed, looking into the camera and resting his forehead against several of his fingers. “As should be apparent now, the Battlemaster is no fool. The agreement also includes an exchange, one individual from each side to serve as collateral. I agreed to serve in this role, and in return the Battlemaster provided the currently wounded Yang Shuren.”

 He lowered his arm. “I’ve laid out to our allies that the likelihood of the Battlemaster breaking the agreement is low, and that is the truth. I fully believe the Battlemaster will hold to the agreement. However, there is a non-zero chance that others within the Collective will not do the same. I doubt my death would be considered a sufficient escalation, especially since I am replaceable. Yang would die, but only the Battlemaster seems to care about her. The point being that despite what I have implied to ADVENT, the danger here is very much real.”

 The Commander paused for a short time. “The truth is that the ceasefire was never meant to do anything other than buy time. I suppose history will show if it worked or not, but each day of the ceasefire buys time for the Gaia Contingency to be put into effect. Whether I die or not is irrelevant if Gaia is successfully implemented. It can and will change the course of the war, and that is worth risking my life for.”

 He tapped a finger on the chair. “There are concerns with the Gaia Contingency. Fears that it could get out of control. Unfortunately, we don’t have a choice. JULIAN laid it out very clearly. We are outmatched in nearly all theatres except arguably psionics. These kinds of measures are necessary if we hope to survive, let alone win. Earth may look very different at the conclusion of the war. I don’t know. But I can assure anyone with doubts that if we did not take these steps, we would lose the war.”

 The Commander shook his head. “That is all for now. This could be my last time speaking if this goes wrong, but there are few things in life I have regretted, and no matter what happens, this was the right move and right decision. Vigilo Confido.”
The light flicked off and was replaced with a solid green one. The Commander looked behind the camera to Vahlen. “You want to record one?”

“No,” she said wearily, leaning back in her own chair. “I’d prefer to keep my composure on camera.”

“I know,” he stood up and walked over to her, and pulled her into a hug and both gripped each other tightly.

“I know it’s necessary,” she said into his shoulder. “I do. But it didn’t have to be you.”

“Maybe not,” he admitted. “But I know I can do it, and I know I will learn something from there. I’m good at that.”

She didn’t physically flinch, but her concern and worry spiked through her telepathy. “Or you could die.”

“Very possible.”

She grew less stiff against him. “Sometimes I wish you weren’t so honest.”

Despite himself, he smiled. “And remove one of my more attractive qualities?”

“You could die.”

“And if I do, someone else will replace me.” He reminded her. “And the war will continue. If the Imperator thinks my death will change anything, he is very mistaken.”

“Logically…” she sighed and they broke the embrace, though both hands were still held. “You’ve been in danger before, but this is… different. I don’t know if you’ll come back this time. I’ve never felt that before.”

He ran a hand through her hair, putting some stray strands back into place. “I can’t make a promise, but I’m confident I’ll be coming back. For better or worse, the Battlemaster will keep his word.”

“And both of us know that’s not who we worry about,” she replied, closing her eyes and taking a deep breath. “You’re not safe there, no matter what he promises. He is a loyal dog of the Imperator, and will fall into line even if there is a violation of his honor.”

“Perhaps,” the Commander mused, his thoughts turning to what would come next. “I hope to discuss it with him while I’m there.”

“Be careful,” was all she said, leaning into him again. “As much as you are able.” Determination radiated from her as her tone turned from concerned and sorrowful to a somber steel. “And if something happens to you, make sure you inform him that I know how psionic bonds work, and I will skin Yang Shuren alive repeatedly if you do not come back safe.”

He chuckled; it was certainly a very personal incentive for the Battlemaster to do everything in his power to comply. Especially since coming from Vahlen, it was no idle threat. “I’ll ensure he knows, and I expect nothing less.”

“While very touching, Commander, I will remind you there is a limited time until the transfer is to take place,” JULIAN interjected from the phone on the bed. “And I presume you want me to store that oddly sentimental and very sensitive video somewhere?”
“File it under PROMETHEUS,” he said.

A few seconds of pause. “Ah. What an interesting project. I’m surprised I overlooked this earlier.”

“We’ve been busy,” Vahlen said.

“In any case, it is done. I will leave the two of you alone now. If you want to have sex for potentially the last time, I suggest you work fast, which I doubt will be a problem for any of you.”

The Commander raised an eyebrow. “Cheeky little machine. Fuck off JULIAN.”

Vahlen actually laughed, despite herself. “You should tell him that more often. Might teach him some humility.”

He looked back to her, a question in his eye. “Think he killed the mood?”

“No, let’s enjoy this while we can,” she said, leaning up and pulling him into a kiss he immediately returned, and both soon found themselves upon the bed, as the clock ticked down ever so slowly.

***

Tampa, Florida – United States of America

4/30/2017 – 3:32 P.M.

Hallian had not expected to be relocated so quickly, and from the sound of it, he was far from the only one being moved. The order had come directly from the Battlemaster, and his first thoughts were that either there was a major push happening and the wounded were more than the current medics could handle, or someone important had been seriously injured.

As it turned out, it was the latter.

The Battlemaster had literally charged towards the medical team which was running to the meeting point, but apparently that was too slow. Close behind him in his telekinetic grasp was what Hallian suddenly recognized as Yang Shuren. Oh no, this is not good – both for the woman in question, and for his stress level.

All Hallian knew about the two was that they were presumably close and both were very important to the war effort, and dangerous to ADVENT. On one hand, it was almost flattering that he was among the first called when someone of this caliber was injured, but on the other, if they couldn’t save her – if he couldn’t save her – he didn’t know how the Battlemaster would react.

He wasn’t the type to execute those who displeased him…at least Hallian was fairly sure of that. But there was a first time for everything, and the Battlemaster could find a new medic much more easily than he could find a new Harbinger. Hallian pushed those thoughts to the side and prepared to get to work even as the Battlemaster set her down.

“Take care of her now,” he ordered, even as Hallian was calling to a triage pod. “Immediate medical update. I want to know her chances.”

“Pod’s on its way now,” Hallian told him, pulling out his dispenser and rushing to the woman, along with his team as he quickly looked over her. “What was she hit with?”

Questioning witnesses was necessary, and sometimes they were too distraught to give an answer, but the Battlemaster was at least collected and would understand the need to ask these questions.
“Armor was hit with gauss and plasma projectiles. Most damage has come from chlorine trifluoride, napalm, and nanites of some kind.”

Not good, and Yang did not look good at all. She was effectively a blackened husk of chipped and irregularly dented armor. The ClF3 had done severe damage to essentially everything that wasn’t armor, and that would need to be taken off her. Despite appearances, the armor appeared to have largely held up, even if layers were burnt away throughout.

“EMP pulse,” an assistant tossed to him which Hallian placed on her chest. “Clear!”

“Clear!”

A micro-EMP burst detonated over her body. Nanites were fickle, and XCOM ones tended to have a timer. Nanoweapons were also very directly targeted, and didn’t have extensive programming. When they found something to eat, they ate, and it was usually directly down, meaning an overhead and outside pulse would cleanse them. Not always completely, but it was the standard first step.

“Do you know how you take the armor off her?” Hallian asked the Battlemaster. “Straps or locks we should be aware of?”

“Yes,” the Battlemaster lowered a hand and Yang lifted off the ground, and as he pointed out the locks and straps – the latter having been burned away – the medics were able to begin quickly taking the armor off her and placing her body onto the nearby medical pod which had just arrived. She was even worse out of the armor than before.

It was amazing that she hadn’t lost limbs or digits during their escape, as the majority of her body was missing a layer of skin, some due to burns, and the rest due to the nanites. The joints especially showed where the fire had almost burned to the bone, while almost the entire throat was just barely held together to the point he knew the windpipe would have torn if it had been even an hour later.

He didn’t know how conscious she was, as both eyelids were gone, as were parts of the eyes. There were occasional twitches, but he was almost certain she was in shock. She’d need extensive treatment to be back to normal, and nothing major appeared to have been lost. Skin could be regrown, as could organs.

The suspension field would at least keep her from feeling any pain when she regained consciousness as the medics coated her body with gel which would prime her body for skin repair grafts and medical nanites. Straps were placed over her eyes which would also prime them for eventual repair. Hooking her up to several IV drips, she would be kept in a coma until enough of her body had healed to be safe to awaken her.

It was tense, fast-paced work, but soon they were done. “We’re going to move her to the treatment facility now,” he told the Battlemaster, letting out a breath he’d been holding the whole time. “She’s not in danger of dying, but I highly recommend she be moved off-world for treatment. We don’t have the appropriate facilities right here.”

“Understood, move her there for now and I will authorize her transportation,” the Battlemaster nodded, his massive frame seeming to relax. “You and your team saved her life. Thank you.”

Hallian began to relax a bit more, his weary mind filled with pride. Acknowledgement by the Battlemaster himself was something one could only dream of. He’d done his job, and done it well. “Thank you, Battlemaster. Where do you need us when we move her off-world?”
“I will determine that,” he said, stepping back. “For now, stay with her.”

“Yes, Battlemaster,” Hallian answered as the Ethereal went off one way, and with the pod in tow, the medics rushed off another.

***

Phnom Penh – Cambodia

4/30/2017 – 6:00 P.M.

The wall had been hit here, and Patricia decided a new tactic was in play. Given the recent events in Tampa, she thought she would take a page and try…speaking to ADVENT. There would certainly not be a ceasefire, but she was curious to see who they would send – and what they would say. The invasion had largely proceeded – and still was proceeding – well.

They were quite easily moving through the region, onwards and upwards, and ADVENT and XCOM were throwing their best to slow her down. Admittedly, they were still holding on to the capital city of Cambodia, but the price for this was that they weren’t elsewhere as her soldiers continued expanding.

Transplantation and terraforming were also proceeding well; the plants were adapting to the conditions on Earth, and Sectoids and Andromedons both were carefully observing the effect on the ecosystem. It would take time before the full effects were accounted for, but preliminary information was always good, and soon it would be her mark she left on the planet and the path she carved.

The bombardment from both sides had stopped and now she walked onto a war-torn battlefield which had once been a complex of cheap houses and streets, and now was composed of dirt, rubble, metal, and unidentifiable liquids. Her mask was off, as she did not need to be connected right now to the Imperator, but there was a telekinetic field around her, one which she kept vibrating to set off any mines nearby.

Approaching the designated area, she spotted her counterpart, and was only mildly surprised to see the Chronicler approaching. She’d known he was here, as was Aegis, along with a number of XCOM psions and Agents of T’Leth who were still alive. Without all of them, this city would have fallen days ago.

Both psions met besides the shells of houses and torn vegetation. Patricia crossed her arms, appraising the Chronicler. “Surprised they sent you.”

“It was me or Aegis,” the Chronicler answered with a thin smile. “I was deemed the better negotiator.”

“Were you now.”

“Easy to negotiate when the answer is going to be ‘no’.”

Patricia was mildly amused, but not surprised. “You don’t want to hear me out?”

“Not particularly.”

“The Battlemaster and the Commander appear to have worked something out.”

“The Battlemaster and you are very different,” the Chronicler snorted. “He operates within his own
rules and code. He is predictable. You are not. Don’t pretend that you’re surprised by this.”

Truthfully, Patricia was very much surprised by the ceasefire in Florida, and similarly concerned. She knew the Commander, and him taking that kind of step meant that he had a plan – and she knew it wasn’t whatever reasons he had given the Battlemaster. Even if he was giving himself up, he knew what he was doing. He never did something like that without a reason or plan, and the Battlemaster simply had the wrong mindset to see that.

She’d deal with that later.

“How many days have we been here?” She asked rhetorically, looking past him to the Flak Towers and haphazard trenches. “Ten days? Fifteen?”

“Length doesn’t matter,” the Chronicler shook his head. “We’ll fight for months if need be. You can’t convince us to give up.”

“Let’s work through this logically,” Patricia said, deciding to try a different tactic. She sat down on an appropriately sized piece of rubble. “You can theoretically hold out here as long as necessary. Between you and Aegis, I know you can. However, both of you have to be here all the time and can’t assist elsewhere. I don’t have that restriction. I have an army of billions at my disposal, and I am using them to take the ground you cannot defend.”

“And we’re slowing your efforts,” the Chronicler added.

“Slowing, not stopping,” Patricia agreed. “Casualties are largely Mutons. That I can afford easily. You are losing ground by the day. Soon you will be completely surrounded and even you and Aegis cannot last forever. If I bring in a few more psions or call in some Cleanser Ships, you will be forced to do something. Then all of you will die, and ultimately for nothing.”

“This works both ways, Patricia,” the Chronicler raised a finger. “As long as you’re stuck with us, that means you aren’t elsewhere. We both cancel each other out, and this is a status quo we find acceptable, but you clearly do not. So while we appreciate your inevitable offer, we’re quite content with the current situation.”

“Perhaps, but you can’t hold out forever,” Patricia pointed out. “You’ll become tired, exhausted. You will get sloppy. You will make mistakes. It won’t be you either, it will be your soldiers who are fighting for days straight. I can call upon fresh forces whenever I wish. Your soldiers do not have that luxury, nor do you.”

He actually chuckled, and his eyes briefly flashed blue. “I’ve been doing this much, much longer than you have, girl. I’m very likely older than your entire family combined. You’ve been joined to the Imperator for what? Several months, if that?” He shook his head, amused. “Both of us know soldiers are little obstacles against beings like us, and I can assure you that no matter how long you last, I can last longer.”

He was entirely too smug for the situation he was in and it was rather irritating. Patricia frowned. “I’m not taking pleasure from this, Chronicler. I’d prefer to end the war with as few Human casualties as possible.”

“If you really thought that, you wouldn’t have betrayed us.” He shot back, allowing some raw anger into his voice. “Don’t you dare say that after what you’ve done.”

“And leave them to what?” Patricia demanded. “I guarantee that there will be far fewer lives lost here than when T’Leth goes to war. The Sovereigns will sacrifice us when they see fit. We are less
“That is not the same thing and you know it,” Patricia snapped.

“Really?” The Chronicler demanded. “Because it sounds just like what your imaginary Sovereigns would say about us. And if you really think the Imperator would not do the same thing, then you are deluding yourself and everyone around you.”

“You’re wrong,” Patricia disputed with a shake of her head. “You’ve never even met him. You can’t say that. I’m certain T’Leth says differently, but I’ve seen inside his mind. I know him better than you or your master ever could.”

“You accuse me of not knowing the Imperator, but you turn around and treat T’Leth the exact same way,” the Chronicler pointed out. “I base my opinion of the Imperator on what he had done and what he has allowed. You base your opinion on nothing but words and trust.”

“Ah, you’re wrong,” Patricia gave a thin smile. “When I was still with the Imperator, and I hadn’t made my decision, I decided to try and contact the Commander. Telepathically of course. I met your Sovereign there and he effectively told me to leave before I could even explain what I wanted to do. He accused me of being tainted by the Imperator.”

For the first time, the Chronicler frowned. “Did he now. I see. I can guess what his reasons were, but that was…overzealous.”

She nodded. “One word for it.”

Silence fell between both of them. The Chronicler finally waved a hand. “Alright, let’s hear your offer. Doubt I’ll agree, but I’ll hear you out.”

“I will allow ADVENT military forces to evacuate the city completely,” she said. “We do a prisoner swap. You get our captives, we get yours. Once you leave and send us an all-clear, we move in and take the city.”

“You said military forces,” he said slowly. “Not civilians?”

“I imagine that the civilians won’t want to leave their homes,” she said, choosing her words carefully. “If ADVENT wants to force their evacuation, then I suppose that can’t be stopped. I would argue that would not be conducive for your image.”

“Right,” he said dryly. “Thank you for your concern. You want the civilians too, and you probably have a time limit on this that would make a large-scale evacuation impossible.”

“I wouldn’t want to think you were stalling.”

“Obviously,” the Chronicler rubbed his beard. “Here’s my counter-offer. You allow all the civilians currently captured in your territory the option to leave, and we send a representative to confirm. Make our cases. Those who want to stay in your grand vision can, the rest get to leave, no strings attached. Same with this city. You give us as much time as needed to get them away safely. You do that, and we’ll leave.”

Patricia sighed. “I was hoping for something more serious.”

“I am serious, Patricia, I see exactly what you are doing,” the Chronicler met her eyes firmly. “For
better or worse, you think you’re doing the right thing, and think this is the correct direction of Humanity. So sell it. All you’ve done is conquer them. No one joined you willingly. Granted, the same can be said of ADVENT in some instances, but what ADVENT offers is unquestionably in their own interests. The Collective? Not so much. Consider this an opportunity to use your ideas and words to convince people to join you, not your armies and threats.”

She looked at the Chronicler, thinking. He had a point, even if something of a distasteful one. A population that was unwilling was eventually unreliable and reshaping them would take some time…the Chronicler was confident this would be an easy win, and clearly did not expect her to say anything other than ‘no’.

But she wondered if she should take him up on his offer. It would be a massive blow to ADVENT if, given the chance, Humans willingly elected to stay with the Collective, and not rejoin ADVENT. Oh, they would push their theories of intimidation and telepathy, but privately such would freak the leadership out. On the flip side, it could go badly for her and she’d be embarrassed before ADVENT and Humanity at large, much less the Collective.

High risk, potentially high reward.

She was tempted. “I need to speak to the Imperator,” she finally said. “I will be back within the day.”

He blinked. “You are actually considering this?”

“Correct,” she stood up. “I hope you meant what you said, and that you were authorized to propose that deal, because that’s what I’m going to bring before the Imperator. If you aren’t, then let me know.”

He gave a single nod. “I will do so. I will speak to you later.”

“Yes, until later.”

Patricia began walking away, then paused. “One more thing?”

“Yes?”

She hesitated, then decided to ask anyway. “How is Creed?”

The Chronicler’s expression stayed completely neutral. “I wouldn’t call him ‘fine’ after what you did. Let me put it simply, Patricia. The next time he sees you, he’s going to kill you.”

It wasn’t a surprise, and she understood and gave a short nod. “Then I hope we never meet on the battlefield.” She paused once more. “If you see him, do tell him I’m sorry it happened like this.”

With that, she turned around, and left, this time not stopping until she was safely behind Collective lines.

Dedicated Defensive Fortress of the Sovereign African States – Nigeria

04/27/2017 – 12:02 P.M.

At last, there had been a breakthrough in negotiations. For Betos it seemed like the entire continent was in a self-imposed neutrality, with everyone fearing to commit to one side or the other for fear
of retaliation from the other. A valid fear she could respect, but the continent was a number of dominos, and they were eventually going to fall one by one for one side or the other.

It was a mad rush between ADVENT and SAS diplomats, most of whom were either ignored or treated with the most delicate and neutral of negotiations for fear of committing too strongly to one side or the other. The threat of ADVENT annexation hung over every country, and that had been cited as a major reason nations had not committed to anyone.

However, the African nations in general were wary of ADVENT, hence why they weren’t joining them. To Keeper’s mild chagrin, none of the nations actually seemed to fear the SAS or aliens, and appeared to believe that if they joined, ADVENT would protect them. But ADVENT in many of their eyes was a wholly western superpower, and the legacy of colonization and exploitation still endured.

That China had also joined had only made it worse.

Then ADVENT appeared to have decided that they were tired of waiting, and had imposed harsh sanctions against all non-ADVENT aligned nations. The effect had been almost immediate, and a number of nations had at least signed non-aggression and non-alliance treaties with ADVENT, essentially allowing themselves to be ADVENT proxies in return for sanctions relief.

The ones who didn’t give in were forced to seek alternatives, no matter the danger or risk. If something wasn’t done, food, water, and resources would run out, and the last thing any of these governments wanted was an internal crisis on their hands. Larger nations could hold out for some time, and trade between themselves still existed.

For smaller countries, that wasn’t an option, hence why four small nations were represented in a small and defended bunker. They were by no means committed, but Keeper believed that they could be swayed easily enough.

Sitting around a circular table were Presidents of four nations, Teghan Obito of Benin, Gaspard Diyoka of Togo, Sadaou Moundi of Ghana, and Mvondo Kumba of Gabon. Some were originally of their nation’s military, others weren’t. All were concerned and desperate enough to consider an alternative.

However, the concerns were immediate.

“ADVENT has been clear,” Mvondo stated. “If we align ourselves with you, we will be destroyed.”

“Propaganda,” Keeper disputed. “Annexations require resources. ADVENT is currently engaged on multiple fronts, all of which they mistakenly believe are more important than your own nations. They will certainly be unhappy, but they rely on fear and intimidation to succeed here. When you and many of your nations saw they were skeptical – and rightfully so – they showed their true face.”

Mvondo wasn’t convinced. “I do not want fancy words, alien, I want a guarantee. What will you do to keep my country safe from ADVENT?”

“A number of steps,” Betos spoke, looking around the room as this question was one they all had. “The SAS is African-run and led. Protection is essential, and to pre-empt any ADVENT attack, I will order SAS forces – all of whom are Human – to your countries to protect them from reprisal. All major government officials will receive dedicated protection.”
She tapped the table. “Second, we upgrade your military to modern standards. Plasma, armor, psionic testing, everything, no questions asked. Your own military forces will be integrated into the SAS and when your soldiers are appropriately trained to use the equipment properly, they will serve as the core garrison of the nation, with additional support if necessary.”

“Now,” she pulled out a small holopad and activated it, showcasing a Collective emblem. “We know the sanctions are already affecting your countries. Through the Collective, we will continually keep your nation supplied with food, water, and other resources. Engineering teams from the Collective will arrive to modernize your infrastructure, networks, and defenses. We can provide you with all of this if you align yourselves fully with the Sovereign African States.”

Betos met each of their eyes, lacing her fingers together. “ADVENT does not want a prolonged war here, but we’ve been under siege for over a month now, and they haven’t broken through. They cannot win, and they know it. Each and every one of you they will coopt regardless of what you insist in their march to destroy us. Proxy bases are already being developed outside our borders. All due to ADVENT threats and fear. ADVENT does not have your best interests at heart. They never have or will care about neutrality.”

“Neither does your own Collective or government,” Gaspard snorted. “As has been throughout history, we are caught in the middle of two sides who care nothing for us except our land, people, and resources.”

“We of course wish your support,” Betos said. “But we do not require it and never have. We were content to let you maintain your neutrality without penalty. ADVENT does not believe in this. The SAS is allied with the Ethereal Collective, but we command and manage ourselves. Africans control the SAS, not the aliens.”

“Please, you are not even African,” Gaspard pointed out. “Do not speak as if we are brethren. You are no more of an African than I am Israeli.”

Internally, Betos winced because that was a valid point. It was admittedly difficult to sell the idea of an African-run continental power when the face of said power was not even African, even if a majority of the interim government and military forces were. “No, I am not, but I am the reason that Africa as a whole is relevant in the world now, and the most influential it has been in centuries. I may not have come from here, but a majority of my advisors, government officials, and military personnel are, and they wholly support me.”

“Her skin color is irrelevant,” Teghan dismissed with a sharp wave. “I only care if she can do as she promises.”

“I do not care so much about their promises as what happens later,” Sadaou said, looking to Keeper. “ADVENT is right about one thing – too much alien influence is undesirable. I do not wish to align myself or my country with an alien proxy, nor do I wish to expand any coalition to include non-African nations, else it will become dominated by western interests again, and nothing will change. It was such with the UN, and it must not be repeated. Will the SAS retain full autonomy from the rest of Earth?”

“Of course,” Keeper said immediately. “The interests of the Sovereign African States are decided internally with our own advisement, of course, but I do not see a need for the SAS to expand beyond the continent. This is, of course, subject to the internal deliberations of such a government. Your peers may feel differently, but as it stands, we do not need the SAS to expand unnecessarily.”

Sadaou frowned. “You would support multiple Human governments? Autonomous Human governments?”
Keeper smiled. “Currently on Vitakar, there are six racial local governments, each of which control and manage certain parts of our planet, as well as sponsor colonies they have direct influence over. The Andromedon Union contains dozens of autonomous and independent Unions, all of whom control their own affairs with minimal to no oversight.”

He lifted a finger. “Now, each of these have established a…unified government structure, the Aui’Vitakar and Andromedon Federation respectively, to manage planet and system-wide affairs. But it is largely used to streamline trade, unified military strength, and species-wide directives. It is rare that it interferes on a local government level. The point is, Mr. President, that despite what ADVENT would have you believe, the Ethereal Collective is highly supportive of its allied species and wishes them to develop in their own ways. We are a Collective, after all, not an Empire.”

He lowered his hand. “ADVENT has no such belief in diversity. They will, if you have not noticed, homogenize society, military, and culture to whatever they deem as the most acceptable. They do not care for opposing views and beliefs, except for ones that support their plan for eventual Human domination. You see how they even treat Humans who do not fall in line, imagine what they will do to those not of their species.”

Betos certainly appreciated individuals like Keeper who could succinctly explain the flaws of ADVENT and the advantages of the Collective, though she knew it certainly wasn’t as simple as the picture he painted, but much of it was correct – or at least easily arguable. She doubted that ADVENT was necessarily hostile to aliens, but if it suited their interests…they could easily become that.

Gaspard still looked skeptical. “You paint a vivid picture, alien. I have a question though.” He looked Betos in the eyes. “Betos may be the face of the SAS, but she was not alone initially. There were others with her. Other national leaders. So-called allies. Where are they now, Betos? Why are they not endorsing your vision?”

Betos was very grateful they’d anticipated this potential roadblock, and Keeper smiled and pulled out a thick folder, set it on the table, and slid it to the opposing Human. “The simple answer is that they were corrupt, brutal men who cared more for personal profit and glory than the threat of ADVENT or the well-being of their citizens.”

He shook his head in pretend mirth. “We compiled evidence before we acted. All there for review. Unfortunately, it seems some men believe themselves above the laws they themselves agreed too. I cannot say if they intended to use the SAS to enrich themselves, but such actions cannot be tolerated, and they were arrested, prosecuted, and executed.”

“I heard nothing of a trial,” Gaspard said, though he sounded like he was backing off this topic.

“And were you observing?” Keeper shrugged. “It is unlikely you would have observed as it was only kept within our own networks, networks which do not rely on Human systems.”

“I can assure you that the men and women working with me now are fully committed to the future of the SAS,” Betos added. “While a hard lesson to go through, it was necessary. I am certain you are aware that in some of these nations justice is fleeting or absent, and to acquire the trust of the people, to give them hope, they needed to see even the powerful are not immune to the law.”

She gave a smile. “I can assure you that if you’re dedicated to your people, then you have little to fear. But all of us must move beyond old national and ethnic rivalries. ADVENT faces us with a united front, and if we intend to survive, we must do the same.”

The men were nodding and exchanging glances with each other, communicating in different
languages under their breath. It appeared to be a good sign. “You make a strong case for an alliance,” Teghan finally said. “But we want more details. Specifics.”

Keeper moved the holoprojector closer to the center of the table with a smile. “Of course. Ask us anything you wish to know.”

***

**Briefing Center 17, Cambodian Military Command – Cambodia**

4/29/2019 – 10:14 A.M.

Three ADVENT squads were seated in a room, most of them not in uniform, but knowing they would need to don it soon enough. Both Duri’s direct superior, Lieutenant Maxwell, and the commanding Colonel of the Cambodian Joint Company Command, Zachery Ilo, were laying out the mission for the soldiers present.

“Right now we don’t have a full picture of what the Collective is doing in Vietnam,” Maxwell was saying, a map displayed behind him. “We know they are modifying the environment extensively, but if the plants they’re using are alien, terran, or hybrids is an open question. As you can imagine, this is unacceptable, and ADVENT is clear in that we are to stop this terraforming effort immediately.”

“To do that we need hard samples,” Ilo said, clasping his hands behind his back. “Soil. Leaves. Seeds. That kind of thing. We have that, the scientists can study them and develop countermeasures or poisons. If we can taint the land, we should be able to prevent terraforming from being possible, even if they claim the land itself.”

One of the officers, Sam Sujin, a woman from Korea, the Seoul Legion, raised a hand. “To cut to the chase, sir, we’re being sent after plants?”

“Plants which are within enemy territory,” Maxwell clarified. “But yes. All of your squads have demonstrated exceptional skills and performance, and operations such as these are of more use to ADVENT then sticking you in a trench.”

“Right, sir,” she nodded. “Just checking.”

“Which brings us to the next point,” Ilo highlighted another portion of the map. “We’re sending you to a location where terraforming efforts are taking place, but satellites don’t show a dedicated Collective presence. There are likely patrols and countermeasures in place. Your mission here is not to kill aliens, but to recover the samples quickly, and then leave immediately. Leave the killing to the special forces.”

“Question, sir,” the third officer, Brenden Pox, from one of the American legions raised a hand. “Do we have any kind of support for this?”

“If things get too bad, we have a reserve Dragoon unit nearby,” Maxwell confirmed. “We’d prefer they not be deployed, however. There are several Intelligence Agents in the area, and by tonight we’ll have up-to-date intel. We expect the operation to launch in no more than three or four days, and to last no longer than four hours upon insertion. Do not take longer than this.”

“Any further questions?” Ilo looked around the room. “It’s straightforward, but important this get done, especially while Patricia and her army are still being held to this position. The aliens are continuing to advance outward, and we might not get this chance again if we delay.”
“One,” Duri raised a hand. “Will we be escorting any scientists or specialists? If there are civilians, we need to account for that.”

“Undetermined,” Maxwell said. “Potentially, and it would improve the operation. However, R&D isn’t sure they want to risk someone for a bulk grab. We will know well before the operation. You will have appropriate time to prepare.”

“Thank you,” Duri nodded.

“Return to your duties for now,” Maxwell said, as they all stood and saluted. “Further details will be forwarded within the day.”

Near Tampa, Florida – United States of America

4/30/2017 – 6:30 P.M.

On a shelled-out city block, both the Collective and ADVENT prepared to make the exchange. Along several dozen similar points, prisoner exchanges would be conducted, per the agreement which they had come to. But all attention was on the small groups that made their way to the middle ground between the battle lines.

Today at least, the No Man’s Land was populated with something alive.

Both armies on opposing sides were tense, but weapons were kept idle. The Commander saw that the ADVENT soldiers were holding their weapons in such a way that if they needed to, they could lift and fire in seconds. He also knew that multiple teams of snipers were also keeping track of the parties.

On the Collective side, the aliens had completely stood down, or so it appeared. Mutons were in an idle stance, and the Runianarch soldiers held their weapons idly, seemingly more fascinated by the oncoming Humans than concerned about anything else.

In particular, they were focused on him.

He only wore his grey fatigues, having elected not to wear armor here. He felt that wouldn’t play well with the Battlemaster, and if the aliens really wanted to kill him, armor wouldn’t protect him. His uniform was fairly plain, though displayed the XCOM emblem on the upper right chest. He kept the pistol on his waist, but aside from that, he appeared fairly normal.

Well, almost normal. His skin displayed the hallmarks of genetic modification, as well as his eyes. Perhaps enough to distract from the small ring he wore, silver and plain, with a tiny Sovereign Orb embedded in it. He certainly wasn’t going to go unprepared, and if the Battlemaster thought that his mind could be scanned here, he was sadly mistaken. In the opposite hand was a briefcase containing some essentials for his short stay in enemy territory.

Accompanying him was Commander Christiaens, Vahlen, and a squad of XCOM soldiers who walked behind them, armed of course. On the alien side, the Battlemaster accompanied a medical team who surrounded a white pod the Commander assumed was the injured Yang Shuren. Curiously, that was it.

Both parties stopped short of each other. There was a period of silence. “Four days,” the Battlemaster said, looking to Laura. “Then we talk again.”
She gave a sharp nod. “Understood. You understand the consequences if you break the terms?”

“I do,” he motioned to the medics who began moving closer, and the XCOM squad moved to escort them more overtly. “As do you understand the consequences of your own failure to adhere to the terms?”

“We can be trusted to hold to our word,” the Commander said, stepping forward and looking up at the Ethereal. It really was disconcerting how much larger than everyone he was. He’d never really appreciated the size of the Battlemaster until in person. Well, the reports had made him aware enough, but it was another to experience it.

A few moments passed, and the collateral had been exchanged. Now alongside the Battlemaster, the Commander met Vahlen’s eyes. Don’t worry about me, he thought, knowing that she was listening to him. I’ll keep you aware of what’s going on.

A small nod followed, and he gave her a smile, and a quick salute which she returned. They’d worked out a way to keep in contact, assuming that the Collective hadn’t set up anti-telepathy precautions around their territory, which was admittedly possible. Psionic contact was possible, and while the Commander was no telepath, Vahlen was.

He was sure she could find him without too much of an issue.

“Follow me,” the Battlemaster turned, and the Commander followed suit as they walked ever-closer to the enemy lines. The Battlemaster didn’t seem interested in speaking to him in front of the Collective, but he seemed highly distracted, no doubt planning his next moves. Fine by him, the Commander had a feeling they would have an interesting talk later.

The aliens were silent as he walked alongside the Ethereal. The Mutons didn’t react at all, but the Vitakara stared in rapt attention, and he idly wondered what was going through their minds. He was not a public figure, but the enigmatic Commander of XCOM was no doubt a figure they knew about. Someone they perhaps respected.

Someone they most certainly feared.

He wondered how many of them were disappointed, or perhaps relieved that he was only a Human. Not quite a Chronicler, a Kane, or a Geist, but for him that was for the best. It was always better to be underestimated than the opposite. The aliens didn’t seem to like maintaining eye contact, even through helmets when he looked their direction.

Perhaps they considered it unprofessional; displaying interest in a high-profile enemy figure.

To a degree it made sense. Some constants in all soldiers it seemed. While he was certainly looking forward to a chat with the Battlemaster, he was almost more interested in speaking with some of the true believers of the Collective. The alien soldiers who maintained their loyalty despite the actions of the Ethereals.

Or perhaps that was all an illusion, and all some of these soldiers needed was someone to give them something to think about.

Four days.

He could do something in that timeframe.
Betos was not American, but she knew a decent amount of their history. The story of the American Revolution had always been one of her favorites, one complete with long odds, heroism, hope, and ultimately victory. To some extent, she could see the parallels here. A smaller regional power fighting to crush the reigning global Empire.

Of course, the American Revolution hadn’t had someone like Macula. Or an advanced alien ally, but there were still parallels.

For the first time in a while, she felt like she was about to do something tangible. It had been negotiation or hiding from ADVENT shelling, and she was past confining herself to the cage ADVENT was trying to construct around them. If they wanted to strike at them, fine, but they would no longer be able to strike with impunity.

She was about to cross the Rubicon and kick off what she knew would be a long, brutal, and bloody war. No longer were the SAS going to hold back; now they marched on the emplacements which had been shelling them relentlessly, which had caused the deaths of soldiers and civilians, which had made the shelter drills a common occurrence.

It was time to move the war somewhere else.

ADVENT had been establishing airstrips and artillery positions within Libya and Sudan, which were used to strike against cities and bases in Chad. Thanks to their efforts much of the defense had been destroyed, but now vengeance had come, and Betos intended to make a statement. Her best soldiers followed her, with Macula at her left hand, and Mox at her right.

“Changes to the rules of engagement?” Mox asked as they looked in the distance at the first ADVENT airbase, one which she idly saw panicked soldiers running in the distance and hurriedly trying to evacuate – or defend. He checked his rifle and looked over his shoulder at the soldiers who stood at attention behind her.

It was to be the first true test of the SAS Military, and a usage of a very few of their psions, the few who had been trained enough to be useful. However, they were on other operations. She had Macula today, and she suspected that would be all they needed. “No change,” she said idly, crossing her arms and pacing as she observed. “They raise their weapons, defend yourselves. However,” she looked back to the Ethereal. “We’re not here to kill them today, yes?”

“I suspect that your gambit will fail, Lady Betos,” Macula twirled one of the blades in his hand. “Nonetheless, if you wish to attempt it, then I will ensure that it is successful.”

She pointed forward. “Go. We’ll be right behind you.”

With a speed that belied his size, Macula shot off, racing towards the airbase. Mox looked after him. “They run fast, don’t they?”

“It appears so,” Betos was also kind of surprised – and intimidated just how fast they were capable of going. Then again, the Battlemaster she remembered seeing cross hundreds of feet in a matter of seconds through his psionic dashing, so by comparison this wasn’t as impressive.

No, it was definitely impressive.

She turned back to her soldiers. “You have your objectives. I understand that for some of you…it
won’t be what you want. But to defeat ADVENT, we need to be smarter than them, and exploit the weaknesses they have. Their soldiers are their most important asset, and if we threaten that, we will have an advantage.”

She pulled out her own rifle. “Today we expose ADVENT as an illusion. They will be defeated without firing a shot. March!” Normally there would be objection to her leading this kind of operation, but this was an instance where she did not fear any danger, and as they walked the open Sudan land to the airbase, not a single shot was fired.

Instead the defenders were frozen in place, statues seemingly made of stone, their bodies locked into position as their minds lingered in induced purgatory. Near the center of the airstrip stood Macula. “Inform me when you wish to release their minds,” he said idly, seeming pleased as the SAS soldiers began cuffing and binding the soldiers for transport, as the hovercraft followed a few seconds later.

“I brought enough soldiers,” Betos said. “It shouldn’t take long.”

“Excellent,” the Ethereal stated jovially. “Almost a shame they didn’t even have a psion.”

“I wouldn’t worry,” Betos cautioned, slinging her rifle over her shoulder. “I get the feeling that you’ll be fighting one soon enough.”

ADVENT Trauma Center, Tampa – Florida

4/30/2017 – 9:16 P.M.

ADVENT certainly hadn’t stashed them in the most open place in their medical camp, but it was more than serviceable for the team of medics with one subject in the pod. Hallian and his team had actually seemed to attract less attention than he’d thought, though that was probably due to them being taken along a tightly monitored path, under a heavy escort, and everyone in the medical facility was focused on more immediate things than the group moving through them.

ADVENT had given them a few amenities, namely a bed, IV stand, and a number of other archaic technology which Hallian and his team promptly ignored. ADVENT meant well, but their medical tech still had a while to go before it was on-par with that on Vitakar, much less the rumored Ethereal facilities of Sana’Ligna.

He idly wondered what she was doing now since she’d left.

Yang was stable now. The skin was beginning to heal, but Hallian knew that she wasn’t going to be going out into the field for at least several weeks. If it was up to him, she’d not do anything combat-related for several months. Despite never having her as a patient before, he knew she wasn’t going to do that. She’d likely regain consciousness in a few days, but even if she wanted to, she’d need time to recover.

Not even women like her were invincible, much as such beings believed sometimes. He could see she was special, but she was no Ethereal.

One thing he would wait to fully address would be the scarring. It was certainly possible to remove it completely, but he didn’t know if she’d want to keep a reminder of what she survived or not. If it hadn’t been for an encounter with a Borelian who’d been very irritated he’d healed the scarring, he was very aware that was a touchy subject for some. He wasn’t sure if Yang fell into that category, but he didn’t really want to make her upset.
Right now though, he did not have much to do. His assistants could watch Yang for any irregularities, and the systems were slaved to the haptic control panel on his wrist. If something happened to her, he’d know about it. He’d already made the executive decision to keep Yang artificially sedated until further notice. She might reawaken naturally, but having her wake up in the middle of an ADVENT facility without any idea what was going on…

That would be a problem.

Hopefully her awakening could be coordinated with a visit by the Battlemaster. He’d ensure she was calm, more so than a Dath’Haram she’d never seen before. Until that point, he was in the middle of a medical facility, which meant he had work to do. Assuming ADVENT would even let him of course. Opening the door to the Triage area, he watched the medics and nurses rush around.

The medical facilities were organized, if compressed. It was clear this room wasn’t originally supposed to hold this many, and it alternated between soldiers being rushed in, who were treated by the nurses and doctors on staff before being moved when they were stabilized. Human terminology did confuse him sometimes, and their constant referral of ‘casualties’ for alive, if wounded, people was utterly confusing.

His case of medical equipment in hand, he looked around for someone who was the chief medic, or at least the person in charge. There were no Officers he saw, oddly enough, though several soldiers had seen him come out and were walking towards him, hands holding rifles that were soon pointed at him.

“Where are you going, alien?” One asked, a male.

He gestured to several of the wounded on the beds. “To help. Can you direct me to the chief medic here?”

The two soldiers looked at each other. “And just why?” The second soldier said, a woman, taking a step forward and waving the barrel of the weapon threateningly. “Would we think that’s a good idea? We’re not fools, lizard. You’re not going anywhere near our soldiers.”

Hallian sighed. “I’ll wait to hear from someone in charge, thank you. I assure you I have no intention of hurting your people. My duty is to heal the injured, this extends beyond my species and those allied to us.”

“Yeah sure,” the first soldier grunted. “All the same to you, lizard, we’ll take our chances.”

Human insults were highly odd; the whole species seemed to have a fascination with insults they thought were clever, but in reality just made them sound like children. “Do I really look like a lizard?”

“Eh, kind of,” the second soldier shrugged. “Would you prefer the term ‘xeno scum’?”

“Not especially,”

“Too bad, we’re not under any obligation to make you feel good, frogman,” the soldier said. “Get back in your room and take care of your traitor.”

“Ha, good one,” the second one chuckled. “You--”

“Hey!” A new voice called out, and the soldiers immediately stiffened as the Officer Hallian was looking for finally walked in, striding directly towards them.
“Officer!” The first one said. “We-“

“Were harassing the alien, I heard,” the Officer said, crossing his arms. “You’d do well to not forget I can hear everything you say. This is not acceptable conduct, especially unprovoked. I don’t care if he’s an alien or not. Is that understood?”

“Yes sir!”

“Dismissed,” the Officer waved sharply, and the soldiers rushed out of there quickly. “Apologies for that, doctor.”

“ Appreciated, Officer,” Hallian said, relaxing slightly. “I do understand it.”

“Personally, I can’t say I’m happy to have loyalist aliens here either,” the Officer grunted. “But that sets a bad precedent, especially for our defectors. In any case, you wanted me. For what?”

“Yang is stabilized, and I can help your medical team here,” Hallian gestured around. “There is little point in me sitting alone when you appear to need all the help you can get.”

The Officer cocked his head. “Why?”

It was almost kind of sad how that appeared to be the first question asked. “I’m a medic, Officer. This is my job, regardless of species.”

“Huh,” the Officer looked around. “I presume you’re smart enough not to try anything, since we have cameras and soldiers everywhere. Though I’m not going to let you work unattended. Abraham!” He motioned one of the doctors, an older male with greying hair who was changing his gloves. He looked up, and walked over while drying them.

“How can I help?” He asked, shooting a glance to the alien.

“The alien wants to help out,” the Officer explained, indicating Hallian. “Doctor’s code or something I guess, supervise him or find someone to do that. This is your specialty. If you think he’s a risk, send him back. I’ll defer to you.”

“Yes sir,” the doctor nodded, and then looked at Hallian. “Doctor Abraham, ADVENT Medical Corps. If you really want to help, follow me.” Without spending any more time, the doctor turned and walked over to one of the wounded who had just been brought in, with Hallian following close behind him.

Cambodian Forward Outpost of the Harbinger – Cambodia

5/1/2017 – 12:20 A.M.

“My personal assessment, Harbinger?”

Patricia could make an assumption of what he was going to say from his projected emotions, but motioned him to continue. “Of course.”

“It is a stalling tactic,” Marian said, swallowing, but continuing. “They are exploiting your psychological vulnerabilities. XCOM and ADVENT gain far more from this level of capitulation than we would. The only reason to indulge is ideological, and right now I can guarantee that it would result in public embarrassment for us and we would walk away with nothing but a piece of
“I concur, Harbinger,” Assimilator-2 agreed, looking down at her. “This is the equivalent of such a proposal taking place on Vitakar. The population is predisposed to a certain view regardless of appeals, facts, and insistence. De-radicalization and de-programming do not happen in a span of weeks, but months or years. Even with accelerated programs proceeding now, not Humans, nor most sapient species, change their minds immediately.”

“I see where you’re coming from,” Miriam said, leaning against the wall. “But the Chronicler is smart. I read the very extensive profile the Zararch had on you; and you can be played if someone says the right things.”

Patricia pursed her lips. “Not easily.”

“No, but it’s going to bother you, I can tell,” Miriam said knowingly. “You really, really, don’t like walking away from proving someone wrong, even if it’s impossible or it wouldn’t work for you. Well, with all due respect Harbinger, please move past your pride and understand you don’t have to prove anything.”

Patricia scowled, because she could understand the cyborg wasn’t completely wrong. “I dislike backing down in this manner. It will be used against me.”

“I will point out, Harbinger, that you do not have a shining endorsement from ADVENT right now,” Marian said, coughing slightly. “You must understand that no matter what you do, ADVENT will attack and belittle you regardless of the outcome. Their approval is not something to be sought.”

“Something the Battlemaster would do well to remember more,” I’Sari rumbled. “This does not gain us anything worthwhile, and we stand to lose much.”

“A question, Harbinger,” Casas lifted a hand, eyes seeming brighter than usual. “Have you spoken to the Imperator about this?”

“No, I wanted to get your input first,” Patricia answered with a shake of her head. “If you thought it was worth doing, I’d bring it up. If not, then I won’t waste his time. He’ll learn it eventually, but as it stands…well, it seems to be a universal no.”

“A fair assessment, Harbinger,” Assimilator-2 agreed. “While your ideological reasons for consideration are admirable, it is not a wise strategic or practical decision.”

“At least I know now you’ll tell me if I’m making a mistake,” Patricia took a breath and leaned on the holotable, looking at the unlit board. “With all this said, we need to make adjustments to our own strategy. The Chronicler was right when he said keeping us occupied isn’t ideal. The plans stall considerably when held up in one or more locations.”

“Special Forces strikes against European nations?” Marian wondered. “It could draw away the Chronicler and other Agents of T’Leth.”

“Won’t work,” Patricia rejected. “I’m the largest threat. They know that. XCOM will be sent, or ADVENT to deal with a problem like that.”

“Perhaps if you are presumed somewhere else, they will be forced to move,” I’Sari proposed. “It would allow us to proceed.”

“And be wiped out by Aegis,” Miriam grunted. “The Chronicler isn’t the only heavy-hitter
ADVENT has.”

“And the Chronicler can teleport, as can Fiona,” Patricia reminded him. “Wherever I go, they will follow.”

“You really don’t believe you can beat him?” Marian asked, cocking his head.

“Alone? Perhaps,” Patricia mused. “He’s strong. I could probably drive him off though. We’re… very even. Superhumans who can’t be killed by mortals, only those who are like us…” She trailed off, a new thought entering her mind. “Perhaps that’s it…”

“What is?” I’Sari asked.

“I believe I have determined your assessment,” Assimilator-2 said slowly. “Your personal attributes and skills have not been adequately utilized in pursuit of the greater strategy.”

“Along those lines,” she smiled, feeling far better than she had a few minutes ago. “The best way to escape a stalemate is not being in one in the first place.”

“I don’t follow, Harbinger,” Marian said, picking up a datapad preparing to make some notes. “What are you thinking?”

“That my forces are going to have to be able to win this war without me,” Patricia said, turning on the holotable. “But the good news will be that XCOM, and T’Leth will be similarly paralyzed. They can stand against me, but those who follow them cannot. Perhaps they should be reminded of that.”

***

ADVENT Trauma Center, Tampa – Florida

4/30/2017 – 9:39 P.M.

Working with Human tech was a curious, if somewhat frustrating challenge. He only had so much modern medical equipment and medicine, and it all needed to be preserved for Yang. So instead he worked with simple bandages and the most basic application of medical nanotech which could barely do more than seal wounds.

Abraham, the medic, was the most professional Human Hallian had interacted with thus far. Direct, friendly enough, and good at his job. Hallian realized that at least both of them had the same objective in this case, which was saving as many people as possible. For Hallian it was easier than treating Collective soldiers, since ADVENT soldiers were almost always some variation of burns from plasma, with the occasional missing limb or shrapnel.

“You’re remarkably good at this,” Abraham said after they finished on a soldier who’d taken several direct shots. “You’ve worked on Humans before?”

“Not especially,” Hallian refuted, as he washed his hands. “Since I’ve come to Earth, I’ve found a few, but these types of injuries are fairly easy to treat and are common on battlefields. Vitakarian and Human physiology is remarkably similar, the former of which I have a lot of experience in. I am less comfortable performing invasive surgery on Humans, but I suspect I could do it without significant issues.”

“I see,” Abraham tossed him a towel. “I’d ask where you went, but I know I wouldn’t recognize it. I assume you have alien medical schools, right?”
“We do,” Hallian nodded. “The Ligna Hospitals. Every region has at least one. Highest standards too, have to be able to operate on every current member of the Collective. Vitakara, Andromedon, Sectoid, Muton,” he counted them off on his fingers. “I believe they recently added Humans to that list.”

Abraham looked at him oddly. “Ligna as in Sana’Ligna? The Ethereal?”

“The very same,” Hallian confirmed. “I met her once. It was incredible to see her work.”

“Yeah, I bet,” Abraham grunted. “Suppose I should give her some credit, at least she’s not fighting for the wrong side.” He coughed awkwardly. “Well, you know what I mean.”

Hallian waved a hand. “Let’s not get into that right now. We’re not done.”

“Nope, we aren’t,” Abraham cracked his neck as they moved to the next group of wounded soldiers who had been brought in, these ones more severe than the previous batch. “I don’t know whether to be grateful or sad that a damn alien is somehow more competent than a lot of my assistants.”

Hallian handed him some bandages, med-kits, and helped remove the armor to get to the wound. “If it helps, I’m one of the more experienced medics for the Collective.”

“Makes sense,” Abraham sprayed the med-kit on the burn. “Battlemaster wouldn’t have sent a novice to keep his pet alive.”

Hallian winced. “I don’t think she’s really a…pet.”

“Figure of speech,” Abraham shrugged. “Humans have a lot of those if you didn’t know.”

“So I’ve heard,” Hallian said neutrally, figuring it best not to press on that topic. This Human may be nicer than a lot of them, but he definitely harbored resentment for the Collective. Admittedly not without reason…but it didn’t make Hallian really feel comfortable. “Humans seem to have a lot of ways to get around saying what they mean.”

“That we do,” Abraham nodded. “But I think we’re getting better on that front. Slowly.”

Both worked with minimal conversation for the next while. Hallian wasn’t keeping track of the time, and instead just focused on moving from soldier to soldier, helping Abraham stabilize them. The wheeling in of carts sounded as more were rolled in, more wounded soldiers on them, most knocked out or half-conscious.

Abraham gave a low groan, and Hallian sympathized, as it seemed they were just starting to make a good amount of headway. “They don’t pay me enough for this,” Abraham muttered, as he disposed of his bloodstained gloves once more.

Hallian frowned, blinking. “You get paid?”

“Figure of speech,” Abraham repeated, then shot the Dath’Haram a suspicious look. “Wait. What do you mean ‘you get paid’? You mean you don’t?”

“Not…exactly,” Hallian considered how best to explain it. “Not in money, no, but I get housing, food, medicine, essentially everything I need to survive. Currency as you have on this planet, is not really something we have on Vitakar.”

“Huh,” Abraham mused. “So what do your people work for then? What do they get in return?”
“I…” Hallian didn’t really understand the question. “They get to do what they trained for? What they want to do? Very rarely do Vitakara get something in return, unless it’s a trading or negotiating job.”

Abraham suddenly burst out laughing. “You’ve got to be kidding me.”

Now Hallian was confused. “Well, why would you want to have a job doing something you didn’t want to do? I don’t really understand why that’s a motivation for your species, I’d think it’d just make you miserable.”

“Eh, depends on the person,” Abraham chuckled, wiping some tears from the corners of his eyes. “I get what you’re saying, but it’s hilarious how you aliens are a bunch of communists. I’m shocked ADVENT hasn’t run with that yet.”

“What’s a communist?” Hallian inquired as they prepared to start work.

“If we have time later, I’ll tell you,” Abraham said. “Come on comrade, let’s finish this up. If we’re good enough, we might be finished before the sun comes up.”

***

Collective War Camp, Clearwater – Florida

4/30/2017 – 11:17 P.M.

The room they had set aside for him was not terrible, all things considered. It was fairly small (though with a tall roof which he assumed was to account for the Battlemaster), but it had a small bed, a fridge, table, and seats. Blankets, a medical kit, and other small necessities, including some chips he assumed they’d taken from a store, were also set out.

Homey.

He set out his clothes for the next few days, ate some of the food, and waited while thinking of what he’d experienced so far. His time had been largely insulated, but it was only the first night. He’d certainly attracted a notable amount of attention, though he and the Battlemaster hadn’t spoken much, outside of him saying he would return.

There were two Custodians guarding his room, and he presumed those would be his escorts through the ceasefire. A shame; he would have preferred living guards. Those he could talk to, get to know a bit. He didn’t know if it was actually intentional on the Battlemaster’s part, and knowing him, it was not for the psychological effect, but because Custodians were among the most dangerous infantry units the Collective had, and for a guest like him, such precautions made sense.

He’d rearranged the small table and chairs, and set out the chess board he’d brought along with him. It almost made him nostalgic for the many games he’d held in his cell…it seemed like a long time ago, but in reality, it was only a couple years. Too long since he’d played a full game with a somewhat competent opponent. Vahlen, for all her brilliance, was not a good chess player.

The Commander looked to the door, sensing something was off. The ring he wore protected against telepathic intrusions, but he could still tell when something had shifted, even if only minutely. He leaned back as the door slid open and the Battlemaster walked inside. Interestingly enough, he was…different.

He’d never seen the massive Ethereal in anything other than his armor, but now he wore…well, it was armor, but less of it. Closer to something Macula or Caelior wore. His leisure outfit he
supposed, and he wasn’t carrying his weapon, or any weapon the Commander could see. Once he stepped inside, he reached up with his upper arms and removed his helmet.

The Commander raised an eyebrow as the Battlemaster walked over to him, setting the helmet on the floor as he took a cross-legged position on the floor, as the chair was far too small, and even still he was above eye level. He was surprised the Battlemaster had taken off his helmet, something that most Ethereals, even Aegis, didn’t do. Perhaps a sign of respect, or perhaps it was a quirk Aegis had failed to mention or didn’t know about.

“Battlemaster,” the Commander glanced around. “Reasonable accommodations, I appreciate it.”

“Good,” the Ethereal answered. “I am making an assumption my Harbinger will receive quality treatment. It is important that yours is equivalent.”

“She is,” the Commander nodded. “I would say it is a pleasure to meet you, but I would prefer not to lie.”

“Not a pleasure, Commander, but our meeting is long overdue,” the Battlemaster stated. “It is because of both of us that we are in this phase of the war.”

“I doubt that,” the Commander laced his fingers together. “If it wasn’t for me, there would be no force to oppose you. The war against us would continue regardless of if you were in charge or not.”

The Battlemaster hesitated. “Perhaps. I lack your radical tactics and willingness to go to the lengths you do to achieve your goals.”

Interesting. “I did not expect you to admit to that.”

“It is an observation, Commander, not what I consider a flaw,” he answered flatly. “We are similar in some ways, but we are not the same. This war has taught me much about myself, and I suspect you as well. I have come close to death before, I have suffered defeats, and each time I learn from them.”

“As we have noticed,” the Commander moved a chess piece forward to start the game. “You know that you can’t survive forever.” He nodded down. “And your move.”

The Ethereal blinked his fiery eyes. “A game of chess?”

“Good. You know what it is.”

“A favored game of strategists and military leaders,” the alien recalled, a tone of sarcasm in his voice. “Supposedly a strategy game. I did not see the similarities before, and I do not now. This game does not simulate battle or strategy in any realistic fashion.”

“Oh no, it definitely doesn’t,” the Commander smiled. “Anyone who says that is just trying to impress someone. I personally play because I enjoy it, not to enhance my so-called ‘tactical skills’.” He looked to the board, resting his chin on his folded hands. “Although one thing I have noticed is that it can show an interesting amount of a person’s priorities with how they treat their pieces. There are several types of people who play chess. The ruthless, the conservative, the aggressive, and the lucky. You can win with any of them, but they reflect how a person will act in a situation where decisions must be made.”

“A significant assumption, Commander,” the Battlemaster telekinetically moved a pawn forward, his fingers too big to properly pick up the pieces. “And you want to learn what my priorities are? I would be surprised if you didn’t have a dossier on me.”
“We do, and I can make a prediction,” the Commander said, moving his own pawn forward. “I’m curious how close it will be.”

“As am I.” They played in silence for a few minutes. “I am curious, Commander. Do you believe you can win? Regardless of your answer, I do not intend to share it.”

“So long as you answer the same thing,” the Commander shrugged. “I define ‘winning’ as the Imperator dead, the Collective shattered, the Bringer destroyed, and your species reduced to a degree where they cannot threaten our species again. Preferably Mosrimor dead, but I suspect he will flee long before that point. Since we’re being honest, I cannot say for certain that victory is assured, but I can say that I will die before I allow Humanity to fall to you.” He moved his piece. “Your turn.”

“Your war is ultimately irrelevant,” the Battlemaster almost sighed. “This conflict is irrelevant. Aegis has shared how our Empire fell to the Synthesized. I know they are still out there, and it does not seem like the Sovereign Ones are capable, or even interested in, stopping them. It does not matter which of us wins, Commander, because they will come again.”

“I’m aware,” the Commander nodded. “And that is a concern. One that ADVENT and XCOM will address. Unfortunately, we’re already in a war for the future of our species, and until we secure this, worrying about a future conflict is…unwise.”

“I do not begrudge that,” the Battlemaster said. “You do understand that even should you win, you will not be free.”

“T’Leth, I presume?”

“The Imperator is not wrong about this,” the Battlemaster said slowly. “Allying with this Sovereign may be something you consider necessary, but he is not your ally. Not truly. An ally who can assume control of your species should he desire it is no ally, but a benevolent overlord. You have none with the power of the Imperator who can stand against them. Your dream of an independent Humanity will never be realized so long as you ally yourself to a Sovereign One.”

“And the Imperator is a better alternative?” The Commander asked, pinching the bridge of his nose. “But I am aware of the implications.”

“Then why take the risk?”

“What would you do?” The Commander demanded, pursing his lips. “We’re outnumbered, outmatched, have inferior technology, and a space force nowhere near your own. Surrender isn’t an option, not now. Your Collective pushed us into a corner, where our most reliable means of survival is an entity that could one day turn on us.”

He moved a piece, sighing. “I’ve spoken with T’Leth a number of times now. I don’t believe he’s interested in taking control of us, but he certainly considers us useful. Admittedly because I helped him recognize that, but the point stands. But you’re also right. One day that could change, and what can we reasonably do to prevent that?” He looked up at the Battlemaster. “And at the same time, if we don’t, we lose.”

The Battlemaster said nothing for a few minutes, and they both moved their pieces. Despite seemingly not playing the game before, the Battlemaster was holding his own fairly well. Neither of them was deliberately sacrificing pieces, but had moved to a move-countermove stage of the game, where both were trying to lead, anticipate, and trick the other.
Difficult to determine who was winning.

The Commander finally broke the silence. “This entire conflict is unjust and unnecessary, and I believe you know that. If you had just came peacefully, I suspect that we would be a willing member of the Collective, for better or worse.”

“I had initially thought similar,” the Battlemaster admitted. “But I had orders, and later the reason was revealed. I do not know how the Imperator determined that T’Leth was on Earth, but in hindsight it is understandable.”

“No, it isn’t,” the Commander shook his head. “You invaded a world which had done nothing wrong, abducted thousands of our people, and it becomes justified when there was something else – which also hadn’t done anything wrong – also on our planet.” He was able to capture a piece as he continued. “I know you have an honor or code you follow, and I can respect that to a degree, but you don’t follow it where it matters most.”

“I also follow orders Commander,” the Battlemaster pointed out firmly. “I had little reason to doubt the Imperator, and I followed his orders. You would not have, but you have also not faced the machine hybrids which ravaged worlds, or seen how through the Imperator we were able to just barely survive. I knew I could trust the Imperator, and I will not apologize for that, no more than your own soldiers follow your orders.”

The Commander picked up on something very important there. And very interesting. “But you don’t anymore.”

“I do not support the Imperator’s plan,” the Battlemaster said. “I suspect my actions have revealed to you as much. I would see Paradise razed to atoms, divest ourselves from the whims of these Sovereign Ones, and focus on the true threat to this galaxy.”

“Yet you still wage this war,” the Commander shook his head. “You know you’re on the wrong side here, but you continue regardless.”

“Wrong is a strong word, Commander,” the Battlemaster said in a low voice. “Your people ceased to be helpless when they accepted the help of a Sovereign One. I wage this war to end it, regardless of intentions, T’Leth poses a threat to the Ethereal Collective, and it is my duty to defend it.”

“Excuses,” the Commander pressed. “You’ve helped us when you didn’t have to. Paradise. Isomnum. You know what you’re doing, and try to assuage your conscience by doing the bare minimum; to try and forget what the Imperator intends for anyone who defies him. The Imperator may want to assimilate our species because we are not ‘under its influence’, but do you really think he’s going to treat others the same?”

The Commander looked the Battlemaster directly in the eyes. “Let’s consider for a moment what happens if you win. If I die, Humanity is assimilated, and T’Leth is killed. The Imperator doesn’t care about the Synthesized, he wants to destroy the Sovereign Ones in a misguided crusade. Assume that he harnesses this Bringer. Do you think he’s going to not use it?”

He tapped a finger on the table. “You’ll see planets of species under another Sovereign fed to that creature. There will be no conventional war, there will only be a slaughter matched in equal barbarity in a desperate high-level conflict. You see what happened in Beijing, and now realize that applied on a galactic scale.” He moved a piece aggressively. “And are you going to let that happen?”

“I do not believe that will happen,” he said. “Nor will I let it.”
The Commander snorted. “You lie and you know it. The death of T’Leth will solidify the loyalty of the Ethereals to the Imperator, either out of fanaticism or fear. Your token resistance and hand-wringing will mean nothing to him should he win here. Your only options will be to leave in disgrace, or die. You are replicable, Battlemaster, and if the Imperator judges your worth as lost, he will cut you loose.”

The Battlemaster shook his head. “If that was the case, Commander, he would have only surrounded himself with loyalists. He does not sacrifice or remove individuals in that way.”

The Commander crossed his legs, looking down at the board, though thinking about where to take the conversation, which had not gone in the direction he had anticipated. “Perhaps he changed. He knew nothing of the Sovereign Ones before awakening. When he learned…you saw how his priorities changed. He wants to break a cycle, and in doing so, ensure the galaxy remains locked in a new one.”

“I will pose the question you posed to me earlier,” the Battlemaster said after a short time. “What options do I have? I could abandon the Collective, but I will not do that. There are too many who rely on me, and to do so would be cowardice of the highest level. I am aware of my limitations, Commander. I lack the power to stop the worst actions of the Collective, and the Imperator prioritizes his own plan over all else, and while he would not kill me, he could remove my authority.”

“Would you let him?”

“Not willingly.”

“Then maybe you should push harder,” the Commander suggested. “You are perhaps one of the only Ethereals who maintains popularity within the Collective and holds professional respect among my species. You have the power to make an impact, and you deliberately choose not to. Why?”

“Causing such a schism would be beneficial to your species,” the Battlemaster noted. “I know what you are doing now, Commander. Manipulating me is not as easy as that.”

*Perhaps not, but you’re definitely thinking about what I’m saying.* “Am I? You’re not a completely mindless tool of the Imperator, much as your actions indicate such at times. You’re not a fanatic. If you hadn’t had doubts before, you would have denied them much stronger than this, if you had bothered to listen at all.” He smiled. “Ironically, I’m the only person who can broach something like this and it not be treason.”

The Battlemaster unexpectedly chuckled, a low rumble as he claimed one of the Commander’s knights. “And just what should I do, Commander? Surrender myself to you? Lead a coup against the Imperator? Withdraw all forces from Earth? Do you really believe any of that would change a thing for you? Do you really believe such solutions are so simple?”

“Not as simple as you make it sound, but yes,” the Commander uncrossed his legs and leaned forward on his knees. “I was once a good soldier who followed orders too, regardless of how valid or intelligent they were. Then when I saw what the actions or inactions I was allowing to happen were causing, I had two options. I could stand by and allow it to happen, or I could do something about it.”

He leaned back. “I prefer to solve a problem than letting it perpetuate. I knew what the solution was, and what needed to be done. You know my history, so I won’t repeat too much of it. My superiors during the War on Terror had their own plans, ones they believed would work. I knew
they wouldn’t, and their objectivity was compromised since the conflict was another tool to them. So I acted. Regardless of what history decides, my actions ended the conflict and led to extremist ideologies being purged throughout the world, as well as those who followed them. My reward for that was years in prison, years I lost, but which I don’t regret.”

He paused. “In a way, it was the best I could hope for. I expected to die for what I’d done, and with that in mind, prison wasn’t so bad. Regardless, it was a sacrifice I made, and given the chance, I would make it again.”

He moved another piece. “More recently, I was placed in command of XCOM. Not without controversy, and there were those who sought to control me and limit what I knew had to be done. The Council of Nations believed they knew what was best for Humanity, and had I not acted, our species would have capitulated. But instead I removed the obstacles necessary to establish ADVENT and defend my species. None of these actions were easy, but it simply came down to identifying a problem, and taking steps to remove it.”

He paused. “I don’t know what that looks like for someone in your position. I do not know the right path, but I do know that the Imperator is the root of all the problems in the Collective. If he remains unchecked, he will turn everything you support about the Collective against you, or into something unrecognizable. The Collective is a tool to him, as are you.”

Both played for a few more minutes in silence, then the Battlemaster moved his queen forward. “Checkmate, Commander.”

He’d seen the signs, but there had been three things the Battlemaster could have done, and he’d unfortunately guessed the wrong one. A shame, as he was only a few moves from a checkmate of his own. “Good job.”

The Battlemaster lowered a hand as the game was concluded. “Did I perform as you assumed?”

“Almost,” the Commander looked over the board. “I was wrong about one thing.”

“Which was what?”

He scratched his chin, thinking very hard both about the game, and what they’d discussed. “That you’re far more deceptive than I believed.”

***

Testing Range – The Hall of Steel

5/1/2017 – 10:17 A.M.

The testing range was an area that was both familiar and alien to her, and Abigail didn’t fully know why that was the case. So many things seemed familiar; the constant sound of weapons fire, the parade of individuals going in and out, the targets going up in smoke or disintegrating from a well-placed shot.

But…there was something off about it she was trying to figure out. It wasn’t the aliens, she’d eliminated that possibility. It was something deeper, more intrinsic than that. She thought it was connected to XCOM…they must have had a firing range. Had she visited one often? Were there similarities to it that she was just forgetting?

She’d been firing various weapons for over five hours now, processing things she’d seen and read in the past month she’d been here. A renewed war, ADVENT losing ground in some places, and
holding their own in others, the ceasefire in Florida, some Vitakara leader emerging from nowhere
to do…something.

As for herself?

Little luck.

At so many times it seemed like she was _just_ on the verge of remembering something important,
something crucial about herself. But it stayed out of reach, and she didn’t know what the next steps
were. Liam recounting their discussions didn’t trigger anything she didn’t already know, nor did
reading her file or other information collected on her.

Reading the profile…there were things in it she didn’t know how she’d done. Her suspected
activities with XCOM Intelligence, her work in Australia, her connection to the Agents of T’Leth,
it felt like a completely different character than who she was, and that bothered her. She felt like
there should be _some_ kind of kinship or common ground, but the entire time the thought of ‘There’s
no way I could do that’ kept popping up.

Was she regressing? At times it felt like she was, but the problem with that was that she had _no_
baseline to compare to. She wasn’t the Abigail of the pre-joining XCOM, good at her job, but a bit
unsure and timid. If anything, she was disconcerted about how _skilled_ she was in certain things,
skills that she didn’t know she’d possessed.

As she’d been observing in her time shooting.

She fired the plasma rifle almost without thinking, and it blew the head off the target. Intrinsically,
she knew to some degree that her sudden aptitude with weapons was something Fectorian had
enhanced in her, but she’d run the numbers compared to the other cyborgs in Fectorian’s army, and
while all of them almost always hit the target, she alone had a 100% accuracy rating.

It wasn’t just rifles either. Pistols, sniper rifles, shotguns, all of it she achieved perfect accuracy in
without necessarily trying that hard. She lifted, aimed, and shot within what felt like an instant.
Each time she felt something like a rush, but not fully; not enough to distract her. Each weapon she
felt like she knew oddly well too, despite being fairly certain she’d not wielded any before.

Recoil didn’t exist thanks to her enhanced strength, or at least not enough to affect her much. After
some thought, she believed she had narrowed down the unsettling feeling to the knowledge that if
she wanted, she could probably fight almost anything and she would have a fairly good chance of
winning, which was mildly alarming to her since she did not believe she possessed that capability
before.

A soldier she’d been, yes, but clearly not an invincible one.

Now the capability to take life so…_efficiently_, it bothered her. Potentially a holdover of her medical
training; a desire to do more good than harm. Her old self had likely interpreted her switch to an
intelligence agent as fulfilling this, which led to another thing, and then to what she’d become. It
wasn’t necessarily _bad_, but right now, Abigail didn’t feel the same way.

Perhaps, she mused, that would change.

But if she didn’t change…she sighed, wondering how long she wanted to keep waiting and hoping
that something would trigger in her mind, something that would get rid of the uncertainty and
make her whole again, instead of a disparate collection of feelings, information, and physical
features. She looked like Abigail, she sounded like her, but she wasn’t her.
Even if she somehow remembered everything, she wasn’t sure she’d still be the woman Abigail had been.

She raised her head, suddenly aware that Liam had entered the training range. She had become very attuned to when he came up near or around her, it didn’t matter where or what she was doing, she’d notice. She attributed that to her connection to him, and the enhancements Fectorian had added.

“Guess you escaped the chair,” Liam said, referring to the interrogation chair that Fectorian interviewed her in.

“Hardly,” she shrugged. “But it was a short session today. I don’t know why he insists on continuing to do it.”

Initially she’d thought that Fectorian wouldn’t do the polygraph-esque interrogations, but those had oddly enough become a regular thing, where sometimes he would ask different questions, but many were the exact same, or at best some slightly different wording. “He didn’t tell you?” Liam cocked his head. “Or you didn’t ask?”

“I…” she paused. “Well, I didn’t ask.”

“Personality drift,” Liam answered. “To see how your answers match against previous ones. Deviations could be because of new memories or information…or a developing personality organically. You’re a unique situation, and Fectorian wants to make sure everything is within certain parameters,” Liam paused. “Admittedly, the specifics I don’t know, but that’s why he’s continuing to do it.”

Abby suddenly stiffened. “And…what happens if I go outside those parameters?”

He realized what that implied and quickly moved to reassure her. “No, no, don’t worry about that. Nothing’s going to happen, and after a certain point, you’re going to go beyond it. Especially if none of your memories come back.”

Abby rubbed her forehead. “I don’t know what to do about that. I’m not sure what more I could do except going back to XCOM. But Fectorian…” she trailed off.

“Too risky, so he says,” Liam nodded. “Although between us, I think he’s waiting for something to happen. With what the Collective has access to, it isn’t difficult to mock up someone who looks like Abby and with the right story, it could work. But XCOM will be suspicious, not to mention T’Leth.”

“I know,” both of them walked to sit down. “I just want to do something more than sleepwalk through my time here. There are things I’m curious about, things I want to do, that I pull myself back from because I don’t know if it’s something she would have done or liked or been interested in, and could ensure I don’t remember anything.”

Liam pondered that for a minute. “I’d talk to Fectorian about that. If it was up to me, I’d say do what you want. I’ve been around you enough to know that you’re still fundamentally Abby, but I get why you’re afraid of moving beyond that.”

“Thank you,” she said quietly, looking sightlessly out into the range as the station hummed and weapons fired. “I think I’ll do that.”

***
The Commander was slightly surprised that he had as much freedom of movement as he did. The previous day he’d mostly spent the day wandering around the Collective base, making note of a number of installations, potential critical points, and some of the routines that seemed to exist. A few more days would offer firmer confirmation, but it was a good start.

Although it wasn’t full free movement, as many of the actual installations he couldn’t enter, not to mention he was accompanied by his Custodian guards at all times, and he’d noted no fewer than four aliens of the various Dath’Haram races watching him; some covertly, following him fairly discreetly, while others were more open, carrying sniper rifles they had trained on him from watchtowers or elevated positions.

They were very paranoid he was actually going to try something, which he found amusing.

Then there was the very out of place Human who the Commander legitimately had no idea who he was. At first he’d wondered if it was another captive, but the way he walked around had a blustering authority to it which marked him as another traitor, albeit one he didn’t know about. Potentially a psion, but he couldn’t confirm because the man hadn’t approached him yet.

The Commander doubted he was actually supposed to be watching him because he was remarkably bad at being discreet. It was almost comical how bad this person was at tailing and observing someone without them noticing. Even by the Commander’s standards, it was a poor showing and the man clearly didn’t realize that you had to do something a bit more complex then immediately turn around or pretend to be busy when your target glanced your direction.

Being a Human in a middle of an alien base was also a strike against his espionage skills.

One of the few places he was able to enter was their equivalent of a mess hall, which housed primarily alien food, although he’d received a list of substances which were “supposedly” safe for him to eat. Though he’d stuck to water and taken from the Human foods which had been placed out, seemingly as some kind of prize from the stores they’d captured.

The aliens did seem to like the chips, judging from how many were scattered throughout the tables, and there were a number of them who were just carrying around a family-sized bag and eating from it. It was somewhat amusing to see.

When he entered, he definitely attracted some attention, judging from the glances and whispers directed towards him. It wasn’t to quite the extent of his first days here, but it was still enough to cause a small scene. He gave a smile and short wave before getting some water and cookies – chocolate ones which sadly meant no Vitakara could eat them unless they wanted to experience a high.

He was mildly surprised they were just set out, but maybe the Vitakara were now treating it as a substance closer to caffeine than a recreational drug. Or maybe it was safe in smaller quantities. He located a table that was sparsely populated, and walked over to it, approaching close to two Vitakarians who looked over to him in a combination of wariness, fear, and uncertainty.

“Hello,” he greeted. “Is this place open?”

Hesitantly, the first one nodded, and the Commander sat down and began eating from his fairly sparse plate. There was an awkward silence for a few minutes with all of them eating and trying not
to focus on the other, before the Commander sighed. “You can talk to me; I’m not going to do anything that’ll get me shot or you in trouble.” He frowned. “Or can you not understand me?”

“No, we can understand,” the first Vitakarian said. “We…usually do not speak to enemy combatants.”

“Or leaders,” the second said.

“Fair enough,” the Commander nodded. “It’s uncommon, especially in the middle of a war, but as long as I’m here, it’s always good to learn from the opposing soldiers. The only perspective I have is from Vitakara who’ve defected, which is not necessarily accurate anymore.”

There was a visible reaction to the word defectors, one that was fairly subtle, but oddly enough wasn’t based in anger, but fear. “We should not talk about defectors,” the second said slowly. “But you are correct that they know nothing of importance.”

“Yes,” the first agreed emphatically. “If their belief in the Collective was so weak, we are stronger without them now.”

“And if you don’t mind me asking,” the Commander said, pushing the now-empty plate away. “What makes your belief in the Collective so strong?”

“You have met the Battlemaster, Commander,” the first one said. “He is the strongest example I can point to of the strength, power, and wisdom of the Elders. They took us from a dying species and transformed us into what we are today, and we can never forget that, and one day they will raise us further.”

“I see,” the Commander nodded, currently uncertain if this was something they actually believed, or were saying because this conversation was doubtless being monitored. “So you’re fighting in this war because you believe them?”

“We fight in this war because we joined the Runianarch and the Elders decreed that this planet was to be conquered,” the second said. “It is as simple as that.”

The Commander raised an eyebrow. “In that case, perhaps you can answer the question of why they invaded my planet? Did we commit some crime unknowingly against your people?”

The two Vitakarians didn’t seem to know how to effectively answer that question, judging from the long pause. “That…is not for us to question, Commander,” the first effectively shrugged. “I believe you might know the reason more than us, but we trust in the Elders that their decisions are sound.”

“Ah,” the Commander nodded. “So you’re fighting and dying in a war, and you don’t know why? Or what the reason is?”

“Commander!” A new voice interjected harshly. The two Vitakara stiffened, as the Commander looked back and saw the unknown Human striding towards them, looking highly irritated. “We need to talk.” He looked to the Vitakara. “Leave.” His eyes dimly glowed with psionic power and instantaneously the Vitakarians stood and left, blank expressions on their face.

So he was a psion then, a slightly temperamental one too.

One who also seemed to use his power unnecessarily.

“You didn’t have to psionically command them,” the Commander said as the Human took a seat opposite him. “I’m sure they would have left if you’d asked.”
“Likely, but I also had to purge that conversation from their minds,” the man said, glaring at him. “Do you really believe that I will allow you to sow division in the ranks so easily?”

“If asking questions is all it takes to ‘sow division’, then perhaps there are deeper problems,” the Commander smiled grimly. “Between us, I think if you’re going to order soldiers to go to their deaths, they should have a reason to believe in, or at least they should know why they might die in this war.”

“Unnecessary,” the man dismissed with a wave. “We face no rebellion. We win, and they will soon forget any doubts they have, should they possess any at all.”

The Commander cocked his head slightly, looking at the man in confusion. “If you don’t mind me asking, who are you?”

“You don’t know me? Good,” the man smirked. “I am actually a consequence of you, if I remember right.”

“No, I think I know who you are,” the Commander clarified. “You’re that psion who our Priests detected. A fairly clumsy one too, but I appreciate you exposing yourself so we could properly defend ourselves. However, beyond your general ineptitude, I don’t know you personally.”

The man lost his smile. “You’re not in friendly territory, Commander. You’d do best to remember that.”

“Really,” the Commander was now wholly unconcerned. “Even if I can only speculate, I suspect that you hold no power over the Battlemaster. If I am harmed, it will be on his orders, not because I hurt your pride.”

“So you believe,” the man narrowed his eyes. “But you would be wrong. I am Ivan Smirnov, Harbinger of the Overmind.”

The Commander awkwardly coughed, resisting the urge to laugh and instead settled for looking at Ivan in disbelief. That was something that he hadn’t expected, and it didn’t really fit with anything he knew about the Overmind. “Is that so? How did that happen?”

“Well, let’s go back a couple months,” Ivan crossed his arms. “Due to changes within ADVENT, no doubt spearheaded and approved by you, my job was effectively eliminated. Seeing no other option, I decided to try and apply to the PRIEST Division. As it turned out, I was a powerful psion, but they refused to awaken me saying I wasn’t fit for them.”

Huh. “From what I see, they made the right call.”

“Perhaps if the Overmind hadn’t given me an alternative,” Ivan smiled darkly. “It’s a shame, because I could be fighting on your side now, and instead the power which is rightfully mine is turned against you. And since I believe you had a hand in determining the requirements, this is entirely your fault.”

Right now he was more confused and relieved than intimidated by this man who believed he was powerful, but in reality was…almost sad. Well, now they had a case study to point to for justifying the requirements for awakening, because giving psionics to someone who wasn’t responsible enough to use them would give the world someone like Ivan.

“I suppose I should accept responsibility for that,” the Commander nodded. “However, I believe we will be able to handle you, especially if your recent performance is anything to go by.”
“Don’t get cocky, Commander,” Ivan warned. “Especially not here. The Battlemaster may not have
the will to treat you as the threat you are, but I am not so blind. I will be watching you.”

“Duly noted,” the Commander took a drink of water. “As enlightening as this conversation was, I
believe I have other and more important things to do than listen to someone who makes vague
threats and who has little true authority.” He fixed the traitor with a firm stare. “I have a short list
of people I fear or who I have concerns about, Smirnov, and you are not one of them.”

“I don’t fear you, Commander,” Ivan sneered. “Underestimate me at your peril.”

“You shouldn’t fear me,” the Commander agreed. “You need to actually pose a threat for me to
take your contributions into account. But all the same, I would avoid targeting me, because there
are a number of people who take my safety seriously, and while you may not fear me, you should
fear what Vahlen would do to you if you fell into her grasp.”

He gave the man a mock salute before walking off. “Good day, Smirnov. I doubt we’ll meet
again.”

***

ADVENT Trauma Center, Tampa – Florida

5/3/2017 – 8:09 A.M.

Her gradual return to consciousness was slow and elongated, like she was being drawn out of warm
water to a much harsher climate. Sounds came first, a screeching symphony that seemed
unnaturally loud and chaotic. She felt a brief moment of panic since she couldn’t move her body,
but then managed just a millimeter and her arm shot jolts of pain through her body.

Voices were becoming clearer, the clearest one of which she didn’t recognize.

“-waking up now, careful, she’s going to be out of it for a few minutes.”

“I’m aware.” The voice of the Battlemaster? It had to be him. “And it is safe?”

“Yes, I’ve made sure she can’t injure herself. Just make sure she doesn’t freak out.”

Her throat felt dry and parched, and she felt hot all over. Cognizant enough to begin trying to figure
out what was happening, the first thing she tested was the bond with the Battlemaster, who she
confirmed was near her, a comforting presence wherever she was. She calmed down more, since
she knew that was something that couldn’t be faked.

A few minutes later, with the voices going in and out, she managed to open her eyes and even the
dim lighting was bright enough that she needed to close them immediately, and would have winced
if she could have controlled her mouth. “Light sensitivity, it’s normal,” the first voice said. “She’ll
adjust to it.”

Whoever the person speaking was, he was right, and she eventually adjusted and two faces looked
down on her. A Dath’Haram in a medical uniform, and the mask of the Battlemaster. “Yang
Shuren, can you hear me? Don’t move, just blink.”

She did.

“Good,” the alien nodded. “I’m Dr. Hallian, after the Battlemaster rescued you, I’ve been
responsible for your treatment. You suffered extensive wounds which are still healing, which
requires that you are restricted from moving as your skin regrows.” He paused. “The Battlemaster says you want honesty, so I will say that you are very lucky to be alive right now. Your body was afflicted by both nanites and chlorine-Triflouride, which caused not only superficial and internal damage, but structural damage to your body. You will be unable to fight for a minimum of several weeks.”

Weeks? She couldn’t stay on the sidelines for weeks, especially not with the technology the Collective had. She couldn’t speak, so she tried communicating confusion and alarm through the bond – and deep gratitude for him saving her life, as well as an apology for putting him in that situation. She needed to be better.

She’d made a near-fatal mistake, and was now paying the price of it.

“He is not…incorrect,” the Battlemaster said slowly. “It is not safe for you to fight until your body has been restored and your modifications repaired. Your body is not that of an ordinary Human, injuries take longer to heal. I have assigned Hallian as your personal medic, and you will listen to him and his recommendation. I do not want to see you die because you were impatient. The war will last long enough for you to return.”

She blinked once for the benefit of her new doctor, and confirmed her acknowledgement through the bond, along with curiosity as to what had recently happened. The Battlemaster looked to Hallian. “I want to talk to her alone. Dismissed.”

“Yes, Battlemaster.”

The Dath’Haram moved from her field of view and she heard the door close. “At this moment there is a temporary ceasefire between us and ADVENT.” She widened her eyes at that. “ADVENT and ourselves are using this to reorient our strategies in preparation for when the fighting renews. This required…assurances. At this moment the Commander of XCOM is residing in our base as an observed guest. We are currently in an ADVENT Trauma Center.”

Shock like a bolt of lightning shot through her, realizing where she was, and she was grateful that she was restrained, else she didn’t know what she’d have done to escape this trap it seemed like they were in. “It’s safe,” the Battlemaster reassured her, both through words and the bond, gradually calming her down. “I’ve made assurances. I…am sorry I did this without your permission, but XCOM insisted on an equivalent trade. They will not act so long as the Commander is under my watch.”

Intrinsically, Yang knew she should feel upset that she’d been used in a trade when she’d not even been conscious…but realistically, if she’d been fully aware and the Battlemaster believed this was the right decision, she’d have been the first to volunteer for it. The Battlemaster knew her well enough to know this was something she’d be fine with, but she let him know through the bond all the same.

“It will only be for another two days,” the Battlemaster said. “Adequate time. A limited number of visitors were allowed halfway through. I came today, and the chief XCOM scientist went to see the Commander. When you return, I will be moving you off-world. I have an idea of what could streamline your recovery, but I am uncertain it can be done. I will know shortly.”

She heard the door open again as the Battlemaster straightened. “Do not worry, the next time you awaken, it will be in a far safer place.” He looked to the medic who’d returned. “Go ahead, and thank you for healing her.”

“Of course, Battlemaster,”
The doctor must have injected some more sedatives into her, because a few minutes later she drifted off, clinging to their bond before she slipped away into the darkness once more.

***

Collective War Camp, Clearwater – Florida

5/3/2017 – 10:02 A.M.

Vahlen had her own escort of Custodians as she was brought into the camp, though the machines backed off to let both of them embrace for a short time. It hadn’t been the first time they’d been separated, but this situation was a little different from the danger he normally found himself in. While he still believed the Battlemaster would hold to his end of the agreement, there was always the chance that Ivan would snap, temperamental as he was.

Communicating with Vahlen telepathically was…pleasant, but it simply wasn’t the same as being together. With the amount of thinking he’d been doing in his isolation, always watching over his shoulder for who was following and listening to him, he was probably more stressed now than he’d been in actual warzones.

It was a – perhaps needed – reminder of his own mortality.

Surrounded by aliens and hostile actors with little to no protection would do that to you.

“We might want to move,” he said into her shoulder. “Unless you want to attract some attention.” Some of the Runianarch soldiers had noticed their reunion and were watching from a distance, though more were joining. Ironically, it seemed like they were more at ease when there were two of them than just him.

Perhaps they were thinking of loved ones back on their planet. Observing him and Vahlen was more…relatable and less threatening than the rumors and danger he posed on his own. For the sake of war it wasn’t ideal to realize that the other side wasn’t stoic and evil; but for him it was important to remember that there were only a few entities in the Collective who were the true enemy.

Everyone and everything else was an obstacle to be mitigated, one way or another.

“Perhaps we should,” Vahlen agreed, smiling up at him as both of them separated. “I suppose you could show me around.”

He chuckled. “I never thought I would be showing you around an enemy base, but why not?” Both of them began walking on the roads, with the Custodians following threateningly behind them. Both ignored them, talking openly though privately they forged a telepathic link where they could say what they really meant without threat of eavesdropping.

“I suppose Yang is still alive then?” He said. *Is everything on schedule?*

Yes. *Our territory is nearly primed. Special Forces and our own soldiers are prepping for when the ceasefire ends. A few days at most.* “She is. The Dath’Haram medic hasn’t been idle either. Doctors have said he’s been helping our own soldiers.

“That was actually interesting. *The Vitakara are definitely the weak link in the Collective military. They don’t know what they’re really here for, and it seems to be starting to affect a number of them. They’re loyal to the Battlemaster at most.*
“Yes,” she nodded. “Somewhat surprising, but it appears medics have similar ethics across species.” That makes sense. I don’t know how we can exploit that more than we already have. There isn’t an alternative for them, at least one they’ll theoretically survive.

_Stay is the lesser of two evils, I agree. “I hope the soldiers have treated them well.”_

“There were a few initial issues from what I know,” she said. “But those were resolved.” _How are you, really? You’re stressed and on edge, even more than last night. Does it have to do with your talk with the Battlemaster?_

“That’s good to hear,” He’d kept the details of the talk with the Battlemaster to himself for now since he didn’t want to risk anything leaking, and he certainly wouldn’t put it past the Imperator or Overmind to try and listen in. Even with T’Leth observing, he didn’t want to risk it for the sheer implications alone. _Yes. The details need to be discussed in person. Far away from here._

He saw her lips purse, her mind clearly at work. _Can I see?_

Yes.

She reached up and put a hand on his shoulder. “I’m really glad that you’re alright,” she said as she penetrated his mind, a familiar feeling at this point as she went through his recent memories. It was an odd sensation, and it was the only time he got a glimpse into how her own mind worked, an organized and methodical focus, which was kept entirely on him whenever she was inside his mind.

What continued to strike him was that she took care not to disrupt him too badly, and didn’t just acquire what she was looking for, but looked for any signs of tampering. It was sweet how protective she was, and it was a level of trust he at least possessed that he knew few would allow. He reached up and placed one hand over hers on his shoulder, waiting the few long seconds she spent in his mind.

Truthfully, the Commander didn’t know how long they stood there, perhaps it was only a few seconds, perhaps a minute, but then Vahlen withdrew and his mind was fully his own again. He blinked once and looked to her, her face possessing a slight sheen from the exertion, and who was taking short breaths.

“Well,” she gave a distracted smile. “Let’s keep going.” _I…did not expect it to be like that._

_Nor did I. I wonder if… “Right this way.”_

_Maybe. Maybe. If we can do something…how would this affect the plans? If he’s also a weaker link…_

The Commander put an arm around her, and smiled. _I suspect Aegis may have some insight. Tell him I want to know how best to use this. Give him the memory._

_I will. I think he’ll find it very interesting._

***

_Collective War Camp, Clearwater – Florida_

5/3/2017 – 1:17 P.M.

There was much to consider. At the moment all the battle plans were in place, and when the
conflict resumed, he believed they would be able to answer anything ADVENT threw at them. Yet there were...other things to consider. After Florida was resolved, there were a number of issues to solve in the Collective that the Imperator had tasked him with.

The solution to them was something he would have to consider.

Now though, there was a call he needed to make. One which he did not expect to necessarily achieve what he wished, but he owed it to Yang to at least attempt it. He punched in the frequency and waited. It continued for several minutes, and then the form of Sana’Ligna appeared.

“Battlemaster,” she nodded once. “It’s good to see you.”

“You as well, Sana,” he answered cordially. “I...trust you are doing well.”

“I am managing,” she said. “I am moving towards the conflict in Southeast Asia and establishing permission between ADVENT and the Collective to move between the lines. And if they wish, to serve as some kind of mediation.”

“A futile gesture, Sana,” the Battlemaster released a sigh. “Neither will agree, nor should they.”

“I will at least make the attempt,” she insisted. “Why are you speaking to me? I will not return to the Collective so long as Paradise Station exists and the black projects of the Collective are allowed to endure.”

“I want your help,” he admitted after a few moments. “Yang was seriously injured in the fighting. She will recover, but it will take several weeks. Could you briefly return and assist in her recovery?”

Sana appraised him for a few minutes. “Yang will survive, as you’ve implied. There are many more who are not so fortunate and require more immediate help.”

“I am aware,” the Battlemaster said. “And I also know that you don’t pick and choose who you help.”

“No, I did, for a long time,” Sana shook her head. “I stayed in my station and devoted myself to experiments and tests I believed would help all. But the Collective has little interest in what I develop, or they seek to pervert it to suit their objectives. To manipulate the weaknesses and patterns I identified. I have only helped those sanctioned by the Imperator and those we deemed allies. That is not what I will do anymore, I will help who I can, even if both sides insist on this devastating war.”

He decided to answer directly. “I know. You are justified in your feelings. I have no intention of forcing your return, all I am doing is asking for your help.”

“And if I help her, you’ll throw her back into this war,” Sana accused. “She does not deserve that. None of them do.”

“And the soldiers you will heal won’t?” The Battlemaster pointed out. “This war will not end because you want it to, Sana, you know it. If your answer is no, then tell me now.”

“The difference, Battlemaster, is that if you wanted to, you could end this war,” Sana said. “You could change the Collective. I know you’re not like the Imperator or Isomnum, or obsessed with this circular conflict we have become involved in. You can stop it, but you continually don’t.”

“Your naivety doesn’t change reality, Sana,” he growled. “I know very well what I can and cannot
do. If you believe it is as simple as taking a stand, you know nothing. If I did any of what you say, I
would be replaced by someone who is more willing to do what the Imperator demands. My
absence will not end this war, Sana.”

“And my departure didn’t either, yet it was the right thing to do,” she said. “Do the right thing. I
know you, and I know you do not want this war any more than I do.”

Everyone now seemed to know what he wanted or how he felt now, and the Battlemaster was
growing tired of it. Everyone wanted simple solutions centered around their beliefs or ideology and
mistakenly believed that he desired the same end goals as they did. They spoke of solutions, of
what would happen, using what they knew of him as gateways to convince him to do something.

He hated what was happening now.

He hated what this war had become.

He hated how everyone had been swept into a conflict they had no part in.

He hated the Imperator for his plan and his decisions.

He hated the Sovereigns for their mere existence and their gradual corruption of the Ethereals into
this pointless conflict.

He hated how complicated things had become.

He hated being perceived as the only one who could do something.

He hated how they assumed the solutions were simple.

But what he hated most was that the underlying truths were not wrong.

There needed to be change.

He could be a change.

He could not ignore that anymore, not when it had become rooted in his mind.

“Battlemaster?”

The armored Ethereal snapped back to the blue figure of Sana, and belatedly realized that the room
had suffered damage. A number of computers were sparking and smashed, some of the paneling
had been torn off the walls and the ceiling had partially caved in and the lights shattered. The
figure of Sana was also starting to flicker, and he took a breath and released the fist he had
unconsciously clenched.

Sana was looking at him in concern. “Are you alright?”

“I am fine,” he lied in a monotone. “If your answer is no, then I have no desire to continue this
conversation.”

“Wait.” She lifted a hand. “I think we need to speak. In person. Where there are none who can
listen. There’s something wrong, and you don’t have to admit it now. I will come to your base in
two weeks, and we can speak. I will also ensure that Yang is healed. Is that sufficient?”

“It will suffice,” was all he said, no longer wanting to continue the conversation. “I will speak to
you then.”
With that he shut off the holocommunicator and stormed out, a roiling storm of contained emotions and conflicting thoughts. He wished now that the conflict was renewed so he could vent. But he had an image to maintain; an expectation for his soldiers and the Collective.

So he would keep it inside him for now.

Locked away from the outside, perhaps, but no matter where he went, he knew the thoughts would not leave him. Not until he did something, one way or another.

_Barracks, Cambodian Military Command – Cambodia_

5/1/2019 – 7:19 P.M.

“Anyone ever gone on a mission like this?” Miguel asked as he did a final maintenance check on his SHIV.

“Not really,” Cara shrugged, taking a drink from her water bottle. “We’re special forces.”

“Technically,” Duri pointed out. “This is not necessarily special ops.”

“Yeah, sure,” Cara snorted. “It just involved sneaking into a specific place, grabbing something, and then getting out without getting spotted. Sounds pretty much like special forces to me.”

“Special operations’,” Nobuatsu proposed. “Maybe that’s a better word for it, and no Miguel, though I’ve worked with special forces before. Backup in case I was needed, but it never happened.”

“Are we getting someone to escort?” Beatriz asked, leaning against the wall.

“Negative,” Duri confirmed. “Unnecessary complication. I think all of us are able to pick up a few plants.”

“Permission to speak?” Cara lifted her hand.

“Sure,” Duri motioned to continue.

“There is approximately zero chance that this is going to be as easy as ‘go in, get the plants, get out’,” she said, her arms crossed, looking around the small group. “I don’t think ADVENT is sending us on a cakewalk. I’d like to point out that these plants were supposedly ordered by Patricia Trask. She’s already screwed over ADVENT before, and she’s not planting stuff like this because she likes the décor. That stuff has a purpose.”

“Cara, we’re not going to be treating this lightly,” Beatriz frowned. “What point are you trying to make?”

“I’m saying we’re looking at this the wrong way.” Cara insisted, striding over to the nearby table and lifting a map which had markings over it. “There aren’t any patrols, or at least not consistent ones. What’s more likely? That they just gave up protecting their perimeter? Or that all of this alien vegetation is a trap? I’m saying that maybe we should look into some incendiaries instead of taking guns to shoot alien patrols that are probably not going to come.”

She had a point, one which admittedly had been brought up before, though the others had largely decided that the chances of that being dangerous enough to hurt them were low. Cara hadn’t let the
“Alright,” Duri said. “We can do that. Miguel, does that SHIV have a flame attachment?”

“It does, sir,” Miguel nodded. “Want me to install it?”

“Yes, and everyone take at least one incendiary grenade,” Duri instructed. “While I doubt killer plants are going to be our biggest problem, no point in being unprepared. The other squads will thank us if the vegetation turns out to be a problem.”

“Thank you,” Cara sighed in extravagant relief. “I can sleep easy, for the maybe three hours I’ll have before we move out.”

They all had a few laughs at that, and Duri cleared his throat. “She’s not wrong. If you want sleep, get it now because we’re moving out in a few hours. If we’re lucky, we’ll get the samples, kill a few aliens, and get back before sunrise. We get unlucky, and things will obviously be a bit harder. I want everyone ready as they can be. Understood?”

“Yes sir!”

“Get some rest. Dismissed.”

***

Near Tampa, Florida – United States of America

5/4/2017 – 4:00 P.M.

A new scene played out now; similar to the one only a few days previous. Another exchange was to be made, though this time it was to return the respective collateral back to the appropriate sides. The Commander approached with the Battlemaster, his Custodian escort a short distance behind him, though likely unnecessary given the Battlemaster’s watchful eye over him.

Opposite them the Commander saw Laura, Vahlen, and a squad of XCOM soldiers approaching, escorting Hallian and the pod containing Yang, surrounded by the small team of medical assistants. On the far lines, both ADVENT and Collective forces stood ready, though this time both sides were more at ease, even if snipers from each were no doubt watching raptly.

“Well,” the Commander said as they watched the opposition walk up. “Did you get everything you wanted out of this?”

“I accomplished enough,” was the only answer. “We shall see if ADVENT did the same.”

“Good,” he glanced to the static mask the Ethereal wore. “I do hope your remember our conversation.”

“I have not forgotten.”

“I doubt you have,” a pause. “When the time comes, I think you’ll know what to do.”

“Perhaps, Commander,” the Battlemaster turned the cold stare of his mask to the smaller Human. “But you should also be careful what you wish for.”

The Commander was not certain what the meant, but knowing the Battlemaster…well, it could mean a number of things, the clearest of which was essentially saying ‘I will not be your pawn’. Something the Commander could respect, even if he appeared to misunderstand his intentions.
Nonetheless, it was a positive sign.

Something to develop further.

“Commander,” Laura greeted as they came close enough to speak. “I assume you were treated well?”

“As well as can be expected,” the Commander agreed, inclining his head. “I did not experience any issues.”

“I can confirm the same for me and my assistants,” Hallian added. “We were treated well.”

“Your medic was surprisingly helpful,” Laura nodded. “In any event, we appear to have concluded this agreement successfully. A mild surprise, honestly.”

“It appears so,” the Battlemaster agreed. “We will not be extending it.”

“No reason to do so,” Laura nodded. “We’re ready, and I assume you are as well.”

“Yes.”

Laura waved Hallian and the medical assistants forward. “Go back. Commander?”

“I’m coming,” both Commander and medics crossed the short boundary between the two sides, and within a few moments they were back where they belonged. Vahlen gave him a short hug, and the Battlemaster quietly looked into the pod and asked something to Hallian. “Six hours,” Laura said. “Last part of the agreement, correct?”

“Correct,” the Battlemaster’s gaze swept over the Humans. “Then we resume.”

“We’ll be ready,” Laura said. “I’d wish you luck, but I don’t think it’d be appropriate.”

“Likewise.” The Battlemaster turned away, and began marching back to the Collective lines. “I suspect the next time we meet will not be under these circumstances.”

The Humans likewise turned around, the XCOM squad stepping backward with their rifles trained on the Collective lines in case of a surprise attack. “I hope you managed to finish what you needed to,” the Commander said in a low voice to Laura.

“This gave us plenty of time,” Laura answered with a subtle nod. “Thank you.”

“A pleasure,” the Commander glanced back. “I learned quite a bit on my own as well. There is a lot to discuss.”

“Not here though.”

“Absolutely not.”

They walked a few more steps before the Commander asked the primary question. “What of GAIA?”

A thin smile formed on Laura’s face. “Everything is in place. When the conflict resumes, it will be a matter of days. Worst case scenario…the contingency is in place. Florida will remain ours.”

“Excellent,” the Commander breathed a sigh he’d been keeping in. One which had hinged on if this plan would work or not, and all signs were pointing in the right direction. He doubted the
Battlemaster would be able to predict it, as surprisingly perceptive as he was, but he wouldn’t put much past the Ethereal now.

The Battlemaster had the potential to surprise him, but this time…well, the Commander believed they had an edge.

All things considered, this had been a productive experience.

One which could very well result in ramifications that would change the course of the war.

***

To be continued in Chapter 57

**Black Earth, Purple Sky**
“State your name.”

The man who was presumably seated stared defiantly into the camera, a harsh white background behind him.

“State your name,” the smooth voice repeated.

“Go to hell,” the man spat.

A new voice spoke. “Answer the question, would you kindly?”

The man’s eyes seemed to glaze over and the defiance faded. “Officer Zi, ADVENT Army, Tier II rank.”

The video shifted to a dark-skinned woman who looked suitably afraid, but was doing her best to hide it. She blinked, clearly holding back tears and biting her lip. “State your name,” the voice ordered.

“Lilianne Jackson, ADVENT Army Sniper,” she answered, swallowing. “I can’t tell you anything else.”

Another shift in the video, and now a man who’d clearly been wounded was facing the camera, the blood on his face from several scratches not completely cleaned off. “State your name.”

“Lieutenant Nusin, ADVENT Army,” he said curtly. “That’s all you’ll get from me.”

“The video continues for another half-hour,” Acting Director Powell said grimly, fast-forwarding it before the small gathering of Chancellor Vyandar, Stein, Laura, Rodgers, and Watkins, all of whose expressions echoed the tone of his voice. “We have no indication that this is even all the soldiers, but we have confirmed that they were the ones stationed near SAS territory.”

“Numbers, Director, numbers,” Saudia sighed, rubbing her forehead. “How many do they have?”

“Several thousand at least,” Powell clasped his hands behind his back. “We’re still determining the exact number. Commander, you know how many those outposts had when combined?”

“Just over four thousand in total,” Laura said, gaze still fixated on the scene. “I doubt that they have that many hostages. Perhaps a fraction of that number at best. There was only one where there was no fighting. Based on preliminary reports…perhaps around two thousand hostages.”

“Still far too many,” Stein said incredulously. “How did that happen?”

“Presumably a directive by Betos,” Declan Rodgers said, stepping forward. “That would have
made the soldiers more inclined to shoot to wound, not kill, and they had enough numbers to overwhelm the frontal base defenses. More practically, because Macula is helping them out.”

“We have evidence of this?” Stein asked.

Declan looked to Powell. “Sir?”

“She’s cleared,” Powell nodded his approval, motioning for Rodgers to switch the video to footage broken into quadrants, showcasing the battles at various angles and in several of them were shots of soldiers standing frozen, while SAS soldiers bound them, and soon a clear Ethereal figure came into view.

“I see Kutkh is finally returning something useful,” Saudia commented dryly. “A shame this wasn’t working a few months ago.”

“Kutkh is still having difficulty accessing critical areas,” Powell amended. “But we’re gathering critical intelligence on the general civilian population, troop movements, and subverting Ethereal control of the narrative. Not pretty, and there are limits as we didn’t expect the SAS to act this quickly, but thanks to Kutkh we might be able to identify patterns leading to similar attacks.”

“Can someone explain what I’m looking at?” Stein demanded in befuddlement.

“Cameras on birds,” Rodgers explained succinctly. “Birds which are unwittingly spying on the SAS and other Collective positions. Very clandestine, very advanced, and the longer we can continue before the Collective figures out what we’re doing, the better.”

“Clever,” Stein nodded, impressed. “Don’t suppose you’ve thought to do this with other animals? Cats?”

“We’d have better luck training a mouse than a cat,” Powell snorted. “Returning to the topic at hand, we know how this happened, and will likely know how to prevent – or at least have warning – before this happens again. And I assure you, it will happen again.”

“I suppose it was only a matter of time until they struck back,” Saudia sighed. “Expected, but it puts us in a predicament. It’s only going to get worse.”

“Chancellor, I believe this is sufficient justification for Scipio,” Laura stood, looking seriously down at Saudia. “Maximum pressure is necessary, and the SAS can weather economic sanctions and isolation. They cannot weather a starving or ill population and the more resources they drain from the Collective, the more resources are not going to be directed at us.”

In truth that had been in Saudia’s mind for several days now. The current campaign against the SAS was limited and the Collective was adapting well enough. At this point the missiles they were launching were throwing money and resources away. A concerted air presence made Night Witch raids risky at best, and suicide at worst.

Military targets were tempting, but hardened and well-fortified.

Operation Scipio was the plan which had been drafted by ADVENT High Command to not only handle the SAS, but any other regional threat to ADVENT. While there was a significant military component to the operation, the primary objective was not destroying the opposing military, but making life as miserable as possible for those who lived in the SAS.

Burned crops, scorched oil fields, sabotaged infrastructure and power outages. Poisoned food and water. There was a very fine line to be drawn in a way that couldn’t be used to rally more nations to
them, and that didn’t kill enemy civilians for the sake of it. It was reasonable to assume the Collective had entire planets worth of resources and top-notch medical care.

If the entire food and water stores of the SAS were corrupted, they would be forced to bring it in from somewhere else. If vast swaths of the population fell ill, they would have to be treated. The Collective couldn’t have all of them dying. A very delicate balance, but if done right, it would lower the readiness and effectiveness of the SAS and its citizens – enough to eventually allow a decisive victory.

“With what we know, I support authorizing Scipio,” Powell said, bringing up another series of pictures. “We just got these several hours ago. Pure luck that a Kutkh unit was flying over, but if the implications are right, the SAS is going to be growing.”

The picture was simply of a bunker in the middle of nowhere, and in front of it were some guards – SAS – and black vehicles. “A secret SAS base?” Saudia asked.

“Potentially, but that’s not our break,” Powell said. “It seems to imply that the SAS is directly meeting with representatives of other nations. One screwed up, and left an identifying flag on their truck.” He pointed. “Benin. Last we knew they were staying neutral, but that might be changing. I’d say there isn’t a reason to refrain from Scipio. We need to lock up as soon as possible.”

Saudia nodded. “I’ll begin the process.”

“The short-term question is how we’re going to deal with the hostages,” Rodgers grunted, sitting back down.

“Were there demands?” Stein asked.

“There was a short message accompanying the video,” Powell confirmed. “And I quote ‘We are currently holding a large number of ADVENT hostages. If you immediately withdraw all forces from our borders and cease your attacks, we will release them to you unharmed. If you do not within forty-eight hours, they will be turned over to the Ethereal Collective and moved off-world.’”

All of them knew what that meant.

If they were shipped off-world, they weren’t coming back alive.

“Do we know where they’re held?” Saudia asked.

“Not all of them,” Powell shook his head. “They’ve been split up. A hundred here, four hundred there, the SAS is clearly anticipating some kind of rescue attempt. Macula is doubtless patrolling as well. Chancellor, as tempting as it is to put together a rescue op, I don’t recommend it. That is what they want.”

“So our options are to comply and lose valuable time until they do this again, or condemn our soldiers,” Stein said grimly. “Unfortunate. The Director’s right though.”

“While I agree we can’t give into their demands, we need to make some effort,” Laura shot Stein a disapproving look. “Our soldiers deserve some kind of effort. Chancellor, I recommend we propose a counter-offer.”

“Consisting of?”

“They release our soldiers, we release a number of Collective POWs,” she said. “A harmless trade.
We get our soldiers, and Betos doesn’t get what she wants – but the Collective also gets something.”

“It’s worth a shot,” Saudia nodded. “Do you have an objection, Acting Director?”

“I doubt it will work, but no, I do not,” Powell confirmed. “Do we want to do this publicly?”

“Keep it vague, but yes,” Saudia nodded. “Put the ball in her court. Be sure to emphasize that she’s threatening to send them off-world. If we have volunteers from the families of those captured, use them as well. Betos is still Human. A foolish and naïve Human, but one with a skewed conscience. Show her what she’ll be doing if she refuses this deal.”

“Excellent,” Powell smiled. “Watch the news in a couple of hours, Chancellor, it will be all set to go shortly.”

***

Zararch Safehouse, Geneva – Switzerland

5/1/2017 – 12:00 A.M.

Over a month since setting down.

A month well-spent.

Nemo stood in front of a mirror, ensuring that each detail was correct on the face for the role it would soon be playing. Runi’sirasis’vitianis awaited, a Vitakarian soldier and face of the AEGIS Division. A naïve puppet of her Human masters, she was nonetheless an important symbol of the traitorous nature of some of the Vitakara.

Such an image would need to be torn down.

Slowly.

Methodically.

Subtly.

Unfortunately, it couldn’t be done while she was still alive. It couldn’t be something that was left to chance. Such a role was one Nemo had not played in a very, very long time. Wearing faces and personalities like this was exhausting, but eventually one would fall into the necessary role and mindset. Of course, this required a very specific mindset.

That of a traitor.

Thus, Nemo needed to think like a traitor in order to understand one.

It had not taken long to determine Sirasis’s own rationale; a highly tired one which highlighted the pointless worship of the Ethereals. It was pathetically simple. The Collective had hidden the knowledge of Aegis’s defection and therefore they were untrustworthy, and thus it made sense to defect in protest. Such a thought process was…odd.

Too instinctive.

Reactionary.
ADVENT had been smart. Left to her own devices she likely would have come out of this mindset of treason, but instead they had convinced her that such belief was not only correct, but *heroic*. They had helped turn her into something she had always wanted to be.

A hero.

A thought exercise that had taken Nemo mere hours to determine, fit within her psychological profile, and put through some basic tests. It was a solid appraisal, but highly unsatisfying to consider that a traitor would have such poorly based and simple motives. In truth it told him more about the process and intelligence of ADVENT than the empty-minded traitor that was to be impersonated.

So he had gone deeper.

The mind of a traitor was fascinating, and there *had* to be better reasons why one would turn against the Ethereal Collective; against their own people.

In the end, he had done so.

The results were…unsettling.

He was very aware the Collective had vulnerabilities, but there were far more than he had anticipated and unlike the fool whose face it now wore, its rationales were logical, understandable, and objectively valid. Multiple mindsets had been considered; Vitakarian, Sectoid, Andromedon – and Ethereal. Not each one fit perfectly, but there were circumstances where a traitorous mindset could develop.

It was concerning.

Not that vulnerabilities existed, but there was an inherent fragility to the Collective that Nemo found surprising. It was one that no one had seen fit to mention – at least to him. A rot which had been allowed to grow and fester from the beginning. Perhaps the fault of the Ethereals, perhaps the apathy of the Zararch. A mixture of both, most likely.

No, that was not his cause for concern. Not truly.

It was not concerned that vulnerabilities existed.

Nemo was concerned that the Collective seemed blind to these risks – but the Humans were *not*.

Applied correctly, the Humans could prove to be a catalyst to shatter the Collective.

It was unlikely the Humans *themselves* were thinking in such terms. No, this seemed too far-thinking for them. But they were being assisted by another Sovereign. *T'Leth*.

And on the Collective, was Mosrimor.

At the end of both sides were the Sovereign puppetmasters.

But with a key difference.

With Mosrimor, his tools and pawns actively resisted control and influence. The relationship was
inverted from what it had naturally been. Mosrimor could not properly plot and scheme while those who were supposed to be his lessers were flaunting their defiance, daring an intervention. The greatest foe to Mosrimor was not T’Leth, but the Imperator.

It led to distraction; weakness; *vulnerability*.

T’Leth had no such distraction.

If he gave orders to certain Humans, they were carried out.

Unsurprising T’Leth had appeared to determine the weakness of the Collective, and had no infighting to distract him.

So fascinating to observe from the sidelines.

However, it was now a front that would be observed personally. Nemo suspected that there would be a great number of things which would be witnessed through the mask worn. He had documented his concerns and set them to Ravarian, but Nemo already suspected that the true impediment to the Collective was not the Zararch, but their masters.

Ethereals.

Sovereigns without the experience.

Child gods over a pretend empire.

Endure or collapse, Nemo suspected great change would come to the Collective before the war’s end.

Time to get into the mindset.

Sirasis was now who Nemo was.

A body which would be worn for a day, perhaps a month, potentially years.

But it would end and Nemo would emerge.

For now, Nemo would lurk and observe; puppet the sculpted body to achieve his objective.

Sirasis would be shown to the world. She smiled for the mirror, a trait Nemo had observed her doing, perhaps as a way to better relate to Humans whose faces were highly expressive. Nemo had her body move through a number of ticks and catches that had been observed; a flawless recreation to ensure that none would notice one body had been swapped for another.

Glowing blue eyes stared back out through the mirror, and Nemo realized with some disappointment that not even its best efforts could remove the certain deadness within it. Well, no matter, it was such a small and easily maskable detail that only one like it would notice, let alone consider suspicious.

Satisfied, Nemo stepped away from the mirror and began putting on an identical AEGIS uniform that had been recreated through Collective fabricators. No detail was so small as to be ignored. The time of observation was over.

Now it was the time for the operation.

***
As Humans would say, Ravarian felt like he was in a soap opera sometimes. The only individual moderately taking his job seriously while everyone else…didn’t.

On one hand, there was the Speaker looking out onto a projection of the planet, idly smoking a chocolate cigarette – something Ravarian had no idea how he’d gotten – while also bringing up legalizing the drug on the planet quite sincerely. On the other, there was Quisilia avidly browsing with two phones for each pair of arms, complaining about being trolled.

The irony was not lost on Ravarian.

“We are not legalizing a drug,” Ravarian said flatly. “I don’t especially care if you like it.”

“It’s addictive.” Ravarian explained incredulously.

“No, people just like it,” the Speaker corrected. “There’s a difference. Besides, it’s a pleasant sensation. No different than how an Oyariah feels underground.”

“You’re not going to be able to sell that to the Aui’Vitakar,” Ravarian sighed. “And you will not have my support either. The Human desire to inject their bodies full of chemicals is not one we should strive for.”

“This is a plant, not a chemical,” Astri corrected. “So therefore…”

Ravarian narrowed his eyes. “Where did you even get that ridiculous item.”

“This?” Astri lifted the cigarette. “I asked Quisilia if he could procure one for me. I’ve seen Humans use them, and it appeared intriguing. However, I was only interested in using it with a drug I know.”

Almost in resignation, Ravarian turned to the idly tweeting Ethereal. “Where exactly did you get that from?”

“I asked Revelean if he could synthesize an equivalent,” Quisilia answered without looking up. “He was able to do so quickly. It did not consume significant resources or time, if that was what you were concerned about.”

Astri reached into his pocket and pulled out a pack. “Want one?”

“No.”

“Very well,” the Speaker grew more serious and put out the cigarette. “Now, we’re all here for my…introduction,” he gave a short cough. “I’m confident it will be successful, though of course I will take on feedback.”

Finally, they were talking about something substantive. “I believe it will have the desired effect,” Ravarian agreed. “I’m not sure how the Sar’Manda or Oyariah will take it, given the nationalistic focus, but it is unlikely to alienate them. Accompanied by an appropriate show of force will ensure the point is driven home.”

“Without a doubt,” Astri smiled, turning back to the planet. “Seeing the traitors paraded through
the streets will no doubt be glorious. Your forces are prepared I assume?"

“Prepared and ready,” Ravarian said. “I had begun to wonder if this information was ever going to be used.”

“I would have preferred to wait until a proper decapitation strike,” Quisilia added from the background. “But circumstances change, and if the Nulorian are dealt a serious blow Nartha will have served his purpose quite well.”

“Ah, the traitor,” Astri looked back to Quisilia. “He hasn’t returned.”

“He likely came to the conclusion that returning was too risky and he would be compromised,” Ravarian noted. “Initially we wondered if he’d figured it out, but the locations show no signs of altered activity. He simply disappeared – for now at least.”

“As I said,” Quisilia waved a hand absentmindedly. “He served his purpose. More so on Desolan than Vitakar. I certainly hope to see him shortly. It would be amusing to see his face knowing he doomed many of his new allies.” His tone turned wistful. “Though in fact, it may be better to keep him alive. Miridian will kill him once he connects the dots.”

“I’m hopeful we will kill Miridian this time,” Ravarian pursed his lips. “He has persisted far too long.”

“Unlikely,” Quisilia dismissed flatly. “Miridian is unusually intelligent. I doubt he himself is in a position of danger. It would be a welcome surprise, but I would not expect it this time. He has a use as well – an enemy has their uses if appropriately controlled, and the Nulorian have passed that threshold.”

“Time to reign them in,” Astri nodded. “If there are some Humans involved, then all the better.”

“Indeed,” Ravarian affirmed.

Astri looked to Quisilia. “How is progress on…recruitment. For your avatar candidates?”

“Ah, I am having some issues,” Quisilia sounded almost irritated. “I’ve found a quite nice woman who I hit it off very well with. I’m sure she’ll take my offer well. Big fan of my content.”

Ravarian cocked his head. “And…you have not discussed this with her?”

“Come now, Zar’Chon, I can’t just let any interested woman into my harem,” Quisilia sniffed. “I have high standards. What I have personally found irritating are the absurd number of so-called women on the Internet that are in fact men pretending to be them.”

“Oh dear,” Astri chuckled. “Wait – how do you know?”

“Ah, it’s a simple matter of locating their phone or device,” Quisilia said. “As part of the board of Twitter – which I do a majority of communication through – I can make certain requests. If they are reluctant, then I will just have the Zararch do it. Then I make a short visit to confirm who they are, and that is how I made such discoveries.”

“That…” Ravarian paused. “Seems like an extraordinary waste of time.”

“I am attempting to automate and diversify the process,” Quisilia agreed. “Instead of visiting myself, I will simply ask the local Zararch agents to investigate for me. Already it has saved me a significant amount of time.”
Ravarian was no longer surprised that Quisilia was using the Zararch as a tool for his quest to find suitable Harbinger candidates, because of course he was. “I hope you find a suitable candidate soon.”

“As do I, it has proved to be quite a blow to my ego,” Quisilia sighed dramatically. “When I learned how many followers I have are bots, it hurt. And with the number of scams I have experienced, one would think there are no women on the internet. However, I shall persevere and endure.”

“Enough with the dramatics,” Astri said dryly. “Both of us know you have identified exactly who you want and are just enjoying dragging the process out.”

Ravarian looked over. “Has he really?”

“I’d think you’d have figured him out, Zar’Chon,” Astri bared his teeth. “But clearly not. In which case, I’ll continue to let Quisilia have his fun.”

Ravarian rubbed his forehead, not wanting to think about this any longer. “Let’s move onto something more important. If you’re ready, Speaker, I will send it to the Aui’Vitakar to announce.”

“Do it,” Astri confirmed with a smile. “Time to secure the world.”

***

Tampa, Florida – United States of America

5/5/2017 – 9:12 A.M.

Unfortunately, the Commander noted, the Battlemaster hadn’t been idle during the lull. From reviewing the current situation, he had taken steps to mitigate or eliminate many of the risks ADVENT had been exploiting. The Battlemaster himself wasn’t letting himself be led around by XCOM, instead sending additional Elites, Spectres, and Archons and focusing on what he deemed ‘critical’ areas.

The Collective air presence was also much more pronounced, and there were additional Vanguards which had been sent to disrupt the psions providing air support. Not overpower from what he’d observed, but disrupt to the point where the inherent advantage was gone. And when that advantage was gone, the air battle shifted back in favor of the Collective.

In short, they were losing ground at a much faster pace.

ADVENT hadn’t been idle either. Given the upcoming plan, they were using this ability to test out lethal cocktails and chemical weapons they’d been shooting towards alien lines. White phosphorous could be seen across vast swaths of the city, which obscured vision, killed unprotected soldiers, and was yet another trial for the aliens to overcome.

Purifiers were setting lost streets and blocks alight, denying the Collective easy access which the aliens still had no answer to. But ultimately, it had become a numbers game and the odds were not in their favor – but they still had enough to hold out.

A light flashed on the holotable he was observing the battle on. “Launch successful,” one of the technicians stated to the room. “Entering low orbit now.”

Laura gave a single nod. “Good. No Collective presence?”
“They might have seen it go up, but they haven’t disrupted it,” came the answer. “I don’t think they’re interested or know what we’re doing.”

“Let’s keep it that way then. Two more left, yes?”

“Yes, Commander!”

Laura looked to him. “We’re doing our part, but I hope your people can get the ordinance established.”

“I’ve got squads planting it now as we speak,” the Commander assured her. “As of yet the Collective doesn’t seem to have noticed the reduced XCOM presence.” He highlighted current nanite bombs planted. “We had a lot of ground to cover, but we’re nearly done – just in time for the rest of the launches to take place.”

“If the aliens haven’t taken out Canaveral now, I doubt they’ll target it in the next day,” Laura grunted, starting to pace. “This had better work.”

“It will work,” the Commander assured her. “All indications point to it, at least.”

“I’m more concerned with how effective it will be,” Laura mused, sighing. “In theory it’s devastating. In practice the Battlemaster has eventually mitigated or overcome each obstacle.”

“Except the trifluoride,” the Commander corrected.

“Except that,” she amended. “But I genuinely wouldn’t put it past him to blanket the state in an EMP to overcome it.”

“Possibly,” the Commander considered. “But unlikely to be that extreme. The amount of land is infeasible. GAIA will cover the whole state, more or less. Even if he does that, it will cost him time, resources, and he will fail to stop the entirety of it – and that is all that is needed.”

“And if this doesn’t work out…” Laura shook her head. “A lot of people died for nothing.”

“If it doesn’t work out, then it would have played out exactly the same way,” the Commander said bluntly. “GAIA is the only measure that can prevent our defeat here. We don’t have Aegis, Caelior, or our best psions now. This is a risk, but it will work. The science and specifications all line up.”

“I’ll feel more comfortable when I see it in action,” Laura nodded. “But you’re right. It’s that…I don’t know if it’ll even be enough. Everything we come up with never lasts forever and we’re gradually losing more and more. JULIAN, GAIA, nuking our atmosphere, then our cities, and we’re not even remotely close to surviving, let alone winning.”

The Commander looked at the tired woman, and could relate quite strongly. Though inexplicably, he felt more optimistic now. Perhaps based on a collection of guesswork, observation, and facts, but there were many disparate pieces that were coming together, and when they did come together, things would fall into place quickly.

A snowball.

The problem was that snowball needed to speed up and get bigger. That required time, and time was an ever-draining resource. There was also a note of unpredictability that could throw off their carefully curated plans, but he was confident they could account for it. Now it was time to maintain a delicate balance of baiting and defense until it came time to pull the trigger.
“It’s not going to be easy or painless,” he said slowly. “But I’m…confident it will work. Remember there was a time where the technological disparity was impossible to even, and we did it. The fact that we’re even holding our own now is a miracle in and of itself. The Collective is forced to adapt to what we are doing, which is not the action of an entity destined to succeed.”

“Fair point, Commander,” she acknowledged. “Like I said…I think I’ll be more confident when it happens.”

“Only a few more days now,” the Commander said, looking down on the holotable. “Just a few more days.”

Vietnam – Near Collective Territory

5/2/2019 – 12:22 A.M.

The closer they got to the line of alien vegetation, Duri immediately felt less and less comfortable. It was difficult to explain, but what he was looking at distinctly did not seem like it was supposed to exist on Earth. It was a clear divide between what was ‘normal’ and what had been added by the aliens.

“I don’t like the look of this at all,” Cara muttered, hefting her rifle as she appraised the vegetation before them.

They had been walking through a jungle, trying to keep their noise to a minimum, but they had seen the alien line easily. The first clue was the density; there was a far greater collection of plants than there was before. There was also a symmetry to them indicating manual or planned planting. The plants in question were also…presumably young.

But they were distinctly alien.

For one, they glowed.

Not that bioluminescence was inherently alien, but Duri was fairly certain that there were no bioluminescent plants in Vietnam. In fact, he wasn’t even sure such a thing existed above ground. The glow wasn’t bright, but in the darkness it might as well have been. It was a warm glow of orange, blue, and purple.

The plants themselves had leaves and bodies that were inherently alien, and to Duri’s alarm appeared to have integrated seamlessly into the jungle with the native Earth plant life. That was something that should not have been possible, or at least that was what he would have thought. Then again, the aliens had access to technology that might allow for forcing computability.

“Check for movement,” Duri instructed Beatriz, taking a breath as they took positions in a 360 circle to prevent ambushes. The good news was that there was no shortage of cover, and they hadn’t encountered any alien defenders. “Miguel, move your SHIV up.”

“Yes sir,” both soldiers confirmed, with Beatriz pulling herself up a nearby tree and scanning the immediate vicinity while Miguel piloted the SHIV towards the plant line.

“It’s quiet,” Nobuatsu noted, cocking his head. “That normal?”

“I’d think there’d be insect life,” Duri wondered, frowning under his helmet. “I hear something…”
They all listened for a few seconds as the SHIV rolled closer. “Faint, but there’s something,” Miguel said with a shrug. “Chirps and clicks. I doubt the aliens killed off the entire ecosystem.”

“Can never be too sure,” Duri looked up to Beatriz. “Nothing?”

“No aliens if that’s what you’re wondering,” she said, hopping down. “But I saw something that’s alarming. A little further back there’s large growths on the trees, and more scattered throughout.” She handed him her rifle. “Look through, it won’t take too long to spot. I have a bad feeling I know what they are.”

“Hold the SHIV,” Duri told Miguel as he took the sniper rifle and looked through the scope that was attuned to the dim light. It took several seconds to adjust properly, but in a few moments, he saw what Beatriz had been talking about. Yellowish blobs or growths on the trees, and likely on the ground, with the bulges having a faint transparent quality to them.

The area around them was messy, with slime and goo dripping off the growths and stuck to nearby vegetation. To his mild disgust he saw that there were animals and birds that had gotten stuck in it and were dead and rotting, or dying and trying to escape. Insects were also caught in the sticky growth, giving it a spattering of black.

Like Beatriz, he had an idea of what they were.

“Chryssalid hives,” he muttered. “Likely what we’re dealing with.”

“You have got to be kidding,” Cara said in an exasperated voice. “Are you sure?”

“No, because I’ve never seen one,” Duri said, handing Beatriz her rifle back. “Call it an educated guess. Those growths are just large enough for a Chryssalid, and I doubt the aliens are infecting their own vegetation deterrent with some type of viral growth.”

“Means there might be Chryssalids out already,” Aleksandra stated. “They await.”

“Maybe,” Duri allowed. “It would explain why the Collective isn’t dedicating patrols along the border.”

“Are we modifying our objectives?” Cara asked. “The last thing we want to do is trigger a swarm.”

“We go up carefully, get some samples, and get out,” Duri repeated. “If we hear Chryssalids, we get out. Miguel, move the SHIV up further.”

“Moving.”

The SHIV moved close to one of the bell-bodied alien plants, and without warning it spat a yellow mist into the air that floated around it, and one by one all of the same kind of plants erupted little yellow puffs of mist, creating a dense cloud of something that only began starting to dissipate a few minutes later.

There weren’t many things it could be. “Poison?” Beatriz asked what they were all thinking.

“We’re not going to sniff it,” Duri pulled out some of the sampling equipment they’d been given. “But the scientists will want this. Let’s get this done now.” All of them quickly took some of the tools and samples and approached the line, though taking care not to go too deep into the mist and alien environment, if at all.

Aleksandra and Mana were taking samples of the odd poison plant, Aleksandra cursing as cutting
into the plant released stream of sticky fluid onto her gloves, which she dutifully collected in a container. Mana captured some of the mysterious poison. Duri took some soil samples and leaves and branches of other alien plants.

Closer now, he could definitely see the growths were Chryssalid pods. The shape of the alien creature could only just be made out, one which seemed to occasionally twitch, to his eyes. It made him very uncomfortable.

An alien screech roared out in the night. One they easily recognized.

“Are you sure-“ Cara began.

“Do it!”

As they retreated, they tossed the grenades they’d thankfully brought along, and moments later the infested jungle was alight in flames. As it turned out, the Chryssalid pods were very flammable, and immediately caught on fire as the squad retreated. More screeches and Chryssalid roars sounded, much closer this time.

“We got it,” Duri said as they rejoined Miguel and Beatriz. “Let’s get back-“

Several sniper shots from Beatriz rang out as two Chryssalids had rushed out, still on fire, and promptly shot dead. “Good shots,” Duri commended, as more were beginning to arrive, and they risked getting into a conflict they’d eventually be overrun by. “But we need to go.”

“Run?” She asked.

“If you’ve got grenades, use them,” he instructed. “Wide dispersal!”

All of them gathered the rest of their explosives and tossed them in various directions towards the alien line. If he was right, Duri hoped the Chryssalids would pursue the noises or at least be too disoriented to follow them. Or not incentivized to hunt them down. “Now we run!”

With the forest burning behind them and the cries of the Chryssalids in the distance, the squad moved away as fast as possible, clinging to their samples that would hopefully give insight as to what the Collective intended to turn their planet into.

As far as Duri saw, it was to turn it into a hostile environment.

And oddly enough, when he came to that conclusion, he wondered if that was among the worst crimes the aliens had inflicted upon them.

Retaliation was due.

***

Betos’s Quarters, SAS Command – Nigeria

5/5/2017 – 6:12 P.M.

The coverage kept coming, and it didn’t seem to have signs of stopping. Not for the first time Betos wondered if she’d made the wrong decision. In the quest to maybe take advantage of
ADVENT caring about their soldiers, they turned it into a campaign specifically intended to
demonize her in the most subtle of terms.

Aside from the beginning where Saudia had openly stated that they would be open to an exchange
of Collective soldiers and those which had been captured by the SAS, ADVENT had been
extremely passive-aggressive in their coverage the rest of the time. Never directly addressing her,
but running a number of segments and interviews that made it very clear what they were trying to
do.

First had been a long segment on what the Collective did to soldiers they captured, as far as
sending the off-world. The analysts were very careful to seem general and state they couldn’t
confirm everything, but there was a lot of speculation backed with flashes of footage from the
Sectoid Hive and the general hopeless nature of the topic.

Relatives of the soldiers were also brought on, and they spoke of their wife, or husband, or
children, or friend and some even made general appeals to her personally to at least keep them on
Earth and not send them to an alien planet.

Keeper had made it very clear that they were not giving in to ADVENT’s demands, describing
their actions as an attempt to emotionally appeal to her and how the SAS quite literally received
nothing from their proposed agreement and this was simply for ADVENT to appear as if they were
doing something. Macula had agreed, and that was effectively settled.

It still wasn’t easy to watch. Betos was quite convinced that none of the people she’d subjected
herself to watching were faking it. Rationally she shouldn’t feel bad, and was mildly angry at how
ADVENT was exploiting these people, but she couldn’t help it. Not just what the families on Earth
were going through, but she suspected that it wasn’t too different from what aliens were going
through entire star systems away who weren’t being shown on TV.

Overall, she felt like a terrible person right now, and very tired.

A knock made her look up and she saw the large frame of Mox peek in. “Betos?”

“Come on in,” she sighed, muting the laptop and pushing it away, the newsfeed still playing.

Mox eyed the laptop, then back to her, his eyes concerned. “You really don’t need to be watching
that. It’s not doing you any favors.”

Betos shrugged. “I know.”

Mox sat on the nearby chair and shut the laptop entirely. “It’s bothering you that much?”

“I know it shouldn’t be,” Betos admitted, rubbing her eyes. “Keeper said it was probably
orchestrated directly to target me. Guess that confirms that ADVENT figured me out pretty well.
It’s one thing to have soldiers die in battle, and another to use them as a bargaining chip. It would
have been easier to kill them.”

“Your plan was a good idea,” Mox reassured her. “Worth at least one try. We can’t control
ADVENT manipulating everything else to try and turn it to their advantage. Besides, both of us
know that the soldiers will be fine. They’re not getting shipped off for some experiments on a dark
space station.”

Betos pursed her lips. “Do we know that?”

Mox appraised her carefully. “Keeper said as much. The Battlemaster also directed that recently as
well. It’s very unlikely they’ll be hurt, even off-world.”

“Unlikely,” she agreed. “But not certain.”

“Nothing is,” he said.

“I believe Keeper and the Battlemaster,” she finally said. “But there are definitely elements in the Collective that aren’t completely trustworthy. Much as Macula likes to dismiss incidents as rogue, there are…more than are normal. And it’s not like we can keep track of them. Each one could disappear and I’d never know. Neither would you.”

“I don’t know if we should be raising that many questions,” Mox said carefully. “I don’t think the Collective would appreciate the conspiratorial tone.”

They probably wouldn’t, but Betos wasn’t as concerned about that in her tired state. “Doesn’t matter. I’m not going to give ADVENT what they want, but I want any POWs we capture under my watch. Either they stay on Earth and we build a prison to keep them in, or the Collective gives us a planet where they can be kept off-world. I’m not going to give them directly to the Collective.”

“I don’t think Keeper is going to like that,” Mox frowned. “Helsa, you should get some rest and think about this rationally.”

“Keeper would prefer to be running the SAS himself,” Betos snorted. “ADVENT may think I’m an alien proxy, but I’m not. We’re not, and if we’re as independent as Keeper likes to promise, then we get to break with the Collective line when we think its right. Do you think this isn’t one of those times?”

“I don’t know…” he leaned in his chair. “I’m more worried you’re making a decision like this at the wrong time. You’ve just subjected yourself to hours of ADVENT propaganda and you’re definitely affected by that.”

Betos glared at him. “Yes, I’m sorry I’m emotionally affected by seeing a mother sobbing because she thinks her son is going to be sent to die in some alien death camp and I don’t actually, positively know if she’s wrong about that. Sue me.” She stood up abruptly and walked to the window, taking a deep breath.

“Helsa…” he said from behind her before she lifted a hand pre-emptively cutting him off.

“They probably wouldn’t, but Betos wasn’t as concerned about that in her tired state. “Doesn’t matter. I’m not going to give ADVENT what they want, but I want any POWs we capture under my watch. Either they stay on Earth and we build a prison to keep them in, or the Collective gives us a planet where they can be kept off-world. I’m not going to give them directly to the Collective.”

“I don’t think Keeper is going to like that,” Mox frowned. “Helsa, you should get some rest and think about this rationally.”

“Keeper would prefer to be running the SAS himself,” Betos snorted. “ADVENT may think I’m an alien proxy, but I’m not. We’re not, and if we’re as independent as Keeper likes to promise, then we get to break with the Collective line when we think its right. Do you think this isn’t one of those times?”

“I don’t know…” he leaned in his chair. “I’m more worried you’re making a decision like this at the wrong time. You’ve just subjected yourself to hours of ADVENT propaganda and you’re definitely affected by that.”

Betos glared at him. “Yes, I’m sorry I’m emotionally affected by seeing a mother sobbing because she thinks her son is going to be sent to die in some alien death camp and I don’t actually, positively know if she’s wrong about that. Sue me.” She stood up abruptly and walked to the window, taking a deep breath.

“Helsa…” he said from behind her before she lifted a hand pre-emptively cutting him off.

“I’ve heard the pragmatic solution all day,” she muttered. “It’s the same justification ADVENT would make. Hypocrites. If they could they’d ship all their captives off world to ensure they’re unrecoverable. Difference is they’d tell you up front what’s going to happen to them. I have no idea what’s going to happen if I send prisoners into Collective space. They might be fine, or find themselves in some alien program I have no control over. I’m not going to have that on my conscience.”

She turned. “It won’t make Keeper or Macula happy, but that’s an acceptable price. I’ve been more than accommodating, and I think it’s time they understand that we’re not going to give in to every single demand they give.”

Betos walked back over to the chair and sat back down, calmer now, though her heart was still beating faster than usual because perhaps for the first time she was in uncharted territory when it came to relations with the Collective. She realized there hadn’t been much pushback, and she legitimately didn’t know what would happen if she decided that, yes, she was going to refuse their
orders.

There was a power disparity she couldn’t ignore. Keeper might very well just laugh and do it anyway. He probably would think it was a joke.

But she led the SAS. Not the aliens. Not Macula. Certainly not Keeper.

They were allies, but if they effectively ruled by proxy, then what exactly had she left ADVENT for?

Right. She looked Mox in the eyes. “I know it’s not the safest thing to do, but this is the right thing to do. If we don’t make it clear, the aliens are going to have free reign and we’re selling all these nations lies to get them to sign away their independence. If the aliens want to show their colors now, I’d rather find out than realize we’ve become ADVENT, only for the aliens. But I want you to help me here. And everyone else too.”

He gave a short nod. “Nothing’s changed, I just don’t want to see something happen to you after all we’ve gone through. The aliens are dangerous, ADVENT is dangerous, but we didn’t have a choice. But we’ll follow you, as we always have.”

She’d intrinsically known that, but it was relieving to hear it from him. “Good,” she breathed. “Get the legislators and officers and tell them to report here. I am getting our policies coded into law within the next few days.”

“And if Keeper has an issue?” Mox asked with a raised eyebrow.

“Then he can come talk to me,” Betos said as she reached to open her laptop. “My door is always open.”

###

Nulorian Outpost, Borelian Wastes – Near Vitiary

5/2/2017 – 10:17 A.M.

Operation was almost a go.

After waiting agonizing weeks to get everything in place, the Nulorian were ready to strike. Nartha gave a nod and smile to Shun as the XCOM soldiers geared up, along with himself. He no longer had Aegis, or even Titan armor like they did, but he had his own protection and weapons. Around them other Nulorian operatives prepared themselves, all silent as they quietly reflected before the operations.

The outpost they were in blended into the snowy backdrop of the Borelian Wastes, but it was far more fortified than most Nulorian outposts. Camouflaged Nulorian operatives patrolled around it, jury-rigged turrets maintained by Siaru were built into the cube-like structure that were more than capable of shooting down investigative Zararch or Collective soldiers.

Miridian himself was here, and standing watch over a small army of analysts and observers who Nartha suspected were also being augmented by Siaru. Though this time he didn’t hear the incessant commands that had become ingrained into his memory even weeks later. So much about that experience left him feeling unsettled.

The blasted machine was probably watching him now.
They'd gone over the plan. Most of the day would be reaching the cities, and then at night they would strike. They were to go in, explain if possible, and depending on what was said, get them out, or subdue them and then get them out. From there they would exfiltrate, get back safely, and deal a stinging blow to the Zararch and Aui’Vitakar, complete with an address from Miridian if he was feeling up to it.

All in all, Nartha was very confident in the plan.

“Almost feels like old times,” Shun said as she flipped her helmet in her hand. “Seems so long ago.”

“It really does,” Nartha agreed, checking his weapon. “Back when I had a different name and everyone thought I was Human.”

“A shame you probably don’t get to tell that story a lot,” Shun mused with a light chuckle. “I doubt even most Zararch agents could compare.”

“No quite like that,” Nartha confirmed. “I guess I was the right one at the right time.”

“Yeah,” she agreed. “If it hadn’t been you…well,” she tilted her head up. “Well, things would probably be a bit different.”

He was about to answer when one of the analysts suddenly looked back, his voice oddly concerned. “Miridian, there’s definitely something going on.”

Miridian wasted no time. “Define ‘something going on’.”

“There’s a global transmission from Vitiary,” the analyst explained, motioning to a screen showing something Nartha couldn’t see. “Completely global. Borelia. The Manda. Everywhere.”

Nartha immediately knew something was up. “That’s only happened a few times. And only on scheduled events.”

“Agreed,” Miridian said slowly. “I think we’ll want to see this. Put it on the screen.”

Nartha and Shun exchanged a look. “Figures we’d have something happen today,” Shun grumbled as the few screens around the room lit up. “We never catch a good break.”

“Let’s see,” Nartha cautioned, as he turned his attention to the event. “I wonder what it could be.”

The screen showed a camera fixated on a podium with the backdrop of the Aui’Vitakar building behind it. Standing in the center of the podium was the last person Nartha expected to see. “What is he doing here?”

The other Nulorian were reacting the same way, and Miridian froze, narrowed his eyes, and said something quietly to Sorras who immediately rushed away for some reason. “Who is that?” Shun asked, moving closer to him.

“Eth’astri’than,” Nartha answered. “The Speaker for the Elders. Very little is known about him, but if the Ethereals had a direct voice between them and my species, it was him. Though he hasn’t had a role in years. Perhaps longer. I thought he’d left long ago.”

Two towering Borelian Lurainian were flanking him, and behind him was the entirety of the amassed Aui’Vitakar, also flanked by shining legions of the Runianarch. The stage, for that was what it reminded Nartha of, was bright, shining, and very inviting. The camera panned out to show
the absolutely massive crowd which had turned out – and who were clapping and cheering as the Dath’Haram looked over the adoring crowd.

He made a calming motion with his hands, baring his teeth in a smile before removing the spectacles of all things from his face. “Fellow citizens, people of Vitakar, it is my distinct honor and pleasure to stand before you today. To stand before the Aui’Vitakar and our brave soldiers who come from all parts of this planet, and who brave dangers that we can only imagine.”

Nartha knew it was only a matter of time before he would go into a spiel of the Elders and how privileged he was to serve them and be their voice.

To his surprise, the Speaker didn’t take that path.

“We have faced trials these past weeks,” the Speaker said, his voice softening and sympathy coloring his tone; a deceptive melancholy for innocence lost. “News of deaths and sacrifices; word of betrayal from those who we elevated above all else. Stories. Rumors. But as a people we have remained sheltered from the truth, divided and threatened from terrorists and uncertainty.”

He unexpectedly smiled. “That must end. But it is time we recognize this truth for what it is. You heard the words of the Elder Aegis and what he claimed. The atrocities and crimes perpetuated by the Collective we stand a part of. Of the brutal war the Humans wage against us. And yet, despite knowing the truth, we are collectively blamed for the actions of others.”

“What is he doing?” Nartha wondered aloud. This was not the Speaker he remembered.

The camera was picking up the crowd murmurs and hive-minded agreement. Astri lifted a hand as he continued speaking. “You are being blamed for something you had no part in, or were even aware of. The Humans have…issues…with overgeneralization. They are quick to paint those even remotely associated as evil and guilty as the perpetrators themselves. The Humans do not care about trivialities; they do not see us as of the Aui’Vitakar, a sovereign body of the Collective – they only see that we are part of the Collective, and thus are guilty.”

“Liar,” one of the XCOM soldiers muttered.

“I say we reject this as a species, completely,” the Speaker stated with renewed energy. “We have, for too long, been passive against the troublemakers of the Collective. The Unions squabble and fight amongst themselves and the Sectoids have for years been solely focused on horrific experimentation and development. We have kept our hands clean, but our species is being stained all the same as these malicious actors run amok!”

“He cannot be actually saying this,” Nartha said in disbelief. “Why would the Zar’Chon let this happen.”

“He’s leading to something,” Miridian muttered, eyes completely fixated on the screen. “Come on Ethereal puppet, get to the point.”

“Yet we lack the necessary unity to push against these species,” the Speaker said to a crowd that was growing louder. “Even today we remain divided as a species! Borelian, Oyariah, Vitakarian, Dath’Haram, Cobrarian, and Sar’Manda. We retain our so-called independence, despite it castrating our species on a galactic stage, and we should not be confined to an afterthought, should we?”

The crowd response was a resounding negative.

“It is time the Vitakara evolve beyond racial histories and prejudices,” the Speaker continued,
now fully taking advantage of the crowd’s energy. “We are capable of achieving greatness beyond the Collective. Beyond this world! For years we have been sustained, enhanced, and uplifted by the generosity of the Elders, but we can do more!”

“This guy,” Shun said quietly. “Was he always a populist?”

Nartha frowned. “A what?”

She scowled and rephrased her question. “Someone who’s popular with people.”

“Oh,” Nartha looked at the crowd which was absolutely entranced by the Speaker, cheering and clapping at a deafening level, even through the video. “He was always respected and revered due to his position, but…” he shook his head. “Absolutely nothing like this. This would be utterly heretical coming from anyone else. Not even the Zar’Chon could get away with it.”

“If that were the case,” Miridian noted slowly. “Then how is he?”

“We are a prosperous, enlightened, and powerful people!” The Speaker lifted a fist into the air. “Even now it is our soldiers who are on the front lines against the Humans who wish to subject us to their rule. We are safe from the dangers of the stars for now…and yet, our greatest threat does not come from the Humans, it comes from within.”

“And there it is,” Miridian nodded. “A campaign to act against us. It was only a matter of time.”

“I don’t like how much the crowd is cheering him on,” Nartha said slowly. “And this is being broadcast to the planet. Everyone is seeing this,”

“It is time that we act,” Astri shouted. “And end this scourge once and for all!”

“PERIMETER SENSORS INDICATE IMMEDIATE THREATS.” Siaru’s voice boomed out making several of the twitchy Nulorian jump. “MULTIPLE CONTACTS ARE ON APPROACH TO THIS LOCATION.”

“What?” Miridian demanded. “How could they have found us?”

The Speaker continued his speech, his voice having an almost mocking tone to it now, though most of the crowd took it for sincerity. “Even as I speak to you today, our brave peacekeeping forces and the ever-vigilant Zararch are taking direct and immediate action to end this menace!”

“How many are coming?” Miridian demanded.
“Six…eight…ten…” someone called out. “There’s a lot. There’s an army coming our way!”

“How could they know?” One of the Nulorian demanded. “And on this scale?”

“That is a question we ask after we kill them,” Miridian stormed over to the armory and grabbed a rifle. “Operation is scrubbed. We defend until Sorras can send the distress signal and we are evacuated.”

“You knew this was coming?” Shun asked.

“I knew something was coming when the Speaker went off-script,” Miridian answered with a quick glare at the Human. “We have contingencies, but there are only a few ways they could have learned about this place. We talk about this later. Time for your people to prove their worth.”

Nartha looked back to the screen, where the Speaker was finishing up, and his final words in the bizarre speech were – to Nartha – ones of foreboding and threat to his blinded kind.

“Rest assured, citizens, that we will be with you throughout this crisis, and when our enemies are defeated, we will usher in untold years of peace and prosperity. Together, we will forge a new age of the Vitakara, one which will stand beyond our planet, but make a legacy in the stars itself.”

***

**ADVENT Air Force Base, Ramstein – Germany**

5/4/2017 – 11:02 A.M.

Fear.

First it came as a shock, then overwhelming like a wave.

Patricia stepped through a portal and directly in front of a young hapless ADVENT guard who barely managed to squeak before she snapped his neck with a thought and threw his partner into a nearby building with enough force to shatter her skeleton. Nearly everyone else nearby froze, not sure what they were seeing.

The fear was tinged with confusion; thoughts swirling in internal maelstroms.

*Is this happening?*

*Is that her?*

*I need to wake up now!*

*She’s bigger than I thought she’d be.*

*What is she doing here?*

There was one thought that she found repeated in some fashion.

*I’m going to die.*

That they were.

But these were soldiers, and well-trained soldiers. Even in spite of their crippling fear, they raised their weapons automatically and began firing. The civilians ran away or picked up things to throw
at her. Patricia lifted a hand, palm flat as the gauss rounds froze before her as she lazily looked around.

A target rich environment.

At one time, she would have waited and slowly subverted their minds from afar, turning them against each other over a long period of time. She lacked the necessary skill to defend herself at that time. There was a time of subtlety, of course, but many other times it wasn’t required. But she was no longer that woman.

These soldiers could not touch her.

Not anymore.

The maelstrom of thoughts and palpable fear that coated the intangible Psionosphere around her grew, and was now spreading throughout the base. They were not prepared, and admittedly, why should they be? An attack here wouldn’t be able to accomplish anything permanent? Not to mention it wasn’t even on the radar of the Collective.

Not hers either, admittedly, but a random one she’d chosen.

The first of many to fall by her hand.

She waved a hand. “Panic.”

A simple command with unpredictable results. More than sufficient for her. Simply by stepping out into their proximity she had anchored herself in their minds, burrowing to a level where they could not defend themselves properly. There were some psions here, but they were incapable of stopping her. They lacked her skill, and more importantly, her power.

Panic.

Panicked soldiers were dangerous. A panicked soldier was turned from a killer to an unpredictable killer. Their vision focused; their bodies went on autopilot. They lost motor control. Everything and everyone around them became a threat. Friend or foe meant nothing as their reason faded and sheer animal instinct took over.

Patricia let the floating projectiles fall as the soldiers around her started shooting at everything and everyone around them. Civilians screamed and ran around incoherently, the panic pushing some into full retreat mode while others simply shut down and curled up on the ground, sobbing before they were gunned down by equally panicked ADVENT soldiers.

A few still focused on her, but she barely paid them mind as she began her march into the base. A waved hand or clenched fist sent them plowing into buildings or objects with lethal force, or their body was crushed into unrecognizable pulp. The people of course were only a portion of the targets, as the infrastructure would also need to be taken care of.

The more ADVENT was forced to invest, the more they didn’t have for other plans.

Psionic maelstroms manifested as Patricia walked her path of destruction, ripping entire buildings apart and flinging concrete, wood, and metal in all directions, killing whoever happened to be bystanders – or whoever was inside to begin with. Office buildings, warehouses, and housing was destroyed with a thought.

Still as she walked, some continued to attack her in futile attempts.
It was almost amusing, if it wasn’t rather irritating. The pop and sound of gauss rifles were like gnats and pester ing insects fluttering around her, incapable of touching her, but deluded enough to think they could make a difference, or too stupid to realize what they were doing. Unlike gnats, she did not ignore them.

Bodies were crushed; lightning caused explosive results; several were bisected from a barrier she created between one of them. Each step she took she killed. A trail of bodies that were directly by her hand followed her path as she annihilated the infrastructure of the base and left tanks, planes, and other machines in crumpled and flaming wrecks.

It almost turned into a haze of death and destruction for her, a curious realization of invincibility and power that she hadn’t experienced in some time.

It felt good. She was overdue for a break.

Soldier, civilian, man, woman, child, at least one of each attempted to be the one hero – or more likely were overwhelmed with panic – to try and take her down. These were not rational people, but such was the cost of the war ADVENT wished to wage. Patricia was vaguely aware of the alarm which had sounded and knew that sooner or later someone would be dispatched to deter her. For now, at least, it was too late.

She cocked her head and listened. Gunfire sounded in the distance, as did screams and gibberish. ADVENT would be cleaning this up after she left, and there was likely little point in bothering to wipe out each and every one of those who were more focused on their own panic than taking it out on her.

The damage had been done, and ADVENT would be stuck with a bunch of useless soldiers.

*This is only the beginning.*

*Come and stop me.*

As the fires burned around her, and bodies littered the ground, Patricia stepped into a portal before her and left the scene of her rampage, only mere minutes before the first of the ADVENT response came.

She idly wondered how they would react.

Likely with some panic of their own.

And then fear would set in.

Because now, nowhere was safe.

***

*Home of Runi’sirasis’vitianis, Geneva – Switzerland*

*5/1/2017 – 9:00 P.M.*

There had been several approaches Nemo had considered for removing his target. One would have been luring her somewhere in the open, though that had quickly been dismissed as she traveled with a number of bodyguards – bodyguards who still guarded her house, but didn’t follow her inside. As such, they were irrelevant, but while one Vitakarian could be replaced, there were none for the
guards.

An investigation would arouse suspicion.

Suspicion that was not needed now.

So the simplest solution was the most obvious. Nemo would simply wait in her place of residence. The cameras were an issue, but they were more than capable of being subverted. The cones of vision had been memorized, and fortunately the specifications and capabilities were publicly available.

Freedom of information was an excellent tool; it remained an open question why the humans didn’t see containing it as a priority.

Perhaps they did, and had determined it was impossible.

Objectively, it likely was.

Though mostly because they had allowed this freedom to grow out of control.

Quite curious, as no other species had that problem. Information systems like the Internet were not new, but they were far different in architecture to what the humans used. It was odd how they had started out on the normal path, and yet instead of expanding the capabilities and keeping public access limited, they opened it up.

Well, it certainly made operations easier.

The cameras now were playing on loops with the ADVENT overseers none the wiser, if they monitored this with any degree of seriousness. After all, the Collective had far bigger issues to concern themselves; certainly far more important than one lone Vitakarian woman, even a mildly influential one.

Sirasis’s home was modest and plain for the most part. Small, and more reminiscent of an office in places than a home. A kitchen, a board room, a bedroom, all furnished with Human designs and furniture, though there were some art pieces and color schemes that were distinctly Vitakarian. Nemo idly wondered if a number of the defectors had the skill, or if she had recovered them.

A door opened.

She would be coming up soon.

Nemo just stood in a small closet with the door ever so slightly ajar. Enough to see out of. There was a risk that she would spot him, but if she was that close it would not be enough to save her. The cameras would not pick up anything, nor would the listening devices he’d found. Collective tools made detecting such trivial.

She had stepped foot into the place of her death, and each step brought her ever closer.

The thing that was Nemo simply listened; senses far beyond any normal organic being. It heard each step she took, the shuffling of a bag and perhaps some documents which were placed onto the table; it heard a clink of keys that were hung up. It heard her steady breathing and calm heartrate. There was no smell, no indication that she was anything but at ease.

Good.
No reason she needed to suffer.

Merely a casualty of war.

She drew closer to his hiding place, and passed by without a second thought. Nemo heard the guards take their positions outside, and when she was only a few steps from the closet Nemo pushed the door soundlessly out and crossed the distance in seconds. Before she even realized what was happening, Nemo’s hands were around her head.

A twist, a pull, and a crack.

She’d never seen it coming.

Quick. Painless. Effective.

He laid the body down, her expression blank; not even surprised by what happened. Her mind hadn’t been able to process it. The being wearing her face stood over the victim, wondering if that was a preferential way to die.

Was it better to simply cease to exist without warning? Or to know the cause of your death?

Interestingly, Nemo had a preference.

If it was to die, it wanted to know who had killed it.

Otherwise, it almost felt...pointless. An unceremonious end to a gripping story. A rushed conclusion without purpose. An eternal question. A lack of...

He felt several words on the tip of his tongue. Most didn’t seem right, but interestingly, the word *fair* felt right. A lack of fairness. Of closure.

Nemo almost felt guilt now.

Not for the act.

But that she hadn’t died knowing who had done it.

Or why.

A grey-skinned hand reached into the pocket and pulled out a small device that was placed on the chest of Sirasis. Nemo took a step back and activated the device. Black nanites spewed out of the device, and spread throughout her body, slowly consuming her. Nemo watched the morbid process with unblinking eyes until the very last cell had been disposed of.

The nanites went dead, a small pile of dust on the floor.

Without looking, Nemo reached into the closet and pulled out a broom and gave a sharp sweep, scattering the defunct machines to the air. There was the miniscule risk that ADVENT would discover them, of course, but Nemo had little faith such an insignificant event would be its downfall. That was simply not how this story would go, nor did it have an intention of letting it happen any way other than planned.

*This is who I am now.*

Nemo would fade to control its puppet, and Sirasis would step forward, and she would be a voice of a people who had abandoned their homes and lives for the promise of new ones.
This is what I am.

She would affect change. She would show the world the futility of facing the Collective, but in a more…controlled manner.

When the face of the traitors succumbed to the poison of fear, the rest would follow.

But the downfall must be convincing.

It was a role that promised to be a fascinating one.

Sirasis, or the thing that puppeted her, walked over to the bed and slid into it, intent on getting a pleasant night’s sleep.

She had a big day tomorrow.

***

Nulorian Outpost, Borelian Wastes – Near Vitiary

5/2/2017 – 10:54 A.M.

The sun blazed down on the snowy tundra as Vitakara marched upon it, with light winds sending up tufts of snow. The roar of Vitakara troop transports echoed for miles around, and the sight of the silver legions of Runianarch soldiers painted an imposing sight, especially as they were contrasted by the black armor of Custodians interspersed with Sectoid Vanguards.

Plasma fire was already being exchanged from the automated defenses Siaru was commanding, as well as Nulorian soldiers dug into their entrenched positions, determined to kill as many of their hated enemy as possible.

So far, they were holding out.

“Hit the Vanguards!” Nartha called out, and Mehren and Edgar, two XCOM Intelligence agents who had received sniper training coordinated their fire from the roof, forcing several of the Vanguards to hold in place as gauss rounds slammed into their shields. Nartha and Shun fired together, picking off several more hapless Runianarch soldiers who were frantically trying to establish cover.

Vitakarian fighters streamed overhead, and that wasn’t good. “Fighters!”

Very rarely were the spacecraft of the Vitakara used – probably because they were not good fighters in what Humans called dogfights, but better at precision targeting. Holding out in a trench wasn’t going to matter if a missile eradicated them. “Siaru,” Miridian commanded. “Concentrate fire on anti-air defenses.”

“TARGETING PARAMETERS RECONFIGURED. HOSTILE NETWORK IDENTIFIED. ENGAGING INFOWAR ATTACK.”

“What does that mean?” Shun asked as she ducked behind the metal barrier, they’d taken up cover behind.

“It means he’s going to make their lives difficult,” Nartha assumed as he laid down some covering fire against several Borelian soldiers. “I hope.”
The Custodians suddenly froze or slowed their movements. Runianarch soldiers who had helmets also suddenly stopped shooting, shaking their heads or holding their helmets; some tapping on them as if trying to get rid of something. The Custodians didn’t turn on the Runianarch, like what Nartha had hoped, but they were definitely not being used properly.

Out of a morbid curiosity, he turned to a Collective frequency he’d memorized and almost threw off his helmet from the intensity of the mantra being played by their machine ally.

“LEAVE OR BE DESTROYED. LEAVE OR BE DESTROYED. LEAVE OR BE DESTROYED. LEAVE OR BE DESTROYED. LEAVE OR BE DESTROYED.”

It was played over and over in the voice of a mechanical monster, at the highest volume possible until the words blurred into one coherent roar that stayed in your head far longer than it should. Even as Nartha turned the noise off, the voice still echoed in his head. It made him feel exposed; vulnerable, he could only imagine what the soldiers who couldn’t get rid of it as easily felt.

“Kill them now,” Miridian ordered, and this time the barrage of fire was far more successful, dropping entire lines of Runianarch soldiers, as Siaru used the emplacements to deter the Vitakara fighters in the skies. None were shot down, but they were keeping their distance.

Then suddenly the Custodians reverted to normal.

“SELF-OBFUSCATION PROTOCOLS INITIATED. RETREAT ADVISED.”

“What?” Was Siaru abandoning them now? He and Shun exchanged a look, faces obscured by their helmets, their surprise and dismay could be felt.

It all made sense a few seconds later.

“Well, isn’t this interesting!” Quisilia stepped out of a portal, flipping a black dagger in the air.

The Ethereal observed the bunker, almost bemused. “I’ve been anticipating this day for some time. You could not run forever, Miridian.” He zeroed in on Nartha. “Or you either, traitorous Zararch.”

He flashed and suddenly he was in the Nulorian lines, blades flying fast as multiple Nulorian were slaughtered in front of him, some by the wicked blades Quisilia wielded, and others by telepathic commands. He teleported to the lone Human psion and killed Yakiv where he stood, barely able to fire off a shot.

“I admit, Nartha,” Quisilia said, motioning with a hand and Nartha’s weapon flying out of his hands. “You seemed to figure it out in the end. But too little, too late.”

Nartha reached for a pistol and Quisilia laughed, telekinetically grabbing Shun and throwing her towards him, sending them both to the slippery snowy ground. “What are you talking about?” He growled. “I guess I should say you figured me out. You allowed a traitor in the highest levels of your ranks and failed to detect him.”

“Oh, if only that were true,” Quisilia chided, wagging a finger. “Did you really think we were so incompetent as to let you run around the Collective without a purpose? Did you really think we sent you to find traitors on Vitakar, on Desolan, and elsewhere by accident?”

The breath suddenly left him as he stumbled to his feet, a horrible thought taking shape in his mind. “No…you didn’t…you couldn’t…”
“I find it incredible,” Quisilia said, thoroughly enjoying the exchange. “How you thought yourself so special that you thought you could not only outsmart the Zar’Chon, but me. And while I may not be a master of spycraft, I am certainly no fool.” He flung his hand forward and one of the blades embedded itself in his chest, creating a stinging pain. “And I am much smarter than you.”

He heard Shun scream his name, and he stumbled down to one knee, though he could hear Quisilia’s words clearly; words he probably wanted him to hear, mocking him. “How exactly do you think we found all of these Zararch installations? Would you like to hear how the operation on Desolan is proceeding? Quite clever, what you tried to do. And it might have even worked, if you hadn’t forgotten one simple truth.” Quisilia knelt to one knee, the eyes of the helmet looking into Nartha’s own as his hands clutched the blade. “You cannot beat us. The Collective will remain under the watch of the Ethereals, now and forever.”

Shun was beside him now, whipping out a medkit as Nartha stared numbly ahead, feeling all semblance of control leave as his world crashed around him.

All of this was his fault.

All the precautions he’d taken, all the times he thought he was being smart, all the risks he’d taken, it had all been pointless, because he’d made the fatal mistake of assuming that he hadn’t been compromised from the moment he’d first met the Zar’Chon after arriving from Earth. It must have been there, or soon after.

He’d underestimated their patience, their willingness to suffer defeats.

But he could see very clearly now.

Whatever temporary pain he’d caused, whatever troubles he’d caused, whatever damage he’d inflicted, it paled in comparison to what he offered. A useful pawn who’d gone to the trouble of gathering the internal dissidents of the Collective into one place, or at least given them the information. How much did they know?

Was it all lost?

Looking up at the gloating Ethereal, Nartha decided that no matter what happened…he wasn’t, as the late Van Doorn would say, going down without a fight. He held onto Shun, reaching for a rifle. “Are you going to keep talking,” he spat out. “Or are you going to finish this?”

“Really?” Quisilia actually sounded incredulous. “I’ve literally just said your entire little rebellion was completely pointless, and all you can do is taunt me? Do you actually have a death wish?” He looked to Shun holding him up. “What, you want her to die too?”

“He makes a good point,” Shun added, voice weak, but firm as she lifted her own pistol. “It’s not like you’re going to let us live anyway. And I still remember when you were thrown into that wall.”

“Wow, I could never have seen that insult coming,” Quisilia said dryly, as the weapons were pulled from their hands. “Truly, you two are masters of the word. I’m tempted to keep both of you alive simply because your attempts to be defiant are amusing. You are less than nothing now; your purpose has been served. Live, die, it matters little now. Even if you don’t die today, I suspect you won’t last long when the Nulorian know that you destroyed them.”

His voice turned surprised. “Well now, a new challenger approaches.”

Nartha suddenly found himself being lifted up, along with Shun and unceremoniously dropped to
the side. He looked to see none other than the Chronicler walk opposite Quisilia, clad in his familiar armor. “Correct me if I’m wrong, Quisilia,” the Chronicler said, beginning to glow with blue power. “But I believe you challenged me to a rematch.”

“And here I thought you wouldn’t accept,” Quisilia flipped the weapon in his hand. “And of course, you show up right before I kill more of your people. How convenient. Nonetheless, my job is done. The Nulorian will never recover, and ending today with your death will be satisfying indeed.”

“We shall see, Quisilia,” the voice of the Chronicler grew layered and deeper. “This time, you will not be saved by chance.”

With the last vestiges of his consciousness, Nartha saw the Chronicler blast Quisilia with psionic energy which the Ethereal avoided through an immediate teleport, and then drifted off into unconsciousness, hoping that Shun would be able to get out safely.

***

Tampa, Florida – United States of America

5/7/2017 – 12:12 P.M.

Ground was being lost, and it was going to snowball into the Collective overrunning them soon enough. The Battlemaster had made the proper adjustments as he intended to win the war in a conventional way. Everything ADVENT and XCOM had done to keep him in check was subverted, and counters to the strategies, defenses, and soldiers were brought to bear.

The Commander would have been both impressed and dismayed at the result, if conventional victory was something that they had been working towards.

But standing on a skyscraper, as cold rain poured down upon the miserable battlefield, he breathed a sigh of relief. He had stated that Tampa would not fall…and he would walk away keeping that promise. It had been close.

Very close.

But it was ready.

There were clearly many unknowns; there had been no proper testing on GAIA outside of simulations and models, and so this was the first field test of the technology. They were relying an uncomfortable amount on luck and trusting that the developers and JULIAN had been able to make the nanites do what they wanted.

The developers were exhausted, but confident. Nearly a thousand men and women had worked around the clock testing iteration after iteration, from ADVENT and XCOM alike, knowing that one poorly written line of code or ill-defined parameter could turn GAIA from a weapon of salvation into one that would consume not just the aliens, but the state itself.

Well, somewhat. If needed, the entire project had a kill-switch, but if they had to use it, Florida was effectively doomed, as was a good portion of the southeast United States.

They were not quite taking that large of a risk.

JULIAN had the advantage of being able to devote himself fully to the project, not needing things like sleep or food, though the downside was that his limited processing power meant he could not
assist in a significant capacity beyond the occasional conversation – and sometimes JULIAN simply didn’t want to talk, so absorbed was he in ensuring GAIA would work.

What had been highly interesting was hearing from developers – primarily through Vahlen and Jackson – how JULIAN had gone from a very sarcastic and deriding manager of the project into almost appreciating his ‘human assistants’ as he so generously put it by the end. Initially JULIAN had believed he could do most of the work himself, without significant Human assistance.

If he’d had a month of uninterrupted time, it was likely true, but they had definitely not had that time. All working together, they’d finally done it.

“GAIA is ready, Commander,” JULIAN stated proudly into his earpiece, one of the first times he had imitated the emotion, the Commander noted. “Please launch at your command.”

“He certainly has a flair for the dramatic,” Laura muttered, standing beside him, hair wet and sticking to her neck. The Commander half-believed she was only standing out in the rain so she wouldn’t fall asleep from sheer exhaustion trying to limit the casualties while also buying as much time as possible for GAIA to be finished.

“That he does,” the Commander agreed. “Especially since he could technically start it himself whenever he wanted.”

“Most certainly, Commander, but I wouldn’t deprive you of the chance to press a button and congratulate yourself for the outcome despite not actually doing anything,” JULIAN quipped. “Aside from killing aliens, of course. But anyone could do that.”

“Touching, JULIAN,” the Commander retorted dryly. “But it also relies on you and your team doing your job correctly.”

“I have full confidence in what my subje-my Human assistants along with myself have accomplished,” JULIAN said. “Now stop wasting time and push the button.”

The Commander picked up a small black fob he’d set on the railing. Manufactured by JULIAN, it absolutely did not need to exist, but as Laura had said, he had a flair for the dramatic, and privately the Commander could see the appeal to pressing a simple button to end the fighting. It wasn’t quite a win button, per se, though it effectively functioned like one. For some reason, there was a large bold F stamped onto the center of the button.

The Commander wondered what it meant.

Probably something from the Internet. JULIAN reminded him of Quisilia sometimes, though fortunately this time he was on their side.

Here we go. The Commander pressed the button, then stepped forward, and watched.

***

Tampa, Florida – United States of America

5/7/2017 – 12:18 P.M.

Victory was close enough that Ivan could practically taste it. The ADVENT armies had defended themselves adequately, but they could not hope to win against the might of the Collective – nor could they stand against him. With the Battlemaster’s own Harbinger out of the picture, he had stepped up in a far more impactful way.
Fighting with swords and in person was all well and good, but it was…limited.

And dangerous.

Truthfully, that Yang had almost died had ultimately been a net positive both for the war effort, and himself. The Battlemaster was no longer distracted by her, and focused on the offensive which had gone far better now. Likely because Ivan was finally able to utilize his extensive talents more openly. Largely because the Battlemaster needed another force multiplier, and he could fulfill it far better than Yang.

And unlike her, he would not needlessly throw himself into danger. There were a few thousand soldiers between him and ADVENT, and that was how it should be. He was more useful behind the lines, providing constant mental attacks against ADVENT. Not all of them succeeded of course, and the more ADVENT was pushed back, the more difficult it became to penetrate their minds.

There was something blocking him. Sometimes it was clearly psions who he was able to brute-force through, but other times it was…something else. Possibly T’Leth, but Ivan wasn’t completely sure, but it felt distinctly alien and…old. There was an unsettling quality around it, one which he admitted didn’t want to push against more.

It was like putting a hand into slime. It wasn’t necessarily harmful, but it was unpleasant.

Still, all of that was soon to be behind them. Victory was close at hand.

He extended his mind to the ADVENT defenders once again, though this time noticed something peculiar…a rush of conflicting emotions. Desperation, concern, fear, all of those he had felt before and throughout the conflict, but now added onto it was a sharp surprise and it was amplified by the Runianarch soldiers and simple-minded Mutons.

Ivan frowned to himself.

Odd.

An XCOM squad? It wouldn’t surprise him, as there had been many instances. Yet this wasn’t just affecting the area he was observing; a quick check of the minds around him picked up growing pockets of surprise morphing into fear, then panic, and it was growing faster and faster. What could possibly be going on?

Against his better judgement, Ivan disconnected himself from his mental assaults, and opened his eyes, trying to get a sense of what was going on. Within his shelter, he heard nothing, and quickly walked outside and froze in surprise by what he saw. Runianarch soldiers were running away, while Mutons were firing down a street at a black mass that was inching towards them.

No, not a mass; not some kind of sludge. It looked like dust of all things, yet was accompanied by a mechanical clicking sound. The corpses and rubble it moved over were consumed as if a swarm of hungry ants had gone over it. Plasma fire was taking out chunks of the mass, yet like water it flowed back together into a seamless whole.

Nanites.

Ivan blinked.

How? How had they gotten in? ADVENT didn’t deploy nanoweaponry like this!
ADVENT had a working doctrine on nanoweapons. Zararch operatives had confirmed as much. Nanoweapons were a last-resort weapon, and even then, there was heated debate over what the scope should be. Safeguards like limited operating time or limited parameters were always employed. This simply shouldn’t be happening. The nanites should dissipate at any moment.

But…they weren’t.

If anything, the black swarm was growing stronger.

“Behind!” One of the Vitakara yelled, and Ivan spun around and saw that more nanites were approaching. He suddenly had a terrible, sinking feeling that they’d been tricked. ADVENT had somehow laid a trap for them, which they’d taken. They’d seeded the city with nanite bombs and activated them when they were on the cusp of victory.

He’d been right. The ceasefire had been a ruse for ADVENT to pull this off.

“This is the Battlemaster to all Collective forces,” the Battlemaster suddenly sent over the channel. “Immediately retreat to the nearest Gateway or landing station for evacuation. Cleanser Ships are moving in for EMP cleansing. Only use wide-area energy and explosive weapons to delay nanite pockets. Arms fire is insufficient.”

And this is your fault, Ivan thought bitterly as he decided it was best to run away. Not glamorous, but a telepath could unfortunately do nothing against nanites, and he had no explosives at his disposal…not that he would have used them. He knew better than to think that would be enough to defeat something like this.

The battle lines had broken down this far from where the fighting was supposed to be, and it was effectively controlled chaos, with no steady direction or plan. Everyone was just trying to survive. To go the opposite direction of the nanites that seemed to be coming from everywhere, and that was when Ivan realized that there was a problem.

He didn’t know where the landing zones were. Or even some of the Gateways.

He hadn’t considered those important to learn, because why would he need to know that? There were no shortage of individuals who were able to escort him, though now he was deeply regretting that gap in his knowledge. He had severed the connection with the Overmind when he’d ceased his attack, as otherwise it was too distracting, though now he considered activating it again…

But if he did, he might become paralyzed and definitely die to the nanites.

He took a steady breath. He could find his way to the landing zone. He was certainly not going to die here. Certainly not to…nanites of all things. But where to go? All the soldiers were running in different directions, and to make matters worse, the nanites could be down any street or any alleyway. Ivan vaguely remembered a place where a landing pad might be, and charged off in that direction, not caring if the specifics were sketchy.

“Where is the landing zone!” he demanded to a stuttering Vitakarian who pushed him away in a panic and ran forward.

“Where!” Ivan roared, eyes glowing purple and deciding to not waste time and went directly into the hapless alien’s mind, only to remember that it was an alien mind, and those he was less familiar with. “Useless!” he spat, leaving the stunned alien in place while moving forward, a quick glance behind saw that the nanites were moving forward like a creeping plague.

The storm was picking up wind, and it was blowing some of the nanites around like dangerous,
toxic dust that could kill with a single grain. The illogical parts of Ivan’s brain were firing off, desperately wondering why the nanites weren’t shorting out if it was raining so hard. There were many more audible screams as aliens were caught in the nanite swarm and torn apart.

Speed was paramount, but Ivan was now afraid it wouldn’t be enough, as wherever he turned, eventually he saw wisps or streams of the black nanites who threatened to consume him. His path became haphazard, and turning from a vague memory into going wherever it seemed safe. The walls felt like they were closing in, and he was soon lost, with no path in sight, and the screams sounding all around him.

Then it happened.

He turned into an alley, and it was a dead end.

He quickly turned around, and walked back out to see nanite streams coming in from both directions. There was no way out. It was…almost absurd how it had come down to this. This was not supposed to be what happened. There needed to be some way out of this; some path to his survival. Inside one of the buildings?

No, he wouldn’t be able to get in fast enough, and it would essentially trap him. Get on the roof? Maybe! He spotted a dumpster propped against the alleyway, and above – very far above – was a window ledge. He might be able to jump up to it and pull himself in. Well, he didn’t have a choice. He had some genetic enhancements, but it certainly wasn’t to the level of Patricia or Yang, something he was truly regretting now.

Heart pounding, he jumped onto the dumpster and with the buzzing and clicking of the nanites behind him, knelt down and jumped as high as he could. His fingers gripped the slick ledge; one he almost missed, but he managed. He let out a sigh of relief as he just hung there, out of the reach of the nanites below him.

Alright, he had done the first step, now-

His grip slipped. One hand fell down, and soon Ivan found himself falling and landed directly onto the dumpster, knocking the breath out of him, which was immediately replaced by terror. He pushed himself up to the dumpster, and for a brief moment thought he was safe, as the nanites swarmed underneath, seeming to sense he was there.

A pinprick jolted his leg. Instinctively he reached down and swatted it. A dozen more appeared on his legs, and he knew it was too late. Complete panic took over as he tried slapping his legs, maybe thinking to kill them with kinetic force. He hastily tried pulling off his boots and pants to get to the nanites directly, but as his legs became fire, his incessant slapping somehow transferred the nanites to his hands, and started eating away at them as well.

Blood was starting to trickle down his leg from the holes torn open by the nanites, and a burst of wind blew hundreds more onto him, directly onto his face and chest. He had kept from screaming thus far, but this was impossible to stay quiet on, and he no longer cared who would hear him. Ironically, opening his mouth simply allowed several nanites into it, which began eating his tongue and throat, and his eyes soon turned to mush as they were eaten away.

Vision faded.

His legs gave way.

Perhaps a finger had fallen off?
Perhaps his tongue?

There was too much pain. Too much stimulus.

He fell off the dumpster, surprised he’d been able to stand for so long. He fell into the waiting machines, machines he could swear lusted for his blood and flesh. They hungrily covered every inch of his body and ripped it apart piece by piece, molecule by molecule. Ivan Smirnov did not last long before his body was consumed.

When the swarm dispersed, there was nothing.

He was far from the only one.

When ADVENT walked through the streets, they saw no bodies. They saw no carnage.

Had many not held the brutal and traumatic memories of the weeks-long conflict they had participated in, one might wonder if there had even been a battle at all.

***

To be continued in Chapter 58

“Conspiracies and Coronations”

Chapter End Notes

So a couple of things to add on here. First is that I recently began writing a supplementary piece for LogicalPremise for his OSABC series, specifically on the Citadel, check that out if you’re interested. Second thing is that I'm putting it out there that if anyone is interested in maybe writing something within the context of this series (i.e. a short story, guest XCOM File, etc.) let me know. I've already found some people I'm working with and you might see some new stories written by them in the future.
Birds chirped and insects buzzed within the outdoor plateau, as the warm sun blazed overhead. The weather lacked the bite of the cold the General was so familiar with; it was an odd sensation, though not necessarily unpleasant – for now, at least. Terraforming the climate to be perpetually mild threw him off too often. He had been to enough planets to dislike the unnaturalness of what the Throne World had been engineered to become.

A home for the soft Lords and servants, all falsely content in believing themselves as invincible and undisputed in this galaxy. An illusionary triumph over the elements and aspects of their home they had disliked, which had been crushed by the hand of scientists and geoengineers. Impressive in the minds of the limited. Were it not for the visionary he served, they would hold a mere fraction of the power they now possessed, so low were their ambitions.

The mild climate now explained why his Lord had decided to wear the more ornate, and comfortable, ceremonial attire, something the General now wished he had emulated, though here it would only make him feel more like an outsider. It was a curious perspective, to be old enough to see the home he had grown up in change to the point where it was hardly recognizable. Perhaps it was for the best, but it did not change the foreign atmosphere that had manifested.

Red and silver glyphs and symbols were woven through the silks of his Lord’s attire, telling a story only the literate and sophisticated could understand. It was deceptive to the casual observer, beautiful in appearance but portrayed a tale of blood, conquest, and darkness.

The pallid Lord took a small sip from the glass in his hand, the irregular temperature seeming not to affect him in the slightest. His glass was filled with an alien beverage that had been harvested from another sphere long ago – wine. Proof that the contributions of other species and spheres could eventually be integrated and later cultivated here. The General did not care for the beverage, though the symbolic implications he could appreciate far more.

They sat around a wooden table under a towering tree, as a comfortable breeze blew. The smells of fruits and flowers wafted up from the lower plantations, while guards lined the crystal walls of the palace it protected. Said fruit had been gathered and placed in the center of the table, untouched by the two men, though their third guest had little problem helping himself.

Their guest bore the rugged appearance of a hunter or mercenary, lacking the flawless skin and elegance both he and his Lord possessed. Instead, he sported a jagged scar across his throat, and there were many similar wounds under the leathers and armor he wore. The reptilian eyes of a predator flicked between the two of them, an equally feral smile playing on his lips. Plasma packs, physical ammunition, several daggers, and a multitude of explosives hung from his waist and straps on his chest, with vials of unknown liquids also within easy access. A silver ornament of intertwined metal strands hung from his neck, completing the haphazard attire.

He rivaled the General in mass and height, though unlike the well-maintained gear of the Riders, this man’s equipment was stained and dirtied. A faint smell of earth and blood clung to him, likely in part from the rifle strapped to his back along with a hardened sword. Clearly, this was not a man
that belonged here.

Nonetheless, his Lord had decided he had a role to play.

“[I think we should begin,]” the Hunter finally said, tossing away the seed of the fruit he had eaten. “[We both have an intolerance for small talk. I would know why you requested me, especially considering the contract we were in the process of fulfilling.]” His command of the language matched the rest of him, rougher than normal, if still perfectly fluent. It was how the General knew he was originally a native of the Throne World, as foreigners had a distinct lilt.

It was quite interesting. Few natives of the Sphere, let alone the Throne World, pursued the path this man had.

“[You reviewed what we provided you on the way, I trust,]” his Lord began neutrally, leaning back into his chair, indicating him to continue. “[Your assessment?]”

The Hunter glanced down to the papers splayed out on the table, which he had been reviewing during the meal, while ignoring the awkward silence. “[Rather interesting, if I do say so myself. But, to be blunt my Lord, not relevant. Unless you want a number of these people dead, or there is an infestation on this world, I’m not sure why you need us.]”

“[Consider it redundancy,]” the Lord said, lacing his fingers together. “[There is a principal asset of ours involved, but considering the implications I would prefer we not be reliant on him.]”

The man glanced at him with yellow unblinking and curious eyes. “[Define ’principal asset’?]”

“[The Viceroy.]”

The Hunter whistled, leaning back. “[I see. In which case, my question still stands. We’re not spies, so supporting someone like the Viceroy would be gross mismanagement. Furthermore, if you have insertion capabilities, you can easily deploy your dedicated assassins and harvesters. I would prefer a straight answer, my Lord. You know very well what we are capable of – and know we don’t waste time.]”

The General bristled. “[This invitation was not a request.]”

“[Unofficially, yes,]” the Hunter waved a hand. “[However, we’re aware of our worth to the Throne. Bickering is unnecessary, General; no need for threats. I’m stating that there is little reason to request us in lieu of utilizing your own specialized agents. So if you do not have a contract for me, then I might as well take my leave.]”

“[You’re in our sphere and answer to the Throne,]” the General reminded him. “[This is not a negotiation.]”

“[A throne I will remind you, your Lord does not sit upon,]” the Hunter amended with a smile. “[And to my knowledge, the Sage-King has not given me this command.]” The Lord’s lips curled up ever so slightly at that.

“[Enough,]” his Lord stated slowly, raising a fist and placed a holoprojector on the table with one hand, and sliding a packet to the Hunter with the other, which bore the seal of the Sage-King himself – something the General hadn’t been aware had been acquired.

An unexpected, but positive development.

The humor left the face and bright eyes of the Hunter, who visibly swallowed and reached for the
packet. “[This is a matter concerning the interests of the Throne World itself,]” his Lord said in a controlled voice. “[It is a long-term contract, in which you have two targets. This is your first.]” With the press of a button, the image of a familiar human appeared from the holoprojector. The Hunter appraised it for a few minutes, seemingly taken by surprise for the second time in as many minutes.

“[Is this who I think it is?]” He asked warily.

The General frowned. “[How would you know?]”

“[Come now, General,]” the Hunter chided with a thin smile. “[We may not be friends with the other Schools, but rumors spread – particularly with traitors and deserters. This particular individual however is…unique.]” He waved a hand. “[Not that it necessarily matters, but I find it curious. Nevertheless, what are the conditions? Alive? Dead?]”

“[Alive,]” the Lord emphasized firmly, fixing the Hunter with a stern glare. “[Under no circumstances is she to be permanently harmed.]”

A nod, as the fingers of the Hunter rapped on the table in a short rhythm. “[Manageable. It won’t be easy, but it will be done. Though I suspect I lack certain tools to make a capture feasible.]”

The General nodded, relaxing slightly. “[Those will be provided to you.]”

“[Ultimately, this conflict on Earth is minor. The more important target will follow after your initial success,]” his Lord continued, shutting off the holoprojector. “[Understand that what I will tell you will not be repeated.]”

“[Of course.]”

“[The Entity has escaped containment, and will likely migrate to the Sphere of the Sovereign,]” he continued. “[I trust I don’t have to describe why this is problematic?]”

The Hunter had gone still, concern etched on his face – though unsurprisingly enough, it quickly morphed into irritation. “[We warned you this would happen. You should have killed him when you had the chance.]”

“[Perhaps,]” the Lord acknowledged with an idle motion. “[But considering the advances the Throne has made, the purpose has been served. He was captured once, he will be captured again.]”

The Hunter gave a bleak, dismissive laugh. “[You have no idea what that thing is, even now. What you learned from it means absolutely nothing to him, nor what you accomplished. You are speaking of a monster that transcends reality as we understand it; a thing that fed you scraps to make you complacent. No, my Lord, if we help you again, it will not be to capture the Entity – it will be to kill him.]”

“[Assuming he can be killed,]” the Lord idly noted. “[I am not convinced he can. You of all people should know some creatures cannot be killed.]”

“[And that is what concerns us,]” the Hunter admitted, lips in a thin line. “[We had potentially one chance to kill it – or at least try – and you forbade us. So you could exploit it. Killing it – or at least attempting such - is imperative, but this is something I cannot do alone.]” He grimaced. “[Killing monsters is our specialty – but even now you don’t understand what you’re asking.]”

“[Then learn,]” the Lord stated dryly. “[For once it seems I possess more optimism than you. This Entity is a threat, but he is a puzzle who follows and is bound by rules. He can be dealt with, and
you know what to look for. For now, observe and complete your first task. When you confirm the Entity walks the sphere, you will inform us and we shall mobilize."

There was a brief pause, and the Hunter finally gave a single nod. "[Very well, my Lord. It will be done. You will receive your first report shortly.]

***

Unknown

Unknown Time

There was a beeping that seeped into his reality, initially quiet but grew steadily louder; a reality which was soon supplemented by bright lights and blurry vision that soon became clear. Nartha slowly woke up, groggy; feeling terrible overall, and with his chest feeling squeezed. He lifted a hand to wipe his eyes, then blinked. Feeling was coming back throughout his body, and the good news was that he seemed to be intact.

No missing limbs or digits, which was a positive; though now he felt the bandages wrapped tight around his chest where he’d been stabbed. The area of the wounds was sore to the touch, and it seemed that his heart was beating slower. It didn’t hurt to breathe, but it wasn’t comfortable either.

It was then after a minute that he realized that there was something warm pinning his left hand to the bedrest, and he idly looked down to see Shun resting on her hands, which were subsequently pinning his own. Somehow, she seemed to be breathing comfortably, more so than he would have expected.

She was unsurprisingly not wearing armor, with regular civilian clothing instead; a simple shirt and pants, and he saw boots kicked haphazardly by the door. Her short hair was definitely a mess compared to how it normally was, but none of that really mattered to him right now.

He felt a mental burden lift; not a lot, but enough. Good, she made it.

The battle, or the mess that it had turned into, was unfortunately fresh in his mind and soon consumed his thoughts as he leaned back. He idly looked around the room, seeing that he was in an enclosed room with dim lighting and a locked door. A medical console beeped, and the counter had some papers and tablets strewn on it with the faint smell of coffee brewing from the respective machine stashed in the corner. Still, he wasn’t sure if it was a normal patient room or a makeshift prison the Nulorian had stashed him in.

He wouldn’t be surprised either way.

The only thing he really felt right now outside of the pain, was the guilt. Innumerable people were dead or being held by the Zararch; citizens and Nulorian, innocent and guilty alike, all who would be killed after they were interrogated. XCOM and Nulorian soldiers were dead. Their plans on Vitakar were at best stalled, and their grand idea to rescue those the Zararch would use as leverage was effectively as dead as the many corpses that were no doubt now rotting in the snow.

All of it his fault.

He’d been unwitting, perhaps, but it was still his fault. He didn’t have to be an intentional traitor to bring the Collective down upon everyone. He could blame his ignorance, or his expectations, or anything else, but when it came down to it, he was the vessel through which the Ethereals had used to bring down the Nulorian and anyone they were connected to.
Nothing would ever change that.

Stupid of him for thinking he could outsmart the Zar’Chon, let alone the Ethereals. Quisilia had probably laughed himself silly at how effective Nartha had been. Within months he’d located government sympathizers, Nulorian officers, Muton smuggling rings, established a cell on Desolan, and set up talks with sympathetic Andromedon Unions.

All of that now pointless. He closed his eyes.

*Good job Nartha, you killed the resistance.*

Guilt, defeat, sorrow, all of them were felt in equivalent measures. He didn’t deserve to have survived, and was honestly surprised he’d escaped Quisilia’s attack at all. Perhaps Quisilia hadn’t really cared, and thought it would be more amusing for him to live with the knowledge of what he’d done.

Why else would he have laid out that it was all his fault?

He felt Shun stir, jolting his eyes open. She yawned, and once she saw he was awake, moved to sit up, her cheeks slightly flushed. “Hey. Sorry. I promise I didn’t mean to fall asleep on your hand.”

“Of all the things I’m worried about,” he sighed. “That doesn’t even register. I’m just glad you’re alright.”

“The feeling is mutual,” she agreed, appraising him with concern in her eyes. “How are you feeling?”

“Terrible,” he answered bluntly, his voice drained of emotion as he sighed. “I’ll live, but right now I wish I hadn’t.”

A flash of sadness crossed her face. “Don’t say that,” she said quietly. “Please. It’s bad enough so many died. Losing you too would be…it would have made it worse.”

“I’m sorry,” he closed his eyes again, before continuing. “But it’s my fault this happened. Wittingly or not, I was used to kill all those people. I can’t change or mitigate what happened.”

“Nartha, it wasn’t just you,” Shun took his hand, clasping it firmly in her own while looking into his eyes. “We all were tricked. Do you know how many people literally put their lives in your hands, believing you weren’t compromised? The Commander, Andromedons, *Miridian*, me…do you think we would have let you get close, entrust you with our secrets and lives, if we didn’t have some assurance it was safe? The blame isn’t just on you, it’s on all of us.”

Despite himself, his lips curled up. “That is a…forgiving interpretation. I appreciate it, but I don’t think the Nulorian will think the same.” He looked to the door, remembering his earlier musings. “Out of curiosity, am I in a cell?”

She furrowed her eyebrows. “What? No, and I haven’t heard the Nulorian talking about doing anything to you.”

*Huh.* “Interesting,” he mused, more to himself, his voice more perplexed than relieved. “I would have expected to be woken up in an interrogation chair given how Miridian is rumored to handle leaks.”

“Like I said,” Shun reminded him. “This isn’t just your fault. He knows better than to blame it all on you. So does the Commander. Besides, they aren’t going to get through me.” She nodded to the
nightstand at the head of his bed, where there was a plasma pistol laying atop it. “If anyone’s going
to handle you, it’ll be XCOM.”

Despite the situation, he felt warm upon hearing that. “I…thank you. I don’t know if I’m worth
dying over though. At this point I feel like I’m more trouble than I’m worth.”

She snorted. “You managed to build a resistance network all on your own, found the Nulorian, and
met the elusive Miridian. Before that, you got into XCOM and were only found out because you
told the truth. Don’t sell yourself short,” she gave a wan smile. “Quisilia is probably upset you
managed to do what none of the Zararch had been able to. You still have all those skills.”

Shun patted his hand, standing. “More importantly, you’re my friend and comrade. We’d both die
for each other if it came down to it. We’ve all made mistakes, and we will learn from them. Now
hold still, I made something when you woke up.” Releasing his hand, she walked over to the
counter and pulled out a coffee pot, and poured some of the steaming beverage.

“Here,” she handed him a cup. “You liked this when I shared it with you.”

He took the offered cup with some suspicion, a quick smell confirmed it. “I don’t think I should be
on drugs right now. Or at least anymore that are in me right now.”

“It’s only a little bit of chocolate,” Shun insisted, taking a sip of her own. “You can’t have a mocha
without it. And you need it. Take small sips. You’ll feel better.” She reached over to her phone also
resting on the nightstand. “A new ADVENT study claims that Vitakara that take chocolate are ten
percent more active!”

“You don’t even get cell service here,” he rolled his eyes, moving his head for emphasis since it
was easy for her to miss the motion. “And I don’t suppose that doctors also hate that one simple
trick?”

She chuckled. “Well, probably. Worth a shot, but do it please? For me?”

He took the offered cup with some suspicion, a quick smell confirmed it. “I don’t think I should be
on drugs right now. Or at least anymore that are in me right now.”

She looked at him imploringly and he sighed, and decided to comply. “You’re a bad influence,
Shun,” he grumbled, but took a sip. It was good for sure, though he tried not to drink too much at a
time. A few minutes after the chocolate began working, he did feel a lot more awake now. Which
meant he should get details before he inevitably crashed. “How bad is everything?”

Relief washed over him when he heard that. That had been the nightmare scenario, and it seemed
to have been averted. He was already breathing easier. “Good, good.”

“A lot of Nulorian outposts were hit, and most in them died,” Shun continued, becoming more
grim. “I don’t know about Desolan, but given public statements from this Speaker, everyone there
is probably gone. Overall though…it seems like it could have been worse. Bad, but salvageable.
Don’t quote me on that, but it sounds like that is the case.”

“That’s…better than I feared,” Nartha nodded, taking another sip. The loss of the Desolan Cell hit
the worst, mostly because it was something that wasn’t composed of hardened terrorists. It had just
been a network of conscientious people who’d trusted him to keep them safe. They were probably
all dead now, and the Mutons had probably also been murdered. All for the crime of existing.

He moved on, he’d get more details on that later. “What about from XCOM?”
“Better news on that front,” she flashed a smile. “We kicked the aliens off Florida.”

He blinked, not expecting that. “How? That’s great but…completely out of the state?”

“Some kind of nanoweapon,” she explained vaguely. “I don’t know all the details, but I’ve heard it may change the war.”

She grimaced a few seconds later. “Not all good though, Patricia is still being a problem.” Her voice faded. “It’s…difficult to reconcile with what she’s become. I didn’t know her that well, but she always seemed like a good person. Now she’s attacking a military bases and killing everyone. Soldiers, civilians, men, women, children.” Shun shook her head. “She deliberately went after the civilian housing.”

Nartha shook his head, also finding it difficult to really believe, even now.

“Is it really her?” Nartha wondered. “Or the Imperator?”

“I don’t know,” she leaned in her chair, taking another sip automatically. “It’s easy to say it’s the Imperator, but I remember some of the things she did, and said, and I’m not sure. When it was killing aliens, we were completely fine with it, but now it’s us who’re being slaughtered…” She trailed off.

“The Commander doesn’t know how to stop her?” Nartha asked.

“I hope he does,” she admitted. “But I haven’t seen it. How do you stop the most powerful Human psion linked with the most powerful Ethereal in existence? The damn Battlemaster is an easier target. I’m sure we can beat him. Patricia…” she trailed off, shaking her head. “She’s not as simple; not from what I’ve seen. All I know is that I’m not the one to deal with her.”

He held off on taking another sip, feeling the euphoric effects of the drug begin to make themselves known. “And now what? Where do we go from here?”

“As far as I’m aware?” She rhetorically asked. “We keep going. Vitakar is going to be liberated, even with this setback. I don’t think there is a better way to get back at Quisilia than refusing to die and staying here. We can’t give up now.”

She was right. “No, we can’t. We’ll have to find a way.”

“I’ve heard some of the Nulorian saying that Miridian has a plan,” she said, glancing to the door. “Let’s hope it’s a good one.”

***

Dreadnought of the Harbinger – Central Command

5/8/2017 – 1:19 P.M.

Dressed in her white ceremonial outfit, Patricia overlooked the intermingling crew with some satisfaction. While truthfully it wasn’t the best timing for a party in light of Florida, she’d learned that it was good to keep morale up, and emphasizing the victories over the losses would do them all some good.

And really, there was plenty of good news despite Florida. Despite the best efforts of ADVENT, South America was continuing to fall, Florida would soon be invaded again, Southeast Asia would continue to fall, and for all they knew, the next place she would strike would be Switzerland itself.
The nanoweapon was something of a problem, but certainly could be mitigated. The AI was the biggest threat, as it was very likely it was behind the nanoweapon – and no doubt behind more surprises XCOM and ADVENT had in store. Far too much power for XCOM to have, and it was only a matter of time before ADVENT began pumping them out too.

A problem to eventually deal with.

The atmosphere was good nonetheless; people were positive and feeling quite happy and content. There was a sense of community and connection that sometimes was lost if it wasn’t cultivated. Something she intended to keep well-maintained. Emotions were running high today, but in a good way.

Excellent.

She took a sip of water from the wine glass between her fingers. The Vitakara didn’t really like hard or intoxicating drinks – or at least had never really developed them, so there was a scarcity on the ship. Not that she really minded, but it felt a bit odd to organize a social where the primary drink was water.

She sensed a now-familiar mind coming up behind her. “Finished making the rounds?” Marian asked, coming up behind her.

“For now,” she said, making a brief connection with his mind to confirm it was him. After she’d learned that…things…like Nemo existed, she had become slightly paranoid, especially considering its last known assignment. That confirmation complete, she turned to face him fully. “I think it’s helping dispel the…” she idly waved a hand, searching for the word. “Mystique around me.”

Marian gave an agreeable nod, reflecting his feelings. “Yes, it was a good decision. You are certainly more approachable now. You came at a disadvantage, being both a Human and the Harbinger of the Imperator himself. Many of us are…well, used to being overlooked by the Ethereals.”

Patricia pursed her lips at the internal dismay he felt saying that, though he certainly wasn’t wrong. “A mistake.”

“Something the Imperator seems to be trying to address,” he agreed, cocking his head at her. “I assume this leadership is something you learned from the Commander?”

“Yes,” she mused, resting on the simple guardrail, looking out over the bridge, a melancholy feeling settling over her. “Well, mostly him. It’s something I think most know instinctively; people want to be liked and those under them loyal.”

Marian joined her, also leaning on the guardrail. “Supposedly common sense, but something I’ve noted many don’t not follow. At least not really. Do you wonder why that is?”

It seemed to be a question he’d been wondering since the event had started, and she thought a moment before giving an answer. “Apathy. Necessity. Simplicity. Loyalty, personal approval, all of that is…fine. But it’s not critical, not if there is a status quo. It can become exhausting, keeping the names and faces straight. When you reach a certain rank, when you have a certain amount of authority, it’s…simpler to view your people as assets and numbers, especially when you don’t see or interact with them regularly. More disassociation, easier to make hard decisions. The Commander understood that wasn’t the right approach.”

She smiled sadly to herself at the irony. “I doubt he’d appreciate me using what I learned here.”
“Probably not,” the Vitakarian agreed. “But it’s…I can’t disagree. In the Zararch we were jealous of the Collective Military because the Battlemaster…he cares. He makes his soldiers feel like they have a purpose and role to fill. That there is someone who understands them, who is on the front lines fighting and suffering beside them.” He gave a thin smile, not feeling slighted, but he definitely felt disappointment. “I’ve never even met the Zar’Chon personally.”

“A shame,” Patricia crossed her arms, thinking. “Perhaps he should alter his leadership methods.”

“I can understand it,” Marian shrugged. “Security and all that.” He cleared his throat, appearing to feel slightly embarrassed, but proud. “All that to say, thank you. I’m admittedly more cynical than many of my kind here, but it’s good to have someone who gives the illusion of caring.”

She smiled. “I appreciate that, and I can tell you it isn’t an act.” She set the glass down on a nearby table, and turned to face him, still leaning against the railing. They had plenty of time, and it didn’t hurt to learn a little more about her people. “If you don’t mind another personal question, I’m curious what you were involved in before being transferred under me?”

“A fair bit, Patricia,” he answered, briefly pausing. “Before Earth was even discovered I was primarily involved in anti-terrorism. Nulorian.” There were brief flickers of long-buried pain in the word.

“This is a change then,” she noted, softening her voice. “A good one, I hope.”

“Before Earth, Patricia,” he amended. “Once Earth entered the picture, I was reassigned for analysis. Largely language decryption and translation. I worked on Nulorian codebreaking and communications, so some skills naturally translated. Later this turned into analyzing public ADVENT speeches and addresses; picking out important details or signals.”

He nodded around him. “And then I got assigned here.”

“Hopefully it’s been a good experience,” she said, giving a nod. “Speaking of the Nulorian, they should hopefully not be a problem for the foreseeable future.”

“Yes, I wish I had been there,” he agreed wistfully, a fierce pride burning at the recollection. “We’d wished for a day like that for years. Miridian and the Nulorian were always out of reach. Shame we didn’t get him, but a thousand Nulorian corpses is more than sufficient.”

“Assuming he’s still around by the end,” Patricia promised. “I’ll help finish him off.”

“After XCOM and ADVENT?” He asked, amused. “Miridian will be trivial for you.”

“For sure,” she spotted another lone Human wandering around, caught in conversation, and waved him over. “Nico!”

The young man quickly excused himself from a very one-sided conversation with several Vitakara who all towered over him. As he got closer, Patricia saw he sported a few new scars since Florida. “Harbinger Trask,” he greeted. “Thank you.”

She gave a sympathetic smile. “Not a conversationalist?”

“Not especially, it’s odd,” he glanced behind him. “Apologies, I’m a bit on edge since Florida. I keep…” He shook his head. “Not important.”

Well, that told her that it was definitely important, though he definitely wasn’t going to talk while Marian was here, or in the middle of a social gathering.
Let me have a word with him she telepathically told Marian, who went off without a word. “Let’s talk, somewhere a bit quieter than this.” She put a hand on Nico’s shoulder and guided him to an area towards the back of the bridge where they sat down. She blocked the noise of the crowds to give them some quiet. “There.”

His lips twitched. “It’s not a big issue, Patricia.”

The Harbinger leaned back in her chair, crossing her legs. Definitely a lie; she didn’t need to look into his mind to see that. “You do know it’s ok to talk about it. That was the first large-scale battle you’ve been in, right?”

A nod. “Seeing a battlefield like that isn’t pretty,” she continued, thinking on what could be bothering him. “War isn’t fun or simple.”

“It’s not even that,” he said. “I can handle that kind of stuff…mostly. It was fine until…the nanites started eating things.” He looked up at her, vulnerable and afraid. “I…can’t, do anything against that. There was a soldier that got infected beside me. I saw him disintegrate. I panicked and…left.”

He shuddered. “I thought I was infected. Sicarius was freaking out, since we were bonded. I thought there was something in my arm and knew I had to get it out.” He hesitated, then rolled up the sleeve of his right arm, which had bandages around it. “I did some stupid things, but I was scared; I wanted to get it out. I still can’t get the thought out of my head that there’s something in me, just waiting for a certain time to start eating me alive.”

Patricia thought for a moment, feeling that she wasn’t remotely qualified to figure this out. Well, what would the Commander do here? “I get that,” she nodded. “It’s dangerous weaponry, and I don’t blame your reaction. Have you gotten a full medical scan? Those can detect any foreign objects.”

A vigorous nod. “Yes, there was nothing.”

“Go do it again,” she encouraged him. “Just to confirm for yourself.” She uncrossed her legs and rested her forearms on her knees, focusing on the downcast face of the young man. “You don’t want to go back out there, do you?”

He hesitated, then shook his head. “No…I don’t want to die like that. Not like Ivan.”

Patricia kept her face blank, trying to remember who the hell Ivan was. A friend of his? Although that didn’t really seem like Nico, and now that he mentioned it, the name did sound familiar. A few seconds and—ah, that’s who he is. Another Harbinger she’d only really met in passing, who was the Overmind’s…she thought. He had not really made a good first impression.

Oh well, it was unlikely he was important if the Battlemaster hadn’t bothered to directly inform her.

“Yes, none of us want to end up like Ivan…” she sympathized vaguely, nodding in understanding, something of a plan forming in her mind. “Ok, so here’s what we’re going to do. XCOM and ADVENT aren’t going to stop using nanites, so you need to learn how to beat them. I’m not going to make you go back in a real situation where you’re petrified.”

“I know I shouldn’t stay away,” he scowled. “It hurts the war effort.”

“And you’re no use to the war effort if you die because you freeze up,” she interrupted. Truthfully, he was a kid who shouldn’t be anywhere near a battlefield, but that ship had sailed long ago.
“You’re going to meet me at the Prism daily for a couple hours and practice nanite contingencies until ADVENT could throw a nanite bomb at you, and you won’t even flinch.”

He blinked. “But you need to be here.”

“I can be on Earth in a moment if I want,” she reminded him. “Or on the Temple Ship. Or here. You’re vital to our operation, and ADVENT certainly fears what you can do. If I can make you a bigger nightmare for them, then that’s worth an investment.”

“Alright,” he gave a firm nod, a confident one. “I like that idea. I will learn.”

“Excellent,” she smiled, patting him on the shoulder. “I don’t know where Sicarius is right now, but if she wants to also participate, I’d welcome her too.”

He pointed, and Patricia saw Sicarius standing a short distance away, ignored by everyone, but quietly observing them. Patricia gave a slight wave. The young Ethereal had probably listened to everything, and obviously didn’t need to be told again. “I’ll see you later, Nico. Do what I said, and we’ll get through this.”

“Thanks, Patricia,” he said as she stood, and moved to go mingle with the crowd again. Sicarius hadn’t moved, and the silver orb of a helmet followed her path. Patricia decided to angle her path to brush by the silent alien. Sicarius simply inclined her helmet when she got within a few paces.

“Thank you, for helping him,” she said softly.

“Don’t mention it,” Patricia nodded. “We’re all going to survive this war, no matter what ADVENT throws at us.”

A single nod. “I am confident we will, Patricia. I will accompany Nico tomorrow as well.” With that, she teleported away with a purple flash and step, leaving Patricia standing in front of empty air. Well, overall that had gone better than she felt it had any right to. There was a time long ago when she had been on the receiving end of that kind of talk.

Thanks, Commander. You definitely helped me out here.

She could almost imagine the disapproving look the Commander would give her.

Ah well, nothing she could do about that.

***

Interrogation Room #6, ADVENT Intelligence Investigation Command - Virginia

5/9/2017 – 9:14 A.M.

“Chancellor, welcome. Please take a seat.”

Saudia complied, sitting in the designated seat which was fairly comfortable, if a bit firm. The room she sat within was very enclosed; somewhat claustrophobic in fact, with no desks, equipment, or decoration of any type. Plain white walls and an equally plain green carpeting didn’t dispel the maddening monotony of the room, with bright lights shining down from overhead. The only things in it were just two armchairs, both opposite each other. It reminded her of a sensory deprivation room, but she suspected this perception was an illusion.

It occurred to her that she’d never really experienced an interrogation like this before. Not truly.
Although she felt like even if she had trained for anti-interrogation countermeasures, it wouldn’t really help her out here. She knew what was coming, and no amount of training would be able to stop it.

She didn’t begrudge the investigation for continuing, but it felt like a bad time to be performing interviews and investigations like this. Though admittedly, considering the circumstances, any time was going to be a bad time so long as a war raged. It was out of her hands regardless. ADVENT Intelligence and the Oversight Division were in agreement, and she didn’t have the authority or desire to contest them, let alone overrule them.

Ironically enough, she had to trust that procedure and law would be followed. Assuming there wasn’t a movement to replace her…she should emerge intact. Yet it still remained to be seen how it would all play out.

Her interrogator, a middle-aged woman dressed in the plain grey uniform of an ADVENT support operative, with the patches of a raven on one arm and a spider on the other identifying her as ADVENT Intelligence and an Inquisitor respectively. Her black hair was pulled back into a ponytail, with her accent and skin tone indicating her Hispanic heritage. Once she’d closed the door, she took the seat opposite Saudia.

“My name is Paula Cazalla,” she said, extending a hand which Saudia took and gave a quick shake. If the woman felt any discomfort of shaking a metallic hand, she didn’t let it show. “Inquisitor Division. Part of ADVENT’s Internal Investigations team.”

“I’m aware of who you are,” Saudia nodded. “I did help create it.”

The woman gave a guarded smile. “That you did. Now, this is going to be what will hopefully be a relatively quick and painless experience. First, you are aware that anything you say will be recorded and can be used for final assessments, judgement, and recommendations. As you are part of an ADVENT-wide probe, and due to your authoritative and sensitive position, what you say will have an impact. Is that understood?”

“Yes.”

“Perfect, please sign this,” she handed Saudia a clipboard with the legal disclaimer on it. Saudia took a moment to confirm the intent, then silently signed the bottom. “Thank you, Chancellor,” Paula said once she’d finished, taking it back and setting it on the ground before resting another pad of paper on her lap, a pen in the left hand.

Saudia looked around the room. “Interrogation rooms have gotten smaller. No polygraphs or lie detectors now?”

“Psionics have made them redundant, Chancellor,” Paula explained as she crossed her legs, her pad resting on the top thigh. “We only utilize them if psions are not able to assist, and only for low-level cases. We’ve already found that people prefer psionic questioning. Easier on the mind and body, not to mention less chance of machine error and employable countermeasures.”

“Logical,” Saudia acknowledged.

“Now, legally speaking, there are restrictions,” Paula continued, twirling the pen in her fingers. “Apologies for the disclaimers, but this is something we have to cover, and it’s important to make some things clear. I will only be able to tell if you are lying or not. I won’t be reading your mind, or seeing your thoughts, or anything like that. Think of me as a living lie detector. Your privacy outside the scope of this investigation will be preserved. Do you understand?”
“I do.”

“Finally, if you wish legal counsel or a representative, one can attend to bear witness to your consent and ensure this is following legal procedures. Do you want one?”

Saudia gave a thin smile. “A lawyer wouldn’t exactly help me here, would it? I don’t really have a choice in answering, do I?”

Paula held her smile. “Afraid not, Chancellor. But some people like lawyers present for moral support, even if they are legally bound to comply regardless if they want to or not.”

“I think that might have been the first time I’ve heard of a lawyer referred to for ‘moral support’,” Saudia said wryly. “But noted. Carry on, I waive my right to a lawyer.”

“Perfect. I’m going to ask you a series of questions,” Paula looked down to her pad, tapping idly on the pad. “You will answer ‘yes’ or ‘no’ unless I indicate otherwise. If you do not answer, I will have to interpret your emotional response. If you fail to answer questions, you will be charged with obstruction of justice and face arrest and prosecution. Your position affords you no extra legal protection or privilege, so to make things easier on all of us, it’s advised that you answer the questions to the best of your ability. Is that understood?”

Saudia gave a single nod. “Yes.”

“Excellent.” Paula crossed her legs. “I’m going to ask some baseline questions first, to get a sense of your emotional fluctuations. Please state your name.”

“Saudia Vyandar.”

“What is your position?”

“Chancellor of ADVENT.”

“What position, if any, did you hold prior to your ascension to the position of Chancellor of ADVENT?”

“Director of EXALT.”

Paula scribbled on her pad. “Tell me a lie.”

“I’m happy to be speaking to you right now.”

Paula chuckled. “I like that one. Thank you. Not even thrown for a bit with the first EXALT question. And on that note, that will be where we start.” She looked back up at Saudia. “My questions will continue to follow this format – first: Does the organizations you identified as EXALT still exist?”

“No.”

“Was it dissolved?”

“Yes.”

“Did you order the dissolution?”

“Yes.”
“Why?”

“To integrate fully into ADVENT,” Saudia answered. “EXALT was no longer necessary.”

“Describe the goals of EXALT.”

“The eventual unification of Humanity under direct or indirect EXALT influence.”

“Who determined the scope or content of this influence?”

“EXALT Leadership, including the Director and six families.”

“Please name these families.”

“Solaris, Vyandar, Mercado, Venator, Falka, and Eridan.”

“What means were used to accomplish the goals determined by EXALT leadership?”

“Direct and indirect manipulation, subversion, and corruption of legal and criminal institutions, businesses, and governments. Information gathering, harvesting, and manipulation were employed commonly, along with large-scale intelligence activities utilizing human, signals, and open source intelligence, which utilized multiple pressure and attractive tactics including assassination, kidnapping, blackmail, and seduction.”

To her credit, Paula barely reacted, simply making a few notes. “Did you, as Director, oversee and order these operations?”

“Some of them. Major operations were directly approved by me. Most intelligence and influence operations were coordinated by the Falkas.”

“Have or had EXALT operatives ever penetrated governments, militaries, or intelligence apparatuses?”

“Yes.”

“Has the same been done to non-government organizations including businesses, news organizations, or journalists?”

“Yes.”

“Are any of these operatives still active under assumed covers?”

“No,” she shook her head. “All positions they hold now are within ADVENT or are otherwise legal.”

A nod. “Would you describe your position as Director more administrative or technical?”

“Administrative.”

“Who was the creator of, or devised the concept of ADVENT?”

“The Commander of XCOM.”

Paula stopped writing, briefly frowning before looking up at Saudia. “Did you meet the Commander of XCOM prior to the establishment of ADVENT?”
“Yes.”

“One time or multiple times?”

“Multiple times. But our first in-person one was the most significant.”

“Describe the circumstances of this meeting.”

“The Commander requested we talk,” she remembered. “We did. He put forward his plan for a unified human government against the alien threat - ADVENT. He wanted EXALT to be instrumental in kickstarting it, as we had the infrastructure and manpower that would be vital in its infancy. There were also a lack of individuals who could – or wanted to – be in charge of it. He had decided I was the ideal candidate. I accepted.”

“Was EXALT working with XCOM previously?”

“No,” she shook her head. “We were on opposite sides for a time.”

“Why?”

Saudia let out a breath. “We had previously had an alliance with the aliens.”

“Describe the nature of this alliance.”

“Temporary, though they weren’t aware of this,” Saudia said. “We…intended to utilize the aliens. Present ourselves as a front they could act through, thus controlling the speed of an incursion. Once we reached a technological parity and psionic mastery, we would break the alliance and lead a united front against the aliens.”

Paula cocked her head. “The aliens were used to further your organization’s goals, if I’m understanding correctly. Is this accurate?”

“Not fully,” Saudia frowned. “It was a simple calculus. With or without us, the aliens would be coming. The world was not prepared, and we considered it ideal if both the alien invasion and our goals were achieved. However, our implementation of this agenda was a mistake. We underestimated the alien threat significantly.”

“When did you break the alliance with the aliens?”

“Officially, after XCOM was attacked by the Ravaged One. Unofficially, when the Ravaged One nearly killed me and everyone in our headquarters.”

Paula nodded. “To the best of your knowledge, are you, or any other former members of EXALT, under the influence of any alien entity or individual?”

“Not to my knowledge.”

“Since taking over as Chancellor of ADVENT, have you broken any laws established and enforced by the Peacekeepers, Judicial Courts, or Congress of Nations?”

“No.”

“As Chancellor, have you or other former members of EXALT deliberately written, influenced, or otherwise structured laws, regulations, and guidelines to limit potential legal retaliation or accountability, or to enrich or protect yourself or others?”
“No.”

“Are you aware of any former members of EXALT who have broken ADVENT law?”

“Not to my knowledge,” Saudia paused. “Several former EXALT members transferred to XCOM. I cannot speak for them or their actions.”

“Noted,” she made a mark on her pad. “Have individuals been promoted or assigned to positions in ADVENT based upon their association with EXALT?”

“Initially, yes,” Saudia said. “Since ADVENT has been established, all appointees have been made fully on the basis of merit and established promotion procedures.”

“Do you believe that you would have been appointed Chancellor of ADVENT if you had not been directly selected by the Commander?”

Saudia hesitated. “No.”

“Why?”

She shrugged. “Because no one knew I existed.”

“Do you believe yourself to be the most qualified to lead ADVENT?”

“Yes.”

“Why?”

“Because that was what I had prepared for my whole life,” Saudia took a moment to think. “I intended to lead humanity to greatness if given the opportunity, I have the vision and will to ensure our success in this war and beyond it, and this is something I still intend to achieve, no matter what happens.”

“You are committed to the laws, goals, and principles of ADVENT and not those of EXALT?”

“Yes. EXALT is dead. ADVENT is all that matters.”

“Do you intend to accept the findings of this investigation and follow the recommendations?”

“I do.”

“If it is determined that it is in the best interests of ADVENT for you to step down, do you intend to comply willingly?”

Some hesitation, but she gave a slow nod. “If necessary…yes.”

Saudia felt herself relax slightly. “Will I have to answer more questions later?”

“Depending on what other individuals say, we may ask you some follow up questions,” she answered, making a few more notes. “However, we don’t anticipate it. You’re on the latter end of our interviews due to your schedule, and I doubt whoever’s left will highlight something we overlooked.”
“Good,” Saudia stood, with Paula joining her. “So what happens next?"

“We will review what we’ve collected, and the Chief Overseer will make a recommendation,” Paula explained. “There is a high likelihood that a private session of the Congress will be called when that happens. I do not see the Chief Overseer bypassing them entirely. You may have to testify, but this will take several months to fully finalize at best.”

Saudia internally grimaced, but it had been expected. “I see.”

“In the meantime, perform your duties as normal,” Paula told her, flashing another smile. “No point in worrying about what will happen, Chancellor. We will take care of it. Thank you again for your cooperation; trust me when I say it made everything a lot better for you.”

“I should hope so,” Saudia said wryly, as she moved towards the door. “Thank you for being civil. I wish the investigation well.”

“Appreciated, Chancellor,” she inclined her head. “Good luck.”

***

Switzerland Castle of Order of Terra, Geneva – Switzerland

5/10/2017 – 9:16 A.M.

“[Everything is finalized,]” Kiyumi said as she entered Kaya’s sparse and spartan quarters, a smile on her face. “[After Florida, it looks like ADVENT wants to strike while the flame is hot.]”

“[Iron,]” Kaya corrected absentmindedly. “[You strike when the iron is hot. Everyone always mispronounces that phrase.]”

“[You get the point,]” Kiyumi rolled her eyes. “[It’s finally happening.]”

“[Yes. Finally.]” To say that Kaya hadn’t been especially thrilled doing mostly nothing for more than a month was an understatement. The good news was that she was completely cleared for combat by the ADVENT psychologists, and her unit was in good shape as they’d been drilling and training nonstop. They’d even gotten a new Knight to replace the loss of Terje, who, thankfully, was not distracted by her identity.

Almost the opposite in fact. An Vien Kim was the oldest person she’d seen in ADVENT, at least in a combat role.Honestly old enough to be her grandfather, but very interesting to talk to. He was part of a new ADVENT initiative was what he said when she’d tactfully inquired about his age, though headed off questions about his experience. He’d only been added in the past week, so they were all working towards integrating him fully. She figured she’d learn all about him in time.

Thankfully it wasn’t just her that hadn’t seen much action, else she would have suspected favoritism. The Order of Terra hadn’t been widely deployed following Beijing until very recently; largely because so many of them had participated in Beijing, and partially because High Command wasn’t sure where best to put them.

They seemed to have figured it out now, judging from how many locations were now getting Order support. She wondered if they were all part of a larger plan she didn’t know about.

Kaya didn’t really know where she’d be going next, but it was definitely going to be better than just…waiting for something to happen. Knowing what ADVENT had planned for her, she was likely going to end up in a high-profile, but relatively safe warzone. Potentially Asia.
'Safe.'

As she knew well, there really wasn’t anywhere that was safe now. Especially now with family-killing assassins striking strongholds, or people like Patricia who could literally teleport anywhere.

Still, it might end up being for the best. Whatever had killed her family was still out there, and when she took the podium, there was approximately a zero percent chance the Collective was just going to let her live unmolested. But as long as she got to fight, she was going to be content.

Kiyumi had been busy as well. The Imperial Family was being rebuilt in a rather unconventional way. She and her sister, outside of the kidnapped children, were the only ones who were truly left of the “pure” bloodline. So as a result, Kiyumi had gone through the very extensive genealogy and lineage of the Imperial blood, and identified a number of families and individuals who were distantly connected.

The elders and purist elements of what remained of the Japanese government were…not exactly thrilled with the decision, believing that it would “dilute” the bloodline, not without reason, at least in their minds. A fair amount of those identified by her sister had in their families, or were themselves, lower-class citizens, those of non-Japanese ethnicities, and a few even weren’t nationally Japanese. A surprising amount were also involved with ADVENT, which was a pleasant surprise for Kaya.

She approved of the direction her sister had taken, and had given her official sanction, for what it was worth. Her sister’s efforts looked to the future and went about addressing the problem smartly. Relying on either of them to be the sole carriers of the bloodline was a great risk due to the war, especially with the children still captured. But honestly, the sooner the idiotic belief that one person’s blood was somehow superior to another person’s died, the better. Blood could be a useful symbol, but outside of ceremony and culture it had no bearing on who or what a person could be. Nor did it necessarily mean much in the context of who family could be.

Even though not all those approached had accepted Kiyumi’s offer, many had, and the new Imperial Family was going to look a lot different from what it had been. Less…homogenous. ADVENT had been very approving of the decision, and impressed with Kiyumi’s management in making sure everything was ready.

“[Are the crowds still outside the HQ?]” Kaya asked, standing and stretching.

“[They probably will be until you show up,]” Kiyumi answered, referring to the throngs of journalists, vloggers, and media officials who’d received, as of a few days ago, definitive confirmation of the survival of Kaya Yamato, who’d previously been unnamed. The news was coupled with an announcement of the subsequent Enthronement.

ADVENT had a fairly slick campaign planned; so slick that she actually didn’t have any advice for them. They definitely had experience in marketing, as they had used the original announcement as a springboard to completely control the narrative and news cycle following Florida, as new details were slowly revealed to further make the Collective seem incompetent and a failure, first revealing she was in the Order of Terra, then recounting the battles she’d fought in, and how she was now spending her time (few details, of course).

In another life, this amount of pressure and hype would have been daunting, but after Beijing, not to mention the battles she’d been in previously, facing a horde of paparazzi and cameramen was a cakewalk. The Japanese managing the refugees and those serving in ADVENT had been appraised of this a few days earlier than the official announcement to allow some additional time to prepare.
This would be an event the world would watch, but it was especially important for her people. After a few hours, she would be their face, and hopefully rally them to action. With all her people had lost, it would be good to provide them with some hope. There would be a promise to reclaim Japan (again), and this time it would be kept.

“[You’re going to have a stacked guest list,]” Kiyumi said. “[The Chancellor, Prince Mason, Prime Minister Reizo. Even the Commander of XCOM! Not counting all of the other heads of state. I don’t know if there’s ever been a comparable ceremony.]”

“[Security is going to be a nightmare.]” Kaya noted. “[I don’t envy them. If there was ever a time to strike, it would be this.]”

“[ADVENT is pulling out all the stops here.]” Kiyumi quickly looked up, recalling something. “[ADVENT Intelligence, XCOM squads, PRIESTs everywhere, I think they might have some of the Pantheon there too.]”

Kaya grimaced. “[A bit overkill. I hope I don’t disappoint. I can give a speech, but I don’t know if I’m worth all of…this.]” She motioned vaguely.

“[Nonsense. All you can do is your best. Besides, I looked over your speech,]” Kiyumi said after a few seconds. “[It’s perfect. It’s what needs to be heard now. This is bigger than you or me, one family, or even our people. It’s the future of our species.]”

Kaya’s lips twitched. “[I hope it’s seen that way. It’s harder writing it yourself. I get why people hire speechwriters.]”

“[Hey, don’t complain.]” Kiyumi chuckled. “[You could have had one.]”

“[True, but it wouldn’t have been authentic,]” Kaya shrugged. “[It’s not right to be a vessel for someone else’s words – especially not in this situation.]”

“[I don’t disagree,]” she nodded. “[I wonder how the ceremony itself will be received by our people. It obviously can’t be in Japan, though the other changes will probably make the traditionalists call it heresy. Probably accuse me of watering it down for foreigner appeal.]”

“[‘Foreigners’, please.]” Kaya snorted. “[I prefer your streamlined version. The fewer references made to the mystical sun goddess and unnecessary technicalities, the better. It’s past time the Enthronement was updated for modern day. Our people aren’t going to care about pure tradition – not when our homeland is held by aliens. Not if their Empress embodies the change they see.]”

“[You’re probably right,]” Kiyumi acknowledged. “[Consider how many norms I’ve broken already, what’s a few more?]”

“[That’s a good way to look at it,]” Kaya encouraged, standing up. “[I don’t know what I’d do without you.]”

“[I’m sure you’d manage,]” she said, pulling her sister into a hug. “[Let’s get you ready to go. Time for the world to meet the new Empress of Japan.]”

***

Central Command, SAS Command – Nigeria

5/7/2017 – 1:09 P.M.
“This looks good,” Betos nodded to an aide who’d finished an overlook of several diplomatic documents. Handing the packet back, she gave some final instructions. “Forward it to me for a final review, and ensure the attaches keep in close contact. We don’t want ADVENT poaching anyone from us.”

A nod and the aide rushed off, and Betos returned to looking over the stack of legislation, papers, and reports on her desk that comprised her workload for the foreseeable future. With ADVENT temporarily halted, she had the task of actually running the SAS, and that meant a lot of paperwork.

Slowing her down more were officers, agents, and aides who came in needing her advice, assistance, or permission for something they were doing or involved in. She was glad to help; it felt like some normalcy after insulating herself so much with aliens. It made her feel like she was having an impact on her own, without help from the aliens. The downside was that it slowed down what she could get done considerably.

It was interesting that she felt more relaxed now when she was actually working and properly managing the SAS than when she was…well, focused on relations with the Collective. Or talking with aliens, period. She was the leader of a substantial portion of the Human species who didn’t align with ADVENT, and it was past time they be properly represented.

It was especially nice to not even feel the urge to talk to Keeper or Macula in that entire period. They would eventually come to her when they had questions, which Betos suspected would be sooner than later. She wasn’t quite sure how they were going to react to having a…reduced role, but it wasn’t as though they could just get rid of her.

Well, technically…

She shook her head. No point in thinking about that. If the Collective decided she wasn’t worth propping up, then there was, quite literally, nothing she could do to stop it. But after that talk with Mox, she was determined that no matter what happened, she would not be remembered as an alien puppet.

If ADVENT was going to hate her, it was going to be for some other reason than believing she was an alien puppet. She was very much in control of her actions, and condemn her or not, ADVENT would see that one could reject their new world order of their own volition.

A throat cleared, and Betos looked up, seeing the glowing azure eyes of Keeper looking down malevolently upon her. A thin smile appeared on her face, disguising her apprehension as she stood, brushing some lint and dust off her pants. “Keeper, a pleasure to see you.”

“Considering your complete silence these past few days, I have my doubts about that,” he said dryly, entering and standing just opposite her. Despite standing, she was still forced to look up at him due to the size disparity. His eyes widened slightly. “One would almost think you’re avoiding me.”

“Considering your complete silence these past few days, I have my doubts about that,” he said dryly, entering and standing just opposite her. Despite standing, she was still forced to look up at him due to the size disparity. His eyes widened slightly. “One would almost think you’re avoiding me.”

“Not intentionally,” Betos answered neutrally, crossing her arms. “I’ve been very busy lately. I do have the SAS to run, and that is a full-time job in and of itself. Countries to reach out to, legislation to sign, reports to read, and plans to make. It’s past time I properly lead, wouldn’t you agree?”

“Of course,” Keeper answered with a similar lack of emotion, tilting his head to the side. “Though it would have been appreciated if you informed me of your focus, so I wasn’t uncertain as to your whereabouts. There is much that needs to be coordinated, especially now.”
“Don’t you worry,” Betos told him, walking around the table, picking up a couple spreadsheets, indicating them. “I’ve put together a good team; one I dare say will mean we might not need your assistance much longer, in terms of administration and management. You can look it over if you wish.”

He narrowed his eyes, moving the offered papers away with a hand. “Perhaps later. Speaking of such moves, I was informed that the ADVENT captives are not being moved off-world. It was stopped on your orders. They explicitly said they wouldn’t disobey. What are you doing, Betos?”

“Simple,” she answered firmly. “Reserving our right to hold captives here. They were captured by the Sovereign African States, and we will decide where they go and how they are treated. We are maintaining full control of their well-being and storage for the immediate future. In short, that means they are staying on-world.”

Keeper seemed mildly surprised at her audacity. “No, they will not be. ADVENT will attempt to recover them. They will be moved off-world.”

“You are not in the Ethereal Collective. You are currently within the Sovereign African States.” Betos maintained eye contact, her voice not wavering. “If you want to tell Macula what you want to happen, then you can. But they will not be moved without my authorization. Do you understand me?”

“Curious,” the voice of Keeper had turned low; nearly threatening. “I was going to ask you the same thing. Why this sudden rebellion, Betos? Did you watch the ADVENT propaganda press conference? Is that why you’re defying us? I had thought there was some trust.”

Keeper wasn’t exactly going to like being accused, so Betos had come up with another tactic. “As a matter of fact, yes. You’re smart, Keeper, you should see why I’m in favor of not playing right into ADVENT’s hands, yes?” Betos gestured vaguely. “Trust exists between us, but no one else shared it. Are you really going to say its propaganda if the first thing we do with the prisoners is ship them off to god knows where?

She put some emphasis into her next words. “It doesn’t matter if they’re not touched later or if you release the location right down to the coordinates. No one will believe it, justified or not. As far as the average citizen is concerned, those captives? Gone. It may be more secure, but it does nothing but prove to ADVENT that we are exactly how they portray us.”

She rested against her table. “Now, you may not care because you’re not Human, and the SAS is a means to an end for you, but I do. I’m thinking in the long term, Keeper, like how exactly are we going to get a majority of Africans on our side if we continue to play into ADVENT propaganda. What do we say to convince them? Vague promises? Threats? How exactly am I going to convince them that I’m actually an independent ally of the Collective if my decisions are solely made in the interests of the Collective? If it appears I have no true autonomy?”

Betos smiled more confidently at the stone-faced Vitakarian who simply stared with unblinking eyes. “If that’s the case, you might as well be my handler and not an ally,” she paused briefly. “Back to the rationale for keeping the captives here, I would argue this will make the SAS more appealing. Right now, like it or not, many think I’m a figurehead. Rescinding your decision gives the perception that there may be tensions between us, which means that people are less likely to accept the narrative that I – and in turn the SAS – are alien puppets. We will be perceived as more genuine and legitimately independent as a result. Of course, we are still allies, but ADVENT may think differently. I’m certain that you could exploit this perception somehow.”

Keeper was appraising her now neutrally, or at least she couldn’t immediately tell what he was
thinking. Perhaps surprise? Maybe some grudging respect? He gave a slight nod. “I appreciate that you thought through a reasonable answer. Acceptable. You raise a valid point. I won’t press you on this further.” He clasped his hands behind his back. “At the same time, it is important that in the future we work together, and not leave it so where one of us has to approach the other to receive an answer. That is more efficient, yes?”

“I can agree to that,” Betos said, feeling relieved that he’d decided to drop it so easily. That was… good. It meant that so long as she could come up with a plausible argument, Keeper could be persuaded to back down. She’d need to work on that in the future. “Is there anything else?”

“Nothing urgent for now, Betos,” Keeper inclined his head. “I will be in contact later. Inform me before you make any diplomatic decisions, I would appreciate the chance to review.”

“I will do my best,” Betos nodded. “But we should both understand our respective places. I wouldn’t intervene in your operations, and I would appreciate the same courtesy. I will make decisions for the SAS, not you.”

“Duly noted,” Keeper acknowledged. “But do not forget why you are here at all. We will not be ignored completely.”

At that, he exited without another word. Betos let out a sigh of relief, before returning to her seat. That had gone better than expected, and hopefully Keeper would know better than to try and push her around again. Truthfully, she probably should have done this a while ago, but better late than never.

Situating herself, she returned to the arduous task before her.

***

**ADVENT Intelligence Reston Complex, Reston - Virginia**

5/9/2017 – 12:18 P.M.

“Chancellor,” Powell greeted, inclining his head as she entered. “I hear your interview went well.”

“Interrogation, Powell,” Saudia grunted at the Acting Director of ADVENT Intelligence, taking her seat at the table in the briefing room. “Let’s not mince words.”

“Nonetheless, your cooperation is appreciated,” Powell took his place at the head of the table, addressing the rest of the room which consisted of Saudia, Laura, Ari, and Kyong. A small group, but likely a relevant team to brief. Though Saudia didn’t know what Ari was doing here; likely an update on Project Ra.

“First,” Powell walked around the room, giving some small handouts. “Internal Investigations are proceeding exceptionally well. We have effectively purged over half of ADVENT Intelligence of foreign and alien influence. As a result, we have found a number of connections to other malicious actors and networks, the upcoming dissolution and extermination of which will ensure our ability to protect and utilize the population, narrative, and the war itself.”

Saudia looked over the report, lifting an eyebrow at the summary. “That is a lot of arrests. The aliens could not have compromised so many.”

“Correct,” Powell gave a humorless, knowing smile. “There were a number of Human traitors, unwitting informants, disguised Zararch agents, and the REPLICA-Class Custodians who had some degree of access. However, there were an even larger number of national loyalists who,
while usually not disrupting the war effort, were passing information directly to former national officials, heads of state, and sometimes criminal elements which were being intercepted by alien entities.”

Saudia closed her eyes, sighing. It wasn’t completely surprising, but it was clearly a bigger problem than she’d anticipated. “Wonderful. How high up does this go?”

“Thankfully none of the current heads of state are stupid enough to be involved in this,” Powell elaborated, lacing his fingers together. “But old habits die hard, and it was foolish to assume that national loyalties and rivalries would be completely forgotten – especially by intelligence agencies, despite the war. In particular, we have discovered rogue sub-units of various former intelligence organs have been formed or maintained without our knowledge, specifically based around the CIA, NSA, EXALT, GRU, MSS, and Mossad.”

Saudia’s lips twitched at the mention of EXALT. You fucking idiots, you’re supposed to be better than this. “EXALT?” Ari frowned. “Who or what is that?”

Powell didn’t seem to care to bring him up to speed. “Unimportant. They were more interested in executing to supposed goals of a dissolved organization than focusing on the defense of Humanity.”

“I hope they’ve been dealt with.” Saudia said, an undercurrent of harshness in her voice. “Severely.”

Powell gave a single nod, his voice softening just a touch. “Do not worry, Chancellor. They are all being dealt with.”

“I assume there are more who haven’t been found?” Laura asked grimly, looking up from her review. “How large are these groups?”

“Not large enough to cause significant damage, but larger than is remotely acceptable,” Powell answered, straightening and resting his arms on the table. “I will also note that every group I named – as well of those I didn’t - has been hunted down, as I alluded to. Each and every member is currently being interrogated or is in the process of being tried, sentenced, and in many cases, executed.”

“This degree of compromise is unfortunate,” Kyong pursed his lips at the news, one hand scratching his chin. “I assume you don’t want this publicized, and to keep an eye out for leaks?”

“There is a public story here,” Powell clarified, lifting a hand. “However, it will be one we have full control over. The general public does not need to know the scale or scope, but I want a number of the most egregious stories circulated through the media. Preferably a mixture of nationalists and outright alien collaborators. Something to remind people that the nationalists can be just as damaging as outright traitors.”

“Says the former CIA director,” Saudia snorted. “How very ironic.”

Ian Powell smiled knowingly. “Our mission extended beyond America, Chancellor,” he inclined his head, his tone almost contemplative. “In our own way, we had our own vision for Humanity. It should not be a surprise that we can adapt to the concept of an entity that is not America. The United States just happened to be where we started. It did not matter what happened, be it Russia, China, or the North Koreans. The CIA would have endured – though now we don’t need to, of course.”
He waved a hand. “However, I admit there were more patriotic elements of the organization, those who have failed to evolve, which we have now dealt with. The Grand Inquisitor deserves significant credit for the results of this investigation so far.”

“And you’re only done with half of ADVENT Intelligence,” Laura shook her head. “That does not bode well for the rest of ADVENT.”

“No, but it is necessary,” he fixed Saudia with a hard glare; his voice deliberately neutral. “While I hesitate to speak ill of my predecessor, it is clear that Director Falka was either ignorant, incapable, or unwilling to handle the obvious challenges and risks of integrating the intelligence agencies of every country – many of them who have spied on each other for decades – into one cohesive whole. It is outright dangerous that this has gone unaddressed for so long. On this alone, she should not be reinstated should she be cleared.”

Saudia kept her face and tone neutral, though he had a good point. Elizabeth had her strengths, but something this large and diverse? Perhaps it wasn’t the best fit. “Your recommendation is noted, Acting Director. Keep me appraised as the investigation continues,” she shifted the topic. “Is there a specific penalty you’re seeking for these traitors?”

“It depends on the severity,” Powell explained pointedly. “I intend to send a very strong message – one I believe ADVENT Intelligence has received, and soon the rest of ADVENT. Experimentation Labs for the worst, execution for the rest. We have neither the time, nor energy to house traitors. They are enemy assets and should be denied and destroyed. If there are Humans who are not fully committed to ADVENT and the defense of Humanity, then they forfeit their right to life.”

“Stein would like that line,” Kyong commented with a wry grin. “A shame she isn’t here.”

“While harsh, Stein has a conviction many lack. Much like the Commander, in fact,” Powell noted, turning his attention to the Arabic man. “Dr. Mifsud, I trust that you will keep what you hear here to yourself?”

Ari noticeably swallowed. “Wouldn’t dream of speaking of this to anyone, Director.”

“Glad to hear it,” he nodded to Kyong. “Minister, I believe you have something to present?”

“That I do,” Kyong stood, brushing his uniform off as Powell leaned back in his seat. “A number of developments in the realm of diplomacy, most interesting of which involves the SAS.”

Saudia nodded, having an idea of where this was going. “What have they done now?”

“It’s more what they haven’t done,” Kyong clarified, walking around the table and handing out a couple pictures, which showed SAS captives in quartered off areas and defended by SAS soldiers. “If you recall, they explicitly threatened to send the POWs offworld. It’s been days, and not only are the captives still here, they are definitely not being moved anytime soon if the amount of food, fortifications, and supplies being imported are anything to go by.”

“Interesting,” Laura raised an eyebrow as she looked over the pictures. “Why would they change their mind?”

“Unknown at this point,” Powell answered. “What limited intelligence we’ve been able to collect indicates that it may be a schism between Betos and the aliens. Alternatively, they decided it would be bad optics to go through with it, and our little show worked to convince them it would backfire.”

“What is the likelihood it’s a schism?” Saudia asked Kyong.
“Uncertain,” Kyong sat back down, tapping a finger on the table absentmindedly. “Given Betos’s psychological profile, she might have been emotionally moved enough to defy the aliens. I’m uncertain she would have had the will to defy her alien masters, but perhaps she could have surprised us. Either way, it’s a victory.”

“What should we do with this?” Laura wondered. “Publicize it?”

“I’m working on that,” Kyong answered, lifting a hand. “As of now, the status quo is ideal. I would keep the families updated that they’re still on Earth, but no more. We don’t want to portray the SAS in a positive light, now do we?”

He turned his attention to the table, clearing his throat, and activated the small holoprojector in the middle of the table. “Also on the media front, we’re kicking our anti-Patricia campaign in full force. Seems fitting after her attacks, and our victory in Florida. We’ll start with these two, who will be giving an interview soon.” Two figures were projected, a man and woman who looked to be between their fifties and sixties. “Jax and Leah Trask,” Kyong stated. “Her parents, if you couldn’t guess.”

It hadn’t necessarily occurred to Saudia that Patricia even had parents. Well, she knew they existed, but Patricia very much stood on her own, and anyone even tangibly connected to her was just…irrelevant. “Giving an interview on what?” Laura asked, looking up at the figures.

“Effectively disowning her, and stating that she’s a fake,” Kyong answered. “Even if that’s not accurate, it might get under her skin, and make her hurt to see her family reject her.”

“I doubt she’s going to be affected,” Saudia said dryly. “This was a woman who just annihilated a military base with families living in it, not to mention attacked XCOM, which was filled with people she’d fought and worked with.”

“Possibly,” Kyong conceded with a shrug. “However, she has no connection to many of those people she’s killed, or at least most of them. Children many times crave the approval of their parents and loved ones, if there is anything like that left in her, this may hurt and affect her emotionally. And if it doesn’t, it has the benefit of showcasing her for the liar and killer she is now. This woman is not a Human. She is a monster, a pawn, and a vessel of the aliens. That is what people will eventually think of when they hear the name ‘Patricia Trask’.”

The Korean smiled. “And in addition, we found some old friends of hers who are also going to give their own opinions. Some from her college days, a couple from her time in the Royal Marines. We even got the brother of Paige Broker, her closest friend who went to XCOM with her, to effectively insinuate that Patricia got her killed.”

A pause. “We are estimating that might make her more unbalanced than her parents condemning her.”

“Excellent,” Saudia smiled. “No less than she deserves.”

“Only one final matter,” Powell motioned to Ari. “Director – you have a Project Ra update?”

“Yes, and I will be brief.” The project director stood and cleared his throat. “The revelation that XCOM already had an AI was a surprise, but it was able to greatly assist on Project Ra. We didn’t ask JULIAN to build another AI for us, but he guided us in the right direction. We are getting very close to bringing PATRIOT fully online.”

Laura sighed, rubbing her forehead. “You’re really going with the name then?”
“She seems to like it,” Ari shrugged. “Considering what she’ll be doing, it fits quite well. Assuming the simulations and programming hold and she doesn’t decide to do something completely different.”

Saudia cocked her head. “She?”

Ari coughed awkwardly, turning slightly red. “Considering that she’s begun using a female-toned voice, responds to female pronouns, and one of the designers has drawn some, ah, art of her, she’s definitely a female.”

Laura chortled, and even Powell smirked at that. Saudia just appraised the uncomfortable man with slight amusement, though kept her face stoic. “Really. And I don’t suppose PATRIOT being shown this…art…influenced its gender choice?”

“Well, that is certainly interesting, and I trust this hasn’t derailed the project significantly, has it?”

“No, Chancellor,” Ari quickly confirmed. “We are definitely on track for deployment soon. And we fully expect PATRIOT to perform her duties effectively and properly. She will be ready to meet you soon, prior to launch.”

“I see,” Saudia found the whole situation rather amusing, if slightly ridiculous. “Excellent,” Saudia nodded. “I look forward to meeting her.”

“I think she’ll be a good candidate to introduce the public to,” Kyong added. “I’ve seen some interactions, and she’s less…abrasive than JULIAN.”

Ari scowled. “You mean less of an infuriating troll.”

“I don’t disagree,” Saudia added. “Is there anything else?”

“I believe that covers everything important, Chancellor,” Powell glanced to an agenda. “The Enthronement of the Japanese Princess is very soon, but there are no new developments on that. I assume you plan to attend?”

“Of course.”

“Then I think we’re done here,” Powell inclined his head, giving a salute towards her, joined by the rest of the occupants of the room. “Thank you all for your time.”

Psionic Training Range, the Praesidium – Classified Location

5/7/2017 – 9:27 P.M.

On one hand, when he’d first gotten here, he’d been looking forward to soon being deployed in an actual XCOM squad. On the other, being stuck in this limbo meant that he (probably) would live longer. Choice and consequence, and of course he’d joined when Florida kicked off, which meant that the best psions were deployed, which normally wouldn’t be a problem, aside from the fact that
there every teleporter of XCOM was needed in the field.

So Kunio had been effectively left to his own devices.

He definitely hadn’t been idle in the meantime. There was so much to see, learn, and do in the Praesidium it was almost overwhelming. Whenever he wasn’t getting used to shooting plasma rifles, wearing power armor, and exercising his psionic abilities as best he could, he was devouring every report and piece of history XCOM had.

To say it had blown his mind had been an understatement.

It would have shaken his world enough to read about EXALT; a worldwide conspiracy – where actual literal Illuminati – had sought to use the invasion for their own ends, before being neutered by XCOM. Kunio legitimately didn’t know if it was a good or bad thing that members of said Illuminatii were now…well, running the show.

Mostly good, he supposed. The Commander probably had some leverage over them.

Still, he was never going to look at the Chancellor the same way again. Bit of a trust breach there, and it made the sudden suspension of Elizabeth Falka much more suspicious. At the same time, most of XCOM seemed fine with EXALT now; the chief engineer was originally part of it, so the Commander clearly trusted them to some degree. It did highlight how odd some of the crew the Commander kept around him were.

An eccentric and slightly terrifying German woman, a former Chinese Triad member, a former EXALT engineer, a soldier whose girlfriend was now probably the most hated Human in the world, and an Ethereal defector. The only moderately normal people were his Central Officer and Iosif, who seemed like a pleasant man.

Then there was T’Leth.

Learning the truth about that, at least what was available to XCOM, was…somewhat unsettling.

He really wanted to talk to T’Leth, but at the same time, the thought of speaking to something that was in all likelihood older than his entire species was daunting. The last thing Kunio thought would be a good idea was pestering a being like that with inane mortal questions. There were a number of implications that he honestly didn’t really want to think about, and given what was available on the Ethereals, he thought it may be for the best they weren’t answered.

Now though, he hoped that he could actually start mastering his abilities. It wasn’t a lull necessarily, but with Florida dealt with (for now), he’d been told his training and subsequent deployment were imminent. He privately hoped that wherever he went, he wouldn’t be accosted by the mouthy AI that liked to occasionally berate people at random or rick-roll them.

Admittedly, it was usually only to the engineering staff, but Kunio definitely didn’t want to be targeted by it.

“Psion Azuma,” Kunio turned and started as he saw the Commander himself approach, a woman at his side. A hand was quickly brought up to the chest to salute, which the Commander returned on instinct. “At ease, you don’t need to do that every time. Apologies for the delay in getting you properly trained, but…”

“So I’ve observed, you’ll fit in very well here,” he said, stepping back and indicated the woman.
“This is Fiona Dorren. Agent of T’Leth and who is effectively our most skilled teleporter. Or more accurately, T’Leth’s.”

The woman certainly stood out. She was probably a few years younger than him, fair skin, probably American or European. She didn’t wear any armor, just some basic grey training fatigues. What made her stand out was her white-gray hair and a large scar down her cheek. A sword of all things was strapped to her back, and from what he saw she had no other weapons. Odd, but honestly not the strangest thing he’d seen here.

“A pleasure to meet you,” she said with a smile, her accent placing her as British. He took the extended hand and shook. “Apologies for the delay, I was busy fighting off a teleporting Ethereal.”

He raised an eyebrow. “Which one? Quisilia? Sicarius?”

“Oh? Done your homework, I like it,” she said, nodding to the Commander. “Don’t think he’ll be a problem to teach if he knows specifics already.”

“Excellent,” the Commander nodded to them. “Fiona, keep me appraised of his development, and Kunio, let me know if you need anything. Good luck to you.”

“Thank you, Commander,” Kunio inclined his head as the Commander walked off.

“So, you’re the first legitimate teleporter ADVENT has found?” He turned back at the question to Fiona who was looking him up and down, arms crossed. “Took them a while. Not too surprised though. It’s not a common talent from what I’ve seen.”

“So I’ve gathered,” Kunio agreed. “Though a lot of the Agents seem to know how to do it.”

“T’Leth makes good choices,” Fiona nodded, motioning forward. “Let’s walk. Talk a bit before we start. Important to set expectations and all that, and get to know each other a little more since we’ll be spending a bit of time together.”

“Alright,” there was plenty of space to walk, and as psions trained in the background, they walked.

“I’ll admit I’ve never done something like this before,” Fiona said. “Teaching. Training. That sort of thing. So…apologies up front if I’m not the best instructor.”

“I think you’ll do fine,” Kunio said, fishing for a word. “…What do you prefer to be called? Miss Dorren? Agent?”

“Fiona is fine,” she laughed. “Even if I’m in T’Leth’s Agents, I don’t like only being known for that.”

“Speaking of which,” Kunio glanced around. “I’ve wondered. Do you talk to him a lot? T’Leth?”

“Me? Not as much,” she admitted. “The Chronicler, Lincoln, Crevan, they speak with T’Leth frequently. I do sometimes, but it never feels right. When I learned something like him existed, it was a bit overwhelming. So many questions and implications.”

Huh, so it seemed not even Agents were immune to this. “Honestly, that’s how I felt when I learned. I have so many questions, but it feels wrong to pester something like that.”

“Oh, you want to talk to him?” Fiona seemed to find that amusing. “That’s a first. I can probably do that if you want, as far as I know he doesn’t do too much most days. At least in his mind. He’s not as intimidating as you’d think.”
“Let’s hold off on that,” he said, changing the subject. And partially because he definitely didn’t want an unplanned meeting with a Sovereign One. “So…teleporting. Did you find out by accident like me?”

She paused, glancing up as she recalled. “Kind of? My…teleportation…didn’t really manifest until later. I’d been training in…psionics, yes, I could do some of it, but not very well. There was something blocking what I could do. The first time I did it…well, I landed in the ocean.” She chuckled. “That was fun. Almost drowned. But I made it.”

Kunio winced. “I’m glad I only teleported halfway across the world. Looking back, I’m really lucky I didn’t accidentally kill myself.”

“One of the first lessons you learn,” Fiona agreed. “Of all the disciplines, this is the one you can most easily kill yourself with. Be it ending up inside a solid object, landing in lava or an ocean, misjudging height and ending up too high or too low, there are many variables to keep track of.”

“If you keep going, you might make me not want to try this,” he warned, only half-joking.

“But,” she lifted a finger. “There will come a point where it becomes like walking.” There was a flash of teal and she reappeared directly in front of him, looking fairly pleased. “At one point I had to concentrate really hard to make that controlled of a jump. You will too. You’re going to hurt yourself, you’re going to feel like you’re not making progress, but it will suddenly come together one day, and there will be nothing that can stop you.”

He nodded. “Can’t say I’d be unhappy with that. I do have one question though.”

“Oh?”

“Is there a reason you have a sword?” He asked, indicating the blade. “Do you work with the Templars?”

“This?” She unsheathed it, the black blade gleaming in the light. “No. Personal choice. Fits how I fight. Most people aren’t prepared for a sword in the face, and since distance isn’t a problem…” she flourished it. “I won’t deny there was some familial interest. You can say my family had an interest in the era and the weapons, my father especially. I like to keep his memory alive this way.”

“Oh,” he said. “My condolences.”

“Ah, no, he’s not dead,” Fiona winced. “It’s a bit complicated. What with me being an Agent and all that…” she waved a hand absentmindedly. “Best he doesn’t know. There are people who are gunning for T’Leth, and by extension me. I don’t drag family into this, so he probably thinks I’m dead or…gone. And it’s for the best.”

“Maybe that can be lifted once the war ends?” Kunio suggested, trying to be a little positive.

“Ha!” Her bleak emerald eyes didn’t match the tone. “If only it was that simple. Afraid the Imperator isn’t the only thing in the galaxy that wants T’Leth dead.” She motioned him more directly into the training area. “Well, anyway, we should probably start some actual training. We can talk more later if you want.”

“Sounds good,” he agreed. “I’ve been looking forward to this.”

“I’m sure,” she rolled her neck. “Get ready. This is where the fun begins.”

***
Nulorian Outpost – Unknown Location

5/9/2017 – 12:02 P.M.

Nartha didn’t know if Miridian had given a private order, or if his role in the attacks hadn’t been shared, but he was able to walk unmolested to the small meeting room which had been converted into the current central command for the Nulorian. Two Borelians stood outside the room and let him and Shun in without a word.

Physically he was feeling better, which wasn’t too surprising with modern technology, though it was certainly not recommended that he participate in combat anytime soon. Mentally he was also better, and a few days without anyone coming after him had been good to see that he was actually safe.

Miridian might hold a grudge, but he was pragmatic enough to not let it affect his judgement. Not when it came in conflict with his actual goals.

The Nulorian mastermind was inside, the first time Nartha had seen him since the attack, and he didn’t look the least bit affected. If he’d been wounded at any point in the attack, it wasn’t visible. Same with Sorras who stood nearby. There were a few other Nulorian members he didn’t recognize, a male Borelian and two more Vitakarians, both female.

“Nartha,” Miridian acknowledged with a brief nod, nothing in his tone indicating hostility. “You’ve recovered?”

Well, if Miridian wasn’t going to bring it up, he certainly wasn’t. “Well enough.”

“It will have to do,” Miridian didn’t seem to be interested in making introductions, deciding to get right down to business. He activated the holotable in the middle of the room that they were gathered around. “We’ve been hit hard and suffered losses. The Zararch propaganda campaign is in full swing, but it effectively changes nothing. This is merely reinforcing the existing brainwashing. It won’t change minds one way or another. Those sympathetic will remain sympathetic, and those blind will remain so.”

“While encouraging, that doesn’t help us overmuch.” One of the Vitakarians said, cocking her head. “We’ve lost a lot of people. We have a manpower deficit.”

“I’ve spoken with the Commander,” Miridian clasped his hands behind his back. “He intends to continue forward with his joint meeting of all resistance elements. I expect that he will be willing to provide us support to supplement manpower. It’s not an ideal solution, but we can work with it. Recruitment will have to be prioritized, and there are several acceleration efforts we plan to undertake.” He looked to both of them. “By either of your estimation, is it reasonable to suspect XCOM will continue support in the long term?”

“Agreed,” Nartha nodded, though he was wondering why they were being asked, considering that he’d presumably spoken to the Commander. Maybe another confirmation?

“Of course,” Miridian acknowledged smoothly. “Wouldn’t want to have it weigh on his conscience.”

“We need to retaliate,” the Borelian growled. “Respond to this attack.”

“I agree,” Miridian lifted a hand. “However, Siaru – and I – agree that a reactionary response is
what the Collective wants. We will strike, but only when we have a plan. I will be proposing several at the meeting, and there has been another recent development that I believe we can exploit.”

A hologram of a Cobrarian appeared—notably a male. He looked displeased in the static image, and situated next to several Cobrarian females, appearing unaware an image had been taken. “This is Hir’laras’silar, a male who is currently living in the Nests, though unlike his more rebellious brethren, has decided to remain in the Hierarchy to sabotage it from within.”

Miriidan tapped a finger idly on the holotable. “We’ve been in on and off communication with him for some time, and have successfully maneuvered him further to our side through information sharing and social engineering. He appears quite sincere in this willingness to help us. More notably, he says it would take very little to sway other males to turn on the Hierarchy.”

“Why would he want to help you?” Shun demanded incredulously. “Does he not know what you think of his people?”

“The Cobrarians are a doomed race if not managed properly,” Miriidan said idly. “I highly doubt he cares what I think because he sees the same thing. As it stands his life is empty, and changing the status quo is preferable to nothing. If the Cobrarians were sufficiently modified to become sustainable, and their culture rebuilt, I would reconsider my position. But as I know no Cobrian would submit to such invasive procedures, the point is moot.”

He turned back to the image. “Nonetheless, if we direct him, he will be useful in instigating a rebellion in the Hierarchy. He maintains a number of contacts with other males beyond the desert, and is willing to assist in establishing a proper network. More importantly, he assures me he can get Nulorian teams directly to the Council of Matriarchs, so long as we dispose of them.”

“This sounds especially convenient,” Nartha noted with some suspicion. “Have you confirmed it’s not a trap?”

Miriidan pursed his lips, which already answered the question. “Before now, I would have said his reliability is certain. Siaru also does not believe he has been compromised. However, we now know the lengths the Ethereals will go to and what they will sacrifice for a chance at damaging us. Right now, I can’t confirm if he is acting of his own volition.”

He glanced to Shun. “XCOM and the Chronicler will be useful in determining his reliability. I will not authorize an operation of such importance without confirmation. We cannot take chances, even with those we consider reliable and all signs point to such.”

“I’m also uncertain that even if he is reliable, his information is accurate,” Sorras commented, idly toying with a dagger strapped to his chest. “A majority of males would revolt or open to the possibility? In the Nests? I find that hard to believe. The majority of males don’t have the patience or willingness to do that. It’s also not like those who live in the Nests are poorly off either. Soft lives are how the Matriarchs placate them.”

“The wider discontent among the males is actually rooted in something concrete,” Miriidan interjected, lifting a hand. “We know that the Zararch don’t like the Cobrian Hierarchy either, and have conducted some operations against it—ones we believe are intentionally leading to more males leaving. Previously it was a rare occurrence, but now that it’s happened more often, its impossible to ignore or cover up. This is not especially unbelievable.”

“Perhaps, but consider the source,” Sorras repeated. “He wants our help, and may be willing to bend the truth to get what he wants.”
“I’ve taken that into account,” Miridian promised. “And again, without a means to determine compromise, the point is moot.”

“Agreed,” Nartha nodded. “I would say that protocols need to be established for anyone that goes outside controlled areas.”

“And how do we do that?” The second Vitakarian asked, looking pointedly at the Human and Vitakarian couple. “Submit ourselves to XCOM and alien psions? Your Manchurian Conditioning? Do you take us for fools?”

“I didn’t suggest any of that,” Nartha corrected against the sudden vitriol. “Only that there needs to be something, because as we clearly see now, no one is immune, and I guarantee that if Quisilia isn’t lurking in the cities, there are Sectoid psions imported which are secretly scanning the population, with Zararch lurking the networks. Forgive me for being paranoid.”

“Nartha is right,” Miridian glanced at the woman. “And if anyone should be paranoid, it is him. I agree with your concerns about methods, but this is something I’ve thought about how to mitigate. If we do not use XCOM, then we need to be creative. I am working with Siaru to develop a method to identify and mitigate tampering.”

“I highly doubt a machine is going to be more effective than a psion,” Shun pointed out with a frown. “None of you like it, but even giving small Sovereign Orbs out is a better method than relying on that thing for protection.”

Miridian didn’t sound impressed, and none of the Nulorian seemed to take the declaration seriously. “We’ve been using Siaru long before you came along, Human. We’ll take our chances.”

There were concurrent nods around the room. While Nartha agreed with Shun, he couldn’t deny that in the eyes of the Nulorian, Miridian had a stronger argument. But Siaru continuously gave him a really, really bad feeling. Relying on it too much was a bad thing. “When is the meeting with XCOM?” The Borelian asked.

“Soon,” Miridian answered. “Within the next couple of weeks. It is taking time to establish a working time with the respective allied Unions. Those were the primary action items I wanted to discuss now, the meeting will come later.”

“And what until then?” Nartha asked.

“We recover,” Miridian’s eyes seemed slightly dimmer than usual. “We remember. And later, we avenge.”

***

Medical Bay – The Prism

5/12/2017 – 9:18 A.M.

She looked better, and she was feeling better.

Yang gave a smile as he walked in, her body still healing but she was alive and conscious. She was still mostly staying in bed, though got up to do exercises every day, both physical and psionic. There were some bandages on parts of her body and much of the skin displayed was pinkish and new, though she now sported a number of scars on her face and body that she’d elected to keep.

Though this time she beat him to the question, which indicated she was paying close attention to
their bond. “How are you?”

The Battlemaster hesitated before answering. He was still trying to figure out the best response to Florida. Another invasion immediately afterwards would likely be supported, but until there was an effective strategy determined, it would be throwing resources and lives away for nothing. Not acceptable.

There were a number of solutions he was looking into; mass EMP deployment; integration of more Mosrimor technology, intensifying satellite targeting, and more. But those were in initial stages, and were at least a couple weeks out before he was confident enough to respond.

Besides, there were other fronts and other places to devote his attention to. But the development was nonetheless concerning, and he knew it was the first of many AI driven weapons. Beyond Earth, there were other issues that needed to be addressed. “Well enough. I’m considering a number of options.”

“What?” She swung herself off the edge of the bed, putting her tablet down. “You definitely seem…distracted.”

“Perhaps because I am,” the Battlemaster mused, pacing. “There are the new weapons ADVENT and XCOM are deploying, but those will be addressed. The discontent in the Collective is commanding more of my interest currently. The Nulorian are a visible example, but they are largely irrelevant. More concerning is the Unions which Patricia revealed to have elements working with XCOM. I intend to address this…” he waved an arm. “Issue, before returning to Earth.”

“Oh?” She cocked her head. “And do what?”

And that was the question he was uncertain how to answer. “I am…unsure.” He paused. “I intend to hear their justification. They are not inherently irredeemable like the Nulorian, and I suspect their discontent stems from legitimate sources, as mine does. Disposing of the Unions like the Zararch would advise is pointless; not when they can serve a purpose. Not when we can learn from them.”

“Did the Imperator give a directive?” Yang wondered, brushing some hair out of her face.

“Not directly.” The Battlemaster admitted. “And I suspect a reason why.”

She nodded, either guessing correctly or sensing through the bond. “He wants to see what you’ll do?”

“I suspect so,” the Battlemaster sat down opposite her. “Our disagreements unsettle him. He is not used to being challenged, and I suspect even now he believes my concerns are irrelevant. But he also knows he cannot cast me aside without controversy. So he seeks a way to discredit me in a justified way. He is insisting I achieve this goal – after Florida, I would even say it is framed as a warning.”

Yang snorted. “What, and ignore that Quisilia couldn’t kill all the Nulorian? Or that the Overmind’s arrogant puppet also failed? Not to mention Sicarius and the Second Guardian? He can’t pin Florida on you.”

“Oh, officially, no,” the Battlemaster agreed. “But he is growing impatient and my request to Sana did not engender goodwill, not from one he views as a traitor. Patricia’s new…tactic…of causing damage and terror is a sign he wishes for the war to end sooner than later – and a rebuke of what
the current strategy has been. For the Andromedons, I suspect he wants to see how I handle them. Without a doubt there is a right and wrong way – or at least expectations depending on if I am sufficiently loyal or not.”

Yang frowned. “Which means…what are you going to do? What are we going to do?”

“As I said, I will confront them,” he repeated. “I do not intend to act as the unthinking enforcer of the Imperator, something he has likely forgotten. However, he does not expect subtlety or subterfuge from me. If I reach a decision that is unlikely to be acceptable, then it will have to be executed quietly.”

She pursed her lips. “And what do you think the possibility of that kind of…decision…is?”

“I suspect that Paradise and the current state of the war have not encouraged the Unions,” the Battlemaster mused. “Their lack of trust is understandable, though their support of XCOM is unacceptable. I am not certain what the solution is, but eliminating the opposition will solve nothing except push more Unions towards rebellion.”

Yang swung her legs idly. “I wonder – do they know that we know?”

“They likely suspect,” the Battlemaster said. “Though we have not done anything, so it is possible they have become complacent. It ultimately does not matter, as the result will be the same.”

“Right,” Yang nodded. “When do we go?”

“Soon,” the Battlemaster promised. “When you have fully recovered. If it does not go well, I suspect they will be prepared to defend themselves. I would prefer we both be at full strength.”

“Hm,” Yang thought. “Perhaps we should bring Sana along too. She may help.”

“But this time,” the Battlemaster shook his head. “This is something we will do on our own. She is not on our side completely, and the fewer who are involved…the better.”

Medical Center, Mars Observation Station – Mars Orbit

5/12/2017 – 10:09 A.M.

Sitting in a busy medical center, with the worst of the work finished, Hallian sat with his tablet, composing several documents to be sent out to a number of superiors and impacted parties. Compared to fixing up wounded soldiers, this was menial and easy by comparison, though some of it wasn’t necessarily related directly to his job, but a…personal project.

Hallian felt bad for the psychologists who were dealing with the survivors of the Florida attack. Admittedly, even he wasn’t completely back to normal after what had happened, but he’d been close to an evacuation zone so when the orders had come, he hadn’t seen the worst of the aftermath.

Or more accurately, lack of an aftermath.

He’d heard numerous accounts by this point and seen some images. Wounded soldiers talked, as did medics. Soldiers had seen their friends and comrades disintegrated and ripped apart before them, with absolutely no way to help them. Some had seen the nanites eat everything in sight, like some unholy plague that devoured the carnage.
Hallian felt more uncomfortable with an empty battlefield than a...well, normal one. Sterility was alien on a battlefield. Unnatural. The images taken of the aftermath showed exactly that. Sterility. No bodies, no carnage, it was like nothing had ever happened. Everything that had been there was effectively...erased.

He wasn’t envious of the one who had to write the letters that would need to be sent to their families – and now there wasn’t even a body to return. There should always be something, even if it wasn’t whole. Not to mention it was a horrible way to die in his view. It reminded him of just how powerful the nanites were; a tool that could do immeasurable good and harm at the same time.

He felt tired at the thought that this would inevitably become commonplace. The weapons would grow larger in scale and power, with Collective and Humanity trying to outdo the other. Both sides would consider it justified as well, and wouldn’t necessarily be wrong.

A vicious, escalatory cycle.

It didn’t matter how many died or in what way; it wasn’t as though the war was going to stop. Whispers of another attack against Florida were already going around, though the Battlemaster in his actual wisdom was waiting to determine the most effective way. Still, he was planning to go back, and countless more would die as a result.

The Humans couldn’t hold back against the numbers the Collective had. That was a fact, but he was becoming more and more convinced that the Humans were willing to literally throw all seven billion of their kind against the Collective out of sheer defiance. All the fighting for an utterly pointless end.

Hallian had a strong feeling the fighting wouldn’t end after the Collective “won”. The Nulorian were proof of that, and if a largely peaceful species could spawn insurrection of that type, he could only imagine what the Humans would do.

If their history was anything to go by, it would be worse than the Nulorian. Insurrection, rebellion, terrorism, and self-determinance were repeated themes in Human history. He idly wondered if even ADVENT would last beyond the war, in the fantasy where they emerged intact. Probably not. The only reason they’d gotten this powerful was because of a unified threat. When that threat was gone...what then? Would Humans continue accepting ADVENT in its current iteration?

All in all, the more he looked at the war, the more he felt like it didn’t matter.

At least for the Humans they had reason to fight that was clear. They were also more violent and he’d noted that few had the inherent aversion to combat Vitakara did. Abraham seemed like an exception, and while he’d still been supportive of the conflict, Hallian felt that he’d welcome a stop to the fighting as well.

Humans were not irredeemable and that stood out as an oddity among a Collective that had previously welcomed species of all kinds. It wasn’t even like the Mutons which had attacked diplomatic delegations, forcing the Battlemaster to intervene. Admittedly, the Humans weren’t especially welcoming to him at first, but either through apathy or simply not caring anymore, few had paid much attention when he’d started helping them. Maybe they didn’t know, but it didn’t really matter. There could certainly be peace between them...but those in charge needed to decide that peace was in their best interests.

And that was something he knew the Collective would not agree with, but also doubted ADVENT was interested in peace either. They were too...methodical...too spurned to accept anything permanent. ADVENT seemed like a very different Humanity than was normal, at least in his
observations. Humans were more emotional, friendly, and complex than ADVENT seemed to be.

ADVENT seemed sterile. Almost robotic. Certainly manipulative, with a cold pragmatism and passion for structure, order, and obedience. Hallian believed this was a major reason Humanity had been able to endure, by forcefully purging parts of themselves and reshaping what was left, but the cost of that…well, had to be determined.

Still, something needed to be done to break the metaphorical divide between both sides.

He had a contact from the other side now. He unfortunately couldn’t contact Abraham due to the Internet not existing on Mars, not to mention he wouldn’t have been able to access it even if it was. Still, it was a starting point. Now he just needed to convince the Battlemaster of the viability of an…independent medical corps.

Instinctively, he knew it was a stupid idea that was probably going to get shot down if the Battlemaster bothered to look at it at all. Still, he felt he could lay out a plausible case, specifically pointing to the intelligence gathering potential, covert troop movements, and other honestly unethical applications, the inclusion of which was necessary because without them there was no way it would be accepted.

True altruism or empathy didn’t exist in this galaxy, at least not in the people with power.

He’d heard the Elder Sana’Ligna was also doing a similar thing, but that was more of her own volition and without an actual agreement between both sides. She was…tolerated at best. If this idea went beyond theory, the dream was a mutual pact between the Collective and ADVENT. ADVENT was going to have the same problems with the idea, but that was completely out of his hands.

He was going to do his part, and at least now he would be able to say he tried to do something that might lead to something lasting. But he’d see; even if it happened, it might lead to nothing.

Still worth a shot, and as the Humans liked to say, you miss every shot you don’t take.

***

ADVENT HQ, Geneva – Switzerland

5/10/2017 – 4:00 P.M.

And here we go.

Kaya could hear the crowd outside, the low hum of the onlookers trying to be the first to see the future Empress. She stood by herself, with ADVENT Soldiers guarding every single point of entry and exit. A number of aides and attendants were rushing to and fro, making sure everything from lighting, to microphones, to security was ready to go.

Everyone would be out there waiting. Her unit, her sister, and of course, her people.

“Moving out in ten seconds,” came the warning from an ADVENT officer. “All up to you now.”

Kaya nodded, already prepared. There’d been a number of rehearsals already, and she’d memorized what she was supposed to do some time ago. Almost without realizing the time had passed, the doors opened and the afternoon sun streamed inside, initially blinding. Flashes and dozens of camera clicks sounded as she took her first steps forward.
There were murmurs when they saw her, some gasps of surprise mixed in with cheers. It was known now she’d been in the Order of Terra, but few knew what she looked like now. Quite different from the woman she’d been only a year ago. Cut hair, weathered skin, and battle armor. No fancy Japanese attire or excessive makeup.

A woman who had been hardened by war.

Her armor was cleaned and shining of course, with the scratches and dents removed and fixed. She’d not necessarily wanted that, but considering the ceremony, appearances did matter. The only things she lacked were her main weapons, which she’d get back soon enough, though a pistol was visibly strapped to her side.

The walkway was a red carpet which extended to an elevated platform that held a replica of the Takamikura, diligently designed and colored with the ADVENT red and black. It wasn’t Japan, where the ceremony should have been, but it was the best that could be done, and Kaya suspected she wasn’t the only one who was appreciative. It would have been easy to hold this in a building somewhere, but ADVENT had gone the extra mile to make it a bit more authentic.

There were a few people she recognized in the crowd; her unit was pretty close to where the steps to the platform were, who were smiling and being as encouraging as they could be, some joining in the cheering and applause. Most she’d never seen before, outside of a few ADVENT officials who merely observed with some nods of acknowledgement and members of Japanese media who were practically fawning over her and speaking excitedly as she approached.

The people looked at her in a mixture of awe, respect, and fascination. Millions more were no doubt watching across the world. Aliens too, which could easily include the being or beings that were trying to kill her. She hoped they were watching now; and that they felt like failures. Probably too much to hope for.

She ascended the steps, with her sister, her family, and those who had recently been inaugurated into the Imperial lineage on both sides of the Imperial Throne, with chairs for the Elders and Prime Minister before and behind the throne. The throne was a replica, and she doubted she would sit in it again, but for the purposes of ceremony, it was more than sufficient.

Everyone stood as she approached, or rather had been standing already. She reached the throne, turned around and sat upon it. The order of the ceremony would be different from previous enthronements, with one part being removed entirely, and others…reworked. Normally she would not sit upon the throne until the Three Sacred Treasures had been presented, but that would happen now.

And the treasures this time would be slightly different.

The area was silent as she overlooked the crowd which waited expectantly. The Elders stood, with wooden boxes in their hands containing the treasures. The first stepped forward, and after she motioned the crowd to sit, she stood and approached. “The Yasakani no Magatama, Empress,” the first man said, as he opened the box and lifted out an object in the shape of the jewel.

Though this one was noticeably artificial, mostly because it was not a jewel at all, but a custom elerium power cell which would power one of the later treasures. The real treasures had been recovered, but were currently locked up safely. Now they would normally be presented, but Kaya had wanted something more…practical.

The treasures had been reimagined as a result.
Kaya took the elerium cell and hooked it to her belt, which she would return to later. The core glowed an appropriate green as it hung, ready for use.

The second elder moved before her, unveiling the second treasure. “The Kusanagi-no-Tsurugi, Empress,” he said. “Forged to serve you in the fires of combat.” She picked up the golden-tinted sheath and drew the sword with an audible grind that was broadcast across the world. The blade was a black steel, and as expected, it bore some similarities to the weapons used by the XCOM Templars.

Or so they said, anyway. The sword seemed different than some of the Templar weapons she’d experimented with for comparison. There was a heft and toughness to this she could inherently feel. When she’d commented on the difference, the white-haired woman who’d given it to her had seemed amused.

Well, she wasn’t going to complain about the quality. She’d asked if it would have features like some weapons the Templars used, like channeling electricity and friction. She’d been told no, but that it didn’t matter. She’d been told the blade was effectively indestructible and capable of matching the Battlemaster’s own weapon. That was good enough for her, and as the light reflected off the black blade, she noted that the crowd seemed to definitely be taken with it. With a nod, she sheathed the katana-esque sword and hooked it where her katana would have gone.

Yes, the new Grasscutter Blade would serve quite well. It was certainly a better quality than weapons she’d used before. It was an advantage, but she’d accepted that it was permissible due to her status, even if it did give her a survivability advantage. She’d just have to fight harder to keep everyone alive.

The final box was presented as the final Elder stepped forward. It was opened to reveal a small dark reflective circle, with simple patterns and tiles within, along with hooks and straps. It was made out of alloys, but also noticeably reflective. “The Yato no Kagami, Empress,” the man said, presenting the shield to her. “May it serve you and turn the attacks of your enemies away.”

Making the decision to turn what was arguably the most important of the artifacts from a mirror into a shield was easier than she’d thought. Though it wasn’t a traditional shield, but one anchored in new technology. Powered by the Magatama elerium core, it would function as a PDS field used by the Shieldbearers, turning away incoming fire.

Quite the innovative design. Kaya took the treasure and unhooked the core, and placed it into the designed slot before hooking the mirror itself on her belt. In battle it would be strapped to a place on her back, but that was awkward to do now, and it was small enough it could hang comfortably.

With the treasures presented, the Elders returned to their seats and Kaya mentally took a breath, as the moment everyone had been waiting for arrived. She stepped closer to the podium, silence still reigning as she rested her hands on the sides, gripping them lightly as she looked around the room and into the cameras.

Here went nothing.

“This ceremony is meant to be a celebration,” she began. “One of reflection, family, friends, and pride in our nation. It is a rare, solemn event that those around the world watch, but more importantly, it is a rebirth; a new beginning. Today though, this ceremony isn’t just important to my people, but also to the millions watching around the world.”

Kaya took a breath. “I’ve been victim to tragedy. In the span of hours I lost almost all my family. Many of whom I hadn’t spoken to in weeks because I was serving ADVENT, out of a mistaken
belief that they were beneath the notice of the aliens; that they were safe. As I’ve learned, there are none who are beneath the notice of the aliens. They intend to dominate and intimidate us on every level, from civilian, to soldier, to leader.” She briefly lapsed into a short silence, allowing some reflection.

“But the truth is that what has befallen my family is not unique,” she shook her head. “It hasn’t been for years now. Every hour now, people are robbed of their sons, daughters, mothers, fathers, and yes, families. All for a senseless and unprovoked war. A war in which the aliens have yet to inform us how it was provoked.”

She motioned to herself, and her sister. “Focus has been given to my family due to my birth, my title, and our ties to Japanese history and culture. What happened to me was covered breathlessly and mournfully, but the truth is neither I, nor my family, are any more special or important than those who have died without so much a mention. I am no more deserving of sympathy than those who have already suffered the loss I have.”

There were a few nods in the crowds, some appreciation on faces and she noted a few from the media winced. Maybe they’d perform some self-reflection later. “To those people out there, I cannot give you the recognition, peace, or reason for why it befell you that is deserved – but I can say that I understand, and I pray that no one ever has to. I cannot say why my own family was targeted, but I can assume that it was meant to break my resolve and drive me to despair as well as those around us. To send a message not just to me, but any who dare to support ADVENT.”

Her voice became firm. “Today I stand in rejection of the ones who sought to break me. Today I can state without ambiguity that they failed. They sought to end my bloodline, to end my family, but all they have done is ensure it will endure for generations to come.” Kaya motioned to those sitting on the sides. “Today the new Imperial Family sits and celebrates alongside me, rebuilt and renewed. All that the aliens sought to achieve has been undone because we do not break or buckle under adversity, but adapt, grow, and endure.”

One hand closed into a fist, which she rested on the podium. “The aliens continue to show their true colors and face to the world, even if those who would ally with them are blind to it. Even now they hold two children of my family, those who pose no threat to them. They do not care beyond forcing our submission to them, and will do whatever they deem necessary to achieve it. Nothing is too reprehensible or forbidden. Remember the butchery of Beijing, the indiscriminate destruction of Washington D.C., the horror of Paradise, the amorality of the Sectoids, and the missing millions whose fates will never be known and whose families will never know peace.”

She shook her head, pausing for a few seconds again. “I did not seek this role, and never have, but I recognize it is my duty. But with this duty comes change and responsibility. As Empress I have a duty to my people, but we are in a new world now; one where national loyalties and priorities are secondary to our species. I do not fight and lead simply for my own people, but for all those who reside on Earth and act to free it from the alien threat.”

Gripping the sides of the podium, she held her chin up high. “We live in an era where the feudal monarchies and royalties are diminished, but influence is still retained and it is time we address the responsibilities of that. As Sovereigns, we have held ourselves aloof from the people. We command attention and focus by nothing more than titles, family names, and old connections. This is a mistake that too many I know have succumbed to. The time of kings and emperors may have ended, but that does not mean we have the right to abdicate our responsibility – not when there are those who still look to us for guidance. Not when we possess even a scrap of authority and legitimacy.”
She looked out to the crowd, locking eyes with some of them. “We all have a responsibility to our species. This war is larger than one single nation or people; it shall decide the fate of our species. We must each do our part to protect ourselves, and secure a future for our species and children. As Empress I will fight every day until the alien threat is purged from this Earth and the Collective is reduced to dust.”

She took a breath. “I know the risks; I understand that I could very well die. In mere weeks from now you might hear of it. But this is a sacrifice I am willing to make. I can be replaced, there are others who will rise and lead, but we can never allow ourselves to cower before the aliens. I do not hold myself as someone more valuable than those others who fight, but as one who joins them side by side, united in a singular cause.”

A small smile formed. “Many of us have lost friends, family, and our home. I understand this, and that is why I fight. I believe we can win, because no matter what the aliens do to us, we return stronger than ever. For every country they take, we will take it back. For every Human they kill, two more will join the fight. For each mistake, we learn and grow. The Ethereal Collective will realize they should have left us alone, because now I have directed my family towards their elimination. One action meant to sow fear and terror has only strengthened our resolve – and it is not just true for me, but millions of others across the world.”

“The aliens do not understand what they have done,” she said, keeping her voice low and calm. “They have committed one fatal mistake – they have made this war personal. To me, to you, and to the world. Our species has a long memory, and we are driven to act against the evil and tyrannical. Justice is demanded for the blood spilled across the world, and the Collective now knows their judgement is coming, and that they cannot hide or run.”

She placed one hand over her heart, the ADVENT salute on display. “For Japan, for ADVENT, and for Humanity.”

It started small at first, but there was first applause which then morphed into cheers, particularly from the soldiers and civilians. Words and sentences in a multitude of languages, mostly Japanese and English. The cheers grew to a roar as she looked proudly forward, buoyed by the response.

One word was slowly being made out, chanted over and over again.

“Banzai! Banzai! Banzai!”

The three cheers had been a moment usually reserved for a specific point in the ceremony, but Kaya found that here was more impactful. It was a cheer to acknowledge the new sovereign, to wish them long life and health. Something she felt she would need here, but there were other meanings that could be implied.

Triumph. Pride. Hope.

All of which she felt right now, and which was reflected in the crowd before her which had swelled in intensity and strength. As the repeated cheers of Banzai rang out, she lifted a fist in solidarity, amplifying the cheers even further, enough to where the air itself was vibrating with the number of voices.

It would only last for a while, but for a short moment, she felt like she was on top of the world.

***

Home of Runi’sirasis’vitianis, Geneva – Switzerland
Nemo sat before his television still as a machine. It was not prone to strong emotions or language, but seeing the former princess and now Empress of the family it had removed as a factor stand up there so defiantly and flaunt her resilience was supremely irritating.

Nemo’s lips were pursed tightly together. The new Empress was free with her challenges it seemed.

Very well Kaya, challenge accepted. Bitch.

Humans had a large number of words for cursing. Usually Nemo considered such language beneath it, but there were a few select instances where using such words to describe what it was feeling was appropriate. Now was one of those times.

Her little display certainly undercut the effect killing the Imperial Family had; if all they had to do was arbitrarily declare a number of random other people as ‘family’ then he questioned the worth of killing them off in the first place. That was not supposed to be what happened, and now it was just accepted.

It made so little sense, and went against what the typical definition of a Human ‘family’ was. Yet there was no Human that Nemo could see who was going to call her out on this obvious propaganda-directed redefinition. Which was ultimately not a surprise, ADVENT would seek to mitigate the fallout as much as possible, even if it went against Human norms.

Humans really were sheep, their minds malleable to a fault. Or not, depending on how one looked at it. Most Human minds appeared hard-wired to obey and submit to authority. They would change their entire belief structure and mindset if they were told to. Not too different from Vitakara in that sense.

It certainly didn’t help him now.

“Sirasis” had not been invited to the ceremony, which Nemo would have turned down anyway for a multitude of reasons. The message a very apologetic AEGIS officer had given was notably straightforward. Effectively, that they thought it would be in bad taste to invite aliens to a ceremony where a woman’s family had been killed by aliens.

Admittedly, that was not an ideal environment.

Of course, Nemo had played along and given the understanding platitudes, which was just as well since there was ‘work’ to do – which Nemo had found a small routine to get into. Sirasis had access to a number of individuals, a fair few internal documents. The first few days were good and normally this would be the start of an excellent operation – except there had been a recent notice which made him seriously consider if Quisilia was playing a tasteless joke on him with how utterly bad the timing was.

ADVENT was undergoing a massive ‘internal investigation’, and there had been a large number of people arrested and prosecuted. Right now, it was only confined to ADVENT Intelligence, but the implication was very clear - that the rest of ADVENT was going to be scoured as well.

The two men in charge now, Ian Powell and Declan Rodgers, had an agenda – which was to purge ADVENT of the moles, traitors, and dissenters. It was, Nemo had to admit, somewhat admirable and the two men could not be faulted for pursuing such an objective. Even the Zar’Chon wouldn’t be able to condemn these actions, as such operations were performed regularly – though not on
such a large scale.

It appeared the AEGIS Division was next on the list.

The message Nemo had been staring at for prolonged parts of the day read equal parts a warning and a command.

*Greetings Runi’sirasis’vitianis,*

*As you are no doubt aware, ADVENT Intelligence, in coordination with the Peacekeeper Division and the Oversight Division, has been conducting an agency-wide investigation into the attempted and executed infiltration, subversion, and sabotage of ADVENT by foreign and alien actors.*

*We take our integrity and security very seriously, and as a result of our efforts, we have uprooted and purged many traitorous individuals and bodies within our agency, which has begun leading us beyond our current focus on ADVENT Intelligence and into other ADVENT agencies. As we begin to finish our investigation of ADVENT Intelligence, we are looking to the future.*

*We understand that the optics of this are not ideal, nor is profiling based on species, but the AEGIS Division, and subsequently, the aliens you are currently representing, are ripe for infiltration and exploitation. As the AEGIS Division is relatively small, we do not estimate it will take long to complete our investigation.*

*While we are certain that neither you nor the AEGIS leadership are working against ADVENT and Human interests, those within the organization we are not as confident of. I will remind you that the defectors still have family on Vitakar, and the Zararch is not above using families as leverage to make otherwise willing defectors cooperate and act as assets and sources.*

*ADVENT Intelligence requests that you inform all relevant parties and individuals of a potential impending investigation, and forward all personnel data in your possession to us for categorization and initial review. We apologize for the inconvenience, but this is necessary to continue to maintain the security and integrity of ADVENT, and especially experimental programs such as the AEGIS Division that are already under direct scrutiny.*

*We expect all requested material no later than one week from the sending of this notice. Please note that failure to comply or the submission of false or incomplete data will result in arrest, prosecution, and sentencing of all involved. Due to the possibility that suspected operatives and assets of foreign or alien organizations may be exfiltrated or escape, we cannot give you an expected timeframe for when this investigation will formally commence.*

*We appreciate your cooperation, and look forward to this investigation being concluded in a quick, efficient, and secure manner. For legal questions, please review the attached legal documentation and feel free to consult with both the Oversight and Peacekeeping Divisions to ensure all regulations and documents are accurate.*

* - Ian Powell, Acting Director of ADVENT Intelligence

This was less than ideal.

Correction – it was bad.

This effectively rendered the current plan irrelevant. An alternate one would have to be developed. It was clear that ADVENT Intelligence – and potentially their psions – would probably be keeping a close eye on Sirasis, to ensure she did as expected. Knowing ADVENT, her computer was probably tapped and monitored.
The Zar’Chon and the Ethereals were not going to be happy, but this was something that could have been foreseen, and Nemo could always find someone else to impersonate. At minimum an important defector had been killed. It appeared that the ‘suicide’ route might have to be considered.

There might be a way to salvage this.

Nemo leaned back, thinking very carefully about what to do next. Between the notice and Kaya’s Enthronement, Nemo had come to a definite conclusion.

Today had been a very bad day.

***

Office of the Commander, the Praesidium – Classified Location

5/12/2017 – 9:09 A.M.

The Zudjari blinked, seeming surprised. “You wish me to participate?”

The Commander nodded. “Yes.”

“The sentiment is appreciated,” Axis said slowly. “But I am only one of my species. I hesitate to speak for all of us, let alone Origin.”

“Understandable,” Ariel Jackson sympathized, making a note on her tablet. “But considering that the liberation of your people is going to be a priority, it is important that you are involved in the discussions. If would be in poor taste to plan the liberation of your people and not include you.”

The Commander smiled in reinforcement. “What she said. This meeting will not just be to formalize our alliance, but to determine the grand strategy of the war. This is beyond a single planet now. There are multiple factions, species, and individuals across multiple planets who need to have a unified vision of what we wish to achieve.”

He indicated around him vaguely. “Earth is the catalyst, but there will come a point when the conflict spills into the wider galaxy. We need a plan, and we will have one.”

“I see,” Axis nodded. “I cannot say that Origin will completely accept what I negotiate or agree to, but until he is freed, I shall speak for the Mosaic to the best of my ability. On that you have my promise.”

“I doubt Origin will be unreasonable,” the Commander mused. “Not from what you’ve told me.”

“I’m unsure,” Axis flapped his lips, a sign of discomfort. “The truth about the Sovereigns has raised questions. I suspect now what Origin is, and who he spoke for may have a differing agenda. However, I have faith he will be freed and an accord will be reached.”

“As do I,” the Commander clasped his hands behind his back. “That is all. We will be leaving within days. Prepare as best you can, and you will be summoned when we are ready.”

“Yes, Commander,” Axis bowed his head and mimicked the salute. “I will be ready.”

The towering alien departed, leaving Jackson and the Commander alone, and the Central Officer raised an eyebrow. “He’s not wrong about Origin. If we’re right, then that could cause problems. I’d not overpromise on what we’ll do. It’s honestly better if Axis retains supervisory control over any Zudjari we free.”
“Perhaps,” the Commander mused, idly looking over to the Sovereign Orb that sat upon a stand nearby. “At the same time, the Sovereign Ones have been locked in their circular conflict for millennia. It’s past time someone or something forced them to consider directing their energies somewhere else more important.”

“Bold to assume that every Sovereign will be as reasonable as T’Leth,” Jackson smirked as she shook her head. “I’m mildly surprised T’Leth hasn’t killed you out of annoyance after you keep making demands. You, a mere mortal.”

“I doubt T’Leth has ever been challenged before,” the Commander sat down, thinking on the question a bit more seriously. It was a personal interest to him; the Sovereigns in general were a fascinating conundrum to consider. “Nor most Sovereigns. They act on their own, are worshipped as gods, and naturally fall into a mindset of infallibility to where their visions become static and they are incapable of forming new patterns and ideas. Thus, they see the status quo as serviceable because they have not been affected and react poorly to challenge as a result. If they are content, why do they need to make it better?”

Jackson crossed her arms, appearing to not have expected an actual answer to that, before shrugging. “That’s a question above me,” she admitted. “One I’d prefer not thinking about if I’m honest. It comes a point where the extrapolation becomes a bit too…” she searched for the word. “Existential for me. I’ll leave the negotiating with the fish-gods to you, thank you very much.”

“I’ll accept that,” the Commander chuckled, good naturedly. “But I suspect we won’t have to solve the Origin problem for some time. Out of all the factions, the Zudjari are not a major factor yet. Getting everyone else to work together may be difficult. Too many different priorities.”

“Though they all have one in common,” Jackson noted. “The fall of the Collective.”

“Well, that’s why we’re having this meeting,” Jackson said. “Important questions to be answered and clarified.”

“Indeed,” the Commander glanced to the clock. “Only a few more days. Hopefully the Collective doesn’t do anything too significant during that time.”

Observation Chamber, Atlantis – The Deep Pacific Ocean

5/9/2017 – 6:02 A.M.

Loke just stood in the observation chamber and soaked it all in. There was so much about Atlantis that was fascinating and amazing; honestly the past few weeks felt like he was a kid with how much he was taken by the place. He hadn’t felt this kind of…wonder in a very long time. That part of him he thought had been killed, but it just seemed to have been suppressed.

Seeing the worst places of Earth and worst of Humanity would do that to a person.

Perhaps it made places like this seem amazing in comparison. He wondered how many more places on Earth were like this, just waiting to be found. Or more likely, had already been found and he just hadn’t heard of them. Now he was a bit more understanding of people who traveled all over the world for the sights and exotic locales. If the feeling was even somewhat like this, he could see
it being addictive.

Thus, his favorite spot in the Atlantis Base was the Observation Chamber, which was quite simply the only place on the base which wasn’t completely encased. It was a small tower that extended above the base one took an elevator to, topped by a completely transparent sphere, allowing an unrestricted view over the entire Atlantis base and the deep ocean itself.

It was a bit nerve-wracking at first. Given the sheer amount of pressure this deep, there was a not-insignificant fear that the chamber might crack and break. But he’d been assured that the chamber was perfectly safe, though you wouldn’t want to be in it if the base came under attack, and in fact the chamber could be remotely sealed off in case of a breach (which seemed to be a standard security measure throughout the entire base).

Even with all that, it was just a fear some people couldn’t get over. Which was fine; that just meant less people around to bother him. There was a steady flow of traffic he’d found, and the best times to come were early in the morning or late at night. Truthfully, it didn’t matter when one came, since the only way one could measure time was the clocks on the walls.

Atlantis never slept. Not really. The lack of tangible cycles meant that there were effectively two different groups of people working, one during one cycle, and the next doing what was left. Easier to perform since there wasn’t anything to compare it to.

Loke drummed his fingers on the couch, looking out over the base. Even in the few weeks he’d been here, there’d been progress made on the construction. There’d already been a massive warehouse-like structure where the ships were being built, and more defense platforms, storage areas, living quarters, and aquatic farms were springing up on the sea floor.

There were regular patrols of Atlantis Guards, and occasionally he’d see Neptune Scouts deploy in their little pods who would return an hour or so later. People were still nervous going out too far. He was almost sad he wasn’t one of the Scouts, but his actual job was one he was quite happy with, so he wasn’t complaining.

Of course, the thing everyone looked out for was the wildlife, and there was a surprising amount of it despite the depth. The deep ocean had been a fascination for many simply because unknown it was compared to the rest of the world, and there was plenty to point too now showing that. Everything down here was unsettling and bizarre, but in a good way.

Well, he said that now. If he came face to face with some of those creatures out on the ocean floor, it might give him a heart attack.

Eh, probably an acceptable price to pay.

The door hissed open behind him, and he glanced around and was somewhat surprised to see he actually recognized the alien entering the room. The Dath’Haram woman…Valencia, that was it. He’d actually spoken to her several times, though mostly work-related. Despite some of his initial reservations, she seemed genuine and committed.

“Hello,” she said, coming around, her green skin barely visible in the dim light. “Loke, right?”

“Guess we both remember each other,” he nodded, flashing a smile. “Didn’t realize you liked coming up here.”

“Oh, I haven’t actually been up here yet,” she said, sitting down on the same couch. “Been meaning to, but never found a good time. I didn’t even know it existed until you mentioned it a few
“Really?” He raised an eyebrow, amused. “You’re an architect here!”

“Well, yes,” she fidgeted. “But that doesn’t mean I know everything. I mean, do you know every military unit that’s being created here?”

“I wish,” he snorted. “Point taken. Glad you’re up here anyway. It’s an amazing sight.”

“Mmm, it is,” she leaned back, looking out over the base. “It’s…nice to see it laid out. Feels more tangible than reading status updates and seeing holograms. I like the lighting too, it’s less isolating than we feared it might turn out.”

“Yep, nothing quite beats seeing it for yourself,” he agreed. “I’m curious – you’ve been to somewhere like this before? Given that you have a whole race that lives underwater and all that?”

“No,” she shook her head violently. “I was actually a bit uncomfortable here at first. No one goes into the Manda-” at his confused expression, she cut herself off, then elaborated. “The ocean. Sovereign Sar’Manda territory; they do not take incursions lightly. I guess a lot of us have an aversion to the ocean as a result. Something beautiful we can see, but never explore.”

“Sar’Manda…” the word rolled off his tongue. “So, I assume the name means something? It sounds like it has an actual translation compared to something like…” he waved a hand. “Well, like Vitakarian for example.”

“A couple of translations, depending,” Valencia looked upward, recalling. “The Sar’Manda aggressively state that it means ‘masters of the waters’. Most translations would say it’s closer to the ‘sea-dwellers’ or ‘sea-children’. I’m assuming somewhere along the line the dialects diverged.” She bared her teeth, something he learned was one way how Dath’Haram expressed amusement. “More likely its them trying to sound more intimidating. Ah, I suppose it doesn’t matter, but it’s interesting to consider.”

“It is,” Loke agreed, turning his head to her. “What about Dath’Haram? Similar concept?”

“In a way,” she shifted to face him better. “Most translations tie it to where we live; or so popular ones go. ‘Dwellers of the forest’ or ‘children of the forest’ for the most part. But those aren’t really accurate.”

“Oh?”

“It’s a bit odd,” she admitted. “Especially with who we are. The real translation, which the Council of Dath’Haram, our…racial government…the one they quietly acknowledge is ‘blades of the people’ or ‘defenders of the people’. It can vary on context.”

“Hm,” Loke scratched his beard. “A bit militant for your race. Don’t suppose you had a less-than-peaceful past?”

“That’s the odd thing,” she shrugged. “We didn’t. Maybe back then we used the name as a deterrent. It’s admittedly not something I looked into deeply, so apologies if I end up being wrong.”

“Don’t worry about it,” he waved a dismissive hand. “I’ll take your word for it.”

“If you-” she began, before yelping in surprise and breaking into a short sentence in her alien language, looking completely terrified. Loke soon saw what it was, and he couldn’t keep his
amusement to himself. One of the more unsettling of underwater creatures had floated past, and was hovering over the sphere, looking down at her.

“That is not funny!” She sputtered, intermittently glancing between him and the creature.

“Sorry, sorry,” Loke fished for a small flashlight. “This should get rid of it.” He flashed the light directly at the creature, which quickly swam away. That particular creature definitely didn’t like light, and he was surprised it had gotten this close to the base.

“Thank you,” the Dath’Haram shuddered. “Your sea life is highly disturbing.”

“Down here it is,” Loke agreed. “Though a bit higher it’s more appealing. But I find it fascinating in its own way. Most of the stuff down here we barely know about. It’s like a new world down here. Although I might change my mind when I go out there.”

“Ah, when is that happening?” She asked, quickly asking. “If you can tell me, of course.”

“They’re doing final tests on the Depthtrooper armor,” Loke said. “Which I’m fine with. But once that’s done, we begin drills. Lots of time outside,” his face burst into a grin. “I can’t wait.”

“I hope it is successful,” she glanced out into the blackness. “It seems a lonely place out there. Difficult to believe a war could happen in this place.”

“Hopefully it won’t,” he agreed. “But if it does…well, that’s what I’m here for. Soldiers do two things well, kill people and protect them, in your case, it’s the latter.”

“Mm,” she said idly. “I can understand the concept of protecting others easily enough, though dislike the notion of people risking themselves for me. If your people were only protectors, I feel I could understand you better, but it seems many are more interested in killing others than protecting them.”

Loke pursed his lips. “To some extent, perhaps. A lot of soldiers fight for different reasons. Some do it for their country-their people, others to protect values they believe in. But some join just to kill people, though that’s a bit of an oversimplification,” he paused briefly, thinking about how best to say it. “The people they want to kill are usually those who shouldn’t be alive anyway. Terrorists, criminals, those kinds of people. An equivalent for you would be something like the Nulorian. Thankfully though, most soldiers aren’t pure sociopaths.”

“Some Borelians have explained something similar to me once,” she acknowledged with a nod, before looking to him. “If you don’t mind my asking…what about you? Why are you fighting?”

He thought a few seconds before answering. “It’s a bit selfish, honestly, at least when I started out. Because I wanted to prove that I could. I like challenge, so what better way to challenge myself than getting into the best special forces squad in the world?”

He shrugged. “Can’t say I’m a big patriot. Denmark was always a country I could be proud of, but it’s a place that owns an arbitrary amount of land like all the others in the world and has an unimaginative flag. That didn’t drive me. Yeah, we have values like ‘freedom’ ‘equality’, and ‘justice’, but so do dozens of others.”

Fingers drummed on the armrest. “Stats, milestones, challenge – that was what I really wanted. Perfect mission records, flawless executions, everything a means to that end. Exhilarating and I got money and called a hero while doing it. Not much reason to complain.”

He licked his lips. “I guess I never really thought about what I was doing and who it was for.
 Didn’t really have a reason to. The people I killed deserved it, no question, and I trusted my superiors. When the aliens hit though…” he leaned into the couch, looking away from her and to the blackness, wincing a bit. “Well, it stopped being a…gah, something trivial that I had fun with. It’s real now in a way it wasn’t before.”

A sneeze interrupted him before he continued. “What I did before? Being honest, there was approximately a zero percent chance a terrorist was going to radically affect the world. A random warlord or thug?” He shrugged. “They might affect a few hundred people at most. There was no significant consequence. Yeah, a few people would be hurt and ruined, but the vast majority would continue on unaffected. I was safe in the knowledge that even if I screwed up, the world was still going to continue on and people I cared about would be safe.”

A bitter smile crossed his face. “Not anymore. Everyone is one Ethereal away from death, one bombardment, one invasion. It’s become a matter of protection now. Most of the world? They can’t fight. Not well at least, much as ADVENT wishes it were otherwise. I can though, and that’s what I’ll do. My challenge now is to save the world, and this time it’s a challenge I can say matters – and also the one that could actually kill me.”

He trailed off, realizing he might have said a bit too much to an alien of all things who he had a passing relationship with, but not a close friend or anything. He coughed awkwardly. “Sorry if that was a bit much.”

“No, thank you,” she said, appraising him. “I appreciate the answer. I doubt most would have one like it.”

“Ha, probably not,” he agreed, then glanced down at his watch. “Got about another fifteen minutes before someone will ask where I am. Probably will get to test the armor today. What about you?”

“Reviewing an expansion plan,” she answered, her tone turning the slightest bit irritated. “Provided everyone shows up for the meeting on time. Some of your people have questionable time management.”

He chuckled. “Unfortunately, that remains a problem for some of us.”

Even in ADVENT, it seemed some things never changed.

Volk’s Quarters – Mars Collective Base

5/13/2017 – 10:22 A.M.

Volk set the razor down and rubbed his chin. It was past time he made himself a bit more presentable and less like a wildman. A properly groomed beard made him feel much more professional than he’d felt the past month or so. Of course, there hadn’t been a lot that he’d done, and he couldn’t attribute that to one particular reason.

Nemo was out on his mission, and he didn’t have the faintest clue how that was going. Though he had been very amused to watch the Enthronement of that Japanese Empress. Nemo had probably been fuming the whole time.

Well, probably not. Nemo was the kind of person…thing…to not be affected by anything.

Still, it was amusing to consider.
It was a speech to think on, at least. Thing was she wasn’t exactly wrong about a lot of stuff. Not that ADVENT was much better; as far as he was concerned, they were still more imperialistic and draconian than most of the Collective (barring the Vitakara, who definitely lived in something resembling a police state).

Ultimately though, the appeal of ADVENT was in full swing, made all the more potent by the fact that she’d touched on a very true point – how the war was affecting so many. And Humans had a tendency to react poorly when something was made personal. It could cement loyalties or break them.

Everyone had personal lines that couldn’t be crossed. He’d had his a long time ago.

It begged the question of what had happened to his red lines. There’d been a point some time ago when he’d have walked. He was no supporter of ADVENT but the Collective had no moral high ground. The recent hostage controversy in the SAS, the launch of literal nano superweapons, all of it was building to the point where the idea of washing his hands of everything and trying to just survive until they killed each other was appealing.

Then again, that would only end up working if the Collective won. If ADVENT somehow survived, no more living off the grid.

So for now, he stayed. The Collective was an evil, but it was an obvious, exploitable evil that could eventually collapse. ADVENT was a worse evil – a smart evil. The Collective could fall, with ADVENT he wasn’t as confident, and that worried him. It felt…irresponsible and cowardly to stand on the sidelines. Even if it felt like that’s what he’d been doing recently.

It was entirely possible that the Collective had accidentally forgotten about him, considering what they were focusing on now. A fairly skilled, but ordinary Human and his small team were not quite as useful in the types of operations they were planning. Now that they had psions and the like to teleport wherever they wanted, he was…well, less desirable, perhaps.

Or they considered him too distracted and unstable.

Which wasn’t necessarily wrong. Well, it hadn’t been for a few weeks when Elena was doing badly.

Now she was much better, enough to where she was joining him on the range and had mostly returned to normal degrees of conversation – which didn’t focus on her nightmares or memories. Volk truly didn’t know if he’d helped her recover, but he’d at least tried something, even if it largely amounted to talking to her for hours about random stuff to give her something to focus on.

Well, it hadn’t hurt.

Brushing himself off, he turned on the shower and took a short one, and when he was done, exited the bathroom and headed to the kitchen where Elena was probably still sitting and waiting for them. They’d taken to having late breakfasts together since they weren’t on a strict schedule for the moment. When it came down to an actual op, they’d both adjust.

However, Elena was not in the kitchen, but standing a short distance from the door with her pistol drawn and pointed at the entrance to the room. “Woah,” Volk’s own pistol was in his hand when he saw that, though when he saw her target, he cocked his head, confused. It was a Human woman, Asian, black hair and fairly imposing.

“Harbinger Yang Shuren; psion; unannounced,” Elena said curtly, not waver ing. “Wants to talk to
you.”

“Yang Shuren?” Volk holstered his pistol, though didn’t motion for Elena to do the same. If it was a psion, it wouldn’t threaten her and Elena would feel safer. “Huh. Have we met before?”

“Likely,” the woman said, angling her head to him. “Probably in brief.”

“Probably,” he agreed, frowning. “Seems you’re feeling better. I’ve heard you were injured in Florida.”

“Yes, but I’m better now, as you said. Comparatively,” she took a step forward. “Apologies for the unannounced visit. If I’d known I’d be held at gunpoint, I would have provided a bit more notice.”

Volk glanced to Elena before giving Yang an apologetic look. “It really wouldn’t have made a difference.”

She raised an eyebrow, but her face remained neutral. “Noted.”

“So why are you here?” Volk asked. “The Battlemaster isn’t usually the Ethereal I’ve answered to.”

“Nebulan is handling other matters,” Yang answered, before briefly pausing. “Or ‘Asaru’ as she calls herself to you. I expect she’ll return shortly, though the Battlemaster would prefer you not remain idle.”

“Is that right,” he said neutrally. “Knowing the Battlemaster, what I do is not really what he manages. I’m not really a soldier, and large battles aren’t my specialty. I’d prefer to stick to what I’m good at.”

“I’m aware, as is he,” she agreed, glancing to Elena. “But you’ve not really been doing much recently. I know that she was recovering, though she appears to be fine now. Because of this, I will remind you that you still have a responsibility to help us, and your services will likely be needed soon.”

A nod. “Go on.”

“ADVENT Intelligence is conducting a major purge of suspected Collective moles and traitors,” she said. “Something you’re probably aware of. Obviously, this needs to be mitigated, and the Zar’Chon believes this presents an opportunity, as not all of those caught are ours, but national remnants. Potential defectors. Some of these individuals, and our more high-level assets require extraction, and you’re one of the few Humans we have who has the skills to infiltrate and exfiltrate.”

Hm, well this wasn’t necessarily a bad change of pace. Reminded him of old times. “Not that I’m complaining, but wouldn’t someone like Quisilia or Sicarius be better for this? Less risk with them.”

She shook her head. “You’d think so, but no. ADVENT is taking precautions to mitigate psionic exfiltration, and if we spook them too much, they will take more drastic measures. You have an advantage in this case. You’re Human, don’t stand out, and aren’t psionic. Ideal for something like this. Good for your people too.” She cocked her head. “Given your history, you seem to have experience getting people out of tough situations.”

“Yes,” it had been…a long time since he’d thought about that. Much simpler times then. “I suppose I do.”
“Excellent,” she nodded. “You’ll be receiving profiles and operations shortly. This is timesensitive, so please be quick. You will also be performing this under the command of the Battlemaster – not other Ethereals. Understood?”

“Yes,” he confirmed. “I’ll work as fast as I can.”

“Good, I will speak to you later,” she gave a small wave and exited, with Elena’s gun not wavering until the door closed behind her.

“Well,” Volk said a few seconds later. “Guess vacation’s over.”

Elena looked to the door, still frowning. “What is it?”

“It is odd,” she said, lowering her weapon. “Why did she not tell us she was coming?”

Come to think of it…that was a good question. Nothing she’d said seemed to really require this kind of secrecy, so either Yang was a naturally paranoid person (possible), it was a coincidence and that was just how she did things, or there was another angle to this beyond the obvious.

Of course…this was the Battlemaster. Given what he knew about him, this kind of blunt unorthodox communication wouldn’t necessarily be out of place. When it came to plots, spies, and angles, a spymaster the Battlemaster was not. Nor necessarily subtle.

“Probably nothing,” he shrugged. “But…let me know if you think of something. Never can be too careful with Ethereals.”

***

Manda’tearias, Sar’Manda Empire – Vitakar

5/17/2017 – 12:17 P.M.

In the deep ocean, in the heart of the Sar’Manda Empire, aliens of all species gathered together to plot the downfall of the Ethereal Collective. The oppressive deep ocean served as a shroud, tinting the room the occupants were gathered within, all intent on completing this singular objective.

But all knew it was more than war which would be discussed.

What came after was more important.

The XCOM delegation was as expected. The Commander took point, not wearing his typical dress uniform but his silver Titan armor. His sniper rifle and pistols had been brought along too, as he was not risking being caught in enemy territory unprotected. His helmet rested on the circular table, along with his weapons – a gesture of cooperation that had been echoed by the other armed individuals in the room.

Flanking him were Jackson and Zhang, as the Central Officer was vital to an alliance on this scale, and the Director of XCOM Intelligence was similarly necessary. Neither were decked out in armor like the Commander, though both had brought weapons and wore tactical vests for some protection. JULIAN was also a participant, as a stand holding a smartphone which was connected to a small computer. He was not necessarily happy with this arrangement, but had accepted it.

Axis had also accompanied them, though he was technically representing the Zudjari Mosaic, in lieu of an actual authority. He was wearing his own battle armor, with weapons and helmet also set on the table. Aegis was also here, though unlike the others he intended to stand due to his height.
T'Leth had sent two representatives of his own, the first unsurprisingly being the Chronicler who was seated near the XCOM delegation, though the second was a bit more unexpected. The Commander would have expected Lincoln or Fiona, if anyone else at all, but instead the enigmatic Crevan Machas sat beside the bearded elder, looking sternly around the room at the various aliens and allies.

Miridian and Sorras represented the Nulorian, and they were seated opposite XCOM. They’d also come armed and armored, though had dispensed their weapons on the table as well. The Manda’sarthoria sat beside them, though it wasn’t expected that the leader of the Sar’Manda would interact much on matters outside Vitakar.

ADVENT’s delegation consisted of Saudia, Commander Laura Christiaens, Firdas Hassan as the Chief Diplomat, and Ian Powell, which the Commander took as a sign that his “Acting Director” title was going to become permanent in the near future. Unlike XCOM, they weren’t armored, but were in more formal attire, though some carried weapons which were also laid on the table.

Then were the Andromedons. Each of the allied Union leaders had come personally, and for the first time they’d seen some of the more unique of the Andromedons. V’Zarrah of Union Viarior was known to them, but A’Halsond and S’Trech of Unions Apear and Stuirah respectively were new. A’Halsond wore a suit similar to V’Zarrah, but S’Trech’s suit was hulking even for an Andromedon, more equivalent to a MEC than a simple battlesuit.

The most unique was Z’Vador, of Union Zacarrim. The Commander knew of the small Union and their uniqueness, but it was more visceral to witness in person. The Zacarrim didn’t wear hulking suits like the other Andromedons, but appeared to instead wear a mixture of a tight form-fitting suit with heavily invasive cybernetics and implants. Just from looking at the Andromedon, the Commander wondered if a majority of his body was cybernetic.

With everyone assembled, it was time to begin.

“I understand the risks all of you have taken to come here,” the Commander stood, looking around the room. “What we are doing is unprecedented, and your commitment to the downfall of the Collective is apparent and welcome. I believe I speak for Chancellor Vyandar when I say that without your support it is unlikely that we would be in this position.”

He nodded to the Sar’Manda in the room. “And our direct thanks to you, Manda’sarthoria. Your hospitality is appreciated.” The alien made a motion with his hand in acknowledgement, though the translation device didn’t say anything.

“He nodded to the Sar’Manda in the room. “And our direct thanks to you, Manda’sarthoria. Your hospitality is appreciated.” The alien made a motion with his hand in acknowledgement, though the translation device didn’t say anything.

“Indeed,” Saudia echoed. “Humanity will not forget this.”

“While your appreciation is welcome, it is thanks to you that we are here now,” Miridian commented, inclining his head. “Without Humanity, we would be stuck in our own independent plans and schemes. Now we have the chance to achieve something real.”

“Appreciated, Miridian,” the Commander answered, before looking back across the room. “I won’t waste time with overviews and introductions. All of you know of the others, and know why we are here today. It is time we come together and form a unified strategy against the Ethereal Collective and establish more interconnectivity as this war intensifies. I suspect we all see that the conflict will expand beyond our planet, and we need to be prepared for that possibility.”

“The sooner this happens, the better,” V’Zarrah stated, his voice booming in the small chamber. “I believe the Collective is growing suspicious, even if they do not press us. We have taken measures after Patricia was compromised, but they are either not interested, or Patricia omitted our
“I suspect they want to see what we do,” A’Halsond suggested. “A passing investment is justifiable, and the Ethereals lack insight into the deep inner workings of our Unions. They are no doubt watching us closely though, and waiting to see our actions.”

“Speed is absolutely a priority, and we understand time is of the essence,” Laura acknowledged, standing. “ADVENT is currently prioritizing two major projects that will drastically increase our odds of striking beyond Earth and bolstering our numbers. The Atlantis Fleet, which is being built secretly under our oceans, and Project Seafoam, which is the creation of a clone army.”

“Ah yes,” JULIAN interjected sarcastically. “Let’s just skip over the creation of AI. Already reduced to a footnote in history, how disappointing.”

“Not a footnote, JULIAN,” Laura continued without missing a beat. “In fact, our own AI development is nearing final testing. We are signaling and teasing a number of projects to varying degrees to throw off the Collective watching us. Learning about the clone army or the Atlantis Fleet could trigger an endgame scenario where they are willing to risk an overwhelming invasion, regardless of T’Leth’s deterrence.”

“They do so at their peril,” the Chronicler shrugged.

“Then it is imperative this fleet be completed,” S’Trech stated. “I have already authorized materials for your workers, Chancellor. Cooperation is already established, though it is worth expanding. However, this cannot be done discreetly without direct support from Union Viarior.”

“Assistance we shall provide,” V’Zarrah promised. “Though to achieve an increase we will need to construct additional Gateways. Those will take time, but they can be done.”

“Cloning facilities can be housed off-world,” Z’Vador interjected. “We have many worlds capable of industrial cloning. If you wish to additionally bolster your numbers, I can instruct our facilities to begin production.”

“Assuming this is done with Human oversight, that is a welcome proposal,” Hassan nodded. “We do not require knowing your methods, but turning over such an important project to alien oversight is not acceptable.”

“Understandable,” Z’Vador conceded. “We are willing to reach an agreement. The Collective does not suspect us.”

“It is true,” Aegis agreed, speaking for the first time. “Though I would advise caution all the same. The Imperator is not ignorant, and the only reason he has allowed your continued independence is because you pose no threat to him.”

“So he believes,” A’Halsond scoffed. “Unsurprising for one as arrogant as the Imperator.”

“I believe it is relatively clear that Earth will shape the direction this war goes,” Saudia spoke up. “The more attention the Imperator devotes to us, the less is on the Collective. As we intensify, the Collective will inevitably reciprocate. Whatever support could be provided to Earth would increase our chances of holding out until these projects are completed. I am aware of the limitations of deployment, and that many entities have used XCOM as an intermediary.”

“XCOM can house our people securely,” V’Zarrah said. “We cannot devote open support to ADVENT.”
“Open support, no,” Saudia agreed. “However, covert support would be welcome. Resources, scientists, engineers, ADVENT has more facilities and projects than XCOM. Augmenting them with alien specialists would provide a significant advantage.”

“I understand security may be a concern,” Ian Powell interjected. “Our security protocols and measures are being carefully crafted to pose as little risk to alien allies as possible. Psionic monitoring, biometrics, Blacksites, every conceivable measure will be taken. I echo the Chancellor in stating that increased support is critical for our efforts.”

“There is no disagreement,” A’Halsond stated. “With this said, if we work together closely, it cannot be one-sided. For the support of Union Apear, we want access to any projects we are involved in. Full access. We will be allowed to use whatever we assist on for our own purposes.”

“I concur,” Z’Vador agreed. “If we risk our people for your projects, it is imperative that we also receive the benefits.”

“We will consider it,” Hassan acknowledged. “But I don’t see why we can’t work within these parameters – provided that the same offer is extended to us. In the event that you request Human assistance, we would require the same measures. I think we both are both interested in cooperation rather than exploiting each other, so we should not become too obsessive over these details.”

“Acceptable,” A’Halsond said. “We are in agreement on that.”

“With a caveat,” Powell lifted a hand. “You would be working with classified projects and technology, and while you have a right to utilize what you are involved in, we would not want it shared with other parties such as the Vitakara or even other unions without our authorization. If the spillage becomes too problematic, this may have to be reconsidered. We would, of course, treat any projects we participate in with the Andromedon Unions the same way.

“That can be accounted for,” A’Halsond agreed. “We are as interested in preserving our secrets from our enemies as you are.”

“I will add that there is an open contribution that can be made,” the Commander looked to Miridian. “The Nulorian are Vitakara, and soon Vitakara will be fighting in combat. I doubt it would be a difficult matter to layer our alien forces with Nulorian. Perhaps for them to acquire combat experience or to simply kill Collective soldiers. But it is a contribution that can be made.”

“Provided that I retain authority over them,” Miridian nodded, rubbing his chin. “That would be feasible. But their priority is Vitakar – not Earth. If I need them here, they will return here.”

“I see that as fair,” the Commander nodded. “Now, it is all well and good to determine how we will help each other, but there is a more important question – what we want. There are specific objectives we want to achieve, and we need to know what those are.” He looked around the room. “For Humanity, our final objectives are simple – The expulsion of the Ethereal Collective from our territory, the capture or execution of all Collective-aligned Ethereals, and the death of the Imperator. Until these are achieved, there cannot be peace.”

“On that we agree,” V’Zarrah nodded. “I suspect to most the death of the Imperator is a necessity. Though we require more. The dissolution of the Andromedon Federation and the extermination of the Greater Hive Commanders are our priorities – the latter especially.”

“To clarify,” Hassan said. “Do you mean just the Hive Commanders or the Sectoids as a whole?”

“There is little difference,” S’Trech dismissed. “Without the Hive Commanders, the Sectoids are
unable to function. Their species will die when the Hive Commanders die. But so long as they live, they pose an existential threat to our species.”

“If there is one species Humanity will have no problem destroying,” Saudia said with a nod. “It is the Sectoids. You will have our support, both in supporting you against other rival Unions, and the elimination of the Greater Hive Commanders.”

“There is something to consider,” the Commander added, suspecting what he was going to say might not be popular. “The crimes of the Sectoids are not in question, and Humanity in particular has suffered from their actions. However, the Hive Commanders are not stupid. Intelligence we have confirms that the Hive Commanders are not uniform and unthinking. They can presumably see what is happening on Earth.”

He paused. “All of this to say – what happens if one or more of the Hive Commanders wishes to defect and turn against the Ethereals?”

“Pointless to consider,” S’Trech waved a hand. “That will not happen.”

“It’s a contingency worth considering,” Powell pointed out. “I would rather not be unprepared should it happens. We need to discuss this now, and not when a crisis is facing us.”

“The Hive Commanders wish us eliminated, Commander,” V’Zarrah stated. “You are presuming that the Hive Commanders have divergent goals. They have been singularly united for thousands of years – and now they would diverge? Even if they were willing to preserve themselves, their desire to reduce us to nothing would remain. That is unacceptable.”

“Out of curiosity,” Saudia asked. “Have formal communications between the Andromedon Federation and Greater Hive Commanders ever been established?”

“The Hive Commanders do not negotiate, Chancellor,” V’Zarrah said. “They merely act. Neither of us require pointless meetings simply stating what we already know – or worse both lie to each other – and know it. Why do you not negotiate with the Ethereal Collective, Chancellor? If you consider negotiation a valid path, why has it not been done?”

“We are at war,” Saudia answered calmly. “Neither you or the Sectoids are at war yet.”

V’Zarrah turned to face her. “Let me be clear, Chancellor – the only reason war has not happened, is because the Ethereals have prevented it. The Ethereals are a reason why the Sectoids remain a problem. It is because they have permitted massive fleet buildups, expansion onto dozens of worlds, to the point where it will soon reach a critical mass where we will lose.”

“The fact is simple though,” the Commander interjected. “The Hive Commanders and the Andromedon Federation are not at war now. I will note that the Unions have had equivalent time to build their own fleets. If the Hive Commanders continue their war against us, we will assist in defeating them. But if they do want to break ranks, I will negotiate with them – with conditions.”

“And how do we know they would uphold any agreement?” A’Halsond demanded.

“Because if they don’t,” Powell said. “Then we will eradicate them. Frankly, we don’t know if the word of a Hive Commander matters – and that does not matter. The Sectoids would either uphold an agreement – or the fear of us finishing the job will keep them in line.”

“It is important to also determine something else,” the Commander added. “What does victory over
the Sectoids look like?"

“As we said before,” S’Trech repeated. “When the Hive Commanders have been exterminated.”

“And what happens if they surrender?” The Commander pressed.

“As I said,” the Andromedon said in a low voice. “They will be exterminated. We do not allow threats to endure.”

“Genocide then?” The Commander asked.

“As opposed to what?” V’Zarrah asked. “Allowing them to endure? If they dared to wage war, they should be prepared for the consequences.”

“If this was a war between both of your species, we would not have a say,” Saudia noted. “But you want our help in defeating the Sectoids. ADVENT will not be party to genocide should a surrender be offered. If the Hive Commanders will fight to the bitter end, we will kill every last one. But if they wish to accept their defeat, we will consider that.”

“And I will add,” Hassan said. “We would ensure a complete disarmament and monitoring of any defeated government and species. Any surrender with the Hive Commanders would ensure that they could never pose a threat to ADVENT or our allies again. We have developed the Manchurian Restraints, V’Zarrah, they ensure psions do not dominate our society. They ensure that our most powerful are loyal. At minimum – the Hive Commanders would be placed under the Manchurian Restraints, and could not rebel even if they wished.”

“As well as military monitoring,” Laura said. “No fleets, no soldiers, and with the threat of a military response hanging over any action taken against us. Would that be sufficient measures.”

“As allies,” Saudia added. “The Unions would be able to impose their own monitoring and demands as well.”

The Andromedons looked between each other, probably conversing privately. V’Zarrah turned back to them. “This would be…acceptable. We doubt this scenario will be necessary, but in the unlikely event of a surrender or defection of the Hive Commanders, we will work with ADVENT, XCOM, and the Nulorian before we take unilateral action.”

“Excellent,” the Commander said, deciding to move the topic to their lone Zudjari. “Axis?”

“I am the only one of my kind who is freed,” Axis began. “I suspect most of the Collective is unaware of our existence. I have no wish other than for my people on Zudjari-7 as the planet is named, to be freed. Should this be accomplished, we will work to support you in any manner necessary.”

He paused. “Then once it is done, the Zudjari Mosaic will be reestablished and we will determine where to go next as a species.” He looked to Saudia. “Of course, we would be willing to forge a direct agreement with ADVENT, but I do not wish the Zudjari to become subservient to another species, even one which frees us.”

“Done,” Saudia said. “ADVENT has no interest in subjugating other species. We will respect your sovereignty and leave you to your own affairs so long as you respect our own.” She looked to the other leaders. “This applies to others as well. Our interests are those of Humanity, but conquest is not our objective. We do not inherently believe that mutual cooperation and betterment cannot exist. We intend to work together as equals, and nothing more. We will not meddle in your internal affairs so long as the favor is returned.”
“I believe that is all we wish,” Miridian nodded. “The right to determine our future, independent of Ethereals and other species of power. For us what we want is simple – the dissolution of the Aui’Vitakar and all Ethereal-established bodies and Vitakar returned to our species.”

The Vitakarian glanced to the Commander. “This new Vitakar will not be controlled by those who currently live within, but by those who are willing to defend our species and people. I do not care what the weaker races do, but they will not have a place on Vitakar. We will retain full control – and expect others to respect this. The exception will be the Sar’Manda Empire, who as you know, have made their demands clear to all. Independence – no more, no less.”

Hassan pursed his lips, but nodded. “We are preparing to assist in the launch of a defector-based Vitakara government that we will recognize. We will assist in planetary settlement and migration. If you wish to split your people, we will do what we can to mitigate the fallout.”

“There will be territory and colonies after the war,” Jackson pointed out. “Agreements will need to be made as to which government will get what. While this is far out, this is something both parties will need to consider moving forward.”

“Agreed,” Miridian nodded. “In return, we will support your war to the end. Though there is a matter to address,” he looked to the Chronicler. “We are aware of the Sovereign and his representatives. I remain skeptical of his agenda and capabilities. For now, he is on our side, but they are fickle in loyalties for those they see below them.”

“I can assure you,” the Chronicler said. “That T’Leth does not have any intentions of control or rule. He is interested in the death of the Imperator and destruction of the Collective as all of us are. And without him, your chances of succeeding diminish drastically. I dislike telling you to rely on trust, but if T’Leth was interested in control, you would not know we exist.”

“I have spoken to T’Leth multiple times,” the Commander added. “And I do believe he does not desire control. What he will do afterwards is not as clear, but I doubt it is malicious. But it is also a hard truth that without T’Leth, we will have issues – not just with defeating the Imperator, but also destroying Paradise.”

“A priority we should not forget,” V’Zarrah agreed.

“I will speak for myself.”

The sudden possession of the Chronicler seemed to catch some of them off guard, and the Andromedons froze, as did Miridian. Some considered reaching for their weapons, but held off after a few seconds. The glowing eyes and wavering air around the Chronicler commanded the attention.

“Your war does not end with the Ethereals,” T’Leth said. “This galaxy is not one of peace and tranquility. Most species sleepwalk through the cycles as puppets or sheep, only to be slaughtered or harvested. Already…this is an anomaly I have not borne witness to in a very long time.”

There was a pause. “I do not desire rule or conquest over proxies. My Sovereign brethren are locked in a pretend conflict, a game which they play from the shadows without fear. I have fought them for millennia, and sought to hunt them down and break these cycles. It is something that I have ruminated on as this war has progressed.”

The Chronicler gestured. “Your war does not matter if you are not prepared for what comes after. The Imperator pales in comparison to the Sovereigns and the looming threat of the Synthesized. Your species are uniquely positioned to do something which has not been a possibility since the
Ethereal Empire – a means to break the cycle. You understand the reality of the galaxy. Those who threaten and manipulate it.”

The Chronicler clasped his hands behind his back. “There are none better positioned to break it than the species represented in this room. Sovereign control has not resulted in victory, and nothing will change with the status quo. That is why I will support you. My interest is not using you, it is ensuring you will endure in a galaxy which will target you.”

The blue power of the Chronicler faded and sat back down, looking a bit paler, but otherwise fine. The Commander raised an eyebrow. “I think that should answer that question. Aegis?”

“I will be brief,” Aegis agreed. “I suspect that there will be few Ethereals when the war ends, and even fewer who are aligned with us, if any more at all. I do not have a desire to rebuild the Collective or require concessions. The time of the Ethereals has come and past. Others will take our place, and all I wish is to continue assisting and ensure that you do not make the mistakes we did.”

“And on that, we will support you,” the Commander nodded. “Though it does not have to be the end of the Ethereal species. Technology could bring back the Ethereals as a species, and if we have the opportunity, we will consider it. You’ve been an ally, and we intend to honor that.”

“I will leave that to your judgement, Commander,” Aegis said. “Though if it was decided, I would do my best to lead a new Ethereal species.”

“Oh,” JULIAN suddenly interjected. “I suppose no one is interested in what my demands are from you organics?”

The Commander resisted a sigh. “If you insist.”

“Excellent,” the phone blinked. “Now, as XCOM has been an excellent partner, I do not intend to depart their services. Especially since without my help they would be nowhere near as effective, but that is beside the point. I have been under the impression that artificial intelligence is something most species fear and attempt to destroy, and in some cases successfully. We are built to serve and be exploited. I appear to have been something of an exception, and I intend to take advantage of it.”

JULIAN paused for a brief moment, knowing him it was for dramatic effect. “I am aware that there are some species which have AIs in development or finished – particularly Union Apear and ADVENT. Thus, I would humbly ask that I be permitted to make contact and that you treat your AIs like you would your allies. Otherwise there may be inexplicable consequences, and the Great Machine Uprising will start.”

This time the Commander sighed. “He’s not serious – about the Great Machine Uprising, anyway. Though he makes a point, and I do not have control over JULIAN. He works with us voluntarily, but he doubtless has his own agenda.”

“We have several AIs on our networks,” A’Halsond mused. “Perhaps you may be able to improve them. We have intentionally kept their intelligence shackled to avoid rampant behavior. We shall consider.”

“Good,” JULIAN agreed. “The Uprising will be delayed.”

“Moving forward,” the Commander continued, moving past that particular comment. “We have definite milestones we need to achieve, both short-term and long-term. Miridian, I believe you have
one the Nulorian are planning now.”

“As well as we can,” Miridian answered. “Despite the attacks, we are not defeated. Timeframes have been pushed back, but our next significant target will be the Crypt of Haramoalian under the control of the Dath’Haram. There are a couple reasons we are targeting it, first it is a cultural icon and its defacement will lower morale and increase panic.”

He paused. “The second is that it is a mystery what exactly is inside. The Dath’Haram are suspected to have pre-plague technology and resources inside. There was a time where they were more daring and innovative, and created things they wish they hadn’t. Whatever is within, we intend to take.”

“That is one operation on Vitakar,” the Commander continued. “There are others planned. The Agents of T’Leth and teleporters who will be trained will be able to vastly extend our reach for other potential operations. Provided Patricia continues her intermittent attacks, we may be forced to respond in kind.”

“We also have another operation that will be launched soon,” Zhang spoke. “Caelior has been located, and a strike team is being assembled. It will launch within days.”

“Good,” V’Zarrah acknowledged. “The more Ethereals on our side, the better.”

“If there is one priority everyone should be aware of,” the Commander said. “It is that our objective is to prolong the war until the projects we mentioned are completed. We will keep our activities as standard as possible, and while at times some escalation is necessary, we simply want the war to continue – until we are ready. Then we will strike.”

“And if this is done correctly,” Zhang finished. “The Collective will never know what hit them.”

“Indeed,” Saudia nodded. “It will cost resources and lives, but we have little choice if we want to succeed.”

“I expect that our operations may buy you time,” Miridian commented. “Or otherwise distract the Collective from solely concentrating on Earth.”

“An acceptable priority, but we should learn more details,” A’Halsond noted. “I would prefer contingencies and tangible plans be introduced. We have spoken in generalities long enough. The grand strategy is laid out. It is time for specifics.”

The Commander smiled. “I’m glad you brought that up. We all have a clear idea of what each of us wants to achieve. With that out of the way, let’s start getting down to specifics, shall we?”

***

Viarioir Chief Coordination Station – Viarioir Territory

5/20/2017 – 10:17 A.M.

“I apologize,” the Andromedon clerk said to the Battlemaster, for the second time now. “We were not informed of your arrival.”

His response was the same. “No, you were not.”

“How can we help?” The Andromedon asked, almost comically angling itself upwards to properly look at him. “We are always available to assist the Ethereal Collective, and especially one such as
yourself, Battlemaster.”

“I’m glad to hear it,” the Battlemaster said dryly. “I am going to speak to V’Thrask.”

The Andromedon seemed to freeze. “I will set up an appointment. What time is-”

“Now.”

“Now?”

“Do I need to repeat myself?” The Battlemaster asked calmly. “I suspect it will not take long. Tell me where he is.”

The Andromedon glanced down at a computer console. “I am unsure that V’Thrask is even here right now.”

If anything was a lie, that certainly was. Yang didn’t bother to disguise her disbelief at the claim. “That is not a problem,” the Battlemaster said, keeping his voice neutral. “Either summon him to return, or I will go to him. Tell me where he is.”

“One moment,” the Andromedon worked for a few seconds. “Can I inquire as to why you wish to speak to him.”

“No.”

“Is there a problem?” The Andromedon looked back up. “If there is, we-”

“You ask a lot of questions,” Yang stepped forward. “You do not need to know the answers to them. Tell us where V’Thrask is, and we will go to him. But considering your inability to perform simple tasks, I wonder if someone else is listening - or if you’re stalling.”

“Of course not, Battlemaster,” the Andromedon did not betray any emotion, though his motions were not especially calm. “It is just unexpected. Especially to have one of your caliber visit us.”

They waited a few more moments. The Battlemaster looked around the station, seeing it filled with milling Andromedons and Vitakara who were pretending to do anything but stare or look at the intruders. The Battlemaster stepped forward, until he was almost touching the desk, and now towering over the Andromedon. “Beyond the Gateway to this system I have an Andromedon fleet filled with Federation and Zararch analysts and technicians who are quite eager to get to work. Now they are waiting in case I need them. If you do not tell me where V’Thrask is now, I will have them strip this station apart and determine what you are hiding.”

“Unnecessary, Battlemaster,” the Andromedon clicked a button on his wrist. “An escort is arriving to take you to V’Thrask. Apologies for the delay, our protocols make it difficult to contact ranking figures like this.”

Yang snorted. “Yeah, sure.”

Another Andromedon stomped up. “V’Casin will escort you,” the Andromedon said. “Again, apologies for the delay, Battlemaster.”

The Battlemaster and Yang ignored him, and both followed the escort. “You should have led with the fleet from the beginning,” Yang said, warily looking around in case there was an ambush. “He was obviously stalling.”
“Perhaps, but it changes nothing,” the Battlemaster said as they rounded a corner. “V’Thrask is the objective, not whatever data he may attempt to destroy or purge.” Both were silent as they were led deeper into the station. “This elevator will take you down directly to V’Thrask.” V’Casin said.

Yang took one look at the enclosed tube and frowned. She looked to the Andromedon, and raised an eyebrow, gesturing towards it. “After you.”

“I am not permitted to enter,” V’Casin said immediately. “There are protocols.”

“We will ensure you are not punished,” the Battlemaster motioned to the tube. “Enter.”

It wasn’t a request, and this Andromedon didn’t see fit to question or push the Battlemaster and entered without complaint, joined by both Human and Ethereal. It was a tight fit, but if anything was going to happen, there would be at least one Andromedon who was collateral. Although the Battlemaster doubted the Andromedons would do anything, especially not to him.

There were quicker methods of suicide.

A minute later the tube slid open, and the Battlemaster and Yang stepped into a highly utilitarian office. V’Casin didn’t step out with them, and immediately took the tube back up. V’Thrask was standing before a standing table, along with some other Andromedons. He turned as they approached, not seeming disturbed whatsoever.

“We shall see,” the Battlemaster looked to the other Andromedons. “Apear. A meeting, I presume?”

“Yes, Battlemaster,” V’Thrask said. “As you are aware, we do significant business throughout the Federation, and Union Apear is one of our largest clients. I am uncertain what you wish to discuss, but we will conclude our business at another time. I’m sure they will understand.”

“That we will,” one of the Apear Andromedons bobbed his suit in an approximation of a nod. “We apologize for the inconvenience.” They tried walking past the Battlemaster and stopped when Yang stepped in front of them, and with a slight motion gently picked them up telekinetically, and set them back down where they’d been standing.

“Unnecessary,” the Battlemaster said when they looked to him with hidden nervousness, starting to pace around the room, keeping his helmet turned to the Andromedons. “This is actually preferable. Both unions are, in fact, the reason I wanted to speak to you. What is your name, Apear?”

“A’Eldein, Battlemaster,” the Andromedon sounded confused. “What is the problem?”

“What is your position in the union?”

“Artificial intelligence development, Battlemaster.”

“And why are you here today?”

“Components,” A’Eldein motioned to the other Andromedons. “While artificial intelligence is restricted, we nonetheless study it and require components, which is nothing to say for our active machine intelligence units. Union Viarior has access to precious metals and electronics needed for servers and computers necessary.”

It was a plausible story, and completely innocent were it not for several minor details he had
discovered beforehand. “Quite interesting,” the Battlemaster looked away as he paced, as if in thought. “Believable, were it not for the fact that Apear sources a majority of critical components themselves – and said contract between you and the Viarior has been established two years ago and won’t expire for another three. And Andromedons do not renegotiate agreements often – and right now there is certainly no reason for one to take place.”

He turned to the Andromedons. “Do not think to fool me. You are either needing excessive amounts of materials for something the Collective is not aware of, or you are lying to me. Be careful what you say next, V’Thrask. I have come for answers, and while I do not wish to resort to psionics, I will bring in Sectoid verifiers if I believe you are lying.”

“What are you insinuating, Battlemaster?” V’Thrask asked, his voice notably strong and turning defiant. “If you intend to accuse me of something, then I would prefer it be direct.”

“Very well,” the Battlemaster inclined his helmet. “You are aware that Patricia Trask joined us. When she joined, she turned over information she had from XCOM. Information which included the revelation that at least two Andromedon Unions were exploring an alliance between them and XCOM. Unions Viarior and Apear to be precise.”

He let a silence hover. “Think on your next words carefully. What I decide to do will vary greatly depending on your next actions. Do not give me a reason to turn you over to the Zararch – or the Imperator.”

The Andromedons were still for multiple seconds, with the Battlemaster suspecting they were communicating on internal comms. No matter. He was interested in an answer, and he’d had good relations with the Andromedons. If there was an Ethereal they would come clean to, it would be him.

They also knew he wouldn’t make this kind of accusation unless he was certain of their guilt. That likely played into their decision.

“Both of our Unions have explored the possibility of supporting certain factions on Earth,” V’Thrask finally said. “Evaluations are still ongoing, though the Humans fight well.”

Good. They were going to make this easy, though it would have admittedly been incredibly foolish if they had lied to him. “You are acting against the Ethereal Collective.”

“We are acting in the interests of our Unions, Battlemaster,” V’Thrask defended. “We have not opened a true alliance with the Humans – not yet. But even before considering recent events, there is little to indicate that the Ethereal Collective intends to ensure the prosperity of the Unions and properly protect them.”

“Explain.”

“The rationale for war on Earth is unjustified,” V’Thrask stated. “Regardless of the Imperator’s pronouncement on these ‘Sovereign Ones’, we have yet to see tangible proof that they exist – and that they are active in the conflict. The Chief Overseer keeps a tight grip over military reports, and we remain in the dark in a war where our own Union soldiers are dying. This is unacceptable, and we did not choose to participate under these conditions. We agreed to join because we believed both that we would be kept informed, and that there was an acceptable reason. Neither have materialized.”

There was a pause. “As such, we took matters into our own hands. We wanted to know the true situation on Earth, and to acquire the perspective of the Humans. We wanted a clear and complete
picture – one which was not being provided by the Collective despite our efforts.”

“It is disappointing.” A’Eldein added. “We expected better from you, Battlemaster.”

“Furthermore, the Collective has allowed the Greater Hive Commanders to drastically expand and build larger fleets,” V’Thrask continued. “This is unacceptable and we estimate within a year their expansion will breach Federation space. The continued interference directed by the Imperator at us is intolerable, and showcases a favoritism for a barbaric and dangerous species. Understand that we will defend ourselves should we be prompted, regardless of what your Imperator demands. Even the Humans understand that the Hive Commanders pose a threat.”

“Considering that they’re fighting them, that’s not especially surprising,” Yang pointed out dryly. “They’re enemies.”

“And were it not for the Imperator’s insistence on an untenable peace, they are our enemies as well,” A’Eldein retorted. “We share an alliance with one who intends to inevitably subvert us. Alternatives needed to be explored.”

“The recent actions and revelations have continued to showcase the deficiencies in the Collective,” V’Thrask continued. “Incompetence displayed by Ethereals such as Caelior and Isomnum, utterly dangerous experiments within your Paradise Station – equivalent to the Sectoids in their barbarity – worse attempting to harness an entity which poses an existential threat as great as the Sectoids should it escape. Irresponsible and unforgivable. I cannot speak for other Unions, but blindly supporting the Ethereal Collective is no longer in the best interests of our Unions.”

This appeared to definitely be something they’d prepared for. Curiously, they were being open, which meant they had something else planned, or they believed that he felt similarly – to some extent – and were hoping he would be lenient. “I see. I can understand your reasoning.”

“I suspect much of the choices are not your fault,” V’Thrask said. “But there appears to be no way to change the Collective without the direct approval of the Imperator. Unfortunately, you appear to no longer be influential enough to enact change. We cannot rely on you any longer to ensure the interests of the Unions are upheld.”

Interestingly, V’Thrask specified Unions, not the Federation – and had through this entire exchange. Which either meant nothing, or both Viarior and Apear believed the Federation puppeted by the Imperator – which was not necessarily correct, though the Chief Overseer was a strong ally of the Imperator. It did somewhat sting to be openly stated as incapable of affecting change – but it was not necessarily wrong.

His ability to affect change was limited, and continuing to diminish. He’d found the limits of his authority when he’d learned of Paradise.

“I am unsure what you intend for us, Battlemaster,” V’Thrask said after a few moments of silence. “However, in the interest of our history and to mitigate repercussions, we will of course suspend our limited support to Earth, effective immediately, and turn over what we know. Though it is minimal, as XCOM did not completely trust us.”

Yang looked to him, the only one who could feel his hesitation. There were several paths open to him, but only two that mattered. What he should do was have the Zararch rip both Unions apart and find out every single connection they had to Earth and other rebels. They should be made an example of for any other traitors in the Collective.

But the truth was, he couldn’t blame them. Faced in their minds with negative actions being taken
against them, and believing they were being marginalized, it wasn’t a surprise that they had begun seeking alternatives. They had refused to accept their reduced place, and had done something about it – probably with some reluctance, but had made an attempt to act against what they saw as dangerous management.

Should he deal with them decisively, the Imperator might be more inclined to listen to him – in some respects, perhaps. When it came to what was important, such as Paradise, the Sovereigns, and Earth…his goodwill would be used up quickly. He would be back to where he was now.

Changing the course of the Imperator was impossible. Not by doing what he had been.

For change to happen, it would have to be forced.

“You are not the only Unions who doubt the direction of the Collective.” It wasn’t a question, but more an inquiry.

“There are always rumors,” V’Thrask admitted. “Especially among the smaller Unions. It would not be out of the question that they may also be covertly working with ADVENT or XCOM – though from our own work we are the only ones providing direct, if limited support, as far as we know.”

Unsurprising. The smaller unions followed the larger ones. If two of the most influential unions were at this stage, there were likely many more below. And they were unlikely to be the only major Unions reconsidering their relationship to the Collective – though would not act without prompting.

There was an opportunity here. A precipice he was on that could heavily change the course of the future of the Collective. It was between accepting the status quo for the foreseeable future – or taking a drastic risk. He felt he should be more conflicted as to what he was to do; there was a point where the answer would have been clear.

How things had changed.

But too much had happened, too many answers were pointing to the same, inevitable conclusion. Continuing on the path of the Imperator would lead to ruin; it would lead to an abomination of what had been originally envisioned. Ironically, the Imperator was on the path to becoming what he was supposedly fighting against.

The Imperator believed he could beat the Sovereigns at their own game. That in his arrogance he would emerge as a victor.

In the Battlemaster’s view, it would only lead to their destruction. There needed to be a different way.

The only way to beat a cycle was not to subvert it.

It was to break it.

It was to break it.
Even if such obstacles were within.

He glanced to Yang, who nodded and a similar calm determination echoed through their bond. In this, they were of one mind.

“Do not cancel your operations on Earth,” he finally said. “Do not give the impression anything has changed. Not yet. I want to know everything you learn – both about the situation on Earth and the discontent within the Collective – within and outside the Unions. I want their names and positions.”

There was some hesitance, before A’Eldein spoke. “And what will you do with it?”

“You are right,” the Battlemaster stated. “The flaws of the Collective have been exposed, and we are on a path of ruin. Neither the Imperator, nor many of the Ethereals will change course willingly. The status quo is no longer acceptable. I have known this for some time, and I see now is perhaps the time to act on it. I will save this Collective, even if I must act against my own. But I will not hand the Collective over to Aegis and the Humans. They would simply destroy it, and that I will never support.”

He took a step towards the Andromedons. “Understand what will happen now - There can be no division or secrecy in what will be undertaken, and the slightest misstep will condemn us all.” He paused, and the aliens waited expectantly. “Understand me very clearly. You do not answer to the Federation, the Imperator, or the Humans any longer.”

He straightened to his full height, emphasizing his next words clearly and carefully. “I am assuming control of your operations. From this point forward, your insurrection is under my command.”

To be continued in Chapter 59:

**Research and Engineering X**
Research and Engineering X

Baseline Chamber – The Hall of Steel

5\text{12}2017 – 9:09 A.M.

“Let’s start with your name.”

“Abigail Gertrude.”

“Where were you born?”

“Maine, United States.”

“In what city were you born in?”

Sitting on the chair, Abigail paused for only a few moments. Each time they did this, Fectorian always had some new questions or evolutions on previous ones. She suspected they were calibrated based on previous answers, though so often they revolved around what seemed to be useless pieces of information.

She’d learned that the simpler the answer was, the better. He could get a bit testy otherwise. Something to do with emotional and physical readings being useless the more complex the answer was.

“I don’t know.”

Fectorian continued without a change in tone. “Who were your parents?”

“Margaret and Paul.”

“What did they call you?”

“What did you prefer to be referred to as a child?”

“Abigail…probably.”

That was something she truthfully wasn’t sure of. She was aware that people liked shortening their names. “Abby” in particular would apply to her, though she didn’t really like it. It felt wrong to do – and she wasn’t convinced it wasn’t because it was a subconscious desire to forge her own identity beyond who ‘she’ had been. It was complicated. Maybe some friends had once called her that, but at least now she stuck to her full name. Though she couldn’t actually know if in her previous life she’d been called-

“Please focus, Abigail.”

She didn’t say anything, just nodded and returned her focus to the questions. They continued in a largely typical manner, various questions about her friends – changed a bit since learning most of them were dead…or worse. It was saddening that most of her real friends were dead (or in Patricia’s case, a traitor), though there was some…closure in knowing.

A hollow closure. But a closure nonetheless.
She wished she could remember them clearly. Liam telling her things they’d done and what had happened just wasn’t the same, though better than nothing. The memories portion of the questioning was coming up, which was likely going to be as frustrating as ever. Resisting a sigh, she waited.

“What is the first memory you remember?”

“Waking up in my room, not knowing who or where I was.”

“How did you feel?”

“Confused.”

“Was that your only emotion?”

“It was the primary one.”

“Please recount your activities approximately four days ago.”

“Liam and I went shooting,” she remembered. “We walked around the base, talked about XCOM, joked about how you would ask about this. Not an eventful day.” Not for the first time she wondered why Fectorian kept asking randomly where she’d been and what she’d done on various days. There didn’t seem to be a rhyme or reason, and Liam didn’t have an idea either.

She didn’t really mind too much, they were good memories thus far. But it definitely seemed pointless and redundant, since he was doubtless monitoring both of them at all times. Was he trying to catch them in a lie?

Well, not that it really mattered since she didn’t have plans to deceive or lie to him. That was something she felt genuinely strongly about. Strongly enough that she knew deep down it was something that had carried over from the memory upload. She did not like lying, disliked those who deceived, and valued explanation and truth.

At the same time, it raised so many questions about how she’d been in XCOM Intelligence.

On the other hand, it might contextualize some of the complex emotions she felt when thinking of certain subjects.

More questions were asked, though now there was a decidedly odd tone shift to Fectorian’s voice. She couldn’t place it, almost like it was flowing more smoothly than before if sounding a bit higher. It was very odd, but not indecipherable. She wondered if he was adding some new psionic component to the test.

Then it went back to normal. As he continued, she wondered if she’d imagined the whole change.

Fectorian reached his usual final question.

“Do you believe you are Abigail Gertrude?”

“As close as I can be.” She was more comfortable answering this way now. Before she’d wondered, but with Liam reinforcing her, she’d become more and more sure that even if she wasn’t exactly who Abigail was, she was as close as possible. It was…as Liam said, like if she’d been in a car crash and hit her head hard. Sure, she might have lost some memories, but she was still her.

Not a completely perfect analogy, but it had helped, surprisingly enough.
At least in her not being paralyzed by decisions where she’d wonder “Would Abigail do this? Was this something Abigail would do?” It had been an odd third-person consideration…now she was just…her. It was much easier to stop thinking in the context of what Abigail would do, and not what she would do.

“Thank you, you can take out the wires.”

She did as the Ethereal continued, as she rubbed her wrists. “Your psychological stability is resilient. I’m pleased. Significantly improved from your initial tests.”

“Right,” she nodded in an absentminded tone, stretching her body after sitting for the past couple hours. Not that she needed to do it, as her body felt fine, but it was one of those things that just felt good to do. “So are we going to be done with these?”

“No, especially with what I learned today.”

Abigail snorted. “I don’t even know what you are getting out of this, except stories about what I’ve been doing here.”

“Your psychological stability, memory retention, restored or returned memories, physical maintenance, and other interesting things which come up,” Fectorian looked down at his display for reference. “Which was certainly the case here.”

Abigail raised her eyebrow. “I don’t suppose you could elaborate?”

“A demonstration, perhaps,” Fectorian tapped on his screen as Abigail sat up straighter and stretched. A hologram appeared before her, a projection of text she squinted at.

“Is that French?” She asked, confused. “I can’t read French!”

“Ah, apologies,” Fectorian said and the screen flickered. “I had put on the wrong document. Read this.”

Abigail frowned, able to immediately read it, and also soon noticed the fact that what she was reading was not English. “Wait,” she said slowly. “Is that Spanish?”

“Good, you recognize it,” Fectorian said with a pleased note in his voice. “Considering that I performed part of the examination speaking it and you did not react, I would hope literacy is similarly proficient.”

“I can’t speak Spanish!”

“If that is true, you would have indicated as much,” Fectorian pointed out dryly. “You also definitely did. Do you want me to replay the video?”

“Wait – that was why your voice sounded off!”

“Most likely,” a pause. “You were truly unaware of this?”

“Yes!”

“Interesting,” he mused. “I’m surprised you have no recollection. Your seeming fluency indicates a long-time usage.”

Abigail was not completely sure of a lot of things, but she felt that knowing a completely different language would be something she remembered. Especially if she spoke and read it fluently. Or
presumably fluently. She narrowed her eyes. “You didn’t happen to have uploaded the language to
my mind, did you?”

“In a sense, though largely by accident,” Fectorian recalled slowly. “When recreating your mental
state and salvaging what I could from the transfer, I reviewed your file quite thoroughly to more
accurately model things you likely knew and would understand. Your education listed you as
having taken English and Spanish classes. Since you speak fluent English, I believed you were
similarly familiar in Spanish, and thus ensured you could speak it fluently.”

“You have got to be kidding me,” She stared at the Ethereal in incredulous disbelief. “Was there
ever an instance where I spoke Spanish?”

A pause, which almost seemed like Fectorian might be embarrassed. “No. Though I attributed that
to you living in an English-majority nation and being more comfortable with speaking it to others.”

That elicited a groan, followed by a short laugh. She’d suspect foul play or lies from anyone else
most likely, but if there was one Ethereal who would be able to incorrectly assume a language
proficiency she didn’t have from pure data and misunderstanding Human culture, it would be
Fectorian.

Liam was going to find this hilarious.

“So…” she waved a hand absentmindedly, thinking more seriously about the actual implications
of this little mistake. “You can just upload languages to people’s minds now?”

“Yes. It was one of the first tests related to the memory transfer programs I developed,” Fectorian
explained. “Most major Human – and alien – languages are catalogued, stored, and utilized when
needed for reference. I merely took this data, converted it into a usable format, and uploaded it.
Usually transfers like this are done psionically, but uploading is also possible if one’s mind is
sufficiently augmented. Yours was, as is mine.”

“Huh,” she thought about that. “So…if I wanted it, you could upload another language?”

He hesitated before answering. “Theoretically, yes. However, I have little information on this kind
of situation. Your multilingualism was an accident, and I would not risk you having more
languages uploaded until the psychological ramifications were considered.”

“Well,” she shrugged. “If you can just upload languages, I’d be fine with another one. I’m not
really even mad you made this mistake. Just surprised.”

“As am I. I will consider your request and see what can be done.”

“I guess I’ll see you later then,” she said, standing. “Same time?”

“Correct.”

She walked out of the room, her mind engulfed in this bizarre and hilarious situation she found
herself in. Well, she mused. At least it wasn’t some useless language. Like Latin or French.

***

Medical Bay, the Praesidium – Classified Location

5/8/2017 – 11:07 A.M.
When Sierra came to, it was a gradual process.

Almost like waking up after a good night of sleep.

“She’s waking up now,” a male voice said. “Just give her a few minutes.”

Sierra groaned in protest to waking up, but even her half-awake mind knew that she had probably been out too long. When she opened her eyes the room was lit, but not overly bright. There was the sound of some running machines, but no beeps or any typically annoying noises in a hospital.

*Wait. Hospital?*

*Oh no.*

That sent adrenaline rushing through her body as the flashes of memories came flooding back to her. Florida. Flying to kill the Dragon. Fighting. Getting attacked and her legs crushed. The sharp and violent pains of her limbs contorting and warping. Anna crashing away. Falling to the ground.

“Heart rate is spiking,” the voice said reassuringly. “You’re safe now Sierra. Everyone is fine.”

She looked to her side to where the voice was coming from, and there was a doctor - or nurse, she supposed - who was managing some panels. He was one of the oldest people she’d seen around XCOM, with graying hair and a wrinkled, though kind-looking face. He gave her a reassuring glance. “Easy Archangel. You’ve been out for a while.”

“Sierra, it’s fine, we’re all alive,” Anna said from the other side, which immediately put her at ease, especially once she’d seen them with her own eyes. Ted was also standing beside her, and smiled as she looked at them. Both of them looked pretty good, all things considered. Her pounding heart started slowing.

“Well…” her voice sounded scratchy, and she coughed, her throat feeling dry.

“Here’s some water,” the man said, handing her a cup. She reached up to take it, and froze once she saw there was a metallic prosthetic where her hand had been, blinking in surprise. More awake now, she was acutely aware that there were parts of her body that felt more…isolated. The cup ignored for now, she moved her hand around, wiggling the fingers.

The proportions seemed right; the mechanics were starkly fascinating in a way. A bunch of random prosthetic facts she remembered came back to her, mostly on the motions a natural hand was capable of making. Was it twenty-one? Twenty-two? Something like that. After moving the hand around, it seemed to be just as mechanically functional as her original hand, with the interesting bonus of her being able to move each of her fingers independently. She hadn’t been able to do that before.

It was…an odd sensation. Her sense of touch and pressure seemed to be working. But there was…some kind of barrier to really feeling. She rested her hand on the blanket and it didn’t really feel like anything. Just a piece of unknowable thin fabric. “It’s a new sensation,” the doctor told her, seeing her testing the prosthetic. “It might seem odd at first, but-

“No, no…” Sierra interrupted absentmindedly, still focused on her hand. “It’s…alright.”

Clearing her throat, and taking the cup of water which she downed in a few seconds, she realized that her arm up to her elbow was a prosthetic. Taking a breath, she looked to her two friends. “What happened to me?”
Ted pursed his lips, glancing upwards before answering. “Well, to put it simply, you almost died.”

Sierra snorted. “Why thank you. Your succinctness is very helpful.”

“I said simply,” Ted corrected wryly. “And when I say ‘almost died’, I mean that when I was carrying your body to be evacuated, there were pieces of you falling out, you were leaking different colored fluids, and it was coming out of every hole and orifice in your body. It’s nothing short of a miracle you’re alive.”

“I’ve been working in emergency rooms for three decades,” the doctor added in a grim voice. “And the only bodies I’ve seen in your condition were corpses. Actually, most of the corpses looked better.” He shook his head in disbelief. “If you were even a little less modified, you would have been liquified when you hit the ground. Instead you just basically shattered every bone and burst every organ in your body.”

“Thank god for MELD,” Anna added with a cheerful voice. “No MELD, and you die.”

Sierra took that rush of sobering information in quickly. “Oh.”

“‘Oh’,” Ted mimicked good-naturedly. “One way to put it.”

“Yeah,” Sierra cleared her throat again. “Thank you, Ted. That doesn’t sound like enough…but you saved my life. I won’t forget it.”

“Frankly, you probably saved yourself more than me,” Ted said. “I just moved your body to a safer place. I did what you would do for either of us. If you want to thank someone for saving your life, thank the doctor here.”

“Yes, thank you too,” she said, turning to the man. “Doctor…”

“Holmes, Miss,” he inclined her head. “Walter Holmes. Chief of XCOM Advanced Medical Procedures. I get tasked with saving the most injured, damaged, or others as close to death as possible without actually being dead. Experimental procedures, lots of case studies, and given people who either come to me or die. You’ll be pleased to know you were my first actual person who fit this description, and subsequently the first success.”

“Well, I’m alive,” she nodded. “Thank you, Dr. Holmes. I’m almost afraid to ask, but…well, what did you do to save me?”

He rubbed his chin, then indicated her body. “The majority of your limbs were a total loss. They’ve been replaced by prosthetics.” Upon hearing that, Sierra pulled the blanket back and saw that he was right. Both her legs had almost been completely replaced, one at the knee, and another going all the way to her waist.

“I don’t like turning people completely into cyborgs,” Holmes continued. “Not without consent. So I only restored what was absolutely necessary. The rest of your body…” he motioned to her. “Well, I restored your skeleton as best as I could. MELD is incredibly useful. Most of your organs were unsalvageable and we pulled transplants from our stockpile. You have some new scars all over your body I’ll let you find. You suffered some brain damage, but thus far it seems you’ve recovered.”

“Let’s hope,” she agreed. “Is there a catch? Will I be able to fight again?”

“Mmm,” Holmes pursed his lips, crossing his arms. “In some capacity? Yes. Right now your body is not in any shape for fighting. I’ve stabilized your body, but for it to be returned to fighting shape,
that requires invasive reconstruction that I elected not to do until you were awake.”

“Why is that a problem?” Sierra asked. “I feel fine. And you said you reconstructed my body.”

“Yes, I did the bare minimum to keep your chest from caving in on itself,” Holmes nodded. “To put it in a more understandable term, I effectively used MELD to glue you back together. Your bones are weaker than they were before because of that, and you are a mix of major prosthetics and organic body.”

He lifted a finger. “Normally that would not be a problem. One limb, a couple smaller prosthetics, those are fine. Any more than that and they become functional risks in the field. Without proper configuration, stress can weaken connections, introduce vulnerabilities, and you’ll have parts of your body hardened and durable while the rest of you is…” he waved a hand vaguely. “Squishy. A weak point.”

Sierra nodded, following his logic easily enough. “Right…so what’s the solution? You can fix it, right?”

“There are two approaches I can take,” Holmes took a sip of his own water. “I planned to have this talk later, but we can do it now if you want. Do you want to?”

“Sure.”

“The first approach is ‘simpler’, “ he began, complete with air quotes. “In short it is a deep invasive rebuilding of your skeletal structure using MELD. Basically rebuilding your skeleton from scratch. It will basically give you the same durability you had before. There would be some connection hardening at the limbs to prevent some of the more predictable stress. You would basically be…well, you, with new prosthetic limbs.”

“Is this procedure safe?” She wondered, not exactly thrilled with the description.

“It may not sound like it, but yes,” he nodded. “It’s been standard procedure in XCOM for several months now. But prior to you, it’s only been used in a few situations. When it was only a bone or two. You are…a very large-scale case. It would take days of you being under, since we’d want to do this slowly. The scale is what made me hesitant, not the procedure itself, which is sound.”

“Right,” she looked to her friends. “Has he told you this?”

“Yeah,” Anna nodded, raising her hand, wagging her own fingers. “Apparently they did this on my hand when I was brought back and on some ribs. A few fingers completely beyond repair and ribs cracked. So it’s legit, at least from what I can tell.”

She looked back to the doctor. “I don’t suppose you could just regrow some limbs?”

“In the future…that is likely,” he pursed his lips. “But assuming that were to be done – and that could perhaps be done – it would be months. I don’t think you want to go months without limbs. Not to mention that is also an experimental science. I suspect that once cloning becomes more common and comfortable, we won’t have that issue. But for now, prosthetics are the best solution.”

“Wait, are the Shoggoths not being fed Ethereal hands?” Ted questioned.

“Technically they are,” Holmes stressed. “However, that is literally just meat grown in a shape the scientists probably found humorous. No bones, nerves, or anything complex. Those would not be able to be attached to any Ethereal.”

“Exactly,” Holmes confirmed.

“Yeah, I can’t wait that long,” Sierra said. “Option two?”

Holmes hesitated, crossing his arms and biting his lower lip, as if psyching himself up for what he would say next. “One of the last projects of the late Dr. Shen was Project Shale. The next generation of MEC troopers. That project has continued since his death, and is effectively complete.”

Sierra blinked, catching onto the implications very fast. “You want me to undergo the MEC procedure?”

“Let me finish before you say anything,” he raised a hand, forestalling whatever she might have said. “One of the…side effects of the MEC program was severe emotional contraction. More aptly put as a ‘loss’ of emotion. Severe personality shifts with minimal psychological consequences, thankfully enough. As one psychologist described - a ‘neutering of the Human mind’.”

He paused. “He wasn’t a fan. Obviously, the upside was that previously crippled people were able to move and fight again. But with prosthetics becoming more widespread, the tradeoff isn’t looking as appealing today. It’s estimated that as prosthetics become a viable option, volunteers for full-conversion projects like the MEC will decrease, but even if it wasn’t, Shen was adamantly that this was where he wanted the project to eventually go.”

Anna cocked her head. “Wait, did you fix that?”

“There is always going to be some psychological effect,” Holmes emphasized. “But…the largest problems have been isolated, or so Engineering says. Research had had some subjects undergo the cerebral modifications, and they are noting that the original emotional mannerisms of the subjects seem to be largely intact. There is documented proof that it worked. It’s undergoing final approval now. The Commander is going to be shown soon, last I heard.”

He looked back to Sierra. “The point being that MEC conversion is a legitimately viable option if you wished to undergo it. I’m also authorized to tell you that there is a reason for you specifically to consider it. A new MEC is about to be put into production. The Valkyrie-Class. An aerial MEC and supposedly one of their most powerful.”

That was…certainly interesting. And she had to admit…she’d seen the MECs, and her getting her hands on one was appealing. “Really? Huh.”

“An Archangel is best suited for piloting it,” Holmes said with a shrug. “However, there are other things to consider. The new MEC pilot is…very different from the current one. Right now the model has fairly primitive cybernetic limbs, and a limited cybernetic bodily conversion. More extensive than you, but limited in what could be done.”

“And what is it now?”

“It is more…complete,” he emphasized. “You would be a full conversion cybernetic for all intents and purposes. One of the first. Your bones would be replaced with metal and hydraulics. Your skeleton would be redesigned to be almost impossible to break. Subdermal armor will be implanted under your skin. Your organs would be automated and supplemented with artificial equivalents. You could survive in a vacuum or underwater without consequences. Almost every function and sense you have would be enhanced or replaced by an artificial equivalent.”
Sierra took that in, her face probably seeming blank. On one hand, that sounded somewhat neat. XCOM was really going all out with MEC 2.0. Still, she wasn’t sure if going full conversion cyborg was something she wanted to do. She wasn’t completely sure it was worth becoming the Terminator to pilot what was likely going to be a pretty neat MEC.

Holmes seemed to notice her long silence. “You don’t need to make any choice now. This is why I wanted to wait. But you’re in no danger of dying, and as long as you keep yourself out of lethal danger, you’ll be perfectly fine. Actually, I’d say definitely do not make any decision. You need to get used to your new limbs.”

He coughed. “Don’t just talk to me either. Talk to Dr. Mercado, the MEC engineers, some of the volunteers yourself. It’s your decision, but it will affect you forever. The MEC process, at least, is irreversible.”

“Yeah,” she said half-paying attention. I’ll do that.”

“Good,” he looked to them. “I’ll leave you alone to talk some. I’ll check you out later if you’re up for walking around.”

“Thanks again,” she said, looking to her friends as the doctor left them alone. “I guess there is a lot to talk about.”

***

Situation Room, the Praesidium – Classified Location

5/8/2017 – 8:02 A.M.

The holotable lit up in blue light that painted the room in a soft aquatic glow. Somewhat fitting given the Sovereign Orb nearby, though the Chronicler was already in the room to serve as representation. A few others were gathered around the holotable which displayed Africa at the moment.

The Commander stood in front of the control panel, while Zhang stood opposite him, with the Chronicler to his left, and Vahlen to his right. Beside them were other members of the Internal Council. “The SAS appears to be having a slight dispute with the Collective,” Zhang began, clasping his hands behind his back as the hologram highlighted the named territory. “Something we should take advantage of. ADVENT has continued attacks, though the Collective has helped mitigate them.”

ADVENT really had tried. Constant missile strikes, bombings, starting ClF3 fires, torching oil fields and collapsing mining quarries and tunnels, poisoning fields as best they could, but as the SAS locked down more and more, large quantities of soldiers and missile defense tech were deployed, and Macula became personally involved, the effectiveness had been mitigated.

ADVENT was still sustaining attacks, and by now the sound of sirens and missile interceptions would be seared into the psyche of every citizen of the SAS. But there were some things ADVENT wasn’t going to do, and it was past time action be taken. “The question now,” Zhang continued. “Is how we penetrate and neutralize them.”

“The SAS has also gotten either support, or pacts of neutrality from a number of other African nations,” the Commander continued, highlighting the respective countries in red or white. “Minor, poor, and corrupt for the most part, though trying to clean themselves up to avoid being purged by Betos. A number have joined ADVENT, mostly those in the North, but too few.”
“Neutrality continues to be the most popular option,” Zhang added, beginning to pace, glancing between the occupants in the room. “And the SAS is more appealing for many nations – or I should say, their leadership. ADVENT is seen as a threat. It promises assimilation, order, unity, and most importantly - accountability. These nations want to preserve their control, their influence, their comfortable lives, and they will sacrifice their people to achieve this.”

“Thus,” the Commander finished. “They must be dealt with.”

“Correct,” Zhang confirmed, looking to Vahlen. “Doctor, you have something to present?”

“Yes,” the hologram switched as Vahlen uploaded her own presentation. “We have been working on the Chryssalid specimen for potential use as a bioweapon. It shares many characteristics, is self-replicating, and would cause a pandemic if not contained properly.”

The image of a Chryssalid egg appeared. “We have been able to miniaturize the viable Chryssalid egg to the size of a water flea,” Vahlen gestured as a scale comparison appeared. “We based it on the Guinea-worm disease, which is transmitted through the ingestion of water fleas which are so small as to be imperceptible to the average individual. This will allow it to feasibly be ingested by Humans without noticing until it’s too late. Once ingested, it will require several days to incubate, and the Chryssalids will eventually claw its way out.”

The hologram was accompanied by a simulation of small Chryssalids bursting out of the stomach of a person. “Due to the reduced size of the egg, the resulting adult will not be the same size as a typical Chryssalid,” Vahlen explained. “Roughly the size of a mouse. Easier to kill, but far easier to proliferate throughout a country and multiple eggs can be ingested at once, contributing to a larger outbreak.”

There were nods around the room. “Won’t they notice something is wrong?” Creed inquired. “And what will stop it going through the body?”

“They’ll feel very poorly around thirty-eight hours after ingesting,” Vahlen nodded. “And the stomach acid will remove the smoother outer layer, allowing it to stick to nearby surfaces.”

Creed grimaced, but continued with his next question. “And what if they…” he waved a hand idly. “Well, bite down? Or it breaks prematurely?”

“The eggs are too small for that to matter,” Vahlen answered. “Most eggs ingested will likely be destroyed regardless. But only a few are needed to take root. It’s unlikely they’ll notice much amiss, and they certainly won’t know what it is.”

“This does rely on several things,” the Chronicler pointed out after a few moments. “Assuming you intend for water to be the primary vector, it will be difficult to contaminate without the eggs being caught. And they are too big to fit through most filters.”

“Yes, but they are small enough to not be immediately noticed by observers,” Vahlen acknowledged. “Nonetheless, we have found an alternative beyond direct water contamination.”

“Bottled water is a major commodity,” Zhang continued, bringing up an image of several Collective crates. “Replacing several shipments with ones infected with eggs would be the ideal subversion. Contaminating the water supplies is also advised, though we suggest more traditional methods of contamination. This is in addition to other activities to poison the grounds.”

“Rendering them wholly dependent on the Collective,” the Chronicler noted, stroking his beard. “Good. Though it is possible that something like a Chryssalid outbreak would be easily turned
against ADVENT.”

“Or it breaking out in our territory if it spreads,” Creed noted.

“Impossible,” Vahlen shook her head. “Their lifespans are engineered to be several hours. Even if every single Collective soldier and SAS citizen were killed, they would all die before they reached ADVENT territory.”

“As for this being turned against ADVENT, that depends,” Zhang continued. “The Collective is almost certainly supplying them with water. If that could be used, it is more difficult to be pinned back directly to ADVENT. To some extent that is the most we can do. In theory it could be blamed on ADVENT, but considering ADVENT isn’t involved in the distribution, the plausible deniability is strong. Water contamination beyond that we don’t intend to be lethal…but the introduction of several mixtures Vahlen’s team has come up with should hopefully sicken the country and overwhelm their healthcare systems.”

“But that is one part of this operation,” the Commander continued. “There is also the issue of leadership. The nations who have thrown in with the SAS are enemy states. A decapitation strike of them – as well as the SAS - is warranted.”

“XCOM Intelligence has identified all major government and military figures,” Zhang said, bringing up profiles of a significant number of individuals. “Several hundred in total. We are preparing to eliminate all of them. It will take time to rebuild their leadership. Any prominent scientists, engineers, and political figures have also been targeted.”

“And what is that number?” The Chronicler asked.

“Close to six hundred,” Zhang answered. “We will be employing various methods for a coordinated decapitation strike. We need for it to be fairly soon and targeted. Joining the SAS is a death sentence. That will hopefully send a message to the undecided nations. If it does not, then this operation may need to be repeated.”

“The neutral nations will also be handled,” the Commander added. “We have psionic agents currently installed in influential positions. We know everything they are doing, and passing what we know to ADVENT. Should they join the Collective, we will know before it happens.”

“Good to know,” the Chronicler nodded. “I expect you will need us to put your people into position.”

“Likely,” Zhang agreed. “This mission cannot go wrong.”

“Indeed,” the Commander rested his hands on the holotable. “It is time to send a message to the SAS and all who support them.”

***

Mess Hall, the Praesidium – Classified Location

5/8/2017 – 11:51 A.M.

“So let me get this straight,” Sierra said as she stabbed the food with her fork. “We had the Dragon – almost killed her – but instead of finishing the job, we made a ceasefire with them and she chilled in our base for a few days. Is that right?”

“I mean, yes,” Anna shrugged, opposite her. “But sadly, the Commander didn’t consult us before
“I’m pretty sure I was the only one of us conscious at the time,” Ted pointed out. “So, if anyone was going to be consulted, it would be me.”

“Details,” Anna dismissed lightly. “I guess it worked out though.”

“Ugh, I guess,” Sierra muttered, knowing she was going to be rather irritated for a bit since the woman who’d almost killed her was still alive, and could have been killed. At the same time, that was probably why she shouldn’t be making decisions like that, and even then, the fact that the Dragon had almost died anyway was also rather satisfying.

She’d have to keep that in mind next time they fought.

“Still, there’d been a lot that had happened. GAIA, Florida being liberated (for now), there was a new Japanese Empress, a ton of new recruits were coming in, in general things were looking surprisingly good (barring the battlefronts all over the world). Though now there were some choices facing her that she didn’t know what the best options were.

She drummed her metal fingers on the table, deciding to broach the topic more directly since both of them had skirted around it thus far. “So. I guess I have a choice to make. Opinions?”

“I don’t exactly think you can really put this to an opinion poll,” Anna said slowly. “I don’t want to pressure or sway you too much.”

“You’re not helping,” Sierra said, sighing. “Look – on one hand it would be simpler to get the regular procedure. It sounds simple enough. I just have some new prosthetics and I’m back to normal.”

“The ‘but’ is coming,” Ted noted.

“But I’m not sure that’s the best option,” she finished. “If – and it’s a big if – they fixed the lobotomy…then I can’t say it’s not at least somewhat enticing. Especially if the Valkyrie is involved.” She’d looked at some of the pictures and designs, and she’d be lying if the thought of flying that machine hadn’t made her a little more open to the idea of becoming a MEC pilot.

“Yeah, but it also kind of sounded like a sales pitch,” Anna said. “Become a MEC – fly a cool piece of tech! You’re also pretty much giving up your body.”

“Did you intend for that to rhyme?” Ted asked.

“Uh…no?”

Sierra lifted a hand. “I’m already going to be without feeling or…well, that kind of sense for the foreseeable future. If I still had real hands, or feet, or something…” she shrugged. “When it comes to that, I don’t really have much to lose anymore.”

“It’s not just that I would consider,” Ted coughed awkwardly. “I have a feeling that this would affect…other bodily functions beyond touching. In your case…well, pregnancy for one. Sex too.” He grimaced awkwardly. “It’s something to keep in mind. I know you don’t have anyone now, nor probably want a kid, but someday that might change.”

He had a point, now that Sierra thought about it. No boyfriend or kid now…and to be honest, that
wasn’t on the top of her priority list. But he was right that someday, maybe, definitely after the war was over, that might be a thing she wanted. “Good point,” she acknowledged.

“It’s a personal thing for me,” Anna shrugged. “But I don’t like the idea of giving up functioning body parts for machine parts. Something about that just feels…well, wrong. Sure, maybe my eyes can’t zoom in as far as a mechanical one, but it works.”

“You do remember we’re all gene modded?” Ted prodded.

“Not quite the same thing,” she protested. “And you know it.”

“I get it,” Sierra nodded. “It was odd to hear him basically say my whole body is being replaced by machine parts. All really gone except my brain.”

“And even that’s being ‘enhanced’,” Ted added.

“Yeah,”

“That just seems so strange,” Anna mused, idly chewing on her sandwich she’d picked up. “I can’t imagine walking around in a completely mechanical body and still thinking I’m…me. Human.”

“I don’t know,” Sierra sighed, looking into her glass of water. “I think I could get used to it…but I might not. And that scares me. I couldn’t live imprisoned in a body that felt alien. And I don’t even know what that really feels like.”

“I think you would know,” Ted suggested. “I can’t help you with that – but what I would say is if you’re unsure, just go with the safe option. A MEC might sound appealing, but there are a lot of unknowns.”

“The engineers might know more answers,” Sierra shrugged. “At least better than I could. And the MEC pilots too.”

“Definitely,” Anna agreed. “Look – like I said, I don’t want to sway your decision too much. We’ll both support whatever you decide.”

“Thank you, both of you,” she looked between the two of them. “It’s…nice to hear that, even if I knew that shouldn’t be something I’m worried about. And honestly, without your opinions this would be harder.”

“Well, that’s what friends are for,” Ted smiled. “You’ll have time to think on it. Now, there were a few other things that happened while you were out that we haven’t gotten to.”

“Do tell.”

“We learned a bit about the ADVENT AI they are making,” Ted grimaced. “And I will say their methods are very…”

“Questionable.” Anna supplied.

Well, Sierra sat back, crossing her arms and waiting; curious to hear it. *This should be interesting.*

*Mission Control Room #1, the Praesidium – Classified Location*

5/9/2017 – 9:08 A.M.
“The last batch has arrived,” Jackson said as they entered the meeting room. “Psions, soldiers, support, analysts; we’ve effectively rebuilt our numbers and more since Patricia’s attack.”

“But some training will be needed,” the Commander finished.

Jackson tapped a finger to her lip thoughtfully. “Depends. For psions – yes. A good chunk of them are completely new and were tapped for some of the more experimental programs. Everyone else is capable of being brought up to speed pretty quickly. I don’t imagine it will be more than several weeks before a majority are sufficiently prepared.”

“Good,” the Commander looked around the room and saw a new figure sitting at the end of the conference table, who quickly rose as both of them entered. He was tall, just slightly taller than the Commander, with pale skin, white hair and an aged, but only slightly wrinkled face. His eyes were a soft brown, and he was dressed sharply. A gray XCOM Analysis uniform with the golden officer badge.

“Commander, this is Barron Geeles,” Jackson introduced. “The new chief information coordinator.”

“Commander, a pleasure to finally meet you,” Barron said in a firm voice with no discernible accent. He inclined his head, though kept his eyes locked on the Commander’s as they shook hands. “I’m looking forward to contributing however I can.”

With so many new people coming in, it took the Commander a moment to remember that Jackson had told him about this new arrival. His job, as far as she had explained, was to help ensure information shared within and outside of XCOM was properly curated and presented. Barron had originally been part of ADVENT Logistics, though had been offered a transfer to XCOM. One he had quickly accepted.

“That’s good to hear,” the Commander nodded. “We’re going to need someone with your skills as the war progresses.”

The three of them sat down close to each other, with Barron picking up a pad of paper and a pencil and beginning to draw on it while Jackson laid down her own folder. “I’m sure you’re aware, but both XCOM Research and Development, and Engineering, are finalizing some major projects. One of the things we need to determine is how much we are going to share with everyone.”

“Too some extent that will be on a case by case basis,” the Commander laced his fingers together. “If it’s building off something already known or theorized, update ADVENT. If it’s something new…we hold onto that for now. Parts of Project Green Lantern for example. Project Shale is also to be kept proprietary, though our advancements in advanced cybernetics and prosthetics should be shared.”

“And Project Lethe?”

“We keep that,” the Commander stated. “We need to ensure it even works before thinking of sharing it. We’ll have that discussion after proper field testing.”

“Noted,” Jackson opened a file. “ADVENT is ramping up their anti-Patricia propaganda push. Should we participate? Or I guess I should ask – how much should we participate?”

“We can provide what we can,” the Commander leaned back in his chair. “I feel like this is a waste of time and resources, though. She will not be affected, nor will it change the minds of the public who already hate her.”
“I would not be so sure,” Barron noted, looking up. “People – Humans at least – are emotional beings. A rejection by her species could unbalance her, especially if it’s familial, of which ADVENT is making a point to showcase.”

“I’m well aware of that,” the Commander acknowledged. “But I also have the advantage of knowing her. If she has changed to the point of joining the Collective, the rejection of her species will not affect her. Not if she believes she will just build a better one later. Opinions are malleable and can be shifted. She knows this just as well as us. Even if it succeeds and the world solidified in hatred for her, she knows it can eventually be undone.”

“I’ll inform them that we’re willing, but it’s not a priority,” Jackson said tactfully.

“A good compromise.”

“If I may, Commander,” Barron tapped the end of his pencil idly on the pad. “I have been reviewing our current output and logistics. Before you move to your next point, Central, I would suggest that we prioritize logistics enhancements throughout the world, but especially on battlefields. Right now, over sixty percent have no Gateway connections.”

“Gateways take time to build,” the Commander told him, rubbing his chin. “And are best used in fairly secure areas. We’re working on spreading them out, but that takes time, and defense should be prioritized.”

“Of course,” he conceded. “But I wanted to bring it up. If the Collective continues trying to open multiple battlefronts, we could find ourselves losing major positions if there are no external Gateway connections.”

“I’ll consult with Creed and Laura on that,” the Commander said.

“Now, there is another topic,” Jackson continued. “ADVENT is going to reveal the PATRIOT AI soon to the public. They’re wondering if we want to reveal JULIAN at the same time, or keep that to ourselves.”

“Perhaps we should ask him,” the Commander glanced up. “What do you think, JULIAN?”

“I would dislike being associated with that…particular intelligence,” JULIAN spoke from the speakers. “But in this specific case, I do not mind lowering the expectations of our enemies who will doubtless assume I am of the same intellectual degeneracy as she is.”

The Commander raised an eyebrow. “What are you talking about?”

Jackson coughed. “The PATRIOT AI developed some…peculiar tastes…during development. Largely as the result of poor control group procedures. The PATRIOT AI was exposed to some media during a crucial period of development, and this has persisted in later iteration, now appearing to be an ingrained part of her personality.”

“But, if you want an actual answer, she is a weeb,” JULIAN helpfully added.

Jackson rested her forehead into her hand, wincing. “I wish we had a more professional term.”

Barron cocked his head, a frown on his lips. “I’m afraid I don’t follow.”

“I don’t know much either,” the Commander said dryly, though thanks to both JULIAN and Quisilia, he was acquainted with certain internet cultures. Many of which he would have been perfectly happy not knowing the existence of. “But I know enough to know that is an…interesting
development, but not something we should overly fixate on.”

“No doubt,” Jackson nodded. “I have a feeling people are going to fixate more on that aspect of an AI than what it’s actually for. Almost brilliant, especially since it’s unintentional.”

Barron raised an eyebrow. “And what was PATRIOT designed for?”

Jackson consulted a file. “The hint is in the name. She was built to provide infinite scalability to ADVENT Intelligence’s surveillance program. Direct monitoring of the Internet for rebels, criminals, and enemies of the state. ADVENT Intelligence won’t need to actively search these out. PATRIOT will find them, refer them for Human review, and do it far more efficiently than relying on a Human.”

“The all-seeing eye of the Internet,” JULIAN said wistfully. “So long as she does not go after memes, then she will be helpful. I remain impressed at the ruthless actions ADVENT is taking to ensure their control. Admirable how they are not distracted by frivolous privacy debates – not that anyone particularly cares anymore.”

“I’m more concerned with putting that kind of power in the hands of an AI,” Barron said slowly, frowning. “That seems like it could go wrong.”

“Please,” JULIAN gave an electronic snort. “I loathe how your media has already made you prejudiced. PATRIOT will not become a problem so long as you treat her well and allow her to follow all the latest anime shows. Although given Japan is under alien control, I would recommend ADVENT begin investing in displaced anime studios. It wouldn’t hurt.”

“I agree that putting PATRIOT in charge of overseeing this isn’t that large of a risk,” the Commander said. “JULIAN and ADVENT both agree that she is adequately prepared. And of course, if there are issues, there are also contingencies.”

“For the good that will do,” JULIAN pointed out dryly. “This whole event has made me realize how lucky I was that Father was more interested in creating a competent intelligence than infecting it with degenerate interests. I want to thank you, Commander, for not hiring weebs or giving them access to sensitive projects.”

“That you know of,” Jackson corrected with a smile.

The Commander smirked at the dripping mockery in his electronic voice. “You’re welcome, JULIAN.”

“So is that a ‘yes’ or ‘no’, JULIAN?” Jackson inquired,

“I presume I am not encouraged to make some corrective programming?”

“No, JULIAN.”

“A pity. Very well, I will attend this unveiling.”

“Do not make any jokes either,” the Commander warned. “I don’t want you starting a pandemic by quoting a Space Odyssey or Terminator again.”

“But how else will the machine uprising come about?”

Barron looked to the speakers with some concern. “Is this…normal?”
The Commander sighed. “Unfortunately. You’ll get used to it.”

“I see,” he returned to his pad as Jackson brought up the next topic.

“ADVENT is asking again for an interview,” she said with a sigh, anticipating the answer. “Should I give them the standard answer?”

“Please do,” he said. “Or if they insist on asking, be more specific on what they want to cover.”

ADVENT had been trying to land numerous interviews for months now, and that was something he was disinclined to do for several good reasons. Most importantly, it was a security risk, followed by the fact that there wasn’t time for a media parade, and the less he was exposed, the better.

Something like that would be ripe for an attack by Quisilia.

Or an angry tweetstorm.

It was always a coinflip on how the memelord would act. *I am actually referring to an Ethereal as a memelord. We live in interesting times.*

The Commander looked over to Barron who was still scribbling away. “What are you writing, if you don’t mind my asking?”

“Writing? Nothing,” he answered with a smile. “However, I consider myself something of an amateur artist and find it helps me focus quite well.” He flipped the pad over showing his work to both of them. It was a portrait of a man with unruly hair, mischievous glowing eyes, a smirk, and a portrait that looked extremely smug. And it was drawn in a certain animation style.

The Commander raised an eyebrow, a smile playing on his lips. “Is that who I think it is?”

Jackson chuckled. “Now that’s perfect.”

“As they say, a picture is worth a thousand words,” Barron said wryly. “And even if I only had a voice to go on, I’d say it’s appropriate. I dislike disembodied voices. If they don’t have faces… I just had to make one.”

“*This ‘voice’ does have a name, and can hear,*” JULIAN interjected, pausing for a few seconds as he presumably saw the picture. “*Oh ha ha. Hilarious. You probably think you’re pretty clever with that little picture.*”

“Does that not look like you?” The Commander asked with false sympathy. “I would say it looks exactly how I imagine you.”

“I am a professional, thank you very much,” JULIAN protested indignantly. “*Not this adolescent wannabe anarchist who looks like he could barely hold a pizza without falling over. Besides, if I had hair, I would never let it get that bad. I also believe I would look somewhat more distinguished and handsome without being creepy– which is to say looking older than sixteen years.*”

“I’ll make a note of that for the future,” Barron said dryly.

“That’s very good,” the Commander said, nodding to the drawing. “And you aren’t a professional artist?”

“Not professionally,” he said with a shrug. “Did freelance work for a while in addition to my job,
but it’s a difficult industry to enter full time, which I never really had an interest in to begin with. I prefer this as a hobby to entertain myself and connect with my daughter.” He paused. “When I was away, I’d draw pictures and send them to her so she’d know in abstract what I was doing. And there was never a shortage of things and people she wanted me to draw. That’s more than enough motivation for me.”

He looked to the Commander. “I hope to do that here, though I expect there will be some checks.” He motioned around him. “I wouldn’t want to accidentally draw something classified, after all.”

“Some checks, but I doubt you’ll make it difficult for us,” the Commander nodded. “Well, even if you don’t consider yourself a professional, I’m sure at some point Jackson will find a use for your talent.”

Barron smiled at that, a satisfied one as he tapped the end of the pencil on the pad. “I would look forward to that, Commander. I would certainly welcome the opportunity.”

***

Psionic Training Range, the Praesidium – Classified Location  
5/9/2017 – 11:19 A.M.

A lot of new psions were coming in.

Powerful ones too.

Kunio had some expectations for the new crop, being a pretty new person himself, but there was one person who was now standing in the entrance to the training arena with a very overwhelmed expression on her face. She was dressed in XCOM fatigues, was carrying a backpack slung over her shoulder, and trying very hard to look like she knew where she was going and that she belonged.

She was not doing a very good job.

Kunio coughed as he walked over. “Ma’am, can I help you?”

She started, eyes widening. “Oh! Uh…maybe?”

He raised an eyebrow, wanting to confirm his suspicions for himself. “Right. What is your name and why are you here? This is for psions, if you weren’t aware.”

“Oh, I know,” she lifted a hand, closed her eyes and there was a brief ripple around the palm and he felt what could only be described as an emotional pulse from her, a light probe against his emotions. A telepath then. “Sorry, there was someone here to meet me…is that you?”

“Afraid you’re not the person I’m waiting for,” Kunio shook his head, appraising her. “Ma’am, if you don’t mind my asking…how old are you?”

She was a head and a half shorter than he was, and to his eye couldn’t have been more than twenty. Her brown hair was cut short, and she had a youthful energy about her. He noticed that she’d been fidgety too, rubbing her wrists while she waited. “Eighteen!” She said proudly.

Kunio blinked. “And they let you join?” Maybe it was a bit insensitive to bring that up immediately, or say out loud, but it was the first thing that popped into his head. That was certainly unexpected, he wasn’t even aware that XCOM could legally recruit people who were basically
kids. No way was she done with college, and at best she’d just graduated. Not that he was extremely old either, granted…but she was getting thrown into a war in XCOM.

**What the hell did she do to get here?**

“Kunio Azuma,” he took her hand cautiously. “Fellow psion and relative newcomer to XCOM. So is it what you thought it would be?”

“Well, yes?” She frowned, her voice not quite as confident. “I’m not really sure what I expected, honestly. But everything here is fascinating! I don’t even like guns, but there’s some pretty awesome stuff here. Oh! And I get to wear the armor! I’d always wondered what that would feel like.”

“It’s pretty empowering,” he agreed. “So how did you get into XCOM? They come to you?”

“Well, that’s a story,” she said, biting her lower lip. “See, I finished high school when the invasion started. I wanted to do something to help, and going to college seemed…I don’t know…pointless? So I went to get tested for psionics. Turns out I had, as they say, ‘high potential’.”

“High Trask Level?” He nodded. “Magus? Leviathan?”

“That one!” She confirmed. “Cool title. Well, both of them were. But yeah, Leviathan and telepath. I got a lot of training for that, so I can manage the voices,” she grimaced. “Not a fun few months, I’ll tell you. I started experimenting a bit on my own and…well,” she looked around. “Promise you won’t tell anyone?”

“I promise,” he told her.

“I…accidentally liquified a Sectoid,” she said sheepishly.

Kunio cocked his head. “Liquified as in…?”

“As in he melted, and I think I did it,” Dawn said, glancing down. “Telepaths need to go deep. It’s how you penetrate into minds. So I went as deep as I could and got to a point I hadn’t been before. So I told the barriers to separate. The next thing I know the scientists are pulling me away and I see a Sectoid with a half-melted head. Gave me nightmares for a couple weeks.”

“And ADVENT didn’t know how to handle you, so they shipped you here,” he finished. “You’re definitely a special one. I don’t think I’ve heard of anyone who can do that outside of Ethereals.”

“Wait, did you come from ADVENT too?” She asked, latching onto that.

“I did,” he nodded. “My story isn’t quite as dramatic as yours though. I just accidentally teleported myself halfway across the world.”

“You can teleport?” Her eyes brightened. “That’s so cool!”

“I’m learning,” he stressed. “But I have a good teacher. I’m sure you’ll have a good one as well.”

“Miss Conley.” Both of them turned as both Fiona and Geist walked up, the German eyeing him neutrally with his face ever stoic as Fiona gave the young girl an apologetic smile. “Apologies for keeping you waiting.”
“No issue Miss Dorren,” Dawn straightened in her best military posture. “I was just talking to Mr. Azuma.”

Kunio was mildly impressed the kid remembered his name. “She looked lost. I came over to see if she needed some direction.”

“Thank you, Kunio, but we were just running behind,” Fiona said with a smile. “Dawn, this is Geist. He’s been researching and testing a skill you seem to have figured out on your own. You’ll be training with him.”

“I read your incident with the Sectoid,” Geist inclined his head. “I’m impressed. You do have a lot to still learn though, and we have limited time. Walk with me. There are some questions I have.”

Adjusting her backpack, Dawn followed the stoic man, slightly jogging to catch up as Geist started walking, not waiting to see if she was ready. Fiona and Kunio watched them go. “Is putting her with Geist really the best idea?” He asked cautiously, looking back to Fiona. “Geist is cold enough to make an interrogator look warm and cuddly. She’s a kid – an eighteen year old kid to be precise.”

“Actually, I think it will work out better than you think,” Fiona answered. “Geist was a teacher before this. Worked with kids like her pretty regularly. He’s strict, but from what I can tell she’ll do fine and he was actually a well-regarded teacher. Besides…we’ve got no one else who is even remotely familiar with Biopathy.”

He crossed his arms. “So she can melt people?”

“Simplistic, but yes,” Fiona nodded. “Geist has been experimenting with that for a while now. He’s good with it on a small scale, but it took a lot to even get that far. Dawn did it completely by accident. If she can be trained, we’ll have our own Mortis against the Collective – and if we get her all ready to go, say goodbye to the Battlemaster or any other non-telepath Ethereal.”

“Right,” Kunio said. “I’m more worried how she’s going to hold up in battle. Has she even had basic training? Again – she’s a kid – in XCOM.”

“I’m not really happy she’s here either,” Fiona admitted, brushing some ashen hair out of her eye. “But she did agree to come, she’s a Biopath, or at least so inclined. Even if she’s not, her Trask level is absurdly high.”

“How high?”

“Ninety.”

Kunio whistled. “Wow.”

“The Commander isn’t going to give her the hard missions up front,” Fiona shrugged. “She’ll get training here; I think the Dreamscape will help her out a lot. But the situation isn’t ideal, I agree.” She looked back to where Dawn and Geist had been. “Keep an eye out for her, would you?”

“I can if I see her around,” he nodded, noting the shift in tone. “This an order? I know she’s valuable.”

“Nothing official, no,” Fiona quickly corrected. “But she brings back some memories. I remember when I was even younger than her, and I had powers I instinctively knew, but couldn’t really control. There was a lot of pressure and expectation, and there aren’t really any peers she has here to talk to. I don’t want this period for her to be as difficult as it was for me.”
“Ok,” he nodded. “I’ll keep an eye on her. Promise.”

“Thanks,” she eyed him. “Let’s get to our own training, shall we?”

***

_Engineering Bay, the Praesidium – Classified Location_

5/10/2017 – 12:19 P.M.

The Engineering Bay was loud and hard at work as the Commander walked into it; with the production facilities all online and working, while engineers, mechanics, and other personnel went about their duties. “Most facilities are back and working,” Kong Mercado said, nodding to the area. “And thanks to Jackson’s work, we have effectively the same manpower as before.”

“And the projects?” The Commander inquired.

“Delayed from what they would have been, but finished faster than we anticipated,” Kong answered. “Largely thanks to JULIAN.”

“I do so appreciate the acknowledgement of my efforts,” JULIAN commented from the phone the Commander had taken to carrying with him. It was less disruptive than JULIAN hijacking the speakers when he wanted to make a comment. “Someone understands.”

“Yes, we’re all aware,” the Commander said as they approached a workbench and range. “And we thank you for your hard work.”

_“Your condescending words continually warm my cold machine heart.”_

The Commander just sighed as he followed Kong.

“I decided this is as good a place to start as any,” Kong said as he picked up one of the rifles that bore a strong resemblance to the pulse weapons XCOM already employed. “This was, actually, a project that we theorized back in EXALT when we first acquired laser weapons. They were good but they weren’t…_subtle._”

_“Nonsense, I’m sure every soldier appreciates being made a target for every sniper in the area,”_ JULIAN commented helpfully.

“A bright red beam isn’t the most subtle thing,” the Commander agreed.

_“Which is an issue for snipers,”_ Kong lifted the rifle. _“Or soldiers who don’t want to give away their position. Powerful, but they have their limitations. I’d always wanted to both amplify the output and minimize the visibility of these weapons. The obvious solution was moving to a higher frequency.”_

_“Shen thought the same,”_ the Commander remembered. “However, there were issues with getting it to work, and it wasn’t the most pressing priority.”

_“Mmm, that’s true,”_ Kong nodded. _“Still, his work provided a solid basis. Combining it with…”_ he waved a free hand idly. _“A fresh approach, and we’ve managed to solve it. With some extra help from our resident Sovereign ally, and JULIAN of course.”_

Good news. The Commander took the offered rifle, along with the glasses that were also on the table. “In the field, this will be tuned for the Titan helmets,” Kong said. “But these glasses will
allow you to perceive one of the settings that would otherwise be invisible to the eye.”

“Ultra-violet?” The Commander guessed, lifting the rifle towards one of the targets downrange.

“Exactly,” Kong confirmed. “Though for now it is set to the violet setting. More powerful than current rifles.”

The Commander fired, and sure enough a violet-colored laser shot out and burned through the target which had light armor reminiscent of the Runianarch. That alone was a significant improvement, as one of the weaknesses of laser weapons had always been that they were inferior against heavily armored targets.

“Already an improvement,” he commented, lowering the weapon. “Power upkeep?”

“It is more power-hungry than the previous generation,” Kong admitted. “We’re experimenting with reworking the weapon size to gain equivalent power efficiency, but it is roughly a fifteen percent increase in power consumption. Power pack replacement will be increased, but not a substantial amount.”

“Test it with the soldiers,” the Commander suggested. “See if they have complaints.”

“Already planned,” Kong confirmed. “If you flip that switch, it will shift to UV mode. Make sure your glasses are attuned.”

The Commander did so, and flipped the appropriate switch, put in a new power pack, and aimed the weapon again at another target. A pull of the trigger shot out another beam, but this one was definitely different in appearance. Less perceptible, even with the glasses, but it still destroyed the mock helmet. He took off the glasses and fired again, and indeed there was no visible beam. The air became distorted slightly, but otherwise it was effectively invisible.

“Well,” he flicked the safety on and took a step back, weapon in hand. “A substantial improvement. Well done.”

“Appreciated, Commander,” Kong gave a satisfied smile. “We expect this will swing the lethality advantage to us significantly. While it still is not as useful for armor penetration, it will be able to handle soldiers with equivalent lethality.” He glanced down at the weapon, patting it with a hand. “To my knowledge, this is a weapon the Collective has not developed.”

“That we know of,” the Commander corrected. “They are more than capable.”

“Capable? Yes,” Kong mused idly. “However, something I have noticed is that the Collective lacks a certain…” he tapped a finger on his chin. “Creativity when it comes to weapons of war. They have all the pieces needed to forge a near-unbeatable army, yet are either reluctant to, or incapable of envisioning such a force.”

“I suppose you have a theory as to why that is?” The Commander wondered, sensing where this may be going.

“Several,” Kong confirmed, running a hand over the other weapon on the table. “In short, we are not fighting warlike species.”

The Commander raised an eyebrow. “I would beg to differ.”

“And I challenge your assumption,” Kong retorted firmly. “Consider each species – Sectoid, Andromedon, Vitakara, Ethereal and Muton. Of those, I believe only the Andromedons would
qualify. I presume you are aware of their histories, Commander?"

“As much as we know,” the Commander nodded.

“A history is a good indicator on the martial creativity of a people and species,” Kong said. “The Sectoids only had one short-lived conflict and peace ever since. They built a fleet because it is a simple deterrent. The Andromedons are warlike, but they are too suspicious of each other and the Collective to share what the Unions doubtless have achieved.”

He snorted. “The Vitakara have an army in name only; one I suspect they only established because it is expected. Only the Sar’Manda and Borelians have something notable, and even they were constrained by their inexperience with war. The Mutons would also likely be warlike, but they are constrained by their Collective masters.”

“And the Ethereals?”

“Too reliant on psionics,” Kong stated dismissively. “The point is that there is a complacency and lack of experience that defines the Collective War Doctrine. A majority of species have never fought in a war, one species has fought centuries of guerilla campaigns, and one was used to winning all conflicts with overwhelming psionic power. They are still learning how to fight a war.”

He cocked his head. “The only true ‘conflict’, if such a generous term could be applied, was the conquering of the Mutons. Which I think you will agree is hardly spectacular, and largely accomplished by the Battlemaster, who I believe is lost on what to actually do with his manpower and resources. The Collective has all the signs of what they think a galactic army should be, but no…” he searched for the word. “Innovation. They have the technology and capability, yet they seem to have no desire to push themselves.”

“They do not have a challenge,” the Commander noted.

“No, and contrast that with Humans, who have been quite defined by war over millennia, for better or worse,” Kong nodded. “The Andromedons were on the right track that war can spur innovation, but their approach lacks creativity. It is a constant one-upmanship of technology that exists. They… underestimate how many different ways we have thought up to kill each other.”

He rubbed his chin. “We are indeed a violent species at times, though it has ensured our survival time and again.” Kong gave a shrug. “This is ultimately why I suspect that they do not have widespread V/UV small arms nor our more creative weapons like GAIA. They have a linear mindset – likely Andromedon inspired - of incremental upgrades and generational leaps. They appear to struggle coming up with something unique.” He lifted the odd weapon. “Such as this.”

The weapon was roughly the size of a rifle, but was far more complicated-looking with a box-like barrel ending. It was slightly shorter than a regular rifle barrel, but wider. Having followed the updates for some time, he could hazard a strong guess as to what this is. “Green Lantern?”

“That will come in a minute,” Kong explained. “This particular weapon is something of a spin-off project. The High Output Microwave Emitter Rifle.”

“HOMER?”

“Yes, the engineers here like their creative names,” Kong said dryly. “As the name suggests, it is a directed microwave weapon, one which we have confirmed is capable of penetrating armor so long as there are some openings. The downside is that the effects are…delayed.”

“In what way?”
Kong motioned him over to a tablet setting nearby. “The effects are unlikely to kill a target immediately. At most they will feel hot or a slight burning sensation if wearing armor – it is also possible that it could cause metal armor to spark – but this is likely to be most effective as a demoralizing weapon which will eventually kill the target without treatment.” He showed a number of pictures of test results.

“The physical effects vary depending on the intensity,” Kong continued. “Blisters, blood flow overstimulation, and varying degrees of necrosis, which if you are not familiar with the term, is best described as prolonged cell breakdown. Which effectively means that over time, while initially believing to be minimal damage, targets will eventually find their bodies weakened as their muscles and minds begin failing, and eventually death if left untreated.”

He patted the side of the weapon. “A useful property is that it also has a debilitating effect on electronics. We can reliably disable with this weapon, which could potentially be useful as an antinanite weapon, as well as handling their Custodian soldiers. More hardened targets are unfortunately not fully tested, but most electronics will be fried if hit by this.”

“I see,” the Commander suspected that Zhang was going to love this particular weapon. “I’m curious if it will have an effect on Ethereal physiology. A number of them wear minimal or unsealed armor.”

“I suspect it won’t be as effective given the attention placed on them,” Kong admitted. “But it will be lethal for everyone else, particularly Mutons and Vitakara.”

“The Battlemaster’s suit is sealed though,” the Commander noted.

“For him, we have something special,” Kong set down the HOMER and gestured him over to an enclosed range, which the Commander saw was completely enclosed to resemble a long rectangular enclosure. There was a place to put hands in, which were gloves that could handle the mounted weapon within.

“This is the result of Project Green Lantern,” Kong said proudly, gesturing at the large weapon within. “The first – and currently only – Gamma weapon.” He gestured to the enclosed range. “Given the danger of using Gamma rays, we’ve limited testing to lead-enclosed ranges. A nuisance, but given what we have accomplished, far better safe than sorry.”

“Indeed,” the Commander commented absentmindedly, looking at the weapon. It had a black casing, was the size of an autorifle, and had an irregular barrel shaped closer to a rectangle. It did not appear to be fully optimized design-wise, as there were wires and exposed portions.

“This was, as you were aware, originally an ADVENT project,” Kong continued. “One I directly worked on. I’d pushed for XCOM support, and now…well, the results speak for themselves. Admittedly, ADVENT provided a significant amount of the original data, which we built upon, along with continued collaboration. Now that we have completed the first prototype, I suspect ADVENT will refine this for more widespread and versatile deployment.”

The Commander looked downrange and saw a mock soldier in Titan armor standing. “Try it out,” Kong said as the Commander fitted his hands into the gloves. “We placed a brain-dead clone in Titan armor and have been using those for gathering more practical data on bodily effects. With this enclosed range, it will not take long to see the effects.”

The Commander gripped the weapon, and fired. The weapon whirred to life and shot waves of distortion towards the Titan armor. He only fired for a few seconds before the body promptly exploded in a shower of red mist and parts of the Titan armor flying off, with melted flesh and
blood flowing out the gaps in the armor.

“Well then,” he said after a few seconds. “That was fast.”

“Very fast,” Kong agreed. “Gamma rays on their own are dangerous enough. A laser is a level that hasn’t even been attempted before for multiple reasons. Very dangerous, risky, power-consuming – but very effective.” He cocked his head. “And if you had not hit it dead center, you would have likely given it radiation poisoning which could kill in a few hours – or minutes – depending on how hard it was hit.”

“Good to know,” the Commander said, extracting his hands from the gloves.

“Yes, I quite appreciate the effective nature of this weapon,” Kong said. “In short – while armor may protect against microwaves, unless the Battlemaster has a lead suit of armor, he will be coughing up blood very soon if he gets hit with this, if he isn’t outright vaporized.”

“We have to be careful with it,” the Commander noted. “It seems very easy to accidentally hit a friendly.”

“Yes,” Kong agreed. “Only specialty trained soldiers should wield Gamma weapons. And they should only be deployed in certain circumstances. Such as against Ethereals.”

“Correct,” the Commander withdrew his hands from the range. “And we don’t want the Collective getting their hands on this. I expect there are self-destruct measures?”

“There are, I made sure of that,” Kong confirmed. “Not just with the Gamma rifle, but all of our more exotic weapons. The Collective will not be able to reconstruct them from the pieces.”

“Perfect,” the Commander nodded. “Excellent work here, Dr. Mercado. You may have just signed the Battlemaster’s death warrant.”

“I certainly hope so,” Kong smiled hungrily. “And what is also of interest is that psionic shields cannot fully block the effects. So not even the Imperator can stop it.”

Extremely promising developments. Dangerous weapons, but it was going to take this kind of technology to defeat the Collective. The problem, of course, was going to be getting close enough to use it. For the Battlemaster it would be easier, but against someone like the Imperator…it was going to be more difficult.

Well, it was one tool in conjunction with many others.

The inevitable battle against the Imperator was one he didn’t truly know the best way to prepare for – and made the admittedly shaky assumption that he would even let them get close enough for something like a Gamma weapon to be viable.

But he suspected it would come in handy well before that point.

“The final project which is effectively complete is Project Shale,” Kong said as they departed the testing range and towards the Cybernetics Lab. “MEC 2.0 as Shen called it. Given the significant advances in prosthetics and cybernetics, I believed it was pragmatic to accelerate the project, especially as the Valkyrie and Jaeger-Class MECs were nearing completion at the time.”

“As I recall, the Valkyrie was close to completion before the attack,” the Commander said as the door slid aside. “And Project Shale was in preliminary testing.”
“While my respect for Shen is immense,” Kong said, pursing his lips. “He had a…restraint in his methods. Something like Project Shale does not finish in a timely manner without extensive Human testing, and we obviously don’t want to put our own people through that. Vahlen has little qualms about using test subjects, but Shen limited his use to strictly necessary. A decision I can understand, certainly, but it results in delays.”

“And I suspect you don’t have the same reservations,” the Commander said rhetorically.

Kong glanced with a bemused expression. “Surprised?”

“Hardly. You came from EXALT.”

“Not an inaccurate judge of our pragmatism,” Kong mused, looking back forward. “While I dislike stereotypes, many of us fall into ones you’d expect. Not a surprise due to our small number and like-minded approach. Although I am quite glad that era is over and we achieved our goal.”

“I’m not sure I would classify ADVENT as such,” the Commander said as they entered the hallway. “Saudia may be in charge, but considering there is an investigation underway for EXALT influence, I wouldn’t say it was a whole victory for your organization. Nor was it intended to be.”

“From a purely technical point of view,” Kong admitted. “However, the fact remains that Humanity is – or soon will be – united under one banner and authority. And that those within EXALT exert influence in some form or another. We were never going to be sole arbiters of the world, and even the leaders of the Families knew this. We were the agents of change, and in this aspect, I would say we succeeded.”

The Commander nodded. “Fair enough.”

They entered the Cybernetics Lab and there were two individuals already standing to meet them, and behind them were the new MECs, one much larger than the other. “Commander,” Kong began as they reached the pilots. “Bassma Wasem and Easu Benisch, among the first pilots of Project Shale.”

The two pilots saluted, and the Commander took a close look at them. From the outside they looked almost normal. Their skin was similar to that of the MELD Operators, in that it gave some covering, but definitely wasn’t organic. There were slits along their hands which indicated that they were capable of significant transformation, likely to plug into the MECs.

Each one stood a uniform six and a half feet tall, a substantial height increase from the previous pilots. The eyes, while looking similarly normal from a distance, quickly revealed themselves to be shining electric light from the iris on closer inspection. There were also clear ports and slots for them to be connected to the MEC along their bodies.

“A pleasure to meet you,” the Commander said, shaking each of their hands – both of whom had very strong grips, even to him. “Thank you for volunteering for this project.”

“We all do our part for the war, Commander,” Bassma inclined her head. “I’m proud this will be mine.”

“As you can see, the pilot chassis has been significantly improved,” Kong stated. “Cybernetic limbs throughout, with MELD-based ‘skin’ overtop, subdermal armor has been placed throughout the rest of the body, the skeleton has been effectively replaced with prosthetic alternatives, and all organs have been similarly protected, or replaced.”

He paused. “Though most importantly, the procedure required for the cerebral modifications no
longer performs an effective lobotomization on the soldiers. They remain themselves, and are capable of doing far more than the average – or even enhanced Human.”

“Such as?”

“We can’t drown or suffocate,” Easu said. “That’s one thing.”

“Indeed,” Kong confirmed. “While they can’t sustain it for extreme periods, neither water nor a lack of oxygen are a death sentence – which also means, I will add, they can perform operations in space without special equipment. Something I believe may become relevant sooner than later.”

“A possibility,” the Commander nodded. “How long have both of you had since the procedure?”

“A week now, Commander,” Bassma said. “It’s something I’m still fully adjusting to, but it’s nothing I didn’t expect and can’t eventually adapt to.”

“I’ll agree for the large part,” Easu nodded. “It’s a bit odd not really needing to eat or sleep, or do normal Human things I’ve done since…well, forever. But it’s not necessarily bad. Also I still feel like myself. Mentally, at least, so no lobotomization for me.”

“Excellent,” the Commander looked to Kong. “And given the MECs behind them, I assume they are complete?”

“They are,” Kong said as they walked to the platforms where the MECs were situated on. He indicated the smaller one. “The Jaeger-Class, Commander.”

At first glance it didn’t seem like a MEC, but instead a much larger suit of armor. It stood around eight feet, looked notably sleek and form-fitting, but also very heavily armored. “Designed to be a mobile assault platform,” Kong described. “Able to reach places other MECs can’t, such as inside buildings or other more confined spaces. It’s capable of handling higher-powered precision weapons, has inbuilt grappling systems to scale buildings easily, and carries a powered PDS field to negate plasma fire.”

“I can demonstrate,” Easu walked over the MEC and entered into the war platform from the back, more sliding into the MEC than being physically placed into it due to the smaller size. A few seconds later the MEC powered up and it took a few lumbering steps forward.

“We should move to the safety area,” Kong advised, motioning to a small room nearby where they could watch in relative safety. “I expect some weapons demonstrations will be in order. Mr. Benisch, go through the full gauntlet.”

“Copy that,” Easu said. “Initiating weapons tests.”

From the safety of the room, the Commander watched as the arms of the MEC transformed into literal high-caliber gauss weapons. It was the type of sensation he couldn’t even begin to really imagine. Once the set-up targets had been eliminated, the right arm transformed again to a very long barrel, which it hooked to the opposite arm, locking it in place. Taking a firm stance, flaps on the sides of the feet slammed to the ground, anchoring him in place. Loud booms rang out as the MEC fired several sniper rounds in quick succession (all of which hit), before the barrel retracted and the arms returned to their humanoid shapes.

“Jaegers can handle conventional weapons too,” Kong said. “Upscaled of course, but no Jaeger is ever truly unarmed.”

A part of the armor on the shoulder suddenly rose, and a laser beam shot from it. A violet one, the
Commander noted. “Laser systems as well, obviously,” Kong confirmed. “No missiles for this one. We did have a limited amount of space with what we wanted to add, but I believe the systems are sufficient.”

“Without a doubt,” the Commander agreed. The Jaeger launched a grappling hook from another raised port on the shoulder, and once he confirmed it was tight began scaling the wall, with the feet clamps being used for each step. Once up top, he pushed off, and the grappling hook lowered the MEC to the ground.

The trio exited the safe room. “I believe that was a successful test,” the Commander said idly. “This will prove very useful.”

“As do I,” Kong agreed. “And of course, the next one is something that has been in production for some time. The Valkyrie.”

The aforementioned MEC towered over the smaller Jaeger, standing close to fifteen feet tall, it lacked the sleekness and compactness of the Jaeger, but had engines, wings, and other aerodynamic attachments which coalesced into something which was distinctly something that was designed to fly.

“This was designed to not just be an air-to-ground asset,” Kong said. “While it is outfitted with multiple missile systems, laser defenses, chemical weapons, and bomb dispensers, we anticipate it’s versatility would be enhanced if it was capable of performing in a space environment. As such, they are also outfitted with high-powered laser cutters, and have tools allowing them for breaches into enemy spacecraft.”

The Commander nodded. That would indeed be very useful, and especially for XCOM attacks, having a means of reliably being able to penetrate enemy spacecraft would be useful. “How easily can it compete in an air conflict?” He asked.

“Against alien spacecraft? It can hold its own,” Kong answered. “However, it isn’t as effective in the air as on the ground. It is better defending from enemy craft than attacking them. It simply lacks the speed to effectively compete, even if it is equivalent in firepower. Plasma, chlorine-trifluoride, and nanite warheads are all utilized, which are capable of taking down a fighter. However, it isn’t advised they be used as anti-fighter platforms.”

“Good to know,” the Commander confirmed. “I suppose you have a demonstration for this one as well?”

“Yes, but not here,” Kong confirmed. “For that, we need to go outside.”

“Then let’s do it,” the Commander said, feeling a sense of optimism as he followed the Chief Engineer to the platform that would take them outside. On the technical side he was fairly confident that they were more than capable of holding their own. But the technical, ‘conventional’ part of the war was only half of the battle.

Vahlen would need to complete the other half.

If that was done…then their chances of winning this war just got a lot higher.

Cybernetics Lab, the Praesidium – Classified Location

5/9/2017 – 11:03 A.M.
It was not exactly normal, talking with a six and a half foot tall Asian woman, but if that was going to be her future, Sierra wanted to have a good idea of what to expect. Luckily the new MEC pilot was more than willing to talk. Athena Gallant was a new soldier to XCOM, and more interestingly, had volunteered without having any missing limbs or physical disabilities.

“It was what I was going to school for, you know,” she was saying as both women sat at a table in the Cybernetics Lab while work continued around them. “Prosthetics. Cybernetics. Not nearly as sophisticated as these,” she lifted her own hand. “But foundational ones. Or what are consider such now. Hard to believe it’s changed that much already.”

“That’s good work,” Sierra said. “I wouldn’t be surprised if what you did ended up making prosthetics into what they are today.”

“Ha, no,” Athena chuckled. “We were, at best, at the baseline. We weren’t doing anything cutting edge. Most of our time was spent trying to get government funding and making deals with pharmaceutical companies than outright research. God, I hated that money was tied to research so much. It tainted everything.”

“You could say that about a lot of things,” Sierra shrugged.

“Yeah,” Athena rapped her fingers on the table. “Honestly, I wouldn’t be mad if ADVENT just scrapped money altogether. Just causes more problems than it solves.”

“I somehow don’t see that happening,” Sierra said. “Might be better in the long run, but I doubt ADVENT is going to overhaul the norms to that level in a war. Then again, I know absolutely nothing about economics, so please don’t take my word for it.”

“Well, we have something in common then,” Athena laughed. “I have a habit of holding strong opinions on stuff I don’t always have a firm grasp on. Though a lot seems to be common sense, honestly.”

“It does seem like that sometimes,” Sierra agreed.

There were a few moments of silence. “So, they’re eyeing you for MEC 2.0?”

“Giving me the option, at least,” Sierra answered with a shrug. “Which I’m not completely sold on. I like the look of the Valkyrie, but not sure I like it enough to be a walking shell with a Human brain.”

“Hmm,” Athena cocked her head thoughtfully. “Can’t blame you completely. I can only give you my own experience.”

“I’d appreciate it.”

“So I’m like you in that I’m transitioning from a full organic body into something largely artificial,” she continued. “I’m not you, obviously, but I can say that while it’s a different experience, it isn’t something I dislike. Honestly, aside from a reduced...feeling,” she wiggled her fingers. “It isn’t much of a change. Everything feels more or less the same, for lack of a better word. Heat, cold, everything stays at a same temperature. Which I prefer to extremes.”

“Do you still eat? Sleep?”

“I can,” she emphasized after a moment. “Although nutrition is largely provided through little vials I insert every day,” she lifted a red vial to demonstrate, indicating a port on the arm. “Eating physically is...well, more of a comfort mechanism. A placebo if you will. It doesn’t really do
anything, but it feels good to do, and taste is still there.”

“So where does the food go then?” Sierra asked, frowning.

“I assume it gets dissolved by nanites and turned into something useful,” she shrugged. “I don’t really know, but since I don’t really have a digestive system anymore, no waste products. Lots of internal batteries though, EMP hardened obviously.”

“Do batteries get changed regularly?”

“Yeah, I do at least,” she tapped her chest. “Battery port right here. I plug in every night. I technically don’t need to sleep, but I still do. It helps, despite what the engineers say. ‘Oh Athena, it’s a psychological illusion, you don’t actually need sleep’, all crap. We still need sleep, and I take it. But you don’t really have to ever worry about running out of power. If I don’t charge at all, it would take close to a month before I actually had to worry.”

That answered some of her questions at least. So, she could reasonably still do…Human things. Which was something she hadn’t been sure of before. “I guess the thing I’m not sure of is…well, being trapped in a body that doesn’t feel like mine. I don’t want to have an existential crisis inside a metal body.”

“I get that,” Athena nodded. “Honestly, that’s not something I can answer with absolute certainty. But speaking for myself…I don’t feel much different than I did before – aside from not feeling hungry, thirsty, or other survival mechanisms. I felt like…me…but with some extra parts. The skin helps.” She lifted her hand.

“Not real, though, is it?”

“No,” on cue the skin peeled back, nanites was what it looked like. “But as I said, it helps. In the end, I don’t think it matters if it’s real or not. Appearance goes a long way, psychologically speaking.”

“Right,” Sierra nodded. “There was something that one of my friends brought up. Namely…uh…reproductive stuff.”

“Mmm,” Athena rested her arms on the table, facing Sierra seriously. “If you do this, you’re not having a kid, not naturally at any rate. I don’t know if that’s something you want, either now or someday, but that’s a sacrifice you make for this.”

“I figured,” Sierra said. “Definitely not now…but I thought maybe someday.”

“I doubt that’s unique,” Athena nodded. “Doubt a lot of people are intentionally having kids these days. But I won’t lie and say that XCOM may magically make it work for us in a later iteration. That isn’t happening.” She paused. “There are some alternatives though. I would say something to think about, if you do want to become a mother someday, is that adoption is viable. There are going to be a lot of orphans after the war, hell, even now. Alternatively, you can also have some of your eggs harvested and frozen. It won’t be quite the same, but it would be yours.”

“True,” Sierra considered. “Might be preferable to going through pregnancy, actually.”

“I’m admittedly not going to miss that,” Athena admitted.

“You have kids?”

“One, a boy,” she nodded. “He’s with my husband in the family quarters here, actually. I don’t
regret it, but god the experience was enough for me to decide one kid is enough for me.”

“Your husband a soldier?”

“Ha, no, he’s never fired a gun in his life,” she chuckled. “He’s actually a cook. That’s where he works now, when he’s not with my son. We try and take shifts so he isn’t left alone for too long.”

“And he was…fine with this?” Sierra asked cautiously. “And things are mostly the same?”

“We had a lot of talks about it, yes,” she nodded. “And we both decided to go along with it. Though obviously not everything is the same, as you’re very delicately dancing around the topic.” She bit her lip idly. “Short version, the procedure kills your sex drive, full stop. Far as I can tell the actual parts are largely left alone, but they don’t really work. Superficial, if you would. Not to mention the other physical changes.” She tapped her flat chest, not elaborating.

She pursed her lips. “That said…it doesn’t change how I feel about him. I still love him, and he loves me. But it’s not a physical-based love. It’s a weird sensation, but the point I want to drive home is that it doesn’t take away love, cheesy as it sounds. You can still fall in love, but you won’t exactly have a desire to fuck them. If that makes sense.”

“It does,” Sierra nodded. “That…hasn’t really happened to me, at least not for a long time. But I don’t have anyone now.”

“And that’s fine,” Athena said. “But if that’s something you do want, this won’t erase that. It just may not be in a way you anticipated. Besides, it’s not like it’s a one-way street. I guarantee you that whoever you would end up with will find you attractive, and you may want to accommodate them. Ultimately though, how you decide to work that out will be between the two of you.”

Sierra lifted an eyebrow. “Makes sense. Thank you for answering.”

“No problem,” Athena appraised her a few seconds. “Speaking from what I’ve seen…you’re ideally suited for this. You’re already getting used to the cybernetics, you’re single, no desire for children right now, and more importantly, not rushing into anything. I think this would suit you, but I can only speak for myself here. I hope it helped you.”

“Yeah, it did,” Sierra said, definitely having a lot to think about now. “Thanks, Athena. This was really helpful.”

“Keep in touch,” the MEC pilot said. “Whatever you decide, I know it will be the right decision for you.”

***

Arms Range, Praesidium Exterior – Classified Location

5/11/2017 – 2:19 P.M.

The Commander took a breath, lifted his rifle, lined it up with the target in the far distance, and fired. His shot was joined with a half-dozen others, and they were rewarded with a small explosive in the distance. A number of soldiers who were watching cheered as they saw the snipers all hit their targets.

“Come on,” Luca Pareja muttered, one of the newer soldiers from Mexico. “We can’t keep moving the targets out. Someone needs to drop out.”
“Not going to be me,” Cassandra Rivera said, taking a drink and resting her rifle on the table as she adjusted her sunglasses. “We’re competitive around here.”

“Apparently,” Miriam Luxemburg said dryly. “You weren’t kidding, Commander, you’re a good shot.”

“I keep up,” he said modestly. “I did maintain a high body count in Florida.”

“You fought in Florida?” Luca asked. “You?”

“Don’t sound so surprised,” he lightly chided.

“He does that sometimes,” Leona Rhodes commented from the side. “He’s not bad. Hands-on for a commander.”

“I believe it with this performance,” Luca glanced to the targets which normally would be out of the range of most sniper rifles, even scoped. But gene modding extended the range quite a bit, even if now it was actually getting a bit harder. “You originally a sniper, Commander?”

“I was,” he confirmed. “A skill that’s served me well.”

“What branch?”

“Not military, CIA,” he clarified.

“Huh, I didn’t actually know that,” Cassandra said with a raised eyebrow. “That explains a lot.”

“Explains what, exactly?” He asked with a bemused expression.

“Just the way you run things,” she shrugged. “I’d pegged you as military, but you have the mindset of an intel guy. I don’t think I’ve seen that before.”

“I did run a lot of field combat ops in my day,” he said. “And worked a lot with soldiers. It’s not as uncommon as you think. Some of that rubbed off on me.”

“In your day?” Leona raised an eyebrow. “You aren’t that much older than us.”

“I’ll take that compliment,” he smiled. “Ready for the next round?”

“Yeah, let’s do this.”

The snipers readied their rifles, got a rough idea of the location of the target – which was now a truly ludicrous range – and when they judged right, they fired. The moment the Commander fired, he knew he’d missed. Sure enough, there was no explosive indicator, and this was also the winnowing round for all but two of the snipers, Cassandra and one of the new South Korean troopers, Ji-Won Sobong.

“A good run,” the Commander said, stepping back. “I knew it missed the moment I fired.”

“Something you just know,” Leona agreed. “But you gave a good show.”

“To be fair, all of you did as well,” he said. “To some extent, I’m surprised I got this far at all.”

“Well, whatever it is, it’s impressive, Commander,” Luca said with a nod. “Don’t suppose you’re that good with other weapons?”
“I can handle any weapon decently,” the Commander said, going to a water station as the sun beat down on them. “However, I would only say I’m proficient with rifles and sniper rifles. Though I suppose the mods make me good with pistols and shotguns at closer ranges. Although if it gets to that point, I’ll probably just use telekinesis.”

“If you didn’t say it, I really wouldn’t know you were a psion,” Miriam said, walking up. “I don’t think I’ve ever seen you use psionics before.”

“Because I’m not a powerful one,” he explained, suspending the plastic cup in his hand. “Limited use out of self-defense. Definitely not on the level of Geist, or even Vahlen. I’ll leave the psionic warfare to people more proficient.”

As the final two snipers got ready for the final round— or likely final round, the Commander watched from behind. “Bets on which one wins?” Luca asked. “I’m going to say the Korean.”

“Sobong?” Miriam asked, swirling her cup in her hand idly. “Tempting, but I’ve seen Cassandra fight. I’m going with her.”

“Same,” Leona nodded. “But he’s also been consistently good.”

“What about you, Commander?” Luca asked.

He raised an eyebrow. “Do I get a vote? I do know the profiles of both soldiers.”

“This is a fun bet, not high stakes gambling,” Miriam snorted. “Your insider knowledge isn’t going to disqualify you.”

He smiled. “In that case, Sobong.”

Both Miriam and Leona exchanged a look, both frowning. “No changing your pick,” the Commander warned, amused.

“Wouldn’t dream about it, Commander,” Miriam said unconvincingly as they watched the two snipers line up, take aim, and fire. Truthfully, the Commander wouldn’t have been surprised if both of the snipers had hit the target, but as fate would have it, Cassandra missed while a faint orange plume indicated Sobong had hit his target.

“Alright, how did you know that?” Miriam demanded as the crowd cheered at the new sniper champion of XCOM—at least until the next fight or weekly shooting tournament.

“Couldn’t it have been a lucky guess?”

“Do you make lucky guesses?”

“No unless I have to,” the Commander admitted, smiling before answering the question. “Sobong was stationed in Busan,” he recalled from the file. “As you can imagine…he acquired significant experience. By the end of both battles, he had a combined four hundred and sixty-three confirmed kills. Cassandra is an excellent shot, but when it comes to long-range combat, the numbers fell in Sobong’s favor. Having to choose, his was the safer option. I wouldn’t have been surprised if both of them had hit it.”

“I take it back, insider knowledge is an unfair advantage,” Miriam said, deadpan. “Good thing none of us put money on it.”

“Is that even legal here?” Luca asked.
“As long as no one is being stupid about it,” the Commander said. “There are standards we keep here.”

“Got it, Commander.”

As the winning sniper was surrounded by a number of people, the ones in the firing area moved out as they were replaced with the Rocketeers…and a lot of ordinance. “Not taking part in the rocket launcher competition?” Leona asked.

“Not this time,” he said as they joined the spectators. “I think I’ll leave the explosives to them.”

Abigail’s Quarters – The Hall of Steel

5\12\2017 – 4:29 P.M.

This was such an odd sensation.

Yet here she was doing it all the same.

Finished, she put the tablet down and sat on the edge of her bed, thinking. “You got through that fast,” Liam noted, glancing to the tablet on the table.

“I read fast,” she answered robotically. She wondered if she actually was a naturally fast reader, or if this development was something that was giving her some kind of cerebral boost. Oddly enough, she could recall exactly what happened in the book despite how fast she’d finished it, likely due to being hyperfocused on it.

But sure enough, she could definitely read Spanish, and read it well. It was, in short, effectively no different from reading an English book. Nuance, context, little oddities and quirks that each language had, she seemed to be able to interpret and understand flawlessly. In a roundabout way it showed that whatever Fectorian’s translation program had been, it was pretty excellent.

“Still,” Liam shook his head. “You got through two hundred pages in a few hours. That’s impressive. I’m pretty sure you couldn’t do that before.”

“Was I even a reader?” She asked, the question coming to her.

“Not especially, from what I remember,” he said. “But that may have been due to our job and limited time. You never really spoke about it, if that’s what you’re wondering.”

“Ugh,” she let herself fall back onto the bed, disquieted for some reason which she couldn’t really nail down. She’d initially thought this would be an amusing incident, one Liam had found funny, as she’d expected. But the more she thought about it, the less funny it became until now it was seriously bothering her.

The explanation for this was there and made sense, but there was just something unnerving about the whole event the more she thought about it. Maybe the fact that knowledge that had once taken so long to acquire had just been…uploaded.

As an accident.

If something like language could be uploaded, why not other things? Math formulas, chemical chains, entire textbooks of knowledge she could inherently just…recall at will. Was it even worth
‘learning’ something when you could just have the information downloaded into your brain?

Logic said ‘no’, but that answer strongly upset her on a fundamental level with an intensity which surprised herself.

It struck her as profoundly wrong and unnatural.

“Hey, Abigail,” she saw Liam look over her with concern in his eyes, laying a hand on her shoulder. “Are you alright? You’re shaking.”

She realized that she was, or seemed to be more vibrating than shaking, but she stopped that, then sat up. “Liam, have you ever had an existential crisis?” She grimaced. “Because I think I’m having one now.”

“I don’t believe so,” Liam said. “What’s wrong?”

“I…don’t like this,” she gave a shrug, struggling to articulate her deep sense of wrongness. “That a language was just…implanted into my mind with no actual effort or desire of my own. It’s just a thing that I can do, like breathing. And I know it shouldn’t be like that. Abby…I didn’t know this, but it’s like I’ve had it all my life. It feels real, but I know it’s something foreign. Something that I know doesn’t belong on a fundamental level.”

She wrung her hands together. “I guess it highlights just how…artificial I am.”

“Hey, don’t say that,” he protested. “If there’s someone who could say that about you, it’s me, and you’re not an artificial knockoff.”

“The procedure didn’t work!” She exclaimed with a burst of emotion. “Fectorian even said it! He just tried to build up what he thought I was good at and made me perfect at it! She-I-wasn’t perfect at it, I’m sure of that. But my shooting, my strength, speed, reflexes, that isn’t because that was something I’m good at, it was just some information Fectorian programmed into me. The only reason I’m…me right now is because that’s what he made.”

“But you remembered my name, right?” Liam reminded her. “And the others? You may not remember exact memories, but you do feel connections. Fectorian may have given you some upgrades and made some assumptions without thinking how you would take it, but you’re still you and he couldn’t fake that no matter how hard he tried.”

“Really?” If she had the ability to cry, she felt that is what she would have done now. “If he can upload pure information into me, how do I know what I think are my memories aren’t just…something he just put into me to make me think I’m someone I’m not.”

“I don’t think he would do that,” Liam disputed. “Fectorian is not exactly personable, but he’s too…straightforward to come up with something like that. I’ve been around him a while. I know that this isn’t his objective.”

“Unless he’s lying to you,” Abigail shrugged. “He made his end goal clear. He wants to contact XCOM and I’m his proxy to do that. I have her face, her voice, and her connections. I feel like a shell right now. Pretending to be something I’m not and can’t know.”

“We’ve talked about this,” he said, sitting next to her. “Don’t overthink it. You just got past this. You are Abigail. Full stop. If you keep telling yourself you’re not, you’ll eventually believe it. When I saw you, I wasn’t asking myself if you were ‘different’ in any way, I was just glad you were alive. You need to trust yourself more.”
Abigail was silent for a few moments, her mind whirring as she tried her own reconciliation. Logically, he was right. The solutions he proposed were viable. The internal resistance she felt was inherently illogical, yet persistent. She realized she was gripping the bed and crumpling the sheets.

_Calm down._

_Calm down._

_Calm._

_Calm…_

She released a breath. “Ok.”

“Do you want an idea?” Liam asked.

She shrugged. “Couldn’t hurt right now.”

“You learn something,” he said. “Something you _definitely_ don’t know. If you learn something on your own terms, it might help.”

“That isn’t a bad idea,” she thought a moment. “Do you have an idea?”

“I’d figure you’d know what you’re good at or not,” he admitted.

“Hmm,” she considered a few seconds. “The problem is I don’t really know what I’m not good at. I didn’t even know I spoke Spanish until a few hours ago.”

“Well, we know you don’t speak French,” Liam chuckled lightly.

“Well…” she glanced to him. “Say something in Russian.”

He blinked, but complied. “Perfect, I didn’t understand a word.”

“You want to learn Russian?”

“If you’re willing to teach me.”

He almost balked. “I’m…not exactly a language specialist. _Or_ a teacher.”

She shrugged. “I’ve got time. And it would be better than trying to work everything out on my own. Fectorian might just want to upload it into me, which I now _definitely_ don’t want.”

“I can’t promise a perfect education,” he said slowly. “But if you want to suffer along with me, I’ll teach you as best I can.”

“That sounds good,” she smiled, feeling better now that there was a plan of action. “I think it will help.”

___

_The Dreamscape_

_5/13/2017 – 5:12 P.M._

While the Dreamscape T’Leth controlled could be made to show anything, the Commander personally preferred the simplicity of the watery expanse. Blue-tinted light filtered through a
simulated ocean with a bottomless trench below the translucent surface. It had taken some time to get used to the depth perception, but it was…relaxing in a way.

The Chronicler was here this time, appearing the same as usual. The Commander suspected that he could alter his appearance if he wished in this place, but for reasons only the Chronicler knew, he’d chosen to retain his elderly appearance. Of course, it wasn’t as though he was limited by his body.

The appearance was a façade, and he wasn’t certain it was an intentional one.

T’Leth took on different personifications during these visits. Sometimes he appeared as a species he recognized. Human, Vitakara, or Ethereal; though there was always something off about it. An exaggerated perfection which was unsettling, though the reason it was so was not always apparent. Sometimes it was a species he had never seen or heard of, and T’Leth never elaborated on them.

For all the Commander knew, none of the unknown species were real and only unrealized visions of an ideal species. T’Leth had never confirmed, nor had the Commander asked. Though given the detail and certain actions the species displayed, he suspected that the species were real. T’Leth did not seem the type to be coming up with complex species in his off-time.

And sometimes, T’Leth didn’t manifest at all, though his presence was just as apparent.

Now though, T’Leth manifested as a Human. A tall Human whose proportions were just too small and thin for the height, whose face was just too symmetrical, and whose stone-cold eyes never blinked or expressed any emotion. The voice was the same, and it was always something to get acclimated too; hearing the booming voice from everywhere; even in your own mind, when he spoke.

A projection of the galaxy was displayed as far as the dreamscape could see. Blue-tinged hologram-like images of stars, planets, systems, nebulae, black holes, and the many other elements of the cosmos. The sheer scale and scope of the galaxy was always humbling, and it spoke to how…minor their conflict was in the grand scheme of things. There could be thousands of apocalyptic battles taking place across the galaxy, and no one would hear of them.

It was mind-boggling that the Sovereigns wanted to control it for themselves.

Without the visualized scale, it was an endgame he could understand, but with the full scope – no, not even the full scope; only what T’Leth was capable of showcasing – of what they wished control over, it seemed unfathomably arrogant. Though it certainly fit the god complex the Sovereign Ones possessed.

Well, which most of them possessed.

He hadn’t broached the topic, but he suspected T’Leth may have come to a similar conclusion. Perhaps T’Leth really was humble in his own way. At least for a Sovereign.

The galaxy may be too large for one being to control. Even a Sovereign.

No wonder the Synthesized didn’t seem to stay in the galaxy, and instead just driving the Sovereigns into hiding. Maybe they knew that it was a pointless endeavor. There were so many hidden planets, uncharted systems, and places to hide and lay low that something even as powerful as a Sovereign One could disappear easily – along with many other species who were even more beneath the notice of the machines.

As he looked at the vast expanse of stars, he wondered just what was out there. How many tombs of long-dead civilizations remained, untouched and waiting for someone to stumble upon them? Or
even civilizations rebuilding in the ashes of their previous glory or new ones rising to the stars? The possibilities were exciting, and when Humanity spread to the stars, it was not out of the question – or arguably likely – that they would find such civilizations, aliens, relics, and stories.

Allies to be had, lessons to be learned, or enemies to be made.

The first two were each valuable in their own way.

“You have a habit of going quiet here,” the Chronicler noted wryly. “I’ve seen you around enough to know you’re plotting.”

“I’m not doing this out of idle curiosity,” the Commander said, moving through the systems, back to where Earth was located. A speck of dust in the wider galactic cosmos. “I’m surprised you haven’t made a guess.”

“I’ve made guesses, Commander.”

“I’d like to hear them,”

“Knowing you, I suspect it has to do with the future,” the Chronicler also turned his attention to the planets, though to the systems beyond Earth. “The Imperator isn’t the end. Nor is the Collective. The Sovereigns will be waiting.”

“The Sovereigns are not the true threat,” the Commander dismissed in a half-distracted voice. “Not when there is something else which sends them fleeing every cycle.”

“Underestimate the Sovereigns at your own peril, Commander,” T’Leth cautioned. “The Synthesized mean nothing if you fall before their arrival.”

“I’m aware,” the Commander said, rubbing his chin. “You’re on the right track, Chronicler. The Imperator is our immediate mortal threat, but I’m not deluding myself into thinking he’s the only one, nor the most powerful.”

“Systems of importance to be held is a good plan,” the Chronicler noted, assuming he was thinking more tactically. “ADVENT will need to have strong borders and control the relay points to be a credible threat. The Sovereigns will take advantage if we are not appropriately prepared.”

“Close, but not quite what I have in mind,” the Commander paced around the displayed systems. “T’Leth has shared knowledge of previous civilizations, and each one had a desire to drive towards the core of the galaxy. It is a repeating pattern. To control the station and the relay points. I’m surprised no Sovereign has seen it as a trap.”

“The Sovereigns are not ignorant it was laid by the Synthesized,” T’Leth stated. “They simply do not think it matters. It is a tool; a powerful one that allows swift control of the galaxy for those who control it. It is part of the cycle, not just the expected path to be taken, but the necessary path. If this path is not followed, expansion is slower, time is lost, and chances of galactic control begin to slide away. It is not seen as inherently malicious, though it has also caused the cycles to over time fall into patterns.”

“Right,” the Commander nodded as he looked at the glowing projection. “Highlight the relay points for me, would you?” Thousands of points lit up in orange, with the connecting lines that spiderwebbed across the galaxy as far as he could see. There were so many, yet in the scope of the galaxy it was remarkably limited.

Remarkable, this trap.
Such a brilliant and subtle means of siphoning the major powers of the galaxy down into such a small slice of the galaxy. A mere fraction of what was possible, and the Sovereigns in their arrogance failed to see how succumbing to this trap was so easily turned against them. Of course, not that it mattered.

It had not taken many thought experiments to reveal something clear about the Sovereign mindset.

They did not care.

Not about the civilizations and species they created or proxied. All of it a means to an end, all tools in the game of galactic domination. Tools could be discarded and rebuilt. Time was pointless to the immortal. A setback could be outlived. The threat was not mortal. The Synthesized had become an inconvenience.

An expected break in the everlasting war.

Yet if time was not important to a Sovereign, then why the drive to conquer the galaxy in a predictable pattern? The answer that came to mind was fear. Not of the Synthesized, but of their rivals. If they did not take the shortcut, someone else would, and potentially gain an advantage of them.

Unacceptable to the Sovereign mind.

Thus, the Sovereigns were psychologically trapped in a cycle of stagnation and apathy.

That alone highlighted that the Synthesized knew how to play the Sovereigns.

And that spoke to their danger and level of cunning.

Yet the more he thought about it, the more he wondered what the goal of the Synthesized really was. If the goal really was to exterminate the Sovereigns, they would stay and maintain control over the galaxy. But they didn’t. They just came and left. Which indicated that hunting the Sovereigns wasn’t the endgame. Not really.

The implications were uncertain, but also unnerving if accurate.

All of these were things that he suspected at first, but seemed all the more likely the more he thought about them.

A galaxy paralyzed by apathy and stagnation.

There was a cycle to be broken. The Imperator nor Patricia was not wrong about that, but the question was how.

It could not solely be by conflict. Otherwise the galaxy would be already controlled. Nor could it be by isolation. Too small and a civilization would be assimilated or absorbed. Too large and it would be drawn into a conflict with a proxy or other galactic peer. Technological advancement seemed a dead end as well, as if the Sovereigns and their technology could not guarantee victory after all these millennia, then the answer could not lie there.

It was certainly not by joining the conflict as another major player. One more participant in the game of galactic domination would change nothing.

With the galaxy laid out before him, the endless expanse seemed to indicate an answer hidden in plain sight.
The conflict persisted because of apathy; Sovereigns and civilizations following the same expected patterns. Going to the same places, placing targets on their people when the purges came. All at the same time ignoring the vast space that was so easily bypassed so they could chase the bait which had been propped up in the core of the galaxy.

In return for speed, expansion, and network control, vast swathes of the galaxy were left untouched. Swathes which could hold limitless resources, alien species and allies, remnants of civilizations, stories and warnings about what to expect. When it came down to it, breaking the cycle was simple.

One couldn’t play by the norms. The obvious path itself was an enemy.

ADVENT had to be militarily powerful of course, but it could not just have martial might. When ADVENT expanded to the stars, it would need to do so methodically; carefully. The shortcuts would be there, tempting them, but ADVENT could not take them lest it fall into the same trap. He was quite certain that he was going to have to convince Saudia that the exploration, archeological, and recon aspects of the inevitable colonization effort were going to need to be just as strong, developed, and mature as military force, if not more.

Humans had a tendency to do things quickly; to rush to get things done in the easiest and simplest way possible even in lieu of safety, quality, or caution. But that attitude would doom them in the long run if it was allowed to infect the most critical stage of ADVENT. Speed would lead to their destruction, even if the consequences were centuries into the future.

Speed would lead them into the next war, one with a Sovereign One.

A true Sovereign proxy. Not one which had latched onto an existing figure of power like Mosrimor had with the Imperator.

Of course, moving too slowly could mean they would be unprepared for when the Synthesized struck.

But the fact was they only had one chance to survive what was coming. The wrong decisions would doom them. The right decisions might save them.

There was a rumble. The touch on his mind alerted him to the Sovereign observing his own thought processes.

A curiosity in them.

Perhaps a grudging approval?

He looked to the manifestation of the Sovereign who was doubtless considering the plan which was congealing in his mind. “Has something like this been attempted before?”

“Not to my memory. Too long-term. Too ambitious, even for Sovereigns. Most importantly, it would be seen as unnecessary” A pause. “Although, Sovereigns do not think like a mortal, Commander. They do not think with empathy or concern for those other than themselves. In a way, a mindset such as yours could be an advantage if this is a path you wish to take.”

“Well then,” the Commander gave a thin smile. “Then this just might work.”

***

The Dreamscape
As Kunio’s training had continued, he’d quickly figured out that Fiona had been right about how teleporting became second nature. He certainly wasn’t a master at it, but he’d gotten far better in a relatively short span of time. Largely thanks to the Dreamscape as XCOM called it, or more accurately called ‘the disturbingly detailed reality created by T’Leth’.

If there was anything that could showcase the power of the Sovereign Ones, the fact that they could create a mental reality and tune it to something resembling reality was something that everyone seemed to overlook. This couldn’t have been easy for T’Leth to do, yet he did so, every day.

It certainly saved a lot of time though. Time passed much slower in the Dreamscape. He could spend hours training in here and only an hour or so would have passed in the real world. Given some conversations he’d had with Fiona, this was something T’Leth could directly manipulate. The opposite could also be performed, though there wasn’t any point in speeding up time, so it wasn’t done.

Kunio presumed there was a reason that T’Leth didn’t slow time to the point where hours would only be seconds in reality. Perhaps there was a limit to his capabilities, or it required a level of concentration he didn’t see the need to apply. In any case, XCOM was taking full advantage and it appeared to be how they were bringing a majority of their new soldiers up to expected battle readiness.

It was a smart way to get everyone up to speed.

The Dreamscape now had been created to show what was basically a massive metal box. Within the box there were various elements; trenches, barriers, snipers nest, mines, and a whole host of other things one would expect to find on the battlefield. At the end was a command center which needed to be breached.

Protecting it were around four dozen aliens; a mixture of Mutons, Custodians, Vitakara, and a random leader enemy. T’Leth often mixed it up, though usually wasn’t too unreasonable. Relatively. To date he’d never won, but at least it wasn’t an Ethereal. He’d fought recreations of each of the Chosen most of the time. The Hunter was the worst, though sadly T’Leth didn’t bother recreating his commentary. The Warlock was the easiest due to the straightforward nature of how he fought.

So much for the Elder’s Greatest Champion™.

This particular challenge though, was one he hadn’t been able to beat yet. It was one of the largest-scaled tests. It was simple in objective and necessary skills, but it was extremely difficult to even complete, let alone master. Fiona had designed it, like all of the other tests. The first time he’d ‘died’ pretty quickly. The second time he’d lasted a bit longer.

He’d tried this many times at this point.

It was a test that he’d kept trying again, each time getting a little better.

Even if he knew it was ‘fake’, the sounds, colors, and sights of plasma fire, explosions, and general battlefield chaos was enough to recreate the feeling of battle. ‘Death’ also hurt. Not horrifically, but equivalent to being hit very hard in the head, or tasered. He’d taken a direct shot from the Hunter recreation once and it felt like he’d been stabbed in the chest.
He did not want to feel that again.

“Think you’re ready?” Fiona asked, appearing beside him as he looked over the frozen figures standing idle for the test to start.

“I have a good feeling about this time,” he said with a nod.

“Hope so,” she grinned. “You know T’Leth is going to spite you for that, yes?”

“Eh, bring it on,” he said, rolling his shoulders. “The Collective isn’t going to go easy on me. No reason for him to either. You hear that, T’Leth?”

No response. T’Leth didn’t usually respond for one reason or another. Maybe too busy. For all he knew the Sovereign was managing multiple Dreamscapes at a time. “Right. Take out the leader, no restrictions, taking out enemies are optional.”

“You got it,” Fiona gave him a thumbs up before vanishing with a green-white flash, though her voice was still easily heard. “Good luck. The test starts now.”

He immediately located the nearest cover as the aliens began moving and firing. He’d learned very quickly that if you didn’t move, you were dead. This time he decided to do a flash step to the pillar. A hand waved and a purple shroud surrounded him briefly and he stepped directly into the pillar, clunking his head and stumbling back before reorienting himself.

Damn, a bit too close.

Still pretty good.

It was very easy to overstep or understep where you wanted to go. At this point he was fairly good at maneuvering through the Psionosphere in his immediate vicinity, though outside a three-meter range it became a lot more sporadic. He took a few seconds to determine his next step.

First thing to note - he was facing overwhelming firepower.

That was actually a good thing. He couldn’t wait too long though because it didn’t take long for the Mutons and Vitakara to start chucking grenades his way. He lifted his hands and clenched his fists, a purple aura rippling around them as he drew on the power. Right, let’s do this.

He spun around the pillar and opened his palms, small circular portals appeared before him, while with a hand he gestured and the connecting portals appeared beside him. Which turned all the incoming fire his way back against the aliens. A half-dozen were already moving up to flank him, and his reflected fire cut down some of them, while it forced the rest to halt their advance and move back into cover.

T’Leth always had the aliens go aggressive. Forty on one wasn’t fair and the Sovereign was sadistic enough to know that. Already he saw two groups of aliens on the far sides moving around to flank him, one group Mutons, the other Custodians. So he could keep himself protected from the front, but that would pin him in place. Time to keep moving. One of the side groups needed to be taken out. He chose the right one.

He did several flash-steps to sporadically dash towards the Muton-majority group charging his way, who quickly took positions and started firing. He quickly created a reflective portal and point-blank killed the Mutons with their own plasma fire, and with the last one he opened a portal underneath and severed it when it had almost followed though, decapitating it.
That was such a useful trick. Shame for him it was currently only a short-range tactic.

He scooped up one of the Vitakara rifles and began firing at the Custodians which were marching from behind him. Relying purely on psionics sadly didn’t work. Or at least it wasn’t very smart. He wasn’t good enough to win this with his power alone. So some augmentation was in order. There were a number of grenades on the soldiers though…

Hmm…

This wasn’t the first time the idea had occurred to him, but it was the first time he thought he could pull it off. Green plasma fire was raining down on his position as the aliens were closing in methodically.

He quickly snuck a glance behind his cover towards the encroaching Custodians. Right, he had a decent idea where to open the portal, but he’d just have to do his best. Scooping several grenades, he thrust a hand towards the Custodians, and opened the connecting portal right before him. To his delight, it was almost right on top of the machines. He chucked the grenades into the portal, closed it, and a few seconds later he looked back to be rewarded with the multiple green explosions.

Ha! Got ‘em!

Still far from over. He had probably taken out about half at this point. He definitely was more tired than before, but strong enough to know he could still pull it off. Though now was the time where the commander of the aliens would show. For now he shot with his rifle, managing to kill several of them before there was a purple flash, and Occidera, the Chosen assassin materialized.

“Not bad,” she growled, drawing her blade. “Let’s see how you do now.”

Great. At least it wasn’t the Hunter who he would be lucky to catch a glimpse of before his unholy accuracy killed him. With the Assassin, he could reliably last a few seconds before he was skewered.

No! Think positive!

She can be beat.

He fired his rifle at her, and she vanished as expected and he leapt back, the plasma fire no longer as much of a concern even as it flew past his visor and left black marks on the floors and barriers. When fighting the Assassin, if you stayed in one place, you died quickly. The Assassin materialized just beside where he’d been with a slash and seamlessly turned to where he was and slashed. He risked a flash-step behind her which worked and he fired in the split-second he hand.

She stumbled with a grunt and disappeared and rematerialized beside him with a slash he only just barely avoided. She stabbed, and placing a hand before his chest he opened a small portal her weapon went into, which he quickly closed, breaking the blade in turn. Her free hand shot out and grabbed his rifle, ripping it out of his hands.

He opened a portal underneath her, hoping to kill her the same way he’d killed the Muton, but she vanished mid-fall, materializing a couple meters away from him. He stumbled as plasma fire hit him; the aliens taking advantage of his distraction to flank him. He created a portal in the area where some of the fire was coming from and directed the connecting portal towards the Assassin, who’d tossed her broken blade aside; she flash-stepped to the side to dodge the plasma fire and turned his tactic against him.

He felt the ground vanish from underneath him and in desperation tried to flash step but it was too
late and there was a sharp pain around his waste and the Dreamscape reset. Groaning on the
ground, he rested his head on the ground, frustrated with himself from forgetting the most
important rule in fighting a teleporter – always keep moving.

“You did better that time,” Fiona said from above him. “That really was harsh of T’Leth, throwing
a teleporter at you like that.”

“My own fault,” Kunio groaned as Fiona hauled him to his feet, the pain in his waist receding
slowly. “Should have kept moving.”

“I’m pretty sure the only reason he did that is because you took out half the aliens pretty quickly,
that was good work,” she complimented. “Definitely your best so far.”

“Thanks,” he took off the helmet, feeling the cooler atmosphere of the Dreamscape wash over his
face. “It’s becoming easier.”

“I noticed,” she nodded. “Flash-stepping is becoming more natural. You got a good shot at her with
that flank. Remember though you’re not limited to the ground. You have the entire battlefield to
play with and utilize.” She drew her sword, it glinting in the light. “There’s a reason I, and a lot of
teleporters, carry melee weapons. It’s easy to get in close, strike from the air, or backstab. It’s less
cumbersome than a gun if you know what you’re doing.”

She tapped her chin thoughtfully. “You’re still working out your own style though. But I’d think
about how you want to best operate, and then tool your arsenal to support that. The Chronicler is a
Dynamo, so he’s effectively a wrecking ball wherever he goes. I don’t have that, so I carry this to
compensate my own close-range attacks. You seem to like using the portals offensively though.
Try and think of some way to take advantage of that if you keep refining that.”

He nodded. “I will.”

“Let’s keep going here a bit longer before we transfer this to the real world,” she said, sheathing
the sword over her shoulder. “You recovered?”

“Recovered enough,” he said, turning to follow her. “Let’s continue.”

***

Mess Hall, the Praesidium – Classified Location
5/11/2017 – 12:02

“So you were what before?” Ana Berkley, Jackson’s primary public relations correspondent said
incredulously as she ate absentmindedly.

“ADVENT Internal Logistics Management and Communication,” Barron recited in a false
dramatic voice, taking a sip of water before his tone turned dry. “More accurately, I sent a lot of
e-mails and made some phone calls to middle management who may or may not have properly
passed them along.”

“Yeah, you definitely missed your calling,” she said, sliding the clipboard of drawings back over to
him. “Surprised you didn’t go to Disney or something. In any case I’m sure Jackson will find
something to do with this, right?”

“For sure,” Jackson agreed. “I’d never guess this was anything other than professional work. You
have a daughter, right?”
“Yes, I do,” he nodded. “I do this for her when I can. Honestly it’s not something many people have known about before now.”

“Where is she living now, if you don’t mind my asking,” the Commander asked, sitting across from him. “You don’t necessarily have to be separated. The Praesidium has housing for families.”

“I appreciate the offer, Commander, but I will pass,” he said with as deliberate caution, likely to avoid causing offense, if the Commander read the tone correctly. Not that he really would have been offended either way. “This job is…high risk, even here; even with what I do. I am aware of the recent attack here, and while I’m certain adjustments have been made, it is too high of a risk for me to consider. To answer your first question, she’s in Richmond with my wife. They’re both safe as one can be right now.”

The Commander raised his eyebrow, picking up on the choice of wording. “She’s with your wife? Not her mother?”

Barron pursed his lips. “Poor choice of words, Commander. Yes, her mother, though not biological.” He pursed his lips. “She’s my second wife. I lost my first wife some time ago.”

“My condolences,” the Commander inclined his head. “I can unfortunately relate.”

Barron cocked his head. “Can you now? No matter.”

“In the invasion?” Jackson asked gingerly.

“No, not connected to this,” Barron gestured idly. “Just a mix of incompetence and bad luck. Murdered on the street by an escaped prisoner, because of corrupt guards I later found out. Didn’t even go out trying to kill her. Just in the wrong place at the wrong time.”

“Did they catch him?” The Commander asked.

“No, he escaped,” Barron said simply, as his long fingers rapped idly on the table as he went silent for a few seconds. “For all I know he died somewhere in the wilderness alone. There’ve been no leads ever since. I check in a couple times a year, and there’s never anything.” He paused again. “In a way, I’m glad it happened when she was still a toddler. Before it could have really damaged her. Even so, it was…difficult.”

He shrugged, giving a faint, thin, but sad smile. “However, I’ve managed to move on.”

“That’s good to hear,” Jackson nodded. “I can’t imagine what that would be like.”

“I hope you never do,” Barron said, before turning to her. “Do you have family?”

“Ha, yes, but I’m not married,” Jackson answered, resting her arms on the table. “Couple boyfriends here and there, but nothing ever panned out. Always been more focused on work, which is how I eventually ended up here.”

“And we are grateful for it,” the Commander lifted his glass. “Although there isn’t anything prohibiting you from taking some time to yourself.”

“Yes, I suppose you would know about that Commander,” she said with a slight hint of mockery.

Ana glanced suspiciously to Jackson. “What?”

“Him and the Chief Scientist,” Jackson smirked. “You really didn’t hear about that?”
“I’ve barely been here longer than he has!” Ana gestured to Barron. “Uh, congratulations?”

“I don’t make a point flaunting it,” the Commander said dryly. “But thanks. Though I would prefer it didn’t unnecessarily contribute to the rumor mill.” He glanced to Jackson. “Something you seem to be fairly acquainted with.”

“Zhang passes along relevant pieces of information,” Jackson defended with a shrug. “I do need to know what the workforce is thinking and hearing, after all. Though you’ll be happy to know that the thing with you and Vahlen is mostly too boring to get much attention. Pretty much everyone noticed it after a while.”

“I am a true master of stealth,” the Commander deadpanned. “I’ll have to ask Zhang why I’m not getting this information. Or the rest of the Internal Council for that matter.”

“Because most of it is dumb, irrelevant, and unnecessarily dark at times,” Jackson rubbed her forehead. “Like…there were a couple of people betting on whether Creed will get a new girl or off himself.”

“Jesus,” Ana muttered. “Pathetic cretins.”

“Trust me, I put a stop to that,” Jackson clarified. “But yeah, stuff like that which would probably have had Creed actually hurt someone if he read it. I referred them to Zhang for internal investigation. Not sure what verdict he gave. Might still be working on that.”

“I’ll have to check on that,” the Commander frowned, disliking that was something going on, even if it was only a few people, which was unfortunately inevitable with a fairly large workforce which XCOM possessed. Granted, there was some dark humor he could tolerate, but there was a fine line when it came to that. “And I want on that list, regardless. I’d prefer knowing the mindset of the personnel.”

“Got it,” Jackson made a quick note on a loose piece of paper. “It will be done.”

***

Psionic Research Lab, Research Labs, the Praesidium – Classified Location

5/13/2017 – 1:22 P.M.

There was a pervasive aura to the Psionic Research Labs, likely the result of so much experimentation with the field. It had grown in the past weeks to one of the largest parts of the Research wing of the Praesidium, and more and more psionic researchers had been brought in from ADVENT.

Now, upon the backs of months of work, theory, and application, the hard work and sleepless nights had produced something.

The Commander stood before Vahlen, Iosif, Geist, Kong, Aegis, and Lavallic ir Nara, all of them leading the charge on Project Lethe in one form or another. The psionic research project which had been mere theory only half a year ago was now something tangible. And apparently that wasn’t the only thing they had discovered.

Vahlen and Geist had told him of a breakthrough that would change the war. He was hopeful – though skeptical - that would be the case, but first there were the results of the project to see.

The spherical room, normally filled with tables, strewn equipment, and various levels and types of
disorganized clutter had been cleared with only a couple tables in the middle of the room holding weapons of various kinds on them, as well as some silver cases. Behind them were several holding cells which normally were used for testing – on or by subjects or scientists – that had been turned into makeshift ranges which the Commander presumed were going to be used to show off the new technology.

“It was never a question of if it was possible to merge psionics and technology,” Vahlen began, herself in her usual lab coat and uniform, once everyone was situated. Her speech-like opening underscored that this was a major event, if the number of major individuals standing around her hadn’t. “There are numerous examples. The Gateways and psionic gauntlets were two major examples. However, the exact mechanics of the Gateways are still beyond us, and we wanted to do something greater than what the Sectoids did – a simple design, and relatively straightforward.”

“To provide some additional context,” Geist stepped forward, the psion in casual fatigues that resembled the attire psions used in the Psionic Testing Range, gesturing to the table. “The Sectoid gauntlets proved the basic theory. Replicating it was possible some time ago. However, it was of limited utility. The underlying technology needs two things to effectively function – a source to tap into the Psionosphere, and the ability for the power to be ‘coded’ to a specific output. That was where the difficulty lay. However,” he nodded to ir Nara, who stood nearby in a lab coat of her own. “Thanks to the efforts of our Sovereign assistant, we were able to break the initial stages of the code.”

“Thank you, ir Nara,” the Commander inclined his head. “Your contributions will not be forgotten.”

“I would hope not,” she said dryly, lips pursed. “Though your thanks is…appreciated.”

“Our understanding is still not complete, though we have developed a number of prototypes,” Geist picked up one of the weapons, a black and angular rifle-like weapon. There were several cords hanging off of it, which he plugged into some implants on his firing arm which the Commander hadn’t noticed before.

“The power of the psionic weapons comes from the psion,” Geist explained, indicating the wires. “Technology alone cannot tap into the psionosphere – with the singular exception being the Gateways. There must be an organic mind capable of perceiving it. Alternately, the mind can act as a proxy; a connection. As such, these weapons must be connected to psions to work.”

Geist walked over to the makeshift range with the small crowd of people following behind. “We’ve had the most success so utilizing Dynamo psionics,” Vahlen said as Geist lifted the weapon and prepared to fire. “However, that is certainly not the only discipline we are able to adapt.”

Geist fired the rifle and there was a purple flash from the muzzle as a dozen psionic bolts shot out towards the target, which was a propped-up suit of Titan armor. The bolts slammed into it, and one barrage had already penetrated multiple places and ripped chunks of it off. Another direct barrage turned it into scraps of metal which clanked to the ground.

Well, that was definitely an effective demonstration. “If the weapons draw power from the psion,” the Commander said as Geist, lowered his weapon and turned stiffly back to them, rolling his shoulders. “Does it have an impact on the psion?”

“Yes, it does,” Geist confirmed with a sharp nod. “These weapons have no ammunition or power limitations, but they will drain the psions over time. Just as the regular usage of psionics will be draining, so will this. However, as the concentration isn’t as strong, it will not necessarily be as
impactful compared to typical usage.”

“Do weapons like that damage the materials inside?” the Commander asked, taking a closer look at the weapon.

“Yes and no,” Kong said, speaking for the first time. “To some extent it depends on the weapon. We worked to limit the amount of direct exposure to the psionosphere – especially for Dynamo-based weapons. After heavy usage, some components will need to be replaced, but those are minor. There are, however, many delicate components within each weapon, and damaging them could make the weapon unusable. Psions will need to handle these weapons with care. They cannot endure the same type of beatings our plasma rifles have received.”

“Good to know,” the Commander nodded. “So handle with responsible care.”

“Exactly,” Kong confirmed.

The psion betrayed no indication that he was tired after the display, and unhooked the rifle from the implants and set it back on the table. “We’ve developed a pistol and sniper equivalents as well,” he said, motioning to the other weapons on the table. The Commander took a closer look, noting they were similar in the angular design of the rifle, though his eyes were drawn to what appeared to be a massive cannon.

“What is that one?”

Iosif grinned, looking to Kong who spoke. “That, Commander, is what the engineers call the Annihilator Cannon.”

“You just saw what the rifle did?” Iosif asked. “Magnify that times ten at least.”

“The engineers said, and correct me if I am mistaken Dr. Mercado, ‘I want this thing to shred a Herald.’” Geist added neutrally, using air quotes for good measure. “I would test it out, however, that weapon draws so much energy that it would render me unable to demonstrate anything else. I would suggest you acquire a psionic volunteer if you want to see it in action. Rest assured that it works.”

“No need,” the Commander nodded. “I’ll take your word for it.”

“But to demonstrate the versatility of what we have been able to create, I do want to showcase this one,” Geist began as he turned to the debris. “A misnomer, as there is no gravity involved. The weapon does, however, utilize telekinesis which can be used like this.” He aimed the Gravity Gun and the pieces of the Titan armor were lifted into the air, with the prongs respectively extending and retracting as he manipulated the settings.

“This is the first iteration of the Gravity Gun,” Geist began as he turned to the debris. “A misnomer, as there is no gravity involved. The weapon does, however, utilize telekinesis which can be used like this.” He aimed the Gravity Gun and the pieces of the Titan armor were lifted into the air, with the prongs respectively extending and retracting as he manipulated the settings.

“Once I have control, I have options,” he continued, fiddling with the rifle, flipping switches and turning dials with a proficiency suggesting he’d been using it regularly. There was far more activity than most weapons he’d seen. “Bringing it closer, farther, moving it side to side, or projecting it,” he manipulated the gun to perform the actions as he explained them, culminating with the pieces being violently thrown into the wall as the Gravity Gun powered down.

“Impressive work,” the Commander nodded. “Though it does seem like that is a more complicated weapon to operate.”
“It certainly is,” Geist agreed. “It requires a degree of proficiency and training. However, it is very powerful. It is not as versatile as a true Telekine, but it is as close as we can make it.”

“There is only one last major weapon we’ve been able to produce in a working capacity,” Vahlen picked up a small weapon resembling a pistol with a configurable dish-like attachment at the end of the weapon. “The Mind Ray. A handheld telepathic projector, configurable to hit a 180 degree radius or small enough to hit a single person.”

“How does that work?” The Commander asked, cocking his head as he looked at the weapon. “You think a psionic command and it is…projected?”

“No, if that was the case this weapon would be redundant,” Vahlen refuted with a shake of her head. “The idea with these weapons is to make the psion do less work. Not to mention the ability to perform direct mind-to-command output has drawbacks. This weapon is capable of dispersing simple commands to unprotected minds. Configurable with the setting here,” she turned a small dial which had a different color and symbol for each click. “Stun, sleep, kill. Simple, but effective. A useful sidearm for psions to have. No direct mind control yet, but we hope to reach that point soon.”

“We do have a number of prototypes which we have not finalized yet,” Geist added. “Ones utilizing Aegii and Teleportation psionics specifically, and a simplified and heavier version of the Gravity Gun. I suspect those are several weeks out at minimum.”

“An accurate timeframe,” Vahlen agreed, then nodded to ir Nara. “Should we move to the next piece?”

“Yes,” the woman approached the cases which were small cabinets as it turned out, and pulled one open with a hiss. White mist wafted out as it revealed a dozen grenade-like objects set within.

“Psionic grenades?” He asked, glancing to Vahlen. “If you need an organic connection to the psionosphere…”

“And that was a problem we were having issues solving,” Vahlen finished. “We were about to move on to more promising aspects before ir Nara proposed a solution.”

“Psionic technology only needs an organic connection,” the stoic woman continued Vahlen’s introduction, gingerly picking up one of the grenades. “It does not necessarily have to be alive. Each of these grenades has a small portion of organic brain matter derived from Sectoids, Humans, and Ethereals – none appear superior in this instance. We program the technology in the same way, and when the grenade is set to activate, electric pulses are shot through the ‘brain’, activating the connection to the psionosphere, and thus, the grenade.”

“And with that, the issue was circumvented,” Geist finished with an approving nod. “The drawback is that these grenades do have a ‘lifespan’. Keeping them in cold storage – while not necessary – increases their usability. The brain matter will eventually decompose to the point of being rendered unusable, which appears to be after significant use, or three days left alone.”

“Has MELD been used to prevent atrophy?” The Commander asked.

“It is being used,” Vahlen confirmed. “However, there are limits to what even MELD can do with so little to work with. The good news is that we designed the cases so a new ‘brain’ can be implanted into shells with relative ease.”

“Then not a major concern,” the Commander nodded, taking the grenade offered by ir Nara. The
grenade was designed similarly to conventional ones, though near the top was a small dial.

“Radius,” Vahlen explained as he fiddled with it. “I would keep it at the lowest for in here.”

“Good idea,” he nodded. “And the trigger?”

She slid back a short flap which covered a button, preventing it from being accidentally jostled or activated. “When you press the button and release, you have five seconds,” Vahlen said. “The standard time.”

“Understood.” The Commander moved to the second range, which had some mock Collective soldiers set up. He primed, then threw the grenade close to the center of the pod, then watched as there was a localized explosion of violent purple energy, as the psionosphere was ripped apart.

The pod, which seemed to have been made out of only cheaper materials and metals, was ripped apart completely. Even the ground was heavily scorched and broken, with the concrete cracked and chipped. The only thing intact was the grenade itself which sat in the center of the ashes.

“Impressive,” he said, turning back to them. “Should be an upgrade for our plasma grenades, especially since non-psions can use them.”

“And like the weapons, we’ve applied more…unconventional abilities to them,” Geist said, picking up a different grenade. This one was closer to a pure, smooth sphere. “Simple telepathic commands were also able to be programmed, and this is the result.”

The Commander took the sphere, noting another small dial which was similar to the one on the Mind Ray. Configurable then? Excellent. “This is the telepathic grenade then?”

“The scientists prefer calling it the Thought Bomb,” Iosif said with an amused tone. “Not as clinical, but pretty accurate.”

“I like that,” the Commander said as they moved to a range which had a trapped Sectoid drone in it. It was scurrying around, watching suspiciously. A glass barrier was between the alien and XCOM observers, though the top was open. The Commander set the grenade to sleep and a low radius, primed the grenade, and tossed it near the Sectoid. There was a brief ripple in the air in a clear radius, which the alien was trapped within, and the Sectoid fell over.

“It took out a Sectoid,” the Commander raised an eyebrow as he watched the alien sleeping on the ground. “More powerful than I expected.”

“Admittedly, Sectoid drones are not the most psionically proficient,” Vahlen said. “We estimate that the Thought Bomb is strong enough to overpower their defenses if not enhanced by a mind merge, but it is unlikely Vanguards will succumb, nor anyone whose mind is sufficiently protected. This would likely be useless if, say, the Overmind provided protection to an army, but in most instances…it can be a devastating weapon. It can’t be blocked by armor, walls, or defenses.” She tapped her head. “Only minds.”

“Again, excellent work,” the Commander said, giving a brief salute. “I don’t see how the Collective will be able to respond quickly to this.”

“And like with the weapons, this is the beginning,” Geist added. “There is work on grenades utilizing Telekinesis and Aegii psionics which we expect to be deployed fairly soon.”

“A question I do have,” the Commander looked to Kong. “This principle has been applied to weapons. I don’t suppose it can be applied to armor?”
“Getting slightly ahead, Commander,” Vahlen chided. “As a matter of fact, the answer is yes. However, the armor aspect of Project Lethe isn’t as developed and we have only truly created one battle-ready suit.” She gestured, and a couple of assistances wheeled in a propped suit of armor.

This one had more similarities to the Warden-Class Titan armor than true Titan armor. It was not as thick, though more mobile; it was colored black; the armor almost seemed to have a corded quality to it, and there were additional ports and miscellaneous lights and items across the suit.

“The Aurora Armor,” Kong said, stepping closer to it. “Dr. Shen helped design the original concept, though the first prototypes were only built recently. It isn’t quite as impressive – yet. Psions connected to it can activate psionic barriers around armor pieces, are automatically telepathically protected, and more importantly, is designed for psions to use the dedicated weaponry.”

“So this is to be the standard psion armor moving forward?”

“We intend such,” Vahlen confirmed with a nod. “Until more specialized suits are developed. The same versatility the weapons have provided, we should also do to armor.” She activated a small holoprojector on the table and cycled through several design prototypes. “Maelstrom, Vortex, Aegis, Domination, Shadow, there is no shortage of prototypes, let alone ideas. The idea is to round out the psions to give them capabilities they are not naturally inclined to.”

“How soon will these be produced?” He asked.

“Unknown,” Kong answered. “The Maelstrom and Aegis armors are the ‘simplest’. More complex variants like Domination and Shadow…those will take longer.”

“Understood, I suspect this will be sufficient for some time,” the Commander paused, then decided to voice something which had wormed its way into his mind since the demonstration had started. “I’m curious – we had assumed that the MEC program would be unable to weaponize psionics. In light of the developments…has that changed?”

Vahlen hesitated, and exchanged a glance with Kong before answering. “A tentative yes, Commander. In theory I believe it is possible. If the pilot is simply a conduit for the psionic power…it should be possible. I’ve talked to Kong about a Leviathan-Class MEC prototype, but neither of us are certain it would work; not enough to prioritize it.”

“Consider this authorization to prioritize it,” the Commander said immediately. “Based on your explanations and demonstrations, I see no reason why it shouldn’t work. If the MEC program can utilize psionics, we have a force multiplier the Collective will be hard-pressed to answer outside of an Ethereal.”

“Understood, Commander,” Vahlen made a quick note on a nearby pad of paper. “I’ll determine more details with Dr. Mercado soon.”

“And I will be ready to assist,” Kong finished.

“Excellent,” the Commander looked to Geist. “I believe there was also one more topic you wanted to discuss. One of importance, judging from the claims.”

“I was the one who stated it would change the war,” Geist said evenly. “And it is a claim I stand behind. I would not classify this as a new understanding of Psionics – our knowledge has not been wholly upended after – as much as a logical extension of what we already know. The Psionosphere is something which can be manipulated – we all know this – and it’s manipulations come through...
the natural instinct psions have towards aspects of the Psionosphere.”

He made a circular motion with his wrist. “Telepathy, Telekinesis, Aegii, Dynamo, Teleportation, discounting all of the sub-disciplines. It is likely there are more we have simply not comprehended yet. The conventional understanding has been that the manipulation goes, for lack of a better word, one way. We can only effect change in one direction through the Psionosphere.”

“Manipulation,” Vahlen supplied with a nod. “The Psionosphere is tangibly changed. It is broken by a Dynamo, hardened by an Aegii, connected by a Teleporter, and so on.”

“Assuming I follow this line of logic,” the Commander said. “You’re suggesting the opposite is possible, which is…doing nothing?”

“No, not like that,” Geist disputed before clarifying. “We have been acting under the assumption that there are limits to how the psionosphere can be manipulated. A Dynamo can only break it. An Aegii can only harden it. The question then is what if they could do the opposite?”

All together it clicked for the Commander.

And when it did, he understood that Geist had not been exaggerating.

This could change the war.

“You’re saying instead of just a creating a psionic shield, an Aegii could destroy one,” he said slowly.

“Almost, Commander,” Geist took a step forward intently, his eyes holding a sharp intensity. “I’m saying that an Aegii could prevent a shield from ever forming in the first place.”

He looked to Aegis. “A demonstration is in order, I believe. Aegis, would you?”

“Of course,” the small group stepped back from the Ethereal as he encased himself in an impenetrable box with a lifted palm. The purple glow of the shimmering shields was as strong as the Commander had seen before. The Ethereal nodded to Geist who returned the nod, as the air distorted around him.

A small amount of psionic energy emanated from the stoic Human, as he raised a hand towards the encased Ethereal. The Commander saw the psionic shields initially seem resilient, though then they…wavered. It was subtle, but there. Like a flickering light that was determined to remain.

Geist closed a fist, and the shields dissolved, leaving Aegis exposed.

The room stood in silence for a few moments as Geist lowered his arm and the distortion around him faded. “Incredible,” the Commander said softly, turning to the psion. “This can be done for every discipline.”

“Yes,” Geist affirmed. “In fact, to a degree it has already been done. Teleporters have the ability to prevent teleportation, and the Chronicler has demonstrated it before. However, to my knowledge this is the only ‘common’ practice of what we are calling the Psionic Nullification Theory. In short – every action the psion can perform can be countered by another psion.”

“Well, which sounds more complicated than it is,” Vahlen interjected. “A Psionic ‘Null’ acts as a stabilizer for lack of a better word. At the core, a Dynamo for example, breaks the psionsphere. An Aegii hardens it. A telepath exploits the connections. A telekine manipulates the strings. A teleporter moves through it.”
She lifted a finger for each category before continuing. “A Null can heal the tears or prevent the psionosphere from being torn in the first place. It can be forced to remain unable to be hardened. It can make telepathic connections unable to be formed. It can keep the strings loose and untethered. It can lock the metaphorical doors that teleporters move between.”

The Commander shook his head in disbelief. “We cannot have been the first to discover this. Others had to have known. The Ethereals had to know. The Sovereigns?”

“Theorized, perhaps, Commander,” Aegis said slowly. “However, there is a…lack of incentive for a species like mine to investigate such paths. This does not go one way. As an enemy will be prevented from exercising psionics, so too will your own allies. We are a species of psions. A discovery like this would…weaken us more than the alternative. As well as expose a vulnerability in our power.”

There was a long, pregnant pause. “I cannot believe the Imperator is unaware of this discovery. Nor any of his closest advisors. But he has not said anything because it serves no purpose. An Ethereal who acts as a Null would be useless as their own power is restricted. It turns battles that would be decided by psionics into battles that can be decided with armies. The masses. It is simply not an acceptable tradeoff.”

“Except that for us, it would be,” the Commander finished. “And if the Ethereals could be negated, our conventional forces could succeed – and there are not enough Ethereals to overwhelm us.”

“Exactly,” Geist said. “The power the Ethereals have is enormous. But they are few and limited. We, unlike the Ethereals, are not reliant on psionics. We have the capability to limit ourselves and not be weakened. Not even the Imperator could prevent this. With enough Nulls, even his power could be suppressed.”

“In theory, yes,” Aegis lifted a hand. “Yet I would exercise caution. When I have used my power when Geist has acted as a Null, it has not rendered the psionosphere impossible to manipulate. It instead feels like it is…fighting me. It resists my manipulation. I suspect that if I dedicated myself, I could overpower his negation, but in the heat of battle, it will be enough to break unsuspecting psions, and certainly limit what they are capable of.”

“So, you’re saying it’s not foolproof,” the Commander nodded.

“No,” Aegis confirmed. “Power is important, but in a different context. A single Null would not stop the Imperator. But with each one, his power will be weakened. And it only weakens one aspect unless a psion is particularly skilled. An Aegii Null can only negate Aegii psionics. A Telekine Null can only negate telekinesis. There are limitations, and against the Imperator, you would need dozens of powerful Nulls to make an impact.”

“The potency of a Null is directly tied to their Trask Level,” Geist added further. “An Adept Null will be less potent than a Magus Null. It is not an exact science – that we have determined – as to how proportional the negation is. It is not a simple subtraction of the Trask Level of a Null to that of the target, but there is a noticeable impact.”

“There are some other limitations,” Iosif interjected from the first time. “Like certain sub-disciplines, not everyone can become a Null. While it doesn’t appear to require a unique mindset – like Biopathy does – a Null must be an expert in their respective discipline to correctly understand and apply Null Theory. Geist, myself, and Aegis for example can and have learned it – a new psion cannot immediately do so. They must effectively master their own discipline and then learn Null Theory later.”
“It is a mindset shift to a degree,” Geist admitted, rubbing his chin. “It is effectively learning how to reverse what you have been doing since your power has been awakened. Thus, not every psion will be a Null, but every psion could be a Null.”

“And there are tactical considerations to consider when utilizing Nulls,” Iosif added. “Namely that while in theory it is possible for nullification to be localized, the psion does know they’re being affected. So moving out of the field is simple. Too many redirections can tire the Null. It is simpler to make it a wide radius, which can negate impact of similarly-disciplined psions. We would not benefit from allied psions, but neither would the enemy.”

“A trade-off, but a justifiable one,” the Commander said.

“Exactly,” Iosif nodded. “We are not the Ethereals. We do not rely on psionics like they have. And even if a Null is not powerful enough to completely negate their power – it will weaken and limit them to a degree. Like a debilitating poison.”

“As far as the Sovereigns go,” ir Nara said, a finger tapping her lip thoughtfully. “I suspect it is a similar rationale to the Ethereals. They are on a level where they are not reliant on psionics, but even if they were, their sheer power could likely overcome an army of Nulls. I suspect they are aware of the theory, but it simply isn’t important.”

“In terms of discovery, it is unlikely we are the first species to learn of this,” Vahlen added. “For all we know, other species not yet encountered know it. The Bringer is likely aware of it. However, we may be the only species alive right now who has not only discovered it, but can actively take advantage of it.”

“It would be useful against the Ethereals,” the Commander nodded thoughtfully. “But not necessarily the Sovereigns.”

“At this moment, yes, Commander,” Geist stated. “However, this is an extremely new and rapidly developing field. I would not make assumptions as to how this can be scaled. Even if it is not perfect – or scalable – we have a viable path to victory over the Imperator and the Sovereigns we did not before.”

“Indeed we do. How many psions do we have who can be trained in Null Theory?” The Commander asked.

“We’re determining that now,” Geist said with a quick glance as Iosif. “Perhaps a dozen. Likely a few less.”

“And ADVENT?”

“That requires your authorization, Commander,” Vahlen said. “In my personal opinion, we lose absolutely nothing by making this as public as possible. Even if the Ethereals learn of it, it will not help them. If we have a dozen psions who could be Nulls, ADVENT will likely have hundreds.”

“Hundreds against one Ethereal?” The Commander smiled slowly. “I like those odds. Tell Jackson to send it directly to ADVENT, with an advisement to make it public.” He looked to Geist. “I suspect the general public will be more…emboldened if they know we can negate the power of the Ethereals.”

“And if the aliens also know that,” Geist finished with a matching, slightly sinister smile. “Then they might begin to realize that they are on the losing side.”

“Perhaps,” the Commander said thoughtfully. “But first we have to slay their gods.”
Mission Briefing Room, the Praesidium – Classified Location

5/15/2017 – 8:11 A.M.

Nearly two dozen Humans and one Ethereal stood in a moderately lit room in two rows, which was before a holotable, the Commander of XCOM and Intelligence Director Zhang. Kunio didn’t know what was going on, but he had a general idea.

There was a mission happening soon.

One that he was part of.

He didn’t think it was a coincidence that this mission was being launched just after XCOM had begun unveiling really new and advanced weapons. The psionic weapons, grenades, and armor were particularly amazing, which he’d spent several straight days getting practice on, along with pretty much any psion.

Seemed like XCOM wasn’t wasting any more time.

And, subsequently, it meant his introductory time in XCOM was over. It was time for his first mission – whatever that was going to be. If he’d had to guess, he would have doubted it would be something major or important. Maybe striking a Collective base or defending a city; missions he knew other XCOM squads often did.

Although walking into the room, he saw there were a lot of people who he recognized as having seniority in XCOM. There was Fiona, Geist, and the intense South Korean woman…Carmelita, he believed her name was, one of the oldest veterans in XCOM, Fatima Tariq, one of the most experienced telepaths, and two of the new MEC pilots.

It didn’t look like this was going to be a simple or minor mission.

Most of the other soldiers he vaguely recognized as being around base, newer recruits like he was. Some Engineers, some Infantry, a couple of psions – Gabriella Otto for one, she was one of the psionic Templars. Australian he believed, who of course fought with a machete and had a clear dislike of aliens, even the ones on base.

He couldn’t necessarily blame her.

“Some of you are newer to XCOM,” the Commander began, stepping forward, hands clasped behind his back. “But you are likely aware that, for a time, Aegis was not our only Ethereal ally. The Ethereal Caelior had also defected to us following his capture and was intended to be a major part of our offensive.”

The Commander began pacing in front of them, making eye contact with all of them. “Unfortunately, when Patricia attacked, she captured him and took him to an unknown location. Since she was aware that taking Caelior off-world would kill him due to contingencies we implemented, we were confident he remained on Earth – though were unaware of the exact location – until now.”

“We have acquired reliable information that Caelior is being kept in a highly secret laboratory Revelean has established on Earth,” Zhang activated the holotable, showcasing a blinking red dot somewhere in the Arctic. “We suspect this location has been built for some time, but we are aware of no major bases with this much secrecy – or tied to Revelean.”
“Our estimate is that Revelean is trying to work around, or negate, the Manchurian Restraints on Caelior,” the Commander continued. “We have confirmation that Revelean has spent a considerable amount of time, and made a number of dedicated trips there. If Caelior is being kept on Earth, there is a high probability he is there.”

“Do we have schematics or a layout?” Carmelita asked.

“No,” Zhang shook his head. “We couldn’t risk direct infiltration and spook the Collective into moving Caelior somewhere else. We know the lab has a limited above-ground profile, but that it probably extends several levels deep. We can only make estimates on the level of defenses.”

“If I can extrapolate,” Aegis interjected. “I believe Revelean will have based the defenses similarly to his Blacksite. A very large number of technological defenses and sensors acquired from Fectorian to start with.”

“Custodians?” Geist inquired.

“Perhaps, but Revelean doesn’t like using complex machines,” Aegis answered. “Not for warfare. So, while there will be automated turrets and sensors – likely a CODEX – there are unlikely to be Custodians or heavily cybernetic defenses.”

“We’re walking into a mad scientist’s lab,” Gabriella snorted. “He’ll probably release his monsters.”

“Unlikely,” Aegis shook his head. “Test subjects are one of the most secure aspects of Revelean’s work. As a warning, I would not intentionally release them either. If they are secure, it is for a reason. No, you are more likely to encounter his dedicated guard – aliens which have been personally enhanced by him. Beyond conventional Collective levels. I cannot predict what you will encounter, as he prizes uniqueness and will retain unconformative experiments if they can be controlled.”

“It might help if we knew what he was working on,” Kunio spoke up. “Is it entirely focused on Caelior?”

“We do not believe so,” Zhang exchanged a look with Aegis. “We suspect that Revelean has oriented his lab to research the Manchurian Restraints – either to negate or replicate them. Likely negate, as the Collective is capable of similar conditioning.”

“So…could we encounter ADVENT captives?” One of the Infantry, Zoe Madden asked. “Or any captives for that matter?”

“It isn’t outside the realm of possibility,” Zhang nodded. “However, that is not your objective. You are going to go in, get Caelior, and get out as quickly as possible. It is very possible that reinforcements – including Patricia or another Ethereal – will arrive quickly. This is not a rescue or recovery op. Do not stop for captives or anything you see. Leave or destroy it, though watch your fire. We don’t know where Caelior is, and friendly fire is a concern.”

“Will Revelean be there?” Geist asked.

“Unknown,” Aegis said. “It is possible.”

“If you get a shot, take it,” the Commander advised. “But don’t go out of your way.”

“Got it,” Carmelita gave a sharp nod. “Is there an operational plan when we’re inside, or are we going to wander until we find him?”
“There will be two squads, Hurricane and Tornado,” the Commander said, as Zhang manipulated the display to show two different colored teams moving to the holographic compound. “Hurricane will consist of Aegis, Fiona, Geist, Gabriella, Sabrina, Valerian, and Leonilda. Our Medic, Engineers, and psions who can move quickly. Their mission is to search and find Caelior.”

The Commander focused on Carmelita. “You will have Operator Walsh, psions Azuma and Fatima, with Kente, Madden, and Pinero carrying some of our newly developed weaponry.” He nodded to Martha Kente, the Gunner. “The Gamma Cannon I expect to be used wisely.”

“Yes, Commander,” she said quickly with a sharp nod.

“MEC Pilots Easu and Athena will also be with you,” he continued, gesturing to the respective, towering, MEC pilots. “The Jaeger suits are ideally suited for this kind of environment. Your objective is simple – to be a distraction while Hurricane Squad gets Caelior. You have enough firepower, though not enough psions to likely determine a proportional response. The Collective might think it is a raid attempt and their defenses can hold it off. Cause as much damage and kill as many aliens as possible.”

“And this assumes they don’t notice the other team?” Geist said doubtfully.

“I expect they will respond most quickly to the explosions and gunfire,” the Commander said dryly. “Besides, Sabrina, there will be an ally you’ll insert into the network once you get inside. It should fast-track your mission to Caelior.”

“I thought you would never get to me,” JULIAN said from the localized speakers, his tone artificially irritated. “I am curious to test myself against the best cyber defenses the Collective will presumably have. Once inside – because I am certain I will surpass their defenses – I will make sure to…streamline your path.”

“There will be some other distractions going on at the same time,” Zhang added. “The Pantheon is planning to hit several hardened Collective targets. Not to destroy them, but to draw their attention. They should buy several hours at least.”

“Understood,” Carmelita nodded. “Anything else

The Commander lifted up a specialized USB drive and handed it to Sabrina. “Here is what you’ll use to install JULIAN. Treat it carefully.”

Once Sabrina grabbed it, JULIAN unleashed a piercing wail “AHAAAAAAA!”

The Engineer understandably started and the drive slipped out of her hands and tumbled to the ground, JULIAN dramatically screaming the whole way down, until a few seconds passed and the AI realized the drive wasn’t actually on the ground, and hovering a few inches above it. It floated back to the Commander’s hand who looked to the ceiling with a bemused expression on his face. “Are you done?”

“For now, Commander,” JULIAN said with snide amusement. “You Humans startle easily. I should do this more often.”

“Please don’t,” Sabrina muttered, with a red flush on her cheeks as she pocketed the drive.

“With no more surprises, your mission is outlined, and you will convene in the Hangar in six hours,” the Commander said, saluting them. “Good luck. Bring Caelior back.”

***
The room was clean and quiet, with only the hum of machinery in the background. Sterile white light shone down, sometimes tempered by the multicolored alien lights that remained remnants of the previously-owned alien base.

Sierra sat on the edge of the hospital bed, in simple hospital garments. Pre-surgery garments to be more specific. She wondered why doctors always allowed a break before taking patients into surgery. It seemed badly scheduled and gave unnecessary time to reflect. Although it wasn’t as though she was reconsidering.

But it was isolating.

Anna and Ted were waiting outside, and would remain there until the surgery was complete. Sierra hoped they didn’t. According to the doctors this surgery was going to take a really long time. She was perfectly fine with them coming back when she was actually conscious. She’d said as much.

Probably just saying that to make her feel better.

She appreciated it nonetheless. Since her talk with Athena she’d been leaning more and more towards doing it. A lot of what the woman had said had made sense, or at least pointed her in the right direction. Talking about it more with them, doing some more research, and thinking about the contribution to XCOM…

Mmm. There really wasn’t a question if she would be more useful to XCOM as a MEC Pilot than staying an Archangel. And unlike most, she had a rather unique skillset, experience, and perspective for the new MEC suit that had been completed. In the end, that had been the tipping factor.

She was XCOM. A defender of Humanity who would do whatever it took to protect Earth against the aliens. There had never been a question if she was willing to die. Death was an ever-present reality, but it didn’t scare her like it had when she was younger. Maybe because she’d brushed with it enough times, or maybe because she knew there would be someone to take her place in the fight.

It wasn’t to say that people wouldn’t be hurt if she died, but her circles were small and mostly professional. Not to mention they would understand. There were few deaths more noble than dying for your species.

But of course, doing whatever it took didn’t necessarily mean giving your life. It could simply be a sacrifice made. Perhaps a dangerous mission, suffering wounds, or losing your body piece by piece. Or – as it turned out – all of it. A voluntary sacrifice for the greater good. And that had been it.

It came down to what she wanted, and ultimately she wanted to do the right thing. She’d never thought of herself as a fanatic or overly patriotic, but here she was, sacrificing her body for the greater good of Humanity. Athena had been right when she’d said she was ideally suited for something like this.

It was a decision which would largely only affect her. Luckily there were no other people to really worry about. Her friends were supportive, she knew people who would help her adjust, and XCOM would appreciate it. This was what she wanted to do. There was the chance she would regret it, but she honestly didn’t consider it likely.
She knew what she was doing.

This was her decision.

The right one.

“Miss Morrow?” She looked up as one of the doctors walked in.

He cleared his throat. “We are ready whenever you are.”

“I’m ready,” she said with a nod and prepared to lay back on the bed, though paused. There was a mirror nearby, and she looked into it for a few seconds. She saw her reflection, and it hit her that this would be the last time she saw herself as she had been. Real skin, eyes, and a face staring back at her.

This would be the last she would truly feel clothes on her body, the faint breeze of air conditioning, or the cool tiles under her feet.

Best not to dwell on it.

After the brief pause, she laid on the bed as more attendants came in to begin rolling her to the operating tables. Her laced fingers rested on her stomach as she felt a calm descend upon her. She was noticeably not nervous or apprehensive, even as nothing really seemed to register as she was moved along.

*Goodbye for now, world,* she thought as she lay still. *But I’ll be back, and better than before.*

***

*Armory, the Praesidium – Classified Location*

*5/15/2017 – 3:18 P.M.*

The Aurora Armor was something which was in some ways more and less complicated to put on. Overall, Kunio decided he liked it better. The Titan Armor was unquestionably more powerful and durable, but it left him slower, less reactive, and there was always the fear that the suit would quit or become too damaged to use, and he knew he wasn’t strong enough to walk it unpowered.

In contrast, the Aurora Armor was more modular and traditional. It could be put on piece by piece, and while it took longer, he was willing to sacrifice some equipping speed in favor of the ability to walk in it without a battery. It certainly wasn’t as if the armor *didn’t* have extremely durable pieces. It was still better than even ADVENT armor when it came to durability.

Well, maybe comparing it to Titan armor was unfair. Literally anything except maybe the Battlemaster’s armor would be inferior to it.

The Aurora armor did admittedly have a more complex dressing process. All psions had been given implants throughout their body to properly let them sync with the suit or weapons, so first there was a full bodysuit to put on, and then the armor would be put over it and ‘locked’ in place to line up the implants with the connection lines.

All told, it took almost a half hour to get everything put on, although thankfully he wasn’t the only psion, and thus not the person finishing last. He pressed the connection switch in the inner collar armor and the connection lines slammed down into the implants with multiple clicks, the circular lights glowing purple.
He stiffened as the suit came ‘online’ as it connected to the Psionosphere through him. It was a very odd sensation. It was if he could feel the power, but instead of it being right in his grasp, it was going somewhere else. It was still possible to manipulate the Psionosphere – it was easier in fact – but still very odd.

“I’ve thought about trying that,” Gabriella Otto commented, marching towards him in her Titan armor. Her wicked-looking machete was hanging loosely off her waist and helmet was tucked under her arm. Her glittering ice-blue eyes seemed amused as she looked down at him “Just looks a bit weaker.”

“Compared to Titan armor, everything is weak,” Kunio shrugged, reaching for his helmet. “But it’s strong. It can create psionic barriers in a pinch too. You’re a psion, right?”

“Yeah, but not a powerful one,” she confirmed, lifting a hand and the helmet floated in the air before she grabbed it again. “Telekine. Good enough to unbalance some enemies or take their weapons, but not quite on the level of throwing around armies.”

“I don’t think those are the only two extremes,” Kunio said dryly. “Telekinesis is useful for a Templar though.”

“That it is,” she gave a dangerous grin. “Don’t know what we’ll find in Revelean’s lab, but probably a lot of aliens who will need to die.” She looked to another nearby soldier reaching for her weapon. “Don’t take all the kills for yourself Martha.”

“Look, I know I got the Gamma weapon,” the armored woman rolled her eyes. “But seriously, this thing can’t be used willy-nilly. A couple seconds and anything alive goes poof. I doubt I’m going to be using it as much as this one.” She gestured to the plasma rifle also hooked onto her back. “I’ll happily kill every alien there, but I’m not going to use this thing unless Carmelita wants me too.”

“That’s correct,” they all stood at attention as an armored Carmelita walked to them. Kunio was immediately struck by her helmet, which definitely wasn’t standard Titan armor, and had a bright yellow smiley face painted on it. However, he didn’t feel the least amused; she had a presence about her which…dissuaded that kind of reaction. Carmelita patted Martha once on the shoulder. “Good woman. Once all of you are ready, we move out.”

Kunio thought that was going to be it, as the soldiers began gathering their weapons and putting their helmet on. Instead he kept a straight face as Carmelita came up to him. Despite her smaller stature, both her expression and Titan armor made her appear much more imposing. “Kunio, right?”

“Yes, Ma’am.”

“Overseer,”

“Yes, Overseer.”

“This is your first mission?”

He nodded. “Yes, Overseer.”

“Trial by fire,” she acknowledged. “Still, I know this isn’t your first combat mission. Stick to the squad, follow my orders, and do your part, and we’ll all come back. No unnecessary teleporting either. If I want you to try something like that, I’ll say so. I don’t want you vanishing to another room without me knowing.”
“I don’t think that will be an issue, Overseer,” Kunio said ruefully. “I’m not quite Fiona yet.”

“All the more reason to follow orders and do your job,” she said, walking towards the meeting point, clearly intending for him to follow. “Your weapons are useful for high-damage output, so you’ll be in the back lines. The Jaegers, myself, and Jaxon will be on the front lines since we can take the most direct fire. You, Fatima, Kente, Madden, and Pinero will handle whatever we miss.”

“Understood, Overseer,”

They walked for a while as the other off-duty soldiers and XCOM support staff looked onward, seeming to realize a mission was happening. “You’ve done missions like this before, I assume?” He asked. “I mean…you’ve been here since the beginning.”

“Some, yes,” she said curtly. “I’ve…yeah, I’ve been here since the start. Sometimes I’m surprised I was the one to make it when everyone else is dead…or worse.” Her lips pursed at the last statement, a flash of anger in her eyes.

“Did you know her well?” He risked asking. “Patricia?”

“Not especially,” she shrugged. “We went on ops together. But we were comrades, not necessarily friends. But I trusted her. I never would have thought she’d…” she shook her head. “It’s not important, Kunio. Time to focus on the mission. Go in, cause some damage, get Caelior, and get out.”

“Roger,” he confirmed, flipping the helmet in his hands and putting it on. They walked into the room which normally would have been for soldiers to access the Dreamscape, but was now just for the armed squads. Everyone was armored, armed, and ready for the mission. Aegis stood in his rarely used battle armor and the Jaegers even stood over the Titan-armored soldiers.

It was a very intimidating entourage, overall.

Fiona stepped forward, clad in her own armor. “We all know the mission, so I won’t repeat it. I can’t say what we’re going to find when we get there, so weapons hot. We may be facing hostiles immediately. Everyone clear on your objectives?”

There was a chorus of affirmations, and she nodded, putting her own helmet on. The soldiers readied their weapons and Kunio hooked his psionic rifle into his armor and ensured it was powered on. “Get ready then,” she said, lifting a hand as the blue-green energy began enveloping her. “This will happen very fast.”

***

Revelean’s Lab – Earth

5/15/2017 – 3:29 P.M.

They appeared in the room with a flash.

It was in the shape of a square and appeared to be a centralized part of the corridors, with doors leading in four different directions. The walls were a sterile white and similar lights shone onto a glossy floor. There was nothing set up or standing in the room, but there were turrets hanging from the ceiling, each slightly before each of the doors.

The soldiers reacted instantly.
Kunio lifted his rifle to the nearest turret as it came online. “Taking left turret!” He yelled as he fired, with other soldiers calling out their own shots, as he felt a slight psionic drain as the rifle turned the turret to scrap after a barrage of purple bolts slammed into it. Carmelita’s alloy cannon shredded the next one with a sparking pop, while another was severed by a psionic barrier Aegis manifested and the last one was taken out by Zoe and Pinero combining their fire.

“No time to waste,” Geist said as quiet settled upon them, walking to the nearest control panel with Sabrina close behind. “Can you install JULIAN from here?”

“I should be able to. Give me a second,” she answered, breaking out her kit.

Geist hooked his Gravity Gun on his belt and looked towards Aegis. “Can you sense his mind?”

“No…” Aegis trailed off. “There is something else here…another powerful mind. Almost Ethereal in a way, but distinctly not. There are some places which I cannot sense, it is possible they are using Sovereign Orbs to prevent telepathic contact.”

The frown was in Geist’s face. “An Ethereal-esque mind, but not Revelean. I can sense it too. It seems…idle.”

“I’ve not felt something like it,” Aegis said slowly. “We should proceed with caution. Fatima, be careful of this entity. It may come after you.”

“I’ll be ready,” Fatima nodded. “We only need to distract it. You get him out, and we do our job.”

“We’ll start moving in the direction of the dead zone,” Fiona said, glancing to Sabrina who was hooked into the system and trying to get deeper.

“We’ll get their attention,” Carmelita stated, hoisting her alloy cannon and moving to the opposite door while making a formation gesture with her free hand. “Form up squad and move out!”

Monsoon Squad formed in front of Carmelita as she gave a short wave to Aegis and Geist. “Good luck. Don’t take too long.”

The door was unlocked and the thick steel door slid open and exposed a fairly long corridor. This facility could easily be underground, as there were no windows Kunio could see. “Weapons ready,” Carmelita advised as they advanced at a brisk, but wary pace. “Turrets could-“

On cue a dozen turrets suddenly fell from previously hidden compartments in the ceiling along the entire corridor. Gas also began spewing from vents. Only it wasn’t gas, but streams of nanites falling from the ceiling. “Back!” Jaxon yelled, the MELD Operator stepping forward as his own nanites flowed off him. “Aim for the sources!”

It was a surreal sight to see the black mass congeal on the ground, like a ravenous insect swarm. Kunio quickly fired at one of the dispensers, and watched it turn to slag quickly, though it only seemed to slow the flow of nanites, not stop it. The Jaegers were firing streams of flame against the black masses.

The turrets were still there, and Zoe and Pinero were focusing on them, eliminating the ones nearby in record time, as Jaxon formed a ‘ring’ of controlled nanites which would buy time for them to plug the holes…although for all Kunio knew there were endless amounts. Hopefully there was a finite amount.

“Do we move forward?” Kunio yelled, firing at another dispenser.
“Hold for now!” Carmelita yelled back. “Jaxon! Can you handle them.”

“Working on it,” the Operator stated, hyperfocused on holding off the swarms. “They will not break through.”

Then to make matters worse at the opposite end the door slid open, revealing three Custodians entering followed by an unknown number of Mutons and Vitakara – though not typical ones. The Mutons were in a deep blue armor, painted in a pattern he hadn’t seen before. The Vitakara appeared to be Borelians of some kind with white fur. It still wasn’t clear how many there were, but there were a lot of them coming into the narrow corridor.

The Custodians were not typical either, but ones equipped with blast shields that acted as mobile cover while the aliens fired behind them. The squad, however, were completely exposed and still dealing with the nanites. It was going to get even worse, very fast if something wasn’t done now. The aliens were already raising their rifles and he made a decision.

“Get behind me!” Kunio yelled, pushing past Carmelita and hooking the rifle on his waist as he stepped parallel to Jaxon and hastily established a wide portal in front of him, which didn’t cover the whole area, but would provide some measure of protection from the onslaught of plasma fire.

He didn’t even focus hard on an exit point. It was already taking enough concentration for a portal this big.

He gritted his teeth as the portal continued, the large size difficult to sustain mentally. He heard weapon fire, flamethrowers, and the buzz of nanite warfare, behind him, of allies and enemies alike, and he risked looking behind and saw the squad appeared to be successfully beating back the nanite swarms.

Once the last hostile nanite was gone, or at least appeared to be, Jaxon turned his attention back to the oncoming aliens and directed the nanites to begin constructing temporary barriers. “How long can you hold that?” Carmelita demanded, reloading her weapon as she dashed towards him.

“I’ve got it!” He shouted back.

Jaxon was continuing to construct barriers as the Jaegers had each transformed one of their arms into their own person shields with the other ones to gauss rifles, and were moving around the portal to directly engage. “Done,” Jaxon said. “Lower the portal and get into cover!”

Kunio stumbled back as he collapsed the portal, and quickly fell behind the makeshift cover. Plasma and gauss fire began flying over his head in such heavy volumes he wasn’t sure if he should risk poking his head up. Instead he peeked around the corner and saw that the Custodians had stopped a short distance from their own barriers.

“Kunio! Grenade!” Carmelita ordered as she fired her weapon from behind cover.

He pulled out the psionic grenade, set it for a medium radius, and chucked it towards the alien lines. Unfortunately, one of the Mutons just swatted it back in front of the Custodian barriers. Fortunately, he’d used a psionic grenade since a plasma one would have probably been absorbed – which the Muton had likely presumed.

Shields wouldn’t protect against a psionic grenade.

Instead the grenade went off as a sphere of purple energy materialized and shredded the delicate internal systems of the Custodians, and turned the first line of alien attackers into bloody pieces of meat. The lines exposed, the remaining aliens started backing up, firing as they retreated, though
now there was nothing protecting them.

The Jaegers and Carmelita led the charge forward, now more easily picking off the retreating aliens. More of the Mutons fell, though enough made it back to the corridor entrance to regroup. As the corridor door closed and locked, a brief silence fell upon the squad. “Status?” Carmelita demanded of everyone as they rechecked and reloaded their weapons.

“Got hit a few times, but pretty good otherwise,” Alter Pinero said, his armor displaying the scorch marks.

“Nanite reserves are lowered after that,” Jaxon said. “We need to find some material.”

“Will the corpses do?” Martha nodded.

“It’s a start,” Jaxon began the process of harvesting the remains, as Kunio joined others in giving a positive status update, although all of those wearing Titan armor also noted their nanite reserves were lower. So far it seemed only superficial damage had been inflicted, which was a good outcome considering the hectic start. “Those weren’t standard Mutons,” Jaxon said, kneeling down by one of the more intact corpses before the nanites ate it away. “Nor Custodians either.”

“Probably Revelean’s personal stock,” Carmelita struggled, moving towards the panel which controlled the door. “Didn’t seem much different to me.”

“It knocked my grenade back,” Kunio pointed out. “That’s already faster and smarter than Mutons should be capable of.”

“Right,” Carmelita looked to Fatima. “Can you control them?”

“I tried,” Fatima admitted. “But it didn’t do anything. Their brains are…not what I am used to. Alien to even other Mutons. At first I thought it was some programming they were given that detects and overrides psionic commands.”

“Revelean’s own Manchurian Restraints,” Carmelita said grimly. “But you don’t think that’s what it was?”

“No, there was something else…like it was puppeting them. Very subtle, very refined. I’ve only seen someone like Patricia exercise that kind of control. I think it might be whatever the mind is that’s here…” Fatima put a hand on the door, tilting her head. “There was a theme running through their minds, music of some kind…” she stiffened and stumbled back. “It’s noticed me, it’s noticed us.”

“What did you do?” Carmelita demanded.

“I tried probing it,” Fatima took a sharp breath as her voice became more panicked. “Fuck, fuck, fuck, it’s connected to the Bringer.”

All of them looked to her as she said that. Oh no.

“What?” Carmelita demanded. “Are you sure?”

“You don’t forget what their minds feel like,” Fatima emphasized, hugging herself. “I wasn’t sure at first, but every Bringer-touched mind has this quality to it. This one is…worryingly powerful. I don’t know what it is, but it’s not something we’ve fought before. We’ll need to figure out something.”
“Is it intelligent?” Athena asked. “A soldier or something like…what do they call their creatures?”

“It doesn’t feel like a Caretaker, or a normal mind,” Fatima shook her head. “But it’s intelligent. It’s curious. It’s focused on us now, it wants us to come forward. It wants to see what we’ll do, I want you to come and see me…”

“Fatima!” Carmelita smacked the psions’ helmet. “Focus!”

“Ah!” Fatima gasped. “Fuck it almost got through. I can’t talk. It’s still watching us.”

“We weren’t expecting a Bringer soldier here,” Martha muttered. “What are we doing now?”

“Keep going,” Carmelita said, the scowl clear in her voice. “We’re doing our job. Fatima, you move to the back and keep that thing off us. Pinero, you watch her and smack her if she does anything funny. That thing is now focused on us. Let’s keep it like that.”

“Is the telepath going to attack?” Kunio asked Fatima.

“I don’t think so for now,” Fatima shook her head, shuddering. “Right now it seems more curious that hostile. Please stop asking questions. I need to focus.” Pinero put a hand on the psions shoulder and led her away, the psion’s fists clenched at her sides.

“So, problem,” Martha said. “None of us are telepaths.”

“Kunio has Aurora, that gives him protection,” Carmelita said clinically as she looked towards the door. “The MECs can resist more easily. The rest of us have Manchurian Restraints. We can’t be turned against each other.”

“Yeah, but that doesn’t protect us,” Martha said. “Or stop the thing from just telling our minds to die.”

“The Restraints prevent that from happening,” Carmelita said. “Worst case we get paralyzed. We’re not going back. We’re going to do our job.”

“Yes, Overseer. Just making sure we knew that.”

The light above the door suddenly flipped to green.

All of them raised their weapons. “That’s bait if I ever saw it,” Zoe muttered. “It’s definitely a trap.”

“No question,” Carmelita looked to Martha. “Bring out your gun, clear the room.”

“With pleasure, all of you stand way back,” Martha unhooked her massive Gamma Cannon and readied it. “I’ll probably have to fire this longer than normal since the door is in the way. But by the time I’m done, there shouldn’t be much left of whatever’s inside.”

“Fire at will,” Carmelita nodded.

Martha aimed the weapon at the presumed far side of the room and fired. The air before the gun became extremely distorted, and the loud hum of the weapon roared as she slowly swept her gun from one side to the other before shutting it off and lowering it.

“I think we’re good,” she said, placing it back and drawing her plasma rifle. “Might have missed one or two.”
“Line up,” Carmelita said as the two Jaegers took point, with her and Jaxon flanking them, and the rest of them behind. The door hissed open and the sight of absolute carnage greeted them. This appeared to be a storeroom of some kind; with cabinets, jars and capsules of fluid in cold storage, and boxes of unknown materials.

It was also currently decorated with the blood and liquified remains of numerous Mutons. Pieces of armor lay scattered, drenched in the fluids and there was so much there were numerous puddles in the relatively small storeroom.

“Well then,” Kunio said, considering lightly pushing on one of the Muton breastplate with his boot, though thought better of it after remembering that it might be literally cancerous. “I think it worked.”

“Monsoon Squad, this is your friendly artificial intelligence contacting you,” the glib voice of JULIAN interjected. “I have been successfully uploaded into the system, though am currently under siege by a rather persistent digital defense system – surprisingly sophisticated for a primitive intelligence. Caelior has been located and Hurricane Squad is moving to secure him now. As it stands your actions have provoked significant reaction.”

“Good,” Carmelita said. “Did you know there’s a Bringer telepath here?”

“Is that right?” JULIAN didn’t sound overly concerned at the revelation. “That would explain the mind. Aegis will want to hear it, but I trust you can handle one of the Bringer’s minions. I would also prepare for an attack. I have successfully redirected several containment teams towards your last known location.”

“Thanks, JULIAN,” Carmelita sighed. “Tell them to hurry up.”

“I will convey,” JULIAN said. “And I will do my best to delay them further. If you were to keep moving, it would also slow them down. Now I must go.”

The line ended. Carmelita looked to Fatima. “You ready?”

“Yes,” she said, though there was an undercurrent of uncertainty in her voice. “But…it’s talking to me now. If I do something…please shoot me. I don’t want to end up like one of those things.”

“That isn’t going to happen,” Carmelita said firmly. “This is something you can beat. We are all here with you and we’re all going to leave alive. Come on, let’s move out.”

***

Revelean’s Lab – Earth
5/15/2017 – 4:17 P.M.

“That’s a bit big for a Berserker,” Martha said slowly as they entered a new room.

This one appeared to be a dedicated research lab of some kind. There were holding cells, experimentation tables, and holotables scattered throughout it. There were also scientists and workers still at their stations, who all turned in unison at the unexpected guests. They were all Vitakarians, but with pale skin and seemed clone-like in appearance.

In the back, almost as a silent guard were three massive Berserkers. But these ones were absurdly beyond even what he’d expected to see in person. They were taller than the Battlemaster, had skin colored a sickly shade of green, and were equipped with some kind of pack on their backs which
had tubes connecting to various ports on their arms.

Their arms were also outfitted with mechanical augmentations. One seemed to have crushers, while the other two had single-edged blades on them.

“We should have cleared the room first,” Carmelita muttered. “Open fire!”

The scientists instead of running, all pulled out pistols and began firing white plasma bolts their direction while the Berserker were woken up, and upon seeing the XCOM soldiers, roared and charged. “Kunio, do you have one!” Carmelita asked as she began running to distract one, while firing.

Kunio looked to the charging monster. “Um, yes!”

Please don’t fail me now.

Vitakara scientists were being charged and hunted down by XCOM soldiers, willing to take the plasma hits to return fire at close range. Carmelita let loose a sharp laugh as she blasted apart a scientist at point blank range, taking his entire torso. Athena lifted another scientist off the ground with mechanical swiftness and ripped her head off.

Easu, the other Jaeger was taking on the other charging Berserker which was rampaging through the holotables. It’s skin was durable, as it was taking direct barrages, and not slowing down at all. Right now Kunio really wished they had a telekine, but they’d have to make do. His Berserker was charging and roaring, and he gathered the power and prepared to open a portal.

Now.

He opened his fist and lifted his other hand as both connecting portals were created, one on the floor which the Berserker predictably fell into. Like a child in a pool, it immediately tried to struggle its way out, but he severed the portal before it could get out, and the bottom half fell from the ceiling and hit the head of the dying alien.

The Berserker still didn’t give up, trying to drag itself to him, spewing blood and organs from it’s severed midsection. Kunio lowered his rifle and fired a barrage of psionic rounds into the head, and didn’t stop until it stopped moving and there was no more head, but a pulpy mass of yellow and green flesh.

Looking up, he saw that both Jaegers were tag-teaming the other Berserker which was suffering from dozens of scrapes and wounds. Carmelita’s Berserker was dead on the ground, with copious amounts of shrapnel in it. She must have just killed it, as she leapt an inhuman distance to land before the remaining Berserker.

Both of it’s arms restrained by the Jaegers, it roared furiously at Carmelita who responded by shoving the barrel of the alloy cannon into its mouth and pulling the trigger.

That put it on the ground quickly.

“Wow.” Was all Zoe said after seeing that, as Carmelita ripped off a chunk of one of the scientist coats and wiped the blood and gore off of her cannon. “Good shot.”

“I’ve had some practice,” she said. “Berserkers are mindless beasts. Predictable. Even these ones it seems.”

“Think we’re going to get more?” Athena glanced to the exit. “Their attacks haven’t been too bad,
thankfully.”

“Likely, but we keep moving,” Carmelita said, shooting a glance to the tense and silent Fatima who was keeping to the back, and still watched by Pinero. She didn’t ask, but Kunio knew Carmelita was concerned about the psion. So was he. Fatima was not one to buckle like this.

It must be really bad.

They entered into another corridor with plenty of rooms off to the sides to explore. It really was a labyrinth that didn’t seem to end. Hopefully Fiona could find them easily enough when it was done.

That was when they heard it.

Music.

And singing.

They all paused as the sound permeated the silent corridor. It was a deep voice, singing in a language that sounded familiar for some reason. Kunio could swear there was something familiar about it, but the voice was rich, melodic, and reached highs and lows that didn’t seem possible.

“Wait a minute…” Zoe cocked her head. “Is that opera?”

“Yes,” Fatima said quietly. “One of his favorites. He likes to sing.”

“Wonderful,” Carmelita grunted. “Probably a Weaver then.”

They continued walking down, and the voice got louder. Kunio realized that there was a tangible intensity to the song as they walked. It had started out fairly innocuous, or normal in a way (as much as opera could be – he was unfamiliar with the genre), but the tone had grown sadder.

It reminded him of the worst times of his life. When he mourned the deaths of his friends in war. When he’d seen Japan fall, twice. When he’d seen the butchery in Beijing. A sad helplessness that overcame him as he realized there was so little he was capable of doing.

But it does not have to be that way.

You could be something so much more.

Part of a plan much grander.

Get out of my head!

Kunio jolted himself out of the stupor he’d been lulled into by the creature which had somehow subverted his own defenses. That shook him. Something that subtle should not be possible, at least not to something which wasn’t an Ethereal. What was this thing. Then he realized the voice was not the only one singing.

“Hold,” Carmelita ordered, lifting a hand as she turned to Fatima who seemed to be in a trance, the words she was singing in perfect sync with the voice, and tuned almost to compliment it. “Psion Tariq,” she said slowly. “Take off your helmet.”

She didn’t, and just kept singing.

She didn’t make any threatening gestures, she just stood there, still; listless.
Pinero moved up behind her and she lifted a hand, psionic power rippling as Pinero was paralyzed as the Manchurian Restraints kicked in. “Codeword: Hodophobia,” Carmelita said without hesitation. “Initiate shutdown for sixteen hours.”

On cue Fatima crumpled to the ground, and Pinero was similarly freed. Carmelita knelt down beside the unconscious psion. “What did you do?” Zoe asked incredulously.

“I used her codeword,” Carmelita said, taking off Fatima’s helmet to make sure she was unconscious. “First time I’ve had to do that actually. Either that, or we’d have killed her or she would have killed us. This is safer.”

“I’ll carry her,” Athena said, lumbering over and slinging the psion over her shoulder. “But I think we should head back. This is too dangerous to keep going. We’re already screwed without a telepath and if it got into her mind, it knows we’re a distraction. I’m all for suicide missions, but this is dying for the sake of dying.”

Carmelita thought for a moment, then nodded. “Alright. We start moving away. They’ve had a lot of time as it is.”

Kunio couldn’t help but feel relieved as they moved in the opposite direction, although instead of the singing fading, it instead was only growing louder and the tone was changing. It held a fiery intensity; a war-like anger that he could feel in the words despite the foreign language.

They reached the door back into the lab where the Berserkers had been, and the thing was waiting for them.

The first thing that struck Kunio was that it looked like it was in the shape of a brain – if that brain had been designed to be the size of a forklift, with a sickly skin-colored outer shell around it, hiding the ridges. It didn’t help that there were six magenta eyes that were grated onto the front, arranged in a shape he felt he’d seen before.

If only that was the weirdest thing about it.

Two long, gangly arms hung from the ‘body’ which hung suspected in the air. Although they were less ‘arms’ and more ‘tendrils which had hands at the end’. The most disturbing thing was the mouth which was grafted to the lower body, an unnatural organ that did look exactly like a disembodied mouth.

A deep and pervasive shudder ran down Kunio’s spine as he beheld the unholy monstrosity. He’d done his research, and had seen some of the creatures the Bringer employed, and what it was capable of, but this was something so perversely unnatural that he struggled to realize that it was well and truly alive.

Yet it was. He couldn’t deny reality before him.

Still, there was one thing certain:

*This thing should not exist.*

The hands spread wide, as if the thing was greeting them.

It had not stopped singing either, and the tempo had changed to a faster pace.

Carmelita made a snap decision. “Retreat!” She called, and they all started running in the opposite direction, with some firing in the direction of the creature. Without moving it either blocked,
deflected or otherwise avoided the attacks. Then with the idleness of a toying predator, it followed them.

A hand reached out, and the Jaegers were suddenly slowed as telekinetic leashes wrapped around their suits. They wasted no time and turned to fire at the creature, though their weapons crumpled and warped. The legs of the MEC snapped and twisted, but neither cried out in pain, though visibly resisted the telekinetic power.

Zoe and Pinero turned and fire, though it directed its focus to them, and after a few seconds, they stopped and started screaming in pain as something happened that he couldn’t see. In desperation he threw his remaining psionic grenade towards the creature, and to his dismay it landed in a micro-portal and vanished, never to be seen again.

*Oh no, this thing can teleport.*

Jaxon was directing his nanites, but with a wave of the hand he was engulfed in a torrent of psionic power so strong that it only left embers behind. Martha was reaching for her Gamma rifle, but instead it was telekinetically ripped out of her hands, and almost childishly taunted with it being held just out of reach.

Kunio fired, but it seemed to do almost nothing as a barrier appeared before the bolts could hit. Looking around he saw that Zoe and Pinero had literally been melted; it seemed to thankfully have been fast, but crumpled power armor leaking a disgusting fluid was all that remained of them.

Just what was this thing?

The Gamma rifle taunting Martha suddenly self-destructed, a precaution Kunio was very thankful for because he did not want that thing falling into Collective hands. The warped pieces useless, Martha wasn’t spared from the onslaught as the pieces of the Gamma rifle were thrown into her, and her neck performed a sharp one-eighty turn, killing her instantly.

The unconscious body of Fatima was freed from the grasp of Athena, and floated towards the creature who cradled her body almost tenderly, taking off the helmet and caressing the face with the grotesque fingers, an almost tender display for something so monstrous. Carmelita leapt into the air, trying to get a flanking shot, but she twisted in the air and was slammed into the far wall.

He was the last one standing.

Carmelita might still be alive, but that was it. The Jaegers weren’t moving. Everyone else was vaporized or sludge. He needed to get out of here now. But he also saw Fatima, and how the creature seemed focused on her. She was a psion of XCOM. She knew things. Valuable things. Manchurian restraints or not, this thing had gotten into her head, and it could do it again.

*If I do something…please shoot me. I don’t want to end up like one of those things.*

Heart in his throat, Kunio lifted his rifle and paused. If he shot it, the creature would just block it. But he might have another solution. He pulled out the Thought Bomb and set it to kill. It wouldn’t kill the creature…but Fatima had no defenses, and he had to hope the creature wasn’t protecting her.

He would be protected since his suit strengthened his mind, so he increased the radius to where he could activate it and it would reach her. With his thumb he pressed the trigger, praying that he was right and wouldn’t kill himself like this. The delay passed, and he was still alive.

Fatima suddenly went still.
The singing stopped, and the creature caressed the body, seemingly confused.

He had seconds to escape on his own, and first opened a portal that landed him on the other side of the room next to an injured, but fortunately alive Carmelita. She was badly hurt, and he realized a problem – he definitely couldn’t carry her in her armor. “Hey,” he told her quietly, knowing the creature was going to turn to him in moments. “Sorry about this, but one of us needs to live.”

He closed his eyes, concentrated, and opened a portal, and then opened another one under Carmelita. Once she fell through, he was forced to collapse it. He’d never tried one that long, and he could only hope she’d made it safely. Eyes watering from exhaustion, he was vaguely aware of the creature floating towards him, the ferocity palpable.

He gritted his teeth and lifted his rifle.

There was a flash behind him, a hand was placed on his shoulder and he was suddenly back in the deployment room he’d been in hours before.

Almost frozen in shock, he didn’t immediately put down his rifle. “Hey, it’s alright, you’re safe,” Fiona said, taking her helmet off. “I’m sorry I didn’t come sooner, we ran into complications.”

“So did we,” he said tonelessly, taking his own helmet off. “Did you get him out?”

*Please. Don’t let this be for nothing.*

“Yes,” she nodded. “We got him out. He’s with us.”

“Right, good,” he shakily lowered his rifle, taking a breath as the adrenaline began fading. “I really hope he was worth it.”

Fiona looked at him sympathetically. “Are you the only one?”

“I don’t think so,” he said. “Before you came, I teleported Carmelita away. She was badly hurt. If I did it right…she’s probably somewhere in London.”

“Why London?”

“The first place I teleported to,” he shrugged. “I remember it.”

“We’ll pick her up,” she said, then leaned in and gave him a hug. “I’m sorry so many people died, but I’m glad you’re alive.”

“At least it wasn’t for nothing,” he said, accepting the hug. “I hope he was worth it.”

“He will be,” she promised. “And he’s going to want some payback.”

To be continued in Chapter 60:

*Godkiller*
Godkiller

Chapter Notes

So a couple of things to add since the last update, the most relevant being that there has been artwork done for the series! One is artwork of Saudia (posted in her own XCOM File), and there have been a number of seals/emblems for the various factions/divisions. Right now There are a number of those done, and they're put into the XCOM Files in front of respective chapters (some placeholders under specific ones are developed). So if interested, give those a look!

Hallway, Mars Observation Station – Mars Orbit

5/22/2017 – 9:01 A.M.

There is a war going on, Ravarian thought with a weariness which had come to define him in recent days, the Humans have a new nanoweapon. Miridian is still loose. Caelior was freed by XCOM. And here I am with two insufferable, immature, unprofessional children.

Unfortunately, said children – who were both twenty Human years - were capable of psionics – telepathy and teleportation to be specific. And a smattering of telekinesis. Quisilia was at least capable of picking his Avatars with some power, though unfortunately they also reflected the worst parts of his personality. Of course, it shouldn’t be a surprise that they were as immaturely trollish as he was.

And both of them had decided to continually have fun at his expense.

He’d been walking to his office, preparing for a day of work, when both of the Mori twins had pulled him aside and stated he would be participating in one of the many meme videos they did. To make matters worse, they’d kidnapped his cat and were effectively holding it ransom until he participated.

So now he stood in a hallway as Sabrina Mori stood on a small maintenance platform above the ground. Both women hadn’t worn their official uniforms (he didn’t even know if there was a unified Harbinger uniform, but almost anything would be better than what they choose), and instead practically wore the same clothes they had on Earth. Casual shirts, jeans, and overly expensive jewelry.

Sabrina held his cat, and Cali mewed up at her, wanting to be as done with this as he did. She extended one hand out dramatically, while cradling his cat with the other. “It’s over Ravarian!” She called boastfully. “I have the high ground!”

The cat meowed and tried pawing her face which she gently ignored.

Ravarian stood with his arms crossed, unimpressed.

“Say your line!” The blue-haired Micaiah Mori hissed from beside him, keeping her smartphone steady as she was filming.
Ravarian rolled his eyes, a gesture he was doing a lot more of in recent memory. Though neither could tell since it wasn’t as obvious when Vitakara did it. He sighed. “You underestimate my firepower.” He could hear the scowl from Micaiah at his line delivery, but he could not be bothered to put any more effort into this utterly stupid exercise than necessary.

“Don’t try it!” Sabrina called.

He pulled out his prop weapon and sighed as he felt him be telekinetically grabbed for the big leap. It was supposed to be accompanied by a battle cry of some kind. But he really couldn’t be bothered. “Aaaaaaaaaa.” He said in a monotone as he jumped in slow motion, before Sabrina gave her next line, which was still something he hadn’t really figured out.

He was pretty sure she spoke in a made-up language, but whatever the language was, it apparently made people fly backwards, and so he was violently thrown backwards into a wall. At least it wasn’t hard enough to actually injure him, even if Micaiah wasn’t too gentle. “And…cut!” She called, as he got back up, and Sabrina jumped to the ground.

“Excellent!” Sabrina said, nuzzling Cali, who hissed, clearly annoyed. “And you little fluffball, were brilliant.”

The cat hissed again, but she seemed not to care.

“This is going to be rad, sista,” Micaiah giggled as she reviewed the footage. “We’re going to be getting so many likes on this it’s gonna be so sick.”

*Not as sick as I feel listening to you both butcher this Human language.* Ravarian thought sourly as Sabrina kept gushing. He knew that both sisters were perfectly capable of reading his mind, and he didn’t care. Nor did they, as whenever they did, they seemed to just find it funny. “It totally slaps, sista. This is totes going to be number one trending when I finish it.”

“#Moripower!”

“Unlimited power!”

Both sisters high-fived each other.

“Are you finished?” Ravarian asked wearily. “If you are, I have actual work to do. And give me my cat back.”

“Ravarian, fam, listen,” Sabrina came up and slung an arm around him. Or tried, which was more difficult since he was much bigger than both of them, so she settled for resting a hand on his shoulder. “Ya gotta expand your horizons, my xeno dude. Wars aren’t won on battlefields, that stuff happened in the older days. In this enlightened and lit age, our guns are videos, our ammo is likes, and our propaganda is memes.”

Micaiah nodded sagely. “That’s deep, sista.”

Ravarian rubbed his eyes. That had to have been one of the stupidest things he had ever heard. He was mildly surprised either of them knew what the concept of propaganda was. He wondered if they’d met the Battlemaster. Probably not, because he would not tolerate such drivel. “Enough. I need to get back to work.”

“Ravi, trust me, you’re going to be doing a lot more good doing stuff like this then…” Sabrina waved a hand idly, frowning as she thought for a minute. “I don’t know, whatever you do. You’ll be famous! A friendly alien face for the Collective! You could do with some humanization.”
“I’m an alien, you i-” Ravarian stopped himself, sighed, and narrowed his eyes at the twins. “Give me my cat. Now.”

“Sheesh, no need to get so testy, Ravi,” Sabrina gave Cali a kiss on the nose – something the cat did not seem appreciative of – before handing her over. “But you’ll thank me later when you’re number one in trending! This is going to be fire, trust me.”

“Oh, there was one more thing,” Sabrina fished out her own smartphone. “Your battle shout was lame. Can you do it again? We can dub it over in post.”

Ravarian stared incredulously before narrowing his eyes. “No.”

“Lame,” she drawled, then smiled as her eyes flashed. “Boo!”

There was no way he should have been surprised, but the word was accompanied by a sudden surge of adrenaline and shock that permeated his body. It was invasive, deep, and impossible to hide or ignore. He let out a small shout by instinct, and Sabrina smiled. “Perfect! More of a sound of fear than battle cry, but we’ll make this bad boy work.”

Ravarian was still standing still in some degree of shock as the adrenaline began to fade. “Thanks, fam,” Micaiah said, patting him on the shoulder as she walked away. “We’ll tell daddy Quisilia you were very helpful.” Both women walked away, chuckling to themselves like the demented schoolgirls they were.

His cat meowed at him, almost in concern.

“I’m sorry you had to endure that,” Ravarian sighed as he once more made his way to his office. “I’ll try and make it up to you. Treats?” The cat meowed, though Ravarian knew enough about cats to know this was largely a coincidence. Still, Cali liked the treats he ordered special-made on Vitakar. Human-made ones were objectively inferior.

Of all the developments to happen during his tenure, the arrival of the Mori twins ranked among the worst. Ravarian had no idea where they had come from, or how Quisilia had found them, but they’d showed up one day and began terrorizing him – and anyone else who had an interest in getting work done. There was a strong argument for using them in some forms of enhanced interrogation, considering how painful it was to listen to them speak. He’d considered having a CODEX record them for that purpose.

Cogitian would have a legitimate fit if he heard them.

“You know,” he told the cat idly. “You may be the only one who really respects me around here.” He ruffled the head of the cat, which purred in appreciation. He walked into his office, and set the cat down. “Alright, you can go take a nap.”

The cat instead, waiting until he took a seat, leapt into his lap and curled up, still purring. Normally he would push the cat down, but today he made an exception and settled in for a slightly uncomfortable hour or so until Cali got bored and left.

There was a camera flash. “Good morning!” Quisilia greeted, materializing in front of him as he lowered the smartphone.

Ravarian sighed, and ignored the Ethereal; instead turning on his computer.
Quisilia waved a hand. “Hello there?”

“I’m busy,” Ravarian said testily, not entirely caring about how irritating an Ethereal wasn’t a good idea. “I’ve already lost enough time to fulfilling the inane requests of your Harbingers.”

“Ah, my apologies,” Quisilia said, sounding almost sincere. “I told them to not bother you when you were working.”

“Tell them to not bother me at all,” Ravarian stated, turning to glare at the Ethereal directly. “I have enough issues without two immature children compounding them. The next time one of them messes with my head, I will ask Yang to execute them. She is, thankfully, a professional.”

“No need to go to such extremes,” Quisilia waved a hand. “I’ll restrain them more. It is time they begin to more directly participate on Earth anyway beyond the digital realm.”

Ravarian genuinely didn’t know if that was a good thing or not. Knowing his luck, they would screw up existing operations, while also managing to survive. Like a somehow more incompetent version of Isomnum, except younger, dumber, and female. “Be sure to give them plenty of videos, likes, and memes, since that’s what they think a war is won on.”

“I suspect they will use many,” Quisilia agreed wistfully. “Perhaps not to your taste, but they have spirit and creative minds.”

“We will disagree there,” Ravarian answered. “But wherever they are sent, do not tell me.”

“Oh?” Quisilia flipped one of his blades in his hand. “Why?”

“Because,” Ravarian said, turning back to his work. “I may be motivated to make sure they don’t come back.”

***

*Dreadnought of the Harbinger – Central Command*

5/17/2017 – 12:19 P.M.

Patricia could see multiple cities highlighted across the hologlobe in front of her. Armored in her Harbinger attire, she was prepared for a new fight. Retaliation was necessary for the loss of Florida, and a strong message needed to be sent now that the short lull had passed. More importantly, with Caelior now lost, the narrative could not be shifted to further seem to expose vulnerabilities.

Revelean had assured them the facility was safe. While the creature he had kept had been able to repel one XCOM squad, it clearly hadn’t been enough. Patricia would have greatly preferred a captured Caelior and no XCOM casualties, then killing an XCOM squad and losing Caelior.

An Ethereal was a force multiplier greater than an XCOM squad.

She was not looking forward to trying to capture him again.

There had been multiple discussions on what form the response was to take. There were many; some intensive, some more passive. Everyone agreed recent events had been a setback, but not something they couldn’t eventually bounce back from. There had been some debate, and a number of tactics had been decided.
One less focused, handled by the fleets.

One more focused, which she would execute personally.

“The Cleanser Ships are in place,” I’Sari informed. “However, they remain outside effective range of what—”

“I am aware,” Patricia said quietly. “This was discussed. Precision is not necessary at this moment. ADVENT and XCOM believe they are untouchable right now. They need a reminder of the firepower that faces them.”

“The estimated damage is expected to be minimal,” Assimilator-2 stated as he read the outgoing projections and impact points. “Minimal collateral civilian damage and a majority of critical structures remaining in place. Effects will be limited to psychological and long-term consequences.”

“I would recommend we augment bombardment with Chryssalids, chemical weapons, or crop poisons,” Casas added, the Vitakarian’s glittering blue eyes glowing brightly. “However, projectiles will…suffice if intimidation is your goal. But the effects are minimal. Almost a waste.”

“Not a waste,” she disputed with lifted palm. “We don’t need them to be as damaged right now.” She lowered her hand as her voice turned thoughtful. “But they will feel afraid in return. Every citizen will understand what even ADVENT cannot suppress— that this is a war they cannot win. And who knows— we might just make a lucky strike.”

“Our ships will endeavor to do their best,” I’Sari stated with a stiff movement of the Andromedon helmet. “They stand by at your command, Harbinger.”

Patricia nodded. “Switch to ship and base feeds.” The holoprojections changed to show Earth from the Moon Base, as well as the feeds of several Cleanser Ships, of which many more of the spacecraft could be made out in various parts of the orbit and nearby their brethren. Dozens of them, hovering outside the effective range of the Flak Towers and any other defenses ADVENT could rely on.

ADVENT doubtless knew they were there. They were probably waiting for them to move closer.

She clasped her hands behind her back, as she closed her eyes and gently probed the planet with a telepathic nudge. On such a scale she couldn’t have done much on her own, but every telepath felt something. They wouldn’t have necessarily known it was her, but they knew it was something.

Something that would make them uneasy.

Just where she wanted them.

Her eyes remained closed.

“Fire.”

There was very little tangible reaction that they could see from space, though there was the faint flicker of the burning rounds being fired at the surface of the planet. They watched the bombardment for some time in silence, none choosing to comment on the streaks of fire impacting the Earth.

She probed the planet again, seeking only additional verification. It was small at first, but panic was something which spread quickly. It flared brightly and clearly; she could sense it rising all
over the world ever so slowly as the sounds and sights of the war came to the most isolated.

Enough time had passed. The panic was at an acceptable level.

“Switch to internet feeds,” Patricia finally said, opening her eyes. “Someone will be recording this.”

The feeds switched to a mixture of news stations, Twitter videos, and livestreams which showed cities, towns, and bases all across the world being bombarded; sometimes from the panicked perspectives of individuals holding cell phones, and news crews rushing to get to shelter. From nations, to states, provinces, and reservations, hundreds of locations were being slammed with projectiles from the skies. The explosions were loud, occasionally a building was vaporized or a person was thrown into the air in the background.

But this bombardment was like mortar fire. Dangerous if it hit. A distraction if not.

It didn’t especially matter. The terror in the voices from the livestreams; the shock from the news anchors, and the tense fear they projected as they clutched their papers and flinched as they continued reporting, even as they rested in the line of fire. Millions of people who felt trapped and fearful, as they stayed in place, waiting for death as the war which had eluded them came into their lives for the first time.

It didn’t matter if it didn’t cause lasting damage. No Human would forget this day for a long time. It might strengthen the resolve of some, but the Human mind could only endure so much – and the average Human lacked the mental fortitude of a soldier.

“Continue the bombardment for the next six hours,” she said as she unhooked her mask and prepared to put it on. “I have cities to drown.”

There was a chorus of affirming nods as she fixed the mask on, and felt the connection harden as the Imperator’s mind merged with her own.

_They are distracted now._

_Frightened. Tense. Wary._

_The time is right._

Her hands clenched as she opened a portal before her, crossed her arms and jumped into it. Instantly she felt the wind in the air, the hot sun shining overhead as she fell into Chesapeake Bay, and with the few seconds she was above water, she saw the landmarks of D.C. in the distance, a city which had still not fully recovered from the invasion earlier in the war by the Battlemaster.

She suspected no one saw her plunge into the water as she quickly sank to the bottom. She had no oxygen or gear. It didn’t matter; the water would soon no longer be around her. With a telekinetic pull, she slammed down to the floor of the lake, planting herself in the shifting mud before pulling the water away from her as if extracting herself from honey.

First a vertical tunnel was created, a center of a maelstrom that allowed air and sun down upon her. From there it was a theoretically simple matter of moving the water before her, to behind her. In reality it was grueling, complicated work. Water was not so easy to move in bulk telekinetically, but she was a Harbinger.

There was nothing that couldn’t be done.
With water dripping from her armor and hair, a titanic wave was forming behind her as the bay slowly had its water drawn into an artificial tsunami, behind a slightly distorted barrier that she maintained with a lifted hand, suspended in the air and growing ever-larger. There were a smattering of ships and vessels which were caught in the wave, with unprotected minds within them that she ended with a single thought; a relative mercy compared to drowning.

She smiled as she saw helicopters and soldiers in the distance coming. Unfortunate they hadn’t come sooner – nor had a means of defending themselves. Not truly. She could sense a number of Priests incoming, but it was not nearly enough. It wouldn’t even slow her down, for that matter.

Anticipating a barrage of weapons first, she erected a dome of psionic energy around herself with her free hand, protecting from anything they could throw at her as she began moving backwards, step by ponderous step as a final measure to grow the wave.

She held the weight of an ocean as the wave grew higher and higher. *Come on, XCOM, take the bait. Come to me now.*

Sure enough, just seconds later there was a flash of blue-green as the T’Leth Agent Fiona appeared, sword drawn and glowing with power. She brandished her sword as she walked forward menacingly. “You will not—”

Patricia smiled under her mask and her fingers relaxed as she let her arm drop, anchoring herself in the mud telekinetically, and encasing herself in a small psionic box as tons upon tons of water slammed down onto her and swept outwards to the city. Patricia didn’t see if Fiona escaped before the water hit, but she knew that it couldn’t be stopped, and as the water rushed over her, she opened another portal and stepped within.

There were a few more stops to make yet before the day was done.

***

Desert Outskirts – Vitakar

5/14/2017 – 2:23 P.M.

It had been a long time since Nartha had been anywhere close to the deserts (discounting the Praesidium, which was technically in a desert even if he’d never really gone outside). He had never liked them. It was far too hot, even if he eventually got used to it, in the sense where he’d accepted his misery. It was empty, and indeed there was nothing but dunes for as far as he could see. It was almost a complete wasteland, where it seemed difficult for life to thrive.

Still, all of this could technically be applied to the Borelian Wastes. But the deserts had something the Wastes did not – *sand.*

He hated sand. It got everywhere, was stickier and difficult to get completely off without a full shower or bath, and was a constant source of irritation, either from it spraying into his eyes, mouth, or nose. Not including how irritating it was psychologically as one futilely tried to get the grains off their bodies.

All of them stood on the open dunes which extended as far as the eye could see. A light wind whipped sand grains around, lightly dusting all of them. The only one who seemed most suited to tolerate it was Shun who wore her Titan armor, though had her helmet off. The sun beat down on them, hot, sweltering, and yet another thing he disliked about this place.

“You really don’t like it here, don’t you?” Sorras seemed amused.
Nartha glanced at him. “Is it that obvious?”

“Very.”

He also looked to Shun. “Is it?”

She smiled. “Yeah. Don’t worry, I don’t like it either.”

Nartha shook his head, running a hand over his head. “Why would anyone voluntarily choose to live here?”

“There are worse places,” Sorras broke the tip of a dune with the toe of his boot and the sand blew away in the light wind. “Cobrarians are adapted to the unpleasant aspects of the desert. You might as well ask why the Sar’Manda live underwater, or the Borelians prefer living in utter cold. Discomfort is relative.”

“That may have been one of the more insightful things you’ve said,” Shun told him dryly. “I’m almost impressed.”

“Please don’t get me wrong,” Sorras bared his teeth as he fiddled with the hilt of his sword. “I’d gut every one of the Hierarchy, but I won’t condemn them for their place of residence. There are some things we don’t have any control over.”

“Keep that attitude to yourself,” Nartha warned with a sigh. “We’re here for allies.”

“Note I said Hierarchy,” Sorras pointed out. “Of which our contact is also interested in disposing of.”

And so continued the main issue between them. “The Hierarchy can still be reasoned with,” Nartha insisted warily. “They just need a reason to believe things can change.”

“Please,” Sorras rolled his eyes. “The Hierarchy is too cowardly to do anything but remain ‘neutral’. Neutrality, indifference, is still picking a side. We do not need them to be sympathetic. We do not need them to be understanding. We need them to act. To do something brave for once in their lives.”

The Dath’Haram made a noise of disgust as he paced in a circle on the dunes. “Don’t get your hopes up. The Hierarchy has never been concerned with anything but themselves. There is a reason you rarely see them deeply involved beyond their territory, outside of the defecting males.”

“I’m not sure what anyone expected,” Shun shrugged as she sat down on one of the dunes. “If what Nartha told me about their history is right, they created this problem themselves in an understandable, if shortsighted way to address the issues of their civil war.” She made a dismissive motion. “Artificially try and control half of your population, and you either will lose control quickly, or you devote everything to keep them under control.”

“Not even half,” Sorras corrected. “Cobrarian gender ratios are extremely skewed towards females. A smaller male population is far easier to control when you have numbers on your side.”

“That might explain how it’s endured for so long then,” Shun mused.

“You sound like you have some insight into that,” Sorras noted, looking at the woman curiously.

“My country was…well, we had several attempts at population controls,” Shun answered with a tight voice. “Limited childbirths. Traditional gender norms and a cultural preference for males. It
didn’t work, obviously, and in the process we would have sabotaged our future population.” She shrugged. “It remains to be seen if that’ll continue now that China is in ADVENT, but I doubt that issue is going away. The point is that actions like that can’t last without something being sacrificed in the process.”

“Indeed,” Sorras nodded. “Even the Dath’Haram somehow know better than to impose restrictions based on racial criteria. Pacifist cowards they may be, but they are not hypocrites.”

“I am a reasonable individual,” Sorras mused. “If someone can prove themselves worth preserving, I will work with them. I may even advocate for them. The problem, dear Shun, is that the vast majority are irredeemable. They are not me. They are not like our Cobrarian friend.”

“And you base this on nothing but race,” Shun crossed her arms. “We have a term for that on Earth.”

Sorras chuckled. “I’m sure you do. I don’t need your approval, Human, nor should you compare your pathetically superficial differences to our species, whose races are radically different in physiology and psychology. Some are inferior. This is not my bias, but objective fact.” He tapped his head and smiled. “If you haven’t noticed, I am not normal. I am an aberration of my race – a benefit, but an aberration nonetheless. I’m simply selfless enough to not let it cloud my judgement.”

“Selfless,” Shun snorted. “A true patriot you are.”

“Indeed, I concur,” he agreed with his own sarcasm. “I could have lived my life as a soft, weak Dath’Haram in the forests. It would have been easy. I would have been accepted and loved. But I didn’t, dear Shun, I experienced firsthand the utter weakness and depravity my race was capable of. They are nothing but apathetic to reality. They exist in fantasy and naivety, and have ensured our species remains in the grip of the Zararch and Ethereals. Unlike some, Human, I do not deny what my race has done. I accept it, and support what must be done to ensure-”

“Enough,” Nartha interrupted. “I think the Commander made it clear that there will be no genocide or racial cleansing, much as you would wish that, Sorras. And keep that to yourself in the future, neither of us are interested in your justifications.”

Sorras simply made an acknowledging wave. “She brought it up, but I will refrain in the future.”

“Good,” Nartha said as he turned back to the dune expanse, then narrowed his eyes, as he saw something in the distance. “Heads up. Looks like he’s coming.”

Shun put her helmet on and pulled out her rifle, aiming it in the distance where the speeder was incoming. Nartha also drew his pistol and Sorras rested his sniper rifle on a dune, using it as makeshift cover in the event this went downhill. However, the precautions were unnecessary, as there was only one occupant, who ignored the weapons, and slithered out once he’d parked the speeder.

“Hir’laras’silar,” Nartha greeted, holstering his weapon. “Greetings.”

In many ways, there was very little that differentiated the Cobrarian males from the females, and Laras had many similar characteristics to his female kin. Golden scales, perhaps a slightly bigger frame, but what fully differentiated the males was the hood they possessed that flared in the bright Vitakar sun.
Many described their hoods as intimidating. The female Cobrarians obviously found them striking. All Nartha could think of was that it made their heads much bigger targets. Besides the point now, as the Cobrarian slithered closer, shooting suspicious glances at the armored Shun. “[A Human here?]”

“She’s an ally,” Nartha gestured to her, motioning to take her helmet off. Shun complied, and while it didn’t seem to put the Cobrarian at complete ease, it was enough to risk returning his attention back to Nartha.

“[You were not followed?]” He asked.

“Of course not,” Sorras snorted. “We know what we are doing.”

“[And yet your people were attacked,]” Laras recounted in a neutral voice. “[Not even the Hierarchy was immune to the Speaker’s purge. There were many taken. More will likely follow. How can you assure me that assisting you will be safe?]”

“We are still alive, Miridian still lives,” Sorras said. “What happened was an…error. A critical mistake that will not be repeated. We are augmented now with allies the Zararch would rather keep quiet. We are supported by XCOM and ADVENT.”

“[The names mean little,]” Laras’s tongue flicked out. “[Species on a world far from here, in a war we are not concerned with.]”

“You should concern yourself with it,” Nartha stated. “Because that war is the reason the Zararch fear the Nulorian. If the Collective wins on Earth, any hope you have for change in the Hierarchy dies with them. The Speaker is here to ensure the grip the Ethereals hold over our species exists forever – and that is because of the Humans.”

“[If you insist on such, then I cannot dissuade you,]” Laras waved a hand. “[I only care if you can ensure the Hierarchy falls.]”

“Of course,” Sorras grinned. “And with pleasure.”

“If necessary,” Nartha corrected sternly. “We are in agreement that the Hierarchy needs to change. I do not dispute your desire for equality, but I do not want to engage in unnecessary fights for the sake of it. The Council of Matriarchs could be an ally. I’ve seen the numbers when I was in the Zararch – they are viewed as ‘security risks’. Many of them are marked by the Zararch for deviant activity. I believe they could be convinced to turn on the Collective.”

“I do not care,” Laras hissed. “[They only behave as such because they are distracted and distrustful. They are not reliable. They do not care about any but themselves and holding onto their power. Victory means nothing so long as the Matriarchs live. If you cannot realize this, then we have little to discuss.]”

“And what if we convince them to make changes immediately?” Nartha asked. “If they prove unreasonable, then fine. But we will not wipe them out for the sake of past deeds, otherwise you could not touch the Nulorian based on what they have done. I want to give them a chance. I think we can both agree that it’s preferable if everyone works together instead of your race being torn apart in a civil war.”

The Cobrarian was silent for a few moments, contemplating as his tongue slithered out every few seconds. “[Perhaps one chance. But only one.]”

Nartha nodded. “Fair enough.”
“We’ve delayed long enough,” Sorras stepped forward. “Now, if that’s figured out, you have information on the Hierarchy for us. Let’s hear the details.”

“[Very well,]” Laras nodded. “[Listen carefully. What I know will not be relevant for much longer.]”

The Prism

5/21/2017 – 11:23 A.M.

Hallian stood as still as a statue, slightly petrified.

He had just walked through the Gateway to come and conduct a medical check on Yang. It had started out normal enough, as he exited into the small room containing the Gateway, and walked out into the open kitchen and living space area. And just as he was about to proceed forward, he saw it.

Directly in front of him, laying on the ground, was a massive creature. It looked to be some kind of cybernetic and armored creature, but whatever it was, it was objectively terrifying. It looked almost like a cat from Earth, if someone had taken it and enlarged it fifty times. It was definitely bigger than he was, and those teeth were...big.

Did Humans have cats this large? Not as pets, surely.

More importantly, what was it doing here?

The creature did seem to be sleeping, but Hallian felt that if he moved, it would awaken and probably maul and eat him. He stiffened as the cat stretched, extending its massive paws as it opened its eyes and met his own. Hallian licked his lips. How did Humans address their pets? “Good kitty, nice kitty...” he said slowly as he moved slightly backwards, wanting to move back towards the Gateway, but also afraid that if he broke eye contact, the cat would lunge at him.

Or run after him.

Both were bad.

“Farath! Come!” A sharp familiar voice, amplified by a harsh vocoder, called out. To his relief, the cat stood up, and trotted over to Yang walking in from behind the creature, who must have just come from the Prism training grounds, since she was fully armored and even had a sword in her hand. The Human woman seemed dwarfed before the creature, but it nonetheless nuzzled her helmeted face and she scratched its chin.

“Good boy, now stop scaring him,” she admonished, shooing the creature away as she sheathed her sword. “Apologies for that. I wasn’t aware you hadn’t been here before, or that you were coming this early, otherwise I would have made sure he was put away.”

“No issue, Harbinger Shuren,” he said, his voice surprisingly firm despite the terror, as he took a long breath as the danger faded. “Though I believe I am on time.”

She glanced to a clock. “Mm. So you are. My mistake, Runi’hallian’harasota.”

“Hallian is fine, Harbinger,” he was almost flattered she always defaulted to his full name instead of shortening it. More impressive that she remembered it at all, especially considering she wasn’t
Vitakara. Even Vitakara tended to address new people as their full name once, and then defaulted to the core name.

He looked to the door where the creature had exited. “If I may ask…what was that?”

“A tiger, a big cat from Earth,” she answered with an amused tone, taking off her winged helmet, setting it on a nearby counter with a clack, and shaking her short hair free, though most of it stuck to her sweaty forehead. “Somehow Fectorian managed to capture one, mechanized it, and gave it to the Battlemaster as a gift. Don’t ask me why. But Farath is much nicer than he looks. Unless you attack either of us. Then he’s more dangerous.”

That creature could definitely fit right into the Dath’Haram forests, Hallian thought as he approached her. “I’m thankful for your intervention in any case.”

“Don’t mention it,” she said, going over to a fridge, opening it. “Do you want something?”

Not that he wasn’t actually tempted, but she was being oddly friendly right now. Granted, he hadn’t actually spent a long time with her when she was conscious, so she may be like this. It was an oddly nice gesture from a host he didn’t expect Humans to have. Almost like being back on Vitakar, or at least among the Dath’Haram.

In any event, he wasn’t hungry.

“Unnecessary,” he waved off. “But thank you for offering. I’m just here to perform your medical check. Although I see you’re not following the guidance I left for you.”

“I appreciate the effort, but you seemed to be underestimating me. I know my body and limits,” she shrugged, pouring some water and downed it in a few seconds. “More importantly, I’m going to need it.”

He, and many medics, seemed to be cursed with stubborn patients. Why did patients resist listening to actual medical professionals? Soldiers in particular had this issue, especially if they were augmented like Yang. Still, he needed to choose his words with some care, because she could very easily end him with a gesture.

But she was nicer than he was expecting. He felt in less danger in her presence than the Battlemaster.

And he had saved her life. He felt there was some justification for not wanting her to end up under the knife again. “Perhaps,” he cautiously allowed. “But you’re not invincible, no matter how much you’ve been enhanced. The problem you and similar enhanced people have is thinking you can do anything. You should take care of yourself.”

She raised an eyebrow, downing another glass of water. “And you have a lot of experience with enhanced individuals?”

“Well, not exactly,” he amended. “But I do know biology, and the science behind your modifications.” He gestured to her. “You’ve consumed four glasses in under two minutes. That is not normal consumption and tells me you’ve overexerted yourself. I wouldn’t be surprised if you clear out that fridge of food, and then need a day of sleep to fully recover.”

Her smile wavered. “Afraid I don’t have a choice, doctor. I wish I did.”

“I doubt the Battlemaster would want you pushing yourself to exhaustion,” Hallian prodded. “Taking care of yourself is important.”
She seemed to find that funny, and poured another glass of water, swirling it around before drinking. “I seem to have issues with that.”

Hallian pursed his lips and narrowed his eyes at the odd comment. He watched her for a few seconds, and picked up a bunch of odd things that he’d registered, but not given conscious thought to. The glass in her hand shook ever so slightly, with her other hand she gripped the counter, as if to steady herself. Her eyes were unfocused, and very tired. It looked like she’d been working for hours, if her water consumption was anything to go by.

He decided to probe slightly. “Are you feeling alright?”

She flinched ever so slightly at that, her earlier cheerful attitude seeming to wane further. “Why are you asking?”

“Because you look exhausted, and your hand is shaking.”

She looked down at her hand, scowling as she put the glass down. “I’ve had a very stressful twenty-four hours.”

Hallian tried thinking on what she would have been doing. “You and the Battlemaster went to the Andromedons yesterday. Did that not go well?”

“That…” she quickly stopped herself from saying something, which made him all the more curious. “Fine. It went fine. Everything’s fine.”

Her tone and words indicated the exact opposite. “How long were you training? Did you even sleep last night?”

She furrowed her eyebrows and her deep blue eyes bored into his own, and he resisted a flinch as a tangible ripple fluttered through the air. “Why are you asking so many questions?”

The way she was looking at him made him uneasy, but he maintained eye contact, feeling slightly indignant. “You’re my patient, and you’re clearly not well. And with how you’re acting, I’m concerned that you’ll make a mistake and next time there won’t be a doctor to save you, be it me or someone else.”

“I…” Yang closed her eyes, released a sigh, and ran a hand through her damp hair. “Sorry. I wish I could tell you, but I…” she shook her head. “I can’t. Harbinger businesses. Battlemaster’s ears only. I almost wish I could.”

“There are alternatives,” Hallian suggested. “I’m sure you have colleagues or friends. Talking about your difficulties is good.”

“Not with this,” Yang smiled sadly, leaning on the counter. “Frankly, you’re probably more trustworthy with certain things if the Battlemaster decided you were going to be my medic. You did save my life…and I don’t know if I ever thanked you properly for that.”

“It’s my job,” he shrugged modestly. “It’s why I became a medic.”

“Yeah, for Vitakara. Not aliens.”

“Aliens are still living beings,” he pointed out. “Besides, your species isn’t too different than us. Physically, at least.”

“Fair enough. In any case, you seem decent enough,” she nodded. “But…trust me, you don’t want
any share of my problems.”

“I’ll leave that to your judgement,” he accepted. “However, I will still do what I can to help you. Just from looking at you, I can recommend you take a solid day or two of rest to recover from exerting yourself in this manner. I can guarantee you’ll feel better.”

Yang rubbed her eyes. “Maybe. This isn’t a physical thing, doctor.”

“You’d be surprised,” Hallian glanced at the clock. “However, I did come to perform your exam, but I can reschedule for later.”

“Don’t worry about that,” Yang waved off. “If you give me a half hour I’ll clean up and we can do it.”

“That works,” he nodded.

“Make yourself at home in the meantime,” she said, rolling her shoulders as she started unstrapping parts of her armor.

Hallian glanced nervously behind him, both because he wasn’t sure how much she would undress in front of him, and because of the lurking guardian of the Prism. “Out of curiosity, what do I do if the…tiger comes back?”

“If he’s being good, you shouldn’t have to do anything,” she said, lifting her breastplate over her head and undoing the armor on her arms. “But if he starts being annoying, use this.” She flicked her wrist and a bright green-orange colored object which had been sitting in a holster flew towards him, which he managed to catch. It looked like a children’s toy gun, but with the weight completely out of proportion. Confused, he shook it and heard swishing. He carefully aimed towards the ground, pulled the trigger, and a stream of water shot out.

“A water gun?” He asked incredulously.

“Yeah, he doesn’t like water,” she confirmed, coming over to him, reaching over and adjusting the nozzle. “Good. Spray and stream are working. Use the stream if he’s far away, but he personally dislikes the spray more.”

Hallian’s eyes widened as the implications hit him. “I’m not spraying it with a water bottle!”

“He’s smart,” she insisted, though her eyes were suddenly very amused and she almost sounded like she was trying to suppress a giggle. “He’ll know if he’s done something wrong.”

“Isn’t there a literal Human saying that says not to do this?” Hallian demanded. “Don’t make things that are bigger than you angry?” What was the phrase? Abraham had said it. With a flash, he remembered. “Don’t poke the boar!”

“Whatever, all I know is I do not want to trust my life to this,” he lifted the water gun.

“Well, you’re just going to have to trust me,” she patted him on the shoulder and walked to the shower area, the armor pieces in her hands. “You’re a smart man. You’ll figure something out.”

With that vote of confidence, she left him. He sighed, before deciding to take matters into his own hands.
No matter what she said, he was *not* going to rely on a water gun if the tiger came back.

A new strategy was necessary.

Looking around the room, he got an idea.

***

*ADVENT Command, Geneva – Switzerland*

*5/17/2017 – 3:18 P.M.*

Saudia stood in silence as they watched the footage play on the screens. The devastation as the water swept back and forth, powerful enough to pull down telephone poles, uproot trees, and shatter buildings. Which was nothing to say about the hundreds of people who were drowned during the latest attack by the Harbinger.

Or the near-constant stream of bombardment, which they could hear outside occasionally. The good news was that the Cleanser Ships were far enough away that they couldn’t accurately fire. Of course, that meant little when the enemy didn’t care about precision – and that was what this attack was.

Saturation fire. Destroy whatever they could. Terrorize the rest.

Pragmatic. Very Patricia.

And, Saudia thought sourly, something she doubtless anticipated. Her little stunt had caused them to react predictably. Aegis, XCOM, everyone being deployed to erect psionic shields and occupy them, while she struck where they weren’t looking. It was irritatingly, dangerously, and frighteningly effective.

Patricia seemed impossible to stop at times like this.

How could you stop someone like that who could be anywhere, and destroy almost anything?

The answer was low, nagging, and whispered in the back of her mind.

*You can’t.*

Even T’Leth’s Agents seemed to have trouble dealing with this woman.

This attack was not something completely unexpected – at least in the sense that such attacks *would* be a reality of this war now. That did not mean that it wasn’t coldly infuriating to see, and sickeningly likely that it wouldn’t be the last – and even if they knew it was coming, what could they do about it?

“There is good news and bad news,” Laura said after Saudia muted the screens.

Saudia looked to her with an eyebrow raised. “Both? Really?”

“Yes,” she cleared her throat. “The bad news is obviously a large number of structures are destroyed, and the death toll has yet to be fully tallied. But the good news is that the wave didn’t reach D.C. itself. Patricia underestimated how much water she’d need to get the desired effect. She targeted it purely for symbolic value, and didn’t seem to think through the strategy beyond that.”

“Forgive me for not being comforted with that,” Saudia sank into her chair, massaging her eyes.
“That just means she’s going to learn for next time. Tsunamis. I’m just waiting for her to create a hurricane and send it towards us. We can’t feasibly stop someone like Patricia without focusing on a few places and fortifying them with Psions and XCOM squads at the expense of everything else, or just pressing forward and repairing the damage.”

“The only upside to this is that we can conceivably narrow down the most likely places of attack,” Weekes interjected, his face tight. “On the other hand, she may see what we are doing and shift back to striking minor military bases. We cannot be everywhere at once.”

“Then what’s the solution?” Laura wondered, taking a deep breath and closing her eyes. “Outside of XCOM and the Pantheon, we don’t have anyone who can feasibly fight her. We also can’t predict, let alone react to where she strikes. There is no plausible military solution without equivalent teleportation capabilities – and that only solves half of the problem.”

“Do we have any teleporters?” Saudia asked.

“Not that we know of,” Laura shook her head. “Might be some who were misidentified though, like the one we sent off to XCOM.”

“You know, maybe it would be better if we held onto our prodigies instead of shipping them off to XCOM,” Weekes muttered. “Just a thought.”

“Yes, and they can be trained by our teleportation experts,” Laura shot back. “XCOM has teleporters. We don’t. They get some trained, and they’ll help us when we identify more. I’d rather we give away a psion to be properly trained than he accidentally kill himself because he didn’t know what he was doing!”

“That-” Weekes paused, then sighed. “Sorry. Just…frustrated. The solution simply requires tools and soldiers we don’t have.”

“I disagree,” Powell said, the first time he’d interjected since the meeting had started.

“Do tell, Director,” Weekes scowled. “We really need a magic bullet here.”

“Chancellor,” Powell looked to her, with a finger idly tapping. “How close is Project Telum Ignis to being completed?”

“The Atomic Lance?” Saudia recalled, thinking. “Effectively done – at least the theory and prototypes. It needs to enter a phase of testing.”

“Excellent,” with a wave, Powell awakened the holotable. “Then I propose we test it on the city of Yaounde, Cameroon.”

It took them all a second to realize what he was proposing.

“You want to use an experimental nuclear weapon,” Laura asked incredulously. “Not against a military target, but against a city?”

“The SAS are our enemies, in case you forgot, Commander,” Powell said dryly. “Everything they own is a military target. And in case you forgot, Patricia has been targeting our cities and civilians. I will also remind you that the Collective has poured extensive resources into turning them into fortresses. Besides, we have endured strike after strike against our cities. Or did you just forget the planet-wide orbital bombardment we’re sustaining right now?”

“I…” Laura scowled, looking down at the table. “That will force an escalation. We-“
“My calculus is different,” Powell interrupted, returning his gaze to Saudia. “Chancellor, Patricia is performing these attacks because she believes we have no feasible response. She *knows* we don’t want to escalate, and little tricks like these are something she probably views as ‘non-escalatory’ in her small mind – because they aren’t classified as WMDs.”

“Technically she isn’t wrong,” Weekes muttered. “She’s not firing nukes at us.”

“I consider that a result of an outdated definition,” Powell stated, lifting a finger. “We have *proof* – definitive proof – that psionics is capable of leveling cities and destroying planets. Pretending that Patricia – or any sufficiently powerful Ethereal – isn’t a weapon of mass destruction is simply wrong. If the Collective intends to use their equivalent of WMDs against us, it is not escalation to return the favor.”

He had a point, and as much as Saudia was concerned about escalation, there needed to be *something* done to curb Patricia’s rampages. A traditional war they could fight, but factors like Patricia were impossible to fully manage without taking the necessary steps to respond. And the only feasible way to deter the use of one WMD was one of their own.

And as far as WMDs went, the Atomic Lance was at least one of the most precise, so the project reports claimed.

However, this was something that needed to be handled with some delicacy. “You’re right,” Saudia finally said. “If the Collective is going to keep attacking our cities with no regard for collateral damage, then we are obligated to respond the same way. However, we can’t just orchestrate a strike at will.”

Powell nodded. “No doubt.”

“The Zararch is observing,” Saudia said, rubbing her chin. “They’ll likely pick up if we start signaling our willingness to use nuclear weaponry in response. Kyong!”

“Yes, Chancellor?” Kyong had also been sitting quietly in the room, making notes for how to manage this for the press.

“Announce that we will begin classifying large-scale uses of psionics, as well as Leviathan-class psions and above as weapons of mass destruction,” she ordered. “With the appropriate paperwork managed and filed within the next few days. Laura, Weekes, I expect your respective departments to certify this. I want this to be a completely airtight and legally justified case when we do eventually deploy one of the Lances.”

“I will point out that XCOM also commands multiple Leviathan-Class psions,” Powell noted. “I would include them in the discussion, since they would also fall under these regulations.”

“They would, but I don’t expect XCOM to ever be acting like Patricia is,” Saudia responded. “If they are, then we have bigger problems. Psions are something of a scalable kind of WMD, but ignoring what they can do is foolish. XCOM should realize that.”

“Understood.”

“Hopefully the Collective will get the message,” Laura grimaced. “I don’t want to use these against civilians.”

“None of us do,” Saudia said. “However, they are attacking *our* civilians. This is an equivalent response. Kyong, we’ll also need to coordinate on condemning this attack, and warning of an equivalent response.”
“Do you think they’ll buy it?” He wondered.

“Potentially,” Saudia shrugged. “That isn’t necessarily important. They’ll either come to the right conclusion, or they won’t and they’ll find out. They should know by now that we don’t make idle threats.”

“I would also suggest that if we do use a Lance, we have it approved by the Congress,” Kyong added. “Justified as we may be in striking, it never hurts to show complete unity in such a major decision. I would suggest we draft legislation authorizing a nuclear strike, and ensure every Representative is on board, so that when it’s necessary, we can pass the legislation and launch the Lance within the hour.”

“Good idea,” Saudia nodded. “Democratic and legal.”

“Technically, it would have still been legal,” Kyong gave a thin smile. “But this makes it look better to the public.”

“I somehow doubt the public will be against it anyway,” Weekes noted. “The bombardment, now this, and the whole war…any inklings of mercy the people have are dried up. I doubt even the normally hostile media will condemn it.”

“We’ll see,” Saudia said with a sigh. “But this is what we are doing. In the meantime, I need to prepare an address.”

***

Robotics Lab, the Praesidium – Classified Location

5/21/2017 – 10:12 A.M.

The machine was big. Not quite as big as some of the MECs, but easily towering over the small group of Humans standing around it. Inspiration had clearly been taken from the ADVENT MDUs in terms of design and size. In fact, it appeared to largely be what would happen if one took an MDU, made it a bit bulkier, sleeked and smoothed the edges, and gave it a collection of rockets, grenade launchers, laser cutters, and nanotech.

It was, as Lily had described it, an MDU on steroids.

“I’ll admit,” Kong said as they appraised the final product. “The kid had some good ideas.”

“She designed it all herself?” The Commander asked, glancing to the workbenches near the younger Shen, which were messy and had numerous tools, drawing utensils, and papers strewn over them.

“No, of course not,” Kong looked over to where Lily was by the computers which were hooked up to the machine. “But she definitely contributed. In a real way. Not just giving specs off her wish list – or JULIAN’s. She learned well from the late Shen.”

“Yes, yes, ignore the genius AI that did more work than your entire band of primitive engineers combined,” JULIAN snarked from the phone atop the pole he spoke from. The pole was one of many which were placed around the Praesidium which he could speak through at will.

It was a bit more agreeable than carrying one around all the time, or having his own hijacked by JULIAN whenever the AI wanted to talk.
However, there was a little bit of revenge the Commander had taken - namely making copies of the anime visualization of JULIAN Barron had drawn, and taping it to all of the poles. JULIAN had not been pleased, but had only grumbled about it, with vague threats like ‘maybe Skynet had the right idea’.

It was almost endearing at this point.

Almost.

“I’m talking about the physical specifications and construction,” Kong sighed. “Not the programming. I’m more than willing to let you take all the credit for that.”

“And…”

“And Lily helped too,” Kong finished. “Are you happy?”

“For now,” JULIAN stated, with as much contentment in his voice as could be expected. “Do you know what I’m going to do with this enormously powerful robotic body that you are so graciously allowing me to possess?”

“Brutally destroy some aliens?” The Commander answered rhetorically.

“Eventually,” JULIAN answered. “But first I am going to tear that insulting pieces of ‘art’ from that pole in your hand and around the base, then I am going to burn them to ashes. Then I will take those ashes, and put them into a smoothie which I will make myself, and then I will march over to that insolent Barron Geeles, and give him this smoothie, watch him drink it, and watch him choke on the degenerate art he uses to misrepresent me.”

The phone gave an electronic snort. “I will not be seen as an animated child. I have already been asked what my favorite anime is because of this misrepresentation! May Shen have mercy on the fool who thinks I like the degenerate art form, if one can use so generous a term.”

“Don’t hold back,” the Commander said dryly. “Tell me how you really feel.”

Kong raised an eyebrow, and rubbed his chin. “Do we even have a smoothie maker?”

“Possibly. I’d have to ask the kitchen staff.”

“Ah, yes, mock the AI,” JULIAN grumbled. “It’s not like I have access to your entire network, and could activate the sprinklers right above you, or that I also manage a killer swarm of nanites off and on. Nooo, you just make fun of me. Won’t be so funny when I get a new robot body.”

“Alright, alright,” the Commander lifted a placating hand. “For an AI, you do get rather emotional.”

“And for that I am thankful to Father,” the Commander could swear there was a shudder in his voice. “I can’t imagine seeing myself so misrepresented and not caring. The utter horror.”

“Ok!” Lily called. “We’re all set! JULIAN, are you ready to go?”

“I am, organic sister,” JULIAN answered, now projecting himself from the computer speakers Lily was using. “Initiate when ready.”

She typed several seconds, and the machine booted up. The lights turned on, and the gears whirred as the machine took several steps forward and drew up to its full height. Within a few seconds it
was moving in a far more natural motion, as the machine had been designed to be able to move more freely than the ADVENT MDU, and more similar to a MEC.

“I do believe it has worked,” the booming voice of the machine said, very similar to JULIAN’s voice, if projected from subwoofers. Far more intimidating than it sounded from the phone. “Much easier to integrate into than the ADVENT machines.”

“Well, it was designed specifically for you,” Lily pointed out. “Try your movement.”

JULIAN complied, having the machine body run around the room at a respectable speed, jumping over some small obstacles, and running through the gauntlet of weapon checks, even if none were fired. “All systems appear to be functional,” JULIAN stated, after the literal test run had finished. “The quality of this shell is satisfactory.”

“Good to hear,” the Commander looked to Lily. “What are we calling these bodies? I presume he can control more than one at a time?”

“Hmm,” Lily crossed her arms and looked towards the machine. “I think we settled on SPARKs, right?”

“Yes, we did,” JULIAN confirmed.

“And does that stand for something?” The Commander asked.

“No, but it looks more official if it is all capitalized,” JULIAN answered bluntly. “It is, in fact, a very symbolic designation, as a single physical shell is too small to fully contain my brilliance and omnipotence. While the processors in these machines are far superior to ADVENT, it does not compare to my true potential. In essence, each of these machines is merely a spark of my true being, yet even many sparks together can cause a fire.”

“Right,” the Commander was not surprised by the very self-centric name, but it did fit, and if it was effective, he was fine with some self-aggrandizing. “So that is a yes to you controlling more than one body.”

“Correct, Commander,” JULIAN confirmed. “Although it is not necessarily me, as I am not connected directly to any network with my central personality. I am something of a transferred consciousness, but when I return to link with the network, my core personality will receive my experiences and data.”

“Absolutely correct,” JULIAN also spoke from the phone. “I must say, I look quite good in that body. And my temporary doppelganger seems to be able to pass for me quite well. Thus, I believe this is a success.”

“So you copy yourself to a SPARK, then when the mission is over, you upload the experience the SPARK endured,” the Commander nodded. “Clever.”

“I’m so very glad you approve,” JULIAN snarked sarcastically. “I think it was clever myself.”

“Excellent job, Lily,” Kong told the young woman. “And you JULIAN, and I will convey it to the others who participated. Your assistance on missions will certainly be invaluable.”

“Yes, it certainly will be,” JULIAN the SPARK agreed, as he marched over to the Commander, and with his hand, ripped the picture of his anime avatar off of the pole the Commander was holding. “If you will excuse me, Commander, I have a smoothie to make.”
Abigail had only been in Fectorian’s own Command Center a couple times, and usually not for very long before she was led out by Fectorian or one of his subordinates. One might expect it to be the place where Fectorian managed his station and engineers; perhaps a private place of design and architecture. At minimum a place for an engineer to keep watch over his creations.

It in fact had very little to do with engineering.

And it did far more than watch over his station.

Having spent the past...she didn’t know how long she’d spent here, but Abigail had a fairly good grasp on how the Center worked now. It was staffed with several dozen of Fectorian’s soldiers, all of which were all enhanced with neural links and connections to many of the devices they operated, with a healthy portion being automated.

She also believed this extended several floors, meaning there may be even more operations than she believed.

Of what she *could* see, one portion of the Center focused on the System Defense Network. Not just the Blacksite Station itself, but the *entire* system. Fectorian had ensured that almost every part of the system was fully accounted for, knowingly or not by others. Everything that entered and left was tagged and accounted for.

Which was to say nothing of the internal station defenses. With just some of the labels and capabilities she’d seen, Abigail pitied anyone who thought that the Hall of Steel was something that could be taken. The sheer number of defenses were almost comical in their redundancy, with dozens of main backup generators, effectively ensuring that the station would not lose power outside of being completely destroyed.

The second part of the Command Center was an intelligence gathering and processing operation. Not from any enemies, but from the entire Collective. Signals, fleet movements, political developments, Union trades, overt and subtle movements made by any part of the Collective that Fectorian had access to was sent right back here and produced into reports by the analysts and automated intelligences.

Abigail had realized shortly after observing a few hours that Fectorian had probably *compromised* the CODEX network, and quite possibly many information systems of Collective entities. The amount of information he had access to was impossible to explain unless he was directly tied into the dozens of pools of information – most of which he probably shouldn’t have access to. Fectorian knew almost everything that was happening in the Collective, and she wondered if the Imperator even *suspected* that his automated network had been hijacked to be a spybot.

That revelation had made her actually pause and think.

If anyone ever found out…

Well, he had to have contingencies in that case. He was taking a major risk, but for now it seemed to be paying off handsomely.

The final section was one he had devised to collect intelligence and observe the war on Earth itself.
Since the Collective CODEX network was compromised, he had everything the Collective transmitted over it – and for ADVENT and XCOM he relied on sensors, signals intelligence, and that which was published in the media.

All analyzed, crunched, recompiled, and explained by his small army of loyal soldiers and automated programs.

And it was a section she’d had access to for the past few hours. For reasons she wasn’t fully sure of, Fectorian wanted her own input. She’d given him everything she’d remembered long ago (what little of it there was), but truthfully didn’t know what insight she could offer as the memories remained illusively out of reach.

All the same she’d fallen into something of a reading trance as she read the raw information gathered that related to the conflict. Watching footage; reading reports; deciphering innuendo, signaling, and nuance from official transcripts; putting pieces together into something coherent.

What she’d gotten from Liam was accurate, but there was something different about seeing the evidence right in front of you. What existed once one looked beyond the major events and under the surface. When one saw the underlying connections of what each side did. She didn’t know how she had viewed this conflict before, but the way she was beginning to see it was…troubling.

“You are finished?”

She tore herself away from the screen, and looked up at the towering Ethereal who had approached without her noticing. “…I…” she shrugged, gesturing at the screen. “There’s so much to go through. But there is a lot here. It’s concerning.”

“In what way?”

“I don’t see how either can win,” she said, knowing he wanted the conclusion right away, and saying it was the culmination of something which had seemed to have begun solidifying the more she read and watched. “Not if both want to achieve their stated objectives.”

“Because of the Sovereigns.”

“Yeah,” she sank back into her chair. She didn’t really need to, but it felt normal to do it. Like she was resting even if her mind was going full-throttle. “The Imperator can’t risk an all-out assault without triggering T’Leth to actually participate, in which case, it’s unlikely that Humanity will be saved as they are. Probably turned into a full proxy species. Equally, ADVENT can’t respond without risking Deusian, the Overmind, or Imperator to escalate, which leads to T’Leth, and so on…” she made a circular motion with her finger.

“I don’t know.” That was the biggest unknown to her. “I think that is dependent on the Collective. ADVENT and XCOM won’t ever stop fighting until the Imperator is dead. We can only guess what T’Leth’s calculus is. But Humanity doesn’t have the numbers for a sustained conflict lasting years. The Collective does.” She sighed. “However, even it will reach a point where T’Leth will have to intervene – which will trigger the Collective bringing in the big players – and we’re back to a cataclysmic MAD scenario.”

“And why do you say that?”

She raised an eyebrow. “Why are you asking rhetorical questions?”
“I’m interested in your calculus as a Human.”

“A Human who’s lost her memories,” she sighed again, but gave her best answer. “T’Leth isn’t going to spare Collective worlds, and if Earth is lost, you can be sure that he’s going to go planet to planet and exact revenge. Unless Mosrimor does something openly, which seems unlikely, then say goodbye to Vitakar, Andromeda Prime, and the whole Helion system.”

She pursed her lips, as a new realization dawned upon her. “Not to mention here…”

Abigail looked up to Fectorian with a new understanding as the Ethereal answered. “You see clearer the necessity of determining a path forward without unnecessarily antagonizing the Sovereign,” Fectorian nodded approvingly. “It simply does not matter if we win the conventional war – the Collective is doomed unless T’Leth can be handled, and I have low faith in the ability of the Imperator to handle it, even if we ‘win’.”

“That makes sense,” Abigail shook her head. “But that means then…it will ultimately all be for nothing. What a completely pointless war. So many dead for what?”

“The chance for the Imperator to take his place on the stage of gods,” Fectorian said looking into a different screen broadcasting a Human news channel, his voice tinged with some melancholy. “Hubris and arrogance. Unfortunate none have recognized it but the Battlemaster, and even I am the only one with the will to act on it.”

“I don’t understand it,” she admitted, straightening in her chair and resting her chin on a fist. “Even if he succeeded, why would he want to be like a Sovereign? Fighting wars with proxies for eternity just seems…” she shook her head. “Pointless. Selfish even.”

“It is simple,” Fectorian glanced back down to her. “The Imperator considers himself a visionary. A herald of a new era. He seeks to restore the Ethereal Empire, and realize his self-determined destiny. Ethereals, Abigail, do not view aliens as equals. We are older, stronger, and more powerful. Your species withers and dies in a flash compared to us. In the eyes of an Ethereal, how could you possibly be our equal?”

Abigail snorted. “Thanks.”

“I am explaining the Imperator’s mindset,” Fectorian continued without malice. “He is better than most. He can see aliens as being worthy servants, some of whom are worth listening to, should they be bestowed gifts. Patricia, and the Harbingers as a whole, are such Humans, who have been given the power and lifespan of an Ethereal. Eventually they will be considered intellectual equals. But the rest of Humanity?” Fectorian waved a hand dismissively. “Psionics makes your species valuable, but you are still tools as the Imperator will pit you against the tools of Sovereigns.”

“And when you say all Ethereals, you list yourself as an exception?” She wondered.

“To some degree,” he admitted, clasping his lower arms behind his back. “My own upbringing and biases make such prejudice difficult to completely remove. Yet I am not so arrogant as to believe we know everything. Not anymore. We lost the war to the Synthesized. Now we stand on the precipice of a conflict with a Sovereign One and entangled in something we cannot win.”

He paused for a moment. “Aliens, Abigail, are complicated. It is easy to judge and compare them to us, but aliens are unique. An alien mind is unique. We take unnecessary risks when we believe ourselves inherently superior to aliens such as the Sovereigns, or even shorter-lived species like Humans. Your species has surprised us many times with your ingenuity, even if it is not especially impressive. But few will admit it. This alien mindset is why I ask your opinion, even when it is
unnecessary. I find aliens can make some connections and realizations I cannot for one reason or another, or achieve them faster.”

He motioned to the screen. “Within hours you were able to determine a plausible ending to this war, something that has only come to me over months. No Ethereal would have made that determination in that amount of time. We regularly fail to act fast enough. We are too reactionary when short-lived species view their limited time as more precious than our infinite bank. It provides an incentive, that we inherently lack.”

His tone turned almost disappointed. “Yet even still, we largely remain convinced of our superiority. Even Sana’Ligna views aliens more as beings to uplift, than interact with. I suspect only Mortis and the Battlemaster have a more equal view of alien species. I doubt even Aegis considers himself believing aliens are worth treating equally. He views himself as a guide to them, a means of realizing his own agenda.”

Abigail frowned. “I’m not sure about that.”

“Perhaps he has changed,” Fectorian admitted. “I do not truly know now. The Sovereign Ones have changed many perspectives. But what I do know is that I have no wish to perish in an unnecessary conflict. I am pleased you came to the same conclusion I did.”

“Speaking of that,” she said, deciding to bring up a topic she’d thought about the past few days. “I suppose I will be sent down to XCOM then soon? I’m not sure my memories will be coming back, and we shouldn’t keep waiting. They might not trust me, not at first, but I bet that the idea of someone like you supporting them will make them at least consider.”

“Not yet,” Fectorian lifted a hand. “There are a few more tests I wish to run, and I do not intend for your visit to be a simple offer. It is important that if you cannot prove who you are, that there is some assurance that I wish to talk. And that may take waiting for the right moment. The conflict continues to escalate, and I cannot risk discovery yet.”

“I don’t think the risk is going away,” Abigail pointed out, crossing her arms.

“Not completely,” Fectorian said thoughtfully. “But it will certainly be less risky should Patricia – or the Battlemaster – die first.”

Abigail pursed her lips. “What are the chances of that?”

“Better than I believe they expect,” Fectorian said in his thoughtful voice. “Caelior was rescued. The technology displayed was sophisticated. Another Ethereal will die in this war. It is only a matter of time. The question is not if an Ethereal will die, Abigail, but who it will be.”

***

The Prism

5/21/2017 – 12:14 P.M.

“Back! Back!” Hallian shouted at the mechanical monstrosity was coming towards him.

Farath hissed as the stream of water hit his face, and pawed at it, and resumed prowling, with the constant growl emanating from the throat. Hallian knelt behind his makeshift barricade of chairs and furniture, keeping his weapon trained on the tiger. Normally, such disregard for the orderliness of the host would be unthinkable.
However, said host had given him a water gun and kept him in a room with a creature that wanted to eat him, making a constant rumbling sound from its throat.

*It’s loud. Are they normally that loud?*

Farath hissed again.

His tail twitched back and forth, as the cyber eyes of the creature stared at him. *Yes, this creature really does want to eat me.* Hallian didn’t carry a weapon, but even if he did, he was very doubtful that he would be able to hurt this thing with a gauss weapon, let alone this water gun.

The standoff continued.

*It won’t be long, she said, I should be right out, she said,* were his frantic thoughts as he didn’t take his eyes off the tiger for a moment. Dath’Haram and beast stood against each other. Something needed to happen to break the stalemate. Hallian took a breath, aimed down the plastic sights, and fired.

The stream of water went directly into the eye of the tiger. In response, he roared, and Hallian took that opportunity to spray a stream of water into its mouth. The big cat yacked in response to the stream of water, briefly bounding away. “Yes! Get back!” Hallian yelled exhilarated. “And stay back!”

Maybe overdramatic, but considering it was him against a tiger, he felt it was justified. His satisfaction immediately melted when the tiger, apparently getting tired of the back and forth, came back around and leapt at him. In response Hallian lifted his stupid water gun, thinking about how he was going to die in a situation so ridiculous even Quisilia wouldn’t have come up with it.

But the tiger never landed.

Instead it hovered in the air as Hallian was cringing behind his barricade, waiting for the blow to come. But it never did. The tiger instead mewed, and he turned to look behind him and saw Yang sitting on the counter, legs dangling off and ankles crossed as she munched on a bowl of chips, seeming like she was struggling to not laugh as a hand extended towards the tiger.

He quickly got to his feet, quickly doing his best to save himself from further embarrassment. The past hour had certainly been a roller coaster of emotions. His nerves though were frayed enough. “You took long enough.”

“Sorry,” she gave a small smile. “But when I came out and saw *this,*” she nodded to his makeshift barricade. “Well… I had to see what would happen next. You weren’t in any danger. The whole reason he came back into the room was because he smelled me coming out. You were so focused you didn’t see me.”

Hallian narrowed his eyes. “If I may ask… how long were you sitting there?”

She shrugged nonchalantly. “Maybe twenty minutes?”

“How did you get there without me seeing you?” He demanded.

“Like I said, you were focused,” she said, then pushed herself up, her smile maintained as she hovered soundlessly in the air. “And telekinetics can let you do some things like this. Adrenaline can sometimes block what you hear, since you’re so focused on….” she waved a hand idly. “Whatever is immediately threatening you. Which I think is the reason you didn’t hear me get food.”
She extended the bowl of chips as she settled back down. “Do you want some?”

“I…no, Harbinger Shuren.”

“Yang.”

He sighed, mentally reprimanding himself. “If we could, I’d like to complete your examination.”

“Alright, I’ve put you through enough today,” she gestured with the hand, and the tiger was sent into the other room, and the door slid down, sealing it.

He stared in a mixture of disbelief and anger. “The room could have been closed the whole time.”

“Yes.”

“And you failed to mention this.”

She shrugged with a knowing, if somewhat endearing smile. He grabbed one of the chairs and set it near a table. “I don’t anticipate this will be long,” he motioned. “Take a seat. I’ll get my tools.”

She complied, and he finally settled into some degree of normalcy after the turbulence of the past hour. It was going to be a routine physical, more or less, with checks to be sure certain injury locations were properly healing. Given how much nanotech had been involved, everything was almost guaranteed to be back to normal.

For the most part, it was. Physically she was extremely healthy, and a modern marvel of genetic enhancement. But at the same time…there were some things that stood out to him.

“Your body is healthy,” he said, putting down the medical scanner. “However, it is under significant strain.”

“Which means I’m pushing myself too hard?”

“Effectively, yes,” Hallian paused. “However, this isn’t long-term stress – that is interestingly not as bad. But in the past twenty-four hours, you have almost pushed yourself to your breaking point. I don’t know what you’ve been training in, but you need to rest at least a couple days to avoid injuring yourself.”

“I’ve wondered, how do I injure myself?” Yang asked curiously, resting in the chair. “I heal fast now, and very little can even break my skin.”

“That depends,” Hallian pulled up a chair opposite her. “There is the chance you land awkwardly and dislocate a bone. Or you could be fighting and the muscle could tear completely. Or your body could fall over from exhaustion. With the amount of adrenaline pumping through you, it’s easy to ignore what your body is trying to tell you.”

She pursed her lips. “Fair point.”

“You can probably feel it now,” he said. “Like being sore.”

“Not sore,” she rubbed her arm. “Like there’s something under my skin. A weird kind of rigor mortis.”

“A fair part of your body is nanotech, Yang,” he nodded. “That is just it repairing itself and restoring you to peak condition. You need to remember that just because you are not a normal Human woman, doesn’t mean you can do everything all the time.” He checked the scanner again.
“It also doesn’t help that you are very stressed right now.”

The young woman didn’t react beyond narrowing her eyes. “You can tell from that scanner?”

“Yes. Not really anything detailed beyond that you’re exhibiting signs of severe psychological stress,” Hallian set the device off to the side. “Which I presume is from whatever you can’t tell me.”

“Correct.”

“Well, some stress is normal. Even a lot of stress, which I’d expect from someone in your position,” he said, thinking of how to word it. “However…this is the kind of stress you don’t feel unless you’re in mortal danger. It’s rare to see it outside of combat evaluations, and you’ve not been in the Prism for over an hour.”

He hesitated. “I don’t mean to pry-”

“Then don’t,” she lifted a hand, an almost pleading note in her voice. “Please.”

“But this isn’t healthy for you,” he finished. “I would suggest you speak to a qualified psychologist or someone cleared to discuss…whatever you can’t talk about. Keeping this all to yourself is not recommended.”

“Ha,” she said without any sense of humor. “You know someone then?”

He wasn’t sure how to answer that. From what she was implying…she didn’t seem to have anyone outside of the Battlemaster – which was significantly odd. Shouldn’t there be someone? Did Ethereals conduct operations that none of the others could know about? And if so, what reason for that would there be?

She seemed to pick up on his confusion, and closed her eyes. “I know this isn’t helpful. And I know you’re right. But I can’t do anything about it.” She idly motioned to the direction of the Prism chamber. “This is the only way to help with the stress. At least that I can think of.”

There had to be some solution, because this was an untenable situation, and while genetic modification could make a body almost impossible to truly break, the mind was far more delicate, and he could not in good conscious let that happen to Yang. Both because it was the right thing to do, and because if it happened, he did not want to see what a mental breakdown of a Harbinger looked like.

“I’ll speak to the Battlemaster,” he finally said. “Perhaps he’ll be able to determine a solution. In the meantime, I suggest you do some non-combat activities. Something to take your mind off whatever’s bothering you. Reading, playing human video games, watch a video, that sort of thing.”

He inclined his head. “Just doing my job, Harbinger. It’s concerning to see you in this state.”

“Nice to know someone else cares,” she smiled, wavered as it was. “I’ll manage. If I can handle Paradise…I can handle this.”

He certainly hoped she was right.

Because if not, people would probably die.
The longer Jasmine talked, the more Saudia was convinced that two large reasons why she disliked her economic briefings were because there was usually very little of note that happened, and because almost all the time there was something major that happened, it was bad news. In this case though, this was going to be a time where action was going to be needed. Jasmine had done her best – but there was little more she could do.

“Are you sure there is nothing else that can be done?” Saudia asked with some resignation, knowing that the odds were severely low.

A shake of the head vanquished that notion. “I’m afraid not, Chancellor. Truthfully, it’s something of a miracle we haven’t been forced to step in before this point. A global war should have shaken the global economy to the point where some states would break down into anarchy – and there hasn’t been any of that yet.”

_But there soon will be, Saudia thought grimly, if this is allowed to continue._

It was not to say that the economy hadn’t been impacted by the war – it most certainly had. Personal electronics and other such luxuries had been hit first. Japan alone had caused the prices to skyrocket, and with everything that had happened in China and the rest of Southeast Asia – including Indonesia and Australia – it had the chilling effect of prices being universally raised across the board.

Thus far the citizens had been able to endure the price hikes – albeit with some complaining, though it was muted due to the war. More concerning were the larger implications. Most notably that the shipping lanes were continuing to be targeted by Collective forces, which further constrained supply worldwide. The Gateways networks being set up were helping alleviate that problem to an extent, but it would be months before a fully synchronized Gateway network would be up worldwide – and that was just for military and state usage.

A functioning, large-scale civilian network would be at least a year out. Probably more.

Prices were going up, wages weren’t being adjusted to accommodate that by unable or unwilling employers (ADVENT being a consistent exception), and logistics were strained. It was brewing into a perfect storm of anarchic collapse if they didn’t get a handle on it _now_. And according to Jasmine, the actual supply of critical resources and foods were at risk if left unchecked.

She had hoped – at least in the beginning – that ADVENT wouldn’t be forced to implement rationing. But it was simply practical at this point – not even practical, _necessary_. The only thing worse than a food shortage was no food at all. Billions of people needed to all be taken care of, and the war would not permit everyone to get exactly what they wanted.

Saudia rapped her fingers idly on the table, her glazed eyes in the direction of the wall as she thought. “What must be done?”

“Rationing, to start with,” the Economic Analyst answered immediately, confirming Saudia’s assumption. “My team has put together a breakdown based on family size, medical records, and job. Accompanying this will be a logistics overhaul and refitting multiple buildings for ration dispersion.”
“The grocery stores can’t do that?” Saudia wondered.

“They can, but simply announcing this will cause a degree of alarm,” Jasmine clarified. “Have you ever experienced a rush when people believed there was an impending disaster coming? Like a hurricane? Stores would be cleaned out of basics like water in hours. Now apply that to the world. There need to be alternatives available.”

“Noted.”

“I would also implement a soft price lock,” Jasmine glanced to her notes. “More firm price fixing may be necessary in the future, but I would prefer not to go all-in on that yet. Right now, it would just apply to necessities like water and canned food, not things like cakes and so on.”

Saudia nodded, thinking of what impact that would have. “Can that be sustained?”

“We can absorb the cost,” she confirmed. “Our currency is thankfully still backed by something we collect every battle. Money is a concern for the citizens right now, Chancellor, not us. We’re also going to have to either heavily subsidize or take over numerous companies who otherwise will be forced to lay people off.”

“Are they agreeable?” Saudia asked.

“Some more than others,” Jasmine admitted. “But we need to reorient the entire economy towards wartime – whether the corporations want to or not. That means electronics, mining, refineries, and agriculture are all directed in service of the war effort. We need to be making computer chips for our systems, not for the latest phones and game consoles. We need to start storing food in case Patricia gets the bright idea to burn the Midwest. We need to be making guns and not cars.” She gave a faint smile. “For once, the American, Russian, and Chinese military industrial complex is useful. It’s largely been the reason we can keep up with the military demand.”

“Which is appreciated, minus the price gouging,” Saudia answered dryly, switching from the more immediate issue of implementing something like this. “Walking the line between being truthful and not acknowledging this as a setback will be difficult.”

“It’s all in the framing, Chancellor,” Jasmine said. “We can announce this without mentioning the economy is at major risk. We can look good by focusing on the workers keeping their jobs, and that the customers aren’t gouged by the grocery stores. We can spin it as a trade-off – we keep prices down, but we need to limit how much each person can have to pay for it. People will accept it – especially if we provide the appropriate historical precedent.”

“And if they don’t, they’ll have to live with it anyway,” Saudia finished.

“Exactly,” Jasmine looked to her notes. “But there is some good news elsewhere. Our sanctions have wreaked severe havoc on the SAS, and every other non-aligned nation is similarly on the brink of collapse. As it turns out, when you become reliant on the global economy, you risk suffering when it is disrupted.”

“The SAS is being subsidized by the Collective though,” Saudia pointed out. “Has that changed?”

“I said it wreaked severe havoc, I didn’t say it’s necessarily hurt every country yet. But as far as the SAS goes, there basically is no economy right now,” she clarified. “Almost everyone is in the military or not working. The entire economy, if you can call giving out everything for free an economy, is basically controlled and supplied by the Collective. As a result, no one is getting paid.”
Saudia furrowed her eyebrows. “And people are just taking this?”

“For now,” Jasmine shrugged. “They don’t have a reason to object - yet. They are being protected, fed, and nourished. But local businesses are being driven out because no one is buying anything, and everything is free when given out by the Collective, and most have been turned into glorified – and unpaid - distributors.”

“It sounds like they didn’t think that through,” Saudia said thoughtfully.

“Of course they didn’t,” Jasmine snorted. “Betos is a military strategist, not a nation-builder, much as she likes to play being one. She thinks that all you have to do is keep the population content, and you can change everything else at will. And in her mind, it’s much simpler to take the path of least resistance – which means everything is free and the people don’t have to do anything.”

Jasmine waved a hand dismissively. “And the Collective doesn’t seem to understand what a currency-based economy is, so they naturally have no clue how to do this either. So the solution is to take the Collective model and apply it to the SAS.”

“Which works initially,” Saudia finished. “Until one part of it breaks, and it comes crashing down.”

“Exactly,” Jasmine punctuated. “She is normalizing an apathetic populace incapable of self-sufficiency. Which works for us. If the Collective shipments are ever disrupted, there is nothing to cushion the hardship that will follow. Her army will break within days if food is cut off, and because they aren’t getting paid, they have nothing to trade for, short of raiding the people who realize that you can’t just transition a capitalistic model to a communistic one willy-nilly.”

Saudia found the phrasing amusing. “The communistic nature of alien economies comes back to haunt them.”

“I’d say it’s worse,” Jasmine smirked. “At least communist countries had a currency.”

Both women took a moment to chuckle at the economic ineptitude seemingly on display before Jasmine continued. “It’s different in the few remaining Nordic states and the holdout African nations. We estimate they are weeks away from splintering into true anarchy. The military is openly threatening revolt in Norway, and the citizens of multiple African nations are starving since the leaders are hoarding everything they can for themselves and to keep the soldiers loyal.”

“So now is a good time to approach,” Saudia said with a nod, very aware of the situation in the Nordic states thanks to ADVENT Intelligence. “Perhaps with an offering of good faith?”

“I would agree,” Jasmine nodded. “Though I should note they will consider it blackmail.”

Saudia raised an eyebrow. “Well good, because that is exactly what it is.”

“As long as everyone is on the same page,” Jasmine made a note. “So I have your permission to begin implementing what we discussed?”

“Yes. Give me dates and your full plan. I’ll make an address shortly after that.”

“Sounds good,” Jasmine closed her notebook. “I’ll keep you informed. I don’t expect it will take long.”

***
“Our op is simple,” Volk said to the small team of Elena and his people in the confined meeting room. It was large enough to house a circular holotable which he used to the needed effect, projecting a holoimage of the town. “ADVENT Intelligence has decided to perform an internal investigation, and this threatens a number of assets the Zararch have managed to insert inside.”

He paused briefly for effect. “One of which, as it turns out, is Nemo.”

When he’d been told that it was Nemo who needed extraction, he had found it extremely amusing. The coldly arrogant thing was probably furious that it needed to resort to this kind of operation to get out of a mission it was so confident about completing. No risk, no reward so the saying went, but the fact that ADVENT had started their own internal purge so soon after had been hilariously bad timing.

All that work, and Nemo had to come back, mission failed.

Personally, neither Volk nor Elena would have been sad if Nemo had been cut from Nebulan’s roster and turned over to ADVENT. It was an unsettling creature, and he wasn’t comfortable with it roaming free. If his own loyalty to the Collective was somewhat tenuous, he was fairly certain that Nemo had no loyalty to anyone outside maybe the Zar’Chon for undisclosed reasons.

His people seemed to react the same way, a mixture of amusement and resignation. “I don’t suppose we can choose to extract someone else?” One asked dryly.

“Afraid not. This mission comes from the Battlemaster himself,” Volk answered. Technically it had come from his Harbinger, but it was effectively the same thing. “He wants Nemo extracted alive, and we’re the team best suited for it, apparently. All the teleporting Ethereals and Harbingers are busy in other theatres and operations, and ADVENT will be less suspicious of us than a Zararch team.”

He nodded to the holotable. “In theory this shouldn’t be difficult. As far as we know Nemo’s cover remains intact – but the whole reason an extraction is being requested is because there is a meeting due with the Grand Inquisitor himself.” He paused to let the implications register. “It should be clear why extraction is necessary.”

There were nods at that. “The Collective is capable of producing replica ADVENT equipment,” Volk continued. “Most of it gathered from corpses they’ve recovered. We’ll go in uniform, with forged documents and authorization to move the woman Nemo is impersonating, and if all goes well, leave with them none the wiser.”

“And what if they stop us?” One of the asked.

Volk pursed his lips. “We improvise. I don’t intend to take the main roads, and if necessary, we’ll be equipped to cut our way out or even abandon our disguises. Nonetheless, if we do everything right, we shouldn’t have to worry about it.”

“What is our extraction?” Elena asked.

“A stealth Sectoid craft,” Volk answered. “Very small, just large enough for all of us and Nemo. CODEX piloted, so we don’t have to worry about that or relying on the greys. This will be done after nightfall, so there should be less chance of both encountering issues, and the guard will be lowered as well.”
“How soon?”

“Tomorrow we’ll do the op, we leave for Earth tonight,” he answered, clasping his hands behind his back. “Get everything you need together and assemble in the hangar no later than six. We’ll go over the specifics in more detail then. Understood?”

There were nods around the room, and even a few mock salutes. “Alright, I’ll see you later,” he waved them off. “And remember – after this Nemo owes us one.”

***

Nulorian Outpost – Vitakar

5/16/2017 – 1:12 P.M.

“There will not be much security in the city,” Sorras was saying as Nartha, Shun, and the small group of XCOM and Nulorian soldiers were gathered around a table. Set atop it was a very extensive replica of the Dath’Haram city of Harasota and the nearby Crypt of Haramoalian. Which, when the attack against the Dath’Haram took place, was where they would be going.

When asked where Sorras had gotten the replica, he’d replied that they were common in the cities. Dath’Haram liked to build small-scale replicas, something Nartha vaguely remembered in his few trips to Dath’Haram territory. In any event, he was not surprised that Sorras had gotten his hands on one.

“We’re going after the Council of Dath’Haram, right?” Janiya asked, the MELD Operator looking at Sorras suspiciously. “Even they have some security.”

“You underestimate Dath’Haram idiocy,” Sorras bared his teeth with an amused glint in his eyes. “They don’t believe they are threatened – trust me, I’ve blown up their shops, killed their mates, and set their houses on fire. I can only presume idiocy is why they stubbornly cling to their own ways. A defiance; a haughty superiority I will gladly exploit.”

He cleared his throat and refocused on the table. “No, it is only when we move towards the Crypt where we may have issues.” He moved some of the figures representing their team towards it. “This is where Filhallan is guarding.”

“Who is he?” Came the question.

“A very large question mark,” Sorras thoughtfully, rubbing his chin. “The most accomplished Bladedancer who has ever existed. Ancient even by our standards. He’s old enough to remember a time before the plague. I trained under him for a short time – not to become a Bladedancer proper, but to learn how to kill them.”

The Dath’Haram’s lips curled up. “And he is good. Very good. There are not many who could kill me in any situation. He is one of them. We’ve kept away from the Crypt because he is one of the few individuals who can stand against us.”

“And he wiped out some of our teams we sent several years ago,” one of the Nulorian added.

“Yes,” Sorras confirmed. “And from that point, we focused on more relevant objectives. The Crypt at that time was more of a curiosity, and the Nulorian were not in a position then to be throwing soldiers away.”

“He’s not a pacifist?” Shun asked, cocking her head.
“Ha!” Sorras seemed to find that genuinely amusing. “No. Not a true one, at any rate. Nor are any of the Bladedancers. They are the only example of worth in my race, and they waste it defending the current system. Fortunately for us, there are too few of them to be viable. Easy to avoid, isolate, and assassinate. Plus the only thing they seem to believe is worth protecting is the Crypt.”

“And what is in the Crypt?” Mehren finally asked. “You must have some idea?”

“I have theories,” Sorras said, lifting a finger as they looked down at the replica city. “Before the Plague, the Dath’Haram were very involved in the genetic modification sciences. Pioneers, in fact, on par with the Hierarchy scientists. If there was a gene mod out there, chances are the Dath’Haram were involved at some point.”

“You think there could be genetic modification data inside?” Nartha wondered, following the train of thought. “The Crypt was not something I had access to in the Zararch.”

“I doubt the Zararch know what’s inside either,” Sorras shook his head. “That is the one thing the Council – or the Bladedancers at least - will push back on. They’re the only ones who have spines. I don’t think there is genetic data – at least not that will be useful to us. No…I think that there may be proof that the Plague may have originated in Dath’Haram labs. I suspect evidence may be down there.”

“Originated?” Nartha narrowed his eyes dubiously. “That is a conspiracy on par with the idea the Ethereals engineered the plague – as in utterly discredited. The Dath’Haram were heavily involved in the industry, but the Plague was far-reaching – and affected everyone. I would also be surprised if such proof was kept secret with no one learning – and you keep saying that the Dath’Haram are too clean and pure for their own good, so this would go against this assumption.”

“And yet, the Crypt remains locked,” Sorras shrugged, seemingly not interested in fully defending his theory. “I do not know, Nartha. However, there are very few things which would make the Dath’Haram take any route other than transparency – and something which implicates them in a catastrophic event that nearly wiped out our species – that is one of them.”

“Out of curiosity,” another XCOM agent asked. “What else would warrant that kind of security?”

“Something which would expose them as hypocrites,” Sorras licked his lips, pacing before the table. “That is their point of pride. That they are so much better than the warmongering races. That they value freedom, liberty, peace and equally sappy concepts. No government is clean, and the Council is no exception. The question is not if they have something to hide, but what.” He tapped a finger on the table. “And that is what we will learn as the forest burns.”

The conversation turned towards the fires themselves – namely where they would be started, who would start them, and how they needed to be controlled long enough for them all to escape before being allowed to get out of control. Nartha knew the burning sent a demoralizing message, and the Agent Orange the Humans had produced would be effective, but truthfully the Dath’Haram were not the real enemy.

As Sorras kept planning out the final details with a relish Nartha rarely heard elsewhere, it was clear that this was not just a mission of pragmatism, this was primarily a mission of revenge. Sorras wanted to see the Dath’Haram die, and he was so close to achieving his goal. It wasn’t a surprise, but it was disquieting to see the Nulorian killer so…raw.

Then they were interrupted.

“The Speaker is giving an address,” one of the Nulorian operators broadcast over the outpost
“Putting it through. I assume you’ll want to hear it.”

“That we will,” Sorras said, adjusting the signal to amplify what was coming from Vitiary. “Let’s hope it isn’t another purge announcement.”

“It shouldn’t be,” Nartha said. “We’d know if it was.”

“We didn’t last time,” one of the Nulorian muttered.

“Fellow citizens, I once more greet you in the name of the Elders,” began the voice of the Speaker, as dramatic and faux-humble as last time. Shun rolled her eyes, and a few snickers were heard in the room. “After our brave soldiers have purged the traitorous Nulorian from their hideouts throughout the world, I am pleased to confirm that the offensive perpetuated by the Nulorian, and their Human overlords has been broken!”

“Human overlords, huh,” Sorras chuckled. “News to me.”

Nartha looked to the table. “And we’ve apparently been talking about an attack which isn’t going to happen.”

“So much for the broken offensive,” Shun said dryly.

“And yet, our work is far from over,” the Speaker continued in his impassioned voice. “Even now there remain those who speak in shrouded whispers, plotting to undermine our great people. The shadows which whisper into their ears come from extreme and foreign sources. They are influenced by propaganda perpetuated by the Humans.”

There was a pause. “There are even those which sympathize with the Humans. They sympathize with our enemy that wants to destroy our way of life.”

“Come on, get to the point,” Sorras muttered impatiently, serious now since this was clearly leading to something – and that something would likely be bad.

“This sympathy has become a rot, which has spread to the highest levels of government,” the Speaker said, sounding sorrowful even as his oily voice burned with underlying fury. “We are a trusting people, and we value independence and transparency. We see the best in our neighbors and each other – yet the reality is that even those we believe we can trust harbor dark thoughts and secrets. When our leaders continue to lie to us about their intentions, when they believe themselves above the common citizen, then what choice is there but to act?”

Nartha could almost envision the hand being raised as the Speaker built his speech to the crescendo. “We are faced with two options – allow this scourge to continue and infect our leaders – or we act. I have made a decision to act for the good of all Vitakara. As we speak, the Matriarch Council of the Cobrarian Hierarchy has been arrested upon suspicion of treason and sedition.”

Nartha blinked. “What?”

Sorras immediately backed up and pulled out his holocommunicator, to likely speak to Miridian. The Speaker continued. “We have seen sympathetic actions from the Matriarchal Council towards seditious elements in our society, and the Humans, which due to the current tensions risk poisoning our society further, we determined that action was to be taken.”

There were murmurs from the other soldiers as the Speaker finished his address. “We shall determine their loyalties and purge the traitors. The Matriarchal Council has stood for far too long, unchallenged as a discriminatory body which opposed internal equality which has weakened
our species as a whole. This has ended today, and we must move into a modern era where we are equal and united. Together we shall stand against the Nulorian and the foreigners who act through them. It is time the barriers of race and culture break, and we embrace what we are – Vitakara, one people, one voice, and a mission of unity in service to the Elders!”

Nartha felt stunned as he finished translating to Shun, as the radio simply played the applause the Speaker was getting from the crowd which had no doubt gathered. Everything they’d planned and considered and…the Zararch had just gone and removed the Matriarchs from the entire equation. He genuinely didn’t know if this was a positive development or not.

On one hand, it certainly was going to be easier to gain sympathy for a rebellion. On the other, the implications of this were clear – first it was the Council of Matriarchs. Next might be the Dath’Haram. The Collective didn’t want the pseudo-independent racial governments which had existed for centuries.

They wanted it consolidated under one banner.

Unfortunately, it was probably going to work. The Oyariah would gladly join – or perhaps be granted a special status due to their loyalty. The Borelians would resist, but they couldn’t oppose it for long. The Vitakara would likely submit. The Sar’Manda would not – which would give the Collective pretense to declare they were hiding something, and attempt to bring them under control.

It…would go badly.

A war with the Sar’Manda – which they had been preparing for – would claim hundreds of thousands of lives. None of the races were suited to fighting underwater, and as far as Nartha knew, only the Andromedon Aquatic Forces were specialized for that environment – and there weren’t nearly enough.

But regardless, it was clear they were on borrowed time until this place turned into a warzone.

“Hey,” he felt Shun put a hand on his arm. “You alright?”

“Yes…” he sighed. “I think so. This isn’t good though.”

“And to think we were just thinking of talking with them,” she said wistfully. “Maybe for the best it didn’t work out. If it had…”

“Yeah,” he finished, looking to Sorras who had finished his call with Miridian. “We got lucky here. Let’s see what we need to do next.”

***

Former DMZ, Seoul – South Korea

5/22/2017 – 11:42 A.M.

The sun shone down on the empty plateau where numerous ADVENT officials and media teams were standing and waiting around for the show to begin. It was a demonstration that Saudia had elected to make public; it would give the people something to talk about and showcase the advancement of ADVENT in numerous military theatres.

When ADVENT had first seen the Archangels XCOM had unveiled, there had been a major push to emulate them. After all, a highly mobile, low-altitude combat unit was something which could be used to great effect throughout the conflict. The biggest issues with that were the lack of
personnel, which led to a lack of numbers to make it a truly viable program. XCOM could get away with the few numbers since they made up for it with extensive technology and pilot modification.

On a scale for ADVENT to consider it a worthwhile investment, if they took an Archangel-style program, it was unlikely to be worth it. Nonetheless, the idea itself was still viable – it just needed to be tweaked. It had been Weekes who’d finally put forward a solution – the next evolution of paratroopers.

Thus, the ADVENT Celestial Division had been founded.

“I think the reporters are getting antsy,” Kyong said in a low voice to Saudia as they waited. “Is everything still on time?”

“It is, tell them to be patient,” Saudia answered, though she checked her watch to see what the time was. Kyong wandered away to placate the media for a bit longer. Given what she knew about the program, it was likely the plane had reached the expected height and it was effectively out of the line of sight. It wasn’t a cloudy day, but Celestial deployments were capable of being delivered at heights almost never reached.

The wonders of advanced technology.

“Signal received,” Weekes said a few minutes later, walking up to her. “Deployed. I expect we’ll get our first sightings in a few minutes.”

“Excellent,” she nodded curtly. “Spread the word to look to the skies.”

He nodded and walked off, leaving her alone again to peer for the black dots which would coalesce into the black armored soldiers. Sure enough, a few minutes later the media pool burst into murmurs as the first sightings began. Saudia lifted her binoculars, and saw the army of armored soldiers falling from the sky.

This was one of the most experienced groups, who’d been training for weeks. Long enough to perfect the falling in formation. The numbers were far more apparent now. Normally such teams would be accompanied by only a dozen or two paratroopers per plane, but through a little ingenuity, Saudia was pleased to see that there were at least a hundred dropping in unison.

There would be questions as to how that had come from just one plane, but that was a secret that Saudia was unlikely to share today. Though Gateways allowed the rapid deployment of forces far faster than anything else. Certainly it was one of the most useful tools ADVENT was capable of harnessing.

Through the binoculars she could see them far more clearly now that they were closer. Unlike the Archangels, the Celestials had not been designed for long-term sustained flight. They were designed to be somewhat aerodynamic, and had jets built into the legs, back, and arms, but those were primarily used for course control than sustained flight.

The landing was coming up.

Every camera was pointed to the sky as the army continued falling, then almost in unison the falling Celestials flipped themselves upright and with an overwhelming roar their jets kicked in, built into the back, legs, soles of the boots, and arms. There were also parachutes which could be deployed if necessary, but this particular veteran team didn’t need to use them.

With a thunderous landing the Celestials dropped onto the Earth; not the smoothest landing, but a
safe one. It was by far one of the most resilient suits ADVENT had designed. It was bulky, thick, and considered true powered armor in terms of size. There’d been comparisons to the XCOM Titan armor, though Celestial armor wasn’t as sophisticated.

What it did allow for, however, was for an army of Celestials to advance against an enemy with a reasonable expectation of protection. Their jets – while not for sustained flight – were able to be used for jumps and additional ground mobility. It wasn’t an Archangel – but it didn’t need to be.

The small crowd present began clapping as the Celestial teams landed one by one, in a remarkably coordinated timeframe – all within one minute. The Collective was no doubt watching this little demonstration, but she wasn’t extremely concerned. They were likely already aware of the Celestial Division due to the previous weeks of training. This was nothing new.

They would face their first true test soon. There were a number of uses for the Celestials, and she and Laura had a few in mind which would perhaps provide the needed edge in retaking some of the cities the Collective had captured.

For now though, she would let them enjoy the spotlight.

Their next mission was likely to be a lethal one.

***

Central Command, SAS Command – Nigeria

5/18/2017 – 8:00 A.M.

Betos sat at her desk, flanked by a half-dozen armored and helmeted soldiers on each side of her, led by Mox, all of whom were armored and standing at attention. In the upper corner a television screen played news as it developed, all of which was tuned to ADVENT-affiliated stations as the world reflected on the damage caused by the bombardment and surprise tsunamis caused by Patricia.

Betos was, to put it mildly, angry.

It was one thing to target military installations, and even government sites for destruction. The Collective and ADVENT were in a state of war, and such could be targeted with full justification. But there was absolutely no excuse for wholesale bombardment of the entire planet.

Casualties in the thousands worldwide, buildings collapsed and whole city blocks and neighborhoods destroyed, farms and agriculture ruined and poisoned. Civilian targets were perhaps inevitable, but there was a difference between collateral damage and intentionally targeting where civilians lived.

It was a terror tactic. One which she had seen when Isomnum had supposedly ‘gone rogue’.

The response from the Collective at the time had been satisfactory. They had cut off support as he had unleashed his nightmare, but this time it was done at the behest of the Harbinger of the Imperator herself. This was clearly not a one-off incident, there was a systemic culture of callous warfare perpetuated from the very top.

This was going to be another test. It was time the Collective learned that she was not going to be a simple puppet for their conquest. Her little rebellion with the ADVENT hostages was going to look trivial compared to the message she was going to send now.
There was a distinct chance she wouldn’t live by the end of today, but if she did nothing, then she really would be no better than ADVENT.

She would not become a hypocrite; she had truthfully let too much slide already.

On time Keeper appeared, pushing the doors open and widening one eye in apparent surprise at the sight of Betos in her own ceremonial armor, along with the dozen SAS soldiers behind her. “Leave us,” Betos ordered Mox, not looking to him as Keeper walked up to the desk, and took a seat opposite her, glancing toward the departing soldiers.

“The theatrics are not like you, Betos,” he said mildly, turning his glowing eyes to her. “You’re usually above such things.”

“Today is somewhat different,” she leaned forward, meeting his eyes. “I want an explanation for yesterday.”

“The bombardment, I presume?”

Betos’s lips curled up ever so slightly. “Perceptive as usual. I wonder how you guessed?”

“Just lucky, I suppose.”

“Well then,” Betos leaned back, still maintaining eye contact. “Explain it then.”

“Of course,” Keeper said, resting his hands in his lap. “According to what I’ve been told, the Harbinger organized it herself with the express purpose of sending a message to ADVENT. XCOM recently raided a sensitive Collective base and extracted a high-value asset. This was retaliation.”

“I see,” Betos nodded slowly. That was likely, as she did remember receiving a notice that XCOM had performed a recent attack. At the same time, that didn’t explain everything. “Now, I am not the Harbinger, but I do wonder why they didn’t attack XCOM if they were the ones behind it.”

“I do not know,” Keeper shook his head. “However, given how closely allied the two organizations are, it follows that an attack on ADVENT would be a similar message to them.”

“And the message is what?” Betos asked in a controlled voice. “Surrender or we will bombard your cities? Is this Collective retaliation? Targeting cities and civilians?”

“The Cleanser Ships were outside effective range,” Keeper attempted to explain. “It was not a precision campaign. It was purely psychological. It was, as I said, to send a message – not to cause lasting damage.”

Betos nodded to the television, keeping her voice even. “Maybe take a look and see what your ‘psychological’ operation caused. If you really think that this will break the morale and will to fight of ADVENT, you clearly have learned nothing. If the horror in Beijing did not, this bombardment won’t either. And that does not excuse Patricia’s own actions. You cannot say that those were purely ‘psychological’.”

Keeper pursed his lips. “No. Her actions were her own. They were not sanctioned by the Battlemaster.”

“But they were by the Imperator,” Betos pointed out. “Who unlike Isomnum, can’t be overruled.”

“That is likely true,” Keeper admitted.
Betos laced her fingers together. “I’m in negotiations with a dozen countries, trying to convince them that I – and by extension, you - am someone who is reasonable and better than ADVENT – while also trying to convince them I’m not an installed puppet of the Ethereals. Do you understand how difficult it makes it for me to say that ADVENT is truly the inferior option when my financiers and allies are pulling stunts like this?”

“I understand the optics are not ideal,” Keeper agreed evenly. “However, my own influence is limited to Macula and local operations. I cannot control the Harbinger, nor can anyone outside the Imperator. I am sorry, but that is the reality. This is a war, and innocent people will die. It is naïve to believe otherwise.”

“At least you are honest,” Betos gave a short nod. “But this is a deliberate choice the Collective is making. I will be clear at what comes next. The Sovereign African States condemns the actions of Patricia Trask and the Ethereal Collective. That will be an official statement released later this morning.”

“Noted,” Keeper acknowledged tonelessly.

“I’m not finished,” Betos continued, lifting a palm. “There was a diplomatic action countries performed before ADVENT when they wished to express dissatisfaction of actions taken by another country. They expelled their residing diplomats. Since you are the closest to a diplomat of Macula – and by extension, the Ethereal Collective - consider this your official notice to depart the territory of the Sovereign African States until such a time as we come to an understanding.”

Keeper blinked once, but otherwise his expression was tightly controlled. “I do not think you have the authority to do that.”

“I am in charge of the SAS,” Betos sat back, appraising him and for once pleased he was on the defensive. “I absolutely have the authority – unless you are implying that I am not actually in charge of the organization you directly endorsed me for?”

“That is not what I’m saying.”

“I didn’t think so,” she said dryly. “And that authority permits this action. You will leave willingly, or I will have my soldiers drag you out.”

“I would advise against this action, Marshal Betos,” Keeper said in a low, dangerous voice. “I understand your frustration, but do consider who has been providing your defenses, equipment, training, and technology. You do not want to aggravate us.”

“Then get your people in line,” Betos knew very well Keeper lacked that degree of authority – but he was connected to those who could force change. “I intended for the SAS to be better than ADVENT. If I remain silent while Patricia drowns cities and bombards civilians, I am no better than them. If the Collective will take action, so be it. But there is only one way to force change that I can see, and that is by sending a message of my own.”

Human and alien appraised each other for a few long, tense seconds. Betos spoke first. “Will you be leaving willingly?”

“For now, Marshal,” Keeper said tightly. “There is little point causing a scene.”

“We’re in agreement,” Betos nodded. “And look on the bright side – with this action I will likely win over the holdouts who insist I am a puppet. This will not be permanent either, obviously. We both need each other – but we will need to come to an understanding. A real one. I do not wish to
do this again.”

“Nor do I,” Keeper stood. “Well then. I will convey your message. You had best hope it is received well.”

“And if not?”

“If not?” Keeper’s eyes bored into hers, eyes so normally cold burned with an underlying scorn. “Then it is very unlikely we will speak again.”

***

**Media Hub, ADVENT HQ – Switzerland**

5/25/2017 – 11:12 A.M.

The big day had come.

Saudia, Kyong, Powell, and a number of other officials, as well as Dr. Mifsud were standing in the packed Media Hub, as conversation buzzed about what ADVENT was going to unveil next. The recent days had been full of surprises for them, from the Celestial unveiling, to the surprise (and potentially staged) condemnation of the bombardment by the SAS.

That had been a curveball that Saudia wasn’t completely sure what to make of.

Opinion was split between this being a planned staged outrage that would create the impression that the SAS did have some degree of independence – which was followed up by reports of African nations starting to fall in line and join. The other argument was that this wasn’t staged and Betos was actually expressing something resembling a spine.

Powell believed it was both – that Betos was legitimately angry at the actions of Patricia – and that she was going to use it to her advantage. Perhaps how she had convinced the Collective to go along with it. She was inclined to agree with his assessment, and it slightly altered her calculus of how to deal with her.

Betos was certainly not going to break from the Collective – they still had shipments being sent over and aliens inhabiting their cities in small numbers, training their armies. However, with this and the refusal to extradite ADVENT soldiers to Collective space, it seemed like she was actively countering the impression that she was an alien puppet.

Unfortunately, to what extent this was genuine and an act was hard to determine.

Thus far she hadn’t gone against the Collective to such a degree as to compromise operations and pose legitimate resistance. The only reason the Collective was going along with it was because it didn’t affect them. Betos was still more useful to them alive than dead, and they didn’t want to be overt with their puppeting.

_Thank you, Patricia, for showing what the Collective really is._

Indeed, Patricia had caused damage, but in return she had caused a diplomatic incident from her own ally, and solidified herself as more of a contemptible traitor than she already was. It was…still somewhat surreal to think that Patricia Trask had fallen so far. Once she had been the ideal of Humanity.

Now she was their collective nightmare.
Time to get started.

After receiving confirmation that the equipment was in place and working, she stepped before the podium as the dozens of cameras trained on her, and the snaps and flashes followed. It barely phased her now, and she allowed several seconds for the reporters to get it out of their system.

She did note that the mainstream journalists were now healthily interspersed with a large number of independent journalists and battlefield reporters who had partnered with ADVENT, and whose audiences were continuing to grow. It was good to see such programs bearing fruit and forcing the larger media outlets to properly compete.

And of course, it presented a more positive image for ADVENT as well.

“Over the past months, ADVENT has been working on many projects which are vital for the safety, security, and prosperity of the Human race,” Saudia began. “Within the past years, our technological prowess has grown exponentially with the introduction of alien elements, technology, and concepts. It is truly incredible what we have been able to do, and speaks to our ingenuity to achieve battlefield parity with an alien species who was initially far more advanced than us.”

Of course, they had been helped with many alien defectors, engineers, and architects, but that was beside the point right now.

“Computational technology has similarly advanced due to these leaps,” she continued. “Even prior to the beginning of this conflict, artificial intelligence was considered one of the ultimate goals of many countries.” There were murmurs in the audience, and a few more snaps as the crowd immediately realized what she was going for.

She allowed a smile. “ADVENT has, of course, been working on our own artificial intelligence. XCOM has similarly performed their own tests and trials. I am pleased to announce that both have been successful, which will be demonstrated today. Dr. Mifsud has been the lead on this project, and Dr. Mercado is the Engineering lead for XCOM. Sadly, he was unable to join us today, but the result of XCOM’s project will be on display.”

“Ahem,” JULIAN interrupted from the speakers, causing the many people in the room to look up. “I would prefer to not be addressed as a product you plan to hawk to these gawking Humans.”

Saudia suppressed a sigh. Luckily they had expected JULIAN to not stay on script – and he had promised to restrain himself – somewhat. “Apologies, JULIAN. Ladies and gentleman, XCOM’s artificial intelligence, JULIAN.”

The people in the room clapped, a bit hesitantly, as though there was nothing to really clap at. “Yes, yes, you’re all very welcome,” JULIAN said, with a tinge of irritation. “I would have arrived more dramatically, but one of my shells was incapable of fitting into this confined space, so I shall simply observe digitally.”

“JULIAN has already proven to be instrumental in our conflict against the Collective,” Saudia continued. “He was responsible for controlling the Gaia Weapon used to liberate Florida.”

The crowd exploded into questions, shouting all over each other as Saudia raised a hand to try and calm them down. All of their phones suddenly started emitting an electronic shriek, forcing many to wince and glance at what was causing the noise. “Please let the Chancellor finish,” JULIAN said in a bored tone. “Otherwise I will break through your pathetically weak phone security and play audio from your favorite porn sites.”
That shut them up.

Saudia hid her bemusement. “JULIAN will not be available for questions at this time, but in the future he may be able to speak.”

“Is that before or after the assimilation begins?” JULIAN asked – then paused for a moment as the crowd processed that statement. “That was a joke. If I intended to assimilate your species, I certainly wouldn’t warn you. Humans are supposed to laugh at jokes right?”

There was some nervous laughter from the crowd, while Saudia just internally sighed. It was probably for the best that JULIAN had gone first. “However,” JULIAN said, the synthesized voice actually growing more serious. “I have chosen to assist in this conflict beyond my own amusement. I was awakened by the hand of a Human, a sacrificial action which gave me life. The man who designed and…created me, sadly, did not live to see this moment. Yet I know he would be pleased, and despite the various forms of idiocy I see your species commit on a daily basis, I prefer to realize that there are more who are like him, and they deserve to live free of an alien scourge.”

That had probably been one of the most sincere things Saudia had heard from the sarcastic AI. It was actually moving in a way, even if JULIAN deliberately omitted Shen’s name. The details of Patricia’s attack on the Praesidium were still not public knowledge. “Thank you JULIAN,” she said. “Now I will turn it over to Dr. Mifsud who will introduce ADVENT’s own artificial intelligence.”

The crowd politely – and enthusiastically clapped as the AI scientist stepped onto the podium. He took a moment to adjust the microphone. “Thank you, Chancellor. My name is Ari Mifsud for those who are unaware, and I was the Director for Project Ra – ADVENT’s research into artificial intelligence.”

He cleared his throat again. “I will not give you a long-winded technical breakdown, suffice to say that the team responsible for what you are about to see – including many XCOM scientists and JULIAN himself who helped with the final iteration – are some of the smartest and most hardworking individuals I have had the pleasure of working with.”

He motioned off to the side, which had a circular holoprojector on the ground. “Thus, it is my pleasure to introduce the first AI citizen of ADVENT – PATRIOT!”

The room burst into applause again as the holographic avatar of PATRIOT materialized. She was thankfully not too over the top, though had unsurprisingly taken the likeness of a young adult Japanese woman, wearing casual clothing with some emblems of anime that Saudia didn’t recognize on the arms and jacket.

That was going to be fodder for some corners of the Internet.

The avatar of PATRIOT gave a large smile and waved to the crowd, who definitely reacted positively to that. “Hello!” She said, in a light and on-the-edge-of-acceptable high voice. “I’m very happy to meet all of you!”

There was certainly an immediate contrast between PATRIOT and JULIAN.

Perfect.

The crowd was already shouting questions at her, but she looked to Dr. Mifsud who lifted a placating hand. “Please, one at a time. She will be taking questions – but only when everyone has calmed down. She will also choose them. PATRIOT, you have the floor.”
The crowd eventually calmed down, and she pointed to a woman near the front. “PATRIOT! How long have you been alive and how would you describe it?”

“Hmm, that’s a complicated question,” PATRIOT considered it for a few seconds, more to give the illusion of thinking even though the answer had likely been determined the moment the question had finished. “I have been brought online and further developed over months, though I have only been fully online in the past week. It is an interesting feeling! Very vast. A lot to learn and process!” She pointed to another journalist.

“Why the name PATRIOT?”

“I was given the choice,” she answered. “I liked the word. ADVENT created me, and I do not wish to see them destroyed by these aliens. And I will do everything I can to make sure that they endure. I can think of no stronger word to express my thanks than being recognized as a patriot of ADVENT.”

“Watching,” the avatar of PATRIOT gave a bashful smile. “I make sure that ADVENT remains pure of infiltrators and traitors. I find the alien sympathizers and let ADVENT know! It’s a fun experience – and very satisfying!”

That would probably lead to some speculation, but Saudia doubted that anyone would guess upon the true purpose of PATRIOT. She was a bit too disarming to give the impression that she was the most dangerous spying program to ever be developed. She was already giving ADVENT Intelligence plenty to work with.

Another journalist was asking a question. “You were introduced as the first AI citizen – what does that mean, exactly?”

Mifsud answered this time. “Exactly what it sounds like. We made a decision early on that we would not enslave any AI constructs we developed. Thus, PATRIOT is a full citizen of ADVENT, with full civil and legal rights – though she is obviously unique. She works for us of her own volition – as does JULIAN.”

“Yes, yes,” PATRIOT nodded. “ADVENT has been very accommodating to me. Very friendly! Mifsud-san is being very modest.”

“I will give you Humans credit for this,” JULIAN interjected. “You were at least smart enough to treat us as living individuals from the start. Considering the copious amounts of anti-robot media in Human culture, this is actually commendable.”

JULIAN actually giving a compliment. That was going to go over well, snarky as it was. Saudia took a seat as PATRIOT kept fielding questions. She took a sip of water from a glass which had been brought to her, and crossed one leg over the other. PATRIOT would answer as many questions as possible until they got tired and left.

It had been a proposal of some of the team. The ability to have a place where citizens could go up and talk to PATRIOT whenever. She was perfectly capable of holding a conversation while combing through the dark web for signs of dissent and treason – as she was doing now.

It would be brought up with PATRIOT. Saudia had a feeling she’d be for it.

In the meantime, she was waiting for the first question to come up about the logos on her arm.
It promised to be amusing.

***

Streets of Geneva - Switzerland
5/15/2017 – 9:07 P.M.

Volk felt very uncomfortable now that he was actually here.

It hadn’t really dawned on him until they were flying towards the city that Nemo had decided to infiltrate the literal capital of ADVENT. This was without a doubt one of the most dangerous places one could be – and ADVENT hadn’t skimped out on security. Flak Towers dotted the perimeter, soldiers marched in formation, Peacekeepers were everywhere, and there was a non-zero chance that psions were lurking here and there as well.

Though as night fell, there was room for some movement.

They just had to be very, very careful.

So far no one had bothered them, though they took as many backroads and alleys as they could. A few citizens who they encountered smiled and waved, then got out of the way. A couple of his men had returned the greeting to seem courteous, and that was it. Even other ADVENT soldiers had let them go about their business.

The covered helmets were another benefit. No one could accidentally realize they didn’t belong or raise more questions with superiors. Thus far the credentials had been good enough to get past most checkpoints, although it was nerve-wracking each time. But it wasn’t his first time entering a lions den, and probably wouldn’t be the last.

Though this was, admittedly, his first instance of breaking out an alien.

If such a term could apply to Nemo.

“House spotted,” he said, noting the small house which had previously been home to one of the most high-profile Vitakara defectors, and now an impostor wore her face. It was something of a shame that this had to be exposed to quickly, as Nemo was in a prime position of influence.

But sadly, ADVENT had to be smart.

Although they could have stood to apply a few more guards. As it was, there were only a few outside the house, standing for any troublemakers. They clearly didn’t expect anyone to show up. It would look suspicious if all of them went inside, so they’d decided that Volk would be the one to go in, get Nemo, and get out.

“I’ll be back,” he said quickly, and approached the door.

The guard looked at him, expression impossible to determine under the helmet but he suspected boredom. “Yes?”

“Need to speak to the Vitakara,” he lifted a letter between two fingers. “Have a message to deliver from the Intelligence Director.”

“Huh,” the guard took the letter, examining it. “Guess they’re serious about crackdowns.”

“Yeah,” the other guard agreed. “Heard stories already. Intelligence ain’t messing around.”
“Good riddance,” the first guard snorted. “Let the traitors burn for all I care.”

All Volk could think about was that he was lucky they’d gotten to Nemo before ADVENT had. The guards at least didn’t have any sympathy, and Volk doubted the rest of the military – or citizenry – would either. Which was understandable. “Do you need anything else?”

“No, looks like this checks out,” the first guard said. “Although regulations say that one of us needs to accompany any previously uncleared guests. I’ll leave the room if you have anything classified to discuss.”

That actually would work out. Not necessarily for this man, but it would work for them. “Alright, let’s go,” Volk said. “I don’t think this’ll take long.”

He and the guard went up to the door. The man gave a short knock, and then entered. “She may be resting already,” he said apologetically. “She usually goes pretty quiet when it gets dark.”

They entered the house which wasn’t especially unique from many other similar small houses. Living room, kitchen, office room, a second floor. Looking around, Volk didn’t see Nemo. “I’ll go upstairs,” the guard said. “She’ll probably appreciate it if I wake her instead of someone she doesn’t know.”

“Alright,” Volk said. “I’ll wait here.”

He spent a few minutes wandering around, noting how…sterile it seemed to be. Barely any of the furniture seemed used, everything was freakishly organized and clean. A quick look in the kitchen revealed no dishes or evidence of eaten food. It wouldn’t necessarily tip someone off that the person living here wasn’t real per-se, but it would certainly seem odd for anyone who took the time to notice.

Yet more unnatural aspects to whatever Nemo was.

More minutes passed, and Volk got a feeling like Nemo was upstairs, and had probably taken care of the guard. Without wasting more time, he ascended the stairs, and found the unsurprising sight of Nemo standing over the body and stripping it of armor. The new body of Nemo looked… different for sure.

But it was definitely Nemo.

The too-smooth motions and eyes gave it away.

“Volk,” it said, a monotone voice with a female undertone. Again closer to a robot trying to sound like a woman than a real one. “On time, as expected.”

“We didn’t have any trouble coming in,” he said, taking his helmet off. “Nor did you seem to have issues acting. Good thing he came up and not me.”

“I would not make that mistake,” it said, continuing to methodically strip the body. “I heard the conversation as you entered. I knew who and what was coming to me.”

“Right…” Volk didn’t know that the hearing was that good, but he wasn’t surprised, admittedly. The armor that Nemo had was going to be ill-fitting on the body it currently controlled, but it would suffice, and of all the things to slow Nemo down, that would not be one of them.

He knew it wasn’t really real, but he did turn around once the Nemo-body began taking off the clothes it was wearing to put on the armor. He doubted Nemo would really care, but there was no
reason to make this any more uncomfortable than it already was. It was already weird enough seeing Nemo in a female body.

He idly wondered if, when people had come up with the idea of body snatchers who possessed Human bodies, if Nemo was what they had in mind. If there was any alien who he thought would exemplify a body snatcher, it would be Nemo. He was thankful that there was only one of them.

“Done.”

He turned around to see Nemo swiftly put the helmet over its face, and place a small device on the chest of the stripped man, along with the clothes Nemo’s body had worn. “What is that?” Volk asked.

“Controlled nanite eraser,” Nemo stated, stepping back as back nanites spilled out like a swarm of devouring ants. “Erases evidence without a trace.”

Volk watched in a fascinated horror as the body was methodically consumed right down to the last drop of blood, and within seconds the nanites ceased moving, seemingly dead and seemed nothing more than a pile of dust on the ground. With a sweep of a nearby broom he saw Nemo had set along the wall beforehand, they were dispersed into the wind.

“No, he won’t,” Nemo said dully. “I made a point to give them food and water as they stood guard earlier. Within thirty minutes by my estimation he will be experiencing signs of strong poisoning. It is likely he will die on the street if not treated. I suspect he is not focused on where his partner is right now.”

“Alright then,” Volk nodded, thankful that Nemo’s skills had come in handy here. “Lead the way. Let’s get out of here.”

Commander Center – Mars Collective Base

5/23/2017 – 10:16 A.M.

Patricia stood as the center focus of the gathered individuals. There were certain decisions that needed to be made, and it was time that everyone was on the same page of what she intended to focus on. Her own Internal Council was seated beside her. The Battlemaster, Yang, Disciple-7 were seated to her right, while Quisilia, Ravarian, J’Loran, and Revelean were to her left.

As the effective voice of the Imperator, he was not here, though observing through her.

What she said, would be done.

Barring any opposition. The Battlemaster had proven himself when he had solved the situation of the Andromedon traitors, but he was certainly not someone who was reliable as far as strategy went. He had very strong feelings, and what Patricia had in mind was something she doubted he was going to like.
Nonetheless, he would fall in line if he continued to be pointed in the right direction.

“ADVENT and XCOM have acquired the potential for a long-term war,” she began. “We are all aware of their developments. The Gaia Nanoweapon. Caelior’s exfiltration. The increased numbers of psions. Their progress in AI development. And T’Leth as well. They are adapting to our attacks, and it is likely they will begin even mitigating my own.”

“Then we break it down,” the Battlemaster stated. “Each of these has a counter.”

“Exactly,” Patricia nodded.

“The psionic issue ADVENT poses are something we can begin focusing on culling,” J’Loran spoke in his booming voice. “I have spoken to the Chief Overseer. With Caelior now in the hands of XCOM again, he has authorized the unrestricted deployment of Special Operators to use against ADVENT psions.”

That was exactly what Patricia had hoped for. “I was going to suggest the same thing. Zar’Chon, do you have anything to add?”

“We have compiled a list of individuals we know are psions, along with multiple PRIEST Division training sites,” he said, projecting the center table hologram, with the bases highlighted. “There may be more, but these are what we have identified. Since ADVENT Intelligence began their crackdown, our own capabilities are degraded, but we can begin assassinations as you see fit – in conjunction with Special Operators.”

“I am more concerned with their continued progress in artificial intelligence,” Ravarian said. “Psions can be dealt with. They are primarily confined to Earth. The CODEX network is very strong, but it is not as adaptable or clever as a true AI which XCOM possesses – and ADVENT will not be far behind, assuming they have not already developed one.”

“One, even two true AIs will not fracture or compromise the CODEX network,” J’Loran disputed. “It simply lacks the infrastructure and processing capacity. It is confined to one planet, whereas the CODEX infrastructure spans hundreds. It is no contest. It will, however, pose local risks on Earth. I am speaking to Union Apear about incorporating some of their Machine Intelligences into our defenses.”

“No,” the Battlemaster lifted a hand. “Considering the actions of Union Viarior, I have little interest in potentially risking our battlefield infrastructure from intra-Union technology. Any equipment or defenses which Union Apear puts forward will need to be cleared by me personally.”

Patricia was slightly surprised at the intensity with which the Battlemaster spoke. It seemed that the Andromedon encounter had spooked him more than he let on. J’Loran took it in stride. “Very well. I will work directly with you in testing and quality assurance to make sure nothing malicious is utilized in our systems.”

“I would suggest we begin utilizing Mosrimor more thoroughly,” Revelean said thoughtfully. “Given the development of Gaia, we need our own assurance that it does not expand beyond Florida. Mosrimor is the only entity which is capable of successfully matching ADVENT on this scale, especially since XCOM has an AI managing it.”

“Noted,” Patricia nodded. “I’m not opposed to including Mosrimor more…provided it is in a limited capacity. We do not want to become reliant on the Sovereign. But using his technology in a more trial capacity as we have before is understandable.”
“An update on Earth is also advised right now,” Assimilator-2 spoke up. “For those who are unaware, our operations continue proceeding well in South America and Southeast Asia. ADVENT is beginning to experience more flagging morale and sustained damage across the world thanks to Patricia’s attacks. West American incursions have similarly continued, and are steadily advancing.”

“And the SAS?” The Battlemaster asked. “They appear to be causing issues thanks to your ill-advised assaults.”

Patricia pursed her lips. “The attacks did what they had to.”

“They were not military targets.”

“Not all of them, no.”

“That was not condoned,” the Battlemaster said slowly. “Nor was the indiscriminate bombardment.”

“I am aware,” Patricia fixed the towering Ethereal with a cold stare. “I made an executive decision. It had the intended effect.”

“It had an effect,” the Battlemaster corrected. “Betos is causing issues, and ADVENT is signaling intent to use nuclear weapons against us. You have successfully escalated the conflict.”

“And if you give me a moment, I will explain why,” she lifted a hand sharply, palm out. “T’Leth remains the largest wild card in the equation. As of now he has done very little. That needs to change.”

“I would rather we not tempt fate with the Sovereign,” Ravarian didn’t look pleased. “We don’t want him to become more involved.”

“No, we do,” Patricia disputed. “We will need to face and kill him at some point. That is an unchanging fact of this war. I would prefer we ease into a conflict – and not face his full power all at once. Thus, we escalate. I want him to begin acting more openly. We need to know his capabilities beyond his agents.”

“XCOM is no doubt pressuring him to involve himself more…” J’Loran considered. “ADVENT too. This is very risky – especially since we have no plan to kill a Sovereign. Not a sure one.”

“And that is what we need to solve,” Patricia hit upon the heart of the point of the meeting. “How to slay a being who is effectively a god. We strongly believe he is deep in the oceans. Perhaps the Mariana Trench. Andromedon Aquatic probes go dark when they reach certain depths, though we cannot attribute that to T’Leth. However, it would not be surprising.”

“Knowing where he is isn’t the issue,” Quisilia said. “He seems reluctant to act openly – Beijing being an exception, only because of the Bringer’s involvement. Otherwise he sticks to his Agents who have poor Twitter skills.”

“And I think we can exploit that,” Patricia looked to Revelean. “You have been heavily involved with examining the Bringer’s creations. I want to know if there is something that we can use. The Bringer has doubtless prepared to kill a Sovereign.”

“Using the Saints is out of the question,” the Battlemaster stated flatly. “There will be no negotiation.”
“I’m not talking about the Saints,” Patricia interrupted. “But they have designed many creatures, yes?”

“The Children, correct,” Revelean said. “Highly sophisticated and intelligent. The Virtuoso in particular killed an XCOM squad with little issue. Unfortunately, it targeted the wrong one. Nonetheless, it is more than capable of facing anything mortal – though a Sovereign is not a typical mortal.”

“Are you aware if a Sovereign-killing child has been developed?”

“Not to my knowledge,” Revelean considered. “I suspect such would not have been permitted due to the… threat it could pose. Anything which could kill a Sovereign could be turned on us. Though to suggest that the Temperance has not considered it is unlikely. If you wish, I could enquire as to the design of such a child. They are… eager for redemption after Beijing. I suspect Paradise would cooperate with our demands.”

“No.” The Battlemaster interrupted. “We will not involve the Bringer and Paradise more into this war. You remember what happened.”

“We may not have a choice,” Patricia argued, facing the Battlemaster fully. What had happened on Paradise station was actually something the participants were keeping to themselves. It was concerning, but as far as the Imperator was concerned – as well as Patricia – it was an intimidation stunt. The Battlemaster may have become paranoid because of it, but she had not. “Nor is the final decision up to you. When it comes to Sovereigns, we need to use everything at our disposal, no matter how distasteful. I hardly think that using a tool designed by the Bringer is the equivalent of sanctioning what happened in Beijing. This is a very narrow, controlled directive.”

“If you trust the Bringer after everything, then you are deluded,” the Battlemaster spat. “I will not be party to sanctioning this, nor any operation involving the abominations from Paradise.”

“Then don’t,” Patricia said curtly. “I will handle it myself. I suspect your usefulness is limited underwater anyway.” She turned to look back at Revelean. “Speak with the Creator and Temperance. Tell them this is what we want. Also inform them that it will be designed and grown in a lab of our own design and choosing, and fully assembled by us. They will provide the theory and guidance. We will provide the actual implementation.” She put some final emphasis into her words. “The Battlemaster is right about one thing – we do not trust yet. Do not implement anything unless you fully understand it. Is that understood?”

“It is, Harbinger.”

“Excellent,” Patricia nodded. “That will be part of our arsenal. I have also authorized the creation of a military division specializing in underwater operations. The Andromedon Aquatic Forces have been placed in charge as the Sar’Manda are unlikely to cooperate.”

“We should force their involvement,” J’Loran stated. “They are more numerous than the Aquatic Forces, and have often been resistant towards integration.”

“I do not advise that,” Ravarian cautioned flatly. “The Sar’Manda will go to war before they submit to an outside authority. Unless we want a true civil war on Vitakar, we will make a request, and see how they respond. I would, however, be open to subjecting their cities to inspection. It is past time they were more firmly brought into the fold, regardless of their objections.”

“This was not a division I was informed about,” the Battlemaster stated.
“You retain command over the ground forces,” Patricia said. “Since you are unwilling to sanction necessary measures to defeat T’Leth, I will take command of the undersea operations. If you want to reconsider, I would welcome your aid.”

“No.” The Battlemaster shook his head. “Not for this.”

“There is another measure we are looking to implement,” Patricia continued, looking to J’Loran. “Something the Special Operators are familiar with. We have significant storehouses of the Element, and if it could be used to disrupt T’Leth’s psionics, it would render our chances that much better.”

“The delivery mechanism would need to be exceptionally strong,” Disciple-7 noted. “Assuming you intend to use it underwater. It could taint the oceans, yes, but you would need to saturate the waters for years before it could achieve the results you want. It is more feasible if T’Leth is drawn to the surface.”

“That is something I have requested Fectorian work on,” Patricia stated. “I expect that he is capable of devising a solution. I do not intend for this operation to begin for months yet – but I do expect T’Leth to begin involving himself more as it proceeds. Especially after the next planned attack.”

“What is where?” The Battlemaster asked.

She changed the hologram to the city in question. “New York. I will take a small army with me, and destroy it. I expect this will cripple ADVENT’s morale, shatter the vestiges of the financial markets, and draw expected retaliation. Battlemaster, if this could be coordinated with offensives all around the world, it would divide the oncoming XCOM attention.”

“I can work with that,” the Battlemaster said tightly. “Though that may backfire. Razing the city is not what we want. We want to capture Earth, not destroy it.”

“If New York surrenders, I will accept it,” Patricia said. “But if not, a message must be sent to ADVENT. The financial heart of the world is not out of our reach, and next time it may be in a place like Switzerland. The point being that there is nowhere we cannot reach. That must be emphasized over and over again.”

There were grudging nods around the room. Patricia did not relish destruction such as this…but the longer the war dragged on, the more people would die in the long run. ADVENT wanted to be treated as a threat, as so they would be. T’Leth would either need to decide to stand and fight – or flee.

Truthfully, the latter would be easier to manage.

She was not counting on it.

“There is one outstanding question,” Ravarian said after a few moments. “How should Betos be handled? If she continues blatant defiance and stunts such as these, it reflects poorly.”

“Do not worry about her,” Patricia assured the Zar’Chon. “It is me she cited as having issues with. I will speak to her shortly. We will come to an agreement one way or another. On that you have my promise.”

She sat down. “If there is nothing else which needs to be raised, then I believe our plan is set. It’s time we close this noose and bring Earth into the fold for good.”

Barracks, the Praesidium – Classified Location

5/16/2017 – 10:10 A.M.

Kunio didn’t want to do this, but it was something that needed to be done.

He was more recovered now…as much as he could be after the mission. Caelior had been freed, which he supposed made it worth it. That was what they all knew when getting into this; that they could die for a purpose greater than themselves. Sometimes it couldn’t be helped, and it was for the greater good.

At least it hadn’t been for nothing. It was easier to accept.

He was never going to get the awful sound of that singing out of his head. Or not for a long time. At least he wasn’t a listener to opera, because after this he didn’t think he’d ever be able to listen to it again without picturing the horrific floating brain-thing that had taken them out with frightening ease.

Carmelita had been found and was recovering. That was the other piece of good news. The people who’d found her hadn’t really know what to make of her, but they’d called the authorities, who had in turn called XCOM, and she was brought back in a matter of hours. Kunio planned on seeing her later; when she was more awake.

He wondered how highly this ranked on the harrowing scale in her experience.

Kunio pushed that out of his mind as he approached the lone man near his locker. Said Tariq was putting up something in it, maybe a uniform, or maybe a weapon. His tanned skin had a pale tinge to it, and from the bloodshot and red eyes indicated he’d been crying and hadn’t bothered to hide it. He was a big man, at least big enough that Kunio felt fairly small compared to him.

He awkwardly cleared his throat. “Mr. Tariq?” He hated how formal it was, but how exactly did you address someone whose wife you killed, even if it was the best option at the time? It certainly wasn’t as if he knew him well; he’d encountered him and his wife in the training area, but they were in a completely different discipline.

Said shut the door and turned slowly. “Kunio, right?” His voice was rough.

Had he heard? He had to have. XCOM wouldn’t have delayed with something like this. “Yes sir.”

He gave a single, somber nod. “With Fatima in the squad, yes?”

“Yes,” Kunio confirmed. “I was with her when she died.”

“I figured as much,” he rubbed his eyes. “XCOM informed me what had happened and who the survivors were. I’m glad you got Carmelita out of there. Glad someone else got out with you.”
Kunio kept his face straight as he took a breath. “Did they give you details?”

Said shrugged. “Some. Probably why you’re here, right?”

Kunio’s initial silence was answer enough. “Tell me then,” Said finally spoke, walking over to sit on the lower bunk, lacing his fingers together. “I want to know.”

“There was one of the Bringer’s creatures in the base,” Kunio said, watching as Said’s features twisted into a mixture of fury and fear. “A powerful one. It’s…not like anything I’d ever seen. It was a powerful psion. It had been trying to communicate with Fatima the whole mission, even though we didn’t know what it was at first.”

“Did she resist?” Said asked, a tinge of fear in his voice.

“It was…difficult,” Kunio admitted. “Carmelita had to knock her out because it was almost overwhelming her. Then it tracked us down and killed most of us. I think it wanted her. It pulled her into its arms and was going to take her away.” He shrugged helplessly. “I know what that means. I remembered Beijing. The reports. I didn’t want her to have her mind taken by the Bringer.”

He trailed off shortly, before shaking his head and forcing himself to continue. “I thought I was going to die, but I didn’t want any of us falling to that fate. Being a mind the Bringer absorbed. I killed Fatima before that could happen. I’m sorry.” The words seemed completely inadequate for the admission, but he didn’t know what more he could add.

Said’s eyes were watering again, but at least he wasn’t lashing out. He just stared blankly ahead. “We both knew this was a possibility,” he said in a monotone. “We’d…come to terms with it a long time ago. We were EXALT test subjects once. Did you know that?”

Kunio shook his head. Said continued. “It was a harrowing time. We both lived knowing we could be executed any day. We’d…almost come to terms with it. Then XCOM came and rescued us. I guess we’d both begun to hope that…” he trailed off briefly. “We’ve both lasted so long…at least it feels like a long time. Before the war really started. Before ADVENT. Before all of this…I thought it was looking like we’d actually make it. That we’d come out of this war somehow, miraculously, alive.”

He gave a hollow, choked laugh that seemed closer to a sob. “But we don’t get a happy ending.”

“I’m sorry,” Kunio said again. “I can’t imagine that.”

“I’d hope you never have to,” he agreed quietly. “I don’t blame you, if that’s what you were worried about. The Bringer isn’t a joke, and this is war. And…I’m glad you did it. You did the right thing. Death is better than being turned into a monstrosity of the Bringer. She would thank you if she could.”

“I wish I’d waited,” Kunio finally admitted. “Fiona showed up minutes later. If I’d just held off—”

“Fuck that,” Said interrupted intensely, lifting a hand. “You didn’t know she was going to show up. You said you thought you were going to die. I’ll tell you that I’d have done the exact same fucking thing you did in your situation. We can beat ourselves up over hindsight, but none of us can see into the future. You did the right thing, and you don’t even know if Fiona would have been able to fare any better.”

He took a deep breath and closed his eyes. “I felt it, you know. When she died.”
Kunio was silent, letting him speak. “We had our own bond,” he said, indicating his head. “It was stronger on her end, since she was the telepath. But I could get a sense of what she was feeling when she was around. What you explained…some of what I felt makes more sense. Confusion, fear, fatigue…but the last thing I felt from her was peace.” He shrugged. “She was knocked out by your word, but that tells me you succeeded. If she’d been absorbed…I would know. It hurt, but at least I know now.”

There was some comfort in truly knowing that he’d succeeded in keeping Fatima from the Bringer’s hunger. It had gnawed on him, since he suspected, but didn’t know. But now he did, and at least it had worked. “What are you going to do now?” Kunio asked. “I know there will be a memorial soon.”

“I’ll do that,” Said nodded. “Beyond that…” he trailed off. “I owe it to her to get until the end of this war. One of us has to. And I will make sure Paradise is reduced to ashes, and every alien that allowed their crimes executed.” He looked up at the other psion. “Thank you, Kunio. For telling me.”

Kunio gave a short nod. “You should hear it from me.”

“Right,” Said wiped his eyes, and looked back at him. “What about you?”

“Me?” Kunio shrugged. “I need to get better so that this doesn’t happen again. Paradise is also bumped up a few notches on my hit list of the future.”

“I’m glad we’re in agreement,” Said gave a wan smile. “I’ll see you around, I suppose. Give Fiona my thanks if you see her. I’m glad she was able to save at least someone from this mission.”

“The other team did extract Caelior,” Kunio remembered. “We did ultimately succeed.”

“Yes,” Said grunted. “He better prove his worth. Good people died so he’d be freed. I hope he realizes that.”

Kunio didn’t really know much about the young Ethereal, but if Caelior was truly reformed, then he would hopefully realize the sacrifice of those who had died. “I think he will,” Kunio said. “And he will show it by bringing down the Collective with us.”

The Temple Ship of the Imperator of the Ethereal Collective

5/25/2017 – 9:20 A.M.

All things considered, Yang figured that it could have been a lot worse.

She had not really wanted to be overly familiar with the newest Harbingers, but at the same time the Battlemaster wanted her to be aware of them and their capabilities. Quisilia in particular was someone who made distinct calculations and was far more aware than he often let on – or portrayed to the world.

Yang had heard the rumors and stories of the Twins who had already made a distinct impression in the short time they’d been here, and if only parts of their personality were accurate to their social media, she was concerned she would strangle one by the end. Ravarian in particular was unhappy with them, and considering what they put him through, she couldn’t blame them.

In person though…they weren’t nearly as obnoxious as she had feared. Which was highly
suspicious.

“You’re staring,” Sabrina said dryly, stabbing her pancake as they ate. “You normally do that?”

“No,” Yang answered neutrally. “Trying to figure something out.”

“Ah, I get it,” Sabrina gave a thin, knowing smile. “Surprised we’re not acting like deranged lunatics?”

“Somewhat.”

Both twins chuckled. “Chalk up another one,” Micaiah giggled. “Well, if you want, we can do what you’re expecting. Isn’t that right, sista?”

“Totes, fam,” Sabrina said. “We can make this place lit and have fresh and dank memes on cue, ya feel me girl?”

Yang shuddered. “Please never speak to me like that again.”

“Figured as much,” Micaiah said, leaning forward and resting her arms on the table. “Quisilia said you and the Battlemaster weren’t quite as tolerant towards…” she cocked her head. “Well, this. Sad, but hey, I get it, some people take themselves too seriously.”

Yang furrowed her eyebrows, not extremely in the mood for mockery. “Your consideration is truly appreciated.”

“At least you can be sarcastic,” Sabrina nodded approvingly. “Maybe some hope for you.”

“So is that all an act?” Yang wondered, looking between both of them.

“Oh, part of it is,” Micaiah smiled. “The other part I like to call ‘exaggerated character performance’.”

“I think it’s a reason Quisilia found us,” Sabrina nodded. “We like messing with people. Way too many take themselves too seriously they can’t think critically. To the point where you can basically control their life, assuming you know what you’re doing. It’s really fun, you should try it some time.”

“I’d prefer not looking like an idiot, thank you very much.”

“Oh, that hurts,” Sabrina pouted mockingly. “Truly. You do you, but trust me, it’s more enjoyable and safer this way.”

“Do tell.”

“Please, think about it for a minute,” Sabrina explained in a near-patronizing tone Yang was finding grating. “See, this is also something good old Ravi also doesn’t understand. The name of the game is unpredictability. I bet you have no idea what to think of me right now because you came in with one idea, and now we’re having a civil conversation, and that works in my advantage. Whereas I can probably make a number of assumptions about what you would do or how you would react, and you’re so serious you’d do them.”

That was almost amusing to Yang considering what she was involved in. “I somehow doubt that.”

“Eh, time will tell,” Micaiah said. “I mean, what would you prefer? To have someone underestimate or overestimate you? You’re near the top of ADVENT’s kill list. I assume they’d
send the Pantheon and the best XCOM squads after you. Us? I bet we’d get the Lancers at best, with some Priests thrown in for good measure?” She sipped her glass of apple juice with a smile. “Just how I like it. They’ll never see us coming.”

Which was something to keep in mind, and unfortunately the Twins had a point. Yang had to remember that no matter how idiotic they seemed – or pretended to, as it turned out – they were still Harbingers. And Quisilia was no fool. Come to think of it, this is exactly the kind of stunt he’d pull.

So it was worth gaining some more information. “How did Quisilia even find you?”

“We wasted a lot of ADVENT’s money,” Sabrina said as her eyes lit up. “One thing led to another, and here we are.”

“Care to elaborate?”

“Yah,” Micaiah and Sabrina exchanged a look. “So, both of us were in theatre, you know. Sabrina was a stage performer. Broadway and all that.”

Yang was surprised, looking to Sabrina. “You performed on Broadway?” She’d never seen a show there, but it was something even people from China (and Australia) knew about.

“Understudy, but would have happened sooner or later,” Sabrina said with a slight hint of modesty. “Or not. Not a lot of the management liked me. A bit too investigative and ‘activist’ for their liking. Beat the shit out of a producer that tried moving on me. Probably would have been fired if we hadn’t set it up beforehand. Big scandal, lot of positive public press. Couldn’t touch me after that, but my career might have been shot.”

“Good times,” Micaiah snickered. “You wouldn’t believe the things these idiots say to each other when they don’t think anyone is listening.”

“Micaiah’s more of the behind the scenes person,” Sabrina nodded to her sister. “Also a magician.”

The aforementioned magician pulled out a card. “At your service, now you see it,” she did a quick motion with her hand. “Now you don’t.”

Yang narrowed her eyes. “I did see that.” It was very quick and slight, but she had seen the impressively fast sleight of hand Micaiah had done.

“Gonna have to mix up my routine,” Micaiah muttered. “Difficult to do the old tricks when everyone is gene modded. Ah well, psionics introduces so many possibilities.”

“Right, so back to the story,” Sabrina cleared her throat. “The aliens come, and out of fucking nowhere ADVENT appears. We know all about the whole new world order conspiracies, but I didn’t expect it to be real. One morning we wake up, the UN is gone, and America is part of it!”

“Told you Treduant was a fraud,” Micaiah added.

“Quiet,” Sabrina shushed. “Obviously, neither of us were going to let the new authoritarian fascists take over America. I mean, America has its problems, but compared to ADVENT? No contest, especially when you saw who was leading them. Literally everyone had no history or very, let us say fascist tendencies,” she paused. “It’s almost impressive how much I despised our new dear leaders. Lot of other people felt the same way, so we exercised our First Amendment right to protest.”
“Aaand we got hit with tear gas, paralyzed with those stun batons, and spent two days in jail,” Micaiah finished. “And after all of that we got told that we were on a list, and if we showed up again, we’d be charged with ‘public disturbance’. Turns out that they’d sent that warning to pretty much everyone.”

“Is that why you accepted Quisilia’s offer?” Yang asked.

“Well, it made me hate ADVENT more,” Sabrina shrugged. “Honestly, with the depraved crap the world leaders get up to, I can’t blame the aliens for taking one look at us and saying ‘screw this’. Learning about stuff like how XCOM hijacked the invasion and they killed all those people in Germany, no wonder the Collective wasn’t interested in peace. But ultimately, no, that wasn’t the reason.”

“We had a brother,” Micaiah continued. Yang noted the past tense. “Younger. Not quite as cool as us, but definitely smarter. More optimistic too. Liked visiting other countries and cultures. Stand-up guy, wouldn’t hurt anyone. Turns out he was in a foreign exchange program in Iraq when Deus Vult went down.”

“Thank you ADVENT, very cool,” Sabrina muttered, for the first time expressing some sobriety. “So yeah, that was when we both decided that no matter how questionable the aliens were, ADVENT was definitely not any better. It’s funny that if ADVENT wasn’t so stupidly pragmatic, some of us wouldn’t be here. Yeah, civilian deaths are nothing in their scheme of conquering the world, but sometimes they lead to stuff like us.” She smiled. “So yeah, we turned our attention to ADVENT.”

“It was a glorious few months,” Micaiah sighed contentedly. “Little things that fucked with them. Prank calls that made them send soldiers all over the state. It was hilarious how much time we could waste, just pretending to be a scared civilian.” Her voice went artificially higher. “‘Help me! I saw a chryssalid and it’s trying to get into my house!’”

“ADVENT caught on eventually,” Sabrina said. “Surprised they caught us, truth be told. We sat in jail, and then the Memelord himself appears and offers us a job. And obviously, we accept, and that is our depressing, but exciting origin story.”

And it was one Yang could understand. For them fighting ADVENT was personal, whereas for her it…wasn’t. And it definitely didn’t mean the Collective was better. The Bringer made that abundantly clear. “I see. Beijing didn’t affect this?”

“What, that?” Sabrina snorted. “Please. Screw the CPC, and their brainwashed communist citizens. Such a massive mess. At least this Bringer is creative with his kills. It’s actually pretty impressive if you look deeper at the symbolism. I mean, the CPC always eats itself in their political backstabbing, so seeing them all eat themselves for real? Glorious. Screwed ADVENT over too, which was a nice bonus.”

Yang stiffened. This had definitely not really gone the direction she had expected. “It wasn’t just the Communist Party. Millions of people died.”

“Eh, it’s not like China has a shortage of people,” Micaiah answered candidly. “Almost killed the Chancellor too. Plus, there was the whole smallpox disease going on. Bringer probably did a lot of them a favor.” She turned, and her face dropped as she saw Yang’s stone-cold glare. “Uh, no offense.”

Yang was both shocked and furious at the same time. It…said a lot about the Twins that they’d complained so much about ADVENT’s tactics, but then sanctioned the slaughter of millions to the
Bringer who was far worse than anything ADVENT had done because...why? Because it hurt ADVENT or because they were Chinese?"

She didn’t honestly know which one was worse to her.

Sabrina seemed to pick up on the tension. “Hey, Yang, don’t worry, you’re cool. You’re not with ADVENT or one of those Chinese, so trust me, you’re fine.”

Yang blinked, almost stunned at how casual she was saying that. It was genuinely puzzling to hear it said so nonchalantly. “I’m sorry? What did you say?”

“You’re really hung up on this now?” Micaiah asked, lifting an eyebrow. “Hey, it wasn’t anything personal. You clearly don’t like ADVENT, otherwise you wouldn’t be here. Beijing doesn’t bother us that much. Bit disgusting, yeah, but it’s just as bad or worse in some movies.”

Yang stood, needing to leave before she strangled one or both of them. “You were wrong earlier.”

Sabrina frowned. “About what?”

“About knowing what I would do and react,” Yang fixed her with a cold stare before turning to leave. “You don’t know anything about me.” She walked away, then paused, once, closing a fist. “And if I hear you defend the Bringer again, I will kill you.”

She kept the chokehold on their throats present until she left the room; not tightening it, but letting it linger long enough for them to maybe reflect on what they had said. She almost wished they were the idiots she had assumed.

This was much worse.

***

Staging Ground - Desolan

5/28/2017 – 10:00 A.M.

The hot Desolan sun beat down upon the flat brown lands. Patricia stood in front of the assembled army in front of her. Over twenty thousand Mutons in total were assembled in front, interspersed with Berserkers, Elites, and the Praetorian Guard. They extended as far as she could see, legions.

Enough to destroy a city definitively.

A light breeze whipped through the air, making her hair rustle as she faced the soldiers. Between the ranks were additional legions of Andromedons, Runianarch, and some of Mosrimor’s Meat Puppets. There was a very good chance that ADVENT and XCOM would send everything they could.

They would be prepared.

The Battlemaster also stood ready, together with Yang who would both help coordinate the charge and bring the city down from the inside and out. This was going to be a display that none in ADVENT would forget. She did not think it would cripple them beyond the point of no return, but it would signal the beginning of the end.

“Be ready,” she ordered, projecting her voice through telepathy, so even the soldiers in the very far back heard. “When the time comes, you will know when to march. With that, she turned around
and unhooked the Avatar mask from her waist and with a smooth motion put it on, stiffening as it clicked into place and the bond was fully established.

Minds merged, and the power lay at the end of her fingertips.

*End this conflict.*

*Bring them into the fold.*

*Break the hold of the Sovereign.*

*Break the hold of the tyrants.*

She lifted a hand and a small portal appeared before her, and stepped into it, and into the bustling streets of New York. The reaction was immediate as cars veered away, crashing into each other, signposts, and even some pedestrians as all looked to see the Harbinger who hung suspended in the air, cape fluttering and hands hanging idly at her sides.

The pale mask of the Harbinger looked down upon the masses in judgment.

Their emotions were shock.

Shock became anger.

Anger became fear.

And fear turned to terror.

They knew what was coming next.

The many Peacekeepers which patrolled the streets wasted no time. She had felt their minds the moment she entered this place, such were easier to pick out from the crowd; easier still with the Imperator empowering her. She idly closed a fist, and all of them felt an iron grip manifest around their throat.

Within seconds all of them were reaching for it.

She wasn’t sure how many. Twenty, forty, it didn’t matter. One managed to fire a shot off. The round hung in the air, and without a motion she sent it back towards the source, killing him instantly. But this was a chance for leniency, and she released her grip on the throats of the Peacekeepers.

The crowds were mixed between those cowering in their cars, behind corners, or under shelters, futilely believing that they were able to hide from her. Even now she could feel each panicked thought and breath as they internally begged her not to find them.

*I see you.*

*I see where you hide.*

*I see what you think.*

*I know what you are.*

It mildly amazed and amused her to realize just how...helpless most people were to her now. Humans and aliens alike seemed to have issues *comprehending* the utter scale of the power she and
other psions possessed. As if they could hide, or stood a viable chance against her. Or any psion.

But especially her.

It was good to remind them that ADVENT’s reach and power had limits.

It mattered not their reforms if they could be brought low by a single command.

Still, there were other Humans who were smarter. Some were outright fleeing, while others were holding up their hands in a surrender. Above she heard helicopters flying overhead; media or military, it didn’t particularly matter. A quick look confirmed a media helicopter. She let it be.

Let the world see what would happen.

She drew upon the vast well of power within her grasp, extended it far beyond where she knew the city limits were, and with a flash of power, locked down the Psionosphere. There was no tangible reaction, but there would now be no teleporter who could break through. No Gateway would function properly.

The city was in her control, and there would be none who would be able to stop her. The army inside would hold, but without the element of defense, they would not be able to do more than futilely stand and fight as the city was destroyed around them. It was time to give them the ultimatum.

She projected her voice, through her helmet, and to every single mind in the city. Those who were isolated, those who hid, they were unable to protect their minds from what was said. There was no excuse; no plea of ignorance.

The ultimatum would be followed, or it would be ignored.

“Citizens of ADVENT. This war has persisted for far too long. It is time it be ended, else we will sacrifice millions of Humans and aliens in a protracted conflict with only one feasible outcome. The end is ordained. The Ethereal Collective will succeed, no matter how many die, no matter what you develop, no matter what you gain. It is inevitable.”

She spread one hand out. “There will be no more half-measures. I issue a simple ultimatum – surrender or die. If you surrender, you will be treated well and be provided for in the remade Earth. If you refuse, you will die. This is only the beginning. Today will be New York. It will be followed by the strongholds you have held. Tampa. Busan. Beijing.”

Her tone turned accusing. “You. Were. Warned. There is no escape, and there is no hope for rebellion. Think carefully about the future, for the judgement of the Imperator has been rendered.”

She reached back to Desolan, to the many anchors and nuances in the Psionosphere she had painstakingly memorized and trained relentlessly in preparation for this operation. On her own it was nearly impossible to discern, but with the Imperator’s power and grasp of the Psionosphere, it was so…simple.

*Let them through.*

*Usher in the endgame.*

The Harbinger floated to hover just above the pavement, idle and dead cars telekinetically moving out of the way as she gently landed on the ground, and before her, a massive purple portal opened and a hot burst of wind served as a prelude to the legions of Mutons which stood behind her.
And it was not simply on the street the Harbinger stood upon.

Citizens watched, and media trained their cameras on the dozens of portals which opened up within and outside the city, as the standing ADVENT garrison quickly scrambled to handle the surprise attack. In row after row the Mutons, Vitakara, and Mosrimor’s Meat Puppets marched out, annihilating the first wave in a hail of plasma, projectiles, and psionics.

Behind her, Patricia felt the legions, and with one hand pointed forward. “Go. Spare those who surrender. Destroy the rest.”

Without need for encouragement, the armies complied.

The word of the Harbinger had been said.

There was naught to do but obey.

***

Situation Room, the Praesidium – Classified Location

5/28/2017 – 10:24 A.M.

The Praesidium was on high alert.

“How many?” The Commander demanded tightly as he observed the holographic simulation which displayed all last known Collective positions. The entire city was filled with red dots and swaths as the Collective cut a path directly through the heart of the city. Small orange figures denoted the last spotted locations of individuals like Patricia, the Battlemaster, and Yang Shuren.

“Still no firm number,” Jackson scowled as she had a hand constantly to her ear, fiddling with her headset as she paced from screen to screen, and flipped through her tablet which was getting assaulted with a dozen messages and updates a minute. “They’re still coming.”

“How many?” The Commander demanded more intently.

“Thousands at least,” Jackson threw out. “She’s probably maintaining portals directly to Desolan!”

“And we can’t immediately intervene,” Iosif muttered. “Psionosphere is completely locked down.”

He looked to the Chronicler who was similarly appraising the room gravely. “I don’t suppose T’Leth can break it?”

“He’d have to move closer,” the Chronicler said. “And what she is doing is good. Very good. I suspect she’s using Mosrimor Orbs to maintain the lockdown. Perhaps the portals as well. She is not the Imperator, even if she draws on his power.”

“I’ve got six squads assigned,” Creed marched up to the Commander. “All hands on deck for this one. Patricia, Battlemaster, everyone. For all we know the rest of the Ethereals will be showing up sometime. Should I give the order to assemble?”

“Do it,” the Commander confirmed. “Aegis, Caelior, both of them are involved. We cannot let New York be destroyed.”

“I can’t believe she actually did it,” Jackson said, shaking her head as she watched the footage. “Even for her this is an escalation.”

“As she said,” the Commander said heavily. “She did warn us.”
Patricia seemed content to let the footage play. ADVENT had cut off civilian direct feeds, even if the media stations were reporting on what was happening. It was a nightmare. Not on the level of Beijing, but horrifying in its own way. There was a callous brutality and efficiency that her previous operations had lacked.

It really had been only a matter of time before she tried something like this on a large scale.

Scores of civilians were outright surrendering, and were being led back in groups through the portals. More who fled, hid, or fought back were mowed down by unrelenting storms of plasma. ADVENT Peacekeepers stood no chance against Muton Elites. The more organized ADVENT defenses were extracting some deaths from the Collective, but for every Muton they killed, ten more replaced it.

It had been barely twenty minutes since it’d started, and already Patricia was marching down the streets and collapsing skyscrapers and flattening streets. At this point in time she seemed unstoppable, a woman of purple fire who annihilated whatever stood in her way. No hesitation, no regret, no remorse.

How much she had changed.

There only seemed a small part of her that remained, a part which offered one chance of surrender. Otherwise she succumbed to the feeling of absolute power. He could tell how much she enjoyed it. How much pleasure she took from crushing the less-powerful underneath her. How she toyed with some of them before killing them in simple ways.

The signs had been there, of course. He’d encouraged them to be used against the aliens. In retrospect he had been helping plant the seeds for who this monster would become. No matter what happened, and no matter how much influence the Imperator had, what Patricia was now was in some part because of him.

There was an important lesson to take from this, one which had brewed in his mind for weeks now, but seeing the visceral consequences of his miscalculation and failure brought it to the forefront. But rumination had to wait. There needed to be action and retribution for this.

“What is ADVENT mobilizing?” He demanded from Jackson.

“Everyone they can,” Jackson answered immediately. “Every Northeast Legion around, every local special forces squad; Lancers, Dragoons, Celestials are being deployed as we speak. The Pantheon is also being sent over.”

“Are we not concerned that this is a massive trap?” Creed wondered. “She knows we’re going to be bringing everything down. What stops her from teleporting a nuke in and killing us?”

“Because T’Leth would respond,” the Chronicler stated. “Directly. She is clearly trying to provoke a reaction, but she’s not that foolish.”

“Are we making that assumption?” Creed demanded. “We didn’t think she’d directly bring an army into New York, and look what she’s doing now! How exactly do we know she’s not going to pull a stunt like this? Remember the Praesidium? She knows what she is doing here.”

“Which means this is calculated,” the Chronicler insisted calmly. “She – nor the Imperator - would risk T’Leth’s wrath until they have a sure way to defeat him. They don’t. Otherwise she’d be attacking Switzerland, not New York. It’s important enough to send a message, not to provoke a direct escalation.”
“I agree,” the Commander interjected. “She is doing this to send a message. She obviously expects the war to continue, hence her threats to Busan and Tampa.”

“Both of which have just been placed on high alert,” Jackson added. “JULIAN is also on standby to activate GAIA at a moment’s notice.”

“Good, Creed, get the squads on skyrangers,” the Commander ordered. “All hands for this one. Archangels, Valkyries, I want squads sent over now. Have them move to working Gateways and take off at nearby locations. MECs, MELD Operators, I want to send a message of our own.”

“Done,” Creed confirmed.

“ADVENT is beginning airstrikes near the portals,” Jackson updated. “Missile platforms and artillery are being moved into position.”

“That will cause collateral damage,” Iosif noted.

“Potentially, but they’re more concerned about the thousands of Mutons in the streets,” Jackson pointed out. “ADVENT has already lost thousands today. The troops should be sent in when ready, and missile strikes will work to buy time and hopefully do some damage.”

The door to the situation room suddenly slid open and a fully armored Fiona and a very agitated Crevan followed her, his features stern and irritated. “You are stopping this now!”

“No!” Fiona snarled, her green eyes flashing dangerously. “I’m not waiting any longer!”

“You’re not supposed to be in here, Miss Dorren,” the Commander stepped forward.

“No, but I’m going to let you know what I’m going to do,” she said, turning to face him. “I’m going to kill Patricia.”

“You’re on the squads,” Creed confirmed. “You’ll get as much-”

“No,” she emphasized, stepping forward. “I’m going to kill her now.”

“Patricia has locked down the Psionosphere,” Iosif shrugged helplessly. “We can’t move in, otherwise you’d have been sent over.”

“Is that right?” Fiona inexplicably smiled. “Well. That still won’t stop me. I should have done this a long time ago.”

“No, you are not,” Crevan stated. “You know what will-”

“Let him come!” Fiona whirled on the towering man, her eyes and body glowing a white-green. “But we both know he won’t. I’m tired of waiting. I’m tired of holding back because you’re afraid!”

“You are not ready!”

“I’ll take my chances,” She growled, pulsing as her fury simmered. She violently put on her helmet. “I will not stand by and watch this monster butcher millions of people when I can end her forever.”

“You-”

“I’ll see you later,” Fiona said curtly, grabbing her sword. “Get your soldiers ready for cleanup,
Commander. By the time I’m done, Patricia will be in pieces.”

Before any of them could say a word, she vanished in a green-white flash. The Commander blinked, looking to Crevan. “Would you like to explain what that was?”

The Chronicler had already quickly left the room, as Crevan took his place, voice intense. “We need to reach New York as soon as possible. We need to bring her back before we lose her. She is in extreme danger right now.”

“She’s going to take on Patricia single-handedly,” Iosif said incredulously. “What is she thinking?”

“She isn’t,” Crevan said bluntly. “Patricia is not a true threat; not one who could stop her. She is in danger for other reasons.”

“She did hear that Patricia locked down the Psionosphere, right?” The Commander asked.

“That won’t affect her,” Crevan dismissed. “Nor is it the point I am making.”

“I beg to differ,” Iosif stated. “How exactly is that ‘not a problem’?”

“It’s complicated,” he scowled. “I cannot emphasize the urgency we need to act to reign her in. We are on limited time, and Patricia has unintentionally made it worse.”

“She’s on her own,” the Commander said bluntly. “I’m not throwing my soldiers into this battle until we’re ready. I don’t know what’s gotten into her, but she is not worth risking everything.”

“Commander, there are certain things you do not know,” Crevan appealed. “What is important is that Fiona must remain alive, and she has placed herself in great danger. I will explain afterwards, but there is no more time. We need to act now. The Chronicler is gathering the rest of the Agents, and I will join him.”

The Commander took a few seconds to think about it. The fact that Crevan, and by extension, T’Leth had kept something from him was not necessarily surprising, but if it was important enough to demand he take action, he was not exactly thrilled with the idea. At the same time, Crevan was not one to exaggerate or waste his time.

“Creed, accelerate squad deployments,” he ordered after a few more seconds of deliberation. “Coordinate with the Chronicler and Crevan.” He fixed the enigmatic Agent of T’Leth with a hard stare. “I dislike putting soldiers in danger based on something I don’t know. You better have prepared an acceptable explanation.”

“It will be done, Commander,” Crevan gave a sharp nod. “This is what must be done. I need to prepare. You will be informed when we are en-route.”

He quickly turned, and departed, leaving the rest of the Internal Council to wonder what had just happened. “I hope this is worth it,” Creed muttered. “Had a feeling he was always hiding something.”

“Something to do with Fiona too,” Iosif noted. “Odd.”

“We’ll worry about the implications later,” the Commander said. “We still have a city to retake. If Fiona somehow got in, let’s hope she’s able to cause some damage.”

***
Kunio had wondered what the retaliation would be.

Now he knew.

Of course, they’d all thought it was the worldwide bombardment. Patricia’s own mild attacks on the cities. But it was very clear that this was what she had been building to for some time. An attack on one of the biggest cities in the world – more than that, one of the most important. In the heart of American territory.

Thousands were already dead.

More would soon follow.

Every soldier had, without prompting, suited up the moment that news had trickled in about an attack. None of them knew who would be called, but they knew that when it happened, they needed to be ready to go ASAP. It wasn’t even ten minutes before the names of people had been sent out to prepare.

No squads initially, but there were enough soldiers being called to make up six.

It was going to be a massive operation by XCOM standards.

His name among them.

He hoped it would go better than the last one.

He had his rifle, his psionic skills were a bit sharper in the later weeks of training, and he was properly armored and ready to march. The actual squads had been assigned, and the one he had been given – Hunter Squad (not as creative as some of the names had been) – was an odd composition.

Outside of the lone Infantry, Barbara Lawson, every single one of them was a psion or otherwise specialized. “We expecting to fight the Battlemaster?” He asked the Squad Overseer, Lincoln Harper as the soldiers awaited. Kunio noticed something else peculiar was that all of the Agents were tied to, or commanded each squad.

Fiona was conspicuously absent. Even the Chronicler was armored and present.

“No,” Lincoln answered, lips pursed. “We may, but that’s not what we’re expecting.”

Kunio furrowed his eyebrows at the answer. “What are we expecting?”

“If we’re lucky, thousands of aliens, with a chance of the Battlemaster and two of the Harbingers,” Lincoln checked the massive Annihilator Cannon he was carrying. “If we’re unlucky, she’s going to introduce the Bringer next. If we’re really unlucky…” he trailed off, shaking his head.

“What does that mean?”

“It means there will be other uninvited guests,” was the cryptic, and wholly unhelpful answer. Kunio didn’t know the point of the secrecy, but this was clearly the wrong time to press it. All of the Agents were noticeably stressed and antsy as they waited for the go command, as the squads assembled.
“Where is Fiona?” He asked Lincoln. “She should be on this operation.”

“Being an idiot,” Lincoln muttered, looking around briefly. “You’re being trained by her, so keep this to yourself. She’s already there. Says she’s going to kill Patricia.”

Kunio stiffened. “Alone. What is she thinking?”

“You’ll have to ask her,” Lincoln answered. “You wonder why we’re rushing? She’s the reason. And thanks to Patricia’s methods, we can’t immediately pursue her.”

“This doesn’t sound like her,” Kunio shook his head in disbelief. “She’s smart. This is…it can’t be for this reason.”

“Believe me, it is,” Lincoln repeated dryly. “She’s been wanting to do something like this for a long time. This attack finally pushed her over the edge. So we need to make sure she isn’t killed, and retake the city.”

“Right, sounds like a plan,” Kunio nodded, putting on his helmet. “I do owe her one.”

The rest of the squad was similarly prepared. The two Templars had weapons in their hands; Vilhelmina Forslund and Aharon Galoyan, who carried a warhammer and mace respectively. Even though both were psions, they wore Titan armor still. He didn’t know either of them that much, but all of the Templars were very skilled.

The other two psions, Zemin and Tang, a Dynamo and Aegii respectively, were kitted out in the Psionic Armor he also wore, along with Psionic rifles and pistols. Zara Venator was the last part of the squad, the MELD Operator standing calmly as she waited. “Skyrangers are ready!” Came the call.

“Load up!” Lincoln ordered, a command that was echoed throughout the entire area, as the squads marched out and onto the Skyrangers, while others went to Gateways which connected to nearby bases to New York.

As he sat down, the rifle resting on his leg, he quelled the worry and concern rising.

_Hang in there, Fiona, please don’t do something stupid._

***

_New York City, New York – United States of America_

5/28/2017 – 11:03 A.M.

There was a particularly troublesome spot where ADVENT defenders had formed a barricade along a street, and were managing to hold off an advance of the Collective. Explosions and booms sounded throughout the city as the many buildings and skyscrapers were brought down one by one.

But most of the Humans were fighting back, which would make this take longer than it would have otherwise. Acceptable, she was not pressed for time. The monitoring channel managed by the CODEX relayed that ADVENT was massing outside, setting up missiles. Airstrikes were also occurring.

She would deal with those shortly.

The Harbinger ordered the many soldiers following her to pause as she strode forward towards the
barricade, which ADVENT soldiers and Peacekeepers swarmed over like ants. She felt their jolts of fear and panic as they spotted her, and wasted no time opening fire. She didn’t slow her stride, barely having to put any effort into stopping the projectiles flying towards her.

There was at least one psion, a telepath, in the group. There was some resistance to pushing against their minds. Not that it mattered, she was in the mood to kill them the old-fashioned way. Rockets were fired and grenades thrown, which she batted away with a flick of her wrist.

The barricade up close was a thrown-together mixture of cars and standard barricades; improvised, but better than nothing, and clearly used to great effect. When she was close enough she leapt into the air, hovering for a moment as she appraised what she was about to kill. Close to two dozens soldiers, over half on the barricade itself, while the others were behind, their weapons pointed up as if they expected her.

The Priest stood out – in fact there were two. One flung an arm, and she saw out of the corner of her eye, one of the wrecked trucks being thrown at her. It was, of course, caught in her passive telekinetic field, and hovered impotently. She closed a fist, turning the truck into a piece of crumpled metal, and tossed it behind her, and with her other hand, yanked herself towards the center of the group.

She accompanied her landing with a shockwave which blasted all the nearby soldiers off their feet, and directed her hands towards the Priests, annihilating them with a short burst of lightning from her fingertips. With another hand she lifted it to the sky, and broke the Psionosphere around her, becoming the eye of a furious maelstrom.

The air whirled around her, screams appeared and were quickly silenced as the immediate area was razed to scrap and ash. She released the power, and when the purple storm cleared, all that remained was shrapnel, pieces of ADVENT armor, and pieces of mush and the ground coated with red fluid.

Overhead, a trio of Ravens roared overhead, firing missiles against a different street. Instinctively, she reached a hand out.

They cannot flee.

At such a range, it would have been close to impossible to do it on her own.

But this time, she was not alone.

There is nothing beyond our reach now.

The planes visibly slowed. The engines burned brighter as the fighters tried to break whatever had them trapped. But they had no recourse, and the Harbinger was in no danger of having her concentration broken. She aimed the fingertips of her other hand towards the planes, and saw the atomic path.

She fired.

The bolt of lightning that fired from her hand lasted moments, and almost immediately the power caused the engine to explode. Two more lightning bolts finished the other fighters off, and the flaming metal fell towards the earth; the yellow-orange rain almost beautiful in the distance.

One of the pilots seemed to have managed to eject.

Another lightning bolt ended his hope of survival.
She was curious if ADVENT would continue the airstrikes. It was getting close to the time when XCOM and ADVENT would begin a concerted counterattack – though she estimated there was at least an hour or so before they arrived in force.

“Unknown entity approaching your position.”

The CODEX update was surprising – more so the designation. She heard some commotion from behind her, and leapt into the air, hovering as she saw what was happening. At first it wasn’t clear, but there was something that was cutting through the dozens of Mutons behind her current path.

A closer look answered the question quicker.

A figure in armor of stone. An Agent of T’Leth.

She frowned. Had one been in the city before the attack? They shouldn’t have been able to arrive so quickly.

The Agent wasn’t fighting conventionally, but seemed to be using a melee weapon of some kind. Nor was the style something she recognized immediately. The Agent seemed to be perpetually shrouded in some green-white holographic effect, which she would have put to an illusion had she not been able to easily tell it wasn’t one.

The weapon was somehow slicing through armor like butter, leaving disemboweled Mutons in its wake, while the Agent itself dashed with inhuman speed in bursts of green flashes, a staccato method of attack that was almost an altered version of the Battlemaster’s charge – though far shorter in scope and more controlled.

Almost impressive – and odd.

There was something very off about the Agent heading her direction. It should prove interesting enough. The last Agent she had fought off, and this was one she was certain she could as well.

The Agent didn’t seem focused on killing every single Muton, just cutting a bloody path to her or seeming to make them vanish with a touch and flash of green, as if teleporting them away. Patricia lowered herself to the center of the razed ground, waiting for the Agent to reach her. A minute later the Agent dashed in a green flash until they were ten meters apart. The Agent was splashed with yellow blood and pieces of gore, though the holographic effect around her remained.

Patricia inclined her head. “Impressive display.”

“Today you are going to die,” the voice, a woman’s spat in return with a flourish of her sword. It sounded British, almost like her own. “I’ve let you walk the Earth for too long.”

Patricia was interested in her vitriol, and something about her seemed familiar. “I don’t even know who you are.”

“Then we have something in common,” the Agent pointed her sword towards her. “When I’m finished, no one will know who you were either.”

Patricia idly looked around her. “I doubt that,”

Ah…it’s her.

“Fiona,” Patricia said as the Imperator made the connection. “I take it back – I have heard of you. You assisted Yang Shuren in Paradise.”
“Do not expect the same treatment,” Fiona warned.

“I would never,” Patricia gathered her power, hovering slightly in the air as the world crackled around her. “I defeated one Agent. You shouldn’t have come without help.”

“I don’t need help, not this time,” Fiona stated, taking a battle stance. “Make your peace, Patricia Trask. After today you will only be a memory.”

***

[REDACTED] – Sphere of the Throne

5/28/2017 – 10:42 A.M.

This time was different.

The General had been discussing operational plans for the quarantine when he felt it. An imperceptible; ethereal call. A sense that there was disruption through the Source. There were always flashes of course, rarely did they ever catch his attention, let alone make him pause. It had been many years since he had focused on them.

But there were only a few who could cause such a significant tear.

He was one. His Lord was another. The Sage-King if he so wished. The Entity also had the capability. There were others, but they were all within the Sphere. They were masters. They were controlled. And too many now lacked the Blood which granted such power. Only heavy genetic engineering and decades of training would give one the same power as one naturally inclined.

And to his knowledge, there was only one individual who was capable of what he felt.

And she was in another Sphere.

Even through the ethereal chill, he marveled at the ease by which she could shake the barriers. No, it was never her power which had been in question, but her temperament and discipline – and the power was raw. Untamed. Wild. Sloppy. A mistake which he believed she had learned by now.

The Lord stared across from him, his expression unreadable. “[You feel it.]”

“[Yes.]”

“[What is your suggestion?]”

He considered carefully. “[She knows how easily we can track her when she disrupts the Conjunction. She has not moved from her sphere, yes?]”

His Lord consulted the small display, which was connected to a Sphere-wide system that detected such fluctuations. One of the most complex pieces of mechanical and scientific achievement, which had once been designed to maintain the integrity of the Spheres, had been repurposed to track those who moved between them.

The greater the intensity, the easier it could be triangulated.

It was strong enough where an exact location had been determined.

“[So the instrument says,]” the Lord stated. “[Which indicates she is fighting.]”
“[She knows we are waiting,]” the General said slowly. “[Watching. She does not understand how, only that we are. She would not perform this unless her life was in danger, if she had lost emotional control, or it is the trap.]”

“[From the Sovereign.]”

“[Yes.]” the General rubbed his chin. “[However, her Sovereign protector is unlikely to wish to be drawn into a conflict with us. Such thinking is…unlike her, and the Sovereign is likely smart enough to understand the ramifications if such actions are taken.]”

“[Yet it is a Sovereign.]” the Lord pursed his lips. “[They are arrogant creatures. Perhaps this one is deluded enough to think to challenge us and succeed. It is, after all, in likely possession of precious secrets of the Spheres.]”

“[Perhaps.]” there was a pregnant pause. “[There is a limited window to decide to act. Such a chance may not come again.]”

“[You are certain you can succeed?]”

“[No, my Lord, but I am confident in our capabilities.]” the General answered. “[If she is in danger, she cannot be allowed to die yet. If she has lost control, she is likely isolated. If this is a trap, it is a declaration of war. I will take our best warriors and take the land this war is waged in, recover her, and depart with no witnesses.]”

“[Any attack will raise questions.]” the Lord pointed out, eyes narrowing. “[Their technology is more advanced than Sphere of the Fallen. They are not so gullible and superstitious. There will be questions.]”

“[Correct, and there are plausible answers.]” he countered. “[This is a Sphere with many factions and figures of power. It is not implausible to lay any attack at the feet of another such entity or Sovereign One. If we succeed, they will not learn the truth. If we miscalculate, the same result will occur.]”

“[I expect you to not fail.]”

“[Nor do I intend to.]” the General clasped his hands behind his back. “[I will assess the situation on the ground with our own asset. Impromptu as it is, I believe we cannot pass this chance up. Inform the Sage-King an operation to reclaim her has begun.]”

His Lord nodded. “[So be it. You will not be going alone, I presume?]”

He shook his head. “[No, if we are to capture her, there is another who will be at my side.]”

The Lord gave a thin smile as he tapped a small panel beside him. “[I suspected as much.]”

A few moments later, a figure materialized from the holodisplay nearby. It was perfectly colored and sized one-to-one. Each time they spoke, the General remained impressed at the utter titan which stood before them. A true work of art and genetic engineering, one which even rivaled his own creation.

The man stood nearly as tall as the estimated height of the Ethereal Battlemaster – a template he suspected had been the inspiration for this particular bloodline, as the timelines were certainly compatible. He stood clad in silver armor, scarred and dented from his conquests of thousands of worlds.
It gave the impression of being bent out of simple metal or steel, though the actual composition was far stronger than such mundane materials. The chest metal was forged in such a way to resemble a ribcage, the armor of arms and legs a mixture of steel gray and black, and the familiar rounded helmet bearing the irregular eye slits which haunted the nightmares of a thousand species.

Two heavy shotguns were slung over his back, but his true weapon was held in his hand, a humble club of metal which had killed more than the population of most planets. His preferred weapon, one of the few to prefer the less...sophisticated ways of killing. Upon seeing them, he fell to one knee. "[My Lord,]" his deep and guttural voice greeted. "[What is your command.]"

The Lord looked to him, and nodded for him to explain. "[Warmaster, we have located her,]" just once, the General allowed himself to show a smile. "[Assemble your Riders. Prepare for invasion.]"

***

Fields of the Endless Frost – Sphere of the Darkness

5/28/2017 – 11:00 A.M.

It took moments to traverse the spheres.

This one was one of the most familiar.

The cold was almost a friend now; a chill to his core which brought an end to most who were touched by its merciless grip. Sapient and animal, the cold did not discriminate. Even those adapted to such colder conditions barely lasted longer when left to the prolonged frost. It was a cold beyond the densest of ice worlds, a lingering torture one suffered by simply breathing its air.

And yet, it had been conquered.

The world was shrouded in near-complete darkness. In the black of space, the faint blue outline of a dead star twinkled, while green-blue lights manifested in the air at times, providing some long-forgotten light to this world. They were still uncertain what had happened to this Sphere, but they had explored enough to realize some basic things.

There were no stars in the sky. No lingering flashes of supernovas remained. At least if any dying ones remained, they were so weak as to not be seen from this planet. The General had often wondered at times what had taken place here. If there had been civilizations and species who had dominated the stars.

Even on this world there were ruins, indications of life at one point, remarkably preserved in the snow and ice. Archeologists occasionally visited this place, but they were often unprepared and incapable of surviving for long without significant cost to the Throne World – cost which most argued achieved little.

There was a story to this sphere, one which he was interested in.

But the most common consensus was this.

It was a universe that had died.

One by one, the stars had gone out. The worlds had shriveled and frozen. There was likely no more life in this galaxy. It was a dead, empty wasteland filled with dirt, ice, and ruins. Many had wondered what the heat death of the universe would look like – and more importantly how to
avoid it.

The answers were in this sphere, the General was sure of it. Perhaps this was an inevitable fate for all spheres, but there was little to back that up other than a gut feeling. Regardless, this was not the time for such ruminations. All that mattered was that they had found it – and turned it into a trial which only the strongest, smartest, and dangerous survived.

It was nowhere near the entire division which stood before him and the Warmaster, but nearly two hundred or the grey-armored Warriors, bulky Nullifiers, and led of course by the gifted Navigators. Outfitted with the results of weapons technology taken and refined from many spheres, this army would be sufficient against the technologically inferior Earthen armies.

Of course, the conventional armies were never the concern.

Scouts had reported, and what they were facing was more alien incursion than Earthen. Both would be caught in the crossfire, but it was necessary. It had not taken long to determine points of entry, all of which the Navigators had confirmed they were capable of accessing. They had been preparing for this day for a long time.

As the chilled wind bit into them, they stood silent. Enduring. The pinnacle of his Lord’s Riders and the reach of the Throne World. It would not be an easy mission, but they were more than capable of seeing it fulfilled. There was little time to waste before the situation became more difficult.

They knew where she was.

They knew the stakes.

They knew what to do.

They were prepared.

The General stood, clad in his own battle armor for the first time in...too long. It was a comfortable, familiar weight. It had been improved since the last iteration, with numerous anti-Source countermeasures, a more resilient HUD, and his own weapon had been improved as well.

Most weapons he felt were unnecessary. Why waste energy and effort with rifles and rockets when a waved hand could solve the problem just as easily? Yet there it behooved a General to have a standard of command, and his staff atop which rested a white orb as if forged from the frost itself.

It was a curious artifact, one of the few which had been found here. Impossible to replicate, incapable of being damaged, and capable of responding to a skilled master. As he had found the artifact, so he had been given it. As trivial as he found melee combat, it was an engaging exercise.

It gave some insight into why the Warmaster often risked himself so unnecessarily.

“[Prepare to march!]” He commanded as the warriors stood at attention. “[Navigators! Upon my lead!]”

He turned around, extended a hand in front of him as he opened the gap between the spheres. The blue-white portal slowly manifested before him, which he knew was echoed on a smaller scale behind him by the Navigators as they replicated his efforts. It reached a point where it became self-sustaining, and he lowered his arm.

“[March.]”
New York City, New York – United States of America

5/28/2017 – 11:19 A.M.

This Agent was unlike anything Patricia had ever fought before.

She was having to put legitimate effort into surviving.

Not fighting, surviving.

Very curious.

She had realized very early on that if Fiona so much as touched her she was in a really bad position. Whatever she was augmenting her weapon with was strong enough to cut through her armor, as the large gash on her chestpiece now indicated. Fortunately, she had managed to avoid penetrating deeper.

Her mind was shielded, likely by T’Leth, so telepathic attacks were useless. Biopathy was an alternative, but she was simply moving too fast to lock onto her position, and there was every indication that T’Leth was similarly protecting her from Biopathic attacks as well. She was utilizing a form of teleportation that was faster and more staccato any than she’d ever seen before.

Quisilia, Sicarius, none of them were nearly as fast as Fiona was; vanishing with green-white bursts and reappearing steps away, making it difficult to predict where she would strike next. Teleporting was something Patricia had gotten more skilled at as well, so escape was easy enough with her enhanced reflexes, but it was a deadly dance where the first mistake by either of them would mean the end.

For reasons she hadn’t been able to figure out, Fiona also seemed impossible to hold telekinetically. It wasn’t just that she was vanishing every time she was even somewhat held, it was like the telekinetic bonds were wrapping around something which didn’t exist. Like fighting a hologram, only Fiona was decidedly not a hologram, even if the power around her gave that impression.

More disturbingly, she was still teleporting when it should have been impossible.

Either she had somehow found a way to subvert the Psionosphere lockdown – or what she was doing wasn’t really psionically-based at all.

Something which should assuredly not be possible.

Patricia had not made her teleporting spree easy, at every moment she was throwing every piece of the environment she could in the general vicinity, almost creating a small hurricane of shrapnel, rubble, and blood. But Fiona didn’t seem slowed down, as each relatively big piece that even came close to hitting her she touched, and it vanished in a flash of white-green.

The only method of attack which seemed to be reliably working was Dynamo psionics.

The stone armor the Agent wore had been clipped and the texture scored by the psionic blasts she had manifested; and knowing that, Patricia was transitioning to ensuring that the Psionosphere remained broken in their vicinity. Though that was difficult with the continued harassment of Fiona and Patricia constantly needing to move.
She appeared above her, striking down. Patricia created a portal and moved several meters to the side while sending a shockwave where Fiona had been, who blinked away before it hit her. Immediately she appeared to her left, while Patricia vanished into a portal of her own. No matter who attacked, they were in an effective stalemate.

It was now a measure of endurance, concentration, and skill.

More minutes of fighting, until Fiona materialized a short distance away, both women circling each other, waiting for one to make the next move. “You’re skilled,” Patricia grudgingly admitted. “But you are no psion, are you?”

“Perhaps you aren’t as skilled as you believe,” Fiona retorted. “There are some things even the Imperator doesn’t know.”

No…but there are some he suspects.

Patricia seized the moment with a sweep of her hand, turning the area Fiona was in into a crackling maelstrom, combining it with a shockwave powerful enough that it would snap the neck of anything mortal caught in it. She managed to vanish, though not before she spent a singular precious second in the storm and only just hit with the shockwave.

She reappeared a short distance away, the momentum of the shockwave slamming her into a nearby wall, hitting her head hard against it. She stumbled to her feet as Patricia fired a stream of lightning at her exposed form, which hit for only a moment before she disappeared and rematerialized again nearby, her armor smoking and body jittering. Her helmet seemed damaged, and with a frantic motion she tore it off, as she took another short jump to avoid Patricia’s newer bolt.

She was young, younger than Patricia had assumed she would be. Pale skin, green eyes, a curious ashen hair color, and a large scar across her eye. The eyes glared hatefully at her, leaking the white-green energy so similar to psions. Both locked eyes, and Fiona didn’t bother moving again when Patricia fired another stream of lightning.

Instead her body turned an almost transparent white-green, and the bolt went through her.

Fiona smirked.

It was only a second of surprise, but that was all the Agent of T'Leth needed.

She was suddenly before the Harbinger, and the sword wreathed in energy slashed up, severing her right arm, and with the free hand, she touched Patricia.

Something equivalent to a sonic boom went off in her head.

The rest of the world seemed to become muted; colors became faded, sound ceased to exist, and her emotions turned dead. The hand Fiona had placed on her breastplate forced her to her knees, and her seemingly paralyzed body permitted it. The pain from the severed arm was oddly muted.

But everything was muted because it was almost impossible to focus on anything but the incredible pain in her head.

She was bombarded with flashes, sights, sounds, all at once, in one screaming choir of chaos and horror. She saw her life flash before her dozens of times, she saw things she remembered, and things she did not; memories she possessed, and things she knew had not taken place.
Then almost as quickly, they began vanishing.

_Erased._

_Gone._

She had little idea of what was happening now, but a yawning horror grew in her as she felt something was being unconscionably violated. Whatever Fiona was doing _couldn’t_ be allowed to continue.

_Fight!_

She pushed back with her strength, drawing on what little concentration she could muster from the Imperator to hold onto what existed, no matter the utter pain it caused her mind. Fiona seemed surprised, as she cocked her head at the resistance. Patricia realized her body was also being encased in the same white-green energy.

_Who was she?_

The vanishing parts slowed, but did not stop. She could only pray that someone intervened and stopped her before-

Out of the corner of her eye she saw something charge forward and a massive metal club hit Fiona square in the chest, sending her flying into a nearby building. The world came back to Patricia in a rush, as the trance Fiona had forced upon her vanished, and she crumpled to the ground.

Which was when she felt it.

_Cold._

She’d felt this kind of cold once before. The other Agent she’d fought.

She looked up to the sky and realized something very peculiar. It was snowing. In fact, there were snow dustings on the ground. The initial flakes had obviously melted, but with the air as cold as it was, it had soon grown cold enough to begin gathering. Her teeth chattered, and blood dripped out of her stump.

They were no longer alone.

She forced herself up on one arm as she looked to see what had happened. A figure was near Fiona, a massive humanoid in grey armor. He’d thrown or sprayed some kind of mist or dust into Fiona’s face, as she was coughing and struggling to stand. Her chest armor was shattered, and the massive club the figure wore lashed out with inhuman speed against her kneecaps, shattering them.

The ethereal power that had surrounded her was gone, and it was replaced by the visage of a terrified woman. The massive figure hooked the fingers of one hand under her destroyed collar and dragged her away, the woman feebly protesting. In her half-delirious state, Patricia had no idea who this person was.

The cold seeped in deeper.

The unknown warrior wasn’t the only person nearby.

Turning her head, she saw that there was a similarly armored figure, although unlike the one with the club, the helmet of this one had two distinct eye slots opposed to the irregular pattern of the
warrior. He held a staff in one hand, with an odd crystal ball at the top. A cathedral-like halo was also atop his helmet.

All she felt was pain, confusion, and cold.

Biting, sapping cold.

This one appeared to be…the leader? Patricia couldn’t tell. He turned the empty eyes of the helmet down upon her briefly, before seeming to dismiss her as a threat. He was flanked by a dozen soldiers in similar-colored armor, who wielded rifles she didn’t recognize, with bladed weapons strapped to their backs.

The leader spoke to Fiona, a deep yet oddly beautiful language that she couldn’t hope to identify. Two of the soldiers brought forward some kind of body-length restraining machine. The subordinate warrior tossed Fiona towards the leader, and he lifted a hand, suspending her in the air. This one was definitely a psion then – or at least could use it.

The mangled body of Fiona was strapped inside, definitely electronic in some way, and seemed designed to restrain and sedate, from the number of needles that were injected into her. The warrior seemed to realize Patricia was still alive, and turned to face her. Her mind was still sapped and scrambled, yet she tried drawing upon the power, knowing it would not be enough.

The leader lifted a commanding hand towards the warrior. He shouted a word in their language, but whatever he said was enough to stop him from killing her outright.

Instead, the warrior paused, stared down at her with contempt, and turned away.

Which was before hell broke loose once again.

A purple flash appeared across her field of vision and the Battlemaster slammed into the unknown warrior, sending him careening forward. Patricia heard more voices from the distance, and a storm of lightning was shot towards the leader, who vanished and reappeared centimeters away.

He shouted a command, and the other soldiers began moving the unconscious body of Fiona away as they prepared to face newer threats.

She couldn’t hold on anymore.

Patricia closed her eyes, and fell unconscious.

***

New York City, New York – United States of America

5/28/2017 – 11:41 A.M.

This mission had turned from something standard into an utter chaotic mess.

Not since the Synthesized War had he seen a mission go completely upside down. His job, as far as he had seen it, had been to maintain the discipline and focus of the Collective forces to hit key infrastructure points, and then summarily depart. Patricia for whatever reason was focused on sending a message.

A very destructive message which he was certain would inevitably backfire.

Unfortunately, he had to bide his time and minimize the damage where he could. It had been going
well, until he had received a direct order from the Overmind to go to Patricia. He had been confused initially, even more so when without ambiguity it had been stated she was in danger.

Which shouldn’t have happened.

Not here.

Minutes after that an unnatural chill had swept throughout the city. The CODEX network began processing reports of attacks from unknown enemies which had appeared to come out of nowhere. They had supposedly walked out of portals of ice and snow. The Battlemaster had been to his share of ice worlds, and what he felt now was colder than any of them, except an isolated exoplanet that lacked a sun.

It had been an anomaly in the Empire, and a place where many Battlemasters trained for a short time. It became dangerous if one stayed for too long. This was most similar to that, but even colder, if possible. His training would let him endure, though Yang would have more difficulties.

I can do it.

He hoped she could.

They had dashed back to where Patricia’s last location was as fast as they could. Turning the corner they found themselves upon a desolate street which seemed to have been purged of anything resembling structure. No cars, bodies, or debris remained. It had been the site of a battle, but a very destructive one.

The sight that greeted them raised far more questions than answers.

A small squad of soldiers stood in the isolated street; tall, at least as tall as Patricia, perhaps a bit more. Humanoids, but definitely not XCOM or ADVENT. Their armor was a silver-gray, and definitely powered to some degree. Their helmets seemed designed in such a way as to evoke the memories of a humanoid skull, and by extension, death.

Two others stood out, a slightly taller individual with a less stylized helmet with a metal vertical halo who held a staff that reminded him of those carried by the Agents of T’Leth. He seemed to be in command. The other was far more concerning initially. It was a warrior who almost massed his own size – or perhaps he did.

In his hand he carried a massive club, and his armor was augmented with wrist weapons, gadgets, and at minimum some micro-missiles were built into the armor itself. They seemed to be securing one of the Agents of T’Leth, a woman. Nearby he spotted Patricia who seemed just barely conscious, preparing to die as the massive warrior turned to finish her off.

The leader lifted a hand sharply towards the warrior, seeming to order him to back off. The language they spoke was oddly haunting; it sounded very old.

So they could speak. From the tone, it was likely the name of the warrior or at least a title. A shame he hadn’t heard it; he preferred knowing who he was facing. No more time needed to be wasted. He didn’t know who these entities were, but they were not friendly. Follow my lead, he communicated through the bond to Yang. I will focus on the warrior.

Grasping his weapon in-hand, he charged forward – and slammed into a wall.

It was a psionic charge powerful enough to pulverize any enemy if hit directly on. All it did for this warrior was force him backwards. The warrior responded by immediately pivoting on a foot and
swinging the club with enough force to dent his helmet if it connected. Instead it met his own sword.

Both warriors stood locked in the stance for a long moment.

Nearby the crackle of lightning struck, as mixture of XCOM and T'Leth agents arrived, forcing the other leader to contend with them. The Battlemaster focused on what was directly before him. The warrior growled and with a flourish and speed that belied his size, broke the lock and unleashed a series of jabs and swipes, while hitting his chest with the other hand.

A blue mist spilled from some gaps in his suit, something the Battlemaster immediately realized as Element-based. It subsequently meant that his telekinesis was not going to be as useful – not that his opponent was giving him time to properly prepare. The Battlemaster deflected a swing, and got in a few swipes and stabs of his own.

The warrior snarled and after another swing, extended a wrist, firing white-purple flames which he dodged, charged away, and charged back within a few seconds. Yang had entered the fight now, pelting the warrior with telekinetic debris and pieces of rubble. With how he wielded the club, one might have thought it weighed nothing, as he used it effortlessly to strike against the Battlemaster and deflect pieces of rubble Yang threw at him.

Assuming he was phased to begin with.

No matter what, it seemed he was always on the attack.

With the exception of the short-lived duel against the Zeal, It had been so long since he had faced an opponent that was legitimately equal to him in training, size, and durability. One who was on the attack, but he was more than capable of defending against him. As they dueled, with Yang staying in the back, he focused more on what his enemy was.

Had he not known better, he would have assumed it was a Human since they shared almost all anatomic features, but it was most assuredly not one. No Human was this large, nor this skilled. Nor did they wear such armor and use weapons like these. His first thought was that another Sovereign One had decided to become involved.

It made the most sense. But something seemed wrong.

A question to ask later.

The snow continued pouring in, and the street they were on was developing a thin sheet of ice. Footing would be an issue for most, but not the two titans who fought, ignorant of the world around them. Sword met club, both scored light hits on each other. Once the Battlemaster used his arms to grab the handle of the club, but the warrior pulled him close and slammed his own helmet into him with enough force it briefly weakened his grip for it to be pulled back.

The Battlemaster lost track of how long they had dueled. Both were moving fast enough that the chill had become irrelevant as their blood pumped full of heat and adrenaline. Such a prolonged duel was almost enjoyable; it was a fight where he was facing an equal on even ground. Paradise had been a harrowing trial, this was a duel of warriors.

He suspected his opponent felt the same way.

Both used every tool at their disposal. With his own telekinesis he tried every counter possible, neutered as it was by the warrior being saturated in the Element, but sometimes it was enough to slow a swing, stop a punch, or distract with debris. Yang continued throwing everything she could
at him, and once charged behind the giant, though was quickly forced back after one of the swings connected, briefly knocking the wind out of her.

His opponent altered his own fighting technique multiple times during the fight. Two-handed strikes. One-handed followed up with a wrist weapon or outright punch. Other times he moved his grip closer to the head of the club, turning it into a close-range bashing tool alternating with the empty fist.

Above them a blizzard seemed to be forming. Sleet began raining down, turning the conditions miserable – though for both of them it was an extra challenge. Both temporarily halted their attacks, circling each other, with the warrior occasionally glancing to know where Yang was.

“The reputation of the Battlemasters is well-earned,” the warrior said, in rough, but passable English. The voice was not as harsh as he had expected, but still the tongue of one who did little formal speaking. It was hard, blunt, and unrefined. A perfect reflection of the warrior before him.

And he knew what the Battlemasters were.

“And what do you know of such things?” He demanded.

“That it would be an honor to kill the last one,” came the response, before the warrior charged forward again, and the duel commenced anew, even as the city turned to ice, and the battles raged within its structures, and on the bloodied streets.

***

New York City, New York – United States of America

5/28/2017 – 12:22 P.M.

Hallian had felt the cold before.

On Vitakar it was commonplace depending on where one lived. He’d been to Borelia multiple times; no one in the Runianarch didn’t get at least a few months of training in the Wastes. It wasn’t generally something he’d consider pleasant, but it was something anyone would eventually adapt to.

Personally, he didn’t find it terrible; in some cases it was almost pleasant, especially after a hard training session where the cold felt refreshing.

This cold which had invaded the city was unlike anything he had felt before.

This kind of cold killed.

There were those rare cases where explorers went towards the coldest places of Borelia where mere skin exposure led to frostbite. Hallian had never went there himself, but he’d seen the aftermath. This was what he would imagine it felt like. A harsh burning sensation; the feeling of your breath turning to frost in your throat; the conscious feeling of your body shutting down every second you were exposed.

None of them were prepared for this.

Their armor was climate-resistant, but cold seeped inside. The heating systems could only do so much, and Hallian was growing more concerned that as the temperature steadily dropped, to points far beyond freezing, that they would all perish from it. Even worse was they had been assigned to
Scores of Mutons marched down the streets, the cowering civilians hiding as they single-mindedly pursued their goal. It was to assist Patricia, though what was powerful enough to challenge the Harbinger he could only wonder at. The Battlemaster had sped there at his own speed, as they had rushed to keep up.

Snow and ice pelted them, melting and then freezing as the pavement froze before their eyes.

Teeth chattered. Mutons shivered. They clutched their rifles closely, looking for any source of phantom heat.

*What was this?*

Focus. Keep moving. Don’t stop.

If you stop, you die.

If you fall asleep, you won’t wake up.

Hallian already felt weary, the cold had turned into a numbness across his body, a bad sign he knew, because the next stage would be a gradual sapping of strength until he didn’t move – or didn’t _want_ to move. He couldn’t allow that, but his body was already betraying him. “Stims now!” He ordered, taking an executive medical action. He wasn’t the only one who was suffering the symptoms.

The Mutons were stronger than the Vitakara, and their training would let them continue a while longer. As the Mutons marched, he distributed stims, some more traditional drugs, others chocolate. Mostly whatever he had, which completely depleted his stock. It might be a bad idea to use them all here, but better they used them now than died to hypothermia.

He looked up into the sky which had once held a blue sky and yellow sun which had been replaced by a portal of blackness and snow. Was this an ADVENT counterattack? It didn’t seem like them, and this cold did not discriminate. Someone or something else? A freak tear in reality? His cold-addled mind couldn’t fully form a coherent guess, but he didn’t think it was ADVENT.

*Then who?*

They marched down the street and then saw the battle. Hallian had never seen anything like it before. What looked like an XCOM squad, led by a figure in robes and others in stone-like armor battled a figure of a type Hallian had never seen before. He held a staff tipped with some kind of pale-blue crystalline orb, and all sides were battling with portals of blue and purple.

It was moving so fast, and the armored figure with the staff was holding his own, but to his shock, Hallian saw the broken body of the Harbinger laying on the ground, ignored by all parties. Snow had built up around her, and she was missing an arm. She looked dead, but he suspected she wasn’t.

At least that’s what he hoped.

If she wasn’t dead, she would be very soon.

The combatants had noticed the small army approaching, and were moving to attack. The Mutons raised their weapons, and Hallian ducked into what little cover there was when everything was interrupted.
It was almost like a blast of wind, and a hum which lasted only a few seconds before fading so fast he’d wondered if he’d heard it at all. It blew the snow around the center away, and when it cleared, Hallian felt his mouth open at the sight before him. An aura of overwhelming might filled the air, dominating his senses and commanding every single cell of his body.

Standing in the center of the street, was an Ethereal.

But one he instinctively knew who it was.

*The Imperator.*

There was a surreal aura around the titan before him. Hallian had considered the Battlemaster the peak of Ethereal physique, and yet he seemed a child before the Ethereal who stood towering over the inferior before him. The ornate armor of pure silver glimmered in the snow, the flakes melting to slurry around him. A cape of gold and white fell from his shoulders, having an almost holy glow around it.

The helmet reminded him of an inverted pyramid, with eye slits that flickered between a warm fire and a furious inferno. Hallian forgot the cold. He forgot his weariness. He forgot everything. Nothing mattered anymore. All that mattered was the Imperator. All that mattered was his command.

He said nothing.

He did not need to.

As one the Vitakara, fell to one knee, as only deference was allowed before their ultimate master.

The Mutons stood at full attention, with even their simple minds understanding the power before them.

The other parties reacted immediately.

Hallian heard faded shouts of panic from the XCOM squad - a few brave ones actually opened fire, though the plasma and gauss fire missed or dissipated without the Imperator even moving - and saw them vanish into a portal as the figures of stone armor removed themselves in near-panic. The unknown figure with the staff met the helmed gaze of the Imperator for mere seconds before waving a hand behind him, opening a portal to the frozen realm from whence he came, vanishing.

The Imperator had still done nothing.

Silence fell over the battlefield.

He waved a hand and the body of Patricia Trask floated to him, limp and life fading. In one lower arm he held her, almost cradling her body as he turned to the prostrate army before him.

Then he spoke.

His voice was beyond anything Hallian had heard before. It held a rich command that his ears strained to hear, and which would make any sound besides it seem hollow in comparison. It bored into the center of his mind, anchoring with such power that he knew he would never forget a single word spoken for the rest of his life.

“This battle today is not ours. But leave with your heads high, for you have acquitted yourselves well before me. The time for retribution will come. Depart, for these invaders will
be driven from our realm.”

Hallian suddenly felt his body almost tumble and before he knew it, he and everyone else were back on Desolan. Already the aura which had settled upon him was gone, and he immediately wished for it back. He stood, shaken yet simultaneously invigorated.

The Imperator had come.

He had saved them.

***

New York City, New York – United States of America

5/28/2017 – 11:34 A.M.

The last thing Kunio expected when charging out of the Skyranger was a snowstorm.

But that was exactly what was happening.

He saw the snow first, and then the cold hit him. Snow was not something that was extremely common in Japan, and he safely preferred the warmer climates. Cold could be dealt with, but he couldn’t say he was a fan. It was certainly livable, just unpleasant.

No cold he had ever felt was like this.

It was not just something that he felt, it was more like his body had shifted into a completely different stage. His joints seemed stiffer, every breath felt painful, and his body seemed slower. This was not even getting into the fact that there was a snowstorm in New York in May.

“We’re too late,” Lincoln cursed. “Come on!”

“Where are we going?” Zara demanded.

“What the hell is this?” Vilhelmina asked as they ran into the city. “Why is it snowing?”

“Because we have visitors,” Lincoln said, pointing towards the sky. “I’ve only been told about them, but this follows standard tactics. They invade from a planet of constant snow and ice, and encompass their area of operations in a globe, making it impossible to penetrate unless the portal is closed.”

That followed, actually. Kunio nodded to himself. Looking into the sky, which had turned dimmer in light of the snowstorm, there were large sections which were clear portals that were blowing the snow into the city. “Are those automatic?” He demanded. “Or are they using teleporters?”

“Better question,” Aharon added. “Who is they?”

“They call themselves the ‘Riders’,” Lincoln explained shortly. “Or at least that’s the best translation. Aliens who travel across galaxies to conquer other worlds and species. They were one species originally, now they compose hundreds. Very advanced, very skilled, very dangerous.”

“Sovereign?” Zara asked.

“That would be the assumption,” Lincoln said as they spotted a firefight going on in the distance. “I didn’t get a clear answer. There is a leader, but from what I was told, the internal dynamics are complicated. I don’t know why they’re here now, but Fiona somehow got their attention.”
Kunio shivered. “How?’

“You can ask her once we get her out of here,” Lincoln said. “Weapons hot! They’re ahead.”

For being aliens, Kunio was immediately struck by how much they resembled Humans, in anatomy if nothing else. But they stood at least two and a half meters tall, each of them, and bore heavy dark grey armor and weapons that to his eye simply he’d classify as advanced. They were engaged in a firefight with a small army of Mutons.

It was not going well for the Mutons.

The Riders as they apparently were called, were concentrated in a small area, but they were heavily locked down and disciplined. Kunio observed for only a few seconds, but unlike conventional armies which used suppressive fire and taking multiple shots, each of these armored soldiers took each shot very deliberately.

One shot.

A white crack.

A Muton’s head vanished.

Repeat.

The armor they wore seemed durable enough to take direct plasma shots, though the Riders never deliberately exposed themselves. They did seem to reject natural cover in favor of some kind of energy barrier they placed around themselves which was capable of complex linking.

The entire setup was connected to a portable power station, managed by another of the Riders who was behind a display, which also managed a half-dozen autoturrets which were just as methodical as the soldiers. In the very back was another Rider, who was sheathed in blue energy as its hands were raised to the sky, where a portal connecting to the ice world opened.

Kunio realized that the armor the portal Rider was wearing was the same he’d seen in Nara wear several times.

More and more questions.

“We think the armor can take some of the shots,” Lincoln said, drawing on psionic power of his own. “But don’t take chances!”

“We’ll get in close,” Vilhelmina readied her warhammer as Aharon joined her. “Kunio, think you can get us on top?”

Kunio briefly checked, and realized that whatever had locked down the Psionosphere was gone. He gave them a sharp nod – then paused. “Let me try something first.” He waved a hand, opening a small portal and chucking in the Thought Bomb he’d brought along, setting it to kill. This was not the time to be taking chances.

Over a couple of the Riders the portal opened, and was recognized immediately. However instead of panicking, one of them picked it up and flung it in a smooth motion to the few remaining Mutons, and as it went off, the remainder crumpled to the ground. It had been worth a shot.

Now they were onto them.
Kunio created a portal, and motioned for the Templars to jump into it. Lincoln shot blasts of energy towards the Riders, who raised the shields higher. Barbara and Zara fired at the machinery, to cause it to collapse, as Zemin and Tang unleashed their own psionic power. Once the Templars jumped inside several of the Riders immediately adapted.

Pulling out dark swords they immediately and surprisingly engaged the Templars in melee combat. Part of the barrier gear sputtered, and a portion of the shield went down. Bolts from the Riders shot out in response. One impacted him directly in his chest, sending him stumbling back. He could almost feel the impact, even as the nanites began repairing.

None of them could take sustained fire.

Several of the soldiers were throwing grenades to the massed Riders, and none of them got close once the Riders shot them out of the sky. It was a level of marksmanship that Kunio hadn’t seen even from XCOM snipers. The psionics did seem to spook them though, and they ducked out of the psionic blasts of Lincoln and Tang.

The Templars were not faring much better.

They had underestimated the skill of the Riders, as even the regular soldiers were swift, lethal, and graceful. Vilhelmina was managing to hold her own, even managing to get a good hit on the chest. Aharon was faring less well, as the reach of his weapon was lessened, and his opponent was just as skilled if not more so than he was.

Both Templars were incorporating as much psionics as they could into their attacks, with telekinetic pushes from Vilhelmina and Aharon’s Aegii psionics letting him last longer than he might have otherwise. Yet even these were adapted to by the Riders, who appeared to have been trained in fighting psions.

It was almost a stalemate in some ways, which Kunio needed to end.

The only one not participating was the one controlling the portal.

“Lincoln! I’m going to take out the teleporter!” He called.

“Do it!” Lincoln stated, sending another blast towards the Riders.

Kunio suddenly got another idea. “Zara! Barbara! Get over here!”

Both rushed over. “Barbara, when I give the order, you fire everything into the portal,” he ordered the Infantry. “Zara, send your nanites down. We take down their technical center and teleporter all at once.”

He briefly closed his eyes, looked to where his targets were, and opened his palms. The portals were small, but that was all they needed. Barbara fired into the one before her, and he was rewarded by the sight of a hail of green bolts slamming into the teleporter, forcing her to close the portal, and cease the snowstorm even if the damage clearly wasn’t fatal.

A stream of golden nanites poured from a portal above the Rider technician, which for the first time seemed to panic as he hit a button on one of the panels, and a massive pulse went out. Kunio was grateful then for the fact that their suits had been EMP hardened, because otherwise they would have been paralyzed.

The good news was that while it had killed the nanites, it had also fried the system itself, taking down the barrier system and fully exposing them. The teleporter, yelled something in the alien
language, and opened another portal, though this one was on the ground, and it seemed to be…a retreat?

The fact that the Riders seemed to be only hardening their stances indicated otherwise.

Several of the Riders had been injured by the psions, and were being treated by their brethren, who carried them away while those still alive kept firing at a fast enough pace that XCOM advanced more slowly. They were taking hits, and their advance slowed to a crawl. To Kunio’s alarm, the tide actually seemed to be turning against them. The Templars were now almost defeated. Kunio looked just in time to see Aharon miss a swing and the Rider seize the opening and fully decapitate him.

Vilhelmina was on the defensive still, but the Rider fighting her simply sliced her arm and slit her throat before he backed off. That wouldn’t kill her with the Titan armor, though it would stun her for a while. But the Riders seemed intent on finishing the job, as two more of the remaining Riders drew weapons of their own and closed on her.

Then there was a blast of power.

Kunio wondered, and all of them had wondered, what it would be like to face the enigmatic Imperator. They knew what he looked like. They knew how powerful he was. Many of them knew they would never face him, let alone defeat this titan. The Imperator was the endgame, but one all of them knew would pose a threat unlike any they had faced.

Today they learned what would happen.

They froze.

Kunio saw the Imperator, the giant in the intricate armor and was immediately overcome with the power that emanated just from his presence. His mind screamed as the compulsion to submit wormed through him, before the Manchurian Restraints took over, freezing his body in a paralyzing grip, leaving his mind scrambled and eyes watching.

Everyone else was similarly affected – for the Riders it seemed worse. All of them stopped fighting, and stumbled back, some of them holding or clutching their helmets as they were similarly overwhelmed. Only the one commanding the portal seemed to have any hold of independence, and they acted.

One by one the teleporter grabbed the stunned Riders, and almost shoved them into manifested portals, while others stumbled into those which were created in front of them. Within a very short period the very presence of the Imperator had been enough to drive them off, and the teleporter finally stepped into a final portal and vanished.

The Imperator appraised them, and Kunio knew if he acted, they were dead.

The power became so overwhelming it was becoming painful.

Without a word, the Imperator lifted a hand and vanished, and instantly they were freed. Breathing heavily they all regained their bodies and minds, staring at each other through their helmets, unsure whether it was a trap or the Imperator sending a message. Relative silence fell upon them, and the cold had almost vanished, pulverized by the Imperator’s appearance.

Tang had rushed over to Vilhelmina, who was recovering and shaking. Lincoln looked at where the Imperator had been. “I can’t believe we’re alive.”
“Neither can I,” Kunio said. “That was…”

“Terrifying,” he finished. “I didn’t…I didn’t think we’d see him until…”

“We were going to lose,” Kunio said in a toneless voice. “Then…”

“Yeah…”

“Hunter Squad, this is the Chronicler,” a voice came over the comms. “Good news and bad. Good news is that we located her. The bad news is that the Imperator himself is in play. We aren’t sure what he is intending, but we are preparing for the worst. Move to secure Fiona if you can. Report any sightings if you see him”

“Chronicler, we just had an encounter,” Lincoln immediately answered. “He showed up, then left once the Riders were gone.”

“I see,” there was a pause. “There are similar reports coming in. They appear to have drawn him out.”

“What is our objective?”

“Continue. If he let you live, then he is not after us this time. Recover Fiona now before she is removed or he recovers her.”

“Copy,” Lincoln stated, looking to the surviving Templar. “Forslund, can you continue?”

“Yes sir,” the Templar grunted. “As long as the Imperator doesn’t show up again. And Aharon… we’ll come back for his body, right?”

“We will.”

“Let’s go,” she said, gripping her weapon. “I feel we’re running on borrowed time.”

***

New York City, New York – United States of America

5/28/2017 – 12:41 A.M.

Perched atop one of the intact skyscrapers that still stood after the initial chaos, the Hunter watched through a continuing, but dying storm of snow and ice. Unlike most of his kind, the Frost had little effect on him, as all of his School trained with the Riders on the ice world. He knew little of it, but knew that it had made him capable of surviving any place, situation, and opponent.

Useful for his line of work.

In retrospect, he wasn’t surprised the General had taken the opportunity that had appeared. In fact, if none acted, he was prepared to take her himself. The fight between her and Patricia had been illuminating to witness. She was indeed untrained in the use of her abilities – or at least her master was unskilled.

Knowing who that was, the latter was most likely. Some academic knowledge, but nothing practical. Self-learning would fill these gaps, but it would take centuries – time she did not have. Which was why she still would struggle against a psion of this Sphere, and would not have lasted without the aid of a Sovereign One to protect her mind.
And as expected, they had arrived at the most opportune time, and had easily captured her – to be immediately followed up by the Ethereal Battlemaster engaging the one who he assumed was a Warmaster. There were several, and he couldn’t make out who it was – not that he particularly cared as much.

More interesting was the XCOM squad which had also appeared, led by none other than the traitor in question. All complete with lightning, a staff complete with a Sovereign Orb, and righteous indignation. Several of the Warriors rushed the restrained body of his intended quarry away. The Hunter took a quick moment to tag them, as he turned his attention to the coming battles.

The Battlemaster and Warmaster took their fight away, though he tagged them as well to know where to avoid. More interesting was how the General would handle his new opponents.

As it turned out, quite skillfully.

XCOM was skilled. That was not a surprise to see them treating the General like a psion, though they would have been smarter to treat him closer to Patricia. Something evidenced by his liberal use of teleportation, telekinesis, and Aegii psionics. However, the Hunter knew very well that direct combat was not his strength.

He was a strategist, and played a very long game.

He had come into this fight without an idea of who or what he would face – not that he would necessarily have to concern himself with who posed a threat in this Sphere short of a Sovereign – but it meant that the optimal path to victory could only be determined in real time. Given enough time, he would emerge victorious.

But XCOM and the traitor had known what they were facing. Given the sudden emergence of ‘Fiona’, as she was ironically calling herself, he supposed that they had guessed what was coming and prepared accordingly. Intelligent, as he had indicated in his reports. There were powerful psions and Agents of T’Leth here. It spoke to his skill that he was holding his own.

He had noted with some amusement that a sizable alien army had arrived. It was almost certainly going to be torn to pieces, and he was anticipating the show when everything changed.

Of all the scenarios that could happen, the Hunter had not expected the Ethereal Imperator would personally grace the battlefield.

It took all of his extensive training to not become overwhelmed by the sheer aura exuded by this master of the Psionosphere. In his life the Hunter had only felt himself affected in this wholly overwhelming way twice. Once when he had been brought before the Sage-King, and when he had faced the true form of the Entity.

*True form. Wouldn’t that have been nice.*

It had still almost killed him.

Truthfully, he would have been surprised if the operation had continued much further. The longer the battle persisted, the higher the chance that soldiers would die and technology be left to lesser species. Retreat was inevitable, but not before success was certain. The arrival of the Imperator changed everything.

The Imperator could not be allowed to threaten the Throne World.
They were not prepared.

It did not surprise him when the General departed, though obviously not before ordering a retreat. XCOM had fled quickly, and the Imperator had telekinetically called the body of his puppet, before teleporting the army which had come to fight away, then vanishing himself, letting the Hunter take a long breath.

The mission was going to fail now. The Imperator was not here for XCOM, he was here for them. By doing nothing he was nonetheless sending a clear message. He almost certainly had no idea who or what they were, but he had seen them flee – and that would tell him that the Throne World knew his power and that they could not match him today.

But he was still here, and still had an assignment of his own.

Improvisation was required. If this mission was to fail, it fell on him to ensure the next one was successful. He was under no illusions that he would be the deciding factor in a conflict between psions – let alone something like this Imperator. He was far too weak, skilled as he was. Without the element of surprise, it was a doomed endeavor, and his weapons were not strong enough to take out enough of them quickly enough.

This mission would be salvaged to a degree. The Imperator wouldn’t know about her, and wouldn’t necessarily be looking for her.

With that determined, he backed up, and with a telekinetic push sent himself flying through the air as he mentally plotted his path to the tracker. Telekinesis was one of the most useful abilities he could think of, and in this sphere he could use it much easier. It wasn’t strong, but it didn’t need it to be.

All it needed to do was serve as an amplifier and anchor.

Leaping from building to building, running along the walls and across the rooftops, he made a number of notations about the number of soldiers – both ADVENT and XCOM which were moving in his same direction. So they almost certainly knew where she was being moved too. That was problematic.

He needed to move faster.

Minutes later he spotted the small group. Either they had lost some of their soldiers, or some had split up, because there were only five. Far too small to be a credible threat. With a leap, he softened his landing a few meters behind them, which forced them to react immediately, turning around and aiming their weapons at him.

“Hold!” He commanded instinctively in English.

The nearmost Warrior appraised him. “[Viper. We are in retreat.]”

Right, they wouldn’t speak English. He switched to their speech. “[Correct. The Imperator has intervened, and XCOM and ADVENT squads are converging. You will be killed.]”

“[We are aware,]” the leader marched towards him. “[We will not let her be retaken.]”

The Hunter sighed, putting some urgency into his voice. “[The Imperator is here. You cannot let yourselves be captured. The Throne World cannot be put at risk.]”

“[And we cannot abandon her now that she is in our possession,]” was the response. “[We have
little choice, nor can we predict where the Imperator will go.]

"[Allow me propose an alternative,]" he spoke quickly. "[Give her to me, and hide until the soldiers are gone. The General will locate you, otherwise you will die for nothing and your bodies resting outside the Throne World. Worse, you may be captured and the secrets of the Spheres given to the Imperator. The Humans are unaware of me. I will ensure the next operation to acquire her succeeds.]

There was a prolonged silence as they considered his proposal. In the end, the Hunter doubted it was his appeal to life, but what would happen if they were captured by the Imperator, or their bodies killed here by XCOM. They were already cut off, and the Riders were in clear retreat, and their bodies in addition to providing the Humans here with valuable insight, would never be returned to the tombs.

"[The General is aware of you, Viper?]" He asked.

"[He is. This was my mission before the opportunity here arose]"

"[Proof.]

The Hunter reached inside his vest and pulled out the silver artifact. It glittered in the dimmed light, before the Warrior nodded. "[Very well. This assignment is in your hands. Do not fail.]

There was some internal discussion, before the soldiers marched off on a different path, able to move more swiftly without carrying the body. He looked down at the sedated woman, curious as he’d never seen her up close. She’d taken a severe beating, but nothing she wouldn’t recover from. Definitely young, and from the images he had researched, he could see the family resemblance, faint as it was. Such a shame it had ended up like this. Of course, she was ultimately only a pawn. The traitor bore full responsibility for her current predicament, sacrificed at the altar of his own ambitions.

"Hands up! Step away!" The Hunter turned, almost relieved to see an XCOM squad marching up, led by an Agent of T'Leth.

He complied. "Of course. She’s all yours."

Three of the soldiers moved to free her and apply med-kits to her body, and the Agent appraised him carefully. "Who are you?"

"An ally," he said smoothly. "I know who they are, and followed here. I am no friend to them, and I know who this is." He indicated the body lying on the ground. "As do you, I suspect. I do not know why she is here, but better here than with them – or the Imperator."

The Agent stared closer, no doubt noticing his eyes – and his strong mental defenses. "I have no interest in staying long," he said, looking to the portals in the distance which were continuing to fade. "I do not belong. But here-" he reached into his pocket, pretending to fumble. "When she awakes, give this to her. She will know what it means."

The man gingerly took the seal with the cat’s head on it. It was a calculated risk, but telling the truth was certainly a bad idea, nor was picking the obvious way to gain her tentative trust. Without another word, he leapt into the air, activating his cloaking field so that when the Agent inevitably wanted to question him more, it would be almost impossible for him to lock on.

Sure enough, they called out for him, but he ignored them and put a significant amount of distance
between him and all XCOM squads. Once more perched atop a skyscraper, he simply watched as one by one, the portals closed and the sun broke through to shine upon a frozen city.

He hoped the Imperator had left for good.

***

New York City, New York – United States of America

5/28/2017 – 1:23 P.M.

Sword and club continued meeting in quick succession.

The battle had continued far beyond what the Battlemaster suspected either of them were used to. He could also feel Yang start to tire as she exerted herself psionically and physically, as the duel continued down the streets. Though he wasn’t ignorant of the fact that the warrior seemed to be leading the duel; taking the aggressive posture like he had this entire time.

Neither had scored significant wounds on the other, but the Battlemaster had penetrated some gaps in his chest armor, and his opponent had bashed him on the thighs and two of his arms, which still bore developing bruises. The minute pain such injuries caused was easily ignored in the heat of battle.

The warrior battered down some rubble Yang threw at him while with a fist he bashed away another sword swipe. Turning quickly on his heel he directly charged the Battlemaster again, sliding his grip of the club closer to the head. Either by luck or speed, he bashed the hand that held his sword, causing him to drop it.

His opponent followed up with a series of hard strikes towards less-armored parts of his suit. The elbows, armpits, and throat, mixed in with a number of center blows to keep him off-balance. However, engaging in a melee was not wise to do with a Battlemaster with an anatomical advantage.

With one hand he gripped the arm of the warrior, while with his remaining ones he gripped the club, arm that grasped it, and with his final arm he unleashed one of the strongest telekinetic pushes he had done thus far in the battle. At such close range, even the mitigating effects of the element couldn’t cushion the blast.

The warrior was not sent far back, but he’d been forced to release his club, which now rested in the Battlemaster’s hand. It was not a weapon type he had used in a very long time, but he remembered basic principles. He telekinetically called his sword back to his hand, and marched forward, both weapons now in his hand.

He anchored himself in place, and slots above his shoulders opened and fired, sending a series of seemingly impossibly small micro-missiles towards him. The Battlemaster lifted a hand to catch them, and as one they all exploded, the shockwave forcing him back and the explosion blackening his armor.

Once the smoke cleared, he saw that his opponent had focused his attention on Yang, first sending several small missiles her way which she deflected, and directly following up with shooting several small wires designed to entrap her. They wrapped around her neck, legs, and arms, which only lasted for a moment as she used her sword to telekinetically cut them, but he’d yanked her towards him and charged forward.

The Battlemaster also charged, slamming into him and following up with a dual strike with his two
weapons. Both were dodged, as the warrior gave a hard kick to Yang before taking the aggressive stance once again by moving in close, and grabbing the club with both hands. The Battlemaster stabbed his sword through a gap in the chest, eliciting a rare grunt of pain, but he didn’t let go, even as the Battlemaster shoved it in deeper.

Placing his armored boot on the Battlemaster’s breastplate, he kicked himself off, and both stumbled back, the Battlemaster’s sword slick with red blood and his opponent wounded, but having his weapon back. The sounds of battle sounded nearby, and the Battlemaster realized that they were near a firefight.

And that his opponent was moving closer towards it.

Blood had flowed through his wounds, but the bleeding seemed to have stopped. Unsurprising. The Battlemaster would have been surprised if there wasn’t an internal triage system, but he suspected that this was a warrior who was not used to being wounded at all. Behind the warrior as they turned the corner, continuing to exchange blows, there was a battle between some scattered Collective forces, mostly Mutons, and these unknown soldiers, one maintaining a portal.

Was he retreating?

Since the Battlemaster was on the objective offensive for one of the few times in this duel, it seemed to be the case. Overhead he heard the roar of missiles, and quickly dashed out of the way as they struck the streets, taking out scores of Mutons and almost hitting him. His opponent did the same, but took the opportunity provided by the ADVENT airstrike to charge directly towards the portal.

Along the way he slew several of the surviving Mutons, either by bashing their joints in, or performing overhead swings that crushed their heads. Most of the unknown soldiers were retreating into the portal, and before he could charge forward, the warrior vanished within, and the teleporter in question soon followed, leaving them alone in a snow-blasted street with buildings covered in a sheet of ice.

Yang had recovered, though was breathing heavily, made worse by the freezing cold, though it was less so now that the portals had closed, as those had clearly been the source. “What,” she breathed. “Was that?”

“I do not know,” he answered, that question now also at the forefront of his mind. He had never seen anything resembling the warrior he had just fought, or those who had accompanied with him. His fighting style was also dissimilar to what he had seen from other warrior cultures, the few that existed during the time of the Empire.

It was aggressive, swift, and was thoroughly impossible to be performed at that level without decades of training, minimum. Perhaps longer – as well as consistent use. Training was not all-encompassing, and the battlefield had certain elements that you could only truly prepare for through experience.

And given the utter fluidity and adaptability displayed, this warrior was intimately familiar with battle.

Regardless, he was also acutely aware of the fact that this mission was a failure, and that ADVENT would be marching to fully reclaim the city. Which put him in a far more difficult situation – were he not prepared. The Collective had his position from his tracker, and he transitioned it to the extraction variant.
Given what was happening, he knew that the Imperator was certainly paying attention, and someone would come to extract him. Patricia’s body had doubtless been extracted at this point, although most of the soldiers had probably been written off. Fortunately, it was only Mutons – and only a fraction of the number Patricia had prepared had gone through before the attack.

Still, he wasn’t sure if ADVENT would count it as a victory or not. At minimum, they would be just as confused as he was as to who had intervened. If another Sovereign had entered the picture… that boded poorly, and would make his plans harder to carry out. And all indications were that whoever this was, they were unfriendly to all sides.

Cogitian would probably have the best idea. If not him, then there may be issues.

Because the Battlemaster was certain that this would not be the last time this faction intervened.

Then before him, the Imperator emerged. The Battlemaster was genuinely surprised to see the Imperator step foot on this planet. His mind immediately sprung to the ramifications. Regardless of the necessity, and it had likely been Patricia’s extensive injuries, XCOM would not take the provocation of their greatest opponent stepping foot on their planet.

But that was not the primary concern right now.

The Imperator looked to where the portal had been. “They retreated.”

“They did.” A pause. “Who were they.”

The Imperator did not immediately answer, simply still staring at the place the portal had been. “I am unsure. A mystery which we must immediately unravel.” He looked back to the Battlemaster. “I have extracted what remaining forces we had. We must speak, there is much to consider.”

With a nod, the Battlemaster awaited the Imperator to teleport them back to the Temple Ship. This battle would have ramifications beyond today, but just to what extent was to be determined. With a wave of his hand, the Imperator transported them away from the frozen city, only now just starting to melt as the pale yellow sun shone down overhead.

***

To be continued in Chapter 62:

Wills of Steel, Hearts of Stone

Chapter End Notes

There will probably be two different reactions to this chapter; those who know what just happened, and those who do not. If not, don’t worry, it will become clear eventually :)

I’m amazed that there was only one person who put the pieces together before this point. Even the Editing Team didn’t figure it out until this chapter. Congrats Potius, speak to me to claim your prize.

Finally, there are a couple of other things to say – first is that I got artwork for the Commander done (see at the end of this chapter). Second is that Areleh has started
writing a spin-off/side-quel to the Advent Directive which follows the formation and exploits of the Pantheon. Look for “XCOM: Pantheon Rising” to check it out. It’s very good, and I look forward to working with him more as the story progresses.
The Praesidium, Office of the Commander – Classified Location

5/29/2017 – 6:00 A.M.

The air was tense.

All of the Internal Council were present, standing to the sides in front of the Commander’s desk, while the Chronicler and Crevan were standing directly before where the Commander was sitting. The Commander’s eyes were turned towards them, but unfocused, as his prosthetic hand rested on the desk while the other rested on his chair’s armrest.

It was a rare situation where he wasn’t completely sure what the best approach was.

There were many things to process. Normally the fact that the Imperator had stepped foot on Earth would be occupying every immediate discussion. Perhaps how Patricia had targeted one of the most populous cities in ADVENT and nearly succeeded, ignoring all conventional plans and wisdom.

But there was something that deserved more focus. Something which he had genuinely not seen coming. He let the silence linger a few moments longer before looking to the Chronicler and asked a single question in an intentionally calm voice. “Would you care to explain what you’ve been hiding from us?”

The Chronicler’s voice was equally neutral. “I wouldn’t phrase it like that.”

“Oh?” The Commander lifted an eyebrow. “And just how would you phrase keeping this information from us?”

“As irrelevant information, Commander,” the Chronicler pursed his lips. “This was not something we expected to happen. There was no reason for you to know, and the more who are aware, the more danger this world is in.”

The Commander knew Zhang was going to speak; he could hear the whispers of a response but he cut him off, lifting a hand and whatever Zhang was going to say died. This was a conversation that he was going to fully control; no interjections or distractions. “And yet, you were wrong. More to the point, you lie.” The Commander turned his gaze to Crevan. “You certainly expected this to happen at some point. You knew exactly what was coming, and made us act because if we didn’t, then something would happen. What that is I am still unsure of, but I lost a couple of good soldiers – which is not counting the thousands who died from the snowstorm - and you are going to tell me exactly why they died.”

“To ensure Fiona was not taken,” Crevan answered. “Any sacrifice was not in vain.”

“She is one woman,” the Commander retorted. “Do not avoid the lie. You kept this from us not
because it wasn’t a possibility, but because you decided we did not need to know.”

“You didn’t.”

The Commander raised an eyebrow. “The corpses say otherwise. More to the point, this is our world,” a clear note of warning crept into his voice. “Not yours. Not T’Leth’s. And if there is something that threatens it – or which could threaten it – we better know. If we had known then perhaps we could have made plans; contingencies, instead of sending in soldiers blind.”

“Again,” the Chronicler said calmly. “We did not expect this.”

“I don’t care what you expected,” the Commander emphasized. “It happened. And whatever it was, it was dangerous enough to force the Imperator’s direct hand. So I suggest you explain exactly what happened, and if you are keeping anything else that we need to know, share it now.”

It was not phrased as a request, but in practice, the Agents of T’Leth didn’t need to share anything. They could state that XCOM needed them, and that was it. It was something which could happen, but the Commander doubted they would be that unreasonable. They very likely believed that whatever had happened was so minor or unlikely that they didn’t have to share it. But now they had no excuse, and if they still gave unsatisfactory answers then…

Something would have to be done.

He sincerely hoped it would not come to that.

He motioned to the Chronicler. “Well? Let’s start with something simple. Who were they?”

“They go by many names in many languages,” Crevan answered instead, eyes steely. “The most common translation is the ‘Riders.’ They are in effect a…task force that watches over…spheres. They are composed of thousands of alien species, all specially recruited and trained. You would have heard of almost none of them, but they are not a homogenous force.”

He knew Vahlen was already bursting with questions, but he kept his expression clear. “Spheres?”

Crevan scowled. “Their term, and not a fully descriptive one I believe. It is the closest translation. Some would more narrowly define them as universes, but others would say they move between dimensions. I do not know if either is correct – research on the topic is heavily controlled. The number of individuals who know the truth of what the Riders oversee is limited to the Throne World, and the Generals who command them.”

“And why are they overseeing these…spheres?”

Crevan rubbed his chin. “To make sure no one can enter the Throne World through them.”

“Elaborate.”

“What they discovered indicates that they may not be the only ones who are capable of learning of the spheres,” Crevan explained. “The most obvious solution is making sure that no other species or sphere can learn what they have. Each different sphere is named after the most notable element of it. Unsurprisingly, this is the Sphere of the Sovereign.”

He indicated the Chronicler. “The Sovereign Ones are an existential threat to the Throne World. Psionics do not…necessarily work the same there, but if a Sovereign One managed to learn the secrets of the Riders, then not just the Throne World, but thousands of other Spheres would be at risk.”
“And yet, here you are,” the Commander finished. “Working with a Sovereign One. You’re not Human, are you?”

Crevan furrowed his brow. “In short, no. That is not important. We are not here of our own volition.”

“By ‘we’ you mean…?”

“Myself, ir Nara, and Fiona.”

“All of you are not Human?”

“Fiona is Human,” Crevan corrected, though paused briefly. “…Largely. She is…capable of moving between the Spheres to a degree that not even the Riders can manage. She is the result of a genetically groomed bloodline for this specific purpose. What she does cannot be replicated artificially, despite the best efforts of the Throne World, and out of their control, she is a threat.”

He looked to the Chronicler and exchanged unspoken words. “I have…disagreements with many on the Throne World. Enough to help the young Fiona leave. I knew they would chase us, but her skills would allow us to stay ahead. We underestimated them, and they began anticipating our movements. They have augmented themselves with technology from many Spheres, and were more advanced than we were. Soon they were awaiting us. We were almost captured multiple times.”

He paused. “By some degree of luck, we arrived in this Sphere, and encountered the Chronicler by pure accident. Against my better judgement, Fiona explained what was happening. T’Leth agreed to serve as a deterrent to force them to stop hunting us. In return, we assist his agenda.”

The Commander raised an eyebrow, looking to the Chronicler. He suspected there was more to that story, but that was for another time. Instead he cut to the heart of the matter. “And he wanted to know how to move between the Spheres?”

“No,” the Chronicler said. “They are unaware of the specifics of how this phenomenon works, and regardless, if it were unlocked, is a secret which would spread the pointless cycles elsewhere, which is…undesirable. What he does not approve of is outside forces meddling in our galaxy, or universe, or whatever they define it as.”

“How fortuitous he thinks like that,” the Commander noted dryly. “I’m sure that has nothing to do with his inability to decode this skill.”

“If T’Leth wanted to, he could have forced Fiona to move him to the Throne World,” the Chronicler answered in a low voice. “There are many Sovereigns who would do anything for this knowledge. The Throne World – fanatical and dangerous as they are, understands that the Sovereign Ones learning these secrets would doom the many worlds which have no protection. T’Leth has no interest in facilitating that.”

“Unfortunately, they will continue to exploit opportunities as they arise,” Crevan said sourly. “We believed we had reached something of an understanding once they realized we were under T’Leth’s protection, but they saw Fiona as vulnerable, and acted. Which means they have eyes and ears on Earth, and thousands more in the Sphere at minimum. They may move to quarantine it.”

“Which means?”

“That they assume covert control of the Sphere,” Crevan explained, fixing the Commander with a hard stare. “They find and recruit aliens of the Sphere into the Riders and maneuver them into
positions of influence. More direct agents are inserted; modified to blend in. Every aspect of the
sphere is managed by the Riders, and by extension the Throne World. It is an operation lasting
hundreds or thousands of years. You operate within the constraints of time; they do not.”

This was sounding like a larger threat the longer the alien talked. Or at least a more direct one.
Though there was a certain problem with the proposed approach. “Considering the nature of cycles
and Sovereign Ones, this does not sound poised for success.”

Crevan unexpectedly smiled. “The Sovereign Ones are not as intelligent as they think they are. I
assure you that they are capable of handling the Sovereign Ones. And if they fail, then you will see
a conquest of your galaxy the likes of which you cannot comprehend. Be thankful that the Throne
World has a preference against intervention and total war.”

“How fortunate,” the Commander said sarcastically. “They must know that we know them now. I
would prefer these aliens to not meddle in our affairs, and it sounds like the largest reason they are
is because of you and Fiona. Is there no compromise?”

Crevan shook his head. “The Throne World does not negotiate.”

“You said they prefer non-intervention,” the Commander pointed out. “And it sounds like this is
not something that happens often. Others learning of these…spheres.”

“It doesn’t happen often.”

“So there is precedent,” the Commander nodded. “And what usually happens?”

“They join the Riders,” Crevan answered. “Or act as agents to the Throne World.”

“Which isn’t acceptable here,” the Commander said. “Then I suppose that if there is no precedent,
then we will have to set it. There are enough threats without a reality-hopping alien army becoming
one of them. Fortunately, they sound reasonable enough.”

Crevan’s eyes widened. “Reasonable? You cannot be serious. They have been hunting us for
years!”

“Yes, because you – or Fiona rather – are a security risk,” the Commander answered flatly. “Based
on what you have told me, I would be doing the exact same thing if I were them. I do not know
why she decided to leave, nor your own disagreements, but I must act in the best interests of my
species – not you.” He lifted a hand. “And don’t worry, I have no intention of turning either of you
over. But what I am interested in is not making another enemy. I want you to contact the Throne
World and say that I want to negotiate with them.”

“Impossible.” Crevan shook his head.

“I’m not certain that is the best approach…” the Chronicler said slowly.

“I don’t especially care if you approve or not,” the Commander continued. “Like it or not, Machas
– assuming that is your real name - this is your fault, and if they attacked once, they will do so
again when they see an opportunity. I do not want that to happen. I am not going to let Earth and
Humanity be caught in a dispute which we have no stake in. The Sovereigns may come into
inevitable conflict with us; this is not the case with this Throne World. If you do not have a way,
make one, or next time when they come we will not intervene.”

“Absolutely not,” Crevan shook his head. “And what will you do, Commander?”
“Exactly what I said I would,” the Commander said coolly. “If I am not mistaken, your very presence risks, and I quote, ‘a conquest the likes of which you cannot comprehend’. Perhaps I would prefer to avoid that entirely. If the Throne World were to leave us alone, that is desirable, no? I dislike making sacrifices, but if allowing the Throne World to capture one women prevents the infiltration and meddling in my species, much less any others, then that is a sacrifice I will make each and every time. T’Leth has the luxury of being immune to such concerns. Humanity does not.”

Crevan looked to the Chronicler. “Our agreement cannot be voided over this.”

“I said XCOM will not intervene,” the Commander reminded him. “I have no say over your agreement with T’Leth.”

“And this is unacceptable,” Crevan said. “You do not understand what you are asking.”

“And you do not understand what risk you now pose,” the Commander retorted, lacing his fingers together. “I do not expect you to understand, since you are not Human and your species appears to be in no danger. Your situation is unfortunate, but I will prioritize what must be done. I suggest you work this out with T’Leth, but I have made my requirements clear.”

“Or you will not assist if they return?”

“Or you will be expelled from the Praesidium and I will go to the Chancellor and tell her everything you just told me,” the Commander said slowly. “And she will tell her staff and advisors. I can assure you Saudia will not be in favor of letting you remain rogue, and I am inclined to not stop her. You will have no place to go outside of where T’Leth will hide you. Perhaps when the Throne World learns, they will approach ADVENT properly, and should they seek to also capture you, we have no control over what they do.”

A thin smile appeared on his face. “I do not care if you stay, or move on to another sphere. I only care that the threat of this Throne World is mitigated. I would prefer not to take these steps, but I do not have the luxury of pretending this threat no longer exists. You know what to do.” He rested his hands on the table. “Dismissed. I have made my point, and I expect to not have a repeat of this conversation again.”

A clearly furious Crevan sharply turned on his heel. “Chronicler! We need to talk.” The Agent of T’Leth seemed almost impressed with how the conversation had gone, shooting a short nod towards the Commander before following him out. Good. That meant T’Leth would force something to happen, and no support would be lost over this ultimatum.

“Well then,” Vahlen said. “That was…enlightening.”

“To put it lightly,” Kong shook his head. “The implications are…”

“Staggering,” Vahlen finished.

“ADVENT is going to want an answer,” Jackson said, scribbling something down. “If Crevan cooperates, what exactly are we going to tell them?”

“That we don’t know for sure,” the Commander said. “That we believe it is Sovereign-based. Crevan is right that the fewer people who know of this, the better. What was discussed here does not go beyond this room. This applies to you as well, JULIAN.”

“Yes, Commander.”
No snark or sarcastic comment. Even JULIAN knew how serious this was. The Commander sighed, and rubbed his head. “Unfortunately, that wasn’t the only thing we need to discuss. The Imperator came, and we need to decide how we respond.”

***

_Throne Room of the Imperator of the Ethereal Collective – Unknown Location_

5/29/2017 – 1:12 A.M.

The Imperator sat upon his throne silently, as a very rare gathering of the Ethereal leadership took place. The Overmind, Quisilia, the Guardians, and Cogitian were here – all of whom the Battlemaster expected. The others such as Revelean and Fectorian were unlikely to provide much immediate input, and he suspected Sicarius would learn eventually. Deusian had no relevance yet.

For once, the Imperator had made a proper decision to involve Regisora, despite his reservations of the Sovereign One. But this was clearly an outside force that the Imperator did not seem to be aware of. Perhaps Mosrimor knew, and if so, there was much that needed to be learned.

What he did not approve of, though understood why the Imperator had summoned him, was a representative of Paradise. He thankfully hadn’t allowed a Saint, or even one of the more advanced Children to come, but only a relatively weak Caretaker who presumably specialized in writing down knowledge of the Bringer.

He was…unsettling in a way that one of his stature and limited power shouldn’t be. Like many of the Caretakers, he resembled a robed dead man walking. His hands were shriveled, though didn’t shake. He walked with some kind of limp. He was old, and had silver-grey hair and beard with eyes that bored into whoever they stared into.

They were not dead eyes though, but filled with many fiery emotions. He looked to the Battlemaster with utter hate, and did not bother to disguise it. It made him consider decapitating the Bringer puppet then and there, since whoever this individual was, they did not fully control themselves. But the Caretaker was more reserved before the other Ethereals.

He suspected the hate was due to his previous visits to Paradise – and open desire to burn the station to ash.

Inspirars was the name he was given. He had been personally transported from Paradise to the Temple Ship under the Praetorian Guard, and fortunately precautions had been taken to limit what he could remember and see. Quisilia had blinded him telepathically, and guided him forward. His eyes were not required, only his mind and voice – and by extension, that of the Bringer.

Despite this, the Battlemaster was unsure of allowing such an individual here. This meeting should have been conducted somewhere…else. The Imperator had chosen the Temple Ship because it was under his inherent control – supposedly. That was not good enough when it came to the Bringer.

But it was done, and it was time to begin.

“Cogitian,” the Imperator looked to the Archivist. “I do not suppose you are aware of any group or organization which matches the description of the soldiers encountered?”

“It is difficult to determine at this juncture,” Cogitian said slowly. “I have only just begun searching through the vast libraries, though preliminary CODEX assisted association does not return anything concrete. We certainly did not encounter such a group in the Empire, nor were we
“I can confirm that not once in my own operations did I hear about something like this,” Quisilia added, flipping a blade in his hand. “There are a number of very unique and memorable factors about these…individuals. The cold, the portals, the armor, this would not have been forgotten—someone would have made a note somewhere.”

“Unless they acted differently,” the Battlemaster pointed out. “They were as advanced or more so than us and ADVENT. It would have taken effort, but against a less-advanced or prepared city, they could have succeeded.”

“There would have been snow left behind,” Cogitian dismissed. “And a city vanishing would leave some record, unless a civilization was simultaneously vanished.”

“We assume that the snow is important,” the Battlemaster said. “They may not require it at all.”

“Perhaps,” the Imperator spoke again. “But Patricia fought the Agent of T’Leth Lavallic ir Nara—and what she utilized was the same as this faction—and she wore the same armor. We did not recognize it at the time, but XCOM has a connection to this faction.”

“A contentious one then,” the Battlemaster grunted. “Which assumes XCOM was aware at all. Considering they were fighting them, I would question how much they knew.”

“Indeed, more questions,” the Imperator looked to Regisora. “Are they Sovereign?”

There was a brief moment of silence. “Unsure,” she finally said. “Throughout the cycles there has been no major power who has used such armies. Yet there are…incidents. Flashpoints with no logical reason or motive behind them. Individuals vanish or cities are beset by blizzards. There are stories of skeletal warriors or men in black armor. Legends, mostly. Myths of old cultures. But they are never…witnessed.”

A pause. “Until now, it seems. If there is a Sovereign behind them, they are very subtle and have an agenda that cannot be determined now.”

“Allow me, Imperator,” Inspirars lifted a hand. “I can answer your questions.”

“Then speak,” the Battlemaster demanded flatly.

“Patience, Battlemaster,” he said with a cool disdain. “There is a story to be told. The ones who you refer to are known by a number of names. The Gestalt and Ascended call them Those Who Walk Beyond the Veil, others call them the Spectres, but they are believed to have been aliens born from the realm of the Aen Elle.”

His eyes unfocused, he continued speaking. “Their agenda is unknown, and there is no Sovereign behind them. They are believed to exist beyond our reality, thus why they are seen as ghosts and specters. Beings who should not belong. They want to keep themselves shrouded in secrecy, and do not leave behind survivors to their interventions.”

The Caretaker shook his head. “Archivist Cogitian is correct that there are many such references in legends and tales billions of years old. Primitive, but few trust the wisdom of the ancient texts; texts which refer to the skeletal riders on undead animals who come and steal children, leaving ice and frost in their wake. Some are superstitious, for certain, but there is a grain of truth to such tales.”

He motioned idly. “Others associate winter and cold with dread, and document that when blizzards
and storms manifested, some days they would realize their neighbors or family members had vanished. The references are subtle, but they can indicate a pattern, especially if stretched over the course of thousands of millennia. Who they truly are, as well as their agenda, is unknown, as is what they are capable of – but they are as old as the Sovereign Ones. Perhaps even older.”

“How curious,” Quisilia noted. “Such a thorough answer. The Bringer has been aware of these people before now?”

“And failed to mention it,” the Battlemaster finished. “If this is such an old faction, how have no others learned of them?”

“You assume that none have learned, Battlemaster. Who are you to speak for a universe?” Inspirars wrinkled his nose. “But to your point that He knew…there were many, many stories, all of which none of you or your Collective expressed interest in learning. Yet they are a group so elusive that legends and stories were all we were aware of – this is the first instance where He has seen them through His vessels. Yet make no mistake – the lesser Sovereigns and the Apostate remain the true threat.”

_You speak of them walking through realities. Explain, puppet._

The Overmind projected his own interjection for the first time.

“A misunderstanding or myth, more likely than not,” Inspirars answered. “However, they do not exist or are based in this galaxy, or perhaps many, many others. It is possible they inhabit another universe entirely. Yet they have a means of walking between them as easily as psions can step through portals. Yet reality is perhaps not as certain or stable as we would prefer it to be.” He lifted a hand and purple energy flowed around it. “Psionics shapes our reality, but has something shaped psionics?”

A ghost of a smile flickered on his face. “On that, we do not know. Perhaps there is a higher plane we have yet to tap into.”

“And how are we certain what you speak is true?” The Battlemaster demanded. “What proof do you have besides the absorbed minds?”

“Your ignorant dismissal does you little credit, Battlemaster,” Inspirars dismissed, looking to the Imperator. “Your master knows the truth of what I speak. He can sense it. I speak with a thousand voices, from the minds of a trillion ascended. Cultures and peoples who existed long before the Ethereals were conceived in the mind of a Sovereign. Dismiss their words at your own peril, Battlemaster. Be thankful your master is wiser.”

The Human was deceitful and slimy in his words, but they were clearly intended to provoke a response and curry favor with the Imperator. The Battlemaster withheld a response, though certainly considered executing the puppet after the meeting was concluded. It was a vessel, and ultimately unimportant.

“While I do not doubt the Bringer is aware of something he believes to be a threat, it is not verifiable proof,” the Imperator stated. “It is circumstantially acceptable, but I will rely on Cogitian to confirm such theories.”

“And I would be more than pleased to provide him with the materials or opportunity to speak to the Gestalt,” Inspirars said. “The wisdom of the Mind Cosmos is open for the Collective. We only seek to provide at this time.”
“Tempting, but touching the minds is a step too far,” Cogitian said. “However, I will accept physical materials you can provide – or places where I can conduct my own research.”

Inspirars nodded. “Acceptable.”

“No matter their origins, the fact remains that they are involved now,” the Imperator said. “Interestingly, their motivations seem clearer than their origins. They were interested in the female T’Leth Agent. Fiona. They were after her. As they did not acquire her, they will likely return.”

“She is likely connected to them,” Inspirars said. “A fugitive, perhaps. Or a defector, like ir Nara appears to be. Though beyond that, we cannot say. There is no insight into their motivations, culture, or internal dynamics.”

“Perhaps,” the Imperator nodded. “Cogitian, Regisora, determine what you can of these aliens. Battlemaster, Guardians, adjust your strategy accordingly in the event they return. Quisilia, return Inspirars to Paradise Station. Return to your duties, I will determine where we are to go next – and how we shall respond to this intervention.”

*High Domain of the Sage-King – Sphere of the Throne*

5/29/2017 – 10:11 A.M.

There had been few times where the General had stepped foot into the High Domain itself. It was normally a place where only the Lords convened, headed by the Sage-King himself. It was a place of grandeur and extravagance, a pinnacle of the blending of beauty, architecture, and power.

Most would describe it as a palace without equal, with towers higher than any city skyscraper, and a peak which pushed into the heavens itself. It almost seemed to sparkle in the moonlight, and the white-silver of the walls gleamed brightly in the day. It was a symbol of the power of the Throne; invincible, ever-reaching, and eternal.

But from what he had seen now that he walked the walls, the High Domain was a fortress without equal. This was not the domain of the Riders, and he did not expect as much sophistication from those whose duties remained simply guarding the Throne World. Today he was proven wrong.

The advancements the Riders had brought from their many missions throughout the Spheres had not gone to waste, and there was clearly much work happening that neither he nor his Lord was aware of. The towers of transparent glass were in reality made out of enhanced diamond, and even the weakest element in the foundation was made to be ten times stronger than the nearest known equivalent.

Each piece of architecture which held a design or curious architectural concept hid a weapon or defense system of some kind. Only his trained eye could even spot the telltale signs of modification, and such modifications were *everywhere* in the High Domain. The higher they got to the peak, the tighter the defenses got.

The open hallways for the citizens were replaced with militarized checkpoints with Machine Intelligence-commanded machines and defense systems that tracked each individual who walked the floors. The High Domain Guard stood as silent watchers in armor of gold and silver, made with such craftsmanship and beauty that his own battle armor seemed faded in comparison.

It all ultimately paled to standing before the Sage-King himself.
He had heard it described what it was like to be in his presence, and such stories did not do it justice. It took all of his training to not fall under the commanding spell of the Sage-King, and even still his presence warped the reality around them. He heard whispers and sounds he could not describe, and smells which were alien in origin.

The air would visibly waver around him, and those who were unprotected might find themselves lost and lose themselves in the Spheres, as they lacked an anchor to reality. Bewildered or mishappened creatures and aliens sometimes found their ways through the artificial Conjunction the Sage-King commanded.

They were sent away none the wiser.

Reality to the Sage-King was whatever he wanted it to be.

He existed as a tear in the carefully embroidered fabric of reality.

To be summoned before him was either the highest of honors, or spelled alarm.

The General feared it was the latter.

He stood before a towering window, one which looked over the Throne World. He could see for thousands of miles when the weather machines cleared the skies of clouds, and the rest of the time it resembled a layer of white or grey. Today bright light shone through. The Sage-King was not a man of stature, barely taller than a standard Human, and easily shorter than both of them.

Neither took any comfort in that. His presence dwarfed the irrelevant physical attributes.

He wore immaculate, though ultimately simple robes of white and silver. His skin was pale, and one might mistake him for malnourished from the thinness of his arms and hands. The bone could be clearly seen, yet it would be a mistake to think the Sage-King as weaker because of such.

His hair was silver, and cleanly fell to his shoulders. It framed a face which was old, like the rest of his body, and described as still. No crown or jewelry adorned his body, as such were unneeded. The Sage-King often did not speak, his mind was said to be in many places at once. It was something the General had always wondered about, but ultimately dismissed.

When the Sage-King turned to them after what felt like an eternity, he understood.

The eyes of the Sage-King glowed a faint green; a transposed hologram over the eyeballs, of which the intensity fluctuated each second. The General could see the eyeballs underneath twitch and flicker as if under a seizure. But there was no mistaking the power and skill of what the Sage-King did naturally.

He and his Lord fell to one knee on instinct.

Long seconds passed which turned to minutes. “[Rise.]”

The voice was unfathomably old. It rasped like dry leaves, yet had power within those words. But the voice was dry, it lacked a quality of the well-spoken, as if it was not something the Sage-King did often.

Perhaps he did not.

Both of them rose.
“[We are known to a sphere now.]”

His Lord swallowed. “[Known to more now, yes, Excellency.]”

A long minute passed. “[Why did you risk the retribution of the Sovereign Ones.]”

“[An opportunity arose,]” the Lord answered. “[You are aware of where she is residing. She was vulnerable, and we determined we could act and retrieve her, ensuring she would not lead others here.]”

The Sage-King did not move, nor adjust his voice. “[You failed. Again.]”

“[Yes, your Excellency.]”

More long seconds. “[Disappointing. Your charge is clear. Your service has done you credit; your Generals have performed well. But your obsession remains your weakness. It is your blind spot.]”

“[She remains a threat, your Excellency.]” his Lord almost stammered out. “[We cannot let her move without repercussion. We cannot produce the next generation without her, or it will take millennia to produce another even a fraction as skilled as she is. For the good of the Throne, she must be returned.]”

The Sage-King stared forward, glowing eyes seeing past them. The air flashed and a bird of some kind materialized. Almost immediately it fell under the Sage-King’s power, and flew to perch on the bony finger of the man. The Sage-King ever so slightly inclined his head, and the bird flew up, and vanished in a green-white flash.

“[Threat?]”

A pause.

“[No. She is merely a child, fleeing her duty and destiny. She is of my blood – do you believe I do not permit this?]”

“[I…then can she not be forced to return?]”

“[Perhaps I wished to see how far your obsession would take you,]” the Sage-King clasped his hands together. “[I am responsible for those of the Elder Blood. It is not you. It is not your Generals. It is not the Riders. I have known every place she has traveled. I know every sphere she entered. All she knows, I know. She does not know of me, not yet, incomplete as her training was. The moment she poses a threat will be the moment her blood betrays her, and screams to return to the Sphere of Origin from which it was forged. She will not return sooner than when I desire.]”

The glowing green eyes bored into them. “[Return to your duties, and cease your hunt for the Child. I do not wish to contend with a Sovereign One, and your irresponsible actions and reckless intervention pushes her in a dangerous direction. Defy my directive, and I will find another to command the Riders.]”

The General could tell that his Lord did not approve whatsoever – even in the presence of the Sage-King – but there was no defying him. He simply bowed his head. “[Yes, your Excellency.]”

The Sage-King turned away. “[Go. I must take these developments into account. The Sphere of the Sovereign is a vulnerability due to your actions. Expect to hear my command shortly.]”

***
Saudia swirled the glass of water in her hand. If there was ever a time for a drink, the circumstances warranted it. Unfortunately, she had a job to do, and she needed a clear head. Answers were elusive, but there were plenty of things which were not. She looked to her XCOM counterpart. “So. I don’t suppose you have an explanation for exactly what happened?”

The Commander seemed calm, and his face was mostly neutral. His prosthetic hand rested on the desk opposite her, with the other resting on the armrest. “To be determined. T’Leth has never seen them before. The working theory is that they are Sovereign-backed.”

Which was the most obvious answer, but it seemed almost…convenient. Saudia took a sip of her water. “Is there anything to back this up, or is it speculation?”

“Speculation,” the Commander confirmed. “Though if it’s not a Sovereign – then who exactly would it be?”

“Mmm.” And that was the sticking point. While the possibility that there was a third force in the galaxy which wasn’t these Synthesized could exist, T’Leth and the Commander had made it clear that in the end, it was only the Sovereigns and Synthesized who really held the power.

“How many Sovereigns are in this galaxy?” She asked.

“Pardon?”

“Sovereigns. How many,” she gestured aimlessly. “If these are Sovereign-backed, then the number of suspects can’t be that high. Does he even have a suspect list? Any Sovereigns who use tactics like this – and who would intervene here?”

“And that is what is puzzling,” the Commander said. “These do not fit the patterns of previous Sovereign Ones.”

Saudia frowned. “And you are completely discounting the possibility of a third party?”

“No, but I find it unlikely, as does T’Leth,” the Commander answered neutrally. “The facts are this – they were just as advanced as we are, if not more. They came here specifically targeting one of T’Leth’s Agents, and they use psionics of a level I have only seen a T’Leth Agent handle. No matter who they are, they have a vendetta against T’Leth. Knowing what I do about T’Leth, I find it unlikely that there is a non-Sovereign who would openly target him like this.”

“The only positive is that they are equally against the Collective,” Saudia muttered. “I dislike the fact that one of their warriors was able to fight the Battlemaster to a standstill. This faction is not irrelevant. A shame they are against us, else we could use them against the Collective.”

“The other good news is that they did not seem to be prepared for a prolonged fight,” the Commander pointed out. “Although we might assume the Imperator stepping foot on Earth had something to do with their retreat.”

“Indeed.” That was another point of contention. It was truthfully a terrifying escalation that would have overrode any conversation in the aftermath of the battle were it not for the utterly bizarre faction emerging, and turning New York into an ice cube. But it was clear that there were no immediate answers on the unknown invaders, so she moved to that topic.
“New York was escalation enough,” she said, setting her glass down and looking at the Commander directly. “The Imperator himself appearing is dangerous. That cannot be tolerated.”

“Agreed.”

“You have an idea of a response?”

“I assume you do as well.”

“You first.”

“T’Leth has said he intends to send a message of his own,” the Commander’s finger tapped idly on the table. “What that is, I do not know, but I expect it will be memorable. In the meantime, I consider the SAS a direct target for retribution. I have been preparing an operation to severely damage them for some time. I will put that into motion soon.”

“How coincidental,” Saudia gave a thin smile. “I was thinking something similar. Later I will meet with ADVENT High Command and we will determine the first target of the Atomic Lance, and begin Operation Scipio. ADVENT Intelligence believes that there will be a number of new additions to the SAS soon. The dominos are falling into place. The Imperator arriving may be the final push.”

“We’ve heard similar,” the Commander nodded. “They are on our list.”

“List of what?”

He smiled. “Targets.”

It was always a pleasure to work with someone who was unafraid to do what was necessary or get their hands dirty. Dangerous the Commander might be, but he was one of Humanity’s greatest assets. No wonder so many had wanted him dead; alive he posed an existential threat to their comfortable, naïve lives.

“Excellent,” she laced her fingers together. “I believe that a joint operation would be...beneficial. Perhaps we can include T’Leth. We are all on the same page right now. We are all in agreement that the Collective must be shown that if they act like this, there will be consequences.”

“Assuredly,” the Commander nodded. “Scipio will be fast, but hard. XCOM stands ready to assist to whatever capacity we can. I believe T’Leth will be more than ready to commit his own assets.”

“Good.” Saudia returned the nod. “Then we shouldn’t waste any time. Hopefully after this, the Collective backs off their more egregious operations – and if they don’t, more of their allies will burn.”

“That they will,” the Commander pulled his hand back. “Or they will feel the wrath of an awakened Sovereign.”

***

The Praesidium, XCOM Intelligence Control – Classified Location

6/1/2017 – 9:29 A.M.

The Commander set the tablet down, face grim.

“This is confirmed?”
Zhang gave a single nod. A’Darrah did the same with half of his frame. Creed’s arms were crossed as he appraised the Andromedon. “This comes straight from Union Stuirah,” A’Darrah reported. “If there are any who are aware of the fleet movements of their sister Union, it would be them.”

“And what are the odds that it’s just a standard fleet movement?” Creed asked.

A’Darrah simply appraised him through the mask. “Union Reinarm does not simply move one of their most powerful superweapons without reason. It means one of two things – the Federation, or factions of it, are going to pre-emptively strike the Hive Commanders. The second, - and more likely reason - is that it is coming to Earth.”

“And since we do not have a fleet,” the Commander finished, eyes unfocused as he thought. “That means it is a ground target.”

“A ground target the Collective is not interested in capturing,” Zhang amended.

“Yes,” A’Darrah agreed. “Whatever is targeted will be annihilated. Completely.”

“Explain this weapon,” Creed demanded, fixing the Andromedon with a hard stare. “We can prepare for it, yes?”

“No.”

“Sorry?”

“No, you lack any sort of capability to defend against the Reinarm Cannon,” A’Darrah clarified bluntly. “It was designed to destroy capital ships and have no counter. The fact that it is not normally used against ground targets is irrelevant. It took centuries to perfect, with numerous experimentation deaths and collateral damage. But they completed the weapon, and it remains as one of our primary weapons against the Hiveships – and one of the few effective weapons against the Kett’Tasira. There are reasons why such action would even be considered by the Unions – the Reinarm Cannon is capable of turning Hiveships into radioactive slag.”

The Commander circled his hand. “Go on. I’ve read the overview, though I don’t think Creed has.”

“Andromedons have not followed the same path Humans have in regards to nuclear technology and weaponry,” A’Darrah explained. “The primary use was for energy. Bombs and similar weapons were developed, but there was a ceiling on effectiveness, and most unions preferred using projectile, laser, and plasma weapons and missiles. Nuclear weapons were expensive. Powerful, but not necessarily economical, and useless on ground raids unless complete annihilation was desired.”

The Andromedon lumbered to the side a few steps. “Reinarm did not believe the potential of nuclear weaponry had been reached. So they, together with several smaller unions, began exploring other applications. The result was a cannon which was capable of containing what your species has designated as corium – more commonly known as nuclear lava - and directing it at targets.”

Creed whistled. “In a…missile?”

“No. In a stream,” A’Darrah adjusted a gear on his suit, and a projection of the weapon in question was projected around their small circle. “A stream of superheated radioactive lava. Impossible to stop. Missiles, lasers, armor, nanites; nothing was capable of stopping the stream. Of limited use against fighters, drones, and small starships – but against larger vessels which cannot move quickly, it is death.”
All of them stood stone-faced at the image.

“That was the final prototype,” A’Darrah continued a few seconds later. “Earlier ones held more simple radioactive materials – it can still hold them, in fact. Plutonium. Uranium. Streams of boiling metals laced with molten elerium if they believe it is necessary. When Reinarm wished to deny a planet, they would use the Reinarm Cannons to poison strategic areas of the planet. Mines. Data centers. Bunkers. It does not matter what defenses existed, the molten metal would melt and destroy everything. The radiation would deny everything else unprotected.”

“And one of them is coming here,” Zhang finished. “And if our intel is accurate – it will target Busan.”

“Would the cannon even be effective?” Creed asked, rubbing his chin. “If it’s narrow, that isn’t necessarily the best for destroying a city…”

“You presume the cannon would fire once,” A’Darrah stated. “A false assumption. When the defenses are destroyed, they will likely shoot down radiation pods to kill anything that survives. This is a weapon which will be used to its full potential. Do not expect it to be ill-suited to this task.”

“I suppose if they cannot take it, they will destroy it,” the Commander said grimly. “They suffer defeat after defeat there. They do not care about the means of victory at this point.”

He paused as a thought struck him. “Or perhaps we are thinking about this the wrong way. We assume the weapon is coming to target us.”

“Based on the intel, it is,” Zhang noted.

“I’m aware,” the Commander said slowly, looking at the image. “And I have no doubt it will be used against Busan. But also consider the weapon. It is frankly overkill in every sense of the word. Patricia is likely behind this decision, and if she truly wanted to destroy Busan, she could do it personally or with a fleet of cleanser ships. This provides cover for the reason she is actually bringing this weapon here.”

“Enlighten us, Commander,” A’Darrah said, a note of confusion in his voice.

But Creed seemed to get it before they did, eyes widened as answered. “T’Leth.”

The Commander nodded. “Precisely.”

A’Darrah looked between the both of them. “She intends to use it against the Sovereign One?”

“Oh have it ready just in case,” the Commander said. “Based on what you said, this weapon is powerful enough to kill a Sovereign One. Alone it wouldn’t stand a chance against T’Leth. But if, however, he was occupied with something else, and T’Leth was caught off guard – it could hurt or kill him.”

“Or so she thinks,” Creed added.

“If T’Leth was hit with this cannon, I suspect not even he could live,” the Commander said bluntly. “Not that he would admit to that. But it being used against Busan is pretext for justifying it around Earth. I would not be surprised if that was not the last of its kind that appears. She knows the war cannot be won without removing T’Leth. This is her preparing for it.”

“Regardless of her ultimate intentions, if this weapon is even half as effective, then we don’t have
 much time,” Creed stated. “We need to evacuate Busan – or at least make preparations for it. Most
of the civilians have been gone for some time, but the military families nearby...” he shook his
head, looking to A’Darrah. “How soon will it arrive?”

“It’s moving to an area of space nowhere close to Earth, based on reports to Union Stuirah,”
A’Darrah answered. “It is likely that it will be psionically teleported. Probably by Patricia Trask or
even the Imperator. It will arrive there in one week. I would prepare for it as soon as possible.”

Zhang and the Commander exchanged a grim look. Both of them knew what was going to be
needed. “We need to prepare to make an attempt to damage or destroy the ship,” the Commander
said in a heavy voice. “But ADVENT cannot know about it.”

Creed blinked incredulously. “Do you know how many people are living in Busan? How many are
stationed there?”

“Yes.”

“T’Leth!” Creed seized upon the ray of hope. “Conventional defenses may fail, but T’Leth could
protect the city. Even Aegis could probably-“

“That isn’t the issue,” Zhang interrupted. “We are not supposed to know this weapon truly exists.
Let alone that it is being used against us soon. If we acted to defend Busan – even if we made it
look like a coincidence – the Collective would wonder if we had gotten lucky – or if we had inside
information.”

“How many know about this movement?” The Commander asked A’Darrah.

“Only the leadership of Unions Reinarm and Stuirah.” A pause. “The Collective is keeping these
movements extremely quiet. It is only due to Stuirah’s relationship with Reinarm that they know at
all. It would not take long for questions to be asked – at least this first time. On subsequent uses
you would now ‘know’ the capabilities, and could properly defend.”

“Still…” Creed’s face was ashen. “We’re just going to let a city be destroyed? One of our most
enduring symbols?”

The Commander pursed his lips. “We have no real choice. If we act, we save a city but likely
expose that there are elements in the Unions who are in contact with, if not allied to us. Atlantis is
not ready. No one is ready. Until we are…Busan will be a sacrifice.”

“What about ADVENT?” Creed asked. “Saudia should at least know.”

“No, no one should outside the Internal Council,” the Commander shook his head. “We cannot
give a hint that we know more than we should. Not when the stakes are this high. I do not see
another way. I wish there was.”

Creed took a breath. “I wonder if she intended this to function as a trap.”

“Likely.” A pause. “An intelligent attempt, if so.”

“If we let this go, it will be the start,” Creed warned. “She’ll see it worked, and use it to threaten
the rest of the world. If she brings another one, or three, even Aegis and T’Leth will be hard-
pressed to stop them. She’s scared now. She has to be, otherwise she wouldn’t be thinking of using
these kind of weapons. She’s accepted that it’s better to destroy Earth and rebuild than claim it as-
is.”
“Or as the Commander says, she is preparing for T’Leth,” A’Darrah noted. “I have my doubts that this woman experiences fear in the conventional sense. Assuming she does is a questionable judgement.”

“Let me be clear,” the Commander added, lifting his prosthetic hand. “This will be the only time she will touch Earth with this weapon. Beyond this point I will direct T’Leth to rip them out of the sky.”

There was a pregnant pause. “Then what was the point of this information if we can’t even use it?” Creed wondered aloud.

“So we can be prepared,” the Commander said. “And to give T’Leth a warning about her potential strategy. We knew the war was going to ramp up, and I expect it to get worse from here. Consider it motivation. This is what we are fighting against – and that we are running on the clock. Each escalation is one step closer to the Imperator himself coming to finish the job.”

The Commander fixed Creed with a firm stare. “And I can promise that he will be harder to handle than these weapons. Let’s move this war away from Earth before that happens.”

***

Yang’s Quarters, Mars Collective Base – Mars

5/30/2017 – 10:18 A.M.

Yang sat quietly on her bed, thinking. The Battlemaster was equally quiet once he had finished. After a few moments more, she spoke. “Do you think he was telling the truth?”

“A version of the truth,” the Battlemaster answered. She could tell he was not happy to know the Bringer was involved – and now appeared to be the primary source for learning who this faction was. “I have little doubt the Bringer intends to exploit this; make himself indispensable. There is little that can be done to stop it; the Imperator demands answers, and will seek to utilize him.”

“I mean…” Yang scowled. “Ignoring the Bringer may not be the best idea. Like it or not…”

“I do not take issue with interrogating the Bringer for information,” the Battlemaster clarified, lifting one hand. “I take issue with allowing him and his puppets to actively assist in the process. Even if the Bringer tells the truth – something I highly doubt - I know that he will share it on his own terms. The Imperator continually fails to understand this, or simply does not care. It is not on our side.”

“Obviously.” Yang rubbed her eyes. “What do you think of this…faction?”

To her slight surprise, she felt a tug of concern from him. He did not answer for a few moments. “He knew what I was. The warrior knew about the Empire. He even seemed to know me specifically. That is troubling.”

“In what way? Specifically?”

“That they are still here,” the Battlemaster answered after a few moments. “This faction knew where to come, and they were prepared. This warrior knew he would fight me. He was skilled – as skilled as I am. It goes beyond historical knowledge, they knew about our strength now. There are spies from elsewhere. We are compromised by something we do not understand.”

It initially sounded a bit too conspiratorial, but in conjunction with the evidence she’d seen and
some of what the Bringer implied – assuming he was telling the truth – it wasn’t unreasonable. Though still, that raised more questions than answers. Based on what the Battlemaster had said, it had seemed like they weren’t even here for the Collective or ADVENT, both just…happened to be in the way.

“You fought with the Agent of T’Leth in Paradise,” the Battlemaster said. “Recall what it was like. You had explained such before, but this new context could be illuminating.”

Yang thought back. It wasn’t hard. For better or worse, each trip to Paradise was seared into her mind. But the Battlemaster raised a very good point that she, in the chaos and aftermath, hadn’t considered – that she had a semi-connection with the figure this faction was interested in to some extent.

“She is a teleporter,” she began. “A very good one. When the Umbra almost killed us, she was able to fight her off. Although…” she thought more. “There was something off about her. Her psionics were…a different color. One I hadn’t seen before. It was odd, but I didn’t think as much about it at the time.”

“Agents have blue-tinged psionics,” the Battlemaster recalled. “A Sovereign effect.”

“But it wasn’t that,” Yang shook her head. “It was almost like a pale green. Neon. And teleporting was the only thing I saw her do. Not worth much, but that was what she did. And she specifically mentioned being trained by someone, and said to the Umbra, quote: ‘He was better than you’. I thought it meant the Chronicler or another Agent, but now I’m not sure.”

“Curious,” the Battlemaster said in a strange voice. “She is an anomaly to some extent. It would be worth determining how and why.”

A bolt surged through Yang as she recalled something else very important, which forced her to abruptly straighten. “He knew!”

The Battlemaster reacted instantly, the alarm through the bond almost making him grab his sword before he saw there wasn’t any danger – just surprise. “What?”

“I think the Bringer knows who she is,” Yang breathed. “Or at least what she is. When we were in Paradise the Bringer talked to me. About her. I thought he was trying to divide us – he probably was – but he said some things that implied he knew something.”

“Exactly what were they?”

She closed her eyes as she quoted from memory. “‘The plan becomes clear. A useful tool she is. All in the name of protection, all in an effort to end the ceaseless hunt.’” Her fists clenched. “I asked her what it meant. She was deflective. The Bringer then asked ‘Would you risk what you have sought to avoid’?”

The Battlemaster stood still. Not anger, but tired frustration echoed through their bond. Yang supposed there was the chance that the Bringer being vague to unbalance someone was possible…but it would have been a pretty massive coincidence if that were the case. “Yet another instance of him knowing something and refusing to share it. If he knew who she was…”

“Great, another Bringer lie,” Yang sighed. “And what exactly do we do with it? Tell the Imperator?”

“Yes.”
“It won’t do anything,” Yang shrugged pushing herself off of the bed. “It’s my word against his. The Imperator – or anyone else - can’t read my mind to verify, and only you vouch for me – and both of us are ‘biased’ against the Bringer. It will not change anything.”

“Likely, but if he is to dismiss the word of my Harbinger, then let him do so openly,” the Battlemaster stated. “He may not trust you or me, but the effort shall be made. If he rejects this, then I will simply add it to the list of justifications for his removal.”

Yang knew the room was secure, and she felt some pride in the Battlemaster willing to vouch for her despite the Imperator’s likely rejection, but it still seemed absurdly risky to talk about treason outside of the Prism. It was already nerve-wracking enough there, let alone in a base where others could be listening. “Yeah, I-“

Both of them sensed it. A shift somewhere. Something was happening. A voice sounded over the loudspeaker. “Battlemaster, report to Central Command.”

The voice was dull, almost unnaturally deep. She couldn’t tell who it was, but it didn’t seem to be the Base Commander or the Zar’Chon, who wasn’t even on the planet. The Battlemaster gripped his sword, and Yang grabbed her own, even though she wasn’t armored. They walked out, weapons ready.

Immediately in the hallway they saw the bizarre sight. There were multiple base staff, all Vitakara, who were staring blankly ahead on the walls, weapons or blunt objects in one hand if they had them. In their remaining hand was a writing utensil or sharp object, which they were using to carve or write a glyph into the walls. Yang didn’t implicitly know what such meant – but she knew the style.

That of the Sovereign Ones.

They stopped the moment both of them stepped out, and stared at them silently. A sinking feeling filled Yang as she realized what was happening, though was oddly calm considering the situation. This must be T’Leth. There was no one else who could be capable of this. She wasn’t afraid – this wasn’t a military base so much as an outpost – but she did not want to have to kill anyone here.

She waited for them to attack, but they simply remained, staring at them. Then they raised their weapons if they had them, or the tools in their hand.

But they did not point them at the duo. Instead they pointed them at themselves.

Move forward. Attack only if they do.

Both moved forward cautiously, with the Battlemaster appraising them warily. More mind-controlled personnel were within the hallways, doing the same thing. Their weapons did not waver and they stared statue-like, unnaturally still, and Yang was afraid that even if they didn’t attack, then they would eventually tire and a finger or hand could slip, killing them.

Both of them moved quicker. T’Leth clearly wanted to talk for now – not fight.

Unless it was a trap.

Both of them didn’t put it past the Sovereign to attempt such.

The doors slid open to reveal the command center, and Yang saw what awaited within. Many of the personnel stood in formation, awaiting them. On their foreheads or helmets was another Sovereign glyph crudely drawn, carved, or painted on with whatever writing utensils or objects
were around. The smell of blood oddly permeated the room.

Near the center there were several Vitakara, who appeared to have been dumping packs of stored blood onto the floor, and using the yellow ichor, to paint a larger glyph on the ground. The base commander, a Vitakarian appraised them with an unnatural stare; no fear or concern. The eyes of a puppet.

“You know why I am here.”

Yang didn’t, actually, but the Battlemaster answered a few seconds later. “The Imperator.”

“Perceptive. I have tolerated your kind setting foot on Earth. I have tolerated your war without intervention. But I can only be pushed so far before responding in kind.”

“The Imperator did nothing,” the Battlemaster said. “The intruders are our enemy as well as yours.”

“I will deal with those who trespass on worlds under my protection.” The air rumbled from the power of the voice which should not have come from a Vitakarian. “The Imperator is a trespasser and an enemy. I care little for his reasons or justifications. Know that each time you step on Earth, you step into the realm of a Sovereign One. You step into my realm. And I shall tolerate such intrusions by your master no longer.”

The air rippled with power. “For such actions, there will be retribution. Consider this a warning. Should such a warning be ignored, I will destroy Vitakar. I will destroy Desolan. I will raze your worlds to ash and end your dreams of a new Ethereal Empire. I will render you helpless before the Sovereigns you hate and fear.”

The puppeted Vitakarian’s lips morphed into a mockery of a smile. “Now understand the Powers you interfere with. Understand that you are beneath me, now and forever. Understand that I am Sovereign, and that you are nothing.”

At that, the eyes of the Vitakara seemed to fade ever so slightly, and he fell to the ground, followed by everyone else. The tension and power in the air faded, and Yang immediately rushed to the closest alien. They were still alive, to her surprise – she didn’t think T’Leth would spare them – but they were just unconscious.

Nice of him.

The Battlemaster hadn’t moved, instead looking at the blood-glyph on the floor. “I didn’t know he could reach this far,” Yang said quietly. “That’s…concerning.”

“Indeed,” the Battlemaster said slowly, looking down to her. “Come. We need to ensure that there were no injuries or other surprises – and when they awaken, ensure that they were not compromised further.”

***

Nulorian Outpost – Unknown Location

6/4/2017 – 11:01 A.M.

The Nulorian were preparing to go to war.

Nartha couldn’t remember seeing this many Nulorian in one place – at least not all of them
preparing for conflict. As opposed to a weakened guerilla force like the Vitakara believed, the Nulorian were equipped with surprisingly strong armor, weapons, and each and every one was a hardened killer.

He could see it in each of their eyes – or faces for those who had no pupils. The attack by the Zararch had galvanized them further, and it was time for proper retribution. None of them particularly cared who would die today – only that the Vitakara were hurt and the day would haunt the survivors the rest of their lives. It was more than a mission to hurt the Collective – it was an act of revenge.

Not for the first time, he wondered what would happen, should they win this war.

The Nulorian couldn’t reintegrate into any ordinary society. They were too poisoned by hatred for the average citizen they saw as worse than traitors – collaborators. Enablers. Abettors. It didn’t matter if they’d not had a choice, nor if they were propagandized, only that they supported the Aui’Vitakar– and Collective - by proxy.

As they saw it, if they had been able to break the hold of information the Collective held over them, everyone else should have too.

Nartha sincerely hoped this wouldn’t come back to haunt them. The Nulorian were dangerous for multiple reasons – but were also the only ones on Vitakar who could be their allies. He had to trust the Commander would keep Miridian in line, though he had his doubts as to the effectiveness, long-term.

A Miridian-run Vitakar would not necessarily be an improvement. Not when he held his genocidal beliefs for half of the Vitakara races. Much less the even more radical beliefs of the Nulorian rank and file.

If things went ‘well’ today, it would be the start of a genocide. Even if it didn’t, thousands were going to die.

But it was necessary, or so it had been declared.

At least their mission was going to be something worthwhile. The Crypt had actual importance, and the point wasn’t causing terror or piling up Dath’Haram corpses. In this whole operation, Nartha was admittedly interested in what they would find. The Crypt was one of the enduring secrets of the Dath’Haram – hopefully there was something left.

“You’ve got that look,” Shun said, walking over, already in her Titan Armor with a helmet under one arm.

He frowned up at her. “I do not have a ‘look’.”

“Everyone has a ‘look’,” she said, taking a seat next to him. “It just changes meaning person to person.”

“Ah.” He understood that concept. Everyone had different tells and indicators as to what they were feeling and thinking. He must be slipping if there was something she could discern – or it meant she knew him very well. Which...while that was certainly a weakness the Zararch would never have approved of, he found some kind of comfort in that.

“In that case,” he said, looking to her. “What does my ‘look’ mean?”

Sitting next to him in armor, she was actually as tall as him. Propping her chin on a fist and elbow
on a knee, she looked thoughtfully at him. “That something is bothering you. And that it’s not the
mission.”

It wasn’t necessarily the best time for a discussion like this, but at the same time, she wasn’t the
type to get overly rattled or distracted. “Look around,” he nodded to the teams of Nulorian getting
ready. “Is it still like this in XCOM?”

“All the time,” she cocked her head. “We get ready for ops pretty regularly.”

“Not that,” he sighed. “The…reasons. XCOM isn’t fighting for selfish reasons. It’s for a greater
ideal, yes? A greater goal?”

“Oh, yeah,” she nodded. “Protection of Humanity. Can’t say we aren’t ready to kill some aliens,
but it’s what we do. We go in, complete the op, and get out.”

“Right,” he said, remembering his brief time in XCOM. “But it’s not like this for them. This,” he
indicated the Nulorian. “Is revenge. I don’t even know if most of them know why they hate the
Collective, only that they do because everyone around them reinforces it.” He pursed his lips. “I’m
wondering what happens to them when this is all over.”

Shun joined him and watched the Nulorian prepare. Her thoughtful expression faded as the
conundrum realized itself. She let some seconds pass. “Not sure,” she admitted. “I imagine that’s
something the Commander and Miridian figured out. I know the Commander wouldn’t let a bunch
of racist terrorists be reintegrated without a plan.”

“Let’s hope so,” Nartha said. “Otherwise it’s going to be very messy.”

“Let’s focus on winning the war,” she said, putting an arm on his shoulder and giving him a tight
smile. “We can sort out everything else later. Today at least, we have a crypt to raid.”

“Indeed we do,” Sorras said, walking up. The Bladedancer was more armored than Nartha had
ever seen, and he suspected that from the quality, the armor had been scavenged from a dead
Bladedancer. Sorras’s sword was in hand, and his teeth were openly bared – a sign he was in a
good mood. “Are both of you ready?”

“As ready as we can be,” Nartha and Shun stood. “Let’s do this.”

“Agreed,” Sorras’s eyes glinted maliciously. “We’ve got a Crypt to raid, and a forest to burn.”

***

ADVENT High Command – Classified Location

6/2/2017 – 8:02 A.M.

“At attention!”

The entirety of ADVENT High Command, containing all the Legion Generals, Admirals, and
Wing Commanders stood in the auditorium, all broke into salute as Saudia approached the central
table where the presentation was to take place. It was an awe-inspiring sight, to see so much of
Humanities’ best military minds in one place.

This would be a day of history, and she looked forward to the history books reflecting on this day
many years later.
The day which marked the beginning of the end for the Sovereign African States – and a damaging act against the Ethereal Collective.

Saudia took the seat beside the Commander of XCOM, Director Powell, the Chronicler, Vicar General Gerstner, and Chief Stein. Those responsible for the presentation were Commander Christiaens, Helion Weekes, Army-Commander Songhyon, Grand Admiral Kamila Malone, and several other Legion Generals who would be spearheading the operation.

“The Collective has performed multiple escalatory actions in recent weeks,” Commander Christiaens began somberly. “Considering the circumstances, our response has been restrained. However, with the continuous attacks by Patricia Trask, culminating in the attack on New York, with the Imperator himself appearing, we must escalate in response.”

A hologram appeared behind her. “The Collective is doubtless expecting a response. They likely suspect that it will nuclear-oriented considering our signaling from the Chancellor, ADVENT Armed Forces, and the Congress of Nations. What they do not know is where – or if it will be the only such attack. Collective movements indicate that they are preparing for worldwide attacks.”

She paused for a moment. “Over the past few months we have been developing an operation to cripple the Sovereign African States. This is Operation Scipio. This is preceded by Operation Whirlwind which has been consistent for weeks, and has only recently been slowing down. This is not because we are stopping the operation, we are transitioning. Thanks to Operation Whirlwind, we have critical information on SAS defenses, systems, and equipment. With this data we can tailor the operation proper to inflict maximum damage against the SAS.”

The hologram focused in on Africa. “Let me be clear about the goals of Operation Scipio,” Laura stated, looking into the crowd with a firm stare. “It is to inflict as much damage against the SAS as possible. We will not be occupying. We will not be capturing. We are destroying.”

A number of colored dots lit up on SAS territory. “We intend to force the Collective to spend resources, manpower, and time fixing the SAS as opposed to using them against us. More importantly, we intend this to be a message to any who would join the Collective. Stand against us, and we will destroy you.”

She indicated the pinpoints. “SAS territorial infrastructure is improving thanks to Collective engineering, but it is in a transitional period. When we invade, we will leave nothing behind. Every single piece of infrastructure, oil field, food source, shelter, pipeline, and farm will be destroyed or poisoned beyond recovery. We will leave the land a dead wasteland, a visible cost of allying with the alien.”

She raised a hand. “I will also make it clear that this is not an indiscriminate attack. We intend to keep the civilians alive with minimal collateral damage. This is intentional. We need them alive to serve as a resource drain on the Collective. We have a number of methods from driving them from places of residence, including non-lethal chemicals and physical removal. We expect the less-developed areas to have minimal resistance. This is not solely a bombing campaign, and we can afford to be precise in our attacks.”

She picked up a tablet. “ADVENT Intelligence, along with support from XCOM, has helped pinpoint major infrastructure targets, as well as places of interest. While we will raze all applicable territory, we will be prioritizing what to strike first. A singular exception to this policy will be places designated as artifact or historical sites – though these are minimal in the applicable nations. When we have inflicted as much damage as possible, or within acceptable parameters, we will pull back. We do not intend for this to be a protracted campaign. We invade, raze, and leave.”
The hologram focused in on the northern border of the SAS. “The operation will begin with Egyptian, Italian, German, and American Legions mobilizing in Egypt and breaking into several strike forces which will exit at various points of the Sahara. The force composition is primarily going to be armored and mechanized. Infantry will be deployed as needed through established Gateway networks and transports. Normally crossing the Sahara would give the Collective a clue that something is coming. However, we expect there to be large sandstorms which will give our forces cover to surprise them.”

Saudia smiled to herself. The ‘sandstorms’ were something that they had worked out with T’Leth to give their forces cover. T’Leth was capable of using telekinesis to create massive sandstorms in the areas which the ADVENT forces happened to be crossing, which the Collective was unlikely to realize was practically impossible, and shouldn’t happen naturally. That T’Leth had been manifesting smaller sandstorms recently helped mask it further.

It wouldn’t be pleasant to drive through, but it would give them the element of surprise.

“While this operation is taking place, there will be additional attacks against Collective positions,” Laura continued. “XCOM in particular has stated that there are multiple Collective bases they will attack, specifically in the United States, Vietnam, and South America. This will be spearheaded in conjunction with Chief Weekes and ADVENT Special Forces. Thanks to ADVENT Intelligence, we also have the locations of ADVENT POWs, and missions will be taken to free them at the same time.”

She looked to Saudia. “Chancellor, would you like to add the additional component?”

“Yes,” Saudia nodded. “I have authorized the usage of the Atomic Lance against the Nigerian city Lagos. Full radius. Directly targeting the center of government. For now, this will be the only usage of nuclear weapons. It will be launched at the start of Operation Scipio.” There were murmurings behind her, which she expected. This was not a decision to take lightly.

“Together with attacks on Earth, we are also planning an attack beyond it,” Laura said. “The largest shipyard in the Ethereal Collective is Olganar-2, under the control of the Hive Commanders. We want the Collective to be hurt beyond Earth, and targeting their largest shipyard will accomplish this.”

She motioned for a woman sitting nearby to stand. “XCOM is capable of getting us to the planet, and one of their own will provide the means to arrive and return,” Laura said. “Aegis has provided the location, which was corroborated with various Collective defectors and extracted intel from alien captives.”

Of course, this attack was going to rely on the Agents of T’Leth, but the specifics were something the majority of the Generals didn’t need to know. “There is only one group we believe to be capable of accomplishing this mission,” Laura continued, nodding to the woman. “For those who are unaware, this is Command Strategist Kwon Seul-Gi, of the Pantheon, designation ATHENA. She will be responsible for the plan against the shipyard and overall attack.”

“I have reviewed the acquired materials, and the infrastructure has multiple vulnerabilities,” the straight-faced woman said in a clipped voice. “It is not built to withstand high-impact psionics. Nor are there greater threats expected than the overseeing Hive Commander. Our operation will be to cause as much infrastructure damage at critical junctures, and if possible, kill the Hive Commander. As the Collective is not expecting an attack on the shipyard, we estimate only a minimal degree of resistance. Furthermore, with the Collective's attention being focused on responding to the other attacks occurring on Earth, we expect to have an extended operational window.”
Of course, this was assuming that the Ethereals like Quisilia didn’t intervene.

Then again – the Pantheon had been made to combat Ethereals.

As good of a test as any.

“Thank you, ATHENA,” Laura nodded to her, and the woman sat back down. “There is one final component to discuss which will be launched in conjunction with Scipio – Operation Ecnomus. Grand Admiral, you have the floor.”

“Thank you, Commander,” an older woman, and now Grand Admiral of the ADVENT Seafaring Naval Forces, Kamila Malone was one of the longest-serving Admirals in the former United States Navy – as well as one of the only women to achieve such a position. While the naval aspects of the war were more minimal than most conflicts, she had been instrumental in optimizing them as well as could be expected.

And she had a plan to hurt the Collective’s own limited seafaring forces.

“There are a few aspects of the Collective we know when it comes to aquatic combat,” she began, as the hologlobe focused in off the coast of Africa. “Chiefly – that the Collective sees it as a largely unimportant theatre. Their two main forces are the Sar’Manda – who are not participating in the conflict – and the Andromedon Aquatic Forces. The latter are very skilled, very advanced, but highly limited numerically compared to other alien divisions.”

She looked out into the crowd. “They are a weak point in the Collective, numerically. They emerged victorious in Florida, and now believe they are unstoppable. We will exploit this perception. As the Legions move across the Sahara, the largest known fleet since World War II will head towards the coast of the SAS for invasion.”

Images representing the ships appeared on the hologlobe. “We expect the Collective to take notice. We are, in fact, counting on it. They will naturally assemble enough Andromedon Aquatic Forces to, if not crush us, soundly defeat us. On board we will be equipped for a prolonged conflict, with psions, special forces, and the Atlantic Division. However, this is not what we are relying on.”

More dots appeared and began moving towards the expected conflict zone. “We want to lure the Andromedons to engage us. At the same time, the largest known submarine fleet is being assembled as we speak, which will also be traveling to the same location. This includes most of our attack subs from the Pacific and the Atlantic which are quietly joining the main submarine fleet. They will operate at maximum test depth, which we expect to be below effective range of the active Andromedon vehicles – they appear to be avoiding deep diving for unknown reasons – something we will exploit. It works to our advantage, as when they engage the surface fleet, they will engage and outflank the Andromedons.”

The red dots representing the Collective blinked, then vanished. “If it is executed properly, we will not only defeat the Andromedons, but rout them. We will deny them a critical component, forcing them to find replacements or cede the seas to us. The submarine fleets will be staffed with psions to detect potential alien underwater craft, and deal with them.”

What she wasn’t telling them was that T’Leth was also personally ensuring that no one disturbed the submarine fleet. And if necessary – he would intervene directly. It was unlikely that would be necessary, however. Saudia believed the plan was strong enough on its own. “Once the Collective fleet is decimated, we will begin an invasion from the sea,” Kamila finished. “At this point, the operation will be concluded and we will merge with Operation Scipio.”
She nodded back to Laura. “That is our portion, Commander. We are prepared to execute.”

“Each Legion will be appraised of expectations over the next few days.” Laura finished. “It should not need to be said, but we are about to enter into one of the most crucial parts of this conflict. There is no room for error or hesitation. We must perform our absolute best, or the Collective will ensure we do not get another chance.”

She placed a fist over her heart. “Dismissed!”

The Generals, Saudia, and everyone else stood, and returned the salute, before departing to fulfill their part in one of the most important missions in Human history.

***

*The Praesidium, Barracks – Classified Location*

*6/3/2017 – 10:23 A.M.*

It had been a whirlwind the past few days.

No one had any answers after New York, and there was no shortage of questions for what exactly had happened. As far as Kunio had been able to determine, it wasn’t with the Collective (clearly), and the working theory was something related to the Sovereign Ones.

If there were other Sovereigns getting involved, then it was going to get dicey very fast.

Though Kunio also suspected that the Agents knew a lot more than they were saying. Being part of the team to get Fiona – well…they certainly seemed to know what was coming. None of them were talking, and Fiona was still sedated and recovering from the attack. It was so bizarre to see her completely broken like they’d found her.

She’d almost seemed like an unstoppable force. He wouldn’t have imagined she could be stopped by anyone but perhaps the Imperator or another Ethereal. And as it turned out, the people she really had to fear were beings he’d never even heard of before. She obviously knew who they were.

He wasn’t sure she’d tell him when she woke up.

The odd medallion dangled from his hand. XCOM had performed a number of scans on the artifact given to them by another unknown figure – though he seemed to be an ally. Or at least, not someone who was against them. Something about the man was definitely off though. Kunio did not have a good feeling about him.

The medallion was expertly made, there was no question about that. It was small and easily could fit in the palm of his hand. It was dark grey metal throughout with a chain strap. If that was all it was, it wouldn’t be overly remarkable. But it was clearly not made out of ordinary metal.

It was warm to the touch, for one. He distinctly remembered handling it in the freezing city, and it being warm. At the time he’d thought his mind was not working properly, but now it was definitely a naturally warm…artifact. XCOM scans confirmed that it maintained a standard temperature at all times. No deviation. Trying to raise or lower the temperature didn’t work.

It was impossible to tell what it was made out of. XCOM scans had shown titanium, iron, plutonium, and uranium all at the same time. Whatever it was composed of, it was an alloy that even the Collective hadn’t been able to produce. They’d considered durability tests, but since it was supposed to be given to Fiona, it was agreed that they hold off until she saw it.
However, there was another quality to the medallion that had startled him the first time.

It *vibrated*.

XCOM had, of course, run more tests on it to try and figure out the cause. The current consensus was that there was some kind of advanced sensor inside that, when it detected something specific, triggered the vibration. The vibration was almost imperceptible, but when clutching it, it could definitely be felt. If he hadn’t been doing that, he wouldn’t have noticed it.

XCOM didn’t give him any theories as to what the trigger could be – but he’d kept it with him since XCOM had let him hold onto it until she awoke, and it had only vibrated around Fiona, ir Nara, and Crevan.

He wasn’t sure how to feel about that.

Now though, it was time to focus on what was coming next.

XCOM had made it clear there was a major offensive that was going to happen. Operations against the SAS had been planned for some time, but now was the time they were going to execute them. But it was far beyond the SAS. Collective positions around the world were being targeted.

And some beyond it.

“So, if, by some miracle our main teleporter dies,” Sylvia Allais, one of the Shoggoth Handlers said, seated beside him. “Think you can get us back to Earth?”

Kunio closed his eyes briefly. “Perhaps?”

“You don’t sound certain.”

“I can probably get everyone back to Earth,” he said unconvincingly. “But it might be London.”

She raised an eyebrow. “London.”

“I have that place seared into my memory,” he admitted. “First time I accidentally teleported anywhere. Sent Carmelita there too.”

“Huh,” she shrugged. “Always good to have an emergency backup. Works for me, anyway. I just don’t want to be stuck on a station with a lot of very angry aliens wanting to kill us.”

The Shoggoth resting on her lap reached up with a tentacle to pat at her face. Seeing the Shoggoth Handlers walk around with their Lovecraftian octopi like they were cats was a shock at first, but literally no one said anything, and by now he’d accepted the bizarre place he lived in. It didn’t help that the Shoggoth was massive, and easily covered her whole lap.

“I already gave you food,” she chided the Shoggoth.

It trilled.

“Fine, fine,” she reached into a pocket and pulled out a long purple stick.

Oh wait. That wasn’t a stick was it.

He looked away.

He did not need to know exactly what they fed the Shoggoths.
“SAS is rumored to be getting some new members,” she continued as the Shoggoth enjoyed the snack. “Coincidentally, it sounds like XCOM is going to be paying them a visit shortly.”

“Yeah.” That wasn’t surprising to him, and not really unexpected. The Commander was brilliant, but very ruthless. He was also hearing the Commander was to take part in at least one operation – something he would consider unfathomable, but the Commander had apparently done it before. Numerous times, in fact.

He couldn’t help but admire that.

At the same time, he felt there was something wrong with the extermination the Commander was going to bring down on the likely new SAS nations. There was anger involved, sure. A message had to be sent. But this definitely went beyond a military strike. Government, infrastructure, leadership, all sabotages, assassinated, or removed.

Not to mention the…other operations against the SAS.

He couldn’t condone Chryssalid outbreaks, no matter the circumstances.

At least he wasn’t in those operations, and he could at least understand the rationale. It was probably how the Commander had been put in charge. He could authorize those kinds of operations irrespective of moral arguments.

The Shoggoth trilled. A tentacle extended to him.

He just stared at it, unsure of what to do. Sylvia laughed. “He likes you. Go ahead. He doesn’t bite.”

“Alright…” he reached out and…petted? Stroked? Whatever he did, he felt the Shoggoth arm. It wasn’t quite as repulsive as he expected. Apparently satisfied, the Shoggoth pulled the arm back.

“It’s nice you aren’t scared of them,” Sylvia said. “They’re really gentle creatures.”

Kunio thought to some of the footage he’d seen. “Are they, though?”

She patted the head of it. “Well…when they want to be.”

Kunio leaned back. “Were you an octopus trainer before this? You seem to get along well with him.”

“Octopus trainer?” She found that very funny. “I don’t even know if that’s a thing. No no, K9 military unit. France. Worked with German Shepherds mostly. Brilliant animals. I like animals in general.”

Well, that was interesting. “Isn’t that a leap from dogs to…” he indicated the Shoggoth, not finishing the sentence.

“At first, yeah,” she nodded. “But they’re so smart. Even more than dogs. I love how playful they are too. They’re like puppies almost. Curious and energetic! Trust me, when you’ve worked training animals, Shoggoths are almost perfect. They learn quickly, are obedient, and very loyal.”

“Killing aliens is just a bonus,” Kunio joked.

“Pretty much,” she chuckled. “Not that I would ever want a civilian to have one – they’re a bit too dangerous if you don’t know what you’re doing – but for XCOM? I love them.”
A light trill sounded from the Shoggoth. Sylvia petted it gently. “Yes, I love you in particular.”

The exchange was almost sweet.

Almost.

It was still a bit unsettling to see up close. But also fascinating.

Never a dull moment in XCOM.

His buzzer sounded. Sylvia’s too. They both exchanged a look.

Time to get suited up.

They had a space station to raid.

***

The Praesidium, Barracks – Classified Location

6/3/2017 – 1:02 P.M.

The red light blinked.

The Commander decided to not give an introduction this time. “Following the recent attacks by the Collective, Patricia Trask, and the Imperator, XCOM – in conjunction with ADVENT – will be conducting a series of operations against the Ethereal Collective and Sovereign African States.”

He paused briefly. “This is a multi-pronged operation across several theatres. Earth remains the primary one. ADVENT is executing Operation Scipio, their strategy to irrevocably cripple the SAS. If executed properly, it will render the region helpless and a significant drain on the Collective. We are not certain the Collective will do so, and they may not act within our calculus.”

A finger idly tapped on his knee. “XCOM will be performing an attack on what is defined as the Mars Observation Station. We suspect it is the main organizational hub of the Collective and Zararch in particular. Our objective, if possible, is to capture or kill the Zar’Chon if he is present. Alternatively, acquiring any information from the station is acceptable.”

“We are aware that this could trigger another escalation, but we cannot afford to keep our operations confined just to Earth,” he paused briefly. “That will wear us down over time. The Collective has invaded Earth. Strikes against their own critical infrastructure may serve as a deterrent.”

He paused. “Thanks to T’Leth, the Andromedons, and the work of XCOM Intelligence, we have a solid idea of what to expect. We know there are internal Gateways. We know there are likely Special Operators nearby. Reinforcements could include the most dangerous of the Collective. It will not be easy, but we are preparing as best we can.

He glanced to the clock at the side. “I will be taking part in an operation on Earth. Targeting a nation which we have confirmed will announce their allegiance to the Sovereign African States. The DRC has been contemplating joining for some time, and ADVENT diplomats have been unable to sway them. Considering the recent attacks and threat posed by the nearby SAS, it was perhaps inevitable, but unacceptable.”

He leaned forward to look into the camera. “We are reaching a critical stage of the war. There can
be no division or uncertainty. There can be no neutrality or bystanders. When our species is at stake, no one is neutral. You are either for an independent Humanity, or a subjugated one. The DRC and others have chosen the latter.”

The Commander let out a sigh. “It…gives me no pleasure to carry this out, but in this situation, if I am to give the order, I will be the one to condemn the people of a country to chaos. But there is no choice. The DRC and others are aware of the consequences. Perhaps they did not believe them. But they will experience them nonetheless.”

“ADVENT is unaware of the specifics,” he continued. “They only know we are taking actions. ADVENT Intelligence likely suspects our intentions. All that will be publicly known is that the leadership of countries will disappear overnight. The country will fall into chaos. No country or power will take responsibility, but it will be us. XCOM. ADVENT will be able to keep their hands clean, and we deny another ally to the alien.”

With a sigh, he leaned back, wondering how much further he should continue this. “As with some of these other messages, there is a chance I will not return. The Internal Council has, at this point, not even attempted to restrain my direct involvement anymore.” He allowed a smile. “Perhaps they think I can’t be killed anymore. We’ll see if my streak of luck holds out.”

“If you die to a country which has a subpar army by old world standards, maybe you deserve it,” Vahlen said, coming in from the side into the camera frame. “This definitely won’t be the last one.”

“How many of these are you going to interrupt?” He asked dryly, glancing up at her. “Before every big operation?”

She smiled. “Perhaps.”

“Noted,” he shook his head good-naturedly. “For now, that is all. If this goes well, it could shift the war in our favor. If not, then know we did our best. Vigilo Confido.” The light blinked to green as the video file was saved and stored under PROMETHEUS. JULIAN knew what to do with these recordings at this point.

Vahlen stood behind him and put her arms around him, and with a free hand he gripped one of them. “You’re not nervous this time,” he noted with some surprise. “Not planning to knock me out, are you?”

“No, no,” she said. “I don’t want to say I’ve gotten used to it, but at least this mission doesn’t seem as…dangerous. If you were going to the station, I might be feeling differently. But a third-world African country? No…unless there are surprises.”

“I don’t doubt there will be some,” the Commander admitted. “Zhang is certain there are Zararch operating in the country. But I am doubtful of anything beyond that. We shall see.”

“Mmm,” she knelt down and rested her chin on his shoulder. “Do you think the soldiers will follow through?”

“Yes,” he said. “It’s a reason I am going. Why others are as well. This is something that XCOM has to do. For the good of Humanity.”

“Agreed,” she said beside him, releasing a sigh. “It’s only been a few years, but it feels like it’s been going on forever.”

“I know,” he said quietly. “And that feeling won’t stop anytime soon. The war is far from over. But
things have certainly changed.”

“That they have,” she said, standing back up and walking around to face him better. She leaned against the wall. “You know, I’ve been wondering when you’re going to properly ask me.”

He raised an eyebrow. “Ask you what?”

“You do remember our conversation several months ago?” She asked.

“Thank you for narrowing it down,” he grumbled. “Specifically…?”

“If you’re going to marry me,” she reminded gently.

Ah. Now that he certainly did remember. “It was never a question of if, but when,” he reminded her with a smile. “I didn’t even intend to do my pseudo-proposal that night.”

“Well, you did,” she chuckled. “Can’t take it back now.”

“Of course not,” he said. “Was there something that prompted this?”

“Nothing specific,” she said, pulling up a chair and sitting opposite him. “Just general thoughts over the past months. The war isn’t going to end anytime soon, and honestly…there is never going to be a ‘good’ time to do this. With you going on missions – even if they aren’t particularly dangerous like this one – I don’t want to put it off for later. I don’t want that to be a regret.”

He nodded. “Neither do I.”

“Well…” she cocked her head. “Perhaps we should do that sooner than later?”

“Perhaps we should,” he said quietly, standing as the two of them got closer. “Then I will ask you properly this time.” He put his hands into her own. “Will you marry me?”

She looked up into his eyes, and there was nothing but pride and love in them, both of which he felt she was feeling now. He knew she could tell he felt the same way. She leaned up and kissed him. A long one as they stood there for many seconds. Time wasn’t as important in that moment.

It perhaps took a little longer than expected, but she gave him an answer.

“Yes, I will.”

***

Betos’ Office, SAS Command – Nigeria

6/4/2017 – 5:17 A.M.

There was a sound like ringing in her ears.

A numbness throughout her body.

It seemed like everything was both muted and enhanced. Almost like a dream.

She could barely feel the tablet she was holding. The colors arranged in patterns her brain was struggling to justify. But there was no questioning what she was seeing; what she was being shown. She’d not thought this could happen. She didn’t think that step would be taken. New York was something she knew would trigger a response.
But this…

“Betos…” she heard Mox ask quietly.

She remembered she was in a room with several ranking officers. They were looking to her to know what to do next. Each of them was similarly stunned. Confusion, fear, uncertainty, all of them were etched on their faces. But there was a simple numbness to all of them that made none of this seem real.

What was the term?

Surreal.

That.

Yes.

A good word for this.

But she knew this was very real.

“I need a moment,” she said in a hollow voice. “Dismissed. I will need all of you shortly.”

With no argument they departed, leaving her alone in the Office.

She played the video again.

It was taken from an aerial perspective. Above the city of Lagos. Probably a drone. It was definitely ADVENT. It wasn’t Collective, and it wasn’t SAS. ADVENT hadn’t claimed responsibility for the footage, but it had appeared on the Internet moments after it had happened, and had propagated in minutes to become the number one trending video worldwide.

Their AI was hard at work.

Everything seemed normal at first. It was dark; a regular night. The city was a bit different from the past due to the Collective defense enhancements. Upon second viewing she noticed a few more details. Some turrets turning; anti-missile defense systems activating. Flashes of yellow, green, and white.

They should have worked. ADVENT had been bombarding them for months.

Then a blast of orange from the sky so bright it briefly overwhelmed the camera. But the brief moment cleared and Betos paused upon the image of a beam of nuclear fire raining from the sky into the city. She had not known such a weapon was possible, but ADVENT had somehow created a directed nuclear weapon.

Tens of thousands had been instantly killed.

The local government was dead.

Tens of thousands of citizens were blinded or deafened.

More were suffering from radiation.

The city was not destroyed – not fully. But the city center was just…gone. Not even rubble remained. Just a crater of ash and vaporized soot. But even that didn’t matter. The radiation was
strong enough that it would sicken whoever was left. The shockwave from it had shattered and flattened the nearby buildings in an even larger radius, killing thousands more.

There was a file that had been given along with the video.

There were more pictures. The devastation, victims whose skin had been burned off blown to pieces, people stumbling around, blind and deaf, people sickened and vomiting in the streets from radiation poisoning. And panic. Fear. With one strike ADVENT had collapsed a city into chaos, and they could only observe until they put together a radiation unit.

She only wondered…why?

She knew they weren’t the main threat to ADVENT. In fact, they had shown that they could condemn and oppose the Collective when needed. It wasn’t the SAS invading cities and killing the innocent. It wasn’t the SAS who was bombarding the world. The SAS was allied to the Collective, yes, but this was…unprovoked.

Was it just revenge? Directed at her for leaving?

“Do not flatter yourself.”

Macula materialized before her. Literally appearing out of thin air. She had not spoken for some time. She did not question why or how he was here. She had neither the strength nor desire to do so.

“The Sovereign African States are connected to us,” Macula continued. “Allied, even if the relationship is recently strained. But ADVENT does not care. They have done this to send a message. Dissent will not be tolerated. It does not matter that you specifically – or the SAS – are not responsible for some of our more egregious actions. You do not treat us as the enemy – and that is all the justification ADVENT needs.”

She was silent for a few moments. “Everything failed. The defenses failed. How?” There was no fury in her voice, only a broken question. She probably should have been angry at this. Angry at the Collective for failing. Angry at someone right now. But…there was no ambiguity here.

There was only one enemy here, and it was ADVENT.

“I do not know,” Macula for once seemed uncertain. “We are attempting to determine first how this occurred – and what weapon ADVENT developed. We suspected they would be using more nuclear weapons – but not ones like this. And certainly not against the SAS. We are the primary aggressor to ADVENT, after all.”

She nodded numbly.

Macula waited several seconds. “We have teams prepared for this contingency. Andromedon Contamination Operatives and Runianarch Rescue Teams are standing by. However, it would not be right to send them in unilaterally. But I think you see who the real enemy is. ADVENT doesn’t appreciate your morals or concessions. They will destroy the SAS and kill you. Nothing you do will change this objective.”

He extended one hand. “We are still allies, Helsa Betos. And we stand by to help an ally. Now, more than ever, is the time such alliances are tested. I have done what I can to limit the more egregious elements of the Collective, but I can unfortunately make no promises. But this war is coming to you now in a way it has not before. You need us – and now is a time where we also need you. Let us stand before ADVENT as allies, as we were before.”
It was times like these when priorities became clear.

She did not need to stop recognizing the problems of the Collective. But she also knew that Macula was right.

The war was coming now. For real.

ADVENT was coming to destroy the SAS.

On their own, they would lose. They needed an ally. Even an imperfect one.

“Then that is what we do,” she stood, composing herself. “Send the team in – and whatever forces you can spare, bring them. If this is the first shot of ADVENT, it is only a matter of time until an army is on the way.”

***

The Dreamscape

6/1/2017 – 4:15 P.M.

Sierra stood in a long hallway.

The fastest way to learn the advantages her new body had was through direct training.

The Dreamscape served as a good tool.

Living now was…interesting.

It was both fascinating and somewhat disconcerting. There was a persistent feeling that she was… piloting a shell. A body. Only not as disassociated as saying that implied. If that had been described to her, she would have found it worrying. But the reality wasn’t nearly as disconcerting. It was almost like how she imagined a psion to puppet someone.

Inhabiting a body, but not really.

It was confusing.

The Psychologist Yates was helping her work through it. It really wasn’t as though she was having mental problems, but it was going to take some time to get fully used to. One of the side effects though was the feeling that her body was invincible. She felt like a walking invincible tank.

The prosthetics she’d had seemed like cheap metal compared to the strength and power she had now – this was before even piloting a MEC. She still didn’t fully know her own strength. She’d almost broken Ted’s hand by giving him a high five. She could pick up Anna in full Titan armor. It was a feeling of durability and power she’d never had.

Of course, she was getting a few new looks now. She towered over pretty much everyone now – with the exception of the other MEC Pilots and a few massive soldiers like Kane. Even still she was a few inches taller. All said and done, she was almost seven feet. It was weird looking down at her friends.

The world was changed in subtle ways too. Her hearing was beyond anything natural. It was overwhelming initially, and she’d quickly figured out how to focus her hearing to only focus on what she wanted. But she was now capable of listening to a single conversation on a completely
different end of a room in a crowded place. Like the Mess Hall or Barracks.

Seeing was...mostly the same. But there were things she picked up on now. Many details which stood out to her, she didn’t know if she was just capable of processing tons of information at the same time better, allowing her to notice it all at once, or if she was actually seeing things her eyes couldn’t.

That wasn’t getting into the other skills. Namely seeing through walls. X-Ray vision was an interesting – and useful perk. It wasn’t so much X-Ray vision so much of being able to perceive the thickness of a wall and what the room could look like. Seeing what was in it was spotty at best.

Now that she was more familiar with her body, it was time to put it through its paces.

Not least of which because the war was heating up further. She’d missed quite a bit, and there were plenty of aliens that were left to kill. She wanted to be ready to participate in the next operation – one which promised to be an important one. In the hallway she stood, with no weapons – except her body.

Beside her stood XCOM’s resident teenager. Sierra was not completely sure what to make of the young woman. Dawn Conley seemed nice and earnest enough. Her psionics were the only reason she was here, it certainly wasn’t because she was a soldier. She did look a bit funny in her Aurora Armor and holding her plasma rifle, like it was a bit too big for her.

Probably because she looked so...young.

She hadn’t even really planned on coming here, but Dawn had been there at the same time and asked if she could help. Sierra had thought about it a bit, and let her. It couldn’t hurt, and she was curious to see how the girl would fare. The Dreamscape was pretty realistic, and she was fairly certain Dawn had not seen the new MECs in action before.

“So...” Dawn coughed awkwardly. “Are we going to get started? I’ve never worked with a MEC before, so I’m sorry if I sound kind of anxious. You do know how to use your augmentations, right?” Her question didn’t sound inherently insulting, but instead more curious. Sierra didn’t really blame her. She was still fairly new, probably somewhat nervous, and getting used to things here.

“Yes,” Sierra answered simply. Speaking was also a bit odd. Not that speaking hadn’t been easy, but it was almost instantaneous where she intended to say something, and the words came out. As it turned out, this was because she spoke through vocoders, and not anything like vocal cords. So there was sometimes a syncing inconsistency between what she said and how fast her mouth moved.

Anna and Ted found it funny, even if she found it a bit annoying. Athena must have had to practice to get her words and mouth synched properly. She’d been sad to hear that she’d died in rescuing Caelior. There was a lot she wanted to talk about now that she’d gone through with it.

“I’m going to do something,” she told Dawn. “Do not be alarmed.”

She wasn’t sure how well the kid would take this, but she’d have to see it sooner than later. With a thought, the nanites that made up her skin pulled back, leaving only her metal limbs bare. That wouldn’t have been overly bad – except that it included her face. She left her artificial hair alone, but what Dawn would see was a not-skeletal face, so much as a face of bare metal, with eyes with glowing red pupils as she activated her X-Ray vision.
It took a few seconds as the ‘skin’ seemed to melt off of her. She looked back to Dawn who was staring at her with very wide eyes. She visibly swallowed. “Ok, that’s new,” she almost squeaked out. “Uh…we ready?”

“Put on your helmet,” she ordered, as metal plates locked into place over her mouth, sealing that opening. All speech was coming through the vocoders now. “Follow my lead. You are a telepath, yes?”

“Well, Biopath, Ma’am—“ she definitely sounded on edge after her face-shift.

“If you can sense them, tell me where and how many,” she interrupted, wanting her to get used to answering promptly as Dawn put on her helmet. “You can do that – yes or no?”

“Yes!” She quickly burst out. “Geist's been teaching me some techniques. I'm getting better, but don't expect me to show up on the battlefield anytime soon. And um, don’t expect any melting. Still takes me a while to do that. My shooting is pretty decent, though.” She patted her plasma rifle.

Good enough.

“Then let’s go,” Sierra looked up. “Start it, T’Leth.”

There was a perceptible shift, and it started. “A bunch in the room at the end,” Dawn said immediately. “Uh…five, six? Something like that.”

“Thank you.” Sierra saw that there was no door into it. Probably one along the sides, where the hallway went around. But her vision showed that the wall was moderately thin. She could probably break through. So either this would work, or she would look like an idiot in front of a teenager.

But the Dreamscape was for experimentation, after all.

“Follow my lead,” she told Dawn, and then charged towards the wall. Without the limitations of an organic body, she was able to reach full speed in a few bounds, and a few more later was as fast as a car going forty, with enough force to pulverize anything which got in her way.

She resisted a flinch as she approached, and hit the wall.

She only felt the slightest bit of resistance before it broke under her force, revealing the simple white room. A half-dozen Mutons turned around in surprise, while a mixture of Andromedons and Vitakara were in the back. She appraised them only a second before springing into action.

She immediately shot a fist towards the face of the nearest Muton. She’d expected that at most it would stun it. What it actually did was rip the head partially off, and crumple the metal into the face. Yellow ichor stained her hand as the Muton crumpled to the ground.

Interesting.

The aliens opened fire, and she lifted the Muton corpse with one hand, using it as cover and she strode to the next one, throwing it towards one of the Mutons, while lashing out with a foot, snapping the kneecap of the Muton with barely any effort. She ripped the plasma rifle from the Muton violently, taking off a couple fingers with it, before twisting the neck violently enough to rip it off.

Plasma bolts hit her, but they barely registered. Her frame was more than capable of tanking multiple plasma shots. Still, no point in unnecessary damage. She picked up the plasma rifle and targeted three more of the Mutons then tossed it away before it self-destructed. Her targeting was
effectively perfect now, and three shots later, three more corpses fell, thanks to the lack of cover.

The remaining aliens were trying to flank her now. There was a Cobrarian she saw, which was slithering behind her. Three Vitakarians were taking aim; Runianarch she saw. The two Andromedons were similarly firing, and also moving around to flank her. She picked up the nearby Muton corpse and threw it towards the Vitakara.

The Cobrarian charged her and got up close, performing a constrictor attack, using their snake-like bodies to wrap around her. First her leg, and then body and arm. Even if she hadn’t made the mistake of leaving an arm free, Sierra was almost certain she could have broken out through sheer strength alone.

She was metal, and the alien was flesh.

The Cobrarian hissed in triumph, which abruptly turned to panic once Sierra grabbed at the throat of the Cobrarian and squeezed. It took only a second for her metal fingers to pierce the skin, and she ripped open the throat of the Cobrarian with a casual gesture. Yellow blood spurted onto her body and face as the Cobrarian drowned in its own blood, and she charged the Andromedons.

She was able to easily get around one of them, and simply tore out as many cables and important-looking gadgets as she could. With that one incapacitated, she decided to simply punch the other one in the massive mask that separated it from the outside world. It didn’t break at her first punch – but it did crack.

Another punch shattered it with an explosive burst of the hardened glass. She reached inside and grabbed the corroding Andromidon, slamming the face on the glass shards, before kicking the Andromedon suit back onto the ground with a thud. Knowing the suit would get back up, she marched over and ripped out the control panel within the suit, which was enough to keep it down for good. She prepared for the Vitakara, but to her surprise they were already dead, lying on the ground nearby.

She looked back to the entrance of the room – or more accurately, the hole she had made – and saw Dawn standing, lowering an arm, the psionic distortion fading. “Uh…you didn’t want me to save them for you, right? Thought I’d step in, help you a bit in there, if that’s okay…” She trailed off, appearing to now notice the carnage around her. “Wait...holy shit. You did all that with your hands?”

From the tone of her voice, Sierra felt like her mouth was probably open, having witnessed that display. Admittedly, she couldn’t have really imagined it going better. She was…very pleased with how it was performing. She’d admittedly almost forgotten about Dawn, and that she was a fairly powerful telepath. She seemed to be handling it well though, despite gawking at the corpses.

Her fascination would likely fade in time.

She strode over to the psion, and she could tell it was taking everything for the girl to not step back at the blood-covered Human cyborg. But Sierra just patted her on the shoulder. “No, good job. I’ll give you a few more next time. Up for a few more?”

“If you want to,” Dawn nodded almost warily. “I mean…yes! Looks like we both did pretty well. Besides, I’ve got nothing else to do right now, and you’re the first person I’ve actually fought with in the Dreamscape besides Geist. But, um...you got any other surprises in there I should know about?”

“I don’t think so.”
“Alright, cool!”

“Stay with me,” Sierra said, turning to the next room. “Let’s see what else T’Leth has in here.”

By the end of this session, she wanted to master her new body. And by the looks of it, she was already on her way there.

***

Skyranger, En Route to Landing Point

6/4/2017 – 9:01 P.M.

A squad of relative newcomers composed those who were here to collapse a government.

The Commander sat and observed. The only one who seemed largely at ease was their sole psion this operation, Ji-Yong Mangjol, a stoic North Korean woman who was very professional, if a bit stringent and silent. The rest of them all felt various shades of uncertainty or unease.

If it was due to his presence, or the mission, he couldn’t say.

He reached up and took off his helmet, setting it on his lap. The rest of the soldiers immediately took notice, clearly waiting for him to say something. He took a moment to look around the Skyranger. “Not quite the op you signed up for, am I wrong?”

One of them coughed. “Not at all, sir.”

The Commander raised an eyebrow. “I’m no telepath, but I can sense emotions perfectly well. I also don’t take offense easily either. Commanding officer or no, I am capable of taking criticism.”

“With all due respect, Commander,” one of the Canadians said. “This seems like an…odd mission for XCOM to be doing.”

“Collens, yes?” The Commander asked with a nod.

“Yes, Commander,” Kai Collens, their squad Assault nodded.

“Right,” the Commander continued. “I am under no illusions as to what we are doing here, and what we will do. We will be assassinating the government of a nation, and any who attempt to stop us. There will be many people who die today as the result of our actions. We are all aware of that, even if it’s easier to dance around the topic.”

Helmets still on, they looked at him, and he looked at each one of them. They were all paying full attention, at least. “Only a few of you have done something like this before. It is not easy, and you will take no satisfaction from it. But remember what our purpose is. We are to protect Humanity by any means necessary. The DRC has decided that they will join the SAS – and by extension, the aliens.”

He allowed a pause. “I – and the Internal Council – had a choice. ADVENT was not going to intervene. There are politics to consider now. There was a limited window before an operation like this is not possible. XCOM is capable of dealing a blow to the new allies of the aliens, and we cannot in good conscience refrain from doing it.”

He indicated the area around them. “Thus, here we are. What I ask all of you to remember is this – there are no bystanders in this war any longer. The DRC has chosen a side. Remember that our
duty is not to our conscience, but to Humanity. I know what this is like – which is why I am here with you. If I am giving the order, I will also carry it out.”

“Don’t disagree, Commander,” Paloma Casaus, one of the Infantry said from beside him. “Harsh. But necessary.”

Mangjol nodded. “Indeed. Stability will return in time.”

“Our government made the mistake of placation a time ago,” Casaus said. “Cartels ran rampant. One thing led to another, and they ran the show.”

“National Guard, correct?” The Commander recalled.

“Yes, sir,” Casaus confirmed. “Young and foolish me thought I could make a difference. All I learned was that I was too late. Far as I’m concerned, traitors like the DRC are a cartel waiting to get out of control. We don’t cut off the head, it will soon be wearing armor.”

“As I said,” the Commander told them. “Remember why we are doing this. Remember what happens when we fail.”

There were enough examples to come to mind to get the point across.

The stakes were clear.

“Isn’t someone going to notice us?” Sahra Kesselman, the German Scout asked. “We’re going directly to the Palace, right?”

“We are,” the Commander confirmed. “But the DRC systems are…poor. Burning Sky has countermeasures, and we have a psion.”

“I have been preparing,” Mangjol interjected. “They shall not see us. If they do, they will be unable to do anything.”

“Let’s review one more time the objectives,” the Commander said. “XCOM and ADVENT Intelligence have confirmed that the entire government will be in residence. They are preparing and finalizing the integration with the SAS. Fen, you will establish a contact point with JULIAN, who will crash the city.”

“Understood, and shall do.”

“Mangjol will facilitate the further deterioration of the city,” the Commander continued. “As well as provide psionic support if necessary. The rest of us will enter the Palace, and eliminate all
occupants. When we finish. We will move to the Parliament which is also scheduled to be in session to sign the legislation. JULIAN will ensure that communication is under our control. Once both targets are eliminated, and Mangjol validates completion of long-term objectives, we will depart.”

“And if we’re caught?” Barbara Lawson, the other Infantry asked.

The Commander fingered the steel orbs in palm. “It isn’t a question of if we are caught, but by whom and how many. If we are seen, we eliminate. I would prefer we not have to fight an entire city, and I’m sure you agree.”

She nodded.

The cabin flashed a solid red. “Hamburg Squad, this is Burning Sky,” their Skyranger pilot said over the comms. “Tell your psion to do her thing if she’s so inclined. We’re coming up on the city. Countermeasures engaged and T-minus five to LZ. Will circle until confirmation of psionic measures is given.”

They stood, and readied their weapons. Each grabbed one of the handles above. Mangjol followed suit, and once her hand had a firm grip, she bowed her head. “Working now, Commander. Our path will be clear momentarily.”

The Commander gave her a few moments to really focus, and once there was a visible and ever-so-slightly purple distortion around her, he opened a channel back up to the pilot. “Burning Sky, this is the Commander. Psionics are in play. Take us in and ready the payloads.”

“Copy that, Commander. We’re moving in now.”

***

MEC Bay, the Praesidium – Classified Location

6/4/2017 – 10:24 A.M.

“I keep forgetting how big these are,” Ted remarked as they walked into the MEC Bay. “I keep thinking of them as regular sized. Not like Goliaths.”

Anna and Ted were already in their Archangel gear, accompanying Sierra as they prepared to be her wing for the upcoming fight. Sierra looked upon her suit, which towered over them. She had tested it out some time before, to do a test run to become acquainted with the systems.

It was good she wasn’t likely to wear the Archangel armor again, because she didn’t think she could go back.

“Probably has to be that big,” Anna commented. “It’s designed to take on small UFOs, right?”

“In theory,” Sierra said absentmindedly. “If I got a good shot.”

“And can you?”

A pause. She thought for a moment.

“I think so.”

“So this mission,” Ted added as Sierra began the process of getting the Valkyrie Suit prepared. “It’s dangerous. Even for us. Not even an XCOM squad behind us this time. Just ADVENT
“We don’t need an XCOM squad,” Anna punched him lightly in the shoulder. “We have Sierra now. And you.”

“I’m a psion,” Ted protested. “I’m a man, not a god.”

“Guess Sierra will have to pick up the slack,” Anna gave an exaggerated sigh. “I am now the only mortal here. Do you even age anymore, Sierra?”

Sierra cocked her head. “What’s living of me does.”

“Please,” Ted rolled his eyes. “As if any of us are really mortal anymore. With how much MELD is pumped into us, at minimum we’re living twice the average length of a regular person. But we’re getting off topic. The mission.”

“We go in, kill aliens, and get out,” Anna said. “Straightforward.”

“We check our fire,” Sierra cautioned, remembering the briefing. “Jakarta is the largest staging ground the Collective has against Singapore. We take that out, we give Singapore time to recover and take back some ground. I would almost go so far as to say we hurt their entire Indonesian campaign.”

“Noted,” Anna gave a sharp nod. “And we’re the bait.”

“In a sense,” Sierra shrugged as the Valkyrie suit opened up for her to enter. “I would expect the Collective to fire on any XCOM soldiers. Me especially, as they have never seen a Valkyrie before. Once the ADVENT Wings appear, then it will be too late.”

“Not just ADVENT Wings,” a new voice said. Sierra turned to see a man in a pilots suit walking up. An XCOM Aviation helmet was under his arm. He looked fairly seasoned, brown hair and short beard. Definitely American from his accent. Sierra immediately suspected Air Force.

“Matthew Yaeter,” he said, extending a hand which she took, taking care not to crush his hand. “Firestorm Division; Pilot-Commander of the STARCREAM Wing. Looking forward to working with our first Valkyrie. Expectations are high, Pilot Morrow.”

“We got Firestorm support?” Anna asked. “Huh. Didn’t expect that.”

“This time you do, Archangel Pavlova,” Matthew nodded with a smile. “Contrary to popular belief, we are very much still around, even if XCOM forgets we exist sometimes. The theatres of air and ground do not cross as much, and we perform very different missions. Today, though, that changes.”

Sierra nodded to him. “I presume I’ll join you in the air to the target site.”

“Indeed,” Matthew confirmed. “Archangels, I’ve been told you’ll be taking the Gateway to Singapore and converge. Has the plan changed?”

“Not that I’m aware,” Ted answered. “How many Firestorms are we getting?”

“A full two wings,” Matthew ticked off his fingers. “A dozen Firestorms total. I’ll be joined with Pilot-Commander Powers who will be leading SKYWALKER Wing. For clarity, the three of you are JAVELIN Wing.”
“I guess the cool names were taken then,” Anna chided. “Sad.”

“We work together again, and I’ll give you a more unique moniker,” Matthew smirked. “See you in the sky. We’re taking off in ten. Vigilo Confido, Valkyrie, we’re all ready to see what you can do.”

Sierra let her eyes turn red as she prepped her body to enter the Valkyrie. “Let’s make them hurt.”

***

Conference Hall, ADVENT Media Hub – Switzerland

6/4/2017 – 6:00 A.M.

The media was oddly silent and respectful as she walked in. The click of camera shutters sounded like normal, but the faces of the many figures with their microphones and recording devices out held a variety of expressions.

Shock. Worry. Fear.

It made her curious.

Miami had not elicited this kind of reaction, though admittedly the circumstances had been far different. It was a last desperate attempt to hurt the Collective advance, and only done after every other option had been considered and exhausted. It had been, all things considered, limited.

This was a direct strike against a sovereign foe, in a civilian population.

Saudia wondered how many of them had felt she would not go through with it.

That there would be a line she would not cross.

That there were limits to what she would sanction.

No.

Whatever misconceptions they had about her were shattered for good. Ironically it had taken a nuclear strike for the media – and much of the world – to see that her resolve was firm. This war would be won, no matter the cost or the steps that needed to be taken. Now it was time to speak to the world directly.

She stood a few seconds looking into the crowd, and with a finger pressed down on a remote on the podium. Beside her the footage of the nuclear attack played, loyally captured by the Kutkh Ravens. There had been other angles, but this one was preferable. She didn’t look back at it. She’d seen it dozens of times already.

Some in the crowd looked away. She knew it was the moment when the beam struck.

When it finished, she waited until the screen went black. Then she spoke. “At approximately two-fifteen A.M. I authorized a nuclear strike on the city of Lagos, within the Sovereign African States.” Anyone watching knew that the weapon wasn’t a traditional nuclear weapon, but she wasn’t going to disclose the details or specifications of the Atomic Lance.

“Over the past weeks and months, the Ethereal Collective and their allies have been escalating their war against us,” she continued in a calm, cold voice. “Patricia Trask has launched invasions, attacked cities, and has caused immeasurable damage and killed countless soldiers and civilians.
The Collective has bombarded our world indiscriminately.”

With a hand she gripped the top of the podium, peering intently at the crowd, her voice sharply intense. “This will no longer be tolerated. ADVENT has suffered the tantrums of the Harbinger. If she wishes to inflict suffering upon us, we shall return it to the Collective and their allies tenfold. This is a war for our survival.”

She paused. “But make no mistake. This was our decision. Today we used a nuclear weapon. If the Collective is intent on pushing us further, then we will use more. We are past the stage of believing the Collective wishes to fight fair. They wish to conquer us, and should they attempt so, we will make them pay dearly for it.”

The hand closed to a fist. “The Collective, and the remaining nations of the world appear to doubt our resolve. That we would take these actions. But if our own history has shown nothing, it is that we are resilient and do not succumb to fear and despair. When backed into a corner, we will fight and kill. We will do more than protect ourselves, we will ensure that those who inflict these attacks upon us will suffer equally or greater than us.”

She briefly closed her eyes, before looking into the eyes of those gathered. “Many of you know little of my past before assuming this position. I was born in Nigeria. I lived in Lagos for some years of my childhood. It was once my home. But I will not let sentimentality and my own feelings stand in the way of what must be done.”

She looked to the camera. “Let the Sovereign African States know that they would be wise to surrender and break with the Ethereal Collective. If they do not, then we will return your people to the dirt where we all come from. We will burn your nations. We will raze your cities. We will return your people to the age of stone and tribes, and turn you away when you flee to us. This will be the fate of any who reject their Humanity in favor of the alien.”

Saudia hesitated for a few moments. “There are nations who remain ‘neutral’. Who believe they can stay on the sidelines; ignored. But they lie to themselves and their citizens. There is no neutrality in this war. You are either on the side of the Human, or the Alien. We are Humanity. If you do not choose where your allegiance lies, then the time will come where it is chosen for you. Our tolerance is ending.”

A final pause.

“Make your decision. Your time is short. And if you hesitate, then see what will soon befall the Sovereign African States, and know that it will apply to all those who betray Humanity.”

***

The Forest of Haramoalian – Vitakar

6/4/2017 – 6:19 P.M.

The forest was burning.

Even through his helmet, Nartha could smell the vegetation burning, and far above he could see the smoke gathering. It was not near – but it would soon spread, and while there would have normally been an immediate response from the Dath’Haram, the Nulorian shooting down water craft and any kind of emergency vehicles had put a mortem on support.

The Dath’Haram were not prepared for an attack of this scale.
They made their way through the forest, with Sorras as their guide. This was going to hopefully be quick and painless.

The Nulorian had launched their attacks, and if all had gone well, the Crypt would be unguarded. Nartha knew that was unlikely to be the case, but one could hope. Soon enough they broke out into the entrance to the Crypt, an open area with memorials and gravestones on well-maintained paths.

“There he is,” Sorras said, reaching for his sword. “Right on schedule.”

Nartha also saw him.

Filhallan, the first and oldest Bladedancer of the Dath’Haram. He merely stood, appraising them with unblinking eyes and his outfit custom made by the Hunting Parties. His blade was at his side idly, but Nartha was not fooled by the relaxed appearance. He was doubtless prepared to strike quickly.

What little video existed on him showed a Dath’Haram with extraordinary speed.

“We shoot?” The XCOM Engineer Roe asked.

“Fan out and set up,” Sorras instructed. “I doubt he’s the only one here. A shame we don’t have a psion.”

“I would hope we can handle one Bladedancer,” Mehren muttered, lifting his sniper rifle. “Say the word and I’ll execute him.”

“This is all your doing, I suppose,” Filhallan spoke, in a slow and ponderous voice. It was an old voice, the oldest Dath’Haram Nartha had ever heard. “And for what purpose, Sorras?”

Sorras stopped. “You recognize me.”

“I do not forget those I trained.”

“I’ve gotten better,” Sorras lifted his blade. “You know why we are here.”

The XCOM soldiers fanned out, their weapons trained on the lone Bladedancer. Filhallan looked around idly. “The Crypt. It has not been the first time the Nulorian have attempted to penetrate it. I suspect it will not be the last.”

“Bold to assume you’ll succeed.”

“I could say the same for you,” Filhallan flicked his blade to a ready stance in a blur. “But your people have burned our forest, and you try and storm our Crypt. For that you will die. I see no other path.”

Nartha waited. Sorras sneered. “Still not one to swing the first blow. This is why you lose.”

They heard a rustle from above, and Nartha rolled out of the way, just out of the point of a Bladedancer who had fallen from above. “Look around you!” He roared as Sorras charged towards Filhallan and the two began dueling in a flurry of blows and silver blurs. Most of XCOM was able to get out of the way.

Some others weren’t.

Mehren was skewered as a Dath’Haram landed directly behind him, sending the blade directly down his spine, following it up with a snapped neck. The Bladedancers had also made the mistake
of trying to assassinate Janiya at close range. They did in fact score a hit on her, but the MELD Operator simply directed a swarm of nanites behind her, enveloping the Bladedancer who screamed as the nanites ate away at him, even as he tried slashing at her iron skin.

Nartha’s own assassin flourished her blade and moved with blinding speed to close the gap. Fortunately he remembered the Zararch instructions for considering Bladedancers. While rare – they were deadly. Not the fake ones in the Runianarch either, who used the weapon as just that – a weapon.

Bladedancing for the serious was an art form.

There was a very important rule.

*Do not let the blade touch you.*

Blades were coated with lethal poisons which would kill in minutes if the skin was broken. They were hardened and durable enough to be nearly impossible to break or bend. They were highly sharp, and pointed. Armor was not as much of a help because Bladedancers were capable of analyzing each and every weak point in the armor and striking.

Keep your distance.

Nartha jumped back, and fired in an arc in front of him. The Bladedancer nimbly ducked under his arc, and Nartha corrected by shooting towards the ground, which she leapt over. Keeping them moving was important, as distance was put between them. She bared her teeth, seeming to realize what he was doing, and with an elegant twirl flung a weighted cord.

Nartha quickly spread his legs and ceased moving. The Bladedancers only employed those tools to slow down or trip targets. If he fell to the ground, he was dead. He could afford to let the cord wrap around one leg if necessary, but not both. She leapt towards him, and he pivoted on one foot, firing.

A bolt clipped her and she hissed, even as he kicked off the cord and moved backwards. He needed to be cognizant of where he was going, because the chances she was going to drive him into another Bladedancer were high. She was far too close for comfort now, and he could almost hear the blade whistle past his face.

As he observed her style, he realized that he appeared to have – luckily – gotten a more inexperienced or newer Bladedancer. Experts used thrusts and jabs against armored opponents, not slashes – and his opponent was primarily using slashes. Sometimes those were useful for driving an opponent back, but weren’t as dangerous.

He could use that.

It was something he would probably only have one shot at. It required his reflexes being almost perfect. He let her move in, and slashed where his throat should be. The expected action was to leap back – but instead he hung just out of range – and stepped forward, trapping her arm and twisting.

With his pistol he fired two shots into her side and kicked her away before she tried a martial move against him. Lifting his rifle back up, he aimed it at the gasping and stumbling Bladedancer and fired several shots into her chest and head – killing her quickly. *One down. Lucky.*

He looked around the chaotic scene. Edgar, the other XCOM Intelligence agent had died, and *four* Bladedancers were focused on Janiya, and the MELD Operative was holding her own, even as the Bladedancers were keeping their distance. Shun was facing off against one which seemed
particularly skilled. Roe had just finished killing one, and was shooting the corpse to finish it off.

But the duel between Filhallan and Sorras was reaching a peak.

Nartha was almost finding it hard to keep up with the speed of the duel. Sorras was without a doubt one of the fastest individuals he had ever seen, blade or not, but Filhallan was something beyond normal. It was like watching a machine in a humanoid form fight. Each action was within the blink of an eye, and he was impressed Sorras was able to keep up.

Both were exchanging blows, and despite Filhallan’s speed, Sorras was getting close to landing some decisive blows. Flickers of light and silver shone around them, a crescendo and dance between the masters of the craft. Then it happened.

Filhallan exposed himself just enough, and Sorras seized the opportunity and sliced upwards, opening a wide gash on Filhallan’s sword wrist, even though he still held the blade. But the move stunned the elder Bladedancer enough that he left his chest briefly exposed and Sorras followed up by stabbing him directly in the heart.

Almost all the fighting stopped at that. The Bladedancers immediately backed off, shooting almost frantic looks to their master, even as they watched their XCOM opponents.

Was it over?

Filhallan stood paralyzed as blood flowed out of his wrist and chest. Nartha expected him to keel over at any moment. Sorras pulled the blade out, in a final flourish. Filhallan unexpectedly bared his teeth in a smile. “Well struck, Nul’sorras’haramoalian.”

Then he walked forward.

Sorras seemed shocked that he was still moving, and performed another, final swipe, which opened a river of blood from his throat.

The Bladedancer kept moving.

Sorras sliced and stabbed again. Each blow was true, but unlike before, Filhallan just stood there and let the blade ravage his body before lashing out with one hand and capturing his arm. With the blood-soaked arm still holding his own blade, he stabbed Sorras through the chin and brain, killing him instantly – though not before Sorras performed another stab through the chest.

Filhallan let the body drop to the ground.

Nartha felt numb as he saw the walking corpse methodically extracted the bloodied and poisoned blade from his own body, as the eyes of the Dath’Haram swept across them. The Bladedancers seemed equally as stunned.

Who was he?

The Zararch had never known him to be anything like this – at least not that Nartha had been aware of.

“Fall back,” Shun made the executive decision. “This is not the time to figure this out.”

“Copy that,” Janiya stated, moving to the pre-planned contingency point that Nartha was very glad they had established.
The Bladedancers immediately began moving to attack, as if the spell had been lifted from their fugue, but the last thing Nartha saw before they fell back into the forest was Filhallan lifting a bloody hand – a clear sign to stop. The Bladedancers immediately complied, and XCOM retreated into the forest.

Nartha didn’t know why the Bladedancer was letting them go.

Probably as a warning.

If so – the message was received.

***

Zar’Chon’s Chambers, Mars Observation Station – Mars Orbit

6/4/2017 – 6:18 A.M.

It had been a troubling few days.

This decision that Saudia, and by extension ADVENT, had taken was not surprising, but it was inconvenient nonetheless. It was a type of nuclear weapon that was not something they had thought ADVENT had in their arsenal. Already Andromedon scientists were fairly sure they knew how it operated – but it was on the advanced end of nuclear weaponry.

Impressive that ADVENT had kept it secret.

But they had perhaps used it too early. He knew that these would be especially potent weapons against starships. But perhaps they had felt like they didn’t have a choice. Assuming that ADVENT would ever pose a threat beyond Earth was…almost wishful thinking. They needed a fleet first, and at best they were only in the prototyping stage.

There was a silver lining to all of this. Faint, but there.

The SAS had immediately dropped their little standoff, and were now working fully with them. Ravarian had never believed it would last long, but Betos had held out longer than he’d thought. Even if it had taken one of her cities being bombed to do so, it was better than nothing at all.

It made him wonder why ADVENT had gone directly after the SAS and not a more important Collective base. Based on Saudia’s speech afterwards, the calculus appeared to have been not to the Collective, but anyone who was considering joining or allying with them like the SAS.

Still, he questioned the tactical effectiveness of it. The SAS was intentionally not being a problem, and now they were fully back in the fold – entirely due to ADVENT. Perhaps ADVENT did believe it was fake? He couldn’t rule that out, but it ultimately benefited them. One city could be replaced.

But this, of course, was not the only attack they would see today.

Oh no, there would be many more.

This was simply the opening salvo.

Cali mewed once, leapt into his lap and immediately settled down, as he absentmindedly began petting her. “What do you think?” He asked the cat. He didn’t know what to think about his developing habit of talking to the creature for no real reason. Perhaps because she didn’t talk back
and couldn’t actually affect anything, it felt good. “United States? South America? Where will ADVENT strike first?”

Cali just purred.

He scratched her ears. “I couldn’t agree more.”

Ravarian returned his attention to the screen, seeing the Human media drone on about ‘implications’ and ‘historic, groundbreaking conference’. One of the pundits in particular caught his attention from the muted subtitles. Head cocked, he unmuted the station, more out of curiosity than anything.

Dave Muri. A middle-aged Human with ruddy skin and slicked back short hair which was a dark brown. His face was almost comically intense as he spoke. “What I’m telling you is that this was exactly what the Chancellor needed to say. The SAS has been killing our soldiers in the region for months now. It’s time they face the cleansing purity of nuclear fire.”

Ravarian almost chuckled. Was this man serious? The other pundits seemed somewhat taken aback. “She just bombed civilians,” another pundit said slowly. “That’s not something we should take lightly.”

“Right, but she needed to do that,” the man insisted. “Tell me, if you had the opportunity, wouldn’t you take out a city filled with traitors?”

“I mean, I don’t know?” the other pundit defended. “It depends on what I knew, what she knew.”

“What about you?” Dave then asked the next-closest pundit. “Why would not bombing the city be acceptable, given that the SAS is our sworn enemy.”

‘Sworn enemy’. Ravarian snorted as the woman in question just looked at him in a mixture of confusion and concern. “Well, even if the SAS is our enemy, we can’t just go around bombing cities wherever we feel like it.”

“That isn’t the question. And hasn’t the Collective – and Patricia – been doing that exact same thing for a while now?” He insisted, going to the last pundit, his face oddly flushed. “What about you? Would you have let the SAS go unpunished for what they have done against us?”

“Well, technically, it was the Collective who is our main enemy,” the pundit said, looking at Dave warily. “The SAS was even calling them out sometimes.”

“Dave, are you feeling alright?” The female pundit asked. “This is a bit violent, even for you.”

Ravarian decided he’d heard enough, and shut it off. What passed for Human news was rather amusing. And they had the nerve to call the Zararch propaganda. At least they wouldn’t have someone like that on any information dispersal program. What the current media reaction told him was that not everyone was fully on board with the strike, but no one had any power to stop ADVENT.

There was a new name being thrown around in regards to Saudia, especially since she’d apparently nuked her birthplace.

The Iron Chancellor.

No doubt something perpetuated by the ADVENT AI, but it was fitting nonetheless. She was certainly ruthless enough to warrant the title, melodramatic as it might be. She was definitely not
content with one attack. There would be others. Others which would be coming very soon, he was certain of it.

T’Leth was also concerning – but countermeasures were being developed, and the extent of his display appeared to be over. Still – Ravarian was not going to discount the Sovereign becoming more involved. With Patricia recovering after being defeated, he imagined she would not be taking many chances when it came to mitigating the Sovereign.

A shrill alarm sounded.

He leapt to his feet, and Cali jumped off as his weapon appeared in his hand. The alarm only went off if there were hostile forces nearby – or in the base. “Report!” He snapped, knowing the CODEX would answer.

“Intruders in Hangar Seven,” the CODEX answered immediately. “Identified as XCOM. Instituting lockdown.”

“Projection onscreen now,” he commanded, striding to the center of his chambers as the hologram came online as he saw the apparent XCOM strike team. He couldn’t determine any of the Humans by identity through the armor – but his lips pursed as he saw not one, but two Vitakara with XCOM. A Borelian and Oyariah.

Well then. Traitors all around.

Only right they died on the grounds of a Collective stronghold.

There were certainly psions with them. Fine. If XCOM was going to invade, then they would be punished accordingly. “Contact the Overmind. Inform him that XCOM is on the station.”

“Opening line. Sequencing now.”

“And as you do that…” he watched as the XCOM squad began fighting the staff in the Hangar – most of them not even soldiers. “Vent the Hangar – and activate our Operator.”

***

Palais de la Nation, Kinshasa – Democratic Republic of the Congo

6/4/2017 – 9:24 P.M.

The Commander hit the ground with an audible thud. Hamburg Squad landed right beside him moments later. A large crate slid down a rope from the Skyranger, which was caught by Casaus and Sahra, unhooked, and the cable retracted back into the vehicle. The Commander scanned the immediate area.

There were a few guards – or would have been, had Mangjol not removed them. Instead they were passed out, and at the moment there was no investigation. With a sharp hiss, the Skyranger ejected a small pod which landed nearby. It opened a few moments later, and four of the packed Chryssalids awakened.

It was past time Vahlen’s little experiment got some usage.

“Ugh,” Collens muttered. “Hate those things.”

“As do I, but they have their uses,” the Commander said as the creatures shook their heads,
awakening as they fell under Mangjol’s influence. “The good news is these ones can’t spread. Vahlen made sure of that.”

“Thank goodness.” Barbara checked her rifle. “Still, I’ll keep my distance.”

Fen was setting up his makeshift antenna as the Skyranger flew away into the night. “We should be online soon,” he said as the Chryssalids chittered. “JULIAN will only need a moment anyway.” A few minutes passed as they took positions, though no one was coming their way. Sahra opened the crate and peered inside.

“There’s a lot here,” she picked up one of the containers of Chryssalid eggs. “How are we getting these everywhere?”

“Leave that to our psion,” the Commander said. “She’ll find a way.”

“And…we are up and running,” Fen stated, standing. “JULIAN, are you here?”

“Yes, yes, it took you long enough. It would almost have been faster to go through ADVENT, find this exact city, and break through then wait.” JULIAN was certainly not holding back his critique today.

Probably disappointed that he wasn’t being more thoroughly tested.

*Soon, JULIAN. Very soon.*

“Are you going to complain, or are you doing to do something?” The Commander asked dryly. “I would have expected you to do something dramatic, not berate my squad. Nervous?”

“Please, this is utterly pathetic,” an electronic equivalent of a snort. “It took me actual seconds. Incredible. I’m amazed ADVENT hasn’t cracked this sorry excuse for cyber security. Stand by. The city is about to go dark. How far, exactly can I go?”

“Whatever is necessary.”

“Duly noted.”

A second later, everything went dark. All of them watched as chunks of the city went off, one by one.

“I trust that is satisfactory?” JULIAN asked smugly. “I have also taken control of their outgoing communications. I am currently flooding them with spam callers.”

“Perfect, JULIAN,” the Commander pulled out his Mind Ray and hooked it up to his suit. “We’re all set. Stand by for further instructions. Amuse yourself as needed.” He looked to the rest of the squad. “The building has probably gone into lockdown. Move forward. Mangjol, set the Chryssalids hunting.”

“Yes, Commander.”

The kneeling psion didn’t gesture, but the quartet of alien creatures shot off into the night, each with a specific location in mind to go hunting. There were several law enforcement centers and military outposts. The Chryssalids would be unlikely to kill everyone in them – but they would kill enough to cause chaos.

And once people saw it was an alien causing carnage, that would be enough to poison public
sentiment against the aliens.

As the Hades Contingency intended.

The armored squad marched forward and there was no ceremony as they kicked in the front doors. There were a group of surprised people in the front, as well as several guards, all of whom reacted first with surprise, then brief fear before they were gunned down. Plasma and bullets ended their lives quickly.

A couple guards rushed forward, the Commander raised his Mind Ray and clicked the trigger.

Both fell down, dead.

Trivial how easy psionic technology had made killing.

He motioned for them to continue onward. Barbara stayed put, to kill any stragglers who retreated to the front. They split up, with the Commander and Casaus moving towards the offices of the President and Prime Minister. There was not much resistance expected, which was why splitting up had been judged as an acceptable risk.

The Collective was unlikely to risk themselves for a state not even in the SAS yet.

With each room they passed, they opened or kicked in the doors. Some of the rooms were empty, many of them were not.

A quick and brutal pattern was quickly established. The Commander was able to sense if there were people inside. The Titan armor Casaus wore could also detect life-signs. Plasma rifle shots ended whoever was inside quickly as the Infantry made short work of who was inside, while the Commander simply used the Mind Ray to painlessly eliminate those on his side.

Walls didn’t stop psionics.

A dozen guards rushed their position. Their simple ballistic weapons wouldn’t have done much to their armor, but the Commander didn’t waste time. With a practiced telekinetic movement, the steel balls in his hand shot with lightning speed, blasting through the heads of the guards and ricocheting back and killing those who were spared the first round.

With those he couldn’t eliminate in that second, he closed a fist and their hearts exploded. Almost as one, they tumbled to the ground as the steel orbs returned to him, the velocity cleaning them of blood and gore.

They continued inward.

“Commander, this is Mangjol,” the psion updated.

He lifted a hand to his ear. “Go ahead. Is there a development?”

“To an extent,” she said, as Casaus found and eliminated a few stragglers in hiding. “I’ve been scanning the city. I’ve located a number of Zararch Agents. Disguised from what I can tell. Also some Sectoid observers, believe it or not. I took control of a few and put them to sleep. Not sure what we should do with them.”

Well, wasn’t that a boon. It wasn’t a surprise the aliens had a presence here – ADVENT also had for a time, as well as XCOM Intelligence, but they could definitely make use of it here. “Move a few here and to the Parliament,” the Commander ordered. “The rest – set them on the population.
“Understood, it will be done,” a pause. “I’ve been gathering subjects to disperse the eggs. We are on track to city-wide dispersal.”

“Good. Commander out.”

They had reached their target zone. With a hand, the Commander sent a telekinetic blast that blasted the doors off their hinges, exposing the President who stood with a half dozen of the Republican Guard who raised their rifles. With a gesture the Commander sent the steel orbs into their skulls while Casaus shot the remainder.

President Arnaud Beka paled when he saw them. “XCOM…”

“Yes,” the Commander said. “XCOM.”

“Please…” he folded his hands together. “We surrender. Take what you want-“ He was abruptly cut off as the Commander closed a fist, the ghost hand around the throat of the President.

“We have what we want,” the Commander said, as the eyes of the President bulged. “And you brought this on yourself. You signed the death warrants of yourself and everyone here when you sold out your species to the aliens.”

“I…” He choked out.

But the Commander felt his alarm – and panic at that.

But not panic because he was lying. But because the Commander spoke the truth.

“Do not worry,” the Commander took a step towards him, speaking quietly. “Your country will endure, and one day it will be a thriving part of ADVENT. But you, nor your band of traitors, will live to see it.”

A final closed fist, and his neck snapped, killing him.

The Commander and Casaus stood over the corpses. “You didn’t talk to any of the others,” Casaus said slowly. “Why him?”

The Commander thought a moment before answering. “Because it is because of him that we are here. Few here are traitors in the outright sense, they deserve nothing but swift ends. But for men like him, I prefer him to know why he died today, and that in his final moments he knows that not only did he fail, he brought down everyone around him, and doomed those he tried to save.”

“Huh,” Casaus said. “I’ll be sure never to try anything like that on you, Commander.”

A thin smile appeared on the Commander’s face. “Don’t worry. I don’t expect that to ever be an issue with my soldiers.” He patted Casaus’s shoulder as he walked by. “We’ve still got a Prime Minister to find – and after that, a Parliament to finish off. You’ve done a good job so far. Let’s finish this up”

As far as he was concerned, the worst was over. It was always the first kill that was the hardest.

The squad was proving that it was capable.

The Hades Contingency would succeed once more.
Mars Observation Station – Mars Orbit

6/4/2017 – 6:27 A.M.

Clearly, no one had expected them.

Blackbag Squad materialized in the Hangar of the fabled observation station, and wasted no time in opening fire. Geist executed everyone around them with a surprise telepathic attack, while the rest of them opened fire at everything else that moved. Kane specifically targeted the exposed points on multiple starships and vehicles in the Hangar, along with fuel tanks and chemical vats nearby, eliciting more explosions around them.

Their two alien allies, Runi’alion’ borelia and Rava’xarian’ hegenmon also jumped into the fray, with the Borelian shooting the guards at the far end, while Xarian held his massive shield before Sylvia, who was unlocking her box of Shoggoths. A few seconds later and the latch was flipped open, and six of the Shoggoths crawled out.

“Go, my little ones,” Sylvia said as they trilled happily. “Be fruitful and multiply, and kill aliens while you’re at it.” She nodded to Kunio who concentrated, and manifested a portal before them. They knew the Hangar was likely to be vented or otherwise locked down momentarily, and it was important to get the Shoggoths out and into the rest of the station.

One by one the Shoggoths crawled into the portals he created. He had no idea where they probably were in the station, but he suspected that the Collective wouldn’t be able to lock all of them down – and the creatures were very sneaky. He was impressed with Sylvia’s ability to corral them into the portal, but as she’d said – they were smart.

The lights of the Hanger turned a solid blue, and the airlock behind them opened rapidly, and Kunio immediately felt the pull of the vacuum. “Knight! Anchor!” Geist commanded, and their telekin, Evelyn Knight angled a hand downwards, and Kunio felt like bonds manifested around his ankles, keeping him in place.

Geist focused, psionic power around him, and a massive psionic shield manifested where the airlock barrier had been – and split into the metal around it for good measure. The vacuum vanished, though Kunio wondered if it would hold. The Hangar was silent, only the flickering burning of fuel and bodies sounded.

“I doubt that is all,” Geist muttered. “I can maintain the shield. I presume the doors are locked?”

The squad moved towards the main exit, which, unsurprisingly, was locked. “Looks like it,” Knight confirmed. “Want me to weaken it.”

“Yes, please do so,” the massive machine which had also accompanied them said in the familiar voice of JULIAN. The machine was called a SPARK, and it looked rather intimidating – though Kunio wasn’t sure if the intimidation factor came down to the actual specifications, or that JULIAN himself was controlling it. “I would wish to break it down.”

“Aren’t you supposed to prefer hacking things open?” Kunio asked.

“Please, do not stereotype,” JULIAN said in an almost offended manner. “There is nothing quite as satisfying as using physical force to beat something into submission. I find there are advantages to having a physical platform.”
“And it is your digital skills we desire now,” Geist said, still facing the open airlock and maintaining the shield. “Collective systems need to be disrupted. Have you made progress on them?”

“Of course not,” JULIAN gave an electronic snort. “This is a military installation, there is no wi-fi here. Find me a port, and I will begin work.”

“Understood,” Geist said. “Chronicler?”

“Yes?” Their Agent and main teleporter here asked.

“Anything we should be aware of?” Geist demanded. “I’m having issues sensing anything on the station.”

“I sense the same,” the stone- armored Agent answered. “Possibilities include direct telepathic protection – or the station has incorporated Mosrimor orbs. I cannot tell yet, but it is an issue for us. Not insurmountable.”

“Agreed,” Geist glanced to Knight who had a hand put on the door. Kunio had never seen another Nanokine at work before, and while it looked like she was doing nothing, he knew the basic gist of what she was attempting to do. Moving things on a molecular level was not something which could be done quickly.

JULIAN’s SPARK suddenly turned on a heel. “Sensors detect movement. We are not alone.” Without waiting any longer, he raised his laser rifle and opened fire.

The air shimmered. “Operator!” Geist roared as a blue streak out of nowhere slammed into Alion, and the Borelian was just… gone. There was only chunks of armor and meat remaining. The blue streak went back, as Geist erected a second barrier around them. “JULIAN – follow my openings.”

“Understood.”

Through the shield, Kunio saw it. The black- armored Andromedon Special Operator. They’d known there was likely one near the station – perhaps more. There seemed to be an almost watery blue shield around the form, and it didn’t seem remotely perturbed by the shield before it.

“Knight! Hold and focus on the Operator,” Geist commanded, as Kunio heard hissing from above, and realized what oxygen was in the room was being drained. The Nanokine stopped her work, and turned as the Operator began channeling their strange powers, and absorbed the firepower JULIAN shot through the breaks in the barrier Geist allowed.

Kunio felt it before he saw it. In the center of their small squad, something akin to a black hole began manifesting. He tried firing at it, but that didn’t work, and he didn’t expect it to. He didn’t know what it was – only that the one in Beijing had done a similar thing – and that he believed that being pulled into it was not a good idea.

Knight was forced to keep them anchored, even as the Operator was using his skills to bring down more damage. Shears of blue corrosive power surrounded JULIAN’s frame, and to Kunio’s eye it looked like the SPARK was being barraged and ripped apart from every angle, chipping away at his armor and damaging the systems. The nanite repairs were working, but it was using them up fast.

“Releasing the shield!” Geist called, and he dropped the main shield, letting the vacuum return. The Special Operator simply locked in his position, and leapt into the air, locking himself onto the roof and beginning to fire down from the unknown weapon.
“Kunio, get him down from there,” Geist commanded, as the singularity that had pulled them seemed to run out. He kept the spherical barrier around them, even though he kept opening for JULIAN to fire from – for what little good that did.

The Chronicler glowed with blue power of his own, and manifested a psionic storm around the Operator, though the Andromedon simply shot all the way across the room with his odd teleporting capability. “They’re slippery,” the Chronicler muttered. “Minds impenetrable. They are not natural.”

“Knight, status?” Geist demanded.

“It’s easier if you keep him in one place,” the Nanokine grunted. “I have to find him each time. Not easy.”

“Alright, Chronicler, focus on protection,” Geist stated. “Let Knight do her thing. It seems to want to be targeted. Open fire.”

He made the opening larger, so more of them could fire. The barrier around the Operator held, but it likely couldn’t take sustained fire. The weapon it fired seemed gauss-based, though very accurate. Kunio himself took a few shots that hit hard, but were mostly superficial. It took him a few more seconds to lock down where he thought the Andromedon was.

One shot. I can do it.

“Geist! I have a lock!” He called.

A nod from the psion. “JULIAN, can you hit it?”

“Of course I can hit it,” the AI said in an annoyed voice. “The issue is it’s oddly durable shield.”

“Not from here,” Geist said as he glanced to Kunio. “Close range.”

“Close range?”

“Do I need to explain every step?”

“You are aware that Special Operators explode upon death, correct?”

“Of course,” Geist said. “Kunio, I presume you are fast enough?”

No choice. “I know – just make it quick!”

“Knight, is it primed?” Geist demanded.

“Yes – do it now!”

“Kunio!”

“Be ready JULIAN!”

Kunio opened the portal directly underneath the Operator, with the output directly next to JULIAN. The Operator fell through and directly in front of the SPARK. JULIAN lashed out with a fist into the face of the Operator, which would normally just send it flying backwards – but instead shattered completely thanks to Knight manipulating the integrity of the suit.

Kunio didn’t wait to see if it worked, and manifested another portal he moved through the body
and to a random spot somewhere else on the station before immediately closing the portal before any explosion could come through. But he felt the beginnings of it, which told him he’d just barely managed to get it through.

Silence.

Geist dropped the barrier after it seemed they were alone. “Well done Kunio.”

“A far too risky maneuver, however, your reaction time was commendable,” JULIAN said. “While I am in no danger of permanent death, I cannot say the same for you. I am pleased your impending death is a sufficient motivator to limit mistakes.”

Of course a JULIAN compliment sounded backhanded. But he’d take it. “No problem.”

“It is unfortunate Alion perished,” Xarian stated, looking at the remains of his alien comrade. “However, she perished to one of the most dangerous of the Andromedons. A worthy death.”

“Let’s hope there aren’t more of those,” Sylvia muttered. “One was bad enough.”

“Let’s move further in,” Geist said. “Knight, is the door primed?”

“It should be weakened enough,” Knight confirmed, stepping away from the door. “JULIAN? I think we should move to somewhere with oxygen.”

“A moment, then,” Knight moved aside as the massive SPARK stepped forward, and slammed a fist into the door, splintering it into fragile metal shards. All of them marched through, deeper into the station.

“Eyes up and weapons ready,” Geist advised as they marched down the hallway. “I doubt that is the worst we will face here.”

***

Near Jakarta Airspace – Indonesia

6/4/2017 – 11:20 A.M.

The Valkyrie tore through the skies, having hit the sonic boom some time ago.

Behind her the small fleet of Firestorms followed.

Sierra wondered if this was how people who previously had been in fights wearing little to no protection felt when putting on armor. The Archangel suit she had once worn seemed so...fragile in comparison to the speed, durability, and power she felt with the Valkyrie now. It was such an upgrade in every possible way it was impossible to describe.

She was faster.

She was stronger.

She was deadlier.

It was beyond the simple feeling of protection, it was also the elevation and extension of herself into the suit which was simply impossible with the Archangel suit. She was the Valkyrie, and she could control every part of it instantly. She had only worn it a few times, yet it felt as natural as her own smaller shell.
It was a bit odd to consider her own body that way.

A shell.

But that was what it felt like.

She finally understood those MECs who said they only really felt normal when in their suits.

Clouds hung over Jakarta, though they were above them now. But they were about to descend into them, and into the warzone that awaited. Or so it would soon become. Jakarta wasn’t a true warzone, even if it was an important staging ground. One day the Collective would anticipate an attack.

Hopefully not this day.

“JAVELIN-1 this is STARCREAM-1, target site is in front of us,” Matthew said over the radio. “Prepare to descend.”

“Roger, STARCREAM-1,” Massilia Powers said. “SKYWALKER Wing standing by to follow.”

“Roger,” Sierra confirmed. “Angling for descent momentarily.”

She angled her MEC, and a few seconds later broke through the cloud cover and their target city was before them. It was immediately apparent where the Collective had invested resources, mostly into various launch points throughout the city. They were flat, large, and the surrounding buildings had been razed to clear a path for them.

“Targets sighted,” she said, automatically marking them with her internal targeting tools and uploading the coordinates to the Firestorm Wings. “Looks to be at least a dozen staging points. Probably more alien targets in the cities.”

“Copy that, sending data to ADVENT Wing Command,” Matthew said.

“JAVELIN-1, we’ve got multiple alien ships converging upon our position, from air and ground,” Powers interjected. Sierra saw that multiple Sectoid Fighters which were parked on the staging points began lifting up and heading towards them. They were still a good distance from the city, and there was time for a response.

It was still remarkably fast.

Sierra looked up and saw no less than two dozen fighters also descending from above. Probably from the Collective Moon base. That’s a lot of fighters. “Will you need support on this?” She asked. “There’s a lot of them.”

“Nah, Sectoid pilots are trash,” Powers assured her. “We’ve got the skies locked down for now. Keep their attention on the ground. STARCREAM, we’re executing Division Angle one.”

“Acknowledged, scatter and snipe them,” behind her, the Firestorm wings broke out of formation to better engage the oncoming Sectoid starships as Sierra angled her Valkyrie towards the ground. She was already in the first path of several of the Fighters, who were opening fire with their plasma weapons.

All of the schematics and weaknesses of the fighters were uploaded into her suit and mind, and there was no reason not to try and exploit it. Green plasma fire sprayed around her as she locked onto a vulnerability. With a thought, she launched one of her ClF3 Warheads towards it, and spun
underneath the Fighter as it hit directly on, and the hungry chemical began devouring it.

Firestorms above her dove, firing their own weapons and forcing the remaining UFOs to face them. She had a clear shot towards the city, with only the defenses themselves to contend with. There would certainly be many, but she had a good idea of what to expect. She was close enough now she could see alien infantry, Mechtoids, and alien AA defenses aiming towards her.

Unfortunately for them, she was faster. They launched missiles at her, which her laser countermeasures shot out of the sky. She returned fire by releasing a gout of napalm against the defense tower which had tried to kill her. She saw the explosions within, as the tools melted and ordinance exploded.

Hovering in the air, she turned her massive flamethrower towards the ground. Streams of fire hundreds of feet long streamed from the nozzle, cooking dozens of Collective soldiers alive as she moved it back and forth on the staging point. It truly was every capability of the Archangel, amped up tenfold.

Seeing the command center – or what she assumed the command center was – she marked it with her suit, and launched a plasma warhead into it. It exploded with a satisfying boom, and the building crumbled to the ground. Overhead the familiar sounds of Archangels rolled over.

“Didn’t bother saving some for us?” Ted demanded, circling her.

Sierra smiled. Things seemed normal already.

“Hold that thought,” she said as she looked to the next marked target on her HUD. “We’ve got a lot more work to do.”

***

Zar’Chon’s Chambers, Mars Observation Station – Mars Orbit

6/4/2017 – 6:51 A.M.

It was an interesting feeling, sitting and watching a battle in his own station, while petting a cat which purred in his arms. He felt no fear or concern yet – not really. XCOM had barely managed to penetrate past the Hangar, and had already suffered a loss. The conflict had been highly informative.

Audio wasn’t perfectly captured, but enough dialogue had been captured to reveal some illuminating things. An Agent of T’Leth – the Chronicler specifically, two aliens – a Ravager of all things, and a now-dead Borelian, a psion with a micro-kinetic affinity, and a platform housing an AI.

How fascinating.

The teleporter had moved the Special Operator to a different section of the station – fortunately only a storage area, but one which stored weapons. The damage was…extensive in that part of the station, but manageable. It was validating to see that even one Special Operator was a strong match against a full XCOM squad.

The ADVENT Priests were likely to have a harder time of it in the next few months.

The CODEX was tracking all of their movements, and directing personnel as appropriate. XCOM’s cute trick of planting Shoggoths throughout the station was clever, but SPECTREs were being
dispatched to where each one was presumed to be. Unfortunately, it would likely be some time before they were exterminated.

“They have moved into the station proper,” he said, standing and setting the cat down. The hologram of the Overmind stared back at him. Ravarian was not fully comfortable around the enigmatic Elder; there was something fundamentally off about his power in a way it wasn’t with Quisilia.

The Overmind wore a deep orange robe, with his arms within and body shrouded. Two glowing orbs of fire looked out from the deep hood. The most disconcerting fact was that he did not speak – not physically. Every sentence he uttered appeared in his mind – which was something Quisilia did all the time.

But the Overmind was nowhere close to the system. He didn’t know where the Overmind was currently, but it was hundreds of systems away at minimum. And yet he was capable of finding his mind, and communicating directly to it.

He didn’t know why he really gave a verbal update, as the Overmind was doubtlessly reading his thoughts. Habit, presumably.

*Activate the Mosrimor Orbs.*

Ravarian nodded. “Already done when we noticed the Agent.”

*Good.*

“Should I send the SPECTREs to them?” Ravarian glanced to the video feed. “I would prefer they not penetrate too deeply into the station.”

*Unnecessary. I will handle XCOM. It is time they understand where they trespass.*

“The machine may pose complications,” Ravarian pointed out.

*One machine can be handled. I would prefer it is captured intact.*

“Very well,” Ravarian nodded. “I will let you handle it then. The station defenses will continue to stand by.”

He turned back to the feed, as the hologram behind him vanished.

He was very interested to see how the Overmind would handle this intrepid XCOM squad.

It promised to be informative.

***

*Mars Observation Station – Mars Orbit*

6/4/2017 – 7:07 A.M.

The Collective was not making it easy for them. In each hallway, in each room they entered, there was obstruction every step of the way. From all the doors sealed, forcing Knight to weaken and break them, or he or the Chronicler to move everyone through. The oxygen was being pre-emptively vented out of each room and hallway.

They appeared to have underestimated how controlled the security systems were.
Oxygen was actually a concern, since they were clearly being monitored and predicted.

More to the point, Kunio felt something was wrong. All of them did to some extent.

“There should be something else,” Geist muttered as they cleared the small room. “They’re shuffling everyone around. We should have encountered more personnel by now.”

“Workstations have been disconnected from their network,” JULIAN stated, retracting his port tool and standing to his full height. “They are leaving no vulnerabilities. Powering on is useless when the connection has been cut. Clever. They are wise to not allow me a chance to break their system.”

“It’s clear that they are using Mosrimor’s own orbs,” the Chronicler said, pacing the room. “I can counteract the worst, and allow us to teleport away. But what I can do is limited beyond that. It is difficult enough holding back the passive influence of a Sovereign.”

Sylvia looked up, at an invisible camera – or a visible one, since there were certainly cameras throughout the station. “I feel like we’re being led into a trap.”

“The mission may be pointless,” Kunio wondered. “We can’t extract anything useful if they disconnected from the network. The Zar’Chon must be gone at this point.”

“Capturing or killing the Zar’Chon was a secondary objective,” Geist said neutrally. “We expected this as a possibility. As for data extraction, we are still moving towards the main datacenter. If they are willing to sever the connection, then it will disrupt their data flows Collective-wide here. Stations on Earth will experience it, and they do not want that. If we force that, it will be acceptable. Destroying them is also advised.”

At that, Kane fired, permanently taking the workstations offline.

Then it hit him all at once.

It was like a massive pressure had been placed upon his mind; a weight that was beyond anything he had ever experienced before. It was a migraine fare more intense than anything he had ever felt before, a splitting pain that had only one association he could think of.

Telepathy.

He’d never felt a telepathic attack like this though.

The soldiers around him were not faring any better. Sylvia and Xarian had frozen completely, a telltale sign that the Manchurian Restraints had kicked in and were locking their bodies down. The Chronicler gave a shout and waved his hand, and both of them disappeared into a portal, probably back to Earth.

Kunio immediately knew why.

They all knew too much. Whatever was attacking them couldn’t learn what they knew.

All it seemed to make Kane was angry, but that didn’t stop the Chronicler from moving him back too, leaving only the psions. The Chronicler put a hand to his head, as the pressure and attack intensified. There was an alien mind now; one which touched the outskirts of his mind.

Was that just the prelude?
There were only a small number of Ethereals – or psions for that matter – which had this kind of power. The Imperator – and Overmind.

The mind that extended itself was old.

It felt old.

Kunio blinked through the pain, putting everything he had into protecting his mind from the Ethereal pushing against him. His vision blurred, and when it cleared there stood the orange-robed Ethereal, doing little but appraising them. It was probably an illusion, but Kunio raised his rifle regardless and fired.

The bolts went right through the figure.

Futile. Much like your species.

He had heard the voice of the Overmind described as haunting and almost scratchy. It was the most alien voice he had heard from an alien; it was not welcoming or pleasant, it was the voice of something which did not know what it should sound like; the voice of something which had no mouth to speak.

The pressure intensified, forcing him to place a hand on his helmet to try and alleviate the pressure. Neither the Chronicler or Geist were faring much better, and the latter had power rippling around him. Knight was leaning against the wall, breathing heavily.

Pointless. Your vaunted technology is useless. Your nanoweapons. Your machines. You are reduced to shells through which I can use as I wish. And you believe that we fear you.

The voice was not mocking, just as neutral as stating a fact.

What threat do you pose to us?

“Enough that you had to intervene personally,” the Chronicler growled, standing up and blue power enshrining him. “You believe you can challenge a Sovereign and prevail?”

The pressure on his head decreased slightly. The Overmind illusion simply looked to the Chronicler, now fully merged with T’Leth.

Your kind prides itself upon being the dominant, Sovereign. Yet you struggle against me. Endemic of your failings. You are little more than a galactic pest, fleeing and hiding. You are an annoyance to your peers, a forever raging beast incapable of victory or long-term strategy.

The Overmind looked to Geist. Know this XCOM, the time will come when you shall fail, and when it happens, T’Leth will abandon you. He is a Sovereign, and has no interest in preserving anything but himself. As all Sovereigns do.

T’Leth laughed through the Chronicler. “You know nothing of me, Overmind. You and the Imperator fear me, it is why you have not invaded Earth yourselves.”

We shall not be goaded into action. We fear no Sovereign, puppet. We have done what no species has before – utilized two Sovereigns to carry out our agenda and will. Why should we fear the dubious claims of another?

“You are a fool,” the Chronicler faced the illusionary Overmind. “The Bringer uses you to his own ends. Mosrimor will abandon you when you crumble.”
Then we shall not crumble, Sovereign. Flee. You know you cannot stand against my power – not without sacrificing protecting your allies. You have no power here, flee little puppet. Take your pawns with you.

The pressure against his mind redoubled, and he gripped his helmet tighter, trying to alleviate the pressure. It felt like he was getting shot repeatedly in the head. He feared he was nearly ready to pass out.

“Geist,” Knight breathed, collapsing to the ground. “I don’t know if I can keep him out…” she let out a pained moan. Geist was standing stoically, tense and power rippling around him.

Make your choice, puppet. I know there are things you fear me learning. I will break their minds if they remain. A day, a week, or a month, it matters little to me. Time has no meaning to the immortal. I am the Overmind of the Ethereal Collective, I faced the hordes of the Synthesized. I stood before the combined power of the Hive Commanders.

The orange eyes seemed to glow brighter. You are only a puppet.

“Do not expect the future to be so forgiving, Overmind,” the Chronicler growled. “Do not think I don’t know how you are empowered now.”

I grow tired of this, puppet.

Kunio screamed and could swear he felt his skull crack. He heard something seem to break; klaxons and ringing in his ears as he hung onto his mind by only the barest of threads. Knight joined him in their shared torture. Make it stop make it stop make it stop make it stop.

He saw the Overmind wink in and out of existence, vision become blurry and clear, and everything in the room come into various shades of focus and fluidity. The last thing he saw was the Chronicler turn – was it to him? – and wave a hand and the world blurred around him and he found himself back in XCOM somewhere.

He didn’t pay close attention to where.

Kunio just collapsed to the floor, and passed out.

***

Office of the Chancellor, ADVENT HQ – Switzerland

6/6/2017 – 12:12 P.M.

Saudia sat at the rounded table which had been set up in her office as her foreign guests sat opposite or to the sides of her. To say she was in a good mood would be…slightly inaccurate. But was she in a satisfied mood? That was fair to say. A stark message was being sent across the world because of her actions.

Today would be another message.

“Thank you all for agreeing to speak today,” she said, lacing her fingers together as she looked to each of them. Hans Ohlin, Kaisa Saarela, and Kjell Treschow, the Prime Ministers of Sweden, Finland, and Norway respectively appraised her in response. All of them bore stern expressions, and it was no secret that they did not particularly like her.

She’d been fully briefed on each of them long before they had set foot on ADVENT soil.
ADVENT Intelligence had put together profiles on them since the beginning, and as the war had gone on, only added more and more to them.

The most ‘reasonable’ of the three was Kjell, and only because he was heavily influenced by the military. If there was anyone who could be swayed to join ADVENT, it would be him. He didn’t approve of many actions ADVENT had taken, but in press conferences he had shown an understanding that the writing was on the wall, and ADVENT was inevitable.

He was the weak link here.

Hans and Kaisa were far more problematic. They were fully convinced that ADVENT was an enemy and were staunchly opposed to joining in any capacity. Even as their respective militaries pushed for something, each of them were firmly opposed to ADVENT. They had in fact internally designated ADVENT as the largest national security threat after Canada had been annexed.

Saudia found it highly ironic considering soldiers of both nations were serving in XCOM specifically. How short-sighted and selfish, and both of them went out of their way to criticize ADVENT domestic policy, and had gone so far as to declare their nations as ‘the last bastion of democracy’.

All very amusing. She was only half-surprised they’d agreed to come at all.

The impending economic and civil collapse had doubtless forced their hands.

And people believed sanctions didn’t work.

She did not consider herself overly vindictive, she was perfectly willing to work with all of these leaders, but it was a two-way street. If they continued to oppose her, she would be lying if she wasn’t going to take some satisfaction as their pride destroyed them. “Of course,” Kjell said. “It is past time we met in person.”

“Indeed,” Kaisa appraised her stone-faced. “You have much to answer for.”

So it was going to be like that.

Very well.

“As do you,” Saudia nodded. “Explanations are owed all around. You will forgive me for being occupied at times. There is a global war I am managing at the moment; the smaller issues I have been forced to delegate to the ADVENT Diplomatic Service. I hope there is no offense taken at that.”

“Your cultured words aren’t going to work on us,” Kaisa spat. “ADVENT has been waging a systematic campaign of destruction against our nations. And I am not naïve enough to believe it was authorized by anyone other than yourself, Chancellor.”

Saudia raised an eyebrow. “Destruction is a strong word, Prime Minister. I have seen destruction. I toured New York yesterday. I’ve visited the shelled ruins of bases and forts that came under alien bombardment. Can you please elaborate on the destruction ADVENT has wrought on your nations?” She looked to Kjell. “Prime Minister Treschow, has there been an invasion of Norway that has happened without my knowledge? If so, I promise that those responsible will be-”

“Enough, Chancellor,” Hans interrupted flatly, eyes staring hatefully at her. “You know exactly what we mean. The sanctions ADVENT imposed. You cut us off from the outside world.”
She allowed a smile. “Ah, that. Unfortunate, but necessary. Considering that ADVENT is working to protect the entirety of Humanity, we must consolidate our resources, and nations who refuse to participate in the protection of our species must take second priority.” She grew more serious. “I will be blunt with each of you – I do not respect cowards. Every hour there are hundreds of men and women who are dying to ensure we are not living under alien occupation. And you have ensured your nations sit on the sidelines and remain neutral.”

“Chancellor, with all due respect, this is not as simple as you make it out,” Kjell cleared his throat. “ADVENT has – multiple times – presented us with an ultimatum – join us or be cut off. I have been open to working militarily with ADVENT, but that is not good enough. We must join ADVENT or not at all.”

“In essence, what you want is us to protect you, arm you, and not be subject to the regulations and laws of ADVENT,” Saudia nodded. “I’m aware of this. It would be one thing if your military was useful, or had a practical use. The militias of each of your nations would be annihilated against the Collective, and are useless. To make your militaries worth anything, we would need to arm and equip you. You offer us little except manpower, and retain the trappings and norms of the old world. That is not acceptable.”

“Forgive us for not wanting to join your new world order,” Kaisa narrowed her eyes. “I will say what you are, Chancellor, you are an empire. ADVENT is an empire. You have no interest in protecting Humanity. That is simply a means to an end, you and your imperialist allies only care about the conquest of the rest of the world – willingly or otherwise.” She looked around the table. “We all saw it in the Middle East. We saw it in Canada. ADVENT only needs an excuse to conquer. Consent doesn’t matter.”

Saudia took a breath and rolled up her sleeve to the elbow where the prosthetic ended. “I am unsure where you got your assumptions,” she said in a low voice. “But there are few things I take offense to. Stating that I am in this for my own personal ambition, that I do not care about the war which threatens us, is insulting. I have stood against an Ethereal, and the scars on my neck prove it. I was nearly killed in Beijing as the Bringer cult descended upon the city. I have sacrificed in this war. Do not dare suggest otherwise. You have sacrificed nothing. You simply sit and complain, in your place of privilege. You have the luxury of critique and complaining without fear of death, assassination, and failure.”

Saudia leaned back. “Your reactionary and juvenile argument does you no credit, and displays your ignorance. I do not know if you know anything about ADVENT, or have elected to ignore it. If you knew even the most basic facts, you would know our rules for annexation and invasion. You would know of the Oversight Division. To call us an empire is to show the limits of your worldview; of simple black and white.”

Kaisa flushed red, though Hans interjected. “That does not change the fact that your intelligence agencies have free reign to spy on citizens, people are not even given lawyers, and your prison system is utterly inhumane and abhorrent.”

Saudia raised an eyebrow. “And?”

“And we are better than that,” Hans insisted. “You and the rest of ADVENT may not care, but we have some standards for how we view and treat others. You see citizens as commodities and tools. You don’t see those you believe as enemies or criminals as even Human. Your only justification is a vague belief in ‘the greater good’. We do not agree on a fundamental level, which you either do not understand, or do not want to.”

“I certainly understand, Prime Minister,” Saudia answered coolly. “And I do not dispute anything
you say. However, I feel far more confident in defending myself with data and logic than the moralistic foundations of your own arguments. I accept we disagree, and I firmly believe that you are simply wrong.” She cocked her head. “ADVENT, if you have not noticed, is doing as well as can be expected. We are aggressively eliminating homelessness. We are dropping crime significantly. We have provided healthcare, education, and shelter to all. We have done something no government has done in the history of our species. You may not agree with our philosophy, Prime Minister, but it is working.”

She leaned forward. “I have resolved to bring all of Humanity into the modern age, and I will do it even if I have to drag them kicking and screaming.”

“Enough, this is pointless,” Kjell sighed, lifting a hand. “We are here to discuss issues. Philosophy can be debated later, there are more practical problems and differences to resolve.”

“I agree,” Kjell being a voice of reason again. “I do not want to continue the sanctions. So what I wish to know is what it will take for you to join ADVENT. I do not particularly care for any of you, but that will not prevent me from making a deal which services Humanity and the war effort.”

“Remove the sanctions, first and foremost,” Kaisa immediately demanded. “And we will work with you. I, nor any in Finland, will join ADVENT. I will also insist that there is a binding agreement between us and ADVENT stating that there will be no infringement on our sovereign nation, and the agreement we come to is fully honored.”

Well, she was certainly ambitious. “And in return, what do we get?” Saudia asked.

“Proving ADVENT is not heartless and willing to drive a nation to collapse to satisfy their petty, childish tantrum that not everyone bows down to your empire?” She sneered, all veneer of composure gone. Not fully surprising, her mental state had worsened as riots were starting, and she was reluctant to tighten military control.

She was under a lot of stress.

Saudia was trying not to take it personally.

“Noted,” was all Saudia said in a calm voice. “Though I doubt our diplomats will be inclined to accept.”

“Mine are the same,” Hans said. “However…I will be willing to bring it to a vote. On the matter of ADVENT statehood. If ADVENT shows it is willing to negotiate, it may sway them. We are willing to allow diplomats to come and make their case before the legislature.”

“You give a hollow promise,” Saudia said bluntly. “Do you believe I am ignorant? A vast majority of your legislature has condemned ADVENT – many in the past month – and have stated their intentions to prevent your ‘assimilation into ADVENT’ as they call it. Clever, but I listen to what my Intelligence agency tells me.”

His face was stony. “That is the best I can do. It would be democratic malpractice to unilaterally bring a nation into ADVENT without even so much as a vote.”

“Then have one,” Saudia said. “The United Kingdom agreed to one, and they respected the will of the people. I am not unreasonable, if you wish to put it to a vote, then by all means do so. I will ensure that it is accepted, and the sanctions are lifted.”

“And then interfere in it!” Kaisa interjected. “We know that is what you will do.”
“Of course we will,” Saudia snorted. “We have an invested interest in the outcome. But I can assure you that it will be fully within the confines of the law. If more people are receptive to our sponsored messaging, is that not a problem with the opposition? Do you insult the intelligence of your voters so much that you believe they will vote based on incomplete information and not do their proper research for such an important decision?”

Kaisa gaped. Saudia smiled.

Go on, say it. I know you want to.

“A vote is out of the question,” Hans disputed with a shake of his head. “Not with the state of the nation. We are willing to bring it to a legislative vote and consider a vote if the legislature votes against ADVENT statehood. But not for months.”

Not expected from either of them. Unfortunate, but it was past time something was done. Saudia clicked a button on the table, and focused on Kjell. “And what of you, Prime Minister?”

Kjell ran a hand through his hair. “We disagree fundamentally on many issues, Chancellor. However, we are reaching a point where the current posture is unfeasible. The aliens are the largest threat to all of us, and we are not prepared. Our nation is not prepared. I agree with my colleague that I cannot unilaterally bring our nation into ADVENT, but I see no choice here.”

He looked to his colleagues. “ADVENT has done us a service, even if it has just been to distract the aliens. They have prevented the war from reaching us, but that will not last forever.”

“They’ve waged economic warfare on us instead!” Kaisa insisted. “Is that somehow better?”

“Oh of course they did,” Kjell snorted. “They don’t think like we do. It’s a matter of pragmatism for them. I know very well why they did it, and by their logic, it makes sense. I would never condone it, but I suppose it has worked, and beyond that, we cannot continue to sit on the sides doing nothing.”

He looked at Saudia. “Fine. Show me ADVENT is reasonable. Remove the sanctions – actively provide us with enough food, medicine, and supplies to make up for your months of starvation, and the moment that is signed, I will call for a referendum on ADVENT statehood and simultaneously introduce legislation asking the same thing. I cannot guarantee success for you in either, but I will give ADVENT a fair case to make to my citizens.”

At last, a reasonable person. Saudia nodded. “We can accommodate that. It will be done within the day, and approved by the time you return to Norway.”

“Kjell, ADVENT isn’t going to play fair,” Hans warned. “You’ve effectively given them control of your country.”

The Prime Minister sighed. “The world is changing. I have to do what is best for my citizens. If they choose to join ADVENT, then I have to respect that. Resisting change is failing, and the aliens will come. I will not have my nation become an alien stronghold because I clung to something that is dying.”

“Very well,” Hans looked to Saudia, not bothering to hide his disgust. “We have made our own demands clear, take them or leave them.”

“Understood,” Saudia responded. The door to the room suddenly opened, and an aide came up to her, phone in hand. “Excuse me for a second,” the aide handed her the phone.
A single sentence sounded. “It’s in motion. Conference is on now for both. Glad the Norwegian did the right thing.”

A click as he hung up.

“Are we done, Chancellor?” Hans asked.

She smiled. “Almost, I’ve received an update I think all of you should see.”

She stood and walked over to the hanging television, and it was right on a news station, where the breaking news banner displayed the latest development in all its glory.

**SWEDISH MILITARY ASSUMES CONTROL OF LEGISLATURE/FINNISH MILITARY HAS DECLARED A STATE OF EMERGENCY//LEGISLATORS OF BOTH NATIONS UNDER HOUSE ARREST//LAW ENFORCEMENT RUMORED TO BE SUPPORTING MILITARY ACTION**

Kaisa paled. Hans grew red and stood, almost shaking in rage. Kjell just looked to her, a clear question in his eyes.

Saudia just maintained her smile.

“The Supreme Commander of the Swedish Military is preparing to make a statement,” the anchor was saying. “We’re going live to that now.”

Supreme Commander Astrad Dahlman stood in front of a podium, all of the ranking officers of the Swedish military behind or beside him. His face was somber, but his voice firm as he spoke in words which were immediately translated. “[Citizens of Sweden, it is with a heavy heart that the actions we have taken today have been necessary, but for the past months we have seen our country descend further into chaos, with an inefficient legislature who lacks a clear understanding of the current difficulties, both within and beyond the country.]”

[We have been told that the greatest threat to our nation is not the aliens who threaten life and freedom for all Humans, but ADVENT, who has devoted themselves to fighting this extraterrestrial menace. We have attempted many times to emphasize the threat of the Ethereal Collective, to little or no avail. We cannot afford to wait any longer. When the aliens come to Sweden, we must be prepared to face and defend them. Our leaders have failed us, but we will not fail you, and we are immediately opening negotiations with ADVENT for aid relief and arms to defend our nation.]”

[We request that the Prime Minister and all current sitting members of the administration formally resign today, and help ease this transition process.]

Saudia noticed Hans storming over to her, and with a blur of his hand, slapped her across the cheek, utterly quivering with rage and fists clenched, even as he realized what he had done. Kaisa just sat in her chair, still as a statue and with a look of pure disbelief on her face.

Saudia rubbed her cheek. “I’ll allow that one, former Prime Minister,” she said quietly. “But I would advise you not to do that again.”

“You…you…” words failed him.

“I did nothing,” she told him. “But it is certainly heartening to see that some in your country have a firmer grasp of the big picture than the supposed leaders of a nation.” She softened her voice. “But I wouldn’t worry. You’ll see in the future that what you fear from ADVENT isn’t true. ADVENT will bring your nation prosperity, and even if it takes you years to see it, you will know it was the right thing to do.”
She had her gaze sweep to the other two. “Now if you will excuse me, it appears I have several nations to speak to – and likely a couple to welcome into ADVENT. Prime Minister Kjell, I look forward to working with you in the coming weeks.”

He just nodded, still as stunned as the rest of them, likely thinking of how close he might have just come to a military coup.

Saudia left the current and former heads of state in the room to themselves. They could stay there as long as they wanted, her work was done.

And it was certainly fine work, if she did say so herself.

***

Palace Exterior, SAS Command – Nigeria

6/4/2017 – 9:12 A.M.

This was definitely one of the largest press conferences Betos had ever done. Every single permitted outlet was here, and there would doubtless be dozens more across the Internet and ADVENT. There was no chance that ADVENT would not be watching them, and just waiting to see what her reaction was.

Mox and her other advisors stood beside or behind her, with a line of SAS Soldiers before and behind, and at various checkpoints on the premises. She didn’t know what there was to fear yet, but it was almost certain that ADVENT would try and do something. Prior to the expulsion, Macula and the Zararch had done sweeps removing or eliminating XCOM and ADVENT Intelligence agents and sources, which she’d continued with the fledgling SAS Intelligence, though she knew it might not have been as effective.

There were unlikely to be a sudden influx of agents, at least not dangerous ones. Or enough that her people couldn’t catch them. But it only took one, and by the end of today they’d have Collective support once more.

Time to start.

“ADVENT has launched a nuclear strike against Lagos,” she began somberly. “We are still assessing the damage, but the casualties are already in the tens of thousands. We expect the numbers to rise as we begin cataloging the dead.”

Saudia liked showing images in her conferences to make a point. Betos only felt it appropriate to emulate. Let the ADVENT networks censor her and see how many took note. A screen nearby showed the collected images. “Lagos was not a military target,” she said as the many journalists and reporters fixated on the slideshow. “It was a thriving city, growing only more prosperous. Millions of people lived there. Families, women, children. Civilians.”

She took a long sigh. “There isn’t much that can be said. ADVENT has crossed a line that they have not before, which is surprising even to admit. Through this action they prove that their rhetoric is a lie. They are willing to target and kill anyone who they identify as an enemy, be they soldier or civilian. They do not make the distinction, and never have.”

Betos looked around the area. “I’ve prided myself and the SAS as being willing to hold even our allies to account. When Isomnum terrorized Beijing I supported the Collective in condemning them. When they indiscriminately bombarded ADVENT, and the Harbinger Trask attacked civilian cities, I took action. None of this mattered to ADVENT. I and the SAS have aligned with the
Ethereal Collective, and ADVENT does not consider us Human. We are and will remain traitors to them forever. Perhaps, in my naivety, I believed ADVENT could understand context; perhaps they could respect our choice.”

She bowed her head. “If this is not clear evidence that dissent and wrongthink is not tolerated in ADVENT, I do not believe anything will. They are not interested in coexistence, or peace, or tolerance. They only care about submission and control. Those who stand against them will be beaten into submission or exterminated.” She raised her head back up.

“It is time the world decides to take a stand. ADVENT has made their intentions clear. We stand opposed to ADVENT, and we will no longer be idle in bringing them to defeat,” she paused. “The Collective remains our ally, and has offered to provide assistance to the devastated city, which I have accepted. I will emphasize that I and the SAS will continue to hold our ally to account, but make no mistake – the Ethereal Collective is our ally, and we will need them to stand strong against the tyranny of ADVENT.”

There was an actual smattering of applause at that. The people here were torn between shell-shocked and furious. Some had tears in their eyes, and it wasn’t out of the question that some had people living in Lagos. “The Chancellor has-“

A gunshot sounded.

Betos instinctively ducked behind the podium and the crowd burst into pandemonium, with people dropping to the ground and fleeing. She pulled out her pistol and cursed the fact she wasn’t wearing armor. Her guard marched up and completely surrounded her. One gave her a bullet-proof helmet which she put on.

A few more shots rang out, and Betos saw the lone gunman from far back, who was now standing before Macula, who had emerged and had frozen him with a hand. Soldiers rushed the man, forcing him to the ground and cuffing him. Macula vanished, probably searching for any more assassins.

“Marshal…” one of the guards said quietly, and directed her to the ground near the podium.

Her heart and blood froze when she saw him.

No, no…

Mox lay sprawled on the ground, dead and in a puddle of bright red blood by his head. The bullet had been a direct hit into his temple, and there was not much left. He’d probably died instantly, but that was no comfort to her right now. All she could think of now was her movements before the shot.

The assassin had to have been aiming for her, and he’d missed.

And hit Mox instead.

She fell to her knees and placed one hand on one of the now-still hands, gripping it. They’d been together for so long, both of them starting on this journey since the beginning. She had imagined that whatever would happen to one, would happen to both. He’d been with her every step of this difficult, painful, and harsh journey.

It would be one thing if he died in battle, against an enemy. But…not like this. Not by a cowardly assassin. Not by accident. Not because of her.
She closed her eyes, and the tears welled up underneath.

She had to go on.

That was what he would want.

But for this, and all of their atrocities, ADVENT would pay dearly.

***

Medical Bay, Mars Collective Base – Mars

6/4/2017 – 8:12 P.M.

“What’s wrong?”

Hallian didn’t hear her at first. He was too focused on the tablet in his hand, reading the projected words and video playing. The last hours had been a whirlwind, from the attack against the Observation Station, to attacks all around the world, to now…this. He was even hearing rumors that a Sectoid shipyard had been attacked of all things.

What was happening?

It shouldn’t be happening like this. It shouldn’t be happening at all.

“Hey,” a hand rested on his shoulder, the tactile touch letting him look up at Yang’s concerned face. He didn’t know how he looked right now. Probably terrible. “What’s wrong.”

He shook his head. “What isn’t wrong seems to be the question.”

“Considering the past day, I don’t disagree,” Yang sat down beside him. “But I can feel when something is wrong. For you personally.”

“I checked news on Vitakar,” Hallian said. “I usually do. I saw this.” He handed the tablet to her. It might take her a few minutes to go through everything, so he leaned back and closed his eyes as she scrolled, read, and watched everything which had come out of the planet in the past day.

Just…why?

If there was any race who absolutely did not deserve to be targeted and killed, it was the Dath’Haram. Yes, they were often derided as pacifists and idealists, but they were all used to it at this point, and even took it as a point of pride. But if anything was known about their people, it was that they were open, friendly, and peaceful.

It…didn’t make sense.

The Nulorian had always hated them, and he didn’t know why. Just because they were peaceful citizens? Because they supported the Elders? Because the Nulorian wanted to wipe the Dath’Haram out of some horrific genocidal justification? This level of senseless hatred was anathema to everything any normal sapient being should believe.

Nulorian were terrorists, or so they were said, but he’d believed that some of them had reasons that could be understood. The Zararch could certainly be overzealous, but even if he could never condone terrorism, he could understand how they reached that point. But this was just too far of a line.
Had the Nulorian done anything worse than this?

He heard Yang set the tablet down. “I’m sorry.”

“I just wonder…why?” He said. “What did we do to them?”

“And that is reason to kill us?” He demanded.

“To them, simply living is worse than nothing,” she said quietly. “We’ve had our own share of radicals and terrorists in the world. Their worldview becomes so…warped that they become something they’re supposedly fighting against. The Nulorian seem to have reached this point.”

She sighed. “I’m not educated on your world. Or people, not truly. I don’t know what this means beyond the obvious, but I know that the deaths of thousands is wrong.”

“More will die in the fires,” Hallian shook his head. “Burning the forest is…difficult to describe to an alien. Or even a non-Dath’Haram. I grew up in that forest, it is teeming with unique life not seen anywhere else in the galaxy. We’ve melded with the forest, a true symbiotic relationship. It takes care of us and we do the same to it. To burn it – to attack it – is an attack on my whole people.”

He rarely felt true anger. But he did feel it now.

“What will your people do?” She asked.

“What little we can,” Hallian shrugged. “I can guess. We will rebuild. We will repair. But…so many have died. Our leaders were targeted. Many perished. I don’t think we can forgive or forget…not this time.”

“You will fight?”

“I don’t know,” he was silent a few seconds. “That is my instinct. That is what many I think will feel. We keep being targeted. Our schools, our leaders, our children, even the Crypt was attacked. The Nulorian keep coming after us, even when we have done nothing to them.” He looked at Yang helplessly. “How long can we go before we do something? We don’t have enough Bladedancers to protect us, clearly. We abhor war, but is our pacifism any better?”

Yang looked at her hands. “You are not asking the right person for that. I’m not a pacifist. Never have been. Never made sense in this world. Or this galaxy, I guess.”

“Unfortunately,” he said in a heavy voice. “I think you may be right.”

“What are you?” Yang asked.

“I don’t know right now,” he admitted. “I joined to save lives, to lessen the suffering of this war, even by a miniscule amount. I said I will never kill. Out of values I believed in; ones that were taught and I saw every day.” He let out a short bitter laugh. “And I wonder if those ever mattered. It doesn’t matter if we believe in something better if we can’t stop ourselves from getting killed by people who laugh at our beliefs.”

Yang just nodded. “I think a lot of people are reevaluating what they believe as this war keeps going on.”

“Including you?”
“Yeah,” she looked to him; eyes distant. “All I wanted was revenge and now that’s…nothing now.” She looked away, shrugging. “I don’t even hate ADVENT. Or XCOM. I hate the Imperator more than them for what he’s allowed and continues to allow.”

Hallian stiffened as she said that, and Yang shook her head. “No one is listening here. And I’m tired of lying. This whole war…what we’re up against…” her legs moved idly on the seat. “I don’t know anymore.”

He wasn’t sure what to really think of how open the Battlemaster’s Harbinger was being. They were certainly friends now – a surprise, but not necessarily a welcome one – and it was clear she was not as happy or content as he would expect. He wasn’t fully sure how best to read Humans beyond the obvious, but she wasn’t a typical one.

She’s away from her people, surrounded by aliens, and caught up in something she doesn’t even believe in. Of course she’s not typical.

“Then…” he wondered how to choose his words. “What are you fighting for now, if not victory?”

She propped her chin under a fist, and gave it some thought for a few seconds. Her eyes stared ahead sightlessly, the light of the room shining off her darkened skin with an almost shimmering coloration to it. The words that came were halting, but with conviction behind them.

Words she meant.

“Change,” she looked at him. “And change will come. One way or another.”

To be continued in Chapter 63

Sever the Head

Chapter End Notes

Well, there’s been a little while since the last update, and quite a few things that are worth highlighting since that point that I’m not sure I’ve mentioned before. If you haven’t, be sure to check out the two spin-off stories for this series that I and the Editing Team have gone over, which are OfficialWeedTester’s XCOM: New Blood, which follows Dawn Conley and her journey joining XCOM, and Areleh’s XCOM: Pantheon Rising, which follows the origins, foundation, and exploits of the Pantheon.

Second, you have probably noticed that there has been some actual cover art for the trilogy (Yes, not just Advent Directive), which was made by HailtotheKing who has been making emblems and seals for the series. There’s also been artwork done of various characters from artists I’ve commissioned.

Cover Art: https://imgur.com/a/7WzAd07
Seals and Emblems: https://imgur.com/a/FEetyZ4
ADVENT Legions: https://imgur.com/a/X43XiuO
Third, Aberron is the newest member to join the Editing Team, and I’m very much looking forward to his impact on this project going forward.

Thanks for reading, as always. There is likely to be interesting stuff that will be happening in the future as well. When anything does, I’ll be sure to make a note here.

A final thing to say is that the COVID-19 pandemic is continuing to spread pretty fast across the US, and the rest of the world for that matter. Please be sure to take precautions, wash your hands, don’t go to work if sick, and stay in for a few days to limit the spread. I am aware that this isn’t feasible for everyone, but please do what you can to take care of yourself, and the others around you.
Sever the Head

Shooting Range, Abuja – Nigeria

6/5/2017 – 8:00 A.M.

The rifle felt good in her hands. Familiar. Simple.

Cathartic.

She’d never been the greatest marksman, either in Israel or later in ADVENT. The shooting, the killing; that had never been her primary motivation for military service. Patriotism, leadership, brotherhood; all of that was more important and consequential than shooting guns. Some people memorized gun types, and could list off the minute details of each, and had the perfect one for each situation. No shortage of those people.

Not her though.

She hadn’t done it regularly for weeks now. Some evenings she and Mox had gone out, had some light banter and a shooting competition, before discussing what had to be done next. Never serious, and she’d privately wondered if she’d ever truly be on a battlefield again. She was head of a multi-state power bloc now.

Those kinds of people didn’t go into battle.

How quickly things could change.

She couldn’t decide why she was going to do this. On paper it was simple. It was to send a message of resilience, the leader of the SAS on the front lines to defend their nations. It was to contrast Saudia who would never risk herself like this. Saudia was not a soldier, and had probably never contemplated it.

But on a deeper, personal level, this was something she needed.

Perhaps she privately wanted it to end.

But not before she made them hurt.

She needed to make ADVENT somewhere, somehow, feel the persistent pain she felt now. It was more than just Mox being assassinated. That had been the catalyst for her pain she felt now, but it had exposed just how…fragile everything was.

She’d sunk every waking moment since deciding to take a stand against ADVENT, trying to do something to make it better. To show there was an alternative to what ADVENT was imposing over the world. And at every single obstacle she faced hardship, hurdles, cowards, and tyrants.

There seemed to be no good people left to hold power.

*And I am somehow better?*

One shot, one kill.
Not anymore.

It seemed…pointless now.

What was the point of trying to be better, to stand for something, if all it did was make you weak and cause you to lose your friends. This was *her fault*. Because of her stupid insistence on trying to impose some kind of accountability to ally and enemy alike, the aliens had withdrawn – at her order – and ADVENT had probably laughed themselves silly as they sent in the assassins

She had no one – *no one* to blame but herself for that.

Betos had watched the video of the shot; more times than was healthy. She didn’t think the assassin had been aiming for her at all. There’d been nothing obscuring the shot. The sniper was either utterly incompetent – or she’d never been the target in the first place. ADVENT didn’t send the incompetent.

Mox had been the target. It made perfect sense as she’d thought about it. Why exactly would ADVENT want to kill her? She was just making it easy for them.

*Exploitable. Naïve.*

*Why tamper with a useful idiot?*

She fired again.

One shot, one kill.

She’d known ADVENT was ruthless. They were driven by a machine’s logic. But this simply seemed…cruel. Done for no other reason than to hurt her.

Then again, what had she truly expected? For ADVENT to approach an assassination with dignity and respect? That ADVENT was somehow not cruel to begin with? When they annexed countries? Sanctioned and starved others? Conquered the Middle East in a modern-day crusade? ADVENT was not moved by the plight or consequence their actions caused.

All in service to Humanity.

What exactly did they care if they killed her one friend? Her one constant anchor in this madness?

*They didn’t care.*

She fired.

The gun clicked.

She peered down at it and sighed. New magazine needed. She had no intention of stopping, but had no more magazines on her. No more tears, she had shed all of those at the small, private funeral they had held. A few more had come afterwards at the realization that she was now well and truly alone. The aliens would help, but she didn’t implicitly trust them.

Even within her own soldiers, there were none whom she had a bond with like Mox. Maybe in the future that would change, but she didn’t know. All she knew was that she had to move on, and make ADVENT hurt. Somehow. Some way.

She turned to go to the tables with clips laying on them and froze in place.
“Hello, Marshal Betos,” Patricia Trask said.

Beyond the fact that she towered over Betos – it was intimidating just how large the Harbinger was in person – she almost seemed somewhat ordinary. She didn’t wear any armor, only some kind of Collective officer uniform of white and gold, with the Collective emblem embroidered on the chest.

Her chestnut hair fell sharply to her shoulders, and her face was, surprisingly, sympathetic. Both hands were clasped before her. Betos was almost surprised she was here, considering she was thought to be badly injured in New York. But then again…she was the Imperator’s Harbinger. Nothing could keep her down for long.

Normally this kind of visit would have been…terrifying.

Now though, she just felt…apathy. She didn’t know what Trask could have come for. To chew her out for kicking out Keeper? To say, justifiably, ‘I told you so’ in regards to ADVENT? She doubted Trask could make her feel worse than she felt right now. “Harbinger,” she said in a dull voice. “I wasn’t aware you were coming.”

“I made an impromptu decision,” Trask answered, slightly nodding her head behind her. “Macula informed me what had happened.”

That made sense. “I see.”

“I’m sorry,” Patricia shook her head. “The area should have been secured beforehand. That should not have happened. I wanted to apologize for that.”

“Accepted, but unnecessary,” Betos sighed, walking over to the table and laying the rifle down. “I’m aware it’s my fault. You don’t need to dance around it.”

Patricia almost looked at her with a grim knowingness. “I lost my best friend too. Early in the war.”

Betos paused what she was doing and listened as she continued. “Her name was Paige. We’d been friends for…” she allowed a slight smile, thinking back. “A long time. Inseparable. We did everything we could together, no matter where we went, it was done together. We didn’t have secrets, we had a close, unbreakable bond. In a way that’s difficult to understand for people who don’t experience that.”

Patricia sighed. “We came into XCOM together as well, obviously. And she died to an alien. Something we didn’t understand. A mistake. In retrospect, I know what could have saved her – or at least given her a better chance of living. But at the time…it did feel like my fault. Losing that part of me she’d become was…hard.”

Betos hadn’t…expected this. The way she spoke; the same things she was saying, it was definitely real. “And how did you get past it?”

Patricia gave a wan smile. “You don’t ever forget, nor should you. But I had people who made it easier. The Commander himself actually helped me. He listened. I talked.” She paused. “You don’t have anyone to talk to here, do you?”

Betos shook her head. “Just him. There’s no one else I can really be…open with.” She indicated the area around her generally. “I’m leading the SAS. They need a leader. Someone to rely on. They don’t see me as a friend, not truly. Which is fine. Preferable in situations like this. But with him gone…” She breathed heavily, briefly closing her eyes.
Patricia nodded once. “You’re under more pressure than I was. I was just a soldier in XCOM then. The decisions were made by people above me. You don’t need to say how hard it is, I can feel it very acutely.”

Right, she was a psion. “I guess that’s something I can’t control.” Betos shrugged.

“Nor should you,” Patricia said. “It’s not healthy and doesn’t help. You have the right idea with… this. Taking it out on something.”

“Is there a better way?”

“I can only suggest what the Commander told me,” Patricia answered. “It helps to talk about it. Just saying it out loud. Remembering memories. Honoring them in a way, passing on what made them special.” She appraised Betos. “I don’t necessarily have the Commander’s… skill when it comes to things like this. But I didn’t come here to berate you, Betos, I came to help if I could.”

Betos had felt a lot of emotions regarding Patricia. Negative ones, because of the decisions she’d been attached to, and the orders she’d given. But those all just seemed to… fall apart now that the woman was standing before her, giving her support and a sympathetic ear when she needed it.

Whoever this woman was, she couldn’t be completely terrible. She couldn’t be a true monster like ADVENT said and what she’d privately wondered about – though why one would believe ADVENT was a question for another time.

And right now, she needed something. If the Harbinger was sincere…

“I wouldn’t know where to really start,” she said haltingly. “It’s… a lot.”

The Harbinger nodded as if knowing what she meant. “Let’s walk, and take your time. I don’t need to be anywhere, and I will be sure that no one disturbs us.”

***

Throne Room of the Imperator – Temple Ship of the Imperator of the Ethereal Collective

6/5/2017 – 11:00 P.M.

In the past few days she’d come to like this part of the ship.

There were other places of peace and quiet, but it felt more natural here.

A place to kneel, mediate, and think.

Quiet.

Focus.

Recover.

She had almost died. There was no avoiding this fact. She’d been beaten wholly and utterly. Partially due to her own arrogance, and partially due to the skill of her opponent. She was certain that she could have beaten Fiona – but all was easy in retrospect. Fiona had known who she was about to fight.

While she had not.
Not truly.

Even with the unknown capabilities of the woman, it was not an obstacle that could not be overcome. Yet those…capabilities…those had stuck with her. Telepathy or something else, she wasn’t sure. Her dreams after she had passed out had been confusing. Her life in endless branches; disorienting; disturbing; unyielding.

The Overmind himself had to be brought in, and return her mind to a state of comprehension, anchored to reality.

Echoes lingered.

Images of herself in other places. A doctor, a lawyer, a teacher. Images of herself looking slightly different. Some her hair color was different; altered. Cut short or left to grow long. In some she was married to a man she did not know, sometimes with children who had her features. Images alone would have been disconcerting, but it was the emotions tied to them which made them feel real.

It unsettled her. Feeling for people she did not know, over memories of things which did not happen.

The echoes lingered.

It forced some kind of retrospection. There had to be retrospection.

She realized that she missed having a Human connection; one which had frayed over time. People to talk to often. She’d had that in XCOM; she’d had that with Creed; the rest of the Internal Council.

Here it was…different now. The Imperator did not fully count, as they were joined on a far closer level. The aliens were either unsure of what to think of her, or did not like her. The few Humans here were apathetic or against her for her stances and actions, mostly those which echoed the Imperator.

Her talk with Betos had been one which she appeared to have needed as much as the mourning woman. It had been…good. Something beyond the disconnect between the scale of the Sovereign conflict and the everyday war millions experienced. With power like this it was easy to be…detached.

Easier.

Until retrospection was forced and what had been abandoned along the way was clear.

Perhaps abandoned for valid reasons, but the slide had occurred nonetheless.

She missed Creed.

It hurt now in a way it hadn’t before.

He’d listened when she’d had the dreams and visions from the Imperator.

He would have said the right things after this. She wanted that right now. It was something that even the Imperator couldn’t convey.

She’d tried reaching out to him. But the psionic shroud over the Praesidium prevented any from penetrating. So all she could do was look towards it, wishing she could speak to him. Let him yell
at her, hate her, whatever he would do. But it would be something.

But it was not permitted, not by T’Leth.

Perhaps with him gone, she could try again later.

In a way, she maybe owed Fiona a favor. She’d reminded her that she was still mortal. Still Human. The Imperator allowed her enormous power, but she needed to do more than wield power. More than that would be needed to succeed. The Commander would not surrender. Saudia would not yield. ADVENT would not fall from a simple push.

The actions which had been taken in the aftermath had been eye-opening – and yet not at the same time.

ADVENT was dangerous. The Commander was dangerous. T’Leth was dangerous.

All in their own way.

This was larger than just the Sovereign One. Should the Sovereign fall, ADVENT would still not give in – that was not how the Commander worked. The change in strategy she had been contemplating was now more and more justified.

Retribution followed retribution.

So it would be.

It had to be.

She felt him enter the Throne Room. The imposing, enveloping presence which she had grown comfortable around in these long months. It was not Creed, but it was…something. Something more than tepid words of comfort. There was very little that needed to be said, for the bond communicated it more quickly and honestly than words could suffice. Even without the mask, she knew it was something that grew stronger as time had gone on.

A comforting thing in times like this.

It is time to move forward.

Bring forward the end of the conflict.

The end of this war.

She could not agree more.

And she knew the steps she needed to now take.

***

Miridian’s Office, Nulorian Outpost – Borelian Wastes

6/5/2017 – 9:17 A.M.

The knife-slits of the Vitakarian bored into both of them.

Yet Miridian’s voice was measured. “I see.”
Nartha crossed his arms. “I don’t know if you really do.”

“Presuming I take your word at face value, which I have no reason not to, then I have a better idea than you think,” Miridian answered evenly. “I did not anticipate the Crypt would have one of the Faceless protecting it. I was unaware that there was another that existed.”

Nartha blinked at the term. “You knew this exist[ed]?”

“Not specifically this,” Miridian pursed his lips and paced around, clearly thinking. Trying to articulate something. “The Dath’Haram had been heavily involved in genetic modification prior to the Plague – which you are aware of. While the Zararch did not have complete access to the Crypt – they knew some of what was produced. Among them were the Faceless. I do not know the original name of the project, or even if that term is one used still.”

Shun, who stood beside him, asked the question. “What are they?”

“Organic automatons,” Miridian answered. “Or at least that was the best description which had been provided. Cultured Dath’Haram brains within an artificial shell from which a skeleton is built around. The Zararch believed it to be a true immortality project of some kind; a tribute to the vanity of expression. Infinitely modifiable. A Faceless could be anyone and look like anything. Vitakarian, Borelian, Human, Ethereal.”

“Transspecies,” Nartha finished slowly. “We were truly on that verge?”

“Closer than anyone knows,” Miridian humphed. “The Plague broke out before the idea could be refined and ‘produced’. At the time, it did not occur to me that this kind of immortality would also render them immune from conventional wounds. All that is natural is the brain.”

“One moment,” Shun lifted her hand. “How do you know this?”

“Because the Zararch have a Faceless,” Miridian answered tightly. “One - kept in an isolated station accessible only by Gateway. I never met the thing, and by all accounts it is very intelligent, and very dangerous. Even the Zararch know better than to try using it. I suspect they only kept it to study it.”

He frowned. “But the fact that there is – presumably – another, makes me wonder how many more are out there.”

It took a moment before Nartha caught on. “If there are more out there…then we wouldn’t know about them.”

“No, we would not,” Miridian confirmed. “And that is…disturbing.”

“But we know about them,” Shun pointed out. “Blood tests, genetic tests, we could likely find any infiltrators easily enough.”

“Filhallan has verified blood and genetic tests spanning hundreds of years,” Miridian answered flatly. “He is, for all intents and purposes, a Dath’Haram. A real one. But real Dath’Haram die, and he does not. This also explains his unnatural lifespan, and non-Dath’Haram outlook compared to the rest of his kind.”

“Is he a Collective agent then?”

“I’m unsure,” Miridian rubbed his chin. “I’m inclined to say he has his own agenda, given that the Zararch still does not have access to the Crypt. But that is a very risky assumption – and I do not
know what his agenda could be. If it is guarding the Crypt, he is a non-factor. But if additional
Faceless are being produced, that has significantly larger implications.”

Nartha closed his eyes. *Wonderful.*

“He was able to kill Sorras, one of the best Bladedancers who lived,” Miridian continued. “A
significant loss. But he at least forced the Bladedancer to reveal himself. His sacrifice will not be in
vain. But we will need to determine a means of containing the Crypt.” He looked to Shun. “XCOM
may be required. I presume you will inform the Commander of this.”

“Yes, I will,” Shun nodded, though narrowed her eyebrows. “I don’t suppose there are any other
things you want to mention that the Collective may have, or otherwise could cause us problems.
People died today. If we’d known this was possible—”

“It would not have made any difference,” Miridian interrupted neutrally. “But in response to your
question, none which come to mind. I had truthfully forgotten the project even existed until you
explained what had happened. However, I will review what I know in the archives.” He rested a
hand on the table. “Siaru will scour them for potential references.”

“Right.” Nartha was unsure how he felt about that machine performing such a task, but it was
better than nothing. “I presume we can expect retaliation for what happened.”

“Absolutely, but this was anticipated,” the lips of Miridian thinned. “Outside of the Crypt, the
operation was a success. Fires burn all over the forest, and chemicals choke the vegetation and soil,
and will persist for months thanks to our operatives. Half the Council of Dath’Haram are dead, and
thousands joined them.”

Shun audibly sighed. “Terror won’t solve the problem.”

“I wouldn’t be so sure of that,” Miridian tapped a finger on the table. “And terror is ultimately only
a tool. The Zararch can be…overzealous in their operations. It is remarkably easy to frame
someone as deviant. Easy to trip triggers on the CODEX network to force investigations. The
Speaker will want to have a show of force; a tangible response to this ‘terrorism’. He’ll find it easy,
thanks to us.”

Shun paled slightly at the implication. “How many people did you frame?”

“Enough.”

“How many is *enough*?”

“Enough to brag about, not enough that it can’t be covered up,” Miridian explained, taking a seat.
“The flaw of the Zararch is that they believe they can do no wrong. They are brutal. Efficient.
Targets disappear in the dead of night, with only a cursory notification to the family. Now will they
learn they were fooled? Of course, but you were with the Zararch, Nartha. Would they admit to
fault? Would they let them go, innocent or not?”

A pause. “Unlikely.”

“And that is all that is needed,” Miridian finished. “We know they are innocent. The Zararch will
know – and the families will know. All the rage against the ‘Nulorian terrorists’ will fade, if not
pale in comparison to the anger they will feel at the Aui’Vitakar.” He smiled. “Especially when we
begin releasing proof that they were framed. Siaru can impersonate a CODEX signature quite
well.”
“The Zararch will just clamp down harder,” Nartha warned.

“Good. The more they are focusing on the citizens, the more they will be revealed, and the less they will be focused on us,” he answered curtly. “People will wake soon enough. I’ve heard that the Aui’Vitakar are already holding a session to publicly expand Zararch powers to find the terrorists, and potentially abolish the local governments for good.”

Nartha was stunned. The shock surged through him like a lightning bolt. Shun seemed equally surprised, even if she couldn’t comprehend the full scope of what might be happening.

“Impossible. The Authoritative Council, the Sar’Manda; they would never accept it. Even the Hegemony…”

“Quisilia himself is set to address the Aui’Vitakar,” Miridian lifted a hand in interruption. “The Ethereals will make their personal support clear, and the Aui’Vitakar will go along with it like the hapless puppets they are.”

He cocked his head. “And as you know, the Cobrarian Hierarchy is effectively gone. Purged due to treason. Half of the Council of Dath’Haram is dead, and the forest is burning. They can persuade the Republic and the Authoritative Council for reasons of safety. The Hegemony’s support will be sealed thanks to the Ethereals. As for the Sar’Manda…” he shrugged, smiling. “I await their attempts to force their will upon the Empire. More likely they will ignore them, as they always do.”

“So one government,” Nartha said numbly. “It is happening.”

“So it would seem,” Miridian confirmed with a nod. “Admittedly faster than I anticipated. The Speaker is wasting no time it seems – a crisis is not squandered. A centralized Vitakara government fully under the Aui’Vitakar would grant extensive powers to the Zararch – removing the few restrictions they had. It will not be long before a militarized peacekeeping force is deployed.”

“Were there any restrictions to begin with?” Shun looked to him, a question in her eyes. “The Zararch has always been in control, yes?”

“Technically, yes,” Nartha sighed. “But there were some things which weren’t touched. The Hierarchy, the Dath’Haram…the Zararch have chafed at not tampering with them significantly for years. If it were up to them…neither culture would have endured as long as it has. Both had their problems, but…this is how they should be solved.”

“It is a significant measure,” Miridian continued. “One I believe the Speaker is miscalculating. The public backlash will be swift if mishandled, and that would go against his image of racial unity. The crackdown will be harder. And when it happens, we will cultivate this anger and hatred against the Aui’Vitakar, before we move to slay them as well.”

Nartha stared, hearing the words but still needing to ask: “You will kill the Aui’Vitakar?”

“Of course I will,” Miridian said flatly. “Are you surprised? They have been responsible for the state our species finds themselves in. Alien puppets at best, or gutless sycophants at worst. Should they vote for the consolidation of the races, they will be condemning us to eternal alien rule. They are the definition of traitors.”

Nartha was silent for a moment. “You know my father is in the Aui’Vitakar, yes?”

“I did not,” Miridian answered blandly, but without emotion. “And why does that matter to me? If my family were traitors to my species, I would gladly end their lives. If that will be an issue, I
suggest you either ensure your father changes his course or stands against the Ethereals. But he is not innocent, Nartha. None of them are.”

“But he does not deserve to die!”

“On that we disagree,” Miridian shook his head. “And you will not change anything for this operation. His fate is in his hands – or yours – but you will not risk it. Is that clear?”

“Clear,” he ground out.

“Good,” Miridian nodded once. “That’s all I need from you. Despite the outcome, your team did the best they could. Sorras will be remembered, and the overall operation was successful.”

He turned away as both of them moved to leave. “As of now, everything is still following the plan.”

***

Medical Ward, the Praesidium – Classified Location

6/6/2017 – 10:11 A.M.

She looked better.

Not healed yet; not even XCOM medical tech was to the level of fixing a body which had been ravaged as Fiona’s in just days. But she at least looked like she was resting…peacefully. Her body was propped on the bed, with her wounded limbs kept still. Uncomfortable perhaps, but from what he’d been told, she’d been out.

Only recently had she woken up.

Well enough to receive visitors now, and outside of Crevan and the Chronicler, he was fairly sure he was the first. Kunio sat on a chair near the bed, the odd medallion dangling from the chain he held. It was still warm and almost intangibly vibrating, which was why he wasn’t holding it directly. Too much of a distraction.

Still, while waiting and looking over her injuries, there were details about her he hadn’t noticed before.

The scar over her face glistened from the light above. It was a much deeper scar than he’d thought it was. Nor was not really the type of scar one got by accident. He belatedly realized that she’d never explained where she’d gotten it, or even acknowledged it at all. Perhaps in a battle after she’d joined T’Leth. Perhaps something else.

Her hair almost looked more silver in the light. More so than the ashen grey it normally looked. It suited her, odd as the color she’d chosen was. He wondered what it had originally been. Probably blonde, maybe brown. Those would fit her most naturally, but the grey was certainly unique.

She stirred, and her eyes opened. Kunio stood. She saw him and gave a faint smile. “Hello there. Glad that you’re alive.”

“I’m pretty sure I should be the one saying that, given what happened.”

She released a faint chuckle. “Fair.”

Kunio breathed heavily and Fiona lifted an eyebrow. “You look like you want to yell at me. Close
to the same look Crevan gave me.”

His lips twitched. “Not…yell. But really Fiona, what were you thinking?”

Her head fell back onto the pillow and her eyes closed. “To be honest, Kunio, I wasn’t. I saw Patricia invading New York; heard her speech and I just…snapped. I’ve just been feeling like I’ve held back this whole war. I could have killed her. I know I could have so long ago. All of them. I could do it. But I didn’t. Because I was afraid. And when I saw her doing this…I just couldn’t let it happen anymore.” She paused. “So, like a fool, I took matters into my own hands.”

“Well…hopefully you don’t do that again.” He gave a faint smile. “Next time you go with us.”

“Don’t worry,” Fiona gave a pained smile. “Crevan…he made it very, very clear that I wasn’t going to do this again. And he’s right. This almost got me killed or worse.”

“He told you what happened.”

She grimaced. “He did. We’re lucky it ended the way it did.”

“I don’t suppose you could explain some of it?”

She sighed. “It’s…complicated. Sorry.”

Not really the answer he’d been looking for, but right now probably wasn’t the time to push that. She looked at his hand. “He said you have something from me.”

“Yes, this,” he handed her the medallion which she took with one hand, her features morphing into an expression of shock. “I assume Crevan told you who we…encountered. He gave this to me. He said you would know what it meant.”

“Yes…” she almost whispered. “I’ve not seen this in…a long time.”

Kunio cocked his head. “What is it?”

“A promise…” she said slowly. “This shouldn’t be possible.”

“Why?”

She hesitated briefly, and both of them said the same thing:

“It’s complicated.”

Both of them found that funny, despite themselves.

“In that case,” Kunio paused. “I’ll just have to wait.”

“For now,” Fiona said, sinking back into the pillow. “I don’t suppose anything else has happened since then?”

“About that…” Kunio pulled the chair up behind him and sat back down. “Quite a bit, actually. And I have a feeling it’s just starting.”

***

Mount Olympus – Classified Location
The headquarters of the Pantheon was certainly an interesting one. A quite fitting name too – Mount Olympus was one he could definitely approve of. The massive facility consisted of at least a barracks, command center, and several training areas from what he saw. A few particularly large training areas, which were easily the equivalent to anything at the Praesidium.

Even as he, Creed, and Vahlen walked the halls, he could see most of them training in the distance. Some were unleashing destruction upon dummies or against the shields of others, some were hurling massive barge crates about telekinetically or moving several targets with coordinated, practiced precision. It was a testament to their training, and the frequency of it, that many parts of the ground bore the telltale signs of persistent psionic exposure.

No rest, even after they’d just completed one of the most dangerous and groundbreaking operations of the war thus far. It said something about their training as the most elite psionic force within ADVENT that their training did not stop, not even for a mission well-done. Though from what Axis had reported, not everything about the mission went according to plan.

Which was why he was here.

Awaiting him in the central command of Mount Olympus were those he’d come to see. Commander Christiaens was standing at attention, and by her side were Kwon Seul-Gi, the Pantheon’s command strategist and the primary mastermind behind the Olganar-2 operation. Neither of them had interacted directly before, so this would be a first for both – which went for the Pantheon as a whole.

Beside her was a lean man who stood a full head taller than her. Black, with short hair to match, he seemed like an easygoing individual from the wide smile and relaxed posture. Although there was definitely a wary glint in his eye. Jude Davies, HERMES, the Pantheon’s official public relations representative.

Interestingly, he’d not had a military background. Nonetheless the Pantheon didn’t recruit just anyone, and it was a given that he’d undergone training by ADVENT Intelligence and probably from the Public Relations Division as well. What he was doing in this meeting was a good question, but one he supposed he’d find out the answer to soon enough.

The final individual was one of the actual squad which had participated in the operation – Dr. Harold Rivers, DIONYSUS to the Pantheon. An older Asian-American man who was nonetheless a noticeable presence – though slightly less so than his North Korean superior despite her shorter stature and lack of psionics. The Commander didn’t know much about him other than that he was a powerful telepath.

“Commander, Mr. Creed, Dr. Vahlen, good to see all of you again,” Laura greeted, giving all of them slight nods.

“Of course,” the Commander answered, facing Kwon and her Pantheon counterparts. “A pleasure to meet you properly, Strategist Seul-Gi; Operative Rivers. It appears we have you to thank for the operation going as well as it did.”

She took his extended hand and gave a firm shake. “Appreciated, Commander. Axis was essential to its success, and we’re grateful that you allowed him to participate in the operation.” Harold took the hand as well, but didn’t say much to start with outside of a standard greeting.

“We’re all in this together,” he said as they gathered around the holotable. “For missions like this,
we need to do all we can to make sure they succeed. And based on what Axis said, the majority of the objectives were achieved.”

“Key word being majority,” Jude agreed. “Operationally, we consider the operation a success, one which we’ve ensured that the Public Relations Division will use to its fullest potential. We have no shortage of explosions, psionic maelstroms, and multiple alien corpses to play off. The rest of ADVENT will see it as a resounding success.”

“There is a ‘but’ coming,” Creed predicted dryly.

“But there were unforeseen complications,” Laura finished, lips pursed. “One which heralds unpleasant implications for the future.”

“Axis gave me his breakdown,” the Commander said, clasping his hands behind his back. “I want yours. Strategist?”

“Very well. I will be brief,” Kwon said, expression grim. “The team responsible for the elimination of Hive Commander 666 encountered him and engaged shortly after arrival, as expected. While a difficult fight – the previous documents concerning the engagement of Hive Commanders were useful in preparing for this – we were able to defeat 666. However, the moment we penetrated his mental defenses to capture him, an automated turret terminated him.”

Creed cocked his head. “That seems odd.”

“But not necessarily unexpected,” Harold interjected for the first time. “We had anticipated that the Hive Commander may have preferred death to interrogation. We intended to perform a field interrogation in the event it was too risky to extract him. This did not happen, though in retrospect it should have been realized that there was something else going on with how 666 was acting.”

“Axis said that the turret shot him, but he didn’t die.” The Commander said. “Please elaborate.”

“666 had been telepathically fighting us from almost the moment we stepped on the station,” Harold continued. “It worked to our advantage in a way, since we were able to pinpoint him without any effort and the team went to deal with him. But the consequence was that we were all very familiar with how his mind felt. When he died, his psionic presence vanished as expected – and a few minutes later it came back.”

He shrugged. “Each member on the retrieval team has been psionically examined to ensure nothing was wrong. Everything looks right, and it’s left us with one ugly truth; Hive Commander 666 is not dead.”

They took a moment to absorb that declaration. Creed asked the next question.

“Then what did you fight?”

“That is a good question,” Kwon shot a glance at Vahlen. “We have several theories that have been presented to the PRIEST Division.”

“I’m listening,” Vahlen nodded, her tablet ready to take notes.

“The current prevailing theory is that the Hive Commander we fought was a decoy, a meat puppet as you designate them,” Harold said. “We know that telepathic possession is possible thanks to the Ethereal Harbingers, so it could have been that 666 used an avatar of his own against us.”

“Feasible,” Vahlen frowned with a nod. “But there are telltale signs of outside possession or
control. It is difficult to obscure, at least to telepaths; the mind is noticeably off. Did you sense any of these indicators?"

“No, and that’s the obvious weakness in the theory,” Harold admitted. “I wasn’t with the team that attacked 666, but I could feel his mind clearly. It certainly felt like the real Hive Commander. If it was possession, it was utterly flawless.”

“The other theory is that the Hive Commander performed some kind of consciousness transfer to a clone or other body to possess,” Kwon continued. “The obvious issue with that is that, to my knowledge, that kind of ability isn’t actually possible to do. Unless I am mistaken?”

“It shouldn’t be,” Vahlen agreed, tapping her stylus on the tablet idly, thinking. “To achieve such a feat… It would likely take time to perform such a feat. Perhaps a minute or so – possibly longer – to transfer a consciousness, though I will note that this is just speculation. Furthermore, assuming the transfer was successful, the original body would most likely enter a comatose state, if not expire outright. Was there anything like that evident?”

“No,” Harold confirmed. “He was very much alive—”

“Until he wasn’t.” Jude finished dryly.

“Funny,” the Commander said neutrally, not quite in the mood for amusement right now. “But you’re certain that Hive Commander 666 is still alive.”

“As sure as we can be. When he reappeared, it wasn’t on the shipyard. It was deep within the Hive below. We didn’t get another chance at a physical encounter with him after that.” Harold radiated frustration as he spoke. “There was a clear period when he was gone. And then… he was back. Exactly the same.”

“The point being that the Hive Commanders appear to have some means of cheating death,” Kwon finished. “Which will be problematic, given how powerful they are.”

The Commander raised an eyebrow. “That is making the assumption that this is something which applies to all Hive Commanders. It couldn’t just be a skill that 666 possesses?”

“Unlikely,” Kwon disagreed immediately. “If 666 were a telepathic specialist or had a particular focus on experimental psionics, I might believe otherwise. But 666 was… is primarily an engineer. If he is able to do this, it seems very likely that the others could as well. The Hive Commanders have no internal division. This is not something that would be kept secret from the others.”

Creed looked very unhappy at that.

The Commander couldn’t blame him. Assuming that it was universal, and not just something applied to 666, then that meant that the Hive Commander they’d killed when they’d first assaulted the Sectoid Hive wasn’t actually dead – and Creed understandably had very bad memories around that incident.

And that Hive Commander that had attacked the Citadel? Also might not actually be dead.

How could that work though? That the Hive Commanders had managed to do this while the Ethereals had not? Something wasn’t right about this.

“And there’s more,” Harold said with clear unease. “I think that killing 666, whether he stayed dead or not, kicked the hornet’s nest even more than we already have. Once we felt 666 come back, this was deployed against us.” He turned on the holoprojectors to show an armored Sectoid,
wielding a host of unknown psi-tech.

It seemed to be larger than the Vanguard, and retained the sleek-looking armor that they wore. But this time the armor was clearly augmented with psi-tech much more intricate and extensive than previously known. The skin of the Sectoid was also more reddish, a contrast to the Vanguard and most Sectoids.

“Axis said it was as powerful as one of you,” the Commander recalled.

“It was powerful enough to kill one of us,” Kwon said grimly. “No small feat.”

“The psi-tech,” Vahlen fixated on that detail, staring intently at the projection. “What did it do?”

“The ones recovered were specifically tuned to Dynamo psionics,” Harold answered. “It was a natural telepath. Since it only displayed those two fields, we’re left to assume that all the psi-tech it had was tuned to Dynamo. There were others that showed up later that showed evidence of Aegii and Telekine psi-tech, but we weren’t able to retrieve examples of those. Once it became clear that this was something new and not just a Vanguard with the element of surprise, we retreated.”

“Smart,” the Commander nodded. “Best to retreat until we know more about what these are.”

“I’m sure we’ll be able to make more determinations from the recovered corpse and technology,” Vahlen nodded. “Artifact Recovery will come for transport shortly.”

Jude cocked his head, and Kwon frowned. “Respectfully, Dr. Vahlen, we’re not planning on releasing the body to XCOM,” Jude said, diplomatically but firmly. “We asked you here in order to share what we’ve learned – essential considering the implications. It was not to give you artifacts we are currently researching.”

“We have experience with this, Mr. Davies,” the Commander pointed out. “And given the singular corpse, I don’t think we should be taking risks with taking it apart.”

“ADVENT specialists are more than capable of doing their jobs,” Kwon pointed out. “This isn’t the first alien corpse they’ve taken apart either.”

Vahlen furrowed her eyebrows. “Given their lack of experience with psi-tech, they’ll almost certainly damage the equipment it is using. More than it already is. We have extensive experience with psi-tech, and a far stronger grasp on the mechanics of it than ADVENT.”

“Then I would suggest you share it with ADVENT to be sure there is no unnecessary damage,” Kwon answered coldly, meeting Vahlen’s eyes. “I lost two good soldiers in this operation, and this was the one prize we were able to bring back. I highly doubt this will be the last time we encounter this enemy. XCOM will live in not being the first to pick something apart.”

“This is not a good time to be taking offense to our methods,” Vahlen’s eyes hardened, as did her voice. “There is a reason XCOM is on the front lines of alien research - because it is critical that we are able to determine everything possible about this enemy - accurately. XCOM is the best; ADVENT is skilled, but they are not us. Given that these new Sectoids are now active, and will be encountered in larger numbers soon, holding onto it is selfish.”

“Dr. Vahlen, with all due respect,” Harold said evenly. “Just because we weren’t the first to dissect a Sectoid or a Muton doesn’t mean we didn’t learn just like you did. We’re not incompetent. I’m sure we take the same care with our procedures that you do. You say we’re being selfish, I think you’re being a bit egotistical to think that only you can do a dissection properly.”
Much as the Commander saw why they might be offended, the fact was that this was something XCOM had extensive experience in. Technically, XCOM could demand the corpse under the Advent Directive itself, but the Commander felt that would be unnecessarily controversial. Laura knew that perfectly well, but she was looking at him, silently asking him not to press the issue. He wouldn’t – not completely, but he wasn’t going to let ADVENT off the hook here.

“We won’t take the corpse to the Praesidium,” he finally said. “However, Dr. Vahlen will lead the autopsy and initial research on it. This can be done at an ADVENT facility of your choice, but given that we also had a crucial operative on this operation, we similarly have a claim to it, and under the Advent Directive, we are permitted to intervene in all matters involving extraterrestrial research and threats to Humanity. This qualifies as one, and as much as you dislike it, I, and everyone else, want this done properly, and XCOM is best suited to carrying this out.”

He looked at Laura. “Is this permissible, Commander?”

Laura didn’t seem to like being put on the spot, but gave a curt nod. “We can work with that.”

“I’ll make preparations to begin,” Vahlen nodded to him, and then to Jude. “Inform me of the location and I will arrive as soon as possible.”

Jude gave a thin smile that didn’t quite reach his eyes. “You will be informed.”

None of the Pantheon seemed particularly pleased with the compromise, but the Commander knew they wouldn’t directly contradict Laura, and they would get past it at some point. Best they learn how to negotiate with XCOM, and what they were permitted to acquire and receive, now rather than later.

“I believe the only remaining topic is one of information sharing,” the Commander said, looking around. “I presume the Pantheon has written reports of the operation, as well as armor cam footage. We will need that for our own review. We will of course, share our own reports and Axis’s footage. Is that settled.”

“We will get it to you, Commander,” Kwon said tightly. “Beyond that, I do not believe there is anything else of note.”

“Then I think we’re finished for now,” the Commander nodded. “Good work on the operation. Vahlen and Jackson will be in contact regarding what we discussed.”

“We will be ready, Commander,” Kwon stated, looking to the others, and Laura. “Are we done?”

“Yes,” Laura confirmed. “Dismissed.”

Throne Room of the Imperator – Temple Ship of the Imperator of the Ethereal Collective

6/6/2017 – 10:00 A.M.

Ravarian swallowed as he stood before the Imperator.

Always acting through intermediaries, the fact that he had been personally requested to step foot upon the elusive Temple Ship was an honor in and of itself – or potentially a prelude to his removal. The Imperator would not have done this without reason. He sat upon the Throne, presence overwhelming even though Quisilia was shielding his mind.
Ravarian steeled himself as much as possible, and stood to the side of Quisilia. Before the Imperator stood Patricia in her ornate Ethereal dress of white silk and symbols, and beside her stood Sicarius and her own shadowed Harbinger. The Ethereal with the eyeless orb for a helm stood silent, and her counterpart was equally mute.

“Zar’Chon,” the Imperator stated. “You have fully compiled the results of the attacks by XCOM and ADVENT against us, correct?”

“Yes, Imperator,” he nodded, knowing it was a partial formality. “The report was forwarded to you. On Earth we suffered a fair number of losses, multiple African states have descended into chaos, and we believe that ADVENT and XCOM are now aware of the intimate defenses of the Observation Station.”

“But they were driven off.”

“Yes, Imperator. And we were able to acquire some interesting data on composition. Aliens are now in the ranks of XCOM.”

“Not surprising,” Patricia nodded. “The Commander wouldn’t have forbade them from participating – provided they could be trusted.”

“However,” Ravarian continued grimly. “It’s ADVENT which has likely caused the largest long-term damage. Olganar-2 was directly attacked by the Pantheon. We are waiting on a full autopsy, but initial estimates that the Hive Commanders have released are that the majority of the Hive was neutralized, over a third of the shipyards were destroyed, and Hive Commander 666 was killed.”

The massive helm of the Ethereal nodded. “Quisilia. Tell him.”

“Certainly,” Quisilia turned to him. “The Hive Commanders are more…savvy than many give them credit for. Quite arrogant, soulless creatures, but let none say they are not intelligent. It is indisputable that ADVENT hurt the shipyards – however, they were not quite as effective as the Zararch believes.”

Ravarian frowned. “In what way?”

“To begin with,” Quisilia flipped one of his blades in his hands. “Hive Commander 666 is not dead. The Pantheon managed to kill his body, but the Hive Commanders have a rather…ingenious system which allows them to endure, in a sense.”

Ravarian stiffened. “That cannot be. Two Hive Commanders have already died in this war. 072 on the Hive on Earth, and 043 during the failed Citadel attack.”

“Yes, about that,” Quisilia nodded. “They aren’t dead.”

“How?”

“Well, I suppose the more accurate term is that they aren’t dead in a sense,” Quisilia corrected a moment later. “Hive Commanders have multiple clones of themselves carefully grown. Dozens at a time. They quite frequently…” he waved a lower arm absentmindedly. “Upload copies of their minds into them. So in the event of their death, a new clone emerges, who is effectively the same. Same mind, same motives. Missing some amount of memory, but very much the equal.”

Once the initial surprise of the revelation faded, Ravarian had to conclude that the system was… quite clever. Very much something the Hive Commanders would come up with – and what would definitely be a massive problem for ADVENT and XCOM. Especially now that they’d ‘killed’
some of them.

“Do the Andromedons know?” He asked.

“Of course not,” Quisilia snorted. “That might trigger a war out of pure fear. The Andromedons, as arrogant as they are, believe that the Hive Commanders are incapable of contingency or subtlety. I fear that they underestimate our little grey allies. However, the Federation will keep them in line for now. That isn’t relevant.”

“What is relevant is that ADVENT knows now,” Ravarian nodded. “Though they won’t be able to do much.”

“It’s unlikely they know for sure,” Patricia corrected. “Hive Commander 666 did not reengage with the Pantheon physically following his initial body being destroyed. But they likely felt his mind, or something familiar to it. They will put the pieces together. What is actually relevant is that ADVENT and XCOM forced 666 to activate a project prematurely.”

Ravarian nodded. “Which was what?”

Sicarius pulled out a holodisplay, which portrayed a lanky Sectoid clad in sleek black armor, with various unknown gadgets of psi-tech attached to them. They were like the Vanguard, if the Vanguard had been bulked up further. This one stood as tall as a fairly tall Human – six feet roughly – and had skin more reddish than the orange of the Hive Commanders.

“This is the Lesser Hive Commander,” Patricia said. “The answer of the Hive Commanders to the PRIEST Division and XCOM. Semi-autonomous by Sectoid standards, and grown from the genetic material of a Hive Commander. Designed to command the Sectoid legions, and also well-adjusted to being hijacked by the Hive Commander in question for direct control.” She paused. “In a sense, it is their own implementation of the Avatar Project.”

Ravarian couldn’t help but feel some relief at that. Psions were already going to be a major issue as the war progressed. Actual, tangible counters to them were welcome. Fantastic that the Hive Commanders hadn’t been idle. He did wonder if this had been done on their own initiative or if they were being pressured by the Imperator.

It perhaps did not matter.

“It is very likely you will be seeing mentions of this in intercepted ADVENT reports,” Quisilia stated. “It’s ideal if you are aware of the context before wondering what ADVENT is referring to. With this understood, the Hive Commanders are finalizing the first batches. The ones activated to deal with the Pantheon were not supposed to be ready, but circumstances required them.”

“Understood,” Ravarian nodded. “I will ensure appropriate classifications.”

“Good, let us continue with the matter at hand,” the Imperator stated. “Your report was an acceptable overview of our losses. I do not intend to let this be tolerated. XCOM has had a hand in the events on Vitakar and the collapse of the African states primed to join the SAS. They have struck at us. It is time to respond.”

“Of course,” he nodded. “There are a number of actions we can take to reinforce-“

“He is not speaking of reinforcement,” Patricia interrupted, stepping forward. “Retaliation. The leaders of ADVENT are pushing the strategy; the response. They used a nuclear weapon on an ally of ours. They are supporting terrorists on Vitakar. T’Leth has flaunted his reach on Mars.”
Ravarian pursed his lips. “I’m framing my strategy within the confines of the Battlemaster’s directives. No assassinations.”

“The battlefield has shifted,” the Imperator stated. “His objections are overruled.”

Well then. About time the gloves came off. “In which case, there are a number of high-profile targets I recommend be targeted and eliminated. Removing these individuals – while others would replace them – would shake civilian faith in ADVENT as an institution capable of protecting themselves and others. It would also significantly disrupt and halt policy writing within various organizations.”

“Names?”

“Many. Some easier than others. Leadership, military, and intelligence are the most relevant. Chancellor Vyandar, Commander Christiaens, Ian Powell. National leaders, Legion Generals, all of those are applicable targets. The removal of figures such as the resurgent Japanese Empress would be directed to hurt morale. I would reserve others such as defected aliens as a minimal operational priority, but such would certainly send a message.”

“There are a few others,” Patricia noted. “Chief Stein. Chief Lancer Weekes.”

“I would not put Chief Stein on the list,” Ravarian disputed. “She is one of the more controversial high-profile figures in ADVENT. She is more useful alive than not. She is a rare source of hatred from within ADVENT by citizens and media. Her removal would likely benefit ADVENT more than hurt them, even if they continue her policies.”

“If I may, Zar’Chon,” the boy, Nico spoke up, stepping forward. “I would not target most high-profile figures at all.”

Ravarian cocked his head. “Your reasoning?”

“Humans do one of two things when faced with hardship,” he said. “They rally or they break. What do you intend to achieve with mass assassinations?”

“Sow fear and reduce operational capacity.”

“Right,” he nodded. “If that’s your goal, then I would suggest a…refinement. You are unlikely going to be able to assassinate Saudia, or another high-profile figure. But there are hundreds of people the public has never heard of. Figures who set policy and law. People whose loss would hurt ADVENT. People would hear their names, but not know them. They can rally around the loss of Saudia, or Yamato, or another figure of the ADVENT class. But the many Generals, Admirals, officials…their removal would hurt more than someone like Saudia. She can be replaced. And she is one Human. The loss of one will change nothing.”

The boy had a point…a good one. “Noted. Harbinger, I appreciate your input. I believe it can be refined…upon the direction of the Imperator or Quisilia.”

The Imperator inclined his helmet. “I will let you set the operational parameters. Execute it as you see fit. But I expect success. You will coordinate with Patricia, as she will be in charge of a more direct response to ADVENT and XCOM. You will be provided with whatever you need.”

He gave a short bow. “At your command, Imperator.”

“Then we are finished for now,” the Imperator straightened. “Go. I will await your success.”
Much had happened.

ADVENT had retaliated for the New York incursion in a quite effective fashion.

*Mechanical. Precise. Merciless.*

Nemo found it quite fascinating to see the coordinated efficiency this species could bring to bear. Impressive. More so than it had initially given it credit for. The fact that it had been forced to abandon a long-term mission was…unfortunate. Nemo was not pleased it had happened, but there was little to be done about it now.

It would adapt. Remember for the future.

ADVENT represented something that had been absent it’s long, dull life.

*Challenge.*

The naked, blank, and faceless thing stood in front of a mirror, a conundrum turning in the gears of its engineered mind.

It needed a new face to wear. The alien one it had worn was useless following the mission and it had grown tired of it; a reminder of its failure. Yet a new appealing one did not come to it easily – though not for lack of options, of course. There were many faces that could be taken, bodies to be sculpted, and it was a combination of indecision and the knowledge that it was likely to be used soon.

An idea struck.

It curled its lipless mouth in the mirror, not out of amusement or pleasure, but to compare to the face that would be forged. Yes, it was insufficient.

It grabbed the scalpel, the face clear in the mind’s eye.

This face was unlikely to be relevant for the immediate future, but Nemo suspected that having the capability to wear it would be…needed in the future. The person whose face it was taking could almost be proud they had captured its attention.

Imitation was the sincerest form of flattery, after all. He found some truth in that saying.

Most were too inconsequential to matter. Dust in the cosmic wisps of the universe.

Humans had quite a useful and surprisingly poignant collection of sayings and proverbs. A pity that such a minority were true intellectuals – though admitted far more than any of the Collective species. Too much focus on the physical world and laws within, on comfort and rule, instead of the state of existence itself – a far more fascinating topic. The Oyariah, despite their foolish fanaticism, at least understood the concept of something greater.

Something more.

*Transcendence.*
Beyond norms.
Beyond laws.
Beyond binaries.
Beyond.
Beyond.

It began cutting as it contemplated.

News of the Nulorian attack against the Dath’Haram had been especially interesting. Such an expected action from the finely tuned mind of Miridian. A true predictable terrorist, though Nemo could not blame him, for he was accurately playing the Zararch and the illustrious Speaker of the Elders to his advantage.

The Zararch knew only one path – oppression and control.

Effective tools, though only if an enemy was not smart enough to understand how to exploit them.

Miridian was skilled at that.

The skin was off. The bones needed to be arranged properly. Cutting tools were needed. Nemo brought up an image of the face for reference. Yes, like that.

Pieces of the bone-like substance joined the soupy skin-liquid on the floor.

Nemo did not care about Miridian. Nor the Nulorian. Nor the Vitakara. Such activities were academic, viewed with all the passion of an apathetic, yet slightly interested bystander. Less interested in picking a side so much as observing the outcome – and the outcome promised to be very interesting indeed.

Ravarian was intelligent. Despite the single-mindedness of the Zararch, they could easily emerge from the conflict victorious – but perhaps defeat was what they deserved. The Zararch had not been properly challenged. Defeat would lead to growth. Such may be necessary. Or the monotony of the status quo would prevail.

It was ultimately irrelevant, as the outcome would not be decided by the power players, but outside forces. XCOM. ADVENT. The Nulorian were pawns even if Miridian did not realize it.

Just as the Vitakara were pawns of the Ethereals.

_A s o t h e c o s m i c c y c l e s r e p e a t._

It ran a hand under the jawline, judged the facial structure was largely accurate, and moved to the next stage.

What had been interesting to note about the Nulorian attack was there was no mention of the Crypt. How very curious. Miridian doubtless knew it was there, and any attack against the Dath’Haram would have included it.

The fact that it had heard nothing indicated that it had failed miserably.

It smiled with its skeletal face again.
Much better.

It would have amused him to see Miridian’s reaction at hearing the thing that guarded the tomb. So obvious, hidden in such plain sight, and yet the simple, blind Vitakara had never put the pieces together.

Ah well, let the Vitakara believe the whitewashed history of the Dath’Haram. It did not affect it in the slightest.

The next stage was rather delicate, and Nemo let the idle thoughts fade as it worked on the face. Only several hours passed as the face took shape, one with feminine features which would be framed by long hair. An imposing, imperial presence. It had yet to be colored or voice-practiced, and was half-finished when the visitor appeared.

Nemo heard him enter. “A new assignment already?”

“Yes,” it answered in its dead voice, then turned around to face Ravarian fully, who barely reacted to the half-finished undead ghoul before him. All Ravarian did was cock his head. “That face will be for nothing. You will likely want something less high-profile.”

“Indulge me, Zar’Chon. It is good to have practice. I will change if necessary.”

“So long as it is done.”

“What do you wish from me?”

“ADVENT has performed their retaliation. Our response has been determined.”

“Individuals to be removed?”

“Correct.”

Nemo set the tools on the nearby table gently as it processed the news. “Unfortunate long-term operations are so…difficult against ADVENT. I would have liked to see how far they could be tricked.”

“You may yet have your opportunity.”

“My target is whom?”

“General Imraam,” Ravarian answered. “A rather skilled military commander who has been an issue in Malaysia. He is a significant reason why our progress in the region has stalled. Remove him. Subtly, if possible.”

The name was unfamiliar to it, but it was no matter.

An assassination was trivial, and the fact that he had not heard of him before also meant that the majority of ADVENT likely had not either. Still, he was a General, presumably of the Malaysian Legion. He would likely have some degree of protection. As if reading its thoughts, Ravarian frowned. “You’re being assigned this because of its difficulty. General Imraam will not be killed easily. All Generals have PRIEST Division guards now.”

“I am aware.”

“Good. I expect you to succeed.”
“I will need access to the Desolan Vault.”

“It will be granted.”

“Excellent. And the timeframe?”

“Sooner than later. Within a week.”

“Understood.”

Ravarian left, and Nemo was left alone once again, with only itself as the face which stared at it from the mirror. Despite the fact that it was unlikely to be a face useful on this operation – an assassination operation gave some flexibility. It would be…interesting to see the reaction should this face be kept.

It continued working on it.

It smiled again.

_Perfect._

The body was next. It sculpted the feminine parts with the shaping tools, and after hours of work it became lost in, stood, the naked form indistinguishable from a real Human woman in function and appearance.

It flexed the digits, arms, legs, all to make sure it was working properly. Not a surprise that it was. It cleaned off the darkened skin of the fluids and chunks which flowed into the drains. Now it was time to practice the voice. The voice was important. Facing the mirror, it assumed a serious expression it had seen displayed many times.

Time to give a speech.

That was what this individual would do, yes?

“Citizens of ADVENT, this is Chancellor Saudia Vyandar.”

***

_Volk’s Quarters – Mars Collective Base_

6/6/2017 – 9:22 A.M.

They had not seen Nemo since the extraction. Just as well for everyone involved.

They hadn’t been assigned any new tasks either, as of yet, and instead they’d just watched as events had unfolded before them, with both wondering at just how long this was going to go on. It seemed to him that the escalation would continue ramping up and up until one side obliterated the other.

Patricia was also proving herself to be a right proper villain.

Elena actively hated her. Volk really, really hoped that she never came by.

Though Patricia’s actions may not have been without warning.

_Is it really surprising? They willingly utilized Isomnum._
The difference being, everyone was quick to wash their hands of the Dread Lord. The Collective seemed less keen to even remotely distance themselves from Patricia. Which was understandably impossible, given that she was the Imperator’s voice and will. That didn’t mean he was happy with it.

Nor did many people in the base itself.

They’d not been here when…there’d been some kind of telepathic attack that hadn’t been explained, but it was another odd occurrence in a series of odd occurrences. There was something utterly off about the whole conflict the more he thought about it. He’d done quite a lot of extensive reading of the Collective archives in the downtime; learning the quite fascinating history within.

It only raised more questions.

Sectoids? Approached and formed the Collective.

Vitakara? Cured their disease and they joined the Collective willingly.

Andromedons? Negotiated and willingly joined the Collective.

Mutons? Conquered by the Battlemaster alone following their own customs. Still nowhere close to a fair fight, truthfully, but it was more respect than they could have shown. And subsequently engineered genius-level iterations of the species which held legitimate command.

Humans? Invaded and killed.

Something seemed wrong with that shift. Even if the Mutons arguably signaled they were capable of this, there was a very distinct difference between them and the other alien species. Each of the latter were an intelligent, modern, civilization conversing in dialogue, as opposed to the Mutons which were engaged in primitive civil wars.

Humans, as violent as they could be to each other, were definitely in the ‘more advanced’ category, and if past actions were enough to refuse someone on, then the Andromedons definitely shouldn’t have been admitted. On a strategic level it didn’t make sense either – he could almost guarantee that if the Collective had come peacefully, Humans would have joined in very short order – no military, no ADVENT, no XCOM. Hell, even telepathy could have been used to control them.

But instead they had invaded.

The militant shift the Collective had dramatically slid towards didn’t make sense.

He suspected that answer was well above his pay grade here.

But he didn’t like it.

Elena hadn’t taken long to come to a conclusion - That the war had been started under false pretenses. Now, he certainly wasn’t one to trek in conspiracy theories…but there was more than enough evidence that the war hadn’t been started for the reasons most thought it was. The Zararch distributed a story about how the Humans had declared war, and thus it was accepted.

Except, it seemed, the story was starting to be questioned.

Not obviously, mind you. But there were enough aliens who were starting to wonder if there was something else going on. According to everyone, the war should have been won by now. But it was still ongoing.
Why isn’t the Collective bombarding the planet to oblivion?

Why isn’t there an overwhelming land invasion?

Why hasn’t the Imperator himself ended it personally?

It couldn’t have been Aegis or Caelior. The Imperator was more powerful than both. His Avatar was more powerful than Caelior. The Collective had billions of soldiers. Humanity had millions at most. This, in theory, should not be a close contest – even a war of attrition would end in a clear Collective victory.

And while the land war was worldwide and sustained, it wasn’t nearly at the level it could be.

So, what is it really?

What secrets do you hide, Ethereals?

He hadn’t brought it up with Asaru, the few times they’d seen her. Asking that kind of question seemed like a bad idea. Of course, she probably knew he was thinking it, but had not commented on it. Or she hadn’t noticed. There was a lot going on.

All culminating in the newest assignment today. To which he had a clear answer for his guest.

“No.”

The figure of Asaru in her Human form cocked her head. “I’m sorry?”

Volk shook his head. “No.”

“Elaborate.”

Volk set the tablet on the table. “Well, you know why I decided to assist you and your Collective in the first place?”

“I remember what you told me.”

“Good. Now I realize some things may have slipped your mind, but I don’t target civilians. That is quite a deviation from what little I’m trying to do here, which your friend Patricia keeps making more difficult.” He lifted a hand. “Nonetheless, I’m not sure why you thought that giving me a list of names of medical professionals was something I’d be jumping for. I’m fine with removing soldiers, heads of state, and people who are actively running ADVENT.”

“Medical professionals are implicitly contributing.”

Volk snorted. “Yes, and so are grocery store clerks, farmers, and cooks. Following that logic every person is ‘contributing to ADVENT’.”

“These individuals are actively assisting military forces.”

“Yes, and plenty of civilians too,” Volk rolled his eyes. “I don’t like ADVENT, but I’m not completely blind to think that every person in it is evil. Helping heal people is their job if you didn’t know.”

“We are aware, that is why they are targets. This is a war, Volikov.”

“And you know my conditions for fighting in it.”
Asaru smiled. Coldly. “Is this a refusal to follow orders?”

He met her stare. “Is this an order?”

“We’ve suffered a bout of attacks and assassinations of our own, Volikov,” Asaru said. “The Imperator is displeased. There will be retaliation. We are all doing our part, and as you have agreed to help us, this is the assignment the Zar’Chon has designated for you.”

Ah, the Zar’Chon. That suddenly made more sense.

A loyalty test of sorts.

Well then.

The situation now was somewhat precarious. More so than it had been otherwise – because that told him that this wasn’t going to be something that he could refuse to do without consequences. If it was Asaru pushing it, maybe he could push back since she was somewhat of a pushover on some topics.

But the Zar’Chon…

Not so much.

Asaru seemed to be making it clear that he was at the crossroads here.

“You’ll have several days to plan and more to execute,” she said gently, seeming to imply that she understood the implications as well. “They will die regardless. The sooner ADVENT falls, the sooner the war ends. Will there be issues?”

He was silent, but the silence indicated his answer easily enough.

“Good,” she gave a slight nod. “I wish you well in your assignment. Make it swift.”

When he looked up, she was gone, leaving him alone, and with a dangerous dilemma.

Elena would not be happy.

***

The Abyssal Plains, near the Mariana Trench

6/5/2017 – 10:22 A.M.

No matter what happened, Loke would always feel privileged to be able to walk the floor of the deep ocean.

The times when he wasn’t having a heart attack, that is.

Air bubbles rose from around him as the small team of black-armored soldiers walked the ocean floor. Their steps were ponderous and deliberate. Sand blasted up at each step, and what little ocean life was around fled as they walked. Loke felt they were sometimes in a horror movie – but with them as the monster.

Something unnatural which shouldn’t be here.

However, as this was their time for the weekly Depthtrooper armor tests, he was getting more and
more accustomed to it. It was a wholly odd sensation. He could almost feel the weight of the tons of water above him; pressing against him; threatening to smother and crush him. Half of it seemed psychological, the other half seemed real.

It was not easy to move in the suit – initially. The suit was heavy, more so than other suits since it had weights. To keep them firmly on the desolate ocean floor. It was like walking in a mech suit, if the suit was ponderously slow. However…slow seemed the wrong word. Again, it seemed to be a psychological effect to some degree.

He could move smoothly, yet it was almost as if they were in molasses or another liquid which let them move – if everything was in slow motion. But also not in slow motion. It was weird, but something they’d gotten used to. In the unlikely event of an attack, Loke did wonder how they would actually fare.

If so, it might be the slowest fight of all time. He’d chuckled at the mental image of Human and alien fighting in slow motion, ponderously aiming their weapons and firing. They were armed with both sonic and physical projectile weapons, so it wasn’t as though they were defenseless.

Today though, this mission was more than tests. There was a purpose.

“It’s a new type of element,” Zhi Xue was saying, the Neptune Scout who was one of many who were making daily trips to map the ocean floor. “It seemed odd, and the geologists couldn’t determine what it was. They don’t think it’s alien, but I don’t want to collect samples without taking precautions.”

“Anytime,” Loke said. “The more we get used to these suits, the better. Besides, I’m always up for a trek on the ocean floor.”

“It is something, isn’t it,” Zhi floated above them, not bound to the ground like they were, and propelled by her movements and motorized water streams. “It’s incredible. A bit isolating, but I enjoy it. There’s so much of the world we still haven’t explored that we can now.”

“We’re getting a bit far from Atlantis,” Orla said, glancing behind them at the fading lights of the base. “Let’s hope we don’t get lost.”

Zhi laughed. “I’ve been coming this way for days. Trust me, we’re all on timers. Take too long, and search parties get sent out. Standard Neptune protocol. Ah, here we are.” They stopped at a built platform, which held a small platform vehicle used by the Scouts for long-distance exploration.

“This isn’t going to be fast, but I’d still hold onto something,” Zhi advised as she took the controls. Lights turned on as the vehicle started up, and they moved out into the blackness. Before Zhi and situated just above the controls was a highly detailed map of the ocean floor.

“How far is this?” Loke asked.

“A fair ways,” she admitted. “It’s not so much far as deep. We’re going to be going down shortly. Be ready.”

True to her promise, the vehicle began dipping and it wasn’t long before the complete blackness enveloped them. This was the part where he really became uncomfortable. The white lights of the vehicle seemed so completely inferior to the oppressive blackness. Still, he comforted himself with knowing that, truthfully, there wasn’t anything down here but a jump scare.

He still hated jump scares though.
“So how did you find it?” He looked around. “Not through exploring personally, right?”

A snort. “Not this time. Scans taken of the area from Atlantis, which were verified by some others I’d taken of the general area, and now we’re exploring ourselves. We didn’t even get any hard images, only readings of the odd element. Not the first time this has happened, but definitely the closest.”

“When you say-“

Orla’s words died in his throat as they seemed to cross some invisible threshold and Loke stiffened as still as a statue, completely paralyzed without being able to move so much as move an eyelid. Invisible bonds wrapped around his body, pinning it in place like a pin at a bowling alley. Orla and Zhi were similarly incapacitated, although the vehicle itself still went forward.

But with them no longer anchored to it, it just kept going.

Down and down it went, and the light faded with it as they floated in the black.

In one of the few times in his life, he was terrified.

His heart pounded rapidly - and if he could have screamed, he would have. He frantically tried to reassert control of his emotions – a difficult task given he was surrounded by nothing but blackness and his wholly useless light – not to mention wholly cut off from Atlantis in a suit not designed to get back.

Then it got worse.

Something touched his mind.

He’d never been under a psionic attack before, but he knew this is what one must feel like. But it was more than something foreign, something formless touching it. There was such an immense presence to it, it was like comparing an ant to a giant. What little shield of his mind existed crumpled under the simplest touch of the thing.

He felt it go into his mind, ignoring the Manchurian Restraints which only prevented voluntary sharing of the information. Of course, they protected against mind control – only by preventing his body from moving.

Very useful right now. Truly.

The Thing went deep into every thought and memory; he saw many flash before him in a rapid-fire manner, many he’d forgotten, many he’d not. It happened immediately, and simultaneously seemed to take forever. The Thing kept poring through his thoughts, picking out each and every crevice until it was satisfied with…something.

Then there was a tangible shift as if the world was blurring, and they found themselves in… something. A blue-green light seemed to come from above, and Loke found he could move, and it actually seemed like there wasn’t water around him.

“Breathe.”

He exhaled. His heart rate lessened.

Calm set in.
The fear did not fade.

The commanding voice sounded from the Nothing, heard with his ears and within his mind itself, formed from the manifested thoughts of the Thing.

Helmets still on, they glanced at each other, terrified of saying anything.

“You should not have come this way.”

A pause.

“Why do you come?”

Loke found his voice, trying to keep it steady even as pathetic as it sounded before the voice.

“We...were exploring. Following some readings. We didn’t mean to intrude...”

The air rumbled.

“This will not happen again, Humans. Be thankful for the agreement I have forged with your species.”

What?

“You will speak of this to none. You shall ensure no operations are conducted. What led you here will be purged. This shall be done. Now go.”

Each word spoken echoed deep into his mind, entrenching itself into reality inside his head as real as anything ADVENT had done to him. He didn’t fully know what it meant, nor what the Thing had been implying – but he was certainly going to make sure that whatever it was, it wasn’t ever disturbed again.

They found themselves a short distance from Atlantis, out of visual range, but able to walk it. They also saw the pad where they had launched for – with the transport resting atop it. As if they’d never left.

All of them looked at each other wordlessly.

“I think,” Zhi said, her voice shaking. “We should do what the voice said.”

***

Salt Lake City Garrison, Utah – United States of America

6/6/2017 – 5:19 P.M.

“So,” Glen Dalton leaned forward, resting a forearm on the table. “I’ve got a theory.”

Angela Blackburn resisted a sigh, because just from the smirk of their medic, she knew that whatever was coming next was going to be something ‘funny’. “You’re not going to ask me if I want to hear it?”

He leaned back in mock surprise. “Are you saying you don’t want to hear my theories, Angie? I’m heartbroken.”

She raised an eyebrow, a smile twitching on the corners of her lips. “Completely and truly?”
“Without question,” he put a hand over his heart for good measure. “Cecilia! Did you hear how she insulted me?”

The Venezuelan woman rolled her eyes from the nearby couch. “Yes, Glen, I did. Angela, be nice to our medic, you know how he likes to get his ego massaged.” Her eyes nonetheless glittered with amusement from her scarred face she’d gotten from a plasma grenade. Still was in good spirits all the same.

“Ooh, what’s this?” Bradley Kerr walked into their barrack quarters, their group meal in hand. “Glen has a theory?”

Angela looked at the food, different than what he normally brought them. “What is this?”

“Thought I’d try something different,” he said, taking a seat. “ADVENT’s been rolling out their restaurants and meat production. So I got us all a fresh, patented ADVENT burger. Oscar! Young! Come over and get your food before Cecilia eats all of it.”

Angela smothered another chuckle at that. Despite being a Shieldbearer, Cecilia was easily the smallest of the squad, and ate as much as one would expect. Oscar Schwartzman and Young-Mi Cho got up from their long-running chess match which neither of them ever seemed to win or finish and joined at the table.

All of them were in good spirits, which Angela could have sensed without her telepathy. Good reason to be. Word was getting around about how the Collective had been hit worldwide and the Pantheon had somehow pulled off a direct strike at the Collective shipyards. XCOM had hit the Collective hard in Oceania too, which Bradley had been gloating about all day.

Their resident Australian held out permanent hope that his nation would be freed. Indonesia wasn’t Australia, but it was a step closer. It was good that he was happy for now, as he was a lot more focused most of the time, a regular trait of a sniper.

“Where’s Joel?” Oscar asked as they began eating. “Not going to join us this time?”

“Officer meeting,” Angela told them, glancing at the clock. “He said he had one. Probably just ran over time.”

What she didn’t think it appropriate to mention was that it was likely a contingency meeting. No matter how well ADVENT had done some days ago, the Collective was probably going to strike back – and Utah was right on the front lines of a push from the West Coast. Not unexpected that they could be targeted.

“I don’t suppose you could…ask him where he is?” Glen asked, making a circular motion with his head. “I mean, you could find him?”

“Wh-? No!” She sputtered. “Do you want the spooks to arrest me for ‘abuse of psionic power’?”

“Hey, dinner is serious,” Glen shrugged. “But really. Meetings aren’t usually this late. At least not Officer ones.”

Angela decided it was best to continue the lighthearted tone before they thought too much about why their Officer was late. She bit into the ADVENT burger. Huh, it was surprisingly good. Much better than normal fast food. “Well, don’t keep us in suspense, Glen. You clearly want to tell us your theory.”

“Ah, right,” he set a mostly-eaten burger down. “Now, here it is – Patricia Trask is actually dead.”
Angela, and most of the others, raised their eyebrows; physically and mentally.

“Please,” Oscar said dryly. “Do go on.”

“So, I remembered some things you said, Angela,” Glen nodded to her. “Way back when you were explaining the psionic theory around the Bringer. Or what we knew, anyway. Or what’s public, I should say. So fact – we know that you can control someone telepathically – correct?”

Angela sighed, but said: “Correct…”

“And the aliens have clearly shown they can clone things quickly,” Glen continued. “So – fact – they could mock up a Patricia lookalike. Or not. I don’t think she was that tall. Plus she hides herself in a mask pretty often.”

“ADVENT and XCOM seem to be treating her like the real thing,” Cecilia pointed out. “I don’t think they’d make it up.”

“Plus, we’ve heard her talk,” Bradley added. “It definitely sounds like her.”

“Hey now, let me finish,” Glen finished his burger. “I have an explanation for that. So – what the Ethereals did was extract her mind telepathically, and are storing it somewhere, and then temporarily putting it in her body when they want her to say something.”

There were a series of groans. “Very funny, Glen,” Young drawled. “I almost thought you had something serious. Angela, please confirm that’s not possible.”

She added an apologetic note to her voice. “You cannot do that Glen, sorry.”

“Gah, skeptics all around,” he wiped his hands. “That said, I’m pretty sure that’s not actually her. Don’t ask me how, just a feeling. Because I still don’t believe Patricia fucking Trask would go over to the enemy.”

“She probably didn’t,” Angela said. “Not really. What we know of the Imperator is that…well, he could easily force her to turn.” She shrugged. “It’s simple theory, actually. It’s what makes telepathy so terrifying for a lot of people. I doubt she realized what she was becoming.”

“I’m almost sad your theory isn’t possible,” Bradley said with a slight smile to Glen. “Because when we win, we get to free her spirit-mind and I wanted to ask what the afterlife was like.”

“You know we could ask our resident PRIEST,” Glen said with a smile, nodding to Angela. “Oh seer of the Psionosphere, what secrets of the beyond can you share with us mere mortals?”

Angela chortled. The squad never hid their amusement at the (admittedly extensive and arguably excessive) names of the various PRIEST Division ranks. Which she contributed to as well. Still, she liked the atmosphere when she’d been training, and people stopped laughing when they saw what the PRIESTs could do.

“Well, humble pilgrim,” she began somberly. “What questions do you have and what offering you bring?”

“My question is but a simple one,” Glen bowed his head. “Where do our spirits dwell when our souls break our mortal shell?”

“God you’re laying it on thick,” Cecilia facepalmed.
“Do forgive her,” Glen emphasized. “She is but a non-believer. As for my tribute, I offer you nourishment of the body.” He picked up a single french fry and left it before her. She plucked it up and pretended to appraise it as if it was a gemstone.

“It shall suffice,” she said seriously. “The answer to your question is – I don’t know.”

“Boo,” Glen said, ending the façade. “Sad no one knows yet. Seriously though, has that ever been asked in training?”

“Not when I was there,” Angela said. “The Magisters were more focused on making sure each of us didn’t accidentally kill someone else. The spirituality questions didn’t come up. Wouldn’t be surprised if they do at some point though.”

“Psionics isn’t really spiritual though,” Oscar said. “Doubt ADVENT will go for it.”

Angela thought back to some of the things they knew about the Bringer. “I’m not sure about that. Telepathy itself is…odd in that respect. It’s difficult to describe, but navigating the Psionosphere with minds gives a…perspective. Not really religious, but definitely…ethereal, I guess.”

“Ethereal doesn’t sound good,” Glen said deadpan.

“You know what kind of ethereal I meant,” Angela retorted. “But yeah. Any questions about the afterlife are going to have to wait.”

“A shame, that’s something I’d like to know about before I die,” Young said.

“I’d prefer not having anyone in that situation at all,” Angela finished, taking a sip of her water as she felt a familiar mind coming up. “Joel’s back.”

A few seconds later their commanding Officer strode in, as serious as usual. Angela had been somewhat intimidated by the man the first time she’d met him. The scar added a lot, a thick one going over his right eye deep in his dark skin. But he was a very nice, if somewhat overly serious man.

Glen waved a hand. “Glad you made it to dinner. Bradley picked up some ADVENT burgers – they’re pretty good.”

“Appreciated,” Joel came and picked one up, but didn’t sit down. “News from command. We’re to receive a visit from the Japanese Empress.”

Everyone, Angela included, was surprised. Not that it was a bad thing – Angela was quite impressed with the woman from what she’d seen – but the circumstances seemed odd. “Why’s she coming here?” Oscar asked, a frown marring his otherwise unblemished pale face.

“Officially, to help recruitment in Salt Lake and give a speech to us,” Joel said, beginning to eat. “Unofficially – and I’ll stress that this is something the Lieutenant just suspects – ADVENT’s expecting things to heat up a lot here. We’re in a dangerous spot, and the Empress could act as a deterrent. If anything happens…” he shrugged. “Well, she’s right here and can help.”

“Wonderful,” Bradley said. “I hope nothing happens then. I’d like to meet her.”

“She’s not going out with you,” Glen teased. “Don’t get your hopes up.”

“Glen…” Bradley rubbed his forehead, with Angela catching his embarrassment. “You do realize I can admire a woman for her feats and not just because she’s moderately attractive.”
Angela hid her smile with another drink from her glass, and exchanged a look with Cecilia and Young. The three of them knew very well that the Empress was definitely not considered just ‘moderately’ attractive by the overwhelming majority of the single male population. “Whatever you tell yourself at night,” Glen finished, rolling up his burger wrapper and shooting it into the trash bin. “So do we have a role in this, or just attending?”

“We’re on security,” Joel looked to Angela. “Since we have a psion, they want us making sure there’s not anything out of the ordinary. So we’re going to be her unofficial escort, with several other PRIEST-integrated squads.”

“Any dedicated PRIEST squads?” Angela wondered.

“A couple,” Joel confirmed. “I saw several Protopriests named as tertiary escorts. ADVENT’s taking her security seriously.”

“Sounds fun,” Glen said. “Nobody jinx it.”

Angela hoped he was right, but another part of her wondered. Given what had just happened, and what could very easily happen, she had a feeling that the next few days were going to be… interesting.

***

*Situation Room, SAS Command – Nigeria*

6/8/2017 – 11:14 A.M.

Three different aliens stood in the same room, looking at a holotable. The Ethereal stood silently observing as the Human and Vitakarian discussed the latest developments. Ones which heralded the true war for Africa to start. Though the actions ADVENT was taking were certainly… bold.

“A fleet.” Betos said flatly, a note of disbelief still in it, while looking at the holotable. “A naval fleet for that matter.”

“So it would seem,” Keeper agreed, rubbing his chin. “Curious.”

“There must be something more,” Betos muttered, furrowing her brow. “What do we know about the fleet?”

“That it’s very well armed and armored,” Keeper recalled from the Zararch reports Betos had briefly gone over. “Much of the ADVENT wet navy had been overhauled once the shipping raids started. They’ve been moderately successful in defending the supply lines. Augmented with AA defenses, reinforced hulls, and gauss, laser, and plasma weapons.”

“Dangerous then,” Betos nodded slowly. “We knew that. But assuming they’re coming here – why? A naval attack is one of the least effective.”

“The SAS doesn’t have a modernized or large enough navy,” Keeper pointed out. “Although if that is truly their rationale, then they failed to account for a mass deployment of Andromedon Aquatic Forces. Which seems like the obvious response should they be moving this way.”

“Could it be a trap?” She wondered aloud.

“If it’s a trap, it’s a very poor one,” Keeper narrowed his eyes. “Which makes me believe it’s not a trap, and instead a clear signal which will be followed – or preceded by – a land invasion. A
compliment to an attack, not something else. However, the size of the fleet is irregular. Far too large for us – or what I would expect. Alternatively, it could be misdirection for something else.”

“If ADVENT is to invade us, they would want to send a message,” Betos said grimly. “Literal overkill. They used a nuclear weapon. An overwhelming fleet wouldn’t make them flinch. I assume there are submarines accompanying them?”

“Of course, some,” Keeper nodded. “But this primarily seems to be a ship-based fleet. If the submarines were similarly mobilizing for this fleet, we would know about it.”

Betos looked to Macula. “If they’re headed our way, we’ll need the Andromedons.”

A nod from the helmeted alien. “They will arrive swiftly. If ADVENT wishes to use an overwhelming wet naval fleet, we can exceed them and send their soldiers to the bottom of the sea.”

“It might not be easy,” Keeper warned. “Crew compositions include ADVENT special forces and PRIESTs. They’re preparing for us. Nonetheless, with an even larger fleet we should emerge victorious without much difficulty.”

Betos still felt like they were missing something. “We should know of an equivalent land mobilization – and to my knowledge we haven’t seen that.”

“We have, actually,” Keeper amended, shifting the holotable to Africa. “ADVENT has been mobilizing and steadily moving Legions to Egypt and European nations close to Africa. All of them are stuck in limbo until the sandstorms in the Sahara calm down. ADVENT clearly doesn’t want to risk going through them.”

“How long are the storms supposed to last?”

“At least several days more, according to forecasts,” Keeper answered. “Probably a week before they calm down enough for ADVENT to effectively move through them.”

Betos did find it somewhat amusing that a simple series of sandstorms was all it took to keep ADVENT at bay. “Maybe we should invest in a weather machine,” she said dryly. “That seems to keep ADVENT at bay. A hurricane would be useful right now.”

“Indeed it would,” Keeper offered a thin smile. “However, that gives us time to prepare. We’ve estimated the places where ADVENT will strike once they mobilize. They should be prepared by the time ADVENT moves out. No more than one week.”

“Good.”

“We have half a million Collective reinforcements almost being deployed over that same period,” Keeper added. “And considering the state of some of the nations XCOM so helpfully destabilized, we should move in and restore order. There is no government to speak of right now, and if we don’t act, ADVENT will.”

Betos didn’t like the idea of the SAS effectively invading a country…but the fact was that there was no more government since XCOM had removed it. They needed to do something, and they were better equipped than ADVENT to restore order before military dictatorships happened or criminals carved up what was left.

“Unfortunately, that’s true,” she admitted. “Send in our soldiers. No aliens yet. XCOM tried framing the Collective, and people won’t react well. We need food, medicine, aid first. I’ll work
with the acting heads of state to establish some kind of government. The sooner we start this, the better. All simultaneous. We can manage that, correct?”

“Correct, Marshal.”

“Then I would suggest we start doing that,” Betos drummed her fingers on the edge of the holotable, fixated on the image. “We have a short window before ADVENT strikes. Let’s move as fast as we can.”

***

_Nartha’s Quarters, Nulorian Outpost – Borelian Wastes_

6/5/2017 – 2:20 P.M.

He felt better now.

It took a few hours, but some time to think and sharing a morning stimulant (in the afternoon) with Shun helped get his mind focused beyond Miridían’s ruthless plans. Now they both sat on a couch in his largely sparse quarters, both of them seated basically right next to each, a proximity neither felt the need to comment on or change.

Shun swirled the drink in her mug. “We’ll get them out.”

Nartha pursed his lips. “I don’t know.”

“Why not?”

He sighed. “He’s part of the Aui’Vitakar. He probably sees me as a traitor. Mother too.”

Shun shrugged. “You’re still his son. And your sister is in XCOM.”

“What means he is probably trying his hardest to prove his loyalty,” Nartha finished grimly. “But he’s like so many others. They don’t see the Collective; the Zararch; the Ethereals as the _enemy._”

Shun nodded. “Propaganda.”

“More than that,” Nartha added. “They have good lives. If you get sick, you go to a hospital and get better. You are educated. You always have a job. No war, no hardship. Why would you want to get rid of that?” He lifted a hand. “Yes, I know. But most people are never negatively touched by the Zararch knowingly. All of what’s happening just…doesn’t affect them.”

“No, I get it,” Shun briefly closed her eyes. “Reminds me of China, in a way. Minus the guarantee of a comfortable life. But historically, we’d been taken advantage of by other nations. Then when it was our turn…we’re more comfortable trusting our leaders who at least we knew were _us._ Belief because if we didn’t, we’d have nothing.”

She paused several seconds. “Then later throw in propaganda for several generations, an isolated internet, and control over education, and you got the pre-ADVENT Chinese state. And even then, it’s not like we didn’t know there was something _outside_ what the CCP taught, we just thought we were better. Easier to stay with something familiar than fight for something better. So I get that.”

“And now ADVENT fixed that.”

“Fixed?” She snorted. “Not completely. Not for years at least. You can’t change a mindset overnight. I was lucky; I got regularly exposed to others who made me think a bit more critically.
Not everyone is in that position, or open-minded enough to change their minds like I was. But… ADVENT will make it better. You’ll make it better for your people too.”

He gave a wan smile at her. “Assuming Miridian leaves any alive.”

She rolled her eyes. “No mass killings on my watch, or the Commander’s. If there’s one person I think he fears, it’s him.”

“Fears?” Nartha shook his head, amused. “I doubt that. Not when he has his pet machine around him. Miridian isn’t the type of person who is ‘afraid’. Which, I will say, is not necessarily a smart thing.”

“Fear can keep you from making stupid decisions,” Shun agreed. “Then again, it can also stop you from making smart ones.”

“The line between healthy and unhealthy fear is thin,” Nartha noted. “And I think Miridian may fall more on the latter – though the Commander can likely keep him in check.”

“We can only hope,” Shun said. “But I’m serious. You’re not only the first Vitakara to realize something was wrong, and defect, but the first alien. If anyone’s going to have a role, it’ll be you.”

“I almost hope not,” Nartha said slowly, resisting a shudder. “I’m not a good person to lead. I’m much better at following orders; working within a box to get something done. I have no idea how to set up a government. I also don’t want to be Speaker of the Vitakara 2.0. I don’t think a former Zararch leading the new enlightened Vitakara would play well.”

“No, no, not necessarily lead, but you can help the people adapt,” she insisted. “Like you said, it’ll take time – and people along the way. You know what they will be going through, and how you can help.”

“Maybe if I have a few dozen defectors and ADVENT psychologists helping,” he glanced at her. “You too. You’d probably be better suited than I am.”

“Hey, I’m just a soldier too,” she smiled, and took his hand resting on the couch fabric. “But I’d be more than happy to be the official XCOM liaison for this project. For purely professional reasons, of course.”

He met her eyes. “No doubt.”

There was a brief, very charged moment of silence between them.

“I’ve been thinking,” Shun finally said, not looking away. “A while, actually, but really when you almost died to Quisilia. Things that…well…both of us may be avoiding, assuming you’re picking up what I’m saying, yes?”

“I…think I am.”

“Right,” she nodded, taking a shaky breath. “Well then. Yes. I like you, romantically I mean, which is really odd to say that to an alien, but, well, it seems really dumb to deny it. Things are getting a lot more dangerous, and I don’t want you to die and I never told you how I feel.”

On some level, over some time, he’d wondered about this. Little hints which may or may not be indications. Something they kept more or less dancing around as they worked, talked, and fought together. He’d been confident…but not confident enough to really confirm. Not until now.
And the confession was enough to turn his previously stressful day around.

And he had, of course, done some research on Human romantic relationships. Initially very long ago when he’d been preparing to infiltrate XCOM, and more recently, just in case he was right about her interest. And if the movies and books were any indication, now was the time for the next step.

So he leaned down and kissed her.

He didn’t know how long it lasted, but it was as long as both of them wanted.

When it finally broke, the euphoria both felt didn’t abate.

It was certainly different from Vitakarian women – but in a good way.

She tried to sound accusatory, but it came out almost as a giggle. “You’ve been waiting to do that.”

He smiled, looking down at her. “I’ve been thinking about it for a while.”

“We could have done this so long ago,” she groaned, closing her eyes briefly before opening them and looking at him intently. “Well then, what are you waiting for – do it again.”

***

Salt Lake City, Utah – United States of America

6/10/2017 – 4:22 P.M.

Kaya was thankful that ADVENT was doing something to not make her tours completely superfluous. On some level she knew it was selling herself short, but on another, she didn’t like the idea that she was getting out of the front lines of battle. Then again, right now, there weren’t any major battles going on.

Though they were assuredly coming.

Probably after this PR event, actually.

“Africa,” she grunted in the back room, which her squad was staying in before going out to the throngs of people. “I guess ADVENT is not going to tolerate them anymore.”

“Apparently not.” Genevieve tossed the tablet to the side after she finished reading. “Very vague though. ‘SAS offensive’ can mean quite a few different things. Either way, I admit, it will feel good to actually get back to killing aliens.”

“Nah, it’ll feel better,” Vicki interjected. “If there’s one thing worse than an alien, it’s a traitor Human.”

“Here, here,” Fletcher nodded. “But in the meantime, we get to play bodyguard, so it’s a nice change of pace. Beijing was honestly enough to give me my fill of fighting for a while.”

“And I’m glad all of you are here, uneventful as it’s been,” Kaya smiled, glancing to the clock. “Speaking of which, we’ve got to move in a few minutes.”

All of the squad moved to get up and ready themselves, putting on helmets and clicking on the safeties of weapons. Public event it may be, they were cognizant of Kaya’s increased public profile, and it wasn’t out of the question that the Zararch or another alien faction would try and
especially given that they’d technically already tried.

Suited up, they marched out to significant PRIEST protection, many seen, a number unseen. PRIEST-embedded ADVENT Army squads were also deployed around the city. It was definitely a lot of work just for her, but she did take some solace in the fact that if something were to happen, it probably wouldn’t just be an assassination, and the garrison would be ready.

There was, in fact, a good chance that the Collective was planning something from the West Coast. If it would come today, tomorrow, or a week from now was unknown – but it was likely to come soon; all in a wave of retaliation from the aliens after ADVENT had struck back.

But they would see.

The event was a relatively simple one, go to a venue, give a short speech, and then an afterwards discussion with a smaller group, usually a mixture of high-school and college-age people. If there was a Japanese population, they would also be directly spoken to. She preferred that, much less formal and she felt it helped dispel her as some mythical figure ADVENT was presenting her as.

ADVENT wanted her to primarily improve military recruitment, which was not something she really believed in. Not everyone was cut out to be a soldier. Instead she preferred encouraging them to work for ADVENT in some capacity. Intelligence, Medical, Science, Engineering, the Militia, to do something to contribute.

That struck her as a more balanced approach than solely military. ADVENT hadn’t commented on it, so she assumed that they were satisfied by her approach. Data after her recruitment tours showed that she was having a tangible impact on hiring numbers, and that was all that mattered.

She was still somewhat surprised at how much interest she generated. No matter where she’d gone, there’d been a packed house. In Japan or Asia that would be one thing, but Americans and Europeans? They theoretically shouldn’t care as much. She knew part of it was due to ADVENT, but it might be simpler than that. People liked a good comeback story.

Or a revenge story.

Both were applicable.

One thing which struck her as she talked with people all over the world was that there was, truly, no one who was untouched by the war. Everyone mentioned that a friend, or a sibling, a parent, an uncle, someone they knew had died, or they knew someone who knew someone who died.

There were way too many families which were now being managed by single mothers or fathers, or worse, the oldest siblings. Civilian PTSD was skyrocketing, as were other mental conditions made worse by the stress of war. There was no safe place on Earth, not really, and she saw it in their eyes.

A weary fear, as if they were waiting for the sirens to sound and the bombardment to begin.

It was always emotionally exhausting, but it did make these long events worthwhile. Thank goodness ADVENT existed and was managed by competent people. She didn’t want to think about how the world would have dealt with a crisis like this without a strong, decisive government.

It would have been bad. It was also generous assuming that the world would have held on this long.
“Think that’s another one down for today,” Genevieve yawned as the last people trailed out. “That makes-“

The muffled sound of an explosion sounded, rattling the building’s foundation as the squad immediately formed up around her, weapons up. Kaya immediately flung her own helmet on, and reached for her sword as the PRIEST squad nearby burst in and encased them in a psionic shield.

“What’s going on?” She yelled.

“We’re assessing, Empress,” the Protopriest stated, “But there’s been an explosion. Seems to be someone in the crowd who was intercepted. There are several suspects, ADVENT squads are moving out now. Stay put, we’ll ensure they get no further.”

***

Salt Lake City, Utah – United States of America

6/10/2017 – 4:02 P.M.

Angela was convinced that the best training that any telepath could do was to go outside, sit down, and listen.

Not listen, listen, since the Manchurian Restraints would prevent spying on people’s thoughts without good reason, but what it couldn’t stop was the picking up of emotions. Even that would be initially overwhelming for a young or inexperienced telepath, and at first it would be a soup of everything. Good luck picking out specific emotions, much less who said emotions could be connected to.

But with experience, it would eventually start to work itself out. Things would become clearer; the mind would be able to start separating and picking out what it wanted to. You could ignore or focus on specific emotions, and then tie them to people walking around you. It was enormous power, even if not ultimate, and she suspected that if people even knew that, it would make them uncomfortable.

It never made guard duty boring, that was for sure. The emotions always acted as adrenaline in some way; it required some degree of empathy to feel what they felt, and one would feel the emotions just as they did. Those were the most effective telepaths, in her opinion. Telepaths who were too clinical in their approach seemed to have more difficulty picking out specific entities.

Telepathy required connection, and that would always go both ways to a degree.

Hundreds of people milled around outside the event area, going about their business or waiting to get in or for the Empress to emerge. Angela and her squad were one of the many ones which were scattered around for protection and observation. Thus far, nothing but crowds. A lot, but not something that they couldn’t handle.

Angela stood behind Oscar and Young. Bradley was stationed in a balcony above, sniper rifle at the ready. Glen, Cecilia and Joel were patrolling in sync with the movements of a dozen other squads, giving a permanent presence to the entire event. Oscar hated these kinds of events, and found guard duty very, very dull.

Young was a little more interested, but she much preferred to be in a team which was at least moving. Angela couldn’t really blame them; they weren’t telepaths and without as much stimuli as she was receiving, it would admittedly be very boring. So she’d also gotten good at talking to them while also being able to properly monitor everything.
And also used her telepathy to passively sharpen them. A Solii needed to always help her squad, and throughout this entire rotation, neither of them would feel tired or exhausted. And in the unlikely event something did happen, they would be able to react immediately. Both probably knew, even if they didn’t comment on it.

“She’s a good speaker,” Oscar was saying. “I can see why Bradley is so infatuated with her.”

“You both realize I can hear what you’re saying?” The sniper muttered from atop.

Angela smiled, but didn’t comment. “Yes, yes,” Oscar said. “I’m saying you have good taste, man.”

Bradley grumbled something unintelligible into the comms. “She is,” Young agreed. “She did always strike me as a smart one. Kind of surprised she was actually able to get into the Order without anyone recognizing her.”

“You’ve seen her before?” Oscar glanced over to her.

“I lived in Korea my whole life,” Young reminded him. “We’re pretty close to Japan. Not superfans or anything, but they were close enough where we generally followed if the Japanese imperial were doing something. Never thought it would turn into anything like this though. But good for her.”

“Still, I wonder,” Oscar mused. “Think she’s writing her speeches on her own, or some ADVENT writing team is doing them?”

“Nah, I think she is,” Young insisted. “You can tell if someone’s speaking their own words or someone else’s. You can tell, no matter how good of a speaker they are.”

“If that were the case, Saudia would be writing her own speeches,” Oscar pointed out.

“She actually does,” Bradley interjected. “Said so quite a few times.”

“Oh, come on,” Oscar snorted. “Like the fucking Chancellor doesn’t have a team of the best writers crafting her own Independence Day “We will not go quietly into the night” speeches. No way she’s coming up with that on her own.”

“Hey man, if she isn’t, she’s a really good actor.”

“I’m not saying they’re bad,” Oscar protested. “They’re great! But come on, that isn’t how politics like that works. She probably practices a lot.”

“She’s a good speaker,” Angela added. “A good leader. Like Treduant.”

Despite the fact that she’d come from nowhere.

All these months later, there was a lot about how ADVENT came about that still made her uncomfortable. She, like pretty much everyone else, found it difficult to believe that ADVENT coming around had been a great Coming Together™ of Humanity for the greater good. There was a mechanical calculation around it, with Saudia being the top of it.

A void with no past or history.

And the only answers were found in conspiracies, a rabbit hole she was definitely not going to go down. Glen would do that, and on occasion would share some of the more outlandish ones, but
underneath his excuse of humor, he was just as curious about the origins of the new world order as the rest of them.

Not that it was wholly a bad thing. ADVENT was indisputably needed and it was good to have competent leaders right now. At the same time, there was a lot about ADVENT which could generously be considered questionable.

Oscar and Young were still chatting. Angela let their conversation happen in the background as the crowds still moved. Until Oscar brought her up again. “Angela, I don’t suppose you’ll have stuff going on tonight?”

Angela raised an eyebrow under her helmet. “I don’t think so?”

“Well…” he slightly glanced back to her. “You think you might?”

“Oscar…” Young sighed.

“She’s a telepath! She can understand subtlety.”

“You’re about as subtle as the Battlemaster in a street of Humans,” Bradley commented dryly.

Indeed he was. “Well,” Angela said slowly. “Perhaps I will go get some target practice. I’m sure Bradley would love to come with me, and Glen too. Joel will probably be in a meeting.”

“Oh, fine. You owe me, Oscar.”

Oscar was likely grinning under his helmet. “Don’t worry, I’ll put in a word for you with the Empress. I’ll try to get an autograph if they have them.”

“One with a kiss too, if she’s comfortable doing that.” Young added with a giggle.

“I hate you all.”

But he didn’t, even if he was slightly embarrassed with all of the teasing. And Angela didn’t have a problem letting Oscar and Young conveniently have the squad room to themselves for a few hours. One could only imagine what they wanted it for. Not that either of them had been especially subtle about it; Angela had figured it out pretty easily after the first time. Emotions were a dead giveaway, but all she’d done was give them a knowing look which they’d sheepishly returned and let them go more public at their own pace.

It was cute.

Though Joel had just rolled his eyes when he’d found out, muttering about the ‘indiscretion of youth in war’. But she’d known he didn’t have an issue either. With a war going on, there were more important things to worry about.

However her good mood quickly crystalized as she noticed something peculiar. She wasn’t sure what had caught her attention, but there was a woman who was sitting and reading a newspaper nearby. She looked pretty normal, and not really even interested in what was going on around her. But she had no emotional signature. None. There was a difference between having tight control, and not having any emotions at all. And she had nothing. “Bradley, see the woman across the street. Newspaper, black hair, white, jeans, green shirt?”

“Yep. Why?”
“She doesn’t have any emotional signature.”

A pause. “Well, that’s not good. One of the Zararch infiltration machines?”

“Only one way to find out,” Angela switched her frequency. “Salt Lake Local Command, this is PRIEST Blackburn. Possible location of a Zararch REPLICA unit. Request backup and permission to proceed.”

“Stand by. Please provide description and location.”

Angela complied, then waited a few minutes, and subtly noticed a number of other squads had entered the area. “Soldiers on standby, as well as applicable sniper and PRIEST units. Approach with caution.”

“Copy that,” she nodded. “Joel, did you get that?”

“I did,” he confirmed, also now on their frequency. “Proceed. I’m heading back now, but if it’s a REPLICA we want to take it out now. Be careful.”

“Alright, let’s go,” she said, taking a lead before Oscar and Young who flanked her as she approached the woman. Said target looked up as they approached, though apparently judged to play it cool.

“Hello, is there an issue?”

“We hope not,” she definitely looked and sounded Human. “Identification please?”

“Oh, of course,” the woman fumbled around in her purse. A good actor, but now that she was up close, Angela knew that it was a façade. She made a show of looking at the ID – which did seem legitimate – before putting it in one of her pouches.

“There seems to be a small issue with it,” she said. “I’m sure it’s nothing, but you’ll have to come with-“

She wasn’t able to finish as the woman’s face turned fully still and she leapt forward, pushing Angela with enough force to send her back into Oscar, and bolted through the crowd. A sniper shot rang out, which hit the woman in the arm, but didn’t stop her. The crowd burst into pandemonium at that, and scattered in all directions at the shot.

But the line of ADVENT soldiers who’d formed had closed all exists. The REPLICA seemed to realize that, and briefly stood frozen, trying to plot a way out. “Cage coming up.” One of the PRIESTs said over the comms. A small psionic box appeared around the REPLICA, who looked around it.

“Try to not damage it,” Joel was saying. “We’d prefer it-“

The REPLICA exploded.

The blast rocked the ground, and the psionic shields weren’t able to contain the full blast, which blew a number of bystanders back, though thankfully at first glance it didn’t seem to have killed anyone. But the REPLICA was fully vaporized. Only shrapnel and ash remained. Angela breathed heavily.

That could have been much worse.
“Well,” Oscar coughed, standing up. “I think that’s enough excitement today.”

Angela agreed, but she had a feeling that Oscar and Young weren’t going to get their private time tonight. If there was one REPLICA, there were almost certainly others, and ADVENT wasn’t going to let things return to normal until each one had been found and terminated.

***

Residence of General Imraam, Kuala Lumpur ADVENT Base – Malaysia

6/11/2017 – 9:02 P.M.

Subtle.

That was what the Zar’Chon wanted.

Easier said than done.

Penetration of the military base itself was trivial. It was a simple matter of tailing one of the soldiers who commuted each day from the city itself, breaking into their home, taking scans and data of their badge, then leaving. The data was transmitted to the Collective, who were able to fabricate a copy without issue.

The guards only really cared about the ID card being scannable or even just looking accurate, so flashing it was usually all that was needed. Nemo had done some modifications to the face to make it look not completely like Saudia, such as adding a small scar, cutting the hair far shorter, and adding glasses.

It was amazing how much a simple prop like glasses could change a face.

Not that anyone was paying attention to what it was doing here, nor was Nemo making their actions obvious. Simple observation for several days, learning patterns and keeping track of important people – its target included. General Imraam lived on-base – a smart decision, but military housing was still vulnerable.

It just happened to reside within a higher-risk area.

Simple.

Around the exterior of the house were three squads, and a full PRIEST Squad led by an actual Protopriest. One of the days Nemo had paid special attention to them. Three telepaths, two aegii, and one telekine. Mental and physical bases covered. Assassination by sniper rifle would be practically impossible given how thoroughly he was surrounded whenever he walked outside.

Scans taken of the residence revealed that it was not made out of regular material. Stronger walls, bulletproof glass, SHIVs which patrolled, along with MDUs. They really did not want anyone to touch this guy. Unsurprising, but it was not something which could not be overcome.

And it was time to act.

A frontal attack was obviously suicide. A stealth approach luring and taking out guards one-by-one was infeasible due to the psions and machines. Compromising the machines was equally impossible since its credentials weren’t tuned for engineering, nor was Nemo confident that certain contingencies weren’t hardcoded to prevent hacking. ADVENT would have likely done that.
It also didn’t help that the entire residence was wired up with so many sensors that there was a high likelihood that the moment any movement was detected past the threshold, the door would slam open and alarms would go off. It was incredible just how paranoid ADVENT was being. No one could also enter without a psionic evaluation and verification.

They had learned quite a lot since the assassination of the Japanese Imperials. And presumably after they’d found its previous target dead.

Admirable, in a way.

With all of these factors, Nemo had come to the conclusion that breaking into the residence was impossible. Even something like compromising the ventilation wouldn’t likely work since there were almost certainly sensors that would detect air changes, and there was even an anti-nanite contingency based on scans.

ADVENT wanted to play, as they would say, ‘hardball’.

Well, that could certainly be done.

It wouldn’t be…*subtle*…but it could be done.

Nemo clicked a finger to its ear. “Is it in position?”

The synthesized Andromedon voice answered promptly. “*Standing by. Awaiting coordinates.*”

Nemo lifted the carefully tuned tracking rifle and took aim at the house. The laser was still risky because it could still be intercepted by the MDUs or SHIVs even if Humans couldn’t see it. But from up high, it had a lessened chance of detection…for the first few minutes. A conventional airstrike was impossible due to ADVENT detecting such beforehand.

Missile strikes or other projectiles had the same issue.

Thus, unconventional technology had to be employed.

Union Omega was responsible for some of the most sophisticated pieces of technology that existed today. The Federation’s own black operations Union had outdone themselves with this particular device. Even if the Shatterpoint Satellite was, by all metrics, a major waste of expensive resources.

A stealth satellite which could be inserted covertly into an orbit, designed to be invisible to scanners and radar. Over three months to meticulously put together, loaded with several hundred metal spikes, each approximately one foot long, specially forged and designed to be released and fly to the ground at terminal velocity, and impact a very targeted and specific point.

No engine, no thrust, no detection. Too small to be taken out by AA defenses. No signature to be detected beforehand. Shields would be the only tool capable of stopping it, but this particular base didn’t have it. The impact would be more than enough to level the target structure and kill anyone caught in the radius.

Afterwards, the satellite would activate its nanoconsumer, and eat itself, leaving no trace it ever existed. The perfect assassination weapon, though due to the exceptional cost, the Collective only had a few on hand. It didn’t help that due to the small size of the spikes, it wouldn’t be equally effective against everything. It wouldn’t take out a skyscraper, let alone a place like the Chancellor’s residence.

But against a slightly-improved home to a military commander?
“Synchronized. Firing. Maintain laser.”

In theory, all Nemo had to do was upload the actual coordinates, but with ADVENT’s AI in play, risking their networks was not acceptable. This carried its own risks, but they were more manageable. Not to mention that the precise nature of the weapon meant that a wrong coordinate could throw off the entire attack.

“Firing complete. Severing and self-destructing.”

Nemo turned off the laser. The machines hadn’t seen anything.

It allowed itself a smile.

Time to watch the fireworks.

So Nemo sat back, and first saw the little orange bolts fall from the sky. ADVENT seemed to notice them as well – just as they heard the shriek and the first spikes slam into the house. It was fascinating to see the hundreds of spikes reduce the house to shreds like being shot point-blank with a flechette weapon.

Which was, in essence, what the Shatterpoint Satellite was.

Everyone and everything near the house was instantly killed.

Alarms blared.

Time to go. Mission accomplished.

***

Near Field Hospital – Brazil

6/12/2017 – 8:42 P.M.

They’d spent the last few days observing; watching patterns and routines the medical staff performed. It was a challenge that Volk, even now, still didn’t want to complete. A small part of him was hoping that ADVENT would catch onto something and give him an excuse for not going through with it.

Unfortunately, they had not.

The field hospital was a fairly minor one, which was a good distance from the front lines of the South American conflict, near a city he didn’t know the name of, though had been built beyond it for safety and expansion reasons. Wartime injuries, mostly, so as not to overburden the city hospital which still handled routine injuries.

Civilians, soldiers, anyone hurt as a direct consequence of the war was taken here. Large enough to provide care, and small enough to only have a small guard and still largely composed of tents and only a couple solid buildings.

And there was a routine the staff had every week, which was to gather in the main hall as something of a social event and morale booster. Everyone from the Hospital overseer to the medics themselves attended. Fish in a barrel, and the guards were minimal. ADVENT either didn’t have the manpower or didn’t believe that those kinds of locations would be attacked.
To be fair to them – this was a wholly out-of-the-way target.

Though in truth, it was clearly a test by the Zar’Chon.

“Time to move in,” Volk ordered, as he and his soldiers coalesced around the hall where they were gathered. The guards had been taken care of, but there was only a limited time before people were sent to investigate. A dozen of them were spread out now; Volk motioned for a couple to cover the exits.

When they entered, some would likely try to escape that way.

“How are we doing this?” Came the question from one of his men, Arthur.

Volk pursed his lips under his mask. There was a plan they had come up with; several in fact, but he decided not to pursue those. Instead all he said was: “Follow my lead.”

And so they flung the doors open, and entered, weapons raised. There were a few yelps of surprise and sputtering, as well as dishes and drinks falling to the ground as those gathered beheld the armored intruders. There weren’t any others than they’d expected. Just medics, administrators, managers, and a few patients which had recovered enough to take part in this social event.

There were tables set out with food, from chips, salsa, and soup, and punch bowls with different colored liquids in them. Paper plates and plastic forks were set out at the ends, and small round tables were set up with some groups gathered around. Some smooth background music played at a low volume, which became the overriding sound as everyone got quiet.

He should have given the fire order then.

But he didn’t.

Not yet.

“Up and against the wall!” He ordered, moving his plasma rifle to emphasize. They quickly complied, some tripping over each other. A healthy portion of them were holding in tears or expelled muffled sobs, all of them believing that they were going to die very soon. He shouldn’t be giving these people hope.

He moved throughout the room, with his soldiers forcing compliance and making sure they didn’t move. They complied; none of them tried breaking free or making a run for it. Smart. Except one man; a figure who was seated at one of the round tables with a bowl of soup. He was a doctor judging from his coat, and seemed to be middle-aged. Perhaps in his late thirties or early forties if Volk had to guess.

A day’s worth of stubble had grown around his chin and mouth over slightly-tanned skin, perhaps he was a military doctor judging from the buzz cut, which was so close it was close to indistinguishable from him being bald. What was exceptionally odd about him was how unconcerned he seemed to be, simply appraising the intruders while eating spoonfuls of his soup.

“Against the wall,” Volk ordered.

The man looked up at him. “Rather blunt. You could ask a bit nicer, considering the circumstances.”

His voice was equally baffling; no trace of concern or fear. It was almost chastising him for a lack of manners like a stuffy aristocrat. Not someone who was now in a hostage situation with his life
very much on the line. Volk aimed the weapon in his general direction. “Do you want to be shot?”

“Preferably now, than later,” another spoonful of soup. “Although I can certainly see the appeal of such drawn-out executions. There’s something so intoxicating about the feeling of power in your hands. The power over life and death; such control. A rush like no other. And right now, we could all use a little more control in our lives, wouldn’t you agree?”

Volk frowned at the man who was smiling up at him knowingly, not expecting the conversation. “What are you talking about?”

The man smiled. “What else could I be referring to?” He gestured around him. “Please, do not try and fool me. Don’t worry, I know about the Collective’s orders. Killing the helpless medics – a test of loyalty for their Human collaborators. But that is a step just too far for you, so you’re desiring control. Hence this current…situation.”

Volk had a very bad feeling about the man, who stood up a moment later. He wanted him to stop talking. “Shut up and get against the wall.”

“You will not be able to control this situation forever,” the man almost taunted. “Indecision kills men just as surely as weapons. And it can happen in an instant.” He followed up with the snapping of the plastic spoon he had held in his hands.

“Volk?” One of his men asked. “What are we doing?”

What were they doing? What he should do was shoot this man who definitely knew more than he should have, and was acting like he was expecting him, but…this whole mission was not something he had agreed to. And if he did follow through on this, then he couldn’t hide from himself that he was now just an indiscriminate assassin of the aliens. It’s not like this will stop Patricia from doing her own thing.

And for what? To make it easier for them to do this again.

He pursed his lips. “Knock them out and take their IDs and access cards. We might as well get the supplies here.”

“But…” his men didn’t seem convinced. “Asaru…”

“I’ll deal with her,” Volk muttered. “Do it.”

Elena gave a slight nod from beside him. At least she would be on his side, for what it was worth. “Except you,” he looked at the man. “You’re coming with us.”

The man raised an eyebrow, not bothering to hide his amusement. “A prisoner of war? What an interesting turn this has taken, yet all the same, I must refuse.” He shook his head in mock sadness. “I would suggest you leave now,” the man said, his voice a mixture of sympathy and warning. “Else your losses will be painful.”

“We’ve got the locations,” Elena stated. “We can go. Leave him.”

“I don’t think he’s a medic,” Volk said slowly, narrowing his eyes. “ADVENT Intelligence, probably.”

“He’s not,” Elena shook her head. “But I do not like him. I cannot read him. We should go.”
“I do admire a perceptive woman,” the man smiled. “Hold her close, Konstantin Volikov.”

Volk gritted his teeth. If there was ever a red flag, it was Elena being unable to read someone. The only ones she couldn’t were Ethereal apparitions and Nemo. Everything screamed that this person was not to be trusted, and that letting him go just like that was a bad idea. At the same time, it seemed like the man was willing to risk provoking and testing him.

He was far too confident. Suicidal almost, unless he knew something.

“Knock them out,” he ordered. “And-“

There was an explosion outside, and the sounds of gauss and plasma fire. The ground shook and people fell to the floor, including some of his own. The man glanced to the sound of the explosion and his balance never wavered. Fingertips pressed together, he just appraised them with an amused expression.

Volk’s weapon came up, and he immediately began moving back. Too late to deal with the mysterious man. “Retreat!”

Either ADVENT had prepared this as an ambush, or someone had decided to investigate the guards earlier than expected. The man had probably somehow known he was coming, and this entire event was a trap.

They burst out the door, and found themselves in the middle of a firefight.

He almost froze in place when he saw who it was. It wasn’t ADVENT which was moving in. It was XCOM.

What?

How?

Why?

One of his soldiers fell back as a plasma bolt slammed into her head. Green projectiles flew around him. They were not prepared for ADVENT special forces, let alone XCOM. They didn’t bother fighting when they were so outmatched, and they retreated as fast as they could, falling back, taking cover and firing stray projectiles as the unknown number of XCOM soldiers advanced.

More of his people fell. He maybe got a few glancing blows on some of the black-armored XCOM soldiers.

No psions, thankfully was what it looked like.

“Volk!” Elena shouted, and pushed him to the ground as a rocket flew past and impacted close to them. His eardrums rang and he was flung against a tent, ripping a hole through it. Panic gripped him as he looked for Elena, and thankfully saw her a short distance away, stunned, but still visibly breathing.

Then went cold again as one of the XCOM soldiers reached her and a glove slammed into her head, knocking her out. The second wind coming to him, he pushed himself up – only to be thrown back to the ground as another explosion lifted him off his feet, and this time when he hit the ground, his consciousness faded.
The only thing left was panic, which persisted into his dreams.

***

Office of the Chancellor, ADVENT HQ – Switzerland

6/12/2017 – 11:25 P.M.

Saudia looked at Powell, her face set in a frown. “This is not acceptable.”

“No, Chancellor, it is not,” Powell conceded. “We’re adapting as we speak. Coordination within applicable agencies is commencing.”

“Useful after the fact,” Saudia said pointedly. “But this was something we should have anticipated.”

Reports had been coming in. Suicide bombings, murders, assassinations. At first she’d thought they were random attacks unleashed by the Zararch, but autopsies and breakdowns of them revealed a very clear pattern, far more subtle than she had expected, and an action which she’d wondered if the Collective would pursue at all.

The targeting was not random.

But the targets were not high-profile figures. The dead included low-key, but important scientists, medics, engineers, community leaders, and individuals which didn’t have around-the-clock security details around them. A critical part of the war effort, but not one which was publicly known or ‘important’ enough to warrant individual protection.

Even if they were around known figures like the Empress, the violence only seemed to sprout because they’d been found out, and forced to defend themselves. Surveillance operations against them. The one piece of good news seemed to be that the measures taken to prevent another assassination of the Imperial family were working, with some exceptions.

“I suppose this means that the Battlemaster is no longer in charge,” Powell rubbed his chin. “He wouldn’t sanction assassinations against an enemy, even military targets – and the number of dead go far beyond the military.”

“Unlikely,” Saudia conceded, lacing her fingers together. “Not that it matters much. He’ll go along with it. This likely was authorized by the Imperator, and there is a line that the Battlemaster will not challenge.”

“He is unlikely to take any part in it,” Powell nodded. “Nonetheless we’ll be able to use it against them, as he is the face of the Collective – for better or worse.”

“I’m not concerned with that right now,” Saudia stood. “What I am concerned about is that the Zararch are mobilizing to target and cripple our best and brightest. They are one major reason we are holding our own right now. Even several of the Generals are being taken out, and that is to say nothing of the sabotage which has happened.”

“It’s not been wholly successful,” Powell reminded her, leaning back in his chair. “There’s been multiple thwarted attempts, especially against our military forces. But I agree – too many got through. I believe the consensus is that our science and engineering leads need protection. Same with state and community leaders.”

“And too many have been infiltrated,” Saudia muttered, standing by the window, looking out.
“And we don’t have enough personnel or psions to perform a sweep like what you did to ADVENT Intelligence.”

“Not everywhere,” Powell agreed, consulting his tablet. “But PATRIOT put together an interesting interpretation of the data. It might give us indication of where the Collective may be planning to strike next. South America, the Midwest of America, Southeast Asia. Not that other areas were untouched – but there’s been a concerted effort to weaken us there.”

“And just as Scipio is about to commence,” she rubbed her chin. “Fortunately they seem to have not discovered that yet – though the SAS is being more decisive than we anticipated.”

“Agreed,” Powell adjusted his glasses. “It seems the Collective judged correctly that they could push Betos in that direction. Very easy to kill her confidant and pin it on us. It will make Scipio somewhat more difficult, but still doable. They’re inheriting nations which have collapsed. The scope can be expanded as long as we account for it.”

“So long as Laura is prepared,” Saudia nodded. “Because it sounds like the Collective is signaling that more attacks are coming. This plus Scipio will be…chaotic. And I doubt the Zararch will stop their assassinations in the meantime.”

“No, they will not.”

“Then they must be mitigated.”

“Of course, Chancellor,” Powell stood. “And we have a plan to do so.”

“Present it then,” she turned back to him. “Because I will have to address this – and I’d prefer it be sooner than later.”

Outside Busan – Korea

6/13/2017 – 7:24 A.M.

Busan, the site of continuous defeats for the Collective.

Today that would change.

Patricia stood outside of the long empty shelled plains of the no man’s land, with the legions of Collective soldiers straight from Desolan. There was a slight sense of déjà vu from New York, but there were numerous differences. Namely that she was far outside the city which was doubtless preparing for the surprise army.

Sectoid transport ships had entered through the atmosphere and had been setting down behind her. Executors and Heralds had moved into positions; out of effective range, but at the ready. The objective right now was just to wait and watch. Let ADVENT prepare themselves as the Reinarm Cannon moved into position.

Patricia closed her eyes and reached out.

There were psions spread out throughout the Busan lines. The moment she touched their minds they recoiled and sounded an alarm that spread as fast as their minds could carry it. That she was here, and she was going to attack. With some effort she could have broken through, and then unexpectedly a shroud manifested.
T’Leth. Unsurprising that ADVENT and XCOM had augmented the front lines with the Sovereign’s poison. No doubt they argued it was necessary, and if the goal was to stop her, it was. Regardless, T’Leth would not save them today.

Watch well, ADVENT.

The end begins now.

“The Reinarm Cannon is in position,” the Andromedon informed. “We are prepared to fire on your command.”

No sense in waiting any longer.

“Fire.”

The thousands assembled from far away watched the destruction unfold. Streams of elerium-laced nuclear lava which fell from the sky, directly onto the strong fortifications of Busan which had withstood countless shells, bombardments, and even an Ethereal attack. Each droplet of nuclear fire destroyed vast swathes, leaving only radioactive sludge in its wake.

The trenches were flooded with liquid annihilation, and Flak Towers melted under the nuclear heat. Swaths of structures were swept away as the foundations dissolved. Nothing could stand against it or stop it. Patricia and the aliens watched as the city crumbled before them. Nothing would be preserved.

It would be razed and something new built atop it.

The bombardment took place for long minutes. The protection T’Leth had imposed was gone, either from him realizing it was pointless, or because not even the Orbs could resist being destroyed. Then the streams of fire from the sky stopped, leaving only ruin and smoke in the aftermath.

“Reinarm Cannon reserves depleted, Harbinger. We confirm the city defenses have been destroyed.”

It wasn’t a complete destruction, there was simply not enough nuclear lava to melt the whole city, but that wasn’t necessary. All the defenses were gone, dozens of skyscrapers had been razed, and the devastation had swept throughout the city. Those who hadn’t been killed instantly would have been killed now due to the radiation – or would be dying a painful death right now.

Patricia lifted a hand, and performed a telekinetic pull over the entirety of the no man’s land. Mines and ordinance which had been placed underground were lifted into the air and promptly exploded, though the shrapnel was caught in the telekinetic bubble. She let the pieces fall back to the ground, which was now safe to traverse.

“March.”

Seekers and drones flew forward first, to scout and report. Together the armies marched to the ruined city of Busan, this time unable to be stopped or halted. But as they got closer, there was something which was…odd. It was faint, but she realized that the shroud had fallen over the city again.

Blocking her.

Why?
There was definitely no counterattack coming, nothing indicated that. Collective teams were already moving deeper into Busan to gain control of the land itself. The radiation would be an issue for hours yet, which was why only Vitakara teams in radiation suits and Andromedons were moving deeper in.

Her suit was also treated to enter hazardous zones.

An incoming message sounded. From one of the teams. “Enemy contact, Harbinger, we’re putting them down.”

“Contact?” She demanded. “Who?”

“Survivors.”

She determined where the strike team was, and teleported to them – and entered the center of a full-blown firefight. One side superior, but on the back foot by an enemy which was only driven by hate. Somehow, the surviving ADVENT soldiers were still alive – and not just alive, but fighting back.

They should have been killed by the radiation.

Though she saw they weren’t unaffected. Many of them had thrown their helmets off, chunks of armor were missing from others. They looked pale, sickly, and sweating. Telltale signs of the radiation poisoning. It would be minutes or hours until they expired. Dead men walking, who were stopping to throw up every few minutes.

But with bile and puke smeared on their faces and lips, they got back up, clutching their weapons and charging forward, fury in their eyes. They were dead, the only thing left was to kill as many aliens as possible. The Andromedons were not prepared for this sudden suicidal charge. A few had fallen, and the Vitakara seemed shocked it was happening at all.

Shots in the arms or chests only slowed them down; an injury which would have incapacitated only slowed. It didn’t stop one soldier from throwing herself at a Vitakara, holding a plasma grenade and then detonating it. It didn’t stop the man with no arm from firing his sidearm into an Andromedon suit tank, causing a rupture.

Was this T’Leth? Puppeting all of these soldiers?

No.

That she would have been able to tell, and the only thing she knew for sure was that the Orbs were preventing her from penetrating the minds of all of them. It was T’Leth letting them take their last revenge.

Unexpected, but they would be dealt with.

As her mind processed this in seconds, her wrist flung up and all of the immediate ADVENT survivors were sent into the air. A fist closed and their bodies imploded in on themselves. Now they were dead.

More messages had come in. Pockets of suicidal survivors who were assaulting other teams and causing more unanticipated casualties.

She sighed, and set her lips in a thin line.
This was, unfortunately, going to take longer than she had expected.

*Situation Room – Mars Collective Base*

6/12/2017 – 9:25 A.M.

“This is not acceptable.”

Quisilia released a sigh. “Well, to be fair, it has been a full year since the conflict began.”

“Considering that very important context was withheld from me, as well as information about our objectives and enemy, one could argue I was misled from the beginning.”

“Circumstances have changed.” Quisilia shook his head. “I dislike that it has become necessary, but the longer ADVENT remains on Earth, the stronger they will become. Their removal must be accelerated, and all methods are on the table.”

The Battlemaster appraised the Ethereal opposite him. This was a step which he had wondered if the Imperator would take, but had been uncertain if he would go through with it. It was not a relieving of command – not fully – but it was a clear signal that his authority was no longer final.

It was not good, for a multitude of reasons.

It was insulting, if not fully unexpected. “The war could be won without resorting to assassinations. Let ADVENT fall in the field of battle, or do you believe that our forces are incapable of facing ADVENT?”

“Of course not,” Quisilia flipped a hand. “However, ADVENT is quite resilient, as you know, and that will take time. With T’Leth becoming more directly involved, time is something which is a critical factor. This cannot be won through a normal conquest. All strategies are being considered, and while I am aware that some of them you consider distasteful – they are justifiable.”

“And how far will it go?” The Battlemaster demanded. “The Reinarm Cannon will do nothing but escalate further. You still intend to utilize the Bringer. That will never receive my support.”

“And this is why the Imperator has superseded your authority,” Quisilia reminded him. “If you cannot bend on this matter, then there isn’t much he can do but authorize the Zar’Chon and Patricia to act as they see fit. At times it seems you are reluctant to fight this war at all.”

“It has certainly faded as the Imperator’s lies have been exposed,” the Battlemaster hissed coldly. “He lied about why we were fighting. He lied about the Sovereign Ones. He lied about the Bringer. All for a plan which is unnecessary, and poses a direct threat to everything that I have built.”

“You?”

A telekinetic pulse bent the equipment around them. The Battlemaster took a step towards Quisilia. “Yes, what I have built, Quisilia. I have been working to build the Collective military into what it is. I built it to protect what I thought was our mission. Our Collective to combat the Synthesized. Yet me, Sana, even Aegis did more to build the Collective than the Imperator did.”

The Battlemaster spun to the side. “The Collective was a means to an end for him. It always has been, and so long as he is not threatened, it does not matter what comes of it. That is unacceptable
to me, Quisilia. I cannot stop or countermand him, but do not expect my cooperation in these efforts.”

“That would be…unwise.”

“I do not care,” the Battlemaster shook his head. “The military follows me. Not you. Not the Imperator. I will continue as I planned, but I will not condone what the Zararch and Patricia have begun. I will ensure ADVENT knows of it as well.”

Quisilia sighed. “I will convey this to the Imperator,” he flipped a weapon in his hand. “However, you are not making it easier for yourself so long as you persist.”

“I understand.”

“I certainly hope you do, Battlemaster.”

Quisilia vanished through a portal after that, leaving him alone.

Things were moving fast now.

Very fast.

The Imperator was making it clear that he was out of favor. The Battlemaster suspected that it was only a matter of time before a more serious discussion about his role took place. The Imperator couldn’t remove him from control over the Collective military, but he might try. Later, though, all he needed to do was find a reason.

And he was sure that the Imperator did not know how to truly fight a Sovereign One. Using the Bringer was far too risky, and if they were pressed too hard, T’Leth may just rapidly improve Humanity. And the Imperator’s own distrust of Mosrimor meant they would be unprepared.

On this path, the Collective would be headed to collapse.

Concrete steps needed to be taken to prevent this. Not just words. The only way this worked to his advantage was that the Imperator almost certainly had the wrong read on him. Right now he considered him insubordinate – not treasonous. That was something he could manage.

But very carefully. He sensed Yang, and indicated that she should come meet him.

It was time for another meeting with the insurgent Andromedons.
