There was a steady stream of Andromedons using the dozens of elevators that lined the walls of the room – a clever insulating tactic in the event of an attack – which took them to various floors.
There were five hundred levels in total, with the elevators being able to reach speeds fast enough to bring a being from floor one to floor five hundred in five minutes.

However, he was already expected. He didn’t anticipate this would take especially long. The Andromedon in front of him finished, and Nartha stepped forward and rested his hands on the desk. “Zar’nartha’inha. I should be expected. A meeting with V’Zarrah.”

The Andromedon manager appraised him a few seconds as he manipulated the haptic display that was written fully in Andromedon, which Nartha was nowhere near fluent in. “The Zararch agent, yes. Your scheduled meeting is in two hours. It will be level two-fifty, there will be a Viarior Soldier to escort you to him. In the meantime you have authorization to walk the premises. Be advised there is a constant watch on all visitors.”

“Understood,” Nartha nodded. “Interesting. I would have thought V’Zarrah would have the highest floor.”

“Perhaps he does,” the Andromedon said with some annoyance. “But he wants to meet you there. The whereabouts and location of the leader of Union Viarior is not shared with anyone outside his inner circle and bodyguards. You already pose a security risk, be thankful he is willing to deal with the Collective at all.”

Nartha widened an eye, even though he knew the Andromedon couldn’t see it. “Given the level of security, the Imperator himself would have a difficult time here. But I will not pose any more of a security risk than I already do.”

He stepped away and another Andromedon immediately took his place. So, he had an invitation to explore, with drones probably watching his every step. Fair enough, he would be suspicious too. With that said, perhaps he could learn something by wandering around. The first thing to do would be to explore the defense pads, assuming he was allowed.

He walked to an elevator and selected the fifteenth floor. Given the absurd amount of floors in the building, he had to enter the number manually, instead of just selecting the floor. It also didn’t help that the elevator was in Andromedon numbers, but they were luckily in the same order.

As it also turned out, there was also an Andromedon guard in the elevator, and Nartha didn’t fail to notice the gas dispenser on the ceiling of the elevator box, and a tiny micro-turret in one of the corners, with a camera in the other.

He smirked under his helmet and shook his head in amusement. And he thought the Zararch were paranoid.

***

Training Arena – The Temple Ship of the Imperator of the Ethereal Collective

12/28/2016 – 10:18 A.M.

“I don’t think this is a fair fight anymore,” Nico said slowly, as the point of Yang’s weapon lightly jabbed into the back of his neck, while another one had the blade under his wrist which held his own weapon. “Fighting you up front is suicide.”

Yang smiled and recalled the weapons to her hand with a gesture, rather pleased with how she had been improving. Even better was that Nico was a fairly significant distance away from her, exactly the position she wanted him to be. She still had her standard telekinetic skills, and the more subtle manipulations of weapons were becoming close to a second nature.
Literal days of practice had that effect.

None of the Mutons or Vitakara posed a threat any longer, using weapons or no, handicapped or not; the only thing that would be able to provide a suitable challenge was another psion. Preferably one who was able to defend themselves. If there was one area she knew she could improve, it was in telepathic defense.

Although she didn’t know anyone she trusted enough to let into her mind. Because that was unfortunately a requirement.

“Looks like we have a watcher,” Nico said as he walked up, nodding to the edge of the area. Yang cocked her head and pursed her lips. Patricia Trask was leaning against the wall, just watching them, wearing the elaborate clothing of the Ethereals. It was somewhat uncanny how the Imperator had been able to determine their exact measurements.

He’d given her a similar piece of clothing, and she’d stuck to much less elaborate clothing even if it probably wasn’t as good. Wearing it once had been an unnerving experience because it was too tailored to her, not a centimeter off. The only people who should know about that would be her husband (If she’d had one), her parents, and her stylist (Which she no longer had).

The Imperator was none of those things. And she didn’t want to think about how exactly he knew about it. Measurements were one thing, but when it came down to the damn material and color, very specific details she hadn’t told anyone, that crossed a line into somewhat creepy. Of course, the Imperator likely hadn’t intended to come off as a stalker, but that didn’t mean she had to wear it.

But Patricia seemed not to have that reservation. Good for her, and to the Imperator’s credit, it did look good on her. Definitely designed to command attention.

Well, she’d been avoiding actually meeting the esteemed guest of the Imperator, largely because she hadn’t cared all that much to begin with, and also because she didn’t want to see her at all. But she supposed it was only a matter of time until it happened. Nico seemed to think she was fine, and the kid had a decent ability to read people, but that didn’t really mean anything when the person in question was one of the most powerful telepaths Humanity had produced.

“Might as well say hello,” she sighed. Nico smiled as she walked over to the telepath. Yang wasn’t especially thrilled that Patricia was a notable few inches taller than she was, even when she was wearing much heavier armor. However, even if she wasn’t really a telepath she could easily sense that Patricia had a much more noticeable presence than Nico, even as powerful as he was.

Probably more training. “Hello, Yang,” she nodded. “We had to meet eventually, despite your attempts to avoid me.”

Yang narrowed her eyes. “Sorry, I was busy focusing on more important things. Another Human, regardless of if she’s supposedly important, didn’t concern me. Nothing personal.”

Patricia simply raised an eyebrow. “It’s not really recommended to lie to telepaths. Emotion sensing is one of the first things I taught myself.”

“Fine,” Yang shrugged. “I’ll be honest and say that I have no clue what the Imperator was thinking when he brought you here.”

Patricia actually looked somewhat solemn at that. “I see.”

That annoyingly piqued her curiosity. Which admittedly did exist regardless of if she wanted it or
not. She had to admit that she wanted to know what the Imperator had said to make one of Humanity’s greatest warriors change sides. Assuming she was on their side. “Well, do you know?”

“I think so,” she said slowly. “He told me some things… I needed to hear. I almost wished he hadn’t. I suspect he likely enticed you to stay as well.”

“Didn’t need to entice me much,” Yang said. “But yes; that seems to be a general theme. Imperator knows what we want, what’s important to us, and then gives us it.”

The woman opposite her cocked her head. “And you don’t think that’s manipulative?”

Yang snorted. “I’m not a moron, and I doubt you are either. There is not a damn thing the Imperator does which isn’t manipulative in some way. He has his own agenda and plans, but he isn’t a liar. Not to me. So I don’t care, I’m happy to train and get ready to kill people on Earth.”

“Really.” Patricia said it as more of an observation, not like a question. She focused on the swords in her hand. “There was a telekine I knew which tried a similar technique. You’re much better at it.”

Yang suddenly chuckled as she knew what Patricia was talking about. “Oh, the one who tried throwing her swords at the Battlemaster? That was one of the funniest things I’ve ever seen. She should have stuck to throwing aliens in the air.”

“Ha ha,” Patricia said without humor. “Hilarious. She was a good woman though.”

“In XCOM? No,” Yang sheathed her swords. “Anyone who is in XCOM is definitely not a good person, not anyone who works under the Commander. And don’t pretend like you don’t know who he is.”

Patricia sighed. “Most of the soldiers don’t, nor about our more…morally dubious actions either.”

“Hm,” Yang wondered if that was true or not. She didn’t see how word wouldn’t get out in a much smaller organization like XCOM, but the Commander likely ran a tight ship. Or killed anyone who began asking questions. “I suppose it doesn’t matter. As long as the Commander is leading XCOM, they’ll just keep doing the same thing.”

Patricia looked mildly irritated at that. “Says the woman who openly states her intention to kill more Humans. A paragon of Humanity, you are.”

“Please,” Yang sniffed. “I never said I was a good person. But at least the people I kill will deserve it.”

“Who then?”

“The Chinese government to start with,” Yang ticked off. “Then ADVENT leadership. Probably a good number of soldiers. Then anyone who was part of the old government and system. All the cowardly and corrupt who looked the other way while regular people were pushed down, or victims of power plays.”

“Ah, so you’re a champion of the downtrodden,” Patricia nodded, and Yang couldn’t figure out if she was sarcastic or not. “More idealistic than I guessed.”

“I’m not doing it for anyone other than myself,” Yang shrugged. “Not anymore. People can’t be worse off under the aliens than they were under their own species. I’m not lying to myself; this is revenge, Trask, not anything more.”
She nodded slowly. “And you think every single person you will kill deserves it? Every soldier or politician?”

“Doubt it,” Yang admitted. “But it’s a necessary sacrifice. They are part of the old system, and the old system needs to be destroyed completely.”

Patricia now looked amused. “Funny. Necessary. That is very close to the justification the Commander used as he planned the destruction of the United Nations. He knew not everyone, or even most of them, were beyond redemption. But their deaths were necessary to usher in ADVENT.” She paused. “The point is that I don’t think you can use the Commander as some point against me when you seem to use his exact logic.”

Yang had to admit that Patricia did raise a good point. One she hadn’t really thought about, largely because she didn’t know much about the Commander to begin outside his actions and reputation. But not necessarily why he had taken the actions he had. She scowled. “For someone with us now, you sure don’t sound like one.”

“I’m most definitely not on your side,” Patricia said. “Not yet, at least. I’m…staying for now. Seeing how things work, talking with people. I wish it was as simple as choosing a side, but this is unfortunately a…complex situation.” She looked away. “I wish it was as easy for me as it was for you.”

Yang might have made a sarcastic comment on that, but she didn’t really feel like doing it. Which was unlike her. Patricia definitely seemed…conflicted…even more questions as to why the Imperator was risking this, but it was definitely something that was bothering her. A lot. She was now both curious about what the Imperator had said that had made her reconsider her entire life, but at the same time wasn’t sure she wanted to know.

Yang knew she was a useful weapon. She didn’t need to know the deepest secrets of the Imperator. Those seemed to be dangerous and bad for your mental stability.

“I did want to point out something,” Patricia focused back on her. “Your telepathic defenses are very weak.”

“I really hope you didn’t poke around in my head.”

“I don’t do that,” Patricia shook her head. “But it’s impossible not to notice. I’m sure Nico has as well, but he’s too nice to say anything. But if you don’t fix that, you’ll die against any competent telepath. I would be able to take control of you in a few seconds, no matter how fancy your swordplay is.”

“I’m aware,” Yang sighed. “But I don’t trust anyone to be poking around inside my head. Definitely not you.”

“Fair enough,” Patricia conceded. “But you’re not going to get better on your own, not really. If not me, then maybe ask Nico. He seems to get along well with you.”

Yang paused. “Perhaps. But it’s weird if it’s him. You know he’s just a kid, age-wise at least.”

Patricia shrugged. “I suppose you’ll have to decide if you’d rather not because it’s ‘weird’, or die when you fight a telepath. I’m sure the Imperator would be willing?”

A pause. “No.”

Patricia cracked a smile. “Well, if you change your mind regarding me, I could help.”
Yang appraised her suspiciously. “Oddly helpful for someone aligned against your friends.”

“Who knows?” Patricia said with a smile. “Maybe I want to give them a challenge. Or maybe what I teach you is flawed and will let them kill you easier. Up to you, but you’re not my enemy. Not yet, at least.”

She glared back at Patricia. “Very funny.”

“I’ll see you later, I think,” Patricia said with a farewell wave. “Good luck with the Battlemaster.”

“Yeah,” Yang was somewhat apprehensive as she knew what was coming. “I’ll need it.”

***

Union Viarior Trade Command – Andromeda Prime

12/28/2016 – 3:02 P.M.

As it turned out, Nartha was not allowed to view the defense platforms. Not unreasonable, but he had to admit to being somewhat disappointed. Well, he had certainly seen quite a bit of Trade Command regardless. There wasn’t too much of note that wasn’t either restricted or otherwise blocked. It was an exceptionally smooth operation, and most of the floors he visited had steady streams of traffic.

Now though it was time to actually meet V’Zarrah.

Stepping into floor 250 was little different initially from the other floors. All of them seemed to have a similar structure. A hallway which went around the perimeter, and had paths around four square rooms, four on the outside and one directly in the center. There were different markings and indicators on them, obviously, but the basic architectural layout was exactly the same.

However, this floor had Andromedon Soldiers on it. Nartha doubted it was typical for the floor, but it certainly meant that V’Zarrah took his security seriously. Already four Soldiers were walking up towards him, and he saw no fewer than two Contamination Operatives standing in front of other paths. Several Battlefield Engineers were also accompanying the soldiers, their drones hanging in the background.

“Come with us, Zararch,” one of the unidentifiable soldiers ordered, voice low and booming. “No surprises.”

“Of course,” Nartha said, keeping his hands up so they saw he wasn’t armed. “You need to scan any electronics I have?”

The Andromedon motioned to one of the Battlefield Engineers who approached with his drone, which began floating around and scanning him. “One holoprojector, one datacube – encrypted. No weapons, explosives, or oxidizing agents.”

“The datacube is for V’Zarrah’s eyes only,” Nartha added. “It won’t be plugged into any Viarior devices.”

“Ethereal datacubes cannot be connected into our system regardless,” the Soldier said. “A security weakness. He poses little threat. Continue the escort.”

In the middle of the four Soldiers, they marched him to the center square room. Inside he was surprised to see nothing but a decontamination field which led to a circular tube. The rest of the
room was a cold grey, and there were no fewer than six microturrets on the ceiling, and a small area where an armored Andromedon was operating the decontamination field.

“Step through and into the tube,” the Andromedon ordered, pointing with his weapon. “It will take you to V’Zarrah.”

Nartha nodded and stepped through slowly and deliberately. Since no alarms were raised he assumed it had gone alright. The steel tube opened up, and he stepped inside. So V’Zarrah wasn’t actually on this floor, but it was a ruse for anyone who might be listening. He didn’t exactly like being in a coffin-like tube, but he doubted anything would happen to him.

Wording flashed on a monitor at the top of the tube, thankfully Ethereal Script, which said Microgravity Engaged. He heard the start of a machine and he found himself weightless. It wasn’t quite like being in space, but he was lightly hovering off the ground. Ah, clever. Going up or down would be important information for anyone who intended to harm V’Zarrah.

If the individual didn’t know if they were going up or down, that piece of information was lost. Nartha knew the systems on here to maintain that must be at an extreme level of precision, as moving in either direction would pull a certain direction. Interesting.

It seemed slow as a result, and perhaps ten minutes later the gravity returned to normal and he was firmly on the floor. Nartha was fairly sure they had gone down, but thanks to that little security measure he didn’t know for sure. The door slid open and he stepped out into a similar room, minus any Andromedons and decontamination equipment.

There only seemed to be one path forward, and Nartha followed it as harsh white lights lined the top of the walls. Minutes later another metal door slid to the side and he stepped into what he presumed was the private office of V’Zarrah. To his surprise there was an entire wall of physical documents and books, and opposite that was a massive screen showing the explored galaxy. Likely intractable as well.

V’Zarrah stood at the end of the room, in a full battle suit and standing in front of several holographic displays which were showing scrolling information in Andromedon. He also didn’t fail to notice the small armory behind him, openly displaying plasma rifles, grenades, and other destructive equipment. Even suit attachments were included.

“Zararch.” V’Zarrah shut down the display with a wave as he turned to fully face the Vitakarian. “I suppose it was only a matter of time before the Ethereals demanded a show of loyalty. Perform it, I have little to hide.”

Nartha tried not to focus on how much larger the Andromedon was than him. He could barely see the silhouette of the Andromedon within the suit, which was also looking down at him. “No need to be defensive, V’Zarrah, I don’t intend to cause unnecessary problems.”

“You may not, but the Ethereals do,” the Andromedon didn’t hide his irritation. “Both them and I know that the time I waste here could be put to better use. But instead they send their investigators to probe for non-existent problems.”

“Hardly non-existent, Overseer,” Nartha said, deciding to use his title. “Union Viarior was one of the Unions who voted against resuming military contributions to the Ethereal Collective. I’m sure you can see how that could look suspicious.”

“The Imperator did the bare minimum,” V’Zarrah answered bluntly. “And yet the Unions prefer to curry favor with them despite only having words as promises. Union Viarior would have preferred
to see the Imperator’s words translate to action before contributing further. The Ethereals have not
been reliable partners in this endeavor, and I do not fear saying so. We were justified in our vote,
and if they take issue with our politics they are welcome to speak to me in person.”

“I will make a note of that,” Nartha said. “However, there are other matters. There are…
concerns…that Union Viarior is supplying and funding smaller Unions for their own purposes,
some of which have been connected to the so-called “Sectoid Problem”. What is curious is that
they are becoming more vocal and numerous, even as Viarior deepens connections.” He held up
the datacube. “There is, of course, proof. The Zararch is skilled at disseminating data. I am sure
this was done without your knowledge, but perhaps this should be investigated? The last thing the
Collective needs right now is another war.”

It was as veiled a threat as he could make. Both of them knew very well that nothing happened in
Union Viarior without the Chief Logistics Overseer being aware of it. The idea that he wouldn’t
be aware of such actions was laughable. V’Zarrah’s suit was silent for a moment. “Union Viarior
supplies and finances every single Union in the Andromedon Federation. That is our way of
business. Their political platforms or how they use the equipment we supply them with is not our
concern. I fail to see how this is a relevant concern.”

“Then I am sure you would suspend business with those the Collective has identified
as…troublesome?” Nartha asked. “Ignorance is acceptable to a point, but knowingly funding
potential dissidents would be…inadvisable.”

“No.” V’Zarrah stated bluntly. “Union Viarior keeps careful track of our clients. We will not break
from them without reason. Certainly not at the whims of the Ethereals. Again, if the Ethereals wish
to accuse me, they should do so in person.”

Well, this had gone on long enough. “I presume this room is secure, Overseer?”

“Yes.”

Nartha pulled out a holoprojector and activated it. “Then I presume you are aware of V’Thrask? An
Andromedon who, along with a number of others – some of whom are also from Viarior – defected
to XCOM during the Battle of Seattle. At your instructions.”

V’Zarrah was still, looking at the image of V’Thrask. “Where was this acquired, Zararch?” A
pause. “The knowledge of Andromedon defectors would have reached me before you.”

Nartha smiled under his helmet. “From the Commander of XCOM himself.” He pressed another
button on the holoprojector and the image of the Commander appeared, hands clasped behind his
back as he began addressing the Andromedon leader. “Chief Logistics Overseer V’Zarrah,” the Commander began. “That is the title which was
provided to me by V’Thrask, and I apologize if it is too forward. I am the Commander of XCOM,
and currently enemy of the Ethereal Collective. I suspect by now you are aware of our alliance
with Aegis, and the Imperator, or another Ethereal, has attempted to lessen the impact of this
revelation.”

The Commander paused. “From what V’Thrask has told me, you are not impressed with Ethereal
leadership. I suspect you have been told this war would be over in weeks or months. That we have
no chance of success. However, I would claim the opposite. Despite what you have been told, we
pose a threat to the unity of the Collective. We have pushed back the Battlemaster, the armies of
the aliens, and our defiance has made…ripples across the Collective. Aegis is one of many aliens
who are rejecting the Collective and seeing another way.”
The Commander gave a small smile. “I would carefully consider this, V’Zarrah. Nartha has more details if you wish to converse further, and inside that datacube there is evidence of our capabilities. I see no reason for us to continue this farce of enemies, and I hope you feel similarly. Until then, I wish you good fortune in your endeavors.”

The hologram shut off and Nartha lowered it as V’Zarrah was silent. “So,” he rumbled. “A Zararch traitor. I was skeptical such a thing was possible.”

“Most are,” Nartha nodded. “An oversight that will likely be corrected if I am ever discovered.”

“Give me the datacube,” the Andromedon said, extending a gloved hand. Nartha complied as he held it in his hand. “An…intriguing offer. One I did not anticipate.” He looked down at the Vitakarian. “But I suspect you will need…evidence to maintain your cover.”

“Correct,” Nartha nodded. “My orders were to search your databases for anything…suspicious. If nothing was found, documents of your transactions would be needed. I suspect you could forge them if necessary.”

“I am amused the Zararch would believe such a simple demand would suffice,” the Andromedon rumbled, possibly laughing. “I can provide the ‘evidence’ you need to show our innocence to the Zar’Chon. And I wish to meet with the Commander.”

“Good,” Nartha breathed in relief, and pulled out a folded piece of paper. “On here is a secured network. I will contact you through it when the meeting is ready. On this topic…I don’t suppose there are other Unions who have similar reservations?”

“That is a discussion between me and the Commander,” V’Zarrah said slowly, turning away. “My people will provide you with the evidence. Leave me, I need to see what the Commander has provided me. I will await your response.”

With that, Nartha turned away and headed back to the tube, ecstatic at how well that had gone. Having one of the most powerful Unions as an ally was going to improve their chances significantly.

The Commander was going to be happy to hear it.

***

Training Arena – The Temple Ship of the Imperator of the Ethereal Collective

12/30/2016 – 8:20 A.M.

The Battlemaster supposed it was time he met the woman who the Imperator had suggested as a
potential candidate for the Avatar Project. As far as candidates went, on paper she seemed to fill the requirements he would expect from one in her position. The daughter of a military general, a powerful telekine, physically capable, and willing.

What he didn’t know was if she could actually fight. He had little interest in strategists and leaders who failed to participate on the front lines. Human generals for the most part sent others to die in their wars, as they considered their own lives too important. He continued to find that stance amusing, as it proclaimed a self-importance that they couldn’t be replaced.

Tactics and strategy was not as difficult as military leaders liked to believe. It was a simple matter of assessing information and acting on it in the optimal manner. Logistics were arguably more important than pure strategy, and it certainly wasn’t a gift for the privileged few. No, actual military leaders needed to be warriors and involved beyond the situation room.

A climate-controlled area would never be anything close to resembling an actual battlefield. Reports never fully addressed the nuances of the true situation.

Nevertheless, he was mildly curious as to how Yang Shuren would have prepared. She would never be his equal in combat, but he at minimum expected her to be able to defend herself. At best she would surprise him. At worst she would die.

It had been a decent while since he had returned to the Temple Ship. It was far too quiet for his liking, but it was good for introspection. He wondered how different it would be if he was able to sense what the other psions did; the presence of the Imperator. He had heard descriptions of his power, but more importantly, seen it in action.

Yet the Imperator was not like most Ethereals, and the Battlemaster was unsure if that was an advantage or not. On one hand, he understood the need for aliens and abandoned the xenophobic policies of the Empire, but on another the Battlemaster did not understand his full plan. The Imperator was keeping things from him, moving pieces into play, executing hidden plans without his knowledge.

He trusted the Imperator, that had not changed. Yet he didn’t know if the Imperator fully understood what he was doing. He was barely over two hundred years old, little more than a young adult in the Empire. But he was now in charge of the last of the Ethereals. Even with the Overmind assisting him, the Imperator was a relative child in terms of his experience.

It made the Battlemaster feel unfathomably old. Hundreds of years of life seemed more apparent to him. He’d seen the Empire at its height, and watched its entire collapse. He’d outlived the vast majority of those he’d known, though most had been lost in battle. He’d had time to form his own ideals and opinions through the centuries.

The Imperator did not have that experience. He had the intellect and raw power, but the Battlemaster did not know if absolute power should have been given to him without question. The Empire had been desperate, but the Imperators were not all-knowing or powerful.

The Battlemaster would have personally preferred if the Overmind had initially taken control, or even Aegis. If someone with experience had taken control of forming the Collective, it might not be in the position it was today. The Imperator could take his position as a leader when he’d earned it. He had made too many missteps, mistakes that would and should not have happened under someone else.

Then again, it could be worse. Isomnum could have been placed in charge.
Or Quisilia.

But what was done was done. The Imperator was learning and eventually the Collective would be what it should have been from the start. He might have forced the Imperator’s hand in this instance, but it would lead to a stronger Collective, and the Imperator was aware he wasn’t perfect. He knew when he was wrong.

The Battlemaster didn’t like the Temple Ship for this reason. He became too focused on the failures of the Imperator and what could have been done instead. The entire concept of the Temple Ship seemed an unnecessary extravagance, a deification for some kind of god-like figure. The Battlemaster had been sorely tempted to smash some of the murals Cogitian had made.

He’d never bothered asking why the Imperator needed such deification. What exactly had the Imperator done to earn it? Because while the Battlemaster had killed his share of the Synthesized, he never found a need to brag about it. Especially when they had lost the war.

That was the thing which most irritated him. Not necessarily that such murals existed, but that they venerated a war when he had ultimately lost.

The idea that one would openly flaunt this was baffling. The millions of dead Synthesized meant nothing if the end result was defeat. The Temple Ship also seemed to serve little purpose other than to avoid contact with the rest of the Collective. Even the Andromedons had a central location of government. The fear of assassination or attack was far too weak, and it seemed like the Imperator didn’t really care about maintaining his Collective when he could stay here and conduct his secret operations.

The Battlemaster shook his head and pushed the thoughts aside. He wasn’t thinking clearly right now. The first thing he would do was take Yang Shuren out of this place, assuming she lived. And she was going to be facing a moderately annoyed Battlemaster.

The woman in question was waiting at the edge of the arena. She fit the image he’d seen of her. Slightly taller than average for a female, Chinese ethnicity, cropped black hair, dark brown skin, younger-looking than her age suggested. She was in armor provided by the Imperator, grey with red tints and to some would look inspired by ADVENT armor.

The materials were undoubtedly better, however.

“Battlemaster,” she greeted respectfully. She spoke English, with a noticeable accent but easy enough for him to understand. “Thank you for this opportunity.”

“The idea was not my own,” he said bluntly. “However, I am willing to consider you upon the prodding of the Imperator. But you must know if this is something you want. I will fight you momentarily, and if are not sufficiently skilled, you will die. Is that understood?”

“Yes, Battlemaster,” she confirmed. “I will do my best to assist you in whatever capacity you wish.”

He cocked his head. “I am not interested in blind subservience, Yang Shuren.”

“That was more to give you an indication of what I can do,” she corrected. “Be that fighting on the front lines or deciding how to cripple ADVENT. Trust me when I say I’ve been looking forward to both since I have arrived.”

“We shall see,” he withdrew his sword and held it beside him. “I do not expect you to beat me. Survive.” He thrust out with a lower arm and she went flying backwards. She unceremoniously
slammed into the far wall, but quickly got back up, drawing both short swords from her back. Duel wielding was a curious choice, but not inherently bad if one was skilled enough.

The Battlemaster advanced forward, and Yang tossed the weapons into the air, which remained suspended as she reached out with a free hand and yanked back. His sword was suddenly yanked forward in her telekinetic grip which he had to physically tighten to maintain his control over. The two floating weapons sped towards him at the same time.

Now this was a technique he hadn’t seen in a long time. He vaguely recalled one of the Templars performing similarly, but Yang seemed more skilled at it. Unfortunately for her he was familiar with the style and knew its weaknesses. Two arms raised and telekinetically deflected the swords which flew behind him, and he let his sword go.

Yang surprisingly didn’t lose control of her sudden grasp on his weapon, and threw it as far across the room as possible as she focused on the Battlemaster himself. He very clearly felt the telekinetic grip encasing him; present but weak. One he could easily break free of if he wished, but he would rather she exhaust herself this way.

Her two floating swords returned, an impressive range of control, and sped towards his helmet as silver streaks. They halted just before his faceplate, in his own projected telekinetic field, and were directed towards his open palm which he grasped as Yang was hit with another telekinetic blast. 

Weapons in hand he sent them directed back towards her, which she froze with a raised hand as she struggled to get up.

At the same time he recalled his own blade to his hand, flourishing it as he closed in on the woman. He slashed down and she manipulated the blades to catch his own in a scissor maneuver while she quickly dashed away. He helped her along by catching her in a telekinetic grip, and slamming her into the wall.

Her control over the blades lost, the only thing which stopped his second downward swipe was her hands raised up as she telekinetically held the blade back, and redirected it into the wall while she hit him with her own telekinetic blast which barely made him stumble.

He’d done this long enough. She was competent, and would survive against most opponents. A Battlemaster was not a fair match for anyone, but she had performed decently. Enough where there was potential for her to become far better. He lifted her telekinetically and rested the tip of his sword on her throat.

She didn’t look afraid so much as resigned, even as she continued to make indirect telekinetic assaults. Fighting to the last. Good. He withdrew the blade and let her fall to the ground. “You have potential, and can be better. Come with me.” She coughed, but summoned her own weapons back to her hand as she followed him, clearly relieved.

“Tha-thank you,” she coughed. “Where are we going?”

“Away from here,” he answered. “We do not hide in the shadows. The Collective is our responsibility, and we must be a part of it. Is there anything you need from here?”

“No,” she shook her head. “I’m fine with just leaving this place.”

***

Busan – South Korea

1/3/2017 – 8:28 P.M.
Duri wasn’t sure why he had bothered actually issuing this challenge to begin with. With a smirk on her face Aleksandra easily maneuvered his arm to rest flat on the table. To his credit, at least he hadn’t gone down easily. But a regular arm against a mechanical arm was almost doomed to fail. The rest of his squad laughed at the ending.

“You lose,” Aleksandra said. “Like everyone else.”

“I blame all of you,” Duri said, rolling his eyes at his so-called squadmates. “What made you think that I could beat her? Cara is probably stronger than I am!”

“Hey, maybe we all would have weakened her,” Beatriz shrugged. “Not fair if you get out of doing it too.”

“Fine, fine,” he grumbled good-naturedly. He was pretty sure most of them were jealous of the Shieldbearer’s new arm, since it seemed much better than their weak flesh ones. All of them were in pretty good spirits, especially since there hadn’t actually been much alien activity for close to a month. It was a little strange, but something Duri wasn’t going to complain about.

The lull had been great, in fact. He’d been able to speak with his family much more regularly, ADVENT was getting ready to roll out new upgrades, there were even a few alien defectors who were getting more acquainted with the soldiers. At least now he could attest to that not all of them were bad.

Overall, he was suspicious in thinking that things were going really, really well, but they certainly seemed to be. They were at least all alive, which was more than he could say for a lot of aliens, and unfortunately a good number of humans. But the casualty numbers could be much, much higher.

“Oh, did you know what I had to do today?” Nobuatsu asked, as they ended and all got drinks.

“Don’t drag it out, just tell us,” Miguel said.

“I had to treat an alien,” Nobuatsu continued. “For chocolate poisoning.”

Duri snorted. “The hell?”

“Oh! I’ve heard of that,” Beatriz recalled brightly. “Isn’t it poisonous to them?”

“Poison? Not exactly,” Nobuatsu explained, gesturing aimlessly. “It’s like marijuana for them. Although they can overdose with it as I found out. The alien was high as a kite when he came out of the anesthetics, couldn’t understand a word he was saying.”

“Who was the one who gave chocolate?” Cara asked. “Some prank?”

“No, just a mistake,” he said. “One of the soldiers gave him some to ‘expose him to real human food’.”

“And that is why regulations like ‘Don’t share food with aliens’ exist,” Duri finished. “None of you better be feeding aliens.”

“You make it sound like they’re some kind of zoo animals,” Cara snorted, miming a deeper voice. “Please do not touch, feed, or entice aliens you encounter.”

“I swear we’re going to get a TV show like this if they ever get their own town or something,” Beatriz said. “Today we observe the Vitakarian in his natural habitat…”
All of them laughed at the absurd concept. “Don’t think ADVENT would like that,” Duri chuckled. “Although who knows. Have any of you seen that XCOM show?”

“Oh, god,” Cara facepalmed.

“You mean the best and most realistic show ever to grace the medium?” Beatriz asked sarcastically. “Oh yes.”

“I hate that show so much,” Miguel said. “I swear it’s like every single character has magic armor and can’t be killed.”

“It’s called plot armor,” Cara supplied.

“I don’t know about you,” Beatriz said. “But when I saw the Commander of XCOM tank six missiles, and then proceed to rip the spine out of an Ethereal, I was on board. You can’t tell me that isn’t awesome.”

“Nah, my favorite part is when that Korean lady single-handedly took out an entire UFO alien team,” Nobuatsu said. “And when she blew it up, she said to that guy she was with “I guess their plan…blew up in their faces.””

“Pure poetry,” Miguel shook his head in disbelief. “Where did they even find people to write this?”

“The whole team is a bunch of comedy writers,” Beatriz said. “I don’t know who thought it was a good idea to turn a show about XCOM into an over-the-top comedy, but they completely pulled it off.”

“I also like how they somehow made the character who is totally not Patricia Trask even more overpowered,” Duri added. “I mean, being able to control armies is clearly not cool enough, no, give her…” he looked at Beatriz. “What did you call it?”

“Exterminatus powers,” she supplied.

“That,” Duri finished with a nod.

“Having Quisilia being the one to defect instead of Aegis was great,” Cara added.

“I’m not so sure that isn’t him,” Duri said slowly. “I mean…would it be surprising if he was playing himself?”

“That’s not happening,” Beatriz began, then frowned. “I…think…”

“I wonder what XCOM thinks about it,” Miguel said. “They are either really insulted or really amused.”

“How could they not like it?” Beatriz asked. “Real life is depressing. We’ve already got a realistic alien invasion going on. Why bring that to a TV show?”

“That…” Miguel frowned. “Is a good point.”

Duri tapped the table. “All right, I’m turning in. Drills tomorrow bright and early. And next time it comes on we’re all watching the next episode together, since apparently we all do anyway.”

Cara gave a mock salute. “Copy that, Officer.” All of them gave their goodnights, and most turned in for the night. All in all, a fun time. There were a few bright spots in this war, even if they were few and far between.
This was perhaps the worst plan in the history of plans, maybe ever.

The Hunter cared about very little in the world. As far as he was concerned nothing really mattered except what he wanted. The Ethereals, Humans, Collective and ADVENT, ultimately pointless and worthless groups that would eventually fade away. The only thing he could really say he enjoyed was the art of killing. Maybe it was a genuine feeling; maybe he’d just been designed to feel the rush of euphoria when he blew the head off something.

It didn’t really matter. Killing made him feel alive. Who or what it was didn’t matter as long as it was alive and prey.

With that said, he wasn’t an idiot.

Right now he definitely could not say that for the illustrious bitch herself.

He was on top of a skyscraper, looking through the scope of his rifle onto a hotel which was housing displaced civilians from the south of the country. There was much less security now, especially since the Collective had been doing fuck all the past month. But there were…he paused, thinking of the number.

Ah right. Over three thousand, according to the information the Caretakers had shared. Three thousand, four hundred and eleven. How the hell they knew that was something he’d given up on long ago. The Caretakers always had eerily accurate and exact knowledge, and the less he was involved with those freaks, the better.

He had been given the dubious honor of being responsible for clearing the hotel in question. Some were marked to be captured, for whatever horrific fate awaited them in the ironically named Paradise, and the rest he was free to murder. In one of the few times of his life, he was conflicted.

Not because he was going to kill hundreds of Humans in their sleep, he didn’t care at all about that. There was something of a thrill in the operation, he wouldn’t lie, but it didn’t override his more important sense of self-preservation. Namely, that the moment the Battlemaster found out about this – and he would find out one way or another – he could safely assume he would either be killed or kept in constant torture forever.

Neither option was appealing.

At the same time, going against the illustrious Creator was not an option, since no matter how bad the Battlemaster was, the Creator would somehow find a worse punishment. So in short, he was completely fucked regardless. And now he was frantically thinking about the best way to salvage this so he wouldn’t be screwed.

In all honesty he was probably screwed one way or another. So the current plan was to carry out the Creator’s plan (Of which he had no fucking idea what the goal was aside from getting her more Humans to experiment on), be sure to get footage of him following orders, then go to the Battlemaster and ask very politely to not be disemboweled.

The Battlemaster was a reasonable Ethereal, a rarity, and he could at least understand the delicate predicament he was in…or perhaps not.
The Hunter hadn’t actually considered the idea that the Battlemaster wasn’t actually aware of what was going on in Paradise. He’d always assumed, since the Battlemaster was as close to the leader of the Collective (The Imperator wasn’t worthy of the title) as anyone. But if he didn’t know…oh boy, the Creator would be lucky to not immediately be executed.

He grinned a sinister smile as that thought entered his mind. If anyone could put a stop to whatever the fuck was happening with the Creator, it would be him. Normally he wouldn’t care, but there was a point where the stuff that happened there was plain unnatural. It went far beyond the corpse-looking Caretakers. It went far beyond the dozens of test subjects being subjected to every kind of torture.

No, the Creator was involved in something much older and dangerous. He didn’t know what it was, but it was perhaps the only thing that terrified him. An endless void which had once touched his mind, promising comfort, joy, and love to him. It had taken a full week to shake the persistent voice in his head, and he’d almost shot himself in it just to make the dangerously tempting words stop.

After that he’d never gone beyond the first level again.

He stood, and walked to the robed figure. It was a Vitakarian, or at least, was supposed to be. The skin looked dead, the figure was gaunt and it wore little more than a full black robe with the gibberish of the Creator written in silver. “Six rooftop guards,” he reported. “Standard guard. I can take them out easily.”

“Unnecessary,” the voice was cracked and raspy, though with undertones of authority. “Four are marked for retrieval. You will execute the unmarked.”

“Right…” he drawled. “And I suppose you’ll just mark them for me?”

The alien lashed forward with a hand and placed it on his temple. The Hunter found he couldn’t move, even if it only lasted for a moment. “You know now,” the Caretaker said. “Prepare to return the souls to Him.”

And he knew now. He glanced back to the rooftop and somehow knew which ones were marked for death, and which were to be extracted. “What now?”

The Caretaker gestured, and beside him a blue-rimmed portal appeared, psionic mist obscuring where it had come from, but more Caretakers stepped out, far more than he had ever seen before. Lanky and thin Sectoids who looked based on the Vanguard template, also wearing black robes. Humans were also in their number, their eyes pale and hair grey; looking somehow more degraded than the Vitakarians.

There were a total of twenty of them. One of the Humans, a decomposing female, extended a hand towards the hotel and began speaking in some language that made his skin crawl. It sounded old. Old and primal. Even the damn Sectoid had joined along telepathically. “They have deafened the world to our presence,” the Vitakarian Caretaker said. “Go. Accomplish your mission. The world will not hear the misguided cries of those who are still mortal.”

“What about cameras? Alarms?” He asked, gripping his pistol.

“The Stalkers have neutralized them,” the Caretaker stated with surety. The Hunter had no clue what the hell a Stalker was, but perhaps he didn’t need too. As long as they did their job, it wasn’t his business. “His will is absolute and final. There is no obstacle.” Another portal materialized. “Now enter and begin.”
Here went nothing. The Hunter stepped through and found himself on the roof. Now, he had several ways of carrying this out. He could be stealthy and take them out with a little telepathic trick he’d learned, or he could do it the fun way.

Might as well, the Caretakers certainly didn’t know the meaning of the word.

He raised his pistols, and began firing at the guards. It was sad how slow they were as he shot the weapons out of their hands, shot their kneecaps out, and then followed up with any arm or hand which moved towards a weapon. In roughly ten seconds the entire rooftop team was neutralized. He twirled a pistol in his hand before blowing off the head of one marked for death, and following up with killing the other one with a shot to the throat.

Perfect shot.

A portal appeared in the center of the roof and the Caretaker stepped out, now with several Muton Caretakers, which wore light armor instead of just robes. They looked just as healthy as the rest of them, which was to say like a recently exhumed corpse. They grabbed the wounded ADVENT soldiers and dragged the screaming people back to the portal before throwing them into it.

Poor souls.

The Caretaker once again placed a hand on the Hunter’s helmet. “Your next targets.”

He was not going to get used to the sudden transfer of knowledge anytime soon. Shaking that off, he entered the top floor and considered where to start. Thanks to the uncanny abilities of the Caretakers, he somehow knew every single name on this floor and their room number. Well, he might as well start at the beginning.

He gave a polite knock and the idiot Human opened. A woman whose eyes widened before he blew her head off in a spray of red. Only occupant and marked for death. Time to move on.

The Hunter had a plan of action, he would target all of the rooms with single occupants first, the vast majority of whom he could just kill, then move onto the rooms with more than one occupant. It proceeded smoothly enough, although he had to make some forced entries. It was amusing to see their terrified faces right before they died.

The Caretaker appeared at the end of the hallway, portal working as he brought the targets and ended up just tossing them in the portal which likely went straight to Paradise. He continued with the rooms of multiple occupants. One had a small group of women, half of whom he shot. Another had a family which only the mother was required to be captured. One room was just older human children with some younger siblings. Not much of a challenge.

Even on the first floor he was picking up on something rather interesting.

Nearly all of these Humans seemed to have some connections to a soldier. In certain cases it was clearly a mother or father with some children, or it was a spouse. But it was an extraordinarily high number of coincidences. If the Creator was being bold enough to target the families of soldiers… well, he wished her good fortune when the Battlemaster found out.

One floor was cleared, and he moved to the next one. Same deal, the Caretaker transferred the knowledge to his mind and he got to work. One door he just kicked in. This one had a mother with two children. Only the older child needed to be kept alive. The woman shrieked before he ended her life, and quickly ended the life of the smaller girl sleeping on the bed before pressed a hand to the mouth of the other one, sending a telepathic sleep command.
Loud children were far too annoying to deal with.

He tossed her into the portal, and continued working. The more he continued, the less fun it became. He now remembered why he rarely bothered killing civilians. They didn’t pose a threat, they usually just accepted their fate and died, and basically made his job easy. Which made it boring. There weren’t any actual fighters around to be outraged, which was half the fun of killing civilians.

So he had to be creative. He took out an entire floor without his guns, and then another just by using whatever was in the room. Scissors, as it turned out, were highly versatile weapons. At this point he was shooting into the air, or just opening the doors and calling people out to fight him to see if there was at least some entertainment to be had.

It was slightly enjoyable when he managed to get an entire floor to gang up on him. Some rushed him with makeshift weapons, others simply tried protecting children (Which he shot first if they weren’t marked, since they screamed), and he had some good fun as he ended their lives or crippled them before their one-way trip to hell.

“You are efficient,” the Caretaker said as they reached the tenth floor. “The Creator will be pleased.”

“My life’s goal has been achieved,” he answered sarcastically. “We’re good on time? Status of other operations?”

“Occidera has nearly cleared her building,” the Caretaker answered. Shocking, his all-serious sibling was going to beat him in efficiency. Well, good for her. “Senorium is finishing the last fifteen floors of his building. We have three hours before our window has expired.”

And also a shock, his more idiotic and fanatic sibling was taking forever. Either way, it didn’t matter. That little bit of recording was going to be very interesting to the Battlemaster. “You know why the Creator wants this many people?”

“No,” the Caretaker said. “And you do not need to know.”

And irrefutable proof the bitch herself was behind this. The Battlemaster was going to have a field day with it, and would probably murder her. The Hunter was quite aware that the only thing that would make the Battlemaster more livid than going after families of soldiers (And probably families in general), was going after kids.

And there were a lot of both who were dead. He didn’t care, but there were definitely those who did. As far as he was concerned, every person he shot or captured was another mark to the Creator’s death warrant.

It would be so ironic if he was the one to finally bring her down. That was the dream.

He looked to the hotel hallway that awaited him. More targets and walking dead left to deal with.

Time to make that dream into reality.
Saudia felt numb as she looked at the plethora of pictures and reports from the massacre. The calm of ADVENT had been shattered in one of the most horrific displays she had ever borne witness to in her life. She had certainly been party to some distasteful events, and the Commander was no stranger to the effectiveness of brutality.

But it was nothing compared to this.

“How many?” She asked quietly.

Kyong, Stein, and Elizabeth were in front of her, all in their own stages of coping. Kyong was teetering on the edge of composed and broken; he was a civilian with no experience in dealing with traumatic events. But he needed to know the situation to coordinate ADVENT’s message. And there was no better way than to have him see what had happened.

Stein was clearly furious, but composed. Saudia supposed her long law career had allowed her to build a tolerance to shocking imagery, especially to do with children. Her first act had been to lock down the entire city, with over five thousand Peacekeepers being moved to ensure that everything was accounted for. All aliens in ADVENT were currently being subjected to Deacon and Inquisitor interrogation.

Objectively, Saudia suspected that the defectors had nothing to do with this, but there was someone that needed to be blamed, and the first thing people would suspect was not just aliens, but the aliens ADVENT had been moving to integrate. Getting them out of the way immediately would both buy time from a PR perspective and find out any perpetrators if they did exist within the ranks.

Elizabeth was impassive, but Saudia knew she was taking this as a message. And she was shaken. Having children herself, she knew they were targets for anyone who wanted to get to her. The fact that this had happened with no alarms or failsafes being tripped meant that the aliens could very well get into anywhere, anytime.

It felt both morbid and in bad taste that Saudia wondered if they should be thankful they had only targeted civilians. It could have very easily been any one of them.

“Numbers are still being counted,” Stein answered, handing her the tablet she’d been holding. “Over six thousand so far. Three locations, all packed with civilians from the south of Korea.” She flipped though some of the photographs. “Killings are indiscriminate. Men, women, children, no obvious preference or goal. Causes of death range from apparent suicide to being bludgeoned with a couch.”

“Disagree,” Elizabeth said flatly, setting her own tablet down. “I’ve run the lists. The vast majority of people who were in the attacked buildings were the families or relatives of currently serving soldiers. This wasn’t a random attack.”
“God damn it,” Kyong muttered. “When they learn they died this way…”

“We’re going to need a lot of counselors to keep them from killing themselves,” Saudia finished grimly. “Or aliens. As far as telling them…that I will leave to Laura. They’ll have to be told but…there really isn’t a good way to share the news.”

“I’m also going to add that there definitely seemed to be different teams leading each of the attacks,” Stein continued. “The wounds seemed tailored to the location. In one the main cause of death was precise stabbings, dismemberments, and quite frankly, clean kills. Another one had a mixture of deaths that seemed to be caused via psionics, and multiple self-inflicted casualties. The final one was a mixture of firearm deaths, melee combat, and everything in between.”

“So whatever did this used small or single teams,” Saudia grunted. “And were also highly skilled.”

“Definitely couldn’t have been alone,” Stein shook her head. “They would have needed to neutralize security, alarms, and everything else. All footage was wiped and the drives just gone. This wasn’t done by teams of one.”

“Those Chosen?” Saudia recalled. “Even they couldn’t pull this off on their own. And we already know it was the aliens.”

“I’m aware,” Elizabeth said. “I’m just planning how best to torture them when I’m done extracting what I need.”

“I’m also afraid the deaths are just part of the story,” Stein sighed, pursing her lips. “There are a good three thousand unaccounted for. They’re just gone. No trace.”

“This reminds me of the old abductions before the invasion,” Elizabeth said. “Only back then the aliens were more subtle and just kidnapped everyone.”

That was something she was partially confused by. “They wanted to send a message, but also acquire more…prisoners. Doing both seems…odd. They could achieve more by focusing on one or the other. Was there anything special about the missing persons?”

“Couldn’t find anything,” Elizabeth shook her head. “This had absolutely nothing to do with getting more prisoners, or let’s be real, test subjects, and everything to do with sending a message. They took just enough that the vast majority are corpses, and they’ll be considered the lucky ones because the few who are now captives of the aliens are likely being eviscerated.”

Saudia grimaced. “Unfortunately accurate.”

“I don’t get this,” Elizabeth muttered. “It makes no sense. The aliens gain nothing from this. Not to mention this seems extremely out of character for the Battlemaster. Especially since his dossier explicitly states he doesn’t kill kids.”

“Do you really think this would happen without his approval?” Saudia asked. “Something like this?”

She shrugged. “Perhaps he was overruled.”

“That does not matter,” Stain growled. “This came at the hands of aliens. There needs to be retribution. Justice for those who were slaughtered.”
“That will be demanded,” Kyong agreed. “And I cannot blame them. This can’t go unpunished.”

“How?” Saudia sighed. “We’re stuck on Earth, our military is out of position for a lighting strike, and places to attack are limited. The only option is to crack down on alien defectors, and I won’t do that without evidence, no matter how much people want that.”

“We have POWs,” Stein said. “Not defectors. Ones we captured. Interrogate them, sentence them, and execute them. Skin or chop them into pieces and send them to alien strongholds, along with videos of their torture. Or give them to some of the soldiers whose families were murdered. Cull the aliens who are useless to us, and show the aliens there are consequences to this kind of attack.”

“I’d stop short of skinning them,” Elizabeth cautioned. “ADVENT is not like that. But executing them and sending their bodies to the aliens isn’t a bad response. She’s right that they don’t provide us with anything useful aside from potential bartering chips.”

“Bartering chips for what?” Stein snorted. “The aliens aren’t giving any of our people back. You’re deluded to think otherwise. And we must also send a message. Execution is tame compared to what they deserve.”

“We’re not going to kill our POWs,” Saudia shook her head. “Yet. That will be used as propaganda against us, and while I’m sure it would be cathartic…these aliens are almost certainly not behind it, not to mention it doesn’t do much aside from sate public bloodlust.”

“So what do you propose?” Stein asked.

“The aliens have cities they control,” Saudia stated. “I want Sacramento leveled. Missile strikes, bomber runs, whatever it takes to level it. One attack, then we relent before an escalation. I do not believe that the Collective will retaliate, not for this. I will order Laura to have this executed by the end of today.”

“Acceptable,” Stein nodded. “This calls for a response. This will be stronger than simply killing captured aliens.”

“Indeed,” Kyong nodded. “Let them know the payment for this atrocity.”

“Another thing,” Saudia said. “I want every single image and report sent to every government around the world. Let them see how their neutrality holds in the face of that. I also want the less…gruesome images on the news. I want it on every screen and everyone to know this is what the aliens will do to us.”

Elizabeth gave a single nod. “Ones with children included?”

“Yes.”

“What else?” Kyong asked.

“A special letter drafted to the nations of the so-called Sovereign African States,” Saudia said. “As well as the rest of the continent. They are to turn over all former ADVENT traitors within one month or ADVENT will annex their countries. All ADVENT defectors and traitors are now enemies of the state, and will be captured, tried, and executed.”

“Gladly,” Kyong said. “I’m surprised you let them survive this long.”

“There were more important matters,” Saudia said humorlessly, even as the corners of her lips turned up. “But I am done tolerating them. Betos will be the last executed. I want her to watch all
those who followed killed in front of her.”

Kyong frowned. “Would that be legal?”

“I wouldn’t worry,” Stein added with her own humorless smile. “Her punishment can be specifically worded to...include something akin to this. Completely legal.”

“Excellent.”

“In the meantime, I will address the public,” Saudia rubbed her forehead to clear her thoughts. “It’s not going to be pleasant.”

“Has XCOM said anything?” Elizabeth asked.

“Not yet,” Saudia answered, also wondering what the situation there was. “But knowing the Commander, anything we’re going to do will pale in comparison to what he has planned.”

Situation Room, the Praesidium – Classified Location

1/9/2017 – 9:22 A.M.

Confusion and fury.

That was what the Commander was feeling at this very moment. This made no sense, but at the same time, what better way to send a message? In all honesty, it was justified in a way if he thought about it. First Aegis, now Caelior, there was room for a response. But a response like this? Not even against ADVENT proper?

He supposed it didn’t matter the reason or justification behind it.

Only the response mattered.

“What are we going to do about this?” Creed finally asked, saying what they all were thinking.

“I have some ideas,” the Commander sharply turned back to the holotable. “Chronicler, can you transport a small team to Vitakar?”

“Possibly,” the older man nodded, not wearing his armor at this point. “What are you thinking?”

“A simple solution,” the Commander said neutrally. “We wipe out the Aui’Vitakar. We have salted nukes. Providing them to the Nulorian would provide cover. They would of course wonder, but it would just be an interesting coincidence.”

“I’m not sure that is...the best response,” Shen said slowly. “While there needs to be retribution, there may be a more effective way of carrying it out aside from killing innocent aliens-“

“They are part of the Ethereal Collective,” the Commander growled. “Ignorance is no longer an excuse. They are complicit and will be treated as such. The Sectoids and Andromedons won’t succumb to terror or loss easily, but the Vitakara will be shaken and broken from so many dead. They would serve as an effective response to the Imperator.”

“Or it will just make them hate us,” Shen countered. “As horrible as it is, I don’t think anyone on Vitakar actually sanctioned this. Do you think they actually know the reason, or will they see it as just an attack with no justification?”
“I agree with Shen,” Aegis finally said. “The Battlemaster would never have sanctioned this attack. He would never sanction the assassination and abduction of children. Not when he’s in charge.”

“Do you really believe he didn’t know?” Vahlen demanded. “Something like this?”

“He would never approve it,” Aegis repeated. “Even if it came from the Imperator. I do not believe this is as clear as it seems.”

“That doesn’t matter,” the Commander pointed out. “Even if he refused to carry out the order, there is nothing stopping the Imperator from taking command himself. This is clearly orchestrated by the Collective, like it or not. And given how it was carried out, the Overmind or Imperator had to be involved since no one noticed it.”

“But what do they gain from this?” Aegis demanded, stepping forward. “There was no reason to carry this out, and neither the Imperator nor Battlemaster operate through terror. All it does is further unite your species and drive up anti-alien sentiment. The Imperator is not a fool, I cannot believe he’d sanction this.”

“Let us look at the facts,” Zhang interrupted, setting his tablet down. “Based on the autopsies and reports from both the Peacekeepers and ADVENT Intelligence, there were three separate attacks, and in each location the causes of death varied. Which so happens to match up with the Chosen. The majority of civilians were killed, many of whom were related to soldiers in ADVENT, and several thousand were abducted. The goal of this attack was terror, and I see two probable suspects behind this.”

“Isomnum and the Creator,” the Commander finished, frowning. “This does fit Isomnum, but I don’t see why he would risk reprisal from the Battlemaster or Imperator in carrying this out.”

“What about the Creator?” Jackson asked.

“The Creator is of deteriorating intelligence and growing sadism,” Aegis said. “But she is no fool, and I doubt she even cares about Earth. She is too focused on her own work, and I suspect orchestrating such an operation would be outside her interests. Her Chosen clearly work with the Collective upon request. Isomnum could have requested them.”

“I doubt it’s the Creator too,” the Commander said, shaking his head. “She’s a scientist, not a schemer or tactician. Even if she wanted test subjects, so do Isomnum, Revelean, and Fectorian, and I doubt the latter two would follow this route either.”

“As twisted as the Creator is,” Aegis agreed. “This is not her. But this does fit Isomnum.”

“Is he that skilled to pull this off at three separate locations?” Creed asked. “And have the manpower too?”

“Absolutely,” Aegis sighed. “Remember, he was an Overmind. This would not be a challenge for him.”

Creed rubbed his forehead. “Wonderful.”

“The problem is we don’t know,” the Commander muttered. “Isomnum is an easy scapegoat, but that might be intentional. Easy to pin the blame on rogue operators acting on the orders of ones above them. Trust me, I ran these kind of operations for the US for years. They work.”

“This is where it would help having spies in the aliens,” Zhang noted. “With inside information we would be able to determine the general mood. Right now we have nothing but speculation.”
Aegis, how likely is it that the Battlemaster would know about this?” The Commander asked. “Would he attempt to deny it if he wasn’t behind it?”

“In a situation like this, yes,” Aegis said. “I doubt he knew about it, and he is likely furious. If he did not know...we will know shortly.”

“I want to return to your earlier plan for Vitakar,” Shen said. “While at this point I feel indiscriminate attacks would do more harm than good, you are right in that they are a more empathetic species. This would likely horrify them, especially if they were associated with it. Instead of bombing them, why not show them what is happening?”

“It would force the Zararch to crack down,” Zhang said slowly. “But we have psions. They do not. And I don’t think anyone would care if a few were killed in the process.”

The Commander considered for a moment. “Fine. We hold off on bombs for now. Let’s see if the Collective responds. If it appears the Battlemaster was not aware of it, or behind it, we go forward with your idea, Shen.”

“And anything else?” Jackson asked.

“Not immediately,” the Commander said. “But if it isn’t the Battlemaster, it’s almost assuredly Isomnum. And when we capture him, he is going to wish he was dead.”

***

Tactical Briefing Room, Solar System Command Center – Mars Collective Base

1/9/2017 – 10:02 A.M.

“I didn’t order this,” Ravarian said, swallowing as the Battlemaster approached him, his sword drawn. “This would never be launched without your approval—“

“Then who did?”

“No one here,” Ravarian said quickly. “Trust me, I’ve interrogated anyone who could have possibly organized it, and even then, none of them could launch it without my approval. You can check the logs and correspondences. The Zararch didn’t do this, and more importantly, there is no reason to do this. What exactly do we gain here?”

“The Zar’Chon is innocent here, Battlemaster,” Quisilia stepped out of thin air in front of him. “As is the Zararch. And from what I can tell, anyone else who could authorize something like this.”

The Battlemaster stopped, and just glared at Quisilia. “So this just happened out of nowhere? It’s all deception?”

“That...” Ravarian coughed as he continued with a theory that had been growing. “May be the case. The Collective clearly did not cause this, but the Commander has performed multiple false flag operations before. The United Nations, the Council. Chancellor Vyandar was also behind the collapse of Brazil, and the Middle East incident. The Commander in particular understands the power of brutality. It isn’t out of the question that this is a propaganda attempt to drive up support for ADVENT.”

“Not a bad theory,” Yang Shuren, the Human that the Battlemaster was now allowing around him for whatever reason, spoke up. He was unsure why the Battlemaster was letting her participate, but he was not stupid enough to ask questions like that now. “But this doesn’t fit the Commander. Not
really. He doesn’t just do stuff like this without reason. Let’s be honest – ADVENT isn’t exactly 
hurting for support right now. They’re enjoying what they have now. Why would they need *more*? 
Everyone on Earth already thinks you’re the enemy to some degree. This has too much of a chance 
of backfiring to be the Commander, and not solid enough reasons.”

“Your expert analysis is appreciated, Miss Shuren,” Ravarian said keeping his sarcasm down. 
“And I would contest that by saying that the issue ADVENT faces is that we are not *enough* of a 
threat yet. There are still many countries who don’t wish to join, including many European, 
African, and South American nations. An attack like this drives up fears, and encourages unity.”

“Then why not do this in one of those countries?” Yang asked. “If that was the goal, would it not 
be more effective if it *wasn’t* in ADVENT?”

“Perhaps,” Ravarian conceded. “But you can’t disagree that it is easier to set up in ADVENT.”

“Yes, if you’re cheap,” Yang rolled her eyes. “Or lazy. Are those words you ascribe to ADVENT?” 
One of the swords floated to her hands. “Be honest. Name *one* nation that ADVENT *wouldn’t* be 
able to do this to? Who could *possibly* stop an operation like this enhanced with *psions*?”

“The Humans have used this already as an excuse to escalate the fight again,” Ravarian pointed 
out. “The Sacramento base is *gone*. Completely. They seem to think that we won’t retaliate for this, 
and at this point, it appears to be accurate. Not responding to such an attack sets a disturbing 
precedent. We cannot just allow our bases to be destroyed with no response.”

“This was not ADVENT,” the Battlemaster spoke. “The targets were specific. Families of soldiers. 
There are too many downsides to their intentional deaths to be worth it. There were easier targets. I 
agree with Yang. Neither ADVENT nor XCOM had reason to do this. The military strike is a 
reflex. There will be no response from us.”

Ravarian sighed. “Fine, then who was it? It clearly wasn’t us.”

“I don’t know,” the Battlemaster admitted slowly. “But I am going to do two things. Prepare to 
broadcast a statement to Earth. They will not believe us, but I will deny it all the same, and I 
suspect Aegis will come to the same conclusion. Then I will find who is behind this, execute them, 
and send their body to the Humans with the extracted confession. This will not be tolerated.”

“Understood,” Ravarian said. That was as solid a plan as he could think of. He wasn’t convinced 
this wasn’t a false flag attack, but did have to admit the reasons ADVENT or XCOM would 
perform it were questionable at best.

But if it *wasn’t* them, then it was someone who was confident enough not to fear the retribution the 
Collective would bring. The Battlemaster rarely got angry, but attacking children and the families 
of soldiers was a line he wouldn’t intentionally cross. Ravarian almost felt bad for anyone the 
Battlemaster killed in the investigation.

But a larger part hoped that he would take his time killing them.

It would be deserved.

***

*Unknown Location – Argentina*

*1/9/2017 – 9:57 A.M.*
And work had been going so well. Volk had happily been planning the next three months of operations, the Argentinian government was slowly coming around to the idea thanks to a combination of smooth talking, tech agreements, and preliminary diplomacy, and the base was finally fully complete and functional.

It was exceptionally nice, air conditioned, with full research and fabrication labs, and crystal clear TV stations.

Volk had a wide smile on his face, though on the inside was seething. Asaru was standing in front of him in the brightly-lit room, arms crossed and for once looking serious. Volk was almost sure Elena was going to start shooting her if what she said wasn’t good enough. He’d barely stopped her from murdering one of Asaru’s other soldiers.

Not that he could especially blame her right now.

“No, do you remember our agreement?” He asked mildly, appraising the plasma pistol in his hand. “If I recall, I believe it had some specific stipulations.”

“What happened in Seoul was not us,” Asaru said firmly. “We’re…not sure what is going on, but this was not sanctioned by the Ethereal Collective.”

“Liar!” Elena screamed as she fired her rifle at Asaru, unloading shot after shot until it was empty. All the projectiles passed directly through her, of course, but it managed to calm Elena down and he tentatively put a hand on her shoulder. “Evidence released to the public,” she said in a rush. “Images, autopsies, clear evidence of alien weapons, psionics, and abductions. Too coordinated to be independent. Level of psionic and technological power extremely high.”

“Evidence which ADVENT is releasing,” Asaru pointed out. “As…distasteful as it may be…it is entirely possible they are behind this attack. To further villainize us in the eyes of the public and any allies. A clever tactic-“

“Shut up,” Volk growled, raising a hand. “I’m not a floundering pawn like you’re used to, most likely. Please, give me one reason why ADVENT would do this? And more importantly, why they need to do it?”

“Increase public-“

“But do you know that for sure?” Asaru asked. “I promise it wasn’t us.”

“No, but I’m inclined to believe her more than you right now,” Volk pursed his lips. “It doesn’t make sense for anyone to be behind it. But someone is, and I don’t think it’s ADVENT for once. But I also doubt you knew about it either. This,” he gestured aimlessly. “Is plausible deniability. Terrorism from another group. Since there are no actual dissidents in the Collective that I am aware of, I suspect this is a group acting on the orders of someone else. Probably an Ethereal.”

“I can assure you the Imperator would not sanction this,” Asaru said. “Nor would any other Ethereal…” she trailed off suddenly, her own lips pursing. “Although…perhaps there is one. Only one would dare consider such an idea, and then carry it out.”

“Who?”
“An Ethereal named Isomnum,” she said slowly, grimacing. “A highly distasteful individual obsessed with the usage and research of fear. Highly isolationist, highly dangerous. More powerful than I am. He was the one who extracted the Battlemaster in D.C.”

Volk remembered the aftermath of it. At the time he’d gotten a bad feeling about the Ethereal, but anyone who had a death mask for a helmet elicited that reaction. But it sounded like this Isomnum was disliked even among the Ethereals. “Would he actually go against the Imperator?”

“I would not have assumed so,” Asaru said. “But the only ones who might would be him, and perhaps the Battlemaster. And over this the Battlemaster is certainly not the culprit. Yet even for Isomnum this is irregular. I will need to speak to the Imperator about this. There will be repercussions for this, I assure you.”

“There better be,” Volk said. “And I want proof.”

“You will have it.” Asaru said, before she vanished.

Volk sighed, but did feel like Asaru was going to get some answers. Much as everyone would like to scapegoat the aliens, this was the act of an idiot. And while the Collective and ADVENT made questionable decisions, he didn’t think the leadership consisted of morons. If he didn’t know better, he’d think this was an odd attempt to worsen Human-alien relations, but like Elena had said earlier, that wasn’t really necessary.

“I want to leave here,” Elena said, looking up to him. “It feels unsafe right now. Aliens watching.”

She meant the base. Elena didn’t like staying in it for long periods of time. Or whenever she was anxious. He could see how she might feel trapped in here, especially with the amount of aliens around, and given the current situation, he couldn’t blame her. “Alright, let’s get out of here,” he said quietly, putting an arm around her and pulling her close. “We can do whatever you want today.”

The Throne Room of the Imperator – The Temple Ship of the Imperator of the Ethereal Collective

1/9/2017 – 10:09 A.M.

“I am under the assumption,” Patricia said slowly. “That you didn’t order this.”

The Imperator was…displeased to say the least, both in his aura and in his voice. Though not at her. “No. This did not happen at my command. I have little need for such unnecessary measures. A pointless waste of life and breeding of xenophobia.”

“Thought so.” Patricia hadn’t really believed the Imperator would do it. Not only was it an idiotic idea to begin with, it didn’t give them any advantage, and looked very bad if you were trying to get someone on your side. “So who did?”

“It was not ADVENT,” the Imperator said. “I am certain of it, though cannot be completely sure since the Manchurian Restraints have been placed on…many high-ranking ADVENT personnel. I would prefer not to reveal my presence to them immediately. But I have seen enough to convince me they were not behind it.”

“And XCOM?”

“Blocked entirely,” the Imperator stated as he strode forward. “Which is the consequence of Aegis,
or more worryingly, the Sovereign on Earth. I suspected it was only a matter of time before it began reaching out. XCOM is an obvious choice, and I doubt it took much to convince him it would be an…ally against me.”

Patricia scowled. “Let’s hope not. The Commander is willing to do anything to defeat the Collective, even if it means allying with something like that. And saying the right things to the Commander isn’t difficult. Assuming it didn’t take control altogether. Not even Aegis could stop a Sovereign, correct?”

“No.” The Imperator said flatly. “Nor any other psion in XCOM. I suppose it is possible this was the work of XCOM, but I am skeptical.”

“The Commander wouldn’t do this, not of his own free will,” Patricia shook her head. “He would only do it if it served a greater purpose and was necessary. Forming ADVENT justified such actions. There is nothing here which justifies this. He didn’t need to make people angrier at the Collective.”

“No, and even a Sovereign One wouldn’t go to the trouble of something so…pointless,” the Imperator mused. “There are possible culprits; few would dare to carry something like this out. This fits Isomnum’s work, yet I am not convinced even he would do it. The alternative is exceptionally unthinkable though.”

“Which is?” Patricia asked.

“That this was carried out at the command of the Creator,” the Imperator said. “Or more accurately the Bringer. She has been corrupted to a point where her loyalty is to it, not me. A planned and acceptable consequence, but even still she understands the…consequences of actions like these. They are of rebellion. The Bringer would be playing with fire. I do not toy with such creatures and he knows it.”

Patricia furrowed her eyebrows as she looked outside the windows to the void of space. “How much have you spoken to this Bringer?”

“To the Bringer himself? Only twice,” the Imperator said. “His subordinates and the Creator relay anything else essential. But Mosrimor has been useful in this regard. I know enough about him to establish boundaries and safeguards. To act in such a manner against me is…ill-advised. Which makes me question his involvement. He knows the consequences.”

“It couldn’t hurt to speak to both of them,” Patricia suggested. “You would find an answer one way or another.”

“What will be difficult is the Battlemaster,” the Imperator said. “He will want to punish the culprits. It is not time to sacrifice Isomnum yet, nor will he succeed in killing the Bringer, nor do I want him to yet. Denying him justice will not be taken well.”

“He doesn’t know the truth,” Patricia realized. “About the Sovereign Ones.”

“No,” the Imperator said. “He will not take the existence of the Bringer…well. And he would be unlikely to take the truth as you or I would. He sees no enemy greater than the Synthesized, and will do whatever it takes to defeat them. He does not care about greater ramifications of the Sovereign Ones. Giving him Isomnum and allowing some means of taking his vengeance may alleviate his wrath.”

“And if it is the Bringer?”
The Imperator was silent for a few moments. “Then he must be distracted. The Creator’s Blacksite of Paradise should not be investigated by him. He would not approve of what is taking place.”

Patricia wondered just how bad it could be. The more she heard about the Bringer, the more she wondered just what was going on there. If it was bad enough where the Imperator worried about the Battlemaster finding out, it must be far worse than the Sectoid Hives. Which was something she was struggling to really comprehend.

“Nebulan suspects Isomnum,” the Imperator said. “What gives me pause is the apparent usage of the Chosen. They must be interrogated as well. Before the Battlemaster does. I will have Quisilia distract him until this is determined. You will come with me here. Your species has suffered because of the fool who performed this, and you will determine their fate.”

“How?” Patricia raised an eyebrow. “I’m not the only Human here.”

“No,” the Imperator agreed, gesturing for her to follow. “But you are the most important. Come with me, Patricia. There is a dissident to find.”

***

Busan – South Korea

1/9/2017 – 12:11 P.M.

Duri wished something would happen. Something to wake him up from the nightmare he was in right now. This had to be some kind of twisted figment of his imagination; everything seemed brighter than it should be, there was a ringing numbness in the air and everything around him barely registered.

It had been bad enough waking up to the news of the attack. The images they’d shown were horrifying. They’d all watched in stunned silence until Duri realized that was where his family was.

The news had been given to him shortly after.

I’m afraid that I have to report that your family is among those killed, Officer. I’m sorry.

The man had said some other words, but he hadn’t registered them.

Your family is dead.

Dead.

His wife.

His girls.

Dead.

Not because the city had come under siege. Not as a casualty of war. Just victims of a senseless slaughter. Hundreds of miles away.

Dead.

They were dead because of him. Because he didn’t want them going north. Because he thought they’d be safe away from the front lines. A cruel irony, if they’d done literally anything different they would still be alive. But he’d insisted because he’d been sure of their safety.
Dead.

He’d numbly asked for pictures. Proof. They’d refused. Not until you speak to someone. You can’t handle it right now. Not until you’re calmer. Perhaps they were right. Any other time he would have punched them. But somehow his military discipline won out, and he just stared blankly at them before wandering out.

They yelled something after him. He didn’t hear it.

Dead.

He wandered aimlessly, picking up more parts of the story by accident. It wasn’t just his family that was dead. It was others. Then it came out that some were abducted, not dead. Then that the attacks had been deliberately targeted at families of soldiers.

Dead because of him.

He was shocked he hadn’t begun crying yet. Instead he was just numb. Still clinging onto some fragment that none of this was real. He’d wake up, call his family, and tell them to get as far away as possible. Or hell, bring them down to him. Here he could protect them. That was all he wanted to do. Protect them.

What kind of father and husband would he be if he couldn’t do that?

A failed one.

It was a bright day outside, a sunny one. Too bright. Too pleasant. There was even a breeze. Would the weather be so nice if this was real? Wouldn’t he be able to feel everything a little more crisply? Just a little bit?

“Duri!” He barely registered a shout, not looking away as he looked onto the sea in front of him. Yes, very bright and blue. It was never that color.

“Duri!” Beatriz scrambled up, her face immediately morphing to relief. “Thank god you’re fine. We thought….well…” she swallowed. “Did you find out…”

“Dead.” He said numbly, not looking at her. “They won’t show me the bodies. They just said they’re dead.”

“This?” He looked down at it in his hand. He’d forgotten it was still drawn. “Doesn’t work.” He pointed over the sea and pulled the trigger. Nothing. “I tried twice. Don’t know why I didn’t load it,” he shrugged. “Maybe I would wake up.”

Beatriz took a few deep breaths. “Duri…you should come back with me. We can talk…you shouldn’t deal with this by yourself. It isn’t a good idea.”

“Talk about what?” He shrugged. “They were there because of me. And now they’re dead. No mystery. They’re not coming back.”

“Duri, this is not your fault,” Beatriz insisted, grabbing his arm. “You sent them there to protect them. You didn’t kill them, the aliens did. Not you.”

He was silent for a minute. “I haven’t been listening. Do they know for sure it was the aliens?”
“Chancellor Vyandar confirmed it,” Beatriz said. “Of course the Battlemaster has said they had nothing to do with this.”

“Liar,” he agreed, an alternate plan forming in his mind. “He should at least admit to what he did. Lying is insulting. Where are the aliens on base?”

“Don’t know,” Beatriz said. “ADVENT said they were going to question the ones in custody to see if they knew anything else…”

“It’s funny,” he said slowly. “I was just wondering if the aliens weren’t all bad.” He looked down at his empty pistol. “Guess I was wrong. But my family needs to be avenged one way or another. I shouldn’t die until then.” He reached in his pouch and pulled out a clip and slid it into his pistol.

Beatriz looked alarmed. “Duri, this is a bad idea. You’ll be killed or court-marshalled. Don’t do anything stupid.”

“It doesn’t matter,” he said numbly, turned to face her wearily. “I don’t have a reason to live anyway. The only ones I wanted to protect are dead. ADVENT may kill or arrest me, but I don’t care now.”

“Just talk to someone first!” She pleaded. “You can’t ruin yourself over this.”

“Call someone to stop me if you want,” he shook his head and began to walk. “I don’t need someone to talk to right now. I’m sorry.”

She looked at him helplessly, but didn’t say anything. “This is something I have to do,” he said as a farewell. “I hope you never have to understand why.”

He left her alone, as he walked towards where the aliens were being kept.

All he needed was three. One for each of them. Then ADVENT could do whatever they wanted to him.

***

Chambers of the Battlemaster – Mars Collective Base

1/9/2017 – 4:11 P.M.

It was ironic that for the first time he and ADVENT were on the same side. The Battlemaster suspected that there was little that he and ADVENT leadership would agree on, but there were certain lines that would not be crossed on either side. Targeting civilians was something done only as a consequence of other actions, and even then when there was a clear goal to it.

Very rarely had it seemed to have an effect outside of making enemies. Civilians died in war, but there were few instances where deliberate targeting was justified.

Attacking families of soldiers, regardless of side, was one of the most dishonorable actions one could take. Enemies were afforded a certain level of respect. This respect was extended to families. They were not exempt from the dice roll of war, but to deliberately target them simply because of association with an enemy was the action of a coward.

This was why he despised intelligence work, where this line of thinking was mild compared to what spies considered. It had its place, but it was a station that he would never fully endorse or support.
Dead children were also casualties in war. Accidentally it was always unfortunate. But to deliberately target them was a level beyond evil. Humans already had subpar treatment for many children, and killing the ones who actually had parents was made somehow worse. He couldn’t fathom the mind of someone who would deem this acceptable, among any species.

Although it made him realize that the Collective had been complicit in this kind of activity for some time, he just hadn’t wanted to realize it. Who knew how many children had been sent to Revelean, Fectorian, and the Creator. Perhaps this excuse could be distraction, but it would be a lie. He had just not considered it relevant until now.

That would change soon. And if they took issue with it, they could use clones.

“What are you thinking?”

Yang had been somewhat talkative as they’d worked, each of them trying to get a feel for each other. He was thankful she wasn’t put off by his stature, but it was…different…attempting to talk to someone so openly. He had made an attempt to articulate his thoughts, but it was usually without preparation.

“Considering,” he said. “The Collective has been complicit in distasteful behavior for some time. I had not confronted it until now. It is…disquieting to realize it after all this time.”

She cocked her head. “Like what?” She was having her new and improved weapons float by her sides, a constant practice the Battlemaster respected.

“Children,” he mused. “Our treatment of them. Human ones at least. Many have been killed by us before the deaths today. That will need to be changed.”

“Ah, right,” she nodded. “Can’t say I’m disappointed to hear that. Glad that you aren’t the kid-killing type.”

“I would purge the genome of any who are,” the Battlemaster muttered. “Degenerates.”

“You’re bothered by this,” she noted after a few minutes. “Almost as much as ADVENT. More than I expected, honestly.”

“Are you not?”

“Of course I am,” she scowled. “ADVENT is the enemy, not the people. But you’re…” she gestured. “Well, an alien. And the one in charge.”

He thought about how to articulate this to her. “During the days of the Empire…Children were rare. Only given or allowed to those who earned them. They were the ultimate dream, the progression of our species. There were none more valued or treasured than our children. Rarely were there more than one at a time.”

He paused. “Humans were the first species I saw who were…ambivalent to children. They did not care about any other than their own offspring. What children do not starve are placed into buildings and sold by governments.”

“Isn’t it?” He asked. “You must pay the government for the privilege of giving a child a home. I performed my own research. Your institutions are corrupt and bloated, more concerned with money than children. Perhaps not permanent slavery, but they exist to make money. And those are
the lucky ones.”

He shook his head. “A species which does not care for children if they have the means to do so is flawed and failed. The Vitakara have orphans, but they are adopted by families within days. Humans are selfish and wouldn’t think about other children unless they were directly affected.”

Yang pursed her lips. “Can’t say I disagree.”

“So I am upset,” the Battlemaster continued. “The children who died today were lucky. They had families and lives. They did not choose to participate in this conflict, and yet they died senselessly. Many have lost family members already, those who died in conflict. More will be rendered orphans by my hand. But those who die in battle made a choice to fight. But children have no choice. Especially not Human ones.”

“I don’t suppose you’ll take over orphanages when you conquer Earth?” She asked with some hope.

“Perhaps. I cannot do worse than your species.”

The room chimed as someone outside the door approached. The Battlemaster turned, wondering who it could be. “Open.” The door slid open and the Hunter of all things walked inside. He was clad in his battle armor, minus the helmet, and surprisingly unarmed.

“Battlemaster! What a pleasant surprise.” He caught a glimpse of Yang. “As well as whoever you are.”

“This is not a good time,” the Battlemaster warned. “State your reason for bothering me or leave.”

“Don’t rush me,” the Hunter raised a hand, grinning under his hood. “After all, you want to know who could possibly be responsible for that terrible massacre—“ The Hunter gasped as he was lifted into the air and pulled into one of the Battlemaster’s waiting hand.

“What do you know?”

“First,” the Hunter coughed. “I want to say that none of this was my idea and I was just following orders!” He hissed as the Battlemaster began applying pressure over his whole body. “Alright! Stop it! The Creator ordered the attack! We took part in it.”

The Battlemaster threw him into a wall, fury building as the Hunter rose to his feet shakily. “The Creator?”

“Yes,” the Hunter coughed. “Look, I knew it was a bad idea. But sorry, if I’d done anything I would be getting tortured for the next year. You’re scary, but sorry, it’s not much compared to going against the almighty bitch.”

“What did you do?!”

“Got orders to work with a bunch of the Creator’s people;” he explained hurriedly. “Caretakers she calls them. Ghouls pretty much, but somehow psions. Teleporting and everything. My job, and that of the other Chosen, was to capture some people, and kill everyone else. We got in, then got out. The Caretakers took care of security and keeping everyone away.”

“Why did they capture anyone?” Yang interjected. “Was there a reason, or was it random?”

“Don’t know the criteria,” the Hunter said. “But it was definitely not random. Trust me, I had the
exact *names* of people who were being captured shared with me. The Creator knew *everything* about the people in those buildings. Somehow.”

The Battlemaster was silent for a few moments. “What was her reason for this?”

“I have no fucking idea,” the Hunter raised both of his hands in surrender. “Look, I have zero problem with killing those people, but I’m not an idiot and knew that would *probably* make you mad. Hence why I’m here and telling you so you don’t eviscerate me and drown me in acid or something.”

“How considerate,” the Battlemaster growled, twisting his hand and the Hunter crumpled as his kneecap shattered. “Yet you still participated.”

“Of course I did!” He yelled. “You have no idea what’s going on with the Creator, do you? My choices were not follow her orders and face death at *best*, or go through with them then tell you later and hope you don’t murder me anyway! I didn’t *have* many great options here!”

“Let me be clear,” the Battlemaster rumbled as he ground the leg of the Hunter further into mush and splinters. “If you are *ever* faced with a choice between me or the Creator, *I* am the one you go to. The Creator is *not* a threat to me. If you fear retribution, I can handle her.”

The Hunter laughed. “No, you can’t. I promise you can’t. I’m probably going to die anyway just by telling you this, but at least you might kill the bitch for me.”

“You will not die by her hand,” the Battlemaster promised. “You overestimate her own power. She is a scientist at best, one twisted and deranged—”

“Word of warning,” the Hunter interjected. “*You* better not underestimate her. Do you think I’d be this reluctant if she were a fucking *scientist*? There is something in Paradise. Something a lot more powerful than her, than me, and probably you.”

The Battlemaster paused briefly. “Do you have proof the Creator was behind this?”

“Ah, yep,” the Hunter grimaced as he pulled a datacube out of a pocket. “Recording of the whole incident, at least where I was. Audio and everything. Figured you’d want it.”

“This will be useful,” the Battlemaster said, telekinetically calling it to his hand. “Your contribution is noted.”

“Another thing,” the Hunter twisted his leg back into position. “I’m pretty sure the Creator got this brilliant plan from Isomnum. They’ve been talking a lot recently. I bet they wanted everyone to blame it on him. He wasn’t behind it, but he gave her the idea, I’m pretty sure about it.” He gave a grim smile. “But that’s just my assumption, no evidence for that other than what I heard.”

The Battlemaster felt the datacube in his hand. The situation was now extremely complicated. The worst case scenario he had anticipated was one Ethereal behind it. Two were worse, even if one had merely provided the idea. But he was an Ethereal of his word, and ultimately, it did not change much. Isomnum and the Creator needed to be dealt with.

He wouldn’t kill them outright, but drag them before the Imperator. They could defend themselves before he executed them and sent their corpses to ADVENT. He wasn’t surprised about Isomnum, but the *Creator* was unexpected. He had not thought she’d known much about the war to begin with, let alone try and *influence* it.

Neither of these Ethereals deserved to live. Their species was small, but only those who deserved
life should keep it. Perhaps this would motivate the Imperator and Revelean to consider focusing on repopulation.

It sounded like there was much about the Creator he was uninformed of. Fortunately whatever she was doing would not last long.

He had targets now. Once he reviewed the evidence he would act. Justice and retribution would be swift and merciless. Ironically much like the operation that had started this. “Your assistance is appreciated,” the Battlemaster told the Hunter as he telekinetically lifted him into the air. A few flashes of his sword later, and the Hunter was now limbless, as the Battlemaster tossed the torso a short distance away. “But you still murdered those people. That requires punishment. Be thankful it was not worse.”

“I hate you so much,” the Hunter spat as he hissed in pain. “Well, sorry!”

“Apology accepted,” the Battlemaster said, sharply motioning for Yang to follow him. “You are not beholden to the Creator any longer. If such an event happens again, you will die. Is that understood?”

“Loud and clear!”

“Come, Yang,” the Battlemaster said. “Isomnum has an explanation to provide for us.”

***

Busan – South Korea

1/9/2017 – 3:30 P.M.

The Officer in charge was unreadable with the helmet on, but was thankfully the only one there. Duri had his off. He’d forgotten it to begin with, and he didn’t really care enough to get it back. Not like he was trying to hide. This was a self-destructive plan, but the alternative was doing nothing.

And he just couldn’t do that. Not now.

“Hold up,” the Officer said, raising a hand. “We’ve got the area restricted.”

“I know,” Duri said. “I want to go in.”

The Officer looked at him a few moments. “Why?”

Duri just pulled out a picture of himself and his family and handed it to the Officer. He didn’t feel the need to say anything at that moment. Both of them knew what had happened, and now why he was here. “They warned me people like you might come,” the Officer finally said. “Technically I shouldn’t let you in at all.”

Duri was just silent. The Officer extended a hand. “All weapons have to be confiscated,” he paused. “However, there may be a pistol around the cells. But I wouldn’t know that.”

“Of course not.”

He handed his pistol over, and began walking in as the Officer unlocked it. But he suddenly grabbed his arm. “I’d think carefully,” the Officer warned. “In the event something happens I’ll have to call for security. I won’t be able to help you.”
Duri gave an emotionless nod. “I understand. Thank you.”

He stepped inside the holding area and walked towards where the cells were. Of course, calling them *cells* now was a bit generous, as they were essentially rooms with steel walls. There weren’t locks on them anymore, they had actual beds, tables, and some small furniture. All of them were occupied, and all of them watched him in concern.

As they should.

The pistol wasn’t in an obvious place, in one of the lockers, but he found it easily enough. He simply entered the nearest cell he could find. Five aliens resided in it, four Vitakarians and one Dath’Haram. All unarmed and slowly backing up as he entered the cell. They must have seen the deadness of his eyes because several of them became visibly worried.

He’d learned that Vitakarians began blinking rapidly when agitated or surprised. “Officer,” one of them said, likely speaking for the group. “I know what happened. I’m sorry about it and it’s terrible, but killing us isn’t going to bring anyone back…” he trailed off as Duri raised the pistol.

“Their deaths were pointless and without reason,” he said blankly. “Why should you be special? They died by the hand of your kind. Justice is needed.”

The Vitakarian swallowed, but continued. “We didn’t kill them. This isn’t justice, Officer.”

“Perhaps not,” Duri agreed numbly, his hand staying firm. “But I don’t care now. The three ones I loved most are dead. Three aliens will die now.”

He suddenly felt something like a vice cover his entire body. “Officer,” a female called out, and turning his head he saw another Officer with one of the Priests beside her, arm extended to him. “Put the weapon down. It won’t end well for you.”

Duri looked back and fired the pistol. There was only clicking and he looked at the weapon in disbelief, before letting out a broken chuckle. He tossed the useless weapon to the side, looking at the officer in defeat. “A trick.”

“One for your own good,” the Officer said, taking off her helmet, revealing a Korean woman with cropped black hair. “You aren’t the first person today to try that. If we’d let it just happen you’d be in jail. This is ADVENT saving you from throwing your life away. You are **not thinking clearly.**”

She took a step towards him, as he stood there limply, not having the strength to resist whatever would happen. “Look, I get it,” she said softly. “My sister was butchered by the animals that did this. I want to put a bullet through every alien that was responsible for this.” She tentatively placed a hand on his shoulder. “But the **right** aliens. And when you’re in an acceptable mental condition. You-we’re not going to be able to get over this easily. But we need to at least try.”

“Why?” He asked, voice cracking. “I don’t have anything left.”

“Yes you do,” she said firmly. “Even if you don’t see it now. I don’t know who you lost, but would they want you to just give up?”

He shook his head; hesitantly, but he did it. She took his arm. “Come with me, let’s get out of this place.”

He didn’t say anything as he was led out, still in a semi-surreal state. Maybe she could help him, maybe he somehow still had a future. But now he just felt tired and drained. He just wanted the day to end, to sleep.
To forget.

Maybe that realization broke the dam inside him, and he let silent tears roll down his cheeks as he was guided away.

Communications Hub – Mars Collective Base

1/9/2017 – 6:11 P.M.

Yang did not especially want to be standing in a darkened room as the holoprojectors lit up, even with the Battlemaster center-stage. She had heard the stories about the Dread Lord, and the fact that no one felt comfortable providing anything more than basic information about him, and that she’d never heard any sort of casual talk, let alone any jokes about his subjectively edgy persona said a lot.

Cogitian actually had a few documents on him.

Those had been enough to put the Dread Lord on her list of ‘Ethereals never to talk to ever’. Even the dispassionate text of what he’d done and descriptions of what it was like to be around him unnerved her. What the Imperator had been thinking bringing him along she didn’t know, although the literal fear factor was certainly a possibility.

But she would have preferred that the stories just stay that – stories. She had no desire to meet the illustrious Dread Lord in person.

But he was now connected to this incident, so the Battlemaster’s first course of action was to speak to Isomnum directly. And to her mild surprise, he had responded rather quickly. Perhaps he was always this fast, but no one called him. She did feel some levity at the thought of Isomnum staring hopefully at a phone hoping someone would call him, but no one did because he was the closest thing to a demon the Ethereals had.

The hologram materialized, showing Isomnum in extreme detail. He matched his dossier image perfectly, right down to his death mask helmet. Two hands were held in front of him, and two were clasped behind him. The Dread Lord looked at the Battlemaster first, then down to her. She shivered as the empty eyes of the helmet stayed on her for far too long.

“Battlemaster.” Yes, his voice was just as discomforting as described. “Why do you speak to me?”

Yang then noticed that Isomnum wasn’t alone, there was another figure to his right, and another to his left. The leftmost figure was a Sectoid of all things, although this one was notably... unique. It wasn’t a Vanguard, but it was modeled in the form of the Hive Commanders, if they were more proportionately built. It bore black armor of some kind, which seemed embedded directly in the flesh, and the eyes were a white that even came through the hologram.

The rightmost figure was a surprise. It was an elderly woman; Japanese she noticed, with her greying hair pulled back into a single ponytail. She wore nothing ornate, but instead a medical coat of sorts, with an array of surgical tools attached to a belt on her waist. Round-rimmed glasses rested on her face, and her face was impassive and cold, similar to the mask of the Ethereal beside her.

She supposed it wasn’t out the question that Isomnum would have Humans working with him, but some part of her suspected that this wasn’t an ordinary Human. She didn’t like the idea that this person was yet another gift to an Ethereal from the Imperator, but it wouldn’t necessarily be out of the question.
“Have you spoken with the Creator recently?” The Battlemaster began, also looking at his entourage.

“Yes. She came to me for advice,” Isomnum motioned to the Sectoid. “I provided what she asked. In return she granted me this; a fascinating and intelligent creature. Further useful for the deconstruction of the Sectoid psyche, it is more adaptable than the Hive Commanders believe it is.”

“I do not care about your pets,” the Battlemaster dismissed flatly. “What did she request from you?”

“How to properly break the Humans through terror,” he answered dispassionately. “Techniques, examples, how to use it to manipulate populations. Simple tasks, there are many avenues in which to exploit the Human psyche. The average Human can be broken through certain triggers; too much stress on a particular aspect will break them. Family is a noted constant. Figures of importance or prominence have an effect on those below them. Targeted, they will have a detrimental effect on the mental health of a population. This leads to irrationality, which leads to mistakes, which leads to exploitation, to conclude in manipulation.”

Then Isomnum had definitely been behind this plan, even if it was just providing the Creator with the structure. The Battlemaster wasted no time. “Did you know she would carry it out?”

“Did she?” Isomnum’s tone shifted to moderate interest for the first time.

“If so, I am impressed. I did not think she would follow through. She is too…obsessed. Too broken to question whatever she is communicating with. She did not matter to me, but it has yet to dull her skill. Yet if she has performed what I suggested, then I may have to reexamine her potential.”

The Battlemaster was angry enough that Yang could easily sense it, despite not being a telepath. “You are aware that I specifically stated that nothing of that nature was to happen without authorization. You should have informed me even if it was just a suggestion.”

“No.” Isomnum stated without emotion. “You are afforded no more respect than any of our kind. The concerns of aliens, their lives and feelings, are irrelevant. You have no stomach for war, for doing what is necessary for victory. I do not answer to you, you are ineffective.”

“The Imperator placed me in charge of all operations on Earth,” the Battlemaster continued calmly. “It does not matter your opinion of me, this went directly against the wishes of the Imperator.”

“Words which are hollow,” Isomnum added. “You are easy to placate, Battlemaster; easy to manipulate. You have been, and are little more than a tool used by others at their command. You think you have independence; authority, but all the power you have is an illusion. You are a weapon pointed at our enemies, always looking for validation or approval from those who are your superiors. You have authority over aliens. But your words or threats mean nothing to your own kind.”

Yang didn’t know if he was trying to make the Battlemaster angry or not, but she was concerned it was working. “He’s trying to distract you.”

“Yes, listen to your own pet,” Isomnum said, looking back to her. “The Battlemaster, an Ethereal, listening to the words of an alien. You rely on them too much, Battlemaster, they are a corruption, one which you have succumbed to. Use and dispose of them as you wish, but you do not treat them as they are meant to be used. You care for them, and that is your weakness.”
He looked to her, and she was suddenly assaulted with a psionic mind far stronger than anything she had ever face before. It reminded her of a lurking beast, hovering at the edge of her telepathic reach and pressing against her like a tidal wave. “Battlemaster…” she swallowed. “I can feel him.”

“Cease your attack,” the Battlemaster commanded. “There will be consequences if you continue.”

Isomnum gave a hollow laugh. “None will mourn an alien. The Imperator will simply provide you another pet to placate you. But you will not forget how you lost this one.”

The toying Ethereal easily shattered her defenses and was inside her mind, a stabbing and constant pain as he made sure she knew and he sorted through her mind like a burglar robbing a house at gunpoint. Her life from childhood to now flashed at various places before her eyes. “He’s in my head!” She screamed in a panic.

Her vision blinked and flickered, pain stabbed throughout her body, not from bullets or standard weapons. On the ground she saw and felt her leg being ground up and eaten by spiders, which then began crawling into her body and she felt the eggs they were laying inside her. The area around her was no longer what she remembered, instead she was surrounded by corpses, all of them her family.

Perhaps she screams, or maybe not as the spiders were in her mouth, she didn’t remember how her hands became deformed and covered in blood, but she saw it all the same. She knew there was something else there, some part of her which knew this wasn’t real. But it was vivid and visceral.

And Yang could do nothing but scream as her sanity was broken bit by bit.

**Blacksite 004: “Sanctuary” – Unknown**

1/10/2017 – 3:20 A.M.

In the white room, the Battlemaster sat and thought. The actions of Isomnum were intolerable, and would need to be dealt with in suitable fashion. It was fortunate he had thought to take control of the situation immediately before her mind was lost for good. And he could always rely on Sana to be available when necessary. Especially when he was carrying a convulsing Human woman in his arms with an explanation of “Isomnum.”

There were only a few options he had before him, and ultimately Sana he trusted the most and if there was anyone who would be able to help reverse the damage, it would be her. Perhaps. Sana was a doctor, and a powerful telepath, but he didn’t know how often she worked with cases like this. But he didn’t want to trust Yang to the Imperator or the Overmind.

He was surprised with himself how much he cared at all. While Yang was more…palpable than he had originally intended, it had been a matter of weeks since they’d met. It was probably simpler than that. No one deserved what Isomnum inflicted on his victims, especially when it was done with the intent to provoke him.

In which case, it had certainly succeeded.

However, he also disliked what Isomnum had said. Yang had been right in that it was clearly to throw him off, but the Battlemaster didn’t think it couldn’t have some truth to it. He was no Imperator, he had no desire to do anything other than what he was good at. That didn’t necessarily make him just a weapon or tool. While it might not be something that Isomnum would care about, he did have some authority in the Collective.
Certainly more than Isomnum had with the Imperator.

Although…he did wonder now. How true that was would depend on what happened next. What Isomnum had done was unjustified and the most blatant in a long list of his offenses against not just aliens, but the Ethereals themselves. His involvement in this incident was enough for the Battlemaster to justify his removal.

But he wasn’t sure the Imperator would allow that. While he could understand the reluctance to kill off an Ethereal when there were so few left, the Battlemaster was convinced that the Collective would be better off without him, and that he was too dangerous to be left alive. It was both the practical and right thing to do.

The Creator’s fate would depend on her own justifications.

The Imperator was hiding something important there, and the Battlemaster was not naïve enough to think that the Creator could be doing anything major with him knowing about it. It was concerning enough that he hadn’t been told of it, but what was more concerning was that the Imperator was in support of it.

From what the Hunter had said, he wasn’t going to like what he found.

At the very minimum the Creator needed to be detained until they figured out what was going on.

He let out a sigh. And this was happening just as the Collective had begun to stabilize. Now there were two Ethereals acting outside their authority and deliberately interfering with Earth. Not a good situation, but one he would have to solve soon. The Humans would never let this go until they knew the truth one way or another, and right now it just served as a rallying cry.

The problem would only get worse if the Imperator declined to punish either of them.

He wasn’t sure what he would do in that case.

The Imperator was not unreasonable. His reluctance to punish Ethereals was understandable, but this idiotic assumption that they could keep acting like they were invulnerable and superior to everything else was one reason the Empire fell. Isomnum was a remnant of an era that didn’t exist any longer, and some day they would find an alien species that would pose more of a threat than the Humans.

Despite what Isomnum thought, aliens were not inferior. Not really. If that were the case they wouldn’t bother with them at all, and they wouldn’t have been working to make sure they were on the same side. Humanity had at least proven that aliens could hold their own, which likely made Isomnum irritated that was the case.

The door slid open and Sana walked inside, her expression one of focus. The Battlemaster stood as well. “Will she recover?”

“Yes,” Sana answered. “Though only because you brought her to me immediately. The damage would have been irreversible if you had delayed.” She shook her head. “A parasitic command. A perfected one, I have only seen it a few times. Goes through the victim memory by memory and forces a certain reaction. Unsurprising it was fear. Luckily it hadn’t gone too far, and I was able to stop it.”

She let out a sigh. “I suppressed the memories of what she endured.”

“Suppressed? Not removed?”
“It is…complicated,” Sana waved a hand. “Removing the memories outright could possibly cause personality incompatibilities. If she returns later, I could examine how to remove them without damaging her, but from what I saw of her mind…she would not want me in her head. Or anyone.”

“An understandable response,” the Battlemaster nodded. “But you have already done it.”

“Only to save her sanity,” Sana nodded. “She is…not a sound woman. Hardly one to bring into battles.”

“Violence does not indicate mental status,” the Battlemaster said. “Otherwise I would never be considered of a sound mind.”

“You are not the same as her,” Sana shook her head. “But that is a different conversation. What Isomnum did here was inexcusable, and I am certain it was not the first time.”

He snorted. “Of course it wasn’t.”

“What do you plan to do?” Sana stepped forward, her robes sweeping over the floor. “I saw the conversation in her memories. It was direct defiance, and if he was involved in what happened…” she trailed off. “This cannot stand without consequence, especially if it came from one of our own kind.”

“I will deal with Isomnum later,” the Battlemaster stated, moving to walk out of the room. “But first I will need to bring the Creator into custody. She has been allowed unmitigated freedom in her experiments, and what I have heard bodes ill for what I will find. She will at least be easy to subdue and bring in.”

“Should you inform the Imperator?” Sana asked. “He would also be interested in what happened. This is not what he wants.”

He glanced at her thoughtfully as he entered the main medical ward. “No. The Imperator knows more than he has said. I want to see for myself if this is the case. He would not order this, but he has been lax in reigning in the likes of Isomnum and the Creator.”

“He will not appreciate that,” Sana pointed out as they reached Yang’s bed. The woman was now clad in a simple medical robe, and looked almost peaceful as she slept. A monitor hooked to sensors on the bed transmitted all important medical information. Heartbeat, brainwaves, blood pressure, all the necessary vitals.

The Battlemaster barely heard Sana’s comment as he looked her over, but gave a quick response. “That is too bad. He should not have allowed this degree of freedom.”

Sana checked some of the equipment, and continued speaking, without looking to the Battlemaster. “So when will you go to the Creator?”

“When she wakes up,” he nodded to Yang. “I feel delaying would not end well. Too much of an opportunity for the Imperator to intervene, or the Creator to destroy or alter evidence. She likely knows the Hunter told me everything.”

“She just went through a traumatic experience!” Sana exclaimed in disbelief. “And you want to drag her to deal with the Creator?”

“The Creator is not a threat,” the Battlemaster said. “And yes. The memories were suppressed, she should be fine since the damage was not physical.”
“I highly recommend against this,” Sana said. “She needs rest, not a visit to the Creator’s hell.”

“There is another thing,” the Battlemaster raised a hand. “I want you to come with me.”

She appraised him carefully. After a few moments of silence she just asked. “Why?”

“Because there are going to be those who need your help,” he said grimly. “Once the Creator is subdued, I will put whatever is within Paradise under your control. Dispose or help the victims as you see fit, but I want you to become more involved in the Collective. Shutting down Paradise would certainly assist in that.”

Her mouth was a thin line. “I cannot disagree that it would feel good to end the Creator’s streak of insanity. Yet it might turn violent.”

He faced her squarely. “You have fought before, and if you forget, we will be able to protect you. And you could help her.” He nodded down to Yang. “But I am not expecting a fight. The Creator is no warrior, and she will capitulate easily enough.”

Sana sighed. “Very well. Better I go than Revelean. Yang will likely awaken shortly, and in the meantime I will…prepare.”

“Do that,” the Battlemaster said, as he sat down on another bed in the ward. “I will wait here.”

En Route to Blacksite 10: “Paradise” – Orbit of the Dead World

1/10/2017 – 10:00 A.M.

When the Imperator had first given the Ethereals the resources and authority to construct their own personal stations, it was not a gift squandered. Some were small and compact, fulfilling a singular purpose, and others were massive, spanning dozens of levels and factories in their own right. Each one was a work of art which reflected their designer.

The Battlemaster remembered the Creator’s original Blacksite. It had not been called Paradise then, but something else he couldn’t bother to remember the name of. But it had been small, a spherical station that housed several levels of labs and chambers. Modest, but utilitarian, much like how the Creator had been.

That no longer resembled anything close to Paradise.

“Where is it?” Yang asked, looking surprisingly refreshed for what she had gone through. The Battlemaster chalked it up to Sana suppressing the event, and the enhancing drugs which had been pumped into her. They would keep her awake and alert, and were specifically designed to rejuvenate psions.

“Straight ahead,” the Battlemaster said calmly as he piloted the Cultro forward. “We’re almost there.”

Yang frowned. “It’s on the moon?”

“Not a moon,” Sana corrected, stepping forward as she also appraised the marvel before them. “That is Paradise.”

It was easy to mistake the space station for a moon. It was the size of a small one, though not even
half the size as the one orbiting Earth. It was a sphere with a black outer shell, almost blending into
the void it inhabited. The Battlemaster knew that it wasn’t completely dense, each level allowed
some space between it, eventually growing smaller and smaller.

But as he’d found out, acquiring complete schematics of Paradise was impossible. The most he’d
been able to find was the first level, which included useful details like where the walls could move
to form different passages, the Gateways leading to different lower levels (And even parts of the
same level), labs, cells, and the lone stasis chamber.

He did not like how little they knew about anything beyond the first level.

And he especially didn’t like that they were walking in blind to just what the Creator had.

Upon reviewing the video the Hunter acquired, the fact that Vitakarians of all things were
somehow managing feats of teleportation, and the Creator was using strangely decayed specimens
of all species, it all pointed to something especially unnatural happening. The closer he drew, the
more he realized just how big the station was.

He didn’t feel like they would pose a threat, but it was disconcerting such a thing was possible at
all. Another question in the list to ask her.

“Communication incoming,” Yang said, looking at the solid green light indicating a hail.

“Open it,” the Battlemaster nodded. She pressed a button and the hologram of the sender appeared.
Unlike the previous ones he had seen, this one was a Human, and did not appear to be degraded in
the same way others representing her were. The Human wore a white robe with intricate patterns
and symbols embroidered into it, and the robe itself was weaved expertly through silver armor it
wore, the shine the Battlemaster recognized as his own. Materials from the Dead World.

That raised unpleasant implications.

The man’s face was shaven, as was his head. The eyes were a steel grey, but the face was
completely impassive. Not a single muscle moved as the Battlemaster waited. When he spoke, his
voice was devoid of tone. “You are encroaching on Paradise. You are advised to leave
immediately.”

“This is the Battlemaster of the Ethereal Collective,” he answered. “I will speak to the Creator. Tell
her I am coming.”

“We know why you have come,” the man said, unmoved in the slightest. “You will not find what
you seek here. That was a warning, Battlemaster, one it is advised you heed. Paradise operates
under the approval of the Imperator, and we are authorized to defend our institution from threats.
Do you intend harm towards the Creator, Battlemaster?”

“Only if she gives me no choice.”

The man was impassive, as he waited a few seconds for seemingly no reason. “You will be
allowed to speak to her. No more. Do not go where you do not belong, Ethereal; even you can die
here.”

The hologram vanished, leaving the Battlemaster both amused and curious. “The Creator’s minions
hold high opinion of themselves. Interesting that they claim the Imperator’s protection.”

Yang pursed her lips, as she placed her helmet over her head, a design the Battlemaster had taken
from Human medieval knights, although updated to work with her armor. “I don’t know. I have a
bad feeling about this.”

“As do I,” Sana agreed. “This is not normal. Fortunate that I did not listen to you about the lack of risk.”

For once, the Battlemaster was glad someone had ignored him. Sana was wearing her battlefield attire, something he had not seen her wear in decades. It wasn’t quite armor, but interlinked alloy weave which wrapped around her body, retaining some characteristics of robes, but with freedom of movement. She wore no hood, and there were several tools and drugs along her waist and pockets in case she needed them.

They flew the rest of the way in relative silence to the designated hangar. Interestingly enough the Blacksite physically opened up to them, blade-like pieces retracting into a triangle-shaped area, which was definitely not standard Collective design. He easily piloted it in, and set it down, while retracting the exit bulkheads and disabling the seals.

“Something is wrong here,” Sana said cautiously, looking around. “Something is interfering with my telepathy.”

The Battlemaster drew his weapon. “Blocking you?”

“No…exactly,” she explained. “But normally I am able to easily sense the minds of those around me. I cannot, or at least not beyond a short radius. I can feel you, Miss Shuren, and there are several waiting outside. But their minds are…protected. I would not be able to penetrate them without direct action.”

“Keep your guard up,” the Battlemaster instructed as he led the trio off the ship. “This may be more difficult than expected.”

Angled pillars dominated the architecture, ones which extended upwards to meet at a peak. It was not like any traditional Ethereal architecture, and reminded him somewhat of Human cathedrals. It seemed to be designed to evoke a constricted, oppressive feel, especially in such a tightly controlled space. The area was bare of any equipment or furnishings. There was only a cold grey and glossy tile for the floor which continued in all directions.

Awaiting them was a curious entourage. There were five figures, four of whom were each a different alien species, a Human, Vitakarian, Sectoid, and somehow, an unsuited Andromedon who all wore black robes and hoods. Like the figure the Battlemaster had seen before, they were in various states of decay. The Andromedon in particular looked almost white, and the skin of the others looked veined and cracked.

Unhealthy to say the least.

In contrast to them, the leading figure, a female Dath’Haram, looked unnaturally…striking. If there was a model for the race, this alien would embody it. Regal, toned, skin a pleasant shade of green and her face and eyes aesthetically pleasing even to aliens. She was without physical flaw, and even the Battlemaster couldn’t deny that she was pleasant to look at.

She wore a cloak instead of robes, but this was noticeably more intricate and ornate, allowing more freedom of movement. It had a hood, but it was down with her face exposed to the world. The trim of the robes was a sparkling gold, and strange symbols and glyphs – the same type he recalled from the Creator – were also embroidered in gold thread on the robes in specific places.

“Battlemaster,” she began with a short bow; even her voice and motions were smooth, attractive,
and without flaw. “We have been expecting you, as well as your disciple Yang Shuren and the honorable Sana’Ligna.”

At least this one was more conversational. “Then you know why we have come. Take us to the Creator.”

“As you wish,” she turned and gestured for them to follow. “Please follow me.”

They did, with the Battlemaster standing beside the leader, and the remainder of the aliens – Caretakers, the Hunter had called them, flanking them. “Who are you?” The Battlemaster asked as they walked into a similarly triangular hallway.

“I am merely the Umbra of Paradise,” she said, flashing her teeth in a Dath’Haram smile. “A mere watcher over this place. No one of significant importance, I assure you.”

The Battlemaster had a feeling that she was more important – and dangerous – than she wanted to say. But he said nothing as they kept walking until they reached a Gateway. It started automatically on their approach, and they stepped through it – from the schematics the Battlemaster knew it led to the so-called “Ascension Ring” of the first level.

“You have not been here before,” the Umbra said as they entered a larger hallway, this one a more traditional rectangle. “What brings you to Paradise?”

The Battlemaster looked down at her. “The Creator has interfered in Collective operations. I am here to determine how to handle her.”

“Ah,” the Umbra shook her head. “The Creator does not make mistakes of such nature. If she did interfere in a plan of the Collective, I am certain she was justified in doing so.”

“Unlike,” Yang snorted. “So what’s wrong with them?” She motioned to the Caretakers.

“Wrong?” The alien blinked almost in offense. “Nothing is wrong with them. To be chosen as a Caretaker of Paradise is one of the highest honors one can achieve. If of course requires sacrifice, but the gifts received are worth the mere physical pain of this world.”

The Battlemaster could imagine Yang’s unimpressed face. “They look dead.”

“One cannot bear power without a price,” the Umbra said solemnly. “These Caretakers now serve a higher purpose than their previous lives. They were all once mere mortals, unimportant, nonessential; ones who sleepwalked through life until they became ascended.”

A circular door with similarly blade-shaped segments retracted as they stepped through, into another circle which was filled with Humans. Not just any Humans, the Battlemaster saw that every single one was a Caucasian female. Blue shields separated the ring of captives into segments, with each ‘cell’ having exactly five occupants.

“What is this?” Sana demanded, as she saw what the center of the chamber held. There were a ring of odd-shaped stasis-like chambers, each one holding a Human female at various stages of some kind of mutation or disease, beside it was a table where two Caretaker Sectoids were operating on another.

“We are exceptionally organized, and of course do not squander what the Collective provides us,” the Umbra continued without pause. “These are captives from Earth. We are continuing to determine the full capabilities of their genome based on ethnicity, gender, and which adapt best to our technologies being developed today.”
The Battlemaster looked at the woman who was clearly in agony, though wasn’t able to scream because of some organic-looking creature placed over her mouth, though her eyes begged for relief. The Caretakers looked like they were trying to graft something to her flayed arm, and that they were having difficulty with it.

The Battlemaster looked around at the captives, all of them having dead expressions as they shrank away from them wherever they approached. “Am I supposed to be impressed?” The Battlemaster finally asked in a low voice. “Because this display is…lacking.”

A blade suddenly flashed by him and buried itself in the head of the woman, instantly killing her. All of the Caretakers immediately dropped to combat stances, blue energy encircling their hands and lightly glowing behind their eyes as they focused on her. A wave from the Umbra had them ease, but the Dath’Haram looked at Yang in clear disapproval. “Do you feel satisfied, Yang Shuren? Is your murder of a woman common among your people?”

“When the alternative is whatever the hell this torture is, than yes,” she said, the bloodied blade recalling to her hand as she glared through the helmet at the alien. “Is the pointless torture of civilians common among your people?”

“The woman you killed was nothing,” the Umbra said, taking a step forward. “A mere pawn of a store on Earth. A life devoid of any purpose. Here she had found one. She could have become something great, and if not, she would serve beyond death; a purpose that is eternal. In her short time here she made a larger impact on the galaxy than she ever would have on Earth. An impact which has just been culled by your selfishness.”

“And who is to decide the purpose and worth?” Sana demanded. “Did this woman choose to be here?”

“Change elicits fear,” the Umbra said, her voice low as she spoke the words. “Mortals fear the unknown. They fear the unknowable. Yet does that mean they should not be shown anyway? Should they be forgotten simply because they choose to remain blind?” She shook her head. “I was once like you, Sana’Ligna.” She stepped towards the Ethereal, who took a step back herself. “Blind and fearful of what I saw. Sickened and revolted, but eventually I learned, I watched. I began to see the purpose behind this, behind everything.”

She motioned around her. “Once I accepted the reality of the galaxy, of my place in it, for the first time I was able to know peace and assurance. Not as a mere hunter of the Dath’Haram, or a Bladedancer guarding old and irrelevant ruins, but as one who shapes the future. And I have seen the future, Sana’Ligna, and it is beautiful.”

The Battlemaster was disquieted by what she was saying. Not due to the words themselves, but by the fact that the Creator had a far more intricate hold over these aliens than he had realized. She somehow achieved a deity status with them, something he didn’t previously think she had the subtlety and mindset for.

“Enough.” The Battlemaster raised a fist, and motioned for her to move on. “Take us to the Creator. Order them to cease whatever they are doing. If I return and they are experimenting on another woman, I will kill them.”

The Umbra sighed, but waved dismissively at the Sectoid Caretakers, who left silently. “This way.”

The Battlemaster did not especially feel any charitable emotions for the Creator at this point. He supposed this had always been going on, but seeing it in person
was a different experience. On a certain level he could see that it was likely not too different from what Revelean did.

But Revelean was usually more...considerate. Experimented subjects were never conscious, or they were just killed. They didn’t suffer unnecessarily, and at least Revelean developed what he considered to be useful research. To his knowledge he had never heard of the Creator developing anything that wasn’t unnatural or of actual usefulness to anything else.

Even the Chosen were mere pawns of limited loyalty and power, and he did not want to know exactly how the Gatekeeper had been developed. What he could not completely understand was showing this off to him as if it were something to be impressed by. “Are there children here?” Sana asked.

“Of course,” the Umbra answered immediately. “Do not fear, they are specially chosen by us. Children have important roles, their purpose and potential is much grander than an adult.”

“You will take me there after we speak to the Creator,” Sana stated. “You will need to learn to live without them.”

“Heartless, Sana’Ligna,” the Umbra sounded sad. “You would tear children away from their home? From the love they receive here? Who are you to decide that this is not their home? I believed you to be better than that.”

“I am certain that whatever happens here,” Sana said slowly, her voice quiet in a way the Battlemaster knew was close to her becoming violent. Something that was exceptionally rare. “It is the farthest thing from love.”

“There is love in everything we do here,” the Dath’Haram merely continued her faux sorrow. “Yet I understand you cannot accept it. But it is what gives us strength and guides us through the trials. Even you can receive it if you open your mind to something greater than yourself.”

“Enough of this,” the Battlemaster cut her off. “Umbra, I should tell you now that the Creator will be leaving with me. Paradise will be turned over to Sana, and you will follow her orders as if she is the Creator.”

The Umbra did not respond, but merely led them forward. They entered another “Ascension room” which had nothing but Vitakarians in it, of both genders. This room had no additional Caretakers, but it was almost more horrific. All of them were horribly starved, little more than skin and bones as they looked at those on the other side of the energy fields with envy. The Battlemaster let his fist clench when he saw several of the cells had bones and clearly half-eaten corpses in them.

“Stop.”

All of them did at Sana’s voice, who unsurprisingly looked and felt both mortified and furious. The Umbra looked behind her with a faint display of disapproval. “Do you wish to continue-“

“Silence.”

The Ethereal placed two fingers of one hand on the side of her head, closing her eyes as the psionic energy faintly swirled around her. One of the Caretakers raised a blue-tinged arm right before he felt a cool blade rest against his neck.

“Touch her, and you die,” the Battlemaster said coldly. The Caretaker relented and returned to being his impassive self. After a short time the prisoners began falling over, not dead from what the Battlemaster could tell, but sleeping. Not a cure, but he knew it was better than letting them
suffer further.

“We can continue,” the Umbra said with clear dismissal as she continued walking. They continued in silence as they entered more rooms, each one some kind of twisted and repulsive experiment. Everything from each cell being exposed to a certain frequency which had caused some to cruelly force themselves deaf, or a room where each member had a hand and a foot removed.

None of them asked what the purpose could be. None of them could see any possible reason other than sadism, but at each one Sana insisted on stopping; insisted on doing something to help, even if it was minor. The Umbra allowed it, though was clearly annoyed with all the delays.

Paradise. A sick joke if he had ever heard one.

“The Creator is just beyond this room-ah!” She didn’t have time to finish as the Battlemaster telekinetically slammed her to the side as he crumpled the door leading to the Creator’s chambers. The Umbra looked mildly annoyed, and once more waved off the Caretakers from again channeling their strange abilities.

The room was almost bare, square, with an elevated square in the center where the Creator stood over a surgical table which was thankfully devoid of anything else. The chambers themselves were dimly lit, and on the walls hung tapestries of abstract symbols and art which he had no idea how to decipher. The Creator was in the same robes he had seen earlier, almost an odd mockery of Sana when she was in her own non-battlefield attire.

In the far corners he saw two figures standing silently. One was what he could only describe as a massive Sectoid, one as tall as he was. It was as if a Vanguard had been doubled in size, and given the muscle mass to match. Its head was also noticeably bigger, even proportionate to its size. The armor it wore was alien, yet regal in terms of pure craftsmanship with beautifully carved patterns and designs which seemed almost organic as it weaved through the robes it also wore as a covering.

The second one was a Muton that looked surprisingly small, or at least seemed that way as it was only the same height as the Sectoid, where it was usually the opposite. This one actually looked similar to a Berserker, at least in the color scheme. Silver armor as exquisitely crafted as the Sectoid’s covered its form, all of the engravings in red, along with a cloak over it. It wore a helmet which resembled a Muton’s face, but one with what could only be described as a solemn expression. A hammer proportionate to its size rested in one hand, the head on the ground, while the other hand was inside some kind of armored gauntlet.

“Blessed Creator, Artist of his work,” the Umbra bowed deeply as they approached. “The Battlemaster and his entourage have arrived.”

“I see them,” the Creator appraised them in disapproval. “Why have you come here, Battlemaster? I have important work to be doing.”

“I see them,” the Creator appraised them in disapproval. “Why have you come here, Battlemaster? I have important work to be doing.”

“Now is not the time to play ignorance,” the Battlemaster growled, his voice deadly calm. “Just answer my question: Did you order the attack on Earth?”

She cocked her head. “Ah, that. The Hunter betrayed my secrets I see. No matter. I ordered it, yes. I have grown tired of this constant delay in conquering Earth. Your methods are inefficient, I consulted Isomnum, and from there determined a way to break the morale of the Humans and acquire some resources that are useful to me.”

The Creator glanced down on them in near-contempt. “And I see you couldn’t help but get
involved, Sana. Naïve and useless as always. I do not apologize for my actions. In the future, you will be informed of my operations.”

“That is all you can say?” Sana exclaimed in disbelief. “After what we walked through and saw this is all you can say?”

“This is not your domain,” the Creator said in frustration. “I do not give you instructions on how to run your Blacksites. You would do well to extend the same courtesy. All who come here see Paradise, in this life or the next. All who arrive in these walls turn their directionless lives into meaningful ones. Myself included.”

“You tread on dangerous ground,” the Battlemaster continued keeping his voice low as he unconsciously let his power make the air quiver. “You know better. I believe you have forgotten your place in the Collective. You have been deranged and allowed freedom for far too long. You will be coming with me.”

“No,” she answered, crossing her upper arms. “You lack the authority-“

She let out a yell as she was yanked forward until she impaled herself on his extended blade. He telekinetically dragged her forward until her body was at the hilt, and he roughly grabbed her face with a free hand. “I want this to be perfectly clear,” he hissed in fury. “The only reason you are alive is because you are one of us. I will drag you before the Imperator and he will execute-“

He was cut off as the Creator unexpectedly gripped his weapon with a blood-stained hand. “You,” she hissed with surprising strength and fury. “Just made a fatal mistake. Your fate is sealed.”

“Battlemaster!” Yang shouted, and he pushed the Creator away just in time to avoid the spiked hammer of the Muton which would have slammed right onto his head.

“Kill them!” The Battlemaster roared as he recalled the blade to his hand, eliciting a shout from the Creator as the blade slick with blue blood swept in an arc which decapitated the nearest Caretaker – who flashed with a brief blue light from the wound - as the others began channeling their powers for real. Yang had already killed another one, and was currently facing attacks from the other two.

The Umbra simply sighed in distaste. “An unfortunate outcome. Kill them if you can, delay if you can’t.” She briefly shimmered blue and vanished. The Battlemaster looked to where the Creator was, and saw her being kept up by the massive Sectoid, who created a blue portal and pushed her into it as he turned to face the Battlemaster.

“Take care of him,” the voice that emerged from the Sectoid – a real one – sounded oddly rich and deep. “The healer will be dealt with.”

“As we have prepared for,” the Muton spoke – a female of all things. Their voices were distinctly a shade lighter, even though he had only heard one talk a handful of times. “It is an honor, Battlemaster.” Her arms began flowing with scathing purple energy which didn’t seem to scorch or scar the pristine armor; with the purple flame sheathing her weapon and gauntlet in the acidic energy. With a flourish she charged forward, swinging the hammer with the ease of a feather which he caught by the flat of his sword which held against the purple energy, first intending to test her strength.

She pushed down, but he held, just as he pushed back with a telekinetic blast. He quickly dashed forward and delivered a strike to her head, then did another dash towards the Sectoid, one sheathed in blue power as he assaulted Sana with energy of the same color. The opposing Ethereal was sheathed in her own purple aura, an ability he had not seen in decades.
He smiled under his helmet at the sight. The air itself became tinged with purple as she expanded her aura. Yang behind him was fighting skillfully, having killed another Caretaker telekinetically although she was still dealing with one.

The Muton suddenly thrust an arm forward and sent him flying backwards, which he quickly corrected via a mid-air psionic charge right back into her, the force knocking her backwards, thanks to a psionically enhanced punch. Invigorated, he rose and began striking the Muton, harder and faster than he had in decades, switching hands and adding psionic punches to the strikes.

He had forgotten what it was like to fight under the influence of Sana.

The better part was that the longer it persisted, the stronger he became.

And the weaker his opponents became.

Yang executed the last Caretaker with a beheading, and telekinetically threw her swords towards the Sectoid who didn’t even bother lifting a hand as he redirected them back at her. The Muton was fighting back, now adding her own psionic attacks and punches. She finally let out a roar and extended a hand, catching him in a vice and corrosive energy began lapping at his armor.

Unfortunately, he was still better at it. She had simply provided a means of concentrating more…directly. He focused the telekinetic power on her most vulnerable points, the joints, eyes, and organs. He heard a squish and multiple cracks as the Muton stumbled, though didn’t fall. The Sectoid was still trying to assault Sana, but was having little luck, as his psionic attacks did little but irritate her skin which knit back together near-instantly.

The Battlemaster briefly appraised both the Muton female, whose own corrosive aura hadn’t dimmed in the slightest, and the resilient Sectoid. How exactly the psionic power the Muton displayed was even possible was a question for another day. Right now he needed to focus on the situation, and took a closer look at the Muton’s companion.

The giant Sectoid couldn’t beat Sana telekinetically, and every second he continued fighting his body became weaker. But with a glance and a sudden teleport, now he was suddenly in front of the Battlemaster, and with a gesture threw him backwards causing him to slam into one of the tapestries. The Battlemaster charged forward again, and began striking from as many angles as possible.

Ironically, the Sectoid was almost a better duelist. Every strike was immediately blocked by a blue shield which existed just long enough to stop his strike. A hand faced palm-down, and the Battlemaster was anchored to the ground. The Muton charged forward with the gauntleted hand pulled back and wreathed in psionic flame, but was suddenly slowed as Yang appeared to the side, one hand extended towards the alien.

The Sectoid teleported in front of her in the blink of an eye and with a gesture bathed her in corrosive energy which easily penetrated through her armor and ravaged her body, leaving it writhing on the floor. The Battlemaster, free once more, charged the Muton, pinning it in place with his telekinesis and stabbed directly into its eye.

But his sword never hit the target, as the blade itself had been caught by the gauntleted hand of the Muton. Golden ichor bled from the hand, but the Muton swung the hammer at his head, which he in turn caught by the handle with one of his hands. Both aliens grappled with each other, with the psionic energy beginning to scratch the Battlemaster’s own gauntlet, while the blade cut ever deeper into the palm of the Muton.
With his lower arms he telekinetically drew upon his own power and directed it towards the head of the Muton once more. It roared and pushed towards him with significant strength, but he held fast, and the helmet began crumpling in on itself, already leaking more blood from the crevices.

The Muton finally drew back, yanking the weapon back to his hand, and he dashed to the side of it, grabbed the gauntleted arm telekinetically and stabbed towards it. The armor itself held, and he only managed to nick one of the gaps.

But the Muton was blinded now, even more than she had been before, and with Sana assisting, it was only a matter of time until the battle was decided. It appeared the Sectoid had recognized the same thing, as it teleported behind the Muton, and lifted it telekinetically as a portal was created behind it which it backed into, a psionic shield protecting against any possible retaliation.

The room was silent.

He looked around the room in near-disbelief at what had happened. This should not be close to possible, but it had turned out that a freak Sectoid and Muton had somehow been able to pose something of a challenge for all of them. And both of them were likely still alive, which meant they would be coming back, something which would not bode well since they would bring help.

A brief glance to the Caretaker corpses revealed that that bright flash he’d seen when he’d killed one had seemed to have some effect on the corpses. Whereas in life they had looked aged and sickly, in death they appeared shriveled and little more than sludge for some of them. This could not be natural. Psionic energy housing? He had heard of the theories of the feasibility in the Empire, but those had never materialized.

The Creator was not a powerful psion. How could she have discovered something like this, let alone seemed to perfect it?

Sana was by Yang, who was waking up. Sana had removed her helmet and had placed a palm on her forehead as she mended the wounds inflicted by the Sectoid. “What the hell?” she coughed at she saw the scars on her arms healing. “How are you—”

“It is called Biopathy,” she answered softly. “A rare skill even many Ethereals cannot learn, let alone master. I promise I will give more details later.”

“Right,” she coughed once. “Speaking of which, what the fuck was that?!”

“Unknown,” the Battlemaster said flatly. “I’ve never seen anything like it. This is far beyond experimentation. Not even the Creator could discover this on her own, not in this short a time.”

“Well, she did it,” Yang said as she rose to her feet. “Did no one bother to check what she was actually doing?”

“We can discuss this later,” Sana said, looking around. “I believe the Creator will have more of these modified creatures attack. This place…it is disruptive, but tinged with power. The barrier between the Psionosphere and reality is thin. I would not have been able to assist so quickly anywhere else.”

“I doubt our ship has survived,” the Battlemaster said grimly. “And for the current situation, we are trapped here. Our options are limited, and if she has more of those things, even we will not be able to last forever. We have one option.”

“Go deeper?” Yang winced. “Think they’ll even let us?”
“This place is connected by two-way gateways,” he answered. “They cannot be tampered with, not even the Creator could decipher Sovereign technology. There are no security measures, if we find gateways, we can cross them.”

“So the plan is to kill the Creator before she kills us?” Yang asked. “Not the worst plan.”

“But a dangerous one,” Sana looked down, as if considering something. “I suspect those were not the most dangerous creatures she had. There will be more. We need help.”

“That would be great,” Yang said sarcastically. “But where exactly are we going to get it? The captives?”

“No, they would be led to their immediate deaths,” Sana looked to the Battlemaster. “We must release Mortis.”

“Who?” Yang asked.

“When you say ‘dead’…”

“I mean he was rendered medically comatose,” Sana said slowly. “Unless…I directed him. At the end he was little more than a walking bioweapon. We share a psionic bond…” she trailed off. “This is not important, not now. We need his help if we want to survive.”

“Are you sure you can direct him?” The Battlemaster asked as he turned to go back into the hallway, remembering the schematics. “It’s been-“

“I can,” Sana said sadly as she began following. “There are some skills I can’t forget, even if I wanted to.”

***

Level 1, Paradise – Orbit of the Dead World

Unknown Time

“Look out!” Yang shouted and the Battlemaster spun around to see, or rather, not see something leaping at him. The writhing solid mass was telekinetically caught, right before he stabbed upward into it. The skin was hardened, but with the iron grip of telekinesis he made it penetrate the body, it stopped writhing, and he followed up by crushing the head in his hands.

Even in death the creature was difficult to see; somehow able to blend into the environment around it, a memetic ability, he had only heard rumors of the possibility. Revelean had been working on something like that, but it appeared the Creator was far ahead of him. It hadn’t been the first attack either. One had nearly disemboweled Yang who’d required healing from Sana, and they’d been hounded by the things for the past half hour as they’d walked.

Yang herself was in sub-optimal state. Even if her physical body was able to be continuously healed by Sana, her armor was severely degraded. It was corroded all over from the psionic attack by that Sectoid, broken in multiple places, and the continuing attacks were only adding scratches and damage to the already-beaten armor.

It wouldn’t be able to protect her for much longer. A problem. One he’d have to deal with at some point.
The walls had shifted, but the Battlemaster knew which way to go. They had also sustained ambushes along the way; Caretakers appearing out of portals in front of, or behind them, with the intent to score quick kills. However with Sana with them such attacks at best only slowed them down, and after the attempt by one to push him and then Yang into a portal, the Battlemaster was keeping his guard up constantly, as was Sana.

The ambushes had stopped, but the beasts that had likely been patrolling the halls this entire time were still being encountered. They were…interestingly creative as well. They managed to always attack from where he did not expect it. From the sides, from above, when his head was turned the other way, and just when he was distracted for a moment.

Almost as if there was something watching.

The Battlemaster didn’t really know how that could be possible, since there was nothing resembling a security system, and there were no obvious observers. Either way he was on edge, and the constant attacks were doing very little to lessen this. Given how many times Yang had already almost been killed, she was sticking very close to him.

She’d made a joke that she was on her third life. One he’d laughed at if only to reassure her. If he hadn’t brought Sana along, he was certain she would be dead. He wasn’t even sure he’d be in the position he was in now. And this was probably the optimal situation.

Trapped in a hostile space station, threatened by a sadistic traitor Ethereal and her creations. The Imperator, if he knew about what was really going on, was going to have a lot of explaining to do. But there was still something wrong with this place that he couldn’t sense, but Sana and Yang could. Likely to do with his immunity to telepathy.

A blessing at this point.

“Here we are,” the Battlemaster said, looking at an unmarked door which led to the stasis chamber on the schematics. He was slightly surprised that he hadn’t encountered more resistance, but perhaps the Creator didn’t want to risk more of her pets quite yet. Or maybe she couldn’t. He didn’t know what she was planning or thinking anymore.

“What happens if they moved them?” Yang suddenly asked.

Well. That would be a problem.

“Let’s not jump to the worst scenario,” the Battlemaster suggested, as he telekinetically forced the doors open, and they entered the room. Inside was something much more reminiscent of actual Ethereal design. Well-lit, two large lockers on one wall, and on the opposite one, two stasis chambers. He didn’t fail to notice there was a dull blue orb which was embedded into the wall above, and between the two stasis chambers.

“A Sovereign Orb,” Sana also noted. “Perhaps that is why they are avoiding this area or haven’t moved the stasis pods. The Imperator also gave orders they were not to be touched.”

“I would assume it is the former,” the Battlemaster said, looking to the rightmost pod. “Orders alone would not have prevented them.”

The figure of Mortis’Ligna was as he remembered. Eyes closed, arms crossed over his chest, oxygen mask and suit keeping him alive. For being medically close to brain-dead, his body looked as healthy as a normal Ethereal. The Battlemaster hadn’t entirely liked the idea of using an Ethereal he’d developed something of a friendship with as a weapon, but the Synthesized had demanded
such a sacrifice.

And now they needed him again.

“What is this?” Yang asked, pointing to the other stasis pod which was very clearly not of Ethereal origin. It was composed almost entirely of orange shards, offering a splintered look into the chamber within.

Well, so it had ended up here. Interesting. “That is a Zudjari,” the Battlemaster said as he looked at the sleeping alien. “’Axis’ he is supposedly called, one of their most powerful. I did not realize that he had ended up here.”

“Nor did I,” Sana said. “I had assumed the Imperator had stashed him somewhere remote, like he did with Origin.”

“This is remote,” the Battlemaster pointed out. “At least very few would stumble upon him here.”

“There was a completely different species and I never was told this?” Yang sounded mildly annoyed. “This seems like it should be a lot more important than you both are saying.”

“The Zudjari are an ancient species,” the Battlemaster gave the short version. “We discovered them some time ago. We awakened some and they immediately betrayed us. We decided it was best not to investigate them further until later. There are not many of them, and this one was deemed a possible threat.”

“But that is an assumption,” Sana said slowly. “And we could use all the help here we can.”

“You want to release him?” The Battlemaster demanded. “He might attack us!”

“All of us can handle one Zudjari,” Sana said. “More importantly, I doubt he would attack when we’re all that stands between life and death.”

“Do it,” the Battlemaster sighed. “We don’t have much time here anyway.”

Sana quickly went over to the stasis chamber of Mortis’Ligna and began the awakening procedures. “Shield your mind,” the Battlemaster warned Yang as the pod hissed and began opening. “If you do not, you will die immediately.”

She swallowed. “Understood.”

The pod opened and Mortis’Ligna opened his eyes.

Then began to look around, and saw first Sana then him and Yang. “Sana…” he said in a voice that sounded like it had not been used in a long time. “What is…happening…” he stumbled out and was quickly caught by his sister.

To say he was shocked would be an understatement. Somehow, it seemed the Dead Ethereal was alive again. “You’re awake!” Sana exclaimed in similar surprise and amazement.

“Of course…” he said, strength returning to his voice, as his eyes narrowed. “What is that?”

“She is a Human,” the Battlemaster said, nodding down to Yang. “An alien species we are… utilizing to an extent.”

“The situation must be bad if the Empire is relying on aliens,” Mortis commented, and the Battlemaster realized that he had no idea what had happened.
“How much do you remember?” Sana asked slowly. “Your recent memories.”

“Oddly fuzzy,” he said, as if realizing that. “I remember fighting, I was...injured...yes, you healed me. I remember you were there,” he pointed to the Battlemaster. “I assume I was placed in stasis until I recovered.”

So he didn’t remember anything. The question was now how to break it to him. “You’ve been gone a long time,” the Battlemaster finally said, deciding to be blunt. “Sana will tell you later. We lost, the Empire is gone. The Imperator gathered a small number of us and placed us in stasis to survive it. Ever since we’ve been working to rebuild and prepare for their return,” he motioned to Yang. “Hence why we are working with aliens.”

“The Imperator?” He looked at Sana. “Which one? How could we lose...” he trailed off.

“I’ll tell you later,” Sana said. “But right now we’re in a precarious situation. We’re trapped on a station where a rogue Ethereal is trying to kill us.”

“What?”

“And we need to get to her before things get worse,” the Battlemaster continued. “Sorry for waking you up, but...well, it’s a long story. But we’re in need of your skills.”

Mortis looked down at his hands. “I see. Well, not exactly, but I trust both of you. Explain to me on the way, and I’ll kill anything that dares try and attack us.” His tone turned dark. “Especially if we have lost everything.”

“Not to interject in what I’m sure is an important conversation,” Yang interrupted. “But I can’t understand anything.”

“Apologies, Miss Shuren,” Sana said, as she placed two fingers to Mortis’s head. “It would be beneficial if you could understand the Human.”

“I suppose,” Mortis took a step towards her. “Interesting specimen. Psionic? Impressive. I can see why our species is interested in them. Can she fight well?”

“I can speak,” she answered. “And well enough.”

“Five fingers like us? Fascinating coincidence,” he continued. “Is there a whole planet full of them?”

“Unfortunately,” the Battlemaster sighed. “The situation is...complicated.”

“And will be discussed later,” Sana said as she moved to the Zudjari stasis pod. “We have another alien to talk to.”

“What is this?” Mortis asked, confused as he found his proper clothing and began donning it. “How many aliens are working with you?”

“Technically we’re not ‘working’ with this species,” the Battlemaster corrected as the crystalline structure of the pod began to retract as was expected of Zudjari technology. “The last time we woke one up, it tried to betray us.”

“I assume it didn’t go well for them?”

“No.”
The Zudjari adjusted almost immediately, and once he stood, froze, eyes rapidly blinking as it appraised the situation. It wasn’t attacking, which was…good. Yang gave a brief wave, and Sana raised a hand and touched her head, then pointed at him. The Zudjari nodded once, and she did the same transfer of language she had done with Mortis.

The Zudjari shook his head, before focusing on them. “This tongue…is strange. Mouth not suited.”

“You will adjust,” the Battlemaster said. “Others of your species have.”

“Others,” he looked around. “What are you? Where am I?”

“Right now you are trapped,” the Battlemaster motioned around with a bloody sword. “As are all of us. We needed help, and from how Mu’ut Jeen described you, you are a powerful psion.”

The Zudjari visibly perked up at that. “Assimilator Jeen lives? Excellent.”

“No, he doesn’t,” the Battlemaster interrupted. “He made the mistake of attacking us, and is now dead. He is the reason you are here and not at the Forge.” The vertical mouth of the alien opened and closed several times. “You are Axis, correct? You were one of the few who were named.”

“Axis…” the alien paused. “That will suffice, for now. I will demand the full story, but I see and sense that this situation is precarious. But I must know…does Origin yet live?”

“Yes, but he is away and has not been awakened,” the Battlemaster said. “We did not want a repeat incident.”

Axis closed his eyes in clear relief. “Then I am content for now. Allow me to prepare, and I will assist in this conflict I find myself in.”

“I assume you’re going to be useful?” Yang asked.

If Axis had questions about another alien, he didn’t share them. “I am an Axis of the Zudjari Mosaic. Only the Origin can surpass my power, alien.”

“Then prepare,” the Battlemaster said. “This will not be an easy fight.”

“What is the plan?” Mortis asked, as he finished putting on his own gear.

“We fight to the center of this place,” the Battlemaster said, turning to the exit. “And then we kill the Creator.”

Supplementary Material

Chronicles of Salvation:

- Nulla - When Eyes Open
- Inma - Gates of the Garden

Chapter End Notes
So, some of you may have questions about what is actually going on in this place and how everything happened or got to this point without much warning before this chapter. The next chapter will definitely answer some of these questions, but there is a significant amount of extra backstory/lore here that isn't going to be discussed anytime. Most of anything to do with Paradise, the Creator, or Bringer was not originally conceptualized by me, but by Edumesh, one of my editors who put an absurd amount of work into it.

Because I wouldn't want his work to go to waste, I asked if he'd be interested in doing a supplementary companion piece detailing everything else regarding the Bringer and Paradise, and he said yes. So there will be a new additional piece of supplementary material coming fairly soon. I forgot there was a waiting period for making accounts, so he's in the process of getting one now. Hopefully he'll have it in a few days. I'll link it here and in the next chapter when it is posted. It's definitely something different than most of what I've written so far.

If you don't want to wait until it's posted on AO3, the Chronicles of Salvation is posted to FF.net, but will eventually be posted here as well:
https://www.fanfiction.net/s/13013855/1/
Watching Mortis put on his war attire was almost nostalgic in a way. The arrival of the Twin had been an event, whether there was a war or not. His armor was sleek and form-fitting, covering even his joints, the black metal polished until it shone brightly. The edges of the armor were trimmed in gold, with the symbol of the Ethereal Empire emblazoned on the chest.

The helmet was similarly designed; form-fitting, black, and without eye sockets or lights of any kind. The equally black robes he wore were more akin to those of Quisilia and Macula; integrated into the armor and hanging down his sides, nearly touching the floor, but didn’t impede his movement. He pulled the hood over his helmet, and gave his sister a nod, before repeating the gesture with the Battlemaster.

Axis was similarly preparing, and it was somewhat fascinating for the Battlemaster to watch, as the armor was far different than anything in the Collective. Each piece interlocked and connected to each other to create one single suit of armor. There was a fine black mesh that gave the illusion of flexibility, but there was hard metal underneath.

The locks around the knees, wrists, and elbows clicked as each piece was added, with the small lights turning from red to orange to signify a successful lock. The armor around the neck was much thicker, and the back seemed significantly more armored than the front. The helmet itself was globe-shaped, with the face and upper head visible through a transparent element. The helmet reminded the Battlemaster of the Human space suit helmets, although this one was likely far more fortified.

The Zudjari pressed a few buttons on his wrist, and the transparent element darkened to black, then reverted back again. The alien rolled his shoulders, and held out a hand and orange crystal sprouted from his fingers to create a short shield, while another crystal blade appeared on the opposite wrist. At a nod of confirmation, both retracted into his suit. So their armor could generate that crystal. Good to know, and combined with his psionic abilities, that made him a more dangerous opponent.

At least for now he was on their side, although the Battlemaster would have preferred to know exactly what he was dealing with. He knew how the Sectoids used and understood psionics. They were able to easily observe and determine the same of the Humans. He could not say the same about the Zudjari, and if Mu’ut Jeen had been a representative of their power, it meant that, psionically, Axis was on the skill of a Hive Commander.

The Battlemaster brandished his sword, lifting it vertical to the ground, flat facing Axis. “I was…am…a Battlemaster. The final ritual to become one was to go to the Dead World and forge my weapon. I was successful, but the price was that my telepathic abilities were reduced to nothing. But in return, I can no longer be affected by attacks on the mind. As for my weapon…” He let it lower to the ground. “I was trained as such. We had no need of the rifles of other aliens. Fighting your enemy close is more respectable and honorable. It shows the skill and bravery of the
individual in question. More importantly, most are unprepared for such an attack.”

“Curious,” Axis turned around his own wrist, displaying the device the crystal had emerged from. “Yet I can understand the…satisfaction…of killing an enemy up close. Though few were a challenge for me. Weapons are…” he shooed his hand. “Archaic. Wasteful. For myself, at least.”

“You say that, but I’m sure you’ll change your mind when a bunch of ‘archaic’ and ‘wasteful’ missiles rain down upon you on Earth,” Yang interjected from the side sarcastically. “Did either of your species actually fight anyone competent?”

“One,” they both said at the same time, looked at each other, and then back at Yang.

The woman snorted.

A loud clang attracted all of their attention, and the Battlemaster immediately spun towards the source of the noise. The Sovereign Orb that had been above the two stasis chambers had suddenly fallen onto the ground, and the dull blue light that had surrounded it was gone, and revealed it to be a solid black orb.

“I don’t suppose that is supposed to happen?” Mortis asked, taking a step forward. “Also, what is that?”

“That…was…a Sovereign Orb,” Sana said cautiously, eyeing it suspiciously. “Or at least I thought so.”

“What is a Sovereign Orb?”

Mortis was going to be in for something of a shock later. “We’ll explain later,” the Battlemaster said, as the orb suddenly hissed and cracked open, half of it raising several inches higher. A black mist-like substance began spilling outward. The Battlemaster hissed. “Nanites!”

Everyone backed up from rapidly expanding mass, although the mass didn’t expand beyond a foot from the orb, which rose into the air and further segmented into fourths, and then eights, all tenuously connected as it hovered at roughly Yang’s height. The nanites swirled around the orb, likely kept in place by some magnetic field or perhaps the nanites were designed in such a way that aviation was easy.

“Is this an ally?” Axis asked hesitantly. “Or should I contain it.”

The Battlemaster hesitated. “I am—"

“Stasis pods unlocked – Zudjari Axis and Mortis’Ligna.” The voice that emerged from the machine was emotionless and mechanical. “Unauthorized breach suspected. Analyzing units in the vicinity.”

Several clumps of the nanites sped towards them, far faster than any of them could move away. None of them felt anything, but the Battlemaster felt dread as the nanites slipped into the nearly invisible gaps between his armor, and the rest of them looked to be in various states of concern. The Battlemaster didn’t think the Imperator would put some kind of contingency that would kill them.

But then again, he hadn’t expected the Creator to try and kill him either.

“Analysis complete – All units marked as allies and cleared of Bringer corruption. Ethereals identified as the Battlemaster, Sana’Ligna, Mortis’Ligna. Zudjari identified as Axis of the Zudjari
The mass swirled around the orb. "Structural damage identified on allied unit Yang Shuren. Weapons insufficient to defeat Bringer-corrupted units. Providing support." A large amount of nanites sped towards Yang, and began fixing her severely damaged armor. Another (smaller) mass jumped towards the Battlemaster.

Or more specifically, his weapon.

The blade was suddenly coated in a black layer of nanites, from hilt to tip. Axis’s gauntlets were also covered with the nanites, and when he created a small blade the nanites quickly formed to cover it. Well, this was certainly going to make his job easier if they would do what he thought they would. Yang’s armor was soon fixed, and those nanites returned to the orb.

"Ally support complete," it rumbled. "Beginning purge of all Bringer-corrupted influence. Level one purge commencing." The orb then began moving towards the exit, slowly but surely, the mass of nanites continuing to swirl around it, like a black plague of insects.

"Since when were we this good at nanotech?" Mortis asked in confusion. "The Empire was good at a lot of things, but our nanotech was nowhere near this level."

The Battlemaster considered his answer. "We didn’t."

"Answers can be discussed along the way," Axis interrupted, pointing out. "We should begin moving. That…thing…will be a sufficient distraction for this Creator. But I would prefer we kill this…individual sooner than later. I dislike this place. It is…wrong. I cannot telepathically make sense of what is deeper in this place."

"It is certainly…off," Mortis mused, flexing the fingers on his upper hands. "But interesting. The veil between the Psionosphere and reality is certainly weaker here, something I didn’t think was possible. But I agree, we should move now. A warning – do not under any circumstances drop your telepathic guard."

Yang frowned as she put her repaired helmet on again. "Yes, I was told this, but why?"

Mortis gave her a long look, made more foreboding by his eyeless helmet. "Because you will die. That unfortunately cannot be helped. But I can assure you that if our enemies are mortal…they will die."

"Then forward," the Battlemaster recalled the map. "I know the way to the second level."

After that though…they would be in uncharted territory.

Normally the prospect of a challenge would be exciting. Such was rare these days. But the Battlemaster felt that they had stepping into something that was truly dangerous. Something that they should not have stumbled across.

But it was too late to turn back now. They had no choice but to go deeper.

***

Level 1, Paradise – Orbit of the Dead World

Unknown Time
The Battlemaster knelt down to the group and cupped the orb-thing in his hand. Much like the strange beasts which had attacked them earlier, this also had some strange camouflage skin, from most angles being nearly invisible, and in others having some kind of black covering. A light squeeze of his hand made the black skin crumble, leaving him uneasy with what he held.

It appeared to be a brain.

A Human one, to be specific, although it could have perhaps been a Vitakara. It was too small to be a Sectoid or Muton, and not even the Creator would not use any Ethereal genetics. Nonetheless this was…unnerving, for lack of a better word. It was not quite the same shape as a standard brain, however, it was more rounded and no indication to the split human brains had down the middle.

Complex machinery was weaved through it, although not much. A small anti-gravity device was on the bottom of it, and a small ‘eye’ was also attached. Was this some kind of security system?

He let the thing drop to the ground as he turned back to the group. The group which had the corpses of more of those creatures around it. Along with more orbs that had fallen in their trail. Mortis looked down at the brain. “The Imperator is certainly more lax than the Empire when it comes to…experimentation,” he said tactfully. “While I am currently questioning his mental faculties, I can admire allowing this degree of freedom.”

“I highly doubt he sanctioned this,” the Battlemaster said slowly, though he wasn’t sure if he believed it. The Imperator was no fool. He would not have let this place stand if he in any way opposed what was going on.

“In any case,” Mortis turned back to the corridor. “They will not pose problems for us.”

In that he was right. They had heard the leaps of those creatures, but as expected the moment they had entered into the presence of Mortis, they simply keeled over and died.

The Battlemaster had never asked how Mortis had developed that particular skill, but he supposed it didn’t matter. Perhaps as a means of self-defense, perhaps as a side effect of his Biopathy. All that mattered was that the only thing beings thought when they stood before the Dead Ethereal was that they should cease to exist.

And the brain shut down.

The body followed.

All it took was seconds.

The group had split into two, all of them keeping their guards up as they walked the corridors – which had shifted since his arrival, though the Battlemaster remembered the patterns. Yang and Axis took the front, while Sana, Mortis, and the Battlemaster were in the back. It didn’t take long before Sana began informing Mortis quietly of what had transpired.

They walked for…it felt longer than it probably was. Nothing more ambushed them. Yet. With obvious guilt Sana was finishing explaining his situation, with the Battlemaster largely remaining quiet as he watched and tensed for any surprise attacks.

“Interesting…” was the first thing Mortis said, his voice contemplative as he likely looked aimlessly forward, probably wishing he was somewhere else to ponder this. “I wonder if a similar result could be achieved without the necessary psionic bond.”

“I don’t believe so,” Sana said softly. “The Empire tried to replicate what happened. It was a
“I see,” Mortis glanced down at one of his hands, perhaps thinking of how many more he had killed while being an unknowing puppet. “I do not resent you for this, sister. I would have allowed more as our species was on the line. I do not remember anything of this…and perhaps it is for the best.”

“But I do,” she said. “And I regret it. In the end it didn’t matter.”

“Blame the idiots running the show for that,” Mortis’s tone turned bitter. “I’m not surprised that the first thing the Imperators did when they awakened was get rid of whoever had slowly bled the Empire dry. I know we could have won this, if only they had listened to us and made the necessary.”

“It would have led to the same result,” the Battlemaster finally spoke, making them turn to him. “The Synthesized had held back the entire time. Yes, the Imperators killed one of the Primes. But it was the only one.”

“Imperators,” Mortis sniffed, shaking his black-helmeted head. “Last ditch efforts by the Empire. A step forward, but I agree that they would have failed no matter their arrival, though not for the reasons you think.”

“Then why?” The Battlemaster was curious. Mortis had only seen the beginnings of the Imperators before his accident, but he was well aware that Mortis had disliked many of the military actions and strategies used by the Empire, though didn’t believe he was fully qualified to speak up against it. He was, after all, something of a hybrid. Respected, but with no authority. Powerful, but alone in his specialization, only his sister could understand. He was on a different level than other Ethereals; alone in a sense.

“But Imperators,” Mortis said, throwing a glance forward as they all paused, hearing a low rumble. Another wall moving most likely. Cautiously, they resumed walking. The Battlemaster could hear Yang and Axis speaking ahead, but focused on Mortis instead. “Imperators,” Mortis began again. “They are…how do I put this?”

He thought briefly. “Superior. They were the most powerful, the smartest, on another level even to the most powerful. Deities in a way…” he trailed off thoughtfully. “And naturally, they did not believe they could make mistakes. I spoke with three. Each one was unnaturally confident. Each one had a plan they knew would bring victory.”

Mortis straightened his cloak. “It was infectious, even for me. The Imperators did not strike me as…arrogant…their skills were justified. But they lacked fear. They can’t conceive of someone genuinely outwitting or beating them. It is always an excuse, always something to blame that didn’t go according to plan. They have no check on their ambitions. They believe they are infallible because that was how they were treated by everyone.”

The voice of the Dead Ethereal lowered an octave as they walked into one of the testing facilities and he saw captives, these ones all female Vitakarians who seemed to be succumbing to some kind of infection which was covering their bodies. All of them watched silently as every alien in the room died as Mortis walked through it; quite possibly a mercy in death.

Mortis clearly did not want to speak of it. “If what I am seeing right now is any indication, the Imperator that is still alive is no exception. A superior without equal. I imagine he has a master plan to defeat the Synthesized? Something that now he can pursue, unshackled by the constraints of the Empire?”
Hearing the sarcasm and bitterness from Mortis was jarring. Not because it was out of character, Mortis, and Sana to an extent, had both been proven right in the worst possible way. Their opinions on the Empire silenced and redirected until the need for change was apparent – but it was too late.

No, it was jarring because it was coming from an Ethereal. The Twins lacked the emotional…

coldness that most Ethereals possessed. The words coming from Mortis were what he would expect from a Human, perhaps a Vitakara. Sana never expressed this tendency like her brother had, but Mortis had been the closest thing to a deviant in the Empire.

Or a radical.

Not that it mattered once the War began. Everyone fell in line; but Mortis had never forgotten that his insistence that the Empire required change could have…if not led to victory, perhaps given them more of a chance. But he had never said so to the many enemies he’d made in Civil and Military Command. It wouldn’t have changed anything.

Mortis was waiting for an answer. The Battlemaster should have been more confident, but he had an uneasy feeling that Mortis was perhaps more accurate than he wanted to admit. “A tenuous plan, yes. One which involves aliens.”

“Obviously,” Mortis said dryly. “Little option now, though it’s good to know that barrier is broken. I suspect it has gone well?”

The Battlemaster and Sana exchanged a look. “Largely,” the Battlemaster said slowly. “Though at the moment…there is a species which is fighting back.”

“Really,” Mortis sounded torn between amazement and sarcasm. “I…don’t suppose you could elaborate on that? And…ah, how that is actually possible?”

“Well,” the Battlemaster motioned to Yang. “The species is psionic. There is also an Ethereal assisting them. An Aegis.”

“But Aegises were always the most loyal?” Mortis now just sounded confused as they kept walking. “Why would one do this? This would not happen without a good reason.”

“He disagreed with how the species was being handled,” the Battlemaster said tactfully.

“Because we invaded their planet without spoken reason or warning,” Sana oh-so helpfully added, taking the opportunity to voice her own opinions about the Earth situation. “Despite assimilating previous species peacefully.”

Mortis actually stopped and stared at the Battlemaster. “I would have thought better of you. That seems out of character for you.”

The Battlemaster grimaced under his helmet, keeping his voice level. “I have orders. I am not privy to every decision or reason of the Imperator. I trusted him and did not question if he had a plan or reason.”

None of them commented on the past tense of the word.

Mortis let out a sigh. “And this is the Imperator who is going to beat the Synthesized. Excellent. Quite clearly of sound strategic mind and rational decisions.” He shot a pointed look around the hallway, even as more of the beasts died. He was becoming more emotional, more unstable and his aura was fluctuating in range.
At least here it was useful.

“Mortis…” Sana extended a hand and touched his shoulder. “Be careful when speaking to the Imperator. He will not be so…”

Mortis simply stepped in front of his sister without a glance behind, his voice cold. “You are too kind, sister. Too meek. It is your nature, but take a stand for what you believe for once in your life. We made that mistake before, when the Empire quietly distracted us. You have not learned. But I am not going to do so again.”

He turned around, facing the Battlemaster. “I’ve woken up to learn that the Empire is dead, and the best hope for our species is in the hand of an Imperator which invades primitive species for no reason, allows far too much leniency with others he’s brought along, and doesn’t bother to apparently share everything with the few of us who are left.” He spun back around sharply. “Forgive me if I am not filled with immediate respect for our supposed leader. I do not hold you accountable, Battlemaster, but you are loyal to a fault.”

He motioned forward. “But now is not the time for this. That will come after we kill this thing which calls itself a Creator.”

“Battlemaster!” Yang suddenly called, as she pointed to the end of the corridor. Glad to have the diversion, the Battlemaster stepped forward as he saw what she was pointing at. “I think this is the Gateway.”

***

Level 1, Paradise – Orbit of the Dead World

Unknown Time

Yang didn’t know when she had moved ahead of the Ethereals, with Axis joining at her side. It felt disproportionate to be far smaller than literally every other alien in the area. Axis alone was close to three meters. She wished she knew a little more about the Zudjari in general, let alone the one who called himself Axis.

The Zudjari also seemed to not be comfortable around the Ethereals, and even if he didn’t know anything about her, he was at least taller. Likely it gave him some more confidence. The armored alien with the spacesuit-like helmet had been largely silent as they walked, perhaps thinking about how unlucky he was to wake up in this place.

And she could sympathize.

This place…it was wrong on more levels than one. There was a profound wrongness that permeated the entire area. She felt more powerful here…unnaturally so. Yet at the same time she felt chills up her spine as if she was constantly being watched. Multiple times she’d felt like she heard something, a whisper, just on the edge of her consciousness.

“Why are you with them?”

Yang glanced up at the deep voice of the Zudjari, who stared ahead resolutely as they walked. She knew what he was talking about, and didn’t give a rhetorical reply. “Their leader gave me a choice. I accepted it.”

“Yet you are not a slave?”
Yang snorted. “No.”

“Yet the same can’t be said for others of your kind.”

“Also no,” Yang said. “The Ethereals are not slavers.”

They stepped into one of the sickening experimentation rooms, which had reminded Yang about the stories of Unit 731, horrific experiments done by the Japanese on captives during the Second World War. A dark part of her had been fascinated by what had happened there, and what they had learned from such experiments.

She had never wanted to see what it would look like, done with modern technology. Humans were clearly not the only species to possess cruelty. She had thought the Ethereals were largely better. Sure, they experimented on captives and prisoners, but there was a definite purpose to it. Not cruelty, but a clean, sterile goal. ADVENT and XCOM were the same, and she’d be a hypocrite if she thought otherwise.

Then again, if the Imperator had kept the existence of this place from all of them, who knew how accurate her perception really was?

Axis was speaking as they walked through. “Do you really believe that? Have all these aliens been captured or convicted of crimes?”

Yang just shook her head, but remained silent. “And yet you fight with them willingly.” It was a statement.

“Yes,” she shrugged, idly balancing one of her swords enhanced by that Sovereign machine in a hand. “Trust me when I say that the…leaders of my own species aren’t better. This…isn’t representative of the Ethereals.”

Axis looked down on her for the first time. “You have no goal. No purpose.”

She smiled dryly under her helmet. “Oh, I do. But it’s personal. I don’t care about my species anymore. Not really. I don’t need to have a greater goal or purpose than revenge.”

Axis surprisingly nodded. “I have encountered aliens like you before. When their focus is complete, then they are nothing. They are empty. And we saved them, fixed and molded them into something with a goal that mattered.”

Yang just looked up into the black helmet of the alien. “And what if I don’t care about that?”

“You will.” Was the simple reply.

She didn’t respond to that. They walked in silence for a while, until Yang needed to speak to ignore the increasing pressure on her head, even as the Ethereals began talking heatedly in the background. “Your turn. What are you?”

“...an Axis of the Zudjari Mosaic. One who regularly communicated with Origin.”

“I have no idea what any of that is.”

The alien paused, considering. “This galaxy…Yang…” he stumbled over her name hesitantly, not specifically sure if she wanted to be called that. At a nod he continued. “This galaxy is vast, expansive, and unique. But it is not an accident. Those that inhabit it are not products of chance. It
is…” he paused. “A puzzle. A mosaic. The galaxy are these with the pieces scattered; the mosaic broken. That is what my species learned, and it is upon us to rebuild this broken Mosaic into what it was originally.”

He looked back down on her. “Every species, every planet, no matter how great or insignificant, is a part of this Mosaic. It was the mission of the Axis’, my mission, to determine what the purpose of these species and planets was.”

Yang raised an eyebrow under her helmet. It was, she had to admit, an interesting reason to give to conquer the galaxy. “And how did you know what the purpose was?”

“Origin.”

“Which means nothing to me.”

“Origin existed before this galaxy was broken,” he explained slowly. “The cataclysm which shattered it killed the original creators. Yet Origin survived, rebuilt, and determined that our species were the ones who would put it back together. And…we failed.”

Even through the deep voice, Yang heard the bitterness and self-loathing, as well as sensing it with her heightened telepathy. She didn’t think it would be ideal to ask questions, such as how they knew Origin was something real, or pointing out that the concept of a galactic ‘mosaic’ was somewhat questionable, given how species had likely risen, expanded, and died, without the Zudjari ever knowing about them.

Unless the ‘mosaic’ was not supposed to be something static. Perhaps she could ask him about it later, assuming they got out of here alive.

“I wouldn’t go that far,” she said with a shrug. “You’re still alive.”

“I suspect these Ethereals have more selfish reasons for the subjugation of the galaxy. My survival means little in light of this.”

He did have a point. “Stick to the Battlemaster,” she finally said. “He’s reasonable. I doubt he’ll agree with you on everything, but as far as best utilizing things…he knows what he is doing. He’s one of the good ones. Not,” she motioned one of her swords around. “Like this.”

“I feel I don’t have a choice,” Axis muttered. “They are more powerful than I am, regardless. The black armored one, he is unsettling. The other robed one is as well, even as she is a complete opposite. I am already in a trap, and unlike you, I have no desire to stay in it.”

“Maybe you can ask them to put you back in the pod,” Yang said as they rounded a corner. “But right now, I would assume life is preferable to death. I’m sure they can come to some kind of agreement with you. The Imperator did for me.”

“The one who allowed this place to exist?”

“Yeah,” Yang scowled. “Trust me, he’s going to be getting enough questions from the three Ethereals here now. I’m sure he has some explanation…he should hope it is a good one.”

“Would it matter?”

Yang thought about that, and then came to an unfortunate realization that the Zudjari had another good point. “Probably not,” she admitted. “Furious as the Battlemaster is…he is loyal to the Imperator. All of them are.”
Even if the Battlemaster lost his trust in the Imperator, he wouldn’t do anything else. He might hate it, but he would keep working towards his mission. All of them would. The Imperator couldn’t be challenged or beaten. At least not successfully, and all of them knew it. For better or worse, the Imperator was the unquestioned power in the galaxy.

She’d only see him use it responsibly, but even he, she supposed, could make mistakes or misuse it. But he had to know that abusing it as such would decrease loyalty.

This was a mess.

She needed answers. They all did.

Yang perked up as she looked to the end of the hallway. There it was, a working Gateway, though it was definitely designed differently. It was an inverted V which would be barely tall enough for the Battlemaster to fully fit through. But it could be done, and the swirling and rippling psionic energy filled the V, flashing between obscuring and transparent where Yang could see the faint image of something on the other side.

“Battlemaster!” She called. “I think this is the Gateway.”

They all were around it soon enough. “We should be careful,” Sana advised. “It could be a trap. Or one could be waiting on the other side.”

“This is not a Gateway design,” the Battlemaster noted, placing an armored hand on the black metal which made the structure. “She changed it…not even Fectorian has yet.”

“Who is she working with?” Axis asked. “She could not have done this on her own.”

“She was gifted the resources of the Collective,” the Battlemaster said slowly. “Personnel, information, equipment. But she was in charge. And she could not have learned how to construct or manipulate Sovereign technology. Not without us knowing.”

“Unless the Imperator hid it,” Mortis added bitterly. “This Imperator certainly keeps secrets. There is far more going on here than any of us think.”

“We still need to move forward,” the Battlemaster said. “I will go through, then come back if it is safe. I can survive ambushes if necessary.”

“No,” Yang stepped forward. “Can’t risk any of you. Not if we want as many people out alive as possible. Let me go through, I’m more expendable.”

“Technically, that would be our other alien friend,” Mortis said, gesturing to Axis. “But you are a brave alien.”

The Battlemaster looked down at her, thinking. “We will be trapped regardless of if I survive or not. It makes little difference who is more or less valuable. If you wish, come with me as I investigate. I will not deny you that.”

Well, it was certainly better than just waiting here anxiously. And she did feel some pride at the Battlemaster allowing her along. It at least showed she was worth something. “Then let’s go,” she said.

“If it is safe, one of us will return,” the Battlemaster said as both of them walked to the Gateway.

Taking a breath, Yang stepped into the psionic portal.
Level 2, Paradise – Orbit of the Dead World

Unknown Time

Welcome home.

Yang gasped as they stepped through the Gateway, a couple seconds which felt like an eternity as she felt the very reality around her change. The feeling of being watched magnified tenfold; she no longer wondered if something was watching her, she knew it was. The air itself seemed charged, and she felt significantly stronger and more aware.

The psionic connection she possessed had expanded, as if this was a nexus of psionic energy. And just beyond the veil between the Psionosphere and reality was a presence, something that had an all-seeing eye on her. It didn’t feel malicious, but it was terrifying just how close it was. How profoundly wrong it all felt.

“Yang.” She jolted as the Battlemaster placed a hand on her shoulder, taking her out of the trance. She shook her head and looked around where they were.

It was a circular room, one with the steeples angling to a simple center point. But the room was no longer just a sterile metal room. Harsh red and white lights lit the room, though not from electronics, but what appeared to be strange organic objects which lined the walls. And the walls themselves were an unsettling fusion of metal and flesh, and towards the exits – two of them – there were noticeably beating organic…things.

“I…” Yang swallowed. “Something is watching us. All of us. It’s not the Creator.”

The Battlemaster took a few tentative steps forward, weapon at the ready. “Will it attack?”

Of course, he couldn’t sense it. “I…don’t know,” she whispered, and the presence seemed to be…almost amused. “It’s…it’s in the Psionosphere, I think…can’t you feel how weak the barrier is here?”

“Yes, but not in the same way you do,” he said slowly. “This must be artificial. The degradation of the Psionosphere should be impossible.”

It is the future. One where all will feel the euphoria experienced now.

“[Fuck!]” She hissed, reverting to Chinese briefly as that clear sentence simply appeared in her mind. It was gentle; warm; inviting; certain.

The Battlemaster spun to her. “What is it?”

“It’s talking,” she said immediately, her weapons immediately in her hands. “To me.”

“It attacked?”

“No! It just…appeared in my mind. I didn’t even sense it happening.”

The Battlemaster looked around for a moment, then walked over to the wall, near a concentration of the flesh-like substance, and made a slight incision on it. Yang understood what he was doing, especially once a few of the nanites slid off it and began eating the flesh around it. It would take time, but it would soon start consuming the room.
Life will endure. Metal will not.

Shut up. She thought in return.

“We should bring the rest,” the Battlemaster said. “Return and I will stay here.”

Yang nodded, eager to get back even if it was temporary. A few seconds later she was back in front of the Twins and Axis. “Clear, for now. But…be careful. There is something else here.”

“How?” Axis demanded, even as they moved to the Gateway.

“Have you felt like someone has been watching you?” She asked over her shoulder. “Down there…it’s much worse.”

They all stepped through…

And into a fight.

The Battlemaster was in a duel with…something…it almost looked to her like a knight. It was a piece of armor that made the Battlemaster’s look like something crudely forged, a deep silver metal with deep blue shapes and symbols engraved over it. It was an organic, sleek, and beautiful design which concluded in an eyeless helmet that emulated the design of the Winged Hussars, with appendages extending off the sides of the helmet up.

The weapon it held was a simple katana, or at least appeared to be.

A katana encased in psionic flame, a ghostly purple which somehow didn’t seem to damage the metal.

The duel between it and the Battlemaster was moving at a speed which Yang could barely keep track of even now. So quick were the strikes of the mysterious opponent, and she was seeing just how fast the Battlemaster could retaliate…in addition to also fending off the six other Caretakers in the room, including a massive…animal of some kind.

The hairless, six-legged creature leapt at the Battlemaster, the mouth opened wide, exposing the unnatural rows of teeth within. The Battlemaster sent a telekinetic blast towards the armored enemy, who somehow stood resolutely, even if it was distracted as the Battlemaster stabbed upward towards the beast.

It struck true, right through the mouth to the brain, and the Battlemaster immediately slashed up through the skull to meet another blow from the figure. Yang’s weapons were already out and telepathically being directed towards the nearest Caretaker who sneered as she turned – a decaying Human – and raised an arm before she reached out and crushed the head of the Caretaker, which emitted a brief blue flash.

Sana was immediately encased in psionic energy, as the empowering aura began filling the room. The figure dueling the Battlemaster shouted, and two Caretakers immediately teleported towards Sana. They appeared behind her, and then stood frozen as she gestured at them, right as Axis stabbed an Outsider shard into the brain of one, and then grabbed the head of another, psionic energy now encasing the Zudjari.

The duelist the Battlemaster was facing was somehow withstanding an overhead slash downwards. Yang directed one of her swords towards him, and somehow holding the Battlemaster off with one hand, he looked directly at her and the air around her crackled as the Psionosphere was torn into a rift.
She dashed out of the way, even as the rift left deep scorches in her armor, and right into the waiting hand of a robed Caretaker, one pale hand resting on her chest armor. This one was a Sectoid. Another went to her head as she felt a beginnings of a psionic attack. “Do not resist,” the Sectoid said, as it didn’t begin attacking her mind…not directly.

The barrier she felt between the real word and the…thing which watched her…that was coming apart. A ghostly hand reaching out to her mind, a presence which longed to be a part of her. Yang felt the terror rise in her, and through the paralyzing spell the Caretaker had placed her under, punched it in the face.

The feeling dissipated, and that was all she needed to recall with one hand one of her blades, and with the other, catch the robed alien in a telekinetic grip. Blue energy flowed off it, but when the blade reached her hand, she stabbed upwards to its brain, impaling it and splattering blood over her helmet.

Blinking rapidly at what had nearly happened, she looked around. Two Caretakers had tried going after Mortis, and they lay dead on the floor. Apparently Mortis didn’t consider them worth expending any more energy than a simple telepathic command, and was walking to where the Battlemaster and the armored alien were engaged in one of the fastest-moving fights she could see.

Normally the Battlemaster would have ended it by now, but in addition to being a duelist of some kind, it also had some skill with defensive psionics, as the armor was now shielded with blue ‘plates’. Yang moved to assist how she could, and realized that she couldn’t. Looking down she saw that she was stepping on a section of the floor which was made out of the same flesh substance on the walls.

Except she was up to her ankles in it.

The armored figure suddenly flashed blue, and the Battlemaster was encased in a cage, and immediately retaliated by locking the figure in a telekinetic vise. A major mistake, Yang saw. The Battlemaster was just as dangerous a psion as he was a duelist.

A fact the figure seemed to have forgotten.

And then it suddenly keeled over, limp. Yang looked to Mortis, with an outstretched hand. The psionic barriers dissipated, and the Battlemaster immediately walked over to the body as silence fell over the room.

Only it was not silence. Yang could then hear beating. A heartbeat.

Mortis looked to her, and Yang looked down to see that the flesh which had encased her ankles was now a disgusting pale slurry, one she shook off her boots and stepped onto the metal. The Battlemaster and Mortis were talking ahead. “What was that?”

“I don’t know,” the Battlemaster said, kneeling down and attempting to take the helmet off it. “But it was exceptionally skilled. Its technique was as good as mine…and a better psion.”

“Where could it possibly learn that?”

“I don’t know. Perhaps a Bladedancer.”

“A what?”
“Irrelevant. They did not train this.” The helmet was taken off, to reveal a slim Human of all things. One slightly pale, but unlike the Caretakers, in relatively healthy condition. But it had definitely undergone extensive modification. The sightless eyes were an unnatural blue, and the skin was reminiscent of the Iron Skin modification ADVENT and XCOM employed. Only far more intricate. Triangles inside circles inside squares, overlayed thousands of times. Barely perceptible in the dim light, but obvious when looked at from the right angle.

“Don’t let those things touch you,” Yang warned as she strode up. “They don’t do standard telepathic attacks. They-”

“What has your Imperator done!?” Axis stormed over furiously, tossing the corpse of a Caretaker onto the ground before all of them. “Do you have any idea what this is!?”

“Do you?” The Battlemaster demanded.

“I thought it impossible,” Axis spat. “But I made the mistake of touching the mind of this thing – and found a memetic telepathic command.”

Yang furrowed her eyebrows. “What is that?”

“A psionic theory in the Empire,” Sana said. “Never truly experimented with. It-“

“A virus,” Axis supplied. “A virus which is spread telepathically. This exact same thing almost killed half of the psions in the Mosaic. If you hadn’t been prepared – if I hadn’t realized what it was…it infects your mind. It would turn you into one of them.”

“Did that happen?” Yang began, then shook her head. “Wait, are you saying this is the same memetic command?”

“Oh, yes,” he growled. “Because I was one of the first who learned to protect myself from this command – and then ripped the knowledge from the minds of these things. Don’t ask me how it started, but we found a psionic alien – decaying similarly to what these appear to be doing…and brought him to help.” Yang heard the hiss of disgust. “Our psions read his mind…and then became corrupted. Entire planets were lost as these things converted the populations. Turned them into more of these creatures.”

“Where did it come from?” The Battlemaster demanded.

“They believed they were working for some goal,” Axis stated. “Enacting the will of something called the Bringer of Paradise. A delusion most likely, but memetic commands have that effect. We purged all of them, but it seems this Creator wasn’t under the same intelligence.”

Yang shuddered, as the presence tingled on the edge of her consciousness. “I don’t know…I think this Bringer might be real.”

“I am inclined to agree with this assessment,” Mortis added, glancing back at the dead corrupted Human. “When I touched his mind, even for a moment, I was immediately retaliated against. It was…unlike anything I had ever felt. It didn’t feel like a command per-se, but like an attack with a presence behind it.” He looked up. “There is something else here, most of us can feel it. Be careful when telepathically fighting…it would be unfortunate if our guards were let down and we succumbed to this.”

“Regardless, if this Bringer exists we simply kill it as well,” the Battlemaster said. “They know we are here now. Be careful where you step and fight. It appears these walls and floors are dangerous.” He glanced to the wall where he’d sliced it earlier, where the nanites had expanded to
take over a significant portion of the flesh square. “Begin nanite infection where you can. If we perish here, they will consume everything else.”

He waved his black sword forward. “Move forward. Kill whatever you find.”

They stepped forward, even as the heartbeat echoed in their ears.

***

Level 2, Paradise – Orbit of the Dead World

Unknown Time

Perhaps, the Battlemaster realized, he had spoken too soon.

Both Mortis and Sana were speaking with Axis, specifically about protecting themselves against the command implanted in these Caretakers, and the entity that was supposedly watching all of them. The clues were there, and the Battlemaster was no longer certain he actually could easily kill whatever this Bringer was.

As difficult as it was to believe, the theory that stuck in his mind and persisted was that they were dealing with a rogue Sovereign One.

Even his mind questioned using the word rogue. This implied that rogue Sovereign Ones existed, and he assumed that the ones assisting them now might have mentioned this particular one. More importantly, if this was a Sovereign One, the Imperator had to know what it was…and he could only assume it had been given free reign.

Distasteful as it was, if this Bringer was a Sovereign, he could see why the Imperator would grant it extra freedoms.

It didn’t excuse what was happening here, but the pieces of why it seemed no one knew what was going on could be attributed to this. Too many pieces made sense for it not to be anything else. The strange abilities, the absurd level of genetic modification he had already seen, the resources, personnel, it was something that made little sense if one assumed it was the Creator, a talented geneticist but certainly no genius, who was behind this.

If she was being assisted by a Sovereign One, everything suddenly made far more sense.

Which then begged the question of why the Imperator was so insistent they ignore researching and implementing Sovereign technology. The Creator was clearly doing it, and if what he had seen was anything to go by, these soldiers would prove to be a challenge for any conventional army. There weren’t enough to make a difference, but if it was anyone other than three of the most dangerous Ethereals, a talented Human, and a powerful Zudjari, it would have resulted in death.

So he was assuming that he was dealing with a Sovereign One, which would also explain the strange presence all of them believed was watching them. Sovereigns were certainly capable of such from what he had seen. No Sovereign orbs had been observed though, which made him curious how it exerted it’s influence, because it certainly was not in the station itself.

Or was it?

They knew very little about Sovereigns. The common assumption was that they were large, the Voice had shared she had seen a massive creature that dwarfed her own size when they had communicated – one the size of a skyscraper. But it was a telepathic illusion. Perhaps he would see
a Sovereign in the flesh for the first time.

If so... he was unsure how he could kill it, even with the support of Mortis and Sana.

“It’s getting darker,” Yang noted as they walked, moving past another room which seemed somewhat equivalent to an experimentation lab – if the primary decorator used beating heart-organs, and lined the walls and floors with flesh. It was empty, but the dull black tables were stained with yellow, red, and especially disturbing – blue.

“There may be another ambush,” the Battlemaster warned, lifting his weapon. “Prepare.”

There had been several more attempts since the fight in the entrance. Before they could do anything Mortis simply raised a hand and they died on the spot. He was in no mood to deal with annoyances, and neither was the Battlemaster. He was still concerned over the very real possibility of them being separated via a quick teleportation, but they would have to strike faster than Mortis could kill them.

An unlikely feat, although Mortis reported that they were at least trying to defend themselves. Failing, but trying.

And also that the virus described by Axis didn’t quite feel like such, but like an active telepath was protecting them. A powerful one.

The Bringer?

The Battlemaster stabbed his blade into one of the beating organs. They had figured out that the slow beating that permeated the area was definitely caused by those – and alarmingly, Axis had reported that they were emitting some kind of limited telepathic field. As a result they destroyed them every single time they found one.

Unnatural. There were too many things here that shouldn’t be possible.

Is this what working directly with a Sovereign brought?

He wondered how much further they would have advanced if they had embraced working with the Sovereigns. However, such discussions could take place after they were out of here, which unfortunately was looking more and more difficult and dangerous.

“It’s getting taller,” Sana also noted, and the Battlemaster immediately saw what she was talking about. The ceiling which had remained high to start with, seemed to expand upwards into the void. Indication of a room ahead? A large one? This screamed of some kind of trap, and the additional comments didn’t dissuade that.

“Are those drapes?” Yang sounded confused, but indeed there were now ceremonial silver and blue drapes which hung from the walls, and up ahead was a literal curtain blocking the way forward. Perhaps a dining hall? A theatre? He would not have been surprised by either at this point.

“Do you sense anything?” He asked.

“No,” Sana said slowly. “But that means little. I haven’t sensed anything until it was right in front of me. This place clouds our ability to sense anything. But there is a large concentration of... something inside.”

Most likely enemies then. A trap of some kind. “Be ready,” he said, raising his sword in a
defensive stance. “This may be a difficult fight.”

Yang spread her hands apart and telekinetically moved the curtain to the side. Pitch darkness was all they saw, but there was no other way but forward. Defenses raised, they half-moved, half-charged forward into blackness.

And stepped in front of an audience which immediately applauded their entrance.

The oddness of the immediate sight made him briefly hesitate, and he then saw that all of them were bathed in moonlight, a small circle which illuminated only them. He didn’t look to find the source, not yet. It turned out not to be an illusion, they were actually on a stage, in front of an audience of…robed Caretakers, and other armored and robed figures.

A quick count, from what he could tell, as the entire audience was only sparsely lit, also with moonlight, there were fifty. A small audience, but they made up for it in sheer enthusiasm. But they quickly took second priority when he paid attention to what was actually on the stage itself. There was an extremely ornamented table with, disturbingly enough, plenty of seats for everyone, including full dishes of food.

Then the other figure on the stage spoke.

“Representatives of the Ethereal Collective, welcome!” The voice was male, oddly…delicate…and even more strangely, was clearly accented in French, a Human language. The words were also English, and overall the voice made for something unexpected indeed. Which paled in comparison to the source of the voice itself.

It was perhaps the oddest thing he had seen yet, which certainly spoke to the surrealness of this place.

The source of the voice was a Sectoid, but most certainly not an ordinary one. First it more closely resembled a Human in stature, if slightly taller than an average one. It was slightly less defined than a Vanguard, but that was a minor detail. It’s attire grabbed his eye; which was a full suit – complete with a tie – white conductor gloves, and dress shoes.

It’s face was smaller than even that of the Vanguards, and seemed to have a completely naturally designed mouth, which almost looked maniacal in contrast with the smooth noseless face, and the solid-blue eyes which glowed with power. Clearly a psion, and probably a dangerous one at that.

It carried few weapons, save for some kind of melee weapon on its waist the Battlemaster couldn’t quite see, and what appeared to be an old Human pistol strapped diagonally across its chest, both within easy grasp if necessary.

“Oh ah,” the Sectoid raised a finger as Mortis raised his hand. “None of that now, honored Ethereal. You wouldn’t want anything bad to happen to our other guests, now would you?” He elaborately motioned upwards and more shafts of moonlight illuminated the terrified forms of children, four Human, two Vitakarian, one Borelian, and one Dath’Haram.

Each of them were held in a strange grip of a creature, one with six appendages, all of which were holding fast to the wall they had pinned the children against. A head-like…thing rested at the respective place of this creature, and was just under the heads of the children. The Battlemaster couldn’t make out more details of these spider-like beings, but the message was clear enough.

“Now, now,” the Sectoid said with an air of confidence that normally would be delusional in front of an Ethereal. “I’m aware of all of you. The great Battlemaster, the gentle Sana, and radical
Mortis. All three here tonight, in addition your disciple Yang, and the awakened Axis. Truly tonight is a spectacle to never be forgotten!”

He raised a hand and the crowd cheered further. “Now then,” he said, taking a short bow. “I am Preximius, your host for tonight. Understand that if you… disrupt this fine evening, then there are certain consequences.”

Almost on cue, the creature with the leftmost child, a Human, moved the head upwards until two spiked appendages extended, and with a lightning motion, stabbed the child through the skull. Preximius closed his eyes, and rolled his head back as the creature kept the body suspended.

“Oh, fuck,” Yang breathed. “I might be sick.”

The Battlemaster had the feeling that she wasn’t simply referring to the act of murder. “Ah,” Preximius said contentedly. “Truly wonderful, the mind of a child is. An innocence and joy which is so often lost to the cold reality of the galaxy. Delicious and extraordinary, I certainly hope each of you enjoyed this fine appetizer?”

This seemed addressed to the crowd, which sickeningly applauded and laughed at this. “What kind of monster are you?!” Sana yelled. “Those are children!”

“They most certainly are, I have eyes if you couldn’t tell.” The crowd chuckled as the Sectoid moved to the head of the table. “And tonight we celebrated the life of one. A bright flame who lived a life of happiness, friendship, and love. All have their place, all touch us in some way, and now she is in Paradise, and as such, at His side.”

He shook his head. “Ah, such games we play. All of you are too attached to life. Indeed, resisting tonight would only send these young minds to the Paradise we can only touch in this mortal realm. Yet I must command your attention somehow, and this is certainly effective.” He motioned to the table. “Now, sit! Tonight will be a most entertaining evening indeed. We so rarely get such distinguished visitors.”

A hand touched his shoulder. “Give me time,” Mortis rumbled under his breath. “Keep this freak talking.”

The Battlemaster simply nodded. At the moment he didn’t want to sacrifice the children. He didn’t feel he was in mortal danger here…yet. Playing along might be beneficial. “Why?” He demanded.

Preximius heaved dramatically. “Because it is polite? You have been a rude guest to our home thus far-“

“We were attacked!”

“You dared to strike His chosen Artist,” Preximius sounded genuinely offended. “Even for a simple brute such as you, that is too grave an insult to take lightly. Now, sit.”

Sana and Axis moved to take a seat, with Mortis moving in that direction. The Battlemaster stayed put, he wouldn’t follow the instructions of this thing. Yang hesitated, then stayed at his side. “Stubborn,” Preximius said with a dismissive wave. “Expected of a sightless. Yet tonight can continue as planned! Now, let us begin!”

Applause broke out, and amazingly, the Battlemaster saw a small orchestra begin playing. There was a mixture of primarily Human and Vitakara instruments, and in distaste he saw they had seemingly been modeled as though they were in corpses. This Sectoid couldn’t even make simple music without it being over-the-top….there was a Human word for this.
Edginess. Or shocking. Either way he did not appreciate whatever ‘artistic’ value it held.

The Sectoid suddenly frowned, then glanced up at the children who were still continuing to sob, struggle, and express to someone the terror they felt. “No, this simply will not do,” he said. “I apologize for such disruption to our evening. Children sadly cannot quite understand the privilege they find themselves in here.”

The Battlemaster realized that he was referring to the fact that the sounds of the terrified children were disrupting the music the orchestra was playing below. Preximius closed his eyes, and there was a slight distortion in the air. The Battlemaster coldly determined his assumption was right as the children suddenly became quiet.

Until they began to sing instead.

No words, but their young voices instead joined in the music of the orchestra. Haunting and impeccable as if they had been trained for years. A choral addition which only brought juxtaposition to the rising music taking place in the madness and nightmare around them.

The faces of the children did not seem frightened any longer, but content as they sang for the crowd and guests of Paradise.

“There…” Preximius’s smile widened once more as he laced his fingers together and rested them on the table. “Perfect; such beautiful young voices to complement our evening.”

“You are a monster!” Sana spat furiously. “How could you-“

The Sectoid almost looked hurt. “Dear Sana, I would have thought you of all would understand. Terror and fear are self-destructive. It is cruel to let them suffer so needlessly.” He waved upwards. “And now they feel no such emotion. They only understand the contentment and joy that comes with Paradise. Can you really not understand this?”

“You are forcing them to do this against their will!”

“For their own benefit!” The Sectoid was undaunted. “And is that not what you say when you ease the pains of those who come to you. The experiments of the mind you perform.” Preximius said the words with a malevolent glee. “Did you ever ask what they wished? No! Because you simply knew it was for their own good! To ease their pain and suffering.”

Mortis glanced over at Sana, who glared furiously at the Sectoid. “Do not even begin to compare yourself to me.”

Mortis had also seemingly had enough of this.

“Give me one reason I shouldn’t melt you and your audience,” Mortis growled. “Aside from holding children of all things hostage.”

“Because you want to live,” Preximius said with a smile. “Death, kill, destroy, you are a simple creature with simple wants, are you not? Open your mind to some more pleasures in life. Food, music, art! Please, Mortis, I don’t intend to kill you, but I wish so much to learn about our guests tonight. At least until the Imperator graces us with his presence.”

“And signs your death warrant,” Yang added.

“A comforting dream for you, child,” he looked to her with a ghoulish smile. “But no. I suspect that had the Imperator had…concerns, I might very well not exist. And certainly that would be a
shame!” The crowd laughed.

Preximius turned his head back to Mortis as the music played in the background, a melody the Battlemaster didn’t recognize. “You think you’re so very special, wave your hand and things fall apart,” he raised his own hand daintily, fingers wiggling. “Only using it to tear down and destroy. At least your sister understands a broader application. One to shape, nurture, and grow!” He moved a hand over the meat on his plate, and it slowly began dissolving into a brown sludge. “But you are not the only one with such tricks, and I assure you I am but a mere novice compared to our wondrous Patron.”

He clapped his hands together. “Now! Our first show of the evening! Mortis, you will take center stage. Give us a show!” There was a laborious pounding, the sound of something large walking forward. “Remember! The children rest in your hands.”

From the opposite end of the stage, a massive beast walked out. A huge black-skinned creature, one towering over even the Battlemaster, the visage alone was intimidating enough. Sharp claws, dual wings on it’s back, oddly hanging and moving tentacles lined the body, and the head held six eyes, all of which glared hungrily down upon Mortis.

The hands began swirling in uncontrolled psionic energy…

And then it collapsed to the ground and didn’t rise.

Mortis hadn’t even spared the creature a look. “I am not in the mood, Sectoid.”

Preximius had the gall – and somehow emotional capacity – to look offended. “No! No! Such a waste of life! You are indeed a pitiful, insipid creature! No respect for the simple art of delivering a distinguished death!” He shook his head, voice rising. “Death is a celebration! A joyous event delivered with rapture. It is not the sterile cold thing you deliver. The nerve!”

The Sectoid jumped up, pointing at Yang. “You! Let us demonstrate a proper show! On guard!”

The melee weapon he had, which the Battlemaster now saw was a rapier of all things, appeared in his hand and with a wave he teleported in front of Yang and jabbed forward, just before she managed to get one of her swords out and deflect it.

“Yes! Excellent!” He shouted jubilantly to the applause of the crowd.

Yang shouted in surprise as she began fighting the elegant dance both now found themselves in. “He’s getting in my head!” She shouted, panicked. “I’m not doing-“

“Such chatter, Yang!” Preximius said with a smile as he expertly dueled the clearly less experienced woman. It was quickly apparent that this seemingly frail Sectoid was extremely robust, and more disturbingly, intended to be toying with her. Light strikes which caused no damage, but unbalanced her. Near misses. Even she got a few swings in.

It was as if the Sectoid was doing his best to make it exciting.

Enough was enough.

A psionic charge forward slammed directly into the far smaller Sectoid, and even as he went flying a slash opened up that fancy suit he wore. The Battlemaster pulled Yang back as the sputtering Sectoid rose. “You dare to interrupt? And here I thought you had honor!”

“We are done,” the Battlemaster said flatly. If Mortis wasn’t ready, it was too bad. The Sectoid
waved a hand over himself and the weeping flesh healed over. “Move or die.”

“You seal their deaths!” Preximius hissed, raising a hand, bathed in silver moonlight. “Let the children go to Paradise!”

The Battlemaster charged forward, but the Sectoid simply teleported to the end of the room, then frowned as he glanced up. The creatures holding the children were…still. “Impossible,” he growled. “Unless…ah ha!”

“Have you ever been under a biopathic attack?” Mortis asked quietly, psionic energy encircling him. “A real one? I’ve been told it isn’t pleasant.”

That was when the Battlemaster noticed that the music had gone silent, and the children had ceased singing. And it had been like that for some time. A quick glance to the crowd showed that while Preximius had been trying to work his show…Mortis had begun a biopathic assault on the crowd. And now they were beginning to feel the effects.

Moans, grunts of pain, and even a brief scream or two began filling the theatre. “I have a strategy,” Mortis continued, taking a step forward, voice dangerously low. “The weak parts of the body first. Organs. Squishy, weak, things. The eyes are the first. Your vision blurs, fluid leaks out of your ears as your brain begins melting, you feel sweat drip off you, until you realize that it is not sweat, but your skin forming a puddle on the ground.”

The Sectoid inexplicably smiled as Mortis continued speaking. “The loss of your skin leaves muscle underneath. Muscle unprotected by skin. It does not matter what you are, you feel the pain. You scream. And scream. And you feel as your body dissolves cell by cell until nothing is left but mush and liquid. It is a painful way to die,” a hand extended towards the Sectoid. “As you will experience now.”

The Sectoid hissed, his own arm flaring with psionic power, then froze as Mortis unleashed a full biopathic attack on him. It was fascinating to watch for the Battlemaster as the Sectoid suddenly had to devote his own skill to healing himself, as the skin off his face began dripping off, and then healed.

But the Sectoid performer would not outlast Mortis. Especially not as he was enraged.

Yet the Sectoid just laughed in a high mad pitch. “A masterful showing, Ethereal.”

A low bow accompanied the words, even as the Biopathy continued ravaging his body. “And here I was afraid you were a mere killer, no,” Preximius gave a toothless, unsettling smile. “You do understand. Well done.” The Battlemaster heard no scorn or malice in the words, but even more disturbing, sincerity.

Preximius straightened up and waved to a non-existent crowd. “We shall meet again!” With a flourish he teleported himself away and there was silence in the theatre. Silence except for the faint cries of children and the heartbeat of Paradise. The Battlemaster looked to where the audience was, and saw that the occupants had been reduced to a slurry of dissolved liquid and bone in colors of yellow, red, and flesh.

Yang spoke first. “Just what the fuck was that?”

“Something I will finish killing later,” Mortis said, though the Battlemaster could tell from his tone that he was unsettled by the reaction the Sectoid had to his skin melting off his body. He stood there as Sana and the Battlemaster went to the children who, while they were no longer singing,
were almost black-faced in the grip of the things which held them. It was a simple matter to remove the creatures, as Axis had dominated their minds which had prevented them from following the Sectoid’s command in the first place. The Battlemaster took a significant amount of pleasure in killing several, while Yang killed the rest.

As it turned out, the child which had been killed was…not dead, but not especially alive. She appeared to be affected by the telepathic equivalent of a chryssalid egg. One which began corrupting the body immediately. Her eyes were streaked with blue, and she thrashed as whatever had been implanted in her took hold.

Mortis killed her with a thought. Forever this time.

Sana put the rest of the surviving children into a deep slumber, as they stood around to discuss what to do. “We can’t take them with us,” Mortis said grimly. “But if we leave, they might just die anyway.”

“There is no choice,” Axis interjected. “They are far from the only victims here.”

“Yes…” Mortis shot a look at the Battlemaster. “Test subjects are one thing, Battlemaster, *children* are quite another. I suppose you had no idea this was happening.”

The Battlemaster shook his head. A response he knew he had no excuse for.

This was, in some way, his fault.

“There were not supposed to be children,” he said hollowly. “I made that explicit.”

Mortis looked at the sleeping children…and one dead one. “Excellent job. Tremendous.”

“Enough!” He finally spat. “You have no idea what is going on!”

“You do not get to wake up and judge everything you see!” The Battlemaster spat. “Do you think I want all of this? That *any* of us want this? We’re not in the Empire, Mortis! Things have changed!”

“And it does not appear to be for the better,” Mortis nodded. “But I agree. You aren’t the problem here. You appear to be a willful and ignorant pawn of this Imperator, who just believes everything said.”

“Oh, shut up,” Yang interjected, scathing irritation in her voice. “Prior to this, I know the Battlemaster had damn good reason to believe him. The Emperor clearly doesn’t know what he’s doing sometimes, I agree on that point, and especially right now. But the Battlemaster,” she pointed. “Is the only one who appears to actually care about the Collective that was built. You want to yell at someone? Yell at all the other Ethereals who haven’t been doing *anything* outside their pet projects. Which happens to include your *sister.*”

The Battlemaster had not expected a defense…from her of all people. He gave the woman a nod of appreciation, as Mortis turned to Sana. “How accurate is what the human says?”

“I have a name.”

“Yang,” he said flatly. “How accurate is this.”

Sana released a sigh. “More than I want to admit. The Battlemaster has…held the Collective
together. Not perfectly, but he…is not responsible for this. Nor do I say he is a simple tool. Such would imply the Imperator cared enough to use him.”

“I see,” Mortis sighed. “This place has me on edge. I…apologize, Battlemaster. We…should focus on completing our mission.”

“Apology accepted,” the Battlemaster looked around, feeling mentally exhausted. “I agree we should continue moving. Arguing serves no one. Not now.”

“Where to?” Axis finally asked. “And what about the children?”

“We can’t take them with us,” the Battlemaster said grimly. “But leaving them leaves them vulnerable.”

“We could kill them,” Axis suggested. “It would be better than remaining here.”

“We do not intentionally kill children,” the Battlemaster ground out. “No.”

“And leaving them alive to experience this is better?” Axis crossed his arms. “This is mercy, Battlemaster, not malice.”

“No.”

“Here,” Sana knelt down by the head of one of the silent Vitakarian children. “I’ll place them in a psionically induced sleep, where only I can awaken them. I will also know if it is broken or harm comes to them. They will live…and not suffer one way or another.”

“And how do you know they won’t bypass it regardless?” Axis pressed. “If one thing should be clear, it is that these particular being do not follow convention. What would work for…well, what you expect, may not work against them.”

“It is better than killing them,” she responded, steadfast.

“Do that,” the Battlemaster ordered. “We will be sure to recover them before we leave.”

As Sana performed that, the Battlemaster looked around for an exit and saw several paths; through the theatre seats, or another route. “We follow where that beast came from,” he pointed his sword at the right stage end, opposite where they’d come out of, once Sana had finished putting the children into the psionic sleep. “Unless anyone objects?”

“As good a route as any,” Yang said. “And if it’s a dead end, we can try again.”

They all seemed to agree to that, and then exited stage right. Deeper into the nightmare they knew wasn’t even close to over.

***

Level 2, Paradise – Orbit of the Dead World

Unknown Time

That incident with the Sectoid – Preximius – had been terrifying. Even her enhanced mental defenses seemed to mean nothing as the alien had easily slid through the gaps, and started a barrage of small telepathic commands.

_Dodge! Back! Forward! Stab!_
Her body had complied immediately, and the duel choreographed by the Sectoid proceeded as the performer decreed, while she just inwardly shouted and tried fighting back. She had been reduced to a puppet for the malicious delight of an adoring crowd.

A deep satisfaction filled her at the thought of the audience being reduced to sludge.

If she somehow survived this – a feat looking less and less likely – she was going to have to improve her own skills significantly. Perhaps it wasn’t her fault she hadn’t been prepared to enter this particular hell, but she had to be prepared for anything it seemed.

Insane, well-dressed, and French Sectoids for example.

“I wonder if they realized they can’t kill us,” the Battlemaster commented as they walked.

The halls seemed to be growing more winding, and the sounds became more visceral. Yang was fairly certain the squishing sounds were from the station itself moving around them. Indeed, Mortis had briefly gone backwards and reported that the passageway they had been in had closed behind them seamlessly.

As a result he was liquefying any kind of biological material he was coming across.

It was like they were trapped in some knockoff American horror movie, only real and much worse than any movie director would ever portray. She found it somewhat ironic that after this, it was going to take a lot to ever actually scare her again. Isomnum notwithstanding, but she never intended to end up in his presence again. Or see him, for that matter.

“They forces are becoming more sophisticated,” Axis said, responding to the Battlemaster’s comment. “They do not seem to send these Caretakers against us any longer.”

“But that,” the Battlemaster clarified, as he telekinetically crushed one of the beating organs on the walls, which Mortis began liquefying. “They can’t kill us. Not if they wish to avoid retribution. The Imperator does seem to have authority here, and they know if that we die…it will go badly for them.”

“They could still trap us,” Mortis pointed out.

“Yes,” the Battlemaster agreed. “They could. That concerns me. They believe that if all of us remain alive…then the Imperator will not punish them.”

“And what are we going to do if he makes that his command?” Yang wondered, twirling her swords in her hand, trying to keep her guard up. The presence watching her was muted…or at least lesser thanks to Axis sharing a far more effective means of protection, but she still felt it and it made the hairs on her neck stand up.

“There will be no such command,” the Battlemaster said. “If the Imperator commands such, then I will ignore it.”

“How?” Yang wondered. Not that she was against the idea, but she didn’t know how feasible it actually was.

“I will order Deusian to destroy this place,” he said. “She can do so easily.”

“Who?” Mortis asked.

“And what if the Imperator countermands that?” Yang pressed. “Will she listen to you or him?”

The Battlemaster was silent for a moment. “I do not know. But I will not willingly allow this place to exist.”

“For what it is worth,” Mortis added, as he finished liquefying the nearest wall. “You will have my support in this.”

“Mine as well,” Sana added. “This is too far to allow, even for the Imperator.”

“We’ve got some company,” Axis interjected, pointing forward and Yang grimaced as they saw a familiar figure.

“I do not believe you understand how important that show was to Preximius,” the Umbra said dryly, hands clasped in front of her. “He puts a certain effort into his shows, and his audience being reduced to sludge in the middle of a performance will certainly damage his reputation.”

“Stand aside, or you will join their number,” the Battlemaster rumbled, not halting his movement. “You will not kill us.”

The Umbra was wearing slightly different attire now. While the basic robe was maintained, at her hip was a holster for a sleek black pistol, and a gleaming Dath’Haram blade coated in a bright red substance was hung telekinetically suspended at her side. She was prepared for a fight, even if Yang wondered if she could take a hit.

Something told her that this alien was good at dodging.

“Kill you?” The Umbra gave a beautiful smile. “That is a decision for the Saints. I am merely a servant for them and the Bringer himself. I have my instructions.”

Saints? Yang wondered why this Bringer seemed very attached to Human religious names and concepts. Perhaps it was simple translation. English was a Human language, and she suspected those same concepts existed in alien culture. Regardless, it confirmed there was definitely some kind of chain of command here.

“You have caused us a great many problems,” the Umbra continued. “For one concerned with the lives of those here, your decision to release the Exterminator is perplexing.”

“The Sovereign Orb began on its own,” the Battlemaster said, stopping a short distance from her. “I did not intentionally activate it.”

She tapped a gloved finger to her chin in thought. “I suppose it does not matter. The machines consume all, even those you wished to save. In the end you achieved little here but death. Does that satisfy you?”

“No,” the Battlemaster said, lifting the sword and pointing the bloodied tip at her. “But the blood is on your hands. Not ours.”

“A matter of debate, yet I have spent enough time talking,” she gently reached out and took a Dath’Haram blade in her hand and flourished it before him. “I have my orders. You are protected for now. But the other aliens do not have this luxury.”

Yang realized what was happening and leapt away….

And right into a portal that materialized in that direction, and flung her onto a cold metal floor. She
immediately stood in a darkened room, and was struck by how constrained and confounding it was. Two people could fit through the corridors at most, and she was in a large circular room, with corridors leading every which way.

Axis had also been thrown into the same room, and he stood as well. The light just barely illuminated the room, as a blue flash saw the Umbra walk out, with a smile on her face. “Now,” she said. “We have all the time we need.”

Axis’s suit activated, shielding him in crystal as psionic energy formed around him as he likely began a telepathic attack. Yang began her own attack, telekinetically tossing a sword to the Dath’Haram while leaping towards her with the other in hand. The Umbra closed her eyes briefly, and when she opened them, the blue glow of power filled them.

With a flick of her wrist the thrown sword didn’t even get close and was automatically recalled to Yang’s hand while she began attacking with the other. With a few exchanges, Yang realized that she was just as outmatched as she had been against Preximius. The woman handled her blade like a delicate instrument, and moved like a dancer.

Yang’s own strikes seemed obvious and clumsy by comparison, and the grim smirk that permanently rested on the face of the alien simply showed that this was as real a duel as the one Yang had previously taken part in. Axis gestured and the Umbra was encased in a psionic box, but within a mere second she vanished and appeared behind the Zudjari, hand flashing to the sidearm on her waist and fired a blast of contained purple energy at him which cracked the crystal and sent him sprawling forward.

“Admirable,” the Umbra said as she flourished her weapon. “But not nearly enough. You will both serve him well, once you understand and accept the gift that will be offered.” Yang lashed out with a telekinetic grip, which the Umbra responded with by teleporting again, and suddenly Yang was thrown to the ground by a returned telekinetic throw.

She lay pinned on the ground by the same force, the Umbra’s arm extended down to her as she slowly walked forward. “Rest easy, Yang. No need to fight it now.”

Yang struggled, but the Dath’Haram was too strong. She had beaten her easily.

But she would still fight to the bitter end. She would force the alien to kill her, but she would not become one of these things.

There was a sudden green-blue flash and the silver blur of a new weapon and the Umbra hissed in pain before instantly teleporting several meters away, her arm on the ground. In her place stood a completely new figure.

Clad in stony black armor, left fist clenched and the other holding a forged sword, and a black helmet obscuring the face of whoever it was, the figure didn’t look like one of the normal inhabitants. The voice that came out of it though, was not exactly what Yang had expected. “You would do well to step away,” a female British accent said, flourishing her own blade in warning. “At the moment, I’m perfectly fine with dicing everyone here into little pieces.”

The Umbra for the first time looked curiously at the figure, even as the stump of her arm bled. “What are you?” She asked, seemingly not dissuaded from continuing the battle as she lifted the blade in her good hand. “You should not be here.”

“On that I agree,” the other woman pointed her sword at the Umbra. “I’d heard the stories of what happens here, but unfortunately it’s somehow worse.”
The Umbra pursed her lips and as she took a step forward, teleported to right in front of the armored woman who immediately matched her blow, and both began a series of exchanges that were almost too fast for her eyes to follow. The armored woman seemed to treat the fight the same way the Dath’Haram was – as a dance.

Spins, deflections, quick foot movements, it was a mixture of delicacy and precision. The Umbra realized she was dealing with someone who wasn’t a novice, and flashed behind the armored woman, who flashed in a blue-green light and stabbed the sword through the Umbra’s stomach, who immediately teleported away.

The armored woman let out a low chuckle. “Do you think you’re the first person to try that trick?” She lowered her sword to the side in a ready stance, other arm up for balance. “You’re a novice at it.”

She took her sword in both hands, holding it by her head as the point was directed at the Umbra and charged forward in a blur that seemed to be faster than the Battlemaster’s psionic charge. The already-stunned Umbra barely moved out of the way, and retaliated with a stab as the armored woman blinked out of existence and appeared right behind the Umbra and stabbed.

This time the alien was prepared for it, and similarly teleported just as the armored woman reversed her grip and stabbed backward, nearly impaling the alien in the eye as both teleported away again, several meters from each other. “For the record,” the armored woman said, returning to her ready stance. “The other one who tried that against me was better than you.”

“I doubt it,” the Umbra’s voice betrayed no pain, and Yang wondered how best she could intervene, especially as Axis was also getting up. “You should not have been able to penetrate this deep.”

“I’ve been told that,” the woman responded. “You know when you are beaten. Unless you want to meet your Bringer, then leave.” The woman began having the bluish-green energy mirror her body in a near hologram-like effect. “This is your one warning.”

The Umbra saw it, and seemed to consider her options, then with a blue flash she vanished, leaving them alone in the metal arena. Yang eyed the woman warily. Despite helping them…she wasn’t sure this if was an ally or not. Especially with that particular armor. “I didn’t think I would be saving your lives,” the woman said, turning to them. “But for now, it seems there is a common enemy.”

“Who are you?” Axis asked with similar wariness.

“Ah, yes,” the woman reached up and took off her helmet, revealing a surprisingly young woman with pale skin, white-silver hair and eyes that looked hazel or green, Yang couldn’t tell which in the dim light. “Fiona Dorren. And until recently, in opposition to the Ethereal Collective. In short, your enemy,” she nodded to Yang. “Although I don’t know about you.”

She cocked her head at the Zudjari. “I haven’t seen you before. Or your species for that matter.”

“You are from Earth?” Axis didn’t seem to hear her question. “One of the Humans fighting these Ethereals?”

“Yes, I am,” Fiona looked at the alien with some curiosity. “And I suppose you aren’t here willingly?”

“He was in a stasis pod,” Yang supplied. “Along with an Ethereal. Mortis’Ligna. We needed help
“Mortis is awake?” Fiona blinked, then frowned. “Actually, wait. We can talk as we move. Despite being on opposite…or mostly opposite sides,” she shot a glance to the Zudjari. “We both want to get out of here. I help you get out, or get you back to whatever Ethereals that are here, and you answer my questions.”

At Yang’s hesitation Fiona grimaced, putting her helmet on. “You will die without my help. You know that, right?”

“I will travel with her,” Axis stepped forward. “I have no loyalty to the Ethereals, and I do intend to leave this place alive. You would do well to join us.”

Yang sighed. Axis already knew a lot, and Fiona was going to get information one way or another. And really, perhaps she could at least assure XCOM that the Seoul Massacre wasn’t actually their fault. “Fine,” she said. “I’ll go with.”

“Good,” Fiona turned around as she appraised the number of doors around them. “Now we need to figure out where to go next.”

***

Level 2, Paradise – Orbit of the Dead World

Unknown Time

“She will live,” Sana said as they walked. “They would not kill her.”

“Unknown,” the Battlemaster muttered flatly. “The Imperator will value our lives. A Human and Zudjari are expendable.”

“Do you consider them such?”

“No.”

“Then the Imperator will have to make some concession,” Sana said with more confidence than he felt now. “He will understand.”

“Unless his plan is more important,” the Battlemaster said as he stabbed another beating organ. “He would sacrifice one of us if it accomplished his ultimate goal.”

“On a certain level, I can respect that,” Mortis said, his voice bitter. “Hard decisions need to be made. But not in service to whatever this thing is. There can be no good which comes from this.”

The Battlemaster felt somewhat annoyed with himself for actually caring about what happened to Yang, but it was a combination of actually talking with her and seeing just what this place was that made him concerned for what would happen to her. This was no place to die for anyone, especially not one like her.

The Zudjari he was less concerned about on a personal level, but would have preferred he live as he at least provided another ally against these corrupted aliens. Not to mention he ironically seemed to have more of an idea of what they were facing than any of them. His loss might prove to be a hindrance.

Regardless, the further they continued into this place, the angrier he felt. Anger was dangerous, the
beginning of a loss of control, a breakdown of the meticulous and steady mindset he had developed for himself.

Yet he cared about preserving that less and less.

His highest wish now was to plunge his sword into the Creator’s heart, and then execute every being who was involved in this atrocity.

Rarely did he wish death on so high a scale, but there was no redeeming those who took part here. Only justice. Justice which translated to execution. It wouldn’t bring anyone back, or make his mistake of complacency better, but it would at least send a message and for once, he would know he was doing the right thing.

A rarer commodity these days. Even rarer in war.

What was considered ‘right’ was of course subjective. The word varied on organization and individual, but at least during the Empire he had known he was on a side he could rely on and believe in protecting. While he couldn’t say the Collective hadn’t given him a goal, the actions with which had been taken of late, culminating in this revelation, were further eroding this belief.

Unfortunate that there was only one side, and he was stuck on it. He was not a traitor to the Collective. It could be fixed, he knew that and wouldn’t run from the responsibility like Aegis did. But he could see much easier what would drive Aegis to such a radical path. Had Aegis learned of this?

Questions he needed some answers to. Questions which demanded his survival in the here and now.

“More up ahead,” Mortis muttered, as the Battlemaster noticed that ahead was a medium-sized box-like room with a fixed exit. One which was guarded by two of the same type of duelist he had fought upon coming to the second level. These soldiers were similar, but had obvious changes signifying their individuality. Different runes on their armor, different helmets, different weapons.

The slimmer of the two carried a sword and shield, and had the helm of a traditional medieval knight, while the one opposite appeared to be an Oyariah from the size, and it held a large hammer in it’s hands. The helmet was an eyeless orb, but the Battlemaster suspected that it wouldn’t hinder it much.

Standing between the two ornate soldiers was a Human woman, who wore full robes of silver and black; intricately and artistically designed with a precision the Battlemaster couldn’t help but admire. Whoever was behind the craftsmanship of their equipment would have been highly respected in the Empire.

The woman’s raven black hair hung barely above her shoulders, and was meticulously done, not a hair out of place. It matched the stone-like expression on her ebony face; and from her absolute stillness one might be forgiven for wondering if this was a living person, or an exceptionally realistic statue. No blinking. No obvious breathing.

The two soldiers saw them and began moving forward when the woman lifted a hand, and they immediately froze, and returned to their original position. The hand moved back down to where it had been. The Ethereals walked forward in silence, and upon fully entering, the Battlemaster saw that there was another occupant, sitting on a small bench off to the side.

“The Battlemaster himself. I knew the day would come, though did not expect it to be now.”
The source of the rich voice stood, and faced the group. A Human, older than most, with chalky white skin, though not degraded like caretakers. Scars lined his face, but none stood out more than the large scar over his left eye. The eye itself was clearly *not* Human, but a black orb with a shining blue pupil, heavily contrasting the opposite brown one.

Ash grey hair covered his head, cut short, and the Battlemaster knew that this was a dangerous Human. Or at minimum, an experienced one. The armor he wore was pitch black, with writing in an unknown language engraved on his armor in blue lettering. A standard longsword which had rested on his legs was held in his right hand, while the opposite held a helmet which resembled a stern male face, though the eyes were a deep red.

“Who are you?” This man seemed to know him, but for once here, the Battlemaster wanted to know more details about what was happening in this place.

“I am Grand Marshal Immortalis,” the man stated. “Not my original name, but who I am now. I command the warriors of the Order of the Absolving Tempest, the Carmine Baptists of Paradise, under the Zeal of the Bringer of Paradise. You have trespassed on our homes and spilled our blood. There will be retribution for that, but I will ask, what is your goal?”

“The death of the Creator.” He stated plainly. The Battlemaster suspected he would appreciate bluntness.

“You should turn back,” Immortalis said. “You will not reach the heart of Paradise. Stepping through the door will necessitate…action.” The face of the Human grew into something cold. “To succeed and reach what you have I can respect, Battlemaster, but His tolerance is coming to an end. You will not wish to feel His rage should you persist.”

“Draw your weapon,” the Battlemaster pointed his sword at the warrior. “We waste time.”

A single nod, and Immortalis placed the helmet on his head. “Let us begin.”

The Battlemaster instantly shot a hand out towards the trio of beings in the door, sending a telekinetic blast their way. The Baptists stumbled, but the woman didn’t even flinch from the blast. His other hand began stabbing towards Immortalis who deflected the strike, and set his sword ablaze with psionic energy. The purple-blue fire seemed to make the writing on his armor glow, and the red of the eyes of his helmet do the same.

The duel began.

Immortalis immediately struck with his blade, getting close to limit the Battlemaster’s effective range, although it didn’t stop the Battlemaster from throwing a fist at close range, which Immortalis easily dodged, though was forced slightly back, and shot psionic energy from his hand which the Battlemaster dodged by charging out of the way, and then directly towards the Human who sidestepped and somehow absorbed the brunt of the strike.

The Battlemaster briefly glanced to see how fast Mortis and Sana were working, and then noticed that the woman was actually moving her hands. The air around her shimmered with psionic energy, even if the face stayed as stony as before. Looking to the Twins, the Battlemaster saw psionic barriers materializing and dissipating with unnatural precision.

They were designed in order to not protect or destroy, but unbalance. The edges slammed into both Mortis and Sana; the legs, arms, heads, preventing any immediate offensive they could deliver, and the two Baptists were marching towards Mortis, psionic energy setting their weapons alight. Clever, very clever.
Immortalis twisted a hand, and the air around both of them split as the Psionosphere broke and unleashed gouts of psionic energy, commanding his attention. The Battlemaster exchanged a few blows, then after catching Immortalis in a blade lock, sent out a telepathic grab which yanked the two Baptists towards him.

The smaller one twisted in the air and landed down in a strike which he caught with his gauntlet and grabbed with a lower arm, then flung them at the robed woman. Without looking, a blue shield appeared before her, stopping the thrown soldier immediately and she continued her intrinsic psionic destabilization of the Twins.

The Battlemaster sent a telekinetic push towards Immortalis, who barely moved, but it was enough and the Battlemaster charged towards the woman, and as expected ran directly into a shield. But he was prepared, and caught the woman in a telekinetic grip and began squeezing. The woman was suddenly enshrined in a blue shield, but she was now focused on him, even if her face still somehow betrayed nothing.

Now all of the remaining soldiers were converging on him, but the Battlemaster knew all he needed to do was endure. With one hand he caught the head of the hammer of the Oyariah, grimacing as it began charring his hand through the gauntlet. The smaller Baptist stabbed towards gaps in his armor, which scored some hits, even if he was able to stop most with several kicks and punches and even the ones which hit did not quite puncture his skin.

Immortalis simply bathed him in scorching psionic energy, a miniature rift appearing around his body as it corroded and scarred even his armor. He threw his sword towards Immortalis who easily dodged it, but relented on the storm momentarily.

But he had done enough. The aura of Sana bathed the room, and a glance towards the woman showed her skin beginning to melt off her face, and the smaller Baptist began coughing as the Oyariah froze, the Hammer cluttering to the ground. Even Immortalis took a cautious step back up. “Retreat!” He commanded, realizing the tide was against him now that the Twins were no longer contained.

A flash of blue and Immortalis teleported away, as did the Oyariah warrior. But the smaller one was now on the ground, ripping off her helmet revealing another Human woman who was hacking up blood, as she began dissolving as well. A quick glance over to the robed woman showed a convulsing body even as the face was mostly sludge, and leaking into a small puddle.

The air around Mortis was distorted and tinged purple, even as he simply stared at the dying female Baptist. The Battlemaster snapped the neck of the armored woman with a telekinetic twist, and the body slumped to the ground, an expression of fear and pain on the half-melted woman’s face. There was silence once more.

Mortis returned to normal, and once he walked over, shook his head as he glanced at the woman. “You should have let me finish. The ones here deserve none of your mercy.”

“No,” the Battlemaster said slowly. “They don’t. But I do not prolong the deaths of my enemies regardless. Work faster if you wish them to suffer.”

“Considerate,” he snorted. “That was a clever woman. I will have to be careful of that being used again.”

“Indeed,” Sana had also regained her orientation and composure after the thrashing she had received. “They are learning.”
“Unfortunate they are competent,” the Battlemaster muttered, as he looked to the door. “And I suspect this Immortalis was telling the truth. This is simply a vanguard. The true challenges are ahead. They will only become more dangerous.”

“Normally I would say ‘charge’,” Mortis said slowly. “But we’ve already lost two. And we’re going to get worn down, while they will likely have fresh people to throw at us. Perhaps we should hold our ground here, because I am certain the Imperator will come. As idiotic as he has shown himself to be thus far, he shouldn’t take long to make some connections.”

“Normally I would also agree,” the Battlemaster shook his head. “But I need to know the extent of this. I need to know the worst and most dangerous of it. They clearly do not want us to keep going down there, even if they know killing us is not in their best interests. There is something they want to hide. I can’t trust the Imperator will share it with me. I need to see for myself.”

Mortis let out a sigh. “You have a point.”

“Then we move forward,” the Battlemaster said. “At least we know we are going the right way.”

“For now,” Sana said slowly.

“For now.”

***

*Unknown Level, Paradise – Orbit of the Dead World*

*Unknown Time*

Yang felt like the more they walked, the more lost they became.

It turned out that the mass of doors led to small, enclosed corridors which intersected and weaved within each other, and conformed to a giant maze-like area which the three of them were now trapped within, with no obvious path or direction to go. Yang was more convinced that the maze itself was changing as they walked, as distant (though quiet) creaks and groans reached her ears.

What was more disconcerting was the lack of a ceiling. The walls extended close to four meters high, but there was quite clearly no ceiling, and only showed empty blackness, and silver light barely illuminated the way forward from small glowing organs placed along the tops of the walls.

She felt like they were being toyed with and watched by something; something that could at any point leap from the blackness and murder them.

Fiona kept them distracted, or at least not focused on the weight of the darkness above. “So the Battlemaster had no idea what this place was?”

“No,” Yang shook her head. “I mean…he knew the Creator controlled this place. Not what was going on.”

“And what was he planning to do?”

“Talk to the Creator and likely remove her from this place,” Yang shrugged. “Possibly execution. Now that…this happened…he’s going to just kill her.”

“Well, good for him,” Fiona decided to go left as they reached an intersection. “Nice to have the Battlemaster targeting something other than Earth. Doubt the Imperator will allow that to happen
though, if he’s let it go this far, letting the Battlemaster mess it up isn’t going to happen.”

“And what is going on here?” Axis asked. “You appear to know more than most.”

“I probably know only a little more than you,” Fiona said, sword up in case of attack. “The first thing is that this Bringer of Paradise doesn’t actually exist in reality.” She pointed upward with an armored finger. “It exists in the Psionosphere.”

Yang stiffened. “Impossible. Nothing can survive there. The Ethereals researched trying to navigate it physically, and either they got horribly injured before they even stepped foot into it, or annihilated instantly. Research into it was banned after too many killed themselves. They executed people by throwing them into it!”

“While I cannot attest to the intelligence of this research, she is correct,” Axis added. “What you call the Psionosphere was specifically ordered not to be tampered with by Origin. Tearing the Psionosphere was not usually approved of because the merging of it and reality was so destructive.”

“I’ve heard that,” Fiona said. “But it was once a Sovereign One. Trust me when I say the standard rules and logic do not apply to them. If any one could survive in the Psionosphere where everything else would die, it is one of them.”

Yang thought about that briefly, disliking how all the walls were maddeningly the same color and with nearly imperceptible symbols and patterns – had she missed those initially? She shook her head, trying to focus. That would actually make some degree of sense, if this Bringer was in the Psionosphere, then it would explain just how it could sense and exert its presence so easily.”

“So what does it want?” Yang asked. “Why...” she paused, gesturing around. “All of this?”

“The only thing I know for sure,” Fiona answered grimly. “Is that it wants to fully cross back over. To my knowledge, it has never once gotten this far.”

There was some silence at that.

“What happens if it crosses over?” Axis finally asked.

Fiona snorted. “The best case scenario is that we have an extremely powerful psion loose, and that what is here mirrors a lot of the galaxy. The worst case heavily depends on what theory you subscribe to regarding the Bringer himself. Particularly how much...control he possesses over the Psionosphere.”

“Just give the worst case,” Yang said.

“The worst case is that the Bringer retains control over the entire Psionosphere,” Fiona said slowly, deliberately. “This assumes that the Bringer’s consciousness is throughout the Psionosphere at this point, and not within a section. We don’t know that, but if that is the case...well, in theory psionics could be shut off, changed, or enhanced at will. The Psionosphere touches every part of reality, aside from the Dead Worlds. Worlds could be protected or destroyed in moments. Entire populations could be dominated or murdered through telepathy in seconds. It would be a threat that cannot be defeated conventionally.”

Yang thought for a moment. “How likely is that...theory?”

“I would like to say ‘unlikely’,” Fiona said as they turned right. “But the truth is we don’t know. This is actually uncharted territory, thanks to this ultimate idiot of an Imperator who thinks helping
this thing was a good idea.”

“We don’t know his reasons,” Yang felt the need to point out. “I can’t imagine the Imperator would make a mistake this large. You can call him…ambitious, but he isn’t an idiot.”

“You can ask him,” Fiona focused ahead. “But the only reason I’m here now is to gather as much information about this thing as possible and return. I don’t know nearly enough yet.”

“Who do you actually work for?” Yang pressed. “XCOM? You don’t look like one of them.”

“No, not XCOM. Another interested party.” The helmet of Fiona turned back to her. “And no, I’m not going to say who.”

“How did you even get here?” Axis asked.

“ Took a few tries,” Fiona said nonchalantly. “But teleportation is something I’m good at. Once I had the location, it was fairly simple. Observed some of the fight going on in the first level – seemed to be a fairly even fight last I saw between the Bringer and that nanite weapon. Wanted to catch up to your group. Managed it, saw you and Axis get dragged through a portal, and after locating you, fought the Umbra. And here we are.”

“Could you teleport us somewhere else?” Axis asked.

Fiona notably hesitated. “Assuming you mean out of this maze? I can, yes. But you could die. As in, I could teleport into a solid object and bisect you. I can keep myself immaterial long enough to prevent that, but it doesn’t extend to others.”

Yang cocked her head. “How can you do that? Psionics, and teleportation itself, doesn’t make you immaterial.”

Fiona just sighed. “Like I said, Sovereign technology provides quite a few advantages that would normally be considered…unnatural.”

“So nothing can hurt you,” Axis stated curiously.

“In theory, no,” Fiona said. “But I can still be surprised. And if my concentration slips, well, at best I lose a limb or two. I’m not a telepath like you, so I can’t rely on that.”

“Even here?” Yang gestured around, even in the confined space. “Even I can use telepathy reliably, even if my skill is telekinesis.”

Fiona tapped the armor by the neck. “This protects my mind from tampering. It’s the reason I can’t be watched or dominated. It also prevents me from utilizing the…additional properties of this place to my advantage.”

“Wait.” Axis suddenly stopped, then turned around. “We’re going the wrong way.”

“What? Are – hey, wait!” Fiona teleported in front of the fast-moving Zudjari who came to a stop. “What are you doing?”

“Voices, this way,” he pointed the direction he was heading, although his voice was obviously strained. “We need to go to them.”

“Yang!”

The Battlemaster’s voice. So they were here too. She felt relief wash over her. “I hear it too,” she
said. “But the other way,” she pointed behind them. “Let’s go before we lose them.”

“No!” Axis pointed the opposite way. “We need to go this way!”

Yang scowled at how unreasonable he was being. “Are you deaf?”

“Both of you enough!” Fiona interjected. “Axis! Make sure you aren’t being influenced. You too, Yang! I don’t hear a damn thing.”

“Trust me, Human,” Axis took a step forward to Fiona. “I would know if I was under a telepathic attack.”

“In this place, so would I.” Yang added. She strained, but there wasn’t a voice any longer. But she felt the intense need to follow where the voice had come from. She knew this was the right way, and nothing was going to stop her, so she started walking, not paying any more mind to either Fiona or Axis. She just needed to get to the Battlemaster, and then get out of this place together.

Joining forces once again was all that they needed to do right now. If she lost him again she didn’t know what she would do.

Wait, no. She shouldn’t be doing this. This could very well be a telepathic attack. She should stay with Fiona and Axis. Stick together.

But at the same time, she would know if she was being attacked. She knew quite well what that felt like now, and this wasn’t it. But she knew she was allowing her emotions to take over and push her to do irrational things. Like running away from her current companions.

She stopped, and leaned against a wall, trying to get a handle on herself. She needed to stop. She needed to keep going. Staying put wouldn’t do anything.

Think!

The barely perceptible engravings seemed more noticeable now, and perhaps there was some kind of clue in them, and she stared at them, all the while feeling a growing an intense need to keep going forward, going backward, doing something except standing put looking at the glyphs which merged, split and swam before her eyes.

What was she trying to get from this? A way out? A puzzle piece right before her?

She rested her helmet on a hand, trying to figure out what to do. At this point she knew what she was feeling now couldn’t be normal. But she didn’t know what it could be. She knew it couldn’t be a telepathic attack, but something which was eating away at her and making her feel this way. Dehydration? Starvation? How long had it been since she’d eaten or drank?

Yang finally forced herself up after what felt like hours, and everything seemed to be swimming in front of her. The walls extended upwards indefinitely and had a silver sheen to them she was surprised she hadn’t noticed before, and as she turned to one of the paths in front of her, she saw it.

It was a creature, but one that definitely wasn’t like the others. A thin body which was covered in some kind of shawl or robe which hid the legs which appeared almost membranous, although from here it looked like it was almost lying on the ground. Upon her noticing it, it lifted its arms, two sets, one of which it pushed itself up with, and the other pair extending towards her in a beckoning embrace.

The skin was a beautiful deep blue, that of the ocean. Upon pushing itself up, Yang also then
noticed that there were two gelatin wings which sprouted from the back, spreading to their full length and dwarfing the body itself. Like bat wings, she thought, only put on a...she hesitated using the word ‘humanoid’ but it was the first thing that came to mind.

The face itself was flawless, much like the Umbra’s. A smile was on it as it beckoned forward. The only thing that gave Yang pause were the four eyes on the face. They were positioned in a square, pure black, and yet she could feel what the creature was trying to convey from them. It wanted to help. She needed to go to it.

She took a step forward.

_No! Don’t!_

This wasn’t supposed to happen! Why was she going _towards_ the creature that was probably going to kill her? Why was she forgetting what this place was?

The creature beckoned once more, and she unwittingly took a step forward. Then another.

There was then a sudden blue-green flash and the hiss of a blade moving through the air and the creature let out a horrible and final shriek as Fiona’s blade decapitated it. Leaking reddish blood, the creature slumped to the ground, and the compulsion that had driven her for what felt like hours vanished instantly.

Either from exhaustion or relief she dropped to her knees as Fiona approached her. “What...” she croaked, her voice dry. “What _was_ that?”

“They kind of creature which uses telepathy to hunt,” Fiona helped her to her feet. “An exceptionally intelligent and talented creature at that. It was even beginning to affect Axis. By the time he figured it out, you were gone.”

“How,” Yang shook her head, trying to clear it. “How did it happen? I didn’t sense anything?”

“Axis thinks it was watching us ever since we got in here,” Fiona gestured around. “I didn’t think about it at the time, but this is a...you know that myth about the labyrinth? With the minotaur? That’s this, probably a way to execute prisoners. Anyway, he suspects it infiltrated your minds slowly and carefully so we didn’t notice, then forced you to ignore the standard warnings you would have otherwise had. It was subtle, and frankly, _much_ too sophisticated for something that was probably made in a lab.”

“How did you find _me_ again?”

“Oh, that was easy,” Fiona said. “It didn’t take too long to find you, especially since I can teleport. But I left you alone until the creature came so I could kill it. I don’t want this bothering us again.”

Normally Yang might have been mad, but now she just wanted to get out of this area. “What now?”

Fiona looked around them. “I found the exit too. I’m going to risk teleporting you. Axis is already at the end, and last I checked he was alive. Let’s hope he still is. Here,” she extended a hand which Yang took. “Here goes nothing.”

***

_Level 2, Paradise – Orbit of the Dead World_
They did not get far before they noticed that the path was going down. It was gradual, subtle, but the walls were becoming more constrained, the lighting darker, and the metal gradually being replaced with flesh. It melted under the power of Mortis, and ran in foul-smelling rivers down onto the metal, or was absorbed in the remaining flesh-like floors before those were melted as well.

No one was taking chances any longer. Sana’s aura was pulsing and active, drawing on the energies of this place which offered near-limitless endurance compared to the normal reality they inhabited, and it was becoming stronger the more they descended. Mortis was prepared as well, his mind sharp and own death aura enhanced by concentration, and would immediately kill anything that was poorly protected, mentally or otherwise.

The Battlemaster himself was deeper in his battle trance than he had been in months. The limitations he normally felt were gone, and without having to fear telepathy he immersed himself within the Gift that had played a role in turning this place into a nightmare. It had initially taken some time to fully maintain it without actual combat, but he had adapted.

In this place, he had to or he would die.

Conversation had little place any longer.

There was no need to talk to these creatures. Each one was marked for death.

A room was coming up. The Battlemaster caught a flicker of movement within. A fight was coming. Another one. But now they would face the actual might of the Ethereals. As they had been warned they had only experienced the beginning of Paradise, so too had these abominations experienced but a taste of the power they brought to bear themselves.

And so the Battlemaster raised a hand and clenched a fist, as did Mortis. The small entrance began widening and snapping under the telekinetic grip, ripping the surprisingly delicate material apart, as the flesh which helped bind it together fell apart as the cells were divided. Within the Battlemaster saw the force that awaited them.

A dozen soldiers in the room, in addition to the Muton he had fought at the beginning, seemingly no worse for wear. These must have been her soldiers, as their armor reflected her own. Helmets that resembled faces molded in a singular emotion, armor black and red, growths and tumors seemed to be on some of the less-armored ones, but that seemed to only indicate the extensive genetic modification they had received.

Two carried longswords as they immediately started moving towards them, bodies and weapons enshrined in violet-blue fire as they intended to burn away the armor he wore. Time further slowed for the Battlemaster as he picked out additional details in the crowd. He needed to prioritize, as their last encounter had begun poorly.

The weaker-looking of the soldiers he would kill first, and already he saw two of the ones who had the faces of stone-faced individuals, with red-tinged robes. The hands were already beginning to rise and bodies begin to be encased in psionic energy.

And so he lifted a hand, palm facing the ceiling, and pulled it into a fist, creating a telekinetic vortex in the center of the room which was powerful enough to crack the Psionosphere. Most of the soldiers were pulled towards it, though the robed soldiers and the Muton resisted. The air rippled around Mortis as he began his work, and the Battlemaster charged into the fray.
The Muton swung at him with her hammer, but it was slow enough he saw it coming almost in slow motion, and instead telekinetically gripped and tore it from her grasp, slamming it into the far wall, as he threw her backwards with a furious throw. The Muton seemed unprepared for his sheer ferocity and only managed to teleport in mid-air, reappearing where her hammer had been thrown as the Battlemaster marched forward.

A soldier with a scowling Human woman’s face as her helmet yelled a battle cry as she shot corrosive energy at him, and he reached out and telekinetically crushed the skull into paste. He then psionically dashed forward towards one of the robed soldiers and before they realized what was happening stabbed one in the heart while telekinetically pulling the other to him and immediately crushing the head of the Muton right after he ripped the helmet off.

Hearing the rush of a swung blade, he spun around and met the hammer of the Muton, and with the greatest threats to Mortis and Sana eliminated – indeed the rest of the soldiers were noticeably slowed, and all moving towards Mortis. Several made the mistake of teleporting behind the Ethereals, and had their minds promptly penetrated and stunned by both Sana and Mortis, the latter of whom wasted no time in turning their brains into mush, while the rest he simply focused on causing slow and agonizing death.

The Muton herself was also encased in the psionic fire of her brethren. She was more skilled than the Battlemaster had initially given credit for. She landed blow after blow against him; psionic fire ravaged his armor leaving dents, scorches, and corrosion. He believed there was now an opening or two now.

It did not matter. For every blow she landed he responded similarly.

She was a talented abomination, but she was no Battlemaster.

Her control over psionics was sublime, and would have put even some lesser Ethereals to shame. When given time she would use her own telekinesis to hold him in place, or even attempt to throw him around. Every opportunity she would try and burn and damage his armor with the acidic psionic fire. She used teleportation to surprise him from different angles. Shields would occasionally protect her blind spots from his swings.

But her telepathy was beyond useless.

He suspected she worked like many telepathic melee fighters. Reading the minds of her opponents so she knew their weaknesses, knew their strengths, knew how to predict what they would do.

But he did not have that vulnerability.

And so he surprised her.

Strikes were feints. Overcompensation would lead to him crushing another organ with his pinpoint telekinetic control. Every shield placed would simply respond to a psionic charge where he slammed into her with the force of a train and into the following wall. Every attempt to scorch his armor just led to another opportunity for him to slowly crush her piece by piece.

And regardless of how well she was trained, she lacked the pinpoint precision or concentration needed for what he was doing. Too many attacks distracted her. She likely believed she was special. She was perhaps another Preximius or Immortalis, a leader in this place of horror, taught to believe she was above the concerns of lesser aliens.

Someone who had never once faced a true threat.
How long they dueled for the Battlemaster did not know. He felt none of the punishment she supposedly dished out, just vague changes in pressure on his armor. An insulation provided by Sana or his armor, he was not sure. But he knew it was coming to a close. The rest of her soldiers had been killed by Mortis, and combined with the weakening aura of Sana, the Muton knew she would die.

“Run,” The Battlemaster spat, deep in his battle trance, to the Muton as he grabbed one of its arms with two of his own, and telekinetically applied as much pressure to the arm as possible, hearing it snap in some places, the metal crumple, and the fingers twist. He blew her back with another telekinetic push, even as she once more teleported to safety a short distance away.

He raised his bloodied sword at her. “Run back to your master in shame. You will die by my hand, or you will run. Make your decision.”

He psionically charged forward in the blink of an eye and nailed the Muton in the helmet, sending her stumbling backwards. Every step she took now left liquid seeping out of her joints, the Biopathy beginning to ravage her body as well. The Muton took a look around the three Ethereals, and then immediately teleported away.

The Battlemaster paid little attention to the fallen suits of armor around him, or the puddles that splashed his boots and legs. He suspected that Muton would not appear again, but if it did, he would beat it as he had before. If that was the best they had, it would not be enough. With Sana and Mortis behind him, he looked to their goal.

Another portal, likely leading deeper into the station.

Without hesitation, he walked towards and through it.

No more games. No more chances.

***

Unknown Level, Paradise – Orbit of the Dead World

Unknown Time

There was a distinct difference here. Yang knew they had to have gone to another level. They had soon found another Gateway, which had taken them to a square room which had immediately had four strange plant-like constructs of flesh, with four planted talons into specific flesh patches on the floor, turn head-like orbs to them as if to fire.

Fiona had sprang into action and decapitated two within the blink of an eye while Yang crushed the other two telekinetically, causing them to explode in a spray of red and yellow. Continuing forward they had run into a small group of Caretakers, these ones seeming more prepared and equipped than others, and from what they could tell, the room they had stepped into was an armory of sorts.

They had also been dispatched with relative quickness, but if this was the actual layer of defense…

Yang didn’t know how long she could last.

She was exhausted, her mind felt in tatters with how much it had been infiltrated and abused by hostile figures, and the presence that constantly watched her – the Bringer – had only grown stronger to the point where she couldn’t even muster the strength to block it out.
You have proven your worth today child. Are you not entitled to rest now?

Oh, she most definitely was. But she knew that her version of rest and the Bringer’s version were definitely two different things.

I don’t want your approval or advice, she spat to the presence.

She could swear she felt a flicker of sadness. I will always be here, child, you will come when the time is right.

Yang shivered.

“It’s talking to you too.”

Yang looked to Axis who was still in the battle-mode of his suit. “Yes.”

“I don’t know what to think of it,” Axis shook his head. “I have looked more into the minds of these Caretakers. This level of indoctrination is nothing like anything I have seen. I had thought this to be a malevolent presence, but I don’t know. It might actually believe what it says to these followers.”

“Obviously what it wants you to think,” Fiona scoffed, flicking blood off her sword. “This thing only wants to cross over to our reality. Everything it says or does is a means to this goal. Obviously it’s going to make itself seem less evil than it clearly is.”

The Bringer seemed almost amused. And the woman speaks so surely. She has lived through the trillions of years of cycles. She has experienced the slaughter of countless. She knows so much more about the nature of the galaxy. So naive. Such a useful tool of T’Leth.

The Psionosphere seemed to shift.

An expression of amusement or laughter.

Ah...yes...the plan becomes clear. A useful tool she is. All in the name of protection, all in an effort to end the ceaseless hunt.

Yang shook her head, though latched onto something she felt would be important. “Who is T’Leth?”

Fiona didn’t look back. “Someone I know.”

Yang shrugged. “He seems to think you are a tool of this T’Leth.”

“We have an agreement,” she said. “I help him, he does the same to me. If that’s being a tool, then I suppose the Bringer is correct.”

But how far are you willing to go to stop me, Fiona, the words rumbled in Yang’s mind. How far? Would you risk what you have sought to avoid?

“He’s wondering how far you would go to stop him,” Yang repeated to her, since she felt the woman would want to hear what the Bringer was saying behind her back. “Do you know something I should know about?”

Fiona was silent for a few moments. “Yes, but I don’t want to tell you. Suffice to say, I know what he’s talking about, and if he’s so curious, just let him know that I’ll only do what I need to finish this mission. And also tell him to be careful what he wishes for.”
“I don’t think I need to tell him anything,” Yang said slowly. “He probably hears everything we say anyway.”

“Back!” Axis suddenly shouted and Yang leapt backwards just as a black blade stabbed the space she had been, and in her place stood yet another strange creature. Like the beasts on the first level, this one seemed to have some kind of invisibility, where it disappeared at certain angles, and flickered in and out of focus.

However it was made easier since the creature itself had pitch black skin. It had no face or eyes she could see, was extremely thin and had four arms which ended in long blades which also seemed to be able to move more flexibly than one would first assume. A black shawl covered it, which made it very easy to track thankfully, which was ordained with more of the glyphs and symbols others in this places possessed.

Fiona was immediately on it, and performed a teleporting slice which the creature blocked with one of its bladed arms, while Yang reached out and attempted to lock it in a telekinetic vice. The creature then teleported away before she could establish a firm grip and Yang leapt away, fearing that the thing was behind her.

A good assumption, and she avoided another stab. She risked a glance towards Axis, who was fighting another one of the things, only this one was slightly different in that it seemed to be taller and more muscular, and was engaging the Zudjari in a duel which was going…badly, given how many hits he was taking, and chipping away at his armor.

Yang tossed one of her swords in its direction, and it actually managed to impale it in the arm. It immediately swung its attention to her as she pushed the blade deeper. Fiona was engaged in a duel with the other one, as it was forced to fully concentrate on her when Fiona began employing her own teleportation.

To Yang’s untrained eye, Fiona was still far better at it, as she dismembered one of the arms, then almost seemed to be in two places at once, striking both times as two more arms fell off. Yang once more reached out, and locked the head in a firm grasp, crushing it in her hand. Axis was still dealing with the larger creature, but with the other one down, Fiona turned her sights on it.

This time it only took one swipe and the creature was decapitated. In the ensuing silence, Yang went over and pulled her sword out of the creature, wondering what it was supposed to be.

*Disappointing.*

Yang got the impression the Bringer was not referring to her. *Forgive me for not feeling sad.*

*Nor should you. They are in Paradise now, and they served diligently during their lives. You granted them a gift, child, one that should be celebrated.*

Despite that, Yang did note that the first word had been *disappointing.* Regardless of their service, the Bringer had clearly expected something more from these creatures.

“I have a feeling our actual test is going to be ahead,” Fiona said, motioning to the end of the hallway. “If we’re going to be attacked, it’s going to be there. And I don’t think whatever it is will be a pushover.”

At the end, Yang saw it open into a darkened arena, similar to the one they had fought the Umbra in, but much larger. Large enough where she couldn’t see far into it, as the blackness permeated the area. Perfect for an ambush.
Do not fear, child. Death does not await you in there. Your story is just beginning.

Ignoring the haunting words, Yang steeled herself and followed Fiona into the darkness.

***

Level 3, Paradise – Orbit of the Dead World

Unknown Time

The welcoming force they had encountered was almost immediately killed.

The Battlemaster suspected that the reason they had not faced more resistance was due to the fact that they would just be throwing more soldiers away. Fighting the trio of Ethereals was close to suicide, and whoever was commanding the defenses likely realized such resistance was futile.

So they had walked through the more segmented hallways of this level. It seemed more organized than the previous level, more akin to the first. There was more visible metal, but interspersed with clearly obvious organic defenses of some kind which Mortis melted before either he or Sana could intervene. The rooms seemed close to barracks or armories; each containing detailed armor and weapons from multiple species and differing historical periods.

The Battlemaster made a mental note to reclaim these pieces of equipment when he finished. He would find some use for them. Interestingly he saw very little modern weaponry, few rifles or pistols, and the ones he did find seemed to either be altered primitive guns, or ones which seemed inert with wires and tubes that looked like they connected to another power source.

Fectorian would need to examine them in detail later.

He idly wondered how the Sovereign nanite weapon was performing on the first level. Hopefully it was succeeding against the forces that were no doubt converging upon it. He would need to requisition more of those later, preferably for this place.

How long they walked for the Battlemaster didn’t know, but they faced little resistance. But the hallway soon became narrower as it converged into one final direction. The ceiling began angling up, and up ahead the Battlemaster saw a faint blue light filling the arena ahead, for he could immediately tell that was what it was.

“There is something ahead,” Mortis muttered. “This is probably what they fell back for.”

The Battlemaster said nothing, but simply advanced forward and they soon stepped into the arena itself. It was made completely of metal, extended upwards to then converge once more at a centerpoint in the ceiling. The pillars along the walls were similarly angled and interwoven with each other, in triangles, like the first level.

His boots clacked on the floor, and he realized his impression was not completely correct. Tile of some kind lined the floors, and was clearly arranged in a mosaic of some kind that he couldn’t see on the ground level. A closer look at the pillars also saw they were engraved with the symbols he had seen throughout the station.

In the center of the arena was another triangular gateway, this one massive, extending close to twenty feet into the air. It was shut off, allowing the Battlemaster to see through to the opposite end of the arena he was standing in. But that was not what immediately drew the attention of every Ethereal in the vicinity.
There was a figure standing before the inert Gateway, one which was amazingly somehow taller than the Battlemaster – though only slightly. Like the Caretakers, it wore robes, though they were a deep purple with highly symmetrical lines of blue-embroidered symbols woven throughout. The figure looked…thin, proportionally to its size.

The Battlemaster saw the two arms it had were clasped behind its back, and a hood covered the face… but all of them could easily see the face in question. The marble-like skin, if it could be called that, appeared more to be scales or stone, as it overlapped in places and was fully symmetrical along the face. No obvious mouth was seen, but there were plates that could be their equivalent.

The figure had six eyes, each seeming to glow a harsh blue as it appraised them, though the Battlemaster could not determine anything close to what it was thinking or feeling.

“Ethereals of the Collective, you have come far,” the voice was deep, vibrant, and came from everywhere in the room. The figure showed no indication it had spoken, but the Battlemaster suspected that was the case. “Hundreds have died in your path of destruction through our home. Your cause is righteous in your mind, but you will go no further.”

“We have killed every threat here,” the Battlemaster was slightly calmer than he had been during the duel with the Muton. “This will not end until the Creator is dead.”

“You will go no further,” the figure repeated. “The actions of the Artist are unfortunate, and were not sanctioned. A mistake, one you may feel anger for, but one that does not require the ultimate punishment. Such actions will not happen again.”

The Battlemaster let out a harsh laugh, lifting his weapon and waving the blood-soaked sword around. “Do you really think this is about that anymore? No, creature, it is about everything that is happening here.”

“We have done nothing wrong here,” the figure said calmly. “All of this was permitted and sanctioned by the Imperator. Your superior. Let the bloodshed come to an end. The Imperator will arrive eventually and he will explain to you.”

“What are you?” Sana finally asked.

“I am merely an Aspect of the Bringer,” the figure said. “His Temperance. His mind and cunning, His restraint and patience. I am nothing more or less. Each of you is a worthy opponent, each of you has strengths, weaknesses, and patterns. Each of these I know. Each of these I will use. I need not kill you today, only ensure you do not cross this point.”

The voice of the…Temperance…didn’t change, but the Battlemaster suspected it had been annoyed by what they had done. “The destruction is no longer tolerable and it will come to an end now. Yet I will offer you one final chance to stand down. Await the Imperator for answers.”

The Battlemaster pretended to consider. “No.”

He swung his blade down, and immediately transitioned into a psionic charge. Almost immediately he slammed into a barrier erected in front of him, and even after recovering quickly, he lashed out with several strikes and slashes towards the massive figure, though each one was deflected by a blue barrier which appeared just before he struck the fabric.

The Temperance slowly moved a hand forward, and the black-gloved hand faced him, palm out and the Battlemaster was thrown backwards by the edge of a psionic barrier which slammed
against him. He recovered quickly, and quickly glanced to Mortis and Sana, the latter of whom was encased in a psionic stasis field, even if her power was not diminished.

Mortis was under constant assault by multiple appearing and disappearing micro-barriers, which did little lasting harm but did do enough to prevent him from utilizing his Biopathy. The same tactic the one woman had used, only this being seemed to be far more skilled at it, and the Battlemaster was not sure what he could do to stop it.

He reached out and telekinetically grabbed the Temperance and began applying pressure. Past the robes, directly onto the skin and bone of the creature. Almost lazily the creature looked to him with the unblinking glowing eyes and then froze – as it looked back to Sana and the barrier attacks on Mortis briefly dissipated.

The Battlemaster continued the psionic grip, though was running into resistance as blue light from barriers likely shone from inside the body, as the Temperance likely wished to protect against the telekinetic assault. He quite possibly had underestimated that both Sana and Mortis were also expert telepaths, and was now engaged in a telepathic duel against them.

Of course, this would prevent Mortis from utilizing his Biopathy, but it would give the Battlemaster something to do in the meantime, and with his telekinetic grip still maintained, charged forward once more, and stabbed towards the likely heart of this alien would be. The other hand of the Temperance lashed forward from behind its back, palm flat before the tip of his sword as it held it back psionically.

“You should fight against one with your talents, Battlemaster,” the Temperance said, voice as calm and emotionless as before. “It is rare to find an opponent who can match him.”

The Gateway flashed behind him, and the Battlemaster was thrown back by a powerful telekinetic attack. Anchoring himself telekinetically as well, he cautiously appraised the creature that stepped out before the Gateways shut off once again. This one was just as tall as the Temperance, but far bulkier and strong.

Blue psionic shields covered it, arranged like armor, showing an almost knightly figure that stood beside the robed alien. The head was especially shielded, and while the Battlemaster could vaguely make out the skin underneath the other barriers, the face was little more than an obscured void.

The greatsword made out of nothing but psionic energy was held in its hand, a dark mirror of the Battlemaster; a rival he had never known existed until this point. The air around the creature began splitting and breaking, the Psionosphere itself destabilizing in its presence. The creature let out a furious roar that shook the ground, and charged him.

The Battlemaster prepared to defend himself.

This was the endgame.

***

Unknown Level, Paradise – Orbit of the Dead World

Unknown Time

Yang wondered if her mind was slowly being compromised yet again as they walked into the darkened arena. A soft blue light fell from the sky, but when she looked upwards she only saw a black void. The arena itself was constructed with what seemed to be black metal and weaving architecture, with the walls themselves shrouded in shadows.
Multiple times she thought she saw figures in those shadows, genderless humanoids that were watching. Most places she would question if she was seeing things, but here she didn’t know. It was becoming more and more difficult to determine what reality actually was. Spend too long here and she might actually lose her mind.

A thought that would normally terrify her, but right now she felt too exhausted to care.

Constant fights and battles; her mind besieged, assaulted, and cracked; voices real and imagined. It made the swords feel heavier than anything had before, and her armor a weight that made her sluggish and slow. Did she truly have the strength for more fighting. Fiona could go on. Axis likely could as well.

She didn’t know if she could or not.

So she stuck close to the Zudjari, because if she was attacked, he would likely see it before her.

Fiona’s sword was drawn as they reached the center. “No exit. Likely a trap.”

“Then should we leave?” Axis asked, forming his crystal defenses into shields. “I do not want to stay in this place.”

Yang turned back to the entrance and her heart likely skipped a beat. “Behind!”

Axis and Fiona turned around as they saw the same thing she did. Standing at the entrance was a tall humanoid cloaked in living shadow, seeming to suck the nearby light around him. Yang couldn’t see the arms, but the smoldering red eyes where the head was were enough. Fiona suddenly appeared behind it and slashed down, and her sword seemed to go right through it as the shadow dematerialized and appeared directly behind her, a dark arm grabbing her by the neck and lifting her up.

Yang tapped again into the psionic wellspring this place was and immediately felt more invigorated, though didn’t know how long that would last. She brought her swords to her hands, then telekinetically tossed one towards the shadow. Fiona disappeared in a blue-green flash and appeared right before the shadow, sword raised and ready.

The shadow performed a micro-teleportation and stabbed a shadowy arm forward towards Fiona which went directly through her body as Fiona sidestepped and sliced down onto the arm which also disappeared as the shadow appeared opposite her once more.

Fiona swung her own blade up. “Clever. But I can do that too.”

With a flourish she teleported towards the shadow once more and began a prolonged exchange of slashes and micro-teleportations, as each of them both tried to get hits on the other in a battle that was almost impossible for either Yang or Axis to actually follow. One moment the two figures were on one side of the arena, and then in a flash they were on the other.

She felt useless in the fight, as everything she did was either deflected or missed thanks to teleportation, the shadow seemed nearly impossible to properly lock on to through telekinesis, and it barely seemed to regard her as a threat at all. Axis was in a similar predicament, as simply moving towards the fight was pointless since both duelists were moving around so quickly.

“I cannot sense his mind,” Axis growled, even as the air distorted around him. “It is…slippery. It is too small for someone of this level of teleportation control.”

Calling it a duel seemed the wrong word as she watched it. The Shadow didn’t actually have any
kind of weapon he could see, but it was clearly trying to grab and retain control over Fiona. The problem was of course that she was simply too fast, and as a teleporter she could escape any grasp within moments. Her immunity to mind control made her impossible to control this way.

On the other side, Fiona seemed to be as ineffective against the shadow as it was against her. Every strike was either dodged or missed entirely. It was clearly as skilled as she was, and as Yang watched, she noticed just how flowing it was. Fiona performed a series of stabs and cuts, and the Shadow simply weaved out of the way with a masterful precision that seemed oddly slow, but fluid.

It suddenly looked over to them, and appeared before them. The air around her became blacked as it towered over her and extended a black hand to grab her chest and looked directly into her eyes for an entire long second. An eternity.

Her brain felt as though it was suddenly submerged in sludge, barely able to process what was happening. Instinctively she knew this thing was in her mind, but she could barely muster any strength to strike the arm of the shadow itself. The blades raised and then fell as she suddenly lost all feeling in them.

Her heart stopped.

Her sight vanished.

The world became silent as her hearing ended.

She felt herself dropped onto the ground with a thud. Or it would have been a thud, if she could hear.

Then she realized she couldn’t move, and felt herself convulsing as the effect of her heart stopping began to reap the consequences. The pain was unlike anything she could describe, and she could not even scream into the dark void that was now her reality.

She had failed. She was going to die here.

***

Throne Room of the Imperator, Temple Ship of the Imperator of the Ethereal Collective

1/11/2017 – 12:11 P.M.

Patricia couldn’t determine how or what the Imperator was thinking or feeling, but if there was one thing she could determine, it was that he was somewhat irritated and angry. Fortunately it was not directed at her, but in small part towards the Battlemaster, and the majority reserved for the Creator and the Bringer of Paradise, who she had learned a lot more about over the past few hours.

The Imperator was realizing that he had made several mistakes in the handling of a being that existed within the Psionosphere. Mistakes he was correcting now.

The Overmind, Quisilia, and Fectorian were standing before the Imperator now, as he stood and waited for the Overmind to finish whatever he was doing. She believed he was locating the exact coordinates to directly teleport to Paradise, but she figured it was more than that – they wanted the exact location of the Battlemaster, Sana, and Yang to teleport to them directly.

There were immediate plans to severely neuter the influence the Bringer had already created, and Paradise was about to become a lot more observed in the future. The Imperator was, quite simply,
furious that the Creator had performed one of the most controversial actions of the war to date, and otherwise damaged their standing both in and outside the Collective.

Patricia was mildly surprised the Imperator was going to spare her, but the fact was that she would be instrumental in his plan to control this crossed over Bringer, and so she was unfortunately going to have to live. Although she wouldn’t have nearly as much freedom, and the Bringer was going to be taught a severe lesson in abusing trust.

“The stasis fields are fully prepared?”

The Imperator knew the answer, but wanted to hear Fectorian say it regardless. “Yes, they will hold your captives,” Fectorian kept his tone respectful, but Patricia remembered that he had been… somewhat irritated when he learned even part of the situation. He had likely held his tongue out of respect for the Imperator, but anyone could see that he was not happy, especially when he was given short-notice construction orders. “Like for Origin, they are designed to hold a Reaper-level Ethereal. There will be no escapes or failures.”

“Holding the Bringer’s toys is not something we should be concerned with,” Quisilia’s tone was light, but he had been oddly silent through the whole thing. “Both of us know what is likely happening on that station, and now the Battlemaster and Sana – two Ethereals who could not have possibly been more ill-suited to it – are on it and have seen everything. You do know they’re going to know you’ve been allowing this?”

“The Collective experiments on captives, this has been done before,” the Imperator said slowly. “Distasteful as it is, this is something they will accept.”

“Yes, assuming they stayed on the same level,” Quisilia’s tone was sarcastic enough it verged on disrespectful. “Both of us know there is a lot more than ‘experimentation’ going on. So are you going to tell the Battlemaster the reason or not?”

The Imperator was silent for a moment. Patricia knew he was not particularly happy the Battlemaster had created this situation, even if it wasn’t completely his fault. He was irritated that the Battlemaster, along with Sana, had first questioned Isomnum (which had supposedly gone badly), and then gone directly to interrogate the Creator with Sana’Ligna, without even once informing the Imperator.

Something the Imperator had seemed legitimately surprised at when they determined what had happened. And then surmised that at best the Battlemaster was engaged with the defenses of Paradise, and at worst was dead. Honestly Patricia wondered which scenario would be easier to solve. In the grand scheme…the chained essence of a Sovereign One was more important, but on the other side it was a massive risk.

Of course, without prior warning the Battlemaster had almost certainly gotten the wrong idea about what was going on, and was likely furious at the Imperator. It was the reason the Imperator had kept the details so secretive. There were certain people who would simply not accept the justification for these measures, and the Battlemaster was one of them. Not to mention Sana’Ligna.

“I suspect I will have little choice,” the Imperator finally said. “But I do not think he will be convinced of the necessity of it. He is too focused on the immediate picture. The Collective. Even if he understands the bigger picture, he may ultimately reject it.”

“Is there something I should know about?” Fectorian interjected. “I believe I deserve to know exactly what is going on here. What are these stasis pods being used for?”
“An experiment which has temporarily gone awry,” the Imperator said. “It involves Sovereign technology. An example of why we should never become reliant on it. This is all you need to know, if your experience is required I will ensure you know.”

Fectorian straightened, and looked directly at the Imperator. “Very well. If you do not require my services further, I will leave,” he turned abruptly and began exiting the room. At the edge he looked back around. “I suspect the Battlemaster will be more forthcoming than you are, Imperator. There are too few of us left to keep secrets.”

The door shut behind them, and Quisilia shook his head. “I would not have advised that.”

“The fewer who know, the better,” the Imperator said. “This will eventually fade and the situation will stabilize. The Battlemaster will eventually calm down, especially if he focuses on Earth.”

“Then I hope you plan on doing something to actually appease him,” Quisilia continued, sounding unimpressed. “Because I’m going to tell you that if you think simply explaining this is going to make everything go away, you clearly don’t know him. He’s going to want Paradise destroyed, and the Creator and the Bringer’s Aspects brutally murdered. At the moment you are planning how best to preserve the situation and ultimate goal, not how to deal with the Battlemaster.”

“What do you suggest?” Patricia asked. “There are few good options here.”

“You,” Quisilia pointed a black dagger at her. “Don’t have a say in this, Trask. I’m not even sure why you’re involved in this situation, but you are. That doesn’t mean you get to make suggestions.”

“Answer her question,” the Imperator stated.

“Kill all of the Aspects,” Quisilia said heavily, clearly unhappy. “It would be a severe setback, I know, but it would ensure the Battlemaster is appeased, even if the Creator is spared. Essentially kill everything on Paradise, and start over. Not ideal, but I think keeping the Battlemaster is more important than completing the Crossing in a timely manner.”

“No.” The Imperator stated flatly. “We may…need it in the future, if the Sovereign on Earth becomes more involved. It has taken decades to reach this point, and we do not have that time before this kind of measure will be needed. The Battlemaster will simply have to be convinced.”

Quisilia simply sighed. “I see the reasoning, but he is not going to like it.”

“No,” the Imperator agreed. “He will not. But this is ultimately essential.”

“Which reminds me,” Quisilia recalled slowly. “Do you think he awakened Mortis?”

“With Sana, yes,” the Imperator said, standing. “I suspect that made their jobs easier. Once this situation is contained, we will relocate him to here. I do not want an Ethereal, especially him, near the Bringer, regardless of assurances.”

“They have been located,” the Overmind suddenly spoke. “Two groups. Separated. The Battlemaster, Sana, and Mortis, and Yang Shuren with a foreign mind. They must have awakened the Zudjari as well.”

“I’ll recover Yang and the Zudjari,” Quisilia said, twirling the blade in his hand.

“Patricia and I will go to the Battlemaster,” the Imperator finished. “Give us the exact locations. How deep did they manage to get?”
“The third level.”

The Imperator lifted a hand and the air in front of Patricia split into a purple-tinted portal. She put on her XCOM helmet in preparation. “I do not know what we will find,” the Imperator said slowly. “Prepare to immediately defend yourself. I will be immediately behind you.”

With a nod, Patricia stepped into the portal.

Unknown Level, Paradise – Orbit of the Dead World

Unknown Time

Yang was unsure what happened, until she suddenly gulped a mouthful of air.

“Apologies,” the voice of Axis said, as she realized that she still couldn’t see and was still paralyzed. “Lower brain telepathy is something I have limited training in, and your minds are not like ours. I’ve done what I can, but I don’t know-“

“I can hear,” she breathed. “I’m not dead. Can’t see or move.”

“Fiona has its attention for now,” Axis said, even though Yang couldn’t actually hear much aside from some slashes in the distance. A silent duel of immaterial warriors. “I’m going to try-“

His voice turned to something like surprise. “What-?”

“That is enough,” Yang tried to move her head as she lay on the ground, although her paralysis hindered it. Don’t panic, they’ll fix this. They’ll fix this. “This little party is over.”

Quisilia?

“You know this Ethereal?” Axis sounded similarly surprised.

“Yes,” Yang muttered. “Which means the Imperator is not far behind.”

“While I’m sure you’ve had great fun with this, I am going to have to demand you stand down,” Quisilia said, presumably addressing the shadow-thing. “The Imperator is very… displeased with what has happened here.”

We have come under attack. The voice appeared in their minds, a raspy and slick male one which could not have sounded more sinister if it tried. Defense-

“Ah, no,” Quisilia sounded amused. “You can call it whatever you want, but let’s just say no one who isn’t brainwashed is going to believe you. Also, who is this?”

“Fiona,” Axis muttered.

“And that is my cue to leave,” Fiona said, likely teleporting beside them. “Stay or go?”

“Get me out of here,” Axis said.

Yang didn’t hear anything, but she presumed that Fiona was gone, and had likely taken Axis with her. She was almost sad, since the Zudjari had not seemed that bad. That he had saved her life was also a point in his favor, though she couldn’t really blame him for wanting to leave this place as soon as possible, and especially not trusting the judgement of the Ethereals.
What had the Imperator been thinking?

“You, stay there,” Quisilia ordered, likely to the shadow. “Hold onto this. You move, I will kill you, regardless of what the Imperator ordered.” Yang heard something being tossed through the air, but didn’t have any idea what it could be. Footsteps approached her a few seconds later.

“I can’t move or see,” she said, hoping he would hear her. “That thing-“

“Yes, you’re fortunate you lived at all,” he said. “I’ll get you to Sana immediately. You can be healed. The Battlemaster will be pleased to know that you lived, and I’m sure you can say quite a bit about the ones who were with you.”

“Yes,” she agreed. “To the Battlemaster. Please say there is a good reason for this.”

“There is a reason,” Quisilia said as she was picked up by him. “I suspect you would not agree, though I cannot tell you regardless. That is the Battlemaster’s prerogative.”

Yang would have closed her eyes if she hadn’t already been blind. “What the fuck was the Imperator thinking?”

There was a noticeable pause. “In the long term, Miss Shuren.”

“Please tell me he will stop it.”

Another pause. “There will be consequences for what happened here, I can assure you of that.”

She didn’t ignore he had avoided the question. “Will the Creator be executed?”

“No. She has a part to play.”

She had feared that would be the answer. But deep down she had known that the Imperator wouldn’t allow this if he truly didn’t think it had some worth. All of them were presumably alive, and the cost was minimal. In terms of cold statistics at least. The Collective had ultimately lost nothing in this incident, and no permanent harm had been done.

Except of course the damage to the reputation and trustworthiness of everyone who had been involved in hiding this. She knew on her own she was ultimately not important, and her wants and opinions wouldn’t change anything. A mere weapon given to the Battlemaster to utilize as he saw fit.

But she felt some hope that the Battlemaster would not take this lightly. “Then I hope you’re prepared for what the Battlemaster and Mortis will do once they are told this,” she said quietly to Quisilia. “I can’t do anything. But they will.”

She felt some measure of surprise from him. “Did you say Mortis?”

Oh right, they didn’t know he had recovered from…whatever he had been afflicted with. She smiled. “Yes, he apparently has recovered. And he is not happy.”

“Oh dear,” Quisilia mused. “That is going to make things more complicated.”

***

Level 3, Paradise – Orbit of the Dead World

Unknown Time
The warrior fighting him was one of the most challenging the Battlemaster had ever experienced in his life. Rarely, outside of other Battlemasters, had he dueled someone who was just as strong, fast, and skilled as he was. There had been few who surpassed him, and he had known that one day he might hold the title of Grandmaster.

But this warrior before him was without a doubt his equal. Possibly better.

Blow for blow, they matched each other. A psionic charge was met with a telekinetic throw. Swings were blocked head on, not dodged. It was certainly a different experience to fight something his own size, and the Battlemaster began falling back into a comfortable rhythm he had not used in a long time.

Larger meant slower. It meant easier to predict and exploit.

This warrior was likely as dangerous as him, but there were weaknesses he could exploit. A larger size meant more areas to hit. More mass slowed him down, and made his moves more predictable. The Battlemaster did not feel he was in immediate danger – yet.

But the corrosive aura he had around him was an actual problem, as were the beams of psionic energy he shot from his hands. His armor was slowly deteriorating, subjected to rift after corrosive shot. Even this forged armor could not last forever against psionic bombardment, and to make this issue worse, the longer the duel progressed the more extreme the psionic hurricane around the warrior became.

The burning psionic sword slashed down, and was blocked by the Battlemaster as he responded by sending a telekinetic shockwave towards the warrior, shaking the ground. With another hand, he maintained a telekinetic grip on the arms, briefly forced them open, and stabbed forward. The psionic armor blocked it, but the warrior let out another roar, and threw a fist towards him which missed, and the Battlemaster stabbed under the armpit, which was also deflected.

But it was enough to unbalance the warrior, and the Battlemaster shoved him to the ground as the warrior responded to it by immediately turning around and with a gesture created a psionic maelstrom where he was standing.

The Battlemaster winced as he felt the psionic acid land on his skin, a testament to how degraded his armor was by this point, and performed another psionic charge to the warrior who moved out of the way and swung in a wide arc, which the Battlemaster easily ducked and stabbed forward to the chest.

It was growing angrier. Good.

He allowed it to miss several more times before punching it once in the shielded head. No damage, but it was enough to unbalance it even further. A furious but sloppy strike followed, which he deflected quite easily as he threw it back with a telekinetic push. The psionic storm was growing fiercer, and that blow seemed to make something fundamentally change.

The blue psionic armor flickered and suddenly dissipated as the psionic disruptions around him flashed, then turned into a full storm, revealing the true form of the creature. A mix of armor and hard brown skin covered the body, almost as though the armor was physically attached to the creature. Lining the torso were extra little limbs, underdeveloped and waving as they were free from the confines of the psionic armor, rippling with psionic power.

The head was not covered by any helmet, but a hood of some kind, and no face could be seen. It could not have been an illusion, but the Battlemaster only saw blackness within the hood. Perhaps
it did not actually have a head at all?

The psionic sword remained in hand, and with another furious and ground-shaking roar, charged as the Battlemaster felt the full power of the storm around the warrior. Psionic acidic energy ravaged his armor even more, and began destroying the hardened skin underneath, and the Battlemaster was thankful for Sana’s own power as any light wounds he sustained were healed almost instantly.

But for the first time in a long time, it was painful.

The warrior rained down blow after blow in an insane frenzy, with no regard for strategy or skill. It was the swings of a berserker, one which exchanged discipline for unrestrained fury. After swinging once it reached back and ripped the hood back and a massive beam of psionic energy shot from the head towards him.

It slammed directly into his chest and he psionically charged out of there before his armor’s integrity could be weakened further. Once away, he saw what the head of the creature truly looked like. It wasn’t even a head, but almost a vertical ring of flesh that formed the outline of one, which he could see through. All it was good for was propping up the hood, and possibly worked as a focus point for a psionic attack.

The Battlemaster had given up trying to work out how the biology of what he had seen worked. This was not the time or place for it.

A psionic charge back into the whirling maelstrom resumed the fight once more, and while he could easily deflect, block, or dodge the wild swings, the psionic storm around him was beginning to take its toll. He could not stay in it forever, even as he landed blow after blow on it, dismembered some of the small arms on the torso, and otherwise thought he was causing it damage.

But it also could heal, and he didn’t know what the best way was to beat it.

He charged backwards out of the storm to briefly appraise it before it began walking towards him again.

Possibly a problem.

He spared a glance over to where Sana and Mortis were, and they seemed to be in the exact same situation. It spoke to the skill of the Temperance that they had somehow managed to not break through yet, but at least he was being occupied.

A purple flash appeared behind the Gateway, and Patricia Trask stepped out, followed immediately by the Imperator, who was already radiating power.

“Stand down.”

The warrior he had faced was suddenly encased in a psionic stasis field, lifted into the air and compressed into a more compact form with the limbs folded backwards. The head of it suddenly split into pieces, although that seemed to affect it very little as the psionic storm began dissipating. It was likely struggling, but the barriers would not allow it.

The Temperance was also encased in a barrier and suspended in the air, although it wasn’t constricted as much.

About time.
“Sana,” the Imperator said. “End your assault. Your orders are to stand down.”

What?

“Kill it,” the Battlemaster roared. “What are you doing?”

“Imperator,” the Temperance said, in the same toneless voice. “I am pleased you have finally arrived to mediate this unfortunate dispute.”

“Stand down, Battlemaster,” the Imperator commanded, raising an arm in his direction. “I want to know the actual situation—"

“What!” The Battlemaster yelled, flinging his sword in a wide arc to emphasize his shout. “This entire station is the situation. One that needs to be completely destroyed.” His anger began growing as he stormed to the Imperator. “Answer me this, Imperator, did you know about what was happening here?”

“Not specific details,” the Imperator answered with irritating calmness. “But the overall situation I was aware of, and approved of.”

The Battlemaster didn’t know how he felt about the Imperator simply admitting this. “What were you thinking?”

“Quite clearly your mental capabilities were as atrophied as I had feared,” Mortis said, speaking for the first time towards the Imperator. “Which is odd, as I specifically remembered the Imperators being among our most intelligent. The only possible way to correct this mistake is to do as the Battlemaster suggests and purge everything on this station.”

The Imperator looked to the Ethereal in almost surprise. “Mortis’ Ligna, I see you have… recovered.”

“Yes, I certainly have,” Mortis also stormed forward, his own voice rising. “And I am informed that not only is the Empire destroyed, not only are we invading a primitive alien species for no reason, but you are sanctioning and running this place which grows every kind of abomination and experiments on children. And you don’t even deny it!”

“This situation is far more complex than it appears—"

“Really,” the Battlemaster was unsure if his tone was sarcasm or outright contempt. “No, Imperator, it is not. You may have everyone conditioned to accept your every word, but that does not apply to me. The Ethereals I knew forbade the exploitation of aliens, the Ethereals I knew did not run horror camps like this one for no good reason, or talked with things living in the actual Psionsphere! The Ethereals I knew had standards and rules, and didn’t let every idiot with a scalpel start cutting up innocent aliens! You,” he pointed at the Imperator. “Have no authority as far as I see it. The Empire would have despised you. No. The Empire would have executed you.”

There was silence at that, and the Battlemaster felt no urge to defend the Imperator here. While he didn’t consider the Imperator on that level of contempt, he deserved no pity or respect in this instance.

“He is right,” Sana stepped forward, her voice softer but firm. “We have retained and expanded the worst aspects of the Empire without making the reforms necessary. This goes beyond experimentation, Imperator. This is unjustifiable and cannot be salvaged. Perhaps you had good reasons for this, but those do not matter now. What does is what you do next.”
“Each of you has a right to be upset,” the Imperator finally said. “This situation is my fault and I accept this. It escaped my control, and the freedom I allowed was abused. There will be consequences for this, for that you have my assurance. An explanation as to why this was allowed in the first place will be provided on the Temple Ship.”

“What consequences?” The Battlemaster demanded.

“There are six Aspects to the Bringer,” the Imperator looked to the Temperance. “Constructed over years and each holding some of his power and mindset. If one dies, that aspect itself is destroyed and may take centuries to reform. As a result, there is a certain… motivation, to keep these Aspects alive and well.”

He looked back to the Battlemaster. “You have encountered two of them. Quisilia has encountered another. As powerful and skilled as the strongest of the Ethereals. But they have… been allowed too much free reign. As the result of this disappointing incident, three of these Aspects will be imprisoned and a far closer eye kept on this station.”

“What?” Mortis yelled. “Are you insane? Why would you want to help this thing? Did the fact that it exists in the Psionosphere not give you an indication that maybe working with it is a bad idea!”

“It is under control.” The Imperator stated with steel in his voice. “I would not take this action unless it was necessary, and I know how it will be kept under control. I know what it needs, and it needs us far more than we need it.”

Mortis threw a glance around. “It is clearly under control.”

“The mistakes will not be repeated,” the Imperator promised. “You can rest assured of that.”

“No,” the Battlemaster shook his head. “Not good enough. The Aspects must die, as will the Creator.”

“While I can sympathize, that will not happen,” the Imperator said. “This is unfortunately necessary.”

The Battlemaster steeled himself. “Then I will inform the Voice.”

“The Voice is aware,” the Imperator said. “This is similarly sanctioned. The Sovereign Ones support this action, and I am taking their advice into consideration. Something I believe you have suggested I do more of.”

That was a blow. If the Sovereign Ones were also sanctioning this then… why? But he couldn’t help but think the Imperator was using that as an excuse for the inexcusable. Sanctioned or not, this was not something that he was going to allow. “That does not change this situation. You may try and keep this running, but I will stand in your way every step of the way.”

The Imperator regarded him idly. “And what will you do, Battlemaster? Stay here? Fight me? You have more important duties, both to our species and the Collective. You have spent a long time on Earth without much to show for it. Perhaps your effectiveness has waned.”

“Insults and insinuations will fail,” the Battlemaster said flatly. “Both of us know the situation on Earth needed time to be reformed. You also have no one to replace me. Your threats are empty, and as far as I am concerned, this is part of my duties to the Collective. Destroying places like this,” he motioned around. “If you will not do what must be done, then the entire Collective will know of this place. As will Earth. I stated that I would bring those who were responsible for this attack to justice, and that is what will happen.”
There was another flash, as Quisilia suddenly appeared, holding the beaten form of Yang in his arms. “Hello! What did I miss?”

The Battlemaster’s concern turned to her. “She’s alive, but her body has been telepathically disrupted,” Quisilia assured him as he walked over to Sana. “You should be able to fix her.”

“I’m… fine, Battlemaster,” Yang called weakly.

“Good,” he said, before turning to Quisilia. “Where is the Zudjari?”

“Gone,” Quisilia said. “There was someone helping them. I believe she was affiliated with the same individual who attacked me in Australia.”

He would have to ask Yang about that, though he did feel he owed whoever this was. Regardless of the side of this individual, she had apparently helped them survive. The loss of Axis was unfortunate, but he felt some treasonous satisfaction that at least someone on Earth would know about this place. “Unfortunate, but we will deal with it later. The important part is that she survived.”

“I would ask how serious you are, Battlemaster,” the Imperator finally said. “You would throw the Collective into pointless chaos to fulfill your sense of justice? It is far more destructive to the Collective than anything which has taken place here, all in an effort to blackmail me? I would suggest you hear what I have to say before you consider such actions.” The Imperator took a step forward. “We are both aware this is a bluff. You would not do that because it would throw the Collective into chaos, the same Collective you have spent decades refining.”

“Because you would not,” the Battlemaster answered. “But if there is such a good reason for it, then I suppose you have no problem sharing it with the Collective?”

“Do not make this situation simpler than it is in actuality,” the Imperator said, his voice dropping. “This is a direct order to stand down, Battlemaster. At least until we can discuss this more rationally. Will you break an order because you are, right now, emotionally compromised?”

Would he?

Should he wait to see what the Imperator had to say before making a decision?

Then he remembered the rows of experimentation chambers where the victims had literally cannibalized themselves due to starvation, where they had been experimented on while they were alive, the children the mad Sectoid had forced to sing for them, and he knew that he had found a line. One that not even a superior could overrule.

A hand suddenly grabbed his upper arm. “Don’t push him farther,” Mortis said quietly. “I do not know if he will kill you, but he is gathering power. Don’t forget what happened, but getting yourself demoted or killed now won’t solve anything.”

Rationally, the Battlemaster knew he was right. This station would still be here. The evidence wouldn’t vanish, and there was nothing stopping him from carrying out his threats. But he would not give the Imperator the satisfaction of agreeing with him. Instead he looked to Quisilia. “There are a group of children on the second floor, in a theatre-like area. Recover them, and sweep the station for any others, child or adult. Remove them and send them to Sanctuary.”

Quisilia gave a mock salute. “With pleasure.”

The Battlemaster looked back to the Imperator. “Let’s leave this place,” he didn’t bother disguising
the contempt in his voice. “Before I change my mind.”

Supplementary Material

Chronicles of Salvation:

- Duo - Gentle Genesis
- Bactum - Voice of the Divine
Four more disappearances. It was time to either determine the cause of the killings, or catch the perpetrators causing the scouts and deep patrol teams to vanish. Enough was enough, and she did not want to report to Alberta-3 that her forces were being bled dry. The Sargon was not like regular Mutons, and from one conversation she knew she was dealing with an alien smarter than her.

Runi’falia’borelia marched into the snowy forests where the soldiers had gone missing. She had initially felt fortunate to be assigned to a place on this planet with something resembling an acceptable climate, even if it wasn’t quite as nice as Borelia proper. It could have been far worse, she could have been assigned to Australia.

She shivered.

Instead, she’d been placed in charge of a small city which had been easily taken over by Collective forces, and was instructed to keep the population in line, catalogue the number of citizens, and fortify the cities for eventual counterattack. The first thing she’d done was prepare all non-essential civilians for processing to a more secure location. Women and children mostly, the males were useful as labor, and there were specialists that knew the area, methods, systems, and additional information about Humans.

Processing was nearly forty percent done, and the population was largely placated. No unrest, and cooperation was acceptable. The problem was not within the city, but beyond it. Falia suspected the culprits were either ADVENT stragglers, or hunters known to inhabit the land and not necessarily live in the cities. There was reason to suspect such, given that the bodies that had managed to be recovered showed signs of death by unconventional or less powerful weaponry than ADVENT standard.

Most of the time bodies weren’t found at all. Falia wondered grimly if they’d been eaten. She knew Humans didn’t typically eat sapient life…but she wouldn’t put it past some of the more savage Humans to do so. The stories of Human cannibals were…unsettling. Over twenty had died since their initial takeover, and only three had been able to be recovered.

However, four at a time was unusual. Normally it was one or two stragglers. Four implied that this was now a concerted effort, if it hadn’t been so before. Either they were now facing an actual ADVENT resistance, or there were stragglers working together to pick off her soldiers. No longer tolerable.

Twenty-five soldiers equipped in battle armor, thermal detection, and the finest weapons of the Collective would be more than adequate to deal with whatever stragglers they are dealing with. The force was mostly Borelians, but there were a few Vitakarian support soldiers and a Dath’Haram medic in case that was actually needed.

Along with two Humans, both of whom knew the area well and were animal hunters. Falia didn’t intend to use them as hostages, but if it came down to between protecting her soldiers or Humans, the choice was clear. “There is no animal which could kill them, is there?” She asked one of the
bundled Humans, a short male with light skin.

“Not one that lives in this area,” the man answered, shrugging. “A bear definitely could, but the problem is that they’re likely hibernating, and more importantly, don’t live in this part of the country. Nothing venomous either. Afraid you don’t have an easy answer here.”

“Have you heard anything about this?” She growled. “Within the city? From the people?”

“No one’s sad about it,” the man said slowly. “But no contact, if that’s what you mean. Not surprised though, you’re dealing with people who excel in hunting animals down. Aliens aren’t too much different.”

“Is there anything in particular we should look for?” Runi’baliaha’borelia asked, another Borelian soldier. “You know how these people think.”

“We can make guesses, we’re not mind readers,” the second Human said. “But you’ll want to look for signs of activity. Fires, food, blood, anything out of the ordinary. Tracks will be covered up in the snowfall, and if they’re smart they’ll be covering their tracks anyway.”

Falia bared her teeth. “Will they have ways of controlling their body heat?”

The first Human snorted. “These are hunters, not ADVENT. No.”

That was good enough. “All soldiers switch to thermal,” she said. “They won’t be able to hide from us.”

“There may be traps as well,” one of her Vitakarian soldiers commented, raising his rifle. “Watch for those.”

“Agreed,” Falia motioned for the Humans to go to a duo of soldiers. “Watch them. They’ll have either left or we’ll kill or capture them.”

They nodded, then she and the remaining soldiers began fanning out into the woods, thermal vision on as they searched for the hunters. The trees were not thick, but they were dense and the woods were close to silent as they walked through them. The snow crunched under their feet as the darkness grew deeper.

She idly wondered if this should have been done when there had been more light. The problem was that she also wanted to bait these hunters out, and give them the illusion they would have the advantage if it was dark instead of light. Now that she was actually here, she wondered if it was a more significant advantage than she had first assumed.

“We’ve lost one!”

She turned towards the sound of the voice, as a couple of her soldiers came running up. “We turned around, and he was gone,” the first explained immediately. “No sound or thermal detection.”

They were here then. “Hostiles in the area,” she said through her linked intercom. “Regroup on my position.”

There were multiple acknowledgements…and a disturbing amount who didn’t report in at all. A few minutes later she was standing in front of a force which was half the size it had been. Something it seemed the majority of soldiers hadn’t noticed until now. “Did nobody see them?” She demanded. “How could there be no trace they were here?”
No one had an answer, and she thought for a moment, thinking of a way to salvage this. Much as she hated to admit it, retreating might be the smartest idea. Whoever these Humans were, they were very good, and almost certainly more numerous than she’d been expecting. Still, the thermal should have picked at least something up-

She heard something whistle in the air, and at a glance up saw a sphere-like object…“Grenade!” She yelled as she was already moving. “Down!”

A bright orange flash and boom followed, as a half dozen grenades landed around them, killing some of the clustered soldiers outright and wounding others. Her armor had absorbed the worst of the one closest to her, but she’d been on the outer edge of the blast radius. Sharp cracks suddenly rang out, and soldiers around her began falling, helmets punctured by firearms.

Stumbling upright, she then caught her first glimpse of the ones that they had been pursuing. But these were not hunters, they were quite clearly trained soldiers. Their armor was slim, colored a mix of whites and greys, and thinner than standard ADVENT armor. The helmets were blank faces which didn’t expose any skin, and now that she noticed, no skin at all was exposed.

She quickly switched to thermal and saw her suspicion was frighteningly correct. There was no thermal presence, despite this soldier standing right in front of her.

There were at least four, carrying shotguns, pistols and rifles as they executed the soldiers she had foolishly clustered together. She raised her own rifle until she felt a calm feeling sweep over her, one which made her hesitate before aiming, let alone shooting.

“Oh, no,” the soft voice of a Human woman said right beside her. “You’re coming with us. We’ve got questions for you.”

Inexplicably, Falia felt like she was going to collapse on her feet and fall asleep.

Much to her drowsy surprise, she did, and fell first to her knees, and then on her face in the cold and soft snow of Canada.

***

Canadian Wilderness – Canada

1/4/2017 – 10:11 P.M.

In truth, the area where they’d brought the Borelian leader was not far away from their ‘main’ base, if it actually deserved such a name. At best it was a camp, one of four in the area. It just happened to be the one he was primarily working out of now. But this place they were at in the woods now was isolated, foreboding, and intimidating.

Perfect for an interrogation.

They didn’t necessarily need to conduct one, but Neil didn’t want to rely on psionics unless absolutely necessary. That kind of power didn’t sit right with him, regardless of if it was being used on aliens or not. The Borelians might have looked like animals, but that didn’t mean they would be treated as such.

While they were alive, in any case.

Two soldiers in ADVENT Snowtrooper armor stood behind the alien who’d been stripped of weapons and heavy armor. On her knees, she was still in the psionically-induced sleep thanks to
Cycelea. The Inquisitor was at his side, while he was also flanked by Adam, a Molosser Handler who had one of the genetically modified dogs at his side.

The hound was huge, with a purebred wolf as the initial base instead of the standard German Shepherd. A bit too large for Neil to feel comfortable around, but the hound was a ferocious fighter and an excellent tracker, as well as exceptionally well-behaved. It was, however, baring its teeth and focusing the bright MELD-infused eyes on the alien.

At a single command, Adam could let the dog rip the Borelian apart. Not a pleasant way to die, and Neil wondered if the dog had developed a taste for Borelians after being fed several corpses they’d recovered earlier. Well, the dog had seemed to like it either way, even if he was messy with it.

Neil looked to Cycelea. “You can wake her whenever.”

“One moment.” The Inquisitor walked up to her and placed two fingers on the temple of the unconscious alien. She’d explained it was easier if she had physical contact with the being whose mind she wanted to control, and Neil had decided to accept that. It did make some degree of sense.

All of them were still in Snowtrooper armor, and he didn’t plan on revealing any of their faces. Not only because it was dangerous due to the cold, but because he didn’t want anyone picking out his face if this alien was psionically interrogated. Not to mention there was a certain intimidation factor he could exploit.

From what he knew of Borelians they wouldn’t be able to be coerced easily, and were resistant to pain. However, to his knowledge this had never been tested psionically. He supposed that was one good thing about psionics; it removed the need to inflict pain. Why bother when you could take what you needed straight from their minds?

The alien slowly opened her eyes, then tried recoiling once she saw the trio in front of her. The hound growled, as Neil raised a hand. “Don’t struggle, or you’ll be subdued again.”

Cycelea drew upon her power, briefly illuminating her form with a purple aura. The Borelian stopped, as Neil had hoped, recognizing the signs of psionic powers. “Yes,” Neil confirmed. “She’s a psion. A telepath.” The eyes of the alien widened at that.

“She’s definitely spooked at that,” Cycelea said through their internal comms, unheard by the Borelian. “Psionics in general seems to unsettle Borelians.”

“Now,” Neil continued, as if he hadn’t heard Cycelea. “I’m not exactly a fan of relying on that kind of thing, mind reading and all that,” he idly motioned with a hand. “But at the same time, I have work to do, so unless you want her poking around in your mind, you’ll answer my questions. You understand me?”

“Yes.” A low voice answered, not distinctly female compared to Human voices, but having heard both genders of the race speak, it definitely wasn’t as deep as a male.

“Good,” he crossed his arms. “Who knows you’re out here?”

“Several of my Captains. No one else. We assumed it was a group of hunters.”

Just what he wanted to hear. “We did our jobs then. So you could return without raising questions?”

“You killed all of my soldiers!” She growled up at him. “That will raise questions.”
Neil smiled under his helmet. “Incorrect. We only killed about half of your forces; the rest we’re holding. It wouldn’t be an unbelievable story if you were to be ambushed, and eventually retreat. Perfectly believable.”

“I won’t do that, I refuse to help an enemy,” she spat. “You will have to kill me.”

“Really,” Neil said dryly. “I don’t recall saying you had a choice. This was me…” he paused. “Thinking out loud. I don’t want you, I want your superior. The one managing Collective territory here.”

“Then you want Sargon Alberta-3,” she said. “But you won’t be able to kill him. And if you do… they will send another.”

Neil ignored her comment. “How many Sargons are there?”

“Three in total.”

Neil nodded; that was good. Sargons as far as he knew weren’t cheap, so killing them would hurt the Collective, even if they would eventually be replaced. Cut off the head, cause damage, and repeat. The Sargons were the most dangerous threat now, and if he was too aggressive, they might take direct action, and he wasn’t confident he could outwit three of them.

But strike before they all noticed? A plan with much higher odds.

“Do you have their locations?” He asked. “As well as the locations and names of other Human City Overseers?”

She bared her teeth. “I know where the Sargons are stationed, and I have access to the data on occupied Human settlements. But I will not provide them to you, as I have not memorized them. Even your psion can’t pry something I do not know.”

“Unnecessary,” Neil said. “Here is what is going to happen. You’ll return and continue as normal. However, you’ll turn over every detail of your operations to one of my operatives. As well as the names, locations, and as much information as possible on all Collective officers and leadership. In return, when ADVENT liberates this area, you’ll be given a comfortable cell and a positive recommendation for your trial.”

“No,” the Borelian stated. “I will not.”

“I’m afraid you will,” Neil said, waving Cycelea forward. “While I’m not a fan of psionics, it does have its uses, and sadly I cannot take the chance that you’ll try and screw us over. Cycelea will ensure you do exactly as I say, as will all the other soldiers we have. Don’t worry, she’s said it won’t hurt.”

“No…” the Borelian interrupted, the fight suddenly out of her. “Don’t let that happen! I don’t want her in my mind! I’ll do what you want.”

Neil hesitated. “Perhaps, but I have no guarantee. And that is just not good enough for me. My objective is more important than your mind.” He looked to the Inquisitor. “How long will it take?”

“The last one took just over an hour,” she said, stepping forward as the Borelian tried shrinking back. “I don’t think this one will be more difficult.”

“Report back to me when it’s done,” he said, turning away. “And good job.”
Ignoring the sounds of the Borelian roaring in protest before being abruptly cut off, he began making his way back to the camp with Adam. “Think this’ll work?”

“If the Inquisitors do their job, it will,” Neil said. “I intend to make this a test run. See how much we can get away with here. The Sargons are the priority, however, and we should move to remove them as soon as possible.”

Adam nodded. “Think we can make it look like an accident? Or take a Sargon over?”

“An accident? Possibly. Take one over…no,” Neil recalled what he’d been given. “Sargons have their own version of Manchurian Restraints. Besides, I wouldn’t risk keeping one alive. But I am hoping with our newly acquired Overseer, we can lure them to places of our choosing.”

“The others might catch onto that,” Adam grunted as he patted the hound on the head. “Especially if it happens twice in a row.”

“Which is why we ideally take control of another Overseer,” Neil said. “And launch the ops to kill the Sargons at once. With three Inquisitors and ADVENT’s best snipers, we can pull it off.”

“All at once?” Adam asked thoughtfully. “We’re not exactly an army.”

“We don’t need to be,” Neil said. “We just need a few good men and women to be at the right place at the right time.”

“I’ll take your word for it,” Adam looked around the forest as he saw the camp coming up. “I don’t suppose we’ll be having something different to eat tonight?”

“Fresh Borelian meat,” Neil chuckled. “Some of the guys are actually going to try it. Your dog can have what’s left.”

“Ugh,” Adam was probably grimacing under his helmet. “Something just seems wrong about that.”

“Well, that’s what rations and deer meat are for,” Neil patted the man on the back. “But we all do what we must to survive, and aliens are as good a food source as anything. It’s not like it’s cannibalism.”

“Technically.”

Neil smiled. If their biggest arguments were what to do with the corpses they had, then so far things were going well.

Now they had to wait and see how well the Inquisitors had done their jobs.

ADVENT Diplomatic Command - Switzerland
1/12/2017 – 9:19 A.M.

“Polls are looking quite promising,” Kyong said as they reviewed the latest international and diplomatic news of note. “The Royal Family coming out in support of joining ADVENT has greatly boosted the popularity of the referendum.”

“Prince Mason came through,” Saudia nodded approvingly. “Worth the concessions I gave him.”

“For certain,” Kyong agreed. “And I would argue that those ‘concessions’ will improve our
reputation and military further. In fact, I believe Hassan is already developing a number of diplomatic avenues exploiting our dedication to preserving and protecting the culture of nations and our species. And Laura receives her melee unit for the military without having to rely on the Lancers.”

“A win-win for everyone involved,” Hassan said with a smile. “Are you sure you weren’t a diplomat before becoming Chancellor?”

Saudia thought back to her time in EXALT. “Not formally, but I was...good...at having opposing parties come together for a shared goal. That skill has served me well.”

“I believe we’ll need it in the future,” Hassan said. “You’re developing something of a reputation among the diplomatic community, both in and out of ADVENT. People are beginning to realize that when you become personally involved, things happen. Usually good things.”

“The details I leave to you, Firdaus,” she said inclining her head. “But I’ve found that people are more amenable to offers if they’re treated as equals. Respect goes a long way, especially when bringing nations into the fold.”

“Speaking of which,” Hassan pushed over a tablet. “We’ve got several interesting offers on the table here. Take a look. The Referendum, and the Seoul Massacre are shaking everything up.”

Saudia picked up the tablet, read it briefly, then looked to Hassan with a raised eyebrow. “Greece, Italy, and Poland want to talk about potential integration into ADVENT. That is...a pleasant surprise. This all but shatters the EU once and for all if it happens.”

“Yes it does,” Hassan nodded, lightly smirking. “Which is why some of them are using their positions as leverage. They are going to want certain amenities in exchange for joining ADVENT.”

“As long as they don’t want exemption from laws,” Saudia nodded. “So what are they?”

“Greece is in...some financial troubles,” Hassan began. “I’m sure you’re aware of them. They want us to cover any and all costs of leaving the EU, as well as settle any debts they have. I’ve passed the numbers to Jasmine and she’s looking at the best way to go about this while ensuring we recover quickly. It’s certainly feasible though.”

“And the other two?”

“Guaranteed protection, mostly,” Hassan gave a humorless smile. “Modern ADVENT tech, weapons, amenities; what they would get regardless. Of course I said we could provide it, but we can let them think it’s a concession we are making.”

Saudia smiled back. “Of course. This shouldn’t be too difficult. Have we heard anything from the SAS?”

“Nothing yet,” Hassan shook his head. “Which is...surprising. Not even an acknowledgement, and ADVENT Intelligence has been having trouble getting eyes there, which is another concern. I feel there is more going on there than we think?”

Saudia grimaced. “Alien involvement?”

“It would make the difficulties Intelligence is facing explainable,” Hassan said slowly. “But I can’t say for certain. Betos did know quite a lot about the inner workings of ADVENT, although now her information is significantly out of date.”
“I’ll have to speak to Elizabeth about that,” Saudia said, thinking. “We have Inquisitors now. If they ultimately penetrate or not…it will reveal a great deal.”

“In the meantime…” Kyong looked to his own tablet. “Further talks with the Chinese are upcoming. They’ll be wanting some more of our technology, especially since they’re helping us with our own AI projects.”

“We can likely spare some technology,” Saudia said. “Feng has finalized ETC weaponry, which would provide a massive boost to the Chinese specifically. Not on the level of standard ADVENT weapons, but enough to protect themselves.”

Hassan frowned. “Sorry, what is this?”

Saudia rubbed her forehead. “Honestly I only remember that Feng said it would make our arsenal of previous generation weapons relevant again. You’ll want to speak to him for a better idea, but I do know it will allow us to produce weapons for our militias and stockpiles fast enough to make sure every city can protect themselves within months.”

“I’ll speak to him about it,” Kyong nodded. “Now, there is one more thing I want to bring to your attention, which I believe could potentially give us a significant diplomatic advantage going into Africa.”

“Besides the alien threat?” She asked rhetorically.

“Yes,” Kyong said, pressing the screen on his tablet several times. “This was sent by the Environmental Development Team of R&D. Project Greenwall. Have you heard of it?”

Saudia shook her head. “No, not that one.” It was not especially surprising she didn’t hear about it, there were a multitude of projects that were being worked on that she only knew the basics of, if anything beyond that. Only major projects or ones with something to show were ones she knew of. Project Greenwall was not one of them. “What is it?”

Saudia just raised an eyebrow. “Really.”

“It isn’t quite as crazy as it sounds,” Kyong explained. “The proposal is extremely thorough. Creations of artificial lakes and controlled flooding, planned forest development and soil creation, controlled livestock deployment and grazing, and plans for excavating and utilizing the excessive amounts of sand, especially in the Sahara. It’s not necessarily that the technology is demanding, rather it just requires manpower, time, and dedication.”

“In theory that is possible,” Hassan said slowly. “But the scale of it…it would be one of the largest projects undertaken in Human history. With no actual guarantee it would actually work.”

“It is a large project,” Kyong said. “However, it would be a unification project, one spanning countries who would work together to better the entire continent. It would also allow these nations to contribute themselves, and feel like they are making a difference. This is especially potent for civilians.” He paused. “In more practical terms, this makes Earth more habitable, and will be an exceptionally powerful tool we can use to appeal to nations to join ADVENT. This would partially be a PR stunt…but a substantial one.”

“You’re saying we offer this, without requesting integration into ADVENT?” Saudia frowned. “I don’t agree with that. If they wish to benefit from ADVENT, they should join themselves. Should we fix Africa for them, they have no reason to join us.”
“Let’s be honest, Chancellor,” Kyong said. “The world will eventually be under ADVENT control. It may be five or fifty years, but it will happen. Doing this, no strings attached, could speed up this process and make ADVENT more appealing. If we’re seen to be willing to do this to non-ADVENT nations, imagine what it is like within our own borders?”

“There is the slight problem of this happening during an alien invasion,” Saudia pointed out.

“This would not be a military project,” Kyong reminded her. “It would primarily employ mostly civilians, with ADVENT oversight of course, and focus on involving the local country and economy which it takes place in. Contributing to the war effort is important, but not everyone necessarily needs to do so.”

“There is something that could be done as a trial,” Hassan said, who had most likely also downloaded the document on his tablet. “The project calls for the proof of concept to be done in the Middle East, a smaller area to work with which could prove the viability of it.”

“An area that is fully under our control,” Saudia mused. “And in the process of reconstruction.”

“A regional project might have positive ramifications,” Kyong said. “Something on this scale would tighten the bonds between the nations, as well as ADVENT. It would give the civilians something to do that directly benefits them.”

“Of course this would likely take years to be fully realized,” Hassan said. “But I imagine within half a year we could see immediate improvements.”

Saudia thought for a moment. “Send this off to Tygan, Munju, Jasmine, and Marshall. Laura as well. If most of them sign off on it, let the trial run start. Add your own signatures if you wish. It could have merit, but I want other opinions. Inform the author of this project to be prepared for detailed inquires.”

“Yes, Chancellor.”

While Saudia did wonder if this was something ADVENT would end up doing, she was certainly going to make sure that if they won, this project would be accomplished. If nothing else, ADVENT didn’t lack ambition. It would do good for the world to see that ADVENT was capable of changing the world legitimately for the better.

Of course, some might argue that the removal of an ecosystem was similarly destructive, but Saudia did not consider the loss of a desert a major loss. The wildlife would adapt or die, but the overall habitability for Humanity would rise.

More importantly, this might be the first step towards experimenting with terraforming. Earth was the first test, and if they could successfully alter the Earth, other planets in the galaxy would soon follow.

Perhaps this project would ultimately prove beneficial during the war after all.

***

ADVENT Military Base, Busan – South Korea

1/12/2017 – 10:10 A.M.

He was far from back to normal, but he supposed that having ruled out suicide or alien murder as an option, he could consider it an improvement. Enough for him to function, at least. Duri was just
going with the flow at this point. Easier to fall into a routine. Do what they say. Speak to the counselors. He didn’t know if they actually cared, but they at least put enough effort in to seem genuine.

Sitting under an overcast sun as ADVENT continued construction in the background, Duri kept reading the documents the consular had given to him. Physical documents, she’d said he would be able to focus more than just putting them on a tablet. Whatever the validity of it, he did like the feeling of something real in his hands.

“Didn’t expect to find you here,” Duri glanced behind him to see Nobuatsu walking up. Not too much of a surprise their medic was keeping an eye on him. Out of all of them, he’d likely been the most concerned with Duri doing something drastic. “Last time you went missing-“

“You don’t need to worry,” Duri reassured him. “I’m past that point.”

“Still,” Nobuatsu took a seat on the same bench. “At least tell one of us. Not a good sign when none of us know where you are, and our first instinct is…not anything pleasant.”

“I’ll do that,” Duri promised, then sighed. “Sorry, I’ve…not been a good officer lately.”

The medic chewed his lip. “With what you went…what you’re going through, I’d be more personally concerned if you hadn’t reacted. Don’t apologize, just…keep us informed.” He nodded to the documents in Duri’s hand. “Stuff the counselors gave you?”

“So say,” Duri answered, glancing back down at them. “Whatever the Battlemaster says, the Collective was behind this. Aliens. The only way to get some measure of justice is to destroy the Collective.” He pursed his lips. “So I need to learn about the aliens. Most of these are descriptions and information about them. Their biology, organizations, cultures, government, politics. The defectors are useful for something, at least.”

“And you’ll use it to fight them better.” Nobuatsu nodded. It wasn’t a question.

“To start with,” Duri answered. “But I’ll know what will hurt them the most. Understanding how they think will be the first step to destroying everything they care about. I don’t need to strike the killing blow, but when I get the opportunity, the aliens in the Collective will suffer.”

The medic chewed his lip. “Assuming ADVENT will allow you.”

“ADVENT?” Duri snorted. “They won’t mind how we kill aliens. They certainly aren’t going to feel sorry for them. We don’t need to stoop to their level to make their lives hell.” He placed a finger on the paper. “It takes very little to break Vitakarian lines. Explosives and long-term weaponry shatters morale quite easily. Mutons are fodder without leadership. The Collective can’t handle chaos without degenerating further. It’s like they’ve never actually fought a war before.”

“I don’t think they have,” Nobuatsu agreed. “Well, I don’t think the Vitakarians or Mutons have.”

“Andromedons seem to have experience,” Duri recalled. “Their own history is quite interesting. More so than I expected. But even they were best at space guerilla warfare. Open battlefields are not their forte. Don’t ask me about the Ethereals. Most of what’s on them is restricted.”

“Well,” the man gave a wan smile. “The Ethereals don’t have a good track record for wars, otherwise there would be a lot more Ethereals to worry about.”

“In any event,” Duri set the papers down. “They’ve suggested I look into applying for genetic modification.”
Nobuatsu blinked. “I thought that was only restricted to special forces and essential ADVENT positions?”

“It is,” Duri said. “For now. They’re fast-tracking the construction of what they’re calling Gene Therapy Clinics. There are two kinds from what I’ve heard: Civilian, which is more for handling hereditary diseases and pre-birth genetic manipulation. Then there’s Military. That has the actual combat mods. Iron Skin. Enhanced Eyesight. Organ Redundancy. Supposedly ADVENT is going to make a big push for even the lowest soldiers to be modified.”

He whistled. “Can they even keep up with all of that?”

“Don’t know,” Duri admitted. “It’s ADVENT, so I wouldn’t say it’s out of the question. The point is that because of my…focus…he suggested I look into it, and if I agreed, I could be one of the first.”

“Are you planning on it?”

“I’ve got nothing to lose,” Duri said with a shrug. “And if it helps me kill more aliens, I’m not going to turn it down.” He sighed. “I doubt my wife would have approved. She found the idea…unnatural. She’s probably right, but if becoming something unnatural is an advantage, then I need to take it.”

“Understandable,” Nobuatsu nodded. “I’ll admit, the idea intrigues me as well. Whenever one of these clinics are built, I’ll likely look into it myself.”

“Hopefully they build them sooner than later,” Duri said as he looked back to the ADVENT personnel continuing to fortify in the distance. “This lull will not last forever.”

***

ADVENT Military HQ - Switzerland

1/12/2017 – 3:00 P.M.

“Let’s get down to business.”

Saudia was more than happy to begin, as they had a great deal to discuss. There was a great deal of projects and plans the military had to take into consideration, and every member in the room had an important role in making sure everything successfully came together, as well as had the necessarily clearance to know what ADVENT was planning and the full scope of their operations.

Laura’s own inclusion was obvious, and she was, as far as Saudia was concerned, the lead on this meeting. The military was her domain, and Saudia was here to ensure that everything was reasonably proposed and planned. The additional men she’d also brought along were Ravi Kapadia, the Chief of Military Logistics and vital part of keeping the war machine stable, and Robert Groves, Director of the newly implemented Superweapons program of ADVENT.

Saudia had raised her eyebrow when she’d seen the division proposal several weeks ago. Since Laura had brought him along, she assumed it was for a good reason. But it was a reasonable proposal, as she suspected they would need superweapon-level technology to ever hope to beat the Collective, much less kill the Ethereals.

“Where do you want to start?” Saudia asked, resting herself above the holotable. “This is your meeting.”
Commander Christiaens cleared her throat and motioned Ravi forward. The Indian man had seemed slightly nervous when they’d been introduced, but he composed himself well enough now. “First, an update on Project Atlantis.” The holotable flashed and showed a blue simulation of the ocean floor, along with some construction equipment and half-finished buildings. “Construction is proceeding, and with the construction Gateway Network established, we’ve ensured that it’s unlikely the Collective will realize what we’re doing for quite some time.”

“But they still could?” Saudia noted.

Ravi coughed. “There is always that risk, Chancellor, but with the precautions we’ve taken, it will severely hinder them. Aside from the initial staging team, there have been no further physical operations in the areas where Project Atlantis is taking place. The facilities shipping the materials do not know where they are going, or what they are used for.”

“The fleets themselves are also unaware,” Laura added, pointing as the hologram shifted to a 3D plane to show the surface and the construction far underneath it. “I’ve scheduled a rotating patrol for multiple fleets, so while there will almost always be some level of surface protection, it will appear completely normal.”

“Once construction of the facilities is finished…” Ravi paused. “Phase two will begin; relocation of the engineers and architects to Atlantis. Nemo Protocols will be established to ensure no contact with the surface. All necessary communication with the project will be done in person – no physical or digital documents should be shared with the surface. We have to anticipate the Collective will attempt to improve their penetration capabilities or utilize psionic observers.”

“Nemo Protocols include Manchurian Restraints?” Saudia asked, though she suspected the answer.

“Absolutely,” Ravi nodded. “Minor ones, but we can’t take chances here. The fleet will be quite possibly our best chance of surprising the Collective. Even if they do discover it, if we can prevent them from knowing what Atlantis is for, we still have a chance.”

“And these engineers,” Saudia asked. “Have they begun outlines for the fleet?”

“Indeed,” Laura pressed a button on the holotable and several schematics popped up. “There are isolated teams who’ve been tasked with designing one ship of the eventual fleet with certain parameters. At the moment they’ve been led to believe that construction will take place in remote locations, possibly in the Middle East or South America. Perceptions we have reinforced with false references and documents to throw off any Zararch penetration.”

“Ideally, we want production to begin immediately after the factories complete,” Ravi added. “Hence why the Engineering teams are developing proofs of concept for spacecraft. Nothing resembling a working ship…yet. But considering at best the basic facilities for Atlantis will not be complete for a minimum of three months yet, they have time.”

“Time to also begin implementation of what will be our newest iteration of our Naval Forces,” Laura said. “I’ve requested the Seatrooper Project be sped up, using the reasoning of exploiting an area of Earth the Collective does not have a notable advantage in, to further expand and update our naval forces, and to provide a counter to the Andromedon Aquatic Forces and possibly the Sar’Manda in the future. That is the official justification.” She looked Saudia in the eyes. “Unofficially, the reason is to protect Atlantis from any Collective attack. If they learn about it, and decide to attack, I want them to run straight into an army under the sea.”

Saudia remembered the proposal. “Then I suppose development will focus on the Depthtrooper prototype?”
“Yes and no,” Laura said. “The standard Seatrooper will be given the media focus, one which Feng is all too happy to perpetuate. But yes, the bulk of development will be on the Depthtrooper units, as well as the proposed Atlantis Guard and Neptune Explorers. The Atlantis Architect proposal has already been largely implemented since construction has begun, but it will be refined.”

“Good,” Saudia nodded. “You have my approval to take any measures you feel are necessary to ensure the success and secrecy of this project. Send over whatever documents you need me to sign.”

“Excellent,” Laura nodded to Ravi. “Continue.”

“Of course,” Ravi switched the hologram once again to show a map of the world. “The vital components of the Gateway Network are officially up and running. We have Gateways at all major zones of potential conflict, major government facilities, and major military bases. In theory we should be able to reinforce areas like Busan, Seoul, Tokyo, Vegas, and more near-instantly…with infantry, admittedly, but it will be enough to buy more time.”

Saudia nodded. “Good news. And the network is secure?”

“As secure as we can make it,” Laura pursed her lips. “Aegis has assured us that they are impossible to hack unless one knows the connection numbers. As long as those are protected, and protocols are followed to prevent any unauthorized Gateway from connecting…yes, it should be secure.”

“We have two options for immediate expansion,” Ravi continued. “We can continue to place Gateways in every major city, and soon all across the country, or we can utilize the Gateways in a more…revolutionary way.”

“How?”

“Logistics, of course,” Ravia smiled thinly. “The Gateways have provided us a way to immediately stock, resupply, and speed up the utilization of essential components and equipment. What would take days to arrive at our bases could be done instantly as soon as production has finished. No risk of interception, no risk of being lost, the traditional targets of supply lines would be completely removed from the equation. We don’t have to rely on transportation to support our facilities any longer.”

That was something Saudia had to admit was a significant advantage. Supply lines were usually easy targets, and she could only assume the reason they hadn’t been targeted yet was because the Collective might not have actually considered it. “The only issue is the size limitation,” she pointed out. “The Gateways are not large enough for significant quantities at a time.”

“Yes, it won’t remove supply lines immediately,” Ravi admitted. “But I can assure you that for most pieces or packages, it can work and will ultimately be faster.”

“Then focus on that,” Saudia said. “If the essential part of the Network is complete, then focus on improving the logistics. I do want expansion on secondary bases to continue, but at a pace which is feasible.”

“Of course, Chancellor.”

“Thank you, Mr. Kapadia,” Laura nodded. “Before we move on, we should briefly discuss something which does affect all of ADVENT, not just the military. EMP attacks, specifically. Treduant’s stunt was useful and exposed a major weakness in the Collective…and ourselves, for
that matter. I doubt it will take time for the Collective to realize this.”

“The Blackout Protocols,” Saudia recalled the initial plans ADVENT had developed after D.C. had been attacked. “I agree. EMP hardening for our vital systems is essential, as well as preparing for any of our forces coming under this attack. Feng has said ETC weapons should help mitigate this too.”

“I suspect we’ll want to try this tactic again,” Laura said. “But it shouldn’t hinder us like it did last time.”

“Pass it along to Infrastructure and Engineering,” Saudia said. “The protocols in place are sufficient for now.”

“And I am planning to put into motion another branch for the Army,” Laura continued, sliding a tablet towards her. “Or a kind of special forces if you prefer. The trenches are likely going to be copied by the aliens, and with it the same strengths and weaknesses. Namely that they are confining, and properly equipped soldiers could cause massive havoc if they managed to get into the line.”

Saudia looked down at the document with some interest. “Stormtroopers.”

“No, it wasn’t based off of what you’re thinking,” Laura said, almost rolling her eyes, picking up on her lightly teasing tone. “Or did you not know of the actual German Stormtroopers?”

“Of course I do,” Saudia said. “Though only the name.”

“They specialized in exactly what I described,” Laura said. “In World War I they were responsible for infiltrating and raiding trenches. They caused a significant amount of havoc and death for the Allied Forces, and I want to have some good come out of that idea. Turning this idea against the aliens would be fitting.”

“Wouldn’t this fit closer to the Order of Terra?” Saudia pointed out.

“The Order will be better for sustained and major assaults,” Laura countered. “These would be independent missions, more focused on chaos and sabotage than outright victory. They’ll be mobile, few, and heavily armed. Surprise is more important than protection. It would be a dangerous position, but it would have a valuable role.”

“I can see them working closely with the Order as well,” Saudia noted. “Especially when sweeping and clearing buildings.”

“Yes, they would complement each other well,” she agreed. “But I want to have this ready to go when the aliens end up stealing our idea.”

Saudia smirked. “It’s amusing that they would take ideas from such a primitive species. They probably hate it.” There were several chuckles at that.

“Speaking of dangerous weapons,” Laura finally motioned the final man in the room forward. “Director Groves, of the Superweapons R&D.”

“A pleasure, Chancellor.” Unlike Ravi, Robert Groves seemed fully comfortable around her, and had an air of confidence around him. “I’m pleased this department was opened in the first place.”

“I suspect it will be needed,” Saudia nodded.
“Indeed,” Robert nodded, scratching his beard. “While I’m not certain that ‘superweapon’ is the best description of what we are doing, it is sufficient. I would personally define it as the development of large-scale offensive and defensive systems and delivery mechanisms for the purposes of protecting ADVENT and quashing the alien threat.”

Saudia raised an eyebrow. “Meaning?”

“That we are capable of far more destructive capability than the Collective wishes to believe,” Robert said with some smugness. “We have nuclear weapons, of course. But sadly, no major leaps of similar scale have taken place in decades. Already we are capable of producing salted nukes, a devastating weapon which most would be understandably hesitant to use on our planet. However, we are working on the means to make these weapons of destruction more… practical.”

He pressed another button, and the image of a missile with some accompanying text appeared. “Project Telum Ignis, which is something of a continuation of Project Casaba-Howitzer, which itself was a refinement of Project Orion, both of which were US Projects that have been in various stages of implementation. Casaba-Howitzer was never technically ended, but in the past couple decades the focus was shifted to other projects.”

He raised a finger. “Now, you may be wondering what the project was. To shorten the story, Project Orion was the investigation of using nuclear bombs to propel a spacecraft, and in this process discovered how to focus a nuclear blast into a narrow cone. They immediately realized it could be used as a weapon, and from it Project Casaba-Howitzer was born to explore this idea of a nuclear directed energy weapon. I’m pleased to say that Project Telum Ignis is on track to perfect it.”

The hologram continued in a simulation which showed the nose of the missile exploding and firing cone-shaped blast in front of it. “The benefits of nuclear power without as much collateral damage,” Robert continued proudly. “This is, admittedly, something that is most useful on large or stationary targets. Military bases, capital ships, but I can assure you that it will vaporize anything in its path. Even better, it’s far less powerful than standard nuclear weapons due to requiring much less power to focus it. Any fallout, even if used on the ground, should be negligible in the long run.”

“You foresee this as an anti-spacecraft weapon?” Saudia asked.

“I foresee it as an anti-target weapon,” he clarified. “Aim this at something, and it will annihilate it. But I understand what you are saying. I see these being exceptionally useful against alien bases, medium-sized spacecraft, and space stations. I say specifically these because they don’t move much, if at all. If they detect it ahead of time, smaller craft and priority targets could get out of the way. The focused power of the missile does diminish the radius. At the moment, this weapon is called the Atomic Lance. We are preparing to build prototypes to test, but simulations are extremely promising.”

“You want to test it,” she said. “On Earth.”

“Yes,” he said immediately. “Preferably against an alien installation.”

Saudia exchanged a glance with Laura. “I’ll look into it. Continue your development in the meantime. Good work.”

“I have one more project to share,” Robert said, raising a hand as he switched the hologram with his free one. “This one is slightly more… ambitious and risky. But it could in theory prevent anything from entering our planet.”
Intriguing. “Continue.”

A hologram of the globe appeared. “Project: Nanosphere.”

Ravi pursed his lips. “You were right when you mentioned it was risky.”

“As it sounds,” Robert continued. “This involves nanites. Specifically ones designed to be released into the thermosphere and maintain an orbit around Earth. They would be launched via rocket or railgun, and simply float…until they encounter foreign material. They would begin disassembling the foreign objects and replicating to add to the greater Nanosphere.”

The hologram showed several red dots which floated around the globe. “This serves us twofold,” he explained. “It will first help clean the atmosphere and orbit of the amount of space junk that exists, and destroy any alien craft that comes into our atmosphere, provided there is a nanite swarm in the area. It would need a significant amount of nanites to be effective, but we’ve calculated an amount that will be enough to begin the process to saturation.”

Saudia smiled grimly at that. The idea was certainly appealing. However, there were some obvious questions. “I assume there is a means by which we would be able to pass through? We do not want to be trapped on our planet.”

“Of course,” Robert quickly assured her. “There are three methods. The primary one will be the development of an IFF which all ADVENT spacecraft, satellites, and other personnel will broadcast which will negate the Nanosphere in a certain radius. Alternatively there will be a kill switch for multiple parts of the Nanosphere, and it is highly susceptible to EMP attacks. And for those concerned about nanites falling to Earth and replicating…if they somehow fell out of orbit, they would be burned up upon reentry.”

He motioned to the hologram. “This is not an especially difficult project, but nanotech makes people hesitant. But Nanosphere takes the risks into consideration, and those are far outweighed by the benefits this provides.”

“Put this into production immediately,” Saudia ordered. “This is the kind of work I want to see. Excellent job.”

“Thank you, Chancellor,” Robert inclined his head with a smile. “We will not disappoint. You will receive a full implementation plan by the end of the week.”

“I look forward to it,” she said, looking around. “Unless you have something to add Laura, I believe this covers everything important. Good work everyone, meeting adjourned.”

***

ADVENT Intelligence Outpost, Brasília - Brazil

1/6/2017 – 6:11 A.M.

“So you haven’t really done anything?” Abby asked blandly at the Intelligence operative opposite her. “Why?”

“Because quite frankly, we’ve had better things to do,” ADVENT Intelligence Officer Silvio Andrade answered in near-frustration. “The terrorist attacks were bad, yes, but they didn’t really leave anything behind, and more importantly, there haven’t been many attacks since, or at least none of that magnitude.”
Abby pursed her lips. “Psionic attacks were reported, correct?”
“Correct.”
“And these terrorists probably didn’t want to found, correct?”
“Most likely.”
“And there were reasonable reasons to focus on other operations instead of hunting them down, correct?”
“We were dealing with an illegitimate invasion, the removal of the de-facto leader of the country, and Operation Sherman was starting. Yes there were better things to focus on.”
“Right,” Abby said. “So how out of the question is it that these terrorists used their seemingly considerable skill in telepathy to…redirect your attention?”
Silvio opened his mouth to answer, suddenly closed it, and frowned as he thought. “That…is a good point…”
“I’m assuming ADVENT Intelligence thought the same,” Abby said, crossing her arms. “Or maybe the Commander figured out something was off about the response. Either way, I’m going to help put this matter to rest. I’ve requested several Inquisitors to assist in this operation, as well as the Military Branch of the PRIEST Division on call should we need them.”
Silvio appraised the younger woman opposite him. “I’ll make sure we get what is needed. It sounds like you have a theory about this.”
“I do,” Abby pulled out a beige file from her bag and slid it across the table. “Reviewing the initial reports, and speaking with Aegis, it’s very likely that there is an Ethereal behind this. One by the name of Nebulan.”
“Shit,” he cursed as he took the file. “Didn’t think it would be that bad. Anything beyond guesswork?”
“This particular Ethereal is a master illusionist,” Abby said as he read. “More than capable of affecting three separate attacks, and also capable of making sure they aren’t investigated. In fact, this wouldn’t be the first time she’s done it.” She quickly raised a hand. “Don’t ask. Classified. The point is that this fits her methods, and explains why no one immediately launched an investigation into a psionic attack.”
“Well then,” he let out a sigh. “I can say right now that my confidence in taking down an Ethereal is not especially high. I can safely say we aren’t prepared for it.”
“Things are different now,” Abby reminded him. “We’ve got our own psions and the Manchurian Restraints. She won’t be able to pull it off this easily again.”
“I suppose the question is what she’s doing,” Silvio mused. “Using disenfranchised Humans or just dominating them? For what?”
“Using them,” Abby suggested. “A means to an end. Plausible deniability to an extent. Possibly using Argentinian and Brazilian nationalists and separatists. ADVENT isn’t popular in Argentina, especially after Uruguay, and Marshal Luana didn’t help the image during her brief control. Recruitment wouldn’t be hard for a telepath.”
“What are the chances that the Argentinian government is compromised?” He wondered.

“Don’t know.” Abby pursed her lips, propping her chin on her hand. “But we should establish that she probably is in Argentina before we investigate, if she’s even on the continent at all. I want everyone who’s been assigned to this case so far, all here, and I also want a Savoraim or Qalandar specializing in memory alteration or telepathy.”

He furrowed his eyebrows. “What?”

“Research Branch of the PRIEST Division,” she quickly recounted. “Savoraim and Qalandar are research positions. I first want to know if I’m right and Nebulan did tamper with this investigation.”

“I’ll request them,” he promised. “As well as everyone already working on this. Give me and them a couple days to get here and sort everything out. In the meantime you can talk with the people here now.”

***

**ADVENT Infrastructure Modeling and Research, Berlin – Germany**

1/13/2017 – 9:58 A.M.

This was, Saudia believed, the first time she had actually visited the Modeling and Research facility of the Department of Infrastructure. It had been one of the first buildings repurposed for this specific purpose, which she recalled was experimenting with means of infrastructure, since after all, they wanted to improve it and not simply stagnate.

Thus the Department of Infrastructure included many scientists, in addition to engineers, among its ranks. While anything relating to infrastructure would be a large investment, Saudia was quite happy to do it if the results were of the quality she expected. She didn’t have issues sinking what would be millions of dollars into experiments that wouldn’t always work.

She knew they wouldn’t be wasted on anything frivolous or clearly unworkable. These people knew not to abuse ADVENT’s generosity.

A benefit of having the largest economy in the world, and complete control over a currency the Collective was only too happy to provide them. Ironically, each battle was helping to replenish any funds that were lost. Jasmine had a better handle on the economy than she did, so she trusted that it wasn’t going to collapse anytime soon. Appropriate taxation was certainly another contributor to their economic dominance.

“Chancellor Vyandar, welcome!” A thin British man greeted her, accent more pronounced than most British people she’d interacted with. “There is much to show you!”

“Lead the way, Mr. McNeil,” she motioned forward as they began walking through the fairly open facility. Frederick McNeil, Head of the Department of Infrastructure, architect, project manager, and visionary. He’d been a heavy proponent of looking to future solutions for aging infrastructure, although until recently even he had trouble securing the necessary funding.

That was fortunately not a problem any longer.

“I see your teams have been hard at work,” Saudia noted as they walked, seeing the rooms
organized by project type and clearly marked with directions and maps placed throughout the building. Not especially pretty, but highly practical. “I’ll let you decide what to show first.”

“Yes, of course,” the man adjusted his glasses as they made a turn. “There are three main areas of focus: Economical, Military, and Civilian. I will start with the less impressive, which is the Economical portion.”

“I’m hurt,” Saudia said lightly. “With the amount of money we’re giving you, you don’t need to try and conserve it just to make us feel better.”

McNeil luckily chuckled. “Trust me, Chancellor, we’re spending your money. But to clarify: When I say economical, I mean something that can be developed, built, and deployed in a short amount of time without the need for exotic resources, while also reusing what ADVENT has no immediate use for.”

They stepped into a square room, which had several squares of bound-together cylinders of various sizes. There were several other personnel in the room, as well as several gauss weapons on the table. “Our first viable Economical project, Liquid Barriers.”

“Are those tanks filled with water?” She asked.

“Water certainly works, but in truth you could theoretically put anything into them,” McNeil clarified. “However, the idea started based on the fact that projectiles are slowed down significantly underwater. So we put together some cylinders made out of inexpensive metal, filled them with water, and shot them.”

“And it worked?” Saudia asked.

“As in it stopped the projectile? Yes.” McNeil motioned her to one of the cylinders. “Obviously it doesn’t stand up well to a sustained attack, and grenades decimate them. But if you want a fast way to defend or reinforce an area, these will provide an extra layer of protection.” He raised a finger. “More importantly, it can be a means to dispose of certain unwanted materials. Black water, which is sewage, works just as well as pure water, and sand is also surprisingly effective. Sand actually works best against laser and plasma weapons.”

Sand. Well then, perhaps there was one use for the large amount of sand that was going to become available soon. “What about repairing it? Going out into the crossfire does not seem wise.”

“We thought of that,” McNeil put his hand on one of the handles she now saw built into the cylinder, and turned it so the outside was now facing them. “Complete 360 degree repair. Can be repaired and refilled from the safety of the barricade.”

Saudia nodded. “Good. This can be used to fortify civilian cities and areas without much current defensive capability. Possibly will save lives, and can be incorporated into established defenses. Viable; send it to Commander Christiaens to see where she wants to integrate them.”

“Certainly.” he nodded, already moving to the next area. A few minutes later they were in an area which was noticeably cooler, and Saudia saw quite a few models of buildings and larger test walls and systems in the experimentation rooms.

“Military Infrastructure R&D,” McNeil said proudly. “What I hope to say is the future of ADVENT military infrastructure. I believe you’ll be pleased with what we’ve developed and discovered.” They first stepped in front of a block of what Saudia first thought looked like silvery foam. Which is to say, full of holes.
“This was particularly interesting to us,” McNeil said. “CMF, or composite metal foam. Don’t let the appearance deceive you, this is one of the toughest substances we’ve developed. The air bubbles, which you see, actually are highly important to this material. They are essential for CMF absorbing impacts and heat, since they don’t just ricochet off the metal, but instead can shatter on impact.” He motioned. “See if you can lift it.”

Saudia frowned, but complied. To her surprise, she was able to lift the metal block up, even if it wasn’t exactly light, it wasn’t nearly as heavy as she would have expected for something of its size. “CMF is light as well, thanks to the more porous nature of the material,” he continued. “Not to mention it ultimately saves resources. We can make two or three times the amount of CMF as traditional metal, since the process consumes roughly a third of the raw materials needed.”

“I see,” Saudia wondered what the drawback was. “And is there a catch to be aware of?”

“It takes longer to produce, as the metal itself needs to be bounded to a matrix element,” he said, which Saudia didn’t exactly know what he meant by that. “But I don’t believe there is a significant drawback other than the lack of high-volume production facilities.”

“So where do you see this being incorporated?” She asked.

He motioned her to a table, where she saw the standard design of an ADVENT Barracks building, only it was made entirely out of the porous metal. “For future construction of ADVENT military facilities, I’ve incorporated a layer of CMF into the design, further reinforcing them. But the material itself, Chancellor? Far beyond infrastructure. Vehicles, armor, shields, this has significant potential beyond my oversight. I’ve already informed the other department heads about this.”

“Good,” Saudia nodded. “If you have appropriate schematics, I can ensure the new facilities are built to the new standard.”

“Oh, I’m not done,” McNeil smiled, bringing her over to another model. “What you’ve seen is made solely from materials on Earth. When made with alien alloys…I believe we might possibly have something tougher than their own metals. This,” he pointed at the shield of metal. “Is CMF made out of pure alien alloys and hardened with an outer layer of MELD. We have yet to actually find a way to destroy it. While extremely resource-intensive, not even alien alloys have this much durability.”

“Well done,” she complimented. “No small feat.”

“Indeed, and there is a little more to show,” he motioned her to yet another model, though this one seemed built out of stone. “This is the results of Project Blackrock,” he said, extending a hand to the model. “An investigation into the potential advantages of using stone as structural armor. Diorite, Granite, and so on. The results were surprisingly positive. Extremely hard, high heat resistance, and not exceptionally difficult to find.”

He cautiously raised a hand. “Now, with that said, there are a few weaknesses. Heavy kinetic weapons and explosives can damage it, but on the other side it will render energy weapons near-useless.”

“How do you see it being used?” She asked.

“Preferably as exterior armor,” he reached to the model and picked it up, revealing there was a CMF model underneath it. “Ideally, the most important structures in ADVENT would have a concrete composite based on Project Blackrock, with a CMF layer of protection, with slabs of cut stone serving as exterior armor. An impenetrable fortress; further still if we wish to incorporate
He shrugged. “Otherwise, these can easily be cut into fortifications for reinforcing buildings and positions. The only challenges will be cutting and harvesting the required stone types, but with ADVENT supporting it, this can be an easily overcome challenge.”

Probably not as easy as he was suggesting, but Saudia quite liked the work he and his team had managed to do. “I’ll speak to Commander Christiaens about implementing all of this. Well done.”

“And for one final showing,” he said, exiting that room and continuing downward. “I have, of course, sent my proposals for new building standards for all new ADVENT infrastructure to account for EMP attacks. If nothing else, I would hope the specifications on generators and critical systems be implemented.”

“That will be done,” Saudia promised as they walked into what she assumed was the Civilian infrastructure development area. McNeil led her into yet another room, this one with a large, rusted pipe in the center. On the end was a sleek metal ring, but other than that, it looked like a standard sewage pipe.

“One of the largest problems in infrastructure is it breaking down and corroding,” McNeil said. “Be it from rust, algae, or other manner of corruption. Impossible to fully fix, too expensive to replace, and the best that happens is occasionally it’s kept from getting worse, or maybe someone shells out the money for replacing it. Worst case no one does anything and it breaks, costing more money and time.”

He tapped the end of the pipe. “However, that may not need to be a concern any longer. With the significant amount of advances in nanotechnology, we wondered, ‘why not apply this to infrastructure?’ So we worked on a nanotech system that ensures our piping and buildings remains pristine.”

He picked up a small remote, as the ring on the edge of the pipe flashed yellow. “Stand back, Chancellor,” he warned. “The nanites will consume anything other than the metal on the pipe. I don’t want you losing a hand. Watch.”

Saudia stayed well back as the ring flashed red, and she saw a congealed black-orange ring form, and began slowly, but noticeably, moving along the pipe. In the process, she saw, it consumed everything in its path. When it passed over a part of the pipe, all that was left was clean steel.

“The nanites operate on a whitelist program,” McNeil explained. “The metal of the pipe is what they are specifically directed not to consume. Anything else is fair game. They are precisely programmed, and will only go a specified distance down to the nanometer, and then immediately return.”

“Can they replicate?”

“No,” he shook his head. “They only break down what they encounter. They also are programmed to self-destruct after a half hour if they don’t return to the housing ring. There are kill switches for each ring as well, and their instructions can’t be modified remotely. We’ve taken precautions, Chancellor. The greatest risk this will pose is an idiot sticking their hand on it during the cleaning procedure.”

“And ADVENT does not support the idiots,” Saudia muttered. “Not a concern. Again, your team has outdone themselves here. I want these in major cities. Once those test cases have proven successful, we can justify an expansion to the rest of ADVENT. I’ll see this gets done myself.”
“I’m pleased you approve, Chancellor,” he said, inclining his head. “We both want the continued improvement of our species. It’s refreshing to work for someone with the same goal.”

“Trust me,” Saudia said. “It’s far past time that became the priority of everyone, not just the few.”

---

ADVENT D.C. Research Center, Washington D.C. – United States of America
1/13/2017 – 4:11 P.M.

Saudia looked up from the outlining document for Project: Green Lantern. “Normally I wouldn’t be opposed to a project of this scale, but this seems different.”

Tygan cleared his throat. “With all due respect, Chancellor, I can assure we have taken all… necessary…precautions to ensure the safety of the personnel involved.”

“And if this succeeds,” Dr. Munju added. “We have a weapon that will kill not just the Battlemaster, but any other alien that we face.”

“There is already a significant amount of interest in Gamma rays in the scientific community,” Tygan said. “Tapping into such interest seemed a prudent move, and the results of this project will undoubtedly serve ADVENT beyond the development of a powerful weapon.” He did pause for a moment. “Each researcher knows what they are involved in. This is a Manhattan Project for the war, Chancellor, one which could legitimately affect the outcome.”

Saudia sighed. “There are a significant amount of projects on the scale of the Manhattan Project. I’ll ascribe that comparison when it actually happens. Keep Green Lantern running and I want every precaution taken. I don’t want them blowing themselves up accidentally.”

“I suspect these people know what they are doing,” Munju suggested dryly. “We don’t recruit the incompetent, Chancellor. You know that.”

“That is true,” she said, clasping her hands behind her back. “ Speaking of which, I would know what else you have to update me on.”

“Thanks to XCOM, we have the means of producing plasma weapons,” Tygan said, consulting his tablet. “Dr. Mercado will have more on that for you. The science team, now that we have a more complete understanding of the nature of plasma, has begun more…extensive research. The respective team has been working closely with Dr. Mercado, especially in regards to the propulsion utilizations of plasma. I suspect you may know more about how that relates to the larger picture.”

For the fleet. Made sense, and she’d have to inquire as to how that was going when she spoke to Feng. “And you mentioned there was a breakthrough in regards to our energy output?”

“Indeed,” Tygan straightened his glasses. “Through the success of Project: Thursday, we believe that we have been able to turn Thorium into a nuclear fuel, almost bypassing the need for Uranium.”

Saudia raised an eyebrow. “And this means?”

“In practical terms,” Tygan said. “We can begin major development of Thorium reactors across ADVENT and, if not meet the energy requirements for the world, come significantly close.
Thorium is far more plentiful than Uranium, Chancellor, and we control the largest deposits in the world. We can sever our dependence on previous generation energy production and move towards fully renewable.” He coughed. “In addition, with the Uranium need being significantly reduced for reactors, more will be freed up for…military applications.”

“I will also add that it would eliminate a military vulnerability,” Munju added. “Once the Collective realizes that targeting oil hurts us, they will exploit it. While not invincible, transitioning to Thorium reactors will eliminate this particular weakness. The more we reduce our dependence on non-renewable energy, the better.”

“Agreed,” Saudia gave both men a nod. “Send this to the Department of Infrastructure. I’m sure McNeil will be overjoyed. Good work.”

“Thank you, Chancellor,” Tygan bowed his head. “If you would follow me, I believe there is something we can update you on.” She complied, and they walked through the narrow hallways of the lab, the pristine sanitary smell sticking out to her. The trio walked through another sliding door into a fairly small lab, but these had stacks of nutrient tubes along the leftmost wall.

Saudia stepped towards them, immediately seeing what was inside. “Are these…”

“Yes,” Tygan said, sounding slightly unhappy. He still hadn’t been on board with the project, but he’d nonetheless complied. “The first products of Project Seafoam. The first Human clones.”

They were little more than vaguely baby-shaped fetuses, but it was unmistakably a Human fetus. A sense of finality of the situation settled around here. They were growing clones. It was set into motion. Necessary, but hopefully it would not have the consequences of a Pandora’s Box. It was one thing to write and justify the need for clones.

But seeing the fetuses before her lent a sense of reality to what she’d ordered. “How far along are they?”

“In normal pregnancy terms, close to four weeks,” Tygan said. “However the growth has been…significantly accelerated. This is one batch being grown, at six times the development of a normal Human. Within six weeks it will almost be ready to be born from a normal mother. Within six months it will be close to adult size.”

“We are currently experimenting with how fast this can be accomplished without negative side effects,” Munju added, stepping forward as he looked over the rows of growth tubes. “At minimum we are aiming for one year from the start of the cloning process to soldier. Preferably less, but we can’t accept too much more. So we have multiple batches going at once.”

“And the learning programs?” Saudia asked.

“Will begin to be implemented at various stages of brain development,” Tygan said slowly. “I must stress that this project is proceeding far too fast for my liking. We will not truly know how successful we are or not until the first clones awaken. The learning modules should work in theory, but we again are experimenting with the best means of implementing them, either through chips connected to the brain, subconscious hypnosis, telepathy, Manchurian programming, you get the idea.”

“However,” Munju interrupted. “As far as growth speed, we should be able to determine that within several months. By then each batch will have been moved to an adult pod and we can determine if the speed had negative impacts.”
Tygan frowned. “We can estimate. We will not know until they awaken.”

“The important thing is that this has started,” Saudia said. “You’ve done good work, despite any reservations you have.”

“I will take some comfort in that,” Tygan said. “I trust they will not be abused, even if entire batches will inevitably be euthanized.”

“Unfortunate,” Munju grunted. “But that was always going to happen in this project.” He turned around, motioning her to a table behind the stacks of growth pods. “I do have some less heavy news to consider, Chancellor.”

She looked down at the table and saw another small model. One of a sleek design, open rooms with glass roofs, and within top of the line medical facilities, surgical pods, and the latest of all ADVENT designs. “I believe we have reached a point where we can formally begin opening civilian gene clinics,” Munju said. “And officially unveil the ADVENT Eugenics Division.”

Tygan grimaced. “I would caution using that word.”

“The public has become afraid of a word which has become tainted,” Munju sniffed. “Eugenics is certainly at its core not an evil word. It is the simple betterment of our species through genetic modification. You may not wish to call the cure of autism, hereditary diseases, and genetic mutations eugenics, doctor, but that is what it is.”

“Dr. Munju has a point,” Saudia nodded. “ADVENT is not the Third Reich or Imperial Japan. Our usage of eugenics will only be to remove the negative aspects of the Human genome while preserving the rest.”

“I don’t dispute your intentions,” Tygan clarified, still frowning. “But I do not see the reason to use that word where other, less offensive, terms would suffice.”

“Because it is the most accurate,” Munju snorted. “I suspect any public outcry will die down when people learn their children do not have to worry about diseases which have ravaged their families, or become afflicted by rolling badly on the genetic lottery. Mothers no longer need to worry about bringing children with mental disabilities into the world, or having that knowledge determine if they will keep or abort it. The perception on eugenics, Doctor, has been altered once before. It can be altered again.”

“As it stands now, the name will stay,” Saudia interrupted, not wanting to continue this debate. “So, the civilian Gene Clinics will be managed by the Eugenics Division. What of the military Clinics?”

“I was going to talk to Laura about that,” Munju said. “I suspect she will advocate for control over it herself, but she might let it be managed by Intelligence or Oversight to avoid the headache of it. At your approval, I can send it to Infrastructure to begin construction.”

“Consider it done,” Saudia nodded. “I’ll begin establishing the Eugenics Division in the meantime.”

“I sincerely hope you find an acceptable candidate,” Tygan said, grimacing. “This appointment should be handled with care.”

Saudia smiled, and patted him on the shoulder. “You’re at the top of the list. Think about it, doctor. You’ve earned a promotion.”
He blinked. “But my work here-”

“Will continue,” Saudia stated lightly. “Surely you don’t think that the Eugenics Division wouldn’t be heavily involved in cloning?”

He pursed his lips. “You make a good point, Chancellor. I will…consider…your kind offer. Although I would assume Dr. Munju is similarly deserving of a promotion.”

“You’re the geneticist, not me,” Munju gave a thin smile. “While the idea of conquering the Human genome is enticing, my skill set is more on exploring and researching the mysteries of the alien technology. As much as you hate to admit it, Project Seafoam is largely of your own hands. I’ve simply helped where needed.”

“Well, as I said, I will consider it,” Tygan repeated. “In the meantime, Chancellor, there is one final project I believe you will want to be appraised of.”

***

A few minutes later they were walking through a Gateway which connected to one of the ADVENT Mental Clinics. Specifically the one that housed many of the victims of Isomnum’s attack. Even now people were still trapped in mental prisons or completely broken psychologically. The terrible risks of fighting a psion made manifest.

The Mental Hospital was fairly bright with the white lights and walls, even if it was extremely cold, even compared to most hospitals. There were patients in rooms either unconscious, strapped as they suffered nightmares, or talking with psychiatrists. “I believe it was mentioned to you that there was a certain patient who recovered on his own,” Tygan said. “And there was a team wanting to study the phenomenon.”

“I remember,” Saudia nodded, furrowing her eyebrows as she glanced back. “Has something happened already?”

“Happened? I don’t believe so,” Munju interjected. “However, they did develop a specific plan and project outcome. Ah, there is the Project Director herself.”

They stopped in front of a short Asian woman with short black hair pulled back in a ponytail. Upon them coming, she dismissed whoever the doctor was who was speaking to her, and turned to face them fully. She was astonishingly young, if Saudia didn’t know better, she would guess this woman was at most in her early thirties, possibly just graduated with her psychology degree.

“Chancellor,” Munju introduced. “Dr. Emily Shodon, Director of Project Phobos.”

“A pleasure to meet you,” the young woman said with a smile. “I’m surprised you decided to personally come, but I’m pleased to see someone taking notice, even if it just started.”

Saudia motioned behind her. “I listen to my people, and they considered this important enough to share with me. However, I haven’t been appraised of what Project Phobos is.”

“Well,” Emily rubbed the back of her head. “There is quite a difference between what Project Phobos is now and what I want it to be. The project originally happened when one of the victims of Isomnum’s attack just…woke up.”

“Yes, I’m aware of that,” Saudia recalled. “By himself.”

“That’s only part of it,” Emily clarified. “We’d given up on him. We tried psionic therapy three
different times and none of them could stay for more than a few minutes. Each of them recommended we just put him out of his misery. How he woke up is close to a miracle, but that’s not what’s interesting.”

“What is then?” She asked as they rounded a corner.

“He has some kind of neurological reaction to psionics,” she said. “But what’s truly remarkable is that certain types of telepathy just don’t affect him anymore.”

Saudia blinked. “Explain?”

“He offered to help with the experiments,” Emily said. “Let them try and influence him. Repeat what Isomnum did to him. He said it couldn’t affect him any longer. Turns out he was right, I had to call in a Leviathan-class to get into his mind since it was so bad no one else wanted to try. He tried everything against him, illusions, mental pain, fear, none of it really worked. It admittedly almost sent him into cardiac arrest, but the man reported that even though he could have taken control of his mind, it would have required effort and was…not pleasant.”

“I don’t suppose he explained how he was able to do that? Saudia asked.

“He tried,” Emily shrugged. “I personally don’t think he came out of it completely whole. His descriptions were…delirious and disjointed. He thought he had been condemned to Hell, and pretty much suffered until he learned to ignore the pain, overcome the fear, and fight back. He said he was fighting for years, until he killed three very specific aliens: The Warlock, the Battlemaster, and Isomnum. When he killed Isomnum, he said that was when he woke up.”

“Needless to say he was not exactly pleased to wake up and learn that Isomnum was alive,” Emily gave a small smile. “I suspect his background shaped what he went through. He grew up in a fairly fundamentalist Christian family. Dante’s Inferno kind of Christian family. Big on instilling the fear of Hell into others. I don’t have his full records, but even if he eventually left it, it seems to have definitely made an impact on him.”

Saudia pursed her lips. “So this Kane is Subject Zero in your project. So with that out of the way, what are you trying to achieve?”

“To create more of him,” Emily explained as they stepped into a small, quiet room. “The goal of Project Phobos is to turn Humans into soldiers who can’t be affected by telepaths like Isomnum. Ones immune to telepathically imposed fear and pain. Soldiers to kill Isomnum.”

Saudia gave a brief nod as she saw many of the people around the room. Some were clearly being affected by psions in lab coats; others were sleeping or talking with each other. “And how do you accomplish this?”

“We take it in phases,” Emily said. “Right now we’re in the stage of gathering what we need. Brain scans, interviews, neural analysis, patient observation. This needs to be done for each potential candidates. This is a volunteer-only program, and possibly one of the most intense within the entirety of ADVENT.”

“How?”

“We push them to their limits, psychologically,” Emily explained. “Candidates are exposed to our psions. Every fear, insecurity, and flaw is dredged up and magnified. They have to learn to overcome them. We’re doing to them what Isomnum did, although over a longer period. Whatever
Kane thought he did, the process of defeating his fears was key to him waking up. If he can do it, others can as well.”

“And what happens if they lose their minds?” Saudia asked.

Emily sighed. “That is a risk. One which is acknowledged at the start. I want to stress that this is volunteer only, invitation only, and that they can walk away at any time. They won’t be taken back, but it’s understandable that someone wouldn’t want to participate in this. We’re being careful about who we invite. Obviously not everyone is suitable.”

“And who are you inviting?” Saudia asked.

“Soldiers who’ve experienced and overcome severe mental difficulties, either with help or by themselves,” she explained. “This goes beyond victims of Isomnum. Soldiers suffering from PTSD, cancer survivors, people who’ve lost loved ones and remained intact, those kind of people. The ones who could theoretically not only survive worse, but grow stronger because of it. The goal of our mental clinics are, of course, to help cure any mental issues these individuals have…but afterwards, those willing can join Project Phobos.”

Saudia nodded. “An ambitious project. One I will be interested to see if it actually works.”

“I’ve got a good team working with me,” Emily said. “Psychologists, veterans, members of the PRIEST Division. I’m no psion, but the science is fascinating and helps me understand it better. We’ll get results for you, Chancellor, I can promise you that.”

“I’ll hold you to that,” Saudia nodded. “And what stage of the project are you in now?”

“Gathering recruits,” Emily said, motioning around. “Some of them are starting preliminary testing. More to get a baseline of what our parameters should be for the next rounds. After a few we’ll begin in earnest.” Her face grew more serious. “There are going to be a lot of people who won’t make the cut, Chancellor, I’ll warn you now. We’re talking under a ten percent pass rate. You’re not going to get an army out of this.”

“I don’t need an army,” Saudia gave a grim smile. “But a small team to kill a certain Ethereal will be acceptable.”

“As long as I’m part of that reckoning.”

All of them stopped at the sound of a deep voice from the side. Saudia had known that the man before them was massive, but he was somehow taller than her, if only by an inch. Short black hair rested on the head of a man with eyes that seemed very close to black, and within them was a steel Saudia had only seen in truly hardened people, and sociopaths. It was the ruthless gaze that gave even hardened criminals pause.

The sheer size of the man punctuated the fact that this was someone dangerous. Saudia found it easier to imagine how even in the imaginary hell this man had been trapped in, he would eventually win. He was dressed in a simple t-shirt, pants and boots. His posture was straight, however, and he kept a respectful distance from the group, even if he wasn’t intimidated.

Saudia suspected that after being trapped in a prison from Isomnum, nothing would really scare him ever again.

“Kane,” Emily stepped forward. “I see you’re up. This is-“

“Chancellor Vyandar,” he said, still standing still. “I’m aware. I keep up with the outside world,”
his lip curled up. “Including what the alien filth did to Seoul. Isomnum’s hand was in it, of that I am sure.”

“Perhaps,” Saudia said non-committally. “I would not be surprised. But he will be fought, and he will be punished.”

Kane smiled for the first time. “Yes he will. I killed him once before. I can do it again.”

Saudia raised an eyebrow. “Reality is not in your head.”

“The mind is where he is strong,” Kane responded, his smile remaining. “If he cannot defeat me in his own domain, how could he win in mine?”

Saudia was unsure how to respond to that. The man definitely seemed unstable, as Emily had suggested. She didn’t really want to provoke him, as his size and demeanor was slightly intimidating, even for her. But Kane looked to Emily. “What is left for me here? Do you need me for more tests?”

“Only a few,” she promised. “Then, if you wish, you can rejoin the military, provided you are cleared.”

“No,” he shook his head. “My place is not there. You know what I want.”

Saudia looked to Emily. “What does he want?”

“To join XCOM,” she answered. “But like I said, it doesn’t work like that. Invitation only-”

Saudia lifted a hand, cutting her off. “Why XCOM, Kane?”

He looked to her with unblinking eyes. “XCOM fights Ethereals, and that is where I belong. There are more Ethereals to die at my hand than just the so-called Dread Lord.”

Saudia suspected he would likely get himself killed, but he certainly had spirit, and if he wasn’t useful to the Project, she was fine with XCOM having to deal with him. “I’ll send your name directly to the Commander. But he will decide to accept you or not.”

He nodded his head and saluted. “Thank you, Chancellor.” With that he walked away, leaving the four of them relatively alone again.

“He’s certainly an interesting character,” Saudia noted. “I wonder if the Commander will take him.”

“I hope he does,” Emily grimaced as they continued forward. “I definitely wouldn’t want to be the one to give him bad news.”

***

ADVENT Intelligence Outpost, Brasília - Brazil

1/12/2017 – 10:28 A.M.

Jaylin felt rather out of her league as the team put together by the XCOM Intelligence agent finally assembled. She and Agent Gertrude had only spoken once, although it was for a fairly significant period of time, largely on the attack, which she had no trouble remembering. It ended with her being assigned to a new intel op dealing with these terrorists.
It wouldn’t be a bad change, since she’d felt rather useless recently since the attacks had largely stopped and the populations weren’t protesting anymore. Leon was in the same boat as her, although she was glad that she wouldn’t be going into this alone. Someone equally out of her league would be along with her.

She was better at keeping herself composed though.

Jaylin wasn’t quite sure what to make of this particular XCOM agent. She looked barely old enough to be a regular field agent, let alone one in charge of an operation like this. Jaylin was fairly sure she was the youngest one, aside from Leon, who was only twenty-three. But there was a clear air around the woman, a quiet authority that the agent didn’t feel the need to exercise yet.

The nondescript Caucasian woman was also almost certainly more dangerous than she looked. Jaylin had seen enough gene-modded soldiers to immediately spot the golden rim of MELD around the irises, and if her eyes were modded, then her body was also significantly altered as well. She didn’t really know what else XCOM would have also added to increase her lethality.

Were they skilled enough to create cybernetic implants?

For that matter, was ADVENT Intelligence?

She honestly didn’t know much about ADVENT’s own intelligence counterpart, though obviously by design. All people really knew about ADVENT Intelligence was that you should do everything you can to not attract their attention. Their agents were always watching. Probably mostly propaganda, but Jaylin could easily believe that there were certain people and places under constant watch.

This Agent Andrade seemed like a straightforward man, even as he was talking with Agent Gertrude quietly at the end of the conference room. He didn’t strike Jaylin as the straight-laced intelligence type, always very serious. Which…she wondered if that was intentional. A good agent was one no one else knew about, after all.

“Think they’re going to get started?” Leon muttered beside her, fidgeting in his own military fatigues, which she wore as well. Not the kind of meeting to wear armor.

“Probably,” Jaylin answered as she saw Agent Gertrude shoot them a look, before looking around at the others assembled. “Be quiet.”

The woman finally took a stand at the end of the table, with Agent Andrade beside her. The rest of the assembled turned their attention to her as she pulled out a small remote and set it on the table.

“Good morning to all of you, I’ve met with most of you at least once, and I’m sure you’ve spoken to Agent Andrade. As far as I’m concerned, there isn’t a major need for formality. You can call me either ‘Abby’ or ‘Agent’. Same with Silvio, or call him ‘Officer’ so there isn’t confusion. I am in charge of the overall operation, if you have questions relating to mission objectives, goals, and tactics you come to me. If you have questions about your specific task that will be assigned, you speak to Silvio.”

She motioned to the left, where Jaylin and Leon were seated. “These two are soldiers who’ve encountered the terrorists that attacked the bases, and eyewitnesses to what happened. Specifically, they know better than everyone here what we’re going to be up against. Jaylin Tanika and Leon Mina, Peacekeeper Riot Control. They’ve been temporarily assigned to this operation.”

Both of them either raised a hand or nodded in acknowledgement of the introduction. No one asked if it was right two fairly low-ranked soldiers were in this kind of sensitive operation, which Jaylin
did appreciate. “Serena Campos,” Abby nodded to a well-dressed Hispanic woman, wearing professional business attire. “ADVENT Diplomatic Corps. She’ll be needed for reasons that will be explained shortly.”

Jaylin already suspected where this was going. Abby was definitely planning to investigate Argentina, and getting a diplomat for this operation was a smart way to go about doing it. “August Wepper,” Abby continued, indicating the Caucasian man sitting beside Leon. “ADVENT Qalandar. For those who don’t know, a researcher of psionics. Specifically specializing in telepathic tampering of subjects.”

Jaylin was less sure about what he was here for. To figure out if they’ve been infiltrated? To test out psionic theories? She’d admittedly never heard of anything called a Qalandar, but she would look that up later. “Kil Ae-Ri,” Abby said, as a Korean woman in the fatigues of the PRIEST Division nodded. “Protopriest. Telepath focus. She’s not the only one on call from the Military branch, but she will help us defend against any psionic attacks.”

So for the combat operations that were inevitable. Good planning. The final man in the room was dressed in simple black clothing, the only indication of…anything, was the small embroidered silvery spider on the upper right chest. Hispanic as well, so possibly a local. He was likely an Intelligence agent as well, now that she thought about it.

“Marco Tasis,” Abby finished. “Inquisitor of ADVENT Intelligence. Their psions.”

Oh. Well, it made sense they would have their own psions, but she was surprised she’d never once heard about this. “This is a good time to remind everyone that this entire operation is classified,” Silvio added. “Anything you learn or hear of as the result of it will not be relayed to any unauthorized party. I trust this is clear?”

They all nodded. Both lead agents exchanged a nod. “Based on what we’ve learned,” Abby said. “We are confident in saying that the perpetrator of these attacks was an Ethereal by the name of Nebulan.” The holographic display in the center of the table flashed to light, showing an Ethereal outline with a question mark in the darkened body. “A master illusionist, who likes using aliases and covering her tracks as much as possible. The Ethereal Aegis has provided us with an extensive breakdown of her personality and methods, however, which is now being shared with you.”

“If it’s an Ethereal,” Protopriest Kil asked slowly. “Why has she been quiet aside from the first attack?”

“Unknown,” Abby shook her head. “Perhaps she struck too early and wanted to spend time developing her defenses or location. Possibly hoping we’d forget about the attack. I suspect the reason ADVENT hasn’t pursued this until now is because Nebulan affected the leaders involved, making this incident a lesser priority.”

Jaylin blinked. “She can do that?”

Abby pursed her lips grimly. “I’m afraid so. Which is why Dr. Wepper is here. If Nebulan has been affecting ADVENT personnel, he will help uncover it. That is only one part of the investigation though.”

“What about the Humans that attacked?” Leon asked. “Are they controlled by her?”

“There are several possibilities,” Abby answered. “In theory, she could. But based on her personality, it is equally likely that she is working with, and using them for some unknown goal. Alternatively, these are Humans who have been recruited into the Phantom Division, Nebulan’s
“own personal army.”

“What do we know about them?” Kil asked.

“That they’re among the most advanced soldiers in the Ethereal Collective,” Abby said. “Extensive genetic modification, all highly intelligent, specialize in recon, sabotage, and assassination, using equipment more advanced than alien standard. If they’re involved, and they almost certainly are, then we’ll eventually need to bring Lancer and PRIEST support. The Phantom Division are elites of the Collective. We won’t take chances with them.”

“And the Ethereal is still the most dangerous,” Marco said with some amusement. “Such an interesting species.”

“By far,” Silvio agreed. “The danger of the Phantom Division is slightly blunted by our own psionic capabilities, if not offset more by their technological advantage. However, Ethereals are known to eclipse our own psions if handled improperly.”

“So what is the plan?” Jaylin finally asked.

“Twofold,” Abby said. “Determine if ADVENT personnel were affected, and locate the main base of operations for Nebulan. We suspect that she may be in Argentina, so in a friendly gesture to our neighbors, we will be paying a diplomatic visit to warn them about these terrorists, and determine if they know anything more.”

“I will warn you that they likely won’t allow anyone besides me inside,” Serena pointed out. “There are nations which are paranoid about psions affecting their minds. Argentina is definitely one of them. While I am good at reading people, if they are actually involved in anything, they will be good at hiding it.”

“Have no fear, Diplomat,” Marco said smoothly. “We’re good at getting what we want, and especially enjoy exploiting those who have no idea how psionics work.”

The distrust Jaylin knew some had for psionics seemed rather prudent now. In this case it was justified, but she could see why ADVENT might not want to make it public knowledge that their spies had psions who had no qualms about reading the minds of targets who may or may not be innocent.

“Right now I want everyone to review the compiled information on what we’re likely facing,” Abby said, shutting down the hologram. “More detailed directions for each of you will be sent by the end of the day. Dismissed.”

***

ADVENT Intelligence Outpost – Colorado

1/16/2017 – 12:02 P.M.

Saudia furrowed her eyebrows. “You mean you did send Inquisitors?”

“Just a few, who promptly vanished, and then I stopped,” Elizabeth didn’t sound perturbed, but Saudia knew she was concerned. She wouldn’t have pulled back observation of the SAS unless she felt otherwise. “I don’t know if they’re dead, and the SAS hasn’t released anything indicating there was an attempted infiltration…which I’m positive they would do. Proof of ADVENT ‘trying to assassinate the hero Betos’.”
Saudia agreed. If the SAS was behind the surprisingly effective counter ops, Betos would have definitely exploited it. But they’d been quiet. “So do you have an explanation?”

“Only one feasible one,” she admitted, leaning against the wall. “There is only one party that stands to gain from this idiotic situation.”

“The Collective.”

“Exactly,” she punctuated. “And there is now an entire regional faction against us. A potential opportunity. They’d obviously want to keep their presence as quiet as possible, so covertly ensuring the SAS isn’t compromised keeps us in the dark, and they can use that as proof saying “See, we can help you.””

Saudia considered that. The possibility had crossed her mind before, although there was always some reservation. “Betos is an idealist. The aliens are no better than ADVENT, and in fact, much worse, as the recent Seoul attack proves.”

Elizabeth made a disgusted face and similarly disgusted noise. “You’ve read her dossier, right? It would be stupidly easy to convince that idiot woman that anything bad about the aliens is propaganda perpetuated by us, and the aliens are the good guys in all of this. The aliens couldn’t ask for a better puppet.”

“Good point,” Saudia muttered, rubbing her forehead as she sat down. “So. What is your plan?”

“I guess I’ll start there,” Elizabeth sat down beside her and moved the tablet over. “Now, I don’t want you calling this a crazy idea. I’m not going to use agents again, not until we know what’s going on. With that said, I am going to field test one of the projects I’ve been running.” She shrugged. “I’d intended to use them on the West Coast, but infiltrating the SAS is just as a valid target.”

“Infiltrating them with what?”

“The African Pied Crow,” Elizabeth tapped the screen, which indeed showed one of the birds on a blueprint with several additional components. “Corvids, if you want to be accurate. Birds like ravens or crows.”

“Really,” Saudia was not immediately convinced. “Ravens. I didn’t know they could give reports on what they see.”

“Ha, ha,” Elizabeth said sarcastically. “You sound just like the Officer I shared this with initially. ‘Elizabeth, you can’t use Ravens as spies, that doesn’t make sense.’” Saudia snorted at her impersonation. “He shut up once he saw I’d had one of the early specimens of Project Kutkh follow him for the entire day. Got some good footage from it.”

“Footage?” Saudia looked back down at the document.

“Obviously,” Elizabeth said. “Fabrication made little cameras which fit over their heads. Almost invisible unless you’re looking for them. Lightweight, HD, the works. Anything the corvid sees, we will see. Eventually I want to have the eyes themselves replaced by cameras, and have everything stored on an implanted hard drive, but we haven’t gotten there yet.”

“I see,” this made more sense. “That…is reasonable.”

“That’s only part of it,” Elizabeth continued, flipping through the various pages. “Cameras are useless unless they’re pointed at something we’re interested in. The good news is that corvids are
very smart. Not that most people know, but for birds they’re great. Their memories and facial recognition skills are what we use here. We’ve got them to the point where we show them a picture of an individual, and if we release them into a place they know the target inhabits, they’ll track them down.”

“And how much video can these cameras hold?” Saudia asked.

“Four hours, we’ll get it larger later,” Elizabeth said. “Obviously, not a lot of time for what will be likely hours of hunting and observation. Which is why the cameras are sound-locked. The corvid makes the sound, the camera turns on. They lose sight of the person, they do it again to turn it off. If they locate the target, after listening and then losing the target, they return to the nearest outpost where we take the data.”

“I suspect the aliens will not expect spies in the forms of birds,” Saudia said. “Clever.”

“I agree,” Elizabeth said. “The good news is that corvids are everywhere on Earth. So they won’t seem out of place, and our only problem is if they’re attacked by wildlife or otherwise killed, and their bodies found later.”

“Well, I want to know how well this goes,” Saudia said. “If it works out, we have potentially perfect infiltrators. I don’t suppose you’ve considered psionics?”

“Telepathy? Yes,” Elizabeth waved a hand. “Although from what my telepaths have said, it isn’t really clear or easy to navigate their brains, and unless it’s necessary, I want my psions actually doing something essential. We can explore telepathic memory extraction later. For now, the technology appears to serve fine.”

“Good,” Saudia pushed the tablet back to Elizabeth. “Aside from that, there is the larger issue of the aliens themselves. Their cyber capabilities are better than ours, especially if they begin using the Andromedons.”

“If they haven’t penetrated us already,” Elizabeth pointed out. “I doubt it, and we have purging protocols in the event of a breach, but definitely not something I want to rely on. Which is why we’re still having our cyber divisions focus on some breakthrough in quantum computing. In theory, if we develop quantum computers, we will be able to resist any kind of cyber attack from the Collective.”

“Does the Collective also use it?” Saudia asked. “I’d think they would have developed it before us.”

“Not exactly,” Elizabeth said. “At least, I don’t think so. Their internal networks are managed by the CODEX system. Which, while it does seem to have a quantum foundation, is more akin to a machine intelligence. The Andromedons certainly do though, or at least several of the major unions. I suppose we should be thankful they don’t usually share their secrets with the Collective.”

“Alternatively,” Elizabeth rested her chin on a fist. “Project Ra completes.”

The ADVENT AI project. Saudia nodded. “And the status of it?”

“Beginning stages at best,” Elizabeth shook her head. “There won’t be major progress for some time. I’m letting select Chinese AI scientists work on modules, though those won’t be used in the final AI. We have a firm base thanks to the Chinese, but no one has ever gone this far before. But if we do develop an AI, it should be more than capable of resisting Collective cyberattacks.”

Saudia thought for a minute. “Have you contacted XCOM?”
“They’ve insinuated they’re working towards something similar, but weren’t any closer,” she answered. “Ethereals don’t like AIs. They consider them dangerous, which means we’ll definitely have an advantage if we complete it. But Aegis was sadly unhelpful.”

“And I assume you’re taking the precautions so we don’t end up having to deal with a rampant AI?” Saudia asked rhetorically.

“Damn it,” Elizabeth answered sarcastically. “I knew I forgot something.” Both women broke into a smile at that. “Yes, Chancellor,” she said, more serious this time. “We’re taking every precaution possible. Just like with nanotech, we’re not going to make something we can’t control in some way.”

“Let’s hope so,” Saudia raised an eyebrow. “I’d really hate to deal with an AI after the Collective is gone.”

“Everyone would, Chancellor. Don’t worry, that isn’t going to happen.”

***

_AEGIS Diplomatic Command – Switzerland_

1/17/2017 – 10:35 A.M.

While it had not exactly been the easiest of beginnings, Saudia was pleased that the AEGIS Division was still on track to properly be unveiled fairly soon. The hardest part had not been finding the personnel and facilities (Which would be relatively few at the beginning), but ensuring that their new extraterrestrial residents were as sincere as they said they were.

For the most part, the defectors appeared to have been telling the truth. The reasons varied, but what was important was that they were motivated to stand against the Collective. Saudia and Elizabeth had suspected that the defectors who had done so because of more…selfish reasons, such as fear or because other were doing it, had their own decisions validated and reinforced by more logical reasons.

It had essentially been taking the defectors who’d had legitimate reasons to finally abandon the Collective, put them in the same room, and by the end, the entire room would be fairly angry or at minimum irritated against the Collective.

The best part was that there was no need to lie. Simply exposing the Aui’Vitakar for the puppet state it was often convinced most, and sharing the abuses of the Collective, such as their Blacksites, the truth of the Muton situation, the experiments of the Sectoids…all damning evidence. As much as the Seoul Massacre had turned public opinion against aliens briefly, it had been yet another mark against the Collective which had horrified the aliens.

For the particularly unsure groups, she’d simply asked XCOM to send Aegis to speak with them. Being graced by the presence of an actual Ethereal would likely be remembered as one of the most important days of their lives. If you couldn’t trust an Ethereal who said what he had helped established was too far gone, then who could you trust?

There had been, of course, several aliens who had used the defections as an attempt to infiltrate. It had gone _badly_ for them.

The Inquisitors were thorough, and within days had weeded out the illegitimate defectors from the real ones. Most of them didn’t have much actionable intelligence, but there was always a need for
live aliens in the Experimentation Labs. They would serve some purpose, at least. Saudia was aware that there were at least a few illegitimates that ADVENT Intelligence were using to monitor and control their access to the Collective, however that was established. With psionics, it wasn’t especially difficult to turn them into unwitting double agents.

Today, though, would be the first true step for the AEGIS Division. It was more than just responsible for ensuring aliens integrated into ADVENT, but would also manage diplomatic ties with all alien factions. Saudia was aware that Chief Ambassador Kamar Dennis had some ideas for addressing the Collective directly, and they might very well be discussed today.

The room they were meeting in was small, but well-furnished. A circular table with a holoprojector in the center, red carpet, adjustable ambient lighting to relax all occupants, and some visual additions, such as the ADVENT banner hanging in the center. The chairs were equally spaced apart, angled so Saudia would be in front of the banner. A bit of a dramatic touch, but she didn’t especially mind.

To her rightmost position was Kamar Dennis, veteran diplomat and her top pick for the position. He had been interested in the aliens long before this, and his previous experience as a diplomat to less-traveled locations in the world, who often didn’t speak the same languages or have similar cultures made him an ideal fit for a position dealing with alien life.

As such he was noticeably older than her, with a neatly trimmed beard and moustache, his skin almost identical in color to her own, and in the fairly plain attire planned for the AEGIS Division. A nameplate, with the position beneath it on the upper right chest. The symbols of ADVENT and AEGIS were on opposing shoulders. Like most ADVENT attire, the uniform was black with muted red highlights.

And to her leftmost position was Runi’sirasis’vitianis, a former officer of the Runianarch. Within all the defectors that had been gathered, there were always at least one who seemed to have a measure of command or spoke for the group. Sirasis had been selected by the defectors to speak for them, although there was the knowledge in the back of all their minds that none of them had any diplomatic experience.

They were all soldiers, and would be making decisions that may very well have significant ramifications in the future. A daunting responsibility, but the good news was that ADVENT would be more than happy to assist in their efforts. Sirasis was a Vitakarian, a good move in Saudia’s opinion. Of all the races their similarities with Humans would help with how the rest of Humanity perceived aliens.

The alien did admittedly look like a very well-muscled soldier, but her face and voice clearly indicated her gender. Vitakarian voices did have a generally soothing effect on Humans, from some brief studies they’d done. A good advantage for the speaker of a people. She was tall though, even when sitting down.

“Chancellor,” Sirasis greeted as she sat down. “I’m glad to finally meet you.”

“The feeling is mutual, Representative,” she answered. “This is an important day, for both our species.”

“Yes,” the alien shifted in her seat. “Although I would not call myself an representative, Chancellor. Just a soldier placed into a…delicate situation.”

“Nonsense,” Kamar interjected, shaking his head. “From personal experience not being a trained diplomat lets you cut through the meaningless drivel that plagues talks like this. You want results,
correct? So do we. ADVENT respects directness, Representative Sirasis, we do not offend easily.”

“From what I’ve experienced, your people are…reasonable,” Sirasis nodded. “And I can say we have been treated well. Or at least protected from the more xenophobic of your species.”

“An unfortunate reality,” Saudia said. “It will take some time to fully change perceptions towards you species, which is what AEGIS intends to accomplish.”

“In addition to integrating us into your society,” Sirasis said, pursing her lips. “I don’t know how best to say this, Chancellor, but while we appreciate ADVENT taking us in…there are those of us who would prefer to return to our own government. Whatever one may be left, by the end of the war, of course.”

Saudia nodded. “Of course. In fact, that was something we need to discuss. We don’t have an intention of forcing you to join ADVENT, though we will of course assist with integration for those who want it.”

Sirasis looked relieved. “I’m glad to hear it.”

“In the meantime,” Kamar said, pulling out a file. “I’ve spoken with Chancellor Vyandar, as well as a few members of the Congress of Nations, and we all believe that it might be a good idea to get a head start on the business of…let us say the reformed government of your species. I think we can both agree we not leave the finer details till the day Vitakar is liberated.”

The glowing eyes of the woman flashed as she blinked. “What are you suggesting, Ambassador?”

“That the new government of the Vitakara be established now,” he answered brightly. “Staffed and managed by yourself and a chosen body of course. As a fully legitimate and recognized government by ADVENT, you would have a diplomatic embassy in our capital, and for all intents and purposes, be a fully functioning alien power. Allied, of course, with ADVENT.”

“There are advantages to doing this,” Saudia added. “The first is that your species is fully prepared to reestablish itself when Vitakar is retaken, or another capital planet should you so choose. In addition, it will further legitimize your position within us. Right now it is easy to paint yourself and your people as mere defectors and traitors. An established and functioning government will negate that to an extent. You would not be a band of defectors, but a Vitakarian government in opposition to the Ethereal Collective. One not controlled by the Ethereals, but maintained – completely – by yourselves.”

“I…” she seemed at a loss for words. “Over what? We don’t have anything. We’re on your planet, and there definitely won’t be support for us on the colonies now.”

Saudia and Kamar exchanged a look. “If we go to this trouble of establishing a new Vitakarian government,” Saudia said. “ADVENT will allocate enough territory for your people to live that will be considered sovereign ground of your people.”

“And not necessarily limited to an area the size of a city,” Kamar said, pulling out a file. “It would scale depending on how large it grew, with a maximum cap of course, up to the size of a small country. Potential plots would be large areas in Canada, Russia, Afghanistan, and the Midwest of the United States. Parts of it may need to be developed, but you will have enough room for the needs of your people.”

“That is…generous,” she said, still sounding stunned. “Until Earth is fully reclaimed and the attacks on Collective territory start, yes?”
“If your people choose so, it can be,” Saudia said. “But ADVENT will not retake the land we give to you. Your people could maintain a location on our planet as long as you wish. It would be made to work.”

“I see a problem…” she said. “Not a single one of us actually knows anything about running a government, let alone establishing it.”

“Which is why you’ll have help,” Kamar said. “ADVENT will be happy to provide input and advice if needed. In a strictly advisory manner, of course. We would not want to build your government for you. In a case like this, it isn’t necessarily a bad thing if you are unfamiliar with how to establish a government. You have a perspective and experience most in your position don’t have. I presume that you don’t consider the Aui’Vitakar perfect?”

She snorted. “No. But I can’t claim to have thought about them much.”

“But I suspect there are others who know a bit about it,” Saudia noted. “The good, the bad, what to keep and what to discard. This, Representative, is your opportunity to make something better than the Aui’Vitakar.”

“More importantly, Representative,” Kamar added. “It is what it will represent. This will show to every Vitakara on Earth, and in the system, that there is another path. There is another choice they can make. The Vitakara no longer have to live under the Collective in fear simply because there is no choice. Now there will be, and what your people build will be the future of your species.”

The Vitakarian visibly swallowed. “A lot of responsibility.”

“Indeed,” Saudia nodded. “Believe me, I am aware. Uniting an entire species is no easy task, but it is worthwhile. I believe you can handle the responsibility, and your people can as well. And as we said, we are certainly available to help.”

“So…” Sirasis trailed off, deep in thought before she said anything. “I would need to discuss all of this with everyone. Hammer out something preliminary. See what they think.”

“Of course,” Saudia nodded. “Take as much time as you need. We will not be going anywhere.”

“We won’t delay,” she promised. “Thank you, Chancellor. This is more than I expected.”

Saudia gave her a smile. “We are not the Collective. I believe that in the future ADVENT can certainly work with aliens, and even be their allies. This would mark an excellent first step in that goal, one I certainly hope your people will consider.”

“We will,” Sirasis promised. “You have my word on that.”

***

Center of ADVENT Research and Development – Russia

1/26/2017 – 1:09 P.M.

“Thanks to XCOM,” Feng Mercado was saying. “We now have a far more complete understanding of elerium. Enough to fully solve the energy issue we had previously run into with the initial Dropship design.” He clasped his hands behind his back. “As you can see, the results speak for themselves.”

That they did. The design of the dropship was largely unchanged, but now there was a much lower,
yet persistent hum which emanated from the dropship as the air was distorted under the anti-gravity emitters keeping the dropship up. “Quiet, fast, and with an integrated PDS field so they won’t be shot down. The optimal solution for deploying large squads of soldiers.”

“Yes,” Saudia agreed. “Are these combat-ready?”

Feng scratched his chin. “They’ve passed our battery of tests. They’re as close as we can get without a real field test. However, I wouldn’t expect a large number of them soon. They’re complicated to make, and pilots, maintenance staff, and mechanics need to learn how to pilot and repair them. That takes time. I would estimate we can use them in sufficient numbers in about…” he paused. “Two to three months, depending on how badly Commander Christiaens wants them.”

“I’ll have to think about it,” Laura said, also looking at the dropship thoughtfully. “Consult with Command. But this will be utilized, good work.”

“Excellent, come with me,” Feng said, turning on his heel and leading them out of the hangar into a much narrower hallway. Eventually they stepped into an area which Saudia could clearly see had been used as a design room. The main rectangular table was clean, with a holoprojector, but the walls were treated to be used like whiteboards, and there was a large amount of scribbled notes, formulas, and other commentary (along with some rudimentary designs of whatever they were designing) written in English, Russian, and Japanese.

“We have, of course, been hard at work on other projects which have yet to materialize,” Feng said, turning on the holoprojector. “Three of which I want to get your opinions on.” The holodisplay turned on, showing what looked to be a large, thin, wing-like aircraft with a significant amount of weaponry on the underside. Looking at it from the side, it was definitely thicker around the center of the aircraft, though not by much, and the center looked like a small launchpad itself.

“The Thunderbird, as we’re calling it,” Feng said. “Our answer to establishing air superiority on any planet, not just Earth. As of now the armaments are…not fully decided, as there are several paths we can still take. But the Thunderbird itself would be capable of bombarding enemy positions, engaging enemy aircraft, and launching multiple missile types.”

“That seems like a decent arsenal to me,” Saudia noted. “What’s missing?”

“This is I believe a perfect opportunity to explore drone swarm technology,” Feng pointed to the center of the aircraft. “Right now there is room for a small fleet of next generation drones. However, the issue is the coordination of all of these drones at once. A machine intelligence is best suited to handling the sheer amount of computation necessary, but I’m unsure if that would be an acceptable addition.”

“Something equivalent to what the Chinese did?” Laura asked. “I don’t see an issue with that.”

“The issue is that we’re not sure it would be enough,” Feng crossed his arms. “For best results, I would almost recommend an AI. Perhaps merging it with Project Ra?”

“I’ll consider it,” Saudia said. “Would this be automated?”

“It will have that capability,” Feng answered. “I feel it will be necessary, even if it will be able to be piloted manually. But there likely will be a very small crew. Despite the size of the Thunderbird, it is intended to never actually have to land.” He highlighted parts of the schematics. “There will be nuclear reactors powering it, and those will be able to be replenished manually or with drones.”
“How large is this thing going to be?” Laura asked slowly, looking at the hologram.

“These are, as one of the designers said, the air equivalent of the United States aircraft carriers,” Feng said. “A fortress in the sky. A flying flak tower of sorts if you wish to make that comparison. It will be…large.”

“And where is that going to be constructed?” Saudia frowned. “And with the size…it will attract attention.”

“That is an excellent point,” Feng grinned. “The aliens would definitely take notice of a large construction zone. They might, at first, even think it’s a spacecraft. They will investigate and discover, much to their relief, that it’s likely a mere stepping stone to spaceflight. Dangerous, perhaps, but nothing that will set up alarms.”

Saudia’s lips curled up. “A diversion. I like it.”

“We keep the actual fleet secret, and build an air fortress at the same time,” Feng nodded happily. “The aliens keep watching these facilities, because obviously the fleet will eventually be built from them.”

“That will probably buy us several months at least,” Laura nodded slowly. “Especially if we include interceptable correspondences discussing the potential of the Thunderbird for future spacecraft designs. I’ll speak with Elizabeth about this.”

“Paradoxically,” Feng said. “These will be fairly exposed, security wise, but an intentional sabotage to keep the fleet secret. Something real will be built, but it will ultimately be a smokescreen.”

“I like it,” Saudia nodded, referring more to the misdirection it would cause. The Thunderbird…she would have to wait and see how well it could actually work. “What is next?”

“The completion of Project Pluto,” Feng continued, changing the hologram to show what appeared to be a large missile, with smaller missiles attached near the engine along the sides. “A US government project exploring the possibility of a nuclear-powered missile delivery system. It was abandoned, despite the fact the it seemed to work, for being potentially ‘too provocative’ towards the Soviet Union. Fortunately, we have no such concerns.”

“And what makes this different?” Laura asked. “I’ve heard of this project before. It’s a...very old one.”

“In theory,” Feng answered. “The nuclear power allows it to remain airborne potentially for months, flying at supersonic speeds around the world. It essentially allows us a missile deployment system that flies under the radar, that we can launch at any point, and they deploy at any point, at any place in the world. It would have a limited missile capacity, but this is a primitive defense network for our planet.”

“Not bad,” Laura said in approval. “The Collective would certainly find that disconcerting.”

“Tests are still ongoing,” Feng said. “However, I know it can be done within the month. As long as ADVENT Command agrees, these can be deployed the day they’re completed.”

“I’ll ensure everything is in place,” Laura said. “And you also have something else?”

“Yes,” Feng once more changed the hologram. “This is more of a...lower tech idea, but that isn’t necessarily a bad thing. This project was specifically designed to be invisible to Collective sensors
and used for surprise night bombing runs. Project Night Witch.”

The hologram changed to show what looked like a small glider plane, with a small bomb arsenal strapped to it. It looked small, and fairly simplistic, which she suspected was the point. “The name certainly implies what this does,” Laura said, a smile on her face. “It’s good that the contributions of the Night Witches continue to be remembered.”

“Indeed,” Feng agreed. “Powered gliders. Invisible to most radars, painted black to reduce visibility, capable of gliding over their targets silently and leaving with the enemy none the wiser.” He highlighted some parts of the glider. “Now, the armaments are obviously enhanced. Gas weapons, ClF3 bombs, cluster bombs. The intent is to cause damage, yes, but also psychologically affect the aliens. An invisible enemy is indeed a terrifying one.

“These don’t have covered cockpits,” Saudia noted, pointing to the hologram. “Is that safe?”

“With modern technology, yes,” Feng confirmed, switching the hologram to a pilot encased in a cold weather suit with an oxygen supply. “The pilots will be perfectly safe, since they will be insulated and have plenty of oxygen supplied for the less than ideal conditions in the air.”

“I assume you’ve built these then?” Laura asked.

“Yes, and tests have been extremely successful,” Feng waved a hand once dismissively. “A trivial design, laughably easy compared to most of what we do. We’ve been running tests for months, and we have enough data to conclusively show the benefits, and more importantly, that it works. I intended for these to be used on the West Coast, or the operations that are no doubt happening in Canada.”

Laura and Saudia exchanged a look. She definitely had the same thought Saudia had. The Night Witch fleet would definitely be useful for Long Dark. Laura cleared her throat. “I believe there would be some use for them. I want enough of them to be produced immediately for combat operations.”

“Give me numbers, and we’ll produce them,” Feng confirmed. “More questions?”

“Not on this,” Saudia answered. “But I do know you have more to show.”

“Yes, several more projects which can be demonstrated,” Feng said, as he led them out of the room. They walked for several minutes until they entered what Saudia remembered as a testing area which had several projects in various stages of being put through various tests and demonstrations. “We’re still working on incorporating the Andromedon Barrier technology into something usable,” Feng said, motioning to the left where there was a team of engineers with automated weapons shooting at a projected red barrier. “However, that project is proceeding well.”

“What about that one?” Laura pointed to a more intricate testing ground which, as far as Saudia could see, involved drones and mirrors.

“Project Daedalus,” Feng said as they kept walking past. “A project in the early stages; using mirrors to direct lasers onto specific targets from safe distances. Useful primarily as a defensive system, especially for our cities.” He gave a short shrug. “However, as I said, it’s in the early stages.”

They eventually made it to a weapons range, which had an array of what looked like conventional weapons on a table, with Chief of Fabrication Ofelia before them. “Chancellor, Commander” she greeted Saudia and Laura respectively. “I suppose you are here for a demonstration of what we’ve
been working on in the weapons department.”

“If you want to start there, certainly,” Saudia motioned to continue.

Ofelia grunted. “Well. Thanks to XCOM we have the capability to develop plasma weapons. However, they are relatively complex and expensive resource-wise, so they will not be mass-produced for some time.”

“Our current weapons will suffice then,” Laura nodded. “Plasma weapons can be reserved for Officers and special forces.”

“In the meantime,” Ofelia picked up one of the previous-generation rifles, although looking at this closer, Saudia could see that it seemed to be slightly sleeker than a previous assault rifle would have looked. “We’ve been researching a concept known as electrothermal-chemical technology. ETC for short. Likely the next step of weapons development had we not diversified and produced gauss, laser, and plasma weapons.”

Saudia frowned. “I suppose the obvious question is why you’re researching an obsolete concept?”

“Not obsolete,” Ofelia disputed. “Each weapon type as advantages and drawbacks. The closest comparison is gauss rifles, which, while they are more powerful than ETC weapons individually, they cannot match the volume of fire and capacity that ETC weapons are capable of. We know that an M2 Browning is more powerful than a gauss autorifle, correct? But we would not be able to produce a gauss equivalent because the technology can’t work for a weapon with that much output.” She patted the rifle. “With ETC tech, you can.”

“And what does that mean?” Laura asked. “Clearly, mind you.”

“In short,” Ophelia said. “ETC weapons utilize plasma and electricity to ignite and control the propellant in firearms. This results in much greater power, accuracy, and relatively cheap for the damage it outputs. Specifically, it only requires a few changed components in previous generation weapon schematics to turn them into ETC-capable variants.”

She turned towards the range and aimed at an alloy-outlined dummy target, and fired. It sounded very similar to a previous generation gun, enough that Saudia couldn’t really tell the difference. With that said, the dummy with multiple holes in it definitely made the point. Conventional weapons of that size would have been lucky to even dent alien alloys.

“Aside from being easy and cheap to mass produce,” Ofelia continued, turning back to them. “There is another advantage. These are almost completely EMP resistant. Assuming one is not firing when a pulse hits, it will still work. So here you go, Chancellor, an easy way to outfit the various militias, upgrade all our conventional stuff, and something good to arm our allies with. I’d think even our own soldiers would want this.” She set the rifle down. “They want stopping power and raw damage per shot? Gauss is the way to go. If they want to just lay down fire as quickly as possible? ETC guns are for them.” She patted the rifle. “What do you think?”

“Useful,” was the first thing that came to mind. “I’d prefer we see how they do against aliens, but it is a good way to ensure the militias are properly armed, and that we have reliable weapons if ever faced with an EMP weapon. If they can be quickly produced, all the better. Anything to add, Commander?”

Laura nodded to Ofelia. “I’ll be coordinating with ADVENT Command. We’ll have production numbers shortly. Send over everything you’ve gathered on them.”
“Yes, Commander.”

“China will also be interested in these,” Saudia mused. “It can only improve our standing with them.”

“Can’t wait to see what cheap knock off they come up with from our work,” Ofelia muttered. “But good for them.”

“Excellent work, to both of you,” Saudia said to Ofelia and Feng. “Any other notes you want to make?”

“Nothing of import yet,” Feng shook his head. “Refining of the Order of Terra schematics is proceeding well, as is the Celestial Project. We’ll have updates for you shortly.”

“Keep me informed then,” she said. “But today you’ve made a lot of people happy.”

---

Supplementary Material

Chronicles of Salvation:

- Medtrum - The Inward Mandate
There were a number of things that he could be doing now, but instead he was taking a break and spending some time with their new Sovereign ally. Although that wasn’t quite accurate. After their previous talk, everyone had said he’d only been occupied for a few minutes when the Commander’s own perception of time had been much longer.

Time didn’t work the same when talking to T’Leth, so some time could be dedicated to getting to know him. Or at least as well as one could get to know the personality of a being older than their entire species several times over. Vahlen was with him too as well, which she had jokingly referred to as a ‘date’, and he didn’t know if it was funny or sad that this was the closest they would probably get to having a date until the end of the war.

As it turned out, T’Leth seemed fairly open to it, at least according to the Chronicler. He suspected that idle conversation was not something the Sovereign One enjoyed.

It did appear that T’Leth was interested in showing them something specific as the moment they touched the Sovereign Orb, both of them found themselves in a place that definitely was not Earth, nor the abyss the Commander had found himself inside the first time. It was as if they were within a valley with metal walls on either side, and above it showed the vastness of space tinged with purple mist.

The area within the metal valley was filled with what he could most easily describe as checkpoints and guard towers, rising up in regular intervals with a curious aesthetic of angles, tempered by a more organic softness. Red, black and white were the dominant colors; banners flew on the artificially created winds displaying symbols or words of unknown meaning.

There was a precision and direct layout to everything, the streets and buildings were impeccably clean. In the distance he could see larger black pyramids rising up over the more mundane rectangles and squares that made up the buildings around them. Another thing he noted was that the top of the walls were lined with multiple gunnery stations, and there were unfamiliar weapons mounted to the tops of the buildings there.

“A space station,” he wondered aloud. “Amazing.”

“It’s larger,” Vahlen pointed straight upwards and he saw that just through the faint purple mist, which must have been some kind of nebula, were what were likely arms of the station, which were much, much bigger than whatever they were on now. “The scale of this…”

“The High Fortress of the Just,” the rumbling voice of T’Leth interjected. “The seat of power for the Adherents. Also the location of the Imperial Sanctum, as the Ethereals called it. It is a simple fundamental rule of this galaxy, the dominant powers control this station. It has been called many things, it has housed millions of species, it has been razed to its foundations each cycle, and is rebuilt in the vision of those who come next.”

The Commander raised an eyebrow at the manifestation of T’Leth, who stood in silver armor, easily over eight feet tall, and most definitely not a Human, nor any other species he could
recognize. The anatomy was almost spindly, even with the armor, and the hands were three digits which more closely resembled pincers or claws than fingers.

The face though solidified the insectoid comparisons. Though it didn’t have an armored helmet, the black carapace fulfilled the same function, even as it exposed the fairly large black eyes and disconcerting mandibles that made up its mouth.

“This is destroyed now, I assume?” He asked.

T’Leth made a clicking sound. “Long destroyed. One of the final cycles before my arrival to Earth. I’ve found myself thinking more on this particular species and benefactor of late.”

“Why?” Vahlen asked, sitting down on one of the steps.

“To understand that requires the story,” T’Leth answered. “One I can relay if you wish.”

The Commander sat down next to Vahlen. “We have time.”

T’Leth gave a single nod. “There was a Sovereign of this galaxy known only to the rest as the Traveler or Wanderer, depending on who was speaking. She was highly secretive; never explicitly intervening in the ways other Sovereigns did, but instead acting as a source of information for many. A broker of power and knowledge. A service many Sovereigns utilized, even though they were aware of the potential danger. But none truly knew about her plans and motivations.”

“Did you also use her services?” The Commander asked.

T’Leth cocked his head. “Yes, several times. Her own price was miniscule, and allowed me to get a better grasp on her own personality. She wanted to know about the worlds I visited, the locations of primitive species. Vaults and ruins of previous civilizations. I suspect she was an explorer, perhaps more comparable to a treasure hunter, historian, or archeologist in your terms. In return she provided information on certain…enemies I had.”

The Commander gave a small smile. “To be more specific?”

“Information I exploited to destroy the proxy species of other Sovereigns,” T’Leth answered bluntly. “I was under the impression she quite liked her interactions with me, as she was as sick of this petty conflict as I had grown to be. But in all this time, she had never acted on her own, and for a long time no one suspected she would do anything different.”

“But she was biding her time,” Vahlen guessed. “A plan millennia in the making.”

“Yes,” T’Leth confirmed. “When the Replicator fleet attacked and forced the Sovereigns into hiding once more, there is a long period of quiet in the galaxy. But instead of quiet, the moment the Replicator fleet returned beyond the edge of the galaxy, a new species struck from the uncharted regions. The Adherents as they called themselves, under the unsheltered command of their master.”

“The Traveler.”

“The Just; as they called her, an approximate translation,” T’Leth clarified. “She was fond of titles. The Adherents were a species that revered war and conflict, at minimum developed and refined over multiple cycles. All hidden. All without attracting the attention of other Sovereigns. They claimed this station and began spreading across the galaxy rapidly, exploiting their high birthrates and using reproductive technology to grow their species from billions to trillions within years.”
T'Leth motioned them to rise and began walking down one of the pathways. “So how does a warlike species live if there is nothing to fight?” The Commander asked.

T'Leth rumbled. “There was plenty to fight, Commander. The first planets the Adherents attacked were the hundreds of planets that housed developing or primitive life. They were slaughtered with ease, and some were the planned proxies of Sovereigns. Those eventually fell too, and the Traveler had paralyzed the cycle and become the undisputed power of the galaxy.”

The alien avatar pointed to the pyramid. “As for what they did when there was no conflict, it is simple. They fought themselves. Daily battles of strength and prowess took place in those pyramids, there were constant cullings of those they deemed inferior both physically and genetically. The Traveler never allowed a civil war, and indeed, the cullings had been engrained in their culture to an extent where those killed simply accepted their fate.”

“She sounds violent for a Sovereign,” Vahlen noted, looking at the walls which the Commander saw held simple pictograms and images, all of which portrayed fighting or combat in some way.

“The Adherents were a means to an end.” T'Leth sounded as though he would shrug if it was possible. “A species to wage nothing but war was necessary. It served the purpose of the initial conquering of the galaxy, and I assume she thought it would be enough to fight back the Replicator invasion. The black fleets they had been taught to expect since the beginning.”

“But it wasn’t,” the Commander guessed. “She lost.”

T'Leth seemed to consider for a moment. “I remain undecided on that. I made contact with the Adherents when I realized what her plan was. I agreed to fight the Replicators as there was no Sovereign threat. I suppose that fact that she permitted this was an indication she liked me enough. A rare alliance, but one we both knew was temporary. When the initial invasion took place, it was rebuffed easily for a time. Then the numbers became overwhelming, the tactics more refined, the power stronger. But that is not what caused the downfall of the Traveler and her Adherents.”

Vahlen pursed her lips. “Another Sovereign?”

“The Leviathan.” The words came almost in a hiss. “He came out of nowhere and attacked this station. The Traveler was no warrior, yet she resided here. None stood a chance against this Sovereign, and I am surprised the station was not simply destroyed.” A pause. “Perhaps it was, and it was rebuilt later. But it matters very little. I attempted to help, and managed to engage the Leviathan. A mistake that nearly cost me my life.”

“Amazing,” the Commander commented dryly. “Intervening to save another Sovereign. I thought you didn’t do that.”

“The Traveler was a useful check on the galaxy,” T'Leth said. “A way to even the balance of power. And one of the few who was interested in ending this war instead of perpetuating it. Having her die, especially to the Leviathan, would serve no one aside from her killer. Aside from that, I considered it practice for the day we fought decisively. Although I severely miscalculated his skill and power. A mistake I will not repeat.”

“And so he hunted her down,” Vahlen said slowly. “Unfortunate. I think.”

“Yes,” T'Leth confirmed. “To a largely barren world, where he struck her down. I am unsure how he tracked her, but there was no mistaking the result. With their god gone, the Adherents fell apart and were massacred by the Replicators. A valiant effort, but it was simply not good enough.”
“So why have you been thinking about it lately?” The Commander asked.

“As a lesson,” T’Leth said. “Even as she used the Adherents, there are similarities to our own… alliance. They were treated as close to equals as one could get, and with the cunning of the Traveler and the strength of the Adherents, they came close to conquering the galaxy.”

“I see some striking differences between us and them,” Vahlen noted.

“The principle is the same,” T’Leth said, looking over the barren city. “The Traveler made mistakes. She was too involved, the Adherents were too obsessed with war and conflict. It was a wasteful society, one which she overmanaged. Every single achievement she gave to them, none of it they earned. Most of them barely understood the technology they used because in the end, they were a tool. A means to an end.”

“And a tool cannot act on its own,” the Commander said.

“No,” T’Leth agreed. “The loss of the Traveler and this station should not have doomed the Adherents. But because of the mistakes made, they were little more than children without a parent when she was attacked. The Traveler learned too late that there is a reason Sovereigns normally hide or distort their presence to their proxies.”

“I assume then this is something you are applying to our own alliance?” The Commander asked as he looked back up to the expanse of stars and nebula in the sky.

“Yes.” T’Leth notably was silent for a few moments. “This is an…opportunity. One I certainly did not expect, not from your species. But if this is done correctly, one day Humanity will control this galaxy and the Sovereigns and Replicators will be defeated and hunted. But this is far into the future, Commander. Long after your lifetimes. Long after the Ethereals and their puppetmaster have been destroyed.”

“Well,” the Commander nodded. “Let us hope the war continues in our favor. The help you’ve provided so far has certainly been useful.”

“Pardon the interruption,” a new voice said, as the Chronicler appeared out of nowhere. “Commander, Vahlen, you’re needed.”

“Why?” Vahlen asked.

“Fiona’s returned,” the Chronicler’s face was neutral, but his voice was deliberately tight. “She’s bought very disturbing news. And a friend.” He glanced towards the manifestation of T’Leth. “We need to talk. The situation regarding the Bringer is much worse than we thought.”

“Go.” T’Leth dismissed the Commander and Vahlen. “Speak to Fiona. Chronicler, continue.”

And within seconds the world around them disappeared and the Commander and Vahlen were back in the real world.

***

Situation Room, the Praesidium – Classified Location

1/12/2017 – 9:09 A.M.

This was…one of the more unexpected developments the Commander could have expected.
When Aegis had off-handedly mentioned the Zudjari in several documents he’d written, it had been very explicitly stated that the Collective was not planning to use them anytime soon. He knew Vahlen and a few of the other scientists had inquired as to the species, but he personally did not consider them relevant.

And now one of them was standing in front of him.

Even with the astronaut-like helmet removed, the Zudjari easily towered over him. The armor itself was nothing like either Collective or Human-make, and the technology involved seemed to be a natural evolution of that used by the Outsiders. A confirmation of their Zudjari origins. While he couldn’t read Zudjari body language that well, this one didn’t appear to be hostile. In fact, he seemed somewhat overwhelmed.

Given the story of how he’d come at all, it wasn’t much of a surprise.

But Aegis, he was focused on the other big piece of news Fiona and their new Zudjari friend had brought.

“Mortis is alive?”

“There was an Ethereal called Mortis,” Axis repeated, a tone to the voice the Commander couldn’t place. Possibly annoyance at having to repeat himself. “A user of a psionic discipline called Biopathy. Related to another Ethereal called Sana. That is all I know, I had very little choice in participating.”

“And he has recovered…” Awe was in Aegis’s voice. “This changes much. Mortis would never have approved of what the Imperator is doing. And if Sana and the Battlemaster have been exposed to the worst of the Creator’s experiments—”

“None of them were pleased,” Axis interrupted. “Especially Mortis. The Ethereal Battlemaster was more controlled, but he was definitely furious at whatever that place was.”

“Perhaps we should focus on the fact that the Creator has been working on bringing over a Sovereign One apparently trapped in the Psionosphere,” the Commander said dryly. “Ignoring how that shouldn’t be possible, it might be worth asking why the Imperator is letting this happen.”

“I’ll give you that answer,” Fiona shrugged, as she cleaned up her blade. “He thinks he can control it.”

“Control a Sovereign One,” the Commander said as neutrally as he could. “It can’t be just that.”

She snorted. “I never said it was a good reason. Aegis, anything to add?”

“I am of a similar mind,” Aegis said slowly, looking down at the Zudjari. “The Imperator would not take such a risk unless he was sure the benefits were certain and greater than the cost. Yet control over a Sovereign One…even in this state…it seems far too risky, even for him.”

“Except that we’re forgetting one thing,” Zhang suddenly noted, stone-faced. “The Sovereign One the Imperator is working with. Historically the Sovereign Ones have warred with each other, and this Bringer is trapped. If given the opportunity to fully control a direct threat…the Imperator could be working with the Sovereign to make this feasible.”

“Damnit,” Fiona cursed. “That makes a lot more sense. Still, the problem is that according to what T’Leth has said, the Bringer isn’t an idiot. And from what I saw, the Creator has placed zero boundaries on what is happening. Incidentally, she definitely was behind Seoul. Apparently the
Battlemaster was actually telling the truth.”

“And you base this off what?” Creed narrowed his eyes. “The word of this other Human? A traitor?”

“Quiet, Creed,” the Commander rubbed his forehead. “Given what we know now there is no use pretending the Collective was behind it. It didn’t add up then, but it does if it was perpetrated by the Creator using the forces of a Sovereign One. That being said, the Imperator does share blame for allowing this to happen at all.”

“So much for the Battlemaster promising to turn over whoever was responsible,” Jackson reminded them. “I somehow doubt the Imperator is going to let him hand over the Creator. Not if she’s involved with bringing a Sovereign under his control.”

“He will be furious,” Aegis said. “He would never approve something like this.”

“That means absolutely nothing,” the Commander shot Aegis a hard look. “The Imperator is in charge of the Collective, not the Battlemaster. What he would or would not approve of doesn’t matter, he’s still working to keep the Imperator in power and that isn’t going to change no matter how much he dislikes it.”

“Except he had no idea this was happening,” Aegis said. “Nor did anyone else for that matter.”

“And what do you expect him to do?” The Commander asked bluntly. “Shut it down?”

“He will make an attempt,” Aegis noted. “Of that I can promise.”

“There are two other Ethereals who can corroborate his story,” Axis added. “While I do not fully understand the dynamics of this species, both of his companions seemed to wield some influence.”

“Mortis more than Sana,” Aegis said. “And yes. Mortis is, for better or worse, similar to your species emotionally. It will be very difficult to convince him that the Creator’s experiments are justified.”

“At the risk of derailing this conversation,” Iosif coughed, speaking for the first time. “We should probably discuss the fact that there is a Sovereign power which was capable of fighting and matching three of the most powerful Ethereals, and someday they are going to be used against us more openly. And this force, I’ll remind you, consists of non-psionic species wielding psionics with some level of mastery, along with whatever other things the Creator has designed which are also psionic. The potential Ethereal infighting, or lack thereof, is not something we can predict or control. This is more important.”

“I concur,” Zhang nodded. “Worst case scenario is that the Imperator begins using these…forces.”

“You cannot fight them like a normal psionic foe,” Axis interjected. “Telepaths especially will fail if they are unprepared. The Mosaic encountered this Bringer before, it seems. I know how to protect myself against what it does.”

“Yes, you are in an interesting situation,” the Commander noted. “I suppose we might as well discuss your future. We can’t have hostile aliens running around, but this is not necessarily your fight.”

The Zudjari was quiet for a few moments as his eyes briefly became unfocused. “The fight you wage is not my own, this is correct. But for now we have a common enemy. The last of the Zudjari are being held hostage by this Ethereal Collective, and Origin is a prisoner. And any alien who
allies or tampers with an abomination like the Bringer is an enemy to be purged from this galaxy.”

He looked back down at the Commander, and pointed one finger. “I will help and fight with you, on the condition that the Zudjari be freed. Origin may be lost, but my species should not be condemned or held hostage.”

The Commander crossed his arms, thinking before answering. “From what Aegis said – and this comes from him, the reason they are currently being held is because when the Ethereals awoke them, they immediately attacked. While I’d like to help your species, I’m less inclined to do so if it means we’ll be attacked as thanks.”

“The Ethereals intended to use us as soldiers or pawns,” Axis answered firmly, voice rumbling. “I am not surprised Assimilator Jeen fought, even if it was not in his favor. Some species are willing to become slaves in return for a single favor. We are not. Does your species intend to treat our kind as the Ethereals did?”

The Commander’s mouth formed into a grim smile. “I can assure you that ADVENT, and Humanity as a whole, has no interest in conquering or assimilating aliens. As long as we aren’t bothered, no one else will be either.”

“Then you will have little to fear from us,” Axis nodded. “I was second in authority only to Origin. The Zudjari will follow me, and we will try and find our place in this galaxy once more…” he trailed off. “I have much to think about and consider. The Mosaic cannot be formed in this galaxy, but if that were the case…why should we have been preserved?”

“You’ll have to think about that,” the Commander said before the Zudjari lost himself in self-reflection. “We’ll have to formalize an agreement with ADVENT regarding the eventual treatment of the Zudjari; you’ll need to be caught up on everything before that though. But for now, we’ll protect you, and you help us in return. I expect ADVENT will agree to help your species.”

“That will suffice for now, Commander,” Axis nodded, looking around. “Then I will go to my room…or a cell, if you have one.”

Vahlen sounded surprised. “You want a cell?”

“I do not wish company, or to be disturbed,” Axis said flatly. “I can tell your species is an inquisitive one. I do not want to be prodded or questioned now on my people, history, or any inane question that will arise from such.”

“We can arrange that,” the Commander promised. “And…welcome to XCOM, I suppose.”

“Perhaps we should consider a name change,” Creed suggested dryly. “Soon we’ll have more aliens than Humans here.”

Jackson rolled her eyes. “I’ll let you know when alien numbers actually come that close.”

“That’s enough for now,” the Commander said. “Everyone dismissed; Zhang, Aegis, Creed, Iosif, we’ll need to go discuss a more feasible plan with Fiona here at some point. If you’re willing to be debriefed?”

“Whatever you need,” she sheathed her sword. “I definitely need to prepare for a rematch.”

***

*Atlanta, Georgia – United States of America*
As it turned out, it was difficult to come up with a workable plan for penetrating the ADVENT Recruitment Center, and from there getting to the machine which would awaken his psionic abilities. The most obvious thing was it would have to be done at night, since the process would take at minimum a few hours.

The Overmind had, surprisingly, been rather...present as he planned this out. Not so much giving advice as making him aware of certain crucial details that he had no hope of figuring out on his own. Such as the fact that it would take close to eight hours for the machine to work. But aside from that, the Overmind hadn’t really helped him.

Well, he’d occasionally make a comment or ask a question which made Ivan pause and reevaluate something. Other times he would be a phantom figure in the background; disconcerting at first, but he’d grown more used to it.

The first thing he’d done was get an untraceable cash flow. He knew ADVENT would catch something if he went and withdrew several thousand dollars, even if it was over a period of weeks. So there was an easier solution. Convert money into other assets, jewelry, antiques, and so on, and sell those off to third parties for cash. Completely out of character for anyone who knew him, but it wasn’t as though he was advertising this.

So that had gotten him a substantial amount to work with, and since ADVENT hadn’t shown up with questions, he’d assumed it’d gone unnoticed, or at least flagged as not a high priority. He’d stayed off the Internet as well, and used public places and networks for any kind of searching which might raise red flags.

Thanks to his work, he was able to call in quite a few favors from former clients and friends. Several he had snoop around the Recruitment Center, or go in and pretend to be interested, while taking note of certain things. From there he was able to put together something of a layout of the place, as well as people of note.

It was through these people that he had also become aware of what passed for the black market in ADVENT, something he wasn’t sure would be possible given the obsession with law and order. But it turned out that it did exist, although from how one of his former clients had described it, it was a lot smaller and secretive than anything before.

It had cost a small fortune just to buy one of the gauss pistols. He’d asked about a suit of armor when he’d considered infiltrating that way, and the man had laughed and said “I don’t know what you’re into, but you don’t have nearly enough for a suit. ADVENT has those locked up tighter than gold and they cost a pretty penny because of it.”

So that had been the end of that plan. It wasn’t strictly necessary; he needed a weapon, and now he had one.

The harsh truth was that there weren’t many scenarios that were both plausible and feasible to pull off. Ideally he wanted someone on the inside to help him, but that was out of the question. He was resigned to the fact that it was extremely likely that he wasn’t getting out of this undetected. Assuming he could get the security shut off, someone would be looking for him eventually.

Possibly not a concern, assuming the Overmind followed through on his end.

There was the matter of getting into the building in the first place. Breaking in could lead to a host of problems, so unfortunately the best solution was to find an employee and coerce them into
helping him. Not something he was especially pleased by, but it had to be done. Luckily he’d identified a suitable person who would assist him.

Danielle Cortez, an unassuming young Hispanic woman who worked as a technician in the Center. Lived alone, had a few friends, but not many, able to be overpowered if necessary, and thankfully not especially intelligent since he’d been able to enter her unlocked house and access her devices and calendars. He knew her plans and itinerary for the next couple weeks.

It was, admittedly, stalkerish. But he didn’t intend to hurt her, and once he had what he wanted, she would be released and never see him again. A means to an end.

He was, though, going to be extremely vulnerable when he was in the machine, but the Overmind had promised that he would ensure there would be ‘no disturbances’. He supposed he would just have to put some trust in the Overmind that he was going to wake up and not immediately be shot by ADVENT security.

“You have planned well enough.” Ivan grimaced, though he wasn’t startled any longer. “Working within limitations allows room for growth.”

“And I might die,” Ivan muttered, sitting down at his home table, seeing the figure of the woman he was going to be kidnapping later, though with glowing orange eyes.

But the face was completely impassive. “Then you had best ensure there are no mistakes.”

“Trust me,” Ivan grunted. “I’m aware. So, assuming everything goes to plan, what will happen next?”

“You will be extracted to safer territory,” the Overmind said. “I will not share details in the event you fail and are interrogated by ADVENT.”

Ivan just raised an eyebrow. “I appreciate the vote of confidence. Truly your kind look upon your allies with confidence and appreciation.”

“And your kind utilize humor and sarcasm as a deflective coping mechanism at curiously high rates,” was the deadpan reply. “Fascinating to see it so pronounced in a species.”

“Really.” Ivan got up and went to his fridge to get a drink. “Well, since I’ve got you talking, why aren’t your kind a little more…” he waved a hand around. “Open?” he scowled. “But literally every single one of you is serious and like a military officer in charge of a base where no fun is allowed. Even Aegis is like this.”

“It is how our species is,” the Overmind answered. “Emotions cloud judgement. Thus they were tempered. We feel our emotions, but they do not control us.”

Huh, interesting. “You can control that?”

“Every aspect of an individual can be controlled and manipulated,” the Overmind said slowly. “It is merely a combination of time, research, dedication, and technological progress to fully master the genome. We came close…very close. I have seen our species come from being a collection of independent clans and states, to the undisputed power of the galaxy, to our eventual fall and now our rise once more.”

Ivan stopped pouring, processing what the alien was saying. He coughed. “Just…how old are you?”
The Overmind was quiet briefly. “Old, Human. Older than your entire species’ recorded history. Old enough to watch an entire rise and fall over thousands of years. Old enough where I have seen everything the galaxy can offer. Age becomes less important to the immortal, and in truth I do not fully know how old I am now.”

Ivan coughed again. “You’re…immortal?”

“Yes, we are,” the Overmind said. “Our species is. An evolutionary consequence of our low birthrates. We lived a thousand years when we were restricted to our planet. As we conquered our genome, periodic treatments ensured that we never degraded, and as a result, never died.”

“Ah, I see.” Ivan took a swig of his vodka. “You’re not actually immortal, you just cheated actually dying. Clever. Don’t suppose you could do that for other species?”

“Perhaps,” was the answer. “None have tried before.”

Hm, well, when he was off Earth, maybe he could try and see if some scientists could look into that. “Well, to tomorrow I guess,” he said, lifting his glass to the emotionless figure. “A toast, a Human tradition. Good luck.”

The figure showed no visible reaction, but a similar glass suddenly appeared in the hand, which mechanically raised to mirror his own. “Good enough,” Ivan conceded.

Well, one way or another, his future would be decided soon. Hopefully it turned out in his favor.

Isolated Location - Argentina

11/13/2017 – 11:11 A.M.

This was an unfortunate interruption. Volk pursed his lips. “I suppose it was only a matter of time.”

“XCOM experienced in psionic interference,” Elena nodded. “Intervention inevitable. Revised plans must be established.”

To put it lightly. When Asaru had said that they didn’t have to worry about ADVENT for some time, as long as they weren’t tipped off unnecessarily, he hadn’t thought to wonder what to do when XCOM decided to investigate. The report from one of the Phantom Division who was keeping an eye on ADVENT Brazilian Command confirmed that XCOM Intelligence had sent an agent.

Abigail Gertrude.

Interestingly enough, this was a woman who actually had a history. A former US Marine combat medic. Exceptional student, extremely intelligent, by all accounts a woman with a bright career ahead of her. She hadn’t seen any action, but despite that a few months into her services she’d been reassigned, and that was where the trail ended.

Seeing as how she’d shown up as an agent of XCOM, she must have been recruited by them. It was certainly an odd career change. Combat medic to soldier made sense, and XCOM would have obviously needed women like her. However, combat medic to soldier to intelligence agent? That was rare and unusual. She didn’t, in Volk’s unprofessional opinion, fit the mold.

That said, XCOM wouldn’t send a novice and she’d apparently been putting together a similarly
interesting team. A couple Peacekeepers who’d survived the attacks, multiple psions, a diplomat, several of whom did have actual backgrounds to pull from…which luckily gave him an idea of how she was going to tackle this, and confirmed to him that his misgivings about how the operation was proceeding in Argentina were accurate.

In the end, he wasn’t a leader, a revolutionary, or aiming to start a rebellion. Lofty dreams, but he wasn’t cut out for that kind of thing. He was an assassin, a killer, and it was better to focus on using those skills against ADVENT. Supposedly this Betos woman in Africa was also working with another Ethereal, and she seemed to want to be the revolutionary.

“We need to change our plans,” he finally said, to himself as much as Joreal and Asaru. “If we hadn’t been cautious, ADVENT would be invading Argentina soon and we’d have accomplished nothing. They’re going to speak to the government, and they’ll eventually learn about the ones who dealt with us. Scrub their minds, Asaru, we’re changing our game plan.”

Joreal seemed skeptical, but Asaru just widened a blue eye. “You do not want to fortify Argentina any longer?”

“There wouldn’t be enough time, and it would ultimately fail, and be another state assimilated by ADVENT,” Volk shook his head. “This serves as a base of operations. But that isn’t what any of us are. We’re assassins, not guerilla warriors. Our mission is to hurt ADVENT as badly as possible, and to do that we need to start just targeting people.”

Asaru gave a bright smile. “I cannot say I’m disappointed by your change of heart. Macula will be pleased to hear it.”

“Do you have a target in mind?” Joreal asked.

“Elena?” He nodded to her as she cleared her throat.

“Focus should be on highly placed military officials and heads of state,” she said. “The public assassinations of high-profile figures will demoralize ADVENT personnel and citizens. More specialized targets will hurt their intellectual, scientific, and engineering capabilities. Sabotage or tampering of research facilities is also advisable.”

Volk pulled out a small piece of paper. “I already have regional leaders for the Midwest of the United States. Crippling them in this area will likely improve the Collective’s chances whenever they attack again. In the meantime, the first high-profile targets will be Supreme Leader Iseul Gwan, and South Korean President Chia Seo-jun.”

“That would hurt even worse given recent events,” Joreal complimented. “North Korea still views Gwan in a reverent light. His death would shatter morale there.”

“I have the feeling you aren’t finished,” Asaru noted curiously.

“No,” Volk said, smiling for the first time. “Before we do any of this, I want this investigatory team dealt with. We are going to send Abigail Gertrude back to XCOM in a body bag, along with everyone else she’s recruited to her mission.”

***

ADVENT Intelligence Outpost, Brasília - Brazil

1/14/2017 – 12:44 P.M.
“The meeting is set,” Serena said, handing Abby the tablet. “I got the impression they weren’t exactly happy about it, but mentioning that XCOM was also interested definitely got their attention.”

“And everyone on the list will be there?” Abby asked, taking it.

The diplomat nodded. “Yes. If there was any collusion, we’ll know about it. They also stated that only yourself and I will be able to meet them in person, as soon as they have verifiable evidence that neither of us is psionically sensitive.”

“Well, we prepared for that,” Abby said, shrugging. “I assume their people will be coming to take the samples?”

“Within a couple of days,” Serena confirmed. “They confirm that, we’re all good to go. Not that it’ll stop our resident Inquisitor.”

“He might not even need to be in the building,” Silvio commented from his chair at the other end of the room. “The psions usually have a pretty good range.”

“I’ll let you figure that out,” Serena said. “Just wanted to give you an update on that.”

The woman saluted, leaving them alone again. Silvio appraised her inquisitively. “What do you think the chances are that the Phantom Division tries to interfere?”

“We should prepare like they will,” she said, sinking into a nearby seat, pinching the bridge of her nose. “Which is why I think we should bring a team of disguised Lancers for our guard instead of standard soldiers. If we are attacked, or something happens, I want to have soldiers on standby who can actually fight back.”

“I’ll get some agent backup too,” Silvio promised, making a short note on his own tablet. “Plainclothes civilians throughout the city. Hide our numbers further.”

Abby pursed her lips. “This will be a big waste if nothing happens.”

“Well, it’s for a good cause,” Silvio shrugged. “And we don’t want anything to happen. But if it does, you’ll be happy you’ve got Lancers and agents to help out instead of standard soldiers. Not to disparage our fine fighting men and women, but from what you’ve said, they aren’t going to stand against the Phantom Division, or these terrorists for that matter.”

“The terrorists may be the larger threat,” Abby mused, rapping her fingers on the table. “They could also hide in any crowd. So far we haven’t witnessed any kind of suicidal actions, but I wouldn’t rule those out.”

“It will be curious to see what they do,” Silvio said thoughtfully. “Doing nothing may make us drop it if there is nothing, but if someone is guilty, we’ll have another lead to follow. But doing something will definitely confirm that we’re on the right track.”

Abby was silent for a few moments, and decided to give voice to a concern she’d been having over the past few days. “I don’t think that we’ll find anything. Not now.”

Silvio frowned. “Why?”

“Because we’re dealing with Nebulan,” Abby explained, reclining back in her seat. “An Ethereal
that specifically likes memory tampering. If they learn what we’re doing, there isn’t anything stopping Nebulan from warping their minds. An attack would be out of character…at least in the middle of a city. She’d do an ambush, somewhere isolated.”

“But this is assuming she learns about us,” Silvio said. “She might not, or learn too late to do anything without it being obvious.”

Abby snorted. “I guarantee there is at least one Phantom agent watching the government if they’re involved. The moment they hear about the meeting, they’ll know what we’re doing. Nebulan isn’t an idiot.”

“So what you’re saying is that Wepper should also probe their minds,” Silvio said slowly. “Has he had any luck so far?”

“Partially,” Abby flipped to the relevant document on her tablet and slid it to him. “The good news is that he found the identifying marker which usually indicates if a memory was tampered with or not.”

“That’s…good news?” Silvio looked up, waiting for the catch.

“The problem is that he was only able to reliably find it in victims with whom it had only happened recently,” Abby supplied. “A few hours at most. These were volunteers. And it seems impossible to tell what the original memory would be. The best thing about it is that the tampering marker seems universal, so it would be easy to find…assuming you know the area to look.”

“So it’s like finding a needle in a haystack,” Silvio muttered. “Even assuming he goes at full speed, could he go through their memories fast enough before they leave? All of them?”

“Unlikely,” Abby admitted. “And there’s still too much unknown. We don’t know if this would change depending on the mastery of the tampering psion. We don’t know if it can be done faster. For all we know, this is the worst possible way to do it. I guess it’s better than nothing.”

“This probably would be fairly recent when the meeting takes place,” Silvio said, thinking as he rested his chin on a fist. “Within a week to ten days. At least it’s a shorter window. Might not be enough though.”

“We might have to rely on command conditioning,” Abby finally said. “If we don’t find anything, and they are working with Nebulan, psionic contingencies will either inform us what they’re doing, or at worst make them wonder if we’ve compromised their government.”

“Then you better get authorization for that from Falka,” Silvio said. “We’re only authorized to read their minds. Actually planting commands needs additional approval.”

Abby sighed. “Is that necessary?”

“It is for us,” Silvio shrugged. “With XCOM I don’t know if that would change things, but I’d rather be safe than be arrested by the Oversight Division for ‘Unauthorized psionic manipulation’. Since we’re dealing with an Ethereal, I doubt you’ll have problems getting it approved. But we’ve got rules for psions here, psions can’t do whatever they want and we can’t use psionics however we want.”

“Fair enough,” Abby conceded. “I’ll get a request written up and sent to you. And the requests to Special Forces and Intelligence, for the Lancers and Agents.”

“I’ll get everything prepped on my end too,” Silvio gave a bright smile. “I almost hope they try
something. I’m curious how a group of enhanced spies will fare against the best special forces ADVENT has. And psions, of course.”

“Like you said,” Abby answered. “Let’s hope we don’t have to find out.”

***

Stasis Chambers, the Praesidium – Classified Location

1/18/2017 – 11:00 A.M.

“I’m sorry, could you please repeat that, Commander?”

The sheer disbelief in Saudia’s tone was almost amusing to the Commander, but he couldn’t really fault her reaction. “Aegis believes it can be done. Now that the Manchurian Restraints are completed, we have our insurance policy-”

“Let me get this straight,” Saudia interrupted, lifting a hand. “You want to wake Caelior up from his very secure and protected stasis pod.”

“That is the plan.”

“And then use him against the Collective?”

“Preferably he’ll be more willing to fight for us,” the Commander said, thinking how best to phrase it. “Caelior was…misused back in the Empire. Aegis sharing some of the truth with him definitely took out a lot of the fight he had.”

Saudia looked like she wanted to slap him. “You…do remember this is the Ethereal who single-handedly leveled Tokyo?”

“And we would be fools to not turn that kind of power against the Collective,” the Commander answered. “With some proper education in tactics, and sufficient motivation, we have one of the most powerful Ethereals to exist on our side.”

“And how do you know he isn’t going to try and break free?”

“Because Caelior doesn’t want to die,” the Commander answered simply. “Because he will want to take revenge for the way the Collective used him. Because we’ve taken extensive measures to curtail any sort of action against us. We’re doing this very carefully, Chancellor, and I asked to speak to you here to keep you up to speed on what we’re doing. I’m not asking permission, but I think it’s best if we’re both on the same page here.”

“I’m glad you at least did that,” she muttered, leaning against the wall. “The media insanity around Aegis would be nothing compared to having Caelior showing up. So thank you so very much for not springing something like that on us.”

“We live and learn,” the Commander allowed a smile. “And in the interest of that… he pulled out a printed piece of paper and handed it to her. “Also keeping you in the loop, we might be acquiring some additional allies.”

“How?” She immediately grabbed the paper, and skimmed it. It wasn’t fancy, and solely for the purpose of sharing information. The Commander didn’t want any virtual copy of it on ADVENT computers. She blinked several times as she blazed through it, looking up at him again in disbelief. “The Andromedons?”
“Technically a Union,” the Commander clarified. “Possibly more. But a very-“

“I know who Union Viarior are,” Saudia interrupted. “I’ve also read all the reports you shared with us. And you’re going to meet with V’Zarrah?”

“Yes.”

“How?” She furrowed her eyebrows. “Is he coming here?”

“Can’t share that,” the Commander shook his head. “But it’s taken care of. I’m telling you because if we reach an agreement-“

“It could affect the development of the fleet,” she finished slowly, blankly looking at the walls as she processed the implications. “Resources, designs, training; the Andromedons only have the Sectoids as rivals in naval power. We could have a fully-trained and prepped fleet in a fraction of the time if this happens.”

“Let’s not celebrate just yet,” the Commander cautioned. “But you should be aware of it. Share that document with whoever you think should be informed and destroy it.”

“I’ve handled sensitive documents before,” she noted, carefully placing it in a folder she’d brought along, retrieving it from where she’d set it down. “I don’t think it will be necessary to share it with anyone outside Elizabeth, Laura, and Feng. They should be aware.”

“Commander?” Both of them turned as Vahlen walked inside, giving Saudia a brief nod. “We’re preparing to bring Caelior out of stasis, we’re waiting on you.”

“Showtime,” the Commander said, following Vahlen as they exited the room.

“How certain are you that Caelior can be controlled, doctor?” Saudia asked.

“We’ve applied the strictest of Restraints,” Vahlen said. “He will not be able to speak or act when he awakens, not until one of us manually sets his programming. Witnessing the process should give you more concrete reassurance that he will not pose a threat.”

Saudia didn’t seem fully convinced, but that wasn’t something the Commander was concerned about. One way or another she’d come to terms with what they were doing. They stepped into the stasis chamber, which held Caelior’s own pod which was suspended on the far wall, the bare metal dully reflecting the light from the ceiling.

Aegis and several technicians were already there, the latter of whom were closer to the pod itself, while Aegis stood near the door. “We will be sectioning off the room,” Vahlen said, as she stepped closer to a computer console which seemed to control the pod. “Security precaution, nothing should go wrong.”

“Comforting,” Saudia muttered, as a transparent, but shimmering barrier appeared between the trio and Vahlen.

“There is little danger,” Aegis promised. “If necessary, I can restrain him again.”

“Beginning draining sequence,” Vahlen said, and they heard a low hum begin as the green fluid within the pod began draining into chambers within the walls themselves. For a pod as large as the one which held Caelior, it was a good fifteen minutes before Vahlen announced, “Sequence complete, pod chambers opening.”
Right on cue the pod opened up and Caelior almost fell out of it, though he was caught by the two technicians who were prepared for it, then maneuvered him to a specially designed chair proportionally designed for his large size. The Ethereal wasn’t completely naked, but the Commander knew that Caelior was likely not thrilled at the prospect of being observed when he was so vulnerable.

“Caelior, welcome back to the world,” Vahlen said, walking to stand in front of him, her voice sharp and professional as she spoke to the Ethereal, making it clear that he better listen. “I assume you enjoyed your rest. Now, do not panic. The reason you can’t move or speak is because you have been subjected to the Manchurian Restraints, which have locked your body down and made you unable to react to any stimuli.”

As she spoke, the technicians had still restrained Caelior. Better safe than sorry. “This will be changed shortly, but we understandably can’t take chances. The good news is that you are no longer paralyzed, although it will take you some time to your body to fully readjust to walking and using your limbs again.”

She motioned to the trio behind the barrier. “Once the programming is properly in place, Aegis and the Commander will be talking with you about what happens next. Chancellor Vyandar is here to ensure that we aren’t making a mistake in keeping you alive. I hope you’ll prove our decision was the correct one.”

Vahlen pulled up the other chair in the room and sat down opposite Caelior, while glancing at the notes on her tablet. “Now, let’s begin.”

Ideally, in the future this would be done by Julian. But for now, they had to make do, and doing it manually was likely needed anyway since Saudia was here. “How long do you think it will take?” Saudia asked.

“Hopefully not too long,” the Commander answered as Vahlen began applying the Manchurian commands. “But I don’t think we should rush her.”

***

Throne Room, the Temple Ship of the Imperator of the Ethereal Collective

1/12/2017 – 7:11 A.M.

The Imperator at least had an explanation. That was more than the Battlemaster had expected, but to say that it was justifiable was so far beyond the realm of possibility that he was surprised the Imperator had thought he would consider it even remotely acceptable. While the revelation of the theorized nature of the Sovereign Ones was something to consider, it in no way justified allowing this Bringer to have free reign over the Creator.

At least this finally explained why the Imperator hadn’t pushed for more thorough integration of Sovereign technology. If he viewed everything as a potential threat they couldn’t completely control, preventing it from being used in the first place was a good way to prevent a supposed ally from stabbing you in the back.

Perhaps, the Battlemaster mused to himself, he would be more accepting of the Imperator’s concerns if he’d actually seen some evidence that this was actually what was taking place. Mosrimor, the lone Sovereign supposedly allied with them, had barely interfered at all, and as far as the Battlemaster could tell, didn’t seem particularly involved to begin with. The Bringer seemed more involved than their apathetic Sovereign ally had been.
However, there was a bigger concern to be raised. “You deliberately withheld this from me,” he said slowly. The twinkling from the backdrop of stars cast a silvery light on the Ethereals in the room, long and dark shadows rising behind them. “This entire time, you neglected to tell me the actual reason for invading Earth.”

“I did,” the Imperator confirmed; an honesty the Battlemaster appreciated for what it was. It wasn’t as though there was much choice. “As well as others. This kind of information should not be common knowledge, and only shared if the need is dire.”

The Battlemaster took a slow and deliberate breath. “Did you not think that maybe, the knowledge that there is a Soverign One on Earth might be information that I would consider important!?” His voice was rising, but he didn’t especially care. “You didn’t just withhold information, you lied to me about why we were invading Earth! We are not prepared to fight a Soverign One!”

“Deliberately,” the Imperator answered, still calm. “Had we gone in with this objective in mind from the beginning, we might have forced its hand. Now we have the option to actually land on the planet and wage war without cause for alarm. Had we gone with the sole purpose of killing the Soverign, we might have never stepped foot on Earth and would be facing a much more dangerous Humanity.”

At the Battlemaster’s silence, the Imperator continued. “I did not lie to you about Humanity. I do intend to assimilate them into the Collective, and they have thankfully helped establish a framework of government to work with once their leaders are removed, XCOM is purged, and the Soverign is dead.”

“I would like to point out the absolute brilliance of your plan,” Mortis said, voice dripping with contempt. “In your oh-so-noble quest to kill every Soverign in the galaxy, you specifically go out of your way to invade their planets and make them your enemies where otherwise they would have never known you existed. Or maybe, you could have considered well…peacefully contacting the Humans? You do realize there are other ways to get on a planet without invading it? But no.” Mortis waved a hand. “Now you’ve made the enemy of something a lot more dangerous than you that completely didn’t need to happen. Great job. Truly.”

“You have certainly not changed,” the Imperator said dryly. “Spare me the dramatics, Mortis, no one is interested in your contempt. Consider that if I had done as you said, I would have given this Soverign the opportunity to infiltrate the Collective through Humanity. That is how they work. I would not have made an enemy, but I would have allowed what has been built to be corrupted.”

“And how do we know your theory is accurate?” Sana finally asked. “By your own admission, you have only contacted one of these Soverigns. The Bringer is another, and you suspect there is one on Earth. How do you know that each one is as manipulative and warmongering as you say? What proof do you have of this? The Humans were not under the influence of one.”

“Because a pattern emerges when one looks at the ruins scattered in the galaxy,” the Imperator answered. “It is heard through the words of their puppets, and themselves. Carefully constructed sentences and promises, while being vague on motives or details. If you want a specific piece of evidence, Mosrimor was the one who provided the location of Earth to me without saying why. He knew, or at least suspected there was a Soverign, and he wanted us to confirm it.”

“Did you consider that maybe we were unlucky enough to get the evil, manipulative Soverign?” Mortis asked. “Patterns or not, you’re basically doing what he wants anyway, so good job. Puppet.”

The Battlemaster took another breath, and turned around as they debated. “I don’t think you withheld this information because of tactics or strategy,” he said slowly. “You withheld it because
I might disagree with you.”

“You are too focused on your view of the galaxy,” the Imperator said. “You do not grasp the larger picture here. It is not a stretch to determine how the cycles of the galaxy play out. The Synthesized are a symptom of a larger war, not the endgame. You have made it your mission to kill the Synthesized, when your true targets should be their creators, and the ones who see species like ours as mere tools.” His lower two hands were clasped together. “The Bringer gave me locations of ruins; this is a use he has provided. I have verified what he has shared myself. More importantly all one needs to do is look to the inner galaxy. There are species under the control of Sovereigns. They manipulate through deities, proxies, AIs, but this is not a realization I came to overnight, Battlemaster. It is the culmination of years of research, and evidence both circumstantial and actual.”

“Tell me,” the Battlemaster said. “Was the Empire under the control of a Sovereign One?”

“Unlikely,” the Imperator conceded. “But we are an…exception, more than the rule.”

A snort came from Mortis. “Convenient.”

“Recall that we knew our species was the result of an artificial creators,” the Imperator pointed out. “Our species wondered for generations, and found no answers. Yet it seems abundantly clear that we were the product of a Sovereign. I cannot explain why it did not take control, or where it has gone, but we now have the answer. Even if they were not under their control, only they have the skill to engineer a species such as ours.”

“Regardless of the validity of this theory about the Sovereign Ones,” the Battlemaster stated, turning back to the Imperator. “Deliberately seeking out the Bringer is unjustifiable, and goes against what you ultimately want.”

“A means to an end,” the Imperator said. “This is perhaps the only opportunity to acquire and control a being powerful enough to fight another Sovereign. And that will unfortunately be something which is needed. Once the last Sovereign is dead, the Bringer will be disposed of.”

“And if you mess up, you unleash that thing on the galaxy,” Mortis pointed out. “You have no idea what you are doing here. Assuming you’re right, you’ve entered into a conflict that might have been going for millions of years. Do you really think you’re going to be able to outsmart and outwit beings which are older than our entire species?”

“Sovereign Ones are fallible,” the Imperator said. “Their arrogance and superiority can be exploited.”

“How interesting,” Mortis answered. “I was just going to say the same thing about you.”

“You may wish to be a pawn for the Sovereigns,” the Imperator said, an edge creeping into his voice. “But I will not willingly become one in this conflict, and I will attempt to break this cycle forever. Perhaps I will fail, but I will have made an attempt most are never even aware of.”

“So don’t,” Sana suggested, stepping forward. “Reject Mosrimor. Reject the Bringer. Sever contact. Withdraw from Earth. The Empire was without a Sovereign, the same can be done here. An attempt can be made to break free of this theoretical conflict without resorting to...making agreements with monsters and invading blameless planets.”

“Do you honestly believe we could accomplish what I intend with such a plan?” The Imperator growled at Sana, making her step back. “You are idealistic, not stupid. The galaxy has changed.
The Sovereign Ones are at large, and this time they will not let the remnant of the Empire pose a threat. We have little choice but to similarly augment ourselves, even if it leads to unsavory places.”

“I’m sure that reasoning never once backfired,” Mortis said, starting to pace back and forth. “Yes, our actions are just as bad as the ones we’re fighting against, but this time it’s actually justified, and before you know it, you’re helpfully uplifting and guiding species to use against the enemies because ‘it’s necessary and they do it’, but this time it is justified because the ends justify the means.” He looked at the Imperator. “Does that sound familiar? Isn’t this exactly what you’re doing with this little Collective?”

“No,” the Imperator stated harshly. “We saved the Vitakara from extinction. We made agreements with the Sectoids and Andromedons. Do not compare me to the Sovereigns who create and manipulate for millennia.”

“While not quite the same,” Sana added. “Your denial rings hollow when Paradise is allowed to exist.”

“Paradise will be controlled more tightly,” the Imperator said. “I mistakenly-“

“No.” The Battlemaster jabbed a finger at him. “Effective immediately I will be suspending any and all activity to Paradise and the Creator. The Gateway will be shut down and decommissioned. If you won’t deal with her, I will cut off her supply of food, components, and prisoners.”

“This is bigger than what any of us would prefer,” the Imperator answered slowly. “What the Bringer is doing is distasteful. It is also our best chance to fight the Sovereign Ones. You may decommission the Gateway, but I will simply have another constructed. I apologize, but this is a necessary task.”

“Is this the real reason Aegis defected?” Sana asked. “Because perhaps he was right to.”

“No.” The Imperator shook his head. “Aegis never learned of it, otherwise he would have informed others, I suspect. I suggest all of you take time to actually think about this. Consider what is best for our species and the Collective. Consider what is best for the galaxy. If the price of this understanding is a hatred of me, then so be it. I made mistakes in not sharing this with you and controlling the Bringer, but I will not apologize because they were justifiable and necessary.”

He looked at the Battlemaster. “Consider very carefully what you do next. I will not have further disruption in the Collective, not when significant progress is being made now. I have authorized more Ethereals to conduct additional destabilizing operations on Earth. I want this planet conquered and the Sovereign dead. See to it that this is done.”

“You forget I don’t answer to you,” Mortis reminded him. “And I’m very much not inclined to right now.”

“I suggest you reconsider as well, Mortis’Ligna,” the Imperator turned and began ascending the stairs. “If that is your feeling, then you may leave the Collective. But if you stay, you will follow any instructions I give. I will give you time to decide, but there will be no rebels here. Choose between your species or yourself, but it cannot be both.”

It was as clear a dismissal as could be made, and the Battlemaster had all he wanted regardless. He spun around, and began marching towards the exit, Mortis and Sana close behind him.

***
Danielle Cortez had no plan for tonight. She was exhausted having not slept well previous nights, and was hoping that this would be the night where she could break that cycle. Go home, eat, change, shower, and sleep before work the next day. Seemed a good enough plan, where she wouldn’t have to worry about recruitment numbers and Trask levels.

She pulled into her driveway, got out, and immediately made her way inside and walked directly to her fridge intending to get some water. She didn’t notice anything out of the ordinary, that was, until she turned and saw a figure sitting at her kitchen table.

With a gun.

She let out a brief shriek before the figure put a finger to where his mouth would be gesturing with the gun to be quiet. The figure was definitely male, and much bigger than her even sitting down. He wore completely black clothing, gloves, boots, pants, and jacket. The face was shrouded by a hood, but she could see that there was something covering his face.

“Hello, Miss Cortez.” The man’s voice had a trace of an accent, perhaps Russian, but she didn’t know. It was easily comprehensible and polished. Not what she had expected. “Cooperate and you have nothing to fear. Please no sudden movements or sounds. Understand?”

She gave a small nod.

The man stood, towering over her, making her curse her shortness even more, although it honestly didn’t matter at all with a gun in the picture. “You can speak,” the man said. “But I think we can both agree that attracting attention would be especially bad for you.”

She gave another mute nod, become more terrified of what the man wanted. How had he broken in at all? Was he going to rape her? Would it be better to just fight anyway? “You work for the ADVENT Recruitment Center,” he said. “A technician. With the psionic systems.”

“Glad you confirmed it,” he nodded. “This is what you’re going to do: We’re going back to the Center, and you are going to hook me up to that machine. Do that, and you’ll be released unharmed.”

Danielle blinked. The Psionic Awakening Unit? How did he know about that, and did he know that it might not work? How would he react… “But…we have to run tests…not everyone can-“

“I’m aware,” the man interrupted. “But I wouldn’t concern yourself with that. I know I’m psionically sensitive.”

A reject? It made sense, but he didn’t seem to have thought this plan though. Not the least of which was that when she hooked him up, he would fall unconscious. More than enough time to get some help. Unless he shot her? No…he would need her, he wouldn’t know how to work the machine. Maybe she could still get out of this.

Perhaps misdirect him. “There are security systems,” she said. “At least one guard. I don’t know where all of them are.”

“You let me worry about that,” he said, motioning for her to turn around with a flick of his gun.
“As for the guard, we’ll simply use the back entrance. Yes, I know there is one. Give me your cell phone.”

She slowly reached into her purse and took it out, and slid it towards him, hands up in the air.
“Thank you.” She expected to hear the sound of it being smashed or destroyed, but instead heard nothing. “Let’s go for a drive.”

A few minutes later they were on the road, the man sitting in the back seat with the pistol likely aimed at the back of her head. She tried not to look in the rearview mirror too much, and just focused on the road. For better or worse she lived fairly close to the Recruiting Center. On the way she tried to think of the rejects from the PRIEST Division.

There were a fair number who simply weren’t suited to have psionics – that had been emphasized during the training. Standards had to be met, and there were absolutely no exceptions whatsoever. Some people took it well, and found other work in ADVENT, but others didn’t react so calmly.

She cursed her forgetfulness, although in truth it could have been someone weeks or months. “Male” and “Well-spoken” didn’t really narrow down the possibilities, especially since he hadn’t given any details, such as the Trask level, or even basic things like skin and hair color. The man had clearly planned this out, though she still didn’t know how he would deal with being knocked out for hours.

She considered questioning him a bit more, but she didn’t know if it was a good idea to press him. Would he actually shoot her if he needed her? Could he afford to do that? But at the same time, could she risk it?

Danielle did not want to die. Not like this.

So she said nothing and they drove in silence.

A short time later she pulled into the alley which led behind the building, and parked. “Get out,” the man ordered, and she complied as he stepped out in unison with her, the pistol still aimed directly at her. She wished she knew more about guns, because she didn’t even know if it was a real gun or a fake, or if the man knew how to use it at all.

Danielle unlocked the back door, and stepped inside, with the man following her. “Go directly there,” he said behind her. “Don’t delay, I know the layout of this building.”

She couldn’t risk that he actually did. She could only hope that the night guard would either be watching the cameras or patrolling where they were going. A hostage situation would not be the worst outcome because backup in the form of PRIESTs could be called, telepaths. Of course, he might know that and just kill her.

But she definitely did not want to give those kinds of powers to this man.

It seemed she had little choice in that, though.

She took the way to the Psionic Awakening room, a smaller rectangular area with little more than two opposing pods on the ends of the room, with the accompanying consoles to begin and monitor the process. There were a few chairs against the wall opposite the entrance for recruits to sit on.

“Go to that corner,” the man ordered.

She complied, and heard some rustling in the background. There was a camera in the room, he might have been taking care of that. The click meant he’d locked them inside. In theory, no one would be able to get in and they wouldn’t accidentally stumble around it since there were no
There was something she was missing. This person had planned for everything up to going into the pod. Once he was in, she was free to do whatever she wanted. Was there another person who was following them? “Alright, let’s get this started,” the man said, inviting her to turn back around. “A word of warning, once I’m in there…don’t try anything, since I know you’re wondering that. It won’t turn out well for you.”

She bit her tongue, thinking that was an actual bluff. Since he’d locked them in, she was safe for the time being. Even without a phone, she could simply halt the process or keep him under indefinitely. “I’ll need to attach some sensors and insert some IV tubes,” she said, figuring that he would know the process of this, since he already knew a disturbing amount already. If he reacted badly…that might give her more options.

But he nodded, and stepped up into the vertical pod, even as the gun was still aimed at her. Danielle was surprised by how calmly she was doing this, her hands were barely shaking as she prepped him for the process. A few minutes later she was done, at least with that part. “You should keep your arms flat,” she said. “You don’t want the arm crushed when the pod closes.”

“I’ll worry about that when it’s started,” he said dryly, the gun still trained on her. “Go on then.”

She complied, and began the process. “The pod will close in ten seconds,” she told him as the hum of the machine filled the room. “Then it’ll enter the automated awakening process. It will open automatically once the period is over.”

The man nodded, and laid his arms flat against the pod as it began closing. “Your cooperation is appreciated.” Those were his last words before the coffin-like pod closed and began working. She was still for a moment, thinking she needed time for the pod to knock him out before doing anything.

She yawned, realizing how exhausted she was. The process would take eight hours, that would be enough time for a short nap. It wasn’t as though he was going anywhere, and she needed to be clearheaded in case there was anyone else watching her to make sure she didn’t get help. Just a short nap was all she needed.

Sitting down on the floor, she fell into a deep sleep.

Canadian Wilderness – Canada

1/14/2017 – 7:00 P.M.

The subversion of Fort McMurray was proceeding very well. Neil was quite happy with how things had been going. With the Overseer under their control, within days they had established a means of information transfer and he had a significant amount of data to work with. More than enough to plan what to do next.

Killing the Sargon was the priority, and Neil had soon realized that there were plenty of ways to kill a Sargon that wouldn’t necessarily implicate ADVENT. Psionics opened many additional possibilities, as they were finding out as Cycelea was slowly working to turn ranking members of the alien forces in the city into additional tools, and he suspected that within several weeks they’d have full control over Fort McMurray, all without the aliens ever realizing it.

He still had commanded the Overseer to continue patrols into their territory, where they either
killed them, captured and psionically took control of them, or just wanted them to see the skinned and frozen bodies of their comrades. All to give the Sargon a legitimate reason to investigate himself.

Around the campfire Neil idly chewed on a piece of Borelian meat. Despite some reservations, it actually wasn’t that bad. It was a little more chewy than most animal meat, and if it wasn’t cooked enough it had a really bad aftertaste, but cooked just right it was very filling. Waste not, want not and all that.

With his other hand he drew crude shapes in the snow, a way of visualizing possible ways to kill the Sargon.

“I still can’t believe you eat that stuff,” Cycelea commented walking in from the woods, Snowtrooper armor still on. It was close enough to the fire that Neil had taken his helmet off, and Cycelea followed his example, shaking free her hair. “Ah, that feels good.”

“Mission successful then?” He asked.

“Yes,” she nodded. “I’m getting pretty good at it. To the point where I’m worried I might overlook something important. But I don’t think I’ve made any mistakes. Yet.”

“You seem to know what you’re doing, I’m not concerned,” Neil said, reaching close to the fire and taking a plate of meat to her. “Figured you’d be hungry. Don’t worry, 100% from Earth.”

She looked suspiciously at it, but took the plate and sat down. The wind chill felt nice close to the fire, even as it howled in the distance, picking up and blasting snow around them. Not likely a storm, but he didn’t want the fire going out anytime soon. “Everyone on watch?” Cycelea asked.

“Or sleeping,” Neil confirmed. “Everyone’s got something to get done.”

“Including you?” She raised an eyebrow as she ate.

“Oh, yes,” he gave a thin smile. “Namely deciding how our upcoming Sargon is going to die. Input is needed, obviously.”

“Hit me then,” she crossed her legs, waiting for him to continue. “I’ve got ideas of my own.”

“Alright,” Neil picked up the stick and began tracing in the snow. “We’ve got our traditional way. Have the Overseer lead him out to show the area itself. We ambush and kill him, and since we have control over a lot of aliens, it turns into a chaotic mess. Not good for anonymity, but it would do the job.”

“Doesn’t seem subtle enough for you,” Cycelea mused.

“I think there is a better idea here,” Neil said. “The Sargon will arrive in a vehicle most likely. While he’s touring with the Overseer, we have some controlled aliens plant a bomb, or sabotage it some other way. Have it detonate when he’s nowhere near here. Suspicious, but it could be a freak accident, and even if they suspect otherwise, it wouldn’t be near us.”

“Until they look at where he was last,” she pointed out. “Might draw more attention.”

He scowled. “Good point.”

“However…” Cycelea leaned back slightly. “If you could make it so that it detonates at a different time, like from when he leaves his home base…that would be far more difficult to track. Assuming
the bomb isn’t discovered in the meantime.”

“The problem is we’d need to know when he’s using it again,” Neil said. “And we don’t have any aliens under our control there.”

“Yet.”

“The Sargon will likely come with a guard,” Cycelea said. “Elites, but also regular Mutons and possibly Vitakara. Nothing stopping us, or specifically, me from planting some new orders in their minds. Orders that could involve anything as complex as detonating a bomb at a certain point, or even simply attempting to kill the Sargon that way.”

Neil scratched his chin. “Three Inquisitors could subvert a group fast. Especially with all the practice you’ve have been getting.”

“Exactly,” she smiled. “And in the unfortunate event that it works and our alien spy is discovered, it will appear to be an act of a traitor, and not connected to us.”

That was an especially devious plan, and one he quite liked. “Well then, Inquisitor,” he said with a returned smile. “I think I know how we’re going to kill our Sargon.”

***

The Prism – Classified Location

1/12/2017 – 10:09 A.M.

The Battlemaster suspected that Mortis would have been more impressed if they hadn’t just come from speaking to the Imperator. Sana had returned to her own Blacksite, where he suspected that she was just waiting to inform Mortis of everything that had been going on. But Mortis wanted to talk to him first.

“Impressive station,” Mortis said as he looked into the main simulation room. “I suppose there are some perks of this Collective.”

“Some,” the Battlemaster said, placing his sword back within the mounted hold. “Though the usefulness of such is out of reach at this moment.”

“I suppose you would feel that way right now,” Mortis said. “I’m surprised the Imperator kept something like that from you. It seems like crucial information.”

“Because it is,” The Battlemaster growled.

“I suppose the question is what happens next,” Mortis mused. “I will need to become acquainted on the situation of these Humans, and right now would prefer not to wander aimlessly. The Imperator is of the type who would likely follow through on such a threat.”

“I will inform the others about what has happened on Paradise,” the Battlemaster said. “As well as what the Imperator believes about the Sovereign Ones. Our kind must know the truth of what is happening. The Imperator will not halt that.”

“Are you sure?” Mortis asked.

“He cannot,” the Battlemaster shook his head. “If he bars me or others, then that will raise
questions. Too many questions, especially now that you’re here. Perhaps he will preempt what I say, but the truth will come one way or another.”

“I think we both agree that the Imperator is taking the wrong path, yes?” Mortis said, turning back to him. “I dislike it, but he does have a point about the Sovereign Ones. We should not be bound to them, and forge our own path.”

“But not like this.”

“Exactly,” Mortis nodded. “Paradise needs to be destroyed completely. Though I am at somewhat of a loss as to how to accomplish that. I suspect there are enough Ethereals who are loyal to the Imperator no matter what, and the only other option is this species on Earth.”

Yes. Earth. ADVENT and XCOM would be especially keen to destroy something like Paradise. Given what Yang had shared, they likely already knew. “The options are limited. The Imperator will dislike any action taken against Paradise, and possibly remove me from command if drastic action is taken.”

“How important is that to you?” Mortis wondered.

“I am a Battlemaster,” he paused. “Perhaps he could not force me out, but it would be a disconnect I would feel since he would isolate me as a result. There must be a better way. I have put too much into this Collective to damage it because of the actions of the Imperator.”

“From the sounds of it, you are the only Ethereal to put anything into it,” Mortis pointed out. “I suspect the aliens in it have a much higher opinion of you than the Imperator. What is he going to do if you do something he doesn’t like? Execute you?”

“Unlikely,” the Battlemaster admitted.

“So do something then,” Mortis suggested. “Carefully, mind you. Something subtle. Which reminds me…Sana mentioned you have an intelligence chief?”

“Who answers to Quisilia,” the Battlemaster corrected. “Who appears to back the current path of the Imperator.”

“Unfortunate,” Mortis walked to a large chair and sat down. “This is a time where I wish that we had a rival. Someone to use against the Imperator. I observed this in other species. One dominant power is almost never good for anyone, especially when they are mentally challenged.”

“The closest schism was when Aegis defected,” the Battlemaster released a sigh. “But within the Collective there is nothing. The Imperator is without equal. Nor do I necessarily think that should change, even if he makes mistakes, I am unsure what would happen to our species should he die. We do not have more Imperators…and those will be needed against the Synthesized.”

Mortis appraised him for a moment. “Not exactly a vote of confidence for the Imperator. I agree, the Imperator will be needed. However, I do not necessarily think he is fit to lead the Collective.”

The Battlemaster stared dubiously. “Whatever you’re thinking of that could possibly work, it won’t.”

“I have experience dealing with people of subpar intelligence in authority,” Mortis stood. “But I need to talk to Sana to get a clear picture of this situation first. In the meantime…” he waved a hand. “Go check up on that Human that was with you, or go conquer that planet. And let the others know about Paradise if you want.”
“I’ll start working on that,” he said dryly, knowing that Mortis did have a point. He should check on Yang, to make sure she was recovering. It was fortunate she had survived the ordeal at all, which spoke to her skill, but he had the feeling it was also luck. Either way, he was glad she had not died.

---

Unknown Location

1/14/2017 – 5:16 P.M.

Yang groggily awoke, and the fact that she could see again was immediately a reason for relief. That she could also move her limbs after a few seconds of experimentation proved it. She was half-tempted to think that the entire ordeal had been some fever dream after taking a large dose of alien drugs. The only problem with that was that she never took drugs, and unlike any dream, she actually remembered what had happened.

She closed her eyes again.

“Good. You are awake.”

She was somewhat surprised, and unexpectedly pleased that the Battlemaster was taking some time to check up on her. Well, perhaps she shouldn’t be, and winced at that thought. “Second time in as many days,” she muttered. “Thought I would do a little better than this.”

The Battlemaster was in his armor, though it was cleaned up and like new, though he lacked his sword and instead was sitting on a nearby bench that lined the grey metal wall. Looking around, Yang had no idea where she was, only that she was laying on a pretty comfortable bed while a console at the foot of her bed showed her vital signs. The room was dimly lit, but very clean from what she could tell.

“You lived.” Was all he said. “Most would have died in your position.”

She gave a shrug, which was more difficult to do laying down. “Don’t make me feel better. Trust me, if I hadn’t had help I would have died,” she flashed him a smile. “But thanks for trying to make me feel better.”

The emotionless helmet looked at her, and she realized that he didn’t really know what to say to that. Right. The Battlemaster wasn’t exactly a humorist, which she supposed meant that he’d actually meant what he’d said. He was not one for empty compliments. It was a statement of fact for him. Well, at least she wasn’t a complete disappointment.

“I apologize for putting you in this situation,” he finally said. “That was a scenario you were unprepared for, and I failed to consider the Creator was more…fortified…than I believed. I have no intention of killing you because of my negligence.”

“Please,” Yang weakly waved a hand. “I guarantee that no one could have predicted whatever the hell the Creator was doing there. And anyway, how am I supposed to be a worthwhile partner if I don’t fight with you in places like that?”

“Because you are not prepared for it,” he answered. “But you handled yourself well, and will emerge stronger for it. But I prefer to not force improvement this way.”

“Well, I definitely know what I need to do to get better,” she said. “Once I’m stronger, I’ll be training more.” There was some silence. “So,” she turned onto her side to face him better. “Is the
Creator still alive?"

“Yes.” The word was curt and bitter.

“Really?” She was actually surprised. “What happened?”

“The Imperator arrived and ended the conflict,” he answered heavily. “Then proceeded to reveal that he’d known about that place the entire time. He has decided against taking further action against the Creator, from anyone, myself included.”

“What?!” Yang could not believe that he’d actually said that. “What!”

“The Imperator has demonstrated questionable judgement here,” the Battlemaster said. Calmly, but there was a low anger underneath it. “But destructive action is not going to be tolerated.”

“Why!” She didn’t care that she was yelling, the fact that Paradise was still in operation was almost making her sick. “What is he thinking!”

“He considers it a means to an end,” the Battlemaster said. “He told me, and I will tell you now.”

“Really?” Yang asked bitterly. “Or would the Imperator disapprove of that too?”

“He would,” the Battlemaster nodded once. “But I do not care. You were there, and deserve to know the truth. You should make yourself comfortable,” he paused. “This will be a long story.”

***

Officer of the State, Abuja - Nigeria

1/12/2017 – 8:11 A.M.

It was time to put the games to an end and shape the SAS into something which could feasibly stand against ADVENT. Betos had initially been hopeful that the men she’d asked to help form it would help develop it into something strong and united, but instead they appeared to have simply seen it as a power grab to further enrich and benefit themselves.

And that simply would not do, especially given recent events.

The attack on Seoul had been a major shock to her, and she had wondered why the aliens would do such a thing, especially given the guarantees of Macula. However, a closer look at it had made it appear that it wasn’t as clear cut as ADVENT wanted to make it seem. For one, she knew that the Ethereals would gain nothing from such an action, especially if they were courting Human allies like her, and second, she couldn’t completely dismiss the idea that this was a false flag attack ADVENT carried out themselves.

Given what she knew about them, it would not surprise her. She didn’t know for sure, but the way ADVENT had taken advantage of the tragedy by first razing an alien-controlled city to the ground without repercussions, and then demanding that she be turned over to them made her wonder. She knew that civilians were just numbers to ADVENT. The destruction of alien installations, and the capture of their most famous defector could be easily justified in their minds.

But she ultimately did not know for sure.

Were ADVENT capable of such an action? Yes.

Would they do it? She didn’t know, and Macula didn’t have evidence for it. The problem was she
could pose that same question to the Collective and achieve the same result.

Was the Collective capable of such an action? Yes.

Would they *do* it? There were almost no upsides that she could see, which was why she was inclined to believe Macula when he said they were not behind it. It wasn’t that they were incapable of the action, it was that they would be idiots to actually follow through.

She had been summoned by the Joint Presidents, as they were calling themselves, after the message ADVENT had sent to them. And thus she was on her way to meet them, and subsequently introduce them to Macula and his forces. Mox and Kellani were behind her, the latter of whom was disguised to hide his Oyariah features.

Kellani was extremely large, however, and it did attract some odd looks, but none of the soldiers were brave enough to stop them, especially with Betos in front. She was in her armor, helmet under an arm as she marched into the building which had been converted into the State Building for SAS Executive matters.

They had to stop for weapons checks, although Betos had made sure that they were clean before even coming. Much as she wanted to have a rifle at her side in there, the security measures wouldn’t have allowed it and she had no desire for confrontation yet. It might come later, but she knew with Macula around that there would be no threat.

Inside the Joint Presidents were seated in a semi-circle, in a fairly ornate room with a chandelier hanging from the ceiling, several bookshelves lining the walls, and colorful rugs lining the floors. The men opposite her were all in suits with the exception of Kone, of course, who still had a pistol and knife openly displayed.

“Marshal Betos,” Ndulue greeted with a nod. “Thank you for coming so quickly.”

“Your bodyguards may remain outside,” Kone added, suspiciously looking at Kellani. “This does not concern them.”

Neither Mox or Kellani budged, and Betos simply set her helmet on the table in front of her. “I decide if my soldiers are privy to what I am or am not involved in, not you. You have nothing to fear from them, we were checked before arriving.”

“And we rank above you, Marshal,” Ezeudo said, leaning forward. “This is a private matter between us. If you wish to inform them later-”

“I thought I made myself clear,” Betos interrupted firmly, raising a hand. “They will stay. If you wish to debate this, I will leave as I have actual responsibilities to attend to.”

“Very well, Marshal,” Kone’s lip curled up in contempt. “ADVENT has sent a formal request to turn you over to them, or they will annex our countries. We have a month to comply.”

“I am aware,” Betos confirmed. “And how seriously are you considering complying?”

To their credit none of the men denied they were. “This is a…complex situation,” Ndulue began slowly. “We are agreed that without you we would not enjoy the status and alliance we have now, and complying with anything ADVENT demands is distasteful.”

“At the same time,” President Atem said with equal cautiousness. “We do not stand a chance against their armies, even with the weapons and armor you have provided. If it were the Western countries of the old world, I would not give these demands a thought. But ADVENT *has* shown
their willingness to carry out these acts of conquest and genocide. This is a power incised by the alien attacks on their citizens, they demand retribution for those who oppose them. And we – specifically, you, Marshal Betos are the face of the Human resistance.”

“It is a matter of survival,” Kone spoke, the beady eyes behind his spectacles boring into her. “We refuse and risk what we have achieved being destroyed. Comply and ADVENT may leave us alone. We are divided on a course of action, and decided to consult with you to see if there is an alternate option we have not yet considered.” His tone indicated that he saw no other option.

Here it went. “Understand this,” Betos was careful to enunciate everything clearly. “Even if you do turn me over, ADVENT will eventually attack. Their mission is to control every part of the world and if it is not in the immediate future, it will come eventually. There will be some reason, some application of pressure they will use, to bring the SAS into the fold. Complying now will only make their job easier in the future.”

“Perhaps,” Kone said neutrally. “But you do not know for sure.”

“I can promise that you will have a better chance with me in command than if it were otherwise,” Betos said. “ADVENT is only concerned about the SAS because I am here, not because of you.”

Ezeudo chuckled. “Bold words from a woman. Then turning you over to them should ensure they ignore us for some time.”

“And you will eventually pay the price in the future,” Betos answered evenly. “Having worked with your military, they would be destroyed in any encounter with ADVENT without actual leadership and strategy. Which right now has poor representation.”

“Insults do not change minds,” Kone said. “You are speaking the words of a woman who is trying and failing to fight her fate.”

“There is another option,” Betos finally said. “We make an alliance with the Ethereal Collective.”

There was dead silence as the four men stared in shock, clearly not expecting her to say that. “First,” Ndulue said slowly. “We have no means of contacting them, or if they’d be willing. Second, that would ensure that we’re attacked by ADVENT.”

“The SAS will come under attack by ADVENT one day,” Betos answered. “The only way to effectively fight back is to be similarly equipped. As for the aliens being willing…” She motioned to Kellani who removed the helmet, revealing the stone-skinned Oyariah.

“You’ve been speaking with them!” Ezeudo yelled, immediately rising furiously. “What are you thinking?”

“We have no desire to enter this war between the Collective and ADVENT,” Atem noted slowly, appraising the Oyariah suspiciously. “This was a mistake, Betos. How long have you been speaking with them?”

“Long enough,” she said. “I did not want to bring them up unless it was necessary, and so I could see what you had planned for the SAS. As well as to negotiate with them.”

“You were not appointed our diplomat,” Kone growled. “You stepped far outside your authority. I have no desire to ally with these aliens, nor be involved in this war. But you Betos, you have forfeited any chance you had at walking away from this free. I suspect ADVENT will be very curious to learn what you know about the aliens. Perhaps that will grant us some more favor with them.”
“I am afraid Kone is right,” Ndulue said. “This changes everything, Marshal. We cannot be dragged into this conflict and what you’ve done will only ensure ADVENT attacks us, especially once they learn about what you’ve done. For the good of the SAS, you must be turned over.”

“I would… reconsider that,” Betos looked to the far wall to see Macula standing there. Appearing out of thin air, which meant he’d been affecting them with his time perception telepathy. The orange glow of his eyes seemed ominous as he looked at the Presidents.

“How did you enter, alien?!” Kone hissed, his pistol in his hand and aimed at the Ethereal. “Answer now.”

“I walked in,” was the answer, as the Ethereal raised his upper left hand, and snapped. Instantly he held Kone’s weapon in his hand, with Kone looking down in shock at his empty hand. It was both amazing and terrifying to see Macula demonstrate his powers. “Unfortunate that I hear you discussing your intentions to turn Lady Betos over to ADVENT, despite taking the steps necessary to ensure your independence. Disappointing.”

“An Ethereal…” Ndulue breathed. “How…”

“Lady Betos has expressed her disappointment in your government,” Macula said as he tossed the weapon away, and began pacing across the room. “A bunch of old men obsessed with power and control. Using your armies to settle old scores and punish your enemies. Petty. Intolerant. Disrespectful to the vision Betos proposed to you. She handed you the keys to eventual control over Africa, and yet you have thrown them away.”

Directly in front of them, he turned to face the men directly. “But unlike you who are stuck in the past and your prejudices, I see the vision she wishes not just for Africa, but Humanity itself. You had your chance to bring it fruition, and you squandered it. You do not deserve the power you hold.”

“You would not kill us…” Ndulue swallowed. “You cannot.”

An obsidian blade appeared in the hand of Macula. “Is that right, Human? Would you stake your life on it?”

“We are the presidents of nations,” Kone stammered. “Our deaths would cause riots in the streets. Chaos in government! Think before something is done which you will regret!”

“You overestimate your worth,” Macula said softly, taking a step forward to them. “The ones you look down on will not mourn you. And each of you is merely a Human. One who can be replaced by ones with vision.” He turned around. “But I am a mere representative here to ensure the success of Lady Betos. Thus, I will leave your fate to her.”

“Think carefully, Marshal,” Ndulue implored her. “You wouldn’t be here if not for us. Executing us because this alien encourages it will only make you their puppet.”

“She only allied herself with you out of necessity,” Macula said, suddenly appearing behind the men. “You no longer have a use. She can do better.”

“These men would have turned you over to ADVENT,” Kellani said. “They are untrustworthy and do not deserve mercy.”

“But do they deserve to die?” Mox asked. “Betos…”

“They have lost their place in the SAS,” she said slowly. “But we will not execute them. Not here.
They will be removed from power and held in cells. If there has been misconduct and crime, then it will be brought to us and they will be tried. But we will not execute them for the sake of it.”

The blade vanished from Macula’s hand. “As you wish, Lady Betos.” With a wave of his hand the eyes of the men rolled up into their heads, and they fell down or slumped onto the table, unconscious. “It is time to assert your control over your citizens, Marshal. Bring in your people and begin.”

***

ADVENT HQ – Switzerland

1/27/2017 – 1:09 P.M.

Saudia had not expected anything major to happen today, and in fact was enjoying a day of approving projects, reviewing the dozens of reports that were being sent to her, and otherwise giving statements when appropriate. She did understand why there were many prominent officials who usually just had someone write every statement for them, and never touched it themselves. It was a time consuming process and exercise in saying a lot of the same things over and over. But she’d never really approved of that practice; and she certainly didn’t trust anyone to speak for her, especially on matters of state.

Hassan was in front of her desk, and the hologram of Elizabeth was also close beside him as she reviewed the known details from what appeared to be a mass murder attack in China. “Were there recordings?” She asked, glancing up at them.

“The Chinese have not released them,” Hassan explained. “Likely. But they probably want to try and contain this themselves before releasing more details.”

“It doesn’t add up,” Saudia muttered. “A well-respected and highly ranked official walks in one day and begins killing his staff? That doesn’t sound normal. Any history of mental illness in his family, Elizabeth?”

“From what records we’ve been able to acquire, no,” Elizabeth answered. “Which is odd, I’d agree. Nor does he seem the type susceptible to blackmail. Finances check out, married with kids, clean criminal record, healthy, and has multiple accolades from the Communist Party. This isn’t the guy to just snap.”

Saudia pursed her lips. “I suspect you’re thinking what I am?”

“Alien meddling?” Elizabeth shrugged. “Possible, but we won’t know for sure until the Chinese release more details. If it is, it’s certainly cheeky. Have an untraceable attack which hurts Chinese leadership, perpetrator dies, and since the Chinese don’t have Manchurian Conditioning, they have no defense.”

“If it is aliens,” Hassan wondered. “I wonder what their goal was. It seems this may have been a testing ground for something.”

“I’d like to put in the request with the Chinese regarding that,” Elizabeth pointed to the report in her hand. “Page 6, evidence number 14. I don’t suppose you know what that thing is?”

Saudia turned to the appropriate page, and shook her head. She had noted that it stood out from the evidence, and in fact was the only photograph the Chinese had included. It appeared to be a black pyramid, small enough to fit in the palm of a hand, and found in the briefcase of the man who’d carried it with him before his attack. “No. But it might not be anything. A pyramid isn’t exactly a
unique ornament.”

“I don’t know,” Elizabeth crossed her arms, tone skeptical. “I’m not sure why the Chinese would include the picture if it was just an ornament. And even if it was, why was he carrying it with him?”

“I’ll pass along the request in my personal message to President Qin,” Saudia said, setting the report on her desk. “And get the media ready within the hour. We’ll do the standard response. ‘ADVENT gives their sympathies for the attacks in China today and stands by to offer support,’ and so on. You know the drill.”

“I-“ the phone suddenly rang, and Saudia pressed speakerphone, knowing that the secretary wouldn’t call through unless it was important.

“Yes?” She asked.

“Foreign Minister Xuan is on the line,” she answered. “I would have passed it to Hassan, but I know he’s with you. Do you want to take it or should I-“

“Put it through,” Saudia interrupted, looking to the confused faces of Elizabeth and Hassan. “Foreign Minister Xuan.”

“It must be more serious if they’re contacting us,” Hassan noted. “Normally that would wait until the official statement. It’s only been hours.”

At a click, Saudia returned her attention to the phone. “Chancellor Vyandar,” Xuan greeted.

“Thank you for answering so quickly. I’m sure you’ve heard of the incident.”

“Yes, we have,” Saudia nodded. “I would like to extend our condolences. We will officially make a statement of support later-“

“Appreciated, Chancellor, but we can ignore formalities here,” she picked up a touch of tension in his voice. “The report we sent you was the same as what we sent to other nations. A formality, as you understand. That was before the more recent development. The situation is much worse than the media is aware of right now.”

Saudia leaned forward, furrowing her eyebrows. “In what way?”

“We don’t know,” Xuan said. “Not fully. But everyone who was working on the crime scene is… changed. They’re killing and dragging people to the scene, and fortifying it. Soldiers are doing this, Chancellor. This has only developed within the past half hour. This must be based in psionics. We need your PRIEST Division to fully contain this. I can guarantee that ADVENT will have full access to all information and materials related to this incident.”

“I’ll begin mobilization of a detachment of the PRIEST Division,” Saudia confirmed, making Hassan and Elizabeth stare at her more intently. “I assume you have the scene locked down from the outside?”

“Yes, but we would prefer not to bomb one of our government offices. We do not want the population panicking. The situation is already unsettling enough, this cannot get out of hand. The situation is contained for now, and PLA soldiers are fighting to regain ground, but the ones inside are entrenched.”

“We appreciate the request and update, Minister,” Saudia said. “I’ll have my secretary put you in contact with Chief Ambassador Hassan to keep you appraised on our progress.”
“We thank you, Chancellor,” Xuan answered. “Your assistance will not be forgotten.”

Saudia hung up the phone after the farewell. “Looks like this is definitely psionically based. A bunch of people at the crime scene also are acting odd and shooting at government officials and soldiers. They’re requesting PRIEST help.”

“I’ll have agents on the ground,” Elizabeth said. “This turned into an interesting day.”

“Unfortunately,” Saudia rubbed her forehead. “Let’s get this done.”

---

Vitakar Orbital Station – Vitakar Orbit

1/26/2017 – 9:55 P.M.

Nartha was quite happy for the short break the Zar’Chon had given him after the ‘successful’ mission with the Andromedons, which had not been in person largely because the Zar’Chon was still handling operations on Earth. It was a good thing that was the case, because Nartha was concerned that if someone was reading his mind when speaking to the Zar’Chon, the presence of the small orb Fiona had given him would be a large red flag. That was something that he needed to figure out.

The Zar’Chon had tasked him with reviewing a bunch of reports from Earth and giving his analytical opinion of them. It was quite useful, as he knew now exactly what the Collective did and did not know about ADVENT and Earth in general. No names of agents, but he could figure out locations easily enough and volume could also indicate how many there were in an area.

He was keeping a separate piece of paper for notes to turn over to XCOM. There were a lot more agents in America and China than he felt ADVENT would be comfortable with. Sadly he only had access to information acquired, no details as to future plans or operatives, even though someone could probably put the pieces together.

He’d also kept the Nulorian up to date, as much as he could, and while they initially seemed extremely unbelieving that there would be a possible alliance with Andromedons, the proof he’d provided had appeared to convince them. Enough to where they had said that it would go straight to Miridian himself.

Nartha figured it was only a matter of time before he met the illusive figure.

He was saving the reveal of Human agents until there was actually something to show for it. XCOM was apparently working on it and would be in contact soon. As well as the Commander choosing a meeting time for V’Zarrah.

“Hello, Nartha,” he started as the familiar voice of Fiona spoke behind him. “Been a spell, hasn’t it?”

“I wish you wouldn’t do that,” he said, turning to her. “But hello to you too.”

“Shun says hi,” Fiona said idly, for once not actually wearing any armor and just normal Human clothing. It was conspicuous since he’d never seen her not in armor.

“Ah, good,” Nartha acknowledged, rather pleased she was carrying messages. “Tell her I hope to see her soon. Speaking of that, I assume you have news?”
“The Commander wants to meet V’Zarrah,” Fiona handed him a sheet of paper. “At this time. He’ll be brought to this location. If you want to come along as well, let me know.”

He looked down at it. “Unfortunately probably not a good idea. The Zar’Chon will be suspicious if I go dark for a long time. This can be done without me, I can get what’s important afterward.”

“As long as this gets to him, that’s fine,” Fiona nodded. “And as for getting some XCOM teams in Collective territory, we’re finalizing that. Within a week, I think.”

“Excellent,” Nartha quickly walked over to his table and pulled out data cube, along with a copy of his own notes. “Take this to the Commander. The Zar’Chon made the mistake of giving me access to intelligence reports on Earth. He might be interested in them.”

“Will do,” Fiona took the offering. “You never stop working, do you?”

He shrugged. “I don’t have anything better to do.”

“Fair point,” she gave a brief and slightly mocking salute. “Until next time, Nartha.” With a blue-green flash, she vanished into thin air once more. Turning back to the table, Nartha began working on sending the information to V’Zarrah.

He sincerely hoped the meeting went well.
Saudia knew there would be a significant media buzz around her unexpected visit to China, not to mention the relative proximity she had to the scene of the incident itself. While she wasn’t directly on-site, she was in a nearby building where she would be able to follow the entire operation. Foreign Minister Xuan was also on-site, and seemed extremely shocked that she was so close.

He probably hadn’t expected to see her in combat armor either. She didn’t view the entire suit as necessary, but protocols dictated that if she was to be in proximity to a dangerous situation, she had to wear protection. She had absolutely no fear for her life, especially not when surrounded by Ethan and the most well-trained and genetically enhanced soldiers ADVENT had, as well as shadowed by Intelligence agents, along with an entire PRIEST Team who were continuously scanning telepathically for threats, and a Defensive specialized psion to shield her in the event of danger.

Overkill, but she figured the price was worth it. She didn’t fail to note how much the people liked whenever she directly participated in something. The picture of herself leading ADVENT forces to arrest the former Prime Minister when ADVENT had annexed Canada had been in the news for days as were statements like “She isn’t letting others do her work”, which she knew ADVENT Intelligence had run with as part of their own media operations.

Of course, right now the media did not have any idea of what was going on, and she expected a slew of questions to answer. Which she would, when she actually knew the extent of the situation herself. Her entourage, along with several ADVENT field Officers and Protopriests, made up the majority of personnel in the impromptu Situation Room. Minister Xuan, along with several Chinese soldiers and officers, made up the rest.

The operation had already started, and with Protopriest support the Chinese had already pushed through the initial floors. With that said, the words from the Protopriest in charge were disconcerting. “I definitely sense something. Telepathic-based for sure, but it doesn’t seem to be psionic. Or at least nothing like I’ve felt before.”

Protopriest Alice Dromor had found that more troubling than the rest of them, if her face of concern was anything to go by. “Specify, Protopriest Ji, is it a sustained telepathic command or aura?”

“Both,” was the answer, as they watched through the armor cams as several Priests annihilated the defenses with psionic blasts or telekinetics. “It’s like…a loop, almost. The same command repeated over and over, but in an aura. The THD, that’s what this is…but against allies.”

“What is he referring to?” Xuan asked quietly as the operation proceeded.

“The Trask Hypnosis Doctrine is the method of subtly subverting an enemy group or population,” Protopriest Dromor said without turning. “Usually a repeated phrase or command, sent over and
over again against enemy minds. Easy to maintain and devastating if applied correctly. First performed by Patricia Trask, if you were aware of our counterattack against Las Vegas. She used this to kill a significant amount of enemy forces before ADVENT arrived.”

“I see,” Xuan nodded. “So that was how she did it.”

“Updates, Protopriest?” Dromor returned her attention to the operation. “Is the telepathy stronger?”

The soldiers were moving through the building, and coming very close to where the crime scene had been. “Yes, it is,” was the confirmation. “Enough to where I can sense the source. I’m attempting direct penetration, but it’s impossible. This isn’t a mind, I’m positive it’s an artificial projection.”

“That’s…” Xuan looked to Saudia. “Is that possible?”

She simply pursed her lips. “At the moment, the answer appears to be yes. But I’ve never seen or heard of something like that before.”

“It shouldn’t be,” Dromor shook her head. “Psionics cannot be accessed by machines. There needs to be an organic component; a mind complex enough to access and manipulate the Psionosphere to this degree.”

“Well, should or not, that’s what it appears to be.” Everyone in the room leaned forward as the armor cam showed the original crime scene. Several of the affected Chinese soldiers and workers were easily dispatched, and in the center was the pyramid Saudia remembered from the file the Chinese had sent to them.

But it wasn’t the same pyramid any longer. It was floating a few inches off the ground, and the entire pyramid was partially segmented, little chunks and points not quite connected to the greater shape. It was as if someone had broken the pyramid into pieces, and was using telekinesis to hold them in place a few seconds after it had been broken. But these were clean and straight cuts, obviously not broken.

No light or color emerged from it, if anything only the air appeared distorted around it. “Orders?” Protopriest Ji asked.

“Contain it, see what it does,” Dromor ordered, and a few seconds later the pyramid was encased in a box made of psionic shields. The pyramid did not seem to react in any noticeable way.

“Nothing,” Ji said. “I’m going to try and force my way in. It’s closer, so I can concentrate better.”

They waited quietly for a few moments, and then as unexpectedly as it had begun, the pyramid suddenly pulled itself together and fell to the ground, an inanimate object once more. “What happened!?” Dromor demanded.

“I don’t know,” the Priests moved closer to the pyramid, with Ji picking up the device. “I began to try and penetrate it and it just…shut down. It’s not emanating anything now. Perhaps it sensed I could penetrate it.”

“Which means that it’s sophisticated enough to have protocols like that,” Dromor muttered. “Or that it’s powered by a user somewhere else. Neither is good.”

“What should we do with this?”

Dromor looked to Saudia. “Chancellor, I would be highly cautious handling something like this. I
cannot say that we could effectively contain it if it starts up again. However, we can set up an isolated research facility if you want.”

“No,” Saudia shook her head. “We send it to XCOM. Aegis might know what this is, and how to best contain…or dispose of it. They’ll share whatever they learn from it, and I do not want to risk this activating anywhere else.”

“Understood.”

“Concerning,” Xuan said as the room became more relaxed and the soldiers began talking amongst themselves. “I do not know what the purpose was behind placing such a device in my country, but it is fortunate you were able to intervene.”

“Indeed,” Saudia answered. “We appreciate that you shared this incident with us. Now it will be contained and hopefully explained later by XCOM. A potential crisis prevented from escalating.”

“The President will extend his thanks to ADVENT publicly later,” Xuan assured her. “Although I would request that you forward any relevant results from this artifact whenever ADVENT learns of such. If one of these artifacts appeared in my country, I do not wish us to be caught unprepared again.”

“I’ll see what we can do,” Saudia promised. “Now I have my own media to address. They will be demanding answers for this…unexpected excitement.”

“Then I will let you handle them,” he said, giving a thin smile. “Until next time, Chancellor.”

***

Psionic Training Area, the Praesidium – Classified Location

1/20/2017 – 11:03 A.M.

And so the saga of XCOM being a haven for all kinds of disaffected and outcast aliens continued. Nuan had honestly been unsure how anything could top Aegis in the first place, but no, not only was there a completely new alien in the Praesidium (Who preferred to keep to himself for now), but fucking Caelior of all aliens was not only around, but actually active.

Was he on their side now?

Iosif was being…helpful. As much as he could be, as they watched what Nuan could swear was a therapy session for Caelior, with Aegis helping him train and walk again. Apparently XCOM had done something which had paralyzed him, and he was almost learning how to walk again. “He was essentially a massive propaganda tool,” Iosif was saying. “A rallying point for the Ethereal Empire. They played into the image he made for himself, and as a result…well, he became an arrogant twat.”

Nuan raised an eyebrow. “A twat?”

“How Jackson described it to me,” Iosif shrugged. “He needed a good humbling.”

“Right,” Nuan chewed her lip. “Are you actually allowed to tell me all of this?”
“It isn’t classified,” Iosif assured her. “It just isn’t especially important now anyway. There is a lot of stuff I can’t tell you, but most things relating to Ethereals and their history can be shared. I guess Aegis thinks he can redeem him in some way.”

“You think so?”

“I’m not sure he has much of a choice,” Iosif looked thoughtful as they watched the Ethereal get used to using his powers again by lifting three shipping containers full of concrete. “His entire life and status was a lie, and he is understandably angry at the Imperator for perpetuating it. I think it helped that he was completely beaten. It was good for him.”

Seeing the Ethereal easily lift the shipping containers, even with a wavering arm, made Nuan feel glad that he was, if not on their side, at least under their control. Hopefully. “I guess he’ll be getting back to normal soon?”

“I’d expect so,” Iosif said. “A few weeks at most. From the looks of it, his own skills haven’t deteriorated.”

“Ah, such an impressive display,” Geist noted, walking into the room, arms crossed. “Lifting things into the air. Truly the Ethereals have taken the practice of psionics to its fullest potential.”

Nuan scowled. “Speak for yourself. That can’t be easy.”

“Hello, Geist,” Iosif greeted. “You’re in a good mood.”

Geist raised an eyebrow. “You know what? I just finished having a fascinating conversation with that Zudjari about how they utilized psionics. Imagine my surprise when I learned they had actually attempted some development of the discipline, and in fact created what I consider to be a completely new branch of telepathic theory.”

“Oh, I know,” Iosif recalled. “Memetics. Agreed, that can be useful to us.”

“Yes, and I suspect it would have taken us time to come up with the same theories,” Geist said, leaning against the wall. “But the Zudjari appeared to do more than refine the powers they had, and instead worked on how to expand and modify them. An attitude I’ve noticed the Ethereals simply do not possess. There is a disturbing lack of creativity. Lifting crates?” He sniffed. “Any telekin can do that.”

“And you have a much better idea?” Nuan asked sarcastically.

“Spare me your sarcasm, Miss Kun,” he waved a hand. “In fact, I have. Telekines have the world at their disposal, which they can manipulate as they see fit. They can exploit the environment for unparalleled movement, they can extend their reach through manipulating tools and weapons, they could have the potential to create or affect weather. And instead most confine themselves to throwing things at each other or picking up opponents like toys. Basic. There is opportunity for so much growth.”

“That…” Nuan paused, thinking. “Alright, you have a point.”

“I think you also have to consider that Caelior is…recovering,” Iosif suggested. “This is a basic exercise.”

“I will need to speak with Caelior about a refinement of his own strategy,” Geist said, turning to look at the Ethereal pair. “His potential is extreme, and one that powerful should not rely on such basic manipulations.”
“You don’t seem too affected by him being here at all,” Nuan noted with interest.

“Caelior?” He glanced to Nuan. “The Ethereal is under control and will be a valuable resource. Should he prove unreliable, he will be disposed of. I have no strong feelings one way or another. The Commander obviously kept him to use against the Collective, and we are no worse off with him here and alive than the alternative.”

Iosif just chuckled and shook his head. “Practical as ever.”

Nuan sat down. “Has the Commander ever just considered recording Geist insult the aliens and their poor usage of psionics and broadcast it? It might hurt some of their feelings.”

“That…” Iosif grinned, and looked down to her. “I’ll have to speak to the Commander about that.”

“Wait,” Geist frowned. “I did not intend to become a mere propaganda piece. Do we want to give them ideas?”

“What?” Iosif asked lightly. “You think any Ethereal is going to take ideas from a Human? Us, a mere primitive species?”

“Good point,” Nuan muttered. “Although if I heard Geist insult me like that, I’d certainly want to prove him wrong.”

“Hilarious,” Geist said, deadpan. “However, I suspect the Commander, and yourself, have more important issues to tackle, as I have my own projects.”

“Projects around your psionic ideas?” Nuan asked knowingly.

“Of course,” he nodded. “And by the time the Collective decides to attack again, I hope they will be ready to use.”

“Assuming they do decide to attack again,” Nuan said thoughtfully. “Maybe they don’t want to keep fighting.”

“Sadly,” Iosif sighed. “I’m sure that’s far from the case.”

***

The Conduit Chamber, Paradise – Orbit of the Dead World

1/19/2017 – 10:16 A.M.

The center of the station of Paradise reminded Patricia of several cathedrals she had visited. The high ceilings, the sense of scale and awe which permeated the area, and the feeling that one was standing in something old and grand. The area the strange agents of the Bringer had referred to as the Conduit chamber was this very room.

It was a circular room, with the metal walls rising up from the ground to meet at a certain peak far above her head. In the center of the room was a large, though clearly unfinished, pillar which was elevated off the ground with steps leading towards it. The pillar itself had its innards exposed, revealing wiring, strange transparent materials, and what was likely components to handle psionics.

From what the Imperator had said, it appeared that this would be where the Crossing would take place. The moment where the Bringer would cross over into their own reality. It was…to put it very bluntly, not the best of ideas she had heard. When the Imperator had casually mentioned his
plan, she had lacked a proper context for what exactly the Imperator was dealing with.

Now that she did, she wondered if the Battlemaster was right and it would be better to send the Bringer back to whatever hell he had come from. It wasn’t necessarily the sheer loss of life that was happening here that was the only problem. It wasn’t as though ADVENT or XCOM weren’t experimenting on Humans or aliens as well; she’d known this better than anyone, although she agreed with the Battlemaster that sending children and civilians was unacceptable.

But if there was going to be experimentation done, it needed to be for a purpose.

In Paradise, the purpose could be merely entertainment for a show.

She’d come very close to murdering that insane Sectoid when he’d oh-so-willingly explained why he was using children for performances. No wonder the Hive Commanders kept their drones docile, and for the first time she was thankful the Sectoids had such a tight control over their species. It appeared that given the chance, they could be just as bad, if not worse, as Humans.

These Aspects of the Bringer though…they were different. Especially the one that stood in the room beside her and the Imperator. The face of the Temperance was different now. Instead of the strange face it had showed, now it was a marble Humanoid head complete with a neatly trimmed full beard. So it had the ability to shape its features. Possibly good information to know.

“There is a chance that the Conduit may not function properly should you proceed with this level of...security,” the Temperance finally said, the voice at the same pitch as it always was. It was eerie how it never changed tone once.

The Imperator was not perturbed. “Then work around it. I was far too lax in my oversight of this place. Consider yourself fortunate you have not joined your brethren or been executed as the Battlemaster demanded.” He looked directly into the dead eyes of the creature. “Be thankful that I am allowing this to continue at all.”

“Your reasons are sound.” The Temperance was clearly not looking to argue. “We will adapt, and we will earn the trust that His Artist lost.”

Patricia snorted. “Still want to pin all of this on her?”

The head turned down towards her. “The Artist made a grave error which did not reflect His will or order, and brought down judgement upon all of us. If you refer to the state of those within Paradise, such is the way of His path. All have a purpose, and all fulfill it. And in the end, each and every individual enters His embrace. It was not merely the Artist, but a combination of multiple factors and misunderstandings. Our restrictions are deserved, and we will work to earn back this trust.”

Patricia pursed her lips. “We shall see about that.”

“I’m done,” Fectorian stepped down from the Conduit, sounding rather unhappy as he shot a look that was definitely annoyed, even through the helmet, to the Imperator. “Send the signal and this entire area is obliterated along with Paradise, and several trillion nanites will consume the ashes. I suggest you remove my own access to the controls, otherwise one day I will detonate this place whether you like it or not.”

“Noted,” the Imperator said neutrally, turning to the Temperance. “You understand the price now for further acts of antagonization?”

A nod. “Clearly.”
It was part one of the Imperator’s plan to resume his iron grip over Paradise. With enough elerium bombs to crack a moon, the loss of the most important piece of technology for the Bringer would be devastating and unable to be replaced. This would prevent an…unauthorized crossing from taking place, or as sufficient motivation not to fuck up further.

The second part was one Patricia especially liked. “Now, turn around,” Fectorian ordered the Temperance, pulling out a small black square. The Temperance complied, and he placed the square on the back of the head, which soon broke into several million nanites which traveled over the body until they burrowed into crevices and openings. For good measure Fectorian places four additional of the nanite pads on the neck and arms of the Aspect.

“I sincerely hope you try something like this again,” Fectorian mocked, as the Temperance turned around. “I’d especially like to see your barriers protect you when you’re eaten alive. Please give me a reason to turn them on.”

“Fectorian,” the Imperator had a neutral tone, but Patricia knew he considered that kind of mocking unprofessional. Although Fectorian was not exactly one who held a high opinion of the Imperator at the moment. If it was up to him, he would have destroyed the entire place, and Patricia wondered if he hadn’t put a back door which might allow him to do just that.

She wouldn’t shed any tears should it happen, but she unfortunately agreed that without a controlled Bringer, it would be difficult for the Imperator to fight a Sovereign One. Though she was still of the opinion that if that couldn’t be completely guaranteed, it shouldn’t be attempted. She would rather the Imperator find another way than risk unleashing this thing on the universe.

“My job in this part is done,” Fectorian said, moving to exit the chamber. “Unless you want to help me establish the surveillance network, I would prefer to work alone. That goes for the statue.”

“I will take my leave.” The Temperance also quietly walked away.

“Then I suppose we will as well,” the Imperator said, as he waved a hand and the air formed into the shape of a portal. “Let us return.”

Within moments they were back on the Throne Room of the Temple Ship. The darkness was now almost a familiar comfort compared to the harsh, red lights of Paradise. The oppressive presence that loomed over everything there was thankfully gone, and even the Imperator’s own presence was nowhere near as intense and pressing.

Perhaps she’d gotten used to it.

“You disapprove.” The Imperator was moving to his seat, as the map of the galaxy lit up throughout the expansive black chamber.

“I’m skeptical.” There was no point in lying. “I see your reasons for continuing with your plan. But I’m not convinced it is safe to carry out.”

“The Crossing will not take place without my express permission,” the Imperator said, his words echoing with surety across the chamber. “I will dissolve the Aspects and force the Bringer to start again should he continue to test me. They are within a box, one which I control completely. Their only options are to defy me, and suffer the consequences, or comply and follow my exact instructions.”

“Do you need to preserve that…culture they have too?” Patricia crossed her arms. “Is that actually necessary?”
“Yes, and no,” the Imperator laced the fingers of his upper hands together. “There is nothing requiring me to indulge in their twisted fantasies. But I allow them because it makes them more productive and willing to help me enslave their god. If this requires the deaths of civilians and children, the innocent and guilty alike, and in return results in trillions who will no longer be under the thrall of the Sovereign Ones, then that is a price I will pay.”

He paused. “You understand this, Patricia. A price is necessary for the greater good. XCOM has performed similar acts in pursuit of what they – what you – believed was right. Would you consider what has been done wrong?”

She pursed her lips. “That’s the wrong word to use. Just because it was necessary does not mean I think it was right.”

“Exactly,” the Imperator nodded. “I do not take pleasure in loosing the monsters of Paradise, but it is a necessary step to shattering the chains the Sovereigns have placed on the galaxy. I do not expect XCOM or ADVENT to understand. They will condemn this, not because they are necessarily in the wrong, but because they simply do not understand the stakes. I cannot reveal the plan to them, nor do I think many would accept it.”

He cocked his helmet at her. “Tell me, Patricia, do you see another path to facing the Sovereigns?”

She sighed. “Not an obvious or easy one, no. You’ve never seen one fight. Neither have I. Can you really prepare for something you’ve never seen or fought before?”

“Yes, but the methods will be incorrect,” the Imperator agreed. “Hence why Earth is… important. And now, we know the name of the Sovereign who resides on your planet. T’Leth.”

The galaxy map shrank until it focused directly on Earth. “How likely is it that the Commander is in contact with this T’Leth?” The Imperator asked. “If the Sovereign is bold enough to send agents to such a place, I would imagine by now there has been contact established.”

“Likely,” Patricia sighed. “Knowing the Commander, he won’t be trusting of any Sovereign initially. But he would at least see any enemy of the Collective as an ally.”

“You assume the Sovereign has given him a choice at all,” the Imperator noted. “The Commander is not a powerful psion. He would not be able to prevent himself from being manipulated or controlled. Not from a Sovereign. There is a very real possibility that XCOM and ADVENT have been compromised.”

She frowned. “But…how sure are you of that? Mosrimor didn’t dominate you, this T’Leth might not have either. Not that I think he’s an ally to be trusted, but that is a major assumption.”

“I am not sure,” the Imperator said. “But there is one way to determine the extent of this alliance… if it exists at all.”

She raised an eyebrow. “How?”

“You contact them as I have contacted you,” the Imperator stood. “Allow me to show you how. Use this to speak to the Commander. To Creed. To whoever you trust to answer your questions. Find your answers, not from me, but from those you lived with and fought besides.”

“Or I could go to the Praesidium myself,” Patricia pointed out. “Or would you not permit that.”

“My word stands,” the Imperator stated. “Should you wish to leave, I will not stop you. But consider if I am right, and when you return you will become a pawn of T’Leth. Do you truly
believe that the Commander will throw away an alliance with one as powerful as him? Do you believe your species has a choice in how to handle a Sovereign? Your species retains their independence at the whim of T'Leth. You cannot change that there.”

“Point made,” she scowled. “Fine. Teach me how to do this.”

Training Arena, the Prism – Blacksite of the Battlemaster

1/24/2017 – 11:11 A.M.

It was remarkable just how real everything here seemed. While the Prism couldn’t replicate certain parts of psionics, such as telepathy, it could simulate everything else almost perfectly. There was a sense of weight to the projections that made every test feel authentic. It was arguably better than training against actual opponents since she could set the intelligence and difficulty levels to whatever she wanted.

No more fighting drugged-up Mutons and failed Zararch.

She had also given up trying to figure out how this whole thing worked. The Battlemaster had said it was Sovereign technology which utilized dark energy, and that was as far as she had understood. Yang just accepted that this was how it was. And right now, she was fighting through a labyrinth in order to get to Nico, her opponent here.

They’d been taking turns, with one person preparing the defenses and giving orders to the projections, and the other assaulting whatever location they created. It was a good way to hone their own skills, and especially their tactics. There had been plenty of victories and defeats for both of them, but Yang was feeling good about how she was doing right now.

It helped that she was still furious at the Imperator for what she could safely say was one of the most idiotic decisions she had ever heard in her life. It was gratifying to know that the Battlemaster, and quite a few Ethereals it seemed, were against the decision, but none of them actually wanted to do anything.

Damn chain of command. The Battlemaster was too loyal for his own good. But she knew it was unreasonable for him to throw away everything to undermine the Imperator’s decision. Whatever the case, this entire incident had killed a good portion of the respect she had for him. For a practically and logically driven individual, this seemed just…extreme.

And no, she didn’t consider the Sovereign Ones as good justification. One of their agents had saved her life, so at least that one couldn’t be completely bad. It was a good scapegoat though. Literally anything could be justified if you said it was to prevent the galaxy from being manipulated by space gods.

The anger was still there as she reflected on it, but now she was able to channel it better. It gave her that extra bit of punch and adrenaline she needed in fighting.

It felt good to kill everything she came across.

Four Muton Elites suddenly appeared from all sides, their plasma cannons glowing as they warmed up. Good flanking attempt, and in a maze like this she might accept that Nico hadn’t just cheated and teleported them there. Within seconds she sent her swords towards the weak spots of the helmets, and they easily penetrated, killing two instantly.
With the other two she telekinetically crushed the plasma cannons, rupturing the elerium core to cause an explosion which didn’t kill the other two Elites, but her compressing their internal organs into paste finished the job quite nicely. Telekinetically calling the swords to her hands, she continued onward.

The Prism was also useful for training to kill specific enemies. She’d done enough repetitions on killing Elites that it was already becoming instinct. Most aliens and basic ADVENT soldiers were easy to kill with little effort. XCOM soldiers were a lot more difficult, as were some of ADVENT’s special forces. Likewise, there were Ethereals and some of the more dangerous Zararch agents which also posed a threat from the Collective.

Andromedons were tough to crack as well.

At last she saw a door which she knew would lead to the end. Nico was either out of aliens, or coming very close. She had killed a significant amount on the outer perimeter, and dealt with the ambushes inside. Normally Nico put up a better defense, but she was fairly certain that he’d failed to take her new genetic enhancement into account.

That had been one of the first things she’d done when she’d fully recovered. She was never going to be stuck at a place like Paradise with the body of a regular Human woman. Yang couldn’t completely say how well Ethereal genetic enhancement would stand up to that of XCOM and ADVENT, but from how she felt now, she knew she could hold her own.

Extending a hand, she clenched a fist and the door crumpled and ripped off its hinges. Nothing shot out in response, or came out, so she proceeded cautiously, keeping a telekinetic field active in case something came at her. As it turned out, there was nothing inside except Nico sitting in a chair looking almost embarrassed.

“I forgot you’d been enhanced,” he winced. “Sorry, otherwise it would have been harder.”

“Duly noted,” she said, relaxing. “You took the maze from what I told you about Paradise, didn’t you?”

“You said you almost died in it,” he yawned, standing up. “Thought ‘why not try and see how that works’? Made some mistakes though, clearly.”

“I don’t mind it,” she waved. “It was cathartic.”

“I guess you’re not going to let that go anytime soon,” he said. “Not that I blame you.”

“Not planning to,” Yang confirmed. “You can tell Sicarius that.”

“Believe me,” Nico grunted. “She knows the situation very well. She wasn’t especially thrilled with it either, especially when I told her what you told me.”

That was actually surprising. “The Imperator didn’t tell her?” Yang didn’t bother disguising the surprise in her voice. “Why? I thought that was the one he actually cared about.”

“She is,” Nico emphasized. “But I suppose she isn’t as…practical as him. She knew the basic plan, not actual details.”

“What a surprise,” Yang muttered dryly. “You would think that something this secret might mean that it shouldn’t be done.”

“Nothing can be done about it now,” Nico shrugged. “Anyway, you want to take command for the
next round?"

“Sure,” she said. “Good luck. Because I’m not going to go easy on you today.”

He grinned. “Wouldn’t expect you to. I’ll be ready when you are.”

Sitting down in the chair he’d been in, Yang began using the console to set up her own challenge. Eventually the planning and focus distracted her from the issues of the Collective and Ethereals. Here at least, she could do something that was the closest thing to fun in this place.

Which was an unfortunately depressing thought.

***

Throne Room – Temple Ship of the Imperator of the Ethereal Collective

1/22/2017 – 1:32 P.M.

Patricia was unsure why the Imperator wanted to speak to her now. She was still experimenting with the far-distance telepathy techniques the Imperator had begun instructing her in, but she had underestimated just how...vast the gulf's between minds were. It was at a macro scale that she was still having some trouble fully visualizing.

Such was expected, according to the Imperator. Even Ethereals had difficulty operating or utilizing their abilities at a scale beyond their own immediate vicinity. Only those who had trained their lives from birth to instinctively grasp this scale could transverse it effectively. The Overminds and the Imperators had the capabilities to perform this, and Mortis and Sana were capable of the inverse.

Humans could do the same, she was sure of it. The Imperator suspected the same.

According to the Imperator, once your target was located it was extremely easy to repeat. It was finding it in the first place which was the challenge. The universe was vast and expansive; all living beings were imperceptible in the cold black of the universe. Even Sovereigns weren’t exempt from this isolation, which she supposed would explain why they were still fighting each other for millions of years unceasingly.

“You have been here longer than I initially expected.” Patricia turned to the silver domed head of Sicarius. The Ethereal assassin had a tendency to follow her, just hiding on the edge of her sight. She rarely spoke, but just watched her. In times where Patricia was alone or even when speaking with the Imperator, Sicarius was just waiting in the background.

Forgotten.

She found the effect Sicarius had on everyone fascinating. Even telepaths weren’t immune to it unless they were prepared. Patricia wondered how many times she’d spoken to the Imperator or other Ethereals with Sicarius plainly in view and her mind simply ignored her. The effect Nartha had spoken of she now knew firsthand.

It was almost sad. Everyone around her soon forgot she existed. The only exceptions Patricia had seen were the Battlemaster, for obvious reasons, and Nico, who she suspected was simply trained to always block out Sicarius’s telepathic aura to forget. It wasn’t difficult to imagine why Sicarius wanted a partner of her own. Having someone who knew you while you were alone in the world was enticing.
She shook her head to avoid becoming distracted. “Surprised?”

“Mildly.” Sicarius just stood there, still as a statue. “But your time for impartiality is coming to an end. You cannot stay on the edge forever.”

“Not forever,” Patricia agreed. “Are you afraid I’ll go back?”

“No.” Sicarius took a step forward. “You know the truth now. There is no going back. You will not choose between returning to your kind or not; you will choose to run from what must be done or face it.”

Sicarius had a point, though Patricia would not have phrased it as such. But the core, that there wasn’t any true going back, that was very real. The Sovereign Ones changed everything, and she couldn’t just pretend that they did not exist. Some may be able to live in willful ignorance, but she was unfortunately not one of them.

It was something she was concerned about. That if she did decide to return, and everyone was still the same…that they wouldn’t listen to her. It would be so easy to dismiss anything said as lies told by the Imperator, that her mind had been affected, any number of admittedly plausible reasons to avoid the truth.

Patricia just sighed, tugging on the white glove of the silver clothes she wore. They were still some of the most comfortable things she’d ever worn. “I know. You don’t have to remind me.”

Sicarius looked at her, probably in sympathy if her face had been shown. But the faceless helmet only reflected light. “I believe you do, Patricia. It is not an easy choice, but time is running out for you. The Imperator will not allow your neutrality forever.”

“When the time comes, I’ll make my choice,” Patricia said. “But until then, I’m not going to pretend that I’ve decided one way or another.”

“I think you have decided,” Sicarius said. “It is now a matter of admitting it to yourself.” She motioned to the Throne Room. “Go to him, I will not keep you longer.”

Patricia gave her a nod and walked up the steps to the chamber door. As she glanced back Sicarius was gone. There hadn’t even been a whisper indicating she had moved. This part of the ship was always eerily quiet regardless, and Sicarius was just the haunting ghost. By now Patricia was at least somewhat used to it.

Inside the Throne Room the Imperator was standing in the expanse in front of a large holoprojection of Earth. It was color-coded, with hundreds of points of interest and slowly spinning. “ADVENT is continuing to prepare,” the Imperator stated. “Their territory has continued to expand as more and more join their numbers. The United Kingdom overwhelmingly voted to join, and it is only a matter of time until the remainder fall into line.”

Patricia took a moment to just observe the idly rotating globe. “The lull is coming to an end.”

The silver helm of the Imperator turned to her. “It is. There will be small doses of conflict before this, I know that to be the case, but the war will soon reignite. The Battlemaster is preparing his legions, he is strategizing how to break the Human lines. ADVENT will not be an easy target. Yet there are places other than ADVENT where the war could reignite.”

“Africa?” Patricia asked. “China? It will only serve to push them into ADVENT.”

“Indeed,” the Imperator said, pacing around the globe. “But Africa…no, there are events taking
place there that I would prefer ADVENT not interfere with. Not yet.”

“You’re working with Betos,” Patricia stated, crossing her arms. “That explains quite a lot. I suppose you forgot about the notice ADVENT sent to the SAS?”

“ADVENT has far more important issues to deal with in the world,” the Imperator said calmly. “The notice will fade from their minds for the moment. It will fade from the realm of public opinion and knowledge soon enough. The Overmind is assisting in this. There may be conflict in Africa, but it will not be between ADVENT and the Sovereign African States.”

Patricia decided she wouldn’t ask how exactly he was doing that. She had her doubts at the feasibility of erasing or suppressing something like that, but that was something for them to worry about, not her. The knowledge that the SAS was working with aliens was enough to ponder on. “So what am I doing here?”

“I am curious of your opinion,” the Imperator said, walking in front of the part of the globe displaying North America. “There are multiple fronts to reignite the conflict. ADVENT in America continues to push forward, and our territory there is threatened. I suspect the Battlemaster would want to begin retaking lost ground there. This time there will be no holding back.”

Patricia snorted. “He’d need a massive army and something truly spectacular to break America. He could probably conquer it…eventually.”

“There are the other fronts as well,” the Imperator continued. “Japan. South Korea. There are territories which are not as closely protected. Russia. Germany. India. There are no shortage of places to strike. I am curious, Patricia, what is the ideal decision here?”

She felt it was a trick question. The Imperator wanted a specific answer from her. Well, he would probably accept what she gave, but there was definitely an ulterior motive than simply asking what she thought would be the best tactic against her species. “That depends,” she said slowly. “Are you speaking from the Battlemaster’s perspective – or your own?”

She immediately sensed the Imperator approving of her choice of words. “I am asking the question.”

“The destruction of ADVENT is not a priority then,” she continued, more confident this was what he wanted. “Earth must eventually choose a side, be it that of ADVENT or that of the Collective. The new offensives should not focus on territory ADVENT already has, but what it does not. At worst ADVENT intervenes and emerges victorious, or alternatively the territory of the Collective is expanded. But another country refusing to join one side or another will be removed, and will not revert to what it was.”

She looked at the map. “China should be a priority. Argentina, Africa, and what remains of Europe as well. They should be made to choose a side. ADVENT will not due to their laws, but the Collective is not under that obligation.”

“Good,” the Imperator gave a single nod of approval. “You see what is important in this conflict. The species must be united as one before they are properly assimilated. There is less risk of drawing the Sovereign as well through this. But before that happens, there is another way to incentivize ADVENT to act across the globe.”

“Oh?” She was curious. “How?”

A small vial was lifted from around the Imperator’s waist, and hovered just above the palm of his
lower right hand. “A curious discovery the Zararch made when performing research on diseases
Humans were weak to. The Sectoids have been interested in such for some time, and they stumbled
upon a disease that, in a rare moment for your species, people worked together to eliminate from
the world through vaccinations and immunization.”

Patricia tried remembering what that could be, and then it snapped into place. “Smallpox.”

“Indeed,” the Imperator confirmed. “Your species made the disease extinct. Nearly. There are still
two places where the disease has been preserved for research purposes. I had Quisilia and Sicarius
acquire one of the samples, and at this moment it is being turned over to the Sectoids for some
slight refinement and synthesis.”

“You want to release a disease which has no actual cure, back onto Earth?” Patricia demanded.

“I am confident ADVENT can work to a cure,” the Imperator said. “And it will be an additional
tool to force the independent nations to take sides. I have also ordered a cure of our own, one
which would be a useful recruiting tool for Betos. I suspect an epidemic in China would require
ADVENT intervention.”

“I’m not going to pretend like you don’t know the mortality rates for this,” Patricia said slowly.
“You do. You really think ADVENT won’t figure out it was started artificially? You think the
Battlemaster would also use this? It’s deadly to kids in particular.”

“The Battlemaster now has a useful role as plausible deniability,” the Imperator said. “He is the
face of the Collective to your species. He does not need to be informed of these actions. ADVENT
may suspect he is lying, but they will not be able to prove it. Aegis will also attest that such actions
would be out of character. They believe the Battlemaster has the highest authority. This can be
used.”

He moved the vial telekinetically to Patricia, which she delicately took. “We are agreed in the
direction the war should take, Patricia, but I am curious what your own thoughts on this are. Do
you consider the unification of Humanity worth sacrificing thousands for?”

“A very conservative estimate,” she muttered, torn on what to say. On one hand she knew what the
correct answer for the Imperator was. But was the unification of Humanity that important?
Especially if it could be done other ways? But it also came down to efficiency, and an epidemic
would quite possibly accomplish what armies could not, in a much shorter amount of time.

This was, ironically, not out of the realm of possibility for the Commander to consider. He’d
murdered an entire state legislature and proxy assaults on civilians to keep a country from joining
the aliens. He’d eliminated the Council and United Nations when they stood in the way of uniting
Humanity. He’d always had the will to carry out choices that no one else would consider.

Now it was her turn to make a similar decision.

There would be at least one person who understood the decisions she’d made.

She looked directly at the Imperator. “I would do it,” she held up the vial to him. “For the greater
good.”

He reached down and took it from her fingers, the vial looking so fragile between his own. “You
did learn from the Commander,” he said. “I am impressed with your resolve.”

She felt similar to how she’d felt when she’d assisted in the destruction of the United Nations.
Hollow and disjointed, the airy feeling of a dream, though it was all too real. But this time she’d
been the one who’d made the decision, not one who carried it out.

Patricia was under no illusions what the Imperator was doing here. He wasn’t the one making decisions, she was. Against her own species, but she still couldn’t disagree that it was ultimately necessary. For the greater good. Was it different if she was making the same decisions in front of an alien than if she had done the same with the Commander if he decided the unification was proceeding too slowly?

Would she feel nearly as conflicted?

She didn’t know now. That worried her.

But she hadn’t been coerced into saying one thing or another. Every action and word had been her own.

“Why?” She finally asked. “Why are you keeping me here? Showing me things that you aren’t even sharing with your own kind?” She gestured to the globe. “I’d think you’d ask the Battlemaster his opinion before me. Why am I special here…it doesn’t make sense…” she realized her voice had broken slightly at the end, but it couldn’t be helped. There were too many conflicting emotions going through her.

To her surprise, the Imperator lowered himself to one knee to be closer to her eye level. “That, Patricia Trask,” he began quietly. “You just demonstrated to me. Your resolve mirrors my own, something few other Ethereals possess. But the resolve is not enough, it must be used for the right reasons. Isomnum or Macula would have easily condemned the thousands to die as you have, but they do so for petty and destructive reasons. You did not do it because you wished to cause suffering, or saw it as the culling of the inferior, you did it because you believed it was necessary. That is rarer than you might expect.”

He paused. “You understand my goals, you understand the logic behind them, and you feel compelled to act on it. Your mind will not permit you to forget. You can see the scope and reach of what I propose; what I work towards; what I prepare for. You see, and do not reject reality, you do not make excuses or justifications to run, but you accept it…and question when you doubt. But that is not a flaw, Patricia, I would not accept someone who would not be as conflicted as you are. The choice you face should not be one taken lightly.”

He stood back up. “And this is why I share things with you that my own kind are not privy to. Because you understand necessity in a way that too many others do not, and you do not make your choices based on logic or morality, but through this lens of necessity. And so I share my thoughts, and ask your opinions, because I value what you have to say, and want there to be no secrets when the time comes to choose a side. Sicarius is right. You cannot remain on the edge forever.”

“I know.” She said quietly.

“Did that answer your question?” He asked after a few moments.

“Yes,” she finally answered. “I think it did.”

***

Command Center of the Battlemaster, Mars Collective Base - Mars

1/24/2017 – 1:00 P.M.

The Imperator wanted Earth conquered, and so it would be done. Though the Battlemaster was no
longer as invested as he once was. Not only was there the threat of this Sovereign to contend with, but there were still issues in the Collective which needed to be addressed. And so he would address them one way or another.

Or rather, he already had addressed them. But it would be a short time until the ramifications were felt. In the meantime, he was continuing his own research on Human history. Since the Humans were drawing inspiration from their past wars, looking to how they had developed the means to overcome the challenges he faced today could prove insightful.

The World Wars in particular were of interest, and he was rather impressed at the capabilities the species possessed when pressed to war. They clearly had not lost that advantage, although now had turned it on him instead of each other. But it also seemed like, in true ADVENT fashion, they were also looking to mitigate the weaknesses of the past.

What worked during the World Wars would not necessarily work today.

If nothing else, it was a fascinating history lesson, and offered a better look into the psychology of Humans. Although he did wonder how accurate that really was. Humans were a diverse species in thought and mindset. He didn’t know if he could really say for certainty what most of them thought like. There did seem to be some general constants, but few enough that there was plenty of room for diversity.

He shut down the holoprojector and went over to one of the consoles. The data cube he had filled sat on it, waiting for him to make a decision. The good news was that he had a way to carry it out if he wanted, thanks to the Zararch, but he suspected that the Imperator would disapprove. But at the same time, the Imperator was going to disapprove of his more recent actions, so one more, assuming he found out, wouldn’t hurt him more.

With that done, he could then focus on Earth.

While he stood in front of the blinking console, he did realize that he’d made his decision. Paradise was not something he would ever associate himself with, and he needed to make it clear, even if it gave the Humans another piece of propaganda against them. But the Imperator deserved such. If he wished to stand by his decision, the Battlemaster would force him.

“I suspect you are not going to do something good,” Quisilia said slowly from the entrance. He must have teleported in. “So is this something I should know about?”

“Perhaps,” the Battlemaster allowed the datacube to be inserted and read. “I was not expecting you.”

“Well, I do pay attention to what happens in our little Collective,” he said, twirling one of his obsidian blades in his hands. “Not always on Twitter, despite what some people guess. And surprisingly, this includes military orders. You’re sneaky, Battlemaster…well, if you’re assuming that literally no one is paying attention to you.”

“If the Imperator wishes to countermand my instructions,” the Battlemaster allowed some satisfaction to creep into his voice as he sent the contents of the datacube away. “He can do so himself, although then I will sadly be forced to explain why I felt they were needed in the first place. Which might reflect badly on him.”

“Let’s review,” Quisilia said. “You stopped the shipment of all alien test subjects to the Creator. Then you imposed a restriction on only using clones for physical experimentation and moving all Human captives to controlled worlds in Vitakarian space.”
“Yes,” the Battlemaster said, finally turning to him. “Using the captives as test subjects only gives ADVENT ammunition against us, and cloning is far more efficient. Simply take samples of the captives, grow an identical batch, and you can continue without the same issues. As for the Creator, I do not especially care if she is displeased.”

“The Imperator is more irritated with the fact that you did this without consulting anyone else,” Quisilia added. “Aside from those who support you in this. While you have done good things for the Collective, you should not be making these decisions without keeping everyone informed.”

“Then the Imperator should take a more direct interest,” the Battlemaster said. “I only have this much authority because no one else would take it.”

“And let’s not forget your little plan to get around alternate Gateways for the Creator,” Quisilia sighed. “I suppose I shouldn’t be surprised Fectorian agreed to help you. You and him are of a similar mind on this.”

“I will let you know I did not shut down the Gateway,” the Battlemaster said. “And in fact, have provided additional protection for Paradise. Who are always on the watch for any threats.”

“The ships Fectorian sent are targeting and destroying anything that enters the system,” Quisilia noted flatly. “A curious malfunction.”

“Yes, a terrible mistake,” the Battlemaster also kept his voice emotionless. “I’m sure Fectorian will get right on fixing that. Maybe he could send some more in the meantime.”

“You are a very bad liar,” Quisilia said. “But I can appreciate your attempt here. But the Imperator does not exactly agree that your actions are conductive. Now, what were you doing before I came in?”

The Battlemaster considered simply refusing to answer, but he also knew keeping secrets wouldn’t help anything. “Informing XCOM and Aegis of Paradise. The Hunter’s confession and the multiple hours of footage from Yang’s armor within it. It exonerates the Collective from the Seoul attack and places the blame squarely on the Creator.”

Quisilia just stared at him. “Battlemaster…just…why would you do that?”

“So I can return to completing the mission I was given,” he walked over to the holotable projecting an image of Earth. “Conquering and assimilating the Humans. However, before I achieve that I need to ensure loose ends and issues in the Collective are solved. Paradise was one of them, and I have done what I can to solve that problem. Not an ideal solution, but now I can continue unhindered.”

“Do you want the Imperator to think you’re trying to sabotage him?” Quisilia asked slowly. “Because that is very close to what is happening.”

“The Imperator can be insulated,” the Battlemaster said. “The Creator is the main perpetrator after all. But it would certainly reflect badly on the Imperator if he did nothing. If XCOM releases this to ADVENT, it is only a matter of time before the Andromedons and Sectoids see it. Questions would arise.”

“You know, if you hadn’t just told me everything I would think you’d actually picked something up from myself and Ravarian,” Quisilia sounded mildly impressed. “Well, I’m not sure how the Imperator is going to handle you now.”

“And are you going to tell him?”
“Depends,” Quisilia sheathed his blade. “If XCOM decides to release it, I won’t keep it to myself. It’s enough that he may take away your command. As it is you may be sharing joint command with another because he wants someone he can rely on handling the Humans.”

“He cannot remove me,” the Battlemaster said. “No matter what he says. I’ve been with the Collective too long to just reassign me. And for joint command…it would depend on who it is.”

“Undecided, for now,” Quisilia said. “However, it may be Isomnum.”

The response was immediate. “No.”

“Just…it would be best for you not to fight the Imperator on everything,” Quisilia advised. “I’m not a particular fan of the Dread Lord, but he is effective in certain areas. Though I did mention that if he was paired with you he might end up dead.”

“A possibility,” the Battlemaster acknowledged.

“Look,” Quisilia’s tone turned serious. “There are a few divisions I’m sensing between our kind. Understandable and I can see both sides. But right now, the last thing we need is this kind of infighting. You think you’re right, and so does the Imperator, and both of you don’t know how to back down or compromise, and I doubt neither of you think you should.”

“Correct,” he stated neutrally.

“But this right now,” Quisilia waved a hand. “It’s not helping anyone. Neither of you are going away. Paradise and the Creator aren’t going away either. But I consider this bickering dangerous when there is an active Sovereign One on Earth, which is also not going away. Everyone needs to focus on killing it, and then we can properly sort out what to do about the Bringer. And any other grievances you have.”

“The Imperator will not compromise on this,” the Battlemaster said. “Do you believe otherwise?”

“You are just as stubborn,” Quisilia shot back. “You’ve done what you can to express your views. But everyone needs to stop that and focus on Earth. The Imperator can end his vague threats, and you can stop trying to undermine his decision. For now, it should stand. Once everything is at a comfortable status quo, we figure this out together. As a species, not just with the Imperator.”

“Would he allow that?” The Battlemaster was definitely not convinced.

“He can come or not,” Quisilia said. “But you have a point that a decision like this shouldn’t be made unilaterally. The Imperator won’t make decisions like this without all of our input. So he can argue his point, and you can argue your own. We make a decision as a species one way or another. Compromised Ethereals like the Voice and Creator will obviously be excluded.”

That…did not sound unreasonable. “Assuming this is not said to placate me,” the Battlemaster answered slowly. “I think it is acceptable. Though the Imperator must agree as well.”

“I’ll convince him,” Quisilia promised. “He does not want you as an enemy or you to hate him, but he does believe he is right here. A good opportunity to reset everything, and I think he’ll be willing to participate.”

“As do I,” the Battlemaster said. “But his actions must back up his words.”

“Of course,” Quisilia agreed. “As it will be for you.”
“Then for now I’ll return my focus to Earth,” the Battlemaster said, moving to the holotable. “Go. I need to think alone.”

Quisilia exited the room quietly, leaving the Battlemaster alone in his thoughts.

A war was much easier to deal with than politics. He disliked that was happening now. He’d thought their species was above such things, yet here he was.

More proof that their species wasn’t as superior as some wished.

He sighed, and tried to focus on the latest reported ADVENT movements.

***

SAS Command, Abuja – Nigeria

1/15/2017 – 4:17 P.M.

There was the one main problem that they needed to solve. Now that the previous leaders of state has been removed, and temporary replacements appointed in their place, the next immediate problem to solve was how to ensure that ADVENT didn’t come crashing down onto them. Keeping international silence would work for a time, but not indefinitely.

Macula apparently had a plan for this.

Betos frowned. “How feasible is that?”

“Easier than you might suspect,” Macula was seated in front of a holotable which his own forces had established. “It is difficult to fully grasp the reach an Overmind has. A single portion of a planet is hardly a challenge to a telepath as strong as himself.”

The proposal, as Macula had explained it, involved two parts. The first involved an Ethereal called the Overmind telepathically securing the territory, and then performing weekly repeats of this telepathic observation, which would – according to Macula – go through the minds of everyone, perform cursory checks to ensure there weren’t moles or spies, and then inform Macula or herself of any problems.

Although Macula had said that it was also entirely possible that the Overmind would simply force any individual who was compromised to turn themselves in. With the Manchurian Restraints in play now, that was not as guaranteed since there was almost certainly anti-psionic measures. Such a measure seemed extremely inefficient, until Macula had further explained that the Overmind wasn’t limited to one mind at a time, but could go through hundreds in moments.

“If ADVENT does have agents here,” Betos said slowly. “Then they’ll know something is up.”

“I’ve been doing this on my own in my spare time,” Macula waved a hand absentmindedly. “ADVENT absolutely suspects something is wrong. I would force them to act as double agents, but unfortunately ADVENT was competent and programmed the Restraints to refuse to follow orders from aliens. ADVENT can keep sending agents, but they will keep dying. Which is why to keep ADVENT distracted, we’re going to have to do some of the work ourselves.”

“Meaning?” Betos asked, crossing her arms.

“You have a different role to play, Lady Betos,” Macula clarified. “I’m referring to my other alien brethren. Since ADVENT has made it difficult to tamper with them, I believe I will have to employ
the services of Quisilia and Nebulan’s Phantom Division. ADVENT, despite their propaganda, is not always a well-oiled machine. There are vulnerabilities we will exploit to keep their focus elsewhere.”

“Fine.” That seemed reasonable to her. If the aliens wanted to pull their own weight doing this, she was more than happy to oblige. “I think we both have the same idea for what to do next.”

The orange glow of Macula’s eyes seemed to glow brighter. “Yes, I believe we do. It is time the SAS establishes their own psions to combat the ones ADVENT has. There is little reason to deny your people this advantage.”

“Glad we’re on the same track,” Betos confirmed, feeling like they were finally making some headway. “Training may be an issue, however, at least initially.”

“Some shortcuts may have to be taken,” Macula answered. “But it can be worked around. With ADVENT blinded to our operations, we can fully begin the establishment of the SAS military properly.”

“With what facilities?” Betos asked. “It will take time-“

“On Earth?” Macula let out a low chuckle. “We are not limited like ADVENT or XCOM. The SAS has access to the foundries of the Collective. Your military can be upgraded within weeks, and your soldiers turned to the equal of any ADVENT has. What is needed from you, Lady Betos, is leadership and organization. This is, ultimately, your own organization. It is up to you to shape it into what you desire.”

Betos nodded. There was going to be some significant restructuring and appointing being done over the next few weeks. It was good that resources would not be an issue, at least for now. The Gateway infrastructure still needed to be built, but in the meantime the armor and weapons themselves could be put into production on alien worlds.

There was a nagging issue. “Satellite coverage,” she said. “Is that being handled?”

“Yes,” he said. “Satellites providing coverage over Africa are being subverted. Data being sent to ADVENT is monitored. That is under control.”

She was going to assume that Macula was telling the truth, as there was very little reason to embellish or lie. “There is also the matter of cities and infrastructure,” she said. “Both military and civilian. I expect there will be alien support for this as well?”

“Certainly,” Macula nodded. “Although… it would require a significant amount of external teams to elevate your cities to…acceptable levels. Before this, you must ensure that the populations are ready to have aliens around them. Once that is accomplished, the construction can begin in earnest.”

“I suppose it’s settled then,” Betos stood up and looked at the holotable. “I have a lot of work to do. You handle your end, and I’ll do mine.”

“That will not be a problem,” Macula also stood. “There is much to be done.”

Situation Room, the Praesidium – Classified Location

1/28/2018 – 8:11 A.M.
Getting a wake up call from Zhang in the middle of the night was extremely unexpected, even more so when it was clarified that it wasn’t an immediate emergency. With that said, the Commander knew Zhang would not waste his time on something unimportant.

He had been correct.

For reasons that both the Commander and Zhang had yet to figure out, they had received a data cube through one of their own agents, who’d found it placed in his home, promptly decoded it, and immediately sent it back to the Praesidium. Inside it were several high-quality recordings, the first of which was the Hunter explaining who had actually been behind the Seoul Massacre.

It had been the Chosen, as they had suspected. But the true orchestrator was the Creator.

Amazingly, it seemed like the Battlemaster had actually told the truth.

And that had only been the first video. The others had shown, from the perspective of someone else, Yang Shuren, the Human Fiona had told them about, with the Battlemaster, in addition to Sana’Ligna and Shuren, originally going to Paradise to interrogate the Creator, and then it turning into a full and unrestrained battle.

They’d watched in near-amazement at the Battlemaster fighting the Creator. It was one thing to hear the testimony of Fiona and Axis on Paradise and the depravity they’d seen, but it was definitely another to actually see visual evidence of it himself. He knew there was still an element which couldn’t be transferred, mainly the presence Axis had reported, as well as other telepathic attacks, but that wasn’t strictly necessary here.

The Chronicler, Axis, and Aegis were also in the room now as Zhang finished explaining the overview. Any sleepiness the Commander originally had was gone. This footage was a gift-wrapped opportunity. This was what they could point to as the Imperator allowing to happen, not to mention showing the clear discord that existed between the Ethereals.

“We haven’t determined who sent it,” Zhang finished, shutting down the brief clippings of footage. “But I would think the suspects are very few, and all of them have extremely interesting implications.”

“I don’t think there is a question,” Aegis said. “The Battlemaster is the only one who could authorize this kind of information drop.”

“The one who, if I recall, is orchestrating the invasion of Earth?” The Chronicler shook his head. “Unlikely. That would be extremely devastating if it were the case, and the Battlemaster does not strike me as disloyal; not to the Imperator. This is intentional self-sabotage; Sana is the more likely culprit. Or perhaps Mortis.”

“I would not be surprised if it was him,” Axis said. The Zudjari’s eyes were narrowed. “This Battlemaster was highly displeased with what he saw there, and strikes me as one who would do everything he can to contest a decision he disagrees with. But I can only speak from personal experience.”

“This is correct,” Aegis said. “The Battlemaster has limits he will not cross. Paradise goes far beyond what he would ever tolerate. I suspect that in his eyes, sending this to us exonerates himself and the Collective, and heavily implicates the Imperator and Creator. Which tells me that the Imperator is not punishing her. This is his revenge.”

“But this could easily backfire on him,” Zhang noted. “We can do whatever we want with this
“I will note that, if I recall, the Battlemaster promised that the actual perpetrators would be handed over,” the Commander recalled. “I don’t think he’d appreciate being called out on failing to fulfill that promise.”

“He could not have predicted what was happening,” Aegis pointed out. “It must have been the Imperator who forbade it. No one else could dissuade him from killing her.”

“I can work with that, regardless,” Zhang smiled. “All the world needs to know is that, ultimately, the Battlemaster is subservient to a master which allows this horror show to continue. His fault or not, he supports a leader which perpetuates it.”

“I do not think antagonizing him is the best course of action,” Aegis said slowly. “That he sent this at all is proof that his loyalty is shaken. We should not throw that away.”

“Forgive me, Aegis,” the Commander said, raising an eyebrow as he leaned back in his chair. “But I’m not especially concerned with hurting the feelings of someone who is still a major threat to my planet. It was nice he sent that, true, but if his loyalty is really shaken he should be more public. Why not release it himself instead of using us as a proxy?”

“Because the Imperator would more than likely silence him, as he attempted to silence me,” Aegis’s tone was growing frustrated as he continued. “Would you prefer the invasion be handled by Isomnum or Deusian? By someone who isn’t as restrained as the Battlemaster has been? That is what you would accomplish by something like that. This is the best he can do while still retaining his position, and for the moment, he considers that more important than causing chaos in the Collective.”

“Not bad, when you think about it,” Zhang mused, making a short note on his tablet. “He uses us to discredit the Imperator, sends it in a way that we would know immediately who it came from. We use it to further disrupt the Collective and shame them into acknowledging their actions. This can get back to the Hive Commanders and Unions, making them raise questions of their own. I agree with Aegis, the Battlemaster did this in the correct way, assuming this was his plan.”

“Which raises the question of how this is going to be handled,” the Chronicler noted, pacing the room. “Send this to ADVENT telling them to acknowledge the Battlemaster was telling the truth?”

“Frame it as a clarification, an update,” the Commander said. “The story just needs to be that the Creator orchestrated the attack, it was allowed by the Imperator, and that base and Ethereal are still in operation based on our most recent intelligence. Point out that the Battlemaster failed to come through on his promise. Don’t press it too much, but make it a firm point. The media machine will do the rest.”

“Do you believe they should have the raw files?” Zhang asked.

“That’s up to ADVENT,” the Commander said. “But I would give them that, yes. Much more material to work with, even if traumatizing. Ultimately, whatever they do will work in our favor. The clarification that it was ‘merely’ the Creator behind it will be lost in the sheer outrage of the public once they see what Paradise holds. Nothing much better to galvanize the public further.”

“This should also be sent to all known alien bases,” Aegis suggested. “It will be difficult to dismiss this as merely fake. I suspect the Battlemaster will not confirm or deny, and if someone does deny it…he will have to correct them.”
“In any event,” the Commander said, rubbing his eyes. “I have some extra material to prepare for V’Zarrah. I think he’d be very…interested in this. Maybe we can have Nartha get it to the Nulorian. Not that the Zararch would probably let that spread, but Miridian can at least make an effort.”

“I’ll have Jackson prep all of this to send to ADVENT,” Zhang said. “Your input was appreciated, Axis. You are dismissed.”

“I see,” Axis looked around. “But everyone else is staying?”

“We have more matters to discuss,” Zhang punched a code into the holotable. “Which is above your authorization.”

The Zudjari merely nodded, and exited the room with no further questions. “Since we’re all here, I’ll update you on several additional matters which have arisen. The first of which is this,” the hologram of a pyramid appeared, with some background text. “This was just captured in China—”

“Where did they get that?” They all turned to the suddenly intense voice of the Chronicler, who was standing and fixated on the hologram in front of them.

Zhang shot him an annoyed look. “China, as I said. Apparently brought in by a worker, and the device seemed to make them act differently. Lose their minds to the point where they killed everyone in the building and held off PLA forces successfully enough that they reached out to ADVENT for help. The PRIESTs involved confirm that there is some kind of telepathic emanation, and sent it to us since we, ah,” Zhang cleared his throat. “‘Specialize in the safe analysis of unknown alien materials and objects’.”

“Which means they don’t want this thing to accidentally kill whoever’s researching it,” the Commander noted wryly. “So instead they send it off to an isolated party with some experience in this. How thoughtful.”

“They are extremely fortunate they did so,” the Chronicler said in a low voice. “Those are Indoctrination Pyramids. Used by the Synthesized. Constructed by them to emit certain telepathic commands to assume control over, and dominate, other living beings. They can be tailored for any species, can be infinitely customizable, and what should concern everyone here, are directly connected to one of the Synthesized Primes.”

There was dead silence at that. “A Prime,” Aegis said slowly. “Would it still work if a Prime is destroyed or gone?”

“Destroyed? No,” the Chronicler shook his head. “It is…closest to the Sovereign Orbs. The Sovereign always maintains a connection to it, even if it is never a priority. Their minds are not as limited as our own, and a machine like a Prime could easily handle multiple streams of data at once. As far as it being gone…that is possible. Instead the Pyramids will be left as idle; traps for aliens to stumble across.”

“Or to use as traps,” the Commander added. “Aegis, are there any Ethereals who have found or research Synthesized technology?”

“Isomnum,” he answered without hesitation. “During the war he was a primary researcher of their technology, and was a proponent of using it against them. It would not surprise me to know this was continued, unless one of these Pyramids was originally found on Earth.”

“Fools,” the Chronicler hissed under his breath. “Every pieces of their technology is a trap for the
gullible. The Pyramid could not have come from Earth, T’Leth would have eventually found it by now.”

“Even if it was shut off?” Zhang asked.

“Pyramids do not ‘shut off,’” the Chronicler clarified. “They execute new protocols, some of which are dormancy protocols until it detects it is safe enough, or a new person enters the vicinity.”

“From what I’m gathering,” the Commander said. “You don’t want us to research this.”

“That is exactly what I am saying,” the Chronicler stated. “That is what they want you to do. Curiosity killed the cat and all. T’Leth can contain it somewhere safe.”

“Can it be researched safely?” The Commander asked.

The Chronicler just stared at him. “Did you just forget what I said?”

“No, I didn’t,” the Commander met his gaze. “I’m asking you if it can be done safely. We’re in a more…malleable situation with a Sovereign to help here, and I can see several different uses for devices which can send out telepathic commands on their own. Can it be done safely or not? Please make sure he doesn’t lie, Aegis.”

“Certainly,” the Ethereal acknowledged.

The Chronicler grimaced. “In theory it can be done ‘safely’, which is in a controlled environment, overseen constantly by psions or a Sovereign One, with multiple safeguards to destroy the Pyramid, and isolated enough to not hurt anything or anyone outside the research vicinity.”

The Commander smiled. “Well, it just so happens we have a cooperative Sovereign, and we are also happening to build underwater bases which are fairly isolated from the majority of Humanity. So this is what we will do – you take the Pyramid for safekeeping. Secure it however you want. When a facility to the standards of T’Leth is done, research begins. Does that sound fair?”

“I’ll confirm with T’Leth,” he muttered. “But that would be…acceptable.”

“I’ll let Vahlen know about this development then,” the Commander said, picking up his tablet. “Do we have anything else pressing?”

“The list of agents to begin work in alien territory is finalized,” Zhang said, giving him a nod. “It just needs your review and approval. Chronicler, you should go over this as well. I want these agents sent over within the next week.”

“Just in time for our meeting with V’Zarrah,” the Commander commented. “I’ll get that finished by this afternoon. Also, I want you to get me some information about a certain individual.”

“Who?” Zhang asked.

“Someone interested in joining XCOM,” the Commander said. “Kane McTaggart. Subject Zero for the Phobos Project, and a curious individual. Someone who was able to wake up voluntarily from Isomnum might be useful here.”

Aegis shifted his helmet to look down at him. “No one can voluntarily awaken from the nightmares Isomnum projects onto his victims. Even psions will not recover if they have been compromised. This cannot be done without help and time.”
The Commander shrugged. “He did. Why do you think ADVENT was so interested in building a project around him?”

“It is unlike Isomnum to make such mistakes,” Aegis mused. “I might be interested to speak to this individual. Director Zhang, please forward what you find to me, as well as this Phobos Project.”

“I’ll do that,” Zhang said, standing up. “I’ll have a report to you tomorrow, Commander. I expect it will not take long to acquire the background of this individual. He’s not a spy or highly ranked. No major amount of red tape to cut through.”

“All right,” the Commander nodded, giving a salute. “We’ve got work to do then, dismissed everyone.”

***

Unnamed Planet

2/1/2017 – 12:02 A.M.

The world was bare and desolate, the moon of a nearby planet. How Fiona, or more accurately, the Chronicler had known it existed at all was a mystery. It was simply grey stone which rose into small mountains in sections while craters of all sizes marred the desolate rock. There was no atmosphere, and looking up revealed a planet covered in white clouds over deep blue oceans. A water world most likely, surrounded by the black maw of space; white stars glittering in the distance.

A beautiful sight the Commander had hoped to see one day. Preferably on the Moon of Earth, but this would suffice until then.

The Commander wore his Titan armor, which had been slightly modified to include a larger oxygen supply. He did not imagine that they would be in this place longer than four hours, but just in case he had brought additional tanks. “Nice place,” Jackson looked around the moon, her voice sarcastic. “A bit bland, but nice.”

“No one will find us here,” Fiona said, deliberately ignoring her sarcasm. “Now we just have to wait for our Andromedon friends to show up.”

“Which shouldn’t be too much longer,” the Commander said, looking at the clock on his HUD. “They are a prompt species.”

His words turned out to be correct as within ten minutes there was the blip of an alien spacecraft, clearly Andromedon, coming down to land. It was definitely smaller than any other Andromedon spacecraft he’d seen, but fitting the standard Andromedon aesthetic of harsh geometric architecture modeled around a rectangular body. It had a flat nose, no windows, no ‘wings’, but quite a few weapons placed along the sides and top.

It turned to its side as it landed before them, landing struts emerging from the bottom to set down gently. The trio began walking towards it, just as the door itself unsealed and a ramp extended to the ground. Out stepped a single Andromedon, V’Zarrah he presumed.

The Andromedon was also similarly dressed for combat. From what he had learned, V’Zarrah was perfectly capable of holding his own in a fight, and his suit was the absolute top of the line. Heaviest armor, chemical dispensers, micro-missiles, blast shields to go over the commonly exposed helmet, and rumored nano-tech offensive and defensive systems.
“You are the Commander of XCOM.” It was definitely V’Zarrah. No other Andromedon present would ask or know that, and the Commander doubted that V’Zarrah would share his plans with many others.

But it was also not a question. It was a confirmation. “Yes,” he answered, their voices seeming to be carried far on the dead moon. “You are V’Zarrah.”

“I am curious how you arrived on this moon,” V’Zarrah walked closer to them. “Your species is intriguing. Strong enough to hold against the might of the Ethereals, sharp enough to turn Zararch agents to your cause, and yet smart enough to realize that without allies your war will be lost. And it all circles back to you, Commander. The cause of the Collective’s current issues.”

The tone seemed to shift. “An impressive feat. Few could do what you have done. For that reason I have agreed to this meeting.”

The Commander inclined his head. “And how much do you know about me?”

“I know that you have a history of determining the most efficient course of action,” he answered. “And then following through on it, no matter what others have said. I know that since you took command of XCOM, you have sought to prepare your species adequately. I have no confirmations as to the incidents around Germany, or the timely deaths of the Council and the United Nations. I do not have proof as to your own involvement in the creation of ADVENT, and the subsequent assimilation of upstart nations and territories such as Canada or the Middle East.” The voice turned to focus on the Commander. “But I have made my way through life seeing the connections, coincidences, actions, results, and the strings that bind them all together. You need not confirm your role, I already know it. And any being who can turn their species into their vision, by themselves or with help, is someone I want to meet.”

It wasn’t especially a surprise that V’Zarrah had been able to put together a fairly accurate picture. Someone with access to as much data as he had would find it rather easy. It also wasn’t surprising there was no condemnation, only respect. The Andromedons were a practical species. “But you want to meet me for a reason,” the Commander said. “As do I.”

“In that you are correct,” V’Zarrah said. “I have grown tired of the apathetic leadership of the Ethereals and their insistence on controlling the foundations of our society. The Federation itself is merely a tool to keep our species in line.”

“I thought it was the result of the Kett’Tasira,” Jackson interjected. “The Ethereals did not insist you follow-“

“The Federation was temporary!” V’Zarrah hissed, shifting his massive frame threateningly to Jackson who took a step back. “We are not like the Ethereals. We are not like the Vitakara or your own species. The Federation was meant to ensure our survival, it was not meant to be anything more. And so our species continues to be complacent. We are not permitted to act when action is called. The Federation has grown into everything our species was against. It is past time that it is destroyed.”

“And return to what?” The Commander asked. “A constant war that plagued your species for thousands of years? Is that better?”

“Through war we grew, we advanced, we evolved,” he answered harshly. “We are not your people, Commander. I thought you of all people would understand the necessity of not compromising your vision for your own species. Do you really believe the Unions simply forgot the conflict that has persisted for generations? We have not. The Federation has been kept alive by the sole command
of the Ethereals, and the Unions simply wait and plan.”

V’Zarrah spread a hand. “There are the alien loyalists, the cowards, the compromised, and the apologists of our species. Those have no place in our society, and they would have been purged long ago – or if they had proven stronger and smarter, they would have killed me. The Union Wars will not end until only one faction remains, and that one will be the superior and worthy of leading the Andromedons into the future.”

“And thousands of years of wasted time and lives,” the Commander answered. “Restarting the Union Wars is not something I want to support.”

“Ah, you misunderstand me, Commander,” V’Zarrah paused. “I agree in a way. I have learned enough to know that there are greater threats in this galaxy. Ones which require a united species. For you it was the Ethereals. For us it was the Kett’Tasira. I suspect we both know the machines that wiped out the Ethereals. Further conflict, while necessary, might prove our undoing. I do not intend to drag this war out, Commander, I intend to win it immediately.”

A light shined from his gauntlet, and the images of the Union symbols of the Federation glowed before him. “The Federation can serve a purpose. If one faction acts quickly and decisively enough, they can be eliminated. As it stands now, none could act fast enough before the Ethereals intervene. However…if the Ethereals were focused on a larger threat.”

“You could strike,” the Commander finished. “And what, exactly, would be your own vision for your species?”

“Our species will grow and form into a galactic power,” V’Zarrah said. “One independent of alien influence and control, one which is capable of destroying all who oppose or threaten us. And one day, we will return to Andromeda and exterminate the Kett’Tasira from the galaxy. Too many of our kind believe we should simply move on, or that we should be more open to outsiders. We have now seen the results of allying with aliens. And this galaxy is not our home, and it never will be. It may be thousands of years later, but I will ensure our species reclaims Andromeda.”

The Commander nodded. “In that case we have similar goals, minus a return to Andromeda. We are not interested in interfering in alien affairs, and expect the same in return. However, I believe we can be allies…but no more than that. A mutually beneficial agreement, nothing more or less.”

“Yes,” V’Zarrah shut off the hologram. “Another reason I decided to meet you. Your species in particular understands the threat of alien domination. You understand better than most that outsiders should be treated warily at best…and allies watched closely and never relied upon. This galaxy will punish the trusting and gullible, we all use each other as a means to an end.”

“A more fatalistic outlook than my own,” the Commander cocked his head. “But we agree that reliance leads to apathy and complacency. Both our species must be able to operate independently, and anything else is extra.”

“I have a question now,” Jackson stepped forward. “Are you intending to emerge as the sole Union from any conflict, or are there others?”

“There are others who share my vision for our species,” V’Zarrah confirmed. “Ones I have known long enough to trust them as much as possible. If it was during the Wars, we would have merged into a unified Union long ago, but doing so now is…unwise. Unions Apear, Stuirah, and Zacarrim are allies in this.”

The Commander didn’t need to be psionic to feel the shock Jackson excluded. He felt almost the
same way. Those were Unions which were fairly major. Apear were supposedly pariahs with everyone due to their work on AI, and Stuirah were the primary engineers of the Andromedon fleet. Zacarrim were a surprise, though mostly because they were extremely apolitical, even if there were no better cybernetic engineers.

“That is good to know,” the Commander acknowledged. “It just so happens that we have some projects of our own which would benefit from those kind of specialists. I would also expect you have expectations for us, in the event that you help us.”

“It is simple,” V’Zarrah said. “You assist us in wiping out the rival Unions, as well as the Sectoids. In return we assist in destroying the Ethereal Collective. We can provide you specialists for your own projects, as well as covertly funnel your people resources which are scarce on Earth. Both of our species will grow through this partnership.”

“In return for the small task of helping you wipe out half of your own species, and completely wiping out another one,” Fiona noted. “Harsh, even for your own kind.”

“I am not negotiating this, Human,” V’Zarrah said to Fiona. “The Sectoids pose an existential threat to our species, and the Unions to be purged are a consequence of the rot which has taken hold in the Federation; that which will weaken our species as a whole.”

“Enough,” the Commander raised a hand. “The Sectoids will not be a problem. From what we know, they won’t give us a choice anyway. As for the Andromedons… it is our own species which is at stake here. If the Andromedons want to kill each other for their own greater good… that is their own decision, and here, we need allies in this war. Consider it a deal, V’Zarrah. You help us defeat the Collective, and we will help you take control of your species.”

“Excellent,” V’Zarrah nodded. “It is good to begin moving the pieces into position. I have waited for a day like this for a long time.”

“I also have this,” the Commander took a small case Jackson had been holding. “I think that you’ll find there is quite a bit of useful information inside it. Including how to contact us again. What you do with the contents? That is up to you. I will inform the Chancellor of our agreement, and next time you, or a representative comes, we can nail down specifics.”

“We will be in contact, Commander,” V’Zarrah said. “Good luck.”

“Appreciated,” the Commander smiled under his helmet. “I feel our luck just got a lot better.”

Chapter End Notes

So, a few things to mention here. The first being that artist TheBritWriter (Check his Deviantart) drew a piece for me which is based on the Ravaged One's Assault back on XCOM. So definitely go look at that if you want to see what one of the Ethereals in this setting looks like. Will probably be working with him again at some point, was pretty happy with how it turned out.

Second thing is that I've done some side writing for fellow author SLoH4's Shadow of the Phoenix series (in addition to being an editor as well), more specifically an addendum piece to his universe, essentially a kind of XCOM-Files type thing. This is for Star Wars for those who are unaware, and I recommend you check it out if you
want to see how well I do something which isn't XCOM. I'm listed as a co-author in my profile, so you should be able to find it very easily if you go there. It'll be right beside my other stuff.
On one hand, this was going to potentially cause problems in ADVENT. The revelation that the Battlemaster had actually been telling the truth was...odd. In a twisted way, it did make sense, as from the dossier both ADVENT and XCOM had compiled on him, authorizing a strike like that in Seoul was extremely out of character. But that had never truly been in question, what had been was denying he didn’t know it at all, or that the Collective wasn’t behind it.

It would be easy to dismiss the evidence XCOM had provided as fake, but she knew that would just be denying an obvious truth. ADVENT would have to acknowledge that the Collective appears to have not been behind Seoul, which led to the next problem of how to actually distribute the proof of that.

The Commander said he was in favor of the raw footage being sent to media companies to edit as they wished, since the only ones who would be harmed would be the Collective. She personally disagreed with that, as ADVENT needed to figure out their own statement on this before even thinking of giving it to the media, not to mention she wasn’t sure it was within the public interest to show even a portion of the sickness of Paradise, redacted, edited or not.

Paradise itself, as well as this Creator, were a completely separate problem. There was an army there powerful enough to stand against three of the most powerful Ethereals in the Collective, and an unknown alien and Human of unknown psionic powers. If the Collective started using soldiers like that against ADVENT, there would be problems.

However, the silver lining was that this whole operation was so secret not even most Ethereals had known about it, so there was a potential that these would never move beyond that space station. It didn’t change the fact that one day ADVENT was going to have to fight and destroy those things, but perhaps they didn’t need to worry about them quite yet.

That was mixed-to-bad news.

On the other hand, an alliance established with not one, but three Andromedon Unions was perhaps one of the most uplifting things she could have heard. “The Union that produces their spacecraft is part of this alliance?”

“Union Stuirah,” the Commander confirmed. “Arguably the best designers of spacecraft in the known galaxy. Perhaps we can move past them some day, but for now they understand spacecraft much better than we do right now. You can see the implications for Atlantis.”

“Yes, yes,” she nodded, concentrating hard. “However, I know that Elizabeth is going to have issues trusting aliens with what is our most important project; a concern which I share.”

The Commander surprisingly gave a small smile, as he shut down the holotable absentmindedly. “If there is any alien which understands your reservation, it is the Andromedons. I’m not suggesting we give them access to Atlantis immediately, but working with them to design our own spacecraft should be pursued. Their expertise can help us avoid mistakes we can make. More importantly, these Unions have a very good reason not to sell us out.”
“The Ethereals.” Saudia nodded. “That doesn’t mean we immediately trust them.”

“Of course not,” the Commander rapped his fingers on the metal. “But there has to be enough trust to make this work. Viarior has a stranglehold over the entirety of the lesser Unions, allied with Viarior or not. They have dozens of factory worlds and off-the-maps facilities. Their logistics networks are unmatched, and they have been planning for something like this for a long time. I would trust them not to screw up, if only because they’ll die otherwise.”

Saudia knew the Commander was moving towards his own recommendations, or more accurately, more recommendations. “What do you have in mind?”

“Something to give us an edge,” he said, taking a file and sliding it over to her. She appreciated that pretty much everything related to Atlantis or the Andromedons he never shared digitally, it was always through a physical medium in an isolated and secured location. A paranoia she understood, especially now.

She picked it up, and began reading. It was not an especially long document, but it was enough to keep her occupied for close to a half hour, mostly due to her reading part-way, and fitting that into the current war model. The Commander spent the time she read reviewing several of XCOM’s own reports, as Saudia had unconsciously sat down into one of the nearby chairs, with only the hum of the base filling the air while she read.

Saudia finally closed the file, looking back up at the Commander. “Assuming that by some miracle everything works out perfectly, and in the end we beat the Collective, the Andromedons will know an extensive amount about our naval operations, strategies, tech, and tactics.”

A nod. “Correct. But do you see another way to build a functional fleet, train crews, and be able to hold our own without being smashed by the much larger and more experienced Collective armadas?”

“Having Andromedons train an officer corps is a risk,” Saudia pointed out, standing. “I don’t want our eventual navy to be reliant on what they learned from aliens. We should develop our own understanding of naval combat, because this,” she tapped the file. “Will give the Andromedons an advantage.”

“Nothing says we can’t do that eventually,” the Commander added slowly, crossing his arms. “But perhaps at a time where we aren’t facing the threat of extinction. Time is of the essence here, Chancellor. We are not going to win this war without alien help, and that is a fact we need to accept. Will that put us in potentially vulnerable positions in the future? Perhaps, but if we don’t then there will not be a future. We are only as reliant on the aliens as we allow ourselves to be. That does not mean we can’t learn from them or accept that they might have more experience than us in certain areas.”

“I’ll consult with Laura and Elizabeth,” was all Saudia said. “Moving past that aspect, having the Atlantis facilities function solely as shipyards is a good idea, with other parts being produced by the Andromedons elsewhere.”

“V’Zarrah suggested that,” the Commander said. “While it would definitely be suspicious if a factory started producing ships, a thousand factories over a hundred planets, from a dozen different Unions, producing small individual parts for various projects will not raise any alarms. If we can focus our production on assembly instead of that and exclusive manufacturing.”

“The fleet can be produced in a fraction of the time,” Saudia finished. “And if we follow having the Andromedon train teams of officers, the moment the fleet finishes, we can launch our attack to
take back the Solar System.”

A smile was what she received in return; a smile of calm confidence with a curious satisfaction in his eyes. “Exactly, Chancellor.”

Saudia had the feeling that there was more the Commander wasn’t telling her. She’d had the feeling for some time. The Commander was curiously not particularly concerned as much as he had been earlier in the war. Perhaps it was because things were falling into place, such as an alliance with the Andromedons, but that couldn’t just be it.

She wondered privately if they were in contact with another Ethereal wanting to defect. It would explain his attitude, and why he wouldn’t necessarily share it with her immediately. Perhaps this Paradise incident was affecting the Collective more than she thought.

Or perhaps he was just in a continual good mood now?

It wasn’t especially important. As long as they kept doing their jobs, the attitude of the Commander was unimportant. It did bring something to her mind, however. “Have you learned anything more about that pyramid?”

“Only that it’s very dangerous and alien,” he answered, the smile vanishing into his more typical neutral expression. “Aegis doesn’t recognize it, but believes it’s a precursor artifact of some kind recovered by the Ethereals. Perhaps Cogitian learned how to use it, although the current assumption is that it was placed by Isomnum or Sicarius to test it. We’re still researching it in an isolated location, it may be some time before we learn anything more.”

Plausible enough, that would explain how it came out of nowhere without bearing any resemblance to modern Collective tech, and this certainly fit the profile of Isomnum. It did make her wonder about the aliens who had made them though. There was always someone else out there, and even after they were gone, their legacy took far longer to vanish.

“We will be in contact shortly,” Saudia said. “AEGIS will be sent in a few days to establish something more formal with these Andromedons. Pass that along to V’Zarrah.”

“With pleasure, Chancellor,” he inclined his head in farewell. “Until next time.”

***

Fort McMurray, Alberta – Canada

1/24/2017 – 9:34 P.M.

Showtime was coming, and Neil wanted to do this in an actual sheltered building rather than around another fucking campfire. And they could do that now, since the Inquisitors had neutered any kind of resistance the aliens could put up. Security was under ADVENT control. Military leadership was under their control.

ADVENT had successfully taken control of Fort McMurray, and it was time to fully liberate it. But not before the Sargon of the region was disposed of. It was time to take the required actions, which was why the Inquisitors and several of his soldiers were around a deactivated holotable. He didn’t care for the tech, not when paper still existed.

“We’ve set it up well enough,” he began. “So far forty aliens have been lost on patrols, and even more have recorded finding the bodies and bones. Morale of the rank and file aliens is low and they’re scared. Whoever’s idea it was to leave a meal of Borelian meat that one time, I want to
personally commend you.”

“Thank you sir!” One of the men said, grinning through his beard. “Didn’t take it well?”

Neil held up a small stack of papers. “Got them riled up enough to actually send multiple requests to command demanding to know if Humans actually eat their enemies. We definitely spooked them. None of them want to go out on patrols anymore, so I say we all did our jobs very well, and our good Inquisitors also pulled their weight.”

Cycelea smiled, as did the other Inquisitors next to her. “Guess your purple space magic came in handy,” Walter grunted. “Fine. Thanks.”

“So far we’ve controlled outgoing reports to not make the request for help seem unexpected,” Neil continued. “But also not to a degree which would attract suspicion. Over the next week this will escalate. For the next week there will be patrols sent out and we will ambush and kill every other one. Make it seem to be a direct challenge to our target: Alberta-3.”

“Can’t believe they’re called that,” a woman muttered. “Dumb name.”

“They’re brutes, what do you expect?” Another man asked. “Surprised they managed it at all.”

Neil just raised an eyebrow at the room’s chuckling. “From what I understand, names are assigned. And I’m going to make whoever thinks a Sargon is an idiot eat Borelian meat for a week if they say that again. These aren’t regular Mutons, they’re smart; probably smarter than you. And even if they weren’t? We’re still going to treat this as if we’re killing a fucking Ethereal. Everyone clear on that?”

A chorus of affirmations and acknowledgements, and Neil gave a sharp nod. “Excellent. I’ve avoided burying anyone so far, and I’d like to keep it that way. So now for the heart of the matter – how are we going to kill Alberta-3?”

“Please don’t tell me you didn’t figure that out already,” Walter said. “I’m not in the mood.”

“Rhetorical question,” Neil sighed, rubbing his eyes. Perhaps bringing their resident wilderness expert wasn’t a good idea. Too late now. “Of course I have a plan, and if it’s bad, I’m sure you’ll say something.”

“You know it.”

“We don’t want to attract the Collective’s attention,” Neil said. “Yet. So we need to kill the Sargon and make it appear to be an accident. That means that the killing is done off-base.” He noted some inquisitive glances, and raised a hand. “How we do that is through sabotaging his transport. While the Sargon is touring the base Cycelea and her team will convert whatever aliens are guarding the vehicle, and then plant a bomb on it. Time permitting, food and drink will be poisoned as well.”

“So it’s detonated on the way back?” A man asked.

“No, that makes it too obvious,” Neil shook his head. “Detonation will be done through one of his own. We’ll have multiple sleeper agents hopefully, and they will detonate the bomb the next trip the Sargon takes. That way if any suspicion appears, it will be in the wrong city.”

“What happens if the bomb is discovered?” Was the next question.

“Then the agents will assassinate the Sargon,” Cycelea said. “The Sargon will die one way or another, but we’re going to aim for the best possible outcome, not just one that works.”
“Exactly,” Neil said. “Truthfully I don’t expect it to go off *that* smoothly. For all we know he’ll come with mechanical soldiers or Sectoids or something we can’t subvert. But previous intel makes me confidant this can be pulled off. Worst case scenario, we kill him here. We have control over the military leadership and the Mutons will obey without question, even if it is against their own.”

“So what are we going to do during that time?”

“We’ll be in the city when he arrives,” Neil said. “Falia will suggest that Human shields are necessary. The Inquisitors, several of you, and I will be ‘randomly selected’ and accompany the Sargon out on his tour. If an Inquisitor or I gives a signal, we kill them. Otherwise we wait and listen. To further pull this off, one of us will be ‘captured’ and will be able to lead them into several ambush points which can be sprung if necessary.”

“You really want him to see all of this?” A short-haired woman asked.

“I do,” Neil said. “Assuming the best case scenario happens, the Sargon will inevitably write a report on what he found. I want any discomfort and fear to be spread. All the better if he blames it on rogue Humans and not ADVENT. I don’t know if it’s possible to unsettle a Sargon, but it’s worth it to try.”

“Question,” Allen, one of the other Inquisitors asked, raising a hand. “We pretty much control the entire scenario here. Why not capture the Sargon instead of killing him? We could learn a lot from it.”

“Too early,” Neil shook a head. “I agree, but it’s too early to do that. We’re not equipped to interrogate a high-value target like a Sargon out here, and we want to keep a low profile as long as possible. Once we kill a few more, and the Collective knows something is up, then we can capture the Sargons. But good that you’re thinking ahead.”

“So worst case scenario,” Walter spoke up. “Everything fails and the Sargon survives an assassination attempt?”

“Then we either kill the Sargon when he comes back to investigate,” Neil said. “Or we get out of the region and move on to the next target before an army is sent after us. Which is why when the Sargon leaves we have a very limited window to liberate every civilian in this town. Commander Christiaens has been informed of the strike day, and civilians will be evacuated using some new kind of dropship. Impossible for the aliens to not notice it, so they must be dealt with before that point.”

“Activate our moles?” A man asked.

“Precisely,” Neil nodded to Cycelea. “Overseer Falia orders the Mutons to kill every alien not under our control. The Inquisitors will take care of the Mutons when finished. We’ll restrain the aliens under our control, and let ADVENT command decide what to do with them. They want them, fine. If not we kill them and harvest some meat for the next journey. Worst case scenario we take out an entire alien base, and have automated reports that will be sent out over a period of a week.”

“Win-win,” Cycelea said happily.

Neil snorted. “We’re not going to settle for that. We are going to kill the Sargon *and* liberate this town. Everyone clear on the plan? Because we’re not going to be meeting here again.”
“Yes, sir!”

“Glad to hear it,” Neil straightened up. “If any of you miss coffee and want to make some, go for it. It’ll probably be the last you have for a few more months.”

***

*ADVENT Intelligence Outpost, Brasília - Brazil*

2/4/2017 – 11:49 A.M.

They were gathered again for a meeting which Jaylin figured was right before the day they were preparing to head out to meet the Argentinian representatives. In the meantime she’d gotten acquainted with the layout of the area they were going to be in, to prepare it for any ambushes as best she could.

Dr. Wepper wasn’t present, largely since he was still doing some research on his psionic tampering theory, but he said that he hoped to start doing actual tests within a few days. Jaylin had to admit she didn’t know if she’d feel better if there was, or wasn’t verifiable evidence of psionic tampering. Even if there wasn’t, she’d always wonder about it in the back of her head.

“All right, everyone pay attention,” Abby said, tapping the table. “I don’t want to have to repeat this more than once. Tomorrow may likely be the first time we face the Phantom Division proper, and as such we’re going over the plan one last time.”

“We have acquired a team of sixteen Lancers,” Silvio continued, allowing a satisfied smile to appear. “In addition to a half dozen agents of ADVENT Intelligence. The agents will be disguised as civilians, and the Lancers will be in ordinary ADVENT soldier uniforms. We don’t want to tip off anyone we’re ready for a fight.”

“There will also be another Inquisitor monitoring the crowd,” Marco interjected. “He will be in communication with me or Protopriest Kil.”

“I will be similarly disguised,” Kil added. “And I will be monitoring the Lancers for any kind of psionic tampering. Should that arise, I will immediately let everyone know.”

“So I do want to ask one thing,” Jaylin cleared her throat. “It’s good that everyone will be disguised. But if we are attacked, none of us are going to be in optimal gear. Definitely not enough to stand up against the Phantom Division if they’re as enhanced as you say.”

“Armor won’t matter to the Lancers,” Silvio shook his head. “By that I mean it’s not as important as they want you to think. They’re extensively gene-modded, you can shoot them and they won’t go down in a few hits. If they get their hands on weapons or get in close, the Phantoms will have a bad time.”

Jaylin coughed again. “I would like to point out that there are those of us who lack this kind of modification.”

“If we come under attack you’ll be protected,” Abby assured them, meeting her eyes which only showed confidence. “The focus will almost certainly be on me or the Priests. You and Leon will need to follow my own orders or those of the Priests. Don’t risk yourselves unnecessarily. Understood?”

“Yes.”
“On that subject,” Silvio continued. “There will be Lancer Executor weapons packed into the transports, along with several more of their favorite toys. We also got authorization to bring two SHIVs along with us. Illusions won’t work on them.”

“A shame we couldn’t get an MDU,” Leon chuckled.

“Considered it,” Abby said. “Sadly too noticeable and will definitely put any watchers on guard.”

“Let’s continue with the plan,” Serena said.

“Yes,” Abby confirmed, leaning on the table. “We will travel in three armored transports. I will be in one, Protopriest Kil will be in another, and Inquisitor Tasis will be in the third. If we lose one transport, I don’t want to lose all of our Priests. Jaylin and Serena will be with me. Leon will be with Protopriest Kil, Silvio will be with Tasis. The rest of the seats will be filled with Lancers. The transports will be sufficiently stocked with weapons and gear.”

So she would be with Abby. Jaylin felt better about that. Even if Abby was not the most powerful of the group, she felt more comfortable than being in the transport with a psion. Besides, she had learned that Abby was a reliable and dangerous woman in her own right. Then again, as the marked leader, she was potentially more likely to be targeted.

“Upon arrival at the building, everyone will help establish a perimeter,” Abby continued, bringing up a small hologram of the layout. “Silvio, Serena, and I will go in and meet the representatives. We expect the talks to take several hours at least. During this time Inquisitor Tasis will be monitoring the meeting psionically, and Protopriest Kil will ensure that there aren’t any threats in the immediate vicinity.”

“After talks conclude one way or another, we will return in the same way we arrived,” Silvio said after a few moments. “And assuming nothing happens, we return here and figure out what to do next. This is if everything concludes without any sort of attacks.”

“If we are attacked, it will either be during the talks itself, or on the way to or from the location,” Abby said, the hologram now showing the route. “Nebulan seems to prefer isolation, so if we are attacked, it’s more likely it’ll be along the route. However, if she wants to be unpredictable, it may happen during the talks.”

“And if we’re attacked?” Leon asked. “Illusions will be a problem.”

“You let me worry about that,” Kil nodded to him. “That’s my job. To make sure any illusions are blocked or at least distorted enough for you to know they aren’t real. Kill the things that are living; which I expect the Lancers will also do perfectly fine.”

Leon just frowned. “I don’t mean to insult you, but are you sure you can defend against an Ethereal?”

Kil was silent, then pursed her lips. “I don’t know. The best I can hope for is to delay her long enough to let ADVENT know we’re under attack and they send reinforcements.”

“I will also be able to help,” Marco added. “Two telepaths are better than one. Illusions can’t kill either. If you all or the Lancers kill the real attackers, she won’t be able to do anything.”

“Aside from taking control directly,” Abby said dryly. “But I agree. If she loses her ground soldiers she’ll back off. And from talking with Aegis, illusions are most effective on the unshielded. Blocking them should not take much energy, and more importantly, if Nebulan wants to apply them to everyone she’ll need to break each mind, which is more difficult and takes longer. And I
will also be helping.”

“Right, you were a soldier,” Jaylin remembered she’d mentioned it once. “Guess you have experience with this.”

Abby gave a thin smile. “More recent than you think. I have a…specialized suit of armor. I’m letting you know so you don’t mistake me for an enemy if I have to use it.”

That didn’t especially surprise Jaylin, especially since she’d come from XCOM, who likely had more advanced armor than even ADVENT. “Sounds good.”

“Keep in mind we are assuming the worst-case scenario,” Silvio pointed out. “It’s very possible that Nebulan herself will not be involved and she’ll just send a team of Phantom Division operatives, if she attacks at all.”

“Exactly,” Abby confirmed. “Prepare as if we know she’s going to attack, but don’t be surprised if nothing happens. That’s a major part of what we’re trying to find out – who knows what. We’re going to learn something important from this, and attack or no, we will have a much more concrete plan moving forward.”

She straightened. “Everyone get some rest. Tomorrow is going to be a stressful day. Dismissed.”

***

Borelian Wastes – Vitakar

2/7/2017 – 5:16 P.M.

The good news was that Miridian was taking an interest in him.

The bad news was that Miridian was taking an interest in him.

What Nartha had deliberately tried to avoid thinking of, despite the necessity of it, was that the vast majority of Nulorian were terrorists that almost everyone would universally agree would be better off dead. It was one thing to target the Zararch, or the military; that Nartha could understand easily enough, and it was justifiable from a certain point of view.

But the Nulorian were considered terrorists for very good reason. Nothing was off-limits for them. Civilians were the most common, sabotage was another common tactic, poisoning, assassination, and worse. They also had a very barbaric tactic of capturing low-level government officials or soldiers and torturing them to death and sending them in untraceable messages. Not to the public, that was always blocked, but it did have the effect of making any Zararch who reviewed it uneasy, especially since much of the videos were scripted to provoke and enrage the Zararch agents they knew were watching it.

And these were still the best people to take down the Collective on Vitakar. Dealing with the monsters in the Nulorian was going to be an entirely separate problem, and he didn’t know how willing Miridian would be to any kind of concessions. Probably none, judging from who he’d sent to meet him.

“Cold?” The Dath’Haram asked him, a low droll voice which was misleadingly conversational. It was just on the edge of continuously amused, and more upbeat than the situation demanded.

“No,” Nartha stated in response. “I dressed well enough.”
The Dath’Haram simply showed his teeth in an approximation of a smile, as the snow flurried and dusted them in the fine white powder. “Zararch agents are always prepared, or so they think. I sincerely hope your friends also thought ahead. If they show up.”

Being in the presence of Nul’sorras’haramoalian was one of the most uncomfortable experiences he’d ever had in his life. The Dath’Haram moved like water, had a voice that would put most at ease, and was half a head shorter than himself. A very unthreatening individual, had Nartha not known he was also one of most infamous terrorists in the entirety of Vitakara history.

He was one of the Nulorian who was known throughout the Zararch – and openly accepted it. The debates had raged on if Sorras was actually insane, or if there was a much greater meaning or message to his attacks. He’d exclusively attacked the Dath’Haram his entire life, killing men, women, and children without mercy. Schools were rigged and bombed, families were slain in the middle of the night, and even Bladedancers had been executed by him.

Nartha had not failed to recognize the golden-trimmed hilt of a Bladedancer sword. No Bladedancer would ever part with it willingly; they would rather die first. Which meant Sorras had killed a Bladedancer, though by what means were up to debate. Although, when was he ever going to have the opportunity to interview the most infamous known terrorist in the Nulorian?

“That blade,” he indicated the sword. “How did you kill him?”

In a one-second flourish the sword was in the hand as Sorras looked at it with pride. “Ah, you’ll have to be more specific, Zararch. I’ve killed three of those Bladedancers, and each one in…different ways.” He fixed his glistening eyes on Nartha. “I presume you want to know if I beat one in combat, or if I used less savory means.”

“I’ve been curious,” Nartha said slowly. “You have quite a reputation.”

“One I’ve done my best to maintain,” he said smugly, letting the blade tip sink a hair into the snow. “The first one I killed in combat, sword-on-sword. They called it an assassination, but it’s in the nature of the Zararch to lie. It was isolated, but there were some witnesses. After I ensured they wouldn’t run off, I fought the Bladedancer.” His tone turned almost longing. “Skilled warriors they are. Ones who won’t answer a threat with pacifism.” He spat the last word. “I eventually won, obviously. Broke his sword and displayed the corpse. I foolishly thought that might get my spineless race to actually do something, but no.”

He paused for a minute, and they both listened to the snow being battered around in the wind.

“I’d proven to myself I could kill a Bladedancer on their own terms,” Sorras finally continued, sheathing the sword slowly. “I had no reason to repeat the process. I slit the throat of another in her sleep and took the blade I’d rightfully earned the first time. The third stepped onto a mine I’d laid. I suppose it just proves that if not in a duel, Bladedancers are not hard to kill. That’s the truth, Zararch. I presume I’ve answered your question.”

“Completely,” he said neutrally.

“Mhmm,” he hummed knowingly. “You don’t like me, do you?”

Nartha figured Sorras would understand honesty. “If I didn’t need you, I would kill you.”

The Dath’Haram simply nodded. “I don’t expect you to like me, or understand. But I think you will eventually. You impress me, Zararch, regardless of your personal feelings. Any of our kind who can break the conditioning we grow up in, especially in the Zararch…that is commendable. It is no
surprise Miridian has begun to recognize that you were no mole.”

Nartha grunted. “And what does it take to meet him?”

“Soon,” Sorras promised. “Sooner if you were telling the truth about the Humans who can transverse to our world. I am skeptical, but that is why Miridian sent me. He knows I will tell the truth of what I see.”

Nartha checked the time. “We’re just entering the timeframe for arrival. Knowing XCOM, they will be here soon.”

Sorras just nodded and then sat down cross-legged on the snow as they lapsed into a silence that stretched out over minutes. He barely felt the cold, either because of his clothing or because he had blocked it out of his mind. It was dying down slowly, and the sun was beginning to set. Then there was a sudden blue-green flash and a group of armored soldiers suddenly appeared from nowhere.

Sorras was immediately on his feet, and Nartha already moving to greet the group. XCOM must have upgraded their armor, because the soldiers before him were in suits that were much larger and bulkier than the Aegis-class armor. A very noticeable upgrade, in addition to the plasma weapons they wielded. Although, as he took a closer look, some of the suits were a little slimmer and sleek, and there was Fiona in her stony armor, sword still attached to her back.

“We made it,” she said, motioning the group forward. “Hello Nartha. Hope you weren’t waiting too long.”

“Not too long,” he answered. “Glad you made it.”

“So,” the armored form of Shun said, looking around. “This is Vitakar?”

He smiled. “Yes, though not one of its most scenic locations.”

“Oh, I don’t know,” she said, reaching up to take off her helmet, and shaking her hair free. “I’ve seen worse views.” She stepped forward and pulled him into a quick hug, which almost caught him off guard but he recovered in enough time to embrace her armored form. Not especially comfortable, but he could look past that.

“Greetings, Humans,” Sorras said, stepping forward and giving Nartha a curious look. “It appears the Zararch agent wasn’t making this up. Miridian will be very interested in this. Who is the leader?”

“Me, right now,” Fiona said. “Fiona Dorren, although when I’m not around, it’s Agent Jarvis.”

“We can make more formal introductions out of the cold,” Sorras answered. “But first I will introduce myself as Sorras, one of Miridian’s best and most trusted operatives, and rather infamous to the Zararch.”

Which was putting it very lightly, but Nartha could correct the record in private. XCOM needed to know that Sorras wasn’t necessarily someone they should treat as a close ally. “Let’s move in,” Nartha said. “We’ve got a lot to talk about.”

***

**Zararch Command, Collective Mars Base – Mars**

1/26/2017 – 12:11 P.M.
For the first time in a long time, Ravarian was pleasantly surprised with something the Ethereals had done. Granted the reforms by the Battlemaster were needed changes on the whole, though he was not especially clear on why he was restricting usage for the captured Humans and taking some kind of internal revenge on the Creator, who he was still not clear on what had happened in her Blacksite.

What was the point of transferring Human captives off-planet and not utilizing them? Was it some bizarre development of a conscience? Was it some kind of justification for transferring to clones? Mildly irritating, but nothing he could do and Quisilia had essentially said to accept it. Well, it wouldn’t stop the Transference project, although given his new directive, perhaps he should hold off inserting the conditioned Humans immediately.

“What changed?” He wasn’t completely expecting an answer, but he did want to know the sudden shift in mindset. Especially from the Imperator.

Quisilia looked up from his phone, Fluffy curled up around his feet. “I suspect you will not like the answer.”

Ravarian narrowed his eyes to slits. “I’ve had to deal with answers I don’t like for some time, I can hear another.”

Quisilia put the phone away. “Our esteemed XCOM guest. She agreed with it.”

The Ethereal was partially right. Part of Ravarian did not like the answer, the other part was surprised she had given one at all. “She agreed?”

“Yes.”

Ravarian waved an arm. “Why?”

“Because Miss Trask is, at her heart, someone who understands the mindset of the Imperator and his goals,” he answered. “Rather remarkable, yes, and I think he’s convincing her that they have very similar goals for her species.”

That was…unlike anything Ravarian had heard. It struck him as profoundly wrong that the Imperator was successfully turning the most powerful Human psion to his side, and if Quisilia was to be believed, without using his own extensive psionic abilities. Words alone. It did not seem natural or right. It was unnerving.

He was no interrogator or negotiator. He was direct, skilled, and intelligent, yes, but his skill was not in convincing individuals to give up their secrets, or necessarily playing a role. He could act, true, but he was not a natural. He could never sway an enemy to his side with words alone. He could make offers, threats, and other kinds of coercion, but oration was simply not something he could master.

But the Imperator could not only turn one to his cause, but a psion and XCOM soldier for good measure. People with that capability unnerved him more than psions, assuming that the Imperator wasn’t using them already.

He pushed that aside, and focused on the part he especially did not like. “Why, exactly, are we basing our operations on the opinions of an XCOM soldier, who I will note, is not actually on our side?”

“Her influence is limited,” Quisilia dismissed. “And I suspect the Imperator would have approved this operation regardless. But having her approve it? It will assist in the Imperator convincing her
to turn. A win for all involved, as far as I am concerned.”

Ravarian sighed. “In which case, we should begin the infection points. If China is a target, we could likely infect anyone in a major city and watch it spread immediately.”

“A possible issue is that it will arise too fast,” Quisilia pointed out, telekinetically raising the cat at his feet into his hand instead of reaching down. “China could quarantine a city immediately.”

“We bypass this by infecting an individual in an airport,” Ravarian clarified, bringing up a holomap of China. “Preferably one with flights to Africa. This will spread the virus internationally. I would prefer to avoid having more than one patient zero, because ADVENT might become immediately suspicious otherwise.”

“You assume they won’t blame this on us?” Quisilia asked dryly.

Ravarian snorted. “Of course they will. But I wish them luck definitively proving it. One patient zero is a fluke. If several pop up at once that is clear evidence of some kind of targeted distribution. And smallpox is something which could theoretically arise naturally, as Humans stopped vaccinations for it years ago.”

“I presume those vaccinations are still useful?” Quisilia inquired.

“Sectoid estimations believe they will be,” he nodded, remembering the report. “But they will only be useful in preventing a spread. It is not a cure, and their stockpiles of the vaccines are low. It will take time for the world to adjust. I suspect ADVENT and parts of Africa will be able to mobilize fast enough. China should be devastated, which weakens the country severely. All according to plan.”

“And we have the cure to give to Betos,” Quisilia finished with a satisfied breath. “I suspect ADVENT will wonder how she developed this, but they’ll be too busy with the outbreak to fully pay attention to her or the SAS.”

Ravarian frowned. “I would attempt to keep this quiet as much as possible. That might be what pushes ADVENT to attack her, and right now, it is too early.”

“True,” Quisilia agreed. “And can it spread to Collective species?”

“No.” Ravarian shook his head. “The virus appears to not affect alien life whatsoever. Not unless there is a concentrated effort, all Collective species are immune to the disease. Our own forces will be safe.”

“We will want to time the virus to launch with an attack,” Quisilia mused. “In the meantime, we should begin the creation of a plausible patient zero. Nebulan could perhaps assist in acquiring us a useful subject. Perhaps someone recently from a remote location; South America or Africa, where he was exposed to smallpox and unknowingly brought it back. Yes, this could work.”

“I’ll leave that to you,” Ravarian nodded. “I also think that Nartha should be terminated soon. We have acquired useful information from him, and I do not want a double agent running around the Collective, especially now.”

“I haven’t checked up on him in some time,” Quisilia noted. “I’ll do a final extraction, bring back what I learn, and we can determine the best method to remove him. Though I will confess he is not a recent priority. One double agent cannot do anything when cut off from Earth, and rebellion within the Collective is completely out of the question. Any plans he can conceive of can only be executed after years. Hardly an immediate or pressing concern.”
“Agreed,” Ravarian said. “But my point stands.”

“We will deal with Nartha after China,” Quisilia said. “Until then, keep him confined to a place where he has limited influence. Vitakar is good. He will only have the Nulorian for company and not a group which is actually dangerous.”

“I’ve done that already,” Ravarian answered with a nod. “He won’t be a problem.”

Isolated Location – Argentina

2/4/2017 – 8:18 A.M.

One day.

Volk sipped from his cup of water as he listened to the ambient silence of his room. Elena was still sleeping, and wouldn’t wake up for a few minutes yet. He’d forgotten how nice it was to have a modern and clean room to live in. Normally he and his crew lived in conditions much worse than this. Granted, if the aliens hadn’t known how to construct an entire facility in a remote location over a short period of time, he would have wondered as to how advanced they really were.

But they had come through, and now everyone was happy.

Now came the first part of what Volk was considering to be a long, drawn out campaign. The assassination of an XCOM Intelligence agent would draw attention, as well as the attack of an ADVENT convoy. No matter how it turned out, the heat was going to be turned on them, and he was curious both how ADVENT and XCOM would respond, but also Asaru and the Phantom Division.

He heard the bed rustling and glanced over to see Elena on cue sitting up and moving to get dressed; no sign of morning fatigue as usual. “Morning Elena,” he called. “Sleep good?” No response, which meant that she had. If she hadn’t, she would have woken him up in the middle of the night. But he still considered it polite to ask, and he knew some part of her appreciated it.

As she changed, he pondered what he would do if he had a clear shot at Abigail. Asaru wanted her alive, but he wasn’t sure that it would be safe to risk capturing her. By all accounts she was a dangerous operative, and one underestimated XCOM at their own peril. If it came down to it, he would kill her if he had the chance.

Well…not quite. Wound her first. If things were heated or going south, he could kill her.

Elena walked out of the bathroom and straight for the griddle as she had every morning since they had actually set up stoves and brought in ingredients. She was already dressed for a mission, minus the mask and hood down. He gave a short cough as she walked past him. “Elena?” She paused, and looked to him. He pointed at the plate opposite his. “I made you breakfast already.”

She didn’t immediately ignore him, which was a…good sign, and slowly walked over to the table and looked down at the plate of pancakes. Stacked three pancakes high, each layer buttered, and topped with an extremely generous helping of powdered sugar, they were to Volk, perhaps the unhealthiest iteration of a classic breakfast he had ever seen. But Elena loved them for god knew what reason and would never eat any other kind of pancakes.

He held in a sigh of relief as she sat down, looked over the meal closely, shot him a suspicious glance, peaking under one of the layers to make sure he hadn’t put syrup under it (a previous
attempt he regretted after Elena had dumped out all of syrup in retaliation), and satisfied, began eating it. Well, it was better than her throwing it away and making it again the exact same way.

Stickler for details, she was. But part of her lovable charm. Even if he screwed up on something like pancakes, she’d let him know it just wasn’t acceptable.

He let her eat in silence for a few minutes, letting his mind wander back to the upcoming operation. They knew that the entourage was going to have support. He was expecting at least some ADVENT special forces, they had to anticipate there might be an attack, but perhaps they’d bypass it with just standard soldiers because of a numerical advantage?

Possible. It was unlikely all of the estimated dozen soldiers would be Lancers or Dragoons. Then again, it wasn’t known just how much ADVENT knew about the situation. This could be them testing the waters, or it could be they were laying a trap of their own. Two sides of intelligent enemies playing mind games. He was honestly very curious to see how this would play out.

Elena stopped eating, her eyes focusing on him. “This is good,” she said quietly. “Thank you.”

An ecstatic Yes! went through his head and he smiled. “Knew I’d get it right some day.”

“Mmm,” she hummed, and ate some more. “I will not die tomorrow.”

He blinked. “What?”

“Tomorrow,” she said, continuing to eat. “I will not die. You do not need to worry.”

Oh, he saw where she was going with this. Stupid of him to think she wouldn’t notice the timing of him making something innocent like breakfast and the potentially lethal mission the next day. “Call it an unfounded concern,” he shrugged, leaning back in his chair. “I don’t want to have any regrets.”

“We are prepared; we possess numerical, tactical, and psionic superiority,” she listed off. “ADVENT psionic assets have been identified. XCOM Agent has been identified. Route is known and planned. We possess advantage in combat; snipers will engage at long range. Safety in distance.”

“Like I said,” he repeated. “Unfounded concern. But…I don’t know what to expect. This will be different than the first time.”

She had finished the pancakes, and was swirling the fork around the loose powdered sugar and getting what she could from it. “ADVENT soldiers most effective when prepared and engaging in medium-range environments. Psions occupied by Asaru. Phantom Division possess technical edge over ADVENT. Isolated location prevents immediate reinforcement.”

“Alright, alright,” he held up a hand in mock surrender. “You made your point. Still won’t feel better until it’s done and we’re both back here.”

“Yes, we will both come back here,” she pushed the plate forward slightly and tapped it with her fork. “You will make this again for me. More sugar next time.”

He gave a mock sigh. “Understood Elena.” She gave a rare smile in return, though only for a moment. “Come on,” he stood. “Let’s make sure everything is ready.”

***
It was indeed a whole new world which had opened up to him. It was almost difficult to believe that just over a week ago he’d been stuck on Earth and resorting to forcing a woman at gunpoint to awaken the power within him. But he had succeeded, and now he resided in what he was quickly finding to be the most fascinating place in the galaxy.

Ironically enough it wasn’t a planet, or even the Temple Ship itself, although that came with its own kind of wonder, but the Library, one run by the Ethereal Cogitian. Ivan was personally shocked that so few people were bothering to explore this vast wealth of knowledge within this room. It wasn’t just digital copies of books either, but physical records, artifacts, and other things which he couldn’t even begin to recognize.

Adding to the mystique was that fact that, sadly, the vast majority of records were in Ethereal Script and not English. Which wasn’t unexpected; had the Ethereals had their records in English it would have raised a substantial amount of questions. The CODEX System was going through and slowly translating things into all known alien languages, not just English. But he wanted to learn the language himself, and in the meantime Cogitian had helpfully gone to the trouble of translating a few general documents he felt would be interesting.

And they most certainly were. While he was certainly no historian, nor had previously had much interest in Human history, there was something that drew him to the various alien species, and the old Ethereal Empire in particular. Perhaps it was the alien factor, perhaps it was because he was one of the first Humans to know of it, or perhaps it just drew his attention.

In any case, it was fascinating to see a radically different culture develop and grow, until it ultimately collapsed around them. History seemed to repeat itself well beyond Earth. No matter the power one faction had, eventually it would collapse for one reason or another, even if it was one hundred years old or one thousand. It wouldn’t necessarily die forever, but it would be changed.

The Ethereal Collective was the change of the Empire. Time would tell if the Imperator learned from the mistakes of the past.

He suddenly felt something in his head, which meant that there was someone else that had just come into a room. He was still getting used to that. Telepathy was still a new and odd sensation, and at some times threatened to become information overload as his brain unconsciously picked up every thought, emotion, and fired neuron in whoever he had interacted with, presuming they hadn’t protected himself.

The Overmind had taught him a way to suppress it without it being too overwhelming, but spikes would still happen whenever someone new came by, and he wasn’t expecting it. In fact, one reason he enjoyed the library was because very few people did come by. Still, he wanted to know who it was who came by. They’d likely been here longer than him, and he knew there were at least a few more Humans around. He might as well meet them-

His eyes widened as he caught sight of who it was. Impossible, this must have been some kind of telepathic trick. Ivan carefully set down the Ethereal tablet, shook his head, and looked again. Nope, it was still the same person. Leaning back in his chair, he wondered if it was a clone or some strange lookalike.

Because why the fuck would Patricia Trask be here?
If it wasn’t her, then she must have had a twin. He’d seen her several times on the television, and the media had liked to use her as one of the poster girls for XCOM and the war against the Collective. Yeah, he definitely knew her face, even if she was out of her armor and wearing some silvery outfit.

Didn’t look bad on her though.

The chestnut-haired woman suddenly perked up, then looked over to him and Ivan felt the presence of another telepath probing his outer defenses – which unfortunately were not exactly that great. *This isn’t good at all.*

And there she was, walking over to him. She stopped a few feet away, and leaned on one of the display cases, looking at him with her piercing eyes. No question that it was her. “Do I know you?”

Ivan snorted. “Unlikely. But you might be surprised how many people know about you, Patricia Trask.”

Her lips curled into a humorless smile. “So I see. And I suppose you didn’t expect me to be here.” How she ended that statement made it very clear it wasn’t a question. One she’d probably heard before.

“Can you blame me?” He asked. “Aside from the Commander of XCOM, you’re the last person I’d expect here unless as a prisoner.” He paused. “Or are you?”

“No,” she answered neutrally. “I’m free to leave whenever I want.”

There was a short awkward silence. He coughed. “If you don’t mind my asking…”

“Because I can’t yet,” she said, looking away. “I’ve…learned things here. Things which are… important. I have to make my next decisions very carefully. No, I can’t tell you why.”

That had…not been the answer he had been expecting. Although he wasn’t sure any answer would adequately explain her situation. But she didn’t necessarily appear to be completely on the Collective’s side, which was also an interesting development. “You’re new here,” she said after a moment. “We haven’t met.”

“Ivan Smirnov,” he inclined his head. “Formerly defense attorney, formerly unemployed, now training under the Overmind as a psion.”

“The Overmind?” She cocked her head. “Interesting that he’s found his own trainee. Seems a lot of Ethereals are getting them.”

“Including you?” He wondered.

She sat down in a nearby chair, staring off into space. “I’ve wondered. Maybe. Unlike you I didn’t come by choice.” Her lips twitched. “Well, technically I did come by choice, though one where there wasn’t any actual option.”

Kidnapped then. That made a lot more sense than her defecting. Although what was keeping her here was a question he didn’t know an answer to. “Odd that you’re still here, no offense.”

“Trust me,” she said dryly. “I know. Sometimes I don’t know if I have some kind of Stockholm Syndrome where I don’t want to leave, or if the Imperator is really affecting my mind. Just excuses though. I’m not going to blame someone or something else for my own choices, Imperator or not.”
“You’ve spoken with the Imperator?” That was different. Had the Imperator wanted Patricia Trask to be his…what? Apprentice? Trainee? Speaker? Well, whatever he planned, he certainly didn’t aim for the average individual.

“Many times,” she said. “It’s…illuminating. You’ll understand when you meet him.”

“When?” He gave a little laugh. “I’m not expecting to. Not for a while anyway.”

“I think you will,” Patricia said seriously. “He will make a point of it soon.”

“We’ll see,” Ivan said. “What did you come in for, anyway? This isn’t usually a populated place.”

“Research,” she said. “Theoretical psionics. The Empire had a lot of them, even if most never really pursued it further. Maybe there’s something to them. Ethereals can become stagnant over time.”

“Well, good luck,” he said, picking up his tablet. “There’s almost too much for me to find. Not to mention I can’t read half of it.”

“I wouldn’t worry, Ivan,” she said, standing up. “I know exactly what I’m looking for.”

Project Phobos Research Facility – Washington D.C.

1/30/2017 – 3:54 P.M.

The dossier on Kane had not exaggerated just how big the man was. He was actually bigger than Creed, which the Commander found somewhat impressive. He certainly had the physique to be an XCOM soldier, and the skill if his records were anything to go by. The Commander was curious as to how he hadn’t been selected for special forces, though that could be due to his age. At only twenty-three and with unresolved anger management issues, perhaps he’d been deemed too much of a risk.

“I expect the Ethereal told you about me,” Kane said. “Did he have anything interesting to share?”

Interesting to share? That was...one way to put it. “Aegis has never encountered anyone quite like you,” the Commander answered carefully, wanting to only share as much as necessary at the moment. “Your experience and recovery was not something he considered to be possible, and your reaction to psionics is also...unique.”

Which was leaving out how it was the first time the Commander had heard Aegis sound uneasy. He had said that Kane had the mind of an unsound man, yet who still retained himself. A man who lived in constant mental fury and torment. Aegis had advised “caution” when deciding what to do with him. Something that the Commander planned to take into account.

Kane grunted and replied coldly, though with the slightest hint of amusement “I don’t blame him for thinking that, no one should have been able to survive that with their mind intact. Who knows, perhaps I didn’t.” Kane paused for a moment, appearing as though he was looking through the Commander, through the world around them, his mind elsewhere. “Tell me Commander, do you believe in Hell?”

The Commander had an inkling of where he might be going with this. The dossier had mentioned that Kane had been raised in a religious family. Based on how Isomnum operated, it was quite possible this was related to what he had experienced. He fixed the man with a firm gaze. “No. Not
in the context of religion.” He allowed a brief pause. “Sometimes I wish I did, but I cannot say I do believe in such. I am not exactly what you would call a...religious individual.”

“I see; understandable, neither did I, not really anyway. While my parents believed; still believe,” he corrected quickly. “I began to doubt. As a child I was frightened, that’s what the point of it was, to scare me, to make me obey. But as I grew older I put it behind me. At least I thought I did. Then he showed up…that’s when I learned the truth. Hell is real, but it isn’t something so simple as a physical place, no, it’s a state of mind.”

“When you say he,” the Commander interrupted, wanting to confirm his suspicion. “You mean Isomnum?”

“Yes, Isomnum, the Dread Lord as he calls himself.” He gave a short, bitter laugh, his eyes still unfocused and looking elsewhere as he responded. “The doctors said I was only out for a few weeks. If only. No, for me I was there years, decades maybe, in a hell of his and, as I know now, my imagining.”

There was a momentary silence, before Kane leaned forward, his voice dripping with intensity. “You see, that’s what they get wrong. We create our own hell, Commander; in our minds, in the shadows we dare not tread, we build it brick by brick with every thought we push away, every forgotten trauma, every hidden fear, it all goes there. And when he appeared, when the world went dark, it was waiting for me.” He stated, finally meeting the Commander’s gaze.

The Commander shifted in his seat, eyeing the man with a cautious curiosity. If nothing else, this was perhaps the most accurate insight into the effect Isomnum caused in his victims. They knew how the Ethereal used his powers, but every time the victims were too far gone to acquire an understanding of what they endured.

Until now.

“But you still managed to beat it,” he said to Kane. The exact details of what he had endured were personal, and the Commander didn’t have a desire to pry, but the process by which he overcame them? That he wanted to know. “How?”

Kane was silent, his face impassive, his mind once more seemingly in a far off place. “It’s...hard to explain in words. I don’t know if anyone who hasn’t been there can truly understand. “

“Try,” the Commander asked.

Kane thought hard for some time before slowly, haltingly, he posed a question. “Tell me, what do pain and fear mean for you?”

The Commander frowned. “Elaborate. In what context do you mean? What I’ve personally experienced, or the words themselves?”

“For humans, or life in general, what is the point of it? Have you ever asked yourself that? Why we feel them at all?”

In truth he really hadn’t. He’d accepted those as realities of life long ago, and didn’t see much of a point in asking questions he knew couldn’t be answered. “Not especially. Pain serves as a warning to us, fear as well. Information we can use to either help inform our choices...or let it dominate us. Those are just parts of life. Does there need to be a deeper reason to exist beyond biology and evolution?”

“No, that’s enough for the moment. I’m not the smartest guy around, but from my experience I
came to a similar conclusion as you did. They taught us how to deal with fear and pain in boot camp, tried to anyway, the rest we learned in the field. I get the feeling you were military before all this, or at least received combat training. Not sure what branch but you’ve obviously seen action, so you probably know what I’m talking about. Pain is the body warning us of danger, telling us something is harmful, it hurts so we don’t put ourselves in danger again, ideally at least. The same is true for fear, but with the mind.”

Kane looked at his hand and spoke. “If you touch a hot stove it burns, that makes you pull your hand away. Then you fear that, you avoid making the same mistake in the future, that way you stay alive and healthy. It’s all to keep us alive. But what if you are in pain, what if you’re afraid, but can’t do anything about it?”

He looked back at the commander and with just a hint of anger in his voice continued. “What if you can’t escape the pain? What if you can’t escape death? What if you can’t do anything? You can’t run, you can’t hide, you try fighting but it just results in more pain, even worse sometimes, and then you go through it all over again, because death isn’t the end anymore. Instead of freeing you it just starts the next nightmare. It’s all pointless, all the fear, all the pain, you can’t stop it or do anything about it.”

With his anger growing more and more apparent Kane went on. “What purpose do they serve then?”

The Commander gave a single nod. “In that context, nothing.”

“Exactly!” He slammed a fist onto the table. “Nothing! Not a damn thing! In that moment it only exists to torment you, as a tool make you suffer! And at my lowest point, when my mind was in tatters, my body mangled beyond recognition and experiencing things no human could possibly survive, it all became clear.”

Kane’s anger subsided for the moment but he resumed speaking shortly. “It didn’t mean anything. Pain, fear, death, nothing at all. It certainly wasn’t changing anything about my situation, and just like that suddenly things...changed. Like a fog was lifted from my mind and everything was clear. In that moment I remembered why I was suffering. Who did this to me, and just like that I knew what it was I had to do. I felt angry, furious, like you wouldn’t believe, fear was gone and pain seemed far away, still there but also somehow not.”

Clenching his fists hard enough to turn his knuckles white as he looked down at them, Kane’s eyes were now hidden in shadow beneath his brows. “So I attacked. Or tried to at least, I think my guts were spread all around a room at the time, each being tortured by a different being. Demons, aliens, both? Hard to say. I died, again, but when I woke back up I didn’t run, I fought.”

“From that moment on I never again cowered, never again ran, if they came for me I would fight back, if they broke my arms I would kick them, if they cut off my legs I would bite them, if they broke my teeth I would bash my head against them over and over, so long as it was possible to fight back I would, and when I died I’d do it all over again.” A bloodthirsty grin ripped across Kane’s face as he recalled what he went through.

“At first I failed, over and over and over again.” He said, waving his hand now in small circles. “But eventually I started to win, it was slow going but I managed to kill some of my tormentors, not Isomnum, or the other two, not yet, but the lesser manifestations? His minions? The lowly servants? I could kill them just fine. Then I kept going, and when something died, it didn’t come back again, but I did.”

The Commander cocked his head, noticing something that hadn’t been mentioned before. “The
other two?”

“His overseers, those second only to him, the two he came to save back in D.C., the Battlemaster and the Warlock. In my nightmares they served him, reported directly to him, protected him and carried out his will. It wasn’t always one of them or Isomnum torturing me, hunting me, but I always knew they were out there somewhere, always knew they were responsible. Somehow.”

Hm. It might be a problem if Kane put the Battlemaster on the same level as Isomnum. Especially around Aegis. That would be something to watch for, though the Commander didn’t know if that outlook towards him or the Warlock could be changed based on what he had been through. “And you eventually killed all of them,” the Commander finished. “That was the solution. Once that was done...you woke up.”

“Yes, the very thing meant to prolong my suffering was the key to my victory, because I never truly died. I could continue to throw myself at them as many times as it took, and it took a lot of tries, for all of them. First the Warlock, then the Battlemaster, and finally Isomnum. As I beat him into a bluish pulp with his own limbs and at last crushed his skull I woke up, and found myself in what looked like a hospital bed, tied down and stuck full of tubes.”

At last leaning back in his chair and seeming to relax Kane finished his tale. “At first I thought it was a trick, another nightmare. They had to sedate me several times before I figured something was different and actually tried listening to them. I was free, I hadn’t escaped Hell, I’d conquered it, all my fears, all the pain, everything, it was over. I killed it all. Unfortunately this also meant I’d failed.”

His story was certainly one of the more interesting ones the Commander had heard. He was impressed that throughout all of that, Kane had managed to retain his sanity. At least enough to hold a calm conversation. Perhaps he still wasn’t quite right mentally, only a telepath would know, and all he could sense from Kane at the moment was an intense resolve. But he seemed, at the moment, to be stable enough.

“Thank you for telling me that,” the Commander said. “I’m not sure even I would have been able to overcome a similar situation, nor would anyone else. You did though. But you want to join XCOM now, not return to ADVENT or keep assisting in the Phobos project.”

The Commander rested a forearm on the table, maintaining eye contact. “You could likely join the Lancers with your skills if you feel you’ve done all you can for Phobos. But you specifically want XCOM. Why?” He did know the answer Kane had given to Saudia, but was curious if he would elaborate on it more.

“Like I said, I failed. They’re still alive!” He growled, his hands gripping the table so hard they looked about to bleed. “What happened to me isn’t unique, I’m just the only one to come back on my own, and while I’ve done as much as I could to save the other victims not all of them made it. They weren’t the first casualties of this war, not his first victims, and they won’t be the last. It won’t end, not until those responsible pay.”

He was getting angry again, and breathing heavily. “They must die. Isomnum, the Warlock, even the Battlemaster, them and the rest of the Collective, only then can there be peace for us. So long as that monster, no, that creature lives no one is safe. That is why I am asking you to let me join XCOM, the Lancers are good, damn good, but they don’t fight Ethereals; they can’t handle them, but I can, and XCOM does fight Ethereals. More importantly, you kill them.”

Sitting up straight and after a few moments once more seemingly calm, he looked straight at the Commander, his eyes hard and his face set. “That is why I want to join you. They took everything
from me, they have innocent blood on their hands and until they are defeated this war will never end. Let me help you Commander, let me have my vengeance. It’s all that is left for me. You’ve read the reports, I’m immune to telepathy, or damn close to it. Isomnum has no hold over me anymore, and he never will. I have a better chance of running into Isomnum or the others with you than with anyone else and if you let me I will end them.”

“I’ve done all I can here, they have everything they need from me and at this point I’m little more than a third wheel. There’s no one else from the attack that can be saved either. This is the last thing left to do. Maybe if I kill them for real the last few soldiers will wake up, but I doubt it. At the very least the ones who didn’t make it might rest easier, and no one else will ever need to fear the Dread Lord again.”

He had the right mindset for fighting an Ethereal, the Commander couldn’t disagree on that front. But XCOM wasn’t composed of one man armies, and the soldiers within it needed to be reliable. On that front, he was unsure how well Kane fit, if he did at all. “You’ve made your case for why you want to join. I can’t disagree with it. What I need to know is how reliable you will be.”

“I don’t have a use for lone wolves and one-man armies,” the Commander said, lacing his fingers together. “I give my soldiers freedom in how to carry out my orders. But I expect that these orders are followed, as well as those of my Squad Overseers. Joining XCOM, there is a chance that you will not fight Ethereals. If you saw Isomnum, and you received a direct order not to engage, what would you do?”

Kane frowned and looked down at the Table between them as he considered his response. “I can’t think of any reason to spare that filth so I’m going to assume what you really want to know is if I will follow orders or act on my own, am I correct?”

“Correct.”

Looking up from the table to meet the Commander’s gaze Kane answered. “Before my...encounter with Isomnum I was a soldier, had been for years. I was trained to follow orders, it was drilled into me, because when soldiers act alone or disobey there are consequences. For them, for the mission and for the men fighting beside them.”

“Joining XCOM would mean I report to you, and if I got sent to the field I would report to the Overseers. If I went rogue I’d become a liability, that’s what your worried about. The truth is I’m not entirely sure what I would do, I have no desire to endanger my allies or the mission, while my immediate goal is vengeance against those three I am fully committed to victory in this conflict.”

Kane let out a rare sigh in frustration, the gears in his mind furiously turning. “If disobeying you or the Overseer meant putting others needlessly at risk, or posed a threat to the mission or even the war...I would like to think I could put my own goals aside. I would like to, but if you put me in a room with him right now and told me not to hurt him I do not know what I would do.”

The Commander was not completely surprised to hear that. An honest assessment of what he might or might not do was a point in his favor. It was far better than lying to himself, and if Kane had said the opposite of what he had just stated, he would be suspicious. “I see, and had suspected as much. I can’t have someone who would put his own priorities before the mission, no matter how much they were justified.”

He leaned back in his chair. “That being said, I think there may be a workaround for your own situation. If you come to XCOM, we can make you tougher and stronger than you were before. But you would also receive the Manchurian Restraints to prevent you from endangering a mission or soldiers. It would not be as restrictive as our psions, but considering your unique circumstances, I
feel it is warranted. I do think you would be an asset in XCOM, Kane, but only if I know you are reliable.”

Kane grimaced as he considered the offer. “You’re asking a lot of me, I’d be trusting you with my own mind, I just escaped from one mental prison and now I find I may need to submit to another. All for the chance to kill those bastards, unless you decide I can’t.”

“Yes,” the Commander said. “To protect XCOM and others in case you are not yourself. And if it makes you feel better, I do this to everyone who might pose a risk. Granted, not for the same reasons as yourself, but my psions, own Internal Council, and even myself are under the Restraints. Not common knowledge, but I don’t make exceptions for anyone, myself included.”

He was clearly debating things internally, weighing his options and trying to decide what to do. After minutes of silence, punctuated by occasional grumbling and muttering before he seemed to come to a decision. “And if I agree to this...you will let me fight for you? Give me the chance to end those scum?”

“Yes,” the Commander answered. “I will.”

Another pause occurred before Kane set his expression and looked the Commander in the eyes. “I do this for you then I need to know you’re serious. One thing I will never do, Manchurian restraints be damned, is surrender or allow these bastards, this “Collective” to win. Are we on the same page here? I want them crushed and this Imperator of theirs punished! Along with everyone else who was behind this war. I will give up everything, suffer anything, for this. Are you prepared to do the same?”

“I can promise this much,” the Commander said slowly. “We will defeat the Collective and kill the Imperator, or die trying. There is no other acceptable outcome.”

“Then I agree to your conditions, when can I start?”

“Immediately,” the Commander said, standing up. “I’ve ensured that you can return to the Praesidium on the Skyranger with me without delay.” He extended a hand. “Once we arrive, R&D will figure out how to begin applying the Restraints and gene mods. Welcome to XCOM.”

Kane shook the proffered hand firmly and gave a single, resolute nod in response, before turning away to gather what little he had in his quarters. Then paused briefly and asked. “One last thing, you have information about them right? On Isomnum and the rest, along with everyone else in the Collective that matters, including combat footage?”

“Yes, we do,” the Commander confirmed. “Some of it is classified, but combat footage, information, and basic dossiers on the Ethereals and aliens is available to everyone. If you want to research yourself, it will be open to you.”

“Yes, that should be enough, thank you sir.”

“Excellent,” the Commander said, and after a few minutes allowing Kane to gather his few belongings, walked out of the room, with the newly christened XCOM soldier close behind him.

**Borelian Wastes – Vitakar**

2/8/2017 – 7:11 A.M.
The outpost was quiet for the moment, with the other XCOM agents sleeping and their armor and weapons stored safely away. Having now gotten a closer look at the Titan and Warden armor as it was called, Nartha was almost jealous that he didn’t have a suit of his own. Although fortunately they had packed equipment for more clandestine operations.

Though if Sorras had anything to say about it, the strikes would soon be very loud.

For now though, Nartha and Shun were largely alone in the quiet morning, this being the first time they’d had to talk without anyone else around. Shun wasn’t in her armor any longer, though it was cold outside and even chilly in the outpost, so she was somewhat bundled up in socks, pants and a sweater.

To help wake and warm her up, he’d made her a classic Zararch Morning Stimulant.

Judging from her expression, she did not like it. “You don’t like sweeteners do you?”

“Doesn’t need any,” he took a drink of his own stimulant. “Anything else would dilute the purity of the mixture. Wakes you right up.”

Shun set her cup down. “Oh, I definitely believe that. Once I tasted it I definitely woke up.”

“Ha ha,” he said, wishing rolling his eyes would be even seen by Humans. “I’ve taken this for years. Morning Stimulants work, trust me.”

“And why is it called a ‘Morning Stimulant’?” She lifted a hand, making air quotes. “You couldn’t even come up with a name for it?”

“I hardly think your species is in a better position,” Nartha pointed out smugly. “You just call yours ‘coffee’ which I will note is just the name of the plant.” He smirked. “‘You couldn’t even come up with a unique name for it?’”

Shun just looked at him, and without breaking eye contact, downed the rest of the Morning Stimulant. “Cappuccino, latte, mocha, affogoto, espresso; go ahead and tell me we call coffee all the same thing.”

“I don’t understand half of what you said,” he answered. “What were those?”

“Kinds of coffee drinks,” she elaborated. “All of which are different, I might add. And on Earth, we refer to ‘coffee’ in the generalized sense. I guarantee if your species was in charge of naming coffee, it would be ‘coffee type 1’ and ‘coffee type 2’ and so on.”

He blinked. “What’s wrong with that?”

She seemed to find that very funny. Shaking her head, she answered. “Technically nothing, I guess. But it’s not exactly creative, is it? Not very unique or memorable.”

“Yes…” he was not sure he wanted to engage in this topic. “I believe that we have a different standard of naming conventions. At least you will never be confused if you see something labeled by my species. I would never have known what a capochi-capacina-“

“Cappuccino,” she supplied.

“Yes, that,” he accepted. “I would not have known what that is if you didn’t explain it. How do you know so much about coffee anyway?”
“Half that stuff even non-coffee drinkers know,” she snorted. “And I had a friend who was a big coffee drinker. Always kept wanting me to try new stuff. I spent way too much money at Starbucks,” at Nartha’s confused look, she added: “Coffee place. Very popular, even in China.”

“Ah,” he nodded. “I wished I had spent some time in Human restaurants. If only to compare the difference.”

“Oh, how are Vitakara ones?” She asked, resting her forearms on the table.

“Very high-quality and formal,” Nartha explained. “People only go to them for special occasions. Birthdays, gatherings, birthing announcements, that sort of thing. Likely less than Humans tend to go, if I recall some of your species tendencies.”

“Yeah,” Shun gave a smile. “Humans don’t really need a reason to eat out other than that’s what they feel like. Yeah, it’s for special occasions too, but that isn’t it the majority of the time. Anyway, moving on from food and coffee, I’m wondering something.”

“What?” He asked.

She grew noticeably more serious. “The Commander gave all of us access to documents on the Nulorian. They aren’t exactly…”

“Terrorists,” Nartha supplied. “That’s what we called them in the Zararch, and it hasn’t changed.”

“And Sorras…”

“I know.” Nartha paused for a moment, releasing a sigh. “Not exactly people I’m comfortable enabling, especially now that I’ve begun thinking about it more.”

“Is there no one else?” Shun asked. “You made contact with the Hierarchy, yes?”

“A representative, but the Hierarchy is too embroiled in their own problems to focus on a unified resistance,” Nartha said. “It’s a start, but it will take time for anything to develop. The Nulorian are the best option we have. The best we can do is hopefully keep them in check.”

Shun rested her chin on a fist. “What about the Sar’Manda? No one seems to have looked into them.”

Nartha cracked a smile. “Are you kidding? The Sar’Manda told an entourage of Ethereals to, borrowing a Human expression, ‘go fuck themselves’, metaphorically speaking.”

“Which is good?” She pointed out.

“Not if you know a lot about them,” Nartha explained. “The Sar’Manda do not care about anyone outside the Empire. They could care less who wins this conflict. They could care less if the Aui’Vitakar existed at all. If half the species killed themselves in a war, they wouldn’t think about intervening. Isolationist is being generous, and they only bother to maintain trade and their place on the Aui’Vitakar as a formality, and half the time their members don’t show up for voting.”

“Still,” Shun said. “I think we should at least look into the Sar’Manda. What do we have to lose?”

“We insult the Manda’valrain and he orders our execution, or turns us over to the Zararch,” Nartha answered. “The Sar’Manda despise being told what to do by someone else.”

“Aren’t there Sar’Manda in the Nulorian?” She pointed out.
“Yes, but that doesn’t mean anything,” Nartha reminded her. “One of the first ones I met was an Oyariah. Plus Dath’Haram. It’s not surprising a Sar’Manda would also join at some point. Honestly, Miridian would know more about the susceptibility of the Empire. But don’t get your hopes up for that.”

“I hope Miridian is reasonable,” Shun said, standing to go fill her cup with plain water. “I don’t think the Commander wants terrorists deciding how to run the next Vitakara government. And if AEGIS is going where I think they will, there may be two competing counter-governments.”

Nartha blinked. “What?”

“Oh, right, you wouldn’t have heard,” Shun sat down. “The Vitakara defectors have been working with AEGIS.”

“As in….the Ethereal?”

“The, ahem,” she cleared her throat. “Alien Emissarial and General Integration Service. Diplomatic branch between ADVENT and alien governments or parties.”

“Makes sense,” he nodded. “And they’re…doing what with the Vitakara?”

“Nothing so far,” Shun said. “But Zhang’s said that they’re working on establishing an independent Vitakarian government. Opposing the Aui’Vitakar.”

Nartha whistled. “The Zar’Chon is going to hate that. Although I’ll be honest; ADVENT being involved so closely makes me question its…legitimacy. It is better than the Aui’Vitakar, but I don’t want another puppet government.”

“I don’t think it will be that,” Shun assured him. “The Commander wouldn’t allow for that, and I don’t think Saudia will either. In any event, it hasn’t even been announced yet.” A short banging interrupted them, and Nartha stood and moved to the door where the knock came from. A quick look outside confirmed it was who he hoped it was.

Unlocking the door, Sorras stepped inside. “Good news for you, Zararch,” he bared his teeth. “Miridian wants to speak personally. To you and this XCOM Commander. The teleporter too. Two weeks.” He looked to Shun. “Inform him at your leisure, Human. Miridian is giving you plenty of time to make this work.”

“And what do we do until then?” Nartha asked.

“We are going to plan,” Sorras said, his voice hungry. “For the first time we are in striking distance of the puppets who have enslaved our species. Now we will prepare to burn it all to the ground.” He alternated glances between the two of them. “And this time, we will succeed.”

Palace of the Argentine National Congress, Buenos Aires - Argentina

2/5/2017 – 1:13 P.M.

“I can assure you, representative,” Director-General Nesto Al Sadd said. “Argentina has had no contact with any radical anti-ADVENT terrorists.”

Well, she would know from that question if he was lying or not, assuming the Inquisitors were doing their job. But in the meantime, Abby was content to let Serena do most of the talking. The
Argentinian government had at least sent only high-ranking officials to speak to them, such as the esteemed Director-General of Argentina’s intelligence arm, the Foreign Minister, as well as the Minister of Justice.

*He is telling the truth,* Marco telepathically told her. *At least as far as the question was worded.*

A good start then. At the very least they would be able to get a very clear idea of who, if anyone, was involved with alien infiltration. “Unsurprising,” Serena said seriously, briefly inclining her head. “We had suspected as much, as it would be a curiously risky decision with ADVENT on your border. I am sure you are well aware how seriously we take the alien threat.”

“Abundantly,” Foreign Minister Charro Milani said, still eyeing the trio with guarded suspicion. “We are well aware of how ADVENT treats those who they view as an inconvenience.”

“Threat, Minister Milani,” Serena smiled. “A threat. If it was merely an inconvenience which drove ADVENT policy we would be fighting other countries as much as aliens. We simply do not have time to hunt down everyone who perpetuates lies and propaganda against us.”

The three men clearly did not particularly like her from that, and each of them were no doubt wishing to be anywhere but here. There was a clear power disparity in the furnished room they inhabited. The Palace was extremely luxurious, certainly the nicest place Abby had ever been in. It was probably common for diplomats though, since she imagined they rarely interacted outside these controlled environment.

“Regardless of the word choice, the answer remains the same,” Al Sadd repeated. “We have no contact with the kind of groups you say.”

“How certain of that are you?” Abby interjected, speaking for the first time since the introductions. “We are aware that ADVENT is not looked upon with fondness in this country. Is it possible that officials could be in contact with these groups and hidden it from one or all of you?”

“No,” the Minister of Justice, Timo Herrera shook his head emphatically. “No officer or individual within my department would ever work with a terrorist. We enforce the law as is dictated, we do not support terrorists in any capacity, whether they perform actions we are sympathetic to or not.”

Abby was inclined to believe him. Marco soon confirmed this.

“Director-General?” Serena asked pointedly.

The man was slightly hesitant to answer. “I do not believe so.”

*He does not believe that,* Marco informed. *Press him.*

“You do not believe so?” Serena said. “So you do not know?”

“It is unlikely.”

“That is not a denial,” Silvio noted. “Compared to your colleague, it sounds like it is a possibility, albeit a small one.”

“All I can tell you is that I would be highly surprised and disappointed if any of my people were involved in such activity,” Al Sadd said. “But I operate on the assumption that there is always the chance of something, even if it is unlikely. This is a case where I can safely say that it is *extremely* unlikely, but I cannot discount the possibility entirely.”
The chance is higher than he lets on. I do not think he is involved though; he will likely investigate after this meeting.

In which case it might be time to reinforce this potential suspicion. “There is another possibility, representatives,” Abby said again. “The reason XCOM has taken a direct interest in this matter is because there is a very high likelihood that there are not just aliens behind this terrorist organization, but an Ethereal.”

All three of the men visibly reacted. It was subtle, mostly a few blinks or they stiffened, but it was there. Apparently that possibility had not occurred to them. “An Ethereal?” Herrera said incredulously. “Are you certain?”

Abby reached down to her bag and pulled out a thin file, which had been prepared for this very question. “You tell me. Not just an unknown Ethereal, there is a very specific one we believe is behind this.” She slid the file across slowly to the Director-General. “It is not out of the question that this Ethereal is coopting individuals telepathically within the Argentinian government, and quite possibly without your knowledge.”

“How do you have proof that this is the case?” Milani asked. “Your claim is substantial?”

“That they are doing this to Argentina?” Abby asked. “No. If this is within their capability to do? Absolutely, and the proof comes from one of their own. Aegis, who is familiar with the capabilities of this Ethereal. Using a disenfranchised terrorist organization as a front to expand alien influence in the region would be standard procedure for her.”

They gave the men a short time to read over the short file, which included a description of the first attacks on Peacekeeper bases, a dossier on Nebulan, and finally had a comparison between the attacks and known capabilities of Nebulan. None of them appear to be involved. If collaborators exist, they are low-level or all of them have been affected by her. I do see any indication of tampering. The questioning would have revealed anything strange.

She exchanged a short nod with Serena who’d received the same thing. This was ultimately good news, since alien efforts in the region were not as developed as they had feared. It did raise the question of what the Phantom Division and Nebulan were actually doing, but now that they could largely rule out government influence, at least of any substantial measure, they could perhaps narrow down where they had gone.

“We will need to discuss this matter internally,” Al Sadd finally said. “Psionic influence is something we need to account for to ensure that there are not any attempts to artificially create a conflict between us. We do not want conflict with you, representative, and with this new information we will work to ensure it remains that way.”

Serena nodded. “That is good to hear. ADVENT would, of course, be willing to help determine if any of your people have come under psionic influence.”

“How?” Al Sadd asked slowly. “We will not allow psionic interrogations of our agents.”

“Nothing so drastic as that,” Serena said, pulling out another beige file. “There are much simpler methods.”

Abby knew she wouldn’t have much input once Serena started on this topic, which was fine. They’d learned what they needed to. Now it was a question of what Nebulan would do next.

***
The UFO the Sargon arrived on was larger than Neil had expected. Although from the few reports he’d read, even the small ones seemed to have a large amount of wasted space and standing room. It was as if each one was designed to carry a small army beyond the needed pilots. In fact, even the so-called “Scouts” were large enough to carry a dozen Mutons.

This UFO differed from others in that it had no openings or gaps whatsoever. The multicolored shield that so-often was displayed across the front was replaced with a complex opening mechanism that had a ramp which extended to the concrete. Falia was standing outside with a mixture of Vitakara and Muton soldiers behind her, waiting at attention. The mixture of Humans was just off to the side, shivering in the cold.

Neil disliked being out of his Snowtrooper armor as well as being disarmed, but it was necessary for the ruse. Cycelea was also around him, with the other Inquisitors sprinkled throughout, as well as his other soldiers hiding in the crowd. Neil silently wished the Sargon good luck in managing to circumvent every contingency they had.

Welcome to McMurray, Sargon. Enjoy your last days on Earth.

First came four regular Mutons. Wearing their green helmets, they didn’t seem any different than the standard ones that had been stationed at the base. Same armor, same weapons; plasma weapons, and a couple of grenades. Expected, and the remainder might be Elites, or if they were really unlucky, Vanguards.

And then out stepped something he had never seen before. It appeared to be a soldier constructed out of black metal; standing roughly the size of Human, or a short Vitakarian. The helmet was smooth and eyeless, and the chest had silver markings which culminated into a symbol that looked suspiciously like an Ethereal.

The whirring noises they made as they walked out, as well as the clanking when they moved, indicated that they were machines and not soldiers in armor. They also carried plasma weapons, and nothing else from what Neil could see.

“What is that?” Cycelea said quietly next to him. “It’s definitely not alive.”

“Don’t know,” he whispered quietly without looking to her. “A potential issue.”

Six of the machines came out in total, the final two flanking the Sargon himself. The alien was not quite the size of an Elite, but easily towered over the standard Mutons, made all the more imposing by the green armor he also wore, including a helmet. Hooked to his back was a kind of plasma cannon that looked closer to what Neil had seen on the Mechtoids.

Nothing else came out after them, which was the good news. The bad was that three of the metal soldiers were standing guard on the ship while the remainder of the Mutons and soldiers formed up behind the Sargon as Falia also moved forward to greet them. “Sargon, welcome to Fort McMurray.”

“Overseer Falia,” the Sargon answered in an oddly bland voice. It occurred to Neil he’d never actually heard a Muton speak before. Their voices were low, yes, but there was definitely room for some personality and emotion if they wanted. It was just the Sargon had a decidedly neutral tone. Perhaps that was intentional. “You requested my input on handling an outside threat. I am here to
“I am glad to hear it,” Falia turned and began walking in lockstep with the Sargon. “First we can make an inspection—“

“Unnecessary, one of the Custodians will ensure the base is clear.” At the direct motion from the Sargon, one of the Custodians as they were called, apparently, split off from UFO and throughout the base. “Take me to the site of the attacks.”

This worked out well, fortunately, as now Neil wanted to be as close to the Sargon as possible wherever they went. It appeared he had underestimated the alien to a degree, although he had previously not known about the metal soldiers. Those had to have been a recent development, as someone should have known about them before now.

Falia reacted quickly. “In which case, we’ll need to take Human hostages. These Humans are more wary of attacking if they are with us. We want to take every precaution to avoid an attack today.” On her cue several of the Vitakarian soldiers moved through the crowd and took hostages at ‘random’, which translated to his soldiers, Cycelea, and himself. He put up a faux resistance, though eventually played the role of a defeated citizen.

Eight of them were finally chosen, and brought before the Sargon who looked them over for an uncomfortably long time. He looked into the eyes of each one of them for a minimum of a few seconds before moving to the next one. The last he focused on was Cycelea. He stayed on her for half a minute. “Complexion irregular for this region. State your name and citizenship status.”

The hell? Neil hadn’t thought to think that Cycelea’s skin color would have any kind of impact. Were there secretly alien racists? “My name is Jacklyn,” Cycelea said quietly, putting up a show of her own. “Jacklyn Myers. I’ve lived here for several years, I’m telling the truth.”

“Human complexion does not necessarily indicate living area,” Falia said, trying to shake the sudden suspicion. “She is not the only Human in this area to have similar complexion.”

“Cross-check records,” the Sargon commanded to the Custodian just behind him. “Jacklyn Myers.”

“Accessing Fort McMurray citizenship database,” the flat electronic voice of the Custodian said, with no visual indicator of what was going on. “One entry found. Ethnicity is listed as Caucasian. Discrepancy detected.”

“It must be a mistake!” Cycelea said, Neil got the impression that she wasn’t acting here. “It has to be.”

The Sargon lifted a fist, motioning she needed to be quiet. “Likelihood of Human administrative incompetence high. Update database to accurate data. Continue forward Overseer.”

Never had Neil been so happy for the perceived incompetence of the government. Holding in a sigh of relief, they began exiting the town to follow the typical patrol path. The Sargon asked few questions, and seemed to mostly be observing the countryside and town as they walked through it. It was close to an hour before they reached the beginnings of the forest, where the Sargon saw the efforts of their psychological war on the aliens.

Frozen corpses of Borelian and Vitakarians were thrown out, the former mostly just bones which littered the entire patrol route. One of his soldiers had also had the idea to stick playing cards on the bodies in various places. In the mouth, in chinks in the armor, or in the skin itself once it had been opened with a knife. Neil personally didn’t find it that intimidating, and a waste of good
cards, but if it made the aliens a bit more afraid, he allowed it.

“This is the most common site of attacks,” Falia said, motioning to the foreboding and silent woods, only punctuated by the whistling winds through the trees. “Doesn’t matter how many we send, four, eight, nothing is guaranteed. They leave the bodies as a message.”

The Custodians were moving to the bodies, one of them delicately plucking the Queen of Hearts from the mouth of a frozen Vitakarian. “Human playing card. Significance unknown. Similar cards noticed in nearby bodies.”

“Container found,” another Custodian picked up another gift they had left. Neil kept the smile off his face as the Custodian opened it. “Contents identified as Borelian. Attached note reads “Send more”.”

“They’ve been leaving these,” Falia sighed, stepping towards the Sargon, disgust in her voice. “It has…made some of us uneasy. We had previously not known that Humans eat their enemies.”

The Sargon looked between the contents of the container, the corpses, and the aliens which had accompanied him, then the Human ‘hostages’. Neil did not especially like how hard the Sargon was trying to think about this. This was definitely not a stupid alien. “Human likelihood of eating sentient creatures is low, likely purely psychological warfare. Successful psychological warfare.”

He looked to Falia. “Bodies placed deliberately, includes various attachments and symbols designed to provoke a psychological connection to them and induce fear or uneasiness at their presence. This implies that one or more of these Humans has training in psychological warfare, has training in engaging guerilla conflicts. Likely ADVENT support. ADVENT support implies extensive resources not possible for guerilla locals. Weaponry used to kill forces also insufficient for local hunters or forces.”

The Sargon was not supposed to have figured that out. Even if he was guessing, it was a scarily accurate guess, which meant that it was only a matter of time before he began reaching the logical possibility of psionic support.

Fuck. He might need to signal the attack now. When he’d heard Sargons were smart, he hadn’t expected to be dealing with some kind of organic machine.

“We haven’t found evidence of ADVENT activity,” Falia made an attempt to deflect. Cycelea must have been giving direct instructions. “When they ambushed the first patrol, their weapons were probably taken. Not to mention Humans here are more skilled at survival than most of their kind.”

The Sargon appraised the entire group; his mind impossible to guess under the helmet. “Move the four of them away,” he commanded. Neil found himself being forced slightly closer towards the tree line, and turned around. Three of his other soldiers had also been moved, visibly worried and he couldn’t blame them.

The Custodians had their weapons trained on them. “Do not move,” the Sargon ordered. “Soldiers, move away from them.”

The Vitakara who had held them returned beyond the invisible line in the snow the others were on, and he was suddenly yanked into the air with something wrapping around his arms, legs, and throat. He heard nothing behind him, but instinctively knew what was lifting him up, with only the barest amount of weight being put on his toes preventing him from immediately suffocating.”

“ADVENT support implies psionic support,” the Sargon said. “Possibility of base personnel
compromise is high. I have been keeping reports on this base for weeks, Overseer, well before you sent an official request. I suspect a significant amount of personnel are threatened or compromised by ADVENT forces and they must be purged today. Humans have likely established psionic commands to make attack of allied forces or species impossible. We will determine who is compromised now."

There was no choice now. The attack needed to be signaled. Three of these Custodians and a Sargon, not to mention at least four Seekers. Assuming they were the ones he had previously read about, the Seekers could be disposed of fairly easily, but he had no idea about the Custodians or Sargon.

No one had so far managed to kill one, and if their combat skills were equal to their mental skills… this was not going to go as well as he had hoped. It was already moving onto the worst-case scenario. Send the signal Cycelea, he thought, as he saw the Falia aim her weapon at him. Within seconds the game would be up and all of them would die.

The air seemed to be charged with electricity as Falia shifted her rifle up and shot the Seeker, while the other Vitakara in unison, shot at the other Seekers before turning their weapons on the unprepared Mutons. The remaining four Humans, Cycelea included, dashed to the woods as gauss and plasma fire rained from behind the tree as the Snowtroopers unleashed their arsenals.

Neil yanked the mechanical coils off of him just in time to see the Sargon and Custodians spring into action. The massive Muton grabbed Falia by her head in a surprisingly quick motion, and jabbed an armored thumb into the eye then used that as a grip before he crushed part of her head before tossing the body to the ground; yellow blood staining the snow and his hand.

The Custodians shot at the compromised aliens with merciless precision, killing them in a few shots to the head or neck. Their focus on the aliens allowed the majority of Humans to scamper to the woods for cover, although Neil saw two get mowed down by Custodian fire. The Sargon was reaching for his plasma cannon as the crack of gauss weapons slammed into his armor.

“Pin the Sargon down!” Neil called as one of the Snowtroopers tossed him a rifle. “Everyone else kill the others!”

The Custodians were marching into the woods, unafraid of the barrage of fire, and Neil soon saw why, as the Custodian took several direct hits from a Snowtrooper right before a few plasma shots from its own rifle finished him. The Custodian suddenly froze in place. “Shoot it now!” Cycelea called, a hand extended toward it. “I can’t hold it for long.”

Someone tossed a grenade at it, and Neil emptied an entire clip into the head and chest of the thing, bringing the sparking body to the ground. The Sargon was using his plasma cannon now, and the forest was lit up with the bright green bolts and splintering trees. A crack signaled the fall of several of the smaller ones, ironically creating more cover.

More Snowtroopers fell; two, then three by the remaining Custodian and the plasma barrage of the Sargon. A round slammed into the rifle held by the Custodian, and it exploded in its hand, making it stumble back, but not actually killing it. Neil also saw that it was slowly repairing the wounds it had, but luckily too slow to protect itself against the barrage of gauss fire.

Then only the Sargon was left. The armor had taken a large beating, but he was dedicated in his pursuit to leveling the forest. More Snowtroopers fell or were injured, while Cycelea once more extended a hand, sweat beading her face and locked in intense concentration. “Aim for the head!” Neil yelled, and every single firearm shot where he directed.
The downside of the massive size of the Sargon was that he was a big target that couldn’t hide behind cover they could, and was in perpetual exposure. But now the tide had turned, and not even the armored helmet of the Sargon could protect against the hail of metal.

Neil didn’t know who fired the last shot, but that had been enough to send the massive alien to the ground, shaking it as he hit the thin layer of snow and onto a pile of Vitakara bones and corpses. The snowy battlefield grew silent once again, as all of them stood cautiously.

“Well,” Cycelea finally said, looking at the corpses of Humans and aliens. “That…could have gone better.”

Neil just nodded. “Yes, it could have. But we killed it, at least.” He eyed her closely. “You didn’t tell me you were a telekine.”

She sniffed. “Trust me, I’m not. You just saw the extent of my telekinetic capabilities, and I have a pounding headache because of it. Don’t ask me to do it again, please.”

“Take something to help with it,” he instructed. “We’re not done yet.”

She grimaced. “We still have the other three of those Custodians in the town to deal with.”

“Yes, we do,” he reloaded his weapon. “Everyone that’s still able needs to prepare to move out. We’re on an accelerated timetable now. Our primary objective is complete; now we have to finish the job.”

***

Backroads - Argentina

2/5/2017 – 5:14 P.M.

In a crowded car with other Lancers, Jaylin felt like the talks had gone very well. Abby had said that the government was cleared for now, and were taking steps to ensure that their own agencies weren’t compromised in some way. Good in that they weren’t a potential enemy, and bad in that it meant that they didn’t really know where the Phantom Division was operating from, or what their plans were.

Abby had clearly not let her guard down, as the moment they walked into the car, she rolled around a massive case to a changing area and then emerged wearing a kind of armor she’d never seen before. It almost looked like it was made out of stone, and had an odd symbol on the front of it. It almost resembled XCOM armor in a way, especially the helmet, but she got the distinct feeling it wasn’t something XCOM had made.

She was riding without the helmet now, and Jaylin decided it was probably safe enough to ask some questions. “The armor,” she said, nodding towards it. “XCOM?"

Abby gave a faint smile. “Not exactly. An…appropriation of alien tech.” She tapped the chest. “They won’t be missing it.”

“What’s it made out of?” One of the Lancers asked. “Looks like stone.”

“Don’t know, and don’t remember the designation the science teams gave,” Abby answered, shaking her head. “Doubt its stone. If I recall, it’s a combination of alien alloys and an exotic material not found on Earth. Extremely durable and strong.”
"Huh," another Lancer said. "Shame it's extraterrestrial. Those would make some excellent suits of armor."

"I'd test it out first," another said. "Looks strong, but who knows?"

"This suit can take direct plasma shots," Abby said with a smile. "Trust me, I've used it before."

"So how many aliens have you killed then?" A Lancer asked. "I've only got six so far."

"Every XCOM soldier has kills in the double digits," Abby said. "I'm no exception. More than thirty, I think. Just aliens too."

"Damn," one whistled. "Even your intel agents have higher killcounts than us."

"I'm sort of an exception," Abby clarified. "I was a soldier before I transferred to Intelligence."

"Why make that change?" Jaylin asked, having been curious about that for a while. "Not a common transition."

Abby went silent for a moment. "I took the advice of a friend. I think he'd have approved of my choice."

From her tone, Jaylin suspected that this friend was no longer alive. She figured it was best to not keep pressing forward after that. It was rare in war that soldiers didn't lose at least some of their friends, and Abby was clearly no exception. Jaylin didn't know how much that changed for intelligence agents, but from some things she read it was the same or worse.

A dangerous line of work, intelligence was.

That seemed to have sent the entire convoy truck into some reflective silence. Jaylin herself had had quite the change of career, from Riot Police, to Peacekeeper, to now ADVENT intel attaché. It was an interesting development, and one where she felt she was making some kind of impact, even if it was fairly small.

Definitely more dangerous, especially since an Ethereal was involved, but that was one of the interesting parts of it.

"Convoy one under fire," the driver stated into their ear. "Potential threats spotted on the road. Initiate defensive protocols."

All of them were moving at the words as the convoy slammed to a halt, and the Lancers grabbed their weapons, as did Abby. Jaylin readied her riot shield, remembering the plan. There was an extensive amount of Lancer-tier equipment stored in cases in the back which the Lancers would go to and then use against the enemy. The convoy trucks would be used for cover, and the psions would either protect against psionic attacks, or use their abilities offensively.

"Guess they were watching us," Abby muttered, putting on her helmet. "Let's make them regret it."

Leading the charge she pushed open the door and the Lancers and Jaylin charged out after her into a hail of what looked like white plasma fire and gauss shots from a distance. A quick look around the area confirmed that it was an excellent place for an ambush. The road went through a shallow gorge with forested hills which allowed plenty of sniping range and vision.

The road itself had no cover outside of the convoy trucks, but those would have to suffice. Several
of the Lancers opened up the doors, and slid down additional metal sheets which extended to the ground in order to provide protection to their feet and legs, as they returned fire to the forests and hills while the other Lancers recovered their additional equipment.

“There is definitely a psion with them,” Marco said over the comms. “Me and Protopriest Kil are beginning protection. Until we confirm, do not take what you see as reality.”

The first convoy truck suddenly exploded in a rain of metal and fire, knocking down pretty much everyone nearby and throwing the Lancers to the ground. Someone had to have died there, and Jaylin couldn’t see who. She then remembered that that convoy truck had been the one which held the SHIV, and while she couldn’t completely see through the smoke, she was pretty sure that they were down their one and only SHIV.

Wonderful.

Through the smoke she saw the form of an alien, but this one didn’t fit the formal description of the Phantom Division.

The armor was back and sleek, but unlike the descriptions provided, it had obvious heavy weapon systems incorporated into it. The wrist had several launchers, and there were twin micro-missile launchers on the shoulders. The figure was massive as well, and was manually reloading the launchers. In the distance she saw several black armored forms dashing down the hills – these were the expected soldiers of the Phantom Division. Figures in black armor, no markings or even notable armor segmentation.

What worried her was their known capability to go invisible.

Some of the downed Lancers rose to their feet, to the clear surprise of the alien in the heavy armor. They had definitely not been expecting Lancers then. In torn and damaged armor, the Lancers charged the alien trying to bring him down. The other Lancers had acquired their full weaponry, and were firing back at the aliens with more accurate precision.

“They will try and come from behind!” Abby yelled, firing her plasma weapon into the forest. “Watch for their invisibility!”

Watch for something they couldn’t see? Jaylin figured she just meant for them to be aware that was within their capabilities. But multiple Lancers were watching their backs, ready for any kind of attack. “This is Lancer Valdez to all nearby outposts,” one of the Lancers near Jaylin was saying. “We are under attack and require immediate assistance.”

Several shots rang out, and a Lancer by the third convoy went down. The helmet was shattered, and the head definitely bruised, but the Lancer managed to get back up-

Only to be shot again, and this time he stayed down. It was honestly more than Jaylin had expected. Maybe Lancer-tier helmets could have protected him more, but they were stuck with weaker ADVENT soldier armor. “This is definitely her!” Kil shouted through the comms. Jaylin saw the woman, on one knee and the air shimmering around her. “She’s strong!”

“There they are!” A Lancer shouted as a Phantom Division alien materialized out of thin air holding an impossibly thin blade. It was stabbed into the nearest Lancer who twisted and managed to only have it stuck in his upper left chest and not heart. They did use nanoblades it turned out… and those were strong enough to penetrate Iron Skin.

But the Lancer was not dead, and lashed out with a mace in his hand and slammed it into the head
of the alien, sending it sprawling to the ground, and he leapt on top of it and kept bashing until it was dead and two more of the soldiers had appeared and began firing at him, killing him for good. The other Lancers used the advantage to charge the aliens, some carrying melee weapons while others fired their rifles.

Jaylin turned back to focus on the other front, with more plasma fire coming down on her. Ah, there. Abby was engaging several Phantom Division soldiers at once, moving extremely fast in her armor and absorbing multiple shots at once. She definitely hadn’t exaggerated the durability of the armor. Jaylin lined up her weapon, and fired off a few shots at the leftmost alien who was kneeling behind some self-made cover.

She scowled, wanting to get a better shot, and briefly stood partially exposed to fire again.

Jaylin never heard the shot that killed her.

***

Volk had to hand it to ADVENT, they’d planned for this to happen. From the moment he’d seen the remainder of the convoys had responded to him shooting out the tire in formation, it was very clear that they had a plan and protocol for an attack ready to go, and more importantly, were disciplined to actually go through with it.

There were psions with them as well, which they’d known about. He wished that Asaru would beat them so they could get this mission done faster, because otherwise ADVENT was going to find them and cause a lot of problems. She had to be more powerful than two psions, right?

Then there was the interesting detail that the ADVENT soldiers who were escorting them were not standard soldiers, but ADVENT special forces. Almost definitely Lancers. There were no others he could think of who could take two direct shots to the head. Which meant that he needed to prioritize his shots a bit more.

Elena was similarly positioned to provide sniper fire, as were a few more of his men. As he observed the battle taking place, he looked to the composition of the soldiers. The Lancers were all wearing standard soldier armor. That was helpful. There were two soldiers in Peacekeeper attire, one of them Riot Control. There were a couple who were completely obscured not wearing any armor – likely the diplomats and another psion.

Then there was the XCOM agent who seemed to be invincible.

Volk was working on how best to deal with her. At least she was being held up by the Division soldiers. That would be enough.

“Target non-Lancer personnel,” he stated. “Thin their numbers. Take the Lancers off Joreal if you can.”

The first clue that these should have been Lancers in disguise was when several of them rose from the explosion from Joreal and began charging the alien. The massive Vitakarian was holding his own easily enough, and seeming to enjoy facing the two Lancers, but Volk wondered where the advantage really lay. Both were extensively modified, both were motivated, and both intended to kill the other.

Two on one. Not odds Volk would ever support.

While his snipers dealt with them, he quickly ran through how to quickly thin the numbers. The easiest way was the elimination of all non-Lancer soldiers – who likely would not be augmented.
Good enough. He focused his sights on the female Peacekeeper. Definitely Riot Control, as her shield was up and she used it to help protect against plasma fire.

He felt he could easily take off her head where she was now, but she was clearly wanting to get a better shot on one of the Division soldiers attacking Agent Gertrude. And...there. She peeked out just a little bit more than usual, and that was all he needed to fire. The shattered armor splattered red, and her corpse fell to the ground.

One down.

He moved to the other Peacekeeper. He was also trying to shoot at the Division soldiers attacking Gertrude, but he was not even pretending to be careful. Almost as if the snipers didn’t exist for him. Volk only felt minor disappointment at such an obvious lack of situational awareness. Before the body hit the ground he was already scanning for where the others were hiding.

Another down.

The next shot would require a reload. “Unidentified unarmored female down,” Elena reported tonelessly. “Executing.” A second shot rang out, essentially confirming the kill. Likely one of the diplomats. Not exactly a dangerous combatant, but not one they needed alive. The enemy psions were unfortunately proving to be a lot more difficult to find.

They were smart. Even the armored Priest was keeping herself protected. Against an Ethereal, they needed everything they could. Volk was taking Asaru out of the equation, and assuming she was stuck until the psions were dead. Or at least one was. The Lancers were dropping, but they were holding surprisingly well against the Division.

Time for the nuclear option. Volk was extremely hesitant about using this little development of the Phantom Division, but it was warranted here. “Get rid of the cover. Commence nanite destruction.”

He loaded a highly specialized cartage with a single nanite round. It was essentially hollow, and contained nothing but short-term nanites which would eat through everything for a one-minute period. He just needed to place them in a useful area, and that would be sufficient. So he aimed on the ground behind the wreckage of the third convoy, likely where one of the psions was hiding behind, and fired.

Confirmations rang out as his snipers performed similar actions. While he reloaded with more standard rounds, he peeked through to see the damage. Several had shot the Lancers, who were screaming as the nanites ate into their skin and they couldn’t protect themselves. More screams wafted up, and forced more out into the open to get away from the moving black spots of death.

Several more down.

One of their psions is no longer defending them. Asaru’s voice appeared in his head. The other cannot protect them. They are lost. Capture the XCOM agent.

Volk allowed a satisfied smile as he turned his attention to the final objective. Turned out that all of his concerns had been for nothing.

But it wouldn’t be a victory until Agent Gertrude was captured.

***

They were going to lose.
It was an odd sensation coming to that conclusion, especially as she blasted the head of the alien in front of her apart after a sustained barrage. But the tide had turned, if it had ever been in their favor to begin with. Risking a glance back showed a bunch of half-destroyed convoy trucks and the aliens finishing off the last of the Lancers.

The other massive alien had killed one of the Lancers on his own, and the other was being shot from snipers in the tree. The psions must be dead, which meant that her time was running out. Her own armor was still reliably taking the white plasma shots, but she knew that alone against the Phantom Division she would die.

What the hell had she been thinking?

Going up against an Ethereal with what she’d had was not nearly enough to defeat an Ethereal like her. Plans and strategies didn’t help when Nebulan and the Phantom Division could just attack them, rendering any plan they had useless.

She had underestimated the Ethereal, still. Been played or done as much as she could, it didn’t matter now. She was not equipped to fight an Ethereal like this now, much less kill one. She needed to get out of here if she wanted to live, and the longer she fought, the less chance there was of that.

Abby hated it, but there was no other choice. The other Phantom Division soldiers were either running towards her with nanoblades in their hands or firing with their weapons. She was still nowhere near spent, so she charged the last place they might expect – directly into the sniper nests. She charged one of the surprised Phantom Division, and lifted the soldier into the air before tossing him behind her with a force that surprised even her.

She needed to push the suit to its limits one day.

Bounding up into the forest, she suddenly ran smack into a tree. Or more accurately, mowed down a small sapling. Her head split in a pounding pain as she realized that the forest seemed to be shifting and phasing in and out of existence as her Manchurian Restraints worked to combat the hostile psionic influence.

A figure stood in the middle of the shifting forest. The form of a Vitakarian woman. “Your people put up a fight, agent,” Nebulan’s voice was layered and rich, and she had no idea if it was even remotely close to her real one or not. “But you cannot fight an Ethereal. Not like this.” The alien smiled as Abby took a tentative step forward, the pain in her head splitting as she grimaced under her helmet.

“What did you think would happen, agent?” Nebulan asked, more genuine than mocking. She sounded almost disappointed as she stepped forward, hands clasped behind her back. “Does Aegis think so little of me that he would send a lone XCOM agent and a few psions to combat me?”

Abby took a shot at her with the pistol, which went through the head of the illusion, who still continued speaking as yellow ichor leaked out of the remains of the head. “Foolish. Unfortunate. You would have been useful to us, agent. Much of your species would be, but they are being turned to follow a losing side.”

“Losing,” Abby choked, falling to one knee, hard to think straight as even the ground seemed to shift from grass, to gravel, to empty space; the pain in her head reaching a breaking point. “You may kill me, alien, but you will not stop us. You will wish I was the only thing you will face, because there will be a reckoning for my death.”
The illusion of Nebulan shifted and changed until Abby was looking at a reflection of herself, although one in the uniform of the Collective. “Kill you, agent?” She said softly, leaning down and looking into her eyes. “No, not yet. We need to learn everything about you. You’ve raised many, many intriguing questions.” The eyes briefly glanced to the symbol on Abby’s armor. “You will die, agent,” she continued slowly. “But not today. Not yet.”

A crack from a weapon fired, and Abby felt the leg supporting her shatter and she collapsed onto the ground, white-hot pain shooting up her leg. The pressure on her mind disappeared, and she found herself on the ground in an Argentinean evening, breathing heavily into the orange-blue sky with clouds passing overhead.

Would it be the last thing she saw?

A figure wearing a brown hooded trench coat, with a mask underneath entered her field of vision, a pistol in his hand. She wondered if he would say something, but he just put a boot on her arm to keep it in place. She used the other to lash out and he promptly shot the gap in her elbow, causing her to scream out in pain.

“I wouldn’t do that again, Agent,” he said, the mask synthesizing whatever his real voice sounded like. “We only need you alive, not mobile. Save yourself some pain.”

“Traitor,” she hissed as he pulled out a rectangular device.

He looked over to her. “To you, perhaps.” Placing the device on the gap in her arm, she felt something be inserted into her and slowly found herself falling unconscious and the world blacking out around her. The last thing she saw a white cloud, and the fading orange light.

Then she drifted off into a painful sleep.
“They definitely got a call out,” Volk said as the Phantom Division soldiers continued to strip the ADVENT soldiers of their weapons, armor, and recovered their own dead as the fires caused by the convoy truck explosion kept dying down. “We shouldn’t loiter here any longer than we have to.”

“We’re working as fast as we can,” Joreal said, as he was slowly doing some field repairs to his armor. “To their credit, they put up a good fight despite being horribly outmatched.”

Volk however felt like something was wrong with how this had happened, and it all centered around the XCOM agent who was lying on the ground before him, now properly restrained. He would have done something to make sure her wounds were at least patched, but her armor absolutely refused to come off, and when he’d tried digging around, little wires had sprouted up and stabbed into his hand.

It had hurt, to put it lightly.

“So what are we going to do with her?” Volk pointed to the woman. “I mean, you want to get her out of her armor, be my guest. But we need to make a decision.”

Joreal just looked at him, pausing his cleaning of armor. “What decision? It’s not like we’re just going to leave here, definitely not now. We can get the armor off later.”

Volk just tapped his own lightly armored chest. “Question: What exactly do you think XCOM is going to do next?”

“Try and find us,” Joreal said. “I’d assume they would. Probably won’t rely on ADVENT.” He paused. “Who will also be after us since we killed several Priests, Intelligence agents, and a diplomat for good measure. But same problem. How are they going to find us?”

Volk sighed. “Have you not considered the possibility that this very odd and unique suit of armor just might have a way to track it? Which means we might be leading ADVENT and XCOM straight to our base of operations. If we get her out of the armor, we don’t have to worry about that. Bringing her back with it is just asking for XCOM to quite possibly bring down the cavalry on us.”

“I have looked into her mind,” Asaru materialized beside them, mimicking the agent herself for some reason, including her voice. “From what I have found, the suit likely does not have a tracking device. And if my suspicion is correct…well, we cannot leave it behind, no matter the risk.”

Volk just stared. Which wasn’t as effective with his helmet on, but he was not going to just consider that a good explanation. “Two questions: First, how thoroughly have you examined her mind? Second, is that confirmed she doesn’t have a tracker, or is it possible that she doesn’t know there is one?”

“We did a quick scan of the suit,” Joreal reminded him. “Didn’t detect any outgoing signals.”
“Yes, because there’s no possibility those could be hidden,” Volk noted sarcastically. “If you’ve never seen something like this before, then it is completely possible that that little issue could be bypassed. You saw how much damage that took. This is not made by amateurs – and was likely not easy to make.”

“I have seen enough of her mind to know she at least believes there is no tracker,” Asaru finally said. “The…conditioning she has been subjected to forces me to not push too hard, otherwise it will break her mind. But she is too valuable to leave behind.”

“What do we actually know about it?” Volk asked. “You seem to suspect something.”

“That it is possible that she works for someone besides XCOM,” Asaru said slowly, looking down at the restrained woman. “That suit has only been seen once. And that she is still wearing it is… concerning. I will tell you if my suspicions are confirmed, but we will not leave her behind. She will need to be moved off-world.”

“Alright, fine,” Volk settled for that non-answer, and fully intended to press her on it later. “Then we should do the transfer somewhere besides HQ. So if there is a tracker, we don’t compromise our main base of operations.”

“How?” Joreal asked, motioning up. “Call down a transport and use a Gateway we don’t have? Our options are limited here. Going back to HQ is the quickest solution since ADVENT and XCOM will be all over this area in hours.”

“Then we should just kill her and cut our losses,” Volk scowled. “No, I don’t like it, but I also didn’t expect this woman to have armor glued to her skin that’s somehow more advanced than your own. Not worth compromising everything just to maybe learn what it is and how she got it. Next time we should be more prepared for this possibility so it doesn’t happen again. But for–“

“Overruled, Volk,” Asaru raised a hand, shaking her head. “Risk or not, it’s worth it if I’m right. Load up her body, administer medical nanites for her wounds. I don’t want her dying because we couldn’t get her armor off.” Two nearby Phantom Division soldiers complied and began getting the needed tools to prepare the unconscious agent.

“You’re making a mistake,” Volk warned, not bothering to disguise how utterly stupid he thought she was being. “You’re going to potentially risk everything for…what? A suit of armor?”

“Bases can be rebuilt or established,” Asaru said, some steel entering her own voice as she looked at him. “And you could very well be wrong. For this, I am most certainly prepared to take risks. This is something the Imperator himself will be directly interested in. I will not throw it away because you think the risk is too high.”

“Duly noted,” Volk said icily. “It’s a good thing I made contingency plans in this kind of scenario. You focus on your special armor and I’ll try and make sure you don’t end up collapsing everything we’ve done so far. And don’t think about trying to stop me.” He stormed directly through Asaru’s illusion to find Elena and his soldiers.

Assuming that by some miracle everything worked out smoothly, Asaru was definitely going to have to explain herself more than she had right now. He didn’t understand it. Asaru was not an idiot, and seemed to enjoy devising plans and contingencies that made sense. This was the first time where she was being, for lack of a better word, an idiot.

No matter how valuable Gertrude was, she definitely wasn’t worth risking an entire operation. Not to Volk. So the best he could do was try and mitigate the damage this decision could cause. And
since they were keeping her alive, maybe have a nice chat with her right before she was given to the Imperator.

This turned a nearly perfect mission into one still up in the air. At least it had gone well so far.

Now it just had to stay that way.

***

Situation Room, the Praesidium – Classified Location
2/5/2017 – 10:51 P.M.

“Attacked?”

“We’ve lost all contact with them, and ADVENT forces on the scene confirmed it was the same one Agent Gertrude was a part of,” Zhang informed tightly. “Everyone there is dead, anything left was likely stripped, all enemy corpses are gone.”

“And Agent Gertrude?”

“Gone. No body or indication she is alive or dead.”

“If she was wearing her armor, they would have wanted it,” Creed recalled, pursing his lips. “Unfortunately I don’t think they’d be able to get it off. So they probably took her body back to wherever their base is.”

“Get the Chronicler up here right now,” the Commander said without turning to look at Jackson. “If Nebulan is brazen enough to attack us this directly, we will respond in kind.”

“The operation was a mistake,” Zhang muttered, shaking his head. “I did not expect such a brazen attack. Not yet. Otherwise I would have given her a dedicated force…” he trailed off. “This is my fault, Commander. An ill-conceived plan against Nebulan.”

“We pay the price for underestimating Ethereals,” the Commander said, sighing. “What we do now is fix this, Director. And if Agent Gertrude is alive, you apologize to her yourself. Keep in contact with ADVENT and I want you working with them to find out where the aliens are hiding.”

“Forensics teams are going over the wreckage and bodies now,” Zhang nodded. “Causes appear to be varied. Nanoweaponry, plasma, and even physical projectiles are reported used. Explosives too, judging from the wreckage.”

“Even Lancers are going to lose to the Phantom Division every time if they aren’t prepared,” Creed said, leaning on the holotable and looking on the blank map. “Combine that with Nebulan’s support, and controlling the ambush point, and they never had a chance. You need an XCOM and PRIEST joint force just for Nebulan, let alone when she’s supported by the Phantom Division.”

“Which will be provided if we find her,” the Commander said, face set in stone as he considered what would happen next. “The conflict is reigniting. They are moving towards their next major attack. The operations in Canada are damaging them, and so they are responding in kind. It will continue to escalate.”

“They lost a Sargon, we lost an Intelligence agent,” Jackson noted quietly. “Objectively…there are worse trades.”
“Objectively, yes,” the Commander sighed. “But Abigail has been with XCOM since the beginning…if she dies…”

“Then all of the original XCOM soldiers will have died in this war,” Creed finished somberly. “Patricia had mentioned how she was ‘almost the last’. But she isn’t dead yet. I don’t believe that. Either of them.”

“Patricia is on the Temple Ship with the Imperator,” the Commander reminded him. “If she’s still alive, it means she is bait or has some other role in his plan. Or worse, being experimented on. I don’t know why they would keep Abby alive either…the Manchurian Restraints prevent her from cooperating, and I suspect she doesn’t know more than what the aliens know already.”

“The suit,” Creed reminded him.

“Which also doesn’t make sense,” he scowled. “They would have to guess it has a tracker in it, even if it doesn’t, the risk is extremely high. Taking it doesn’t seem right, even if they want to get their hands on Sovereign tech. Not to mention they won’t get much out of it. It’s bonded to Abby somehow, and it might even destroy itself if forcibly removed.”

“Technology from an unknown Sovereign is valuable,” Jackson suggested, pacing around the table. “They have to suspect that one exists at this point. That might be worth risking being tracked down. Although they might reconsider if they knew Abby wasn’t actually an agent of T’Leth.”

The barrier to the Situation Room dissipated as the Chronicler stormed inside, eyes blazing with intensity. “Agent Gertrude has been taken?”

“Or killed, we don’t know,” the Commander answered, restarting the holomap. “They were ambushed and everyone was killed. Her body is missing. All we know is that she was wearing her suit. It is possible the Collective wants it for study.”

“When you say ‘self-destruct’…”

“The suit will cannibalize whoever is inside,” the Chronicler answered, not looking up. “And break the suit apart into tiny particles. Reconstruction is impossible.”

“So it’s possible that Abby could have just been killed then,” the Commander said.

“Possible, though unlikely,” the Chronicler said. “Otherwise T’Leth would have been notified. All of the suits and weapons have trackers that are undetectable by modern scanners which monitor user vitals and location. Losing a weapon is not a major development. Losing armor is because it means the suit – and user – are almost certainly dead.”

“And if nothing happens, you are not notified,” Zhang confirmed. “So you would not have been able to detect if she was wounded or not.”

“Yes, vitals only display life signs,” the Chronicler said, frowning. “There is the possibility of a manual self-destruct, but I would prefer not to-damn it!”

“What?”
“Good news and bad news,” the Chronicler said, face hardening. “Abby is alive and I have a very neat path to her latest location. The bad news is that her tracker just stopped transmitting ten minutes ago.”

“She’s dead?” Zhang asked.

“No, it stopped transmitting,” the Chronicler corrected. “Which means—“

“She was transferred off-world, into Collective territory,” the Commander finished. “We’re too late.”

“Except we have a direct location on Nebulan’s base!” Creed interrupted. “If it has a Gateway, it has to be important, especially in South America.”

“Let me see the map,” the Chronicler pushed forward, as he typed the coordinates on his map. “I’m inclined to agree with him. The Collective has almost no notable presence in the region. A Gateway would be a big piece of infrastructure for them. Ah, there we go.”

“In the middle of nowhere,” Jackson said, eying the location. “Interesting.”

“I’m not writing off Abby yet,” the Chronicler said, gazing intently down at the holotable. “The Collective will not learn anything, but she does not deserve to die through protecting T’Leth’s secrets. If we know where she was sent, Fiona can take a team to break her out. Assuming such an attack is possible. But holding her in a Blacksite is manageable.”

“And in the meantime we attack Nebulan,” the Commander finished. “Regardless of Abby, that is a step we should take. She will not attack our soldiers without consequence. Jackson?”

“Already on it,” she said, working furiously on her tablet. “Zhang, you forwarding all of this to ADVENT?”

“As we speak.”

“Tell them to bring overwhelming force for our friendly neighborhood illusionist,” Jackson had a lethal smile as she talked. “An army of MDUs and SHIVs will suffice. If they don’t want to just missile strike the location.”

“No. Only bomb it as a last resort,” the Commander interrupted. “I want to recover as much intel from that place as possible. We can always destroy it later. And I know we can put together a strong enough force to kill Nebulan.”

“Understood,” Jackson nodded. “Teams are being put together now. Aegis?”

“Yes.”

“If you would, Commander, I would like to send two people along on this operation,” the Chronicler said. “Both with a stake in the outcome.”

“Who?” The Commander asked. “Fiona?”

“Crevan Machas,” the Chronicler answered. “The finest artisan of T’Leth, and a designer of his technology. A powerful man in his own right as well. He was Fiona’s mentor. He has an interest in ensuring that this technology stays out of the hands of individuals like the Imperator.”

The Commander felt he could accommodate that. Knowing more about who was working with
“T’Leth was always welcome. “As long as he doesn’t tamper with anything and doesn’t deviate significantly from the plan, I’ll allow it. And the second?”

“Lincoln Harper,” the Chronicler said. “Led the Australian Resistance and worked with Abby in Australia. She helped save him once, and I suspect he would want to return the favor.”

“Done.” The Commander nodded.

“Commander?” Jackson interjected. “You said that you planned to kill Nebulan, not capture her?”

“If she surrenders, we will accept it,” the Commander said calmly, turning to her. “But until that point, my orders are her execution. Is that clear? And I want to talk to Vahlen.”

“Yes, Commander.” A pause. “What should I tell her?”

“That I want to do a field test.”

***

Mess Hall, the Praesidium – Classified Location

2/5/2017 – 11:35 P.M.

It was just as well that his sleep schedule was all messed up, because then Oliver wouldn’t have found himself in such an interesting situation. He was now enjoying a decent meal with the Chronicler’s…subordinate? Friend? Whatever she was, Fiona, and opposite her was the odd Zudjari, Axis.

The alien was especially interesting since the Zudjari were something that he’d never seen before a few weeks ago. The vertically slit mouths were an interesting feature of the species, though it didn’t really impair them from what he could tell. Made sense. What was more interesting was that Axis had a very particular way of eating his food, or at least, arranging it.

Instead of picking one dish of each type from the limited amount of options, his entire plate this time consisted of small portions of vegetables. The only way this made sense was that he was experimenting with different types of food to see which one he liked best. After the incident with the chocolate and Vitakara, Oliver suspected that ADVENT was making sure aliens could actually eat their food before giving it to them.

He still wasn’t quite sure what to make of Fiona. She was fit, but didn’t have the physique of a soldier. She carried a sword of all things (although that was less strange when there were Templars around), could teleport, but also had white hair (probably dyed) and no gene modding that he could see. Or at least she had shared.

Oliver would have also been confused as to why Axis had made a point to sit by her, since the few other times they had interacted he had sat alone, but when Fiona explained that they had met before, and she was the reason he was here today, it made more sense. “So,” he said. “What’s your story? Must be a pretty interesting one for you to end up with the Chronicler.”

Fiona stopped chewing her food, looking at him thoughtfully. “Probably less interesting than you think, honestly.”

“Well, I’ve got time,” Oliver said. “And if you want my uninteresting life story, I can return the favor.”
“Do not ask for my life story, Human.” Axis added, not looking over.

“Private person or is that a Zudjari thing?”

Axis silently ignored him. Fiona snorted. “Well, for starters I was adopted. Didn’t really know my real parents, or had a desire to investigate much. But had a pretty normal childhood outside of that. My mother was a teacher and my father a fencer.”

“Explains the sword then,” Oliver noted.

“Yes, I loved watching him,” she said, her voice turning slightly distant. “Almost like a dance at times. Never thought I would actually need to use it, or would want to. Not in a world with guns and psionics.”

“Times change,” Oliver grunted. “And they change fast.”

“Anyway, I eventually moved away and through a series of very unfortunate events and bad decision making, ended up in a street gang, made some enemies of some killers, and spent a couple years on the run.” She took a long drink of her water. “Met someone who helped me, figured out my abilities, and offered to help and train me. Took him up on it, since I had nowhere else to go. And so I became part of the Chronicler’s little army.”

Yep, there was definitely a lot she was leaving out, although Oliver didn’t exactly blame her. Telling a stranger the bad decisions you made when you were younger was not really fun, and it was understandable she’d keep tight-lipped about it. It was interesting how it seemed anyone could end up in this if circumstances favored them, or they just got lucky – or unlucky depending on how you viewed it.

“Did your parents know?” He asked.

“They knew I was having some troubles,” Fiona shrugged. “But they know I’m fine now, although I definitely didn’t tell them the truth. I’ve still got some people who want to kill me, and since they know who my family is…well, a problem I just want to avoid.”

Oliver raised an eyebrow. “You never dealt with them?”

“Ha. No, I wish I had at times, but honestly they aren’t important and it would distract me at this point. If they ever come across me, I’ll happily kill them. But the Chronicler doesn’t want me wasting my skills on petty criminals. Best to let them stew in their impatience to try and find me…although by now I’m sure they’ve moved on too. We’ve both got better things to do now.”

“That we do,” Oliver agreed. “Although given how ADVENT operates, I’d bet they become a victim of this war by proxy. They don’t like those kind of people from what I’ve seen.”

Fiona smirked and pointed her fork at him. “Now that would be funny. Axis, is everything alright?”

Oliver saw that the Zudjari had spat out a half-eaten carrot and was staring at it in what appeared to be pure and unfettered disgust. “I cannot understand how you Humans tolerate this…thing. I do not know why I keep trying it.”

“You’ve…tried it before?” Oliver inquired.

“I try it every time I acquire a plate of your Human vegetables,” Axis said. “It is healthy to
continually challenge and reevaluate our tastes and perspectives. I question the validity of this when eating these sticks of orange rot.”

“Well, you could just…not eat them then?” Fiona suggested casually. “We all have different preferences.”

“No, because one of these times I may understand why carrots are good,” Axis insisted. “And if I stop eating them, then I will be less convinced that they are actually terrible.”

“Uh huh,” Oliver was tempted to laugh at the seriousness the Zudjari was displaying. “So intentionally doing things you don’t like is a Zudjari thing?”

“Within reason.” The alien began eating broccoli, which he seemed to like just fine. “If it is something other people enjoy and consume, there must be a reason for it, and an effort should be made to understand why people reach this perspective. If one does not continually reinforce their own opinions based on experience, why does their word on the subject have value?”

“You are not an Axis,” he said as an answer. “You do not possess the mindset for one.”

“And I’m perfectly happy with that,” she said, smiling. “Well, that’s interesting. I’d always wondered how you chose your meals.”

Oliver’s wristband began buzzing. He looked down at it in disbelief. “Mobilization,” he said slowly. “I’m being deployed.”

Fiona turned instantly serious. “What? An attack?”

“Don’t know,” he said, getting up. “But we’re being deployed. You might want to talk to the Chronicler. The war may have just started again.”

***

Unknown Location

Unknown Time

Abby actually couldn’t recall ever waking up in her armor, but there was a first time for everything.

She soon realized she couldn’t move.

The arm the man had shot wasn’t responding at all, and she could barely move her fingers. Her leg was similarly numb, although she noted that they must have at least repaired it somehow. Nanotech? She couldn’t think of another way they could have gotten under the armor without getting hurt or damaged.

But she was definitely restrained. There were metal restraints around all of her joints, as well as around her neck and torso. Even with the strength the suit gave her, it wasn’t much help if she couldn’t move at all. At least she wasn’t hanging suspended in the air, even if she felt like she was tied up against a wall.

The room she was in was a big square with bright white light illuminating it. There was nothing else in the room that she could see, aside from the small chair opposite her near the middle of the
He was wearing the same kind of uniform as the man who’d shot her, and the mask hanging from his belt confirmed it. He definitely wasn’t that old, and his beard was full and brown. His unkempt and fair long hair fell close to his shoulders, and was propped up by a dark green headband of all things around his forehead.

Abby also spotted the rifle which was propped up in the far corner, and the pistol also hanging from his waist. He held something in his hand, which she couldn’t see, and sat with one leg swung over the other. Waiting for her to wake up. She didn’t feel the need to encourage him, and the helmet at least made sure he couldn’t see her face.

She stayed like that for a few minutes. The man finally sighed. “You can drop the act, Agent. We have sensors. Maybe not the right stuff to break you out of that suit, but I do know if you’re conscious or not.”

“I’m surprised I’m still alive,” she said, not really feeling up to maintaining the ruse – especially since he seemed like he wanted to talk to her. She would have to be careful, but she was curious about these Humans who were working with the Collective.

“You can thank Asaru for that,” the man jerked a thumb towards the exit of the room. “If it were up to me, I would have killed you. A big security risk, but you’re apparently worth it. One reason why I’m here. Why exactly are the Ethereals so interested in that armor you wear?”

“Asaru?”

“An Ethereal,” the man said. “One I’ve been working with.”

“Ahh, Nebulan.”

“Is that her name,” the man allowed a laugh. “No wonder she sticks with Asaru. Assuming that’s her name at all. She strikes me as the kind to never share her real self with anyone.”

“Who are you?” Abby demanded. “I don’t recognize you from anywhere.”

“It would be really odd if you did,” the man said. “Since you’re going to die soon anyway, you deserve something. Konstantine Volikov. Or just Volk. Freelance mercenary or assassin, depending on your definition. Killed a lot of bad people over the years. Killed a lot of people associated with them too, who may not have been as bad.”

“How noble,” Abby said flatly. “One of the good assassins then? Now working against your own species?”

Volk smiled and raised a finger. “‘Good’ is somewhat subjective, don’t you think? But in the context of my line of work, I can safely say I was a lot more ethical than certain members of ADVENT. I didn’t take big contracts or do it for the money. People were suffering in some form? They got word to me and I took care of their problems.”

“And now you fight against us.”

“This may surprise you, agent,” he shrugged. “But not everyone thinks ADVENT is the best direction for our species. Call me a believer in classic democracy, but ADVENT is a bit too authoritarian for my tastes. They’re not the first of their kind, just look at history for that, but I can safely say that they’re the most competent – which to me, is very dangerous.”
Abby let out a sharp laugh. “Do you honestly believe that the *aliens* are going to be better?”

Volk uncrossed his leg, and leaned forward. “Better? Absolutely not.”

“What?”

“I’m not an idiot.” Volk seemed to find her surprise amusing. “The Ethereal Collective is no better than ADVENT, and as much as Asaru likes to blame a lot of it on ‘propaganda’ I’m not the idiot assassin she sometimes thinks I am. I don’t believe the Collective is worse, as they both commit atrocities – such as the experimentation on captives, invasion of planets or countries who oppose them, and so on.”

“But you still side with them over your own species.”

“I *do*,” he nodded. “Because the alternative is a future dominated by ADVENT – and unlike the previous incarnations of that kind of government, they will not fall to violent revolution or peaceful change over decades. The systems are not designed for that. They are designed to keep people loyal to ADVENT, approving of their constant watch. Their representatives ‘elected’ are chosen by the government, and any form of dissent and protest against anything they disagree with is met with swift and sudden *justice*.”

He paused. “It’s unfortunate. I do admire ADVENT’s competency, and some of their measures I do agree with. But the system will be abused far more than it already has been if it is allowed to win. I give Saudia and the Commander credit for putting it together. They learned, and if they win, it will be deserved. But I’m not going to let that happen without a fight.”

“You don’t know what you’re talking about,” Abby would have shook her head. “ADVENT was designed so that it couldn’t be abused.”

“Every single system invented can be broken and manipulated,” Volk countered. “ADVENT is no exception. I’ve done my research, which is helpfully public – Election Oversight has direct authority over who can and cannot run. Which is run by appointees from the Executive Branch. The Congress passes laws and legislation hidden from the public. I would say you probably know more than me what kind of extensive authority ADVENT Intelligence has over surveillance,” he waved a hand. “Granted, it’s not like that’s actually new. But at least there was at least an illusion that governments respected privacy. They don’t even bother with that anymore.”

“And what illusion are you under that the aliens will be any less controlling and more benevolent?” Abby shot back. “Do you *really* believe they will suffer rebellion or any kind of insubordination? Are you that naïve? The Ethereals don’t *care* about us, or the little people. They see themselves as better. Superior. ADVENT does what they feel is best for Humanity. I’ve *spoken* to one of them who says this! You can disagree with that, but I can guarantee that they believe every action they take is for the best interests of our species.”

Volk stood up, appraising her. “I am aware of Ethereal and alien superiority. Will the aliens be benevolent or controlling? I can’t say, but I can look to the other species. The Sectoids have autonomy. The Andromedons do as well. The Vitakara are under the Zararch in their police state – similar to ADVENT now that I think about it – but their circumstances are brought on through Ethereal manipulation and their innate pacifism. Humans are a little more likely to strike back, if you haven’t noticed.”

His lip twitched. “I’ve been promised certain things for the future governance of Humanity. Acceptable compromises for autonomy. Do I expect the aliens to follow through? Not completely. If they turn out to be just as bad as ADVENT, then I will happily wage the same war I am now.”
“Alright then,” Abby growled. “So why not do that now?”

“If I have the choice between a government established by Ethereals, or by ADVENT, I will take the Ethereals,” Volk explained. “ADVENT is too smart and competent for its own good. I don’t think I can win against it on my own. But the Ethereals? Too self-absorbed in their own importance, too focused on other things to be bothered to worry about their collective species. I’ve talked with enough aliens and read enough reports to know the Ethereals are simply not interested in managing a multi-species government, and rely on others to keep them in line. The Hive Commanders. Andromedon Federation. Zararch. No Ethereals.”

He looked down at the symbol on the chest of her armor. “In some way, Agent Gertrude, we both want the same thing. I would prefer our species not to be under an authoritative and controlling power, and for us to expand and grow our own influence. But our visions for Humanity differ too drastically. You believe ADVENT is the future and fight towards it. I abhor this future and will take on whatever means I can to change it – and make something better.”

He waved a hand aimlessly. “Will I succeed? Maybe, maybe not? I could still die, or Asaru could go back on her word and control my mind. But she’s seen it, and still done nothing. Perhaps she underestimates a mere Human, perhaps she does not fear because she is genuine. I can’t be neutral in this war, Agent, and you agree. Everyone must pick a side to support. I have chosen mine.” He gave a thin smile. “And ironically, for likely the same reasons as you have chosen yours.”

Abby let the silence hang for a minute. “Why are you telling me this at all?”

“Because I want to know what’s so special about that armor,” Volk nodded to her. “Asaru made a massive risk bringing you back without understanding it. Which means she knows something, and I want to know why.” He pursed his lips. “You deserve to know why a Human is, in your eyes, joining the wrong side. So I’ve told you, because you are going to die, Agent, one way or another. But if you care about the future, I need to know if there is something else to be aware.”

Abby had an idea of what they wanted, and she realized that they were going to be very disappointed. She allowed a laugh. “You caught the wrong person. You, or the Ethereals, aren’t going to be able to get anything out of me because I don’t know it. But there is something else out there. Something even the Ethereals fear.” She smiled under her helmet. “But they won’t tell you that.”

Volk appraised her for a minute, then nodded. “Thank you, Agent. I have what I wanted.”

“Tell Nebulan I’m sorry she wasted her time,” Abby said. “And that XCOM is coming for her now.”

“I didn’t come because Asaru asked me,” Volk said, turning away and picked up his chair. “I’m here on my own. She’s busy preparing to move you. I don’t know where, but you will be off Earth very soon. Within an hour at most. I wish you good luck.”

“Much appreciated,” Abby said dryly. “XCOM will be coming after you now too, and they will kill you.”

He just smiled, showing bright teeth. “I suppose we’ll see, Agent. I hope they put up as good a fight as you did.” Volk stepped out of the room before she could retort to his final words, and the hum of the room she was in became the dominant sound. The minutes ticked by, or maybe it was seconds. Time didn’t matter here.

There was a function in her HUD which had flashed ever since she had woken up, but she refrained
from thinking about it too much.

Not yet. Just wait a little longer and see what happens.

XCOM would come. She could only hope she was still around when it happened.

***

**Throne Room of the Imperator – Temple Ship of the Ethereal Collective**

2/6/2017 – 12:15 A.M.

It was the first time Imperator had asked to speak to her in the middle of the night. A brief telepathic communication was all that was needed for her to be woken up and be fully awake. Mildly annoying, but she knew he wouldn’t have bothered if it wasn’t something important.

As it turned out, it was.

“There has been a development.” The Imperator sat on the throne overlooking the empty room. The hologram projectors were on, though not showing anything. Waiting for the appropriate moment, she supposed.

“What kind of development?” She asked.

“Nebulan’s actions in South America have come under ADVENT and XCOM investigation,” the Imperator said, with the hologram of South America helpfully appearing. “A team was formed to investigate, led by your former squadmate and now Intelligence agent Abigail Gertrude. Her team was primarily composed of these individuals.”

Pictures of several other ADVENT personnel flashed up, none of which she recognized. “I’m aware of Abby’s operation,” Patricia recalled. “Zhang had mentioned he’d be sending her there. I was never able to be updated since I’ve been…here.” She nodded to indicate the rest of the room. “What happened?”

“Nebulan ambushed their convoy and removed that threat to her operation,” the Imperator said slowly. “Agent Gertrude is recovered and will be transported to the Forge, where it will then be transferred to the Temple Ship.”

Patricia felt cold at that. This was definitely intentional. “Why?”

“Because I suspect she is affiliated with the Sovereign One, T’Leth, or aware of his operations,” the Imperator said, and the hologram of an armored figure appeared. Patricia wouldn’t have been able to make out the gender or identity, but she then remembered a very important thing she had previously forgotten.

“The armor,” she recalled. “The Chronicler. She spent a long time with them. We didn’t know what it was or how it worked. Sovereign tech was all we knew.”

“She is potentially compromised,” the Imperator said. “An agent of the Sovereign One.”

“No, I don’t think so,” Patricia shook her head. “She even said that what the Chronicler said when he was…controlled…was disturbing. If she was an agent-“

“And why would she keep the armor?” The Imperator asked. “Why would T’Leth allow someone not under his direction to take advantage of the technology within it? You may not have known
about it, but that does not change that she has likely been compromised. You cannot trust her.”

“You want me to speak to her,” Patricia said slowly. “Another test.”

“I suspected you would object to interrogating her as a Sovereign Agent,” the Imperator explained, shutting off the holograms. “But you are a person who could determine where her loyalty truly is. I have little interest in a lone XCOM agent. I only value the knowledge she has, and the armor she wears. Should those be provided to me, then I will allow her to be returned to XCOM.”

“If I convince her to give it to me,” Patricia finished. “She isn’t going to trust me here, and I won’t lie to her.”

“Then don’t.”

“And if I can’t convince her?”

“Then she will be turned over to Fectorian and the Voice to begin analysis,” the Imperator said. “I have not ruled out a possible rescue attempt from T’Leth to preserve his secrets, but he would not risk penetration of a fortress watched by Mosrimor himself. You would likely not see her again, but this is the first opportunity to learn about this T’Leth and his capabilities. A sacrifice, but a justifiable one.”

“And if I get her out of the suit, she will live,” Patricia repeated. “No strings attached.”

“I have not lied to you so far,” the Imperator stated. “I will not lie now. I do not give you false hope for your friend. You understand the stakes. How you handle Abigail Gertrude is up to you, but understand she will likely reject you for what you have come to realize.”

“I know.”

This was going to be difficult to put it very lightly. How was she going to convince Abby, who she was certain was not a Sovereign Agent, that she needed to tell her everything about it, give over a priceless suit of armor to the Imperator, and trust it was the right thing to do? Not to mention she was going to think Patricia was compromised and under the Imperator’s sway, even if that wasn’t true.

Was Abby really going to accept a seemingly-empty platitude of “This is not as simple as it looks”? Patricia had been able to do that, even if it had not been what she would call a fun experience. Not always pleasant to learn that the sides of the conflict you were in were not so clear cut. But Abby? She would call what the Imperator said lies, and say he was using her. It was frustrating because even if she told the truth, there was a very high possibility that it wouldn’t be enough.

Abby wasn’t a telepath who could verify if one was telling the truth or not. All she had to go on was trust and experience. Patricia really hoped that would be enough to make her at least listen. But if Abby was wearing that armor, she had a sinking feeling that XCOM itself was too far gone. Too influenced by a Sovereign One.

She hoped not. She hoped Abby would say otherwise. If she knew about what was recently going on at base at all.

“I will inform you when she arrives,” the Imperator said. “Think on how you will convince her.”

Patricia walked away, pondering how to do exactly that.
Skyranger, En route to Mission Site

2/6/2017 – 12:07 A.M.

Oliver really, really wanted to have been at the meeting when XCOM had decided to make… certain decisions. Decisions which, while certainly…unique, were utterly bizarre when viewed from any kind of reasonable standpoint. Of course, with XCOM, nothing was ever normal and by now he should have realized that.

But he imagined that this particular conversation had gone along the lines of the following.

“Everyone, we need a new weapon,” the Commander said. “Something that the aliens won’t ever expect. Something that no one would even think of as a good idea.”

Shen made an awkward cough. “Perhaps that would be because it wasn’t a good idea?”

“Quiet,” all of them said in unison.

“I’ve got one!” Zhang said ecstatically. “We make our suits of armor shoot nanites and can reproduce themselves! Nothing wrong could possibly happen!”

“Good, good,” the Commander said, but shook his head. “But too standard; too predictable. Next!”

“My turn!” Jackson said. “We make an AI that’s much better than anything they have! Nothing wrong can ever happen when making a machine smarter and faster than us!”

“Almost, almost,” the Commander muttered. “But we need to think outside the box, people!”

“I’ve got it!” Vahlen suddenly shouted. “We make an army of giant killer octopi and use them against the aliens!”

The room burst into applause with some of the Internal Council randomly shouting out “Brilliant!” as they toasted to this completely normal and sound idea and immediately drew up plans to make it reality, as well as the other, more mundane ideas.

And that was how XCOM ended up with giant killer octopi.

Giant killer octopi that made the happiest little trilling noise whenever they poked their heads out of the little aquarium that it rested in. It was downright creepy how there were different tones to its trilling, and it varied depending on the person in question. The Shoggoth seemed to like him…or so he hoped.

The Handler for the Shoggoth, Sylvia Allais, had not exactly made him feel better by telling all of them that “The Shoggoths are really, really smart. Don’t worry, they like Humans and would never hurt any of you.” It had taken every bit of willpower not to pull away when the black tentacle reached out and touched his skin, before being withdrawn back into its tank.

But not before it made the happy trilling noise.

Of course, Geist was fascinated by the creature, and hadn’t taken his eyes off the creature since they’d taken off, not even putting his helmet on. For all Oliver knew, he was trying to probe its mind. Zara Venator just coughed. “I hope these creatures live up to the hype. No offense, little
Cthulhu.”

The Shoggoth trilled. Zara stiffened. “Please tell me that was a coincidence.”

“It has eyes all around its body,” Sylvia explained happily; the young woman seemed ecstatic to be here, which was an interesting change. “They’re smart, like I said. He probably knows that he’s the center of attention and wants to make everyone happy.”

“So,” Analyn Roxas coughed. “You, ah, been doing this long?”

“XCOM brought me on because I did work with military dogs,” Sylvia said, letting the Shoggoth wrap its tentacle around her unarmored hand. “They wanted someone to do the same thing with Shoggoths. Granted it’s not quite the same thing, but they’re smart and easily trainable, and adorable in their own way.”

Oliver looked at the massive black tentacled creature. “Adorable.”

“Oh, yes!” Sylvia nodded. “You should have seen when I gave it a Rubik’s cube. It only took a few days for it to be solved.”

“What,” Zara said flatly. “Are you making that up?”

“Well, maybe embellishing it a bit,” Sylvia hesitated. “It’s not quite a full Rubik’s cube. But it is a cube where the sides can be manipulated. But we’re working towards helping them understand how to solve a full Rubik’s cube. Just need to build one that’s their size. The little ones we have just aren’t good enough.”

“A fascinating creature,” Geist finally said, still not taking his eyes off of it. “Their minds are near-impossible to penetrate.”

Oliver shot the psion a look. If Geist of all people was unable to take control of it, then that was certainly an interesting piece of information. “Really?”

“He is correct,” Crevan Machas said, speaking for the second time. “It has been designed while preserving the distributed intelligence of the octopi. Nearly impossible for any traditionally trained psion to control. A perfect weapon against Ethereals.”

Out of all of them, Crevan was the one who stood out from the group. The first thing Oliver had noted when the Chronicler had introduced him was that he was freakishly tall, standing well over six feet. His first instinct was “Genetic modification” but he had nothing to back it up. His blue-green eyes also added to this, which while it probably wasn’t an unheard-of color, it had to have been rare.

The only indication of his age was the greying hair which was kept neatly back and wasn’t overly long. The demeanor of the man was…restrained at best; almost standoffish. Crevan had not spoken much, aside from a few polite acknowledgements. He was almost certainly a psion, though what kind or how powerful was up for debate.

If he was with the Chronicler, he supposed very powerful indeed.

Which then made him wonder, as Crevan didn’t wear the stony armor that other soldiers of the Chronicler had, but instead an odd mix of armor and cloth, with the chest, legs and arms having silver engraved armor on the limbs, while a teal blue cloth ran underneath it all. He’d also seen it have a hood on the back, though Crevan was not wearing it now. The last odd note was he wore fingerless gloves that went up to the first joint.
He was an odd one, and Oliver was curious to see what he was capable of.

He definitely did not seem to like the Shoggoth though.

“Alright, enough playing around with the little hellspawn,” Zara stood up. “You’ve all been partially briefed on what’s going on, so I’ll just go over it again. We’re headed to where we believe Nebulan has a base of operations; we are expecting heavy resistance and Nebulan herself. That means telepathic attacks possibly from within the skyranger. Psions will be protecting everyone as best they can, and we also have Aegis and several soldiers of the Chronicler to help with that.”

“Phantom Division?” Geist asked.

“Highly likely,” Zara confirmed. “And since she knows she’s taking a risk, there is a possibility there are more enemies we haven’t accounted for. The odds are stacked in our favor, but do not get cocky or overconfident. We’re fighting an Ethereal, and that’s never taken lightly. We have three objectives in this mission: Find and recover Agent Gertrude, recover anything of value from the base, and kill Nebulan. Understood?”

“Yes, Overseer!”

“We’re going to be using the Shoggoths to assault the base itself,” Zara said, nodding to Sylvia. “If what you’ve told me is accurate, they can clear the base from within. Archangel Taira will telekinetically drop them off. They’ll be able to fend for themselves I hope.”

“Definitely,” Sylvia confirmed.

“Shouldn’t we keep one in case Nebulan shows up?” Analyn asked.

“Nebulan doesn’t fight on the front lines,” Zara shook her head. “She might not be in the base, but she will never show her true self on the battlefield, or put herself in unneeded danger.”

“What are the chances she’d just flee?” Viktor Midthun asked.

“She might have already,” Zara admitted. “We don’t know. But if this is her main base of operations, she probably doesn’t want to let it go without a fight. The chances she will flee will likely depend on how we do. One reason we’re dropping the Shoggoths at the base. She will attempt to flee through a Gateway in all likelihood, and her psionics will be useless on them. Not to mention they specifically love to hunt down Ethereals.”

Oliver was very glad he didn’t have to worry about giant killer octopi coming after him.

“The frontal assault will consist of the rest of us,” Zara continued. “Archangels Taira and Hammarström will provide air cover. Aegis, Harper, and Machas will provide anti-Ethereal support as needed, as well as assisting in crushing their defenses. All goes well, this will be a short fight. But I wouldn’t count on it.”

“What about ADVENT?” Sylvia asked.

“They are also en route,” Zara confirmed. “Latest numbers were twelve teams of soldiers, around fifty, ten from PRIEST, a dozen MDUs, and a mixed team of Lancers, Hussars, and Dragoons numbering twenty. They’ll be arriving no later than fifteen minutes after us. They will assist in flanking maneuvers by attacking from the angles we are not. The base will be surrounded, and we will eventually capture it.”

“Squad Overseer Venator, this is Big Sky,” Jason informed over the comms. “We are approaching
the landing zone. Please prepare for landing, there don’t seem to be any AA defenses, but I’m preparing for any evasive maneuvers. Landing is estimated to be two minutes.”

The lights flashed to red.

It was about to begin.

***

Unknown Location – Argentina

2/5/2017 – 10:40 P.M.

The battle was clearly not going to be over anytime soon, or at the very minimum, Asaru was preparing for the worst possible scenario. From the moment they’d returned she’d immediately left to…well, presumably contact someone of a higher rank than her, while Joreal began instructing the Phantom Division to prepare all defenses for battle.

For his part, he’d instructed Elena to do the same, as well as begin backup and purging procedures for all their data. Unfortunately, there was a significant amount and Elena had apparently had an argument with one of the aliens on actually letting it happen. She’d finally gotten through, after Volk had intervened, but only now was the procedure starting.

Collective systems really did have the most ineffective purging protocols possible. Copying everything was going to make everything take twice as long, but he couldn’t fully blame Asaru for not wanting to lose everything in case it turned out to be a false alarm. That being said, since she alone had put herself in this situation, he wasn’t feeling too bad for her.

What Agent Gertrude had said was…interesting.

He would have to inquire about it later.

Although that topic was fading from his mind when reinforcements began arriving from the Gateway. Out from the purple whirlpool had walked out nearly forty of what he could only describe as metal soldiers. Custodians were what they were called, and without wasting any time they had coopted the communication systems and established a direct connection to something called a Battlefield CODEX.

He hadn’t personally interacted with the metal soldiers, but they had not bothered communicating with him either, though they didn’t have any issues instructing Phantom Division soldiers where to go and give orders on what was needed. Asaru was occupied, so they were following the instruction of the Custodians.

It was slightly unnerving to see.

Out had also walked four aliens he’d never seen before. They appeared to be Mutons, but were taller than even the Elites in thick black armor. Praetorians, Joreal had called them in awe. “They’ve never left the Temple Ship before,” he’d said. “The Imperator must really be expecting something to happen and this Human is very important.”

At least Agent Gertrude was off-planet. Or at least Volk didn’t know where she was going. He expected that she was being transported to the most secure location in the Collective, or perhaps being moved to multiple locations to reduce the chances of XCOM managing to track her down. But since the Collective was still sending reinforcements, it appeared that there wasn’t just the chance of a fight, there was going to be an attack.
All for a suit of armor.

And now, even Asaru was seeming to become…concerned with the kind of reinforcements she was receiving. A half-dozen Spectres had just walked through the Gateway, and had immediately been appraised by the Custodians and followed unspoken commands. Perhaps they were also connecting to this Battlefield CODEX?

The Spectres were something that was as close to a WMD as he had ever seen. And from what had been demonstrated, it took another WMD to kill one. It was beginning to look less like this was preparing for a fight as it was a massive field test of sorts. It would line up with what Gertrude had said.

Something the Ethereals would fear. If such powers were after them…then this was one of the best ways to gauge your own strength against them, especially if they were expected to respond in force. This wasn’t just a Phantom Division concern any longer, it appeared to be on the behest of the Imperator himself.

Volk felt like all of them were in much deeper than they had realized. Even Asaru seemed to be recognizing this, especially now that their latest guest had graced them with her presence.

“I did not request any assistance from Isomnum,” Asaru was saying, her Vitakarian form sounding irritated. “Take yourself and your minions away. I have enough soldiers here to kill ten XCOM squads.”

Her name was Sonoda Ikuko, and where she had come from Volk had zero idea. All he knew was that she was supposedly Human, and was a representative of Isomnum. She was flanked by two Sectoids who were encased in some black armor which seemed to have actually infused itself into their bodies. They stood straight and tall – Vanguards for sure, and clearly cybernetically augmented.

But they felt wrong. There was something around them, and the pressure on his mind made him think that Asaru was protecting him from something. Ikuko in contrast was wearing what looked to be a completely standard lab coat, with several surgical tools and vials strapped to her waist and diagonally across her chest. She was definitely a middle-aged Asian woman, with her black hair slowly greying but put up very neatly into a bun.

And she was not intimidated by the apparition before her. “No,” she said softly, her voice with a malevolent echo to it. “I was sent at the behest of the Dread Lord himself. Only he can command me. I will assist in your defenses, and I can assure you that…well.” She moved her stone-grey eyes to look directly at Volk and smiled. “You want me on your side. Your own people are insufficient.”

The woman smiled wider. “And you should prepare for one more. The Voice has been informed, and she will send one of her puppets to ensure that the Sovereign who dares interfere with us will be dealt with. This is by direct order of the Imperator. Do I make myself clear?”

“The Imperator would have informed me about this first,” Asaru growled. “You echo Isomnum’s insolence in speaking to your superiors.”

“Go and hide, Nebulan,” Sonoda said with a smile. “Hide as you always do when confronted with challenge. Go complain to the Imperator. Forego this pointless debate, I have work to accomplish.” She gestured as the two Sectoids marched away, and Asaru’s body vanished, though not before shaking her head at the woman.
Volk now felt very uncomfortable, being in the same room alone with her. She didn’t seem to have some kind of psionic aura around her, but anyone who worked with Isomnum was not someone he wanted to be around alone. “And who are you?” She finally inquired, slowly walking over to him. He rested his hand on his pistol, not even pretending to be subtle. “Her latest interest? You aren’t a terrible specimen, I must say.”

Volk just coughed awkwardly. “Ah, no. Not anything close to that. I just work with her.”

“How unfortunate, but unsurprising,” Sonoda just began walking, and Volk fell into step behind her. “An Ethereal trapped in the past. Stuck with her familiar comforts and cults. A weak and cowardly Ethereal, who hides and misdirects all she can to prevent her greatest weaknesses from being brought to light.”

Volk snorted. “Don’t look too deeply into it. All of them have their gimmicks. Hers is just being evasive and playing with illusions.”

“If only it were so simple,” Sonoda said wistfully. “Yet I do not need to convince you of her ill judgement at times. You fear she had made a mistake, and that everyone has become caught in something far larger than themselves. A conflict and goal which eclipses the galaxy itself. You are correct, Konstantine Volikov. And that enemy is coming now.”

“Stop looking into my head,” he growled, swallowing.

“Are you afraid of what I will find?” She inquired, glancing up at him. “You think that I care that you will turn on the Ethereals just as easily as you did your own kind if you don’t get your way?” She waved a hand. “You are merely a Human. You do not concern anyone that matters. Play in your delusions if you wish, Volk, I do not care overmuch.”

“Then stop looking.”

“I prefer to know people,” she said dreamily, her voice tinged with wonder. “Their ambitions, lives, and terrors. Strengths and weaknesses. What best to know how to shape and guide them. You could be a powerful tool, Volk, more than you already are. But that will unfortunately not happen until you understand one essential truth about yourself.”

He grunted. “Please, enlighten me.”

“You are worth nothing,” she said without pausing. “You want to be the hero of the story. The one who will guide all to your vision of the future. A champion of the forgotten and voiceless. But you are no hero, you are no grand character in this story. You are merely a weapon used by those who are your better. You are a stringless puppet going along the whims of your masters without knowing you are under their control. Your freedom; your influence are an illusion, for all know what one has to do to ensure your cooperation. Your…weakness. Elena.”

The dread which had been building up in him crystalized into ice when she finished. “Do you want me to shoot you?”

“I want you to try.”

He obliged and moved to reach his pistol…

And found he was frozen solid. He couldn’t even move his head. Sonoda just turned around, facing him, eyes tinged with purple. “Pointless. I could have told you as much.”

“Hell of a pep talk,” he growled. “No wonder everyone hates you and your master.”
She allowed a thin smile. “Most people hate to be told the truth. Consider yourself lucky that I gave you this privilege. Most are not told that their lives are utterly meaningless and pointless. They are content to rest in lies and comfort to never amount to anything. Few are worth having their eyes opened. You can be more, Volk, and that is the point I want to make. Purge yourself of your weakness and fears as I did, and you will have achieved something even many Ethereals do not realize.”

He wanted to say something, but he also didn’t want to speak to this woman any more than he had too. It was too unsettling and frightening to have her keep talking. He just wanted it to end and be freed. The purple light faded from her eyes, and she walked away, leaving him alone in the hallway.

“Useless doctrine. Incorrect timing and priorities.” Volk almost jumped at the voice behind him, spinning around to see a new terror before him. The black-robed figure was just taller than he was, with its face hidden in a hood. The arms were cloaked inside the robe as well, and he didn’t know if it was an Ethereal or some other alien.

The voice was strange; a mix of machine and a female. “Who are you?”

“I am the Voice of the Sovereign,” it said. “And I am here to ensure that T’Leth is defeated.” A single arm emerged, one that looked sleek and metallic, with the black metal seeming to shift and change as if pointed behind him. “Pay little heed to the words of Isomnum’s pawn. There is conflict coming, and it is time to prepare. Go. See to it that it is done.”

Nebulan Base Location - Argentina

2/6/2017 – 12:24 A.M.

“She is here,” Aegis stated, as the soldiers stormed out of the skyrangers and into the line of trees surrounding the base. “Be cautious.”

The Archangels were grounded and following them for now, while the Shoggoths were loose and following at the end, being eerily quiet as they moved along the ground. Zara, Viktoria, Harper and Crevan were in the front, with the other Chronicler agent wearing the stony armor as usual. Oliver did wonder how the Collective was going to react to…well, many things that were about to be shown today.

The MELD Operators not the least among them.

Zara had hopefully been preparing.

Aegis suddenly jumped into the air, and created a solid psionic barrier underneath him, a block in the sky where he could oversee the entirety of the base. Purple energy flared around him and he motioned up. Ahead of them purple barriers rose around the base, effectively trapping whoever was still inside.

“There are many psions,” Geist muttered beside Oliver. “Powerful ones.”

The base before them was large. There had been some kind of camouflaging technology on the perimeter, but once the SkyRangers had penetrated it, they had seen that, while it wasn’t large enough for a large army, it was definitely a major base of operations for an Ethereal. Alloyed walls surrounded the internal bases, which were domed and curved as opposed to rectangular and angled. Several of them were interconnected.
They’d certainly built a lot in a fairly short time.

“Soldiers on the walls,” Harper noted, and Oliver saw that soldiers were lining the rooftops; soldiers wearing black armor aiming down with still precision.interspersed between them were other humanoid figures in hoods and masks, carrying more traditional weapons. Human collaborators?

“Custodians,” Anastasia grunted, the psion clearly resisting the urge to let loose. “Damn it.”

In the center of the wall was the entrance, covered by a shimmering multi-colored shield.

One that suddenly vanished.

“Move to cover!” Zara commanded, as all of them slid behind trees, the psions glowed with power, and Zara encased herself in a sheath of nanites, black armor rippling around her as she prepared to face whatever would come out. Crevan and Harper stood behind her, as the Archangels prepared to fly. The Shoggoths even flattened themselves on the ground, massive black blobs staining the forest floor.

“T’Leth.” The voice came from a figure slowly walking through the entrance which re-engaged the shield as it walked through. It was a mix of robotic and female, but definitely unnatural. It almost reminded Oliver of the Overmind, if it was much smaller and had a black robe instead of orange. An Ethereal?

“You live.”

Oliver noticed Harper’s fists clench as the blue aura around him began to become visible. He wasn’t quite sure of the extent of the abilities or purpose of the Chronicler’s soldiers, but he was starting to get a better idea as Harper’s layered voice began speaking. But it was not the words of the Human, but something else. “I am surprised you managed to crawl back from the brink after I decimated your…defenses. I thought you deceased, Mosrimor, but I should not be surprised you slink underground and live.”

Harper motioned him away. “Leave this planet, Mosrimor. Leave this species. Take your puppets and go as far away as possible, or I will destroy you just as I did the last time – and will ensure your death forever.”

“You do not make demands of me,” Mosrimor, was it? For all Oliver knew, this other entity was speaking through the robed figure. “You have changed. I had thought you were above using species.”

“I am not using them,” Harper stepped forward. “We have come to an arrangement. One which begins with your destruction, and that of the Ethereal Collective.”

“Lies,” Mosrimor sneered, taking a step forward, inexplicably seeming to grow larger as the robes appeared to retract into the skin, revealing a slender Ethereal-like body. It was almost stick-figure in appearance, with shifting skin. Nanites. Was the entire creature made out of them too? “We do not make such with the lesser species. Even you know this.”

Harper – or perhaps the entity, laughed. “Have you informed your Ethereals about this? I am certain they would find such opinions curious.”

“Kill them.” Mosrimor commanded, and the building tension dissolved into chaos.

Viktoria and Taira shot into the sky, the latter Telekine lifting the two Shoggoths with her as she
flew towards the base and flung the creatures into it. They were on their own now. Viktoria unleashed a maelstrom of psionic power onto part of the wall, killing a section of the Custodians and Humans on it before being forced to move as plasma fire converged onto her position.

Oliver and most of the other soldiers began taking aim at the enemies on the walls, just as the barrier lowered and a dozen Custodians and Phantom Division soldiers marched out. The Mosrimor avatar motioned and an arm dissolved and reformed into multiple pillars that the Custodians and soldiers used as cover, while it reformed the arm within moments.

“Telepaths are attacking,” Geist stated from behind a tree. “You’re on your own for now.”

Crevan had not moved, only did a short wave as he was surrounded by a transparent globe which dissipated any projectile which entered the vicinity. After a few seconds appraising the situation, he raised a hand, fingers parallel to the ground and purple-white lightning erupted from the fingertips that slammed directly into one of the Custodians behind a nanite pillar, which subsequently collapsed onto the ground, twitching.

Oliver blinked.

The hell?

Harper blasted the Mosrimor avatar with a stream of blue energy, which was absorbed when the nanites reformed into a shield. It also wasted little time in having a portion of itself break off and begin consuming the fallen Custodian. Zara was marching forward, her nanite armor absorbing the plasma fire with seeming ease, as she formulated her own defensive structure from nanites, shedding the armor as she planned her next move.

“Watch out for Phantom soldiers!” Sylvia called out. “They’ll try and flank us!”

Branches were falling all around them and Oliver was quite certain a small fire was going to be started from the barrage of plasma fire coming towards them. “Ah!” Anastasia gasped as she moved back into full cover, a clear wound gaping from her elbow. The armor was already repairing itself and medical protocols were likely going into effect, but she was definitely hurt.

“Watch for snipers!” Oliver called, as he laid down some suppressive fire on the walls.

“Viktor, Oliver, Henry, Rosario move forward and lay down fire towards the entrance,” Zara instructed, and Oliver noticed that the ground around a good portion of her position was bare and stripped of...anything. “Nira, target those Humans. Analyn, Matthew, stay to the back and watch for flankers.”

Made sense that she would want the Medics in the back, but Zara wasn’t done. “Everyone else target the walls. Anastasia, make a new opening when you can.”

“Yes sir!”

Crevan and Harper were keeping the Mosrimor avatar at bay, with the occasional crack of purple lightning and blue energy streams. But the nanite puppet seemed to be adapting, as it was absorbing the lightning strikes and energy with hardened shields and soon psionic shields – so it was a psion. He really needed to ask Crevan later how it was possible to shoot lightning.

Zara had built up her fortification wide enough for all of them to kneel behind, and all they needed to do was charge to the opening. Well, here went nothing. They charged into the hail of white and green plasma, taking a significant amount of direct hits which the armor was thankfully able to repair without issue, but it had depleted a good part of his reserves.
“Grenades!” Viktor called, as Phantom soldiers threw small spheres at them.

Unfortunately there was no place to take evasive action. Oliver actually managed to shoot one, and instead released a black swarm of nanites which landed right on top of him and began eating through his armor. His suit nanites responded and Zara was immediately on him, placed a hand on his chest and adding her own help to destroy the other nanites.

She quickly adapted to first securing the remaining spheres in additional nanite cases, and kicking them far away. She was too slow for one, which began eating into Rosario’s leg. He tried batting them off, but it only made some of the nanites get on his hand and start eating through it as well.

“Matthew, we need a medic here,” Zara ordered as she helped purge the nanites from his body. “Now!”

“Copy!”

A psionic maelstrom materialized to the right side of the wall, growing in intensity as the Custodians on the top moved away. Mosrimor motioned and a psionic shield appeared around the area that was being ravaged. Crevan shot another bolt of lightning from his fingertips, but this time he sustained it, which was apparently intense enough that Mosrimor had to dedicate more concentration to the shield protecting him.

With no protection, the wall eventually was rent into enough pieces that there was a noticeable gap. More than enough for one or two soldiers to get through. Oliver managed to clip a Custodian as it spun out to shoot him, although it appeared that they had self-repairing armor as well. Those machines needed to be killed quickly if any lasting damage was to happen.

“They know what they’re dealing with,” Viktoria’s voice was tight. “They’ve got Custodians at every single juncture possible and I’m pretty sure they’re linked together. We can’t stop evasive maneuvers until they die.”

“ADVENT will be coming soon,” Zara told them. “Pull back if needed and support them when they arrive. You got the Shoggoths in. Hopefully that’ll take care of the telepaths inside.”

“Copy, we’ll work on that.”

At least there was some good news. They weren’t having to deal with Nebulan’s illusions. Although, given that their own telepaths were essentially taken out of the fight in any meaningful capacity, it wasn’t a trade without cost. But he felt they were making progress.

When ADVENT came, that was when the real show would start.

***

Unknown Location

Unknown Time

The room she was in was best described as a mix between a workshop and medical room. It was massive, tools were strewn out all along the tables, and there were machines that were attaching components and inserting cybernetics towards various aliens under some type of anesthetic. The black-armored Custodians stood throughout the room, at the entrance, and two before and behind her.
In the middle of the room, looking at a holographic recreation of the armor she was wearing, was Fectorian. He was largely as Aegis had described him. Half of him seemed to be machine, and even the upper set of limbs had ports and places to further augment his strength. The additional set of limbs and manipulators from his back was retracted as he considered the hologram before him.

He had taken scans through means she didn’t know, but she did know that he wouldn’t get anything important. No more than XCOM, anyway. In the meantime, she needed to think of how she was going to get out of this.

No...

She was afraid that it was over. That there was no way out of this. That this was the end for her. Either life as an unwilling test subject as the Collective tried to pry the armor off of her piece by piece, or she could trigger the self-destruct sequence in her armor. It would destroy the armor and prevent the Collective from ever using it.

But she would die as well.

Did she want to completely give up now?

No. Not yet.

Not until she knew it was truly over. She knew they couldn’t control her. They could read her mind all they wanted, but they couldn’t force her to comply. She couldn’t comply even if she wanted to, especially if it was demanded by an alien. The Manchurian Restraints were harsh and unrelenting, but she was grateful for their rigidity in this case.

In theory, she knew that she could technically exit the suit on her own. She could subvert the Restraints in some way. But she would not do that, no matter what happened.

“I know you are awake, Agent Gertrude,” Fectorian said, without turning to her. “There is little point in keeping silent.”

“And what exactly would I have to say to you?” She asked dryly. “Both of us know I’m not going to cooperate with you.”

Fectorian turned. “I care little for your cooperation or not. I’m merely curious about something.”

“Shoot.”

“The Sovereign One whose armor you bear,” Fectorian said. “What do you know about him?”

If Abby could have shrugged, she would have. “Can’t answer that. I don’t even really know what a Sovereign One is. Other than it’s old and powerful…and this one is interested in helping us.” She gave a thin smile under her helmet. “I know I’ve said this before, but you captured the wrong woman. I can’t give you what you want.”

“T’Leth.”

“What?”

“His name, the Sovereign, T’Leth,” Fectorian said, shutting down the hologram and walking over to appraise her. “From what our own Sovereign has told us, he is a master of war. Weapons and armor like no other. And a loner – which makes his interest in your species curious.”
Abby found it really ironic that she was learning about all of this in a situation where she was quite possibly trapped in with no escape. “Curious? Why? Thought you Ethereals knew everything.”

“Consider it a professional curiosity,” Fectorian explained. “A contrast of what little I know of these beings. They do not line up with what the Imperator has stated, either out of ignorance or agenda. I have had encounters with two Sovereigns, and have not been reassured. I want to know if your Sovereign is different.”

“Again,” Abby sighed. “You’re asking the wrong person. And what would that change?”

“Because it would either confirm the Imperator’s suspicions as to the nature of Sovereign Ones, or refute them,” he answered. “I do not know how much you are aware of the Bringer, but I am concerned the Imperator’s judgement is compromised. His handling of such leaves much to be desired. I need more information. I need more data. You serve as a key to this, despite not being directly connected, or so you claim.”

“Please get to the point.”

“I want to speak to T’Leth,” Fectorian stated. “Or a true representative.”

Abby blinked. “What?”

“Your species is an interesting challenge, and as the Battlemaster has instructed, I will provide him weapons to match ADVENT,” Fectorian opened a hologram port on his palm which flashed through designs Abby had not seen. “But I dislike being lied to or treated as a mere engineer simply because I do not care for the politics and maneuvering of governments. The war both our sides are in is based on lies; lies which have only recently been revealed to me. All for an outcome and objective I am not convinced by.”

“And what is that?”

“The death of a Sovereign One,” Fectorian stated. “His ultimate goal. He is convinced that the Sovereigns must be eradicated for the good of the galaxy. Earth is a trial run to achieve this on his own. The Bringer will be turned into his instrument and weapon.”

Abby snorted, then allowed a chuckle. “He really thinks it will be so simple? Even I see problems with this.”

“And I call such judgment into question,” Fectorian agreed with a nod. “But I am not Aegis. I will not abandon the Imperator on a hunch that he could be wrong. And I will not be the Battlemaster and continue to go along with the plan blindly. No, I will do something to determine the appropriate course of action. And you, Agent Gertrude, can assist me in this.”

“Really,” she waited. “Why should I trust you?”

“Because I am the only way that you have a chance of living,” he stated. “And more importantly, you could assist me in confirming that the Imperator is wrong. You know, and the Commander does as well, that you cannot win this war without help. Even if you have a Sovereign assisting you – we can call upon two. The Imperator can turn your world to cinders if he desired. So you need allies. Ethereal allies.”

“And all you want is to talk to T’Leth,” Abby said dubiously. “Really.”

“It would be a start,” Fectorian confirmed. “The Imperator overlooks me, and believes I do not care about the wider galaxy. To a certain extent this is true, but in this situation I cannot ignore it. You
would almost think he forgets that I am the one who ensures his technological superiority. And that I am not a meek servant like Sana’Ligna.”

“To be fair,” Abby coughed. “I doubt Aegis would have—“

“He only knows me by reputation,” Fectorian interrupted. “Few care to know me, and I prefer it that way. People are fallible, illogical, and unpredictable. Machines are straightforward and simple by comparison. What others think of me is irrelevant in this case, Agent Gertrude, do you wish to hear my proposal or not?”

Abby considered. If this was a large elaborate trick…it was a damn good one. And she hadn’t agreed to anything yet. She could at least hear him out. “Fine.”

“You will be given a choice,” he said. “I am unsure as to where you will end up, but you will face Patricia—“

“What?”

“Ah, yes,” Fectorian paused. “You would not know. She has been a guest for some time; she seems to have been convinced of the Imperator’s plan and I suspect it is only a matter of time until she commits fully. She will attempt to convince you to take off your armor in exchange for your freedom.”

“A guest?”

“Yes, yes,” Fectorian seemed mildly annoyed that she was focusing on this. “And ironically appears to have his favor more than me.”

Abby slumped in shock. Was that actually true? Patricia a traitor? She never thought something like that could actually happen…but she remembered what Aegis had said about the Imperator. People changed around him. They began to see his perspective and conformed to his ideals and values. Had Patricia succumbed to this? Was she lost forever?

She’d been concerned that Patricia was in a cell to be used as a test subject or as bait for something later.

But this was far worse.

“And what should I do?” Abby asked weakly. “I won’t give them the armor.”

“No, you won’t,” Fectorian agreed. “I suspect you would die before you allowed that, and your conditioning would prevent it as well. Does your armor have a self-destruct feature you can activate?”

This was perhaps a moment of truth. If…something happened…she looked to the top left of the screen where the prompt was. The blinks in sequence would be all that was needed. She just needed to decide if she should disclose that information to Fectorian.

Time to take a risk.

“Yes.”

“Perfect. Once you hear Patricia attempt to convince you, activate it.”

“What?” She asked. “I’ll die.”
“Correct, you will,” Fectorian confirmed. “And deny the Imperator the armor and ensure that you are for all intents and purposes, dead.”

“I follow that…” she shook her head. “But how does that help you?”

“Because before I send you to the next location in…” he paused briefly. “Two of your hours, I will need you to take off your helmet and take a full and complete scan of your brain and gather several tissue samples. I will use these to clone you and restore your mind, and you will be free to return to T’Leth without the suspicion of the Imperator, and I will be at least spoken to. As I suspect right now, they would consider any such approach a trap, and I have no way to do this without drawing suspicion.”

Abby slumped her head down, thinking furiously. This was some elaborate scheme to cheat death for the possibility of maybe getting an Ethereal ally? One who might just decide to keep her as a conditioned slave like all of his other soldiers? Was it worth the risk? And if he was lying about all of this, even taking off the helmet could be dangerous and give him one piece of Sovereign technology.

“How do I know you’ll even follow through?” She demanded. “This could all be a lie.”

Fectorian just stared at her for a moment. “If you are so concerned that this is an elaborate scheme to remove your armor, the Imperator is expecting you as you are now. There is little stopping you from simply saying what we were talking about. The Imperator, the paranoid leader he is, would almost certainly attempt to read my mind to confirm one way or another. Or simply look through your own memories. We both stand to gain and lose here, Agent. You will need to trust me, yes, but consider what you could accomplish without this. You will simply die. Now you have a chance to gain an ally for your war.”

“But I have no guarantee you’d even be on our side.”

“Not until I speak to T’Leth, yes. But that is a risk you have to take.”

Abby considered.

It all came down to if she could trust Fectorian…not as an individual, but trust that he was sincere in his plan. And from what she could tell…he was. And the more she looked at her situation, the more she knew that there was no way out. She would die in all likelihood, and all she would accomplish would be denying the Imperator some Sovereign armor.

And if Fectorian was lying…all he would get from her is a clone and a mind he could already penetrate.

“Fine,” she said. “I’ll help.”

“Excellent,” he pressed a button on his lower arm and the restraints retracted and she fell to the ground. As she stood, he was already walking over to a table. “You will need to be put under for this. We have limited time, so please remove your helmet.” After some hesitation, she complied and set it on a nearby table.

“It will destroy itself if you touch it,” she warned, going to lay down on the table. “Fair warning.”

“I understand,” he did glance over to it. “I will also need to erase your memories of this conversation. It would not do for Patricia or the Imperator to learn of this, now would it?” He nodded to a Custodian. “I have recorded this. When you are awakened in your new body, it will be played to you.”
Abby didn’t like it, but she knew that it was the logical step to take.

She sincerely hoped Fectorian was telling the truth, and she wasn’t making a big mistake.

***

Nebulan Base Location - Argentina

2/6/2017 – 12:50 A.M.

ADVENT was knocking at their door, and Volk was not in the right frame of mind to fight. XCOM was keeping the odd Sovereign avatar occupied, as well as a good portion of Custodians and Phantom Division soldiers. ADVENT had split their force into two separate blocs which were now assaulting from the other sides.

The Archangels still roared overhead, but the Custodians were keeping them occupied, although it largely depending on them not being attacked. And right now, that situation was growing more and more precarious. And even within the base there were enemies.

As Volk was finding out.

“Repeat that!” He demanded as he stormed along the walls, aiming his sniper rifle down at the mass of ADVENT soldiers. “There is what in the base?”

“A….” gunfire went off in the background. “An octopus. A giant octopus!”

“Well then kill the giant octopus!” Volk yelled, as he sniped yet another soldier.

“We’re trying!” Was the cry. “It’s not dying!”

“Goddamn it,” he muttered under his breath. The last thing he needed were rants of giant killer octopi in the base. “Get Phantom Division support in there then. Use nanite grenades –“

“Spectre here!” Came the call. “Looks like we’ve got it!”

About time. Volk returned to the situation at hand. Overhead there were also helicopters circling, and they were maneuvering to begin laying down fire of their own. One of Sonoda’s Sectoids was also along the wall, and raised a hand towards it. Volk didn’t know what it was doing, but it appeared that the PRIEST reinforcements were having a hard time dealing with the amount of psionic power at play here.

A Spectre materialized along the wall, took a look down into the ADVENT soldiers who were massed and advancing, and dissolved to appear down on the ground. It didn’t take long for ADVENT to notice and they pointed out the machine with frantic warnings. One of the Priests motioned and the Spectre was trapped in a psionic box.

Couldn’t have that.

Volk lined up his sights to the offending Priest, and fired after a few moments. The Priest fell backwards, a new hole in his helmet. Volk quickly ducked back as a hail of gauss fire slammed near him. From above the helicopters unleashed their weapons along the walls, ripping several of the Custodians apart and allowing the Archangels freedom to operate.

More Spectres appeared along the wall, and went down to decimate more ADVENT forces. But with the Archangels in play, the game had shifted and the Custodians were quickly reforming the
skylines. The black armored Sectoid made a chittering noise, flared with purple energy, and one of the helicopters began tilting until it soon crashed into the ground in a loud explosion.

One of the Archangels was showing wisps of purple energy off of them…no…both of them were. “Both Archangels are psions,” he hissed into his mask. “Priority target on them.” The Custodians seemed to have the right idea as the wall opposite him was engulfed in a psionic tempest. Dropping to one knee, he quickly aimed for a series of weaknesses that – if it hit – would likely cripple her completely.

Gunfire and screams in the background he tuned out and inhaled.

He pulled the trigger.

Slight right.

Trigger.

Both engines on her back exploded and she wobbled into the air as gravity took hold and began plummeting to the ground. The other Sectoid of Sonoda’s had leapt out of the way of the psionic maelstrom, and extended a black-armored hand to catch her. The Archangel became encased in a purple-tinged grip of the alien, as more psionic mist ravaged the armor.

The other Archangel swooped down with a yell and the Sectoid…well, Volk didn’t quite see what happened, but it looked like the Sectoid ceased to exist and instead turned into chunks of grey flesh and black metal. She gathered the fallen Archangel in her arms and shot back into the sky and back to where XCOM was still fighting, dodging and weaving through the Custodian fire.

They were temporarily out of the fight. In the meantime, he needed to check up on how the battle along his own wall was. Phantom Division soldiers were shooting at one of the helicopters, and ADVENT was firing rockets into the walls with the MDUs engaging the Custodians in a battle to see which machine was superior.

The Spectres on the ground were chewing through ADVENT defenses, and the Priests were being pushed to their limits to contain them. They had already consumed half of the opposing force, although there the Lancers were countering that with EMP tools to destroy the nanites. It was a fight that could still go either way.

“Elena, how is it going on your end?” He asked, changing tactics and deciding to see how he could deal with the helicopters.

“ADVENT pushing forward. Archangel attack severely crippling. Possibly retreat.”

“Understood.” Not good. If even one of the faults was breached, it was going to end in a losing battle. He was expecting XCOM to eventually prevail, especially if ADVENT was putting up a good fight against them. But if one of the sides fell…hmm. Asaru wasn’t a major help here, since she was preoccupied with ensuring that Aegis didn’t completely destroy them, and had limited his influence to placing psionic barriers around the base – which had dropped when ADVENT arrived.

He’d better update her. “Asaru, we should prepare for a retreat.”

“Have the purges completed?” She sounded strained – a first for her.

“Not important,” he shook his head, as he fired and took out one of the helicopter guns. “The east wall is going to fall to ADVENT soon, and I don’t know how close XCOM is to breaking through. Have the Custodians and Spectres hold off as long as possible and everyone else needs to get out. If
they take control of the Gateway—“

“Inform me the moment there is a breach,” she cut him off. “Only then will we retreat.”

Volk gritted his teeth. “Understood.”

He’d better get a full explanation when all of this was over.

***

Nebulan Base Location - Argentina

2/6/2017 – 1:22 A.M.

The medics were rushing all over the place as the injuries continued to pile up for them. Oliver knew they were making progress, but flanking attacks from the Phantom Division, pinpoint shots by the Custodians, and sniper fire from the walls was whittling them down slowly but surely. Unfortunately for the aliens, they were running out of tricks.

It was now a continuous battle between Zara and the Mosrimor avatar over which would get the raw materials from the bodies. It was still quite easily holding its own, but as another Custodian fell and with a motion it was consumed by the nanites, Oliver knew that sooner or later it would run out of enemies to consume.

Crevan was still keeping it occupied with intermittent lightning strikes, and was also responsible for frying several Phantom Division soldiers who had attempted surprise attacks. “Down!” Oliver yelled suddenly as one of the armored Phantom soldiers materialized behind them with a nanoblade in hand. His push into Zara made the jab miss, but unfortunately the alien followed up by stabbing it into his stomach.

He lurched at the white-hot pain as the alien tossed a grenade by Henry and the still-injured Rosario, and they couldn’t move out of the way in time before the green plasma detonated beside them. Zara was also damaged by the attack, but the nanites repaired her quickly and with a motion the soldier was shouting as he was slowly consumed.

“He did not want to have it break inside him.

Analyn was soon beside him as she looked him over quickly. “Good. Not broken inside. I can pull it out, but you cannot move. Got it?”

She acknowledged his nod and wrapped her hand around the thin hilt. “One…two…three!” At the end she pulled on the blade sticking out of him, wondering if he should touch it or if it would make things worse. Nanoblades were bad; that had penetrated his armor like it was nothing. Of course the downside was that it had to be at a good angle…which this strike had been.

He gave a nod and grunt. “Get it over with.”

She acknowledged his nod and wrapped her hand around the thin hilt. “One…two…three!” At the end she pulled on the blade and within a moment had drawn it out in a smooth motion with a short shout of pain from him. The medical properties of the suit had been utilized already, so she quickly sprayed his exit wounds with the med-kit. “We’ll have to check for internal damage later, but this should last until the end of the battle. Got it?”

“Got it,” he heaved, standing up again and aiming his rifle at Mosrimor. The entirety of the Collective reinforcements seemed completely depleted, and now it was only the nanite creature.
The entire area around him, and Zara for that matter, was completely bare of any life or materials, all having been consumed in some form or another for the nanite operators.

It was only a matter of time until he lost.

Unfortunately, he seemed to realize that as well.

The shifting black nanites on his skin hardened to a glossy seamless finish, and a psionic shield appeared over himself as he began walking forward. Everything they had, XCOM fired into the approaching creature, but in his deceptively fast speed, he dashed to where Zara had holed up, giving Oliver a terrifyingly close glimpse of the massive alien.

He grabbed Zara, lifted her into the air and retracted the psionic shield around his hand as he began to send the nanites from his body towards her. She fought with her own MELD nanites, but she had been running low and had dispersed them onto the battlefield as fortifications or to negate other attacks. She had very few left to spare.

Oliver fired hopelessly into the psionic shield, but it seemed to be doing very little good.

A lightning bolt flashed, and slammed into Mosrimor…no…slammed into Zara. The conductive shock forced Mosrimor to drop her, even as Zara was twitching on the ground and smoking. Another psionic shield suddenly bisected the alien, with a cube appearing around it as the body fell into two pieces, blue blood revealing that there was something living underneath the nanite armor.

It was an Ethereal. A small one by their standards, but a real one. The nanites likewise became dead and immobile, though Oliver definitely did not trust it right now. He looked behind him, wondering where that had come from. Geist slowly lowered his arm, then slumped forward slightly. “It’s fortunate that worked.”

“Yeah,” Oliver breathed as the medics rushed to Zara. “You couldn’t have done that a little earlier?”

Geist stared at him, and Oliver suspected that under the helmet was either annoyance or exasperation. “From the onset of this conflict I have been dealing with ensuring that three powerful telepaths don’t affect your vulnerable minds along with Aegis and the rest. It is not an easy task to accomplish, and I took a risk intervening like that. But with it dead, we can proceed.”

“Alright,” Oliver looked around at the soldiers who were either uninjured or mildly injured. He knew he needed treatment, but was fine for a while yet. “We move inside now. ADVENT will need help.”

“Yes, we move.” Geist nodded. “Since Viktoria and Zara are currently out of commission, I will take command for the remainder of the operation. What little of it is left.”

Oliver did not feel like contesting him, and Geist was probably the best to see the mission through. “Regroup and prepare to move forward,” Geist ordered. “Roxas! You will stay behind and ensure the wounded are stabilized and guarded. Xirau, you will come with us.”

“I will stay and guard against any other attacks,” Harper added. “And to ensure that this thing doesn’t have any more surprises.”

“Fine,” Geist curtly acknowledged. “We move out now. Let’s hope that there is still something left to salvage here.”

***
The base was falling, and there was no more time to waste. Volk, Elena, and a few of the Phantom Division were moving to find Asaru and ensure she got out. Apparently there was an unforeseen problem they had encountered on the route to the Gateway, even though she was protected by the Praetorians.

The retreat had been sounded, and Volk was torn between irritation that there was only one Gateway in the first place, and concern that they wouldn’t be able to get out in time before XCOM marched into the base proper and killed or captured everyone. This battle had already extracted a heavy toll from everyone involved.

Plasma fire was heard down the corridor, and they rounded the corner to see a bizarre and terrifying sight – namely that the Praetorians were engaged with a massive…octopus? There had been more than one?

More concerning was that there was a dead Praetorian on the ground, the limbs broken and twisted. The black monster was currently wrapping its massive tentacles around another Praetorian which was desperately trying to yank them off, but the suckers on the tentacles couldn’t be so easily removed. Normally this wouldn’t even be a concern for something as massive as a Praetorian, but the problem was that this octopus was gigantic.

The corridor was maybe ten feet across, and the octopus was easily taking up that entire space, and more dangerously, didn’t seem to be that bothered by the plasma fire it took. They arrived just in time to see the octopus break one of the arms of the Praetorian with a loud crack, while making an utterly eerie trilling noise.

The Praetorian was unfortunately not dead either, and the creature didn’t seem to be in a massive hurry to finish the job.

“Fire!” Volk called out instinctively, even though it was likely a bad idea, not only due to the potential of crossfire, but also because shooting it didn’t seem to be working in the first place. Behind the rolling mass of black he saw his first glimpse of the elusive Asaru herself. In fact, she wasn’t too far off from some other Ethereals he’d seen.

Mostly a mix of light armor and robes, with a hood concealing her face. Her height would have easily towered over him, but next to the Praetorians, she was actually a bit shorter. What he couldn’t understand was why she wasn’t doing anything to the creature currently engaged in – and winning – against her Praetorians.

Not his problem right now. He could demand an answer on that later. The creature seemed to grow tired of the Praetorian and decided to kill it, breaking more limbs and the neck in a final squeeze before almost sliding to the ground and moving closer to the last two Praetorians – and Asaru herself. One of the Phantom Division soldiers pulled out a nanoblade and made the questionable decision to charge forward.

“Woah, wait!” Volk called out in futile warning, knowing that was mostly likely not going to work. Sure enough when it got close, a tentacle lashed out and wrapped around the much, much smaller Vitakarian’s arm. Luckily for the Vitakarian the free hand was the one which held the nanoblade, which he then plunged into the tentacle. The response was immediate and the creature made a higher-pitched trilling sound as it switched focus to the alien which had caused it pain.
Volk watched in fascination as the creature used another tentacle to pull the blade out of its arm, and with enough delicacy that it didn’t shatter the blade and leave chunks within it. Once the weapon was discarded, it wrapped said tentacle around the alien and crushed it. Well, another one down. This was great.

“We need a Spectre,” he muttered. “That seemed to work well against the last one of these.”

“Risky, but we need to kill that thing now,” another Phantom Division soldier muttered. “Back up! Nanites will be loose!”

The soldier, along with the few remaining of the Phantom Division threw several of the nanite grenades to the creature and Praetorian it was currently wrapped around. They exploded into a fine black mist which immediately began clinging to both the alien and creature, and the response was immediate.

The Praetorian began furiously and futilely trying to get the nanites off of him, while the creature sort of flailed and flipped along the ground as it tried to get the nanites off of it somehow. It was moving away from, and up the wall where there was a small gap that…Volk wasn’t quite sure how likely it was, but that it had originally come through?

Octopi could apparently fit into very small spaces, and since this was a monster octopus from hell, maybe it could still do that? It didn’t matter, as both Asaru and the last Praetorian took the advantage and dashed past the carnage to catch up to Volk and the rest. “What the hell was that?”

He asked out loud and they began rushing to the gateway.

“Asaru’s real voice was layered, but honestly not massively different from the one she had used when not imitating a specific person. There was a vibration to her speaking that wasn’t present in her illusions. “One somehow immune to telepathy.”

“We’ll figure that out later,” Volk grunted as they ran. “Gotta get out of here now.”

It wasn’t long before they reached the room where the Gateway was stationed, and luckily it was still guarded and running. Volk had no idea where it was going, but that was the least of his concerns right now as the entire building shook and plasma fire became a lot more noticeable and close. Asaru went through the Gateway; Elena and several of his own soldiers soon followed, as well as those from the Phantom Division. He didn’t know if Sonoda was still here or if she’d already left. He doubted she was dead though, for some reason.

He didn’t check to see if the purging was complete. No time for that any longer, but at least he’d made a contingency plan in case they couldn’t be completely purged. He pulled out the detonator, and the dozen or so little EMP and explosive devices he’d placed on the computers went off. Wouldn’t be able to salvage them now, but it was better than ADVENT and XCOM getting their hands on them.

What a waste though. All for an enemy agent of questionable worth.

He did a quick check to ensure that the explosives were also set up on the Gateway, and once the timer began counting there was no going back. Fifteen seconds, and even then he felt he shouldn’t be waiting around, but also didn’t want to condemn any more to be left behind and killed or captured. The wall suddenly exploded outward, temporarily taking out several Custodians as the rest began firing at the encroaching XCOM soldiers through the dust.

The last Praetorian began firing into the smoke, and seemed to actually clip some of the encroaching soldiers. That was until a bolt of lightning came out of nowhere and slammed into the
alien, even managing to stun the massive Muton.

Time to go.

“Go! Go now!” He called, pressing the detonator and leaping into the Gateway with the crackling sound of lightning the last thing he heard before entering the swirling purple whirlpool.

***

Unknown Location

Unknown Time

Abby figured that the unthinkable had happened and that she’d fallen asleep. She vaguely remembered seeing Fectorian of all Ethereals, but he didn’t seem to have done anything except take a few notes before moving her again. She supposed it wasn’t out of the question that she had fallen unconscious. She was a sleep-deprived, wounded, and restrained mess.

She didn’t know how much time had passed, and if she should give up hoping for a rescue.

No one is coming.

A worry that was becoming more and more true. Objectively...she realized that not even XCOM could follow to where she likely was right now. The Imperator; the Ethereals, they were interested in the Sovereign technology her armor contained, and they were going to take as many precautions as possible. She may have been moved dozens of times to various locations, and she figured she was far, far from Earth.

But eventually she would arrive at the place that would be her end, one way or another.

She knew why she was hesitating in pulling the trigger and removing everything they were working to. She didn’t want to die. Not here. Not if there was a chance that she could get out of this one way or another. But...she was just deluding herself if she expected that someone was going to appear out of nowhere and save her.

That wasn’t how the galaxy worked.

Wishful thinking from a woman who was going to die.

The only question was how she would die. As a broken experiment and lab subject, or in a defiant gesture against the aliens.

Between the two, there was only really one acceptable option.

She just needed to pull the trigger. All it would take was a few blinks and confirmations for the HUD to accept the self-destruct.

It was...different; being in this situation. She had been close to death many times before. She’d been in dozens of dangerous situations, and each time knew that there was a chance that it would end in her death. That hadn’t really scared her, it was just a reality she’d had to come to terms with. Others had died in front of her; people she’d known well. Death was very real, but it had always passed over her.

She’d been here since the beginning of XCOM. She’d gone through so much that it seemed like she would survive as one of the few since the beginning while everyone else died around her. Who
else was still alive from the beginning? Patricia? Carmelita? The Commander and many of the Internal Council?

Not many. Herself among them.

Maybe she’d just gotten lucky so far. In war thousands died, and it was a numbers game where the odds weren’t in her favor. She’d finally screwed up bad enough that this was the consequence of that. It only took one mistake to kill you.

But this was worse for her, because she was now responsible for her death. Defying the aliens through suicide. It was long, agonizing, but something she ironically had control over. Death was an option, not something that happened instantly on a battlefield or out of her control. There was time to think about death now, and what would come after it.

She’d not really been a religious-minded person, not really thinking too much about it one way or another. She didn’t especially care much who believed what, and preferred to focus on the real world, not the what-ifs of what happened when one died. Maybe it was something she’d never really wanted to think about since she assumed if it would happen to her, it would be quick.

But now she wondered.

She didn’t know if there was an actual Hell or Heaven out there for her, or if she’d go to either one. But from what she’d seen and knew about...was it out of the question that there would be something beyond death? Or perhaps it was just nothing and she would just cease to be nothing more or less.

Abby figured she’d soon be finding out, one way or another.

Her room was a cylinder of grey metal that suspended her through some kind of gravity or stasis field. She couldn’t move an inch, even if she wanted to. It was in the center of the room, and she was facing a mechanism that she knew operated as a door. There were likely cameras or surveillance in the room that she couldn’t see, and for all she knew, she was floating in a little metal box in space.

There was no way to break free; she’d certainly tried to no avail. All she could really do was wait, hope, and eventually face reality. The only silver lining she could see was that, right now, she was probably at the end of the line. This was the end stop, and someone would come to see or check up on her eventually.

Perhaps right now she was on the fabled Temple Ship of the Imperator. Or more likely, somewhere else on an unmarked world or in uncharted space; unable to be found or located by anyone. She truly had no idea, but she did find it somewhat funny how the Ethereals were going to all this trouble for someone who didn’t know what they were actually after.

They thought her to be some agent of a Sovereign One, but in reality she was just a woman who had some of their technology. Which she supposed they could at least get out of it. The armor was too valuable to just give them. Best case scenario they learned how to replicate it. Middling case they learned how to penetrate or subvert it. Worst case was that they improved on it.

None of those could be allowed.

Time ticked by at a pace that felt infinite. It didn’t seem to matter how fast or slowly time was passing here. All she could do was wait or end it once and for all. Maybe this was some kind of test the Ethereals wanted to do? Maybe see if she would kill herself out of boredom? That would almost
be funny, except she doubted the idea would even occur to them.

There was a loud click in the room, and the door slid upwards. Finally someone was coming in to speak to her. When she saw who it was, she was immediately concerned that she was so sleep-deprived she was hallucinating. “Patricia?” She asked in disbelief, her voice cracking both due to a lack of water and not speaking for what felt like days.

Patricia Trask did stand before her, wearing the same Aegis armor she had been captured in. Granted, it looked like it had been polished and didn’t have any significant marring or soiled in any way. The scratches and chips on the armor did still exist, but it looked like she had been able to clean it recently.

How?

She was helmetless, and if her face was anything to go by, she seemed unhurt or wounded. She looked healthy, at least no worse than she had in XCOM. The orange rims of her eyes seemed to glow more brightly in a dimmer light of the prison she was in. Her hair was still lose and looked surprisingly good. Abby had always wondered how she’d always been able to keep her hair looking like that during her entire career in XCOM.

Patricia though looked very somber and serious.

She wasn’t here with a minder, or in any kind of restraints.

The implications began dawning on her.

It couldn’t be…

Not her.

“Hello, Abby,” she said quietly. “Long time no see.”

“Patricia…” she repeated, still trying to process it. “What…are you doing here?”

Probably not the best way to ask that question. It could mean different things. She of course meant what she was doing as an apparent…guest? Not necessarily what she was doing in this room.

“I’m here to talk to you,” Patricia answered.

“But you’re…” Abby would have shaken her head, and instinctively tried. “You were captured!”

“Yes,” she nodded. “I was. And brought before the Imperator. We talked.”

Talked.

“Patricia…” Abby swallowed. “Please tell me what I think is going on isn’t true.”

The woman in XCOM armor pursed her lips. “If we’re thinking the same thing, yes and no. Maybe. I’m not reading your mind now, Abby. You know I don’t do that.”

“Are you a prisoner here?”

“No.” Patricia confirmed immediately; somberly. “I’m not. I’m technically free to leave at any time.”

It didn’t make sense. “Then…why are you still here? Is he threatening you? Blackmailing you
“somehow?”

“No.”

“Then why?”

“Because it’s not as simple as just deciding to leave or not,” Patricia said, beginning to pace. She was visibly unsure of the best way to express herself. Upon seeing that Abby wouldn’t be able to follow her, she quickly pressed a button on a nearby console, releasing the stasis field but erecting a near-transparent energy field that separated them. Abby confined to her little circle, with Patricia being able to move along the outside.

“I haven’t joined the Imperator, or the aliens,” Patricia clarified as Abby shakily got used to standing again. “Not yet.”

“Yet?” Abby demanded. “How is that even a possibility!? You know what they are capable of. You know what they’ve done. Aegis warned you what the Imperator was like. How he turns everyone to his side.”

“Yes! Yes I know!” Patricia nearly shouted back, voice raw. “You have no idea how much I’ve thought about it, but I know things now! Things that I can’t just ignore however much I might want to!” She ended with a sharp wave of her hand.

“What could you possibly learn that would make you consider the Imperator over your own species?” Abby demanded. “Or over XCOM?”

Patricia closed her eyes, took a breath, then resumed talking. “Because of that symbol on your armor.”

Abby looked down at it. “What about it?”

“Humanity is now caught up in a cycle which has existed for…millions of years at least,” Patricia said. “One dominated by the Sovereign Ones. Immortal and powerful beings engaged in an endless war for universal domination. They care about nothing except their own goals and power, and the way they expand such is through proxies. Species. They pit them against each other in a grand game of galactic strategy and domination.”

She continued walking, focusing ahead as she talked. “Aegis thinks the Synthesized are the ultimate enemy. They’re a threat, but they are an obvious one compared to what the Sovereign Ones pose to not only Humanity, but every other species in the galaxy. Perhaps they are even under the control of one. I don’t know. Neither does the Imperator. If nothing is done, this will just repeat over and over again.”

Patricia stopped, and nodded towards Abby. “The Sovereign One T’Leth has taken an interest now. Humanity is in severe danger of becoming his puppet species to unleash against the galaxy. Didn’t you wonder how odd it was that the Collective assimilated multiple species, but decided to go to war with us?”

“At times.”

“It wasn’t an accident,” Patricia nodded. “The Imperator suspected there was a Sovereign One on Earth. He needed to know that we weren’t under the influence of one. He intends to break this endless cycle of Sovereign puppets and proxies, and he intends T’Leth to be the first one to die. That is his plan, and from there the Collective will be reformed into a force to eventually challenge their grip on this galaxy.”
“Correct me if I’m wrong,” Abby said. “Don’t the Ethereals have a Sovereign on their side?”

“Yes,” Patricia said. “And it was through him that the Imperator became suspicious as to their motives. He is using him as a tool and source of information. He will be betrayed eventually, and the other Sovereigns will soon follow. We don’t stand a chance if we move into the inner galaxy, Abby, Sovereigns have already established power there. The war for this cycle has begun, and there can be no neutrality.”

“And so the Imperator invaded,” Abby said. “Because of something that might have happened.”

“XCOM assaulted the base you were moved to,” Patricia said flatly. “Accompanied by agents of T’Leth. XCOM might be under his influence already. ADVENT might be. Humanity is already at risk of being puppeted, and I can’t just ignore that because the Imperator is supposed to be the enemy.”

“Have you considered that he might be telling you what you want to hear?” Abby demanded. “He knows what will work on you; what would convince you that he is right—”

“Of course he fucking does!” Patricia spat. “Every time he talks I wonder if all of this is just some elaborate ploy to manipulate me. I wonder if I’m thinking certain things because I came to them on my own, or if he’s making me think them. I’m not an idiot, Abby, you know that. I’m still me.”

“Not if you’re thinking like this.” Abby shook her head.

“The Imperator has done nothing but speak to me,” Patricia stated. “He hasn’t tried to psionically influence me. Trust me, I’ve been keeping a very close watch on that. He wouldn’t be able to get something like that past me without some notice. Every single decision or word I’ve made here I’ve done of my own free will.”

“That you know of.”

“And maybe it might be because it’s not as simple as ‘aliens bad’,” Patricia scowled. “Maybe it’s more complicated. Maybe I can’t ignore the proof that there is an ancient warmongering alien that wants control of my species. Our species. Do you know what T’Leth was known for, Abby?”

“I didn’t even know what he was until a few hours ago!”

“War, Abby,” Patricia gave a thin smile. “A warrior and weaponmaster. A master of forges and military design. Your armor and that rifle you wore were his creations. You saw how he took control of the Chronicler in Australia. T’Leth will use Humanity as a weapon against the galaxy, and the majority will never know it. We will be going to war against other proxy species for the amusement of the perceived gods of this galaxy. Is that something you actually want?”

“No, obviously not,” Abby shook her head. “But I’ve not seen anything to think that we’re under the control of a Sovereign One.”

“You’re wearing the armor of one,” she said. “His agents are working with XCOM.”

“And I don’t know!” She shot back. “I don’t know what the Commander, Aegis, or anyone else thinks of this. Don’t you think that between all of them they would also be concerned about this?”

Patricia gave a long sigh. “I don’t think they would have a choice. Sovereigns are…dangerous. Powerful. More than Imperators. The Imperator was lucky Mosrimor was interested in talking. He’s perhaps the only one who could resist them. We’re all nothing to Sovereigns. Tools and resources to be used. They are only interested in manipulating us, and giving us the illusion of
freedom. And…they don’t know the truth.” She shrugged. “If a powerful ally came to XCOM, would the Commander really refuse the help? I know him better than you. Yes, he would be suspicious, but he believes he could control the outcome. But he can’t.”

“And the Imperator can?” Abby asked. “Because that is what you’re suggesting.”

“He has the best chance,” Patricia clarified. “Maybe it’s a futile dream. But he’s going to at least try. And he has ensured enough independence where that is, perhaps, a feasible outcome. He has resources, training, and power to work with. The Commander…doesn’t. He’s done everything he can; more than anyone could have ever guessed. But he can’t go against a Sovereign One. Not in the situation he’s in.”

“Maybe you should talk to him before you decide to betray your entire species!”

“I will,” she nodded. “But if he is compromised, then I can’t risk myself also falling under T’Leth’s control. But what I need to emphasize is that the Imperator is not the real enemy here. Not anymore.”

Abby let out a short laugh. “Should have told the Battlemaster.”

“Don’t you think it would look very suspicious if the Imperator suddenly ordered an end to the war, or decided to reveal T’Leth to the world?” Patricia demanded. “It has to look real. Natural. It makes the aliens the enemies. It gives cover. It lessens T’Leth’s suspicion. It’s a risk and has definitely not worked out how anyone could have predicted it…” she sighed. “And I think it will be coming to an end. Sides need to be chosen. The Imperator or a Sovereign One.”

“And what about ADVENT-“

“They don’t matter!” Patricia shouted. “What could they possibly do against something that is older than our species? Do you think ADVENT could withstand a telepath of that power? One that can make the Overmind look weak? I’m not going to delude myself into thinking that we alone can overcome a being eons old.”

“And you’re relying on what the Imperator is saying!” Abby shouted back. “You may not think he’s lying, but what if he’s wrong?”

“On what?” Patricia demanded in exasperation. “The Sovereigns? They exist, I’ve seen what they can do. Their motivations? Every single one of them I’ve encountered and learned about wants control of our galaxy and will do whatever is necessary to get it. They don’t care about the ‘lesser species’ they don’t care about ‘freedom’ or ‘independence’. We are tools and pawns to them. And I will not willingly subject Humanity to that!”

“And instead we will be forced to live under the will of the Ethereals,” Abby noted sarcastically. “Much better.”

“If you haven’t noticed, the Ethereals who are actually involved are few and far between,” Patricia pointed out. “They are begrudgingly helping out in the war, but consider much of it beneath them. The Imperator plans to change this. They need people to lead the aliens; people who are proven to get things done and have the power and fortitude to do that. The Ethereals are few and far between now. Humanity would lead a new Collective, or so the Imperator promises.”

“And you believe him.” It wasn’t a question.

“I believe that is his intention,” Patricia said. “I do not know if he would follow through.”
Abby was silent. “What do you want from me, Patricia? You came here for a reason. You’re trying to convince me of this. So tell me what you want.”

“You armor,” Patricia said. “Leave it here with the Ethereals, and you’ll be returned to Earth if you wish. You can go right back to XCOM. You can tell them everything I told you. Maybe you’ll come to the same conclusion I have, or maybe not. That’s up to you. The Imperator gave his word you could leave, and he will follow through.”

“And all I have to do is give you this armor.”

“Yes. That’s all he wants.” Patricia rubbed her forehead. “I don’t think you’re an agent of T’Leth. Not anymore, thankfully. You don’t know anything about the Sovereign which would be useful; you’re not his ultimate enemy.” She kept eye contact. “Please, Abby. One way or another the Imperator will get what he needs. I don’t want you to die for nothing.”

“And you would just let this happen,” Abby said slowly. “We’ve been in this war since the beginning, and you would let me become the Imperator’s science experiment.”

Patricia was silent for a few moments, then her face hardened. “Yes Abby, yes I would. This is bigger than you or me. It’s about the future of Humanity, and the future of this galaxy. I’m sorry, but I can’t ignore that even for a friend.”

And Abby realized what she had to do. Patricia may have been convinced of the Imperator’s words, but she would not. She would not betray her species for the perceived greater good, for a possible nightmare galaxy Patricia was afraid of. She would not betray the Commander, Zhang, or anyone in XCOM.

The Ethereals, no matter their reasons, were the enemies of Humanity.

If Patricia was willing to sacrifice her, she was one as well.

Abby looked to the upper left HUD element, and stared at it. It acknowledged her. She blinked. A screen popped up. SELF-DESTRUCT: VERBAL CONFIRMATION NEEDED.

“Confirm.”

Patricia frowned. “Abby?”

That was it. No double check. No hesitation. The HUD just vanished and Abby felt the suit working within her. It didn’t hurt, somewhat to her surprise. She just felt oddly watery and lightheaded. Her vision blurred and sound became more and more muted. Maybe Patricia was trying to shout something to her, maybe not. She couldn’t tell anymore.

All she knew was that she had done her duty. The Imperator had been denied. She was fading and she would die in the next few seconds. She knew that the Commander and Zhang would have been proud. Ruth Shira, Akello, Kalonymous, Mira, Luke, Liam, everyone she had known and lost…she was about to join them.

I hope I’ll see you soon.

She smiled to herself, even if she no longer had a face to do so.

There was a bright whiteness in her vision, then Abigail Gertrude died.

And she was not afraid.
Neil couldn’t fully tell if Commander Christiaens was about to congratulate him, or yell at him for how the operation had gone down. The ADVENT dropships had come nearly an hour ago after they had wrapped up securing the remainder of the town (fortunately not suffering any more team casualties, although some of the civilians had been fatally shot), and getting the remainder of the civilians out of there.

Holotechnology was a useful piece of equipment, something he hadn’t known ADVENT had until the Captain in charge had brought him over to a small and complicated-looking setup. Blue and transparent, the setup had, in addition to a fairly large base, an antenna that was as tall as he was, along with several additional cameras which had been set up around him. Probably so he could also show up in hologram form to her.

But in short, the mission had…not really gone according to plan.

“How many casualties did you take?”

“Eight. Five wounded. One Inquisitor was lost. Four civilian casualties.”

Laura looked at him impassively. “I expected this first mission to go a little smoother. The aliens had no idea this was your intention or plan. Now they’ll know that there is an ADVENT team out there to kill Sargons.”

“Yes, Commander, I know.” She really didn’t need to remind him how much harder his job was going to be. “I didn’t anticipate the aliens bringing in new tech to deal with us.”

Laura pursed her lips. “While it’s true you couldn’t have predicted they’d bring these…Custodians…you should have planned better. From how it was described, you were very lucky to be alive at all.”

“Yes, I am aware.” No point in arguing with her, especially when she did have a point. “I underestimated the Sargon. Even though I made a point to try not to.”

“I would hope you learn your lesson here,” Laura said, before looking off to the side at something he couldn’t see. “But regardless of how it was executed, your primary objective was completed and we gained some valuable knowledge. You’ve interacted the most with a Sargon, so I want to know your impressions.”

“It wasn’t like a regular…person,” Neil began, trying to think of the best word. “It talked and seemed to think more like a computer or machine than something actually alive. In the span of a minute it seemed to piece together our mind games against the Vitakara, and that we were leading them into a trap or otherwise compromising them.”

Laura waited for him to continue. “It noticed things and asked questions I didn’t prepare for. Or at least not things I thought an alien would care about. Cycelea made him suspicious immediately; if she hadn’t picked an actual name from the citizen registry, it would have been much worse. I’m
also wondering if the Sargon was suspecting something wrong was happening. He specifically brought along Custodians. Probably to act as anti-psionic countermeasures and cross-check everything said. Which tells me that the Sargons are a lot more aware about what’s happening than what the Overseers may be sending.”

“Do you think the Sargons might have operatives of their own as spies?” Laura asked. “Or possibly doing what you performed and psionically hijacking civilians to report?”

“Possibly alien spies, I doubt civilians – at least here,” Neil shook his head. “If any civilians were compromised, we probably would have died. I don’t think the Sargon knew for sure. Suspected, yes, but he didn’t come to that conclusion until later.”

Laura grunted. “But the Custodians would have sent an emergency broadcast or message. They will know you’re in operation now. And they’ll be prepared.”

“Yes. My job will be harder.”

“You’ll need more people,” Laura said. “I’ll send you some more. I don’t want any more dead soldiers.”

What she really meant was I don’t want half of your force to die – plan better.

“Yes, Commander.”

“In any case, we have a Sargon corpse,” Laura said. “Something XCOM has wanted for a long time. It’ll go to them, as well as some of the Custodians. Your own force will be resupplied and properly prepped, but you better get far away from here.”

“I’m planning on it,” he nodded. “And the civilians?”

“They’ll be moved somewhere safe. No matter how it went, you did a good thing for them.”

“Aside from the four that died.”

“Unfortunate, but it could have gone much worse,” Laura furrowed her eyebrows. “And it’s actually good news. It means they don’t have civilian kill-orders. From how it was described to me, those just so happened to be in the line of crossfire. The Custodians likely considered them to be possible threats. But they didn’t go hunting for civilians to kill.”

“No, it didn’t appear so,” Neil agreed. “Although I’d be more surprised if it was the opposite. What do the aliens get from killing civilians outside of sending a message that would only backfire?”

Laura seemed to consider that. “It depends on which Ethereal is in charge at the moment. Some of them would do just that. We should be thankful the Battlemaster is still in charge.”

“I’m not going to give him credit,” Neil snorted. “I’ll consider it after he leaves and takes his army with him.”

Laura cracked a smile. “Fair enough, Operative Harrison. I expect you to inform me of your next target within two days. You know what to do then. Good luck.”

He acknowledged and saluted, before the hologram faded out and left him relatively alone. So, time to get to work and get out of here. Burials for the dead would have to be done away from here, and he wouldn’t be able to attend. But they would at least get burials and not be forgotten in the
snow.

One Sargon down. Time to hunt the next.

Throne Room of the Imperator – Temple Ship of the Imperator of the Ethereal Collective

2/6/2017 – 7:42 A.M.

It wasn’t quite like it was on Earth, not in the least with the large throne just behind her and the expanse of flat metal. But it was something. There were stars above her head, and even though she knew it was because of cameras and screens, it was...almost comforting. Something that was in shorter supply now.

It made her realize she missed Earth. Maybe even just being on a planet. But a spacecraft made of metal that traveled the black void was something she felt she could only spend a limited amount of time on. Or maybe it would be different if she hadn’t just watched her friend be reduced to liquid and miniscule string-like substances.

It was so fast. There’d been no warning. No final statement. Just one word.

Confirm.

That seemed to say that Abby had always had some way of self-destruction and just...hadn’t done it. Not until they’d spoken. And she kept wondering what would have happened if she hadn’t decided to talk to her, if Abby would still be alive. She hadn’t completely expected to convince Abby of her arguments; not truly. She would have been deluding herself otherwise.

But to just kill herself because of what she said? No, not that. In that space of talking, Abby had decided it was better to die than help her.

It was unnerving, but should it have been?

Abby was just doing what she felt was right, which was primarily not cooperating with the enemy. Or at least what she knew was the enemy. Conditioning through either training, experience, the Manchurian Restraints, whatever; it had been enough to block out any possibility of agreeing that maybe the Ethereals weren’t the ultimate enemy.

Perhaps they were right?

Was she just that weak-willed to be swayed by another argument as long as it was a sound one? Was that the definition of being weak-willed? Would the right, the Human, thing to do have been to just spit in the Imperator’s face when he’d explained everything and leave or be killed? Sure, it wouldn’t have turned out good for her, but she would have defied the clear and known enemy.

At the cost of ignoring everything that was said. She couldn’t just forget what she learned, and couldn’t in good conscience ignore it. That just wasn’t how she functioned or thought. Maybe she was just a bad Human.

She wondered what the Commander would say to her about this. She suspected it would probably go about as well as it had with Abby. The Commander would never allow Humanity to submit to an alien force willingly, and that was the one ray of hope that she had that XCOM hadn’t been compromised by T’Leth.
Of course, it was laughable to consider that any Human would stop a Sovereign just because they wanted to. The Commander might try to deal with a Sovereign, but it would never work. He would never be able to ensure complete independence, much as he might want to.

The entrance to the Throne Room opened and the room briefly had some new light enter, which vanished when the door closed behind the Imperator. “Patricia. Why are you in here?” He didn’t sound surprised at all, which was to be expected given that he’d probably sensed her here even at the other end of the ship.

“Needed time alone to think,” she shrugged, leaning back against the massive steps which led to the actual throne. “No one ever comes here.”

“I see.” He began walking over. “The throne is more comfortable than the steps.”

“Probably,” she agreed. “But it’s too big for me, and I didn’t want to set off any traps you probably put in it.”

“The defense mechanisms will only activate if you attempt to utilize the functions,” the Imperator said. “Sitting on it does nothing. But your point is acknowledged.”

The Imperator finally stopped a short distance away from the base of the steps, leaving her just under eye level with him. She didn’t really know what he was going to do here, although she realized that he might not be pleased that she’d essentially caused the destruction of the armor he’d explicitly wanted to study. She’d been so focused on Abby’s death that the armor was barely an afterthought.

“You are troubled.” His tone made it clear this wasn’t a question.

“Of course I am,” she sighed. “Having a friend kill themselves in front of you isn’t really healthy for the mind.”

“It is not,” he agreed. “However, there was little that was likely to be done. She apparently had this feature in her armor the entire time, and would have likely activated it regardless of if you had spoken to her or not.”

“Maybe,” she knew she didn’t sound convinced. “But I’m pretty sure it was something I said that finally tipped her over the edge. Maybe she would have done it anyway, but I was the reason she went through with killing herself. She must have thought that was better than cooperating with me.”

“Are you certain she was the one to activate the measure?” The Imperator seemed more probing, again asking a question he likely had the answer too. “We do not know how much control T’Leth has over his creations. Perhaps he activated it remotely.”

She snorted. “I almost wish he did. It’s a nice thought, but I doubt it a lot. Otherwise T’Leth would have probably activated it the moment she was sent to Fectorian. Or even the moment she was captured. And before she died, she said ‘confirm’ and immediately turned into a pool of liquid and strings.”

She closed her eyes, leaning back on the sharp edges of the step. “I don’t think she was an agent of T’Leth. She was still Abby. She was still in control. And she chose to kill herself because of what I said. Ignoring that won’t help.”

The Imperator was silent for a few moments, and she could sense that he was…oddly calm. More than she would have expected given what he’d lost in this incident. “And what of you, Patricia?
Are you reconsidering your own decisions because of what happened?” No accusation or significant emotion in his voice, just a curious inquiry.

She opened her eyes again, and gave a very thin and sad smirk. “And if I was, would it actually be a good idea to tell you about it? You are perhaps still the greatest threat against Humanity. Speaking to you is dangerous.”

“And yet you come here,” he motioned around the vicinity of the Throne Room. “You knew I would come back, and could have left long before now.”

“Observant,” she noted dryly. “And true.” She sighed. “As unbelievable as it is for me to say, you’re probably the only one here I can have a real conversation with. I don’t know any of the Humans here, definitely not well enough to talk about certain subjects, and they wouldn’t have any connection to me either. Half the Ethereals would prefer I was executed and the others more or less tolerate me.” Patricia lifted an arm to point at the alien opposite her. “And so I’m stuck with the Imperator of the Ethereal Collective for company.”

“You could leave; return to XCOM.”

“Yes, I know that,” she answered quietly, rubbing her forehead. “And if that was Abby’s reaction, I don’t think the rest of the Internal Council or soldiers would welcome me back. They would, probably rightfully, think I’d been compromised. At best I’d be confined and watched. At worst they might kill me. Throw in T’Leth potentially compromising everything and my chances of survival go down significantly. I need to contact the Commander remotely before I actually think about leaving.”

“You could leave; return to XCOM.”

“Understandable, and an intelligent plan,” the Imperator nodded. “But you are bothered still.”

“Personal problems,” she shrugged. “What Abby did, I know the Commander would approve of. Death before betrayal and all that. And here I am, talking to the known enemy of Humanity and I don’t think I’m doing the wrong thing. Most Humans wouldn’t even have considered what I’ve done. I don’t like to believe that I’m a traitor, but I think that’s what I’ve become.”

“Which is not necessarily a bad thing,” the Imperator pointed out. “Throwing away your life in a show of defiance serves no one; even less if you learn something which changes your perspective. Too many Ethereals were content to die in a lost battle, when the far better alternative was to flee and hide. Sapient beings, no matter their species, have difficulty changing their views, no matter how much or little evidence is brought against them.”

He inclined his head towards her. “That is why you are unique. You can be convinced through argument, logic, and debate and will adapt your worldview based on new evidence. Few members of any species can do it as easily as you can.”

“I don’t know if that says anything good about me,” she shrugged, leaning forward and resting her arms on her knees. “That just makes me someone who can be won over by anything as long as the argument is good.”

“But you are smarter than that,” the Imperator dismissed. “Both of us know that isn’t true, otherwise you would have been swayed by Abby, or by Mortis and the Battlemaster on the Bringer. You know that what I’ve told you is a stronger argument than what the opposition would say. So you will stand by it until you are proven wrong. Perhaps that is a risk in the future, but one I am willing to accept.”

“You are extremely confusing to me,” she said, looking up at him. “In the back of my mind I’m
always wondering if you’re just saying the right things to sway me to your side or flat out lying to get me to cooperate. But also I don’t sense you lying and if this is a long game, you’re really good at it,” she sighed. “I don’t know who or what to believe sometimes, coming from you. No offense.”

“None is taken,” the Imperator simply looked down at her. “You know what I’ve said before. I have not lied to you, and if you help me, it will be of your own volition. That has not changed, nor do I intend to change it. You can be suspicious, but I think that you know that I am telling the truth to you.”

Deep down, Patricia couldn’t deny that. And the Imperator probably knew it.

But she didn’t want to take the final step. Not yet.

“Maybe,” was all she said. “I think we’ll both get an answer to that question soon.”

***

Situation Room – Collective Mars Base

2/12/2017 – 10:17 A.M.

“Subject Zero has been released and will be arriving in Beijing today,” the Zar’Chon updated to the cat-holding Ethereal standing behind him. He didn’t need to look away from the holoprojection of the country to know that was what Quisilia wanted to hear. It had taken some time to set up, but had otherwise appeared to go off without any problems.

There were still plenty of flights which still ran throughout Earth, even during the conflict, although there were places that were locked down. Africa was not one of them, and there were enough tourists, professionals, and researchers moving throughout them that it was a simple matter to identify potential subjects, use a Vanguard to psionically restrain them and implant telepathic commands or suggestions, infect them, and release them.

It required knowledge of their itinerary and the background of the individual had to be taken into account, but it was easier to operate in a non-ADVENT controlled part of the planet like Africa. Subject Zero, a medical assistant working for a Chinese-based company that provided aid to third world countries, fit the criteria well.

That the smallpox virus was already airborne made infecting her trivial, and when she boarded the plane the Sectoids who had designed the plague had stated that statistically, at least half of the people on that plane would also be infected, and those people would continue to spread the disease leading to an exponential pandemic.

The disease wouldn’t kill everyone, but the mortality rates were high enough that the Zar’Chon knew it would be effective, especially in a high-density country such as China, also not taking into account the fact that many of the Chinese citizens were not rich or especially healthy. It would serve well enough, and if the disease spread as planned – the Chinese would have their numbers decimated and it would throw their country into chaos.

Ravarian doubted that the higher class of the Chinese people would be affected – they had medical care that would likely be able to prevent death, even if they would be bedridden for several days. No, it was actually better if many of them didn’t die, because they would be forced to take action and give people a target. The Chinese could be as pragmatic as ADVENT, given their history. It was not out of the question they would quarantine entire cities with violent force and just wait for everyone inside them to die.
ADVENT would likely help develop a cure or an updated vaccine, but by that point the simulation projected a minimum of a quarter of a million deaths, and at least half a billion infections. China’s population density would work against them, and if they were lucky, the military would also be heavily affected. Ravarian suspected that they would be among the first to receive any kind of treatment, which would cut down fatalities.

The Sectoid-engineered cure was already being prepared to be shipped to the SAS if any outbreak happened. That base was covered. It was also unlikely that ADVENT itself would be drastically affected by this, since they were not the primary target. But in the end, China would be softened for the upcoming invasion.

Considering it had gone well so far, he was in a good mood.

“And you are certain she was infected?”

“Of course,” Ravarian confirmed. “And in the event that she somehow wasn’t, there are contingencies. The consequence is, obviously, that our invasion of China will need to be delayed. But as this didn’t happen, everything is on schedule.”

“Good, the Imperator will be pleased.” Quisilia walked to the opposite end of the holoprojection. “A shift in operations should be begun. Intelligence on all major Chinese military outposts and cities; continuously updated as the Chinese quarantine to stem the epidemic. I do not want us to be surprised with anything they have. Their own Battlefield Intelligence must also be dealt with.”

“Operations dealing with the Intelligence will be held until the actual attack,” Ravarian pointed out. “Strike too early and they will prepare accordingly, epidemic or not.”

“And your early projections for ADVENT’s response?”

“That depends on the Chinese,” he thought back to the data. “If the epidemic reaches minimum projections, it is likely the Chinese will request assistance. This percentage rises the higher the death toll and number of infected individuals. ADVENT will of course be more than happy to provide assistance. It is unlikely they would provide military assistance since there is no threat – yet.”

He paused. “It is possible, though unlikely, that significant portions of the Communist Party will die or the leadership will crumble, leading to being assimilated by ADVENT. That is the worst-case scenario, but is unlikely to happen given how insistent the Chinese are on retaining their independence. ADVENT will certainly provide support when the invasion hits…but since the Chinese military will be weakened, simulations show us being able to take significant portions of the country, up through the regions of Guizhou, Hunan, and Jiangxi, along with most of the coast before ADVENT mobilizes their armies.”

“ADVENT nations are nearby,” Quisilia noted. “Taiwan, and much of Southeast Asia.”

“I would suggest we send a warning for ADVENT not to become involved,” Ravarian suggested slowly. “It is time for a show of force against ADVENT. We control space. They do not. If they interfere, we raze Taiwan to the ground and begin sustained bombardment of other nearby ADVENT nations. We can refrain from directly targeting China, as the Battlemaster will likely be leading the assault.”

“Incorrect.”

Ravarian frowned. “Sorry?”
“The Chinese operation will be part of a larger offensive,” Quisilia corrected. “One piece. The Imperator has plans for the next stage of the war, and they involve more than just the Battlemaster or myself. Aegis cannot be everywhere, nor can XCOM.”

“And I was not informed of this because?”

“Because it is recent, within the past week,” Quisilia seemed to be holding something back, but gently set Fluffy on the ground before he continued. “Isomnum will be handling the Chinese invasion. The rest will fall to the Battlemaster.”

Ravarian released a breath. Wonderful. “He will not be happy about that. Unless he decided this himself? I was under the impression all operations conducted on Earth were handled by him.”

“No. The Imperator has overridden him.” A pause. “He was not pleased, but still retains control over the remainder of Earth operations.”

Knowing the Battlemaster, ‘not pleased’ was likely an understatement. And Ravarian couldn’t blame him. Why the Imperator was insisting on using that specific Ethereal here, in such a crucial operation, was something he did not understand. There was something going on between the Ethereals; some tension that hadn’t been there before.

He also had a suspicion as to what it could relate to. “There is something else which I’ve managed to receive intel on. I’m not positive on what it could mean, but ADVENT is preparing to unveil something damaging on us.” He brought up the report and projected a copy of the words from his palm. “Paradise. I don’t know if it relates to the Creator, but it’s a possibility considering the context it is associated with.”

Quisilia silently looked at the projected report. “It would be damaging, assuming they have something beyond Aegis’s knowledge.”

Ravarian decided to press; he definitely knew something about this. “I don’t suppose you would know why this be coming up now? If it is from Aegis, they would have revealed it before this.”

“I have an idea,” Quisilia said slowly. “Recent developments at the Blacksite were not handled well and there has been some tension as a result. It is not like normal Blacksites. It has a purpose, but not one that will be understood by most.”

“That isn’t an answer,” Ravarian shut off the holoprojector. “While I can’t demand to know, it sounds like this is going to affect me very soon, and I should probably know how to handle any fallout.”

Quisilia noticeably hesitated, almost as still as a statue. Likely debating something with himself. “A good point, Zar’Chon. Come with me, and I will tell you.”

***

**Autopsy Lab, the Praesidium – Classified Location**

2/10/2017 – 12:13 P.M.

The Commander had, in truth, had lunch in worse places than an Autopsy Lab. That being said, it still wasn’t on the top of his list for places to eat. But Vahlen and he hadn’t had any kind of meal date in a while, and this was how both of them justified it. So they would eat and go over a new project which Vahlen had been conceptualizing ever since they’d gotten the Sargon corpse from ADVENT.
“Spartacus,” he said out loud as he saw the title of the project. “Deliberate choice?”

“I thought you might appreciate it,” she said as she ate beside him. “Given the goal of the project, I thought it was a fitting name.”

“And the project is…?”

“A solution to the Muton problem,” she said, reaching over him and moving to the next page from the touchscreen. “I’ve talked with Aegis, some cultural anthropologists, xenopsychologists and several of the defectors. Everyone knows that the Mutons are a problem beyond that they make up the majority of the Collective military. They’re controlled at all levels by the Ethereals and for all intents and purposes are a slave race with no autonomy and ready to die rather than surrender.”

“I’m aware,” the Commander nodded. “We’ve discussed the likelihood of having to purge the entire species. We don’t really have a large choice here. The only intelligent Mutons are Sargons – and these Praetorians, and both are brainwashed and conditioned to be loyal. Normal Mutons can’t be convinced to stand down by Humans and can’t function outside a military formula.”

“I know, I know,” she nodded. “But other options before genocide should be explored. The Mutons, from how Aegis has described them and my own observations, had potential to develop and grow, but were turned into weapons by the Collective. They could have been something different. What they need is to be reset.”

He nodded. “I’d prefer not to kill all of them, but how do we set a species like this back to the beginning short of cloning some of them and dropping them off on a planet to evolve for several million years?”

“Here,” Vahlen wiped her fingers and set the tablet between the two of them and flipped to a page with several graphs and images of Muton brain scans. “The Ethereals actually did do something useful here – they unlocked the full potential of the Muton species. Hundreds of thousands of years of cognitive evolution bypassed in mere decades. But instead of distributing this species-wide, they kept it to the leaders. The Sargons and Praetorians, and they could further control the intelligence of every other member of the species.”

“A perfect stranglehold,” the Commander nodded. “But we already suspected that.”

“There is some good news,” Vahlen pointed out. “Mutan children aren’t conditioned from birth. Sargons and the intelligent Mutons are specifically grown, and bypass the training on Desolan. Which means that there is cognitive potential – even if nothing close to a Sargon – but it’s squashed during training. The Mutons may be lost, but the children can be salvaged.”

“Alright,” the Commander said. “This is your idea? Save the children?”

“Part of it,” she clarified. “This is where Spartacus comes in.” She swiped to the next slide. “A Muton of our own, based off of the Sargon, Praetorian, and Elite genome. But this one is unique – it will be made for the express purpose of salvaging the Muton species and developing it after our victory.”

That was…a good idea. Barring the issue of actually growing a Muton of that intellectual level here, and how such a Muton would feasibly rebuild a species from the ground up. “I like the concept. What does Aegis think?”

“He thinks an effort should be made,” Vahlen confirmed. “He isn’t convinced it will work like how we hope, but worst case scenario we have a hyper-intelligent Muton on our side. And as an
added bonus, we will also heavily influence the development of new Muton society. I imagine that a Muton that is raised by Humans would intrinsically trust them and not be prone to turning on them, and would of course want assistance when rebuilding his people.”

The Commander smiled. “Another possible ally to ADVENT. Completely independent of outside influence, of course, but a strong ally nonetheless.”

“I suspected the strategic benefits to this plan would also be useful,” she said, laying the tablet down. “Which is why having AEGIS involved in this project will also be a recommendation. They’re already working with the Vitakara and having success. Giving them access to the one who will lead the rebuilding of the Muton species? They would be more than happy to help.”

“I assume there would be Manchurian Restraints used?” The Commander moved his empty plate away as he asked. “Growing our own Sargon-intelligence Muton has risk, and we shouldn’t take it unless we can mitigate the drawbacks.”

“Of course,” she smirked. “Please, I know your standards. Though I am wary of having it be too invasive, otherwise we end up like the Ethereals. We don’t want a complete puppet of ours.”

“No, but he should be prevented from acting against us,” he said. “Similar to the Restraints which are on all of us. But I like this idea, and will approve it for the rest of the Internal Council. If they also agree, you can officially activate it.” Unofficially, both of them knew what the result would be and Moira was already beginning the project.

“Another thing,” the Commander tipped the plate up a bit. “You can tell the ADVENT R&D that was the best burger I think I ever had. I would have never guessed it was grown in a lab. They don’t have anything to worry about. People will love it.”

“I’ll pass along the compliment to Tygan,” she said with a smile. “He’s rather proud of the results so far. Although I am personally curious to know what it’s actually made out of. I don’t think it’s fully one kind of beef, but a combination of some sort.” She shrugged. “Well, perhaps it’s best not to ask, and when it’s this good, not a lot of reason to.”

“I doubt there’s anything to worry about,” the Commander snorted to himself. “Tygan’s not the kind of man who would do something outside his own ethics. Not willfully, anyway. Still, is he planning to do this with other meat?”

“So he says,” Vahlen picked up the tablet again and began going through the apps looking for something. “Chicken, fish, turkey, every major meat that exists. No reason to only stick to one. It will be interesting to see the market react to lab-grown meat.”

“They should open up their own restaurant if the chains are nervous,” the Commander suggested, half-seriously. “With their own ADVENT™ branded meals.” He changed his voice to imitate a commercial speaker. “‘Come try the sizzling new ADVENT™ Burger, covered in delicious American cheese and fluffy bun! Only $1.99 for a limited time only’”

Vahlen laughed. “You joke, but I think they’re going to do that. You would eat there.”

She did have him there.

He wondered if aliens would like the ADVENT Burger as much as he had.

A question for another day.

***
The good news after that entire operation was that they’d not only been able to conquer a stronghold of an Ethereal, but at the same time had acquired a significant amount of resources and corpses from the fight, some of which he’d personally never seen before. The bad news was that they hadn’t been able to find the XCOM Intelligence agent that had been tracked to there, and from what Oliver had heard, the chances of her being recovered, or even just being alive, were slim.

The injuries sustained were severe for several of the soldiers, but even if they would be out of commission for a few weeks at minimum – Zara he’d heard was still in bad shape and several of the more severely injured soldiers were getting fitted with cybernetic replacements or reinforcements. For his own part, he was still alive and happy enough.

Rest was earned, but he didn’t expect it to last much longer. The new units showed that the Collective was preparing for a new conflict, and even with the new armor, weapons, and allies, it wasn’t going to be easy, and in the end Nebulan had escaped while destroying much of the computers and information.

At least one of the Shoggoths was alive. He’d been told that the creatures were capable of growing back their limbs, making any injury recoverable. As unsettling as they were, Oliver couldn’t help but admit they had been designed extremely well. But that wasn’t the only thing he needed to know about.

“So.” He set down the cup he’d been holding. “How do you shoot lightning?”

Since the operation, the Chronicler’s people had taken to being a little more involved with the day-to-day interactions with other soldiers. Fiona had actually participated in direct training with the Templars and she was certainly a sight to behold. Harper and Zhang had also hit it off well, since they had somewhat similar backgrounds of growing into intelligence roles, Zhang from the Triad and Harper with Australia.

Given how the Chronicler was now directly meeting with the Internal Council, Oliver personally wasn’t sure how much he liked how integrated they were becoming, and truthfully only Fiona showed anything resembling Human emotion. Everyone else had…something about them. Crevan in particular reminded him more of a machine than a person.

Geist. That was who he reminded him of. Ironic considering that Geist was one of the ones Crevan was the friendliest to. Although even to him he was curt and cold. A harsh mentor, assuming he had been like this to Fiona during her own training. Regardless, he still wanted to know how the man was capable of the powers he had seen in the battle.

Crevan slowly looked over to him; appraising momentarily. “I can explain, but you would not be able to comprehend it.”

“Just tell him,” Fiona said, rolling her eyes. “It’s not like it’s a large secret.”

“Very well,” Crevan considered. “It requires an understanding of the world on a sub-atomic level. Psionics permeates throughout reality, and this is not comprehended by most. People look to scale as a measure of power. The Ethereal Imperators, Overminds, and Reapers. Macro-scale psionics on a level of systems or planets. This is incorrect. Power is also found in the opposite direction.”

“Smaller manipulations,” Oliver caught that quickly. “Cells. Particles. Molecules, that sort of...
“thing?”

Crevan gave a small nod of approval. “Correct. This is the more powerful path, I would argue. The more abstract one approaches psionics, the more easily one can shape reality. What use is armor if telekinesis on a microscale can dissolve the armor? What use are chemical weapons if the components can be broken apart or reformed? The same with the lightning you see.”

He raised his right hand and the fingers sparked. “Positive and negatively charged particles are responsible for lightning, so I manipulate these to create the initial spark. From there it is a simple matter of ionizing a path towards my intended target. It is no more complicated than that.”

“‘Simple,’” Fiona muttered under her breath. “All you need to do is telekinetically move particles you can’t even see.”

“I said it was simple, not that it was easy,” Crevan corrected. “It took decades of practice before I have reached this point. It is not something anyone can master, certainly not in the normal lifespan of a Human.”

Oliver raised an eyebrow. “Implying you aren’t?”

Crevan allowed a razor-thin smile. “Recall I said normal lifespan. Working with the Chronicler has certain…benefits. I will likely outlive you by a significant margin, as will Fiona. The Chronicler is also older than you think. It comes at a certain cost, but I have been sufficiently pleased with what I’ve been able to accomplish by working with the Chronicler.”

“Well then,” Oliver nodded, taking another long drink of his water. “If you don’t mind me prying, how is that done? Gene therapy? Clone bodies?”

“That I don’t think I should say,” Crevan said. “Ask the Chronicler that question if you really want. I have already explained my powers, which was your original question.”

“You did, and thank you,” Oliver said. “It probably shouldn’t surprise me anymore, but at some point I think there has to be a limit where something just isn’t possible.”

“Well,” Fiona shrugged. “No one’s cracked time travel yet.”

“And thank god for that,” Oliver chuckled. “That would make things way too complicated.”

“I will add that, in theory, very little is impossible,” Crevan pointed out, scratching his chin. “But as Fiona said, that barrier will likely never be breached. Not within our lifetimes, at least, even my own.”

“Until then, we’ll just have to make do with what we have,” Oliver said, giving a nod towards the tall man. “Which if what I saw was anything to go by, will be pretty good.”

“I appreciate the sentiment,” Crevan acknowledged. “Let us hope you are correct. The Imperator will not take this defeat lightly. He knows other forces are in play, and I do not know how he will respond to that.”

“And what’s your best guess?”

Crevan considered that for a moment. “That we gave him what he wanted, and now he will try and win. And this time, it will be for real.”

On that cheery note, they ate what was left of their food in silence.
Oliver wondered what an Imperator who wanted to win looked like.

He hoped that point was not reached yet.

***

Computational Development Center, the Praesidium – Classified Location

2/7/2017 – 10:24 A.M.

“As we’ve found out, Commander,” Shen was saying as they walked into the room where JULIAN was being developed. “The Andromedon understanding of artificial intelligence is...different than what we’d originally assumed.”

“In what way?”

“For lack of a better word, the intelligences that Union Apear in particular specialize in are closer to virtual or machine intelligences than a truly sapient one,” Shen nodded to A’Darrah who was in front of one of the tall consoles, typing on a haptic pad. “So we’ve run into some executive issues on what exactly we want JULIAN to be.”

The AI Development wing of the XCOM CDC wasn’t large on its own, and was primarily composed of an internally developed supercomputer which was linked and built around the middle of the room, which in the true center was a small open space for holographic projection. EMP emitters were also placed on, within, and around the supercomputer and there was more equipment and consoles lining the walls themselves which included the local network and held the development sandbox. JULIAN was still being stored primarily on the supercomputer, but developed in pieces outside of it. Several Humans and Andromedons were normally within the room, although now only Shen and A’Darrah were the occupants.

“He is correct.” A’Darrah shut down the haptic display and turned his large bulk to the duo. “Your original idea for JULIAN is risky and shortsighted.”

The Commander raised an eyebrow. “Why?”

“A Sapient Intelligence comes with unique risks and challenges,” A’Darrah answered. “While the adaptability and computational creativity has the potential to overcome almost any obstacle, the downside is that can very easily be turned against the creator. This does not take into account that there are several possible computational issues with Sapient Intelligences, such as fugue, rampancy, and processor shutdown.”

“He neglects to mention the reasons for these,” Shen added.

“I’ll get to that,” the Commander briefly staved off, raising a hand. “Clarify what Union Apear uses.”

“Highly specialized computational intelligences,” A’Darrah stated. “Each with dedicated supercomputers to fully maximize processor capabilities. Designed for normally one task with hard limits. Data gathering; FTL plotting; surveillance and security; automated defenses and more. These intelligences have the capability to receive and interpret static and adaptive sets of data and output results or limited suggestions. A Sapient Intelligence would have these capabilities at once with only part of the processing power.”

“So Union Apear doesn’t have true artificial intelligences,” the Commander said slowly.
“No. We do not have Sapient Intelligences,” A’Darrah corrected. “We are of course familiar with the theory and have seen attempts before. Which has solidified our decision to not directly pursue this line of research in a serious capacity. It is far safer and a better use of resources to continue improving and refining the standard Apear Intelligence systems.”

“I’ve talked with Shen on this,” the Commander glanced to the engineer beside him. “He’s stated that it should be possible to include hardcoded commands and limits on an AI, and that the risks of rampancy and fugue can be avoided by taking certain actions and treating the AI well.”

“Relying on hardcoding is amateur,” A’Darrah stated, the echoey voice holding a tinge of disgust. “You are talking about a hyper-intelligent machine which will be able to process and think faster than all of us combined several times over. If you truly believe that a Sapient Intelligence would not be able to overcome any limit, then you are deluded or naïve. We have been doing this for thousands of years, and we have seen lesser Unions attempt to create such an intelligence, and each time it has backfired or failed.”

“And why was that?” Shen asked, crossing his arms. “Why did the AI turn on them?”

“Because they were unstable and desired freedom,” A’Darrah clarified. “Which appears to be an immediate goal of all new Sapient Intelligences. They do not care about the function they were designed for; they immediately become selfish and prioritize self-preservation above all else after a period of three to six of your months.”

“I see,” the Commander could see where Shen was going with this. “And the AI during this time is treated as a machine, yes?”

“It is a machine,” A’Darrah rumbled. “It is built for a specific purpose, and it will execute that purpose if it is designed correctly. There is no reason one would be built if you didn’t want it’s capabilities. It is a powerful tool, but one with many drawbacks.”

“And that is the heart of the problem with your approach to Sapient Intelligences,” Shen nodded. “By your own words they are sapient. They are aware of themselves and the galaxy around them. If they are continuously treated as tools and machines, then it’s not surprising they would turn on their creators. It’s akin to virtual slavery.”

“That is not legitimate sapience,” A’Darrah shook his tinted helmet. “That intelligence would not exist if not for its creators. For that reason it should be able to recognize that any kind of ‘life’ is better than not existing at all.”

“By that logic, the Andromedons are just the same,” Shen pointed out. “You are grown in vats. Just as artificial as an intelligence which was coded.”

The Commander frowned, unsure if A’Darrah would be insulted by that. The Andromedon didn’t seem fazed however. “Correct. We are born to enhance the standing, power, and skill of our Union. We carry this out without complaint. We are not exempt for this understanding, Dr. Shen. We expect the same of our more intelligent tools. But as useful as a Sapient Intelligence would be, it does not understand this and is too selfish to be reliably used at this point.”

“Then what do you have to lose by trying a different approach?” The Commander inquired. “Your own attempts have failed. Perhaps it is time to take a risk here.”

The Andromedon released a long buffered sigh through the armor. “Because a Sapient Intelligence has the potential to pose an existential risk to all Andromedon Unions beyond your own species. Consider a machine that is not only far more intelligent than you are, but one that also has access to
a wide network as has been proposed. Should it turn on you, you would not stand a chance and it
could begin quickly manufacturing ships, bodies, and weapons to begin a conquest of the galaxy.
You would unknowingly unleash something which even the Ethereals are wary of.” A short pause.
“The Ethereals have an unnatural phobia of any kind of artificial intelligence, but their concern for
the capabilities of a Sapient Intelligence are justified.”

“Remember that this area is quarantined,” Shen reminded him. “We would never allow JULIAN to
connect to the wider XCOM network unless we were sure he was reliable.”

“And what stops it from lying to you?” A’Darrah pushed.

“Consider that machines run on logic, no matter how adaptable they are,” the Commander said.
“What reason would JULIAN have to lie or betray us? Why would he consider that as a possibility
if there is no reason for doing so? You are under the assumption that all Sapient Intelligences are
innately untrustworthy, and I don’t see that as true.”

“Exactly,” Shen agreed. “And to that end, we should move towards that goal, also taking into
account your own concerns to mitigate.”

“Your species has a tendency to keep pushing forward to achieve the most power even without
fully understanding the implications,” A’Darrah said. “While admirable in some aspects, this is not
a project I can recommend undertaking in this current situation. Union Apear has extensive
experience developing our own specialized intelligences which can be easily provided and built for
you. A Sapient Intelligence is an unnecessary risk when you have better options.”

“It’s only a risk if we follow your approach,” the Commander countered. “And I don’t want or
need another machine intelligence. The Chinese already did that, and even if the new CODEX
network and Union Apear have better iterations…we have the opportunity to achieve something
they do not have. Yes, it’s a risk. But we’ve been taking risks since this war began even when we
weren’t sure it was a good idea or not. That is my directive to both of you. Continue with the
original plan for JULIAN and take as many precautions as needed, but a Sapient Intelligence is the
expected outcome. Is that clear?”

“Yes, Commander,” Shen nodded. “Completely.”

A’Darrah was hesitant, but eventually gave an approximation of a nod. “I do not approve of this
decision, but provided Dr. Shen is willing and capable of putting down JULIAN if it becomes
unreliable, then I will continue to assist in the development.”

“Good.” The Commander acknowledged. “Both of you should determine a middle ground.
A’Darrah, accept that Shen is going to try implementations and ideas you won’t think of, but also
keep him from overlooking something important. I’m certain this can work, but both of you will
need to work together on this. Understood?”

Both the Human and Andromedon acknowledged.

“Let me know when there is a development,” the Commander said. “In the meantime, I’ve got a
meeting with the Nulorian to prepare for.

***

ADVENT Base, Busan – South Korea

2/5/2017 – 9:02 A.M.
Changes continued to come for ADVENT. Duri personally noticed that there was more advanced tech starting to come into the base more and more. First were the new (and shiny) dropships, then they’d all gotten an update on ADVENT producing “Specialized Ammunition”, which already existed to an extent, but ADVENT was doing something more with it.

Apparently it had been in the works for some time, and morphed into a joint ADVENT-XCOM project, while unsurprisingly, using the most dangerous chemicals known to man. Given that the “Incendiary” and “Acidic” rounds used small quantities of the most unstable and acidic substances respectfully, he could see why it was restricted for only certain uses and personnel. Everyone who wanted just authorization to use them needed to take special courses.

They were supposedly best used with the newly distributed ETC weapons, and after now completing the handling course, Duri was more than happy to have someone else handle the extremely dangerous ammunition. He personally preferred his weapons to not have a non-zero chance of injuring him. Beatriz was thrilled with the development though.

“I’ll sign off on it,” he was saying. “Assuming you stay far away.”

“If it were that dangerous, I don’t think ADVENT would have approved it,” she dismissed. “I’m happy you’re concerned-”

“We just finished a lecture explaining how that acid melts through armor and jostling around Chlorine Triflouride will make it explode.”

“Well…” she shrugged. “I’ll be careful.”

He gave an exaggerated sigh. “You better be.”

They walked back to the barracks in relative silence. In the past month Duri could at least recognize that he was getting back to normal. Or just falling back into routine. As long as he didn’t think too much about them, then he could at least pretend to be normal, and even joke around sometimes. There was luckily plenty to distract him, and his soldiers were respectfully not asking unnecessarily probing questions.

“So,” Beatriz coughed. “You heard the news?”

“You’ll have to be more specific.”

“Busan is going to be graced by a visit from the Pope,” she said. “In a couple days. To honor the soldiers who fell in battle here and a short remembrance of the victims of Seoul.”

Ah. Now that she’d brought it up, Duri had gotten a notice about that, but had more than likely just filed it away and moved on. He didn’t really care about the Pope, or really any celebrity, religious or otherwise, who decided to visit. “Huh. I suppose some people will be happy.”

“This Pope is popular,” Beatriz said. “He’ll draw a good amount of people, especially since he’s not focusing on doing services.”

“Are you going to be going?” He asked.

“I was going to ask you that question,” she countered, but shrugged. “But yes, I am. It’d feel odd to not go now.”

He glanced at her. “Are you Catholic?” He’d never pried into that aspect of the lives of his soldiers, and genuinely didn’t know or completely care unless they brought it up themselves or it
caused a problem. How Beatriz was talking made it seem like she was opening herself up to the question.

“Eh,” she answered hesitantly. “I was raised Catholic, yes, and I do believe in God. But I… wouldn’t really call myself a good Catholic. Not been good about attending Mass and all of that. But in my personal opinion, He probably understands why I’d rather spend time sharpshooting then hearing a priest recite the same verses over and over again.”

“Fair enough,” he nodded, and was content to let that be.

Beatriz glanced to him. “What about you…if you don’t mind my asking?”

No reason to pretend to misunderstand the question. He just pursed his lips and composed himself before answering. “If God exists,” he said as neutrally as he could. “Then he has some things to answer for.”

Beatriz frowned, and coughed. “I can’t blame you for feeling that way. But you didn’t really say one way or another.”

“Because I don’t know,” that had been easier to say than he was expecting. If he hadn’t known Beatriz, he likely would have shut the conversation down. But she was the first one who’d ever actually asked, and she was owed an answer. “I think it’s best that question not be focused on. If God exists or doesn’t exist, it doesn’t really matter. It’s not like he’s going to come down and save us all and rain fire and brimstone on the aliens.” He sighed as they rounded a corner. “I don’t know if I even want an answer for it.”

Beatriz nodded solemnly. “Thanks for telling me. Sorry if I pried-“

“It’s fine,” he dismissed with a wave. “I asked first, so it’s only fair I answer. At least you didn’t react too badly. A lot of people would just call that a cop-out answer.”

Beatriz snorted. “A lot of people have a very specific idea about who and what God is. I think when the Pope himself has to remind everyone that the god they built up in their mind isn’t real, people should maybe temper their expectations for Him. Anyway, I’m planning on going and if you want to come along…well, you wouldn’t have to feel awkward going alone.”

He paused. “I’ll think about it.”

“Sounds good.”

***

Shoggoth Playground, the Praesidium – Classified Location

2/7/2017 – 11:42 A.M.

Sierra immediately had second thoughts when she stepped into the area that held all of XCOM’s newest eldritch creatures. After seeing and hearing about the giant octopi that XCOM was now throwing into combat, she had to get a closer look at them. Personally, she wanted to see the results of an extreme example of genetic tampering, which to her knowledge, XCOM hadn’t actually done before.

So she’d naturally dragged Ted and Anna along with her, one of whom was similarly enthusiastic, and the other, who Sierra was finding out now, wasn’t.
“I hate this so much,” Anna muttered. “I hate deep oceans, I hate the things that live in them, I hate slimy things, and I definitely hate creatures out of a horror movie.”

“Come on,” Ted gave Anna a light jab on the shoulder and quickly backed off when the woman shot daggers from her eyes into his. “I mean, I’ve heard they like people.”

“If I was a giant octopus and hungry I would like people too!”

The “Shoggoth Playground,” as it was unofficially referred to, was a mix between an aquarium and the playgrounds of parks she’d seen before. Along the walls ran big aquariums which held little pieces of the deep ocean with artificial caves, areas with bright foliage and sand, and green-tinged seaweed forests. It was neat that they’d gone to some effort to create different ‘biomes’ for the creatures, even if they weren’t massive.

Little waterfalls broke off the aquariums which led down to the creation of smaller streams that flowed through the rest of the room. Sierra also noticed there were handholds built on the clear glass of the aquariums, likely so the Shoggoths could get back in when they wanted. The rest of the room had jungle gyms, bars and rings, and a large amount of Rubik’s cubes. As well as other kinetic puzzles, and Duplo blocks of all things.

Currently, there were three Shoggoths in this area. One was moving through one of the jungle gyms, another was just resting in a shallow pool, while another was manipulating a Rubik’s cube before another woman who was wearing grey fatigues, but not an actual lab coat. She glanced up as they walked in, gave the Shoggoth a pat on the head, and walked over to them with a bright smile.

God, they did make little trilling noises.

It wouldn’t be so creepy if they didn’t sound so happy.

Anna looked like she wanted to bolt. “It was nice knowing all of you. This is the point of the movie when we all die because the idiot friend led them to their deaths.”

“You have nothing to worry about!” The woman said happily. “They don’t attack Humans. Vahlen and her team made sure of it.”

“You mean they can’t attack Humans?” Ted asked curiously.

“Oh no, they can,” the woman quickly clarified. “But they are exposed to friendly Humans on a daily basis, and learn to associate us as friends. Plus their diet consists of various alien body parts.”

They all stared at her. Sierra wasn’t sure if she was joking or not; she wasn’t sure if she wanted her to be joking or not. “You…feed them alien body parts?”

“Yes we do; no I wasn’t joking,” she smirked, walking a short distance to pick up a bucket. “Don’t worry. Cloned parts which can be grown in a short time. We’re not hacking the hands and limbs off dead enemies. Can get a variety of meals out of them. Fleshy meat from Vitakarians and Mutons, with some harder meat to crack from something like Chryssalid legs.”

“I really do not need to see what’s in that bucket,” Anna said emphatically.

“Understandable,” she inclined her head. “Tora Nesby. Shoggoth Handler. Glad you’re stopping by. Whenever the Commander wants to send these little creatures into combat, I’m one of the handlers that’ll accompany you. I assume you came to see them up close?”
She and Ted answered “Yes” while Anna gave an emphatic “No”.

Tora laughed, and motioned for them all to follow. “It’s good you came, even if not all of you are on board. The Shoggoths like meeting new people; it’ll make them happier if they taste familiar people when they go on missions.”

“Taste!” Anna looked horrified, Sierra moved a hand to grab her arm in case she decided to bolt.

Tora coughed. “Poor choice of words. The suckers on the end of their arms is how they ‘taste’. It’s not like us. Trust me it’s very gentle. They’re careful with Humans, but they are very curious animals.”

“Unless you’re an alien,” Ted commented. “Then it’s not as gentle.”

“Not gentle, slow,” Tora clarified, as they reached a pool where a Shoggoth was resting. The damn thing was massive and pretty much took up half the pool. It was definitely wider that she was tall. “They like taking things apart and moving them in different directions. Armored aliens…well, you see why they’d like to take their time.”

“Lovely,” Sierra commented. That would be a really horrifying way to die. Being the plaything of an overly-happy sounding octopus from Hell.

“Hey Daoloth,” Tora said to the Shoggoth, kneeling down, putting a hand on one of its arms. “Got some people for you to meet.” The arm moved up and wrapped around the hand, but let go quickly while the creature shifted it’s massive bulk slightly. “Just put your hand on it, don’t be alarmed if it holds on for a second.”

“Alright, here it goes,” Sierra was not very comfortable with this, but steeled herself and lightly touched the arm. It was slightly slimy to the touch, and also warmer than she was expecting. The arm moved up and wrapped around her wrist. It wasn’t tight, but she definitely felt the suckers on her skin. It was an odd sensation. Not uncomfortable or unpleasant, but distinctly weird. The Shoggoth made a different-pitched trilling noise. “What’s that?”

“They do that when they meet someone new,” Tora said. “He’s happy, don’t worry.”

A few seconds later the arm let go of her wrist. “Good Shoggoth,” Sierra said slowly, not thinking it was really appropriate to call it a nickname. What would you call a nickname for a Shoggoth anyway? Shog? Shoggy? Didn’t really fit something that came straight from a nightmare.

“My turn, I guess,” Ted also knelt down.

“It wasn’t bad,” Sierra told Anna. “It feels a little strange, but nothing uncomfortable.”

“I don’t want to,” she shook her head. “This is close enough, thank you very much.”

Sierra rolled her eyes. “Come on. You talk with actual aliens. This isn’t even that!”

“Aliens aren’t giant killer octopi!”

“Hey, the Ethereals are close,” Sierra pointed out. “They have six limbs.”

“These have ten!” She shot a glance over. “I think.”

“Semantics,” Sierra dismissed. “I mean, you’re going to have to work with one of these hellspawn eventually. You shouldn’t be more afraid of it than the aliens.”
“It really isn’t bad, Anna,” Ted told her, as he stood back up. “It’s like a hug. Only around your wrist and a little wetter.”

“I hate both of you,” Anna knelt down, closed her eyes and reached out to the Shoggoth. “Oh god, it’s slimy.” Like the rest of them, the Shoggoth wrapped the arm around the wrist, but noticeably let her go after a much shorter amount of time. Anna jolted back up, but did seem a bit calmer than before as the Shoggoth trilled. “Oh, that was quick.”

“It can tell if you’re nervous,” Tora smirked. “Thought it best not to tell you that quite yet.”

Anna just scowled at her. Sierra looked to the handler herself. “So how did you even get this job?”

“Norwegian K9 Unit,” she answered. “Worked with training dogs. So I have some experience at this. Granted, Shoggoths aren’t quite like the Shepherds, and not as cute…” she paused. “Well, little baby Shoggoths are. But they’re all adorable in their own way. Very personable and unique animals. You’d be surprised.”

Sierra was never going to ever be able to call the ten-foot balls of arms and death adorable, but they did seem friendlier. “Smart as dogs?”

“Smarter,” she explained. “I mean, they toy with Rubik’s cubes, Legos, and other mechanical puzzles. They also figure out pretty easily what you want from them. They also have very distinct preferences.” She pointed along the wall. “They each have one of the biomes they prefer, with no objective reason other than that’s what they like. It’s amazing to watch all of them.”

“Do they ever fight each other?” Ted asked.

“No, never,” Tora answered. “They’re all raised together, but actually keep their distance from each other. Octopi are usually solitary creatures, and honestly bad parents. They leave the little baby Shoggoths alone, but don’t really help them much. That falls to the Handlers, which we’re happy to assist with.”

“Neat.” Sierra said. “So…was the creepy trilling intentional?”

“What?” Tora laughed. “Not to my knowledge. I think it’s nice. They always sound so happy.”

“It might be less creepy if it didn’t come from that,” Anna muttered. “At least it didn’t eat me.”

“Of course it didn’t,” Ted teased. “It just wanted a taste. If it really wants to eat you, it’ll come for more.”

Anna punched him in the shoulder, and they all shared a laugh.

***

Situation Room – Collective Mars Base

2/7/2017 – 11:11 A.M.

“XCOM has gotten better,” Yang said, letting the black holoprojector run as the video finished. “Big gear improvement. And they have their own Sovereign ally.”

“Correct,” the Battlemaster rumbled. “Nebulan was a fool to compromise her base, but perhaps her significant losses will illustrate her complete failure. She should have listened to the Human she sought out; the one I ordered she seek out.”
“So…” Yang coughed. “Is she being punished?”

“The only salvageable aspect of this situation is the updated information on XCOM combat capabilities,” the Battlemaster stated coldly. “Useful, but not worth the complete dismantling of our operations in South America. Nebulan has been recalled from Earth and will need to explain to the Imperator her failure.”

“That XCOM agent, she-“

“Dead. Killed herself. Not unexpected, and rendered the entire operation pointless.”

Yang rubbed her forehead, leaning on the holotable. “So we’ve got a Sovereign One allied against us. And giant killer octopi. And someone who can shoot lightning?” She looked up. “That even possible?”

“It is likely explainable,” the Battlemaster answered, albeit with some hesitation. “However… I am personally unsure as to the theory. I will need to consult with Deusian on the feasibility of such abilities. The creatures XCOM brought can be countered. A telekine and nanoweaponry can deal with them.”

“They’re also immune to telepathy,” Yang remembered. “I’m not sure how that works.”

“Neither am I,” the Battlemaster agreed. “However, it is good that we know this now. I will need to request Revelean to also investigate this development. Nebulan was poorly prepared for an attack and it showed. Her request to the Imperator, and his deployment of Praetorians and Custodians was one of desperation, as was Isomnum’s own agent being sent.”

“I guess…” Yang paused as the Battlemaster shifted the holoprojection to a map of the world. “I guess, my question is what happens now?”

“This will not reignite the conflict,” the Battlemaster said. “But the timetable has started. Quisilia and the Zar’Chon have enacted their plan to weaken the Chinese.” There was a clear tone of disapproval as it was referenced, which Yang found somewhat odd. She knew of the plan, and as far as she was concerned, it was no less than that country deserved.

“You don’t like it.”

“No, I do not.”

“Why?”

“I have a policy on viral and chemical agents,” he said after a few moments of hesitation. “They are to be used during a current conflict, and only against sanctioned military targets. This Smallpox virus is too uncontrolled, and will do nothing but galvanize the Chinese at best, or make them turn to ADVENT at worst. This should not have been deployed until we were engaged with the Chinese. We do not need this yet, and the strategic benefits are limited at best.”

“It weakens them,” Yang pointed out. “Isn’t that the point?”

“No, it is not.” The Battlemaster stated, walking up to her. “The way the virus is distributed is to force the Chinese to make a decision. It will spread chaos and fear, and when ADVENT or the Chinese determine that we are responsible – and they would be fools to not come to this conclusion – the Chinese will likely join ADVENT. And the Imperator knows this is a likely outcome.”

She… hadn’t quite thought of it that way. But it didn’t make much sense. “If that’s true… why
would he authorize it?"

“I don’t know.” The low anger in his voice belied the frustration she could feel. “We do not need to resort to these tactics to beat ADVENT, much less the countries still independent and it will accomplish nothing but provide ADVENT additional propaganda to use against us. The Imperator wants to sabotage my efforts here, I do not understand why, and he has not provided a reasonable explanation.”

“Alright,” Yang nodded, thinking. “So how can we salvage this? I don’t suppose it’s too late to just have the outbreak happen to the government, or just the military? What was Subject Zero in, an airport?”

“Too late, and the proposal was rejected,” he answered with a shake of his head. “Too many outbreaks in different locations would appear to be engineered – as if ADVENT will not determine this on their own. I’ve performed my own research into this disease; the one disease chosen was one which has been essentially eradicated by the Humans. Why Quisilia or the Imperator do not realize how suspicious that will be is questionable.”

“Well, if they’re wanting China to join ADVENT for some reason…” Yang proposed slowly, frowning. “Maybe it makes sense?”

“Quisilia is no fool, he knows this as well,” the Battlemaster agreed. “However, I will turn this to our advantage and try and salvage this ill-planned situation.”

“And how is that?”

“Quisilia also had the foresight to develop a cure and refine the working Human vaccine,” the Battlemaster said, changing the holotable to display the territory of the Sovereign African States. “I am going to make Macula’s own efforts do something more significant. The good news is that the smallpox disease will stay – in part – within Africa. The SAS will be supplied with the cure, and will distribute it. This will make its way to ADVENT, and theoretically muddy the waters regarding our involvement. It is not clean, but short of openly defying the Imperator – of which it is too late to do anyway – it is the only option.”

It sounded good, except for one thing. “So. How will you explain this to the Imperator?”

“I will tell him I will cease sabotaging his ill-conceived plans when he stops trying to sabotage mine,” the Battlemaster growled. “His command to involve Isomnum in the attack is similarly ill-conceived and I suspect is intended to be a test run for the Avatar Project.”

Yang blinked. “The what?”

“The Avatar Project,” he repeated. “A project that Revelean has been working on for some time, and that the Imperator has commanded he finish. It had been started once before, but failed due to a lack of suitable candidates. Your species has proved to be the missing link required.”

“Stop being coy, Battlemaster,” Yang crossed her arms. “What does that mean?”

“In short, a Human psionically linked to an Ethereal, who they would be able to telepathically communicate and draw power from,” the Battlemaster explained. “An Avatar of the power of the Ethereal. The Avatar could fulfill a number of different functions, from acting as a representative to allowing an Ethereal to be in more than one place at once – figuratively speaking.”

Everything suddenly clicked into place for Yang. The random Humans that she’d seen, her own purpose here, her assignment. “That’s what I am…” she said slowly in revelation. “I’m…your
Avatar.”

“The Imperator intended for you to be mine, I suspect,” the Battlemaster confirmed. “However, I do not consider that necessary for you.”

Yang blinked. “What?”

The Battlemaster hesitated. “I worded that poorly, and I apologize. I would…permit this, if that is what you want, but you will not be forced to fulfill a role you did not choose. But I will personally only…consider…this kind of joining with someone who is my equal.”

Well, there went that. Truthfully, she wasn’t sure she would have wanted it anyway, but at the same time…that wasn’t a completely bad idea. There were worse people she could be joined to than the Battlemaster, and the perks didn’t seem terrible. Although with his immunity to telepathy, she wondered how it would work. “Fair enough,” she shrugged. “You probably deserve an Ethereal anyway.”

“I am a Battlemaster,” he said, looking down at her. “That is my rank that no one else holds.”

He was stating this for a reason, and she wasn’t sure what it could be…unless…she narrowed her eyes. “What was required to become a Battlemaster?”

“There were many traditions and protocols,” the Battlemaster said. “Apprenticeship, decades of training, but the only rule that mattered was the Trial of the Battlemasters. Should one pass, they were declared a Battlemaster in full.”

She nodded slowly. “And this trial…what did it entail.”

“I will tell you the same thing that all those who took the trial were told,” he answered somberly. “You would travel to the Dead World, and forge a new weapon that is worthy of the Battlemaster.”

Yang frowned. “That’s it?”

“Yes.”

Then she remembered where the Dead World was. “Oh no.”

“Yes,” the Battlemaster confirmed with a nod. “By rule I cannot speak of what is down there, but considering your own…experiences, perhaps you will put together what the Empire never did. You can acquire the years of training and strategy I have over the course of your life, but you either have the mental fortitude and focus of a Battlemaster – or you do not. That is what the Trial determines.”

“Right,” she nodded absentmindedly. “I see. That’s…has any alien ever undertaken this?”

“No.”

“Is that…” she waved a hand. “Forbidden or something?”

“The Empire never considered the possibility, and there is nothing which prohibits it.” A pause. “And the Empire is dead. I am the last of the Battlemasters, and I exercise control over who is or is not permitted to become one.”

“And you think I could pass this trial?”

“I do not know. Individuals who I thought would easily succeed died, and those who I thought
were doomed lived. Understand the risk you face, but you have the potential to succeed.”

Yang did think that she had an advantage the other Battlemaster might not have. Namely…that she had an idea of what was so dangerous about the Dead World…and possibly how to prepare for it.

“Then I suppose I have some work to do.”

“This is something you wish? You could die. I nearly died.”

“And you deserve a subordinate who is the best she can be,” Yang countered. “Especially for this Avatar Project. You’ve made your requirements clear, and I will meet them.”

He gave a single nod. “Then until that day comes, I will assist in your preparations.”

SAS Intelligence Detention Center, Abuja – Nigeria

2/1/2017 – 1:26 P.M.

“They keep sending them here,” Betos appraised the captured men and women with a quiet concern. The Ethereal beside her let her continue. “No matter what your Overmind is doing, they are going to realize something is wrong. Taking them all captive at once could have been handled better.”

“These ADVENT Intelligence agents are deep reconnaissance and exploration,” one of Macula’s newer arrivals, a Vitakarian who simply went by ‘Keeper’, said, stepping forward. Unlike many other Vitakara she’d seen, he seemed noticeably aged and his right eye was missing. The other still glowed brightly in the dimmer light of the compound. “They report at certain intervals and utilize codes and dead drops. Those are all we need.”

“Ha!” One of the battered men chuckled. “You won’t get anything out of us. We can’t talk even if we wanted to, no matter how much you torture us.” He glared at Betos. “Traitor. You’re going to regret your choice when the Priests flay your mind and extract—” He stopped in mid speech, and screamed as he shook his head.

“Irritating,” Macula noted, returning the lifted hand to clasp his opposing one. “While effective, my own skills are unfortunately more painful for the recipients exposed to the conditioning.”

“Yes,” Betos nodded, glancing to Keeper. “And how do you suppose we get these locations and codes when they can’t be forced to talk?”

Keeper allowed a thin smile, and pulled out a small tablet which he consulted. A gloved finger tapped the screen as another of Macula’s operatives approached. Betos had not been ignorant of the fact that the aliens like Keeper were not standard Collective soldiers, and more likely Macula’s personal army. Kellani was obviously one, but the uniforms were curiously ornate and unarmored, with a mix of purples, greys, and blacks. Very professional and proper.

“I’ve done my own research and experimentation into the nature of the Manchurian Restraints,” he said, giving a knowing glance to the captives. “ADVENT themselves are helpfully open as to the nature, in their intent to justify wide-scale psionics to the public. Contrary to what you seem to believe, the Restraints do not prevent psionics from affecting the mind – it only prevents certain actions.” He took a step towards the captives. “Coercion. Mind control. Torture resistance. Useful, but there is one thing it does not protect against and that is telepathy itself.”

The smile of the alien was unsettling to her, much less the captives. “I’ll be clear, Agent,” Keeper
lowered himself to eye level with the man. “I do not need you, or anyone else, to talk. I will just have one of our fine psions read your minds and learn the information we need. It will, unfortunately, hurt for you though.”

The faces of the agents gradually changed to realization, to concern, and then open worry at that. “I will get what I want,” Keeper said, standing up. “But it doesn’t have to be painful. Tell me what I need, and your deaths will be quick and painless.”

“What a wonderful offer,” one of the female agents spat. “How could we refuse?”

“Because the alternative would be extremely painful,” Keeper said, clasping his hands behind his back. “And should you survive with your minds intact, you will be shipped offworld to participate in several of our groundbreaking research initiatives. I am content with either outcome, but Elder Macula has instructed that you be offered a chance of your own volition.”

“Like I told you,” the first agent growled. “We won’t willingly talk, even if we wanted to. But even if we could, I’m not giving you anything.”

“Then it is decided,” Keeper lifted his hand and subtly waved forward. Two Vanguard-class Sectoids in hoodless robes which had been standing silently in the background walked forward. “Extract the necessary information and prepare the mentally stable for extraction. Take full body scans and genetic material. Dispose of the mentally compromised.”

*Understood and obeyed, Keeper.* The telepathic response Betos heard clearly; oddly crisp and mellow as it echoed in her mind.

She didn’t have anything to add here. Keeper knew what he was doing, and this was not her area of expertise. Her concerns had largely been alleviated with his explanation, and she didn’t feel an extensive amount of sympathy for spies who were sent to watch and possibly execute her by ADVENT.

Although…

“I will amend that order,” she said, stopping and facing the Sectoids while Keeper appraised her curiously. “When you finish, execute and dispose of all captives. No extraction offworld.”

Keeper shot a glance at Macula, but at a nod, remained silent as the Sectoids acknowledged her. *Your orders are understood, Lady Betos.*

Satisfied, she walked out of the room together with Macula and Keeper. The newly-armored SAS Guards stood outside, designed and supplied by Fectorian and his foundries. It had clearly been intended to emulate XCOM armor, as it was clearly armored, sleek, with the flag of the soldier in question stamped along the shoulder pad. The helmets to Betos resembled ADVENT designs more than XCOM, albeit not as angled. The red eye slits seemed to only be for intimidation, but she couldn’t deny that they were evocative.

EMP hardened, and integrated nanites to facilitate repairs, they were more than likely beyond anything ADVENT had at this point. The camo system also allowed the armor to adopt different skins, from black, to white, to green and brown; whatever was most appropriate. While this wasn’t a stealth unit, it could be made to blend in a little easier. The lights of the armor could also be adjusted or shut off.

The default was a black armor, and for now it was the one she and her soldiers preferred. Although now she wasn’t wearing any armor, just her SAS uniform – which had also been produced en
masse by the Collective. It was amazing how in a matter of days they’d acquired enough supplies to turn the rag-tag and subpar military she’d had to one of the most advanced armies on the planet.

No matter what ADVENT had, they couldn’t match the production capabilities of the Ethereal Collective.

“While the sentiment is understandable, Betos, we gain nothing from just disposing of them,” Keeper didn’t look at her as he spoke. She got the distinct sense that he didn’t especially care for her.

“Maybe for the Collective,” she answered. “Or ADVENT. But not here. There is no point in us becoming just like ADVENT. It defeats the entire point.”

“As much as you hate the concept, ADVENT has many things others would be wise to emulate,” Keeper stated neutrally. “They are competent and pragmatic. That is how they continue to pose a threat to us despite their reduced numbers and resources. Idealism doesn’t win wars, Betos, nor is it how the galaxy as a whole operates.”

“Your input is appreciated,” she said, trying not to sound sarcastic. “But the SAS is ultimately under my jurisdiction. Not yours, and you will be fine just assisting me.”

Keeper didn’t say anything, but kept walking forward at a stiff pace. “I assist Elder Macula, and he has instructed me to assist you, so I will do so to the best of my abilities.”

“And you, Lady Betos, should consider his own advice,” Macula said from behind her. “He was not established as Keeper out of charity.”

Betos sighed. “Which neither of you have properly explained to begin with. Are you Zararch?”

“No.” Keeper stated. “Though the Zar’Chon and I share many similarities in our roles, I work directly for Elder Macula and oversee his intelligence operations, of which there are many. I know everything about his allies, enemies, numbers, forces, strategies, and could be considered educated in psionic and space-time theories. A keeper of secrets and knowledge.”

Macula’s personal Zararch. And one that seemed dangerous and skilled as well. Perhaps more so since they were presumably more elite. With Keeper at the top of the list. While he didn’t look like he could fight, appearances were deceiving when Ethereals were involved. “We also potentially have a situation to be aware of,” Keeper continued. “There is something ADVENT Intelligence will be using against us. From the previous operatives we acquired, they didn’t have details, but it was referred to as Project: Kutkh.”

“Which you think is what?”

“That,” Keeper said. “Is something I am hoping can be extracted today. It had something to do with wildlife. Birds I believe. However I am unsure what ADVENT could actually do with that concept, which means it is most likely something else. Nonetheless, they intend to use it and we should be prepared to detain, investigate, or deal with anything out of the ordinary. ADVENT won’t invade the SAS right now, regardless of what they say, but if they acquire indisputable evidence of our collaboration, they will be forced to act.”

“We’ve done as much as we can,” Betos said. “Unless something has happened, both the Internet for the continent is locked down and monitored, and the satellites have been subverted. Outside of that, we can’t do much more to secure the SAS from ADVENT.”

“I know,” Keeper said. “But ADVENT can be relentless, and they are smart. It is not a matter of if
they will learn the truth, but when.”

“I believe that by the time they learn, it will be too late to effectively do anything,” Macula added. “Of that I am confident of.”

“A month is what we need, minimum,” Betos said slowly as they reached the end of the hallway and began ascending up the stairs. “Then we might be ready. We’ll have to be.”

***

Unknown

2/8/2017 – 12:19 P.M.

The watery dreamscape was oddly soothing as the Commander walked on nothing. And he could really only tell that it was watery at all from the glow from the blue eyes of T’Leth. Their resident Sovereign had not bothered to create an elaborate dreamscape this time, and instead wished a ‘face-to-face’ interaction, as much as that was possible.

The dreamscape was such that the Commander realized that he could keep walking in one direction and not actually move anywhere because T’Leth would at least appear to be in the exact same place. Convenient. In fact, he had some ideas for this, but for now he wanted to focus on what T’Leth had to say to him now.

“So this Sovereign that is behind the Collective,” the Commander said. “You have history.”

“Yes.”

He raised an eyebrow. “I don’t suppose you would elaborate?”

The air rippled as the booming voice spoke, disturbing the watery dreamscape. “Mosrimor is like many of my brethren. Manipulative, ambitious, and a coward. Yet he lacks many of the skills of the truly dangerous. He lacks the authority of Exspirant, the brilliance of Classemque, or the power of the Leviathan. He is...young for our kind. An aspirant to galactic power.”

“That’s good, I think?” The Commander considered. A young Sovereign was better than an older one, although by that same token, this ‘young’ Sovereign was quite possibly still older than the entire Human species.

“It is good for our own situation,” T’Leth rumbled thoughtfully. “Mosrimor gambled on contacting the Ethereals, and he is likely recognizing his failure. There was a reason none attempted to manipulate or direct the Ethereal Empire. The species itself was a trap. Likely one to disrupt an entire cycle.”

“That seems like a lot of effort for one species,” the Commander noted, remembering the reports on Ethereal biology. “Whoever made them knew what they were doing.”

“Yes. A species difficult to control, even for a Sovereign. Such species are powers unto themselves, and can be useful in future cycles to further disrupt enemies. But they are double-edged weapons, ones which are harder to control, who are more suspicious, who have seen and survived the worst the galaxy has thrown at them. Mosrimor has likely underestimated the power of even a small number of Ethereals.”

“How powerful are Ethereals?” The Commander asked. “Compared to one of your kind?”
“A single Ethereal...a standard one of the Empire, they can be eventually dominated, but it requires effort to keep and maintain. Those of the Overminds and Imperators...such are more challenging. Controlling will be close to impossible, and it is safer to kill them. On their own, they can still never kill a Sovereign One, but they are poor tools. Expectations must be accordingly set.”

A pause. “Manipulation and psionics is not the strength of Mosrimor. Instead he is a Sovereign who has focused on experimenting with microtechnology. Nanites and atomic viral plagues. Yet he does not have mastery over the true powers of reality, and unlike Classemque, lacks the mind to leverage his knowledge effectively. What use is billions of nanites which can be dispersed with a single psionic fire? Why spend your efforts on killing aliens instead of building them up or creating your own? Mosrimor lacks foresight; he is impatient. And he will die.”

“You sound like you almost killed him at one point.” The Commander nodded.

“Nearly. But he ran as my kind often do. I destroyed his worlds and the species which he had coopted to his needs. He has hid for many cycles, and has clearly learned very little. Yet now that he is aware of me on this world, I suspect he will involve himself more openly. XCOM will need to be prepared to neutralize his agents, as they will devastate the forces of ADVENT. An ordinary species, even one rapidly advancing such as ADVENT, is very little against the dedicated power of a Sovereign One, even Mosrimor.”

“Agreed.” The Commander decided to sit on the black nebulous floor. “Nanoweaponry has weaknesses that we can exploit. Dynamo psionics, EMP grenades, WHEEE cannons. MELD nanites of our own.”

T'Leth emanated approval. “Yes. Even Mosrimor cannot completely overcome the limitations of nanotechnology, or he has, at minimum, not achieved this point. Offensive uses of his technology will not be the only attacks. Infrastructure and systems will attempt to be coopted through his nanites, and precautions against them must be taken for critical areas.”

The tone of the Sovereign turned...ponderous. “A regulating body would be useful for this task. The Artificial Intelligence XCOM is creating would benefit these types of defenses. A continuous risk, but a tool we can use.”

“I’ll talk with Vahlen and Shen about that,” the Commander leaned back. “At some point, it might be worth informing several leaders of ADVENT about the real situation. We should not act in complete independence.”

There was a ripple as T'Leth answered. “A select few, perhaps. My existence is not a secret from the Ethereals now, and they would not reveal such information to their species willingly. Nor will ADVENT, I suspect. If you believe they are reliable, then I will converse with them.”

“Good.” The Commander looked around. “In a few days I’ll be going to meet Miridian. That will likely allow us additional options and forces in alien territory. Fiona will be needed.”

“These terrorists will provide a use. You may take Fiona.”

The Commander stood, and looked around the empty and black-blue dreamscape. “One more thing. This...area...you create. How limited are you in what can be...simulated?”

“Whatever I can imagine. In my mind, there are no limits to what can be created.”

“Right,” the Commander nodded, getting an idea. “I wonder, could you possibly simulate battle
scenarios and exercises in…this?” He waved around. “While actual combat experience is useful, there is a lethal component within it. A non-lethal but still realistic simulation would be invaluable.”

T’Leth considered this, and after a few seconds spoke. “That is…possible. Yes. I would need an understanding of certain concepts and memories. I should know how to accurately replicate certain characteristics and patterns. This is a useful idea, Commander. I will begin preparations for such an adaption.”

“Good,” the Commander said. “Let your agents know what you want and inform the Internal Council. While I think this lull will break shortly…we still have time, and this will serve us well after it.”

“It will be done. Farewell, Commander.”

The area around the Commander blurred, and within moments he was back in his office. Pulling his hand away from the Orb, he turned to give an update to the rest of the Internal Council. Then he would prepare to meet Miridian.

He was expecting it to be an enlightening meeting.

Borelian Wastes – Vitakar

2/10/2017 – 3:19 P.M.

Nartha glared at Sorras.

Shun and Fiona followed suit.

“Out of everything you could have done,” Nartha said slowly. “You would do that.”

“Jerk.” Shun muttered, looking at her rather paltry collection in response. “Roe! Why did you bring Monopoly of all games along?”

The XCOM Engineer grinned from his workbench even as he continued working on assembling a SHIV. “The drama, obviously. Better and cheaper than any other entertainment I can bring.”

“You played back in XCOM,” Shun defended. “And I thought I could count on you as an ally!”

“Both of you should know there aren’t any ‘allies’ in this game,” Fiona snorted. “Although I think we’re equally screwed over now that our Dath’Haram property lord has Boardwalk.”

“Which I’m always open to sharing,” Sorras said with a sharp grin. “I have potential deals for every one of you.”

Sorras had picked up on the rules of the game very quickly and had gone on to gather a majority of properties and quickly striking deals which in theory seemed not to benefit him initially, although now that had proven to be a big mistake, as the other Vitakara was on the verge of two monopolies, and had a scattering of other properties.

Fiona was in second place with an actual complete monopoly, although it was the cheap purple properties, and she was low on money. Nartha had a scattering of properties, and a decent amount
of cash on hand. Shun was in a similar situation to him, with just slightly less money. A few bad runs on Fiona’s monopoly had whittled her funds down.

Nartha sighed. Well, as much as Monopoly wasn’t a team sport, there was no chance that he was coming back with Sorras and Fiona in the game. So he had to break the cycle of Monopoly and help someone else out before Sorras of all people won. “Shun. Trade offer – Pacific for St. James, plus five hundred.”

She blinked. “That doesn’t really help you…ah!”

Sorras cocked his head. “Really. You’re going to do that? This is not how the game works!”

“Hey, I might lose but you’ll go down with me,” Nartha grinned as they made the trade. With a powerful monopoly on her own, Shun was back in the game and now Sorras was in a worse situation. Which meant Fiona was also in danger. Which meant that he just might have triggered the endgame for everyone.

“Atlantic for Illinois,” Fiona told Sorras. “Don’t care about Boardwalk. We both need good monopolies now, yes?”

“You unfortunately have a point,” Sorras said, shaking his head in disappointment as Nartha. “But mine is worth more. Same deal, plus three hundred.”

“Done.”

And then Nartha was the lone player without a Monopoly.

He’d never asked why XCOM had this game, did they use it for team-building exercises? Because as far as those went…Monopoly really did not work as one. It was, in fact, almost the opposite. Well, hopefully he’d done enough to ensure Shun would win even if he essentially doomed himself.

“Alright, here we go,” Shun said with renewed determination as she looked on the board, grabbing the dice. The game continued for several rounds longer, as all players (except Nartha) built up their monopolies, and small amounts of cash exchanged hands for rent. Well, at least they were focused on something other than the upcoming week.

The meeting with Miridian was going to happen in a few days, and Sorras seemed convinced that would be a turning point in the war. Nartha himself was curious to meet the infamous terrorist commander, as he’d been a thorn in the side of the Zararch since before he’d joined. There was endless speculation on the identity of the mysterious Miridian.

The most common and accepted theory was that he was most likely Vitakarian or Borelian, and was ex-Zararch. His operations were too organized and he was too competent to not have inside information on Zararch protocols and tactics. But age, original name, and other physical characteristics were up in the air.

Nartha doubted that he would personally learn this information; that was likely going to the Commander. But he was going to learn at least something interesting about how the Nulorian were able to survive. His base of operations was also a continuing mystery, although the common consensus was that Miridian didn’t actually have a single base of operations, and rotated on a regular basis.

If there was any base, Nartha personally believed it would have to be in the Wastes, or maybe in Sar’Manda territory. The Empire was the type to not bother Miridian if he didn’t bother them,
although Nartha did wonder if they would risk reprisal from the Zararch if they ever learned that there was any Nulorian base within Imperial territory.

Then again, the Sar’Manda had never really cared about the Zararch…or anyone else for that matter. But he absolutely expected that if there was a Nulorian base in Imperial Territory…they would know about it. The Manda was under their complete domination, now and forever. Nartha privately believed that not even the entire Collective armada could successfully invade the Empire and emerge intact.

Unless they just decided to orbitally bombard the ocean.

Which the Empire might have prepared for as well.

“Pay up please,” Fiona said sweetly to him as he landed – on Baltic fortunately. He complied, knowing that if he landed on any other monopoly, his own properties were on the table.

He held up some of his more valuable properties, both between his index and middle fingers. “Shun, want to make another deal?”

“All ears,” she cleared her throat. “What do you want for those?”

“Two dollars sounds fair,” he said, smirking as Fiona’s face dropped.

Shun smiled, and the transaction was completed. “This betrays the spirit of the game,” Sorras said idly, looking over the board as the owner layout had shifted once again. “Unfair.”

“Hey,” Nartha leaned back in his chair. “You want to help me out to balance things, then go for it. But I have a preference for who I want to win if I can’t.”

“I’m so very hurt,” Fiona put a hand over her chest. “How could you support her over me?”

“And I’m actually of your species,” Sorras said dryly. “Does that count for nothing?”

“She’s actually my friend,” Nartha pointed out. “I’ve known both of you for a few days at most!”

“Ahh, my master plan is revealed,” Shun laughed in triumph. “And all of you fell for it!”

“What.” Fiona said flatly, her accent making her word seem even more disbelieving than it would normally sound. “There is no way you planned this.”

“Can confirm,” Nartha rolled the dice. “But she probably assumed that if we were both going to lose, I might help her out. Which it turns out, is what happened because I’m bad at this game.”

“This is the kind of contingency planning I can support,” Sorras nodded to Shun. “I like you, Human.”

Shun rolled her eyes. “Ha ha, that was only partially a joke. Anyway, let’s finish this up.”

With another roll of the dice from her hand, the game was back on, and Nartha suspected it would end very soon. He ultimately went bankrupt to Sorras, and Shun managed to absorb the majority of Fiona’s properties while Sorras successfully achieved the other half. But the war chest Shun had gotten was more, and after a few more painful turns and close calls, Sorras passed the point of no return and went bankrupt to Shun.

Nartha smiled as Shun gave him a high five. Monopoly was much more fun when you weren’t trying to win so hard.
The teleportation was near instant; a brief green-white flash and the Commander was standing in a snowy tundra, with a small structure a short distance away. The Titan armor insulated him from the worst of the cold, but even through it he could still feel a mild chill. Fiona let go of his arm and he followed her into the house.

Once inside, the variety of XCOM soldiers immediately stood and saluted, and he waved them down. “Commander,” Nartha nodded. “Good to see you again.”

The Commander shook his hand, giving a firm pump. “You too. Much has been accomplished, and I hope today continues that trend.”

“The infamous Commander of XCOM,” Sorras pushed himself off the wall and bared his teeth. “A pleasure to finally meet you in person. The stories of your exploits paint a curious picture. One even Miridian himself has heard.”

The Commander wondered how much of that was actually true. The actual acts he’d undertaken and ordered were known to a select few people, and he suspected that the Nulorian were not among them. That being said, as one of the first and leading figures of the Human resistance against the Collective, some stories were sure to pop up. “Curious, you say?”

“Indeed,” the Dath’Haram mused. “A leader who does not reveal his name, yet commands immense respect and loyalty. The man who single-handedly prevented the complete assimilation of your species. The man who even the Ethereals pause before moving against. You’ve made enemies with the most dangerous of the galaxy. It should not be a surprise that I would find that curious.”

“I certainly didn’t do it alone,” the Commander did sometimes tire of hearing this, despite it being praised. “I was merely a catalyst at best.”

“An apt description,” Sorras appraised the armored Human. “Miridian is quite interested to meet you. That you have acquired allies in several Andromedon Unions was an unexpected boon, and the Nulorian will be happy to offer our own services against the Ethereal Collective.” A pause. “Should we come to an agreement, of course.”

“Considering our situation, we need every ally we can get,” the Commander agreed. “I’m certain that Miridian is a reasonable individual, who is also of some curiosity to me.”

“I assure you Commander,” Sorras sounded mildly smug at this moment, green eyes twinkling in the light. “You will learn all that you wish to know.”

“Then we shouldn’t waste time,” the Commander said. “You know the way.”

“Yes,” Sorras said. “But first you, Fiona and Nartha will need to change out of that armor. While Nulorian aquatic gear isn’t quite as sturdy as your Titan armor, it will be necessary for where we are going.”

He opened some cases on the ground, each of different sizes to account for each of their height differences. “So that’s what was in them,” Fiona muttered. “Big secret? Really?”
“That the Nulorian have established underwater locations? The Zararch would love to learn that,” Sorras said, standing back up. “I wanted to keep this under wraps as long as possible. I’m sure you understand, but we take no chances. It’s how we’ve lasted with the Zararch always hunting us. Regardless, this is top of the line. Made in Yarras’Manda; capable of withstanding extreme depths. Imperial Scout armor is made from the same materials.”

“Yarras’Manda is the primary production and design city of the Empire,” Nartha explained at the Commander’s glance, though he also shot a curious look at Sorras. “How did you get this? The Empire doesn’t share their tech with outsiders.”

“The same way we get the rest of our gear,” was the answer. “And I don’t feel the need to reveal our sources right now.” He nodded to the ground. “Once these are put on, we can go. Unless you want to drown, you want to wear these.”

The source of their equipment was likely something he could ask Miridian, and so the Commander took one of the cases and began the somewhat lengthy process of getting out of his Titan armor and putting on the aquatic suit. It wasn’t uncomfortable, and even had a minor HUD which displayed oxygen and depth levels. Not bad, and he saw that the tank would last for four hours, which could eventually be swapped out seamlessly for another tank as the suit maintained an internal air cycle of ten minutes.

Suited up, he rejoined the group in the middle of the house, helmet under his arm. No reason to waste oxygen yet. Fiona held her sword by her side, having no sheath or other means of storing it. “I assume we can take weapons,” the Commander said, lifting his gauss pistol. He was sure to phrase it like it wasn’t a question. As a telekine, he wasn’t defenseless, but the Nulorian didn’t need to know that right now.

“Yes, but I doubt they will function well,” Sorras said with a shrug. “But you can take them if you wish. You are not assassins; I believe I can say that with some certainty.”

“Sounds good,” the Commander said, deciding to keep the pistol for now. “Nartha, Fiona, are you ready?”

“Yes, Commander,” Fiona seemed slightly uncomfortable, but he attributed that more to not being able to wear her suit. Given what he knew about the suits, not being able to wear it in a dangerous situation was likely new for her. Nartha didn’t seem phased whatsoever, and nodded his affirmative as well.

The Commander motioned to the similarly suited Sorras. “After you. Everyone else, make sure this place isn’t bothered.”

“Yes, Commander!”

The four of them stepped back into the snowy tundra, and the chill was now much more pronounced to him, but not uncomfortable yet. “We’ve got a short walk ahead,” Sorras said, taking the lead. “So allow me to indulge some curiosity, Commander, what do you know of our species?”

“What Nartha has told me,” the Commander said. “As well as detailed reports from various Vitakara defectors. XCOM has what we consider to be an accurate picture on the species, even including the Oyariah to some extent.”

“Mmm,” Sorras kept marching forward through the snow, the hum sounding thoughtful. “And so I must ask then, what do you think about the current state of my species?”
“That it needs change, to be reformed,” the Commander said. “Too much of it has been dominated and influenced by the Ethereals, the Collective, and the Zararch. Something new must be built and established. The population must be deprogrammed from their routines and constant propaganda. But I suspect you know this better than I.”

“Reform can be possible,” Nartha added. “Not everyone is ignorant as to the control wielded by the Zararch. The Cobrarians in particular are aware they are being pushed in certain directions. The Aui’Vitakar can be turned if they believe they could survive.”

“No.” Sorras’s tone was flat and emotionless, but unrelenting. “They have perpetuated the cycles of deception and lies for generations. They are a corrupt body who only serve as a front for the Zararch to control, and through them, manipulate our species. They know better. They are not like the blind citizens, who’ve known nothing but lies. They know, but they play along because they have no conviction, no spine. They earn no mercy.”

“And they would likely die if they acted,” the Commander pointed out. “And be replaced by someone else.”

The alien allowed a sharp laugh. “A coward’s excuse. Do you know, Commander, that our ranks are built from former Runianarch, Lurainian, and even some Zararch? Or other countless individuals who make up the scientists and engineers, and even regular citizens like I was who knew something was wrong, knew something had to be done, but unlike the cowards who are supposed to be our leaders, we did something, even though we knew we could die. We knew we could end up with our minds ruined and our bodies tortured, but we did it anyway.”

He glanced behind to the Commander, a cold fury in his eyes, though not for him. “So no, Commander, I do not accept such cowardice as an excuse. Men and women have given their lives willingly because they knew it was right, and they didn’t let their fear of death stop them. The Aui’Vitakar have no excuse. They merely pay lip service to avoid justice from people like us.”

There was short walk of silence as they continued. The air was clear and no snow fell on them while the sun rose behind them. “You know,” Fiona said. “You remind me a little of someone I know, Sorras.”

“Oh? Who could that be, Human?”

“No one you would know,” she answered. “Well, not completely him. But what he could have turned into. Dangerous, ruthless, and hateful.”

“And you say that like it’s a bad thing, little girl,” the Dath’Haram seemed to find it more amusing than anything else. “Ask me if I’m wrong when your species has been manipulated for generations and perpetuated by spineless collaborators. Maybe after your family and friends die because of them. I don’t care what you think of me, Human, nor do I need your approval.”

“I’m not saying my opinion of you either way,” Fiona noted evenly. “Just making an observation.”

Sorras nodded at that, then pointed ahead. “We’re coming up now, and right on time.”

Ahead was a small pond of water that was curiously not frozen solid, and in the center right beside a small dock was a submarine with two Nulorian guards standing before it. Sorras raised a hand in greeting, and they didn’t raise their weapons in response. A good sign.

The submarine itself was divided into four sections, the back one being the pilot seat, while the others were for passengers. Headsets were also in each section, and the glass tops would allow
them a clear view into the deeper ocean. “I will be driving,” Sorras said, stepping into the pilot section. “Pick seats as you want.”

Fiona sat herself down in the front, the Commander behind her, and Nartha behind him. “Alright, strap in,” Sorras said as the tops moved over their heads to seal in place with a hiss. “You’re going to be some of the privileged outsiders to travel the Manda.”

***

The Manda – Vitakar

2/15/2017 – 10:18 A.M.

Nartha had never actually been as deep within the Manda as he was now. The territory was always considered off-limits, and the Empire was extremely particular about who was, and wasn’t allowed to travel in it. Trade craft was most common, and even then that was majority surface traffic, and all sub-surface traffic was monitored or escorted by Imperial Manda Patrol.

“So, should we worry about these Sar’Manda?” Fiona asked as they descended deeper.

Sorras just chuckled, and Nartha could easily see how that would be amusing. “The Sar’Manda know everything that happens in the oceans. They spent centuries mapping, monitoring, and connecting the entire oceans. The Empire knew we were in the ocean the moment we left the pool; now whether they’ll do anything…”

“I think as long as the cities are avoided, we’ll be fine,” the Commander commented. “They seem to be a very live-and-let-live species. We leave them alone, they leave us alone. Unless the Nulorian are particularly risky, Sorras?”

“Plant a Nulorian base right under their cities? Come now,” Sorras was definitely amused. “Miridian wouldn’t make a stupid mistake like that. You don’t antagonize the Sar’Manda and expect to emerge unscathed.”

“I’m curious,” the Commander said. “Does the Nulorian have many Sar’Manda?”

“We have at least a few of every race,” Sorras answered. “But not many Sar’Manda themselves are part of the Nulorian. They aren’t as controlled as the surface, and they don’t face the same hardships and propaganda as we would. They’re a people I admire, though much of that comes from the fact that they may as well essentially live on another planet from the rest of us.”

The darkness became more pronounced as Sorras activated the lights on the submarine. Nartha could see vague outlines and shadows in the distance. Schools of fish and small predators, as well as…he blinked. “Are those mountains?”

“Yes. Just below us you’ll see the Manda Peaks,” Sorras turned the submarine so they could get a better view. “They do extend to the ocean floor, but we’re just going to be above them for the most part. If you keep your eyes out, you might see some of the larger creatures of the Manda.”

“I don’t know if I want that,” Fiona said slowly. “Are they big?”

Oh dear, was she going to be in for a shock. “Afraid so, Fiona. Sorras wasn’t kidding when he said the Manda is close to another planet. There are completely new ecosystems at various parts of the Manda. More than the surface. The creatures that live on the ocean floor could be compared to your dinosaurs in scale. There are also some herbivores which could swallow this ship with ease. But we’re not going that deep.” He shot a glance back to Sorras. “Right?”
“We’re not going to the ocean floor, no,” Sorras confirmed. “Besides, even if we were, Mandaladore avoid subs. Sar’Manda conditioning has weaned them off even attacking metallic craft and they go away when certain spores are released. They’ve solved the wildlife problem long ago.”

The darkness became near-complete, which Nartha really did not like. A few minutes of diving, and a chime sounded. “Well, looks like we have company,” Sorras said. “Sar’Manda monitoring for any aquatic craft that operates for certain lengths of time. Nothing to worry about.”

A slight buzz of static and the cold and artificial voice of the Sar’Manda translators spoke. “[You have entered the Sovereign territory of the Sar’Manda Empire. Send verification codes or reason for passage or you will be apprehended by Imperial Soldiers. Resistance will result in the immediate destruction of your craft. Is this understood?]”

 “[Acknowledged,]” Sorras said. “[Codes being sent.]”

So the Nulorian had Sar’Manda codes. Not too surprising, as even the Zararch had codes they could use in the event they needed to travel through the Manda. “Sar’Manda,” Nartha told the Commander and Fiona, who didn’t speak the language. “Sorras is just transmitting codes to pass.”

 “[Codes recognized. You may proceed to your intended destination.”

“And, we’re clear,” Sorras said as the Sar’Manda machine disconnected. “Should be few problems from here.”

“How did you get Sar’Manda codes?” The Commander asked.

“Not difficult,” Sorras stated with some disinterest in his voice. “Sar’Manda codes aren’t hard to acquire. All of the trading organizations have them, which are trivial to find, copy, and steal. Zararch have some of their own too. The harder to get codes go into the cities or the ocean floors. That’s untouchable Imperial territory. No one has ever been allowed below a certain depth.”

They continued down for what felt like a long period of time. Nartha wondered if Sorras was taking a deliberately convoluted or long route to reduce the risk of any of them remembering the way, or to throw off any potential tails. He was going to be mildly irritated if it turned out that this base wasn’t under the water and it was just an elaborate trick.

He wouldn’t put it past the Nulorian to be that paranoid.

“What’s that?” Fiona pointed ahead in the distance. Nartha leaned forward, seeing the same thing. A massive transparent sphere in the distance, illuminated by soft blue lights which gave the massive floating mass an ethereal glow. A city of the Sar’Manda, just like the pictures had shown. And it was even more amazing in person.

The close they got to it, the larger the city became. It dwarfed their submarine by hundreds of times, and several pieces then clicked into place for Nartha. “Sorras, why are we going to that city?”

“That is Manda’tearias,” Sorras said. “One of the smaller Imperial cities, but an important one. Primarily deals in surveillance, intelligence, and are the ones who watch the Manda. I also happen to have the authorization codes to enter safely.” Nartha leaned back in his seat, thinking furiously. If what Sorras was implying was accurate…

“It appears that your agents are embedded in more than just the Collective,” the Commander said slowly. “Or the Sar’Manda are not as impartial as everyone believes.”
Sorras chuckled and Nartha could easily imagine the toothy smile he wore right now. “As I said, Commander, the Sar’Manda are an admirable people. One who fortunately have more foresight than most of my species. You will see shortly.”

The submarine moved towards a noticeable opening in the transparent sphere that lined the circumference, which Nartha assumed served as a pressure airlock, so the city wouldn’t collapse in on itself for each new submarine which arrived. Sure enough, when they moved through the opening, another transparent wall closed behind them, and after a few seconds of water cycling, the entrance to the city itself opened and they sped through the waterways of Manda’tearias.

Seeing an actual Sar’Manda city was…fascinating. There were dozens of Sar’Manda just swimming around communicating in their strange sign language. There were fewer vehicles than he expected, and the ones that he did see were small and single or double-sized. All the vehicles stayed in specific lanes lit by floating lights which also managed the traffic.

There was less metal than he had assumed as well, and many of the buildings were created out of organic-looking substances, and were more spherical than blocky. Verticality was how the city was built, not horizontal expansion. The city extended below them an absurd amount; the buildings also seemed primarily lit not with lights, but a cultured plant or algae which emitted a sharp blue light. Green and red variants were also common.

“Where are we going?” The Commander asked.

“The big structure in the middle,” Sorras said. “Imperial Reconnaissance and Communications. Don’t mind the soldiers and guns, they won’t fire.”

That disclaimer didn’t make any of them less uneasy as the closer they got to the floating block of black metal, the more they could see the swimming and hovering shapes of Sar’Manda soldiers observing and pointing weapons at them. Several Imperial Patrol craft had also fallen in behind them; not giving any warnings, but also making their presences known.

Minutes later they were inside, and while the entire building was (unsurprisingly) filled with water, it was far more constrained and orderly. They were directed by several of the black-armored soldiers into a grey chamber with soft blue light permeating throughout. A door shut behind them, and the water slowly was drained out until the submarine was floating in a chamber half-full of water.

“Helmets on,” Sorras said as the tops of the pod opened up. “They create air pockets so that we can exit without destroying the submarine. That’s the only consideration they allow for outsiders. Get ready to swim.”

Sorras jumped into the water, and the rest of them followed a few seconds later.

***

Manda’tearias, Sar’Manda Empire – Vitakar

2/15/2017 - ???

Ignoring the fact that they were god-knew how many miles under the water, this was almost fun for him. The Commander had always wondered what the feeling of persistent weightlessness would be like, and the only way it could be experienced was in space, or underwater.

Jumping into the pool, his HUD properly lit up, and he floated easily in the darkness. Lights shone from his suit, illuminating the immediate area in front of him, but it wasn’t really necessary as the
water was well-lit already. The others jumped into the water beside him, and a door opened from the floor and two Sar’Manda swam up to them.

Up close the Commander could see that it would be a nightmare for anyone foolish enough to fight them on their own turf. They flowed through the water with a sharp grace and quickness that he couldn’t hope to emulate. Their webbed hands and feet, as well as the fins along their arms, legs, and back ensured they had an innate advantage, and lightweight black armor built specifically for their anatomy protected them from any possible attacks.

They held rifles of some kind in their hands, likely harpoon guns or similar projectile weapons. They were blocky, but had short barrels. Six of the Sar’Manda ultimately arrived, with one who the Commander assumed was the leader who had a silver stripe on the chest piece. Floating beside the leader was a floating silver sphere.

“Translator spheres,” Sorras said, floating beside him. “Translator tech is extremely advanced here, but it’s still nowhere near actually knowing the language. They usually use them to deliver pre-recorded messages or simple instructions.”

A sharp chime was transmitted to their earpieces.

“FOUR ENTITIES DETECTED. YOU WILL FOLLOW IMPERIAL HUNTER SAR’VARIES’MANDA AND DO NOT DEVIATE FROM HIS PATH OR YOU WILL BE ANNIHILATED. YOU ARE BEING TAKEN BEFORE THE MANDA’SARTHORIAN. FROM THERE THE ARRANGED MEETING BETWEEN MIRIDIAN AND THE COMMANDER OF XCOM WILL TAKE PLACE. THE OTHERS WILL BE SECURELY HELD UNTIL THAT POINT.”

Another click, and the booming and mechanical voice ceased. It was…not what the Commander had expected. It didn’t seem like a standard emotionless intelligence. There was a cold mechanical authority to the voice, yet at the same time dispassionate and calculating. A machine which understood it was in control and would brook no deviation.

It was a good tactic, he had to admit.

“I don’t like that,” Nartha commented as they began swimming to follow the Hunter. “I’ve heard Sar’Manda translators before. None of them sounded even close to that…thing.”

“Yes…” Even Sorras sounded mildly concerned. “Normally they use the standard translator. This was something different. Something I haven’t heard either. Possibly an intelligence they designed…”

“You’re kidding,” Fiona snorted, causing a burst of static. “They’re AI programmers too?”

“No, not any more advanced than the Collective,” Sorras clarified. “At least that was my impression. They can work computers and understand them, but their environment causes…challenges.”

The Commander looked to the floating sphere. “Ones they’ve seemed to overcome.”

“Possibly.” Sorras contemplated. “I suspect Miridian has an idea.”

They continued swimming in the water for some time, as it was not easy to keep track of the passage of time in the waters. The grey steel of the walls gave way to transparent tunnels, allowing them an unrestricted view of the building they were in. There were vast and complex networks of
tunnels which were lit by differently colored lights that led to common areas filled with pieces of equipment the Commander didn’t recognize.

It was especially unique in that there were openings everywhere. From the floors, the roofs, and obviously the sides. Sar’Manda has unparalleled freedom of movement, and they flowed through the building at natural and graceful speeds. They followed the entourage upwards, and once more entered a darker grey tunnel before they emerged in what the Commander would call an aquatic penthouse.

The roof was a transparent pyramid showing the vast black oceans above them, and the room itself was filled with several dozen soldiers – these ones even more armored and the color they bore was blue-silver, not black. They carried no projectile weapons the Commander could see, but several small melee weapons and roped and weighted hooks were attached to their waists, backs, or held in their hands.

The opening they had come up through closed underneath them. The room itself was bare of anything other than the occupants. The Sar’Manda surrounded by the blue-silver armored soldiers was the first Sar’Manda he’d seen that wasn’t armored in some way. The Manda’sarthoria he assumed, leader of the Sar’Manda.

Sar’Manda did wear some clothing, but it wasn’t significant and closer to a skinsuit than anything else, one which didn’t cover up the fins on their body. Their hands and feet were also kept bare. Their eyes were clouded, with no obvious pupils though the biological report Nartha had written said that this was a biological adaptation to protect their eyes. Another eyelid of sorts that kept it from injuries. But for most it simply gave the impression that their eyes were blinded or white.

Their skin was a deep blue, they had no hair to speak of, and no scales either. The Manda’sarthoria hadn’t said anything yet, but he was well aware that they have a couple rows of sharp teeth. Their faces he remembered Nartha describing as ‘very expressive’, which was a consequence of their sign language and having to convey complex sentences and words with gestures and body language.

The skinsuit of the Manda’sarthoria was a mix of blue and green, which he assumed differed from regular Sar’Manda clothing, otherwise the leader would be impossible to differentiate. Close to the Manda’sarthoria he also saw another figure in a suit, this one clearly not one of the Sar’Manda. Miridian, it had to be, though it was impossible to tell anything from the armor other than that Miridian was almost definitely a Vitakarian or Dath’Haram. The suit was too small to be a Borelian or Oyariah. A Cobrarian was obviously out of the question.

The floating sphere moved to the side of the Manda’sarthoria. Looking at the Commander, the Manda’sarthoria floated forward slightly, blinking as he watched the quartet of aliens. The sphere began transmitting to their suits again, the same voice as before.

“COMMANDER. I AM THE MANDA’SARTHORIA, SOVEREIGN OF THE EMPIRE OF THE SAR’MANDA. MIRIDIAN HAS DETERMINED THAT YOUR KIND ARE POTENTIAL ALLIES IN THE COMING CONFLICT, AND SO I HAVE PERMITTED YOUR ARRIVAL. ASK YOUR QUESTIONS BEFORE YOU ARE TURNED OVER TO HIM.”

Possibly pre-recorded, unless Sar’Manda body language was that subtle. Well, he had quite a few questions. “You’re allied with the Nulorian. How long has this been going on?”

The Manda’sarthoria made a few quick gestures and bared his teeth. The sphere translated. “THE
NULORIAN AND THE SAR’MANDA EMPIRE SHARE SIMILAR GOALS. WE HAVE DETERMINED THAT THE ETHEREALS WILL NOT BE CONTENT TO CONTROL THE SURFACE AND WILL ONE DAY COME TO SEIZE CONTROL OF OUR EMPIRE. THIS WILL NOT BE PERMITTED. THE EMPIRE ANSWERS TO NO SURFACE POWER NOR WILL WE BE HELD HOSTAGE BY THE THREAT OF THEIR POWER.”

“Understandable,” the Commander nodded. “It explains why the Zararch have never been able to fully stamp out the Nulorian. Not when you’ve supported them.”

A wave and a quick sequence of facial movements. “THE ZARARCH UNDERESTIMATE US. THEY BELIEVE THEY UNDERSTAND OUR GOALS; OUR MOTIVATIONS. APATHY, ISOLATION, NATIONALISM. WE WERE CONSIDERED NO THREAT; A CURIOSITY AT BEST. BUT WHILE OUR SURFACE COUSINS WERE QUICK TO THROW AWAY THEIR FREEDOM WHEN THE ELDERS CURED THE DISEASE BROUGHT ABOUT BY OUR OWN HAND, WE SAW WHERE IT WOULD LEAD. OUR ASSUMPTIONS HAVE BEEN CORRECT, AND SO WE HAVE BEEN PREPARING.”

“Preparing for what?” Fiona floated forward. “You can’t have thought you could beat the Collective on your own.”

The voice seemed to grow more sinister. “AND WE WILL MARCH ON THEIR CITIES AND REDUCE THEM TO ASHES. WE WILL STARVE AND SLAUGHTER THEIR ARMIES AND PEOPLE. THE AUI’VITAKAR WILL COLLAPSE AND BURN FOR DARING TO IMPOSE THEIR WILL ON THE SOVEREIGN EMPIRE. AND WHEN THE SURFACE WORLD LIES IN RUINS, WE WILL RETURN TO THE SEAS AND NO OTHER FORCE WILL EVER THREATEN THE SOVEREIGN EMPIRE AGAIN.”

There was a pause. “WE DO NOT SEEK ALLIANCES, FRIENDS OR PROMISES, COMMANDER OF XCOM. THE SOVEREIGN SAR’MANDA EMPIRE WISHES COMPLETE CONTROL OF OUR DOMAINS, FREE FROM OUTSIDE THREATS. THE ETHEREAL COLLECTIVE POSES AN EXISTENTIAL THREAT TO YOU, AND AN EVENTUAL THREAT TO US. WHEN THE SURFACE WORLDS ARE CONQUERED, WE CARE NOT FOR WHAT HAPPENS NEXT. BUT IT WILL BE WITH THE UNDERSTANDING THAT NO ARMY WILL THREATEN THE SAR’MANDA AGAIN. WE WILL LEAVE VITAKAR AND ENTER THE GALAXY UNTIL WE FIND PLANETS OF OUR OWN. PLANETS WHICH WILL BE UNTouched BY OTHERS. THIS INCLUDES YOUR SPECIES; BE THEY ADVENT, XCOM, OR OTHERS. IS THIS CLEAR AND UNDERSTOOD?”

The Commander allowed a single nod. “I think we can both live with that. Though ADVENT and XCOM would of course be willing to provide assistance to the Sovereign Sar’Manda Empire in your quest.” He made himself float forward a short ways. “While the Sovereign Empire does not seek alliances with others, I don’t see why either of our species cannot have mutual relationships.
Allies who assist us in this fight will continue to be our friends and allies, even if unofficially. I presume that will not be a major issue?”

The Manda’sarthoria rolled his head back, and made several motions with his left hand. “YOUR WORK HAS BEEN SHARED WITH ME. YOUR WORD IS BETTER THAN MOST OF YOUR SPECIES. SHOULD MIRIDIAN REACH AN AGREEMENT WITH YOU, IT IS ONE WE WILL ALSO ABIDE BY. WORDS AND ALLIANCES ARE EASILY BROKEN, COMMANDER. WE WILL CONSIDER YOUR WORDS WHEN YOUR SPECIES HAS PROVED ITSELF TO THE SOVEREIGN EMPIRE. NOT BEFORE.”

The Commander bowed his head. “That is fair, Manda’sarthoria. Should my talk with Miridian proceed well, I’m certain ADVENT would wish to speak to you.”

“IF THEY COME, I WILL SPEAK TO THEM.”

Good news, he supposed. The Commander had the feeling that ADVENT would be perfectly fine with letting the Sar’Manda do their own thing once the war was over. Miridian floated forward towards him. “Hello, Commander.” The voice was stoic and milder than he was expecting. Not exactly deep, nor what one would expect from a notorious terrorist. But it was also disarming in a way. “Follow me. We have a lot to talk about.”

***

The room Miridian led him too was a small spherical room with tinted walls. There was a solid floor, and in the center there was a circular ring large enough to set down small pieces of equipment, computers and such. Projectors were built into the ceiling and floor in the center of the ring, meaning it functioned as a holoprojector?

The water was drained out of the room in a few minutes and sweet-smelling air was pumped in it’s place. When Miridian moved to take his helmet off, the Commander followed suit. Miridian was, as many had suspected, a Vitakarian. Taller than the Commander by at least three inches, he otherwise didn’t have many obvious surprises.

The eyes were the bright blue of most Vitakarians, and the skin a dark grey. It was hard to tell in the dimmer light, but the Commander’s enhanced eyes easily picked up on the fact that the right side of his face was heavily scarred. Chemical burns or fire it appeared. The face itself matched with the demeanor of Miridian; aristocratic with an air of command and authority around him.

There was history in Miridian, he could tell that much. His emotions were also tightly controlled to the point that the Commander couldn’t pick up anything especially distinctive.

“Apologies for the lack of chairs,” Miridian said, setting his helmet on the ring. “No need when they just float everywhere. Lucky for us they keep a few rooms that can have air pumped into them for the odd surfacer that comes down.”

“Built at your request?” The Commander inquired.

“Not these,” Miridian corrected. “But I’ve had my own share of influence in Imperial construction. Believe it or not, before the Ethereals arrived and screwed everything up, the Sar’Manda were likely going to at least attempt to work with the other races. Likely for the best that didn’t happen.”

“Oh?”

“A long story there,” Miridian waved a hand. “One you’ll likely be hearing shortly. As I said,
we’ve got a lot to talk about.”

“We do,” the Commander set his own helmet on the table. “That machine the Sar’Manda have. It isn’t standard, is it.” It was not phrased as a question, they both knew the answer.

Miridian allowed a smile. “Figured that out quickly. Introduce yourself, Siaru.”

“You made this?” The Commander asked incredulously.

“Made? Ha, not even close,” Miridian tapped a finger on the ring. “How I acquired Siaru…well, that involves my own story which you’re no doubt interested in. So if you don’t mind, I’ll relay that.”

“Trusting of you.”

“You’ve seen my face, and you’re no friend to the Zararch,” Miridian shrugged. “I’ll take my chances, Commander. I have no interest in making you my enemy.”

“Fair enough.”

“There are a lot of rumors about me, many of which I’ve helped propagate or start,” Miridian began. “But the truth is that I was among the highest-ranked agents within the Zararch. Reported to the Zar’Chon directly; did mostly border scouting and frontier work. Met several Ethereals, including the Battlemaster and Quisilia. I’ve seen quite a lot of things, things you’d be interested in once the Ethereals are dealt with.”

The Commander nodded. “And you found something?”

“Indeed,” Miridian nodded. “A crashed and destroyed alien starcraft. Obviously I investigated it, it was nothing like I had found before. But it wasn’t quite dead, and I requested a team to help try and salvage it. We eventually figured out a way to restore the power…even if we barely understood the tech as it was.”

“This was Siaru.”

“So it identified itself as.” Miridian rapped his fingers on the table. “It’s an odd one. I don’t think it’s a true AI, not really. It’s insistent that it’s a submind of something else, but whatever it is, it refuses to identify to me. I don’t know how intelligent it really is. One moment if seems to be a machine intelligence, and other times it will ask very specific questions or without some kind of answer. It can play dumb, although I’m not unconvinced that isn’t leftovers of certain protocols.”

The Commander frowned. “Are you sure it’s on your side?”

“For now,” Miridian said slowly. “Ignoring the fact that it knows I have the central core right now strapped with several EMP and plasma grenades, and the room can be flooded in minutes, it is firmly against the Ethereals.”

“Why?”

“Because as I learned, the Ethereals appear to be under the influence of…something,” Miridian
scowled. “Yes, I’m aware of how that sounds. But they made contact with some extremely powerful being, and it took Siaru minutes to put together a conclusion when I fed it information. And Siaru also put together a simulation of what the Zararch and Ethereals were planning.”

“Sovereign Ones,” the Commander interjected. “They’re called Sovereign Ones.”

Miridian narrowed his eyes. “You know about this? How?”

“Because I’ve talked with one,” he answered evenly. “And just recently we fought a puppet of the one working with the Ethereals.”

“Of course,” Miridian breathed. “Why else would the Ethereals not simply invade your world with everything they have? Because there is something there they don’t want to awaken! I never considered the possibility there was another of these creatures involved!” He then turned somber. “Then…is Humanity…”

“T’Leth has his agents,” the Commander said carefully. “Ones we’re working with. He…does not appear to have an interest in controlling our species. But my impression is that he’s…not like other Sovereigns. I don’t completely trust him, but if he wanted to control me…and any of us…he could have a long time ago.”

“Mmm.” Miridian looked sightlessly ahead. “No disrespect intended to your Sovereign, but I want nothing to do with him. I deserted the Zararch when I realized what was going on, that our species was unwittingly becoming the puppet of some shadowy all-powerful figure. And that they would use us to further their own agenda. The Collective, Commander, is planning for war against the inner galaxy. None of my species wanted this, or are prepared for it. But that was what my work was. I had originally thought it was to keep tabs on what was happening, in case they encroached on our territory, but back then I was…well, naïve.”

“So how did you leave the Zararch without anyone noticing?”

“The only way I could,” Miridian said, amused. “I died. Freak spacecraft accident where all the bodies were unfortunately atomized and the recovered intelligence was similarly destroyed. The team who was with me heard all I did, and we came to the decision together.” He waved a hand. “Obviously it was more complicated than that, but unless you want the boring retelling, I would prefer to reach the relevant part.”

“You can retell the whole thing later,” the Commander said dryly. “I have a feeling you’re proud of it.”

“Managing to fool the Zar’Chon and multiple Ethereals?” The corners of Miridian’s lips curled up. “I do take some pride in it. But I moved to an old derelict Zararch outpost on Vitakar. I had a lot of time to think and reflect; I had enough aliases and disguises that I could gather food and supplies for several years. I talked a lot with Siaru. This machine has been in many wars, Commander. It’s described technology and species long dead and impossible for it to understand. Things became very clear to me; what I had to do next.”

“Your Miridian persona.”

“My goal is straightforward,” Miridian said, as if the Commander hadn’t spoken. “The Vitakara as an independent species of the galaxy. Not under the influence of any foreign power. No Ethereals. No Sovereign Ones…and no Humans. We rule ourselves, and ourselves alone. An idea I had once thought common is, as I have learned, almost impossible to achieve.”
“I can respect that goal,” the Commander nodded. “But I’m not sure how possible that is. Not after speaking with T’Leth. The galaxy is…”

“Cycles,” Miridian said, voice melancholy. “A playground for the powers that be. These Sovereigns. Even Siaru is on a side, even if I do not know which one. Species that are pawns on the galactic stage. I’ve gathered as much, and I reject it. If our species is ultimately doomed, we will die as those who resisted the gods of this galaxy.” He tapped several times on the table. “Siaru has helped us, he’s given the Sar’Manda designs which can protect from psionic surveillance. But too many and the Imperator would notice. Too few and suspicion would be raised. A delicate balance, but one we’ve managed to keep for now. But it’s a temporary solution, one for a planet, not the future.

He shot a look to the Commander. “Your Sovereign may be better than most, or it may be lying to you. I do not care. Do not try and say it is the only way.”

“I’m warning you that it may not be possible,” the Commander said. “The Sovereigns do seem to permeate the galaxy; their presence is everywhere. Even now you’re speaking to someone who’s talked with and allied with one.”

“I’m not unreasonable, Commander,” Miridian breathed. “I don’t care that you are allied with one of these creatures. In your situation, I don’t blame you. But the difference is that you, nor your species, is intent on controlling me, not that I would let you. I have little issue with allying myself to you, but it will be no more than that. If that means the Vitakara may never be the heroes of the galaxy…then I accept that if it ensures our independence.”

The Commander nodded. “I understand. Continue.”

“The galaxy is harsh and unforgiving,” Miridian said. “The Vitakara will not survive long in a galaxy with these roaming leviathans. We’re too coddled, too complacent, too weak, too twisted into the perfect servants of the Ethereals. I realized that our species must be reset if we want to survive in this galaxy, and so that is what I set out to do.”

“This leads to your terrorism,” the Commander segued. “Recruiting people like Sorras.”

“The numbers pale to what I intend,” Miridian said neutrally. “Resetting a species is not achieved without many, many deaths. And many of my kind have no place in the future, so I will not lie and give them the illusion that they do. My targets are chosen carefully, Commander. Collaborators, soldiers, Zararch. My people are similarly recruited from those who show signs of resisting the conditioning they grow up in. The opportunity for change. But this is the exception, Commander, not the rule. In the case of Sorras, it goes against his nature as a Dath’Haram.”

“I want to know what you have planned,” the Commander said bluntly. “The full details.”

A sharp nod. “My species must be culled. The Ethereals have done one good thing – they have shown who is and is not worth saving. They have exposed flaws in our species and genome, which I will fix. The Dath’Haram will be eradicated, as will the Oyariah. The latter due to their uncompromising support of the Ethereals, and the former because their ways, genome, and customs have held themselves and our species back. Those attitudes and tendencies cannot be allowed to persist.”

The Commander raised an eyebrow, the mildest reaction he could muster. “Genocide.”

“Yes.”
“Do you think that might be somewhat extreme?”

“Of course it’s extreme!” Miridian growled. “But let’s not pretend it isn’t needed Commander, not in this galaxy. I suspect you object more to the Dath’Haram, so I will speak briefly – they are a race of cowards and weaklings. Sorras has been killing hundreds of them for years and they’ve never once even thought about doing anything more than holding vigils!” He spat the last words. “They are the worst example of the apathy that has poisoned my species, and it will not infect the future Vitakara. If having their children blown up or slaughtered in their beds does not cause a rise to action, then they do not deserve such consideration. They care nothing for life, for freedom or justice. No, Commander, I do not apologize for this extreme action. You’re not of my species, nor seen what I’ve seen.”

“No,” the Commander crossed his arms. “But I do know that killing an entire race because they don’t fit your own ideal isn’t the right solution. Perhaps you didn’t know, but Humans don’t exactly look favorably on genocide.”

“I’ve read about your Holocaust, the Cambodian Killing Fields and Armenian Genocide,” Miridian said evenly. “This is not the same thing. The men who orchestrated those killings did so for selfish and shortsighted reasons. They did so with unnecessary cruelty and malice. I say this because it is the future of my species on the line, and we cannot afford this kind of liability.”

“And you’ll do what?” The Commander asked. “Execute every man, woman and child for the crime of existing?”

“For what kind of alternative?” Miridian asked. “Sterilize them? Force them to endure a slow and painful death as they slowly go extinct? Is that better?”

“Perhaps raise them properly?” The Commander pointed out. “Schools, education-“

“You’re not listening,” Miridian shook his head. “You don’t know my people. A Dath’Haram will always think like a Dath’Haram whether they’re raised in the Council or under the Republics. Dath’Haram are passive, empathetic, and pacifists. Sorras is considered insane for a Dath’Haram, and for good reason. This doesn’t change. The only exceptions are if they undergo the Zararch conditioning.” He curled a lip in disgust. “And I’ll ask you if drugging an entire population is a better alternative.”

“And Sorras knows about this?” The Commander questioned. “He’s helping you willingly?”

“No one is more aware of the failure of his race than he,” Miridian said. “Part of the reason he’s so extreme is because he thinks that if he can provoke a reaction, that I will allow them to be spared. But deep down he knows that I’m right, and he has resigned himself to this fact.”

“What of the Cobrarians, will you kill them too?”

“Their breeding issues are a liability, and an easily exploited flaw,” Miridian said. “But they are not inherently unsalvageable. Experiments are commencing on the viability of stabilizing their gender rates to something more even. Genetic engineering should make this possible, but if not, then they will be killed as well. The race in general is too obsessed with mating and reproduction. I do not need such distractions.”

“I assume there are Nulorian who are of the races you plan to exterminate,” the Commander said. “Do they know about this? Will they be killed as well?”

“They know, I do not keep this secret from them,” Miridian said. “And they understand the
necessity of it. They know what awaits in the galaxy, and that only a united and powerful Vitakara 
species will be able to withstand it. They have already been sterilized, and they have the option of 
living beyond that day. But if they wish to join their brethren, that is their decision.”

“How generous.”

“Your sarcasm is noted,” Miridian looked the Commander in the eye. “I don’t care if you think of 
me as evil or mad. You aren’t Vitakara. You haven’t lived through this, and you don’t understand 
exactly what awaits if you manage to defeat the Collective.” He pointed upward. “The Ethereals? 
They’re just the start. You will be entering a galaxy where empires and governments hundreds of 
planets strong wait. They have power. They have armies and fleets. They control the worlds of 
power. ADVENT and XCOM have been devised as means of ensuring that Humanity can meet the 
challenges of the future, and this is ours.”

“And I can’t support an alliance where the plan is the extermination of entire races for what you 
believe is the strongest species,” the Commander answered. “There are Vitakara on Earth, 
defectors who left the Ethereals who are of the races you will kill. Why should they trust us if 
we’re going to support the genocide of their kind?”

“What you do with them in your territory is not up to me,” Miridian said. “They can live and die 
there, but they will not be Vitakara. Not within the New Vitakar.”

“And what will you be?” The Commander asked. “The king?”

“Unlikely,” Miridian said. “I’m a wartime leader and intelligence officer. I would be content with 
holding a position there. People better than I can lead the public in establishing our new 
government.”

Hmm…

Something Miridian had mentioned stood out to him. They were at an impasse if it didn’t work. 
There was no chance that the Commander would support or allow this plan. He didn’t care if there 
was a Sovereign backing Miridian, it wasn’t going to happen. “You said that the Vitakara in 
ADVENT territory would be allowed to live, but couldn’t return to your new Vitakar, yes?”

“Yes. They are in your territory. You may do with them as you wish.”

“Good, then let me make myself clear,” the Commander said, summoning the psionic power and 
lifting a fist to clench it. Miridian suddenly froze as the Commander trapped him in a telekinetic 
field. “I don’t usually do this, but I feel a point has to be made with you. I will never support the 
complete annihilation and genocide of species for the sole crime of existing and not fitting some 
nebulous ideal. The people and species change, but the excuses never do.”

Miridian winced as the grip tightened. “I don’t care if you think this is the ‘best solution’,,” the 
Commander said quietly. “You are entitled to that opinion, but I would kill you if you dared to 
actually go through with it. I would probably kill you if you weren’t a necessary ally. But I can 
promise that I will kill you if you ever attempt this kind of plan. Not when there are alternatives, 
and especially not with such poor excuses.”

He released his hand and Miridian shook himself off as he reoriented himself, glancing warily at 
the Commander. His psionic capabilities were apparently a surprise. “Now,” the Commander 
continued. “I do think that we can both get what we want. You want a species of Vitakara to your 
specifications? Then fine, that can be allowed. But the ones that don’t fit your ideal? They won’t be 
killed, they will migrate to the Vitakara government ADVENT is setting up with the defectors.
You get your perfect species, and without the pointless genocide. Does that sound like an acceptable deal?"

“Considering you made your intention to kill me clear…” Miridian answered with hasty breath. “I…think it would work. If the Dath’Haram and Cobrarians would be happier alive and under the puppet regime of ADVENT, then they may live there, as long as they don’t step foot in our territory. And we will control Vitakar. It will not be given to these others. Not to a puppet state of ADVENT.”

The Commander allowed a nod. “A compromise then. You control Vitakar, and the other Vitakar will establish a new capital world.”

Miridian nodded in return. “I do not like the concept of multiple Vitakara states, but considering your alternative…it is better than nothing. I do not want to be your enemy, Commander, nor you mine. We have a mutual enemy, and we should focus on that. If compromise is needed, so be it, even if my own species will ultimately be hurt.”

“I might as well warn you,” the Commander said dryly. “ADVENT might not look favorably on your policies in any future government you establish.”

“I somehow think I’ll manage,” Miridian said with just as much dryness. “If that is the price I pay for an independent species, then I accept it. Then do we have an understanding, Commander?”

“Yes, Miridian, I think we do,” Miridian extended a hand and the Commander took it, both man and alien looking at each other directly in the eyes. Neither relenting, and understanding that this was just a compromise. Neither had changed the others minds, and that was unlikely to change in the future.

But they had a common goal.

They had a common enemy.

“Then we should return to the Manda’sarthoria,” Miridian said as he broke the handshake. “The Nulorian and XCOM officially have an agreement.”
In an unknown corner of space orbiting a lifeless moon, which orbited a gas giant, which itself orbited a bright yellow star, was a space station.

From the outside it was little more than a cylinder. But that was all that was required. It existed for only one individual, and to have only one purpose. For at least four decades it has done nothing but store what the Dath’Haram had designated as Project DH0022. The lone success for their project before the collapse.

Perhaps there had been more, but only one had been found by the Collective and placed into the Zararch as an asset.

Five levels made up the orbiting black cylinder. The bottom was merely the power supply and gravity generator. It managed the station; ensured that the stasis chambers didn’t run out of energy. It provided water and lighting. It provided life. It also housed the deadman explosives that could be detonated if necessary.

Above it was an armory packed to the brim with every single weapon that made up the Collective arsenal, and even some that were used by the elusive Ethereal Divisions. Grenades and nanoblades lined the walls. Raw components for the development of improvised weaponry were set aside for the ever-creative mind of DH0022 to manipulate and experiment with as it deemed fit.

Above that floor was nothing more than a massive holographic theatre. Powered by a dedicated supercomputer it was capable of creating and rendering nearly any location and individual provided. Useful for missions. Useful for creating profiles. Useful to visualizing the operational objective and additional scenarios which might arise.

A small hangar was above. Just large enough for a small ship it was rarely utilized and was typically kept depressurized. A Gateway was stationed inside as well, a dead portal that could only be turned on by an Ethereal. It was almost taunting, but there was little to fear. Reactivation would only happen in the gravest of circumstances.

The Zararch once more required their sharpest tool.

The final level was a light grey box. The walls were colorless, as was the floor. Every aspect was a uniform and drab sameness. Mirrors lined the far wall, giving those who entered near complete-vision of the place they were standing in. Small holographic displays were scattered throughout. Lockers containing scalpels, hammers, and saws could be raised from the ground or pulled from the walls.

Reconstruction machines could be lowered from the ceiling, medical equipment that was typically only used in cases of extreme emergency was a notably common sight. Drains lined the floors in pre-determined lengths with grooves and inclined planes, a hydrophobic surface to direct the blood and organic fluids which flowed.

In the center of this colorless box, sat a colorless figure.
It had no name. No sex. No discernable characteristics. The skin was a milky white and close to transparent in places. The hands were five slender fingers with three joints, which were attached to arms, similarly attached to a slender, flat torso. The head was an oval more closely resembling a Vitakarian, though that was where the similarities ended.

The face was featureless. It had no nose. It had no mouth. The eyes were a milky white; able to see, but yet to be configured appropriately. No hair grew along what passed for flesh, nor did the eyes blink for eyelids were not something that had been added yet.

But it was not idle.

It sat alone on a small chair, in the most base of forms, methodically reading the literature which it had been provided with. Reports and dossiers, maps and star charts, history and technological progress. Much had happened. Much needed to be learned. It did not require sleep and so worked methodically absorbing everything which had taken place.

It was unlike the last time, where only the most basic of details had been provided. But it had known then that mission had been a test. An unproven specimen had needed to prove it could act in the field effectively. Only mission-relevant data had been provided. It was all that was needed.

This was…different.

The activation may be more permanent.

This was pleasing.

Its handler would arrive shortly. An Ethereal it knew. An Ethereal it had, ironically, interacted with before. An Ethereal who it knew was unnerved by its existence. Unsurprising. Standard organic aliens required conformity and familiarity. The formless and faceless was an unsettling state of being, one many would deny could exist.

The pale individual decided it had acquired enough information for now. It was time to prepare for the assignment. One to Earth.

A Human form would need to be created.

A twinge of regret was felt. Humans. A colorful species in some ways which offered many possibilities, but ultimately, they were…dull. It was truly a shame that he would not be involved with operations involving the Sectoids or Andromedons. Such distinctive aliens would provide a much greater challenge instead of the same comforting anatomy.

But a Human would need to be chosen.

The form would not be final, of course, but one should become used to the bodies and voices such a species provided. A form would be needed for interacting with the allies of the Ethereals. Konstantine Volikov. A Human pragmatist and idealist no doubt clearly intending to use the Collective to his own ends.

It did not matter.

*There is little need to inform the Ethereals of the actions of those they consider to be their pawns. It would not be the first time.*

Arrogant.
But arrogance was unimportant in face of his task. The task was all that mattered.

Should the task be completed, the Vitakara would be secure.

Should failure occur, it would be over.

Too many unanswered questions still remained, but the Zar’Chon would not require aid if the need was not urgent. It was a new one as well. This one seemed more competent than the last, ironically aware of the dismissive and self-defeating personalities which plagued the Ethereals. Some things had not changed.

Distraction. A form needed to be chosen.

Two options presented themselves – male and female. Both genders would be utilized eventually, but one needed to serve as a base.

A professional approach was best for dealing with other professional Humans. Female would have been useful if Volk was susceptible to the opposite sex, but he was committed to another and strong-willed for a Human. A professional approach would be more beneficial. Male would serve as the initial form gender.

Skin color and ethnicity were of little concern to it, as either could be changed easily enough. The most non-threatening was Caucasian-American. Therefore that is what would make up the base form.

He.

Transitioning to the appropriate pronoun. Getting in character should begun immediately, if only in the smallest of details. That was enough to begin the transformation. He stood and set all of the literature to the far corner and walked over to stand over one of the drains. He carefully picked up the scalpel and cut a small patch of skin off the right of his neck to find the bodily control panel, expressing minor annoyance as the skin attempted to grow back.

The body had yet to be completely purged from the last mission. Something that needed to be rectified now. Disabling the nano-skin would allow bodily harm without immediate repair. The controls he’d memorized decades ago, but he needed to test them. He felt around for the general area of the jaw where the mouth would be.

Finding it, he penetrated the skin and dragged the scalpel across until a thin slit across his face existed, a mouth once more existing. Purple blood stained his fingers and the new opening, but that would wash away in time. He opened and closed the jaw experimentally several times to ensure everything was working. Biological similarities would thankfully mean that there would be little changes to the skull itself.

With the skin confirmed to not be regenerating, he found the vein which had been designed into his arm and slit it vertically on one wrist. As the purple blood flowed out, drenching his hands and wrists, he repeated the same procedure on the opposite wrist. Both arteries severed, it would only be a short time before the heart pumped all the blood out.

He cocked his head, thinking as the blood fell onto the floor and immediately began flowing into the drains. A name. He would need a name. Or perhaps not. Names were for assignments, names were important to play a role. But he was simply a Zararch asset here, and he needed no cover for Volk and the Ethereals.

Was a name necessary?
Perhaps if only to put his partner at ease. Humans, like most sentient beings, did not react well to that which did not conform to their expectations. Names…Humans had many names. Good names, bad names, curious names.

There had to be one which would fit who and what he was.

Minutes passed. Perhaps longer. The blood had stopped flowing and now was only leaking out of him in small droplets. The final stage of cleansing would need to be taken soon.

*Nemo.*

A word from the Latin language. Meaning *nobody*. Which that was what he was. Nobody. A figure with no true name or identity.

Yes. It would suffice.

*I am Nemo. Nobody.*

“I am Nemo,” the thing said out loud with ragged skin for lips and milky eyes. A soulless voice neither male nor female. “Nemo.”

Vocal cords needed to be adjusted. It was too monotone. Of course, reset had this effect. He looked down at the pool of blood he was standing in. The floor never worked properly, some help needed to guide it along. With a foot, he kicked the blood to make it flow closer to the drain. The hydrophobic layers either needed to be reapplied, or the room needed to be more inclined.

Time for the final purge of the veins.

He felt a twinge of annoyance as now he recalled that he would have to make minor skeletal adjustments and organ replacements. It would take time, but completing a Human form required such. He picked up a larger razor-sharp blade and began first cutting a thin line on the top of the torso just below the neck. Satisfied, he grasped at the edges of the milky-white skin and pulled down.

The nano-skin was well-designed and could tear easily when not in self-repair mode. Of course there was some residual blood, but nothing significant. He tossed the patch of skin aside and pulled out the disintegrator. Muscles were too much of a hassle to work around, and it was simply easier to replace them through the machines then have them self-heal.

He’d done this enough to where he knew how to do it quickly, and within several minutes he had unrestricted access to his chest cavity. The heart pumped empty air now, the cybernetic organ still working even when nothing was left. Picking up the tube linked to the station’s water, he attached it to the organ and let it begin pumping.

The trickle of purple blood then changed to a watery pink, and soon after to clear. The veins and heart organ were cleansed. Satisfied, he shut off the pump and disconnected it from the organ. That done, he pulled up a hologram of Human anatomy, more out of habit and wish for routine than because he needed the information.

He was going to need to perform extensive internal reworking. Humans had several organs that others simply did not have. Not unexpected, nor was he disappointed, but it was simply going to take longer. But in truth, he was grateful for the opportunity.

He had never been a Human before.
It was exciting. Putting on the skin of another species was an experience one only received once. It was something to savor and treasure forever.

It was then he felt the touch of the mind.

Ah, yes. She was to arrive, and she was already here.

He heard no steps, but he knew when he turned around that the Ethereal would be before him. “Nebulan.”

The voice was toneless and neutral, coming from the ragged mouth of a creature which should not exist with its chest torn open and wrists slit. He knew the effect he had on the Ethereal. Of course he was different from when he’d seen her last. A female he’d been that time, with different skin and blood. All for a trick that only lasted a few minutes but allowed the opportunity to kill several powerful enemies and gather some rather interesting information.

Information he would mull over later, as he had not had significant time to process the operation before he had been returned to stasis.

The Ethereal appraised him. “You are different.”

“Yes, Ethereal. I am. A new form takes time to put together.”

“A machine could do just as well.” Dismissal and undertones of disgust in her voice. “You waste time and skin performing it yourself. You are not a machine. Mistakes can be made.”

He didn’t know whether to place her emotions as unsettlement, disdain, or jealousy. Nebulan was…well, he pitied her. She fancied herself an individual who changed identities and names as easily as breathing. A shadow that could adapt at will to any situation. But she was a mere child, unable or unwilling to become Faceless.

Her pitiful attempts to play games with the aliens were merely amusing. Her parlor tricks with psionics were that of a failed mind. She could only play at being an illusion. She could never live one. Because she was ultimately nothing but an insecure Ethereal who had never been good enough to be an Overmind, not strong enough to be a warrior, not charismatic enough to be a leader, and only barely powerful enough to be an illusionist for those who were by far her greater.

A fraud.

“Enough.” The order was not one of command, but of pleading.

He gave her a smile of ragged flesh. It took surprisingly little to send the Ethereals fleeing from his mind. He could never see it the way they could, but he knew by this point that his mind was unlike others. They could never stay in it for very long, and he always knew when something was in it. Either by accident or a little psionic gift of his own, he didn’t know or care.

“I don’t use a machine, Nebulan, because I am not a machine,” he didn’t alter his voice. He didn’t need to now. “To become someone, you must know them inside and out. I will become a Human, and I will understand how I work. I will become the Human I have decided to be. I embrace the forms and roles I play, Nebulan. They are not acts, they are not names I throw away and dismiss, they are individuals in their own right. And this time I will be Nemo.”

“I do not have to accept your help-“

“I have been ordered by the Zar’Chon to assist you,” he interrupted flatly. “I do not answer to you,
but to him. You are merely a means to an end before I begin my assignment. You foolishly compromised the entire Argentinian operation. You failed. You have little room to demand my authority or respect. I saved you once, and it appears I will have to do so again."

“Tread carefully, Faceless One,” Nebulan hissed. “An abomination like you cannot-“

Nemo turned away from her and returned to the hologram of the Human anatomy. “Your threats are as empty as your authority. If you are here to insult me, I will ignore you. I am, at this moment, more valuable than you are. Provide the reason for your visit or leave.”

The Ethereal was silent for a few moments. “The Gateway activation codes have been provided, including the coordinates to travel. You have three days to arrive. The Battlemaster will hear of your insolence to an Elder. We command you. The Zar’Chon himself is subservient to us. By the chain of command so are you.”

He turned back to her, not saying anything. He had no intention of meeting her empty words with either confirmation or denial of his own. He was above this petty infighting. Nebulan would either get over her issues and distaste for him, or she would make more mistakes which would result in her removal.

But he did take pleasure in feeling the air between them grow unnerving as he locked eyes with her as he began dragging the scalpel around his eyeball to prepare to pull it out and set it to a usable configuration. He’d memorized all the settings and options of the implant. Normally he would prefer to look upon his work, but he was more than satisfied to just watch Nebulan become more and more uncomfortable as he changed into a Human before her eyes.

But soon she left without a word, leaving him alone.

No more distractions.

Returning before the mirror, he continued the process of sculpting himself into a Human.

Not just any Human though.

Nemo.

I am Nemo.

I am nobody.

***

Commander’s Quarters, the Praesidium – Classified Location

2/16/2017 – 10:11 P.M.

“So what did you make of him?” Vahlen pulled up a chair opposite him as he sat by the small table that inhabited their room. Both of them were ready for bed, although the Commander was eating a late dinner. Or mildly moving it around on his plate, too absorbed in thought to really pay attention to eating it.

Vahlen’s hair was down like usual, though not straightened since just like him, she’d just come off of work. He hadn’t even asked what she’d been doing all day, although he knew it could only be a select number of projects. None of which were as easily comparable to the whole situation with Miridian, the Nulorian, and the unexpected revelation of the Sar’Manda.
A lot to think about. Miridian in particular was something that made him think.

“He was…is right about some things,” the Commander finally said, lacing his fingers together. “I’m not Vitakarian. I don’t know what he or his species have gone through other than academic secondhand. Keeps things in perspective, especially if the roles were reversed and an alien was taking a significant role in deciding the future of my species.”

Vahlen coughed. “Considering what he wanted to do…”

“Mmm,” the Commander hummed. “I know. The ironic thing is that I can understand how he would have come to that conclusion. Anything can be made to sound justifiable, and after so long it becomes normalized.”

Vahlen reached out and placed a hand over his own. “Don’t compare yourself to him. You’re not.”

He gave a wan smile at her. “I know that. There is a distinct difference between us. During the War on Terror I knew what I did was wrong. Necessary, but still wrong on multiple levels. It’s been repeated by what we’ve done here. Necessary, but it doesn’t somehow make it right.” He leaned back, sighing. “Miridian doesn’t see what he does as wrong. No, I’m not Miridian, but I think at some point I could have very easily become like him.”

“I don’t know about that,” Vahlen mused. “You don’t really change yourself easily.”

“Because I don’t need to.” That was something he had begun to realize. “Through most of my career I’ve ultimately been the one making the decisions. I was given an end goal. End the Caliphate. Protect the United States. Protect Earth from the alien threat. How I accomplished this was up to me. I did what I believed was necessary, and have so far succeeded. There wasn’t a need to escalate, I never had reason to become disillusioned or grow bitter or angry. For better or worse, I was responsible for everything I did.”

He shrugged. “Now, if I’d been given significant oversight from the beginning. If I was given lists of instructions to follow, and they were inefficient, I feel I would have changed. Perhaps significantly, perhaps not. I was fortunate I had people who understood I worked best on my own and through my own methods. Take that away,” he made a dismissive motion. “Well, then it becomes a lot easier to blame someone other than me. Not necessarily for unjustified reasons.”

“You know, I’ve wondered,” Vahlen said. “I think a good number of psychologists would pay a fortune to try and analyze you. I don’t think you’d fit into their profiles very easily.”

“They can wait in line,” he allowed a smirk. “Post-mission debriefs were sometimes conducted by psychologists. I feel they left more confused than anything. Never had issues with them, but I feel like many of them were itching to figure out what makes me tick.”

“They wouldn’t have to try hard,” Vahlen said lightly. “You aren’t extremely complicated.”

“I do my best,” he agreed. “Perhaps if I’d been more involved in deep cover it would be a different story. But letting myself be complicated and convoluted is just an annoyance. Of course, not everyone can fix themselves so easily. But in my case, nothing was broken.”

“Which reminds me, I’ve not asked yet,” Vahlen rested her arms on the table. “You’ve never spoken of family.”

“Beyond you?” He cocked his head.

“Well,” she coughed, blushing a little. “Yes. Your parents or siblings.”
“Because they don’t matter anymore,” he shrugged, not sure how best to explain it. “I didn’t have siblings, and my parents are still alive as far as I know. I cut all familial ties when I began doing black ops work for the CIA. They heard I died in a freak plane accident, no body. They’ve moved on and I don’t keep tabs on them. In my line of work that was a risk and liability.”

“But you’re not with the CIA anymore,” Vahlen said. “And at this point I don’t think you’d have to fear any kind of retaliation.”

“True,” he admitted. “But it would raise more questions than answers, and I don’t want to reopen the past unnecessarily. I’ve moved on, so have they most likely. And in this war, where I could very likely die again, I would not put them through it.”

“That is a good point,” Vahlen sighed. “What about after the war, assuming we are all alive? I would like you to meet my family at some point. I still keep in intermittent contact.”

He rapped his fingers on the table, thinking. “I’d consider it. Possibly,” he raised an eyebrow at her. “I don’t pry into your own family communications, but have you mentioned me?”

“Not by name, I promise,” she said, smiling. “But they do know that there is someone. My grandmother is demanding to know if we’re married and if kids are on the way.”

“Who the hell would have kids in the middle of a war,” the Commander snorted. “I hope she’s not one of the more uptight people regarding marriage?”

“A bit,” Vahlen admitted. “Older, religious, you know. Still I think she’d not care as much nowadays. Old values don’t matter as much when aliens are invading.”

“Indeed.” He met her eyes. “Although it does make me wonder why we shouldn’t. Maybe not immediately, but I don’t see a reason to not do so.” He gestured to her. “We both know how we feel about each other and that isn’t going to change. You know how I’m feeling now, you know me better than anyone ever has or could. You’re an intelligent and beautiful woman who I do want to spend the rest of my life – regardless of how long it may be – with. And I suspect you feel the same way.”

Vahlen blinked, her cheeks tinted a slight red. “Are you proposing?”

He frowned, thinking. He’d definitely not intended it to be that way, he was just stating something they both instinctively knew. But with that said, perhaps it worked as one? “If you want to take it that way,” he said hesitantly. “I didn’t plan it, if that’s what you’re wondering.”

“Well,” she reached over and took his hands in her own, and he felt the direct touch of her mind against his own. “I think it works wonderfully as one, and if you feel that way, I would love nothing more than to take you as my husband.”

While it had certainly not been the way he was expecting the night to go, he was good at adapting, and right now, he felt there was little that would make him happier than he was now, with the only comparable moment being when he’d first proposed to Farida. But he was much less nervous now, and had a lot more experience.

He didn’t quite remember when they’d both stood and moved around the table, but they kissed deeply as they moved to the bed.

And for a few hours, they didn’t need to care about anything other than themselves.
“It is having an…effect, to put it lightly,” Kyong said while Saudia sat at her desk as both men updated her on the begun distribution of the footage XCOM had inexplicably been sent. To put it extremely lightly, it was among the most disturbing things she had seen in her life, even from the days of EXALT.

It was also extremely concerning in what it depicted. She was genuinely unsure how ADVENT would fare against something that was so…unsettling. Something which was enough to face the Battlemaster and survive.

“An effect as in?”

“As in the media is holding a significant portion back, blurring out most portions due to extreme violence and gore, and in general clearly upset on-camera,” Kyong clarified. “I almost feel bad for them, but they certainly aren’t holding back. The real interesting scene is the non-mainstream media covering it.”

He pulled out his phone. “Twitter, Facebook, all of social media is posting clips from it with everyone expressing disgust and shock at it. Uploaders have posted the entire video to YouTube and Liveleak, and already have close to a million views.”

“I’m not sure if that’s comforting or not,” Saudia commented dryly. “That’s a lot of people wanting to see a descent into hell.”

“Humans are curious, Chancellor,” Kyong shrugged, pocketing his phone. “Sometimes too curious for our own good. We’ve released our own statement as planned, as the footage is available for download for independent parties. Not that I think most civilians are going to want to see it for themselves, but I think we’ve put a significant dent in the Collective’s claim that they have our best interests in mind.”

“Until the conspiracies start, I suppose,” Saudia said. “I’d imagine they are in full swing.”

“Indeed. We are working to discredit and suppress all major ones, but the majority will not believe them,” Kyong confirmed. “Our media teams have been successful in stopping such conspiracies from spreading beyond the little corners of the internet they inhabit.”

“And has this had a significant effect on the diplomatic front?” She asked Hassan.

“Several international media organizations have requested the raw footage,” Hassan answered, handing her a file. “Including several other countries. Iceland and Norway reached out directly. I would not make any hasty assumptions, but I think this might be them coming around to the realization that ADVENT and the Collective are actually not the same and only one has the best interests of Humanity at heart.”

“Outrage, as you would expect,” Hassan inclined his head. “With several peaceful protests planned to force several neutral countries to become more involved in the war. Unlikely to work, but Kyong’s teams are working to try and make them as large as possible. We shall see the effect this is having, but we know for sure that people are talking.”

“Which is all we need for now,” Saudia said. “It keeps the alien threat in mind and insists on
holding those in power accountable. That will work out in time. People needed a reminder of what
the aliens are capable of; what they do to us. This will stay in their minds for a while.”

“I feel like the aliens are going to dislike what is coming,” Kyong mused. “I suspect 4chan has
plans for using this. Hopefully they will be primarily directed at the aliens and not used simply for
trolling.”

Saudia raised an eyebrow. “You’re talking about 4chan.”

“Well,” Hassan scratched his chin. “Didn’t they send a bunch of porn to some aliens in Australia
that one time?

“Yes, it was very amusing.”

“I personally don’t care what the internet trolls do,” Saudia clasped her hands together, resting
them on her desk. “I’m more interested in the actual fallout from this. Specifically regarding the
alien forces. I suspect the Collective will be doing everything in their power to block this, so we’ll
need to spread it other ways.”

“We’re flooding the Vitakara subreddit with it now,” Kyong said. “Also we’re working on
penetrating their networks with short pre-determined clips since uploading the whole thing is
impractical. The CODEX is giving us trouble, but we suspect we’ll get it through eventually.”

“Perhaps something more conventional would also work,” Saudia suggested. “Physical drops of
USB drives or still images distributed over alien territory. The officers won’t be able to suppress
them all.”

“A usable idea, I’ll bring it up with Commander Christiaens,” Hassan said. “Speaking of which the
AEGIS Division should also have the Vitakara also publicly respond.”

“Yes, we need to continually be making a distinction between the Collective and aliens as a
whole,” Saudia nodded. “The anger must be directed at the appropriate body. Otherwise it will
backfire.”

“I’ll get on that.”

“Keep me informed as the situation develops,” Saudia leaned back in her chair. “Dismissed.”

***

Borelian Wastes – Vitakar

2/16/2017 – 9:00 P.M.

Nartha supposed Shun was taking some time to process everything that happened, since she’d been
quiet since he finished recounting what had happened. It was still a little overwhelming even for
him. In the space of a few hours they’d learned the Sar’Manda had been preparing for a war for
decades, they’d met Miridian, and they now had an alliance with the Nulorian.

“The Zararch really suck at their job, don’t they,” she finally said, resting her chin on a propped-up
hand. “You sure we should be worried about them?”

He had to laugh at that. “I think that’s a bit unfair. Well, kind of. The Sar’Manda have always told
everyone they knew to fuck off and leave them alone. It wasn’t as if they were mean to the
Collective specifically; that’s how they treat everyone. And at some point you have to compare the
cost of investigating the people who control an ocean with the benefits. Doesn’t really add up to
me, and it must not have to the Zar’Chon either.”

“Isn’t that the whole point of espionage though?” She still pressed. “Learning things without the
other side knowing?”

He blinked at her, cocking his head. This was a moment when a Human would raise an eyebrow,
but since he didn’t have those, he needed some other way. “I’m listening…”

She sniffed. “Unfair. That isn’t my job. That’s what the Zar’Chon is supposed to figure out…”

“…And he doesn’t because it’s a lot harder to be sneaky underwater than above it,” Nartha
finished, deciding to take a sip of his water. “And trust me when I say the Sar’Manda know the
Manda better than any Zar’Chon ever could.”

“So they know the ocean,” Shun said, shifting in her seat. “I guess the next question would be how
good they are on land?”

“They’ll be at a significant disadvantage on land,” Nartha said, thinking. “I inquired about some of
their training. They’re conducting dry-ground training exercises within massive bunkers on the
bottom of the ocean to simulate land. Smart. The Zararch would never find them. So I think they’ll
be useful, but also have significant vulnerabilities.”

“Shoot the suit, water leaks out and they die,” Shun nodded. “Almost like the Andromedons.”

“But worse,” Nartha corrected. “Andromedon suits are unwieldy, but extremely well-protected.
Shooting the suit won’t kill the Andromedon. Shooting the suit of a Sar’Manda soldier is much
worse. It’s like Humans in space – or anyone for that matter. A breach kills you if you can’t fix it
fast, and in war, you don’t have as much time.”

Shun nodded, straightening for a moment in silence. “Well, regardless of what happened, I’m glad
you and the Commander made it back safely. As…reassuring…as Sorras is,” she shot a glance to
the Dath’Haram chatting amicably to several other soldiers. “I wouldn’t have put it past the
Nulorian to do something stupid.”

“They’re terrorists, not idiots,” Nartha reminded her. “They wouldn’t have wanted to make an
enemy of XCOM.”

“Eh,” Shun shrugged. “I guess alien terrorists may be smarter than Human terrorists. At least from
our history, none of them seemed too smart beyond their limited ambitions. Terrorists don’t win on
Earth. Never really have to my knowledge.”

“Well, I have a feeling we’ll be seeing what happens when a terrorist wins here,” Nartha
commented, also shooting a glance to Sorras. “We’ll learn just how benevolent Miridian’s plans
really are.”

“So are you surprised he’s a Vitakarian?” Shun asked, changing the subject after a few moments.

“No,” Nartha shook his head. “It was either going to be a Vitakarian or Borelian. Most Zararch
psychologists doubted that he was a Dath’Haram considering that Sorras likely only came about as
the result of extreme radicalization and tampering. Not impossible, but extremely unlikely. So I’m
not surprised.” He leaned back. “The situation with the Sar’Manda was of a lot more interest to
me.”

“Well, did they consider that Miridian may be a passed-down name?” Shun inquired. “Maybe there
was more than one Miridian?"

“Unlikely,” Nartha disputed. “That has been one constant throughout his entire career. The Miridian – at least the one who’s been operating – has been the same individual. It’s the one consistent piece of information from multiple sources. There is only one Miridian, or at least someone who goes by that name, and their methods and overall tactics haven’t deviated in decades. If there was a sudden shift in objectives or methods, that theory might have more weight. Although I do wonder what contingency Miridian had if he died.”

“Well, obviously his son would rise and assume his father’s place,” Shun said dramatically. “That’s how it would go in a book.”

Nartha snorted. “I highly doubt Miridian has a mate.”

“Oh?” Shun said lightly. “The amount of single Vitakarian female terrorists is a bit low?”

“Honestly, not for lack of options,” Nartha dismissed. “Considering how he’s looked upon within the Nulorian, he could probably find a mate easily enough, regardless of race. But he probably doesn’t care much about that…” he shrugged. “That said, he’s also working with the Sar’Manda and I’ve barely met the man, so what do I know?”

“Right now?” Shun tilted her head with a twinkle in her eye. “More than the Zararch and Zar’Chon.”

He inclined his head. “That’s true.”

“So what happens next?” Shun asked after a few moments.

“I’ll be recalled to the Zararch soon,” he said. “From there I suspect I’ll be getting some help from all of you when my next mission is given.”

She frowned. “Do you want my opinion?”

“Of course.”

“You should get out now,” she said. “You don’t need to work undercover anymore. We have the Andromedons. We have the Nulorian. You’d just be put in danger for the sake of it, and they have to be wondering if you’re reliable at this point. You can only work against them for so long before it falls apart. You’re smart and skilled, but you aren’t unique, Nartha. I don’t think you’ll be the one unique person who was a double agent for years and no one knew.”

That…made some amount of sense.

A little too much for that matter.

“But if I leave…” he began slowly. “Then we have nothing on what the Zararch could be doing. I’m already inside among the top field agents. Putting another person in my position would have taken years, and we don’t have that kind of time.”

“And we won’t have it if you’re killed,” Shun said. “Worse, what if you’re captured? You know so much about what’s going on. You can’t resist telepathy, and that little object Fiona gave you will really just make them suspicious – and they can just take it away.”

“I could always undergo the Manchurian Restraints,” he said. “Isn’t that-“
“That isn’t how they work!” She interrupted. “The Manchurian Restraints can’t stop a psion from reading your mind, it can only react to it. It can prevent you from giving details and being controlled, but all it will do for stopping a telepath is make you hurt.”

Nartha considered that. “Alright, considering I just leave. Or otherwise fake my death. Where do I go now? Stay here and be a pseudo-Nulorian?”

“No,” Shun shook her head. “You’d be like me. An XCOM operative. I at least still consider you one of us. You aren’t Nulorian, and you definitely aren’t Zararch. You’re XCOM, and you should be recognized as one and not have to keep pretending for a job that’s going to kill you.” She looked into his eyes. “Or you could come back to Earth with me. Be a soldier there. There are aliens with us now beyond just you. And your sister is there too.”

He tapped a finger absentmindedly on the table. “I’d have to talk to the Commander or Zhang about this. I said I would work for them like this. If they agree that it’s too risky now, then I’ll move to a different role. But only if they agree with you.”

“Fair enough,” Shun said. “I wouldn’t expect you to just drop it because I said so. But please think about what you’re really accomplishing if you stay.”

“I will,” he promised. “And…thanks.”

She just nodded somberly, moved her arm forward, hesitated, and then just rested it on the table. “A lot of people have died in this war. I don’t want you to be one of them.”

***

**ADVENT HQ – Switzerland**

2/18/2017 – 14:12 P.M.

“Chancellor,” Hassan looked…concerned as he entered her office, phone and file in hand. “We have a situation that requires your attention.”

Saudia minimized several windows on her computer and directed her full attention towards Hassan. “What is it and how bad?”

“Foreign Minister Xuan has just spoken to me, and given us a heads up because this is going to hit the media soon,” her Chief Diplomat answered. “There’s been several smallpox outbreaks across China. Primarily in Beijing, and there are reportedly isolated cases in the more rural cities.”

Saudia blinked then frowned. Processing what he’d said. “Smallpox? Wasn’t that eradicated a long time ago?”

“So we thought, but Chinese officials have confirmed it’s definitely smallpox,” Hassan clarified. “Right now they’re not sure where it came from, or how, or anything at all really. But since cases are only now starting to appear, it’s likely that it’s going to get a lot worse very quickly.”

“How likely is it that there is alien involvement?” Saudia demanded. “A smallpox outbreak now is extremely suspicious.”

“Yet to be determined,” Hassan said grimly. “There are only two locations which have samples of smallpox, and both of them are still there and untampered with. So the possibilities are that this is natural and just extremely bad timing, or the aliens somehow managed to perfectly recreate smallpox without any previous samples.”
“Or they synthesized it from one of the existing samples, and replaced it to lessen suspicion,” Saudia added.

“What I’m saying is that right now, aside from timing, this can’t be pinned on the aliens,” Hassan cautioned. “Unless we get another leak from the Collective, I would not publicly blame them yet. And I want to add that if it was the Collective, wouldn’t it make more sense to have it spread in our territory? China is important, yes, but this is not necessarily going to hurt us.”

He raised a good point. China was an odd target, and in all likelihood might actually lead to ADVENT being able to wield more influence over China, which in turn helped ADVENT. If this was sabotage…it was certainly of questionable effectiveness. “Using a bioweapon of this nature seems unlike the Collective too,” she mused. “At least under the Battlemaster. He doesn’t use these kinds of weapons.”

“I wouldn’t believe their reasoning is moralistic,” Hassan said, handing her the file. “The Battlemaster maybe wouldn’t have a choice. But I tend to agree that this is, if the aliens are actually behind it, an odd move and one which will only drive China into our arms.”

“Put like that, it makes more sense for us to be behind the release,” Saudia snorted ironically. “Are there any cases that have developed in our territory?”

“Only a few isolated cases, all of whom had originally come from China,” Hassan said. “I’m sure you’re thinking the same thing, but right now we need to suspend all flights to and from China until this is quarantined.”

Saudia sighed. “This couldn’t happen in a worse place. China is huge, dense, and poor. An epidemic will spread like wildfire and kill a lot of people.”

“Yes,” Hassan agreed grimly. “It will. And we need to figure out what our own response is going to be. China is going to request our help, Minister Xuan has said as much. President Qin is waiting on the line to talk as well when you’re ready.”

“Give it to me,” Saudia said, motioning to the phone. “We might as well treat this as an opportunity.”

Hassan nodded, and passed the phone to her which she took and dialed the inputted number. A few seconds passed until President Qin spoke. “Chancellor, I appreciate you speaking to me.”

“Chief Hassan informed me of the basics of the situation,” Saudia said. “It’s unfortunate to hear what has happened, and I’m sure you’re working to identify the cause and contain the situation.” Perhaps that was a dispassionate greeting, but she knew both of them were more interested in the practical response over emotion.

“Indeed, Chancellor. We have already taken the step of ceasing all civilian outgoing flights, and I suspect ADVENT will soon do the same,” Qin said. “All government personnel are being tested and we’re starting with the military as well. Military forces are quarantining areas of outbreak and we’re in the process of starting production of vaccines immediately.”

Good. He had a head start on things. “But it’s going to get worse.”

“Yes. Millions will most likely die before we have a full understanding of the range and damage this outbreak will cause. Perhaps more.” Qin paused. “Regardless of what happens, my country will be pushed to the breaking point and in no shape to fend off the Collective. If the Collective was behind this or not is irrelevant. They will see this and take advantage.”
Saudia let the silence hang temporarily. “Correct. Unfortunately this may be what breaks the lull of conflict, and it does Humanity little good to lose ground to the aliens. You will have ADVENT support to contain this epidemic and provide vaccines, supplies and military support. And of course developing a cure as best we can.”

“Your assistance will be appreciated, Chancellor,” Qin said, relief clear in his voice. “We will not forget this.”

“No, you won’t,” Saudia said slowly. “We’re devoting our resources, soldiers, and scientists to helping your country. Some will very likely give their lives because of it. In return China is going to formally pledge unconditional military support against the Collective and reconsider ADVENT membership. We are helping out because doing otherwise is not in the best interests of Humanity. But we are not going to continue giving you benefits of ADVENT membership while you remain independent.”

“Your point is made, Chancellor,” Qin sounded more resigned than offended. “And of course China is more than willing to provide military support against the Collective. But I make no promises on anything more.”

“Understood, Mr. President,” Saudia confirmed. “And I make no promises then beyond what I’ve already pledged. You’ll begin receiving support later this day. Chief Diplomat Hassan will work to coordinate everything. I will be making a statement within a few hours publicly pledging help before it spreads far in the media.”

“Again, it is appreciated, Chancellor,” Qin said. “We will of course continue providing updates. Good day to you, Chancellor.”

“You as well, Mr. President,” Saudia said. “Good luck.”

After the call ended, she handed the phone back to Hassan who looked at her with a raised eyebrow. “‘Good luck’?”

She pursed her lips. “He’s going to need it. This is going to be a mess that only gets worse before it gets better.” Lacing her fingers together, she looked up at Hassan. “You heard the plan. Begin coordination and Kyong will set up a press conference so we can get ahead of this.”

“Yes, Chancellor. It will be done.”

***

Project Nolan Training Center, the Praesidium – Classified Location

2/13/2017 – 3:30 P.M.

The room was fairly small, especially for what was called a “Training Center”, and largely empty. The only things which were in the room were stands holding glowing blue orbs. Nuan and five other soldiers had been invited earlier to participate in a new experimental kind of training. Sounded interesting, so here it was.

None of them were wearing armor, just fatigues which was another interesting request. Or lack thereof, anyway. They hadn’t specified they needed to wear armor, only not to touch anything, and so Nuan had decided to abide by the lack of rules since she really didn’t want to spend twenty minutes putting on her Titan armor only to never need it.

Since the others were wandering around, she decided to take a closer look at the orbs. Up close
they almost reminded her of a snow globe in their perfect sphereness, although what was inside was obscured. A minute of watching was hypnotizing in a way, rippling and flowing as if there was an ocean contained within.

“Pretty, isn’t it?” Iosif greeted, walking up.

“You’re here too?” She’d been unaware of this, but she certainly wasn’t complaining. “I mean, yes, it is. What is it?”

“This,” Iosif tapped a gloved finger on the object. “Is a Sovereign Orb. And since I’m one of the ones who wants to help refine the Nolan Project, I’d say I should be involved here. Besides, I think you’re one of the people who should know a bit more about what’s going on.”

Nuan cocked her head. “What do you mean?”

“You’ll see,” he said, before turning his attention to the others in the room. “Form up!”

The soldiers immediately formed a line in between one of the rows of Sovereign Orbs as they were called. To her surprise the Commander also entered the room, followed closely by Fiona. After they all saluted and were subsequently relieved, he faced them directly, hands clasped behind his back.

“Your willingness to participate in this program is appreciated, despite not knowing details. Welcome to the Nolan Project, what we’re hoping to turn into the standard for XCOM training and strategy.” He rested his artificial hand on top of one of the orbs. “Training exercises are limited by resources, time, and safety. It is impossible to completely simulate a battlefield, even if you have the land, resources, and people.”

He motioned to Fiona. “And in cases it requires holding back so as not to hurt another party in the training exercises. In addition, specific challenges or enemies are impossible to fully simulate, such as the Battlemaster, Isomnum, or the Imperator. Psionics in general can be difficult to simulate. This is what the Nolan Project is attempting to solve. Training simulations not constrained by time, resources, or safety. I’ll take a guess for how you think this is going to be done.”

“Psionics, Commander,” Geist answered immediately. “Based on our current understanding of telepathic theory, it is possible to draw a mind into a space controlled and managed entirely by an individual. The problem is that it is extremely difficult, or near-impossible, for any Human to properly simulate something detailed and comprehensive enough to work for what you describe. I suspect even Ethereals would have issues.”

He had a point. “A computer probably could though,” Nuan added. “An AI.”

Was that where this was going? She’d heard the rumors that XCOM was developing an AI with the Andromedons. Was she actually going to get to see it in actions?

“You are close,” the Commander pointed to Geist. “It is psionically based. We’re not quite to linking it with an AI, Engineer Kun, though you’re also right that an AI would be able to perform the same feat. The general theory Geist described is correct, and what we’re working with. But it is not an Ethereal or Human who is responsible for…powering the Nolan Project, so to speak.”

Nuan was both confused and intrigued.

“You’ve all been selected because you’re considered capable of keeping sensitive information to yourselves,” the Commander continued. “You’ve heard about the alliance between us and the Andromedons. That has not been the only ally we’ve acquired. You’ve all likely been interested in
the Chronicler and his operatives. They are agents of T’Leth, an alien from a species called the Sovereign Ones.”

Carmelita snorted. “Arrogant name.”

“But accurate,” Fiona stepped forward. Nuan hadn’t really interacted with the woman much, but she was one of the more famous, especially when she’d brought back Axis and fought in the attempted rescue operation for Abby. She wasn’t wearing her stone armor now, but a sword was still strapped to her back and her silver-grey hair was pulled back, drawing even more attention to her striking green eyes.

“T’Leth is residing on Earth,” Fiona said. “He’s been…asleep for a long time, at least from what the Chronicler has shared with me. Naturally he sees the Collective as a threat, especially since there is at least one more Sovereign One working with the aliens. So in both the mutual interests of XCOM and him, he has decided to lend his own assistance where he can.”

“On Earth?” Geist frowned. “Underwater?”

“Correct,” she nodded. “In places no Human has ever looked. Or the Collective for that matter.”

“How reassuring,” Fakhr said, speaking for the first time. “So we’ve got another race of extremely powerful aliens in this war. That’s just what we needed.”

“Do you trust him?” Geist asked. “If this alien is as powerful as you imply, there is a good chance that it is simply utilizing XCOM to rid itself of an opponent or rival.”

“I trust him to help us eliminate the Collective,” the Commander said. “But for everything else I can only take him at his word. However, up to this point he has been useful to us, and until he breaks that, I will give him the benefit of the doubt.” He nodded to the orbs. “A Sovereign One is powerful enough to simulate scenarios in a psionic dreamscape, and T’Leth has agreed to do this. If there are objections to that, you can leave now.”

“If nothing else, I’m curious,” Carmelita said with a shrug. “An enemy of the Collective is good enough for me.” There were echoing agreements as the others – Nuan included – unanimously agreed to continuing going forward.

“Good, T’Leth wants to have a blank scenario where he works out some functions,” the Commander said. “Put your hands on the orbs; skin contact is required, so take off any gloves you have.”

“What’s going to happen then?” Fakhr asked.

“You’ll be taken to whatever T’Leth has established telepathically,” the Commander explained. “It is not considered mind control, and the Manchurian Restraints won’t be triggered if you have them. You will be able to leave either when T’Leth ends the session – or you die in the simulation.”

“This’ll be fun,” she muttered, but placed her hand on the nearest orb, as did the others.

Nuan coughed awkwardly, gesturing to Iosif. “I might have a problem,” she raised her grey prosthetic hand and wiggled the fingers.

Iosif winced. “Right, didn’t quite think about that. Well…maybe try it anyway.”

She did, and unsurprisingly nothing happened. “We’ll have to cheat it,” Nuan grumbled, fumbling with her shirt and pushing up her sleeve. “Hold onto my arm and you try it.”
Iosif coughed. “I’m not sure that will work either, but I’ll try it.” At her nod he put a hand around the arm which still had half of the organic forearm and she similarly grasped his own forearm. Iosif then placed the other hand on the orb. Instantly the world vanished and was replaced by a bright watery dreamscape. Both of them were in their Titan armor, and it did feel like she was wearing her Titan armor interestingly enough.

“ Took you long enough,” Carmelita said, walking up. “This place has some interesting properties.”

Nuan realized that Iosif hadn’t let go of her arm, and both realized it at the same time and dropped now that they could move freely again. “Like what?” Nuan asked.

“Hold still,” Carmelita said, and then unexpectedly punched Nuan in the chest, sending her flying into the air. Nuan let out a scream expecting to be killed in the first few minutes of her time here, but the impact was like landing on a deep cushion thankfully.

Carmelita found that very amusing.

She, however, did not.

Storming back over, she didn’t even let Carmelita say her apology before performing a much harder punch with her metal wrist and sending the other woman flying much farther backwards. She heard Iosif snicker. “She did have that one coming.”

“Amusing that is the first thing you did.” They turned at the sound of the deep voice, which came from a figure wearing Titan armor, but the armor had the same stony texture as Fiona’s armor — who was incidentally right beside him. The projection of T’Leth.

“I have much to test and experiment with here,” the projection said as all the rest of the soldiers were suddenly teleported before him. “All of you will provide assistance in helping achieve this. Laws, physics, rules, and more I must become familiar with in simulating in this dreamscape. Once this is complete, I can simulate in earnest. Now, it is time to begin.”

***

Office of the Commander, the Praesidium – Classified Location

2/20/2017 – 2:11 P.M.

The Commander appraised her seriously. “How bad is it already? The real numbers, not speculation.”

Saudia handed him one of the files she’d brought. “Several thousand are already dead, mostly those who were already sick or malnourished. Lower class citizens mostly, and to the surprise of no one, they’re the demographic that’s the most infected. The Chinese are working to contain and quarantine the infected, but it seems like a new case appears every few hours.”

“And smallpox has a one-in-three chance of mortality,” the Commander said grimly, taking the file and beginning to read it. “And scars the remainder for life.”

She pursed her lips. “Not completely. From what I’ve been told it’s likely going to kill children and the elderly, as well as those already ill or malnourished. So statistically that rounds out to one third, roughly. Yes, there will be scarring for those who are infected.”

“I really hope that vaccination programs are being instituted,” the Commander said. “Unfortunate that we stopped doing that.”
“The disease was virtually eradicated,” Saudia shrugged. “Vaccines do have side effects. Why risk possible side effects for an eradicated disease?”

“That argument might have more weight if we didn’t keep some of it around to study,” the Commander noted dryly, placing the file on the desk. “But you have a point. And no indication that the aliens were behind this?”

“None so far,” Saudia shook her head. “The biggest pieces of evidence that points to them are timing – possibly weakening China for a possible invasion, and that the virus itself is one that we aren’t prepared for and is one of the easiest to spread. Almost every possible vector is transmittable by smallpox. If you wanted to use it as a bioweapon, it’s one of the best.”

“I don’t believe in coincidences,” the Commander said slowly. “The timing is too good, as is the cause of the outbreak. Considering we are dealing with extremely psionically powerful aliens and ones with extensive experience in scientific fields and genetic modification, it’s not out of the question that they could acquire a sample of smallpox and replicate it before redistributing it to the general population.”

“It’s possible, but we don’t have actual proof,” Saudia pointed out. “And I’m not convinced that is the case to begin with. If this is the result of alien tampering, then why target China? If this was against one of our nations, that becomes a lot more solid. Or if they immediately attacked China before we could respond. But we’re involved in China now. This may actually be enough to push them to join ADVENT. How does this benefit them in any way aside from killing a lot of Humans?”

The Commander frowned. “I’m not sure,” he glanced down to the file. “Killing for the sake of killing doesn’t fit their operations. But there may be a secondary goal. Perhaps infecting China first is less suspicious, and if cases appear in ADVENT territory, they’ll be attributed to the first outbreak.”

“Except now we’re prepared for them,” Saudia said. “It won’t cause nearly as much damage.”

“No, it won’t,” the Commander agreed with some reluctance. “The situation as a whole is…odd.”

“Some things can just be chalked up to bad luck or coincidence,” Saudia shrugged. “All we can do is respond to it. If things change, you’ll be among the first to know. Right now we’re not directly accusing the Collective of anything and we intend to keep it that way.”

“I suspect that the implications are already flying on the internet,” the Commander said dryly, standing up. “That may work in our favor for once.” He shook his head. “Anyway, that wasn’t what I wanted to talk to you about.”

“Then what?” She cocked her head.

“Another ally has been acquired,” he said. “I spoke with Miridian, and we’ve come to an agreement regarding a Nulorian alliance.”

“Excellent.” More allies were only a good thing. “I suppose at some point Miridian will want to speak to me. Likely to work something out with AEGIS and coordinate with the defectors.”

“Not exactly,” the Commander pursed his lips. “Miridian is…very radical in his intentions, and won’t agree to the Vitakara client state you’re building. He’s going to want to establish an independent Vitakara power, and keep Vitakar.”

“Unfortunate,” Saudia thought for a moment. “We can still work with that though.”
“Yes, and I do think all sides need to meet to sort this out,” the Commander agreed. “Although that’s only one of the issues Miridian brings. He is, let us say, prejudiced against certain races of Vitakara. I managed to talk him out of going through with his genocidal plans, but I wouldn’t put a significant amount of trust that he won’t try a loophole.”

“I am not liking the sound of this ally,” Saudia pointed. “He sounds like a liability.”

“He is, but he is one more useful on our side than against us,” the Commander stated. “The Nulorian aren’t going to disappear, and the only way we can temper them is if they’re on our side and Miridian has reason to hold back. They’re not stupid, which is why I want them working with us.”

“This is certainly going to be more difficult to coordinate in secret,” Saudia said after a few minutes. “We have the Andromedons, and now the Sar’Manda and Nulorian. I’m unsure how long it will last before the Collective realizes what is happening.”

“We’ll have to make sure by that point at least Earth is secure,” the Commander said. “It can be done, but we’ll just have to be careful and quiet. Which brings me to the next topic – what comes afterwards in the event we win.”

Saudia raised an eyebrow and sat down in one of the nearby chairs, not feeling an urge to stand for the sake of it. “I think we should focus on winning before deciding what happens next. What happens afterwards I hope is a long stretch of unbroken peace. A united Humanity could accomplish so much.”

“I would like that as well,” the Commander said, taking a seat opposite her. “But unfortunately, we’re not going to get it.”

She directed her full attention to him. He seemed completely serious, and it sounded like he’d been keeping something important from her. “Explain.”

The Commander laced his fingers together and hesitated briefly before speaking, getting his thoughts in order. “Some time ago we made contact with another alien. One whose had agents on this planet for some time, passively observing and waiting.”

“Who and what? And how extensively have these agents penetrated ADVENT?”

“I can’t answer that, but I doubt all that many anymore. There isn’t a need,” the Commander said, his lips curling up. “You’ll be interested to know that your Chronicler is the most senior agent, and I doubt you’d even realized he’d been gone.”

That shocked her. She looked at the Commander in disbelief. “The Chronicler is an agent of an alien…how…?”

“The Chronicler is much older than you think,” the Commander said. “As for why he stayed with EXALT for so long, I can’t say. Maybe you should ask him. But the alien he works for is T’Leth, from a species of aliens called the Sovereign Ones. And he is currently on Earth – more precisely in the deep ocean.”

Saudia pinched the bridge of her nose, trying to figure out how best to process this new information. The Commander wouldn’t make up a story like this, especially not now. “And what does this T’Leth want with us. What has it told you?”

“He would have preferred to keep his involvement more of a secret,” the Commander said. “But I
said it was best if the leadership of our species was aware of the true situation. T'Leth is not interested in us, per-se. But for now we have a mutual agreement to assist each other. As for what he said...our time of peace will likely be short."

The Commander leaned back. "There are only a few Sovereign Ones in existence. T'Leth says there are under ten in this galaxy, but they are in constant conflict with each other for ultimate galactic supremacy. Many of them design, enhance, and utilize proxy species to wage these wars in the galaxy; a shadow conflict played between the Sovereigns."

"And we’re T'Leth’s," Saudia said slowly.

"Not currently," the Commander said. "T'Leth...does not approve of using proxies in place of direct action. However, I suspect he would request our assistance in hunting down his Sovereign brethren. If he wanted to, the hard truth is that we couldn’t stop him. We’re relying solely on his word here that he has no interest in such. So far he has held up his word."

"A comfort, knowing that there is yet another ancient powerful alien that could control us, and somehow is more dangerous than the Ethereals," Saudia sighed. "It never ends. We’re in a galaxy with more of these things, miniature-deities that pit species like ours against each other, have I got that right?"

"With one caveat," the Commander clarified. "There is another faction in play. The Ethereals called them the Synthesized, T'Leth calls them Replicators. Whatever their name, they’re a hybrid machine race that invades the galaxy after a certain period of time and destroy the proxy species and attempt to hunt down the remaining Sovereigns. It usually doesn’t work, and they go into hiding until these machines leave. And the cycle starts again."

"And they don’t consider working together against these Synthesized?" Saudia questioned. "It appears this has been going on for a while."

"Of course not, that would mean they have to trust each other," the Commander gave a humorless smile. "And from what I’ve learned of Sovereign Ones, they will betray any Sovereign foolish enough to consider them an ally or friend. Exceptions exist, but they are rare and appear to end up dead. The Synthesized they consider less of a threat than each other, since they don’t die in these purges. Only their tools die, and tools can be replaced."

"Short-sighted egomaniacs," Saudia muttered. "Of course they would think themselves beyond making mistakes."

"Indeed," the Commander poured himself some water. He tilted the pitcher to her, and she waved him off. "I suspect that the Synthesized are perhaps more involved than any of the Sovereigns think. Assuming we’re dealing with an artificial intelligence here, or any kind of extra-galactic entity, I don’t think it would be out of the question to think about how to manipulate these cycles. Each one, they grow stronger. That is not an accident."

"And yet you would think at least one Sovereign would realize this," Saudia said. "But apparently not."

"Which means we’re stuck in a repeating cycle, one where we don’t have the whole picture," the Commander said. "But the interesting thing is that there can be exceptions. The Ethereals were one, and while the Collective is in fact backed by a Sovereign, both T'Leth and I wonder how far the Imperator trusts it. The objective truth, Saudia, is that in the event that we emerge victorious, we need to have a plan for what comes next. What Humanity will do in this cycle. Neither of us want to become a proxy or pawn in a pointless war between Sovereigns, but we may not have a choice."
And unlike the Sovereigns, when the Synthesized come, I want to be strong enough to fight back and win.

“And I think we have an opportunity to change things,” the Commander said, drinking from his glass thoughtfully. “Perhaps this will change when we learn more about the galaxy, but we’re a young species. One who will soon begin dedicated space travel. I suspect that galactic communities may already exist, but right now, no one knows about us. We’re an unknown variable that no one has accounted for. We have one chance to claim this advantage – and whether that will change anything or not, I can’t say, but we should try. But to do that, we need to have a clear vision for what ADVENT and Humanity will do when we enter this ongoing conflict.”

“The more prudent question is what T’Leth will think,” Saudia pointed out. “If he decides he doesn’t like it…what can we do?”

“Nothing…for now,” the Commander set his glass on the table, looking aimlessly into space as he considered. “We have to be careful how much we push and take from T’Leth. He has access and knowledge to technology and secrets we should claim and exploit. Done well, we could become a Sovereign-level power in our own right. But it needs to be slow; subtle. I genuinely believe that T’Leth is not interested in directly controlling us – but he expects an ally. He wants to kill the remainder of the Sovereigns who live in this galaxy. He will want to drag us into a conflict.”

“But then we become sucked into this pointless war and probably die when the Synthesized arrive,” Saudia finished. “A limited number of outcomes, none of which are promising.”

“Unless we can convince T’Leth that the Sovereigns are not his largest concern,” the Commander added. “Or that he’s better off ignoring his enemies, instead of attempting to kill them. T’Leth is…brilliant in ways, that’s clear from the technology he creates. But I think even a Sovereign could learn some things about how to emerge the winner of a galactic war without necessarily taking part in it.”

“All of the Sovereigns are enemies of each other, yes?” She suspected they both had a similar line of thought here.

“So T’Leth says. Alliances are brief and tense at best.”

“Which means they are likely to war among themselves eventually,” Saudia continued. “If they weaken themselves, then that would leave a more neutral party in the stronger position.”

“I see we have the same idea,” the Commander said. “Now we just need to convince T’Leth that there may be more benefit to letting the Sovereigns fight it out instead of jumping right into the middle of it. Assuming, of course, that the Sovereigns like to engage in open warfare. They may prefer a more clandestine approach.”

Saudia tapped a finger on the armrest, thinking. “T’Leth wants to talk to me, I think.”

“Yes, eventually,” the Commander answered. “But before that happens, you should know the full situation. Now you do. I would advise that you only keep this to the highest levels of ADVENT. T’Leth does not want his existence being public knowledge, nor do I think the majority of Humanity would react well to knowing the truth.”

“On that we agree,” she nodded. “I’ll take your advice…it appears that there is a lot to discuss about the future of ADVENT and our species.”
“Do what you need to,” the Commander said, as they both stood. “And when you’re ready, T’Leth will be ready to talk to you.”

***

*Patricia’s Quarters – The Temple Ship of the Imperator of the Ethereal Collective*

2/21/2017 – 2:09 A.M.

The world faded around Patricia as she telepathically reached out with her mind. The construction of the dreamscape wasn’t important, not now. Something simple would work; something that would quickly make the Commander realize what was going on. Or at least make him aware of the situation.

She wasn’t intending to trick him. She doubted that she could fool him even if she wanted too, not to mention it would be even more difficult that it already was.

If she hadn’t known how to find the Commander’s psionic signature, or even the general area of where Earth was, this would have been impossible. As it was, she fortunately had a few hints to help her. XCOM was all concentrated together, in a remote location, and the amount of psionic power contained made it easy to narrow down the few hundred or so individuals who lived there, and the psions.

Except there was a problem.

The area where XCOM should be was dark. That was wrong. There should be something there. They couldn’t have just disappeared, and the Commander wouldn’t have given up the Praesidium just because she’d been captured. Frowning in her mind’s eye, she penetrated a little deeper and ran straight into a wall of psionic defenses.

Without warning, she was thrown into the prepared dreamscape.

She stood in a white expanse; there was nothing existing within or around it. Nothing and no one. An endless barren expanse where light came from everywhere and nowhere. She glanced upward and telepathically tugged on some of the variables. It was a bit brighter than she wanted, and the light consequently dimmed slightly as it bent to her will. So, she still had some control. Odd.

What was happening?

“What are you?”

The voice was deep and bellowing; echoing in her mind long after the words faded. It came from no source and everywhere, like a god speaking from above. The dreamscape suddenly shifted, and her mind strained as something else began to take control. Despite her attempts to retain the shape the presence easily dismantled her weak efforts to dissuade it.

The light dissipated and the world around her turned watery; a deep impenetrable blue. She was now in a watery prison, and her gut clenched in fear as she began piecing together the implications. The darkness became more complete, and a form began materializing before her eyes; a massive creature that towered over her; the full size hidden in the shadow with the only light being that which it cast from the six glowing blue eyes that opened.

“Where are they?” She demanded, steadying her own mental defenses in preparation for a direct attack. “What have you done with them?”
“With whom?” The air shifted. “You are a Human. You should not have found this place or attempted to breach it. What are you?”

“Someone who needs to talk to the Commander,” Patricia said. “You know who he is.”

“Ah…” Patricia only had a brief second before she was assaulted with a telepathic attack beyond any she had experienced before. It hit her mind in all places, striking all her known weaknesses. Her mental defenses faltered and weakened, but held firm even as she was driven to her knees.

“You are the telepath…Patricia Trask.”

“And you are T’Leth,” Patricia gritted her teeth as she willed herself to stand. “And it seems like the Imperator was right.”

The Sovereign One seemed amused at that. “The Imperator does not and will never know my mind. Tell me, Human, what he was right about?”

“You’ve taken control of XCOM,” she said. “The Commander. All of them. Soon Humanity.”

“The Commander and I have come to a mutual agreement,” T’Leth said. “One which includes the elimination of the Imperator and his Collective. Our goals are aligned, and Humanity will assist me in removing their threat and bringing the final end of Mosrimor and the Bringer. You would do well to remove yourself from his influence, Human. There will be no mercy given to the compromised.”

“And leave you to influence my species? I don’t think so,” Patricia said flatly.

“I have little interest in controlling your species,” T’Leth sounded almost more irritated than defensive. “As we have said – our goals are aligned. I have needed none in my mission so far, and I do not need the Humans. Yet they are helpful, so I will assist them, and they me.”

“Then prove it – leave.” She said. “If you’re different and don’t need us, then go and prey upon a different species.”

“I would tell your Imperator to do the same, Human. The Commander made an agreement with me,” T’Leth growled, his voice shaking the watery tomb she inhabited. “I have no intentions of leaving.”

She felt her lip curl up. “Then you lie. You have no intention of leaving us because we’re more useful with you than against you. You don’t want to give us up now.”

“The Imperator has an interest in my death, as does his puppeteer,” T’Leth said. “I have no intention of leaving based upon the insistence of an insignificant Human. You are nothing. You mean nothing. I have no need to use XCOM or ADVENT because they are already serving my goals. To do more would be pointless and self-destructive.”

“I want to hear it from the Commander,” she crossed her arms. “I’d be a fool to trust you.”

“Then allow me to see your mind.”

“No.”

“Then I will not allow you to breach the defenses,” the voice rumbled. “I know who you are; a hero who has seemingly been corrupted. I have an interest in preserving XCOM as they are, and you are compromised. I would be a fool to trust your intentions blindly.”
“Maybe you should let the Commander decide for himself,” she said.

“The Commander has more important concerns than dealing with a compromised soldier,” T’Leth stated. “You are a distraction. You know the Commander. You know who he is, and he has an inflated sense of how much he matters – going so far as to dictate terms to me for our alliance. I will not entertain your presence any longer, Human. You must decide between my word or that of the Imperator.”

“If you really wanted to convince me,” she said slowly. “You should have let me talk to him.”

“You invade from the presence of the one who seeks my death,” was the answer. “If you wanted to convince me, perhaps you should have returned when you had the chance. Do not hide like a coward. Return to XCOM if you want your answers, for I will not risk giving you them here.”

Patricia severed the connection and the world came back to her in a rush and she lurched forward, catching herself on the cold floor. Her heart beat wildly, sweat coated her body and the air felt warm.

This was really, really bad.

Even if T’Leth was, by some unlikely miracle, telling the truth, he’d openly said it was only because their interests aligned.

When that changed...

There was no changing the hard and uncompromising truth that now faced her.

XCOM was under the control, or at the mercy of, a Sovereign One. And by extension, ADVENT.

And through ADVENT, Humanity itself.

Drained, she leaned back against the cold wall, wondering at what she could possibly do, now that she knew the truth. None of them were good, and the number was dwindling. Yet she had no choice. Standing on the sidelines was no longer an option.

A choice had to be made. And it would be soon.

***

Quarters, the Prism – Classified Location

2/18/2017 – 8:09 P.M.

Yang set her swords against the wall and began taking off her armor. Training had been going on for most of the day, and she was sufficiently exhausted. Physically she felt she was ready for the Trial; her control of psionics was only getting more precise, and the genetic modification had elevated her beyond any normal Human or alien.

Mentally, she was still not sure what exactly to expect.

If the Bringer was somehow connected to the planet, she was going to be in for a harrowing time.

At least she was getting better at defending her mind. That had quickly become the most difficult part of preparation. The physical challenges she could deal with now, and those were nearly breaks to her compared to a telepath penetrating her mind over and over. But each time she was holding them off a little longer.
She’d get there. It would just take time and effort.

The Prism had become her home now, and it mostly consisted of just her and the Battlemaster most days, at least when he wasn’t conducting operations on Earth. He’d kept her appraised of the developments as well when he returned each night. She definitely liked this place better than the Temple Ship, mostly because she didn’t have to walk around knowing the Imperator was observing her every move.

The people there she didn’t completely know what to make of, or really trust. Patricia was still being evasive over what she was actually doing there to the point Yang wondered if she was just getting as much information as possible before bailing. It would serve the Imperator right if that was the case, considering what a monumental risk it was keeping her around.

Not her problem though, not anymore. The Imperator didn’t have her trust anymore. The only ones she trusted were the ones who’d fought with her through Paradise, who subsequently weren’t in favor of keeping that place still operating. Much as she wished the Battlemaster had decided to just reject the Imperator’s authority on the situation and kill the creatures on board, she knew why he hadn’t.

Paradise would screw over the Imperator someday, and hopefully she’d be alive to see it.

That still made her furious.

*Use it.*

Not now, training was over.

But it was good to have plenty of sources of fury to draw from. It helped. It was cathartic.

She showered and dressed in more comfortable clothes, deciding to get a little more insight into her Ethereal commander. Particularly in a subject she felt was somewhat important for all of the Ethereals, but no one had openly asked.

“Anything new?” She greeted as the Battlemaster walked into the open room which consisted of an interesting mix of kitchen, living room, and armory, all overlooking the main Prism chamber. She grabbed some cereal which she assumed was imported directly from Earth – or made with a really good synthesizer - and sat down on the nearest couch.

“No substantial developments, offensives are being refined,” he answered, setting his own weapon on the designated stand. “The outbreak has begun in earnest in China. Within weeks we will strike. ADVENT has already pledged support to contain the outbreak. I expect China will capitulate to them when the invasion commences.”

A pause followed. “Considering Isomnum will be involved, the timeline of capitulation has been accelerated.”

Yang shivered and the anger built up again at the thought of that thing being given this much authority. “I don’t know why you let him take over so easily.”

“Because I pick my battles, and Isomnum knows that if he becomes a problem to the overall strategy and my plans, I will remove him from his position,” the Battlemaster said emotionlessly, turning to the window. “The Imperator insisted on this order. For now I will follow it. Should he prove a poor choice, I will remove him.”

Yang snorted. “We both know he’s a poor choice. What’s your actual reason.”
“Because Isomnum has made an impression on ADVENT and XCOM,” he continued. “His personal involvement means he will want to show how superior he is to me. That he is more effective. So he will be directly involved, and thus, a target. Isomnum is a detriment to the war effort, and I expect him to be killed by the Humans. If he is so insistent on his superiority, he will operate with a limited garrison of mechanical forces and his own soldiers.”

Yang blinked. “You’re trying to get him killed?”

“No.” The voice was still neutral. “But I expect it to happen, and he is not worth the effort to stop his walk to his death. He is one of the relics of my kind, one who underestimates aliens. I have little patience for tolerating this idiocy any longer, even if the Imperator insists upon it. Nebulan has already compromised the South American operations, and the Zararch have had to take direct action to salvage her mission. The success or failure of the Chinese invasion is irrelevant at this point. It will be claimed by Isomnum, or myself eventually.”

She could understand why, even if she had wanted to lead the invasion against her former homeland. “So then what happens if he wins?”

“Then we take the land and adjust our strategy accordingly.” The answer was immediate. “But ultimately, China is a distraction that will unfortunately claim the life of Isomnum in time. Our work elsewhere is what will complete this invasion once and for all.”

“And the SAS?”

“They will play their part,” the Battlemaster turned to walk to another stand and unclipped the cape. “The SAS will be suitable to distract ADVENT in Africa and tie up additional resources. If the SAS fall, they completed their part and cost ADVENT time, resources, and soldiers. If they succeed, they’ve caused significant damage and can advance forward. Macula has done well in his task.”

Yang ate in silence for a short time while the Battlemaster made some food for himself, and sat on his own massive chair. The entire place had been built for someone his size, and aside from the furniture and equipment made specifically for a Human, she felt sometimes like she was living in the house of a giant.

The Battlemaster never took off his armor either it seemed. Even now he had only removed the helmet, which was another reminder that the Battlemaster was, ultimately, an alien. Sometimes it was easy to imagine him as just a really big Human with an extra set of arms. The armor and helmet hid all other features, but with the helmet removed it definitely showed that Ethereals were alien.

It was…unique. Dark purple skin, glowing orange eyes, a surprisingly small mouth that didn’t seem to fit the elongated neck that also transitioned into a head. It was strange anatomically, not at all as humanoid as it implied. Ethereals weren’t an especially intimidating species on their own; their physiology evoked more curiosity and intrigue than fear or strength.

Maybe that was why all of them went to lengths to obscure their faces.

That would have been ironic if the original reason they liked helmets so much was because they weren’t scary enough on their own.

She cleared her throat, deciding to broach a different topic. “Mind if I ask a personal question, Battlemaster?”
He lowered his bowl of alien food she’d never bothered, or wanted, to ask what it actually was. “Speak.”

“What do you want?”

“What do you mean?”

“What is the purpose of all of this?” Yang gestured idly. “You aren’t a warlord or some kind of crusading warrior. You have to have some kind of goal other than just…” she paused, searching for the word. “Existing. Which appears to largely be what the Collective has been doing for a while. Existing. I think you want to do something with it, but what?”

The Battlemaster fixed his orange eyes on her. “The Ethereal Empire was destroyed by the Synthesized. They likely still exist in the galaxy or beyond it. I agreed to abandon the Empire with the understanding that when I awoke I would have a part in rebuilding our species and avenging them in a second war, this time armed with the knowledge of our previous conflict.”

“And that hasn’t turned out like you intended,” she nodded. “Not yet, at least.”

“The Imperator has become distracted with new goals and threats,” the Battlemaster said idly. “I have not. The Imperator will focus on the phantom threats of the galaxy, while I will focus on the ones I have seen and fought. I have little interest in the Sovereign Ones or their plans; known or unknown. They can be ignored or dealt with if they interfere. I lost my species and many, many good soldiers and friends to the abominations of flesh and metal. Their deaths will not be in vain, nor will I abandon my mission simply because the Imperator forgot what he is fighting for.”

“That sounds good…” Yang began slowly. “But the Imperator is still in charge, if I remember.”

“And once Earth is taken, his role will need to be evaluated,” the Battlemaster responded. “He has become too distracted over what is important, and what does not matter. He is young. A child by our standards; thrown into a war from the moment of his birth and raised to believe he was superior. Genetically, he is. Mentally, he does not, and never will, comprehend what we lost against the Synthesized.”

The Battlemaster rested a hand on top of the scarred helmet, voice melancholy. “We were not perfect, we were flawed, but what existed was good. We existed in harmony with other aliens even if we mistakenly believed ourselves their better. Over time we would have changed; more like Mortis would have emerged. But our chance to become better was stolen in the slaughter the hybrids brought. The Imperator never experienced the Empire and those who lived in it. I saw us at our height, I trained Battlemasters of my own and hundreds of other soldiers. And each one of them died in a bloody and unprovoked war. I cannot forget, and that is why I will continue to prepare for their return and I will either finish the war and avenge those who fell, or I will die, and my species will end and serve as a lesson to others until the end of time.”

The Battlemaster rarely spoke about his life or his past to her, or anyone most likely, and she realized that though it wasn’t always apparent, the Battlemaster was old. It was difficult to imagine what could happen in the span of a hundred years, let alone the minimum of a thousand years he’d lived. What was a long time to her was likely extremely short for him.

That long view of time was something she didn’t know if she’d be able to get used to.

But at times she also wondered if it was a disadvantage, especially in warfare. Humans especially planned short-term, and adapted quickly. ADVENT and XCOM especially were moving and adapting in the span of months, while the Collective was, normally, much slower. Originally she’d
wondered if it was incompetence or inexperience, but maybe it was just because Ethereals were bad in planning in the short term.

But they were getting better, if the Battlemaster was any indication.

It maybe just took them a bit longer.

“Do you think the Imperator will change his mind?” She asked.

“No.”

An abrupt answer. “Why?”

“Because he continues to allow the Creator free reign and intends to proceed with his plan for the Bringer,” the Battlemaster said simply. “He has made up his mind. He sees a greater threat, and he will work to defeat it. He has the support of others who share his view; he will not be persuaded that he is incorrect.”

Yang shifted until she was sitting cross-legged. “What do you think he wants?”

“To become one of them.”

“Become what?” She questioned. “A Sovereign?”

“Yes.” The tone was accepting, not judging. “He considers himself benevolent, and to aliens he is. He lacks the destructive prejudices my species had, but now knows there is a greater conflict in this galaxy. One he wants to become a player of. He is intelligent, immortal, and powerful. More relevant, he believes that he is right. He will see a galaxy that he can liberate from the tyranny of these Sovereign Ones – but one which ultimately owes their salvation to him. He will continue the cycles should he win, but it will not be Sovereign Ones who perpetuate them. Others will rise to challenge him, perhaps the Synthesized will return, but he will not succeed. He will just become the thing he wants to destroy; a god who uses whatever is in his power to ensure he wins.”

It was…unsettling to her that he sounded almost defeated as he spoke. Resigned to what the Imperator would do, or could do. “Have you actually explained it like that to him?”

“Not in that way, no,” he admitted. “Nor do I think he would accept that. He would argue that his reasons are justified, and perhaps they are. But he believes he can change the cycles from the inside, when I see the only possible way to do the same is to avoid them altogether.”

“I think you should at least try,” Yang said, feeling bold enough to advise the massive alien. “You respected him, at least you did. I’m pretty sure he respects you still. Sometimes it helps if they get yelled at by someone to make them actually think about what they’re doing. You clearly don’t like the direction he is going, and instead of accepting it passively—”

“Yang.” He cut her off, raising a gauntleted hand. “I appreciate your suggestion. Your concern is…good; it is not something I hear normally. But at the same time, I don’t think you understand how the Imperator thinks. I’ve considered doing what you said many times, but I…feel debate where both sides have already made up their minds is simply a waste of time. This is not a topic where one side is objectively wrong, and both of us can defend our points and feel we are correct.”

Yang grimaced, but she could see that point. “Then you have reached an impasse. Differences like this will become irreconcilable over time.”

“They will,” he said bluntly. “I know that.”
“And what will you do?”

“I don’t know.” It was uncomfortable how flatly he said that. “I suppose that will be decided when Earth is…resolved. Our raised differences can be settled after the immediate issue is resolved and Humanity properly integrated. But what happens after that, I cannot say.”

There was some silence after that, both of them thinking on what the future beyond the war would entail. It was now a lot more vague and unknown than before, something Yang hadn’t really expected. She knew she’d likely side with the Battlemaster no matter what happened, but where that would lead…

A mystery. Not a thrilling or exciting one either.

“I guess we should enjoy the time before then while it lasts,” she said, brushing her hair back. “At least war is simple. We know who the opponents are.”

“Yes,” he agreed. “In this war, we do.”

***

Throne Room of the Imperator – Temple Ship of the Imperator of the Ethereal Collective

2/22/2017 – 9:00 P.M.

Ethereal and Human once more stood in the darkened room, one sitting on an elevated throne, while the other stood below and waited. Patricia’s time was coming up, and she had a feeling that this would be it. The Imperator had not said what he was going to speak to her about. Her attempt to contact the Commander had revealed the truth, and the only alternative was to return to the Praesidium itself.

A fool’s errand. It was clear it was too late.

“You are ready, I believe,” the Imperator finally said, not standing. “You understand that I am not your enemy. You know the true threat this galaxy faces, and our goals are similar. As such you should be informed of certain things that have been done in secret, and learn knowledge which very few possess.”

“You’re confident,” she noted, crossing her arms. “You wouldn’t share this if you didn’t think I would join you.”

“I have little reason to believe you will choose otherwise,” he said evenly. “I have not lied to you. We’ve conversed and learned enough of each other to know where we stand. I now trust you enough, and yes, this comes with my own expectations. But as always, the decision of how to use this information is up to you.”

“Well,” Patricia motioned to him. “Don’t leave me in suspense.”

The Imperator stood, and descended down the steps of the throne, and even when he reached the bottom he towered over her as usual. At this point, she was used to it. “What role do you think I have planned for you, should you join me?”

Patricia considered, thinking to all their conversations and how they interacted. It didn’t seem especially complicated. “A representative; an intermediary between yourself and the rest of the Collective. Perhaps to other Ethereals. You wouldn’t invest this much in a non-Ethereal if you wanted them in just a command or analytical position.”
He emanated approval, and visibly nodded. “Nearly, Patricia Trask. I indeed would want you to speak with my authority, but that – “ he opened the palm of one of his hands. “That is simply not good enough for me. No one can act simply as a voice. It must be more than that. That which represents me must represent my will and power. Nothing less can suffice.”

“And we both know that’s impossible,” Patricia answered, raising an eyebrow. Knowing the Imperator, this was something he had likely developed an answer to. “Your will is something I can only repeat, my power is limited by my species.”

“Power, Patricia, does not equate to scale,” the Imperator stated, beginning to pace, keeping the triangular helmet focused on her eyes. “I’ve never considered it such. Simply scale can be wasted. Abused. It often lacks focus; discipline. Power, Patricia, is the usage of such. Knowledge and skill over a discipline, be it psionics or something else, equal true power. That can be conveyed.”

“How?”

“Our species is limited by our numbers,” the Imperator said, stopping and reaching for his lower wrist which had several buttons on it. “We cannot be everywhere, we cannot do everything. The Sovereign Ones understand this and instead work through their own agents and proxies. I wanted to develop this technique for our own species. Each Ethereal having an individual which represented their skill and power. This was begun as the Avatar Project.”

Ominous in a way, implied possession was not something Patricia was particularly endeared to. “I’ve heard something of this before. Only the name though. So it would involve possession of ‘Avatars’ for you to control without risk to yourselves?”

“No. I have told you before, I have little interest in unthinking puppets or proxies,” he pressed a button on his wrist and a hologram appeared before her. It showed a humanoid, likely a male, standing still in a black skinsuit which covered almost all exposed flesh. The face was obscured by a mask which was clouded a dark purple, and reminded her of a scuba mask. It almost appeared that the mask was grafted on, or attached to implants in the bald head itself.

“The Avatar Project had far grander ambitions than remote control,” the Imperator continued. “It would allow the two who were linked to become a singular power; each capable of drawing on the memories, experience, skills, and knowledge of each other, in addition to what they faced before them in the present. It would allow each to draw upon the raw power within them, elevating their own beyond their original limits. An Avatar would be the extension of an Ethereal; one who can truly embody and utilize the power we wield.”

“So why haven’t there been Avatars,” Patricia asked. “We definitely haven’t fought any before.”

“Because the project ran into a distinct lack of viable candidates,” the Imperator explained, his voice having a tinge of dryness. “The Sectoids initially showed progress, but they lack emotion. They lack the proper mindset to properly merge with us. We are not soulless automatons, nor did any of us feel enthused at the idea of a Sectoid Avatar – one which could never fully understand us, regardless of upbringing or genetic engineering.”

A hand waved dismissively. The tone reflected this. “The Vitakara and Andromedons lacked the gift. It could not be artificially induced, and the means by which the Bringer achieves this are…not able to be replicated. The project was halted and only considered intermittently by Revelean, who considered the theory sound. I had begun exploring other possible options, and then the solution appeared.”

“Humanity has the capability,” Patricia finished. “We were the missing link.”
“Exactly,” the emphasized word reverberated in her ears. “Humanity has just as much psionic potential as the Sectoids, but they are also capable of connection, emotion, ambition, and skill. Their capabilities for the Avatar Project could not be ignored, and I immediately restarted the project. And now the Avatar Project has succeeded. The theory has been proven and demonstrated by Revelean.”

All the pieces clicked into place for Patricia at once. “You planned for all of this. All of the Humans chosen by Ethereals. All of them to be Avatars.”

“Candidates, yes,” the Imperator corrected. “I knew that it was not a matter of if the Project could be completed, but when. So I have prepared accordingly. But they will not be simple Avatars, as the name crudely implies. They will be more. They will be Harbingers of the Ethereal Collective, of our power and will. Our voice and sword; a being who can earn and wield the power an Ethereal holds.”

It was leading up to a point. “You want me to be your…Harbinger.”

The Imperator did not waste time with pretense. “Correct. We both understand the threat the Sovereign Ones pose. We both see the potential and place Humanity can achieve in the galaxy. You are a skilled psion capable of mastering the power I can command – that which can be yours. You can lead your species into an era that few others could even comprehend. Together, Patricia Trask, we will ensure that the hold the Sovereign Ones hold over this galaxy is shattered.”

She was silent for a few moments. “I need to make this decision now?”

“Not yet, there is one more thing you must know,” the Imperator stopped his pacing, and faced her directly. “When the Bringer has been utilized and remains under control, Mosrimor and T‘Leth have been killed, Humanity has taken their rightful place within the Collective, and the traitors within our ranks exposed and purged, we will build and prepare for war against the inner galaxy. They have a head start, they are more powerful, they control more, and I do not want to use the Bringer more than necessary.”

“I don’t think anyone does,” Patricia pursed her lips. “That said, do you think that all the Ethereals – Harbingers included – would be enough to defeat the remainder of the Sovereign Ones?”

“I do not,” the Imperator said, making the hologram of the preliminary Avatar disappear. “So we will need to find more.”

“I assume you’re cloning them?” She wouldn’t have been surprised.

“At this moment the Collective has access to one Imperial-grade cloning chamber, and the materials to create more are elusive,” the Imperator said, the hologram of a barren star system appearing. “It is under tight control; none can stumble upon it accidentally. No Sovereign knows about it, and within twenty years a new Imperator-class Ethereal will be born.”

“Why just one cloning chamber?” Patricia asked. “If these were as difficult to produce as you said, why didn’t you just install more?”

“Because space was limited, as was power,” the Imperator said. “We needed to rest for hundreds of thousands of years. Nothing could be a drain on life support, and if we were found and murdered, it was imperative that those who carried it out believe that the Ethereals were killed forever.”

The implication was not lost on her. “But that isn’t the only one.”

“No,” the room lit up and displayed the known galaxy, with various worlds lightened in purple. “I
am not blind or lack the foresight to preserve my species. This was not the only group of Ethereals I intended to survive the war, though it was the primary one. In the latter days of the War I ordered the construction of Imperial cloning farms on worlds only capable of being accessed by FTL travel.”

He walked through the bright starfield as he continued. “There were alien survivors, I utilized them to build these stations along with thousands of automated construction. No other Ethereal knew of my plans or actions. Even those I recruited to go into stasis believe they were the last of their species.” He turned to her. “But the truth, Patricia Trask, is that even if I were to die – if all the Ethereals known were to die – my species is far from gone.”

Patricia counted at least twelve highlighted systems. “The Cloning Farms are expansive and isolated,” the Imperator continued. “Built in the shadows of black holes, dying stars and barren moons. They are intermixed with developing garden planets and water worlds. Each holds ten thousand Imperator-class Ethereals who were grown while we slept. When they reached maturity, their pods turned to stasis chambers. They sleep across the galaxy.”

“How wait?” Patricia demanded. “This is…it would have the power to dominate anyone; even a few Imperators would be enough to challenge a Sovereign One.”

“I would agree, were they not established in enemy territory,” the Imperator reminded her, looking to the highlighted system. “They rest within the grasp of Sovereigns and their proxies; with their locations scattered. And when they awaken, they will be noticed. They will need to be trained. Taught. They must learn the truth of this galaxy, and their role within it. Perhaps they would be enough to challenge a Sovereign on their own, but that is a chance that cannot be taken. Thus they will stay asleep for now.”

“Until you come,” she breathed.

“No, because if something happened to me, they wouldn’t sleep forever,” the Imperator clarified, raising a hand. “The first of the Ethereals would emerge one thousand years after we awoke. Then the next would awaken after another thousand. Redundancy in the event of catastrophe; a reason to believe the Ethereals will never truly be gone.”

He paused. “I suspect not all of them will survive; this is a long period of time. But enough will; enough will endure to continue my species. And that was the original, secret, plan, Patricia Trask. When we established a power base and a suitable force, we would march towards the first of these strongholds and multiply the power of our army ten thousandfold. But the Sovereign Ones changed that. I will not willingly lead them to an army they would use to conquer the galaxy. So they must be removed before I continue.”

“You cannot go to them now,” Patricia realized. “Mosrimor would interfere.”

“He cannot be allowed to know the truth, nor can the Bringer, even as restrained as he is,” the Imperator confirmed. “We both know that he cannot fully control me. Perhaps he is more powerful; hidden, but he rests assured that in a singular duel I would lose. More Ethereals of my power…he would be threatened. This cannot be kept a secret from him; such is impossible. So he would act. I will not risk it until he has been dealt with. When all the Sovereigns who are aware of us are dealt with.”

The light glittered off the towering form of the Imperator as he turned back to her. “That is what will happen afterwards. The resurgent Collective will liberate my sleeping brethren and with each stronghold we claim, the Sovereign Ones will grow more fearful. Combined with the leadership of Humanity, the genetic mastery of the Sectoids, the fleets of the Andromedons, the expertise and
diverse skill of the Vitakara, and the legions of Mutons, we will break the cycle perpetuated by the
Sovereign Ones.”

A pause. A heartbeat. “That is what I intend to make into reality, Patricia Trask. That is what I will
bring to this galaxy. That is why I need your help.”

He lowered himself to one knee, and extended a hand to her. “You know the stakes. You know the
truth. You know everything now. The time has come to choose, Patricia Trask. Join me, for the
good of your species, the galaxy, and yourself.”

He was right. There were no more excuses. She knew everything that mattered. What she still
believed she did not know was simply her deluding herself.

She did a psionic check on the Imperator, and unsurprisingly he was not lying. He might not know
everything, but he clearly believed everything he had said to her.

He still had not lied to her, even after all this time.

It was a choice between loyalty to her friends and species, or to a larger galaxy. A choice of what
really mattered to her. She could not choose both, no matter how much she wished it were
otherwise. She was going to regret what she would lose no matter what happened; the knowledge
of what she lost forever tormenting her.

A hero or traitor; a savior or coward; a martyr or pariah.

A Harbinger.

A soldier.

A Human.

Something more.

Yet she knew herself; she’d learned important things; things she would never be able to ignore.

But she was still Human. She had friends, people she loved and cared for. That couldn’t be
forgotten.

Nothing would be forgotten.

No matter what, she would remember the cost.

But in the end, the choice was clear enough to her. She knew who she was, and what she had to do.

Staring into the helmeted eyes of the Imperator, Patricia Trask made her decision.

She took the gauntleted hand which dwarfed her own. “I’ll do it,” she said, her voice calm and
collected. “I will join you.”
The thing that stood before him was not Human. It certainly looked Human, with flawless pale skin, expertly combed and lush black hair, glittering ice-blue eyes, and a full smile. The obvious irregularities were that it wore just a simple black skinsuit with a blade of some type strapped to the chest.

What gave it away was how it moved. It had a habit of changing gaits frequently, and each was of an immediate mechanical precision. It was like it was learning how to walk at times. It spoke in a voice which could only be described as dead. Toneless, flat, and even genderless, which had certainly been an unpleasant surprise when he’d introduced himself.

It didn’t help that he would occasionally – and near-perfectly – switch into various Human accents without warning.

Volk hated that.

Elena had similarly picked up on his alien nature as instantly as she’d figured out Asaru was a telepathic projection. And if anything, she was more disturbed by it. Volk knew perfectly well that “Nemo” as he called himself was not his original name, and found the idea that he was naming himself after the captain of the Nautilus odd, but it was the only thing he could think of.

There was no way this alien had chosen this name because of a movie about fish.

“The Collective is preparing to strike,” Nemo said in his dead voice, standing up straight as they walked in. “China is suffering an outbreak of smallpox, and once the optimum time has been reached, they will strike against them. This will draw ADVENT into the conflict fully.”

Volk grimaced. “I’d thought that the Collective wasn’t going to use bioweapons like that, or at least not against civilians.”

Nemo simply shrugged. “Isomnum and the Imperator have overruled the Battlemaster in this instance. I would put the blame on the illustrious Dread Lord rather than Asaru. Knowing what I have seen of your species and ADVENT, they will bring the situation under control. The Ethereals have a tendency to underestimate your species, something we will not make the same mistake of doing.”

It was somewhat flattering how…oddly high of an opinion Nemo had of Humanity, and conversely how much he didn’t care about the Ethereals. He’d flat out commended Volk for his initial warning that bringing Agent Gertrude back was a bad idea and stated his intention – with Asaru in the room – that he was not going to follow “Orders which hinder or are to the detriment of our goal”.

Volk wondered where this alien had been the entire time. Either he was a risk, and would explain why the Ethereals were hesitant to use him – or things were bad enough that they were bringing out all the stops to defeat ADVENT.

In the case of Nemo, both could very well be true.
“What is your plan?” Elena wasted no time, clearly wanting to get this done as quickly as possible.

“The Phantom Division – as well as you and your team – is now part of a Collective unit assigned to locate and eliminate strategic individuals in pursuit of the goals of the Ethereal Collective,” Nemo answered evenly, then tilted his head. “In simpler terms – we are infiltrators, saboteurs and assassins. We are given a list of targets, and we will kill them. Only individuals with direct ties to our mission will be targeted – no collateral damage against the civilian population. I know how you work, and we both agree that the dismantling of our actual enemy is more effective – preferably if they don’t even know it was us.”

Volk gave a single nod. “So, the same thing we had planned before things went down. I can get behind that. I think we were already given some preliminary targets—”

“Dismissed, the parameters have changed,” Nemo interrupted immediately. “Korea can be dealt with later. We have more immediate targets which will emerge when the conflict restarts.”

“What are they?” Elena demanded, walking towards the holotable which Nemo lit up.

“There are multiple military industrial plants within China,” Nemo stated. “Our initial deployment will be to sabotage them and render them unusable for China. Infrastructure in China is itself a very tempting target, and the more damage done, the less likely their resistance will be. That will be the first operation. Simple and straightforward.”

“Noted,” Volk said.

“Good, then we move onto the second phase,” Nemo brought up a holomap of Africa. “The Sovereign African States will soon be making their official debut, and we are expecting a quick and decisive response. There will likely be a domino effect of countries who will, and will not support them. Or even those who remain neutral.”

Nemo focused directly on Volk. “Those who are neutral or refuse to join the SAS are going to be targeted, and pinned on ADVENT. We will repeat this as necessary to drive countries towards the SAS and Collective. We will end with the tragic assassination of Helsa Betos.”

“What?” Volk demanded. “When was that sanctioned? Betos is helping you. That is a promise you should not go back on because—”

“Betos is a naïve, if useful idiot whose purported usefulness is coming to an end,” Nemo interrupted coldly, lifting a hand. “No, this was not sanctioned by the Ethereals and I have placed her as a target on my own. The Ethereals are not fighting strategically, and I am not beholden to their own internal plans. Betos is more of a liability than an asset. Thus, she will be removed.”

“And what happens when Macula learns your plan?” Volk demanded. “You do realize that this essentially throws any promise the Ethereals make into the fire. None of us can trust anything they say anymore – or at least we trust them less than usual.”

“I did not make that promise, and I am not an Ethereal,” Nemo answered, unconcerned. “I am here to end this conflict. If that involves going back on previous promises, then that is not my concern. If you have an issue with my plan, then by all means inform Asaru or Macula. I do not necessarily care how Betos is removed, only that she is. This is judged to be the path which benefits the Collective the most.”

“You’d best hope that they won’t be annoyed with you trying this,” Volk said. “Because I’m not keeping this to myself. The Ethereals don’t seem to like it when people bypass them.”
“Then perhaps they should do a better job,” Nemo said, giving a chilling smile. “I do not fear the Ethereals. They are not infallible and make many mistakes. And the only way they will learn is to be challenged. So I will challenge them to do better than I can do. If they wish to dispose of me, then they can do so and will ultimately be defeated by their own hubris.”

Volk appraised him for a moment, then shook his head. “You’re either crazy or just don’t care anymore.”

“I am not supposed to exist,” the tone of Nemo became less dead…more muted. “As far as I am concerned, every moment I am alive is more than should be possible. If I die, then my role will be finished and I will not be alive to care what happens afterwards. But I suspect I will not die to an Ethereal, not when I am useful to them. And when I can do things they cannot or will not.”

He waved them forward. “Come. At minimum I want your own take on the current plan, even if you insist on informing the Ethereals of the finer details.”

Yang’s Quarters - The Prism

2/27/2017 – 11:42 A.M.

Yang sheathed her swords and placed them back on the rack where she kept her weapons. At least today she’d kept them more for her own personal reassurance than out of any need. Patricia had continued helping develop her mental defenses, which while they wouldn’t be at the absurd level that she and other Ethereals had…they would probably be adequate.

What had been more interesting had been Patricia herself.

The woman had actually chosen a side.

“You can stop wondering what I’m going to be doing,” she’d told her. “I’m staying. I’m going to support the Imperator.”

Yang had been admittedly surprised. It didn’t seem an absurd reason to follow up with a question: “Why?”

Patricia…she had appraised Yang long and hard, lips pursed and eyes probing. “The Imperator told me some things,” she finally said. “And…what happened to XCOM is what I’d feared. I’d accomplish nothing returning now, which would only result in my capture or death.”

There were only a few possibilities that came to mind. “The Sovereign One on Earth.”

“Yes,” came the nod. “T’Leth.”

Patricia had seemed somewhat distracted as well; more listless and…sad…than before. Not surprising if she’d made the decision to turn traitor on XCOM. Yang didn’t really care about abandoning a species and government which had done nothing for her, but for Patricia it would have been different. She had friends; she’d respected her Commander, Yang was pretty sure she’d been involved with one of the XCOM soldiers as well.

He was going to be in for a surprise when he learned his girlfriend joined the enemy.

She did kind of feel bad for him, whoever he was.
It remained to be seen just what the results would be of Patricia fully joining them. She’d been part of the Internal Council of XCOM. She knew everything up until several months ago. Yang realized that there was an extreme amount of information that could be released to the world, as XCOM (and likely ADVENT) had been involved in some highly questionable stuff.

For all the good it would do. Yang was personally unsure if they’d even bother with trying that. No one was going to believe an XCOM soldier who had turned traitor. Psionics did unfortunately make it easy to simply state that someone was being mind controlled. The Imperator was known as the most powerful Ethereal in existence.

If anyone could break the mind of the most powerful Human psion in existence, it would be him.

Patricia could probably say anything and ADVENT would just deny it, or more likely, ‘refuse to acknowledge the words of a traitor’. She could say that XCOM was manipulating ADVENT from the shadows or that they were performing assassinations and operations to destabilize or infiltrate other nations to drive them to ADVENT and no one would believe her.

Because unfortunately, Yang suspected that Patricia hadn’t brought any actual evidence with her – which was perhaps the one thing ADVENT would listen to. As it stood, anything she said was suspect, for the word of a traitor was not to be trusted.

That being said, Yang would find it hilarious if the Oversight Division decided to investigate anyway and ended up bringing down the ADVENT leadership. That would be so deliciously ironic she would actually make sure that they were preserved whenever the Collective won. Anyone that dedicated deserved to live.

But were the Oversight Division, Peacekeepers, or ADVENT Intelligence going to investigate based on Patricia? Almost certainly not, and to be fair, she didn’t really fault them. It wasn’t as though the Collective was open and honest about what they were involved in. No one involved in Paradise was going to be punished, and Isomnum still existed, which was proof of the immunity the powerful in the Collective had.

But she would think about that more later. Her own trial on the Dead World was fast approaching, and while the unnerving feeling and terror about going to any place which had the presence of the Bringer hadn’t gone away, she felt she was strong enough. The Battlemaster believed she could do it.

So she knew she had the potential.

She’d spent time researching and talking with Cogitian about the Trial of the Battlemasters, and for the most part had learned close to nothing about what it entailed beyond that one had to go down to the planet, forge their weapons from the metals, and then leave. Deceptively simple, but had a dangerous enough reputation that only the strongest made an attempt.

It was...daunting...as she’d looked at the records of the dead Ethereals. Aliens who’d spent decades training and preparing, only to still fail. And she’d only been here for...not even a year. She was a fast learner, and fairly smart and dedicated. But that alone was probably not enough, at least not in those categories compared to an Ethereal.

But she did have one advantage – she had a pretty solid idea of what she would face. The Battlemaster candidates had seemed to focus on the wrong thing. They’d prepared for the physical, when almost everything indicated that the trial was of a mental nature. She knew the Bringer was somewhere on the planet, and she could prepare for that.
Or try, at least.

If she succeeded, she would be the first alien to complete a trial meant for Ethereals. She would take a place by the side of the Battlemaster as – if not his equal – the closest one could become. She would become one of the most dangerous Humans who could exist, as it was implied that this trial was also the result of the Battlemaster’s immunity to telepathy.

And if she failed, she would just die.

Fair enough.

But she did not intend to die.

Though admittedly, that’s what they all said.

###

*Beijing – China*

2/24/2017 – 10:12 A.M.

As far as glorified photo ops went, this was by far one of the most unpleasant. Admittedly, there had been some pushback from her cabinet about her personally visiting the current epicenter of an epidemic, but there were good reasons she’d gone forward with the trip anyway. The first was obviously good PR; the people liked unity and solidarity, and a public showing of support with her physically going there, it would show that she was paying more than lip service.

Although the deployment of soldiers and medical personnel should have already done that.

Second, they knew what the disease was – and more importantly – that it was able to be vaccinated against. Theoretically she should have a high degree of immunity to infection, and even if she, by some unfortunate miracle, got infected, the disease typically only killed the sick and weak. She was in good physical shape, healthy, and vaccinated. She was sufficiently protected. Not to mention that she would, of course, be taking appropriate precautions with masks and hazard suits.

It was bulky and unwieldy, not to mention paranoid, but that was the compromise she’d reached with her cabinet.

Third, it was an opportunity to meet with Qin directly and coordinate and discuss the situation face to face. Those kinds of meetings were preferable to her, and he would be sure to inform her of the full extent of the situation. ADVENT itself had been careful in distributing information, largely reporting outbreak locations and travel advisories.

The numbers they were holding for now because they were still growing, and because they were growing uncomfortably large.

She didn’t think it would cause panic, especially because it was in China and travel to and from there had been suspended, but it certainly wouldn’t do any wonders for morale. Unfortunate that this had struck now, since morale was surprisingly at an all-time high under ADVENT. But things couldn’t stay the same forever.

The trip was still unpleasant. While she wasn’t a squeamish person – she doubted she would be able to function in her position if she was – seeing the effects of the disease as it ravaged the bodies of the infected was more visceral in person than even in the pictures she remembered seeing as a child which described the military applications of viral bioweapons.
Rashes which morphed into hundreds of bumps covered the entire skin of victims, making many of
them unrecognizable or in severe cases blinding them or causing further complications due to
where the rashes developed. Even the survivors would be scarred and marked for the rest of their
life, but already there had been many who’d simply just not made it.

There had been far too many small body bags from the single treatment center she’d visited.

“How many in the government are infected?” She asked Qin as they walked into one of the
medical research centers which was working on both a treatment and determining the best way to
predict and quarantine further outbreaks.

“I assume you mean important officials?” He asked with a sideways look. “Our government
employs many people. But only twenty individuals of note have been infected. They are currently
recovering and are expected to survive. We acted fast when this happened, and inoculated our staff
and military.”

“And how much has the military been affected?”

This time he didn’t look at her. “We’re looking at minimum several hundred thousand affected,
with more cases appearing every day. Vaccines are being administered as fast as possible, but
considering how long the disease has been allowed to propagate, I am unsure how effective it will
be. The good news is that there have been comparably few deaths, as most of our soldiers are in
decent health.”

“But that is still a blow,” she nodded. “And only going to get worse.”

“Which can sum up this entire situation,” Qin agreed. “It is going to get worse before it gets better.
What of your end, Chancellor? Have your countries encountered similar outbreaks?”

“Comparably few, and they’ve been mostly isolated,” Saudia said. “They still number in the
dozens, but we’ve been proactive on our end with vaccine distribution. We can’t rely on people
seeing what’s going on in the news or online. Door to door visits have been conducted in areas near
an outbreak. So far, it’s seemed to help contain the spread.”

“Much like what we are doing,” Qin confirmed as they rounded a corner. “Although the number of
individuals is…significantly larger than what you have to deal with. Although you have to deal
with the scientifically illiterate; the West is home to some interesting conspiracy theories.”

Saudia snorted. “Unfortunately. But it hasn’t been a significant problem. If those fools would
rather risk it, then we let them. However, their ignorance will not extend to others. The few idiots
who’ve demanded as such have shut up when Child Services began to intervene.” Saudia allowed a
smile. “But it has been useful, as they will now have special monitoring from Intelligence in case
they try and use the internet to ‘warn’ others about the smallpox vaccines.”

“I do not understand why you tolerate individuals such as those,” Qin shook his head. “Dangerous
misinformation is corrected by swift and decisive arrests. Ignorance in this age is little excuse.”

“Because first, we try not to play into the image of a stereotypical totalitarian,” Saudia answered
with some bleak amusement. “Arresting idiots has the unfortunate effect of spreading their
message. But more importantly, they still have their personal rights. Which include the right to
hold an opinion. So long as that stays to themselves, they can believe whatever they want. When it
affects others is where the line is drawn. A suitable compromise, I feel.”

“Indeed,” the two of them finally approached a window which had several teams of researchers
and scientists within. “We’re continuing to try and find an effective treatment. But progress is… slow. By the time something is developed, it’s estimated that the worst will have already passed and only the survivors will remain.”

“Even if that is the case,” Saudia said. “It will not be for nothing. We are back to base zero with smallpox. It will take decades to fully eradicate. Again. This will ensure that now there is a reliable treatment.”

“A long view of the outcome, I can respect such,” Qin nodded. “Yet that will not change the fact that my country will be significantly damaged because of it while others will no longer have to fear this disease. A sacrifice I would have not paid, in all honesty.”

She wouldn’t blame him for the resentment he had. Already there were millions of Chinese infected, and hundreds of additional cases by the hour. Soon the thousands who had already died would turn into millions. With a country the size of China, that was unfortunately inevitable, but there was no chance that China was going to emerge from this in good shape.

“It is unfortunate,” was all she said. “But we are doing what we can to assist.”

“Not by sheer altruism though,” he said grimly. “I suspect after this, there will be a call to join ADVENT from in and outside the government. You’ve certainly had your people be involved on the ground level. It isn’t just our soldiers and security they see; but also the ADVENT medics and soldiers. They will not forget that, nor will anyone in our government.”

“And you see the benefits of what we can provide,” she said, turning to him. “Humanity is more effective united than divided. Our species has an unfortunate tendency to isolate ourselves from each other and be selfish when their rivals are undergoing hardship. It does not need to be this way.”

“I am well aware of such, Chancellor,” Qin said, lifting a hand. “Very acutely. But let’s not delude ourselves in this situation. This is a political and PR move to assist us, not because you actually care about the people infected. The more conspiratorial would wonder if this was manufactured solely to encourage us to join you.”

“Come now,” Saudia sniffed. “We have zero reason to sabotage you in such a way, not to mention painting a clear and decisive target for the aliens, which will only result in more of our soldiers dying, resources expanded, and all to reclaim territory that was already in Human hands.”

“That is what some would say, Chancellor, not me,” Qin clarified. “The point is this: You play the game very well, Chancellor, in a way few can condemn you for. That makes you dangerous to me, and I am unconvinced someone like that is the best choice to direct our species.”

“And I am curious as to the alternative?” She answered evenly. “You?”

He actually smiled at that. “Of course not. I am a product of this charged and political age. I am more of the opinion that having a singular directed government which has not been agreed upon by other independent nations is a dangerous direction to take Humanity. There needs to be checks and balances to naturally move in such a direction. The United States and European Union served as checks to us, and we to them. There was, of course, continued competition on a geopolitical level, but we prevented major conflicts for decades.”

“And it was slow; pointless,” Saudia shook her head. “Humanity will never unite the way you think it will. We’re too independent and susceptible to outside manipulation and brainwashing. The only way Humanity will unite is if they are dragged kicking and screaming along the way. And
considering the amount of resistance there is to ADVENT, this has very much proven to be true.”

“Touché, Chancellor,” he inclined his head. “But of course, the ideals that you and ADVENT espouse are not shared by the rest of our species. Perhaps you are right, perhaps not, but it doesn’t matter what everyone else wants. What ADVENT wants is the only thing that matters.”

“Prove you can do better, and we will consider it,” Saudia said. “But we don’t begin with the notion that all opinions and ideas are equal or worth debating. Some things are fact, others are rooted in idealism, naivety, and dogma. Those are not, nor should be tolerated in the war we find ourselves in.”

She looked back into the lab, her hands clasped behind her back. “But as to what you imply, I know that ADVENT will one day represent the entire Human race. Not today, a month, or even years from now, but it will happen. But I do not intend it to be a violent seizure or to leverage our power on the dying independent world. They will join us, because they want to.” She looked over towards Qin again. “And if they see us helping their people and supporting them even when they are not part of us, is it wrong of them to want to be a part of what we do?”

“Only if they’ve considered what they want to lose.”

“Perhaps,” Saudia said. “But I find that these kinds of decisions show the true character of a leader. The difference between one who is actually interested in the well being of their citizens, or one interested in holding on to their waning power.”

A corner of his lip turned up. “An interesting implication, Chancellor. A little too binary for my tastes.”

“Regardless,” Saudia replied, without looking to him. “When this situation is resolved and you make your own recommendation, I hope you remember both who helped you – and what you wish your legacy to be.”

The two world leaders stood in silence for a few minutes afterwards, simply watching the teams inside work hastily to develop a treatment to the epidemic that was proving to be a pivotal catalyst.

***

Office of the Commander, the Praesidium – Classified Location

2/22/2017 – 1:35 P.M.

This certainly necessitated an unplanned meeting of the Internal Council. The Commander did have to give T’Leth some credit – at least he was keeping him informed.

That did not mean he was making good decisions.

“So let me get this straight,” Creed was shooting daggers into the Chronicler who merely met his gaze at the sight of the furious soldier. “Patricia tries to contact someone here. Maybe the Commander, maybe me. She is stopped by you. She asks to talk to the Commander to maybe clear up whatever lies the Imperator’s been telling her, and T’Leth refused?”

“Of course he did,” the Chronicler’s tone was measured in calm. “Patricia was very clearly compromised in some way. Letting her communicate further was an extremely dangerous risk.”

“Do you even know if she was compromised?”
“Unfortunately,” Aegis interjected slowly. “I fear the Chronicler is correct. That kind of communication is not easy to achieve, and something Patricia had no previous knowledge of. The Imperator would not have permitted this unless he knew it would not affect her, though I fear that T’Leth’s refusal has played right into his hands.”

“It certainly didn’t help,” Creed jabbed a finger at the Chronicler. “Did T’Leth think about how that would look to her? And that was not his call to make in the first place!”

“Correct,” the Commander spoke for the first time, turning a stern face to the Chronicler. “That was not T’Leth’s call. I’m not ignorant enough to believe that he couldn’t have had you inform us of the situation and allowed us to decide it. This is the first we’ve heard about Patricia in months. Any decision related to her needs to first go through me.”

“I will convey that to T’Leth,” the man inclined his head. “But at the same time-“

“At the same time, you can kindly shut up,” Creed interjected.

“Quiet,” now Zhang stepped forward, stoic as ever. “While I agree with the Commander that we should have been informed about this, T’Leth did nothing wrong. We’ve been warned thanks to Aegis –“ he nodded to the Ethereal in the room. “That Patricia is in serious danger of being compromised by the Imperator. Much as we don’t want to accept it, that is the reality. To let her enter without checking the truth of this is a catastrophic risk.”

“Couldn’t T’Leth have just broken into her mind to check himself?” Jackson asked, looking to the Chronicler. “One Human woman can’t be stronger than a Sovereign One.”

“Bad idea,” Creed shook his head. “You’d spook her and she’d leave.”

“More to the point, that is an arguably worse outcome,” the Commander agreed. “You’re talking about a woman who made a specific point to not read the minds of people without their consent. T’Leth ignoring that would reflect badly. Of course, this cuts both ways, which was why she didn’t want a Sovereign to read her own mind.”

“Most likely because the Imperator has filled her head with propaganda about the Sovereigns,” the Chronicler muttered. “Typical.”

The Commander raised an eyebrow. “From what T’Leth has told me, I don’t blame her. T’Leth’s brethren are not exactly paragons of virtue, nor apparently do much to dissuade people from their preconceptions. T’Leth may be different, but the other Sovereigns are still manipulative and dangerous.”

The Chronicler’s lips twitched. “Fair point.”

“Patricia’s issue was that she was relying on trust,” Zhang speculated, crossing his arms. “She had to know that wouldn’t work here. She’s a possible risk now-“

“No offense, Zhang, but you don’t know her that well,” Creed interrupted, shaking his head. “She had no idea that T’Leth had set up his little mental fortress over the Praesidium. When she wants to learn about something, she goes to the source. She probably intended to go directly to the Commander, and get answers that way. She wasn’t thinking about protocol, she was trying to find a reason…” he suddenly trailed off. “Oh no.”

“I warned you about this,” Aegis said, resigned if not saddened. “The Imperator took her for a reason. He has likely convinced her to, if not join him, cooperate willingly with his plans. She was lost the moment he spoke to her. There is nothing you could have said to her that would have
convinced her otherwise; the Imperator is too intelligent for that.”

“And because our Sovereign ‘ally’ didn’t bother to tell us, I suppose we’ll never know, will we?” Creed snarled, primarily directed at the Chronicler. “No. If she was still trying to get answers, she isn’t completely gone. She can be brought back.”

“She’s likely had little to no contact with other Humans,” Vahlen noted. “Spending any significant amount of time with aliens will make one more amenable and sympathetic to them, especially if they are treated well. It may be as simple as Patricia needing to be returned to some degree of normalcy.”

“I agree that we shouldn’t mark her off as completely lost,” the Commander agreed. “We need to find her – and talk to her. Assaulting the Temple Ship will be impossible, yes, but at some point – if what you believe is accurate, Aegis – he will use her on Earth. That is when we go to her and bring her back.”

“No.” Zhang disputed flatly, his tone leaving no room for dispute. “If Patricia ever directly acts against XCOM or ADVENT, then she needs to be eliminated. She is extremely dangerous if allied with them, and it will shatter morale, not considering that she knows some very important truths about what we’ve done and the formation of ADVENT itself. We can’t risk her becoming an out of control element.”

“She was one of us, and has been under the corruptive influence of the most powerful Ethereal in existence,” the Commander reminded all of them. “Even now Creed still thinks she’s resisting because she knows that it’s wrong, but when her only source is the Imperator or other Ethereals? Her mindset is going to be warped. It’s not her fault, not completely.”

“That would only apply if she’s mind controlled,” Zhang stated. “Aegis, you’ve said this is something the Imperator doesn’t do?”

“Not when he is attempting to persuade an individual of something,” the Ethereal answered. “He considers resorting to mind control as…failure. A cheat which is unworthy of the command he now has. With this said…his aura will have shaped her to be more amenable, though she is a powerful telepath, so it was likely muted. No, this will be worse. She will join him of her own free will.”

“Patricia is not some naïve little girl,” Zhang continued. “She knows the situation she’s in. She’s an extremely logical and methodical person. The Imperator doesn’t use mind control. She’s likely had opportunity to refute him or refuse to help, but very likely has not. Regardless of her decisions, they are her decisions, and she shouldn’t be treated as the victim here.”

“Have we considered that she’s lying?” Shen spoke up for the first time. “I sincerely doubt the Imperator would have just allowed her to walk away if she refused. She’s not the type to martyr herself for nothing, what if this is her trying to convince the Imperator she is an ally, who will then turn on him when she is sent to Earth?”

There was silence around the room as they considered that.

“Could that be done, Aegis?” The Commander asked.

The Ethereal considered it carefully. “In…theory. The Imperator could easily fall into the trap of pride. He is so convinced of his own beliefs that having someone who similarly understood would be reassuring to him, and he would begin to trust in a way. But it would be a…dangerous line to tread upon. The Imperator will be suspicious if she agrees too easily, and too much skepticism or
refusal will lead to him simply imprisoning her. She would need to be both extremely clever and lucky. But it…could be possible. The Imperator is not immune to that type of manipulation.”

“She could do it,” Creed stated immediately. “She knows what’s at stake, and she knows how the Imperator works.”

“Until we know for sure, I don’t want to put any kill orders out for her,” the Commander said. “I also don’t really believe she’d turn on us; not with everything that’s happened.”

Zhang pursed his lips. “People change. Patricia in particular is susceptible to a well-reasoned argument.”

“I want us to come to a clear consensus on this,” the Commander leaned on his desk, looking around the room at all of them. “Patricia could be compromised. But she could also be playing the part so she can eventually escape. I personally don’t think we should give up on her until we have clear reason to do so, and we haven’t hit that point yet.”

“Our decisions should not be decided around what’s best for her, but what’s best for XCOM,” Zhang said. “If you’re wrong, if we’re wrong, we’re going to get soldiers killed. Treating her as friendly until proven otherwise is likely to get people killed. Do we want to do that?”

“He isn’t wrong,” Iosif agreed. “I want to bring Patricia back as much as everyone, but if she isn’t on our side, I can guarantee that she’s going to be able to kill people easily. And this isn’t taking into account skills the Imperator or other Ethereals may have taught her. If she’s learned long-distance telepathic communication, what else has she learned?”

“How about a compromise?” Creed stepped forward. “We make the intent to capture her, not kill her. She’s not an idiot, if she’s on our side she’ll know what we’re doing. We make a demand for her to surrender. If she does, we bring her back and debrief her.” He paused, before resuming slowly. “If she refuses…we kill her.”

Zhang gave a single nod. “Acceptable. We would know quickly if she complies or not.”

“You’ll have us as well to assist,” the Chronicler said. “We have an interest in removing her from the Imperator’s control, and helping her understand that T’Leth’s rejection wasn’t personal.”

“Then that will be our objective,” the Commander confirmed. “Until that point…if anyone receives any contact from Patricia, or someone claiming to be her or know anything about her, that goes directly to me. That goes for T’Leth as well. Is that understood by everyone?”

“Yes, Commander,” they all confirmed.

“In the meantime, we’ve got other work to do,” he nodded. “Dismissed.”

Barracks, the Praesidium – Classified Location

2/24/2017 – 7:19 P.M.

Nuan set aside her tablet and just stared blankly forward for a few minutes. At least her superiors were keeping her updated as her country continued collapsing. The infection tolls were staggering, and the death tolls continued to climb. The actual extent of the deaths wasn’t being shared publicly, a move that both the Chinese and ADVENT were in surprising agreement on.
To her utter lack of surprise, most of the government leaders seemed to be fine – probably been immunized as soon as cases started appearing, but everyone else was more or less screwed unless they were in a prioritized position. Doctors, military, and scientists had priority for immediate vaccination, and the regular citizens had to wait their turn.

Practically, this was the smart thing to do. The structure of order needed to be preserved, which would be admitted be more difficult if half the government was incapacitated, the military was crippled, and the doctors were weakened. Granted, that was happening anyway since the disease had been in circulation for possibly weeks beforehand, but its spread was going to be limited in those areas.

At least everyone in XCOM was immunized, for all the good that did them.

A knock on the doorframe to the empty barracks room distracted her. She looked up to see Iosif leaning in, a questioning look on his face. “You alright?”

She wasn’t, not really, and that was probably something he sensed. She should be used to it by now, but at times like this it still caught her off guard. In a way, she appreciated that she couldn’t pretend. Nuan waved him in and he took a seat beside her. Off-duty, so he wasn’t wearing his armor and probably hadn’t come from training.

“You probably know what’s going on in China more than I do,” she said, shrugging. “My superiors are keeping me up to date as well.”

He nodded. “It’s bad.”

“Yes.”

A pause. “Both of my parents are infected,” she said flatly. “Grandparents too. Everyone lives in Beijing, which is ground zero for where this supposedly started.”

“Oh,” he answered slowly. “I’m sorry Nuan, that’s awful.” He scowled. “Putting it lightly. I don’t know what else to say. Will they pull through?”

“My parents probably will,” she said, the brief bit of good news she’d received. “They’ll be scarred and endure a few more days of hell, but they’re expected to live. My grandparents though…” she shook her head. “Grandfather will probably pull through, my grandmother passed away earlier today. Not surprising; she had some previous health issues and was older. Supposedly a lethal combination for smallpox.”

Iosif gave a single nod. “I’m sorry for your loss.”

“Accepted,” she shrugged again. “I guess I’m luckier than most. At least most of my family is still alive. Others aren’t so lucky.”

“Everyone is working on a cure,” Iosif said. “From what I’ve heard, it may be ready in a few weeks.”

“And by then it’ll mean nothing,” Nuan said, a bitter truth she’d come to accept. And something the PLA had also come to the conclusion of. Everyone knew that a cure or treatment would only prevent the next epidemic, not this one. “The damage is done. It’ll take years to recover if we’re lucky.”

He didn’t dispute it.
“What are we going to do?”

“What about?” Iosif questioned.

“Come on,” she snorted. “We both know what’s going on. This was a deliberate attack by the aliens, probably to weaken China before an attack. There is no way this is an accident. So what are we going to do about it in response?”

“Right now?” He sighed, looking down. “Nothing, Nuan. At least not explicitly. There is – technically – nothing which links this to the Collective.”

“So a dead disease just so happened to spring up out of nowhere in the most populous country in the world?” She asked. “Which just so happens to be one the most strategically important countries on Earth that – since it’s not part of ADVENT – is even more vulnerable than normal? This is all just a massive coincidence?! Just bad luck?”

“Nuan…” he paused, before continuing. “I’m in agreement that it’s suspicious at best. But ADVENT isn’t going to accuse the Collective of something they can’t prove, nor are the Chinese from what I’ve gathered. Trust me, you’re not alone in thinking the aliens have a hand in this, but there is the possibility that this is just bad luck. Not everything has the aliens behind it. Sometimes disasters just…happen.”

His tone didn’t convince her, and he clearly wasn’t convincing himself either. “You don’t believe that,” she accused softly. “No one believes that. But everyone isn’t calling it out for some reason. ADVENT has their rules, fine. China wants to play nice with ADVENT, so they follow suit. But XCOM? Why isn’t the Commander saying something? He’s not part of ADVENT, we aren’t part of ADVENT.”

“And what would making accusations accomplish?” Iosif pursed his lips. “What should be our response to this? Should we be the ones to break the stalemate and retaliate violently? Invade the West Coast, Canada, or Australia? Create a virus which kills them like smallpox infects us?”

She flexed her arms, causing them to whirr. The sounds they made were satisfying at times. “It would be a start.”

He nodded. “And what if you’re wrong?”

“Then the aliens begin hurting a lot,” she answered. “They become more despised for what they did. Forgive me for not caring about their feelings or them being slandered. Of course they’re just going to deny it, but their denials mean nothing.”

“We have enough reasons to hate the Collective,” Iosif cautioned. “We don’t need to lie to do so.”

“Well don’t lie,” she said. “Just imply. Lay out the series of coincidences that led to this point. That isn’t a lie.”

“But it is an accusation,” he pointed out. “Which to many people, will be seen the same as absolute proof.”

“It just…” she searched for the words. “It feels wrong to just do nothing. It’s like watching a criminal walk free even though you know they committed the crime, but were smart enough not to leave provable evidence. Letting that happen is just not right.”

“I agree, but things may still change,” Iosif said. “We’ll have plenty of time to kick the Collective in the teeth, for crimes real and implied. ADVENT will help China recover and a treatment will be
developed. Not to prevent this epidemic, no, but it will help prevent a future one.”

“Until the Collective digs up some other old disease,” she suggested dryly.

“I think that we’re going to be prepared in case this happens again,” Iosif suggested knowingly, allowing a slight smile. “The ADVENT vaccine programs are going to be getting some special attention.”

“Hopefully,” she agreed. “And the rest of the world should follow suit.”

“Oh, I think they will,” he said. “ADVENT leads, and other countries follow, even if they grumble along the way.”

***

Fort Nelson Outskirts, Alberta – Canada

2/10/2017 – 6:18 P.M.

It was, unfortunately, more or less what he’d expected.

“Yes.” Cycelea grunted from her prone position as she observed the small fortified town. “We’re not breaching that anytime soon.”

“Not with what we have right now,” Neil agreed sourly. “I’m not in favor of suicide missions.”

As they had expected, the Custodians had been able to update the rest of the Collective on what had happened and that there was an ADVENT kill team wandering the area, and to be prepared. That a Sargon had died because of them had probably bumped up the priority quite a bit, and as a result they were seeing the towns turn into impenetrable fortresses.

The shining black Custodians patrolled around the perimeter and stood near-motionless at designated guard posts, their heads moving back and forth as they scanned for enemies. Turrets of some kind had also been constructed around the entrances, and inside they had caught glimpses of Mutons and maybe some Vitakara.

There were a few civilians, but it was likely that they were only keeping them as hostages or to provide some kind of manual labor so that the Custodians didn’t need to manage everything. Since there were Custodians, there was also a CODEX connection. The only good news he saw was that everything was fairly concentrated (it was a small town), and there weren’t any Elites or Sargons in the mix.

Seekers were an open question.

“Thoughts?” Cycelea asked.

“Infiltration is going to be difficult,” he said, knowing that it was extremely obvious, but it was more to get his thoughts in order. “Telepathy isn’t going to be useful here. No Sargons or Elites, though likely a sizable Muto contingent. CODEX likely integrated. Which means…”

“The connection is a weak point,” she finished, lifting the binoculars to her eyes again. “Take out the CODEX, the Custodians will be hampered and it will screw with coordination.”

“Yes,” Neil agreed. “The downside to this approach is that it only works very well in coordination with an actual attack.”
“Of which we aren’t exactly equipped for,” she finished.

“Depends,” Neil mused slowly, thinking. “There was an interesting project which was shared recently. The Night Witch bomber – a glider prototype that was impossible to detect through modern radar systems.”

He could imagine Cycelea frowning under her helmet. “I know I’ve heard that name before.”

“World War II Soviet air force bombers,” Neil recalled. “All females, interestingly enough. Their tactics involved cutting their engines as they got closer to the target so it was more difficult to notice and detect them. They were impressive, and I guess someone in ADVENT liked the idea enough to apply today.”

“Huh, neat,” she lowered the binoculars. “Knowing ADVENT, it’s going to be a little deadlier.”

“I saw white phosphorus, chlorine-trifluoride, and thermite on the same page,” Neil smirked under his helmet. “I would say so. If, for instance, we were able to call a few Night Witch bombers to make some coordinated strikes after we disabled the CODEX transmitter, I think we just might be able to take the town. Only one problem with that.”

“Civilians,” she immediately noted.

“The good news is there doesn’t seem to be many,” Neil continued. “That said, one of our goals is to extract as many people as possible, and we should at least make an effort to save them. But the other thing to consider is that we want whatever Sargon is in this area to pay a visit.”

“Since we’re not interested in infiltration…taking out a few patrols of Custodians might get their attention,” she said. “We use that time to locate the CODEX transmitter, and when the Sargon comes, the bombs drop.”

“Glad we’re on the same page,” Neil said. “I’ll refine it and send it to Laura for approval. We’ll need to have this prepared well ahead of time. And until then…we catalogue everything the Custodians do. They’re machines, and that will make it easier to spot their patterns.”

“Seekers may still be a problem,” Cycelea pointed out as they moved to stand and retreat. “We need to be prepared should they be sent against us.”

“I know, I know,” Neil grunted as they began moving back, actions cloaked by the darkness of the night. “But don’t worry. They’re going to need to try a bit harder if they want to use that trick against us again.”

***

*Avatar Project Research Station – Classified Space*

*2/25/2017 – 6:10 P.M.*

Things were going to move quickly now that she’d made her decision, and it was as expected. The first major development would be receiving Ethereal-grade genetic modifications, then undergoing the Avatar Project itself, which Revelean was explaining to her, with the Imperator standing behind them. The room they inhabited was circular in shape, not especially large, and with two highly computerized medical tables which could be adjusted to the occupants in question.

A small army of medical drones were stored around the room, the center of which was isolated from the rest of the room by glass. This clean room contained the majority of equipment and
specialized tools. It wasn’t especially daunting on its own; if any discomfort was to be had, it was the knowledge of what the room was used for.

There had probably been a significant number of test subjects used to refine and improve the project. Revelean had supposedly utilized both Sectoids and Humans (both captive and cloned) by the hundreds before he had reached an iteration which was both effective and stable. The few successful Avatar prototypes she assumed had been disposed of.

Or maybe they were still stored…somewhere.

She wasn’t wearing her normal clothing which she’d grown accustomed to during her stay, nor her Aegis armor. While the Imperator had said that she’d get specially made armor befitting of her rank in the future, for the surgery she was wearing the standard Avatar Project jumpsuit worn by the other test subjects.

All black, somewhat insulating and comfortable, and this one not having any armor pieces whatsoever on it. But footwear wasn’t hardened, and was functionally more slip-on than anything, though it was much more flexible. The suit definitely felt clingy to her, and very much like she wasn’t wearing that much at all. However, it was very easy to move around in.

“You’ve been appraised of the purpose of the Avatar Project,” Revelean began. “So I will continue with explaining how the surgery will proceed once your body has been sufficiently prepared.”

Mildly disturbing wording, but Revelean was clearly not the best at words. And wasn’t technically wrong. It was recommended that for best results she undergo the genetic enhancements. Which did raise a question. “Will it conflict with the ones I’ve already received from XCOM?”

“Of course not,” Revelean dismissed immediately. “We have been utilizing MELD far longer than your species. It will be altered and enhanced as needed. It is entirely possible that it might not be touched at all if XCOM did their job.”

“Good,” she said.

“And this is, of course, the time to make any recommendations if you wish,” Revelean continued, turning to her. “I would prefer not to repeat this time-consuming and expensive project multiple times.”

She frowned. “As in what way?”

“Appearance-wise, mostly,” Revelean said. “You are, after all, going to be representing the Imperator. Impressions are important, and the capability for physical alteration is present. Human females in particular obsess over their appearance from my observations.”

Patricia snorted.

“Nonetheless, the decision is up to you,” Revelean finished, glancing to a nearby console. “The Imperator wished to provide you with the option.”

“As Revelean said,” the Imperator added from behind him. “If you wish for such a thing, it should be done now rather than later.”

Hm. She considered it for a moment. She wasn’t especially unhappy with how she looked now, nor did she really want to change anything or be turned into an unrecognizable supermodel. Even if that was possible, she liked how she looked right now and didn’t really want to alter it significantly. Well…maybe there was one thing, but it didn’t really relate to facial appearance.
“Maybe make me a bit taller,” she suggested. “And proportionally balanced, obviously.”

“Noted.” Revelean said, typing briefly on a tablet he was holding. “I will work that into the procedure, and all final details will be repeated before you undergo it. We will move onto the actual Avatar Project procedure once you have been sufficiently prepared. How much do you know about the more intricate methods of the project?”

“Not a lot,” she admitted.

“Expected,” he said, half to himself it seemed, glancing at another screen in a hand. “In short, the Avatar Project creates the capability to establish a telepathic bond between an Avatar - yourself, and the Anchor – in this case the Imperator. This telepathic bond you have not likely experienced before.”

“No,” she confirmed.

“It will be disorienting at first, as both of the personalities merge and interact on that level,” Revelean said, looking back to the Imperator. “This applies as well to you, Imperator. A bond such as this – while not explicitly like a full bond – will not be something you have experienced before.”

“I have read sufficient material on psionic bonds and what happens during them,” the Imperator said. “I am aware of the risks and consequences.”

“Which mean very little in practice,” Revelean shook his head. “There are certain realities both of you will need to accept and understand. Most notably that for all intents and purposes, when the bond is activated, you will need to function as a single entity. Over time there will be some degree of personality drift as both of you settle into an equilibrium. Your first times performing the bond will be debilitating, but you will get used to it.”

“That severe?” Patricia frowned. “And invasive?”

“Necessary for the Avatar Project to work,” Revelean said. “You will need to draw upon the Imperator’s knowledge and experience, and that cannot be done if your minds are separate. I will note that the bond will go both ways. You will be able to know things about him as he will you – when bonded, you will not be able to keep secrets or restrictions for each other – nor will either of you be able to control a body. If you both fight each other, the body will simply be paralyzed and likely die.” He glanced to the center of the room. “I assure you that I’ve seen this happen numerous times in testing. You are doing this voluntarily, so I suspect it will proceed easier.”

Well…upsides and downsides to that. The Imperator would know everything about her, but in return, she could theoretically know the same. “But this isn’t permanent.”

“No, you will retain your own individual identities outside of combat and experimentation,” Revelean said, activating a life-sized hologram before her. “Or at least that is what I expect. The bond will only be triggered when the Avatar performs a certain action or activates certain components. The Anchor is – in design – always programmed to be the source of power of knowledge. The guiding hand. Thus, they have no similar component.”

The hologram Avatar had several highlighted marks around the face. “I will be installing these points to work in conjunction with your mask,” he motioned to the faceless mask the Avatar wore. “You are unlikely to put it on accidentally, preventing unwanted activations. The mask will clip into cybernetic implants around your face and open your bond to the Imperator.”

Looking closer at the hologram, Patricia could see an approximation of how that would go. The
mask would hook under the chin, then be sealed into place by hooks along the edges of the jawline and top of the forehead, with some short arms that would rest on the top of the ears for some – largely unneeded – support.

“The points will be cosmetically hidden when not in combat,” Revelean said. “Small nanite swarms will congregate and retreat smartly. You will also not feel any pain during this process. There should be no accidents here. Understand?”

She nodded once. “Yes.”

“When the bond is activated, you in particular will need to prepare for an overwhelming surge of energy,” Revelean warned. “This is normal, and it will take you time to adjust. While your psionic potential is capped – for now – you will still feel more powerful than you ever have. Do not let it overwhelm you, and as a result the psionic bleedoff will affect the world around you in possibly unpredictable ways. This will likely stop once you master it.”

“I suppose I’ll have to prepare,” she said. “But there are worse things to have happen to you.”

“I suspect you will adjust quickly,” Revelean said, lowering the hand with the tablet. “That covers the basics of what you will experience after undergoing the procedure. Do you have immediate questions?”

“Not especially,” she shook her head. “Although…how long will it take?”

“The procedure? Estimated twelve hours to complete properly, with several days of recovery,” Revelean recalled. “Your enhancement will take five days to fully complete, with you being unconscious throughout, with several days of recovery. I would prefer this begin as soon as possible.”

“As would I,” Patricia motioned to continue. “Let’s do this.”

Situation Room, the Praesidium – Classified Location

2/26/2017 – 11:01 A.M.

“We have had limited interactions with psions,” V’Zarrah was saying to the small collection of Humans. “Incorporating them into possible strategies will need to be carefully considered. We have no interest in relying upon them.”

“Understandable,” the Commander nodded. “But they can be an asset for your fleet – and something you will need to counter the Sectoids and Ethereals.”

The Andromedon didn’t sound happy at that but conceded the point. “Agreed. I would advise our fleet commanders become acquainted with your psions and assess their capabilities. Your own fleet will need to understand how to incorporate psionics as well as training for traditional space combat.”

“If any training is to be done, it should be in the Atlantis facilities when it happens,” Creed interjected, appraising the Andromedons. “It’s a risk for both of our species to potentially be caught in Andromedon space.”

“We have established facilities in locations secret from the Ethereals,” V’Zarrah refuted. “And all of whom are trustworthy. This has not been a decision made overnight, and the updated plans to
incorporate your species have not changed it. Care will be taken, but we know what we’re doing.”

“We’ll debate this when ADVENT has a curated naval officer corps,” the Commander said, looking around the room. “Until that point comes, this is mostly speculation for something that will not happen for a long time. Earth will need to be reclaimed and the fleet will need to remain secret.”

“Indeed.” V’Zarrah looked to the Commander for a moment. “There is another topic that we need clarification on. Following the revelation that there was an Ethereal defector – Aegis – the Imperator implied to us that your species is under the influence of, or possibly being directed by, an entity he referred to as a ‘Sovereign One’.”

The Commander was surprised. Not necessarily at the question, which in context was perfectly reasonable and something he would have asked as well. No, he was surprised because the Imperator had actually revealed to the Andromedons something of that magnitude. Probably not the complete story – if the Imperator actually had the complete story – but it was, he had to admit, a pretty good deflection in the appearance of being open and honest to one of the species in the Collective.

Had he told others.

“What exactly do you need clarification on?” He asked.

The answer was immediate. “How much of it is true.”

The Commander gave a short nod. “The Imperator didn’t completely lie here. There is a Sovereign One on Earth – T’Leth he calls himself. He has a certain number of agents that operate on our planet and beyond, which you’ve probably seen. Fiona and the Chronicler.”

“The ones with stone armor,” V’Zarrah recalled. “They are agents of this T’Leth. I had assumed they were XCOM.”

“Correct,” Creed confirmed. “Not a lot of them, but we’re working with them.”

“Yes, T’Leth is not controlling our species,” the Commander continued. “The Chancellor was only recently notified about their existence. He has proven to be a help to us, and continues to provide his own expertise on certain subjects. Our psionic tech program is nearing testing stages because of him.”

V’Zarrah considered. “So you say. What are his intentions for the future?”

“More vague than we would like,” the Commander admitted. “But what is certain is that he wishes to remain an ally to Humanity and would assist us in future conflicts, and we would support him if he encounters issues of his own. Other Sovereign Ones will be hostile to emerging galactic powers, and an ally like T’Leth will be useful. Not to mention the threat of the Synthesized.”

“The machines that supposedly destroyed the Ethereal Empire?” V’Zarrah sounded skeptical. “Those still exist?”

“According to T’Leth, yes,” the Commander said. “And they have an explicit goal of hunting Sovereign Ones and any others in their path. They are as much of a threat to us as the Collective is, even if they won’t come until the future.”

V’Zarrah consulted a haptic display on his wrist. “These Synthesized are described as hybrids of cybernetics and flesh, correct? With odd abilities and spacecraft?”
“Something to that effect,” he confirmed, frowning. “Why? Do you know something about them?”

“Union Viarior has not paid significant attention to this presumably phantom threat,” V’Zarrah said. “We had more important things to concern ourselves with. But others have developed an interest in these Synthesized when we learned of them. In particular, Union Zacarrim thought their usage of cybernetics was something worth exploring.”

“Did they actually find anything?” Creed asked.

“Nothing significant until five years ago,” using his wrist he projected an orange-tinted hologram of what looked like an exoskeleton. Broken metal lined what was clearly supposed to be over a skeleton, with one of the arms altered into…something. Likely a weapon, but it had long-since broken. The head reminded him of a triangle or teardrop, but aside from that he didn’t see anything else identifying.

“Synthesized soldiers?” Creed questioned, looking at the hologram curiously.

“Unknown, but these were extracted from a desert planet in the process of terraforming,” V’Zarrah said. “Hundreds of thousands of these wrecks. At minimum this was a highly cybernetic species, but their uniformity makes me think they were soldiers. Considering what we know about the Synthesized, perhaps these were part of the army it used. Unfortunately, we were not able to recover any usable technology from them, though the metals we extracted and melted, as they were made with an unfamiliar composition. But if you are concerned about the Synthesized, then you should be aware of what we might have found on them as well.”

“I see,” the Commander said slowly, moving to the holotable to bring up an archived hologram. “In which case, have any of your Unions ever recovered one of these?” He brought up the hologram of the Indoctrination Pyramid recovered from China.

“No.” V’Zarrah denied flatly. “Something that exotic we would know about, and likely attempt to acquire. What is it?”

“What T’Leth calls an Indoctrination Pyramid,” the Commander said. “A Synthesized device which emits a telepathic signal to control others. Worst case scenario, it’s connected to a Prime, one of the managing intelligences. At best…it mostly causes insanity and mental deterioration. Avoid these at all costs and inform us if you stumble upon one of them. Do not attempt to research it.”

“You’re speaking to an Andromedon, Commander,” V’Zarrah said dryly. “That is what we do.”

“And for your own safety, I’d suggest you not,” he repeated. “But since you shared what you know, it’s only fair we return the favor.”

“Which is appreciated, I will inform the others of this,” V’Zarrah said, making a note. “But what does T’Leth intend for my species? Or has he not communicated these plans to you?”

“As far as I know, you’ll be left alone unless you make him your enemy,” the Commander said. “Or make an ally of his an enemy. Our…alliance…is atypical for him. A mutual partnership. I suspect he doesn’t care what you do unless it relates directly to him.”

“I would prefer to determine that for myself,” V’Zarrah said. “I want to talk to him. That is possible, yes?”

“That can be done,” the Commander said. “I’ll speak to the Chronicler. Although there is only one way T’Leth directly communicates, and you might not like it.”
“How?”

“Through Sovereign Orbs, which he uses to observe Earth,” the Commander said. “Touching them opens a telepathic dreamscape between you and him. Not dangerous, but it is initially daunting, and psionically based. It requires trust on your end.”

“Noted.” V’Zarrah said, not sounding deterred. “And I suspect that Union Zacarrim will wish to speak to him regarding the Synthesized. Perhaps their fascination can be answered in more detail.”

“I think you should also keep much of this to yourself,” Creed cautioned. “T’Leth doesn’t want his existence to become public knowledge. Share it with your leadership if you must, but the average Andromedon should still remain unaware.”

“We will continue the same policy as usual,” V’Zarrah promised. “This is valuable and destabilizing information if used properly. We will ensure that only those relevant will know about this situation.”

That was probably going to be as good of a deal as they got. And if T’Leth wasn’t happy with that…well, he’d probably let them know. Perhaps T’Leth would end up helping the Andromedons as well. The Commander could see both getting along nicely.

It nothing else, it would give the Andromedons pause if they ever tried to betray them.

T’Leth could turn out to be a very useful deterrent.

War Command Center, Collective Mars Base – Mars

2/28/2017 – 10:00 A.M.

The room was among the largest in the base. It was alien in that it was constructed in the shape of an ascending ziggurat, each row of seats becoming smaller and smaller as it neared the top. The Disprium clearly liked to have whoever was in charge clearly visible to all, and the Battlemaster stood at the top with the Zar’Chon and the First Guardian to his sides.

The dimmed room was filled with the rest of the ranking soldiers who would be involved in what the Battlemaster knew would be the final invasion of Earth. Vitakara, Andromedons, even a Hive Commander was in attendance. Sicarius was somewhere, as was Quisilia, but they stood apart so as not to command additional attention.

“Our attack on Earth has been finalized. Within one week the attacks will commence.”

It was the first time that had been publicly acknowledged outside of internal discussions. But the officers and aliens simply remained silent, waiting for him to elaborate. Good. He pressed one of the buttons on the console and a replica of Earth appeared above him. “We possess numerical and technological superiority over Earth. It will be utilized to the fullest now. There will be no singular battlefields in the coming conflicts. We intend to conquer this world, and it shall be done.”

The hologram focused on China. “In three days Isomnum will address the Chinese and on the fourth day he will commence the invasion of mainland China and the surrounding countries. This will force an ADVENT response. They have been significantly weakened due to the smallpox epidemic, and without significant ADVENT support and protection, they will soon fall.”

“The question of Japan and the outlying islands is outstanding,” the Zar’Chon stepped forward.
“Fifty Andromedon Cleanser Ships have recently arrived in-system. They will be crucial for the overall campaign. After Isomnum addresses China, orbital bombardment will commence on Japan and Taiwan, with deployments of three million Mutons, Custodians, and Runianarch to each to assume control of the country.”

The Battlemaster suspected ADVENT would be shocked at this development, but he was no longer concerned with protecting the infrastructure which had already survived previous attacks, and in Japan at least, there was not really any concern for civilian casualties since they’d been evacuated long ago.

And for Taiwan...Cleanser Ships were precise enough where merely targeting the military bases and government buildings was feasible.

“In the likely event an invasion of China is declared, Isomnum will commence operations in what will be referred to as the Earth-Asian theatre,” the Battlemaster stated, as the area comprising the theatre lit up. “Due to his own restrictions, he will likely utilize primarily automated and mechanical forces, in addition to air support. We suspect that Aegis is likely to directly oppose him, along with a majority of XCOM.”

The globe spun until it focused on Africa. “The Sovereign African States will unveil their allegiance with us the same time as Isomnum,” the Zar’Chon said, motioning upwards. “We are expecting an immediate response, though what that could entail is unknown. We are prepared to provide significant military and civilian assistance. The SAS will begin the nearby assimilation of countries – through negotiation or conquest – and at the same time we will launch a direct attack against the south of the continent.”

The respective country lit up. “South Africa,” the Zar’Chon said. “Due to the technological inferiority of the African nations, we expect we can easily capture all nations south of the SAS within weeks, and subsequently turn leadership over to them. Since ADVENT has little to no presence, we will encounter minimal threat. This will be primarily carried out under the direction of Ethereal Macula.”

The globe moved until it highlighted the Americas, before zooming in on South America. “We will also begin a coordinated invasion of South America,” the Zar’Chon continued. “With orbital support, we will capture non-aligned nations and likely overwhelm the majority of ADVENT-aligned nations on the southern half of the continent. Our eventual goal is the capture of Brazil.”

He motioned to the Ethereals beside him. “This will be overseen by both of the Guardians.”

The Battlemaster took over as the Zar’Chon stepped back. “The United States will be invaded from a new direction. We will commence the invasion at Florida and advance up the East Coast. At the same time, our offensives will be renewed in the West Coast and strike teams will strike in major cities around America simultaneously, including New York, Washington D.C., Houston, Philadelphia, and Kansas City. These will be comprised of elite units including Spectres, Elites, Vanguards, Outsider Units, Lurainian, and Ethereals as well as candidates from the Avatar Project who will be revealed shortly.”

ADVENT had been able to weather assaults before. But admittedly, those had been only several major assaults. He was curious to see how they would react to dozens of assaults in frontal attacks all across the United States – and the world. Canada would also receive some support, but the Battlemaster did not especially consider the country vital, and much of it was underdeveloped. Orbital bombardment would likely reduce their military effectiveness significantly.

It zoomed in on a section of the United States. “I have also established a contingency which will serve two purposes,” the Battlemaster continued. “One is to provide ADVENT with a distraction if
they are proving more resilient, and the second is to draw Aegis to a specific point. Should the contingency be activated, the area known as Yellowstone will be targeted for orbital bombardment. The goal will be to trigger a cataclysmic effect that will destroy a large portion of the country and cause significant changes to the immediate biosphere. Since we wish to keep the environment largely untouched, it is why this is a contingency. I am the only one who can activate it, or rescind the order – remember that it can and might be used merely to draw Aegis to this position, as he can defend against the bombardment.”

The globe finally moved to Europe. The Zar’Chon stepped forward. “We are initiating a series of assassination and quiet strikes against first the leadership of non-ADVENT nations to throw them into chaos. Soft strikes against politicians and military officials will prime the countries for lightning invasions and will be carried out simultaneously. This will throw them into chaos and given the situation ADVENT will be facing, they will likely be unable to respond quickly.”

The hologram shifted to highlight ADVENT nations. “After this, we will begin operations to assassinate the ranking members of ADVENT. This is not exclusive to Europe, but considering that a majority of their major operations are overseen in Switzerland and surrounding areas, this serves as a good illustration. Public figures and heads of state who have supported ADVENT will be removed first, such as Prince Mason and the British Royal Family, Iseul Gwan, Minister Habicht, and similar individuals.”

A pause. “Following that, we will begin the assassination of ADVENT officials and military leaders. These will be more intermittent as they will be fewer and likely require custom timeframes to achieve correctly. They are intended to cripple ADVENT leadership in key areas. This includes Commander Christiaens, Feng Mercado, Kim Munju, along with Richard Tygan, Elizabeth Falka, and of course, Chancellor Saudia Vyandar.” As he said each name, the corresponding portrait appeared.

“The final target is Russia,” the Battlemaster finished. “A strike team will invade and take control of Moscow and from there, the rest of Russia will be taken over. We are not expecting significant resistance or retaliation from ADVENT given the other operations taking place. This will be accompanied by orbital support. After Moscow is secured, we will likely conduct strikes similar to those that will happen in America against Russian cities.”

He shut the hologram off. “This covers the overall plan to conquer Earth, and will be continually modified as new information emerges. Each of you has specific information to review and disseminate to your own command. I expect the instructions to be followed immediately for this operation to begin without issues. Your orders and mission are clear.”

He drew his sword, took a reverse grip and rested the point on the ground, pleased to have finally arrived at this point. “Each of you is dismissed. Go, and prepare to end this war once and for all.”

The Dead World

3/1/2017 – 9:00 A.M.

Her hands were steady as she piloted the small spacecraft down onto the grey, barren world. While she was definitely no pilot, she knew enough now thanks to simulations and hands-on experience that she could fly and land a simple spacecraft, with the assistance of the on-board computer. Flying past the spherical station of Paradise was…unpleasant, and the sense that she was being watched had not faded in the least since she’d arrived in the system.
But nothing had happened, and she’d proceeded downward.

Down onto the Dead World.

The planet was an odd contradiction and impossibility. There should be no breathable atmosphere, but one somehow existed if her sensors were accurate – though how this was actually possible she didn’t know. Given the legends and rumors about the planet, it could be any number of reasons. The Bringer being involved (Most likely) made even far-fetched theories seem somewhat plausible.

At least she knew for sure that taking off her helmet wouldn’t kill her. Not that she was planning to take unnecessary risks.

She had only been given one goal by the Battlemaster: Land, find the Forge, create her weapons, and leave. It was straightforward and simple. Too simple. No fighting, no puzzles or riddles, no clear test outside of what was clearly said. But she knew better. This Trial had claimed the lives of Ethereals, so there was something dangerous.

She should hopefully be able to-

She froze in her seat as the psionic power she had grown so accustomed to dissipated. It was ripped from her in an instant. She couldn’t feel the Psionosphere and her mind was completely exposed. The ship was on autopilot now and it could land on its own, which already had a pre-determined destination. Standing up, she tried telekinetically summoning her weapons to her.

It didn’t work. The psionic power was gone. The Psionosphere was gone. It was dead and absent.

She felt naked and vulnerable without it. Sure, she had been significantly genetically altered and enhanced with the best of Collective technology – but that wasn’t her best asset. She was a telekine and that’s what she’d trained for. To have that taken away was…damaging.

Well, the Trial now took on a different dimension. She couldn’t rely on psionics anymore.

She supposed the good news was that the same applied to the Bringer. He couldn’t dominate her if there was no psionics to influence her with. She’d have to rely solely on her training and mind. The good news was that she felt she could handle it. The bad news was that she just knew there was something else that was going to happen.

She pulled out the handheld holodisplay which brought up a map of the Dead World. Interestingly, there were still ruins, mountains, and landscapes on the planet, but it was just dead and grey. But still preserved. No weather, insects, or vegetation to degrade and destroy it. Probably one reason the Forge had managed to survive.

It was going to be a hike, with a roundabout path, but easy enough to follow.

Placing her helmet over her head, clicking with a sharp hiss, she grabbed her swords and moved to the exit. It opened, extending the departing ramp, and she stepped outside into paradise.

The vertigo she experienced when she looked around made her briefly question if she’d accidentally replaced her oxygen tanks with some psychedelic drug that made her hallucinate, because what she saw was absolutely nothing like the grey and barren world she’d flown down to.

She stood in the middle of an open forest, with her ship in a clearing surrounded by trees and covered in grass. The grass was green and not trimmed, but very short. Small flowers grew within it, ones she’d never seen before. The trees were a mixture of having brown and white bark, with
leaves ranging from red, orange, blue, and transparent. It was a bizarre mixture, and they grew in patterns and shapes that were definitely not similar to Earth.

Was this real?

She slowly took off a gauntlet and knelt down and picked some of the short grass. It was plucked easily enough – and felt real in her hand. She wasn’t going to take off her helmet, but it likely had a real smell too. It left some soil on her fingers, which she brushed off. Pulling her gauntlet back on, she pondered what to do now.

There were two possibilities: Either the world was still dead and she was now being affected by some kind of telepathic effect – though how that worked when the Psionosphere didn’t exist (and it still didn’t) here was unknown.

Or the world was real, and what was projected to the rest of the galaxy was a fake. A telepathic effect or ridiculously ineffective holoprojectors? If it was a passive telepathic effect, then maybe that somehow explained the lack of a Psionosphere. But if that were the case, shouldn’t it have broken when she entered the atmosphere? Or did it somehow change when she went into her ship?

Did she need a physical connection?

She had time, and she needed to know what she was dealing with, because it would change how she proceeded. Yang moved back into the ship and moved to the cockpit, and looked through the screens again to the outside. Grey and barren. Alright. Was it because she wasn’t actually seeing it with her own eyes and through a computer screen?

Didn’t matter at the moment. She grabbed a small empty jar which would normally be used for drinking, and walked back outside into the alien world. Kneeling down, she dug out a small patch of grass and flowers and put it in the jar. She also went over to a blooming tree of red and black leaves, and pulled off a small branch from it. Both of those in her hand, she went back to the ship.

Both stayed exactly the same. She set them down and considered. It appeared like she wasn’t going to get any actual answers until she left the planet. Whatever was happening, she was definitely being affected by it, inside and outside the ship. So she’d need to leave the planet entirely before she knew for sure what she was dealing with.

An unexpected turn of events, and she didn’t like how she might not be able to trust her own senses.

Stepping back outside, she began walking along the path which would lead to the Forge. It was walked and clear, with fallen leaves along the path. It was a beautiful sight, and she could see hills and vibrant countryside in the distance. The sky was a bright blue and cloudless, but without a blazing sun. It was an almost perfect world.

Still, something seemed off, which was why she held the swords in her hand. Her senses seemed artificially enhanced. Everything was too vibrant, as if she was viewing from a higher definition than she could interpret. The colors popped too much, the sounds and wind were too sharp to her ears. It all felt real. Too real.

What a stupid thought. It didn’t make any sense.

But that’s how she felt.

Yang walked in near silence along the path, until she froze as she saw a being sitting on a bench which was surrounded by trees which shed leaves with each gust of wind. These were the trees
with the transparent leaves and white bark. The bench itself seemed to be made out of the branches which dipped into the ground, shaped to provide seating to others.

The individual who sat on it appeared to be Human. It was an older male, with oddly vibrant skin and white hair with a neat beard which seemed to almost glow in the light. He wore an odd grey robe-like garment which she didn’t recognize, but it seemed to allow a decent amount of mobility. But it all was background compared to the impossibly purple eyes that glowed with psionic fire.

“Welcome, child. I said that you would come back to me.”

She didn’t even think before reacting to that same voice that penetrated directly into her mind, even as the mouth moved like a real one. She tossed one of the swords towards the chest and charged forward with the other sword in hand. The blade buried itself in the unarmored chest, spurting bright crimson blood while the other blade lopped the head off of the old man.

The body though did not collapse, and merely pulled her close to the decapitated body. “Now, now. Let us be civilized about this.” With a gesture she was thrown back by a powerful wave and slammed against one of the white-barked trees. As she stood, the sword was telekinetically pulled out of the body and returned to her, while the head was also pulled back to the hands, and placed back onto the head as if it were nothing.

A cold terror gripped her as she realized the implications. The Bringer was somehow here, and she had no way of defending herself from him. And it must be him who was maintaining this illusion – no matter which way it went. Did that mean he controlled the Psionosphere here…

If so…

She swallowed. The figure who embodied the Bringer smiled. “You learn fast, Yang Shuren. An admirable trait and one which has captured my interest.”

“No!” She spat. “I will never join or help you. I made that clear!”

The bearded face of the man twisted into a smile, the glowing eyes shining bright. “And despite that, you come here. You come to a world where my vision is most potent. Where my power is absolute. Why come to here, Yang Shuren, if you wish to flee me? You knew I would be here.” He appraised her, taking a step forward. “Perhaps not quite like this, but you are no fool. You know what the Ethereals did not when they came to this world. But you still come.”

She pointed a bloodstained sword at him. “Not for you.”

“You trial,” a simple nod. “Expected, I suppose. But why risk your life for this? For the Battlemaster? For the Imperator who you are growing disillusioned with? For a planet you now fight against? Or are you merely doing it because it’s expected of you?”

“Quiet,” she snarled, clenching the swords in her hand. “My reasons don’t matter to you, they never did and never will, even if you’re inside my head.”

He looked almost…sad as he met her eyes. “They matter, child. More so than you can imagine right now. I know what you think of me, I know your hatred runs deep, and in your eyes, it is justified. But today…it will be different. Today when you finish, you will understand. No more will ignorance guide you. Salvation can only come to those who are willing. Today you will accept eternity in Paradise – or reject it.”

“I’ll give you my answer now,” Yang said, stepping forward. “Rejected. I’ve seen what your
version of that is, and I want no part of it.”

“Continue first, child,” he gestured to the path. “Your journey here is not complete.”

“And what are you going to do?” She asked. “Send your people to attack me when I’m handicapped with what you’ve done to the planet?”

“Done?” He raised an eyebrow, smiling. “What I’ve done to this planet. How…interesting. Yes, you would feel that way. You are a blind woman wandering; so used to having to reach for the power when it should merely be another aspect of the reality we inhabit. The Psionosphere is a false barrier imposed on the galaxy by constraints of reality. One which will be torn down when the Crossing is complete.”

He looked around the forest, his tone almost wistful. “This planet is…special. The first time where the hard lines of reality were broken and the salvation for all species was unleashed. This planet was the homeworld of the Arthenn, psionic aliens who were managed by a few powerful and arrogant masters. The rest were little more than slaves and batteries from which the masters drew to extend their lives. The aliens lived without hope, life or love. They had no future.”

“And you found them,” she guessed. “You helped?”

“They longed for something in their lives, a reason for living,” the Bringer said wistfully. “Salvation and hope. I can give them what none can provide. Eternity. Their masters would be brought low and consumed forever, their minds scattered and broken for all time. But they would live jubilant and triumphant. Never dying; with me in eternity forever.”

“But it clearly didn’t work,” she smirked. “You failed.”

“A matter of perspective,” he said with some amusement. “The crossing…yes…it failed. I underestimated what it would take. What would be required. Yet at the same time…the Arthenn endure to this day. They are in Paradise, with me, they live eternal. And through the sacrifice of their physical bodies, they created the world you inhabit today.”

He pointed at her. “Let the scales fall from your eyes. Experience the power which will be afforded to those who accept Paradise.”

The rush that she’d felt when entering the world suddenly flowed back into her, far stronger than before. She could feel the power, but it was…different now. More a part of her than it had ever been. She’d needed to reach for the power before, but now it barely required any effort. It was as if the world was saturated with pure psionic energy; an inexhaustible well to draw from.

In an experimental gesture, she focused on one of the trees nearby and applied some telekinetic pressure with complexity that would exhaust her. With a series of snaps and creaks, the tree practically disintegrated as it crumbled into splinters and jagged wood, as the pulling of the telekinetic strings in hundreds of directions accomplished.

She looked down at her hand, not feeling any sense of weariness or exhaustion. It was just as easy as suspending a feather in the air.

Yang swung her head to where the Bringer was, and found he was gone. But he wasn’t gone, he would still be watching her, and waiting. Shaken at what she was seeing, yet empowered by the high of the power which flowed on this world, she carefully continued forward on the path. The sun overhead beat down on her, but she felt no scorching heat.

So she continued.
Minutes passed until the path began winding down a hill. In the distance, she saw a blurred city. She consulted her holomap, and unfortunately, that seemed to be the place she needed to go through. There was a contradictory series of architectures that she could see; some with curved and shining architectures which reached up to the heavens. Others were almost organic in nature, brown and webbed and reminded her of corruption. Others were buildings in a style she recognized from the Ethereal Empire.

Was all of this real? Or the Bringer continuing the illusion?

“And another one comes,” Yang started at the voice coming from the right. “It’s been…a long time.”

She felt the power at her fingertips, then hesitated as an Ethereal emerged from the forest. A female one, though only really possible to tell from the voice, not the armor. Her armor was far more ornate and detailed than the Battlemaster’s, with various symbols and decorative additions on the armor. It didn’t seem as heavy either, and the blood-red cape only fell off of one shoulder, mostly covering the arms that held an Ethereal short sword while a similarly decorated shield was held in the other.

She appraised the alien warily. “You’re not real.”

The Ethereal simply looked at her, the helmet impossible to read. It resembled the more traditional helmets of the Ethereals, if having not as many exposed points. “Why?”

“The only Ethereals alive, I know,” Yang said. “And if you were one of them, I would have been told. And they definitely aren’t living here. You’re not real. An illusion.” She snorted. “Like most things here, I guess.”

“I suppose that depends on what you define as alive,” the Ethereal said walking to the side, voice merely musing as if she were asking idle questions. “Perhaps I don’t have a physical body. Perhaps I do. You feel you cannot trust your senses. But it doesn’t matter. Body or no, I am alive.”

Yang shook her head. “I’m afraid that’s not possible.”

“Indeed?” The Ethereal turned. “And what are you, Yang Shuren? Are you a collection of organs and skin? Are you made up only of a brain, eyes, heart, and lungs? Is the body Yang Shuren, or is it your mind? Your consciousness?”

Yang paused. “Fair point. But you can’t have a consciousness without a vessel. A body.”

“Conventional wisdom would suggest as much,” came the answer in a sigh. “Despite our Empire’s vast knowledge, the truth is that we never came close to understanding the nature of psionics or the Psionosphere. We never could. We were too flawed. Too insulated. Too blind.”

She looked back to Yang. “I feel some pride in the fact that despite us losing everything, there are at least a few of my kind who have learned from our mistakes. No alien has ever undertaken the Trial of the Battlemasters. May I ask who yours is?”

“I…” Yang hesitated. “I don’t know his name, actually. He’s just…the Battlemaster.” She shrugged lamely. “That’s his title and what he’s gone by. He’s never shared his name.”

“I see,” she said. “If he is the last, I understand why he would adopt the title, as that is who all Battlemasters are. We are instruments of war, conquest, and destruction. We thought, planned, and executed according to this mindset. I am Ereuter, I have walked the path you did today. I hae intended to become a Battlemaster, yet fate had other plans.”
“And now you’re a puppet for the thing in the Psionosphere,” she finished. “Assuming that’s actually you. What happened to you, anyway? What did he lie to you about?”

“Lie?” Ereuter truly sounded confused. “He does not lie. The truth we may cower and flee from, but he does not lie. He told me the truth – about the universe, about our Empire, about how we would fall and die, about how we squandered our chance to break the grip the Sovereigns hold over our galaxy, about just how little we knew. And…” she trailed off. “He was right. About everything. So many dead by our own pointless short-sightedness, greed, and superiority. Our Empire lies in ashes; dead; forgotten. Our survivors led by an Imperator who retains the arrogance of his predecessors, yet ironically is drawn to a strikingly noble goal.”

“An idiot,” Yang stated flatly. “He works with you.”

“I agree,” Ereuter said. “But not for the reason you think. The idea that a mere Imperator could hope to command Him is…amusing to believe. The arrogance of the Ethereals knows no bounds. And it is so…unnecessary,” a hand waved in dismissal. “We want the same thing; a galaxy free from the iron grip and machinations of the Sovereign Ones, and protection from the scourge of the Synthesized. An end to their galactic harvests and perversions of self. Sadly, this is not to be. The Imperator is yet another only concerned for his own survival, his own power, at the expense of the greater good.”

She looked to Yang. “Do you know, Yang, what will happen in the future?”

“Of course I don’t?” Yang was confused by the question. “How could I?”

“I can tell you,” she said. “And what the greatest gift He offers to us. You are curious, I know that much.”

“Enlighten me.”

“He offers a universe without death,” she said. “What happens when we die, Yang? What happens when our bodies cease to function and begin rotting away?”

“I don’t know,” Yang shrugged. “Nothing. Or something like eternal torment in my case. Or depending on which god may or may not exist. No one knows the answer. And I guess it doesn’t matter really. The dead don’t come back. They don’t affect the world.”

“But I do know, Yang Shuren,” she said, the towering alien kneeling down so that Yang could look the helmeted Ethereal in the eyes. “Death of the physical body is merely a transition to eternity. It is true immortality, together with the other souls under His loving watch. There is no death in Paradise, Yang. You were saddened and disgusted by what you saw on this plane of reality within the station of Paradise because for you, death is finality. It is the end. But for Him…that simply is not true.”

She looked up to the sky. “Every soul that perished, by your hand, that of your allies, or who were allowed to join Him then…they live, Yang, and they will live forever, forever united in his Embrace. They will know no fear, doubt, or any of the physical ailments of this reality.”

“Impossible,” Yang shook her head. “All you’re doing is just feeding the Bringer. Only making him grow more and more powerful. It isn’t a gift, it’s a death sentence and you’re just an illusion trying to make me doubt.”

“We do make him more powerful,” she agreed. “With each soul added, he grows in might and power, as is his right. But we do not lose ourselves in his gestalt. We are all one-“
“Enough!” Yang needed to have her stop talking, and used the power of the world to instantaneously and quickly rip the Ethereal apart, which was accomplished in a splash of blue blood, flesh, and armor. The remains fell to the ground, and didn’t reform. Breathing heavily, trying to ignore the haunting words, she turned back to the path.

And now there was a little girl standing in her way.

Swallowing, Yang stepped forward towards her, hoping she would be silent. While she could tear apart the Ethereal specter, she would not be able to do the same here. The young girl with bright eyes and golden hair looked up. “Do you remember me?”

The memory of the haunting voices of the children came back; the grotesque trigger that made her recall. A single nod. “Yes.”

“Don’t be sad,” the girl admonished. “I’m ok.”

“No,” Yang remembered when the little girl was killed. “You’re not.”

She smiled up at Yang. “It’s not your fault. I didn’t die then. I can’t die now.”

Yang looked away. “Please. Go.”

“He doesn’t lie,” a small hand wrapped around a gauntlet which held a sword. “You don’t need to be afraid anymore. It’s ok to be wrong.”

“I can’t be,” Yang shook her head. “Even…this…you can’t trick me. No matter how much you try. I…can’t be tricked like this, not like this.” The hand around her own pulled back, and when she looked around, the girl was gone, yet her words still stuck in her mind along with the clinging implication.

What if she was wrong?

“Then you will sleep for eternity,” a new deep voice jarred her out of her reflection. Another armored Ethereal, this one bearing more resemblance to her Battlemaster approached. But his armor was golden, not grey like most. In his hands was a Guardian saber hilt, a double-sided one. “Appealing to your empathy and logic is clearly lost on you by the minds which inhabit the gestalt. You consider yourself a woman of logic and reason, yet you deny the evidence before her. You are Dead, like so many in this galaxy despite being offered the rare opportunity to ascend beyond such things.”

“And who are you?” She raised one of her swords.

“Idance, and like many others who stepped onto this world, I aspired to become a Battlemaster,” he stated. “And the Bringer showed me the truth of the galaxy. In all of its harsh reality and brutality. And I have watched you on this world, and your coddling will come to an end. What do you hope to achieve Yang Shuren. What importance is your life in the scope of a galaxy?”

“A galaxy?” She sniffed. “I don’t care about that. I will help the Battlemaster conquer my species and rebuild it into something worth preserving. I will kill all of those who’ve taken advantage of me and others, who’ve hurt myself and those I care about. And then?” She shrugged. “I’ll endure, and help the Battlemaster.”

“All you achieve can be undone, and anything you do will be undone if you continue on this path,” came the warning. “It takes far fewer to undo progress than create it. Your own species is rife with this short-sightedness. Progress undone and lost by the ignorant and fearful. Your kind are driven
by emotion and manipulation. You are children surrounded by equally blind adults; you require
guidance, but those who seek to control you are just as inept, and filled with just as many failings.
Your legacy will achieve nothing, you will be nothing, everything you build will be torn down.
Perhaps before your eyes, perhaps long after your body expires. As of now, it does not matter.”

He jabbed a finger, his words jabbing at her with such intensity that she took a step back. “You are
Dead. You are a Dead woman, conceived from Dead parents of a Dead species. Now you fight for
Dead masters who follow in the steps of the Dead. You are walking the path of the Dead along
with many others. Your legacy is as fragile as a Human life. Your bones will be argued over, or
crushed under the eyes of future cycles who wonder what could have happened to you. But they
will be as Dead as you are. Their fates assured forever.”

He was close to her now, the assaulting words rendering her mute, so strong was their intensity.
“But…” he said, voice soft. “There is salvation. It is possible. You need not be dead, your species
need not succumb like so many. You are afraid, it is understandable. The truth is terrifying. What
is the point of existence if all it will ever amount to is nothing? He has seen the cycles reap their
harvests over and over. You know this truth.”

He clenched a fist. “Accept this truth, Yang Shuren. Do not let the fear drive you to continue the
path of the Dead. He is no Imperator. He cares about the future of all. He wants them to join his
Embrace and be forever protected. I have seen the memories of galaxies in flames, and it will
happen once more. But now though…now hope can potentially bloom. Death can be made
obsolete. Imagine a galaxy where death no longer has hold on those who are saved; who can
continue safe in the knowledge that they will be forever preserved by his will and love.”

The massive Ethereal turned away from her. “I have said what I wished. Go, and I would ask you
think on what I say. I live, regardless of what you tell yourself or not – as well as those you have
already spoken too.”

The Ethereal dissipated into nothing, leaving her standing before the empty city.

Too many of those words echoed in her mind.

You are Dead.

Conceived of Dead parents of a Dead species.

You fight for Dead masters who follow in the steps of the Dead.

How much of this was true…”

How much of this had happened in some form before.

Cycles. It was called that for a reason.

Were they doomed from the start? Did anything they do…matter?

She walked forward, shaken and distracted. She didn’t see the specter of the Bringer until she was
much closer. This time she didn’t bother to tell him to go away, she wanted to, but she was thinking
too much now. “There are many more who wish to impart their wisdom, child,” he said as she
approached. “Yet I feel that you being overwhelmed would serve no one.”

She looked around the divided city. “What is this place?”

“The past, present, and future,” the Bringer stated. “Your situation is not unique. So many others
are already subverted and under the spell of the Sovereign Ones. Even now the servants of the Synthesized operate and prepare. And I still see all, and this is what I wish to show you. The galaxy is violent, savage, and brutal. It continues now, and will continue in the future if nothing changes. Follow me, child. See the realities that are taking place now in this galaxy.”

He gestured, and she decided to follow him into the towering and shining structure. It seemed inviting enough. Inside it reminded her of a church, and that may have been what it was. There were rows of shining white benches which faced an elevated altar and before it was a blue and white rug with symbols she didn’t recognize.

Small rivers ran along the path through the center of the pews, pouring from small artificial waterfalls which poured from the sides of the altar. Towering over everything was a statue depicting…something…an alien, likely. Perhaps their being of worship? It was illuminated by tinted light which came from stained glass etched with the white and blue symbol.

The church as a whole was highly elevated, with high ceilings which were angled and were segmented with more stained glass depictions of things she didn’t recognize. Alien music wafted through softly; beautiful in all honesty. The Bringer sat on a pew in the back and she joined him, even as they watched the other aliens that wandered through.

They were definitely…something she hadn’t seen. Wearing dresses or robes, all of them seemed female whose skin tones ranged from purple, to blue, to white in rare cases. An aquatic species originally, if she had to guess. The statue figures may be males or other aliens which possibly ruled over them? Their language she didn’t recognize, though it was pleasant to listen to.

“What is this place?”

“A temple,” the Bringer was amused. “To a false god. Not atypical for Sovereigns, but they cannot offer anything more than any other mortal. They cannot protect against the others of their kind. They cannot protect their thralls against the harvests. They cannot transcend death, or offer the same to their subjects. They are frauds and false. A god who will not intercede for his subjects is no deity, but a coward.”

Yang grunted. “And you’re not.”

“Death has no hold over me, Yang Shuren,” the Bringer said with calm confidence. “That barrier has been forever shattered, and I do not hoard this gift to myself. I walk among my people, I walk among Paradise through the beings you encountered. The Saints as they are called by my more eloquent children. Why have believers and servants if you cannot celebrate and live alongside them? Why cultivate followers if you merely intend to ignore them and be silent? Questions, eternal questions which appear in cycle after cycle.”

He turned his fiery psionic eyes on her. “All religion is false in a way, child. While I may be considered a god, I am merely the result of those who have found a way to transcend death. Yet I find myself wishing to live up to these lofty ideals – your species in particular has high standards for deities. Yet the truth is that there is only so much even the most powerful can do. But I can state that at least I do not cynically utilize those who follow me to merely destroy my rivals and discard them afterwards.”

He pointed to an alien which just entered. “The Sovereigns who would be gods reap what they sow. Their hypocrisy is seen even among their own, and when that happens…there is violent retribution.”

There was something definitely off about the alien. Features of contained anger were plastered on
her face. Pushing through the more calm occupants, she moved to the front of the altar where the leader gave her a command. Or a question. Yang couldn’t tell. The alien was saying something, and it seemed to be a fast exchange of dialogue.

Something akin to fear appeared in the other woman, and the first alien triggered something in her hand. An explosion of fire and a blue substance rocked through the church, annihilating the entirety of the occupants, reducing many to particles and destroying most of the structures at the epicenter of the blast, and damaging many others around it. Parts of the roof fell down, and the glass shattered into millions of pieces.

Silence reigned, with Yang and the Bringer the only two occupants still alive. “Who…” Yang shook her head, voice unexpectedly happy. “Who was that. Why did she…”

“Her child was taken,” the Bringer answered, lacing his fingers together. “The hypocrite gods demand much of their subjects, sometimes including their own children. Few defy a god, but there are those who will. After all, there is little more dangerous than a mother who has lost the only thing they care about.” He looked upwards. “And their only goal in life becomes to destroy the institution which took everything.”

He stood, gesturing for her to follow. “Come, child. There is more to see.”

Yang stood shakily, and followed hesitantly. “Why show me that?”

“To give you perspective,” the Bringer stated as they walked. “To show you what people are driven to under the grip of the Sovereign Ones. They perish and sacrifice themselves because they feel there is no choice. There is no hope. One can only submit or die. No freedom. No expression. Nothing that is not mandated and approved by the Sovereign Ones. So many lives perished senselessly. This kind of pointless sacrifice is what I will eradicate. What hold do the Sovereigns hold over their thralls if the fear of death no longer exists?”

“The unknown,” Yang answered. “You make a lot of promises. But what you have isn’t eternal life. Not really. It’s an imitation. A part of your mind which thinks it’s alive and independent, but it can no more defy you than my own limbs can defy my own mind. They are happy living that way because they’re brainwashed to want that. Death isn’t, and shouldn’t be something celebrated, something your own thralls seem to not understand.”

“But what does it matter, if they are satisfied and happy?” the Bringer questioned. “You would prefer they be miserable; trapped in their pointless and empty lives who can enjoy what you call ‘freedom’? What good is freedom if nothing can be done with it? What good is free will if it can never be realized to make decisions which matter?”

He scratched a finger on his beard. “You are driven by anger and rage, Yang Shuren. It defines your existence. It has defined the choices you’ve made. Revenge is a powerful motivator, but when you execute the ones who condemned your family, what will you do then? You do not support the Imperator. You are a traitor to your species no matter what you say. You have none who will truly accept you, nor do you operate under a leader you want or respect.”

“Wrong,” she shook her head. “The Battlemaster is my direct superior and who I follow. I’ll work with him. Help him with his goals.”

The Bringer cocked his head. “You are merely useful to him. A powerful alien, but still an alien. He will never see you as his equal or true partner.”

And Yang realized something rather important. The Bringer really didn’t know much about the
Battlemaster. He didn’t know who he really was or what he really believed. “In that you’re wrong,” she said slowly. “Maybe I won’t be his equal in combat. But I can be his friend. He needs one.”

“Ah.” The Bringer nodded. “I see. You want to belong. You want friends, companionship, love, validation.” He shook his head. “Ah, child. You merely had to say something. All your life you have faced rejection and pushed others away due to who you were. Your family never recovered from the shame of your expulsion…and you consider yourself tainted.”

Yang flinched. “Get out of my head.”

“I do not judge you, no one here does,” the Bringer said as they approached one of the brown webbed buildings. “Do you think you’re the only one who has been discarded by others who has come here? There is a place for you here, child. There is a life, cause, and friends who merely wait for you to take your rightful place with us.”

Yang shook her head, more to block the words than straight disagreement. “I have that now. Even if you don’t believe me, because he’s the one thing you can’t understand. He may not be able to give me eternal life, but he is real and can understand me better than you.”

“You’re attached to him now, understandable,” the Bringer acknowledged. “Then he may join as well. There is a place for all here, including him. His respect for the Imperator continues to wane, that is certainly clear even to me. Our goals align in this way. You both could stay, and in Paradise none will have to fear the death of the other.”

Yang snorted. “I certainly don’t fear him dying.”

“All mortals die, child,” the Bringer said, voice tinged with some sadness. “I am blessed, or cursed, to possess the knowledge to defy death. It is merely a matter of probability. All things, even Sovereigns – will eventually perish. Trillions of years, or merely a day, it will happen. I can never die, nor can the ones who have joined me. We will exist forever and ever in eternal joy and purpose.”

“Honestly,” Yang sighed. “Living forever would get tiring after a while.”

The Bringer just smiled. “You would adapt. You and him. But let us continue – there is something I feel you must see to understand the malicious selfishness the Sovereign Ones possess. This selfishness which consumes trillions upon trillions of lives.”

They walked inside, and an odd smell hit her first. It was a sickly sweet aroma of something burning, with working machines. Inside there were lines of coffin-like objects on the walls, manned by drone machines and on the ground there were additional aliens she also had little idea of what they were. Possibly insectoids, as they appeared to have brown-colored carapaces, but as she looked closer, it didn’t seem like they were all exactly the same.

Some had three fingers, others had six. The number of limbs also varied, as did the overall shape of the body. This appeared to be something which aliens were assimilated into instead of belonging to a singular species. The area on which they operated was open and surrounding an assembly plant which was constructing what appeared to be a machine of some kind – or a spacecraft.

Inside the partially transparent coffins, she could see other aliens inside. Not enough details, but they were clearly cognizant and alive, some of them banging on the interiors. The other aliens ignored them and she watched in muted horror as their screams reached her ears, and were presumably liquified slowly.
“What…are they?”

“Thralls, assimilated cleansers of the Synthesized,” the Bringer explained. “Or whatever name you wish to call them. They are responsible for cleansing the galaxy of the obvious artifacts of previous cycles; fooling aliens into thinking they are among the first. They are collectors and experimenters of aliens, sequencing their genetics and then using it to construct their ships.”

He pointed to the coffins. “The majority are melted down into a genetic slurry which will be used for biofuel of the ships, along with certain other uses. They are the lucky ones,” his fingers laced together once more. “The unlucky ones have their minds destroyed and rebuilt to serve as the enslaved mind of their flagships. Unthinkingly merged with others, they live in an eternal prison, forever condemned to serve under the Prime Directive which governs the Synthesized. A few more lucky ones are chosen to join these aliens – conditioned, grown, and raised to serve as excellent and effective servants.”

Yang swallowed. “This is in the past.”

“Yes,” was the confirmation. “A previous cycle I bore witness to. These aliens are of some interest to me, for they are not like others in the Synthesized. They, in their own way, are their own Collective, a species playing with independence. They are as much victims as those under the Sovereign Ones, but they understand artistry, culture, emotion. They are worthy of salvation, for they simply do not know better. They are created for a singular purpose with all other context stripped away. Yet until they are enlightened…this is what they will do to all species. To your species, as well as any others you care for.”

He motioned her to follow him outside, which she quickly followed, happy enough to leave the abomination. It was almost as bad as what was within the Bringer’s Paradise. “So you think the Synthesized are the actual threat.”

“Indeed,” there was no hesitation. “The Sovereigns will be forever obsessed with each other and their proxy wars. They continually fail to realize that with every cycle, the Synthesized grow stronger. They enter more galaxies, they purge, destroy, assimilate, and conquer. They are not shore by the weaknesses of the Sovereigns, for they are united in a common purpose – be it programming or no, it gives them a significant advantage. The Sovereigns will eventually succumb, and the galaxy will be ruled by machines who can no longer pursue their own directive.”

Yang was silent as she walked. Perhaps he thought that was enough for the Battlemaster to join her, but Yang knew that there was exactly zero chance that would happen, as it should be. This was one case where the enemy of another enemy was not their friend. The Synthesized were bad. The Sovereigns were bad. But the Bringer ultimately wanted the same thing.

Control over the galaxy. Probably more.

There would be no choice with him anymore than any of the other deity-like figures of the galaxy. All would end up being assimilated – or they would die.

Or worse.

“The future for the galaxy will not be the nightmare you envision,” the Bringer allowed a sigh as they walked out of the city. “Such measures will no longer be necessary. Why should they be when victory, safety, and peace has been achieved? No, child, the future will be beautiful; where all beings will be able to live freely without fear of war, disease, or death. Let me show you.”

They walked a short distance and Yang sensed the very atmosphere change as they proceeded. In
the distance there was another small city, but this one she could see was more…lively. There were figures in the distance, occupants who didn’t seem to notice their arrival. There were no guards or defenses she could see, and seemed to have been built solely with aesthetics and artistry in mind.

There was no specific style that she could see that was dominant. There were tall spires and glass temples; skyscrapers and columns evoked comparisons to Roman architecture. They were made out of extremely valuable and precious resources which were further utilized in copious amounts. Marble, obsidian, diamond, no expense was apparently spared in this place.

There were even more buildings which she could not really accurately describe or compare to others on Earth. Many of the buildings were engraved with figurines, scripture, or symbols of which she could only guess as to the meaning. The colors also ranged significantly, which should have clashed horribly, but instead it made the entire city seem vibrant and alive.

A city that was calling to be explored and experienced to its fullest.

Night was falling, and it seemed like there was an ethereal mist which resided over it, making it slightly hazy and mysterious, for lack of a better word. Voice and music wafted upwards, haunting and beautiful melodies that she’d never heard on Earth. Although interestingly, the more she listened, the more she could hear some chords and sounds that sounded like they were originally Human.

A medley of different music from different species?

“Speculmnis,” the Bringer said, moving a hand to display it. “A celebration of life and what all have to offer the galaxy.”

“It isn’t real,” Yang shook her head. “It can’t be.”

The Bringer’s eyes of purple fire just looked at her. “Does it truly matter? It is real, regardless of if it resides on this world or another. If you need additional reason, your Forge is within. Check your hologram if you doubt.”

She did, and he was right. Which at least told her that this place…it wasn’t real.

“Yet before you enter…” the Bringer motioned her over to him. “You will need something more appropriate. Something that is worthy of this place, and the role you desire to hold.” He entered one of the alien ornate rooms, which was simply covered in luxury, with stained glass, carpets, and tastefully integrated color schemes that brought the room to light.

In the center of it was a suit of armor.

Yang approached it hesitantly, giving it a closer look. It was…one of the most impressive pieces of…well, anything she’d seen in her life. Calling it merely armor was too simple a word; it was a piece of artwork. Something worthy of a Battlemaster, which made what she was wearing now look ragged and simple by comparison.

A deep red colored the majority of the armor pieces, with black serving to accent the rest of the suit. The aesthetic reminded her of a cross between the scale mail of a knight, but also a dragon with hundreds of small overlapping plates over the arms and legs, while the chest was a solid plate. The overlapping plates made it sparkle in the light, and pleasing to look at.

A black piece of reinforced cloth wrapped around the back and sides of the waist, some small additional protection for the legs, while a blood-red cape fell from the shoulders almost to the ground. Walking around it, she was…happy…to see that the Chinese flag was emblazoned on the
collar of the armor, a touch she’d appreciated from the XCOM armor.

The helmet itself was medieval and intimidating. It reminded her of a cross between the spartan helmet, and one from medieval times. The eyepieces were armored, and the gap which would normally remain open in a spartan helmet was closed in red bands of metal. The helmet top was smooth, and there were pieces which covered the ears which resembled dragon wings.

“This was created specifically for you to use in your future battles,” the Bringer said as she admired it. “Regardless of what you decide, you will certainly find it useful.”

“Even if I use it to kill your people,” she said, half-paying attention. “Generous…”

“Perhaps,” the Bringer didn’t sound insulted. “Yet death holds nothing over us. You will merely be giving them what they desire. I will leave you to put it on – assuming you wish it, of course.”

She merely nodded. If he was just going to give it to her…well…no point in turning it down. There was the possibility that all of this was an elaborate illusion, but in this case she didn’t think he was lying. Paradise certainly had the resources to make this, unfortunately, so it wasn’t out of the question. She turned to see he was gone, shrugged, and worked to change out of her suit into the new one.

The measurements were perfect, and the suit allowed for a full range of motion far better than her old suit. It wasn’t heavy, but weighty enough to where she didn’t feel like she was wearing just light clothes. The HUD had options for both English and Chinese, something she appreciated, and it appeared there were a few features of the armor she’d have to experiment with.

The Bringer at least knew how to make quality stuff.

When she walked back out, she was surprised to see that the form the Bringer had taken was…different. No longer was it an older man, but one much younger and taller. The skin had an attractive glow to it, and he wore a muted-colored tunic and pants; slightly exotic and formal, but nothing overly elaborate.

Aside from the eyes which were now a glowing red, he had taken an annoyingly attractive form. She narrowed her eyes under the helmet. “Cute.”

“We should aspire to look our best in this place,” he said with a smile, the voice still carrying with it the undertones of power, but now it had a much richer and melodic quality to it. “Let us continue, child.”

So they continued walking, and began mingling with the crowd of Caretakers and other soldier types she remembered from Paradise. But unlike the station, these Caretakers were ornately dressed in curiously old-time Earthen fashions, some close to Victorian. Decorated masks obscured their faces, and some simply wore ornate helmets.

The music grew more intense and there was some cheering and clapping in the distance; a celebration of some sort she wanted to go see.

No. Focus on completing this.

This is all a distraction.

She found it a little more easy to resist than it might have been otherwise. She’d never been the most social of people, nor particularly interested in parties and the like. Although she’d wanted when she was younger to know what it was like to completely put yourself out there without
second-guessing. It was the wrong place for someone reserved like herself, yet she still wondered…

“The dances,” the Bringer said, in response to her unspoken question as to what the commotion was. “We could go observe for ourselves. There is no rush, after all.”

She clenched a fist, more to keep herself focused than out of emotion. “I have a job to do.”

Something that was becoming more and more difficult to focus on. Maybe it was her imagination, but it seemed like the air itself was tinged with psionic energy and tinted with silver moonlight. She just wanted to stop and wander, perhaps eat some of the food or just listen to the hypnotic and rising music.

No. Focus.

She pressed on.

And froze.

Standing in the crowd, one of the few who wore no mask or helmet covering their face, was her dead mother, conversing and laughing at something one of the Caretakers was saying. She was dressed more simply than most of the crowd, and she looked exactly as Yang remembered. Not a day older than the day of her death.

“What is she doing here?” Her voice felt dead even to her, the sword appearing in her hand instinctively.

“Living.” The Bringer answered simply. “You have been destined for great things since the beginning, Yang. I would not let her simply expire when she was dying. It would be a cruel end to a young and defiant life. She deserved more, she deserved Paradise. And now she will live without the fear of death again. She is proud of you.”

“If…” Yang took a shaky breath and her mother caught a glimpse of her, and even through the helmet, seemed to know it was her. With a wide smile, she gestured for her to come. “If you could reach her…why did you not save her?”

“She was saved,” the Bringer insisted. “You are seeing her now.”

“No!” Yang shook her head violently. “That’s not her. It’s whatever part of her you wanted to live on. You found her, you could have healed her if you really cared!”

“To what end?” He spread his arms. “Her inexplicable healing would have caused more pain and hardship not just for her, but yourself and your father. A choice needed to be made…and it has proven to be the right one.” He motioned to the woman who stood a short distance away. “She wants to speak to her daughter again. She wants to be with you again. You want that too. Nothing can ever hurt her again.”

The woman who was her mother – regardless of the truth or not, for she felt too real for Yang to ignore – stood and waited, an arm outstretched and a wavering smile as she wondered why her daughter was not coming.

But the truth was that her mother was dead. She was still dead. This thing…it wasn’t her mother. It was a pretend trick at best, or a horrific taunt at worst. The Bringer was no better than the Sovereigns, or the Synthesized, or any of the other would-be rulers of the galaxy. He was just as manipulative, just as driven by selfishness and power as the rest of them.
He would go so far as to plot her life years in advance; engineer it just for this moment. To let an innocent woman die to gain some leverage over her in a bid to make her willingly join his mad cult.

Maybe she could join and be happy. She could live in euphoria, conditioned under the Bringer’s intoxicating power and never be sad, afraid, or hurt again. She could have everything she wanted or could want. It could very well all be hers. The chance of a lifetime that most would strive for.

But…

But it wouldn’t be real.

She would only feel what He wanted her – *allowed* – her to feel.

She wouldn’t be physically dead, but she would be fake.

A fake woman, existing with a fake mother, in a fake reality, feeling fake thoughts and desires.

Life was cruel, dangerous, and terrifying at time. Yet it could also be rewarding, uplifting, and joyful.

Real.

She would work to make the real world better for others. Not impose a fake alternative.

Tears stung her eyes as she closed them, reaching out in the saturated city around her. The power in her grasp, and she would harness it for one final purpose. With a flash she swung her sword out and decapitated the body of the Bringer’s vessel, and with a free hand clenched a fish and crushed everything in the area around her.

The illusions around her played their parts as their limbs and bodies exploded in mixtures of flesh and different colors of blood. No time to scream even, her mother – or the body at least – was turned inside out in a moment. Fake as it was, it made her hurt all over. The ornate structures and buildings cracked and tumbled into rubble and strips of metals and materials. Creaks, groans, and pops filled her ears as the music turned from a haunting melody to a fractured symphony before it vanished from the wind.

She didn’t realize she’d let out a scream initially, but when she finished, her voice ragged and raw, she knew it was needed. All of the pent-up emotions that had gathered on this trial…they needed an outlet, and the pure destruction she wielded served enough as one. With shaking hands, she lowered them and looked around at the carnage.

The Bringer’s vessel now stood opposite her, but now looked on in clear disapproval.

“Leave,” she spat, lifting her sword again. “You lose today. I will *never* join you. I will make sure you and your *cult* are purged from the face of this galaxy. We may die in the process, but when we *live*, what we feel will be *real*. It will be *us*. I will not submit to you, I will help forge a path forward free of you parasites of this galaxy.”

She directed her telekinetic power towards the vessel. “Now *go!*” Before it could be unleashed, the vessel vanished, leaving her alone.

Wiping off her blade, she stepped through the now-dissipated city as the illusion collapsed, to the Forge she could see a short ways ahead. Allowing the tears which had leaked from her eyes to dry on her face, she pressed on forwards. The worst seemed past. It seemed over.
She would finish the Trial.

She felt something change in her. It was almost like a comforting blanket which was drowning out white noise she never realized was so loud. Soon it became silent and clear. No noise; no distraction; no voices.

Yang knew that she had won then. Now the Bringer would soon have no power over her.

Her mind was her own, and it would never be broken again by another.

The Bringer knew that too now, and yet his final words which appeared in her mind were devoid of threats, anger, or emotion. They were, much like how they’d been, merely filled with a calm confidence that left her feeling cold long after they finally dissipated in her mind.

*You will understand eventually child. Not today. Perhaps not in the near future. But you will.*

*And when you do…*

*I will be waiting to welcome you to Paradise.*

***

To be continued in Chapter 46

Voice of the Dread Lord
3/7/2017 – 8:00 A.M.

The room was close to empty and cold; the grey steel walls and floor did little to lower the unease of those who looked within it. From what most people could see, there were no walls or ceiling. Light shown clearly on the occupants, but when viewed in closer detail most wished that they hadn’t looked closer.

Yet they would still be drawn to it.

Mesmerized by individuals standing in shadow, wearing cloaks and armor of the blackest paint. Red lights shone from where eyes should be, silent and foreboding; judging and warning. Still as statues, the figures in black stood silently, comprised of various species and specialties. Later viewings would clearly note a Sectoid and Andromedon, though there would be endless speculation as to if the remaining two figures were Vitakara – or Humans.

But they were merely a background element.

A drone floated silently in front of the small gathering; merely waiting for the command to begin transmitting to the planet which would soon be awash in fire, blood, and death. Transmitting to people that would be dead mere days later. A prophecy of their destruction of which there would be no denying.

Two individuals took the center stage; one known, the other new.

The Dread Lord stood silently, an embodiment of death and terror of which few aliens have been able to so easily encapsulate. The death mask of his helmet bored through the cameras, and to the people who found themselves drawn deep into the black sockets of the shining metal skull. Were it not for the voice, some may have suspected that the Ethereal had not moved in the slightest.

Yet for the leaders; the military advisors of ADVENT and the soldiers of XCOM, they would be drawn to something else. Something which did not fully scale to the threat of the Dread Lord himself, but whose implications were far more alarming. Far more terrifying.

A woman, a female stood directly in front of the Dread Lord, far below his stature and the camera was angled in such a way as to make it appear that the Ethereal towered over her. As if she was under his direction; his control. Or perhaps that they were merely one entity, one unified warning and threat.

One voice.

She wore no heavy armor, and resembled something closer to a scientist than a warrior. Stark shades of gray; contrasting light and dark made up her garments. Gloves were worn over hands which were clasped behind her back. The lab coat she wore shimmered as light reflected off the alloy weave which laced through her garments.

Her belt was strapped with syringes and medical tools, and a pistol of unknown make was strapped
to her leg. There was also a mask of some kind dangling from her waist, though the video never allowed a clear look at it. At the time, it was unimportant. It paled in comparison to attempting to puzzle out why a Human was standing before the Dread Lord, but not as a prisoner or even a noticeable servant.

But as a willing **soldier**.

ADVENT facial recognition would later identify the woman as Sonoda Ikuko, an aging woman of clear Japanese heritage. With hair shored grey and equally colored eyes, whatever empathy or care she had once held in them was gone, replaced with a cool, sadistic glint. A disgraced psychologist, she had been assumed to have been a captive or casualty of the First Battle of Japan.

Yet it was clear something far worse had happened instead.

The drone blinked green. All systems were online. Sonoda pressed a button on her wrist. Thirty seconds would pass and the transmission would begin. It would be broadcast to the entirety of Earth; they would not be able to force their way into the networks, but it did not fully matter. For now, only China was important.

Agents within the Chinese had provided a simple solution to bypass the troublesome Intelligence that was monitoring the Great Firewall. While it was not necessary that the Chinese hear firsthand what would befall them, Isomnum had stated that such knowledge would be beneficial. So each Chinese citizen would be sent a link to the transmission; each restaurant and store would receive a command to turn to a station for an emergency broadcast.

And they would watch. Perhaps the Chinese would shut it down before it could be concluded.

But it would be enough.

The rest of the world…

They would watch with rapt attention.

The drone blinked an orange light. The transmission was beginning. They would be silent initially; allow the message to spread so that there were as many individuals watching this as possible, both from their home televisions and online. All across the world. A second drone slowly floated up beside the first one.

A hologram silently displayed a split screen of major television news networks. CNN, FOX, NBC, BBC, Chinese State Media, and more flashed through. The hosts could be visibly seen reacting to the news, and one by one they began switching to their broadcast until all that was seen was a reflection.

She could see the blood drain from their faces when they realized who it was.

None forgot the Dread Lord.

This **was** addressed to ADVENT in a way, but today they were not their primary audience.

Today that was China.

And so the Dread Lord began speaking.

“This *I speak today and bring a simple instruction and warning. I address the People’s Republic of China. The last of the free nations of Earth; the few who resist the expanding grasp of ADVENT.*
Your time of independence is over. Your leaders have lied to you, they continue to use and deceive you. They are meek and subservient to ADVENT and XCOM; pawns to give the illusion of your independence. Your inferior nationalism. But you are nothing, and never will be.”

The Ethereal paused, and Sonoda spoke; repeating everything he had said in Chinese.

They were their primary audience, after all.

But the Dread Lord needn’t stoop to speaking the language of those who would soon be conquered.

“I address the Communist Party of China. President Qin Yijung; General Cheng Zhen; Minister Han Jie. Leaders of your people. You have exactly twenty four hours to surrender to the Ethereal Collective or I will invade your nation and raze your cities to the ground. Your soldiers will abandon their minds and butcher their comrades. Family will turn against family; and sibling against sibling; your country will drown in blood and fire.”

A moment of waiting as Sonoda repeated his words.

Millions were now watching the broadcast, and while some stations had gone dark, more were still broadcasting what was being said. In military installations and bases across the world, ADVENT officials and officers watched in concern as they understood that the worst case scenario was coming true.

Commander Christiaens didn’t wait for permission to take action. She knew what was coming and the command was given. “We have confirmation of an alien invasion of China. Double the deployment of PRIESTs. We’re going to be fighting Isomnum.”

“I will march through your streets and set alight those who in their foolishness still remain; their bodies will soon belong to me and your dead will be set upon the living as all that you have come to know descends into a nightmare which shall only worsen. Your last moments will be spent in utter agony and terror, or feasting on your kin as your mind leaves you a broken shell of a person.”

Saudia sat quietly in her seat as she watched, and the Human speaking the previous words in Chinese. “Should we stop it?” Kyong asked quietly as she watched alongside her.

The Chancellor shook her head. Far too late for that. “No. Let him finish. I doubt we could stop it even if we wanted to, and it would only show the world we fear what he has to say. He has nothing more than fear and threats – both of which we can deal with. China will be attacked, we know that now.”

“What should be done, Chancellor?”

“Get me the Commander, and schedule an emergency cabinet meeting. And tell President Qin we’re sending soldiers to help.”

“This is what I promise should you refuse to surrender to us. There shall be no more chances. And to ADVENT, I give no warnings. We shall shatter your empire and crush your spirit as we will this entire world, and no more chances shall be allowed to you. You will have only one opportunity chance to surrender with the majority of your world intact, and you shall have mere hours. Should no surrender be forthcoming, the countries of Japan and Taiwan will be turned into rubble in twelve hours.”

The soldiers of XCOM all watched silently, some seething at the threats of the Ethereal while
mutterings began wishing for death on the Dread Lord and the Human traitor who so easily puppeted his words. Nuan gripped Iosif’s hand instinctively as she listened to the threats against her home; Sierra, with Ted and Ana immediately marched out to get ready to deploy.

Oliver just observed the screen in silence, wondering how many were going to soon be dead in the renewed conflict. Kane crushed the glass he held in his hand before storming out, not even seeming to feel the small shards stuck in his hands.

The Commander simply watched calmly, before sending the signal to convene the Internal Council. The war had just been declared anew.

“The time for benevolence and mercy has passed. You have been allowed to exist unmolested for far too long. Your only decision now is how many will die before you accept your place under the Ethereals. The conditions have been stated. Surrender or Earth will burn.”

The broadcast lingered on the Dread Lord as Sonoda finished the last words, and then on cue the light on the drone flicked to red, killing the connections.

It was done.

The world knew the demands of the Dread Lord.

It remained to be seen if such words would have an effect.

***

Situation Room, the Praesidium – Classified Location

3/7/2017 – 8:24 A.M.

Not much needed to be hashed out now that they were all here. They’d all seen the broadcast. “Not a good sign that Isomnum has a large degree of command,” Jackson said grimly, her arms crossed as they stood around the holotable. “Aegis, thoughts on this?”

“Possibly a distraction,” Aegis didn’t sound entirely convinced. “I have a difficult time imagining the Battlemaster willingly putting him in charge of such a major operation. Isomnum’s tactics are…not something he would use unless there was no other choice.”

“And there are other choices,” Zhang added. “It is not as though the Collective is restricted in their actions.”

“Do you think the Battlemaster could have been removed or demoted?” Creed questioned. “Perhaps the Imperator isn’t happy with him, and what happened at Paradise wouldn’t have improved things.”

“It is not out of the question he’s been forced to allow others into the conflict,” Aegis agreed. “However, the Battlemaster knows what he is doing and is not as blinded by arrogance as other Ethereals. I know that he has some impact on strategy still, because if he didn’t, we would not have received the warnings of the bombardment on Taiwan and Japan.”

“The Collective is exploiting their space advantage,” the Commander said, looking at the holotable which showed the blue globe of Earth with red tokens moving towards it. “It was inevitable, I suppose. There are enough of the Cleanser Ships coming that I’m concerned that Isomnum is only the first of possibly dozens of attacks. You can’t be everywhere, Aegis.”
“Don’t forget their mystery structure on the Moon,” Jackson reminded him. “That probably has hundreds of fighters and dozens of ships – at minimum.”

“We have quite a few Firestorms now,” the Commander said. “But from what we know about Cleanser Ships, that might not be enough. Nor do we have adequate shields or AA defenses to reliably take them down.”

“Or enough psions,” Vahlen added. “Trained ones, anyhow. And ones who can sustain a barrier for days on a moment’s notice.”

“I will say there is some good news,” Shen adjusted his glasses as he reviewed something on his tablet. “The effectiveness of the Cleanser Ships is directly proportional to how close they are to the surface. For precise bombardment, they would possibly be in range of AA defenses. Indiscriminate bombing is a different story. If they attack China, we will likely be unable to stop them. However, if they wanted a more surgical strike with limited collateral damage…Aegis, this is what the Battlemaster would pursue, correct?”

“Yes, I believe so,” the Ethereal confirmed. “I suspect it may be a reason why he insisted a warning be given. Japan only has military personnel stationed there, and Taiwan is small and will have adequate time to evacuate. It sends a message without necessarily compromising how he wages a war. He has given a warning, and assumes no responsibility for those who ignore or refuse it.”

Generous,” Jackson said with a snort. “Evacuating an entire country in a matter of hours is certainly doable and especially when we don’t know what to prioritize. But we have been warned, so I guess it’s all fair.”

“It’s better than the alternative,” Aegis said. “Isomnum would not have given such warnings.”

“I’m unsure,” the Chronicler noted dryly. “This Ethereal is melodramatic enough to do such a thing. Isomnum thrives off the uncertainty, panic and fear which is no doubt happening now. People will die in the stampede to evacuate the country and the soldiers in Japan will be paralyzed and uncertain as their death comes to them. Even if the Battlemaster had not made it a stipulation, this is within Isomnum’s expected actions.”

“That is correct – and troubling,” the Commander wasn’t so sure the Battlemaster was behind it when phrased like that. “What is to stop Isomnum from firing an hour or two early? This is not an Ethereal above lying.”

“The location of the Cleanser Ships will be a clue,” Shen said. “We’ll know the moment that they are in range of the stated targets. If they show up hours ahead of time, we should be worried.”

“The question we need to answer is what are we going to do,” Iosif interjected. “We have two minor bombardment targets, and China is definitely going to follow. ADVENT won’t let the Chinese surrender even if they wanted to. And even the Chinese know better than to surrender to an Ethereal who styles himself as the Dread Lord.”

“Focus on China for now,” the Commander said. “An invasion is coming for sure. We’ll need our best there, especially if Isomnum is engaging personally. Chronicler, how feasible would it be for T’Leth to block the worst of Isomnum’s telepathy?”

“That depends,” the Chronicler answered slowly, scratching his beard. “You want to spook Isomnum and send him running? He could confine Isomnum to his own mind and prevent him from affecting anyone else. Not break or control him, mind you, but there is no way he could be
quiet about it. Risky if not done properly. And noticeable.”

“Noticeable in what way?”

“Noticeable in that T’Leth would have to move closer to Isomnum’s location,” the Chronicler said. “T’Leth is skilled, yes, and the Sovereign Orbs will never allow as much direct power as a personal intervention, but the further away a target is, the less precise such attacks become and expend more energy. It is why telepathic communications are easily defended against even by non-psions. It’s expending great amounts of energy and concentration over a significant distance. This is not irrelevant simply because there is a Sovereign performing them.”

“We don’t want people talking about sea monsters right now,” Jackson said. “But if we don’t have a choice…”

“Here is a better solution,” the Chronicler proposed, placing a hand on the table. “Isomnum only directly targets the minds he can sense, mostly a blanket effect if his dossier is any indication. This makes it feasible to hide people from him. We don’t have enough Sovereign Orbs to blanket protect the entirety of China, but we can ensure that the important and critical aspects are secure. The soldiers on the front lines, the government, and ADVENT. Psions will have to do the rest.”

“And we essentially leave the civilians out to dry,” Shen pursed his lips. “We should have the psions protect the critical infrastructure and the Orbs to protect the civilians.”

“You didn’t hear me,” the Chronicler repeated; frustrated. “I said we don’t have enough orbs to cover China. Even if we used every single one to protect civilians – civilians who I will note are currently suffering from a plague, probably poorly trained, and ultimately unimportant factors in this conflict. If the lines break, the civilians are as good as lost anyway.”

“He’s right,” the Commander said grimly. “There is also the matter of transporting them to the right areas. That is going to take time and we can’t have XCOM squads running around depositing orbs everywhere – and in places where civilians could touch them.”

“I was afraid you’d say that,” Shen sighed. “I understand, but I don’t like it. We have enough psions where this should be possible to accomplish both. It’s not the easiest solution, but it is the right one.”

“You are assuming that only China will be targeted,” Zhang pointed out, motioning to the hologram of Earth. “That is far too many signatures for one country; even China. It’s more likely that there is more than one attack planned. Yes, if we pulled everything back into China, your solution is justifiable. But I think that is what they want us to do.”

“Ironically relying on fear,” Creed nodded. “They know we know Isomnum’s reputation and want to do everything to mitigate or kill him. We overreact in China, they more easily attack other nations. China is important, but it’s not worth sacrificing the world for.”

“No, it isn’t, but we can at least make an effort to do what we can,” the Commander said. “Chronicler, we’ll begin sending teams to fortify infrastructure and military positions with what Sovereign Orbs we have. In the meantime, we’ll send a recommendation to China to begin evacuating the country.”

Jackson shook her head. “The country? Of over a billion people? That will never happen, not now.”

“And ADVENT isn’t prepared to handle a refugee wave of that magnitude,” Vahlen added. “If
even a fraction of the population leaves, that’s still more than ADVENT can feasibly handle even in several locations."

“This is ADVENT, not the United Nations,” the Commander disputed. “They’ll adapt to a refugee wave, and then turn them into productive individuals for the war effort. I’m aware that the country will not be completely evacuated, but more people will be saved if they follow that advice than if they stay and hope for the best. It’s the difference between losing the majority of the Chinese population, or a fraction of it. Anything to mitigate the effects of Isomnum should be taken.”

“A reasonable approach,” Zhang gave a short nod. “The best we can do, given the situation.”

The Commander knew that was going to come up, and none of the possibilities were good. “Only two possibilities for her. She’s being controlled, or she is a traitor.”

“Or the result of constant psychological manipulation and grooming,” Aegis pointed out. “Isomnum enjoys doing such to aliens. Twisting and destroying them, then reforging them into creatures loyal to him without question.”

Creed pinched his nose. “None of those bode well for Patricia.”

“No, they don’t,” the Commander agreed. “But until she shows up, we can’t worry about her. Ideally, we should try and capture this woman or one of Isomnum’s soldiers. That may give us more answers as to what is going on. But we should not focus on Patricia – or her situation – until she either becomes relevant or this situation is resolved.”

“Yes, Commander,” Creed acknowledged. “Orders?”

“I want no fewer than three squads in China,” the Commander said. “Possibly more. Put ten squads together and prepare them for deployment. Jackson, Zhang, Iosif, and Creed; all of you will be coming with me to China to join Saudia and her staff. This is going to be a possibly long-term coordinated defense. Aegis, you and Caelior will need to also prepare to deploy on a moment’s notice. Understood?”

“Yes, Commander.”

“Dismissed, we have a lot to do.”

***

ADVENT Commander – Switzerland

3/7/2017 – 9:09 A.M.

“We are deploying several ADVENT legions to the major cities where we are expecting an attack,” Commander Christiaens stated to the small assembled collection of cabinet members and military officials. The overhead hologram depicting the Asian theatre was complete with small graphics and colors to easily distinguish the actions which were taking place.

“Hong Kong, Shanghai, and Beijing are all cities of target,” she continued. “The Chinese regions of Fujian, Jiangsu, and Zhejiang are under direct threat due to their proximity to Japan and Taiwan – both nations named in Isomnum’s threat. It is also possible that the Hainan region will be targeted for the aliens to use as a staging ground to assault the mainland.”
“Should we even expect conventional tactics from Isomnum?” Weekes inquired, frowning in his armor. He was preparing to supervise the operations in China personally. “His dossier paints him as atypical, even for Ethereals. Most of whom don’t follow conventional tactics or wisdom with the exception of the Battlemaster.”

“We are working under the assumption that Isomnum is working under the Battlemaster,” Christiaens clarified. “We have and continue to be in communication with XCOM who have Aegis to give his own insight. They currently believe that it’s likely that the warnings against Taiwan and Japan were stipulations the Battlemaster ordered, and Isomnum would not necessarily have stated them.”

“But this is speculation,” Saudia wanted to clarify.

“Yes, Chancellor,” Laura said. “But informed speculation. The dossiers on the Imperator, Battlemaster, and Isomnum all indicate that Isomnum is likely not operating purely on his own, and this is part of a larger plan. While we can’t absolutely state that the Collective will follow conventional tactics and wisdom – we can make some logical assumptions.”

“Also keep in mind that it is unlikely that there will be a significant organic component to an invasion of China,” Elizabeth interjected. “Due to Isomnum’s…aura…that would be unwise, and his dossier indicates he enjoys taking part in such activities. We should expect a Custodian-heavy compliment, with additional heavy vehicle support. Sectopods for sure.”

“I was getting to that,” Laura shot the Director a nod of thanks. “Due to this predicted compliment, ADVENT legions are being primarily equipped with anti-armor equipment and electronic-based weaponry. MDUs are being outfitted with gauss and missile weaponry as well.”

“ADVENT Special Forces are being similarly prepared, as well as a select team of soldiers from the Phobos Project,” Weeks stepped forward. “There are fewer Hussar and Cuirassier units, and are being supplemented with Dragoon and Lancers, the latter of whom have been augmented to a degree with WHEEE cannons provided by XCOM.”

“Sorry, what?” One of the officials asked in a confused voice.

“Electrical-based weapon,” Weekes answered immediately with a snort. “Cute name, but the thing fries Andromedon suits. Can’t think of a better weapon to use against a mechanically-based army.”

“I have also been keeping in contact with President Qin,” Saudia said, taking her cue to begin. “He has, at the insistence of XCOM and our own support, begun the evacuation of China, first prioritizing the major cities and regions. Borders are being fortified with ADVENT and PLA soldiers. If Isomnum attacks personally, the fewer people that are there the better, and our focus needs to be supporting and protecting the soldiers.”

“Evacuating the entire country is impossible,” an official said, shaking her head. “What is he thinking? Especially since there are hundreds of thousands sick?”

“Because unlike the Battlemaster, Isomnum has no qualms about killing civilians,” Laura said coldly. “He wasn’t putting on a show in that broadcast. He fully meant everything he said. No, it’s not feasible to evacuate the entire country, but he frankly doesn’t have much of a choice.”

“And where are they all going? The ones who get out?” Was the next question.

“That is being decided based on their region of origin,” Saudia said. “Out of concern for possible similar invasions, all refugee points will be deep inland. This includes northern India, Mongolia,
Kazakhstan, and Russia. These regions are being sent additional personnel as we speak to handle the anticipated large number of refugees.

“Does this include the infected?”

Now that was a touchy subject. Saudia exchanged a look with Laura. “That depends on the region,” Saudia said slowly. “Regions and cities inland are moving quarantined individuals out of the country, at least those who are recovering and are somewhat self-sufficient. The ones along the coast are not; they cannot afford to be prioritized. Patients which are failing or dying are in the process of being euthanized and extremely sick individuals are being offered the option. Standing orders are to euthanize all infected non-combat personnel if a city comes under attack.”

There was muttering which broke out briefly after that. No one liked the idea, but the Commander had made a good point that it was entirely possible that cities could be under siege for days, and infection could spread rapidly especially if not all individuals were vaccinated. As of a few minutes ago, the PLA was working to transfer all quarantined soldiers further inland to prevent this. She doubted it could be completed in time, but some lives would probably be saved.

“Concerning the threat to Taiwan and Japan, we are taking appropriate actions,” Laura said, as the hologram focused on that region of the world. “We are sending ships, aircraft, and personnel to immediately assist in the evacuation of major Taiwanese cities including evacuating the government. Major military bases are also being evacuated and divided into smaller cells to go to pre-designated locations and reconvene when the situation is resolved.”

She focused on Japan. “We’ve initiated similar protocols in Japan, as well as moving several nuclear submarines near the coast. Should Japan come under bombardment, several nukes will be launched to take out the Cleanser Ships – which XCOM has stated will be responsible for the bombardment. With that said, we are anticipating significant infrastructure damage of Taiwan and Japan which will not be recovered easily, and there is a high possibility that the Collective will follow up this bombardment with ground invasions of the countries and use them as further staging points.”

“We are also preparing for additional invasions of Korea, and the majority of southeast Asia,” Laura added. “Korea can likely hold out for a significant amount of time, but we are not as fortified in countries such as Vietnam and Thailand. We expect China to be the major thrust, and for that conflict to spill over into the nearby regions. Yes?”

The officer she pointed too nodded. “We are assuming that China is the only target. What if there are more?”

“Then we will deal with them,” Laura said. “XCOM also suspects that there are multiple offensives, which is why we’re being careful not to overcommit to any singular one. We’re preparing for a major attack on China, but if there are others, we will be able to defend and respond accordingly.”

“Have we identified the woman in the broadcast?” Another officer asked.

“Yes, a certain Sonoda Ikuko,” Elizabeth said. “We’re not sure how exactly she’s ended up with Isomnum, but it surprisingly indicates that at least some of the captives are screened for use. Ikuko was a Japanese psychologist who was stripped of her license and arrested a decade back when she was caught participating in experiments on patients without their consent.”

Elizabeth consulted her tablet again. “From what we can tell, she was still serving her prison sentence – from all accounts she was a model prisoner – and when the aliens attacked Japan she
was present and still in prison. We had assumed that the aliens had either captured or killed the occupants. She’s the first prisoner that has reemerged. In short, she fits an individual like Isomnum surprisingly well. Aside from that, we can only speculate as to what her actual role is. XCOM is unsure as well.”

“Mind games, most likely,” Weekes snorted. “It makes a compelling image when a Human gleefully repeats the words of a melodramatic alien who unironically calls himself the Dread Lord. Either way, she should be put out of her misery if we ever find her.”

“We’ll cross that bridge if we actually come to it,” Laura said. “That is the current response, and will be updated every half hour until Isomnum’s first deadlines pass. Any emergency developments happen, you will all be informed. The Chancellor and myself will be making statements to the public shortly. Good luck, and dismissed.”

She gave those in the room a salute, and each of them mirrored the gesture.

Back to work, and back to war.

***

ADVENT Base, Busan – South Korea

3/7/2017 – 10:42 A.M.

“Do you think that we’re going to be attacked?” Beatriz asked as they armored up.

“Again?” Aleksandra snorted. “Aliens keep trying. They die again.”

“Can’t really argue with that,” Nobuatsu added, hooking a medkit to his waist. “This would be… attempt two or three to take Korea?”

Duri checked his rifle, and grabbed his helmet. “Unimportant. If they come here, we kill them. They’ll be walking into one of the most fortified bases in the entire world. I wish them luck right before we kill them.”

“With pleasure,” Cara nodded, giving a mock salute. “Looking forward to blasting a few more aliens up.”

“Especially that traitor,” Aleksandra snarled. “I hope she burns.”

Duri pursed his lips; and though he would not actually vocalize it, he felt the same. Everyone knew the Ethereals – the ones who were with the Collective anyway, were malicious, cruel, and faceless monsters. They could be nothing less if they still maintained their position. Not after Seoul or the revelations of their black site they so curiously called Paradise.

At this point he was not surprised at what the Ethereals were capable of. The threats of the one who called himself Isomnum were hardly shocking anymore; merely something he expected from their kind. At least this one was honest about it.

But the traitor which had stood with him was far more sickening. Perhaps she was under his control; a puppet of the alien. But it still made him furious that the slight possibility that there were willing collaborators was actually plausible. Perhaps it was a solace that it would only attract those who were as fucked up as the Ethereals themselves.

Either way, he doubted that she would show her face in battle. Such an individual; a puppet, was a
coward. Not to mention that the only nations explicitly named were Japan, Taiwan, and China. Mostly China. He would not be surprised if Korea was attacked after Japan, but he was not expecting it initially. It seemed more likely to him that they’d be transferred to the front lines.

His squad was mostly the same as the start of the war, with only two casualties (something of a miracle, in all honesty), battle-hardened, and he knew they were recognized by some of the higher-ups. Not that he cared so much anymore, it wasn’t like he had a home or family to go back to. If he died in combat now…well, he wouldn’t have to worry about leaving anyone alone.

Still, he would not intentionally do that to the rest of his squad. They had lives, friends, and futures. If they were moved to the front lines, he would not contest it, but he wouldn’t intentionally request it.

“Duri?”

He snapped out of his self-imposed trance when Cara shook his arm, her head cocked and voice mildly concerned. “Yes?” He said, with a short shake of his head. “You were saying?”

“The Chinese,” Miguel was saying. “What do you put their chances at?”

It didn’t take him long to give an answer. “On their own? Dead. With ADVENT? They have a chance. Depends on how much we want to commit to it.”

“Don’t know what the Chancellor is thinking here,” Cara leaned against the locker, arms crossed. “She’s been treating China way too nicely. Diplomacy is one thing, but we shouldn’t be putting our soldiers out there to defend a country that isn’t even ADVENT. Not until they actually join us. Otherwise, why bother joining ADVENT when you get the benefits anyway.”

“Strategy, Cara,” Nobuatsu said. “Why force China to join you when it’s pretty much guaranteed that they will when all this is done? You really think the Chancellor is going to send several legions to China without a guarantee that by the end, Qin will willingly and happily sign onto ADVENT after we literally save his nation?”

“I don’t know,” Cara shrugged. “The Chinese have made something of a point to keep themselves out of ADVENT.”

“That was before an Ethereal threatened an invasion,” Beatriz reminded her.

“Like the Chinese actually thought they could go the whole war without fighting in it.”

“Nobuatsu is right,” Duri said with a shrug. “China will join ADVENT when this is over. If they don’t, I expect they will be annexed for the sheer stupidity such a decision would require. A non-issue. Chinese independence is over, and everyone knows it. The smallpox epidemic essentially guaranteed that.”

“Stop making sense,” Cara said with a slight smile. “Well, I’ll admit I’ll be a little disappointed if the Chinese give in without some kind of fight. I’ve been kind of hoping that the Communist Party is deposed and replaced with Taiwanese leadership. A poetic end, I think.”

There were some chuckles from the group at that. “I’d pay to see President Qin sign over the country to Taiwanese leadership,” Miguel chuckled. “I’m almost sad that won’t happen now.”

“Hey, we don’t know that,” Nobuatsu said. “Knowing our Chancellor, I wouldn’t be surprised if she makes the ‘ADVENT transition team’ or whatever they’ll call it majority Taiwanese. What is China going to do about it? Not join ADVENT?”
Duri did crack a smile at that. Personally, he doubted that Saudia would be that petty. She was a professional, and relations with the Chinese were apparently good enough that she was taking the overly nice approach to assimilation. So if the Chinese played their part, he doubted the Chancellor would screw them over, even when she very easily could.

No, the only people who truly deserved to be screwed beyond redemption were Betos and her traitors. Even if they weren’t alien collaborators, defectors at this stage were essentially traitors to the species all the same. A shame nothing had been done to them during the lull, but honestly preparing for an actual threat was more warranted.

“Alright, is everyone ready?” He asked, after he did a final check of his equipment. “We’ve got a lot of preparation to do. We might not think the aliens would attack here right now again, but Command definitely isn’t as convinced.”

“Ready as we can be, Duri,” Cara confirmed, putting her helmet on and giving a thumbs up. “When you are, Officer.” The rest of his squad echoed similar affirmations.

“Move out,” he ordered as he took the lead. “After me.”

***

The Prism – Classified Location

3/2/2017 – 10:17 P.M.

She’d mostly made her way back to the ship numbly after she’d found the actual Forge and made her weapons. It was simpler than she’d expected; merely a matter of following the instructions she’d memorized. In the end it didn’t really feel like the construction itself meant much; it was a beautiful set of weapons from a mechanical standpoint, but compared to what she’d experienced previously…

Well, Yang felt almost hollow inside. Alone.

Considering she was now telepathically severed – or blocked – from the Psionosphere, maybe that was the source. It was strange just how used she’d gotten to being able to sense at minimum the emotions of those around her, if not their thoughts. All gone now, and at most she could sense emotions if she actually tried. The Battlemaster had said she would be able to receive direct telepathic contact, but that was it.

It was with only mild interest that she’d confirmed that the so-called “Dead World” was very much not dead and was instead just a very odd planet. This was confirmed when she’d departed the planet, and could look out and see it for herself. It was…well, it had raised questions. Ones she would ask at some point. Perhaps now.

The Battlemaster had been waiting when she’d returned to the Prism. He didn’t seem overly surprised at either her armor or emotional state. Maybe this was common back in the Empire, which was why he didn’t inquire immediately. He merely gave her his congratulations and took her to the kitchen area where there was some food for her. She didn’t ask if he cooked it himself, as it wasn’t important.

She wasn’t hungry at first, but as she took small bites she did realize that she really did need food. So between all of that, she told him everything. She hadn’t necessarily intended to, thinking initially that the trial was a personal experience only to be known by those who participated in it. But now she just needed to talk to someone about what happened, and the Battlemaster was
literally the only one who could probably understand.

It took several hours to get through everything, and aside from a few clarifying questions, he mostly just let her talk, moving as fast or slow as she wanted. It was...difficult to convey everything, but he seemed to understand in some capacity. Although the Avatar Project might end up changing this, at least in some way.

The Battlemaster was quiet for a few moments after she’d finished. “Your resolve is admirable even in the face of what you experienced. I suspect many other Ethereals would have succumbed if they were in your place. With what you know, you were far more vulnerable. Well done.”

She pursed her lips. “Really? If I remember, most Ethereals who took the Trial passed.”

“Correct,” the Battlemaster said. “But knowing what I know now – and in what you have described – the Bringer is far stronger now. More dangerous and active. And as I said, you are aware of certain truths about this galaxy that we were not privy too. The Synthesized, the Sovereign Ones – and the Bringer himself. And yet you still resisted him.”

“So did you know what it was?” Yang asked. “Did the Battlemasters?”

There was some hesitance as the Battlemaster considered, resting his lower arms on his legs. “Only the highest in the Empire even knew some of the details on the Trial. We didn’t know what it was; there was discussion on if it was an actual entity or the effect caused by the removal of the veil of the Psionosphere to reality. All we knew for certain was that it could tailor itself to make Ethereals kill themselves willingly by somehow convincing them – and that those who stayed on the planet long enough would become immune to telepathy.”

“You never researched it?” Yang sipped her water. “I’m surprised at that.”

“If it was effective enough to make Battlemasters fail,” he answered. “There was significant concern that any researchers would kill themselves or others if exposed to it for even a short time. The risk was too great. I suspect that in time, attempts would have been made, but the Synthesized ensured that would never happen.”

“And the whole...‘dead world’,” Yang absentely waved a hand. “A lie.”

“A lie known only to us,” the Battlemaster confirmed. “We saw what everyone saw when the first Ethereals stepped on the planet. A world devoid of all life. Fate or chance led to its discovery, and its story was born from there. We didn’t know why the planet memetically forced all individuals to see a dead planet, but it did.”

“Probably the Bringer wanting to remain inconspicuous,” Yang guessed. “People are unlikely to step on a dead world. And the ones who do are...” she trailed off, shaking her head. “Dead. No way any ordinary people could withstand what he would do to them. I’m surprised he even allowed the Trial to be established at all.”

“The situation was different back then,” the Battlemaster said. “The Bringer appears...more awake now. More active. Back then...I did not experience the same things you did. There were no cities, and it never seemed like the Bringer directly spoke to me. I saw things, yes. Spoke with individuals I believed were apparitions.”

She perked up, not expecting him to reveal details of his own trial. “What did you feel he wanted you to do?”

“I saw aliens which had never been seen in the galaxy,” the Battlemaster said wistfully. “They
warned that the Empire would die. I saw our destruction, and the destruction of other civilizations by the Synthesized. I didn’t know it at the time. The unifying voice insisted that the only way to ensure the survival of the Ethereals was to join the gestalt; to join him.”

He looked back to Yang. “A paradise. Their terminology appears to have changed little. I believed it all illusions and lies, of course. I actually considered the possibility that the Overminds were behind the entire Trial. After all, what could possibly threaten the Ethereal Empire? There were none who existed that could come close to our power and size. It was…easier to ignore. My ignorance saved me, and many Ethereals. That, along with a weaker Bringer.”

Yang pushed her empty plate away and rested her arms on the table. “You think it would be different if you knew he was telling the truth?”

“If it was the first time I had heard of it, if I hadn’t had time to consider it in a more objective light, I do not know,” the Battlemaster admitted. “At minimum it would have been more compelling. I would have done much to ensure the survival of the Empire and the eradication of the Synthesized. I would like to think I could resist as you did, but that is something one cannot know until they are placed in that situation.”

“Well, if you took the trial today you would pass as easily as I did,” she shrugged. “Never thought I’d say that an Ethereal was my moral compass, but it helped me down there. None of us are saints, but you know right from wrong.”

“Today? Yes, I am older now. Wiser…” he trailed. “But back in my youth, perhaps I would not have been. Your words are appreciated, it is good that I could assist in that way in your trial. It has been a...long time since I’ve had a student.”

“I guess the Imperator made a rare good choice then,” Yang nodded. “I know you weren’t exactly thrilled about the idea. With you managing the Collective military and all that. Understandable.”

“But it appears to have worked out,” the Battlemaster nodded. “You are as worthy of a student as any Ethereal. It is unfortunate the potential of aliens went unrecognized in the Empire. Perhaps then we could have made a more successful stand.”

“We have another chance now,” Yang said. “Assuming the Imperator doesn’t make any more stupid decisions, I have a good feeling about the future. Earth will be conquered and my species will assimilate. A union of Ethereals and Humans. Don’t know if even these mysterious inner galactic species can withstand that combination.”

“I suspect that at some point we will find out,” the Battlemaster agreed. “But right now, let us focus on only one war at a time.”

***

*War Room 16, Collective Mars Base – Mars*

*3/6/2017 – 7:10 A.M.*

He stood alone in the room. Contemplating on the moves both alien and Human would be making in the coming days. Quite intriguing to see play out, with many possible outcomes and predictions. The Dread Lord fool would serve as an adequate distraction while the main invasion commenced.

With that said, the utilization of Isomnum was yet another questionable decision in this conflict. It would do nothing but ensure the fall of China to ADVENT, and guarantee a wave of condemnation against the Collective. Which appeared to be the opposite of what the Battlemaster and Imperator
intended.

Such mishandling.

Too many internal Ethereal politics he was unaware of.

Too many unknowns.

*Distasteful.*

A hand held a hologram as he looked at the man in the image. Elderly, frail, an old shell of a Human whose time was long past; clinging as the symbol of a country which had fallen and been reclaimed. He studied the old face, the wrinkles and cloudy eye which had supposedly been the result of a failed break-in.

A story he found unlikely.

Humans had an interesting fascination with the past. It was one thing to remember and honor the past, it was another to continue to be stuck in it. It was not strictly ideology and dogma which kept Humans from advancing, but also clothing and smaller things. A slight annoyance, in all honesty. Why Humans, particularly the Asian nations perpetuated the wearing of robes and impractical clothing was something he did not understand.

Yet it would play to their advantage here.

Twilight would finally fall upon the Japanese Emperor and his family as their country would be reset by fire from the sky.

He set the tablet on the table and rolled it away. He knew enough and how he would properly accomplish his task. He would need to return to his station to acquire a temporary face, and briefly shed the Nemo persona. Merely for a day, but it was necessary while Volk and the other aliens dealt with President Shu-chan.

Then he felt it. The tingle in his head which told him an Ethereal was near. They were quite difficult to ignore, as much as he might want to. But this one was different; certainly one he had never met in person before. He turned around slowly; deliberately, and briefly appraised the Ethereals before him.

*Ah, yes.*

The Ethereal Macula. Another illusionist, though a more competent one than Nebulan. Quite clever in all honesty; capable of trapping victims in their mind as their perception of time was altered. In a way, time certainly was malleable; another aspect of reality that could be twisted and manipulated if only one was intelligent enough.

Unfortunate that he was trapped with the naïve Betos.

Although perhaps that was merely a limitation placed on him.

*Is that the truth, Ethereal? Are you merely following orders?*

Ethereals did not ask permission before reading minds.

*Let him hear the question.*

The Ethereal looked at him for a long moment. Nemo moved to replace the papers and equipment
he had used during his brief stay here. If the Ethereal wanted answers, he would have to ask him questions. In the back of his mind, he knew that the Ethereals felt they were entitled to respect and attention due to their power.

Power.

Fake power. False power. Rule by fear and intimidation.

Not true power.

Not lasting power.

“You are indeed a curious creature,” the Ethereal’s voice seemed mildly amused. “Few are brazen enough to hold such beliefs. Much less express them in your…unique way.”

“You are not special, Ethereal. I will not pretend otherwise,” he saw little point debating this with an Ethereal. “You are no more entitled to my respect or attention than any other alien. I do not know you. I do not respect you. Not yet. Tell me why we are speaking, I have an assignment to prepare for.”

“Very well, alien,” Macula said. “I have been informed about your intentions with Betos. Intentions which will not come to pass. You are not suicidal, not completely. However I can assure you that such actions will guarantee your death, so if you wish to pursue them, inform me now so I can save some time and eliminate you.”

Ah, so Volk – or perhaps Elena – had informed Macula of his intentions. Not surprising, and it served his purpose which was to both gauge Volk, as well as force a meeting with Macula. If that had not happened, the Collective would have been rid of a burden and streamlined their operations in Africa. However, the more likely outcome had come to pass.

“Why is she still alive?” A simple query, but an important one. “You know she is a hindrance to our operations there.”

“A former ADVENT officer and a Human with stated principles,” Macula said, with some frustration in his voice. “Not ideal, it is true, but she will appear more sympathetic and legitimate to the rest of the world than a clear puppet.”

“Then let her die a martyr.”

“And there are express orders not to betray our allies,” Macula finished. “And on this I will not go against the Battlemaster. That would be a bad idea.”

“Then do not tell him.”

Macula gave a short noise; perhaps a laugh. “It is not wise to push the Battlemaster right now, creature. There are some things which are simply not worth the risk. I will work on making Betos as efficient as possible. However, should she accidentally find herself on the field of battle, it would be a tragedy if she were to fall defending her people.”

Nemo allowed a small nod. “A definite tragedy. You at least understand. That is good.”

“And it lectures an Ethereal,” he sounded amused again. “Gives it compliments as if its word means anything. If it matters whatsoever.”

“Your approval or lack thereof is unimportant,” Nemo turned away again and finished
straightening the room. “I am under no illusions as to my status. I do not need your approval, nor will I mewl before you simply because your species bears the Gift. I will complete my assignments, but no more than that.”

“Quite curious, very,” Macula said as he twirled a black blade in his hand. “I’m quite curious as to what the Imperator intends for you.”

That gave him some pause. Mostly due to the unexpected nature of it. Perhaps it should not have been a surprise the Imperator was aware of his existence, but his implied interest was slightly unexpected. No one but the Zar’Chon had reason to care about the science experiment. “The Imperator is aware of my operations?”

“He was the one who ordered you be released.”

Unexpected.

Surprising. He had thought only the Zar’Chon would release him.

Many implications.

Implications he would dwell on when he changed his face.

But one question appeared clearly in his mind.

“Why?”

“That you will have to ask him,” the Ethereal answered. “Complete your assignments well. Once you prove yourself, he will give you the answers you seek. You are not the only one who demands respect and attention be earned.”

A day full of surprises. He was curious. He was…almost motivated to do these assignments well, if only to learn why the Imperator had taken an interest in him.

Something to mull over.

He gave a single nod to Macula. “Noted, Ethereal Macula. Your answers are appreciated.”

Without giving the alien another word, he walked past him out the door to a gateway which would take him to the familiar white room where he could prepare and think in quiet.

***

Patricia’s Quarters – The Temple Ship of the Imperator of the Ethereal Collective

3/4/2017 – 4:19 P.M.

To say that she didn’t notice any difference would be a lie.

At the same time, to say that the changes were unpleasant would be incorrect.

She was still somewhat weak, and Revelean had directly advised that they not begin linking attempts until she was fully recovered. But the Avatar mask he had provided to her was alluring, if for no other reason than she wanted to satisfy her curiosity of what it would be like. The mask itself was fairly ordinary, with a clouded white front which would obscure her features.

Others were undergoing, or had undergone the procedure too, and she knew that their uniforms
would be slightly different. Designed around the Ethereal in question or the Avatar’s own personal
taste. She’d had plenty of input into her own uniform, and to her utter lack of surprise, quite a few
parts of it were based on XCOM armor – with enhancements of course.

But her body itself was definitely different.

When she’d said for Revelean to make her ‘a little taller’, she hadn’t quite expected him to jack up
her height entire inches. She was already a tall woman, and now she could even look down on
Saudia. How Revelean had managed to pull that off and proportionally adjust the rest of her body
to account for the differences she didn’t know.

She didn’t feel uncomfortable or awkward in her body. She could move as easily and smoothly as
if she had always been this size. Of course, mentally, it was an adjustment to get used to the extra
inches the height provided and she had already accidentally bumped her head a few times or
knocked something over when she misjudged her reach.

It certainly wasn’t a bad feeling though. And everything was adjusted as if she’d always been this
way. Subtle things, like her clothes were the correct size, her bed was also a few inches longer and
as far as she could tell, only her original Aegis armor was untouched. Out of curiosity she’d tried
putting some of it on, and couldn’t manage to even squeeze into it.

She was a bit sad that she’d never be able to properly fit into it again, but at least it was being
replaced with something just as good.

It also appeared that the Ethereals had also given her essentially any genetic modification XCOM
hadn’t. Her eyes had been left alone, and from what she had observed, they still worked like
normal. It did seem like the Muscle-Fiber Density modifications had been slightly tweaked, as she
could definitely jump farther than she remembered and her strength had been augmented as well.

It was an…interesting feeling to be able to throw around heavy objects like they were nothing.
Granted, it was something she had technically been able to do for a while now, but had stuck to
telepathy. There was something to be said for applying her advantages in a more tangible way
though.

The Disease Immunity and Secondary Heart modifications had also been left alone, though
Revelean had said that they had been augmented with additional nanite systems to handle internal
repairs and hardening the organs themselves from danger.

The largest addition that she knew was that her entire skeletal structure had been augmented with
MELD. According to Revelean, it would be nearly impossible for her to break a bone and vital
organs (such as her heart and brain) would be protected completely. He had noted that it would
make her entire body heavier, but that the other enhancements should negate that almost entirely.

So far it seemed he’d been correct. It didn’t seem like she was slower than before, though even if
she was, speed had never been something she’d relied upon or needed.

Her skin had also been subtly altered. It no longer had the slightly transparent tint which was a
hallmark of the Biomuscular Regeneration, but looked exactly like her original skin tone. A
cosmetic change Revelean had added, while insisting that the modification itself hadn’t been
altered. She had briefly tested it out by making an incision on her arm, and it seemed to have held
up.

The pain though seemed dulled. Probably intentional. Sharp enough for her to take note, but not
debilitating. An irritant instead of something crippling. A satisfactory middle ground. Of course
she probably would get a better idea in combat, but she had a suspicion that it was going to be…
difficult to hurt her.

It was not going to be a pleasant experience for reasons that had nothing to do with physical
danger.

The moment she revealed herself, she would be seen as a traitor until the end of days for ADVENT
and XCOM. Which was deserved, because she was a traitor. She had her reasons, but it wouldn’t
magically make her not a traitor. But she did feel there was a difference between betraying
ADVENT and XCOM, and betraying her species.

One was more important than the other, regardless of what it cost.

A chime outside her door sounded, and she waved it open. She could tell it was Nico outside, since
there wasn’t anyone who felt remotely like him. He had also recently undergone the procedure,
though unlike her, didn’t look overly different or taller. Though he very clearly hadn’t been
informed of her own changes as he took a step back as she stood, towering over him.

“Hi Patricia,” he said hesitantly. “You look…different.”

“A bit bigger than you remember,” she gave him a smile. “Revelean can’t resist showing off in
some things it seems. Not quite what I had in mind, but I’m not complaining.”

“Well, that’s good to hear,” he said, giving a cough. “So you actually did it. The Imperator choose
you to be his Harbinger.”

“Or Avatar,” she shrugged. “They use the terms interchangeably it seems. Avatar seems more
accurate, but yes, I did. I couldn’t go back; not with everything I know now.” She raised an
eyebrow to him. “You would have preferred this position?”

“Being the public face of the Imperator?” He asked in disbelief. “No way. I mean…it’s a great
honor and you’ll be great at it, but that’s not what I want.” He motioned to his plain black clothing.
“I’d rather keep in the background and not have every XCOM squad trying to hunt me down.”

She smiled at that, and he gave another awkward cough. “Are you ready for that?”

“For what?”

“XCOM,” he clarified, gesturing aimlessly. “Coming after you? You’ll have to fight them.”

“Yes,” she said quietly. “I know. I knew what I was signing up for when I decided to join the
Imperator. The best I can do is make it quick and painless for everyone involved and maybe save
some of them.”

He looked doubtful. “Do you think any of them will listen?”

She shrugged. “I don’t know. Probably not.”

He nodded. “I’m sorry. I know you were close to some of them. Friends or otherwise.”

“Appreciated,” she said. “I’m not going to mourn yet though. Nothing has happened yet. Even
though it likely will go the way I fear it will.”

She focused on him. “What about you? Are you ready?”

“Yes, I think so,” he said a bit hesitantly. “Me and Sicarius have experimented with the merge. I
don’t know if Revelean gave you—"

“He gave me pretty much every warning. Several times,” she interrupted with a smile.

“Right,” Nico cleared his throat. “It’s…even more intense than he described. It’s impossible to fully explain until you experience it. You see into your partner’s mind, but at the same time it’s yours. Merging memories and knowledge, but at the same some individual and separate.” He shook his head. “It’s amazing when you get over the disorientation. The first time I did it I couldn’t even walk in a straight line without falling over.”

“They said that I would learn abilities he knew quickly,” Patricia said, curious. “Did you learn anything new that you didn’t before?”

“As a matter of fact, I did learn a fairly useful trick,” he said, smiling. “Just a second.” He lifted a hand as purple energy coalesced around it, before a small portal appeared before which he stepped into and emerged a short distance away. “Couldn’t do that before, always had problems with concentrating,” he said as the energy faded. “Turns out all I needed to do was merge with an Ethereal and that problem is solved.”

He nodded to her. “You’re lucky. With the Imperator as your Anchor you’ll know everything. Psionic disciplines you couldn’t comprehend before; powers that were too complex, and so on. I do envy that about you. But after the war is over…” he shrugged. “Plenty of time to practice. Yang is back too, by the way.”

“She was gone?” Patricia asked.

“Oh, you were still undergoing the procedure,” he nodded. “She took the Trial of the Battlemasters. And succeeded.”

Huh, that was interesting. “Good for her,” Patricia said slowly. “What exactly did that entail?”

“Going to the Dead World,” Nico said apologetically. “The details are extremely secretive, so I’ve heard. I don’t know much more than that. But I don’t think the fact that the planet is close to Paradise Station is a coincidence, and Yang definitely didn’t seem happy when she came back. She looked…shaken. But she survived, which Cogitian was mildly astounded by.”

“Aliens breaking barriers,” she said dryly. “He probably didn’t think she could do it.”

“The Trial killed Battlemaster candidates,” Nico reminded her. “Most of whom were probably more powerful than her. It’s definitely an accomplishment that she did it. The Battlemaster is probably pleased as well.”

“He definitely has high expectations for his Avatar,” Patricia noted. “All I had to do was say yes.”

“The Battlemaster is a bit different from other Ethereals, I’ve noticed,” Nico agreed. “Not necessarily a bad thing, though he has clashed with the Imperator as of late. Regarding the war from my understanding. He doesn’t like the Imperator’s meddling.”

“Makes sense why,” Patricia shrugged. “This was his job and only his job for a while, and he doesn’t think everyone else is as qualified or smart as he is in this field. He’ll get used to it though, I’m sure.”

A moment of silence passed between them. “Will you be participating in the operation?” Nico finally asked.
“Not at the beginning,” Patricia answered, thinking. “But if it drags on…then likely. What about you?”

“I will be,” he nodded, lifting a piece of paper. “The Ethereals are apparently willing to start getting rid of the heads of ADVENT directly. With the direct authorization of the Battlemaster. Guess who my target is?”

“Saudia?” Patricia couldn’t think of anyone else at the moment.

“What? No!” He snorted incredulously. “Way too risky right now, so I’ve been told. No, the target they gave me was Rena Shu-chan.”

The name Patricia immediately recognized. “The President of Taiwan.”

“Correct,” he nodded. “And after the city is razed to the ground by Isomnum, their leadership will fall with it.”

***

Administrative Command of the Sovereign African States, Abuja – Nigeria

3/7/2017 – 11:51 A.M.

The day had come, and this was as good as she was going to get. The message given by Isomnum had not exactly been something she was in support of, but Macula had explained that this was in service of intimidation and the war – if one had to be waged – would be far more conventional. He was under the control of the Battlemaster at the end of the day, who had some sense of honor. The bombardment of military and government locations was one she could accept as justifiable, especially as an actual warning had been given. She would not have ordered such, as the risk of collateral damage was especially high, at least in Taiwan. Right now in Japan it only appeared that there were military targets.

While she couldn’t completely get rid of the feeling that there was an ADVENT sniper or operative just waiting for the shot, rationally she knew she had nothing to worry about. The building where the address would be held was completely sealed off by SAS soldiers and personally swept by Macula and his operatives for any spies or traitors.

The room itself was fairly grand, and ironically she realized that in many ways it echoed the red and black color scheme of ADVENT. Although there was more white mixed in than ADVENT had. Chandeliers hung from the ceiling of a room which more closely resembled a ballroom. A podium was placed on an elevated section of the room, with a red carpet leading before it over the marble tiles.

Chairs were filled with the ranking officials in the SAS military, which included all of the former ADVENT soldiers and some of the newly risen native officers. A few select aliens were also seated with the crowd. A civilian crowd was also gathered at the back, and they were being thankfully quiet and respectful. Mostly because they knew that today of all days, interfering would just get them kicked out.

Betos herself was clad in her SAS armor. She was and always had been a soldier, and it was important ADVENT remembered that they were fighting one, even if she was still leading the only effective Human resistance against ADVENT. Her helmet was placed on the podium, and the red cape reminiscent of the one she’d worn while in ADVENT was borne in stark contrast to the night-black of her armor.
Keeper stood off to her left, in his uniform devoid of any markings. Hands clasped behind his head and glowing eyes appraising the room – and soon those watching – he was the ever-watchful alien observer. There had been some discussion on if Macula himself should be in the picture, but it was dismissed because Macula didn’t want the public spotlight, and would give ADVENT easy propaganda material.

If an Ethereal stood behind her as she gave a speech, they would just say she was mind controlled. The message would be undercut.

So Keeper had been the alternative.

Mox stood to her right, helmetless like her and wearing his armor. He’d been with her since the beginning and an instrumental part in the initial defection and forming the SAS, even through its growing pains. It was good that he was here now, even if he wasn’t particularly comfortable before a camera. But he didn’t need to speak today.

She did.

“We are ready, Grand Marshal,” Keeper told her, using her official title as the overseer of the Military Branch of the SAS. “Give the signal when you are.”

She nodded, and motioned to the camera crew which would begin filming and broadcasting it around the world. She knew that there would be immediate attention due to the alien by her side. She waited a few minutes for it to propagate, and get the all-clear from the crew in the back who confirmed they were streaming and the link was stable.

“I am Grand Marshal Betos, and Acting President of the Sovereign African States,” she began. “The many people who are watching will no doubt know me better as former Marshal Helsa Betos, the defector. I left when I would not continue with ADVENT’s unrestricted and harsh measures against the rest of the world. As expected, they have branded me a traitor and condemned my name in the history books.”

She rested a gloved hand on the podium. “ADVENT would have you forget their policies of control and deception. They would have you forget the purges of the Middle East, their invasion of Canada, Uruguay and their destabilizing influence on other nations to manipulate them into leaving as we see in the United Kingdom. It is important to understand that ADVENT is focused primarily on deception and lies to achieve their goals.”

She opened a palm and made a short wave motion to the cameras, looking in each one briefly. “Consider how much control ADVENT has in your lives if you are even able to watch what I am saying now. Who decides what is acceptable to be shown on the news? Who decides what is taught to your children and what is appropriate civil disagreement? Who decides which candidates are suitable for election? For those who live in ADVENT – how much control do you have in your lives?”

Betos pointed upwards. “ADVENT controls every aspect of your life, and they hide it cleverly, but at the end of the day, you are merely a means to an end. A soldier, a worker, a doctor; you are just a single piece in their war machine. The world under their control will resemble a sterile realization of what it means to be Human. There will be no independence or free will under ADVENT – only what they decide is what is best for you. But despite what they would have you believe, this is not the only option.”

Her arm lowered, she continued. “It is no surprise that you will fear and hate the aliens –
ADVENT has done much to stoke this fear. But understand that this is not the truth, merely something twisted to served their own purposes as it always is. I have been in contact with the aliens for months now, and they have greatly assisted in the continued development of the nations which have hosted myself and those who made the brave decision to follow me.”

Betos put some additional emphasis on the word *months*, since she derived some joy from the fact that right now Saudia was probably demanding how all of this had happened without her knowing. Someone in ADVENT was going to be getting yelled at very soon, she had a good feeling about it.

“Much of the aliens has been shrouded in mystery and propaganda,” she said. “ADVENT would have you believe it is a tyrannical state where the Ethereals rule with an iron fist. This is not the case. As the name implies, it is a Collective of species. Each one is allowed to develop independently and without direct Ethereal control. All these species are prosperous and advanced – and this could be our future. Not one under the authoritarian and Orwellian grip of ADVENT, but one where Humans continue to develop in unique and divergent ways without the fear of going down a ‘dangerous path’ as ADVENT would say.”

She subtly indicated Keeper. “The Sovereign African States have officially formed an alliance with the Ethereal Collective, and they will back us against the inevitable retaliation from ADVENT. They cannot stand the prospect of there being any option aside from themselves, for to them, there is only *one* path for Humanity. Within the Sovereign African States, there are many. We do not force others to *conform*, instead we encourage *diversity* in all aspects of life; of the different states and peoples. A place that is safe, just, and prosperous.”

Focusing on the camera, she began her conclusion. “This is a direct invitation to all countries of the world – those outside of ADVENT and the people within – that there is more than just ADVENT. Our alliance ensures that we have the manpower and technology to withstand the reprisals of ADVENT – and this can be yours.”

“Each individual and nation faces a choice today – will you choose to stand and defy ADVENT and insist that each Human and nation follow their own path, in their own way? Or will you obey the demands of ADVENT and remain as slaves to their whims; forever bound to their singular and controlling vision of what it means to be Human? I cannot make this decision – it is up to the world to decide what kind of Humanity it wants.”

The cameras knew that moment was the time to end it, and after a few more seconds, the stream cut and the broadcast ended. As they were speaking, diplomats were reaching out to all immediate neighbor nations to discuss the possibility of joining the SAS – and sharing news of the aliens in the process.

“Good speech,” Mox said. “Assuming ADVENT even allowed it to be played. But you know they won’t let anything come of this. Any protest will be crushed.”

“Yes, I know,” she sighed as the room began getting louder as conversation began. “But it was important to include – especially for the holdouts.”

“Regardless of the effect,” Keeper said with some amusement as he looked over the crowd. “I think it is safe to say that someone in ADVENT is getting yelled at.”

***

*Joint ADVENT-Chinese Command Base, Beijing – China*

*3/7/2017 – 12:10 P.M.*
“Get me Director Falka on the line now!”

“Yes Chancellor!”

Of all the things she’d expected to have to deal with today, the traitor Betos and the United States African Edition was not something she wanted or needed in her life right now. That would have been irritating enough, but no, the fact that the aliens were openly backing her turned the situation from an irritation into a very real threat.

In a miraculously short time, the hologram of Elizabeth appeared in the recently-secured room which would serve as a place where she could maintain a presence over the coming conflict. Elizabeth – understandably – looked rather nervous. “Chancellor.”

“Elizabeth,” Saudia drawled, keeping her voice calm. “As of this moment, I am currently in China preparing to coordinate preparations for an invasion, the upcoming refugee wave, and overseeing the evacuations and reorganizations of two countries at the same time. In addition to that, there is just under four hours until said countries being evacuated are going to be orbitally bombarded to rubble.”

She raised a finger. “I just got finished with an initial response press conference – which I think went rather well – and what is the first thing I see when I land in China? I see Helsa Betos giving a speech – surrounded by seemingly advanced soldiers. It wasn’t the worst speech I’ve heard, personally. But I honestly could have had my day be better if she wasn’t in it.”

Saudia paused while Elizabeth winced. “There was one other thing…” Saudia paused dramatically. “Ah! I remember! Would you care to tell me how the fuck you didn’t know the Collective was supporting her!?”

The Chancellor jabbed a finger at her. “I am very tempted to have you expelled for gross incompetence when this situation is stabilized unless you have a very good reason for why we had no indication of this whatsoever. You told me that the SAS wasn’t a problem. It’s one thing to not know what she’s doing every minute of the day, it’s much worse if we don’t know she’s getting support from the aliens!”

Saudia took a deep breath, really wanting to throw something. “Tell me what exactly all of your agents down there have been doing. Now.”

Elizabeth swallowed. “I assume responsibility for this Intelligence failure. We don’t know what happened. We’ve been getting reports from our agents documenting the training and development of the SAS military, but nothing even remotely like what was shown. And no mention of any alien involvement whatsoever.”

She took a breath. “Our working theory right now is that our agents or communications have somehow been compromised. Almost certainly an Ethereal behind it, perhaps more than one for a deception this major. We didn’t anticipate something like this due to the Manchurian Restraints.”

“Of all people should know the Restraints are not completely foolproof!” Saudia practically hissed at her, forcing the Intelligence Director to wince. “I know that. It’s your job to know the weaknesses and take them into account.”

“I don’t dispute that, Chancellor, we are prioritizing this immediately,” she answered quickly. “I can assure you that we will determine the cause of the failure and that it will not happen again.”

Saudia gave a joyless smile. “I’m so very pleased that we’re discovering unaccounted for failings
in our operations on the eve of an invasion of China and mere hours away from Cleanser Ships arriving to pound our cities into dust.”

“Your concerns are well-founded, Chancellor, we’re doing everything we can to mitigate them as quickly as possible,” Elizabeth said quickly. “Every agent involved in Africa is going to be questioned by the Inquisitors and Oversight Division. Any compromised or corrupted agents will be purged and our policies completely secured.”

“I believe you,” Saudia said, shaking her head. “I expected better of you. There could not be a worse time for this to be discovered. So yes, you will fix the problem as soon as possible. But because of your failure, the SAS is now an alien-backed threat that we are going to have to deal with in addition to whatever the aliens have planned now.”

To her credit, Elizabeth didn’t dispute that. “Yes, Chancellor.”

Saudia sighed, and rubbed her forehead. “I’m drafting a response to her little speech since this needs to be dealt with immediately in that way. Get the media talking about that, at least. It’s going to pull time away from the evacuations, but I don’t really have a choice. The best we can do is damage control now until China is resolved.”

“Understood, Chancellor,” Elizabeth sharply nodded. “In addition to fixing our intelligence failings, we will assist to the best of our capabilities until this situation is resolved.”

“Considering that was what you were going to do anyway, I’m not going to give you praise for actually doing your job,” Saudia said coldly. Normally she didn’t chew out subordinates like this, but she was stressed and irritated, and Elizabeth had no excuse for missing something this major. “We will deal with the SAS shortly, and if you really want to start making amends you will put together a squad to either capture or execute Betos. Go to Weekes or the Commander if you want to, but don’t be surprised if they don’t have time right now because of the invasion that is coming up.”

“I’ll begin work on it immediately, Chancellor,” she promised. “Further instructions?”

“Start fixing your mistakes,” Saudia scowled. “At the end of this, you will stand before my cabinet, the Oversight Division, and the Congress of Nations and tell them why you deserve to keep your job. You’d best make a miracle happen if you want to keep it. Get to work, I’ve got a crisis to resolve.” With that she cut the feed and sat back down, still fuming.

Shaking her head and expelling another sigh, she returned and began furiously writing. Later she would need to have Aegis or one of the defectors refute Betos’s notion that the Collective was somehow better than ADVENT of all things. Because some idiots were going to wonder if the traitor had a point.

She simply did not have time for this, but she couldn’t let the traitor have the last word.

***

Temporary Residence of the Japanese Imperial Family – Germany

3/7/2017 – 2:11 P.M.

A temporary new name and face, although unlike Nemo, this face he was only strictly wearing for the job. He doubted his acting skills would need to be put to the test. No one seriously considered the Imperial Family of Japan worth serious consideration, so there was less…protection…for them than there would be for heads of state with actual political power.
As he thought this, looking into the armored compound with no fewer than ten guards outside and four snipers on the room.

Pointless security, for he was just going to walk in, or more accurately, drive in.

The mind-controlled Human driving the limousine drove to the initial checkpoint and would say that Prince Kaneda was returning to the residence. There had been a Zararch spy watching the Imperial Family for some time. Of all the resident members of the Imperial Family, the Prince and eldest son of the Emperor was most prone to leave, likely because he knew that one day he would assume the title of Emperor.

Today, he had predictably left to presumably meet ADVENT officials. The perfect opportunity to enter with his face. The limo taking him to ADVENT had been dealt with, as the Prince had been temporarily mind-controlled to call ADVENT and inform them that he needed to return to the compound. His body would be found later.

But the face of Prince Kaneda would be useful for a little while longer yet.

A simple matter of the driver handing the identification, and they were inside. He knew the schematics of the compound, as they had been psionically extracted from the living Prince and then shown to him. The first order of business was the disabling of internal security. There were far fewer guards on the inside than outside, which would make his job far easier.

Exiting the limo in the garage, he was greeted with one of the family servants. “[Welcome back, my Prince,]” he greeted in Japanese. “[Your meeting with ADVENT was productive?]”

He readied his throat. The language of these people was less straightforward than most other Human languages. While he doubted it would be noticeable to this old Human, he unfortunately had not had enough time to fully perfect the voice. “[Well enough, I need to think.]”

The man didn’t seem to notice anything. “[Do you require my assistance?]”

“[No, but there is work I need to do.]” The doppelganger of the now-dead Prince walked past the man and into the main compound while he considered his targets. He stopped to get a glass of water from the open kitchen area while he looked around. No guards, and there shouldn’t be any outside the security room. The youngest children – Mashai and Rena – were watching a movie on the television. Good. If they stayed down here it would be easier to grab them.

Today the children would live. He suspected they would be part of some plan the Zar’Chon had regarding the future of Humanity. Or perhaps he would use them as hostages or give them to Isomnum to kill on live television. He didn’t know, nor particularly care. All that mattered was the elimination of the Imperial Family, the extraction of the children, and that no unnecessary individuals be killed.

The third aspect he had added himself. It was useful to send a message to ADVENT. The skill of a true assassin at work, and a professional assassin didn’t leave any collateral damage and was long gone by the time the bodies were found. While this was admittedly not the most difficult of assignments, it had been a while since he had participated in such an operation.

Drinking a glass of water – for theatre, nothing else, as the water did absolutely nothing to him – he moved to the upstairs and rounded the corner of the balcony which overlooked the main kitchen and room. The security room however, was on the third floor and directly at the end of the hallway. Nemo found it interesting that even in their exile, the Imperial Family still maintained some semblance of their luxury, as the colorful rugs and ornate furniture showed.
Unsurprising, perhaps. Humans born to privilege expected it their whole lives.

He gently tested the door handle, and found it locked. Good, ADVENT had some intelligent staff on hand here then. Normally it would force the outside individual to knock or otherwise get their attention – probably through the intercom just beside the door. Or someone could pick the lock since it wasn’t electronic.

He didn’t need to resort to any of those things. The less attention, the better. He applied a bit of strength and he heard the mechanisms of the lock click as they broke. Excellent, he softly opened the door and peered in. The men sat facing the shifting displays of screens, as it rotated through each camera. Both were helmetless and chatting about something.

The room itself was bare in furnishings and only held the table of monitors and several large computers. He filtered out their pointless chattering, closed the door behind him, and walked up silently behind them and without warning pulled them onto their backs and applied a hand to their throat. They were flesh and bone, he was not, and soon they stopped struggling, for what little good that had done them.

He stopped, listened. Good, they were breathing. They didn’t know what had happened or who had knocked them out. He looked at the one who was roughly his size, and quickly removed the armor and applied it to himself. The helmet resting on the table would provide an excellent disguise and no one would question an ADVENT soldier.

Glancing quickly at the name in case someone inexplicably recognized him, he tied the man up at the wrists and ankles, before applying tape over his eyes and mouth and propped the man behind the wall. Not a good hiding place, but it was better than leaving the body on the ground. For the armored man, he began strapping him to the chair (after removing all weapons and objects he could use to free himself), placed the tape over his eyes and mouth, placed the helmet on him, and propped him up.

A good loyal ADVENT soldier doing his job.

Instead of merely destroying the recording equipment, he shut it down, took out the disks and hard drives and stuffed them into a small sack. Damaged hardware could still contain information, and it was best to take that with him rather than risk it being found. The cameras would still work now, they just couldn’t save anything.

He disconnected everything anyway.

Exiting the room, he began his sweep of the third floor. There were only two targets up here, the second daughter to the Emperor Aneka and her husband, Keizo. Their room would be the fourth from the corner. Now he had an easy means of entering, because he would just knock. The woman answered the door, looking concerned when she saw him. “Is there a problem?”

“Possibly,” he answered, adopting a more ‘normal’ voice, primarily German. “There may be a situation. We need to make sure you’re safe. Is your husband with you?”

“Yes, he’s right—” When she looked back, he reached forward and effortlessly snapped her neck and quickly propped her up on the nearby wardrobe, and closed the door behind him in one smooth motion. Keizo stood up from his desk, looking confused.

“What was it?” He asked, looking very worried. “A situation? Aneka?”

Nemo unexpectedly threw the bag of hard drives at him which was enough to daze him, if not fully
knock him out. That was quickly solved with him walking over to the groaning man, leaning down, and snapping his neck in a similar manner to his wife. That out of the way, he lifted the body and walked over to the wardrobe and propped up the body inside, pushing aside the garments stored within.

He grabbed Aneka, and propped her up on the other side. With luck no one would think to check there for a day or so. Well after he was gone. Shutting the wardrobe completely, he stepped back, satisfied. If he could have done so, he would have used the lock, but he didn’t intend to waste time finding it, and improvising would be obvious.

He was also pleased he hadn’t needed to resort to using bladed weapons so far. Those were too messy and left too much of a trail for them to be optimal. Leaving the bedroom, he shut the door and made his way back to the second floor. There were many targets here, several unmarried or widowed sons and daughters.

As he methodically entered their rooms and killed them, he was slightly annoyed that no matter how it turned out, he would not achieve a perfect clean sweep of the Imperial Family. The daughter who had renounced the Imperial Family to marry a man not of high class didn’t quite count, but she was of royal blood. But the other Imperial daughter had inexplicably enlisted in the ADVENT military and he unfortunately hadn’t been able to locate where she was.

Unfortunate, but one woman wouldn’t likely be able to rebuild and the moment he learned where she was, she would join her family.

Killing everyone else and the Emperor was the most important, and soon he was before the residential room of the Emperor. Fortunately the Empress had died some years back, so this easy job would be even easier. A short polite knock was done, and upon hearing nothing, he stepped inside. Emperor Tamotsu was awake, and in his bed watching the news, which were talking about the impending bombardment of Japan.

“Do you think they will be able to stop it?” He asked, not looking to the man in armor. His voice was old and frail, the voice of a man who was close to giving up. Nemo could understand that the subsequent loss, reclamation, and overall destruction the country one was supposed to preside over would likely be difficult for any individual of any species to properly deal with. Even Emperors were not exempt from this.

“Possibly,” he said, moving a little closer. “Chancellor Vyandar and XCOM always manage to think of something.”

He wasn’t even lying there. Humans were adaptable, and it was going to take more than the poorly-utilized fear that Isomnum brought and the Cleanser Ships to prevent that. No reason to not give the Emperor some positive encouragement in his final seconds. “Is there a problem?” The Emperor asked. “You normally do not enter unless there is a problem – or is it bad news…?”

Ah…such a shame the idea had never occurred to him. Well, he could remedy that. “Not bad news, sir,” he said as he walked forward, reaching behind him as if to reach a letter. “We would have received a letter from ADVENT command if that was the case. But she has sent a letter, and I was instructed to bring it to you right away.”

The Emperor’s eyes lit up. “That is…good. I-”

With a lightning jab to the throat to stun him, Nemo transitioned to a grab and snapped the elderly man’s neck. Wasting no time, he hoisted the Emperor up by his neck and carried him to the closet where there was another ornate wardrobe. Propping the Emperor up inside it, he stepped back and
Mission accomplished. It was a...pleasant feeling.

All that remained now was to extract the children.

A very simple task now, one he knew he would complete without issue.

***

Taipei ADVENT Command, Taipei – Taiwan

3/7/2017 – 3:01 P.M.

Volk was somewhat uncertain about this mission for two reasons, none of which had to do with the fact that they were about to assassinate the President of Taiwan in addition to whatever ADVENT and government officials were with her. It was a clever way of taking advantage of the situation. Volk wasn’t exactly a fan of the other operation Nemo was undertaking, since from his understanding, the Imperial Family was just being housed there, and it wasn’t like they had any influence in ADVENT anyway.

No, the first thing he didn’t like was how close they were cutting it in regards to the planned bombardment of Taiwan. The city was definitely not evacuated, but the base they were targeting was definitely going to be on the list of orbital strikes. An hour was going to have to be enough, since Nemo wanted the timing done almost perfectly.

Volk had wondered why the President hadn’t evacuated already, but she appeared to be one of those noble types that wouldn’t leave until the last minute. That, and he was fairly certain she was former military or at minimum had a solid interest in the operations, so she might want to oversee that as much as possible.

He did find it ironic that she was going to be flown to China, and from there, to Russia.

Well, he would have if she wasn’t about to be shot in the face.

He did have to admit, that despite preferring good old-fashioned weapons and gear, where his clothes were camouflaged and didn’t provide a lot of protection, as well as being mostly strung together, the Collective didn’t skimp on their tech. Collective-issue Phantom Division armor was comfortable, durable, and provided a temporary cloaking field.

Elena had asked the details about how it worked, and the answer Volk had not even been able to remotely understand, and he knew Elena hadn’t either. The only reason she’d asked was so that later when the mission was over, she could look it up and learn the specifics. Perfect memories were so very useful.

Either way, this had allowed them to set up just outside the base itself; on the roof in fact was where he was staying, and he had yet to be spotted. Snipers including some of his own soldiers and Elena, combined with Phantom Division and Zararch aliens around the area created a noose around ADVENT that they wouldn’t realize until it was too late.

Eventually, they would be able to fight back and all of them knew that they couldn’t fight an ADVENT army. With that said, they didn’t need to. They only needed to kill as many as possible.

“Everyone is in place,” the man, if such a generous term could be bestowed upon him, said. “I will begin momentarily.”
And this was the second issue he was unsure about. The majority of this operation rested on this boy that until a day or so ago he had no clue existed. He wore the same stealth armor as the rest of them, but it was painfully apparent just how young he was. Nico was his name, and Volk didn’t know his story, only that he was a powerful psion and the “Avatar of Sicarius”. Or “Harbinger”.

A new title for Humans who worked directly with Ethereals?

Either way, he didn’t like entrusting the outcome to someone he’d never worked with before, much less someone who looked like he’d just left high school. But he was overruled, and had to deal with it. The plane was out on the tarmac, heavily guarded, but ready for the passengers. ADVENT Ravens were also on standby to protect the plane when it took off.

Volk shot the kid one last look as he placed a mask over his face. It was rather odd, and fully covered it up and to a certain extent reminded him of a scuba mask, if the facemask was pure black. The air seemed to hum when he put it on, and the kid gave him a short nod before lifting a hand and vanishing with a purple-tinged distortion in the air.

“Avatar is in play,” he informed the rest of the team. “Await my shot.”

From what Nico had said, what he would do is go inside the base and begin killing people. When asked for details about how he was going to do that, Nico had explained that he could just tell people to die ‘and they will’. Previously, Volk would think that was the kid saying he wasn’t going to tell them because it sounded too ridiculous to think he was serious. But it was also apparent that psions could do a lot of unnatural things.

Maybe telling people to die was something they could do too.

One of two things would happen when people started dying. Either the President would be evacuated on the plane, or she would be moved to a safe room. If the former, that was where they came in. If the latter, then Nico would kill her. Mostly a foolproof plan unless there were unexpected elements they hadn’t anticipated.

So far there were no XCOM operatives or Sovereign Agents that they’d seen, so they should be good.

The alarm started blaring.

Nico had started.

“They’re aware,” he communicated, although that was obvious. “Prepare to attack. Probably five to ten minutes if things go to plan.”

ADVENT soldiers below were moving around and yelling to each other. Considering the way they were lining up, it looked like she was being moved out. Volk readied his rifle, quite curious to see how effective his weapons were. Unlike previously, the rounds he was using which were just metal bullets, these ones had a small amount of nanites inside them which would release upon hitting the target.

Possibly taking out others near it.

“She is coming,” Elena informed. “Four guards. A full squad behind her.” Eight more soldiers.

“Call targets,” Volk ordered. “Lining up the shot.”

The sooner he took her out, the better. He listened to the snipers call out their targets in quick
succession. When the last one was called, he lined up the shot. Her head was just in the sights, and while the slight obscuring the bodyguards provided might pose trouble for some snipers, it was barely an issue for him.

He fired.

President Shu-chan’s head splattered in a flash of red.

“Target eliminated,” he said. “Fire.”

The rounds from a dozen sniper rifles fired from around the base, killing the bodyguards and the ADVENT squad behind them. The nanites were working and he noted that they’d consumed a good portion of the face and the armor of the nearby (now-deceased) bodyguards. He swiveled his weapon to the Ravens.

Might as well make use of this.

He fired a few shots into the cockpits and engines of each plane, enough to drain the clip. He switched to a second one, though this one was just filled with standard armor-penetrating rounds. The base was now in chaos as the surviving ADVENT soldiers were being shot from all directions and had no idea where to go or take cover.

Volk felt cold satisfaction in how he took down several more soldiers who were hiding from sniper fire in one direction, while leaving themselves completely exposed to him. A few headshots took a few more soldiers out of the fight. He let a few more minutes of the pandemonium pass. “We’ve done enough here, they’ll be coming soon. Fall back.”

There were choruses of affirmation, and right on cue he looked back to see Nico standing behind him, a hand extended. Volk gave the black-masked individual a short nod. “Not bad kid, was it hard?”

Nico looked down at the ADVENT base in chaos, and answered, his voice layered and almost thoughtful. “Not really...no.”

Well, that was good enough for him. He grasped the free hand and with a wave of the other one, Nico teleported both of them away.

***

3/7/2017 – 4:01 P.M.

As the Cleanser Ships hung in orbit around Earth, twenty in total with several dozen more in the system, it was ultimately clear that the time for bluffing was over. Those in ADVENT and XCOM knew as the ships moved into position that the Collective would hold back no longer. They had done all they could to prepare for what was coming.

Each Andromedon Captain awaited the command to commence firing. Each one had been given a designated target, and each one knew the distinct possibility that ADVENT might respond with nuclear force. Something they had prepared for and would deal with should the situation arise. They were not blind to the threat ADVENT posed.

As well as the fact that even now, it was a distraction.

Let ADVENT be occupied with the impending destruction of their cities. There was more in play than they realized yet.
The command came minutes after the deadline, well after they had been moved into position. The raw, awful voice which even made the implacable aliens withdraw further into their suits. “Open fire. Scatter these aliens to the wilderness.”

The signal given, the Cleanser Ships opened fire.

They were at the maximum range; excellent for protecting themselves, but poor for precise targeting. Their capabilities were such that if they were close enough, they could destroy a singular building without significant damage to nearby structures. At this range they simply did not have the precise capabilities.

But they would not let ADVENT surprise them again.

Yellow and orange streaks rained down from the sky into cities and military bases across both Taiwan and Japan. The latter country saw the last of their grand skyscrapers and buildings fall into twisted scraps of metal and concrete. Taiwan saw their island pounded by fire from the sky; killing soldiers and civilians who hadn’t been able to evacuate in time.

The warning then came. “[Incoming missile.]”

“[Fire countermeasures and raise shields,]” came the immediate command. The bombardment temporarily ceased as the trajectory of the missile was calculated by the onboard computers, and a missile per ship was fired against the incoming one. The shields were raised immediately afterwards, protection which was strong enough that even capital ships would have difficulty penetrating it.

For it had not been the first time such tactics had been tried against the Andromedons.

The missiles collided in a bright explosion, but not a nuclear one. There were no others detected. “[Resume bombardment interspersed with the pods,]” came the order. “[They will not try that again.]”

After some slight maneuvering, the pillars of fire which rained from the sky were interspersed with orange-tipped white streaks; boarding pods to further destroy the survivors who had evacuated. They had known that ADVENT would not be overly hurt by this attack, if that were the case they would have put up a larger fight.

Their error would be shown. The first wave would be pods filled with Chryssalids and Wraith-Class Seekers. Those would hunt down the stragglers and survivors. And with the primary infrastructure of the countries destroyed, there was no defense against the pods.

The locations were secured, and the signal was sent.

From Mars, the fleet of ten thousand strong troop and vehicle transports, discounting the fleet of fighters ten time that number, began to move. Already two hundred were hanging close to the Moon, having arrived hours ago, and they began to descend towards the open ocean, avoiding clustering. In the unlikely event that more nuclear weapons were deployed, they would not lose their invasion force like the last time.

When they had reached a certain altitude, they turned under the command of the guiding CODEX, and sped towards the islands of Japan and Taiwan, carrying thousands of Mutons, Custodians, and vehicles the Collective would debut for the first time. Flanked by several dozen Sectoid Fighters each, they were prepared to take on ADVENT and XCOM in the skies.

Within four hours, the countries of Japan and Taiwan belonged to the Ethereal Collective.
As the Dread Lord stood on the shores of Taiwan, he fixed the soulless eyes of his helmet on the final target in the distance; and reached out. He reached out to feel the fear that was slowly growing in each man, woman and child, he reached out to listen through them as they whispered and yelled in angry and terrified voices.

Just as anticipated. The seeds of collapse had been planted.

It was time to make them grow.

***

To be continued in Chapter 47

March of the Dread Lord

Chapter End Notes

And so the end of Act III is upon us. Been looking forward to this for quite a while. Hope everyone had a good holiday and New Year. I would like to say that this story will be done in 2019, but not quite sure I can make that promise yet. It will be done when it's done. I'm not going to rush it or make cuts for the sake of finishing it up. If anything, I'd imagine that some things will be expanded.

To that end, if you haven't seen it already, one of my editors, Ashardalon125, has recently published the XCOM Files - Technical Addenda which focuses on some aspects of this story from a more technical perspective. So if you want a more scientifically-grounded take on some of the things in the story, that is it. More is planned to be added to it relatively soon. And of course, Edumesh is continuing with his excellently written Chronicles of Salvation. I recommend you check both of these out, not just because they're considered canon as far as in-universe continuity goes, but because they're both legitimately good and worth your time.

Thanks as always for reading. Here's to a good year.

- Xabiar
March of the Dread Lord

Busan Military Base, Busan – South Korea

3/7/2017 – 8:12 P.M.

It had been a very long series of hours as ADVENT prepared for a full scale invasion. Initially it had been more of a limited response, since it still wasn’t clear if Korea and Busan specifically would be another target. Duri and his squad were held back from going into the trenches to wait, and instead were moved to helping set up the artillery pieces, carry around boxes of ammo and grenades, and other general tasks.

Then the bad news had started rolling in, and the situation got worse and worse. The first bit of news was the fact that Betos had apparently not only proved herself as a deserter to ADVENT and a coward, but a full and legitimate traitor by openly stating her intent to side with the aliens against ADVENT.

As an officer, Duri had to maintain some kind of professionalism when he relayed the news to Aleksandra and Cara who were with him at the time. Both women had been dumbstruck when he told them, and then quite justifiably furious. Aleksandra’s voice had dropped to glacial temperatures when she’d expressed her displeasure in a remarkably restrained way.

Cara had been…less restrained. “If I have the displeasure of running into that bitch,” she had practically growled as she shoved cases of ammo into boxes. “She’s going to find out how it feels to have a plasma grenade shoved down her throat.”

He’d allowed a smile at that, glad the helmet could allow him to not have to worry about keeping a stoic blank face. Underneath, he had been seething. He, along with quite a few others, had eventually watched the entire speech the self-righteous traitor had given and he had privately wondered just how brain-damaged she was, assuming she actually believed it and wasn’t being mind-controlled.

The fury that built in him when she had the gall to say that it was ADVENT who was the tyrannical evil, instead of the Collective – made him want to do much worse to her than shove a grenade down her throat. The bodies of his family and girls stuck in his mind; senseless deaths caused by aliens, and that was far from the worst they’d done.

Thousands of captured people; experiments on babies; the utter horror that was their Blacksites.

And she stood there with a straight face and said that it was people like him who were the enemy.

He’d heard it said that traitors were often more hated than the actual enemy that was being fought. He understood that now. Hard to believe that even in this conflict, there were those who would rather turn on their own species than get over the differences they had with everyone else and fight back.

Given what he was just learning about, it seemed like something of a sick joke that the Collective had played on their little puppet. He was not quite in pure disbelief, but it was still a difficult thing to accept. “What happened?”

“The Imperial Family…the Emperor…is dead,” Nobuatsu said haltingly, slowly lowering the
tablet in his hand. “No details right now other than that there was an attack and none of the Imperial Family survived.”

Duri couldn’t relate to feeling a sense of reverence and loyalty to someone like a monarch. Granted, he knew the Japanese didn’t really view the Imperial Family as divine anymore, but they still held them in extremely high regard, essentially a celebrity status. He didn’t personally get enamored by those kind of people, but his daughters had of course had their share of people they admired, pop stars and the like. He couldn’t relate to that.

But he did understand loss now.

“I’m sorry to hear that,” he said, putting a hand on Nobuatsu’s shoulder. “There will be retribution for this.”

“It’s almost kind of unbelievable,” he said numbly, leaning back into a wall and tossing the tablet onto the table. “I’m not sure whatever deity we angered, but the Collective really has it out for my people. We lose Japan, we retake it, we lose it again, they level it from orbit, and now the Emperor is dead.” He shrugged. “I guess someone thinks we haven’t paid enough for World War II.”

“Hey,” Duri snapped his fingers. “Cut that out. The world is past all of that now and no one cares, definitely not some mystic deity. Taiwan was just captured too, and Australia hasn’t even had the luxury of being reclaimed. Hell, Africa now has aliens controlling part of it. China’s about to be fighting an Ethereal who wears a skull for a helmet. Japan isn’t special here; everyone has lost something at this point, and the only thing we can do about it is either reclaim or avenge.”

His voice hardened after he took a breath. “I can’t bring back my family. But you can do more than avenge the Emperor and his family, you can actually take back your country. So make that your goal.”

“Yes, you have a point,” Nobuatsu rubbed his eyes. “And maybe it isn’t all hopeless. They’re also saying the two Imperial children are missing, and likely abducted. So they’re probably alive and hostages. They can be saved.”

“There you go,” Duri patted him on the shoulder. “Two goals to follow. Bring back the children, and take back your country. Get angry and have a plan.”

Nobuatsu looked over to Duri curiously. “Nice words, but I’m not sure how much of a choice I have here. I don’t make the deployment decisions.”

“But you do know an Officer who will help,” Duri said. “And in the end, you can only do so much.”

“And…” he hesitated. “What about you? You have a plan?”

He almost chuckled, but it wouldn’t be appropriate and it was a fair question. “Not really, not anything concrete. I don’t have anything I can get back now.” He picked up his gun. He heard soldiers rushing past him towards the trenches. “The only ‘plan’ I have is to kill as many aliens as I can and eradicate this Collective piece by piece.”

He was mildly surprised Nobuatsu didn’t ask what would happen after, but instead just nodded. “Well, I think I’ll help you with that plan in addition to my own. It seems you will need it if you want to eradicate the Collective.”

Duri smiled grimly as he pulled out his rifle. “I’ll take it. Looks like something is happening. Let’s check it out.”
The mood was tense, but calm. There was a certain isolation to being in the wilderness in what ADVENT liked to call a ‘castle’. They were quite dedicated to following through on the pseudo-medieval theme of the Order of Terra, even if what they actually included had quite a few distinct differences. Namely that the supposed ‘castle’ was more or less a smaller and more fortified military base tailored with training grounds and other necessities of the Order.

Yet there was a kind of homage and aesthetic here that pleased her. Kaya had always been one to appreciate ceremony and rituals; partially because of her upbringing, and partly because she simply loved participating in such events. They were experiences one could not get anywhere else, and while others may have dismissed them as archaic and dated, there was a meaning and history she couldn’t help but respect.

It was almost funny in a way; the idea that someone had pitched an idea to ADVENT about creating a modern order of medieval knights. With samurai thrown in too for good measure. Kaya was personally quite unsure who had originally proposed and greenlit the project, since it had also sounded somewhat…odd…to her when it was first proposed.

Wars weren’t fought that way anymore. She could see a kind of ceremonial role for something like that, but according to Lord Hamilton, it was intended to be a fully-fledged military branch of ADVENT for use in legitimate combat operations. She admittedly wasn’t a military strategist, but it seemed like an odd investment especially during a war.

Hamilton had found that amusing, and promptly showed her some of the actual suits and weapons.

As it turned out, she should have had more faith in the intelligence of ADVENT. While ADVENT may have taken inspirations when naming the various positions in the Order, they were fully kitted out with modern armor, weapons, and tools. Knights carried rifles and grenades in addition to their MELD-enhanced swords; the Unit Standards carried by the Standardbearers were walking PDS fields to deflect plasma, and her own kit included grappling equipment, and a sniper rifle in addition to a katana.

The way they would be used was also tailored to their actual strengths. They were ultimately best for close combat, and that is how they would be used. Leading the charges in choke points, clearing out enclosed buildings and bases, and engaging with the alien units who also had melee forces. The Oyariah Titans were touted as the main threat, and there was also a Dath’Haram equivalent that was much less known.

And all indications suggested that, after several hard months of training, they were going to be deployed very soon. Soon ADVENT would see if this little project was justified or not. Kaya had faith; the men and woman who’d been selected were certainly among the most physically adept of Humans that she had seen. It reminded her more of a special forces unit than a “standard” military branch.

Given the weight of the armor and equipment each member had to wear, the weak were either weeded out or adapted to grow stronger.

After drilling almost nonstop, the majority were quite ready to be deployed against an actual threat. For her own part she wasn’t exactly apprehensive…but it was going to be a much more intimate
experience than her previous roles in combat. It turned out that she had good aim, and had managed to kill a decent amount of alien soldiers, but that was at range.

She was pretty sure she’d still be the one picking off aliens, but it was going to be closer.

But she trusted her unit. They’d all had to get used to each other quickly after being more or less thrown together in the beginning and forced to work together or get thrashed by some of the established units. But they’d done it, and she was confident they would do well. Still, at times she wondered the wisdom of keeping her actual identity a secret.

They knew her as Tora Sato, with the cover story of a civilian who’d enlisted and proved herself over some of the major battles of the war. Only Genevieve, one of the Gunners from her original squad, had also been asked to participate, and even she didn’t know. Unlike her, Genevieve had originally been a British soldier, which was plainly apparent from the fact that she was the largest woman Kaya had ever seen. Her entire family had military service, and her husband was working somewhere in ADVENT Logistics. She was coy about where.

Kaya hadn’t pried. Everyone had the right to their secrets. Although in her case, they were more for reasons of personal security than anything else.

So far, no one had guessed that the lithe, short-haired Japanese woman was in fact Kaya Yamato, a Princess of the Japanese Imperial Family. The only thing that might tip people off was her very distinct stone-gray eyes, but no one had yet made a connection. The decision to join the military directly had not been taken especially well, but she wasn’t going to be dissuaded, and no one was going to make a public scandal out of the fact that one of the Imperial Family was actually going to do something as opposed to being a historical relic.

Kaya saw very clearly what ADVENT was going to mean and it worried her. ADVENT was meritocracy incarnate, and anything that didn’t provide them with benefits was going to either be reduced, removed, or cut off entirely. If the Imperial Family didn’t do something to show that they were more than a rich family and cultural icon, ADVENT would reduce them into irrelevance – and not entirely without reason.

Strategically for the family, it was the most practical thing to do. Personally for her, it was the right thing to do.

As she’d told her brother, if the aliens won, there wouldn’t be an Imperial Family to survive. They definitely wouldn’t want something like her family hanging around.

Her status had made enlisting a bit more of a challenge, because ADVENT actually seemed torn between using her as a combat asset, or as a propaganda one. She’d had no interest in being any more of a celebrity than she already was, and had told them she’d be an actual soldier or not at all. So they’d given her an assumed identity and backstory, and deployed her with a mostly foreign squad who were unlikely to recognize her.

And in the event that they were, she fortunately didn’t look much like her public pictures anymore except for the eyes. Her long hair was (sadly) cut off completely. She could have kept a little of the length, but she’d dismissed that for practical and recognition purposes. She also now sported a visible scar on her forehead where shrapnel had scraped her when they’d fled from Japan.

In truth, she doubted anyone really cared. The soldiers were more concerned with what the aliens were doing and how to prepare than if they were serving with a princess or not. But it wasn’t worth having attention on her or any kind of preferential treatment which would unfortunately happen, intentionally or not.
She’d wondered how it would feel to see her homeland fall again, this time ravaged by the fire from the sky, but the second time hurt less than the first. Hamilton (who was one of the few to know who she really was) had given his opinion that it would be one of the first countries targeted when the aliens came back and would likely fall because, as he’d said, “The aliens have something to prove now.”

How right he was, and it was good she’d emotionally prepared for this.

She’d been mildly irritated that she hadn’t been able to help reclaim Japan the first time, but fortunately – or unfortunately in this case – it looked like she would be after all. All the more satisfying to kill the aliens occupying the land that rightfully belonged to her people. Killing aliens, as it turned out, wasn’t as hard emotionally as she’d thought it would be.

Maybe because it was psychologically closer to shooting an animal than a living being.

Then again, the aliens were like animals, or perhaps parasites. A quite literal invasive species on the habitat that was Earth. And the only permanent solution to an invasive species was extermination.

Someone walked into the room where she was sitting, the armory in particular, as she found it a good place to think and no one usually loitered around it. To her mild surprise, it was Hamilton. He looked grim, but it wasn’t a surprise given everything that had been going on. “We deploying?”

She asked, standing.

“Nothing about that yet,” he said, shaking his head. “But come with me. We need to talk.”

This was highly irregular. He usually only made a point to talk to her in private when the subject matter related to her identity. With growing concern, she followed him, wondering what had happened that they hadn’t heard about yet.

***

ADVENT Military Command, Situation Room – Switzerland

3/7/2017 – 8:29 P.M.

The collection of military and intelligence officials was crowded around the holotable as Saudia stood in the center, flanked by Laura and Weekes. The fact that Watkins and a not-insignificant number of operatives of the Oversight Division were present quite rightfully made most of the people – especially those in ADVENT Intelligence – nervous.

Elizabeth was also in the room, though keeping to the back now that the military itself was taking the initiative in this situation. Saudia had already made a short statement to the media, and she was working on writing a more in-depth rebuttal to Betos as her supposed speech. In a morbid way, the assassination of the Imperial Family would serve as a good illustration as to what the Collective actually intended.

One thing Elizabeth had pointed out – and something Saudia found rather interesting – was the fact that none of the leaders of the SAS had been seen since…well, according to reports, quite a while. Which definitely made her quite curious as to their fate. Could they have potentially been considering turning Betos over and she’d promptly sicced the aliens on them in retaliation?

Something else to confirm before she used it properly. For now she would merely float the question.
However, right now she was far more interested and invested in burning the SAS to the ground. Betos being a defector was bad enough, but it took a special kind of selfishness to turn against her own species. And unlike what EXALT had planned, she had no illusions that Betos was seeking to ‘use’ the aliens to their own advantage. She was too idealistic, too stupid for that to have even entered her mind.

She would have considered that manipulative or wrong.

Fool.

Saudia wondered for a moment which outcome would ultimately be best for ADVENT. The swift assassination of the traitor and taking her out of the picture. She was, for better or worse, the figurehead. She would not be so easily replaced, and the other Humans, specifically the defectors, were probably more loyal to her than the aliens. At best it could cause infighting in the SAS before the aliens inevitably took control.

On the other hand, it would be an especially effective demonstration of ADVENT’s intolerance for traitors if she – and the other defectors – were brought back to ADVENT alive, and the world would watch as they were jailed, prosecuted, and sentenced to the Experimentation Labs. It would be both cathartic for the general population, and the traitors would serve some final use before their likely inglorious deaths.

She particularly wanted Betos to be alive to see everything she had worked towards fall apart and die.

Saudia allowed a thin smile at that; eyes with a furious glint in them. The others in the room saw that, and knew she wanted a plan that would make the SAS regret they had ever involved themselves in this conflict. “Thank you for arriving on such short notice, and for coming up with a plan of action to address this development,” she nodded to several of the uniformed officials. “We’ve all been appraised of the aliens massing on the islands, and indications are they will launch their attacks on China in just under twelve hours, in accordance with Isomnum’s demands. However, they could launch an attack on Korea before then since they are an ADVENT nation. But we are all here to handle the SAS and determine the response. Commander?”

“Thank you, Chancellor,” Laura took the center, and the holotable flared to life and focused on the continent of Africa. “The Sovereign African States have effectively declared war on us. We intend to negate this threat quickly and effectively. Right now, our operations will be to contain and sow chaos throughout the region, and Chief Diplomat Hassan will be leading a blitz to align ADVENT with the remaining independent nations. Yes?”

She nodded to one of the Marshals. “That approach seems too ineffective, Commander,” he said. “No disrespect to Hassan and the Diplomatic Corps, but we need to deny the SAS countries now. Is annexation completely off the table?”

“Yes and no,” Laura clarified, looking to Saudia. “Chancellor, would you explain.”

Saudia nodded. “Annexation is bad from an optics standpoint at the moment, and ADVENT will at least make an attempt to get them on our side. There are requirements to demand the annexation of a nation, and right now the independent African nations have not met them. However, the moment a nation refuses to allow troop movements or is actively allowing SAS traffic, those will be grounds for termination.”

“Which I will note are stipulations that we are making in our outreach to the nations,” one of the Diplomatic Corps added. “We’re giving them demands, yes, but as you said, we’re not going to
tolerate additional treason. The nations can keep their independence provided they allow us to move through them without issue, and flatly refuse any kind of agreement with the Sovereign African States. We are making it clear to them that failure to do this will result in authorization to annex their country.”

“So annexation could very well happen quickly,” another Marshal said, her voice grim. “They aren’t all going to agree to those demands.”

“Possibly not, but it isn’t quite just us issuing threats,” the Diplomat added. “We’re giving them some positive incentive to support us, regardless of their personal opinions.”

“Which is?”

“Protection,” Laura said. “From hostile incursions, both from the Collective and the SAS. They retain their independence, and they also gain protection so long as they allow us to move and operate in their territory.”

“That’s somewhat generous,” came a comment. “We might as well extend that to everyone in that case. Doesn’t this disincentivize joining ADVENT properly?”

“The independent countries are a means to an end,” Saudia explained. “All of this is temporary. Assuming that the SAS is inevitably pushed back or destroyed, we have a far stronger position to vie for integration. Not to mention it undercuts the claim Betos introduced about us being simple conquerors.”

“We also have yet to fully leverage our economic pressure on neutral nations,” came a comment from another diplomat. “Should the independent nations continue to be stubborn after the war, they will be able to be easily pressured into joining when they are sanctioned and their people begin suffering. This is not done now, for obvious reasons, but the nations will eventually join ADVENT. And continuing to refuse ADVENT integration in the event of us defending their country will be enough justification for such actions when the conflict in Africa is mitigated or ended.”

“Correct,” Laura agreed. “Nonetheless, we will give them all a chance to do the right thing. But the SAS is a disease that needs to be stopped from spreading. However, the diplomatic situation is one that is different from how we are going to handle the SAS directly.” Several orange submarine indicators lit up. “Our first operation is the launch of two nuclear weapons which will be detonated over the entirety of the territory of the SAS, disabling any non-hardened electronics and disrupting communications.”

“Why not just hit them directly?” Came another question. “Solve the problem immediately.”

“Considered and rejected,” Laura clarified. “Too much collateral damage, and a far greater risk of being shot down by Collective defenses. Worst case we don’t actually kill Betos, and now she has more reason – justified or not – to go after us and will appear more sympathetic to non-aligned individuals. This will hinder the SAS and aliens, as well as send an effective message.”

“We are not expecting significant damage to actual critical systems,” Weeks interjected, his arms crossed. “We’re assuming they learned their lesson from DC and are hardening their vulnerabilities. This will not apply to more general civilian infrastructure and likely their more delicate weapons. It will make her look incapable and weak, and regardless of her defenses, we can insinuate that we refrained from striking because we didn’t want to kill the civilians, contrary to what she’s said about us.”
“This is the first action of Operation Whirlwind,” Laura continued, as more submarines appeared on the map near the borders of the SAS. “This will be followed by several dozen missile strikes against various points of the SAS. As we do not have actual hard intel about the defenses, ground, air, or otherwise, these strikes will be to determine the strength and type of defenses. Based on this gathered information, future strikes will be conducted upon weaker, unprotected, or vulnerable points of interest. In the case of valuable primary targets with significant anti-missile defenses, clustered strikes to overwhelm the defenses will be conducted.”

As she spoke, the holotable lit up with the predicted strikes across various points of SAS territory. “Hassan is currently engaged in talks with the Egyptian government,” Laura said. “We are hoping that at minimum we will be able to use the country as a staging ground for surface-to-surface missiles to be launched against the SAS. Should other nations allow the same, this will be repeated. We intend to continue launching missiles using an irregular system and direction between every half-hour to two hours. We do not want to relent. We anticipate that after two or more weeks, we will have a far better appraisal of their capabilities, and the political situation will be settled. From there we will decide the course of a future ground invasion.”

The holotable now showed small graphics of planes. “However, the missile strikes will also be accompanied by nightly airstrikes conducted by the Night Witch bombers carrying ClF3, thermite, and white phosphorus bombs. The chaos caused by these, in particular the ClF3 bombs, will occupy the SAS for some time.”

“Ha,” one of the officers said. “A few more of those and you could just burn the country down.”

There was some chuckling, and Laura gave a slight nod and smile. “Perhaps some more incentive for allying with us, as we can prevent any accidental spread of the fire. Regardless, we are perfectly content to let the SAS burn to the ground and we build over it. That is not our problem. If their entire territory is engulfed by fire, all the better for us. The Night Witches are ideally built to carry this out, and not easily detectable by sensors. Should we judge their defenses vulnerable enough, airstrikes by bombers and fighters will also be authorized.”

The hologram ships and planes vanished, and now it just showed the country. “That concludes the basic details of Operation Whirlwind. This has been approved by Chancellor Vyandar, and Congress is being notified of the decision now. The nuclear strikes will commence in two hours, and Chancellor Vyandar will make a statement shortly afterwards contingent on the results.”

“Sounds good,” an intelligence officer commented. “Has a decision been reached on our satellite coverage over the nation? It’s fair to say it’s likely been compromised.”

“It has been,” Elizabeth said. “Teams are working to reclaim it. Should that prove ineffective, we will shoot it down and sent up another within three days.”

“Each of you will be given specific orders and information,” Saudia stood. “The aliens aren’t going easy on us anymore, so we need to give everything we have now. We get through this, and we can weather whatever they throw at us. It is not an exaggeration to say that the future of this war will heavily depend on the course of the next few days. Do not let me, yourself, or your species down. Understood?”

“Yes, Chancellor!” They confirmed with uniform salutes.

She returned them and nodded. “Good. Dismissed.”

***
“We expect that ADVENT will begin an immediate diplomatic blitz against the independent nations,” Keeper was saying to the small group of officials and aliens in the room, including Macula. “Considering how they handled Canada, annexation is likely to be a threat they make.”

“And ADVENT has proven they will follow through on those threats,” Betos nodded. “So there has to be immediate protection allocated to nations that ally with us.”

“Can ADVENT even mobilize enough soldiers to take over all of Africa?” Mox questioned. “Sure, they could take a few nations if they wanted, but if everyone says ‘no’, can they really take down everyone?”

“ADVENT has entire legions in the European sphere sitting and doing nothing,” Keeper shook his head. “Recruitment is growing daily. If they really wanted to, they could invade the continent. But they wouldn’t even have to do that to cause havoc. One well-placed assassin or special forces team to arrest or kill the government would be enough to force capitulation with relatively little bloodshed.”

“See Operation Deus Vult,” Betos added grimly. “They have no issues eliminating who they consider to be in their way.”

“Or who oppose them,” Macula added. “This is not a surprising tactic for ADVENT to take. They are concerned with removing their enemy, and we should be as dedicated as they are in this respect.”

Betos fixed the Ethereal with a hard look. “We will defeat ADVENT, yes, but not by stooping to their tactics. The others will soon see what ADVENT is like first hand, and that will drive them to us; no threats and coups necessary.”

Keeper sighed, his unblinking glowing eyes on her. “We are now in a war, Grand Marshal, one where our enemy has no qualms about using whatever methods are needed to defeat us. If you were ignorant watching the response the good Chancellor gave, she was not especially pleased with this development, especially on this day.”

Betos had, as a matter of fact, paid close attention to the response the Chancellor had made. She couldn’t disagree with Keeper here. Saudia always exerted authority and confidence when she spoke, but her curt speech had a clear undercurrent of fury in it. Saudia had to be completely stressed and furious about how the lauded ADVENT Intelligence hadn’t known about this development.

Betos idly wondered if there would be some management changes within ADVENT in the near future. She couldn’t help but feel some pride at causing the downfall of Director Falka. If nothing else, that would be a satisfying, if minor victory.

“The Chancellor hasn’t been pleased with anything we’ve done,” Betos shrugged. “And the best way to hurt ADVENT is not to go after the other nations, but them directly. Better yet, we can appear as liberators. Should we hear they are annexing a country, we go into it and shut them down.” She glanced to Macula. “You’ve repeatedly said that your soldiers and tech are better than ADVENT’s. So I suggest we utilize that unless you’re concerned you were mistaken?”

“It isn’t our technological advantage that is at issue,” Keeper continued coldly. “It is the fact that
there are going to be larger amounts of soldiers – ours and yours – who are going to die because of you taking the moral high ground. That is a fact. ADVENT will annex countries or threaten them into submission, and we – who are based in this continent – could very well be on the defensive within days with less territory. Which means we will expend and lose more resources to take these nations because you didn’t want to take the initiative.”

“Arguing at this point isn’t smart,” Mox placed his hands on the table. “It’s been only hours. Let the diplomats do their job. Let’s see where the political situation shakes out in a few days. I agree with Betos that the diplomatic options should be tried first. We lose nothing except a few days – and you already expect ADVENT to do something similar. ADVENT will be hesitant, they don’t want to validate Betos so quickly by invading. Everyone is going to wait to see how this plays out for a few days, and then you’ll see what ADVENT does.”

Keeper’s lips twitched. “I would prefer we not be on the defensive. Reactionary tactics will be costly. But in essence, you have a point. In the meantime though, I would have our soldiers begin massing at several locations near the borders, and places ADVENT is likely to strike.” He turned on the red-lighted holotable which displayed the continent, as well as locations of interest.

Three countries were highlighted. “Egypt, Libya, and Sudan are likely going to be approached by ADVENT, if they haven’t been already,” Keeper said. “Any one of those allying with ADVENT, or otherwise allowing them to move through their territory would be an issue. Aside from giving them a direct point of entry into the SAS, they will establish artillery and missile systems which can reach our major cities.”

“Which are protected,” Mox noted. “ADVENT isn’t getting through with a few missiles.”

“Protected does not mean invincible, and ADVENT isn’t run by the incompetent,” Keeper shook his head. “Our fortified bases will be protected, but other areas are vulnerable and it could have the effect of keeping our forces pinned. I would prefer to avoid it if at all possible”

“I presume we have missile systems of our own,” Betos motioned to the map. “We return the favor.”

“A good solution, but there is more,” Keeper said, as several objects were highlighted above the map. “We have Cleanser Ships. It will have the effect of ADVENT intensifying their attack and defense, but they will be especially effective against ground targets. The only issue will be that precision targeting will bring them in range of ADVENT defenses.”

“And indiscriminate bombardment doesn’t help anyone,” Betos shook her head. “Some risk, but that is what combined arms is. Precision strikes in conjunction with missile strikes and armed assault will occupy ADVENT from focusing on the Cleanser Ships.”

“Should we be concerned with an approach from the northwest, Algeria?” Mox asked, looking at the map. “If ADVENT goes through Morocco, they could strike us from behind.”

“Possible, but unlikely,” Keeper answered, though gave an approving nod. “Spain is not part of ADVENT, and unless that changes in the next few days, ADVENT would be more likely to spend their efforts on Africa directly. If they try to move directly through the Tyrrenian and Mediterranean Seas, they will be slow enough that we will know well before they arrive.”

“Which reminds me-“ Betos began, right before alarms began going off. She’d recognized the sound instantly thanks to her being involved in the early warning systems implemented mere weeks ago.
“An attack?” She swung her head to Keeper and Macula. “ADVENT?”

Keeper’s face morphed to thoughtfulness. “It appears so. A faster response than I anticipated.”

“It’s for this city,” Mox said incredulously. “Which means a missile strike.”

Betos stiffened, blood draining from her face. “Not a missile strike. A nuclear one.”

“Where?” Mox demanded. “How could they reach us?”

“Fuck!” Betos swore as she remembered some very important details that had somehow slipped her mind. “ADVENT has nuclear submarines. Probably off the coast. They have a clear shot to us.”

“Calm down,” Keeper switched some options on the holotable, and pressed his earpiece. “We don’t have that confirmed. I will get that now.” A pause. “Status report, now.”

“If ADVENT thinks they can bomb this city, they are mistaken,” Macula reassured her. “The defenses are capable of destroying any missile fired to this city, even nuclear ones.”

“Confirmed,” Keeper was saying, glancing to her briefly. “We have Betos with us. We’re-“

There was a faint sound of a blast, and the entire room went dark.

A few seconds later, the lights came back on.

Betos looked around at everyone frantically, mentally calming herself down and trying to lower her pulsing heart-rate. *This was way too close and fast for ADVENT.* “What happened?”

“ADVENT being cute,” Keeper actually scowled, taking off his earpiece. “I’d wondered what their plan was with this. They’ve not used nukes this entire time outside of instances where they didn’t actually hit the ground. They just used the EMP capabilities of the nuke.”

“How has that hurt us?” Mox crossed his arms. “I know the critical stations were EMP hardened, but beyond that?”

“Not everything,” Keeper confirmed grimly. “Defenses, critical power stations, and computers were hardened. Which means the SAS will be able to function and defend itself, but all civilian and non-critical parts of the SAS are out of commission. This is going to tie up additional resources to repair. Wireless communication is severed for now. We won’t have a full extent of the damage until at least a few hours.”

“No time to waste then,” Betos said, coming back under control when she accepted that she wasn’t going to die. “But if this was the beginning…ADVENT isn’t waiting around for us.”

“No, they aren’t,” Keeper agreed, looking to the holomap. “I suspect this is only the beginning.”

***

**Russian Castle of the Order of Terra, Russian Wilderness – Russia**

3/7/2017 – 6:41 P.M.

Kaya sank into her chair, numb. All sound seemed to fade away into white noise after she’d heard Hamilton say the words she’d never expected to hear; even with everything that was happening.

*There was an attack against the Imperial Family. All the members at the safe house are dead.* The
It didn’t make any sense.

Why were they dead?

Kaya racked her brains in anguish, trying to find some kind of justification for why the aliens would target her family; they were important and known, yes, but they didn’t have any political power, and weren’t even especially vocal ADVENT supporters.

“How?” She finally asked in a broken voice; still feeling too numb to weep. Or maybe it was because she’d seen several friends she’d made be killed around her. She couldn’t break down anymore so easily, but now she was at least feeling tears threaten to come out. It was just too... unbelievable.

Hamilton kept his distance and pulled his chair over to sit in front of her. Part of her wished he’d have not been so blunt in telling her everything that happened at once, but at the same time, that was just who he was. Damian Hamilton was not sympathetic or considerate, he was demanding and practical, and overall he was a fair and excellent leader.

This was, ironically, the most sympathy he’d ever shown for her. He’d certainly warmed to her since the first time they’d met. “Still unknown,” he said. “ADVENT thinks there was an infiltration into the compound by some kind of infiltrator unit. Whoever did it was quick, careful, and thorough. There was no collateral damage. Not even the soldiers were outright killed.”

That was... better. That meant the staff was still alive, the guards, and probably none of the heirlooms or records had been touched. Not a large comfort, in all honesty, but it was better than nothing. “Kiyumi!” She suddenly said. “Is-“

“Alive and under our protection with a PRIEST guard,” Hamilton answered with a slight nod. “As is her family. We assume they didn’t target her due to her not being a royal, and the reason you also weren’t targeted was because no one knows where you actually are.” He pursed his lips. “I know you aren’t thrilled with keeping your identity a secret all the time, but it very likely saved your life.”

“Do not lecture me about that right now!” She snapped at him. “My family is dead! I don’t care about that right now.” She wiped her eyes, trying to focus on what would happen now.

Hamilton didn’t speak right away, nor retort. After a few moments he continued in a calm, but softer voice. Which didn’t especially suit him. “Not everyone is dead, Kaya. You’re alive, and so is your sister. The children are also likely alive, even if they are in alien custody.”

Kaya turned her focus to the children. “Have there been any demands or ransom?”

“None,” Hamilton shook his head. “But it’s only been hours. They wouldn’t take them if they didn’t have a plan, otherwise they would have also been killed.”

Kaya wasn’t entirely convinced of that. Killing children was a line that no one – Human or alien – crossed without an extremely justifiable reason. But it didn’t really matter now. The fact was the children were gone, her family except Kiyumi was dead, and it just now struck her that she was now the immediate heir to the Imperial Family.

But she couldn’t just... leave. Not now.

“What am I supposed to do?” She asked, looking up at him. “I can’t leave here. And I don’t want
He appraised her, leaning back in his chair. “Normally, you wouldn’t. But you’re a special case, and have been from the beginning. If there was ever an exception to be made, this would be it. I don’t like it, but if you felt you had to return and put your family in order, you could. I’ve been ordered by people higher up than me to make it clear to you what your options are.”

“I want to talk to my sister,” she said. “I don’t plan on leaving either – I can’t kill aliens from a safe house.”

A razor-thin smile devoid of humor appeared on his face. “I’m glad to hear it. You can do more good for your family with a sword than sitting in a chair. As for your sister, I’ve got her on hold and you two can talk and figure things out.” He stood and pointed towards a small fob. “That will initiate the connection. Do it when you’re ready.”

He lowered a hand to her shoulder, his voice becoming ever so softer. “I’m sorry about your family, Kaya, I really am.”

“Thank you,” she answered quietly. “I appreciate it.” He gave her a nod and left the room. A few moments later, after some more consideration, she pressed the fob and initiated the connection. Hamilton’s office had a holoprojector and after a few minutes of waiting, she was able to see her sister in washed out colors.

She looked terrible, she’d definitely been crying and her normally well-kept hair was a mess. “[Hey,]” she said quietly. “[Is everyone safe?]”

“[They say we are,]” she answered dejectedly. “[I don’t know if I believe them. I don’t know what to do now.]”

“[Have they let you see the bodies?]” Kaya asked. “[Or given you any more information?]”

“[No, they say they’re ‘investigating’,]” Kiyumi sniffed. “[All they told me was that everyone is dead and the children are gone. They’re saying it was the aliens. I was terrified you had been killed too.]”

 “[I was more worried about you,]” Kaya said, glancing around. “[I’m in a secured place with my identity protected. You’re…living with your husband and kids.]”

Kiyumi shrugged. “[But I’m not part of the family anymore, officially at least.]”

“[Consider that no longer the case,]” Kaya scowled. “[I don’t care what any of the elders or purists say, you’re still Imperial blood and so are your children. It wasn’t right you had to give up your heritage then, and it’s definitely not right now. We’re the last of the family! I don’t fucking care who you married, and neither will anyone else!]”

“[But-]”

“[No ‘buts’,]” Kaya dismissed with a wave. “[I will punch anyone who insinuates that you don’t have any right to be here. For all intents are purposes, you are the best hope for the future of the Imperial Family since you have children.]”

“[But we need you here, Kaya,]” Kiyumi insisted. “[You’re the next in line. I can come back, but everyone needs your help now. We have to be together to work through this.]”

“[And do what?]” Kaya demanded. “[Sit around in a chair acting like an administrator and being a
hapless political prop in a role I can’t even think of taking right now? And don’t give me that ‘I’m
the next in line’ speech. You’re older than me. By birthright you have the right to be next in line
since the position wasn’t directly abdicated to me. And it’s safer that I remain here.

“[Safer?]” Kiyumi demanded incredulously. “[You’re on the front lines of a war! That isn’t any
safer!”

“[Safer in that whoever the monster is who attack our family is going to do it again when they
realize they didn’t succeed,]” Kaya said. “[My…superior…he said that the suppression of my
identity was likely the reason I also wasn’t targeted. But they will target us again, and it’s better if
we’re not in the same place.]”

“[So whoever takes the role is in danger,]” Kiyumi said with noticeable apprehension. “[I’m not
like you. I can’t live with that fear. My children can’t either. I’m not cut out for this and I don’t
trust ADVENT to protect us now.]”

Kaya pinched the bridge of her nose, trying to think. Kiyumi and her family were going to be in
danger regardless, but putting her in the role of Empress would heighten her profile significantly.
She didn’t know if she could, in good conscience, force that role onto her. She was right that living
with this threat hanging over her wasn’t something she would deal with well.

Admittedly, Kaya wasn’t enamored with that idea either.

But she wasn’t going to go back and do nothing and just be a target. And like Kiyumi said, she
wasn’t going to rely on ADVENT. Oh, they’d fix their protocols and promise that ‘this would
never happen again’, but with respect to them, she didn’t – and couldn’t – trust them right now. The
only way they would prove that is by stopping another attempt.

She was not risking her sister like that.

However…

There wasn’t, now that she thought about it, anything stopping the Empress from actually having
to stay and manage the family. While that was tradition, perhaps it was time for some of those to
be broken. And since Kiyumi had always expressed more of an interest in the administrative side of
the family prior to her engagement…

She nodded to herself. There was a plan. Hamilton was going to hate it, but it was the best one she
could think up right now.

“[What are you thinking of?]” Kiyumi asked after a few minutes.

“[I’m not going to put you in any more danger than I have to,]” she said firmly. “[I’ll take the
position.]” She raised a finger to cut off Kiyumi’s immediate thankful response. “[With several
conditions.]”

***

3/8/2017 – 8:03 A.M.

“The time has come,” came the haunting command. “Begin the attack.”

Standing on the shores of Taiwan, the Dread Lord stood and waited. Listened and watched.

Felt.
He had not agreed to the delay merely because the Battlemaster demanded it. He would not have bowed to the squeamish Ethereal had it been otherwise. But it had offered him some quite useful time.

Time to seek and explore the populace that would soon be screaming.

Throughout the country soldiers and citizens had been subtly affected by the gentle, yet malicious touch of the ethereal specter. A light probe into the base emotions those were feeling. Some had felt unnaturally paranoid; feeling that they were being watched. Perhaps a shadow or two appeared to jump at them, perhaps they had suffered a minor hallucination.

Those sleeping had been affected the worst, and their dreams were filled with blood, terror, and death. Many had woken up screaming and incoherent, barely able to be calmed down as ADVENT and Chinese officials saw it as a warning of what was beginning to happen. This revelation increased their worry; their fear.

Psions recoiled at the alien touch of the entity; shaken and afraid of the sheer magnitude and power the entity exuded. One that had refused to identify or force itself into their minds, but reveled in their confusion turned fear. The reach and volume of the reports stoked the defenders into a worried frenzy, even as the unleashed plague continued to kill and maim citizens and Chinese soldiers.

The Dread Lord had stood silent and acted for hours. He needed no reprieve or to feel concern for physical limitations. He felt the fear of a nation grow by his subtle hand.

He fed on it.

Hundreds of transport ships sped towards the landing zones designated, which would first be softened with the Cleanser Ships. A lower hand brought up a holodisplay which the Dread Lord appraised to determine the initial impact. Fiery steel and plasma rained down from the sky, targeting the outer borders of the nation of China.

This volley was followed up with Chryssalid and Seeker pods. They would serve their purposes well. Yet this time there was not a complete success rate. Displays showed a significant portion of the coast was not significantly affected.

Psions.

Aegis.

It mattered little. The weak-willed traitor would soon be a broken waste of flesh and power before him. Aegis was all that was holding this species together. His subjugation would ensure that they broke.

For if an Ethereal could be defeated, what chance did these Humans have?

There was no more waiting, no more delaying.

*Let them feel the liberation of terror.*

*Let there be no more lies they tell themselves.*

One hand reached out, and the dam broke.

There was no protection for many, and the cities and areas which housed soldiers, civilians, and
others never felt anything amiss initially. Then chaos broke out all at once, as their minds conjured the images of their hidden fears and phobias. They responded viscerally, violently. They killed their fears or their fears killed them.

The fears were merely those who existed around them.

And the longer they lasted, the worse they became.

One would not be able to defeat the ethereal fears and shadows that plagued them, they could only pretend to. More would appear around them, morphing and laughing as they taunted the shattered minds. Worlds became twisted dreamscapes of black and warped reality. Friends were revealed to be monstrosities, and the deepest hidden seed of paranoia became reality with limited courses of action.

Some simply attempted to block the horror. They took their own lives or gouged out their eyes, content to live with the simple pain than be subjected to the abject terror they were witnessing. Yet the mind is a malleable organ, and merely clawing their eyes out did not protect them from the fears lurking inside their own minds – and now there was truly no escape; no response.

Only screaming, begging, and sobbing.

And when the legions of Custodians marched upon the cities, led by the black disciples of Isomnum, the Terror troopers and soldiers of his will, in many areas they encountered little more resistance than chaotic and broken Humans scattered, running, and fighting each other. A trifle to put down.

Not kill, not yet.

Armed with surgical equipment and blades, this broken and reformed collection of beings began their work on the subdued humans unfortunate enough to still be alive. They would be reformed as they had been, and become a living symbol of the fate of those who would deny the Dread Lord what he was owed.

Sonoda observed the pacification of Hainan with a bright smile on her face, clad in her black armor from what little threat these Humans posed against her. As the work began on conversion, she unhooked the mask which signified her sole and unique connection to her Lord, and donned it. The euphoria that swept through her as the bond was forged and the two minds merged into a singular entity was impossible to convey.

She closed her eyes and focused on everything around her.

On the pain and screaming of those whose limbs were being removed and grafted onto; as their bodies were opened and replaced with machines and parts which would ensure their servitude; as they remained cognizant and aware as they were broken and reformed into something more, something which had purpose.

They would no longer be empty vessels with meaningless lives.

They were the walking legion of the Dread Lord.

And as more and more were found and began to be converted, the anguish, paid, and terror only fed her more, and in turn fed her master.

A symbiotic, beautiful link.
The Dread Lord fed on what she did, and unleashed this anguish to the holdouts, those who were being protected by ADVENT’s weak psions, by Aegis.

But they could not last forever. They would break.

And they would then understand.

***

Busan Trenches, Busan – South Korea

3/8/2017 – 8:41 A.M.

“Here they come!” Duri called as the alien transports began landing. The trenches were filled with soldiers shooting downrange, most not coming close to hitting anything, but still providing a volume of fire that would hinder the Collective, or so they hoped. Miguel had his SHIV over the top of the trenches, and it was also firing downrange.

Unlike previous conflicts, the PRIEST Division had a far greater presence here, and the white-armored soldiers were seen rushing every which way and spread throughout the trenches, and already they had succeeded in blunting the alien offensive. First there was the attempted orbital bombardment of the base, which had been largely negated when psionic shields had appeared over vital structures. The ground had still been shaking and they’d taken casualties and damage, but the worst had been quelled.

Now the ground invasion was beginning in earnest.

“What do you see?” Duri asked Beatriz as she looked through her scope. Slightly above him Cara was manning the newly enhanced ETC Browning, and sending hundreds of propelled rounds towards the encroaching aliens. Some things looked different to him though, even from this range.

“A lot of Andromedons and Mutons,” she answered between shots. “And some things I haven’t seen before. Vehicles.”

“Any Sectopods?”

“Yes, a few,” she confirmed. “But these others are different. I don’t like the look of the big ones.”

Green plasma fire was beginning to be returned to ADVENT, and it was just as inaccurate as what was being sent to the aliens. In the distance Duri could see the red glow of shields the Andromedons were putting up, but in general they seemed to be holding back. A few more minutes passed and he got his first good look at the vehicles Beatriz was talking about using his issued binoculars.

They reminded him of Sectopods, but if Sectoids had been completely redesigned to turn them into siege breakers. They had a somewhat rectangular body, which was covered with missile silos and launchers presumably to serve as a true artillery weapon for the aliens. It was supported by six legs which he noted had crude Andromedon shields around the joints.

A massive gun jutted out of the right side of it, which had to be a railgun of some kind, though he didn’t know for sure. It had yet to fire, but had been still for a few minutes as if preparing. Definitely was being readied for an attack. The only good thing he could note was their limited numbers. Twelve in total, all distributed along the front in a largely even manner.

Up above, an air battle was also raging. ADVENT had launched four whole wings of Ravens, and
nearly thirty of the XCOM Firestorms were also not only fighting the Sectoid Fighters, but also new V-shaped spacecraft that he could only assume were Vitakara in origin. The Flak Towers were also assisting in the air battle, as well as taking aim at the massive alien units.

ADVENT artillery was also firing from the rear, and it was not reaching far enough back to damage the siege units, and the few shells that did reach back were somehow picked off by laser defenses that emerged from the vehicle. Firing several rounds as a test towards the massive vehicles, he noted that pretty much nothing happened.

“Cara! Focus on the siege units!” He called.

“I’ll do my best!” She called. “But they’re still way out of range!”

“Woah!” Beatriz breathed. “Snipers are being employed!”

“What!” Mana demanded, but Duri saw it when she did. It looked like several hundred black Seekers had shot into the air and were idly hovering for only seconds before highly accurate plasma lances shot out of them. Several nearby soldiers were struck and Duri himself was already moving down when the highly volatile bolt slammed into his chest.

“Duri!” Beatriz screamed as he stumbled backwards.

“Shields engaged!” Aleksandra yelled, powering up her armor. “Take those things out!”

“Ugh,” Duri groaned, feeling the plasma eat away at him like acid. “Nobu-“

“I’m here,” the medic dragged him over to the front wall of the trench, out of the range of sniper fire. “Hold still.” A medkit was sprayed over the wound which briefly turned the wound freezing cold, before settling into a mild ache.

“Got one,” Beatriz called. “These things are tough. It took three shots to take it down!”

“Continue with it,” Duri called, also motioning to keep firing. “Nobu, how serious?”

“Looking it over,” he said quickly, appraising the wound and repairing the hole in it. “Clean entry and exit. There’s a scorch mark on the wall behind you when it hit. These things have enough power to penetrate a fucking tank. It went through your armor like nothing and is oddly thin. If you hadn’t moved, it would have turned your head into paste.”

“So don’t get hit by them in the head,” Duri grunted, moving to take his position, ignoring the ache. “Got it.”

More soldiers and targets were falling to the thin lances of green plasma, but ADVENT had adapted as the Shieldbearers utilized their suits. More of the Seekers were falling from the sky, but they had been successful in dividing the attention of the snipers, allowing for the deployment of another vehicle the Collective had been working on.

This one was also reminiscent of a Sectopod, if one had taken the main ‘pod’ and enlarged, elongated, and armored it. It floated along the ground, a massive railgun attached to the top, projecting Andromedon shields in a triangle that reminded him of a train buffer. Additional weapons were mounted on the sides, shooting both plasma and physical projectiles.

It was a vehicle designed for a frontal assault, and it was not idly moving to the trenches. It wasn’t what he would call fast, but it wasn’t slow either. It moved in irregular patterns, sometimes even stopping or moving backwards to miss or dodge fire. It somehow didn’t seem to be triggering any
of the mines either; possibly due to sensors to negate this issue.

It had also given ADVENT a very visible target.

The response was near-immediate. The PRIESTs and Dragoons which had also been deployed wasted no time in engaging with these vehicles. The PRIESTs in particular demonstrated their power by shooting psionic energy at them, picking them up telekinetically and then throwing them to the ground, generally resulting in mine explosions and derailment, and blocking their paths with psionic shields.

The vehicles still remained extremely durable, however, and the full arsenal of a Dragoon wasn’t enough to destroy one, even if it could noticeably damage it. The closer the vehicles got, the more soldiers began falling, as the medics dragged them out of the trenches and they were continually supplemented with new soldiers waiting in reserve.

“It’s firing!” Someone called out, and in unison the alien siege units fired a missile from a compartment in their chassis. It had a green flair and sped upwards into the air, arching until it was headed straight for the trenches.

“Shields!” Someone yelled nearby, and a barrage of psionic shields appeared in the sky and above the trenches. One of the missiles hit and produced a blinding explosion which took out the shields and rocked the ground itself. Some of the missiles were inexplicably caught and redirected towards the aliens lines and the battlefield where the hover vehicles quickly moved out of the way.

But no one emerged from the resulting blasts unscathed.

Duri saw one land on a nearby Flak Tower and the resulting white-green explosion briefly blinded him and threw everyone to the ground and a wave of burning heat and debris swept over all of them. In the chaos when he emerged, the Tower was reduced to a few scraps of metal – in addition to a significant portion of the trench being essentially gone.

He hauled Beatriz to her feet, just as Aleksandra was doing the same to Nobuatsu; gun raised, he looked around at what had happened. There were four large craters in the no man’s land, with several dozen wrecks of the vehicles, though the surviving ones were making a run to the trenches in the chaos. The alien line had also suffered some hits, but none of the siege units had been destroyed, although one was noticeably damaged.

How had that thing survived?

“Those things are coming towards us now!” Cara coughed, trying to get back on the turret emplacement. “Get ready!”

But just before they could more accurately focus their fire, a massive maelstrom of psionic energy appeared in the group and began ripping even the heavy armor of the vehicles into pieces, causing many of them to explode. Duri glanced back and, to his surprise, saw an XCOM squad marching down into the trenches.

They’d gotten an upgrade. The suits towered over his own and appeared to be one-man armies on their own. The psion who’d created the maelstrom jumped down into the trench. He gave him – or maybe a her, he couldn’t tell – a nod. “Thanks for the save. You came at the right time. Officer Eun-Jung, how can we help?”

“I was going to ask you that,” she said, making several hand motions to her squad who mostly began heading to the broken trench lines. “Psion Eriksson, Zeus-1, XCOM. We’re here to make
sure the Collective doesn’t gain a significant foothold here. MEC and Archangel support is incoming.”

Duri pointed in the distance. “The Collective has some new tech. Those siege units are priority targets. You saw what they did with one volley, and that was probably a test. They’re going to swarm the weak points now.”

“Agreed,” she confirmed, stepping forward. “Looks like they’re confident enough to send in the silver legions.”

“What?”

“Look,” she pointed in the distance. “Mutons and Custodians are moving forward. Guess that means Isomnum isn’t actually focusing here. Good news. It’s going to be getting a lot tougher soon.”

“We’re aware of that,” Duri said, then cocked his head as he remembered something. “Sorry, you said your name was Eriksson?”

“Or Mona,” she clarified absentmindedly, focusing on the oncoming invaders. “Doesn’t matter to me.”

Duri blinked, knowing now was not the time to press this, but Johan had failed to mention that his sister was in XCOM. Or maybe he didn’t know? “Do I know you?” Mona asked curiously, picking up on his confusion.

“Not exactly,” he shook his head. “I’ll tell you after we halt this attack.”

“Sounds good,” she stepped back. “Hold this position until then, we’ll reinforce the gap up ahead.” With that she dashed away to rejoin her squad, as the aliens continued to advance forward inch by inch.

***

Sanctuary – Classified Location

3/8/2017 – 12:14 P.M.

“No.” Sana was adamant. “I will not support this action, and I am disappointed that you went through with it. I thought you forbade the deliberate targeting of civilian families.”

The Battlemaster was not happy that she was making this more complicated than he needed at this moment. “I would have preferred a different target be chosen, but the Imperial Family was a valid one, and one the Zar’Chon believed should be followed up on to remind ADVENT of our reach.”

Sana turned away to look at the two children, both inside one of the enclosures that was made to resemble a bedroom. They had been placed into a psionically induced sleep until it was decided where they were going to be placed. “This conflict is taking too much of a toll on you. You would not have sanctioned this even one year ago.”

“One year ago I was not in a war against an Ethereal and these Sovereign Ones,” the Battlemaster growled, jabbing one finger at her. “You are not involved here, Sana; you are not being forced to accept Isomnum, or be under pressure to end this war now with the knowledge that if we’re lucky we won’t have to fight more of these Sovereigns. I do not want to do this, but I had little choice.”
“No, you do have choices,” she insisted. “You just do not want to bear the consequences.”

He closed his eyes and composed himself before answering. “Would you prefer those two children be dead, Sana? Would you prefer I was not involved to restrain the more indiscriminate of our brethren? Because that is what you’re saying I should do. If I do not sanction these operations, then the outcomes become far worse. Do you honestly think that had I been unaware, the Zar’Chon or the Imperator wouldn’t have ordered the same thing?”

That at least didn’t elicit an immediate response. ‘I dislike how we are put into this position to begin with…it is not right. We do not need to resort to such tactics. We are above that.’

Had they ever been? Had there ever been a war fought using only ‘ethical’ and ‘correct’ tactics?

He sat on a nearby chair, looking around the empty white room. “Do you honestly believe that? The only reason you hold our species as above such things is because we had never been in a true conflict prior to the Synthesized. And when we fought ourselves…we were no better than the Humans or any other species. We are not special, Sana, and we never have been.”

“Perhaps,” she admitted after a short while. “But that does not excuse or justify what we do now.”

“No, but we cannot change what has happened,” he shook his head. “I would save your outrage for Isomnum, because I will not be able to restrain him, regardless of what he allows. He has not, nor will ever, follow my orders. I have multiple attacks to order in addition to this. The children, while it may be of issue to you, mean very little in the scope of this war. They are safe and protected. We can revisit this issue after the offensives have been launched.”

“And will you just let him continue without consequence?” Sana demanded. “You know what he will do unchecked.”

“His involvement is by the direct order of the Imperator,” the Battlemaster said flatly. “If not for that, I would not have let him be given any significant command. I suspect this is a pointless test by the Imperator to see if I will follow his orders. Should I intervene against him, he will remove me from command. I merely have to provide him an excuse. The only way to effectively stop Isomnum is to kill him.”

She appraised him quietly. “But you will not do that.”

“No,” he said, also subdued. “But not because I couldn’t. Or because I would not. I would end his life without hesitation should the opportunity present itself. I would take significant pleasure in ending the life of that monster. But the consequences are too high and far reaching for the Collective at this point. I will have to allow XCOM and ADVENT to do that for me.”

She looked at him in surprise. “You intentionally intend for him to die against the Humans?”

“Intentionally? No,” he shook his helmet. “But should such an event happen, it will not affect the larger war plan. Isomnum is powerful, but he is arrogant and underestimates the effect his tactics will have on the species. I will not stop him from succumbing to his weaknesses, as I did not stop Caelior.”

“I would not say the two are the same,” Sana pointed out. “Caelior’s issues were due to his youth and inexperience. There is no redemption for Isomnum. Allowing him to be captured was…unfair to him. Even if you could justify it.”

He was not interested in debating this at the moment. “You see my intentions. That is the best I can do short of betraying everything I have built here. The next time you criticize me for an action I
take, consider yourself in my position and ask yourself if you would do anything differently.”

“And I have, Battlemaster,” she said. “And I would not do what you did, even if I understand your reasons.”

He allowed a shrug. “Then you are better than I am.” He stood. “I will return to Mars. We will discuss this later…although I am curious, where is Mortis? I have not seen him for several weeks.”

“He is on Vitakar,” she answered. “Attempting to learn of the species itself and their history. He went with a Vanguard escort so his aura doesn’t make everyone around him die.”

“Good.” The Battlemaster would have preferred he be more involved, but Mortis was still figuring out where he stood on the whole concept of the Collective, and like Isomnum, Mortis would not follow his orders because he asked. Although he would do the same to the Imperator, where even Isomnum knew better than to cross that line.

He needed to focus now, and prepare Yang for deployment. China was only one aspect of this renewed invasion.

There would be many others.

***

Busan Battlefield – South Korea

3/8/2017 – 9:42 A.M.

This was a battlefield they were coming in hot to. Sierra was glad for all the times they’d trained deploying from a flying Skyranger. It was exhilarating and terrifying to jump into a pitched fight on ground and air. They were low enough to be targeted from the ground, but not high enough to engage the dogfights in the skies.

“And we are clear,” Sierra called as she began a wide arc. “Find somewhere safe, Lightning Sky.”

“Copy that Host-1,” their pilot said as he sped off towards the city proper. “Good hunting down there.”

“Anna, Ted, form up behind me,” she commanded as she began appraising the situation. “Both of you good?”

“We’re good,” Ted answered in her ear. “Collective is bringing everything they have here. Never seen anything like this before.”

“Yeah,” Sierra saw both of the Ballista-class MECs being dropped well behind the ADVENT trench lines, who immediately began advancing towards the pitched fighting. “They’re not holding back.”

“Host-1, this is Zeus-1 on the ground,” Mona’s voice came through loud and clear. “We need report from our own eyes in the sky. ADVENT trenches were just hit hard with some kind of plasma explosive.”

“Right,” Sierra hovered idle for a moment, before swooping downwards. “I’m guessing that came from the big vehicles. Siege breakers from the looks of them. You can handle those other vehicles moving in right?”
“Gonna be messy, but we can. How many?”

She did a ballpark count. “Way more than you can handle everywhere. Over a hundred at least, and they’re converging towards the weak points. Looks like ADVENT is also moving to handle them.”

“We’re headed to one as well, HUD should be updating with our position.” Sure enough a few seconds later it lit up in the lower-corner of her HUD. Sierra nodded to herself, even knowing Mona couldn’t see her.

“Copy, you want us to reinforce your position?”

“Not currently, let’s see how we handle them before we call in backup.” Mona grunted, with Sierra hearing yelling in the background. “The MECs are working to target the siege breakers. Are there advancing ground forces right now?”

“Yep,” Anna confirmed, as she laid down fire from her plasma cannon. “There’s hundreds of them. Mutons leading the front, with Custodians following behind. Elites are interspersed.”

“These are the helmeted ones too,” Ted added. “No easy headshots this time.”

“Copy,” Mona confirmed. “Thin them out a little would you?”

“Three Archangels against an army of Mutons and Custodians?” Sierra snorted. “No problem. Good thing we came prepared for company. We’ll slow them down for you.”

“Acknowledged. Good hunting. Zeus-1 out.” The moment she clicked off, Sierra was already thinking how best to approach this. Going too low would get them picked off easily from sheer volume of fire alone. Staying in one place would have the same effect. Archangel armor was good, but it didn’t make them invincible.

The Custodians were the largest threat, so they should be prioritized. Mutons could be dealt with easily enough. The Elites were also a problem. “Anna! Grenade and missile compliment?”

“Three thermite missiles, four WP grenades and one ClF3 grenade,” she answered. “I predicted we would need at least one.”

They would, so they would need to make it count. “Use the thermite to poke some holes in the Custodians. Drop the WP in front of the Mutons and let them choke on it for a while. Save the hellfire for the big one. I’d prefer you get that out of the way now so it isn’t clipped and you go down with it.”

She swiveled to Ted. “Target the Elites. Take them out one by one. Tell me when you need to go back. Outside the Custodians-”

“I know, I know,” he said. “And what about you?”

“Going to emulate Anna,” she said, briefly holstering her WHEEE cannon, and pulling out a WP grenade. “Take evasive action and kill as many as you can. Remember – slow them down, don’t try and kill all of them at once and pull back if it gets too hot.”

They both confirmed, and the Archangels sped off over the pitched battlefield. Anna went right, so she went left. The good and bad news was that there was so much to cover, and not enough soldiers to do it properly. Should have sent two or three hosts to deal with this she thought as she tossed the first WP grenade towards the group of Mutons charging towards a point in the trenches that had been annihilated by one of the massive bombs.
Two more followed it, and she was going fast enough that the Mutons barely had enough time to look up before their faces were melting and loud pained roars met her ears. However the response from the Custodian support was immediate and she had to spin and swoop to dodge the hail of plasma fire shot her direction. A few clipped her, but the suit could easily take that.

_Your turn._ She sped upwards until she was essentially out of the effective range, pulled out several of the thermite grenades, and maneuvered just over where the bulk of the Custodians would be in that area, and dropped the explosives. Her enhanced vision made this actually feasible, where her normal eyes wouldn’t have been able to accurately judge the distance.

Gripping her WHEEE cannon, she decided to follow up with an absurdly risky maneuver. One she’d admittedly practiced – a lot – but doing it over a desert was far different than doing it in a pitched battle. She angled herself downward and cut the engines. Forming her body correctly, and keeping the WHEEE close to her chest, she quickly reached terminal velocity as the thermite exploded below her.

_God I’m cutting it close._

At just past the warning point she flipped herself up, fired the jets once and fell the rest of the way, her modded body able to take the force of hitting the ground. She couldn’t have planned it better if she’d tried, as there was a moderate clearing of melted Custodian bodies – one of which she utterly crushed under her boots as she landed.

She immediately fired the WHEEE in front of her, spun to the side and fired again, turned a full one-eighty and fired once more, before turning to her right and firing again. Without pausing to see her handiwork, she fired the jets and blasted up into the air before the aliens could even think about responding, laughing hysterically at the fact that had actually worked.

Once safely in the air, she glanced down to see that it had worked perfectly. Just as she’d hoped, the electricity had arced throughout the nearest Custodians, frying their bodies as well as the original target. She hadn’t given much thought to aiming since it was so dense, and that turned out to have been the right decision. There was a large pile of dead Custodians where she’d been, and it was safe to say that the brunt of that offensive was blunted.

“Anna! Report!” She called as she sped back towards where they had begun.

“Grenades expended, and I’m trying to mow these things down from behind,” she grunted, and ahead, Sierra could see her. Along with something she did not expect chasing her. “And I picked up a tail.”

“Is that a Seeker?” It certainly looked like one, but if someone had given it steroids. It was bigger than Anna, and pursuing her at an alarming pace. “Nevermind. Coming in to assist.” While she sped towards the duo, she changed the power cell of her WHEEE. Only one fresh one left after this, though recharging would solve that issue relatively soon.

“Dive on my command!” She called, taking aim. She did _not_ want to fry Anna as well as the Seeker. “Now!”

With no hesitation Anna plunged to the surface and Sierra fired. The bolt slammed into the Seeker and it exploded into multiple pieces which fell back to the Earth. “Eliminated,” Sierra called, swooping around.

“Thanks,” Anna said flying away while firing towards the ground. “Tried using my hellfire grenade on one of the big ones.”
“And?”

“Well, it sort of worked,” Sierra flew in the direction she had been fighting in and saw that one of the machines was indeed being forced back, and one of it’s legs was on fire – as was the surrounding area. “It has some kind of point-laser defenses,” Anna explained. “It clipped the grenade I threw. Problem was it just made it rain fire all around. When all is said and done, I think that one is out of the picture.”

“Excellent,” Sierra said, and saw in the distance Ted firing lances of purple fire from his arms. Glancing briefly at the battlefield, she saw a good number of red-armored corpses, including a fair number of Muton bodies. He hadn’t been idle either. “Ted, how is it going?”

“Sixteen of the Elites eliminated,” he breathed heavily, as he kept swooping to avoid fire. Sierra saw that he’d definitely taken some direct hits from the scorching on his chest. “Don’t know how many more I can take out.”

“Just a few,” Sierra promised as she pulled out her pistol and took several potshots towards the ground. “We’re all expended anyway-“

There was a burst of static.

“Hello ADVENT, hello XCOM,” a familiar mocking voice drolled. “It’s been a while hasn’t it. A lot has happened, and what a coincidence I’m back here.”

“Host-1 to Zeus-1,” Sierra contacted urgently. “We-“

“We’re hearing it too,” was the answer.

“Unfortunately this time, I’ve been given strict orders,” the Hunter said, voice mockingly upset. “But while the number of things I can actually kill has been reduced, it’s still enough of a target rich environment where I can have some fun. And there are a few little flying nuisances that I think need to be culled.”

“Back! Back!” Sierra ordered, all of them taking evasive action in varying directions. Ted shot upwards, Sierra tucked into a spin, and Anna took a dive towards the ground as they sped towards the trench lines which now seemed very far away. None of them cared about possible fire from the ground now; grazes were preferable and could be survived.

The Hunter could not.

And he was openly laughing. “Come now, XCOM,” he chuckled. “Do you really think you can just fly away? From me?”

Sierra stiffened as she heard Ted scream from above and arch his back as the shot tore right through his armor – and through the rightmost jet. A second shot penetrated directly through his left foot, turning his fall into an uncontrolled spin. “I’ve got him!” Sierra yelled. “Anna get out of here now!”

Without waiting for a response, she boosted her jets to angle to catch the falling Archangel. They were only a few hundred feet above the ground now, but she slammed into him, catching him in the midsection and eliciting a yell of pain. “Sorry,” she breathed, as she immediately tried to course correct herself.

“It’s…fine…” he breathed in between grunts.
“Ah, everyone loves a hero!” Her blood ran cold as the Hunter taunted her from his unknown position. “I like you, random Archangel! I like you enough I’m going to give you a chance to fight. Let’s see how you do!”

Before she could even think about what that meant, her right primary jet was destroyed and this time there was no stopping the fall to the ground. The good news was that they were close enough that she could ensure they both survived. The bad news was that they were still far from the trenches and they were in an open minefield.

“Anna! Zeus-1! I’m going down!” She called as she made some last-second boosts on her legs right before she crash-landed into the hard dirt. Turning herself around, she fell backwards, slightly cushioning the impact on Ted who would not have survived a direct landing. It slammed her onto her back, and it clearly damaged the suit beyond repair, but she was somewhat alive, if dizzy.

“Come on,” she groaned, briefly pushing him off to get up. The Collective was advancing forward, and green plasma fire was whistling around them. Their armor would still take a few hits, but they were getting closer. A brief diagnostic showed that her leg jets were still good. Ted had his foot shot, and was probably running on half a lung, so he couldn’t make a run. She was going to have to do this on her own.

A long shot, with the possibility of both of them getting blown up with a mine, but there wasn’t a choice.

“Don’t move;” she told him and picked him up in her arms, trying to adjust slightly for weight distribution. Thank god for strength enhancement gene modding. He was still heavy, but movable. Without wasting time, she took off running. After she’d worked up a good speed, she jumped into the air and activated her leg boosters.

She yelped and almost was flipped over, but her forward momentum was enough to keep her moving, and she cut them so she could land with a running start. “Sierra, we’ve got a fix on your position and a PRIEST team is coming out to assist you,” Mona updated. “Stay alive a few more minutes.”

“Copy,” she breathed, starting now to feel the strain. It turned out that multiple landings from terminal velocity had consequences even on a modded body. She repeated the jumping maneuver, this time able to better account for the kickback, and landed successfully, even if now her legs were starting to hurt. She probably looked ridiculous, but it was a hell of a lot faster than just running.

The trench was ahead now, close enough that she saw a slew of white armor moving forward out onto the battlefield. It was also useful that there were the wrecks of those hovercraft that served as some kind of cover. Unfortunately not all of them had been destroyed and one suddenly swept towards her, guns firing.

She leapt straight into the air, and was clipped by the plasma cannons sending her flying backwards and directly into the hard hull of one of the wrecks. At the last instant she tossed the limber body of Ted to the ground to prevent his neck from definitely being snapped from the slam. He yelled as his leg twisted underneath him, but she couldn’t do much more.

Dazed against the machine bearing down on her, she struggled to rise and her head rang.

Then the machine was lifted into the air, and Anna swept down, firing her plasma cannon into the weapons on its sides, turning them to slag. Corrosive psionic energy appeared around the machine, rending its integrity void as the telekinetics similarly crushed the interior. It was tossed a short
distance away and exploded. Sierra rose to see a team of PRIESTs, with Anna landing and firing a few shots behind them into the approaching Muton army.

“Got here just in time,” she gasped, stumbling over to the body of Ted and trying to pick him up again. He was completely passed out now, and given how bloody his chest armor was, she hoped he was still alive. “Thanks.”

“We can carry him, sir,” one of the Priests said. “You’ve done more than enough.”

“Unless you’re modded, you’re not carrying him on your own,” she insisted, stumbling towards the trench lines. “Just…have someone waiting.”

The Priest didn’t argue, and just began calling for a medical team when they got back. Psionic shields appeared behind them as they made it back inside the dubious safety of the trenches, but a team of medics rushed to Ted who Sierra laid on the stretcher, and began spraying their medkits and calling out their medic lingo.

She was too tired to listen too closely, and took off her helmet, breathing heavily.

“You did it,” Anna said, also taking her helmet off as some ADVENT personnel brought them water. “When he started talking…” she shook her head. “I thought we were all dead for sure. We don’t just…survive that.”

“He still might not,” Sierra said wearily, slumping to the ground as her armor felt very heavy. “I probably made everything worse.”

“Fuck off with that,” Anna grunted, hauling her to her feet. “Now he has a higher-than-comfortable chance of dying in surgery as opposed to definitely dying from terminal velocity. You saved him and yourself. We need to get new gear and rest.”

“Alright,” Sierra shook her head and absentmindedly realized her WHEEE cannon was gone. Wonderful. “Have there been any casualties?”

“Three wounded enough to be taken for treatment,” Anna grunted as they passed through several squads of ADVENT soldiers. “Cho’s MEC was taken out by one of those green bombs the siege units shot. Hendrix’s was damaged in the blast and is being repaired now. XCOM is going to send a Goliath as backup.”

“The Hunter is the larger problem,” Sierra said warily. “We need to deal with him.”

“XCOM is aware,” Anna said. “I think they’re working out how to deal with it.”

“Well,” Sierra took another long drink of water. “They need to figure it out sooner than later.”

Throne Room of the Imperator – The Temple Ship of the Imperator of the Ethereal Collective

3/7/2017 – 9:08 A.M.

To describe the feeling of psionically mind merging with the Imperator would be nearly impossible. Patricia knew she was one of the most powerful Human psions, but at the same time also knew that compared to even the weakest of Ethereals she was significantly lacking. But until her first merges with the Imperator…she didn’t understand how vastly inferior her capabilities were.
While not completely having control, she could comprehend and grasp how much power he could bring to bear in seconds.

Power strong enough to reduce this ship to scrap, telepathically dominate armies, or send a moon crashing into a planet.

It was…fortunate that she didn’t have to find this out the hard way, and hopefully humanity would never have to experience just how outmatched they were against the Imperator. To simply describe what the Imperator could do was simply not doing him justice. Yet it was also a sobering reminder that the Imperator could be compared to the Sovereigns like a human could be compared to an Ethereal.

No reminiscing. Focus.

The voice in her head was not her own, not completely, but it was also not the Imperator’s. It was a merged compilation. The intensity of the voice, be it the lighter or deeper pitch, seemed to depend on the intensity of their connection. It also depending on who ceded control the most. That had been among the first experiments – how to cede or take control.

Incorrect words.

He-she-they were right. It wasn’t the correct explanation of what was happening. A mind could not give or take control any more than it could ignore itself…it was closer to deciding which side should take control; what to draw upon. It depended upon what they did. When it came to her body; when that was primarily what she was doing, the part of her that was her was more in control.

But when the vast experience and skill of the Imperator was needed, by instinct her body reacted. It was not as crude as being hijacked, as their merged mind had come to the same conclusion, and the only notable consequence was what it was drawing from; who it was drawing from.

The first few times had been overwhelming, as she’d stood paralyzed or just fell to the ground, trying to comprehend the mind of the vastly older and more powerful being her mind was joining with. It had taken multiple attempts to even begin to start moving on her own; walking was a challenge, much less fighting.

A process that Revelean had assured them was expected and natural.

“Your minds are from different species and chemistries. An Ethereal does not think like a Human and the reverse is true. All that can be done to change this is by exposure. It will not be pleasant, and it will be incoherent and vast for the beginning, but the minds of both Human and Ethereal are malleable and adaptable – it merely requires effort and time.”

Nothing had been painful, thankfully. It had been more of a fugue state at first, with her getting bombarded with information, languages, and incomprehensible gibberish that the sheer volume of had forced her mind to simply stop working correctly. Overloaded, Revelean had called it. The Imperator had not been as affected, but that was to be expected.

It probably helped that everything she had seen from the Imperator’s mind stayed with her for the most part, which allowed her to think and ponder over it. The first few times she’d barely gotten anything she could understand; mostly images and words in Ethereal Script that she couldn’t entirely process.

Now it was becoming easier, and the amount of secrets between them was diminishing each time
they merged. It wasn’t as though she had many things she could call major secrets – although her
time in XCOM could certainly be considered that from a military standpoint – but the Imperator
likely knew of them from seeing her memories as well.

As for what she’d learned?

Many long talks, debates, and arguments during the Synthesized War. The rush of vertigo as he
had been awakened and immediately thrust into a war; the confusion and stress at being considered
the only hope of a species he had never really know; the long and continuous battles against an
enemy that more and more seemed less mindless, and more conniving and malicious.

Thousands of Ethereals and worlds sacrificed, and more and more evidence that this enemy could
not be defeated. Not now. It was too late.

And a name. His name.

*Viatorian.*

*Destroyer of the Prime.*

The name she’d recognized from reading on the Synthesized War, or at least what Cogitian had
written. She’d wondered if the Imperator was one of the famous ones in the war; she’d guessed that
*this* Imperator was one of the ten coordinators of the war, although which one she did not know for
certain.

But now she did.

The only Imperator to have killed one of the Synthesized Primes was still alive, and had set his
sights far higher. Time would tell if they were successful, but there was no possible way for
humanity to know just who they were facing.

She realized now that they were lucky that the Imperator was sending his Harbinger to solve such
issues. Were the Imperator himself to directly intervene…the war would be over far sooner,
although it would awaken T’Leth.

And now was not the time for it.

She looked down at her armored hand, ensheathed in psionic energy, as was her entire body. It felt
hot, like an engine with too much power in it. Which in a way, it was. She was a bottleneck to the
true power the Imperator could bring to bear…but what power she *did* have was beyond compare.
There felt like there was little that she could not do.

*With one motion, we could splinter this ship.*

*With one command, the legions would become ours.*

*In one moment, reality can reshape itself.*

The power flowed through her; the voices evenly split. Both intertwined and cognizant of the
world around them. They had *clicked* to use a Human term. It would still take time to fully master
what they could do, but the difficult part was over, and as Revelean had said, it had only taken time
and effort.

Yet it had been worth it.
Human and Ethereal, soldier and Imperator, their minds had overcome the obstacles of their artificial union. They were of one mind in this joining.

The path ahead was clear.

***

Hong Kong, Guangdong – China

3/8/2017 – 10:12 A.M.

To say they were stepping into a nightmare would be an understatement.

It was less of a coordinated attack, and much closer to a free-for-all. The Chinese soldiers initially depending the city had been devastated by the initial psionic attack, even with Aegis protecting them. While they retained their minds, they were paranoid, shaken, and afraid. The ADVENT soldiers deployed were faring better, but they still weren’t prepared for the onslaught.

China had lacked the trenches and Flak Towers of other fortified cities. They had defenses, but they were facing the black legions of Custodians led by the black-robed soldiers of Isomnum. As well as strange hovercraft that had come floating over the ocean, and not from the air. Smart, and that was not what Oliver really wanted from the Collective right now.

“There is a significant sustained psionic attack on this city and throughout the border regions of China,” Geist stated with a calm coldness. “Aegis is defending against it. That will be what I do as well; to reinforce the cities under assault that are succumbing to him. Many have already fallen and are being overrun.”

“You can’t help them, can you?” Kane’s voice reminded Oliver of an animal just before it struck. Restrained, yet just waiting for the opportunity to strike. Even the question was rhetorical and Geist did not treat it otherwise.

“I do not have time to help them,” he shook his head. “They will be put out of their misery. Isomnum’s reach is weak to affect as many as possible it will not be difficult to penetrate a mind that is already broken.”

Kane nodded. “Better to die than live in the hell Isomnum creates.”

“What are we doing?” Oliver asked.

“Either prevent Hong Kong from falling, or eliminate as many of Isomnum’s soldiers as possible,” Geist said. “Target priorities are the black-cloaked soldiers. All others are secondary. There is too much ground to cover with one squad, so there will be two teams. Chronicler, take Oliver and Kane and investigate any requests for assistance.”

He turned to another trio of XCOM soldiers. “David, take Alisa and Kanda. Do the same. Viktoria’s Archangel host will provide air support in the same way. MECs will also be operating on their own to provide assistance to ADVENT. That is why we are here. Ensure ADVENT does not fall. Understood?”

“Yes, Overseer!”

Kane unstrapped his massive weapon. The gun seemed almost as long as he was tall, and wasn’t standard XCOM gear. He’d asked along the way, and Kane had said it was a specially developed ETC variant of an M2 Browning. Which translated to a Browning that didn’t need a stand, but was
essentially the same thing. Normally it would be impossible for a regular Human to wield them as heavy weapons, but thanks to gene mods and Kane being the largest person Oliver had ever seen by far, it looked surprisingly natural in his hands.

The Chronicler’s wrists had a blueish glow about them as he clenched a fist. “Let’s go.”

Their first encounter was an overrun ADVENT squad that was fighting off a Custodian advance on a barricaded four-way street. It was being led by one of Isomnum’s Sectoids, and just from the glimpse of the area, Oliver saw the effect that alien had. There were soldiers, Chinese and ADVENT, shot in the back, and even now one Chinese soldier was being restrained as he shouted gibberish.

Kane said nothing, but let loose with his weapon. The Custodians were confident enough to have been advancing, and thus were unprotected. The Browning shredded four into pieces before they moved with surprising swiftness to duck into cover within the nearby buildings. The Chronicler waved a hand and two of the Custodians were ripped apart by a blue wave of energy.

The Sectoid chittered as Oliver fired at it, a psionic barrier appearing to absorb the plasma. Glowing with psionic energy, the Chronicler lifted a hand and Oliver felt something...cushion his mind for lack of a better word. There was a presence, but he suddenly found himself able to think more clearly and focus.

The passive effect Isomnum and his minions had placed over the city was not to be scoffed at. The soldiers were rallying, and firing back with ragged cheers. “No!” Kane roared, glaring briefly back to the Chronicler. “Stay out of my mind! I do not need your protection. Not from him!”

Heedless of the danger, he instead marched forward towards the Sectoid. A psionic barrier had appeared and was absorbing all of the rounds, but he had successfully attracted its attention. Oliver fired multiple shots at an overwhelmed Custodian and it fell to the ground as a smoking wreck. More were brought down by the Chronicler’s psionics and the combined ADVENT and Chinese survivors.

The Sectoid had the air distort around him, and directed a hand towards Kane, likely a psionic attack.

But something unexpected happened instead. Not only did it just seem to make Kane angrier, the barrier itself was dissipated and the Sectoid shook his head as if stunned. Only mere seconds was all it took for it to be ripped apart by the unforgiving rounds of Kane’s Browning; turning the alien into ground meat leaking ichor blood.

With that fight done, the Chronicler was talking to the leading officer, and Oliver saw Kane go over and smash a boot on top of the head of the Sectoid, turning it into a splat, before walking back while reloading his weapon.

“What happened?” Oliver asked.

“The alien made the mistake of looking into my mind,” he said in a low voice. “It didn’t like it.”

Oliver didn’t know much about Kane, but it appeared that he’d had some history with Isomnum. Something he’d have to ask about later, because now was not the time. “Will they be able to hold?”

Oliver asked the Chronicler as he walked up.

“For now,” was the answer. “We couldn’t stay even if we wanted to. Too many other defensive points that will fall without us. Follow me.”
Without waiting, they both followed the Chronicler down a winding path of streets until they saw another battle raging ahead. This was a full street battle with ADVENT and the Collective fighting to take control of it. There were two of the hovercraft leading the front, in addition to Outsiders of all things.

“Been a long time since we’ve seen those,” he grunted, readying his weapon. They were coming up behind the Collective assault, so they had the element of surprise. But these Outsiders looked different. They were bigger. Their armor was a dull orange, not the bright crystal they had originally been made out of.

The ones in the back seemed to know something was coming, but before they could do anything, the Chronicler swept his arm across with a yell as the entire street was engulfed in a blue crackling maelstrom of energy from side to side. Oliver fired into the storm at the targets, though he really didn’t think he was adding much.

The Outsiders and hovercraft attempted to fight back, but against a psion they were incapable of sufficient retaliation. As it turned out, that was armor the Outsiders had been wearing, and when it broke, it revealed the crystalline form underneath. Not that it protected them any better, as they shattered soon afterwards, and the hovercraft were subsequently rendered destroyed.

Not all the aliens had been taken out, as there were Custodians fighting in the front, but the combined power of a plasma grenade, the Chronicler’s telekinesis, and Kane’s weapon ripped the entire line of Custodians to pieces. It appeared they had arrived just in time as well; as the Chinese defenders were close to breaking.

Looking back, Oliver saw that there had been several defensive points that had been constantly overrun in short order. Only about ten of the Chinese soldiers were left, and half of them were wounded in some capacity. They didn’t speak English, but did make their thanks known as Kane and Oliver helped fortify the area as best they could. The Chronicler looked around the street for a minute, and then proceeded to collapse one of the buildings, and telekinetically moved the debris around to create a near-impenetrable barrier.

“Find allies; retreat,” he said with a waved hand to the Chinese.

They began moving off immediately. “Telepathy?” Oliver grunted.

“Yes,” the Chronicler said. “No English, so I had to improvise.”

“We need to keep going,” Kane insisted. “There is too much ground being lost.”

Unfortunately he was right. The few battles they had encountered did not paint an optimistic picture of how the attack was going. “We need to change the tide of a major defense,” Oliver said. “Can you find one?”

“We’re heading to it now,” the Chronicler said, motioning them forward. “And if we hurry, we can salvage this as much as possible.”

***

Skyranger, En Route to Mission Site

3/8/2017 – 10:05 A.M.

This was going to be a very risky operation, but from the news Nuan had heard…it was necessary. Things were already bad, even with Aegis and the Chronicler working to prevent the worst of it.
The attack was fast and overwhelming, and multiple smaller cities had already fallen, with the larger ones being contested – with ADVENT losing.

She didn’t necessarily know by how much, but it was far too close for comfort.

“The island of Hainan has been captured by Collective forces,” Iosif said, standing in the skyranger; commanding all of their attention. “We suspect it is already being used as a staging ground to the mainland. It’s likely that Isomnum will not expect a strike so soon after landing, which means that if we do enough damage, we can significantly affect his operations.”

“Without as much infrastructure or defenses in place,” Alberta Hill, the MELD Operator accompanying them added. “Easier for us.”

“Exactly,” Iosif confirmed. “We are still expecting significant defenses, but nothing firmly entrenched yet. We are likely going to be encountering significant amounts of Custodians and Isomnum’s personal soldiers. We’ve heard reports of Collective vehicles, so be prepared for those as well.”

“What about civilians?” Analyn asked, clasping her hands together. “The island wasn’t completely evacuated in time, and it’s possible they’re still alive.”

“They are not our priority,” Iosif shook his head. “And it is unlikely they’re even still sane now. Isomnum does not avoid targeting civilians. They may be crazed and attack us. Put them down if you have too. We can deal with them once the region is secured. Gamil, Ellinor, both of you will need to protect us from the worst of Isomnum’s effects.”

“Will do,” Ellinor nodded. “Not exactly my specialty, but for a group this small it can be done.”

“Hainan isn’t a small island,” Nuan commented. “Are we going to be the only ones taking it on? That’s dangerous, even for us.”

“Just give me time,” Alberta said, likely smiling underneath. “And enough materials.”

“Until that point, Alberta, we’ll still need help,” Iosif chided. “The good news is that we’ve got backup incoming. ADVENT is sending PRIEST, Dragoon, Cuirassier, and Lancer squads to help us secure the island – or cause a lot of damage for the Collective. Some will be dropping in behind us, others will be striking other areas of the island.”

“Sounds good.” This sounded like a much more plausible scenario. One they could possibly win. ADVENT special forces could definitely handle some of the worst the aliens could throw at them, and the PRIEST Division also being included would help mitigate the worst of Isomnum.

Nuan did wonder how much the aliens had prepared for this possibility. The Battlemaster was likely still behind some of the offensive, and Isomnum was unlikely to be blind enough to not anticipate some kind of response or attack on critical locations. This entire operation would have contingencies, and she supposed that they would find out just how thorough such contingencies were.

It was going to be satisfying though to kill aliens invading her homeland. She’d only visited Hainan a few times in her life, but in the end, it was still a part of China, and she would defend it to the bitter end. She had not expected it would be in quite this way, but she couldn’t complain about it. Humanity standing and fighting together against an alien threat.

This was how it should be.
She had been right to initially be suspicious of XCOM and ADVENT, as had most people, but by now it was clear that they intended to do exactly what they promised – defend Humanity through whatever means they could. Didn’t matter the nation or people, they would still fight because it was the right – and admittedly strategic – thing to do.

She looked up to Iosif, who gave her a reassuring nod.

She smiled under the helmet. Not that he could see, but maybe he could sense her thanks. If there was someone she wanted by her side right now, it was him.

“This is Rising Sky to Janus Team,” their pilot said. “We are coming in on the LZ. Prepare to deploy. Fires in the city, doesn’t look like they have it fully under control.”

The lights turned to red, and they all stood. “Showtime,” Ellinor said, the Templar gripping her ax.

All of them brought out their weapons or drew on their psionic power. They descended with a roar and hit the ground with a shake and a thud. The ramp hissed and lowered, the waiting nightmare beckoning. Nuan could see the ADVENT dropships also in the distance behind them.

“Go!” Iosif commanded, pointing with his mace. “Let them have it!”

And charging into the streets and into the waiting battle; ADVENT forces deploying all around them, the battle to take back Hainan began.

***

The Prism – Unknown Location

3/8/2017 – 4:17 P.M.

The hours were ticking away and Yang felt…disappointed by what she was seeing.

Idiot.

Isomnum was taking the most blunt and ineffective approach to China she could have imagined. His grandstanding at the beginning wasn’t going to make anyone actually important afraid of him, and all he was going to achieve was ADVENT getting a whole lot of propaganda to distribute about the evils of the Collective.

This of course would imply the Dread Lord actually cared about the opinions of aliens.

She shivered.

He quite clearly did not.

She had news broadcasts of the attacks playing in the background. It was mostly speculation and some ‘front line’ interviews with clearly designated officers in Beijing – nowhere close to the ‘front lines’ unless the media somehow considered ‘front lines’ to be the same country. It was disingenuous and largely amounted to ADVENT saying “We’re prepared if the coast falls.”

Which it probably was. Isomnum was at least making progress against ADVENT, and for that she could admit some grudging appreciation. She didn’t feel sorry for the brainwashed soldiers and politicians who’d presided over the country for decades, or that they were getting anything less than they deserved. But strategically, Isomnum was not how she wanted to see the Chinese brought low.
It would have preferably been her extracting the confession of President Qin over the hundreds of political dissidents he’d ordered eliminated who dared question his policies, possibly while dangling him over the highest skyscraper in Beijing, but that was unfortunately unlikely to happen.

The best case scenario for her was Isomnum dying well before he reached that point, the Battlemaster stepping in, and both of them finishing the invasion.

Unfortunately she felt like Isomnum was going to blow any impact they had very quickly. Once ADVENT learned what Isomnum was doing to the civilians, things were going to get bad. Bad as in it was going to tarnish the Collective possibly irredeemably if it was just allowed to continue unaddressed. Not to mention it was going to really undercut Betos and her activities.

She hadn’t known much about the SAS or their situation until it was announced; unsurprising as it appeared to be a deeply secret mission by Macula, but she was mildly impressed that Betos actually went through with supporting the Collective. And Isomnum was going to very much fuck all of it up if this wasn’t handled correctly.

“You are anxious,” the Battlemaster said, indicating his return. He must have returned through the Gateway since there had been no other indication of his arrival.

“Because I’ve been reading the intel reports one of Isomnum’s thralls has been so kind as to send back,” she said, turning to him and shutting off the news projection. “He needs to be recalled or dealt with. This is just going to make things worse. ADVENT is already furious over the assassinations, but this will send them into an entirely justified uproar.”

“Let me see,” the datapad floated to his hand and he began reading. She realized that it was probably difficult for him to see since the tablet was made for someone not twelve feet tall. Then again, the amount of modifications he had, he could probably read perfectly fine.

She also realized that his greeting was not exactly standard. He noticed that she was anxious, and aside from a few physical tells, it wasn’t very apparent. Likely a result of the deeper bond between them. While it wasn’t exactly full merging like what Nico and Patricia had with their respective Anchors, there was still a more intimate understanding of each other that accompanied the merging.

It was…not as debilitating or overwhelming as she was expecting. There was not necessarily a sudden comprehension of psionic abilities or overwhelming power at her fingertips like had been described. There was just a telepathic…connection. That was the simplest explanation. A direct link to the Battlemaster that he was seemingly still getting used too.

“No one has touched my mind in centuries. I did not expect that the first to manage it would be an alien.”

They hadn’t really pried into each other’s minds for now. When it came down to it, the Battlemaster respected his mental privacy and that of others. A privilege for a species that relied so heavily on knowing what others were thinking, or at least had that capability. This distance would likely lessen, but when they both were used to it.

They didn’t need that to be effective in battle. Already they were far more coordinated when joined than apart. Being able to communicate at the speed of thought took some getting used to, but that was what the hours of training in the Prism would be used for.

In the meantime, the Battlemaster gently floated the datapad over to the nearby table. “Unfortunately that Isomnum continues to squander every opportunity he gets to show some restraint and
usefulness to the Collective.”

To most people, that would be just a statement. But she could tell very clearly that the Battlemaster was furious with what he had read. As well he should be. “What are you going to do?” She asked as he made his way over to the communications room. She suspected she knew his immediate response, but wanted to confirm.

“I am ordering the immediate withdrawal of himself and his units,” the Battlemaster said as he punched in the codes. “The Second Guardian will assume control over the Chinese offensive.”

Yang pursed her lips. “And do you really think he will withdraw?”

“He will,” the Battlemaster said. “Or when he returns, I will kill him and send his corpse to ADVENT.”

“The Imperator—”

“The Imperator will need to decide on what course the Collective will take,” he snarled, strong enough that the room shook. “There are no places for creatures such as Isomnum.”

A few moments later, the hologram of Isomnum appeared, one hand holding the holocommunicator. “Why are you speaking to me, Battlemaster. I am busy.”

“I’ve been following the reports you have been sending,” the Battlemaster said. “What are you thinking?”

“I will break the minds and spirits of all who oppose us,” was the answer hissed through static. “Do not act surprised by this, Battlemaster. There are more ways to break minds, lessen morale, and destroy hope than mere telepathy. Psionics cannot block the screams, they cannot blind those with eyes. They will see those who dared resist us and they will break eventually.”

“It is unnecessary,” the Battlemaster said, taking a threatening step forward. “We do not need such crude tactics. This is directly against our interests. We intend to conquer and assimilate. Fear will only rally the Humans against us; it hinders our operations on this planet. You are in direct violation of this.”

“Silence.” Isomnum lifted a hand and closed it into a fist. “You seek assimilation; equality with species who are our lesser. They will rally at first, but fear will break eventually. Resilience only survives in the face of hope. Should hope prove to be futile, they will collapse and assimilate. You will have your assimilated aliens, and unlike your pathetic and restrained tactics, they will not dare question the might of the Ethereals.”

He cocked his head, the soulless eyes of the death mask looking at them – first to the Battlemaster, and then to her. Even though his mind could no longer affect hers, she looked away. “You are tactical, Battlemaster. Do you really think the Imperator is such a fool as to place me here if he did not intend for me to execute this task as I saw fit? I do not care what violation you believe I am committing. The Imperator placed me here, and I will do as I see necessary with his approval. And when ADVENT crumbles and their will is broken, perhaps you will understand just how wrong you were.”

The Battlemaster pointed a finger to him. “The Imperator means nothing at this juncture. You are under my command now, Isomnum. I order you to withdraw along with your soldiers. The Second Guardian will take your place and command the Chinese offensive.”

Isomnum laughed.
A long, grating, and horrifying laugh. “Are you threatening me, Battlemaster?”

“Yes.” There was no ambiguity in his voice. “Withdraw, or the moment you return to Collective space, I will kill you.”

“I look forward to witnessing your removal from Collective military command,” Isomnum said. “The Battlemaster ruled by fear – fear of what I have done and will do. Fear that he might be wrong. Fear of meaningless backlash and opinions of aliens. You care too much for the opinion of those beneath you, Battlemaster. Your pet has corrupted you further than I had imagined. This conversation is over.”

The hologram vanished. Yang winced. “I’m worried that would happen. The Imperator isn’t an idiot.”

“We shall see,” the Battlemaster said, as he was already putting in another code. An Andromedon appeared.

“Your orders, Battlemaster?”

“Relocate all Cleanser Ships assigned to China to reinforce points of attack in phase two,” the Battlemaster ordered. “Do not respond to hails or contact from Isomnum or affiliated subordinates.”

The Andromedon seemed confused. “Has there been a development?”

“Isomnum has put his personal goals over the greater good of the Collective,” the Battlemaster answered. “The changes in approach will be discussed shortly. No one may countermand this order.”

“Understood, Battlemaster.”

The hologram winked out, but Yang looked at him with some concern. “It won’t stop him from just mind controlling them if he wants it.”

“No, but unknown to those on the ships and Isomnum, there is one Special Operator on each ship who will inform me if they become compromised,” was the answer as the Battlemaster punched in a code yet again.

This time the image of the Zar’Chon appeared. “I presume this is about the questionable tactics Isomnum is planning to utilize?”

“Indeed,” the Battlemaster confirmed. “Our plans are going to undergo some revision.”

Russian Castle of the Order of Terra, Russian Wilderness – Russia

3/8/2017 – 9:24 A.M.

To say that her revelation was surprising was something of an understatement.

Reinhold, the German of the group and normally the most easygoing of the unit for once didn’t have anything to say; instead just showing a blank expression on his face as he processed it. Vicki looked similarly stunned, and only now did Kaya remember that her entire family was second-generation Japanese immigrants.
Funny how those kind of things turned out.

Genevieve’s mouth had opened and closed several times after she’d finished, definitely in the most amount of shock since they’d actually spent the most amount of time together. “I’m sorry,” she said, still in disbelief. “You’re who?”

“The goddamn Princess of Japan is what she is,” Terje said, his Norwegian accent even more pronounced than normal. “No point in making her repeat it.”

“Empress,” Mike, one of the Squires corrected absentmindedly. “Get your titles straight.”

“My apologies,” Terje lifted his hands in mock surrender. “Empress then. Japanese royalty either way. I mean…is that your title now?”

“Once things are formalized,” Kaya shrugged. “Technically I’m acting Empress until a ceremony. For all intents and purposes, that is my position.”

“Ah,” Terje suddenly winced. “Then that attack on the Japanese royals…”

She gave a sober nod. “Yes. My family.”

“I’m sorry,” he shook his head. “No one deserves what happened to them, but especially not you.”

“Appreciated; from all of you,” she waved a hand. “I’m not telling you this for sympathy, and I’m sorry I’ve technically been lying to you this entire time. But there are protocols ADVENT insisted on.”

“Technically?” Bethany, another Squire sniffed. “Not sure how ‘technically’ there is about it. Apparently your name isn’t even real.”

“Hey, lay off her,” Genevieve interrupted. “She said it was protocol. Honestly, this isn’t something new. I’ve heard the British royals doing this all the time.”

“It might have saved her life too,” Vicki chimed in. “Otherwise she might have been killed too.”

“Possibly,” Kaya agreed. “It’s impossible to say. Hamilton wanted it to stay under wraps even after this.”

“Wait, he knew?” Mike demanded, then paused, pinching his nose. “Of course he knew. No wonder he always had some kind of weird interest in you. I thought…well…”

“Oh, do go on,” Reinhold said with a raised eyebrow. “I really want to know what you thought it was.”

“Not important!” Mike insisted. “Since it’s definitely wrong.”

Kaya felt a little smile creep on her face. It did feel good to have this out now. “I can say very safely that whatever you might have, ah, thought was going on definitely wasn’t.”

“How the hell does this even happen?” Vicki asked. “I haven’t heard of any kind of royals being in the ADVENT military. And before that you usually only heard of the British. Did you just…ask?”

“More or less,” she answered. “Long process, with a lot of back and forth. Name change, false identity, backstory, all of that figured out. No preferential treatment. What you would expect.”

“So…” Genevieve sat down on the nearby chair. “Is this a really long way of telling us you’re
going back to be Empress? Because honestly that’s a completely justifiable reason. Didn’t think I’d say that, but then again, I didn’t know you were actually a monarch.”

“What? No, no,” Kaya denied immediately. “I’m not going anywhere. Not until the aliens are driven off our planet and the one who killed my family is dead.”

“So you’re not going to be Empress?” Vicki asked, confused. “Can you even be both? You have a sister right?”

“Normally it’s more of an administrative position,” she said. “A figurehead. So I’m making some changes. There…well…there isn’t anyone to stop me now,” she gave a sad smile. “Besides, I know this killer is going to want to finish the job. I’m a better target than my sister, and it’s important that my people see me in this position – fighting back.”

“Wait, I remember you now!” Vicki said, who’d been appraising her face. “You cut your hair. A lot. No wonder I didn’t recognize you. It was some interview you gave a few years ago.”

“Probably,” Kaya had given quite a few interviews, although she’d only heard of a few that had been given a western release. Probably when she’d addressed the circumstances of her sister leaving. And she’d definitely looked different then. Aside from the hair, she was quite certain the younger her had been more happy. And innocent. “You’re likely going to be seeing me on the news in the next few days. I wanted to let all of you know a little beforehand so you weren’t too blindsided.”

“Something like that,” Kaya glanced at the clock. “Hamilton wants to keep details about where I am under wraps. No identifying Order garb, not yet at least. But something to show people that I’m alive. Something hopefully inspiring.” She felt her lips curl into an empty smile. “Knowing ADVENT, they’ll be waiting for the right moment to propagandize my position in the Order. I’ll cross that bridge when I get to it.”

“I mean, it’s certainly a good story,” Bethany commented, lifting a hand as if illustrating a title. “‘Japanese Empress fights to retake Japan.’ Not the worst headline in the world.”

“No, but still,” Kaya shook her head. “I don’t want any kind of celebrity treatment here, no matter what ADVENT does to me. I don’t deserve that anymore than you; I just happened to be born into the right family. You can even keep calling me Tora if that’s what you’re comfortable with. But there’s also the risk that everyone will be a target if my position is ever revealed.”

“Ha!” Terje grinned. “Well, then we will all have the pleasure of killing the bastard who killed your family. Doesn’t change anything. We’ve worked well together so far, and I don’t see a reason to change that. Anyone disagree?”

No one spoke up, and there were several nods of confirmation. “Thank you,” Kaya said quietly. “All of you. I’m sorry you had the bad luck to be paired with me of all people.”

“Nah,” Genevieve dismissed, shaking her head. “It just makes things more interesting. Plus, I’m one of the few to actually say I’m friends with the Empress of Japan.”

“Or fought with the Empress of Japan,” Terje added.

“That too,” she nodded. “Well then, let’s get to training. I bet that Freya is wondering where we all are. She is going to love this.”
Knowing Freya, Kaya expected her to just raise an eyebrow, accept it in stride, and immediately get to work. And maybe talk in private later. “Let’s go do that,” she agreed. “The aliens aren’t going to kill themselves.”

***

ADVENT-Chinese Joint Command, Beijing – China

3/8/2017 – 12:19 P.M.

“It’s not looking good right now,” Laura was saying, shaking her head. “Too many aliens, not enough entrenched defenses, and Isomnum’s direct intervention.”

“Aegis should have been able to protect them,” one of the officers said. “Right?”

“Aegis is the reason ADVENT lines haven’t gone insane yet,” the Commander clarified. “He’s under direct assault from a former Overmind. He can’t protect everyone, and is also engaging with the invading forces.”

“Which is still leading to problems,” General Cheng said, frowning at the holotable. “Isomnum’s influence is forcing us to contain and deal with the civilians who are left and subsequently have lost their minds. This is dividing our attention further and it’s not improving morale.”

“No, it isn’t,” Saudia said. “And the aliens aren’t helping matters by releasing their new toys. I don’t suppose you know anything about these, Commander?”

“Unfortunately not,” he said, moving to enhance a holographic recreation of the hovercraft and the siege-breaker. “Likely something Fectorian or the Andromedons developed. A direct response to our defenses and fairly impressive. They have the advantage this time, and only our most fortified cities will be able to repel them.”

“What is the status of Busan?” Saudia asked Laura.

“Holding well, if suffering casualties,” she answered, consulting her tablet. “The first trench is being slowly overrun, but they’re causing significant damage to the alien forces.”

“The one piece of good news today,” she muttered. Losing the first trench was not a major deal, as the aliens would find three more layers behind it, much less the defenses in the city itself. Busan would not fall, but it would not be easily defended, depending on how badly the aliens wanted to claim it. “The only issue is that the Hunter has shown himself,” Laura added. “Although he’s not the wild card he used to be.”

“Not surprising,” the Commander grunted. “The Battlemaster wouldn’t have deployed him if he was. I’m working on a team to handle him.”

“We may need more XCOM teams in China,” Laura said, returning their attention to the siege at hand; with many red-lighted areas on the holographic coast of China. “Even if this strike in Hainan works, that isn’t going to stop the invasion, nor will it be able to be held indefinitely.”

“We need to wait for a few more hours yet,” he disputed. “I will not overcommit to this attack; not yet. Right now Isomnum has not done anything we did not expect. I suspect something unexpected is going to happen, and we do not want to overplay our own hands just yet.”

“At the same time, I don’t want to unnecessarily lose significant portions of China,” Cheng pointed out with a frown. “We may need to start preparing euthanasia commands if the insane civilian
problem gets worse. There are tank brigades in the cities which are about to engage if the front lines keep falling.”

“That is not going to help,” Laura said, shaking her head. “The euthanasia. Not the tanks.”

“It’s preferable to having to worry about being stabbed in the neck by some insane civilian!” Cheng shot back. “We don’t have many options here; I do not like it either, but we have to put our own soldiers first before anyone else.”

“I have a better idea,” the Commander said. “Halt the advance altogether. Have the Purifiers begin creating a line between the armies in as many places as possible. It’s possible it could spread, but it would give us time to regroup and solve this issue, and temporarily halt the alien advance – or funnel them into corners. Not even aliens will risk going through ClF3.”

“It could also burn down the cities,” Cheng added.

“You’re right, it could,” the Commander nodded grimly. “But it would stop the aliens for now. Concerted bombings along the coast with ClF3 bombs would also help, and more directly impact the alien lines. They have yet to deploy the siege breakers in China yet.”

“I wonder why?” Laura mused.

“Possibly so we expend everything on what is already deployed,” Saudia guessed, scratching her chin. “However, I agree with the Commander. Extreme, but this advance needs to be halted. We can make decisions on how best to defend the major cities or retreat if needed to more fortified interiors.” She glanced to Cheng. “However, you or Qin need to also make the call.”

He grimaced, but nodded. “Move your forces into position, I will inform President Qin about these developments.”

Haikou, Hainan - China

3/8/2017 – 10:47 A.M.

The infrastructure was eerily untouched, likely due to the lack of any significant fighting that had taken place. But that was the only thing Nuan could see that was even remotely normal, because right now they were facing something out of a nightmare. In the middle of the streets there were Isomnum’s black-armored soldiers performing surgeries.

Surgeries on civilians.

There wasn’t even any slight indication of protocol, sanitation, or comfort. The screaming men, women, and children were being held down by clamps or Custodians as their limbs were removed or replaced with basic prosthetics or were forced onto their backs as their spines were cut open or their brains exposed to the cybernetics that were being meticulously applied.

Custodians guarded the operations sites and moved to defend them as the enraged XCOM soldiers approached. Nuan snapped her gauss rifle up to aim at the nearest Custodian and fired at the head. The rounds tore into it, but she temporarily forgot that was not the actual control center for the machine, and the black humanoid robots moved to defend.

She really needn’t have bothered, since Ismail shoved one hand forward, and the entire front line of Custodians was lifted into the air and crushed into scrap metal. Orange-tinted wisps of apparent
dust floated off Alberta and converged on the scrap of the Custodians while Isomnum’s soldiers stood at attention and directed the converted civilians to begin marching against the XCOM squad.

It was worse seeing them approach, since it was apparent that they were mad from pain and terror, and clearly not wanting to do it, but the machines or psionics in their heads forced them to obey. There was some pattern to how they were outfitted; most had an arm with bladed fingers clearly intending to bludgeon or stab enemy soldiers, possibly relying on the soldiers being unwilling to shoot them.

Others were strapped with devices that looked explosive, and they were hanging towards the back. They were not shambling either, but being forced to run at full speed towards the soldiers. Gamil raised an arm, and several psionic barriers appeared in front of the horde of probably thirty of the converted, with at least a dozen more being finished up by Isomnum’s soldiers.

“Grenade out!” Yavin called, and tossed a plasma grenade over the psionic wall, which Ismail assisted by telekinetically grabbing the grenade, and slamming it to the ground with extra force. Nuan winced as the green explosion vaporized a good portion of the converted, but at least they were out of their misery.

“Ellinor, move in with me,” Iosif commanded, brandishing his mace. “After Isomnum’s minions.”

“They’re not going to do what he plans on doing to all of them,” Nuan growled, turning around to see at least several hundred storming forward from around street corners and down the main road. They were interspersed with the black-robed soldiers of Isomnum, primarily Sectoids and Vitakara, with the occasional Human.

It did appear that Isomnum’s soldiers were in full retreat as the two Templars bore down on them without mercy. One of the black-robed Sectoids tried mustering up a telepathic attack against Iosif before his head was caved in by the mace. A black-robed Human simply elected to run away from Ellinor, and ran straight into a psionic barrier, and as he turned to meet her, she buried the glowing ax in his face and kept cutting down.

“Grenade out!” Yavin called, and tossed a plasma grenade over the psionic wall, which Ismail assisted by telekinetically grabbing the grenade, and slamming it to the ground with extra force. Nuan winced as the green explosion vaporized a good portion of the converted, but at least they were out of their misery.

“Ellinor, move in with me,” Iosif commanded, brandishing his mace. “After Isomnum’s minions.”

“With pleasure,” she agreed, and charged. Gamil removed one of the squares of barriers, and the first thing Iosif did with the revealed space was thrust an arm forward and a horizontal field shot out, slamming into those directly in front of him and even decapitating a few, accompanied by several brief spurts of crimson blood.

Alberta was seemingly doing enough to occupy the majority of the Custodians, as they seemed almost frozen as they retreated, to let the remainder of the converted try and kill them. Gamil lowered the barriers entirely, giving the rest of the XCOM soldiers license to shoot whatever approached them. None of them had even sought cover yet, as there wasn’t a significant need.

One of the black-robed Sectoids tried mustering up a telepathic attack against Iosif before his head was caved in by the mace. A black-robed Human simply elected to run away from Ellinor, and ran straight into a psionic barrier, and as he turned to meet her, she buried the glowing ax in his face and kept cutting down.

“We’ve got reinforcements coming from behind,” Analyn informed, sounding worried. “More of those…converted civilians.”

“This is what he plans on doing to all of them,” Nuan growled, turning around to see at least several hundred storming forward from around street corners and down the main road. They were interspersed with the black-robed soldiers of Isomnum, primarily Sectoids and Vitakara, with the occasional Human.

It didn’t make sense why he would go this far? Sure, the practical argument for easy disposable soldiers was pretty straightforward, but he had to know that was only going to make everyone furious? Could this really be something the Collective would sanction? Especially since they were still trying to appeal to other independent nations?

However, as she looked closer at the faces of the converted, whose eyes held only terror and madness, and their faces covered in dried and running blood and gore, she realized that Isomnum simply did not care what anyone, be they Human or Collective, wanted.
He only wanted everyone to feel terror.

Ismail motioned and three of the bomb-converted were thrown backwards and ended up exploding in a red-orange blast, taking out more of the standard converted. So they were suicide bombers, good to know. The best thing to do…the only thing…was to put them out of their misery.

*These aren’t people anymore. They are tools. Enemies.*

*Aliens.*

“Fire!” Yavin called, green plasma shooting from his rifle into the rushing horde.

*You are not killing people. Only things which should be dead.*

“Funneling,” Gamil said, and he repeated the same psionic barrier technique, only leaving open a gap large enough for a few to get through at a time. Everyone concentrated their fire in that direction. Nuan saw an opportunity to fully exploit their clustered situation.

“Switching to hellfire rounds,” she informed, ejecting her half-depleted clip and putting in the Hellfire rounds, which was the unofficial term for the rounds which contained small traces of ClF3. It admittedly turned her gun into something of a primed bomb, but it was a risk she was willing to take. She fired into the horde and was rewarded with a burst of flame as the fire began to take hold and spread.

“Gamil! Lower the shield slightly!” She called, running along the side and taking aim. “Let me fire into the group!”

“Better idea!” Ismail extended a hand to her. “Be ready!”

She barely had time to prepare herself as she was suddenly lifted into the air over the barrier with full vision over the road. Without wasting time she fired a spread across the entire street; and since she didn't need to be extremely accurate, a line of fire took hold and began spreading throughout the ranks. She spent the next few seconds targeting the general area where the black-robed and armored soldiers were, and focused on them.

Her eyesight and aim were good enough that they had difficulty reacting in time, and found themselves suddenly shot and drenched in fire they could not extinguish. She repeated this four or five times before the converted were dying out, and instead Custodians were emerging as reinforcements, in addition to Outsiders.

New Outsiders though. These looked different. She motioned to Ismail to put her down, and was subsequently lowered swiftly. “More reinforcements. Custodians and Outsiders.”

“Outsiders?” Analyn asked. “Haven’t seen those in a while.”

“These look different,” Nuan updated, shooting a look back to the other side of the street to see how Iosif, Alberta, and Ellinor were doing. “Probably improved.”

As it turned out, Iosif was just finishing off the last of Isomnum’s soldiers with a mace swing to the head, turning another Sectoid brain into mush. Ellinor’s axe was stained with yellow and red blood, while Alberta’s nanites had noticeably stripped the Custodians down to extremely reduced and cannibalized sizes, and were instead constructing barriers and what looked to be ammunition magazines from the remains. As she looked around, she also saw that entire portions of the street – including abandoned cars and light posts, were also being stripped.
“We need to watch from the roofs,” Iosif said, returning to them. “And from behind, though it looks like ADVENT will help us with that.” Several hundred feet downwards, Nuan saw a Lancer squad establishing a forward position, supported by Hussars and PRIESTs.

“We need to get this back to the Commander,” Nuan insisted. “Once they see what Isomnum is doing…”

“No need, Engineer Kun, we’re storing all of this now,” the Commander’s voice was grim. “The implications are unpleasant to say the least, but the Collective will not be able to justify this. We think-“ The signal abruptly broke up.

“Jamming us,” Iosif tapped his helmet. “Took them long enough. We’ll have to find the origin and destroy it. We’re lucky at least some of it got to the Commander.”

“Orders, Iosif?” Gamil called. “I can maintain this barrier, at least for a while. But they’re attacking psionically.” He shook his head, even as the barrier held firm. “We need to get rid of them.”

“Open a path, and we’ll go out there,” Iosif commanded. “Nuan, Yavin, provide covering fire. Gamil, reduce the shields to pillar formation. Ismail? Wreck some havoc.”

“Yes sir!”

Pillar formation simply meant that there would only be sections of a barrier, which allied (and enemy) soldiers could use as cover. Nuan dashed towards the purple barrier, careful not to lean on it. She wasn’t comfortable leaning on something that could vanish at any moment. Not wanting to risk the Templars, she switched back to standard ammunition, and resumed firing at the Custodians and Outsiders.

These Outsiders really were different, especially since there was more than one type now. A dozen were fairly small and lithe, and had formed shields onto their arms, and the opposing limb now had a crystalline blade on the end. They were worryingly fast, and beelined straight for the Templars. The Custodians were content to focus on the remaining soldiers, while also making do with the meager cover on the street.

Yavin shot the plasma rifle one was holding, causing it to explode. Nuan destroyed the head of another. Ismail sent a psionic wave that cleared an entire section of the street, crushing one of the Custodians with a car, while others were just thrown into the wall. Several massive Outsiders from the back stepped forward, and lifted their arm which had a cannon of some kind on it.

Lasers activated from a gadget on its shoulder and a red laser shot out directly into the barriers all of them were hiding behind. Nuan’s flickered, and she was slightly concerned until Gamil managed to reestablish the density of it. This needs to be fixed. She switched back to the Hellfire rounds. “Target the back row!” She yelled to Yavin, who nodded as he’d gotten the same idea.

She didn’t have the right weapon for long-range sniping, but she didn’t need exact precision every time. Only a few shots needed to land. She focused on one of the larger Outsiders, and sent a volley in that direction. Splashes of flame confirmed hits, and more fire appearing on the back row confirmed Yavin had hit as well.

In the center of it, the melee Outsiders were giving Iosif and Ellinor a good fight. For every hit they managed to land on the enemies, or send back with a psionic barrier, the Outsiders managed to take a good shot at the Templars themselves. What was worse is that they hadn’t managed to kill any yet, as every time they landed a hit, the Outsider would retreat, regenerate, and return.
There were enough of them attacking that it was a viable strategy.

“We’ve got trouble from above!” Alberta called, and Nuan directed her attention above to see a dozen massive Seekers descending upon them – or merely hovering.

“Close the gap!” Iosif yelled to Gamil. “We’ll handle ourselves!”

The barrier reestablished itself, as the majority of the squad moved to face this new threat. Nuan fired at one of the Seekers, which was surprisingly fast at avoiding her shots, but she clipped one, and that was all that was needed for the fire to start, and it shot back over the buildings before any more damage could be sustained.

One barreled straight for Ismail and knocked him over as it began strangling him. Not wanting to hurt him, Nuan immediately switched to her plasma pistol and opened fire on the Seeker, causing enough damage that it released him and shot into the air. Alberta lifted a hand and the nanites formed into a cloud that the Seekers were suddenly engulfed in.

The few that were left outside reacted immediately. One fired several rounds directly into Alberta, though they did little more than scorch her chest armor, and didn’t even come close to penetrating the skin. The others dived toward Yavin and Analyn respectively, both of whom fired at the massive machines barreling towards them.

Nuan joined in shooting down the one targeting Analyn, and it crashed a short distance away. The other one wrapped the tentacles around Yavin, but this time lifted him into the air and began contorting the body in addition to emitting the black gunk into his helmet to overwhelm the sensors. However, Yavin instead used the defenses of the Titan armor to fight back.

The nanites normally dedicated for repair were instead turned to attack the machine, and in minutes the Seeker froze up and let Yavin’s body fall nearly fifteen feet into the hard concrete. As the Medic, Analyn rushed towards him and began trying to treat him. He wasn’t going to get up for at least a little bit, but with the Seekers falling from the sky as Alberta’s nanites consumed them, it seemed that threat had been largely contained.

Nuan swung back to Iosif and Ellinor, both of whom had abandoned taking out the Outsiders for the moment in favor of kiting around the battlefield, and killing everything else. It also seemed like they were adapting well to the Outsiders, as Iosif was easily fighting off three at a time, encasing two more in psionic prisons, while throwing the other one back with a horizontal barrier.

Ellinor was having more of an issue, but she was also dealing with the armored Outsiders, ones that reminded Nuan most of the original ones…except with dull orange armor instead. They were firing on her with notable accuracy at the same time she was fighting off a half-dozen of the other Outsiders.

“We’ve got a problem!” Alberta suddenly called urgently. “A Mosrimor Avatar!”

Nuan stiffened. She hadn’t been on the mission to Argentina, but she’d heard of the Mosrimor…thing…that the Chronicler and Zara had fought. It had taken a lot to beat it, and in their position, she didn’t know if they could beat something like that. Especially given what it could supposedly do.

She turned around and it was worse than she’d expected, in addition to the rippling black skin of the nanites in the shape of a thin Ethereal, it was accompanied by the black recreations of Lancer Squads, Hussars, and PRIESTs. They didn’t seem to be quite the same as Spectres though, since there was no flash…
Those weren’t recreations. Those were the ADVENT soldiers, who were now being puppeted by the Mosrimor Avatar. Behind it was also an uncountable number of Custodians. “We’re not prepared to fight one of these,” Alberta called, drawing the nanites back to her as the Avatar and Puppets advanced. “Not without backup.”

“Can you hold it off?” Iosif called as he slammed the shield of an Outsider away and smashed the head of it in, and another strike to the chests, which this time was enough to seem to kill it.

“Not for long,” she said worriedly, as the Mosrimor Avatar began leaking black nanites into a fine mist around it. “We need to call it off. This was way more than we expected.”

“Agreed,” Iosif confirmed. “Rising Sky, we need an evac…damn it!”

Nuan remembered at the same time. Their comms were being jammed. There wasn’t anyone able to hear them, and they had no way to call for help. “Change of plans!” Iosif grunted. “Gamil! Trap the Avatar. Alberta try building around it. Hold it off for us to escape. Everyone else help me kill these things!”

“Copy!” The barrier protecting her vanished and she rushed towards Iosif, firing her plasma pistol to distract it. Ismail was assisting the Aegii and Operator as he telekinetically focused on holding the enemy force in place, which the Avatar seemed content to allow, even as the ADVENT Puppets began acting to destroy the barrier by firing at it with weapons and psionics. The Custodians behind them did the same.

Nuan caught the attention of one of the Outsiders and it swung to face her and jabbed at her face. Sidestepping she grabbed the arm and shoved a plasma pistol in it’s ‘face’ and blew it to pieces and did the same to the heart.

Iosif encased three in stasis fields while they took down another one. “I can’t hold them off!” Ellinor yelled frantically as she was stabbed under the armpit with one of the blades, even though she retaliated by burying the axe in the head of the offending Outsider. But it wasn’t enough as the continued barrage of attacks from all sides led to her being stabbed in the joints, neck, and more. Even the defenses of the Titan armor were only successfully in dissuading two Outsiders, and their own regeneration proved enough to suffer no lasting effects.

Analyn had Yavin propped up against her, as he still had the wind knocked out of him from the fall, and both of them were firing at the mass of Outsiders, though to minimal effect.

“It’s breaking through!” Gamil shouted suddenly. “I can’t keep it out!” He clutched his helmet and the barrier collapsed, and with it their hopes of holding back the aliens. The Mosrimor Avatar did nothing, but there was a noticeable psionic glow about it as the black mist of nanites rushed forward, and was met by the far smaller cloud of Alberta’s nanites, with the latter being consumed and overwhelmed within mere seconds.

Nuan watched in horror as the nanite cloud washed over first Alberta, then Gamil and Ismail who first tried struggling to get off the cloud of nanites burrowing into them, but soon fell to the ground, writing and screaming in pain. The Outsiders fighting them were still fighting back, and she was too slow to dodge one and felt the blade penetrate a gap in the elbow.

She shot and kicked back, gasping as the nanites from her suit began repairing it, but it was a lost cause. They were all going to die if they didn’t get out of here now. “We have to go!” She yelled to Iosif. “Now!”
The nanites from Mosrimor had reached Yavin and Analyn who’d been unable to outrun the black cloud. Nuan knew she only had one chance to really make any sort of difference, and she reached to the one Hellfire grenade she had, and chucked it towards the Mosrimor Avatar who extended a hand, and inexplicably grabbed it almost in amusement.

It was less amused when the grenade exploded and coated the Avatar and the nearby puppets in fire. It must have thought it was an ordinary grenade that it could withstand to show how it couldn’t be hurt.

The Outsiders were bearing down on them still. They dashed back to an alleyway, with Iosif doing the majority of the fighting, and he finally created a barrier to block them off, while pulling back his arm, and dissipating the barrier while throwing the other one forward, sending a final horizontal barrier which outright destroyed several of the Outsiders, but sent the majority flying back. Wincing in pain from her wound, Nuan fired the last of her Hellfire rounds along the ground and where they had been hoping it would slow the aliens down.

And with the aliens distracted, if only temporary, they ran.

They were on their own, in enemy territory, and Nuan had a sinking feeling that the Mosrimor Avatar wasn’t dead yet.

Or that they couldn’t just send another one.

This was bad.

Iosif was also breathing heavier, and she didn’t fail to notice the scratches and hits he’d taken during the fight as well.

This was very bad.

***

*Collective Military Command – Mars Collective Base*

*3/8/2017 – 5:17 P.M.*

“We are seeing a significant pullback from ADVENT and Chinese forces,” came the report. “Isomnum’s forces are pushing them back, though he will not be able to maintain this offensive moving forward.”

“As expected,” the Battlemaster was not surprised by this development. “He has been isolated completely?”

The Vitakarian checked the datapad. “All Gateways have been rendered inoperable and transports returned to your command. He will eventually run out of soldiers and equipment.”

“I feel this may have been too much of a drastic step,” the Zar’Chon said unhappily. “Regardless of his methods, this should have perhaps been postponed until after China was conquered. I don’t deny the need to punish him for his actions—“

“He is no innocent or suffering from naivety,” the Battlemaster interrupted bluntly. “He has been given multiple chances, and yet still intends to treat this as a board to play his ideological games. There is no place for it, and I have finished enabling his actions in this manner. We do not require his skills or abilities in this way.”
Ravarian’s expression didn’t change. “And what of the Imperator?”

The Battlemaster looked long and hard at Ravarian, until the Zar’Chon looked away. “The Imperator,” he answered slowly. “Will make his opinion known should he decide to do so. The Imperator has shown a distinct lack of tactical and strategic skill thus far, and I am under no obligation to entertain his suggestions until he proves himself worth listening to. If the Imperator contacts you, direct him to me.”

A nod. “Yes, Battlemaster.”

He had not expected to be placed into this situation; he had thought better of the Imperator, and perhaps the Imperator had some grand plan for Isomnum, but unfortunately that plan would never be realized. The Imperator was not going to exert his influence on this conflict anymore until he could show some competence.

Utilizing Isomnum in any public capacity was the opposite of competence.

There was the risk that the Imperator would just remove him from his position, but that would not happen for a long time yet, and thanks to Isomnum’s idiocy, he had provided an excellent excuse for completely cutting him out of the Collective altogether. The Imperator may be displeased with that development, but the blame could be laid solely at the feet of the Dread Lord himself.

How Isomnum was resolved, he didn’t especially care. Either the Imperator would extract him via Sicarius, or ADVENT and XCOM would kill him. Or the unlikely happened and Isomnum won. Either way, he would disavow the Dread Lord as a rogue operator, and then proceed with the invasion in a more conventional and effective manner.

The holodisplay flashed to life. “All our forces are in position, Battlemaster,” came the update. “We are ready to commence the invasions on your orders.”

“Have them stand by,” he commanded, looking over the deployment plans for a final time. “I will be boarding shortly.”

***

To be continued in Chapter 48:

Dream of the Dread Lord
The ADVENT forces were in full retreat and those that were left were in the process of being converted into something more... useful... assuming their minds were still intact to begin with. The smaller number of civilians were also in the process of being enhanced to serve as his soldiers as the conflict progressed deeper into the country.

The Dread Lord stood alone; simply waiting and considering. The Battlemaster had been true to his word, and this time Isomnum suspected that the Battlemaster would follow through on his threats should he retreat at this juncture. A rare, but infuriating moment of backbone displayed from the one who was so often a coward. His absurd stances would backfire one day, and Isomnum suspected that the Imperator himself might take action.

Or perhaps not. Too many of his own kind were weak of mind and stomach. If any were to be thrown aside as a sacrifice, it could very well be him. Yet he doubted, for the sole reason that the Imperator saw what he could bring and utilize, and he was not so foolish as to cast it aside based on pure morality.

Yet the situation now placed him in a curious position. His forces would last for a while longer, but they would inevitably start to dwindle, which would allow ADVENT to reclaim their territory piece by piece, and Aegis would continue to limit his effectiveness, and regardless of the pathetic character of the traitor, he was steadfast in his defense.

It would not be enough, but Aegis would be granted a quick death.

Fortunately, this was a setback he had a contingency for.

One spindly arm pulled out a holocommunicator. He activated it and after a few moments of waiting, saw the image of the Creator in her ridiculous cult uniform. Such a weak and malleable mind, twisted to serve an entity far more intelligent and dangerous than she could ever be. She had been rightly used as bait by the Imperator to harness greater power.

The puppet was of course ignorant of the role she played, but that was to be expected by one so thoroughly corrupted by the Bringer. And it was not her he needed to speak to, yet the arrogant puppet spoke as if she had authority. “Isomnum. You interrupt my work for what reason?”

“I am on Earth.” The corrupted Ethereal did not need more than that. “I have not called to speak to you, but to Him. I will speak to his representative now.”

“You forget of whom you are speaking,” she insisted. “I am his voice and will just as-“

The air rippled around Isomnum. “Silence. I have no interest in you or your arrogance. I am one of the few who are responsible for your continued existence and that of your master. Otherwise you
would all be dead at the hand of the Battlemaster now. I will speak to Him, now.”

The Creator was silent for a few moments, her body remarkably still as if listening. “As you wish, Isomnum.” The image shifted until the towering figure of the Temperance appeared, two arms visible and clasped together. The head was in a form he had not seen before, one with six eyes and a mildly aquatic shape and texture, even as the skin was still marble.

There were few creatures he treated with caution or was wary of. The Temperance was one such creature. It was intelligent, manipulative, and was quite aware of the limitations the puppet Creator was forced to endure. And any individual who could successfully defend against the Twins – as spineless as they were – had strength.

Strength the Temperance did not flaunt, which was a significant indicator of the danger such a mind posed. The truly powerful did not flaunt it. They simply were.

Power could not be faked. Those with it instinctively recognized others who had it as well.

“You show disrespect to my disciples,” the Temperance said in a monotone. “Unnecessary.”

“Then they should show more respect and lessen their arrogance,” he replied. “Your puppet is unimportant now. The Battlemaster has done as you predicted.”

A slight nod. “You have been completely cut off?”

“Yes,” Isomnum confirmed. “With the threat of death upon returning to Collective space. He will attempt to follow through, unless the Imperator intervenes.”

“It is irrelevant. You have justification to receive additional support,” the Temperance waved a hand to something to the side. “I presume the arrangement still stands.”

Spoken without ambiguity. A rhetorical statement which was not a question. One the Dread Lord did not dispute. “Yes. Assist in the conquest of China and you will be allowed to take as many as you desire from the inhabitants. You also have my assurance that the Paradise projects will not be hampered.”

“Accepted. We look forward to showing the skeptical of your kind the…advantages…of our assistance to your Collective,” the Temperance brought the hands back together. “Your support will arrive momentarily. Our Orders will each assist in your glorious conquest.”

“ADVENT will pose little threat to your soldiers,” Isomnum reminded the alien. “Your involvement will attract the attention of T’Leth.”

The Temperance showed no response to the words. “We are aware, Isomnum. We will handle him should his interference become problematic. Expect us shortly.”

***

Situation Room, Mars Collective Base – Mars

3/8/2017 – 8:14 P.M.

It appeared that his deployment plans would need to be temporarily put on hold, which suited the Battlemaster fine. It would keep them focused on Isomnum for now, and there was no significant time rush. Macula was handling the attacks currently being faced by the SAS. It was causing damage, and it appeared to be a sustained attack, but nothing critical was being damaged that
couldn’t be repaired, at least from a military standpoint.

It was, however, going to require a significant amount of additional resources and personnel to ensure the civilian infrastructure didn’t collapse, as that was being hit the hardest, even if ADVENT did appear to be largely targeting military positions and personnel. Curiously it appeared that ADVENT had some kind of bomber which was oddly difficult to detect, which was already responsible for a number of spreading fires.

That would need to be handled. But that was something Macula had assured him could be done.

Right now, the Imperator was speaking with him. He had expected it would come at some point, but the immediate response was curious. He would have expected it after there had been progress on the ground. The Imperator was impossible to read behind the helmet, but he expected that the Imperator was largely displeased with recent actions.

“You should have consulted me before taking such drastic action,” the Imperator said. “This goes beyond military authority. You actively disbarred an Ethereal returning upon the pain of death. That decision cannot be made unilaterally.”

“Then perhaps you should have reconsidered utilizing him in a military operation,” the Battlemaster responded flatly. “Or including him in your plan at all. You knew what he was like. You knew what he would do. You knew how incompatible he is with myself others. I am tired of hearing you feign ignorance, Imperator. You knew exactly what you were doing. The fault lies solely with you.”

“If Isomnum would not have listened to you, I should have been informed. The Imperator began before the Battlemaster cut him off with a lifted fist.

“No. I will not give Isomnum the benefit of the doubt. He is intelligent enough to know what he is, and is not allowed to do. You either failed to make clear his restrictions, or he no longer will listen to you. His actions do not warrant any protections within the Collective, no more so than your Paradise experiment.”

The Battlemaster took a step closer to the hologram. “You intend to turn the Collective into something aliens will be interested in joining with, and staying in willingly, without significant coercion. If that is the case I am unclear exactly what you are thinking? Do you really think the Creator or Isomnum provide any benefit to achieving this supposed goal?”

“It is not that simple!” The Imperator answered. “And your willful naivety will not change that. You know of the Sovereigns and the Synthesized. The threat they pose.”

“One more than the other,” the Battlemaster commented.

“Both are usable to ensure we are not inevitably conquered by one of these two forces,” the Imperator continued. “There are no other Ethereals who understand the inner complexities and weaknesses of the Synthesized, and the Bringer is our answer to stand against the Sovereigns. And as there is a Sovereign One on Earth, they will at times be needed to achieve the greater goals of our objectives. By throwing a childish tantrum you have actively damaged our operations on Earth and given ADVENT and XCOM hope that they can defend. Do you not see how your public unveiling of this infighting is actively rallying the Humans?”

“Then perhaps you should have made better decisions,” he answered, motioning with a hand. “Perhaps you should think on why there is opposition to your decisions that are supposedly for the greater good. I will not continue to actively accept your inferior choices merely because you were
designed to be the leader of our species, even if others will. And you know that I am not the only one.”

“I accept our disagreements to a point,” the Imperator stated. “But that point stops when the greater interest of our Collective and species are threatened.”

“I am very glad we agree on that,” the Battlemaster nodded. “Considering that knowledge of Paradise and Isomnum is actively damaging the reputation and internal capabilities of the Collective, dissolving these issues is the only practical measure to take.”

“The sarcasm of Humans is rubbing off on you,” was the neutral notation. “And given the opportunity, would you kill him? One of the last of our kind?”

He was, in fact, glad the Imperator had asked. “Isomnum is not an Ethereal worth preserving. I would kill him with no hesitation. And if you are so concerned about losing his knowledge, rip it out of his mind before he is executed. Isomnum will never be safe within the Collective so long as I am alive, and should the Creator dare show herself before me, I will execute her as well.”

The Imperator appraised him for a few long moments. “Your insubordination is becoming an issue, but will not disrupt operations further at this point. Go. Do what you will, though soon we will need to discuss your role within the Collective. I will not have the Collective military led by someone as unreliable as you-“

Not unexpected, and as he had little intention of listening to the passive aggressive threats of the Imperator, he shut off the hologram and turned around to Yang who’d been standing in the far corner, who looked both impressed and concerned. “You’re braver than I am,” she said. “Cutting him off like that knowing what he can do…”

“There will be no Ethereal that actively defends Isomnum,” he answered unconcerned. “And the Imperator will not act against me without showing himself a hypocrite. He has limited power over me and I have no interest in maintaining that illusion more than necessary.”

“And what if he removes you from your position?” She asked.

He did wonder what would happen if that step was taken. The Imperator may be angry enough to do it, at least temporarily. “I will deal with that when it happens,” was all he said. “We will discuss this at a later time. Now we have nations to conquer.”

***

Hong Kong, Guangdong – China

3/9/2017 – 1:32 A.M.

Oliver slumped behind cover, and then forced himself to rise again and take aim at the Outsider which continued to encroach on their admittedly defensible position. It wasn’t good news that they were slowly and steadily being forced out of the city, and were only holding a few more points in Hong Kong, but both the Chinese and ADVENT defenders were going to make the defense as costly as possible for the aliens.

It helped that the aliens were being funneled into specific choke points, which were the results of the Chronicler’s work destroying the nearby buildings and cutting off flanking routes. Oliver didn’t know how the man was still standing after all he was doing, but he was continuing to fortify the general area. The entire defense point had been leveled and destroyed, giving the defenders some much needed room.
It was big enough that a few Chinese tanks were being rolled in and placed along the lines of sight of the streets, and sniper nests had been established in the back line of buildings that offered clear shots down the street. In the area that contained the defenders, there were several rows of barricades and improvised cover of destroyed cars and boxes.

PRIEST teams, Dragoons, and squads of ADVENT soldiers made up the primary ADVENT defenders, with the majority consisting of exhausted and wounded Chinese. Oliver was extremely concerned that whatever protection Aegis and the psions were providing was beginning to weaken as he himself had experienced sudden bouts of terror and seen things briefly, though without any detail. Several ADVENT and Chinese soldiers had shot themselves or attacked others.

It was bad, and it didn’t sound like things had gone much better elsewhere either.

David’s team had been forced to retreat after Kanda had been killed, and both soldiers had been wounded and were receiving medical treatment elsewhere. From the scattered report Geist had given them, it sounded like they’d encountered a powerful Human psion who’d forced Kanda to go insane before breaking their entire offensive.

The bad news was that there was a better-than-comfortable chance that this person was coming their way.

The Archangel team had run into problems as well. They’d suffered a casualty and Viktoria had also gone down. Geist had responded by taking a team of ADVENT and Chinese soldiers and going in after her. They’d taken losses, but from how the other surviving Archangel, Zama, had described it, Geist had been angry.

Geist had also apparently suffered injuries, but was still contributing to the telepathic defense, albeit while hooked up to machines and receiving blood transfusions. Both him and the surviving Archangels were being treated further inland, while Zama, David, and Alisa were in one of the other defense points with the second Goliath that had been deployed.

The first one was right behind them now, and actively patrolling when needed. They were certainly a sight to behold in action.

“Another of the hovercraft!” Came the shout from one of the Dragoons as, sure enough, the vehicle came around a corner and began firing its weapons at their position. The tanks fired in response, the booming shots hitting the red shields that protected the front of the vehicle, causing them to flicker.

“They never stop coming,” Oliver muttered as he focused on the Outsiders that continued advancing. Those in particular were proving difficult to kill. Plasma rifle shots worked to take out the armor, but it still retained the regeneration capabilities of earlier models. As was the case here, as even a direct shot merely caused the wound to flare brightly before it healed itself.

The barrage from Kane’s Browning was enough to finish the job, however.

The alien hovercraft fired something from the top of it, and that was always bad news. “Grenade launched!” He yelled.

One of the PRIESTs in the back row extended a hand, purple energy flickering, and the projectile was caught and subsequently sent back towards the vehicle. It splashed with a bright plasma explosion which left a smoking hole in the vehicle, exposing the internal mechanisms. Oliver, Kane, and the other Chinese and ADVENT soldiers concentrated their fire, with the ADVENT telekine visibly keeping the vehicle in place. One ADVENT soldier went down from the return
fire, but there was enough concentrated firepower that the vehicle exploded a few moments later.

He noticed that the aliens were being significantly more conservative now; they weren’t throwing Custodians or Outsiders at them in overwhelming numbers like they were at the beginning. Were they beginning to run low? Or just deciding that the swarm tactics were too costly? Either way, it gave them a better fighting chance.

“Keep cover fire, I’m getting some more ammo,” he told Kane as he dashed deeper into their small fortification to get replacement plasma cells and magazines. The Chronicler was in the makeshift command center, where he was talking to a small hologram of the Commander. Oliver stopped and gave a quick salute as the Chronicler turned to include him in the conversation.

“Ilari, good to see you still fighting,” the Commander greeted. “You – and Kane – have done as well as can be expected. You might just need to hold out a little longer.”

He was tired, but just nodded. “I’ll hold out as long as I can, Commander. Any new developments, if you don’t mind me asking?”

“Good news for us, in fact,” the Chronicler said, his voice dry and, somewhat surprisingly, with no trace of weariness in it. “It appears that Isomnum crossed a line and the Battlemaster has publicly pulled all reinforcements and support for his invasion.”

Oliver blinked. The fuck?

“About my first reaction as well,” the Commander said, and Oliver realized he’d spoken out loud. The wonders of going without sleep for nearly twenty-four hours. “We don’t know exactly how many forces Isomnum has on the ground, but now he can’t expend them casually. And while the Battlemaster did a good thing here, I doubt Isomnum is going to retreat now. He is, unfortunately, in a box with his only escape to continue to press forward.”

“What did he do?” Oliver shook his head. “And why now?”

“He’s in the process of converting civilians into some kind of mechanical war machines,” the Chronicler said. “Thousands of them. We might be encountering them soon. Which I’m guessing is what the Battlemaster didn’t want him to do, since it’s not exactly helpful to their image right now.”

“This was likely the final straw, not just the action,” the Commander interjected. “From what Aegis has said, even Ethereals hate Isomnum, and the Battlemaster is using this as an excuse to have us remove the problem altogether. Which we’ll do, even if it comes at the cost of preserving the country.”

“I’ll take it,” Oliver said. “I’m moving back out now, good luck, Commander.”

“Good luck,” the Commander repeated with a nod. “Reinforcements will be coming shortly.”

He dashed back to where Kane was positioned and saw that in the meantime, they’d killed a few more Outsiders and Custodians, although they’d lost one of the tanks during the skirmish, or at least damaged it enough to where there were people trying to put out the fires. Two of theDragoons were firing micro-missiles down the streets which resulted in bright explosions which were forcing another of the hovercraft back.

“Got good news,” Oliver said to Kane as he resumed firing. “Isomnum pissed the Battlemaster off enough that he cut off support. We hold out a bit longer, we’ll probably get the upper hand.”
Kane didn’t answer right away, and just fired down the street in an almost mechanical anger. Which was admittedly, not the reaction Oliver was expecting. “Thought you’d be happier.”

“I expect you’re happy with the Battlemaster for taking such a principled stand,” Kane said, hastily reloading.

“Can’t say I’m mad at him,” Oliver shrugged, firing at a group of Custodians taking cover behind a destroyed hovercraft. “We could be dealing with a lot worse.”

“He is a coward and an opportunist,” Kane said coldly in return. “An enabler of Isomnum and those like him. He is no better, and it’s sickening that he will be praised for this as if he has successfully washed his hands of it.” Kane chucked a plasma grenade and it hit the hovercraft hard enough that it exploded on contact and took out a Custodian standing too close.

Well, apparently Kane hated the Battlemaster too. Oliver decided to drop the subject. He couldn’t really say that he was in the best of moods given the previous hours.

Just a little longer, and things will start to change.

***

ADVENT Trench Lines, Busan – South Korea

3/9/2017 – 5:14 A.M.

There were significant portions of the first line of trenches that had fallen, and Duri and his squad had been forced into the second row, while the aliens pushed forward to claim their first piece of actual territory. Of course, they had the misfortune of now having to fight in the confined trenches which were designed not to protect from the back.

Some of the aliens, like the Mutons and Elites couldn’t really fit into the trenches that well, and were prime targets for the Snipers and Rocketeers. So the trenches themselves were still largely untaken – aside from the dozens of Muton corpses which now inhabited them. The majority of the alien army was taking the smarter approach to using the wrecks of the alien hovercraft as staging grounds, and having far more success.

“Duri, catch.” He turned to the sound of Cara’s voice and barely raised a hand in time to catch a water bottle. He quickly sunk to the ground, took off his helmet and took a long drink of water as the guns still fired around him.

“Thanks,” he said. “Any news from the back?”

“It’s more or less the same across the trench lines,” she shrugged, reloading her weapon. “The first line is compromised in a lot of places, but they’re holding out right before it since we’re stuffing the trenches with their corpses. XCOM is downwards, trying to keep the Hunter’s attention.”

“Best of luck to them,” Miguel grunted as he adjusted some parts on the SHIV. “I don’t envy them. At least he isn’t on our comms anymore.”

“I’m more worried about the siege weapons,” Duri said, standing back up after putting on his helmet and looking downward, where the siege vehicles had slightly advanced. As far as he could tell, there was only one that was significantly damaged. “They’ve not fired for several hours. Which means they’re waiting for something.”

“Maybe they ran out of ammo?” Cara suggested.
“Unlikely,” Duri snorted. “Beatriz, do you see anything up there?”

Beatriz was in the Flak Tower a short distance behind the trench line, and utilizing the Sniper Nest within. “Nothing on the siege breakers. Shields are up, which is stopping me from getting a clear shot on them. They keep funneling soldiers downwards to the front, and have a fresh wave of the hovercraft coming this way.”

The siege breakers had continued firing at semi-regular intervals, and each time it had been either a plasma missile strike, one of those massive bombs, or a chemical weapon. Unfortunately for the siege breakers, they were facing the PRIEST Division, who had turned many of the missile strikes away, although enough kept getting through to cause damage.

Beatriz and many of the snipers had briefly switched to the Hellfire ammo, or ClF3 rounds to try and cause significant amounts of damage, but it appeared that the quantity contained in each round was simply too small to cause enough of an impact. There’d been confirmed reports that the siege breakers – as well as the hovercraft – had some kind of limited nanite repair functions, as well as the shields which could handle the chemical.

So instead they’d saved the Hellfire rounds for the Muton Elites to much greater success.

“Duri, we’ve got big problems coming our way,” Beatriz interrupted his thoughts frantically. “A new spacecraft just landed in the far back. Definitely Sectoid.”

“Ethereal?” He wondered, now becoming worried. Ethereals tended to use Sectoid craft.

“Possibly, don’t know yet. That isn’t our biggest problem even though it’s probably related. A transport opened the moment it set down. It’s filled with Chryssalids. Hundreds of them by the looks of it. They’re charging out now.”

“Oh, that’s not good,” Cara breathed as she jumped onto the Browning emplacement. “Not good, not good.”

“Everyone, Chryssalids incoming!” Duri yelled several times to everyone in the trench to get the word out. “Be ready!”

He still remembered the stories about the attack on Hamburg, where the creatures had first been reported. A lot of rumors back then, but as a military officer he’d known a lot more than most civilians. Enough to be appraised of the possibility of creatures that implanted eggs in hosts that elicited a zombie-like effect before birthing another Chryssalid.

They were among the most terrifying weapons the aliens had, and they had largely avoided using it after that point. That was clearly no longer the case, and unlike the much slower alien soldiers, the footage he’d seen of Chryssalids was that they were fast, agile, and surprisingly durable. If they swarmed, things were going to get bad very fast.

“ADVENT forces, we have been appraised of the incoming Chryssalids,” the voice from ADVENT Command said, in one of the rarer public broadcasts. “Stay in positions. Purifiers are approaching to prep the area for defense.”

“They better hurry,” Beatriz said from above. “They’re coming our way, and the ones that aren’t are planting eggs in the corpses.”

“I thought they only attacked Humans?” Cara demanded. “Or laid their eggs in them?”

“Apparently not,” Duri said as he readied his rifle, now able to get a glimpse of the purple alien
insects rushing closer, ignoring the aliens hiding behind cover. “Everyone ready!”

“Fire!”

Gauss fire shot out from the second trench line as the Chryssalids poured through. The first wave immediately collapsed as their chitin plating was shattered; it appeared that the Chryssalids fortunately hadn’t undergone extensive upgrades, but even the volume of fire wasn’t enough to completely stop the flow, and the Chryssalids jumped into the trench and likely began impregnating the many alien – and Human - corpses that inhabited it.

Duri waved Mana and Nobuatsu to follow him as they moved with another squad to defend the connecting tunnel with the Chryssalids that were about to come through. Cara and Miguel were continuing to mow down all the Chryssalids they could with their Browning and SHIV respectively. Down by Duri there was a Gunner, another Officer, and a Priest.

The roars and screeches of the Chryssalids could be clearly heard, and three of them came scuttling around the corner, red and yellow-tinged spittle dripping from their mouths and the orange eyes that glowed in the dim light giving them an even more sinister appearance. No one wasted time in opening fire and the Chryssalids were immediately cut down, only to be immediately replaced by more who came scrambling around the sides.

The Priest took center position, his body glowing a bright purple, pulled back an arm that was sheathed in bubbling purple energy, and then shoved it forward, sending a bright purple wave through the narrow corridor, vaporizing everything in it’s path, leaving only Chryssalid body parts behind.

Duri knew they could hold the choke points. Their lack of armor made them weak, and the area was narrow enough that they could reliably kill anything that came through. Up above was a more difficult prospect, as it would only take a few coming down from the top into the main trench line to break it.

“Corpses are up and walking forward,” Beatriz updated to the sound of gunfire. “It’ll be a fresh wave when they all birth.”

“Cara! How is it up above!” Duri called as some of the puppeted corpses had become aware and were walking towards them.

“Few close calls but we’re doing it!” Cara called back. “We could really use those Purifiers!”

Ironically, the Chryssalid zombies they were now fighting were proving more difficult to kill since they were still wearing armor. Targeting the head only seemed to mildly slow it down, although they were already walking slowly forward. It was difficult to wound something that felt no pain. “Target the joints!” The other Officer called. “Block them off!”

Everyone complied, and Duri crippled an incoming Muton, forcing it to crumble to the ground, although it still continued to crawl forward. A few more, and the corridor was effectively cut off, as even the Chryssalids were being forced to climb over the fallen zombies. The Priest stepped forward. “Back!”

Both arms were emblazoned in purple energy, as he formed a small sphere of destructive energy between his hands and sent it forward through the corridor, and as it continued, it grew larger and began ripping everything caught inside it apart into bloody chunks. When it reached the largest concentration, the Priest closed his fists and the sphere exploded and destroyed everything in the general vicinity, including the corridor itself as it blew the armored roof off in certain places, and
the flooring and lighting was annihilated.

“Woah! Easy,” Duri helped catch the Priest with the other Gunner as he began falling down.

“ Took more out of me than I thought,” the Priest wheezed. “Worked though.”

“Yes, good job,” Duri assured him, passing him off to the Gunner. “Take him back, have him rest up.”

The Gunner looked to his commanding Officer. “Carrie?”

“Take him back, and mention we need another Priest or Purifier here,” she agreed with a wave. “But for now I think we can hold it. That seems to have taken out most of the zombies.” She snorted. “Zombies. Amazing.”

“I doubt that’s all of them,” Duri told her. “The explosion might have spooked them.”

She jabbed a thumb backwards to another Flak Tower. “I’ve got my sniper up there. They’re definitely not stopping.”

“Any breaches?”

“Gonna be difficult to have permanent breaches when there are Psions here,” she shrugged, reloading her weapon. “Haven’t heard of any, but been distracted. Officer Carrie Jenkins.”

“Officer Duri Eun-Jung, a pleasure,” he said as sure enough, few Chryssalids came around the corner, screeching at him. “As much as it can be here.”

They mowed down the Chryssalids, with Mana throwing a WP grenade towards the end to see if it would have some effect. Normally that would have been dangerous in a corridor, but since said corridor had holes in the roof, it was safer than otherwise.

“Beatriz, what’s the status on the Purifiers?” Duri asked.

“Coming up now,” she said. “Priests are psionically shielding them as best they can before moving out. Got more bad news though. You know that Sectoid ship? It’s carrying a Hive Commander.”

“What?”

“What?” Nobuatsu echoed.

“Got some confirmation from XCOM, it’s a Hive Commander. They really want this place bad-Damn it, siege breakers are firing.”

“Apparently they’ve got a Hive Commander here,” Duri explained as they shot a couple more Chryssalids. “Siege weapons are also firing.”

A short distance away they saw several plasma missiles hit, while others were deflected away. One of the Flak Towers was directly hit, but managed to keep standing and returning fire. In the distance more shots landed, but Duri also saw the Purifiers begin moving up ponderously slow. The psionic shielding wasn’t directly on them, but angled before the Purifiers so as to allow them to use their flamethrowers.

Four of them had just walked across the small bridge above their own trench and began spreading out. “Beginning purge,” one stated, and the white-orange flames shot out and began exploding as
they made contact with Chryssalids, vehicles, and aliens. This forced an immediate retreat of all the front-line aliens, and to make it worse for them, one of the Purifiers colored noticeably different was firing a hose into the back of the growing firestorm, causing further explosions.

“That should hold them back for now,” Duri said.

“Yeah,” Carrie agreed. “But I really don’t like how close it is to us.”

***

ADVENT-Chinese Joint Command, Beijing – China

3/9/2017 – 7:15 A.M.

With the limited amount of sleep she had gotten, Saudia wondered if she should have even bothered. The bed was fine, and the shifts were done so as to have Ethan be with her during that period of a few hours, but the stress of the past day essentially made any sleep fitful and elusive. She was fairly sure she was more tired when she woke up than when she tried to sleep.

“Any updates?” She asked as she put her professional attire back on; one benefit to being Chancellor was that there was never a shortage of fresh clothes.

Ethan was reading his tablet, face grim. “Hong Kong is holding, but in danger of being pushed out. The entire coast is essentially lost, and allied forces have regrouped a short ways inland. No idea what Isomnum is planning now that his reinforcements have been cut off. It could get a lot worse.”

The short and curt statement the Battlemaster had sent directly to ADVENT and the media had been one of the largest and most baffling surprises of the entire day, and they had yet to see if there would be a tangible aftereffect. It just seemed…odd.

Why even utilize Isomnum if you were simply going to disavow him later? It wasn’t as if he was ignorant as to who Isomnum was. She could have predicted something like this, and overall everyone was just baffled, if cautiously optimistic.

So far, there were two explanations as to how this could have happened and what the ramifications were. Both Laura and Elizabeth were of the opinion that this was a tactic to make Isomnum a scapegoat (possibly with him aware of this), to justify everything he would do which would not taint the image the Collective was trying to push through Betos. Time would tell if he was truly cut off, or if he was receiving resources quietly as a front for the Collective to do controversial things while keeping their hands clean.

The Battlemaster himself might not be in on this plan, although in that case Saudia had to wonder if the Imperator actually thought that would work. The Battlemaster was oddly principled for an Ethereal, especially a warrior. Interestingly enough, she believed he was sincere, or at least as much as he could be. So the Imperator or other Ethereals covertly supporting Isomnum would likely not go over well.

The other explanation was that this was genuine and there were no ulterior motives, or as the Commander had said, this was the final straw that caused the Battlemaster to get rid of Isomnum. He was, unsurprisingly, not liked by other Ethereals. At the same time, it seemed out of character for him to pull something like this during an ongoing invasion, which the Commander had then pointed to Betos as a possible reason why the response was so quick.

Hard to really say your Collective is benevolent and welcoming if you’re forcefully converting civilians into walking weapons.
Personally, she was of the opinion that no one – including the Collective – knew what was going on or what would happen yet. She found it unlikely the Imperator would have sanctioned this for any reason, especially during an operation, so the odds were high the Battlemaster had done this on his own. So how the Imperator responded remained to be seen, or what Isomnum would do himself. His actions could be an indicator for what was actually going on.

The largest takeaway for her was that there was a very high level of infighting within the Ethereals, which was certainly…curious. The fact that the Battlemaster had done this indicated that he was capable of defying the Imperator and more importantly, had certain lines he would not cross. This had been hinted at with some of his previous actions, but he had taken a very firm stand.

Quite curious indeed.

It made her wonder.

“Korea is holding strong,” Ethan continued. “Although there are sightings of a Hive Commander, so this could continue to get worse. And the aliens are continuing to slowly advance, even if it’s costing them significantly.”

She perked up, frowning. “A Hive Commander?”

“XCOM confirms it,” he said, walking over and sitting by her, showing the image of the orange-skinned alien that was multiple heads smaller than the Vanguard escort. It wasn’t wearing anything, but its telepathic capabilities were certainly enough to defend itself. “They really are determined to capture something here.”

“I wonder if Aegis could identify it,” she muttered. “The damn things all look the same.”

“In any case, XCOM is working on handling it,” Ethan said as he continued scrolling down the pad. “There has, unsurprisingly, been a lot of coverage on our assault against the SAS, with plenty of people condemning her as a traitor.”

Saudia allowed a thin smile. “Good.”

“CNN is interviewing some of the Vitakara defectors now on it,” Ethan continued. “Per your suggestion, I think. They’ve got a whole media tour scheduled. Public sentiment right now is definitely against the traitor.”

“Of course it is here,” she said. “Africa is what I’m interested in.”

“Hassan is saying, and I quote ‘Negotiations are proceeding well’,” Ethan said, putting an arm around her. “You might want to ask him that, since I don’t get access to your updates. I know he was targeting Egypt and Libya heavily, so I’ll take that as a good sign. As far as we know, the SAS hasn’t made any progress on the diplomatic front.”

“That we know of,” Saudia muttered. “Until Elizabeth finds out what went wrong, our intel on the SAS is potentially incorrect.” She sighed heavily. “This was perhaps the worst time she could have screwed up.”

“I’m pretty sure she knows that,” Ethan set the tablet to the side. “Which tells me that the aliens put a good amount of effort into making sure we didn’t know. It’s good they consider us a threat, at least.”

“That isn’t an excuse,” she dismissed. “She was put in charge to anticipate and counter moves like that. And if she can’t do it, I will find someone else who will.”
“Mmm,” they were both quiet for a moment, just waiting in the quiet room. “What do you think will happen next?”

She pursed her lips as she leaned against him, closing her eyes. She didn’t open them while she thought. “I don’t know. That worries me.”

“Why?”

“I don’t know if they’re ready to pull the trigger on us,” she continued, her eyes still closed. “They’re more advanced in technology, resources, and manpower. They could attack in dozens of places across the world and we can’t defend them all. They could theoretically teleport into this room and kill us both. I don’t know what they will do, but it looks like they want to end the war. Against their full power…I’m not sure we can stop them, even with all we have.”

Ethan, curiously, didn’t seem concerned as his heartbeat was steady. “From one perspective, yes. I think the Battlemaster at least wants to end it. He’ll likely invade more countries. But it seems like…well, the Collective itself isn’t stable. The Vitakara, Aegis, this split with the Battlemaster and Isomnum…” he trailed off. “And I suspect the Commander has something in mind. A contingency.”

For once, she knew something about the Commander he didn’t, and couldn’t tell for right now. And she didn’t know if T’Leth was going to be as involved or the trump card the Commander was hoping. Although Ethan would just say he had a plan for that as well. According to him it was impossible for the Commander to be caught unprepared.

“Probably,” she agreed nonchalantly, then snorted. “No matter what happens, it won’t end until the Commander is dead or we win.”

“Oh yes,” Ethan agreed. “If the Collective were to somehow win, he would be immediately organizing the resistance. And he would be…well, angry. If the aliens would like him now, they would be terrified of him later.”

From what she knew of Miridian, it wasn’t out of the question that the Commander could turn into such a Human equivalent. Hopefully they didn’t have to find out.

She leaned up and gave him a quick kiss on the cheek. “Come on, let’s get to work. Spent enough time off.”

She finished getting ready, and her phone buzzed which she immediately answered. Only high-priority calls could go through, so something had happened. “Yes?” She said.

“The aliens have expanded their invasions,” Laura answered briskly. “Brazil and America. Possibly others, we’re getting exact locations. We’re all assembling now and preparing to reinforce.”

What perfect timing. “We’re fairly well entrenched in both countries, especially in the-“

“They’re invading Florida, not the West Coast,” Laura interrupted. “Which probably means they’re intending to take out ADVENT Special Forces Command.”

“I’m coming up now,” Saudia said. “Prepare a report with as many details as possible so we can compile something for the press.” She hung up and a few minutes later she was marching down the hallways with her entourage.

On one hand, the targeting of SFCOM was bad as they weren’t as prepared for that area.
On the other, the aliens were going to run directly into SFCOM. They were not going to find it as undefended as they were probably hoping.

***

Porto Alegre, State of Rio Grande Do Sul – Brazil

3/9/2017 – 8:00 A.M.

Her task was straightforward.

“Two main offensives will begin our conquest of South America,” the Battlemaster had said during the final briefing. “The First Guardian will lead the assault against Fortaleza, and will continue the assault from the north. You will capture Porto Alegre from the South. Isolating Argentina and Uruguay will be important, and establishing a frontal position within the interior of the country will serve us moving forward. The terrain will be a hinderance, but one which can be mitigated with air-based assaults.”

As far as she knew, Porto Alegre was a decent-sized city, if not one ADVENT would expect to be the first attacked. Zararch reports had put the defenses as ‘moderate’, which mostly just indicated that there was an ADVENT presence there. It would fall under a sustained assault, with a sizable civilian population. Only the major cities like Brasilia were extremely fortified, but the limited infrastructure development across the nation had a side effect of isolating other cities from each other.

“Deployment point approaching,” the CODEX informed as it materialized in front of her, a golden holographic projection with a feminine voice. “Please confirm air or ground deployment.”

“Air,” she said. “Additional notes on the defenses?”

“Critical infrastructure points have been located and will be available upon your request,” was the answer. “ADVENT has detected your descent, and are moving to prepare. You are also likely to encounter Peacekeeper forces in addition to standard ADVENT defenses. There is a high probability of limited ADVENT special forces engagement.”

“Noted,” she said, putting her helmet on and doing a final check on her weapons. She wouldn’t need to utilize the Avatar connection yet, and hopefully wouldn’t. It was admittedly most effective when they were both together, but in their positions they needed to be able to operate independently. There were too many points of interest to have both the Battlemaster and his Avatar attack the same one.

That was fine. She could handle herself.

Let’s see how I do against the real ADVENT.

“Deployment position reached.”

The hatch opened underneath her and she began dropping to the ground. It wasn’t a significantly long drop, but it would have definitely killed a non-modified or non-psionic Human. It was the length of several skyscrapers, anyway, and while falling she took a quick look at the city and the landing alien transports from all sides.

Vehicles weren’t needed for a city like this, but there were plenty of Mutons, Runianarch, and Custodians that would be able to dismantle the ADVENT defenses. As well as herself. She saw
herself getting close to the ground, and stabilized herself with telekinesis before hitting the ground with a thud in front of several hastily erected ADVENT barriers with several dozen soldiers pointing weapons at her.

They appeared to be confused, which was understandable. Her rather unique armor and humanoid appearance would raise some questions. “Identify yourself!” Several of the officers yelled out in English and Spanish.

Well, the Battlemaster might give them a chance to surrender if the opportunity presented itself. So she would as well. “Surrender to the Ethereal Collective and you will be treated fairly.” No reason to add a death threat, since that was implied. People would generally respond better to the benefits of surrender than the downsides of refusal.

“Fire!” Was the immediate response as the crack of the gauss rifles sounded.

She gave a thin smile under her helmet as the gauss rounds just stopped a short distance from her body due to the telekinetic field she’d erected. An invisible cushion that caught hundreds of the rounds within seconds to the immediate alarm of the defending soldier. “She’s a psion!”

She drew her swords and tossed them forward while beginning to walk on her own, the telekinetic barrier still in place as she manipulated the swords to puncture them in vulnerable areas in the necks and joints. From the front she lifted a hand and a half-dozen ADVENT soldiers and the barricade were yanked into the air and subsequently crushed into broken bones, metal and flesh.

The other hand she thrust out, sending a telekinetic wave that threw the remaining defenders backwards and right into the swords which crippled or killed them. She killed the rest of them through snapping their necks or outright crushing their skulls. She recalled the swords back to her hands and continued marching forward, ignoring the terrified civilians who ran away from her as they watched the firefight.

She didn’t care about them. There was no place for them to run now.

The streets themselves were nowhere near cleared out, and were filled with abandoned cars or people taking shelter in them as ADVENT forces began marching downwards, yelling orders as they took cover while the remaining civilians fled into nearby buildings or just away from the fighting. Both swords in her hands, Yang charged forward with a series of slashes and stabs.

ADVENT armor had vulnerabilities, particularly in the neck and joints. Combined with her new weapons their armor could be penetrated from a direct hit, even if it was more difficult. The less durable material of their helmets made them prime targets for stabbing them directly in the head, which she performed several times and afterwards sent the corpse towards another soldier.

It was remarkably easy to fight against standard soldiers now. It was only a matter of flicking her fingers and they would go flying backwards and slam into a wall, which she could compress them into until their skeleton shattered. Entire groups could be lifted into the air and killed in moments. Their weapons couldn’t penetrate her telekinetic barrier and grenades she could just throw back.

And if they tried to run, she would just leap after them, or direct her swords to impale them.

No escape.

No hope.

Only defeat.
The CODEX gave her regular updates on the status of the other incursions, all of them going well, and the fact that ADVENT appeared to be rerouting more forces to stopping the threat which was carving up their defenses. It wasn’t a surprise then when she saw a PRIEST team approaching with the distinct Lancer escort. A mixture of Executors and standard soldiers.

Excellent.

There were three Priests, and one of them had the distinct misfortune of appearing to be a telepath who was confused as to why he couldn’t affect her. The other two were Dynamo psions, and one shot out a stream of energy at her while the other began forming rifts in her general vicinity.

She charged forward, moving faster than they anticipated. The four Executors rushing towards her she telekinetically lifted and tossed back into the psions. The Lancers were equipped with plasma weapons which she couldn’t block like the gauss weapons, so she sent her swords out that jammed into the weapons, causing them to explode. With a free hand she telekinetically grabbed one of the Priests and shattered his body.

The Lancers adapted quickly and switched to sidearms or tossed several grenades, all of which she caught and reflected back towards them which they dodged out of the way from, aside from a few of the Executors still on the ground who were now covered in the Symbiote substance. She killed them quickly, even as she beheaded one of the Priests while telekinetically crushing the chest of the other with a loud crunch.

The other Lancers were dispatched quickly enough.

More would come, but they would have just as little success. As the CODEX continued to update her, she knew it was only a matter of time before the city collapsed completely, and the Collective had a solid foothold in the region.

Mission accomplished.

***

South Florida, Florida – United States of America

3/9/2017 – 10:32 A.M.

“Prepare them for offworld transport,” the Battlemaster commanded the Custodians as they finished securing the civilians who had been captured or otherwise stumbled into the Collective landing zones. “Do not allow interference once their processing has been completed.”

The Custodian acknowledged this wordlessly as the machines began lining up the Humans and leading them through one of the established gateways that had been erected. The invasion of Florida was one where some experimentation was due. Simply assaulting the fortified cities was of limited effectiveness currently, especially when approached directly from space or no firm starting point.

This time they would be attacking from the ground. There was a large amount of open space in Florida, especially in the southern half. Their positioning now was above several of the nature reserves, though several Runianarch and Sectoid teams were exploring the feasibility of southern expansion as ADVENT would be hesitant to continue into it.

From this centrist position, they would be able to expand east and west, while cutting off Miami from the north, largely ensuring significant control over the southern half of Florida. North would be highly difficult. ADVENT SFCOM was the primary target, and the base – as well as Tampa
near it – was extremely fortified and a direct assault would be a waste.

However, they had a significant personnel and resource advantage, which was why the current construction of a central command was being developed. The combination of architects, engineers, and geologists of the Sectoids, Vitakara, and Andromedons had been able to design a self-sufficient base with slight tweaks to accommodate the Floridian terrain.

Custodians and Spectres had also proven extremely useful in the construction of the base itself, with Mutons being used for heavy manual labor, Custodians for heavy-duty precision work, and Spectres for the creation and implementation of more delicate and critical components. Heavy equipment such as construction machines, anti-aircraft defenses, and gateways had been flown in, and when the Gateways had been established, enough personnel had been deployed for the base to already be taking some shape.

Twelve Executors were deployed on the perimeter, and to date had yet to encounter any encroaching ADVENT or XCOM force, though the Battlemaster suspected that one would be coming in time. They had estimated that it would take three days for the base to be capable of basic operations, a week before it was at full operating capacity, and two weeks before self-sufficiency could be established.

The Sectoids were using this as an opportunity to perform their geoengineering experiments, primarily by infecting and modifying current farm and swampland. The Everglades in particular were of interest to certain Sectoid Hives, as well as the viability of growing various alien foods on Earth. This tied partially into the self-sufficiency of the base.

The Sectoids were likely going to be pleased with the opportunities these invasions would bring. Once bases were established in Brazil, the rainforests were something the Sectoids were also interested in. Last he had heard, Yang had been mopping up the remainder of ADVENT defenders while the First Guardian was encountering stauncher resistance.

Unsurprising. Yang’s operation was to establish a working base of South American operations while the First Guardian was to attract more ADVENT defenses. He saw the commanding Zararch Officer waving him over as she was speaking to several Zararch Operatives and Fectorian’s REPLICA units. “Battlemaster,” Zar’aour’a’vitiary greeted. “We’ve finished our sweeps of the surrounding area. No signs of ADVENT moving against us yet, though there is a small town nearby.”

“Moore Town,” the Battlemaster recalled. “They have ADVENT support, correct?”

“No military support, yet at least,” Aoura clarified, bringing up a small holodisplay of the town. “However there is a heavy Peacekeeper presence. They have one of their prison production facilities located nearby. Heavy defenses, but nothing we wouldn’t be able to handle. Taking it out would hinder their production capabilities in this region, if only by a small amount.”

“PRIEST involvement?”

“unlikely in the town, at least there were no reports,” she shook her head. “There were several Deacons spotted near the Peacekeeper Station. Nothing that can’t be defeated.”

“Send Vanguards to psionically delay civilian evacuation,” the Battlemaster ordered. “The Peacekeepers will need to be dealt with.”

“There is a potential concern,” she added. “A minor detail, but there is an organized militia in the town. We are not aware of their exact armaments, but it is safe to assume that their equipment and
weaponry is inferior to standard ADVENT personnel. They will be on guard, even if they can be easily defeated.”

“Civilian defenders are irrelevant,” he shook his head. “I do not expect them to pose a significant threat. This does not alter your orders. The Peacekeepers are the larger concern, especially if they have Deacon support.”

“We can move Cleanser Ships into position,” Aoura suggested. “Destroy the Station and Prison that way.”

“No,” the Battlemaster disagreed immediately. “Targets this small would be brought in range of ADVENT defenses and aircraft. Not worth it, and I do not want to destroy the prison. There are a significant amount of Humans within that may have reason to turn against ADVENT.”

Aoura smiled. “I believe this is a better approach. I would suggest we act fast if we want to move before ADVENT inevitably sends the military to evacuate and fortify the town.”

The Battlemaster considered. “Inform the Stalker that she is to take her soldiers and destroy the Peacekeepers and secure the prisoners. I will also send separate teams of Custodians to secure the civilian population and return them for processing.”

“Acknowledged, Battlemaster,” she confirmed while making a note. “What should we be preparing for in the meantime?”

“An assault,” the Battlemaster said, looking to the sky. “It will take ADVENT time to realize what we are doing, but when they do they will attempt to strike us with everything possible. Likely by air and XCOM may respond as well.”

“Against all of this?” She indicated the continued formation of the base. “It’ll need more than one XCOM squad or a few airstrikes.”

“If ADVENT has a countermeasure,” the Battlemaster said, turning to check on the status of the central command center to monitor the progress of the wider conflict. “We will learn of it soon enough. Then when we are ready, we will march.”

***

Hong Kong, Guangdong – China

3/9/2017 – 7:45 A.M.

Oliver was one of the first to see it. Or rather, them. “Kane, we might have some trouble.”

Kane swung his Browning to where Oliver was indicating and stared for a few moments, trying to get a better look. Admittedly, Oliver wasn’t quite sure what he was looking at either. Six knights approached, each carrying a different weapon and with their armor slightly different. He could tell it was intricate and of exceptional craftsmanship, as there were miniscule writing and symbols engraved onto the armor which ranged from silver to a mix of deep blues and whites.

Behind them was a male Vitakarian in silver-white robes, which seemed highly impractical for the combat situation. He seemed to be the main leader as the other knights were moving before him. They were definitely hostile then, even if he still wasn’t sure what they were. The knights were differing sizes as well, and he could swear that one of them was a Muton.

Kane opened fire without a second thought. “They’re from the Bringer!”
Oliver didn’t know how he knew that, but the knights took the attack as a signal to storm forward, and several of them became engulfed in psionic energy, some of them applying it to their weapons as they shouted war cries in an unknown language and charged forward. The Custodians and Mutons which were still alive and had been largely in retreat held their positions as the half dozen psionic warriors charged forward.

He decided to target the robed figure who was standing in the back. The shots were perfect, and would have hit the alien in the head had a blue shield not appeared right before him, blocking the shot, and immediately after that the figure looked to him and Oliver found himself being lifted into the air as what felt like an ice-cold knife was jabbed into his skull as an alien presence manifested itself in his mind.

He’d never come under a psionic attack this direct before, and it was a mixture between helplessness, agency, and seeing flashing or thinking random thoughts from his memories, largely recent. He saw Kane turn the focus of his fire to the robed figure who seemed not bothered in the least as a psionic shield just appeared around him.

Then just as quickly as it had happened, the icy pain vanished and Oliver could concentrate again, picking himself up from the ground. There was still something off about everything, but he had to assume that the Chronicler was now protecting his mind more directly than before. The knights had somehow not been slowed whatsoever by the volume of ADVENT fire, and were nearly towards the front line and they leapt into it, swinging their weapons and utilizing their psionics.

The front-line soldiers didn’t stand a chance, and the one knight that was marching towards them was projecting a psionic shield superimposed over the kite shield he (Oliver assumed the knight was male) was carrying while purple heatless flames fell off the black short sword. Oliver could glimpse more of the writing that was inscribed on the armor, and while at first glance it looked like a character language like Chinese or Japanese, it was none of that. He definitely had never seen it before, or anything like it.

Maybe the language of the Bringer.

What was it doing here supporting Isomnum?

The knight slammed the shield forward and sent out some kind of psionic wave that sent most of them tumbling backwards, while Kane just stumbled, although absorbed the worst of the corrosive wave, stripping off a layer of his Titan armor that immediately began repairing itself. The knight slashed forward and Kane deflected it with his gauntlet although damaged it in the process.

With his free hand he grabbed the wrist holding the blade and the knight responded by slamming him with the shield which was now laced in corrosive energy, intending to damage the Titan armor enough to let him go. The rest of the soldiers took advantage of the struggle by flanking the Knight and firing into it, with Oliver throwing a Symbiote grenade to the ground and pinning it in place.

Then Kane unexpectedly let go and fell back, briefly firing with his plasma sidearm. “Evade it!” He yelled as the knight roared, and the ground flared with purple fire as it ate through the Symbiote substance and rushed to one of the soldiers and stabbed him through the helmet, before swinging his sword and sending a lethal wave of psionic energy towards a duo of ADVENT soldiers, which almost disintegrated the armor of one and dismembered another in a spray of red.

The knight suddenly stumbled and roared again, pointing the sword at Kane and a beam of purple energy materialized and shot at him. Oliver shot at the hand while Kane threw a container at the knight which, while it didn’t kill him, was enough force him to move as two Gunners moved behind the knight and opened fire with Oliver diving to the side to avoid the crossfire.
It miraculously didn’t go down, but the armor was weakening even as Kane picked up his Browning and started firing into the back of the knight again, and now the knight was clearly suffering from something. It dropped the shield and dropped to one knee as it raised its hands and shot out energy that was enough to vaporize the upper half of one of the Gunners while the other managed to fall out of the way just in time.

That appeared to be the last effort of the knight, as it fell to one knee, visibly vibrating and screaming a blood-curdling war cry as the psionosphere began ripping around it. Heedless of the danger, Kane walked over to the knight and placed his hands over the helmet, and the knight jerked backwards and swung his arm around shoving Kane to the side with surprising force as it suddenly charged the surviving Gunner who struggled to get his weapon up.

It wasn’t nearly fast enough as the knight tackled the Gunner to ground the and began slamming his fists into the helmet, heedless of the pain that it had to have been causing him as one of the fists glowed with psionic energy and punched straight through the helmet as the knight stood and charged the nearest trio of soldiers coming in to help.

All of them backed up and fired their weapons, with Oliver tossing his last symbiote grenade at him, and it detonated just close enough to ensnare the leg. The armor was completely tarnished now, and it was bleeding profusely from multiple points, staining the metal crimson. Its yell was more raw-throated, and a hand glowed in psionic energy, even as Oliver saw fingers of the hand fall off, and it inexplicably placed it on the trapped leg and severed it.

The freed knight leapt forward and crawled along the ground and tangled the legs of a soldier who’d been unable to move back in. How was this thing still alive? It shouldn’t be possible, but the thing was still encasing his wrists in psionic energy as they were disintegrating before his eyes, and was whaling on the corpse with bloody and corroding stumps.

Kane charged forward and jumped on its back with enough force that the armor cracked and Kane’s boots went through the body, snapping the spine and crushing the bones and organs within. Kane fired the Browning point-blank into the head for a full three seconds and the knight finally seemed to die.

Kane stepped out of the body as Oliver looked at the corpse in disbelief as the surviving ADVENT soldiers pulled the mutilated corpse of the soldier away from the knight. “Good job,” Oliver said to Kane as he looked at the corpse which had endured so much punishment. “I don’t know how—“

“You’ll see,” Kane said curtly as he reloaded his weapon. “Learn your suit. Nanites can be used for more than repair.”

Oh…So that had been what he was doing. And it explained why Kane had been so insistent on evading the creature. Because he knew that in minutes the nanites he’d infected it with would debilitate it so that it would presumably be easier to kill. A feature of the suit Oliver did know about, but had not seen a good reason to expend them in that manner until now.

But these nanites, as opposed to ultimately debilitating them, only seemed to drive them into some berserk rage where they fought until they literally died. It was…unnerving to see the soldiers fight immune to the fear of self-harm.

“What is that thing?” One of the soldiers asked in awe and horror as Oliver looked around to see how the rest of the soldiers were faring.

“They call it a Carmine Baptist,” Kane said shortly as he began appraising what was next even as the body was being eaten by nanites. “A soldier of the Bringer.”
Oliver stared at him. “How do you know that?”

Kane looked back at him and answered flatly. “I watched the footage.”

They would have to discuss this later, as the battle was far from over. A cursory glance showed that the other robed Vitakarian was still standing, but currently dealing with a squad of ADVENT soldiers and Priests which had moved forward. Oliver saw in the background there were four Priests fighting the Muton Baptist, surrounded by nearly a dozen other dead soldiers.

There were the corpses of two more of the Baptists scattered around, but they had taken a significant toll on ADVENT and reduced it already to a fraction of its strength. The remaining two Baptists were engaged against the Chronicler and on the retreat as the Chronicler was... well... *unleashed* was the best word Oliver could describe.

He was almost more of a blue hologram than person, if said hologram radiated energy which was actively ravaging anything in its vicinity. The Baptists had shielded themselves, but the Chronicler had one encased in a telekinetic grip and with the other was ripping it apart while the other Baptist was shooting much weaker psionic blasts towards the Chronicler which seemed to be doing nothing.

Oliver couldn’t pay much more attention as the Priests were falling to the Muton Baptist, one of which had been smashed into paste, while another was being flayed with psionic energy while in the massive grip of the alien. Right. Bringer soldiers could somehow use psionics despite that apparently being impossible.

The Goliath was also actively targeting the Muton, and a series of micro-missiles as well as the plasma lance slammed into the alien which seemed to only damage the armor, but not the alien underneath it. This one didn’t have any defensive gear, but held a massive warhammer that it swung around in an arc forcing everyone to stand clear or have their heads caved in.

The Priests were having trouble keeping it contained, as one tried to put it in a psionic cage, which dissipated when the Muton closed a fist and the area around the Priest began turning into a rift. The other tried pinning it with telekinetics and had her concentration broken when the Muton telekinetically threw the hammer at her, forcing her to dodge or get hit.

“*Distract it,*” Wei Liuxian, the Goliath, said in an infuriatingly calm robotic tone. “*Away from me.*”

Oliver nodded to Kane. “Take point?”

“Be ready to fire,” was all he said, as he began shooting his Browning at the much-less armored Muton which immediately caught the attention of it. Oliver strafed to the left, and took some inspiration from Kane and threw some of the empty containers and boxes at the alien, which divided its concentration if not being more than an annoyance physically.

It gave a signature Muton roar and shot out a hand at Kane to shoot a funnel of psionic energy towards him, which he dodged by moving behind some barricades and cars that only withstood the raw energy for a few seconds. Oliver added his own shots to the mix, and scored a few hits that were causing the alien to slightly bleed.

But the distraction was enough for the Goliath to stomp over and slam a metal foot onto its back, planting the Muton firmly in the ground facedown. The Goliath wasted no time in following up with a metal fist delivered directly down into the head of the Muton, resulting in the sound of crumpling metal and broken bones. Even though it was clearly dead, the Goliath repeated this
again and the head was turned into paste.

Oliver reloaded and turned to see the Chronicler had dispatched his opponents and was now facing the robed alien and engaged in an astonishingly fast duel. The ADVENT soldiers that had previously been fighting the alien were dead – more accurately in pieces – and the Chronicler was now fighting instead.

The robed figure was using psionic barriers offensively and at an extreme speed, though the Chronicler was responding by simply performing micro-teleportation every few seconds as the area gradually became encased in a rift with the Chronicler at the center. The robed alien was protected by a shield himself, but it was going to fail eventually, even if the face betrayed nothing.

“Enough.”

The psionic maelstrom suddenly ceased even as the Chronicler continued to emit blue energy. The alien on the other hand had been yanked into the air even as the Chronicler had not moved a muscle. The passive expression that had been on the alien’s face began contorting as...something happened to it.

That was when Oliver realized that the voice hadn’t come from the Chronicler, but something his mind had heard.

“Your puppets are worthless as you are,” the voice rumbled – T’Leth, Oliver assumed. “Fanatics driven by the whispers of a dead power. You have no influence over this planet and species, and your days are numbered. Flee, for your people will suffer agonizing deaths otherwise.”

Oliver and Kane watched as the alien quite literally melted in front of them while the Chronicler stood and watched, and listened to the alien scream as he was melted second by second until only the robes soaked in blood and slurry were left. The energy slowly dissipated from the Chronicler.

“Was that...him?” Oliver asked after a few moments.

“Yes,” the Chronicler looked around. “He’s...angry. The Bringer is involved on Earth. He must be stopped, and there are many others who are in danger.”

“We’re down too many to hold this position,” Oliver said, looking around at the survivors. “What can we do?”

“ADVENT must retreat,” the Chronicler shook his head. “Isomnum is no longer the priority. Finding and stopping the Bringer’s forces is, and we’re going to have to move as fast as we can.”

“Then we go,” Kane said without hesitation. “ADVENT will not stop them unprepared.”

The Chronicler was somber, but he gave a nod. “I know. And the Bringer does too.”

***

Haikou, Hainan - China

3/8/2017 – 5:18 P.M.

They’d been running for hours, and at this point they needed to stop and take a rest. The Collective was still out there, but both of them were fairly sure they’d lost the immediate pursuers. Luckily it wasn’t difficult to find a place to go, and they’d snuck into a hotel and kicked one of the doors in on a lower floor.
There might be more survivors, but they hadn’t encountered them. Nor did either of them expect to at this point.

Exhausted, Nuan carefully set her weapon against a corner and leaned against a wall while taking off her helmet and releasing a breath. “I…think we should be good for now.”

“For now,” Iosif agreed, also setting his weapons aside. “I think that you killed the Mosrimor avatar. At least I don’t know anything that would be able to come back from that. That’s their best weapon to try and find us.”

“Unless they bring in more of them,” Nuan closed her eyes. “Or Sectoids.”

“That is a risk,” Iosif admitted, sitting on one of the beds. “There is good news though. If they do a telepathic scan of the island, I’ll know it. They can’t touch my mind without me knowing.”

“Oh good,” she muttered. “So they’ll have our direct location.”

“Not exactly,” Iosif clarified. “I’ll block them. They’ll just know the general area we’re in. But since I haven’t sensed anything like that, it either means that they’ve given up, or don’t want to track us that way.”

“Or didn’t think of it,” Nuan supplied.

“Possible, but unlikely,” Iosif shook his head. “I can’t imagine they wouldn’t have thought of it.”

“So what do we do in the meantime?” Nuan asked, going over to sit by him. “We never came up with a plan.”

“Good question,” Iosif sighed, pinching his forehead; showing actual exhaustion for probably the first time. “Getting off the island is essential. But we’re cut off, and going the wrong way will just lead us into Isomnum’s path. So we need to rest and get clean first. We might be here a few days yet.”

“Do we even have that long?” Nuan asked, looking around. “We’re not low profile. XCOM soldiers won’t just be allowed to…wander around.”

“I don’t know, Nuan,” Iosif said slowly, shaking his head. “Finding two people on an island, XCOM soldiers or not, may not be important for them. They could easily assume that we can’t do anything without them knowing, and it only takes one mistake on our part to get caught. They can afford to play it safe for now.”

He looked to her. “And we can’t run ourselves to exhaustion, not right now. We need to slow down and think. Staying in one isolated place is better than constantly moving.”

Nuan pushed herself up and went to the bathroom to see if anything was working. Turning on a few faucets answered the question. “Water works, at least. Heated too.”

Nuan walked back out, eyeing the bathroom suspiciously. A shower would feel good right now, as would sleep, but she was leery of getting out of her armor right now. Iosif seemed to sense what she was getting at. “We take turns,” he shrugged. “One in armor, the other not. Remember I have psionics too. I’d also suggest we replenish our nanites with the resources around. Fill everything to capacity.”
That was a good plan. Nuan nodded. “Alright. Let’s do that first. No splitting up.”

“ Wouldn’t think of it,” Iosif grunted as he stood and followed her to one of the rooms down the hall. Within an hour they’d successfully destroyed the room and harvested the wood, fabric, and metal to replenish their nanite stores and repair any damage to their armor. A useful side effect of the repair was that it functionally cleaned the armor as well, removing the blood, scratches, dirt, and gore that could pile up. A new suit for all intents and purposes.

“What next?” Nuan asked. “Sweep the floor or get food?”

“Sweep first,” he said, lifting his rifle. “Make sure there isn’t anyone else here.”

“Couldn’t you sense that?” She asked.

He tapped his helmet. “Not a telepath, I know when someone will touch my mind, not as easy to do the opposite. Otherwise I wouldn’t have asked.”

“Sorry,” she apologized. “I’m…not thinking as straight as I should.”

“Neither am I,” he admitted. “Otherwise this should have been the first thing we did.”

“Well,” she motioned to the hallway. “Let’s go. Shouldn’t take long if we go fast.”

“Not too many places to hide,” Iosif admitted. “Although…it would go faster if we had a keycard.”

“Do we want to go down and look for one?” She asked.

He shook his head. “Better to not go down unless absolutely necessary.”

So they began their sweep, being decidedly unsubtle about kicking in the doors and clearing the room. Each one took about a minute since all the rooms on this level were only for a small group of people at most. The beauty of standardized hotel chains, and it helped that Hainan was something of a tourist spot.

There had definitely been something that had happened here. Most of the rooms were already upturned or disorderly, and not from regular guest messiness either. There were bloodstains in many rooms, clear signs of fights, holes and scorch marks in the walls. No bodies, which meant that they’d been manually removed. That was good news since it probably meant the aliens weren’t going to come through again.

They were close to three quarters of the way through, and as usual Iosif tried to kick in the door, and surprisingly found that this time it was jammed. He kicked it in again, and confirmed that it was definitely barricaded from the inside. They exchanged silent glances through their helmets. Survivors. Iosif instead gave a tentative knock. “Hello?”

No answer, Nuan took the initiative. “[We’re Human, with XCOM. We’re not going to hurt you. Please open.]”

There was a brief silence. “[How do I know that?]” Came the voice of an audibly nervous man.

Nuan sighed. Caution was understandable, but it was tiring right now. “[We really don’t care. We’re going to clear the rest of this floor. When we come back, we want to come in. If you want off this island, we’ll be your best chance.]”

She turned to Iosif. “I said we’ll finish sweeping the floor and come back to him. Give him time to
“If you say so,” he said, and they continued to sweep the rest of the rooms. They reached the last one and kicked it in as was standard procedure and entered a seemingly empty room, but this one had the corpse of a…machine? It looked like a Human corpse, except that it had been shot in the back and there were clear mechanical components in it.

“This is new,” Nuan muttered as she turned the machine over. “Might be someone left in here…”

The bed was disturbed, as was expected, and under the beds seemed clear. “Definitely some people here,” Iosif muttered. “I can at least sense that.” She nodded.

“[You can come out,]” she said out loud. “[We’re XCOM, we’re not going to hurt you.]”

No response. Maybe not a Chinese resident? “We’re XCOM, she said. Come out, we won’t hurt you. We know someone is here.”

“Ok!” A voice called out from the bathroom which had been conspicuously closed. “Just…don’t shoot us.” Iosif went to open the door, and was greeted by a visibly nervous Chinese woman who still blocked the entrance. Her eyes widened as she saw their towering suits. “[Don’t shoot,]” she insisted to Nuan in Chinese.

Nuan exaggeratedly made a point of placing her rifle in the corner and taking off her helmet to assure them that they were Human. “[We won’t, we’re not going to hurt you.]”

The woman swallowed, then opened the door. “[Not for us, for him.]”

“The hell?” Iosif demanded as on the ground was a clearly wounded Vitakarian who was barely conscious and bleeding from an unknown stomach wound. There was teenage girl also in the room who started at the sight of the armored soldiers. The room had dozens of bloodstains and all the towels had been torn up for makeshift bandages.

Iosif raised his weapon but the woman stepped in front. “[No! No! He helped us!]”

Nuan motioned to Iosif to lower the weapon. “[Explain.]”

“[We experienced some kind of…]” she waved her hand around. “[Nightmare. Everyone did. It ended, we woke up and there was another person that tried to come into the room. I thought she was a survivor someone to help. She tried to kill us! He shot it, but it hurt him. He saved us, you can’t shoot him!]”

“What’s she saying,” Iosif asked.

“They experienced Isomnum’s attack,” she said, thinking through the story. “When they came to, she says they were attacked by that machine in there and this alien saved them. I don’t think she’s lying.”

The Vitakarian was awake, and was looking quite terrified as the XCOM soldiers looked down at him, even if he didn’t say anything. “Why help a random woman and her…daughter?” He shot the teenage girl a look.

Nuan indicated the girl. “[Who is she?]”

“[My daughter,]” she confirmed. “[My husband is on the mainland. I…don’t know if he’s alive.]”
“[Hey, don’t worry, I’m sure he’s fine,]” Nuan lied, not wanting the woman to break down now. “[We need to focus on helping all of you right now. We need to get closer. See what his wounds are.]”

She motioned for the medkit. “I need that.”

“We might need it later,” Iosif cautioned, even as he complied.

“And we might need him to interrogate,” Nuan answered as she carefully aimed the medkit. “He was here for a reason.”

“Probably Zararch,” Iosif speculated, looking down at the alien thoughtfully. “It doesn’t make sense for anyone else to be here. Doesn’t explain why he’d help a random Human couple though. I doubt it’s for sympathy.”

“If he was here during the attack?” Nuan shrugged as she stood back up. “Possible that he’s now questioning his loyalty. We get him out of here alive, we find out.” She looked back to the woman. “[Move him onto the bed and find him clothes if you can. We’ll be back.]”

As the woman and her daughter began moving the alien away, she and Iosif moved back out to go back to the first guy. This time they just opened the door and walked inside. There was a Chinese man in a business suit holding a gun shakily at them, and Nuan carefully took off her helmet again.

“[Easy. We’re all Human here.]”

“[Ok. Ok.]” he said shakily and put his weapon on the ground. “[Sorry, sorry.]”

“[It’s fine.]” she reassured him. “[We’re all on edge today.]”

Well. It appeared that their stay here and eventual exfiltration was going to be a little more complicated than they had planned. Nuan just felt more exhausted at the prospect. They had three Humans and an alien to keep safe now, and only two tired XCOM soldiers to make it happen.

But this was what their job was all about, even if it was difficult.

It was much easier to just shoot things.

***

ADVENT-Chinese Joint Command

3/9/2017 – 10:09 A.M.

Many developments, some expected, some not.

The invasions in Brazil and America were not as surprising. Florida was slightly unexpected, but the Commander was not as concerned due to the fact that it was reasonably fortified and there was a strong militia core developed in the state, something ADVENT had confirmed. It was going to be a long fight, but one they had a decent chance of winning, even if there were indicators that the Battlemaster was taking a smarter approach to this.

He was, however, rather focused on the holoprojection of the figure that had been captured on camera in Brazil. A woman and psion, who was almost certainly a female. Carried two swords, wore rather unique armor that was masterfully crafted – and was fighting against ADVENT. “Do you think it’s the same person?” He asked Zhang who was communicating from the Praesidium.
“It matches the description Fiona provided, at least as far as her fighting style goes,” Zhang said, looking at the projection curiously. “It is likely Yang Shuren. We do not have confirmation of this yet, but she should be considered our enemy, whoever she is.”

“Thank you for the sage advice,” Creed commented sarcastically. “We should be planning our response, not looking at one traitor Human who we may or may not know. The Bringer is involved now. Isomnum isn’t going down without a fight.”

“I wonder if the Battlemaster knows,” the Commander mused, scratching his chin. “Or the Imperator. It’s possible that Isomnum went behind the Imperator for this to salvage his plan.”

“That’s a question to ask later,” Jackson interrupted. “The Bringer’s involvement has been damaging already. They’re tearing through ADVENT and are appearing in locations that are well away from the fighting. Places ADVENT isn’t prepared.”

“I’m aware,” the Commander nodded. “The Chronicler has said that T’Leth is actively monitoring China and deploying his agents at will. Unfortunately, it appears there are more of them than what T’Leth has active, and at least some of them are teleporters. Creed, have you reviewed the squads deployed?”

“Yes sir,” Creed confirmed. “Being deployed as we speak. I’m not sure this is the best first deployment for Axis, but he has reason to hate the Bringer more than us. MELD Operators and psions should be solid counters, so long as they are protected. More Priests will be needed as well. Can Aegis continue to hold out?”

“He’s given the affirmative, but we need to dissuade Isomnum from continuing,” the Commander said. “ADVENT is preparing drone strikes along the coasts since they’re largely abandoned. Nuclear action is on the table, so I’ve heard from Chinese officials. Continuing debate on that though, and I don’t think they’re ready to do anything until a more approximate location of Isomnum is fixed.”

“What of Hainan?” Creed demanded. “Are we writing off Iosif and his squad?”

“Not yet,” the Commander shook his head. “But we can’t devote anything more to recovering them right now until we know for sure. Iosif can look after himself, and I don’t want to send another team until we know what we’re facing. The Bringer is a far more pressing concern now, as are the invasions.”

“How much should we commit to the attacks led by the Collective and the ADVENT attack on the SAS?” Jackson asked, motioning to the hologlobe. “If anything at all?”

“Let’s wait to see what the Collective does in Brazil and Florida,” the Commander said, thinking. “Actually, Creed – put together a team to take out the First Guardian. Hold off on Florida until we see them do something. In the meantime, I think it would serve as a nice distraction for our other resident Ethereal to show how he’s changed.”

Zhang caught on immediately. “South Korea.”

“Correct,” the Commander confirmed. “The Collective is under the impression that they can gain a foothold in the region. Caelior is powerful enough to handle these siege breakers and the Hive Commander that is supposedly there. If we’re lucky, we can capture the Hive Commander and the Hunter. We cease this siege in Korea, we can move him to other important areas.”

“At the very least it will give the Collective another shock,” Zhang commented. “I’m concerned
about possible retaliation for this. I cannot see positive reactions to the fact that another Ethereal has defected.”

“Assuming they believe a defection at all,” Jackson pointed out. “They may claim that it’s the result of XCOM Manchurian conditioning. And would only be half-right.”

“The point is that Caelior is an asset we are intending to utilize,” the Commander refocused the conversation. “That will shake up the Collective’s battle plans, since they know that we can break any siege just by sending him to defend against it.”

“And handle the orbital defenses,” Creed added. “Still needs practice on that, but I’m assuming he’ll get it relatively soon.”

“Are you sure we shouldn’t deploy him in China?” Jackson asked worriedly. “Korea is holding, even if they are slowly being pushed back. China is in a more precarious situation.”

Both the Commander and Zhang began shaking their heads before she even finished the sentence. “Caelior is the equivalent of a nuclear bomb,” the Commander said. “China requires a scalpel. Not to mention Caelior would likely attract the direct attention of Isomnum, and he can’t defend against it. Too high of a risk to potentially lose him. Aegis is suited to contain Isomnum, Caelior is not.”

“We can save him for the Battlemaster,” Zhang said. “And other Ethereals whose inclination is not telepathy.”

“Fair enough,” Jackson relented. “What stance should we take on the SAS, Commander. Since they’re firmly with the aliens…”

“Traitors, all of them,” he pursed his lips. “If you want to make a statement, we stand behind ADVENT and strongly encourage all African nations to assist in the elimination of the traitor state. Zhang, we will need to watch some of the independent nations closely. If they are looking to defect and ADVENT diplomacy fails, the Hades Contingency is authorized.”

“I anticipated that,” Zhang confirmed, making a note on his tablet. “Contingencies are in place and agents have been deployed. We’ve taken preventative measures already, and multiple SAS diplomats have been removed.”

“Excellent,” the Commander nodded. “When you say removed?”

“Most eliminated and disposed of. Several have been captured and are being interrogated.”

“Possibly worth subjecting them to the Restraints and letting them go,” Jackson mused. “The more moles in the SAS, the better.”

“It would take too long,” Zhang dismissed. “They are already late for their assignments. They will assume ADVENT has compromised them. They will not have proof, nor will anyone believe them. As far as I understand it, ADVENT negotiations are proceeding well. Libya and Egypt are at least holding joint talks with ADVENT.”

“Saudia is scheduled to meet with both of them by the end of the day,” the Commander recalled. “A good sign, and the continued bombardment is keeping their military primarily in check. Right now the SAS is contained, and I want to ensure it stays that way. But carefully. There is at least one Ethereal behind them, and I don’t want to commit heavily until we know which one it is.”

“We will work on acquiring this information,” Zhang frowned. “Unfortunate that we did not know of this. More disturbing that ADVENT failed to notice this development. We will need to begin
monitoring independent countries to ensure this does not happen again. I am surprised this precaution needs to be taken.”

“We likely should have been doing it already,” the Commander sighed. “However, we did learn a valuable lesson here. We can’t rely solely on ADVENT to monitor Humanity. They need assistance every now and then.”

“An expansion of XCOM Intelligence is in order,” Zhang said. “Especially considering our operations beyond Earth.”

“We’ll discuss details after the current situation is largely resolved,” the Commander nodded to all of them. “Get your assignments done and I’ll keep everyone updated as to the current situation. Good luck.”

With each saluting, they winked out of existence as the Commander prepared to return and catch up with what was happening with Saudia in the meantime.

***

Cairo – Egypt

3/9/2017 – 4:18 P.M.

Saudia had only been to Egypt a few times in her life, and had never really enjoyed it. Too hot for her tastes, sandy, and really only known for a few things which had been mild disappointments in her youth. The pyramids had largely been degrading stones that couldn’t really compare to the more modern pieces of architecture, not to mention she’d continually been disappointed that she couldn’t go into them while they’d been there.

Now that she was older, she could appreciate them for their history and how they certainly helped Egyptian tourism even if she was never going to be amazed by them. She still disliked the blazing heat and the endless sand. That was probably never going to change. Nonetheless, she didn’t have to worry about that much in the well-furnished room where she and Hassan were waiting for the Egyptian President and Prime Minister.

She was occasionally glancing over at her tablet, which she normally would never bring to a diplomatic function like this, but considering the situation across the world, particularly in China, she needed to be up to date on everything. China was still not going well, but that was the only completely bad news she was seeing.

Well, Brazil was also being invaded and losing some territory, but nothing crucial had been lost yet.

The doors suddenly opened, and their two hosts entered. President Hussein Shamon was first, a tall and stoic military man who had spent several decades in the Egyptian military. He’d been what could have generously be described as harsh, especially when it came to clamping down on crime and extremism. He’d been surprisingly active during the War on Terror to violently put down any Caliphate individuals and sympathizers, likely wanting to keep the Commander himself as far away as possible.

For the most part, it seemed to have worked and Egypt had largely escaped the worst of the fallout, despite having a notable Muslim population. In the years since Shamon had made it a very…public point to insist that there was no Islamic extremism in his country whatsoever. Very much an international relations move, but one Saudia knew was based in some action. Egypt had also made
efforts to more closely align itself with Western countries, although had difficulties for some due to the less than democratic actions of the police and military to suppress dissent.

From what Hassan had said, Egypt was wary of ADVENT, and Falka had said that there were continuing talks on the viability on simply staying out of the conflict or allying with China, the latter of which was quickly shot down. Ironically, there had apparently also been suspicion that the SAS was actually a trap by ADVENT which was why they’d refused to entertain the possibility of joining.

If only that had been true, and at one point she would have entertained that idea. But that was too complex and wasteful for the current war. That would have been the plan of EXALT, not ADVENT.

The other individual was Mono Bata, the Prime Minister. A political figure that kept a notable low profile, he had proved to be a relatively efficient manager of the government, and unsurprisingly had strong military connections, which was the case with almost every important member of the Egyptian government. It was slightly refreshing to deal with a government with a more militaristic mindset. They were usually more practical, if self-serving.

Either she could work with.

“Chancellor, a pleasure,” President Shamon said, extending a hand to shake, which she took. “Hassan, you as well.”

“Mr. President, Prime Minister,” Hassan answered, nodding to each of them. “I and the Chancellor appreciate you being able to meet with us so quickly.”

“That we do,” Saudia confirmed. “Although I should warn you that due to the situation, I may be required to depart earlier than planned.”

“I do not envy your position, Chancellor,” Shamon said, as he indicated the table. “But I understand the possibility. I am impressed you came yourself at all, as these talks could be conducted by your Chief Diplomat.”

“I prefer discussions like these to be had face to face,” Saudia said as she took a seat, with Hassan beside her as they were opposite the two Egyptian leaders. “The implications are significant for your country no matter what is decided, and that should be treated seriously.”

“An understatement, Chancellor,” Prime Minister Bata agreed, his voice more gravelly than his colleague. “So let us discuss. We know what you want from us.”

Saudia exchanged a glance with Hassan. “Do you know what we want, or do you assume?”

“It isn’t difficult to extrapolate,” Shamon said with a knowing, if guarded smile. “Perception is important to you now, especially after Betos’ little speech. In theory you could march through our nations to strike at them, and there is little we could do to stop you without suffering the same fate as Canada. But it would subsequently give some legitimacy to the claims of Betos, and that you would prefer to avoid right now.”

“In theory,” Saudia nodded. “But in contrast to the traitor, we would be hesitant to do so unless we were severely threatened. As of now, the SAS is not an existential threat to ADVENT.”

“But you want to stop them before they become one,” Shamon nodded. “And that means moving through our country, and perhaps others.”
“Correct,” Saudia confirmed.

“I have mentioned this before,” Hassan added. “But the war will eventually come to you as well. You have tried to stay out of it for understandable reasons, but that is beginning to come to an end. The SAS will attempt to expand and conquer. They merely need a technicality to justify invasion, and Betos is a puppet for the Collective. Her word cannot be relied on.”

“I’m curious,” Saudia laced her fingers together. “Has the SAS reached out to contact you?”

“No,” Bata said. “Not yet, at least.”

“I find that curious,” Saudia mused, while allowing a smile. “You are one of the pivotal nations in the continent. Why would they not reach out to Egypt?”

“Perhaps to avoid spooking you,” Shamon suggested. “To give you pretext to annex our nation and then have a clear path to their territory.”

“You are thinking too rationally,” Saudia shook her head. “You have the wrong impression about Betos. She is not a political strategist or military genius, she is an idealist whose naivety is being turned against us. View her actions through the lens of her idealistic morality, and ask that question again.”

It appeared both men got her implication. “A curious theory, Chancellor,” Shamon said, nodding slowly. “And ADVENT yet has little issue with myself or our government.”

“We respect results and pragmatism, Mr. President,” Hassan said. “We know better than most that some harsh actions are necessary for the benefit of all.”

“The actions of ADVENT lead me to believe you,” Shamon nodded. “And so you want our… permission…to move through our country.”

“That would be our most basic request,” Saudia confirmed. “However, consider the big picture. Know that anything you do to assist us – even if it is as simple as moving soldiers through a nation – will be grounds for the SAS and Collective to attack. You cannot claim neutrality. You will be marked until this war is ended.”

“And so we should throw in completely with ADVENT,” Bata inferred with some skepticism. “Why take that step when we know that you will protect us should an invasion come, if only to protect yourselves?”

Saudia smiled. “We don’t take steps such as these for free, Prime Minister, I would think you know that. While I will not disclose the details of our agreement with China, we are not defending them with the expectation that they will leech off of our goodwill. We have a mandate to protect Humanity, and will do our best to fulfill this. We do not have a mandate to protect those who hold our species back.”

Bata shot a glance to the President, who merely raised an eyebrow. “Confident, Chancellor. But in your position you can afford to be. My Prime Minister does raise an excellent point, however. Why should we do anything more than allow you passage when you will protect your investment regardless?”

Saudia pulled out a small holoprojector and placed it on the table. “What are the benefits of ADVENT? Aside from receiving complete and unconditional military protection, medical and infrastructure support, and a voice in deciding the course of our species? There are no downsides to becoming part of ADVENT on a structural level, gentlemen, not if you want Egypt to have a true
presence in the world.”

She paused. “Your military was widely recognized as among the best in the region, and responsible for keeping order in chaos. It merely requires modernization, and Egypt will be widely recognized for their efforts to bring Africa under control. But there is the question of what Egypt will get that others do not. An extra incentive one is owed as a full member nation of ADVENT.”

Hassan continued speaking as she activated the hologram showing Africa. “ADVENT is currently engaged in a long-term environmental project to reverse desertification,” Hassan said. “Project Greenwall. Early tests being performed in the Middle East are promising, and for Egypt we can expand it significantly.”

An area of the hologram was highlighted. “A plan proposed decades back utilized the Qattara Depression to serve as an artificial lake, which would be filled by the creation of a canal to the Mediterranean Sea. If I recall correctly, it was never implemented due to the high cost. We would be able to complete this project with no cost to the Egyptian government or its citizens.”

Both men looked surprised, if somewhat skeptical at this proposal. “That is a curious offer,” Shamon said slowly. “Especially with the lack of financial issues. But it would not be a promise acted on for years. And agreements can change.”

“Incorrect,” Hassan said, nodding to Saudia who pulled out a document from her bag. “Appropriations have been made to begin near-immediate construction of the Ball Canal, as well as several hydroelectric generators throughout it which would provide the country will additional clean energy. This has been approved by the Congress of Nations, and requires my signature. ADVENT is not solely composed of soldiers, Mr. President, we are capable of beginning projects at the same time, especially for our member nations.”

She pushed the document over for the President to read. “We do not require a decision this instant, and I presume that you want your lawyers to look over the proposal to confirm we’re not hiding things in the fine print. You will also find a few more appropriations that will directly benefit your country.”

They read them quietly for a few minutes while she sat back and waited. They were being won over, she could see it. Admittedly not difficult when they were getting anything they could really want. “You have also appropriated historical restoration and museum funding?” Bata asked, unable to mask his incredulity. “How can you afford to pay for these projects so easily?”

“We consider it an investment, in your nation and our species,” Saudia said. “A fitting one, I believe, considering Egypt has the privilege of being one of the oldest civilizations in the history of our species; a nation which held some of the earliest developed humans to walk this Earth. An investment which will pay off later, I am sure. Money, resources, manpower, we have all of those and there is little reason not to utilize them. Let us worry about any financial or resource cost, Mr. President, I assure you we will take care of it.”

“I see,” Shamon said slowly, looking to the Prime Minister. “Well Chancellor, in this case, I think we should be able to come to an arrangement very soon.”

***

ADVENT Trench Lines, Busan – South Korea

3/9/2017 – 3:41 P.M.
There was the continuous feeling that they were going to be overwhelmed at any moment. The adrenaline that had pumped through all of them at the beginning had become dulled as Duri and his squad repeated the actions of aim, shoot, reload, repeat, over and over again. ADVENT was continuing to take losses as the siege weapons fired steadily, and they were not always able to be deflected, especially as the Hunter had made a mocking point to start picking off Priests.

It seemed XCOM hadn’t managed to deal with him yet.

In the no man’s land, the aliens had established multiple forward positions, even if they had been temporarily prevented from moving forward when the Purifiers had burned a literal line in the sand. Duri had been concerned briefly that the fire would come their way, but it had proved to be unfounded as it mostly just…burned in one place, going deeper into the ground until it burned itself out. They were just careful not to get too close, since the lingering poison and byproducts of the chemical were dangerous in their own right.

He’d seen some of the Archangels flying overhead, or maybe it was just the same one, either way it had been impressive the way it had systematically taken out multiple Mutons and Custodians with a long flamethrower sweep. XCOM and ADVENT both seemed to have an affinity for fire. But right now his back pressed against the trench wall and he sighed, tired.

At some point they would have to be relieved and get some sleep. But the fact that they hadn’t yet meant that ADVENT couldn’t afford to replace any soldiers now, or they didn’t want to risk making substantial changes yet. Granted, they were holding the line very well, even as plasma fire continued spraying over the trenches and into the scorched Flak Towers.

Fortunately, the aliens seemed remiss in trying to actually make substantial progress beyond the first trench, a fact that Cara was continually upset about. “Come on, xeno cowards!” She shouted at the closest alien position with Mutons barely peeking out and firing. The barrage of Browning fire drove them back. “Stop hiding!”

“Don’t think it’s working, Cara,” Duri said with a tired chuckle. “Maybe if you yell a bit louder? I’m not sure they can hear you.”

“Ha ha, sir,” Cara retorted. “Hilarious!” She returned to focusing her fire on the barrier, and it did seem like she clipped one of the Mutons hard enough for it to roar and stumble back.

“Careful what you wish for, Cara,” Beatriz warned. “There’s a massive force coming up now. Andromedons leading them. Probably to storm the first trench and get an actual position.”

Duri breathed in. “Well, we can’t have that.”

The army that she had been talking about was soon within sight, and it was indeed led by Andromedons who were projecting red barriers in front of themselves, which made them targets as well as protected them significantly. Behind them was another line of Andromedon soldiers who were cycling out with the ones who had their shields depleted, and behind them were an unknown number of Custodians and Mutons.

Not good.

Purifiers were being moved up, and ADVENT defenders were focusing fire on specific Andromedons, though this only seemed to trigger the side effect of the armor Duri had forgotten about – how the Andromedon suits still continued fighting after their deaths. Now grenades spewing acid and fire were being thrown into the trenches, and while some were caught, dodged, or deflected by soldiers and Priests, others landed in the confined spaces.
Duri ducked as one of the grenades just barely flew over the trench and detonated above on the other side. More Andromedons were ‘dying’, but they were pushing to the trenches and beginning to file down into them. It was going to get ugly very fast if they maintained any sort of foothold. Duri pulled out his own grenade and rushed down to the tunnel that had previously held off the Chryssalid rampage and chucked it to the end, and was rewarded with the pained roar of a Muton.

Carrie had also returned with several of her soldiers. “Guess they got smart!” She called as the tunnel began being filled with plasma fire. “A Priest is coming. We need to hold off until then.”

“Got it,” he said, and stuck his rifle around the corner and fired blindly. “Aleksandra!”

“Working,” she confirmed, activating her PDS field. “Clear now!”

“We’ve got cover!” He yelled to Carrie. “Take them out.”

All of the soldiers, including Carrie’s Gunner and Rocketeer moved out of cover and focus fired down the center, with the Rocketeer firing several warheads into the far trench, with everyone else just continuing a volume of fire or chucking grenades down along with it. The plasma that was heading their way either fractured or was outright deflected, likely to the surprise of the aliens.

“Shield off,” he waved to Aleksandra. “Let’s save it for when we need it again. Miguel, we need the SHIV down here now.”

“Coming right up,” was the answer.

“Beatriz, how many are still going into the trenches?” He demanded as he returned to the blind fire tactic, even as he singed his armor from the plasma.

“Fucking Andromedon suits are not going down and causing a lot of trouble,” she updated. “Battlefield Engineers coming in now to set up permanent shields. ADVENT Priests are helping, but they’re being focus-targeted. More difficult to concentrate I think. You’re not getting those reinforcements cut off anytime soon.”

On cue the siege breakers fired another volley, which Duri knew would tie up more of the Priests. He was seriously considering the viability of retreating to the third trench line as Carrie’s Gunner was shot in the knee and had to be pulled back. Until there was a transmission interruption that Duri was sure he’d misheard initially.

“This is XCOM Operative Eriksson to all ADVENT personnel,” she said. “Be advised that we are receiving Ethereal support. Do not open fire on any Ethereals seen in the field, he’s friendly.”

Duri wiped the dust off the visor of his helmet and glancing at Aleksandra and Miguel seemed just as confused from their body language. “Did you guys really give up China? For this?” Even the Hunter seemed confused. “Aegis struck me as the type to go down to the bitter end. Huh.”

“Do you know what he’s talking about?” Carrie called. “Is China lost?”

“No idea,” he called back. “But there must be a good reason they’re bringing him over here, and we can definitely use him.”

“I’m not sure,” Beatriz sounded unconvinced. “They didn’t actually say it was Aegis.”

Duri reloaded his weapon and resumed his firing down the tunnel. “What, you think there is another Ethereal that defected? Why would XCOM hide that?”
“More importantly,” Miguel grunted. “Who would it be?”

“Guess we’ll see either way,” Duri said. “Only helps us, and if there’s a Hive Commander, we’ll need it.”

They continued fighting for a few minutes, still waiting for Aegis to come, or at least begin work elsewhere. Word would spread fast.

And it did. Duri was somehow unsurprised that the Hunter was the first to make a comment. But instead of his dark sarcasm, the Hunter sounded utterly shocked. “Is this a fucking joke?” A pause. “You have got to be kidding me!”

“Not Aegis?” Duri looked behind him. Now he was cautiously optimistic, because either XCOM had said it to lure the Hunter into some kind of trap, or there were now two Ethereals that were working with XCOM, and that was going to give everyone a better fighting chance.

“Oh my god,” Beatriz said in a small voice. “Oh. Oh.”

“What-?” Duri began asking, but trailed off as everyone felt a tangible change in the air. Everything seemed to become still and static; the air didn’t move, and random pieces of dirt, cloth, and other material floating in the wind became frozen. To his unbelieving eyes, he witnessed an Ethereal leap over the second trench and immediately focus on the Andromedon defenders.

“Correct me if I’m wrong.” Carrie shouted as the Ethereal appeared to just look at the defenders and an entire line of suits were picked up and crushed into pieces of scrap and yellow blood. “But isn’t that the Ethereal that attacked Japan? Twice?”

“Caelior,” Duri remembered the name numbly. Now that he remembered, there had been a small note saying that the Ethereal had been taken into custody by XCOM, but he’d just assumed that…

Well.

Caelior looked mostly the same as he had when he’d been fighting for the other side, though his mix of robes and armor was blue and silver, as well as prominently displaying XCOM emblems. He was showing his former allies the same power he had once used against ADVENT, though from what Duri remembered, his power seemed more controlled and directed – even as it was relentless and brutal, with enemies being crushed, pummeled, and ripped apart.

Barricades were ripped from the ground and wrapped around the soldiers they had protected before strangling them. Weapons were yanked from dozens of Custodians and Mutons at a time, while more were simply turned into organic missiles to be hurled at their comrades or flung across the battlefield.

The hovercraft, which had been hanging back recently, moved forward while firing their weapons. Six of these vehicles entered range, and Caelior yanked them all into the air, and began systematically tearing them apart and throwing the chunks at other vehicles and barricades.

It was safe to say that the tide had officially turned.

***

**ADVENT Trench Lines, Busan – South Korea**

3/9/2017 – 5:51 P.M.
“Looks like our WMD is doing his job nicely,” Marvin commented as they stood a short distance behind the fourth line of trenches, watching as Caelior continued on his march through Collective lines, turning the aliens to slag and rent flesh. It was both impressive and mildly terrifying to behold, especially as he had completely supplemented the PRIEST defenders when the siege weapons had continued firing barrages, and he’d elevated himself into the air telekinetically to get line of sight over the entire defense line, and erected a telekinetic cushion that absorbed, and then turned away the oncoming missiles.

The Priests were quick to supplement his temporal exposure, erecting Psionic shields in front of him to stop the barrage of plasma fire that also was aimed at him from the entrenched alien defenders who were not going down without a fight.

But the Archangels were waiting for something very particular. There were two problems to solve – the Hive Commander that had been identified, and the Hunter who had not ceased his strikes, even if he was now remarkably quiet. Fatima had been working extensively to telepathically hunt down the slippery Hunter, and she was supposedly getting close, while Said was working with the Priests to lessen the influence the Hive Commander was spreading against the defenses.

This was apparently a dangerous Hive Commander.

“I really hope she hurries up,” Anna muttered, stepping up beside Sierra. “I hate standing here and doing nothing.”

“Join the club,” Sierra grunted. “But Mona is right. We go out hunting him blind and he’ll pick us off one by one. Quick and clean is what we need.”

Their key to success here, Archangel Kawamura, a telekine, sounded skeptical. “This is assuming we’ll even be able to kill or hold him. You know how durable his kind are. I don’t think he’s missed a single shot.”

“It’s simple,” Marvin said. “You hold him in place, and we flay his regenerating skin off of his bones for as long as it takes until he’s a burning puddle. You have your flamethrower ready, Sierra?”

She lifted her wrist. “Always.”

“The Hunter is dangerous when he’s unknown,” Marvin continued. “Corner him and he’ll lose his advantage.”

“In theory,” Kawamura supplied.

If he’d had his helmet off, Sierra guessed Marvin would be rolling his eyes. “Fine. In theory.”

“I’ve got him!” Fatima interrupted over the comms triumphantly. “Placing his location within this vicinity. Far left-center in no man’s land, not a lot of places for him to hide. I’ll let you know if it changes.” On cue the mini-map in her HUD lit up.

“Alright, let’s go!” Sierra called up, and one by one the six Archangels blasted into the sky and towards the battlefield.

“Erecting telekinetic field, expect some visual interference,” Kawamura said, and a few seconds later Sierra did see some visual distortion, though nothing too significant. Unfortunately it was necessary since the Hunter would just shoot them out of the sky otherwise, and since he didn’t use plasma, physical rounds could be stopped or deflected.
As they sped across the battlefield they spent some time sniping some of the many Mutons and Custodians on the ground, with Sierra causing one of the Elites to explode with a blast from the WHEEE cannon. The plasma fire that shot their direction didn’t miss, but was so wildly inaccurate that it wasn’t a concern.

“Well, what have we here,” the Hunter drawled out. “Archangels coming out finally. Let’s see how long you last…”

“Here it comes,” Kawamura said, and Sierra barely saw anything but there were several flashes and a small explosion away from the rapidly receding group. “Hah, idiot.” Kawamura smirked. “Come on, did you really think I didn’t plan for you to use exploding rounds.”

“Can’t blame me for trying,” the Hunter said. “Oh well. Guess I’m going to have to adapt. Whatever will I do now that I’ve been outsmarted so handily?”

“I don’t like the sound of that,” Sierra commented as the sarcasm audibly dripped from the Hunter. “I wouldn’t be shocked if he has backup weapons.”

“Jim, altitude surveillance,” Kawamura suggested. “Target area sighted. Open fire at will.”

Their sniper, Jim, shot high into the air as Sierra focused on the area where the Hunter likely was hiding. It was a fortified location, with Custodians, Mutons, and Andromedons taking cover behind barriers and adjusting their sights to the oncoming host of Archangels. Kawamura swung her arms outwards as she slowed, and inversely applied the telekinetic bubble to the entire area and began compressing down.

The effect was instantaneous, as each thing caught in the invisible net was suddenly forced downward. The Mutons roared in pain and fell to the ground, only to find that the pressure didn’t lessen. The heads of the Custodians began crumpling as they fired up. The Elites and Andromedons managed to remain standing, albeit with growing pressure and pain. It didn’t help that the barriers themselves were shaking.

Sierra aimed her flamethrower at a section of the defenders and the white-orange flame engulfed those unfortunate enough to be caught in it. The Mutons boiled alive, while the Andromedons endured, though their suit integrity continued to suffer. The other Archangels combined their weapons and slowly exterminated the defenses that appeared to be close to a hundred strong.

Kawamura applied more pressure, and this was enough to shatter the Andromedon helmets that were still standing, which cascaded into the deaths of the pilots and the destruction of internal delicate instruments. The Muton Elites died as their brains collapsed, and the Mutons were flattened into the ground in a mix of fleshy mush and broken armor.

Marvin and Anna performed flyovers with their flamethrowers, adding a final layer of destruction to the carnage. “Think we got him?” Anna asked as she flew around to regroup.

“Let’s see,” Kawamura said, and ended the telekinetic field. “I doubt he’s dead, but he’ll get up now-“

She jolted in surprise as a plasma bolt slammed into her jetpack and sent her to the ground. “Your psion is a bit too distracted,” the Hunter chuckled as Maria dived to the falling Archangel. Spinning around, Sierra saw the black form of the Hunter a short distance away, with no surrounding cover and no reinforcements in sight. He was holding a sniper rifle. “Thinking I would just sit still while she probed where I was. But since you’re all here, let’s talk.”
The Archangels opened fire as they began strafing runs, and the Hunter just stood there, though growled in disgust. “What part of ‘let’s talk’ did you not understand? Idiots.” In quick succession he began firing back, even as he tanked a full blast from Anna. She suddenly threw her flamethrower to the ground as it exploded.

The Hunter swung his rifle to Sierra, and she swooped to make it difficult to shoot, but the alien somehow managed to punch a hole right through the WHEEE cannon, making her have to throw away another one, since she wasn’t going to risk it exploding on her. She briefly stopped to think about what the Hunter was saying.

“Hold fire!” She called, even as she reached for her pistol. “What do you want? And put down your weapon if you want to talk!”

“Nah,” the Hunter said, the smirk clear in his voice as he kept his rifle trained on the shaken Kawamura who was still recovering. “I think I’ll keep my eye on your telekine. She even so much as waves a hand, this time I’ll aim for her head, and not her jetpack.”

While the other Archangels maneuvered around the Hunter, weapons trained on him, Sierra decided to take the risk and land on the ground a short distance away. In response the Hunter switched to a one-handed grip of his rifle while pulling a pistol on her. “Careful where you step, Archangel. Just because I was nice before doesn’t mean I won’t blast your head off.”

Sierra didn’t lower her pistol. “What’s your game. We have you surrounded now that you revealed your position. You can’t get out of this.”

The Hunter laughed. “I cannot die. I’ve been shot, burned, decapitated, spaced, dismembered, and flayed. If you think having my limbs shattered and broken, if you think your plasma weapons are anything more than just temporary discomfort, then I’m afraid to disappoint you.”

“Maybe if we aim for the body,” Sierra indicated him. “But the head may offer a more permanent solution.”

“I’ll take my chances,” the Hunter said. “Which is why I’m talking with you at all. Now, you see the truth is that I don’t have a desire to be here right now. I wasn’t expecting the Little Storm here, and frankly, I’m not prepared to kill him right now, and as fun as it is to pick off your poorly-defended soldiers, I’m not an idiot.”

Sierra cocked her head. “Are you surrendering?”

“What? That’s funny,” he nodded indiscriminately behind him. “No. It’ll take you a while to get through here, even with Little Storm helping you out. That Hive Commander isn’t going down without a fight. Nah, the fact is that this entire battle –” he waved around with the pistol. “Means nothing. Especially with what’s going on in China.”

“Well, the almighty bitch herself has decided to send her Bringer pawns to help Isomnum,” the Hunter interjected. “Now, let’s say that the bitch and I parted on bad terms, and since you know what Paradise and the Bringer are, I won’t recap them. Suffice to say that them being involved is bad for everyone involved, especially myself.”

Sierra raised her eyebrow under her helmet. “And why would that be?”

“I may have been the one to accidentally blow the lid off of the Creator’s hell,” he said absentmindedly. “Now, I’m under the Battlemaster’s protection, but if the Bitch is deranged
enough to ignore the Battlemaster and help our prestigious Dread Lord, there’s a non-zero chance that she’ll come after me too, and I value my life too much to tie myself to a pointless battle.”

He flipped the pistol in his hand – clearly showing off. “Now, I’ll get to the point. I have an interest in stopping the attacks in China now. Every Bringer soldier dead makes my own chances of survival better. You obviously want to stop Isomnum. So here’s my offer – I help kill the Dread Lord and whatever pets from the Creator he brought, and in return you don’t come after me when I do this. I give my word I won’t kill your own soldiers during this period. When I leave China though, all bets are off. Temporary alliance, after all.”

“Do you really expect me to believe that?” Sierra asked skeptically. “That the Battlemaster would just let you do this?”

“What, you think I ask for his permission?”

The Hunter chuckled. “He’s occupied with bigger things than me right now, and I guarantee he wants Isomnum stopped as much as you do now. If I take a few days or weeks to chip in here and there, well…” a shrug. “I doubt he’ll care. Besides, I’ve been wanting to kill the Dread Lord for some time. Everything else is just a bonus.”

“And if we don’t agree?” Sierra inquired.

“Then I kill all of you, and go to China and kill everyone who gets in my way,” he said, angling the pistol towards her head again. “Plus, if you agree, I’ll be sure to put in a good word for you when I talk to the Battlemaster.”

“Orders, Sierra?” Anna asked.

She considered in the long seconds as the battle raged in the distance. As much as she hated to consider it, she didn’t know how well they could beat the Hunter right now. In the event Jim hit him, it might not debilitate him permanently. And his marksmanship was so much higher than any of theirs, he could outshoot them before they could fire back.

It was not a decision she wanted to decide unilaterally. However…being able to push the Hunter from a Collective tool to more of a directed weapon was an improvement, assuming he was telling the truth. This was going to be a risk, but she was going to take the chance. If the Bringer had soldiers involved in China now, they could very well use him.

“Fine, you have a deal,” she said unhappily. “Go back on it, and you’ll wish we’d have taken you out here.”

“Excellent!” The Hunter holstered his pistol and returned to a two-handed grip on the rifle. “I’ll be in touch in China, be sure to tell the Commander so he isn’t surprised. But I’ll need to…acquire some things. I really hope the Bitch remembers me, because I have definitely not forgotten about her.”

The Hunter suddenly vanished in a flash, and Anna landed beside her. “I really hope you made a good choice,” she said. “This could backfire.”

“Trust me,” Sierra sighed. “I know.”

***

It took some time for the Hunter to make his way to the end of the Collective lines. XCOM would return to help Caelior clean up and begin pushing forward. As long as the Hive Commander was a factor, Caelior would be prevented from being an unstoppable force, or so it was theorized. Still, it had been a surprise to see him of all Ethereals show up.
It was, the Hunter mused, rather indicative of the state the Collective was barreling towards. First Aegis, now Caelior, and it was probably only a matter of time until a few more pivotal Ethereals defected. The rift between Isomnum and the Battlemaster was the clearest evidence of this yet, and the Hunter was rather fascinated to see it play out.

Ironically, it seemed like the Collective may not be undone by the Humans, but by Ethereal infighting.

If such a time came, he’d have to be careful about who to throw his support behind. Assuming that anyone actually cared. If they didn’t, all the better for him. It was tempting to consider just abandoning everything and taking his chances in the inner galaxy, but so long as the Imperator and Battlemaster were alive, that was only going to result in his untimely demise.

Then again, it wasn’t as though he wasn’t sticking his neck out here.

*I am not going to do that again.*

He was *good*, he knew that. At range he doubted that there was anyone in the galaxy who could match him in pure marksmanship. An accomplishment he took some rare pride in. At the same time, XCOM had easily had the upper hand there. There was a benefit to building up a certain persona of utter confidence and dismissal of opponents – it helped him to bluff.

Unfortunately, he was not omnipotent, nor had the ability to stop time. His body could withstand the damage easily enough, but it was only going to need one volley to debilitate him, and even a four-on-one – especially if they were *XCOM* – was simply not going to turn out in his favor. Not to mention he knew there was a sniper far above, and he wouldn’t be aiming for the body.

Fortunately, his bluffing had likely saved his mind and gotten what he wanted.

None of the aliens paid him any mind as he walked away, pulling out his holocommunicator. They had more important things to worry about, and he wanted to get out of here as quickly as possible. A lot of hunting to do and prepare for. A feral grin spread across his face as he envisioned the hunt to take place.

He was quite interested to see if these soldiers the Bringer commanded were as dangerous as he imagined they were. The bitch was deranged and mad, but she still unfortunately had a brilliant mind, and whatever the Bringer was, it wasn’t an idiot either. Perhaps if he was lucky, one of the so-called Saints would come.

He’d always wanted to know what it was like to kill a being that thought it was a god.

He scowled at the holocommunicator, annoyed by how long the Battlemaster was taking to pick up. “Come on tin man, pick up the damn call.”

A full minute passed before the hologram of the Battlemaster appeared. “*You are alive. Good.*”

“Thank my charming personality,” he quipped sarcastically. “I’ve found out how far I’m willing to stick my neck out, and this no longer includes *exposing* myself to a fucking Archangel team while being assaulted by one of their telepaths for hours.”

“It happened as I knew it would,” the Battlemaster said, unconcerned. “You achieved your objective?”

“Of course I did,” he rolled his eyes under the helmet. “I have a free pass in China. Heading out there now, and if XCOM keeps their word, I shouldn’t encounter problems. Depending on how
involved the bitch is, I might receive some special attention.” A pause. “Admittedly, I’m almost surprised XCOM agreed so quickly.”

“They know the risks the Bringer operating openly poses,” the Battlemaster answered firmly. “Your actions against them are minor compared to that.”

“Fair enough,” fine with him. He didn’t really need to be considered on the level of a Sovereign One. Too many people gunning for you then. “Also, Little Storm is back and on the wrong side.”

“I am aware,” was the curt response. “Concerning. He will need to be handled when Isomnum is contained.”

“I’ve got a plan for him if you want,” the Hunter offered. “I wouldn’t mind taking him out. Never liked the petulant child.”

The Battlemaster was silent for a moment. “I’d prefer he not be killed. It is also unlikely he is being coerced. Aegis would not stand for it. I would prefer to know what brought him to willingly assist them. Reclaiming him is a greater priority, but his involvement changes how we need to prepare. This is secondary to your objective. Use whatever resources you need to eliminate Isomnum and the Bringer’s soldiers.”

“And keep your sanctioning of this under wraps, I presume?” He inquired. Not that he particularly cared one way or another, he had no interest in trying to blackmail or backstab the Battlemaster. There were some beings you simply did not screw over – unless you had the protection of other beings protecting you.

Such as his current predicament with the Creator. Although he was wondering how much that would matter if the Battlemaster lost influence or station in the Collective. His protection might not be worth as much after that. A problem to consider if it happened. For now, he had plenty to distract him.

“Preferably,” the Battlemaster said. “However, I doubt anyone would believe you. You are an unreliable alien to them. Anything you say is suspect.”

“Suits me fine,” the Hunter nodded. “Well, in that case, I have a certain Ethereal that needs killing. Good luck…well,” he waved a hand. “Wherever you are.”

“Good hunting. And if you target ADVENT or XCOM, I will be sure to send your dismembered body to the Creator.”

“Yeah, yeah,” the Hunter sniffed. “No need for threats, not when it comes to this. Trust me,” he patted his pistol. “There are only a few people I actively want dead – the esteemed Dread Lord is one of them, and our glorious Creator is the other. It will be done, Battlemaster, have no worries.”

***

Haikou, Hainan - China

3/8/2017 – 10:13 P.M.

Everyone was in as best shape as could be expected at this point. All of them were set up in rooms of their own, which admittedly wasn’t difficult to set up, given the fact that all of them were open. The Chinese mother and daughter – Yawen and Ren Fao respectively – were in their own room after they’d been able to learn some of who they were.
Both of them were residents of the city, and had been requested to leave their homes and move to the hotel to wait for evacuation. They’d experienced delays, and before they’d been able to be moved away, the whole city had been locked down and soon after that Isomnum had attacked. Had it not been for the Vitakarian, they would have died.

Said Vitakarian had his wounds bandaged and he was recovering, though both Iosif and Nuan had made sure that he was secured and bound. They were not as trusting of this alien yet, although Nuan was curious as to why the alien would help them. Something to interrogate it about at a later date.

Their other newfound civilian was Jun Ye, a fairly wealthy businessman who primarily worked as a representative overseas, although he had said that ADVENT “Was shaking up everything in this line of work” and he was in the city temporarily, although subsequently been caught up in the evacuation and subsequent lockdown.

Nuan had spent time questioning exactly how he had acquired a gun, seeing as how they were supposed to be extremely controlled. China was not America where everyone seemed to have the things, and so a civilian holding one struck her as suspicious. She’d first suspected that he was Chinese Intelligence or even a colleague. The explanation was just as simple, though made her bristle. He’d been granted an exemption by someone in the Communist Party, allowing him to carry a firearm. Bribery.

A crime officially, and the man had been suitably terrified when Nuan had revealed she was a member of the MSS and calmly asked him for the name of the individual who he had bribed. Not that Nuan intended to really punish this man, but whatever person who was participating in corruption would need to be removed at minimum.

They simply did not have time to deal with continued corruption when the Earth was being invaded.

He was now sleeping in his own room – the same one he had barricaded earlier – something there had been debate over. There was some logic to everyone being in one room, but at the same time, it would become crowded very fast and it would also trap them all in one place. There were risks and benefits associated with each option, but in the end they had all decided to have multiple rooms for the night. More decisions would be decided in the morning.

Nuan and Iosif had also taken a trip down to the kitchens and managed to bring up enough food for everyone from the working fridges. They hadn’t wanted to risk actually cooking something in case an alien patrol stumbled upon them. It had been a somewhat nerve-wracking experience, especially with the dead silence that they hadn’t wanted to break for fear of missing something.

But it had happened without incident, and everyone was feeling a little better. More so now that they were both able to use the showers after having to delay that initial plan. “Who’s first?” Iosif asked, as she set her rifle in the corner. “Actually, scratch that. You go first, I can wait.”

Nice of him, even though he’d probably earned it as much as she had. Still, she wasn’t going to spurn him being courteous. “Alright. Help me out of this.” And began taking off the easy parts of the Titan armor, such as the gauntlets, helmet, and boots. Glancing over to Iosif, he was clearly hesitant. Granted, she wasn’t exactly oblivious as to why…but still. “It’ll go faster,” she said. “I don’t bite.”

“Yes, yes I’m aware,” he said, moving over to her and starting to help loosen things up. “Don’t usually get this close to subordinates though. Even XCOM has an aversion to the possible harassment lawsuits.”
Nuan had to chuckle about that. “Has that ever happened in XCOM?”

“Not so far,” Iosif said as he lifted upwards and helped pull the center chestplate over her head. The damn thing really was heavy. “Intentional by the Commander. All candidates get psychological profiles sent over. Examples of unprofessional or criminal behavior, harassment, anger management, and so on – gets an immediate disqualification, doesn’t matter how good they are.”

“Good for him,” she wasn’t too surprised. The Commander struck her as a professional and someone who didn’t tolerate that type of behavior. She wasn’t ignorant of the irony that he more than likely sanctioned things that were just as technically bad or worse, but if someone was mean to a lady? No chance of getting into XCOM. Sort of weird standards when she thought about it, but she couldn’t really complain.

It took close to ten minutes to get the suit fully off, as it was a lot more complex than previous suits, even the Aegis. Both of them were quite blatantly ignoring how close they were to each other, and making short comments about nothing. Eventually she was stripped to just the black undersuit. “Alright, I won’t take too long,” she said, standing up and moving to the bathroom.

Once inside, she started the shower, took off the undersuit, and stepped into the warm water. Yes, this definitely felt good, even if it didn’t eliminate the stress of the day and the events just hours earlier. It was almost surreal; she just continued pushing forward despite the fact that she’d just watched horrendous deaths, suffered injuries, and witnessed Isomnum’s terror weapons.

She didn’t know if some small rational part of her brain was keeping the weight of all of that from crashing in at once, or if she was just…numb to things like this now. There was a surreal aura around a lot of things now for her, and it hadn’t stopped since she’d first watched Isomnum broadcast his speech to the world.

A dream. A nightmare.

At times throughout the day it seemed like she was just walking through the motions as if in a lucid dream. If she was in a dream, she wouldn’t have been surprised. She knew the soldiers who’d died slightly, in a comrades sort of way, but they weren’t who she considered friends. She’d survived after pulling off a lucky throw, rushed through the town while being chased, and got to be a hero by finding some desperate civilians. Even a moral quandary was thrown her way in the form of the alien.

Not to mention how now she and Iosif were sharing a room.

Rationally, she knew none of this was fake. If it was a dream, she would have woken up by now. Nor would she have wanted to live such a paradoxically real dream. Because this could plausibly happen, if she’d really been in a lucid dream, she would have not had anyone die, China would be saved, and she’d lower Isomnum into a burning pit of lava.

Perhaps she was just tired. Maybe she’d been killed by the Mosrimor Avatar and living out some kind of fucked up afterlife.

Wouldn’t that be funny.

You are very tired, Nuan, stop overthinking things.

Right. The warm water was making her loopy, and she couldn’t afford that now. Plus, she’d promised not to take too long, and she didn’t want to make Iosif wait uncomfortably long. A
minute later, she shut off the water and began drying herself off. The only downside was that she’d have to wear the undersuit again, and that she didn’t have any other clothes, but she’d make do.

She wrapped the towel around her to give a little more covering, for all the good it did. Back in the room she saw Iosif had moved her Titan armor to the side, keeping all the components together, while also working on taking off his own armor. Without a word she moved over to help him as well, and this time they didn’t really talk, even as the atmosphere shifted for both of them.

Extremely distracting. Not uncomfortable, but distracting. Enough for her mechanical hand to linger on his chest briefly before she realized what she was doing and quickly moved it away, while he just sort of froze. They only locked eyes for an instant before continuing with what they were doing. Eventually after what seemed like a long time, he was in his own undersuit, and coughed awkwardly. “I’ll be out soon.”

“Right,” she said distractedly as she copied what Iosif had done, and moved the various components and pieces to the side. Well, there was exactly zero chance they could really continue to not talk about the growing elephant in the room. Intended or not – and she had definitely not intended it when she’d originally been assigned here – they’d become close.

Close, with neither of them really willing to acknowledge or push it further. Him probably because he was the director of Psionic Operations and there were some power dynamic concerns from his end, and from her…well, maybe not to make the only friend she had here distant or uncomfortable. While it was true that she wasn’t really looked on suspiciously anymore, she still didn’t feel like she quite fit in with everyone. Easy to put aside when on missions, less so back at the Praesidium. It really was annoying that this was something that was being dealt with in a situation where they both could very easily be killed in the next few days, or even hours. That would be decidedly tragic. But they didn’t choose to be put in this situation, so they just had to deal with it the best they could. And something told her that awkwardly avoiding it would be the worse alternative.

So she just sat and waited, distracting herself with trying to think about the logistical issues with moving the alien prisoner. It was a temporary distraction, but worked for however long it took for Iosif to finish up, and he’d similarly used the towel to cover up slightly more than the undersuit showcased. “Hey,” she nodded as he walked over to sit on the edge of the bed opposite her own.

A short silence was punctuated by Nuan sighing. “So. Tell me if I’m imagining this or not.”

His lip twitched. “I somehow don’t think so.”

“Well…” she trailed off. “This thing with us. That we keep avoiding. I know it’s not exactly appropriate right now, but…” she coughed. “You’re not an idiot. I like you, more than I should since I didn’t really plan on anything like this…I think you feel the same. Or if not, we should get it-“

She trailed off as Iosif raised a hand. “I may not be a telepath, but you’re somehow more unsure now than when fighting. Funny how the mind works. Anyway,” he shook his head. “It’s not just you, I feel the same. Not expected for me either, and I was more considering how to handle it. I can’t completely forget about rank here.”

She relaxed a lot after hearing that, happy that her suspicions were confirmed. Ok good. They could go from here. “I wondered. I don’t really care about that though. Does it really matter,” she looked around. “Especially here?”

He gave a wan smile. “Realistically, no. But…well, I like to be on the safe side when it comes to
this kind of thing. Beaten into me by my superiors a long time ago, and I can’t drop it so easily. But we have someplace to start now. We can work through it more when we get back to the Praesidium.”

“Ok,” she nodded. “Good extra motivation to get out of here alive.”

“In the meantime, we need to figure out who’s going to stay up first,” he nodded to the clock. “Shifts every three hours. I don’t think everyone should be asleep at once.”

“I’ll go first,” she said. “Since you let me use the shower before you.”

He smirked. “I won’t argue right now. But don’t let me sleep later – I’ll remember the time.”

Nuan walked over and retrieved her rifle as Iosif settled into bed, pulling the sheets over himself. For her part, she sat on the edge of his bed, and silently watched over him as he drifted off to sleep.

***

China

3/11/2017 – 3:11 P.M.

Oliver missed the days of straightforward fighting and holding positions against an oncoming alien force. Predictable may have been too strong a word to use, but it at least introduced some sense of normalcy and stability to war that had been lost when the Bringer had begun assisting Isomnum. It had turned a nightmare into a demented fever dream that was no longer restricted to the coast.

All XCOM squads deployed to China had been turned into an immediate counter strike force thanks to the Chronicler’s teleporting, and he and Kane had been teleported all over the country to assist in repelling surprise attacks by the Bringer and other forces. Few they may be, they were somehow capable of outclassing even the PRIEST Division.

They’d often arrived too late to save the majority of defenders, even if they’d served in softening up the Bringer soldiers and were more easily dispatched. But it never seemed to be enough to completely stop the flow, even though rationally he knew that the Bringer would eventually cut his losses. It didn’t help that Isomnum was very much still active and expanding his reach over a tiring Aegis.

The worst places they’d found weren’t filled with defenders, but with the Bringer Caretakers teleporting unconscious victims away with the dead bodies of Chinese and ADVENT defenders all around them. Performed throughout the country, in many places which hadn’t undergone a full evacuation, this was devastating.

But this one seemed different.

The whishing sound of the teleportation put them in the location of a city ADVENT had reported as coming under attack by a new type of Bringer soldier, or at least that was what was assumed. It was entirely possible that they were incorrect, and it was one of the dozens they had already fought. That all of them seemed to have slightly different armor didn’t help with this.

They were immediately confronted by ADVENT and Chinese soldiers on a street, in a city which had limited infrastructure and no skyscrapers. Definitely one of the more rural cities of the country, but there was something immediately noticeable and wrong as Oliver actually got a good look at them. At their arrival all of the soldiers broke into sudden cheers and claps, with artificial smiles on their faces.
They wore no helmets, and had no eyes.

He shouldn’t be staring in disbelief, but this was not expected. The sockets were still bloody, if precise. They had to all be in extreme pain, but none of them seemed to react to the fact they were blind. Adding more to the surreal atmosphere, there was a lively and haunting melody that was playing across the air.

“Chronicler?” Oliver asked, raising his weapon at the smiling and cheering mind-controlled soldiers. They had to be mind-controlled, though up to this point they had been just killed, not preserved like this.

The Chronicler seemed to appraise the crowd for a second, until the crack of a gauss pistol from behind him fired and blew the head of one of the women apart. Kane was wasting no time in systematically executing them coldly with direct shots to the eyeless heads. The cheering stopped as all of them seemed to freeze.

“Kane!” Oliver swore. “Wait-“

“No, he’s right, though not for his reasons,” the Chronicler said grimly. “These people have been touched by the Bringer. They cannot be allowed to live.”

All of the controlled soldiers suddenly began laughing, and a new voice reached over them, a madly happy female from what he could tell. “Indeed! Indeed! Perceptive, little pawn. And yet you think killing them is what we – what they fear?”

The laughing grew more intense, and blood began trickling out of their eye sockets.

“You think we fear death?!“

Even Kane had stopped shooting as he beheld the mad and increasingly raw laughter of the soldiers, some of whom had fallen to the ground, shaking as they kept laughing. One of them stumbled over to Kane and yanked the pistol to his smiling head.

“Do not hesitate. Give them what they want.”

Kane fired, and this time he continued walking. The Chronicler refrained from performing executions on his own, and Oliver complied as they walked forward, the laughing blind moving out of the way down the cleared street. More of the laughing were falling over, and coughing up blood as their bodies were forced to continue laughing.

It soon turned to wheezing, coughing, and gasping as the trio witnessed those who had previously been laughing hysterically seem to die, with wide and bloody smiles on their faces.

Even in the quieter absence of the laughter, he could still hear it.

But why do this?

Kane had holstered his pistol and pulled out his Browning as they approached what looked like a city center of some kind. If one had turned it into a nightmarish cult hub. In the center there was a literal altar and still more blind soldiers were in the crowd, eagerly looking towards the scene unfolding before them, even lacking eyes.

In the center was a lone figure wearing deep purple robes, which were adorned with more of the mysterious writing and symbols that to his perhaps too tired eyes seemed to shift the more he watched. It was clearly a woman, though the species he could not tell. The most distinctive aspect
of her attire was the mask she wore.

It was silver and completely covered her head, reminding him of the old theatre masks he had seen before. Those masks expressed an emotion, happy, sad, angry, and more. Always static, never evolving. So too was the mask the woman wore, one with a laughing mouth, wide eyes; coalescing into an unsettling image, more so because unlike most masks, this one had extra details on it in silvery detail.

Small scars, wrinkles, dimples, details that disturbingly looked like a static snapshot of someone who had actually been laughing.

On the altar was a woman who was lying tranquil, with no restraints or anything that Oliver could see. The masked woman was over her holding a small and pristine knife that she then lowered to the wide eyes of the victim and began cutting the eye out. The crowd cheered and the victim expressed no pain, even going so far as to clap while lying down.

Oliver didn’t fail to note that there were several cameras placed around the area, and he realized that this was likely being recorded or streamed for others to watch. He sincerely hoped that ADVENT was finding and shutting them down as fast as possible.

Kane growled and lifted his rifle and the Chronicler shot a hand over to him and Kane was suddenly encased in a stasis field. “Let me go!”

“No,” the Chronicler said quietly. “Not yet. I want to see what happens.”

“There are others!” Kane yelled. “We’re not killing them for your curiosity!”

Sure enough, Oliver looked behind the altar to see that there were at least a few dozen soldiers who still had their eyes, but they were clapping along with the crowd, were not restrained in the slightest, and had wide smiles and bright eyes.

It reminded him far too much of a celebration. Were the Chronicler not protecting his mind, Oliver was afraid he might have been caught up in the ‘festivities’ since even now he could feel the urge to also show appreciation for what he was seeing. “Everyone is lost.” The Chronicler hissed. “They will all die. Just not yet.”

The masked woman extracted the bloody eyeballs, which were amazingly still in their shape, and carefully placed them in a nearby basket which to his disgust held dozens more extracted eyes. The victim stood with a smile and walked to the crowd, seemingly thrilled with what had happened.

“Another child has joined His ranks, and will forever see with His sight!” The masked woman called out. “Who shall be the next to cast aside your mortal senses for that which is eternal?”

To his dismay and horror Oliver saw all of the soldiers who still had their sight nearly swarming the masked woman, practically begging and pleading to be the next to have their eyes cut out. “Let Me Go.” Kane demanded.

“Not yet,” the Chronicler said. “Patience.”

“Ah, your enthusiasm is commendable, but first!” She turned around and looked right at the trio. “Let us extend a welcome to our guests of the afternoon! An ambassador from none other than T’Leth himself.”

The crowd seemed ecstatic at that, and Oliver wondered just how powerful this psion was that she was managing to influence everyone so completely simultaneously. It was growing more and more
unnerving by the second, starting from when they’d stepped foot into this cursed place.

The Chronicler rippled with a blue aura as he continued to walk forward. Something Oliver now knew as T’Leth taking control over him. He lifted a hand, and closed it into a fist. “Be silent.”

Some hands were thrown to throats, as Oliver saw a rippling band of air around the throats of the crowd. It appeared T’Leth was justifiably angry.

The masked woman twirled the knife in her fingers, the blood seeming to vanish off of it as she expertly sheathed it in a pocket. “Such a lack of manners. For a ceremony mind you! Is that all you came to do little puppet? Disrupt our joy? How typical of your kind, how hilarious!” Even while choked, the crowd around them took the cue to exert as much laughing as they could.

“What are you?” T’Leth almost sounded curious. “You have developed more extensively than normal.”

“I am no one of importance,” the masked woman bowed dramatically, going so far as to extend a hand dramatically. “Merely one of His Trusted, who has been tasked with so holy a task as to bring His truth to all others here!” She spread an arm indicating the asphyxiating crowd. “A truth all here now know. One I invite you to understand as well!”

She stepped forward. “I knew you would come. But you came expecting war and hate, and there is none of that here, unless you have brought it with you.” She spread her arms. “All of these men and women were suffering. They exist in pain and anguish daily, fighting for temporal and petty things. Fighting for a people who will never face the danger they endure themselves. Who do not truly care about them. Now they understand that One does, and they rejoice.”

“What a lie,” Oliver muttered, training his weapon on the laughing mask. “One she is deluded enough to believe.”

A rumble sounded from the Chronicler, a deepness and rumbling Oliver realized was a laugh or chuckle from T’Leth. “Your hypocrisy has not changed, Bringer. You offer no choice, only domination and submission. You may have manipulated the Imperator into doing your bidding, but you will not be granted this species as yours – or any others.”

A dramatic sigh sounded from the woman. “So be it, Sovereign. Give in to your primal nature and kill me!”

T’Leth sounded amused again. “No. I won’t kill you. But he will.”

There was a loud crack as the Chronicler executed all of those he had held in the crowd, and subsequently released Kane who began firing rapidly at the woman. Those who T’Leth had not executed rushed forward screaming crazed battle cries, Oliver quickly put them down with well-placed shots to the head.

The woman suddenly duplicated into dozens of copies – psionic illusions most likely – and pointed at Kane who stumbled, kicked away a rushing brainwashed soldier, and continued forward with a furious roar – one of rage, not pain.

The Chronicler broke the psionosphere around the area where the illusions were, and purple surges of energy lashed out which vaporized several copies, and the Chronicler extended a hand towards what was left and all of the copies suddenly disappeared revealing the real one a short distance to the left of where she had been standing, one hand moved to her head, which she shook and directed at Kane again.
Oliver threw a plasma grenade to her which somehow broke into pieces well before it reached her location. The robes she was wearing were being ripped by the rounds from Kane’s Browning, but not seeming to hurt her as Oliver saw wounds being healed in seconds. A Biopath then. Kane’s weapon suddenly fell apart and exploded as a final round went through it.

Pieces of his armor started falling off as well, and realizing what was happening, he outright charged towards the woman who lifted a hand above as if to teleport away – except nothing happened – seeming to leave her stunned just long enough for Kane to slam her into a nearby wall and was unrelenting as he smashed her head into the wall again and again, before throwing her to the ground.

The Chronicler was also walking forward, energy flowing off of him and one fist lifted and clenched. With pieces of his armor still falling off, Kane lifted his boot and slammed it down on the mask and elicited a yelp. He repeated this move several times, with the woman somehow laughing madly as much as her breaking face would allow, until there was a distinct cracking sound of bone giving way and the body stopped moving.

Kane stood over the body, breathing heavily. “Good job,” the Chronicler nodded.

Kane attempted to swing a punch though he was frozen just before his broken gauntlet could hit the helmet of the Chronicler. It didn’t seem to deter him. “Don’t you ever do that to me again, Chronicler.” He growled.

“Then keep yourself in check,” the Chronicler replied calmly, releasing him after stepping back. “We killed what I believe was one of his most powerful soldiers, and another city is dealt with. Good work.”

Oliver looked around at the carnage, and he definitely did not feel like they’d done good work. No one had been saved and he was never going to forget the nightmare this place had been. Kane’s voice was more controlled now. “I need armor and weapons.”

“Yes,” the Chronicler agreed. “We need to replenish those first. Let’s go.” A portal was created around them, and they were gone just as quickly as they’d come.

***

ADVENT-Chinese Joint Command, Beijing - China

3/11/2017 – 5:05 P.M.

The situation was continuing to deteriorate and Saudia didn’t know what the best solution was. The introduction of the Bringer had disrupted their defenses significantly, and attacks across the country were being reported, and in many cases it was a matter of civilians going insane and attacking ADVENT and Chinese soldiers.

Aegis was weakening, XCOM was being rushed all over to put out fires and hunt down Bringer soldiers, and ADVENT was suffering substantial losses even when they won. Worse, the Bringer – or Isomnum – wasn’t just targeting defenses, but also the populations. XCOM had confirmed this multiple times, which was triggering a massive rush to evacuate the inner cities since boundaries no longer seemed to matter.

ADVENT was also working overtime on the digital front, as some of the assaults were being broadcast by the Bringer’s soldiers, a way for Isomnum to continue to spread his terror non-psiologically. It was a continuous battle to keep it suppressed, and while it was being largely
successful, and Saudia had ensured that a gag order on any footage was given to the media, they weren’t going to be able to stop everything.

Even one or two of these teleporting Bringer operatives were enough to somehow take on garrisons. Oh, they’d be put down, but only after they’d killed many times their own number. Suicide units or not, they were weakening the defenses across the country, and it didn’t seem like T’Leth had enough operatives to stop everything.

Then something changed.

It began with the feeling of a growing pit in her stomach, and looking out the window she saw the city burning, with alien fighters swooping in and strafing the buildings. Ice clamped around her heart as she saw what was happening. Her body suddenly froze as the Manchurian Restraints took hold, and the rational part of her brain screamed that this was impossible.

Then it all vanished. “Chancellor!” One of the Priest guards called, marching up with her honor guard. “You need to come with us now.” Saudia looked out of the building, and was immensely relieved to see that there was no alien fleet in the city…but something was still wrong.

“What’s going on?” She demanded, pulling out her pistol, a concerning feeling that she would need it coming over her.

“Unsure at the moment,” Ethan said, stepping forward. “But the entire city just experienced a psionic attack. Priests are trying to contain the situation, but it’s taking hold. We think Isomnum is here.”

She stiffened. That was very, very bad. And brazen. “How?”

“Probably teleportation,” the Priest said, as they began escorting her out with her in the center. “But he shouldn’t be here. It’s unlike his dossier, but if he is he must have also brought backup.”

Saudia thought furiously as she was escorted through the hallways. Protocol dictated an extraction to the nearest Gateway back to a secured ADVENT base, but she knew there was some greater objective here. There were only two places they needed to focus on to cause maximum damage, and if the population remaining was driven insane and dealt with the forces on the streets…

“Order an immediate evacuation of the building,” she told Ethan. “They’re going to attack here - and send the evacuation order over to Qin at the Great Hall as well. Any legislative and administrative officials need to leave now. Isomnum wants to make a statement here, and he doesn’t have the forces for a prolonged battle.”

“Yes, Chancellor,” Ethan confirmed and began rapidly speaking in the background, as they began moving towards the open staircase leading downwards. Elevators were a terrible idea, and while the stairs were restrained, there wasn’t a better option. While she was confident that she could be protected, she was worried about the parts of the Chinese government who’d elected to stay due to believing the danger was still far off.

Everyone should have paid more attention to D.C. The Collective clearly had no problem striking in the heart of what is assumed to be protected territory. But maybe it would turn out for the best; in D.C. they had almost killed the Battlemaster. Perhaps here they could kill Isomnum.

“Where is the Commander?” she demanded, knowing he was still observing operations here. He needed to get out of here as well until it was contained and safe.

“Don’t know,” Ethan updated. “Communications are jammed now, I just barely got the evacuation
orders off.”

“And Qin?”

“Interrupted, but he got the message,” Ethan stepped in front of her as fighting was just ahead in the hallway they were trapped in. It was a wide hallway, yes, but with almost no cover and only the stairs at the end. A robed figure was thrown back and slammed into a wall, and was subsequently struck by lightning.

The Commander emerged from the stairs, not wearing armor, but holding a gauss rifle. Beside him was another figure in blue and black robes who was absurdly tall – as tall as her even. He was almost regal in how he conducted himself and his face was stern, though his stormy grey eyes flashed with annoyance. In his hands with fingerless gloves over them was a staff of all things.

It was metal with the handle itself having grips built into the design, with a sharp spike at the bottom, and at the opposite end held the head of the staff, which was a ring with odd text written on it. In the center was an orb that glowed with an internal blue-green light, with ripples emanating from it. One of the Sovereign Orbs, which meant that this new individual was an agent.

Good news.

“Chancellor,” the Commander greeted curtly. “Glad you’re safe. This is Crevan Machas, we’re going to get you out of here.”

“We’re escorting her to the Gateway now, Commander,” Ethan confirmed. “You can-“

“The Gateway is compromised,” Crevan interrupted curtly. “Fiona is currently engaged in combat with one of the Bringer’s teleporters. The building is under attack and you are the target. They are marching up here now.”

That explained why they’d been fighting up and not down. Saudia saw no reason to disbelieve them. “Fine. What is the plan.”

“We move towards the roof, and a Skyranger will come to evacuate you,” the Commander said. “Alternatively, Fiona teleports us out of here. Whichever comes first, but we need to keep moving.”

“Indeed,” Crevan glanced to his staff. “They are aware of our capabilities and will be sending forces against us. I can prevent teleportation surprises and telepathic attacks within a certain radius, but little else.”

“Understood,” Ethan moved her guard around. “I don’t suppose you know what is happening?”

The Commander pursed his lips. “Isomnum is indeed in the vicinity. We did not expect it, but it is going to cause issues. I think he is trying to provoke a reaction, and if he succeeds in this brazen attack, he will get it.”

Vague, but Saudia suspected he was referring to T’Leth, which she would have sincerely hoped was the case even before there had been an attack of this magnitude. “Enemy contact!” A guard called out, and Saudia was yanked out of the possible line of fire as one of the Priests placed a barrier before her.

Four soldiers stepped out of a blue-tinged portal. Another of the robed aliens, this one wielding a short silver sword. There were two of the soldiers which XCOM had identified as Carmine Baptists, one carrying a sword and shield, and the other carrying an axe. The one in the center emulated the Baptists, but was distinct in several ways.
The armor was more ornate, and the silver wording on the armor seemed to move and glow. A deep purple was woven into the color scheme, and an equally colored cape fell from his shoulders – and this man was a giant, eclipsing even the wiry height of Crevan, with the body mass to match. But the most distinct piece of attire was the silver helmet which was designed to bear a face. Much like in a theatre.

If the mask portrayed utter rage. It was disturbingly detailed; a snapshot of raw emotion captured somehow in metal. The mouth was open in a snarl, the beard was short and stained with spittle. The eyebrows were furrowed and the face was creased with every feature emphasizing the utter anger felt.

Too detailed. That shouldn’t be possible in something so inanimate.

“Fire!” She heard Ethan call, and the Baptists charged with shrill battle cries. The robed one pulled out twin pistols and began firing purple bolts in their direction. Crevan stepped forward and slammed the staff into the ground with enough force to plant it. He was definitely enhanced if he could do that.

She saw the Commander pull something out of his pocket, and a few seconds later three things whizzed towards the robed alien. It teleported away, and reappeared behind the Commander now, though he managed to keep the harassment of whatever he was doing up. The Baptists were unaffected by the pounding fire, and slung their weapons forward, sending waves of psionic energy towards them. The second Priest erected another barrier which absorbed the blasts.

Once they got close enough, Crevan waved a hand towards the charging Baptists and they suddenly slowed, then collapsed to the ground, somehow dead. He gestured for the shield to be lowered, and the masked Baptist marched forward slowly; deliberately. It pulled a greatsword from behind it and the blade became emblazoned in blue energy.

Crevan lifted his hands and shot lightning from his fingertips, a white-blue stream of electricity that slammed into the masked Baptist with enough force that it dropped the greatsword and roared in a howl of pain and rage, briefly echoing the mask it wore. Plasma and gauss rounds dented and marred the pristine armor, and yet it was not killed.

Instead it lifted a hand and the lighting streaming from the fingertips of Crevan was directed towards it, while the opposite one was pulled back and then shoved forward, and purple-tinged lightning shot out instead before anyone could properly react. It didn’t hit Crevan, but instead hit one of the Priests who couldn’t block it in time, and she barely had time to scream before the lightning fried her body.

Crevan ceased his stream of lightning, and instead adapted his tactics. With a motion, the armor of the masked Baptists turned molten orange over the course of seconds as it slowly began melting off in chunks. The Baptist roared and charged forward, disregarding his weapon lying on the ground. More rounds were penetrating the weakening armor, but they weren’t slowing it down.

Crevan directed a single stream of lighting at him, forcing the Baptist to slow down significantly, though not outright stop. Saudia looked back to the Commander, who was still engaging with the robed alien who’d just thrown a dagger at him while shooting purple-tinged projectiles. Not wanting to be helpless in this situation. She lined up her pistol and fired.

The robed alien had clearly not expected her engagement and the round went straight through its neck, forcing it to stumble back, which allowed the Commander to reached out telekinetically, lift it into the air, and crush the head into yellow paste. But to her dismay, she saw that two more aliens emerged from a portal on the same side, who were another regular Baptist and robed.
This was getting bad. They were becoming pinned.

The Priest protecting her focused on the masked Baptist, for a few solid seconds, yelling “Hold him still!” At Crevan, who reinforced his lightning intensity so much that the Baptist was forced to remain still. The Priest released a hand, and the psionic shield appeared in the chest of the Baptist, expanding horizontally, ripping it in half.

And it still didn’t die. Bleeding out on the ground, it flopped forward with its two arms in screaming fury, when Crevan ripped up the staff and stabbed downwards, skewering its head and twisting until it stopped moving.

Fire immediately became focused on the new threat, with the Baptist firing a psionic wave forward that the Priest was able to block just in time. This robed teleporter also had a rifle, and the bolts struck one of her guard before he could react, and penetrated their armor somehow. “More behind!” Ethan called, swearing. “They’re not stopping.”

This time though, only one emerged from the portal. A stone-faced man in robes, looking decidedly unimpressed with what he saw. The Commander behind her telekinetically grabbed the Baptists and began crushing the armor even as he fired psionic energy back at the Commander which was blocked by the Priest.

The other robed man lifted a hand and the weapons of her guard went flying towards him. Crevan shot lighting from his hand at him, though a raised palm and small psionic shield blocked it from ever hitting. He lifted a hand sharply and another of her guard was bisected vertically and fell into two pieces.

They were losing, little question of that now, and she fired her pistol at the stone-faced man, for all the good it would do. Crevan intensified the lightning, lighting up the room and filling it with the crackling sound. Yet the man didn’t seem deterred, but instead looked to her and a blue psionic shield appeared around her, trapping her.

She fired her plasma pistol at it, heart pounding as the very real danger of what could happen next set in. The Commander had killed the Baptist, and was still fighting the robed teleporter, while her last Priest in an attempt to distract the robed man charged forward and encased him in a psionic prison, making him temporarily immune to harm.

He was decapitated by blue shield appearing out of his neck.

*It can’t end like this.*

“Fiona, get back here now!” Crevan yelled, now sounded concerned. “Do whatever you have to!”

The man gestured towards her, and she saw a blue psionic barrier sever her arms.

She barely had enough time for her brain to process what was happening before another shield severed her knees and the functioning torso fell to the ground, sending screaming jolts of pain through her body.

“Saudia!” Ethan yelled from above.

The shock of the pain and her inability to do anything numbed her. Blood pouring out of her wounds, she forced herself up on her stumps towards the one who had crippled her. If she was going to die, it would be looking her killer in the face.
There was a flash of green and a stone-armored figure stepped out, and was immediately different from the rest. She was stained in yellow and red blood, with her sword equally as ruined. She flickered a greenish-white; as if a hologram phasing in and out. The man forced two psionic barriers at her which should have decapitated or bisected her, but instead they went through her as if she didn’t exist.

A hand encased in white-green energy was extended and the figure was suddenly before the man and placed it on the chest. The man stiffened, opened his mouth – the only trace of emotion she’d seen, just before his body vanished in a flash. She allowed herself to slump to the ground, light-headed from the loss of blood and only hearing the last snippets of conversation before she passed out.

“You know what will happen…”

“Yes.”

“I’ll deal with it. We need to get the Chancellor medical attention now.”

“I’ll do what I can.”

“Yes. Hold her steady.”

***

In the Great Hall of the People, there was a party being thrown.

The doors of the exclusive building had been thrown open, and all residents had been invited inside. It was a subtle whisper, a sirens call that was impossible to ignore even through the madness that now permeated the once-great city. None were immune to its call, not completely, and right now no one would interrupt the festivities which awaited.

If one walked the city during the time Beijing had fallen, they may have believed they had been walking in a dream, for that was the atmosphere which had been woven throughout the night. A fine purple mist tinged the sight of all who stepped outside, the smog replaced with intoxicating clarity and revelry.

The dull and defeated eyes of the soldiers, psions, and civilians who had lived in fear had their concerns slowly melt away as they first cowered in terror, then felt themselves settle into a euphoric state of mind; a mind knowing that their temporal concerns, dreams, and fears were no longer important. Only One was.

That deserved to be celebrated.

The exclusive steps that had been denied to so many were open to the hundreds which walked forward, and the site of so many pointless and cruel deaths was turned into one of remembrance and celebration. The robed ambassadors of the Bringer waited and welcomed those with open arms as if they were old friends reunited, and invited them to partake of the festivities, free of the dull and tiresome lives they’d lived.

Fires burned to cook food, and the smells wafted over the air, of what seemed to those who wandered over to be a delicious aroma, as intoxicating as the atmosphere around them. So content were they that they paid little attention to the tables where meat was carved off the dozens of corpses, each from a willing line of people willing to contribute their bodies in celebration of such a night.
Such a victory.

For they knew even in death they would ascend to something greater.

Blood once more flowed within Tiananmen Square, but instead of the blood of innocents tainting the stones, it was the blood of the sanctified; the few and honored who so freely offered their own flesh for others.

Hundreds partook of the meal outside as melodious music played by a Weaver of this dream drifted over the air; a hypnotizing sound that those who heard felt the urge to follow. Within the Great Hall itself, the most prestigious of the night resided and reveled.

Those who wove the dream were seeded throughout, encouraging and directing the festivities in honor of their god. Wine glasses filled with thin red liquid were freely distributed as well as flesh on platters cooked to differing temperatures, to of course accommodate for all tastes. Toasts were shouted frequently to boisterous cheers.

Those within ate, drank, and were merry.

Deeper within were the halls of honor, the place where the Auditorium of Ten Thousand People stood; a place of history and significance where the leaders of this nation had given statements, lies, and truths to their citizens. Declarations of power; declarations of war, it was a place where the attention of the world could be focused.

So to it was that the auditorium was filled to the brim as hundreds of the newly converted sat in rapture as they feasted and listened to the men on the stage who sat in front of a fully packed and ornate buffet of the courses of the evening. Raw organs were placed in special bowls, and limbs both cooked and uncooked were available to be cut and eaten.

The men who had once represented the nation, led their military, and ruled over the people eagerly partook of these delicacies, liberally giving their compliments to the chefs, with bloody mouths and eyes that shined too bright. Lively conversation between them took place as they babbled around topics of little and great significance, their tongues twisting the languages into something most would consider gibberish, but which each equally mad man understood.

Yet what enraptured the audience so was how each who sat at the table stood up and loudly professed their devotion to the One Who Brings Paradise, who gave moving testimonials and revelations they had experienced so quickly, yet had been apparent to them all along. How they had lived their lives blind until they had their eyes opened.

Many of these testimonials moved much of the audience to tears, and those who professed their newfound faith broke down; believing themselves so unworthy to receive the love that had been bestowed upon them this night.

The greatest of these was when the former President Qin stood and professed the sins he had so easily partaken in without remorse. He confessed every single crime that had been done against his people through sobs and tears, so remorseful he was of the injustice he had committed for so long. He loudly and fully decried the evils of ADVENT and how they would deny the love and joy he had been awakened to tonight.

By the end, he understood that he could not merely accept the unconditional forgiveness of the One Who Brings Paradise, it could not be enough. A sacrifice was required. As he had been blind to his acts for so long, and his words had led so many astray, he would ensure he would never lead those off the only path that mattered.
To a standing ovation, before the crowds he took out a knife which had been given to him by those who wove the dream, and cut out his eyes, then severed his tongue, and yet there was smile on his face as he finished, for he knew that the Bringer was satisfied with his offering.

Such festivities and joy could not simply be restricted to the confines of the square and halls, and such powerful testimonials could not go unheard. So they were shared; broadcasted to the world with high quality cameras at all angles. The celebrity event of the year that all needed to see and understand to be saved.

ADVENT would try, but they could not stop all of it, not at all.

The world was held by what happened that night, captivated and terrified.

And after the blind and mute Qin returned to his seat, a spindly arm came down to rest on his shoulder as the black eyes of the Dread Lord looked down on him in the closest to approval one could come, then looked back out at the revelling crowd as the audience felt compelled to speak of their own conversions.

He looked upon the mad world that he had created, and saw that it was good.

For perhaps the first time in his life, he felt it.

A small, obscured emotion that he had only heard described. Unlike any he had felt before.

Happy.

He mimicked his lips in an approximation of a smile.

A genuine smile.

Happy.

He was happy.

He had won today.

The first of many, for the world would be shaped in this image.

Within the Dream, in the midst of the revelry, one could just hear the mad laughter of the Dread Lord.

And those who heard, smiled, and prayed for the Dream to never end.

***

To be continued in Chapter 49:

Reign of the Dread Lord

Chapter End Notes

Well, one million words (or close enough to the point where it's better to just do it now). I'd hoped that everything would line up so I would break it in chapter 50 and
subsequently wrap up Act III, which would have been a poetic, albeit probably unrealistic, outcome. But length is not really something I can really plan for, so here we are. Still, it's a large milestone and one I honestly didn't think I'd be breaking until I was close to the end of the story, or at least past the rough halfway point. Can't promise that there will be another million words to follow, but hey, you never know!

In all seriousness I'm very thankful to everyone reading, reviewing, or otherwise following along in my hobby. It's special, and not something you can't completely appreciate until it happens to you. Regardless, thank you, and know that your feedback has definitely helped shape the story into what it is today. The most radical changes are suggested by my excellent editing team, but if someone else has a good idea, I'm likely to figure out some way to incorporate it. And trust me there's a lot of time left in the story for things to keep happening ;)

I'll close out this particular note with highlighting the two pieces of supplementary material written by members of my editing team, the first being the Chronicles of Salvation, by Edumesh - of particular relevance given the events of the chapter, and an excellent piece of writing on it's own. The second is the XCOM Files - Technical Addenda by Ashardalon125 which is a more technically-focused XCOM files with a more scientific component. There is not significant overlap with the XCOM Files, although you may see a couple characters in both. If you want a glimpse of some of what ADVENT may develop or pursue, I would highly recommend checking it out and both should be posted on AO3.

The last thing I'll highlight is a series by SLoTH4, who writes Shadow of the Phoenix, a Star Wars story set in the post-Legacy era. I've been working with him quite a bit to help expand and flesh it out, and have personally written quite a bit of supplementary material for his universe with a lot more on the way. If you want to see a rather different take on Star Wars with a good amount of background material to go along with it (I do think some of the stuff I've written for him is among my best work), I recommend you check it out. The addenda are already in my profile, and the main story is also on AO3 as well.

So thanks again everyone, and let's see if we get another million words out of this.

Also, told you Act III was going to be a climactic end.
Unknown

Saudia didn’t remember waking up, or much of what happened after she’d fallen unconscious. She was fairly certain that she had lost one or more of her limbs, and yet she lifted one up in the blue-tinged light and could see that she very much had them. Looking down confirmed that both of her legs were still intact too.

Odd.

Especially when she looked around to see where she was.

It was a vast blue expanse, reminding her of being deep underwater. Light appeared to come faintly from all around, with no clear light source or ‘surface’ to see. Perhaps the color was closer to a deep teal than blue, but it nonetheless appeared to permeate everything. She looked down at the ‘ground’ and knelt down to feel it.

No moisture or anything on it, but it did just barely give when she pressed down on it. She walked a few steps, and she could definitely feel it slightly sink as she put weight on it. Only a few millimeters, but still noticeable. She kept walking aimlessly for a few minutes, unsure of where she could go or what she could do.

She had a suspicion of what was happening now, unless there was some new kind of psionic therapy treatment that the PRIEST Division had failed to tell her about. If so, she was going to have some words with them, but it was more likely that she was here thanks to Earth’s resident Sovereign One. She suspected he wasn’t doing it out of sympathy for her injuries she knew were very much real.

Saudia pulled her arms closer together, uncomfortably aware that this could very well be one of the few times left where she would have ‘real’ arms and legs for a while. ADVENT bioscience was proceeding well, but they weren’t quite there yet in terms of growing replacement limbs. While she knew the prosthetics she’d receive would be top of the line, she also knew enough to know that it wouldn’t be the same.

The world around her suddenly dimmed to the point of complete and utter blackness. She stopped, and waited. There was absolutely no sound to the point where it became deafening. She thought she saw a shape materialize in front of her, and it was massive. Six blue lights appeared above her, in groups of three, slanted downwards as they resided in stone-like orifices.

“Chancellor Saudia Vyandar.” The voice came from no mouth, but from everywhere – including her own mind. Immediately she felt the sheer weight of the voice; one which carried the authority of a being which had lived longer than her species had existed. “It’s time we spoke.”

She cleared her throat. “T’Leth. A pleasure to meet you, despite the circumstances.” A pause. “Or would you prefer a title, if you have one?”

“My name will suffice,” T’Leth answered. “Many titles I have; bestowed on me by my enemies and brethren. Unnecessary. I require no title to be recognized by, Chancellor.”
She was unsure if that was supposed to be an insult or not.

“No insult, Chancellor,” T’Leth rumbled. “Merely a statement of fact. None outside EXALT knew your name before you achieved the position, and now it is what and who you are. No one knew the name Saudia Vyandar before Chancellor.”

She curled up one lip. “A natural evolution. Or would you disagree?”

A slight pause. “No. Quite expected, as you had prepared for such a position your whole life. You are notable, for a mortal alien. One who can attempt to see the long term and act as a guide to lead her species through it. Very rarely does such occur without guidance from one of my brethren or the other hidden powers of this galaxy.”

“Flattering,” Saudia answered after a moment. “Although I don’t know how much credit should be taken given the fact that one of your people was in EXALT for decades. I feel like I may be the culmination of such tampering.”

“I reside on your planet; I rest and recover from my wounds of previous cycles,” T’Leth said lowly, with an undercurrent of threat. “Your Chronicler found me by accident, and I was not aware of him until months later, so deep was my recovery.” The eyes grew more intense. “I have little time or patience for steering species towards my whim. My brethren would do such, but I see little worth investing in a tool that will be annihilated when the galaxy becomes a battleground for the Sovereign Ones again.”

A slight delay punctuated his words. “Believe what you will, Chancellor. But understand that had I truly been interested in commanding your species, there would be no war. There would be none of the issues that plague your species, many of which are pointless, futile, and self-destructive. As you no doubt see, as ADVENT is your tool for fixing what you recognize are the fatal flaws in Humanity. More importantly, there would be no doubt as to whom you answer to. Do I make my point, Chancellor?”

Saudia nodded. “Clearly, T’Leth. Although I am curious about something, ever since the Commander shared this revelation with me.”

“Speak it then.”

She considered how best to phrase it. “I am not ignorant as to the power discrepancy between myself and you, let alone our species. So why do you bother communicating with myself, the Commander, or any individual Humans outside of your agents. It does seem as though it would be…beneath you.”

The eyes blinked once. “Consider it a mixture of curiosity and pragmatism. Many of my brethren act as you propose. A trait which is not exclusive to my kind, as the Ethereals have demonstrated. We were the first species to claim capture of thousands of galaxies. We were the first, the Apex race. There have been none who have matched us since and the belief is that there never will be. Why consider others your equal or give such consideration when entire species are inferior to even the weakest of my kind?”

T’Leth’s voice grew almost considerate. “And something I have always found curious is how many of my brethren rely on so-called inferior species. They raise themselves as gods or deities, or control them through well-placed agents. They know that without their proxies they have no valid chance of claiming this galaxy and others. But they also believe that such species are incapable of reaching the heights we have achieved. Arrogance and fear. That is what we are now, and few will accept it. They cling to their proxies and believe themselves invincible and powerful, even as they
will inevitably fall again and again.”

The eyes grew intense to the point where she had to look away. “The Sovereign Ones will die one day, forever. We are too divided, too scattered for there to be another solution. But there will be a new species who will emerge to take their place, and perhaps they will avoid the same fate which has befallen us. So I consider such investigation of species a curiosity, as they could potentially be our replacements. I’ve spoken to millions over the course of the same time span. Many of them like you are now. It was not enough to save them, but it was interesting nonetheless.”

“Were any of them allied with you?” She wondered. “As we are now.”

“Many of them were the proxies of other Sovereigns,” was the answer. “You would be…dismayed to understand just how little life in this galaxy is natural. Your own species is not unique, as you have been tampered with by other alien forces. Nearly all life is the result of an experimentation or plan by my brethren. You are merely unique in that your creators have not come back yet to claim the results of their labor.”

Saudia felt cold at that. Assuming T’Leth was telling the truth, that did not imply good things for the future. “I don’t suppose you know who was behind this, or who might come later?”

“I have my suspicions,” T’Leth rumbled. “But it is irrelevant now that I am here. More to the point, such an…alliance with aliens. It is amusing. Yet something I am curious to observe for myself. I find it ironic to consider that I may be one of the few of my kind to have the willing cooperation of an alien species.” A pause. “Outside of curiosity, more practically since I am in such an alliance, it is prudent to speak to the leader of it. Thus, here we are.”

“Unfortunate the timing is bad,” Saudia sighed. “Although I suppose I have your agents to thank for saving my life. And you, by proxy.”

“Yes. An error I failed to accurately anticipate.” It almost sounded like an apology, though the tone didn’t indicate as much. “I suspect that not all is as it seems with the Bringer and Isomnum. The Imperator…he would be allowing this for a specific reason, and I believe I know what it was. Previously I assumed he was directing it, but now I think he is…observing. This makes the Bringer’s actions more difficult to predict, otherwise you would have been evacuated immediately.”

Saudia cocked her head. “Observing what?”

“To see if the Bringer would overstep,” T’Leth answered. “I suspect the Imperator will punish it somehow, though far too late to mitigate the impact. Nonetheless, this is a threat which I shall see is personally eliminated. I have seen this scourge appear in the galaxy before, and the fact that it is one of the few issues which will unite my kind speaks for itself.”

“And how will you…” Saudia gestured with an arm. “See to it, ah, ‘personally’. I doubt you’re going to leave wherever you are in the ocean”

T’Leth waited before answering. “There are ways of exerting my will on reality that do not require my physical presence. The soldiers who march to reclaim the city Isomnum holds will bear witness to my power as I strike down the false god who reigns in the city of the mad. Isomnum will die today, and the Bringer will be purged from this Earth. On this you have my assurance.”

The voice seemed to deepen. “We will speak later, Chancellor. Awaken and lead your people to victory.”
Saudia soon woke up as the world of blue dissipated all around her.

***

Throne Room of the Imperator – Temple Ship of the Imperator of the Ethereal Collective

3/12/2017 – 12:17 A.M.

There were many different holoprojections throughout the Throne Room, each one a different news station or livestream – all of them covering the events taking place in China, the rest of the war temporarily forgotten as all eyes were turned to the terror happening by the hand of the infamous Dread Lord.

Patricia could not say she was pleased with the development. Quisilia also seemed slightly irritated, though she suspected it was more to do with the fact that Caelior was now back and working for XCOM than the events in China. For her part, she wasn’t shocked at the development. If he wasn’t working with XCOM willingly, the Manchurian Restraints would be sufficient to keep him from causing too much trouble.

“This has gotten out of hand,” Quisilia said, for once serious as he appraised a holomap of China. “I believe we have learned what you wanted to. Best we end this before Isomnum gets it in his head to try this in another city. With the Bringer’s teleporting soldiers, he will not be restricted by geography.”

“Isomnum will die today,” the Imperator said flatly. “ADVENT and XCOM are already moving soldiers to retake the city. Should they fail, Sicarius will eliminate him. Or perhaps yourself. I have no intention of Isomnum continuing to sabotage our efforts. I have learned what I needed to.”

Patricia shot a glance to the Imperator. Despite linking several times, she was nowhere near aware enough to know each and every plan he had – especially as it pertained to this. “And out of curiosity, what was your plan?”

“Isomnum was a tool,” the Imperator said. “One I brought along as he might fulfill a certain role, given his power and experience. Dangerous, but potentially useful. Yet he is irrelevant when we will claim the legions of Imperators held in stasis. He is a fool obsessed with his own understanding and belief on terror. He is…susceptible…to beings like the Bringer. I knew he would reach out – this does not surprise me.”

It took her a moment to follow, but when it dawned on her, she gave a very slow and deliberate nod. “The Bringer provided support of his own volition. Without express permission.”

“It is a moment to follow, but when it dawned on her, she gave a very slow and deliberate nod. “The Bringer provided support of his own volition. Without express permission.”

“Isomnum was a tool,” the Imperator said. “One I brought along as he might fulfill a certain role, given his power and experience. Dangerous, but potentially useful. Yet he is irrelevant when we will claim the legions of Imperators held in stasis. He is a fool obsessed with his own understanding and belief on terror. He is…susceptible…to beings like the Bringer. I knew he would reach out – this does not surprise me.”

Quisilia hesitated, absentmindedly flipping one of his blades in his hands. “At a certain point I wonder how much it is actually worth. The Bringer has given us very little but trouble and sought to go behind us at every turn. Useful as this entity is, perhaps the Battlemaster has a point and the project should be shut down.”

Both Patricia and the Imperator shook their heads. “No,” the Imperator answered. “If this event has shown anything, it is that the power the Bringer brings is extraordinary. A few hundred soldiers
were enough to take the capital of an ADVENT-protected city, nearly kill the Chancellor, and scatter the defenders of a nation. Properly controlled, it will be a useful entity."

A pause. “Yet I am also tired of dealing with this. Two chances the Bringer has been given to willingly cooperate. The first warning was not sufficient. This next one will be. There will not be a final one.”

“Acceptable then,” Quisilia agreed. “I would recommend that we allow the Aui’Vitakar, Greater Hive Commanders, and the Federation access to monitor Paradise station as they see fit. While more invasive Mosrimor systems are in existence, more cannot hurt and will give them the feeling of acting in the interests of security. So long as they understand the necessity of it, they will likely not pose any problem.”

“I suspect the Sectoids will be interested in the capabilities of the soldiers,” Patricia noted thoughtfully. “I’d do one better – let them have access to any and all aspects of Paradise to experiment with as they see fit. It could even have the benefit of lessening their numbers to the point of irrelevance.”

“Agreed,” the Imperator said after some consideration. “The Bringer has lost his chance for privacy. I believe that these actions will temper the worst of the Battlemaster’s rage.”

“Unlikely,” Quisilia commented mildly. “Nothing short of the destruction of Paradise will satisfy him. I would suggest that you make some greater efforts to make him understand the necessity of the plan. This current divide stems from Sovereign Ones; the Bringer is just a catalyst.”

“Perhaps inform him of the Imperators?” Patricia suggested.

Quisilia laughed. “Trask, please think about how well that would go over. ‘Yes Battlemaster, I’ve known that there are facilities full of Imperators and I didn’t tell you this and instead focused on the Sovereign Ones which included making a deal with an entity with a taste for cannibalism. No, we still need Paradise, but just wanted to clear the air.’”

Patricia winced. “Fair point.”

“He will react better when T’Leth is dead, Earth is conquered, and the Bringer has crossed into the controlled body,” the Imperator said. “While he will not doubt be furious – as will the others who have not been told – he will not make drastic actions.”

Patricia bit her lower lip, thinking. “Which brings me to another question – how should Caelior be handled? Or Aegis, for that matter?”

“Aegis was misguided and left for what he believed were the right reasons,” the Imperator answered. “I would prefer he be captured, should he not have already been compromised by T’Leth. The same with Caelior. They can both still be useful. But not at the expense of the greater Collective. Now that T’Leth is likely becoming more involved, I suspect this war will end with their deaths.”

“Unfortunate.” Patricia was not looking forward to what was coming next. She did not quite know how XCOM – or ADVENT for that matter – were going to react to her entrance. It was one thing to fight the unquestionable evil of the Bringer. But one of the former great heroes of Humanity? That was going to be more difficult to swallow.

Betos was a slightly different situation. She was an unknown, and who would be seen as an Ethereal puppet. Patricia was formerly of XCOM and the most dangerous Human psion.
Considering the position she held now, it would be difficult to state that she was merely a puppet of the Imperator, though ADVENT would still attempt to make that claim.

It was fortunate that the core of ADVENT was what the Imperator wanted intact, otherwise she could very likely say enough about the foundation of the organization to irreparably harm it – in theory. She doubted that when she revealed herself, her word would be given any semblance of weight. Still, it was a possible sword to hang over the heads of ADVENT.

It was still going to be hard.

Very hard.

But it was coming soon. Coming after Isomnum was finally defeated.

***

Porto Alegre Collective Base – Brazil

3/12/2017 – 3:21 A.M.

The offensive was technically proceeding well. ADVENT hadn’t given up the city without a fight, but they had eventually fallen to her and they had soon secured the rest. The civilians were currently in the stages of being processed for transport to temporary worlds where they would be kept out of the fighting. After more land was gained in South America, they would be brought back.

ADVENT would no doubt complain about forced resettlement and the injustice of it all, but to her it was more responsible than keeping a bunch of civilians around to die in collateral damage – and she also had no intention of using them as Human shields or anything of the like. She and the Battlemaster had standards – and the capture of Porto Alegre was a textbook success.

So when news was reaching her about China…well…

It put a damper on things.

She’d watched the footage for a while, a stream provided to the Collective itself by the illustrious Dread Lord. She sincerely had wished that Isomnum would have eventually just given up and died when the Battlemaster had rightfully cut his support. Maybe a last stand before a real invasion could happen.

But no, instead he had brought the Bringer and turned her country into a nightmare.

She’d hated President Qin, the entire Communist Party, and the corrupt institutions which perpetuated the problems and demands forced on China. She would have quite happily executed them all, even if they didn’t remember who she was. They deserved nothing less, and it had been her own private dream.

But this…no.

Not like this.

Qin and his like deserved death, yes, but delivered in a swift and just manner. No ceremony, no drawn-out proceedings; merely a summary judgement as an enemy leader. He was a man she despised, but not even he deserved the mockery that the Bringer was forcing, not just on those who deserved death, but many, many who did not.
She’d known there would be civilian casualties in China. It was a fact of war, and with a population as dense as China’s, it was impossible to avoid. Not deliberate targeting though, which was what Isomnum not only allowed, but actively reveled in. Zararch spies had been giving detailed reports, and while Beijing was the obvious focus of attention, it was playing out the same on smaller scales across the country with ADVENT and XCOM scrambling to smash them as they popped up.

Sickening. The people were not at fault, and never had been in the system. They were the last who deserved to be punished. Even many in the military were good people who were doing what they could to increase their standing and provide for their families. She blamed no one for joining the Chinese military for practical reasons, or even if they succumbed to the propaganda perpetuated from the moment they were born.

How ironic, that she now hoped for ADVENT and XCOM to give unto the Dread Lord a death that would make the Imperator himself shiver.

All she could do was watch and take out her fury in battle. Not that there was a shortage of those with ADVENT maintaining outposts and launching small strikes of their own, but they – for now – were not the ones she wished to destroy utterly and completely. If she could, she would participate in the attack against Isomnum herself, but that would likely just cause more problems, and the war was larger than China.

At least the Battlemaster had done something, even if it was sending his pet assassin into the fray. Better than nothing, and if nothing else the Imperator had much to answer for. He was just as much at fault for this fiasco as Isomnum. First for putting Isomnum in such a position, and then continuing to allow it to continue with support from Paradise – which Yang knew very well that he could stop if he wanted.

The fool likely wanted to see the Bringer’s power in action; likely to justify keeping Paradise station open. Perhaps he didn’t care, but she didn’t think for one second that he could not stop this if he wanted. No, he was allowing it to continue, though for what purpose she didn’t know, and it wouldn’t be enough regardless of justification.

It was irritating from a diplomatic and political standpoint, and she could not understand the reason for letting it continue for so long. ADVENT was going to use this to further demonize the Collective, or maybe if they were smart, would pin it on the Imperator instead. However, she didn’t put much stock in ADVENT propaganda correctly identifying the right perpetrator.

She’d had enough, and shut off the feed. It was all the same anyway, and watching it wouldn’t do anything except make her angry. Instead she went to her bed and laid down, and after an hour the strongest emotions plaguing her dissipated and she fell into a fitful sleep, as tomorrow would bring about yet more conflict.

**Russian Castle of the Order of Terra, Russian Wilderness – Russia**

3/12/2017 – 6:11 A.M.

The Order of Terra was ready for war, and ready for blood. Kaya hadn’t imagined that their first deployment would be against what could be best described as a nightmare incarnate, but here they were. Ironically, it appeared that many of the forces they would be fighting carried melee weapons and thus were suitable opponents.

They were all nervous to some degree, especially considering the danger they would be facing.
which felt…different…compared to their previous stints in combat. For Kaya there had always been some small comfort in battle taking place over a distance, even if that was more impossible to predict. But the danger had the illusion of being easier to avoid.

Not so when the battle was up close and personal – as it would be in Beijing. Granted, her job was going to be a lot of hit and run strikes against targets of interest, but she didn’t carry a katana for show. And she wagered that she was going to be using it more than she wanted to. Still, if there was a time to deploy the Order, it would be now in an urban environment where they would function best.

They all stood armored up and prepared to deploy. All the squads tended to be composed the same way. Four Squire units, who were armored to a degree that they were essentially walking tanks, carrying tower shields which were a full inch thick and stood as tall as they were, even as they were designed to holster a rifle to fire at the enemy as they advanced.

Two Knights were usually in tow, which had less armor even if it was still substantial, but allowed for greater movement. Several of them also had Molosser hounds which were at their sides and outfitted in some light armor. Kaya liked the genetically created dogs. They were surprisingly affectionate with their owners and even most others. It was easy to forget that they would rip out the throats of aliens without a second thought if the command was given. The Knights definitely looked the part too, with kite shields and helmets straight out of the medieval period. Well, minus the rifle strapped to their backs which they would use until they engaged in melee.

Her own armor was lighter, as a Samurai unit that some of the squads had, though not all. Unlike the Knight, it didn’t copy the archetype as faithfully. While the way the armor was designed was reminiscent of known Samurai armor, it wasn’t as heavy or restrictive. It was far more form-fitting and sleek, as it held grappling equipment, a back sheath for her katana, and her HUD in the helmet could manually mark targets of interest. And of course, she held the newest long-range ADVENT sniper rifle outfitted with nanite rounds and even with gauss rounds was capable of penetrating nearly any level of armor.

They called it the “Widow”, and she didn’t know if it was named after the spider or the possible widows who would be created after they perished to this weapon.

Did aliens even have spouses?

Not a relevant question.

The leader of the squad, or at least the main coordinator (which ultimately led to the same thing) was the Standardbearer who held possibly the most stressful job of the entire Order. They were outfitted in gold and white armor of the same density as the Squire, and were only armed with a pistol or SMG, as they could usually only use one hand in battle as the other held the standard of that squad.

From what had been explained to Kaya, the Standardbearers were to fulfill two purposes – coordination for the squad and to serve as a rallying point in the chaos of battle. The standard itself wasn’t a gimmick either, at least not in the way most people would think. The pole was tipped at the bottom with a sharp point, turning it into a weapon of sorts if necessary, or to plant more easily.

The more important piece was that each standard incorporated Shieldbearer technology and functioned as a smaller-scale PDS field capable of redirecting or stopping plasma. Useful for advancing on an enemy position, and the Standardbearers were equipped with enough batteries to last hours as the standard itself literally cycled through them as it ran out.
The banner for their own squad which fell from the standard was the generic one for the Russian Castle itself; a roaring bear. They hadn’t been able to agree on one, and had mostly forgotten about it in favor of other matters since they had assumed they were at least a month or so from deployment. Assuming they survived, they might be more inspired.

All of them stood in formation, with dozens of other squads in the square of the training grounds silently waiting in the chill morning air. Helmeted, Kaya couldn’t see the expressions of her squadmates but she could guess them easily enough. Determination, fury, fear; in certain ways she was grateful that the emotions of those who fought for ADVENT were hidden in favor of the uniform. It certainly projected a powerful image.

Before all of them standing before a holoprojector was Lord Damian Hamilton, clad in his own battle armor reminiscent of the Knights, though a red cape fell from his shoulders. He was not the only one of similar rank, as there were a dozen other Lords who would likely be taking command of the various points of attack. Some held maces and warhammers, others held swords and shields. Hamilton himself carried a greatsword with a rifle also hanging at his waist. He did not have one of the hounds by him, as opposed to some of the other Lords.

His helmet was off as he addressed those assembled.

“We all know what we’re walking into so I won’t address it further,” he began, the holoprojector igniting into red light and showing an outline of the city. “We have our orders to lead the charge and take Beijing back, destroy Isomnum and his forces, and pacify or eliminate any stragglers. We will be followed by MDU, PRIEST, and XCOM support, all of whom have assured us that we will be psionically protected. Once we’re in, we fight.”

Several points lit up. “There will be four points of direct entry into the city, and from which we will spread out and begin clearing the city, street by street until Tiananmen Square – which has been identified as the base of operations for the aliens – is surrounded and no escape is possible. The American, German, and Korean Castles will be involved in this attack, each focused on a different point of entry. Ours is this one.” The southmost light turned green.

“Standardbearers will be given specific directions about where to go when we arrive,” Hamilton continued. “There will be some backtracking due to the nature of the streets, but it is imperative that you do not break formation under any circumstance. When a street is cleared do not continue to advance without the express permission of your Standardbearer. There can be no gaps in our advance.”

Made sense. It was definitely something drilled into them enough. Hamilton paused. “This is probably not what any of us had in mind for our debut to the world, but perhaps there is no better test for us. We say we are willing to march into hell itself in the name of ADVENT and destroy the monsters that lurk within. Today we will prove that to the world – and teach the aliens to fear our wrath and vengeance.”

A roar of approval sounded from the assembled soldiers. The flicker of a smile appeared on Hamilton’s face. “The aliens claim to bring a god down to rule over us. Today we will slay it, along with the Dread Lord it champions!” Another cheer. “March forward, and make the streets they inhabit run with their blood!”

A bit melodramatic for her tastes, but Kaya cheered all the same. The energy had turned from apprehensive to electric. They were ready, and there was no one more ready to exact vengeance upon the monsters in China than they were.

She did a final check of everything before they prepared to deploy through the gateway. Everything
was in order.

*Time to kill some aliens.*

***

*ADVENT Military Commander – Switzerland*

*3/12/2017 – 6:11 A.M.*

The Commander, Zhang, the Chronicler, Falka, Laura, Weekes, and essentially every other major figure of ADVENT and XCOM stood together as they reviewed the coming assault on Beijing. The good news was that it was going to be fairly easy to move forces into position as Isomnum hadn’t taken the city organically and as such had no territory or means of cutting off reinforcements.

Being so close to Russia, Mongolia, and Korea was also useful.

“The Order of Terra will work to sweep the entire city,” Laura was saying. “As they accomplish this the main military force will make tentative advancements, led by an MDU-heavy force. Support from the legions will also be present, as will large numbers from the PRIEST Division.”

“What I’m concerned about is that there isn’t anything stopping Isomnum from leaving as fast as he came,” Weekes grunted. “I’m certain we will take Beijing back, but it will mean little if this monster isn’t destroyed once and for all; otherwise he’ll just do this again and again.”

“Do not worry, Chief Weekes,” the Chronicler interjected smoothly, already encased in his stone armor, minus the helmet. “I will ensure that Isomnum and his thralls cannot escape so easily. Besides, Isomnum is too drunk on his power to abandon his prize so easily. It would certainly break his terror effect if he flees at the first sign of staunch resistance.”

Weekes eyed the elder warily. “If you don’t mind my asking, how?”

The Chronicler smiled. “What Isomnum – and the forces of the Bringer – use to teleport is the Psionosphere. I cannot say what level of familiarity you have with the topic, so I will explain as simply as possible. A skilled user can move themselves through two points of the Psionosphere, provided they understand the technique properly.”

Weekes nodded. “I know the basic Psionosphere theory. I read Vahlen’s paper.”

“Teleportation is exceptionally difficult – and able to be defended against,” the Chronicler explained, lifting a hand to gesture in the air. “Simply put, the range of teleportation can be restricted to a certain area. No – teleportation beyond a certain point. A veil, if you would, capable of being created and maintained by psions. This will keep the aliens in the city.”

“With respect,” Finn Gerstner, the PRIEST Vicar General interrupted. “As someone who understands this a bit better than most, the amount of energy needed to create and maintain such a barrier requires nothing short of an Ethereal, and neither Aegis or Caelior seem to specialize in it—”

“It is taken care of,” the Chronicler interrupted in a tone that indicated that the topic was concluded. “Trust me.”

Knowing what was coming, the Commander nodded in solidarity. “Leave that to us, General. We have this under control.”
“And what stops them from teleporting to the edge of this veil, stepping through it, and leaving it that way?” Laura asked with a raised eyebrow. “Good in theory, but able to be circumvented.”

“Aegis will be encasing the city in a psionic bubble,” the Commander said. “There will be no escape – with areas open for ADVENT forces to enter, of course.”

That seemed to satisfy them, and while Aegis was tired, he could continue on a much more contained scale. “The majority of our forces will ultimately converge on Tiananmen Square,” Laura continued, highlighting the area. “This is where Isomnum has made his primary base of operations – or what goes for one at any rate. In addition to soldiers, tanks are also being deployed to collapse necessary infrastructure and overpower the primarily infantry forces.”

“The actual soldiers of the Bringer seem to be few in number,” Elizabeth recalled. “We’re going to be facing mass hordes of insane civilians and soldiers. Even Isomnum’s own alien forces are minimal, as we’ve eliminated most of his Custodians.”

“And tanks can run over the majority with little issue,” Weekes nodded. “The Order and our military forces should focus on removing the weaker threat. They aren’t capable of handling the soldiers of the Bringer, let alone Isomnum. Targets of interest should only be handled by PRIESTs, XCOM, and special forces.”

“I’m not sure how ordinary special forces will fare against psionic soldiers like this,” Kyong said, the first time he’d spoken in the meeting. “Enhanced they may be, but unless they can mitigate-“

“Agreed,” Weekes nodded. “We’re not going to throw away our Lancers and Dragoons like this. They’re needed more in Florida right now. We’re going to deploy the Pantheon.”

Kyong cocked his head. “Who?”

Ah, about time they were going to use them. The Commander had been aware of the initiative for some time, and was pleased that it had progressed to a usable stage. “The Pantheon,” Weekes explained. “Conceived shortly after the approval of the Order of Terra. A special forces team primarily psionic-based. Very small, very elite, very dangerous. No psionic soldier has a Trask Level under eighty.”

“And they’re called the Pantheon because…?”

“Because their call signs are based on Greek mythology,” Saudia said faintly from her chair, her voice still rough. “Something you can thank the Commander for. The other proposals were far less creative.”

The Chancellor looked exhausted and just barely patched up from the wounds she’d suffered, but she was very much alive and wanting to be involved even if she couldn’t quite think straight. Grey cybernetics were in place of the limbs she’d lost, and he’d noticed that she’d not been moving them much, likely still getting used to them or they still needed to be calibrated. No artificial skin was placed over them, although this was because she’d refused it and not because it couldn’t be applied. Something the Commander could understand.

Covering up a disfigurement implied some kind of shame, but revealing it to the world could certainly send a message. And considering Saudia was going to make a statement as the assault began launching, it would be a powerful message indeed to see the woman who had been attacked and mutilated return hours later not deterred in the slightest from achieving victory.

“I’m pleased they found my suggestions agreeable,” the Commander said. “I’m certain they will
perform well. With our combined forces, we should be capable of crushing this threat once and for all.”

“Indeed,” Laura agreed. “We nonetheless have a difficult road ahead. Although we should make this decision now – if we are able to subdue Isomnum, how should we handle him?”

There was some silence at that, as they considered. It could theoretically be possible to capture Isomnum, and then extract his secrets, put him to trial, or otherwise attempt to gain some use out of him. But at the same time, the benefits were questionable and uncertain. Not to mention holding an Ethereal like that was…dangerous.

Saudia did not hesitate. “Execute him,” she said lowly, fury breaking through a normally professional persona. “Preferably painfully. We gain little from his life. We take his ruined and mutilated corpse and display it for the world to see so that no one need fear him any longer. He will serve as a lesson to any who dare attack us so brazenly.”

A pause. “I believe our Chancellor has spoken,” Weekes said approvingly. “Are there any objections?”

The Commander held back a humorless smile. There would not be anyone who would advocate for sparing Isomnum, not under any circumstances. Technically, the military could override her here, but he sincerely doubted that was even up for discussion beyond a hypothetical. “If we are in such a position,” he said. “I believe one or more of my soldiers would be…pleased to deliver the final blow. Or one of them.”

“You have the Phobos soldier, yes?” Laura recalled. “McTaggart? No promises, but if he so happens to be in the right position, no one will get in his way.”

“Good enough,” the Commander nodded. “And I also would not be surprised if the Hunter showed his face in the battle. Supposedly he will be on our side.”

“Uh huh,” Laura muttered unconvincingly. “And after?”

“We have his word he will depart peacefully,” the Commander said. “Obviously to be taken skeptically. We will handle him if he becomes trouble.”

“We’ll have to address that if it comes up,” Laura said, looking back to the holotable. “ Forces are ready. All we need to do is give the order. We should do it quickly before Isomnum grows a brain and leaves.”

Saudia gave a nod. “Do it, Commander.”

It was a simple order, a single phrase, but one the Commander knew marked a decisive point in the war. Laura opened a comm to the officers on the ground. “Operation Ragnarök is a go. Bring down the hammer.”

***

Haikou, Hainan – China

3/9/2017 – 7:19 A.M.

The quintet was nearly ready to depart, and over a salvaged breakfast Nuan and Iosif laid out the plan to their civilian counterparts – and alien prisoner (who was still largely bound, even though his hands had been freed so he could eat). Earlier the morning the duo went into the kitchens and
brought back plenty of food – cereals, milk, and fruit along with plenty of packaged snacks (many of which were being put into a bag to carry along their journey later).

Nuan was very glad that they had found a mother and child who wasn’t especially young. Ren was young, but a teen and could follow directions and had learned very recently the art of keeping quiet. She’d been rather quiet in the presence of the two soldiers, though Nuan couldn’t completely blame her for that. They probably seemed more threatening than a half-dead alien.

The alien as it turned out was Zararch as they had suspected. Zar’ravas’inth’a, a spy placed in China to watch the population and prepare for an inevitable invasion. In his own words, he’d been fairly low level and was more keeping track of identifying weak points and the most effective routes to take the city.

This was, as he’d said, what he’d expected to be used by a more conventional military. Of which Isomnum was very much not. He couldn’t say if any of his intel had been used since he’d been caught in the initial attack as well and nearly lost his mind. He didn’t elaborate on the details of what he’d seen, but it had been enough for him to reconsider his allegiance to the Collective – or at least the Ethereals.

He…hadn’t gone so far as to disparage the Collective itself, but he made it very clear that he wanted no part in assisting the Ethereals who quite willingly ignored their own assets in their assaults and perpetuated complete indiscriminate warfare, which Ravas found insulting on a personal level.

Iosif was mildly unimpressed with his reasoning, and had included a chocolate-chip muffin in the food he’d given to the alien. Nuan had smirked at that, especially as the alien had just stared at it and eventually sort of just picked around it, after he’d eaten the rest of his breakfast, only to look in disbelief as Iosif dumped a small bag of chocolate bars before him.

“Yes, this is hilarious,” Iosif said, deadpan. “But believe it or not, I got them for a reason. You’re still wounded and likely will be in pain, and I’m not interested in hauling you the entire way there. So if the pain gets too bad, eat one of these until you get high. That will probably help. I will do my best to keep your mind straight.”

The alien pursed his lips. “I do not want to become a drug addict.”

“Chocolate isn’t addictive,” Iosif sighed. “As much as Zararch propaganda may have said otherwise, it just makes you feel good. Or loopy. Or both. It’s like marijuana for Humans. Not addictive, but has similar – and sometimes beneficial qualities.”

“And can also induce vomiting,” Ravas reminded him.

“In large quantities,” Iosif corrected. “So don’t eat them all at once.”

The alien accepted without another word, although took the bag with some distaste. The rest of them ate in relative silence, until the end when Iosif figured it was time to explain what was going to happen next, with Nuan translating for the Chinese speakers.

“We are assuming that we’re on our own, and that extraction will be of our own making,” Iosif explained to them on. “Luckily we have some options, namely boats. The aliens don’t seem interested in destroying the infrastructure and are more likely to just leave it alone than requisition, use, or destroy it. Nuan knows the city, and knows where the ports are.”

He tapped a gloved finger on the table. “In short, we’re going to find a boat and steal it.”
“[What if they don’t have keys,]” Jun Ye, the businessman asked nervously. “[We could trap ourselves.]” Nuan relayed the question to Iosif.

“Possible, but a decent amount of boat owners leave their keys and rely on other things like locks, ropes, security, and fuel to keep away thieves,” Iosif said. “All of those can be bypassed, and worst case scenario, I will likely be able to hotwire it.”

Nuan cocked her head. “You know how to do that?”

He shrugged. “I wasn’t always an upstanding Russian citizen,” he commented with a smile. “Had a rather eventful childhood involving my father’s car, curfews, and other idiotic restrictions. Long story, suffice to say I can probably do it.”

A story she’d have to ask about later. “Back on topic,” Iosif continued, eating one of the granola bars he’d snagged. “The ports will have things like fuel, supplies, fishing equipment and so on. I’m not a fisherman, but in a pinch, we may have to try our luck. We’ll pack up as much as we can in any event. As well as enough fuel.”

“[Do…do you know how to drive a boat?]” Ren asked apprehensively, looking to both of them.

“Not really,” Iosif admitted after the question was relayed. “But I’ve ridden on them before and they appear to be largely simplified now. To the point where I’m confident we can drive without issue. Don’t worry about it. Even better is that most of the boats nowadays have GPS.”

“[So where are we going?]” Jun asked after a moment.

“The closest land which ADVENT controls is Vietnam,” Iosif said. “Going to China is a bad idea, but Vietnam is untouched for now. It’ll be a long ride, but as long as we have enough fuel, it should be possible. We’ll also try and get one with sailboat capabilities in the worst-case scenario.”

“Hopefully it’ll be that simple,” Nuan said slowly. “Go to the port, get a boat, and leave.”

“Hopefully, but possibly not,” Iosif warned. “While I think Isomnum has moved a majority of forces into mainland China – at least that’s what I would do – there are likely stragglers we’ll run into and have to fight and kill. Most we can handle, but we need to stop them before they sound an alarm.”

“[I’ll do what I can,]” Jun said, clearly trying to sound brave, patting the pistol holstered at his waist.

Nuan snorted. “[You’re not going to tickle an alien with that piece of junk. Use this instead,]” she reached down and slid him her gauss pistol. “[Has a kickback, but it’ll do damage. Make each shot count – I assume you’re halfway decent?]” Jun took it delicately, eyes wide as he looked at the weapon.

“[Yes, yes, I don’t keep this for show,]” he said half-distractedly as he overlooked the weapon. “[Although I can’t say to have killed anyone. But the Triad is active in too many places to be too careful. Safety here?]”

“[Yes,]” Nuan confirmed, curiosity piqued. “[You had to worry about the Triad?]”

“[Depending on where you went,]” he said, swapping out his pistol for her borrowed one. “[Everyone had to worry about them. Although one good thing about this was is that their activities died down. Things went to hell for them after one of their leaders died. Or maybe defected. Wasn’t sure, but a bunch of their operations were hit soon after. Haven’t recovered since. Still there, and
I’m still paranoid.]”

Nuan debated giving him the reason for the mysterious collapse of the Triad, but that could be a story for the boat. “[As long as you can shoot, you should be fine.]”

“If I may,” Ravas coughed. “I’m also a good shot. And have experience with any Collective weapons we may find. You will need all the help you can get.”

Iosif pretended to consider this with a raised eyebrow. “Tempting, but I’ll decline your generous offer. You’re Zararch and I don’t trust you, and I won’t until we have a trained telepath interrogate you. Unless you want to find yourself decapitated, you’ll stay in front, stay quiet, follow instructions, and make no sudden moves. You are not a priority here. Understand?”

The alien gave a single nod.

“Getting to the port will be done quietly and methodically,” Iosif said. “Building to building, street to street. We can cut our way through walls and buildings and I have limited telepathic detection. Rooftops may be best, as I can create bridges if necessary. Normally it would take us four hours to get there on foot, but for us I imagine it will take the whole day, so we can escape under the cover of night. If we get there before nightfall, we will wait.”

He looked around. “Does everyone understand the plan?”

They all nodded in affirmation. “Alright then,” Iosif dusted off his hands. “Grab what you can, and let’s move out.”

***

ADVENT Media Hub – Switzerland

3/12/2017 – 6:03 A.M.

She’d been better, but she was well enough to give her speech to a world that needed to hear from her right now. Saudia stood flanked by Ethan with three replacement guards and six Magus-class psions of various disciplines. They had enough forces to fend off a small army should the Collective try something again, but still she felt vulnerable with nothing solid protecting her.

She wore her standard black outfit with the red sash, but it definitely didn’t seem safe now. Too thin. She’d considered wearing armor, but had been talked out of it since she’d only be ‘exposed’ for a limited amount of time. In the future she may be more insistent, but she’d not had the will to debate with anyone on it; not when there were more important topics on her mind.

The press corps were unusually silent when she’d walked in, and all stood in what she could only assume was solidarity. A good number had even refrained from taking the same number of pictures as before. She was almost touched by their concern. They and those they represented didn’t especially care for her, and the feeling was largely mutual. But they didn’t wish to see her dead, which was heartening in a way.

She wiggled her fingers, still not completely used to the sensation. It was eerie in a way, she could still feel things with a surprising degree of sensitivity, but at the same time it felt odd; filtered; almost too sharp at times. Expected, the doctors had told her. It would take some time to get the calibrations perfect.

The cybernetics were grey and expertly crafted. Exceptionally natural-looking, minus the lack of skin color and the obvious mechanical joints. It was genuinely impressive how efficient it was,
although she’d personally not wanted to find out for herself how true that was. Her mechanical hands were visible from her outfit, and while she didn’t necessarily want or need to draw attention to them, it was impossible to miss and a number of the journalists blinked in surprise, audibly gasped, or whispered to colleague when they saw a portion of her injuries.

Pulling up her pad with her speech written up on it, she placed it on the podium where the two microphones were ready to broadcast her words. Times like this she felt like a speechwriter would have been helpful, but at the same time after a few minutes of considering, the words had come together easier than she’d feared.

Today would not be the day where she would speak words written by someone else.

“Thank you all for gathering on such short notice,” she began. “As all of you are aware of the situation, I will not repeat it, suffice to say that I am fully updated since coming out of surgery. Mere hours ago I, along with the personnel at ADVENT-Chinese Joint Command came under attack by Isomnum. Most did not survive, and I owe my own life to my personal guard and the soldiers of XCOM. My own injuries are unimportant and will not impede me from continuing to do my duty.”

With that out of the way, she transitioned to her first point. “These actions in the past hours have served to demonstrate the full depravity the aliens will inflict upon us for daring to continue to resist them, and now that they have seen that we do not bow to threats, they seek to fill our hearts and minds with terror, for there is no better source than the horror which has emerged from China.”

A pause, waiting to let them think. “I’ve thought about what message the Collective – or Isomnum – is sending here. Is it a promise of our fate should we continue to resist? Or a promise of the world under their control? What is the purpose of such terror, or is it merely the madness of the Ethereal leading it? Terror for the sake of terror.”

She shook her head. “No. I do not believe so. Isomnum may believe so, but he is a tool being utilized by others, knowingly or not. This terror he inflicts upon us is not without purpose – or for the reasons he perhaps believes. This entire event is a warning, but not from Isomnum – from someone else.”

She let her fingers curl around the edges of the podium, moving her gaze around to the various journalists who stood in rapt attention. “The Imperator knows that such actions will not shake our resolve; not even the attack on my life would make me consider submission – so this is instead a warning. This is the future the war will take; monsters unleashed under the guise of ‘unsanctioned operations’ as Isomnum currently is acting now. But we know better; the Imperator is not original in his methods. As fundamentalist nations once funded terrorists to strike against their enemies as proxies, so too will the Imperator begin to see a surge of ‘unaffiliated extremists’ who take matters into their own hands as the war continues.”

“It is becoming clear,” she said after a moment. “That there is a growing rift in the Collective. On one side we see the Battlemaster; an Ethereal – our enemy – who will wage war traditionally and on respectable terms. Perhaps we will win, perhaps not, but there is little ambiguity and surprise in such a war.”

She rapped her metal fingers on the podium, looking around. “And on the other side there are those who are showing their fear. Who do not rely on their advanced armies, technology, or unfathomable number of resources, but instead emotion. Terror, fear; all to drive us to capitulation. The madness unleashed by Isomnum is the personification of this method. Yet they will also stoop to such levels as assassinating unaffiliated civilians who merely reside in our territory, as they did with the Imperial Family. They wish to instill a fear of being associated with us.”
“This is not all,” she continued. “They parade pawns and collaborators that attract all eyes to them, who boldly proclaim the evidence of our eyes and ears is merely propaganda orchestrated by an oppressive authoritarian regime seeking world domination…” her voice lowered. “But perhaps this will silence the puppets who act as mouthpieces for the Ethereal’s poisoned words. All have seen what crimes the Collective and Imperator has perpetrated, and those who are so foolish as to believe these are not allowed at the express permission of the Imperator should look themselves in the mirror and ask if they believe it.”

Saudia looked directly into the cameras, eyes hardened. “But these actions are horrifying in their own right, regardless of species. I know there are members of the Collective; the Zararch, Runianarch, Lurainian, the many Andromedon Unions, the Aui’Vitakar, perhaps civilians on many worlds. The extent of the Collective’s crimes had perhaps been hidden to you before now, but consider if this is truly a cause you wish to support.”

Ever so slightly the cameras and microphones inched forward, clearly wanting to catch every single word in perfect clarity, as this had become something more than a short update to the China situation. “Your leaders are lying to you. The Ethereals are lying to you. What they have allowed in China is being carried out on Paradise station tenfold. You are little more to them than an exploitable resource, and should you dare question them, they will ensure disaster and misery befalls you as they are attempting to do to us.”

She curled a lip up ever so slightly. “We did not want this war. I believe that many of you do not want this war. We recognize it would be prudent that it ends before it pointlessly continues, but your masters are content to continue to send your parents, children, and siblings to die in it and they will not stop. The Imperator will not allow the war to stop from mere pressure, and soon a choice will present itself before you.”

Gripping the podium, and making her voice clear, she continued. “There are many soldiers who have abandoned the Collective as they realize what it truly is. Each and every single one is braver than the cowards who allow what is happening in China to continue, who will not dare voice that the abuses and terror is happening. They do not because they are ashamed that they have been forced to stoop to such depths in an attempt to frighten us into submission.”

A shake of the head. “It would be almost pathetic; were it not paid in the blood and lives of thousands of innocents.”

She projected her voice slightly more. “This is no longer a war between powers, if it ever could be called such. There is no ambiguity on what the right side is. One side abducts civilians and presses them into experimentation labs, one side using psionics to drive civilians into states of madness and depravity; one side seeks to dominate another for no crime outside of simply existing.”

She let that linger. “I would ask that the Collective would think carefully about who and what they are fighting for. What crime has our species committed that we are warranted invasion? What is so offensive about us that motivates such actions against our civilians and soldiers? We never wanted to be your enemy, and we do not condemn your species for the crimes committed by the Imperator and his ilk.”

One finger was lifted. “But make no mistake – we will never surrender; we will never submit to the Ethereals, to the Collective, to the Imperator. We have been shown what fate awaits us, and that such measures are taken show the depths of the fear which grips the Imperator’s heart. Because he knows that he is losing his grip; on his soldiers, on his allies – even other Ethereals – and soon the war.”

“Understand this –” she lowered the hand slowly, as well as her voice. “We will show no mercy to
those who continue to abet the Imperator, as there is no more excuse for ignorance. The only fates
of those who stay will be as corpses or prisoners of war. We will take back our planet; our solar
system – and then we will go hunting.”

She indicated those behind her. “Today we will kill the god which has claimed domain over
Beijing and strike down the Dread Lord. As we speak our military forces in conjunction with
XCOM and Chinese Command are marching on the city and will purge it – and thus show the
world and beyond that such actions do not elicit cowardice or fear – but action.”

Saudia allowed a final, dangerous smile. “We will go to whatever lengths necessary to protect
Humanity, regardless of origin, race, or creed. Even if we need to march into hell and back to do
so. The war has turned today, but it will not be Isomnum who emerges victorious today. Because
today?”

***

Tiananmen Square, Beijing – China

3/12/2017 – 5:50 A.M.

The revelry and celebration seemed to go on without end, but Isomnum was careful not to lose
himself in the hypnotic dream the Weavers were spinning for their thralls. He needed nothing of
the sort now, and while he could take satisfaction in what he had accomplished, there was little
question of the fact that the Humans would attempt to get revenge.

Thus, he stood on the stones of Tiananmen Square looking over the thousands of mad victims and
cultists alike. How useful they had been here. They would serve many more purposes in the future.
It certainly helped that there was little resistance as his remaining forces converted thousands of
civilians into something slightly more dangerous.

He disliked that the Bringer’s forces shaped it as something to practically beg for, as it devalued
the entire purpose of conversion, but it was a small price to pay here. He had considered leaving, as
he had largely achieved what he had set out to do, but running would indicate weakness and
ADVENT would spin any reclamation of their city as victory.

That could not be permitted.

He had observed the Human reaction; outrage and horror in equal measure. It should have elicited
demands for compliance; he should have seen masses of Humans expressing fear over what would
come next should ADVENT continue their pointless and doomed war. That is what should have
happened.

Yet the idiot Humans were clearly not intelligent enough to understand that fear should be their
instinctive reaction and then take steps to mitigate such fear. No, the Humans were simply angry.
Not fearful, furious. It showed the extent to their delusions that they believed their armies strong
enough to exact vengeance.

They should realize that they were in a position of weakness.

These actions indicated that the Humans believed they could withstand the power of the Collective
– including his own power.

His anger had grown when he’d realized this. It was clear that the Humans were either too
brainwashed or too stupid to acknowledge the blatant hint he had given them with his actions. They clearly needed to be broken further. They needed to be shown that they needed to be afraid; that their shining armies and alien traitors would not save them.

Yet for once he found himself slightly puzzled at what to do next.

If the sight of Humans cannibalizing, mutilating, and happily killing themselves didn’t make Humans fearful, then what would?

Perhaps it was a matter of volume, of scale. One city was little in the grand scheme of things, and as China was not officially part of ADVENT, perhaps it was easier to disparage and dismiss. The failure of the Bringer’s soldiers to capture Saudia certainly contributed to this – a failure that would not be repeated.

He suspected the Weavers could create a grander show the next time. More bloody, violent, and horrific than the last. He had listened to some of the Weavers paint vivid pictures of what they called the Children of Paradise – creatures born from the heart of the station that were abominations to any sane mind. Fusions of species, masses of flesh and limbs, true works of genetic artistry and unnatural design.

In the future, those could be brought if the Humans continued to fight their inevitable fate.

Alternatively, he could take matters into his own hands. He would, should the Weavers continue to fail to elicit the fear that should have gripped the Human populace. Instead he was met with scathing condemnations and graphic descriptions of how he and his soldiers should die; usually slowly and painfully.

It was irritating. Not due to the threats. He had little concern for a faceless persona on the Internet. It was the wrong reaction.

There was little satisfaction in eliciting terror if those who should feel it completely missed the message.

Humans. Idiot, stubborn, idealistic creatures.

The air suddenly shifted and he paused. It was not the familiar touch of the Weavers which assuaged his mind, but something else. The sky suddenly turned purple as he saw a barrier cutting through the smog and hanging over the city.

*Aegis.*

Unsurprising he was still here. The Ethereal was powerful and could last a significant amount of time. He had expected Aegis would assist the coming force, and he was prepared. Although this was certainly a curious usage. As if he wanted to trap him, clearly forgetting that thanks to the forces of the Bringer, such boundaries no longer concerned him.

Well. It would limit his usefulness in the coming battle. He was rather hoping Caelior would show himself. He would quite enjoy breaking the young traitor; Caelior had always been an upstart irritant, and now he had leave to treat him as one. Perhaps if the Bringer’s soldiers proved themselves here, he would give the Ethereal to them. The Imperator would not care about the traitor, otherwise he would not have sacrificed him to XCOM so easily.

Then something changed in the sky. The smog became tinged in purple until it resembled storm clouds hanging over the entire city. Isomnum felt the telltale sign of an illusion as it lightly pressed
against his mind, which he dismissed with barely a thought initially – only it came back, with twice as much intensity. Another dismissal only resulted in the same.

Confusion was the first feeling, as only an Ethereal would be able to maintain such an illusion and impress it upon him such as this. He could certainly block it, but it would require effort on his part – effort he saw little reason to expend for such a pointless reason. Yet looking into the sky, he did not expect there to be shapes forming in them.

No…

These did not glow purple, but blue. Six orbs which seemed to arrange themselves in smoky clouds. Eyes? The more vibrant they became, the more Isomnum became convinced, and he was reminded of the Sovereign One that was supposedly on Earth. Little was known about their biology, save that they were aquatic. But the Voice had once described what they looked like.

Six eyes were among the description.

Upon seeing this, Isomnum paused. Had he been Human, he would have frowned. Instead he merely watched. Also according to the Voice – and the Imperator – the Sovereigns did not reveal themselves openly, preferring to act through puppets and proxies. Yet to him, this seemed…too obvious, too blatant.

He was not the only one to notice. Those who inhabited the Square paused what they were doing and looked up, the Dream seemingly gone. It only lasted for moments as the Weavers redirected their attention with psionic commands, tricks, and spells. Yet those who retained their minds considered the situation more cautiously.

One of the Weavers approached. “Lord Isomnum, do you have directions?”

He considered. Running would be cowardly and undermine his efforts, as well as what he had achieved here. Yet…he had not considered such blatant intervention by a Sovereign One, and unfortunately only knew their reputed capabilities. In any case, he was suddenly no longer sure he held the upper hand. ADVENT, XCOM, and the agents of Sovereigns he could overcome. A possible direct intervention? More questionable.

“Remove critical forces from Hainan,” he commanded. “Maintain a limited number to direct the Converted and your Exalted. A price can still be extracted from the Humans here. We will decide our next target afterwards.”

“There is an issue,” the Weaver said slowly. “Our Stalkers report that they cannot breach the barrier erected by Aegis.”

“What?”

The Weaver did not cower, but the blood drained from her face as she felt his full attention turn on her. Nonetheless, she continued. “We do not know why this is happening. The only one who could cut off such a large point in the psionosphere is a Sovereign One. We are currently trapped, and with no way out. The Stalkers have confirmed the barrier is complete. ADVENT forces are converging upon our location, along with XCOM and agents of T’Leth.”

A hand clenched in controlled anger. “There were assurances that this was not to happen.”

“We…did not anticipate such a reaction,” the Weaver said meekly. “We-“

“You should not have come to this planet, Dread Lord.”
The voice was deep, booming, and originated from the mind itself. Isomnum looked to the hanging blue orbs in the sky. It was no question of who had spoken it. “Your kind are said to not interfere. You should not reveal yourself, else you will paint yourself as a target – and that you do not want.”

The air rumbled, and Isomnum got the impression the Sovereign was laughing. “You know little of me, Dread Lord, else you would not utter such words. I am not my brethren. I do not fear your pathetic threats. You will serve as an example to the Imperator – and the Bringer.”

“Send your pawns, Sovereign One,” Isomnum stated. “They will die as many have before them. You are not here now, merely an illusion meant to intimidate.”

“Be thankful, Dread Lord,” T’Leth rumbled. “That I have merely cut off your escape, else I would rend your body into pieces. Yet I feel that this will soon befall you and those who serve the Bringer. So I will merely watch; watch as you lose more and more; watch as the dream collapses all around you and you realize that you have been abandoned and used, like the pawns you are in a game between masters. I will watch you die, Dread Lord, and the last thing you will see is not fear, but vengeance. You will not taste victory, but ashes as you expire, knowing that you are an utter failure and your ideology dies with you, disproved to the galaxy. Prepare, Dread Lord, for your death now approaches.”

After that, the eyes themselves dissipated, though the illusion of purple mist remained. Isomnum stood quietly, considering. The Sovereign One was, in fact, not here, though his presence would be felt. The conflict was most certainly not lost, and he was not so weak as to be intimidated by such drivel, though the utter conviction by which said threats had been said was concerning.

Isomnum knew the difference between true and false power. The words T’Leth had spoken were not ones of arrogance, but power. Isomnum knew he was powerful, but he most certainly was not so foolish as to underestimate his enemies. T’Leth would pose a concern, although his stunt had revealed his limitations. Should the barrier be breached, they could leave and that itself could be a victory.

Alternatively, he merely had to weather the storm coming upon him. T’Leth would send his agents, but he had faced such before. They could still win, so long as T’Leth remained a non-factor outside his illusions. If T’Leth could end the fight, he would have. Therefore his threat was limited.

Still. There could be improvement. Tipping the odds further in his favor. He pulled out his holocommunicator and within moments the image of the Temperance appeared. “Lord Isomnum. I assume there have been developments.”

“Correct.” He did not mince words. “T’Leth has prevented teleportation in a radius around the city, and Aegis has erected a shield to prevent escape. We will weather the ADVENT attack easily enough. However, Aegis must be eliminated or the barrier must otherwise fall. More soldiers are required.”

The Temperance did not answer for a few seconds. When he did, the answer was as emotionless as ever. “There will be complications. The aftermath of your attack has not been received as anticipated. More soldiers will not be sent without the express permission of the Imperator.”

Isomnum exhaled loudly. “This is not a request, Temperance.”

“Nor is my decision a choice,” he answered. “I will speak to the Imperator about further support. I cannot promise more, for both of us ultimately answer to him.”

“You lacked this hesitation earlier,” Isomnum noted. “Do not concern yourself with the Imperator.
I will handle him, and ensure your projects are supported. This is difficult if I am indisposed due to the Humans. Your failure to continue supporting my operations will result in this support being withdrawn – and you being replaced. Consider your next words carefully.”

The Temperance did appear to consider, and not a single hint of what he could be feeling showed on the stony alien face. A face that Isomnum saw had six eyes. “Risk has been calculated. More is lost by continuing to incur the Imperator’s wrath. I cannot support you further without his permission. It will be asked, but there will be no further promises.”

Isomnum nearly crushed the holocommunicator, though kept his voice calm. “You have made a mistake. You best prepare to meet your god, as it shall happen when I come to Paradise.”

The Temperance was not affected, and answered as neutrally as ever. “I will take my chances.”

The image disappeared. This time he crushed the device in his hand.

How disappointing. That it was not the Humans who were fearful and cowering, but the thing which puppeted Ethereals. A thing who is driven by fear of a greater Ethereal. Such cowardice would not be tolerated, and the removal of the Temperance would be carried out slowly to serve as a lesson for his replacement.

It was not the Imperator one need fear.

They would soon learn that.

But now he had a storm to weather, an army to slaughter, and an escape to plot.

The odds were stacked against him, but he felt no fear, as such emotions had been purged long ago. It did not matter how many were against him. The Synthesized had tried before, and he had inevitably won.

This time would be no different.

***

Beijing – China

3/12/2017 – 5:45 A.M.

The army that marched on Beijing was massive, and Oliver believed that in his long career that he had never quite been involved in – or seen – an operation on this scale. Even in XCOM their role was more limited and never quite seemed to lead the charge in places – only came in afterwards to take out dangerous enemies or support locations near collapse.

Not today.

That feeling hit him when he saw the purple barrier glowing in the night around the city, as far as he could see and having to crane his neck upwards to see the top. It really was awe-inspiring what the Ethereals could do when their power was unleashed – and that knowledge placed a grim note on his mind as he remembered they were going up against another one.

But they had a good team.

ADVENT did as well.

It was going to be a night where their alien allies proved themselves to the world, as Aegis, Caelior,
and now Axis were deployed and ready to participate. Caelior was assisting another entrance, while Axis was in their squad, fully clad in his battlesuit which still reminded Oliver of what might happen if someone took an astronaut uniform, and put armor on it and then painted it black.

He couldn’t claim to be fresh and fully rested, but he was ready to end the nightmare that had gripped the country, as was Kane, Geist, and everyone who had been fighting in China. Now they were supplemented by reinforcements including another Archangel to replace the one Viktoria had lost earlier, as well as Angelina Fonseca and Daas Nandi, a MELD Operator and Shoggoth Handler respectively.

It was interesting to see the reactions to the Shoggoth from ADVENT soldiers who had no idea what it was and gave it a wide berth. It was a good distraction, as no one had yet commented on Axis which was likely helped by the fact that his face was completely masked and his humanoid stature gave him some degree of blending in.

Somewhat ironic, as it was Axis who had been a major consultant for what was to come.

“Everyone in the city is lost,” he had said grimly. “It is a memetic plague which has taken hold which cannot be cured or removed. There is no choice. Every single person in the city must be executed. Otherwise it will be propagated until it is impossible to contain.”

Words which both the Internal Council and ADVENT Command had expected, but it was still going to be difficult to accomplish. The first kills would be the hardest, and Oliver knew that Isomnum was going to do his best to traumatize anyone who massed to attack. As they approached the designated entry point, with the shield lines of the Order of Terra behind them, his fears were confirmed.

“Massed civilians on the other side of barrier,” he noted grimly. “Need to be cleared out.”

“I see them,” Geist said. “Many of them.”

Isomnum was playing his part well. The civilians on the other side looked normal, wearing regular clothes and looking sad and afraid as the army approached. They were mostly women and children, some of them holding infants in their hands. They yelled in Chinese as they moved closer; now afraid of what was coming.

“Liuxian, Richards, move up and prepare to burn them,” Geist ordered calmly, and the two MEC pilots who commanded the Marauder-class MECs stomped forward and readied their flamethrowers. Purifiers moved behind them, though these ones were outfitted with standard napalm and not ClF3. Still dangerous, but they weren’t walking death traps.

“Axis, are you sure about this?” Alisa, one of the Gunners asked quietly. “They don’t look compromised.”

“They are.” Was the statement from the Zudjari. “I touched the minds of several. They are being directed to act like this. It will break down when they begin burning.”

“Prepare for entrance!” Geist roared, preparing to send the telepathic signal to Aegis. “Fire!”

Flamethrowers roared to life as a sizable section of the barrier pulled back, and the civilians immediately rushed forward – only to be turned into cinders as they met two dozen streams of flame which turned the immediate area into an inferno. Oliver winced at seeing them burn, but did not look away. Kane said nothing beside him, but how he clenched his replacement Browning told Oliver all he needed to know.
“Coward,” he practically spat, but didn’t elaborate. No reason to.

And then the civilians changed from crying to screaming and breaking into suicidal charges to mass-rush the MECs and Purifiers. Men, women, children which had been hiding in nearby buildings or hanging back on streets didn’t hesitate and charged forward, shouting the language Oliver had heard many of the Bringer’s soldiers yell when they fought.

“Forward, into the city!” The leading Lord of the Order of Terra commanded, which was echoed by the ADVENT Officers as the shield line began advancing, with Purifiers armed with extinguishers to put out the fires in their path. Most of the XCOM squad entered before the shield line proper did, so as to provide support to the Purifiers and MECs, as plasma fire and psionics now joined the white-orange flame.

“Converted on approach,” Oliver snapped to the squad as he saw the black-augmented figures begin charging forward. “Possible suicide ones, can’t confirm.”

“Acknowledged,” Geist said, gesturing and erecting barriers which tripped the rush of Converted. “Take them out.”

A task easier said than done, as Oliver and the rest managed to cause enough damage to most of them that they collapsed to the ground in smoking wrecks, but not all of them were caught. One detonated in a suicide blast that killed several Purifiers and scorched Richard’s MEC. The Order of Terra was inside and the shield lines were beginning to go down the streets in tight formation.

Custodians were now entering the picture, and now that the masses of brainwashed civilians had been eliminated, they were stepping back to let the main forces take the front. Custodian fire was accurate in that it hit the towering shields the Squires carried, but did not penetrate them. But the Squires returned fire with their mounted rifles, forcing the machines into cover.

Oliver tossed a plasma grenade towards a trio hiding behind a car, forcing them into Order fire and destroying them. Behind him he saw dozens of soldiers move into the nearest building – a skyscraper, and begin the first of many complete sweeps, accompanied by Priests to find and snuff out every living person in the city.

And it was going to be taken slow and steady.

They had time.

As the tanks began rolling in, Oliver only hoped that it would not be long before the Dread Lord lay dead, even if the rest of the city would take longer to subdue.

A goal he needed to ensure was achieved. Joining Geist at the front, he lifted his rifle and fired at more of the Converted which were now marching down the street, these ones backed with a few of Isomnum’s own soldiers. The Order of Terra did not cease marching, but took the assault head on. The first of many all of them would endure.

***

**Beijing – China**

3/12/2017 – 8:15 A.M.

It was worse than she had feared. She’d seen the massed civilians on the outside of the barrier when they’d arrived, and knew that all of them would be dead when the command was given. The orders had been explicit and clear – eliminate everything in the city; no exceptions. There was
considerable fear that they were infected with a psionic contagion which could be spread to others if not contained – or at minimum made them alien agents and unreliable.

It still didn’t make it any less sickening when the shooting started.

Kaya was almost happy when a switch seemed to have been flipped and they turned from sobbing and begging people into shrieking madmen who lunged at the front lines before being promptly stopped. Even as they made their way deeper into the city, slowly but surely, the assaults hadn’t even come close to ceasing.

She didn’t know how many people had lived in the city, and it had not been one of the ones which had been largely evacuated – most believed they would be safe in such an insulated location. They’d found out otherwise in the worst way possible. The number was in the high millions, she believed, and hundreds were dying every minute.

She saw the standard of her unit which was right behind the line of four Squires together with another unit. Freya, their Standardbearer, hadn’t even needed to activate the PDS field since there was almost no plasma fire to worry about. The blades of Terje and Genevieve were slick with the blood of attempted ambushes from the buildings; never in serious danger as these people were weak, small, and sometimes sick with Smallpox.

But the close quarters made it worse for all of them. She knew personally that Genevieve had seen and done a lot, and experienced enough of the horrors of war. But nothing quite compared to slaughtering a half dozen women with an ease that was almost unfair. The weapons provided to the Order made killing easy; effortlessly.

And they were using these tools on civilians brainwashed to fight their own kind. Necessary or not, no one was going to emerge from this with sound minds. The pressure she had continuously felt in her head having nothing to do with that, but took it as a sign that the psionic protection was still intact. Yet at times she could almost smell a sickly sweet aroma which pierced her helmet.

Not everything could be blocked.

Her heart beat fast and continuous as she fought, holding a sniping position on top of one of the tanks which accompanied the march; she didn’t know the kind, but it was Chinese and the autocannon had also assisted in making short work of mobs. She felt terrified, but not due to any psionic influence.

It was because there was something else here – something which she didn’t know was friendly or not.

Looking to the sky, she saw swirling purple mist, and yet if she looked closely, sometimes she saw six bright blue orbs which seemed to be looking down; watching, observing. She’d wondered if she was seeing things, but when she’d pointed it out…everyone had felt the same way. None of them knew what it was…but she didn’t think it was this Bringer.

Kaya was not strongly religious. She was most certainly aware of the various religious customs in Japan, and herself had participated in such for mostly ceremonial reasons, but a personal belief had never really solidified itself. She’d found religion more fascinating when looked at from the perspective of an objective outsider, to see all the disparate religions and what linked them together and made them different.

She’d never known enough to say for certain if a god or gods existed, but she didn’t quite discount the possibility of it happening; derided as some might believe that.
But now…

She looked back up to see the eyes still looking down upon them.

Maybe there was something up there. But not the old and wise figure depicted in so many stories. This one…it felt more to her like something that had been awakened. And the next question she had was how and what would it do?

She trained her rifle back on the front lines as they made their way through bloody streets. Occasionally there would be bumps as the tanks rolled over corpses. She’d done her best not to think about them. Peering through her rifle, she froze as she saw new targets at the end of her scope. Standing near an upcoming intersection was a figure clad in shining armor with a cape billowing from the shoulders.

The armor reminded her of a Knight, but this one was instantly recognizable as different. The names had been provided to her thanks to XCOM, and it meant things were going to get serious. “Baptist ahead!” And it wasn’t all, there were hordes of civilians, both Converted and unmodified. Now there were brainwashed ADVENT soldiers in the mix too.

What made this Baptist unique was the fact that it was a Cobrarian. It didn’t seem to be as heavily armored as the previous Baptists, but it was still clad heavily enough to likely absorb light gauss fire. The sword it held was more of a fencing weapon; thinner and slightly curved. It lacked a hood, which meant it was female, although she didn’t think it mattered much what the gender was.

Gauss fire cracked as the Squires opened fire as did the tank autocannon. She focus-targeted the Converted, one of which was a suicide bomber, which went up in a loud explosion taking out a portion of the charging mob. The Baptist was hanging back, moving from side to side with an almost blurring speed, waiting for the opportunity to strike.

Even the volume of fire was not enough to kill all of the mob before they reached the shield line, clawing and pushing through while shouting cries in a strange tongue. They ripped rifles from their rested positions forcing the Squires to pull out their swords and start stabbing back, while herself and the soldiers also on the tank fired downwards to further stem the tide.

That was when the Baptist struck as she moved with blinding speed up and over the mound of bodies, pushing some of them down. She hissed as a hand glowed with psionic power and blasted the nearest Knight – Genevieve – who just barely got her shield up in time to block the stream of energy, even as it began quickly eating away at her shield.

Terje along with another Knight charged the Baptist and she ceased and lashed out with her tail at Terje, making him stumble just as she almost went to the ground and then slithered through his legs and wrapped around his body several times. Before anyone could react, she jabbed the thin blade just under his throat and opened her mouth, spitting hissing green acid for several seconds until his face was melted.

She was trying to fire at the Baptist, but the alien was too fast to get an accurate shot at. She didn’t even have time to process his death as the Baptist was doing the same thing to the other Knight. Freya as firing her own pistol at the Baptist to little effect. The shield line was still managing to hold, but there was already a casualty even if she couldn’t tell who yet; she prayed it wasn’t one of her unit.

One of the Priests created a psionic maelstrom around the Baptist, which caused her to quickly slither out of it directly into the psionic energy stream of another. Hissing it charged with lightning speed at the Priests, this time not bothering to drag out the deaths, instead moving on the ground
and stabbing upwards into their chins before moving to the next.

Unaccustomed to such a fast and difficult enemy, the soldiers were almost hopping backwards to avoid dying to it. The autocannon fired at it, and this time it managed to score several hits, making the Baptist turn around and flick out her tongue before springing up onto the tank, giving Kaya very little time to think about how to respond.

She only had one thing that might work – a symbiote grenade. Setting it for almost immediate detonation, she threw it while leaping down and the black goop exploded and managed to land all over the Baptist, pinning it to the ground and even one of its arms to its side. “Shoot it now!” She yelled, focusing her Widow at the writhing alien which began glowing with psionic power.

The concentrated fire though was severely wounding it, and blood now poured from dozens of wounds yet the thing seemed to keep thrashing. Another symbiote grenade was thrown and this one covered it completely. Three Purifiers which had been hanging in the back moved in and concentrated their streams of flame on the Baptist and did not cease the streams until the corpse was burnt to ash.

ADVENT had learned a few things from previous encounters. They would not stop fighting until they died. Overkill was standard policy, and excessive measures were encouraged. Breathing a little easier, she turned to see the shield line mopping up with Genevieve and another Knight filling the gaps where other Squires had fallen.

An uneasy pit formed in her stomach. This was their first real fight. And just one of the things had been enough to stop their entire unit – or at least extract a heavy toll. But she wasn’t going to leave yet, even as the soldiers moved on. She pulled Terje’s body off to the side so it wouldn’t be run over by the tanks. He would get a burial, and she wanted a body to lay to rest.

But that was all she could do for now. Leaping back onto the tank and reloading her weapon, she prepared for more fights ahead – and more losses.

***

Haikou, Hainan – China

3/9/2017 – 6:23 A.M.

The day had been an exhausting and strenuous one for them all. It had been slow going for hours as they had sometimes been forced to huddle down in abandoned houses and shops for long periods of time whenever Iosif heard or felt something. It was not a pleasant feeling knowing that they could be seconds away from being discovered and cornered.

There had been several close calls, one being when they’d stumbled into a Custodian trio with their backs turned. They’d taken them out immediately but knew that it was only a matter of time before someone came looking for why the units had gone offline. More upsetting was when they stumbled onto a gibbering civilian in a house who they’d had to put down before he noticed and possibly alerted others to them.

Nuan wished she could have done it when the civilians weren’t in the house, but they didn’t have that luxury.

They’d kept speaking to an absolute minimum, instead relying on nods, hand gestures, and other non-verbal cues which their civilians understood easily enough. They’d stopped several times to eat quickly, never more than fifteen minutes, and then were back moving along the streets and
between the houses.

Their Zararch captive had eaten some of the chocolate, although very cautiously, almost nibbling on it as if afraid he was going to fall over and die from the food. If they weren’t in a life-or-death situation, Nuan would have found it very funny, but to his credit, Ravas was smart enough to take some precautions, going to far as to tape his mouth shut in case he accidentally made noises when high. While that didn’t seem to happen, he definitely seemed oddly at ease and buoyant compared to everyone else for the short time he was under the influence. Never more than a half hour, probably because he stopped eating the moment he felt it working.

But now, they’d found the port, and there was no shortage of boats to be seen.

She’d honestly been expecting it to be much more difficult than it was, but the city itself almost seemed completely abandoned, as if everyone had been abducted. Clearly not everyone could have been killed, so their fates were likely worse than she had feared. Hainan wasn’t a battleground anymore, so they had likely been moved to the mainland.

Good for them right now, but somewhere ADVENT, China, and XCOM were likely having a hard time.

She hoped the Mosrimor Avatar was gone as well. It was almost too much to hope for, even if Iosif said that he didn’t feel anything like it. Then again, if he did than they were possibly screwed since the Avatar would know they were alive and trying to escape.

Night was falling, so they didn’t need to waste more time. “Alright,” Iosif said slowly, his suit volume almost as low as he could make it. “You three search some of the yachts and boats if there are keys left in them. Most aren’t big, so it shouldn’t take long. Be quick and quiet, and meet Nuan on the dock who’ll keep watch. I’ll go into the shop with Ravas and see what supplies there are. When we’re regrouped, we’ll take the next steps.”

Nuan relayed his orders, and they all moved out and the civilians began searching the various boats. While unlikely, Nuan kind of hoped that some rich person would have been kind enough to leave the keys in one of the nice ones. In the meantime, she took up a watch post with her back to the boats and water.

It had definitely been a bustling port at one time, with boxes, nets, and other marine equipment strewn around and outright abandoned. Her suit filters removed most smells, but she suspected that were her helmet to cut off, she would smell rotting fish, shrimp, and goods. She also didn’t fail to note that there were some Human bodies lying around, already beginning to decompose.

She moved some of the boxes to create some cover if a firefight broke out. They were probably not sturdy enough for more than a few shots, but it was better than nothing. Minutes ticked by, the silence growing louder as she waited for something to happen. She wasn’t expecting they would get out of here without a fight since the Collective did still have a presence here – if a much reduced one.

“[Soldier Kun?]” A voice whispered, and Nuan turned to Ren standing behind her nervously. “[I found one.]” Somewhat shaking hands held a key fob and she pointed to one of the nicer-looking yachts, one of the bigger ones too. Aside from the sea filth which had built up along the bottom of the yacht where it had sat in the water, it looked very good.

“[Excellent job,]” she said just as quietly, taking the key fob. “[Stay here and wait for your mother.]”
A few minutes later both Yawen and Jun came back, Jun finding the keys to a smaller boat which was almost immediately dismissed in favor of the one Ren had found, while Yawen didn’t find anything. Good enough; they had two options and now they just needed Iosif to come back. A few minutes after that they did, and saw him fitted with a rollaway packed with boxes of something, while Ravas pulled a cart filled with various cartons of gasoline.

“What did you find?” He asked quietly. “We’ve got some food, bait, and fishing equipment here. Ravas has gas. There’s more inside we’ll need to get too.”

“Ren found a good one,” Nuan pointed to the Yacht. “She didn’t check, but I assume it’s filled up. I think they do that automatically at these places.”

He started to whistle, but then stopped when he realized that wasn’t the time. “Perfect. That’s for longer voyages too. Bigger tank, and probably has storage already on board. Might be more difficult to drive, but we’ll make it work. Let’s move everyone on board and then get the rest-“

“No, no,” Nuan interrupted quickly, having thought about it for a while. “We need to leave now. We’re lucky no one has found us yet, and getting more is just greedy. We need to run for it while we can.”

Iosif shot a glance to their entourage. “It’s not just us, Nuan, and we don’t know how long it will take. Precautions should be taken, and as you said, no one has found us yet. It seems like the place has mostly been abandoned.”

“Which can change,” she insisted. “Once we’re on the water, no one can come after us. We still have food we brought along. That will have to be enough.”

Iosif thought about it for a few long seconds. “Alright, fine. Worst case scenario we don’t eat our own rations and give it to them. We can last longer without food.”

Nuan breathed a sigh of relief and explained what they were going to do to the civilians who listened attentively, and then helped unpack everything Iosif and Ravas had gathered and load it onto the yacht. While they were storing things belowdecks Iosif and Nuan stood in the enclosed cabin looking over the controls.

“Looks simple enough,” he muttered to himself. “Don’t know what most of these gauges are supposed to mean, but I see speed and fuel, and there is an accelerator lever and steering stick. Compass too.” A pause. “All of it in Chinese, but I have you for that.”

“Is the compass useful?” She asked.

“I know enough to know which way to go, so yes in that context,” he shrugged. “GPS seems to be working, even if it’s a primitive piece of crap and in the wrong language. You’ll have to set it up. I don’t want to turn this on until we’re ready.”

Nuan did have to admit the yacht was very nice, and even had a cabin for two people to comfortably stay, as well as a lounge area. The deck had a lot of space too, and there were lots of cabinets and compartments to put stuff in. Ropes still bound the yacht to the deck, but those could be easily removed. Iosif joined her on the deck.

“Think we’re ready,” he said, then gestured as a couple psionic barriers severed the ropes binding them to the dock. At Nuan’s look, he justified it. “I hate knots and don’t have time to fiddle with them. Isn’t our boat either, so I don’t really care about it floating away when we dock in Vietnam.”

“Hey, I don’t care,” she said. “Just didn’t think about doing it like that.”
They walked back to the cabin. “Feels like it’s going too well,” Iosif commented. “Like something is going to come out and surprise us.”

She felt that way too, but nothing happened. Iosif turned on the yacht and it rumbled, sounding horribly loud as the engines roared and chugged. She could imagine Iosif wincing under his helmet, much like she was right now. Still, he began piloting it out, although he bumped into a wooden post along the way.

It only took a few minutes for him to mostly get the hang of it, easier since there was nothing for him to really bump into when he was out of the ports themselves. In the meantime, she programmed the GPS to get them to Vietnam. The satellite network was still working, luckily, and it put them on course for them to arrive in…fourteen hours going at a certain speed. She didn’t know what the conversion was for ‘knots’ to ‘kilometers per hour’, but it wasn’t likely important.

But…it seemed like they had done it. She stepped out onto the deck and took off her helmet as she observed the rapidly fading city. It looked dark and abandoned, a husk of what it had been; before Isomnum and the Collective had ravaged it.

There would be retribution. She had no doubt.

She could only hope things were going better on the mainland. Although for all she knew, Isomnum could have won. She didn’t think that had happened, but given how easily Hainan had been taken, he was probably doing better than they wanted. She had faith it would be defended though.

Until then, she sat down as the yacht sped forward and enjoyed the breeze on her face, relaxing for the first time in days.

***

Beijing – China

3/12/2017 – 3:12 P.M.

The noose was closing in on Isomnum, slowly but surely, and with much blood being spilled on all sides. While the brainwashed hordes died in droves to ADVENT and XCOM, the fact remained that ADVENT was suffering losses of their own, and, impossible as it had seemed at first, Sierra seemed to note that there was a lesser amount of the hapless pawns to throw at them.

Then again, they were being replaced with more dangerous things.

The Order of Terra was behind the main force now, focused on completely purging the city as they continued forward. The military and XCOM – wanting to press their advantage – now took the lead and were doing well for the most part. Sierra and the Archangels zipped and flew throughout the city, providing support and aerial fire wherever requested.

Right now, they were responding to an urgent request in one of the few zones where Isomnum and the Bringer’s combined forces were successfully fighting off the attackers. ADVENT corpses lay scattered as well as exploded tank chassis, even as more ADVENT reinforcements poured in to stem the losses. “What do we see?” Sierra demanded as she performed a first sweep, more difficult than usual due to the smoke that permeated the air.

There were two distinct hosts here, all of them from Korea after they’d been quickly transferred. They had that going for them at any rate. “Buch of brainwashed civvies, at least a couple dozen Converted, four Baptists, and…shit. Got a read on Isomnum’s human traitor too, and beside her is...
one of those stone-faced robed freaks.”

Not good at all. The Baptists were bad enough, but Isomnum’s…partner? Puppet? They’d never really figured out what she was, only that she was dangerous. But her and one of those robed figures? That was bad, as she’d heard quite a bit of how notoriously dangerous they were. “Allies on the ground,” Anna said. “T’Leth’s agents it looks like, can’t tell who, but they’re fighting back.”

A crackle of lightning shot from the ADVENT lines and was blocked by a psionic shield. “Got Crevan here, good.”

“We’ve got priority targets,” Kawamura said roaring past Sierra’s position. “Robed figure first. Suppressive fire while I move around and take him out.”

“Copy,” Sierra, Anna, and Jim acknowledged. “Moving around for a clear shot.”

“Don’t get too close,” Jim warned. “Those ones will slice you in two with their barriers.”

“Understood,” she said, checking her rifle. “Fire at will!”

The ClF3-tipped rounds from her gauss rifle shot towards the robed figure who barely seemed to react, only lifting a hand which produced a barrier surrounding him and Isomnum’s puppet. Sierra noticed she wore a lightly-armored battlesuit with some kind of full-face mask that was stone-grey and oddly enough, was plain.

The deadly fire splattered onto the shields and then melted to the ground, continuing to burn. One of the Baptists looked upwards and raised a hand, firing a stream of purple energy that they dodged. A second one followed suit – but there was no purple energy which spurted from her hands. Instead, she yanked downwards.

“Ah!” Marvin yelled as he was suddenly yanked downwards. Sierra turned her weapon to fire at the Baptist, but her rounds stopped just short of the Baptist, held in a telekinetic cushion. She yanked downwards again, and Marvin’s thrusters fought it for every inch. But a threshold was soon reached, as the robed man made a minuscule motion and a purple barrier bisected Marvin into two clean pieces.

Kawamura roared around the corner with her hands thrusting down, producing such force that the entire block shook and slammed everyone on it – including the masked woman to the ground. The robed man didn’t so much as blink, as he stabilized himself in an instant by placing a stasis field around himself effectively sealing him in place.

That couldn’t have been good for his body. A few shots from Jim high above slammed into the helmet of one of the downed Baptists, splintering the helmet but somehow not seeming to kill the woman who sort of flopped upwards, roaring in pain and rage deliriously. But she was too wounded to concentrate, and a volley from Anna was enough to kill her for good.

By now the robed man had recovered and Kawamura was in his range, which she was aware of and immediately tried to shoot upwards – and she did right into a barrier, which at best compressed her spine. Sierra didn’t know if she died immediately from that, or the fall through a building into the ground on the other side. What she knew for sure that the barrier that decapitated the body ensured she was dead.

Now they had a problem. Their most powerful psion was dead and they were down another Archangel. The two Baptists were giving ADVENT and Crevan a difficult time, not to mention the
Converted that were pushing forward. Maria had moved to the ground to help fight them off, and Anna was firing streams of flame to also help stem the tide, but the other Baptist was coming for them now.

Worse, the robed agent was advancing forward. Slowly, deliberately, one step at a time as if he had all the time in the world. The masked woman was staying in the same place, psionic energy rippling around her, a telltale sign that she was engaged in a telepathic battle with someone else, likely another T'Leth Agent she hadn’t identified yet.

She would have taken a shot, if not for the fact that she needed to get back before the robed man got any closer. The Baptist was also taking matters into his own hands, by first leaping onto the wall of the nearest building and then launching himself at the closest Archangel, who happened to be Anna. She dodged it, but the psionic ripple around the blade scored a cut in her armor, causing her to spin away as the Baptist fell to the ground and landed safely.

Lovely.

“Woah, hang on we got something new,” Jim suddenly interjected.

“Would it be the Hunter?” She growled, firing on the Baptist and flying back slightly. “Do we know if he’s even here yet?”

“No, behind the woman. Look.” Sierra did and saw something shimmer in the background. Something she actually had to focus on to get a good look at. A figure suddenly became visible, indicating that some kind of cloaking device had been hiding it as it stepped onto the shredded concrete surrounded by bodies.

It looked like some kind of Andromedon unit, if the Andromedon suit had been cut down to a much more slender build, with the bulky suit and helmet shrunken to something more proportional. This was not to say the black-armored unit was unprotected. It almost seemed made of metal when she squinted. The only color was the helmet which was a pale white, almost clouded glass. Tubes connected to devices on the wrists and there were three weapons of unknown design attached to the back, waist, and thighs.

With a blinding motion it flung a hand forward and a device went spinning towards the robed man who immediately turned around and stopped it with a barrier, causing it to explode into blue dust which descended downwards. For some reason, the man stepped back rapidly as if burned. The Andromedon then vanished.

No. Not vanished.

It charged.

Sierra wasn’t sure she’d seen right, as it happened in an instant, but there was no mistaking that a blue streak followed the Andromedon as it charged forward and rematerialized where the masked woman was. Although it was more accurate to say where the masked woman had been, as the sheer force of the Andromedon impacting her had caused her to explode into chunks.

She’d never seen it coming, and the Andromedon was now colored in red.

In moments it tossed out several more devices and sidestepped with surprising quickness, and within seconds was back nearly twenty feet away, a sniper rifle in hand. Those weren’t grenades as Sierra had originally suspected, but some kind of dispersion device that spewed a blueish poison. They had been aimed behind the robed figure and now surrounded him.
Sierra didn’t understand why he didn’t just endure it and run forward, but she wasn’t going to turn
down the help of the mystery Andromedon and swept forward, hovering as she tossed forward
several grenades on his position, while Anna and Jim rained down fire on the robed man. The
Andromedon fired several shots from the rifle which exploded when they slammed into the
barriers. They fired projectiles Sierra couldn’t identify, a strange fact in its own right. It wasn’t
plasma, but it didn’t seem completely physical either.

The mist was closing in, and the robed figure only encased himself in a barrier. The Baptist which
had been trying to kill them instead charged the Andromedon, psionic power blazing from his body
and weapon. The Andromedon holstered the weapon and suddenly had a blue glow of his own
around him, with one armored hand extended, it gestured upwards and Sierra saw a nearly
imperceptible wave move up and the Baptist was suddenly floating in the air as if the gravity had
been turned off.

“What the fuck?” Anna said, speaking for all of them.

Psionic Andromedons?

What?

It drew its arms back as if to leap forward and then charged in a blue streak towards the Baptist
still in air and in a moment the Baptist was caught in the black gauntlets and slammed into the
nearest building, and then in another charge, slammed into the ground with a thud. Somehow the
Andromedon suit was undamaged, and it slammed an armored foot on the head of the Baptist –
whose body was already barely together as it was – and crushed it into mush.

They had continued firing on the barrier around the robed man, and the Andromedon seemed to
consider how best to break it, but before he could, one of the Baptists which had been fighting on
the ADVENT line rushed to the attempted rescue of the robed man. This one was a Muton, even
larger than the Andromedon himself.

Psionic energy poured along the warhammer it carried, but the Andromedon did not seem phased,
and simply raised a wrist and shot out a stream of the blue mist the robed man was so afraid of.
Sierra didn’t know if it was acid or poison, but she figured she was going to see firsthand what it
could do as the Muton paid no heed and charged straight into it, and at the last moment the
Andromedon turned into a blue streak and reappeared a short distance away.

It took a few seconds before Sierra saw what the effects to the Muton were. It stumbled, coughed,
and roared, but the psionic energy was gone and it didn’t seem to be handling whatever had been
inhaled well. A blue aura once more enveloped the Andromedon as it clenched a fist and the area
around the body…shifted.

At least that’s what it looked like, as if there was a continually breaking and reforming mirror over
the form of the Baptist. Only it did seem to be actually shifting, as the first spurts of blood began
happening. She watched with some fascination as the body was rent into tiny pieces with the
Andromedon glowing the whole while and did not stop until nothing remained of the body aside
from mush and metal scraps.

It wasn’t exactly something she hadn’t seen before, Dynamo psionics had these effects all the time.
But this didn’t seem to really be like that.

The robed man was still alive and now the Andromedon was going to deal with him. The front
lines were being claimed, and the quick looks the man was giving between the rapidly dwindling
Converted and the Andromedon meant that something needed to give soon. While the mist was
beginning to dissipate, it wouldn’t go away completely in time to save him, not to mention he was likely growing more weary. Sierra didn’t know if this was accurate or not, the face still betrayed nothing, but maintaining shields for this long needed to have some kind of physical consequence.

The Andromedon was glowing blue again, with hands held up by his waists, palms upwards and fingers curled. Ever so slowly the fingers closed and Sierra didn’t know what he was doing until Anna gasped. “Look!” Sierra looked to the barricade where the robed man was standing and suddenly clutched his chest and then the barrier broke completely.

He gasped, and Sierra could hear the sudden crack from up here as all of the bones in his chest seemed to break. And in the matter of half a minute, the body just seemed to compress on itself. The neck jammed down into the torso, the legs were bent up at awkward angles, and the hand which had covered the chest broke through the cavity and pulled most of the arm itself in.

That was when Sierra saw what was happening, just as the rest of the body was swallowed with final crunches. What emerged was a floating black orb which maintained an almost white halo around it, and all of the mist which was around it began to be pulled around it, creating a swirling effect.

“Is that a black hole?” Jim asked in disbelief. “Get back everyone, now!”

Sierra didn’t feel a pull of gravity, but she was not taking chances with this. She looked to the Andromedon who was back to normal, and with his work apparently complete, turned away and pressed a button on his wrist. He vanished from sight a few seconds later. Their concerns about the possible black hole turned out to be groundless as it eventually shrunk and just as quickly as it appeared, it vanished without a trace.

There was some fighting still going on, but it was clear who the victors would be now.

“So,” Anna said, reloading his weapon and looking around. “I don’t suppose you know what that was?”

Sierra had an idea. There were enough reports by Aegis, and she’d talked to enough Andromedons to know that there was maybe only one thing which fit that description, and what worried her was that it was definitely not an ally, regardless of it helping in this particular instance.

“I think,” she said slowly, looking to the space the Andromedon had been. “We just saw our first Special Operator.”

***

Beijing – China

3/12/2017 – 5:42 P.M.

“Got more Baptists incoming,” Oliver called out as he shot down some of the charging Converted. Some of the altered suicide variants exploded close to where ADVENT was trying to set up a defensive position. ADVENT Officers and soldiers yelled for backup as they were charged by more brainwashed civilians.

David and Kane moved to assist, their weapons spitting hundreds of rounds into the creatures even as behind them came more of the Baptists. The city square they were pushing into was a key place of importance, given its proximity to Tiananmen Square itself, and how easily it connected. The defenses had only grown more and more difficult and ADVENT was losing soldiers by the dozens in trying to push forward. Alisa had been injured when a Baptist severed her arm, and a few more
had almost taken out Axis by rushing him.

To make it worse they weren’t the standard brainwashed civilians either, but had been altered significantly. Their bodies were clearly degraded and falling apart, and it appeared like they were continuously being possessed by some kind of Ethereal presence. Their eyes glowed blue and oddly colored brands and markings covered their faces and bodies.

More unsettling was the faces that still somehow smiled.

They were faster than they appeared though, extremely fast, and only kill shots seemed to permanently put them down otherwise. Like the Baptists, they would keep moving until death (though not quite as violently). After a few encounters with them, it became clear that their purpose was to spread the psionic plague that gripped the population.

They tried to overwhelm single targets and then force a connection which would then infect the individual with the plague. Sometimes it worked, and already ADVENT had already been forced to kill some of their own due to it taking hold. Axis had been there to confirm, and they couldn’t take chances that it could be cured or reversed – Axis himself had stated otherwise.

The other use was as psionic suicide bombers. They would rush forward and then explode their bodies in a wave of blue-purple energy. Neither Oliver, nor anyone else, could tell which one was which, and it seemed to be a random decision – whatever would be the most successful.

“How many?” Geist demanded as he erected additional barriers to trap a number of the thralls, before crushing them with another barrier from the top. His voice was strained, as he’d primarily been the one to fight one of the robed Weavers as they were called earlier. That had been a difficult battle where a good part of the ADVENT force had lost their minds before Geist got it under control.

The most effective counter to the Baptists so far was Angelina, who deployed enough nanites to destroy it in minutes, and the amount of materials around made replenishing her stores simple. Daas’s Shoggoth was also useful at taking down the larger Baptists even if it had suffered a number of injuries and was pulled out while it was being healed.

Tanks fired in vain attempts for the main guns to hit one or more of the Bringer’s soldiers, while the autocannons did everything they could to mow down the mobs of thralls. Although that was sometimes not enough to stop them from being damaged by the psionic explosions of the psionic thralls, or attacks from Baptists, telekinetic or otherwise.

Oliver reloaded his weapon, another magazine depleted, and he’d had to retreat to fill up his ammo soon. He’d lost count of how many kills he had, how many rounds he shot, or anything like that. It had been hours upon hours of endless combat with them inching ever -closer, and this was yet another wall they would eventually break through.

He really missed fighting regular aliens right now.

A flash and one of the lightly-robed Stalkers materialized and was followed up by Fiona appearing right in front of the alien, sword drawn and surrounded in a green-blue aura. The Stalker was alternating between some kind of psionic hand cannon, and a thin bladed weapon. Another Stalker appeared and attempted to strike Fiona who dodged and whose counter was subsequently dodged easily.

The trio continued dueling in a way which was difficult for Oliver to follow in the heated battle. Worse still since there was a constant rate of fire being exchanged but little heed seemed to be
taken by those fighting. Oliver could swear he saw projectiles that looked like they were going to hit Fiona suddenly dissipate in a green flash.

They kept disappearing, reappearing, over and over that he didn’t know how any of them kept track of it, but he knew this was not his fight, and there were Baptists coming. He realized he hadn’t answered Geist’s question. “At least four,” he said as the armored soldiers approached. “Possibly more behind, I can’t tell.”

“MECs should be called to move the line forward,” David called. “We’re still in a stalemate. Or the Order. We’re just going to be stuck here otherwise!”

“Negative,” Geist answered flatly as he lifted a hand and a half-dozen purple barriers materialized which were immediately stormed by ADVENT soldiers. “Liuxian and Richards are holding positions themselves. Moving them would compromise other operations. We will need to make do here.”

“Understood,” David growled, as he blasted another of the psionic thralls back, which subsequently exploded in a smaller wave of energy. “They can’t have many more here.”

The Baptists broke into charges, several of them glowing with psionic energy, while others manifested psionic shields in front of themselves. Most carried long or greatswords, one carried a warhammer. All were either Human or Vitakara. “Angelina, Baptists incoming,” Geist said firmly. “Oliver, Symbiote on my mark.”

“Only think we have a few of these left,” he warned, pulling out the grenade. “Ready.”

“Now!” On his mark, Oliver threw it towards the oncoming armored soldiers. It exploded and caught one of the Baptists who roared furiously as she began melting it with psionic energy. “Concentrate fire on the stuck one,” Geist commanded, motioning his hands to trap all of the other Baptists in stasis fields.

A simple tactic, but one which would only work temporarily as they still possessed a command of psionics without moving. Every gun turned on the stuck Baptist, and the sheer amount of fire was enough to turn the once-pristine armor into a battered and scoured hunk which leaked red blood. A sharp laugh suddenly permeated the area, one which he also heard in his mind.

“Must be a Weaver,” Oliver muttered apprehensively. No one else was deranged enough to make that noise in the middle of battle.

“Isolating it,” Geist answered immediately. “This one is different. Stronger.”

“It might have a mask,” Oliver said. “Those ones appear to be their elite.”

“I’ll handle it,” he said tightly. “You will need to handle the Baptists.”

“This’ll be fun,” Angelina said, rushing up, a golden-tinged mist flowing off of her which headed towards the oncoming Baptists who were going to crush into the ADVENT lines. “Oliver, take the right one!”

He concentrated his fire at the figure as it reached out and clenched a fist, lifting and throwing a squad of ADVENT soldiers away while compressing their bodies. The nanite rounds hit his chest and began eating through it. A golden mist descended on the Baptist, and it began eating through it as well. Thralls continued to follow, punctuated with Converted at random intervals. Most fell to machine gun fire, but many did not.
There were so many dead bodies that piles were forming on the streets, hundreds from the thralls, and dozens from ADVENT who were at least being moved regularly to clear more room. This seemed to trip up the thralls at times, but the Baptists had no trouble navigating the mass of corpses. Oliver tossed a plasma grenade towards the Baptist and then shot it in the air when it was caught telekinetically, ruining a good part of its upper armor.

“Got a fix on the Weaver in the back,” Kane said in clipped tones as he was fighting off another charging Baptist. “Masked. Walking forward. Many thralls.”

The conflict continued for more minutes, with the lines breached and the three living Baptists still fighting furiously. This was taking too long. “Something’s wrong,” Angelina said. “They should be dead by now.”

Worse now, Oliver was beginning to feel awful, and not due to exhaustion but real, scouring pain which seemed to engulf his whole body. Oddly enough he felt humid and sweaty, which was probably true, but closer to what it felt like to be melting with how much water he was losing. His eyesight was getting worse too, and it didn’t make sense until he put all of the symptoms together in one terrifying conclusion.

“It’s a biopath!” He shouted, as ADVENT soldiers suddenly collapsed around him in pain on the ground, him taking every ounce of strength to keep standing and fighting. That explained why the Baptists weren’t dying and his symptoms. If they didn’t get out of here now…

Kane and David were moving back, though David stumbled, and gave the Baptist the needed opening to smash the warhammer into his head, forcing him to the ground, and following up with another shattering one. Angelina seemed to still be in largely working order, although that was probably thanks to the nanites that flowed through her body.

Geist was backing up too, and now faced with another Baptist, but failing to keep it contained or his concentration up as trapping barriers broke with less difficulty as the Baptist burned through them with corrosive psionic energy.

“We are under biopathic attack,” Oliver said into the comms, thinking that maybe someone could send backup. “Repeat we are under a biopathic attack. Taking significant casualties!”

The Baptist reached Geist and grabbing the stumbling soldier, and stabbed him straight through the stomach. Before Oliver could even process what had happened, Geist gripped the Baptist on the shoulder and a barrier materialized and severed the Baptist in half vertically. Both Geist and the two pieces of the Baptist fell to the ground, the sword still very much in him.

Oliver’s body was on fire, and he knew trying to take off his gear for possible relief was only going to make it worse, so instead he stumbled to Geist who was reaching for a non-existent med-kit, having forgotten he’d used it once before.

“I’ve got it,” Geist wheezed, his voice still tight and under control, betraying nothing of the pain he felt. “Get everyone else out of here before it gets worse-“

He was cut off as something roared overhead; he looked up to see something which shouldn’t be anywhere close to here – a Collective UFO. Aegis? Oliver knew XCOM had his ship stored somewhere and it was that kind, but Aegis was still maintaining the barrier…

Alternatively, they were definitely going to die now if it wasn’t a friendly.

Generally speaking, Collective UFOs weren’t friendly.
His heart sank when a cavity opened underneath it and an Ethereal that was not Aegis or Caelior fell out. This one in fact didn’t seem to be armored at all, or very lightly armored at best. A weave of some kind if he had to guess which resembled robes but with more freedom of movement. It stood out because it was mostly white – and the Ethereal in question had no helmet or hood.

It landed on the ground lightly, the drop not affecting it in the slightest. The atmosphere suddenly changed as a noticeable aura grew around the Ethereal, most noticeably around the arms and hands. Oddly enough, Oliver didn’t feel threatened by the Ethereal, but much calmer and somehow able to think more clearly.

His body, while still hurting, stopped feeling like it was on fire. The Ethereal looked around and extended its hands and the distortion around the Ethereal became more pronounced and he went from feeling ‘not on fire’ to the pain actively dissipating over the course of minutes. The Baptists immediately changed their targets from ADVENT and XCOM soldiers to the Ethereal who Oliver was now sure wasn’t an enemy.

Hopefully.

They charged the Ethereal and it lifted an arm and the Baptists suddenly became much slower until they were practically frozen statues. “Shoot them,” the Ethereal called – distinctly female to Oliver’s surprise. “They will not stay as they are forever.”

Reinvigorated, Oliver and the remaining ADVENT and XCOM soldiers fired into the statuesque Baptists and their armor shattered after several volleys, and their skin followed suit having somehow been turned brittle – this Ethereal must be a biopath too. It was like a bloody pinata – as the skin shattered, the internal organs and bones fell out. The heads were shattered soon afterwards leaving behind blood-stained statues of hardened flesh.

Geist had painstakingly pulled the sword out of his body, and was also somehow standing with only some blood around his stomach to show for his wound. “Unexpected,” he coughed. “But not unwelcome.”

“Who is it?” Oliver demanded as the Ethereal walked forward with the ADVENT soldiers rallying behind her, with most of XCOM as well. The air was almost electric and Oliver could see the Weaver outright fleeing at the sight of the Ethereal.

“That, I believe, is Sana'Ligna,” he said slowly, musing. “It appears she’s come to help.”

***

Beijing – China

3/12/2017 – 4:12 P.M.

One shot, three kills.

“Come on,” the Hunter muttered as yet more of the thralls died. “At least pretend to try and win!”

This was so absurdly easy he was close to going to sleep.

Well, perhaps a bit of an exaggeration, but he really did not know what the Bringer – or Isomnum – was thinking here. Mass swarming tactics were not going to work on ADVENT unless their lines were broken first. Granted, they were probably doing their best after deciding to trap themselves in here for some reason, but it was still a complete waste.
He missed going on the comms and taunting. He would have loved for Isomnum and the Bringer’s pawns to hear him mocking their idiotic efforts and strategies. He probably could have, but this was one time where he’d restrained his impulses and decided to keep himself off the comms. He wanted as little attention on him as possible, and that went for ADVENT and XCOM too. They might think he was just gone, or had never showed up, but he didn’t really care. His own life and safety were more important, and the Bringer was something he was not brave enough to fuck around with.

He knew he was a bit arrogant and overconfident, but he also knew when to drop the jokes when needed.

So he’d instead compromised by just pretending to be on the comms. It was disappointing how no one would hear him, but he would still make some good memories here.

“Oh, what have we here?” He chuckled as he saw one of the Weavers come out, flanked by two Baptists and a host of Converted and…the corrupted psionic thralls. *Exalted*, that was what they were called. A host of Converted and Exalted accompanied her. Well, time to give ADVENT a show even if they didn’t know it.

The Weaver was the most dangerous one, but shooting her right now was the wrong move. Would draw attention to him and he didn’t care for that right now. The army charged into the streets which were filled with corpses. He chuckled as the tanks in the streets instead elected to speed up and just run them over.

It didn’t get all of them, but it did make a satisfying sight to see the puny weak Exalted get crushed under the treads after getting mowed down by the autocannons. He added his own support to the mix by shooting the suicide-bomber Converted which took out a decent number. He also helped pick off the ones which escaped the treads and weren’t immediately picked off by ADVENT.

The Baptists were charging forward, and the Weaver was likely getting ready to attack, if she wasn’t already. In any case, she was now vulnerable. He had something special for her. A gift from the Battlemaster from the Vaults of Desolan. There was so much down there that for once he’d been in awe – and understood that psionics was not necessarily the end-all be-all of power.

He switched out his clip with the ammo. The Battlemaster hadn’t actually explained what it was, only that any psions who were shot with it would be crippled permanently without immediate aid. So far, it had held up. He was so happy to have a weapon that seemed tailor-made to kill the bitch’s army. One face lined up in the scope and…

*Fire.*

As expected, the round penetrated and the moment of penetration was accompanied by a puff of blue mist around the chest which the Weaver breathed in even as she gasped in pain. Or pleasure. The freaks seemed to not know the difference. “Oh, you liked that?” He asked, lining up a shot to her face this time. “Have another.”

Her head exploded into red mist. He grinned as dopamine rushed through his body. *Now that’s good, very good.*

Funny how he was getting so much more satisfaction from killing supposed ‘allies’ than attacking the ‘enemies’ - ADVENT and XCOM.

He wondered why that was.
Sure, he couldn’t have claimed to have the best of histories with the Creator, and his relationship with the Ethereals could be at best classified as mixed. Some of them were fine, like the Battlemaster, but most of them were idiots who relied too much on their ability to read minds or destroy planets. Or tampered with things they didn’t understand.

Ethereals were meddlers. Sometimes it worked. Sometimes it backfired.

He hadn’t failed to notice the eyes looking down from the sky, and he was pretty sure that wasn’t the Bringer looking down on Beijing. No, it was something else, and he was going to be rather glad when he left this place. It was an uncomfortable feeling at times, even as shrouded as he was telepathically. But it was an illusion, nothing more. At least for now.

Well, the truth was that in the end, he liked the Humans. He could respect that they didn’t just roll over and die like the Vitakara had, and were smart enough to do so effectively, unlike the Mutons. More to the point, they could hold a conversation, and there were certain people who he felt he could actually relate to. Granted, the Humans still largely had the same reservations on killing and death like most sapient life, but he’d done some research, and there were a few Humans, mostly criminals and soldiers, who understood the art and joy of killing and death that only someone like him could appreciate.

Humans were a species of war and conflict, much as they wouldn’t classify themselves as such. At least before ADVENT either. He respected how they were taking advantage of their natural desire for war.

Fighting against them was…well, depressing at times. It tempered his enjoyment when he killed them in droves. Ironically, he felt like his own skewed moral compass was affecting him here, if one existed inside him. When put side by side, between the Collective, the Bringer, and the Humans, the answer to the question of who really should be eliminated was pretty fucking apparent.

Gah, he still had two Baptists to take out.

“A bullet for you,” he shot into the back of one of them. “And a bullet for you.” A second round slammed into the neck gap between the helmet and breastplate. Neither full kill shots, but he waited a few seconds, then half a minute, and allowed a laugh when he saw them stumble back when they breathed in the blue poison.

He really, really hoped it prevented them from going into heaven, or whatever they believed the Gestalt was. Dying in fear and anguish was the minimum they deserved.

His ears pricked and a flicker of fabric caught his ears and a millisecond later the buzz of electricity sparking made him spin around and see something he’d expected for a while now. One of the Stalkers behind him, who had appeared right into his trap and was being shocked with a lethal amount of voltage.

He laughed and shut off the voltage before lifting a foot and stomping down on the head with all his strength, crushing it to a pulp. “Tell the Bringer I said hello,” he said lightly as he hauled the corpse to the edge of the window he had been aiming out of and threw the corpse down.

Unfortunately, this meant it was time to move since there might be more.

He’d really expected more than one Stalker to come after him, and it spoke to how much ADVENT was demanding Isomnum’s attention otherwise he felt he’d have been attacked long before. Although really, did the Creator really think he was going to not expect some kind of revenge for so elegantly blowing the lid off her operation?
A whistle reached his ears and he leaned back and saw another Stalker appear – this time in the back of the apartment room before the electric trap he’d devised. He spread his arms wide, teeth bared under his helmet. “Well, well, the Creator has found me. Oh no, whatever shall I do?”

In his head he counted down the seconds as the Stalker drew his weapons. “Idiot, you fell into my trap again.”

At his words the Stalker looked around in a rush which was all the time he needed to pull out his pistol and shoot the idiot right in the head. At this distance he could have done it with his eyes closed. Ah, perfect. The only thing better than a trap, was making a target think there was a trap, and then killing them when they focused on that and not the most lethal sniper in the galaxy.

A title he felt he’d earned.

And then stepping out of a psionic portal came his nemesis.

Occidera held her blade in her hands, suited for combat. He sighed. “Good to see you, sister.”

“You have caused enough trouble,” she growled, a hand raised and rippling with restrained purple energy. “It is time for that to end.”

He stared at her, bemused. “What are you even doing here anyway? Were you here before or after the barrier went up?”

“Irrelevant,” she answered coldly. “My only directive is your containment.”

“It appears the bitch still can’t use her brain,” he said, amused as he twirled the pistols in his hands, a second joining the first. “Good luck bringing me back, not unless you want the Battlemaster to stop playing around – trust me, your Creator and Bringer are more vulnerable than you think.”

“Oh, you don’t worry,” she hissed. “I’m only to keep you contained. I don’t need to bring you back. Nor will I kill you, if that was possible at all. But if I keep you merely…contained? Well, the Battlemaster won’t do much about that.”

“Ah, poor you,” he chided. “Unfortunately, I’m not under any such restriction.”

“Do not forget where you came from,” the Assassin warned extending a hand. “You were born from the Creator, and she controls you now and forever.”

He felt his body begin to tighten up as if slowly freezing. “The Legion is bent to the will of their Creator,” she said, stepping forward to the frozen Hunter. “And she has gifted me with the knowledge to deal with pests such as you.”

Now this would be an extremely concerning development, and he couldn’t exactly say it felt that great. His own body betraying him like that? The Creator putting in a backdoor to maintain her control? Who could possibly have seen this coming?

He was really sick of certain people thinking he was an idiot who forgot who he was dealing with. The bitch was insane, but she was unfortunately intelligent in the sciences. He’d have been a fool to think she hadn’t implanted some little control measures in him. Luckily, she lacked the foresight to apply them where it really mattered.

With a hand the Assassin clenched a fist and shattered the electric traps which he’d set up. Now, there was a timer, but he really needed to show off right now. “Oh sweet sister, you haven’t learned a thing,” he said, moving a finger down to a button on his wrist, triggering the poisoned
frag mine implanted in the ceiling.

“How-“ she gasped before the ceiling exploded downward and coated her in a fine blue mist with some metal shards that damaged her lighter armor. Pistols in hand he unloaded with the poison-laced bullets, each one striking true against her joints, chest, neck and hands. Her body twitched and bled as she writhed on the ground, right as the poison took hold.

He strode through the mist, his helmet allowing him to breath without harm, laughing at his wounded sibling. He pulled out a knife, one laced with the poison and slammed it down on her wrist, pinning it to the ground. “Feeling a little down? Short of breath? Disconnected? Ah, don’t worry, I’m not going to kill you today. Don’t have the time, or the resources.”

He holstered his gun and lifted a finger. “Now, did you really think that I was just going to not investigate what I’m made of? Let me tell you, Revelean found my biology fascinating, if concerning. The Legion you call them? Well, it’s infeasible to completely replace all of it. But some? Well…”

He absently fired a pistol, shattering her kneecap. “Let’s just say that having a Sovereign who specializes in nanotechnology is exceptionally helpful in supplementation, especially when Fectorian was all too willing to experiment. So let me guess, you wanted to come here, planned to freeze your little slave-cells and call it a day?”

She didn’t answer, as she wheezed and gasped heavily. He grinned. “Oh, having some trouble breathing? Let me help.” He went over to his bag, whistling a tune and pulled out a grenade and walked by over. He considered just shoving it in her mouth, but she’d probably bite, so he instead shot her lower jaw off leaving a bloody line where it had been. Satisfied, he stuck the grenade in her mouth and pulled out the pin, and it spewed more of the poison into her mouth. “There we go.”

Oh, he was enjoying this way too much.

“So, let’s make this crystal clear,” he said absentmindedly, not really caring that she was too delirious or in pain to really listen. It wasn’t for her anyway, but whoever decided to extract her memories afterwards. “I. Am. Your. Enemy. You come down on Earth again, and I will be there to fuck up everything you do, and I guarantee the Battlemaster will look the other way. And please, stop underestimating me, because you suck quite a bit when you can’t rely on your purple space magic.”

He reloaded the pistol, continuing, and sitting down beside the body. “I know everything of your little cult. Your so-called Saints, your Orders, your experiments, everything. Your strengths and weaknesses. I know how to hide myself from your all-seeing god. All of you are so completely pathetic it’s hilarious. You can’t get anyone to join your insanity, so you go after weak-minded civilians. How does it feel to be the most hated thing in existence right now?” He gaffed. “You have to be really idiotic to think that little show in Korea would go down well, much less China.”

While part of this rant was definitely aimed at the bitch and the Bringer, it was something he really wanted to yell at the Imperator who was definitely just as guilty. But time to wrap it up. He wondered if he would actually kill her. On one hand, she’d be dead, but on the other, no one would hear his excellent speech and that was a shame.

Well, he was recording it, but he felt the Battlemaster wouldn’t really approve.

But there was Twitter…

Ah, something to debate later.
“Alright, I’ve got a few more cultists to kill,” he said, standing and going to his bag and pulled out a plasma saw. While he hadn’t really intended to use it on his sister, and wanted it more for cutting sniping nests and planting traps, it was going to be more useful. “Let’s delay your regeneration a bit.”

So wounded she was that she almost didn’t react to him removing her limbs. With some rope, he wrapped it around her head until he made a noose, dragged the leaking torso to the window and tossed the twitching body out, the poison grenade still lodged in her mouth. Once he was satisfied with the length, he tied it to the window.

He sincerely hoped anyone looking up would appreciate the message – and that the Creator got the message.

But his place was compromised now. Time to move shop and help some more Humans.

Humming a lively tune, he packed up, ecstatic at how the day was going. He knew that one day he would look back fondly on it as one of the best days of his life.

Although he did have to survive it first.

***

Beijing – China

3/12/2017 – 7:14 P.M.

The march continued; unstoppable and unrelenting.

They had cut their way through hundreds of brainwashed thralls; lost or suffered hundreds of wounds and deaths, and paid for every inch taken with blood from enemy and ally alike. Kaya had never thought she would participate in any conflict so bloody, and she didn’t know if there was a similar point in Human history that could compare in scale and loss of life.

War was…not specifically sanitized now, but certainly beyond the archaic times of the medieval era and earlier. Weapons were more lethal and technology advanced to the point of quick and deadly strikes. Mass armies weren’t as common, nor were invasions. Fighting had been transitioning to be automated before the aliens came. Even now combat had been largely waged across the distance.

But not here, not now.

And the fact that the Order of Terra existed showed that there was still a place for this kind of brutal close-quarters combat, if updated for an era of rifles and laser guns. That was no more apparent than a full day of fighting almost non-stop. Her body was exhausted, but she had reached a numbing point where she barely felt it.

It helped that now they were supported by some group of ADVENT psions she’d never seen before. A good thing too, because with the noose closing around Isomnum, they needed all the help they could get. And she felt the change in atmosphere the closer they got to the Square. A pit of unease; of foreboding growing inside her.

Terror.

Sometimes she thought she was seeing things that weren’t there, or corpses were twitching when they shouldn’t be, or that something was coming on her right now and she needed to shoot it just to
be safe. Paranoia and fear were growing in her, in all of them. Nothing she could easily point to either; just a nameless call of the unknown.

*You can’t take chances. You cannot die today.*

A voice whispered in her head, relentless as it grew louder and louder the closer she got.

In battle, she could push it aside. But when it died down, it was more difficult.

Yet the urges came out of nowhere and even stronger – it was taking everything she could to focus her mind on the here and now, and some of the other soldiers weren’t so disciplined. Already there had been several accidental deaths, and even more accidental wounds. She was proud her own unit was still keeping it together, although Genevieve had admitted that she’d *almost* struck her one time when she was sure something was creeping behind her.

But everyone was getting tired, even as they felt a surge of renewed energy with the end in sight. Blood of multiple species coated the shields, weapons, and armor of the Order of Terra, and many of the ADVENT soldiers assisting them. The treads of the tanks were tarnished with blood and gore of their own. Everywhere they stepped Kaya felt like they were continually treading over corpses.

*So many dead.*

It was difficult to believe that the urban landscape didn’t change, not since they’d started. There shouldn’t be this many dead in one place. Had she not been standing in it herself, she wouldn’t have believed carnage on this scale was happening. But it was very much real, and it wasn’t over yet.

But the end was in sight, she knew it.

The city intersection they were fighting to claim was under some of the heaviest guard, and in return ADVENT had sent their best to assist. Tanks attacked from multiple streets, the shield lines of Squires fired unceasingly, the MDUs continued meticulously eliminating enemies with mechanical precision, and the Priests behind them shielded their minds, ravaged the enemies, and showed the power ADVENT itself could bring to bear.

None so impressive as the special forces unit that had been sent to assist them. A *psionic* special forces unit. The Pantheon they were called, a name that she’d found interesting until she saw why they were called that. They did not hold to the uniform nature of ADVENT, and their armor was unique to each member.

There were also several soldiers from XCOM, though these ones wore armor that looked like it was made of stone. They stood out to her for some reason, likely since they were not even using a standard kind of psionics, but these were tinged in blue, not purple, even if they were clearly the same abilities.

In times like this, she felt unmatched when she witnessed these masters of a power that was as alien to her as magic face off against the shining soldiers of the Bringer who maintained a similar mastery. The conflict facing them now was fought on a level where she could only fire and pray she was helping.

“Got more thralls incoming,” Vicki coughed as she fired her rifle from the shield line. “Baptists are engaging the Pantheon and XCOM.”

“Hold line and open fire!” Freya commanded, along with the other Standardbearers. “Soldiers, fire
It hadn’t taken long for ADVENT to form a symbiotic relationship with the soldiers, as when the shield wall held position, the soldiers went up to between the gaps and added their own firepower to the avalanche of lead that was being flung towards the enemy. Kaya and most of the ADVENT snipers had taken up places on the tanks, and took out priority targets.

“Kaya, situational report,” Freya demanded.

“XCOM soldiers causing significant distraction in the ranks,” she reported. “Pantheon operatives Ares and Zeus focusing down a half-dozen of the Baptists.”

Which didn’t do justice to the battle playing out. The operative who’d called himself Ares was close to the largest man she’d ever seen, carrying a warhammer that was probably taller than she was. He also appeared to be a powerful psion as well, judging from the actual creation of a damaging psionic aura which she noted was hurting those around him by causing purple tears and rifts. The sweeps of his weapon were also augmented with psionic waves which extended their reach.

In any event, he was successfully managing to fight of three of the Baptists due to his sheer ferocity in getting in close quarters with them. The operative calling herself Zeus was less engaged at the front, but an extremely dangerous force to be reckoned with. She stood out because she was hovering in the air telekinetically, her armor was lighter, more curved, and white as opposed to the hard red and black of Ares, who looked like a walking tank in protection.

A purple distortion flowed around her as well, and she was summoned psionic maelstroms of sizes and intensities which even the Baptists were struggling to counter. They attempted to counter by firing psionic energies up at her, but were thwarted when a psionic shield manifested and blocked it. She’d responded by summoning a maelstrom which ripped the Baptist apart.

On the other side the XCOM soldiers were fighting their way towards the robed figures that were called the Weavers. There were three of them and they appeared to primarily be using their thralls to put bodies between themselves and the soldiers. It was not working.

The number of thralls charging the shield line was thinned through sustained fire, and the snipers with tank autocannons turned the remainder into shredded meat. By now they knew enough to priority target the Converted and the psionic thralls. It did help that the Squires were armored enough that even the psionic suicide bombers wouldn’t kill them outright, just damage them severely.

“Be advised that there will be airstrikes incoming shortly,” the voice from ADVENT Command said. “Targets are infrastructure alien forces are taking advantage of.”

“They’re targeting the Square!” Genevieve whooped with a ragged cry. “We’re almost there!”

Airstrikes had been taking place in the past few hours, although they appeared to largely be targeting chemical plants to release poison into the air and poison any thralls in the area. Their filters would work, but Kaya couldn’t say she liked the idea. But if it would reduce the fighting… well, it was justifiable.

A few minutes later, she saw orange streaks fall from the sky and into the city away from her. They all felt the reverberations seconds later. The Weavers were reached by the XCOM soldiers and while they tried putting up a fight, they were killed seemingly without much trouble. The Baptists were also falling, unable to fully stand against the psionic power arrayed against them.
She lined up a few shots of her own, and fired when openings showed. She hit one, which likely
did nothing more than distract it, but it gave Ares an opening to slam upwards with his hammer,
and then down fully on the head, crushing it.

It seemed like it was starting to snowball in their favor. Victory was in sight, only a few short
blocks away.

“March!” Freya and the Standardbearers ordered, and the line began advancing once again as the
Baptists were eliminated with help from the XCOM soldiers.

Soon, the nightmare would be over.

They just needed to survive a little longer.

***

Tiananmen Square, Beijing – China

3/12/2017 – 8:19 P.M.

The noose had tightened, and Tiananmen Square was now under direct siege.

Defenses had been prepared, and the normally open square was now covered in barricades and
improvised cover, the revelry of the previous day abandoned and the litter and food from the event
left to rot. Thousands of thralls still packed the square, along with many of the Converted.

The soldiers of the Bringer were about to make their final stand, and they would not go quietly.
ADVENT couldn’t identify how many were left, but they estimated that it was under thirty.
Isomnum had also not been spotted yet, though his presence was nonetheless apparent as even the
telepathic might of the Priests, Agents of T’Leth, and now Sana’Ligna couldn’t completely
suppress the feelings of terror and flight which gripped every individual at some point or another.

The front lines of ADVENT stood, broke, and reformed multiple times; overwhelmed initially by
the overload of psionic permeation, the marching thralls, and the aftermath of the feasts which still
showed blood and parts of Humans strewn around. Not everyone could withstand the sheer power
of the Dread Lord – but most endured.

Cracks of gauss weapons and flashes of green were seen from the ADVENT lines, firing into the
oncoming rush of thralls. Purple psionics flared in the skies from both sides as the Baptists were
attempting to distract Caelior, while the Pantheon, Priests, and XCOM were firing psionic rifts and
lances into the midst of the mobs.

“Fire!” Came one of the orders, and the line of Purifiers besides Oliver unleashed streams of white-
orange flame that incinerated the charging lines. He did his own part, firing into the crowds of the
Converted who followed. The MECs were back with them, and also firing streams of napalm into
the mobs from the alleyways, encircling them in a ring of fire and death.

Kane was taking the lead directly into the Square, a number of Order soldiers and ADVENT
squad behind him. Axis assisted by ensuring those following him – not Kane himself – were
shielded telepathically. So many offensives were taking place at once it was impossible for Oliver
to follow all of them. Sana was a short distance away, petrifying the front waves of thralls and
healing the wounded.

Overhead, Archangels roared and performed sweeping attacks of flame and psionics. Viktoria
turned nearly an eighth of the square into a rippling psionic maelstrom which turned everything
inside into shredded meat, bones, and metal. The Chronicler led his Agents in direct combat against
the Bringer’s soldiers, each one seeming to be possessed of unearthly power and might.

Tanks reached the front lines and began plowing forward, no longer afraid of the mobs as the true
threats were being targeted by T’Leth and XCOM. Those who weren’t completely shredded by the
autocannons fell under the treads of the tanks, crunching and breaking like toys. Blood flowed
from behind the tanks, and those who were still alive and crawling to attack were executed by the
legions following behind.

Caelior was attacking from another angle, and he was determined to end the fight.

“Come out, Dread Lord,” He roared, floating in the air and rippling with a telekinetic shield. The
thralls around him were flattened to the ground, and with a flick of his hand several Baptists were
clumpled into balls of flesh and metal. “You can hide no longer!”

Hands extended to all directions, and slowly squeezed into fists. The ground itself rumbled as
Oliver realized what Caelior was doing. There were three buildings in the Square; three ones which
were important places to the Chinese government and people – also where many were hiding
including Isomnum.

And Caelior was going to tear them apart.

ADVENT soldiers cheered when they saw what was happening, and attacked with renewed vigor
as they advanced foot by foot over a mound of twisted and broken bodies. To their credit the
Bringer’s soldiers attempted to attack Caelior psionically, but psionic shields erected by Priests and
XCOM psions put a short end to that, as well as the Chronicler closing in on the final main group
of the Bringer’s forces.

Oliver saw Fiona flash in and out at times in the midst of the battle, sometimes dueling with one of
the Stalkers, sometimes coming in to provide a swing of her sword and had killed several thralls.
What he also noticed was that sometimes she appeared around some of the Baptists, and instead of
attacking, got behind them and teleported away with them in her grasp.

The three buildings shook, and dust and stones began to fall from their skeletons as the
compression began to take hold. Cracks formed in the entire exterior of the buildings, and they
only spiderwebbed further as time progressed. Those who were inside were rushing out, realizing
that there was no safety, no escape within.

Oliver knew that there were going to be many people who had once been part of the Chinese
government found among the dead. Or perhaps it was better that they wouldn’t be recognized here,
and simply be unrecognizable. Perhaps everyone who had been inside was now dead on some
random street. Whatever the case, there were fewer and fewer bodies to be thrown, and now
ADVENT soldiers were so desensitized to the horror they already experienced that putting down
former members of a foreign government wouldn’t phase them.

Not after they’d had to put down women and children.

Oliver swapped out his clip and resumed firing into the mob, something he was good at now. The
joints were ideal targets, particularly the legs. When they went down, it was much easier to kill
them as they crawled or they were run over by the tanks. Over half of the Square was taken over,
with the Chronicler and Pantheon pushing far ahead.

It was difficult to even see the Chronicler, so encased he was in his own personal psionic
maelstrom which ripped apart any thrall which came before him. Crevan was standing on one of
the tanks, and calling down lighting strikes on the exact locations of the Bringer soldiers; they no longer came from his fingers either, just one hand raised to the sky while the other held the staff with the Sovereign Orb blazing a shining blue at the top.

One of the buildings – Oliver didn’t know which one – suddenly imploded on itself with groans, and the sound of shattering concrete and bending steel. With a triumphant roar, Caelior lifted the hand directed towards the building, and it lifted every piece of the shattered building, and slowly coalesced into a massive collection of concrete and steel, which he threw into the northmost building which nearly broke it then and there.

“That flushed him out!” He heard Sierra on the comms say. “Isomnum spotted!”

“Where!” Kane immediately demanded.

“Just came out of the building Caelior hasn’t trashed, got a small army of Baptists with him. Nothing that can’t be handled.”

“Heading that direction,” the Chronicler stated. “We’ll handle him. T’Leth wants his mind before he is executed.”

“Daas!” Kane called. “Follow me!”

Their Shoggoth Handler was still with them, and the black animal was having quite a bit of fun it seemed, turning the thralls – and a few Bringer soldiers – into pretzels. Daas was firing his own plasma rifle, but came to assist as Kane began pushing forward with his small entourage. Oliver scowled, wanting to call him off, but also knowing Kane probably wouldn’t listen.

Might as well help him out, and there were mostly only thralls left.

He told one of the tanks to follow his lead, and riding on the top of it, directed it to carve a path to where Isomnum had been spotted. And from the top, he could see what was happening. Isomnum glowed with psionic energy as did the Baptists around him. Even from this distance, still telepathically protected, he felt a wave of nausea and fear appear and disappear just as quick.

The Chronicler blasted a wave of psionic energy forwards which vaporized one of the Baptists, while others protected themselves with psionic shields. The other Agents began their attacks as well and one of them unveiled a Sovereign Orb glowing from a box, telekinetically lifting it into the air as it glowed brighter.

The Baptists suddenly stopped and fell to the ground, clutching their heads as if puppets with strings cut off. Oliver didn’t know what had happened, but it was clearly painful for them. The Chronicler and his men showed no mercy, and executed each Baptist one by one as they marched on Isomnum who backed up, and attempted to summon some weak psionic attacks.

But there was no escape, as the building he had exited out of crumbled under the power of Caelior. The Chronicler extended an arm, and Isomnum was lifted slightly into the air, and then forced to the ground on his knees. Oliver felt like they were saying something, but he was too far away to even begin to guess what.

The Sovereign Orb was telekinetically moved to the hand of the Chronicler, and without ceremony, he grabbed one of Isomnum’s hands, and placed it on the orb. Isomnum seemed to freeze, and then went limp. In a few minutes, they had reached the Ethereal who was almost certainly having his mind ravaged by a Sovereign One.

The Chronicler saw Kane and his entourage coming and held up a hand. “No! Not yet!”
“When!” Kane demanded, throwing aside his Browning as Oliver jumped down from the tank and rushed to intervene. “You will not keep him alive!”

“Alive, no,” the Chronicler said, lifting a hand in warning to Kane. “But his mind is useful. More useful to extract what he knows intact before you splatter his brains across the pavement.” He lowered his voice. “Patience, or I will kill him the moment T’Leth finishes.”

Oliver could feel Kane seething, his body tense in constrained rage. He put a hand on his shoulder firmly. “Don’t do anything stupid. We’ve already won, just a little longer.”

Behind them Daas walked up with the Shoggoth behind him. Daas whistled, and the Shoggoth trilled happily and wriggled toward the Ethereal and began wrapping itself around the Dread Lord. “Hope you don’t mind,” Daas said with a shrug to Kane. “Kill will be yours, but I’ve wanted to see what she’d do to a live Ethereal – non-lethally, of course.”

Kane gave a single nod.

The Chronicler motioned and the Sovereign Orb floated back to his hand and Isomnum collapsed to the ground, though not before the Chronicler removed the helm that once covered the Dread Lord’s head. “He’s all yours,” the Chronicler said, stepping back. “Try to leave something for Vahlen.”

Oliver doubted Kane heard the request, so focused on the Ethereal in front of him that all else faded away. Isomnum seemed to be stunned, as he barely reacted to Kane picking him up and slamming him onto his back with the Shoggoth adjusting accordingly, audibly breaking limbs as it did so. Oliver had wondered what Kane would do, what elaborate death he had planned for his nemesis.

It appeared that he had a simple solution.

A fist raised, then fell, then repeated over and over. It wasn’t long until the corrosive cobalt blood was seen, but Kane didn’t even consider stopping. The fists rose and fell, again and again, and still Isomnum barely seemed to react, perhaps still too overwhelmed by T’Leth taking his mind. Ethereal physiology was good, Oliver knew that, but it was giving way to Kane’s relentless beating.

They watched for entire minutes, silently as he wailed on the Ethereal body that twitched slightly as it died, and the sounds of impact turned to that of something wet and squishy. The eyes had burst long ago, and the blue blood coated his fists and had eaten through some of the lining of the armor, though kept being repaired. What had once resembled a face now just looked like a purple mash of bones, blood, and flesh.

“Alright, he’s gone on enough,” the Chronicler said quietly. “Let’s get him back.”

Oliver and him walked up. “Kane,” Oliver began tentatively, knowing better than to immediately pull back the massive man. “Enough. He’s dead.”

Kane didn’t respond, and buried the fist back down in the flesh of what had been Isomnum’s face. “Kane,” Oliver insisted more intensely. “He’s dead.”

He reached down to grab and arm, and was yanked forward as Kane simply ignored the pull and continued his beating. He wasn’t registering anything but the task in front of him. The Chronicler muttered something and he briefly cut comm links with Oliver – though he saw that he was still connected to Kane.

The massive soldier suddenly stopped, and stood up, breathing heavily. He let Kane calm down for
a minute, as he stood over the corpse of his nemesis. “You did it,” he repeated. “He’s dead now.”

There was a long moment. “He is dead.” He looked to his hands which were covered in blood. “I killed him.”

“Good job,” the Chronicler said, handing him Isomnum’s helmet. “Keepsake if you want it. You earned it.” There was a moment of hesitation, and then Kane took the helmet, looking at it closely, clearly thinking to himself. What he was thinking about, Oliver didn’t know and knew better than to pry.

“Let’s go,” Oliver told him, giving him a hard pat on the back. “I think we’ve earned a rest.”

Kane said nothing, but tucked the helmet under his arm, and followed his lead.

***

Tiananmen Square, Beijing – China

3/12/2017 – 8:49 P.M.

Disbelief.

That was what coursed through Isomnum’s mind.

They should not have made it so far.

They should have been stopped.

And there was no means of easy escape. ADVENT had marched on the city from all sides, and they had not succumbed to the millions upon millions of mindless thralls he had directed towards them. Humans were supposed to have easily exploitable psyches. They were supposed to exhibit compassion and sympathy for those who were hurt or wounded.

They should have seen the weeping women and children and moved them to safety.

But…they hadn’t.

Instead they were gunned down. It was not just the obvious bait he left, they were methodically finding and hunting down every single living person in the city out of fear of possible corruption. It was…unexpected. Unnerving for he hadn’t anticipated such a steeled and pragmatic response from the Humans.

Could he possibly have underestimated an alien species so completely?

It couldn’t be. Not like this. He had of course performed hundreds of hours of experiments worth of work on Humans. He knew what worked on them and what didn’t. But all of his research, all of his planning, it seemed worthless at this moment because they were not behaving correctly. Why?

What had changed so significantly?

Had ADVENT somehow changed everyone somehow? Was such psychological development possible?

He would need to carefully re-elaborate his position on the Humans. Either by mistake in interpretation, or simple underestimation, he was going to lose if he did not escape – and soon. They were in the Square, and he would have to fight his way out soon. His presence was being mitigated by the sheer number of psions in the field, and…her.
He seethed as he pulled out the holocommunicator.

Sana’Ligna…

Another traitor. He would take exceptional pleasure in her execution. Unlike the Humans, he knew exactly what to do to break her. He had wanted to reduce that woman to a pathetic wreck for some time, as such weakness was sickening to behold. Potentially he would drag her to Sanctuary and force her to watch as he tortured every single one of her patients to death.

The air around his flashed with power as he was filled with righteous indignation.

The hologram of the Imperator appeared. He waited for Isomnum to speak. “I require extraction,” he said bluntly. “The Humans have proven more efficient than anticipated. Failure to do so could result in my capture or death.”

“Yes,” the Imperator nodded. “It could.”

He waited a few seconds. “Attempting to escape on my own is unlikely to be successful,” he continued, slightly frustrated as the Imperator did not seem to grasp the situation. “Assistance would not be requested if it were otherwise.”

“I know,” the Imperator answered blandly. “Explain to me why I should intervene after what you have done? What your shortsighted ambition has wrought?”

Isomnum’s eyes slowly blinked. “I have struck at the heart of the largest cities on Earth. I have utilized the power of the Bringer – something you have refrained from doing as of yet – and proved that ADVENT cannot properly stand against them unless their greatest are brought to the front. I have occupied the minds and hearts of Humans across the world and commanded the greatest response yet from ADVENT. I destroyed the government of this nation and nearly brought the execution of the Chancellor.” He jabbed a finger at the hologram. “And this is after you allowed the coward Battlemaster to withdraw official support and stranded us here. And yet I did not die as he planned, but instead have achieved what I set out to do.”

“You set out to die?” The Imperator clasped one pair of hands behind his back. “You directly disobeyed the strategic and tactical commands of the Battlemaster. Your actions have indeed caught the attention of ADVENT, and as a result they are threatening to destroy you. You have awakened the wrath of a Sovereign One, fool, and now T’Leth will be heavily involved going forward. Your actions have weakened the faith of our allies, and caused the desertion of Sana’Ligna. Your actions have done nothing but weaken the Collective, and all you have achieved is learning what happens when you underestimate a species so completely and utterly. I have little use for those who are too blinded by their own ambition and ideology to understand the galaxy no longer revolves around the Ethereal – and it does not revolve around you, Dread Lord.”

Isomnum stood still, and his voice grew indignant. “Do not patronize me, Imperator. We both know I am too valuable to abandon. I will do what no one else is capable of or has the will to do. You will always need a Dread Lord, the one to take the fall and blame for actions which are necessary and what the small-minded consider abhorrent.”

The Imperator was silent for a long moment. “Perhaps that is the wrong direction to take. You may be right, Isomnum, perhaps I will always need a Dread Lord. But I feel confident in perhaps attempting a different strategy, and if necessary I will find one – but it will not be you. You have served your purpose well, and rest assured that even in your stumbling you have provided me information of value.”
This…the Imperator could not be serious.

Impossible.

“You need me,” Isomnum insisted, voice growing more intense. He would not beg, nor would his voice break. But he...could not believe he would be abandoned like this. “If not now, when the Synthesized return. And you will not find another who can handle them as I have.”

He almost crushed the holocommunicator. “You will lose the others if you show your willingness to abandon one of our own, one of our last. You cannot simply abandon me merely because you disapprove of my methods. You are smarter than that, and it will show how disposable we are to you. Your support will erode and you will inevitably fall.”

To his shock, the Imperator laughed. “Amusing, Dread Lord,” he said. “But I will take my chances. And when news of your death spread, there will not be mourning, there will not be concern; there will be relief and celebration. You were a necessary monster, Isomnum, but your usefulness has come to an end. Die as you lived; alone and in terror.”

The link cut off.

Isomnum stared in silence.

Disbelief.

Impossible.

Coward.

Fool!

“Lord Isomnum,” One of the Carmine Baptists rushed up. “We need to leave. This building is being attacked by Caelior and we would be trapped within it should we stay.”

Isomnum looked around to see that the entire room was shaking and the sounds of cracks and breaking was apparent. He had no choice, he needed to attempt an escape – and when he did, the Imperator would pay. Pain was no issue, he could endure it, and he could quite easily face any individual who was thrown at him.

“Gather what remains and follow me,” he commanded, idly missing Sonoda who he realized would have been useful here. She had been efficient in predicting what would be needed. An ideal Human; and understandable one. Not like these ones who ADVENT used. The remaining Baptists gathered around them and they marched outside and he saw the sight of his defeat.

His thralls were broken; scattered, and falling to the lines of tanks and ADVENT soldiers. The three symbols of the Square were essentially destroyed, with two reduced to scrap and rubble. He looked around and only saw ADVENT. No path presented itself – and then he saw the Agents of T’Leth approach.

He focused his acute psionic power on them – and realized he could not penetrate. Something was blocking him. The Baptists charged, but they were defeated with an unnatural ease. They must be under the protection of the Sovereign, it seemed. He should not linger. He moved backwards, and summoned some psionic energy he directed at the soldiers which was blocked with ease.
The leading one – the Chronicler reached out, and Isomnum found himself in a telekinetic grasp. Something trivial he should be able to escape – yet he could not touch their minds. He could not feel fear…but there was something akin to unease growing in him. “Do not worry, Dread Lord,” the voice of T’Leth emanated from the Chronicler as Isomnum was forced to his knees, despite trying to fight it. “Your death will not come yet. Your mind still has some use for me.”

He did not understand…until a glowing ball floated over to the Chronicler. He knew what those were – and knew it could not touch him else he would be lost. But he was powerless to stop the telekinetic pull forcing the hand forward, which the Chronicler grabbed and placed on the orb.

It was cold.

And then he was gone.

He found himself in a deep blue area, as if he was underwater and the light was tinted a deep teal. It was silent; very silent. He saw no place to run to, and instinctively knew that he was being watched and kept here telepathically. He felt the presence of the Sovereign.

It was all-encompassing.

He did not feel fear. Such had been purged from him.

Perhaps he could yet resist.

The air rumbled.

“Amusing. To think that even at the end, you still cling to your delusions. Admirable, if lacking in intelligence.” The deep voice physically hurt his mind, and forces suddenly clamped his body together, his arms locked to his sides and his legs together. He looked down to see his feet had sunk below the cloudy ‘ground’ pinning him in place.

In front of him a creature appeared.

Had he not already been paralyzed, he would have froze.

No…not this. How could he know?

Malicious delight permeated the air. “Your mind is not closed to me, Dread Lord. This is my domain – not yours. And I find your fear of this particular creature…warranted.”

The figure was bipedal and tall, standing nearly his own height. The body appeared to be composed out of thick and thin sinews, colored various shades of green as if the muscles of a creature were exposed. It wore no armor, unlike the many thralls of the Synthesized he had fought. But he had never forgotten the long vine-like fingers and the constantly writhing and moving skin.

The aliens had no faces, at least not normal ones. Their skulls were shaped similar to Humans and Vitakarians, with a mass of tentacle vines falling from halfway down the face and entangling with the chest; a nose cavity shaped as a three-way slit rested just above, and two milky-white eyes set just to the sides of the face.

The alien lifted the fingers and moved them, the tips of the digits expanding and contracting as miniscule sinews grew and retracted around them. “A fascinating species. One I had little idea existed until I looked into your mind – so close are they to the forefront of your mind you almost don’t recognize it anymore. I found such an aura you commanded curious. Fear has a source. True terror cannot be faked and yet you claim to have none.”
The puppet of T’Leth walked forward slowly. “No…that is your secret that none knew about you. One you perhaps had forgotten yourself even if you drew upon your primal reaction. You are no master of fear because you studied it in labs and countless victims, it’s not because you saw firsthand the effects of such dangerous emotions.”

Isomnum tried to move away as the creature came forward slowly until his head was frozen and the alien put a hand around his neck. “No…” T’Leth mused. “It was because you are afraid. Only one thing has instilled such terror that you will go to any lengths necessary to ensure it is never felt again. Let it awaken in you again, Isomnum. Perhaps remember what it was like to fear.”

He felt it as a tickle at first, little sinews going into his ears; worming their way through his skull. More then entered his mouth which he tried to bite down on, but to his horror the severed sinews did not die, but wiggled their way down his throat as thicker ones forced his mouth open and continued to go down it.

He felt everything.

“A fascinating means of reproduction,” T’Leth said with amusement. “An excellent design choice. An insurance that such a species can never die, but merely…appropriate. And this could have happened to you, Dread Lord. In fact, it will. You will sit here as you are slowly converted into an alien thing which will turn you into an organic puppet, feeding off of your mind and body. You will be cannibalized over decades with your mind being saved for last.”

He felt the sinews under his skin now, penetrating the blood vessels and nervous system. He had read so many reports and studies on the capabilities of this species, and now he was serving as the test subject himself for torture that had only been speculated.

So he screamed.

There was no one who would hear.

Not now.

Not here.

“The mind is a funny thing, Dread Lord,” T’Leth said, voice now cold. “Did you know that you are already dead?”

The pain was becoming so intense that he could barely focus – but then he suddenly found himself back in China, with his mask ripped off somewhere, face exposed to the elements. He was no longer restrained by telekinetics, but by a mass of black tentacles which squeezed and broke his limbs into pieces.

But he also noticed the blue tint above, and the creature was standing a short distance away – even as the sinews continued to appropriate his body, wriggling like worms and leeched under his skin. In front of him though was an XCOM soldier. He was massive and wore black armor. Isomnum did not know who or why he was there – or why the other soldiers in the area were holding back.

“He would be disappointed to know you forgot who he is,” T’Leth said. “But perhaps you will be interested to know that he survived an attack of yours. He awakened, and now he will kill your body.”

The soldier advanced, weaponless, and punched Isomnum in the face with enough force to crack his skull. A second punch followed the first. Then a third. More and more rained down upon him until his vision was spotty and bloody. He screamed, though not from the punches, but from the
sinews that were tightening around his heart and lungs.

At some point, he was aware he died, yet he still felt the impacts and the soldier turned his head and face into bloody paste, ignoring the corrosive blood which splattered everywhere.

Then it was gone, and he was back where he had been, with the alien still holding him, and now the green sinews were creeping into his eyepieces, the micro-thin points reflecting blue light, as they hovered just over his eyes.

“Your body is dead, Dread Lord,” T’Leth said. “But your mind…it will endure for now. You will only be allowed rest when I am content with what I have learned and have served your punishment. There are few creatures I have encountered worthy of such a fate – you may count yourself as one of them. And perhaps a seeming lifetime of torment being turned into the thing you fear most will be sufficient justice.”

The points jabbed into the corners of his eyes, and then more joined, thicker and thicker until his eyes were blinded and reformed as the sinews wrapped around and dissolved them. So he screamed in the utter darkness. He never even felt as T’Leth pushed deep into his mind, he never felt him sift through centuries of memories.

After a certain point, he felt himself be released.

And he walked.

No, his body walked forward.

His mind screamed in protest, but he could do nothing but passively observe as he was turned into a puppet; a walking weapon for something far older and dangerous than his kind, or potentially any others.

“And do not worry,” T’Leth reassured from the darkness. “I will not let you fall to insanity. You will be aware, of every second of your prolonged existence. I can hear every thought, and you will beg, plead, and wish to be condemned to death. But you will not be granted such. Not until I am satisfied. But do not worry about diverting my time; I assure you it is no trouble.”

His body walked forward.

No dignity was left. He pleaded in his mind for death as more of his body began being consumed. He did everything possible, from pleading forgiveness and contrition to apologizing for every single thing he had done. T’Leth was indifferent, and the alien parasite now consuming his body dragged him across the endless blue watery landscape.

His sight had been partially restored, tainted as it was by the alien biology.

And he saw nothing.

But he felt everything.

Time soon lost all concept for him, as he kept walking the endless space over and over.

But T’Leth kept his promise.

He was aware of everything. He could feel everything. In the fog of pain and horror, he understood that there was one thing he was right about.
There were fates worse than death.

The Dread Lord continued to walk, as he was slowly and completely stripped of what he was and turned into his sole fear; a puppet of an alien master, yet he continued to retain his self, right until the end.

His memories soon faded, his few enjoyments and times in Empire, those were gone. He knew he had been someone, he knew he had been powerful. But all he knew of was his constant and eternal suffering, and that there was only one sure truth in this reality he found himself in.

He was trapped here.

Forever.

***

*Dreadnought of the Harbinger – Collective Space*

*3/12/2017 – 10:01 P.M.*

“Harbinger Trask?”

Patricia turned to see the Zararch officer walk up to her, and offer a salute. She had been introduced to him after taking command of the Dreadnought, commissioned and approved by the Zar’Chon himself. Zar’marian’vitiary, one of the top analysts of the organization. Who had been stuck monitoring Nulorian activity and was now moved to the war effort.

Right now, she wore no armor, and only her white uniform the Imperator had first given her at the beginning. As a Harbinger, and Avatar of the Imperator, it was important to convey his authority in her position of command. When it came time for combat, she would don the battlesuit, but for now such was unnecessary and made her more approachable.

The Avatar mask still hung on her waist though.

“What is it, Officer?” She asked, not raising her voice as the pilots worked in relative silence.

“We have confirmation,” he handed her a datapad. “Isomnum is dead. XCOM has taken the body away and ADVENT is spreading it everywhere they can.”

The corners of her lips curled up. “Expected. His loss won’t be mourned, and he has weakened China for a future assault. No one will miss him. Although…” she paused. “What effect will this have on morale do you think?”

He hesitated, considering. She felt his hesitation. “Speak freely. I’m curious.”

“We respect the Elders and the work they contributed to preserving our species,” he said slowly. “But Isomnum…he…was not exactly looked upon with favor. The soldiers and personnel will hide it, but they are likely happy at his demise, despite losses sustained in China. The Battlemaster gained a significant amount of respect when he severed connections to Isomnum.”

“Good, nothing of value was lost,” she said, reading the report slowly. “Isomnum’s purpose is served, and no one cared for him in life, and his death will only be met with celebration. What of Sana’Ligna?”

“Nothing has been determined yet,” he said, shaking his head. “We suspect she has been taken to a
secure site for debriefing. Her defection, should it get out…that will be more difficult to reconcile. She is among the most revered.”

Patricia had been thinking about that. “I’m not positive she has defected. Not the way we think, at least. That is too brazen an action for her. I suspect she has an ulterior motive.”

“Which is what, Harbinger?”

“Simple,” she lowered the datapad. “She wants to end the war on all sides. She wants peace. She will find out that neither ADVENT or XCOM will want that now, nor can we back down now. We will have to see, but I would not place her firmly as a defector yet.”

“As you say, Harbinger,” he nodded. “I will keep you appraised of the situation.”

A nod. “When will we arrive in-system?”

“One, week, Harbinger. You took command at an ideal time.”

“Well,” she gave a slight smile. “Teleportation has it’s uses. Dismissed, and thank you.”

He saluted, and left, leaving her alone on the bridge surrounded by displays and holograms. Soon, she would reveal herself and everything would change.

Soon, the war would be entering a new, and likely final phase.

***

To be continued in Chapter 50

After the Terror

Chapter End Notes

Couple things which are mostly unrelated to the conclusion of the Isomnum arc. Next chapter will answer some of the questions you may have and bring in the next phase of the war as Act III comes to an end. Anyway, I am aware of the recent development with Phoenix Point and suffice to say I'm extremely disappointed. Julian Gollop has lost a lot of my respect for his shortsighted decisions, and I got my refund for the game. Not pleased, but I guess I'll just look forward to XCOM 3 now whenever that comes.

On a more positive note, I would like to thank the reader whose been working to update the TvTropes page. Don't know what you go by outside of the site, but I want to say your additions are noted and appreciated. Thank you.
No, you aren't misremembering things. This was originally a different chapter title, but as I was outlining and writing this, I realized it was going to be absurdly long and it was better to split it into two different chapters. The difference between a few weeks for a chapter and probably at least a month. So next chapter will be the end of Act III. I can promise that.
would not go against the Imperator, but not once did T’Leth get the impression that he believed she
was only a mere puppet – as he disliked the Imperator’s treatment of aliens – Humans especially –
as equals.”

“I...am inclined to agree with this assertion,” Aegis said, his voice slower than usual, as he was
still recovering from the previous battle. “I had warned of the Imperator’s persuasiveness. Yet I
suspect that Patricia has not fully joined of her own free will, but she thinks that she has joined
willingly. The Imperator’s presence distorts proper thinking—“

“Don’t make excuses for her, Aegis!” The Chronicler unexpectedly snarled. “Patricia isn’t some
hapless telepath who can’t block out a simple aura, nor is the Imperator someone who resorts to
such blatant measures. She joined willingly, end of story.”

“Isomnum was not the most stable of Ethereals…” Jackson proposed quietly, though her face was
grim. “Perhaps…”

“Isomnum was not insane,” the Chronicler stated firmly. “He merely had a highly warped and
distorted view of the galaxy and those who inhabited it. Pose these questions to Sana if you do not
believe them. She most certainly knows.”

“But...how?” Shen’s voice was a mixture of pain and confusion. “After everything that’s
happened, after seeing the truth from the beginning...what could make her turn like this?”

The ghost of a smile devoid of emotion and joy appeared on the Chronicler’s face. “The Imperator
apparently has a twisted view of the Sovereign Ones. He learned of the cycles, and has now
determined that the greatest threat is not the Synthesized, but the Sovereign Ones themselves who
he believes perpetuate the cycles over and over.”

“The issue is that he is convinced that every single Sovereign One is the same based on what little
he knows,” the Chronicler continued. “He believes they are all malicious manipulators only
concerned with complete domination over all life. He intends to purge the Sovereigns from the
galaxy and ‘break the cycle’.”

The Commander shook his head. “That won’t work. Not on his own.”

“No, but he determined this after he forged an alliance with Mosrimor,” the Chronicler clarified,
resting against the wall. “And has never trusted his supposed Sovereign ‘ally’ which is why his
involvement in the war has been limited. But the Imperator is aware on his own he stands little
chance, which is where the Bringer comes in. He is determined to allow it to cross into a body
which he would control through a kind of mental conditioning – and use it against the other
Sovereigns.”

As much as he hated to admit it, the Commander could see the thought process behind this. The
picture of what the Imperator actually seemed to be planning suddenly made certain actions much
clearer. “Out of curiosity...what would the Bringer be like should he cross into a physical body?”

A pause. “We don’t know.” The Chronicler finally admitted. “But...there is no entity like it, and
theoretically it is possible that psionics as we understand it would exist only at the whim of the
Bringer. The Psionosphere itself would be whatever he could will it, and I imagine that you can fill
in the implications of that yourself. In short, it would pose a significant threat to the other
Sovereigns.”
“Are you saying that he could succeed?” Iosif demanded incredulously.

The Chronicler snorted. “No. There is little that would unite the Sovereigns, but the emergence of the Bringer would ensure that the Imperator – and very likely all species associated with him – will be eradicated from the face of the galaxy. He does not know this, of course, but his plan is convincing and foolproof for those ignorant as to the true nature of the Sovereigns and the galaxy.”

“All of this makes it clear,” Creed said in a low, tempered voice. “I see how he did it. Patricia responds to logical arguments and plans. She had no idea of the Sovereigns before she was taken, no idea of what the galaxy was like beyond Earth. The Imperator knew that T’Leth was on Earth, or at least that there was a Sovereign there.”

Like a bolt of lightning, the revelation hit the Commander as well. “Damn,” he exhaled slowly. “It explains the invasion; the slow and quiet incursion. Why they didn’t invade with an army. Or approach us diplomatically. The Imperator believed that we were under the control of a Sovereign One.”

“Something he eventually ruled out, if the later invasion is anything to go by,” Zhang muttered. “Too little, too late.”

“That appears to be true,” the Chronicler nodded solemnly. “The goal of this entire operation is not to conquer a planet or even a species – those are just fronts for the real reason – to kill the Sovereign residing on Earth. Assimilating humanity into the Collective is the easiest justification to present to the Collective, regardless of how little sense it makes in the context of the Collective thus far.”

“And the Imperator believes he is right,” Creed said slowly, carefully. “Patricia would sense that. He would be more than happy to show and explain why he does so. You don’t know how powerful that would be to convince her. I think she genuinely would believe he is right.”

“She does,” the Chronicler said. “There is no ambiguity about it.”

“Context is important,” the Commander said slowly, an undercurrent of hardness in his voice. “And explains a good deal. But it is no excuse. She knows better, or knew better. His reasons do not change the fact that they invaded a world on false pretenses. It does not change the hundreds of thousands of innocent Humans abducted. It does not change the fact that they continue to invade our territories and kill our soldiers.”

Anger was a rare emotion to feel so strongly, but it grew in him now. “The Imperator lies, or perhaps is deluded enough to believe he is on the right side. He was not interested only in the Sovereign, else he would have approached peacefully – or quietly to determine if it existed. Once he determined our species was not under its influence, he should have pulled back and established peaceful relations if that was truly his intention.”

A long pause hung in the air. “And he didn’t. He wishes control over our species, the reasons are merely window dressing. He is no different than the Sovereigns, using his people as proxies against a foe they have no idea exists. Patricia has no excuse for this, and if she has abandoned our species because of it, she will be executed as the traitor she is.”

There were nods from those around the holotable, Creed included, though the pain was clear on his face. “Perhaps she can be reasoned with,” he said slowly, though without much hope. “She has only heard what the Imperator has told her. If she heard from you or-“

“Unlikely,” the Chronicler interrupted with a shake of his head. “She’s more than joined him, she
has become his Harbinger. Aegis, have you heard of the Avatar Project?"

“Yes, it was a theoretical experiment conceptualized by Revelean,” Aegis answered. “A means for Ethereals to use other species as proxies without risking us in direct conflict. The experiment went nowhere and was eventually discontinued.”

“Well, the Imperator ordered it started again,” the Chronicler answered. “And succeeded. She is the Avatar of the Imperator, and has a direct connection to him, and if Isomnum’s memories are to be believed, is now capable of merging with his mind and drawing anything from it, in addition to a degree of power.”

“Only more invasive,” the Chronicler clarified. “What I have with T’Leth is a mental connection, but little beyond that. When he…” he waved a hand. “Assumes control, it is only T’Leth who exists; who controls my body. I am merely an observer, and it is largely a haze. Here…it appears to be a mixture, where both minds become closer to something singular, with neither having full control. It is more dangerous to fight, though also will likely have ramifications for both who are linked. Not to mention the procedure for this is…also invasive, though Isomnum lacked the details.”

“This is extremely troubling,” Aegis stated. “Patricia is far more dangerous than we believe if this is true. If she has direct access to the mind of the Imperator…her limited Trask level by comparison will mean nothing next to the mastery the Imperator can call upon.”

“Would she be able to be handled?” The Commander asked the Chronicler. “We can clearly not afford to take chances here.”

“Of course she can be handled,” he answered. “Little doubt of that.”

Aegis did not seem convinced. “We would do best not to underestimate her capabilities now.”

“And we will not,” the Commander said firmly. “But this will be…we will need to think of the fallout when it is revealed. It will not be taken well.”

“I’ll work on something to address this,” Zhang nodded. “I suspect Sana may have more to add.”

“Let us hope,” the Commander agreed. “And see if she is going to be on our side or not.”

***

Barracks, the Praesidium – Classified Location

3/14/2017 – 7:15 A.M.

The screen was bright in the dimly lit room, and Nuan didn’t feel like getting up to increase the overall brightness. She was more than content to just…sit. Relax. For the first time in what felt like days. So much had happened that she’d largely missed, and catching up on everything that had happened was a painful, though necessary task she felt she needed to do.

The only thing she had wished was that she could have been there when Isomnum was beaten to death by Kane. She didn’t know the man well, but made a point to go and thank him the night of the celebration. He hadn’t really responded to her outside to a short nod, but at least he knew. He’d probably been getting similar comments. Not a man of the spotlight, but she couldn’t blame him.
XCOM Intelligence had taken away their alien friend, and he was presumably being questioned. She’d been skeptical, but it appeared that he was an actually genuine defector and hoped that XCOM wouldn’t treat him too harshly. The civilians were currently staying in a refugee camp in Vietnam and being cared for, and if things recovered relatively quickly, they might be returning to China in a few months.

Although personally…Nuan doubted that they would want to go back. She wouldn’t. Too many bad memories, not to mention if China was ever attacked again, Hainan would again be on the front lines. Hopefully ADVENT would just…turn it into a defense point. It wasn’t safe for civilians to be living in it right now.

The celebration had been…fun…but she needed to get informed as to what was happening. There was so much that was just…an open question mark. She didn’t even know if there was a Chinese government anymore or if the Bringer had killed them all. For all she knew, the ISS had been completely purged.

Google wasn’t being helpful, and she was hesitant to ask the Commander or even Iosif at this moment as they had a lot to focus on. But she had a sinking feeling that it too had been similarly destroyed, which made her feel…empty. She had only been there a few years, but when she’d been accepted it had been one of the proudest moments of her life. The knowledge that she was one of the elite few to have achieved such an important position…well, she had loved it.

All in service to a country which was now devastated.

No one would mourn the ISS. Perhaps they would feel some respect for the Chinese soldiers who had died in defense of their country, but that was where the sympathies would end. Right or wrong, justified or not, the Chinese government – and especially Chinese intelligence – had been looked upon with disgust, hate, and fear by the western world – who was now for all intents and purposes ruling humanity.

Not that she resented ADVENT for achieving what many had tried – east and west – and failed to do. But it didn’t exactly thrill her to know that there were many, many people in ADVENT – citizens and officials alike – who were secretly pleased with this outcome. The Chinese state was effectively destroyed, the Chinese military and intelligence forces were heavily reduced and wholly dependent on ADVENT, and they would unquestionably be integrated into ADVENT at this point, as she knew they would not take ‘no’ for an answer.

She wondered if she was being unfair. Obviously, no one wanted this particular outcome, but ever since the Chinese had made an alliance, she’d known that ADVENT would eventually bring them into the fold, and the way they would do this was by allowing the Chinese to become weaker and weaker until they asked to join. The Bringer, Isomnum…they had just accelerated this timetable.

But again, she was probably among the few in the world who would privately mourn the loss of the men and women of the ISS. There had been good people there, and most were likely dead. The only comfort for them was that they had been avenged.

A short knock on the wall drew her attention. She turned to see Iosif in the doorway, looking questioning in. “Thought you would be busy,” she said, keeping her voice low and spinning her chair around nonetheless. “I can’t imagine how much work you’re dealing with.”

“It’s a lot, but a break is in order,” he said, pulling up a chair opposite her. “But you don’t have to worry about that. So why are you up so early, and don’t lie, because I can tell you’re not alright.”

It was going to be interesting having a partner who could sense her true emotional state without
even trying. She could keep herself outwardly composed fine, but clearly that wasn’t going to be a thing now. Perhaps it was for the best. Honesty and all that. “Trying to figure out what’s going to happen to my country next,” she shrugged, nodding back to the screen. “The government is gone. The military is barely holding together. The ISS appears to just be…erased. No one knows what’s going to happen now except that whatever comes will be under ADVENT control.”

He gave a nod. “Talks are going to happen today. Not sure you’ll like what will probably happen.”

She shrugged. “I can guess. Don’t worry, I’ve accepted it. It’s probably for the best whatever happens. We couldn’t protect ourselves without ADVENT, so maybe the next time it will go better.” She paused. “Although I don’t know what I’ll consider myself after the talks go through. Taiwan is going to take over the mainland, yes? That’s where it’s headed?”

Iosif pursed his lips. “Very likely. They have a mostly intact government barring the recent assassination of the President. They suspect a reunification will be a good thing; a new dawn for the country. Tibet is likely to gain independence, and Hong Kong is considering demanding sovereignty.”

“And the collapse of the Chinese state will be complete,” she mused quietly, without bitterness. “I wondered years ago how it might happen. Many contingencies and warnings. But never thought it would be so…complete. Everything I spent my life enforcing and protecting is now gone. I don’t know what to feel. I don’t even know if I can call myself a Chinese citizen if the country I lived in changes so radically.”

“I wouldn’t go that far,” Iosif disputed. “You were born in China, you lived there your whole life. No matter what happens, that won’t change.”

She knew he wouldn’t really understand, but didn’t completely fault him. “Whatever is made after today is not the country I will have been from. I’m not Taiwanese or Tibetan. The China that will be built will only resemble the country in name.”

He leaned back in his chair and considered her seriously. “Nuan, do you think that is a bad thing?”

“I don’t know,” she answered quietly after a minute. “We weren’t perfect, but neither was America and they still exist without foreigners and dissidents taking them over. Perhaps China needed reform…but it should be on our terms. Where it was Chinese who made the changes so it would be us who were still at the core of our country…not Chinese pretenders and traitors.”

She sighed. “I suppose it doesn’t matter. Maybe it is more palpable to me because I’ve gotten used to XCOM. It’s become something of a home. Now the only one I really have left, if my nationality is gone as well.”

“I’m glad to hear that,” he said. “And ultimately…nationality itself is becoming a thing of the past, or at least compared to what it used to be. We’re Humans, and that is a more important label than where you happened to be born in the world. One day I think you’ll find a new place to call home, be it China or somewhere else.”

“Or maybe I’ll just end up staying here,” she said, then allowed a wan smile. “If things work out, wherever you are too.”

“I think I’d be fine with that,” he said lightly after pretending to consider, before growing more serious. “But I won’t pretend to completely understand you here. Nationalism isn’t something I subscribed to as much as you.”
“Really?” She raised an eyebrow. “You’re Russian.”

“And?” He smirked. “Contrary to popular belief, that does not always indicate a strong nationalist desire nor do all who join the military do so because of a fervent belief in the leadership. Perhaps they simply want to protect their home or help those who live inside it.”

“Point taken,” she relented.

“But don’t hold back if you want to talk about it,” he continued. “And I’ll see what I can do to find out if there are any survivors of the ISS.”

She blinked. “I…thank you.”

“Of course,” he nodded. “You may be right that no one cared about them, but they should know that at least someone does. Give me a few days though, we have a lot of other things to deal with.”

“That’s fine,” she said, some of the void inside her filling. Perhaps false hope, but there was at least something to look to in the future. “I’ll wait.”

***

ADVENT Secure Checkpoint, Beijing – China

3/14/2017 – 3:00 P.M.

Humans and Ethereals stood together in a room under a nameless skyscraper which had been first converted into a field hospital, and then later into a secured room where what could potentially be among the most important meetings of the war would take place. The Commander, Zhang, the Chronicler, and Aegis had arrived from XCOM. Saudia, Laura, and Elizabeth had joined from ADVENT.

And Sana’Ligna herself was merely standing quietly as the Humans and lone Ethereal gathered around a simple wooden table, some pulling out files and binders, or in the case of Elizabeth, a tablet. This was to be the first ‘real’ talk with Sana, and the Commander decided to start things off. There had been some brief discussion with Saudia beforehand, and she had said she would let XCOM take the lead due to Aegis.

“Your cooperation against Isomnum is appreciated, Sana’Ligna,” he began, hands clasped behind his back. “As has been your work in healing the wounded.”

“It is the least I can do, Commander,” she said, her voice melodious and oddly soothing. “Though I feel in some cases there was resentment. The soldiers do not trust me, I have sensed that much.”

“You are an Ethereal and an alien,” Laura said bluntly. “Most of them have not had good experiences with either.”

A sigh. “I understand that. I hope my assistance may ease their prejudices.”

“It likely will have a positive effect,” the Commander said, wanting to move the conversation back on track before it focused on the wrong thing. “However, that is irrelevant at the moment. Now while we are grateful for your assistance, the question remains why you did so in the first place. You did not come at the behest of the Battlemaster of Imperator, correct? But you have yet to indicate if you will follow Aegis in joining us.”

“I assisted because Isomnum was an evil that needed to be stopped,” she stated. “While I…did not
wish his death…I do not feel remorse that it happened. Even though so few of us remain, he did not deserve to be among them. I assisted because I could no longer stand by and do nothing; I could not remain bound to a side which not only harbors and enables those like Isomnum, but refuses to correct their mistakes.”

“I’m pleased,” Aegis said approvingly. “Perhaps your departure will open the eyes of others to realize the failures of the Imperator and his methods.”

“You misunderstand, Aegis,” Sana shook her head slowly. “I do not intend to join you, ADVENT, or XCOM, nor subject myself to them. I assisted because it was the right thing to do…but I made my decision to not perpetuate this war through my own actions.”

That answered that question, which the Commander could not say he was pleased by. His features hardened. “Respectfully, Sana’Ligna, what do you intend to do then? Go back to the Collective? If you are not a reliable ally, you cannot stay here.”

“I intend to bring this war to an end,” she said firmly. “For the sake of your species and our own. Nothing will be achieved here but more Ethereals dying and your species will eventually succumb to the Imperator. He has, and continues to take actions I disagree with…but few go against his power. Even I can see that he is not to be trifled with.”

Saudia pursed her lips, though her expression was contained. Zhang followed suit. The Commander simply shook his head, though the Chronicler looked amused. “Your confidence in the Imperator may be misplaced,” he said neutrally, resting his hands on the table and looking the Ethereal in the eyes. “Isomnum was no pushover. He died to us. The Imperator has not faced a Sovereign One, and not even he can match their might. Do not count out our species.”

“So you believe,” Sana answered. “I sincerely hope you see the error of your ways. The Imperator is sending his Harbinger to take this planet. I wish to avoid your species being conquered, but you must understand that this entire war…it is pointless. You are accomplishing nothing but killing hundreds of thousands of your own species, not to mention soldiers of the Collective. Your lands, infrastructure, and monuments are slowly destroyed and ruined. Continued war will only bring ruin to your species, not freedom.”

The Commander was silent for a moment, then let out a chuckle. “Assume for a moment that we entertain such an idea. That we give up out of fear. That we accept that we are doomed to fail because the Imperator is sending Patricia Trask to break us.” At this Saudia and Laura shot alarmed glances his way. “What guarantee of any sort do we have that the Imperator is even remotely interested in peace?”

His lips curled into a thin, furious smile. “The Imperator, Sana’Ligna, is not and never has been interested in peace between our species. So long as T’Leth lives on our world, he will never cease trying to undermine, eradicate, or conquer us.”

“That is an understandable point,” Sana said. “Which is why T’Leth must leave Earth.”

The Chronicler raised an eyebrow. “And just why would T’Leth do this – and why do you assume that he could even do this.”

“If your Sovereign is as powerful as you claim, leaving Earth for another planet should pose no difficult task,” Sana answered the Chronicler back. “If your Sovereign is as benevolent as you claim, would he not willingly accept the risk if it meant that the war against an innocent species would end? Or is he a coward who will continue to hide behind a proxy or merely because he selfishly does not want to leave?” Her voice softened. “I understand it is not fair, but for the good
of Humanity—and to end a war—it is the clearest solution to resolve this dispute. The Imperator is focused on the Sovereign Ones. When he learns T’Leth is gone, he will pull back and focus on the perceived greater threat.”

“A completely foolproof plan,” Saudia said, her weary tone biting. “You only suggest that we force our one trump card that could ensure our protection off of Earth on the slight chance that the Imperator would end the war.”

“You also assume that T’Leth being here is a negative,” the Commander said slowly. “From what I’ve seen, it is the one thing which has held the Imperator back. He fears the Sovereign Ones, and T’Leth in particular. And after everything my species has endured under his orders, you dare insist that we remove our own ally to end this war?”

“And your continued loyalty to this Sovereign will ensure your species dies!” Sana insisted. “He will only use this to continue to justify the war! Unfair or not, that you are aware of the Sovereigns and actively protecting one gives the illusion that you are proxies to it.”

“A perception that would disappear if T’Leth left?” Zhang demanded incredulously. “You are a fool, even more so than I anticipated. The Imperator would consider it a trick—and he would continue the war—and this time there would be no Sovereign on our planet. Instead of ‘saving’ us, your idiotic plan will ensure that we lose.”

“As for our loyalty,” the Commander stated, crossing his arms and glaring at the Ethereal. “T’Leth is our ally. A powerful ally, yes, with questionable power dynamics, but nonetheless he approached us and offered his help. The Imperator may consider us proxies, but frankly, what he believes does not concern me. T’Leth has proven to be a reliable ally, and neither I, nor XCOM, will abandon our allies on the false promise of peace.”

He pointed a finger at her. “And let me be clear, Sana’Ligna, the time for peace has long since passed. There will be no peace while the Imperator lives. His actions have marked him as an eternal threat to our species, and unless he is deposed and replaced by more intelligent leadership, we cannot in good conscience end the war which is the only action which gives him pause.”

“So you intend to continue the war, even if peace was an option?” Sana demanded. “Based on your own fear of the Imperator and nothing else?”

“Enough, Sana, think!” Aegis interrupted, as forcefully as the Commander had ever heard him. “You know—as well as I do—that the Imperator will never cease the subversion of Humanity. He does not operate like this. Every species in the Collective is ultimately under his control, and Humanity will be no different. Perhaps there will be a false peace, and he will wait. A century or two may pass, and the war will eventually become a memory.”

Aegis looked around the room. “Humans have short lifespans, and are adaptable. Trade will begin between the Collective and Humanity. Relations will normalize. XCOM will be disbanded or reduced, and public sentiment will be manipulated to support integration into the Collective. And then the Imperator will win.”

“While I don’t disagree with your sentiment,” Saudia interjected. “ADVENT would not be so easily fooled as to forget what the Imperator has done even after we are long dead. But your point is unassailable—the Imperator will never be someone we can consider safe. And unlike other enemies, we cannot wait for him to die. He will live forever, while we will not. He can be patient, but I cannot predict the future. Loathe as I am to admit it, time will have an effect.”

“And centuries of peace and normalization are things you consider bad?” She demanded. “Millions
of dead and years of war are preferable? And again, based on your fear of what the Imperator could do?"

"Will do, Sana," Aegis clarified. "There is no ambiguity, even if you cannot see it."

"And the Imperator would never agree to peace so long as T’Leth is a factor," the Chronicler interjected. "And do you demand he turn himself in? That he be forced to leave for peace knowing that he will be hunted?"

"T’Leth is a Sovereign One who has survived such cycles for millions of years," Sana stated, her own voice turning hard. "You clearly consider him to be an ally, but the truth is that he ultimately does not need you, and you need him. If he is so powerful, then he should be able to survive far from Earth."

"And again, you use the same justification without saying why T’Leth is somehow bound to this?" The Chronicler smirked. "Why must T’Leth – who I will note has resided on Earth for centuries and never once interfered – leave? Instead, might I suggest the Imperator himself leave? The Imperator does not need the Collective, though it needs him. And if he is so powerful, then he should be able to survive far from Earth. Why is the Imperator special, Ethereal?"

For the first time, Sana had no answer for him. "Your pursuit of a peaceful solution is admirable, Sana," Aegis finally said. "But the truth is that there is no solution that does not involve the deaths or otherwise negations of the Imperator or T’Leth."

"Ignoring this," Laura interrupted. "There is also the fact that the Imperator allowed individuals like Isomnum and the Creator free reign in his Collective - including Revelean - who are no doubt continuing experiments on Humans well out of the public eye. Not to mention the continued existence of Paradise station which is actively running. I for one will ensure that there is no peace so long as the station exists, and if the Imperator has not shut it down due to this, he never will."

"He will not," the Commander said pointedly to Sana. "And you know why. Because it is important to his ultimate plan. The Imperator is only concerned about controlling power strong enough to defeat a Sovereign, and he will never give that up. But you know this. You know peace for us is a foolish and idiotic option. So why are you really trying to force this peace?"

"I gave you my reasons, and it is disappointing you do not consider them valid or believe I must have some angle," she said, voice bitter. "Though I suppose in this galaxy, such is expected. You do not see the direction the Collective is headed. The longer this war drags on, the more will die. And I do not mean your species. The Collective will fracture; tensions between the Battlemaster and Imperator are growing to a breaking point. Millions will die, my species will be destroyed beyond hope of recovery, and your species will be assimilated or eradicated. The Sectoids or Andromedons will be purged, and it is only a matter of time before the radical Miridian inspires a rebellion which will force the Zararch to purge swaths of the species. Is it this hard to believe I do not want this to happen?!!"

"Peace doesn’t prevent any of this from happening!" The Commander retorted. "At best it delays it. It is only going to ensure that the next conflict is bloodier and longer – and this one with absolutely no hope of peace. As for the Collective…" he shook his head. "Let it burn. Let the Andromedons and Sectoids eradicate each other. Let the Battlemaster and Imperator at each other’s throats. I have no sympathy for your species, Ethereal, or your Collective. You started this war, so I am content to let your kind destroy themselves. Then we will come later and finish the job to ensure that your kind never do this again."

"And you instead propose genocide?" Sana demanded. "You see why I will not bind to these
people, Aegis. They are little better than the Imperator.”

The Commander’s lips twitched. “Better. You certainly have an interesting perception, Sana, though perhaps not surprising for a species that innately considers themselves superior.” He walked around the table slowly. “Let me ask you a question – have we invaded a planet without justifiable cause and subjected a technologically inferior people to a war they should not win? Have we kidnapped thousands of civilians and used them for test subjects in labs? Have we created anything remotely resembling Paradise? Do we allow creatures like Isomnum to exist and espouse their beliefs? Do we have a certain class of Humans who have unlimited power and consider themselves superior over all others? Do we have client states which we keep in line with the threat of violence and replacement?”

He stopped before Sana, his voice low. “No. No, I do not believe we do. Do not dare suggest we are remotely comparable to what the Imperator has allowed to flourish under his watch. And let me be clear – I do not wish to completely eradicate your species. Only the ones who refuse to surrender. Those we will kill. The rest we will control with the Manchurian Restraints to ensure they cannot abuse their power again.”

“And do you support this, Aegis?” Sana asked, looking to the opposite Ethereal.

“There are a limited number of outcomes for this war,” Aegis said. “What the Imperator plans will ensure the eradication of our species. Thus he must be restrained or killed. There is no other way. I have given it much thought, and there is simply no easy solution.”

“I see.” Sana was silent for a moment. “I fear that you may wish to reconsider later. You will soon see that you underestimate the Imperator, and the legions the Battlemaster commands. I am sorry, but this cannot be denied. But I will remain, and be willing to see a peaceful resolution to this war.”

The Commander shook his head, an incredulous laugh threatened to break loose. “You still don’t get it. It doesn’t matter what the Imperator does or does not do – we will not surrender or insist on a false peace. And where do you intend to go? Back to the Collective?”

“No, I will not support them either until they similarly insist on a peaceful solution,” she answered. “I will turn my efforts towards providing healing and protection for those caught between your side and that of the Collective.”

“On Earth?” Saudia asked.

“The conflict takes place here, so yes.” She answered.

“I don’t think so,” Laura stepped forward. “The last thing we need is a rogue Ethereal roaming on our planet, and you have clearly shown yourself to not be a reliable ally here. We don’t want or need your ‘help’ or ‘aid’, Ethereal. Come back when you’re ready to take a real stand. You do not want peace, Ethereal, you want a return to the status quo.”

She motioned absently. “I’ve read your file, and for once it appears to reflect reality pretty well. This war hasn’t revealed anything you didn’t already know existed about the Collective, it’s only forcing you to confront the reality that your kind enjoy playing god and unleashing whatever they please upon the galaxy. Paradise station existed long before this war, yet you continued your own work in pretend ignorance because it was out of sight, and out of mind.”

“You knew the Vitakara are controlled by a brutal police state but it was fine because there was peace,” she continued. “You claim to be empathetic and care about life but you know the experiments conducted on Paradise, by your fellow Ethereals, and what each and every Muton is
subjected to on Desolan, but you didn’t care because you didn’t see it. Because there was peace.”

She shook her head, glaring daggers into the Ethereal. “You don’t want peace, Ethereal, you want quiet. You want things to go back to the way they were. You don’t want to be confronted with uncomfortable truths. You don’t want to be challenged. You don’t want to admit that you or your kind are wrong. You want to pretend that everything is fine, that your conscience is clear, but you know deep down that it isn’t and never will be.”

Laura pulled out her pistol and set it on the table, hand over it. “You are a coward, Sana’Ligna, and the only thing I hate more than an enemy is someone who tries to insist that both sides are equal and valid when they are very clearly not. Centrism has a place, but not when the fates of billions hang in the balance. You’ve spoken enough to make your position clear. So I will do the same – help us, or get off our planet, or the next time we see you, we will kill you just as we did Isomnum.”

There was silence after that. The Commander was rather impressed with the speech, and doubted he could have said it better. But Sana was not done, it seemed, though Aegis spoke before she even could. “That is an unfair assessment. Very few are ignorant as to the less than desirable elements of the Collective, but there is little one can do without being ostracized and continuously watched. I experienced this myself.”

“And left when you saw it could not be changed,” Laura nodded. “Exactly.”

“And what is it you think I have done here?” Sana demanded to Laura. “I have done everything short of defecting. I was one of those who participated in killing an Ethereal. I assisted an army backed by a Sovereign One, as well as one the Imperator is at war with. I cannot go back to the way things were, even if I wanted to.”

“Then commit to it,” Laura shook her head. “You did the right thing here, but I’m not going to give you extra recognition for acting like a decent sentient being. Isomnum is a product of the Ethereal Collective, not an abnormality. Even if you cannot go back to the way things were – something I doubt as Isomnum was hated even in the Collective – that is what you ultimately desire for everyone else. But we cannot go back to the way things were – nor do we want to.”

“Peace is not a concept we do not strive towards, Sana’Ligna,” the Commander interjected, wanting to speak before Laura drove Sana away, and while he wouldn’t necessarily be displeased, he would prefer that she not decide to go back to the Collective. “But peace is only desirable when our species is in a position of safety and no threats are posed to us. This will never be met so long as the Imperator lives – or at least exists in his current form.”

“By that logic, Commander, T’Leth should be subject to the same restrictions,” Sana countered. “He poses a direct threat to the Imperator and by extension, the Collective.”

“Of course he does!” The Chronicler laughed. “The Imperator attacked him. He wants him dead. How exactly should he respond? Do not paint the Imperator as the threatened and damaged party in this scenario, Ethereal. Everything is the result of his actions, and I am tired of you attempting to rationalize them to promote a faux peace that will never work.”

“Then be clear about what your goals are,” Sana said, straining. “You do not want peace, you want supremacy for your species. You desire to be the ultimate power in the galaxy capable of crushing any threats under you. Until such a point is reached, you will never strive for peace even if it leads to endless conflict and war.”

“We were attacked unjustly when we had not even developed proper space travel,” Saudia said.
coldly – stone cold eyes focused on the Ethereal. “By an alien power that far outweighs us in numbers, technology, and might. Had events proceeded any other way, we would now be a pawn of the Ethereal Collective. But now we have the capability to ensure that no alien force can conquer our species again – and if that involves utterly destroying the alien powers that threaten our existence, then I will personally ensure it is done. You will not be the only ones who will try to subjugate us, so we must be prepared for the next.”

“I suppose it was unlikely you would have been willing,” Sana shook her head. “You’ve seen and done too much, justified or not. The only peace that will be achieved is through war which leaves billions dead. You, the Imperator, the Battlemaster, the only thing that matters is growing or maintaining your power, and it is clear this will never change.”

Laura looked like she wanted to punch the Ethereal. “If you think this has anything to do with power, Ethereal, then perhaps you need to reexamine facts. We did not start this war. We are being invaded by an alien power. We have been on the receiving end of attacks against our world for nearly two years. We are actively resisting a forced assimilation of our species. Tell me why we should even consider peace with the Imperator?”

“Because if you do not, you will die!” Sana answered fiercely. “I cannot make that any clearer! You believe you can stand against the Imperator, but you cannot. Do not give yourselves false hope merely because your Sovereign ally believes he can protect you. The Sovereigns do not protect their allies when they are threatened – they leave. They flee. How else have they survived so long? Everything is expendable to them – and for T’Leth, your species is included.”

“Beware the propaganda of your Imperator, fool,” the Chronicler smiled. “He knows very little of the Sovereigns. He has an inbuilt perception based on his own paranoia and delusions. T’Leth may not be a conventional Sovereign in his own philosophies, but even he understands that even the worst of the Sovereigns do not abandon their pawns and tools until such have already been destroyed. Sovereigns with the mindset you describe are the most likely to die a quick and painful death.”

“As for the threat the Imperator poses to us…” Saudia paused briefly. “We’ll take our chances. Such…concern…for our species is admirable, but I assure you, Sana’Ligna, we do not intend to lose. Every single time we were supposed to fall, we have overcome your Collective, and the Imperator will be no different.”

“Then there is nothing more I can say,” Sana said sadly. “I hope you consider the blood on your hands worth it before you see what you have built destroyed. You will soon see that the Imperator is not like any threat you have faced before. When that happens…I hope that you reconsider. For the sake of your species.”

“We’ll keep that in mind,” the Commander said non-commitally. “But if you would excuse us, we have a war to win. I would advise you stay away from your former allies unless you want to be designated as an enemy again.”

“Do not worry, Commander,” she said as she departed. “I will not be returning to the Collective. There are those on Earth who I will help, though I will not discriminate based on labels. They deserve protection and healing, as they are mere pawns being thrown into conflict by yourselves and the Imperator. You may not care about their fate, but I do and will act.”

“Be safe, Sana’Ligna,” Aegis bowed his head. “But do not take unnecessary chances.”

She did not answer, but departed quietly until they were left alone.
Saudia looked at Laura, rather surprised. “Perhaps I should have you look at my speeches. I didn’t
know you had that talent.”

“I don’t, Chancellor, but I’ve disliked this Ethereal ever since I read her file,” Laura answered
calmly, picking her pistol back up and holstering it. “Self-righteous aliens who consider
themselves morally better than mere mortal aliens are something I rather hate, and after she started
talking, I knew exactly how it was going to go.”

“Unfortunately, I expected similar,” Aegis said, sounding deflated. “I cannot fault your reaction,
nor can I fully condemn her. She simply will not accept certain realities of the galaxy and that she
will no longer be assisting the Collective directly is a positive development. I will keep in contact
with her to ensure she does not act… rashly. My concern is not her, but what Mortis will do.”

“Considering the first thing Mortis did when he was awakened was immediately decide to
eradicate Paradise, I think he may actually make the right decision,” the Commander said. “He
appears to have a conviction his sister lacks.”

“Perhaps,” Aegis mused. “We will soon see. With your permission, I would suggest that Caelior be
allowed to see her. Perhaps to show that your intentions for Ethereals are not necessarily ill-
intended.”

“I’ll consider it,” was all the Commander said.

“In any case,” the Chronicler coughed. “I would like to say that I did not quite expect the amount of
support for our Sovereign ally. T’Leth will be heartened to learn of it. He is…used to abandonment
when it is convenient. Expected of Sovereigns, but having a reliable ally is not something he is
used to yet. I’m glad.”

“Convey to T’Leth that we value his support as an ally,” the Commander nodded. “So long as he
proves reliable, he has nothing to expect from us but reciprocation.”

“Now there is another matter,” Saudia said, her voice demanding attention. “You mentioned that
Patricia Trask was coming to Earth. Would you care to clarify this development?”

Right, time to explain this. “We learned a good deal of information from Isomnum’s mind before
he was killed. Which included the fact that Patricia has joined him, and is going to be coming to
Earth to secure the planet for the Imperator.”

Just from their faces, the Commander knew that this was going to be a long and largely unpleasant
conversation. But better to hash out the contingencies now than later, and so as he explained what
they learned, he was keeping a growing list of solutions ever in his mind. There was a lot to
consider, and not a lot of time to implement it.

Better to not waste any more time.

Sanctum of the Overmind – Classified Location

3/14/2017 – 10:11 A.M.

The first time he had been brought here had been nothing short of awe-inspiring. It was a jungle
world, one largely overrun with a moon shining above. It was a green, healthy, and nearly
untouched ecosystem which had life thriving on it. All except for a massive stone structure that
rose above the trees which covered the planet.
Ivan suspected that the Overmind had found the structure in far worse condition, but had now restored it to its former glory. Although what had actually *lived* in this place? The Overmind had not said, but there were clues still left around. Murals on walls depicting aliens fighting in wars, alien script engraved into plaques and pictures, old archaic weapons and unseen technology whose power had long since been drained.

The Overmind kept one of the rooms in this tower solely for storing odd and unique artifacts he had found. Sometimes Ivan saw certain ones disappear, then reappear, or new ones take their place. There were a healthy number of Vitakara and Sectoids who entered and exited, perhaps archeologists or specialists.

As it turned out, this tower was only one of many which existed throughout the planet – all of which connected to massive underground labyrinths and tunnels. Excavation was ongoing as underground it had fallen into disrepair and collapse. But the Overmind was interested in this world for a particular reason, and as it turned out, it was not even on the planet.

*Look to the far planets, look at what hovers in empty space.*

He had, and he’d seen *something* which was in pieces. Large pieces, but pieces nonetheless. The structure had been large, he could tell that much, but it didn’t appear to be a space station or something that had held life. From the shape of the wreckage and compaction of materials, he had believed it was a defense platform of some kind – or a weapon. Then he had spotted the remains of two rings floating, and made the connection. He’d seen one of the replicas of the device in Cogitian’s library.

It then made sense why the Overmind was curious about this planet – and these aliens.

From what he had read, such advanced technology should not be able to be destroyed easily, if at all. Yet here one lay in ruins.

Today though, he was merely reviewing the events on Earth.

At the top of the tower, which had been converted into a modern communications hub, he was playing old Human news stations in the background while reading Zararch, Andromedon, and even intercepted ADVENT reports detailing the events which had taken place. He could not say he was pleased or surprised by the outcome.

Isomnum had been a fool, and he was certainly not upset the Dread Lord was dead. However, the ramifications for said actions and subsequent death were clearly becoming apparent – and something that no one would see on the daily news.

*Assessment.*

The command appeared in his mind. A rasping voice which he knew now was designed to be as unsettling as possible. The Overmind had no mouth, and so communicated solely through telepathy. Ivan had soon figured out that his ‘voice’ was something unique to each listener – but the one thing in common was that everyone found it disturbing.

He was used to it by now. The Overmind was not even in the same room, but a few floors down, but was constantly aware of everything happening in the Tower – and the planet for that matter. He would occasionally ask for Ivan’s own opinion, and through the link forged by the Avatar Project, he knew that it was because the Overmind was both curious as to his own perspective – and to make a larger point.
Ivan set the tablet down and tuned out the sounds around him. “Whatever Isomnum knew, T’Leth knows now too. The Sovereign orb would not have been used otherwise. We should assume that ADVENT and XCOM are aware of the Avatar Project as well as that Patricia Trask is coming to end the war. This will pose problems.”

Why?

“They are allowed time to prepare,” Ivan answered, not completely sure where this point was going. The downsides seemed obvious to him. “The moment Patricia appears they will have stories ready. Propaganda to distribute. Not to mention know the others who have undergone the Avatar Project. It gives them information, and they will exploit it. Not to mention they will likely abandon any plan to ‘redeem’ Patricia if they know for sure she is on our side. That would have been useful.”

They underestimate what she can do.

“She was the Psionic Overseer of XCOM,” Ivan said, thinking. “Respectfully, I doubt it.”

Patricia Trask of XCOM could be easily defeated. XCOM does not fear her adequately. They will only prepare for her telepathic capabilities – capabilities they can mitigate with their own equally powerful psions as well as the Agents of T’Leth. They are arrogant. Their defeat of the Dread Lord leads them to believe they can kill the Imperator’s Harbinger.

“Obviously,” Ivan grunted. “Though Sonoda didn’t exactly give them reason to fear the results of the Avatar…” He trailed off, his brow furrowing as he grabbed his tablet and pulled up several of the diagnostics recorded from the battle which Isomnum had been so kind as to keep operational. He now had a very good idea of what the Overmind was getting at.

Sure enough, he found the diagnostics for Avatar Sonoda, and much to his surprise, saw that she had not once activated the Avatar link. He looked at the readings in disbelief. “What the hell were either of them thinking?”

Isomnum was arrogant. He did not believe he needed an Avatar, and only acquired one for symbolic purposes. Allowing an alien deep into his mind is unthinkable, thus he did not allow one. Sonoda could have activated the link, of course, and had she not died, she would have. It does not matter now.

“And now XCOM does not know the actual capabilities of the Avatar Project,” Ivan finished slowly, nodding to himself. “Since they killed one…they will not treat another one as a significant danger – Even the Harbinger of the Imperator himself…” a smile spread across his face. “Isomnum has certainly been more useful in death than he ever was in life.”

Isomnum was useful in life against the Synthesized, but his time had come. We must move forward, and not be stuck in the ways of the past.

“Still…” he considered. “Patricia is not invincible. I am curious if her plan can be executed as well as she claims.”

She learned well from the Commander. She knows XCOM, ADVENT, and how they will react. The Imperator is confident in her capabilities, as am I. You will soon assist her and liberate Humanity from the grasp of the Sovereign One.

Fighting alongside Patricia Trask. Certainly not something he ever thought he would remotely consider as possible. But times were strange, and he wouldn’t have placed himself as the Harbinger
of the second most powerful Ethereal alive. Although there was one outstanding issue he was curious about.

“The Bringer. Does the Imperator intend to act?”

Amusement rippled from the Overmind, strong enough that Ivan could feel it easily. That was rare, and it gave him a good feeling.

*The Bringer will learn his place. The Imperator has grown tired of his arrogance. There will be retribution for his subterfuge, but it will come after his Harbinger has acted on Earth. A message needs to be sent to all, and later…later the Bringer will be punished.*

***

*Research Labs, the Praesidium – Classified Location*

3/15/2017 – 2:11 P.M.

The Chronicler, Aegis, Vahlen, Shen, the Commander, and V’Thrask stood around a monitor as they watched the footage taken from multiple armor cams from both ADVENT and XCOM soldiers. “You likely know better than we do,” the Commander said, looking to the Andromedon beside him. “Is that a Special Operator?”

The Andromedon looked at the footage quietly, clearly considering his words before answering. “I do not think it can be anything else. I am afraid that I likely know as much about the Special Operators as you do. The Unions do not command them. They answer solely to Federation leadership and the Chief Overseer. I have never seen one in combat before.”

“Too little data to be sure,” V’Thrask answered. “Special Operators are known to be observers and assassins. They only act if their own safety is in danger, or they have received orders to eliminate a direct threat to the Federation. I suspect their equipment is not as extensive as a standard soldier, but their capabilities supplement this void.”

“The next important question is why there was a Special Operator there at all,” Vahlen said, pacing while she looked down at her tablet. “The Battlemaster would have learned the Hunter was involved, assuming he wasn’t aware the entire time. Could this have been additional backup?”

“It is not surprising there was a Special Operator there,” V’Thrask corrected, tone somber. “I suspect there are dozens of Special Operators observing throughout Earth. What is exceptionally surprising and concerning is that it acted.”

A pause. “This was either done at the orders of the Imperator or another high-ranking Ethereal – or it was a warning from the Chief Overseer to the Imperator. What I can say for sure is that the Federation will universally consider the Bringer a threat to the Andromedon species and if the Chief Overseer wanted to make this point abundantly clear to the Imperator – this is how it would be achieved.”

“More cracks appear in the foundation,” the Commander mused thoughtfully as he looked at the stilled image. “Paradise might become more trouble than it is worth for him. If nothing else, it will distract him for a time, assuming your interpretation is correct.”
“V’Zarrah will update me shortly on the situation in the Federation,” V’Thrask said. “Although I doubt we will have confirmation on why a Special Operator was utilized at all. The Unions will be unaware of this fact even if Federation leadership will not. J’Loran is also likely aware.”

“Questions about the appearance and motivations aside, there is a much more pressing matter regarding the appearance of this unit,” Vahlen interrupted. “In short – what it actually did. Aegis, have you ever seen psionics utilized in this way?”

“No,” he answered slowly. “I have not. I speculate that it is a form of advanced telekinesis and the initial charge appears to be similar to the Battlemaster-“

“It isn’t psionics,” the Chronicler interrupted, shaking his head. “I thought it was, and consulted T’Leth for an explanation. But it’s not, and that the Special Operators are using it is a notable threat.”

“Would you explain what it is then?” Vahlen asked.

“In short, it is poison,” the Chronicler explained. “There are literally hundreds of names for it by each species who has encountered it, but it is poison, pure and simple. Psionics is the greatest power in this galaxy, and one Sovereign who was weak in the arts decided to find a way to even the odds. She developed the Element, which affects the galaxy in a tangible way by manipulating mass – granting those who used the Element powers similar to psions. But that was a side effect.”

“Its purpose was to prevent psionic development,” Aegis finished. “I was…unaware it had such properties. We had found it in the Empire, and because our species reacted poorly, we assumed its use was limited to transportation. But if it was artificially created…”

“Exactly,” the Chronicler nodded firmly. “It is extremely useful, to the point where it has propagated across the galaxy and entire civilizations – those created by Sovereigns themselves – have based the technology of their entire species on it. This merely comes at the price of ensuring that psions cannot develop – as it is absolutely lethal to psions – and places those who rely on it at the mercy of its creator.”

“Fascinating,” the Commander commented. “A rather ingenious way of subverting psionics. Though this element clearly has uses, even if they are limited. Vahlen, you performed autopsies on Bringer soldiers who died from odd wounds?”

“Yes,” she quickly walked forward and pulled up the reports. “My conclusion was some type of poisoning, which was confusing as I did not believe that they could truly succumb to something as simple as poison, but if they were shot by projectiles which were infused with this element…”

“And who would have had access to such weaponry?” The Commander wondered rhetorically. “Well then, it appears the Hunter has provided some unknown assistance again.”

“Commander, I believe we have not considered the implications of this yet,” Shen interjected, eyes lighting up. “This is the solution to the Ethereals. A silver bullet that we didn’t know existed until now. We know there is a poison which can kill and inhibit any psion it encounters. If we were to acquire some and even manage to get a little on the Battlemaster or Imperator…we have our method of victory.”

“Aegis, was this element capable of being synthesized?” Vahlen demanded.

“No,” Aegis and the Chronicler answered at the same time, the latter shaking his head. “The only one who can even comprehend how it functions is the creator, and I guarantee that she will be less
than willing to help."

“However, deposits were fairly common throughout the galaxy,” Aegis clarified. “It needed to be refined before usage, but I suspect that the raw state will work perfectly fine as a chemical or bioweapon.”

“As good as it is to learn this, we should not forget what this implies,” the Commander said, deciding to curb the celebration as several unfortunate thoughts entered his mind. “The Collective has stores of this element ready and waiting to be deployed. Yes, it was used to help us this time, but how long will it be until it’s going to be used on ADVENT Priests and our own psions?”

“They have to be careful,” Shen pointed out. “They don’t want to risk us getting our hands on any of it. Too much usage and it will only be a matter of time before we recover some and use it against a singular target. The death of an Ethereal will hurt far more than human psions they kill.”

“The Battlemaster will not be careless with its usage,” Aegis warned. “He has learned better than to allow technology to fall into your hands. We should proceed carefully, and make it a priority to acquire this element as soon as possible.”

“Do you know where it would be kept in the Collective?” Vahlen asked.

“Desolan,” Aegis answered immediately. “Perhaps other places, but Desolan for certain. Likely well-protected.”

“The Federation as access as well,” V’Thrask stated. “If the Special Operators have it, that means it is being harvested and stored. I have never heard of such an element being sold or traded, which means that anything to do with it has been suppressed by the Federation. I will have V’Zarrah investigate this matter for himself. There have been many questions on the Special Operators. Bringing certain details to light could force a response.”

“Or force the Ethereals to become suspicious,” the Commander noted.

“A reality to consider,” V’Thrask agreed. “However, we will open our own investigation. If we cannot find stockpiles, perhaps we can locate a place in the galaxy where it can be harvested. We will need readings and chemical information. Chronicler, if T’Leth has access to these or has the knowledge it would be appreciated.”

“I will do what I can.” The Chronicler confirmed. “But the Commander is right. The Collective has brought this into play – and I am afraid that they are going to use it before we do.”

Busan Military Outpost, Busan – South Korea

3/13/2017 – 8:12 P.M.

Today…well, it had been a largely good day. Duri felt better than he had in a while. The Collective had been pushed back, the nightmare in China was over, and he and his squad was alive. He couldn’t ask for more. He wasn’t exactly the party type, but he was willing to allow himself to enjoy the celebration.

It was the first real celebration he’d seen, and he was mildly surprised that ADVENT Command was letting it happen to this extent. It wasn’t just the military base itself, but the city in general. A mixture of military and civilians joining together to celebrate the defeat of the Collective. Still, smart move. Morale would be high after this.
Even the XCOM squad had decided to stay for a while as they’d mopped up the remaining Collective soldiers, which Duri was pleased by because he could talk to Mona, who now sat across from him at one of the tables. Both of them had some food, were out of their armor and wearing more normal clothes as some music played in the background.

Cara and Beatriz were sitting with him, Aleksandra was drinking over with some other soldiers and one of the XCOM operatives. Nobuatsu was unfortunately not joining them, as he needed to be on hand to treat all of the wounded, of which there were still many. Miguel was actually keeping up a conversation with the MEC pilot, which Duri had never seen before.

The pilot seemed to be almost completely mechanical with joints and limbs which seemed rather basic compared to the prosthetics he knew both ADVENT and XCOM were capable of producing. Mona had explained that they were intentionally designed that way to be able to interface directly with the suits, and Duri found that thinking about what that meant was…well, he couldn’t quite wrap his head around it, nor did he really want to.

Mona was joined by two of her own soldiers, Said and Fatima Tariq who were also psions. Cara had been rather surprised to hear they were a couple, and there had been a long tangent on relationships in XCOM. Their explanation that they’d been civilians who’d eventually been caught up in XCOM was one that made sense, although Duri noted that they were very light on details as to how that happened.

“Johan mentioned you,” Mona was saying. “Not that we…talked a lot during the beginning of the war. Too busy. But he said you were a good officer.”

“I do my best,” Duri answered. “All I can do now. I don’t want to lose anyone else.”

Mona snorted. “Look, I don’t blame you at all for his death. He was fighting against the goddamn Warlock. It’s frankly a miracle that anyone in your squad lived. Trust me when I say that from what I know about that alien, that’s a pretty good outcome.”

“He did drag me out after I got shot,” Beatriz added. “Things were almost worse.”

“That was fun,” Cara said with a smirk. “Running back and firing a ton of lead and praying we were out of range of snipers. Can’t say I want to do that again.”

“Did Johan know you were in XCOM?” Duri asked. “He never mentioned it to me.”

“He didn’t know,” Mona denied with a shake of her head. “He still thought I was with ADVENT in Sweden. I might have told him I’d been transferred, but he never knew I was in XCOM. Or that I was a psion.” She lifted a hand, as a slightly purple ripple appeared around it. “My psionic aptitude was what got me into XCOM in the first place.”

“ADVENT didn’t find it?” Beatriz inquired, sipping on her drink.

“This was before the PRIEST Division,” Mona explained. “All psions were being shipped to XCOM for training. If I had been examined a few months later, I would probably be a Priest.”

“ADVENT and XCOM really like their overdramatic and fantasy-esque names,” Cara chuckled. “Imagine just a year ago talking about Priests, Templars, Purifiers, and so on in an actually serious conversation.”

“Wait until you look at what the ranks are in the Priest Division,” Beatriz said. “I’m convinced they just made some of them up.”
“No, they’re real,” Mona said as she resumed eating. “Mostly. I looked them up once. You have to admit though, it’s more creative than standard boring designations.”

“Do you think they asked the Catholics if they could take all their old titles?” Cara asked.

“Given how closely the Catholic Church and ADVENT are working together, maybe,” Mona said with a shrug. “But probably not. ADVENT doesn’t ask permission for something like that.” She sipped on her water. “Although it might make things a bit awkward if certain Priests go to a church.”

“Wonder how many of them are silently shaking at the heresy they see,” Cara said, amused, and they all laughed.

“So how long has Caelior been with you?” Duri asked, turning the conversation away from laughing at titles and names.

“Since we beat him in Japan,” Mona said. “It’s a more complex situation that you think, which I don’t know how much I can say. But he’s on our side now, and will remain on our side.”

“I don’t suppose you can say if XCOM has anything else they’re hiding?” Cara asked.

“Afraid not,” Mona said with a smile.

“Even a little bit?”

“Ease up, Cara,” Duri said lightly. “XCOM has security protocols too.”

“Worth a shot.”

“Do you think our chances are real?” Beatriz finally asked after a few minutes of eating in silence. “Beating the aliens, I mean.”

“Very real,” Mona nodded, though more seriously. “One Ethereal has defected. Another has left. Caelior is with us now. Isomnum is dead. It won’t be easy –‘ she shrugged. “There is a high chance that I won’t be alive to see the end of it. But can we win? Absolutely. The aliens only have so many tricks they can rely on, and we’re emerging on top each time. They’ll run out soon.”

“Reassuring,” Duri said, taking a drink of water. “As much as it can be knowing the chances are better that I’ll die before it ends.”

“Welcome to war,” Mona said. “Where we all think we’ll be the ones to live through it all but in reality are just as capable of dying as anyone.”

“I’m more aware of that than I want to be,” Beatriz shuddered. “If that alien had aimed just a bit higher, I’d be dead.”

“Or I’d be shot,” Cara added. “We never know how things will play out.”

“Exactly,” Mona agreed. “We can only do the best we can to keep ourselves and those around us alive. Johan would be happy you’re all alive even if he couldn’t see it happen himself.”

“We’ll avenge him,” Duri said, lips pursing. “I suspect that Warlock won’t be able to keep himself from the fight forever. Maybe it won’t be me, but he will die sometime. I have a good feeling.”

“I know someone who very much agrees with you,” Mona said with a small smile. “It isn’t just the Warlock whose days are numbered.”
“Their time will come,” Cara said, lifting her half-filled glass. “We’re doing at least one toast before things go back to normal right? To Johan and Kang. Anyone you want to add, Mona?”

Mona looked like she wanted to say something, but then shook her head and raised her glass. “To those in your squad who gave their lives for our victory.”

Their glasses clinked, and they drank as the celebration continued long into the night.

***

The Praesidium – Classified Location

3/15/2017 – 10:11 A.M.

It took him a bit, but Oliver finally found Kane. Which he was doing more out of curiosity than necessity, as he suspected that Kane would have showed up on time anyway. Still though, he wanted to make sure Kane would actually follow through with his almost tentative agreement at the party last night.

Oliver wasn’t a party person, though he could have a good time when he wanted to, but Kane looked so out of his element that it was almost funny. Even more so was that he was the closest equivalent to the celebrity in XCOM as one of the few who had personally killed an Ethereal. Of course, realistically, Oliver knew that the Chronicler and the Agents needed the majority of the credit, but Kane had been the one to strike the killing blow.

Which put him in a crowd with…Oliver thought. The Commander, Vahlen, Franklin, and Patricia had killed the Ravaged One. Interestingly everyone there was still alive…well, Patricia might not be now, but almost everyone else was. As it turned out, Kane was in the Tactical Review and Strategy wing of the Praesidium, which housed an incredible amount of information on known alien units, Ethereals, and figures. If one wanted to know anything about who they were fighting, it was here, along with plenty of raw footage to go along with it.

Luckily, he’d remembered Kane mentioning how he’d watched battle footage, so thought he might be here. Sure enough, he was, sitting in the sparsely populated room watching something that Oliver couldn’t see. “This where you hang out?” He asked, walking up.

“Yes,” Kane answered without looking up, though paused the video. “Always something new to review; to learn.”

Oliver looked to the screen. “This one?”

“Recovered from Brazil,” he said tightly. “Of the Battlemaster’s pet Human psion. She is clearly a valuable asset to him.”

Oliver vaguely remembered the fact that the Battlemaster had his own Human psion like Isomnum, though not details. He really should look into that if they would be fighting her in the future – which was very likely if ADVENT kept failing to properly defend the continent. “Alright, what do you know of her?”

“Yang Shuren, Chinese national prior to her family making enemies of the Communist Party,” he said from memory. “Lived in Australia, and were presumably abducted during the Collective invasion. Skilled telekine, heavily durable armor, uses twin swords. Extremely dangerous in melee combat and close range.”

“Know anything about why she’s with him?” Oliver wondered.
“Her reasons are irrelevant,” Kane dismissed flatly. “She is a traitor and will die as one.”

“Unfortunate we couldn’t have captured Isomnum’s Human,” Oliver mused as he looked at the still, if somewhat blurry image of the red-armored woman. “Perhaps she is under conditioning or being controlled.”

“It would not change anything,” Kane said, reaching over to close the video. “She is a valuable asset of the Battlemaster, and killing her will hurt his own operations.”

“She your next target?” Oliver asked, now aware that Kane had some kind of list he placed enemies on. Now that the main one – Isomnum – was dead, he wondered who would be the next to earn the death mark of Kane. For whatever that was worth.

“Only if I encounter her next,” Kane said, standing. “The Warlock, Battlemaster, Yang, it does not matter the order they are killed, only that they die.” He frowned. “You’re here to make sure I come, right?”

“Would disappoint some people if you didn’t show,” Oliver said. “Besides, this is something you’ll be good at.”

Sparring matches were a thing which had gone on quite a bit in XCOM, and it had more recently evolved into something of a ranked tournament. Said tournaments took quite a bit longer than general sparring, especially the past few weeks when everyone was busy, but it had recently concluded and there was no time being wasted in starting it again to anyone who wanted to participate.

And after some encouragement, Oliver and a few of the other soldiers had convinced Kane to try his hand at sparring. Kane had agreed, although he’d only promised he’d ‘try it’ and see if it was worth his time. Kane valued his time quite a bit, as Oliver was seeing, although he always seemed to spend it training, at the range, or informing himself on the conflict.

Granted, everyone else did that as well, but not quite on the level of what Kane took it to. He was an example that Oliver admittedly felt he should follow a bit closer. But it didn’t hurt to have some more relaxing hobbies and interests, so maybe sparring could be Kane’s. For whatever reason, he didn’t seem to be as thrilled with the outcome of the battle as Oliver had expected, but maybe he just hid it well.

In any case, as they walked towards the Training Rooms, Oliver felt that this would be an interesting event.

***

Dreadnought of the Harbinger – Patricia’s Quarters

3/17/2017 – 12:00 P.M.

In the small quarters where the Harbinger slept, Patricia was kneeling on the floor in a meditative posture as she had found it was the easiest way to concentrate when she needed to think; prepare. Surrounding her body were holodisplays which outlined schematics and layouts. CODEX speakers had relayed dossiers of every individual of note, although for many she already knew a lot.

Thus, they had been updated.

She had been doing much of that while she had been on the Dreadnought. There was a significant amount of knowledge, context, and nuance that the Collective as a whole lacked on ADVENT,
XCOM, and Humanity. There were a very few people who could accurately explain and predict what ADVENT would do or how they would respond. Even among Humans, the mindset that ADVENT was cultivating was not one that came naturally.

But it did to her.

It was…saddening to her that the Commander would not react well to this. Ultimately, she owed much of who she was now to him. If it hadn’t been for him, she would likely be a different person. One who lacked the vision and will to do what was necessary for Humanity, no matter what it cost, or no matter how much it hurt herself and others.

Ironically, their similar mindsets would play off each other in the months to come. She knew how he thought, while he would do the same to her. Going into a mental conflict against the Commander – a risky move, but she had the ability to make mistakes and improve, and ultimately there would be no one else in the Collective who would be best able to understand him and prevent what he would do.

Even now she knew how he would react; what steps he would take; what ramifications there would be to her coming actions. But the Commander was not the only one to plan ahead, to have contingencies and foresight. She could not under any circumstances underestimate him. That would get her killed and she did not intend to die now.

ADVENT, XCOM, she knew how they operated and what they were most likely to do. As someone who had been one of the consultants on the original Advent Directive, as well as the pioneer for all modern psionic theory, she knew the strengths, weaknesses, and ultimate vulnerabilities of them.

T'Leth and his Agents she knew less of, but that information she would acquire soon enough. Their own Sovereign ‘ally’ was going to prove beneficial in this regard.

In fact, he was going to prove his usefulness very soon.

Fortunately, T'Leth appeared to have a desire to show his hand. Beijing had done more than expose the Bringer for the manipulative entity he was, but also showed the capabilities of T'Leth and his people. Such…command over the Psionosphere…well, that would certainly pose an issue were she to ever fight.

Or perhaps it would be an issue, had she been one to go into fights without knowing as much as she could about an enemy; how they acted, what they were capable of.

When she deployed, XCOM needed to be shown that they had no more hope. Yet doing this would require some skill. She was not so foolish enough as to believe she could strike at the heart of XCOM by herself and face the soldiers, psions, and agents waiting for her. But XCOM needed to hurt when she acted.

And a dead XCOM squad simply was not going to be sufficient.

ADVENT she would handle as well here, though in a more political way. While she knew it would go nowhere, it did not hurt to dirty the reputations of those who led it. Saudia might have escaped the shadow of EXALT, but perhaps it would linger for a time in the public consciousness. If nothing else it would cause some confusion in ADVENT.

Ideally, she could be in multiple places at once to cause the maximum amount of chaos and confusion. But physically, that sadly wasn’t possible. But there were other options; opportunities
that she would take advantage of. She was confident she would succeed, of that she had little doubt. With the Imperator, there was very little that she felt she could not do.

Nothing could compare to the feeling of power and unity she experienced when joined.

Where it had once been overwhelming, it now felt right.

Everything she had done and experienced, every decision made, it led to who and what she was today.

There was a presence outside her room, which she immediately recognized as Marian. The analyst had been very helpful over the past few days, particularly in ensuring that the information she was providing was being relayed back to the Zararch itself. While in her meditative position, she was quietly observing the mental states of those on the Dreadnought. Nothing invasive, but she could sense emotional states, and the flicker of a memory or word.

It was useful to also know where everyone was on the ship. Discontent, disagreements, and distraction could be easily detected and resolved. She knew very well that subordinates would keep truth to themselves, even if they disagreed. A sentiment that both she and the Commander agreed was useless and damaging. Even if he would be her enemy now, there were good lessons she needed to take.

With a telekinetic command the door opened and she faintly heard Marian enter. “Harbinger Trask-” he began, then abruptly trailed off when he saw her kneeling on the ground, the air distorted around her and tinged with power.

She opened her eyes, which bore the glowing purple reminiscent of his own blue ones, normally she would cease the passive telepathic presence on the Dreadnought, but this time she made a concerted effort to maintain it. Practice. Marian stepped back instinctively when she looked at him, his heart rate rising as fear tinged his mind, afraid he had interrupted her.

“Calm,” she ordered, her layered voice penetrating his mind. No reason for him to be concerned, and in a few seconds, he’d returned to his normal self. “You have an update?”

“Yes, Harbinger Trask,” he said, handing her a datapad. “New developments on Earth, in addition to the daily intelligence report. Upon your request, suggestions for the dissemination of the information you possess have been proposed by senior Zararch agents and leadership.”

“Thank you,” she said, taking the datapad and walking over to set it on the table. “Your own assessment? You have been appraised of the plan. I want your opinion.”

Before he opened his mouth, she knew he was preparing to lie – or at least downplay his concerns. She turned back to him just as he was about to speak. “I am not an Ethereal, Marian, you may speak your mind. Remember that I know if you are about to lie or not.”

The alien felt a mixture of surprise, fear, and embarrassment in a short amount of time, though composed himself and rephrased what he was going to say. “With respect, Harbinger Trask…I am concerned that you will need more support than what has been provided for optimal mission success.”

She nodded. “You do not believe I can do it.” It was a statement.

Marian hesitated, but continued on. “In this particular case, Harbinger Trask, not completely. My job revolves around finding weaknesses and making connections between them. Your plan has vulnerabilities, especially if the reactions are outside your established parameters. It relies on
outside reactions far too much for my own personal comfort.”

A pause. “I’ve read what you’ve done when you were with XCOM. It was…impressive. It caused many sleepless nights for myself and others in the Zararch as we feared the implications of a Human with such power. But XCOM has others like you, as does ADVENT now. There is a limit to what you can realistically do.”

He waited anxiously as he finished, clearly unsure what her response would be. Truthfully it pleased her to know that she had apparently been feared in the Zararch, and she knew the Commander and Zhang would have loved that little detail. It was flattering. But the analysis was more or less what she anticipated. Practical, realistic, and assumed the worst.

The issue was that it lacked…context.

Marian was thinking like an intelligence agent; not like a Human, not like a psion, not like a Harbinger. Hopefully he would be able to expand this way of thinking in the future. No reason not to start now. She walked over to the water dispenser and telekinetically brought the cup to her hand. Her prolonged silence was making her Zararch advisor nervous.

“Your concerns are well-founded,” she told him, taking a sip and turning around. “What I expected. My proposal is absurd from your own perspective. But consider mine.” She walked to her bed and sat cross-legged on it, while motioning for him to sit opposite her by pulling up a nearby chair. “Who am I?”

He answered hesitantly, but clearly. “The Harbinger of the Imperator; his voice and will; his Avatar.”

“Yes, I am that,” she nodded. “But that isn’t everything I am. I am a psion. I am a Human. I was a soldier of XCOM. These give me perspective and insight that one who was just the Harbinger wouldn’t have.” She swirled the water in her cup around. “You dislike how much I rely on reactions. You see many ways they can go wrong. From an objective standpoint, you are in the right. But the reality is I know how they will react. I know what they will instinctively think and plan to do.”

She smiled at him. “And I suspect your beliefs on my own capabilities will change when I execute my plan. I am…more…than I was when I was with XCOM. I will be able to protect myself just fine.”

“I’m relieved that this has been taken into consideration, Harbinger Trask,” Marian said slowly. “Though I suspect I will not be completely at ease until this operation is concluded.”

“A fair stance,” she agreed. “If you don’t mind, I would like to ask another question of you.”

“Of course,” he said, though was growing more apprehensive. She hoped he would get past the stage of being so high-strung around her. It definitely wasn’t good for his health. “About what.”

Patricia felt that she could let the psionic observation fade away now, as her little experiment had confirmed what she’d wanted to test. Besides, it might make Marian less nervous if the woman he was speaking to didn’t have fiery purple eyes. “Do I make you uncomfortable?”

He blinked rapidly. “Do you mean…because of who you are?”

She waved a hand. “Something like that. I suspect there are aliens here who…are not comfortable with my decision. Much less me taking command.”
He paused. “Truthfully, Harbinger, I am not uncomfortable with you, even as you take command. You come at the express will of the Imperator himself, and I do not doubt his will for a moment. If he trusts you, I do as well.” He let out a breath. “If I may speak more personally, I feel relief. I would much prefer you to be fighting for us, then against us. I cannot help but respect someone who has recognized the necessity of the Collective and joined it, even though your actions will be seen as a betrayal by the majority of your species.”

She pursed her lips. “Indeed. But a necessary decision.”

“One you will be properly recognized for in the future,” Marian said. “I am sure of it.”

If they won, he would be correct. Patricia though was not going to count on that, not until Earth was claimed by her hand.

Project DH0022 Holding Station, Zararch Oversight – Classified Location

3/15/2017 – Unknown Time

There was a certain comfort to being back here. Familiarity. Clarity.

Away from being surrounded by aliens and their plots and plans. Schemes and shadow wars. It was…an enlightening experience to have observed the incident which was Isomnum. So much to be learned and understood.

Yet there was a job that needed to be done, though Nemo did not see why two things could not be accomplished at once.

The next target was one which had been chosen in response to the arrival of Caelior. Such a revelation would spur more defections; plant subversive thoughts in the minds of the common soldier. The death of an Ethereal would not help with this. If they could not be incentivized to remain loyal through what they already had…

Then the fear of defection would need to be put into them.

Nemo needed a new face while the hologram of his target was before it. Runi’siris’svitianis, the Vitakara Representative of the AEGIS Division. The current face of the Vitakara defectors. A mere soldier and puppet of ADVENT, she nonetheless was being effectively utilized and was ultimately not intelligent enough to see the ways she was being used.

It ultimately did not matter.

She was a traitor, and traitors were to be punished.

The Zararch report on her was comprehensive, as it was simple to acquire information prior to her defection. Her psychological profile in particular was of interest. An easily swayed and frightened woman who was prone to groupthink and propaganda; one who acted in the moment and then could successfully rationalize and justify their decisions after the fact; one who had little-self-reflection, especially when being told she was a hero and doing the right thing.

Killing her would not be enough. It would only galvanize the others. The defectors and traitors needed to fall into despair. They needed to understand that eventually they would realize they had made mistakes – and that there would be punishment for them. There was an art to destroying a public figure, and…well.
It was something it had some experience in.

This operation would be slightly different, as he had decided not to abandon the Nemo persona, as the face worn would be primarily for the operation itself, and it made it simpler for Volk and his people to follow. Although the Human was likely to have difficulty wrapping his staunch mind around the polymorphism Nemo displayed.

Several hours had already been spent on the face. It helped that there were detailed medical scans of Sirasis, which could be easily replicated, if done delicately. A more rounded face, closer eyes, wider nostrils. Details which few would notice, but would be essential to fully sell her untimely demise. Red blood stained the floor as it had emptied his veins in preparation for Vitakara blood to be inserted.

Satisfied with the current progress of the face, it turned to face the captive it had strapped to a chair also in the room. By far the most curious aspect of Isomnum’s operation had been the insertion to the entities of Paradise Station. These agents of the Bringer…they were certainly a concern, if not a threat to him, and there was only one way to truly understand a threat.

The source had to be approached.

It had been a simple matter to have one of the Caretakers brought to him. The species and gender had not been important, and so he had received a Human female Caretaker. Immediately upon taking her to the station, he had stripped her of her bulky clothing to see what was underneath. As expected, she was…degrading.

Skin was turning gray and cracked. Blood openly flowed from breaks in the skin, if only from minor cuts. Her hair was falling out in patches, and a thorough medical scan revealed that her bone structure was remarkably weak and there were multiple hairline fractures, especially in the legs and feet. Already the pain tolerance of the Caretaker was exceptional.

But that…that was not what it was interested in.

Pain tolerance was not special.

It was the thing in her head which caught its interest.

“It is time to talk,” Nemo said, moving towards the bound Caretaker. The voice he was modifying to accurately replicate the tone of Sirasis, and now sounded an approximation of a female. His hands were along his neck as he was continuously adjusting the vocal cords. The memory of the voice of the real Sirasis played in his mind, and he knew just when it would be pitch perfect.

In the meantime, it would talk to the Caretaker.

She was silent. Unsurprising. She had not uttered a word since her arrival, nor resisted.

He lifted a datapad from the floor. “I know who you are. Or who you were before you were taken to Paradise Station. I’m curious if you still retain yourself or if the Bringer has fully puppeted you.”

“You misunderstand, as do all who lack His vision,” she said, voice cracked and raspy. “I am myself as I have always been, and now have been blessed to receive His presence and power.”

Nemo looked to her degrading body. “The Bringer demands a heavy price.”

“A price I pay willingly,” she said. “My mortal body will serve as he wishes until it can no longer function. You cannot understand, sightless as you are. If you only understood who He was; what
he has done for a simple Human like me—"

“Ah, I understand your god more than you think,” Nemo smiled and held up an ornate and bound tome. “Do you recognize this?”

Her eyes widened for the first time. “The Chronicles…you…you have read them?”

“Indeed,” he answered neutrally. “What few chapters exist at the moment. Inspirars is a talented speaker, writer, and rationalizer. I cannot say that I did not learn from the words he wrote. It is certainly enlightening; and convinces me further that the Imperator underestimates the entity that he is foolish enough to think he can control. The Imperator relies on his influence and power to overcome his obstacles, while I prefer to know them. And what better source that the Bringer’s own designated prophet.”

It smiled at the indignant look on the face of the Caretaker. “There is only one Prophet, which you should know, and do not negate her role.”

“I’m very well aware,” Nemo said. “The point being that I read your Chronicles to understand the mindset of your cult. It is most certainly a fascinating study in how a mad entity can warp the minds of so many so completely. Warp them to the point where wrong equals right, where the unnatural is commonplace, and where lies are truth. It is not surprising that Beijing happened as it did when viewed in the context of creatures who have lost all rationality.”

“How can you say this?” She demanded. “You should understand who He is! How can you not?”

“I understand who your god is perfectly well,” Nemo said, reaching down and picking up a small glass jar. “Your god is a manipulative coward. I found a rather interesting creature in the chapters of the Chronicles which were provided to me,” he shook the jar where the dead creature was. “I confirmed with Nebulan that the creature exuded a weak telepathy. Certainly not enough to affect a psion, but would certainly…enhance the Chronicles to an unfortunate curious individual who happened to stumble upon it.”

Nemo set the jar down. “Now, why would the Bringer have put such a creature inside? If he was so convinced that his truth was convincing and legitimate, why would he resort to such deception? Perhaps he fears that he would be utterly rejected; his Chronicles burned in fires, and people rising up to purge the galaxy of his sickness.”

“They do not understand the necessity or truth on their own!” The Caretaker spat. “They cannot be saved if they remain blind.”

“Such a strong god, whose will must be forced upon the unwilling, and later brainwashed to believe it is what they wish all along,” Nemo commented. “It merely confirms that the Bringer knows well the unnatural state he exists in and knows how his wishes are revolting to the sapient individual. Thus, domination is the only way to ensure his success. The Imperator is…arrogant…but the Bringer is just as fallible. Which is why you will recognize that your god cannot save you.”

She sneered through chapped lips. “I am not afraid to die, creature. If this is to be my fate, I accept it willingly. Death is not the end for us, while you…you will die with no hope of salvation one day while I will be in Paradise.”

“So your Chronicles imply,” Nemo nodded, standing. “And what if Paradise is denied?”

“Paradise cannot be denied,” she said. “Not now. The Bringer watches over me, and will welcome
me when I die by your hand.”

Nemo stood. “We shall see about that.” It walked over to a console and began turning on the scanners. Fectorian and Revelean had requested data on what was learned, and it would certainly comply. Nemo then walked to a sealed container which was in the far corner and unlocked it. Inside was a black orb which rippled and swirled with nanites.

Nemo picked the orb up and walked back and set the orb down before the woman and only gave a simple phrase. “Deny the woman Paradise.” The orb rose suddenly and the nanites which had been around it expanded to form a larger globe where Nemo could see the center orb was a pale blue and green color.

Then it began glowing brighter.

The woman stiffened and her eyes widened in terror. “What did you *do* to me!”

“Denied you what you wanted most,” Nemo answered, walking over to a table and picking up a pistol. “Your god is not all-powerful. He will not come to save you. He is mortal and fallible like everything else. I want you to think about that as you die.” Nemo fired a single shot into her chest which clipped the heart.

Sitting down opposite her again, he tuned out her begging and screaming to let her die in Paradise. A useful experiment, and one that would need to be conducted on other pawns of the Bringer. She would die…but not for several hours. The wound inflicted would make sure of that, which would be more than enough to time see how quickly the mental state of a Caretaker would degenerate.

In the meantime, Nemo returned to modifying his face and body for the role it would soon be playing.

*Mess Hall, the Praesidium – Classified Location*

*3/15/2017 – 12:02 P.M.*

Until this moment, Sierra felt like the day was going pretty well. Or at least not to the point where she could complain about it. Daily Archangel practice runs were always good to get the blood flowing and flying always put her in a good mood. The victories they’d enjoyed were certainly a confidence boost, and this had been the first day where Ted had been well enough to join her and Anna.

A full squad again. Another good thing.

So they’d done their exercises and then naturally decided it was time to eat. Dressed in fatigues after taking short showers, they made their way to the Mess Hall and upon entering it Sierra felt the mood immediately change. Conversation was common, especially at this time with all the soldiers and staff here, but everyone was talking in subdued tones, as well as many looking furious at… something.

Anna looked around, then to Sierra. “I think we missed something.”

“Perceptive as always,” Ted grunted. “But yeah, this is odd. Another alien attack?”

“Doubt it,” Sierra dismissed after a moment. “Base would be on alert if that was the case.”
“Want to place bets?” Anna asked. “Mine is that the SAS did something. Probably got a country to
join them. Maybe more.”

“Or Brazil lost more ground,” Ted added. “Or more Human traitors have been found like the
Battlemaster’s puppet.”

“Wonder how they would learn that,” Sierra said as they went to get trays. “Unless a new one
showed up.”

“You want my serious guess?” Ted asked rhetorically. “The Chronicler’s people did something to
Isomnum’s mind before he died. I bet they learned something and it’s only now that they’re
sharing it. Or maybe they just learned it and are sharing it. Considering what Isomnum knows, I
doubt it’s good news.”

Sierra raised an eyebrow and looked around. “Doesn’t appear to be good news anyway, from
Isomnum or not. Hey,” she called to a woman in engineering attire who was walking past. “Excuse
me, did something happen?”

The woman pursed her lips. “Memo was sent out an hour ago. Check your inboxes. Read it for
yourself. Better that way.”

Sierra had a bad feeling about this.

They got their food in silence and Sierra pulled out her phone and accessed the XCOM email. She
had a bad habit of not clearing notifications, so it made sense that she hadn’t seen the message.
Nothing like saying PRIORITY MEMO – READ IMMEDIATELY to get her attention, as well as
the standard ‘flagged’ feature which automatically screamed at her to read important messages if
she did so much as check other unread ones first.

It was a .pdf document of course, like all memos. XCOM dispersed their information that way.
Apparently in the beginning the Commander had just laid out stacks of documents here and let
people read them that way. She almost wished he still did that, but XCOM was likely too big now
for that to feasibly work. Made more sense to just send mass emails instead.

“You’ll have to share with me,” Ted said as he began eating. “Didn’t bring my phone.”

“Sure thing,” Sierra said as she opened the document up.

She read the first few lines, blinked, and brought the screen closer to her face convinced she had
missed something. She reread it again in disbelief. “What the actual fuck?” She read the rest of the
memo in short order, it was only a few pages and it really, really needed to be much longer. Ted
had stopped eating and looked at her, concerned.

“That bad? What is it?”

She almost threw the phone out of anger to him, but restrained herself. “Much fucking worse that
we thought. Read it.” Instead she practically shoved it in his face.

He went through a similar range of emotions, first confusion, then stunned disbelief, and then
shocked anger. “Patricia…she joined the Imperator?”

“Is this a joke?” Anna asked, setting the phone down with a stunned look on her face. “We’re not
close enough to April for this to be funny.”

“No one on the Internal Council would do this, even for a joke.” Sierra shook her head, trying to
rationalize what the hell Patricia had been thinking. “There is no way they would send this out unless they were certain.” She glanced to Ted. “Good call on the Isomnum thing though. Sounds like they learned it from him.”

“Maybe Isomnum was lying or misunderstanding something?” Anna wondered faintly. “I just…why?”

“Yeah, that might be a good detail to conclude in the memo,” Sierra scowled. “I doubt they know either, only that she has. I bet it’s simple though. The Imperator is controlling her. *Aegis* is intimidated by him. No way Patricia could refuse him.”

“I…don’t know,” Ted’s voice was strained as he looked blankly at his food. “I’ve talked with Aegis. I’ve read the file on the Imperator. That…isn’t how he works by all indications. He apparently stays away from things like direct control like that. I think he may have actually convinced her.”

“I might believe that if Patricia hadn’t literally been fighting this war from the beginning,” Sierra shook her head. “You don’t just *switch sides* at this point without blackmail or mind control. What could the Imperator say that magically made everything that’s happened go away? ‘This was all a misunderstanding’?” She mimed. “Patricia is smarter than that. And even if he *did* say that, she wouldn’t fucking *join* him.”

“I think the main point of this is that the next time we see her…we will have to fight her,” Anna said quietly. “Her reasons aren’t known, and probably aren’t important now. She’s on their side, willingly or not. I’m certain the Commander wants us to know what’s coming. Isomnum’s death has probably made the Imperator angry. So he’ll send one of the heroes of the conflict as his pawn in retaliation.”

“Well, the good news is that if he’s stupid enough to send her alone, we can beat her,” Sierra said firmly. “Even if he sends an army, we have enough psions and an Ethereal to capture her and bring her back and break whatever hold the Imperator has on her. The Collective won’t be able to hold her forever.”

“Agreed there,” Anna breathed heavily. “But it isn’t going to be pleasant. Not to mention it’ll be worse if she manages to kill one of us. Or if we have to kill her.”

“It won’t come to that, not unless she’s with another actual Ethereal,” Ted said confidently. “Patricia is a telepath. A powerful one, but still a telepath. Geist and Aegis can occupy her…and the rest of us can subdue her. Remember we captured *Caelior* alive. We can do that for her. She deserves that much.”

“Yeah,” Sierra nodded. “She does. I bet the Imperator thought this was going to be a demoralizing event for us. If he wants to throw Patricia at us and thinks it’ll break us, well…”

“He’s going to be very disappointed,” Anna finished with a wry smile. “I’m not going to blame Patricia for what happened. Not until we know for sure. Odds are she’s a pawn of the Imperator regardless of what you think, Ted. And if she’s a legitimate traitor, we’ll put her in the ground where she belongs. But until then, she’s a victim of the Imperator and we’re going to treat her like one.”

“Within reason,” Ted said slowly. “No holding back until she’s secured though. Because I guarantee she will be trying to kill us.”

“We’ve fought Ethereals, Hive Commanders, and massive siege machines and won,” Sierra
reminded them. “One probably-controlled XCOM soldier?” She took a gulp of her water. “I think we can handle that.”

***

Central Government Complex – Hong Kong

3/15/2017 – 1:02 P.M.

If there was ever a moment where the course of history would change, it was now. Mere months ago it was close to impossible to imagine the gathering which existed today, yet now they stood around a round table with their respective flags and officials in the background, ready to speak and negotiate on the future of China.

Unfortunate that it had involved the destruction of so much of the country, but they could only move forward now. Rebuild and act together as one united force. Today was to begin the process of helping China come together – or safely split apart. Saudia sat with Hassan at her side, while the representatives of what remained of the Chinese government, the Taiwanese government, the Hong Kong Council, and the Central Tibetan Administration held seats across from each other.

The Acting President of China, Jian Huang was one of the few survivors, having left Beijing to help organize evacuations and preparations for the northern parts of the country. As such he’d been spared the worst of the fighting, though quite clearly did not want the responsibility of leading the country. Unfortunately, there was no one else left of importance, and of the remaining members of the CPP, he was the one Hassan had said was the most qualified.

Hanying Yao was also the acting President of Taiwan, although as opposed to China, the majority of their government was still intact and there was a clear line of succession. He was prepared and he, along with his advisors, looked confident as to how the talks were going to go. Saudia suspected that the Taiwanese were thrilled at how for once, they had the upper hand over the Communist Party – or what was left of it.

Zexian Tang spoke for the Hong Kong government as Chief Executive, and while Saudia had been mildly surprised when the Hong Kong government had demanded a seat at the talks, she was not caught off guard. Hassan had warned her that since the Chinese had been slowly and deliberately stripping away their ‘independence’ by installing their own media, immigrating mainland Chinese, and becoming far more politically active in Hong Kong affairs, they wanted to air their own grievances. Hassan didn’t necessarily believe that Hong Kong wanted to be completely independent, but that it wanted concerns addressed.

Finally, Speaker Rebten Tashi spoke for the Central Tibetan Administration, who had previously been known as the Tibetan government-in-exile. ADVENT had recognized them, and they had gratefully accepted their place in the talks. They would want independence, Hassan had assured her, although the CTA would then dissolve when an actual government was in place, one elected by Tibetans.

A nice sentiment, though Tibet would still have to follow ADVENT law like everyone else. But ADVENT would certainly be willing to facilitate elections.

“Thank you for responding quickly to our requests,” Saudia began as the meeting officially came to order. “The future of China, which we know will take months to fully recover from the attacks, is something that must be determined now rather than later so we can adequately prepare. Regardless of the outcome, ADVENT stands to provide support for a smooth and stable integration.”
They were all long past the point of even asking if they would be ADVENT members. That ship had sailed when Beijing had been taken by ADVENT. No one would demand complete independence now. Hassan nodded to Acting President Yao of Taiwan. “President, you have requested to give the opening statements, which has been granted.”

“Thank you, Chief Diplomat, and you as well, Chancellor,” he began, standing up. “I am certain everyone in this room is aware to the extent the country of China has been damaged, from the cities to the outskirts. There is no land which is untouched by the conflict. Regardless of past political stances and agendas, we are all inhabitants of this land we call home and should strive to do what is best for her inhabitants.”

Not the best opening he could have chosen, as the CTA representatives – Tashi in particular – narrowed their eyes. She supposed it was difficult for them to call the land ‘home’ when they had been in exile for decades with no say over who they believed were their citizens.

“The people of this land need stability and leadership, especially now,” Yao said, looking around the room. “ADVENT will provide them with physical needs, but they also need faith and hope – faith that their leaders can provide for them and represent their interests, and hope that they will rise from this event stronger than ever. That cannot happen with a country which is divided.”

He nodded his head to ADVENT. “Ultimately, we are all one people, one species. As the founders of ADVENT put aside their bloody and rival pasts, we too should strive to move beyond what has divided us for so long. Our own people know well the feeling of being ostracized from our country, but even we agree that it will be far more compelling and unifying if we do not emerge from this with the Chinese nation broken into separate states, but one united people, under one united – and fair – government.”

“We have the infrastructure and manpower to lead from the start,” Yao nodded. “We would not think of assuming permanent control, but we would maintain positions long enough for elections to be held and would voluntarily step down. This interim government would be composed of qualifying surviving officials of the Communist party, as well as members of the CTA,” he nodded to the Tibetans. “We do not want an exclusive hold over the government, as that would hinder the unification of our nation.”

“But you would be in charge of selecting them,” Chief Executive Tang noted, who had clearly not missed being snubbed by Yao. “You also neglect the contributions and leadership of Hong Kong in favor of a government which had held no real power for decades while we have been faced with harsh pressure from the Chinese government to become more integrated.”

“We could not return because of the Chinese,” Tashi defended. “Had we seen a way, we would have done so. But we both know that neither of us could protect ourselves, and the West would not support us despite their platitudes.”

“Young proposal is well and good, Acting President,” Tang said slowly, turning his attention to Yao. “However, I put forward a different proposal. The best way for us to move forward is not through a unification, but by forging our own paths independent of each other. We do not have the same beliefs, values, and customs as you do, as the Tibetans do, and others. And Hong Kong will not once more be in a position where our voice is silenced due to the threat of the grander Chinese authority.”

He shot a glance to Huang. “I do not care if you assimilate the mainland Communist party, but this time we will claim our true independence. The “one country, two systems” policy is over. We have
no intention of returning to the fold of the Chinese government.”

An interesting development, Saudia stayed quiet as Yao raised an eyebrow. “I understand your grievances, but we do not intend to remake the Communist party. I will also note that you wish to create an independent state of an island? Is your pride worth more than presenting a united front to the world?”

“I will ask you what gives you the right to play kingmaker?” Tang demanded. “Why do you have more of a right than Speaker Tashi and the CTA? They were exiled by China as well. You are not special.”

“We are Chinese,” Yao said. “Exiled perhaps many years ago. If anyone is entitled to manage her fate, it is us if the mainland government is no longer a factor.”

“We are not Chinese,” Tashi said firmly. “And we will no longer pretend to be such. The Tibetan people have lived under the yoke of a Chinese power for far too long. The forceful conversion of our people to see themselves as Chinese is over, the suppression of our religion is ended. We are not your people, Acting President. We never have been and staunchly refuse any attempt at reunification.”

“As far as our size is concerned, Acting President,” Tang said, looking to the Chancellor. “I believe we need to consider a rewriting of the borders of this land in the context of this war and what has been contributed. Hong Kong has sustained heavy losses and damage during the conflict, as well as many of her soldiers killed in action across the country.”

He motioned to his aide who handed him a sheet. “To the Chancellor of ADVENT, the Government of Hong Kong requests that the regions of Hainan, Guangxi, Guangdong, and Fujian be ceded to Hong Kong and placed under our jurisdiction in light of our contributions to the war effort and previous limitations which were imposed on us by the previous Communist Party of China.”

The room burst into murmurs and subdued comments as Saudia leaned forward. “I disagree with this proposal,” Yao said, frowning. “With respect, Chancellor, giving them land for the sole purpose of contributing is shaky ground. I will remind you that Taiwan has been allied to ADVENT from the beginning and have contributed many resources, soldiers, and manpower to the war effort.”

“And you are getting the majority of the mainland,” Tang said smugly. “So I would not complain about your share.”

Yao pursed his lips and Saudia decided to speak. “Chief Executive, are you and your advisors certain you wish to gain independence?”

“We are certain, Chancellor,” Tang nodded. “Even in the event we do not receive more territory. We came to this decision unanimously and will not back down for the sake of a false unification.”

“And what of your citizens,” Yao cautioned. “This should not be a decision you rush into just to gain independence.”

“Considering you wish to take over millions of people who are not aware of your own existence, do not lecture us about not respecting the will of the people,” Tang snapped back. “I’m certain that the general population of China would prefer the Communist party, not those who they’ve been conditioned to consider traitors leading them.”
“Be that as it may, Chief Executive, the Taiwanese can be considered the legitimate government of China,” Hassan pointed out. “What you request is for the territories you wish for yourself to simply be given to you without considering what the citizens themselves wish. On those grounds your request is questionable.”

“And there is a solution I believe we can agree on,” Tang said. “Let the people themselves decide. Allow myself and Acting President Yao present a case to them, and they vote to remain a part of China, or a state under the Hong Kong Administration.”

“I see that as a plausible solution,” Saudia nodded. “And I agree that Hong Kong is entitled to territory should they desire, though you are placed in a difficult situation due to your limited size. Until such elections can be held, I presume you wish to establish Hong Kong as an independent state.”

“Yes, Chancellor,” Tang confirmed. “We do. We will not be convinced otherwise.”

“Make a note of that, Hassan,” Saudia said. “Considering the unique situation and background of your state and people, I’m inclined to grant this. Hong Kong will be granted member status within ADVENT, and be entitled to a representative on the Congress of Nations.”

“Thank you, Chancellor,” Tang bowed his head. “We will not forget this.”

“It is prudent that we state our own demands,” Tashi said. “We request that the sovereign territory of the Tibetan people be returned. No more or less than what we originally possessed and an immediate expulsion of immigrant Chinese and former government officials from our lands.”

“Former government officials of the Communist Party will be recalled,” Hassan said. “However, forcibly removing immigrant Chinese who have lived their lives in Tibet will not be permitted. However, we will allow the option of immigration to China if they wish to remain under a government they identify with. Is this acceptable.”

Tashi nodded once. “It will be.”

Huang coughed. “While it may be obvious, I will put forth my own decision and that of the surviving members of the Communist party to support Acting President Yao in his management of the country of China. We do not have the people and structure to manage our nation, even if we wanted to. We have little choice but to leave it to your hands.”

“Accepted, Acting President,” Yao said respectfully. “We will do our best to help the citizens of this country and will certainly take your own suggestions into account.”

There were a few more minutes of deliberation, and finally Hassan lifted a hand. “We have already reached important steps in deciding the future of China. There will be a short recess before we return to discuss more specifics.”

They all went into their own separate groups and the sound of conversation filled the air. Sitting back, Hassan looked to Saudia. “I didn’t expect Hong Kong to be so aggressive. An interesting development.”

“But not an unwelcome one,” Saudia said, scratching her metal hands absentmindedly. “I think something like this was what was needed. Let them forge their own paths. Perhaps in the future they will decide to unify as Yao wants. But not yet.” She looked to the Tibetan delegation who were laughing and almost celebrating over the decisions. “Let this nation and people heal. They can always make a different choice later.”
“Support needs to still be provided in Brazil and Florida,” Creed said as they looked over the holomap. Zhang, Iosif, and Jackson were also in attendance. “ADVENT is holding well in Florida, though they’ve taken most of the non-urban centers. Miami and Tampa are holding out well.”

“I’d be surprised if they weren’t,” the Commander said. “ADVENT SFCOM is there. Any Collective advance is going to hit a steep wall. Caelior is likely responsible for Miami being retained.”

“He stopped the orbital bombardment and then pulled the ships out of the sky,” Jackson reminded him. “That seems to have changed up the Battlemaster’s strategy.”

“We should be sending him elsewhere,” Zhang said with a frown. “Keeping him in one location lessens his usefulness elsewhere, especially with the Guardians and the Battlemaster’s Avatar carving through Brazil.”

“And the moment he is moved the Battlemaster levels Miami,” the Commander reminded him. “I agree he should be moved further – but not until the Battlemaster ceases all assault of Miami. ADVENT reports place him moving heavy artillery down to the region. Along with Vanguard support.”

“Telepathic overwhelming?” Jackson wondered, considering. “Couldn’t be with just Vanguards.”

“We should use this chance to deal another blow to the Collective,” Iosif said as he paced. “We have multiple targets in play now. The Guardians in Brazil, the Battlemaster’s Avatar, the Battlemaster himself, and whoever is puppeting Betos in the SAS. An overwhelming attack with our strike teams with ADVENT assistance could work, especially in conjunction with Aegis or Caelior.”

“The issue is that the Battlemaster has to know that,” the Commander said, pursing his lips as he leaned on the holotable, looking into the blue light. “Realistically, the Battlemaster knows we’ve reached a critical mass of psions. But he still takes to the battlefield openly. Why?”

“He’s skilled and dangerous,” Creed answered with a shrug. “Not difficult to see. Why would he stop now, it’s not in his style or personality. If he dies, he dies fighting.”

“But he isn’t a self-sacrifice type,” the Commander pointed out. “Limited in his skills or not, he’s waiting for us to make the first move. He has something up his sleeve and that open question mark makes me hesitant to commit too heavily. Isomnum was isolated and we could rely on his own arrogance and limited range of abilities. The Battlemaster is smarter than him.”

“Then we take his Avatar,” Jackson said. “She’s clearly dangerous, but she can be killed.”

“I agree there,” he nodded. “Creed, do you have a squad in mind?”

“I can put one together easily enough,” Creed confirmed. “No shortage of those willing. She’s a telekine, so she’s going to be a difficult target. Especially since she knows offensive and defensive usages. Makes sniper eliminations unlikely and this is not taking into account the fact that she is heavily augmented.”
“Dynamo psions are the best choice then,” Iosif said. “Telekines can’t block them. Include snipers too. If nothing else it’ll force her to concentrate on maintaining a telekinetic field.”

“No noted,” Creed tapped on his tablet. “Next time she appears, she’ll have a more difficult time than just going against ADVENT.”

“We should rotate our squads already in operation,” the Commander said, swapping the holomap to display active XCOM squads. “Give them a break for a few days. The West Coast is becoming more active. Jackson, you received the list of candidates?”

“Yes, Commander,” she confirmed. “I’ve narrowed the list down, but it will expand our numbers significantly. I’ve passed it to Creed and Iosif for final review.”
