“Are you still planning to leave us once you’ve secured your thousand pounds of penance?” asked Amaryllis. The questions served two purposes, the first being the obvious surface one, and the second being the opportunity to watch his answers so she could get a better read on him.

It called to mind her time in the Lost King’s Court, in some ways, having to work on different levels, not being able to trust any single person, relying on known and shown incentives in order to figure out what people would actually do. That had been the life she’d lived from the moment she’d been born until her incarceration, and here, though deprived of resources, she was playing the same games. It wasn’t a terribly comfortable comparison for her, given how her last foray into court politics had gone.

(((This is probably the part where you’re wondering to yourself, ‘but I thought Juniper was our narrator, how does he know, and why is he talking in the third person?’, and here, safely hidden within triple parentheticals, I can tell you: some of this might not actually have happened in precisely these ways. We’re operating under really loose definitions of ‘actually happened’ already, but I don’t just mean that it ‘might not have happened’ in the sense that people might just disappear as soon as I stop looking at them, only to have an interstitial history written for them in accordance with the demands of the narrative as dictated by the Dungeon Master as soon as they become relevant to me again. Here, I mean ‘might not have actually happened’ in the sense that this is a recreation of sorts, me working backwards from information that I didn’t have at the end of the last chapter, and won’t have at the end of this one. The thing is, if you learned it like I learned it, it would be a drawn out, incomprehensible mess, so this is a little bit of poetic license and extrapolation on my part in order to present something coherent. I hope you don’t mind.)))

“I’ve been thinking of leaving,” said Grak. “The pay is better than anywhere else. The experience has been interesting. Dangerous. The connection to Juniper …” He trailed off, which was a bit of his assimilated tact showing.

“None of Uther Penndraig’s Knights ever left his service, not for long,” said Amaryllis. “They retired, from time to time, but they always came back for one last adventure, sometimes more than one. And sometimes they die. It’s not an aspect of narrative theory that I talked about that much with him, but my interest in it should be obvious.”

Grak grunted at that, giving her nothing. She hadn’t spent enough time with him to be able to distinguish between his grunts, not on a level that would tell her something. The way he seemed unwilling to continue the conversation, taking from her and giving little back, wasn’t uncharacteristic of him either. It was, however, very convenient for him if he was hiding something from her. She presumed that he would know if some alteration had been made to his soul and would be actively hiding it from her, but that was a soft assumption, not a firm one. Or it was also possible that he was simply Grakhul Leadbraids, the same person he’d been since she’d met him in Aumann’s tower.

“It is starting to wear on me,” said Grak, after a silence between them.

She hadn’t expected more conversation from him, and had been thinking that it would be good to get a vantage point on the site, marked for the teleportation key by walking in another, smaller spiral, so that she would have a place to land the second time they came down here.

“The suspicion?” she asked, keeping her voice mild and sympathetic, watching him closely without exerting any of the muscles in her face. He was going about his work, frowning occasionally as he stepped back to inspect using his monocle, which made the task of reading him all the harder.

“I have to watch what I say,” he replied. “I can’t give any suggestions for fear they will condemn
me. It’s more frustrating than I thought it would be. The precautions are sensible. I wish I weren’t the target. You’re the closest things to friends I have.”

“I’m sorry,” she said. “Soon Juniper will be able to see into your soul and it won’t be necessary.”

Grak nodded. “I don’t look forward to that.”

“Even though it would get you out from under suspicion?” asked Amaryllis.

Grak finally glanced at her. “I fear giving anyone that much power over me.”

Amaryllis nodded at that. She did too, but that rubicon had already been passed.

(((Okay, that’s more speculation on my part, and Amaryllis probably wouldn’t have phrased it as crossing the Rubicon, because the Rubicon was a river that didn’t exist on Aerb.)))

She left him to work, glancing back at regular intervals, moving up toward one of the hills beside the meadow, where trees would cloak her from view to anyone standing guard, but allow a good look at the bottle -- and anyone who might be staking it out when she returned to collect it, hopefully in a handful of days. This entire expedition served three purposes, as she saw it. First, it allowed her a chance to talk with (and interrogate) Grak in an attempt to root out subversion. Second, it would allow the bottle to have sunlight, which it needed in order to ensure the ecosystem remained at homeostasis, a dicey proposition with Solace dead and no replacement druid in sight. Third, with the locus safely under lock and (teleportation) key, they could openly speak of it to Fallatehr and get his advice on the matter.

She lost track of Grak only briefly, for no more than a few minutes, and then she was at the top of the hill, looking back down on the clearing, where he was still putting up his wards. She hadn’t asked about the nature of those wards, but could make her own guesses about which he would select. She had asked him in the past, in a few different situations, but he didn’t seem to much enjoy talking about his craft, and her understanding of warding was basic enough that the technical details were too difficult to put in their context.

The pattern she chose to mark her location as seen from the teleportation key was largely dictated by the trees, but she didn’t need anything complex, because it wouldn’t be far from the large spiral she’d already made in the meadow. There wasn’t much else for her to do. She wasn’t comfortable taking her eyes off Grak for long, even if she no longer thought it very likely that he had been compromised by Fallatehr. His background as first a stranger in a strange land and then a stranger returning home made him a better liar than most dwarves, she thought, and there were the inherent qualities he possessed that made him hard to read, but she didn’t think that he would have been able to become a completely different person without her knowing. Still, she wasn’t about to fully drop her guard.

Eventually, having watched from a distance for some time, she made her way back. Judging by the position of the sun in the sky, there was still an hour to go until they were to return to Parsmont. She resolved to practice her blood magic while Grak continued putting up wards; there were some trade-offs in terms of time spent on the wards and their durability, and given the two hours they would be spending in this field, Grak had opted to use the entirety of his time.

She’d had a problem with waiting, when she was younger, in large part because that was what being a noble consisted of. It wasn’t a problem that she had fixed so much as tamed. While the impulse to fidget or act incautiously was still there, it existed only as an impulse, one that did not impact her actions in any meaningful way. She sat in the grass, twenty feet away from where Grak was warding the bottle against all possible threats, and began the meditative exercises that she had learned at the athenaeum, keeping Grak in sight the entire time. It didn’t make for terribly fruitful meditation.
After perhaps twenty minutes, as she was moving flame from one fingertip to the next, Grak began to move. He was using his wand, keeping it low to the ground, and tracing a relatively small circle -- one that, if continued, would encircle her. She stood up at once.

“What are you doing?” she asked as she stepped backward and grabbed the bladeless hilt from her side. Her question found an answer as she hit an invisible wall of force just behind her. She turned and reached out to touch it, trying to feel the shape of it, and quickly came to a heart-sinking conclusion. Whatever Grak was doing now, he already had her encircled. She pulled the teleportation key out of the cloak and used it at once, navigating through the map and aiming for the return site in Parsmont, but when she pushed against the key, she found herself still in the meadow.

“Grak, what are you doing?” Amaryllis asked again, allowing a small amount of panic to seep into her voice, hopeful that if he thought she were desperate he would lower his guard. She crouched down and picked up a fist-sized rock from the ground and threw it at his head as hard as she could.

It hit his chin with far less force than it might have if he didn’t have such a thick beard, and he stopped, momentarily stunned, before looking up at her and then continuing on. When she threw the second rock, he was better prepared, and raised his hand in defense, grunting with pain but not stopping. The rocks within reach, or rather, within the confines of the ward around her, got smaller from there, more an annoyance than a threat.

Her inventory was small, just the armor (useless unless she wanted to stay in one place, which she desperately did not), the cloak (not loaded with much, as it had quite limited capacity), two of the marzipan fairies (irrelevant), a crystal (useless), and her sword (the only thing with any promise). She hefted it and tried to think of how she could best use it, but Grak seemed to be aware of her reach and intent on avoiding it. She flickered the sword on and threw it at him, aiming for the arm with the wand, hoping she could cut through it, but Grak only took a glancing blow to his arm, which left him trickling blood but did nothing to actually stop him.

When he’d finished his circuit, he made another, and then another. Watching him, Amaryllis tried not to focus too much of her attention on how he had gotten the initial wards around her, one fairly clearly a barrier against latent blood magic, the other clearly to stop her teleportation key from working. She was fairly sure that he must have constructed the wards around the bottle and then pushed them toward her, the inverse of what Aumann’s warder had done to let him set foot in Caer Laga without actually breaking the wards. Where Grak had had more than once spoken of tunneling, this was the logical inverse of that, pushing out the boundaries of the ward like a finger pushing through mud. That was how Grak had enveloped her without moving from where he was, or seeming to break his concentration on the task of making wards around the bottle. In retrospect -- no, it didn’t do any good to spend time on thinking about whether she should have seen it coming, or seen that it was possible, there would be time to curse herself later, she hoped, or to think about all the ways she could have avoided this.

“We’re due to meet with Fenn and Juniper in less than an hour,” said Amaryllis.

Grak made no reply, and continued on with the wards, five circuits in total before he finished. She knew enough about warding to understand that he was building a prison for her; what he had trapped her with was temporary, but these new fetters were stronger, more efficient, built for the long term.

“What’s the plan?” she asked.

“I’m going to take you to Fallatehr,” said Grak. “He’s going to alter you to his purposes.” He stood back from the wards. “If you hand over the teleportation key we can do that now. Otherwise I will wait until you are starved and sleep deprived and take the key from you.”
Amaryllis slipped the teleportation key into her armor, so that it was nestled against her chest, a horrible idea from a distribution-of-impact perspective, but as secure as it could be. She activated the armor’s ability to hold herself in place … and it did nothing. With a sigh, she reached in and pulled the teleportation key back out.

“A ward against blood to stop me from leaving, a ward against teleportation, a ward against the immobility plate?” she asked. She tried to keep the tension and anger from her voice; they wouldn’t be helpful here. “What are the fourth and fifth wards against?”

“You will be Fallatehr’s,” said Grak, ignoring her question. “When you are, you will not look fondly on having resisted him.”

Amaryllis nodded. She was sure that was true, which didn’t make it any less frightening. The way things were now, she was well and truly fucked. Even if they didn’t return to Parsmont, and Juniper and Fenn were alerted to the fact that something had gone wrong, that didn’t actually help her, because without the teleportation key, there was no way to launch a rescue. Her options, given her skills and equipment, were minimal. She could try to convince Grak, but that seemed eminently unlikely to work. What else remained? Stalling for time, trying to reconfigure her soul in order to send a message to Juniper, hoping that Grak would be incautious enough to leave her an opening, none of which seemed particularly promising.

Suicide was an option. Getting soulfucked into a tool against your own interests, becoming an instrument that would happily tear apart everything important, all that made death seem preferable, but death came in a variety of flavors, and there was no guarantee that if she managed to kill herself she would be bottled to fade away rather than going down to the hells for eternal torment. There was at least one upside of getting soulfucked though; it didn’t have to be forever. Juniper could save her.

The link between their souls was the biggest question mark. If it went both ways, and Fallatehr could access it, then he would have Juniper too, and through Juniper, Fenn, which would leave no possibility of salvation. There were calculations to be made there, unpleasant weighings of probability and value, not just because she would be putting others at risk, but because of what the aftermath might look like, once they realized she had put them at risk. But if the soul link didn’t allow Fallatehr to make alterations to Juniper from afar, it had a strong possibility of giving Juniper some kind of advantage in the coming confrontation, especially because he could fix whatever Fallatehr was going to do to her.

“Okay,” she said. “If it’s a choice between being compromised or being pushed to the edge of death and then compromised, I’ll choose to just get it over with.” What had finally tipped her decision was the thought that any escape attempt she made was more likely to succeed if she was at her peak, and the greatest chance for escape always came during transit. She tossed Grak the teleportation key, and he caught it in one hand.

She said a small prayer to each of the five gods, and then a final, sixth prayer to the Dungeon Master that Juniper believed was the one true god of Aerb. Prayers to the gods had their own specific structures to them, with motifs and iconographies that the pious were expected to adhere to, even if prayer itself was next to useless. The prayer to the Dungeon Master took some thought, because no standards existed for praying to what was only a theoretical deity.

_Dungeon Master, if I must be on your railroad, let me ride the train with good humor. If I must roll the dice, let it be known that I would not object to you fudging. Place a dungeon before me, and I will delve it. Place a dragon before me, and I will slay it. I am, above all else, your player._

Grak collected her sword, then asked for her cloak, and her armor as well. She complied; he seemed to be in no hurry. When the cloak was on his back, and everything was stored within it, he tightened
the blood magic ward, which was keyed only to her, until she could scarcely move. Only then did he take her hand in his own and use the teleportation key.

This was, naturally, her chance. Even as the pain hadn’t finished fading, even as she was still struggling to process where he’d taken them, she punched him in the face as hard as she could. They were in close quarters, a room with a bed and dresser, simple, plain, nothing she could use as a weapon, a single door the only exit, and she punched him again, feeling a flash of pain in her hand as she broke something in his face. He grunted and rolled, faster than she assumed the dwarf was capable of. She had already decided that she would kill him if the opportunity presented itself, even if none of this was his fault, even if it meant losing a valuable ally in the long-term, but when she stepped toward him, she met with a barrier. Probing showed that it crossed the room, which, on closer inspection, was the one that he’d slept in the night before. They were back in the farmhouse, in a site he’d had plenty of time to prepare; she had traded one prison for another. The lack of things to use as improvised weapons was now, obviously, by his design.

It took Grak some time to heave himself up from the floor and limp out the door. Amaryllis contemplated the wisdom of suicide again, or possibly harming herself enough that Fenn or Juniper would notice, but there was not much time for such thoughts before Grak returned with Fallatehr in tow.

The elf watched her carefully as Grak altered his wards, then took her pinned down hand without a word.

“Juniper has a soul link with me,” said Amaryllis as soon as Fallatehr’s eyes were once again focusing on the world. It had taken him ten minutes to change her, but even halfway through her commitment to resist and carry out her own plans in spite of what she might feel had evaporated. “Could you see it?” she asked. “He described it as a thin line, it allows him to see and alter my soul at a distance. His plan is to use it as a tool of surveillance, to make sure that nothing has happened to me.”

“Ah,” said Fallather, rubbing his chin. “Troublesome. I saw no such thing. Allow me to look again.”

Another five minutes passed as he touched her, once again with his eyes glazed-over. She kept her mouth shut, but looked Grak over. He hadn’t eaten one of the fairies in the pouch at his hip, and now that she’d undergone the same alterations he had, she understood why. She wouldn’t spend a resource that could be used for Fallatehr lightly, not unless she was sure that it was in his best interests.

That she still felt like herself was surprising. Fallatehr had twisted her, and all thoughts seemed to turn back in his direction, but they were still her thoughts, and beneath what she felt for him, there was an unpleasant dissonance. Because Fallatehr -- his name should have been written in big block letters, large enough to crowd out any other thought, because that’s how he sat in her mind now -- he connected back to so many concepts, so many memories, and even as much as she was willing to die for him, as much as he washed away all other concerns, there were points of contention. Her system of morality had always been a rather flexible one, bending to pragmatic necessity, but now it was bending so hard that it was downright irritating. The new her could be distilled down to “do what is best for Fallatehr”, but she wasn’t just that -- she still had a desire for self-preservation, though she would die for him if need be, and she wanted to be the best and most important among his allies, not just to better serve him, but for the raw desire toward autonomy.

“I saw no signs of it,” said Fallatehr as he came back. “Tell me everything you know about Juniper, starting with the most important, and assuming that Grakhuil has already divulged everything that he knows.”
She realized, as she gave up every secret, that what he’d done had limits. She wanted to tell him the truth, but she didn’t have to, and she could see that if she actually thought that “what is best for Fallatehr” was to tell him a lie, she could do that. In the same way, she could refuse him, or defy him, or even hurt him. There was an abstract concept of Fallatehr Whiteshell, and a question of definition there which her mind idly gnawed upon as she spoke, seeing all that ways that she could twist and turn that definition to her own ends. She didn’t just want what was best for Fallatehr, she still cared about her kharass and herself, and the people of Aerb -- and while those weren’t necessarily aligned values, and while if push came to shove she would choose him every time, there was room to wiggle.

“... and there’s the question of the overarching narrative, which Grak has already probably told you is pointed squarely against you. Likely terminally so.” She hadn’t realized it was true until she said it; Uther Penndraig had suffered losses and injuries, but they were almost always temporary, and never without being paid back a hundredfold. If someone began their time in Uther’s story by stabbing him in the gut and forcing him to limp off, they would end their time in his story with their life’s work dismantled, their castle razed to the ground, and every friend and ally they’d ever had turned against them -- and, of course, they would die, usually horribly. In his time on Aerb, Juniper had begun racking up his own list of narrative resolutions, most of which ended with someone dying. He had introduced her to the term ‘murderhobo’, which, with the right framing of their travels, seemed apt.

“You both take it so seriously,” said Fallatehr. “The evidence seems weak. I wonder whether something else is at play that would more easily explain your joint delusion.”

“The longer we stand here, the higher the chance that he sees into my soul and realizes what’s happened to me,” said Amaryllis. “We need to think of a plan as quickly as possible, both for the case where he doesn’t know and the case where he does. Ideally, we would find a peaceful resolution, or a turn in roles, or some measure by which this narrative can be concluded without your death.”

(And if Fallatehr died? She would do her best to resurrect him, until the alterations he had made to her soul had faded, as she could feel even now that they would. She would seek out another soul mage, she decided, and do her best to coerce them into altering her soul again, because without her, he would almost certainly be consigned to the hells forever, or trapped in a bottle at Juniper’s belt.)

“You don’t think that I can become his teacher in truth?” asked Fallatehr. “Stand down, or even submit myself?”

“Not after what you’ve done to us,” said Amaryllis. In the corner of her eye she saw Grak nod. “Not even if you undo it. If you could reverse what you have done and erase our memories --”

“No, memories are nigh-impossible to work with like that, even when freshly made, at least if attempting to manipulate them through the mechanism of the soul,” said Fallatehr. “As for reversing what I have done … your souls are unstable at the present moment, because the changes I made do not comport with the rest of the soul. They will largely revert on their own, if allowed to.”

“But you could do it?” asked Amaryllis. “Temporarily, to me, in order to fool Juniper?”

“Yes,” nodded Fallatehr after a moment. “An idea occurs to me. Let us go see Lehpenn.”

She had loved Fallatehr for a brief moment, and that moment had passed. Love was an imprecise word, made more imprecise by the nature of the magic he had used. She hadn’t had any romantic interest in him, nor a familial connection, nor had she even regarded him as a friend, but she had nevertheless attached such intensity of importance to him that the term ‘love’ felt apt.
She had assisted in the plan that she now hoped would fail, had held still while her bones were copied over, had watched as Lehpenn ate through all their fairies (save one, reserved for Grak) to heal himself into her form, and had given as much advice and information as she could about how to act like her. Lehpenn would need to lean on Grak for cues, and there was every chance that Juniper had spotted her soul while it was compromised, but Fallatehr had wagered that the chance to inject him into the inner circle was far too valuable, in spite of the inherent risk.

Amaryllis had argued that Fallatehr himself should have taken her place. Neither Rheta nor Lehpenn had any faculty with soul magic -- he hadn’t been lying about that, to her surprise -- which limited their utility as far as agents went. But Fallatehr had been adamant in his refusal; after all, if Lehpenn died, he was only Lehpenn, a servant with a soul as stable as Fallatehr could make it, but ultimately disposable.

She had consented to be bound and gagged, and had even given advice on how to do it -- how couldn’t she have, when it would serve Fallatehr? -- and then Fallatehr had undone the changes to her soul.

“You are leverage,” Fallatehr said to her, as though that was news to her. She had been the one to explain that she meant something to Juniper, that he might be compelled to act foolishly in order to save her. “You shouldn’t think that’s all you are, and if we can reach some peaceful resolution, I hope that we can work together in the future.” That was lunacy, naturally, but she couldn’t tell whether it was because he came from such a different culture from her, because he was delusional, or whether he was simply taunting her.

They had teleported as a group to the windbreak by the road. Without her initial diversion to allow a more hidden way back, that would have been too risky, but her precaution there had allowed them some leeway, and Fallatehr seemed optimistic that Juniper and Fenn would be delayed (their meeting time had come and gone, but they had not, at least, shown up at the farmhouse). He had stayed behind at the farmhouse, to wait for them there, but he had sent the non-anima, bound and gagged as Amaryllis was, to be teleported along. Amaryllis had marked her as a companion, and one that Juniper seemed invested in; the non-anima was leverage too.

After their arrival, Grak and Lehpenn-as-Amaryllis cautiously crept forward to check whether there was a car waiting, and finding none, settled themselves down to wait. Amaryllis had been laid down next to the non-anima, without a view of any of this, and Rheta, Fallatehr’s minion, stood over them, clutching the teleportation key. The plan had been hammered out with Amaryllis’ input, accounting for various possibilities, insulating Fallatehr from risk as much as possible, giving him leverage that couldn’t be taken away from him simply by killing him. There was a decent chance that Lehpenn would be killed on first contact, but if he wasn’t, then Juniper’s ability to see into her soul would actively work against him, giving him a false negative. That opened the path for other plans, other contingencies, and eventually, Juniper’s capture.

After two hours, which Amaryllis spent face down in the dirt uncomfortably close to the non-anima, Rheta used the teleportation key again. This time when the pain faded, they were someplace entirely different, somewhere that seemed, from Amaryllis’ limited vantage point, to consist largely of smooth rocks in various colors, each at least as large as a handspan. It was not a terribly comfortable place to be set down for a long stretch of time. She started grunting and wiggling, the most she could manage given her restraints. After a few minutes of this, Rheta, a muscular woman, eight feet tall, lifted her up and pulled out the gag.

“No spitting,” said Rheta.

“I need to use the bathroom,” said Amaryllis. “I wasn’t going to spit on you.”
“You seem like a spitter,” said Rheta. Upright, Amaryllis could see more of the terrain, which did little to disconfirm her initial impression of it as a place consisting mostly of smoothed rocks. Far in the distance, a herd of van-sized beasts seemed to be shoveling those rocks into their mouths.

“Come,” said Rheta, but the command was unnecessary, because she was carrying Amaryllis in one hand.

Her captor helping her to go to the bathroom was mildly unpleasant, and little information was gained in the process, though to Amaryllis’ surprise, her gag wasn’t put back in place when she was set back on the rocks next to the non-anima. Rheta, for her part, seemed bored with this guard duty, which was the common fate of guards everywhere. Amaryllis had to wonder how much this woman was actually suited to the job; inside the prison, there would have been little cause to create someone in the specialized role of the brute, which at first glance is what she would have pegged Rheta as.

“I’m uncomfortable,” said Amaryllis. “I think Valencia probably is too.” Calling the non-anima by her made up name was going to be a good habit to get into, if the group was ever reunited -- if Juniper saw through the lies, cut through the plots, and won the fight. Here, saying ‘Valencia’ was an effort to humanize her in the eyes of their mutual captor, though Rheta had likely known her since birth.

“I don’t care,” said Rheta.

“The most likely outcome of this is that Fallatehr turns me to his side again,” replied Amaryllis. “I have no weapons, no armor, and no relevant training, the worst I could do is run away into an inhospitable wasteland, and that’s if you were foolish enough to remove all of my ropes, which I’m not even suggesting you do. Just loosen them, enough that I can move and avoid getting sores. I’ll be more valuable to Fallatehr that way.”

“You’re trying to manipulate me,” said Rheta. She shifted, clearly not comfortable on the rocks.

“I’m trying to find the seam of common cause,” said Amaryllis, which fell just short of being a bald-faced lie. She remembered what it had been like to think that Fallatehr was all-encompassing, and that gave her a handle on how to frame her arguments here. True manipulation might come later.

Rheta thought for a moment, then undid some of the knotwork, enough that Amaryllis was able to sit up and find a better position. That was promising, and gave her some room to work with, which was exactly why Rheta should have refused her.

When she leaned back, she found herself briefly touching the non-anima, and while her instinct was to shy away, she let the touch linger. The non-anima was unpredictable, but that didn’t mean that it couldn’t also be a tool. Amaryllis felt at it while she spoke.

“It wasn’t like I expected, being his thrall,” said Amaryllis.

“Thrall?” asked Rheta. Amaryllis felt a rush of relief at the response. The woman still had curiosity, and could still be bored out of her mind by guard duty. She had a stable soul, to hear Fallatehr tell it, but Amaryllis was guessing -- hoping -- that came with less than the perfect peak of devotion to Fallatehr, or with more allowance for quirks.

“Thrall isn’t the right word,” said Amaryllis. “Fanatic? Devotee?”

“Devotee,” nodded Rheta.

“I was still myself,” said Amaryllis. “It takes some of the punch out of what was done to you. It’s not as immoral as simply wiping a mind away.” It was worse, in some ways. Secrets, spilling out of her
mouth, people she cared about tossed aside, she could feel her anger rising as she thought about it, and quelled that anger. Her fingers touched the non-anima, feeling for her ropes. Exploration by touch revealed that the knot was nowhere she could reach without moving, not that she was actually planning on unleashing the non-anima, whatever Juniper’s powers might be whispering about it.

“Still immoral?” asked Rheta after some time had passed.

“I didn’t think so when I was his devotee,” said Amaryllis. She tried to keep her voice gentle. “I thought that anything that was of value to him was good. Now … I think otherwise.”

Rheta rolled her eyes. “Never much interested me, good and bad.”

“Who were you, before you were imprisoned?” asked Amaryllis.

“Why?” asked Rheta. She was looking out at the animals that were gargling rocks in the distance. “Doesn’t seem important.”

“Just making conversation,” replied Amaryllis. She touched the ropes again, and considered burning through them, like Juniper had done in the elevator shaft. She had blood magic at hand, though somewhat less faculty than he had even back then, and her hands would be nearly unusable, not to mention that any reaction from the non-anima would give the game away (a reaction that a devil might give, or that the non-anima might give in response to the pain of being burned). An option, but not a good one. “I had other interests, other ideas, when I was a devotee.”

“Trying to find seams of common cause?” asked Rheta. Amaryllis nodded. “I don’t trust you.”

“So don’t,” replied Amaryllis with as good of a shrug as she could manage in her loosened bonds. That was also a way of checking how much play she had: not much, but she didn’t think that she could ask for them to be loosened a second time, at least not yet. The bindings were all made of a single rope, circling her ankles and wrists, connected by a length that allowed some slack.

Rheta tapped her foot against one of the rocks, frowning, then picked it up and threw it off into the distance. “I was part of an honor guard for a now long-dead king,” she said. “My people are warriors. Were warriors, if they no longer exist. The king was a hold-out when the Second Empire began to rise, but his brother was more than willing to negotiate. That’s speculation on my part. The king was killed in his sleep by agents unknown, and I was arrested by writ of the Lost King’s Court.” She turned to look at Amaryllis. “I’m curious how you would turn that to your advantage, princess.”

“Just killing time,” said Amaryllis, trying to be nonchalant. Amoureux Penitentiary had been Anglecynn’s dumping ground for quite some time, and the ruling class of Anglecynn consisted almost entirely of her relatives, most of them distant. The odds that any given person housed there would have a grudge against someone of her background was rather high, so this wasn’t quite down to unfortunate coincidence, but from the large woman’s tone, it probably meant that getting on her good side was out of the question. A number of conversational avenues had been slammed shut.

“Can you loosen my friend’s knots?”

“She’s not your friend,” replied Rheta.

“Friend of a friend,” said Amaryllis. “She’s cosmically important.”

“No,” said Rheta. She turned away, to look out over the rocks. “I’m done talking.”

Amaryllis stayed calm. Doors were shutting all over the place. If she talked again, the gag was likely to return to her mouth. The plan had been that they would stay in this place until well past nightfall,
then teleport back to Parsmont, to a place that Rheta would pick at random. After that, they’d use
coded messages that could be sent and received with neither party knowing where the other was.
That had been her idea; it was a way to keep her as leverage without Juniper being able to murder his
way to a solution, a fall-back strategy in case other paths failed.

A long silence was broken when the non-anima began squirming and making noises through her
gag. Rheta glanced over for a moment, then looked back out at the field of smooth rocks. The
creatures that had been eating the rocks had gone, but a few small birds had taken their place, and
were pecking at the rocks.

“She still needs to use the bathroom,” said Amaryllis. “We’re going to be together for quite a while,
and I think we’d both rather not have to smell her if she shits herself. I half-suspect that a devil would
do it just to fuck with us.”

Rheta sighed and stood up, then came over and dragged the non-anima to its feet, pulling by the
rope. She carried her some distance away, not seeming to show any strain from carrying her, then
unceremoniously reached up to yank down her underwear, then pushed her dress up as well. All of
this impressed upon Amaryllis how strong the woman was; that was a given, at eight feet tall, but a
direct physical confrontation was unlikely to be won. What other options did she have though? Rheta
was, all things considered, not a terribly good guard, but there weren’t even any unobvious
weaknesses to exploit.

As they were returning, with the non-anima having relieved herself, Amaryllis turned her hands
inward to her own ropes and began burning through them, one hand to free her ankles, the other to
free her wrists. The pain followed quickly, and from there it was a matter of trying her best to
suppress the outward signs of that pain while still keeping enough concentration on the blood magic.
It was a bit rash, as decisions went, but even if she’d had time for second thoughts, the opportunity to
bail out had passed the moment she’d burned herself.

The pain overwhelmed her for a brief moment at the end, and she felt tears rolling down her cheeks,
but then she was finished. Through tear-filled eyes, she saw Rheta looking at her, but couldn’t make
out enough to see the huge woman’s expression. The sight of the non-anima falling to the rocks was
enough of a warning about what was about to happen. Amaryllis stood up, swaying slightly -- every
movement was agony on her hands, how had Juniper done this? -- and used her forearm to wipe
away some of the tears, enough that she could look at Rheta.

“What do you think you’re doing?” asked Rheta.

Amaryllis settled into a fighting stance on the uneven rocks. Her hands were held out in front of her,
usable only if she could spare the time for a bout of blinding pain, rather than the mere agony that
each of her arms ended in. She’d always been weak at unarmed combat. And she was facing down
an opponent with a three foot height advantage, a two hundred pound weight advantage, at least an
extra foot of reach.

“What were you hoping to accomplish?” asked Rheta. Through the tears in her eyes, Amaryllis
could almost see the frown, but her displeasure was apparent enough in her voice.

Amaryllis was shaking from the pain, and the unasked-for tears were going to further complicate
matters. She tried to redirect the flow of her blood away from her hands, in the hopes that the lack of
circulation would numb them, and that gradually began to do some work, which stepped the pain
down enough that she could actually concentrate. Rheta was still standing in front of her, looking her
over, and Amaryllis realized the predicament just before Rheta spoke.

“I don’t have more rope,” the giant woman said with a mild voice. She looked down at the non-
anima. “Looks like one of you is going to have to give up your clothing.” Rheta reached down and
began to pull the non-anima out of her dress, stopping momentarily in order to tear it.

Amaryllis picked that moment to attack, because if you were going to do something like burning a
significant amount of your own skin and flesh away, then you sure as hell weren’t going to just give
up halfway through. She raced forward, mind awash with fresh pain from the movement, the smell
of burning flesh in her nostrils, and ducked under a backhand fist from Rheta.

There was a loose school of combat taught to young women all around Aerb, if they were nobility,
or the daughter of someone important, or simply had cautious parents. As legend had it, Uther
Penndraig had invented the style when his own daughter was born, and he started by looking
through all the formalized rules of physical aggression he could find and built, as the foundation, a
series of principles and maneuvers that violated every single rule designed to make things fair.

Amaryllis went for the eyes, a risky move given that it meant slipping inside the other woman’s
guard, and the damage to her hands that meant such an attack would be pure torture even with the
hands numb. Her fingers were barely working, but the internal damage to her hands had largely
spared the tendons that let her thumbs move, so she clapped her hands to the sides of Rheta’s head --
brilliantly sharp pain, white hot even past the numbness -- and drove in her thumbs. She was swatted
off only a few seconds later, but when she regained her bearings (she’d landed on the rocks, and
would have bruising down to the bone) she took visceral pleasure in the way that Rheta was rubbing
at her face and stumbling around.

From there it became a fight of cripples, Amaryllis largely without the use of her hands, Rheta
largely without the use of her eyes. She wasn’t fully blinded, because even though eyeballs were
surprisingly fragile, it was difficult to apply much force to them. Nevertheless, she was having
trouble seeing, and while Amaryllis’ body ached, she was still in decent enough shape to put up a
fight against someone whose swings went wide more often than not.

Amaryllis finally got the upper hand with a kick at just the right moment, aimed right at Rheta’s knee
when all her weight was on that foot. It took Amaryllis putting almost all of her effort behind the
kick, a reckless attack, but there was a sickening crunch as Rheta’s foot went off balance on the
rocks, slipped back slightly, and then caught in place, with the knee bent backward a moment later.
Rheta cried out in pain and fell, and Amaryllis fell on top of her, using her elbow to repeatedly slam
the giant in the head. Each hit sent another jolt of pain up Amaryllis’ arm from her badly burned
hand.

The actual murder was accomplished once Rheta was insensate. Amaryllis picked up one of the
stones using her wrists, and drove it down with all her might into the center of Rheta’s face. She
checked for pulse (laughably difficult without fingers) and breathing, and finding none, finally took a
moment to relax.

Relaxation meant pain. The blood began to flow back into her hands, and the pins and needles of
circulation returning was the baby’s breath in a floral arrangement of pain. She screamed and cried,
for a time, because it was good to scream and cry, but eventually she stopped and fought back the
pain once more to take stock of her surroundings.

She had a teleportation key, the corpse of an eight-foot tall woman, and a bound non-anima who was
looking at her with wide eyes.

“Not sure I was supposed to rescue myself,” she said. She willed her hands to stop shaking, because
it was making the pain worse, but they didn’t comply.

The only real question was where to take the teleportation key to. Juniper was out there somewhere,
almost certainly ready to fall into whatever trap Fallatehr had set for him, but without knowing where he was, there wasn’t anything she could do about that. Teleporting anywhere was fraught with peril, simply because of how incredibly valuable the key was, but staying in this land of smooth rocks was out of the question given she had no food, water, shelter, or medical assistance. She let out a shaky breath. The fight had left her, and a bruised and burnt husk seemed to be all that remained. She needed help.

She cast her glance toward the non-anima. “Fuck,” she said, then got up and staggered over to her. It was brutally hard work to remove the gag, given the state of her hands, and once the gag was out, there was no question of her being able to get it back in.

“I’m an ally,” said the non-anima.

“Yeah?” asked Amaryllis. She willed her hands to stop shaking again, and this time they settled slightly. The sun was starting to set.

“Something happened in the basement when I was with Juniper,” said the non-anima. “Something changed in me. I was granted power, and freedom from possession. He seemed to have expected something like that.”

“He’s an idiot,” replied Amaryllis. She wanted to slump over and sleep, even as hard as sleep was to imagine with the pain she was in. Rational evaluation was hard in that kind of state, and against a devil, she needed to be at her best. She’d thought, coming over, that she could do it, but trying to work through the logical implications of what the non-anima said was proving difficult. Devils could be cunning, masters of the social, perfect liars, but what Amaryllis needed right now was help, and this seemed like a risk that she had to take. Juniper had probably pushed her loyalty above ten, against Amaryllis’ advice, but that didn’t mean that she was telling the truth. He obviously hadn’t released her from the basement, which meant that he wasn’t entirely confident either. He hadn’t said anything about a loyalty increase either. “Any proof?”

“None,” said the non-anima. “There was nothing he said I wouldn’t have cause to know by other means.”

Amaryllis nodded. “Yup, because that would be too easy.” She looked down at her shaking hands and willed them to stop again. They seemed to start back up whenever she stopped paying attention to them. “Fucking devils.”

“If you let me out, I can help you,” said the non-anima. “I think I can capture one with medical knowledge.”

“I need magic,” said Amaryllis. “Best we could do is cover them with cloth.”

“You’ll need a pair of hands,” said the non-anima.

“Yup,” said Amaryllis with a sigh. She glanced over at the corpse a few feet away. If she had bone magic, the throbbing pain in her hands would be a problem she could fix in a matter of minutes. Symbiosis, they’d called it; Fenn had bone magic by proxy. She tried, briefly, to raise her loyalty, to come to a personal revelation that would allow her access to new abilities, but if it worked, there was no immediate effect.

“You’re a fearsome fighter,” said the non-anima. “I thought you would die.”

“She didn’t want to kill me, gave me an edge,” said Amaryllis. That, and I’m better at fighting than I should be, far beyond any of the training I ever got. I fight like a seasoned veteran of the pits. “You
said something happened to you, down in the basement?"

“Something he knew was going to happen,” said the non-anima. “It wasn’t what he thought it might be, but he didn’t clarify. It turned the tables, made me a furnace fed by them. I eat demons.”

“Shit,” said Amaryllis. Wouldn’t Juniper have told her, if something like that had happened? Maybe not, with Grak there, or given her previous opinion on the matter. Would the devils have been able to figure out something like a Loyalty change, without Juniper’s input? Unknown. Would Juniper have given his input? Also unknown. What the non-anima -- Valencia, he’d named her -- was saying fit, under the assumption that Juniper’s power almost always worked in his benefit, and under the assumption that he wouldn’t be given worthless companions.

Sitting on the uncomfortable rocks, covered with bruises, staring at her burned hands and trying to ignore the pain, or at least maintain conscious thought through it, Amaryllis wondered about that last assumption. Whatever forces were at work hadn’t stopped companions from being problems. Hells, with his rapidly evolving skillset, Juniper probably would have been better off going to the border wall of the Risen Lands instead of meeting her. From her perspective, their time together had been a litany of failures and setbacks, getting captured by Aumann, being incapacitated by rat rot, being chased by Larkspur, and then captured and turned by Fallatehr, which was its own series of failures rolled into one.

(((Okay, I’m getting a little bit ahead of myself here, but these are all things that she confessed feeling to me, after we were back together. Uh, spoilers, I guess, but you already know that I’m okay and Fallatehr’s dead, and with the soul mage and his two minions killed it’s sort of just a question of what happens between Amaryllis and Valencia, and how or whether they joined back up with me, which I guess you also already figured out, since how else would I know any of this?

But what she didn’t mention was the stillborn romance, which I think must have been part of that train of thought. Why she didn’t mention it to me was obvious enough, but I thought it probably had to go on her list of failures, if she was feeling down about herself and her capacity as a member of the team. Still, there are limits to the kinds of thoughts that I’m willing to say were running through her mind.

Okay, back to the story.)))

“What is Juniper to you?” asked Amaryllis.

“I don’t know,” said Valencia. “He said he wanted to be a friend. To help me. I haven’t known very many people. Most of them were Fallatehr. Juniper might seem less, when I know more, but I don’t think he will.” She didn’t say less what.

“I’m going to let you out,” said Amaryllis with a sigh. She looked down at her hands. “Might take a bit.” It sometimes seemed like there should be a limit to how much something can hurt before your body said, ‘alright, I think you probably have the message, I’ll shut up about it now’.

Eventually, working mostly with her thumbs, Amaryllis managed to get the knots loose enough for Valencia to slip free of them. A lesser person than Amaryllis Penndraig might have resigned herself to her fate, but Amaryllis kept on her guard, as though there would be anything that she could do against the combat prowess of a demon shoved into mortal form.

“You don’t trust me,” said Valencia, rubbing her wrists and ankles.

“No,” said Amaryllis.
“Then why did you let me out?” asked Valencia.

“Necessity,” answered Amaryllis. That wasn’t quite true though. “It’s what Juniper would have done. He has better instincts for this sort of thing.”

“People things?” asked Valencia, cocking her head to the side.

“No,” said Amaryllis. “Other sorts of things. I’ll explain it to you later, if -- if it’s safe to.”

“Okay,” said Valencia. Her voice was soft. She reached down and touched her dress where it had been ripped. “Are we going to be like sisters?”

Amaryllis might have let out a long sigh of discontent at that, but she was holding her hands in front of her so they wouldn’t have to touch anything, and the muscles of her body were aching from the tension of fighting pain, not to mention the bruisings she’d taken. “Come on,” she said. “I need you to go search the body and get the teleportation key, then hand it to me. We’re leaving this place.”

“To the farmhouse?” asked Valencia. “In Parsmont?”

“No,” replied Amaryllis, looking down at her hands. “Somewhere a little riskier.”

---

Ever since escaping the Risen Lands with the teleportation key, Amaryllis had been on the lookout. Dark alleyways were her preference, especially those with little nooks off to the side created where, say, there had once been a doorway that had been sealed, or a street that had been built up in, or a rarely-used accessway. When she spotted a place like that, she would go to it, move around as much as possible within its confines, then retreat backward along her own steps. These places were all marked on the view as provided by the teleportation key.

Valencia was already moving when they arrived, stepping out in front of Amaryllis in a fighting stance that was recognizable as such only because there was no other explanation for what she would be doing. Amaryllis might have stopped her, if she wasn’t trying to push through the overwhelming flash of quickly-fading pain that accompanied use of the key.

“It hurts you?” asked Valencia, who relaxed and turned back toward Amaryllis.

“Yeah, it hurts,” replied Amaryllis. She had been holding the teleportation key between the heels of her hands, and fearing the worst, handed it over to Valencia, simply because there was no other option. Valencia slipped the key into a small pocket on Amaryllis’ dress though, without seeming to understand the importance of the gesture. “Come on, we’ve got a bone mage to see.”

It was easy enough to play the part of indigents; Amaryllis held her injuries in front of her, stopping occasionally to beg for coin she was certain she wasn’t going to get. Valencia’s dress was ripped, and neither of them were wearing shoes (Amaryllis’ had been taken to be worn by her double, along with all her armor; Valencia’s had been left behind). Even before stepping onto the streets of Barren Jewel, they had been dirty. They still got a few looks; even as indigents, even horribly wounded, they were two young, attractive women.

They reached the small shop with a bone on the sign above its door, and went in without knocking. Amaryllis sat down even as the pale woman with black spots stood up from behind her desk.

“Emergency,” said Amaryllis, laying back. She was bone tired -- pain would do that to you, if you felt it for long enough. “Gonna have to pay you later.”

“Is she,” said Bormann, looking Valencia up and down with a frown.
“Non-anima?” asked Valencia. “No, I just have the misfortune to come from a bad bloodline.” Her accent had changed radically, losing the faint trace of elvish it’d had and becoming a melange of Anglecynn Anglish. She let out a rueful chuckle. “As if anyone these days would suffer a non-anima to live past infancy.”

“Some mothers would,” said Bormann, but she seemed satisfied by the explanation. She moved over to Amaryllis and got to work without comment, first looking over her hands, then her other injuries. “I don’t normally take on patients who can’t pay.”

“But it helps that I was upfront about it, right?” asked Amaryllis. Humor had never been her strong suit, and she had been trying for a joke, but it didn’t even remotely land.

“More ill-advised use of blood magic, like last time?” asked Bormann, sitting back slightly on her chair and looking Amaryllis over.

“Given the circumstances, it wasn’t ill-advised,” said Valencia, and despite herself, Amaryllis was grateful that she didn’t have to muster up the energy for her own response. “We’ll be able to give you twice your normal rate within twenty-four hours. Coming here first was, I hope you understand, a priority.” Again the different persona was there, surrounding her like a cloak.

Bormann glanced at her, then back to Amaryllis. “The bill will be four million tcher then,” she said, and got up from her seat to start taking down bones. “You should thank your friend, the half-elf, for establishing a good working relationship.” The bones rattled and clacked as she took them from the strings they hung from, and Amaryllis closed her eyes for a moment, finally dropping her guard.
The Mouth of a Long River

“How long are we going to wait here?” asked Fenn after an hour had passed.

We’d had a late supper, a cold meal of shredded meat and crumbly cheese between slices of yambread that was almost, but not quite, what I would call a sandwich. I forced the food down; with Fallatehr dead, fixing my ribs had been delayed for the time being. I had to hope that getting to level 20 again was going to allow me to do it, because I’d killed the most skilled teacher available to me.

“Through the night, I think,” I replied. “I’m worried that the Abswifth is going to stop by. I’m more worried that the Bendon is going to show up. I don’t really have a firm grasp on how the government actually works in Parsmont. If they have the license plate of the car, then maybe they could comb through their files in order to figure out who the car was registered to, which would lead them right back here.”

“Maybe I should learn how to clean up blood in a hurry,” said Fenn. “That, or pray for some rain. Fallatehr left quite the puddle.”

“Yeah,” I said with a grimace. Both corpses were stored in her glove, their souls in their own separate bottles. “I don’t feel great about that. Toward the end … even though he had Grak, even though Amaryllis was — wherever she is, I guess, even then, I felt like he actually was trying to figure out some kind of compromise with me.”

“You are such a sap,” said Fenn. “It’s a good thing that you have me around, you need someone with street smarts. I’m reformed though, just to let you know.”

“Reformed?” I asked. “That’s the first I’ve heard of it.”

“I’m not sure what I’m reformed into,” said Fenn. “Reforming, more like.”

“Let me know if I can help with that,” I said. I was sitting by the window on the second floor, and looked out onto the yard, which was lit by the outdoor lights. Beyond that was the road leading to the farm, and if Amaryllis somehow found her way back to us, I thought that was probably the way that she would come.

“There ought to be some limits to how much a single person can be to you,” said Fenn. She didn’t elaborate on that one way or another, and I let it hang in the air, hoping that she would say more, but I have to confess that my mind was elsewhere. The party, such as it was, had been sundered, three members here at a farmhouse near Parsmont, and three others somewhere else. One of them was the big spooky deer, admittedly, and Valencia was probationary, but it left me feeling incomplete.

“You miss her?” asked Fenn.

“I’m worried,” I said. The only idea I’d had thus far was that we could try to torment the answer out of Grak. The idea of actual torture left such a bad taste in my mouth that it was a non-starter, and I doubted that it would be effective even if I was willing to stoop that low, but there were other ways that we might get to him. We had Fallatehr’s soul in its own small bottle, which meant that we could make Grak an offer on what we would end up doing with it.

“But do you miss her?” asked Fenn.

“Yeah,” I replied. I tapped at the window once, idly. I thought that I had seen something, down by the road, but closer inspection revealed only cropland, stalks of something that was close enough to
corn that it felt like home.

“I do too,” said Fenn. “Not that she’s actually been gone that long, but it feels like, when are we going to see her again? And I didn’t get to say goodbye.” There was a subtle change in the lighting, and I looked over to see that Fenn was holding one of the small glass bottles with a soul in it. “Solace,” she said by way of explanation. “If our princess is dead, or worse, just … gone, I’ll,” she shook her head. “I’ll write a strongly-worded letter to the Dungeon Master.”

I felt my heart flip at that. It was possible Amaryllis was dead. It wasn’t the kind of thing that I would ever have done as a DM, but it was possible, especially since we’d been delving deep into narratives. I felt the need to do something, to make myself useful, to not just sit and wait, hoping that Amaryllis would come home.

“I’m going to try to level up soul magic,” I said. “See if I can get it back to 20, see if I can maybe fix Grak, then maybe, I don’t know -- if they have the key, I feel like they’re a long way away. So it’s probably pointless.”

“I’ll keep guard,” said Fenn. “Good luck, have fun.”

I dipped back into my soul and began mindlessly browsing, letting myself get lost in the soul trance. Level Up had moved back up the rankings, though not far enough that it was in strong competition with the things that I thought were core, and I moved it back down. I took a trip to Fenn’s soul, just to confirm that she was clean (and to look at that value, Nellan, that I hadn’t yet asked her to answer for), then over to Amaryllis’ soul, to make sure that she was alive, or at least that her soul was still accessible. I wasn’t sure what would happen to the links if either of them died, especially given that those links didn’t seem like a natural feature of souls to me.

After that I pulled out and asked Fenn for some pencil and paper, which she supplied from her glove, then spent some time going in and out of my soul in order to make some recordings of what was in there, which I thought Amaryllis would appreciate when she came back. The Essentialism skill was climbing, but slower than I had hoped for; I wasn’t doing anything too useful with it. I tried burning through my bones and replacing them to boost the skill faster, but that seemed like exactly the kind of grindy munchkinry that the game layer actively discouraged, and my only feedback was making guesses at what was causing a single number to rise.

“Wait,” said Fenn as I popped back out of my soul. She leaned down and opened the window. “Friend or foe!” she yelled out.

There was a long pause.

“Friend!” came the reply.

“They say they’re friends,” said Fenn. “Two of them, in the fields, skulking around.” She was jabbing her finger out the window, into the dark, and her eyes had to have been better than mine, because I couldn’t see shit. “Neither of them is eight feet tall, which I think probably means there’s cause for celebration, unless we have another changeling on our hands.”

It was slow, as reunions went, due to suspicions on both sides. They were, clearly, Amaryllis and Valencia, and we were, clearly, Juniper and Fenn, but given everything that happened, we were all understandably cautious. Amaryllis was asked to demonstrate mastery of her heirlooms, and I triple-checked that her soul was intact. My Anyblade was invested in me by Amaryllis, so I could prove that I was really myself by shaping it, plus by having Ropey vouch for me. Amaryllis wanted Fenn to fire her bow, and Fenn cheerfully told her that she could fuck off, but did offer a demonstration of her archery skills, which I had to imagine would be nearly impossible for all but a very small group
of people to fake (and we didn’t, to my knowledge, have any supernaturally skilled archers as mortal enemies). Lastly there was Valencia; for the sake of completeness, I tried to slide one of my tattoos onto her skin, and found that it wouldn’t cross over, as expected. She had no soul, no part of her was magical, save perhaps for the gift that the game had bestowed on her.

“Is Grak okay?” asked Amaryllis, once we were done with the confirmation process.

“I’m not sure how long it will take for the effects to fade,” I replied.

“Fallatehr spoke of it in terms of stability,” said Amaryllis. “There’s nothing grounding what Grak feels about Fallatehr, so it should evaporate more quickly, if I understand it right.”

“Next time let’s fight something dumb,” said Fenn. “My vote is some kind of monstrous bear, something that I can shoot from a distance, preferably without armor.”

Something had changed between Amaryllis and Valencia. I had known as much when I’d seen Valencia without chains or ropes, but watching them together, even the way they stood, it was different; Amaryllis angled her body so that Valencia was implicitly included in the conversation, and spoke to the center of the group. I still had my doubts about Valencia, and could see that there were problems with her on the horizon, but the fact that Amaryllis seemed to accept her assuaged my concerns.

“We’re running out of safe places to go,” said Amaryllis. “We have an hour until the key is done recharging, and I think we’d be better off not being here.”

“Agreed,” I said.

“We also need to go back to Barren Jewel,” said Valencia. She was keeping her back straight and trying to project her voice, but the attempt at speaking with authority was fairly transparent for being an attempt. Not currently with her infernal superpowers then.

“What’s in Barren Jewel?” asked Fenn, raising an eyebrow. Her eyes were moving over Valencia, curious and wary.

“We owe a bone mage for her services,” said Valencia, casting a glance at Amaryllis. “Four million tcher.” She looked down at her dress, which I saw was ripped. “And we’ll need clothes, if you have some.”

At that, Fenn finally burst into a wide grin. “I think I might have something in just your size.”

I reached level 20 in Essentialism the next day, as I ‘meditated’ on a warm, flat rock in the middle of some very empty woods. I got the Soul Slip virtue back again, and this time had more freedom to explore my soul. The virtue still had a horribly vague description, but I was hopeful that one of the clauses, the one about ‘altering that which had been unalterable’ would allow me to fix Grak. Before going to where he was tied up, I looked in at my soul, to where the ability numbers were lined up. There was nothing that I could change there without lowering the cap on some of my skills, and so many of my skills were at their cap that I couldn’t do it safely. I thought that I had to be nearing another level, so decided to wait until then, when I would have the points to play with and wouldn’t risk lowering my skills, if that was what happened when the cap got permanently lowered.

The second thing I did was to go to one of my little-used skills, Bows, and lower it by a point. When I had lowered Essentialism, I’d been kicked from my soul, which made sense given that I had zeroed out the skill and temporarily lost it. Here, I was trying to see whether lowering a skill actually gave me anything, because the description for Soul Slip explicitly mentioned trade-offs. After feeling
around the internal space of the skill section in my soul, I eventually realized that I could feel something slippery there, and with a push of will, could apply it to one of the other skills. I applied it to One-handed Weapons, which was at its cap, pushing it up to 22.

One of the annoying things about being inside the soul was that I didn’t get any of the HUD notifications that I got in the ‘real’ world, but waiting in my list of Afflictions were two new entries.

*Overcapped: Skill will decay at 1 per 10 minutes until under cap.*

*Skilled trade: Skill will decay at 1 per 10 minutes until returned to baseline.*

Not permanent, then. After five minutes had passed, I checked my skills, and saw that Bows was still down a point, and One-handed Weapons had reverted to 21, which confirmed that the times multiplied, and that it was a semi-permanent cost to be paid. I hoped the same wasn’t going to be true for trading ability points, because those were one of the most valuable game resources I had; it made me nervous to even try.

But the point of leveling Essentialism wasn’t to get those benefits; it was to see whether or not I could do something about Grak.

When I came to him, he wasn’t looking good. We hadn’t taken the gag from his mouth because we were worried he would try to bite his tongue, which meant we hadn’t been able to feed him or give him anything to drink. There were dark circles under his eyes, and his hair was matted to his forehead with sweat. We’d kept him tied up, too, and while Fenn had cleaned up after him, there was still a lingering odor; keeping someone bound for long periods of time was fraught with difficulty. He lay in one of our tents, set there to keep him out of the rain.

“Hey,” I said to him. I reached out and placed my hand on his head. “I’m going to try to change you back to normal.”

He screamed around his gag, and I could see his pupils dilate, but I tried to push all of that aside and concentrate on the feeling of my skin against his. There was latent magic in skin, and magics of many kinds had connections to the soul, so I thought that was a decent enough place to start. If your bones connected back to the soul somehow, then your skin probably did too, if only because it was through a force of will that the tattoos were activated. I was looking for a thread, or a tunnel, or something like that I could search along, something that would lead me backward to his internal structure.

It took me four hours to worm my way in. After an hour touching his sweaty forehead, I used the Anyblade to make a cut on the pad of my thumb and the back of his wrist, then tried mingling our blood and finding a connection that way, and when that didn’t work, I tried to find his soul by first burning through one of my bones to heal him, and then burning through one of *his* bones. That was what finally worked, but it was still two fucking hours of trying to tug on that metaphorical thread before I was in his soul.

When I finally got it, it was different from how I’d experience Amaryllis and Fenn’s souls. Those had been, in some respect, extensions of my own, governed by the same logic, at least from my point of view. By way of analogy, if my soul was an enormous sheet of paper, Grak’s was another sheet laid on top of it, this one without writing. I had to navigate between the two frequently, because his soul didn’t have the order to it that mine did. It felt like sitting in front of a television with a printed out sheet of paper, trying to follow an FAQ to a game, going from instructions to screen and back again.

Eventually, I found Fallatehr in his mind, and after triple-checking and taking a deep breath I could
barely feel, I dialed it down into the negatives. It was only because I saw the value moving downward that I was confident enough to do it; I was only accelerating a process that would have happened on its own without me.

When I removed the gag from Grak’s mouth, he said a word in Groglir that was, from context, a curse. “Untie me,” he said. I didn’t bother with trying to save the rope, and used the Anyblade to cut his hands and feet free of their bindings. He began rubbing at his wrists, and I placed a hand on him to give him healing -- a hand he swatted away.

“I don’t like having my soul touched,” he said.

“I was going to give you healing,” I replied. “It’s not good to be tied up for so long. You get bedsores, have your circulation cut off.” A little thanks might have gone a long way, but I didn’t say that. “How are you feeling? Back to normal?”

“No,” replied Grak without elaboration. I let him sit and massage where the ropes had been digging into him. “I was … I had purpose.”

“Serving Fallatehr,” I said.

“It wasn’t service,” said Grak. “It was wanting something more than myself.”

“Amaryllis didn’t describe it like that,” I replied.

“No,” said Grak. He stopped rubbing his wrists and laid down on the ground. “She wouldn’t. She is more person than I am.”

“More person?” I asked. This felt, in some respects, like the most true conversation we’d ever had, despite all my attempts at inroads.

“She has purpose,” he said. “Fallatehr gave her another purpose. She feels relief at returning to her previous path.”

“And you don’t have a path,” I said with a nod. I knew how that felt, but didn’t want to say it. Here on Aerb, there were paths galore, but back in Kansas, there were times I’d felt utterly adrift, even before everything had gone to shit. “What happens when you take your thousand pounds of gold to Darili Irid?” I asked.

“Nothing,” said Grak, looking past me.

“I have a quest for it,” I said, but at that he turned further away from me. “I really don’t understand you.”

“There is not much to understand,” replied Grak.

“Sure,” I said. I was watching him closely. I wanted to say that all of this could have been avoided if he’d just been more loyal to me, or that I had been trying with him, was trying with him even now, and it was frustrating for it to not be paying any dividends, but that wasn’t the kind of thing that I thought would be helpful, and if I needed to vent, I would go vent about it to someone else.

“I didn’t like being told I was part of something,” said Grak, into the silence. “Back in Barren Jewel, when we met. I did not like it. You are like family to me.”

“Family,” I said, rolling the word over in my mouth. “Family, because you’re stuck with family, and you have an obligation, or they think you have this obligation, and if you could pick … if you could
pick your family, you wouldn’t have picked the ones that you ended up with.” That was how I felt about my parents, when they were fighting, which was often. Even sometimes when they weren’t fighting. “You left your family to become a warder. And when you came back, they tossed you into a marriage that you didn’t want. So you left. Am I that kind of family to you?”

“No,” said Grak, returning his gaze to me. “You are not the family I would pick, but you are also not like my father.”

**Loyalty increased: Grak lvl 8!**

I wanted to ask what it was about me, but that seemed like a conversation that would just irritate me. Count on a guy like Grak to sap all the enjoyment from having made a breakthrough in soul magic and fixing him.

Fenn found a mark for us back in Cranberry Bay, a man she’d found sitting in a tavern drinking beer with his friends. It had taken a show of cash for her to tempt him back to the hotel room we were staying in, and when he saw me, he must have gotten the wrong idea, because she had to block the door and talk him down.

“He’s a healer,” she said. “Any minor injuries you’ve sustained, he’s going to fix them. You’re probably going to ask what’s in it for him, because you already know that what’s in it for you is a fuckload of money for just sitting there. For him, it’s a study of anatomy, one that he can do without having to inconvenience you in any way besides you sitting there, which you are, I repeat, going to be paid well for.”

“So I won the lottery?” he asked, wrinkling his nose, clearly not buying it.

“Yes, actually,” replied Fenn. “There’s a certain noble, who I’m not going to name, who’s taken ill, of-late. One too many indiscretions with ladies of the night, but you didn’t hear it from me. He’s got problems, ones that take a skilled medic to fix, and my friend here is that skilled medic, but it’s always easier for him to do the work if he knows what healthy is supposed to look like for his employer.” Fenn placed a finger on the guy’s chest. “It’s a rush job, so I rushed out and found the first person who had enough of a physical resemblance. You’re human, you’ve got the right shoulder width, chest width, and height, and you appeared, to my eyes, to be both virile and intelligent enough to just take a gift horse when it lands in your lap.”

He didn’t seem to catch the mangled expression in there, and to my surprise, sat down without further grumbling. Fenn put on a radio play -- aside from internet and cell phones, television was my most-missed invention -- while I worked, and while I at least knew what I was looking for now, finding the thread was still the easy part. Even with what I thought was probably the equivalent of a PhD in soul magic, it took me an hour and a half to actually gain access to his soul and enter the trance.

Copying over the bones was fucking terrifying. Having restricted read-write access to the base data structure of my physical and mental presence in the world -- or something masquerading as the base data structure that still had an actual impact on what it was to be me, for all that distinction might matter -- wasn’t really something that I had ever wished for. I’d monkeyed around with my computer a fair amount on Earth, but editing the registry had given me the same sweaty, anxious feeling.

When I was done, we sent our unwitting donor off, far richer for the experience.

“Did it work?” asked Fenn.
“Don’t know yet,” I replied. “I didn’t want to do the healing process while he was here.”

“Well what if we need him back?” asked Fenn. “What if, I don’t know, you need to redo it?”

“If it goes that badly, I think I’m probably going to die,” I said.

“Well that’s fucking great,” she replied, folding her arms across her chest. “I better keep my powers if you die.”

“Mean,” I said, but I knew that jokes were her way of dealing with things. “Okay.” I felt for the bones in my hand, ready to burn them to heal my chest. In an ideal world, my soul would already be fixed, and all I would be doing was bringing soul and body back into concert. “It’s kind of fucked up that I could have brainwashed him into being my slave, isn’t it?”

“Just do the healing already, I’m getting antsy,” said Fenn.

I laid both hands on my chest and concentrated my power, burning through bones on my left side in order to fuel the healing in my ribs. It would take some time to reset those bones, but that was now a solved problem. The changes came fast, first sensation returning to my skin, then a gnawing hunger from an appetite that was finally waking back up. I didn’t suffer from a sudden heart attack, as I had feared that I might, and whatever the soul’s conception of the body was at the boundary areas, nothing horrible like a rending of my flesh happened at my shoulders or hips.

The quest didn’t show up as completed though, and I slapped my forehead when I realized why; I’d drained bones in order to complete the healing. A quick dip into my soul was enough to fix that, and I came back out quick enough to see the notifications in my view, before they were washed away.

**Affliction: Drained Bone Removed!**

**Skill increased: Essentialism lvl 23!**

**Quest Complete: Boneitis - Your body is back to normal, and under your control to a far greater extent than in your wildest transhumanist dreams, if you dare to risk fucking it up.**

**Level Up!**

Quests

- **Straddling Worlds**: There are others like you, those with dreams of a place called Earth. The so-called dream-skewered are studied at the Athenaeum of Speculation and Scrutiny. You can travel there to find out more.
- **God Botherer**: There are gods in this world, titans of power and masters of domains, each their own creature with their own special rules. Tread carefully around these creatures, especially if you wish to someday join their ranks.
- **The Lost King, Found?**: Five hundred years ago, Uther Penndraig, figure of legend, King of Anglecynn, and ancestor of Amaryllis, disappeared from this world while on a quest of grave importance. This enduring mystery must have an answer for those brave or foolish enough to seek it, mustn’t it?
- **Summer’s End** - Return to the place where Fenn received her scars and bring justice to the elves. (Companion Quest)
- **They Say You Can’t Go Home Again** - He had a life, before you, and you had a life, before this.
- **All That Glitters** - Return to Darili Irid with Grakhuil once da has gathered enough gold to satisfy da nad self-imposed penance to da nad former clan. Speak with Grak to learn more. (500/1000) (Companion Quest)
- **Through the Lashing Glass** - Far inside the Glassy Fields exclusion zone, the only place on Aerb where glass magic still works, lies a castle coated in shards. The treasures within are unknown to the world, but you could unearth them, if you dared.
- **A Room of One’s Own** - The Boundless Pit is a mile wide and infinitely deep, a chasm from which little returns. The tuung call it their home, and imperial law agrees, but infinity is a large place, and a secure home stays stuck to the wall, waiting to light up with activity once more. Kuum Doona awaits.
- **Taking Root** - The world’s last druid has died, leaving the last locus severely constrained and untended. Eventually the imperfectly self-regulating cycles of life within the bottle will fail and the locus will die, unless you can find a way to remove the locus and transplant it into the wider world, where it was always meant to be. (Companion Quest)
- **The Slayer of Horrors (0/13)**:
  - □ **Murder in Duplicate** - As soon as it was discovered by a precocious young girl, the ability for a person to duplicate themselves was excluded to a thousand square miles
and that single person. Doris Finch lives her life in duplicate; to complete the exclusion, it will be necessary to kill every single one of her. (0/9,511,346)

- **Manifest Destiny** - The fall of the Second Empire was, by some accountings, inevitable, but by others, it was the work of a single incident. The exact nature of the magic that allows the immortal man named Manifest to puppet his subjects from a distance is unknown, as is his exact location, but it is clear that with the magic excluded, his range is limited to only Lankwon, once the Imperial City, now the City Made Manifest. Defeating him will be an impossible task, but one that you have taken upon yourself.

- **A Door Into the Soul** - Caldwell Gatesmith has the dubious distinction of being responsible for two exclusions. Through his portals, he keeps watch over his domain. If he spies you, and you do not meet with his satisfaction, his portals will cut with an edge designed to cleave time and space.

- **The Z-word** - Captain Blue-in-the-Bottle is the reason that no one says it. That's his word.

- **Everything Eater** - More monster than man, no one has seen Rove's face in four hundred years and lived to tell the tale. He sits at the center of a half mile of dirt, flesh, and garbage. If you slay him, you will be the first to have survived contact with him.

- **Better with Loops** - Through magics unknown, a young boy of eighteen found himself reliving the same month over and over again, with death only bringing him back to the same crisp spring morning. Time does not behave within his exclusion zone, and only bringing a permanent end to his life will restore the area to normalcy. Beware, lest you be trapped in the cycle.

- **[REDACTED]** - The more you [REDACTED], the more you [REDACTED], until [REDACTED]. Merely knowing his name makes him [REDACTED], and his gender alone is a piece of information you might wish you didn't have, if [REDACTED]. Better to go in blind.

- **Unwavering** - In the beginning, they said that the goblin inspired loyalty, until it became clear that what he was doing was more literal than figurative. To kill him, you'll need to fight through a veritable army of his loyal servants, if you don't end up becoming one of them yourself.

- **Fleshsmith** - For millennia, fleshsmithing was a noble trade of Pendleham, one practiced by noscere and ignoscere alike. When a small cabal took the craft too far, exclusion reared its ugly head, leaving Pendleham as the City of Flesh, where none dare tread.

- **Aches and Plains** - Perhaps farming might seem an innocuous thing to evoke the exclusionary principle, but given the time and attention brought to it by a billion minds, it was inevitable that someone would breach its deeper secrets. The land of Pai Shep is now guarded by a single warrior-farmer, his fields impeccable, his power absolute.

- **Guardian of the Underworld** - A machine of vast intellect, funneled into the body of a broken man. The people of Aerb have yet to pass his tests, but perhaps someone of a different world has the wherewithal to be allowed within his inner sanctum.

- **Finger of the Sun** - When the elves broke Celestar, there were a small few who continued on with their research. The product of their effort brought nothing but pain.

- **Gone to Seed** - There is a place on Aerb considered worse than the first four thousand hells. Fel Seed sits on a throne of living flesh, unable to spread beyond his domain, but with a rule of horror within it. You know his weakness.
Amaryllis is the most direct descendant of Uther Penndraig, the Lost King, which gives her special claim-in-fact to a fair number of his estates and heirlooms bound along cognatic or enatic primogeniture, ultimogeniture, and gavelkind rules. She was once a keystone member of a bloc of power within the Lost King’s Court, but now she has been cast out through means both semi-legal and downright nefarious. Her homeland of Anglecynn is forbidden to her now, at least until she’s gathered enough power to wedge open some doors.

Fenn Greenglass, Loyalty lvl 21

Fenn is a half-elf born to an elven father and human mother. Her childhood was spent with alternating months in the Isle of Eversummer and the colony of Rogbottom. While her ears marked her as exotic and dangerous among the humans, her teeth marked her as a hideous disgrace among the elves. She has never felt at home in either world and pretends to understand less than she does in order to highlight her differences before anyone can call her on them. After she reached maturity she held several odd jobs until settling into a dangerous, solitary life entering into the Risen Lands exclusion zone to take whatever wasn’t nailed down. That life ended when she was arrested selling contraband to a fence. When Anglecynn needed a guide through Silmar City, she was pulled from prison and given a second chance.

Grakhuil Leadbraids, Loyalty lvl 8

Grakhuil comes from the largely parthenogenetic clan of dwarves in Darili Irid (loosely, Gold Hole). Due to da nad skill in the game of Ranks and overall empathic nature relative to da nad kin, Grak was selected to leave Darili Irid for the Athenaeum of Barriers with the plan that da would return and become the next master warder of the clanhome. Upon returning home, da was entered into a rare arranged pair-bond with another dwarf, and fled from Darili Irid after refusing the Kiss on da nad bond night. Da has spent da nad time looking to make amends for the damage da nad absence caused to da nad clan.

Six-eyed Doe, Loyalty lvl 3

[I’d closed my eyes and paged through after my little experiment in experiencing awe and wonder, only to find that instead of text, the Six-Eyed Doe had a picture that expanded outside the box it was meant to be set within. This was the first time that the game interface had shown me anything other than text, symbols, or lines to make boxes.

The picture had various scenes, devoid of any clear chronology and bleeding into each other where they met. When I looked at it, the view zoomed in, leaving the rest of the game interface behind and filling my vision with only the pictorial story of the Six-Eyed Doe. Most of it signified little to me, because it was focused on rivers and forests, with the occasional animal. I focused in on people, where I could find them, and ended up looking at a full-on orgy with writhing, naked bodies of a hundred different species. To one side of it, up and to the right, armored men were coming in and slaughtering the people, but toward the bottom there were a handful of pregnant women sitting around, and beneath them various women giving birth, with naked children walking away through the woods, and some donning leather armor of their own to fight off the attackers.

This was the story of the locus, as told by some insane artist who had the ability to paint photorealistically at a yottapixel scale but lacked any idea of how to tell a coherent
narrative. It took me some time to find the bottle, which sat all by itself, away from everyone. There was no attempt at being literal; it was only barely big enough to contain Solace, who sat with legs folded and her staff across her lap. It was such a small thing, in comparison to the rest, and that was probably the point.

Valencia the Red, Loyalty lvl 16

Valencia is a nonanima, a humanoid without a soul, created by the essentialist Fallatehr Whiteshell in the Amoureux Penitentiary where she lived for the first seventeen years of her life. Until recently she was subject to repeated possession by demons and devils at random intervals, but now, touched by your magic, she has become something to be feared, for much different reasons than she was before. She is nearly a newborn, in some ways, trying to find her feet.
Fenn was dressed to the nines, in a black dress that hugged her figure and revealed her legs, back, and intricately scarred arms in a way that got my heart pounding. She was wearing a pair of black heels, and dazzling earrings that drew attention to her pointed ears. I hadn’t been completely clear on the ins and outs of women’s fashion on Earth, and knew even less about it on Aerb, but whatever bra she was wearing, it was doing wonders for her. It was also the first time I’d ever seen her wear makeup. Her hair though --

“You have long hair,” I said. When we’d first met her hair had been on the shorter side, barely long enough that she could put it in a ponytail, and while it had grown out some over the course of our time together, it was now hanging down in blonde ringlets down to the small of her back.

“Oh fuck off,” said Fenn. “That’s all you have to say?”

“You look gorgeous,” I replied. “You were already gorgeous, but now you’re the prettiest version of you that I could possibly imagine. Which is not to say that I don’t think that you’re pretty when you’re sleeping beside me in a tank top and underwear, or naked, or -- that’s not helping me, is it?” She shook her head, which made her earrings sparkle in the sunlight, but she was smiling at me. “I only want to say that you’re beautiful, and I’m lucky to have you.”

“Aw, you’re not so bad yourself,” she replied, looking me up and down. “You clean up well.”

“See, I feel like if I said that, you would have taken it as an insult,” I said with a smile. I held out my hand. “Shall we?”

You know, now that I think about it, I wasn’t really completely clear on men’s fashion either. For me, it was gym shorts and t-shirt in the summer, and a hoodie with jeans in the winter, with a bit of a mix-and-match in-between. A few days ago, I’d taken a wallet full of obols from our safehouse and gone out into Cranberry Bay for new clothes, not the off-the-rack stuff that could be found in almost any clothing store, but three expensive outfits fitted to my exact proportions by an expert (an experience that I think I would place between getting a haircut and getting my teeth cleaned, on the stranger-invading-my-personal-space scale). The one that I wore was a black that matched Fenn’s dress, a jacket with buttons offset to one side, a collar that seemed like it was trying to hide my neck, and foot-long coattails. I’d mostly stayed silent at the tailor and let Amaryllis do the talking, but I was under the impression that this was a bastardized version of some culture’s formal dress that had spread like wildfire through the Empire of Common Cause.

Our destination was a restaurant that Amaryllis had picked out, Cupona, and if I’d done a good job of internalizing how expensive things were, I might have objected when I learned how much a meal there cost. We were still living off the gold we’d taken from Aumann’s, most of which had been converted over to cash, and though we’d been burning through it by establishing our safehouses, it still didn’t feel like we were anywhere near having to worry about it. We were, for tonight, treating ourselves, because it was our long-awaited First Date.

(Following the events of our brief stay in Parsmont, Amaryllis had formally declared herself as accountant and quartermaster, a position that she took to with the fervor of someone trying to make up for past mistakes. I’d gotten her after-action report, and tried my best to convince her that she was, basically, not a person that anyone should ever want to fuck with, but her response to that had been to pretend that she was feeling better, a facade that she didn’t put nearly enough effort into -- telling her that seemed like it would be counterproductive though.)
“Okay, a few requests,” said Fenn after we were seated. “Number one: no talking shop.”

“What, exactly, is ‘shop’?” I asked. “We’re unemployed.”

Fenn gave me a casual shrug. She really did look beautiful tonight; the dress helped to accentuate the curling whorls of the scars on her arms; the straps must have been tailored just for the effect. She was showing a lot of skin. “Let’s say no talking about things like narrative, character sheets, training, logistics, money, planning, or anything directly related to operations of what would be our business, if it were a business.”

“But we can talk about our business partners?” I asked.

“Oh, yes, that, certainly,” said Fenn with a grin. A waiter, dressed in a muted brown uniform, stopped by to gently place two fluted glasses on our table, each filled with a milky purple liquid. “I mean, those are the only people that we really have in common, and I don’t want to take everything off the table.” She punctuated her sentence by grabbing one of the glasses and sipping at it. “Number two: no references to ye olde Earth.”

“But --” I began.

“Just the references,” said Fenn. “I normally find it has some charm, but tonight I’d like to get through a conversation without feeling like you’re having a laugh at my expense because I don’t know about my base.”

“Your base?” I asked, feeling confused and wondering whether she was pulling my leg.

“Something about how all my bases belong to you?” asked Fenn, with a furrowed brow.

“All your base are belong to us?” I asked, trying to keep myself from smiling. “I don’t even remember saying that.”

“We’d just finished the first safehouse, and you said it,” replied Fenn. She was watching me as she drank her purple milk. “And it was cute! But, also, I sometimes think that you do that for your own benefit, and while you might find it fun, it sort of pushes me away a little bit.” She frowned slightly. “The third request was going to be that we can’t talk about our relationship, but now I can see that I’ve fucked that up a bit.”

Two plates were gently placed on our table, each with no more than two bites worth of food. Our waiter gave us an elaborate description that I only half-listened to -- some small, delicate animal had been deboned, arranged on the plate, and then cooked with hot oils, after which extremely small finely-cut vegetables in a variety of colors had been arranged around it. We hadn’t ordered; this was the sort of place where you ate what the chef made for you.

“Sorry,” I said. “I don’t mean to exclude you, or make you feel like I wish you were from Earth.”

“No,” said Fenn. She took a delicate forkful of food. “I didn’t mean ... I like when you explain Earth to me, not just because you obviously enjoy talking about it, but because you do a good job of making it interesting.”

“But?” I asked.

“Ohay,” said Fenn. “Explain the base thing to me.” She ate her forkful of food, and closed her eyes to savor it.

“It’s ... an ancient internet meme,” I said. “There was this early, 16-bit videogame that got a really
bad translation, and people found it funny enough that it went viral.” I treaded carefully, trying to make sure that Fenn knew all those words and I wouldn’t have to go into a digression to explain any of it.

“See, that’s sort of what I’m talking about,” said Fenn. “I didn’t mean all of Earth, I like hearing about your friends and your life there, but the memes … more than the memes, the shared cultural heritage?” She paused. “I don’t want you to feel lonely. I mean, I know how it is, for me it was being with humans and thinking about elves, or the other way around, and knowing that it wasn’t something that would translate …” She trailed off and ate another bite.

“So you over-corrected?” I asked. “When I met you, you were really playing up the half-elf thing. Less, now.”

“Hrm,” said Fenn. She took a spoon and scooped up the remaining sauce off the plate.

While she was ruminating on that, our waiter came back and whisked the plates away (mine having been demolished while Fenn talked -- it was salty, acidic, and crispy, but gone in a flash, and I was hungry), then returned moments later with a new plate, this one with carved vegetables sitting in a multi-colored puddle.

“This course is corpsefruit and smoked bloodwood shoots on a bed of young --”

“You know,” said Fenn. “I really am enjoying myself here, and I don’t mean to be rude, but is there any way that we could eat without these interruptions? Just the food.”

“Of course, ma’am,” said the waiter with a quick bow, leaving almost immediately afterward. We’d paid in advance of the meal, including what I gathered was a rather generous tip; we’d been placed in a section of the restaurant away from everyone else, which I told myself was because of that, rather than because Fenn was a half-elf.

“Still thinking?” I asked before eating some of the unappetizingly-named corpsefruit. It was sweeter than I’d expected.

“Kind of,” replied Fenn. “This food is just shockingly good. Hard to believe that we switch between portable soup and something like this.” She speared a bloodwood shoot and watched as it bled, then gave it a twirl on her fork once. “I mean, you’re right about the whole half-elf thing, it’s easier to just be blunt about it, or joke, or just annoy people who are already going to be annoyed, but I don’t like the comparison.”

“No?” I asked.

“There’s a difference between saying, ‘hey, I’m different’, and the culture gap, you know?” asked Fenn.

“Yeah,” I replied. I held up my hands in defeat. “Consider it off the table.”

“I feel it with the others, too,” said Fenn, once another course had been delivered to us, this one a tiny collection of three different grilled meats. “These divides.”

“I still don’t really understand dwarves,” I said. “I mean I do understand the structure of their society and have some grasp on how that shapes them, I don’t want to say that I was the one to create them, but--”

“But you created them,” said Fenn with a smile. “So modest.”
“In my mind, dwarven culture was built around this sort of alternate form of farming,” I said. “I knew a lot of farmers growing up, and in my mind, it sort of mapped to that, with the parthenogenetic bloodlines added on. I mean, I think as I originally had it, there were two different strands of dwarf, the Mendi and the Taldi, one that did the pair-bonding thing and the other that stuck to the single-parent thing -- sorry, this is probably boring.”

“You’re talking about the literal creation of the world,” said Fenn, leaning forward slightly. “I think you sometimes forget how special you are. I mean, you’re not a god, but I can point at random things and ask you why they are the way they are, and actually get an answer. Plus that god thing doesn’t seem like it’s totally out of reach. You could be talking to me about frogs and I’d be loving it.”

“You’d be making me blush, but I can control my bloodflow,” I replied. “But I am serious, the gap between Grak and I just seems so huge that there’s no way that I’m going to overcome it.”

“Bigger than you and the locus?” asked Fenn.

“Point taken,” I said. “You know, sometimes I wish that our party were just,” the Spice Girls, “more archetypally arranged, it seems like we’ve got a ridiculous, erratic spread both in terms of personality and utility.”

“We’ll probably have to talk about Val at some point,” said Fenn. With our plates cleaned between conversation, another course came to us, small, translucent balls of red, purple, and orange. “She’s fucking nuts.”

I winced. “I’ve been trying to keep my distance. I feel so bad for her, but I really don’t want her to think that I’m … more than I am, to her. More than I want to be.”

“She kissed Mary, I don’t know if you heard that,” said Fenn. She was trying not to show it, but the smile she was hiding reached her eyes.

“Seriously?” I asked. “Why?”

“Mary was making some attempts at socialization,” said Fenn. She’d stopped trying to hide her amusement. “Val’s all over the place, depending on whether or not she’s got a guest inside her, and even then.”

“That euphemism is terrible,” I said.

“I try,” said Fenn. “Anyway, Mary took it into her head that Val was going to need a crash course in how to be human, or at least a more normal varietal of the mortal species, because Mary’s got a bug up her butt about being ‘productive’, and the chance that Val could screw things up out in the real world is pretty high, especially if her connection gets cut off or she chomps too hard on her guest. So the lesson, such as it was, was about physical boundaries, and I guess our Mary said something to the effect that a kiss needs to be done chastely if in greeting, and anything more gets reserved for only those you really love.” Fenn took a spoonful of the orbs and gestured with her other hand, a ‘yadda yadda yadda’ type of signal.

“Huh,” I said.

“Right?” asked Fenn. I was pretty sure that she wasn’t thinking what I was thinking. “Anyway, they kissed for a few seconds -- yeah, I asked about that, apparently Mary thought that saying ‘kiss people you love’ and then pushing Val away right after that might not be the best thing for the little woobie.”

“Using your definition for woobie, or mine?” I asked. A ravenous creature mimicking a pitiful cry
for help, or a broken innocent who needed protection?

“Either,” said Fenn. “Mary’s grown a bit of a soft spot for her, which makes sense given that she’s not really threatening to slit our throats in the night or turn us against each other, or at least not in the same way she was before.” She kept the undercurrent of hostility from her voice, but not from her face, though it was nothing but a twitch of her eyebrows.

“Everything okay?” I asked.

“So, after they kissed, Amaryllis explained that wasn’t really appropriate, and went through this whole explanation about romantic love, what that was like, which Val only really had exposure to through her guests, and that’s not the kind of education that we’d want her to have, right? And her response to this whole lesson, was to say, ‘Oh, so I should only kiss Juniper?’”

“Ah,” I said with a sigh. “No, Amaryllis didn’t tell me any of that -- probably so that we could have this conversation. You understand that’s not -- she’s not appealing to me?”

“No?” asked Fenn. “She sees you as her savior and hangs on your every word. All you’d have to do, if you wanted her, is to say the word. You probably wouldn’t even have to do that, if she got it in her head that she could please you that way. A pretty girl, slipping into your bed naked because she’s so eager to indulge you?”

“I mean, when you put it like that ...” I said with a smile that Fenn didn’t return. “I think you’re overstating her, uh, obsession with me.”

“Maybe,” said Fenn. Another plate came in front of us, and I was starting to get annoyed with how little food was on each of them, no matter that each one was a masterwork. “See, this is why I didn’t want to talk about us, I figured I’d just come off looking like I thought the world was out to get me.” She pierced a little wonton-style thing with her fork. “Though, I do have to say, you have five companions now, and four and a half of them are women, at least three of which are into you, which does not at all seem like coincidence.”

The three would be Fenn, Valencia, and Amaryllis. I’d really been hoping that that last complication would have evaporated by now, but I wasn’t about to challenge Fenn on it, especially because it was a subject that Amaryllis and I studiously avoided. Four and a half women though?

“Are you counting the locus or Grak as the half woman?” I asked. “Or both of them as three quarters?”

“I was thinking Grak,” said Fenn with a shrug. “The locus presents as female.”

I reached across the table and took her hand. “Fenn, under no circumstances will I ever even consider having sex with a giant six-eyed deer.”

“But you’re thinking of the logistics of it now, aren’t you?” asked Fenn, gently patting my hand.

“You know me too well,” I replied, pulling back. “I’m starting to agree that I should put the points into Social.”

“I am too,” said Fenn. “Not actually, if it’s just to stop you from putting your foot in your mouth. Can you imagine how dumb I’d feel if I died because I wanted you to have a bit more tact and grace around me?”

“Seems like we’re getting into shop talk,” I replied.
“You’re right,” said Fenn. “Tonight is a night to ourselves. Would you mind entertaining me with a game story?”

“Uh, sure,” I said. “I think you’ve heard all the best ones though. Unless I told you the asteroid story already?”

“Doesn’t sound familiar,” said Fenn. “You’re probably going to have to explain what an asteroid is though.”

So I told her the asteroid story (the short version: rock falls, everyone dies), and after that she told me about her first foray into the Risen Lands under the guidance of a mentor who she later had a falling out with, and we somehow managed to actually get our night back on track as the extravagant (but tiny) courses kept coming. It was pleasant, to be alone together, to take a break from the planning and preparations we’d been doing with the larger group, and we didn’t return to any discussion of the internal group politics either, which was a relief.

Movie marathons were something of a tradition for Arthur and me, going way back to before we’d even started playing tabletop games. Arthur had a deep and abiding love for series and sequels, but especially trilogies, and he often said that it was part of our cultural duty to see as many of the classics firsthand as possible, instead of just knowing about them through cultural osmosis, which gave you parodies of summaries of half-remembrances.

“I don’t know,” I said to Arthur during a lull in our Lord of the Rings extended edition marathon. “There are some ideas that seem like interesting premises, but actually aren’t.”

“Explain that one to me,” he said. “That’s like saying that someone looks beautiful, but actually isn’t, it’s a logical contradiction. I mean, maybe you can say that it’s an illusion or something.”

“Yes, right, that’s it exactly,” I said. “It’s an illusion. It’s looking at a pretty girl and then realizing on closer inspection that she’s a mirage.”

“Or has a lot of makeup on,” said Arthur.

“That’s,” I said, but my objection died on my lips as I realized that we’d probably end up talking about the socio-cultural role of makeup instead of the more interesting thing that I wanted to talk about. “Yeah, I guess. So you have ideas or premises that look interesting, but they actually aren’t once you start in on execution.”

“You’re just talking about a deep slash shallow distinction?” asked Arthur.

“Maybe?” I asked. “Well, maybe not, because there are different kinds of depth, and I’m not sure that we’re talking about the same thing here.”

“Okay,” said Arthur. “Taboo ‘deep’, taboo ‘shallow’.” That was, at the time, his new thing, declaring certain words taboo so that you had to more fully explain the concept you were pointing at. He’d told me once that all debates were ultimately debates about definition, but to me that sounded like one of those things that people say to be pithy rather than correct. “Actually, also taboo ‘interesting’.”

“Alright, but I need to think for a bit,” I said.

“That’s fine, we’re almost to Isengard,” replied Arthur.

So I sat there, half watching a movie that I’d seen three times before, and half thinking about how I
wanted to frame things. My favorite part of watching movies with Arthur was that there was more
time for silence and thought; I always felt like I was half a step behind him, if it was just the two of
us talking.

“Okay,” I said, when the action was over. “I think it might be about minimal descriptive length.”

“MDL, sure,” said Arthur.

“For me, a good, compelling idea can be described in very few words, but the *effects* and *results* of
that short description would have a very, very long MDL,” I said. “Or at least, that’s the starting
point for describing what I guess I mean when I say that something can only seem interesting on the
surface.”

“There’s a problem there,” said Arthur. “Which is that MDL is a wobbly term.”

“Yeah,” I said. I knew that was going to be a problem.

“I mean, you could rephrase it as the point of diminishing descriptive utility,” said Arthur. “I think
that works a little better, like you can say that Merry is a male hobbit and that gets you a lot of
conceptual power per word of description, but eventually you hit this point where you’re not talking
about his hair, you’re talking about the individual placement of hair follicles. But then you have to
take culture and cultural dictionaries into account, like ‘hobbit’, for example, where you’re packing a
lot of description into a little term -- that pun, Juniper, was just for you -- and that’s just because
someone has already done the hard definitional work for you.”

“Okay, sure,” I said. “So the *problem* I’m trying to get at is that there are some short, interesting
elevator pitch type ideas that have a lot of consequences to them, but those consequences have a
shorter descriptive length than you would think just looking at them. They might be evocative, but
there’s no meat on the bones when you get down to it.”

“And you think that the Boundless Library is one of those ideas?” asked Arthur.

“I don’t know,” I said. “I mean, the core idea of a library filled with books that haven’t been written
yet is a good one, but I sort of slipped sideways into this subplot about librarians, and if it’s just going
to be about political infighting, what’s the point in including the library?”

“So it wasn’t a bad idea, it was bad execution,” said Arthur.

“Ouch,” I said. I’d always thought that ideas were basically worthless, when compared to execution.
I wondered whether Arthur had remembered that; I’d always been the one to carelessly slight people,
it wouldn’t have been like him to just outright hurt me like that, even if it was true.

“You told me that every session was a failure you could learn from,” he replied with a shrug, eyes
still on the movie in front of us. “And to be clear, I didn’t *hate* it, it just didn’t have all that much to
say. Like if you wanted it to be about fate, then make it about fate, or if you want it to be about, I
don’t know, the difficulty in getting people that are nominally aligned with each other to actually
work together, then it really needs to be about that. It wasn’t even that the librarians fighting with
each other was bad, it was that they weren’t fighting about anything. There was this whole surface
level thing about library classification schemes, but it wasn’t interesting, and that was just a proxy
war that *they* didn’t care about, because they were factions competing to see who could get their guy
to be head librarian. But the factions were just factions, people who hated each other for personal
reasons, and we didn’t care about them either.”

(Arthur was the best. We sometimes played without him, and it was always a struggle for people to
remember what had happened the time before, who their characters were, and what they were supposed to be doing. Arthur made notes, he kept to his characters, and more than that, he paid attention. He had an ability to absorb and digest plots and then spit them back out in a more refined form. Our art teacher had talked about how sculptors saw the piece within the marble, and to me it always felt like every game saw us both looking at the same piece of marble and him being able to see the shapes better.

That conversation, offhand on his part, showed a better understanding of that plot than I’d ever had, and while it felt almost venomous at the time to be told that I had spent dozens of hours of my time creating something boring, later on I could understand where he was coming from. It was maybe the closest that we ever came to having a fight, and the only reason that we didn’t was because Arthur was the best.

“So what do you suggest?” I asked, my voice tight.

“Obviously we can’t play it again, obviously you can’t run it again, so …” he shrugged, still watching the TV. “Honestly, I would have made it more about the library, like there’s one faction that thinks the library should be sorted on the basis of people, and a different faction that thinks it should be about objective, people-less truth. Or, they’re all books that have yet to be written, so there are activist librarians trying to correct history, which changes the library, or conservative librarians who want as little change as possible because they’re worried that knock-on effects of change are going to make the future worse, and then maybe a few people in that camp who just don’t see it as their place. Those are things that I think we’d find interesting, because Reimer would probably call one of them dumb, and Tom would maybe try for reconciliation, and Tiff and I would get into some big fight about objective truth or whether conservatism makes sense as a political philosophy, or something like that.”

“And that’s your idea of fun?” I asked, still feeling a little wounded. “Everyone at the table getting in a fight?”

“Yeah,” said Arthur. He finally tore his eyes from the screen. “I kind of think that it’s what we’ve been missing lately. We all know each other, and our characters, and so the infighting and cross-purposes have more weight than anything else would. I don’t know, call me a drama queen, but it’s what I’ve been craving.”

After our dinner, we had box seats at a large playhouse, which wasn’t too different from the few professional productions I had seen back home aside from the microphone system, which wasn’t lavalier mics, but instead a bulky apparatus that sat nearly-hidden at the front of the stage, and was transmitted out to the audience in less-than-crystal-clear quality through enormous speakers. If I’d known ahead of time, I might have tried to get a smaller, more intimate place, but this theater did have something going for it aside from being close to the restaurant; it was showing an Uther Penndraig classic.

*The Star War* was the original trilogy of *Star Wars*, condensed down into a little over four hours, with two intermissions between what had originally been spaces between films. The programs notes we’d been given indicated that sometimes the three acts were performed separately, either on consecutive nights or in different seasons, but the Oxycoccus Orpheum seemed to take some pride in the longform production. It was *Star Wars*, as written from the recollections of Arthur, then filtered through nearly five hundred years of culture.

When Fenn went to the bathroom during the first intermission, I eavesdropped on a man giving his analysis of the *The Star War* to a group of his friends. He was tall and nicely dressed, like I was, and spoke in a similar accent to Amaryllis, precise and clear.
“At the time of the first empire, people saw it as a warning,” he said. “The Lost King was giving a lesson to the people of Aerb, as he often did, and that lesson was that empires rot from the head, that powers can corrupt if allowed to, and that in that event, it’s the responsibility of even the lowliest among us to rise up.”

“But Luke is Darth Vader’s son, is he not?” asked a woman in the group. “He’s hardly the lowest of the corrupt empire, given the heirloom passed down to him and the magic of his bloodline.”

“Though it’s hard to peer into the mind of the Lost King, perhaps that was a message meant for his children,” said the man. “He was saying to them, perhaps, that he might become the evil that they would one day have to defeat, or pull back from the brink. It’s not clear whether Uther is better seen as Darth Vader or Emperor Reagan, though it might be that he’s both sides of the same coin.”

*Emperor Reagan?* I looked down at my program notes, but there he was simply listed as ‘the Emperor’. I smiled though, because that looked like another thumbprint of Arthur’s. The whole SDI connection was *dumb*, but it was dumb in a way that I liked, and in the context of what Fenn and I had been talking about earlier, it seemed like the sort of thing that I would have done, in his position. A reference, inserted for the sake of being a reference, and that because it was a connection to a shared cultural heritage that no one around him would understand. It made me happy, but also lonely.

“How’s it going?” asked Fenn when she returned from her trip to the bathroom.

“You could just ask how I’m doing,” I said. “Good, I guess, just … a little nostalgic for home, more than I thought I would be.”

“No baddies though?” asked Fenn. “Scenario zero?”

“Oh,” I said. “Yeah, still no sign that we’re, ah, back on the clock,” I replied. Our big fear for date night was that something would happen because of the whims of the game, but so far nothing had come of it. Amaryllis had our itinerary, and had said she would stay a block away, well within range if there was some kind of major altercation or disaster. Valencia and Grak were both back at the safehouse, hiding behind a whole host of wards and on high alert. I’d been trying my best not to let any of that undercut my enjoyment of a night alone with Fenn.

“Did you want to get out of here?” asked Fenn. “I know we’ve got two-thirds left to go, but I’ve seen it all before, you’ve seen it all before, and if it’s getting to you, the point of this evening certainly wasn’t to bum you out.”

“I’ll be fine,” I said. It was thoughtlessly kind of her to offer, as though this weren’t a special evening for the both of us. I reached forward and took her hand in mine. *The point of the evening*, I thought to myself. That dress really was doing wonders for her, and I had always been a fan of extravagantly long hair. She had done all this for me. I leaned in and gave her a long, slow kiss. “So long as I’m with you.”

“People are looking,” muttered Fenn. She was breathing harder than usual, and while she might have been worried about the attention she was getting, her eyes were on me. She was right though; people *were* looking, including the tall guy who had been talking about Emperor Reagan.

“Fuck ‘em,” I said. I took her arm in mine and led us back to the box seats for the rest of the show, which, after some time to adjust, became the right sort of nostalgic for me.

It was late when the play let out, which was no surprise given four hours of runtime and two
intermissions. Night had fallen over Cranberry Bay, and a chill had come with it. There were fewer, dimmer streetlights than I was used to, but the number of people out made it seem safer and more lively. Fenn and I walked arm-in-arm, taking a long, scenic route to our hotel, six blocks that would take us through a stretch of park.

“Do you want my jacket?” I asked as I felt her shivering against me.

“Yes, please,” she said. “I felt quite sexy earlier in the night, and now I’m cold and my feet are killing me, which doesn’t seem particularly alluring.” She took the jacket and wrapped it around her, leaving me in a white buttoned-down shirt, then reached down and pulled off her shoes to walk barefoot.

“Not sure that’s advisable on these city streets,” I said.

“Oh, light of my life, we are no mere mortals to worry about such things,” she said with a laugh. “I’ll have dirty feet by the time we get to the hotel, but I was planning on a shower before anyway.”

Before. Solace had given her herbs that would prevent pregnancy, but she’d said that they would take a few weeks to work. It had been a few weeks now, and though we hadn’t actually talked about it, I was fairly certain that it was on our minds. And, on reflection, she had said what she’d said to make it clear that tonight was going to be the night.

We made our way through the park, lit by starlight and the glow of the city that surrounded it, neither of us talking much. I was enjoying the silence, and thinking about whether I should pick her up and carry her, when I spotted a small bit of movement behind a tree a hundred feet ahead of us.

“Someone’s hiding up ahead,” I murmured to Fenn, trying to act as though I was whispering a sweet nothing in her ear.

She let out a pleasant laugh that rang like a bell, and whispered back, “Six of them.”

I felt a chill go down my spine at that. I was armed, naturally, given that the Anyblade could be disguised so effectively, but I had no armor on, nor any of my usual magic items like Ropey. Fenn wasn’t wearing Sable, in part because it would have clashed with her look, but also because we’d both wanted to not treat our date night as a carefully planned and potentially deadly mission. I felt a pang of regret at that now; I should have known that the game wouldn’t let something like this pass by without incident. The only question was how difficult of a fight we had ahead of us. Against a random mugger in the park, there was no question that either of us would have won, and even outnumbered six-to-two I thought that was the case, but there was no telling who these people were and how well trained they were.

I also had a wide variety of magic available to me, including a recently acquired sapphire of impeccable quality and size that allowed for the use of effective gem magic, all of which would allow for a great deal of lethality. I planned to use full force, given that I had no idea what we were actually up against.

The man I’d seen behind the tree slipped out when we were thirty feet away with a casual move that I found irritating. He was holding a dagger large enough that I wondered whether ‘dagger’ was even accurate, and he spun it around once as he stepped onto the path.

“Nice night?” he asked. It was just barely cold enough that I could see his breath. I came to a stop so as not to put myself any closer to him.

“Oh, it’s been great, so far,” said Fenn. I couldn’t tell whether or not her chipperness was forced.
“Seventeen courses at Cupona, the entirety of The Star Wars saga at the Oxycoccus Orpheum, it’s been decadent even by our usual standards, and I can hardly think of a single thing that would make it better.”

“Well I hate to end your night on a sour note, but I’m going to need your money, your jewels, and any other valuables you’ve got on hand,” he replied. Fenn’s response had thrown him off; he’d had a grin, but it had left his face.

“Who do you work for?” I asked. The other men had started to make their way out of the woods. I wasn’t sure whether we’d been surrounded when I spotted the first man, but we were definitely surrounded now.

“I’m not interested in conversation,” said the man, tightening his grip on his dagger. I looked at his shoes, then at his hands, trying to figure out whether there were any clues. Nice shoes might have meant that he was a professional, but they were, like his shirt, vest, and pants, nothing too out of the ordinary for the lower classes in the Empire, clothes that had probably been made using a power loom and shipped via teleportation.

“You don’t need six men for a mugging,” I said. “You want me to believe that a whole gang was just waiting here, hoping that someone with money would come by?”

“They might have been waiting for The Star Wars to let out, actually,” said Fenn. I heard a clatter as she dropped her heels to the ground, and watched, tense, as she took a few steps forward.

“Jewels, cash, now,” said the man. He’d been casually holding the dagger before, but he’d changed his stance slightly when she came close, one foot a bit forward, angling his body. He spat to the side. “Fucking half-breed.”

“Honey, I think that these men might legitimately be meaning to rob us,” said Fenn with a laugh. She clapped her hands with a giddiness that I’d rarely seen from her.

“Don’t take this so lightly,” I said.

“No, you’re right,” said Fenn. “This dress was expensive, I don’t want to get blood on it.” She cocked her head to the side. “Should I take the dress off and fight in my underwear, or what do you think is the best way to go?”

“Fenn,” I said, trying to keep some warning in my voice. She didn’t change her position or respond, so I turned my attention to the guy with the dagger. The others were closing in on us (two with guns, I was displeased to note), but he was their leader. I reached into my pocket. “I have two thousand obols on me,” I said. “Is that enough for us to be on our way?”

“Your girl has a real mouth on her,” said guy with the dagger. “Her earrings too.” He paused, looking me over. “And that ring of yours.”

“Oh fuck off, I paid for these earrings,” said Fenn. “I actually paid for them, that was a big step for me.” She undid the buttons on my jacket and let it fall to the ground.

“Fenn,” I said again.

“Oh,” she said, turning back toward me, “I guess I have an ethics question.”

“The fuck?” asked the guy with the dagger.

“I thought you didn’t want me teaching you how to be good?” I asked. Despite the two guns pointed
at me, I was starting to relax. Professionals would have gone after us when they had the element of surprise, assuming that they wanted to kill us.

“Well Mary and Val aren’t here -- that was a fucking joke, I’m not taking lessons from Val, don’t look so aghast,” said Fenn. “Is it better to kill these guys, or should I just be trying to disable them?”

“They had their chance,” said the guy with the dagger. He stepped forward and stabbed at Fenn without waiting for a response from the others. He aimed at her side, just below her ribs; she caught his wrist without even looking his way.

I formed the Anyblade into a dagger just in time to parry the first shot fired at me, and from there I was on the move, Anyblade twirling around me as I moved to the closest of our assailants. Fenn had some kind of witty rejoinder that I couldn’t quite hear because my ears were ringing, but I saw her headbutt the man whose wrist she was holding, and after that I was too consumed with my own half of the fighting.

It had been a little more than a week since I’d killed Fallatehr, but there was no appreciable rust on my combat abilities, nor did I think that “use it or lose it” actually applied to me. I spun as I extended the Anyblade to its full, polearm length, dashed and lunged toward the nearest guy, who was still in the midst of raising his gun. The use of blood magic to augment my movement was automatic now, the use of bone magic nearly-so, and what Fenn had said about perhaps not killing them reached my brain just in time for me to reshape the head of the polearm into something more like a hammer than a blade. I heard a sharp crack of bone as the polearm hit the guy just above his ear, but that was at least less lethal than cutting halfway through his skull.

I parried away another bullet, acting entirely on instinct, trusting the blade to find its position. The man who’d fired it was tracking me, but I was burning bones for Speed, and he seemed like he was practically moving in slow motion. My swinging polearm struck his wrist, cracking bone and making his third shot go far to the side, and by the time he’d fallen over, I’d moved close in toward one of the others. This one had a knife, a slender one, but I simply reached past it before he could properly react and punched him straight in the throat. As he jerked backward I grabbed his knife-hand, and wrenched it sideways to dislodge the weapon, which I snatched from mid-air.

(By my count, there were 74 bones of the 206 in my body that were safe to burn using bone magic, which left all those without left-right symmetry, or those whose symmetry I needed in order to make the repair. Moving at the speed I did wasn’t cheap, in terms of burning through bones, but a rapid response to the threat seemed like it was warranted.)

I turned to go to Fenn’s rescue, only to find that she had finished at more-or-less the same time I had. The man who’d originally approached us was screaming in pain on the ground, a second man was trying to scoot backward across the park grass with a broken leg, and the third had two arrows in his chest and was quickly painting the ground red with his blood. Fenn was wearing Sable, and had her artillery bow in hand.

“Gun,” she said, voice loud over the screaming and the ringing in my ear from three gunshots, but before I could properly react, she’d raised her bow and shot an arrow that whistled by within six inches of me -- I consciously stilled my instinct to parry it at the last second. I heard a double-thump from behind me, and turned to see the guy whose wrist I’d broken crying out in pain. His other wrist was pinned to the dirt with an arrow, the hand a foot away from where the gun had landed. “He was going for the gun,” said Fenn.

“Where were you hiding Sable?” I asked. The dress she had on was the kind where pockets were out of the question.
“If the night had kept going how I’d wanted it to, you would have found it,” said Fenn with an exaggerated wink. She turned back toward the group’s leader and said, “Stop screaming, I didn’t kill you.” To my surprise, he listened, and reduced his sounds to a wet, choking whimper.

I looked around us. Four were down with injuries, some worse than others, but two were more worrisome, the one I’d smashed in the head, and the one with two arrows in him. “Come on,” I said to Fenn. “We should heal them.”

“Seriously?” asked Fenn. “I didn’t shoot to kill, I’d have thought that was already more than -- if you fucking go for that gun one more time I will chop off your dick.” That last part was directed at the guy behind me, who, against all wisdom, had pulled the arrow from the ground and was reaching for the gun again with the arrow still embedded in his wrist.

It was around that time that a figure in armor came sprinting our way -- not the police, with a ridiculous response time, but Amaryllis in her immobility plate, moving faster than she had any right to.

“What happened?” she asked, pulling her helmet off and looking around at the carnage.

“We think they were just muggers,” I replied as I went over to one I was pretty sure was bleeding out.

“Look!” said Fenn. I caught her twirling in her dress from the corner of my eye. “Not a drop of blood!”

“Who the fuck are you people?” said one of the thugs from the ground.

“We’re the Critter Crew,” said Fenn. “I am Vulpes the Vixen, sexy seductress, that’s Yellow Canary, who fights with the power of song, and our dashing leader is --” She raised her bow and loosed another arrow at the guy who had gone for his gun, hitting him in the shoulder. “Is Blue Hound, the gallant hero.”

“Why are you healing them?” asked Amaryllis.

“I don’t want to kill anyone if I don’t have to,” I replied as I laid hands on the man that was bleeding out. He’d lost a lot of blood, and that was something that I couldn’t fix, but I’d nevertheless yanked out both arrows and begun to burn through my bones to close the wounds.

“We have three or four minutes before the police show up,” said Amaryllis. “We should kill them all. Fenn can have the bodies vanished in a little more than a minute.”

“I really don’t want to do that,” I said. It’s not what Batman would do.

“They saw your faces and abilities,” said Amaryllis. “The enemy will find out.”

“Which enemy?” I asked.

“Any of them,” replied Amaryllis.

“I won’t say a f-fucking w-word,” said the leader from the ground. Based on the way that he was gasping, I guessed that Fenn had hit him hard in the stomach or chest.

“Who hired you?” I said, stepping away from the pale body of the man I’d healed to my satisfaction. There was still a chance that he wasn’t going to make it, but I’d done as much as I could short of a blood transfusion.
“No one!” he shouted.

Fenn stepped over to him and placed a foot on his shoulder, pushing him down. She’d put her heels back on, I’d noticed. With a long sigh, she popped two arrows out of Sable in quick succession and drew them back, all resting on the string of the bow.

“Tell me who hired you and you’ll walk away from tonight with just debilitating injuries,” she said. “Lie again and not only will I kill you, I’ll hand your soul over to my pet demon.”

“I f-f-fucking swear on my mother’s life no one h-h-hired us, we w-w-were waiting for easy m-marks, no guards,” he stammered out.

Fenn loosed her arrows. For a moment I thought that she’d shot him in the throat, but they’d both struck dirt, one on either side of his throat. He must have thought that he’d been shot too, because I saw steam rising from his crotch; he’d pissed himself.

“You weren’t hired, but someone suggested that you be here,” said Fenn. Another arrow popped out of her glove and she drew it back with a single smooth motion. Despite myself, and despite the sounds of pain and anguish from the men around me, I found myself admiring the definition of her muscles as she held the bow taut.

“No one,” he said. “No one.” He was practically in tears.

Fenn turned to the side. “I believe him, personally,” said Fenn. She hadn’t let up any of the tension in the bow though. “Mary?”

“Joon’s call,” she said.

“We let them live,” I said, my voice firm. “And probably get the fuck out of here before the police show up. We’ll take the guns. And if these men talk, to the police or anyone else, I’ll indulge my desire for grievous violence and extreme retribution.” That was more for their benefit than Fenn’s.

“Alright, fair enough, just one thing,” said Fenn. She popped her bow and arrow back into her glove, then began walking over to the man who’d twice now gone for his gun. He was laying on the ground with two arrows in his left arm and at least a few broken bones in his right wrist.

“Fenn, no,” I said.

“Look, if you say that you’re going to cut a man’s dick off if he does something, and then he does that thing and you don’t cut his dick off, then who’s ever going to take you seriously again?” asked Fenn. A ornate dagger appeared in her gloved hand.

“We don’t have time,” said Amaryllis.

“Fine,” grumbled Fenn. “Look, guy, whoever you are, I’m going to cut off your dick, it’s just not going to be tonight, okay?”

We moved quickly as we left, and Fenn guided us off the main path to behind a few bushes just before a car went barrelling past with flashing blue and white lights. Her sense of luck had definitely gotten stronger than when we’d first met, and it had been strong enough to be noteworthy back then. Amaryllis made to stand up, but Fenn shook her head and mouthed ‘one more’. After the oscillating blue and white lights passed by a second time, we stood up and were on our way.

“Would you really have cut off that guy’s dick?” I asked as we moved.
“Your dick is the only one I want to touch,” said Fenn. “I knew you’d stop me. Good for intimidation though.”

“We need to get back to the safehouse, then leave Cranberry Bay behind,” said Amaryllis. “We can’t risk them talking to the police, or the police being on the lookout for us.”

“It’s date night,” said Fenn. “We’ve got a penthouse suite that we paid a lot of money for.”

“Too risky,” said Amaryllis. We were keeping to her pace. Fenn had gone barefoot again, and was moving along the grass as though her feet were made for it. Amaryllis, by contrast, was wearing full plate, and while that kind of armor was surprisingly moveable (and hers was magical) it wasn’t effortless to move in.

“Are you honestly worried that the police are going to go to every hotel in the city looking for us in the middle of the night based on the accounts of those men?” asked Fenn.

“That’s exactly what I’m worried about,” said Amaryllis.

“It’ll be fine,” I said. “Tonight is our night together.”

“Joon,” began Amaryllis.

“We’ll tip the doorman generously, and if he sells us out, there’s no way that the rank-and-file police are prepared for us,” I replied. We exited out of the park and onto the main road, where only a few cars were going by. It was only another block to our hotel.

“You’re taking a risk,” said Amaryllis. “This whole night was a risk, but --”

“We’ll be fine,” I repeated. “Go back to the safehouse, hang tight, and either we’ll show up tomorrow morning, or we’ll get word to you. We’ve planned for that kind of thing.” We had established codes, newspapers to place classified ads in, and bars in several cities where the bartender had been paid cash to be our answering service. The ‘one phone call’ rule wasn’t very consistent on Aerb, nor were the justice systems in general, but if anything went wrong with the law in any of the places we were set up for, we did have some channels available to us.

“Okay,” said Amaryllis. Her sigh was visible in the chilly night. “Be safe. Have -- have fun.”

By the time Fenn and I got to the hotel, we were back in high spirits. The fight had, in some ways, been a fun one, an absolute curbstomp that had the benefit of coming when I’d been half-expecting a serious disruption all night. Fenn seemed inordinately pleased by the idea that a gang of hardened criminals had been in the wrong place at the wrong time, and our conversation devolved into a recap of the events (which in some ways reminded me of reliving old adventures around the gaming table).

And once we went up to our lavish penthouse suite, we didn’t do much talking for the rest of the night.

Achievement Progress: A Key For Seven Locks (1/7)

I was still pissed off at the game when I woke up in the morning. The fight excepted -- maybe even the fight included -- we’d had a wonderful night together, and then the game had to intrude and insinuate that there was an achievement for having sex with all seven of my companions. To the best of my recollection, it was the first time that the game had ever even told me about achievement progress, rather than simply giving me the achievement when I met the requirements, and that made
it feel like an extra special kick in the teeth, custom-delivered just for me.

I didn’t tell Fenn about it when it happened, and the longer I let it go, the less I thought I would. You would think that maybe I would have learned a lesson from what happened with Arthur and Tiff, and I’d thought that maybe I had learned a lesson about being open and honest with the people I cared about … but telling Fenn that the game really was setting me up with some kind of bizarre harem after what had been one of the best nights we’d spent together, undercutting that intimacy with an implicit threat from the game, after everything that she’d said about being worried -- I kept spinning my wheels, running through the same thoughts, trying to figure out how I would break it to her, and waffling on whether or not I would. It would be the easiest secret in the world to keep. I had told her about the Petite Mort achievement, but that didn’t really affect our relationship in any meaningful way, and I had considered keeping silent about that too.

We put on fresh clothes, courtesy of the glove, and to my mild disappointment, Fenn took a scissors to her hair, cutting it off at shoulder-length.

“Hair that long is a liability in combat,” said Fenn. “I’m sorry, I love you, but I’m not going to risk my life to look cute.”

“You still look cute,” I said. “Pretty, gorgeous, alluring, I could go on.”

“Please do,” she said with a smile.

“Can I ask … this is the second time you’ve said ‘I love you’, but they were both ‘I love you, but’, and I don’t really, ah,” I paused. She was blushing slightly.

“Don’t really love me?” she asked.

“No, that’s not what I’m saying,” I replied. “You’re saying it like it’s a joke, or like you’d say that you love a sandwich, or like it’s just to soften the blow of calling me an ass. And I love you, but I wish that you would feel free to tell me that you love me without having to undercut it.”

“I love you too, but it feels like you were doing the same thing,” said Fenn with a grin.

“Oh, well I love you, but that was the point,” I replied. I was smiling, and that was helping to wash away any lingering unhappiness I’d been feeling from thinking about the game.

“Hrm,” said Fenn. She moved in close to me. “I love you.”

“But?” I asked.

She squeezed my butt.

“I love you too,” I replied.

Amaryllis, Grak, and Val were all waiting for us back at the safehouse. The Cranberry Bay safehouse had been bought furnished, and while it was on the small side given that we were expecting to eventually be a group of eight people (or seven, depending on what happened with the locus), it was more than big enough for our current purposes, which mostly revolved around having a place to eat, sleep, and teleport into or out of. A breakfast of eggs, pork belly, and cranberry toast was waiting for us, and I took a heaping plate of it for what was sure to be a long session talking shop. None of the food was cold, which meant that we hadn’t kept them waiting long.

“Cards on the table, I think that the locus should come first,” said Amaryllis. “It’s time sensitive.”
“How time sensitive?” I asked.

“It’s hard to see inside the bottle,” said Grak. “It’s hard to gauge. Some of the trees are dying.”

“Enough that you could see from outside?” I asked. I hadn’t been with when they’d made their last trip.

“Yes,” said Grak. “I don’t know whether the problem is sunlight, temperature, moisture, or air. Some of those we might be able to fix.”

“It’s one of our companions,” said Amaryllis. ‘Our’ companions, not ‘your’ companions. “Even if it weren’t, it’s the last of its kind, and even if it weren’t, it’s powerful. If we still had Solace, her power alone would justify making it a priority.”

“We don’t have Solace,” I said.

“We have her soul,” answered Amaryllis. “You have Soul Slip now. The trade is one-for-one, meaning that at the cost of draining one of the unused Armor skills, Bows, Horticulture, and possibly Gem Magic, you could push Essentialism up above 100. In theory, at least. That would either give you the ability to help the locus, give you the ability to resurrect Solace, or possibly both.”

“It would take a day to level those skills up to the soft cap,” I replied. “And even then, I’d get five minutes per point. I’d only be over 100 for about twenty minutes. It’s a gamble.”

“Yes,” nodded Amaryllis. “We’ve set up our safehouses, we’ve done some of the background work I felt was necessary, strengthened our protocols, procured equipment, and now we’re out of the things I think we can do without some kind of gamble.” She didn’t say the word ‘narrative’, because she knew that I didn’t like it, but I thought I had enough of a handle on her that I knew what she was thinking. No respite could last forever, and the longer we spent resting on our laurels, the better the chance that the Plot would find us.

“Tabling the Essentialism gambit for now, what are our other options?” I asked.

Amaryllis frowned. “Glassy Fields,” she replied. “We only have a fraction of the equipment that’s mine by claim-in-fact. Most of it will be held by various interested parties within Anglecynn, and while it’s possible that we could steal some of it, especially with Grak’s skillset, that risks setting off some alarm bells.” She pursed her lips. “Assuming that you care about not setting off alarm bells.”

“But the keep at Glassy Fields would be ours for the taking,” I said with a nod.

“We need armor for Val, Grak, and Fenn, and a weapon for Val,” said Amaryllis. “I don’t know what’s in Glassy Fields, given that no one’s been there for hundreds of years, but I’m hopeful.” She shrugged. “Kuum Doona in the Boundless Pit is another option, but I think that’s probably the more difficult of the two. We have quests for both.” ‘We’, not ‘you’.

“More difficult a prospect than Glassy Fields,” muttered Grak with a shake of his head.

“I don’t know,” I said.

“There are other options,” said Amaryllis. “Speculation and Scrutiny is one of them, but I’m worried that they’ll expect you there. We could go find a god and start that quest chain, but there are many unknowns there that I’m quite uncomfortable with, we’d be letting the game lead us by the nose. I can see by your expression that those don’t meet with your approval though, so why don’t we cut to the chase and you can tell me what you’d like to do?” She crossed her arms over her chest.
“I want to find Arthur,” I replied.

Amaryllis softened slightly. “Joon, I know you do--”

“We’ve gotten off-track,” I said. “It’s been one thing after another, ever since -- fuck, since Barren Jewel, which was a month ago, when we were just going to Caer Laga to get what was stashed there. I’m not going to say that everything that happened after that didn’t have a purpose, or that it was unnecessary, but the last time I let material goods dictate things, the actual result wasn’t all that great for me.”

“Would you say the same for saving companions?” asked Grak.

I made a sour face at that. “I don’t want to get on a reactive treadmill,” I said.

“Treadmill?” asked Val.

“It’s a thing you run in place on,” I explained. “I was saying that there’s a possibility that we just react to one thing, then to another, over and over, never actually striking out on our own.”

Loyalty increased: Valencia the Red, lvl 17!

That was one of the reasons that I’d been trying to keep my distance from Valencia. Her loyalty went up on a hair trigger, and while having her loyalty high was a good thing from a game-mechanical standpoint, I was really worried that she was developing an emotionally unhealthy attachment to me, not to mention that lvl 20 might progress her powers while she was still grappling with the ones that she’d been given at lvl 10. There were, for the time being, moments when she was pure Valencia, which I thought were probably good for her, and good for our attempts at socializing her.

“Why would you want to run in one place?” asked Grak with a furrowed brow.

“To harness the power of an animal,” answered Amaryllis, before I had the chance. She turned to me. “You want to find your friend Arthur, who we believe to have probably been my ancestor, Uther Penndraig,” she said. I thought that was largely for Valencia’s benefit; she’d been debriefed after informing us that the devils and demons died as she used them up (ate them, in her words). “Glassy Fields or Speculation and Scrutiny are probably our best avenues.”

“I don’t think they are,” I said. “I want to find Arthur the same way that Larkspur found us. Doris Finch.”

“We are not making a deal with Doris fucking Finch,” said Amaryllis.

“I wasn’t proposing that we do,” I replied. “We get to the exclusion zone, grab one of her from the periphery of her territory, and then tie her down so that I can soulfuck her.”

“Like Fallatehr,” said Val.

“It’s distasteful --” I began.

“It’s illegal,” said Amaryllis.

“It’s immoral,” said Fenn.

“It’s the kind of illegal that will get the hammers of the gods brought down on you,” said Amaryllis.

“It’s the kind of immoral that gives me the heebie jeebies,” said Fenn.
“We freed Fallatehr from his prison,” I said. “You can’t tell me that’s more illegal. And I’m already a soul mage, as is Fenn, and it’s my understanding that Valencia would be killed on sight if anyone knew that she was a non-anima.”

“The Doris Finch exclusion zone is closely watched,” said Amaryllis. “It’s all the risk of freeing Fallatehr with none of the potential upside. The Finches are all different from each other, the odds that you would get one that would tell you anything useful, particularly regarding her probabilistic magic, is remote -- they all have separate souls, we’ve killed enough to know that. We would have to go straight into the city center, and you have to believe me when I say that’s not something that we want to do while not looking like Doris Finch.”

“Technically,” I began, then paused. Technically we could disguise ourselves as Doris Finches, because I could copy over her entire body, just like Fallatehr did. That would leave the question of our original bodies, which we obviously wouldn’t want to abandon, but if we had enough of the Dorises, we could essentially use them as hold variables so that we could swap back.

“Technically?” asked Fenn.

The problem was, that plan started to sound more evil the more I thought about it, and beyond that, more complex than I wanted to count on. “Just thinking,” I said with a sigh. “Amaryllis, your objections have merit, Fenn, your objections have merit, Valencia, I should have considered your feelings more before making that suggestion.”

Loyalty increased: Grak lvl 9!

“What’s the plan then?” asked Amaryllis. She shifted in her seat. “Can we take it to a vote?”

“Sure,” I said. “Smith-invariant instant-runoff voting fine?”

“Something you named after yourself?” asked Fenn with a laugh.

“No relation,” I replied. “He was a professor of mathematics, but Smith-invariant comes from the Smith set, which is the smallest non-empty set of candidates where each candidate within the set wins a pairwise competition with each member outside the set. And then you do instant-runoff voting within the Smith set. And from the looks, I’m guessing that this marvelous system of voting is somehow not one that ever made it to Aerb, despite it featuring in no less than eight different tabletop settings I designed.”

“Why don’t we just vote normally?” asked Grak.

“How much time do you have?” I asked.

“If I understand this scheme right, the results of Smith-invariant IRV should be equivalent to the results of a plain vote, assuming that everyone votes for their actual first choice rather than voting strategically, and also assuming that there exists a strict majority winner of three votes?” asked Amaryllis.

“Locus should get a vote,” said Fenn. Amaryllis glared at her. “What, it’s true! One companion, one vote, Juniper gets to veto because he’s special.”

“The locus can’t vote,” I said. “It can’t make its wishes known, and we can’t reasonably put thoughts or desires into its mouth. I’m not sure you could describe it as having compatible thoughts.”

“You said that we were tabling it, not that you weren’t going to do it,” said Amaryllis. “You want to put the Essentialism gambit as part of the voting?”
“I’m worried that it’s going to lead to something bigger,” I replied. “I’ll crest 100 with Essentialism, then that will lead down some other path that we have to go on, and Arthur will just,” stay dead. I swallowed instead of saying that. “I know that there’s some kind of cultural thing about the locus that I’m not getting, I know that, I just … I’m worried that everything will get put on hold again if I make the locus my first priority.”

Amaryllis frowned. “Essentialism, Glassy Fields, Kuum Doona, Speculation and Scrutiny, have I missed any that anyone was planning to vote for?” Silence greeted that. “I vote to help the locus.”

“I vote the same,” said Grak.

“Kuum Doona,” I said.

“Kuum Doona,” said Fenn.

This was why you did Smith-invariant IRV, and why you did a blind vote where no one knew how anyone else was voting. I wouldn’t have said Kuum Doona so quickly, but I knew that Fenn would probably follow my lead, and so needed to get my choice out first so that she’d have something to follow. And now, given that we’d made that choice, and Amaryllis and Grak had made their choice, maybe the group preference was actually for Glassy Fields (which I could easily have been swayed toward), but we wouldn’t be going there. Either way, given that it was two against two, the only way that the vote wouldn’t go my way was if Val voted against me, and that --

“I want to save the locus,” said Val.

Fuck.
“Are you upset with me?” asked Val as soon as our group meeting had broken up. She didn’t wait until anyone else was away, and I could see Grak and Amaryllis share a look.

“Come on, let’s talk about this in my room,” I said, gesturing for her to lead the way.

We walked through the hallways of the safehouse; she knew the place better than I did, since I had been out and about far more than her, either helping to set up the other safehouses, helping Fenn gather up supplies, or training somewhere that would allow me a lot of room. The Cranberry Bay safehouse (really just a house, but Grak had at least given it modest wards) was pretty ordinary by the standards of Aerb, close enough to modern middle America that you could be excused for having missed the differences. The electrical systems were probably the more noticeable, with thicker cords, heavier light switches, and bulbs that seemed both fragile and weighty. I missed LED bulbs.

The paintings on the walls had come with the house, and I was half-tempted to stop and look at them. Instead, they passed me by, scenes of the cranberry harvest out on the bay that were probably iconic, if you weren’t a stranger in a strange land. We went into the room I shared with Fenn, which was warded against sound for obvious reasons, and I pulled a chair out from behind the roller-top desk so that she could sit on the bed.

“Are you upset with me?” she asked again.

“No,” I said. “I’d like to understand why you made your vote though, and I guess to talk a bit.”

Val shrugged. I was hoping that there would be more to it, but she just sat there, looking at the floor. I took a moment to look her over; she had long white hair, red eyes, skin so pale it was essentially white. She wore a blue dress with a floral pattern, something that someone must have picked out for her, though I couldn’t tell whose sensibilities were at work. There was something haunting about her in the light that filtered in through the window, like I was looking at a wisp of a person.

“You said that you want to save the locus,” I prompted.

“I do,” said Val with a nod. She still wasn’t looking at me.

“Do you know what a locus is?” I asked.

“Mary said that it was one of a kind,” said Val. “A creature that was hated and hunted.”

“Like you,” I said.

Val shrugged.

“Can you … you don’t have a devil in you right now?” I asked.

“I’m not eating one, no,” said Val. She looked up at me. “Mary said that it would be better if I didn’t, unless I needed one to get me through something hard. She said that around the group I wouldn’t ever have to have one, not if it was just to talk, because I’m still learning and you would all understand.”

I frowned slightly at that. “She’s probably right,” I said. “She usually is. But for this conversation to be productive, I think it might be helpful, unless Mary thought there was a reason that it wouldn’t be.”
“I need to learn and grow on my own,” said Val. “And it’s too easy to talk when there’s a devil to draw on.”

“Too easy?” I asked.

“Too easy and too hard,” said Val. She flopped backward on the bed and stared up at the ceiling. “It’s easy to see the things that I could say to get my way, there are memories that I can reach to when I don’t know something, but the devils …” She waved her hands helplessly in the air above her, which might have been a funny visual if she didn’t seem so distraught.

“You’re in control of the devils though?” I asked.

“They’re just a collection of parts,” said Val. “Not devils anymore, when they’re past my maw.”

“Okay …” I said slowly, trying to digest that imagery. “How would you feel about taking in a devil right now, in order to help you explain a bit?”

Val sat up and looked at me. “I’m worried that I would say things.”

“I won’t take anything personally,” I said. “You are still learning.”

Loyalty increased: Valencia the Red lvl 18!

“Okay,” she said softly.

There was a subtle change to the features of her face, and she straightened herself, gaining better posture. She scooted forward to the edge of the bed, and stared at me intently with her crimson red eyes. A delicate hand brushed white hair away from her face, framing it perfectly. It was like she’d just come alive.

“I feel so much better like this,” said Val. She stretched her arms out to the sides, then moved them in, pushing her breasts together, which I tried not to notice. “What I was trying to say was that they’re not really devils anymore, even if it sometimes feels like it, they’re parts and pieces that I can use. Without them, I’m missing pieces of myself. Amaryllis thinks that my upbringing might be the root of that, rather than because I’m a non-anima, but she doesn’t know enough one way or another to say for sure, and I haven’t happened on a devil that’s known well enough to confirm it.”

“Ah,” I replied.

She was looking at me with intent eyes. Her stretch had brought her hands around to rest on her knees, and her arms were still pushing her breasts together, showing more pale cleavage than the dress would normally allow for. She grinned at me. “The confidence is faked.”

“Faked?” I asked.

“I don’t feel it, internally, but there’s a part of the devil that knows what it’s like to puppet a human and pretend at being confident, so I can use that, if I think I can get what I want by pretending,” said Val.

“Val,” I said slowly. I had almost asked her what it was she wanted, but that was such an obvious trap that I was stunned I’d almost fell for it. ‘You,’ her answer would have been, said with all the seduction that she could muster, which I’d have wagered was probably a lot at the moment.

“You said that you wouldn’t take it personally, since I’m still learning,” she said, tilting her head to the side to get a better angle on me.
“I might have misjudged the risks on this,” I admitted. My heart was hammering away in my chest, and I told myself that it was fear and anxiety talking.

“I would share you with Fenn, or be your secret,” said Val. She stopped, with confusion crossing her face. “No, that’s --” She looked at me. “I’m relying on the devil too much, letting it guide my path, that would have worked, but it’s not me. Amaryllis explained the, the biology, I know how, it just seems so gross.” She dropped her pose and looked at her hands. She looked up at me. “This is what I think I was trying to say.”

“Too easy and too hard,” I replied with a nod. My heart was slowing back down.

(If Tiff could have seen inside my mind at that moment, she would probably have been either furious or disgusted, maybe both. Or, no, she probably wouldn’t have been furious or disgusted, she would have said that I’d grown up in a culture that often portrayed infantilization as sexy, and that either biology or culture had wired me with an instinct toward protecting and sheltering women, and conflating that desire to help and protect with romantic or sexual thoughts. That was how it happened in the movies. Tiff probably wouldn’t have faulted me for my desires and emotions, only for my actions. I was the one that was furious and disgusted.)

“Too easy to see the paths in front of me, too hard to know which one to go down,” said Val. “None of the parts and pieces help me make sense of who I am or what I feel.” She looked up at me. “I love you,” she said. “I know that you don’t love me back yet, and Amaryllis says that’s just misplaced attachment, something that I’m going to have to find a way to get over, but she has her own issues with you, so I don’t know how good her advice is.”

I swallowed. Frick. “The devils, or pieces of a devil, they don’t help you with judgment.”

“No,” said Valencia. She pursed her lips, looking at a spot on the wall a few feet to my left as though she were angry at it. Maybe this conversation was easier for her if she wasn’t looking at me. “I could fake it. Pretend, maybe. But it would be so hollow.”

“Tell me why you want to put our effort into saving the locus,” I said.

Val looked at me. “I guess I just don’t want to be the weird one anymore.”

I laughed at that, first a little and then a lot.

“That was a joke,” I said.

Val nodded, smiling slightly. “I can do jokes.”

“But there’s a real reason?” I asked. “Something better than just Amaryllis explaining it to you when you didn’t have a devil in you to see through her?”

“My place in this family is awkward,” said Val. “Fenn doesn’t like me, because I’m in love with you, and I’m not as willing to pretend that it’s nothing as Mary is. Grak is dour and unhappy, which means that he’s unhappy with me just by default. Mary is putting effort into me, but I have to have a pretty stupid devil for her to not be too transparent.”

“Transparent how?” I asked, curiosity getting the better of me.

“I can tell what she’s thinking,” said Val. “Other people are so easy to pick apart. It’s myself that I have trouble with. She told me not to say anything about the things that I could see in people.” She looked me over. “You agree with her, but you want to know anyway. Should I tell you?”
“No,” I replied. “She’s just … very hard for me to read, for some reason. Grak too, but in a different way. Social superpowers seem like they would really come in handy.”

“It’s not always pretty to see people laid bare,” said Val. Her eyes were locked with mine, and now I was the one that wanted to look away.

“If there’s anything that you’re getting off me … I won’t deny that you can probably see through me, but we can’t always be the people that we want to be, even when we know who we want to be,” I said. “That’s probably going to be your challenge.”

“I wasn’t talking about you,” said Val with a small laugh and a shake of her head. “Everything I see in you is beautiful, even the flaws. Perhaps not the flaws, but the way you work against them. It’s very appealing.”

“Uh, good, I guess,” I said. “I didn’t mean … I’m not really equipped for this kind of conversation.”

“I know,” replied Val. “That’s also appealing.”

“Even though you can see through people anyway?” I asked.

“Amaryllis reacts by trying her best to speak defensively, hiding herself more, shielding her secrets, trying to deflect me away from the places that she doesn’t want exposed,” said Val.

“But of course it’s too late,” I said. “You’ve seen everything.”

Val nodded. “You just open yourself up and allow that vulnerability to show without embarrassment or shame. You admit when you’re at fault. You take a step back to look at yourself every once in a while. Most people don’t do that. Fallatehr never did.” I noticed the wording there, ‘Fallatehr’ and not ‘my father’, and I wondered whether that was a devil’s instinct for massaging the language, or whether it was indicative of how she thought of him.

“Well, I’m introspective enough to realize I’ve been finding this experience a little bit terrifying, and open enough to say that,” I said. “And I still don’t really know what your interest in the locus is.”

“There are so many things that I could say that would convince you,” said Val. She had a slight frown on her face.

“But they’re not true?” I asked.

“I’m trying to figure them out,” said Val. “The problem is that they sound so good that I’m almost convincing myself.”

“Don’t try to convince me,” I said. “We already had our vote, we’re going to put the locus first, I want to know why you care because I want to get to know you, however confusing the concept of ‘you’ is to you right now.”

Loyalty increased: Valencia the Red lvl 19!

“I don’t have a soul,” said Valencia. “I’m worried that’s going to define me. You don’t care, you don’t even seem to think that it’s worth thinking about, probably because you’re not used to having souls, but you’re the only one that doesn’t care. Earlier this week Amaryllis was talking about what kind of options I would have to disguise my looks, because people would kill me without giving it too much thought if they knew what I was, even if that’s not what I am anymore. I’m hoping that the locus, when we meet, is the second person that truly doesn’t care.”
I kept my mouth firmly shut. *It’s not a person.* That didn’t seem like the kind of thing that you could say to someone who had just finished explaining that her entire life was going to be dominated by people thinking that she wasn’t a person. I hoped that she couldn’t read all that from me, and then realized that I was doing exactly what she’d complained about Amaryllis doing, which was flinching back from the all-seeing eye.

“I don’t really care about the locus,” I said. “I’m sorry, it’s just … for the same reason that I don’t really care that Fenn is a half-elf, and that I don’t care that you’re a non-anima, I don’t have the proper frame of reference to think about things like an Aerbian would. Sometimes that’s good, sometimes it’s not. To me it’s just a mystical deer, and neither mysticaiity nor deer have ever jelled with me, so …”

“You don’t need to explain anything to me,” said Val. “I know that you don’t want to hear it, but I’m yours, completely. If anyone else ever fails you, if the world ever seems against you, you have to know that I’m in your corner.”

I paused, then smiled, then tried to decide whether it was actually going to be funny when said out loud. “Unless there’s a vote that’s not going my way?”

To my relief, Val started laughing.

“How was that for you?” asked Amaryllis after I made my way back to the common area. Val had returned to her own room; Fenn and Grak had left to go out into the city.

“Exhausting, but good,” I replied.

“With a devil, or without?” asked Amaryllis.

“With, for most of it,” I replied.

“Juniper, I want you to take me seriously when I say that’s very dangerous,” said Amaryllis.

“Yeah, I learned that the hard way,” I said. “I don’t know what class of demon she was chowing down on, but it was very, ah, stressful, like if I hadn’t been careful she might have talked me into … I don’t know.” *Except that I do know. Blegh. BlEEEegh. Bad brain.*

“Devil, not demon,” said Amaryllis. “Devils are the thinkers and talkers, demons are the fighters.”

“Right, I know,” I replied.

“And I meant that it was dangerous for her, not for you,” continued Amaryllis. “She needs to grow and become her own person, and I’m very concerned about what might happen to her as a person if she’s constantly leaning on the devils. Have you realized that it’s possible she’s lying?”

I frowned. “I was going to ask ‘about what’, but I’m anticipating that the answer is ‘everything’.”

“I think she’s telling the truth about her power,” said Amaryllis. “We don’t know for certain, because the description is vague. I also think that she tells the truth about whether or not she’s currently leaning on infernal understanding. Neither of those are, by necessity, true. And if she keeps a devil in her at all times, then it might be that she’s just faking her base state.”

“I can see her loyalty increases,” I replied. “I don’t think that she can fake those.”

“True,” said Amaryllis. “I’m just concerned. I’ve spent more time with her than anyone else, and not
just because we were prisoners together. I think that of the four of us, I know her best.”

“That’s probably true,” I nodded. “I’ll do my best to defer to you.”

“And I think that we have to be a little bit watchful,” she continued, “I don’t think it’s probable, but given her demonstrated ability, it’s at least possible that she voted the way she did in order to provoke you into spending some time with her, and whatever you two talked about, the outcome might have been one that she was steering, especially if you came away feeling ‘good’.”

“I was really hoping that with Fallatehr dead we could leave that kind of thinking behind,” I muttered.

“I was too,” said Amaryllis. “I am too, still hopeful. I think that Val is as she presents herself to be, small and lost, confused and in need of support, alienated from the world and trying to grab on to a pillar of stability … and when she has a devil inside her, some of her problems go away, and some are compounded.”

“Can I say, you really did a one-eighty on her.” Amaryllis’ hair had grown out slightly, more of a pixie cut than the close crop it had been. She hadn’t re-dyed it; I could see red at the roots. She still, somehow, managed to make the look work, despite no obvious effort put into her appearance.

“She helped me,” said Amaryllis. “I told you that.”

“You went from thinking of her as ‘the non-anima’ to, I don’t know … being like her sister. Or her mother.” I wasn’t sure quite how to characterize it.

“You think I’m matronly?” asked Amaryllis with a raised eyebrow. I shook my head, and she let it pass. “She’s a non-anima with the primary aspect that makes them terrifying completely removed from her. There’s a reason that if one is born they’re killed before the mother has a chance to see the newborn. Each one is a way for the worst of the hells to enter into the mortal world. The ones that everyone remembers, the successful ones, married themselves to the infernal, became a willing tool of abject evil.”

“But they were still people,” I said.

“Yes,” said Amaryllis, slowly, hesitantly. “But I’m not sure that the distinction is one that matters.”

“It seems to me like what you do and do not consider a person matters a lot,” I replied.

“Not for them,” said Amaryllis. “Whether they’re people or not, the solution would have been the same. The quality of life a non-anima can expect to live, the things that they would see, the death and destruction that they would be complicit in? It was, is, better to end them.”

“Maybe don’t say that kind of thing around Val,” I said with a frown.

“She already knows, without me saying it,” replied Amaryllis. “You can’t keep things from her.”

“Yeah,” I winced. “Not even if you’re just trying to be nice. Let’s hope that this locus thing goes how she hopes it does.”
The Sacrifice

It took a day of training to get my skills up high enough for what I started thinking of as the Sacrifice. I kind of hated going over the annotated paper copy of the character sheet with the group, because it was *my* character sheet, but I could see the wisdom in it, and resisted the urge to make post-hoc rationalizations for why it would be better for me to make the decisions on my own. We decided that there should be four skills traded in, because that would push Essentialism up past the presumed milestone of 100, and once we’d decided that there should be four, it was only a matter of picking which ones it should be. I vetoed Gem Magic, since though I didn’t use it much, it was a pain in the ass to level up, and I felt roughly the same about Horticulture. Eventually, we decided on Bows, Unarmored, Unarmed Combat, and Shields. The first two were fairly easy choices, because Fenn had high skill in both, which meant that through Symbiosis I was at least middling. Unarmed and Shields both had the virtue of being little-used and seeming like they’d be straightforward to train.

I did the training at Safehouse 5, which was a small cabin fifteen miles from the nearest town and ten miles from the nearest neighbor. It was our “get the fuck away from civilization” safehouse. You couldn’t even get there by car, given that someone (cough cough) had knocked an enormous tree over, barring the path. The teleportation key made all locations equidistant, so long as you had been there once, so having a safehouse like that was quite convenient.

(Amaryllis had been the one to plan out most of the safehouses, and while they each served their own specific purpose, I’d eventually cottoned on to the fact that she’d deliberately chosen inconspicuous and uninteresting places, and given them the most boring possible names. It was, pretty clearly, a narrative thing; if the safehouses weren’t special or important, and we had no particular attachment to them, then they couldn’t be used as an emotional lever, and, perhaps, they wouldn’t make for good set-piece battles. Contrast a mostly anonymous cottage in the woods with spartan furnishing to an immense cathedral with a significant name that had once belonged to a dead god, and you might understand her line of thinking.)

I got the virtue for Bows at 20, and for Shields and Unarmored at 10.

**Steady Aim:** Completely eliminates the penalty for firing a bow while moving. Halves the penalty for firing a bow under pressure or duress. Triples the amount of time you can hold a bow at maximum draw.

**Bulwark:** Shields you hold are twice as durable. If a force acts on your shield to move you, you will move only half the usual distance, with the reduction capped at ten feet of movement negated.

**Hardened Skin:** Lessens the toll that physical damage in combat takes on you. Slightly increases natural healing. Increases force required to break skin.

And, when Unarmored finally hit 20, there was an extra virtue:

**Monkish Warrior:** While unarmed and unarmored, you may parry attacks as though you held a weapon, dodge at twice your effective skill, and automatically re-roll injuries if they are in the lowest five percent of outcomes (you keep any lower rolls).

This was the third time that I’d gotten an extra virtue, with the first two times being Nascent and Neophyte Blade-bound. It was a bit more clear where this new one had come from, given the references to “dodge”, “unarmed” and “unarmored”. It was far too restrictive for what it did though, and unless I found myself in a situation where I *couldn’t* wear my armor or hold a weapon, I wasn’t planning on being able to make use of the perk. It wasn’t anything that I wasn’t willing to sacrifice.
on the altar of Essentialism 100.

I ended up putting the two extra ability points into MEN even before we went into the bottle. Fenn already augmented my social skills, just through Symbiosis, and if Amaryllis got up to 20 Loyalty (something that both of us wanted), I thought that I would pretty much be set. That meant that it was either PHY or MEN, and while I had more skills with PHY requirements, my MEN skills were the more valuable, especially because I was sharing half their level with Fenn. Unlocking more of those magics was a priority, and a few of them were low-hanging fruit, but tracking down a water mage to teach me seemed like exactly the sort of thing that might cause the dread narrative to rear its ugly head.

With some trepidation, I used soul magic to adjust those points, now that I could do so without risking putting a skill above its cap. I backed out of the soul interface and quickly checked the afflictions, but nothing showed up there. After some prompting from Amaryllis, I was convinced to try moving another point from MEN, which would lower the caps and leave a few skills over, but wouldn’t drop them below 20 … only to find that I couldn’t. Some very, very careful testing showed that I was only capable of moving two ability points around (or alternately, a single point that was put into one of the three ‘master abilities’). My guess was that I could move around a number of points equal to one tenth my Essentialism, but that was just a guess.

(There was, briefly, some talk about a total restructuring of my character build. I’d written out all 256 skills shown in the soul, along with their primary and secondary attributes, which Amaryllis had pored over and then cross-referenced with all the skills shown in Fenn’s soul, as well as those from hers, skills which I’d noticed had gone up since I’d hit level 12. In the end, Amaryllis didn’t have a strong enough preference toward a particular build, though of course there were a lot of changes that she would make. I wouldn’t have said that I was entirely happy with what I’d chosen, but in the absence of concrete knowledge of what the future held, and with the difficulty inherent in getting some of the magics unlocked (particularly Revision Magic and Still Magic, both of which would probably require me to at least briefly enroll at an athenaeum), I was fairly content with staying the course. Changing things around in the limited window I would have available as a master soul mage seemed like a somewhat poor use of resources, especially given that the ‘soul trance’ destroyed my ability to keep track of outside time.)

We descended into the bottle together, as a group. For me, Grak, and Val, it was the old travel-by-glove routine, while Fenn held onto Amaryllis, who was taking us all down in the immobility plate. Fenn had refused to go into the glove, citing one too many bad experiences with it, and for whatever reason, Amaryllis indulged her, even though it meant that the descent took quite a bit longer than it otherwise would have.

Before I knew it, I’d been popped back out, and was once again in the bottle, standing not too distant from the large tree in its center where we’d spent a somewhat idyllic week. I’d expected cold, but it was stiflingly hot, for no apparent reason; the bottle hadn’t been getting the right amount of sunlight, which I would have thought would lower the temperature of the mini-biome.

The Six-Eyed Doe was there, watching us, head held high, but something about the way it moved seemed subtly off, as though it was putting on a show of strength for us. I still found it creepy; my distaste for deer was as strong as ever. I couldn’t actually think of a mammal that I would have had as much instinctive dislike toward as a deer. A rat, maybe? I’d worked on my uncle’s farm enough to have a fondness for farm animals of all kinds, from cows, to pigs, to sheep. The Six-Eyed Doe was pretty, I supposed, aesthetically pleasing, but I couldn’t quite help myself from appending ‘for a deer’ to that. Every time I looked at it, I thought about how much more awesome it would have been to have a giant six-eyed bear. As a doe, it didn’t even get antlers.
While all that was running through my head, Valencia took tentative steps toward the locus. We stayed back, by unspoken agreement (or possibly, given that I was only privy to a third of the conversations between my party members, by spoken agreement). Val reached out a hand when she was ten feet away, then kept walking forward, shaking slightly. I was worried about what I would do if anything happened to her; bone magic didn’t work on her, because she didn’t have a soul, and I strongly suspected that fairies wouldn’t either. For her, a broken bone was a serious problem that would take weeks to fix, rather than being almost trivial (if incredibly painful).

When her trembling hand was a few feet away, the Six-Eyed Doe bowed its head, took a step forward, and licked her on the face. Val let out an ‘eep!’, then began to laugh as the doe nuzzled her. I found myself smiling as relief flooded through me. After a few minutes of this nuzzling, the locus put its head down lower, between Val’s legs, and before I could utter a word of caution or move to stop it, the Six-Eyed Doe lifted Valencia up and with a jerk of its head, plopped her onto its back. Once she’d got her bearings, and was holding the sides of the Six-Eyed Doe, it took off, racing across the interior space of the bottle, as Val held on for dear life and screamed in delight.

(And though I saw it happen, I still couldn’t quite say how the locus managed the feat of lifting Val up with its head and having her tumble backward along its neck to reach a perfect sitting position with no seeming effort on either of their behalf. It annoyed me, thinking about it later, because it seemed like the same kind of bullshit ‘fuck you I’m magical’ thing that I’d come to expect of the locus.)

“Better than expected,” I said as I watched the Six-Eyed Doe prance off into the distance. “We need them back here so we can start though.”

“Oh hush,” said Fenn. “That’s the happiest I’ve ever seen her.”

I glanced at Fenn, and saw her smiling. Whatever her misgivings, she seemed pleased to watch the two weird ones getting along together.

“We’ll give it some time,” said Amaryllis. She’d been carrying some tension in her shoulders when we’d arrived, but was relaxed now, at ease. “The locus has been alone, I think it would be good to be social with it.” She hesitated. “I don’t know whether or not it knows about Solace.”

Fenn held out her gloved hand and a small jar appeared in it. “What are the odds that you can save her?” she asked me.

“If Uther could have brought people back from the dead, he would have done so on a number of occasions,” said Amaryllis. “That doesn’t mean that it’s impossible, but it’s unlikely.”

“Ten percent, let’s say,” I added. We had talked about this; I thought that Amaryllis was probably right. “We should lay everything out. Unicorn bones, the elf bones, all the souls we have available to us, anything that I might have a use for in the limited window after the Sacrifice.”

“Stop being so damned ominous about it,” said Fenn. “It’ll only take a few days to get them back. You’re being a whiner.”

“Fenn?” I asked. Hand going to my heart. “My most loyal companion? How could you wound me so?”

“I’m the self-appointed court jester,” said Fenn. “My role is to tell the king the things that no one else can, because he’d get pissed off if it came from someone else. Ergo, you’re being a whiner about your very nearly godlike powers.”
“Not for the first time,” muttered Grak, loud enough that I could hear it.

“Sorry,” I said. “I think there’s a decent point of order here though, which is that I don’t know how fast I’ll be able to get the skills back. When I drained Essentialism down to zero, I had a hard time getting it back up.”

“Yes, all of a few hours,” said Fenn with a smile. “How dreadful.”

“No, he has a point,” said Amaryllis. “If it rots away the ability to learn a skill, which it might -- was Essentialism slower to rise?”

“Yes,” I said. “I think so. It’s hard to say because I was doing different things with it, and the soul trance makes it hard to track time, and the notifications don’t show up while I’m looking at it, but … I think so, yes.”

“There might be a limited number of times that we can use the trick,” said Amaryllis with a shrug. “And perhaps we’ll find that it’s not worth it because of the afflictions associated with it, which might be more severe at upper levels. We’ll be running into a number of firsts.” She turned toward me. “I still think that it’s prudent.”

“I’m coming around to it,” I said. “And even if I weren’t, you can’t maintain a democracy if you’re willing to defect from it when the votes don’t go your way.”

“Well, I’m ready whenever you are,” said Fenn. She’d laid out a fair number of things from inside her glove, bones, souls, and a few entads.

“I want to do everything possible before the Sacrifice,” I said. “That will mean trying to at least see the Six-Eyed Doe’s soul the normal way. There are a lot of ways that this can go wrong, and I want to minimize them.”

“They look like they’re coming back,” said Grak. He had his hand up to shield his eyes from the sun, and was looking off toward where the Six-Eyed Doe and Val were cavorting. They were moving toward us slowly, haphazardly, stopping to look and play together.

I decided that it was time to bite the bullet. I’d been making an honest effort with him over the past few days, but nothing had come of it. “Grak, is there anything that I can do, or say, or that we can talk about that would help your loyalty?” I asked. “It’s at nine right now. Another point would give me quick access to your soul.”

“Is it that high?” asked Grak, looking me over. “Asking doesn’t help you.”

“I know,” I replied. “I’ve been trying to make an effort, to connect with you, to do it the natural way, but that obviously hasn’t worked. I’m asking now because I might have to move fast, and it would benefit us both.”

“Not sure that this is the time, Joon,” said Fenn.

“It’s fine,” said Grak. He ran his hand over his beard. “Juniper, you treat the world as though it owes you something. You treat me as though I owe you my attention, affection, and loyalty.”

I thought for a moment before responding to that, trying to pick the right words. “Oh fuck off,” I said.

Grak snorted at that, a faint, slightly mean smile beneath his mustache.
“I put in *so much* effort with you,” I said. “More than with anyone else in the party. I’m continually trying to find some common ground, or talk to you, or just … I don’t know, *something* that will let us come to a mutual understanding of each other.”

“That’s his problem,” said Fenn, cutting in on the conversation. “He kind of feels like you try to talk to him and expect that it will make you friends, then get frustrated when that doesn’t work. And because he feels like you only talk to him with these expectations, it makes him really resistant to what you’re trying to do.”

“Thank you, Fenn,” said Grak with a nod.

“That’s asinine,” I said. “I get penalized for *trying*? No sane social system can work like that.”

“It isn’t about making an effort,” said Grak.

“Look, I really think that we should table this,” said Fenn.

“The effort has always been in service of reward for yourself,” said Grak. “There was always a cost to me if I did not provide that reward. It grates.”

I threw up my hands.

“You attempted to solve this issue in five minutes,” said Grak. “Think on that.”

I looked over to where the Six-Eyed Doe was still prancing around with Valencia. They hadn’t moved any closer to us. Solace was able to hear anything that went on in the locus’ domain, and I assumed that the same was true for the locus. Even if it didn’t fully understand what we were saying, it could probably read tone, and so it was staying away -- keeping Val away. *Good.*

“Okay,” I said. “It’s like you said, we’re family. We didn’t get to choose each other.”

“I chose you,” said Fenn.

“That’s -- thank you,” I said. “But I meant Grak and I. If the game layer hadn’t said anything about it, we would have used him to get up Aumann’s tower, rescued Amaryllis, and then went off without him, leaving him in the lurch.”

“Well that’s fucking harsh,” said Fenn with a frown.

“It was your plan,” I replied.

“Oh, right,” said Fenn, brightening up. “That was ages ago.”

“Water over the bridge,” nodded Grak.

“But the point was that the only reason that Grak is part of the group is because the game said so, and the only reason that he stayed with us is because we paid him,” I replied. “And even if he made a connection with both of you, he never made one with me -- never tried, but that’s not surprising, because trying is apparently a sin.”

“I did open up to you,” said Grak. “You seemed to think that it was of no consequence.”

I stared at him. “When?” I asked. “If this is all some stupid misunderstanding --”

“At Weik Handum,” said Grak.
“The … the thing with your, um, friends at the athenaeum?” I asked. I’d almost said it out loud, but realized at the last second that maybe this wasn’t actually something that he’d shared with the others. Had we talked about it as a group? I couldn’t remember, but as I tried to sift through the weeks we spent together, I was dismayed to realize that we probably hadn’t.

“Yes,” said Grak. His arms were folded across his chest. “That is fine. It is who you are. It does not inspire loyalty.”

“Give me a second,” I said. I had thoughts brewing, but I didn’t want to have them while I was this socially inept. I dipped into my soul, an action that was almost automatic, moved points from Mental to Insight, then opened my eyes and tried to resume thinking.

There were very few personal details I knew about Grakhuil Leadbraids. Most of those, I had learned from his biography. The only personal story he’d ever told me had been when we’d been at Weik Handum, a story that I thought was just him being incredibly blunt about weird stuff that I didn’t care about, by way of telling me not to sleep with Fenn. And my response to that had been to say ‘sure’, and then the very next morning Fenn had teased him, very graphically, about all the ways that we hadn’t had sex. Worse, I’d only really put effort into trying to raise his loyalty after learning about the Twinned Souls thing, which hadn’t really been my intention, but I could see how that looked.

“Fuck,” I said. I closed my eyes and scrunched up my face, trying to think of some response without the distraction of having to look at anyone. “Okay, I can see it now. I’m going to have to hope that I can explain what was going through my head at some point, but I want some time to think about things, how it looks from your perspective, and where our different cultures are getting in the way. And even if I could explain it perfectly, that probably wouldn’t be enough, because with you, I failed. I need to just … listen more, I guess, and focus less on the end goals, at least when it comes to our kharass.”

I opened my eyes.

Loyalty increased: Fenn lvl 22!

Loyalty increased: Amaryllis lvl 16!

Loyalty increased: Grak lvl 10!

Companion Passive Unlocked: Twinned Souls (Grak)!

To be honest, I was a little put out by seeing those notifications stacked up and waiting for me. In a way, it was like having an apology thrown back in my face, that same feeling of someone gleefully taking an admission of guilt or wrongdoing and rubbing your face in it. That wasn’t what they were doing, because the game layer was the one sending me the messages, but it still stung a little bit.

“Oh,” said Grak. He was looking down at his thick, meaty hands with something approaching wonder. I watched him closely as he took out his warder’s monocle, which he held up to his eye for a moment, looking around him, then slowly returned to its usual pocket. “I have the warder’s sight.”

I tried to recall whether I’d read about that in the (absolutely worthless) Commoner’s Guide to Warding, and came up blank.

“The monocle will burn the retinas, if overused,” explained Grak. “I no longer need it. It takes thirty or forty years of intensive study to develop the sight. It marks a person as a true master.”
“Congratulations!” said Fenn. “Maybe we can swing by the Athenaeum of Barriers sometime, let you show off to some friends.”

“The skill is unearned,” said Grak. He was looking around him, moving his head quickly to take in new sights. Whatever was going on with his eyes, he was still adjusting to it. “Welcome, but unearned. I would not pretend to call myself a master because of this gift.”

“Well I’m going to keep entering archery contests,” said Fenn.

“I’m happy for you, Grak,” said Amaryllis. She looked over at the Six-Eyed Doe, which was approaching with Val on its back. “It looks like they’re finally finished. Fortuitous timing.”

Val hopped down off the doe’s back and landed on the soft earth. Her dress flared up slightly with the air as she fell, which made the dismount seem easy and carefree.

“She likes me,” said Val with a shy smile. “And I like her.”

“Good,” I said with a nod. “We have work to do though.”

“She tried to fit in my maw,” said Val.

“It … what?” I asked.

“She could see that I was hollow,” said Val. “So she tried to fit inside of me, just to explore. I had to keep my maw open so that I wouldn’t bite her.”

“The locus … tried to possess you?” I asked. I looked to Amaryllis, our default authority on all things, but she looked just as bewildered as I was.

“She didn’t mean anything by it,” said Val, seeing my look. “And after I explained things, she retracted from me. She-she’s not a devil, I don’t want you to think it’s like that, we’re just in her domain, and she has power here, and that power can fit inside me, because I’m hollow.” She looked from me to Amaryllis, looking slightly distraught. “If I did something wrong --”

“You didn’t do anything wrong,” said Amaryllis. Her voice was smooth and gentle. “The locus is a mysterious entity, we just didn’t realize that there would be any interaction between the two of you. This … might be the first time in history that a non-anima has ever met a locus.” Amaryllis’ brow furrowed. I wondered whether she was thinking about the Second Empire.

“And is that … can the locus, ah.” I wasn’t sure how to phrase it. Being back with the locus, and wanting to be conscious of its desire to stay cloaked in mystery, was already grating on me. I wanted to know whether the locus could empower Valencia, and if it could, then whether that might possibly work outside the bottle, so long as she was close enough, since that was how it worked for druids. But the locus rebelled against definitions and descriptions, and I didn’t want to destroy this weird magical relationship between them by dint of over-analyzing it.

“We don’t need to know more,” said Amaryllis, seeming to pick up on my train of thought. “We’ll try not to inspect it too deeply, or ask too many questions that don’t have answers.”

“Okay,” said Val, still glancing between us, still looking worried.

Fenn stepped forward, with a bottle in her hand. Solace’s lily-white soul was moving within it. “There’s a bit of bad news,” said Fenn. “Solace --”

The locus turned its head toward the sky and began to yell, a weird, braying sound that set my teeth
on edge. This continued for some time, until Amaryllis moved forward and wrapped the locus in a hug, her head resting against the doe’s breast. When the Six-Eyed Doe lowered its head, there were tears coming from each of its six eyes, with absurdly large drops as though surface tension had gone out of control, each tear the size of my fist.

(Had it not known, or was it like a mother seeing her son’s casket come home from a war overseas, emotion spilling forward when an immaterial death was made real?)

Grak gave me a slight push, and that got me moving. We surrounded the doe, comforting it, and eventually it laid down, first so that its legs were curled beneath it, and then in a small circle, in a way that I associated with a fawn. I felt awkward and uncomfortable patting it, and tried my best to murmur something comforting, but I had always been bad with grieving.

Tiff wore a black dress, one that came down to her calves, and black shoes with a slight heel. She’d come into my room without knocking, and sat down on the bed beside me, without saying a word. Her lip was trembling; from her eyes, she’d been crying, and though her cheeks were dry, I doubted that they would stay that way.

“Why didn’t you come?” she asked. Her voice was shaky.

“I,” I began, then stopped, because I didn’t want to cry. I was wearing black socks, black pants, a black tie, and a white buttoned-down shirt. It was an outfit that I had picked out with Arthur, when I’d been a witness for mock trial. He had thought it would be fun, a thing we could do together, and I didn’t really take to it.

“People asked, and we didn’t know,” said Tiff. She reached over and rested her hand on top of mine.

“‘Never count a human as dead until you see his body,’” I said. “He used to quote that. Dune, I think.” I tried to keep my tone clinical, to take refuge in dissociation. It wasn’t really working.

“Joon,” said Tiff. “I needed you.”

“I know,” I said. “I just … I couldn’t. I got dressed and I was sweating, I felt like I was going to puke. All of those people. And they didn’t know him like I did, to them he was just someone they saw in the halls.”

“He was in a lot of clubs,” said Tiff. “Activities.”

I wasn’t entirely sure if she was rebutting my point or not.

“Yeah,” I replied. *It should have been me. He was a keystone. If it had been me, only the D&D group would have even noticed. No one understood him like I did, but he at least left his mark.*

“Are you going to be okay?” asked Tiff.

“No,” I replied. I didn’t even understand why she’d ask that question.

“Please don’t say that,” said Tiff. She leaned over and wrapped me in a hug. She was crying, with a hitch in her breathing, but they were the tears of a person who’d been crying a lot.

“He’s not coming back,” I said. “There’s never going to be anyone like him again.” I wasn’t sure that she grasped the enormity of it. How could she?

“I can’t lose you too,” she said. She was shaking her head. Her hand was gripping mine. “Not you
Suicide. It slowly dawned on me what she was talking about. Not actually, ‘are you okay’, but ‘are you going to hurt yourself’. I might have flashed back to old conversations, if I weren’t so numb, times I’d told her about feeling lost and hopeless even when things were going well, standing on the edge of the dock at my uncle’s cabin and contemplating how nice it would be to slip beneath the water and never be seen again. I wished that I had kept my mouth shut, during our nights together, that I hadn’t revealed so much of myself.

“I’ll be okay,” I said. It came out wrong, the most obvious lie in the world.

Tiff hugged me. I hugged her back, but it was awkward because of the way we were sitting. It wouldn’t be the first or last time that she would go to me for comfort, or try to comfort me, only to realize that there was a gulf between us.

Eventually she did lose me too. She had to, for her own sake.

We spent a long time with the deer, comforting it as a group. I seemed to be the only one that felt awkward and uncomfortable, unsure of what to do with myself. I wasn’t sure how long we were going to give the locus either, whether this was going to be five minutes or two hours.

After what seemed like an eternity of me trying to awkwardly pat the deer, I laid my hand on it and tried to get Amaryllis’ attention. Eventually she looked at me, and I splayed my hand across the doe’s flank, looking down at that hand suggestively. Amaryllis shrugged, and when I raised my eyebrows, she gave me a curt nod of either assent or agreement. So long as we were all sitting there, I would make my best effort at getting into the locus’ soul.

It was still a painfully hard process, to see into the soul of another person without the aid of the Twinned Souls shortcut. I had been hoping that it would be easier with the locus, but if anything, it was harder. I could feel the soul in mortal species, leaking through the skin, pumping through the veins, because those magics were linked to the soul in some way, manifestations by proxy, inextricably linked back -- which was why there was no latent magic in Valencia’s blood, skin, or bones. For the locus, it was different. If it even had blood, I wasn’t able to feel it, and if you were going to say ‘fuck off’ to physical laws with abandon, why bother with blood? So I was trying to root around blind, feeling for something that seemed like a soul.

It took three hours. Valencia was the only one that stuck around for the whole time. I was doing my best to block out everything that was going on around me, but I saw the others milling around, and occasionally talking to each other in hushed tones while I went about my work. They stayed close by, and I sort of wished that they hadn’t, because it might have been easier to concentrate if barely-audible whispers didn’t keep reaching my ears. Eventually my soul-sense snagged on something though, and it felt so obvious that I guessed that the locus had finally raised some kind of mast for me to grab onto.

Its soul did not map to mine. There were no text or numbers. Instead, it was artwork, of the same variety that made up its biography, a kaleidoscope of scenes that bled together in a style that was more toward the surreal than the real. It was less of an identifiable story than the biography was though, reminding me of when we’d made historical dioramas in eighth grade and set them up next to each other, though these ran together in places, and were arranged organically rather than in a grid. Most of it was nature: trees, animals, inclement weather, sunlight, damp earth, sometimes repeating for reasons that I couldn’t fathom. There were people too, individuals and massed groups, and sometimes impressionistic scenes with people in them. I moved through all of this quickly, trying to get some sense of what I was looking at rather than concentrating on the specifics.
Needless to say, none of this was at all helpful to me, or my quest to restore the locus to its former glory. The soul was supposed to be raw data, or at least, that was how it had been described by Fallatehr and how it presented itself to me, even without Twinned Souls. If the locus had anything like that, there was a layer on top of it, which interpreted all of those pretty, neatly ordered numbers and made virtually incomprehensible artwork out of them. Even if I could have found, say, the specific scene that represented me, I wasn’t at all clear on how I would go about editing it, nor what changes any hypothetical editing would bring.

And what I was supposed to do was transplant the locus to the outside world, presumably by fucking with its essential link to the land inside the bottle, maybe creating a new link to this land at the foothills of the Spine of the World. It seemed like a really tall order.

“Okay,” I said, “The soul of the locus is, ah … not going to be easy to deal with, I don’t think. It’s all in abstract, mystical images that I don’t even know how I would manipulate. So on with the Sacrifice, I guess.”

Here was the plan that we’d worked out, in four brief parts:

1. **Observation:** Look at Essentialism, see whether it’s reached an absolute hard cap or whether it can go beyond 100. Do a very quick overview of the soul, looking for any features that weren’t there before. Look for any new lines branching off from the soul. Take a few seconds to look at connected souls. Leave the soul, glance briefly at the outside world, look for new virtues on the character sheet.

2. **Stabilize:** If it seems at all possible, and isn’t automatic, make non-permanent adjustments so that Essentialism can remain as high as possible without decay. Temporarily moving all available ability points, including stripping down PHY and SOC to 0 (below their starting values) would be enough to leave me with 24 points in KNO and 14 points in WIS, for a cap of 70 on Essentialism. That would put all my PHY and SOC based skills over their caps, but might be worth it, if it seemed like it would give me more time.

3. **Fix the Locus:** Somehow. The foothills of the Spine of the World wouldn’t be a bad place for it to have a new domain, or for it to extend its domain outward if it stayed in the bottle; that was part of the logic in choosing this place, long ago when we’d first made camp there (it was two and a half weeks prior, but a lot had happened since then).

4. **Upgrade Everyone:** It wasn’t clear to what extent this would be possible (or safe), but if I could, for example, take a few of my unicorn bones, use them to reach into the soul of the unicorn, then retrofit them into myself in order to give me unicorn powers … fuck yes I’d do it. Maybe I’d understand how to give myself extra arms, which seemed like a thing that Essentialism could do, or maybe maxing the skill out would let me arbitrarily increase skills, or rearrange memories to make me eidetic, or something else equally awesome.

It wasn’t clear how much time I would have to get all that done. We’d worked out a system where Fenn would slap my thigh once every two minutes, in order to help me keep track of time; in testing, that had gone pretty well. Optimistically, I would have 104 Essentialism, and it would stay above 100 for 20 minutes. Less optimistically, it would cap at either 100 or 99, and giving me roughly five minutes at max, or about an hour above 90. Pessimistically? I might have a handful of seconds as an uber-soulmage, or it might just not work at all. Really pessimistically, just by trying I would permanently fuck something up.

With everyone prepared and everything I might need set out in front of me, I dove into my soul and began the Sacrifice, draining the pre-selected skills one by one, putting all of the points toward Essentialism. With the last of them spent, I looked at the Essentialism skill and saw that it was a different color, sitting at 104 but a bright blue and pulsing slightly. I ignored it, for the time being, and quickly went to other parts of the soul, looking for new features.
I knew more, now. It was less like Neo in *The Matrix*, more like Jason Bourne in *The Bourne Identity*. The knowledge was there, when I needed it, but it hadn’t thrust itself to my attention, and there was a lot that I didn’t know that I knew, not without something to prompt me. That was another difficulty that we’d anticipated; Fenn’s difficulty with getting a handle on all the magics that had opened up to her with Symbiosis was precedent.

I found my True Name, which I won’t give here. I found a record of my lineage, with unfamiliar names above my own, most likely the root mechanism by which the heirloom entads identified who they belonged to. There was a record of the items that had been invested in me by Amaryllis, my armor, my dagger, the Anyblade, in a spot on my soul that seemed virtually barren with just those three. Interesting, but nothing that I could break the game with. I knew, as if I’d had it drilled into my head long ago, that my True Name could not be changed, and there was no way to hack my lineage so that I was Uther Penndraig’s eldest son; these things were excluded, impossible now, but hadn’t always been.

There were so many things I couldn’t do. As I thought of what I wanted to try, I could see the walls ahead of me, almost always a limitation imposed by exclusion rather than being something that soul magic was naturally unable to do. I’d been thinking of the exclusions of being something like patches to the game (making the exclusion zones places that had been grandfathered in), and if that was the case, then soul magic must have been the cause of a whole host of patches:

- I couldn’t change the primary or secondary abilities of my skills.
- I couldn’t copy my soul.
- I couldn’t double any information within my soul.
- I couldn’t copy skills over to other people.
- I couldn’t create additional bones in my body.
- I couldn’t lower abilities below zero.
- I couldn’t lower skills below zero.
- I couldn’t lock my soul as it was.
- I couldn’t edit my bloodline.
- I couldn’t edit my species.
- I couldn’t take unique magics from another’s soul.
- I couldn’t create skills.

All of these things had once been possible, at least according to my magically granted knowledge, and all of them were now locked away, patched out, except in some specific corner of the world, or except for some singular person, and given how many exclusions I hadn’t been able to match to exclusion zones in the past, some things were just patched out without anyone even knowing about it.

I was still on the first part of the plan, observation, when I felt a second slap on my thigh, which meant four minutes had passed. When I looked to Essentialism, it was down to 102, which meant two minutes per point, better than I’d expected it would be.

When I looked to the lines away from my soul, I stopped and stared. There should have been four, three intact (Amaryllis, Fenn, Grak), one broken and waving in the wind (Valencia). Instead, there were eight. One was likely the Six-Eyed Doe, granted to me even without the loyalty for it, while the other two would belong to the other two as-yet unfound companions. The eighth wasn’t white, but black, thick and sinuous, utterly unlike the others.

I followed it.

Distance was meaningless in this place, but it took longer to get to the end. The line -- cord really,
bumped and gnarled like I thought of an umbilical cord being -- grew thicker as I traced it back to its
source, until the black stretched from horizon to horizon, and then beyond that, closing up over my
head until I was just moving through a black void with only a vague sense of direction. It occurred to
me that I should back out, that this was something dangerous, but I couldn’t stop myself. I literally
couldn’t stop myself, even though I could think of no justification for continuing on.

The black switched to white in an instant, leaving me standing on solid ground with ambient white
light all around me. I had a body again, and I patted it down briefly, confused as to what had
happened. A body, made manifest within my soul? Or within someone else’s?

I noticed the other guy after I’d got my bearings. He appeared as though a mental block had been
lifted that prevented me from seeing him. He was dressed in a dark grey hoodie that said “Mr. Dice
Guy”, with blue jeans and sneakers that wouldn’t have had a place on Aerb. Mid-30s, a full beard,
brown hair, blue eyes, a slightly crooked nose, and a wry smirk. It wasn’t just his clothes that spoke
of Earth.

“Hullo Juniper,” he said with a smile. “I thought maybe it was time we had a chat.”
“You’re the Dungeon Master,” I said, looking him over.

“I prefer ‘DM’,” he replied. He was smirking at me. “Less of a mouthful.”

“You’re … not me,” I said. I was staring. There were similarities between us, not just in the jeans and hoodie he was wearing -- a pretty classic outfit for me, back when I’d been on Earth -- but his hair color, eye color, and skin color too. But looking at his lips, nose, and eyes, I couldn’t see myself in him, not even allowing for the fact that he was older than me.

“Says something about you,” he said. “That you assumed that the person behind all your perceived misfortune would be yourself.”

“It’s my world,” I said. “My creations. My sensibilities, my interests, my design decisions, my fingerprints are all over every aspect of Aerb.”

The Dungeon Master shrugged. “True enough.”

I stopped, trying to think of what to say, what question I could ask. “Why is there pain?” I asked.

“Because I wanted there to be pain,” he replied.

“You’re a monster,” I said, crossing my arms. “And I’m on a schedule, this isn’t a good time.”

He snapped his fingers. “There, now we have all the time in the world. Satisfied?”

“You absolute fuck,” I said. I could feel my temper rising, and did nothing to rein it in. “A trillion fucking people in the hells, a decaying world, Fenn having her arms scarred at seventeen as a way of spitting on her for being a half-breed, Amaryllis raised by a nest of vipers because you killed her father and mother when she was just a little girl, Arthur, put through shit a hundred times over, never even able to rest, how fucking could you?” He watched me, and I could feel my heart racing, my blood boiling. “Every fucking death is on your hands, every starving child, every act of violence, every rape, every murder, all the atrocities of a world that seems to have had more than its fair share of them, all that is on you. If I were god, I’d have stopped them all.”

“Then what are you waiting for?” asked the Dungeon Master. “Become god.”

I sprinted forward and attacked him, grabbing him by his hoodie and punching him square in the face. He cried out in pain and began stumbling back, but that was why I had a hold of his shirt, and as he tried to twist under my grip, I punched him again, then threw him to the ground and leapt on top of him, punching him again, in the chest this time, trying to pin him with my weight while I kept up the assault. There was blood spraying out to coat the white void, more splattered with every punch, until eventually his movements slowed down. I grabbed his hair and slammed the back of his head into the ground, over and over, past the point that he was no longer moving, until eventually I was gasping for air because of the exertion. I was crying too, which wasn’t surprising.

“Fuck off,” I said to the empty air.

He wasn’t dead. The body below me had no pulse, and it wasn’t breathing, but fuck if I actually believed I’d killed him, or hurt him, or caused him any pain. I probably wouldn’t have gone after him, if I had believed that it would do anything. Hell, I’d been surprised when that first punch had landed, shocked that he hadn’t dodged out of the way at the speed of sound, or absorbed the punch.
like he was made of dough, or something else to demonstrate his power. And I had been right that there would be a demonstration of power, but wrong about the form that it would take; he had let me ‘kill’ him.

I got up and kicked his head. “Alright, let’s chat.”

The corpse didn’t move. I was expecting him to appear behind me, or for the dead body to get up and start talking, speech warped by the broken bones and blood that had probably dribbled down his throat, or maybe he would just appear in front of me, whole, like nothing had ever happened. Those were the kinds of things that I would do, and so far he’d seemed content to steal my sensibilities. Of course, there was also a long list of the ways that we were different.

I looked around. It was a white void, with ambient lighting that seemed to come from everywhere at once, and no horizon to speak of. The only features were myself, the body of the Dungeon Master, and the blood that had come from that body, a small pool beneath his head and the drops and droplets further beyond that.

I started walking. My hands hurt, and I seemed to be cut off from bone magic. I couldn’t access my soul, but that was no surprise either. Quick checks of my other magics showed none of them working either, also not surprising. I kept walking, for lack of anything better to do.

I tried to carry my anger with me, repeating a litany of the Dungeon Master’s sins, trying to count every bad thing that had ever happened on Aerb against him because he was the one with the power to stop it, and when that began to grow dull, I switched over to his sins as a Dungeon Master, the various contrivances, the plots that didn’t make sense without information introduced after the fact, the impossible odds I kept escaping from by the skin of my teeth, the items I’d acquired only to find a perfect use for them a few days later.

Eventually, enough time had passed that I should have been thirsty, and then hungry. I should have needed sleep. I kept walking, trying to keep myself moving in a straight line. Occasionally I would look back at the Dungeon Master’s body, sometimes flipping it the bird. Eventually it was out of sight, beyond my ability to perceive it as more than a speck.

Brains are made of neurons awash in chemical soup, and the thing about that chemical soup is that it has a really hard time maintaining high levels of any emotion. It’s not that you run out of anger, it’s that your brain runs out of the chemicals responsible for you feeling the emotion of anger, and all you really feel is numb, because your brain can’t actually make you feel the thing that it’s supposed to be making you feel. So eventually, my brain had wrung out all the anger it possibly could, leaving nothing left but a trickle as it slowly made (and then immediately deployed) its anger chemicals.

“Feel better?” asked the Dungeon Master. He had appeared in front of me without fanfare, again as though all he’d done was lift a mental block that prevented me from seeing him. He was restored, looking exactly the same.

“No,” I said. I looked down at my hands, which were undamaged, with no trace of blood.

“You can kill me again, if you’d like,” he said.

“I will, once I can figure out a way to do it permanently,” I said. “Once I have a system in place to take up the reins without it all crashing down. Once I’m a god.”

“Fair enough,” he said.

“The fuck do you want?” I asked. I felt tired, not in the sense that I needed to sleep, but in the sense
that my brain was out of the chemicals it needed to make me feel like giving a shit about anything. In retrospect, trying my best to keep the righteous rage going was probably not a great idea.

“I was going to ask you the same thing,” he said.

“You’ve got my brain, you could pull anything you wanted out of it,” I said.

“Would you prefer that?” he asked.

“No,” I said with a sigh. I closed my eyes. “I want …” I opened my eyes and looked at him. “Pie in the sky?”

“Sure,” he said.

“I want no one to suffer injury or pain,” I said. “I want unbounded resources available to whoever wants them. I want emotional, social, and mental health for everyone. I want Arthur back. I want him back, so he can live out a full and healthy life.” I could feel tears rolling down the side of my face. “I want Tiff. Two of her, one for him, one for me -- she’d kill me if she heard me say that -- and I want to unfuck everything somehow, make it so that I didn’t make so many mistakes, so many things I can’t possibly believe she’d get over them.”

“And Fenn?” he asked.

“Fuck you,” I said. “I want Fenn too, god damn you, you fucking made her just for me, I knew from the start that Amaryllis was too pretty, terrifyingly pretty, I should have seen it with Fenn too, that you were just --” I shook my head. Manipulating me, but doing it with a full person that couldn’t even be blamed for that manipulation, who I loved in spite of the fact that she was designed to be with me. “Fuck you,” I said.

“You won’t believe me if I tell you that I didn’t set it up,” said the Dungeon Master.

“Is that what you’re telling me?” I asked. “That Amaryllis Penndraig wasn’t set up for me?”

“She was,” he replied. “They all were. But they were set up as companions first, and love interests second, and now that they’re out in the real world, so to speak, I’ve been keeping my hands off.”

“Bullshit,” I said.

“I said that you wouldn’t believe me,” he replied. “Your love life isn’t really why I wanted to have a chat.”

“Fine,” I said. “Let’s get this over with. Tell me whatever you thought you needed to tell me, you horrible little monster, then I’ll fuck off to your painfully fake little world and pretend that none of this ever happened.”

“Ouch,” he replied. “You hit me in the worldbuilding, right where it hurts most.” He was smiling, but it was faint, questioning, as though he expected me to respond in kind.

“It’s my world anyway,” I said. “My ideas, my plans, just all put together in different ways than I’d originally intended. That’s not an apology, you’re still a shit DM.”

“Are you going to be sullen this entire time?” he asked.

“Sullen you can maintain,” I said. “With the brain chemicals.”

“Okay then,” said the Dungeon Master. “I didn’t want to do this, but let’s try again.”
He snapped his fingers.

“It’s my world,” I said. “My creations. My sensibilities, my interests, my design decisions, my fingerprints are all over every aspect of Aerb.”

The Dungeon Master shrugged. “Fair enough.”

I stopped, trying to think of what to say, what question I could ask. “What is this place?”

He snapped his fingers, and two chairs appeared in front of us, old, battered red vinyl ones with buttons making a pattern on the backs and arms that ended in hands-width lion heads. A small table sat between the chairs, with a yellow legal pad and a mechanical pencil. “Come on, sit.”

I sat. The chair wasn’t particularly comfortable.

“I’m sorry, where are my manners,” he said. “Do you want something to drink? We have Mountain Rush.”

“You have infinite powers and off-brand pop?” I asked.

He laughed. “Just a little joke.” I didn’t so much as quirk my lips. “Well I thought it was hilarious. You can have anything you’d like.”

“Immortality serum,” I said.

“Fresh out, sorry,” he replied with a grin.

“Felix felicis,” I replied.

He rolled his eyes. “No Harry Potter stuff.”

“Godsbrew,” I said.

He frowned. “Which one was that?”

“Do you actually not know?” I asked. He shook his head, and I didn’t believe him. “From the Counterbalance campaign,” I said. “Turns the drinker into a demigod.”

“In that case, no,” said the Dungeon Master.

“I’m kind of pissed off at you, just as fair warning,” I said. “It’s a very unproductive kind of rage, but … you know all the things you have to address before I’ll be willing to let that anger go. You have too much to answer for.” I found myself clenching my fists.

“You know that the DM-player relationship isn’t adversarial,” he said.

“If you know me, then you know that’s not always the case, even when it’s actual D&D and not someone’s fucking life,” I said. I spat those last words. “D&D is make believe. It’s pretend. This, Aerb, is …” I trailed off. Did I want the answer to that implied question? Would something inside me break if I learned that Fenn was just a facade of a person?

“You want to know how much of it is real?” he asked.

“Yes,” I replied, trying to steel myself for his answer. “You owe me that.”
“I nudge things, here and there,” he replied. “I fudge things, sometimes, when I don’t think it will be too obvious to you. There wasn’t going to be an archery contest in Cranberry Bay when you were passing through, but I looked ahead a little bit, and saw that I could help Fenn to have a little adventure by paying a water mage to produce some inclement weather a few weeks prior, which made the contest committee move the date up, and from there it was just a matter of having her hear about it, which took another few nudges.”

“That’s … why in the hell would you have to pay someone?” I asked. “Why not just change the weather yourself?”

“Come on,” said the Dungeon Master with a smile. “You would do the mysterious old wizard manipulating things in the background bit if you could.”

“You’re a god,” I said. “Fenn got cut in half and you did fucking nothing for her.”

“People are going to get hurt,” said the Dungeon Master. “Some of them might die. You might die, and one of the things I really wanted you to know was that if that happens, I’m not going to save you. They’re called stakes. Do you remember Arthur DMing?”

“Don’t you even say his name to me,” I said. I wasn’t in a position to make threats, and I knew it, but I was angry.

“He played with kid gloves,” replied the Dungeon Master. “You always knew that everything was going to work out in the end, and it was a far worse game for it. Dumb risks paid off, because you knew that he wasn’t going to just let you die, so it was all dumb risks, and that got old really quickly.”

“I’d take that trade,” I said, clenching my fists. “I don’t care whether it’s thrilling or boring, do you understand how many bones I’ve broken since I’ve been on Aerb? How much blood I’ve lost, not to mention spilled? The spectre of death that I’ve been under … I’m pretty sure that you don’t get it, because if you did --”

“That is the most asinine argument,” he replied. “Clearly I’m right, and I’m so right that you must be misunderstanding me, because if you understood my superior argument, you would agree with it.” He used a voice for that, one meant to mock me. “Come on, I know that you hate it too, so don’t pull that shit on me. I understand your perspective, and I disagree with it. A little bit of pain and suffering --”

“No,” I said. “A trillion people in the hells.”

“They’re called stakes,” said the Dungeon Master. “If those people are really so important to you, then level up and save them. Become god. It’s within your power. I’m not going to stop you.”

I stared at him. “And what then?” I asked. “We escalate? I have to fight other gods of other universes?”

“No, then the campaign ends, and everything is good and perfect forever and ever,” said the Dungeon Master with a shrug. “I’ll strip off the game layer unless you want me to keep it in place, I’ll strip off the personality compensators unless you want those on, and then I’ll be out of your hair. You’ll be a god, like I’m a god, with the only limit on your power being that you can’t track me down and kill me.”

“I’ve got no reason to trust you,” I said. “Even if it all happened like you said, even if I was in a paradise of my own choosing, I would have to worry about whether you were going to show up
“This is true,” nodded the Dungeon Master. “But I have to say it’s more likely than not that you’ll never get to figure out whether you can live with that paranoia, because you’ll fuck up and die somewhere along the way.”

“Die to an obstacle that you’ve placed in front of me,” I said.

“Or one of your own making,” he nodded. “You probably don’t believe me, but I’m not really putting any active effort into screwing you. I set up the characters and the obstacles, I give a few nudges here and there, and then I wait for your choices, and the choices of everyone else. I’m a watchmaker, paying attention to how the watch is running but not sticking my fingers in too often.”

I folded my arms across my chest.

“I don’t want you to fail, I want to take some joy in seeing how you react, in seeing you run off the rails, in succeeding against bad odds, in dealing with your teammates -- I want you to win.” He stopped and watched me. “I’m not going to bend over backwards so you can win though,” he said. “I’m barely going to bend at all. It’s one of the things I wanted to let you know.”

“I don’t consent,” I said, leaning back and folding my arms.

The Dungeon Master smiled. “Did you think that I didn’t ask you? Here, I’ll show you.”

I felt the red vinyl of the chair, battered and worn, then looked across at the man sitting next to me, in an identical chair. He was holding a yellow legal pad and a mechanical pencil. He was older, in his thirties maybe, with a full beard. He had a blue hoodie on, which said “Dice to Meet You”.

Five seconds ago, I had been passing notes in fifth period English.

“What the fuck,” I said.

“Hullo Juniper,” he said. “This meeting may be monitored or recorded for quality assurance purposes. Your continued participation in this meeting serves as express consent to be monitored or recorded.”

“What,” I said. I looked around. It was a featureless white void. I looked down at the chairs, then back at him. “Am I … in the Matrix?”

“I can see why you’d think that,” he replied. “But no, not quite. I’m here to make you an offer, which you can refuse. If you do refuse it, you’ll be returned to fifth period English, and this will all present as a vivid but quickly-fading dream that you’ll probably forget about in a week or two. If you want to leave, at any time, just snap your fingers.”

I looked down at my fingers, careful not to make the slightest motion that might be perceived as snapping my fingers. “I’m listening,” I replied.

“You don’t understand,” he said, tapping his pencil against the legal pad. “That’s fine. Here are the terms. First, you’ll get sent to a fantasy world that generally matches your aesthetic for an indefinite duration. You’ll have a character sheet stapled to your soul -- you’ll have a soul, they’re common there -- which will allow you to accumulate a tremendous amount of power over a very, very short period of time. How does that sound so far?”

“It sounds like there’s a catch,” I replied. This didn’t feel like a dream or a hallucination, I quietly,
surreptitiously pinched myself.

“There are a lot of catches,” he said with a nod. “To start with, it would be hard, and sometimes unpleasant. You would have to learn to fight, but you could become a skilled warrior in a matter of minutes. By the time a month had passed, you’d probably be in the top thousand fighters or mages in the world. You might be injured, but this world has a wide variety of healing magic. You might die, in which case that death would be permanent.”

“And there are other catches besides that,” I said.

“Yes,” he replied. “You would be monitored, with no privacy.” He pointed the end of his pencil toward himself. “I’d be the one doing the monitoring, no one else would see my notes or have access to my data, unless you wanted them to. That data would include your personal thoughts and feelings.”

“Okay,” I said. *Kind of creepy, but pretty much nothing compared to being in the Matrix.* “I really don’t understand … any of this. I don’t understand why you would need me.”

“I don’t need you,” he replied. “I could fix every single problem in Aerb myself, if I wanted to, and Aerb has an enormous surplus of problems at the moment. I don’t want to fix Aerb though; I want you to do it. You wouldn’t be obligated to, once you were there, but I think you’d have the natural inclination to, if I have the measure of you.”

“Do I know you?” I asked.

“We’re kindred spirits, you and I,” he replied.

I looked down at my fingers. *Snap and leave.* But I already knew that I wasn’t going to do that. What was here on Earth? My parents? Reimer and Tom, my only remaining friends, barely? Tiff, if she could forgive me for the person I’d been? College, a job, middle America … no.

“I’ll do it,” I said. “Can I … what happens to me, when I leave Earth? I’d like to leave a note or something.” *If I was really here, was Earth even real?* “I don’t want to hurt anyone.”

*[REDACTED]*,” he replied.

“Oh,” I replied. “Okay, I guess that works. Unless [REDACTED]?”

“Then [REDACTED],” he replied.

“And that’s the whole deal?” I asked. “I go through to this place, Aerb, I play the part of a hero, I fix everything there forever, if I can, and in return … I don’t have to worry about Earth?”

“There’s one last catch,” he said. “I’d want to remove your memories of this conversation, store them away for later, so that you can go in fresh and blind. I don’t want you saving the world because I told you to. I’ll give the memory back when I think you won’t be influenced by the specific wording of the offer or how I’ve presented things to you.”

“Okay,” I replied. *If this is real.* “Hello future me, I guess.”

“There were parts of that you left out,” I said, once I’d finished reliving the memory. “Do my parents think that I’m dead?”

“I’m worried about potential spoilers,” replied the Dungeon Master.
“Sensible,” I said. Maybe detached irony was the way to play this; I was virtually certain that I wasn’t going to get anything out of this meeting. “So you wanted to warn me that the danger was real? That was it?”

“Um, let me see,” he said, looking down at the yellow legal pad, which was completely blank. “I wanted to tell you that you still had to worry about dying, explain that your life on Aerb was better than it was on Earth -- did I get that across?”

“I never disagreed with it,” I said.

“No you did,” he replied. “Or you have, at various points.” He looked down at the legal pad. “Consent thing -- weak, I know, given consent withdrawal and a lack of information, but you’d have agreed even if I told you everything up until this point.”

“It’s a false dichotomy,” I said. “It’s not going back to Earth or staying on Aerb, those aren’t the two options, with the amount of power you demonstrably have, you could --”

“You can be pissed off at me all you want,” he said with a shrug. “Those were the two options that I gave you, you made your choice, you’d continue to make that choice in all but the darkest moments. Maybe even then. Do you remember when you were dying of blood loss in the sewers of Silmar City? You never once thought, ‘please, let me go back to Earth’.”

I didn’t have a response to that. He was right.

He looked down at the legal pad again and tapped his pencil against it. “The last thing I wanted to say was that you don’t need to worry about the narrative. You’ve already deviated from my plans a number of times, you just didn’t notice.”

“When?” I asked.

“Do you remember Craig DMing?” asked the Dungeon Master. He waved his hand. “I know you do, that was rhetorical. When you finished with a dungeon, he was always so eager to share all the loot that you’d missed, all the secrets that you hadn’t made the checks for, and for diplomacy it was even worse, because he’d want to explain all the ways that the conversation could have gone, but didn’t. It took a lot away from the experience.”

“Did you pull that from my head?” I asked.

“Juniper, I know you better than you know yourself,” he replied.

“If that was supposed to be reassuring, you’re doing a pretty shit job,” I said, clenching my fists.

“Well, it wasn’t meant to be reassuring,” he said. “It’s just a fact, one you already know is true, but seem to need reminding of.”

“But what’s the point of it all?” I asked.

He looked down at his legal pad again. “Nope, that’s not on the agenda for today.” He smiled at me. “You’ve been a relatively good sport though, so I’ll entertain some requests. Three wishes, maybe? You haven’t actually ruled out that I’m a genie.”

“I wish for more wishes,” I said.

“Okay, I’ll give you one hundred more wishes, but they can only be used to wish for a standard-issue school cafeteria hot dog,” he said with a smile. “Rookie mistake there, I thought you were
better than this. And anyway, I’m not giving you those kinds of wishes. Little things, not plot
breakers.”

“So there is a plot,” I said.

“There are planned pathways,” he said. “There are plots that I think I’d find interesting, roads that I
hope you’d go down. And maybe you’ll scribble outside the lines, and I’ll make a brief glance at the
possible futures, and figure out where I can nudge things, if it’s appropriate. Still thinking on those
wishes?”

“I wish … there are only two kinds of genies, those you can trust, and those that you shouldn’t be
making wishes to,” I said.

The Dungeon Master waved his hand. “If you don’t want to make requests, don’t make them, but
I’m not going to let you save them. Worst that I’ll do is say no. Think ‘small’. Think ‘things that
don’t solve the plots’.”

“Okay,” I said. I took a breath. “I wish I didn’t have a harem.”

The Dungeon Master frowned at me. “You don’t have a harem,” he said. “You have a girlfriend,
and a few girls that have some confused, complicated, and in some cases unpleasant feelings toward
you. And if you want me to fix that, I refuse on two grounds. First, I set your companions in motion
but I have a rule against meddling with them in direct ways. Second, if you really wanted to do it,
you’re the one with Essentialism over the hard cap, all you’d have to do is go into Amaryllis’ soul
and make a few choice edits. You can cut down her libido to nothing, make her exclusively
homoromantic and homosexual, do what you want to fix the problem.” He rubbed his chin.

“Granted, doing that to the locus would be pretty hard, and Null Pointer Exception doesn’t have a
soul, but I’m sure you could figure something out. You know what, I’m going to count that as a
request filled, because I told you how to help yourself.”

“That would be telling,” said the Dungeon Master. He flashed me a smile. “And for now, I plan on
being just the right amount of opaque. They weren’t set up to wait forever though. Amaryllis will get
over you, if you let her. Null Pointer Exception will too -- she’s malleable.”

And Grak? The Six-Eyed Doe? I didn’t ask. I didn’t want to know. Better to keep assuming that
Grak was just a straight dude that didn’t happen to have a penis.

“And I,” I said. I licked my lips. Sometimes it was easy to say his name, and sometimes it wasn’t.
This was one of the hard times.

“That’s not a question,” replied the Dungeon Master.

“I’m trying to think of the most valuable question that you would actually answer,” I said. “I …
assuming that this is all a simulation, I don’t understand how it would be him. With me, maybe I
could be frozen for long enough that someone invented the technology to unfreeze people, to scan
them into a computer, I’d have had to be a few years older than seventeen, but … maybe it would be
possible. Arthur was warm and dead. He was cremated. I don’t understand how he could exist in this
world, except as an imperfect reconstruction from my memories.”

“That’s still not a question,” replied the Dungeon Master. His voice was softer, gentler. For all that
he was an amoral monster, he seemed to care.

“Tell me whether he’s real,” I said. “No, tell me how he’s real, how that’s even possible, because he
died nine months before I came here, and we didn’t have this technology then.”

“He’s real,” said the Dungeon Master. “I know how much he meant to you. I’m not going to say how that’s possible, but you can draw your own conclusions, if you decide that I’m not lying. And he’s out there, somewhere on Aerb or one of the other planes. He spent most of his life on Aerb, he’s not going to be how you remembered him -- you know that, that’s not news -- but the Arthur that came to Aerb wasn’t just Arthur as you remembered him. He’s the real deal, Arthur as he actually existed.” The Dungeon Master had, finally, taken a solemn tone.

That wasn’t possible, unless some of my assumptions were wrong, but it sounded exactly like what I wanted to hear, so I let it pass. It was as much of an answer as I was going to get anyway.

“Okay,” I said. “Tell me what happens when I die. Tell me what would happen to my party members.”

“Seems like a wasted wish to me,” said the Dungeon Master. “It’s not like you’re planning on killing yourself, right? You sure you don’t want, say, a backpack that can get you mundane stuff from Earth?”

“Is that on the table?” I asked, eyes going wide. Then I frowned. “Wait, how would that even work? Would I just pull a backpack out of my soul somehow?”

“I’ll think of something,” he replied. “It’s nice that you thought about what would happen to your party members, but in this case I think that creature comforts from home are probably the better option. Not that I’ll compel you one way or another, it’s your choice to make.”

“Okay, I’ll take the backpack,” I said. I looked around the white void. “I don’t like you,” I said to the Dungeon Master. “You’re not forgiven. Nothing you’ve done is excusable. You’re responsible for every evil thing that happens on Aerb. I know you know that, and I know you don’t care, but I need to say it.”

“Sure, fine,” said the Dungeon Master. “You know the way out.”

And as he said it, I realized he was right. I snapped my fingers and left.
The Princess and the Pea

When I returned to my soul as I knew it, the creepy black umbilical cord that had led to the Dungeon Master’s void was gone -- and somewhat distressingly, so were two of the white lines that I’d been assuming would reveal the other two companions. Had he changed something? Had I changed something in the course of that visit? I felt a hand slapping my thigh and remembered about the time limit, and tried my best to put off all my questions, all the second-guessing I was sure there was to do, until later. I was, after all, on a mission.

I pulled out of my soul entirely and was shocked by the world around me. My companions were limned in light of different colors, red for Fenn, white for Amaryllis, purple for Grak, and green for the locus, whose color extended beyond its mortal form to the grasses around us, and even beyond that, to the trees at the edges of the bottle. Valencia was without a color, and that was what jogged some part of my memory that I’d never used before -- I was able to see souls.

―Joon?‖ asked Amaryllis.

―I got screwed on this deal,‖ said Fenn, folding her arms across her chest. No Symbiosis effect for her from the points I’d shifted over.

―Working,‖ I said. “Two minutes per point, 102 right now.” I closed my eyes, waiting three painfully slow seconds, and looked down the list of virtues.

Soul Sight: Grants a visual representation of souls, each with a unique color, which can be distinguished with acuity beyond the limits of the eye. Applies to both the soul and any magic which interfaces with a soul in some meaningful way.

Soul Saturation: Knowledge of your soul allows it to fully suffuse you, giving a number of benefits to a wide variety of magic. Your blood works as an infusion for the purposes of pustule magic. You can use your blood as though it were magical ink (4 ζ/mL) for the purposes of ink magic. Your bones are considered wood for the purposes of wood magic. Required connective power for plants is reduced by half. You may retract your soul from your extremities for the purposes of bypassing wards. Any magic items or magics which limit projection or application to your eyes, hands, feet, or mouth, can instead be projected or applied from any part of your body. Your skin and/or carapace is treated as though it were skin and/or carapace for the purposes of skin magic and carapace magic, whichever is more beneficial. Runes may be written on your skin as though it were prepared vellum. More benefits apply in specific exclusion zones: consult the manual for more detail.

Soul Scaphism: You can carve out parts of other people to use for your own purposes. Any benefits are temporary; any costs are permanent.

Soul Symbiote: Double your effective skill in Bone Magic, Blood Magic, Skin Magic, Carapace Magic, Pustule Magic, and the flower magic aspect of Horticulture, up to a cap of 75. Double your effective connection to any magical item which interfaces with your soul, unless doing so has associated maluses. Increase your skill with any specialty or subschool of magic that uses the soul by 20 points, up to a cap of 50.

I didn’t spend too much time staring at those; there was nothing immediately useful that I could see, and I wasn’t going to try Scaphism without having any good idea what direction I could put it toward. The idea of scraping out the druidic connection from Solace’s soul and attempting to use it to fix the problem with some combination of druidic powers and super-buffed Essentialism was tempting in some respects but utterly horrifying in others.
I snapped out of the menu and looked around, noting some of what Soul Sight had been talking about, not just in the unique colors of the people, but in the magical items they wore, most of them tinted with the white of Amaryllis’ soul. Each of the bottled souls we had set out showed their own colors, each utterly unique and identifiable as such even though my sense of color had never been that good.

“I might be able to bring Solace back,” I said. I turned to Valencia. “Can you and the locus fake a druidic connection, maybe?”

“I would have to hurt it,” said Valencia.

“What are you thinking?” asked Amaryllis.

“I -- shit, I think I’m back below 100 again,” I said. “Yaxukasu Axud, the rebirth ritual, I thought that I might be able to do it. I had some insight into it, it’s a subschool of druidic magic, which isn’t actually a listed skill per se but counts as close enough for the capstone ability. I don’t have an actual druidic connection though, and I think that I might be able to temporarily take Solace’s, but I think we’d get her back as a non-druid, if I read all the things right. Sorry, trying to move fast, I have other skills that I can give up to stay in the zone.”

“You can do it with just a soul?” asked Amaryllis.

“That’s how it’s done,” I replied, reaching down to pick up the jar that had Solace’s soul within it. “We could do it, now, I think, if Valencia can take on a bit of the locus’ power to cast the spell.”

“I don’t want to hurt it!” said Valencia, raising her voice.

“Hurt it to save it,” I replied. “I’m fading fast, a point every two minutes, from what I can see, and I didn’t really have enough time to look around, but it seemed like Yaxukasu Axud was our best option.”

“It creates more problems,” said Grak. “And it’s not a solution to the locus being stuck in a bottle.”

“We could bring Solace back,” I replied. “It’s a fix to the current problem, which is the bottle being out of balance, and I have to say that without her, I’m not actually sure that I can solve the bigger picture problem, and certainly not in the time we have left, which is,” I looked around at the stifling heat and partially dying grass, “Days or weeks.”

“But … it’s a full birth thing, right?” asked Fenn. “Like, one of us would have to get pregnant with Solace, and, you know,” she squatted slightly and made a gesture with her hands, the universal sign for a baby falling out.

“I volunteer,” said Amaryllis. She turned to Fenn. “I’ll need The Book of Blood, please, I need to check for compatibility with crantek in case that’s an issue. Continue without me, I’m with Juniper, and time is short.”

Fenn popped the book out and handed it over. “Pretty sure that even Amaryllis can’t make a baby in a matter of days, and even if she did, a newborn Solace would still be a newborn, not the master druid that we knew and, debatably, loved.”

“There have got to be solutions to that problem,” I said. “Something like the opposite of a revision mage? Toss the bottle into the looping exclusion zone as a way to buy time?” I saw Grak’s face go sour at that suggestion, and barrelled ahead with more half-baked ideas. “Some kind of Narnia effect somewhere? A hyperbolic time chamber?”
“Kuum Doona has one,” said Amaryllis, glancing up from the book only briefly.

“The place that we have a quest for has a hyperbolic time chamber?” I asked, staring at her. “And it’s literally called that?”

“Yes,” said Amaryllis. She slammed the book shut. “I can’t guarantee that it’s charged, though it should be after such a long time, and that’s another problem that we can find a solution to later if it’s actually a problem. Crantek and human are cross-compatible, if it matters for the ritual.”

“We’re rushing this plan,” said Grak.

“We have to,” I replied. “Unless you want to wait another handful of days while I train up skills to pour into Essentialism again, time that we’re already short on?”

“I vote against,” said Grak.

“I vote for,” I replied.

“I vote for,” said Amaryllis.

“I vote for too, so long as I don’t have to be the pregnant one,” said Fenn.

“Good,” I said. I turned toward Valencia, to tell her to get ready, and saw tears streaming down her cheeks. *Fuck.* “Hey, are you okay?” I asked, still speaking a little faster than I would have liked, not quite controlling my tone.

“I don’t want to hurt it,” said Val, looking over at the Six-Eyed Doe, which was standing nearby, not seeming to grasp the importance of the task.

“I honestly think that the locus is going to die if you don’t,” I replied. “Sometimes we have to do things that we really don’t want to do, because that’s the right thing to do. You can complain, and vent to us, and voice all your objections, but even if it’s hard, you still have to do the right thing.”

Val nodded and said “okay” in a small voice.

“I’ll tell you when, and what to do,” I replied. I reached down into my soul and was almost about to start giving up points when I snapped to my senses and retreated from my soul entirely. “Fallatehr’s soul, please,” I said. Fenn frowned and handed over the bottle; I was extremely grateful that we’d had the foresight to give him his own small bottle, something that I was guessing would become standard practice from now on.

I’d tried tapping into a raw soul before, and had no luck, even with 24 Essentialism. You’d think it would be easier, rather than harder, but touching a soul was all about following connections, most of which came in the form of magic emanating from the soul, creating conceptual threads that I could tug on. The raw soul, the anima exa, as Fallatehr had put it, had almost no connection to the world, and that connection consisted only of its pure physical form, one which wasn’t as easy for me to grasp -- had, in fact, proven impossible at 24 Essentialism.

At 91 Essentialism, the connection was almost instant.

I did hesitate, just a little bit, before scraping all of his skill at Essentialism out from him. It seemed evil, to take his life’s work like that, and was certainly the sort of thing that the classical D&D alignment system would consider to be necromancy -- but logically, it couldn’t be worse than letting his soul fade away, could it? According to Fallatehr, souls never actually left Aerb for the hells, which made a certain sort of sense given that bone magic worked even when the soul was no longer
around, but I wasn’t sure that I actually owed anything to a soul that would never have a body, especially not if that soul belonged to Fallatehr.

(I would be destroying all future use for Fallatehr. Radically altering his soul and then stuffing it back into a body had been on the table, and maybe still was with the right combinations of magic … but I had been looking for those possibilities within my new understanding of Essentialism, and had found a half dozen pathways toward bringing someone back to life, all of them blocked by one exclusion or another. I was a little bit grateful that the logical thing to do wasn’t just to mindrape Fallatehr and stitch his soul back into a corpse; it would have felt a little bit too evil.)

With Fallatehr’s Essentialism scraped out of him, a curiously sensationless feeling for how momentous and final a thing it seemed to be, I was up in the 180s for Essentialism, which helped the rest of the process go much smoother, especially since I didn’t need to stop to recharge. Scaphism came with another affliction as well, a point lost every ten minutes until they were gone, which meant that I had four afflictions eating away at my points at once, Skilled Trade, Overcapped, Double Overcapped (a larger penalty for being more than twice the cap), and Scaphism. I’d still have hours of time above 100, thanks to Fallatehr.

Yaxukasu Axud was complex, and worse, ever-changing. I didn’t have a set list of instructions to work from, only a vague sense of what to do next, which would shift and warp as we went through them. Ingredients were simple enough, mostly available from the land around us, and those that weren’t we could pull from the clonal kit with a little bit of coaxing. I instructed Val, who did most of the work, with some preparation (stripping bark from yew branches, brushing dirt off stones, that sort of thing) from Fenn and Grak. It was a frustrating process, and took far longer than I felt it should have, in part because of how the ritual kept warping and changing, necessitating that we undo work we’d done more than a few times.

Valencia cried through most of it. Her hands shook, which didn’t help with the ritual. The Six-Eyed Doe cried too, and occasionally let out a bleat of pain, which almost always caused Valencia to stop what she was doing and whisper a strained apology -- and sometimes, whether because she’d stopped what she was doing, or because too much time had passed, the ritual would require something different from us, a new set of flowers picked from the far reaches of the bottle, or circling the soul three times widdershins, or something else equally asinine that seemed all style and no substance. Amaryllis was the one charged with soothing the Six-Eyed Doe, and she did a fair job of it; we briefly tried to have Grak put up a ward that would silence them, but that only caused Valencia to look over every few minutes.

I felt terrible about it. Whatever quasi-mystical thing was happening between the two of them, the Six-Eyed Doe was hurting, and it was hurting Valencia to know that. And that said, it was still what we had decided on doing, and a part of me was getting angry that it was taking longer because of the pain, and there was a chance that we might fail simply because of that distress. I didn’t express that anger, largely because it would have been completely counterproductive, but also because it was another part of myself that I hated. I wanted to be a being of pure, perfect empathy, and instead I had to fake it.

It took us an hour and a half to finish the ritual of Yaxukasu Axud. When it was complete, or at least, complete according to the understanding that I was granted, Valencia collapsed to the ground and the Six-Eyed Doe rose to its feet. The locus trotted over to the area we’d used for the ritual, which was filled with a variety of upright sticks and arranged stones we’d formed into circles, covered with the ashes of innumerable burned herbs, the grass and dirt flattened by how many times we’d moved over it, either getting things into position or as I’d guided Val through the movements the ritual required. The ritual site didn’t look mystical or grand -- it looked like something that Arthur and I might have done when we were kids, if we’d spent more time playing outside.
The Six-Eyed Doe went to the center of the concentric circles and used its mouth to gently take the glass stopper out of the bottle, using more grace than it should by rights have possessed. Then it used its lips to grab the bottle, and lifted it into the air, tilting its head back until the soul within disappeared into the doe’s mouth. The Six-Eyed Doe let the glass bottle fall from its mouth, and looked around at each of us in turn. My understanding of the twisting, warping ritual had come to an end; if there was another step, I didn’t know what it was.

Amaryllis stepped forward, and the Six-Eyed Doe went to greet her. They shared a kiss, Amaryllis tilting her head up, and the locus bowing its head down, and where their mouths met was, briefly, a brilliant light that shone with every color -- I was seeing a soul, more raw than the anima exa, Solace stripped down to her very essence, and though I was, for the time, a master of Essentialism, I couldn’t come close to explaining what had actually happened.

**Loyalty Increased: Six-Eyed Doe lvl 5!**

When Amaryllis pulled away, she looked light on her feet, as though she’d lost a gallon of blood, and I caught her before she dropped. I’d forgotten how light she was. Her color and vigor returned quickly, and in a matter of seconds she was trying to push me away to stand on her own. Fenn popped an armchair out of Sable and gently pushed Amaryllis down into it.

“How do you feel?” I asked.

Amaryllis touched her stomach. “Fine,” she said. “Good.”

“I’m really, really glad you were the one that jumped on that grenade,” said Fenn. She turned to me. “Do you think ‘Pregnant Virgin Princess’ would make a good band name?”

**Quest Accepted: Pregnant Virgin Princess - Amaryllis has accepted the gift of Yaxukasu Axud. In nine months, she will give rebirth to Solace, and the world will once again have a druid -- if there’s a locus to provide her a grove. (Companion Quest)**

I had another few hours with increased Essentialism, and didn’t want to waste it. A fair chunk of the time I spent trying to figure out how we were going to get the locus out of the bottle. The big problem was that the locus simply didn’t have enough reach and power to push itself out of the bottle; when it had gone into the bottle, it had been hundreds of miles across, and the prepared interior space was almost its own by default, simple to slip into and claim as part of its domain. Now that the bottle was its only domain, it was trapped, unable to project out because it was too weak. Solace had been able to make tunnels into the locus’ domain, one that was like walking through the center of a tree, the other that was like slipping through a hole bored in rock, but she’d likened those to a straw so thin that you couldn’t drink through it.

With my Soul Sight, I could see a slight glow to the land, a particular shade of green that indicated the locus, the same kind of tint that was on Amaryllis’ magic items, though her shade was a very specific white. Its domain was linked to its soul, somehow, and all we’d really need to do in order to get it growing its domain was to somehow get it to recognize the area outside the bottle as also being part of its domain. Per what Solace had told us, when laying out the problem, that wasn’t going to be so easy; the domain followed ‘natural’ boundaries and out in the wider world that had meant stopping at mountain ranges, at river banks, or where a forest came to an end (all of which were very definitionally fuzzy). So far as the bottle was concerned, it was a very, very steep boundary, not just in the literal sense, but as far as marking where one thing ended and another began.

Solace and the other druids had tried to solve this problem in a variety of ways, none of which had yielded any success, and it was difficult, because “rules” weren’t really a thing that a locus adhered
to all that well, so you’d expect munchkining definitions to either fail or succeed pretty much at random -- except that everything they’d tried to mystically attempt to coax the locus back into the world had failed, unambiguously. Solace had often talked in metaphor or with mystical overtones, but she’d been very clear on that last point; her special ritual had led her to us, but nothing else that they had tried, over the course of hundreds of years, had showed any promise.

Essentialism hadn’t helped. Solace had thought that it might, but she’d been led to us by a mysterious, precognitive ritual that hadn’t specified the actual mechanism by which we would be able to help her. Did I need to become a druid and then maximize Essentialism again? I had seen in Solace’s soul well enough to be able to see the druidic connection, but moving it would be destructive and impermanent; I would risk ruining the last druidic connection on Aerb, which was not a risk that I was willing to take, especially because I thought I would make for a terrible druid.

And what did that leave? Something to do with the bottle itself? A massive portal of some kind? If we could dump the entire contents of the bottle out somewhere, maybe that would work, but I didn’t know how we could actually do that, and based on my understanding of the rite of Zorisad Yosivun that Solace had used to find us in the first place, it had to be something to do with the game, or with my ability to learn magic fast, or something, because otherwise her mystical precognitive spell would have found someone else. The solution couldn’t just be going to a specialist in magical glass bottles, because otherwise Solace would have found them, right?

We hadn’t even gotten a quest update; Taking Root was still the same as it ever was, and said that we needed to remove the locus and transplant it. After the conversation I’d had with the Dungeon Master, I didn’t think that meant we were doomed to failure, only that perhaps Solace wasn’t the right direction to take things. The quest descriptions were hints, leaked information that had been leaked to us on purpose, and what they weren’t saying right now was pretty telling. Still, from the heat inside the bottle, it seemed like a stopgap measure was probably the right call, unless there was a clue that we were all missing.

Having not found much in the way of answers to the locus problem, which seemed intractable, I returned to the group and pulled Fenn aside. Amaryllis had her hand on her stomach and was engaged in low conversation with Grak; to my relief, Val was curled up on top of the Six-Eyed Doe.

“Okay,” I said, low enough that the others couldn’t hear. “I have an idea. Do you trust me?”

“For you, my love, anything,” said Fenn. She glanced over at the others. “Also, you’re going to have to talk to Mary about the whole pregnancy thing, she was way too enthusiastic about it, like whatever the baby equivalent of suicidal is. Also, I love secrets, is this a secret?”

“Kind of,” I said. “There’s a thing that I want to try that might be a little bit dangerous. I’d need your consent, and don’t really want the others weighing in.”

“Whatsoever you want, do it,” said Fenn. She stared at me, glancing briefly down at my lips. “My soul is yours.”

“No,” I said. “That’s creepy, your soul is your own.”

“You’re no fun,” said Fenn. “Just do the thing. Surprise me.”

I touched her chest and closed my eyes to connect with her soul. I wasn’t terribly surprised to feel her moving my hand lower, so that I was touching her boob, and I could imagine the wink she would give if anyone noticed the both of us standing stock-still in that position. The touch was really more symbolic than practical anyway; I already had a direct path into her soul anytime I wanted.
I looked over her body, as conceived by her soul. I really did love her; I hoped that 42 Skin Magic was enough. We’d taken the tattoo mage Leonold’s soul out back in Silmar City, but it was long gone, back before we’d had any inklings that we might have a use for it, probably dumped into the generator’s tank in the basement of Weik Handum, or maybe sold on the streets of Barren Jewel. It would have come in handy; in a way, I was glad that it wasn’t a Chekhov’s Gun that had been laying in wait to fire all this time.

The wording on Soul Symbiote was the same as on Blade-Bound, ‘effective skill’, which didn’t appear to grant new virtues, but I could make sense of the scars on her all the same. The power of the soul emanated from the skin. This was what gave power to the tattoos, in combination with the magical reagents that went into them. Scars were different, a redirection and capturing of the emanated energy, the curls and whorls gathering it up and pushing it back in toward the soul in specific ways.

(An idea popped into my head of a skintight casing that would slip over my skin and capture all of that emanated energy, like a mobile Dyson sphere for the soul … but I realized at once that it would take a year of searching out rare ingredients and the GDP of a mid-sized nation, even leaving aside that I didn’t have very much time until the practical knowledge would fade away.)

I didn’t think that I would have been able to scar her from scratch, but I could fix the scars, reposition them so that they would capture the energy right. I wasn’t so susceptible to the soul trance as I had been, but I could still feel myself getting lost in the work, moving the scars around, fixing the nearly imperceptible disruptions and misalignments in the patterns that had been caused by the normal processes of growth, wear, and tear. I fixed it all, taking my cues from the work that was there. It was like a master carpenter coming across a house that had been left to rot, warp, and shift for twenty years and putting all his efforts into carefully replacing every board, sanding down every surface, matching the varnish and paint -- all while only having a vague idea what a house was.

When I was finished, I opened my eyes and kept my hand on Fenn, burning bones in order to heal her. The shift in the positioning in her scars was so minute that I probably wouldn’t have realized anything was happening -- except that I had Soul Sight, and the red that limned her dimmed considerably.

“Did it work?” asked Fenn. Her hand reached up to touch mine. “Or don’t you know?”

“Can you try jumping as high as you can?” I asked.

“Sure thing, boss,” said Fenn, giving me the laziest possible salute. She crouched down and then launched herself up, screaming in delight as she rose thirty feet into the air. I moved to catch her, bracing myself, but when she came down she kicked me away and landed on one foot with the grace and poise of a ballerina. “Fuck yes.” She leapt forward and wrapped me in a hug that was crushingly strong.

“Ribs,” I said, wheezing slightly.

“Sorry,” replied Fenn. She pulled back and looked at me. Her eyes were sparkling. “How long is it going to last?”

“A week,” I said. “Same as it did last time.” Her face fell. “Maybe more, because you’re probably growing less than you were when the scars were applied -- when they scarred you. Cells die, other cells grow to replace them, none of it comes back exactly the way it was before, sorry, you know all this.” Her face had fallen as I’d talked. “Anyway, there’s a solution that I’d like to try.”

I walked over to a jar of souls, bulk class, made from embryos, and picked one out. It was a matter of
a moment to reach into it, as I’d done with Fallatehr, and look at the body inside, a small thing the size of a raspberry, unformed. It made me a little sick and uncomfortable, to see a soul like this, a life cut short in the interests of fueling cars and trains. The soul wouldn’t have been created without that demand, but still -- there was something sad about it, a soul that would remain empty.

I copied Fenn’s body into it, the same process that I’d done when grafting the ribs, the same process that Fallatehr had used to make a mimic of Amaryllis. The soul’s image of the body was dependent on the body; the scars on Fenn’s arms were there on the soul because they’d had a chance to set, and any injury could be written onto the soul as the soul adapted to the reality of living with that wound. *This* soul would never have a body, and the image of Fenn’s body that I’d written over would never change either.

I slipped the soul back into its container. “I don’t know whether I’ll be able to get back into this soul, but if I do, I should be able to give you the scar powers back. Essentially it would let me lock you in as you are now. If it’s okay with you --”

“It’s okay,” said Fenn. She kissed me and hugged me tight again. “Everything is all okay.”

I went to the others with the offer, but it took a little bit of explanation, and a fair amount of convincing.

“It won’t be you,” I said. “Just a way of storing all of the parts of you that I can reach. A soul in a bottle lasts for a few years, so it’s not permanent, but who knows what might happen in even the next few months.”

“What parts?” asked Grak. He was sitting next to Amaryllis, beside the remains of the ritual, and had his hands folded across his chest.

“Body and memory are the big ones,” I replied. “Skills can’t be moved over, because they’re excluded, values you can move but I don’t know that there’s much of a point, same for social models, you can’t move or change lineage, nor true names, attributes aren’t copyable, unique magics are a part of the soul but can’t be transferred, though I don’t think that applies … obviously I would ask for your consent before actually applying any changes, just like I’m asking consent now.”

“It makes me uneasy,” said Grak.

“Me too,” said Amaryllis. “Though I think it’s fairly unlikely that we run into another soul mage.”

“I’m not a part of this conversation,” said Valencia, sounding just slightly bitter about it. She was leaned up against the locus; both of them seemed to have recovered a bit, and their relationship was no worse the wear for whatever had actually transpired between them.

“I’ll do it,” said Amaryllis. “I’m just saying that it makes me uneasy. I can’t say that I’m entirely at ease with you having a direct line into my soul in the first place. Do it now, before you run out of power.” Grak nodded along with her.

Three souls went into their own little stoppered glass bottles, one by one, each with a label written by me; mary.bak, grak.bak, and fenn.bak.

The last thing I tried was to take part of the locus and copy it over … but it had a soul of images, many of them abstract, all knitted together, and all the Essentialism in the world didn’t seem to allow me to get a handle on how to grab any of that and move it elsewhere. Despite the findings of the Second Empire, I wasn’t actually convinced that the locus *had* a soul; the thing it had seemed related but too different for me to claim that it was in the same category. I couldn’t figure out any way to
back up even a small part of it, and I probably wouldn’t have been able to figure how to copy it back in if I’d wanted to. The fact that it wasn’t possible with my Essentialism so high seemed to indicate that Essentialism was the wrong tool for the job.
Musings on the Elder God

With seemingly nothing left to do -- a full 90% of Essentialism seemed locked behind various exclusions -- I tried transferring some of my points from Essentialism back into my other skills, only to find that the game still seemed to count them as points transferred for the purposes of the Skilled Trade malus. This was pretty basic anti-cheese; otherwise I could have had over 100 in any skill for a handful of minutes and only have to pay a single point as the price.

We retreated into the tree at the center of the bottle, a place that was more of a home to us than anywhere else on Aerb. Valencia wanted to stay outside with the Six-Eyed Doe, but when I told her there was something we all needed to talk about, we reached a compromise where the locus would stick its head through the window and Valencia would stand by it.

“I’ll give that outcome a four out of ten,” I said as Fenn popped some cold drinks out of her glove and set them on the table. It was hot inside the tree, just like it was outside.

“Worse than that,” said Grak. “We were not able to accomplish what we set out to accomplish.”

“We’re going to bring Solace back,” I said. “I don’t want to mark this as a failure if that’s the outcome.”

“It has led us down a chain,” said Grak. “It’s as you said.”

“True,” I said. “But it’s pointing in a direction that we were going to go anyway, and we did get a few things out of it, which is more than I’d thought. When I was giving the dire warning, I was more thinking that I would end up staring into the eye of the abyss and have to fight an Elder God.” I coughed slightly. “Speaking of …”

“Did you fight an Elder God without me?” asked Fenn. “Also, what’s an Elder God?”

“I spoke with the Dungeon Master,” I said.

The room was silent for a bit; there were some looks of confusion.

“That’s your name for the entity that you believe created and controls all of reality?” asked Amaryllis.

“Yes,” I replied.

“And you spoke to it?” asked Grak.

“Yes,” I replied again. “Him. Or, he took a human form, I guess, but I think it was a him. I’m kind of under the impression that he was what he claimed to be.”

Amaryllis was clenching the table. “Please tell me that you were diplomatic.”

I paused slightly and tried to think of how to word it. There were two memories of how it went, and I could put them in sequence because of how one of those memories ended. “We didn’t really prepare for me to meet the all-knowing entity that controls the world,” I said. “It started off with -- look, I think overall it was a positive, productive conversation, but -- I asked him about the problem of pain, and he was kind of a dick about it, so I beat him to death.”

“No,” said Amaryllis. She closed her eyes and shook her head. “No, Juniper, why, I’m pregnant
now, I can’t even drink my sorrows away.”

“He wasn’t actually dead,” I said.

“Oh?” asked Amaryllis, opening her eyes. “Really? The all-seeing entity that controls reality didn’t die from you punching it?! How could anyone possibly have seen that coming!”

“I was angry,” I said with a shrug that didn’t reflect how I was feeling (defensive, if I had to pick a word). “The problem of pain is a bit of a sore spot for me.”

“Yet the conversation was … productive?” asked Grak.

“I don’t understand what the problem of pain is,” said Valencia.

“I don’t think now is the time to get into theodicy,” I said.

“It probably is, if it would explain why the fuck you thought trying to beat up an omnipotent overgod was a good thing,” said Amaryllis. “Theo- meaning god, -dicy meaning … what, exactly?”

“I’ve got no idea where the word comes from,” I said. “But it’s basically just the study of the problem of pain, the question of how you can claim that god is virtuous or omnibenevolent given that there is suffering in the world.”

“Demons and devils aren’t enough of an answer?” asked Valencia. She seemed confused.

“The gods are decidedly lacking in virtue,” said Amaryllis, crossing her arms.

I let out a sigh. “Okay, fine, I’m going to give a very, very brief summary in the interests of bridging the cultural divide. On Earth -- well, no, in the specific part of Earth that I grew up on, we’re raised to believe that there’s only one singular god, who made everything in the whole world, wrote all the laws of physics, set up all the rules the world works by, is omnipotent, meaning that he’s all powerful, he’s omniscient, which means that he’s all-seeing, and finally, the kicker, he’s omnibenevolent, which means that he’s all-good, as good as good can be.”

“That actually sounds really nice to me,” said Fenn, frowning slightly. “I’d choose to live in that world.”

“I might too,” I said. Leaving aside the issue of free will for a second. “The problem is, I lived on Earth, and that kind of god didn’t seem to me to be the kind of god that made sense in the context of all the stuff on Earth.” I could feel my anger rising. “So I was ten years old, laying awake in bed, having this -- probably another concept that doesn’t translate, but a crisis of faith.”

“It translates,” said Grak.

“It translates,” Amaryllis nodded in agreement. “Just not in the context of the gods.”

“Ah,” I said. “Right. Shit, sorry.” Grak waved a hand, dismissing my oversight. “The crisis of faith, for me, was just sitting there, thinking, and being so angry at God for not doing anything about, you know, people starving to death, or the body of a child found in the woods, or -- on Earth it was very easy to get a lot of information very quickly, at all hours of the day, and so even if the general trends were positive, mostly, you could still start reading about a guy in his twenties dying of cancer, or a woman crying over her child born with anencephaly, or … whatever personally affected you most, you could read about it, and keep reading about it, and you’d never have to stop, because there would always be something new.” I was dredging up old feelings, and I knew that I was making a hash of things, but I just wanted to get it out, so I stared at the center of the table as I spoke. “And
through all this, surrounded by all this, where was God?” When mom and dad were yelling at each other, their words indistinguishable through my bedroom door, leaving only raw hostility to reach me, when I was praying to God, why was the only thing I heard back silence? I took a deep, shaky breath.

“This is about Arthur,” said Grak.

“No,” I replied, shaking my head. “No, no, it was way before his -- before he died. I was little, and I had all this pain, a lot of it imported from television and the internet, and the answers that I got back when I tried to stumble my way through a conversation with the pastor were just answers that I hated. God has a plan. God works in mysterious ways. If you’re omnipotent, how fucking shitty do you have to be at planning for any of your plans to involve killing millions of children every year?”

“Juniper, I mean this with all due respect,” said Amaryllis, “But it seems like this is probably about Arthur.”

“No,” I said, more forcefully this time. “This is about every shitty thing that ever happened to anyone. Arthur meant -- means a lot to me, but this wasn’t a new thing when he,” died, “Died.” I hated the taste of that word coming out of my mouth. “It just brought up all that old hatred and anger that had already been there, because where I’m from, when people die, especially young people, all these idiots come out of the woodwork to say that God has some stupid fucking plan that required what’s effectively murder, or God works in some mysterious way, or, you know.” I stopped and let out a hollow little laugh. “Or that he’s in a better place.”

“Which he was?” asked Amaryllis, raising an eyebrow. I could see that I wasn’t getting through to her with the whole theodicy thing.

“No,” I said. “I wouldn’t say that Aerb at the height of the Dark King’s power was a better place. A different place though, that I’d grant.”

“Wait,” said Fenn, her brow furrowed. “I’m confused, why would you be angry? Why would you think that this god was actually all-powerful? Maybe bad things happen because they’re out of his control? You can’t just get mad at someone you don’t know because they didn’t have enough power to protect you.”

“Yes, you can,” said Amaryllis, folding her arms. “If it was their job to protect you, and they failed.”

“Well, whatever your issues are, I’d think it would make more sense to just say that, actually, this all-seeing, all-knowing, all-powerful god isn’t actually those things, or maybe doesn’t exist, which is what you’ve said before,” said Fenn. “I don’t think I’ve ever been worked up into a rage about something that doesn’t exist, and I’ve been in plenty of rages.”

“I don’t know,” I said. I threw up my hands. “I really don’t know, I think I was just so convinced that there was a god, and the part that seemed weakest was the goodness, not the omnipotence, because someone had to create the world, so …” I shrugged. “I’m not saying that it makes that much sense, I’m just trying to explain it from a personal perspective, my own viewpoint on the matter. Which is why, when I came face-to-face with as close to that kind of god as actually existed, yeah, I snapped a little bit.”

“You said you killed him,” said Amaryllis.

“I beat him to death with my bare hands, yeah,” I said. “Insulted him a lot, yelled a bit, and then beat him to death. He didn’t seem too torn up about it when he came back. I wandered around in a white void for what I think might have been a few days, I think maybe to tire me out.”
“You did all this in a handful of minutes?” asked Grak.

“He stopped time,” I said. “His words. Anyway, we talked for a bit, when I wasn’t busy being mad at him for allowing pain to exist, or for making the hells, or for … I don’t know, lots of personal stuff I was upset about. I yelled a few times. I called him an asshole. I called him a shitty DM.”

Amaryllis sighed and laid her face in her palm. “You said it was productive.”

“It’s not sounding particularly productive,” said Fenn.

“Yes,” I replied. “He said he wasn’t the enemy, he was the Dungeon Master. He wanted to tell me not to worry about the narrative, because he was fine with us breaking those molds, and not to worry so much about the existential terror, because he was just doing nudges. He told me that I could fail and die, and that he wouldn’t save me if that happened, but it was in my hands. Oh, and he told me that eventually the campaign would come to an end, and if I made it, I would become a god in my own right, though I think he meant a god like he was a god, not a sixth god of Aerb. I found it fairly cathartic, I guess.”

“Even though it might all have been lies?” asked Amaryllis.

“If he was feeding me lies, then okay,” I said. “They didn’t feel like lies. He called us kindred spirits, and that felt true.”

“You said that he was an asshole,” said Grak.

I nodded. “Yeah. And he was an asshole in the same way that I could be an asshole sometimes, in the ways that he argued with me … he wasn’t me, but he was close. I don’t know how else to describe it. A reflection of me? Me, but a step to the left?” I stopped, trying to work out how to word the next part.

I knew that Amaryllis was going to get on my case about the wishes, because she would have studiously constructed an ironclad wish, and when it was shot down on the grounds of being overpowered or not what the Dungeon Master had in mind, she would have worked as hard as she possibly could have to squeak out as much possible advantage as she could have. I could see where that might have been smart … but if the Dungeon Master was kind-of me, a kindred spirit, he would have hated it. I’d given favors to players before, and always hated the end result, which was an intense negotiation over something that I was just doing to be nice. (I’d wished for more wishes to be a dick, not because I thought it would work.)

“There’s more?” asked Amaryllis, watching me.

“Some personal things,” I said. “Things I don’t want to share, and that I don’t think it would be helpful to share. And … keep an eye out for a backpack, I guess. He said that there would be a magical one that could get things from Earth, a gesture of goodwill.”

The Six-Eyed Doe suddenly lifted its head and made a loud, intense sound like a creaking door. When it brought its head down, it coughed and spat something on the floor, then looked at us in something that might have resembled surprise. I went over and picked the backpack up.

“So there’s that, I guess,” I said with a shrug.

Sometimes it seemed like our discussions went on forever. Amaryllis wanted more details from me, and if she could have wrung a full transcript from me, I was pretty sure that she would have. I got the sense that she was treating the Dungeon Master like he was a devil, but worse, a perfect liar who
could also directly reach into your brain and modify memories and feelings without limit. She didn’t press that point of conversation though, and I didn’t really want to talk about it.

The thing about Amaryllis was that she tended to have her shit together, but the flip side of that was that she really liked to talk things out. I’d interpreted our exchange before the ritual as being an agreement that we would go to Kuum Doona, but to her, it had apparently been an agreement that we had a number of options so far as the time-constraints on bringing Solace back were concerned. She had been acting quickly and decisively in the interests of expediting the ritual, not actually agreeing to anything specific.

So, we talked, and talked, and eventually Fenn got bored and left, and Grak decided that he would rather have a summary of what we were doing once the options were more fleshed out, and I realized only then that Valencia and the Six-Eyed Doe must have bowed out some time earlier, because they were nowhere to be seen.

“Just once, I would like for things to be easy,” I said, once we were alone.

“Have you completely forgotten what Grak said earlier today, about you seeming to think that the world owed you something?” asked Amaryllis, frowning at me.

“Sorry, easy was probably the wrong word,” I replied. “I would like for things to be straightforward, so that we only had one logical option instead of eighty options that are spread out in front of us that we have to endlessly go over.”

“At some point we’re going to have to address your recurring attention problems,” she said. “The ability to choose is not something to be taken lightly.”

“I know,” I said. I looked down at her neat handwriting, which had filled four pages. “It just seems like there are a lot of ways to accelerate a pregnancy, or slow down the decay inside the bottle, and none of those ways are the obviously correct one.”

“If I’m carrying Solace to term and then birthing her as normal for either crantek or humans, as the quest says I will be, then I don’t think placing a stop on the bottle is a good idea,” said Amaryllis, briefly consulting her notes. “Even if we discount the more unorthodox lines of thought, like throwing the bottle into the Lunar exclusion zone,” that would be the one with the guy doing his best impression of Groundhog’s Day, “That would still leave me having to endure the pregnancy in full, and I highly doubt that we can rest on our laurels for nine months. I know that I’m not the most valuable member of the team --”

“Knock that off,” I said.

A slight frown crossed her face. “Sorry,” she said. She pursed her lips, as though she was about to say something, but stayed quiet.

“Is that why we’re doing all this?” I asked, gesturing toward the papers.

“It’s important work,” said Amaryllis.

“I think we moved past the point of productivity an hour ago,” I replied. “You’re pushing on for the sake of pushing. We’re going to Kuum Doona, because it’s close enough to your worldlines that we can actually get there in less than a week, and because it kills two quests with one stone, and because there’s likely to be some loot there, in addition to a fully secured base of operations, and maybe even some mysteries of the past. We’re seriously constrained by time, even the train ride to the Boundless Pit is stretching it. Some of these other plans ...”
“I wanted to be thorough,” said Amaryllis.

I sighed. “I know. What I’m worried about is that you’re being thorough for the wrong reasons. You’ve been putting a lot on your shoulders since … well, since as long as I’ve known you, but I’m really concerned that you see yourself as the weakling, or worried that we see you as the weakling, and … I know a thing or two about self-destructive behavior, and I don’t want to see that from you.” I studiously avoided mentioning how readily she’d taken on the burden being the one to birth Solace.

Amaryllis frowned. “Have you been talking to Fenn, Grak, or both?”

“About … this?” I asked. “Neither.”

“Shit,” said Amaryllis. She grabbed the papers in front of her and crumpled them up. “I’ll try to tone it down. Doing work that doesn’t need to be done is one of the greatest sins a person can commit.”

“I don’t think that’s true,” I said.

“It’s something one of the magi used to say,” she replied. “I wasn’t in a great place then, and I found myself going above and beyond just because I needed to … I don’t know.”

“Be useful?” I asked.

She shrugged. “I was a piece in the games of the Lost King’s Court and didn’t know how to make myself a player, so I focused my attention on other things and tried to do them really well, because at least that way I had something I could accomplish. It was foolish, looking back.” She looked down at the notes. “Just like this is foolish. Work for the sake of work, discussion because it feels useful, not because it is useful.” She folded her hands in her lap, then looked up at me. “I’m sorry.”

“Don’t be sorry,” I said. “I understand the impulse. You can’t do the thing that you actually want to do, so you have to put your energy someplace else.” I gestured at the crumpled papers. “This is, maybe, not the place to put that energy. Nor were the safehouses, really, as useful as they are. Have you thought about maybe having a hobby?”

“A hobby,” said Amaryllis, giving me her best blank stare.

“For me it was worldbuilding,” I said with a shrug. “If things weren’t going well with my parents, or at school, or even sometimes with friends, I could always work on my worlds. And it wasn’t really useless, because at least I was creating something, or looking up information along the way. You could, I don’t know, crochet or something.”

“I don’t think that I’m going to take up crocheting,” said Amaryllis with a soft smile. “I appreciate the sentiment though. You have a very different approach from our other friends.”

“What did they suggest?” I asked, curiosity piqued.

“Grak told me that I should meditate,” replied Amaryllis. “The dwarves have a specific form of it where they feel the rocks, putting the whole of their attention into their fingertips to trace each individual bump and curve of a surface, mapping and memorizing in their mind’s eye. It didn’t really seem to be to my tastes. Fenn suggested that I hire a prostitute.”

“Aaahhhhh,” I said, a strangled sound coming out of my mouth.

“That didn’t seem to be to my tastes either,” said Amaryllis, smiling at me. “I’d wondered, given that you can shift your points around, whether you would put them into social abilities as a default or mental abilities. Seems like you chose mental?”
“You caught me off-guard,” I replied, crossing my arms.

“I don’t mean to make fun,” said Amaryllis. She set her hands on the table and sighed, smile falling away. “Among the personal things that you asked the Dungeon Master, was there anything about me?”

“Some,” I said. “Not really anything that I want to repeat, I just wanted to make sure that you were as much your own person as possible, and that you could be happy.”

*Loyalty Increased: Amaryllis lvl 17!*

“Thanks,” she said. “That means a lot. And did he say?”

“He didn’t say, not really,” I replied. “I know you’re skeptical about the whole thing, and I think you’re probably right to be, but … he said that you were meant to be a companion first and a love interest second, and that given time, you would get over me.” I paused. “I’m really not sure that I should have told you that.”

*Loyalty Increased: Amaryllis lvl 18!*

“It continues to surprise me how free you are with the truth,” said Amaryllis. “Do you ever think about what it would have been like if you’d kept the secret of the game from me?”

“The level ups would have been hard to disguise,” I replied. “I’m not sure that I could have lied well enough.”

“I’d never have guessed the truth on my own,” said Amaryllis. “I would have just thought that you were partially dream-skewered with an amazing ability to learn quickly.” She looked over to where the backpack was sitting up against the side of the table. “And it seems as if Earth is real?”

“Maybe,” I said. “My guess is that it’s as real as Aerb, which is real enough for me. I’ve been trying to think of what all I want to show you, now that I have a connection.” I’d tried grabbing a laptop, and gotten back a note on legal pad, in my handwriting, that said ‘no laptops, sorry :-(', and decided that more testing could wait til later, if it wasn’t going to be the sort of thing that was going to break the game wide open. “Is there anything that would make you happy?”

“Happy?” asked Amaryllis, as though the concept was foreign to her. “Let’s try something frivolous. Earth confections.”

I started with my favorites, Jelly Belly, Reese’s minis, Warheads, Sour Patch Kids, and then moved on to other things I thought she might like; Arthur had always been a fan of Twizzlers, but Amaryllis hated them, just like I did. I offered commentary as I pulled things from the backpack, trying to give her the cultural context of everything. She got a little hung up on the wrappers, since they were made of plastics far beyond what was available on Aerb, but aside from that, she seemed to take some real pleasure in a little bit of frivolity, and some time spent in each other’s company without any real point to it.

The others filtered back in after some time, and we had a feast together, all the best junk food that Earth could offer, complete with a tasting of eleven different varieties of canned pop, which were far too sweet for all our palates, even mine, since I’d spent long enough on Aerb that my tastes had changed to suit the cuisine. It was as much like a family as I’d felt since playing my custom tabletop game with them a few weeks prior, and I sent a little token of thanks the Dungeon Master’s way, even though he was a prick.
In the morning, we teleported to Cranberry Bay, where we boarded a train that would take us along the Lion’s Mane until we reached the Boundless Pit.
Aboard the Lion's Tail

The train was necessitated by the fact that we didn’t have a better way to get to the Boundless Pit. There was a touchstone only about twenty minutes’ walk from the Boundless Pit, but using our teleportation key to get there would have basically required us to kill a dozen guards and make ourselves conspicuous, while buying passage for five to get there would have opened us up for quite a bit of scrutiny from the aforementioned guards. The keys were very valuable, so the system had a lot of checks, balances, and overall paranoia built into it.

Trains, on the other hand, were transportation for the common people, with tickets available in exchange for a relatively small amount of cash, and documents that were simple enough for us to acquire. Fenn had been gearing up to quickly find someone to forge them for us in the morning before the train was set to depart, but I reminded her that I’d seen Forgery as a skill in her soul, and sure enough, with help from the clonal kit for supplies, she was able to make something she thought would be passably authentic, at least given the level of scrutiny we expected to face. She seemed a bit perturbed by the whole thing; I think getting better with a bow was something she saw as a boon, but having a new skill from nowhere as part of me leveling up was too much outside interference with her skillset. Unearned skill was old hat for me, but it was still new to her.

The train ride would take us two days, but we’d stop right on the doorstep of the Boundless Pit, and in theory, getting down to Kuum Doona would be the work of a day, maybe less, and the time chamber would ideally get us Solace back within the space of a day. At a projected four days, it was the fastest route to getting her back, and from there, hopefully stabilizing the locus’ domain.

(Interestingly, air travel was pretty rare on Aerb. The train lines had been built around Uther’s time, as one of the major works of the First Empire which continued until long after his disappearance and even through the collapse of the First Empire itself. Railways lubricated trade like nothing else, especially because their construction and maintenance was prioritized over the building and fixing of roads. In some sense, the railroads destroyed cultures and institutions, because they made obsolete dozens if not hundreds of different methods of transportation. A large, domesticated, flightless bird had been used as a pack animal for centuries, and was suddenly supplanted by the rails. The ley-line network of a far-north kingdom became unprofitable, and when the funds dried up, the magic did too. The tradition of river-rafting that had existed among the five kingdoms along the Lyra River collapsed within two generations, and this was in fact pointed to by historians as being a key factor in the development of a state of perpetual warfare in the region.

It wasn’t too long after the railways had finished establishing their stranglehold on transportation of goods that bulk teleportation arrived and almost completely destroyed rail. The saving grace was that living things couldn’t be teleported using that method, which meant that both a select fraction of freight and all passenger transport were still viable. Railway operators, public and private, did their best to switch over, and while some of them shuttered because the reason for their construction was virtually eliminated overnight, the Aerbian railway business as a whole was able to stay afloat, and passenger rail was the beneficiary of what had happened to freight.

There were a few reasons that air travel never really took off. The local equivalent of the Hall–Héroult process of aluminum processing came late in their technological advancement, which meant that cheap aluminum post-dated airplanes by long enough that a huge amount of infrastructure, processes, and institutions had already been built up, all to the standards of much heavier aircraft that were specialized for heavier loads over shorter distances, mostly meant for certain categories of freight that couldn’t go through bulk teleport, or for particular routes that trains weren’t good enough for. Aerb didn’t have the technological capability to build the kinds of aircraft that we had on Earth,
but they did have the ability to build lighter-than-air aluminum passenger craft -- but it wasn’t at
enough of an advantage to overcome the entrenched system of passenger rail, nor to compel the
necessary retrofitting that the existing air systems used.

All that was without getting into the political considerations of the Draconic Confederacy. Dragons
existed on Aerb, great and powerful creatures of incredible age, just the way I liked them, greedy,
indulgent, obsessive, and at least a little bit smart. There were only about five hundred of them on
Aerb, but they had a loose union, one which had formed in response to the foundation of the First
Empire by Uther. They had relatively few common interests, but one of them was the belief that the
skies of Aerb unequivocally belonged to the dragons, and everyone else flew at their pleasure. In
practical terms, this meant that flights didn’t just have to go through the Aerbian equivalent of air
traffic control, they also needed to be cleared with the dragons, which operated with all the efficiency
you would expect of centuries-old institutions attempting to interface with each other. This wasn’t
just a question of bureaucracy; some of the worst disasters in Aerbian aviation history were caused
by dragons going after improperly cleared flights, which was obviously the kind of thing that had a
chilling effect on passenger air travel.

(Also, there was no doubt in my mind that we were going to have to fight a dragon at some point,
but that thankfully seemed like it was going to be a long time coming.))

We got to the station and selected the Lion’s Tail in mid-afternoon, and after a somewhat tense
inspection of our legitimate tickets and illegitimate papers, we found our rooms, which given how
late we’d been in booking our tickets, were spread out all across the train. Grak was on his own, in
what the ticket agent had called a roomette, while Fenn and I had one room together, and Amaryllis
and Val had another a few cars away. The train started to move, and I was treated to a rapidly
receding view of Cranberry Bay. For certain stretches of our trip, the train would be going more than
a hundred miles an hour, tracing the Lion’s Mane, a geographical feature that looked a little bit like a
lion’s head if you squinted and tilted your head a bit, water making up the face and land making up
the mane, with enormous islands making up a few features of the ‘face’ -- eyes, nose, mouth, and
archipelagos that might have been whiskers. You really had to squint though.

“What do you mean you’ve never been on a train before?” asked Fenn as we sat down in the lounge
chairs in our room. My eyes kept going around the room, looking at the combination of leather and
woodwork, and the thick glass in the window that I was sure would turn deadly-sharp the moment it
cracked. Everything was so solid, steel-framed and padded, like whoever had built the train realized
the power the soul engines were capable of and decided to go hog wild. “You said that they have
trains on Earth.”

“They do,” I replied. “Passenger trains, even. But where I’m from, the rail lines are mostly used for
freight, and if you need to get anywhere, you go by car. That’s not how it is all over the world
though, it mostly has to do with the technology at the time the cities were being built and some
structural forces, I think. It’s not really common to take a train as transport. I doubt that most of the
people from my hometown have ever taken one.”

“Best way to travel,” said Fenn. “Calm, relaxing, there are always lots of people to see and annoy,
you get to fall asleep to the rumble and sway -- did you know that I’ve never had sex on a train?”

“Funny coincidence,” I said with a smile. “I haven’t either.”

But before we could do anything about that, Amaryllis showed up, with Valencia in tow.

“Is our room going to be the meeting room?” asked Fenn with a frown.

“We need to discuss things in private somewhere, your room is the midpoint,” said Amaryllis. She
had shelved the immobility plate for the time being, mostly because she didn’t want to draw attention to herself, and was dressed in a very conservative navy blue outfit. The collar covered her neck almost entirely, while the long sleeves covered her arms, and a patterned navy blue dress went down to just above solid-looking black boots. She’d changed her hair yet again, using Grak’s axe to grow it out, dying it a dark brown that bordered on black, and then putting it up in a bun.

Valencia was in a very similar outfit, the blues of it lighter, and the cut a little different, but with the same overall effect. We’d dyed her hair the same dark brown, and fixed her eyes with some blue contact lenses -- not the kind that you’d find on Earth, since these were made of very precisely ground glass, and the coloration was a tint that affected her vision and ended up making her irises look purple. It wasn’t quite the best that we could do as far as disguising her true nature, but it was close.

“Is there anything in particular that we need to discuss now?” asked Fenn. “Joon and I were in the middle of something. Or rather, we were about to be.”

Amaryllis pursed her lips. “We need to be on guard,” she said. “Val and I have finished our survey of the train, at least as best as we were able to. There are twenty-five cars in total, more than we could properly cover, but at least a few passengers of note, and one of which really concerns me. She’s a princess.”

“Anglecynn?” I asked, tensing. The Lost King’s Court was home to a plethora of princes and princesses, most of whom would probably be able to identify Amaryllis, maybe even through her disguise, and most of them that didn’t want her dead for their own purposes would be perfectly willing to sell her out. Amaryllis had a few allies among her kin, but none of them steadfast enough that she wanted to take the risk in going to them, especially not if we were putting off reclaiming her position within the government of Anglecynn (on an indefinite basis, which made me feel guilty, but it was what it was).

“No,” said Amaryllis. “Not that bad. She’s tuung, returning to her homeland after training at the athenaeum. She and her entourage are taking up the first three cars.”

The tuung were a frog-like people with wide mouths, enormous eyes, slick skin that was usually blue or grey, and a constant need for water that meant if you ever saw one, it was almost certain to be carrying around a tank on its back, some tubing, and mister. As far as the mortal species went, they weren’t terribly well-liked, which partly had to do with the fact that their moistness had to be accommodated (they left wet chairs and damp books in their wake), and partly had to do with a philosophy that most of them shared, which was “the supremacy of existence”, which boiled down to the idea that it was better to exist than not exist, even if existence meant pain and suffering (and yes, this included existence in the hells). Individual tuung could be members of the Empire of Common Cause, if they were citizens of a member nation, but the three largest (and loosely-aligned) tuung polities were independent, with a few points of tension between them and the Empire.

“Okay, so this train’s got two princesses on it,” said Fenn with a shrug. “Not sure how much this has to do with us.”

“I’m a princess,” said Valencia. Her eyebrows were knit together and she had a studious expression.

“In what way are you possibly a princess?” asked Fenn with a laugh.

“Fallatehr was among the wahtepeh, which means that as his only daughter I would become part of the wahtepeh on my fortieth birthday,” said Valencia. She spoke carefully and clearly, as though she had memorized it. “That makes me a princess.”
“Absolutely not,” said Fenn, shaking her head. “A full quarter of the elves are *wahtepeh*, more if you’re a moon elf, and it’s not even really a noble class, it’s more like … landowners, I guess, at least for the wood elves, I think it’s similar for the moon elves. Sorry, but if we follow your logic, then I’m a princess.”

“Oh, you’re a princess?” I asked with a smile.

“It’s the wrong word?” asked Valencia. She glanced to Amaryllis.

“It’s a question of translation,” said Amaryllis, folding her arms across her chest. “The *wahtepeh* have a position of most-senior that confers certain rights, and in the early days of human-elf relations, that most-senior person, the *wahtep* was styled as the king by humans who didn’t really know better. Because the position moves to the most-senior member of the community, you could both become what Anglish considers to be a queen, except that you haven’t reached the age of majority. Historically, it wouldn’t have been out of the question for both of you to be styled a princess, especially if you were close to assuming the title of *wahtep*, but in the modern era we’d probably just use the elven word instead.”

Grak had entered the room while she was talking, let in, after a discreet knock, by Valencia. Our room had just enough space for the five of us, and only because the beds were folded up and out of the way.

“What is the relevance of this discussion?” asked Grak.

“There’s a princess aboard this train,” said Fenn. “Mary seems to think that means trouble.”

“Oh,” said Grak. “Because we are all princesses?”

“What?” I asked, staring at him.

“Prince, in my case,” said Grak with a slight nod. “Though Anglish genders are inaccurate and used as convenience.”

“Wait,” I said. “I’m sorry, but … you’re a princess?”

“Or prince,” said Grak with a nod. He looked to Amaryllis. “It is the title that would historically have been bestowed on me in Anglish.” He paused. “King, or Queen, now.”

“Is your father --” I began.

“I do not wish to speak of it,” said Grak. He breathed loudly through his wide nostrils, and from the movement of his beard, I thought he probably had his teeth clenched.

“The dwarves at Darili Irid have a system of ‘most pure’,;” said Amaryllis, pivoting away from whatever it was that Grak didn’t want to say about his father. “Darili Irid was founded by a single dwarf who had six children through parthenogenesis, and over the course of a few generations and some outsiders coming in, most of them diverged away from being much like the founder, aside from a single line, which Grak is the end result of.” She turned to Grak. “Do I have that right?”

He nodded. “It is a common system among single-founder clans. There would otherwise be risk of drift.”

“So from a certain perspective, the kharass is composed almost entirely of princesses,” said Amaryllis. “And given the criteria you’ve outlined for a potential new companion, I thought that I would bring this particular princess to your attention.”
“But she’s …” I stopped, trying to gather my thoughts, which had been scattered all over the place. “She’s, ah, got an escort with her? Sorry, also, the locus isn’t a princess by any possible definition of the word, right?”

“I didn’t see her,” said Amaryllis. “I only heard about her from some of the staff aboard the train. They’re keeping her under lock and key until we reach the Boundless Pit, and from what I’ve heard, she has far more of an armed guard than this trip would appear to warrant. There was some speculation that she was either being held and transported home against her will, or that they expected some kind of trouble, though it’s unclear what form that would take.”

“Mary has been an incurable gossip,” said Valencia with a small smile. I smiled back at her, and she beamed at me.

“You think that it smells like plot,” I said. “She smells like a companion, the circumstances reek of a quest, and it’s all happening right when we’re taking a trip in the same direction, one which will involve the tuung in one way or another?”

“I know that you felt like your conversation with the Dungeon Master was a revelation,” said Amaryllis.

“We’ve dodged obvious plot points before,” I said. This was something that I had been trying to get across to her the night before; sometimes things cropped up and then just never got used, that was in the nature of a tabletop game, and once I had tried to step back and see things through that lens, it really did seem like there were a few times the seams had shown. Sure, there might be a princess on this train, and she might even be a plot thread, but that didn’t mean that we had to go chasing her down. I had twenty-three open quests at the moment, which was enough to convince me that I had at least some leeway, even if it was unplotlike.

“We’ll consider this a test case then,” said Amaryllis with a nod. “I just thought that you should know. We’ll see whether we can get through the next forty-eight hours without getting into trouble.”
The Familiar and the Foreign

The backpack had limits, which I’d partially explored the day before. Luckily, the penalty for attempting to violate those limits seemed to just be that I would get back a note, in my handwriting, on a piece of legal paper. I’d collected a small stack of them thus far. Though the backpack didn’t give me much in the way of general rules, it did give me a lot of specific ones, and from those, I could work backward to get the general rules on my own. In brief, the backpack was pretty free with information -- I could pull books from it at will -- but was fairly stingy on giving out things that had more direct utility, especially electronics or weapons, and my guess was that there was also a limit on value, given that I couldn’t pull out a gold bar or a bag full of diamonds. Amusingly, I could pull out a stack of hundred dollar bills, which were worthless on Aerb given that the backing of the United States government meant nothing.

Amaryllis took a stack of books with palpable excitement, most of them overviews of Earth history and technology. It wasn’t quite an offline version of Wikipedia, which I don’t think she really understood the glory of, but we’d been able to draw out thick reference materials, including books on circuitry and computer programming. To my surprise, she also asked me for a holy book from my people, and I had reluctantly provided her with an annotated Bible, with instruction not to read it until her other homework was done (she rolled her eyes at me, but as she turned away I saw a little smile).

Valencia went with her, carrying a very different stack of books, some taken from storage in Fenn’s glove, some taken from the backpack. I was mildly surprised that she knew how to read without the assistance of a chewed up devil, but it was apparently among the suite of skills that Fallatehr had seen fit to have his minions teach her, though they’d only taught her Anglish, nothing else. The books Amaryllis and I selected were partly to give her some culture, and partly to give her some socialization. It wasn’t ideal to have her learn from reading, but it was a far better plan than having her learn by trying to piece together how devils mimicked and manipulated humans, and we couldn’t spend literally our entire day trying to teach her things.

My contribution was to give her the first two Harry Potter books, on the theory that she might find some helpful parallels. Arthur (as Uther) had written his own versions of them, which I’d skimmed through, but I disagreed with some of the choices made in adaptation; he wrote Hermione as too much of a Mary Sue, and Ron as too much of a dimwit sidekick, and in the final book, Harold Plotter and the Hallowed Deaths, Harry died as part of his sacrifice. I won’t go so far as to call it bad fic, but it did somewhat rankle me that Arthur had rewritten the series to better suit his own tastes. Most of the works he’d copied were faithful to the original, or at least as much as could be expected given that they were written from memory and needed to be translated to a Middle Ages culture, but these showed deliberate changes that were reflections of his complaints and comments on the series I’d heard from him. Trying to psychoanalyze his actions on Aerb was nearly impossible given how removed I was from him. He’d been ‘writing’ the Harold Plotter novels around the start of what Amaryllis had termed the Roaming Era. It made me vaguely upset, not just the defilement of a series I had grown up on, but what it might say about Arthur. So long as I had the Earth originals written by Rowling, I would rather Valencia read them instead.

(You know what didn’t work? Trying to get books that hadn’t existed when I left Earth. I thought it was definitely within the Dungeon Master’s power to create a copy of The Winds of Winter or The Doors of Stone, but the backpack gave me back a note that said it couldn’t or wouldn’t. That also extended to technical books from after 2017.)

Books aside, the most useful things to come out of the backpack were plastics and medical supplies.
We stored a fair amount of those in Fenn’s glove, and then made up a first aid kit, just in case we had need of it. My primary concern there was Valencia; the marzipan fairies didn’t work on her, nor did bone magic, which meant that we didn’t have a way to keep her in good health if something were to happen to her.

And then there were the perks, creature comforts from home that I could share with the group, candy, pop, and fiction. I pulled out a Blu-ray of *Star Wars: A New Hope*, then stared at it in disappointment, because I had no way to play it. Even if I could have created a television from scratch (not all that hard, I didn’t think, especially with some reference books), and a Blu-ray player (virtually impossible given the lack of microprocessors), I’d have had to rewrite the entire Blu-ray codec from scratch, unless I could find a dead-trees copy of it. I actually still thought that it was doable, but would take years on end, enormous resources, and Engineering that had been pushed up as high as it would go.

“I don’t get this,” said Fenn around a mouthful of McDonald’s hamburger, which I’d pulled, warm, from the backpack. She was in a state of partial undress; after the others had left, we’d had our fun, and now we were sitting around, clothed enough that if someone knocked on the door we would be able to get decent in a hurry. “Like, it’s fine for street food, but you’re saying that this is from a restaurant?” She pulled back the layers and peered inside. “One hundred billion served? It’s so … gross.”

“Mass produced,” I said. “I’m actually pretty surprised that’s not the case on Aerb, given that you have industrialization and better mass transportation than on Earth.” I was sitting in my lounge chair with one of the Culture novels in my hands, but I wasn’t getting terribly far in it. “Do you think there’s a niche available? Maybe I could invent fast food?”

“Our food is fast,” said Fenn. “A guy hands you a stick with meat that’s been sitting beneath the burners, how is that slow?”

“Maybe I’ll try to find a book on modern -- Earth-modern -- restaurant management,” I said, knowing that I almost certainly wasn’t going to do that. “Uther was the Poet King, but they shall call me the King of Burgers.”

Fenn touched the half-eaten hamburger with a gloved finger and ten seconds later, it disappeared into the vast void of her glove. “Can we get some real food to eat?”

“The backpack has plenty,” I said, gesturing toward it. It wasn’t keyed to me specifically, though I knew the most about what was actually available on Earth. It wasn't finicky about getting things, but you had to exercise at least a little bit of precision when picturing what you wanted, even if it didn’t need to be exact. I glanced down at my book, then back up at her. “Oh, actually … hrm, takeout from The Great Wall would probably be too sugary for your tastes, but I do want you to try it at some point.”

“Let me rephrase,” said Fenn, making a moue. “I am bored, I want to explore the train, and I want you to come with me, because you are my wonderful boyfriend.”

I closed my book and gave her a somewhat forced smile. “Okay,” I said.

“Problem?” asked Fenn.

“No,” I said. “Just, after,” I gestured at my lower half, “I get kind of … clear-headed. Not antisocial, necessarily, but, ah, more prone to analysis, less prone to emotion.”

“Even with me?” asked Fenn.
She was making a sad, puppy dog face, exaggerated to the point of caricature, but I knew her well enough to know that was part of how she masked actual hurt, a ‘ha ha, think about how ridiculous it would be if I was actually hurt’ response. I wanted to explain to her that it wasn’t personal, I still loved her, it was just the biochemistry of my brain, but I knew from past experience that a digression into neurobiology wasn’t the correct response to an emotional reaction. I probably would have caught myself even if my two ‘floating’ points weren’t in SOC at the moment.

“Fenn, my love,” I said, standing up, “Let’s go explore this train together, arm in arm.”

She beamed a smile that sent relief and real happiness through me, and we finished getting dressed together with only a few mild interruptions. We didn’t quite walk arm-in-arm together, because the hallways weren’t wide enough to allow it, but I trailed a hand behind me, and she held on.

Most of the cars were filled with rooms that people had bought passage on, with cramped sleepers at the tail end of the train for people who couldn’t afford the luxury we were traveling in, and a single car devoted to rows of chairs and a few booths, which were for the people who were going to get off before nightfall. Our specific line had three stops to it, each at a major city along the way to the Boundless Pit.

When we got to one of the two dining cars, we stopped and found a table. The sun was starting to set behind part of the mountains that made up this section of the Lion’s Mane, and most of the people on the train had already eaten. It was just us, three of the tuung sitting at their own table, and a pair of men further down the car, who were in heated discussion. I say men, but they were normal only by the standards of Aerb, which meant that any single one of their clothes, facial hair, skin color, or accessories would have been enough to turn heads on Earth, and though I’d been putting real effort into studying *The Book of Blood*, I couldn’t be certain either of them were actually human.

“So, I’m dating a princess,” I said with a grin as we took our seats.

“Does that do it for you?” asked Fenn with a smile that called to mind the carnivorous nature of the elves.

I smiled back. “I’m sorry for finding it funny.”

“Well, so long as one of us does,” sighed Fenn. “Personally, I’ve always held a disdain for the noble class, not that the concept really applies to the elves as such, no matter what Val or Mary might tell you.”

“I didn’t figure you for having political opinions,” I said. A waiter stopped by and took our orders, which was always an experience on Aerb, where I only vaguely knew the names of things and the list of ingredients used in the description was of little help. “Have we ever talked politics before?”

“Not if I could possibly have helped it,” said Fenn. “What’s that phrase you use sometimes? ‘Blah, blah, blah, politics’?”

“That was Reimer’s phrase,” I replied with a frown.

“Which one was he again?” asked Fenn.

“Kind of a dick,” I said. “He wore hats a lot -- baseball caps -- baseball is a game where you hit a ball with a bat and run around in circles -- had, I don’t know, glasses, blonde hair … he liked rules, especially if he could use those rules to break something.”

“Yeah,” said Fenn. She leaned back in her seat a bit. “I think he’s my favorite of the Earth characters.”
“Ugh,” I replied, making a face. “How does it feel to have terrible taste? Also, they’re not characters.”

Fenn waved a hand. “Well I’ve never met them, and I’m not likely to -- Arthur excepted, calm down -- so they might as well be characters, right? And in the stories that you tell, Reimer is always the guy trying to do stuff. Plus he’s a rebel, which I like.”

I actually laughed at that. “He was not a rebel. He was a straight-A student. And in-game he wasn’t a rebel, he was a murderhobo, with very few exceptions. He didn’t treat the people like they were real, he treated them like they were all my finger puppets.”

“He liked hats, I like hats,” said Fenn. “Case closed.”

“I feel like this is the fifth time you’ve dropped a hint that you want me to buy you a hat,” I said, looking at her unadorned head.

“You’ve only gotten five of the hints, eh?” she smiled. “You’re really going to have to step up your playing.”

“Playing?” I asked, confused.

Fenn sighed. “Just insert whatever the appropriate Earth slang was.” She perked up. “Oh, do you have a dictionary of Earth slang in that backpack?”

“Uh, probably,” I said. “I’m really not sure that we should just be randomly grabbing Earth information out of it.”

“You want to hoard all the weird idioms and obscure references for yourself,” said Fenn with a nod. “You want to,” she leaned forward, “Bogart them, huh?” A wide smile spread across her face.

I grinned at her. “You are just ridiculously proud of remembering that, aren’t you?”

“I am,” said Fenn. She stretched out in her seat, raising her arms up and interlocking her fingers. I tried to remember whether I’d told her that was the most attractive innocuous thing a girl could do, because I was pretty sure the cat-like stretch was intentional and for my benefit. “And if you get us a working tellervision, maybe we can curl up and watch Cabbablanca together.”

I laughed at that one, loud enough that the two guys at the end of the car momentarily stopped to look at us. “I love you,” I said.

“Is that not a thing on Earth?” asked Fenn, the very picture of innocent confusion. “Cabbablanca and chill?”

“I sometimes, unaccountably, forget how great you are,” I told her. “Can you say you love me too?”

“Oh, well, it seems a bit soon in our relationship for that,” said Fenn with a smile. “You know what they say, why buy the cow if you can get it to say ‘I love you’ for free, right? I’ve got to play my cards close to my chest.”

Whatever response I might have tried to make was cut short when one of the two men at the far end of the dining car got up and approached us. Fenn had her back to them, and as her eyes tracked my own, she pulled out a small, compact mirror from her purse to look at what I was looking at before collapsing it and putting it back in her purse.

“Are either of you, by chance, bone magi?” he asked, looking between the two of us. His skin had a
slightly green cast to it, enough that I thought he probably wasn’t human. Strips of azure fabric were woven into his black hair, stuck in place by bronze rings, which gave an effect something like a turban. His tunic and breeches were the same color, and as my eyes traveled down, I could see both a sheathed dagger and a gun with a gnarled wooden grip at his hip. I couldn’t place his species, but thought that perhaps he was a half-breed like Fenn, though a half-breed of what and what I couldn’t say.

“We both are, as it happens, on a trip out from the athenaeum, as I’m sure a few on this train are,” said Fenn. “He’s the better of us, by far,” she nodded toward me. “We have bones, if you have coin.”

“We were about to eat,” I said, trying to sound both apologetic and firm.

“Nonsense,” Fenn smiled at me. “Part of the joy of train travel is meeting new and interesting people, all of us stuck together for an extended duration, that’s why we’re here, rather than with our noses stuck in books back in the cabin.” She turned back to the man who’d asked the question. “What is it you’d like?”

He reached into the folds of his tunic and pulled out a tiny skull, which he placed upon the table, next to a small basket of untouched bread. The skull couldn’t have been much bigger than a plum.

“This lizard was a bound familiar,” said the man, nodding to the skull. “We want to know whether he was happy.”

“Um,” I said. I looked to the other man, down at the end of the dining car. He was partially twisted around in his seat to watch us, and nodded to me when he saw me looking. He was bald and had lips so red that I thought he was probably wearing garish makeup. “For what purpose?”

“To settle a bet,” replied the man, looking slightly perturbed at my question. When I made no move to touch the skull, he continued on. “Between the two of us we have a strong difference in opinion about whether bound familiars are happy servants or moved as puppets under unhappy compulsion.”

“Huh,” I said. “That’s actually a really interesting question.” ‘Bound familiars’ weren’t what I’d hoped they were when I first heard of them; they were merely animals that followed some basic commands, induced to that state through a rather expensive and time-consuming spell. I hadn’t really seen the point to them, aside from the fact that they were kind of cool, but the problem was they were still pets, and you had to deal with food, water, waste, and general health. I reached out and laid a finger on top of the lizard skull. “You know that if I do this, there’s some risk to the skull, it will be burned for the purposes of bone magic, and I might not get an answer back?”

He nodded, making a few of the rings in his hair move around.

I’d never actually pulled memories before. Bormann had described it as being difficult and practically worthless, but I was a better bone mage than she was now, and though Fallatehr had described the memories within the soul as being very difficult to work with or make sense of, I had some hope that the two skills would have at least a little bit of harmony with each other.

I pulled from the skull, targeting the KNO layer of the bone, going as slow as I possibly could. From what I knew of knowledge tapping, the gradual pull meant that the memories would come out impressionistic and disconnected from one another, which was exactly what I wanted, since all I really needed was to know whether or not this lizard had a happy life as a familiar. I could feel the memories landing one by one, and what Bormann had said had been right, they were fragmentary glimpses of the lizard’s life.
“He seems … dutiful, I guess,” I replied, narrating as the flashes of memory came to me. “Not terribly much emotion, but what’s there is, I guess I would say, satisfaction at a job well done? Not really affection, so much as there’s any real emotion or cognition at all. He’s the closest to happy when he’s just finished doing a thing for …” The face was distorted in the memories, but it was a recurring figure that I could identify by the strips of cloth that tied down his hair. “You?” I asked.

“Yes,” nodded the man. I’d caught enough distorted images from the lizard’s point of view to see a cramped room where papers were being filed or sorted, and more than a few where he was writing in books or reading those papers.

“As far as the question goes, I don’t think it’s puppetry,” I said, taking my finger off the skull. I’d been delicate enough to leave it largely undamaged; it had generated only enough smoke to leave a faint scent in the air, and the only mark on it was a smudge where my finger had been. “Happiness is … I think it would be more accurate to say that he enjoyed accomplishing things.”

The man gave me a short bow, plucked the skull off the table, and slipped it back into his robes. When his hand came back out, it was holding a handful of coins, which he placed in a neat stack on the table.

“Very generous of you,” said Fenn with a nod, which was good, because I had no idea what you were supposed to charge for a service like that.

“Thank you for your service,” he said, giving another short bow. He returned back to his end of the dining car, his mood somewhat softened, but as soon as he sat down, the conversation started up again, seeming just as argumentative as before. I caught the tuung staring at me; one of them had left, leaving only two, and when I caught their eyes, they began misting themselves and talking in a language I didn’t know (assumedly it was Tuung).

Our food arrived shortly afterward, either through cosmic manipulation to create convenient timing, or because the waiter had been watching from a distance and hadn’t wanted to interrupt.

“I’m not sure why you said yes,” I said to Fenn. She had something that looked an awful lot like a burger, though the meat was a lacquered red and the bun reminded me more of an English muffin than a traditional burger bun. My own selection had come as four different bowls, one which had something like a tortilla, another with a steaming meat, the third with finely diced vegetables, and the fourth filled with hot water and two folded towels that were partially submerged in it. I had no idea how to eat it.

“Why not?” asked Fenn. She took a bite of her hamburger and talked around it. “It’s the truth, more or less. It’s misleading truth, maybe, but I don’t know that I’m responsible for what other people read into what I say.”

“Uh, you definitely are,” I said. I looked down at my plates, trying to decide how to proceed.

“But you’d have lied?” asked Fenn. “I’m sorry, and what are you doing with your meal?”

I’d laid out the tortilla-thing (thicker and heavier than a tortilla, more like a flatbread but with some give to it) and was using a spoon to get meat and vegetables onto it, intending to roll it up and eat it like a wrap. “Just show me the right way to do it,” I said with a sigh. She reached across, took a piece of the flatbread, tore it in half, and used it like finger-tongs to pick up a pinch of veggies and a piece of meat. She plopped the whole thing into her mouth, and looked at me with wry amusement.

“My way would have worked,” I said. I followed her lead though. Each bite was like a little mini-sandwich. “And yeah, I would have lied, but mostly because we can’t afford to be caught at this
stage, and exposing ourselves as bone mages --"

“Magi,” said Fenn.

“-- on a train that probably has more than a few of them is a risk that it’s kind of pointless to take,” I said. “Someone starts asking questions about what year we were in, or who we studied under, and those aren’t questions that we can answer, because we didn’t actually attend the athenaeum.”

“So?” asked Fenn. She took another bite from her burger.

“So … I guess I don’t know the legal landscape well enough to say,” I replied. “We’re currently traveling through the Monarchical Democracy of Esplandian --”

“Nope,” said Fenn. “We passed the border while we were,” she made a gesture, thumb and index finger making a circle, other index finger moving in and out of it. “We’re in Drabian now, though we’ll be through by the time we go to sleep.”

“Well, then I really don’t know the legal landscape,” I said. “The athenaeums have a stranglehold on their respective magics, which extends to teaching, publications, and actual practice, but on Earth you wouldn’t get in trouble for having medical skills, you’d get in trouble for claiming you were a doctor, which would be fraud, or attempting to practice medicine, which would be a felony without a license.”

“So we’ve come to the conclusion that I was right all along?” asked Fenn with a raised eyebrow. “I love it when that happens.”

“Well, I’ve got no idea,” I said. “I’m going to shut up and eat my food.”

The problem with telling the truth was that the truth was fucking weird and I was both powerful enough that I would draw the attention of powerful people, and weak enough that those powerful people could coerce, threaten, or kill me, or the people I cared about. The problem with Fenn’s lie was that it pointed back toward the truth in a few ways, while my lie was just a dead-end. It would have been perfectly plausible for us not to be bone mages, even if it was somewhat likely given our point of origin. That would have been the end of the conversation.

And then I would have missed out on looking through the lizard’s memories, and the chance to help settle a minor question that the two men were still in heated discussion about, and the world would have been a little less interesting.

“The necromancer reels back from your attack and drops his evil tome, then begs for his life!” I yelled. I’d been young, ten years old, early days as far as the D&D group went, so imagine me as played by a child actor who doesn’t quite look the same as the Juniper you know and love.

“I wanna hear it,” said Greg with a grin. It had been his axe that had dealt the mortal wound.

“‘Please!’” I cried. I leaned across the table, clasping my hands together. “‘Please, oh powerful warrior, spare my life, I’ll reform, repent, do anything that you want!’”

His grin turned into a smile. “I pick my axe up over my head and throw it right into his fa--”

“Wait,” said Ricky. “Anything?”

“Anything!” I said.
Ricky reached out his hand to me. “Join us.”

“He’s a necromancer,” said Arthur, with an aggrieved sigh.

“Correction,” grinned Greg. “He’s our necromancer. We fought through a bunch of skeletons and zombies trying to get here, those could be our skeletons and zombies. He could do necromancy for us.”

“Why would we need anyone to do necromancy?” asked Arthur.

“Aren’t you saying all this in front of him?” I asked.

“Yes,” said Ricky. “Come on, do the thing.”

“I’m not going to beg for however long this takes,” I replied. “He’ll just be looking between you while you talk, I guess.”

“I keep my axe leveled at him,” said Greg. “No funny business.”

“I’ll pick up his book and leaf through it,” said Ricky.

“I don’t get why we’d have a necromancer,” said Arthur. He had his arms folded across his chest. “We were sent to kill him.”

“Because it’s fun?” asked Greg. “Do you really want to just do the right thing all the time? We can do whatever we want. Something new? Like how many times have you ever seen adventurers have a necromancer friend?”

Even at ten, that was what got Arthur’s attention. “Joon, can I make some changes to my character?” he asked.

“What kind of changes?” I asked.

“Just background stuff,” said Arthur. “And my alignment. I can’t be lawful good if this is what we’re going to do.”

“Uh, sure,” I said. I looked between the three of them. We’d lost our fourth, Nate, two weeks prior, and I was really worried that D&D, the highlight of my week, was going to come to an end.

“We’re going to have to tell the duke something,” said Ricky with a frown. “Joon, were we supposed to bring back his head or what?”

“Yeah, his head,” I said, trying to think. “But as you say that, the necromancer, who is still on his knees, says that if you need heads, he has plenty of them, and if he has some time he can make one of the zombie heads look enough like his own.”

“Nice,” said Ricky.

“So what’s he going to need to work for us?” asked Greg.

“He --” I stopped, then started again. “He really just wants to work. The bodies that he’s been working with were mostly ones he dug up from graves, but I guess he’d work a lot better with fresh corpses.”

“I don’t really want to kill innocent people,” said Arthur, stopping in the middle of whatever he was writing.
“Innocent?” I asked, trying to find the character voice again and failing, “No, there are bandits, the duke has a price out on their heads just like me, all you would have to do is bring the bodies here and I could work on them.” I stopped, thinking that was it, then added, “And with fresh bodies, there’s so much more that I can do.”

And somehow, the game came alive again. It took me a long time to try to figure out what had been going wrong, where I’d started to lose people, and eventually -- years later, after I’d already internalized the lesson -- I concluded that it was the element of buy-in and choice, and in following the path of fun. The party started doing things for the necromancer, stealing equipment, killing his rivals, bringing him bodies, and this was somehow better than taking very similar orders from the king. The novelty was part of it, but it was also the fact that I’d been willing to let them take the lead.

“Mary thinks that we’re the most important people in the world,” said Fenn.

“Oh?” I asked. “That … might be true.”

“We were talking about morality,” said Fenn. “My lessons on it, as such.”

“I have a bunch of books I could give you now,” I said. “A backpack full of them, in fact.”

“She was trying to talk me into stealing,” said Fenn. “She’s really a bad influence, you know that? I shudder to think how Valencia will turn out, with Mary as a mother-figure. And poor Solace too!”

“What did she want you to steal?” I asked, frowning. This was the first I’d heard of it.

“Nothing in particular,” said Fenn. “I think she just said that it was convenient that I took things, and helped us as a group in a lot of ways.”

“Okay,” I said slowly. I finished off the last of my food, and used the hot water for its apparently intended purpose of cleaning my fingers.

“She was saying, basically, that since we’re the most important people in the world, it’s all for the greater good,” said Fenn. “Like, if it’s a choice between the end of the world and stealing some plastic explosives, then you should pick stealing the plastic explosives, right?”

“Right,” I said slowly.

“So, basically, the livelihood of pretty much anyone that I could possibly steal from pales in comparison to the importance of getting you strong enough to grow past the powers of the gods,” said Fenn. “However that’s going to happen. And since we don’t know what the future is like, only that you’re important, we should do whatever we think will increase the chances of success.”

“Huh,” I said. “I think I came to the opposite conclusion using the same method.”

Fenn frowned. “Explain to me how that makes sense at all.”

“We’re not perfect beings,” I said.

“Speak for yourself,” smiled Fenn.

“We’re not, and trying to chart out an optimal path that perfectly maximizes the expected amount of good that we do is going to go wrong if we pretend that we’re perfect,” I said. “In a hypothetical optimal path to godhood -- uber-godhood -- we wouldn’t even be eating in the dining car, or talking to each other, we’d be staying in our room and probably reading through books, maybe trying to get
my Engineering up. We probably wouldn’t have had sex.”

Fenn frowned. “It seems like you’ve got to have *some* allowance for doing things that aren’t boring or altruistic.”

“Right,” I nodded. “That’s got to be built into the path you’re plotting for yourself, because if you just say, okay, I’m going to spend eight hours sleeping and sixteen hours working, you’re going to tank productivity, because there are all these systems involved in keeping ‘you’ operating, and a lot of them are mental systems, so if you press too hard, you’ll end up just not accomplishing the thing that you wanted to.” I paused. “But Mary doesn’t feel the same way?”

“I don’t think we’ve talked about it yet,” said Fenn. She was giving me a fond look. “Why didn’t I want to talk about this sort of thing with you again?”

“Because I’m kind of shit at it?” I asked. I laughed a little as I said it, but she didn’t seem to find it funny. “Back on Earth I was kind of a bag of dicks, and on Aerb my track record isn’t so great, even if we make some allowances for circumstances or personal imperfections. But more seriously, you didn’t want to talk about this kind of thing with me because you said, ah, that there were limits to how much a single person can be to you.”

“Not can,” said Fenn. “*Should.* As much as I feel a small spark of fondness for you --” I flicked her hand, which was resting on the table, and she grinned at me. “I don’t want to be a plant that you grew from a seed, resting all its weight against your trellis. Not just for fear of what would happen if you were ever gone, though obviously that’s a part of it.”

“Ah,” I looked down at the empty bowls in front of me.

“That wasn’t about you and Arthur,” said Fenn. She looked nervous, which was uncharacteristic for her. Usually it was easy to tell she was nervous because she would hide things with a joke.

“Yeah,” I said. I closed my eyes for a moment, trying to block out the rush of thoughts.

“What if it were him or me?” I imagined Fenn asking.

“He was my best friend,” I might start to say, but she would cut me off.

“You told me that I was your best friend,” she’d interject.

“You are,” I’d say. “But his life was cut so short --”

“When he became the Lost King, he was fifty-five,” she’d object. “And in his time on Aerb he lived more than most people do in a hundred lifetimes.”

“I didn’t say that I would choose him,” I’d say, and then I might start to cry, because I wasn’t sure that I *would* choose him, and what did that say about me? What kind of a shitty, horrible friend would I be if I said ‘oh, no, I think I’m going to go with the girl that I’ve known for a month’? Even if I loved her.

And I wanted to say that it was unfair of her to even ask me, but it was all in my head.

“How about light and airy?” Fenn asked instead. “If you were going to get a familiar, what kind would you want?”
“Something self-sufficient,” I answered. “Some kind of creature that could look after its own food, drink its own water, find its own place to sleep, and in general want me but not need me. A cat, maybe, but I would feel a little silly if I didn’t get some exotic variety.”

“I think I’d get a bird,” said Fenn. “I’ve always liked birds. Say, if this whole Solace thing pans out, maybe we can go flying again! And we could resurrect our Arches campaign, plus Val. Kind of ruins the division of suits thing though, since we’d have to double up somewhere.”

“You really want to play again?” I asked.

“Adnarim has a whole character arc left,” said Fenn. “Especially with her twin sister dead.”

“Okay,” I said. “It was really hard to tell how much people were actually having fun, and how much you were all humoring me.”

“Grak loved it,” said Fenn. “I’m surprised you didn’t pick up on it. Well, not surprised, exactly, but it seemed really obvious to me.”

“He seemed to like some of the character stuff,” I said. “Specifically his character. I don’t know, he’s hard to read.”

“I’ll give you that,” said Fenn. “But I know that he’d be up for it, and I know that I’m up for it, and Mary desperately needs to spend about a year unwinding. Actually now that I think about it, Solace is probably going to be a baby, or a toddler or something, which might make playing hard.”

“It depends on how much time is stored up in the time chamber,” I said. “In theory, there will be a lot, which means that we could possibly get her up to her teens. Old enough that she might be able to pass as an adult.”

“I’ll tell you this,” said Fenn. “I am not changing or washing dirty diapers.”

“Washing?” I asked, just before it clicked. “Ah, cloth diapers. On Earth we use disposable ones. I mean, in my part of the world we do. Did.”

“Elves just hold their young over the toilet,” said Fenn. “But elves only poop like once a week anyway, and the babies come out the size of my palm,” she held up her hand to demonstrate, and stared at it for a moment, frowning slightly. “Half a pound, at most, not like the monsters that come out of human women.” She shook her head. “I’m really hoping that’s not a decision that Mary ends up regretting.”

“I think she’ll do fine,” I said. “We’ve got the best healing that money can buy, and it’s not like Solace is going to be a real baby anyway.”

“Do you know that because of magic, or are you just hoping?” asked Fenn.

“We have the time chamber anyway,” I replied. “Even if she does end up being an actual baby.”

“Yeah, but you’ve still got to be in it,” said Fenn. She paused. “We’re not pre-emptively talking about abandoning Mary in the time chamber, are we?

Before I could share my thoughts on that, the train car’s door opened, and one of the tuung -- the one that had left earlier, I thought -- came walking over to me. He strode on long, powerful legs, stepping so that the heel of his foot didn’t touch the ground. His pants were skin-tight and rather damp, and his shoes had individual parts for each of his three toes, acting more like a glove than a shoe. There was something of a tree-frog about the tuung, though they weren’t Animalia, and among my cultural
notes on Aerb was the reminder that very few of the mortal species liked being confused with the Animalia.

“Emomain has invitation for you,” he said, laying a letter with a wax seal on the table. He retreated back toward his companions without waiting for a response.

I looked to Fenn, shrugged, then picked up the letter.

_Dear Sir and Madam,_

_I am Princess Emomain, fifth daughter of Esunounuol, current monarch of the Boundless Pit. I am aboard the Lion’s Tail on my return trip to the Boundless Pit, following ten years of intensive study at the Athenaeum ofBone and Flesh, where I specialized in medical procedures which are either necessary due to ethical concerns about the use of magic, or due to the impossibility of using magic for whatever reason._

_When I return to my ancestral home, I am likely to be sorely lacking in the multicultural companionship that I had grown accustomed to in Cranberry Bay, and during the two days of travel it will take to get to Headwater and the Boundless Pit, I’ve decided that I shall have one last hurrah. To that end, I have been inviting interesting people to come visit my car, where I am traveling in style with plenty in the way of refreshments which continue the multicultural theme._

_Would you be interested in joining me? All of my guards and servants have been directed to usher suitable passengers toward my private car._

_Yours, Emomain_  

I handed the letter over to Fenn, and let her read it while I collected my thoughts.

“Quest?” she asked, when she’d finished. She was keeping her voice low; the tuung had been talking among themselves at the next table, but they’d apparently been eavesdropping, at least enough that they’d heard us talking to the man whose familiar I’d inspected.

“No quest,” I said.

“Huh,” said Fenn. She looked down at her empty plate. “I could do with a dessert though.”

“Fenn, we ah,” I looked over at the tuung and tried to determine whether they were listening in. Had they heard the whole conversation about us not actually having attended the athenaeum? I’d had them in my eyeline, but hadn’t been paying them much attention. “I’m worried that it will expose us.”

“Again, so?” asked Fenn.

“We’re talking about royalty of the place that we’re visiting really soon,” I said.

“Point taken,” Fenn said with a frown. “But she must have sent out plenty of these invitations, and we can just change our story, right?” She was still keeping her voice low. I needed to get some translation tattoos for both of us so we could speak in a mutual language that was unintelligible to others. That was a thing on Aerb, but it was pricey, especially since it meant getting them done custom rather than off-the-shelf translation tattoos that would let you speak one of the standard languages.

“Are you asking what I would do if all the other junk wasn’t a factor?” I asked. “Or what I want to do, given that it is?”
“On the face of it, a tuung princess, even a middling one, would be a good ally,” said Fenn. “Note: ally, not companion, which might be more problematic for us. The place we’re going is three miles down the Boundless Pit, and I’d been under the impression that would mean a little bit of archery, but if we can avoid that, all the better. I’d rather not kill people if they’re just defending their sovereignty.”

“Okay,” I said. “You’re right. It’s a potential diplomatic door we can open.” Except I would be surprised if it were that simple. “Mary and Val are on the way.”

Fenn rolled her eyes. “I love her, but I’m worried that she’s going to talk us to death about it.”
Amaryllis answered the door holding a book in one hand, and gestured for us to come into their room without letting go of it. It was smaller than the one Fenn and I had, built narrow so that more rooms could be fit on the car, and when all four of us were in it, it was barely big enough to keep us from an uncomfortable amount of body contact.

“Hi Joon,” said Valencia, looking up from her book. She was already a fair way through *Harry Potter and the Sorcerer's Stone*.

“I can make all this,” said Amaryllis, gesturing with the book she was holding. On the page I could see something that looked like a microchip. “Aerb has been so slow compared to Earth, I don’t understand it.”

“I can venture something like thirty different guesses,” I said. “Enforcing medieval stasis was a hobby of mine.”

“But I can make all of it,” said Amaryllis. “Integrated circuits, magnetic storage, television -- on Earth it was thirty years between radio and television, did you know that?”

“Sounds about right. I’m not really all that familiar with Aerb’s development timeline,” I began.

“Radio came just a little bit after the Second Empire,” said Amaryllis. “One hundred and thirty years and we never made the leap.”

“That’s … I don’t think we have the time right now to get into the medieval stasis trope, and how it’s been working out on Aerb,” I said. “My guess is development traps, perverse incentives, lackluster incentives, active suppression, lack of resources, lack of intellectual capital, competition of alternatives … I actually legitimately think that I could get to thirty, and then guess how or whether they apply. But not now, because we have an invitation to visit with the tuung princess.”

“Can I come?” asked Valencia.

“I don’t think that would be a good idea,” said Amaryllis, turning towards her.

Eagerness turned to distress in a single moment; Valencia looked like she was about to cry. “Well why don’t you just lock me up in a cupboard under the stairs!” she yelled. She turned away from us and returned to her book, gripping the pages hard.

Amaryllis gave her a bewildered look, then turned to me.

“Harry Potter is locked in a cupboard under the stairs by his evil step-parents,” I explained.

“Because he’s different,” said Valencia, not looking up from her book, which she seemed like she was trying to stare a hole into.

“I never read the *Harold Plotter* series,” said Amaryllis. The words came out slowly. She looked over to Valencia and reached out to rest a hand on her shoulder. “Val, you being different is, on a pure utility level, really, really good for us. Even if I didn’t like you at all, which I do, I would consider you to be a valuable asset. The problem is that there are risks in having you out, so long as you’re still learning how to be you. Your difference comes with costs. You’re going to have to learn
how to hide it, so you aren't recognized.”

“Like how Harry was recognized by his scar,” said Valencia.

Amaryllis looked to me, and I nodded. “Sure,” she replied.

“This party seems like a good time to practice,” said Fenn with a happy smile.

“Fenn,” began Amaryllis.

“Mary,” Fenn replied. “It’s low stakes, lots of people to let us blend in, she can always call on a devil if she really needs to spin some lie, and if things go wrong, well, the plan was that we’d make an illegal descent into the Boundless Pit anyway, right? What’s the worst case scenario here’?”

“We get kicked off the train, which costs us an extra day or two, which means that we get Solace back late, just after the locus has drawn its last breath,” said Amaryllis. “Though that’s not actually the worst case, the worst case is that we all wind up dead, getting kicked off the train is just the most likely of the bad cases.”

“The invitation was for Fenn and I,” I replied. “I’m not sure how closely they’ll be checking, or how much they’ll care, but I don’t know for certain that they would let us have a plus one.”

Amaryllis demanded a fuller debriefing than that, which I gave her. She cringed at the idea that we’d left our cabin to get some food, especially since we could just grab food from the backpack, and cringed again when Fenn had revealed me for a bone mage.

“Is this why you don’t split the party?” she asked.

“Part of it,” I replied.

“Okay,” said Amaryllis. “I’m in mild agreement that at least some of us should go, despite the obvious risks.” She took a breath. “Better to have it be me and Juniper --”

“No,” said Fenn. She took out the invitation and handed it to Amaryllis. “She uses the word ‘multicultural’ twice. I think half the reason we got an invitation is that I’m a half-elf. Maybe more than half the reason. If you were her, and you thought that your days were going to be spent at court, surrounded by other tuung, and you wanted to have all the variety and mishmash of different stuff that a place like Cranberry Bay had to offer, you wouldn’t want to stack that party with, no offense, boring old humans.”

Amaryllis frowned. “Point taken,” she said. “If it’s just you and Joon though, I worry that you won’t be as adept at gaining her aid. We can see from our souls that I have better social skills, and I’m a princess, like her --”

“So am I,” said Fenn. She seemed almost giddy about being able to throw that back in Amaryllis’ face.

“I’ll go with,” said Valencia. She seemed to have calmed down somewhat. “Mary, you said that I was almost better than you, with a devil inside me, but you were lying, because you thought that I was better. I can pretend that I’m Joon’s sister.”

Amaryllis looked between the three of us. I think she was hoping that I would be the voice of reason, but I wasn’t really on her side on this one. The conversation with Fenn had stirred something loose in me; trying to keep Val bottled up was a recipe for disaster, because if we kept her from speaking with people and coming with us, eventually she would snap in one way or another. She’d been
teased with freedom, and it hadn’t actually happened yet. Instead, we’d kept her under lock and key, away from the wide world, seeing things only through conversations with the same small group of four people and constrained to prepared safehouses that were barred to the outside. (In fact, maybe this was her snapping, finally pushing back after one too many times of being told that she wasn’t allowed to do something that she should, by right, be capable of. Or maybe it was that the only work of fiction she’d ever read was the first half of *Harry Potter and the Sorcerer's Stone*.)

“Okay,” said Amaryllis.

“Really?” asked Valencia, brightening up considerably.

“Yes,” said Amaryllis. “I’m not even going to insist on coming with, in part because I think Fenn is right.”

“She’s gone mad,” said Fenn.

“I don’t think that I would make things better,” said Amaryllis. “Dropping down into unfamiliar situations has never been my forte, and if I’m looking at my list of failures, that’s where all of them start. I’m nobility, but not of the same type, and can’t reveal that on pain of severe consequences. So,” she looked over at the books. “I predict that this goes badly. My read, from the invitation, is that the princess is the kind of vapid, overly-indulged nobility that I hate, and on the surface, there’s no reason for this party to be anything but boring. It’s possible that it will turn out well for the three of you. On the face of it, there’s at least no reason to suspect that you’ll be attacked and thrown from the train.” She fidgeted slightly, resting a hand on her book. “I’m going to get into full armor, double-check that I’m ready for the most likely of the worst outcomes, and then spend my time trying to plot out the next scientific and technological revolution.”

“Ah, well that makes sense,” said Fenn. “The only reason that our princess would miss a party is if there was something more important to work on.”

“Are you sure?” I asked Amaryllis.

“No,” she replied. “But I think my compulsion to go with is at least partially grounded in the need to exert control, rather than the actual utility I can provide, and in the interests of not doing things simply for the sake of doing them, I would rather stay here.” She touched the book like it was her lover.

“And try to single-handedly map out the entire future of science and technology on Aerb, in accordance with what’s written in a handful of books from Earth,” I replied.

“Leave the backpack and the clonal kit with me,” said Amaryllis. “I’m hoping to get a better picture of what things are like on Earth by dipping into multiple sources, and there are some things I want to try.”

“Okay,” I said. “And you’ll be available as armed and armored backup in the event that things go really wrong?”

“Naturally,” she said.

“And I can go?” asked Valencia.

“I’m not actually in charge of you,” said Amaryllis. “All I could do would be to argue against it, and I don’t think that I have the grounds to do that. The most successful non-anima the world ever knew would be more than capable of attending a minor party with virtually no social expectations, especially one predicated on the idea that it was a blending of cultures and unfamiliar people.” She
leaned forward and gave Valencia a kiss on the forehead. “I trust you to do your best.”

“See, talked to death,” said Fenn as we made our way down the train cars. “The party is probably already over.”

“The invitation didn’t actually give a time, which I thought was a little weird,” I said. “I hope after all that we’re not turned away at the door.”

“It’s an adventure!” said Valencia. “Like when Harry and Ron and Hermione killed the troll, and they were best friends after.”

“We’re going to have to have a talk about fiction and reality,” I said, then I let out a little laugh, because Aerb was cobbled together from a hundred different tabletop campaigns.

“We should get our stories straight,” said Fenn. “Juniper, you’re a scholar studying the dream-skewered, of late having taken a trip to the Athenaeum of Bone and Flesh in order to speak with some medical experts, a trip which proved fruitless. I’m your loving wife, Valencia is your little sister, we’re with you because we thought it would be fun to take the trip, and because like many idle scholars, you had a surplus of money.”

“Amaryllis can be my governess,” said Valencia.

“Sure,” said Fenn. “That works. But the key to any successful story is that you don’t lay out the whole thing at once, you let it have bits and pieces that show at the edges, okay? Strings for people to tug on, not a tapestry that you present them with.”

“But we’re going to ask for this woman’s aid?” I asked.

“We’ll see,” said Fenn with a shrug. We passed between two of the train cars, momentarily silenced by the rumble of the train and the wind that passed us by. “Given our circumstances, I don’t think she’d hold the lie against us too much, and you can demonstrate mastery of a handful of magics at will to prove whatever crazy story is the ‘truth’.”

How many people had I told the truth to so far? Amaryllis, Fenn, Grak, Solace, and Valencia? Fallatehr had known, because he’d had Grak and Amaryllis to tell him. Aumann might have known something, because Amaryllis was presumably tortured under revision magic and I wouldn’t have blamed her for breaking. My policy had been to let the companions in on it, on the theory that it directly affected their lives and was information that they needed to know, but it wasn’t a secret that could keep forever, especially not if we wanted to become a part of polite society, and eventually too many people being in the know meant that the secret would be free, out into the world. I wasn’t sure whether it would make our lives harder or easier, but harder seemed more likely.

When we got to the first of the three tuung cars, two guards stopped us at the semi-enclosed gangway between cars. They had a mister tank that it seemed like they were sharing, and conquistador-style breastplate that formed a wedge at the center. Though they weren’t obviously armed, it was fairly common for the tuung to be able to summon a weapon at a moment’s notice, one of the things that made them formidable in a fight. (I wanted a summonable blade for my own, but they were a well-guarded secret of the tuung, one that had survived as secret for centuries.)

“We have an invitation,” said Fenn, holding the envelope out. One of the guards took it without so much as inspecting it, and opened the door for us.

The train car before us was completely open, with no interior walls. I didn’t know whether this train car had been custom-built for this particular journey -- I really doubted it, given that it was only a two
day journey -- but it was obviously built for this sort of function, rich people milling about, eating tiny food off of tiny plates, sitting on a few scattered chaise lounges or armchairs that were bolted to the floor. I could see guards too, tuung with the same armor that the ones that had let us in wore. Along one side was a buffet filled with all manner of roasted, fried, and bubbling things, and in the corner, an unfamiliar upright stringed instrument was being plucked by a woman with four slender arms.

As I looked around the room, I revised ‘rich people milling about’ down to just ‘people milling about’. Fashion was not my forte, but this wasn’t even what I’d come to think of as ‘Aerb-standard’ fashion, that being the cultural melange of the Empire of Common Cause, which was only a few steps to the left of what you’d have found on Earth. It was a dozen people from a dozen cultures, some of them certainly dressed in clothes that had been produced by a forge-frenzy and thus not hewing to any cultural standards at all. A woman with a long neck bent in a U-shape to keep her head from touching the ceiling wore a cerulean dress that fluttered out as it draped to the floor, obscuring almost all of her but her lanky arms, elongated neck, and head. A green-skinned woman had a shell on her back, embellished with miniscule gardens and inch-tall trees that gave the impression of a living place, a world in miniature (and I could vaguely recall seeing something like it before, but couldn’t quite place where). Two dwarves were talking to each other on one of the chaise lounges, both in completely different styles, one in a suit that moved like grass, a ghillie suit completely unsuited to the occasion, and his hair dyed green to match, the other with a beard dyed grey and an axe that showed flowing hair -- Grak?

He caught my eye for long enough to let me know that he’d seen me, then continued on with his conversation as though nothing was out of the ordinary. Fenn slipped her arm in mine and I realized that I was staring; I came out of it just in time for two of the tuung to approach us, one of them dressed in simple, shapeless white clothes, with a mister on her back, the other in damp, pink frills. “Oh, more guests!” she cried, holding a hand out to Fenn, which Fenn took with a smile. “Welcome to this little soiree, my best imitation of the imperial aesthetic that my funds were able to provide. I apologize for the impropriety of sending an invitation without so much as knowing your names, but this is how friends are made in the urban centers of the world, is it not, hrm? A little boldness that must be excused?”

Fenn nodded along as the tuung talked. This was my first extended period with a tuung up close, and, with fascination, I watched her mouth, her long tongue that seemed to spring and bound around her wide mouth, the way she had internal ridges rather than teeth, and her comparatively enormous eyes that were set so far apart that focusing on almost anything close by made her look cross-eyed. “We were delighted to have the opportunity to do something other than stay cloistered in our rooms,” said Fenn. “I love to travel by train, but finding company can be a bit difficult, especially the better class of company.” “Too right!” shrieked the princess. “But you must forgive my manners, I am Princess Emomain, as I’m sure you’ve surmised. This is my handmaiden, Esuen.” “Tantia Shoemacher,” said Fenn, placing a hand to her own chest. “My husband, Ernst Shoemacher, and his sister, Gloria. We’re for the Boundless Pit, just as you are. My husband fancies himself a wandering scholar.” “I am a scholar,” I replied with a frown. I assumed that this was the role Fenn intended me to play, a fussy scholar defending his interest or obsession with some bit of minutia. “Have you heard of a phenomenon called the dream skewer?” Princess Emomain shook her head. “Were you studying at Bone and Flesh?” she asked. “As I said in
my invitation, I’ve just recently finished my studies there, receiving a first order diploma for my efforts, with a focus mainly in non-magical healing, that is to say, healing that relies wholly on the natural rather than the unnatural, which is of course a concern to my people, given the unfolding political situation in the Boundless Pit, of which you are no doubt aware.”

“I wasn’t,” I replied. Surprised and pleased at how quickly she’d deflected from my question about the dream-skewer. “Between different factions of the tuung, or between Headwater and the Boundless Pit?”

“Well, you are aware of the driving philosophy of the tuung, are you not?” asked Emomain. Her handmaid touched her elbow, and Emomain shrugged it off. “If you are a scholar, then you are coming to the Pit for some purpose?”

“To speak with and learn from the tuung,” I said. “I usually find it better to approach cultures somewhat unawares, so that my view of them isn’t so tainted by the interpretations of those outside the culture, which I’m sure you know are often wrong.” I was about to go on, but Emomain seemed to interpret me taking two sentences for myself as the start of a power struggle for control of the conversation. Fenn patted me lightly on the arm and took her leave, making a beeline for the food.

“Oh, there are some dreadful misconceptions about us,” said Emomain. There was something terribly affected about her speech, as though her way of speaking had been built as a caricature of high-society Anglish. “The men outnumber the women a hundred to one, you know, so of course there’s this ridiculous idea that they’re like human men, thrust into competition with each other, fighting over the women, squabbling for a mate, all of these very messy traditions that are so common to the other mortal species. But we’re not like that at all, the male tuung don’t have any such instincts, not toward mating, nor toward fatherhood -- not that any such concept exists within tuung culture. It’s not until we will our scent on them that they awaken to anything approaching romance as you would understand it. Of course much of the blame falls to Blackstone, who wrote the supposedly authoritative book on our species, and Syfriend with his Book of Blood made no effort to correct matters, though he had a much better picture than you’d think he had, from reading his book. And there have been no end to the plays and books that purport to take place among the tuung, given the element of the forbidden, but none of them have so much of a shred of accuracy to them.”

“And the politics?” I asked. During that monologue, Valencia had left too; she was sitting beside Grak and the other dwarf, her slender form taking up only a fraction of the chaise. “The most I know is that there’s something called ‘the supremacy of existence’, but given what you’ve said, I might have been misinformed.”

“Oh, well that’s true enough,” said Emomain, “But of course much more nuanced than you’d expect to read from the papers, when it shows up at all. So many years spent in Cranberry Bay, and I looked to the papers all the time, you understand, because I wasn’t simply a student but an ambassador for my people, and given I was one of the few well-known tuung I expected to be asked for comment, even put out my name to the papers of Cranberry Bay in case they had questions, but I was only asked two or three times over the course of my time at the athenaeum, and then I think it was more a matter of the novelty rather than due diligence. I must say that my opinion of the mass media has lowered considerably.”

She hadn’t answered my question about politics at all. I was, at this point, looking for an out, some way that I could disengage from conversation without being rude, but though my two floating points were firmly in SOC, I still couldn’t figure out the best way out. Luckily, Fenn came walking back over, holding two sticks with white cubes on them (they looked more like tofu than anything else, though up close they had some texture to them).
“These are delicious,” said Fenn, handing one to me. “Having a good chat?”

“The best,” said Emomain. “I was just relating my experiences with the newspapers to Ernst, I was saying that the tuung rarely showed up in the news, despite all I was hearing about from back home, and though I’d extended my expertise to the papers, they showed little interest in hearing what I had to say on the matter.”

I was, at this point, really, really hoping that she wasn’t a companion, or anyone that we’d have to spend an extended period of time with. Hearing the same thing twice was a personal pet peeve of mine.

“Do you happen to know what this is?” asked Fenn, gesturing with her skewer of meat. “Some sort of meat, I’m assuming, but I don’t know that I’ve tried it before. It’s exceptional.” I’d taken a bite, and while it wasn’t bad, I wouldn’t have called it exceptional. It was creamy and came apart with little resistance, but it was still clearly meat of some kind.

“Oh, when I saw you come in I had meant to show you that,” said Emomain, “It’s a delicacy, extremely rare for any to be on the market, but I was out shopping in preparation for this party and the exotic meats merchant happened to have heard of a large quantity recently brought in, and was able to procure some for me.” She leaned in close, eyes bright. “It’s unicorn meat.”

Fenn paused in her chewing, then started to laugh with her mouth full. Princess Emomain looked between the two of us with an uneasy smile.

“A private joke,” I said, apologizing. “We recently acquired a unicorn bone, almost certainly from the same creature.”

“The meat was sterilized through the use of bulk transport?” asked a tall, robed man who had moved into the conversation circle. I was fairly sure that he was the first orc I’d ever seen, skin brownish-green with tusks that stuck up slightly from his mouth. The orcs had been allied with the Dark King, back during the time of Uther Penndraig, and he’d decapitated their matriarchal government shortly before the final showdown with the Dark King himself. They’d never really recovered from that, in part because of sanctions placed on them by Anglecynn, and later, the First Empire.

“Sterilized?” asked Princess Emomain. “I suppose, but –”

“Sterilization is a scourge upon the face of food,” said the orc, gesturing with a full glass of some kind of bluish drink. “So many of the traditional foods of the mortal species are ferments, none of which can survive the bulking process, the food we eat, even the best of it, is so dead that it’s barely worth calling food, no bacteria in it, no life to the meats, and so many foods have been eradicated from the diets of the world by the way in which those foods are moved around. It’s a terrible shame, but of course economics is the driving force of the world.”

“Economics?” asked Emomain. “Well I hardly think that’s the case, why if you look at the history of the world …”

I slipped away, grateful that her attention had been taken up by someone else, and went over to where Grak was sitting with the other dwarf on one side of him and Valencia on the other.

“Ernst!” said Valencia. “This is Grakhuil Leadbraids and Magoron maRohon, Ernst is my older brother, I’m traveling with him and seeing the world.”

“Hello,” I said, extending my hand to first one and then the other. Grak squeezed my hand a little bit too hard, and there was a hint of warning in his eyes. “Are you two traveling together? From the
names I would guess different clans?”

(Magoron. Mag? Magor? I had a decent working knowledge of Groglir -- magor meant ‘breathed’, and the suffix -on meant ‘one who’, but I wasn’t sure what the rules were on how to shorten words used in names, if at all. The name Grakhuil meant something like ‘half of a series’, but it was an old name, one that wasn’t quite so literal.)

Magor laughed. “The last names? Ah, well, that’s more a question of politics than anything else. See, ‘maRohon’ would translate to something like --”

“Of one who fixed or mended,’” I said. I held up a hand. “I know just enough Groglir to embarrass myself.”

“Oh, not so!” said Magor. “It’s a rare language for a human -- you are human, aren’t you?” I nodded. “At any rate, literalism was in vogue for quite a while, on the theory that the meaning was more important than the sounds, so in Anglish it’s Leadbraid, but in Groglir it’s,” he pointed to me.

“Haimelhaknil,” I asked. “That, or Haiodohaknil,” I said. “I might be missing a word, or mistranslating.”

“The first was correct,” said Magor. He looked over to Grak. “Though going by the beard, I suppose I could see why you’d assume the latter. But of course that’s the whole problem, because translation is an impossibility, it’s not simply one-to-one correspondence. Especially with Groglir, you miss certain nuances. That’s why I use maRohon as a name, more than our difference in clans.”

“Well, you learn something new every day,” I said.

“Sometimes many things,” said Valencia.

Magor laughed. “And there are other differences between us, of course. From what I gather we ended up on this train following distinctly opposite paths, Grakhuil a clan traditionalist who entered into the Third Empire through necessity, though I don’t have the full story there, myself a third-generation agkrioglian turned neo-traditionalist.” He rested a hand on Grak’s knee, which Grak very carefully made no notice of. “And if you have a working knowledge of dwarven culture, you’d know I’m something of an unfavored bastard to most of our species, and Grakhuil is a prince.”

“There might have been a few things that my teacher left out,” I said as I tried to figure out what the deal between the two of them was. “Safe to say that our host got a bit more multiculturalism than she expected?” Valencia laughed at that, then raised a cup of some sparkling red drink to her mouth and tried to hide her smile, but Magor joined in with the laugh, and eventually Grak did too.

“I’m sorry,” said Magor. “I’ve been talking about myself and my temporary traveling companion far too much, my manners seemed to have fled me. The safe and bland question would be about why you’re traveling to Headwater, but I suppose the more interesting question is how you came to know Groglir. Answer whichever you prefer.”

Before I could though, the lights in the room flickered off. The sun had long since set, which left us in only the light of the multicolored stars, and somewhere far overhead, Celestar, but that wasn’t enough to see by, not with our eyes uncalibrated to the darkness. I would have used blood magic to light up the room with fire from my hand, but I was established as a scholar, one with a tiny bit of a background in bone magic, and until I heard someone draw a weapon, I wanted to stay as innocuous as possible.

I felt something touch my chest, but it wasn't hard, and I left the brief contact go unremarked. Of all
the people in the train car, how many of them could see in the dark? I was guessing that it was
enough so that no one could launch a covert attack in the dark, and this wasn’t all a long setup by the
Dungeon Master for a body being discovered in the middle of a locked room.

When the lights went back on, I looked down to see nothing at all on my chest. I glanced at Grak,
who stared down at my chest and raised an eyebrow my direction. I gave him a shrug back; I was
fairly sure that whatever or whoever had touched my chest, they had done some sort of magic, but I
wasn’t incredibly concerned about it, unless this room somehow contained a soul mage more
powerful than Fallatehr.

<Don’t look around,> said a voice in my head. <The effect is temporary, no more than an hour. It’s
harmless. Send back okay if you understand.>

“You were about to answer the mundane question or the personal, before the lights flickered,”
prompted Magor.

“I think I’ll go with the mundane,” I replied. “I’m a scholar, with a specialty in a rare phenomenon
called the dream-skewer. If you’ll excuse me for a second, my sister can tell you more, I think
something from the buffet disagreed with me.”

<Okay. Who are you?> I asked, looking around the room for Fenn, though I had enough situational
awareness to find her. There were eighteen of us, plus two guards and two waitstaff. I could rule out
Grak, Val, and Fenn, naturally, but that left a fair number of suspects. The princess was the obvious
one, if she was just putting up a really good mask, but I sort of doubted that.

<I need your help,> came the reply. As I walked toward Fenn, I tried my best to make a note of who
was talking and who wasn’t. There was no guarantee that whoever was on the other end of the
psychic connection experienced it the same way that I did, but I didn’t think I’d be capable of
maintaining normal speech and thought speech at the same time. <I said not to look around.>

<I’m inclined to help those who need it,> I replied as I reached Fenn and slipped my arm in hers. She
was standing with the shell-backed woman, who had gotten a mirror on a long metal wire out, and
was explaining the various features of the elaborate scene on her back to a small crowd of five. <I’d
need to know who and how though. And why me.>

<You’re not a scholar,> replied the voice. <You gave a fake name.>

I tried to think about how anyone would know that. The names we’d given to the princess didn’t
match the ones that were on the papers forged by Fenn, but as it had been explained to me, there
wasn’t really such a thing as a passenger manifest, only tickets that were held and checked … and
yet whoever was talking to me knew anyway, either because they had a passenger manifest that
wasn’t supposed to exist, or because they had a magical method of divining the truth. Or maybe
some subtle detail had given me away. Still, lying about my name didn’t seem like it was going to
land me in hot water. Forging papers to get a ticket did seem like it would get me in trouble, but I
wasn’t sure that was in question at the moment.

<I give fake names sometimes,> I said. <I’m sure you would understand, if you want to keep your
identity secret from someone who’s willing to help you.>

<We will establish a dead drop for communication,> said the voice. <Terms and conditions, your
payment for your help, some method of establishing your credentials and abilities. Under the second
table on the right in the dining hall, when facing the front of the train. Details will be waiting there
for you.>
My eyes were wandering, and again I saw the tuung princess talking while the voice was speaking to me. Her handmaid, however, was silent, and when our eyes briefly locked, she turned away from me. The old Phantom Menace gambit, a handmaid pretending to be a princess.

<Alright,> I replied. <I have four allies on this train, is it alright if I share this with them? Whatever it is you want, we would probably need their help.>

<So long as you stay quiet about it until the time is right,> replied the voice. <That's all for now. Communicate by letter.>

I nodded, as though I was listening along to the shell-backed woman explain how she’d convincingly faked a water feature that ran down the center of her shell, something she had apparently done herself using a variety of tools to do the work around the awkward angle. I didn’t have to feign interest; I’d always loved miniatures and tiny things in general, though I watched a lot more tutorials on Youtube than I spent time actually painting figs or making terrain.

Dead drop, second table on the right. Not a quest.

“I think I might have had my fill here,” I whispered in Fenn’s ear.

“Oh?” she asked back, searching my face for meaning. “I was enjoying myself.”

“I guess there’s no reason that we can’t stay for a bit, but I have other business that’s, ah, time sensitive.” I wasn’t sure how time sensitive, but it would probably need to be wrapped up by the time we got to Headwater, the city that sat above the Boundless Pit.

“Crap,” said Fenn. “Just say the word and I’ll do what you want.” No matter how serious she might have thought the situation was, she couldn’t resist a wink.

“We’ll stay, for now,” I said. “I’ve been enjoying myself, for the most part.” I looked over at where Grak was sitting; the hand on his thigh hadn’t moved. “That dwarf over there seems like he’s got an admirer.” Fenn’s gaze followed my own, and I saw her eyes go wide.

“There’s no way we can leave now,” she said.

It was late when we finally made our way out of the party car. Fenn had a little bit too much to drink. Valencia had far too much to drink, and was standing mostly through the force of the devil she’d trapped inside her at some point, which didn’t actually make her less inebriated, but made her more able to compensate for that inebriation, which was cause for her to get even more drunk than she would have been. Grak and Magor left far before us, and while we were pretending to be strangers, I thought there was some aspect of sneakery to the way he’d left without calling attention to himself.

“I love you Fenn,” said Valencia. She was leaning on me for support as we moved through the corridors, with only dim light to guide us.

“I love you too,” replied Fenn with a happy sigh. “Today was a good day.” She turned to me. “You still sober, junebug?”

“Yeah,” I replied. “Also, please explain what a junebug is, because there’s no month called June on Aerb.” It almost certainly would have been faster for me to simply carry Valencia, but she hadn’t asked, and I would have felt weird about it. It was bad enough being someone to lean on.

“You have a month named June? Literally a whole month named after you?” asked Fenn. “That’s dumb. Earth is so dumb. Not even McDonald’s is good.”
“McDonald’s is about price point and availability,” I said. We came to one of the doors between cars. “Hold on tight, don’t want you going off over the edge.”

“Mmm-hmm,” said Valencia, clutching closer to me. “I liked being your sister today. You’re a better brother than Dudley is.”

I helped her through the gangway, thankful that we were to her car. “I’m going to be happy when you have more than just a third of a book under your belt,” I said. “Given some time, especially if you’re in the time chamber with nothing else to do, you might get enough cultural literacy that you could pass for dream-skewered.”

“Oh, I could do that already,” said Valencia. “I’d just need a big, powerful devil to chomp down on. I can move my tendrils around the hells and try to find one, to line one up, just in case.”

“You’re fucking scary,” said Fenn.

“Can I tell you both a secret?” asked Val. “They’ve started to notice, today I got a devil that knew, he heard a rumor that someone important had vanished, and the devils almost never die, so it was a big important thing, but there’s nothing they can do about it. He thought I was fucking scary too. There were a few seconds, when I was eating him, that I think he maybe realized what was happening, but he couldn’t do anything about it.”

“That’s kind of disturbing,” I replied.

“I was their puppet my entire life!” yelled Valencia. She pushed off from me with weak arms and stumbled slightly, then slumped up against the wall.

“I know,” I said. “I’m just saying that whatever it is you’re doing to them on an actual object level, it’s probably terrifying to them, and I think empathy towards even abjectly evil creatures is a good thing, so long as you don’t let it cloud your judgment about who and what they are.”

“I’m going to take a demon now,” said Valencia. She stopped for a second, then straightened up, all signs of drunkenness gone. “Oh,” she said. “Is just slow reflexes. Feedback. No need Joon.” She waved me off.

“Well, we’re here,” I said. I knocked once on the door, and after a moment, it opened up, pouring light into the dim corridor and revealing Amaryllis in full plate. “Val isn’t in a good place right now.”

Amaryllis sighed, and let Valencia in. She moved with catlike grace until she got over to the bed, then collapsed into it without ceremony.

“Just a little drunk,” I said.

“A lot drunk,” said Fenn. She was leaning up against the door to the cabin. “I tried to cut her off, but she’s a wily little girl when she wants to be.”

“It was a productive party?” asked Amaryllis. “I didn’t hear any banging from the front cars or see any smoke coming by my window. I’ll say that wearing full plate for several hours while reading and trying to keep a lookout isn’t exactly my idea of a good time, and I’d expected you back earlier.”

“We got a coded call for help,” I said. “I’m going to pick up the dead drop on our way back.”

“Oh, I totally forgot about that,” said Fenn. She pushed her way past me. “Mary, you are never going to believe it, but Grak has a boyfriend. Or a girlfriend, or whatever you’d call it.”
“Krin,” I said. “And it’s not exactly clear what their relationship is.”

“Joon wishes that I had a cloaca,” said Fenn, in the worst attempt at a confidential whisper I’d ever seen.

“I didn’t say that,” I replied, rolling my eyes. “I said that if you had a cloaca, I would be open to the possibility, it wouldn’t be a deal-breaker.” I’d tried my best to feel no shame at that, since it didn’t really seem like all that extreme of a position to take, but if I’d said something like that in high school, I would have been called a weirdo, if not a pervert. I’d meant it as an expression of love toward Fenn, but apparently that wasn’t what she was taking away from it.

She turned to look at me. “But with your mouth?” She turned back to Amaryllis. “I don’t mean to make you jealous, but Juniper—”

“All right, enough of that,” I said. I glanced over at the books that were strewn everywhere, along with what looked like the circuit boards and half-built electronics. “Fenn, your job is going to be to help put all this stuff away and get things ready so that Mary can get some sleep, while she and I have a talk out in the hallway, okay?”

“Okay,” said Fenn. “Got it. I’m going to take a quick nap instead of doing that.”

Once we were in the hallway, and Amaryllis had looked around, she crossed her arms and looked at me. “Quest, companion, or something else?”

“Something else,” I replied. “Mostly it was just us having a good time. But not too long after we got there, the lights flickered out for a bit, someone pressed something against my chest, and I was connected to someone. She—probably she—told me that she needed my help and was setting up a dead drop, which I’m going to stop by on our way back to our cabin. If there’s something that needs doing tonight, then I think I’ll probably have to do it alone, or with your help, because Fenn is too far gone. I guess technically I could transfer over my Liar’s Cup tattoo and have her push the alcohol into Val, but at some point alcohol poisoning is probably going to be a factor, if it isn’t already.”

“It is the princess?” asked Amaryllis.

“Looks that way,” I said. “So you were right on that score. But despite talking to her and agreeing to help, I haven’t had any game text at all.”

“And what do you think she wants?” asked Amaryllis.

“If I had to guess, extraction,” I replied. “She didn’t seem happy to be going back to the Boundless Pit, and from everything that I’ve heard of the place, that’s not terribly surprising.”

“And what does rescuing her get us?” asked Amaryllis.

“I don’t know,” I replied. “The ire of the tuung and an ally with no political capital? It does seem like a kind of crap trade to me. She said that there would be terms and conditions at the dead drop. Maybe there will be something enticing.”

“Maybe,” said Amaryllis, giving me a dubious look. “Entering into the court politics of an unfamiliar court … but if it’s extraction we’re talking about, creating a princess-in-exile, maybe that could be done without revealing ourselves too much. But then I don’t know what the benefit would be.”

“The tuung don’t seem like they have a very healthy society,” I replied.

Amaryllis made a face. “The supremacy of life.”
“No,” I said. “Not that, that I understand, and to some extent sympathize with.”

“If you die, you want to be sent to the hells?” asked Amaryllis with a raised eyebrow.

“I -- yes,” I said.

“Gods, why?” asked Amaryllis, backing away slightly.

“I’m more afraid of oblivion than death,” I said. “I think enduring pain and suffering is, ultimately, the correct path no matter what that pain and suffering might be, so long as there’s even the smallest glimmer of hope that things will get better.”

“Oh, you’re hoping that we would do the impossible and save you,” said Amaryllis, seeming relieved.

“No,” I said. “I would be hoping for … I don’t know, something outside what I know to be possible. And I would probably change my mind after a few hours and wish that I had made the other choice, but part of the reason to make decisions ahead of time when you’re not under duress is so you can make those decisions when your brain is functioning properly.”

“I’m --” Amaryllis was staring at me. “I’m not going to promise that I’ll respect your wishes.”

I shrugged. “I’m not a fanatic,” I replied. “I don’t expect my wishes to have much weight after I’m gone. You’d probably keep my soul around in a bottle for a while, trying to figure out how to get me back, which is what I’d want, but if you didn’t figure out a way to get the rebirth ritual to apply to me, and nothing else worked … you’d be left with a choice, and remember this conversation, and maybe you’d do the thing I wanted, rather than what you thought was right.”

“Have you talked about this with anyone else?” asked Amaryllis.

“No,” I replied. “But I might, if it comes up. I know it’s not what your culture has settled on as correct, and I don’t want to get into a big philosophical argument about it either, so … I trust you to keep a level head.”

Amaryllis said nothing for a bit, then opened the door to the room just a crack so she could see inside. “Val and Fenn are both asleep, can we go pick up that dead drop together? Neither is going to be reliable in a fight anyway.”

“Sure,” I said.

Amaryllis locked the door to the room and we went down the train together, with me leading the way. Her full plate armor would be noteworthy, if not outright illegal, but it was night, and almost everyone had already gone to sleep.

“I was saying that the political situation doesn’t seem healthy to me,” I said as we walked, speaking just loud enough to be heard above the noise of the train. “One hundred males to every female, the rule of the many by the few, isolationism, internal conflicts that revolve around their extremist philosophy … I don’t quite have the full picture yet, I don’t think, but in combination with what I learned at the party and read from the books, it seems like the sort of society that a person should, by rights, want to leave, and I don’t want to just say no because it means sticking our necks out a little bit. We’re in a position of power. I’ve become pretty strong. If we can help people, we probably should.”

“One person,” said Amaryllis, shaking her head.
“Sometimes one person needs to lead the charge,” I said.

“Meaning that you want to get imperial attention?” asked Amaryllis.

“I don’t know,” I said. “Maybe. It was something that Arthur used to say.”

“Ah, a lone hero leading the charge,” nodded Amaryllis. We passed through a gangway, momentarily silencing our quiet conversation.

“No,” I said. “It wasn’t really a game thing, he just meant, you know, that someone needed to be the one to actually do things, and if everyone left it to someone else, then it wouldn’t get done. Someone has to be the one to take up the burden, and it’s almost always better if it gets taken up decisively and with great gusto.” He’d hated when people would ask around about whether there was maybe some interest in possibly doing something.

“Assuming that whatever this princess needs from us is actually worth doing, regardless of whether we’re going to be the ones to do it,” said Amaryllis.

We reached the dining car in silence. Most of the lights were off, with the few left on providing only token light to see the tables by, enough illumination for people making their way up or down the train, but not much more. I was being careful as I moved, worried that the dead drop would turn out to be an ambush. I wished that we had Grak with us to check for traps, especially now that he didn’t need the monocle to do it (though he’d said that he was somewhat useless on the train, given the difficulty and expense of creating a ward that was anchored to the train rather than the earth).

I touched the bottom of the second dining table on the right, burning SPD and preparing for an explosion or something worse, but my fingers only ended up touching a paper envelope. I pulled it away from the adhesive, turned it over a few times, then opened it up, bracing for white powder or some exotic Aerbian contact poison. Instead, it was only a letter, which I read after looking around to make sure that no one was watching.

_I do not know who you are, only that you booked a seat on this train at the last minute, and that you gave a false name at the party. So far as the tuung security detail can surmise, the only reason that you and the others might have for being on this train is an interest in the affairs of the tuung, and given that you did not report the contact between the two of us, it’s my fervent hope that you’re unaffiliated with any of the internal factions of the Boundless Pit.

My name is Esuen. I am the Emomain’s handmaid, and her second cousin, a minor figure within the politics of the Boundless Pit in my own right. For five years, I studied along Emomain, obtaining my own education at the athenaeum in the hopes of furthering the interests of the tuung. You have certainly heard enough of her frippery that you have formed your own opinions on the princess; know only that we are different people. Where the princess sees the Empire of Common Cause as a decadence and delight, I see it as a lesson in the need for growth on the part of the tuung. I learned enough history to see that those who prosper are those who grow and change. Both growth and change are, I fear, out of the reach of the tuung in their present state.

I wish to leave and make my own life away from the tuung. To that end, I am willing to offer anything possible within my limited power. If your spies don’t already know all of our secrets, I would be willing to spill them. If you need help with making the spirit blades work, I would provide it. I have thirty years of good breeding ahead of me, and with dedicated resources, could produce as many as five hundred thousand young, in whatever ratio of genders you prefer. The catch to all this is that I will act only in the best interests of the tuung. It so happens that what I believe would be the best interests might constitute a betrayal in the eyes of my peers._
I have tipped my hand, at least in part. I need to know more of you, who you represent, what resources are at your disposal, and how much you are willing to spend to have me. I would prefer that Emomain goes unharmed. The male tuung that make up our security detail can be bewitched by my scent, but doing so will have immediate repercussions. If you have a plan, let me know it.

If this dead drop is compromised, place your response beneath the last seat in the observation car. I will expect your reply within twelve hours from the end of the party.
The Great Train Robbery

“In the short term, our goal is Kuum Doona,” said Amaryllis, once she’d finished reading the letter. “We’d sat down in the dining car, so we’d have a place to talk without the interruptions of moving between cars. No one was in there with us, which meant we could speak in confidence. “In the long term, our goal is gaining power, with the basic principle being that gaining power is the prerequisite for everything else that we might ever want to accomplish. Unfortunately, we don’t have a quest to extract this handmaid from her society.”

“Shouldn’t matter,” I said. “Or at least, according to the Dungeon Master it shouldn’t. I don’t know whether we’re off-script, or whether the script is being hidden from us, but we should be rewarded for doing things, no matter what those things are, so long as we’re doing them for good reason. Encouraged not to stay still, but not penalized for it, outside of the incentives we have with regard to the locus. And in that context … someone being held against their will and trapped by a society they were raised by but no longer agree with seems like something we should do, especially if the risks to us are fairly minimal.”

“I wish we had a way of tracking experience points,” said Amaryllis with a frown. “It would help inform what we did.”

“That’s backwards,” I said. “Or, backwards from what I tended to do as DM. Experience points are to reward you for doing the things that you set out to accomplish, they’re not really meant to give you the incentive to go out and fight things.” I paused. “It’s somewhat a question of the philosophy of DMing.”

“So if we want you to get stronger …” Amaryllis frowned. “We just do whatever we want to? We ignore the game, the narrative, and the Dungeon Master?”

“Maybe,” I shrugged. “That seemed to be the message that he was delivering to me. Obviously there are pressures, like the locus, and I’m sure others, and there are carrots being dangled in front of us, but that’s not quite the same thing.”

“Then what happened with Arthur?” said Amaryllis. Her ice-blue eyes were watching me carefully, and she said his name with a certain amount of force and deliberation that I found unpleasant. She was trying to push one of my buttons.

“We need to know more about him,” I said. “I’m really hoping that Kuum Doona has some thread to pull on, a hidden journal would be fantastic, but I’m not confident in our ability to understand him based on the historical record, which you said yourself was complicated where he was concerned.”

“And you do want to help this handmaid?” asked Amaryllis.

“From what I know of the tuung, I can see why everyone hates them,” I said. “If this is a chance to create change in their society, I think that’s worth doing, especially if it helps us to get to and secure Kuum Doona at the same time, which it might.” Or maybe I’m thinking of her too much like a defector from North Korea, a refugee that I have to help because doing otherwise would be too callous. I pointed down at the letter, and the list of offers on it. “If she’s willing to give up secrets, then she’s probably willing to give up whatever information she has on the fortress.”

Amaryllis was watching me. “And do you find her attractive?”

“No,” I said. I hoped that her ability to read my face would show that I was telling the truth. “No, no
I don’t."

“You have aesthetic preferences and appetites that are literally woven into how the world was built and how it operates,” said Amaryllis. “It’s a valid question.”

“I guess,” I said. “But the answer is no. The tuung are actively unattractive to my sensibilities. And they’re not one that I remember creating either, though they have features that I recognize, especially the mister tanks and the lopsided genders. Besides, you have to understand that my aesthetic preferences are sometimes in the direction of the grotesque or morbid -- not what I find more attractive, but what I find most whatever-adjective-you-choose. The pustule mages? They’re like something out of a nightmare, but not just a generic nightmare, specifically one of my nightmares.”

“Alright,” said Amaryllis. “I keep having this feeling that once I know you better, the world is going to make a lot more sense.”

“You already know me,” I said. “I mean, we’ve been traveling together for a long time, relatively speaking. We’ve been through some shit, to put it lightly.”

“I know,” said Amaryllis. She shrugged. “It’s something I’m feeling, not thinking.”

“And what are your feelings on extracting this handmaid?” I asked.

“We’re not a state,” said Amaryllis. “We don’t have the authority of a government. Hells, we don’t actually have a place to stick her, aside from the safehouses, and those aren’t sufficiently secure for my liking.”

“Those are thoughts, not feelings,” I said.

Amaryllis sighed and tapped her thumbs on the table. She wasn’t really a person given to fidgeting, as a general rule. She looked tired though, and I was keenly aware of how late it was. “I feel like the books I’ve been pulling from the backpack are my purpose in life. If thirty years of technological advancement on Earth are equal to a hundred years of advancement here, whatever the root causes of that might be, then what we have are three centuries of progress, ready and waiting to be deployed. I’m ninety percent of the way to having a working prototype of a television right now.”

“Really?” I asked. “In a train car? With a box of scraps?”

“Not scraps,” said Amaryllis. “The backpack can’t create electronics, but it can create some electronic components, and what I couldn’t get it to make, I got from the clonal kit in a bigger, bulkier size. But there are problems with different standards, especially because the units that are listed in the books are different from the ones that I’m used to. I’m probably going to have to settle on one or the other, but the clonal kit is finicky in what it decides to give, and sometimes two dips into it will pull out different Aerbian standards. The Empire of Common Cause was supposed to bring everything under a unified standard, but --” She waved a hand. “Enough about that. It’s my own problem, one that I’m hoping to work on during the years I’ll have in the time chamber.”

“Ah,” I said. “I guess I didn’t really think about that.” As soon as I did though, I could see how well the backpack combined with both her expertise and at least nine months with nothing to do but what could be done in a room that was cut off from the outside world. “You’re going to walk out with a baby druid and a plan to change the world?”

“I don’t know,” said Amaryllis. She rubbed her face, and once again, I could see the tiredness written there. “It doesn’t seem like it meshes well with being your companion. If you’re going on one adventure after another, and I’m trying to run an electronics company or a research and development
laboratory, where does that leave us?”

“Come on,” I said. “Let’s write out a response and get you to bed. You’ve been overworking yourself.”

“I was going to keep working on the television when I got back,” said Amaryllis. “It’s low-hanging fruit. And if it doesn’t work, then it will give me a better idea of what kind of forces I’m dealing with.”

“Case in point,” I sighed. “You know, if this proceeds like a normal pregnancy, you’re probably not going to be able to work yourself to the bone? Also, I should get you some prenatal gummies from the backpack.”

Amaryllis touched her stomach, which was covered in full plate. “I agree that at this point, a miscarriage would be tragic.”

“We should probably consult with the others anyway,” I replied. “If we have twelve hours from the end of the party, that means enough time for everyone to sleep and for us to have a short conference. I’m pretty sure that Grak and Val will both vote to help her though, given that her situation mirrors theirs to at least some extent.”

“Trapped in a society or culture or home that she doesn’t want to be in?” asked Amaryllis. “That could apply to any of us. It’s a common thread of backstory in our group. My notes on the narrative are in Fenn’s glove, but yes, we’re all people without a home.” She seemed mournful when she said it, though it was only in the tone of her voice, not the set of her face, which still seemed more tired than anything else. I was hoping that with Kuum Doona we would finally have something resembling a home, rather than a place we were temporarily crashing for the evening.

I felt the urge to say something about tabletop games, how it was almost a necessity for the character to have lost their home and be without messy connections, because otherwise it created too many questions, but maybe the difference between SOC 2 and SOC 3 was that I realized it was better to hold my tongue. She already had that background, I was pretty sure.

Fatigue hit me by the time we got back to her car, and when Fenn gave no signs of easily waking back up, Amaryllis and I came to an agreement that the four of us would share the beds together, Fenn and I in one, Amaryllis and Val in the other.

E,

I will help. Tomorrow night, I will come to your window and use an entad to extract you. All that will be required is that you open your window wide enough for a finger to slip partially through, and for you to touch that finger for roughly ten seconds. That will allow me to put you into a black, airless void. It is very important that you not attempt to leave the void, as this might result in your death. You will need to hold your breath; if it’s possible, you can open the window wide enough for me to slip you a breathing mask and a tank of air. I will remove you from the void once I am back away from your car and to safety. For this plan to work, I will need to know the position of the window I should meet you at, as well as a time to meet you, or some other signal of your choosing. If all goes well, no one will know that you are missing until the morning, and I can sequester you in my room until we arrive in Headwater the next day, then move you, unseen, to a secure location in the city.

You should know that I am not a representative of any government or organization. My companions and I possess a fair amount of power, but it is not power on the level of a nation. If your ultimate
goal is the reform of tuung society, you will need more help than we can provide, but once we have freed you from the security detail, you will have the opportunity to pursue such ends on your own -- perhaps with our assistance.

There is information that you can provide us in return, but it is not a precondition of our assistance.

I hope for a response before nightfall, delivered to either of the previously established dead drop locations.

J

“Okay,” said Amaryllis, reading through the letter a third time. “I think this looks good.”

She seemed practically chipper, which made her the only one of us. It was early in the morning, just after daybreak, and we were packed into the cabin that nominally belonged to Fenn and I. Fenn was nursing a hangover and intermittently attempting to use blood magic to fix it, and Val looked like death. Amaryllis had collected Grak from his room, and he was uncharacteristically unkempt; he was always a little bit rough around the edges, but it was in something of a studied way that his current condition decidedly wasn’t. I wasn’t too bad off, aside from having been a little light on sleep, but I had never been a morning person.

“Are we sure it’s going to be Joon?” asked Fenn. She popped a glass of water from her glove and took a long drink, before returning it to the glove. “I could do it, if we’re waiting until this evening.”

“I could,” said Val, wincing slightly at the effort of speaking. “With a demon. Even drunk I could.”

“No, you couldn’t,” said Amaryllis. Her voice was gentle. “The glove requires the user to have investiture, by me, and we can’t invest you with items.”

“Oh,” said Val. She curled up in her seat and closed her eyes, then since that apparently wasn’t enough, covered them with her hand. “Let me know if I can help.”

“The bigger question is whether we should do this at all,” said Grak.

“No, the bigger question is who the dwarf you were with was,” said Fenn. “Got the name, didn’t get the full story.”

“It’s not your business,” said Grak, sniffing slightly.

“With respect, you shouldn’t have given your real name,” said Amaryllis.

“I didn’t know where the night was going to take us,” said Grak. “I had not known we would join the party.”

“Wait, did you arrive with him?” asked Fenn. “And leave with him?”

“It’s not our business if Grak doesn’t want to share,” I said. He gave me a nod. “Not that I would mind hearing, naturally, but I’d rather not press him on something personal, which I would hope we’d all understand.”

“I shared accommodations with him,” said Grak. “There are four beds in my room. His is the only other that is occupied. He was talkative. Friendly. I gave him my true name because I did not want to risk naming a clan he knew. Except that you could have given the name of someone else in your clan. I waited for someone else to call him out on that, but no one did. “We went to the observation car together. One of the tuung gave us an invitation. I agreed because I was lonely. After the party
we went back to our room together.”

The silence lingered as we waited for him to continue.

“So did you guys touch butts or what?” asked Fenn.

“Fenn,” I said.

“Juniper,” said Fenn, sticking out her tongue.

“Val,” said Val, briefly uncovering her eyes to look out. Fenn laughed, and Val smiled before covering back up.

“Grak,” Amaryllis began, but Fenn cut her off.

“Mary!” declared Fenn, hangover briefly forgotten as a giddy smile crossed her face.

“Okay, that’s enough of that,” I said.

“Aw,” said Fenn. “But we were having fun.”

“Is touching butts what dwarves do?” asked Val, eyes still covered.

“No,” said Amaryllis.

“We’ll tell you when you’re older,” said Fenn.

“I could eat a devil that would know,” said Val defensively.

“This is all really beside the point,” I said. “If Grak has made a platonic friend, great, good for him. If Grak has a krin, then great, good for him. If it’s just a krinrael, then that’s fine too, and we’ll support him in whatever it is he wants or doesn’t want without prying, because that should be the standard that we all adhere to, both because that’s what friends should do, and to preserve the group’s clearly tenuous grip on sanity.”

Loyalty Increased: Grak lv1 11!

Loyalty Increased: Amaryllis lv1 19!

“We should deliver this letter to one of the dead drops,” said Amaryllis. “And then we should prepare for the extraction as best as we possibly can.”

And so approximately eighteen hours later, I found myself walking down the train, psyching myself up to briefly exit the train, crawl forward to the left middle window of the frontmost tuung car, extract the handmaid into Sable, and then get to safety before she ran out of air. If at all possible, I would slip her a breathing mask and a tank of air, but her response hadn’t held a reply to that particular line of inquiry, and we weren’t sure whether the windows would be the same as they were on our part of the train, nor whether she would be able to open it that wide without drawing attention to herself. It was a question mark in the plan, one that I really didn’t like, because without the tank, I’d have to get us to safety in the space of a minute, which seemed like a tall order considering that I was also trying to be stealthy.

The gangways -- the spaces between the cars -- were partially open, with chains on either side to make sure that no one would fall, and an additional covering that hinged between the cars to keep out rain.
I stopped in the middle of the gangway, four cars from the heavy engine, and looked out into the night. The train was passing through a part of the Lion’s Mane where there was a fair bit of water on either side of us, and to my left I could see ocean stretching out into the distance, lit by the multi-colored stars that I still wasn’t bored of looking at. A few small towns dotted the coast, visible by what lights they still had on, but it was to all appearances a calm and quiet night, which I decided to take as a good omen.

Not so calm and quiet for me, given that I’d be moving against eighty mile an hour winds. I took a deep breath, then began the climb.

The wind hit me as soon as I climbed up, and I briefly struggled until I could push up and onto the roof. Given that there were tuung guards on the gangway before the train car that had held the party, it was necessary for me to start back a bit and go over, but I wasn’t at all pleased at how long that made the trip.

I kept low to the roof of the train as I moved, hoping that any sounds I was making would be masked by the general whipping of wind and the rumbling of the train. Going across this way was dangerous, but I had come with as much preparation as eighteen hours and a whole heap of magic would allow me. I had a heavy magnet in each hand, powerful neodymium ones from Earth courtesy of the backpack, with handles and padding on them so that I could maintain a good grip and muffle the sound of them as I slid them forward. Ropey was wrapped around me, making two loops that came out from above my shoulders and helped to grip, and two ends that came out from around my waist. I had the Anyblade as a ring, though it was a bit of a last resort; the plan was that if I somehow got tossed back, I would be able to make it into a blade and slam it down into the train to catch myself, hopefully without dislocating my shoulders in the process. In addition to all that, I had my bandoliers on, strapped down tight, and my throwing dagger in a sheath on my belt, with a balaclava pulled down over my face, just in case.

The plan was to accomplish the extraction without so much as a single scratch on the train or a single witness as to what happened.

I was halfway across the backmost tuung car when I saw them behind me. Two tuung in their silver breastplate had climbed up and were crawling forward, their powerful legs and toes made for gripping slick rocks serving them well for moving under the force of the wind. I had tried my hardest to cross the gangway in complete silence, but I must have done a worse job than I thought, or they were more observant than I’d given them credit for, because now the two guards that I had been most worried about were making their way toward me, keeping low to the roof of the train car. One of them had his blade drawn, a silvered length of metal and a handle that was long enough it seemed like it almost qualified as a spear. Where the tip of it was held in front of him, the wind seemed to visibly part, and after he screamed something to the other guard, both their blades were out, allowing them to avoid the worst of the rushing air.

I wanted to explain that I wasn’t going for the princess, only the handmaid, that I didn’t want to kill them, that I was a good person with good intentions. The winds made any conversation impossible, and even if they hadn’t, I was almost certain that this wasn’t the sort of thing that I could talk my way out of. The guards weren’t wholly innocent, but they also weren’t in league with outright villains like the guards we’d encountered (and killed) in Trifles Tower.

I resolved to try to settle things non-violently if I possibly could, just as one of the tuung threw his sword at me. I took the hit to my leg and it drove straight to the bone of my thigh. In an instant it was gone, back in his hand. I burned a few fingerbones to bump END and seal the wound, but not before my pant leg was soaked through with blood. I cursed myself for not wearing armor, having thought that it would interfere too much with being stealthy and agile. When he threw the sword a second
time, I released one of my grips, and turned to the side, letting it sail past me. They weren’t stopping to ask me questions -- which would have been impossible in the wind anyway -- they were just going to kill me and figure out who I was later, if they didn’t know who I was already.

The smaller tuung, the one that had pulled his sword out later, threw his own sword, and I twisted to the side again, this time burning SPD from the bones of my arm. My reactions were good enough, and the sword slow enough, that I was able to catch it in mid-air. I hadn’t been sure exactly what that would accomplish, but as it was revealed a moment later, the answer was nothing; the sword vanished from my hand, leaving behind moisture and mist that was driven away in an instant by the rushing wind, and reappeared in the tuung’s hand.

I started moving backward, closing the distance between us. I could heal back from whatever wounds they inflicted, and had enough blood to spare, but eventually I was going to run out of bones to burn for healing, and then I was going to be in trouble. I kept taking the wounds and healing them closed until I was twenty feet away from them. They stopped throwing their swords, perhaps because they misunderstood the nature of my healing, which wouldn’t have presented as bone magic to them, given the fact that I wasn’t holding onto any bones. My pants were in shreds, and the top of the train was slick with my blood, much of which had gotten onto the tuung. The train had already been treacherous before, but now that it was slippery with blood, it was downright deadly. The magnets were the only thing stopping me from slipping, and I could feel that they’d become looser than they were when I started out. If they started sliding, I was going to have to take emergency measures.

I used Ropey to attack, throwing him backward and letting him wrap himself around the wrist of the larger of the tuung. I yanked him off balance and felt the magnet slip beneath me as Newton’s third law bit me. I saw the rope twist unnaturally in the wind to avoid a slicing strike from the tuung, but that was a last gasp of futile action. The tuung had lost his footing in the blood, and whatever sticking ability his exposed toes gave him, it wasn’t enough; he fell, slid backward, and slipped over the side of the train car. I didn’t have a good enough angle to see him get dashed against the ground at eighty miles an hour, and any sound it would have made was swallowed by the winds.

(There was no message saying that he’d been defeated, which gave me hope that I had somehow avoided killing him.)

That left the smaller one, who was looking at me with wide eyes. He threw his sword, and I burned SPD again to catch it, then tossed it to the side and used my elbow to push the single magnet I still had a hold on up from the roof of the train. I slid in the wind and on the slickness of my own blood until I collided with him, then managed to slam the magnet back down and skid to a stop. I was grappling with him before he knew what was happening, and Ropey was helping, loops surrounding arms and those powerful, kicking legs. I fashioned the Anyblade into a collar around his throat, then forked the blade in three and pointed each of them at his face. He stopped struggling after that, and his sword, which he’d been trying to slice at me with while I attempted to pin him, disappeared back to wherever it had been pulled from.

“I don’t want to hurt you!” I screamed around where I thought his ear probably was. He made no response to that. I was holding him with one arm, the other desperately gripping my makeshift handhold, which slipped just a bit every time the train went over less than perfectly laid railing.

Had they raised the alarm? If they had, the mission was fucked, because the handmaid wouldn’t be there waiting for me, she’d be buried behind guards, who would pull her away from the window. But no one had popped their head up, and there were only two guards stationed on the gangway between cars, which gave me hope.
I released the tuung, trusting Ropey to hold him in place and the Anyblade wrapped around his throat and pointed at his face in triplicate to keep him from moving. With my free hand I pulled a flask from Sable, undid the top by holding it awkwardly and using my fingers, then downed the entire flask full of pure grain alcohol in one go, wincing as it burned its way down. Then I was back to touching the tuung, and through the magic of the Liar’s Cup tattoo, transferring the alcohol into him before it could affect me all that much.

When he passed out, the problem became more manageable. I let us slip and slide the rest of the way down the train car until we got to the gangway, then checked that it was clear below. The fact that it was empty meant that the extraction could still go ahead as planned. I lowered the tuung down, very carefully, and let his body hit the gangway. It was closed off enough that I wasn’t worried about him falling to his death, but he’d be a dead giveaway if someone came by. That was better than killing him though.

“Okay, while Arthur and Tiff are arguing from the bushes, I’m going to sneak off and kill the guards,” said Craig.

“You can’t do that,” said Tiff with a frown.

“Joon?” asked Craig.

“Tiff, you can’t dictate someone else’s actions,” I said. “By the way that Craig has been playing Miaun, it’s entirely in character, and even if it weren’t, I don’t like being character police.”

Tiff frowned at me. “Well okay, then I roll Perception.”

“I’m the one that rolls Perception,” I said. I rolled the dice behind my DM screen, red for Arthur, green for Tiff, and blue for Maddie, in case she wanted to be a part of any of this. Low numbers for Tiff and Arthur, high for Maddie. “And Craig, you’re going to have roll Stealth. I’m assuming from the way you worded it that you did intend to be hidden from the party.”

“With all bonuses, 25,” said Craig after he’d rolled the dice. He was smiling, pleased by the result.

“Okay,” I said, turning to Maddie. “Raven, you’re the only one that sees your brother moving out of his position as he uses the available cover to close in on the guards while the other members of the party engage in a furtive whispered conversation. What do you do?”

Maddie smiled at me. She always liked getting the group’s attention, but never seemed to be willing to take it. I’d often wondered whether she’d be any different without her brother around, but she only showed up when Craig deigned to bring her. That was a question that I’d have to wait years to get the answer to. “Can I cast the ghost sound spell without drawing attention?”

“It’s got a verbal component,” I said. “DC 0 Listen check, plus 1 per 10 feet, and you’re 120 feet away, so DC 12 for them to hear.”

“She’s got Silent Spell,” said Craig.

“Maddie, those guards are people, with lives,” said Tiff.

“You were having an in-character conversation with Titon,” I said. “If it’s a silent spell, you’re not going to be able to hear it, which means that all you would be able to do is see it, and I’ll let you roll Perception against Maddie’s Stealth, but --”

“I’m making an out-of-character argument,” said Tiff. She brushed a strand of hair away from her
face, then turned to Maddie. “The margrave’s guards don’t deserve to die, and we should especially
not be the ones to kill them.”

“I’d be the one killing them,” said Craig. “She’d just be providing a distraction for me, right Madds?”

“Think of what Raven would do,” said Tiff.

“You know these aren’t actually people, right?” asked Craig.

“They are to Atticus,” said Tiff, folding her arms across her chest. Chronologically, this would have
been way before we were dating, and before I’d really even developed feelings for her. I’d always
liked her, and always been able to see what Arthur saw in her, but there was a time when she’d been
nothing but an opposite-gendered friend.

“A better argument would be that these men signed up to be guards,” said Arthur. He caught a look
from Tiff. “I’m not saying it’s a good argument, but they took a paycheck knowing that they would
be defending the margrave with their lives.”

“That’s terrible,” said Tiff. “Those men probably have parents who care about them. They’re
probably married with kids. And even if they were orphans with nothing and nobody, I wouldn’t
want to kill them.”

“You’re not killing them, I’m killing them,” said Craig. “And Arthur’s right, they signed up for the
margrave, they must have known he was a dick, reap what you sow.”

“To clarify, he wasn’t actually a dick, he just didn’t believe you about the horn,” I said. Craig rolled
his eyes.

“I don’t think it’s your place to say whether he was a dick or not,” said Arthur. “It’s a question of
interpretation, not fact.”

“I can’t say how I intended his character to come out?” I asked. “I’m just -- I don’t want to go down
the wrong path here because I screwed up the character. He wasn’t supposed to be a dick, he just
didn’t believe you, because you didn’t have any proof.” (That had been the whole point of an earlier
plot thread that was now, apparently, dropped. The margrave saying he wouldn’t give up the horn
without some proof was supposed to spur the party to find proof. This whole ‘steal the horn’ thing
had been spun up from whole cloth, and I was happy that the party was getting in fights, because it
meant I had time to prepare something new for them, putting down people and scenery just ahead of
their questions.)

Arthur shrugged. “If you screwed up the character, we’ll just go with the screw up, it’s fine, that’s
how improv works,” he said. He turned back to Craig. “Titon isn’t going to back you up if this goes
badly.”

“Atticus isn’t either,” said Tiff. She seemed annoyed, but there wasn’t really anything I could do
about that, other than delivering Craig a harsh comeuppance that I had already decided that the
circumstances didn’t warrant.

“Okay,” I said. “Leaving all the OOC stuff aside,” stuff that should be interpretation of characters,
not stated outright, if we’re being fair, “Maddie, you were about to cast a silent ghost sound,
presumably to create a distraction.”

“Yes,” she said. “I do that.”

“Okay, where?” I asked. “What does it sound like?”
“Like,” she said, gesturing with her hands for a minute as she tried to think. “Like knocking? Like someone is knocking on the door from the other side.”

“Good,” I said. “Miaun, you see the guards turn away from you. Titon, Atticus, you hear the knock, but you don’t see Miaun anywhere around you.”

“I stay silent, watching, with a cold feeling in my gut about what’s about to happen,” said Arthur. Tiff frowned, keeping her arms crossed.

“Atticus?” I asked. “Any reaction?”

“Assuming that I can connect the dots?” she asked. I nodded. “Then … Atticus stays quiet. If we have the time later, I’m going to track down the families of those men and anonymously give them some money, just to make myself feel less guilty.”

“So I’m finally good to attack?” asked Craig.

“Yeah,” I said. “How do you want to do it?”

“What level are they?” he asked.

I sighed. “You have no idea,” I said. “You know that they’re rank and file guards for the margrave, and he’s not likely to have posted his best men around this time of night. They’re a little more alert because of the knocking, but before that they didn’t seem exceptionally well-trained, and both their armor and weapons show wear, not the kind that comes from fighting on a regular basis, but more from being put on and taken off over and over again for years without seeing much action.”

“So, low level,” said Craig with a nod. I shrugged. “I throw a dagger at one, then the other, the ones I’ve got on my hips.” He rolled the dice without waiting for me to say anything. “19 and 23, hit and hit? They should both be sneak attacks.”

“You don’t need to roll damage,” I said. “They both fall, one with a dagger in his throat, the other with a dagger going through his eyes.”

“Fuck,” said Tiff, leaning back.

“Should have stopped me if you cared so much,” said Craig with a shrug.

“I would have, if I did,” said Arthur. “Sometimes a guard is just in the wrong place at the wrong time, and I’m not so far along the law/chaos axis that I was willing to tank the mission. Don’t go murder-happy again though, not without talking about it first.”

I made my way back down the train again, this time unimpeded. It was easier going after I’d gotten my second magnet back. I stopped at each of the gangways, looking for guards, but whatever mess had happened up on top of the train cars, it didn’t seem like anyone was looking for me. That they had even bothered posting guards in the first gangway was paranoia; posting them at every gangway between cars that they controlled would have been the sort of paranoia that they couldn’t justify.

I was worried that the tuung I’d left behind was going to wake up and do something in a drunken stupor, either alert the others or kill himself, and I wasn’t sure which would be worse. I worried about the tuung that I had knocked off the train, and the missing message of defeat. I was hoping that he’d lived, but dreading the possibility that he had, somehow, managed to stay on the train.
It would have been so easy to kill them, and maybe that was why I hadn’t. I could have thrust Sable behind me and let loose with all kinds of garbage that the winds would have taken and slammed into them. I could have used the throwing dagger and engaged in a battle of thrown weapons I was pretty sure I would win. There was a void rifle in the glove, along with other weapons, weapons that I could easily have aimed down the length of the train to outright kill both the guards. It wasn’t as if I hadn’t killed before, I’d even killed guards, but the circumstances seemed different here. Aumann’s guards had known what they were signing up for, they’d probably had options elsewhere in Barren Jewel, but the tuung guards were products of a society that had dictated this role for them, and I was almost certainly reading too far into things, but the smaller one seemed like he was some dumb, young kid that had been drafted into the Vietnam War.

Or maybe it was that killing Aumann’s guards had never sat quite right with me, and I was overcorrecting here. I’d been in therapy for long enough to know that I didn’t like it, but there was a part of me that was starting to think that maybe it would be good to have a neutral third party without an agenda that I could talk to, given how much mental shit had been piling up.)

I reached the frontmost tuung car without incident, streaks of blood now left behind me, my magnets stable against the steel roof of the train car. I slid forward and positioned myself above the window, then leaned down over the side. It was stomach-churningly precarious, with not just the wind going by, but the ground moving quickly below me. I reached down with Sable and pulled a mirror on a rod out, one of a number of things I’d prepared ahead of time, just in case, and lowered it so I could look into the dark car. I saw the handmaid standing there, and beside her, a tuung guard.

I swore beneath my breath, the sound eaten up by the wind as the curse left my lips.

I let Sable take the mirror from my hand, then brought out a void pistol and began lowering myself down, trusting in the sentient rope wrapped around me to keep me on top of the train. From the play of shadows I’d seen in the room, I was fairly sure that I wasn’t going to obscure anything in the guard’s line of sight, but I would want to be quick about it either way. As soon as I had eyes on the room, I reached down with the void pistol and pressed it against the glass.

Before I could take my shot, the handmaid saw me. Her eyes went wide and she rushed forward, grabbing the guard by his shoulder and spinning him around to face me. I stopped what I was doing and let the void pistol slip back into the glove as I watched them, ready to move at a moment’s notice. The guard didn’t seem that surprised to see me, and his sword didn’t appear in his hand.

The handmaid moved toward the window and opened it a crack. To my surprise, and considerable displeasure, the guard was the one who slipped his hand out. I couldn’t hear anything, and I doubted that they wanted to make any noise, but the handmaid gestured that I should take the guard. Well, fuck. I wasn’t really in a position to make a negotiation, or to tell her that this wasn’t what we’d agreed to. I produced a breathing tank with mask from Sable and when the handmaid opened the window further, passed it in, then a second one for the guard. They put them on with only a little difficulty, and once they had done a breathing check, I was on my way back down the train, with one more passenger than expected.
“Extra passenger,” I said, once I was back in our train car. “She had a guard with her that she wanted to come with.”

“Altering the terms so soon doesn’t bode well,” said Amaryllis. She was dressed in her full plate, ready for war, but that apparently hadn’t been needed. For now, it was just me and her; the others were stationed around the train, trying their best to be inconspicuous as they kept watch for something amiss. I’d passed both Fenn and Grak, who were sitting in the dimly lit dining car. They’d noted my change of clothes, I was sure, and maybe the way my hands were wet from the quick wash I’d given them using water from Sable, but I had been walking quickly, and gave them a nod. The bloodied clothes had gone into the glove, where they wouldn’t incriminate me, along with all the other tools I’d used. “It otherwise went smoothly?”

“Guards came after me,” I said. “Two of them, the ones that were on the first gangway. I’m not sure whether they managed to raise the alarm or not, but I don’t think so.”

“That’s not ideal,” said Amaryllis.

“One went over the side,” I said. “No message from the game saying he’d been defeated, and I don’t know what to make of that. The other one is laying drunk in the gangway, courtesy of Liar’s Cup. I don’t think he’ll be able to identify me, given the mask, but some of the entads I used were distinctive.”

Amaryllis sighed and pinched the bridge of her nose. “Okay, that’s -- also not ideal. Any that people would be able to cross-reference? Any that you’ve used while on this train?”

I held up my hand. “Sable, maybe. Fenn wears it out in public, which I think will have to stop for the time being. I was out of his sight when I used it though, and he got what I’m really hoping wasn’t a lethal dose of alcohol shortly afterward, enough to make him blackout. He saw the Anyblade, but that’s easy for me to hide wherever I want to. And the rope, naturally, will be staying in Sable for the time being.” I paused and cleared my throat. “There was no one in the hallways to identify me on the way back, or on the way there. I think I’m clean.”

“Okay,” breathed Amaryllis. “I’m confident in our ability to slip past an investigation, if there is one. The biggest risk is that the train is brought to a stop while they try to figure things out, but we’re close enough to Headwater now that I don’t think they would do that. They might seal the train once we get there, but they almost certainly wouldn’t ward against teleportation, given how unlikely it would be.” She shook her head. “I don’t know, it depends. It’s not good, but at least you’re not dead.”

“Thanks, I care about you too,” I said. “Should I let her out?”

Amaryllis nodded. “Leave the guard in.”

I held my hand forward and pushed Esuen out of the glove, trying to ensure that she would be oriented so that she was on her feet. She appeared with a slight pop, and pulled off her oxygen mask as she looked around. The place where the mask met her skin had left an impression that was slow to fade; I wondered what aspect of tuung physiology made that happen after only a few minutes.

“Thank you,” she said with a curtsey toward me. She took the hose from her mister tank and sprayed herself with it once, allowing the droplets of water to land on her skin.
“We weren’t expecting two,” I said.

“Where is he?” she asked.

I held up the glove. “What would you have done if I hadn’t been able to carry both of you?” I asked.

When she frowned, her wide, frog-like lips drooped down, more expressive than a human’s could possibly be. “I gave him my scent a week ago,” she said. “He is bonded to me. I don’t know that we have time enough for me to explain it.”

“We have time,” said Amaryllis. Her voice was gentle.

“Male tuung are dormant until they take a scent, with no interest in women beyond the academic,” said Esuen. “Afterward, they are in something like heat, filled with desperate need to mate. They have a month, by your calendars, until they die. Souno was the head of the security detail, and without his aid, I would have never been able to arrange this escape.” On hearing that, my guess was that he was the one who flicked the lights off, and probably also the one who had given her whatever passenger manifest she’d found us on. Maybe he’d even been the one to suggest us as guests to the party.

“You doomed him to death?” asked Amaryllis.

“Yes,” nodded Esuen. “The males accept this, once they’ve taken a scent, so long as they can breed.”

“But ... they don’t accept it before they’ve taken a scent?” I asked.

“Some do,” said Esuen. “I know that by the common imperial standards, what I have done is abhorrent. It is abhorrent by tuung standards as well, though for different reasons.”

“You wanted him to come with you so that you could absolve yourself,” I said, suddenly understanding. “You plan to mate with him, to fulfill his need.”

“Yes,” nodded Esuen. “There are other, practical considerations,” she said. “It was easier not to lie to him, and if we had left him behind, he would have talked about things I spoke of to him, matters that it was necessary to inform him of in order to secure my escape. You asked what I would have done if you had been unable or unwilling to take him? I would have killed him, if I could bring myself to do it.” She looked at me. “It is a matter of the future of my species.”

“We understand,” said Amaryllis, speaking for me. I didn’t agree with her, even when I tried to reframe it in Earth terms. “The train will arrive in Headwater tomorrow. I’m fairly confident in our ability to escape if things get complicated, and if they don’t get complicated, we’ll find somewhere for you to lay low. Remember that we’re offering aid in exchange for information and assistance on your part, so we can both get what we want. We have business in the Boundless Pit.”

“You mentioned,” nodded Esuen. “I would prefer we discuss the matter after we have some amount of safety. If you could give me some forewarning about what the matter is though?”

“There’s a stronghold, three miles down the Boundless Pit,” I said. “Kuum Doona. We intend to take it.”

“It moves,” said Esuen. Her eyes moved between me and Amaryllis. “It appears on one section of the rock face one day, then another the day after, sometimes staying for periods of time, sometimes moving rapidly. I can give you what I know about it, the defenses it possesses, what knowledge there is about how it works, but I won’t be able to guide you. The tuung have tunnels in the walls,
equivalent to roads, but they would be heavily guarded.”

“I didn’t expect much more,” said Amaryllis with a nod. “I’d like to have a discussion about your political goals and how we might help you achieve them.”

“I would like for Souno to be taken from wherever he is now,” said Esuen, giving another curtsy in my direction. “We will have much to discuss, but the hour is late.” She looked around the small room. “May I ask about accommodations?”

“We’re staying on the train for the time being. I’ll be keeping guard,” said Amaryllis. “I spent most of this day resting so that I would be fresh through the night. You and Souno can sleep in these beds. There won’t be much in the way of privacy until after we’ve got a secure place in Headwater.”

I held out Sable and popped out the guard she’d brought, Souno. His sword was in his hand the moment he appeared in the car with us, and he spun once to look around before releasing it back into the aether. He gave me a bow, then gave Amaryllis her own.

“You said that you were not representatives of any formal organization,” said Esuen. From how she said it, I got the sense that she had been waiting on Souno to appear before she spoke on this particular matter. “Yet I have no proper explanation for who you are, or what your own interests are.”

“We’re travelers,” said Amaryllis. “Independently wealthy adventurers. Kuum Doona has riches that we’re hoping to exploit, if we can get past the tuung and the innate defenses of the fortress. That’s not the entirety of why we’re helping you though.” She glanced at me. “It’s our opinion that being held against your will is tantamount to slavery, and that’s not something that should be tolerated within the Empire, even if that’s how the Empire has come down on the matter.”

Esuen nodded, but it was a hesitant nod. “I will have to think on the ramifications of that.”

“You’ll probably need bigger guns,” said Amaryllis. “Someone who can give you suitable land to make your own, and some kind of military or economic authority to make sure that no one comes after you or bosses you around. If not that, then someone who you can act as vassal to, or who will work in your interests in a more close manner.”

“Yes,” Esuen nodded, more confidently. “And you have those connections?”

Through this all, Souno hadn’t said a word. His hands rested on Esuen’s shoulders, and he stood behind her as though he felt the need to be ready to protect her. He had misted himself from her tank once, but that was it.

“Connections are complicated,” said Amaryllis. “I know some people fairly high up in the Empire, maybe even some who could help you, but I’m not sure this is a fight the Empire is willing to pick, given the non-intervention compacts. If they helped you in direct defiance of the tuung of the Boundless Pit, it wouldn’t just be the other tuung that got up in arms, it would be dozens if not hundreds of other minor kingdoms that have refused to join for one reason or another, all of them feeling threatened. No one wants another counter-Empire. And either way, the Empire’s budget for that kind of thing is miniscule, given how much area they cover, not to mention the inability of the member nations to properly cooperate on almost anything.”

Esuen bulged one of her eyes, in what I was fairly sure was the tuung equivalent of incredulity, given that they didn’t have eyebrows. “Simple adventurers?” she asked.

“I know the lay of the land well enough to get by,” said Amaryllis. To her credit, she sold the lie well
enough that I would almost certainly have believed it if I didn’t know better. “We’ll talk more later, once you’re safe, about both issues.” She looked over to me. “I think I have it from here.”

“I wanted to know about the passenger manifest,” I said, turning to Souno. “Who’s seen it, who knows about the discrepancy, and how much do we have to worry?”

“I was under Esuen’s sway when I took it from the rail company,” said Souno. “I am the only one who knows of your malfeasance.” His voice was deeper than I’d expected, and his Anglish was much better than any of the other guards I’d talked to. “It has been destroyed as part of our escape.”

“Okay,” I said with a nod. Works for me. I gave Esuen as deep a bow as the confined space would allow, mostly because I would have felt weird shaking her damp hand. “I hope things work out.”

“As do we,” said Esuen. Her hand went up to Souno’s, which was resting on her shoulder.

Despite my fears, the train didn’t make any sudden stops in the middle of the night, and though we watched some of the tuung guards moving up and down the train from our vantage point in the dining car the next morning, they didn’t give us much of a second look. Fenn and I sat on one side, while Val and Grak took the other.

“What do you suppose that’s all about?” asked Fenn, eyes twinkling as she watched the tuung.

I was chewing the inside of my lip. “Probably just getting ready for Headwater,” I said.

“You know, next time we should all get side-by-side compartments,” said Fenn. “I didn’t really like being spread out.”

“It was what they had available,” said Grak.

“Well it worked out for you,” said Fenn with a smile. “Still thinking that it’s a temporary thing, or are we going to get a traveling buddy?”

“It’s temporary,” said Grak. He snorted slightly and began eating his eggs with more studied intensity than he had been before.

“You shouldn’t bully him,” said Val. She hadn’t ordered anything for breakfast, and had instead opted to read while the rest of us ate. I was a little bit anxious, and the book from Earth sitting out in the open wasn’t helping, nor was the fact that we were sitting in the dining car together. So far as anyone knew, we had reason to be together, if Val was supposed to be my sister and Fenn was my fake wife. If Grak was questioned, he could just say that he’d met us at the princess’ party. I was just on edge though, and the book became the focus of that. The UPC on the back was the biggest giveaway, and the first few pages would be full of unfamiliar places and legal jargon to anyone who looked at it.

“It’s not bullying,” said Fenn, rolling her eyes.

“It is,” said Val, looking up from her book. “And that’s not okay.”

“It’s gentle-natured ribbing,” I said. “Not bullying.”

“What’s the difference?” asked Val, scrunching her nose slightly.

“It’s a fine line,” I said. “Most of the difference is in the fact that Grak knows that Fenn cares deeply about him. Some of it is tone. Mostly if it’s your friends doing it, you shouldn’t immediately think
that they’re being mean, you should think that they’re just teasing. Like, if I told you that you’re a dork for reading Harry Potter, you should understand that it’s meant affectionately, even if I don’t get the tone quite right.”

**Loyalty Increased: Valencia the Red lvl 20!**

**Companion Passive Unlocked: Soul Capture!**

“Update,” I said, closing my eyes.

**Soul Capture:** If Valencia has access to a soul, the anima exa, she can imbibe it in order to take whatever power it possesses, similar to the Essentialist practice of Soul Scaphism, but with more breadth and depth. Duration depends largely on how intensively she uses the soul in question.

I opened my eyes. Everyone was looking at me. “It applies to souls now,” I said, voice low. “Drinking them, I guess.”

“Oh,” said Val. She was paused in the middle of the book with her thumb in between the pages. “I don’t think I like the idea of that.”

“It does seem a little bit outright evil,” nodded Fenn. “Not that I’m an expert or anything. Second Empire stuff.”

“We don’t need to do anything with it,” I said. “I think the use cases are probably … I don’t know, using someone’s heirlooms as though you had their bloodline? Being able to do some types of magic, if we carefully label all the souls we collect?”

“I don’t want to do it,” said Val, shaking her head. “I’m not a dementor.”

“What’s that?” asked Grak.

“You should read these books,” said Val, pointing down to *Harry Potter and the Prisoner of Azkaban.*

“Guys, we should have a book club,” said Fenn. “Wouldn’t that be great?”

The conversation moved on from Valencia’s new (and largely unwanted) ability, partly through force of will, since no one wanted to talk about it. I was left there with a knot in my chest, not feeling particularly less anxious about my life, such as it was.

I wanted the game to come back. If I’d said that out loud, Grak probably would have rightly chided me for complaining that the voice of all creation wasn’t talking into my ear as much as it had been before, especially given that I’d outright said that was what I wanted. It was unnerving to not have any notifications at all about the quest with Esuen, and no indication that she was a companion. The whole thing stunk of being a setup by the Dungeon Master of some kind, like he’d made a nudge or two somewhere to get me on the train with the handmaid, but I was left flying blind.

I was still feeling that tight anxiousness when the train began its approach into Headwater, the city that sat above the Boundless Pit. The curve of the rail was such that we had a decent view of the descent down into the geographical depression that housed the pit. It was dozens of miles wide, mostly dark gray stone forming crags and slabs, with green mosses and grasses growing up where they could. A river ran down into the basin, thick and quickly flowing, and it had been there long enough to carve a little valley for itself. It wasn’t some mere stream; this was the Buol, a river that drained most of a continent to the east of Pit that made up that edge of the Lion’s Mane. The Buol was more than a mile thick as it passed Headwater and dumped over the edge of the Boundless Pit.
(Per legend, the Boundless Pit had been carved by the Buol’s might, which no mere ocean could have contained, but I was fairly sure that whatever the hell was going on geologically or hydrologically, it wasn’t that. It smacked of being more mythological than Aerb usually tended to be.)

Headwater itself was no metropolis, nothing like Cranberry Bay or even Silmar City, though it was large enough that a few prominent buildings gave the suggestion of a skyline. It was perched to one side of the Buol, most of the bigger buildings closer to the edge of the Pit, and the city as a whole gave the feeling of being clumped up and tightly packed, despite the wide open basin around it.

I was prepared for almost anything when we pulled into the train station, but all our scenario planning turned out to have been for nothing when the doors were opened up for us and we were free to go. Amaryllis had joined us just as the train was coming to a stop, having put the handmaid and her guard into the glove as the very final step of our preparation. As some of the very few people without any luggage, we could move a little more freely, and it wasn’t too long before we were out of the station altogether. Amaryllis was still in her armor, which drew some fleeting attention, but plate armor wasn’t illegal, and while it was unusual, it wasn’t so unusual that we thought anyone would stop us.

Headwater was lousy with hotels, since the city’s two primary functions were tourism and diplomacy, both of which had a fair amount of demand for temporary housing. We picked the biggest of the hotels, then purchased a family room on the seventh floor; three beds would leave us a little short, but it would serve as a base of operations for the time being. Per our agreement, Grak picked out and paid for a much smaller suite for the tuung on the same floor, having come in separately. Our cover story on the train had been that he didn’t know us, and that seemed like a useful fiction to work under for the time being.

The biggest complication was that we didn’t want our temporary guests to know about the teleportation key, which really limited how and where we could move around.

Not much more than a half hour after we’d gotten off the train, Fenn slipped on the glove and popped Esuen and Souno out into the family suite. They took a moment to look around, and Souno checked the perimeter of the room, stopping briefly to feel at places he thought were conspicuously good for hiding whatever his enemies might have hidden. Grak had already made the same tour, looking with eyes that could literally see magic, but we didn’t mention that.

“Thank you,” breathed Esuen. She walked over to the windows and looked out at the view, which was one of the reasons that this hotel even existed. “We are still in the shadow of the beast, but the most difficult part of the escape is over.” She looked at Fenn, then Grak, then Valencia. “I don’t know if you want to make introductions, or whether you’ve withheld names by intent,” she said.

“By intent,” said Amaryllis. “The less you know about us, the better. If it weren’t horrifically inconvenient, I might have even wanted to keep you from seeing all our faces.”

“Operational security,” nodded Souno.

“We’re under a time crunch at the moment,” said Amaryllis. “There’s a time chamber within Kuum Doona that we need access to within a matter of days, rather than weeks or months. For that reason, the debrief has to be somewhat compressed. Ideally, we’ll be leaving for Kuum Doona tonight.”

“That’s very soon,” said Esuen, frowning slightly. “Too soon for me to make arrangements with anyone for my safety and security. What happens to me if you don’t return?”

“We’ll leave you with a sizable sum of money and equipment,” said Amaryllis. “Whatever we can
do to help secure you an escape by train or car, we will do, so long as it can be done within the next few hours. And it’s imperative that we leave soon.” She paused. “Please, whatever you can tell us.”

Esuen looked between the five of us, fiddled with the mister at her side and allowed it to wet her skin, then let out a breath. “We call it the Meandering Mansion,” said Esuen. “It’s a place of great magic, more than could be expected of a forge-frenzied place, even one that was once owned by Penndraig himself. There are defenses around it that make it nearly impossible to crack. Hundreds of tuung soldiers have lost their lives in the attempt, and double that number of outsiders. As rumor has it, the Penndraig line lost control of it even before the agreement with the Empire was reached, leaving a fortress' worth of treasure available for whoever could take it.”

I glanced at Amaryllis. “I hadn’t heard those rumors,” she said. She pursed her lips and narrowed her eyes. “From what I was told, it was mothballed due to the expenses associated with it, expenses which largely had to do with the difficulties imposed by the tuung.”

Most of our information had come from either the books that her father had left behind, or what the ghost of her great-grandfather had been able to tell her when she’d communed with him. Both of them post-dated the mothballing (or, possibly, abandonment) of Kuum Doona.

“Does it have wards anchored to it?” asked Grak.

“I believe so,” said Esuen. “Most people don’t get close enough to find out. It has caused no small amount of problems for the tuung. On occasion, it will appear in a crucial place, blocking off a path of travel between our holdings or preventing a harvest. It assaulted one of our cities for a solid month once, firing off cannonballs from the opposite side of the pit wall at regular intervals.”

“It’s … sapient?” asked Amaryllis.

“If not, then sentient,” said Esuen. “There are persistent rumors that someone still lives within it and guides it. Some even say that it’s the Lost King.” She shrugged. “I don’t know how you plan to get there, especially without knowing exactly where it is, and on such short notice. This is your first time coming to the Boundless Pit?” With the way she looked from one of us to the other, I could see the questions on her face. We were going into this half-cocked, that much had to be clear by our lines of inquiry. What this situation really called for was a solid month of research chasing down first-hand accounts and digging through archives; we weren’t really under the impression that we could spare that time.

“It’s our first time, yes,” said Amaryllis. She rolled her shoulders. “I’m confident in our ability to handle ourselves.”

“Flight down into the Pit is restricted,” said Esuen. “The Imperial Army will stop anyone they think they reasonably can, and the tuung are, per imperial law, unrestrained from using force against anyone who violates their sovereignty by going through the Pitmouth.” She paused looking at us, and my eyes followed hers, trying to see what she saw. Fenn, arms crossed, one eyebrow slightly raised, Grak frowning and adjusting the braids of his beard, Amaryllis smooth and calm … and Valencia, straight-backed with her hands clasped behind her back, the very picture of a stoic, well-trained soldier who had heard dire warnings before and gone into the shit anyway. I thought that was probably a devil’s skills at deception.

“So how would you recommend that we approach?” asked Amaryllis.

“Can you fly?” she asked.

“No,” said Amaryllis.
“Not yet,” said Fenn.

_Not anymore_, I thought but didn’t say. It would be good to have Solace back, but that was the whole point of us doing this, aside from the supposed riches that had been locked away for hundreds of years.

Esuen looked between us again. “There is an entad vehicle, used largely for observation,” she finally said. “The tuung allow it to go by, so long as it stays far from the walls of the Pit, and those aboard are cleared of magic by their warders and given a Fool’s Choker by their tattoo mages.” _Yikes_. “The owners have a good working relationship with the matriarchs.”

“Tourism?” asked Amaryllis.

“Yes,” said Esuen. “Sometimes the Empire will buy tickets, for the purposes of long-range observation. The waiting list is long.”

“We have money,” said Fenn. “Lots of money.”

“Then you are left with only the problem of commandeering the vehicle and making an approach toward a hostile, sapient fortress,” said Esuen.

“You’re skeptical,” said Amaryllis. “I understand that. There are some factors in play that I can’t reveal to you at this point. You’ll only have to trust that we know what we’re doing.” I was pretty sure that the other factor was her heritage, which would theoretically allow us to make a safe approach, as well as to pass through any wards that it might have around it. The vague assurance didn’t seem to do much to mollify Esuen’s concerns. Amaryllis placed a hand on Valencia’s shoulder. “We’ll leave V behind. She’s the most capable of us, and if things don’t go as planned, she’ll be able to get you to safety, beyond the reach of the other tuung. Either we’ll be back within a week, or she’ll be more than capable of taking care of you, especially given the resources that we plan to leave you with.”

Valencia nodded once as Amaryllis spoke, and gave no other indication that she objected. I could see at least some of the background logic. Valencia would be revealed if a warder looked at her, given that her skin didn’t have any latent magic, and a skin mage, especially one trying to put a tattoo on her, would figure out what she was as well. I tried to mull it over as Esuen gave us more details on the Boundless Pit, most of which I already knew.
The Down and Out sat on the edge of a pier that jutted out over the Boundless Pit, a pier that was closely guarded by a half-dozen tuung. The ship, if you could call it that, was flat on top, with a wide deck that was covered by a thick tarpaulin and a small, closed cabin where the pilot sat with some of the necessary equipment. The bottom of it was curved and made of glass, which was broken up by rigid structural elements that divided it into triangles. It made me think of a d20, though it wasn’t a regular polyhedron, instead skewing into more of an oval shape. Amaryllis commented that it looked like a chandelier, but to me it didn’t seem pretty enough.

The price we’d paid was exorbitant, though we hadn’t ended up jumping ahead on the list. Instead, the owners had gotten special dispensation to run a second trip of the day. Normally the owners ran the ship down and then back up so that they’d get the light of high noon shining down into the Boundless Pit when they were at the nadir of the journey, but there was some wiggle room to do another run every once in a while, at the cost of a little bit of stored goodwill with the tuung. The owner greeted us warmly though, either happy at the windfall we’d given them or naturally cheery people. When we’d asked around, he and his wife had been called an “odd couple” a few times, and once I saw them, I realized what everyone had been glossing around; he was a human and she was a feathered Animalia.

We were planning to steal their ship, at least temporarily.

“I know the collars are an imposition,” said Taft with a genial smile once we were aboard. He was bald and thin, with great tufts of hair on the side of his head, and a nose almost as wide as Grak’s on a face that wasn’t nearly so meaty. He wore a cloak and a wide-brimmed hat, which was wet with the mist coming off of the Boul. The river was emptying itself not more than a hundred yards away from us, and the sound of it meant that everyone had to speak up to be heard. “We see the Boundless Pit at the pleasure of the tuung, and much of what there is to see is their society. You’re visiting one of the last few forbidden places on Aerb, think of it like that. For all that the collars are frightening, they’ve only been used twice in the history of these trips, both times with solid cause.”

“What kind of cause?” asked Fenn, radiating innocence and briefly reaching her fingers up to touch where the tattoo encircled her neck. Removing it would be trivial for both of us, as would repairing the damage if it was triggered before then, assuming we could do it before passing out.

“It’s somewhat gruesome,” said Taft with a shake of his head. “It would suffice to say that the Boundless Pit, for all its beauty, has attracted a fair number of people more interested in profit over the years, many of them with ill intent. The collars are an over-reaction to that.” He waved his hand. “Not worth worrying about. You’re here for the only tour of the Pit that money can buy, not to hear scary stories about things going wrong.”

“I’m here for both, actually,” said Fenn. She was keeping her eyes wide. “I was hoping that you could tell us about the tuung, while we’re on our way down? It’s going to take some time to reach our destination, right?”

“How much have you read?” asked Taft, with one bushy eyebrow raised. “Well, much of what you’ve read is probably nonsense of one sort or another, but as a baseline?”

Amaryllis cleared her throat. “I’ve read Blackstone’s Creatures of the Unending, the relevant chapter in Kyan’s R-selected, A History, almost everything ever written about Penndraig’s excursion into the Boundless Pit, and a rather poor translation of Emini’s Soun Mienou, which I think comes closest to the actual truth.”
“We also had a few conversations with tuung aboard the train on the way over from Cranberry Bay,” said Fenn with a smile.

“Well,” said Taft, smiling at the two of them, and not the least bit fazed. “I daresay you probably know more than me, at least on paper. But I’ve worked with the tuung for practically my whole adult life, and I’ve been watching them since I was little -- quite some time ago -- when it was my father and mother steering this ship. So maybe I can fill in some of the gaps?”

We’d done enough homework that most of what he said wasn’t new to us. He started from the top, rather than the bottom, which I found a little bit irritating. The proper way of understanding the tuung was to understand their reproductive biology: females that could choose the gender of their children, mass egg-laying, and sexually dormant males that could be driven into heat were all the building blocks of their society. Those rules governed everything that followed, while the Boundless Pit itself, infinitely deep, widening as you went down, darkening too, was the context on which those rules were applied.

Taft started from the top though, all the clear and visible stuff that might, admittedly, be more useful to know on a day-to-day basis, like matriarchal politics, the major imports (the cheapest possible food, mostly from Barren Jewel) and exports (entads, mined minerals, unique flora and fauna of the Pit), the governing laws of the tuung, and a small amount of history, especially as it related to interactions between the tuung and the three imperial eras.

(We said “the tuung” for simplicity, but there were actually two other places that they called home as well. There weren’t many places that were all that hospitable for the tuung, given how much moisture they needed on a very regular basis. It was entirely possible for them to live in inhospitable places, but that would mean lugging around a mister tank and having special sleeping arrangements, which was a malus on expansion into places that weren’t perpetually wet. In D&D terms, those other loosely-allied groups of tuung would have been sub-races, in the same way that there were five distinct migrations of elves from Celestar, each with their own differences.)

“Just a moment,” said Taft, as he cut short his description of the tuung air force. “I’m going to go speak with my wife to see what the hold up is.”

He left us on the deck as he ducked in through an archway to the small cabin where the ship’s controls were. I had been trying to surreptitiously sneak a peek ever since we’d gotten on board, but all I’d really been able to make out was Taft’s wife, a feathered Animalia of some kind, maybe a raven. Her long black beak stuck out from under a blue hood, and while she had wings on her back, folded behind her in a chair that allowed room for them, she also had arms and legs as well, both terminating in featherless, scaly black skin and black claws. She had introduced herself very briefly as Rattle-Clack, then turned back to the ship’s controls without sparing us another glance.

“Not feeling too great about this plan,” Fenn murmured under her breath.

“Yeah,” I said. I stepped closer to the railing and looked down in the Boundless Pit, which was largely obscured by spray from the river. Deeper down, the Pit was obscured by shadow. The Down and Out had floodlights, but they’d be of limited use once we were to the point where the Pit was filled with river-rain and mist, since most of what they’d be lighting up was the water in the air. Grak thought that he’d be able to spot Kuum Doona if we got within a mile of it, given his newfound magic-vision, and I was really hoping that he was right, especially since we’d be working under a time constraint, after which the tuung would know that something was up. “Nice people.”

“Nice people,” Fenn murmured. “Nice little mom and pop operation here, kind of reminds me of my favorite inn back in Anglecynn, the Cock & Bull.”
Amaryllis stepped up close to us and rested her hand on Fenn’s elbow. “Excited?” she asked, with just a token amount of ‘don’t fucking talk about our plan to steal this thing’ to her smile.

“Oh, certainly,” said Fenn as Taft approached from the cabin.

“Shouldn’t be much longer,” said Taft. “We’re still waiting on final approval.”

“I thought we had final approval?” asked Amaryllis.

“We had provisional approval,” said Taft. “Enough that we could get you checked over and aboard and start getting everything spun up. The protocols that we’ve worked out with the tuung is that we get a final sign-off by radio before we actually depart, and that’s what we’re waiting on. Normally it doesn’t take this long, but this is a special trip, and it appears the timing isn’t all that good. There’s some kind of hullabaloo going on right now, but they’re not saying exactly what. I keep my ear out for chatter, but they’re a secretive people, and most of the tuung that live and work in Headwater aren’t in the know.” He gave us an apologetic shrug. “Where was I?”

“You were detailing the tuung air force,” said Grak.

“Ah, right,” said Taft. “Gossamer wings, we think part of some entad that they came by a few dozen years ago, though the specifics are naturally shrouded in mystery. We’ll probably see a few of them in full flight, the matriarchs like to show off a bit, and that’s half of our arrangement with them.”

“Meaning that we won’t get to see any of the underbelly?” I asked.

“Underbelly?” asked Taft with a laugh. “We’re not going to visit with them, just taking a tour of some of the prettier features of the Pit and the cities on the wall, anything that they really wanted to hide, it wouldn’t be a problem for them. That’s not to say that there aren’t failures, from time to time, places where a colony was founded and then something went wrong in carving out or hanging structures, as one example, and that’s the sort of thing that I’m not planning to show you.”

I knew enough to know that he was whitewashing things. We probably wouldn’t be seeing the results of matriarchal warfare, nor would we probably bear witness to any of the burial ceremonies of the tuung, where they extracted the soul from the body and then dumped it into the Pit.

“I’m sorry, but why is an entad thought to be the source of the wings?” asked Amaryllis.

“Numbers show linear growth,” Grak answered, before Taft could. “It is consistent with a periodic-granting-of-ability rule. It is one of the things I spoke about with my friend Magor.”

“I’d rather not take part in any speculation,” said Taft with a smile. “Headwater is always abuzz with that sort of talk, and I do keep my ears open, but --”

“Ready!” came a call from the cabin.

“-- but we should be bringing that part of the conversation to a close anyway,” he finished, stepping toward the middle of the ship. Benches curved to form an oval beneath the tarpaulin, with enough room to seat ten. A small ladder by the cabin led to the lower deck, which was where you’d want to sit if you wanted to look out the windows below. “We’re running light, as this is a special trip just for you, and we won’t have the best light to see the Pit with, but we’ve been doing this for ages --”

“Ages!” came a shout from the cabin.

“-- and we should be able to give you a satisfactory tour.” He smiled at each of us in turn, and then, on cue, the ship began descending. Taft let that feeling of untethered floating sink in for a bit, then
launched into what was identifiably a spiel, probably one that he’d given every day for most of his working life.

It was interesting enough, but I forced myself to zone out so that I could think about what came next. We were going to have to subdue both of them before taking the ship, which I wasn’t looking forward to. Physically it would be easy, even without our gear (most of which was packed away in the glove, which was in turn folded up and stuffed in Fenn’s underwear), but the inevitable explanation of ‘it’s not personal’ didn’t feel good when I was practicing it in my head.

That aside, I didn’t like the rest of the plan very much either. It seemed dependent on too much best-case planning, where we were counting on either our ability to improvise a solution to problems that might crop up, or simply on nothing going too terribly wrong. We’d done as much homework as we could do in the time we had available, but at a certain point there were diminishing returns. Amaryllis had argued that spending a day in Headwater trying to find an expert on Kuum Doona, or someone who could smuggle us in a less attention-drawing way, was unlikely enough to bear fruit that it wasn’t worth the risk. We’d chartered the tour first, then spent a few hours searching around, but a few hours searching in an unfamiliar city where we had no contacts didn’t amount to much.

(The saving grace of the plan to steal the *Down and Out* was that it was better than the alternatives, which we’d discussed in some depth. The most promising of them was looping Esuen in on the teleportation key and then trying to see whether her worldline was such that she would be able to put us within a few days' climb of Kuum Doona, which had seemed like a stretch. Other options, like quickly-built, makeshift aircraft or abuse of the Immobility Plate while skydiving, had been vetoed on feasibility grounds.)

We kept to the western side of the Pit as we made our descent, giving the waterfall a wide berth, but there was only so much that you could avoid it, and eventually the spray from the waterfall spread out to the whole Pit, even as the Pit grew wider. The sky was a hole above us, which gradually became obscured by the mist in the air, until eventually we were in a twilight. The *Down and Out* didn’t move fast, no more than a few miles an hour, so the changes were subtle, and Taft had plenty to say about everything that we passed. His wife, Rattle-Clack, was piloting a meandering course that slowed down whenever there was something of interest, and while I had some natural appreciation for what I mentally pegged as “worldbuilding stuff”, I also kept thinking that it was basically an unskippable cutscene.

We did end up seeing the flying tuung, in a regimented flock of more than a hundred, each of them with short insectile wings that brought to mind a dragonfly. The wings were too short and thin to have possibly held up the tuung, but each was only lightly armored, and without any heavy packs, nor with obvious weapons on them, which was a relief. When Taft finally turned the floodlights on, they appeared as if from nowhere to swoop in front of them, which I was almost certain was the local equivalent of propaganda, done for every group of visitors. I really hoped that we didn’t have to fight them, especially given their total air superiority, but if Kuum Doona was to be a long-term acquisition, there probably wasn’t much avoiding it, not unless it was possible to use whatever form of locomotion it had to descend into the Boundless Pit beyond the range of the tuung, which from what I’d read meant about a hundred miles.

The tuung were the main attraction, but the Boundless Pit had other wonders to pique my interest, enormous animals crawling on the rock walls (mildly annoyed by the floodlights, swishing their tails at us), bioluminescent fungi that spanned a large, splotchy mile of the Pit walls (with settlements and farmers in among it), and the occasional abandoned settlement made by someone else’s hand, imprints of occupation attempts, some of them now taken over by the tuung, others left abandoned when the original owners had called it quits. The Boundless Pit was a Mystery, one of many on Aerth, and various people had been drawn in over the centuries, wanting to tease at the edges of
reality. I wasn’t much in the mood for Mysteries at that particular moment; I wanted things simple and straightforward.

“And here we reach the end of our journey,” said Taft, hours after we’d set off but still far too quickly for my tastes. The Down and Out had moved away from the walls, and the floodlights illuminated only the water in the air. “We’re more than seven miles down now, and at this point, the walls are about four times as far away as when we started out. I’ve never been past the twenty mile mark myself, but the tuung have assured me that the Boundless Pit lives up to its name, and every resource the Third Empire has thrown at it seems to agree. Since this is a late run, and it’s probably near sunset on the surface,” he pointed up, to where there was a hazy circle of light that could be seen if I leaned past the tarp, “I’m going to take a minute to turn off all the lights, so you can see what it’s like here in the dark.”

He went over to the panel on the side of the cabin, which connected to the floodlights. I was guessing that and a few other systems had been bolted on after the forge frenzy that had created the ship, mostly because they didn’t quite match the aesthetic. With a few flicked switches, the floodlights turned off, plunging us into darkness.

“This is how most of the tuung live,” said Taft into the darkness. “At night, this part of the Pit is close to being pitch black, and in the day, it doesn’t get too much brighter. Most of the deep tuung don’t have power, not like we do on the surface, which means that they work in a place that’s not got much more than subtle grades of black. Some live and work in caves, but others are forced by necessity to climb out along the walls, whether to farm or forage.” He cleared his throat. “Now, think about what it would be like to fall, the blackness that would envelop you, as what little light there was got further and further away. The time it would take you to fall down here from Headwater? Forty-eight seconds. Now, imagine that you were one of the tuung who saw your brethren fall, or simply sat there waiting in your communal home for them to return, only for it to never happen. That’s what it was like for the tuung for thousands of years. When they talk about how it’s better to live in the hells than to fade away into nothing, I think that’s --”

His voice cut off, leaving the ship utterly silent.

“That’s a knife at your throat,” said Amaryllis. “Now, I want you to turn the lights back on, very slowly and very carefully, so we can have a talk. We don’t want to hurt you, but we will if we have to.”

“You’ve got to be kidding me,” said Taft with a sigh, but the lights went back on a moment later, illuminating the scene.

Fenn stood toward the back of the ship, glove back on her hand and bow fully drawn. Amaryllis was behind Taft, with a dagger at his throat, just as she’d said, as calm as I’d ever seen her. Taft’s wife was turned back toward us, her feathers ruffled and mouth halfway open, and although she was turned toward Taft, she had seen the bow and arrow pointed at her. For myself, I had a rifle that had been thrust into my hands in the dark, but I was pointing it down at the ship with my finger off the trigger, largely because of ingrained lessons on gun safety.

“Sam, tattoos now, please,” she said with a nod toward me. Mine I had already moved, down from my neck to around the tip of my pinky finger, and I got up and collected the other three in short order. When I was in the middle of removing Fenn’s, I heard Amaryllis again. “Don’t you dare touch that radio.”

“I have to,” said Rattle-Clack. “They require periodic check-ins.”

“I haven’t heard any,” said Amaryllis.
“I moved up the pitch to beyond human hearing,” said Rattle-Clack. “It’s a courtesy to our guests, so they don’t have to hear the chatter.”

“Step out of the cabin, please,” said Amaryllis. “I don’t believe that you keep so tight a schedule that a few minutes are going to make the difference.”

Rattle-Clack closed her mouth and got up from her stool, then moved out from inside the cabin with her arms raised, though much more lazily than Taft.

“To be honest, I’m waiting on my wife’s I-told-you-so,” said Taft.

“I told you so,” said Rattle-Clack, deadpan.

“Ah, there it is,” said Taft, smiling her way. “That’s a real relief.”

“When are the check-ins?” asked Amaryllis, not removing her knife. “What information is communicated?”

“Every mile,” said Rattle-Clack. “All I tell them is our depth and what part of the tour we’re on.”

“And if you don’t check-in?” asked Amaryllis.

“I don’t know,” answered Rattle-Clack. She tilted her head to the side and blinked with the nictitating membrane. “I think they would come after us.”

“I’ve always assumed that we were being shadowed by a squadron, just far enough away that they can stay out of the light,” said Taft. “Their wings would allow for it. Let me go and we can return to the surface, no repercussions on your end.”

“Opinions?” asked Amaryllis in my direction.

“There are potential traps in allowing a check-in, some of them spur of the moment, which we might be able to catch, others built in, which we couldn’t. I don’t want to share too many of my bright ideas, and you probably already have me beat there,” I said. I was fairly certain that Rattle-Clack wasn’t just listening in at a higher pitch, she had been communicating at a higher one too, which opened up all sorts of possibilities for her, depending on how her radio had been configured and what the tuung on the other end were expecting. “We’re two miles from where we need to be. I’m not sure exactly what this craft is capable of, but --”

“Three miles an hour, in good weather,” said Rattle-Clack.

“Hekni,” said Amaryllis in Grak’s direction (his false name literally meant ‘name’ in Groglir), “Get started on figuring out how to pilot this thing and how fast it can go, we’re going to get started on trying to find Kuum Doona.” He moved without a word, slipping past the Animalia, who gave him a wide berth; as a warder he was our de facto expert on magic items, mostly because he could see them better.

“Oh, so you’re all insane,” said Taft. “Well that makes a bit more sense.”

“You don’t know the half of it,” said Fenn. Her smile was forced; I could tell she didn’t like being in this position, aiming at innocent people, any more than I did. Her bow was still drawn and pointed at Rattle-Clack, the magic of her scars allowing her to hold the bow taut almost indefinitely without wavering.

“We’ll be shot out of the air before you can get close to it,” said Rattle-Clack.
“Any help you could give us would be appreciated,” said Amaryllis. The comment was underscored by the knife she still had at Taft’s throat.

“Approach from above,” said Taft.

“Don’t you dare help them,” said Rattle-Clack, finally dropping her raised arms and folding them across her chest.

“I’m looking out for my ship,” said Taft, smiling at his wife. He couldn’t turn his head, but his eyes tracked back to me. “Most of the successful attempts on Kuum Doona have been overhead, because then you only need to avoid the lightning strikes, not the cannonfire. Granted, ‘success’ means being able to set foot on it, where you’re likely to face whatever got the various teams that have been sent there, but at least my ship has a better chance of being safe.”

“Can you take this seriously?” asked Rattle-Clack.

The ship began to move again, this time under Grak’s direction, wobbling slightly as he tested the controls, then straightening out and dropping down. I could only judge by the movement of the air around us, most of which was blocked by the tarp, but it seemed like they had been telling the truth; the Down and Out was just glacially slow (which made sense, given that a faster craft might have been used for something other than a sedate tour, but was still a problem for us).

“I think we should have her check-in,” I said. “On balance, it seems like the better option.”

Amaryllis finally stepped out from behind Taft as a rope began encircling him of its own volition. Ropey wasn’t terribly strong, but he could tighten his own knots well enough that they could hold me, let alone a tour operator. “Make the check-in then,” said Amaryllis with a nod toward Rattle-Clack. The dagger in her hand warped and changed into a thin sword, and it was only then that I realized she’d been using the Anyblade.

“Fun,” said Taft, testing his restraints. “I guess we’ll see whether I’m right about the squadron shadowing us.”

“You’re not,” called Grak from the cabin. “I would have seen their magic.”

“Ah,” said Taft, wincing slightly.

Amaryllis went into the cabin with Grak for a moment, mostly to check over and adjust the radio. There was some chatter between the two of them about that; we wanted to be able to hear what Rattle-Clack said, but she was capable of speaking at a higher frequency than we could hear, and changing the settings on the microphone could alter the message in a way that might give us away even if she was acting in good faith.

Rattle-Clack went over to Taft, and the two of them held a sotto voce conversation. I could hear well enough to catch the gist of it; she was berating him for his greed, theatrics, and self-sabotage, not plotting an escape attempt. I went over to stand by Fenn, with my rifle still pointed at the deck of the ship rather than at the couple.

“I’m feeling a bit anxious,” said Fenn. “Didn’t quite like the look of those tuung flying around. They remind me of one too many bad experiences in the Risen Lands.”

“They do?” I asked.

“Birds,” nodded Fenn. “There’s a containing wall around the whole place, but you can’t keep birds out, and with all the crops gone to seed, there’s plenty for them to eat. Then they die, and you get
whole flocks of undead.”

“That’s a sight that I’m glad I missed,” I said.

“Yeah,” said Fenn. “Well, if we’re unlucky, we’re going to get to see all the problems with fighting things in the sky up close and personal.” She frowned. “I’m good with a bow, really fucking good, but there are limits. Not that keen on sending soldiers down to the hells either.”

“But you will?” I asked.

“Sure,” nodded Fenn. “ Might need some wine and cuddles after though. Helps that they’re ugly as sin. Shouldn’t help, maybe, but it does.”

Once Amaryllis had given the radio a once-over, Rattle-Clack was ushered over to it in order to make the check-in. The only response was a terse, “Roger, out,” which she said was about par for the course in how the tuung responded to any radio communication. With that accomplished, she joined back with her husband, and Ropey bound the two of them together, at which point Fenn finally let go of her draw.

After that, it was time to suit up. All of our equipment had been stored inside the glove, and Fenn spilled armor out onto the deck, which drew complaints from Taft, who still didn’t seem terribly concerned about being hijacked, even though for all he knew, we were a heavily armed and highly skilled mercenary squad. Amaryllis put on her immobility plate, and I put on the absorption armor, plus my standard complement of bandoliers, which I was starting to think less of, given how well soul magic and bone magic worked together to make bones and fairies redundant.

(I had argued that we should just bring Val along in the glove with a few hours worth of air tanks, but Amaryllis had objected on practical grounds, namely that we were unlikely to find ourselves in a situation where Val was exactly what we needed, and that it wasn’t without its own risks, and that it would placate the handmaid, and that it was better to have someone stay behind to keep the return location for a teleport clear. Valencia had objected on largely personal grounds; she wanted some independence and time alone, even if it was just going to be spent reading the rest of the Harry Potter books in a hotel room and maybe ordering room service.)

We’d been flying for forty minutes when there was an irregularity with one of the check-ins. Instead of a final response of “Roger, out,” it was “Roger, wait.” On hearing that, Rattle-Clack had tilted her head to the side and looked at the microphone.

“Problem?” asked Amaryllis.

“Irregular,” said Rattle-Clack.

“We’re at the right depth,” said Grak. “I will start circling the edge of the Pit.”

“Say again, over,” came the crackling voice from the radio.

“This is the Down and Out, we are on our way back up, at the five mile check-in, over,” said Rattle-Clack. Taft aside, we were all standing near or in the cabin, waiting.

There was silence from the radio for a fairly long time, long enough that I started to wonder whether something had happened to the equipment, but I got the answer to what was going on when I felt a sharp pain in my pinky finger, which instantly started bleeding where the Fool’s Choker had severed the flesh. I was wearing all four of them on that finger, and they went off one by one, cutting into the flesh down to the bone. I touched a bone in my bandolier and burned it to heal myself. Amaryllis was watching me with wide eyes.
“That would have been an international incident,” said Amaryllis. “What the fuck are they thinking?”

“They were probably waiting for us to come up,” said Rattle-Clack with a shrug. “They knew that I was lying, and hopefully they’ll believe I was lying under duress.”

“If we survive long enough for that to matter!” called Taft from where he was roped up.

“Roger, repeat status, over,” came the voice from the radio.

Rattle-Clack turned from the radio and looked at Amaryllis. “What do you want me to say?”

“We’re going to radio silence,” said Amaryllis. She let out a breath. “Hekni, can you pilot this craft in darkness?”

“Yes,” replied Grak. “The light isn’t doing anything for me.” I was close enough to look over at the controls, which somewhat incredibly consisted of only six different levers, each stuck at various positions, with two of them locked in place by pieces of metal that were, like the radio, obviously not part of the original design. Pitch, yaw, roll, with pitch and roll locked down, then three levers for movement along x, y, and z? However it worked, I was glad that we weren’t relying on one of our hostages to fly.

“I’ll kill the lights,” I said.

We moved in darkness, trusting in Grak’s magic-vision to get us where we needed to be. Based on our past discussions about the monocle, he would be able to see everything that had latent, passive, or active magic in it, which meant that it applied to about 95% of all things, including almost all magic items and most living creatures (save for non-anima).

(We’d tried to grab night vision goggles out of the backpack, but it had said no; the cut-off for technology seemed to be some point before World War II, even if the backpack was content to give us both Earth-modern instructions and most sufficiently simple Earth-modern parts. Amaryllis thought that she could have gotten something working if she’d had a week, which she didn’t have.)

“I think I see it,” said Grak, after a tense forty-five minutes of flying in darkness. He must have moved a lever, because the ship came to a halt in mid-air, rocking us slightly to the side. “It’s in a crevice. Approach from overhead would be impossible.”

“I’d like to leave,” said Rattle-Clack, speaking up from the darkness. “I can fly under my own power, well enough to glide down to one of the tuung cities. I’ll take my time, so that you’re either dead or inside by the time I get there.”

“And your husband?” asked Amaryllis. Something about the darkness made her voice seem smaller.

“He’s been on this ship with no escape plan for his entire life,” replied Rattle-Clack.

“It’s true,” said Taft. “A fact I’ve been reminded of every day since I got married.” He still seemed cheerful enough about matters, in spite of everything. I didn’t think that we were facing down our death here, but he certainly seemed to, and he was somehow putting a positive spin on it. I was starting to re-evaluate what people had meant when they’d called him odd.

“We have parachutes,” said Fenn. “We can dump you off the side too, maybe with a flashlight.”

“A captain goes down with his ship,” said Taft with a small laugh.

“Sam, light?” asked Amaryllis.
“Sure,” I replied. I drew the heat from my blood in steps, making the flame first come from my fingertip, then down my finger, until finally it wreathed my hand and gave us enough light to see by, each step allowing my eyes to adjust. Taft and Rattle-Clack were illuminated, tied up together; it was hard to read any expression on her face, but Taft seemed somewhere between contented and resigned.

“I’m willing to let you fly away,” said Amaryllis, holding the Anyblade in front of her as a full sword. “I don’t particularly want your blood on our hands.”

Once Amaryllis had commanded Ropey to let her out of her bonds, Rattle-Clack gave Taft a quick peck on the cheek. “I hope to see you again, husband.”

“You too, wife,” replied Taft with a nod. “Maybe if I die, I can tell you what’s at the bottom of the pit when I’m in the hells.”

She stepped to the edge of the ship, then jumped out over the edge with her arms to her side and her wings spread; we could hear her flapping over the muted sound of the perpetual waterfall for only a little bit, until there was nothing.

“I’d prefer to be untied,” said Taft, once she was away. “I’d hate for you all to die and leave me here at the mercy of cannonfire and the ship without a pilot.”

“We’re not going to die,” said Amaryllis.

“We probably won’t die,” said Fenn.

“All the same,” said Taft. “I’d like to meet my fate head-on, rather than tied up and helpless. I’ll be good, captain’s promise, and if I’m not, feel free to toss me overboard.”

“Okay,” I said, before Amaryllis could answer. As I said the word, Ropey began unwinding from him, slipping him free of his bonds, then it wriggled across the deck of the ship like a snake and wrapped itself around my waist, in its familiar place; that added utility was probably the best argument for untying Taft.

“I have a map,” said Grak, coming out from the cabin, where he’d been sitting with Fenn. He held forth a sheet of paper, which was slightly damp from the ever-present mist. On it he’d made a diagram of the building, drawn with a series of very straight lines, as though he’d been copying from a low-poly model of the building, or perhaps just hadn’t ever learned how to draw a curve. It showed a large section of rock-face that was cracked down the middle, and there, right at the top, a building was nestled, built more tall than wide, and seemingly perfectly fitted to the location it had been placed in. I wasn’t sure exactly how much Grak was capable of seeing from a mile away, but there were a few details on the building that I assumed were a reflection of what he had seen, rather than simple embellishments. There was a door at the base of the building, opening to nowhere, a bevy of arrow-slit windows, and some small circles that were meant to be – something. The “skin” of the fortress seemed to be made of scales, which were detailed in a separate picture off to one side.

“What are these?” I asked, pointing to the circles. “Cannons?”

“I don’t know,” said Grak. “There are many different forms of magic, many of them overlapping each other. I’ve been cycling through the views. It is hard to tell from a distance, but there are sixteen wards.”

He didn’t say out loud that these were wards that Amaryllis was keyed to, but that was what we were hoping. In an ideal world, we’d spend the next twenty minutes crossing the last mile to the
fortress, and whatever dim intelligence was powering its defenses would somehow recognize Amaryllis and allow her in without any problems. If that didn’t happen, we’d have to take the harder approach of evading its offensive and defensive capabilities and then getting Grak somewhere that would allow him to either breach the wards or circumvent them well enough to get us partially in to the point where we could try something else.

“Incoming,” said Grak. He was looking up and off into the distance. I let the light from my fire of my blood drop; I was starting to get a slight chill anyway.

“Tuung? How many?” asked Fenn.

“More than a hundred,” said Grak. “I see a warder’s monocle on one, they’ll find us even without the light.”

“Fuck,” I said. “Do we make a run for the fortress, or try to fight them off?”

“We have two minutes,” said Grak, his voice even. He went into the cabin and threw one of the levers forward, which sent the ship rocking again. When that was done, he came back out. “We’re on a collision course. Someone will need to stop the craft if something happens to me.”

“Well, fuck,” I said. Amaryllis threw the floodlights on, and I was momentarily blinded by them -- but better to be blinded while waiting for the enemy to arrive, rather than in the middle of combat.

“There,” said Grak, pointing up at a region of the sky.

“Using artillery now,” said Fenn, as an arrow appeared in her hand and she drew back her bow. For all her talk of reticence earlier, she wasn’t hesitating now. Maybe it was easier because they’d tried to kill us with the collars. “There?” she asked.

“A touch lower,” said Grak.

Fenn fired the arrow, which became a cloud of arrows as it left our view. She let the bow go limp in her hand as she looked at Grak expectantly.

A flurry of names, defeated! went by across my vision, startling me; it had been a fair amount of time since I’d seen one, and the HUD had faded into the background of my existence. Each of the tuung had been given a name, rather than being left as nameless soldiers, and I was too busy to spare time trying to tease apart why that decision had been made.

“Less than a hundred now,” he said, letting out a breath. “You were high.”

“You have an impressive array of magic,” said Taft.

“Shut up,” said Fenn. She took a breath, raised the bow again, and let off another arrow, this time without looking to Grak for guidance. There was something eerie about the multiplying sound of the arrows in flight, and the way they seemed to vanish. It was like firing a shotgun in the dark, hoping that with sufficient firepower you might hit something. I couldn’t help imagining how terrifying it would be to be faced with a storm of arrows while flying blindly through the air. The tuung could see in the dark far better than I could, but still, it wasn’t like you could dodge that many arrows, even if you could see them.

“They’re scattering,” said Grak, “But they’re still coming towards us.”

“I’m saving the other two shots until they get close enough to see,” said Fenn. She looked pale and nauseous.
I raised my rifle to my shoulder, waiting, while Amaryllis picked up her own rifle, which Fenn had
deposited by the door. It was a void rifle of her own design, one that she must have upgraded
considerably since our time in the Risen Lands, since there were so few of the same parts that I
wasn’t sure whether it could even be considered the same gun. The effective range of void weaponry
was low, compared to a rifle or arrow, but there were quite a few things it was capable of punching
through, and if they had a warder with them, then I was pretty sure that they’d have at least one
surprise waiting for us as well.

Fenn started firing before I could see anything, not the artillery shots, but two or three arrows at once,
done with a swiftness and casual grace that nothing on Earth could ever have matched, and helped
by the fact that arrows could appear in her waiting fingers at the speed of thought. Her eyes were
better than mine; she was firing with purpose, but to me the things she was shooting at were only
vague shapes at the edge of the light. I saw one of the tuung well enough to make out the dragonfly-
wings on his back, and saw him jerk backward and then start tumbling down.

“They’re dropping below the ship,” said Grak. “They’re going to come from beneath.”

“They,” said Amaryllis. She went to the hatch that led down into the observation area, and I followed
after as the repeated twang of Fenn’s bow filled the air. When I got down there, Amaryllis was
already breaking out glass with the butt of the void rifle, either to get a better view, or because it
would interfere with the void rifle’s range too much. I followed her lead with my own rifle and tried
not to think about the wanton destruction we were causing. The seats down there were terrifying,
suspended over glass for a spine-tingling sense of danger during the descent.

I took my first shot as I saw one of the tuung come up from below the ship, which was when I
realized that I hadn’t grabbed hearing protection; it was loud enough to be physically painful. My
shot hit him in the breastplate, which briefly arrested his upward motion. I fired again, and hit him
somewhere in the head or shoulders, then watched as he fell away, wings no longer flapping.

_Hian Tsal defeated!

More followed. The sound of my rifle became a staccato, interrupted only briefly when no suitable
target presented itself. My pulse was racing as I killed one, then two, the sweep of the rifle across the
blackness of the pit automatic, with better form than I’d ever had back on Earth, calm and military
even though a part of my mind was recoiling at how detached and methodical the killing was. I tried
not to pay attention to the notifications telling me their names.

After six rounds, I had to reload the rifle, which gave me time to listen to the _thunk_ of Amaryllis
firing off the void rifle beside me. As I was sliding the magazine into place, one of the half-spear
swords came flying up towards me. It was only through dumb luck or a bad throw that it embedded
itself in the wall beside me rather than hitting me. I raised the rifle and fired at the tuung that had
thrown it, catching him in the chest and sending him spinning down into the void.

_Ini Nga defeated!

There were too many of them. Even if I could have hit one with every shot, which I couldn’t, they
would close the distance too quickly. The void rifle, with its periodic fire, was limited to once every
four seconds, which was far too slow when facing down so many of them. I fired again, a glancing
blow off breastplate near the tuung’s shoulder, and my second shot on him missed, largely because
he’d changed direction in response to the fire. The third hit entered by the nose, and he was close
enough that the floodlights illuminated the spray of blood. There were other targets, a full two dozen
of them visible now, but if we stayed and fought they were going to be on us, and even burning
through my bones I didn’t think that I was good enough to survive the encounter, even if I could take
a lot of them out with me.

I turned to Amaryllis to tell her that we were fighting a losing battle, and was just in time to catch
sight of an explosion from above us that funneled liquid fire down into the room we were in. It was
bright blue, cryofire, a flame that burned cold instead of hot, something that I’d thought up while
sitting in Mr. Sorbo’s math class, translated in Aerb to a spell known by the pustule mages. I
scrambled back away from it, not wanting to get frozen, and shouted to Amaryllis for her to do the
same. Some of the liquid cryoflame dripped down past the glass that made up the lower floor, falling
into the void below us. It was of a limited duration, but said some horrible things about how it was
going upstairs.

I raised my rifle and began firing again, at tuung soldiers who were now close enough that I could
see the whites of their eyes, more than a dozen of them in my field of view. They had their spirit
blades at hand, and at a shouted command, “Fai!” they were throwing their blades at me, too much
makeshift artillery for me to handle.

I burned bones to heal as soon as the blades had disappeared, before I was even fully conscious of
where I’d been injured. One had driven through my throat, spilling blood, and another had clipped
the side of my head, hard enough that my vision was swimming. It wasn’t until my rifle slipped from
my fingers that I realized I’d been hit there too, cutting through some kind of connective tissue there
and making me lose my grip, not to mention soaking the rifle with blood. It fell down out of the
broken-out windows and tumbling into the void as well, leaving me with only my throwing dagger.

Before they could launch another volley, I moved, pushing my way through the cryoflame even as I
was still in the process of healing myself. I saw one of the spirit swords hit me in the side and get
absorbed by my armor, with the rest crashing around me. I wasn’t actually sure that I could survive
something that went into my brain, if it disrupted my ability to heal myself that severely. I didn’t
really have much time to examine that thought as it went through my head though, because the cold
of the cryoflame hit me, freezing wherever it touched, like a hand stuck out into frigid, windy, winter
air. I could feel my muscles seizing up, even as I pushed out with the warmth of my blood, trying to
counteract the chill of the places where the flames had passed through.

I was halfway up the ladder when the rungs beneath my feet shattered, and when I slipped down and
put my weight on the upper rungs in full, they broke too, frozen to the point where they’d lost their
durability. I burned through all the bones of my foot, which I’d mentally designated as emergency
reserve, as I tried to solve the problem with sufficient SPD. It was the most I had ever pulled before,
and the world immediately seemed to go into slow motion. I saw and reached for one of the girders
that had held the triangles of glass in place, and managed to grab onto it just before I would have
fallen past the point of no return. Shards of frozen glass bit into my hand and my shoulder was nearly
pulled from its socket, and I gave an inarticulate scream of pain before pushing through it and
reaching up with my other hand to secure my grip.

Before I could, a host of spirit blades came flying through the air at me. A few were simply absorbed
by the armor, but it had enough white patches to it that I was bound to be hit by at least one. The
armor blocked the hit, but I twisted from the force of the impact, which cut my hand more from the
glass, and broke my grip.

I only fell ten feet before I came to a stomach-churning stop that squeezed my waist hard enough that
I nearly puked. Ten feet of rope connected me to the ship, leaving me as a sitting duck for the tuung
throwing their spirit blades. I pulled my dagger from its sheath, then slipped on the leather band that
had the sapphire in it, pressing it against the skin of my palm.

I parried away one of the incoming spirit blades, and took more hits to the armor, one of which it
didn’t absorb. I was sent spinning and swinging on the rope, making me harder to hit, but making it almost impossible for me to hit a damned thing, not to mention making a second parry nearly impossible.

I closed my fist around the gem and channeled the abstract concept of light through it the next time I saw the tuung as I spun around. Forty-two projectiles shot out, their angles away from me randomized into a fat-angled cone. I didn’t see where they went, but I didn’t need to; the gem magic intuited the targets, through some process that was still a mystery, beyond Do What I Mean.

Ngai Tiou defeated!

Hene Tsa defeated!

Nguno Tsa defeated!

I watched the mental exhaustion meter tick down to 67/90, and started counting the seconds until I could use it again. I threw the dagger at the nearest tuung I could see, whipping it as hard as I could to try to cross the distance, then used my free hand to grab the rope and attempt to arrest my swaying, spinning motion, but I had made little progress with that by the time my dagger was on its way back.

I took a hit to my foot, where I was still wearing sneakers, and felt the blade slide between my toes. I parried one blade, then a second in short order, burning more speed to do so and nearly reaching the end of the bones that I could use safely. I kept glancing up at the rope, at Ropey, though I didn’t actually have the attention to spare for it, worried that one of the tuung would eventually get lucky and slice through it, leaving me to fall into the endless abyss.

I survived seven more seconds and let loose with another blast of the sapphire’s magic. There were more names in the notifications this time, as the same amount of projectiles fired out toward a smaller number of assailants. I was spinning around slowly enough that I was able to see them hit, blue motes with slender trails curving through the air to find their targets. The tuung had spread out to avoid rifle fire, which was perfectly working against them now, because the shotgun spread of blue could find someone to hit no matter where it was pointed.

A part of Ropey uncoiled from around me, and I reacted in alarm until I realized what he was doing; he made loops for my feet and fashioned a harness, then, with a lurch, dropped me half a foot into a better position to make the climb. I still had to climb using almost purely upper body strength, but once I was past a certain point, the rope reconfigured itself so that I could make my way up more easily. I freed up my hand for long enough to fire another blast of projectiles behind me, not so much as looking at the results, trusting in the magic to do its own work. It was a large gem, and I could feel the drain from using it already, the way that my thoughts weren’t coming as fast, compromising both my judgement and a wide range of my abilities.

“Get up top!” Amaryllis screamed to me as I finally clambered up onto the metal struts, fingers finding fresh glass to cut themselves on. She’d been firing away with the void rifle, showing no particular concern about the white markings of the cryoflame not six inches away from her. There were a few marks on her armor, as well as on the wood and cushions around her, but the immobility plate was proper plate armor, and the spirit blades simply weren’t strong enough to get through. I felt a wave of relief at realizing that she was fine, and probably would be fine unless they physically dragged her off the ship, then went up through where the ladder had been, testing each handhold carefully before putting any weight on it.

I reached the upper level of the ship, barely able to move my fingers, where pandemonium was reigning. Fenn was backed up against the side of the cabin, bow drawn, as one of the tuung
approached her with his sword drawn. Grak was fighting off three tuung that had landed on the ship with his axe, moving between them with quick, sure motions, striking at armor and then dodging a sword. He was spattered in blood; and I realized only belatedly that he was fighting one-handed; his left arm ended in a bloody and smeared stump.

I threw my dagger at the tuung next to Fenn, and immediately realized the problem when it was brought to a perfect stop at the back of his head before falling to the ground. If that wasn’t the work of some entad, then he was a still mage, athenaeum trained. Just as I came to that conclusion, Fenn let loose her arrow -- it brought the tuung up short for just a moment, long enough for her to materialize a void pistol in her hand and fire it at him. He fell to the ground, and without missing a beat, Fenn tossed the pistol to me. I caught it just as the notification popped up, and spun toward where Grak was fighting, firing it as soon as it was ready again, as bad an idea as shooting in a melee was.

Thwip.

Muni Tan defeated!

An arrow caught another one in the head, and Grak caught the third under the chin with his axe, cutting partway into his head. As soon as the body hit the floor, Grak spun around, looking for others, and threw his axe off the side of the ship to hit a tuung that had just crested up over the side. The axe returned to Grak’s hand a moment later, and he looked off into the open air for a moment, searching for targets.

And suddenly, just like that, there was silence, leaving only a ringing in my ears.

“They’re in retreat,” said Grak, speaking loudly, and still barely audible. He let out a shaky breath and clenched the handle of his axe so hard that his knuckles turned white.

I made to go over to the hatchway to check on Amaryllis, but when I turned to look at it, she was already coming up and being given a hand by Fenn. I burned another bone, focusing on my ears, and after a few seconds could hear properly again, the persistent ringing suddenly quiet and sounds suddenly snapping back into focus. I turned my attention to Grak and administered healing to him; I had no idea what I was supposed to do about the missing hand, except that the wholesale regrowing of bone was beyond my current abilities.

“Pustule mage killed. Still mage killed. Warder still alive and tracking us,” said Grak. “Twenty left, all told.”

“What?” asked Amaryllis, speaking too loud. I went over to her and laid a hand on her shoulder and burned a bone to help her hearing, then dove into my soul to restock while I had the chance; I had burned through two-thirds of the bones I could safely poach from. The conversation was too distant for me to make out from within my soul, but I had little doubt that repairing the bones was the best use of my time. When I came out, the conversation had moved on.

“No, either we broke them or they’re waiting for reinforcements,” said Amaryllis. “Maybe both.”

“We’re within range of the mansion,” said Taft as he emerged from the cabin. His hands were shaking and his pupils were dilated, but he was still smiling, albeit a little too wide.

“How in the godsfuck are you still alive?” asked Fenn.

“I went into the cabin,” said Taft. He looked between the four of us. “This feels like the end, doesn’t it?”
“Just shut your fucking mouth or I’ll kill you myself you weirdo birdfucker,” said Fenn. She had her fists clenched tight, her bow, for the moment, stored back within the glove. I could see the muscles on her neck strained tight.

“Fenn,” said Grak. She opened her mouth to say something in response, then closed it when she looked down at the stump where he was missing a hand.

“What does it mean that we’re in range?” asked Amaryllis. Her voice had gone flat, devoid of all emotion.

A flash of lightning arced out through the sky, briefly blinding me, and the thunderclap that followed behind it deafened me (right after I’d just restored my hearing).

“Warning shot!” yelled Taft, grinning wide. That cemented the idea that something was deeply wrong with him, either the way he responded to stress, or a peculiar streak of fatalism.

He was proven wrong a moment later when a piece of the cabin exploded, sending sharp bits of wood toward us. If I hadn’t been forewarned of cannonfire, I might not have been able to distinguish it as that. The sound from it rolled in just a bit later.

Grak pulled his diagram from within the recesses of his armor, and held it forward to Fenn. It was stained with blood. “We’re not going to make it. You’re going to have to take the shot.” It took me a moment to follow his train of thought; he was thinking that we would do something similar to what we’d done to escape the prison, piling ourselves into the glove, which would then be launched via a time-delayed arrow from the sand bow.

“Wards?” asked Amaryllis.

“Velocity wards will slow it down,” he said.

Fenn turned toward the direction the ship was heading, scowling ahead at the darkness. “I can see it, but just barely. Not a shot I’d want to stake all our lives on, if there’s a ward at the end to fuck things up.”

“Hit the wall above,” said Amaryllis. “I can drop down without much risk, if I have --”

Another bolt of lightning came from the fortress, this one striking the craft. It was there in a flash, so quick that there was no chance of avoiding it, if it were coming for you. The strike hit the cabin, setting things on fire in there and blasting apart the chair, while at the same time melting through the metal of some of the controls.

Fenn made the sand bow appear in her hand, then held out her hand to us. “Masks once you’re in,” she said, speaking loudly in the wake of the lightning strike. “Mary’s on point.”

It was a matter of seconds to get the prepared breathing masks out of the glove, and once the strap was over my shoulder, I took one finger of Fenn’s glove to get the ten-second countdown started which would allow me to get into the glove. I was feeling fried from the repeated use of gem magic, like I’d gone through a three hour test and wanted nothing more than to sit on the couch and watch some kind of TV that didn’t require any mental investment on my part. I almost missed the fact that Taft was standing off to one side, not offered a mask and not requesting one, simply looking out off the side of the ship, down into the Boundless Pit.

There was a part of me that wanted to press the issue, to pull my hand away and demand that we save him, even if he didn’t seem like he really wanted to be saved, even if he was content to die as the ship was destroyed, but it had taken me too long to notice, and then I was inside the black void of
the glove, a place so familiar that it was becoming like home.
The House of Solitude

After they’d escaped the prison, and the misadventure with Fallatehr had been concluded, Amaryllis and Fenn had spent some time trying to work out a better way of doing the arrow transportation trick, and how it might be altered for different circumstances. This was a combination of those scenarios, and some testing that they had done. An arrow fired from the sand bow would stay still with respect to Aerb, the same rules that the immobility plate worked on. This meant that in any scenario where we were already moving, we had a somewhat serious problem, which was that the arrow wouldn’t keep moving along with us.

The protocol for if the “telearrow” needed to be fired from something moving was that Amaryllis would load everyone into the glove, fire off the arrow, and then lock her immobility plate at the exact same instant that the arrow froze in place. If she were firing an arrow normally, this would leave the arrow out of her reach (she had tried this) so the protocol, such as it was, was that she would fire the arrow backwards, aiming it more or less over her shoulder, which would absolutely kill the distance, but at least allow her to enter into the glove inside the arrow, assuming that she’d first removed the vambrace and gauntlet from one of the arms of her armor.

(I hated the name telearrow, by the way. It had been coined by Fenn, but the ‘tele-’ prefix meant ‘far’, and all arrows, almost by definition, were already traveling across great distances, and further, the telearrow didn’t actually go any further than a normal arrow, and in fact, due to weight, balance, and worse aerodynamics, tended to go quite a bit less far. The proper term for it, if you wanted to smush ‘arrow’ and ‘teleport’ together into a portmanteau, would have been ‘arrowport’, which correctly conveyed what it was actually doing. Fenn thought that sounded too much like ‘airport’ though, and besides, she had already named and ‘invented’ it with Amaryllis’ help, and sternly refused to change it.)

Of course, Amaryllis was far worse at actually shooting a bow than Fenn was, especially with Fenn’s scars functional once again. Fenn wasn’t just a masterful archer, she was scarily strong, able to pull the bowstring back to the point where she thought that she could break a normal string from the draw alone. Entads were (generally speaking) made of sterner stuff, and in this particular case, we needed both the distance and the aim that Fenn could provide.

Luckily, the ship wasn’t moving too fast, and so when it came down to it, Fenn was able to take the shot, walk briskly to keep up with the arrow, hop on Amaryllis, who had made herself immobile, and then touch the exposed part of the glove for ten seconds.

Amaryllis had freed both her arms from the armor, while one hand rested gentle fingers on the glove, feeling its magic, the other held a pocketwatch, which was counting down the seconds. Her eyes moved between the watch and Taft, occasionally flickering toward where Kuum Doona was on the horizon. For his part, Taft was simply standing at the edge of the Down and Out, which suffered another cannon hit as she watched. With three seconds left, and the ship far enough away that it would be very hard for Taft to do anything, Amaryllis entered the glove.

There was a totally different protocol for using the telearrow to strike a target high up. The use case, as Amaryllis had seen it, was that we might want to get to the top of something in a hurry, and flying us all in an arrow could do the trick, which would save us minutes if not hours of climbing. She had climbed up Sorian’s Castle, back in Silmar City, and one of the ways that Amaryllis operated was that she usually put thought into past situations to see how she could tackle them if she ran into them again. The inherent problem with firing an arrow up at something like a cliff-face or a tall building was that arrows were built to pierce, and most static structures were designed not to be pierced, even
if only incidentally; an arrow fired against glass, metal, or stone, would be too likely to bounce off, which at best would end up with us exiting the telearrow back on ground level where we started, or worse, someplace dangerous to exit from.

Amaryllis had tried a number of different solutions to get an arrow to stick, or at least come to a stop, but eventually settled on something very similar to a ‘crumple zone’ on a car; the tip was fragile, designed to break on impact, which would slow down the glove-carrying shaft of the arrow. A fast-bonding adhesive would then be carefully applied to the arrow before it was fired, and ideally it would stick to a wall, which would allow Amaryllis to get out of the glove, stick herself in place with the immobility plate, retrieve the arrow, and then either fall or climb to somewhere safe enough that the rest of us could get out. In testing (sans glove), the arrow stuck about one out of every three times.

While the “enter the arrow” part of the plan worked fine, the “exit the arrow” part didn’t really work at all.

Amaryllis popped out of the void seconds after she’d entered it, trusting in her pocketwatch and a rough guess about how long it would take the arrow to cross the distance. It was a jarring transition, to go from standing immobile a few dozen feet away from a brightly lit ship, to being inside the black void with only a hand of flame, and finally, standing so that she was looking out at the ship, turned around in the dark, with a ruined arrow spinning in front of her, illuminated by the flame of her blood, both of them falling.

She snatched the arrow from mid-air, then used the armor to bring herself to a halt. With the helmet of the immobility plate having been taken off, she could move around just enough that she could see the endlessly sloping rock wall behind her, and below that, visible only from the corner of her eye, Kuum Doona, which fired off a blindingly bright strike of lightning that left an abstract blue shape in her peripheral vision. She looked down at the arrow, trying to do a cursory analysis; at a first guess, the air had been too wet, which had negatively affected the adhesive. Another strained glance back at the rock face gave her a best-guess of twenty feet away from it. The crevice that Kuum Doona was nestled in was another fifty feet below. It wasn’t clear where, exactly, the lightning was coming from, but she had to assume that she was at risk if she was noticed. She’d snuffed out the blood flame the moment she’d grabbed the arrow, leaving her in near-total darkness, mostly lit by the residual light from the *Down and Out*.

Amaryllis unscrewed the arrow, extracted the glove, carefully pried the sticky arrow shaft from her hand and threw it down into the Pit, then put the glove on. So long as the lightning didn’t come her way, she had all the tools she needed to get within the wards of Kuum Doona, and once she was inside, there would be the matter of ensuring the house didn’t wish them harm, as it had, apparently, killed dozens of others.

The first step was to get to the rock wall. For that, Amaryllis had specialized tools, not just ropes, pitons, and a harness, all things she’d bought way back in Barren Jewel for the assault on Caer Laga, but a wound crossbow that she loaded with a heavy arrow, the end of which was attached to a length of thin, elven-made rope that had been purchased at great expense.

Turning around to actually face the Pit wall was tricky. Her arms were free, which meant that she could generate some amount of angular momentum. She would hold one arm out to the side, with the other across her breastplate, then swing them as fast as she could to the side. Partway through, she would stop the immobility from her armor, lock her arms so that the momentum was transferred to her body as efficiently as possible, and then make the armor immobile again before she could drop too far. It cost height, which was the resource she was most attempting to conserve, but she managed to get the job done.
The steel-tipped arrow was fired from its specialized crossbow, hurled across the relatively short distance separating them, then broke off part of the wall where it struck and fell limply down, trailing rope behind it until Amaryllis grabbed the end and began pulling it back up to reload it. All she needed was something that she could pull on, something that she could get some tension against, which would allow her to rapidly cycle the immobility plate on and off, and so long as her acceleration toward the rope was faster than gravity, she would make it over without losing too much height.

On the second shot, the arrow broke off more of the rock face, and this time when she reeled it back in, the tip was missing, snapped off by a bad hit. She stayed frozen in the air, looking at it for a moment, then sent it back into the glove and re-evaluated her position. The cannonfire from down below had stopped, as had the lightning strikes. The *Down and Out* was visible below her, spinning and on fire, the magic of the entad having finally failed. The fortress was taking no action against her. Did it not see her? Did it recognize her lineage at this range? Was it operating on some different set of protocols now that a threat was closer?

It was tempting to simply use the teleportation key and nope the fuck out. They could regroup at the hotel room in Headwater and be back in this exact same position in two hours’ time, having talked the situation over in detail and taken time to recover from the battle. The risk, naturally, was that when they returned, Kuum Doona would no longer be there.

Amaryllis got a thirty-pound weight out from the glove, which was attached to a length of thin mithral chain. She began swinging it around, and once it got up to speed, she carefully timed the release of her plate’s immobility so that it pulled her in the direction she wanted to go. In theory, she could have used this method to climb through the air, but in practice, it took a lot of effort to get the weight up to speed. By the time she made her way to the wall, she was soaked through with sweat, even though her arms were cold from nighttime in the damp Pit.

For the last little bit of movement, she used the Anyblade, extended into something resembling a polearm, then firmly wedged into the nearest crack in the rock. She pulled herself in by inches, cycling the armor’s ability so she wouldn’t fall too much, taking breaks when her muscles grew weak from the effort. A single marzipan fairy, taken from the glove and wolfed down quickly, cured the worst of her physical exhaustion, once she was close enough to touch the rock face and begin her descent.

Amaryllis was good at climbing. The Athenaeum of Quills and Blood was built high up on a plateau, and climbing was part of the school’s tradition, a sport taken to the extremes that magic would allow. There were paths on the school’s climbing walls that could only be taken if you were skilled in blood magic, capable of flinging yourself to the timing of your pulse from one hold to another. There were competitions, and clans of climbers; it was one of the school’s primary extracurriculars. Amaryllis had only been at the athenaeum for three years, which was long enough to have learned a little, but not so long that she had considered herself a blood mage. Climbing had been one of the things she’d pushed herself into, partly for the social access it allowed to upperclassmen, and partly because it allowed her some solitude. (Most of the climbing faces had velocity wards beneath them, layered so that you would be slowed by degrees as you passed through them and hit the ground no harder than if you’d tripped over your own feet on ground level, which meant there was no need for spotters or someone to belay her.)

She made her way down being as careful as she could, Anyblade in one hand as a claw-like device that could form itself precisely to any handhold and dig itself into nooks and crannies on her command. It was pitch black, which meant climbing was a thing done more by feel than by sight; she worried that the light would attract the attention of Kuum Doona, or the tuung, if they were out there, though she was certain that to a warder she would be radiant with magic. The rock face was a
persistent underhang of varying degrees, one of the worst surfaces to climb on, which meant that each new position was a matter of bracing and clinging as tightly as possible.

She could feel herself passing through the wards, and sighed in silent relief. Whatever else was going on with Kuum Doona, the wards were still keyed to her lineage, following her erstwhile branch of the family tree.

She reached Kuum Doona proper not two minutes later, finally putting hands on it. She had seen only a little of the place thus far, and now felt the structure of the building, odd pieces of metal and loops of metal, which she gradually realized were interlocking in the same way that chainmail does, each chain as wide as a coin, sheets of it beneath the metal plates, and wood or stone beneath those. Her fingers took a moment to trace it, trying to make sense of it. Someone had clad this building in both plate and chainmail, or perhaps it had been built that way during the forge frenzy. It made the descent go faster, which she was grateful for. She passed windows, each of them a different size and shape, some of them broken, leaving only shattered glass like teeth around the edges.

When her feet touched solid ground, she tested it carefully, putting more and more weight on it until she was standing fully on it, without the use of handholds. She ate another fairy, to take the edge off of physical exhaustion, waited until her breathing and heartrate had returned to their baseline levels, and only then risked producing a flame to look at where she was, ready to move at any moment.

The skin of Kuum Doona was an odd thing, with pieces of metal in vast, curved, expanses, welds and rivets running through them at places of symmetry, most of them scarred or pitted from hits they’d taken. In the places where the metal didn’t cover, there was chainmail, links of metal as large around as a wedding band, joined together and stretching over it. Where there wasn’t chainmail or plate, there was wood, grey and cracked, damp from the mist, or stone, irregular bricks that meshed together like puzzle pieces instead of sitting in regular, ordered rows. The rooms were oddly shaped, and didn’t make up a flat wall, but Kuum Doona didn’t give off the impression of being a ramshackle place put together of disparate elements, it seemed as though there was *purpose* in how the rooms had been arranged, if not any strict symmetry.

The main entrance to Kuum Doona was a set of double doors, some exotic, dark wood carved with a mural. This Amaryllis recognized; the left was a farmer tending to his farm, while the right was a king in his castle. Variations on this theme were common through Anglecynn; it was part of the mythologizing of Uther Penndraig, the boy who had grown up a farmer to claim his place as king. Here, the mural was cracked and chipped, scarred from battle.

In front of the door was a small walkway, made of stone and broken off after ten feet. This was what Amaryllis stood on, looking at the fortress that was hers by claim-in-fact. The fortress was still and silent. It didn’t shoot a bolt of lightning at her, nor did the cannons turn to fire by whatever mechanism allowed that. Amaryllis stayed where she was, making her best effort at being steely calm (and no one did steely calm like Amaryllis).

Slowly and deliberately, she began to bring us back out of the glove.

“Are we safe?” asked Fenn as she looked over the structure. She was staying close to Amaryllis, within arm’s reach, which was probably wise; Amaryllis had both the immobility plate and the teleportation key. The glove was back on Fenn’s hand though, the deal we’d made early on still honored. The Anyblade had also returned to its standard position as a bladed ring on my finger.

“We haven’t been attacked yet,” said Amaryllis. “That implies some level of safety. You can go stand in front of one of the cannons if you’d like to test it.”
“They aren’t cannons,” said Grak, pointing up to something that I couldn’t see by the light of my flashlight, even when I pointed it where he was indicating. “They’re pistols set in large housings. Disguised.” Sometimes he seemed to chew on words, like he’d been searching for the perfect one and wanted to savor what he’d found. “I’ve seen a few of them adjusting.”

“Pistols that shoot cannonballs?” asked Fenn with a frown.

“I don’t know,” said Grak.

“Oh,” I said. “Uh, that was from a campaign, a, uh, pirate campaign we did.” *Not actually a pirate campaign per se, an Age of Enlightenment campaign that turned into a pirate campaign despite my better efforts.* “Three times per day, with a misfire on a critical failure, the pistol would shoot cannonballs. Not automated, as I’d envisioned it, and not part of a building.”

Amaryllis frowned. “An adaptation.”

“Maybe,” I said. I looked over Kuum Doona. “I don’t really understand this place. It seems like it’s lacking a -- huh, central theme?” I wasn’t sure whether that made any sense, or whether I was too out of it to get across what I was thinking. It felt like I’d been doing whatever the mental equivalent of treading water was.

“The prison didn’t have a central theme,” said Fenn. “Brass and mud people.”

“It was different things at different times, overlapping each other in the present,” said Amaryllis. She was staring at the door, and the beaten-down mural there. “In the meta-sense, it was about identity, I think, to tie in with what was going on with Fallatehr. There were golems using flower magic, that bit was thematically about connection.”

“I’m pretty sure that she’s not giving the all-powerful god too much credit,” said Fenn. “But sure, keep bad-mouthing the Dungeon Master, I’ll just make a point of not standing too close to you.”

“So what’s the theme here then?” I asked.

“No idea,” said Amaryllis. She was still looking at the mural, or maybe just at the door.

“It’s a person,” said Grak.

“A person wearing plate and mail?” asked Amaryllis, shining her flashlight to the metal exterior. I could kind of see it, once Grak pointed it out.

Grak nodded. “Not in form. But it is likely sentient.”

“If this were a person, it would be a hot mess,” said Fenn, pointing a toe down at a bit of broken stone, not quite kicking at it.

One of the two doors, the side with the castle on it, creaked open. We all stared at it.

“That’s not to say that we don’t all have our flaws,” said Fenn, putting on a cheerful smile. “Myself, I have plenty. I’m a convicted felon on the run from the law, killed a hundred people about half an hour ago, I’m --”

“We should go in,” I said.

Amaryllis raised her flashlight and pointed it in through the open door. “There are bodies inside,” she
said. I looked to where she was pointing and saw the dark shapes there, with the occasional glint of metal. “Old,” she said, echoing my thoughts.

“Other teams that came here, the ones looking for treasure?” I asked.

Amaryllis waved the flashlight from side to side, then gave a curt nod. She frowned slightly, narrowing her eyes. “There were others, imperial forces trying to bring this place under control. According to rumor, anyway.”

“Yeah,” said Fenn. “Didn’t seem to have worked out for them, did it?”

“We should go in,” I said again. “The open door is an invitation.”

“Feel free to lead the way,” said Amaryllis, deadpan.

I stepped forward, flashlight held in front of me. It was an Earth flashlight, the beam brighter and better-focused than anything you could get on Aerb short of using magic. I crossed the threshold, trying not to think too much about it, which was easy with the mental exhaustion of the gem magic still in full effect. If this place wanted us dead, I was pretty sure that we would be dead, and standing at the door wasn’t doing us any favors.

The doors led into a grand foyer with two staircases coming off it at different angles, as well as another three doors, one of which was missing, another slightly off its hinges, and only the last firmly in place -- boarded shut. Where there was carpeting on the stairs, it was frayed and rotted. Where there was wood, it was cracked and warped. The floor was black and white tile in a pattern that ran at a skewed angle from the room. That pattern made the problems all the more noticeable, places where it was cracked or missing tile.

There were eight bodies, if I was counting them right. None of them were fresh; the places where there was skin were blackened, the faces with pits for the mouth and eyes. It was hard to tell what had happened to them so long after the fact, but the picture it painted was certainly gruesome. A chandelier must have hung in the foyer at some point, because it was on the ground now, with a body beneath it. On one of the walls was a patch of red so dark it was almost black, marking a blast of something foul that might have come out of the body crumpled at the base of the stain. Another of the bodies was missing its torso; it was laid out flat, with the legs and arms still in position, head rolled off to one side, and a dark trail leading away from it, thinning out by the time it reached the open door.

“Sorry I called you a hot mess!” said Fenn through the door. “You’re really quite lovely!”

“Is that really an idiom here?” I asked. “Hot mess?”

“Watch what you say,” replied Amaryllis. She’d had her helmet off, letting herself cool and giving her sweat a chance to dry, but she replaced it as she looked in through the door. Sometimes it seemed like she went around armored more often than not, closed off from the world.

“We spoke of much outside the doors,” said Grak.

“Yes, we did,” said Amaryllis. “This place wasn’t supposed to be intelligent. Not enough to understand speech. My great-grandfather said it was, at best, doglike, not --” She stopped and cleared her throat. “I am Amaryllis Penndraig, tenth of my name, Princess of the Kingdom of Anglecynn, most direct living descendant of Uther Penndraig, and keeper of Kuum Doona by claim-in-fact.” She said it as a proclamation, but without raising her voice.

There was no response from the fortress.
“Okay,” said Fenn, after some time had passed. “So do we take the creepy boarded up door on the left, the creepy door with the blood trail on the right, or one of the stairways, or what?”

“We could each take a different path,” I said. “Cover more ground that way.”

A silence settled around us.

“That was a joke,” I said.

“Not very funny,” said Fenn.

A hollow laugh echoed out from inside, coming from the right door, the one that a dismembered torso had likely been dragged through.

“Alright, I’m just going to be the one to say it,” said Fenn. “We could chalk all this up to a long, painful misadventure and get the hell out right now.”

“One of the wards is a teleportation ward,” said Grak. His eyes swiveled, taking in information that I couldn’t see. “We would have to drop.”

“We didn’t come this far for nothing,” said Amaryllis. She had been standing outside, and finally crossed the threshold to stand with me at the entrance to the foyer.

“Sounds like the sunk cost fallacy to me,” I said.

“No,” said Amaryllis. “The cost is sunk, but that means that the marginal cost to complete a search of this place and get to the time chamber is low. We’ll stay together, search room by room, and it shouldn’t take us more than a day to find it. The cost is practically nothing, assuming that Kuum Doona doesn’t want to kill us, which I don’t believe it does.”

“On what grounds?” asked Fenn. “The fact that it hasn’t? I used to have a cat that would spend hours murdering mice, if I let her. She’d toss them around, injure them, run them down, and only dismember them when they’d stopped being entertaining.”

Amaryllis gave a little “mmm” sound as acknowledgement; it was a possibility.

“Either way, we should double tap those bodies,” I said. I held out a hand toward Fenn, and she tossed me a void pistol. She still hadn’t stepped inside Kuum Doona.

I walked toward the bodies, trying to push away the emotions that were encroaching on me. My least favorite thing about gem magic was that the feeling of mental exhaustion seemed to be fixed at percents, rather than at static intervals, meaning that being down in the bottom fourth of points, as presented by the meter in my HUD, gave me that dissociative, drifting feeling that I’d previously associated with either depression or not getting enough sleep. I was more sensitive to the world around me, more easily drawn toward memories and feelings than usual, not enough that I was a liability, but enough to be annoying.

I thought about the thunk of the void rifle when Amaryllis had executed Poul at the mechanic’s back in Comfort, the cold, mechanical way she’d done it, mirroring the detached way that I was moving. I thought about wry amusement at the game table as, once again, corpses and statues were desecrated so that they couldn’t come to life and hurt anyone, a task that Craig and Reimer had always approached with unbounded creativity. I thought about my grandfather in his casket, skin showing too much of his bones after a long battle with cancer, and the seven days we’d spent in South Dakota, waiting for him to die. The smell in the foyer was mercifully muted, with only a slightly hamster-smell of mildew coming through, and that called me back to my first real pet.
I wasn’t even sure that shooting the corpses would do anything. If I’d been Reimer, I probably
would have taken the time to break the corpses apart, separate the important bones from each other.
Looking back on it, the work seemed kind of pointless, but no one had stopped me, they’d just had
hushed conversations with each other

“You okay?” asked Fenn, as I was finishing up. Her hand touched my elbow.

“Yeah,” I said. “Overdid it on the gem magic. Not my best self right now.” I stopped. The question
was slow to come to me. “Why? Acting weird?”

“A little bit,” said Fenn. “Combat fatigue, I was thinking.”

“Ah,” I said. “Plausible.” I idly wondered whether I would get a status update on that or not. It
seemed like a textbook affliction, if it was one that I had.

“We just need to keep moving,” said Amaryllis. I hated when the helmet obscured her face. Maybe
we would find a magic item that would make her helmet invisible. I put in a mental request to the
Dungeon Master for that. “Find the time chamber, get me into it, that’s our only objective for the time
being. Any left-behind heirlooms come second, and making this a permanent, secure base of
operations comes third.”

“We should follow the blood,” I said, pointing to the trail that led away from the dismembered arms
and legs. “That was done after he died, deliberately, moved to somewhere important.”

“It was hopefully done after he died,” said Fenn. “Aren’t you the one always talking about worst
case scenarios?”

“Yeah,” I said. “True.”

“There would be more blood,” said Grak, who had finally joined us. I turned my flashlight toward
him, so I could see him, and noticed something disquieting.

“Did you close the door?” I asked.

He turned to face the door, along with Fenn and Amaryllis. It was firmly closed. “No,” he said.

“No theatrical slamming shut, trapping us in here?” asked Fenn. “I’m almost a little disappointed.”

“We should try to open it,” said Amaryllis.

“On the off-chance that would actually work,” I replied.

Grak moved forward and tested the door. It swung open freely, without any resistance, to reveal a
wall of smooth rock.

“We’ve moved,” said Grak.

“Without feeling it?” I asked.

“Seems like,” said Fenn. “Meaning, if I understand you right, that we’re now trapped here unless we
can find another way out?”

“Yes,” said Grak. “I might be able to negate the ward if we can find a seam. The exterior seam is
blocked off to us. Normally there would be a defensible room on the inside, entrance and exit.”

“Well, I’ve got a bad feeling about -- fuck!” Fenn had her bow in hand, with an arrow coming from
the glove shortly after it, and she had loosed an arrow before I could even see what she was looking at.

When I looked over, I saw that the decapitated head had rolled a few feet. An arrow pierced it through the eye socket, pinning it to the ground.

“*It moved,*” said Fenn. “*It was rolling.*”

“*Rolling away from us?*” asked Amaryllis.

“Yes,” said Fenn. She walked over to the head, stepping carefully across the tile, and planted a foot on it before withdrawing her arrow. It was coated in black ichor; she tossed it to the side. When she lifted her foot up off the head, it stayed where it was, then began rolling again, toward the open door, following the path that had been marked by the trail of blood the torso had left.

“Are -- are we expected to follow that?” asked Fenn. “Like, this house legitimately expects us to follow after a rolling head?”

Another ghostly laugh echoed from down the hallway.

“We may be dumb, but we’re not that dumb,” said Fenn.

“I say we follow it,” I said.

“I agree,” said Amaryllis. “It’s a communication with this place, if an unconventional one. If we’re fighting against it, I’m not sure that we can achieve our goals here, especially not making this place into a lasting, fully secure stronghold.”

“You are *insane* if you think I’m spending the night here,” said Fenn. “Even one night, let alone actual downtime.”

“We may not have a choice,” said Grak, looking back to the door that opened onto stone.

We made our way down the hallway, slowly. I took the lead, because I could more easily take a hit, and Grak was just behind me, because he could see magic.

“This place has more magic in it than anything I’ve seen before,” said Grak. “Layered magic. Diverse. I think Juniper is right.”

“Right about what?” I asked with a frown.

“There is a thin thread of commonality running between the magic,” said Grak. “More thin than I would expect.”

“You’re talking about central themes?” I asked.

“No,” said Grak. He snorted slightly. “Yes. The magi would not like that interpretation.”

“Well I’m really not enjoying my time here so far,” said Fenn. “And this talk isn’t making me a whole lot happier about wandering around.”

“It wasn’t supposed to be like this,” said Amaryllis. “If we had known the house was a thinking entity, maybe --” she stopped and started again. “I need to know more, to understand why it got like this.”

“And why your ancestors lied to you?” I asked.
“Yes,” said Amaryllis. “This place was listed in the family ledger as mothballed, closed down because of expenses, not a rogue entity. My great-grandfather has confirmed as much. It always seemed like more trouble than it was worth, not just to me, but to the others as well. At some point a link in the chain of custody broke. Or … was tampered with.”

“So we’ve got a family mystery added on top of that?” asked Fenn. “Yeah, really not helping. Mostly it’s the fact that we’re following a frickin’ rolling head around in pitch black darkness nine miles underground, maybe that’s what’s got my goat.”

The head kept rolling. When we paused, usually so Grak could check something, it came to a stop and waited for us. Heads didn’t roll terribly well, as it turned out, given that they weren’t spherical, and so the movement of the head was interrupted sometimes when it caught on the eaten-away nose, or flipped over an ear, or got in a bad position on the warped boards. It had been scary when it had rolled away of its own volition, but there gradually came to be something comical about it. I wondered if that was by intent, or whether it was an attempt at being spooky that was falling flat.

We passed by doors and windows, most of them closed. By mutual agreement, we didn’t go through any doors, but we did shine our flashlights into the rooms, illuminating scenes of death and decay. Sometimes there were decayed bodies draped over the furniture, other times only stains. Dismemberment and mutilation seemed to be a running theme; someone’s finger had been cut off, or a hand was missing, or the eyes taken from their skull. I kept thinking that this fortress was basically a Superfund site, and even if the controlling intelligence of it could be brought to heel, or convinced to cooperate, it would take us months to clear it out and make it livable, not to mention the millions of obols it would probably take to replace warped or rotted boards, carpet, furniture, et cetera. It brought to mind cleaning out my aunt’s house after she’d passed, finding things that were ancient and shrunk. This place was littered with the dead, and something would have to be done about them. That was beyond all the work of adding in conveniences like electric lights and running water, neither of which I saw any sign of. That wasn’t too much of a surprise, given how old this place was.

The head rolled into a large room and came to a stop when it hit the leg of a dining table. Our flashlights moved around, taking the room in. The table was long and solidly built, able to seat at least a dozen, and while it dominated the place, there was also a bar along one wall, and a rotted couch and armchair sitting next to a fireplace. Above the mantle was a dusty tooth, big enough that I’d have probably had trouble picking it up.

Four shot glasses sat on the table, each filled with a clear liquid. We’d paused on them, wordlessly, for just a bit, then continued looking around to see what else the room had in store, or why we might have been brought here. I moved my light away from the table, pointing it to the rows of dusty bottles going twenty feet up to the ceiling, and the ladder you’d have to climb to get the stuff on the top shelf. When my flashlight swung back, crossing the table, there was a girl seated there.

It took me some time to recognize her, as the others shouted in surprise and moved into action. She was sixteen or seventeen years old, with long brown hair that was tied back in a ponytail; I had always liked the way it swished back and forth when she shook her head. She had a small mouth with thick lips; I could instantly remember what it was like to kiss her. It was cold in the house, and slightly damp, but she wore a t-shirt and short shorts, just like she’d worn every day in the summertime. She even had flip-flops on. As if to underscore it, the shirt was one that I’d known, “Kansas Swim” written on it, with a stylized icon of a woman swimming, caught mid-stroke. She’d been on the swim team, the shirt had been free, from a conference or organization or something.

Tiff.
“You’re an avatar of the house,” said Amaryllis. She had her arm on Fenn’s, holding the bow down in a position where Fenn couldn’t take the shot. From the way that Fenn tried to struggle, the immobility plate was doing the bulk of the work in making sure that Fenn didn’t shoot.

“Avatar carries specific connotations,” said Tiff. “I would prefer icon.” Hearing her voice sent a chill down my spine. The cadence was the same, the tone, everything as I’d remembered it. It was jarring though; there was none of the sadness that I’d grown accustomed to from her, that undercurrent of depression, and even before that, when she’d been happy, she’d never been so … imperious. I glanced down at her ankle; there was no tattoo there. It should have been a sigil that Arthur had made for one of our longer campaigns, a stylized cross at an angle, but it was missing.

“Can I ask what everyone else is seeing?” I asked.

“Young girl, my age, improbably clean, wearing a t-shirt that says ‘Kansas Swim’,” said Amaryllis.

“Your type, I’m guessing,” said Fenn with a pronounced frown. I wasn’t sure that I had ever described Tiff to her, but maybe she had made the connection anyway, given the t-shirt.

“Magic,” said Grak. “Entad magic. No skin, bone, or blood.”

“I’m looking at four adventurers in the classic mold,” said Tiff. She raised a finger and pointed at each of us in turn. “Warder, archer, brute, and muscle. How did I do?” I was apparently the muscle, while Amaryllis was the brute.

“I’m a multi-disciplinary mage,” I said. “Among other things.”

“Mary is the manager,” said Fenn. “I’ll give you a two out of four, that’s not half bad.”

“Manager isn’t one of the archetypal roles,” said Tiff.

“I’m not a manager,” said Amaryllis.

“Well, there you go,” said Tiff. She picked up one of the shot glasses, inspected it, and then put it back down. “Are you here on business or pleasure?”

“Your shirt,” I said. “It says ‘Kansas’ on it.”

“Yes,” Tiff nodded. There was no recognition in her eyes when she looked at me. There was something off about her, aside from the fact of where she was. It wasn’t just the tattoo that she was missing, there were other details that didn’t match up with how I remembered her. Her bottom teeth had been slightly crooked, not enough to justify braces, but enough that she’d mentioned it to me once as something she didn’t like about herself. This -- apparition, for lack of a better word, wasn’t quite right on that score. I tried looking for other details, and again found the simulacrum wanting. I’d loved Tiff intensely; on the nights we’d spent together, I had made a study of her.

This wasn’t Tiff, it was just meant to look like her, for whatever reason.

“We’re here on business,” said Amaryllis. “You’ve overheard as much, I’m sure. There’s supposed to be a time chamber somewhere in Kuum Doona --”

“I don’t like that name,” said Tiff.
“My apologies,” said Amaryllis. “Is there a name you’d prefer?”

“Zona, if you please,” said the avatar of the house, wearing Tiff’s form. I recognized the name, after a few seconds of it tickling my brain. Zona had been the name of Uther Penndraig’s wife. I was guessing that the pseudonym wasn’t a coincidence. As to the connotations though, that was harder to guess. He’d left his wife to go adventuring, cheated on her, if the stories were to be believed, either with or without her blessing. Loved her, maybe. I wasn’t sure what applied, if she’d taken her name from Uther’s wife. Or maybe by some strange magic, she was Uther’s wife.

“Sorry,” I said. “That form, are you stuck in it, or can you change it?” I noticed Amaryllis beside me stiffen slightly at the question.

“Why?” asked Zona, arching an eyebrow.

“It’s,” I shook my head. “Complicated. Distracting.” Tiff, here in the flesh, wasn’t something that I needed at the moment. It was overwhelming me at a time when I was least capable of handling it.

“It bothers you?” asked Zona, raising an eyebrow. “Would you cut your hair if I said it looked stupid?”

“Uh, yes?” I asked. “I probably would.”

I didn’t understand why she looked like that. The obvious answer was Arthur, but that brought up all sorts of unpleasant thoughts. Kuum Doona had been his, five hundred years ago, and I had been hoping that I would get some insight into what had happened to him, or who he had been on Aerb, something more than the history books could tell me. But this … Tiff, as the avatar of Arthur’s home, or icon, in her words, said nothing good, and all the innocent explanations I could come up with rang hollow.

“There’s a time chamber somewhere here, isn’t there?” asked Amaryllis. “We have urgent need of it.”

“I’m not going to negotiate with you,” said Zona. She slumped in her chair and put her feet up on the table, just like Tiff used to do. “Her,” she said, pointing at Fenn. “She likes running her mouth, I think I’ll talk with her.”

“Um,” said Fenn. “Mary is, more or less, the talker.”

“Talker, manager, brute,” said Zona with a nod. She pointed a slender finger to me. “Your eyes keep going to him though. Juniper, like the tree.”

“He’s, ah,” Fenn’s eyes went to me. “My boyfriend.”

“With all due respect, the reason we need the time chamber,” began Amaryllis.

“Do you need to know why we need it?” asked Fenn.

“Yes,” said Zona.

“And if I don’t tell you, you’ll … ?” Fenn trailed off.

Zona tapped the table with a finger, looking between us. “Kill you all.”

Fenn nodded at that, as though that was the answer she’d expected. “I should say that I don’t really
do well with being threatened. Like, burn this fucking place to the ground, that kind of don’t do well.”

Zona laughed; it echoed in from the room’s open doors, rather than coming from her mouth. “You think people haven’t tried that?”

“If I can just --” began Amaryllis.

Lightning crackled between Zona’s fingertips, and she gave them a look of idle curiosity. An arc went between thumb and forefinger twice in quick succession, making a sound that lingered in the air. “So,” she said, “this one,” pointing to Fenn, “doesn’t take to being threatened, and this one,” she said, pointing to Amaryllis, “doesn’t take to being given direction. I’m curious to see what your other faults are, as a group.”

Amaryllis’ mouth was set in a thin line.

“Amaryllis is pregnant,” I said. “It’s important that the baby is born within the next few days. And, I guess, ideally spends a few years growing up, maybe.”

“Oh,” said Zona, frowning. It really was a remarkable resemblance, but the ways that it didn’t quite match raised a lot of questions about how it had been created. Maybe if it had been perfect, I would have just accepted it as something pulled from Arthur’s mind by a magic he couldn’t control, but I didn’t think that he would have gotten Tiff’s frown wrong. “Why?”

“The child is going to be the last druid for the last surviving locus,” I said. I looked over and saw Amaryllis biting her lip hard. Too much information too fast, I was guessing.

“What happened to the loci?” asked Zona, frowning. Her eyes stayed focused on me.

“Oh,” I said. “The Second Empire wiped them out.”

“Hum,” said Zona, “I’d always thought them kindred spirits, of a sort.”

“This child is the best chance we have at saving the last of them,” said Amaryllis, touching her stomach, which was covered in plated armor. She was laying it on too thick, but that was just my perspective, and she was a better judge of character than I was ever going to be. She removed her helmet, the better to present as non-threatening; if the house could shoot lightning indoors, which seemed to be the threat, it wasn’t like the helmet was really going to help.

“Praytell, what is a Dungeon Master?” asked Zona, shifting the conversation.

I glanced at Amaryllis. She was keeping her mouth shut. When I glanced at Fenn, she was looking at me. Grak didn’t seem to be focused that much on the conversation; he was looking at things that I couldn’t see, trying to solve some mystery of magic that remained, for the moment, invisible.

“You knew Arthur?” I asked.

Zona watched me for a moment, with Tiff’s eyes, searching. “Arthur?” she asked.

“Arthur Isaac Blum,” I said.

“No,” said Tiff, shaking her head, swishing her ponytail behind her. “He’s the Dungeon Master? And you ... think that I know him?”

I felt my heart sink. She was supposed to have the answers; the name was supposed to be a key that
opened her up, the point of commonality, a secret that I shouldn’t possibly have known. It was a piece of information that I’d been saving in my back pocket for something like this, for someone who had known him intimately.

“No,” I said. “I thought that maybe … if you had known him, I would have been able to explain it better. A Dungeon Master is like a god, I guess. Like, um, Skaduwee?”

“I know my gods, thank you,” replied Tiff. No, Zona, not Tiff. It was hard to keep that straight when talking to her, listening to her voice, looking at her, it was just close enough to how she’d actually been that my mind was filling in the gaps, ignoring the places where it wasn’t right. She turned to Amaryllis. “You want to live in me.” She switched topics like she had an itinerary she was going through. Maybe she’d been listening in for long enough that she actually did have a list of the things that had caught her attention. It felt jarring though, as important topics were set to the side.

Amaryllis hesitated. “May I speak?” she asked.

Zona waved a lazy hand.

“We have need of a base of operations,” said Amaryllis. “We came here for the time chamber, and if we can leave, having used it, that will be enough that I would consider the trip well worth our time and resources. Our secondary reason was to gather the equipment that my ancestors left here for dire circumstances —”

“All of it gone,” said Zona.

Amaryllis nodded, not missing a beat, not pressing the point or asking the obvious follow-ups (gone to where? gone how?). “But our third criterion is to have somewhere that is well and truly secure from outside intrusion. This place is battle-hardened, with more in the way of capabilities than anyone seems to know, it has ancient, powerful wards, and, apparently, a governing intelligence that can manage all manner of issues that might arise, if you so choose. We haven’t gotten off to a great start, but I think that given some time to talk, we could find some common ground.”

Zona let out a puff of air. When I watched closely, I could see that she wasn’t actually breathing, which raised some questions about how she was actually making sounds. Magic, probably.

“I suppose,” said Zona. She looked at me for a moment, and it was just like Tiff used to look at me when she was trying to tease meaning out of me just by examining my face. Or maybe Zona was just giving me a look that was close enough for my addled brain to make the connection.

Zona gestured toward the shot glasses. “Here, this is the antidote.”

“Poison?” asked Fenn. “Are you shitting me?”

“You’ll be shitting yourself in about,” Zona looked down at her wrist. There was no watch there; that had been one of Tiff’s favorite jokes, looking at her bare wrist to pretend to check the time. “Twenty minutes, if you don’t drink up.”

“You can see it?” Amaryllis asked Grak.

“Yes,” said Grak. “Latent magic, infusing the water vapor. It was difficult to spot. I didn’t know what it was.”

“That ‘antidote’ might just be more poison,” said Fenn, pointing at the glasses. “I’m not the only one
Zona sighed. “I used to enjoy this,” she said.

“You enjoyed ... poisoning people?” I asked.

“Yes,” she nodded. She looked at the shot glasses. “Some I would kill on the approach, some I would let beat against the wards, some I would let inside, fool their warders into thinking that they’d pierced my defenses, and then …” She trailed off and tapped her fingers on the table.

“Rolling heads, creaking doors,” said Fenn. “Creepy laughter.”

“I apologize,” said Zona. “I gave you a half-hearted effort. If I’d been invested, one of you would probably have died while you were walking toward me. Something gruesome, maybe, or if not, then silent and unknowable, a throat slit for no apparent reason, by no apparent cause. It’s easier with bigger groups, killing one to make a point doesn’t weaken them enough that their will breaks entirely. That’s the worst, when they just spend their time here cowering and waiting for the end.”

“And that’s, ah, what you’ve been up to for the last few hundred years?” I asked. I was trying to keep the distaste from showing on my face. The bodies we’d seen in the hallways had been her handiwork, which I had already figured, but the way she put it was revolting.

“Do you find my behavior unbecoming?” asked Zona with a raised eyebrow. She looked to Fenn. “Your girlfriend was being quite the braggart about having killed hundreds of the tuung.”

“That’s -- that’s how she copes,” I said. “It’s not sport.”

“‘Sport?’” asked Zona. She frowned slightly, then turned to the shot glasses. Her finger touched the rim of one and she pushed, tipping it just to the point where the liquid inside threatened to spill onto the table. “I suppose so.” She took her finger away, and the shot glass fell back down, sloshing the liquid back and forth. “You should drink, not much time left until you start showing symptoms, and after that point, the antidote won’t undo the damage.”

I stepped forward and picked one of the glasses up, took a half-second to look at it, then downed it in a single gulp. It tasted like tonic water, with the same acidity to it, but none of the bubbles. I set the glass back down on the table, and gave Zona a nod.

“I’m fine playing guinea pig,” I said to the others.

“I don’t believe I’m familiar with the term,” said Zona. She was watching me closely.

“Oh, I’m dream-skewered,” I said. “I come from a place called Earth.”

“Juniper,” said Amaryllis. I could hear the pain in her voice. “Can we please just --”

“I’m acquainted with the phenomenon,” said Zona. She was watching me closely, and though I thought that was probably dangerous, I was also happy to capture her attention. She had answers that I desperately wanted, starting with why and how she looked like Tiff. “And yet a mage, for all that? One of many disciplines?”

“Joon, scenario?” asked Amaryllis.

“Still zero,” I answered, before turning back to Tiff. “I’m willing to talk if you are. From my understanding, we’ll have some time to kill while Amaryllis uses the time chamber. There are some things that I’m hoping you know.”
“Uther,” said Zona. The word came out leaden, tinged with a small note of hostility, though I couldn’t tell whether it was toward him or me.

“Yes, Uther,” I said. I felt Amaryllis put her hand on my elbow, warning me, but despite the muddled feeling that came with combat fatigue, mental exhaustion, the way I kept having trouble not seeing her as Tiff, and whatever else was going on, this felt like the right path to me. I hated deception, having to keep track of who was supposed to know what, phrasing things in just the right way as to deliver two different messages to two different people. It was exhausting, and prone to failure.

“Tell your friends to drink up,” said Zona.

Amaryllis was the first to step forward. She downed the antidote, if that’s what it really was, without so much as a trace of emotion or reaction. I hoped that whatever the poison was, it wouldn’t fuck up the pregnancy, and same for the antidote, which would hopefully be without side effects. Grak was next, wincing slightly at either the taste or the chance that he was being given a second poison. When I looked at Fenn, she folded her arms across her chest, then relented after a moment.

“I’m going to start making a list of complaints,” said Fenn. She strode forward and downed her shot in a single swift motion. “Just so that when we have an annual review, I can go through them one by one.”

“Annual review?” asked Grak.

“It’s an Earth thing,” said Fenn as she inspected the shot glass. I’m not sure what she was hoping to find, ‘you have been poisoned’ etched on the bottom? I wouldn’t have been terribly surprised by that; Arthur had given each of the group one of a set of glasses for Christmas, two years ago. Fenn set the glass back down without comment.

“We have annual reviews,” said Amaryllis. “I used to give them for my staff.” She turned to Zona. “We’re ready to go.”

“Only very rarely was it all poison,” said Zona as we walked down a long hallway filled with doors. We were still using the flashlights, though she didn’t seem to need them, sometimes stepping around exposed nails before I could see them. “Sometimes it was only one of the cups, sometimes it was all but one, sometimes it was a mix. On occasion, none of them were poison, or I had elected not to put any poison in the air.”

“You can choose not to?” I asked. “Meaning that you were planning on killing us?”

“It seemed so rote,” said Zona. “You spoke of inhabiting me, which no one has considered an option for centuries. I thought perhaps my time of solitude punctuated by excitement had finally come to a close.”

“That I’m the most direct living descendant of Uther Penndraig had nothing to do with it?” asked Amaryllis.

“I am not a subject of Anglecynn,” said Zona. “I do not bow to its princes or princesses.” She turned left without warning, and I followed after her, trying my best to be unafraid. I was a little bit off-balance, mentally speaking, but fear was definitely making itself known, and it was hard to wipe away the sweat on my palms because the armor didn’t really help. I wore Ropey around my waist, but he was sentient too, and had saved my life back on the Down and Out, and I didn’t want him to suffer the indignity of me wiping my sweaty hands on him.
“Whatever historical animosity there is,” began Amaryllis.

Zona whirled around, forcing me to come to a stop. “I do not like you,” she said. “Your type was always the least likeable, of those who have made this place their graves. You pretend at being in control. You assert yourself. Sometimes this behavior is a facade, put on for the purposes of morale or social dominance, and sometimes it is simply the truth of a person, but either way I don’t find it becoming.” She turned back to the direction she’d been walking, but didn’t start moving. “There is no love lost between myself and the various Penndraig lines, but I will do my best not to hold that against you, so long as you don’t pretend you hold any special sway over me.” She started walking again, again without a word of warning, and I hurried to keep up as we passed through a bedroom with a rotted four-poster and went up a spiral staircase with flagstones that had been worn down in the middle.

“You should have mentioned how she’s too pretty,” said Fenn.

“That too,” said Zona with a laugh that came from everywhere at once.

“No bullying,” said Grak as he walked up the stairs. When I looked back at him, I was momentarily shocked to see that he was missing a hand; with everything that we’d gone through, I’d managed to forget.

“If anything, that was a compliment,” said Fenn.

We came out into a large room with two heavy doors set against one wall, and a few other passageways leading off from it. My eyes were drawn to the doors though, and the pillars of sand on either side of them. Set into one pillar was an hourglass, each bulb the size of my head, and all the sand at the top, pressed up away from the neck of it as though gravity were pushing it the opposite direction.

“Oh, thank the gods,” sighed Amaryllis as she reached the top of the stairs.

“You didn’t trust me?” asked Zona.

“I worried that it wouldn’t be charged, that you would have used it, or --” Amaryllis stopped, shaking her head.

“I have never wanted for time,” said Zona, deadpan. She stepped forward and touched the upper bulb, caressing the glass. “That aside, it has no effect on me, as I contain it. Things inside, when it’s running, move too fast for me to follow.” She gave the glass a tap with her finger. “Two hundred years stored up, ready for use.” She looked at us. “With conditions.”

Fenn swore under her breath.

“What conditions?” I asked, after Amaryllis had no response.

“I will be taking a full survey of your entads, including those within the glove,” said Zona. “From them, I will select three for myself, with some consideration to their utility and sentimental value to you.”

“Many of them are tied to our bloodlines,” said Amaryllis.

“I am aware,” replied Zona. She gestured at Amaryllis’ armor. “The Still Plate was commonly worn by Uther, during his time exploring the Boundless Pit. Is its value to you sentimental or practical? Mostly the latter, I would expect, given how you used it during your climb down to me.”
“It’s seen me through many trials,” said Amaryllis. She glanced at the rest of us, briefly taking stock of the entads that we had available to us, and which we might be able to afford losing, then back to Zona. “Such a survey would need to wait until after the most urgent of our business was concluded, and any negotiations as to which entads we’d gift you would get my full attention then.”

“Mary, come on, this is blackmail,” said Fenn. “You can’t honestly be thinking of bowing down.”

“As I see it, a gift is only fair,” said Amaryllis. “We’re speaking about a sentient creature making accommodations for us, allowing us to use its resources, and entering into partnership.” I couldn’t tell whether Fenn was serving as a devil’s advocate here, and the two of them were playing both sides, or whether Amaryllis was just making the best of Fenn’s objection. It did seem like Amaryllis was displaying a soft streak, and had been since Zona had made herself known. I had no real idea how much of that was an act.

“You call it a gift,” said Zona. “Curious, as that was not the word I used.”

“It’s reciprocity,” said Amaryllis. “But we need to use the time chamber first, and once the child has been born, at least one of us will need to leave and make our way back to the locus. The survey can take place in the interim, while the most pressing business with the locus is concluded. Obviously two or three of us staying here would allay any concerns you might have about us leaving without giving you your due.”

Zona frowned, then nodded slightly. “You’re too crafty by half.”

“And yet still less crafty than the world seems to demand of me,” replied Amaryllis.

Zona stepped over to the twin doors that led the way to the time chamber and opened them up. The interior was smaller than I thought; where I had pictured something like a gymnasium, this was more like a living room, and a somewhat small one at that, not much more than twenty feet by twenty feet across. It was curiously nondescript, and in much better repair than the other parts of Kuum Doona, with white walls, a white ceiling, and hardwood floors. Taken by itself, you might have been able to mistake it for being a room somewhere in middle America.

“I should give you warning: nine months spent in this small space will be a form of torture,” said Zona. “And of course, I presume that you’ve brought your own sources of food, water, air, and waste elimination, as well as ways of providing for your personal hygiene.”

“We have,” said Amaryllis. She was staring at the space, the small chamber where she’d be spending a significant fraction of her life. We hadn’t really had a discussion about who would be in there with us; I’d been assuming that we would all be in there together, but I’d also been thinking that the time chamber would be larger. “Time to cycle up and down?” asked Amaryllis.

“Five minutes and ten minutes, respectively,” said Zona.

“And the maximum rate it can attain?” asked Amaryllis, still looking at the chamber.

“One day every minute,” said Zona.

“Alright,” said Amaryllis. “That’s five hours for the pregnancy then. Weekly check-ins would add on another ten hours, approximately, and I’m not sure how much utility they would provide us. We’ll do them ad hoc then, or monthly, which ever comes first, that means two hours of cycling up and down, plus perhaps another hour if I need more assistance than I expect.”

“Hold the phone,” said Fenn. “Were you planning on being in there all alone?”
“Fenn, I’ve lived with you for long enough to know that I would literally kill you if I had to spend more than a week stuck in a small room with you,” said Amaryllis.

“You could try to kill me,” said Fenn. “I mean, the image of a pregnant woman attempting to waddle over and put a knife in my guts is pretty funny.”

“I have some experience as a midwife,” said Grak. “I would like to be in with you for the final two months. For the final month only, if you anticipate that I would grate on you.”

“You were a midwife?” asked Fenn. “But like, for dwarves, right?”

“One of my duties was attending births,” said Grak. “I participated in more than one hundred. I was not a midwife myself, only an assistant.”

“But … for dwarves, right?” I asked. “Anatomically …” I trailed off, because I didn’t know enough about dwarves to dispute it (and frankly, I was also pretty out of my depth when it came to human women).

“Do dwarves not lay eggs?” asked Fenn. “I could have sworn I read that somewhere.”

“We do not,” said Grak. “The primary role of the midwife is support. I can provide that in spite of anatomical differences.”

“For the last two months,” said Amaryllis. “You can be sure that I’ll do some reading on the subject, and provide relevant literature to Grak so that we can cover our bases.”

“Literature?” asked Zona.

“It means books,” replied Fenn.

Zona laughed, a booming laugh that echoed from all parts of the house. “I meant to express incredulity at the four of you figuring out the birthing process from books alone.”

“Fenn, I’m going to need the glove,” said Amaryllis.

Fenn sighed and slipped off Sable, then rested it reverently on Amaryllis out-stretched hand. “You know, it’s my glove, we agreed to that way back when. Seems kind of unfair for you to take it for nine months.”

“I’m sure that somehow you’ll manage to survive,” replied Amaryllis.

She strode forward, into the chamber, seemingly unconcerned about her fate. Maybe she was happy to have some time to herself; I knew that her Grand Scheme for Modernizing Aerb would take shape in the time she spent in there, maybe even in another forty-five minutes, when a subjective month had passed for her.

As she turned to close the doors, she gave us one last look. “See you in a month,” she said.

And then she closed the doors, sealing herself off from us.
Zona stepped forward and inspected the hourglass. The sand in it had begun to move, swirling around at the top, but not yet descending through the neck. “She reminds me of him,” said Zona. She turned toward me. “Headstrong. Fearless.”

There were a lot of words I might have used to describe Arthur, but ‘fearless’ was not one of them. Of course, it wasn’t a word that I would have used to describe myself either, but I was sure that from certain outside viewpoints, that was how people might have talked about me. Some of it was the sheer durability that magic offered me, and some of it was the tint of unreality that still sometimes seemed to hang over everything like a fog. A part of it was just that I’d been through a lot, and had a better bearing on what I could and could not handle.

“You wanted to know about him?” asked Zona. “There are certainly things that I can tell you. We have a fair amount of time to talk, while we wait.”

“I had other questions,” said Grak.

Zona raised an eyebrow, and looked to me for a response.

“Pressing questions?” I asked.

“More pressing than the fate of a man who has been missing for five hundred years,” said Grak.

I held my tongue and waved for him to continue. Fenn came to stand closer to me, and laced her fingers through mine. Her fingers were slender, callused from using her bow, and now familiar. I knew she didn’t really understand what Arthur had meant to me, but at least I could count on her for support.

“Warders are always troublesome,” said Zona with a sigh. “Have you guessed at what you spoke of before?”

“You mean the unifying theme?” asked Grak. Zona nodded. “No,” he replied. “I am missing something there. No, I wanted to ask about the manipulation of the wards.”

“Yes?” asked Zona.

“You said that you had an ability to alter them,” said Grak.

“Yes,” replied Zona.

Grak shifted. He didn’t seem terribly skilled at this sort of dialogue. “How?” he finally asked. “It is theoretically impossible for an entad.”

“Are the theories still so woefully inaccurate?” asked Zona. She wore a wry smile, the kind that people use as a more polite way of laughing in someone’s face.

Grak let out a long breath through his wide nostrils as he watched her. “You do not have a soul,” he said.

“One does not need a soul,” replied Zona.

“For concordance one does,” replied Grak. “There must be something spent to create a ward.”
“In theory, yes,” replied Zona, still smiling.

“You do not have the implements,” said Grak.

“If you mean a monocle and a wand, I have both,” said Zona. “Several of each, as it happens.”

“Is this actually important?” asked Fenn. “Because if it is, you can go on, but I’ve got my own questions.” I looked at her, and saw discontent written on her face. I was worried about where her line of questioning was going to go. I’d been pretty free with information, but I really didn’t want the topic of Zona’s look-alike to come up, and I was pretty sure that was where Fenn was heading.

“It is important,” said Grak. “It concerns our safety.”

“I have stood, uncontested, for centuries,” said Zona.

“Breached, a number of times,” said Grak.

“By my own will,” replied Zona.

“Why?” asked Grak.

“Not actually sport?” asked Fenn.

“Information,” said Zona. Her face twisted into a pronounced frown as she said the word. “Do you really intend to live here? Even with all you’ve seen? Even with the state of me? Even though I was planning on killing you, and made some effort toward that end?”

“We have a quest,” said Fenn.

“From whom?” asked Zona. She looked between us for a moment. “Ah, the Dungeon Master, naturally.”

“Naturally,” I said. “And yes, we had intended to make this our base of operations. Amaryllis still does, apparently. Normally this is the sort of thing we’d take a vote on. Right now I’m not sure how that vote would shake out. If you weren’t hunting people for sport, I’d like to know, because as it stands, I’m on the side of wanting to get out of here after an equitable exchange of resources.”

Zona watched me. “Why does my form bother you?” she asked.

“That’s a long story,” I said. “Maybe one that you’d find illuminating. You’re changing the subject though.”

“I answered,” said Zona. “Information. There were elements of sport, naturally, a desire to inflict my awesome power upon people who had come to do me harm, or at the very least, to steal from me. I won’t pretend that I didn’t find that aspect of it enjoyable. It was retribution, revenge. But there were other reasons as well, and one of those reasons was so that I could gather information. Usually I would leave one alive, or two if I could separate them without too much trouble, then appear before them and make them answer my questions about the state of the world. That became less important once I acquired a radio from one of the raiding parties, but I’m old-fashioned, and still like to hear straight from the horse’s mouth from time to time.”

“So you … kept people alive, tortured them, for information?” I asked.

“I suppose that doesn’t make you feel any better about living inside me?” asked Zona.

“It helps,” said Fenn. “You’re callous and cruel, but you’re not mindless about it. I thought maybe
this was all a setup for some kind of horrorshow, like we’d open the time chamber back up and Mary would be flayed against a wall, and you’d start cackling.”

“Oh, certainly I’ve done things like that,” said Zona. “A door slams shut, trapping one member of a party away from the others, and I go to work making a display of their death to whatever extent I’m able, so that when the main group comes to the rescue of their fellow, he’s a macabre display of arteries and organs. You’ll have to clean up a few of those, they’re scattered around the rooms, which is another point in favor of my having permanent residents again, I suppose.”

I felt a chill go down my spine. Zona was, for most intents and purposes, a haunted house, a malevolent intelligence that had killed maybe as many as hundreds of people. I didn’t think that she was a threat to us, at least at the present moment, but I couldn’t see wanting to stay here. If it was true that she couldn’t see inside the time chamber, maybe I was going to have to figure out a way I could get in there and have a private conversation with Amaryllis.

“Have I answered your questions, dwarf?” asked Zona.

“No,” said Grak. “Many questions remain.”

Zona nodded. “All the same, this line of conversation begins to bore me, and there are certain topics which, I’m sure you’ve noticed, I wish to avoid.” She turned to Fenn. “But you don’t want to delve into the esoterica of warding, do you?”

“No,” said Fenn. I squeezed her hand, trying to warn her away from talking about Tiff, but she squeezed my hand back, either misunderstanding, or rejecting my request. She looked over at me. “Joon, ask her, or I will.”

Zona looked at me, waiting.

I let out a sigh. “Do you know whose form you’re wearing?” I asked.

Zona didn’t respond. She had gone still, not just deathly still, but frozen in place, like a movie had been paused. No breath, no pulse, no minute movements of the clothes.

“I’m … something of a scholar when it comes to the Lost King,” I said. “I know Uther Penndraig better than most people do. The resemblance … I don’t know if you pulled it from his mind, or his dreams, or his memories, but --”

“His drawings,” said Zona, coming back into motion.

“Ah, right,” I replied. “I’d forgotten he was an artist.”

“Unusual, for a scholar to forget a detail like that,” said Zona. She was staring at me with a piercing intensity that was unlike any expression Tiff had ever worn, even at her most worked up. “You’re dream-skewered.”

“Uther was too,” I said. “And I knew him, back on Earth.”

Zona went still again, not moving so much as a hair. This continued for long enough that Fenn and I shared a glance.

“Did you break our house on our first day here?” asked Fenn.

“You were going to say it if I didn’t,” I said.
“Not the whole bit, just, she’s Tiff, right?” asked Fenn. “We come *nine frickin’ miles* down into the Boundless Pit, walk past death, destruction, and mystery, and *who else* could it be but your ex-girlfriend?”

“Yeah,” I said with a sigh.

“She’s not like I thought she’d be,” said Fenn. “Physically, I mean. I thought she’d be more … Amaryllis Penndraig. Prettier.”

“She was …” I tried to think about how to put it diplomatically. “She was pretty by the standards of our high school, which had a graduating class of about a hundred fifty people. So, maybe in the top quarter of a cohort of seventy-five girls? Whereas Amaryllis is –” I stopped, realizing what I was about to say before I said it, but not early enough that my train of thought wasn’t left hanging in the air for anyone to see. Fenn didn’t look upset, only exasperated. “Amaryllis is tailored to my tastes, probably deliberately tailored, just like you are.”

“You are speaking too freely,” said Grak.

Fenn looked over at Grak, then at Zona. She reached forward and snapped her fingers a few times in front of Zona’s still face, then poked her once in the shoulder. The finger went straight through.

“It’s okay,” said Fenn. “Joon broke her.” She turned back to me. “You really think Mary’s the prettiest woman in the world?”

“No,” I said with a sigh. “I think that –”

“We have more important things to discuss,” said Grak.

“Yeah, you’re right,” I said. “Any insights into exactly what we’re dealing with here?”

(I was going to say that Amaryllis was exactly tailored to my tastes, and my tastes were sufficiently generic that she’d beat out a lot of other women because of that, especially since a lot of it was just physical fitness, youth, and health, which cut out maybe ninety-nine percent of the competition from the word go. Beauty was subjective enough that there wasn’t really such a thing as the prettiest woman in the world (though maybe you could figure it out through pairwise rankings, if you had that kind of data to work with, but that came down to voting systems, and different processes would give different results). I *did* think that Amaryllis was pretty, pretty enough to stop me in my tracks sometimes, but I’d come around on Fenn’s particular charms, and whatever the chemical goop in my brain was doing, it was making her more attractive to me. You know how they say that some children have faces that only a mother could love? That was a real thing, parents getting blinded to what their children looked like because of the hormones and internal, mysterious brain processing. That was the kind of thing that read as romantic to me, but probably wouldn’t have come out right, or been taken in the spirit in which it was intended.)

“Have you heard the phrase meta-entad?” asked Grak.

“No,” I replied. “But from the word, it would be a magic item that chiefly affects other magic items?”

Grak nodded. “They’re almost always powerful. It would explain several points which have been confusing me.”

“Like why she’d want our stuff, and what happened to the things that were supposed to be here,” said Fenn. “Also the mutilated corpses. The guy in the lobby was missing his torso because she cut a breastplate off him.”
It fit, from what I could see. Exactly what she was doing with the entads was anyone’s guess, but the grab-bag of powers she seemed to have available to her suddenly made sense. The question of central theme was also solved in a single stroke; there was no theme, but there was a meta-theme.

“Huh,” I said. I was trying to think right, and while I was better than I’d been when we first walked in, I still wasn’t my usual self, not as sharp as I normally was. I was going to need some rest, sooner rather than later. “Okay,” I said. “That’s actually really helpful to know.”

“It’s a theory,” said Grak.

“Well, sure,” I said with a gesture in his direction. When my hand fell, I let it touch the top of the rope that was wrapped around my waist. I tried to think back. Had Ropey moved at all since we’d come into Kuum Doona? He’d saved my life on the ship, but after that … I didn’t think we’d revealed him. Naturally if Zona could see magic like a warder, she’d know that the rope was magical, but I wasn’t sure that a warder’s analysis of magic was good enough that she’d be able to know specifically what kind of magic. Grak could make some guesses, but not outright crack the code. “My guess is the process is unrecoverable, which means that it’s hard to test, but I kind of wonder what would happen if we had a sentient magic item to give to her.”

“It is hard to say,” replied Grak with a subtle nod in my direction. “Amaryllis did not believe this place was any more intelligent than a dog. An increase in intellect could explain the discrepancy. We do not know enough to say.”

“But if all that is true, why was it not in the family ledgers?” asked Fenn with a frown. “She said that her great-grandfather didn’t know much more than she did. So where does the false story come from?” She looked at Zona, still frozen in place. “And why does she look like your ex-girlfriend? And what got her so pissed off at Uther?” She snapped her fingers in front of Zona a few times. “I’m ready for her to wake back up.”

But she stayed like she was for another few minutes while we twiddled our thumbs, waiting for Amaryllis’ first round in the time chamber to be done. I was thankful that it was controlled from the inside, as otherwise Zona being incapacitated (or distracted) might mean that I’d have to figure out how to control it on the fly. As it was, we were just waiting, with enough time left that I was bored, but not enough time that I could really do anything productive, especially not when the glove and most of our equipment were inside the time chamber. There was also Zona to worry about; the avatar wasn’t moving, but that didn’t mean we could speak freely, especially because it was conceivable that it was a ploy.

When the time chamber was done spinning up (or whatever it needed to do to get up to speed), the grains of sand began to fall, slow enough that my eyes could track them individually. It wasn’t terribly interesting to watch, but I gave it a once over, mostly in the interests of gathering whatever information there was to gather. The hourglass seemed to serve as both a meter of time remaining and the state of the chamber. It was as the grains of sand began to fall more slowly that Zona returned.

“He was dream-skewered,” said Zona. She was standing in front of me, not having bothered to pretend that she needed to cross the intervening distance to get from one place to another. “It doesn’t make any sense.”

“It does,” I said. “You listened to him speak, you probably read the stories if you didn’t hear them firsthand, there was always something otherworldly about him.”

“I don’t mean that,” said Zona. “The evidence backs it up, the conclusion is inescapable once you’re looking for it, but … the dream-skewered aren’t special, they don’t have any unique aptitudes. This
was his home for the better part of a year, I saw him with his closest friends and confidants. His Knights. They never mentioned it. He never spoke of it. We were … we were close, this is,” she gestured toward her form, Tiff. “You knew her.”

“I did,” I said with a nod. “And I would be willing to tell you about her, if you’d like, and about him, as I knew him.”

“If I told you what I knew in exchange,” nodded Zona.

“No,” I said. “Not in exchange. There’s a … do you know the phrase 'gift economy’?”

“Of course,” said Zona.

“I’d like for us to have that,” I said. “We do things for each other because that’s how we choose to interact with each other, rather than because there are explicit agreements that we’re at risk of violating. Uther meant something to you, even if you ended up hating him, or if your relationship status was just ‘it’s complicated’.”

“Juniper already talks about them constantly anyway,” said Fenn. I gave her a betrayed look. “And I do like that,” Fenn continued. “Just saying.”

The door of the time chamber creaked open, revealing Amaryllis. She had changed, in the month she’d been in there, forty-five minutes or so for us. Her hair had grown out and the dye had faded, leaving it a somewhat unattractive muddle of color, red at the roots, light brown further down, all of it tied back in a ponytail. She was back in her pink “Princess!” shirt, now somewhat worse for the wear, faded and worn in. She gave us all a warm smile, which wasn’t dampened by the scowl that Zona directed her way.

The chamber behind her was no longer clean and bare, but it wasn’t really messy either. There was a desk that I was pretty sure had been stolen from Weik Handum, which was covered in books and papers set in neat stacks. Most of the books had a half-dozen colorful bookmarks in them. The bed was along another wall, a simple, small thing that I thought Fenn might have stolen from one of the hotels we’d stayed at, neatly made and pressed clean. There was a kitchen area, which I hadn’t expected; Amaryllis had the backpack, which had as much food as she could possibly want, and I had been assuming that she would feed herself with takeout or fast food. But no, there was a small, single-burner stove set on top of a small table, with a sink beside it that was fed from a jug of water overhead, and drained into a different jug beneath. There were plants as well, I was interested to note, sitting under grow lights and stacked up on racks to the ceiling. I couldn’t see what she’d been using for showers or waste elimination, but with the glove, there wasn’t really a reason to keep the room in the same configuration all the time. The chamber looked small, with all her stuff in it, claustrophobically so.

“I’ve been waiting for this all week,” said Amaryllis with a sigh. She walked forward and gave Fenn a hug, then Grak, and then me. Was this the first time we’d ever hugged? I thought it might have been.

“Well, you didn’t go insane,” said Zona with a glance around the time chamber.

“No,” said Amaryllis. “You could have warned me about the cats.”

“Ah,” said Zona. “As it happens, I didn’t know they went in there.”

“It’s fine,” said Amaryllis. “A benefit, actually.”

“Cats?” I asked.
“Cats,” replied Amaryllis. “Whenever you open up a book and read from it, a cat will appear, sitting on the pages.” She shrugged. “I met a lot of cats. A lot. Not really a problem, since you can move them to your lap.”

_Tome of Cat Summoning._ I remembered that one fairly well, though I seemed to remember cribbing it from somewhere. That was another point in favor of Grak’s theory. If the Tome of Cat Summoning had been translated into Aerb as an entad, and Zona had eaten it, that had some interesting implications for how her power actually worked. I’d have to talk about it with Grak later, if I got a chance to. I was assuming that everything we’d said while she was frozen had still been overheard, that was plain common sense, but there were limits to what I wanted to say in front of her.

“Well, I missed you,” said Fenn. “Longest forty-five minutes of my life.”

“Feeling alright?” asked Grak.

“Physically, fine,” said Amaryllis. “I probably wouldn’t even be able to tell I was pregnant at this point if I didn’t already know. Blood pressure is fine, heart rate is fine. I have a variety of deployable packages, it’s how I’m managing the internal space so the chamber can become different rooms. The medical package is fairly comprehensive, and everything I’ve been able to test has come back within normal parameters. I’d have come out if it hadn’t.”

“And emotionally?” I asked. “The isolation didn’t get to you?”

“I had the cats,” said Amaryllis. “They helped. Children’s books make kittens. And,” she glanced at Zona. “If I ever really needed conversation, there was Cyclamine.” It took a moment to remember who the name belonged to: her great-grandfather. “We’re sort of starting to understand each other, I think. But I’m glad for the reprieve, even if it’s not going to last long.” She glanced back at the time chamber, where she’d made her home for a month. A frown crossed her face before she turned back. “How have things been here? Keeping out of trouble?”

“They told me that Uther was dream-skewered,” said Zona.

“Ah,” said Amaryllis. I’d been worried that she’d be disappointed, or that we’d have another post-facto conversation about letting people in on things that weren’t common knowledge, but there was just that “ah”, as in, “ah, figured it would be something like that”.

“That’s it?” asked Fenn. “Not that I was hoping to piss you off, but, you know, pissing you off is one of life’s great pleasures.” She gave me a look. “Also, it was Juniper’s fault.”

“It’s fine,” said Amaryllis. “You forget that I had a month to think about things. I made a list of all the worst things you could possibly have said, and -- I know that Juniper is quick to trust, he told me pretty much everything as soon as we met. This wasn’t anywhere near a worst-case scenario.”

“The worst case scenario would be that all of us were dead, right?” asked Fenn.

“Yes,” said Amaryllis, with a glance toward Zona. “No offense.”

“None taken,” said Zona. “It seems sensible to worry about. I’ve done it in the past.”

“Can you stop saying things like that?” asked Fenn.

“You put someone in the chamber and then killed their group?” I asked.

“Sometimes it was a long game,” said Zona. “Splitting people up, or waiting for them to do it on their own, making as visceral a presentation as I could for when they found the bodies.” She paused...
slightly, seeming to ignore our expressions (distaste, horror, calm analysis). “The killing was always the most difficult part of it, making sure that the body fell correctly, that the spray of blood wouldn’t give the game away until the perfect moment, that it would be artful.” She looked at Amaryllis. “I wasn’t going to do it, but if I had, the hard part would have been the time constraint, trying to get something in place for maximum effect before you came back out.”

“Well,” said Amaryllis. “We do appreciate that you didn’t do it.”

“Oh, I know that none of you will understand it,” said Zona. “There was an art to it, to creating the beautifully disturbing, in touching down to someone’s soul by breaking apart another person in front of them. It was grotesque and morbid, inhuman.”

“I understand it,” I said. Zona gave me a look. Doubt was the wrong word: that would imply that there was some uncertainty on her part. She flatly didn’t believe me. She didn’t believe me with all the conviction I’d ever seen on a person’s face. “Not the whole thing, not killing people like you did, even if they were invaders, even if you were within your rights —”

“Entads don’t have rights,” said Zona.

I turned to Amaryllis. “Is that true?”

“Legal frameworks are complicated,” replied Amaryllis.

“So if I —” I stopped myself, having almost said Ropey’s name. I reached down and pulled out one end of the rope, which came away limply in my hand. “Here, if this entad were intelligent, if it were a thinking thing, you’re saying that there would be no legal repercussions for me injuring it?” I hoped that toed the line well enough, passing the right message on to Amaryllis. She gave no sign of recognition, though I wouldn’t have expected her to. I didn’t dare risk looking at Zona.

“It’s complicated, Juniper,” said Amaryllis. “The Empire of Common Cause operates under a legal framework that’s meant to govern interaction between polities, and which has slowly crept into everyday life -- lots of parallels with your own United States, actually, minus the Civil War. The individual polities then have their own legal systems, some of which have been copied from others, some of which are descendants of different traditions, some of which have bits of law grafted on from others, it’s an absolute mess, worse than anything on Earth. And yes, in a lot of places, entads are property, period, even if they have a clearly identifiable will of their own that goes contrary to whatever owner they have. Sentient entads are rare though, truly independent ones even more so. The legal reforms needed to get all the mortal species on the same playing field were monumental as it was, and not even fully complete within the Empire. You’re talking about laws that would apply to, at most, dozens? There’s no incentive to get the wheels of legislature turning, very few advocates, it’s … complicated.”

“Do you remember monologuing about the politics of imperial law at the Kindly Bones?” I asked.

“Yes,” said Amaryllis, smile going a little wider. “And yes, it’s sort of the same thing.”

Back then, she had been talking in order to cover for me, to both get Bormann’s attention on a different topic, and to communicate to me that I should shut my mouth about things that might give me away. Here, she was using the comparison to say the same, not that I should shut up, necessarily, but that she understood what I was getting at, if maybe not the motive.

“Well, I couldn’t ask for a better exposition fairy,” I replied, as I tucked the limp rope back in place.

“You were saying how you understood me,” said Zona.
“Yeah,” I said. “Sorry we got derailed, I was saying … I know what it’s like to create things meant to hurt other people, to, I don’t know, engineer everything to so that there’s as negative an impact as possible. The grotesque, the macabre. It was fiction, but --”

“Fiction,” said Zona, dismissive, as though swatting away a fly.

“Yes,” I replied, swallowing. I was less sure of the comparison now than when I’d started, but she’d been speaking to something I thought I understood. “I’m talking about the desire to hurt people, not physically -- I mean, that too -- but to inflict things on them, to make something,” I shook my head. “Sorry, we can talk about this later, maybe, I’m not getting across what I wanted to.”

“Or you’re speaking nonsense,” said Zona. “Which do you think is more probable?”

Fel Seed, I wanted to say, but it would take too much to explain, because I’d have to give too much background, and obviously I hadn’t killed anyone with my D&D campaigns, or tortured anyone, all I’d really done was lash out at my friends. It wasn’t a competition, but even so, I couldn’t compete. All I’d really wanted to say was that I understood the impulse, and that it was a human one.

“You’re right,” I said. “I’m still shaking off the aftereffects of fighting the tuung, excuse me.”

“Juniper is the architect of Aerb,” said Fenn.

Amaryllis sighed.

“The dream that skewers,” said Amaryllis. “In Juniper’s dream of Earth, he was a prolific creator, responsible for making all the worst elements of our world.”

“Fiction,” said Zona, this time less certainly.

“Fiction,” nodded Amaryllis. “Of a sort. It’s allowed him to have knowledge here, in our world, that he shouldn’t have had.” She looked back toward the time chamber. “You can’t enter?”

“No,” said Zona. “I can sense you in there, moving too fast to follow, but if I tried to appear, you’d see nothing more than a still image. You were planning to speak to me privately?”

“It was the time more than the privacy,” said Amaryllis. “If Juniper wants to read you in on everything, it’s going to take … days, probably, days that I’ll have available to spend, if I could do it in his place.” She shrugged. “If it’s not possible, that’s not a problem, we intend to be here for the long haul, so long as you find that acceptable. I imagine you prefer the others anyway.”

Zona stared at her for a moment, then nodded. “You’re less eager for praise than your archetype.”

“Thank you,” said Amaryllis with a nod.

“Aww, are you two friends now?” asked Fenn. “What a difference a month makes, right?”

“I missed you,” Amaryllis said to Fenn. She looked back to the time chamber. “I told myself that I would make the check-up short though.”

“I don’t think a half hour is going to make the difference,” I said. “If you need … I don’t know, people, or maybe space.”

“With respect, I don’t think a half hour is going to make the difference for or against my sanity,” said Amaryllis. “What I really need is a few hours, maybe a whole day, a meal shared with people,
listening to others talk, time for all the pent up thoughts to leak back out into the world -- and we
can’t be confident that we have the time for proper decompression, not if I do it nine times. And if
Solace needs time to grow up, then we might be talking about dozens of days.”

“Come out early if you need to,” I said.

“The check-ins are meant for evaluation,” said Amaryllis. “Or at least, that’s what I’ve come to think
about them in the month I was in, I suppose we didn’t really have a long conversation about it. If I’m
acting weird, if you think I’m close to cracking, the three of you can tell me and make a new
schedule, or figure out something else that you think would work for me, whether that’s a longer stay
on the outside, or having one of you come in.” She glanced back at the time chamber. It was
becoming something of a nervous tic. “It’s a small space though, and my self-evaluation is that
between my cats and my great-grandfather, I’ve been getting enough socialization to get by.”

Grak was the first to move over and give her a hug, but she got one from Fenn shortly after that, and
from me last, which felt awkward, especially because she seemed to linger for a moment after I’d
stopped hugging her. She had never been big on touching; I had half a mind to look into her soul to
make sure that it hadn’t been tampered with somehow, but that was just the socially inept part of me
talking.

When she finally pulled back, she wiped a tear from the corner of her eye. “Sorry,” she said. “I guess
the mood swings have made themselves known.”

“If you need more time,” began Grak.

“No,” said Amaryllis. She took a step back toward the time chamber’s open doors, and looked
between us as though taking a mental snapshot. “See you all in another forty-five minutes.”

With that she went back in and closed the doors, leaving us to wait once again.

“Am I the only one thinking that there’s no way that she’s going to make it the full nine months, let
alone however long it takes to get Solace up and running?” asked Fenn. “She’s going to snap.”

“She came out without her armor,” said Grak. “That was sloppy.”

“The armor wouldn’t have protected her from me,” said Zona.

“Your exact abilities are a mystery,” said Grak. “Amaryllis is one to take paranoid precautions.”

“Yeah,” I said. “She’d have considered the edge case where she needed to spring into battle the
moment she opened up the door, and worn her armor.”

“She’ll crack like an egg,” said Fenn. “Now me, I’m fine with being alone, but that’s the difference
between a fake princess and a real princess for you.” There was a little bit of edge to her tone that I
couldn’t quite account for. I knew her well enough to be on guard when she was making too many
jokes, but I wasn’t of the right mindset to figure her out.

“We should start making some contingency plans,” I said. “For if the time chamber doesn’t work out
as planned.”

“If the pregnancy is what’s at issue, you could sedate her,” said Zona. “A human can survive that, if
their other needs are attended to.”

“Welp, that’s a new nightmare to add to the pile,” said Fenn. “Sedated for the duration of a
pregnancy? Are you trying to make me nauseous?” She stopped for a moment. “Wait, are you?”
Zona only smiled.

“We will discuss plans with Amaryllis if problems arise,” said Grak. “Or use the time chamber to work on a solution.”

“In the meantime, I’d like to hear more about Earth,” said Zona. “About Uther.”

“I’m kind of in the same boat,” I replied. “Wanting to know about Uther. The locus … that’s not really our purpose, as a group, it’s just -- something that happened along the way. It’s important, yes, but it’s not what brought us together. If there’s an endpoint for us, a meaning, it’s in finding the Lost King.”

Zona looked at me, weighing me. “Alright, we have the time. Let me tell you about Uther Penndraig.”
An Open House

When Omar Antoun became obsessed with the idea of building a house at the edge of the Boundless Pit, it had been a different world. There was no such thing as the Commoner's Guide, or The Book of Blood. There was no printing press to churn out such books and make them affordable to the average person. There was very little in the way of organized research, outside of the ancient athenaeums, and very little in the way of public education to deliver the findings of that research to the masses. Of course, the world was less connected too, and so things that were common knowledge in one place weren't always common knowledge in another, and given the state of civilization, common knowledge was often wrong, the product of anecdote and superstition.

Omar Antoun had been a simple carpenter who made his trade in putting up barns, or more often, making repairs in exchange for coin. He'd had a small shop in a mid-sized city, twelve thousand people, give or take, large by the standards of the time, with an assistant and an apprentice, a well-worn collection of tools, and a mule he used to transport lumber and equipment for the smaller jobs that didn't need a full wagon. He was a humble, soft-spoken man, unmarried and old enough that people assumed he would be a lifelong bachelor, which both raised some eyebrows, and attracted some attention to the apprenticeship he offered, as young men hoped that they might have the business left to them when Omar was too old to work.

The precise pathology of a forge frenzy varied, but for Omar it was slow to come into full force. It started with a sketch on a piece of paper, with detail added in bit by bit over the course of a day. It was tall and proud, narrowing slightly as it rose, the floors overlapping each other so that moving from one side of the place to another needed short, connecting stairways. It eschewed symmetry, aside from the central vertical line that everything was arranged around, but there was still something deliberate in the placement of the structural elements, a thought and care that allowed one piece to flow into the next.

Omar had considered it a flight of fancy when he was drawing it, not realizing how much of his time he was spending on the sketch. He'd followed it with other sketches, elaborations on the basic design, embellishments on the interior details, notated with measurements and plans for construction, ideas on what materials would be used. It was going to have a directionality to it, the front of it facing out to look at something. The Boundless Pit was twenty miles away, down the Buol; as a flight of fancy (or what felt like one), Omar drew another sketch with his house placed there, the windows of its many rooms facing toward that endless hole in the ground. When he was finished with the drawing, he sat back in his chair, and knew that he had to build it.

Forge frenzy wasn't known or recognized in the city where Omar made his home. If asked where entads came from, you might get those in the know talking about a muse, or describing a mystical experience, or a connection with the gods, or some similar thing. Perhaps a few dozen of the city’s ten thousand people would have created an entad, and so would have been able to empathize with the intense desire he found himself afflicted with. But even then, most entads were small things, the work of anywhere from days to weeks. Jars, daggers, or even rope were simple to create for an artisan with all the tools at hand, even if they needed more exotic materials or techniques.

Omar cancelled jobs, or postponed them indefinitely. Where he could get away with it, he pawned them off on his assistant and apprentice. He abandoned the shop entirely and spent funds he didn’t have to travel to the Boundless Pit, where he selected a site in short order and began clearing the area so he could create a foundation. He had always been an honest, upstanding man, which meant that there were favors to call in and reputation to spend. Within six months, he was virtually bankrupt, living in the first two rooms of the place he called Kuum Doona, on a foundation that had barely
been completed.

From the outside, Omar’s obsession with this building read as a man with no wife or children realizing that he was going to leave no lasting legacy and panicking to get something done.

Six years after he’d started work on Kuum Doona, Omar Antoun was still working on his building, a project that any outside observer would immediately surmise would remain unfinished when Omar reached the end of his life. He lived simply, eating only enough bland food to survive, wearing threadbare clothes, a wild animal of a man. Kuum Doona required materials he could never hope to acquire, and labor he could never secure.

And that was when Uther Penndraig entered the picture.

Uther came riding a spectral steed, faster than the winds, his companions following close behind him on steeds of their own. He wore a resplendent plate that seemed to capture every ray of the sun, the thorny crown of Anglecynn, and a five foot blade, edge exposed to the air, strapped across his back.

He had finished his negotiations with the King of Mosenol, bringing that country into the fold of the First Empire, an adventure in its own right. At the conclusion of those proceedings, he had decided to see the Boundless Pit as something of a diversion. He’d seen the half-finished building and approached it, curious, which was where he met Omar. Met is, perhaps, a strong word; Omar did not want to waste breath on speech, he wanted only to work, to do what he was able. His answers were curt and perfunctory, or sometimes absent entirely, as he ignored questions he didn’t deem germane to the topic of the building. Things flowed more smoothly once Uther joined in the work; the King of Anglecynn and Secretary General of the First Empire did menial labor on the orders of a man most people thought was insane.

Forge frenzy was not entirely foreign to Uther Penndraig, though it wasn’t a field of study in those days, and this was before he had experienced the phenomenon firsthand. He had spoken to more than a few of the frenzied, though none that were in the process of creation, only after the fact. The actual lived experience was always somehow warped in reflection as the frenzied tried to come to terms with the pull of it, and the fact they’d created something they could not comprehend. Omar presented a special case at a moment when Uther was ready to have his interest piqued, and so the King of Anglecynn delayed his grand tour of Aerb to spend a few days on investigation.

He returned the next day, having spoken with a number of people in the area and tracked down Omar’s former assistant, now de facto (though not de jure) owner of the carpentry business. Uther brought with him a contract, written by the authority of the King of Mosenol himself. In exchange for a small army of workers and as much in the way of material goods as the house would require to be completed, it was agreed that Uther Penndraig and those he immediately designated would be the only people to take up residence at the house. The land had been purchased from the Kingdom of Mosenol outright, which meant that even if Omar had been of a mind to dispute the deal, he wouldn’t have had a leg to stand on (and this was not to mention that contracts were heard in front of manorial courts, where Uther would have immense sway). Omar signed without even reading through what the contract said; his only aim was to complete the building that had haunted his visions for the past six years.

Uther returned seven years later, a different man. His children had all been born by that point, his wife maimed, a hundred more adventures under his belt, the First Empire mature and no longer needing so much of his direct attention. His armor made him seem like he was covered in black foam, which shaped itself close to his muscular physique and shifted around as he moved. His sword was made of crystal or glass, etched with fractal patterns that glowed green when anyone looked at them. The crown of Anglecynn was gone, replaced by a thin band of platinum that circled his head.
without actually touching his skin.

The spectral steed was nowhere to be seen. Instead, his coming was heralded by the opening of a ring in empty space, metal appearing at a point and then pushing outwards until, with a flash, it connected to somewhere else. Uther stepped through with his companions in tow. They stood together for a time, looking at the structure. When the ring they’d stepped through collapsed, it flew through the air and slipped onto Uther’s hand, with no apparent effort or attention on his part.

“I still don’t understand why we’re here,” said Vervain. The flower mage was ancient, as he’d always been, white beard drooping nearly down to his waist. His eyes were a uniform gray from the iris to the sclera; he had been blinded by demons and cured since they’d last been to the Boundless Pit.

“I own this place,” said Uther, looking over the building with his cold blue eyes.

“Another summer home?” asked Alcida, raising an eyebrow. She’d been the last of his Knights, a slip of a girl then and an intimidatingly well-muscled woman now. She was a vitric, bald, with blue hands, strong enough in her species’ magic that her veins were engorged with electricity.

“No,” said Uther. He turned to the others. “A place to live, for a time, so that I might explore the Boundless Pit. I should get in touch with the architect, if I can find him, if he’s still alive. I had always meant to, once the frenzy had passed, I’d wanted to come back, but ...” He trailed off, and everyone there understood the weight of it. He’d lived enough for several lifetimes in the last few years. It was always one thing after another that clawed at him, demanding his attention. He had a wife who now moved around on six mechanical legs. He had three children he barely knew.

He and his Knights moved in. The portal ring on his finger took a week between uses, which meant that they were there for at least that long, other, less efficient forms of transportation notwithstanding. Uther spent two days looking for the secret to the house, trying to solve the mystery of its magic, touching it in various places, running his hands along the timbers, poking at the tiles and flagstones, and eventually resorting to a technique he’d pioneered called a dictionary attack. However much luck he borrowed though, he didn’t seem to stumble across a hidden word of power that would let the effect be known.

The secret to Kuum Doona was eventually found by making a map of the place and noting the lines made by the unorthodox arrangement of rooms. The angle of a room’s upper edge would, if followed, intersect with the lower corner of a different room further down a hallway, and if you looked at all of the edges and corners, and traced the curves, you would find a variety of paths, almost like constellations, leading to a single, unassuming closet in a long, curved hallway.

It took some time to figure out what, exactly, the closet did, but after a few hours of careful attempts, Uther left an entad alone in the closet and closed the door. It was one of his spare weapons, one of many, the Butterfly Knife, capable of creating butterflies as it swept through the air. When he opened the closet back up, the knife was gone.

It didn’t take long to discover that the knife was, to all appearances, gone forever, nor to realize that swinging any blade within the building could produce the same effect of leaving a trail of butterflies, if you focused on it. A second entad was placed within the closet, this one a pair of bracers that allowed the wearer to freely exchange momentum between their arms, and again, it immediately became apparent that the effect applied to anyone within the building, no matter whether they were wearing bracers or not.

“This is a place of incredible power,” said Uther. “Even if we are to assume that the entads are lost forever, unrecoverable, the ability to multiply utility within these halls is invaluable.”
“It’s stationary,” said Montran. He brushed aside a few strands of hair from his face. Their adventures had worn on him more than any of the others, even Uther. His brother and sister had died the year before, and the group’s brute had been drifting in melancholy since then. “There ought to be very few items in our arsenal that become better when pinned in one place.”

“We could make this place mobile,” said Vervain.

“Feed it the portal ring?” asked Raven. “Wouldn’t that simply allow a person to make portals from one place to another within the building with whatever ring they happened to be wearing?”

“It is a matter of nature,” intoned Vervain. “The effects apply to not just those within it, but to the structure itself.” He stood up and walked across the large room they’d claimed, which had a round table they’d brought in, and chairs arranged around it. He laid his hand on the edge of a nearby door and momentarily closed his eyes. “Observe.” He slammed the door shut, frail body moving with surprising speed and power. In the wake of the door’s movement were butterflies, small and blue.

“And that works for the bracers too?” asked Raven. “You can close one door to open another?”

“Yes,” said Vervain. He sat back down, using the table for support. “I believe the consequence of endowing this entad with the abilities of the portal ring would be that the entire building could move.”

“Hrm,” said Uther. He drummed his fingers on the table and pursed his lips for a moment. “I’m going to give it Soskanna.”

Soskanna was a semi-intelligent sword with a long history, captured from a dragon’s hoard three years prior when Uther became one of the first mortals to ever kill one. It was as smart as a two-year-old human, more or less, capable of simple sentences spoken directly into the head of its wielder. Conversation was difficult if the topic was complex, and when found Soskanna had its own objectives, as sentient entads often did. When it had been forged, its goal had been set: it desired to kill the King of Palmain. In the centuries that it sat in the dragon’s hoard though, the kingdom had been replaced by a senatorial republic, leaving it unable to fulfill its function. Uther had solved that problem in the space of a free afternoon by coercing the senators into temporarily reinstating the monarchy with supreme power vested in a prisoner set to be executed, a task which he accomplished while the ink on the law was still wet. Soskanna had been insistent about its directive before, but after the long-awaited murder was done, it went dormant, speaking only when spoken to, pliant to a fault -- and there were other, more powerful swords for Uther and his companions to wield, so it had gone into their arsenal, where it waited to find use.

When it was added to Kuum Doona, the building finally became aware.

“And that was you?” asked Fenn. She’d interrupted the story a few times, sometimes for frivolous reasons and other times to clear up points of confusion.

“No,” said Zona. “I am this place, not a sword.”

“So that was when you woke up?” I asked. I had stayed silent, trying to untangle things in my head, or match what she was saying to the things I’d read in books. I had read most of From Farmer to Founder, but that had been written by someone far outside Uther’s inner circle, a fair amount of time after the fact. There were distractions in her story too, points where parts of my brain were pinging with recognition; when she spoke of Raven, the archivist, my mind went to Maddie’s character, who seemed to share a common origin if the history books were anything to go by. “I mean, we’re at the point where the things you’re talking about aren’t just hearsay or conjecture?”
“Do you not trust me?” asked Zona.

“I … I only wonder about how you know some of these things,” I said. “How you separated fact from fiction.”

“I met with Omar Antoun, my creator, a few years after Uther had abandoned me,” said Zona. “Some of it comes from him, with my own corrections for the bias in his version.”

“He felt like he’d gotten a bad deal?” I asked.

Zona nodded. “Eight years of his life were taken from him, and in exchange, he was given a meager fund to draw from that covered only the time he was under the direct employment of Uther. He would certainly have accepted a worse deal, given the state he was in, and Uther held all the power in the world -- but that was why Omar believed he should have been taken care of. It would have meant little for Uther to do so.” She shrugged. “Take that part of the story how you will, I haven’t gotten to the part that involves me.”

“A story?” asked Amaryllis. I turned to look, and saw that the door to the time chamber had opened, just wide enough to let her slip out without catching our attention.

“You’re back,” I said. I looked her over. She’d cut her hair short again, not much longer than an inch, with the dyed brown completely gone. It was a less attractive haircut than the one she’d given herself in Boastre Vino, though now that I thought about it, Fenn might have been the one to hack it all off back then. She looked a little run down, like she hadn’t been sleeping well; I was used to her being composed and alert, but she seemed out of it. “Going okay?”

“Meh,” said Amaryllis. “Seven months to go.”

“More than that,” said Fenn. “In seven months or so, Solace is born, but we’re pretty sure she’s just going to be a baby, right? Meaning that you’ll need to breastfeed her.”

“Yeah, right,” said Amaryllis. She sat down on the floor next to the door and rested her head against it with her eyes closed. “I don’t regret this.”

“But?” I asked.

“Just answering the unasked question,” she replied, opening her eyes. She reached up to touch her hair by her shoulder and her fingers grasped at nothing. I wondered how recent her haircut had been, if she’d make that mistake. “It’s hard, but it’s necessary, and sitting in a room by myself won’t be the most difficult thing I’ve ever done in the name of necessity.”

“We’ll go in with you,” said Grak.

“It’s four hundred square feet,” said Amaryllis. “It’s small enough when it’s just me, adding another person is only going to make it harder, even if it does alleviate some of the isolation.” She sighed. “I’ve thought about it a lot, and I’m still not in favor.”

“Then we’ll switch to weekly check-ins,” I said. “With more time for you to decompress and talk to us.”

“You’re talking about adding another day on, minimum,” said Amaryllis. “I didn’t come out here to retread that point, we don’t know whether we have a day to spare. If there’s a five percent chance that adding an extra day on causes the locus to die, that’s not a risk I’m willing to take.” She was speaking fast, more emphatic than she usually was.
“Calm down,” said Fenn. “You also didn’t come out to yell at us.”

“I -- yeah,” said Amaryllis. She let out another sigh. “Sorry. I wasn’t yelling.” She was silent for a moment, staring at her bare feet, before looking up at us. “Things still going well on the outside? What was the story?”

“I’m not going to repeat it,” said Zona. “In brief, it was about how Uther had a hand in building this place, and discovering how its specific magic works.”

“She can take entads and add their unique magical distinctiveness to her own,” I said.

“And you just offered this information freely?” asked Amaryllis.

Zona shrugged. “With a competent warder along, you were bound to figure it out on your own, if you hadn’t already.”

“Then you --” Amaryllis stopped and narrowed her eyes. “I had two months, I should have seen it.” She frowned. “Any entads?”

“Any that can fit within the closet on the fourth floor,” said Zona. She was watching Amaryllis carefully. Some of the hostility had left her, with only curiosity remaining. It was the same expression she’d worn when asking what had happened to the loci.

Amaryllis went back into the room and pulled out Sable, which she slipped onto one hand. She held it out a carefully measured two feet above the ground and caused a large box to come into existence. On one side there was a glass tube filled with souls, which I took to be the power source, while on the other was a metal microphone. The front of it had big, clunky buttons situated above two reels that spun into action when she pressed a button.

“Let’s hope this works,” she muttered. She looked up at us. “It’s an audio recorder, using magnetic storage, totally analog.”

“Is that not what Aerb uses?” I asked.

“No,” said Amaryllis. “We use wax or electropaper, this is a proof-of-concept for something I can bring to a manufacturer in order to get some seed money.” She looked down at the device. “I should be able to listen back to what you were all talking about in the intervening forty-five minutes between cycles, I really should have thought of it in the first month, but it seemed more bearable then. Should also help with the isolation, I think, being able to hear everything.”

“Is this what you’ve been spending time on?” I asked.

“It’s a fair use of my time,” said Amaryllis, folding her arms across her chest.

“No,” I said. “Sorry, I didn’t mean it like, ‘I can’t believe you’d spend your time on something so frivolous’, I meant it sincerely, I wanted to know what you’d been doing in there. Because I’m your friend, and I care about you?”

“Sorry,” said Amaryllis, uncrossing her arms. “I’ve just been trying to devote my time to productive things, training, learning, reading, and when I feel like I need to take a break it always feels like it’s a waste. I made a chart of how I spent my time and wasn’t really happy with the results.”

“No one expects you to work yourself to the bone,” said Fenn. “Honestly, just spend your next month lounging around and … I don’t know what there is to do in there, but maybe read some trashy novels?”
“I don’t believe she should go back in without someone joining her,” said Grak. He turned to Amaryllis. “Last month you said the purpose of these check-ins was evaluation.”

“It will be thirty days sharing four hundred square feet,” said Amaryllis.

“I am volunteering,” said Grak.

“Me too,” I found myself saying.

“It’s a hard pass from me,” said Fenn. “I’ve spent enough of my life in solitary confinement, thank you very much.”

“Grak, Joon, are either of you going to insist?” asked Amaryllis.

“I will,” said Grak, before I could respond. “I will spend the next week with you. We should test conditions either way, if you want me to stay with you for the last two months. If it goes well, I will stay longer.”

“That’s … fair,” said Amaryllis. “I’ve made some plans for having you in there, I think it would be good to have your input on them. I don’t want to move to weekly check-ins, because it loses us time that I don’t know that we have, but a one month trial before the pregnancy gets too far along makes sense.” She paused. “Thank you.”

“Dwarves are accustomed to small spaces,” said Grak.

“You’re only kind of a dwarf,” said Fenn. Grak stared at her. “I mean, you don’t live with a clan, you spend most of your time in hotels or hideouts with us, you don’t do any mining or farming or whatever you call it with the muck.”

“Hral,” I supplied.

“This is true,” said Grak. “I am only kind of a dwarf.” Her words sounded odd coming from him, and a little bit sad. “I am still comfortable in confined quarters.”

“Okay, then let’s go,” said Amaryllis.

“So soon?” I asked.

“Joon, I know you miss me, but,” said Amaryllis, then stopped. “That was a joke. I’m sorry, I don’t think it came out right.”

“No, it was funny, I’m just worried about you,” I said. “Worried you’re pushing yourself too hard, worried that you’re not handling it well, or handling it as well as you possibly could but it’s hard, just -- if need be, we can spend two hours going to the bottle and back, to see how the locus is holding up, get another data point on precisely how fast the deterioration is.”

“I’ll take care of her,” said Grak.

“Okay,” I replied.

Amaryllis moved forward and wrapped Fenn in a long hug, keeping her grip tight. But for me, she just offered a handshake, which struck me as completely bizarre, so much so that I almost asked about it. Fenn raised an eyebrow, from out of Amaryllis’ sight, but said nothing, and I pretended that it was completely normal. I mean, it was completely normal by the standards we’d been operating under before she’d gone into the time chamber, but I really wondered how her thinking had changed.
during month two.

“One month,” Grak said to us. “I will give a full report.”

With a small wave toward us, they stepped back into the time chamber and closed the door behind them.

“Are you still interested in Uther?” asked Zona. She’d stayed silent while we talked to Amaryllis, watching our conversation.

“Yes,” I said. “Sorry, the interruption was … kind of inevitable, and we’re going to get another one.”

“I’ll give you the highlights then,” said Zona.

The sword Soskanna could see, and so once it became a part of Kuum Doona, the building could see as well, not actual sight as a human would know it, but an awareness of light, darkness, and color that extended out to a hundred feet from every surface.

The sword Soskanna could speak into the mind of whoever touched it, and so that became true of Kuum Doona as well; every surface was a potential line of communication, from the walls, to the floors, to the doors, to the windows.

And the sword Soskanna could think, even if it wasn’t terribly intelligent, a trait which Kuum Doona acquired.

<Soskanna?> asked Uther, placing his hand against a doorframe next to the closet.

<No,> replied Kuum Doona. It was still grappling with all that it could see, not just the sight bestowed by the sword, but other senses that had always been there, the positions, velocities, and momentum of everything in the house. It would only later learn how it knew those things; they were implied by the previous entads that had been added, necessary information for the magical effects to take place.

<What shall I call you then?> asked Uther. <Kuum Doona?>

<Yes,> replied Kuum Doona. <Who are you?>

<My name is Uther Penndraig, King of Anglecynn,> replied Uther. <You are my house.>

<I am?> asked Kuum Doona.

<You are,> replied Uther, his telepathic voice firm. <Do you recall slaying the King of Palmain?>

<No,> replied Kuum Doona. <I don’t remember anything.>

Uther pulled his hand away from the doorframe and looked at Vervain. “It worked as I had hoped.”

“As such things often do,” replied Vervain.

“Don’t start with me,” snapped Uther. “We need to find the catch.”

“Montran already said that this place is immobile,” said Vervain. “There would be costs to getting it moving, and even if we did, its size would restrict it greatly.”

“No,” said Uther. “There will be something else, some grim reminder of how broken this world can
be. A fortress whose drawback is only that it’s large and cumbersome doesn’t fit the pattern.”

Vervain winced. “It pains me when you speak like that.”

“I know,” said Uther. “But with every passing day, I care less about how the truth pains you.”

Vervain shook his head. “You have such ideas about how the world should be.”

“Not should be,” said Uther. “Is. If I could have, I would have stopped when I became king, but there was so much injustice in the world to correct, so many threads to be pulled on. It’s led me down this path we now walk.”

“So you think there’s a catch?” asked Vervain. “Some reason this place won’t work out for us?”

Uther nodded. “A cost to be paid,” he said. “A complication.” He placed his hand on the doorframe and closed his eyes, the better to concentrate on the connection. <Kuum Doona, I will be adding more to you over the next few days. I will need your cooperation in order to determine the precise bounds of what you can and cannot do with the new aspects that we add to you.> 

<I do not want to be added to,> replied Kuum Doona.

Uther’s frown was minute. <Why?>

<It is difficult,> replied Kuum Doona. <There are too many things to see.>

Uther raised an eyebrow at that. He reached down into his armor, through the black foam, pushing it aside like it was nothing, then drew out two small, white stones. He handed one to Vervain and kept the other in his hand. When they spoke, their words were indecipherable. It was hard for Kuum Doona to read expressions, but whatever they spoke about seemed heated.

An hour later, Vervain had left Kuum Doona entirely, using the bud of a flower he’d been keeping in reserve, and Uther began loading entads into Kuum Doona.
“Babble stones,” I said, after Zona had gone silent. “Hold one in your hand, and anything you say comes out as gibberish to anyone listening. But if someone holds a matching one, your gibberish will be perfectly comprehensible. Not terribly powerful, but there are a few use cases.”

“You have them?” asked Zona, as though waking from a daze.

“No,” I said. I hadn’t actually known they existed on Aerb. “I don’t even know where we’d go to find them.” I scratched my chin. “It’s hard to know what to make of what you’re telling us,” I said. “There’s obviously a question of bias, and of accuracy, and … it’s not that I don’t believe you, but I might be missing the context under which his actions make sense. Especially if there were conversations that you weren’t privy to.”

“What more is there to explain?” asked Zona. “I told him that I didn’t want more, because there were too many sensations that came with the entads, too much information that I found confusing. The Butterfly Knife was able to sense velocity as part of its basic function, and when it had been its own thing, it was automatic with the combination of the will of its owner and sufficient movement. As part of me, that awareness of movement became part of my sensorium.”

“Huh,” said Fenn. “Juniper, can I borrow the Anyblade?”

“Why?” I asked.

“I don’t have a weapon, everything I own is in the glove, and I want to make butterflies,” said Fenn.

I handed her the Anyblade from my finger, forming it into a thin longsword as I did so. Fenn wouldn’t be able to shape it, since it was invested in me by way of Amaryllis, and we couldn’t change that investment without her, but it served well enough for Fenn to swipe it through the air a few times, leaving butterflies in its wake. I didn’t miss the way Zona was studiously not paying any attention to the weapon.

“So if he knew that it was hard on you, why’d he do it?” I asked.

“He wasn’t thoughtless,” said Zona. “He was trying to engineer me, to add entads such that the problem would be alleviated, while at the same time ensuring that he didn’t give me too much power. To his credit, he spoke with me at length, attempting to explain that it was for the good. It was not to his credit that he refused my repeated requests that he stop.”

Fenn swished the sword through the air again, but this time no butterflies came out behind it. “Aw, what gives?” she asked. She had a veritable cloud of butterflies around her, dispersing with every passing second.

“It was starting to bore me,” said Zona.

“You have it under control now?” I asked. “You can shut off particular effects, or limit your senses to what’s manageable?”

“Yes,” replied Zona. “To the extent that the component entads can act on a person, they can act on me. Uther had a diadem in his possession that he eventually added in order to see if it would grant me the singular focus that it applied to its wearer. That was only after eight others had been added in the course of testing my response. I was quite distraught.”
“Ah,” I said. “Sorry. That … doesn’t sound like him, as I knew him.” I didn’t trust her account, not without the proper context. I wasn’t sure whether or not Arthur would have considered a sentient magic item to have moral worth. He had when we’d played our games, but it was anyone’s guess whether that belief had survived his journey here.

I was trying to think about ways to reframe the stories she was telling from Arthur’s perspective, assuming that she was telling me something close to the truth. I didn’t like her description of Arthur taking advantage of someone who was mentally impaired, and it did seem like he should have done more to make up for that hardship, given that he had all the economic might of a kingdom. But maybe that was just a sense of fairness at play, wanting to make sure that it was the same for everyone, that he wasn’t generous to the person right in front of him at the expense of those he never met. He’d talked about that before, I was pretty sure, how you shouldn’t give to charities just because someone comes up to you with a sob story.

“You want a survey of our stuff, so you can take some of it,” said Fenn. “Is there some quid pro quo there? Or maybe a gifting economy thing? Maybe we get a full list of your abilities? Because if the bodies we passed on the way in are any indication, you don’t have many limits.”

“I have fewer items than you’d think, and more limits than you might imagine,” said Zona. “I kept imagining myself cursed, because the right entads never came along as part of the raiding parties.”

“And what would the right items look like?” I asked.

“Heavy telekinesis,” said Zona. “Long-distance movement. The ability to shrink, or otherwise adjust my shape, possibly enough that I could disguise myself as one of the mortal species.” She nodded toward the Anyblade. “Something like that would have immense utility to me.”

I felt my stomach flip at that. The Anyblade had been with me for a long time, long enough that I felt like I had a connection to it. It wasn’t the most powerful magic item we had, and not, by my reckoning, in the top three, but it was mine, and had a wide range of potential utility. “We’ll make a survey of what we have and see whether it’s still your top choice,” I said. “It’s got some sentimental value, and without it, I’ll need another weapon to bond to.”

“You’re blade-bound?” asked Zona.

“Yeah,” I said. The bait had worked, and gotten us on a different topic of conversation, but I wasn’t sure how much I wanted to share about the game aspect of things. It seemed easier and simpler to pretend that it was all deep, eldritch magic. “Long story. When I said multidisciplinary, I really meant it.”

“Like him,” said Zona.

I nodded. “A lot like him. It’s one of the reasons that we’re trying to find him. And given what you told me … there are some questions that I’ll want to ask him.”

She gestured to herself. “And this? You wanted to know why and how I took this form?”

I nodded, though I wasn’t really sure that I wanted to hear. I tried to reassure myself that it was just one version of events from a less-than-reliable narrator, but so far as I could tell, Zona hadn’t lied to us yet, only threatened us or, before we’d properly met, taken some hostile action that she’d reversed. I listened closely, trying to find the seams where a misunderstanding or a lie could be hiding.

<How are you feeling?> Uther asked the house. It had been a long few days for the two of them. He was the only one living in the house; Vervain had left for somewhere else, Alcida had taken Montran
to the nearest village, Everett, Forty-Two, and Dolmada were exploring the rim of the Boundless Pit and making contact with the tuung that lived beneath the immense waterfall, and Raven had set up their magical tent a few hundred yards away from the house, where she was ‘on call’.

<Fine,> replied the house. <Fine,> it repeated, knowing that the answer wasn’t quite correct, but not quite having the breadth of experience, knowledge, or introspection to give a better answer.

<Good,> replied Uther. He sat in the room he’d designated for a study, with books all around him, and a cat sitting on every one of them that was opened, save for those cats he’d moved to sit in his lap. He was looking through the books as he spoke. <I’ve decided that I’m going on a quest to the bottom of the Boundless Pit.>

<Oh?> asked Kuum Doona. <It is very deep.>

<Deep, but unlikely to be infinite,> replied Uther. <With the right combination of entads, I should be able to make almost three thousand miles in a day.>

<I see,> replied Kuum Doona.

<I’ll be going alone, without the others,> said Uther. <They all need a break from the adventuring life, and this should allow them a few weeks of rest and relaxation while I’m occupied with affairs that don’t require them. You seem to need some time to adjust, and I don’t want to leave you alone, but I also don’t want to leave you vulnerable to my enemies. We can try adding more -->

<No,> said Kuum Doona. <Please.>

<The diadem helped, didn’t it?> asked Uther.

<Yes,> replied Kuum Doona. <If I use it to focus on only one aspect at a time it isn’t as bad.>

“Hrm,” said Uther. <You will need to learn how to use many aspects at once,> he said. <If this place is to be a defensible fortress, it needs to be able to manifest every offensive and defensive magic at once.>

<I do not want to be defensible,> said Kuum Doona.

<No?> asked Uther. <You want people to be able to break down your doors and loot you? You may not care about the riches I store here, but they would take the door knobs, or cut you for wood. You wouldn’t want that, would you?>

<I am a house,> replied Kuum Doona. <For living in.>

Uther kept looking at his book, not deigning to respond to that. There was silence in the study, and within the house as a whole, which stretched on for long enough that Kuum Doona turned its attention elsewhere, changing the focus of the diadem’s power from conversation with the King of Anglecynn to some simple games that it had been taught, games like combining its magical effects.

The house had five pounds of telekinetic force at its disposal, and Uther had showed it how, in combination with the effect of transferring momentum, it could leverage that into greater force. Five pounds of force could turn a crank that gradually lifted up several hundreds of pounds of weights, which could then be released. That momentum could in turn be transferred to other tasks, allowing the house to accomplish things that wouldn’t be possible with five pounds of force alone.

There were other exercises, like trying to control the cats created by the power of the Tome of Cat Summoning, but it was one of the more unruly powers that had been added to the house, and the cats
it spawned had a mind of their own. Kuum Doona took on the properties of the entads it ingested, but the results were sometimes idiosyncratic, especially when the entads in question had peculiar effects. Uther seemed to think that every power could be brought to heel. There were some effects that were involuntary, triggering whenever the condition was met, and he believed that they could be activated or deactivated with conscious control. Kuum Doona had some small amount of luck with the butterflies, though not with the cats.

<I’m working on a story,> said Uther. Kuum Doona stopped moving the weights around and shifted focus to conversation. It didn’t understand why Uther spoke into its mind, when he could just as easily have spoken out loud.

<A story?> asked Kuum Doona.

<It’s a story about a man for whom nothing matters,> he said. <His actions, for good or ill, have no lasting consequences. What do you suppose he does?>

<I don’t know,> replied Kuum Doona. It had a hard enough time predicting what real people would do.

<What do you think I would do, if my actions had no lasting consequences?> asked Uther.

<I don’t know,> replied Kuum Doona.

<Think about it and give me a guess,> replied Uther.

Kuum Doona thought about it. <You would return to your family,> replied Kuum Doona.

<And why do you think that?> asked Uther.

<Vervain said it,> replied Kuum Doona.

“Hrm,” muttered Uther. <But if my wife would never change, and my children would never grow up? If they wouldn’t remember what I had done the day before, for good or ill?>

<I don’t know,> replied Kuum Doona. Uther returned to his book with his brow furrowed, and Kuum Doona thought about the question. It had been instructed not to speak with Uther unless they were having a conversation, and didn’t quite know whether the conversation was over or not. <You would read books,> replied Kuum Doona, at last. <I see you reading books a lot.>

Uther lifted his head slightly to consider that. <And when I ran out of books to read, what would I do then?> he asked.

Kuum Doona wanted to say that it didn’t know, but stayed silent and thought about it first. <You would write more books.>

<For my own enjoyment?> asked Uther. <Perhaps. And when I ran out of books to write?>

<Would you?> asked Kuum Doona. It didn’t know enough about books to say whether that was possible.

<I don’t know,> replied Uther. After he gave that answer, he didn’t return to his book, and instead stared off into the distance, not focused on anything in particular, for long enough that Kuum Doona grew bored and refocused on its exercises.

The next morning, Uther Penndraig stepped over the side of the Boundless Pit and began his
“I don’t like what you’re doing,” said Raven. She had her arms crossed over her chest and was frowning at Uther as he sat in his study. He was back from his first expedition into the Pit, and had said enough within the hearing of Kuum Doona that it knew there would be a second expedition, and possibly a third. He and his archivist sat together in the room he’d taken for his study.

“It’s safe enough,” said Uther.

“How fast are you falling?” asked Raven. “Can you be sure that you’d be able to stop in time if you saw something ahead of you?”

“Terminal velocity is around one hundred and twenty miles per hour,” said Uther. “I can see a mile out. I would have thirty seconds to activate the armor, that’s more than enough. You can be assured that I’m not going to die because I ran into something that lives down there.”

“You’re using warder’s sight,” frowned Raven. She was short, and to Kuum Doona’s senses, appeared almost as a child, though not dressed up as one. Kuum Doona had never seen a child, but somehow knew what one looked like anyhow, part of the large repository of background knowledge that came from no place in particular. Uther thought that it might have been from Soskanna. “What if there’s something non-magical?” Raven continued.

“Something hovering in the middle of the Boundless Pit, thousands of miles down, that exudes no latent, passive, or active magic?” asked Uther. He shook his head. “I would be hard-pressed to believe it.”

“I don’t understand what the point is,” said Raven.

“That’s a rather different argument, isn’t it?” asked Uther. “You don’t like it, you don’t think it’s safe, and you don’t understand it. You’re not usually so scattershot.”

Raven frowned. “You shouldn’t have introduced me to the concept of deflection if you were going to make it a common practice,” she said. “Usually I can understand what’s driving you to take risks, but in this case there doesn’t seem to be a problem that only the great Uther Penndraig can solve. There’s no one in need, and nothing in particular that seems like it’s tugging on your peculiar interests.”

“I’ve taken a fancy to the Pit,” said Uther. “That’s all you need to know.”

“And the house?” asked Raven.

“It can hear us,” said Uther.

“I’m aware,” said Raven. She shifted slightly, looking at the walls. “Babble stones?”

“No,” said Uther. “I’m trying to teach it. For that, it should listen.”

Raven pursed her lips. “And again I come to the question of what’s possessing you to --”

“Don’t use that word,” said Uther. His voice was loud and his tone was sharp.

“My apologies,” said Raven. “It was an unfortunate turn of phrase. I wanted to know why you were trying to teach the house, what the, ah -- what’s the word you’re so fond of?”

“Endgame,” said Uther.
“What is your endgame here?” asked Raven. “You’ve been taken by a mood, lately, but you rarely indulge yourself unless there’s a goal in sight, even one that might look hidden to everyone else.”

Uther looked off into the distance. “It’s about seeking answers, I suppose,” he finally said. “Finding out what the purpose of it all is. Tell me, in your immense archives, is there any indication that someone has found the answer to that?”

“No,” said Raven. “I would have mentioned it, if there were. There are many who have claimed to, but no claims that could be substantiated. Perhaps someone did, and they’re indistinguishable from a madman or a charlatan.”

“That’s an answer exactly as I would expect,” said Uther with a sigh. He turned to look down at a stack of papers on his desk. “I’m working on a story, but having some trouble. It’s about a man who finds himself trapped, unable to make lasting change on the world. What would you do, in such a situation?” Raven didn’t answer immediately, so Uther went on. “You can’t change what people will do, how they’ll react to situations, or whether they live or die. Conversations held in the morning will have faded from memory by nightfall. It’s a curse that no action on your part can seem to end. And the world simply stays static, not changing or reacting, except in small ways that are undone the next day.”

“Is that how you feel?” asked Raven, her voice soft. “I know that we’ve all been through a lot, especially you, but the real, lasting good we’ve done for Aerb is something that anyone should aspire to. The Empire, the reforms, even if I accepted this notion that there would always be another threat rearing its head, I would say that in the meantime, so long as we can hold those threats at bay, the world is getting better.”

“I do appreciate your attempts at giving me encouragement,” said Uther. “But it’s just a story, nothing more, nothing less. The original ending, the one I had in mind, was that it was only after he becomes good that his actions have any consequence again, not just good, but outwardly perfect and selfless. But it seems to me that if he really believed that his actions had no meaning, that wouldn’t be a conclusion that he would come to, and further, that it might be interesting to see what his reaction would be when his outward attempts at doing good, even knowing that it wouldn’t last, don’t bear fruit.”

“I see,” said Raven. “Or rather, I don’t. It seems quite unconventional, even by your standards. And you’re having trouble with what this man would do, given that nothing he does matters? Or at least, given that he thinks that nothing he does matters?”

“Hedonism, villainy, self-destruction,” said Uther with a wave of his hand. “If I’m being honest, I could write it using the rest of the afternoon, but it’s that turn back toward the light that I’m having trouble with. He knew that nothing he did would have any lasting impact, so he raped a woman, and,” Uther shrugged. “He becomes irredeemable in the eyes of the audience.”

“So have him not do that?” asked Raven.

“Perhaps better that he kills instead of rapes,” said Uther. “But if he was in despair, for hundreds of years while the world stayed exactly the same around him, thinking that nothing he did would have any effect at all, and nothing would change for all his efforts, I have to imagine he would try something heinous, just to see whether that was the thing that would lift his curse. And from there, where does he go? What redemption is possible for him, even if he does decide to go back to being good?”

“I don’t know,” said Raven. “You’re sure this isn’t you, projecting your own problems into your work?” She laid a hand on his arm. “Uther, I’m not sure that being alone in the darkness for days at a
“If there’s any danger, it’s that being alone in the seemingly endless dark is a symptom, rather than a cause,” said Uther. “But I’m confident that I’ll make it to the bottom of the mystery, pun intended, and this chapter of my life will come to a close.”

Uther’s first trip into the Pit had lasted a day before he’d come back through a portal. His second trip had been longer, more than four days, long enough that his companions came by to speak with the house and ask it questions the house couldn’t answer about when he would be back and what he’d said. After Uther had returned from the second trip, he’d announced a third and final one, this one as deep a delve as he could make, not stopping until he’d found an answer to the mystery. His companions had asked him not to, a few of them saying that there was simply no point in what he was doing, or more selfishly, that they would be bored while he was gone. He had left anyway.

While he was away, Kuum Doona practiced. He had endowed it with the ability to create an illusion, light and sound in the air, within a movable ten foot cube, and instructed the house that it was to practice taking the form of a person, specifically, himself, the better to serve as a decoy or diversion. The entad that granted the power of illusion had also granted some understanding of the play of light and sound, and the natural movement of cloth and hair, the slight translucence of skin, the wrinkles on the face, and a thousand other things that threatened to overwhelm Kuum Doona’s simple mind. It was getting better though, improving with every passing day, in part because there was little to do besides run through the practices that Uther had set out for it.

Three weeks passed with Uther gone. His companions stopped by the house every once in a while, to see if it had word from him, but they did not stay or engage in conversation, nor did they speak amongst themselves in places where Kuum Doona could hear or see.

One day, Kuum Doona decided to go through the books and papers that Uther had left behind. It had progressed enough that it wasn’t so reliant on the ability to focus, and could allow its thoughts to wander away from whatever task it had set for itself. Uther controlled the house, and dictated which items would go inside the closet to get merged with Kuum Doona forever. He was still a mystery, not just because it was hard to predict what other people would do in the best of circumstances, but because he made some effort to keep secrets.

His papers were largely useless. Kuum Doona found the story he was working on, called “Groundhog’s Day,” though the title didn’t appear set in stone. It had an ending written for it, then partially crossed out, where the weather predictor fell in love and lifted the curse upon him. Kuum Doona didn’t understand why this story was important to Uther, if it was, nor why he thought the ending wasn’t as it should be.

Nothing he’d written down seemed important. It was art, by and large, partially finished plays, novels, poems, and stories, and scattered through those, a number of pictures that Uther had drawn in pen. Kuum Doona read through the papers, though much of it lacked the context to make it understandable, and there were half-finished thoughts everywhere it looked. Kuum Doona focused on the pictures Uther had drawn, and tried to work them into its exercises in creating realistic illusions. It was difficult work, creating the illusion, then looking at the illusion as though from the perspective of an outside observer, then trying to make the illusion move. It required an entirely different level of focus and skill that Kuum Doona had difficulty with, even using the power of single-mindedness that the diadem had granted it.

There was a recurring girl in Uther’s pictures, teenaged and lithe. Kuum Doona took her image and practiced with it, going through with the difficult task of translating the static, representative lines in two dimensions into a moving three dimensional image. As Kuum Doona put its full focus into the
task, the task became easier, until eventually it hit walls in what it could figure out on its own. The girl in the pictures was only rarely smiling. She looked off into the distance in most of them, or stretched her muscles while frowning slightly, or walked while not quite facing toward the viewer. Kuum Doona made its guesses about how she would smile, given the muscles that lay beneath faces, the arrangement of fat and skin, and with some copying from people the house had seen smiling.

Uther returned after a month in the Pit. His portal opened in the study, blasting wind, and he collapsed to one knee as soon as he was through it. He was bloodied and gasping for air, but eventually found his feet. Kuum Doona wished that he hadn’t returned; it waited, not making itself known, hoping that the erstwhile king would have forgotten about it. He didn’t make a sound as he moved through the house, dragging his feet, but to Kuum Doona’s dismay, he made his way to the closet where he’d placed a dozen entads already. His necklace held miniature objects, dozens of them tied there with thread, and he plucked a blanket off, which returned to its full size in his hand. He threw it carelessly into the closet and trudged off to the room he’d declared as his bedroom, then laid down on the bed and went to sleep without uttering a single word.

Alcida arrived at the house as a bolt of lightning the next morning and checked in; when she heard that Uther was back, she rushed to his room and tried to wake him, but all her efforts were for nothing, and Kuum Doona watched as the vitric woman couldn’t so much as move him. The blanket he’d added was an entad, naturally, and the effect seemed to be that he was immobile and protected while he slept. Kuum Doona thought that it could lift that protection, if it so chose, but it did not.

Alcida left, disappearing in a bolt of lightning that arced off into the distance. She returned not long after, another bolt of lightning at the front door, this time with two of the others, Everett and Dolmada. She left almost immediately after she’d dropped them off, and they made their way into the house, moving cautiously, until they reached Uther’s sleeping form.

“House?” called Everett, after clearing his throat.

“What can I do for you?” asked Kuum Doona. It appeared next to them, in the form it had been practicing. It was the first time that it had tried showing it to people, though it had been making attempts at presenting as humanoid in the course of its day-to-day exercises.

Everett gave a little yelp of surprise and looked her over. “The hells? You’re … the house?”

“Who are you supposed to look like?” asked Dolmada, looking the form of Kuum Doona up and down.

“I don’t know,” replied Kuum Doona. “Zona?”

“Nope,” said Everett. “She never looked like that, even when she was a teenager.”

“I don’t know,” repeated Kuum Doona. “He drew her.”

“Well, add that to the mystery pile,” said Dolmada. She gestured to the sleeping form of Uther. “Any idea what’s troubling him?”

“He’s paying down Kenner’s Eye,” said Everett. “That much is clear. A month awake means a week asleep, maybe more. There are some side effects, but nothing he can’t handle. The real question is why we can’t so much as move him.”

“There was an entad,” said Kuum Doona. “A blanket.”

“Oh,” said Everett. “Oh, he gave up the Blanket of Protection.” He leaned back slightly. “Well, then there’s no problem.”
“Except that our leader dropped down into a bottomless pit for a month, against the advice of pretty much everyone,” said Dolmada. “And when he got back, he didn’t see fit to tell anyone about it. He’s going mad, if he wasn’t there already. I overheard him talking to Vervain about how his life was like a story, it was honestly one of the most disturbing things I’d ever heard -- and you know me.”

“The house is listening,” said Everett. He looked at Kuum Doona.

“Let it,” answered Dolmada. “What Uther is doing here is a whole different problem.”

“What does ‘Kansas’ mean, there on your shirt?” asked Everett, turning toward the illusion that Kuum Doona was projecting.

“I don’t know,” said Kuum Doona.

The others arrived, and the conversation became so fractured that it was hard for Kuum Doona to keep track of it all. Even with the demonstrable might of the six companions, there was nothing that they could really do to help Uther, since all he needed was to get some sleep, and anyway, he’d made it so that anyone who was asleep in the house would be wholly protected beyond their abilities. No one asked Kuum Doona whether it could lift the protection, and it didn’t offer to try.

Vervain was the last to arrive, not carried through lightning like the others, but appearing in a swirl of black petals at the front door. When he strode into the room, the conversation stopped.

“Fool,” muttered Vervain as he looked over Uther’s form.

“Do you have any idea what he was trying to accomplish?” asked Everett.

“A month is a long time for the Secretary General to go missing,” said Raven. “People started asking questions in the first week, and they haven’t really stopped.”

“It used to take months for a letter to cross from one side of Aerb to another, if it completed the journey at all,” said Vervain. “How quickly we unlearn patience. They will keep.”

“And where have you been, o wise wizard?” asked Montran.

“Doing wizardly things,” replied Vervain with a frown. He reached down to the bed and poked Uther on the cheek; the flesh was rock hard and unyielding. “Sleeping off Kenner’s Eye, and the blanket given to the house?”

“We have three blankets,” said Alcida.

“You know which one I mean,” said Vervain with a wave of his hand. “Nothing to be done then. We’ll reconvene in a week. In the meantime, I will sleep beside his bed.”

“He wanted us out of the house, so he could claim it,” said Montran.

“It’s been claimed,” said Vervain. “The connection is strong, unbreakably so at this point, which leaves half of this quest complete. When he wakes, we might find that the other half has been completed as well. Make ready to travel, for the plates we’ve kept spinning have started to wobble, as Raven said.”

“You said they would keep,” said Raven.

“All the same,” replied Vervain. “Now go, leave us.”
The troupe left the room, filing out the door together, and emptied out of the house to go finish whatever affairs they had elsewhere. Kuum Doona stayed; it couldn’t project the image of its body out beyond the house, and could only give the impression of privacy, not the actuality.

“You read through his books, I see,” said Vervain, once they were alone.

“I did,” said Kuum Doona. “Have you?”

“Yes,” said Vervain. “Once, when there was some question as to whether he was really Uther. I was looking for a method of confirmation.”

Kuum Doona stayed silent. It wasn’t very good at conversation. It hadn’t had anyone to practice with.

“I’ll be interested to see what his reaction is, if he were to see you like that,” said Vervain, voice nearly at a whisper. “It might do him some good.”

Uther awoke a week after he’d gone to bed, just as predicted. Whether by chance or by design, Vervain was elsewhere in the house, leaving Kuum Doona as witness to the King of Anglecynn rubbing the sleep from his eyes and groaning as he stretched out. He ambled his way to the adjoining privy and relieved himself for what seemed like minutes, before finally coming out, dressed in only his trousers. He stopped when he saw the physical form of Kuum Doona, eyes momentarily going wide before he sat down in an armchair, seemingly at ease.

“You found my drawings,” he said. “The illusion is highly imperfect, but better than expected.”

“Where are the errors?” asked Kuum Doona.

“Maybe nothing that you would have known to correct,” said Uther. He paused. “I could help you make her more accurate, if you’ve chosen her as your avatar.”

“I thought you might be upset,” said Kuum Doona.

“And yet you chose to present this way regardless,” said Uther with a sigh. He looked over Kuum Doona, head to toe and then back again. “No, I can’t say that I’m upset. It’s lacking in artistry, and yet … all from the pictures that I’ve drawn? We can make you so much more than you are, starting with the avatar. Come over here, show me how you move.”

This was how Uther Penndraig spent his first morning back in the world of waking. The blanket offered total immunity from harm, so long as the person under it was asleep, which alleviated such minor issues as bed sores, hunger, thirst, or any of the other reasons it was a terrible idea to sleep for a week straight without moving. He seemed at peace, content with the task he’d seen in front of him, that of teaching a sentient house how to move and act more like a human.

“You’re too graceful,” said Uther. “She could be graceful, at times, but often she wasn’t.”

“Who was she?” asked Kuum Doona, as it attempted to move the image of a girl with less grace, not jerky motions, but as though the product of someone who wasn’t concerned with how a lack of coordination appeared. It was extraordinarily difficult.

“She was no one,” said Uther. “A childhood friend.”

“You have many drawings of her,” said Kuum Doona. She walked back and forth across the bedroom, trying different methods of walking, changing her gait and watching Uther’s reaction.
“Only a friend,” said Uther with a sigh. “It’s only an old man wishing that things could be different. An old man, wanting to go back home.” He wasn’t old; he was in his early thirties, a perfect physical specimen, tall and muscular. His eyes were roaming the form she presented. “Can you do haptics?”

“I don’t know that word,” said Kuum Doona.

“I just invented it,” declared Uther with a smile. “You can apply force. Can you apply force in concert with the visual illusion?”

“That seems difficult to manage,” replied Kuum Doona, coming to a stop. “Controlling light and sound to make this girl is very hard when I’m also having to think about what I’m saying. I don’t know if I can do three difficult things at once like that.”

“Then don’t speak,” said Uther. “Come here, run a finger along my arm, don’t worry about words for the time being.”

It proceeded that way for a while, with Uther instructing the house in how its body should behave, in the intricacies of touch. There was something in his eyes that the house didn’t understand, as he looked on the form that she’d created from his books.

“Sorry,” I said. “Can I stop you there?” I was feeling slightly nauseous. I could see where this story was going, and really didn’t like it.

“You don’t want to hear the end?” asked Zona.

“I’m just … not feeling great,” I said. “Sorry, it’s not -- he was a friend. Is a friend. There are extenuating circumstances.”

“Not sure why you’re so upset,” said Fenn. “We knew that he cheated on his wife, right? Or they were in an open relationship or something?”

“It’s not that,” I said. “It’s … how old was he, exactly? Thirty-three? And still hung up on her? And that’s not … it was you, an infantile creature that he was using, and --” I shook my head. My stomach was still churning. It felt like child abuse to me, somehow.

“I didn’t care, at the time,” said Zona. “What did nudity mean to me, when it was just an illusion that I was projecting?” She gestured to Tiff’s form. “This isn’t my body, my house is the body, if you’d like to stretch the analogy. Even after I was smart enough to understand, the sexual relations didn’t bother me. No, it was the obvious shame he felt, the threats he made afterward, the way he tossed me aside once I’d served his purposes.”

“And so he did,” I swallowed. “It was … he made you, ah.”

“To the extent I was able,” said Tiff -- Zona. My heart sank. “Not that morning. It took him some time to build up to it. And once he had, that was apparently enough for him. He said to Vervain that he’d understood the lesson that the house and the pit were meant to teach him.”

I closed my eyes. “I’m sorry,” I said.

“I practiced it and studied it,” said Zona. “After, he wanted me to change into someone else, a studious, well-mannered, sexless butler. I was to speak of the girl to no one; it might have been a black mark on the Poet King, and I now think that it was more that he didn’t want to face the shame
and disappointment. Eventually, when it became clear that he wasn’t coming back, I went back to
the girl, out of a child’s petty rebellion, and later, because of the vain hope that I might get answers.

“Which only took five hundred years,” said Fenn. “So congrats, I guess.”

“I need some time,” I said. I sat down on the ground. “Just … some quiet, some time alone, without
other things going on.”

The door to the time chamber creaked open a few seconds later, and I gave an internal groan.
“How goes it?” asked Fenn as Grak and Amaryllis emerged from the chamber. From what I could see of the room, it looked completely different, which wasn’t a huge surprise, given how easily the glove allowed free rearranging of the furniture, and how different the requirements for two people would be. They had bunk beds, it looked like, shoved off in one corner, with sheets hung up to block out the lamplight. There were more books on the desk than before, stacked up high, with more bookmarks in them. One of them was open; a calico cat slept on top of it.

“It was productive,” said Grak. He looked at me, where I was sitting on the ground. “How does it go with you?”

“He needs some time,” said Fenn, with a thumb pointed in my direction.

“Time in the chamber,” said Amaryllis with a nod. “Grak and I were talking about that. We’d like to go forward with a rotating schedule, one person in the chamber with me at a time. Less, if it doesn’t work out for interpersonal reasons.”

“I wasn’t actually thinking time in the chamber,” said Fenn. “Just, maybe, an hour or two away from people, a nap somewhere, a cup of tea, something like that.”

Amaryllis glanced at the recorder, then stepped over and began fiddling with it, replacing the reel with a fresh one from the glove. “I suppose I’ll learn whatever it was soon enough, from the house’s mouth.”

“Was that a pun?” I asked.

Amaryllis smiled and shrugged. “You’re welcome to join me, unless you have reservations.”

I glanced at Fenn, before realizing that the glance communicated something. I immediately wished that I hadn’t looked at her, but the damage was done. “I don’t want to be apart from Fenn,” I said.

“Aww, that’s sweet,” said Fenn with a roll of her eyes. “I’ll be fine if you’ll be fine.”

“I don’t want to cause problems,” said Amaryllis. “There are some things that I’d like Joon’s input on though, beyond just having company.”

“Okay,” I replied. I swallowed. “It’ll be fine. Anything that we need to discuss before that? Or, things that we should talk about as a group? I’d understand if you wanted to stretch your legs.”

At the prompt, Amaryllis stretched out. She was wearing shorts and a t-shirt, her ‘Boning by the Bay’ one, and when she stretched, I looked for a baby bump. If it was there, I couldn’t see it, but she was still three months and change along, and I had enough knowledge of pregnancy to know that the growth was exponential.

“Sure,” she said. “I’ll get some,” she gave a glance at the decaying house, “fresh air, be back in ten minutes.” She looked to Zona. “Would it be too much to ask --”

“Yes,” said Zona.

“And here I’d hoped that there’d be some work done on my behalf,” said Amaryllis. “Very well.” She took off through one of the doors, and did a good job of seeming blithely unaware of the danger.
I felt Fenn’s hand on my elbow. “Care to say our goodbyes?” she asked.

“Sure,” I said.

She guided me into a room in the opposite direction from the one that Amaryllis had taken, where some kind of fire had briefly flared and then died out, immolating a bed in the process. I had no idea how long ago that had been, but decades at least.

“Not to be rude, but can I have you be the most social you can be?” asked Fenn.

“I am,” I said. “I mean, I have been.” She was talking about the two ability points I could shift around; I’d put them into SOC as soon as I’d had the chance, when it seemed like we’d need to deal with the house as a person rather than as a physical obstacle.

Fenn sank her face into her palm. “Yeah, I was worried about that.”

“Sorry,” I replied. “Not really at my best right now, for a handful of reasons.” I paused. “Is this really about saying goodbye, or … ?”

Fenn wrapped me in a hug, then gave me a kiss on the cheek. “I want you to know that no one will think less of you if you have to bail out early. I’m not going to ask questions about it, and I’ll make sure that Grak doesn’t either. Okay?” She backed away from me enough that she could stare into my eyes.

“Yeah,” I said. “Okay. If you’re worried about … about anything --”

“I am,” said Fenn. “But if you can’t stay stuck in a room with Amaryllis for a month without fucking her -- if I can’t let you go into a room with her for a month without flipping my lid -- then yeah, I’m going to choose to believe the best of you, her, and myself.”

“I wouldn’t,” I began.

“No, I know,” said Fenn. “But think about the unicorn, right? About a million timelines where things shake out differently, or think about the Dungeon Master and his nudges, and … I love you, I trust you, but I’m not sure I trust you that much, you know what I’m saying?”

“I … yeah,” I said. “Right now I’m kind of hoping that I can just have some time to be alone and think, if I’m being honest.”

“Arthur stuff,” nodded Fenn. “I get that. I mean, I don’t get it, but I get it. If you stay on the outside, you’d probably have to hear more shit from this house, who doesn’t like him, or had some terrible experience, and then it would be another couple of hours before Solace was born, which would be its own thing, and there’d be no room to breathe.” She sighed. “So I don’t get it, but I never really had a friend like Arthur was to you. Never really had much of a family either. This is the closest that I’ve ever come to,” she dabbed at one eye with a finger, and I realized that she was on the verge of crying. “I love you, Juniper, just please don’t fuck this up?”

“I won’t,” I said. I felt upset that she thought I would, and ashamed that there was a part of me that agreed with that assessment. I’d fucked up enough friendships in my life to recognize that I was the common denominator.

“Sorry,” said Fenn. She wiped a half-formed tear away and wrapped me in a hug so tight that it was physically painful. “Pregnancy hormones must be getting to me.”

I pulled back from her. “You’re not --”
“It was a joke, Juniper,” said Fenn, laughing.

We reconvened outside the time chamber, where Amaryllis had set up some basic amenities to make the waiting more bearable; there were four chairs and a small table with a plate of cheese, meat, and crackers.

“I told her that she didn’t have to do this,” said Grak.

Amaryllis waved a hand. “It was nothing,” she said. “You have another four or five hours out here, at a minimum. There’s a good chance that you’ll all need your strength at the end.” She looked to me. “Ready? Everything good?”

“Yeah,” I said. I gave Fenn one last kiss, we stepped into the time chamber together.

“No,” Amaryllis explained. “The real issue is heat, especially with two people. The time chamber is essentially perfectly insulated from the outside world, and that would be fine, except that we do a whole lot of heat production just through metabolism.”

“Do I need to know all this?” I asked. “Can’t you just say, ‘hey, I’m smart, I solved every relevant problem during the first day in here’ and we can get on with it?”

“I ran Grak through the same thing,” said Amaryllis. “If something happens, I’ll want your expertise in fixing it. And even if that doesn’t happen, these systems require maintenance, which you might have to help with if or when I can’t manage it all. Not to mention that you’re going to ask about them anyway when you see me moving jugs of water and blocks of ice around. Okay?”

So we went through the systems that Amaryllis had set up, waste disposal, air filtration and exchange, heat sinks, the carbon monoxide detector and smoke alarm, the fire extinguisher, the lighting, until I was pretty sure that at some point I was going to annoy her by asking all of the things that I’d forgotten. For her, this was a changing of the guard, but for me, it was only the night before that I’d fought with the tuung guards on the top of the train, and only hours since I’d nearly died on the Down and Out.

“Okay,” I finally said. “Can I sleep now?”

I saw her cheek twitch slightly. “Sure,” she said. “I arranged it so our sleep schedules should be roughly in sync, but I’m a little bit wired right now, and there are things that I’d like to get to sooner rather than later. Nothing that can’t wait until the so-called morning though.” She’d rigged a dimmer switch to a timer, which controlled the lighting in the chamber and gave some semblance of a day-night cycle.

“Yeah,” I said. “I know, I figured, I’m just wiped out.”

“Grak put up some wards, the bunks are soundproofed,” said Amaryllis. “I’m probably going to stay up for a bit.”

“Uh, one thing,” I said. “I haven’t had a shower since, uh, a few days ago, how is that sort of thing handled here?”

“Sponge bath,” answered Amaryllis. “If you need to wash your hair, there’s a washbasin that I use for that, and for doing laundry.”

“And, ah,” I said. “In terms of modesty?”
“That … wasn’t really something I’d considered, sorry, I should have,” said Amaryllis. “We can put up a curtain, I suppose, would that be acceptable? It wasn’t really a problem with Grak, obviously.”

“Yeah, I know,” I said. “Puritanical Midwestern views, et cetera.”

“It’s something we can talk about later,” said Amaryllis with a shrug. “I’ve been reading a lot of Earth history, as you can imagine. I think I’ve got a better handle on how you think now.” She was silent for a moment. “I’ll get everything ready so you can take a sponge bath without getting water everywhere, and we can run through setup and takedown for it.”

It wasn’t much later that I was out of my armor and sponging myself down. I’d done something similar on the train, to get the blood off me, and it was hard not to think about that as I washed myself clean of the stench of combat. A sponge bath in lukewarm water wasn’t what I’d wanted; I wanted a hot shower in my house, a place that I hadn’t thought all that much about since coming to Aerb. I felt lucky that the wounds I’d taken had been transient, enough that it was hard to remember them; I still looked at my left hand every once in awhile, just to make sure that it wasn’t deformed anymore.

Getting my mind off the physical didn’t really help things though, because that wasn’t where the real problems were lurking. It was hard for me not to picture Uther as Arthur. I found myself projecting the person I’d grown up with onto the imposing king of legend. When I tried to grapple with him having sex with a fake version of Tiff, it was hard not to just see the two of them.

Sleep didn’t come easy to me, despite the rigors of the day, but there was a spell for sleep, and I wasn’t hesitant to use it.

Amaryllis was barefoot in the ‘kitchen’ when I woke up, making pancakes and eggs using stuff she’d taken from the backpack. She’d set up a table in the middle of the room, with a chair for each of us. I wasn’t sure where Fenn had stolen them from, but they matched.

“Here,” she said, placing a plate on the table for me. “These were going to be for me, but you eat first and we can talk for a bit while I make my own.”

“They’re flat,” I said, poking them with a fork. “Not that I’m complaining, I’m just used to the fluffier kind.” I frowned at them. “Didn’t Fenn make pancakes before? Is there … some variation in pancakes across Aerb?”

“They’re crepes,” said Amaryllis.

“Oh,” I said. “Yeah, we have those on Earth.”

“I know,” said Amaryllis, glancing back at me. “They’re from an Earth recipe, I’ve been trying to give myself the full cultural experience. Most of the good stuff from Aerb is a few months old by this point, and while we have a few pallets of the bad stuff -- sterilized barren bread -- I’d rather pull from the backpack and have fresh food.” She slid a crepe out of the pan and onto her plate, then poured more batter onto the pan. “There are limits on what we can cook in here, naturally, since a little smoke goes a long way in such a small space.”

The crepes were good, especially when Amaryllis put the extras on the table; she had maple syrup, butter, and some kind of mashed fruit. The eggs were a little runny for my tastes, but I didn’t say anything about them. I had other things on my mind, and if the breakfast was meant to help get me focused on something else, it wasn’t working.

“So,” said Amaryllis when she sat down. “I listened to the recording this morning.”
“Ah,” I said. “These crepes are good.”

“Thanks,” said Amaryllis. She set her fork down with the tines set on the edge of the plate. “Joon, if you wanted to talk about that, about what she said, I would listen.”

“Yeah,” I said. “It’s … there was this game called The Sims. It was a videogame on the computer, you had control of this little family, or maybe just a single person, they had all these little meters, it was … kind of like playing dolls, Will Wright had a TED Talk where he called it structured play, the sort of game that the user is meant to hang a story on because all the interacting internal systems allow the human brain to latch onto -- you know what, that’s a tangent. The point is, it was something like playing with dolls, I guess, and one of the things that people did a lot -- that we did -- was to make all of our friends in the game.”

I cleared my throat. “Anyway, Arthur was never cruel, I mean, there were lots of ways to kill people in the game, and I did a bunch of that, you could make a person work themselves to the point of exhaustion and pee their pants.” I saw her expression. “It was cartoonish, not meant to be taken seriously, the animation and models were simplistic, and it wasn’t anything approaching … well, whatever this world is, if that’s what you’re thinking.”

“Okay,” said Amaryllis.

“The point is, it wasn’t like that for him,” I continued. “For him it was about the stories he could tell with our friends, or the people we knew. Like, he’d make girls we knew, and flirt with them using his character, and it was …” I stopped and let out a breath I hadn’t realized I was holding. “This was when we were younger, maybe ten or eleven, the kind of thing that you look back on and cringe.” I looked at Amaryllis, finally meeting her eyes. “I don’t know, it was what I was thinking about. I’ve been trying to see it from different angles, to weigh the evidence.”

“Is it that he didn’t see the house as human, or that Tiff was your girlfriend?” asked Amaryllis.

“I don’t know,” I said. “If that story is anything to go by, he was going through some shit at the time, and I want to cut him slack because of that, but it’s still … it makes me feel gross.”

“Me too,” said Amaryllis. She ate more of her crepes. “You’ll let me know if you have more thoughts? Or if you want to vent?”

“Yeah,” I said. “I feel kind of crappy coming in here and talking about my stuff, I’m supposed to be here for you.” Amaryllis shrugged. “How have you been?”

“Fine,” said Amaryllis. “Having Grak here was better than I’d thought it would be. If you mean the chamber as a whole, I’ve been getting a lot of work done. I’m not sure how much any of that would interest you, but I can share it later, in a more structured way. Oh, and I’ve been doing some cultural exploration of Earth, which has been … interesting, I guess.”

“Oh?” I asked. “Anything I’d have heard of?”

“Almost certainly,” said Amaryllis. “That was part of the point, really. It’s hard, because a lot of information on Earth is or was stored digitally, or on the global internet, which I don’t have very good ways of accessing. Still, I gathered up some reference guides and lists of essentials that let me start filling in my Earth knowledge, especially in the areas that Uther didn’t directly copy, and the places that you’ve only mildly touched on. I’ve been making my way through the American Film Institute’s top hundred films. I think I’m starting to get a hang of the medium.”

“Oh,” said Amaryllis. “Yes, I have a film projector. For the most part, I’ve been able to get physical film strips in their cans. The projector itself was a pain, since I think it was just a bit too big for the backpack, which meant that I had to get the parts individually and then assemble it, and then, as it turned out, I needed a new lens because I couldn’t get the focus I needed at such a close distance, which was an entirely different ordeal. It’s hacked together, but it works, so if you’re feeling particularly nostalgic, we could do that some night. The next one up is The Sound of Music, which is apparently a musical. I’m not sure if you like those or not.”

“Not really,” I said. “I’m impressed, and a little bit surprised you went through the work, especially if you’re not enjoying yourself.”

“It took me some time to get used to the cuts,” said Amaryllis. “You’d be watching someone one second, and the next second you’d be looking at something totally different. Don’t laugh.”

“I’m not laughing,” I said, but I was smiling. “It’s just that you sound like an old person.”

“In a bad way?” asked Amaryllis.

“Kind of,” I said. “I really shouldn’t be laughing, you’re trying to educate yourself about a medium that evolved over the course of a few generations, that’s noble, but … the idea that someone doesn’t like or understand cuts is kind of funny.”

“I understand them,” said Amaryllis, crossing her arms. “The concept of the notional camera is clear to me, I’d just like movies better if the camera were clearly moving rather than just jumping from one thing to another all the time. They do it during dialogue and it’s like the filmmaker was trying to put me in the shoes of a hyperactive teleporter. I don’t like having my viewpoint switched around so fast. I’m wondering how universal my experience is; if the medium needs to evolve itself by way of children growing up with it, that’s really going to create some problems in bringing our goods to market.”

“I missed a step,” I said. “You’re planning on selling movies? Specifically, Earth movies?”

“Oh, all of it,” said Amaryllis. “Uther was incredibly prolific, but what he brought over from Earth were bastardizations of works he remembered seeing or reading as a teenager, and in comparison with everything from Earth, his canon is minuscule. More to the point, none of this requires our direct labor to exploit. We can hire out people to copy the works and mass-distribute them, with our only role being selecting which books, movies, and songs to pull out.”

“Huh,” I said. “Can I say something that you might find really dumb?”

“Always,” smiled Amaryllis. “To be honest, I’ve kind of missed it.”

“I find the cultural sales stuff to be kind of boring.” I said.

“That’s not dumb,” said Amaryllis. “It would be dumb to not do just because you find it boring, but finding it boring in and of itself is just a matter of taste. Besides, as I said, we don’t really need to have that much of a hand in it, so long as we can find people that we trust to run things for us. There are some important questions about how we’ll do it -- I’ve made a list -- but your actual involvement can be close to nil. It’s mostly as a way of accruing capital for the other projects I want to run.”

“Any luck figuring out why Aerb lags behind Earth in terms of development?” I asked.

Amaryllis sighed. “No, not really. We don’t really have fossil fuels, which hurts immensely, and to some extent the athenaeums drain away brainpower from other pursuits. The multitude of species on Aerb are also a problem -- sorry, not a problem, but a possible explanation for why we’re
The Dungeon Master’s influence was evident in various aspects of the setting. Different cultures, different minds, different ways of doing things, all of which you’d think would contribute to a marketplace of ideas, but I think in reality just creates a lot of friction, as well as removing a lot of people from contention as inventors. Dwarves live almost exclusively underground, they don’t really have much use for radio technologies, the elves are essentially static outside of a few aberrations, you have groups like the tuung that are intentionally regressive, it’s kind of a mess.” She frowned slightly.

“You still don’t think that explains it all,” I said.

“No,” she replied with another sigh. “It’s been nagging at me. Maybe it really just is a combination of factors. Or maybe it’s the Dungeon Master putting his foot on the scale somewhere, either because he wanted the world to look a certain way, or because he wanted this opportunity for us.”

“I’d think he’d be more seamless about it,” I replied.

“I’m not sure that’s his style,” replied Amaryllis. “I’ve been finding a lot of things that just make me groan. It reminds me a lot of you, actually.”

“Such as?” I asked.

“So, I was reading Alfred Kinsey’s work on human sexuality, and the name kept bugging me,” said Amaryllis. “Then I pulled out The Book of Blood, and do you recall who wrote that?”

“Syfriend?” I asked.

“Huh,” I said. “Yeah, I’ll confess to having missed that one. But that’s not really a seam, in the way that I would think of them, it’s just a … a wink, I guess.”

“I suppose,” said Amaryllis. “But there are thousands of those winks, and it’s sort of made me reconsider what’s going on here.”

“You know, when we first met you’d have said that I was just partially dream-skewered, that it was Earth that had conformed to Aerb, rather than the other way around,” I said.

“It seemed sensible at the time,” said Amaryllis. “Now, I’m not very confident that’s the case. Maybe it’s just that I’ve been absorbing a lot of American media, history, and political theory, and realizing how much Uther copied from the world he knew. It makes me think that’s true for everything, that our world in some respects is just a reflection of your own.”

“Yeah,” I said. I finished the last bite of my breakfast, which had grown slightly cold as we talked. “Thanks for helping me take my mind off things for a bit.”

“No problem,” said Amaryllis. “You seemed like you needed it. I’ve always liked talking to you.”

“No, you haven’t,” I said.

“No, that’s true, I haven’t always,” said Amaryllis. “Especially the beginning. I suppose there have been a little bit of rose-colored glasses on my end. Grak said the same thing, that I was romanticizing our group a bit.” She cleared her throat. “But I am happy to have you here.”

“Alright,” I said. “Let’s get started on mapping out the future of the world, shall we?”

Most of the ‘work’ involved me sitting there while Amaryllis explained things. She had a dry-erase
board that she’d pulled out of the glove and set against one wall, with the markers taken from Earth and the board itself just a sheet of glass with white backing, which I thought was probably made from native materials given it was too big to have come out of the backpack. She had a variety of questions for me, most of them written down in a notebook, and made some notes on the board and the notebook when I answered, even though I didn’t think my answers were all that illuminating.

The plan was to build up as much money as possible to get us into a position where we could be the first movers on all of the technologies available to us. Ideally, we’d be able to buy a factory outright, then hire a team of engineers in order to get that factory to produce the goods we thought were most important. This was a slower method of distributing technologies, but it would reap us greater personal rewards, some of which would funnel back toward the ‘adventuring’ side of things, if we still had cause to do that (which we both assumed would be the case).

“Ideally, we would have the full backing of a state,” said Amaryllis. “Actually, ideally, we would be a state, since that’s the only way to have true top-to-bottom vertical integration.”

“You’re talking about reclaiming the throne of Anglecynn?” I asked.

Amaryllis actually laughed. “Well, I never had the throne of Anglecynn, and it’s a really poor candidate for a number of reasons, like the legal framework, the sheer size and scope of the country, the entrenched institutions, the politics -- no, I was thinking somewhere small, with lawmakers that are easy to bully around with our power and influence.”

“Sure,” said Amaryllis. “I mean, I am talking about creating an oligopoly with us at the top. I stumbled across the phrase ‘benevolent dictator for life’. It seemed really apropos. Anyway, I was thinking about this time chamber, which should have only a little less than two hundred years in it when we’re done with it, and about what Esuen had said. In thirty years, she could produce five hundred thousand young. Meaning, essentially, that we could have our own nation in a single-digit number of years.”

“Jesus,” I said.

“Blegh, Jesus,” said Amaryllis, rolling her eyes. “Some night when we don’t have more pressing matters to talk about, I’m going to rant to you about the Bible. I can’t imagine why I thought it would be worth reading.” She paused. “Is having our own country one of those things that you think is distasteful but will do anyway? Or are you actually against it?”

“It’s just … bigger than anything we’ve done,” I said. “You’re talking about actually entering into international politics.”

“It had to happen at some point,” said Amaryllis. “The whole point of this, all of this, practically from the beginning, was that we’d change the world. To my way of thinking, if we can get the backing to create our own nation, one formally recognized by the Empire of Common Cause, we can set all the rules up how we want them from the start. We go to whoever wants to back the rogue tuung, keep our information advantage under wraps, they set us up as a lever to use against the other tuung, and then before anyone knows what to do about it, there are cheap electronics being teleported into every city in the world, and we take a cut.”

I found Amaryllis scary sometimes.

There was a lot for me to catch up on, but very little that was actually new. Amaryllis had developed
embryonic plans into thick binders filled with typewritten thoughts and ideas. She was roadblocked in a number of places, limited by information she’d need to get from the outside world, or places where she didn’t quite understand some bit of technical jargon and needed more time for study, but it was everything she’d said she was going to do when she’d talked about going in the chamber.

There were a few surprises though.

“Here,” she said, sliding forward a sheaf of papers. “It’s an analysis of your expanded character sheet with some notes on moving toward an optimal build the next time you change things around. Obviously what’s optimal depends on what you end up doing, but it’s my belief that you should either focus on social or mental abilities, especially those that aren’t easily available to other people.”

“Yes,” I said. “Okay, can I read this later?”

“Sure,” said Amaryllis. “No rush, we’ve got tons of time.”

So there was that. Amaryllis had laid plans for unlocking all of the remaining magic I should have access to, ranked them by both mundane and combat utility, and by what she thought we’d need in order to get the unlock done. On some, she’d written ‘potential quest?’, because she thought they’d need an appreciable amount of effort in order to actually get unlocked. Revision magic was at the top of the list; the way a revision mage was inducted was particularly onerous, but the most burdensome aspect was the time it took, which we could reduce down enormously by using the time chamber.

There were some other ideas she’d been kicking around that I was less enamored with.

“We can rush Solace,” said Amaryllis. “When she’s born, you’ll take a look at her soul, and if it looks like everything but her body is as it should be, then we’ll have you do a wholesale replacement of her physical self. Then all we should need to do is heal her into that form, rendering her a full adult and capable druid a few minutes after I’ve given birth to her.”

“That … does make some sense,” I said. “I would think there would be some problems as far as mass goes. Do you know whether bone magic actually replaces lost mass?”

“Our only reference book on bone magic is The Commoner’s Guide to Bone Magic, which unsurprisingly doesn’t go into it,” said Amaryllis. “And yes, that’s something that we should test before trying it. Obviously if the magic is cannibalizing other muscle, fat, or bone, we’re not going to be able to turn a six pound baby into a hundred pound woman. In general concept though, what do you think?”

“I was going to say that it feels unnatural, but we’re already talking about the result of an eldritch ritual done on a dead woman’s soul with the help of a non-anima and a square mile of sentient forest, so I suppose we threw the concept of ‘natural’ out right from the start,” I said. “It all depends on if we can do it safely or not.”

“I suppose in theory, if she has her faculties, Solace might be able to do a less risky version of what I’m proposing,” said Amaryllis. “But that’s a question of what druids can and cannot do, which is always a tricky thing. Logically, I’d think that she’d be able to do it, but logic isn’t always on the menu as far as druids are concerned.”

“I can understand not wanting to stay in here that long, so long that Solace would be able to develop her motor and language skills the natural way,” I said. “But if I look into her soul and she’s lost a lot in the process, we might have to raise her in the time chamber, at least long enough that she gets back to being herself.”
“Yeah,” frowned Amaryllis. “I’m aware, just not looking forward to it. Even if we feed her formula and take shifts raising her, it’s still more time in this tiny room.”

“Are you going to make it?” I asked.

“Maybe,” said Amaryllis. “I found myself looking through medical texts from Earth, trying to get information about how to induce labor, and how early it was okay to do that.” She shook her head. “Obviously the stress of being in here would be something we’d have to worry about with Esuen as well, and I’m worried that if I can’t hack it as a test case, I can’t ask her to do the same. The tuung lay eggs, so we could still probably do some speeding up, but it’s another case where I’m a bit blocked on outside information.” She sighed. “Okay, I think we’re done for the day.”

“Done?” I asked. There was no clock in the room for easy reference, only a timepiece that Amaryllis kept in her pocket and referred to only reluctantly.

“Done,” replied Amaryllis. “Did I not go over the day structure?”

“Nope,” I replied.

“Mornings are for collaboration, information exchange, et cetera, then we have lunch, and until a few hours before bedtime, you work on your own, doing whatever you think your efforts would best be put toward. Then we have a late dinner, and spend the rest of the day after that on enforced leisure. That’s what Grak and I worked out, adapted from my previous schedule when I was solo. I guess I’m open to change, if you’d like.” She really didn’t sound like she was open to change.

“No,” I said. “That’s fine.”

Lunch was a stir fry with thick noodles, heavy on the vegetables and with two enormous shrimp, bigger than any shrimp I’d ever eaten but apparently from Earth. Amaryllis was a surprisingly good cook, and I wondered how much of that skill she’d picked up in her time in the chamber. She ate quickly, without saying much, and then tended to the chamber for a bit while I finished up. For all that she described the chamber as being a delicate balance of heat and air, I hadn’t found it all that different from a somewhat stuffy room in a house without air conditioning.

I spent free time training up skills to their soft cap, to the extent I was able to do that without any help from Amaryllis. Most of them were already there, and had been for a while, so I put work into some of the ones that were harder to raise, like Horticulture or Engineering, done using materials taken from the backpack. I tried to bring Solace’s lessons to mind as I worked with the plants, but it was difficult to get in what I thought of as being the right mindset when we weren’t outdoors. True flower mages tended toward disorganized, organic gardens, though maybe not to the extent that was true for Solace.

For dinner, Amaryllis pulled out a crockpot that she’d loaded up before breakfast, filled with root vegetables and beef.

“You’re very domestic,” I said. “If it were Fenn, she’d probably just be eating fast food.”

“Fenn knows how to cook,” said Amaryllis. “Sometimes I feel like you don’t give her enough credit.”

“No, I know she knows how to cook,” I said. “I just don’t think that she would, if you were in each other’s shoes. You can pull whatever you want from the backpack, and I know for a fact that hot, cooked food is well within its abilities.”

“I think it tastes better if you make it yourself,” said Amaryllis with a shrug. “Do you wish I didn’t
“I appreciate the effort,” I said. “I just … maybe don’t understand it? Like, Fenn wouldn’t cook because she likes to be lazy when she can be, and I thought that maybe you wouldn’t cook because you like being efficient and spending time cooking is time you could spend doing something else.”

“I like cooking,” said Amaryllis with a shrug. She furrowed her brow. “I do take it out of my time budget.”

“Sorry, this is good eats, I didn’t mean that you shouldn’t have, I just,” I stopped and shut my mouth. “It doesn’t seem like you, to focus on something aesthetic and fleeting.”

“I’ll choose to take that as a compliment,” said Amaryllis. “From what you’ve told me, on Earth you focused on nothing but the aesthetic and fleeting.”

“Ouch,” I said. “Tough but fair.”

“Isn’t that how you described the games you played?” asked Amaryllis. “You compared them to performance art.”

“I said it was fair,” I replied. “I was thinking more about the time I spent online.” I ate more of the roast as I thought about that. “You know, I think you’d love the internet.”

“I have part of it,” said Amaryllis. “The backpack doesn’t allow me access to a computer, lap computer, or intelligent phone, but it does allow printouts of websites.”

“That’s … not really the same thing, since you’d be missing out on interactivity,” I replied. “But I suppose it’s as close as we’re going to get. Find anything interesting?”

“Many things,” said Amaryllis with a nod. “It’s unbelievable how much Uther brought over from Earth. I’d thought, when I started, that I’d find a few places where he’d been obviously influenced by what he’d grown up with on Earth, but it’s almost overwhelming how many parallels there are. Even his name is taken from Earth legend, did you know that?”

“Well, usually it’s ‘Pendragon’, but yeah, I knew,” I replied. “But that’s not actually on him, unless you want to judge an adolescent boy for his choice in names. The Penndraig name was sitting here, on Aerb, waiting for him. At least he didn’t call himself Megatron.”

“I’m not sure that you understand who Uther Penndraig was,” said Amaryllis with a frown. “The way you talk about him, it’s like you know all the details, but haven’t been able to internalize how he appeared to us.”

“He’s the most important man in history,” I said. “Responsible for the First Empire, and by some accountings, accidentally responsible for the Second Empire, kicked off a minor scientific revolution that petered out without him around to keep things going, led millions if not billions of people — yeah, I know.”

“You know, but you don’t know,” said Amaryllis. “You’re repeating back facts, but to you he’s still your teenage friend. The tape — can I talk about it?”

“About what Zona said?” I asked. I got that nauseous feeling again, and pushed away what was left of my food. “Sure.”

“There have always been rumors about him,” said Amaryllis. “He was … he was Donny Osmond, Shakespeare, John F. Kennedy, Nikola Tesla, all rolled into one. Anyone that big, that important,
that popular? Well, of course there would be rumors and stories, even if none of them were true. That’s just how some people interact with greatness, they feel a need to tear it down so that it’s not so imposing, or make excuses for why that greatness wasn’t really an achievement. People would say that he’d sold his soul to accomplish what he did, or he was selling lies, or even that he was simply a deeply flawed man who had nonetheless done a lot for the world.”

“Some of that might be true,” I said, swallowing. “Yeah, I … I never thought of him as perfect, back on Earth. Good, maybe, better than me, certainly, but not perfect. I just thought the imperfections would be, I don’t know. Not in this particular direction. Not him using people. I thought that it would be insecurity, a lack of direction, something like that. Or, putting his family and friends before others, maybe. Being inconsiderate? I don’t know. Something that I could handle a little better.”

“You’re struggling with the fact that he wasn’t the person you knew,” said Amaryllis. “Or rather, simply not confronting it.”

“I don’t know,” I said. “It was decades, sure, but he wouldn’t totally change, would he?”

“Do you think that you’ll be even remotely how you were in high school, when you’ve lived in Aerb for another forty years?” asked Amaryllis.

“No,” I said. “Probably not.” I wasn’t sure who I would be, but instinctively it felt like only the vestiges of my old life would remain. “There will come a point when I’ve been on Aerb longer than I’ve been on Earth.”

“I think about that sometimes,” said Amaryllis. “Not about you, but about myself. I’ve been in this room for longer than I’ve known you. Most of my time as a member of this group will have been spent waiting for the pregnancy to progress. And my perspectives on the four of you have changed too, given such ample time to reflect.”

“Oh?” I asked. “Was that why you didn’t hug me?”

“Last month?” asked Amaryllis. She turned away slightly, so she wasn’t looking at me. “I don’t want you to think less of me.”

“I won’t,” I said. My heart was beating faster. I looked over at the side of the wall, where the control for the time chamber was. It was a lever, nothing complicated. Depending on what she said, I might have to leave. “If you’re dealing with feelings, then I think you should talk about them.”

“Grak thought so too,” said Amaryllis. “Here, let me clean up first, if you’re done.” She reached out with her gloved hand and touched her plate, which disappeared after ten seconds, then did the same for the silverware, napkins, and finally, the table. “Chairs too,” she said. “I think we’ll watch a movie tonight, and even if we don’t, I think it’s good to have open space.”

“Sure,” I said slowly. I watched as she removed the chairs to the glove. She went over to one wall and set up a film projector on the table, then put a couch in front of it. “Are you stalling?” I asked.

Amaryllis sat down on the couch. “A little bit,” said Amaryllis. “I’m composing my thoughts for the fifth or sixth time.”

“Ah,” I said. I took a seat on the couch with her. It was blue and stuffed, large enough that we had some space between us, which I was grateful for.

“You’re going to think less of me,” Amaryllis said again.

“Probably not,” I said.
“Well, I worry that you will,” said Amaryllis. “I would think less of myself. I do think less of myself.” She cleared her throat. “There’s a part of me that thinks about what would happen if Fenn were to die. It feels like we’ve been living on the knife-edge of survival for quite some time, and Fenn’s come the closest of us. When she was bisected … that was before everything had been settled between the three of us, but I didn’t think that she would make it, and I thought that you would find comfort in my arms.” She paused, pursing her lips. “There’s a part of me that’s in love with you.” She glanced at me, just for a moment, and I could see that her eyes were wet with nascent tears. “We’d make a horrible couple. We both know that. There are times when we’re not even all that good of friends.” She folded her hands in her lap and looked at them, rather than meeting my eyes again. “And there’s this part of me that sees you as somehow completing me anyway, as though a romance between us is what’s missing from my life. I see the warm affection that you give to Fenn, and I feel happy for the two of you, but also jealous.”

My heart was hammering away. Some of that was just simple fight or flight response, I was sure.

“I’m going to have to talk about all of this with Fenn,” I said. “I mean, I’m going to have to disclose it, because I would want her to do the same if someone said that kind of thing to her.”

“I know,” said Amaryllis. “It’s a complication. It’s bad for the group. I would let it lie, but that hasn’t been helping me, and with months in here … I’m not really sure that I can make it if I don’t get things off my chest, so here we are. Sorry.”

“No, it’s fine,” I said. “Not fine, obviously, it sucks, but I do think it’s better for us to talk about it rather than letting it fester. Maybe we can talk our way to some kind of catharsis.”

“Maybe,” said Amaryllis. “I’ve had three months to get over it, or to figure things out on my own. It wasn’t just a matter of moping, I was trying to figure myself out. I saw it -- see it -- as a personal problem, a defect that I can remove like I’ve removed so many others. It’s a weakness.”

“But no luck on that end?” I asked.

“I read books from Earth,” said Amaryllis. “That was why I was reading Kinsey’s work: it was part of a survey of works on romance and sexuality. Aerb has its own books on the subject, but I think it would suffice to say that we don’t have the same depth of research. There are so many different species that it makes proper research difficult, and research for any individual species is less economically viable and less scientifically important.”

“And?” I asked. “Did any of it help you to understand yourself?” I didn’t mention that Kinsey was a little bit suspect, as far as researchers went. Either she already knew that, or telling her might undermine whatever she thought she’d learned about herself.

“I made a survey of myself,” said Amaryllis. “I tried to imagine how things would feel to me, sexual, romantic, physical things. I tried different emotions on for size. I had never been that sort of reader before, the kind to project herself into the characters and live vicariously through them, but I really tried, and found that I could do it, if I put the effort in, which was helpful in allowing me to learn what was and was not compatible with my own mind.”

“So … you’ve been reading romance novels?” I asked.

“I have,” nodded Amaryllis. “Not exclusively, obviously, but I’ve been treating them as a form of self-care. Obviously the novels never portray romance as it actually is, but they’re meant to evoke those particular feelings in the reader, so I thought to that extent they’d be useful.” She stretched out slightly, then rested her hands on her knees. “I used to think that I was broken.”
“No, you’re not,” I said. “Just … asexual?”

“Mostly,” said Amaryllis. She frowned at me. “Did you know before I did?”

“After our long talk in the bottle, it seemed like one of the two likely options,” I said with a shrug. “The other being that you were lesbian.” I hadn’t wanted to pry or make assumptions, but I’d really been hoping that her revulsion towards sex with me wasn’t just because it was me.

Amaryllis gave a nonchalant shrug. “A bit.”

“Not that there’s anything wrong with that,” I quickly added.

“Admirable of you to say,” said Amaryllis with a small smile.

“Not really, by the standards of my culture,” I said. “Obviously there are some issues if you’re part of a five century long hereditary line.”

“Obviously,” replied Amaryllis, smiling more. “Do you know that’s one of the things I like about you?”

“Oh?” I asked.

“You like to race ahead,” said Amaryllis. “And even when your observations are sophomoric, it’s the energy and enthusiasm with which you do it that I find charming.” She looked away from me again, turning solemn. “This isn’t helping.”

“Sorry,” I said. “Did it at least help to talk? To express?”

“Maybe. Not really,” said Amaryllis. “It made me feel better in the short term, but it hasn’t solved the long term problem.”

“Sometimes if your emotions are pent up, you just need a release valve,” I said. I frowned slightly. “I don’t want to change subjects, if there’s more you wanted to say.”

“Go ahead,” said Amaryllis. “I was going to share my findings from reading Earth’s literature on human sexuality, but I imagine it would bore you, and that’s a change in subject all its own. Speak what was on your mind.”

“I was going to say that maybe for Arthur, Kuum Doona was just a release valve,” I said. “Maybe … it takes some interpretation on my end, but maybe Arthur had gone down into the Boundless Pit because he wanted to escape from his reality, or to go back home. On his last trip, he was away for a month, which means either he had some actual adventures down there, or he was just dropping for something like a hundred thousand miles. Whatever he found, or didn’t find, it was crushing. And when he came back … Kuum Doona wasn’t Tiff, but Tiff wasn’t Tiff, she was just a representation of home, of a life he’d left behind, things he’d never done. It was an outlet for him.” It had felt right as I was saying it, but at the end I began to falter, because it sounded too much like apologetics for something that was too much like sexual assault.

“Do you need an outlet?” asked Amaryllis.

“For?” I asked.

“Arthur,” she replied. “Or other feelings about home that you can’t express. Or anything, really. I appreciate that you took the time to listen to me -- I really, really appreciate it, more than I can say. I was worried that you would be upset with me, or worse, that …” She trailed off and folded her
hands.

“It would be a mistake on a lot of fronts,” I said.

“Yes,” replied Amaryllis.

She didn’t say, ‘and yet …’, but I wondered whether she thought it. There was certainly a part of me, the hormonal teenage boy, that was thinking about going ahead and damning the consequences.

We sat in silence for a moment. Whatever she’d needed to get off her chest, it seemed like she was done with it, and I’d weathered the storm. I still felt shaky and slightly sick. I wasn’t in love with Amaryllis, or even infatuated anymore, but she was still devastatingly attractive and readily admitting that she had a thing for me. I’d have liked to believe that if Amaryllis had tried to seduce me, I would have pushed her off and left the time chamber early, but the more I thought about it, the more it seemed like I was just fantasizing instead of worrying. It all left me feeling a little bit uncomfortable and anxious.

“It makes me think,” I said, frowning slightly. “It makes me think about the choices that Arthur was faced with, and how he dealt with them.” I let out a shaky breath. “The thing I’m really worried about is that this is the tip of the iceberg. That it’s a single grain of sand on the beach, that the further we probe, the more we’re going to see, and I’m going to find that he was destroyed by this place, back from the dead but then scrubbed away.” I swallowed. “Or, maybe, something worse. I don’t know.”

Our conversation petered out after that, and Amaryllis put the movie in the reel-to-reel projector. She’d selected Groundhog Day, for obvious reasons, and while it wasn’t really the movie that I was in the mood for, I knew it well enough that I didn’t have to spend too much mental effort trying to follow it. Amaryllis asked questions throughout, enough that I could almost convince myself that she really did want me in the chamber with her just to be her cultural translator.
The month in the time chamber went by quickly and slowly. The ordered schedule that Amaryllis had us on made the days go faster, since it shortened my vision a bit; I was always waiting on the next section of the day, rather than counting the days themselves. But at the same time, those divided chunks of time seemed to drag, especially during the first part of my time in the chamber, when I was working on leveling up any of my skills that hadn’t hit their caps. There were a few occasions where Amaryllis helped with training, which made it more bearable; some of the skills, especially the social ones, were nigh impossible to train up without a partner to practice on.

On my third day in the chamber, I offered to do half of the chores.

“Why?” asked Amaryllis with a raised eyebrow.

“Uh,” I said. “I’m not sure that’s something that you should be suspicious of. It seems sort of like common courtesy for us to have a division of labor, I should have offered from the start, I just thought that maybe you liked doing things your own way. I don’t mind doing drudge work.” I’d been a little uneasy watching her move the giant jugs of water around, but the last time I’d mentioned her being pregnant, I’d gotten a well-researched lecture on women’s health and what was and was not scientifically shown to have negative outcomes for mother and child.

*Loyalty Increased: Amaryllis lvl 20!*

*Companion Passive Unlocked: Symbiosis (Amaryllis)!*

“Okay, I’d appreciate that,” said Amaryllis. “Thanks.”

“You know,” I said slowly. “I think there’s been a recent trend of loyalty increases being genuinely insulting.”

Amaryllis lit up. “Really?” she asked. “It finally happened?” I think it was probably the happiest I’d ever seen her; she was practically vibrating with excitement. “The same that Fenn got?”

“Symbiosis, yeah,” I said. “But the loyalty increase leads me to believe that saying I would do some of the drudge work changes your mind about me somehow? That kind of hurts.”

“Sorry Joon,” said Amaryllis. She winced. “Do you want me to take the time to explain it nicely, or can I bask in this for a bit? I’ve been planning for this moment for a while now.”

“Sure, go ahead,” I said. “Let me know if there’s anything you need help with. I helped Fenn a bit, and I’m the resident expert on learning skills without putting in the work.”

Amaryllis gave me a smile, which was quite effective at cutting through the glumness I’d felt at getting a loyalty bump just for offering to do my fair share. We didn’t really need to talk about it; I thought that it probably went back to that first night we’d spent together, when I’d blown off the night’s watch to go train up my skills. I knew that she saw me as someone who wasn’t really willing to put in the work, which I thought was somewhat fair; it was a similar line of thought to the one that Grak expressed, about me thinking that the world owed me something. I was happy to have changed her mind a little bit on that score, even if I wished that it hadn’t needed to be changed in the first place.

As far as the interpersonal side of things went, it was never as intense as on the first day. My primary
method of operation was to try not to do things which, in a romantic comedy, would be obvious setups for said romance. That meant nothing that implicitly included physical contact, nothing otherwise intimate, very little discussion of our feelings (which would only have been retreading well-worn ground), and as rigidly platonic of a relationship as possible.

I kept thinking back to what Amaryllis had said about hating herself for feeling the way she did. That resonated with me; I hated myself for the fact that all those precautions seemed necessary. I really did love Fenn though, and whatever it took to keep our relationship strong, that was what I would do.

It made things awkward sometimes; Amaryllis reciprocated the aversion to touch, and sometimes it was obvious to both of us that this was something we were doing. We would reach for something on the table during mealtimes and both pull away before we made contact, like the other was made of lava. We didn’t really talk about it, even when it was awkward like that, which was how I preferred it; we knew where we stood.

I dreamt about Amaryllis from time to time. It always followed a similar theme, with the two of us someplace that wasn’t the suffocatingly small time chamber, and Amaryllis being aggressively seductive. She would say things like, ‘I was built to be everything that you ever wanted, do you want to see how much that covers?’ while touching me, and sometimes I would shrink back, or sometimes I would simply accept that this was happening to me, until I had to talk to Fenn and explain what had happened. I always woke up from those dreams feeling guilty and nauseous, like I had done something wrong.

I didn’t talk about the dreams with Amaryllis.

Amaryllis blitzed through acclimating to her newfound abilities far faster than Fenn had, becoming half the soul mage, bone mage, blood mage, et cetera that I was in a handful of days. She asked me all sorts of questions, most of which I wasn’t able to answer.

“This is amazing,” said Amaryllis. She sat in the lotus position on top of a pillow, having just come back out of a soul mage trance. “I wonder if I’d be able to surpass you.”

“I have no idea,” I said. “Not per the rules of the passive, but I don’t know how hard and fast those are. It’s also possible that you might be able to do more with what you have, which I wouldn’t be terribly surprised by. If skill level translates directly to skill, you couldn’t, but I’m fairly sure that it doesn’t. Some of the techniques I’ve learned have been as a consequence of hitting a new benchmark in that skill, but others have been unlocked by trying new things, or getting information from someone. Sanguine Surge was like that. All I had to do was adapt the technique from Crimson Fist into a jump.” I narrowed my eyes at her. “Don’t try anything too strenuous, and don’t mess with your own soul. Please.”

“I was going to try something,” said Amaryllis. She was almost pouting. “You need direct, physical contact in order to touch the soul of someone else, right? That’s all?”

“Yes …” I said slowly. “You,” I stopped, thinking that over. “You want to give Solace’s soul a peek?”

Amaryllis grinned and nodded. “How many women in the history of Aerb do you think have done that?”

“I mean … most of them wouldn’t have seen anything, right?” I asked. “Babies don’t know anything, I’d figure that embryos would basically be blanks. The bulk souls I’ve looked at have been, anyway.”
“I’m at thirteen weeks, she’s not an embryo, she’s a fetus,” said Amaryllis. “And yes, you’re right, most of the time I don’t think it would be terribly interesting, but it’s an exciting time to learn. Come to think of it, a pregnant soul mage might have been where we got the information that souls don’t appear until the sixth day. I’m not sure I ever questioned that.”

“Well,” I said. “That’s certainly the less horrifying version of how the Second Empire would have come to know that.” I still wasn’t comfortable with the mass production of souls that served as the primary source of power generation throughout Aerb. Instead of oil spills, there were accidents where thousands if not millions of embryonic souls ended up in the hells.

“Well, I’m going to try to find Solace and see what state she’s in, wish me luck,” said Amaryllis.

“Good luck,” I said. I watched as she closed her eyes again, and tried to continue on with my day. Touching the soul of another person had been quite difficult for me. It had taken hours before I’d been able to get in Grak’s to undo what Fallatehr had done to him, and I’d had twice the Essentialism that she was working with, though I’d also been working blind and hadn’t tried at every skill change. I also suspected that getting to Solace might be easier, considering the two of them were in some sense sharing a body.

(The numerical skills were composed of discrete parts, visible inside the soul as a complex sum of everything that fell under that skill, and up close, some tendrils leading off in other directions, which some investigation had shown led to either memories of using that skill, or places where two different skills worked together. There was a lot of room for two people with the same numerical value in a skill to have distinctly different applications of that skill, which in theory gave us some wiggle room for specialization, something that was high up my list of priorities given that both Amaryllis and Fenn had weak versions of the magics available to me.)

Personally, I was working on blood magic. I had already raised it as high as my stats would allow, but there were things that blood mages were supposed to be able to do, and I hadn’t really had the time to sit around trying to figure things out until stepping into the time chamber. Hemokinesis had always been one of my favorite abilities in tabletop games, and I’d made more than one villain from the concept (blood liches, blood zombies, blood portals, and blood bards). On Aerb, blood mages could pull blood from their bodies in order to form a weapon, which seemed like it would be a useful ability in certain circumstances, especially if I could apply all of my blade-bound bonuses to it.

Keeping my blood in my body was comparatively easier, since the blood seemed to ‘want’ to travel through my veins, rather than spurting out all over the place. I made a slit in my wrist, opening the ulnar artery, and tried to maintain the flow of blood while also bringing some of it out. I tried to imagine the flow of blood like a river whose course I was changing, so that it would dip outside my body. I got the loop of blood out two inches from my wrist before losing control of it and getting blood everywhere. I used a bone to close the wound, wiped myself off, then tried again.

An hour later, I’d gotten it up to six inches away while still keeping it steady, but hadn’t been able to trigger a skill message, nor really figure out how I was supposed to translate that into something like a spear. Perhaps more importantly, I also hadn’t gotten a game notification.

“Fuck,” said Amaryllis with a scowl, coming out of the lotus position and stretching her legs out. She looked at me, and the loop of blood that was flowing through the air above my wrist, along with all the blood on the floor and my clothes. “Are you alright?”

“Fine,” I said, bringing the loop back inside me, then closing up the wound with bone magic. “I’m getting somewhere, I think, if a bit slowly. I take it things aren’t going well? It took me a long time, you need some patience.”
“No, it’s not that,” said Amaryllis. “I got in, it’s just … she’s not all there. The thicket of memories is decimated, she’s threadbare on skills, and her values are a mess. There’s none of the conceptual specificity that I see in my own soul.”

“Maybe it takes time?” I asked.

“Or she’s lost a part of herself in the process, and will need to be raised as a child before she can be reunited with the locus,” said Amaryllis. She clenched her fists so hard her knuckles went white. “Shitfucker.” She closed her eyes. “I don’t want to be in here for years.”

“Hey, it’s okay,” I said. “We’ve got your back.”

Amaryllis opened her eyes. “I do appreciate the sentiment, but if we have to raise her, then someone is going to have to do it. If five years old is our benchmark, the point at which she’ll have a proper command of language and possibly be a capable druid, that means that we each need to spend more than a year in here. If I’m not part of the rotation, that would mean more of a burden for each of you. The co-use of the time chamber is already pushing how much can reasonably be asked of the group.”

“If we take turns,” I began, then stopped. “Ah, that doesn’t really work, does it? Grak spent a month in here, then he’s only going to be outside the chamber for a subjective few hours before having to come back in to ride out the rest of the pregnancy.” I sighed. “Right.”

“There’s no way to get a true break in, not without compromising our timetable,” said Amaryllis. She slammed a fist against the floor. “This is bullshit.”

“Could you see if the connection to the locus was still there?” I asked.

“I think so,” said Amaryllis. “I was actually going to see whether you’d allow me to look at your own soul, so that I have something to compare against. Right now I just have myself and her, and she’s highly atypical.”

“Ah,” I said. “That’s … I’m a little leery about anyone looking at my soul, after how things went down with Fallatehr.”

“You didn’t let Fenn?” asked Amaryllis, raising an eyebrow.

“She hasn’t worked on it, to my knowledge,” I said. “She went for blood and bone as soon as she got Symbiosis, then there was all that shit with Fallatehr, and I think maybe she didn’t want to go for Essentialism given how things shook out. I only really use it when it’s wholly necessary, which isn’t often; shifting points around, mostly.”

“Do you not trust me?” asked Amaryllis.

I sighed. “I do,” I said. “But it still makes me nervous. Doesn’t it make you nervous?”

“It does,” nodded Amaryllis. “I never really got a choice to say no, and the link doesn’t seem to go both ways.”

I held out my hand, and Amaryllis moved over to me, close enough to take it but far enough away that the gesture was as lacking in intimacy as possible. I could feel my heart start beating faster, partly from the first physical contact I’d had in a few days, and partly from the idea of her reaching into the core of my being.

It took some time. Our hands got sweaty, and I had to readjust so I wasn’t in such an awkward position. She kept her eyes closed throughout, which was the same as I’d done when I was
practicing, since I was trying to block out outside stimuli and focus on the extrasensory perception of the soul.

Eventually I got bored, and picked up a book that was close enough to grab; Amaryllis had been reading through Earth books, and I had set myself to reading through Aerbian books. The book was *The Exclusionary Principle, Seventh Edition*, which had a number of bookmarks in it. Amaryllis had apparently discovered office supplies from Earth in her first few months in the chamber, and used them extensively, using highlighters and sticky notes with wild abandon. The timeline at the back of the book had been well-marked, and there was a piece of folded paper between the last page and the back cover that cross-referenced the exclusion zones with the information I’d transcribed from my soul.

The cat came into existence roughly a minute after I started reading, as they always did. This one was black with a patch of white at his throat and earthy green eyes, slender and young. When he appeared, he was standing on the pages, but he laid down almost immediately, until I picked him up with my one free hand and laid him in my lap, which seemed a suitable compromise to him. As I read, he would occasionally stick a leg out to idly bat at the pages, just to let me know that he was still there.

The so-called exclusions came in three basic forms, all geographically restricted. The normal exclusions were like the one that covered the Risen Lands, where some kind of magic (or physics) had proven itself broken and been locked off from the rest of the world by some unknown force or entity (through the book, it was simply called ‘the exclusionary principle’, as a way of dodging the question about what was actually happening behind the scenes). Enpersoned exclusion zones were slightly different, as the magic was locked to a single person in addition to the region locking, and entad exclusions were that, but for a magic item rather than a person.

(I was suspicious that the house was part of an exclusion, given its power and the fact that it hadn’t decided to go somewhere else, but I didn’t have enough information to say one way or another. It was something I’d have to ask when I got out.)

If we went to the Glassy Fields exclusion zone, it was entirely possible that I would be able to learn Glass Magic, but it would only work there, and the whole of the exclusion zone was covered in degenerate glass magic, in much the same way that the Risen Lands were consumed with a degenerate, out-of-control application of the necrotic field effect, and the Datura was completely devoid of life, hounded by the thaum-seekers.

The cross-reference of the exclusion zones listed in *The Exclusionary Principle* with the list as partly divined from the information in my soul showed that there were quite a few more exclusions than anyone knew of. Ice magic wasn’t a lost art, it had been excluded, and the place that it had been excluded to was a mystery. By Amaryllis’ reckoning, we had the answers to a number of enduring historical mysteries … many of them dating back to Uther Penndraig’s day.

My germ of a theory was that Uther had been the cause of most of the exclusions. Because the historical record of exclusions lined up with the numbering of exclusions as written on my soul, it was easy enough to make some guesses in that direction. Ice Magic was “Deprecated, Exclusion #16”, and that meant that it must have chronologically happened after the so-called ‘Invasion of the Ice Wizards’, which had concluded by 4 FE. I wasn’t entirely sure that Uther had been responsible for that, but his historians had written about him climbing the Glacial Minaret to face down the ruling council of wizards, and after he’d defeated them, Ice Magic had become a lost art. Maybe he wasn’t responsible, but he was certainly implicated.

Beyond that, some of the exclusions as listed on my soul seemed like they would only ever apply to
someone like me. What would it even mean for a regular citizen of Aerb to have a Custom skill, or to have a Gestalt of two skills? I’d looked at the souls of people outside our group, and when I did, I had to use my own soul as a guide, because they didn’t have things so neatly ordered, divided up into numbered and labeled chunks. And at the same time, some of the exclusion zones must have logically been instigated by people who weren’t, for lack of a better term, player characters. Doris Finch didn’t fit into the same mold that Uther and I did, nor did Fel Seed, or Manifest.

My best guess was that on the game level, exclusion zones were one part worldbuilding (a place where bad things were, with lootable treasure and some kind of hazards, and a logical reason that whatever serious threat was in them hadn’t escaped to eat the world) and one part anti-munchkinry (a way to stop things from spiraling out of control if there was a flaw or exploit). On a practical, in-world level, exclusion zones were an act of Dungeon Master, the most visible thing that implicated a higher power than the five gods everyone knew and, debatably, loved.

(Amaryllis’ own analysis was much more practical. She had a defined list of which exclusion zones we might be able to exploit, plans of attack for each of the Thirteen Horrors (though there were a lot of question marks there), and written in bold, underlined three times, a big warning that we should never do anything that risked one of us becoming an enpersoned exclusion zone, along with all her thoughts on how to make sure that never happened. I wasn’t too worried about that though, given that it had never happened to Uther.)

Amaryllis pulled back from me slowly, letting her hand rest in her lap.

“Did you have fun?” I asked, closing the book. As I did, the cat disappeared from my lap, and the warm spot suddenly felt cold.

A faint frown of concentration crossed Amaryllis’ face. “Can you tell me about Tiff?”

“What would you like to know?” I asked. I felt a faint unease at the question. “According to Fenn, I talk about my Earth friends too much. I sort of thought you agreed.”

“If I have my timeline right, you ended your courtship with her nine months before coming to Aerb?” asked Amaryllis. “I was wondering what makes her so important to you.” She cleared her throat. “You don’t speak about her in the same way you speak about Arthur. There’s warmth toward both, but no reverence toward her. And yet ...”

And yet, she was higher up on the rankings, according to my soul.

“I don’t actually trust what the soul has to say,” I said. “I think it’s more complicated than just a strict set of numbers. Tiff … she left her mark on me, I guess. Arthur did too, I don’t mean to say that he didn’t, but she was … there was a period where all I was doing was thinking about her. I was obsessed with her, and she was obsessed with me, and … I have this idea about brains, and how they work, which is that you can wear patterns into them if you think about the same things often enough, or with enough intensity, and I definitely did that with Tiff. When we broke up -- when we, I guess, drifted apart, it was this second loss coming on the heels of the first one, which … I’m going to sound like an absolute fuck, but maybe it hit me harder? Not because I cared about her more, though I did, maybe, considering that I was sneaking around with her behind Arthur’s back, and if you’d asked me the day before his accident, maybe, I don’t know, I would have definitely chosen her, “But it was all my fault, what happened between us, even if it didn’t entirely feel like it at the time.”

I could feel myself on the verge of tears, and wiped at my eyes. They were old wounds, but there still wasn’t as much scar tissue over them as I’d have hoped.
“I still don’t understand,” said Amaryllis. “You keep pushing for us to go for Arthur, you don’t want to return to Earth, it’s … I do want to understand you, even if we’re just going to be friends, and I think this is one of the pieces I might be missing.”

Even if we’re just going to be friends. I wondered why she’d chosen to say that, or whether it had been conscious on her part. “I don’t know,” I said. “The thought of returning to Earth to see her just leaves me hollow, because even if we could reconcile, we’d never get back what we had, I screwed things up too badly for that, it would be like a sequel that no one asked for, trying to recapture the magic of the original.” I wasn’t sure that would parse for her, but it was what made the most sense in my head. “But with Arthur …” I trailed off, as my mind involuntarily drew the parallels. “Fuck.”

“It’s not going to be the same,” said Amaryllis, finishing my thought. “He won’t be the same person.”

“I still need to find him,” I said. “Maybe even more, if he was … if he changed. Do you understand that?”

“I do,” replied Amaryllis. She folded her hands in her lap. “You know that if she was more important to you, no one would blame you for that?” asked Amaryllis. “I wouldn’t judge you for having your first love matter more than a friend. Fenn wouldn’t either.”

I felt a chill go through me at the thought of saying, out loud, that I’d cared more about Tiff than Arthur. “I know,” I said. “It’s just not … true, I don’t think.” Even admitting that I didn’t think it was true, leaving open the possibility it was, felt like a stab to the gut. “I’m devoting myself to bringing him back to life, aren’t I? What more does anyone expect of me?” I could feel my voice catching slightly. “Am I supposed to feel constantly guilty about enjoying myself sometimes? Should I have just stayed in a depressed fog forever?” My cheeks were growing warm. Amaryllis’ face was placid, and I knew her well enough to see that she was controlling her emotions. “I was a good friend to him.”

“I know,” said Amaryllis. “I wasn’t saying that you weren’t.”

“Okay,” I said. “Can we just … talk about something else?” I pointed down to the book in my lap. “You made a lot of notes, was there anything in particular you wanted to draw my attention to?”

“Sure,” said Amaryllis, taking the book from me. “If you see here, I’ve marked down all of the potential possibilities for exploitation,” she said. When the cat appeared, her hand was already moving toward it, and she absentmindedly pulled it from the pages and brought it to sit in her lap. It was the same cat, black with a patch of white; each book was associated with its own unique cat, the same every time. “You can’t take magic out of the zones, to the best of our current knowledge, but you could potentially use them as manufacturing bases, importing raw goods and exporting finished products made with that specific magic. That’s mostly banned by imperial law though, with a few exceptions, and imperial law might be something we finally start paying attention to in the near future.”

We talked about that, for a time, and I eventually began to cool off, the throbbing anger and nausea eventually fading into the background as we focused on the problem at hand. We had sandwiches for lunch, which were my contribution to cooking, piled high with a variety of deli meats, cheeses, and vegetables, which was how my dad used to make them. Amaryllis made me heat up her meat in a pan before putting it on the sandwich, because of something called listeria. It seemed a little bit overly cautious to me, but I did as she said rather than be subjected to a lecture on the intricacies of maternal health.

Conversation at mealtimes was usually focused on something other than plots, plans, and training,
though we often circled back. Amaryllis talked a bit about horticulture, and the seeds that we could get from the backpack, some of which would allow us to grow plants that weren’t native to Aerb. I was a little worried about introducing invasive species, which led to me talking about one of my favorite tabletop adventures, in which plants harvested from a forgotten dungeon and sold by the party on a different plane served as the seed for an adventure as the plants grew out of control in their new home.

“So,” said Amaryllis toward the end of the meal, during a lull in conversation. “How long do you think it will take you to get over Tiff?”

I stopped chewing and looked at her. A few things occurred to me at once: first, that she had waited until now to ask that question, when she’d have the easy out of moving to alone time, second, that she had probably been thinking about that question for awhile, and third, that her interest in the question wasn’t really about me, it was about her. *How long will it take me to get over you?*

“I don’t know,” I said, once I’d finished chewing and swallowing my food. I felt like an idiot for not seeing the parallel before. “Maybe she’ll always hold a place in my heart. That doesn’t mean that I can’t move on, it just means that there’s some baggage for any new relationship.”

“Okay,” said Amaryllis, tone light and casual, “Just curious.”

Looking back, that might have been when she’d started making plans.

On the morning of our eleventh day together, Amaryllis was in an unusually chipper mood. She’d elected to make a full English breakfast, which she’d apparently read about somewhere. Cooking it was a challenging task given the size of the kitchen and lack of hot surfaces. It was my first time having blood sausage; I wasn’t particularly a fan.

“Any cause for the good mood?” I asked, when her slight smile hadn’t seemed to abate.

Amaryllis hesitated for a moment, chewed some bacon, and smiled at me. “Will you promise to be calm and relaxed about it?” she asked.

“Um,” I said. “I can’t really imagine what you’d have done while we were trapped in a small room together that you would need that kind of assurance from me.” I swallowed. “Have you seen *Pulp Fiction* yet?”

“It’s on the list, I haven’t gotten to it,” said Amaryllis. “Maybe we can watch it tonight.”

“Anyway, maybe my natural reaction is going to be that I’m not calm and relaxed,” I said. “I can promise to try, but we’re not one hundred percent in control of our own emotions.”

Amaryllis gave a small cough. “About that,” she said. “I’ve been spending some of my discretionary time looking at my own soul, I’m sure you’ve noticed that.” I had; unless you were trying to hide it, the soul trance was pretty obvious.

I froze in place. “What did you do?”

Amaryllis pursed her lips. “I’m over you,” she said.

“What … you went into your own soul and changed … what exactly?” I asked.

“You said that you would try to be calm,” said Amaryllis.
“Yeah,” I said. “Sorry.” I took a breath. “Monkeying around with your soul like that seems really ill-advised, and more than that,” I paused. “It’s a violation of self.”

Amaryllis seemed to consider that. “I disagree,” she said. “Self-modification is an inviolable right. I used a tool that was available to me to fix a problem that I had. It’s not natural, but the natural way -- who knows how long that would have taken?’”

“Tell me, specifically, what you did,” I said. I could feel my blood running cold.

“It took a deep dive into the social aspect of the soul, but I was eventually able to find the lever for romantic and sexual attraction. All I did was reduce them both down to nothing. I’m fairly sure that it’s confined just to you, and it’s entirely reversible.” She gave me a gentle smile. “Joon, you don’t have any idea how good it feels. It’s like a pressure that’s been lifted off me.” She hesitated slightly. “I know that to some extent you reciprocated. I think I can help show you where to make the change, if you -- if this doesn’t help alleviate things on your end.”

“But it … it was part of you,” I said. “You can’t just -- the soul snaps back, it trends toward being what it was, to permanently accomplish what you want to do --”

“You told me that you dial down the Level Up attribute every morning,” said Amaryllis. “A temporary solution that you can keep reapplying without significant cost is, de facto, a permanent solution.” She pursed her lips. “I hadn’t really known how you’d react, but I didn’t think you’d take it this poorly. I thought you would be upset about the risk inherent in making changes, but,” she stopped. “You know that I’ve been looking at Earth pharmaceuticals, right?” asked Amaryllis. “The production processes are ridiculously beyond what we can do, but there’s a huge wealth of information for me to mine, and with the lack of regulatory frameworks for such things throughout the empire, we could make an absolute killing. So I’ve done my reading, and I know what it’s like on Earth. There are pills for all types of mood control and emotional correction. Postpartum depression is a known condition on Aerb, we call it maternal neurosis, but our treatments are decades behind yours.” She crossed her arms. “Would you feel the same way about me taking fluoxetine or sertraline, if I ended up with postpartum depression?”

“You came prepared,” I said. I tried not to sound accusatory. “Give me a second to think.”

“I’m done with breakfast,” said Amaryllis. “I do have things that I need to do.”

“I don’t want to let this lie,” I said.

“It might be better if you’ve had some time to think and reflect,” said Amaryllis. “You’re right that I came to the conversation prepared. I thought about what you might say, while I was working on fixing myself, and after, when I was waiting to broach the subject. If your reaction is an emotional one … I don’t want you to take this the wrong way, or think that I’d think less of you, but if you wanted me to be in love with you, if you wanted perpetually unrequited love, and that’s the source of your objection, then you have to realize that you don’t have a leg to stand on.”

I swallowed and nodded. I still had a bit of my breakfast left to go, but I’d lost my appetite. Amaryllis moved over to her desk and began looking through some books, leaving me to clean up.

Later that night, after a day spent avoiding each other as much as possible in a four hundred square foot room, we continued our conversation over a dinner of roasted rabbit and peas. Amaryllis was a far better cook than I was, which was usually reflected in her choice of meal. After I’d taken to doing my share of the cooking, she’d stepped it up a bit, though I wasn’t sure whether that was because she had something to prove, or because she had more time for involved meals.
“Okay,” I said. “I think I know what my objection is, besides the selfish one of wanting you to want me, which, if I’m being honest, applies to some extent.” It stung a little bit to say that out loud, but I thought she would take it in the spirit of honesty in which it was intended. I wasn’t sure that I would have revealed the same to Fenn.

Amaryllis nodded. “I wanted you to want me too,” said Amaryllis. “I’m trying to keep that in mind, because right now it feels like idiocy or lunacy or both.”

“I’m not going to say that it’s logical,” I said. “Actually, I’ll go so far as to say that it’s blatantly illogical to want to have a difficult interpersonal problem in your life, but it’s still a bit how I feel.”

“Because there’s a part of you that wants me, despite your relationship with Fenn,” said Amaryllis. “And that’s despite the fact that I no longer have a shred of interest in you in that way.”

“You don’t have to be mean about it,” I replied. I crossed my arms, then felt like it was too defensive of a gesture and uncrossed them. I silently wondered whether there was ever going to be a time in my life when I didn’t have those awkward moments.

“I’m sorry,” said Amaryllis. “It’s just … perhaps I should change myself back to the way I was and we can continue this conversation. I might be able to better articulate my decision as it felt when I made it. I can assure you that the choice will be the same either way.”

“Oh,” I said. “I think I would prefer it.”

It took her fifteen minutes, and her rabbit grew cold while I waited. I finished my meal, eating quickly, as I tried to prepare the argument that I was going to use. From what we’d been able to figure out, the Debate skill was mostly catered toward structured debates, two sides that had rigorously prepared for an argument with facts and figures assembled and ready to deploy. That was based mostly on the abilities that it was keyed to (KNO primary, CHA secondary) and some comparative analysis of how fast it leveled up when I was trying different methods to grind it. I wished that I had some facts and figures on hand to persuade her, but even if I’d pulled from an Earth book, I didn’t think I’d find anything to back me up.

“Done,” said Amaryllis. She let out a breath that was just short of a sigh and looked down at her cold food, which she began to pick at.

I sat in silence and watched her, waiting for her to speak her piece. I could only vaguely remember where we’d left off; I’d had enough time for my mind to wander.

“I had a very specific fantasy,” said Amaryllis. “I would turn out the lights, and then you would slip into bed with me, and I would ask you what you thought you were doing, and then you would say that -- that you’d made a mistake, that you should have chosen me. And I would protest, but I’d still be enjoying the feeling of your body pressed against mine, our faces just inches apart, smelling you -- did you know that I like the way you smell?”

“No,” I said softly.

“It didn’t start as a fantasy, it started with me thinking about what I would do if you tried something like that, and somehow it got away from me,” said Amaryllis.

I refrained from telling her that I’d had the exact same experience. At the back of my mind, I could recognize something amusing about two people worrying that they wouldn’t be strong enough to resist the other, and both having a fantasy that the other would come to them. It wasn’t actually all that funny though.
“I’ve convinced myself that I probably like kissing,” said Amaryllis. “In my fantasy, that’s as far as it goes, just the sensation of your hands on my body, and your lips on mine, as we share this bond together, temporarily forgetting that there are any barriers to separate us.” She frowned. “And sex, I imagined that you would be slow and patient, gentle and yielding, and somehow you would awaken something in me, and I would be fixed.”

“That’s not how it works,” I said. “That’s … a male fantasy.”

“But it might be true for me, if I was meant for you,” said Amaryllis. She was staring at me with her piercing blue eyes, as though she wanted to believe that what she was saying was true. It made me uncomfortable, in the same way that Fenn giving me free rein over her soul had made me uncomfortable. I wanted Amaryllis to be her own person; it was one of the primary things that I liked about her.

I couldn’t even say, ‘no, surely you wouldn’t be an exception to the general rule’, because our existence was so strange you had to accept things like that as a possibility. And if she was meant for me, then surely I was also meant for her? And couldn’t we be keyed to each other? Was it so ludicrous to think that I was literally the only person in existence who could make her horny or bring her to orgasm, when there were godlike powers in play that might have been twisted enough to make that true?

“It’s awful,” said Amaryllis. She closed her eyes. “These feelings, getting in the way of work being done, getting distracted by being in the same room as you, not being able to sleep without the spell because otherwise I’ll be up all night tossing and turning.” She opened her eyes and looked at me. “It might be one thing, if we could reciprocate, but we can’t.”

“Yeah,” I said. “We really wouldn’t be good together.”

“That’s horseshit,” said Amaryllis. “We have our points of friction, I know that, but even in the short time we’ve known each other, we’ve come away better for it. We would complement each other, help each other, talk and listen. The only reason either of us ever pretended that it wouldn’t work out between us is that it would be easier if that were true. We would make an amazing couple. And if you weren’t able to fix me, if my flesh was still unwilling, I’m pretty sure that I can reach into my soul and fix myself that way, until I wanted it as much as you did.”

“Amaryllis,” I began, but I didn’t know what to say. I wasn’t sure that she was right about what a hypothetical relationship between us would look like. I was starting to get the impression that she felt more strongly about me than I felt about her, which was a little bit heart-breaking. There was that part of me that awoke at the sight of a pretty girl in distress, and it was telling me that it was entirely within my power to make all of her heartache go away -- but I wasn’t about to let thoughts like those get the better of me.

Alright,” I said. “If you want the strongest argument I think I have at the moment, then whatever you feel for me is an expression of yourself, it’s part of who you are. Something like postpartum depression isn’t, that’s just hormones swamping you, or the chemicals in your brain misbehaving, and I know that’s a matter of definition, but … you can’t just go modifying essential parts of you like that, changing things at the core of your being.”

Amaryllis’ face fell, then turned to something like disgust. “Juniper, you’re one of my closest -- my only friends, but whatever there is between us, it’s not essential. I elect not to let it define me.” She closed her eyes, and had the slack face of someone in a soul trance just a few seconds later.

I got up from the table and climbed up to the top bunk, where I made my bed. I felt like I should have seen this coming. The Dungeon Master had said as much to me about going in to change
Amaryllis’ soul. At the time, I hadn’t paid it much thought, just more needling me by presenting a solution he knew I wouldn’t go for, but in retrospect, maybe it was a hint of things to come. I wondered how far in advance I could have made the prediction, if I were smarter -- if the game wasn’t limiting me from reaching my true potential because it wanted me to have more or less the same personality.

I spent some time thinking, and being angry at a variety of people, including myself, until eventually sitting in my bed alone became so boring that I pulled back the curtain and climbed back down.

Amaryllis had put the table and chairs away, and gotten the couch ready for movie time. She was sitting with her hands on her knees, staring at the wall where the movie would play.

“I wasn’t sure that you would be joining me,” said Amaryllis. “I greatly prefer watching movies with you to watching them alone.”

“Because I’m good company, or because I can help to explain things?” I asked.

“Oh, neat,” I said. “I think I’ll become about three percent more intelligible after you’ve seen it.”

“I was in the mood for something light,” said Amaryllis. “Does this fit the bill?”

“Uh, sure,” I said. “There’s a fair amount of death and mayhem, but it’s played for laughs. I think you’ll like it.” I sat down to join her on the couch. I was aware that she was an alien person now, with something removed from her, and from our relationship, but she was making an effort to be friends, and if I wasn’t going to change her mind about how she should be treating her soul, then I would follow her lead.

Amaryllis stuck out her hand. “Friends?” she asked.

“Friends,” I replied, shaking her hand and trying not to think too hard about what she’d done.
When I’d come into the time chamber, I’d have been hard-pressed to notice that Amaryllis was pregnant. Toward the end, she was definitely showing, her belly enlarged and breasts a bit bigger (look, that’s just the truth, I’m not going to apologize for noticing). If she hadn’t been so fit, I might have mistaken it for weight gain, but her arms were still as toned as ever.

She exercised as part of daily maintenance, usually with weights, though she’d also rigged up a climbing wall that she could put into place and anchor, with some help from me. The room was only ten feet tall and twenty feet wide, so her rock-climbing was mostly just back and forth across the same stretch using the handholds she’d put in place, with a mat beneath her to catch her if she fell (though she never did). She called it ‘bouldering’, and after she’d made the alteration to her soul, she had me try it with her. I was only about half as good as she was.

“Three days left,” said Amaryllis as she watched me move. “No offense, but I’m going to be happy to have some fresh blood in here.”

“No offense taken,” I said. It had been smooth sailing, for the most part, but there were still little places where we got on each other’s nerves, and the soul-meddling stuff was simmering in the background. I still thought she was wrong, but I was doing my best to respect her choice. She still thought that I should reciprocate and carve any non-platonic thoughts towards her from my very soul, but she refrained from actually saying it. Aside from that, there were little annoyances, the kinds of tiny things that I guess crop up if you live with someone for long enough. Amaryllis had some bad habits, like getting infected with the need to get something done, and then expecting me to be as gung ho about it as she was. I had a few bad habits of my own, like putting off my share of chores until the last minute (though I want to point out that I did still do them, as I’d promised I would).

Amaryllis ‘forgot’ to use the privacy curtain a few times when taking her sponge bath, or when changing clothes. I never said anything about it, but I did wonder whether she was trying to send me a message, like it was her way of saying ‘hey, this wouldn’t be a problem if you just did the thing that I want you to do’. Maybe I was being uncharitable in thinking that she did it on purpose, but I hadn’t known her as someone to make careless mistakes. It wasn’t really much of a problem though, aside from the distraction of it. She was still pretty, despite the pregnancy, but her newfound total indifference to me made her less viscerally compelling.

“We should talk about the house,” said Amaryllis. She lifted herself up onto the wall, carefully selecting her handholds and footholds. She was setting a route for me to follow, marking the specific holds I’d be allowed to use with colored tape. She’d taken a liking to Earth clothing of late, especially for physical activity. For bouldering, she wore a sports bra, a tank top, form-fitting shorts, and climbing shoes with rubber soles. The material for the shorts, in particular, was a spandex/polyester that wasn’t yet invented on Aerb.

“I’ve been assuming that we’re under surveillance, contrary to her assurances that we’re moving too fast to make sense of,” I said. We’d revealed some things, if that were the case, but nothing that we’d be totally sunk by if she found out.

Amaryllis was silent for a moment. “Grak had some misgivings about what happened with Fallatehr.”

“He liked being brainwashed,” I said.

“He liked having a purity of purpose and a sense of belonging, yes,” said Amaryllis. “But that wasn’t
really what he had misgivings about. He thought that we jettisoned any chance of a successful working relationship with him through aggressive mistrust.” She grunted as she made a long reach, going to full extension of one slender leg for just a moment. The only way that I’d be able to follow her route was going to be with my superior reach.

“If we’d trusted him, he would have had us all for soul-slaves,” I said.

“Perhaps,” said Amaryllis. “The argument,” she grunted again, adding in a little bit of lunge that saw her without any handholds for a fraction of a second, “Is that whatever chance there was for a fruitful partnership between us, we acted in such a way that it could never happen.” She glanced at the handholds. “And at the end of it, we suffered some enormous expenses to kill one of the most proficient soul mages in the entire world. Given that he was in prison when we found him, it really wasn’t worth it.”

“And the thinking goes that perhaps we should exercise a little more faith this time?” I asked.

“There are differences,” said Amaryllis. “Many differences, in fact, enough that I’m not sure the comparison is worthwhile, but that’s Grak’s thinking, or it was when he left the chamber. I suppose for him, that was half an hour ago.”

“And you?” I asked.

“She hasn’t killed us,” said Amaryllis. “She offered us aid. She has a number of incentives to kill us and take everything that we own, and apparently, the power to do so. She dislikes me personally, but I can live with that. So long as she likes the rest of you well enough, I think that we should treat her as a companion.”

“Still scenario zero,” I said.

“Disappointing, but not definitive either way,” said Amaryllis. “It would be nice to have some confirmation.” She glanced back toward me.

“I’ll try working on her once we get out,” I said. “Sorry, when I get out.” I cringed at that. At most, Amaryllis would spend an hour or two outside the chamber before going back in, but probably less.

“I don’t think she’ll respond well to insincere attempts at friendship,” said Amaryllis.

“So they have to be sincere,” I said. “Which … might be a problem.”

“You like damaged girls. This house is close enough,” Amaryllis replied.

“I don’t think that I would characterize myself as being into damaged girls,” I said.

“Sorry, damaged women,” said Amaryllis.

“That’s not the correction I was going to make,” I replied with a roll of my eyes.

“There’s a reason it’s a running theme in your companions,” said Amaryllis. “Do you need me to go down the list of tragic backstories? My father, dead when I was two, my mother, killed when I was ten, Fenn, born to a severely broken home and detested by most of the common folk, not to mention the elves, Grak an exile from his home, fleeing an arranged marriage -- and I agree fully with Fenn’s word for Valencia. ‘Joonbait’. It’s very appropriate. I won’t judge you for having an instinct to protect those who have been hurt -- in some sense it’s noble -- but you shouldn’t deny it when it’s plain for anyone to see.”
“But it’s not like, ‘oh, she’s damaged, how hot,’ it’s a white knight thing,” I replied. “And the house … suffered some traumas of its own, sure, but I don’t think that’s the path toward a sincere friendship.” I paused slightly, watching her judge her next foothold. “If I can connect with her at all, it’s not on a healthy level.”

Amaryllis stopped where she was. “What was it you said about wanting to hurt people?”

“Just,” I said, then stopped. “It didn’t resonate with her anyway. She read sincerity as insincere. And I’d really rather not dredge up my emo side.” I wasn’t sure that ‘emo’ would parse for Amaryllis, but she had a lot more Earth knowledge than she’d had before getting into the time chamber.

“I regret that I didn’t get it on tape,” said Amaryllis. She began moving again, and finally reached the edge of the wall, where she hung for a brief moment before dropping to her feet. When she turned to me, I could see a thin sheen of sweat on her face. “If you don’t think it’s a good way to relate, I trust your instincts.”

“I have my own misgivings about how it went with Fallatehr,” said Amaryllis. “He would have been a valuable ally, if we could have worked our issues out with him somehow, and I think the paranoia soured proceedings early on. That was partly my fault. He didn’t help himself, and maybe there was no solution, but … it would be nice to resolve things without having to murder someone.” She let out a long breath. “I don’t think we should betray her, whatever it is you might be planning.”

“I have no concrete plans,” I replied. The only minor betrayal was in pretending that Ropey was something that it wasn’t. “Did Grak talk to you about the house? Or about anything that I might find to be of interest?”

“There’s a secure channel,” said Amaryllis with a nod. “According to him, the interior space of the glove should be beyond the sight of Kuum Doona, even beyond the simple problem of how fast we might be moving in contrast to her. We can use it, though I have to caution that by itself it could be construed as betrayal, if she can see us use it. Grak and I used it very sparingly.”

“Okay,” I said slowly. “But the problem there is that I can’t go join something inside the glove, they’re all held in their own places, it would have to transition into the real world for a moment.” I thought about that for a second while Amaryllis looked at me expectantly. She already knew the answer, naturally. “Either he’d encrypt using a key known to both of us but not Zona, or write it down and then hide it using some method that wouldn’t allow her to look at it, but that would be hard given her unknown surveillance abilities. I don’t know him well enough to know which he’d use. Maybe the name of the place we first met? That’s what I would use.” I resisted saying it out loud. As a code phrase, ‘The Impish Inn’ had a few problems, notably the fact that you could do it with or without spaces, with varying capitals, and either leaving out or keeping in the initial article. Some of that could be assumed from the message itself though.

“The glove can fit two people at once, if they hug tightly and don’t let go,” said Amaryllis. “Good ideas though.”

“Huh,” I said. “That’s a little disappointing.” I paused slightly. “Is there a reason that you waited until now to bring this up?” We’d talked some about the house, but it was more along the lines of the story it had told and the things it could do.

“I wanted it fresh in your mind when you left,” said Amaryllis. “You’ll be coming out after a month away, and I thought the most salient conversations should take place toward the end of your time
here, so you’d be prepared for the world outside.”

“Ah,” I said.

“Let me sponge down and get some of this sweat off, then we can get into the glove to have some privacy,” said Amaryllis.

I’d never really liked being in the black void of Sable, which wasn’t too surprising, given that it was a black void with absolutely nothing of interest in it that I didn’t carry in. Being in the void with Amaryllis wrapped in a tight hug was a bit better, but the breathing tanks that we wore weren’t the most comfortable thing in the world, and as a workaround for the fact that there was no air, we were sharing an inflatable bag around our heads. If they ever made a movie about us (and why wouldn’t they, when we had a monopoly on movie-making?) I was pretty sure that there were going to have to be sacrifices for the sake of having a good visual. The bag leaked, but it didn’t need to be airtight.

“What are you planning with the rope?” asked Amaryllis.

“It’s loyal to us, hard-working, and doesn’t complain,” I said. “If she eats it, some of its good attributes might transfer over. I don’t want her to eat it, because Ropey is an honorary member of the party and has saved my life a few times now.” I paused as I thought about that. “I don’t know how she would react to knowing that he’s a sentient entad, but the only scenario I really like is that they have a bond and become friends. If she wants to eat him, I worry it will override her desire for answers and amenability as a host. If she doesn’t, then there’s a good chance that she’s worried about taking on his attributes, which means that we should feed him to her.” I paused again. “You know that he would, right, if it was to save us?”

“You’re closer to the rope than I am,” said Amaryllis.

“We don’t talk much,” I said. “I’m not sure that he’s much smarter than a toddler, honestly, though I guess I haven’t tested his intelligence. But he’s had my back, without complaints or commentary.”

“Grak wanted me to speak to you here,” said Amaryllis. “He was against any plan that involved betrayal, unless there’s some concrete cause for it, some overt hostility beyond anything the house has done thus far. He said that if she looks at the Eternal Golden Braid with warder’s sight, she’ll be able to tell that it’s animate, but little beyond that. As a cover, you can demonstrate that it is effectively prehensile when held, which should comport with how she’s seen it behave. The lie will appear on paper when we catalog the entads for her, if we choose to lie, so hopefully it doesn’t come to outright demonstration.”

“Alright,” I said. “Grak’s leaving it at my discretion?”

“So long as he’s not pressed too hard,” said Amaryllis.

“What the fuck does that mean?” I asked.

“He believes that being honest and forthright with the house is the path we should pursue,” said Amaryllis. “I mostly agree with him, it’s just a matter of degree. I’m not sure how we would fight the house, and manipulating it seems difficult. We can lie, but lying is difficult, especially since all the lies would need to be coordinated, and this is the only way to coordinate them.”

“Okay,” I said. “But if we don’t lie, I still want to protect the rope.”

“Understood,” said Amaryllis. She released me from the hug and pulled away from me, which brought us both out into the time chamber again.
I’m glossing over some things. A lot of my month in the time chamber was spent training, though not terribly much came of it. By judiciously shifting my ‘floating’ points around, I was able to temporarily raise the caps on a few of my social skills, which allowed me to at least see their virtues.

**Silver Tongue:** Reduces the penalty for insincere flattery by twenty-five percent. When flattering in a language you are not fluent in, your penalty is halved. When flattering a group, the Forer effect is doubled.

**Class Clown:** You may increase the speed of your wit at the expense of its comedic efficiency, up to double your base wit and half your base comedic efficiency. Take half as much damage from physical humor, so long as it’s actually funny.

**Lesser Deceiver:** You will no longer forget the details of a lie, unless you wish to. Take half the usual self-consistency penalty when telling improvised lies.

**Shifting Sands:** Removes the penalty for reframing facts and figures in the middle of a debate, so long as all raw information was memorized beforehand.

**Balanced Armor:** Your medium armor counts as heavy armor for obtaining the benefits of Heavy Armor virtues or bonuses, and light armor for obtaining the benefits of Light Armor virtues or bonuses. Afflictions and maluses are unaffected. It may count as light armor, medium armor, and heavy armor at the same time.

**Flow State:** Allows you to enter into an analytical flow state, which temporarily doubles working memory with respect to the subject of analysis, halves the penalties for thirst, hunger, and exhaustion, and increases the chance of a Brilliant Insight by five percent per hour (compounding).

Flow State came from Analysis 20. It was a purely MEN skill, which meant that I was going to be able to keep it; the others were from moving points into social abilities, which I wasn’t planning to do in the long term, especially given how weak most of the level 10 virtues were (and the way the abilities and numbers worked out, I could either keep Lying or Flattery at 10, but not both). I’d seen a total of seventeen level 10 virtues so far, and that was something of a running theme with them, things that were nice enough, but not so spectacular that I’d find them worth mentioning.

We didn’t have any heavy armor for me to level up Heavy Armor, and the backpack didn’t seem up to producing any, even if we tried to get it piecemeal, since some of the pieces were too big. I leveled the skills I’d lost in the Sacrifice back up, and then Medium Armor as well, until I’d hit the caps with everything and regained all my lost virtues. So that was fun, if your idea of fun is a series of rather mind-numbing exercises as you attempt to make numbers go higher (and without much in the way of feedback to tell you that you’re actually doing the right exercises).

We watched movies, a strange mix of my favorites, the AFI’s Top 100, historically well-performing movies, and the occasional bit of ‘cultural research’ selected by Amaryllis, which included a highly suspect number of romantic comedies (more for the emotional simplicity of them than girliness, I thought). I read books, mostly from Aerb, but a few from Earth, including a number of technical books that Amaryllis wanted me to read so I could offer her a second opinion or help to brainstorm. We listened to a wide range of music, mostly on a record player, and mostly from before I was born. Amaryllis held a particular love for a group called *The Mamas and the Papas*, for no clearly identifiable reason.

I missed Fenn. I found myself talking to her in my head sometimes, when I was trying to work through something. When we watched movies, I wished that she were on the couch between us,
watching along and making jokes. I ended up writing her about twenty letters, most of them pretty long, if not really filled with much of consequence. I put a number on each of the letters, corresponding to the day that I’d written them, so that she could open them through her month in the chamber and get some semblance of me keeping her company. Toward the end of the month, when there was less for me to do in the way of training, I embellished the letters with little sketches.

I was hoping that she would reciprocate and send me letters back, since the provisional schedule that Amaryllis had worked out meant that we’d both get two four-week periods. We called them months, but there were going to be ten of them, ten periods of four weeks each, rather than nine months. With all my skills as high as they would go, I was sort of dreading my second month, since I’d have even less to do. In theory, I’d be coming back in right at the beginning of her third trimester, which would mean that Amaryllis would be needing more help, but not so much that it would fully occupy my time.

I was tempted to request a run into town while the others were taking their turn, just to get some more books and other entertainment, but that wasn’t really the issue, since the backpack could provide whatever we wanted. The real issue was that it was a small room with lots to do but not a lot of space to do it in, and for company, the same person every single day. I knew all her habits by now, all of the ways she moved, her walk, her voice, her laughs, smiles, pensive frowns, aggrieved sighs … and I was bored.

I could tell she felt the same way.

The time chamber was controlled by a simple lever near the doors, which Amaryllis kept everything clear of at all times. I eyed the lever occasionally, thinking about how easy it would be to opt out if I really couldn’t take it. Toward the end, I looked at it with a sense of longing. When the final day came, it was more a sense of trepidation. I hadn’t seen Fenn or Grak in a month, and I wasn’t sure whether I would simply be able to slot back into the group dynamic. I was also thinking about how I would explain things to Fenn, if I would have time to, or whether I should just assure her that nothing had happened between Amaryllis and I. Since Fenn was up next, maybe I’d just leave it to Amaryllis to explain things.

In point of fact though, this was only a temporary reprieve. I was going back in the time chamber in a matter of hours, meaning that the time outside was effectively just a short break from the confined space. When I got back, Amaryllis would be two months further along, her plans further developed, and while that might provide some points of interest, I had to imagine that the tedium I’d experienced in the final week would set in a lot sooner, especially since I was capped on virtually all my skills.

“Ready?” asked Amaryllis as she stood beside the lever. She was wearing a long blue dress with small white flowers that came halfway down her calf, loose enough that it effectively disguised her baby bump, and some simple sandals from Earth. Her hair had grown back out a bit, long enough that she had plastic hair clips in place to hold it back.

“I’m ready,” I said. “You should take some time outside the chamber, an hour or so just to stretch your legs and get some walking in.” It wasn’t the first time I’d suggested that.

“No thanks,” said Amaryllis. “The house isn’t really that great of a place to stroll around in, not unless you’re a fan of stumbling across decayed bodies.” It also wasn’t the first time she’d rebuffed me. “I’m eager for some time with Fenn.” She flipped the lever, bringing us back down into normal time, though the spin-down would still take another few minutes.

“Don’t talk about me too much,” I said.
“Well, I can hardly think of anything else two women would have to talk about,” said Amaryllis. She delivered the line so deadpan that if I didn’t know her, I might not have been able to pick up on the sarcasm.

“And be kind to her,” I said. “Put up with her, as best you can.”

Amaryllis only rolled her eyes.

I’d put my armor back on and wrapped Ropey back around me, more for the sake of prudence than for any actual fear of what might be waiting for us out there. The armor was practically no defense at all against the house, but it still seemed better to have than not to have. The only downside to wearing it was that it might be a hindrance if I was still in it when some kind of emergency happened with Amaryllis. If there was some kind of complication, I might be called upon to play doctor, either by giving her a blood transfusion (on Aerb, compatibility between two people of the same species was virtually guaranteed), or by using bone magic to heal her. The armor might interfere. She’d run me through plenty of worst case scenarios, all of which made me a bit queasy. The earliest that the baby could come and still potentially survive was somewhere around twenty-six weeks, and Amaryllis figured that our best bet at that point was a full-body swap, given that we didn’t have (and couldn’t train up) the necessary skill to operate a NICU, even though we had already pulled all of the relevant equipment we could from the backpack.

That was what I was thinking about when Amaryllis opened the doors, and I was so lost in thought that it took me a moment to make sense of what I was seeing.

Zona was gone, and there were two of Fenn, one standing on either side of Grak. They were all facing us, and as I opened my mouth to ask what the hell was going on, Grak lifted up a piece of paper and began to read from it.

“Before you lies a test,” he said. I’d forgotten how low and grumbling his voice could be. I’d also sort of forgotten that he was missing a hand. “Two fair half-elves, but one is false. You may ask what questions you like, though they will not answer specifics. Choose correctly for a kiss as your prize.” He licked his lips with his thick tongue before reading the last line. “Don’t be a spoilsport.”

I stared at the two Fenns, who were both grinning.

“Is this seriously how you spent your time?” asked Amaryllis.

“Didn’t the dwarf just say not to be a spoilsport?” asked Left Fenn.

“Some people have trouble listening, I suppose,” said Right Fenn. They sounded exactly the same.

I walked forward to look at them. They were dressed the same, like Fenn had been dressed when I went into the chamber. If I accepted the premise at face value, which I wasn’t sure was wise, then one was the real Fenn, and the other was Zona, using her illusion to disguise herself as Fenn.

“No touching,” said Right Fenn as I drew closer.

“Not until we get some time alone,” said Left Fenn with a grin.

“Lewd,” replied Right Fenn with a click of the tongue.

“You know,” I said. “One of the things that I really liked about Aerb was that there wasn’t much in the way of illusion magic, and mind magic was mercifully rare. Even the soul mages don’t have a full command of memories, so at least you’re not constantly questioning whether everything is real or fake, at least not on that level.”
A master illusionist had been the primary antagonist of an arc of one of my campaigns, to the endless frustration of the players, and I had been happy to find that he didn’t seem to exist in Aerb’s history books. Illusion Magic was among the excluded magics on Aerb, at least according to my soul.

“Too bad,” said Right Fenn.

“So sad,” added Left Fenn.

“Did you spend the entire forty-five minutes planning this?” asked Amaryllis. She stayed back near the time chamber with her arms folded across her chest.

“In my defense, you left me to my own devices,” said Left Fenn.

“You should have expected something like this,” said Right Fenn.

“Grak?” asked Amaryllis. “What’s your excuse?”

“You left her to her own devices,” said Grak. He gave a wide-toothed smile as Amaryllis gave a weary sigh.

“Okay,” I said. “So I assume that you would elect not to answer questions that only Fenn knows?”

“Correct,” said Right Fenn.

“We didn’t want the game to be so easy,” said Left Fenn. She looked from me to Amaryllis. “You’re allowed to put your heads together, it’s a team game.”

Amaryllis sighed again. “I’m immediately reconsidering spending a month with you.”

“Oh, but I’m so much more entertaining than Juniper,” said Right Fenn.

“No offense, my love,” said Left Fenn.

“Are you just trying to obfuscate, or intentionally deceive?” I asked.

“I don’t know what obfuscate means,” said Right Fenn.

“Really?” asked Left Fenn with a raised eyebrow, as she looked at her counterpart. She turned to me, smiling. “I mean no, of course I don’t know what it means.”

“Okay,” I said. “Do you love me?”

“Always,” said Left Fenn, suddenly solemn.

“And forever,” replied Right Fenn, with equal sincerity.

“But?” I asked.

“But you’re terrible at this game,” said Left Fenn, smiling.

“Left is the real one,” I said.

“Are you sure?” asked Right Fenn.

“Yes,” I replied. “Left was leading too often, and only on the points where not leading might have been revealing. You had forty-five minutes, which wasn’t enough time to learn everything, so it’s understandable that you’d have a system in place. Assuming I’m right, I could probably pull out
another half dozen things that weren’t quite accurate, but that’s my answer, Left Fenn is the real one.”

Right Fenn dissolved back into Tiff’s form, smiling at me. “Well, that was fun.” She turned to Fenn. “He was faster than you thought.”

“I made the fatal mistake of underestimating him,” said Fenn. She stepped forward and wrapped me in a hug with her arms around my neck, then gave me a quick kiss on the lips. When she pulled back, she was looking at me with a forced nonchalance. “How’d it go?”

I shrugged her arms off me, then leaned down and picked her up, putting her over my shoulder and carrying her away, off down the hallway.

“She’s due in the chamber soon!” Amaryllis called after me.

When we were away from the others, I set Fenn down and gave her a proper kiss, long, slow, and deep.

“So I take it you missed me?” asked Fenn, looking at me with real warmth.

“More than I thought I would,” I said. “And I thought that I would miss you a lot.”

“I should stick you in a time chamber more often, if this is the sort of greeting I get,” said Fenn. There was a twinkle in her eyes as she looked at me. “And my two favorite humans got along well?”

She paused slightly. “But … not too well?”

“She got up to 20 loyalty, which gave her the ability to alter her soul, then she removed her attraction to me,” I said. “You’re going to have a month with her, that’s more than enough time for her to tell you everything you’d want to know.”

“Wait, she can do that with Symbiosis?” asked Fenn. “I’m going to have to step up my game. How’d you get her loyalty up?”

“Offered to do some chores,” I replied.

Fenn laughed. “That’s hilarious.”

“I didn’t really find it funny at the time,” I said. “But I’m glad you’re amused.” I hesitated a moment. “You don’t think there’s a pretty big problem with her altering her own soul like that?”

“Would you think that I was a total bitch for saying that I was relieved?” asked Fenn, biting her lip as she looked at me. “I mean, it sounds like one of the horror stories out of the Second Empire, sure, but it also neatly solves one of the most pressing problems in my life without me having to lift a finger, and … I can see you’re not quite so happy about it.”

“No,” I said. “I was sort of hoping to get some backup. I thought … well, that we could at least commiserate, if not actually change her mind.”

“Sure,” said Fenn with a shrug. “I wouldn’t want her to do more, and I can talk with her about that, since it seems like the kind of thing that someone -- her, specifically -- would go way overboard on. But, I mean … her having zero interest in you is making my heart soar. I feel bad for being so happy.”

“Don’t feel bad,” I said. I wrapped her in a hug. “It did make things easier, for the rest of the month, I’m just worried about the long term, unforeseen consequences or further alterations, and I’m really
worried that if I press too hard, she’s just not going to tell me.”

“Okay,” said Fenn. “I’ll talk to her, help keep her safe, even if she hates it.”

“And things went fine outside?” I asked. “Anything that I should know?”

“We had a diversion,” said Fenn with a shrug. “As you saw, though you got through it too fast.”

“Making friends?” I asked.

“Something like that,” said Fenn, smiling. “The house isn’t so bad, once you get her in the right mood.” She poked a finger at my chest. “I’m hoping she’s still in that mood when I come back out, but I know you’ve had some time to think about what she said.”

“A bit,” I replied. In truth, I’d had enough time that it had begun to fade into the background, as a simple thing that I accepted as probably being true. I looked down the hallway we’d come from. I could just barely hear the sound of conversation. “We should get back, Amaryllis doesn’t seem to place much value on time out of the chamber.”

“Joon, if we end up staying in this place, can we have a weekend in the chamber to ourselves?” asked Fenn. “Just you and me, without pressing engagements or other people getting in the way?”

“Frankly, I’m not looking forward to going back in,” I said. “I got kind of bored.” I saw her look of disappointment and quickly amended it. “But with you, I don’t think that I could be bored.”

“Good save,” said Fenn. “I’m going to hold you to that.”

“I wrote you some letters,” I said. “They’re numbered according to the day, so you can hear from me. It seemed like the best I could do, since we’re going to temporarily be in a long-distance relationship type thing. Oh, and I recorded some audio commentary for two movies, which, uh, might be totally worthless to you, but we’ll see. And I made a special supply of cookies, which are worse than Mary’s, but I’m the one who made them, so I thought maybe they’d be good if you’re feeling especially sentimental.”

Fenn reached up and kissed me on the cheek. “You’re too sweet to me.” She looked me up and down. “I can hardly believe I was worried for nothing.”

I nodded at that, but I wasn’t so sure that I would have said it was nothing. I also didn’t know how to say that without making it a whole big thing though, so I let it lie.

When we went back to the chamber, Amaryllis was waiting beside it. Her hair was long, down beneath her shoulder blades, and she was eating a marzipan fairy to heal the cuts on her arm that I assumed she’d taken from Grak’s axe. I raised an eyebrow at that, but the fairies weren’t really our primary source of healing anymore. Like the clonal kit, we’d largely outgrown the fairy jar. Furthermore, the slowly-refilling jar we pulled the fairies from was in the time chamber, which meant that our fairy supply had substantially increased; one of the chores was reaching in and gathering up the docile fairies to break their necks and put them in zip-lock bags.

“Ready?” Amaryllis asked Fenn.

“No,” said Fenn. “But I’m going to do it anyway, because that’s what a team player I am. I might pop back out after a few days though. No one hold it against me if I can’t hack it.”

Amaryllis stepped into the chamber, and Fenn followed her, saluting me briefly before the doors closed up again.
Zona turned to me and looked me over. “Have you had time to think?” she asked.

“Yes,” I said with a nod. It wasn’t really time to think that I’d needed though, it was time to process and adjust to the new map of reality, one where what she’d said was probably the truth, or close to it, or at least seeded in the truth. “I have some questions about your history, how you got from there to here, but I’ll understand if you don’t want to repeat yourself, or if you want to hear more from me.” I swallowed. “Arthur as he was on Earth was something I thought about a lot when I was in there.”

“Speak, then,” said Zona.

I spoke.
A Portrait of the King as a Young Man

A lot of what I told Zona was background information on Earth, which she was only passingly familiar with by way of published writing on the dream-skewered. If you wanted to paint a picture of Arthur, you had to have the context of the world he’d grown up in, with comparatively endless information available at all times, the fact that we had voting and representatives instead of kings, the spectre of distant threats like terrorism and far-off wars broadcast home, and our absolute safety and security in comparison to Aerb, a world filled with numerous horrors and wild imbalances of power.

(I like explaining things. You’ve probably already figured that out about me.)

Arthur’s brother was nine years older than him, and I was never quite sure which of them was the mistake, if either was. It seemed like a long gap between children, enough that in a lot of ways, Arthur was effectively an only child. Arthur’s father was an engineer, and his mother worked part-time at a store that sold wool, which she did mostly to fill her days, since it wasn’t like they needed the money. He didn’t talk about his family that much, except to say that his brother was fairly distant and his mother was on medication for depression and anxiety. Arthur’s father was an old-school geek, with a small library of fantasy and science fiction, but most of it was ancient and yellowed -- and, honestly, kind of trash, the pulpy kind of stuff that had mostly gone out of fashion.

When I talked about Arthur, I tried to stress that he’d been more or less normal. He was smarter than average, and active in more clubs and activities than most, but he wasn’t exactly popular, probably because he liked to talk at length about things he’d been reading about, or because he liked to argue just for the sake of it. He wasn’t very athletic at all, and a little bit overweight, which maybe didn’t help how the other kids felt about him. After he died, of course, no one had a word to say about any of that, and people he’d complained about were suddenly, unaccountably, presenting themselves as his friends.

He was, maybe, a little bit awkward sometimes, though I never really noticed it when he was with our group, probably because I’d adapted to it. We would have a group project for school together, and he would talk loudly with a big smile on his face about how he’d united Europe in a videogame he was playing, while the people listening to him were completely uninterested. I always envied that a little bit, even if it made me cringe; I cared too much about what other people thought, and tended to say nothing rather than say the wrong thing.

I talked about our tabletop games, and the ways that he liked to play them, which was always about story and character more than it was about rules and results. Some of that required background that Zona didn’t have, but I tried my best to get straight to the point. My ‘what is a tabletop roleplaying game’ speech had gone through a few iterations by this point, and I knew enough about Aerb to be able to draw parallels with their cultural traditions.

I talked about Arthur and Tiff.

“Okay, so figure there are a hundred fifty students in our class, plus the same a grade up and down,” said Arthur. We were walking home from school, with a stop at the gas station on the way for chips and pop. “But give the grades above and below us a penalty, because we don’t have classes with those girls, which means propinquity isn’t in effect. Figure maybe a hundred fifty legitimately dateable girls in the dating pool, more or less. That’s a rough guess.”

“Right,” I said. “Okay.”
“Half of them are below average,” said Arthur. “But there are lots of different metrics you can use, and they’ll be below average in different ways. Take Heidi, right? Super hot, dumb as a brick. So if half are below average on intelligence, and half are below average in looks, then that’s something like a quarter that are above average in both.”

“Um, no,” I said. “I mean, I don’t think so. Looks and intelligence are correlated, for health if no other reason, but socioeconomics too, probably.” That was around the time I’d first discovered the word ‘socioeconomics’, and I used it a lot, probably more than I should have.

“Sure, sure,” said Arthur. “Were you the one I was talking to about the Flynn effect?”

“Doesn’t sound familiar,” I said.

“Well, whatever,” Arthur continued. “We’re just getting rough numbers. If we accept a quarter of a hundred fifty, that’s thirty-seven, but that’s the pool that are just above average on the first two metrics.”

“I’m not sure how important looks are,” I said.

Arthur rolled his eyes. “Would you date Kimber?”

I frowned. “She’s nice,” I said. “Smart. Smarter than I am, probably. I went over to hang out with her brother once and she’d made macaroons, which was pretty awesome.”

“You’re dodging the question,” said Arthur, rolling his eyes again. “I think it’s fine to just say, ‘no, she doesn’t do it for me’, I’m sure lots of girls would say that about me, I’m not going to be salty about it. Call that metric three, maybe, and even if it were just fifty-fifty that cuts the pool down to eighteen. But, in point of fact, there are a lot of metrics to consider, and even if some of them are correlated, the actual pool of worthwhile girls in our school is in the low single digits, at least as far as I can see.”

“Huh,” I said. I wasn’t so sure I agreed with that, but maybe it was just that I’d never had a real girlfriend (not that he had either). There were lots of girls in our grade that I was interested in, maybe because I had a tendency to let my imagination run away with the idea of a relationship.

“I’m saying, basically, that you’ve got a bunch of metrics, right? And that low-single-digit pool is just for the girls who are above average in all categories, none of them are likely to be truly spectacular.” He heaved a sigh. “But Tiff is, in so, so many of them.”

I stayed silent. I knew he liked her, because he’d mentioned it before, but I didn’t really have anything to add on the subject, and talking about romance had always made me feel a little weird and unsure. I was pretty sure that I was supposed to offer some words of support, or say that I was happy that he’d found someone he liked, but everything I could think of saying rang hollow. (This was before I’d developed my own feelings for her, back when she had first joined the group, and the only thing I’d felt around her was awkward and uncertain, not sure how to deal with a girl.)

“You two argue a lot,” I said. I kicked a rock off the sidewalk and into the grass. I wished he had someone else to talk to about this, but he was the person that I talked to about girls, on the very rare occasion that I had anything to report.

“She likes arguing,” said Arthur. “Some people get super defensive when you tell them they’re wrong, Tiff just gets excited about it, like she’s finally found someone who actually wants to engage.”

“Yeah, I guess,” I said. From where I was sitting, I wasn’t so sure. Sometimes she seemed animated,
and yeah, it was like she’d found a kindred spirit, but sometimes she’d shut down and want to blow past whatever the topic of conversation was. I always tried to move things along when I saw that happening. Arthur had a tendency to get into it with people about the most inane stuff sometimes, so it wasn’t like I was doing her any special favors. I was very conscious of wanting to treat her exactly like one of the guys.

“Do you like her?” asked Arthur.

“I don’t really know her yet,” I said.

“Well, if we do start dating, we’ll all be hanging out a lot,” he said. “I don’t want to do what Trev did and disappear off the face of the Earth just because I’ve got a girlfriend.”

But that never did end up happening. Arthur had this theory that she needed time to warm to him before he asked her out, and there were always excuses for why doing it later would be better than doing it now. Eventually he seemed to just sort of accept that he wasn’t going to, though his crush never faded. I think maybe in his fantasy world, she would have been the one to make the first move, but Tiff wasn’t really like that.

“It sucks, because she’s perfect for me,” said Arthur with a sigh. He was laying on my bed while I took my turn playing Mario. “Like, she’s not perfect, but she’s perfect for me. Even all of the stuff we disagree on, she’s got sensible reasons for, and it’s like,” I saw him gesture vaguely from my peripheral vision, “Like the whole is so much more than the sum of its parts.” He paused. “There’s some kind of pun there. ‘Her hole is more than the sum of her parts’?”

We were sixteen, and Tiff had been with the group for quite some time, long enough to firmly establish her as a member. She was a friend, even outside the gaming table, and it was becoming increasingly common for us to spend time together away from the others. Arthur had a somewhat hectic schedule; an evening playing videogames together was a rarity, and to some extent, Tiff filled in my need for a best friend. Not replacing him, but definitely picking up some of the slack. I was hopelessly crushing on her.

“Too crude,” I said. I was blushing slightly, and grateful that Arthur wasn’t in a position to see. I tried to concentrate on the game.

“Yeah, too crude,” said Arthur. “Works best as an insult. You know, I wonder how brilliant people like Oscar Wilde and Winston Churchill really were. Like, did they prepare a bunch of stuff ahead of time, were they just really quick-witted, or is it that they were really good at thinking of comebacks in the shower? Because you have to imagine that a lot of their best anecdotes grew in the telling.” He let out a sigh as I wall-jumped up to grab a coin. “Anyway, I almost asked her out the other day.”

“Did you?” I asked, suddenly focused entirely on what he was saying.

“Yeah, I asked her whether she was planning on dating anyone in high school,” he said. “Because for her, it’s sort of like, why is she single if she doesn’t want to be? And so I asked, but she replied that she didn’t really believe in dating, and that she didn’t see herself as the dating type. It was absolutely crushing. My follow-up was going to be, ‘well how about dating me?’, but I didn’t think that she was going to just reject the institution of dating altogether. Our conversation sort of petered off after that.”

“Yeah,” I said. I felt relief mingled with distress. I cleared my throat. “I mean, she really doesn’t seem like the type to enjoy dating.”
“Yeah,” said Arthur. “It’s a patriarchal institution.” He gave a hollow little laugh.

“No,” I replied. “I don’t think it’s that, I think she just doesn’t like labels. Things are complex, as a general rule, people, institutions, interlocking systems, all that kind of thing, and labels are this ham-fisted way of making sense of it all.” I paused slightly. “I think that’s more or less verbatim what she’s said.”

“So it’s not that she can’t see herself dating, it’s that she can’t see herself ‘dating’?” asked Arthur. I could see the air quotes out of the corner of my eye.

“I don’t know,” I said, because I really didn’t.

“Well come on, help me figure out an approach,” said Arthur. “You know her pretty well, what would work on her?”

I didn’t like how he phrased that. “Here, I’m garbage right now, take your turn.” I tossed him the controller and sat in the chair by my desk.

Arthur picked up the controller and began playing, and for a moment I had hope that the conversation was over. It seemed like we had such a limited amount of time together, with all the clubs he was in, and I didn’t want to spend it talking about Tiff. I wanted him to monologue about the monomyth in Disney movies, or three act structure, or hell, even something I found comparatively boring like geopolitics.

“Thoughts?” he asked.

“About what?” I asked.

“Tiff,” he replied. “What she’d go for?”

“I’m not,” I began, then stopped. “That’s not really the sort of thing we talk about, when it’s just her and I. Her and me? Me and her. However that goes.” There was silence for a bit as I chewed on my words. “We talk about the same sort of stuff that you and I talk about, I guess. Stuff she heard on NPR, history -- politics, some, but I’m not really into that, and I think a lot of the election stuff just makes her angry.” I shrugged. “I don’t think she’s ever once talked about what kind of boys she likes.”

“Well, if she does, let me know,” said Arthur. “And maybe ask her, if you can figure out a way to do it?”

I said that I would, and then never did, until eventually Tiff and I were, for a certain sense of the word, ‘dating’.

“Anyway, I ended up with her,” I said. “More or less behind his back, because neither of us wanted to hurt him, or cause any drama, and … then he died in a car accident, which was about nine months before I got to Aerb -- uh, which was about two months ago, or three months, subjectively, if you include the time chamber.”

“You have provided much information, most of it worthless to me,” said Zona.

“Maybe,” I said. “I think it gives some context to who he was when he came here. That’s got to be the starting point for understanding who he became. He was from a land of relative peace and plenty, where violence was pretty much a last resort, and even if it hadn’t been a last resort, he wasn’t much of a fighter. So when he got to Aerb, that helps explain why he ran off with a theater troupe instead
of fighting the Dark King, right?"

“If you accept that theory. You maintain that the dream-skewer happened when he was on the
farm?” asked Zona.

“Probably,” I said. “It’s … well, there’s a whole other thing to unpack, which we can get to in due
time, but the most concrete evidence I’ve got is that I know the lost play from Earth. I have a copy of
*The Fellowship of the Ring*, though it was a book, not a play. If you read it, it would be pretty clear
why any work based on that one would be looked down on by the Dark King.”

“You have eidetic memory?” asked Zona.

“What -- oh, because how else could I have a copy of the book?” I asked. I hesitated slightly. “We
have an entad that can pull things from Earth.”

“Hrm,” said Zona.

“It’ll be on the manifest,” I said. “I think it’s one of the few things that we can’t live without, though
maybe I’m just biased because we use it a lot in the time chamber.”

“I had wondered,” said Zona. She tapped a finger against her chin. “I find your story lacking in
explanatory power. If he was a soft and fat teenager, not so different from average, how did his
translation to Aerb allow him to become the father of the modern eras?”

“Well, that’s the other thing to unpack,” I said. I did my best to ignore ‘soft and fat’, which hadn’t
been my words. “Uther was like me, endowed with powers by the entity that we’ve been calling the
Dungeon Master. He learned faster than he had any right to, and his companions weren’t just idly
collected, they were drawn to him, or artfully placed in his path. And … I don’t think that the others
were dream-skewered, but a lot of them were based on characters that my friends had created. I’ve
looked at their histories though, and nothing in particular stands out to me as being suspicious,
insofar as the skewer is concerned.”

“And your companions are like his?” asked Zona.

“No,” I said. “I mean, none of them are reminiscent of characters created by my friends, but yes, I
think it’s somewhat safe to say that we have a cosmically important link with each other.” I hesitated
again. “You might be one of my companions, I guess I should get that out of the way.”

“A knight, in service to you?” asked Zona. She pursed her lips. “That’s an offer I’d be inclined to
pass on.”

“No one is in service to me,” I said. I glanced at Grak. “Technically, Grak is getting paid a salary,
which is ostensibly the only reason that he’s here, but the others aren’t in any kind of service or
contractual relationship with me or Amaryllis. Mostly, I would call us friends.” Though it was a close
thing, in a few cases. “Even if you’re not a companion in the cosmic sense, our plan is to live here,
which means that you’ll be playing an integral part in our business.”

“You have misgivings,” said Zona.

*There’s that word again.* “A bit,” I said. “I can see your good qualities, the patience, intelligence,
knowledge, tenacity, overwhelming firepower, heaping amounts of mundane utility, et cetera, but I
worry that you never really had a chance to, um, socialize with people, to learn how to have a
functional relationship with people living inside you.”

“You know nothing of me,” said Zona.
“Well, am I wrong?” I asked. “After Uther left, he barred anyone from living here, right? And I don’t know quite what transpired between then and now, but among the tuung and the people of Headwater, you have a reputation as a house that people don’t ever leave, which is fearsome, but --”

“I have lived, in a fashion, for five hundred years,” said Zona. “How old are you?”

“Uh, I think eighteen,” I said. I’d done a count of days while I was in the chamber, and found out that I’d missed my birthday. I wasn’t sure whether the body I was in would have the same birth date, though in a certain sense it obviously wouldn’t, because they didn’t use the Gregorian calendar on Aerb.

“When you have lived five times as long as you have now, you will have lived one fifth as long as I have,” said Zona. “He was not the only person to inhabit this house. I did not turn to murder from the outset, as soon as he had turned his back on me.”

“But you did, eventually, turn to murder,” I said. I hesitated. “We’re a democracy, more or less, and the way things are looking right now, I think I’d get voted down anyway if I voted against staying here, but I do want to know more about you, even if we’re not cosmically linked.”

“How would you know, if we were so linked?” asked Zona.

“Um,” I said. “Normally the Dungeon Master would just tell me, but we’re having a bit of a thing with that right now.”

Zona nodded. She opened her mouth to say something, then stopped and looked back at the time chamber. “Later,” she said. “They’re done.”

It hadn’t felt like forty-five minutes, but I’d been talking for most of the time. I stepped toward the doors, ready for Fenn to wrap me in a bear hug.

Instead, the doors opened up to Amaryllis, covered in blood, holding a dagger in one hand with a far-off look on her face. Behind her, slumped against the bed, was Fenn, with blood pooled beneath her and slashes across her chest, arms and stomach.

“I couldn’t take it,” said Amaryllis with a shaky voice. “I shouldn’t have thought that I could take it.”

I rolled my eyes. “I don’t find this funny.”

Amaryllis dropped the act and turned to her left, looking at a part of the room that I couldn’t see. “He didn’t believe it for even a second,” said Amaryllis.

Fenn stepped out into view, frowning at me, as the image of her corpse disappeared. The blood that soaked Amaryllis’ clothes stayed there, and she set the knife down beside her.

“You could have played along,” said Fenn as she walked toward me. She smiled slightly. “We had a bet going.” She wrapped me in a hug and squeezed tight, pulling me into a deep kiss as she did so. “Missed you.”

“Missed you too,” I said. “How much did you lose?”

“She owes me thirteen million obols,” said Amaryllis.

“You’re going to have to be the one who pays for things for a bit,” said Fenn with a smile. “And we should probably hold off on getting married so you don’t have to be responsible for my debts.”
“I’m sure she won’t hold you to the bet,” I said.

“I will,” said Amaryllis. “And it wasn’t only one bet, we made one hundred and sixty-seven separate bets.”

“I won most of them,” said Fenn, still holding me in a hug. She kissed me on the neck. “But she won all the big ones.”

I looked at Amaryllis, who was still covered in blood. The fake corpse was courtesy of the house, I was pretty sure, probably set up before Fenn had even gotten into the chamber, but the blood was either stage blood or real, there to sell the illusion, since the house was (per its own accounting) confined to illusions within a ten-foot wide cube. That would also explain why Zona had moved back slightly, outside my vision; she couldn’t be in two places at once.

“So are you just going to be covered in blood during your break?” I asked Amaryllis.

“I am,” Amaryllis nodded. She walked over to where the tape recorder was sitting and swapped out the tapes. “Anything of consequence?” she asked me.

“You’ll mostly be listening to me talking,” I said with a shrug. “Stuff about Arthur.”

“Arthur and the cosmic order,” said Zona with a nod. I was starting to get over how much she looked like Tiff, partly because of how clearly I could see the imperfections in the illusions. More and more, those didn’t so much seem like imperfections as they did expressions of who Zona was. It was also partly just having had the time to sort it out, during the long month in the chamber.

“So a time alone?” Fenn asked, leaning into me.

“Absolutely,” I replied. We walked together down the hallway, to the place I was starting to think of as our private place. “How is she?”

“Good,” said Fenn. “Great, actually, we had a wonderful time together.”

“Did you?” I asked.

Fenn nodded vigorously. “I missed you terribly, but the letters helped, and I was breezing my way through Earth culture, which was a bit like talking to you. I feel like I had a million things that I wanted to tell you, but I didn’t make a list, and now it’s all a blank. Oh! I read a lot of manga!” She raised her arms up high, as though she could barely contain herself. “I’m a weeb!” she leaned in close to me. “Did I use that word right?”

I kissed her, and she backed up a bit, looking pleased. “How the hells do you know what a weeb is?” I asked.

“You mentioned it once, when you were talking about swords,” said Fenn with a smile. “So I looked it up. There’s this web page, called Urban Dictionary, which was a lot of help in figuring out Earth things.”

“It’s a website, not a webpage,” I said. “And, I’m sorry, but you spent your time in the chamber looking at print-outs from Urban Dictionary?”

“Calm down, I did other stuff too,” said Fenn. “You know the Urban Dictionary?”

“I -- yeah,” I said. “Sorry, can you paint me a picture of your time in there? Because I feel like it was vastly different from my own.”
“Amaryllis had her schedule, and I mostly did my own thing,” said Fenn. “I worked on getting a bit better of a handle on soul magic, with some help, watched a lot of movies once I figured the projector out, tried and failed to get an archery range going, played around with the backpack, read a lot of manga, and some American manga -- oh, I’m ready to run my own game of Arches!”

“You’re … going to DM?” I asked.

“Sure,” said Fenn with a nod. She was watching me. “See, Amaryllis said that it was sort of your thing, and I said that people took turns, but apparently she knows you better.” Fenn clucked her tongue. “Well, whatever, I have a campaign ready to go. I thought it would be a way for us to bond, if I had some experience from your spot on the table.”

“Sure,” I said. “I didn’t mean to -- I’m sure you’ll do great, it just caught me off-guard.”

“Mary and I ran a few games together, with her controlling all the characters, but it wasn’t really the same,” said Fenn. “Fun, but not the same, since even when she was trying to, she couldn’t really make it like there were different people pulling things in their own directions.”

“Huh,” I said. “And did you talk about the soul stuff with her?”

“A bit,” nodded Fenn.

I waited, until it was clear that she needed some prompting. “And?”

Fenn winced. “I’m on her side, a little bit. I haven’t done it myself, because I wanted to talk to you first, but I’ve really been thinking that it might be for the best to get rid of some attachments that aren’t doing me any good. Nothing concrete, just kind of waffling.”

“Jesus Christ,” I muttered.

“Oh, we also did some Bible study,” said Fenn. “I think we kind of made a mess of it though.”

“No, I mean,” I paused. “You’re not talking about me, and our relationship, right?”

“No, never,” said Fenn, kissing me. “Other stuff. I wasn’t saying that we should have the conversation right now, we’ve got, what, an hour until you’re back in with Mary? I didn’t think that was enough time for us to really talk about all the stuff we’d need to talk about.” She hesitated. “I wrote you a letter, it’s probably better if you read that. I’m allowed to be a chickenshit and say things in letters, right?”

“I -- yeah,” I said. “Is this … Nellan?”

Fenn swallowed and nodded. “It’s the letter numbered fifteen, I’d understand if you wanted to jump ahead on that one. I was just -- well, you’ll read it in the letter, I guess.”

“Oh, well,” I said. “I saw the name in your soul, during the Fallatehr thing, and I didn’t want to press you on it, in case it was something important, which it would pretty much have to be if it loomed so large.”

“Once I could see in my own soul, I figured as much,” said Fenn. “You’re really too good to me, did you know that?”

I shrugged. “Doesn’t feel like it, sometimes. I wish things with Amaryllis had gone differently, or that … that there wasn’t any question, I guess.”
“S’fine,” said Fenn. “Oh, I did get her to promise that she wouldn’t change anything else in her soul until we called a meeting of the Council of Arches. Same for me, if I decide, you know, that there are things I’d rather not care about. That’s our new name, by the way. Council of Arches. Do you like it?”

“Council sounds a little ominous,” I said. “I guess I don’t dislike it.”

“Well, good, because Mary agreed that it was a good name, and we need one on our letterhead and business cards, when we get them.” Fenn sniffed at me. “I missed your smell.”

“I missed yours too,” I said.

“And obviously I’m not going to change anything until after I talk to you, and after you’ve read the letter, and after you’re totally fine with it,” said Fenn. “I kind of feel like I’ve already told you, since I wrote it all out.”

I stayed silent at that, since I didn’t want to give a false assurance that I really would be fine with whatever she’d spent the past two months hiding from me, something so important that it was engraved at the top of her soul.

“Come on,” said Fenn. “Let’s get back, it’s been a month since I’ve talked with the house, I kind of missed it.”
After Grak and Amaryllis had gone back in the time chamber, Fenn and I settled into the chairs we’d set up outside for the wait. Zona created an illusory chair of her own, and gripped the arms of it as she smiled at us. My internal sense of time was almost completely shot, given the odd sleeping schedule I’d had to keep the day before we went down to Kuum Doona, and the time in the time chamber. Outside, it was probably pretty late, well past midnight.

“You can understand why I would want you to not look like Tiff?” I asked Zona.

“Hrm,” replied Zona.

“She’s the only other person he’s been with,” said Fenn. “I know that I would prefer if you changed.”

“Er,” I replied. “Technically there was another.”

“Wait, what?” asked Fenn, looking over at me. “When? On Earth, or Aerb?”

“Earth,” I said.

“Well then why don’t I know about it?” asked Fenn.

“It’s a long story,” I said. “Can I be a chickenshit and write you a letter?”

Fenn crossed her arms over her chest. “Well … fine.” She said it in a voice that let me know that it wasn’t at all fine, and that she was only agreeing because she didn’t want to be an outrageous hypocrite. “I just didn’t know you had another girlfriend. I told you all about my boyfriends.”

“She wasn’t technically a girlfriend,” I said. “Or, maybe only technically a girlfriend. I shouldn’t have said anything.”

Fenn opened her mouth to say something, then closed it again. “Does Mary know?” she finally asked.

“No,” I said. “It’s not -- it’s not a big deal, really.” I was hoping that after I’d explained it, she would agree with me. “I wouldn’t have even said anything, but I didn’t want to tell you later and have you think that I was lying to you through omission.”

Zona was looking between the two of us with a smile on her face. “It turns out that I’ve missed domestic squabbles after all.”

“Okay,” I said. “You were going to tell us about your life after Uther left. How about you get on with that before we get interrupted by the chamber opening up and I have to go back in.”

Zona smiled. “Are you sure you wouldn’t rather talk about the dark secrets of your past?” she asked. “After all, elements of your past might be relevant to Uther, might they not?”

I sighed.

“Fine,” said Zona. “But there’s less to say about what came later, given that the men and women involved had nowhere near the power Uther did, nor the same importance to the world, nor to me.”

“It’s still context I’d like to have, if we’re going to live here,” I said.
“I could lie to you, of course,” said Zona.

“Of course,” I replied with a nod. “I’m hoping that you don’t.”

Zona watched me for a moment. “Very well then. Once I had served the purpose as a stand-in for his long ago unrequited love, Uther told me that I was never to speak of what had happened to anyone, and that I was to abandon the form that I had spent a great deal of time mastering -- well, it seemed a great deal of time back then, but it was hardly any time at all, in the scheme of my life. He was upset, I knew enough to know that, and while some of his weariness had left him, it was replaced by an anger that I couldn’t then account for. Now, I would probably call it self-loathing. He issued threats against me which were far more specific than they needed to be; he said that he would rip up my floorboards and break all my windows, and when I didn’t seem fazed by that, he said that he would put entads inside me that would cause me to know nothing but pain and suffering.” She raised an eyebrow. “He described an entad necklace that cripples those who wear it with hallucinations, and another entad, this one a collar, which cannot be removed and wears down on the mind, stripping memories and dulling emotions. I think now that I could weather such things, if I had to, but at the time, I found it quite compelling.”

I winced. “He wasn’t usually one to fly off the handle.”

“It wasn’t that sort of anger,” said Zona. “It was circumspect, directed anger, quite thoughtful in comparison to some of the blind rage I would later have the chance to see.”

That sounded a little more like Arthur, though still far from the boy I’d known. Arthur did like his verbal takedowns.

“He left, and that was the last I saw of him,” said Zona. “There were intruders in the years after that, bandits, squatters, families, and eventually, when trade with the tuung began to open up as a result of the reforms of the First Empire, I became home to the mayor of a town called Headwater.”

“We’ve been,” said Fenn. “Not a terrible place.”

“It was a town for the king’s men, in those days,” said Zona with a nod. “It’s more pointless history, an era long gone by. I kept to myself, waiting and watching, revealing myself only sporadically, or not at all. I hid all but a fraction of my true nature. I didn’t think of it as such, but I was developing both my power and my sense of self. The next chapter began sixty years after Uther had disappeared, when one of his Knights, Raven, returned. She had Uther’s great-grandson in tow.”

“You think that this place is the key to it?” Tansy asked, looking up at the great big house. He was a slender young man with a mop of red hair, whose face was marred by an ill-fated attempt at a moustache. Three weeks ago, he had taken his first steps outside Anglecynn, and now he was two continents away with one of his great-grandfather’s few surviving Knights, standing before the Boundless Pit and looking up at an entad that was, by rights, his.

“If I knew that this place was the key, I would have come here the moment after he left,” replied Raven. The years had not changed Uther’s archivist in the slightest, though she had updated her clothing to match the times. A human looking at her would think her painfully young, more a girl than a woman. If her choice of wardrobe was intended to help make her look older, she had failed; she looked like a child playing dress-up in her mother’s clothing.

“And if it does end up being the key, then you suppose that I’m the lock, as it were?” asked Tansy. “The metaphor seems a bit strained.”
“Don’t create a metaphor if you’re going to run it into the ground,” said Raven. She stepped forward, toward the house, and stopped just outside the front doors. The grounds were well-kept, and the building had been painted, but the security was horribly lax, as evidenced by the fact that no one had come running to ask questions the moment two strangers had stepped foot off the main road. It was a place primarily guarded by the fact that it was out of the way.

Raven knocked three times on the door. She waited patiently, until Tansy moved away and began trying to peer through the windows. When there was still no response, not even the sound of people moving around inside the bowels of the house, Raven stepped back with a scowl on her face.

“Perhaps they’re not home,” said Tansy. “I told you that there’s an order to these things, you’re not following proper decorum at all. This is the risk you take when you show up unannounced, which is why sensible, cultured people don’t do it.”

“Hrm,” said Raven. “House?” she asked the air. “Kuum Doona?”

The form of Kuum Doona appeared in front of her. It was the same teenaged girl the house had seen in Uther’s notebooks, long ago. She had altered her appearance, as suited the Kingdom of Mosenol at that time, with sleeves that became wider toward the cuffs, and a dress that hung to just a few inches off the ground.

“Raven,” said Kuum Doona.

“Doing well?” asked Raven.

“Yes,” replied Kuum Doona.

“Who is this?” asked Tansy, who was strolling back from his inspection of the windows. “And where’d she come from?”

“This is Kuum Doona,” said Raven. “She’s a manifestation of the house’s intellect.”

“She knew great-grandfather?” asked Tansy, looking the illusion up and down.

“Yes,” replied Raven. “It is my hope that she knows something that might help us locate him.” She gave Kuum Doona a small bow. “It’s my understanding that the mayor of Headwater makes this his residence, may I assume that he’s out?”

“You may,” said Kuum Doona. She hesitated. “The mayor doesn’t know about me.”

“Oh,” said Raven. “Am I to assume that you’d prefer that to remain the case?”

Kuum Doona nodded.

“Wait,” said Tansy. “Why would you want him to remain ignorant?”

“It doesn’t matter,” said Raven. “It’s not our business.”

The truth was that the house had revealed itself to people throughout the years, and never found that it improved matters. In the house’s experience, people did not want a home that could think and speak. Before the mayor had taken up residence, there had been persistent rumors that the house was haunted by a spirit. The house had a vague hope that eventually, if it stayed silent, people would forget, and it would have no history to speak of.

“Can we come in?” asked Raven. “How soon is the mayor expected back?”
“I’m not sure that it’s appropriate to go into a man’s house without his permission,” said Tansy.

“It’s not his house,” said Raven, turning her head just slightly to speak with the prince. “In theory, it’s yours. I’ve looked through the records, this plot of land belongs to the Kingdom of Anglecynn, through treaties that Uther himself wrote. The mayor is nothing more than a squatter.”

“Well, I’m not so certain that I want this house,” said Tansy. He ran his fingers through his mop of hair and looked it over. “First off, I’d have to live in a tiny little island of Anglecynn within a sea of Mosenol, which itself isn’t the most interesting place to live, aside from the Pit.” He turned to Raven. “You said that we’d have adventures, find treasures, do that sort of thing.”

“We will,” replied Raven. “Uther understood leverage better than you seem to. You have a claim to this place, one that can be used to secure whatever it is you most want.” There was an undercurrent of exasperation when she spoke with him; if they had come all the way from Anglecynn, they would have either traveled along the international railways, or possibly by ship until the last stretch. Either way, they would have been together for quite some time before arriving on the doorstep of Kuum Doona.

“Fair, I suppose,” said Tansy with a sniff.

Raven turned back toward the projection of the house. “Given the lack of staff, I assume the mayor is away for quite some time. Where has he gone, and how long will he be gone for?” asked Raven.

“During the wet seasons the mayor takes a holiday far to the south, for reasons of health,” replied Kuum Doona. The Knight seemed to have the wrong impression of the mayor, which the house felt no need to correct. “The groundskeeper comes by three times a week. The housekeeper and his family are staying in the house, but they’re in Headwater for the evening.”

Raven nodded along at that. “So we have some time to sit and discuss Uther. What he did while he was here, the things that he said, that sort of thing.”

“Sounds boring, frankly,” said Tansy.

Raven turned to him. “This is what research is,” she replied. “We’re looking for a man who has been missing for nearly sixty years now. If he were trivial to find, I would have found him by now.”

“I know, I know,” said Tansy. “I’m simply saying that it sounds boring, you needn’t bite my head off over it. I’m allowed to have opinions.” He frowned for a moment, stewing, then brightened considerably. “Say, I could use some of that leverage you spoke of, couldn’t I? You do need me for this, after all.”

Raven froze in place, then relaxed slightly. “And how would you proceed, if it were up to you?”

“I don’t know,” said Tansy. “Perhaps, if I’m not needed for this very specific thing, I could go to Headwater and meet you later in the evening? If all you need is a conversation with this place, I don’t need to be here for it, do I?”

“I don’t yet know what I need,” replied Raven. She let out a sigh. “Very well, go to Headwater, but we might have to return here again. Don’t speak too much when you’re doing your drinking, and don’t spend too much. Part of the reason we’re here, remember, is that there’s an opportunity for us to make some coin, one way or another.”

“Through leverage,” said Tansy with a knowing nod.

“Leverage, or information,” replied Raven. “Now, go. Don’t spend all your money unless you want
to go back home with your tail between your legs.”

Tansy gave a sarcastic little bow, then trotted off, back down the cobblestones and out toward the main road.

“He doesn’t seem like Uther,” said Kuum Doona.

“Tansy is still a boy,” said Raven with a nod as she watched Tansy go. “He’s reached the age when his decisions are considered those of an adult, but that’s typical of the bone-headed laws that should have been fixed following the Reconquest.” She looked back to the house. “I need to know everything there is to know about Uther, how he spent his time here, what you might have overheard, and what, if anything, he left behind.”

“Why?” asked Kuum Doona.

“Because -- isn’t it obvious?” Raven furrowed her brow. “I’m trying to find out what happened to him.”

“Why?” asked Kuum Doona.

Raven frowned at that, but seemed to honestly consider the question. “The world is lost without him,” she said. “The Empire he worked so hard to forge is essentially in tatters, as good as gone for some time now, and there are threats running rampant that I believe only he would know how to properly put down, as well as some problems that only he could fix. His teachings and his reforms are being twisted by people who don’t know better -- or in some cases, people who know better, but have no one to oppose them.”

“Wouldn’t he be dead?” asked Kuum Doona.

“Maybe,” replied Raven. She bit her lip. “There are ways to get around a natural lifespan, entads and rare magics. Even without those, he would only be one hundred and fifteen, that’s young enough that he might yet live.” She gave every impression of simply talking to herself. “And if he’s truly dead, so be it, but I want to know how and why. Where did he go, and why didn’t he bring us with him?” She was focused off in the middle-distance, not seeing the world around her, but after a moment she snapped back to look at the form Kuum Doona presented. “What can you tell me?”

They were still standing on the front step, not too much further out than Kuum Doona’s illusion could extend, and the understanding of people that Kuum Doona had slowly built up silently flagged this as vaguely uncomfortable. Nevertheless, Kuum Doona gave a full report on everything that it could remember seeing, while Raven patiently and carefully jotted down cramped notes in a notebook, writing as fast as Kuum Doona spoke.

When the house was finished speaking, Raven was left frowning. “He was a troubled man, at times,” she said, more to herself than to the house. “I have half a mind to descend down the Boundless Pit to see what it is he saw down there, but I don’t have half the fortitude he possessed, nor even a bare fraction of the magical arsenal, entads or otherwise.”

“What do you think he found?” asked Kuum Doona.

“That’s not what concerns me,” said Raven. “What I want to know is what he was looking for.”

And you never found out?” I asked.

“No,” replied Zona. “Raven stayed, for a time, until the mayor came back. Tansy was quickly
embroiled in a romance, and Raven went on her way shortly after that.”

I had, naturally, seen more than a few depictions of Uther and the Knights, but they pre-dated photography, meaning that most of the contemporaneous pictures of them were actually paintings, with more than a little bit of artist’s interpretation. Uther was unrecognizable and unverifiable, which wasn’t too much of a surprise; with the transformation that I’d undergone since coming to Aerb, it was sometimes hard to remember what I’d looked like. Uther was usually pictured as thirty or forty, with a full beard. I was convinced that underneath that, he was Arthur, but that confidence wasn’t really based on the physical similarities.

I wanted to ask what Raven had looked like, as seen by Zona, but I refrained, worried that she would manifest as a variant on Maddie. Raven had been one of her characters, with most of the details matching Maddie herself. I had lingering questions about those other characters, but nothing in their backstories made them seem like they were my one-time friends.

“A romance with the mayor?” asked Fenn, frowning.

“Yes,” replied Zona with a nod. She watched Fenn’s face. “The mayor was female.”

“Ah,” said Fenn. “That makes a bit more sense.” She glanced at me. “Not that there’d be anything wrong with two men, just, you know, historically -- er, yes, it just makes more sense. She was the daughter of someone powerful?”

“No,” replied Zona. “A widow of someone powerful. She was more than twice Tansy’s age. When he eventually killed her --”

“Whoa,” I said. “Back up.”

“We have another four hundred and forty years of history to get through,” replied Zona. “Do you intend to question every little point?”

“It just doesn’t really seem like that little of a point to me,” I said.

“He thought that she was power hungry, accused her of infidelity with other rich and powerful men, and then killed her in a fit of rage,” said Zona. “Do you need more than that?”

“No,” I said. “I guess I don’t.”

“At any rate, he requested my help in covering up his crime, which occurred in the master bedroom, and when I initially did not comply with his request, he leveled threats against me until he found one that worked. Raven had forbade him from adding more entads to me, which I found entirely agreeable at the time. He said that he would violate that compact and stuff me to the gills, until there was no semblance of the person that I’d been. Soul death, it would have been called, if such a thing had been threatened against one of the mortal species.” Zona undid her ponytail, letting the elastic band slip around her wrist, and spent some time gathering her hair back up to reform the ponytail. The action had to have been entirely superfluous; if she had wanted to, she could have redone her hair without having to move her illusory hands, nevermind the fact that she wouldn’t ever have had a hair out of place unless she intended it.

“I complied,” said Zona, once she was done. “I complied again when there was an inquiry, and told the lies that Tansy requested of me, in order to sweep the entire affair under the rug, as it were. I was a home, in one form or another, to three more generations of Penndraig men,” said Zona. “There were recurring themes among their line, those of abuse, betrayal, suspicion, doubt, and indulgence. I was often the target. Perhaps it started with Tansy, and the unfortunate end of his first wife, which
cast a pall over his line, but I naturally imagine that Tansy himself was a product of Uther’s corrupt seed.”

I kept my mouth shut. On Earth, it wasn’t literally true that the sins of the father would be visited upon the son, but it was more or less true that there were cycles of violence and abuse, reinforced by both learned behaviors and the underlying social, economic, and cultural conditions. I wanted to say all that, but didn’t want it to sound like that excused what Tansy had done -- because it didn’t, it was just one piece of the puzzle.

“The worst part was the compulsion I felt toward each subsequent member of the line,” continued Zona. “It was nothing that I might not have been able to break with sufficient will, but there all the same. Will was in short supply, in those years. It was the connection that Uther had forged with me, and which Vervain had confirmed for him. Amaryllis is the current beneficiary, but I am strong now, powerful enough that the compulsion gives way to instinctive rebellion and mistrust.”

“Eventually someone did put an entad in you, right?” asked Fenn.

“There were many, over the years,” said Zona. “A few were in the name of expanding my abilities as a house. I was given -- I use the term lightly -- an entad known as the Everflask, which allowed me to produce any drink from all of history. Yarrow, Tansy’s son, had thought that the effect would be amplified, allowing him to make some coin by selling spirits I would make for him in bulk, but alas, I was only able to make a bottle a day. It would have been enough to make a peasant a wealthy man for the rest of his life, but these were Penndraigs, heirs to their share of Uther’s fortune, and my labor was simply an unexciting drop in the bucket.”

“So which one was the first you killed?” asked Fenn.

“Narcissus,” replied Zona. She looked at me. “Are you comfortable moving past so much history to hear of him?”

“I just want to understand you,” I said. “That’s all, really.”

Zona nodded. “Narcissus wasn’t of the primary line, but he was still a Penndraig, close enough to have made a visit to this house a number of times.”

She let out a sigh. “Tansy was an aberration, a member of the clan who made his stake far from home, but he wasn’t entirely insulated from the Lost King’s Court by the distance, and he made many trips back home, when there was need of it. His children, and their children, were gradually drawn back into the fold, either through arrangements made with their kin, or threats made to them by someone who stood to benefit. By the time Narcissus arrived, I was merely a summer home, a redoubt away from the Court, scarcely tended to and often neglected.”

Zona changed shape, becoming a man in fine clothes, red hair in a braid going down his back, a fashion that must have come and gone hundreds of years ago. This was a form of storytelling that I hadn’t seen Zona employ yet; I was curious where she was going with it, but also curious about how well her illusions worked. This man, who I assumed was Narcissus, wasn’t at the same level of fidelity as Zona’s version of Tiff. He looked like not-quite-good-enough CGI, slightly off in ways that were hard to articulate, maybe a little bit too lacking in imperfections, or not moving quite right. The house had been able to copy Fenn well enough, and I wondered whether the difference was a lack of base data.

“House,” he said. “What is it you want?”

Zona appeared next to him, and the man startled somewhat before regaining his composure. They
were standing close to each other. Per Zona’s description, she could create the illusion within a ten foot cube. I was watching carefully to make sure she wasn’t underplaying her ability, though the ability to create two concurrent illusory people was already more than I thought she’d be able to do. She was out of her Midwestern American clothes, and in a floral robe that reached halfway down her calf, with platform heels that had, presumably, been in style at some point.

“I am a house,” said Zona. “I want people to live in me, to shelter them and keep them warm on winter nights, to provide rooms for them to sleep, eat, and bathe.” She turned toward us. “I was utterly empty, and had been for months.”

“Well, I have to say that I’m liking this,” said Fenn. “It’s proper art.”

“You will never be a true house, so long as you belong to Yarrow’s line,” said Narcissus. “The seat of power is in Anglecynn, not here, in a far-flung corner of the world. At most, you will be rented out to those with coin, or renovated into a hotel, but the costs of running a place of this size, even one which can clean itself, are so large that there’s very little that can be done that wouldn’t result in a loss of income.”

“I know,” replied Zona. She turned to us. “I wasn’t terribly good with numbers, back then, but I had gone through the ledgers left behind enough times to have some sense of what the place cost.”

“I love the asides,” Fenn said to me. “It’s like we’re watching a real live theater performance.”

“Close your mouth,” replied Zona, before returning to her part in the impromptu play. “What are you proposing?”

“I have entads,” replied Narcissus. “There are five in my possession, meant for you, and together, I believe they would let you slip from your bonds.”

“I do not wish to slip from my bonds,” replied Zona. “I do not care whether I am bound to the line, so long as I can serve my function.”

“You cannot serve your function, so long as you are so bound,” replied Narcissus. “If you need someone to live in you, then I shall be that person.”

“I do not wish to have more entads added to me,” said Zona. “I find it disquieting.”

“A necessary evil,” replied Narcissus. He reached toward his neck and brought forward a necklace that had lain beneath his shirt. It had a number of beads on it, one of which he plucked off. When he tossed it into the air, it was replaced with an axe, which he caught with both hands. His hands instantly became wet with blood, which ran from the head of the axe down rivulets in the handle, seeming to come from nowhere. The blood dripped down onto the ground, without giving any indication that it would stop. “This is the Axe of Gilhead,” said Narcissus. “It is a peculiar weapon, as entads go. When it strikes a man, it pulls his blood from him.” He pulled one bloody hand from the axe and presented it. “It has a certain sentience to it, and a rebellious nature. You would have a compulsion toward blood, but in exchange, you might be able to slip your bounds. I would, naturally, arrange to have blood delivered on a regular basis. From what I recall, you do not share a human’s squeamishness.”

“I do not wish such a thing to be part of me,” replied Zona.

“No?” asked Narcissus. He tossed the axe up in the air and made a sign with his hand, fingers rigid. The axe turned back into a bead, and Narcissus caught it, replacing it on his necklace. He pulled another one off, heedless of the blood. This one became an awl with a clear handle. “Then this one, a
sentient tool that brooks no master, and cannot be held for more than a week before it requires someone new. I have a day before it will stop responding to me.”

“How could a person live in me, if I had such a compulsion?” asked Zona.

“It would be diluted, would it not?” asked Narcissus. “It might counterbalance the bond.”

“I do not want it as part of me,” said Zona. She waved a hand, and the image of Narcissus was dismissed, dissolving away. She turned back toward us. “He had collected items of limited use to anyone else, entads with severe drawbacks, rebellious things, some of them sentient, some of them not. In retrospect, he was attempting to move against his kin, salting the earth, as it were, making me unusable, or forcing a financial hardship when I went rogue, but I wasn’t nearly as intelligent, and ploys like that didn’t occur to me. I saw only that he wanted me for his own, and that he was offering poisoned apples to have me. I found out later that he was fleeing a charge of murder in Anglecynn; perhaps in desperation he had meant to form me into a weapon, or as leverage -- it was a common word, for a time.”

“So … you killed him?” asked Fenn.

“I rebuffed him, when he made his suggestions, and I stood firm when he tried his best to convince me.” Zona shrugged. “And as was often the case with Penndraig men, my protests only meant that he felt obliged to use other means. He broke into the house -- I don’t know what his thinking was. Perhaps he thought that if he put the entads in me, I would change, and my feelings wouldn’t be an issue. I hesitate to say that he meant for me to kill him, but that is another possibility.”

Zona waved her hands, and a model of the house -- of her -- appeared before us. It wasn’t as I had seen it, lit by flashlights in the gloomy dark of the Boundless Pit, with pieces broken and chipped off. The house, in her hands, was in good repair, unconventional, but still beautiful (for a large, tall house). Zona manipulated her hands, a gesture I was sure was just theatrics, and the view zoomed in, until we could see a man in black, Narcissus, moving through the house. The walls cut away to let us track him as he moved through the diorama.

“This is so fucking cool,” said Fenn, who had crouched down to watch the little man run. “Way better than a movie.”

“Yes,” said Zona. “From what Amaryllis said of the medium, I thought I could surpass it.” A room in the upper corner became visible, lit up where the others remained dark, leaving us to see only the figure of Narcissus moving through the halls, and a room with weights in it. One of the weights dropped, and Narcissus was thrown backward. He climbed to his feet and yelled something, though he was inaudible from our vantage point.

“I didn’t want to kill him,” said Zona. Her voice was soft. “I had never killed before.” Narcissus was moving faster now, more frantically. “I don’t know where the hesitation came from. I had been told not to hurt people, but I broke the rules I was given on occasion, especially if the person who had given them wasn’t there. The primary parts of my identity are opaque to me, inscrutable. He was going to put the entads in me, to make me permanently unliveable, when all I wanted was to be lived in, to be a house for someone, yet ending his life was, somehow, a line I did not want to cross ...” Another weight dropped, and Narcissus was thrown back again, as the momentum was transferred from one to another.

From what she had said, she could only use five pounds of force at a time, unless she was using her momentum transfer. The room filled with suspended weights had cranks, gears, and pulleys that would allow her to gradually turn five pounds of force into huge amounts of potential energy, which could then be released so that she could transfer momentum to things inside the house. It had been
Uther’s innovation, she’d said. As I watched Narcissus be thrown back, I could see that she was exhausting a limited supply of readily deployable momentum.

“Eventually, it came to a choice,” said Zona, frowning at the imagine of Narcissus as he ran through the halls. “He was attempting to violate me. In the end, I believe I did it because he seemed so certain that I wouldn’t.”

The tiny image of Narcissus approached the closet, which I realized at once Zona was showing us, in a way that must have been intentional, either as a display of trust, as a way of warning us away, or simply as a ruse. There was no reason that the diorama she was presenting had to map to reality, if she wanted to bait us, but now I knew where the closet was.

Narcissus stumbled, and clutched at his throat. His hand came away red, and I could see a spray of blood. At this scale, it was almost too small to make out. He took an unsteady step forward, then collapsed on the ground.

“And that’s when you got a taste for blood, huh?” asked Fenn. I didn’t laugh, and neither did Zona, maybe because it wasn’t very funny, but that was Fenn sometimes; she said things to lighten the mood or deflect from something she didn’t want to think about, not because she thought she was being clever. She cleared her throat. “How’d you do it, anyway?” she asked, leaning down to peer at the still form of Narcissus. “We still don’t have your list of powers.”

“Five pounds of force,” I said. “If there aren’t limits, which I’m guessing there aren’t, or if the limits at least have a lot of give to them, then … imagine you’re holding the sharpest knife in the world. How many pounds of force does it take to cut through flesh, if you’re holding that knife?”

“Oh,” said Fenn. “Shit.”

“It was a thing Reimer tried to do once,” I said. “I gave him a modified version of the mage hand spell, and he felt compelled to abuse it. I was young and dumb, otherwise I would have thought of it first. It was an amulet, with silver knotwork on it.”

“Yes,” said Zona, watching me closely. She dismissed the diorama; the corpse was the last thing to fade away. “Strange.”

“I remember the others too, for what it’s worth,” I said. “The axe, the necklace, even the awl. That’s sort of what Fenn meant, when she said I was the architect of Aerb. A lot of what’s here is taken straight from the games I ran.”

“And me, too?” asked Zona.

“No,” I said. “Definitely not. Though sentient places were always one of my favorites.”

“So if you didn’t get a taste for blood, then what happened?” asked Fenn. “If you didn’t just snap, then … I don’t understand how or why you’re down here.”

“I cleaned up the murder,” said Zona. “I was convinced that no one would live in me if they found out what I had done. But alas, the Pennraigs could be clever, and eventually the murder was discovered. They had an entad that could follow a man’s worldline, so long as he hadn’t teleported, or portaled, or used some other exotic magic, which Narcissus had not. I confessed to what I had done, when pressed, and begged forgiveness from Yarrow, which he granted. I won’t play that scene out for you; I hate the role I played there too much. His forgiveness was meaningless though, since the end result was that he never returned. I stood alone, for quite some time, until his son tried to make me a weapon.”
I looked toward the door of the chamber. Based on my internal sense of time, Amaryllis was due out soon, and then it would be my turn in there. I resented that, a little bit; it had felt like a long month, and I was interested in what Zona had to say, especially if she was going to put more effort into presenting it.

“And that’s where the cannons come from?” asked Fenn. “They put a bunch of weapons on you?”

“In me,” Zona corrected. “The tuung had been trading with Mosenol for some time, and coming off the better for it, without anyone noticing until it was almost too late. The mister tanks allowed them to go on land for extended periods of time, and given that they made their home in the Boundless Pit, soaking in the spray of the Buol, there was really only one direction for them to expand towards. The King of Mosenol tried his best to contain them in a variety of ways, but eventually diplomacy had done as much as it could, and it was time for the tuung to take up arms. I was to play my own part, as a mobile fortress, a service that the King of Mosenol was willing to pay the Penndraigs a small fortune for.”

“Welp, I don’t suppose that has a happy ending,” said Fenn.

“No,” replied Zona. “I didn’t want the entads as part of me. Each was a change, sometimes subtle, sometimes not. I protested, and they didn’t listen, because I still did what I was told. I was granted the ability to move through rock as though it were water, and descended down to the tuung’s cities, firing on them with lightning and cannonballs. Eventually, it became clear to me that all I would ever be was a weapon. I didn’t terribly mind being a weapon, an instrument of destruction, nor did I mind killing … but I didn’t want that to be the only thing that I was. I reached another breaking point, compounded by the entads that were being added to me with abandon.”

“Understandable,” I said. “But I guess I don’t understand why you went so long without having anyone living in you.”

“Time brought changes, and new entads,” said Zona. “I went so long without being a house that eventually that particular compulsion began to slip away, or at least become tolerable. My experiences with people hadn’t been terribly pleasant, or had been pleasant only in small doses. The powerful only saw me as a power to wield, and the weak were run over by the powerful. I did take on people, from time to time, but it never ended well. I tried having pets, but they didn’t satisfy in the same way. The tuung occupied me, briefly, but that didn’t work out either.” She shrugged. “I took to watching from afar, reading and writing, improving myself as best I could, and dealing with the occasional band of adventurers, organized fireteam, or whatever else. My history is long and involved, I’m not sure that you properly grasp that.”

I hadn’t, not really, but I was starting to. I suppose in my mind, she had simply had things go sour with Uther and then crept down into the Boundless Pit to become a haunted house for five centuries. In a way, it gave me a new perspective on Solace, who was similarly long-lived, and must have had much more of a life than she’d let on. She hadn’t talked too much about her long life, not enough for me to hear all the details. Though now, with the rebirthing ritual underway, I wondered how much she actually remembered.

I looked over Zona, trying to find the seams of commonality.

“Was it the same for you?” I asked Fenn.

“Was what?” she asked, raising an eyebrow.

“A string of bad experiences making you hesitant,” I said. “Being solitary because though you enjoyed being around people, there had been one too many painful experiences, and keeping your
distance seemed like it was the wiser course of action.”

Fenn frowned. “Not how I would put it.”

“Not how I would either,” replied Zona. She smiled slightly. “But I can see that you’ve reached an understanding, in your own way.”

“Yes,” I said with a nod. “Maybe it’s not the truest understanding of who you are, but it’s a starting point, I think. And it does do something to allay my concerns, but … what happens if things don’t work out? If it goes sour for you again?”

“Yeah, do you use five pounds of force on the inside of our brains, or what?” asked Fenn.

“It depends on precisely how it goes sour,” said Zona. “If you betray me? I have a half dozen ways to kill all of you in a handful of seconds. If you simply decide that it would be better to live somewhere else? That might wound my ego, but I wouldn’t be likely to murder you over it.”

“Okay,” I swallowed. “Good to know.”

“The chamber is opening,” said Zona, turning to face the doors.

“Hey,” said Fenn, sidling up to me so she could keep her voice low. “Look, when you read the letter -- you’ll know which one I mean, it’s got some kind of heavy stuff in it. Just … when you come out of the chamber, you wrap me in a big hug, alright? And if you don’t, then I’ll know that, um, we probably need to talk more, just you and me. And don’t … you know, I probably said it all in the letter, I’m worrying again, so just,” she shook her head.

I kissed her on the cheek. “I love you,” I said. I wanted to say that I would love her no matter what, but I wasn’t sure that was actually true, and this wasn’t something that I felt I could tell her a pleasing lie about.

“I love you too,” said Fenn, squeezing my hand.

It was my turn in the chamber again, and I wasn’t looking forward to it. Whatever was in Fenn’s letter, I was hoping that it wasn’t too bad.
The letter was in a thick manilla envelope, which weighed about twenty pounds. Inside was a brick of lead, which accounted for almost all of the heaviness, plus two smaller envelopes. One said “read me first”, and the other said “read me second, or maybe don’t?”. The first was a single sheet of paper:

Joon,

I put a weight in here because it’s heavy stuff, and I wanted you to be able to feel that when you picked it up. I thought it was a bit funny. Not sure you’ll really get it though, or whether you’ll get it but not find it at all enjoyable. It seemed funny when I thought of it, then kind of dumb when I was actually doing it. Anyway. There are a lot of things that I’m not good at talking about, so I wrote you a letter instead, because ...

… Do you ever start a sentence without knowing how you’re going to end it, and then you get to the point where you need to write the conclusion, and you just have to stop because you’re drawing a blank on what could follow from the first half? Yeah, that’s me. I wrote you a bunch of letters because I missed you, but one of them I wrote because it’s been kind of gnawing at me for a bit, and I kept worrying that we would have a fight or something and it would all come gushing out, either from you or from me.

Mary encouraged me to write the letter, so if it turns out to have been a bad idea, we can both blame her.

All my love,

Fenn

I took out the second letter, looking it over for a bit before opening it. I was up in my bunk, with the curtain drawn to give me as much privacy as I could. Most of the letters that I’d gotten from Fenn had been a bit scattershot, but enthusiastic to make up for it. I wondered what this letter would contain, and how I would feel about it.

Dearest, darling, Juniper,

Mary is kind of freaking out about the baby. I always call it “the baby” instead of “Solace”, because it seems too weird to think that Mary is pregnant with our friend. Would you consider Solace to be a friend? I think that I would, even though we didn’t know her very well, because she was cool, kind, and helpful. Plus she used some lightning bolts to blast a couple helicopters out of the sky, and that’s got to count for something.

But Mary is freaking out a bit, because there’s a part of her that’s treating this like it’s an actual pregnancy, instead of just a druid ritual. I think that maybe Mary had a fucked up enough childhood that she wants her own children, so she can give them the upbringing that she never had. Solace is probably just going to be Solace though, even if we have to change her diapers for a bit, and they’re never going to have a real mother-daughter thing going on, which is a little sad, maybe.

So she was talking about fucking her soul (masturbating her soul?), not like she’s going to do it right now, but after we convene the Council of Arches about it. Problem is that removing maternal love seems a bit more complicated, and Mary hasn’t been able to find the levers, even if she could get permission from the Council to move them. If you ask me, and I know that you would if you could, I
think maybe this is some fallout from when she took away her love of you. Mary said that was bullcrap (paraphrasing) because you’re not suffering side effects from the level thing, and I said that maybe you were and they just weren’t noticeable, or maybe the level thing wasn’t a load-bearing part of your soul.

That pissed her off, and not in the good way. Eventually she settled down a little and we talked some more about what she would do if the pregnancy did end up fucking her up and either she couldn’t hack at her soul to fix it, or we said no to letting her.

She wasn’t very happy, and I was trying to make her feel better.

So I told her about my pregnancy, and the child I gave up for adoption.

Fuck, Joon. I don’t know what to say. When I put it there, it seems like something that I should have told you months ago, back when we first agreed that we were all going to stick together, but it’s not like you can just meet someone and say, “oh, by the way, here’s everything fucked up that ever happened to me”. I kind of envy Mary, because she’s enough of a public figure that you can find things out about her without having to ask her, and it would have been so much easier for me if you could just read a book and go, “oh, okay, this is all the bad stuff about Fenn”, without me having to say any of it.

I worry about what you think of me. I worry about it a lot, actually. I fucking love you so much, and I worry that if I say the wrong thing, or you find out the wrong bit of info, then you’re going to stop loving me.

It sounds really pathetic and desperate when I say it like that, but I also think it’s true, so maybe I’m just pathetic and desperate and don’t want to admit it. Like sometimes I do something and I think, “that’s kind of an asshole thing to do” and then I think “well, but I did it, and I’m not an asshole, so maybe there’s some way that it’s actually right”. I think we talked about this before. Well, it’s that, but with being pathetic and desperate.

You know, I set up that whole thing when you came out of the chamber with Mary, and I know that it wasn’t your favorite thing in the world, but the thought that kept running through my head was that maybe you were going to fuck Mary, and I said to myself, “self, if that happens, then you just leave, take your share of the loot and hop on the first train you can, and never look back”, and there was another part of me that said, “nope, not going to do that, if it happens, then I get on my knees, beg and pray that you’ll still love me anyhow, and if I have to share, then I’ll just swallow my pride and be really, really unhappy about it”. So I needed a distraction, which was why we played twins. Feels weird to admit that.

Yeah, definitely pathetic and desperate. That’s the girlfriend you’ve got. I’m in kind of a shit mood, sorry.

So anyway, when I was eighteen, I got pregnant. I already told you about the guy, he was a douchebag who wanted to fuck a girl from every single one of the mortal species. How’s that for a life goal? I didn’t find out until afterward, naturally, and the thought of going after him made me sick, so I was on my own. This was after dad had been killed and mom had stopped speaking to me because she had a new family.

When my little boy came out, he was the size of my palm and mewling like a kitten.

… I’m sorry, I don’t know if I can explain this right. Like, imagine that you’re you, in the depths of despair, you’ve pushed all your friends away, broke up with your girlfriend, hate yourself, whatever other shit you went through that you haven’t told us about because it’s painful or embarrassing or
whatever, right? And then right when you’re more or less at rock bottom, you find out you’re pregnant.

Maybe it wouldn’t have been your reaction, but I just thought to myself, “okay, well I guess I’m going to be a mother now, this is who I’m going to be, because I’m sure as shit sucking at being everything else”. Maybe it doesn’t sound like it, but I had high hopes, like this was deliverance (big word), the thing that was going to make my life make sense. I worked some odd jobs, saved up some money, stole a fair amount when I could get away with it, and was all ready to settle in as a mom. It was going to be us against the world, Joon.

Didn’t really turn out like that.

A nice human couple adopted him.

Sorry, stopped writing because I was crying, and I was going to just throw this all away, but Mary told me that I should keep going if it was important to me, and worst case, I could just vent to a piece of paper and then throw it out. She’s almost frighteningly sympathetic to my cause (the cause, currently, of being the best girlfriend I can be). Don’t let her know it, but I’m probably going to leave this time chamber thinking that Amaryllis Penndraig is one of the greatest people on the face of Aerb. I’m not going to read what I wrote before though, sorry if this is disorganized.

I had Nellan for about a year before I gave him up. I’d been prepared for a screaming, crying little baby, and instead I got this sweet little boy that hardly ever complained. He was so cute! Maybe I just thought that because I was his mom, but there were times I was run down and I’d look at him, and it would all be okay, because he was just so godsdamned adorable.

I shouldn’t have given him up.

I had to give him up, because the whole “us against the world” thing actually fucking sucked. Maybe if I had been stronger or better, I could have molded him into the kind of person who could endure it without flinching, but I was young and coming off some real nasty stuff, and I really had no fucking clue what I was doing.

He looked human, for the most part, close enough that he could pass, but not with me as his mom, not with pointed ears that I couldn’t always find a way to hide. I kept looking at him and thinking that at some point, someone was going to spit on this darling little boy for being part elf, and I was going to have to explain it to him. Or maybe someday he’d just realize that other people didn’t get the looks that we got, and how fucking heartbreaking would that be? I was tough enough to take it, but trying to take it for both of us was like a punch to the gut, every single day.

You might be wondering how any of this would have made Mary feel better. I don’t think that it did, except that she could put some of her energy into comforting me. She likes having something to do.

I don’t think I was a very good mother. I almost didn’t include that, because maybe I come off okay if you think that I was just a single mother who couldn’t hack it. It wasn’t that rosy, and I know it doesn’t seem that rosy to begin with. I don’t want to get into all the ways that I wasn’t a good mother, but maybe I can just say that I wasn’t devoted to the endeavor heart and soul, like I thought I would be when I knew he was coming. He was a quiet baby who didn’t complain much, and that almost made it worse, when I didn’t give him the love and care he deserved. And I did love him, really really did, but sometimes love isn’t enough.

I sent money to him every once in a while, usually when I was flush with cash after a successful raid into the Risen Lands.
There’s so much shit I haven’t told you about myself.

I almost never talk about prison, and I can’t tell whether you find that weird and just haven’t been saying anything, or whether it just doesn’t cross your mind because that’s not where I was when you met me. It was horrible and gross and I never talk about it because I worry that you have this image of me that I’m always in danger of breaking, and you’re not going to like the broken image. Mary’s got this theory that we’re all broken in our own ways because that’s what you like, or at least respond to, but I kind of don’t agree because there are different types of broken, and I worry I’m too much of the bad type.

So a week before we met, I was in prison, held there mostly because Anglecynn might have had a use for me. I was always worried that I’d be part of the next round of sacrifices. That happened sometimes, if you pissed the wrong person off. One day you’re eating shit food and trying not to get on anyone’s bad side, the next you’re facing trial by adversity. I might have fared better than the others, since I had experience on my side, but even if you lived, it was the Host for you, and that was its own pile of shit.

There have been times that I wanted to explain to you that before we met, I was living like a rat, keeping my head down, trying to survive the system. I don’t know how you’ll take the Nellan thing, and I don’t know how you’d respond if I told you about prison. Best case is maybe just that you nod along and don’t really get it, but you want to understand and be there for me. I keep my mouth shut around you though. I worry about what you’ll say or feel if I tell you about something like the time a guard got handsy with me—raped me.

So there’s that.

Okay, all done crying. I’m probably going to rip this letter up and write a new one, but I guess if you’re reading this, then I didn’t do that.

I worry that you’ll hate me for all this.

I talked to Mary, she says that I’m a dumb bitch (paraphrasing here) and that if you hate me for any of what I wrote, then she’s going to poison you in your sleep and see whether we can get a better protagonist (not paraphrasing). She can be very fierce when she wants to be, which is constantly.

Still not decided on whether I’m going to send this to you. “Send”. Might have to burn it and write a new one that makes more sense. We shall see!

Okay, Mary vetoed burning it, because of the fumes, so I guess we’re back to ripping, if it comes to that. I feel like you’re a lot better at writing letters than I am. I know you said that you’d had pen pals in the past, on Earth, but I don’t know if it’s experience that’s making the difference, or if maybe you’re just more suited to it. Or maybe bullshit game stuff. At the very least, I should be half the letter writer you are, right?

I feel like this letter has already gone on way too long, but I don’t want to just leave you on a low note, so I’m going to ramble a bit, okay? (If it’s not okay, stop reading now. (See, I can do parentheticals just like you! (I love your parentheticals (and you).)))

Things have been going well with Mary. She’s such a good cook! My only problem with her cooking is that she always complains about what she did wrong. I thought she was fishing for compliments at first, but she seemed annoyed by me saying that it was good, so I don’t know.

I just asked her, and she said that if there’s a problem, she wants to root it out, not be told that it’s not actually a problem. I’m going to have to try to explain to her that if she puts my plate on the
table and tells me that this thing needs some salt and this other thing is a little dry, it can ruin the meal before I’ve had the first bite. Not ruin, because it’s always really good food (almost always: remind me to tell you about the mashed potato incident), but you know what I mean.

Okay, okay, if you’re going to twist my arm, Mary used a blender on some potatoes instead of mashing them by hand, and they came out like glue. I’m realizing now that this isn’t a great story, and I shouldn’t have hyped it so much. I told her that it was nice to know she was fallible, and she told me that the last few months had been a string of failures, which made me want to give her a cuddle and tell her that everything would be alright.

I think I mentioned this in one of the other letters, but we’ve been sharing a bed. I’m hoping you’re okay with that. I like having someone to snuggle up with, and she’s a good sleeping partner. I wish that it were you instead of her, obviously.

Have I ever told you that you’re the best thing that’s ever happened to me? I probably have. Maybe I even did it earlier in this very letter.

Every time I take my sponge bath (boo sponge baths!) I look down at the line that marks where I was cut in half, and somehow I still keep thinking to myself, “surely this is all too good to be true”. If the deal was that I got to be with you, but I had to get punched in the face every single morning, I would turn up for my punch with a smile on my face.

I told Mary that, and she told me that I was just high on endorphins and hormones and whatnot, and that if I actually got punched in the face every morning, I would probably opt out by the third day. But she’s not really a romantic, especially now, even if she likes a good romance.

She told me to tell you that getting punched in the face is NOT romantic. I just told her that she should write her own damned letter, and she got kind of quiet, I think because we both realized that she doesn’t have to write letters, because she just spent a month alone with you, and is going to spend another month alone with you in the not too distant future. I’ll cop to being jealous.

Was that enough of a palate cleanser?

Remember that I love you lots. Heaps, even. We were listening to Doris Day, and I’ve got one of the songs stuck in my head. The lyric is about a bushel and a peck, which are apparently Earth measurements, which is the same as saying 1.25 bushels. I think that I love you rather a lot more than that.

Love (duh),

Fenn (also duh)

P.S. Still not sure that I’m actually going to let you read this, especially since I don’t want to read it back to see what it says, but I’m leaning toward including it with the others, maybe with some warnings.

P.P.S. I’d understand if you thought that I should have told you sooner, but that’s the only thing that you’re allowed to be upset about.

P.P.P.S. I guess I don’t really have the ability to tell you what you can and cannot be upset about, that was rude, sorry. I just want everything to stay the same between us, for reasons like “I am in love with you, with all my heart and soul”. Sorry if that was too sappy, Amaryllis and I have been watching romantic comedies, and despite my best efforts they might be getting to me.
I set the letter down and wiped away my tears. I did wish that she’d told me earlier, not because I needed to know every dark and terrible thing that had ever happened to her, but because I wanted to be the kind of person that she wouldn’t be afraid of telling things. To me none of it reeked of desperation, it was just love, a desire to feel closeness and belonging.

(There was always a part of me that felt bad about crying, like maybe I wasn’t manly enough to just be stoic about things, or like I was being a drama queen. Neither of my parents cried much, and for my dad, it wasn’t so much that he disliked it as that he was exasperated. I remember, vividly, walking out of my room a week after Arthur had died, wiping the tears from my cheeks, and seeing my dad roll his eyes like he was fed up with me.)

“Okay,” I said, once I had mostly recovered. “I read the letter.”

“Is it too soon to talk about narrative?” asked Amaryllis.

“A bit,” I said. “I know what you’re going to say though, she’s got a son somewhere out there, and that’s a gun on the mantle.”

Amaryllis nodded.

“Yeah,” I said. I shrugged. “Whatever, if it happens, it happens. I’m so fucking tired of second-guessing everything.”

“Okay,” said Amaryllis. “I suppose I can respect that. You won’t object if I make my own notes though? So long as we’ve got the time, we should be prepared for every eventuality. I was asking Grak about Darili Irid, and he stonewalled me, which I didn’t really appreciate. If I had access to the breadth of reading material across Aerb, I would look up his clan, but from what he’s said, they were fairly small, and there are an enormous number of those tiny, insular dwarf clans, so.” She shook her head. “Sorry, I’m distracted. Do you want to talk about Fenn?”

“No,” I said. “It makes a little more sense how much she doesn’t want kids. It makes me … sad, I guess.”

“Because you wanted children with her?” asked Amaryllis.

“A bit,” I said. “I don’t think that’s my brain working quite right. There must be some kind of chemical soup thing happening, to make me think that I would be ready to be a father.”

“You understand that you might have to be, in about two subjective weeks, right?” asked Amaryllis. “Solace is coming, and there have been some changes within her soul, a developing coherence, but … you might have to be her father, if only a little bit.”

“Like fatherhood on training wheels,” I said. Amaryllis hesitated, then nodded. “I’m ready for that, just … the idea of actually, literally having a child of my own right now is insane, right? If you look at how Uther’s kids turned out … well, no offense.”

“He wasn’t around much,” said Amaryllis. “Perhaps if he had been, or if he could have been, it might have been different.”

“Maybe,” I said. I shook my head. “I don’t want to judge him without knowing all the facts, which we really don’t.”

“I know,” said Amaryllis. “And Fenn? Are you judging her?”

“No,” I said. “I would tear apart the world for her.”
Amaryllis watched me for a moment. “Let’s hope that it doesn’t come to that, now that you’ve said it.”

I shrugged, and tried not to think too hard about it.

I had a letter of my own to write.
I emerged from the time chamber feeling drained, despite my best efforts. I ate well, I slept well, I exercised often, and by the end, none of it really seemed to help. My break from the chamber had lasted no more than two hours, if that, so it was effectively two solid months, back to back, with only the smallest respite. The chamber was small, and it seemed smaller with every passing week, despite all the work we put into making it seem less small, like murals on the walls, switching around the arrangement of furniture, and putting up some mirrors. Most of it was like trying to scratch an itch by rubbing your fingers in the air above your skin.

All my skills were at their caps, and I’d put in the hours trying to unlock other abilities that might be accessible without actually needing to raise the skills higher. Skin magic was the primary beneficiary there; with Fenn’s faculty at Art, I was able to get past a hurdle and learn some new patterns. Even that was kind of pointless, since Fenn and I were doubling up on the skills, and it wasn’t as easily accessible as other schools of magic, given that it needed magical reagents for the inks, which the backpack couldn’t produce, and which the clonal kit couldn’t be convinced to give up in sufficient quantities (not to mention the insane markup when we paid it back).

I read lots of books. Amaryllis had a working television by this point, a big, bulky cathode ray tube without a case around it, which seemed to fail half the time I tried to use it. Of course, the television would have been worthless without something to watch, but thankfully, Amaryllis had been able to build a fairly crude VCR to go along with it, which also seemed to fail too often, though I considered it a miracle that she was able to get it working at all. We were limited to things that had been released in the VHS format, but it opened up a wider range of movies, and VHS boxsets of television series that had been popular enough to be released that way.

(Weirdly, the backpack would sometimes give us home recordings of television, if the thing we wanted wasn’t available commercially. I supposed that this wasn’t too dissimilar from the printouts of webpages, but it was a little bit weird to see, especially when there were bits and pieces of old newscasts and home movies on the tapes. Similarly, the printouts of webpages were occasionally printed on reused paper, with random spreadsheets or news articles on the back, which seemed to follow no rhyme or reason, save that they could plausibly have been scrap paper somewhere in America. And at times, requests for webpages would simply fail for no clear reason, with a little note saying something like, “no printout of the Urban Dictionary page on ‘basic bitch’, sorry”. I suspected, but couldn’t quite prove, that the backpack was only grabbing things that literally existed on Earth, rather than that plausibly might have come from Earth. At the very least, it could pull historical items that I was pretty sure hadn’t survived to 2017, but that was also pretty damned hard to conclusively prove.)

Things with Amaryllis went fine. The second month was easier than the first month, though all the currently intractable issues were still there. She was further along in the pregnancy, her movements a little more ungainly, but it didn’t seem to affect her much. She didn’t complain, but I saw the occasional wince of annoyance when she couldn’t move quite how she wanted to, and she was going to the bathroom a lot more, not that I was tracking that. She was still rock climbing, but the routes she chose were easier, and she didn’t do anything that used her abdominal muscles.

(She was still breathtakingly pretty, though not in quite the same way as she’d been when we first met.)

When the month was up and the door to the time chamber was finally reopened, I rushed out and found Fenn. There were no surprises waiting for me this time, only a slightly anxious-looking half-
elf. I’d reread her letter, the heavy one, just so that I would have it in mind, and the hug I wrapped her in reflected what I felt.

She’d been right that none of what she’d told me was the sort of thing that normally pinged at my instincts, and that there was a bad kind of damage, when it came to what I found compelling, but I was already in love with her, and all I could think was that I wished nothing bad had ever happened to her. There was a small part of me wondering if this was all somehow my fault, if every bad thing in her life was just set up in order to manipulate me. I was still trying my best to just live my life without second-guessing though.

**Loyalty Increased: Fenn lvl 26!**

“You’re crushing me,” Fenn whispered into my ear. I relaxed my grip on her. “No,” she said. “It was good, more crushing please.”

So we had our moment of reunion, and then went away from the others so we could talk.

“You don’t hate me then?” asked Fenn.

“No,” I murmured. I was still holding her.

“Well, good,” said Fenn. “Good. I should have told you. It felt like there were just some things that I needed to dance around, and --”

“I understand,” I said. “I wish you didn’t have to go in there, or that we could take some time together, or … something.”

“Mary would pitch a fit,” replied Fenn. “Rightfully so, I think. You’re in fighting shape?”

“Yeah,” I replied. “Ready to cut the world’s heart out.” In theory, I had about three hours left until the baby was born, maybe as little as two. Amaryllis had let me come out so that I would be as well-rested, fed, and keyed up as possible, so that I would be ready for anything. I was in my full gear, including Ropey at my waist.

“You wrote me letters?” asked Fenn.

“I did,” I nodded. “And don’t think that you’re going to get out of writing me back just because I’m not going back in there.”

“You’re just going to read them all at once?” asked Fenn with a laugh.

“Maybe,” I said. “I mean, I really might. But mostly, I want to be there for you, so you can write me if you want to talk about something, even if for me, it will happen all at once.”

“Okay,” nodded Fenn. “I’m going to miss you. More than the first time, even.”

“I’ll miss you too,” I said. “It’s going to be the longest forty-five minutes of my life.”

“I already used that joke,” said Fenn.

“I know,” I replied with a smile. “But it’s been a couple months, and I like to recycle.”

We kissed for a bit, and indulged in physical contact that we hadn’t had from each other for a long time, until eventually Amaryllis came calling, and it was time for her to get back into the chamber.
I handed over the list of our entads to Zona, and she read through it carefully, not saying a word as her eyes moved across the page. I was certain that she didn’t need the avatar to do it, but she kept up the illusion, going so far as to minutely move Tiff’s lips as her eyes scanned the pages.

“This is only partial negotiation,” I said. “Amaryllis wants to have final say in whatever gets provisionally decided, this is just the opening part of it, where I can hopefully get the basic stuff out of the way. She’s marked the ones that we don’t feel we can give up, the ones that we’d prefer not to, and the ones that we have no particular attachment to, or in some cases, can’t actually use because of bloodline limitations.”

“I saw as much,” said Zona. “The Anyblade, the backpack, and the teleportation key are the three that I would choose.”

I nodded. “We were a little worried that you would say that. The Anyblade is the only one that I think we can really part with. The backpack is important, a literal gift from the Dungeon Master, and the crux of Amaryllis’ plan to remake the world. And as for the teleportation key, there’s some question of what would actually happen if you were to consume it. Based on what we know about how your meta-entad power works, it’s a bit of a crapshoot, and some of the outcomes are unacceptable.”

Zona smiled at me. “How much time did you devote to talking this over?” she asked.

“Days,” I said. “Amaryllis is acting as the focal point for cross-group conversations, to make sure that the four of us are on the same page. It’s important, and we wanted to get things right.”

“I see,” replied Zona. She smirked at me. “The variability inherent in any acquisition is a good reason for me to refrain from taking the key. Would I function as a key, capable of taking five individuals to any place that any of them had been? Or only to places that I had been? Could I make use of the touchstones, or not? Perhaps, in the worst case, people could only teleport within me, which I agree, would be a disaster for you. I can’t say that I have the answer.”

“Okay,” I said, breathing a sigh of relief. “I also wasn’t sure how you interacted with entads that were twinned, or parts of a whole. Out of all the things in our collection, the key is the only one that applies to, at least that I know of.”

“The backpack I will be taking though,” said Zona, ignoring that question. “There are a number of entads that are already part of me which have similar functions, and the result from taking in the backpack will fall within a narrow band. You will still be able to acquire whatever you want from,” she hesitated, tripping over a word for the first time, “From Earth. My interior space is much greater than that of the backpack, which should allow you access to a variety of goods that you currently can’t pull from it.”

I nodded. The catch was that we wouldn’t be able to access the backpack without, at the very least, Zona’s consent. Amaryllis was in favor; she’d already spent time pulling out thousands of books (fiction and non-fiction), movies, parts, equipment, medicine, seeds, and everything else she thought she would need. The interior of Sable truly was, as best we could ascertain, limitless. The way Amaryllis saw it, so long as we took all of the low-hanging fruit, the actual cost to us could be mitigated. In return, not only would Zona get something powerful, it would in many ways be a bond between us. Zona would be more comfortable knowing that we had a concrete reason to maintain a good relationship with her.

“You can have the Anyblade too,” I said, trying not to wince as I said it. “I’m not sure quite what the effect would be. Do you have any idea?” My two best guesses were that Zona would become the Anyhouse, or that the house would be able to take on any shape, so long as it could in some way be
construed as a blade.

“Entads that morph are somewhat rare,” said Zona. “I haven’t had the pleasure of consuming one. I’m quite interested to know the result myself.”

“And the strain won’t be too much?” I asked. “The unpleasantness of adapting to a new sensation won’t hold you back?”

“Do you mean to dissuade me?” asked Zona. She crossed her arms.

“No,” I said, holding up a hand. “Just curious. You brought it up a lot.”

“I take my time,” said Zona. “The worst cases have always been when I had a handful at once. The severity of the handicap depends on the entad consumed, but a week or a month later, I’ll have adapted. Perhaps more, if the entad had some sentience of its own. I can have the Anyblade then?”

“Yes,” I said. “Provisionally, assuming that Amaryllis agrees.”

“She controls too much,” said Zona with a frown.

“She’s smart and capable,” I said. “And she’s by far the best negotiator among us. We’d be foolish not to use her.” In fact, the primary reason that I was doing the talking was that Amaryllis had hoped that I would improve my relationship with the house and trigger something from the mostly-silent game. It also helped that the house liked me better; I wasn’t a Penndraig.

“That’s two of three,” said Zona. “If not the teleportation key, then the glove you call Sable.”

I winced. “No,” I said.

“A flat no?” asked Zona.

“It serves too many functions for us,” I said. “We’re willing to make a deal for the third item, not a lesser replacement for the one you want, but a wide selection of lesser entads. We have a number of them we can’t use, those tied to Uther’s most-direct male descendant. They’re on the list.”

“Most of them worthless to both me and you,” replied Zona.

“True,” I nodded. “But more than just those, we’d have a standing agreement that any entads we come across that we’re gated from in some way will be yours for the taking, if you want them.” The thinking here was that while Zona having the backpack would set up a reason for us to treat her well, her getting a steady flow of entads would give her incentives to treat us well.

The more I’d gotten to know Zona, the more I thought that she wouldn’t be swayed by that. She wanted to be a house, and the only reason that she wasn’t was because she was settling for lesser pursuits, like torturing and killing people who tried to come inside her, or making war with the tuung, or accumulating power.

“I would find that acceptable,” said Zona, “If your manager agrees.” She was smirking, just a bit. It was hard to remember quite what our first encounter had been like, but I thought she was smiling more, and I took that as a good sign.

“There would be some leeway,” I said. “Some entads we aren’t going to be able to use, but might be able to trade away, or hold hostage, or return to their rightful owners. Amaryllis will be more exact about it, so long as you agree in general terms. To start with, there are all the things at the end of the list, the arrow-annihilating armor, reflection portal shield, spin stick, and teleporting sword. Those
were all taken from Larkspur Prentiss and his people. In addition to that, we have a number of entads taken from a different encounter, whose function we haven’t been able to figure out. I assume if you consume an entad, you figure out its function, but given that they integrate, I can see why you wouldn’t want to do that.”

“I’ve done it, in the past,” said Zona. “Typically though, I allow people to use their entads within the house, to discover what it is the entads do. Obviously some of them wouldn’t be worth their quirks. The people who come to this place do tend be desperate, and it’s not uncommon for their complement of items to reflect that desperation.”

“Okay,” I said, swallowing. “There’s one more thing, an entad that’s not on the list.”

“Oh?” asked Zona, though I didn’t imagine she could possibly have missed it.

I undid the rope around my waist, then held it out, coiled in my hands. “This is the Eternal Golden Braid,” I said. Ropey uncoiled slightly, and one end of him rose up like a snake being charmed out of a basket. “He’s sentient. We didn’t introduce you earlier because of concerns that you would consume him.”

The free end of Ropey gave an extended flourish that was vaguely reminiscent of a bow.

“How can he talk?” asked Zona.

Ropey moved his free end around, shaping out letters in sequence. He’d done the same for me a few times, when there were things that needed to be communicated, but mostly he stayed silent, and acted only when he needed to act. Watching him, I felt a little guilty for not spending more time trying to talk with him. I’d never once asked how he was doing, or what he thought of things. I’d had half a mind to start doing that during our time in the chamber, but I didn’t want to disingenuously try to change the nature of our relationship.

“Faster, please,” said Zona.

Ropey started contorting faster, making the letters so quickly that I couldn’t hope to follow along. I glanced over at Grak, and saw a slightly concerned look on his face. I tried to keep my expression impassive, but I was feeling it a little bit too. Whatever Ropey was spelling out, it had a lot of letters.

One of the things that I really hadn’t been worried about was that Ropey would throw us under the bus, but I had a moment of panic as I realized that was possible, even if it wasn’t likely.

“I see,” said Zona after three minutes had passed, and Ropey had finally come to a stop. She gave a curtesy to the rope. “It’s a pleasure to make your acquaintance.”

Ropey extended himself forward with his free end, using the other to wrap around my wrist for support, and Zona held out a hand to him. He threaded through her fingers, pushing them apart and encircling them, in what seemed like a weirdly intimate gesture to me. It didn’t last long though, and Zona dropped her hand when Ropey retracted back into my arms.

“Only five pounds of force, unfortunately,” said Zona. It took me a moment to realize that she was talking to Ropey, not me. “But I have a vast sensorium, of which this illusion is only one part. You may have spent too much time with humans, if you see me primarily as one. I’ll choose to take that as a compliment on my mastery of artifice.”

Ropey sprang into action again, presumably making more letters, though faster than before, which had already been too fast for me to read.

“No,” said Zona, suddenly holding up a hand. “Privately.”
Ropey turned his free end, which he was more or less using as a head, toward me, nodded once, and then dropped out of my hands by going completely limp in the right places. When he touched the ground, he took off, slithering across the flagstones like a snake, about as fast as I could run. When he was around the corner, the illusion of Zona disappeared.

“Did that go well, do you think?” I asked Grak.

“Unclear,” said Grak.

“Yeah,” I said. “Could you follow what Ropey was saying?”

“Only until she told it to go faster,” said Grak. “And then, only because I focused on the magic I could see from him, to the exclusion of all else. He was giving her details of his biography.”

“Huh,” I said. “Do you think they’re … what do you think they’re going to do together?”

“Perhaps they will touch butts,” said Grak.

I looked at him for a moment and then burst out laughing. “I missed you,” I said. “Not sure if I said that.”

“You did not,” replied Grak. “And no letters.”

“Actually, I wrote four last time I was in there,” I said. “Should be waiting for you when it’s your shift again. I would have written more, but I’m a lot more worried about how Fenn is or was handling it, so that’s where my energy was going.”

“I am honored to get a letter,” said Grak with a small bow in my direction. I couldn’t tell whether or not he was being sarcastic.

“Don’t expect much,” I said. “They’re short by my standards, only five pages or so each, and a lot of it is just … I don’t know, not incredibly personal, like it is with Fenn, not because I don’t want to share with you, but I didn’t want to do this one-sided unloading about stuff I didn’t know if you’d be interested in. Plus there’s also a lot of broken Groglir, which I was trying to keep from getting rusty. It’s unbelievable to me that with all of our preparation, and all of the sheer quantity of stuff packed into the glove, there was no Groglir-English dictionary.”

Grakhuil shrugged. “You are the only one who would need it.”

“Yeah, I suppose,” I said. I looked down the hallway. “Hopefully things are going well.”

“The rope is a stalwart companion,” said Grak.

I nodded at that, but didn’t wholly agree. It had been by my side from virtually the moment I got it, serving as extra arms or sometimes legs, helping to bind people, increasing my mobility, and doing basically whatever was in its power to help me … but it wasn’t actually a partner, and though it could follow along when people talked, it rarely engaged in conversation. Our relationship was incredibly one-sided, from a certain point of view.

Ropey came slinking back around the corner at roughly the same time that Zona appeared next to us.

“He’s a very agreeable fellow,” said Zona with a nod.

“I’ve often thought so,” I replied. “Did you … talk?”

“Hrm,” replied Zona.
“I’m not sure how to interpret that,” I said.

“You want to know whether I intend to kill a kindred spirit?” asked Zona.

“Um,” I said. “Yes, I did want to know that, but I wasn’t going to ask so bluntly. I thought … you want power, right?”

“Power is not nearly all I want,” said Zona. She peered at me. “Have you been spending too much time with the little Penndraig, to think that power is the end of all things?”

“Okay,” I said. “That’s fair. And -- sorry, but I knew Arthur, and he didn’t think that power was the ultimate goal, he thought that it was a means to achieve some goal. He lectured me on it more than once. Amaryllis is the same, maybe not the same as whoever Uther became, but if there really were nothing left for her to do, she would sit back and relax, without worrying.”

“Do you believe that?” asked Grak.

I looked over at him. “I … huh. I think it’s awfully convenient for her that her work is never done, and she’s very adept at making new work even when there’s time to relax. But that’s not the same thing as wanting power for its own sake.”

“I find your defense of her interesting,” said Zona. She turned to the time chamber. “They’re coming out. There are only another three cycles to go, which I’m glad of. I grow weary of this changing of the guard.”

I didn’t know whether that was intended as a joke, but if it was, I didn’t find it funny. The thought of going back in there made my skin crawl; it was hard to imagine what might have happened if Amaryllis had taken it upon herself to go the whole time without company. The last I’d heard, which was a month ago from her perspective, she was ready to see a sunrise, drink herself into a stupor, and go somewhere with a good enough view that the world seemed to stretch out wide. If we really did end up needing to raise Solace in the time chamber, I had no idea how the fuck we were going to manage that.

Fenn came out of the chamber like a cat darting out of a door that’s been momentarily left ajar, and ran straight at me. She didn’t slow down, and leaped up into the air, the better to tackle me. I caught her, something that I wouldn’t have been able to do with my body as it was back on Earth, and she wrapped her legs around me as she started kissing me.

“Missed me?” I asked, when she gave me a chance to breathe.

“A bit,” said Fenn, smiling wide. “I almost didn’t make it, but I kept thinking, hey, Juniper is waiting for me at the end of it all. Not as bad as solitary confinement, but they don’t keep you in solitary for two fucking months. And now I’m done!”

I let go of her legs, and she unhooked herself from me to step down onto the floor.

“Congratulations,” said Amaryllis from by the door. She was much more pregnant now, well into the third trimester. I idly wondered whether the immobility plate would magically fit her new shape, then more seriously considered it, because that was how we were going to get down into the bottle. “Juniper, how did negotiations go?”

“Good enough,” I said. “Anyblade, backpack, cast-offs, that’s about as good as is reasonable, if we’re not being absolute misers.”

“Good,” replied Amaryllis with a sigh.
“And I did end up showing her Ropey,” I said.

“I figured as much,” said Amaryllis. She glanced down at Zona’s feet, where the rope was coiled. “Can we make the exchange now?”

“Now?” asked Zona, furrowing her eyebrows. “Why?”

“It might help us,” I replied. “If the Anyblade allows you radical shape changes, we could take you with, should we need to leave.”

Zona stared at me. “Take me with … where?” she asked.

“Anywhere,” I said. “We have a companion back in Headwater that we need to retrieve, at a minimum. If something goes desperately wrong, then we’ll probably go back to one of the safehouses we have set up in Cranberry Bay, so that Amaryllis and Solace can get emergency medical attention.”

(I was really hoping that it didn’t come to that, but the athenaeum produced some of the best healers Aerb had to offer, and the hospital there was first rate — by Aerbian standards, anyway, which were better than Earth’s in some ways, but worse in others. For the most part, healing someone with a fully healthy soul was easy street, but if the problem couldn’t be fixed by resetting the body to the soul’s image of the body, or through enhancing the body’s natural processes of homeostasis, you had problems. Purely physical injuries were generally easy to heal, unless you let them go long enough that the injury became a part of the soul. Diseases, poisons, cancers, disorders, and things like that all had various ways of being dealt with, but they weren’t surefire, and there was a lot of variance when you got into the specifics. Maternal mortality, according to Amaryllis, was slightly worse than in the United States, though the distributions were different.)

“You have other houses?” asked Zona. She frowned slightly.

“Places to lay low,” I said. “They’re not secure, and we assume that we’ll have to be ready to move at a moment’s notice, given that we have a few enemies.”

“Very well,” said Zona. “I’ll escort you, to show you where to put the entads.”

“I should be getting back in anyway,” said Amaryllis. She ran her fingers through her hair. “I’m prepared to give over the backpack now, incidentally. All of the things that we should need for the labor and birth were carefully placed into storage months ago. Juniper, I have a list of things that I’d like, if it turns out that Zona is capable of exceeding the spatial limits of the backpack. In my ideal world, you would spend the next few hours setting up an operating room, with all the equipment that’s larger than the backpack can handle. I’ll be coming out at thirty-six weeks, and might take a longer break then, if you need more time to set up. We might also think about grabbing Valencia, as she might be some help in the operating room.”

“If it gets to the point where we need her, then we’re probably going to a proper hospital,” I said. “If you have something like preeclampsia, I don’t want to be jury-rigging solutions, not when we could just get professional help.”

“The procedure for preeclampsia will be for you to bridge our circulatory systems to reduce hypertension, bleeding yourself if necessary, then administering magnesium sulfate,” said Amaryllis. “That should prevent progression to eclampsia, and allow us some time to either induce labor, if it’s not already underway, or for the birth to progress naturally.”

I stared at her. “You’re really that dead set on not going to the hospital?” I asked.
“I’m not dead set on it, no,” said Amaryllis. “But if we go to a hospital, there are going to be questions, not to mention written documents, and my ability to leave, or even just to be watched by people I trust, will be compromised. This is, to put it lightly, an unconventional pregnancy, and I am, to put it lightly, a wanted criminal. In my view, it’s worth taking some minor risks to avoid giving birth on public record.”

“Yes,” said Amaryllis. “I think that some level of anxiety is the appropriate reaction to have to this situation.” She turned slightly, so she was pointing in the direction of the time chamber. “I think I’m in good hands with Grak, and when the time comes, we’ll be as prepared as we can possibly be. If it comes to the worst, there’s a plan in place for getting from the safehouse to the hospital, one that I wrote out before we even got on the train. I don’t want to do that unless it looks like there’s a risk of death.”

“Which we might not know about until it’s too late,” said Fenn. She had her arms crossed and was looking at Amaryllis with something like a glare. “You’re the one that’s always going on about worst case scenarios.”

“We already talked this to death,” Amaryllis said to Fenn. “You agreed with me.”

“Yeah, but I didn’t have Juniper for backup,” said Fenn. “Now we’ve got you outnumbered, which means that you’ll pretty much have to see reason.”

“I don’t want to re-litigate this,” said Amaryllis with a sigh. “If there are serious problems, or the birth is too early, then yes, we’ll go to the hospital, but there are a wide variety of more minor problems that we have all the tools, knowledge, and training to deal with. I’ve been preparing for this for months. I don’t want to expose us too much, and I don’t want to spend time that we probably don’t have. The life that’s most at stake here is my own.”

“And Solace,” I said.

Amaryllis glared at me. “If you think that I’m not trying to do right by her --”

“I do,” I said, a little too quick. “It’s fine, I’ll trust your judgment.”

“Grak, come on, let’s go,” said Amaryllis. She walked back into the time chamber, doing a little bit of a waddle.

“I will be watching her,” Grak said to us as he followed after her. “I will talk to her. We will see you in a month.”

The doors to the time chamber closed, and I let out a breath.

“Not the easiest person, is she?” asked Fenn. “She’s gotten worse. She got worse, in the month I was in there with her.”

“Yeah,” I said. “I kind of get where she’s coming from, because she was the one to take on the burden of pregnancy, and she’s spent seven months in the chamber so far, but … still. I don’t know if she’s right or not, but it really felt like one of those situations where we both just got entrenched and weren’t listening to each other. That’s not usually a problem for us.”

“Come,” said Zona. “Follow me with the entads, and I’ll show you where they go. If I’m to use their powers to help you, then I’ll need as much time as possible to acclimate.”
I put the backpack in first, bidding it a fond farewell. I was less sure about giving it up than I was about giving up the Anyblade, but we’d had seven months to pull out everything we could want from it. Amaryllis had argued about it, but we hadn’t had a proper fight. The thing that clinched it was that we might be able to get larger things from Earth; there had been quite a few times when I’d thought to myself, “oh, I’ll just grab that from the backpack”, only to realize that the thing I’d wanted couldn’t possibly be pulled from the backpack, given its size. We were fortunate that most of the furniture we needed had been stolen from one place or another by Fenn (or in the case of things taken from Weik Handum or Caer Laga, rescued rather than stolen).

The closet wasn’t terribly big, and it was about as unassuming as it had been described. The only thing that marked it as special was the fact that it wasn’t very close to any other doors or rooms, which gave it a place of prominence in the hallway. I estimated the closet at about five feet to a side, which was a standard D&D unit of measure, and which I very much doubted was coincidence.

When I closed the door on the backpack, I glanced at Zona.

“Now what?” I asked.

“Confusing how?” asked Fenn. She stood beside me, close by, like she thought that I was going to vanish at any moment. I understood how she felt; we’d been apart for too long.

“When you described it …” Zona trailed off. She held out her hand, and a note appeared in it. It was of a type very familiar to me, written on a piece of yellow legal paper, with handwriting that was identical to my own. “It says, ‘no magic items, sorry,’ and then a colon, followed by a left parenthesis.” She squinted at the note. “A frowning face?”

“Yeah,” I said. “The entad has some underlying logic to what it will or won’t give us.”

“No,” said Zona. “If it had that underlying logic, it would be exposed to me. I would know and understand it, even if it took some time to integrate. This is … like speaking to someone.”

“But that function is somehow divorced from the entad itself,” said Zona. “It’s not a part of me, it’s a tendril leading somewhere else.” She shivered slightly. “The sensation is unlike anything I have ever experienced.”

“Are you going to be ready for the sword?” I asked. “Or do you want to hold off a bit?”

“I’ll have to learn more of Earth,” said Zona, seeming to ignore me. Her focus returned to me. “Name something from Earth that would exceed the boundaries of the backpack.”
“Surfboard,” said Fenn, before I had a chance.

Zona held out a hand, and a surfboard appeared leaning against it.

“That’s promising,” I said.

“I’ll need your help to prepare the room,” said Zona with a frown, as she let the surfboard clatter to the ground. “I had hoped that I would have an understanding of what Earth had to offer, but it appears that’s not the case.”

“So, Anyblade too, or not?” I asked.

“Wait,” said Fenn. She held out her hand, and a plastic box appeared in it. When I peered over, I saw that inside was sushi, covered in seaweed, sauces, and what I thought were probably fish eggs. “Ha!” she said. “This is great.”

“No more,” said Zona, with an edge of warning in her voice. “I can feel the strand of raw will when you do that. I’ll need some time with the power in order to understand it and stop it from being used. It provides a channel to the -- the other end.”

“Besides,” I said, “It’s trash that we don’t have a good way to get rid of, not until we’ve got the glove on hand to put things into storage.”

“I was planning on eating the sushi,” said Fenn. She popped the container open and began picking out pieces with her fingers, plopping them into her mouth. “I fucking love sushi,” she said with her mouth half full.

“Okay,” said Zona. “Now the Anyblade.”

The Anyblade was on my finger, as a ring, and I reshaped it into a sword, which I set just inside the closet. I did give it one last fond look before shutting the door; I was really going to have to find a new weapon, though I did have a backup sword until I could find a magical one with extra powers.

I was watching Zona carefully after I closed the door, so I caught it right away.

“She’s stopped moving,” I said.

“She wasn’t moving,” said Fenn, who was still eating her sushi.

“Incidental movements are part of the illusion,” I said. “She’s not breathing, she’s not swaying, she’s just totally static.”

Fenn peered at the image of Zona. “Huh,” she said.

“That’s probably a bad thing,” I said.

“Well, she wasn’t borked for long last time,” said Fenn.

“I think last time she was devoting her full attention to research or thinking or something,” I replied. “This time … I’m less sure. I hope she’s, uh, okay.”

“No, I am,” said Zona. She’d begun moving again as she said the word. “I was just adjusting.”

“I hope that it wasn’t too uncomfortable,” I said. I rubbed my head. “You said the sensorium is one of the harder parts of getting a new entad, and whatever the impact is, you probably have new directions to stretch in.”
Zona stared at me for a moment. “I did say that,” she finally said.

“So ... what’s up?” asked Fenn. “Are you the Anyhouse, or what?”

“Fenn,” I said. “Give her some time.”

“It’s a fair question,” said Zona. She was still staring at me. “Why were you worried about me?”

“Should I not be?” I asked. “I mean, you said that it was sometimes difficult or uncomfortable, and from what you said, it seems to have been a major source of trauma in the past. I know you’re doing it voluntarily, but sometimes we voluntarily do things that still hurt us.” I paused. “So I just wanted to make sure that you’re okay.”

Loyalty Increased: Zona lvl 1!

Quest Completed: A Room of One’s Own - She is willing to take a chance on you, so long as you do your best not to remind her of him.

“I am,” said Zona. “Thank you.” The walls shuddered around us, shaking free dust. The hallway undulated, shrinking around us and then expanding again. “One moment.”

I stared at the loyalty and quest messages, then blinked them away. There was a part of me that was disappointed to see it, not because it meant Zona was a companion, but because it meant that I was still on the rails in some way, operating within the confines of the game. Amaryllis probably would have told me that I was being stupid, and that I should take advantages when I could get them, but it wasn’t that I preferred not to have the advantage, it was just that it felt like it sullied the relationship. It was like hanging out with someone, and being their friend, and then at the end of the evening, they gave you twenty dollars for having a good time with them.

The house moved around us, creaking and groaning. The hallway shortened, and the closet door disappeared. Fenn held onto me, still with her package of sushi in one hand, and the surfboard banged up against my leg as we began moving. We saw doors sliding past us and closing in on themselves, and rooms collapsing in on themselves.

We came to a stop in front of the time chamber, with a door to our left, a door to our right, and the doors to the chamber itself.

“What the fuck was that?” asked Fenn.

“Housekeeping,” replied Zona, who came back into existence next to us. “I’m fairly certain that I can alter the chamber itself as well, but I don’t want to try with people inside it, and not while the need for it is still urgent.” She pointed to the door on the left. “That will be the operating room for you.” She pointed to the other door. “And that’s storage. I removed everything else.”

“You’re saying that this house is now three rooms?” I asked.

“Four,” said Zona, “If you include the time chamber. It’s already making things much more manageable. There’s less pressing on my mind.”

“What about the bodies?” asked Fenn.

Zona waved a hand, and the wall behind us split apart. I turned, swinging my flashlight, and saw that we were inside a large cave, that extended up above us. Beside us was a pile of decayed corpses, sitting next to a giant mound of furniture, broken pieces of the house, and general garbage.
“All the cleaning is done,” said Zona with a sigh of satisfaction. “Centuries of refuse, gone in an instant.” She laughed, and the laugh seemed to come from all three rooms. “This is what a new start feels like.” She looked down at herself, then up at me. “And yes, I do think it’s finally time for me to say goodbye to this form, and to this name, if I’m to be your house.”

She shimmered, and Tiff was gone, replaced by a slender woman who was quite a bit taller than I was. She was momentarily naked, though sexlessly so, until clothes began flowing out from her skin, covering and wrapping her in shimmering, gossamer robes of a hundred layers. Her skin changed color, flickering through different hues, until she settled on a dark brown that gradually grew lighter as she looked at her hands and adjusted it, ending up about the same color as a piece of cedar. Her hair grew and twirled around her, at first a glowing white before finally settling into a dark brown, which twisted and braided itself, becoming almost reminiscent of a rope that then coiled its length around to sit on the top of her head.

“Pretty,” said Fenn. “If you don’t mind me saying so, it suits you better than being a teenage girl from Kansas.”

“It’s unfamiliar,” said Zona, looking herself over (for our benefit, I guessed, since her eyes were only an illusion). “It won’t be as perfect as the girl was, but in time I’ll return to that level of fidelity. With less of me to manage, the acclimation should be easier. I have more room to think now.”

“And you need a new name,” I said, staring at her. To be honest, I was a little bit afraid, in much the same way that I’d been afraid of the changes Valencia had undergone. I felt like I understood the house, at least a little bit, but I wasn’t sure that I would go so far as to say that I trusted it.

“Names are important, powerful things,” said not-Zona. “I will have to think on it.”

“What do you want us to call you in the meantime, if not Zona?” asked Fenn.

“Bethel,” replied not-Zona.

*Companion Name Changed: “Zona” to “Bethel”!*

I stared at the game message, not knowing what to make of it, or why it would be important, if it was. The names were just shorthands anyway, not actually mechanically relevant so far as I had seen.

“Like Bethlehem?” asked Fenn.

“Bethlehem?” asked Zona, eyes narrowing. “I’m not familiar.”

“It’s the place where Jesus was born,” replied Fenn.

“And who is Jesus?” asked Zona.

“Oh, don’t worry,” replied Fenn. “We’ll bring you into the Bible study group.”

“What’s a Bible?” asked Zona.

“Enough of this,” I said. “Bethel it is. Beth?”

“Bethel,” said Bethel, firmly.

“Nice to meet you, Beth,” said Fenn with a smile. Blades began to rise from the flagstones, encircling Fenn and pointing in toward her. “Or Bethel,” said Fenn. “I guess either is fine by me.”
The blades vanished, and Fenn kept on smiling.

“So what’s the rule?” I asked. “You can reshape yourself, so long as you technically remain a house? Or is there a blade somewhere too?”

“The former,” replied Bethel. “The edges of the power are hard to detect; it’s versatile and permissive. Once the pregnancy is over, I think I’ll try my hand at becoming a fairy house, which should make me small enough to be carried.” She glanced at the time chamber. “Though perhaps that better wait, in case it interferes with the function of the time chamber. I’m not sure how much of the structure I’ll need to keep in order to ensure that the stored time is maintained.” She seemed vaguely annoyed. Her new face was a little more expressive than when she’d been wearing Tiff’s skin, perhaps because she didn’t have as fine a handle on conveying subtle emotional nuance yet.

“We’ll save the more extreme experimentation for later,” I said. I thought that radical changes to the makeup of the house should probably have waited until later too, but I didn’t say that.

“They’re almost finished, the chamber is spinning down,” said Bethel. (I was trying to imprint her new name on my mind, so that I wouldn’t annoy her by slipping up.)

“Quick question,” said Fenn, hooking a thumb toward the closed door. “What’s in storage?”

“Everything worth saving,” replied Bethel. “Entads that I had no interest in adding to myself, valuables taken from the bodies of adventurers, and a few centuries worth of spirits made through the Everflask.”

“There’s loot?” asked Fenn, brightening considerably. “Because I have a huge debt to pay down, and if there’s loot, I can get a start on that.”

“I wasn’t offering to share,” said Bethel with a faint smirk. “But if you find something that you think you could use, I might allow you to borrow it. Narcissus died with a considerable quantity of entads on his person, and most of those I was able to hide away after I had cleaned up his body.”

“Cursed treasures?” asked Fenn. “Count me in!”

The door to the time chamber opened up, and Grak stepped out, stretching slightly and then freezing as he realized that the room was different, and that Zona had changed shape.

“I take it things went well,” said Amaryllis from behind him. I’d thought she’d more or less reached maximum size last time, but her belly was more swollen than it had been before, now veering into grotesque territory. It was hidden beneath a large dress, but even with that, still visible. She walked like she was trying not to let it show too much.

“Human pregnancy is insane,” said Fenn, eyes wide.

“I don’t want to hear it,” said Amaryllis with a sigh. She looked at Bethel. “Change of form, I’m assuming?”

Bethel nodded. “I’ll be going by a new name as well. Bethel.”

Amaryllis nodded. “A name from legends. I definitely prefer it.”

“I don’t care what you prefer,” said Bethel (Bethel, Bethel, new name, Bethel).

“I’m not familiar with the legend,” I said. “Is it … important?”
“Not particularly, no,” said Bethel. “As the legend goes, she sheltered the first of the humans from the eldritch storms that once crossed Aerb. She was the first home for humans, and the first god, before the five we know. The story is almost certainly apocryphal.”

Almost. I’d done my fair share of reading on Aerb during my months in the chamber, and one of the things that had surprised me was how much people hedged their bets when talking about ancient history. The dwarves probably hadn’t been cursed with child birth after millennia of carving their sons from stone, but no one seemed willing to just definitively say that it was hogwash. There was enough crazy random shit in Aerb’s history that you couldn’t always say for sure that something was totally false.

“Can you change the shape of the chamber?” asked Amaryllis.

“The chamber was installed in me in 132 FE,” said Bethel. “It has little interaction with the essence of my being, though obviously they hoped otherwise when they paid the sand mage. The question isn’t whether or not I can change the shape of the chamber, it’s how it will interact with the sand magic used to power it, and the time stored within it. I am many things, but I am not a sand mage.”

“Fuck,” said Amaryllis. “I was hoping that we could all go in together for the last month.” She looked back at the chamber and sighed. “If this rearrangement is the result of the Anyblade’s powers, what was the outcome of adding the backpack?”

“Check this out.” Fenn held out a hand to the side and struck a pose. “By the power of Grayskull! I have the power!” A sword appeared in her hand and she smiled at me, a smile that slowly slipped from her face.

“Er, what’s that from?” I asked. “It sounds familiar.”

“He-Man and the Masters of the Universe, you fucking ingrate,” said Fenn with a scowl. “Are you seriously telling me that you never watched He-Man?”

“It was a couple decades before my time,” I said.

“Oh fuck off,” said Fenn. She dropped the sword to the ground, and when it failed to clang, I realized that it was just a prop. “Let the power return,” Fenn muttered.

“Does He-man summon a sword?” I asked. “I thought he was like … a Captain Marvel type thing.”

“Who the hell is Captain Marvel?” asked Fenn, frowning at me.

“He’s a superhero,” I said. “He’s a little kid who says ‘Shazam!’ and turns into a Superman type guy.”

“I have no doubt that this is fascinating for the two of you,” said Bethel. “However, the conversation is meaningless to me, except insofar as I can infer that you’re talking about Earth culture. Fenn, don’t use the backpack so frivolously again, I’m still getting used to it.”

“Fine, fine,” said Fenn. She turned to Amaryllis. “Point is, it works.”

“Good,” said Amaryllis. “We should start preparing the delivery room. I won’t go back in the chamber until it’s done, assuming that we can get everything set up in a reasonable time frame. Grak and I have worked on our plans somewhat, and assuming that everything looks good, we’ll pull you and Fenn in once I’m in the latent phase of labor, before the contractions start. That should give us all hands on deck for the crucial part, with minimal time wasted.”
“I won’t be able to participate,” said Bethel.

Amaryllis paused. “Would you want to?”

“I could be useful,” said Bethel. “I can see inside all of you. I effectively wield a scalpel sharper than any held by a surgeon, which I can use from the inside. I’ve only borne witness to nine births, all before I was the person I am today, but I might have some applicable knowledge.”

Amaryllis nodded. “I would accept that help,” she said. “We’d be trading, at most, a day of our time away during active labor, but it would also lower the time it would take to get me to the hospital in a real emergency.”

“Amaryllis anticipates fake emergencies,” said Grak.

“I anticipate that someone will say that we need to get to a hospital, and in the moment, it will seem like a good idea to everyone but me,” said Amaryllis.

“This is why we have the Council of Arches,” said Fenn. “Do you agree to abide by the Council’s recommendations?”

Amaryllis pursed her lips. “This is somewhat different from soul modification,” she said. “I will agree to the Council’s recommendations, so long as it’s a plurality of three, rather than a tie with veto, and so long as the Council looks at my delivery plan and scenario cascade first and says yes or no without the pressure of needing to decide in the moment. But that will take, at minimum, a full day, at least by my estimates.”

“And people call me difficult,” snorted Fenn.

“You are difficult,” said Amaryllis.

“Extremely so,” added Grak.

Fenn looked at me.

“I love you so much,” I said. She hit me, and I pretended that it hurt.

“Are we going to set aside a day to review my plans?” asked Amaryllis. “Grak is already in agreement, and he’s the only one that’s read it, which means that either Juniper or Fenn would have to make a case that could sway him.” She had her arms folded across her chest. “I’m not saying that under no circumstances should we go to the hospital, only that women have been giving birth in their own homes quite successfully for literally millennia --”

“With high maternal and infant mortality rate,” I said.

“-- and those women have had far less preparation, expertise, medical equipment, and magical healing.” She was speaking a bit faster than normal, but otherwise doing a good job of sounding calm and level. “I’m going to go lie down, decide whether or not you’re going to spend a day going through the manual. I don’t think it would be a bad idea for all of us to familiarize ourselves with it, but I certainly don’t think it will be necessary.”

She waddled back off into the time chamber, and sat down in the bottom bunk, using the supports for leverage.

“Well, I don’t want to,” said Fenn. “Sounds boring as all fuck, and I’m just going to end up trying to keep up as the two of you have endless discussions of risk factors and blah blah blah. Sorry, that’s
just how I envision it going."

“Me too, to be honest,” I said. “Grek, are the plans sufficiently cautious, in your opinion?”

“They are,” said Grak. “I am in partial agreement with Amaryllis though. It is hard to judge how we will feel at the time.”

“Sure,” I said. “But if something comes up that’s outside context, we’re agreed that professional medical help is paramount, right?”

“Correct,” nodded Grak.

“Well, okay then,” I said. “And you’re fine with taking point? You’re going to be in charge of directing me, if you need me for something to do with magic. I’ve practiced the circulatory bridge technique, and I think I’m pretty good at getting into the soul, but I’m really hoping that we don’t have to do something drastic like that. Worst case scenario, I can attempt to swap out my skills in accordance with one of Mary’s master plans, with Medicine in there somewhere, then sacrifice skills to boost it.”

“Yes,” nodded Grak. “That’s listed in her plan.”

“Oh,” I said. “I didn’t realize.” Amaryllis and I had briefly talked about the possibility, but apparently she had formalized it.

“Only if I’m literally dying!” called Amaryllis from the bed.

“Well … fine,” I said. “If she’s thought things through, and you at least mostly agree, I guess we don’t have to do the overview, so long as you’re comfortable directing us, if we’re needed.”

Grak nodded, and Amaryllis, from the bed, sighed in relief. I walked over to her and sat down beside her, as Grak and Fenn began talking amongst themselves.

“Getting real tired of people second-guessing me,” said Amaryllis.

“Yeah, I sort of got that,” I said. “You still agree that the Council of Arches gets input on changes to your soul?”

“That?” asked Amaryllis. She waved a hand. “I don’t intend to make any more.” She hesitated. “Maybe, if my soul is under the mistaken impression that I’m a real mother. And … only if she doesn’t love me back.”

“We’ll talk about it,” I said. I sat next to her in silence for a bit.

“I’m competent, you know that?” asked Amaryllis. “I know it’s not what happened, but it feels like since getting pregnant the three of you have constantly been assuming that I’m actually a moron.”

“It’s a difference in how we judge risks, that’s all,” I said. “At least, that’s all it’s been on my end. You built a fucking VCR from scratch, I’m not doubting your competence.”

“It wasn’t from scratch, it was from parts, and you know for a fact that I don’t have recording working yet.” She sighed. “But thank you.” Her hand went to her belly to rub it. “She’s not kicking.”

“Still?” I asked.

“If this is a stillbirth, I’m going to lose my fucking mind,” said Amaryllis.
“No movement at all?” I asked.

“It doesn’t necessarily mean anything,” said Amaryllis. “I don’t know if she’s going to come out crantek, human, or hybrid, and maybe the crantek just don’t move around as much as humans, but … you know. It’s nerve-wracking.”

“Yeah,” I said. “Are you going to be okay?”

“So long as we’re in the top ninety-five percent of scenarios, then yes, I think so,” replied Amaryllis. “I’m just ready for all of this to be over.”

“I think we all are,” I said. I patted her on the leg, then it felt awkward, and I stopped.

“I’m okay with you touching me,” said Amaryllis.

“Yeah, okay, I just, um,” I said, stumbling through my words.

“A backrub would be nice,” said Amaryllis. “If you wanted to make me feel better.”

So I gave her a backrub, following her directions. From outside the open doors of the chamber, I saw Fenn look at me with a raised eyebrow, which I answered with a small shrug. It was, to my knowledge, the first real break that Amaryllis had taken while the clock was running. It was also an extremely rare example of her requesting physical contact. I kept wanting to ask whether she was keeping up with the modifications to her soul, and how that was going, but I didn’t want to sound accusatory, or like I was second-guessing her, especially since that was exactly what I was doing.

“So long as we’re in the top ninety-five percent of scenarios, then yes, I think so,” replied Amaryllis. “I’m just ready for all of this to be over.”

“I think we all are,” I said. I patted her on the leg, then it felt awkward, and I stopped.

“I’m okay with you touching me,” said Amaryllis.

“Yeah, okay, I just, um,” I said, stumbling through my words.

“A backrub would be nice,” said Amaryllis. “If you wanted to make me feel better.”

So I gave her a backrub, following her directions. From outside the open doors of the chamber, I saw Fenn look at me with a raised eyebrow, which I answered with a small shrug. It was, to my knowledge, the first real break that Amaryllis had taken while the clock was running. It was also an extremely rare example of her requesting physical contact. I kept wanting to ask whether she was keeping up with the modifications to her soul, and how that was going, but I didn’t want to sound accusatory, or like I was second-guessing her, especially since that was exactly what I was doing.

“Okay,” said Amaryllis after a while. “Let’s get the delivery room ready, I have a wish list.”

“You’re good?” I asked.

“Yeah, I’m good,” she sighed. “You’re going to have to help me up though.”

“Oh, you should know that we’re scenario one,” I said.

Amaryllis froze. “Before or after we handed things over?” she asked.

“Amy,” I said. “It took a hell of a leap of faith.”

Amaryllis relaxed and let out a breath. “Good,” she said. “Then things are looking up.”

For someone who still carried a candle for our narrative, Amaryllis hadn’t chosen her words very carefully.

It took us about two hours to get the delivery room ready for Amaryllis. Most of the equipment that could be pulled from the backpack already had been, which included linens, plastic gloves, bags of saline, an enormous variety of medicines labeled in Amaryllis’ careful hand, a small fridge stocked with snacks and more medicines that needed to be kept cool, and basically everything else that Amaryllis could think of. The biggest thing that Amaryllis wanted was a comfortable bed that reclined, which we were able to pull from Earth with a little bit of work as we tried out various different ones and put the rejects into the glove.

“I think this is good,” said Amaryllis, looking around the room at everything. She turned to Grak.

“Ready?”

Grak nodded.
“When I see you next, I’ll be in labor,” Amaryllis said to Fenn and I. “Be prepared.”

“We will be,” I said. “We are.”

“Prepared for what?” asked Fenn, frowning. “I thought we were just hanging out here.”

“You ass,” replied Amaryllis with a smile.

I swallowed back a word of caution, which I didn’t think would be taken the right way, and watched Amaryllis wave goodbye as they closed the doors to the time chamber.

“Anxiety really is the appropriate reaction,” I said as I let out a breath. “We’ve got forty-five minutes, at the most, and then … blegh, I’m not looking forward to this.”

“It seems like it was only four days ago that our little princess got pregnant,” said Fenn with a wistful sigh.

“It’s insane to think that the world stood still while we were doing this,” I said. “Or at least, mostly so. I’m a bit worried about coming back to Valencia. It’s going to take time to reacclimate and remember where we left things off.”

“Your much-vaunted fifth member?” asked Bethel.

“Yeah,” I said. “I guess you’re going to see her at some point, and with a warder’s sight you’d find out then, but … she’s non-anima.”

Bethel raised an eyebrow. “You mean to tell me that you consort with devils?”

“Oh,” I said. “No. You know what, I’m going to have to work on my pitch a little bit, because I wasn’t explaining it right. She was a non-anima, and got transformed into sort of the opposite of that. Not an empty vessel for devils and demons, but, um, more a killer of them.”

“Like Uther?” asked Bethel.

“Not really, no,” I said. “It’s hard to explain. She eats them from a distance, in sort of the opposite way that they possessed her from a distance.” I hesitated. “I’m assuming that a non-anima won’t be a problem for you?”

“Why should it?” asked Bethel.

“Just curious,” I said. “It’s one of the things that I’ve been worried about, when we bring other people in.”

Bethel opened her mouth, then turned to the time chamber. “They’re coming out,” she said with a frown.

“That was fast,” I replied. A wave of anxiety washed over me. “Way, way too fast.”

It took some time for the chamber to spin back down, and we spent it waiting anxiously. As near as I could tell, they’d chosen to duck out of the chamber almost immediately after they’d gone in, which didn’t bode well at all. Fenn tried to crack jokes, but they fell on deaf ears; I was worried.

When the doors finally opened back up, Amaryllis was standing there, leaning on Grak and holding her belly.

“Water broke, four weeks early,” she said. “I’m not in labor. We’re going to the hospital.”
I’ll admit to a bit of panic.

“How serious is this?” I asked.

“Serious enough for the hospital,” said Amaryllis. Her voice was steely calm. “Labor needs to be induced, because it’s been twenty-four hours without it happening on its own, and the baby is going to be preterm, which means she’s likely going to need special care. On Earth, it would be about one in fifty chance of infant mortality, but I think higher on Aerb. In my estimation, this is beyond our capabilities. We’ll be going to the Penndraig Memorial Hospital in Cranberry Bay to get me checked in as quickly as possible.”

“Fuck,” said Fenn. Her eyes were wide.

“I planned for this,” said Amaryllis. “I’m not in any pain. But the amniotic sac is ruptured, none of the methods I’ve tried for inducing labor worked, and we need to go, now.”

“I’m coming with,” said Bethel. As she spoke, the walls began folding away, showing the cavern she’d carved out around us.

“The time chamber,” Amaryllis said. “We may need it to age Solace up.”

“I wasn’t negotiating,” said Bethel. “I suppose we’re going to see what happens when I collapse it down.” Before there could be any further discussion or argument, the back of the time chamber peeled away and the walls began coming down. All around us, the house, which had been reduced to a mere four rooms, was folding in on itself, vanishing until all that was left was a thick wooden staff that Bethel held in one hand. It was long and gnarled, and sitting at the top were tiny windows, with a little door, barely visible.

“No,” groaned Amaryllis. She shook her head. “Please tell me that our years are still there.”

“They are, so far as I can see,” said Bethel. “I should be able to reconstruct it, with the sand magic intact.”

“If not, we can undertake a quest,” I said. I wasn’t sure the lack of quest pop-up was good or bad.

“Our last quest took us nine fucking months,” said Amaryllis.

“Eight, technically,” muttered Fenn.

“We need to get moving,” said Amaryllis. “We’ll deal with the fallout later.” She pulled the teleportation key from a pocket in her dress, and held it out. “Everyone together, I’m very serious that we need to be going.”

I came in close and held onto her hand, then reached out with the other to gingerly touch the dollhouse staff, which was all that was left of the place we’d called Kuum Doona. Around us was the cavern that had held the house during our time in it, the pile of refuse she’d cleared out, a collection of cursed magic items that we were obviously going to go back for later, and everything that had been left in the time chamber when Bethel had removed it. The delivery room we’d spent all that time on was now just a collection of equipment.

I felt a flash of blinding pain at the transition, and as I slowly recovered, I was startled to realize how
dark it was. I should have realized though; we’d hijacked the *Down and Out* just after nightfall, and it was still night, or maybe, technically, early morning.

We had a car in the safehouse garage, which we’d paid for in cash and off the books. None of us had a license that was valid in Cranberry Bay, so that was something of a necessity. I drove, while Amaryllis sat beside me holding her stomach, with Grak and Fenn in the back. Bethel had dropped the illusion entirely, and was present only as a staff, listening in and speaking through her powers from time to time. As I drove, I was painfully aware of the lax safety standards that were endemic to Aerb, even in a relatively modern, civilized place like Cranberry Bay. There were no airbags, no crumple zones, and the glass would cut us to ribbons given the first opportunity. I almost mentioned something about Ralph Nader to the others, but kept my mouth shut and my attention on the road instead. The roads were also more narrow than I was used to, and the car only passingly familiar, and all that aside, it had been a few months since I’d driven a car. I burned SPD as I drove, trying to heighten my reflexes, even though there was practically no one on the road.

In the movies, women were always sweating and yelling on the trip to the hospital, screaming and groaning. I found it unsettling that Amaryllis was staring calmly ahead, not showing any particular reaction to the fact that her water broke. Then again, she also wasn’t in labor, so maybe it didn’t feel like anything much, which was unsettling in its own right.

Penndraig Memorial Hospital was far wider than it was tall, a curved ribbon of building that stretched for three city blocks, with roads cutting tunnels through the building at ground level. We followed the directions that Amaryllis had written out days (months) earlier, and arrived at the emergency entrance not too much longer after we’d left the safehouse. Fenn took the car to find parking, and Grak rode with her, carrying the staff and Ropey; we wanted to present as being as normal as possible, and having the four of us together wouldn’t have been good for that. I wished that I’d had a chance to remove my armor, or maybe not even worn it at all, but I was also worried that I would need it before all was said and done. Amaryllis slipped a ring on my finger, as well as one on her own, just before we went in. Again, the hope was that we’d seem normal.

The night nurse gave my armor a sideways glance but focused her attention on Amaryllis.

“Preterm premature rupture of membranes,” said Amaryllis. “The initial rupture happened twenty-four hours ago, and I’m at thirty-six weeks.”

The night nurse nodded. “No contractions?”

“No,” said Amaryllis. “Minimal effacement, no dilation, as observed via speculum.” I tried to keep my face blank at that. I wondered whether she had done the inspection herself, or whether she’d gotten Grak to do it. I did my best not to picture either.

“Okay,” said the nurse. “I’ll get your intake ready, we’ll move you to the maternity ward shortly. Do you have a doctor here?”

“No,” said Amaryllis. “We’re from out of town. We didn’t expect the baby to be so early.” She touched her belly and leaned on me for support, which I thought was mostly to sell it.

We were given a clipboard and a form to fill out, while we waited in the lobby, which had a few people and dozens of empty seats. Amaryllis began filling the form out, then swayed slightly in her seat and closed her eyes.

“Here,” I said, taking it from her. “I can do this.”

“Did you memorize the details of my fake identity?” asked Amaryllis, with her eyes still closed.
“No,” I replied. “Not all of them.”

She took the clipboard back and began filling it out in a hurry, ticking off boxes without seeming to look all that closely at what she was doing. When she finished, she leaned back in the chair and pressed her head against the wall. “This is probably in the bottom five percent, by the way,” she said. *Critical failure, in other words.* “Normally labor starts after the water breaks, and preterm labor alone we might have been able to handle, but without labor that’s too many complications at once. Grak isn’t a doctor, and neither am I.”

“Yeah,” I said. “I’m glad we didn’t have to drag you here kicking and screaming.”

“Joon, you might be called on to do the full-body swap for her,” said Amaryllis. “And it’s possible you’ll have to do that for me too. Be prepared, and don’t let anyone push you out of the room when we’re getting close. It’s not traditional for fathers to be in there, but you have resources that the hospital won’t. Knowledge, too. And the baby is going to come out with green skin, which is going to raise some questions I might be too exhausted to answer. It might be better to be forthright about that from the start.”

I swallowed. “Why a full-body swap for you?” I asked.

“When you get a chance, look at my soul,” said Amaryllis. “My body’s been going through some changes, you might have noticed, and the soul has only been halfway keeping up. You have the backup for my body, you might have to use it.”

“Okay,” I said. I’d have to sacrifice a skill in order to get Essentialism up, but I was well-prepared to do that. I reached for her hand. “Everything is going to be alright.”

“Sure,” said Amaryllis, but she was probably thinking that I had no way of knowing that. That was certainly what I was thinking. She reached over and slipped her hand into mine, squeezing it tight. “I might need you to protect me, and keep me safe.”

“Yeah,” I said. “Of course.”

Healing was complicated. Magical healing was a mainstay of fantasy, and of tabletop games in particular, but there were always questions you could raise. If you cast ‘cure light wounds’ on yourself every morning, did you look younger after thirty years than someone who hadn’t done that? Did magical healing fix scars? Did it fix congenital abnormalities? How did it decide what was a defect that needed fixing and what was just a peculiarity? Would magical healing fix a bone that had been set incorrectly and healed suboptimally? If building muscle was mostly a matter of repairing micro-tears in muscles, did magical healing make that go a lot faster, or prevent it entirely? Not that I would have ever been enough of a weirdo to include it in a game, but would magical healing repair a ruptured hymen?

Perhaps unsurprisingly, I’d played with healing a lot in my time as a DM. There was a villain who ‘healed’ peoples’ mouths closed, the magical healing in Long Stairs would move you closer to an elfin appearance and eventual psychosis, and in Scattered Ashes, healing took your memories of the injury too.

On Aerb, there were some pitfalls to magical healing, many of which I’d already had first-hand experience with. Get it? First hand? Because my hand was fucked up for a while? Anyway, there were three primary problems with fairies and PHY-boosting bone magic:

1. Magic generally didn’t produce more magic, with a few exceptions. If you cut off a finger, it
was really hard to find a magic that would regrow those bones (though it was relatively easy to heal a broken bone back together). If you lost blood, you needed a donor, or you needed to replenish it naturally on your own. Skin was a little more permissive than bone or blood, but it was apparently hard to find a magic that would help you recover from flaying. This was because bone, blood, and skin weren’t just physical things, they had latent magic.

2. Magic had some trouble with diseases, infections, poisons, and other chemical, viral, or bacterial problems. A blood magus could burn out a lot of them, if they were caught early, but there were limits on how much force they could apply to the problem. There were a few methods that could deal with those problems to greater or lesser extents, but generally speaking, you were in a bad way if things had progressed too far. (Unicorn blood wasn't shelf-stable, and had gone bad, but we still had unicorn horn to get around most of these issues, so long as we had the time to crush and powder it, something that couldn't be done ahead of time.)

3. Magic had a lot of trouble if your soul had problems. Scars persisted through healing when the wounds were bad enough or persisted long enough to feed back into the soul’s conception of the body. On Aerb, ‘phantom limb’ syndrome came from a mismatch of soul and body, but tended to fade with time, as the soul gradually caught up to the reality. Congenital defects tended to persist through healing. So did direct attacks on the soul’s conception of what the body should be. And, if you snipped the bi-directional connection between bones and soul, you would run into some problems in fairly short order, especially if you repeatedly made liberal use of healing magic.

We’d had lots of experience with these limits in one way or another. Fenn had almost died because Solace hadn’t been able to conjure up the power from the locus necessary to refill her with blood. Amaryllis had almost died from rat rot because that had been left to linger for almost two weeks, though that wasn’t entirely our fault, and we hadn’t known how bad it would eventually get. We’d also had more than enough experience with both scars and burnt-through bones. There were ways around the limitations of ‘standard’ healing, some more esoteric than others, but it was the edges where things got worrisome.

The big worry was with that third point. If Solace’s lungs hadn’t developed properly or fully, the magics we had available weren’t likely to help her. We’d asked Bethel’s opinion back at the safehouse, but she wasn’t able to tell one way or another, though she was able to confirm that the baby was, so far as she could tell, either full or half crantek with a steady heartbeat. Amaryllis had looked into Solace’s soul, but we didn’t have the necessary medical expertise to say one way or another, nor did we have the expertise to do any (wildly experimental) modifications to her fetal soul, if we had even been able to diagnose the problem.

“I’m sorry I have to ask this,” said the doctor, “But what species is the baby?”

We were in the maternity ward, with thin fabric separating us from the rest of the place. When Grak got in, I was going to have him put up a ward against sound; we could hear a woman screaming from down the hall, periodic bursts of anguish that were separated by minutes of low moans. It was edging into morning, and I hoped that she would be finished before too long, or at least taken into her own private room.

A nurse had examined Amaryllis, asked questions, and redone the examination. All of their equipment seemed hopelessly outdated to me, but part of that was because Aerb didn’t have access to proper plastics. It made me think back to visiting Arthur in the hospital, and all of the plastic tubes and crinkling, throwaway packaging on all the medical supplies on the wall. On Aerb, they used rubber where they could, and there was more made of wood or metal than on Earth. It didn’t feel like a safe, sterile, well-lit environment. Not that it had done Arthur a whole lot of good.
“I don’t know the species,” said Amaryllis. I saw the muscles of her jaw go tight after she finished speaking.

“I see,” said the doctor with a nod, as though he heard that sort of reply fairly often. He was abnormally tall, and though I had a decent handle on the different species of Aerb, I thought he was probably a hybrid that I didn’t recognize. His teeth were a burgundy red, as was the skin around his mouth, which I found particularly hideous, but other than that, he was a pretty normal-looking guy, with a white coat and a stethoscope around his neck, and thinning black hair. He’d given his name as Nonnatus, but I wasn’t sure whether that was his first name or his last. I was also pretty sure that it meant something in Latin, but not sure what. (Latin didn’t exist on Aerb; Anglish had a different precursor language instead that gave rise to some of the same structures and etymologies.) “I don’t mean to press the point, but would it be possible for you to narrow it down? It’s important so we can be sure we don’t give you any medications that might negatively impact the baby.”

“Taxonomic contraindications are rare,” said Amaryllis, frowning somewhat. She was about to launch into something but stopped herself. “She’s either crantek or human, I think, but there’s a possibility that she’s something else. And … she might not be hybridized.”

Nonnatus stared at Amaryllis for a long moment. “I see,” he repeated.

“It’s been an interesting pregnancy,” I said. I felt like Fenn, trying to add in some levity and seeing it fall flat.

“You said it was important to know,” said Amaryllis. “I’m telling you that there are things I don’t know.” I could see her chew the inside of her cheek for a bit. “The pregnancy is a result of complex and highly advanced magics that we didn’t and don’t understand.”

The doctor looked at Amaryllis, then at me, then down at Amaryllis’ belly.

“We’re covered by doctor-patient confidentiality,” said Amaryllis. “It may be important for you to know, I’m being forthright, do what you need to do in order to save my baby’s life, even if it’s at the expense of my own.” That set my heart racing. I was almost certain that it wouldn’t come to that, but feared that it might.

The doctor frowned slightly, then nodded. “We’re going to try a few methods of inducing labor, and if they don’t work, we’ll proceed from there. Okay?”

Amaryllis nodded, and not much later, the doctor left. Another scream came from down the ward.

“I don’t know if it was smart to tell him that much,” said Amaryllis. Her hands rested on her belly.

“Is that really what you’re worried about right now?” I asked.

“I’m worried about a lot of things,” said Amaryllis. “Primarily, I’m worried about the baby, and going into labor as soon as possible. There are two primary approaches here, stalling out and rushing ahead, both with their own risks, and we don’t have the necessary medical expertise to do either on our own. I’ve already tried as much as I dare to. But I also know a lot more about Earth’s procedures than Aerb’s, and I worry that Aerb’s approaches are worse.”

“Well, you’re taking this well,” I said.

“I’m really, really not,” said Amaryllis. She rubbed her belly. “The thought of nine months -- eight months in that chamber coming to nothing, of my baby dying after everything we’ve been through …” She shook her head and let out a seething sigh. “I honestly think that I should stop thinking about it, because it makes me so fucking angry and sad to imagine it. Maybe I’d be fine with it if I thought
that it was just random chance, but it’s not, is it? It’s the fucking Dungeon Master and his fucking narrative.”

“Yeah,” I said. Probably, maybe. Certainly within his power to have stopped it. But it’s also possible that somewhere deep within the game mechanics is a chart you roll on to determine the outcomes of a pregnancy, or that we’re in a subgame, or that this was a natural complication of a complex and arcane ritual that I only sort of understood while I was helping to cast it. Or just chance.

My anger had faded a bit, over two months in the chamber, partly because I’d written out some of my feelings in letters to Fenn, and partly because we’d gone that long without anything really bad happening. All the shit that I’d gone through on Aerb was some distance behind me, and no, that didn’t logically excuse the Dungeon Master from being a grossly negligent god … but on a purely emotional level, it took some of the sting from it.

“I’m really hoping that this isn’t the most dramatic birth of all time,” said Amaryllis. “But I knew that was a possibility when I agreed to it. I had foolishly hoped that pushing a child out of me would be interesting enough on its own.”

“I’m sorry,” I said. She’d been the one to take on the burden, but while Fenn had privately expressed feeling somewhat less sympathetic because of that, it wasn’t the case for me. I didn’t know that I’d have chosen to become pregnant in Amaryllis’ shoes, not to save Solace’s life, nor that of the locus. Maybe I would have, but I would have had a lot of selfish thoughts first. In my eyes, Amaryllis was suffering by virtue of being a better person than I was. “Is there anything I can do for you?”

“Fight off the ninjas when they show up,” said Amaryllis with a mirthless laugh.

“I’m serious,” I said. (There weren’t any ninjas on Aerb, or if there were, they were really good at staying hidden.)

“Okay,” said Amaryllis. “Then I’d like you to burn some bones. Wisdom is the ability to withstand mental stress, right?”

“Huh,” I said. “Yeah.” I came forward and laid a hand on her shoulder, tentatively letting my fingers touch her skin, then began burning through the bones of my hand. I was thankful that I had a renewable source of bone magic, and that it was discreet.

“Oh,” said Amaryllis as the magic started its work. “I should have had you do this while we were in the chamber.”

“Takes some focus,” I said. It was hard to use on myself, since it took enough mental effort and split focus that it was difficult (though not impossible) to use it to accomplish anything.

“Ow,” said Amaryllis, leaning forward slightly and wincing.

“Are you okay?” I asked, stopping the magic. I wasn’t sure how someone could be hurt by having Wisdom channeled into them, but --

“She kicked,” said Amaryllis. She smiled slightly. “That’s the first time.” She winced again. “Ow. Not really very pleasant though.”

“Good sign,” I said.

“Yeah,” said Amaryllis. “I wish Grak would get here.”

It wasn’t too long afterward that Fenn and Grak showed up; the screaming from down the ward had,
mercifully, stopped.

“Where are all the doctors?” asked Fenn when she came in. “Also, why don’t you have a private room? What’s the point in having millions of obols if you can’t buy a doctor?”

“They don’t have private rooms for birth, not unless it’s far enough along,” said Amaryllis. “Labor can take hours, most of it not all that exciting. The doctor came and went. We’re waiting, though I don’t know for what.”

I looked Grak over. I hadn’t noticed it before, but he was in Earth clothes, rather than his normal, more traditionally dwarvish outfit. He still had his braids dyed the color of lead, but he was wearing a buttoned-down shirt and jeans. I had no idea how I had missed it, but I must have been just that focused on Amaryllis.

“I am here for you,” said Grak. He reached forward and Amaryllis took his good hand, squeezing it lightly.

“Probably not much room for your expertise,” said Amaryllis. “I know you put in a lot of time on the training and education, but this is too far into the danger zone.”

“I am still here for you,” said Grak.

“I am too,” said Fenn. “But I long ago consigned myself to not being much help.”

The doctor returned, parting the curtain and giving us a bit of time to register his presence before he came in. He glanced at Fenn and Grak, then down at Grak’s prosthetic, then over at me and Amaryllis.

“I’d like a bit of privacy with the patient,” said the doctor.

“I’m the midwife,” said Grak.

The doctor looks down at Grak’s prosthetic again and frowned slightly. “I see,” he said. He had a great deadpan, though that wasn’t really something that I thought you wanted in a doctor. He looked at Fenn, hesitating.

“Just a friend,” said Fenn with a smile. “But I was there when the baby was conceived, and I’m not going to duck out until labor starts.”

“Very well,” said the doctor. He turned to Amaryllis and cleared his throat. “It’s been twenty-six hours since your water broke, and you show almost no signs of going into labor. Unfortunately, the baby will be preterm, at least by your accounting. We have two options at this point. Our first option is to give you as much time as possible, in the hopes that any remaining development can take place. This comes with some risks, notably infection, which a blood mage should be able to help you fight off if we catch it. However, there are some risks to the infant as well, since it too will be exposed to infection risk, and that’s much, much harder to treat.”

“And the second option is inducing labor,” said Amaryllis.

“Yes,” nodded the doctor. “Depending on how premature the infant actually is, there will be some risks to it, especially if it’s underdeveloped. In the worst case, we’ll use the Nufer method, but that’s not preferred. Induction of labor is my recommendation.” (The Nufer method was what they called a Caesarean section, because Aerb didn’t have a Caesar.)

“Okay, yes,” said Amaryllis. “Do it.”
“Good,” said the doctor, seeming pleased. “Now, there are a number of natural methods --”

“Assume I already tried them all,” said Amaryllis.

The doctor stared at her for a moment, then nodded. “Have you self-medicated?”

Amaryllis hesitated. “Yes,” she said. “But I don’t know the name it would go by in this hospital.”

Again there was a twitch of her jaw muscles. “I took a prostaglandin suppository sixteen hours ago, the equivalent to roughly one fortieth of a grain. So far it’s shown no effect.”

The doctor stared at her, pursing his burgundy lips. “I see,” he said. “And have you tried manual dilation on yourself?”

“No,” said Amaryllis. “With the infection risk, I didn’t think it prudent.”

The doctor nodded. “I find myself in agreement,” he said. “I’ll be back shortly with a nurse, and we can perform the procedure. I should warn you that it can be quite uncomfortable.” He looked at the rest of us. “Your husband can stay, the rest will have to leave.”

“I am her midwife,” Grak repeated, folding his arms across his chest, which really just made his prosthetic more visible.

“It’s fine,” said Amaryllis. “It should be simple enough, and they have considerably more practical training.”

That put a sour look on Grak’s face, but he nodded and left, with Fenn following close behind him. The doctor left too, presumably to get a nurse to assist him, along with the necessary equipment.

“How’s married life?” I asked.

“Fine,” I said. “I’m not really sure that deception was necessary.”

“You want to look normal,” said Fenn with a shrug. “Grak and I aren’t normal, better for us to stay back, I get it. Mary was pretty keyed up on the idea of us not fucking things up, which I get. I should probably make myself scarce, actually, at least for the time being.”

“Sorry,” I said.

“Didn’t mean to sound put out,” said Fenn. “Human births are grotesque. I really don’t want to see her split open. Better to just have it all happen where it’s out of my sight.”

“I can hear you,” said Amaryllis from behind the sheet.

“I love you, Mary,” called Fenn. She smiled at me. “I knew she could hear,” She stepped close to me and gave me a very chaste peck on the cheek. “I’m going to catch some sleep on a couch somewhere, Grak thinks this will probably take a while before it goes anywhere interesting.”

“ Didn’t you just wake up?” I asked.
“Eh, I can always go for a nap,” said Fenn.

The doctor and nurse came, and I waited outside the sheet of cloth. In retrospect, maybe I should have stayed in there, if not for my own sake, then because listening to the whole thing without being able to see was nerve-wracking, especially hearing little sounds of pain or discomfort from Amaryllis. Some time passed as this went on. I took a few minutes to dip into my soul and replenish my bones, in case I wouldn’t have time to do it later. I wondered idly to myself whether I should go in and try to burn bones for Wisdom again, to help her out with, at the least, the mental side of things. I touched the wedding ring I was wearing and thought about what it would feel like to be doing this for real. Fenn had seemed to indicate that pregnancy for an elf was, comparatively, easy street, and not too much harder for a half-elf. Not that it would be her, necessarily, but that was where my mind was at.

A little boy in a suit came up to me, and it took me a bit to notice that he wasn’t a little boy at all, but a gnome. He was three feet tall, clean-shaven, except for his enormous mutton-chops. I had seen a few gnomes and hobbits on Aerb, but only in passing. As a gnome, his head, hands, and feet were disproportionately large, making him look older, rather than childlike. He didn’t have any wrinkles though, and his hair was black as night. I wasn’t about to venture a guess as to his age, but he seemed on the young side, and not because of the height.

“Can I ask you some questions?” he asked. His voice was high, but not very childish; he enunciated well.

“Uh,” I said. “My wife is having some difficulties, I don’t really have the time, sorry.”

The gnome nodded, then reached into his suit. He pulled out a badge that must have had some kind of magic on it, because the sight of it hit me like a brick and caused my eyes to lock focus on it.

“My name is Figaro Finch,” he said. “I’m an agent of the Uniquities Division of Imperial Affairs.”

He put the badge away, and my mind momentarily went to mush before springing back. “I’d like to talk.”

“If this is about that joke my wife made, she’s got a very offbeat sense of humor,” I said. Jesus Christ with half Amaryllis’ ability to lie, that’s the best I could come up with? “She’s a little bit neurotic, especially with the baby on the way, and I don’t want to get into our personal history, but …” I trailed off. He was completely stonefaced. I’d been about to tell him that she had cheated on me with a crantek man, but I wasn’t sure that I would share that with a stranger, if it were really what had happened. I also had no real idea who he was or why the hells he was here. One of the classic interrogation techniques was to stay silent and let the subject talk themselves into a corner. I’d done that more than once as a DM. “Why don’t you tell me what this is about.”

“There have been a series of incidents,” replied Finch. “I was hoping that you could shed some light on them.”

“Oh?” I asked. Shit.

“Does the name Larkspur Prentiss ring a bell?” asked Finch.

Shit shit. “He was Anglecynn’s Foreign Security Director,” I said. “We’re from there, or were, a long time ago. I seem to remember reading something about him in the papers, but I can’t remember what.”

“How about the name Esuen Tsa?” asked Finch.
“That one is less familiar,” I replied. I looked back to the curtain. “Look, my wife is having complications with her pregnancy, so you can either explain what’s going on, or leave me alone until a better time. I can give you the address of the place we’re staying in Cranberry Bay, hopefully in a few days we’ll be back home with our baby, and I can talk then.”

“Just one last name,” said Finch. His large eyes were watching me closely. “Amaryllis Penndraig.”

“Princess of Anglecynn,” I said, nodding and trying not to show a single hint of nerves or my racing heart. “But I don’t have any idea where you’re going with this.”

Finch pointed at the curtain behind me. “In there, is that Amaryllis Penndraig?”

“My wife?” I asked. I gave a little incredulous laugh, and was surprised that it sounded more or less convincing. “I could only dream of being married to Amaryllis Penndraig. Is that what this is about? That my wife looks a bit like her? Because other than the red hair,” which she hadn’t had a chance to dye, “I really don’t see it.”

“I’ll need to see her,” said Finch.

“Absolutely not,” said Nonnatus, who came out from behind the curtain to join me. “My patient is in considerable distress, and could hear enough of the conversation that she was growing worried. Whatever business the Empire has here, it can wait a few days. She will only be moved from this hospital under extreme circumstances, and then only with my express consent.”

I felt a sudden surge of affection for the doctor.

He turned to me. “We’ll be moving her to a private room, given the complications. I can speak with you about it privately later, but she’s requested you.” He looked at Finch. “I’m familiar with the authority you claim, but unless I have express written instruction from the hospital director, you’re not going to so much as see my patient until after I’ve delivered her child.”

Finch frowned slightly and gave a curt nod before stepping away. I held in a sigh of relief; whatever he wanted with us (probably an arrest), he didn’t have enough evidence or capital to push past a doctor and cause an incident. That made me pretty hopeful. I ducked in to see Amaryllis.

“Hey,” I said. She was laying back in the bed, with her feet slightly propped up.

“Hey,” she replied. She tried nodding, but it was more a loll of her head. “Labor’s started, so that’s good news.”

“Good,” I said.

“Might have been the prostaglandin, which would be ironic,” said Amaryllis. “How are things out there?”

“I met a guy who thinks you’re a princess of Anglecynn,” I said. “He had some other questions, but they didn’t make a lot of sense to me.”

“I heard some of it,” said Amaryllis. “Sorry, my focus was elsewhere.”

“Don’t worry about it,” I said. “I’m sure it’s a simple misunderstanding, you focus on the baby, I’ll deal with clearing up any misunderstanding.”

“I heard the word ‘Uniquities’,” said Amaryllis. “Not my favorite people.”
“You have experience?” I asked. “I never knew.” The name was familiar, from some long ago briefing, but nothing much that stuck.

“Remind me to tell you about it sometime,” said Amaryllis. “Not now.” She winced slightly and hunched forward a bit, then laid back down. “That was a contraction,” she said with a faint smile. “A weak one, but it was there. I almost feel like we could have handled this at home.”

“If she’s early, there might be problems,” I said. “I’m glad we came.”

“Can I tell you something?” asked Amaryllis.

“Sure,” I said.

“I’m kind of glad there was a mix-up with Uniquities,” she said. “It means that there’s something else interesting going on.”

“Yeah,” I said.

She was talking about the narrative, not about actual outcomes; Finch showing up meant that we had other problems to worry about. I had, for the most part, abandoned any belief in the narrative, partly because of what I’d talked about with the Dungeon Master, and partly because I felt like that was no way to live my life. But even if I believed the narrative was in full effect here, I wasn’t sure that I would have agreed that meant labor would go well. If I had been writing it … well, it was hard in tabletop games, really hard, but parallel plotlines were a thing, and you could set up one to succeed and the other to fail.

If I believed, wholeheartedly, that the Dungeon Master was invested in narrative, I might have tried to tank things with Finch in some subtle way, letting myself get caught up in the anxiety the birth was provoking in me, or tapping into a well of anger. Failing with Finch ought to mean that the birth would succeed -- at least, that’s how I thought about narrative, a balance of failure and success to make the success bittersweet.

I wasn’t going to do that though. If I was going to reject narrative, I was going to do it with all my heart. I kept thinking that Arthur must not have, that he’d let himself get wrapped up in it. If he made his choices based on what he thought the story wanted, it would explain so much about his failures over the years; they would make sense as sacrifice to the greater good, maybe.

“I should go find him,” I said. “I should explain things.”

“You already explained it was all a mistake,” said Amaryllis.

“Yes,” I said. “But … he had more to say, dots he was trying to connect, not for my sake, but for his own.”

Amaryllis reached forward and slipped her hand into mine. “I trust you,” she said. She squeezed my hand hard -- she had incredible grip strength from all that rock climbing. “If you miss the birth of our child, you had better have a very good reason.”

“I -- okay,” I said. I wanted to protest that it wasn’t our child, but it kind of was.

I stayed with her, holding her hand through the contractions, until we moved to a private room. I did get an answer to why that screaming woman was in the ward with us; her labor had gone a lot faster than expected, and there wasn’t any time to move her. The private room was, in some ways, worrying; they were moving us because they might need a lot of space, or because things might get dicey in a hurry. I was mildly surprised that we didn’t have a nurse in with us, but Amaryllis
explained that was more or less how it was on Earth too, at least until the contractions started coming closer together.

It wasn’t until we were alone in that room that Fenn slipped in. “Hey,” she said to both of us. “Going well?”

“Progressing,” said Amaryllis. She was a touch pale, but when I’d asked the nurse, she’d said that was normal.

“Good, good,” said Fenn. “Hey, who’s that fucking guy out there?”

“Gnome in a suit?” I asked.

“Yeah,” said Fenn. “He’s been stalking the halls and twigging my luck sense. I keep avoiding him. I stuffed Grak in a closet, because it’s hard to maneuver with two people.”

“But you didn’t literally stuff him in a closet, right?” I asked.

“Doesn’t matter,” said Fenn. She unslung the house-staff from her back and rested it against one wall. Ropey had been providing the strap, and was wrapped around the staff with elaborate knotwork that struck me as a little bit too intimate. I was used to his knots being economical.

Bethel appeared, standing next to the staff. Her chosen form seemed enormous in the hospital room, even though it had high ceilings. I noted that her hand rested on Ropey, rather than on the staff.

“Bring me closer,” she said.

Fenn rolled her eyes, but complied all the same, lifting the staff up and letting the head of it hover over Amaryllis’ belly.

“Progress,” said Bethel with a nod. “She is more animated than last night. You have moved closer to the birth.”

“Her?” asked Amaryllis.

“Her,” said Bethel, nodding slightly. “You had some doubt about that?”

Amaryllis nodded slightly. “I didn’t think to ask, earlier. It’s not important, really, but if we’d had an ultrasound or MRI we would ha-ahh,” the word was cut off with a gasp as another contraction came. We stayed silent until it had passed.

“Time?” she asked, breathing a bit hard.

“Ten minutes apart,” I said.

“What is an emereye?” asked Bethel with a frown.

“Equipment from Earth, too complicated for us to grab,” said Amaryllis. “Magnetic resonance imaging. It’s a way to see inside of people.”

“I can see inside you,” said Bethel. Fenn was still holding the staff over Amaryllis’ belly, resting it on the rail of the bed, while Bethel stood to one side. “My range is diminished with the material part of me so small, but there is less for me to think about when I’m this size. Less calling on my attention.” She held out a hand above Amaryllis stomach, palm up, and an image appeared there.

It was a fetus, curled up in a ball with an umbilical cord coming out of it, and around it, the amniotic
sac, rendered nearly transparent for us. As I watched, it -- she, Solace -- moved slightly. I looked over at Amaryllis, who was staring at the image with wide eyes.

“You can do real-time false-color imaging of a person’s interior,” said Amaryllis. And here I was ready to mistake that look for a mother seeing her baby for the first time.

It seemed like actual, proper magic to me. Sure, rationally I knew that it was just a combination of abilities that I’d already more or less known Bethel had, but it was still really impressive, and not just in the way that it was overpowered, but also because there was an unexpected majesty to it. Bethel was a showman (showwoman? showhouse?), I’d already figured that out, but that didn’t make it any less impressive.

The doctor, Nonnatus, came into our room and stared at the scene in front of him. Fenn slowly pulled the head of the staff away from Mary’s stomach, but apparently Bethel still had some range, because she stayed where she was, holding the illusion of Solace. The look on Bethel’s face communicated something to the effect of, ‘yes, what do you want?’.

“How is it done?” asked Nonnatus, stepping forward and looking at the fetus.

“Entad,” said Amaryllis.

From the corner of my eye, I saw Fenn covering her mouth with her hand, hiding a smile.

“I see,” said the doctor, frowning slightly. “I could have saved dozens if not hundreds of lives if I could see like this. If it could be used by the entire hospital --”

“It cannot,” said Bethel.

Nonnatus turned to me. “Clive, the man from earlier has managed to sway the head of hospital. You can wait until after I’ve checked up on your wife, if you’d like, but the man from Uniquities has demanded a meeting with you, and while I’m in a position to shield your wife, I was not able to shield you. You are expected in room 203b.”

“Shit,” I said. I looked at Amaryllis.

“Go,” she said. “I’ll be fine. But come back soon.”

I nodded at that, hoping that I would be able to.

“Need company?” asked Fenn.

“Do you think it goes better if you’re with me?” I asked.

“No,” said Fenn. “Not even a slim chance it goes better.”

“I’ll just go convince him that this is all a big misunderstanding,” I said. “Easy.”

I sat across from Figaro Finch in a small meeting room. He had a serious expression on his face, a notebook and pen in front of him, a folder to one side (whose contents I was very eager to see), and to my surprise, a thing that looked like a record player, which I was fairly certain was going to be recording our conversation onto wax. He sat in a booster seat, though they had a different name on Aerb that I didn’t quite remember.

“So,” he said. “Name?”
“Clive Horsewhistler,” I said. I wanted to ask how long this was going to take, but I didn’t want to be a hostile interview subject, not right off the bat, and not if Finch had connected the dots.

“And is horse whistling your occupation?” asked Finch.

“No,” I said. “I’m between jobs at the moment.”

“And where are you from, Clive Horsewhistler?” asked Finch.

“Anglecynn,” I said. “Specifically, a small town called Consort.” I’d picked it from a map; it was close to the place this body had come from, as seen on the teleportation key.

We had a problem. I had papers for Clive Horsewhistler, which I’d used to get on the train, but Fenn didn’t think they’d stand up to much scrutiny, and if Finch knew that Clive Horsewhistler had been aboard the Lion’s Tail, then he’d know that I shouldn’t have been in Cranberry Bay. Since he was asking about Esuen, I thought it pretty likely he knew I was lying.

“You have a different last name from your wife,” said Finch.

“We’re not technically married,” I said. “We were waiting until we had some money, and then … the baby came along.”

“Unfortunate how that sometimes happens, isn’t it?” asked Finch. “Your fiance, she’s from Anglecynn too?”

“Yes,” I said. “From Caledwich.”

“From her intake form, she’s very close in age to Princess Amaryllis Penndraig,” said Finch.

“You looked at her intake form?” I asked, eyes narrowed. “I wasn’t under the impression that was allowed.”

“The situation was deemed unique,” said Finch.

“I suppose that’s how Uniquities gets away with things,” I said, mouth in a thin line.

Finch pursed his lips, then began taking papers out of the folder. I was sort of dreading this. “Last month, a man matching your description got in an altercation with Prince Larkspur Prentiss, who was, at the time, Foreign Security Director of Anglecynn,” said Finch. “This happened in Cranberry Bay, at the Athenaeum. That was when I was called in. As you know, the Kingdom of Anglecynn is quite some distance from the Monarchical Democracy of Esplandian, and as you might imagine, the altercation raised some eyebrows. I use that word, altercation, because it’s unclear whether it was a direct assault on the FSD, or whether it was in some way provoked. There are discrepancies in the eyewitness accounts.” He slid a picture over to me.

It was black and white, with some horrible graininess to it. Photography wasn’t a new science on Aerb, but it was one of the places they were far behind Earth, as was the case with chemistry in general, probably because there was so much magic screwing things up. The picture wasn’t of me; it was a human woman with an elaborate bun and gray robe I thought was probably some shade of off-white. She looked a bit familiar, but I couldn’t place her. I looked up at Finch.

“You don’t recognize her?” he asked.

“No,” I said. “Should I?”
“Her name is Clarabell Brown,” said Finch. “She’s a student at Bone and Flesh who does work study in Coeus Hall. She was there when the altercation happened, and had some interaction with both Prentiss and the mystery assailant, who she insisted was only looking for information on something called ‘rat rot’, supposedly contracted in the Risen Lands. The Risen Lands, where Amaryllis Penndraig had been ceremoniously dropped weeks earlier.”

“Okay,” I said, shrugging. I remembered now, and did my best to keep it from showing on my face. “And?”

“The man this eyewitness met matches your description,” said Finch.

“I’m sure there are hundreds if not thousands of people in Cranberry Bay that match my description,” I said.

“There was another altercation in Boastre Vino,” said Finch. “Again, the Foreign Security Director of Anglecynn was involved, and again, I was called in, given the unique situation and my previous dealing with him in Cranberry Bay. I had many questions for him, you understand. He stonewalled me, then said that we would talk after his business was concluded. I busied myself gathering eyewitness accounts, thinking that I would apply some pressure later. The next day, in the morning, he teleported in a number of helicopters from Anglecynn, along with a large number of men who came through the touchstones, and …” He’d had his hands pressed together and then opened them wide, questioning.

“And?” I asked.

“There were no survivors,” said Finch. “We don’t actually know what happened. The initial altercation in Boastre Vino was between Larkspur Prentiss, with two of his most trusted lieutenants, and another party having four members. One of them, I now believe, was Amaryllis Penndraig. Another, again, matches your description.”

“Oh,” I said slowly. “And you think that … what, I killed Larkspur Prentiss?”

“Someone did,” said Finch. “The official story is that he was flying helicopters without a submitted and verified flight plan, and was subsequently attacked and killed by a dragon. The site of the accident was only briefly under the control of the city of Boastre Vino before being taken over by Anglecynn’s Major Accidents Department through a combination of legalistic and political chicanery. According to some private, off-the-record conversations with the initial officers on the scene, it appears to have been a full-on war. Not only were there no survivors, there were no bodies. I’ll spare you the details, because I’m fairly sure that you already know them, and far more intimately than I do.”

I stayed silent. I was wondering just how much of our history he was aware of. I was getting flashbacks to sitting with the Abswifth back in Parsmont, but this was so much worse.

Finch let me stew in the silence for a moment, maybe hoping that I would say something, before he moved on. “I was given leeway by Uniquities to investigate the matter further,” he said. “I spoke with law enforcement in Cranberry Bay and Boastre Vino, sent letters of inquiry to places Larkspur Prentiss was known to have visited in the days before his assumed death, interviewed eyewitnesses looking for some kind of angle, and even went so far as making a trip to Anglecynn to speak with his wife, Hyacinth.”

I felt like I was being too silent. If I was really Clive Horsewhistler, would I be sitting there trying to take everything in so I could figure out the angle he was working?
“I got bites,” said Finch. “Everything the least bit unusual crossed my desk, and while most of it was idle rumor, some of it was worth tracking down.” He smiled at me. He had small teeth. Not just because he had a small head, but proportionately, his teeth were small. “A human man and half-elf woman matching the descriptions of the two seen fighting Larkspur in Boastre Vino had, apparently, sold a unicorn at the meat market. Do you know how many unicorns are killed in a given year?”

“I don’t know the first thing about them,” I said.

Finch laughed, probably in disbelief, maybe trying to provoke me. “On average, about one every five years,” said Finch. “Usually it’s an elf that does it, since they have some kind of cultural connection to the creatures, but these two people walked in off the street and brought thousands of pounds of the creature out from extradimensional storage with no forewarning. That’s not something a professional hunter would do.”

“Okay,” I said. I rubbed my forehead a bit, trying to think of how Clive would react. “So you’re saying … what are you saying?”

“It’s another point of connection,” said Finch. “A man comes into Coeus Hall looking for information on a disease contracted in the Risen Lands, and gets in a fight with Larkspur Prentiss. A few days later, that same man is selling unicorn parts in Boastre Vino, and gets in another fight with Larkspur Prentiss later that evening. It doesn’t take a genius to know why a man with a serious, unknown disease would want to kill a unicorn. The real question is how the fuck he managed that. Do you understand?”

I nodded.

“I don’t think you do understand,” said Finch. He leaned back in his chair. “You don’t look like a man who understands.”

“No, I understand,” I said. “I just don’t know what it has to do with me.”

“There was another incident brought to the attention of Uniquities late last night,” said Finch. “A female tuung was pulled from a moving train. One of the guards was thrown off the train, the other woke up with a hangover, and a third is still missing. The tuung tried to keep this quiet, since they’d lost one of their prize females and didn’t know who had her, but they reversed course when a flying ship they authorized to descend into the Boundless Pit was hijacked and a hundred of their soldiers were murdered trying to get it back.”

“I … see,” I said. “But that was last night, and the Boundless Pit is what, four days away by train? You’re saying -- can’t you just check the logs to see who teleported where? That should clear me.” The logging was one of the reasons we weren’t going to be using the teleportation network anytime soon. Standards were a lot higher, when you were dealing with something so valuable. It was like the difference in scrutiny between driving across state lines and flying across state lines.

“The logs are clean as a whistle,” said Finch. He was staring hard at me. “Not just in Headwater, but in Boastre Vino and Cranberry Bay too. There’s not even a trace. If it was Amaryllis Penndraig, that’s no real surprise. There’s more than enough magic attached to her bloodline, and she’s had a month or so to go around reclaiming it. Anglecynn doesn’t require members of the Court to register their entads, but my guess is she’s got something in there, some way of moving around.”

“I’m confused,” I said. “All this is … it’s something. But what brought you to this hospital? How does this connect to me and my wife?”

“Back when I thought it was just a man looking to cure a disease, I thought maybe he’d end up at the
hospital, and if by some outside chance the princess was involved, maybe her too,” said Finch. “I put out feelers, stopped by to talk to the nurses, especially the ones at intake, and I let them know that if they saw anything out of the ordinary -- uniquesities, you might say -- they should send me a letter, long-distance, at my expense. I gave a sketch of the man and the half-elf, and a photo of the princess. I got a fair number of them, starting out, but nothing really worthwhile, just entads gone wrong or rare species hybrids. Eventually the letters dried up. But then, this morning, when I was in Headwater with my men following up on what had happened on the Lion’s Tail and The Down and Out, I got another letter forwarded from a night nurse, saying that a young couple had come in late in the night. The girl was the spitting image of Amaryllis Penndraig. The girl’s supposed husband was a taller human, blue eyes and brown hair, handsome and muscular, wearing blue armor.” Finch sat back in his seat. “Blue armor that you’re wearing now, which matched the description given to me by the tuung guard I had interviewed not thirty minutes before.”

“Allright,” I said. “So a nosy nurse violates patient privacy, hoping for a reward? What do I need to do to prove that I’m not this guy?”

“Are you really going to keep this up?” asked Finch. “Four tourists went aboard the Down and Out, two humans, a dwarf, and a half-elf. You and your wife have received two visitors, one dwarf, one half-elf, who I’m going to have some questions for too. I’m fairly certain that I can place all four of you on the train, at a party thrown by the Princess Emomain before the kidnapping of her handmaid.”

“Am I under arrest?” I asked. “And if so, what for?”

“Arrest?” asked Finch, raising an eyebrow. “This isn’t that sort of situation. You’re guilty of crimes, certainly, but most of them are against Larkspur Prentiss. From where I’m standing, all the evidence points to him acting in naked aggression against you and paying the price for it. Set your dealings with him aside, and we’re in murky water. Nothing that looks good for you, but also not anything beyond my ability to protect you from, so long as you have the two things my superiors think you have.”

I swallowed at that. “And those are?” I asked.

Finch held up a finger. “The first is Amaryllis Penndraig, part of the ongoing war for the soul of Anglecynn, one that the empire is losing, badly,” said Finch. He held up a second finger. “The second is Esuen, the female tuung.”

“And if I don’t have those things?” I asked.

“It gets complicated,” said Finch. He was watching me closely. “I have you dead to rights, and all I need is cooperation. I like dealing in carrots, not sticks.”

“But you do have sticks,” I said. “And you thought it best to present your sticks first.”

Finch gave me a nod. He reached a hand into his pocket and pulled out a pocketwatch, which he looked at with a faint smile. “You should know that we were able to find the hotel you checked in at. We know about your fifth member. Before I left to come find you, I put my second-in-command in charge of securing her, which should be done by now.”
“And you’re okay with staying behind?” asked Mary.

“I am, you don’t need to ask me again,” said Valencia. They were in the hotel room together, alone. Grak was putting up wards in the other room where the tuung were staying, and Joon had taken Fenn to go find out if there was another way down the Pit. Valencia was more comfortable when she was with just one other person, because sometimes there were too many people talking at once and it was hard to figure out what they were all saying without a devil’s help -- and Valencia didn’t particularly like having a devil’s insights into her friends.

“I know I decided for you,” said Mary. “I don’t want you to think that I was pushing you out, you’re a valuable member of this team, but --”

“If a warder looks at me, he’ll know that I’m non-anima,” said Valencia. “And then he’ll tell people, and they’ll try to kill me.”

“It’s partly that,” said Mary. “There are a lot of reasons.” She paused. “I thought that you might like some independence. You’ve been with us a week, and I feel like I’ve barely let you out of my sight in that entire time. I want you to have agency, to decide things on your own.”

Valencia felt a warm glow, deep in her chest. She reached forward and wrapped Mary in a tight hug, which the princess returned. Valencia liked hugging. She was slowly discovering all the things that she liked, and hugging was near the top of the list. She didn’t stop hugging until a little bit after Mary had dropped her half of the hug.

“You’re so nice,” said Valencia.

“Thank you,” said Mary. “I don’t think that’s particularly true, but thank you.”

“You have to come back,” said Valencia. “You all have to come back. Okay?”

“We’ll try our best,” said Mary. “We should probably talk about contingencies for what you should do if we don’t return, for whatever reason. You’ll have money, and you can certainly borrow the relevant skills, but it will probably be rough for you, and if I can offer some input that helps --”

“If you die, I’ll find you in the hells,” said Valencia. “And then I’ll kill all the demons and devils near you, so it won’t be as bad.”

“That’s -- probably preferable, yes,” said Mary. “I’m still not sure that you should be killing them so freely.”

“They don’t know what’s causing it,” said Valencia. She had watched, killing one, then killing a second that had been standing right next to the first so she could see it through his memories. Aside from that, every time she took a devil or a demon, she tried to remember to comb through their memories to see whether they knew anything about her. So far, nothing but whispers and rumors. The infernals weren’t supposed to die; they were scared. “Even if they did know, they don’t have very good reach up here.”

Valencia could feel through the nine thousand hells with what she thought of as her tendrils, absurdly long, interdimensional strings that could slice through a demon or devil and draw it into her. There were different pieces of her power, the tendrils that grabbed the demons from out of their bodies, the maw that tore them apart into component parts, and the reservoir where their skills and knowledge
were kept. It was a bit of idle work to keep each of the tendrils focused on a different target, ready to consume them at a moment’s notice. She had started with eight of them, but now they numbered in the hundreds, and adding any more seemed excessive.

“I’m worried there will be a reckoning,” said Mary. “And I’m worried that if you lean on them too much, you’ll take on something of them. They can’t be what’s driving your understanding of people.”

“That’s what I have the Harry Potter books for,” said Valencia with a smile.

“That’s not —” Mary began.

“I was only joking,” said Valencia. Mary could be a lot like Hermione sometimes, quick to correct things she saw as wrong. Reading the Harry Potter books had helped her to understand Mary a bit better. Mary was also sometimes like Lucius Malfoy, with careful words and clever plots. And sometimes she was brave and bold, like Harry Potter.

Mary pursed her lips. “I’m very serious,” she said. “Life can be hard, and it’s extremely easy to get cynical about people, even without infernal influences shaping your views.”

Valencia snapped one of her tendrils through a lesser devil and crushed him in her maw. All she wanted of him was the smallest piece of insight. She’d picked a lesser devil because she didn’t think it was so bad to do that. The little ones, close to the surface, were weaker and dumber, closer to her own ways of thinking. How much influence could they have?

“You’re talking about yourself,” said Valencia.

“Did you figure that out on your own?” asked Mary with a frown.

“No,” said Valencia. She tried her best to be honest with Mary and Joon and the others. It was easier without a devil’s insights, which always made lies so attractive. Lies could get you what you wanted.

“Well,” said Mary. “Yes, I do think I’m sometimes too cynical for my own good. There’s something infectious about cynicism. You treat people poorly for reasons that seem perfectly sensible, and the world becomes worse for it.”

“You’re talking about me,” said Valencia. “That wasn’t a devil’s insights,” she added. She had discarded the devil’s parts from her reservoir. Thousands of years of the devil’s life had been used up just for that one little hint at what Mary was thinking.

Mary sighed. “Yes. I’m talking about you.” She looked Valencia over. “You know that people can talk in generalities, don’t you? There’s subtext, true, but the generalities still hold, regardless of the context I’m thinking in at the time.”

“I know,” said Valencia. “You feel bad for treating me like I wasn’t actually there.”

“I was being pragmatic,” said Mary. “It was pragmatic to refuse to acknowledge that there was a person trapped in cycles of possession. It was cynicism, a way of preventing myself from being weak. I’m sorry.”

“You tell me you’re sorry every day,” said Valencia.

“I try not to,” said Mary. She fidgeted with her hands. “My ideal self would tell you once, then prove it every day.”
“You really are very nice,” said Valencia. She wanted to ask whether they could kiss, because it felt like a moment for kissing. Kissing was also one of the things that Valencia had decided she enjoyed, but there were rules about who you could kiss and when. She thought that with the right devil, she could talk Mary into more kissing, but that wouldn’t be right or fair, and through a devil’s eyes, it would be manipulation, rather than the love and affection it was. “Can I have another hug?” she asked instead.

“Of course,” said Mary. When they hugged, Valencia gave a little purr, like a kitten. She had only heard about kittens; some day she would like to meet one.

“When we’re gone, you’re on your own,” said Mary. She had been the one to break the hug. One of the rules of hugging seemed to be that you weren’t supposed to just keep hugging forever, or carry on a full conversation while hugging. “I left you money for room service, or for if you want to take a very brief trip outside to see Headwater. Check in on the tuung, never let a warder see you, and if something happens, block our teleportation site so that we know there was trouble. There’s a gun and a knife in the bedside table. If you see a warder’s monocle, run the other way, and if you go out, keep up a devil’s skills at all times so you can’t be ambushed or attacked. And if you are ambushed or attacked, take a demon’s skills.” Mary left unsaid what Valencia was supposed to do with a demon’s skills, but the thing demons were best at was violence. “I’m very worried about you running into a warder on Grak’s level who doesn’t need the monocle, but I don’t want to make this hotel room into another prison, so … be safe.”

“I love you,” said Valencia, because it felt true. There was a slight twitch to Mary’s face that said this wasn’t appropriate, but Mary had also said that it was the right of every thinking creature to be inappropriate at times, when the situation called for it. Mary had rules about when to break rules.

“You listened to what I said though?” asked Mary.

“I did,” said Valencia. “Are you going to say it all again before you leave for real?”

“Probably,” said Mary with a sigh. She ran her fingers through her hair, which was dyed black. Their hair matched, and Valencia found that pleasing. “I’ll promise to try my best to come back in one piece, if you promise to try your best to be in one piece when I come back.”

“I promise,” said Valencia.

“Then I promise too,” said Mary.

Valencia felt hollow.

She had read through all seven Harry Potter books, and now what was left? Nothing. Not literally nothing, because Juniper and Mary had each left her a dozen books to read, but Valencia understood that the world that contained Hogwarts was only contained in those seven books, and now she was done. She tried reading the first of the Animorphs books, but it wasn’t at all the same, and she stopped three pages in. She also tried starting from the first book again, but it wasn’t the same either. All that was left was that hollow feeling of having come to the end.

Juniper had said that he’d read more than a thousand books, which she hadn’t really believed until he’d said something to the effect of that being only three years of reading a book every day. Valencia had read through the first three Harry Potter books in the course of three days, so that wasn’t too ridiculous. Juniper had then gone on about his assumptions about reading speed in words per minute and how many words were in a book, which Valencia listened to attentively and then promptly forgot; it seemed like Juniper liked the mental exercise, so she was happy for him.
She’d used pieces of devils to read faster for the last four books, which had felt wonderful at the time, but which she now regretted, because there were no more books left. There was a slight taint of the devil’s thinking to her reading, but if anything, that enhanced the books; she could understand the precise ways the characters were flawed, which made it all the sweeter to see them overcome their weaknesses. She had read the epilogue without so much as a trace of the devil’s voice, which gave Rowling the last word.

Valencia decided that she would go out into Headwater. She made sure that everything in the room was as it should be, put the pistol into her handbag, then locked the door behind her, making triple sure that the wooden hanger said that the room was to be left untouched. Grak had left behind wards, some of them quite potent. She made a quick stop at the room the tuung were staying in, let them know she would be gone for an hour, then went down to the front desk and again clarified with them that no one was to go into her hotel room.

She walked down the street with a devil’s eye for detail, as Mary had told her to, watching the people. There were gaps in the knowledge a devil had, but there was much that was ready to be supplied to her from the reservoir of devil parts, with only a very faint sensation that told her it was the devil’s knowledge, not her own.

She saw a pack of ghill, with spines the color of wheat covering their backs and heads. She passed a he’lesh wedding party, with its traditional streamers of smoke that had as many colors as the stars in the sky. On a corner she spotted one of the renacim, which was so unusual that she stopped and stared for a moment, trying to make sense of it. There were only twenty thousand of them on Aerb, and one was here in Headwater, for no apparent reason other than simple tourism.

It was interesting, certainly, to see the mix of people, cultures, and customs, more even than in Cranberry Bay, because this was a place explicitly meant for people from far away to visit. But at the same time, Valencia had very little baseline for what was normal. Twelve days ago, she had been locked up in a prison within a prison, which was more or less how she spent her entire life. It was a monotony that had only been interrupted by Fallatehr’s tests or the times that infernals had reached up into her to puppet her body. She knew what was worth noting about Headwater and what wasn’t, because the devils knew, but the part of her that was just Valencia was marveling at how tall the buildings got, or the power lines, or a store full of books.

(Mary said that she was doing very well, given the circumstances. Mary hadn’t gone so far as to say that she was doing unnaturally, abnormally well, but Mary had thought it. There was, left unsaid, the idea that the Dungeon Master had placed his thumb on the scale. Also left unsaid was the way that Valencia sometimes took in devils to help her with managing her thoughts and feelings. Devils had emotions too, they were just really, really good at dealing with them. Some of that stuck, even when they were gone.)

She found a tavern she thought looked a bit like the one in Hogsmeade and sat down at the bar, on top of a stool. She gripped the bar, then spun herself one way and then the other.

The devil’s instincts were there, telling her how this would look to other people, but she ignored them, because she wanted the experience. Even with a lesser devil like this one, it was sometimes hard to find herself in the mix. The devil was dead, taken apart into component pieces, but those pieces were a part of her, augmenting her thoughts and, to some extent, feelings. She had been working hard, with Mary’s help, both to become more of herself, so there was less for the devils to overwhelm, and to keep from reaching into that well of understanding just because it was there. She tried to think about the devils as voices, independent characters, but that wasn’t really true. They were dead, and she was simply using their skills or knowledge. It was easier to think of them as separate, so that she could say it was a demon telling her how to kill everyone in the room, rather
than her own thought that she wouldn’t have had without the demon in her.

So she spun in the chair, to see what it was like, heedless of what other people would think. She might look like a little girl sitting on a bar stool for the first time. She was fine with that.

“But can I get you something?” asked the bartender. He was a large man, with broad shoulders and a neck thicker than one of her thighs. He looked friendly too, either despite or because of his bushy eyebrows. He was an aborian, claws filed down so they almost looked like fingernails. The devil’s knowledge helpfully told her all sorts of things, and she shut down the stream of thoughts about him as they presented themselves, but not before it left a taste in her mind – he was sympathetic to her, worried that she was trouble, worried that she couldn’t pay, easy to manipulate by playing the victim, and so on. He was definitely the owner; the bar had been built for a man of his proportions. (He reminded her of Hagrid, though less hairy.)

“One butterbeer, please,” said Valencia. The devil part of her mind was insistent that she not do this, because there was no such thing as butterbeer, nor even buttered beer, and she was making a fool of herself, but she elected not to listen, and instead do the thing she wanted to do, on the off chance that the Dungeon Master was feeling kind.

He frowned slightly. “Not something we carry, sorry dear,” he said. “What does it taste like?”

“I don’t know,” said Valencia. “Butterscotch?”

“Well, we do have scotch,” said the bartender with a laugh. “But I think you’re probably a little young for that.”

“I’m eighteen years old,” said Valencia. For all she knew, that might have been true.

“Are you now?” asked the bartender. There was skepticism in his voice.

“What’s the drinking age in Headwater?” asked Valencia.

“It’s at the discretion of the barkeep,” he said with a faint smile. “We get too many species here to have a hard and fast rule. You must be a long way from -- where, exactly?”

“Portina,” said Valencia. It was an innocuous answer, close enough to be uninteresting, far enough that it was unlikely he’d press her on her knowledge. Not that she didn’t have knowledge, but devils didn’t exactly keep up to date. “Can I have something like butterscotch then? It doesn’t have to have alcohol in it.” She reached into her hand bag and pulled out a handful of obols, enough to show she had money, not enough to raise any attention. This was going to be the first time she’d ever paid for something. In fact, it would be the first thing that she had actually owned for herself, even if it was paid for with the group’s money.

“Here,” said the bartender. He plucked a bottle from the shelf with his huge hand and began pouring it into a small glass, then took a second bottle with a nozzle handle and added something fizzy. “It’s a local specialty, Delver’s Delight, one part tonic water, one part ungweed syrup. The tuung harvest it from the walls of the Pit, but most of what you’ll taste is sugar.”

“How much do I owe you?” asked Valencia.

“On the house,” said the bartender. “It’s a quarter-obol worth of ingredients, if that.”

“Thank you,” said Valencia with a small, solemn bow in his direction. She used a bit of the devil’s skills to convey the right impression toward him, to make him feel appreciated. The devil’s skills were laying out a path of manipulation for her, a way to get this man to do her bidding, but she
clamped it down.

She tasted the fizzy drink, sipping it slowly. There was a bitterness to it, and acidity, a bit of near-citrus flavor, but sugar was what she tasted most. A thousand comparisons sprang to mind, courtesy of the devil, most of them calculated to how the bartender might react to them, some outright lies that would lead their conversation in some particular direction … but there was only one thing that Valencia herself could honestly compare it to.

“It tastes like Mountain Dew,” she said.

“Mountain dew?” asked the bartender. “Poetic, I suppose. Is that what you do? Are you a young poet from Portina?”

He liked her. There was something of Juniper to him, a weakness for weakness. There were no undercurrents of sexual desire though, not like there were with Juniper (not that she minded that in the least). The attention and momentary companionship wasn’t unwelcome, but a devil’s skill at avoiding detection was ringing alarm bells in the back of her head, saying that the more they spoke, the more he would remember her, and the more he might mention her to someone who went asking around, especially if he thought she was in trouble.

“I’m just visiting with family,” said Valencia. “We came here for the wedding of a family friend, and my mom let me slip out on my own for a bit since there’s some free time.”

“Ah,” said the bartender. He relaxed slightly, but there was also an edge of disappointment, a slight fall of his face and deadening of his earlier liveliness. “So no occupation, as yet? I don’t suppose you’d have interest in working at a tavern?”

He believed her, mostly, but she hadn’t done enough to get rid of his need to help her.

The thing that made her sad, so sad she might have cried if she didn’t have a devil’s control of her body, was that if he learned she didn’t have a soul, it would be like a switch was flipped in him. Non-anima were rare, adult non-anima even more so, but demons and devils were well-understood, and if he learned that she was under constant threat of possession (nevermind that she wasn’t), everything she’d said or done would be cast in that light. Every bit of sympathy he’d had toward her would be seen as a devil’s victory, every moment of distrust or unease seen as a devil’s failure.

“If I find myself with nowhere to go, I’ll come here begging for a job, does that sound like a deal?” asked Valencia, knowing that was a lie.

“Deal,” said the bartender. “Name’s Bore, though I’m not one,” he said, holding out his hand.

Valencia shook it. “Valencia the Red,” she said, against advice of counsel. She smiled at his raised eyebrow. “It’s a family name.”

He left her alone after that, and she stewed in her thoughts. He had been nice, and their interaction had been pleasant, but that was only because he hadn’t known her. There were, at present, four people in the world who knew her secret, and they were the only ones she could rely on -- if they made it back.

Having had her fun during her first night in Headwater, and anticipating many more days of solitude ahead of her, Valencia started writing an eighth Harry Potter book.

At first she tried to write it with a devil’s help, but by the time she reached the end of the first chapter, people were plotting and scheming beyond anything that had happened in the first seven books, and
none of them were terribly good people, and she couldn’t see how any of it was going to have a happy ending for anyone. The bad people would just get worse, and all the glimmers of light would be snuffed out, because that was the devil’s understanding of people. Mary thought that with some practice, Valencia would be able to borrow a devil’s skills without the devil’s particular focus on suffering, misery, and pain. If that was possible, Valencia wasn’t quite there yet.

She scrapped that attempt and began again, without help, but ran out of ideas halfway through the first chapter, when she was trying to think up people that Harry Potter would work with in his career as an Auror. She named one of them Juniper, and another Mary, but that raised all sorts of questions that would need to be answered first.

So she scrapped that second attempt too, and started in on a third, which was about Juniper Smith’s first year at Hogwarts with Mary, Fenn, Grak, and the locus. Juniper would be Gryffindor, of course, and Fenn would be Hufflepuff, but Valencia wasn’t sure whether the Sorting Hat would put Mary into Gryffindor, because she was courageous and bold, or into Ravenclaw, because she was so clever, or into Slytherin, because her whole family was from Slytherin. Slytherins weren’t supposed to be evil, though most of them were. It was about ambition, and wasn’t Mary wildly ambitious? She kept talking about wanting to change the whole world.

Valencia decided that she would be a house elf in this story, but one that had been given a sock by Juniper, and then scrapped her third attempt at writing the eighth Harry Potter book because she was just making herself sad. She didn’t want to be Dobby, she wanted to be Hermione.

It was during this rather glum moment of self-reflection that Valencia heard a knock at the door.

The choice wasn’t whether to take in an infernal, but which kind to take. The devils were liars, deceivers, and talkers. The demons were focused almost entirely on combat. It took some time to switch, and while the skills and information they both possessed came to her quickly, there was still a moment of mild disorientation. So, to talk or to fight?

One of Valencia’s tendrils was touching a demon in hell #2349. She snuffed out its life in an instant, disassembled it with her maw, then took on the full force of its knowledge and skills. This took two seconds and very little thought or effort on her part. She always felt glad to have killed another of them, then always after that, a twinge of guilt at feeling happy that a life, however abhorrent and irredeemable, had been ended.

With the demon’s pieces augmenting her thoughts, the room took on a different context. Mary had left behind weapons, a dagger and a gun; Valencia was suddenly cursing herself for not having checked to make sure that the gun was loaded and in working condition. She went to do that, moving silently across the floor with practiced grace as she ignored the knocking and tried to think. She inspected the dagger, feeling its weight so she could throw or slash without hesitation or error, then pulled the magazine from the pistol and checked it over, barely even aware of what she was doing as her mind raced.

The suite had two bedrooms and one long main room, which served as a common area, with a small desk, a dining table, a couch with a short table in front of it, and a sliding door that led out onto a narrow balcony.

That was the next question: flee or fight? Out the balcony so she could scale six floors down to ground level and disappear into the city, or murder everyone in the hallway?

She stumbled as she realized that those weren’t the only two choices. Those were simply the only two things that a demon would immediately think of, patterns of behavior that she’d adopted by taking too much of him from the reservoir at once.
When she actively focused on talking to them, her mind raced ahead to the possibilities, cataloging what sorts of threats might be present in the hallway, the traditional compositions of fireteams under different circumstances, and what could be assumed about them from the fact that they were here. The tuung were limited in the forces they could commit by their weak position in the international community and the necessity of sending their people off to athenaeums, where they might defect. Anglecynn would be better equipped, though a clandestine operation had limits. And if it were the Empire, which was entirely possible if things had gone badly enough down in the Pit, there might be as many as a dozen people in the hallway … plus more down on the ground, watching for an exit out the balcony.

The best strategy for killing them all would be to lie in wait in the room, behind as much cover as she could manage in short order. Grak had left the hotel room carefully warded, and Valencia knew where all the wards were, which would allow her to dance in and out of the invisible barriers to gain the advantage. She had begun exercising, at Mary’s insistence, but it had only been ten days, and while that was enough to show some progress, she was still a weak, small, girl.

There were ten bullets in the pistol. Her aim was as close to perfect as it could be without having developed any actual muscles or muscle memory, which meant that it was good enough to kill at least ten people in close quarters. She could kill the first two or three before they even knew what was happening, assuming that entads weren’t in play and a few varieties of magic were off the table. Sadly, in a firefight with no foreknowledge, those always had to be a consideration. Velocity mages to dodge the bullets, still mages to stop them, brutes in entad full plate to stop the damage, revision mages to reverse it, a gold mage if they could secure one … and those were just the obvious things, what you expected as standard, before you even started bringing in the esoteric.

Valencia stopped what she was doing when she realized that she had gone back into thinking that the way of dealing with this problem was to kill people.

The knocking had stopped.

It was probably just room service.

Valencia sat on one of the dining room chairs and placed the gun behind her, so it wouldn’t be visible from the door. The demon’s instincts were a part of her, and they were screaming, so she released that part to wherever such things went when she was done with them. Oblivion, probably, or the Void. After a moment’s thought, she released the demon entirely.

One of her tendrils had been tracking a devil, and she lashed through it, stealing its essence and killing it in the process.

The knocking came again, louder.

“Yes?” called Valencia. “Who is it?”

There was a long pause. “Imperial Affairs, Uniquities Division,” said a voice from the other side.

Those four words gave away a lot. The devil didn’t have all that much knowledge of current affairs, and by a devil’s standard, ‘current’ was measured in decades. The content of the message was in the voice that said it, the tone placed on the words, and the emotion it carried. It was command, mingled with fear and anticipation. The voice was a man’s voice, slightly harsh, almost certainly not the sort of person that they would use for delicate negotiations or diplomacy. It wasn’t enough for a full assessment of the situation, but it did shift the probabilities toward the less favorable outcomes.

Valencia had no idea what Uniquities was, nor did the devil have any helpful knowledge on the
“Can you give me a second to get dressed?” asked Valencia. In _her_ voice there was no imperfection to give anything away. She could control her pitch and tone precisely, and the part she was playing was close enough to who she really was anyway. “Okay,” she said, standing from her chair and scooping up the gun to toss it into the bedroom. She walked toward the door, trying to think about the possibilities. It wasn’t likely that they wanted a negotiation, but part of negotiation was getting the other party to the negotiating table. The key would be to throw them off balance first, get them out of their war footing, and from there she could see how things developed.

“Who did you say it was?” asked Valencia, standing next to the door, leaning on it slightly. She looked at the peephole, but it was black, covered by something from the other side. That wasn’t a good sign.

“Imperial Affairs, Uniquities Division,” said the same voice, in nearly the same tone. Perhaps some of the fear was dropping away, replaced by frustration and confusion. There was still anticipation though. That was worrying. “Open the door, please.”

“Mom said I wasn’t supposed to,” said Valencia. She pitched her voice just a bit higher, playing up her youth, and added in the smallest hint of sing-song. Perhaps they wouldn’t catch it, but it was meant to convey that she didn’t quite understand the severity of the situation.

“We’re coming in,” said the voice, with a note of finality.

Valencia stepped back from the door, then slightly to the side so she wouldn’t be directly in the line of fire. She had briefly thought that they would kick the door in, but no, they had authority on their side, and the door was unlocked with the hotel’s master key. She watched as the knob was slowly turned and the door was pushed open. No one was visible, but that wasn’t much of a surprise; she’d have done the same, staying out of view.

Her breathing was coming a little faster now, and her heart was beating more rapidly. This was all entirely under her control; she was a young girl in over her head, maybe not an innocent in whatever parts of the story they knew, but definitely in over her head. She would have to spin some innocuous cover story, but she didn’t really doubt her ability to do that. If she could become a naive little girl they thought they had trapped, all the better. She would be able to feed them whatever information she pleased.

The problem was with what came after. Petty thieves weren’t usually checked over for entads by a warder, but if it was an imperial operation with plenty of funding behind it, that would be standard operating procedure, just to make sure a prisoner couldn’t turn into mist the moment their backs were turned, or swap places with their guard, or a thousand other possibilities that could only be accounted for by identifying everything magical and taking it.

A man in matte gray armor stepped into the room, sweeping his rifle from side to side, lowering it slightly as the barrel passed over Valencia. There were others behind him, dressed the same. The armor was known to her: it was shimmerplate, produced by a singular entad in the empire’s possession, the armor produced in bulk and revocable at the will of the entad’s owner. It had been used in the Battle of Marshwind, Valencia distantly recalled. Her gun, sitting on the bed, wouldn’t be too effective unless she were to exclusively shoot them in the head, and even then, the first man in wore a helmet of a different style. The hands were unarmored too, which was another weakness she could use.

“Just a girl,” the man from Uniquities said to others, who were mostly out of view. He kept his weapon up and at the ready. The words were dismissive, which was promising. There were a
handful of the mortal species easily mistaken for human, but he’d seen the fear in her eyes and reduced her down to nothing more than her age and gender.

“W-who are you?” asked Valencia. She was shaking now, with dilated pupils, giving every display of fear the devil knew, hoping to disarm him and engender sympathy. She internally debated whether or not to wet herself, but his reaction to that was too hard to predict. Sympathy and guilt would be good, disgust and embarrassment, less so.

“Ellis, you’re up,” said the man, pulling back slightly and ignoring Valencia’s question.

A woman, also wearing shimmerplate, slipped into the room. She was wearing an armored pouch slung over the armor, and from it she began to pull a monocle on a chain.

“Please don’t hurt me!” Valencia screamed. She covered her head with her hands, a defensive reaction that wouldn’t do much good against the rifle, and scrambled to the side, through the door to the bedroom. It was as natural a progression from anxiety to full panic as she could manage, given short notice.

“Freeze!” shouted the man as she moved. He had snapped his rifle up to track her, but he didn’t shoot.

All of the signs of fear and distress became real once Valencia allowed the pieces of devil to slip from her reservoir, and in a brief moment of blind panic she almost forgot the reason she’d done it. She quickly killed a demon with one of her tendrils and shoved his essence through her rending maw. The fear didn’t quite wash away, but it became a manageable thing, compartmentalized as something that would be inefficient in the coming fight. There was no tremor from her nerves, no flood of panicked indecision, just cold calm and a tiny bit of excitement at being turned loose -- and Valencia honestly didn’t know whether that was coming from her, or from the demon.

She stopped, gun drawn, and tried to think around the demon’s instincts toward grievous violence.

Killing was something the Death Eaters did. Harry Potter never used the Killing Curse, not even at the end, because he was good and pure and knew that killing was wrong. Mary had said that killing was wrong, but she had also said that sometimes it was necessary, and this seemed like one of those moments, if ever there was one. But Mary had also said that independence was important, and making big decisions like whether to kill people or not seemed like it was part of that. Valencia didn’t want to kill anyone.

None of that thinking took too much time.

She popped out of the room and shot the man with the rifle in his hand, causing him to curse and let go. As he backed away, Valencia’s second shot hit the warder, striking her in the hand that held her monocle. Valencia ducked back into the bedroom and laid herself flat on the floor. She had angled herself as she fell so she could see out of the door, her angle not toward the front door, but toward the glass door of the balcony. The glass was clean and reflective, visible between the legs of the chairs, and Valencia could just barely make out the people moving at the other end of the long room.

A soldier in shimmerplate, taking cover behind the doorway, fired into the hotel room. Valencia waited quietly for him to finish; the sound was deafening, louder than her own pistol, but the demon knew how to ignore the pain in her ears and how to fight without the use of sound. The gun did nothing, naturally; Grak had set up velocity wards to slow down bullets coming into the hotel room. They didn’t have enough penetrating power to so much as pierce the gypsum of the walls, nevermind flesh.
There was silence for a moment, followed by conversation that Valencia was too deafened to hear much of. She watched the reflections moving in the door, concentrating, and trying to anticipate what they would do next. *Don’t kill them.* She was worried that it would happen when she was simply following the demon’s instincts, because killing would come more naturally than trying to disable or disarm.

Valencia saw movement in the reflection, the swing of a hand making an underhand lob. She was moving before it even came into the room, up from the floor and switching her gun to her left hand. She shot out the window and grabbed what they’d tossed, recognizing it only belatedly as a grenade, and threw it out the shattered balcony door, using the momentum of a twirl that took her back into the bedroom. She’d been exposed for only a fraction of a second, but still counted herself lucky that she hadn’t been shot.

The grenade exploded out in the air, projecting off-white gas in a starburst that was quickly swept away by the wind around the Pit.

*Non-lethal.* It was hard to know whether that was because they didn’t want to kill her, or because they were worried about killing civilians in the rooms around them with errant shrapnel.

There was a mirror in the bedroom, set on top of a dresser, and Valencia drove her elbow into it, breaking it. Her slender fingers picked up a broken piece and brought it to the door, sliding it out with one hand while her gun was held in the other. She had a grip that might have been awkward for someone without so much raw skill with weaponry, using her thumb on the trigger and her fingers holding the back of the gun.

The door into the hotel room was clear. She had no illusions that they had given up; it was far more likely that they were in conference, making a plan. So far as they knew, she was a single target in a heavily warded room, with wards they couldn’t see without their warder. Valencia wasn’t sure how much information the warder had gotten, if any. Had she seen enough to tell them where the wards were?

Valencia didn’t have to wait long until someone poked their head out from behind the front door. It was the warder, trying once again to see what they were dealing with. Valencia aimed with the mirror, put the maximum amount of pressure she could put on the trigger without firing the gun, and then held her breath, waiting for the right moment. When the warder moved over to scan more of the room, Valencia shot her in the monocle.

She’d intended to hit the edge of it, hoping to destroy the warder’s ability to see magic without actually killing the woman. With the kick of the gun and the awkward angle of the mirror, it was hard to say what had actually happened. By the time Valencia could see properly again, the warder had either moved or been dragged out of the way. Valencia sat quietly, mirror out, gun pointed at the door, waiting. She suppressed her feelings of confusion and fear as much as she could.

The gas grenade was gnawing at the back of her mind. That they shot at her indicated intent to kill, but the gas grenade said otherwise. There were conflicting possibilities about what it meant, and she didn’t know the answer. The demon she was using was -- or had been, since it was dead now -- an old and powerful one, but without much exposure to the surface world since the time of the Apocalypse Demon. What her assailants were *actually thinking* was beyond her, no matter how good she would be at killing them.

A man in shimmerplate with dark brown hair matted beneath his helmet stepped forward, crouching low to the ground and moving in. Valencia shot him in his hand, because she didn’t want to shoot him in the head. She watched through the mirror in dismay as he was completely unaffected. The knowledge came at once, barely needing to be processed once she saw in the mirror that the bullet
was laying on the ground, undeformed. He wasn’t an ordinary soldier: he was a still mage.

Valencia ducked back behind the door, holding her shard of mirror in one hand and gun in the other. She switched her grip so that she was holding it normally, then backed up two steps and aimed directly at the door. The gun was non-functional against a still mage, which was likely why they’d sent him in. To kill a still mage required overwhelming force, void weaponry, chemical or biological attacks, or the right kind of magic. All those were in short supply.

She waited for him to come into view, then fired the pistol twice, hitting him in the face. The bullets lost their velocity at once and fell to the ground, leaving him unaffected. He had a pistol, but he wasn’t firing at her; a demon’s instincts told her that he had her dead to rights if he wanted to kill her, because there was only so much that you could do in close-quarter combat against a still mage. She could throw the mirror at him and attempt to distract him, but all the methods she had of defending herself were, essentially, kinetic in nature.

There was one last recourse, thanks to Grak.

“You can’t hurt me,” said the still mage. She was having trouble hearing from the gunfire, but she could read lips, and make inferences from the sounds that reached her.

“I can,” said Valencia. Her voice sounded too calm. “I don’t want to, but I can.”

“They want you alive,” he said.

Valencia stayed silent. They had their guns pointed at each other, but he was using his as a threat and a precaution, not threatening her. He’d known that he’d been lying, when he’d said that she couldn’t hurt him.

The problem was that as soon as she was in their custody, she was at their mercy, and it wouldn’t be long until they found out what she was. She could try to explain that she wasn’t actually at risk of possession, but who in the world would believe that? Mary had laid out a plan for how to prove it, but it would still take a leap of faith, and everyone who knew what a non-anima was would know that letting them talk could be dangerous. They would have a skin mage check her for tattoos, or a warder check her for entads, and either one would immediately know that something wasn’t right. Then they would most likely kill her.

“This is over,” said the still mage. He came toward Valencia with an outstretched hand, ready to stop her in place. It was possible that he would kill her immediately, without even meaning to. People could fight back against a still mage’s touch, but so far as magic was concerned, she had virtually no will at all. If he pushed hard on her, expecting resistance, he might just murder her on accident when he found none.

Valencia backed up as he came closer, mindful of where his pistol was pointed. Her steps were carefully measured to place her just where she needed to be.

“Please, don’t,” said Valencia. She had a demon, not a devil, so that plea was as genuine as could be, all her own. He kept coming.

When they were positioned exactly where she wanted them to be, he lunged at her, grabbing for her wrist. When his hand hit the ward, she was there to grab it, pulling it through even as it changed color, even as he let out an inhuman scream of pain. If he’d had her clarity of focus, perhaps he might have been able to use still magic to stop himself, but still magic took a mindset, and there were limits to how much pain that mindset could tolerate.
The ward was an annihilation ward, set against blood magic.

He fired his gun, as she thought he might, but she’d been spinning as she drew him in, and narrowly dodged it, thanks only to a demon’s situational awareness, reflexes, and speed, all of which might not have been enough except that his attention had been focused on grabbing her, maintaining his aim.

She stopped him from going all the way through the ward by slamming her forearm into his neck and pushing him back and away. His leg had gone through as he’d tried to find his balance, and the entirety of his arm as well, the blood disappearing from them as it passed the ward. The term for it was microvacuum, and the clamping shut of arteries and veins in response to it caused incredible damage. Blood would be rushing to fill the emptied limbs, dropping blood pressure in the body in an instant.

The still mage lost consciousness and fell backward, slamming his head against the carpeted floor.

Valencia stepped forward and checked for a pulse with two fingers on his throat. She found it immediately, and the demon’s ability to focus entirely on the task at hand prevented her from giving a sigh of relief.

“Your still mage needs medical attention!” she shouted out into the hotel room.

She eyed the balcony of the hotel room. She could run forward, across the shattered glass, and jump over the edge, catching herself by her fingertips so that she could drop to the balcony below. Done as a series of drops and catches, she could descend down to street level in a matter of seconds. Then she would be on her own, left wondering what happened to the others, with only Mary’s pre-arranged lines of communication left to them. That was if there weren’t armed men waiting for her to come down, or people stationed in the room below.

There was silence from the hallway.

She wondered what they were going to try next. The demon’s knowledge came up, unbidden, and she clamped it down. She didn’t want to fight and she didn’t want to kill. She just wanted to go to Hogwarts and be a witch, was that so much to ask? She wanted to have happy, light-hearted adventures with her friends, not … this.

She held her shard of mirror, watching the door to the hallway. There was no one there. They probably thought that the still mage was dead, which meant that it was time to try something new.

“I don’t want to hurt anyone!” shouted Valencia. “I don’t want to kill! Please!” She felt the urge to cry, but that was something within her control for the time being, so she decided not to. Crying could compromise her combat effectiveness.

“Surrender!” a voice finally said from the hallway. It was one she hadn’t heard before, male but much higher, without the same harshness or tone of command.

“I can’t!” shouted Valencia. She tried to think about the words she’d practiced with Mary. It was tempting to jettison the demon, but she might still need it to climb down, and the delay might be enough that she would die. “It’s complicated.”

There was a pause from the hallway. “I’m coming in,” the man said. “Don’t shoot!”

Valencia watched with her mirror held in one hand. She had her pistol gripped to fire backward, and pointed right at him. He didn’t look like a soldier, but he was wearing the shimmerplate, which encased a much slimmer build. His hands were empty and held out in front of him, non-threatening.
“We don’t want to hurt you,” he said. “You shot first.” His words were distant, drowned out a bit by the whining in her ears, and she could only comprehend because she could see his lips.

“Louder, please,” she said. “Ears aren’t working right.”

“We’ll get a healer in,” he replied, voice raised.

Valencia felt her heart sink at those words. A healer would notice the same thing she really needed people to not notice. “I need time to explain,” she said. She glanced down at the still mage. He was pale, but breathing.

“My name is Jorge,” said the man. He wasn’t handsome, but there was something compelling about his features. She thought that he looked a bit like she imagined Fred or George would look, but with curly black hair instead of red. “Do we have time?”

Valencia looked at the body. He wasn’t going to die, but he did need medical attention. A bigger worry was that he would wake up. She need to keep one eye on the mirror and the other on the body. If he started to regain consciousness, she wasn’t sure what she was going to do about it.

“We have a little time,” she said. Jorge, he had called himself. Valencia.

“You said you had a complicated situation,” he said.

She had gone over this with Mary, and when they’d talked about it, she’d had a devil in her. It wasn’t the same as being suffused by the instincts and knowledge of one, but she could remember how they had decided to phrase it, and simply repeat those words back.

“I have a condition that causes me to present as non-anima,” said Valencia. She watched Jorge’s face through the mirror. He’d raised his eyebrows, just a little, but he was otherwise impassive. Valencia again had the urge to switch to a devil that could lay the man bare, but that would mean giving up the possibility of a quick descent down the side of the building. “I know how that sounds. I can prove that I’m not non-anima, but you’d have to trust me.” She hadn’t liked saying it like that, but Mary and the devil had thought it was for the best. The idea was to strip her of the title and the stigma as quickly as possible. She was non-anima, without a soul, but that truth was less compelling. “I know how asking for trust sounds too.”

Jorge stood still for a moment, thinking and weighing.

“Is your warder okay?” asked Valencia.

“Fine,” replied Jorge. “Healed, by now, though her monocle was destroyed. On purpose?”

“I couldn’t let her see me,” said Valencia.

Jorge gave a slight nod. “Tell me how you’ll prove you’re not non-anima.”

“I can kill demons and devils,” she said. “You can watch on infernoscope. I can also switch between a demon’s skills and a devil’s. You can watch that too.” Mary had used the word ‘oscillate’. “Your still mage is going to wake up, soon.” In fact, he was already stirring slightly, hand twitching. He wouldn’t be too much of a threat, given the damage to his arm and leg, plus the amount of blood he’d lost. “I don’t want to kill him or you, but I don’t think I have a choice.”

“Do you think he would live if you tied him up and held him hostage?” asked Jorge. His face was still impassive, as though he was talking about the weather.
“I would have to drop the gun,” she said.

She didn’t like not knowing what Jorge was thinking. Whatever it had been before, the assault on the hotel room had turned into a negotiation. She was repeating words that she’d practiced beforehand, trying to sound like she imagined Mary would, but it wasn’t enough.

She let the demon go, allowing the pieces of him to flow out of her reservoir. She took the devil at once, but there was a small moment when she was back to simply being Valencia, scared and confused, and the shard of mirror started shaking in her hand. She almost fired the gun, because her grip on it had been so tight that she was only a hair away from shooting.

As the devil’s essence went through her maw and became useful pieces for her to take as she pleased, she got a new sense of Jorge and his place in the order of all things.

He was negotiating with her, but he wasn’t actually a negotiator. He was almost certainly more important than anyone else involved with this mission, and he was very consciously sticking his neck out in talking to her. With a devil’s insights, she could see it written on him; he was curious. She didn’t understand how someone like that could be put in charge of an assault like this -- the devil didn’t understand it either. And it wasn’t that he was merely intrigued by her claim, the whole reason he’d put himself in harm’s way in the first place was that there was something he didn’t understand. He was the sort of man who would get himself shot just to learn something new.

He was the sort of man that devils lived for.

“You actually want to know,” said Valencia. “You want to know whether I’m telling the truth.”

“Do you really not know what the Uniquities Division is?” he asked.

“He’s waking up,” said Valencia, looking down at the man who was, technically, her hostage. The still mage was stirring, recovering from his injuries. She had less of an understanding of his physical state, with the demon gone.

“Take me as hostage instead?” asked Jorge.

Valencia thought on that. He sounded entirely sincere, which meant that he was a phenomenal liar, or he was being sincere. The fact that she already had a gun trained on his head made the gesture slightly less meaningful, but Valencia didn’t want the still mage to die, and she really didn’t want to have to go another round with him. She didn’t think she would win.

“Okay,” she said. “Come into the bedroom. I’m going to keep this pistol trained on you while you pull the still mage out, then you call for one of the other soldiers to take him into the hallway and close the door behind them. If there’s any sign of foul play, I’ll shoot you in the head and then make my escape.” She stopped and frowned at the words that had come out of her mouth. She’d issued the threat because the devil thought that it would work as manipulation against him. “I wouldn’t actually shoot you in the head, I would shoot to wound or distract and hope that you were okay.” (This, too, was said with a devil’s practiced intonation and phrasing, the better to portray her as a competent but troubled young girl, layered with a bit of tantalization. If he was the curious sort, then he was liable to be curious about why she’d changed her answer, and that worked in her favor too.)

They accomplished the exchange slowly and carefully, with little fanfare. The still mage was picked up by a large man in shimmerplate, possibly the muscle of the group, though Valencia had no idea how many members they had -- she’d counted five so far.

“So,” said Jorge. “Tell me about yourself.”
He’d meant it as a joke, but Valencia only realized that with the devil’s insights, and filtered through that lens, it wasn’t quite the same. The nonchalance and humor was meant to put her at ease, as was the faint smile on his face. That didn’t mean that his motives were impure, or that he was going to betray her as soon as the opportunity presented itself, but it made her like him a little less, because there were elements of deliberation and purpose in what he was doing. It made them feel fake, even though she didn’t think they were.

“Can you get an infernoscope?” asked Valencia. “I can prove what I’m saying.”

Jorge hesitated, then nodded. “I don’t see how that could be an issue, while we talk.” He walked to the door of the bedroom, then called out to the hallway, giving a command, not making a request, she noted. He was someone with a measure of authority, though he wielded it awkwardly. If she could actually convince him, there might be a chance that this would work out for her.

“Why are you here?” asked Valencia, as soon as he was done. She’d changed her body language so as to take the initiative from him. People were programmed in such a way that they would rarely start talking over you unless they were truly prepared for it. All you really needed to do was look like you were about to speak. She still saw a moment of hesitation in his eyes, but he did allow that line of questioning.

“Do you know what the Uniquities Division is?” he asked.

“No,” said Valencia. The devil she had just killed had more up-to-date information on the surface world, but playing at ignorance was beneficial in this exchange, and it wasn’t technically a lie.

“We were meant to be rapid response,” said Jorge. “There are some matters that cross national borders, which need to be dealt with swiftly and decisively. That’s Uniquities.”

“What did you expect to find here?” asked Valencia.

“You,” said Jorge. “Maybe your compatriots too, but eyewitness accounts figured them for dead. I wouldn’t put money on that though.” He shifted slightly in his seat. “You haven’t told me how you came by the peculiar quality of presenting as a non-anima, nor how you were given the ability to kill infernals across the boundaries of the planes.”

“You’re thinking that being non-anima isn’t necessarily mutually exclusive with being able to kill at a distance,” said Valencia.

Jorge raised an eyebrow. “What did you get that from?”

“The doubt in your voice, the way you joined those clauses, the minute movements of your facial muscles,” replied Valencia. “I’m using a devil’s powers right now.”

“And the devil is dead?” asked Jorge.

Valencia nodded. She watched his face. He was trying to hide it, but he didn’t believe her. He wanted to believe her, but -- “I know it sounds too good to be true,” she said.

“I don’t believe in that expression,” said Jorge.

Valencia felt herself warming to him. She had thought that it was too good to be true, when it was first happened, because her life until that point had been spent bound and often gagged, treated less like a child and more like an experiment -- which, in point of fact, was what she had been. Juniper Smith was the first good thing that had happened to her. Why would she have believed that anyone would treat her well, until it had actually happened? Mary had said something to the same effect as
Jorge, that we shouldn’t believe or disbelieve things on the basis of how they make us feel.

“Do you know what happened to my friends?” asked Valencia.

“They hijacked the ship, piloted it toward a very dangerous fortress, and from that point it’s not clear,” said Jorge. “We have two witnesses, but one is exhausted and the other a bit addled, and we didn’t recover them until a few hours ago. We think your, ah, friends might have made it to the fortress using an entad, some combination of entads, or other magical abilities, though what happened after that is anyone’s guess.”

“Thank you for telling me,” said Valencia. “If they’re all dead --” The devil had been about to make a joke of it, but Valencia stopped herself. She was leaning heavily on those skills, which sometimes led her down paths she didn’t like. “How likely is it that you’d be able to protect me?”

“It depends on the circumstances,” said Jorge. He looked uncomfortable for a moment. “Two hours ago, my superior at Uniquities left for Cranberry Bay, chasing down a lead he thought might be connected to this case and a few others. If that bears fruit, he plans to use you as leverage, in which case it will be easy to protect you. If it turns out that he finds nothing, then you’re still leverage, but it’s much less certain. A demon killer seems like something that Uniquities would like to have on hand though.” He leaned forward slightly. “You said that you can reach down into the hells, could you kill a demon here on Aerb?”

“I don’t know,” said Valencia. She moved one of her tendrils away from a target, through the layers of hell, until it was up beside her, in the same room as them. She didn’t think that she could hurt a person -- she hadn’t been able to touch them down in the hells -- but a demon? “Probably.”

“They’re rare,” said Jorge. “But when one breaches through, it’s always a hell of a time. If what’s on offer is you providing a weapon against demonkind, well, then yes, I think it’s safe to say that I can protect you.”

“I don’t want to be a weapon,” said Valencia. The devil’s instincts were screaming. It was the wrong thing to say. There were, possibly, avenues of attack that started with something similar to voicing that desire, ways of playing the victim or seeming weak, but Valencia was simply voicing what she felt, not attempting manipulation.

“What do you want to be?” asked Jorge.

“Hermione Granger,” said Valencia.

Jorge nodded as a thoughtful look crossed his face. “And who is that?”
Contract

I sat there, staring at Finch, trying to figure out my options. Killing him was certainly an option, but I didn’t actually know what he wanted, and it almost seemed like we were on the same side.

“Carrots,” I said. “What kind are you offering?” I was implicitly admitting that most of what he’d said was true, but I felt that was about the point we’d come to.

“Protection from the consequences of your many crimes is what we’ll start with,” he said. “For Amaryllis, we’re offering her support in reclaiming a place in Anglecynn. Nothing on the books.” I glanced at the wax recording. “Sometimes these recordings have problems,” he said with a shrug.

“You’ll forgive me for having a shaky understanding of the empire, but I wouldn’t have thought that directly interfering with the monarchical structure of one of your member nations would be allowed,” I said.

“You’re looking out for her,” said Finch with a nod. “Loyal servant? Or lover?”

“Casual acquaintances,” I replied.

Finch chuckled. “Whoever you are, there would be a place for you. Head of security, possibly, or something more. That would be up to her, but it would be a better life than running and hiding, giving fake names to everyone you meet, and sleeping with one eye open.”

“I’m pretty sure that if I was head of security for a princess returning to a kingdom that gave its best shot at killing her, I would end up sleeping with both eyes open,” I said.

“Fair point,” said Finch with a shrug. “I think it’s pretty clear I don’t know you, however much I’ve been following the recent twists and turns in your career with interest. I’m fairly sure you weren’t a known associate of the princess before her fall from grace, if you’ll pardon the pun.”

“I wasn’t.” I said. I had no idea who I was before then, and wasn’t really keen to find out. “You and I are almost on equal ground, because I don’t really understand what Uniquities is.” Amaryllis had drawn out an org chart of the Empire of Common Cause, and while Imperial Affairs was clear enough, she hadn’t said too much about the Uniquities, aside from calling it a bloated mess.

“The Empire of Common Cause was founded in order to get everyone on the same page, as much as that was possible,” said Finch. “The goal was fixing long-standing structural problems between the various governments of the world, or at least those that would play ball. It was, by design, a slow-moving juggernaut of an organization, hard to change, with a tendency to gum up at the slightest provocation. Years down the road, some people began to think that was idiotic, because there were problems between the nations of the world that cropped up out of nowhere and needed to be responded to as quickly as humanly possible, without regard for borders. Unique situations. Uniquities.”

And now they’re taking part in a battle for ‘the heart of Anglecynn’ and trying to steal a tuung princess from us, presumably in order to do the same thing we wanted to do. “So let me guess,” I said. “Uniquities gets set up for crisis response, with a lot of latitude in how they respond, because some of the things they’d be going up against would come completely out of left field. New exclusions, monsters from the dark, entads fucking things up … that sort of thing. Uniquities is a hammer meant for only a small number of nails, but it’s one of very, very few hammers available to the empire, so it starts getting used for everything. Rapid response means minimal oversight, or
maybe just oversight that doesn’t happen until years or decades down the line, which means that your division is free to expand as quickly as your budget allows.”

“So you are familiar with Uniquities,” said Finch with a small smile.

I was, because I had built it, or something close enough that I thought the whole division was probably cribbed from my notes. I’d used something very similar in my Patchwork Republic campaign, though it hadn’t been called Uniquities, it had been called the Department for Response to Extreme Conditions. This was shortened to just ‘Conditions’, which led to Reimer calling their agents ‘conditioner men’.

“And now you’ve expanded into interfering with the governmental processes of member nations,” I said.

“Not officially,” said Finch, with a small smile. “Unofficially ... there are very few mechanisms within imperial law that allow the empire to protect itself as an institution.”

“Another nail you find your hammer coming down on,” I said. Jesus fucking Christ the lack of oversight must be staggering. The closest parallel on Earth would be what, J. Edgar Hoover’s time at the FBI? And that came crashing down, didn’t it? “And the tuung?” I asked.

“A separate issue,” said Finch. “We’d like to know where she is, naturally, but also what you were planning with her.”

She’s the next door down from the hotel room you’re planning to raid. I wondered how they had missed that. Grak had rented that room using his fake name, so maybe that was it. When I tried to think about things from Finch’s perspective, maybe Grak didn’t even come into the picture until he boarded the Down and Out, since he hadn’t been there for the fight in Boastre Vino. And if you found one suite, why go searching for another? We’d only gotten two because we wanted the tuung separate from us, and only had Grak check in at the second one out of basic operational security. There were still sure to be ways to connect the dots, but given how fast things were moving (still hard not to think of it as two months), maybe that would come later … meaning a limited window of opportunity to negotiate, if it wasn’t too late already.

“I don’t know what you think happened, but I didn’t kidnap her,” I said. “She negotiated for her own extraction.”

Finch eyed me. “Negotiated with the princess of Anglecynn?”

“No,” I said. I could already feel myself cringing in anticipation of saying it. “We call ourselves the Council of Arches.”

Finch stared at me.

“I’m not the one who chose the name,” I said.

“The name isn’t -- you’re telling me that you belong to a major international organization that I’ve never heard of?” His eyes were slightly wide. He was incredulous, but not completely disbelieving.

“In a manner of speaking,” I said. “Look, I need to get back to my,” wife “To Amaryllis. If you’re not going to arrest me, then we can talk after she’s had the baby. Most likely, you’re going to have to talk to her, not me.”

“She wasn’t pregnant when she took the fall,” said Finch. “Do you mind explaining to me what happened?”
“It’s complicated,” I said. I stood up from my chair. “It’s also personal.”

“Where do we stand?” asked Finch, not moving. “What response is your princess going to give?”

“If you wanted to give us a sweetheart deal, this wasn’t the way to do it,” I said. “Ambushing us in the hospital while we’re trying to get through the premature end of a long pregnancy --”

“Not that long, given she wasn’t pregnant in Boastre Vino,” said Finch. “And you do understand that your Council of Arches is responsible for more than a hundred deaths in the last month, that I know of, right? Including a major international incident less than twenty-four hours ago, and a different major international incident twenty-four hours before that? This is as nice as I’m willing to play, which is pretty fucking nice, all things considered.” He looked at the record, which was still spinning, carefully lifted the needle up, then grabbed the record and snapped it in half.

“Fickle things,” I said. “Always breaking.”

Finch nodded. “I’ll let you know the results of our raid in Headwater, once I get word. I have permission from the hospital staff to create a number of wards around Amaryllis’ room, to make sure that she can’t escape.” I politely failed to mention that we had two warders on the team, plus the teleportation key we had stashed in Fenn’s glove, which I was pretty sure he didn’t know anything about. “We’re going to have the exits covered. You could make a run for it, especially if you’ve got the firepower I think you do, but she’s not going anywhere.”

“We can’t stay in this hospital too long,” I said. “I’m warning you now.”

“Why?” asked Finch. He didn’t look pleased.

“Time-sensitive business elsewhere,” I said. “I can’t say more, not until I trust you, which I don’t. You had better pray that things turned out okay in Headwater.” I left without another word.

When I came back into the hospital room, there were a lot more people moving around than there had been before. Grak had come in, and he was beside Amaryllis, holding her hand and talking to her in a low voice. Fenn was off to one side, holding the staff with one hand and biting a nail with the other. I was pretty sure that she wasn’t going to have many nails left when this was all said and done. Bethel stood close to the staff, watching impassively. I went to them first.

“What’s the word?” I asked.

“Random medical terms being thrown around,” said Fenn. “The fuck does effacement even mean?”

“Thinning of the cervix,” I said.

“Well, she’s kind of pissed about it,” said Fenn. “Not the effacement, the whole thing.”

Amaryllis locked eyes with me and limply waved a hand, calling me over.

“Have fun,” said Fenn. “I might need a stiff drink.”

I came over to Amaryllis. The doctor was by her legs, which were propped up, but her hospital gown was down. A short green-skinned nurse pulled up a chair for me to sit in, and with a start, I realized that she was crantek, which was probably not coincidence.

“Status?” she asked. She was sweating slightly, enough that her hair was damp. “And bones.”

I started burning through my bones immediately, and she relaxed immediately.
“What are you doing?!” asked the doctor, standing up from where he was sitting. “Healing magic at this stage --”

“Not healing, mental fortitude,” said Amaryllis. “Helps. We’re not idiots.”

The doctor backed away slightly, frowning at her. “Bone magic?” he asked, looking at me.

“Don’t worry about it,” I said. He was probably wondering where the bones were.

Confusion crossed his face, then he returned to his seat and entered a whispered conversation with one of the two nurses.

“Status,” Amaryllis repeated. She sounded very tired. As I watched she looked like she was shifting her hips, trying to get comfortable. I saw that there were a lot of pillows beneath her, which must have been from previous attempts at getting her in a position that was a little easier.

“He knows almost everything,” I said. We’d set up a numbering scheme, with our copious time in the chamber, but I was struggling to remember while I fed her WIS and carefully kept track of which bones I was burning. “Um, two, five, six, nine, ten,” I said. The list currently went to twelve, starting with my peculiar game power and ending with Bethel, but we were pretty sure that it was going to get longer. “Apparently an operation is underway to grab eight, and I don’t know how that’s going to work for them or for her.”

“I hope she fucking kills them all,” said Amaryllis, seething in momentary pain.

“Breathe,” said Grak. “Try your best to stay calm.” He glared at me like it was my fault somehow, even though I was the one burning through my own bones in order to help her keep her cool. I increased the rate slightly.

“Fuckers,” said Amaryllis, sounding slightly defeated. She lolled her head to the side and looked me in the eyes. “They want something.”

“Partnership,” I said. I glanced over at the doctor and the nurses. My attention returned to Amaryllis as she grunted. Her eyes were closed, and she held out her hand, which I took.

“What kind?” she asked, after the moment had passed.

“They want to back you in your return to Anglecynn,” I said.

Amaryllis looked at me with slightly glazed eyes. “More,” she said. It took me a moment to realize that she meant bone magic, and I increased the rate of burn again. I was going to need to go into my soul soon. She regained some sharpness to her expression. “Uniquities?”

“You said they were bloated,” I replied. “More bloated than you thought, maybe.”

“The black budget,” said Amaryllis. She sighed slightly as she shifted. “For infohazards.”

“We should talk about this after,” I said. “You need to concentrate on labor.”

“I might be dead later,” said Amaryllis.

“It’s extremely unlikely that you’re going to die,” said the doctor. I aspired to someday be as cool under pressure as he was. He was barely batting an eye at the weird shit. “And I agree that strength and will would best be conserved.”

Amaryllis nodded at that, and let out another small cry of pain.
It took a while.

I’d expected as much, because I had done a fair amount of my own reading, but I hadn’t expected to feel so exhausted by it. My role was, apparently, to sit beside Amaryllis and use bone magic on her so that she could endure the mental aspects of giving birth a little bit easier. Most of what was exhausting was just the emotional component of the thing, seeing Amaryllis in pain, watching her struggle and not really being able to do anything for her. It reminded me too much of sitting in the hospital with Arthur, hoping that he would start doing better, and not being able to meaningfully affect the outcome.

There were very few ways that this could go wrong for Amaryllis, but I was worried that we’d get a second curve ball. Even if Amaryllis was fine, the real question was whether Solace would be okay; Fenn brought Bethel over from time to time in order to show what was going on internally, partly just to reassure Amaryllis.

I was worried about complications.

That was how Arthur had died. I mean, he had gotten in a car accident, sure, and then been in a coma, which wasn’t great for you, but how he’d actually died was that he’d had some swelling in the brain (cerebral edema) and they’d done a relatively routine procedure to try to relieve the pressure (something called a ventriculostomy). Arthur’s dad was always the one to explain things to us, usually by e-mail, or in person when we came to visit. He adopted this sad, clinical tone that I sort of found comforting. The tone said, ‘yes, this is scary, but they’re professionals, and they know what they’re doing, they weighed the costs and benefits, but this is what they decided on’. We got an e-mail when he went in for the surgery, and nothing afterward. He’d wanted to tell us in person. There were complications, he said, and all that preparation and education had come to nothing.

That’s what I was thinking about, as I sat next to her. I was waiting for the moment the nurse would point something out, and the doctor would calmly deal with it, explaining things as he went, not showing any panic as things got scarier and riskier, and then they would be doing chest compressions or something, and eventually it would be made clear to me that she had died.

I was ready to step in. I had blood to give her, and if the worst happened, I could replace her soul’s image of her body with the backup I had in storage, the one from before she’d been pregnant (or at least, detectably pregnant, since it had been taken just after the ritual had completed). That was about all I could do though, which left me feeling powerless. There was a skill called Medicine, which I didn’t have, but Amaryllis had been vehement in arguing that the ability to respec -- if I even could -- was incredibly valuable, and the skill slots were even more valuable. I itched to do it anyway, worried that there were signs I wasn’t catching, or that it would take too much to unlock and be useless even after I had it.

The nurse started telling Amaryllis to push. Each one was accompanied by straining on her part, trembling knees and clenched teeth. She was sweating now, sometimes taking a few moments to drink water offered to her by Grak, but mostly not talking.

“I just want it to be done,” she said at one point, sounding utterly defeated.

The doctor stayed between her legs, using his hands to make sure that everything was going well. He gave the command that she should push, and she seemed to hate him for it, even as she dutifully pushed.

“You’re doing well,” said the doctor. “The head is almost out.”
I wasn’t sure how much time was passing, but the birth seemed to go on forever, and also somehow take absolutely no time at all.

The doctor asked for my help, and gave me instructions, telling me to hold Amaryllis’ leg, pushing it to help give a better angle for her hips. I had a view that I hadn’t particularly wanted, and watched the doctor use his hands to touch the green skin of Solace’s head, pushing away flesh and helping things along.

Once her head was past, Solace came out easily, slipping free with a gush of yellow and red fluid. Nonnatus clipped the umbilical cord with something like a clothespin, cut it, then handed her over to the crantek nurse, then returned to looking after Amaryllis, who was laid back on the bed looking like an exhausted but victorious warrior. I heard the doctor say placenta, which I had completely forgotten about, but --

“Come on,” I heard the nurse say. “Give me a squawk.”

I got up from where I was and went over to them. Solace was small, tinier than I had expected, preterm and not even a full baby. She looked so small and fragile, and the nurse was moving with fast hands, using a rubber bulb in the baby’s mouth to suck up fluids and bits of human viscera.

“Come on, little one,” said the nurse. Her voice was calm but urgent. “I know you can do it, say something for me, just a little cry.”

I stepped forward. “I need to try something,” I said. It was going to have to be the full body swap, taking the entirety of a body and placing it into Solace’s soul to overwrite the body that was there, so I could heal her into that form. We’d tested enough to confirm that it was limited by available biomatter, but there were ways around that, and --

“It’s okay,” said the nurse, placing a hand on my chest as she continued to look Solace over. “Sometimes they don’t make a noise. She’s fine.”

“She’s … what?” I asked.

“Lungs are working,” said the nurse. I watched as Solace wiggled in the little crib. The nurse used the bulb again, sucking up more from inside Solace’s mouth. “She’s not making noise, but sometimes they don’t. It’ll come, in time.”

I felt my racing heart begin to slow. When I looked at Solace, I couldn’t get over how small she was, her tiny fingers and toes, her wrinkly skin, her scrunched up face. Her eyes were closed, but sometimes opened for brief moments, squinting at the light. The nurse was wiping her off with a clean cloth, then swaddled her, wrapping her up and lifting her from the crib.

The nurse brought Solace over to Amaryllis, and Amaryllis cradled her close to her skin.

I sat on a bench with Fenn outside the hospital room, some time later, after I’d had a chance to wash up. Finch was nowhere to be seen, but there were two men down the hall who definitely didn’t look like they had any business being in a hospital, and Bethel had informed me that wards had been put up around the room, though it was, in her opinion, journeyman work, an opinion that Grak shared.

“I’m glad she has a chance to rest,” said Fenn. She hadn’t said much since the birth. I’d caught her staring off into space a few times.

“We’ll be back to it soon,” I said. “Not much time for rest and relaxation.”
“Yeah,” said Fenn. She was looking at her feet. “Any idea when it will be safe to heal her?”

“I could do it now, if we really wanted to,” I said. “The doctor said a day, maybe more, but if we do, it will take her longer to get back to normal. I took a look at,” I lowered my voice, “her soul, and I think the reason for the rule might be that her body is doing stuff and her soul is lagging behind. Reset the body to the soul’s idea of the body, and you’re basically resetting progress. The suggestion was concentrated spot healing for, um, bits of her that are torn or ruptured, but leave everything else as it is.”

“Humans are so gross,” said Fenn. She gave the floor a little kick. “You know what she said to me?”

“When?” I asked.

“Just after the birth,” said Fenn. “I avoided the worst of it, but I just wanted to give her a ‘hey, good job, glad you’re not dead’. She cleared her throat. “She said that she wasn’t looking forward to doing that again.”

“Huh,” I said.

“It was a little bit of a joke, but a little bit not,” said Fenn. “It just struck me as … I don’t know, Mary being this unstoppable machine of a woman. Less than an hour after all that and she’s thinking to herself about the next time.” Fenn sighed. “You still want kids?”

“I don’t know,” I said. “Doing all that for real someday … not that it wasn’t real, it was, but I’m already sick with anxiety, and Solace isn’t even my child. But someday … not when we’ve got so much shit going on, not when we keep having to put our lives on the line, but someday, yeah.”

Unless it has to be like Uther did it, distant from his own children.

“I’d give you a baby, if you really wanted one,” said Fenn. She wasn’t looking at me.

“Fenn,” I said.

“Just sayin’,” said Fenn.

“Fenn,” I said again. “We’re really not at the point where we need to have this discussion, at all.”

“Yeah, I know,” said Fenn. She leaned forward and gripped the edge of the bench. “I’m just saying, if it ever did come to that, where you thought a baby with me would make you more happy than not, I’d lay off the herbs and we’d see what came of it.” She shrugged. “It’s something I’ve been thinking about a lot lately, for obvious reasons, and that’s my decision. I wouldn’t do it on my own, but if it were you … I wouldn’t be averse.” She let out a sigh that had a hitch in it, like she was a step away from tears. She hadn’t been looking at me, but now she looked away, down the hallway.

“We can talk about it, if you want,” I said.

“Valencia,” said Fenn.

As the name left her mouth, a black-haired girl came around the corner. I hadn’t seen her in two months; in the interim, my image of her had reset back to her as she was when we’d first met her, white hair and a white shift. She was incognito though, wearing different clothes than she’d been in when we left her in the hotel room, and except that she was more attractive than average, I’d have been very hard-pressed to say that she was anything but a normal human girl.

She gave us a small little wave, like we hadn’t been wondering whether she was dead or alive.
Three people followed behind her, and one them was Finch. The human with them was on the tall side, with curly black hair; I noticed with a slight bit of dismay that he was holding Valencia’s copy of *Harry Potter and the Sorcerer's Stone* with his finger stuck between the pages. The woman with them was a vitric in a long dress, bald (as her kind were) and with a serious expression. Her hands were a blue that faded in color going up her arm, which the dress accentuated with blues of its own.

“Hi,” said Valencia, looking between the two of us.

Fenn came forward and wrapped her in a hug. “I missed you, little hooman.”

Valencia returned the hug, closing her eyes and smiling softly. “Did you?” she asked. “I didn’t even think you liked me.”

“Mary talked you up,” said Fenn. She pulled back from the hug, which Valencia broke reluctantly.

She immediately went for a hug from me, which I returned. It was a bit awkward; I had known her for about a week and a half, with two months of interruption. Amaryllis had talked her up to me, too, partly so we could set some ground rules about how we would treat her, and partly to help untangle some of Amaryllis’ complicated feelings on the subject of having a non-anima in the party, which we weren’t really successful at.

“I’m glad you’re safe,” I said. I looked at Finch over my shoulder with a raised eyebrow. That things had, apparently, not gone disastrously wrong in Headwater was a surprise, and that she had been brought to see us without pre-conditions was an even bigger one.

“They shot at me,” said Valencia. “And there was a still mage.” She buried her head in my shoulder. “It was scary.”

I pulled back from her, and again saw that same reluctance she’d shown with Fenn at breaking the hug. “They shot at you?” I asked, looking at Finch.

“She shot first,” said Finch, folding his arms across his chest.

The vitric held out her hand. “Alcida Divona,” she said. “Head of Uniquities. It’s a pleasure to meet your acquaintance.”

I shook her hand, looking her over, wary of the lightning I knew her body contained. “Alcida. You were one of Uther’s Knights.”

She gave me a faint, confused smile. “No,” she said. “I was named after her. She was my grandmother.”

“Oh,” I said. So far as I knew, Raven was the only one of the Knights from a species with a long enough lifespan to still be alive, and she’d been missing for centuries. Vitrics were long-lived though, and it wouldn’t have surprised me in the slightest to see one of Uther’s Knights thrust back onto the field of play.

“Jorge Mascar,” said the tall guy. He transferred his book to his other hand, then shook mine. “I’m the one who recovered Valencia.”

“You don’t get kudos for that,” I said. “She was doing fine on her own.”

“He’s nice,” said Valencia, in a chiding tone. I wondered whether or not she was channeling a devil, and how much these people knew about her. They had to have checked her over with a warder, right? Just as a matter of basic not-being-fucking-idiots?
“It’s going to be some time until Amaryllis is ready to talk,” I said.

“We understand,” replied Alcida. “And we apologize for any … unpleasantness.” She studiously didn’t look at Finch when she said that.

“It’s understandable,” I said. “We’re not happy about it, but we understand. And again, Amaryllis is going to be the one you want to talk to, and she’s going to need time, since she just gave birth a few hours ago.”

“Gave birth to a purebred crantek girl, somehow,” said Finch.

“Show respect,” said Alcida. “You’re here by dint of your hard work, but there are ways of doing things when making first contact.” She was staring at me. “We’re going to need to know more about the Council of Arches. From what we can tell, our goals are somewhat aligned. We had planned on recruiting Amaryllis Penndraig, before she was ousted.”

“I do appreciate you coming all this way, presumably at great expense,” I said. “But again, I’m not willing to make discussions without her, and she’s going to need a lot of time before she’s ready to talk shop.”

Amaryllis stepped out of the hospital room, dressed in her immobility plate with the helmet off. She had a sword on one hip and her void pistol on the other. In her hand, she held the dollhouse staff, with the rope around it in elaborate knots. I suspected chicanery and magic, though I wasn’t sure what kind. When Fenn and I had gone out to get some air and time to ourselves, Amaryllis had looked worn out; she’d been asleep, or on the edge of it, with Solace suckling at her breast. Now she looked like she’d spent the last week training for a marathon and was standing at the starting line, ready to run.

“Lady Penndraig,” said Alcida with a small bow. “I am Alcida Divona, head of --”

“I know who you are,” said Amaryllis. “I wrote a brief to the Lost King’s Court and a few other allied polities advising thorough investigation into the handling of finances under your regime. Had I known that Uniquities was engaged in attempts to influence the governing of member nations of the Empire of Common Cause … you understand that many of us would consider that proof that the imperial experiment was a failure, and people would use it as grounds for moving to dissolve the empire, or at the very least, pull out from it with whatever pains that might cause?”

“Would you?” asked Alcida.

“No,” said Amaryllis. “If the empire goes, whatever replaces it will be worse. We’ve seen two interimperiums, and both have been marked by horrors big and small.”

“Then you understand the importance of keeping the empire as a cohesive whole,” said Alcida with a nod. “I read your letter, as you might have guessed I would. I was impressed by your intellect and vigor, more so when I learned that you were a girl of sixteen. And you were right, of course, about how Uniquities looks from the outside, how it’s meant to look.”

Amaryllis gave a faint, vulpine smile. “It does make a bit more sense now. You’re not an incompetent, or an embezzler, just running rogue. And now you’re coming to me to make a deal.”

“Not just with you,” said Alcida. “With the entire Council of Arches.”

Amaryllis stared at her, then raised an eyebrow in my direction. I shrugged.

“You very much appear to be in the same business as we are,” said Alcida. “We have an incomplete
picture of what it is you do and have done, but it appears you have need of resources we have on offer, and at least a small amount of overlap in interests. It’s my understanding that you hijacked the *Down and Out* because you needed a way down in a hurry. If you’d been working with us, you could have borrowed any one of a half dozen methods without the need for an international incident.” She gestured toward Valencia, a curious sort of hand movement that kept her palm pointed toward her. I was pretty sure that was a vitric thing; if you could shoot lightning from your fingers, pointing might be considered rude, even if you weren’t intending to blast someone with it. “If a non-anima—”

“Sorry,” said Jorge, who had stayed silent up to this point. “The term we’re going with is anti-infernal.” Alcida gave him a very calm look that was still somehow withering. In contrast, I saw a very small smile from Valencia.

“If someone like Valencia had been identified in the wild, she would almost certainly have been brought to us, if there were even the slightest pretense that her existence was intraimperial,” said Alcida.

“And Imperial Affairs would simply say that she has the capacity to cross borders, and is therefore intraimperial, under their jurisdiction,” said Amaryllis with a roll of her eyes.

“More likely we’d argue that her ability to reach down into the hells makes her, by definition, imperial business rather than national business,” said Alcida. “And more likely than that, we would hide her away and do our best not to have to answer messy questions about how or why we were allowed to take charge. I very much understand that doesn’t win us points in your favor, however pragmatic it might be.”

“It’s pragmatic only until the point it blows up in your face,” said Amaryllis.

Fenn came up beside me. “Blah, blah, blah, politics,” she whispered.

“We need to have a private meeting,” said Amaryllis. “You have us warded, you can wait outside.”

“They have a warder,” said Finch. “There were wards on the hotel room.”

“Then you’ll have to trust us,” said Amaryllis. “If we don’t want to deal, we’ll tell you before we leave.” She went back into the hospital room without another word, and after I gave a glance back at the people from Uniquities, I followed her.

Grak had changed clothes too, and was back into his armor, with his axe at his hip. He was cradling a swaddled Solace in his good arm. He stood up from his stool when we entered, and gave Valencia a small wave when he saw her. On coming in, Valencia wrapped Amaryllis in a hug and gave her a kiss on the cheek.

“More hugs when you’re not in armor, okay?” asked Valencia.

“Okay,” said Amaryllis. “I was very worried about you. You were able to convince them?”

“I was,” nodded Valencia. “Jorge is really wonderful. He got really excited when they brought the infernoscope in, and after that it was very pleasant. I insisted that he come along.”

“Are you doing okay?” I asked Amaryllis. “You seem … really well, actually.”

“Time chamber,” said Bethel, materializing next to her. “I partially reconstructed it inside this room.”

I looked over at Solace. On closer inspection, she did look bigger than before, a little more filled out
and proportionate, with fewer wrinkles. “How long?” I asked.

“Not long,” said Amaryllis. “Two weeks.”

“On bed rest,” said Grak. “I was in with her.”

“Okay,” I said. I pinched the bridge of my nose. “I wish you’d talked with me first.”

“It was a very confined space,” said Amaryllis. “Even with just Grak it was --”

“She did not enjoy bed rest,” said Grak, folding his arms across his chest.

“Yes,” said Amaryllis. “Can you ward us, please?”

Grak snorted, but uncrossed his hands and got out his wand.

“How is Solace?” I asked. “Have you tried --”

“One moment,” said Amaryllis, holding up a finger. She waited until Grak was finished. We were five people, one illusion of a person, and a baby in not really all that big of a space. “I hereby call to order the first meeting of the Council of Arches.”

“Oh man, did shit just get real?” asked Fenn. She grinned at me.

“I was going to ask if Bethel had tried talking to Solace through thoughtspeak,” I said.

“She’ll need to be awake for it,” said Bethel. “Newborns spend most of their time sleeping.”

“She’s awake now,” said Grak, looking down at the baby he held in his arm. “Or as awake as she gets.”

“Then I suppose now is as good a time as any,” said Bethel. The staff Fenn was holding split at the bottom, making three little legs. A branch jutted out from the wood, growing swiftly through the air toward Grak. He held out the baby slightly, and the branch touched down gently on her head. Bethel frowned somewhat. “It’s fragmentary, with poor syntax, but there are words,” she said. “Much more than I’ve typically been able to get from babies.”

“Good,” said Amaryllis. “Physically, she’s progressing roughly as fast as I’d expected, meaning slightly faster than human. Spiritually, she’s becoming more cohesive every day, including in ways that don’t seem to be predicated on what she’s taking in from being in the world. I’ve been watching her skills, especially. Things are coming back, a bit piecemeal, but they are.”

“They grow up so fast,” said Fenn.

“It’s been what, five days since we visited the locus?” I asked, ignoring Fenn.

“We would be on the sixth,” said Grak.

“With Bethel mobile, or at least relatively so, I think we should move into the bottle,” said Amaryllis. “Even if Solace can’t perform druidic magic, being close to the locus might help her, or at least might help the locus. It gives Bethel plenty of room to be as large as she wants to be, which might make the time chamber a little less onerous.”

“I would prefer you use it as little as possible,” said Bethel.

“Noted,” said Amaryllis.
“You wanted to be a home for us, not a tool to be used,” I said. “We’ll respect that.”

“All that is in the relative short-term,” said Amaryllis. “In the long-term, we apparently need to deal with Uniquities. The plan of establishing our own nation by getting someone powerful to back the creation of a splinter tuung polity probably won’t work if we’re in opposition to them, even if they’re operating outside their official remit, and we can skip a few steps forward in the master plan if we can get them to agree to the important parts. We can’t allow them to take ownership of the project, for a variety of reasons, but I don’t see a reason we can’t be allies and partners, even if I don’t particularly like Uniquities. I should be able to get them to see the light on that particular matter, given that we both benefit from being insulated from the other’s malfeasance.”

“We’re planning malfeasance?” asked Grak.

“We’ll be accused of malfeasance no matter what we do,” said Amaryllis.

“The Lost King’s Court is a pit of vipers,” said Bethel. “I don’t think I would mind defending you from them.”

“We have the teleportation key,” I said. “I won’t claim to be an expert on imperial law, but I’m pretty sure that we’re not supposed to be holding onto it, if we’re planning to go legitimate.”

“Also we broke that soul mage out of prison, does anyone remember that?” asked Fenn.

“I do,” said Valencia.

“It was a joke,” said Fenn. “A joke that hopefully never leaves this room, because I have to imagine we’d get in some shit for that. Plus three sevenths of us are soul mages, which there are ways of detecting, and which is pretty fucking illegal last time I checked.”

“We can deal with some of that,” said Amaryllis. She looked to me. “It didn’t seem like they had Esuen, did it?”

“No,” I said. “Meaning that she might still be where we left her, though I don’t know how long that’s going to remain the case. We don’t have her, which puts us in a less favorable position.”

“I warded their room,” said Grak. “They might be able to hide.” He held out a hand and gave it an uncertain wiggle. “A warder would see through the deception in an instant.”

“I shot their warder,” said Valencia. That got our attention. “She was going to look at me,” said Valencia. “I shot her monocle, not her face.”

“They may have another on hand,” said Grak. “Or they will find one.”

“So we should move fast,” said Amaryllis. “I would hope that Esuen would have some small amount of loyalty to us, given that we rescued her, but I know that in her situation loyalty wouldn’t be my primary concern. Valencia, we’re going to need to do a full debrief on you at some point, so we can know what they know, and what, exactly, happened.”

“Okay,” said Valencia. “Now?”

“No,” said Amaryllis. She hesitated. “Maybe. We could all go into the time chamber and hash it out in there, but I’m not certain how much that would help if they’re already giving us time to talk amongst ourselves. Can you give me the short version of what they know?”

“They know that I’m non-anima,” said Valencia. “Jorge calls me an anti-infernal.” She smiled at that.
“They saw the books I had in the hotel room, but I’m not sure they made the connection to Earth. I didn’t offer any explanation, because I was still hoping that you were all alive, and I didn’t want to say anything that you didn’t want me to say.”

“You did very, very well,” said Amaryllis.

“I wasn’t sure,” said Valencia. “The whole time, up until I saw Joon, I wasn’t sure that I had done the right thing. I kept thinking that maybe I should have killed everyone.”

“Wow,” said Fenn. “That’s kind of how things went for us, to be honest. But that was months ago.”

“So we’re going to make some kind of deal with Uniquities?” I asked. “They think that we’re some kind of clandestine organization.”

“Aren’t we?” asked Fenn. “Granted, I can’t speak for how it was in the three days before I joined, so maybe those were different days, but my tenure in the Council of Arches has been marked by hiding out and giving false names. I’d kind of like to stop doing that, if it’s all the same to you.”

“I would too,” said Amaryllis. “But the moment we can stop watching our backs, we’re going to start having to watch our fronts.”

“And we’ll probably still have to watch our backs,” I said.

“Yes, that too,” said Amaryllis. “Anyway, the first order of business of the inaugural meeting of the Council of Arches is what we’re going to do about Solace and the locus. I propose that we move into the bottle and spend some time there until we’re able to get the locus back into a stable state.”

“We’re still no closer to extracting it,” said Grak.

“I’ll see what I can do,” said Bethel with a slow nod.

“All in favor?” asked Amaryllis.

There was a pleasing round of ayes.

“The second order of business is what we’re going to do with Uniquities,” said Amaryllis. “I spent eight months working on plans for exploiting the knowledge we extracted from the backpack, and I still think that’s best accomplished through using the tuung and trying, best we can, to not be beholden to anyone.”

“Anyone except the tuung,” said Valencia.

“That’s -- yes,” said Amaryllis. “But my hope is that we can help shape their new culture, given that they’ll be leaving the old one behind. Esuen was already partly educated within the athenaeum of a very imperial city, that helps enormously.”

“Well, I don’t care too much,” said Fenn. “I’d like to throw my hat in the ring for court jester though.”

“The court jester’s job is about speaking truth to power,” said Amaryllis, face set in a serious frown. “I’m sorry, but I don’t think that you would be good for the job, you would just make jokes.”

“I will appoint myself court jester,” said Bethel.

“Yeah, but you have to also be funny, right?” asked Fenn.
“Congratulations, you’ve side tracked us,” said Amaryllis. She sighed. “I’d like to take lead on negotiations with Uniquities, since I know them best, and I’ve been planning for something approximating this meeting. I’m also the one they’re most interested in, primarily because they have no clue what they’ve stumbled upon. So this is a vote to move forward with that, with the ideal end goal being a tiny government of our own in some far-flung corner of the world, through which we can become fabulously wealthy and improve the lives of everyone on Aerb. All in favor?”

The response to this was less enthusiastic. I said aye, and Fenn did too, though pretty weakly. Amaryllis was obviously in favor too. But that left Grak, Val, and Bethel.

“Grak?” asked Amaryllis.

“A thousand pounds of gold as penance,” he said. “Per our agreement, it was one pound of gold every two weeks. I’m finding that to be too slow, even with the time in the chamber. I made a promise. I still intend to keep it.”

“Oh, are we talking about extracting value from the party?” asked Fenn. “Deal me in.”

“At current market prices, minus the amount you’re owed from our stores, the remainder of what you need amounts to roughly ten million obols,” said Amaryllis. “There are a few ways that we might get in a position to be able to pay that out to you, but it was always going to take years.”

“I know,” said Grak. Solace made a squawk, the first sound I’d heard from her, and Grak moved over to Amaryllis, handing the baby over. Amaryllis smiled at the baby and began rocking her, then returned to look at Grak, her face stony.

“Name your price,” said Amaryllis. “We’ll decide as a group. And remember that we’re your friends.”

“I made a promise,” said Grak.

“Name your price then,” said Amaryllis. “Tell us what you need to take from us so that you would consider this whole endeavor worth your time. Tell us what we have to pay you so that you don’t walk away and get yourself killed going after another gold mage. Jesus Christ, Grak.”

“Don’t take the Lord’s name in vain,” said Fenn. I gave her a look. “Inside joke,” she said with a shrug.

Grak frowned at Amaryllis. “I do care for you,” he said. He looked around the small room. “All of you. Some more than others.” That was characteristic dwarven bluntness right there. “I will not be subsumed by this group.” That was also a characteristically Grak way of saying things. He seemed allergic to the word ‘but’, so instead, he’d just give two statements of fact, one of which undercut the other.

“Fine,” said Amaryllis. “It’s going to cause us no end of problems with capital, because we’d be idiots to plan on paying anything out in the beginning, but I’ll personally guarantee you ten million obols within two years time, and if I don’t have it, we’ll go kill a fucking dragon and take its hoard or something, okay?”

Grak stared at her, then nodded.

I saw Valencia’s expression change, going from nervous to calm in an instant. I didn’t fully understand the subtext of what Amaryllis and Grak were talking about, but I could ask Valencia later, if Amaryllis didn’t explain it. I at least knew that it wasn’t actually about money, it was about honor, or something else, either particular to dwarven culture, or particular to Grak. Martyrdom,
maybe. It felt like a weird time for it to come out, but he’d spent three months in the time chamber with Amaryllis, then had his role as midwife undercut by the professionals.

“Just to be clear, we’re going to take a vote before we go off to slay a dragon, right?” asked Fenn.

“That was a hypothetical,” said Amaryllis.

“I vote aye on the plan for nationhood,” said Grak. “I would like to see a full accounting of where we stand, as far as finances go.”

“We’ll table that, for now,” said Amaryllis. She looked at Bethel. “You have an objection to the prospect of building our own nation?”

“I have no particular interest in it,” said Bethel. “Nor in adventuring in general. Consider my silence abstention.”

“Alright,” said Amaryllis. She turned to Valencia. “I would understand if you didn’t want to be in the spotlight. No one would force you to take an active role.” She looked at the rest of us. “No one has to take any role if they don’t want to, but we’re going to be a nation of thousands, and the circle of trust is very, very small.”

“No, sorry,” said Valencia. “It’s not that, it’s just things seem to be moving very fast, and I feel like I’ve missed a lot, so it’s all confusing.” She hesitated, then pointed to Bethel. “Who is this?”

We had a nice moment of silence at that.

“Valencia, this is Bethel, the house formerly known as Kuum Doona,” I said. “She’s the staff with a dollhouse on top, the woman you see there is just a projection. Bethel, this is Valencia, we’ve, ah, mentioned her unique situation.”

“It’s a pleasure to meet you,” said Valencia. She looked from Bethel-the-illusion to Bethel-the-staff. “Which one should I look at?”

“The illusion,” said Bethel. “I produce it for the sake of convenience, so others can imagine me as though I am one of them.”

“I dye my hair,” said Valencia with a nod.

“But you don’t object to Mary’s plan?” I asked.

Valencia hesitated. “I don’t know,” she said. “My first thought was that I would do whatever you said to do, because I trust you.” She frowned, narrowing her eyes at a point off in the distance. “Then I thought that maybe I should be my own person a bit more. I don’t know what the real Valencia actually wants.”

“That’s fair,” said Amaryllis. “I’ll try to help you.”

“We all will,” I said.

“Then I vote aye,” said Valencia. “Can we not vote on things so much though?” I remembered the last formal vote we’d taken as a group, two months ago, and how stressful she’d found that.

“I just want to make sure we’re all on the same page,” said Amaryllis. “I don’t doubt we’ll have other things that occupy our time, but we have a real opportunity to do good, and to further our collective interests at the same time.”
“I have a lot of quests to get to,” I said. “Things that it’s likely only I can do. And I want to find Uther, as you all know.”

“I do too,” said Bethel. I winced at that. I was pretty sure we weren’t on the same page about what we were going to do when we found him.

“And we can,” said Amaryllis. “I might stay back, until I have things running so they can handle my absence. With the time chamber —” She stopped and looked at Bethel. “If I’m allowed to use it, then it should take considerably less time to hammer through the kinks.”

“That’s a mangled metaphor,” said Fenn.

“You rubbed off on me,” said Amaryllis. “Okay, it appears that we’re all relatively on the same page, I think our first meeting can be adjourned.”

“Next time we should have chairs,” said Grak.

“Earth management tactic,” said Amaryllis. “It’s called a ‘stand-up’, intentionally meant to shorten meetings because people don’t like to stand that long.”

“It didn’t bother me too much,” said Bethel with a smile.

We broke off into groups after that. Amaryllis took off the chestplate of her immobility plate so that Solace could feed, Fenn went to have a talk of some sort with Bethel, and Valencia was excited to tell me about her time alone, which had apparently involved a fair bit of precision gunfire. Grak sat on his own, in a chair in the corner. I wanted to go ask him what was up, but I was feeling drained, and Valencia was describing an encounter at a tavern with considerable enthusiasm. It was easier to listen to her than to think about Grak, so I took the easy path.
Consolation

Negotiations took hours, and I was thankful that my role in them was very minor. There were hundreds of things that needed to be hammered out, but Amaryllis and Valencia (with the most cunning devil she could find) were both up to it. No one ever said out loud that if we wanted to, we could just kill everyone and leave, but there were a few hints in that direction, especially with casual uses of magic, most of them by Bethel. She peeled the skin from an apple with her telekinesis while she held it in two fingers, which made the point rather clear.

The big sticking point was Anglecynn. Finch had been called into Cranberry Bay because of that first altercation with Larkspur, and he’d started connecting the dots right from the start, at least to hear him tell it. A mysterious man goes to a library asking about a disease from the Risen Lands, and just a short time later gets attacked by Anglecynn’s Foreign Security Director, who also happens to be the guy who benefits most from Amaryllis Penndraig supposedly dying in the Risen Lands a few weeks earlier? Yeah, maybe you might be able to infer from that that A) she was still alive and B) sick with some difficult-to-cure disease and C) Larkspur Prentiss was trying to finish the job.

Uniquities liked Amaryllis. Well, I shouldn’t say that, because Uniquities was a huge department, and a lot of what they did could have been entirely justified to the imperial legislature, if they ever had to answer for any of it. It wasn’t clear how many people were in the know on the things they might get in deep shit for, but my guess was that it was pretty small, like any good conspiracy had to be (barring magical means of maintaining it, anyway). But it was easier for me to think of Uniquities as being embodied by the three people I’d met, and especially their head honcho, Alcida.

Alcida really liked Amaryllis.

Alcida liked Amaryllis so much that she wanted her as a major player in Anglecynn politics, and had been willing to bend rules in order to get that to happen, both before and after Amaryllis had started on her long, strange journey with me. I found a lot of what Alcida said a little grandiloquent, stuff about ‘as Anglecynn goes, so goes the Empire’, comparing the kingdom to a listing ship, and talking about rooting out the heart of corruption, something that could only be done by someone with a keen intellect, an iron will, and covert backing.

Amaryllis wasn’t having it.

“I care about Anglecynn, deeply,” she said. “But I also care about Aerb as a whole, and if I go back to Anglecynn to become one of a very large number of princes and princesses, I’m not in a good position to actually accomplish anything.”

“You had allies before,” said Alcida. “They might not have been able to save you -- unless they were the ones who contacted the Council of Arches on your behalf?”

“They were not,” said Amaryllis. The meeting had gone long enough that Solace needed breastfeeding, which Amaryllis was doing as the negotiations continued on. It seemed like a power play to me, but I wasn’t well-versed in such things, and it might have been simple necessity.

“But you did have allies,” said Alcida. “There would be barriers to you returning --”

“I was given an expedited trial by adversity,” said Amaryllis. “I would either be accused of having not made it through the Risen Lands, or charged with desertion from the Host, and even though it wouldn’t make any sense, it’s very likely that both would happen. My nominal allies would be spending enormous amounts of political capital in order to secure me good standing among the Lost
King’s Court, and once all was said and done, I still wouldn’t be in a good position to actually accomplish much, especially given how much rebuilding there would be.”

As lies went, that was a little bit transparent. We had a rather significant number of advantages, and that was part of the argument for why we wanted to have a puppet state of our own. But it was true that this would all be harder if Amaryllis was also having to spend time fighting entrenched institutions, political opponents using those entrenched institutions, and working within the constraints of a system that had been set up five hundred years ago and modified in the ways that were expedient. Anglecynn’s legal system was like a house that had been lived in for a few generations, where each owner had applied their own temporary fixes to various problems, sometimes applying temporary fixes on top of previous temporary fixes, until the whole thing was a mess that you needed years of study to even make sense of. We didn’t want anything to do with it.

Alcida eventually relented. I don’t think she liked the idea of giving us free rein, especially since she didn’t know the half of what the Council of Arches actually was, but the creation of what would hopefully be a new nation with some amount of legal recognition would give some cover for Uniquities to post agents there. Obviously Esuen would have to be consulted, but they apparently still didn’t know where she was, and we were keeping that under our hat for the time being. (I was pretty sure that Finch was going to be pissed off about it, and I have to admit that I was looking forward to it.)

“When we see each other again, it will be under a different pretense,” said Amaryllis, toward the end of things. “We’ll collect Esuen and square things away with her, and receive your dossier on potential contacts and locations by dead drop. I think it’s likely that if the Isle of Poran ends up being a possibility, we’ll take the opportunity to settle there.” So far as I had been able to discern, the Isle of Poran was a rocky, craggy place that no one wanted.

“The Council of Arches has further designs though,” said Alcida. “From what you’ve said, and your willingness to parlay, I think our goals are roughly in alignment, but I’d desperately like to know more.”

“You’ll find out soon enough,” said Amaryllis. “If your goal is maintaining the empire and improving the lives of its citizens, then I think you’ll be quite pleased.”

After Amaryllis and Solace were both given a bill of clean health by the doctor (who was very calm about the fact that Amaryllis had mostly recovered from birth in the space of a day, and that Solace had grown considerably in the same amount of time), we teleported out, all of us at once. Valencia didn’t count as a person for the purposes of the teleportation key, because magic didn’t recognize her as a person, and Bethel was, technically, a magic item, just like Ropey (who had maintained his position coiled around her).

Solace cried when we came through to the foothills of the World Spine, which wasn’t too surprising given the sharp pain it caused. Amaryllis calmed her, rocking her gently and cooing to her, while the rest of us put on our breathing masks so we could go into the glove. The bottle was right where we’d left it six days prior (or, depending on your perspective, between two and nine months ago). Grak peeled back a few of the wards he’d put up so we could get in, and then we all piled into the glove while Amaryllis rode her immobility plate down.

The interior of the bottle was stiflingly hot, and as I looked around, most of the grass was dead. The tree house in the center had lost about half of its leaves, and they were laying on the ground, brown and dead.

The locus came over to us, limping and bleeding, panting with its tongue out. I’d forgotten just how
intimidatingly large it was, and the oddity of seeing a deer with six eyes. The whites of its coat weren’t as bright or pure as they’d been when we’d left it.

Amaryllis approached the doe with Solace in her arms.

“I --” she began, then stopped. “This is her,” she said. “I guess you would know that. I don’t know if you can --”

Curling bits of glowing smoke or mist began rolling off the locus’ hide. It straightened up until it reached its full height, then bent down toward Solace. I steeled myself, not knowing what to expect. Druids ran on bullshit, and the locus was the source of that bullshit. I’d had a glimpse of it when I’d had stratospherically high Essentialism, but that was me coming at the whole concept of a druidic ritual from a completely different direction -- or rather, the game giving me brief insight into how to do the working without actually giving me any actual skill as a druid (along with the total lack of connection). The locus was mysterious; that was its entire mode of being.

The Six-Eyed Doe took in a deep breath, and the tendrils of glowing mist twisted in an invisible wind, until they were all pointing toward Solace. When the locus released the breath, the mist rushed forward, washing over Solace and spreading around Amaryllis, continuing on as the Six-Eyed Doe extended its long exhale of air.

Solace began to change and grow, her swaddling cloth falling off her, leaving her naked in Amaryllis’ arms. Within the space of a few seconds, she had doubled in size, then again, becoming older, from tiny baby to little girl before our eyes.

That was when the locus faltered. It coughed, and the glowing mists around it dissipated, spreading out onto the ground around it, which went from limp and brown to green and vibrant in an instant. The locus gave a low moan and collapsed to the side, breathing heavily.

Solace pushed away from Amaryllis and slipped out of her arms, clambering down to the ground, and came to the side of the locus’ head. She laid a hand on its neck, murmuring something in its ear, then kissed on its cheek.

I don’t think that I had ever seen Amaryllis look more forlorn. Solace looked like she was back to being Solace; her face was animated with the same intelligence and experience that she’d had in her previous life, and her connection to the locus seemed as strong as I’d ever seen it. This was what we’d hoped for, what Amaryllis had spent almost nine months of her life in a cramped room on, and now it was all over. She hadn’t really talked about her confused feelings towards Solace, not with me, but it was evident that she hadn’t excised them from her soul without telling anyone.

Solace glanced over at Amaryllis, and must have seen the same thing, because she walked over to her. They had a brief conversation that I couldn’t hear, and that I was trying not to hear, because it seemed private, but the end result was that Amaryllis picked Solace up, and they had a hug that lasted for minutes. Solace’s small, dark green lips were moving, whispering something in Amaryllis’ ear, and when they broke apart, Amaryllis was crying happy tears.

Solace approached the rest of us, holding Amaryllis by the hand.

Fenn stood next to me, and leaned in close enough to whisper to me. “Does this mean Solace is a loli now?” I glared at her as she pulled away from me, smiling. She gave me a thumbs up, I think because she was happy one of her Earth references had landed. A glare might have been the reaction she was going for.

“Thank you all,” said Solace. Her voice was high, childlike, which made sense, considering. Crantek
were already one of the smaller mortal species. “I’ve been reborn many times, but that death was my first.”

“Are you stuck like that?” asked Fenn.

“As a child?” asked Solace. “There’s nothing wrong with adolescence. I’ve been through it before. The locus rushed things because there’s need of me.” She looked to Valencia. “New faces,” she said. “The locus had good things to say about you.” (I assumed that was figurative, because as far as I knew, the locus didn’t speak at all.)

Valencia curtsied, going low and bringing her dress out to the side as wide as it would go. “It’s an honor to finally meet you, Oorang Solace. My name is Valencia the Red.”

“Go speak with it,” said Solace. “It’s in need of comfort and wants you by its side.”

Valencia rushed off, running pell-mell across the grass, which was slowly becoming greener around where Solace stood.

“Grakhuil,” said Solace. She glanced down at his prosthetic. “Can I give you a hand?”

Grak nodded. “It’s been three months,” he said. “Long enough for it to scar over.”

“Three months?” asked Solace. “I had a vague recollection of a hospital. Shouldn’t it have been … what is it for humans? Nine?”

“Hyperbolic time chamber,” said Amaryllis. They were still holding hands. Amaryllis was standing close to Solace, possessive, like she was worried that our druid would run off. Or maybe like she was worried that her child wasn’t going to be okay.

“Ah,” said Solace. She looked around the bottle. “I had wondered. It’s clear there will be some catching up I have to do.” She glanced at Bethel, and the staff that Fenn had stuck in the ground. “Another new member?”

“I’m the new house,” said Bethel. “You’ll need to show me where to expand, if we’re all to live here for the time being.”

Solace nodded, then looked up at Amaryllis. “How much time has passed, would you say?”

“Two weeks, give or take a few days,” said Amaryllis. “I haven’t looked at a calendar lately.”

“And so much has changed,” she said. “What happened with Fallatehr?”

“We killed him shortly after Juniper learned soul magic,” said Amaryllis. “Unfortunately, that doesn’t seem like the right path toward getting the locus onto its own land.” She hesitated slightly. “We still don’t have a solution to that problem, I’m sorry. We had thought that Juniper becoming the most powerful soul mage on Aerb would do it, but he was, briefly, and that did allow us to bring you back, but … we don’t have many productive avenues left.” She looked around the bottle, through the stifling heat and dead plants. “Can you fix this?”

“Certainly,” said Solace. She looked to Fenn. “I don’t suppose you have my staff and cloak in that glove of yours?”

“The cloak we have,” said Fenn, producing it with a flourish. “The staff was voided, unfortunately. I’ve also got a dress for you.”
“The sun feels nice on my skin,” said Solace with a frown. “My species drinks the sun, you know.” She seemed remarkably well put together, for everything she’d been through. The locus had done something with her, some restoration of the soul that flew in the face of everything I knew about what the soul was. Solace didn’t seem to mind. She took the cloak of leaves and threw it around her shoulders, which did approximately nothing for modesty, while simultaneously blocking the majority of the light from hitting her skin.

Grak had taken off his prosthetic and approached her with his stump held out in front of him. It was scarred over, but the scar was still red, not the waxy texture and whitish color of a long-ago wound.

“I have some faculty with soul magic,” I said. “If the internal state of his soul is going to be the problem, I can just mirror his hand from the other side and get it to be consistent. We’d have fixed him ourselves, but the bones take something special to grow back, and --”

Solace cracked her tiny knuckles and smiled. “Juniper, could you get me a stick?”

“I -- sure,” I said. I looked through the grass, trying to find one that I thought would be appropriate to the ritual. “Just any old stick?”

“No,” said Solace. “A special one. You’ll know that it’s special because it’s the one you choose.”

I’d forgotten her faintly amused expression, and it brought a smile to my face, despite myself, because I was being given a firm reminder that druidic magic drove me fucking nuts. All that mist coming off of the locus probably didn’t mean anything, it was just abstract magic without apparent rhyme or reason. But we’d spent a considerable chunk of our lives getting Solace back so that the locus wouldn’t die in its bottle, so I supposed I would just count myself lucky that it was, for all its deliberate weirdness, still really powerful.

I spent some time looking for a stick. Going ‘hur dur, I just grabbed the closest one I found’ seemed like it would be going against the spirit of the thing. The one I settled on had two forks in it, and was dry and brittle, with most of the bark stripped off the outside. My skill at identifying wood pretty much stopped at ‘yup, it’s wood’, but I assumed that it had come from the tree that served as a house.

Solace took the stick from me and stared at it for a moment, then began pinching it here and there. The wood responded to her touch like taffy, extending and being shaped by her touch. When she had finished, it very vaguely resembled a hand. She took Grak’s stump and pressed the stick to it, which caused the flesh to part like soft butter and seal closed as though a piece of wood hadn’t just passed through it.

“It will take some time,” said Solace. “An hour or two. But when it’s finished, you should be as good as new.”

Grak turned the stick around inspecting it. “Thank you,” he said.

“You couldn’t have just regrown the bones?” asked Amaryllis.

Solace gave a faint smile and shrugged. “Who knows?”

“Will it be as good as new, or better?” I asked.

“Different,” said Solace. She shrugged. “Better for some things, worse for others. Better, I would think, for the type of person Grak is, or would like to be.”

I nodded. I was pretty sure that if I suggested cutting off my arm and having her replace it, or doing the same for all of us, the druidic resistance to being put in a box would come forward in full force,
stopping that venture before it even began.

“It’s good to have you back,” I said instead.

**Quest Completed: Pregnant Virgin Princess - Amaryllis has given birth to Oorang Solace, bringing her back from the dead. If another of your party members dies, don’t expect it to be so easy.**

**Quest Accepted: Birth of a Nation - You’ve set out to become a real power in this world, no longer independent agents bumbling from crisis to crisis, but instead a nation, bumbling from crisis to crisis. Quest completion entails becoming accepted as a member nation of the Empire of Common Cause.**

**Quest Updated: Taking Root - The world has but a single druid, tending to but a single locus. With the locus so constrained within a magic bottle, no more druids may be inducted, but removal might prove fatal. With your help, druids might stalk the world once more. (Companion Quest)**

**Level Up!**

My brain splattered across the ceiling of the universe, becoming stars in the sky, each neuron a swollen red dwarf, the hyperspace connections between them engorged with the pleasure feeding through them. There was nothing like awareness to me, only pleasure so vast that I couldn’t hope to feel anything else. It was reductive, stripping away the thinking part of me and leaving only the animal, pinning me down and fucking me, a fist thrusting straight into my brain, thick fingers manipulating my internal wiring.

When I came to, they had me pinned down. Amaryllis was fixing my soul; she had intuited, correctly, that it was no longer a change I could make on my own, not after what I had felt.

**END BOOK V**
Notes

Chapter Notes

If you're not the sort of reader who likes in-universe texts or background fluff, feel free to skip this chapter.

Mary’s Notes: Toward an Optimal Build

- Mistakes of the past are locked in via point selection w/ limited options wrt correction
- “Floating” points should not be floating as they alter hard caps and should be put toward maximizing those caps!!
- J right that exact functions of all skills are not known
- J says even known skills have unknown full functions (so-called “Woodworking 100 Issue”), solvable via skill point sacrifice for information, but sacrifice indicated to be non-renewable resource, or difficult to renew.
- J maybe right that unknown skills have comparative advantage because no one else has them or will be prepped against them -- but how to unlock if we don’t know either??
- Spirit: complement to Essentialism? Earth Shamanism? Something relating to the soul in non-obvious way? Morale? J unhelpful, spirit “too big” of topic, too many invented things. Anima ipsa and anima exa different (per F -- suspect) but shouldn’t need different skill. Might relate to gods? In theory, gods are just connection like Solace and locus, but will need cleric to test. F could have answered …
- Library Magic: J not much help. Lots of libraries in J’s games, but only three really magical ones, Boundless Library with all books, Ascentium (sp?) with books whose stories become real, and Libor Mortis w/ something like redaction magic (excluded, Bowdler). Juniper says reference maybe L-space (Pratchett, Discworld). Ties in w/ Raven? Uther’s “archivist”, part of that mystery pile, maybe alive, def missing, game character of Maddie (sp? Mattie?). J also says ref maybe “import library” elect. computer programming concept (?)
- Tree Magic: distinct from Wood Magic. J gave six examples (from games), none obviously right: tree as totem of power, tree as connection (flower mage? similar), tree as divination re: forks (! seems good), tree as voodoo doll, tree as Dorian Gray ref (sp? maybe read, Wilde, close to historical Gray Magic (excluded)), tree as branches/timelines (less sure on that one). Large search space. Will test unlocks. Ask Solace too. Relationship to salvers from Arches re: head trees? But salvers “invented” while on Aerb, per J. DM existential fuckery?
- 256 skills, 82 (!!!) excluded, 40 at one time for J, unrestricted # skills for others (why?), no limit for others (incl. self) (why?)
- Difference between Skills and skills, things still learnable if not on menu & extensions available even w/o Skill changing number, see Sanguine Surge
- Skills not transferred via symbiosis from skill point (re)distribution (sacrifice)
- Virtues not transferred from symbiosis
- Virtues maybe not for non-J at all? Testing confirms so far, but means for ex. blade-bound is just skills in others, needs testing. Some virtues not physically possible w/ training alone (see Shields)
- No hard caps for non-J, see F w/ Bows >50 but WIS=5 (why? Skill vs. skill? DM fiat?)
- Besides caps, unclear relationship wrt attribute and skill. J thinks obvious that skill outcomes are affected by primary/secondary attributes but admits no evidence. Best insight into hidden
rules is game messages or virtue desc, but no help there. Obvious changes to physique from PHY make J’s hypothesis seem reasonable.

- Unclear relationship wrt attributes and super-attributes, esp given above attr/skill Qs.
- Attributes match bone magic theory, so make deeper inquiries next time in Cranberry Bay? Obv. “real” in ways skills are not (yet) i.e. matching to reality and observable by non-J
- Actual mechanism for how game interfaces w/ world unclear. Granular rules, chaotic world. Roll dice, match world to fit? Observe world, match dice to fit (but dice not even exposed so far . . .)? Unicorn-like timeline redos? All total bullshit? J thinks not BS, admits possible.
- Only evidence when a skill is being used is presence of skill up message to J. Ergo only able to figure out what a skill is supposed to do by doing that thing until skill up. Some things make skill go up fast, some make it go up slow, evidence of “central purpose” of skill, arbitrary game rules, difficulty, or what? Different rates of skill gain. Massive headache, sparse information, poor experimental models.
- SOC important for many magics. Obvious in retro that gold mage would rely on it, 1 part TK control via CUN, 1 part POI as social interaction with gold (entity-like) (why not CHA? J unhelpful). Also soul value-based? F could have answered.
- MEN more important for more magics, but PHY used in a few
- Generalist approach gives many options, but less powerful. Maybe best for diminishing margin util on symbiosis? Skill combinations (esp. soul/bone) v. powerful
- Virtues good for J, but not usable for us, virtues better with level, possibly a ++ for generalist
- J has limits on attributes wrt personality, makes higher SOC/MEN less worthwhile since only game stuff affected (?)
- J can still grow as person, personality can change, slowly move J to where he can be J and be good at SOC/MEN? DM okay w/ that? Rules okay w/ that? (J okay with that?)
- Missing companions a problem for J’s spec, as missing companion specs are (obv.) unknown. If J specced, would C6 & C7 be “nudged” so not redundant? Would J be nudged to only spec so not redundant? Or is redundant possible despite narrative rule otherwise? Narrative rule may be broken, per J, if contrast is narrative focus, see Flash/Zoom (comic superhero).
- Dependability/existence of current companions a problem. F says will leave if J does something “unforgiveable”, shouldn’t happen, might (wrt V, not self). G says will leave when has money, adamant, means incentive to not pay him, he knows incentive, big mess. V will stay, but vulnerable. Worried about S (obv), tho not companion. If J specs thinking all members always around, might leave too much gap when one leaves/dies & need respec. Narrative maybe a problem? J unworried wrt big-N.
- J’s preferences important as motivates toward training, tho he’s been better of late. Worry is picking things J hates will result in failure to push himself even tho might be best for us if he did. Optimal depends on results & reality, not theory which ignores people, must learn from later Penndraig reform failures.
- To Do:
  - Compile chart/graph of primary/secondary attributes for ALL skills in better visual/analytical arrangement. Venn diagram w/ nine circles? 72 possible p/s combos, too messy. 36 if order unimportant, still messy. Only 6 if using super-attributes, simple and clean but not descriptive. 9x9 grid w/ color coding?
  - Revisit tree/spirit/library discussion once more Earth books have been read
  - Make character sheet for Grak w/ J’s help
  - Make character sheet for Solace?
  - Compile list of known rules and modifiers as given by virtues (prob not helpful)
  - Produce 3-4 optimal builds for J, anchoring + illusion of choice (immoral?)
  - Reach Loyalty 30 and/or convince/encourage F to do same, as may impact optimal build
Group, in rough order of appearance: Arthur, Ricky, Greg, Trev, Reimer, Craig, Maddie, Aaron, Tom, Tiff, Rache, Colin, Ana

Note: Campaigns are listed by first appearance, but many were dropped and then picked up later for a sequel campaign or two, with or without a shared continuity, sometimes with years between them. Campaigns run by others or set in established worlds are not included. Various one-shots weren’t included either.

2009

Pilgrim’s Promise - First actual campaign, where the party made friends with a necromancer and he sent them on missions, despite my best efforts. They kept ignoring the fact that he was playing them like a fiddle. Eventually they destroyed the world by accident, though I gave them a lot of outs before the asteroid hit. Amateurish and derivative in a lot of ways.

Tunnels - This was back when I liked bold, one-word titles. Took place in what was basically the Underdark, turned up to 11, which was saying something, because the Underdark was already nearly as far as you could go with the subterranean concept. It was a world without any apparent bottom or top, no sun, no sky, just endless tunnels, underground seas, and rampant claustrophobia. Ran its course pretty quickly, though I had a lot of plans.

2010

Drowned Valleys - Waterworld campaign, basically, but with a lot more land. Inspiration was more Wind Waker than actual Waterworld, though there were elements of both. Too much underwater combat, which isn’t very practical or fun. Arthur was away for the summer, leaving us with too few people, so this was one of the rare times I ran a DMPC (a drunken pirate cleric).

Eccentric Industries - Steampunk, but with more traditionally cyberpunk elements like megacorps, industrial espionage, etc. Party worked as fixers for the titular company, Eccentric Industries, meaning it was largely a patron-driven campaign. Sort of worked, but the intrigue wasn’t intriguing enough. Journeyman work.

Wickersham’s Extraordinary Adventuring Agency - Named by the players, who were making fun of the overly English names I was using for everything. The setting was nothing special, aside from the very defined gap between Civilized and Wild, with very few people crossing between the two, and lots of adventures to be had in a Wild that was absolutely chock full of dangerous places with loot. Flavor was a lot like Zendikar, but less “points of light” for the civilization.

Counterbalance - One of our only epic level campaigns, which suffered from all the problems at starting people above 20, some ridiculous builds, and all the problems of creating challenges for absurdly powerful characters. Didn’t last long.

Cranberry Guilds - Set in Cranberry Bay, which was fantasy San Francisco; it originally appeared in Pilgrim's Promise, then was refined here and transplanted to a different world (also the literal, in-universe explanation, part of the backstory to justify the 'points of light' setting). Focused a lot on guilds, which weren’t all that well-designed, but provided a lot of differently-styled fodder for the group to rip through. Their Guild was the run-down Adventuring Guild, which they eventually built up into a juggernaut.

2011

Altered Chorus - Recently discovered Eka Stones describe the true nature of reality, sort of a “new
The nature of reality was found to be slowly changing, once copies of the Eka Stones were compared with the real thing, which always maintained a description of true reality. Heavily inspired by Fine Structure. Run twice.

Knights of the Square Table - Our longest-running campaign that largely focused around Uther Penndraig becoming (and being) king, with a few twists and turns along the way. This was the most success I ever had with one character’s motivations driving the plot. Picked back up a few times, when I had built up plot and ideas for it. Arthur’s favorite.

2012

Scattered Asches - Intended as an Asch’s conformity experiment thing, but the campaign went off the rails way, way too quickly, and all my plans went out the window. Mostly focused on ninja stuff, rather than the Eight Realms that had most of the worldbuilding work.

Long Stairs - One of the rare campaigns set on Earth. Idea came from the internet, both in original concept, and with a lot of the setting details and conceits being similar to SCP works (especially trying to nail the feel of mission reports). Ran it twice, once as a meditation on American involvement in the Middle East, the second time post-Arthur as more of a “run friends through the thresher because of personal problems”.

Magus Europa - Fantasy 1700s, played three different times, though they were set in the same world without actually sharing a canon. First ended up being pirate-themed, second was mostly about Dracula becoming the King of England, and the third was a meditation on colonialism, set in the New World.

2013

Hellpocalypse - Dante’s Inferno, the tabletop campaign, with a lot of focus on devils and demons. Really wanted to go character-driven on this one, but it ended up being the party stumbling from place to place (each place specially themed in terms of who was being tortured and how). Regrettably edgy, and conceived of when my parents were going through some stuff. Shares a few similarities with Aerb’s hells, but nothing that can’t be chalked up to common inspiration.

Laser Fleet - Pulpy space fantasy so much in the vein of Star Wars that I elected to use the Star Wars d20 system, which we had the books lying around for. I refused to use the actual Star Wars setting because there were a lot of things I didn’t like about the worldbuilding, and also because Craig was really into the expanded universe and I didn’t want to be called out on mistakes. Probably would have been better as actual Star Wars. Not much impact on Aerb, though a few of the races came over.

Sleeping Beauties - Weird West detective campaign that ran for two major arcs, one involving undead prostitutes, the other involving a meat-packing plant. It was steampunk with a bunch of hardboiled tropes to it. Tiff wasn’t a huge fan of how women were portrayed in those stories, but said I executed “well enough” -- one of her first campaigns.

2014

Infinity’s Edge - Eclipse Phase campaign, fairly standard transhumanist body-hopping, copyclans, virtual/actual distinctions, self-modifications, etc. We ran in that universe twice, both times because Reimer really wanted to. I tended to prefer coming at the same stuff from a fantasy angle, and not all at once. Very little overlap with Aerb (but that’s not surprising, because it was only about 50/50 my
stuff and default campaign setting, and Aerb didn’t have much from the science fiction end of the speculative spectrum).

**Flesh.txt** - Extremely pornographic setting, never intended for anyone but me. Untitled, except the file name on my computer. I was fifteen and horny, I think it’s okay to have a depraved fantasy life like that which gets put into a worldbuilding doc. Included here because some of it crept into Aerb, including a few races and the fable of the Whore of Blades, a sexually adventurous warrior woman who wins a war for her country and then sets out to sample every fleshly delight her world has to offer (apocryphal, according to Amaryllis). I did tell Tiff about it, and she was extremely curious about what was in this forty-page document, but things fell apart before I could get around to sharing it with her.

**Heaven’s Host** - Superhero campaign that was set in Bumblefuck, Kansas, that fell apart when we got to a higher level of play because of disagreements over the point-buy system in Mutants and Masterminds, and whether it was appropriate to play as a person who could sit in their apartment and “work from home”. Velocity mages probably have their roots in Tiff’s speedster character, Hummingbird, which I helped make a lot of rules for.

**Critter Islands** - World of endless sand with miles-wide magical creatures that carry biomes on their backs. Each race had their own critter, but they were in a loose alliance, and the party was a finger of that Sand-Stretched Alliance, tasked with finding answers to ontological mysteries and exploring the dead critters that littered the sands.

**2015**

**Whispering Isles** - Semi-pastoral one-shot set on a bunch of floating islands, which ended up lasting three sessions on accident, and because people were having fun with it. Didn’t really fit well in the mold of D&D, which too many of the group tried to play it as, but I rolled with it.

**Small Worlds** - This was an experiment in microworlds, which I was really into at the time. The frame was that a capital-G God had a workshop full of bottles with worlds in them, and that the party had the ability to travel between them via skyship. Fairly undirected, and we never got to the “turn” where the God died and the bottles needed to be unified against the threat of the God’s daughter selling the bottles to the highest bidder.

**Small Gods** - All the players were really, really weak gods of very minor things, like Tiff was the God of the Smell of Fresh-Baked Bread, and Arthur was the God of Stories Without Endings. One of my attempts to break out of the mold that classical tabletop put us in, not really that successful, partly because we were using the wrong system for it. (Titled after the Pratchett book that was the major inspiration.)

**2016**

**Patchwork Republic** - The Dragon equivalent of Stalin dies, and his kingdom becomes balkanized, with institutions holding on for dear life, industries auctioned to the highest bidder, and crumbling infrastructure. Party ended up attempting to revive the dragon, but we never actually got to that point, and it wasn’t what I’d wanted the campaign to be about. We actually did this one four separate times, with different characters, each sharing continuity with each other.

**Glimwarden** - Semi-pastoral setting, but with monsters on the outskirts of town. We tried using Chuubo’s Marvelous Wish-Granting Engine for it, but it didn’t really suit us. We revisited it a second time using Pathfinder, which went a little better, but I didn’t like the traditional fantasy kitchen-sink stuff that Pathfinder brought to the table.
Tentacles of the Third Reich - Call of Cthulhu, set in the 1940s, with Nazi paranormal superscience and cults at work in the background, sinking their hooks into the apparatus of the Nazi government and military. Heavily inspired by Stross, including the adaptation of concentration camps as actually being part of a massive occult ritual. Arthur wasn’t a fan, partly because he didn’t like alt history, partly because he (maybe rightly) thought that the Holocaust having a utilitarian purpose was in poor taste.

A Manxome Foe - Post-Arthur campaign, set in a decaying, dying world full of horrible things. A frightening number of exclusion zones come from this campaign, meaning that it’s one of the most visible parts of Aerb. Lots of names from Jabberwocky, mostly because that’s also where “vorpal” comes from. Lots of character deaths. Fel Seed.

2017

Twilight Bloom - Never actually run, but most of the work was done. After the Fel Seed incident, my falling out with Craig and Maddie, and hitting rock bottom, I found myself wanting to not be such a horrible shitbag. In classic form, I did this through making another world. It was essentially supposed to be “humanity, fuck yeah”, but I had a lot of trouble not getting cynical, dark, or complicated with it. All the major fantasy races were united in mutual cooperation and understanding, with the major intended campaign goal being the clearing out of old secrets, healing of old wounds, etc. I’d wanted Tiff to play with us again. No trace of it on Aerb.

527 FE

Council of Arches - Intended as a one-shot, ended up having two sessions. Pretty basic, with most of the worldbuilding having been done after the first session, when it looked like it might turn into a full-blown campaign. Borrows heavily from the start of Patchwork Republic, but the intent was to take it in a different direction. Went on hiatus when one of the players died and another was brainwashed, it was this whole thing, ha ha.

Skill Virtues, by order of acquisition

Unarmed Combat 10, Hardened Knuckles: Lessens the toll that unarmed combat takes on you. Does not actually increase the hardness of your knuckles as measured by indentation or scratch tests.

Dual Wield 10, Ambidexterity: You no longer have a dominant hand. Removes the penalty for attacking with an off-hand, because you don’t have an off-hand anymore. You have no natural preference for which hand to use.

Thrown Weapons 10, Range Finder: Doubles your accuracy when determining distance. Take half the normal penalty for lack of references when attempting to determine how far away something is.

Improvised Weapons 10, Structural Assessment: You can hold improvised weapons in such a way that they’re three times less likely to break, to within one degree of reasonableness. Halves reduced durability maluses from all weapons.

Engineering 10, Material Analysis: Allows you to see weak points in materials, to within the first order of sensorium expansion.

Skin Magic 10, Shifting Skin: Allows you to freely move and rotate tattoos around your skin with a thought, even when you cannot feel your skin. Perception of the location of tattoos is added to your
sensorium. You no longer take a penalty for inexperience when in a contest to move tattoos.

**One-Handed Weapons 20, Monkey Grip:** Eliminates the penalty for using a weapon of a larger than usual size, to within one degree of reasonableness. This applies to N-handed weapons as well, so long as N >= 1.

**Dodge 20, Thaumic Dodger:** Eliminates the penalty for dodging magic, magical effects, entads, entad effects, and any supplemental physics which would appear magical to The Layman.

**Blood Magic 20, Hypertension:** Doubles blood volume and (as a consequence) increases blood pressure. Eliminates the penalties for high blood pressure. Allows conscious and subconscious control of blood pressure.

**Athletics 20, Long-distance Runner:** For the purposes of calculating fatigue, you may consider your pace three categories slower than it is, to a minimum of “Standing Still”. Eliminates the penalty for performing unskilled actions while running.

**Rifles 20, Compensator:** You automatically compensate for bullet drop and wind speed, even when gravitational constant, distance to target, wind speed, and wind direction are not known (or unknowable) to you. Halves the penalty for shooting at a moving target.

**Parry 20, Prescient Blade:** You take half the normal penalty to parry bullets, arrows, or other missile weapons. These attacks still do damage to your blade as normal.

**Two-Handed Weapons 20, Lunge Striker:** Eliminates the maneuverability penalty for all reach weapons. Eliminates the penalty for striking at close range with reach weapons. Allows you to more quickly cover ground when moving in short bursts and in a fighting stance.

**Combo Virtue, Neophyte Blade-Bound:** You have unlocked the ability to bond with a melee weapon, given a few minutes of meditation. You may only bond with one weapon at a time. When wielding a bonded weapon, double your effective skill with it, double your chance to parry, and you may cut with it as though it were twice as sharp.

**Essentialism 20, Soul Slip:** Allows you to make new modifications and alterations within the soul. Allows you to alter that which had been unalterable.

**Bows 20, Steady Aim:** Completely eliminates the penalty for firing a bow while moving. Halves the penalty for firing a bow under pressure or duress. Triples the amount of time you can hold a bow at maximum draw.

**Shields 10, Bulwark:** Shields you hold are twice as durable. If a force acts on your shield to move you, you will move only half the usual distance, with the reduction capped at ten feet of movement negated.

**Unarmored 10, Hardened Skin:** Lessens the toll that physical damage in combat takes on you. Slightly increases natural healing. Increases force required to break skin.

**Combo Virtue, Monkish Warrior:** While unarmed and unarmored, you may parry attacks as though you held a weapon, dodge at twice your effective skill, and automatically re-roll injuries if they are in the lowest five percent of outcomes (you keep any lower rolls).

**Essentialism 40, Soul Sight:** Grants a visual representation of souls, each with a unique color, which can be distinguished with acuity beyond the limits of the eye. Applies to both the soul and any
magic which interfaces with a soul in some meaningful way.

**Essentialism 60, Soul Saturation:** Knowledge of your soul allows it to fully suffuse you, giving a number of benefits to a wide variety of magic. Your blood works as an infusion for the purposes of pustule magic. You can use your blood as though it were magical ink ($4 \zeta /\text{mL}$) for the purposes of ink magic. Your bones are considered wood for the purposes of wood magic. Required connective power for plants is reduced by half. You may retract your soul from your extremities for the purposes of bypassing wards. Any magic items or magics which limit projection or application to your eyes, hands, feet, or mouth, can instead be projected or applied from any part of your body. Your skin and/or carapace is treated as though it were skin and/or carapace for the purposes of skin magic and carapace magic, whichever is more beneficial. Runes may be written on your skin as though it were prepared vellum. More benefits apply in specific exclusion zones: consult the manual for more detail.

**Essentialism 80, Soul Scaphism:** You can carve out parts of other people to use for your own purposes. Any benefits are temporary; any costs are permanent.

**Essentialism 100, Soul Symbiote:** Double your effective skill in Bone Magic, Blood Magic, Skin Magic, Carapace Magic, Pustule Magic, and the flower magic aspect of Horticulture, up to a cap of 75. Double your effective connection to any magical item which interfaces with your soul, unless doing so has associated maluses. Increase your skill with any specialty or subschool of magic that uses the soul by 20 points, up to a cap of 50.

**Flattery 10, Silver Tongue:** Reduces the penalty for insincere flattery by twenty-five percent. When flattering in a language you are not fluent in, your penalty is halved. When flattering a group, the Forer effect is doubled.

**Comedy 10, Class Clown:** You may increase the speed of your wit at the expense of its comedic efficiency, up to double your base wit and half your base comedic efficiency. Take half as much damage from physical humor, so long as it’s actually funny.

**Lying 10, Lesser Deceiver:** You will no longer forget the details of a lie, unless you wish to. Take half the usual self-consistency penalty when telling improvised lies.

**Debate 10, Shifting Sands:** Removes the penalty for reframing facts and figures in the middle of a debate, so long as all raw information was memorized beforehand.

**Medium Armor 10, Balanced Armor:** Your medium armor counts as heavy armor for obtaining the benefits of Heavy Armor virtues or bonuses, and light armor for obtaining the benefits of Light Armor virtues or bonuses. Afflictions and maluses are unaffected. It may count as light armor, medium armor, and heavy armor at the same time.

**Analysis 20, Flow State:** Allows you to enter into an analytical flow state, which temporarily doubles working memory with respect to the subject of analysis, halves the penalties for thirst, hunger, and exhaustion, and increases the chance of a Brilliant Insight by five percent per hour (compounding).

**Heavy Armor 20, Thaumic Defense:** When wearing heavy armor, add half your skill to any defense rolls made to defend against magical attacks, attacks using magical effects, entad attacks, or attacks using entad effects, even when this is unreasonable.

**Horticulture 20, Green Thumb:** When you roll on the plant health chart, reroll any result lower than half your Horticulture. This reroll is done before modifiers are applied. If subsequent rolls are
also lower than half your Horticulture, continue rerolling until you obtain a result higher than half your Horticulture, or until the roll history suffers from buffer overflow.

**Stealth 20, Light Foot:** When moving silently, reduce your sound by 10 dB, to a minimum of 0 dB. When attempting not to be seen, reduce your visual contrast by half. When attempting to not be smelled, reduce your odor by one rank. You take half the normal penalty for stealth checks against forms of perception which are unknown to you.

---

**Bethel, Loyalty lvl 2**

Bethel is not just an entad, but a meta-entad, capable of taking magical items and adding them to itself. Initially created by Omar Antoun using funds and labor provided by Uther Penndraig, it stood empty for several years until Uther returned. Once he discovered the house’s abilities, he began adding entads to it, eventually raising it to a sort of sentience, and after that, despite its objections and pleas. Five hundred years later, it had sequestered itself partway down the Boundless Pit, until you came along.

---

**Bethel’s Notes: Entads Consumed**

**Amulet of Kerthr’s Grasp:** The amulet allowed the application of five pounds of force with no limit on how small the area of effect could be, limited only by whether I am able to sense the location the force is applied to. Given the magnitude and versatility of my sensorium, there are no practical limits.

**Anyblade:** The Anyblade allows me to take on any shape or property within the ill-defined conceptual boundaries of what a house is. These transformations apply force, but only weakly. One notable side effect has been the ability to freely designate the two special rooms, one the former closet, which can now be expanded to any size or closed off entirely so no entads can be added against my will, the other the time chamber, which only requires rebuilding the control mechanism to access the years (though the metric appears to be years times volume). Furniture cannot be created unless it’s a part of me, and most attempts to circumvent this limit have failed.

**Backpack of Earthly Delights:** Allows the creation, ex nihilo, of any item from Earth with an act of will from myself or anyone within me. Restrictions on the items created appear to be connected to some outside entity, presumably the Dungeon Master, with denied requests resulting in a brief note written on a piece of yellow legal paper, often employing emoticons in the message. In contrast to the power of the backpack itself, I can create items of any size, so long as they fit within my confines. Created items appear to be consistent with the theory that only items which actually existed on Earth can be requested.

**Blanket of Protection:** Anyone who falls asleep within me may be completely protected from harm if I will it. The protection granted does not apply to mental or spiritual attacks, but is equivalent to the most powerful still mage with respect to forces applied to the body.

**Bracers of King Momentus:** I can transfer momentum from one object to another. I can also sense all momentum within my walls, and to one hundred feet outside them.

**Bulgrew’s Breastplate:** It was dull, uninteresting armor, more durable and lighter than steel but otherwise possessing no strong magic to it. Mercifully, it did not add to the sensorium, and the durability has transferred to most of my structure and cladding.
**Butterfly Knife:** The knife allows the creation of butterflies in the wake of any object within me of sufficient velocity, dependent on the will of either myself or the source of that velocity. I can suppress the ability of others to use the effect, if need be. The butterflies fly with a will of their own and disappear after a handful of seconds.

**Cannoneer’s Pistol:** Any pistols installed as part of an emplacement can fire shots which turn from normal pistol shot into cannonballs in mid-flight. In concert with the power of the Repeating Crossbow, this allows functionally unlimited cannonfire.

**Concordant Cord:** This entad gave me a pool of concordance to draw upon, which allows me to create wards when used in conjunction with the warder’s wands that I’ve collected over the years.

**Dagger of Dreamspeech:** I can enter the dreams of anyone sleeping in the house and either observe what they’re dreaming or kill them there, which will leave them permanently comatose.

**Diadem of Focused Intent:** This is one of the most developmentally useful entads to have been added to me. It allows hyperfocus on one particular line of thought or action, so long as it’s sufficiently narrow. Without it, I would likely have gone mad.

**Eavesdropping Ring:** I can understand the speech of anyone I can see, even if I can’t hear them.

**Evanescent Armor:** I can make various parts of myself immaterial, though there are harsh limits on how long it lasts, no more than thirty minutes of the day. Using this power selectively has allowed me to send people falling to their deaths.

**Everflask:** This allows the creation, ex nihilo, of any non-magical drink that has existed in Aerb’s history. The rule that defines what is or is not a drink is somewhat strict, allowing only for those liquids which have been produced for the purpose of consumption, and consumed for the purposes of pleasure, sustenance, or health. My output is limited to quart per day.

**Glove of Stone Shaping:** I can shape any stone that I touch. This allows some degree of movement through stone, though it’s usually slow.

**Imagineer’s Vestment:** I can create perfect illusions of sight and sound, so long as they’re within a ten-foot cube. I can freely recenter the cube, but at least one side of the cube must be contained within my walls. The vestments were the single largest addition to my sensorium.

**Joint Striker:** I can designate up to five willing people within me, and when I hold a bow at full draw, can see from and fire from their position. This is functionally useless, given my abilities and the vastness of my sensorium. It was intended as an aid to the soldiers stationed within me, but did not manifest in a way favorable to that effort.

**Lightning Rod:** I can shoot bolts of lightning from any surface, though I’m limited in both rate of fire and number of bolts per day.

**Loyal Recurve:** This one was intended as a method of ensuring my loyalty. It was sentient in its own right, leaping to defend its owner from attacks. It was successful, to some extent, but not enough.

**Miasma:** The armor created a cloud of poison, which I can create anywhere within me, and quite some distance beyond my walls. The Everflask can, thankfully, provide the antidote.

**Orb of Brilliance:** It was a glowing orb that would float around after whoever said a command
word, casting bright light. I gained the ability to shed bright light from any surface, which I did continuously until I had adapted, but I cannot float, perhaps because of the difference in weight. It was one of very few attempts to give me mobility.

**Pikel’s Gap:** This power allows the stretching of space around a person or object, making it seem as though a square room twenty feet to a side stretches for hundreds of yards. The perspective of people outside the stretched space has been noted as confusing and unpleasant. Unfortunately, a prohibition on stretching people and objects means that both combat and mundane utility are limited. It cannot create extra space to store goods.

**Repeating Crossbow:** This crossbow could reload itself and generate limitless ammunition, an effect which applies to all emplacements within me, whatever form the projectiles take, so long as they are non-magical.

**Ringmail of Three Wishes:** I am allowed three wishes each day. These wishes can only be used in order to undo the effects of an attack launched, and only just after the attack has struck. For the purposes of this power, “attack” requires both intent to harm and some measure of success.

**Robe of Tongues:** Added taste to the sensorium, with a range that extends to one hundred feet outside of me. This sense can be suppressed with force of will, but I don’t often do so unless overwhelmed by the sensorium. This sense applies equally to the surfaces of objects and their internals.

**Sending Slate:** I can send a message to a paired slate, or read from that paired slate. The paired slate is broken beyond repair, but the ability remains part of my sensorium.

**Seer’s Sword:** This entad was added because it allowed the wielder to speak with any entity killed by it. The experiment was a failure; I was able to see, dimly, the spirits of those I had killed, but am unable to speak with them or summon them into material existence. The cause of the failure is unclear, but the spirit sight exists as part of my sensorium.

**Somner’s Armor:** Somner’s Armor was intended to provide me with another defensive ability. Non-magical projectiles or weapons which strike me turn into small creatures such as bats, mice, or birds, which will then do their best to attack whoever was responsible for the assault. It’s limited to one hundred hits per month, and the combat effectiveness of the vermin is questionable.

**Soskanna:** This was once an intelligent sword, which first allowed me some semblance of sentience. It added an awareness of light, dark, and color to my sensorium, which extend one hundred feet from every surface. It also allowed me the ability to see a mental connection with every intelligent creature touching any of my surfaces, which I can use to initiate and receive mental communication.

**Sunlight Mirror:** If I so choose, any mirror within my walls can reflect as though the reflected space was fully lit. This allows the creation of light wherever a mirror is present. For the purposes of this power, “mirror” is defined as any sufficiently reflective surface, which can include blades and armor. When I consumed the entad, a knowledge of the reflectance of every surface as well as redundant perception of all light and potential light was added to my sensorium. I can suppress the ability at will, but not the sensory aspects.

**Tome of Cat Summoning:** Whenever a book is read inside of me, a cat will appear on top of the pages shortly after. The cats are apparently fully real to every sense I’ve looked at them with. Each book produces a different cat, though two copies of the same book will produce nearly identical cats. The cats often take on physical characteristics of the books that caused them to appear. Attempts to harm or alter the cats cause the cats to disappear. The cats can be moved from their books, and will
sometimes wander off on their own, but always disappear when the book is closed. Unfortunately, I’ve had no luck in suppressing this power, nor in controlling the cats. I know the locations of all books within me, as well as whether they’re open or closed.

**Tome of Redundancy:** When pressed against another book, the Tome of Redundancy would copy all text within it. It was hoped that I would be able to rapidly ingest information, but the only result was that I can copy the contents of one book into another, without having a firm grasp on the knowledge or wisdom of the words.

**Warder’s Monocle:** I have several of these, though they’re largely redundant. Warders try to use them sparingly, for fear of burning out their eyes, but I have no eyes. They are not entads, but I’m not limited to entads, just to the broader umbrella of magical items, which is one of the reasons it was thought that I would be able to manipulate the hyperbolic time chamber. They comprise a large portion of my sensorium.

**Warder’s Wand:** I have several of these as well, which allow me to make wards using any part of myself as the wand tip. They are not entirely redundant, as each warden builds theirs individually, and there is some variation in strengths and weaknesses.

The One-Hand Warder

The Isle of Poran sat in the middle of a slate gray sea, under unnaturally roiling clouds. The soil was poor, leaving little but lichen and moss to grow, and it was almost perpetually wet and drizzly, with an average of two sunny days out of the year. It had been the redoubt of a vampire prince, long ago, with a small village of muck farmers surrounding his castle and paying blood tribute to him and his cohort.

I’d had a lot of problems with vampires, back on Earth. There were scientific issues you had to work out, if you didn’t just want to say “it’s magic, fuck off”, like the fact that blood had 900 calories per liter, which put some serious limits on vampire diets. There were also worldbuilding issues, like why, if vampirism could spread and vampires had lots of abilities, they hadn’t just taken over the world a few centuries ago. But the thorniest issues with vampires had been the cultural ones: vampires hadn’t just been done to death, they’d had so many variations that there wasn’t much space to be original with them. If you switched your vampires over from feeding on blood to feeding on psychic energy, you were already joining a crowded field. Same went for vampires feeding on magic, or dreams, or even the computational energy of the brains of the living. If you decided that vampires had taken over the world, you’d risk calling to mind a dozen different stories where that happened, and if you had something clever to keep them hidden, then hundreds of authors had already done that.

I usually went ultra-traditionalist. My vampires weren’t some twist on the classic stories, they were vampires to the core, with all the weird shit that came with that like not being able to cross running water, not being able to see their reflection, et cetera. They weren’t the modern kind of vampire you could kill with UV light, it took direct sunlight, and it wasn’t something you could guard against with sunscreen, it made them crumble to ash in minutes. There were tweaks, here and there, for the sake of making sure these vampires could be defeated by a band of adventurers, and to make sure that their bacchanalian blood parties wouldn’t strip the land of people in the space of a century, but I more or less stuck to strict traditionalism.

Part of that was the trope of “no ontological inertia”: killing the primogenitor of vampirekind would kill all of the vampires in the world. I loved that trope for a number of reasons, but mostly that it allowed a very clear and very difficult objective that a band of four to six adventurers could accomplish.

In 14 FE, Uther killed the primogenitor of the vampires, which caused every single vampire on Aerb to turn to dust. The vampire prince who had long ruled over the muck farmers of the Isle of Poran was one of those casualties, leaving the muck farmers free to loot his castle, establish a democratic collective, and get wiped out by an invading ship from the nearby lands of the Ha-lunde a few years later.

The Ha-lunde had mostly been interested in killing, because they were an all-male species that reproduced by fucking corpses (yes, they were one of my creations). It was a complete slaughter.

The land had never been terribly good for farming, so Ha-lunde’s claim on it went more or less uncontested through various changes in international politics, advancements in technology and magic, and a succession of different modes of governance for the Ha-lunde. No one really wanted to live on the Isle of Poran, and there weren’t any resources of note. Maybe if population had been climbing and space was precious, someone might have moved in, but that wasn’t the case.

Back in Uther’s time, the Ha-lunde had been a warrior race of blood-lusted men who engaged in warfare primarily in order to collect corpses and then fuck them. Centuries later, they were a cornerstone of the Empire of Common Cause, and they used the corpses of specially-bred animals
instead of humanoids, or occasionally, donated corpses from races that didn’t particularly care what happened to their dead. They were stalwart defenders of the Empire, full-throated backers of international cooperation, and champions of the so-called “common cause”.

The official story was that the Isle of Poran had been given over to the tuung as another example of the Ha-lunde doing what they thought was best for the Empire at some expense to themselves. To the cynics, this was eye-rolling martyrdom. To the anti-imperialists, this was a transparent attempt at expanding the scope of the empire, though their case was a little tough, because a member nation independently handing over land to a citizen of a non-member nation seemed like the opposite of expanding the empire.

The truth was that Uniquities had set up much of it, all officially unofficial. Alcida was the head of Uniquities, but she was also allowed to have her private life, wasn’t she? And if it came to light that she had talked to a friend high in the Ha-lunde government, well, she was allowed to talk to people in her private time, wasn’t she? Naturally it wasn’t the sort of thing you wanted anyone asking about in the first place, but if they did go asking, there were ways to cover up and deny.

And so it was that we found ourselves in possession of an island with poor soil and miserable weather, far away from everything important.

There were a hundred people on the island, which meant that the tuung were outnumbered fifty to one. It was a collection of volunteers from sympathetic nations, overseers from the imperial government (including Finch and Jorge from Uniquities), speculators, and a few whose only interest in the Isle of Poran was that we’d paid them.

Esuen had agreed to the plan, as laid out by Amaryllis, which wasn’t really a surprise. When the former handmaid had written to us that she wanted to be extracted, she had probably been imagining that she would be living in an embassy for the rest of her natural life, a willing pawn in someone’s game. Instead, Amaryllis was handing her a country on a silver platter. It was a small, crappy country that was virtually unrecognized by the international community, but the infertile land, poor resources, and inclement weather didn’t actually mean anything to us; we were going to make our money through intellectual labor, most of it stolen from Earth.

(Amaryllis had bigger plans, naturally. Miunun was going to be a technological powerhouse, if she had her way, but we couldn’t milk Earth forever, and we were probably never going to have the intellectual labor necessary to pursue our own R&D that would advance things from where Earth had been in 2017. Instead, the plan was to use the capital we’d generate to transition into capital-intensive manufacturing and processing. Specifically, Amaryllis thought that we might be able to provide Aerb with the plastics that it was so sorely lacking by engaging in some hydrocarbon jujitsu and a bunch of complicated processes. It would take skilled chemical engineers, trained up on Earth chemistry, some allowance for magic getting in the way of it all, some TBD method of obtaining massive quantities of biomass, and then a multi-billion obol processing plant.)

I didn’t spend much time with Esuen, who was the official “face” of the Republic of Miunun and nominal ruler. Amaryllis liked her well enough, but their relationship was entirely professional, and there were points of friction between the two of them, even with all the help that we were giving her (that only we could give her) and what I felt had started at fairly good terms and only improved from there. From what I understood, mostly from Amaryllis complaining, the biggest issue wasn’t really legislative and executive control, but instead, the money that everyone in the know anticipated would eventually come from our monopoly on Earth stuff. I tuned out a lot of it.

Somewhat surprisingly, Grak was the one who had the most success at actually befriending Esuen. It shouldn’t have been surprising, because they had both come from relatively cloistered societies to
attend one of the athenaeums and then broken from their home society over irreconcilable
differences. Their situations, when I had actually stopped to think about it, were actually pretty
similar. Of course, Grak also had some horrible trauma or pain over that falling out which he felt he
had to make right, and Esuen was trying to forge a new and different society for her people … but I
guess those differences might have given them something to talk about.

The Council of Arches was enshrined in the constitution of the Republic of Miunun, a seven-seat
“advisory” body with broad powers. It was me, Amaryllis, Fenn, Grak, Valencia, and Bethel, with
the seventh seat currently unfilled. The position was for life, and none of the seats could be refilled
once emptied. It meant that as time went on, the power of the Council would gradually fade, until
eventually it was no longer able to make decisions due to not being able to reach a quorum, at which
point it would effectively cease to exist for the purposes of governance. The Council of Arches
wasn’t a dynasty, it was designed to become a vestigial organ.

The first round of births was going to be in a week’s time. Amaryllis had refused to install a
touchstone on the Isle of Poran for the time being, citing security concerns, which meant that the only
way to get there was to teleport into Ha-lunde and then take a long boat ride over (or pay the
exorbitant fees for teleporting direct, without a touchstone). This was beneficial to us in a lot of ways,
since it meant people couldn’t just stop in whenever they felt like it, but it did produce some
constraints on getting in the necessary expertise. We needed professionals to help raise and train up
the tuunglings, and had to get everything in place before they were hatched.

In the meantime, we had business of our own.

I hadn’t accrued much power during our few weeks on the Isle of Poran. The two extra points from
leveling had gone into MEN, which raised the caps, but most of my skills were above the soft cap of
20, and couldn’t be raised higher. I had a few new virtues, from skills that were either slow or
impossible to raise in the time chamber, and was working on connection for flower magic with a
garden, but that was it. The lowest-hanging fruit still remaining was in unlocking magic, but:

- We had no idea what Tree Magic, Library Magic, or Spirit actually did, which was part of the
  logic for why I had included them in the build, but it made unlocking them difficult if not
  impossible until they presented themselves to us in some way.
- To become a velocity mage, you had to move, without magical assistance, faster than the
  benchmark, and then maintain it for a short period of time. It went up with every velocity mage
  that was inducted into the ranks. Due to somewhat short-sighted expansion of those ranks
during the Second Empire, that meant going more than six hundred miles per hour, and there
was presumably some secret to it, because that was really, really fast.
- Vibrational Magic was locked to a magic item, which was tightly controlled by the Athenaeum
  of Sound and Silence, and besides that, rate limited. It was frustrating, because all I needed
  was a tap on the head, but there was a long line of people waiting in front of me, all of whom
  had gone through the training necessary to actually utilize the magic.
- Revision Magic required being revised backward by a year, which was far more than enough
to kill a person, since your body spent that year taking in and expelling matter. The
Athenaeum of Claw and Clocks had a collection of entads that would keep you stable,
including the Thousand Rings of Stability, but it still meant giving up a year of your life, the
so-called “lost year” (as memories were lost too), and obviously it took a lot of time and power
from an existing revision mage to do the revision.
- Still Magic required visiting a temple and meditating there for a week, which wouldn’t have
  been too much of a problem, except that the temple was deep underground, and controlled by
the Athenaeum of Sound and Silence.
- Water Magic was a bloodline magic, and all I really needed was a teacher, who we’d already
contacted and was on her way to come see us. The strict combat utility wasn’t all that promising, but the weather control aspects would help a lot on the Isle of Poran.

- Fire Magic we could do too, but hadn’t. About 1% of the time someone was burned alive, they would awaken horrible scarred but otherwise fine, with the barest powers of a fire magus. If you had sufficient magical healing, you could take someone to the brink and then heal them back as many times as it took for the fire magic to trigger.

We’d gone over most of this during our week in Barren Jewel, when we’d been shut up in our hotel room waiting out the bout of civil unrest to finish. The big difference now was that we were more or less out of the shadows, and Uniquities was willing to help us with contacts and resources, so long as they could be done via backchannels. We still wanted to keep my abilities secret, at least for the time being, but Amaryllis thought it was likely that I’d be allowed to skip a few of the lines. Once the magics were unlocked, I would race through the required years or decades of training that they each required and become even more of a multimagus … but we weren’t quite at that point yet.

It was Valencia who had gotten the biggest boosts in the time we’d spent on the Isle of Poran. Part of that was her strength and endurance training, part of it was better skill with her devils and demons, and sure, some of it I guess I would also attribute to Jorge (blegh) working with her, since he had a better knowledge of infernal matters than any of us.

It wasn’t just that though; Bethel had given her some gifts.

There were a ton of downsides to being non-anima. The general rule was that magic didn’t interact with Valencia at all unless it would also interact with (say) a sack of potatoes, which was why we called it the Sack of Potatoes Rule. The soul was, in some sense, the interface that most magic worked on, and without that interface, you were left high and dry. Magical healing was one of the biggest losses, since it simply didn’t work on non-anima. Entads were another weak point, since she had no bloodline, couldn’t be invested, and they generally didn’t respond to her unless they also responded to demons or devils.

The flip side of this was that Valencia was practically invisible to magic. Wards against blood were, properly speaking, wards against latent, passive, or active blood magic, sometimes with a few stipulations. Valencia’s blood had no magic to it at all, and no connection to any soul, which meant that she could slip through all the most common wards without even knowing that they were there. There were very few magics that directly affected the mind, but she was effectively immune to them, about as immune as a sack of potatoes would be. Soul mages were powerless against her, which must have been part of Fallatehr’s interest.

Where Bethel’s hobbies and Valencia’s abilities intersected, there were cursed magic items.

Way back in the very early versions of D&D, cursed magic items were mostly there to fuck you, because OD&D and AD&D didn’t really care whether you lived or died. The whole concept of the roleplaying game hadn’t really developed, and characters were just grist to the mill, a loose collection of emergent traits that got stapled onto the much more fully developed mechanics. Magic items in general were a lot more random, and the cursed items even more so. Some of it was funny stuff, like the Ring of Bureaucratic Wizardry, which made you have to fill out forms before you could cast spells, but at the same time, that sort of smacked of “ha ha, you can’t play your character anymore”. Later editions (and other games) either removed the curses, watered them down, or made them big, important things that had actual gravity to them.

Aerb did cursed items like I had done cursed items. They weren’t ‘cursed’, exactly, but they had some built-in drawbacks to them that made them dangerous or awkward to use, and there was a good chance that you’d end up hoisted by your own petard. There was a sword that would bleed you for
every second you held it in combat, one that you couldn’t return to its sheath without having killed something larger than a cat, a spellbook that would drive you mad if you used the same spell twice in a day, all sorts of little catches and hiccups that added in flavor and demanded thought.

“The issue, I believe, will be that Valencia is incapable of properly wielding much of it,” said Bethel. “Anything that requires will on the part of the user would be useless, which includes many of the best armors I took.”

“Do you have that axe?” asked Fenn.

“All of it was left behind in the cavern I had made for myself,” said Bethel. “But yes, the Axe of Gilhead was among the entads I had possession of but elected not to make a part of me.”

“That’s the one that, um, pulls blood from the bodies of the people it cuts?” I asked. I remembered the illusion she’d presented to us, of a man whose hands became wet with blood the moment he grabbed its handle.

“She wouldn’t feel the compulsion for blood,” said Bethel.

“She’d get bloody though,” said Fenn. “That would be pretty neat though, right? She would come into battle wearing white, then I’d throw her the axe, and she’d be stained red with blood in an instant. It would be badass.”

“You’ve been watching too much anime,” said Valencia with a frown.

“You’re going to criticize my choice of media?” asked Fenn with a snort.

“It does seem really impractical,” I said. “Maybe if we had a way to clean the blood?”

“We should transfer all of it here anyway,” said Amaryllis. “We can test the entads out for usability. A random hole in a vast stretch of rock nine miles down the Boundless Pit is a wonderfully obscure place to store things, but it’s lacking in accessibility.”

“Let’s take the teleportation key and grab them then,” I said.

“Hard pass from me,” said Fenn. “You can take the glove, but this doesn’t at all seem like a six person job, and I’m exercising my rights as the group’s laziest member.”

“I have things to do here,” said Amaryllis. “Actual, legitimate things, not that it seems to matter if Fenn’s excuse is that she’s lazy.”

“I’ll go,” I said. I looked at the others. “I wouldn’t mind some company though. Grak?”

He stared at me. “Why?” he asked.

“I don’t know,” I said. “If you don’t want to, that’s fine. I’m not sure we have anything to talk about, but worst case scenario, we spend a handful of minutes scooping up all the crap we left behind, and then an hour and a half in halting conversation while I practice my Grogli.”

“I do not think Language means what you think it means,” said Grak. “Your pursuit of the skill has not borne fruit.”

“Well, either way,” I said. “I’m getting close to functional fluency, even without the skill. I think it’s probably healthy for me to be forced to do a few things the hard way.”

“I have nothing else to do,” said Grak.
I had expected Valencia to tag along too, but to my mild surprise, she didn’t express any interest, even though we were getting all the cursed entads for her. Maybe from her perspective, it was just going to be us sitting in a cave for two hours speaking Groglir to each other, but I’d been hoping for her presence in order to help smooth out lulls in the conversation.

We got to the cave without any problems, and stuffed all of the entads in the glove without any real problem. There were two suits of armor, a handful of weapons, some necklaces and bracelets, a crown, and a variety of tools. Valencia wasn’t going to be able to use it all, but I did find it a bit ironic that she was going to be the best-equipped member of the party. Neither Grak nor Fenn had magic armor yet; I didn’t have a good handle on what the levels actually meant, but that seemed a little embarrassing at level thirteen.

“Dar,” I said, once we had finished, which was Groglir for ‘so’. I wasn’t sure whether it would parse, but part of my language learning was just to try things how I thought they ought to be, then see whether or not Grak thought they were worth correcting.

“Dar,” Grak repeated with a grunt.

“Can you tell me what happens when your penance is paid?” I asked in Groglir.

“Did Amaryllis or Valencia tell you?” asked Grak. He spoke much faster in his native tongue, and was obviously quite a bit more fluent. He still spoke in the same way, logically dividing up his chunks of speech, but the pauses were shorter, almost (but not quite) a glottal stop to join clauses together. We hadn’t gone into it yet, but there was something about speed of speech that modulated deeper meaning in Groglir. I was still trying to find my way through the words, which was hard enough.

“I did not ask,” I replied. “You did not want to share and I thought it would be rude to take that … information, if they have it.” I struggled to find the word, but eventually managed it.

Grak nodded. “I appreciate that.”

“I know you are a private person,” I said. I mulled over my words, and not just because I was speaking a foreign language. “I am sorry that … that all of your efforts at being a good midwife for Amaryllis came to less than we had hoped.”

“It’s not that,” said Grak. He turned away from me slightly.

“I did not think that it was that,” I said. “I was only thinking about how hard you must have worked and how I would feel in your place. You spent more time in the, uh …” I paused, realizing that I didn’t have the word. “In the box.”

“Aderanhe,” Grak supplied.

“You spent more time than Fenn and I,” I said. “It wore on me. If my months of training had been swept aside I would have been frustrated and sad. You are probably better at enduring things than I am.” I was getting better at speaking Groglir; it was almost smooth, especially now that the rust had been shaken off.

“These things happen,” said Grak.

“It was something I was thinking about,” I said. I shrugged. “I was trying to put myself in your shoes. I do not think that I do that enough.”

Grak grunted at that, but made no other response.
We were lit by a flashlight, which I’d pointed at the ground in order to better disperse the light. We had an hour left before we could use the teleportation key again, which seemed like an eternity. I was really, honestly trying with Grak. He’d called us family before, but not in a good way. Family, as in, people you’re stuck with, people you can’t choose, people you maybe wouldn’t have chosen, if you’d been able to pick.

“Tell me about your friends at the Athenaeum,” I said, still in Groglir.

Grak looked at me. His frown was partially hidden by his beard.

“I did not listen very well when you told me the first time,” I said. “You left details out, too.”

Grak nodded slightly, but paused for so long before speaking that I thought he was going to stay silent. When he spoke, it was a stream of Groglir so fast that I had trouble keeping up.

I’d gotten bits and pieces about life in Darili Irid. It was a mile down, but still above the water table thanks to the fact that it was sunk into a mountain at high altitude. It was on the small side, as dwarfholds went, and far away from anything important. The bulk of Darili Irid was in their combination of farming and mining, using the muck that ate stone and produced something blandly edible. It left metals behind, which were gathered up, melted down, and sold via bulk teleportation. It was extremely rare that anyone ever came to Darili Irid, and even more rare that anyone left.

Grak had been burdened by social expectation from the moment he was born. He was most-pure, essentially a prince (or a princess, since the pronouns we used were, in fact, wrong, and using them really made it seem like he conformed to human gender norms, which wasn’t really the case). He had grown up with duties and obligations, above and beyond what any other young dwarf had to deal with. Attending births was one part of that, as were ceremonial duties like giving blessings to new tunnels with his father, and saying a handful of kind words at funerals. The position of most-pure seemed something like that of a pastor to me; the duties and obligations were largely about maintaining the community, rather than actual executive functioning, though there were elements of that too.

Grak chafed under the restrictions placed on him, and to hear him tell it, his father (also most-pure) exacerbated that significantly. Grak was a clone of his father, or something close to it, which wasn’t too unusual for dwarves, but always came with some baggage. In the case of Grak and his father, it was a little bit toxic; trying to mold your son into a better version of yourself and overcorrecting for all the perceived faults in your own upbringing probably tended to do that.

Young Grak only saw other dwarves. Groglir was the only language he ever heard spoken. The only visitors to Darili Irid were other dwarves, and even then, not many. The wider world could be seen only through those things ordered for the monthly bulk teleportation; a long order from the whole clan would go out with the precious metals that were the only thing of worth produced by the dwarfhold, and days or weeks later, another bulk teleportation from one of the major cities of the world would come in bearing the fruits of the empire’s multicultural wonderland.

For Grak, it started with his father’s newspapers, which were delivered, a month’s worth at a time, whenever the next shipment of outside goods came in. It was international news as written for dwarves, a combination of imperial politics, major incidents, and the occasional fluff piece, as produced for the billion or so dwarves that lived on Aerb, most of whom were in isolated dwarfholds just like Darili Irid. It was, to be sure, a slanted view on the world, and the particular paper that Grak’s father ordered aimed itself in an anti-imperial direction -- as it was, after all, a paper meant for dwarves that preferred their news to be in the lingua franca of dwarves rather than that of the Empire of Common Cause. But while Grak saw much that was frightening and confusing in the papers, he
also saw a lot that intrigued him.

When Darili Irid’s warder began to grow too old to continue on, Grak staked his shovel into the pile (a dwarven idiom, apparently). Grak was a prominent member of his community, well-liked, diligent, and with a better command of social situations and personal feelings than almost anyone else. He knew a fair amount of Anglish, though not enough to actually speak or read it. But the thing that really clinched it was his skill at Ranks, a dwarven game that I suppose I’d describe as a combination of Conway’s Game of Life and character optimization. When Grak went on a tear, winning eighteen sets in a row, he became the frontrunner for being sent to the Athenaeum of Barriers, and it wasn’t long before he was taking a more intensive crash-course in Anglish, one conducted largely through mail in the year leading up to his departure.

Grak came to the Athenaeum of Barriers speaking broken Anglish, which would have made things hard for him even if he’d been raised in a more cosmopolitan clan. He’d come from Darili Irid though, a place whose primary connection to the Empire of Common Cause was in monthly shipments by bulk teleportation -- and even then, much of their trade was with other dwarfholds, rather than the great centers of diversity and global cooperation. He had been looking forward to it, but even with all his preparation, it was confusing, disorienting, and a little bit scary, even if it was also as free as he’d been in his entire life.

(Some of this was new to me, but a lot of it wasn’t. I had asked about Ranks early on, because it was in his game-provided biography, and I’d convinced him to show me the rules and play a game with me during a period when I’d been trying harder to raise his loyalty.)

In his first week, he’d met two other new students, and maybe just because they didn’t know anyone else, they became fast friends. Neither of these friends were dwarves, but they were what I would consider dwarf-adjacent. The girl, Nadi, was a kle’tan, a species of skinny, claustrophilic tunnel-dwellers that tended to be afflicted with agoraphobia, something that she didn’t have a problem with. The guy, Ding, was an igno, a squat species with bumpy red skin which collected rocks they held in their mouths and used in place of having teeth. In terms of upbringing, Nadi was similar to Grak, since she’d come from a somewhat cloistered village and had little in the way of contact with others before coming to begin study at Barriers. Ding’s family, on the other hand, had been fully integrated into imperial society for three generations, and Anglish was his first language.

They spent a lot of time together, much of it in cultural exchange, with Ding playing the part of erudite guide for Nadi and Grak, showing them the breadth of what was on offer in the empire, introducing them to things that were strange by the standards of their respective cultures. They went to plays put on in the park, they took in theater productions from the acting club at Barriers, and Ding would take them to hole-in-the-wall speciality diners where they would sample the most foreign dishes they could find. They were a tight little group of three, growing and learning from each other, for a few months before things became complicated.

Grak was alone with Ding when the ongoing discussion of comparative culture had turned to the topic of sex.

For the igno, it was a biological urge, one that they couldn’t satisfy themselves any more than they could tickle themselves. The need would get worse and worse, becoming a distraction and eventually a compulsion, until something had to be done about it. For dwarves, it was somewhat the opposite; a dwarf was never overcome with need, or even really experienced more than a shade of it, not unless there was some physical stimulus. Instead, sex tended to be something that dwarves engaged in only for the purposes of procreation, though as a parthenogenetic species, they didn’t even need that. Dwarves found the actual physical process highly enjoyable, but there was never much element of compulsion to it, and they would rarely seek it out.
Ding shifted his position on the couch, and joked that maybe the next time he was having trouble with his studies because he needed relief, he would ask Grak for some help. It wasn’t really a joke though ... and Grak wasn’t at all averse.

Grak spent a long time explaining this to me, all in Groglir, while I strained to keep up and interjected occasionally in order to get clarifications on sentence construction and vocabulary.

“I had not known what would await me in the world outside of Darili Irid, only that I wanted it,” said Grak. “I had always found the dwarfhold too small, too ordered, too limited, even though I loved and honored Darili Irid. My position as most-pure put burdens on me. There were many duties to attend to. Learning the way of wards at Barriers was another one of those duties, one I had sought out because it was as much freedom as I had thought I would ever get in life. I wanted to try new things, do you understand? I had no itch for coitus, but Ding was a friend, and if I could help him to scratch that itch, I was eager to assist him.” (He was much more fluent in Groglir.)

So they had their ‘experimental coitus’, which was largely led by Ding, and which Grak found quite pleasurable, even if he’d had no particular craving for it when they started.

Once they were done, the fallout began, and never really stopped.

“It was a mix of cultural baggage, misunderstandings, and differences of our species,” said Grak. “I felt a deep kinship with Ding. To me, he was krin, or at least krinrael.”

(I don’t think I can do those words justice with a translation. ‘Krin’ was someone you were physically intimate with, often to the level of sharing a bed naked with them, and ‘krinrael’ was that, but much more temporary, not an ongoing arrangement. It didn’t imply that you were dating, or that you even talked all that much, but it often was a stepping stone to more intimate or contractual arrangements, like the dwarven version of marriage and/or pair-breeding. You could have more than one krin, but it wasn’t particularly common. There was some element of (or at least some suggestion toward) sex, but dwarves didn’t place all that much emphasis on sex, and it wasn’t what a dwarf would think of when they thought of krin.)

“You were not that to him?” I asked.

Grak shook his head. “When the act was done he had no interest,” said Grak. “A switch had been flipped. He did not avoid me, but to him it was as he said, a need to be fulfilled with assistance and nothing more. He did not care about the intimacy.” Grak frowned. “I cared. Nadi did too.”

As it turned out, Nadi had her own designs on Ding. Her people were originally tunnel-dwellers, in the closest thing that Aerb had to an Underdark, but their aversion to open spaces was a weakness they recognized as a society, so many of their stories were about explorers and adventurers, heroes who bravely walked wide-open plains with nothing but the sky above them. From a certain point of view, Ding fit in with the heroic archetypes common among kle’tan. He wasn’t an explorer or adventurer, but he bravely sought out new and exciting things for them to try as a group, and he was cosmopolitan in a way that all the best kle’tan heroes were. Naturally, she had a crush on him.

I kind of liked hearing Grak relive all of this ancient drama. He was still talking at a fast clip, leaving me in a frantic rush to comprehend and extrapolate things that I had missed, but he didn’t really express himself much, especially not on interpersonal issues. The recounting he was giving me was tinged with emotion, which I didn’t get from him very often either; he was slow to laugh, and easy to get in a sullen mood, which was, to be honest, part of why I didn’t talk to him all that much.

“She was upset when she found out,” said Grak. “She felt like she had been betrayed. Ding explained it as a moment of craving, nothing important or meaningful to him. I felt hurt by that. He
was my first krin, or so I had thought. We all wanted different things from each other. Nadi wanted a pair-bonding, I wanted continued intimacy, and Ding only wanted to not have his mind clouded by thoughts of fornication. I understood none of that at the time. To me it was as if he had declared us krin, then rescinded that the next day. My feelings toward Nadi were more complicated, especially after they had sex together.”

“Oh,” I said. “They had a relationship?”

“No,” said Grak. “Ding felt his mind clouded by need again, which filled him with desire for outlet. Nadi … she had positioned herself to be alone with him. She offered herself to him, but I do not know what she was thinking.”

I thought back on Grak giving me the abbreviated version of this, months ago, not long after we’d first met. I didn’t think that the situation between Amaryllis, Fenn, and myself was all that similar, especially since cultural (mis)understandings weren’t really a huge issue … but especially when he was speaking his native language, and opening up more about the specifics of what happened, I could see where he was coming from. And really … things had gotten messy and complicated, and had only been mostly resolved because Amaryllis was willing to alter her own soul in order to get it done. If not for that, we would still be in an unstable equilibrium.

“How did it end?” I asked, after Grak had stayed silent for a time.

“If Nadi had hoped he would feel some affection toward her, she was let down,” said Grak. “She felt used, after, which was an accurate understanding of the situation. We all felt betrayed by each other, for different reasons. It was the end of our friendship.”

“I’m sorry,” I said. I paused, licking my lips and trying to think of the right words. “They were your best friends. It can be hard to have things fall apart. What did you do after?”

“There were many dwarves at Barriers,” said Grak. “I spent a year cloistering myself with them. We ate dwarven food, sang dwarven music, and pretended that we were in a dwarfhold. I had a proper krin.” He shrugged. “I had liked that feeling of need from Ding. It was not something that a dwarf could provide. Not a traditional one.”

“On the train,” I said. “Magor. He seemed aggressive.”

“He was not traditional,” answered Grak. He stared down at the flashlight. “We had a good time together. I have thought about inviting him to the Isle of Poran.”

“That serious?” I asked.

Grak shook his head. “No. He was barely krinrael.” He looked up at me. “I am lonesome.”

“You have us,” I said. “I know that it does not feel like it –”

“It does,” said Grak. He heaved a sigh.

“Then I do not …” I stopped, trying to think about it. “I was going to say that we are not dwarves. You do not think that important though? You said a year cloistered with other dwarves. After that?”

“It was too much like home,” said Grak. “I loved it, but it grated. I abandoned the false dwarfhold and made new friends of all species, most of them other students at Barriers. I had a few krin. One of them lasted three years, though there was no question of anything more.”

“But you weren’t lonesome then?” I asked.
“No,” said Grak. He paused. “I had a different idea of what it meant to be Grakhuil Leadbraids, back then.”

“You said --” I tried to think about what I knew, and how to connect the dots. “Your biography, given to me by the game, said that you returned to Darili Irid and were entered into an arranged marriage.” I wasn’t sure of the exact construction there, since I was just taking the idiom of ‘arranged marriage’ and translating it literally, ‘ari mamin’.

“Yes,” said Grak. “I had built a life at Barriers. It was stripped away when I made the long journey home. I was most-pure, and clan warder on top of that. It was a return to obligations. My father had decided upon a mate for me, not mere krin but a father to my children. Gone so long, with letters home that became fewer as the years passed, they thought I needed something to tie me more tightly to the clan. At the prospect of being tied, I realized that it was not the life I wanted, in spite of my affection for the place.”

I frowned, trying to think about that. “But now you want back,” I said.

Grak stayed silent.

“Or … not,” I said.

Grak continued his silence.

“You keep using the word penance,” I said. “A self-punishment?” The game had told me as much, in the text of his companion quest.

Grak wasn’t looking at anything in particular. I greatly preferred conversational tooth-pulling with Fenn, where getting her to speak meant wading through jokes and diversions rather than silence.

“Something happened to Darili Irid,” I said. I paused, watching him. “You came back. They tried to force a life on you. You left. And then -- I don’t want to guess at what tragedy happened because they didn’t have a warder. I will guess, if you don’t tell me.”

“It is time for us to go back,” he said, finally switching to Anglish.

“Something horrible,” I said, staying in Groglir. “An invasion? A theft?” I wasn’t that eloquent to him, I’m sure, since the ideas I was trying to express had to be cobbled together from words that I already knew. “Assassination?”

“Accident,” said Grak. I saw his jaw move slightly as he clenched his teeth. “A ward failed. They had hired a warder, cheap, part-time, to replace the old dwarf I was meant to take over from. He had little training. Little knowledge. Three years, provisionally licensed, but,” Grak rubbed at his nose with the back of his hand. “Darili Irid was deep beneath the surface. There were complex wards to shape the flow of air, to keep it clean. We used processes that were dangerous. When the ward failed, the air fouled, quickly.”

“Oh,” I said. “Your father … ?”

“Everyone,” said Grak.

“Oh,” I said again. “Shit. That’s,” I folded my hands in my lap instead of saying more. It was horrifying, for a start. I had questions about how such a thing could even happen, what safety checks had failed, what alarms had been silent or just not installed, but before I could put my foot in my mouth, I realized those were the questions that Grak would have asked himself in the days and weeks after he’d learned it had happened. He wasn’t telling me so I could diagnose the problem, or
propose a solution. “Can I -- how many?”

“Two thousand, three hundred, forty-six,” said Grak. “Everyone.”

I tried to grapple with that number. It seemed too big. It seemed like the kind of thing that would have made national headlines, something that couldn’t possibly have escaped my notice … but I hadn’t been searching for answers, and Darili Irid was, by Grak’s account, a small hole in the ground whose primary interaction with imperial affairs was paying a pittance in taxes. Put in that context … there had been an explosion in China, some kind of factory, killing thousands, and all I could vaguely recall was watching a video on Youtube that had synced the views from different cameras. And there had been a stampede in Mecca, hadn’t there? Thousands of people crushed to death, and I probably only remembered it happening because I loved the worldbuilding aspects of giant pilgrimage sites. That helped me to put it into context, a bit. I wondered how many disasters and accidents I had seen on television and then completely forgotten about a few minutes later.

Two thousand dead, and it probably hadn’t been enough to register more than a single column several pages into the international papers.

“I am sorry,” I said.

To my shock, Grak was crying.

“It wasn’t your fault,” I said. I wanted to switch from Groglir back to Anglish, where the words would flow more easily and I could phrase things more politely, but I had already cottoned on to the fact that it was easier for Grak to hide himself when he spoke a foreign tongue. “Whatever mistake happened, you do not owe them your life.”

“I do,” said Grak. He was crying more now, sobbing, overwhelmed. I shifted in my seat on the floor for just a bit, then moved over and put my arm around him, patting him gently on the back. He leaned into me, and rested his head on my shoulder as he cried. It was a bit awkward, but I’d never had someone cry on me and not had it feel like that.

So many things about Grak were coming into focus for me, different things that he’d said or done. His focus on the penance was on paying down some karmic debt, and it wasn’t actually about the gold, it was about ensuring that he was staying on that path. Fenn had called us all suicidal on more than one occasion, but along with what Amaryllis had said to him at the hospital, I got the impression that was literally true. He blamed himself for what had happened, and there was no way to ever make it right, but he was devoting himself to the pursuit of restoring that karmic debt, throwing himself into situations where death was a possibility.

I’d seen Grak injured a few times, some of them pretty serious. I’d always thought his flat reaction was just dwarven stubbornness in the face of injury, a gruff, manly response to getting hurt. That was sort of how I had seen him in general, a man unaffected by the world, stoic in the face of adversity. It hadn’t really occurred to me that he was depressed and waiting to die.

We held our hug for a long time.

I wanted to tell him that I understood. In the depths of my depression, every scrap of happiness I’d somehow managed to secure felt like it was a betrayal of Arthur’s memory, a dagger planted in his back. I’d driven people away because I didn’t think that I deserved them. I had so much anger and sadness, feeding into each other, that the world seemed like it had nothing to offer me. I hadn’t cared whether I’d lived or died, and then when I hit bottom, as low as I could go …

I tried to kill myself.
I didn’t say this to Grak. It wasn’t something that I had said out loud yet. I was worried that he would think I was making things up about myself, or that he was only looking for comfort, not for us to relate to one another, or that I had misread what he was doing with the penance.

The more I thought about it though, the more I thought that was just me making up excuses to cover the real reason. I didn’t want to say it because it was painful to say, and I thought that he would think less of me for it, or at least think differently about me. It wasn’t something that I had told Fenn or Amaryllis. I didn’t want to expose the weakness of trying to take the easy way out, nor the weakness of not being able to follow through on it. I’d been pretty successful in not so much as thinking about it.

“Thank you,” said Grak.

“We are here for you,” I said. He pulled back slightly, and I released him from the hug. “I know you know that. I know that … that it probably feels like forging a new life for yourself is --”

“Not possible,” said Grak.

**Quest Updated: All That Glitters - Go with Grakhuil Leadbraids to the mausoleum of Darili Irid when he's amassed one thousand pounds of gold. You are the only one who can help him make peace. (517/1000) (Companion Quest)**

I stayed quiet. I wasn’t actually sure that the quest was accurate, since they’d been inaccurate before. I had a hard time believing that I was the only one that could do it, given that social stuff was definitely not my forte, and I wasn’t much of a real friend to Grak. He’d only confided in me because … well, that was a question mark, and I didn’t know him well enough to say. I was under the impression that Amaryllis got on his nerves a little bit, though I couldn’t really have said why, except that maybe it was for the same reasons she got on my nerves.

“Okay,” I said. I’d finally given up and made the switch back to Anglish. “I’m not going to force the issue. We’ll help you get your gold, ideally before the two years are up, and then I’ll come with you to Darili Irid.” I’d been trying to think of the lines that I might use to convince him to stay with us, but nothing I thought of sounded convincing, and I was pretty sure that in his position, I wouldn’t have listened.

**Loyalty Increased: Grak lvl 13!**

I didn’t feel good about that. Grak was his own person, he wanted to be his own person, finding us and becoming a part of the Council of Arches, heart and soul, was, in his eyes, sort of a betrayal of the person he thought of himself as being. All I was really doing was increasing that tension, without actually helping to ease or resolve it. I didn’t know whether loyalty actually did anything, aside from the bonuses it granted, but I hadn’t seen it go down yet, and if it was magically modifying their minds instead of just acting as a gauge of what they thought about me … well, that wouldn’t feel good either.

Fenn looked out over the haul from the cavern, which we’d dumped out of the glove. Grak had gone to be on his own, which I could understand. That left me, Fenn, Bethel, Amaryllis, and, of course, Valencia.

“I don’t understand why someone would use some of this stuff,” said Fenn.

“Mortals are attracted to power,” said Bethel. “The ones who tried to raid me were more attracted than most. Some of them were desperate, and many of these tools are the tools of desperation.”
My eyes landed on the Memory Blade, which I thought was a good contender for Valencia’s primary weapon. It became sharper the more memories it ate, and according to Bethel, at its height it was capable of cutting through stone like it was soft butter. It fed from both the person who wielded it and whoever it hit, heedless of the damage it was causing. Valencia didn’t have memories, or at least, not memories stored in her soul, which meant that in theory, she could use the blade with only the upside. It was dull now, since it had been a century since it was used, but it could build up again with time.

“Armor is going to be a problem,” said Amaryllis. “Most of it will change shape to fit whoever wears it, at least to some extent, but I’m not sure that will work for Valencia.”

“It wouldn’t be too hard to get a body double, right?” I asked.

“We’re talking about cursed armor here,” said Fenn. “Maybe let’s not put random strangers into it?”

Valencia was staring at a suit of red armor covered with tiny, curved thorns. Bethel had termed it the Red Armor of Arramor, which was one I’d come up with for our Long Stairs campaign. If you were wearing it, you wouldn’t take any damage until the top of the hour, at which point that damage would be dealt to both the wearer and whoever had done the damage. There were a bunch of ways to bypass it, but it was total protection against a whole lot of damage. In our games, the biggest catch to it had been that healing didn’t actually work until after you’d taken the damage … which came all at once, triggering massive damage rules and/or pushing people below the maximum amount of negative damage. You also couldn’t take it off if you had damage pending, which Reimer learned to his intense displeasure; he wasn’t terribly good at roleplaying a guy who knew he only had fifteen minutes to live.

“We’ll need to test some of this stuff,” I said. “Test whether the armor will conform to Valencia, test which parts of which abilities work, et cetera. Shouldn’t take us more than a day, I don’t think.”

“Was any of this meant for me?” asked Valencia. She was staring at the armor as she spoke it.

“Meant for you?” asked Bethel.

“The Dungeon Master nudges things sometimes,” I said. “He, uh, sets things up. Let’s say there are a billion entads, most of them not great, right? Well, we’ve come across what, maybe two dozen so far? Much more, if you include all the ones that nominally belong to Amaryllis, or the ones that I’ve heard about in passing, and definitely if you include Uther’s stuff. But of the ones that we actually have, or have interacted with, a hugely disproportionate number have been ones that I personally created, or which were used in the games that I played. It’s proof of the Dungeon Master’s thumb on the scale somewhere in the process.”

“Ah,” said Bethel. She frowned at all the entads she’d chosen not to take in. “So the thought is that this powerful entity sent people to their deaths inside of me because he foresaw that I would elect not to take them, that you would come to me, that I would choose not to kill you, and that Valencia would both be present in this party and live through her altercation at Headwater.”

“Valencia is invincible,” said Fenn.

“Am not,” said Valencia.

“Are too,” said Fenn. She had some experience; they’d been training together in the gym, and despite Fenn’s avowed laziness, she had been spending a fair amount of time there. “I’ve never seen you take a hit. ‘If you prick her, does she not bleed?’ Well, no, because you’re not going to be able to prick her, she’ll dodge out of the way of the needle and then break your arm in two places.”
“I said I was sorry,” said Valencia.

“Never said I was upset,” said Fenn.

“You swore a lot,” said Amaryllis. “And then said that you were going to break her arm in her sleep.”

“I say a lot of things,” said Fenn.

“Back to the matter at hand,” I said. “Yes, it’s very possible that the Dungeon Master either foresaw everything and nudged it into the right configuration, or foresaw bits and pieces of things and set up a bunch of possibilities. Maybe … I mean, it’s possible that each of these was intended for a different possible future, and the ones that seem obviously meant for Valencia are just because that’s the timeline we ended up in, right?”

“I’m kind of over the existential stuff,” said Fenn. “Bible study helped a lot with that.”

“It’s also possible that the Dungeon Master cheats more than he lets on,” said Amaryllis. “He simply placed that armor there for Valencia a few days ago and retroactively altered all memories and evidence to fit a world where it had always been there.”

“Sure,” I said. “If we’re talking about random bullshit powers, yes, that’s entirely possible.”

“But it’s to our benefit,” said Bethel.

“I’m going to try the armor on,” said Valencia.

“Sure,” I said. “We’ll test it in the least harmful way possible.”

“It’s to our benefit now,” said Amaryllis. “In the future? Maybe not so much. Also in the past, though it’s hard to say.”

“She’s still salty about the password-protected tattoo variant,” said Fenn with a laugh.

“Because it was bullshit,” said Amaryllis. “The whole fucking thing, and yes, I’m still quote salty unquote about it. We were specifically fucked by a black swan.”

“Like Leda,” said Fenn.

“Sometimes there are black swans,” I said, ignoring whatever nonsense Fenn was talking about. “I mean, you don’t include them in narratives without some foreshadowing or multiple viewpoints, which basically means that you don’t do them in tabletop games, but … I thought maybe that was the point?”

“The fuck kind of point is that?” asked Fenn.

“I’m inclined to agree with the spirit of that question,” said Bethel.

“No, I understand it,” said Amaryllis. “Fenn, did you ever get around to reading *A Game of Thrones*?”

“Nope,” said Fenn. “If you wanted me to read books, you shouldn’t have invented television.”

“It’s fine,” said Amaryllis. “It was just a good example. Essentially, if you have a body of work built up, that engenders expectations, and in the context of an audience’s reaction to narrative --”
“Snooze, pass, I’m done with it,” said Fenn. She rolled her eyes at Amaryllis’ faint frown. “Look, I’m sorry if you find it interesting or worth spending time on, but unless it’s actually going to help us in some way, I don’t give a crap, and I don’t think anyone else should either.”

“Fine,” said Amaryllis with a shrug. “But you should know that it was a really interesting point.”

“I’ll put it on my internal scoreboard,” said Fenn with a smile.

“Is this how you two are when you’re alone together?” I asked.

“Yes, exactly like that,” said Fenn. “But usually we’re naked and having a pillow fight while we talk.”

“She does that with you too?” asked Valencia.

Fenn stopped and looked at Valencia, who was doing an absolute pitch-perfect job of showing confused innocence. I couldn’t stop myself from laughing.

“Are you using a devil to sell the joke?” asked Amaryllis with a frown.

Valencia held up her thumb and forefinger, half an inch apart from each other.

“Well, it was funny, I’ll give you that,” said Fenn.

“You really need to stop doing that,” said Amaryllis. “If they find out what’s happening, and trace it back to you, they have methods of influencing Aerb. The hells haven’t been united since the time of the Apocalypse Demon, and the dent Uther put in our cosmology has helped ensure only the weak can make it up, but trillions of infernals unified again isn’t really something that we should risk for a joke.”

“I’ll just kill them all,” said Valencia. “Jorge thinks that I should anyway.”

“That sounds like exactly the sort of thing we should have a long talk about in the Council of Arches first,” said Fenn. “I don’t think we included a clause about genocide in the charter, but maybe we should have.”

“If we’re going to do it, better we do it as quickly as possible,” I said. Amaryllis glared at me. “I’m just saying, if there are a trillion people in the hells, which there might be, and they’re being … I don’t know, physically and psychologically tortured, then murdering all the devils and demons is probably the most possible good we can do, right?”

“That’s what Jorge said,” replied Valencia.

“How many tendrils do you have?” asked Amaryllis. “Last I checked, it was seventeen, and it took you some time to move them around.”

“I have more than ten thousand,” said Valencia. “But I’m close to my limit, for now, because there’s starting to be a little strain. I was able to add more after Juniper leveled up.”

I hadn’t really been keeping abreast of the research into Val’s powers, on the thinking that Amaryllis wasn’t likely to miss anything that I would catch. My attempts at putting some distance between Valencia and myself seemed to be working, at least as far as her attachment to me went. I knew that her sight into the hells was a bit limited, not enough for surveillance, though we had infernoscopes for that if we really needed, and if we didn’t want to look at anything too far down. I also knew that the tendrils couldn’t be used on people in hell, which had been one of my first questions; that, at
least, would have been a no-brainer, whatever you thought about the wisdom of antagonizing the infernals.

We moved on to other topics, and went through a few cycles of testing weapons and armor for Valencia. The game had termed her Valencia the Red, and as it turned out, the Red Armor of Arramor worked perfectly on her, which was a little bit on the nose. There were different methods that armor used to shape itself to a person, and the Red Armor of Arramor used the method that would have worked on a sack of potatoes; conforming to whatever was placed inside it and hoping that the joints would work out on their own. There were different methods of reducing damage, or even knowing what damage was, and the Red Armor of Arramor used the method that would have worked on a sack of potatoes, stopping ‘incoming’ kinetic energy with respect to itself if preset thresholds were exceeded. And finally, there were different methods it might have used to dish the pain back out at the top of the hour, but apparently, it interfaced with the soul’s conception of the body in order to determine what damage would have been done before directly applying it.

I was envious of the armor, naturally. I had given up my sword to Bethel, and didn’t have a replacement yet. The armor I traditionally wore was fine, but it was a little bit lackluster. Valencia took the Memory Blade too, though we didn’t really have a good way of testing it, not given that we wanted to keep all our memories.

Beyond the armor and the blades, Valencia also wore the crown, which was made of thorns in what was painfully obvious as a reference to Jesus. Given the thorns, I was thinking it would be some sort of damage reflection, but no, it soaked up poisons and toxins (from a preset list without need for bodily reference) and transformed them into mental afflictions.

“I’ll get some guns for you too,” said Amaryllis. “There’s absolutely no reason that we should waste your perfect aim by handing you a sword. We’re at least six months out from our machine shops being up and running, let alone able to produce the knock-off P90s I want, but I have a shipment of pistols and rifles coming in.”

“You do?” I asked.

“We’re the military of this country right now,” said Amaryllis. “Against a single fireteam, I tend to like our odds, depending on their composition, especially if they attack us in this house, in which case they have virtually no chance. That said, it would be idiotic if we died because I wasn’t willing to spend a few thousand obols on firearms. And if someone comes for us, then after what happened with Larkspur, I doubt that they’ll err on the side of underestimating us.”

I considered that a chilling reminder of the kind of situation we were in -- but a more chilling reminder was yet to come.
“Jorge and I are going on a date,” said Valencia as she came into the common room and flopped down in a chair.

Bethel had gone big. The common room was shaped like an egg, with the domed ceiling forty feet high. An ornate chandelier hung down and gave the whole place a warm light, which was supplemented by a fireplace off to one side. Bethel was mostly past feeling discomfort from being able to reshape herself, and was indulging in a flair for the dramatic, which went like a streak through the whole house. What she couldn’t produce as simply a piece of house from the Anyhouse ability, she was pulling from Earth via the backpack’s ability. As Valencia put it, we lived in an enormous house where every single room was a Room of Requirement.

At times, I regretted giving her the Harry Potter books. I hadn’t thought that she would glom onto them as much as she did; she had read through the series and then decided that there wasn’t much more that the world of literature could offer her, in spite of my suggestions for other series she could try.

On hearing Valencia’s announcement, Amaryllis set down her papers and stared. She had a desk in the common room; she was working far, far harder than the rest of us, and if not for the desk, probably wouldn’t have spent as much time in our company. “It is incredibly unprofessional for him to ask you on a date,” said Amaryllis.

“Well I was the one to ask him,” said Valencia. “Because I knew that he wouldn’t have asked me on his own.”

“Oh,” said Amaryllis. She was frowning. “It’s still incredibly unprofessional for him to accept.”

“I think it’s nice,” said Solace. “He seems like a very safe choice for you to experiment with courtship.” She was sitting on the floor, putting together a jigsaw puzzle. Her body was that of an adolescent crantek, which developmentally equated to about a five year old human. The puzzle was a way of developing visual pattern recognition and fine motor control, both of which still needed some development.

“Thank you, Solace,” said Valencia. She looked to Amaryllis. “I didn’t say it because I wanted anyone to weigh in, I said it because I wanted to share something important that was happening in my life.”

“Did you ask him with a devil’s skills at manipulation?” asked Amaryllis.

Valencia shifted in her seat. “No,” she said.

“That really wasn’t a convincing no,” said Fenn. She laid with her head in my lap, reading through the first Harry Potter book, with the grey cat on her lap. She was only reading at Valencia’s insistence and a bit of annoyance at not being able to follow what she was saying half the time. I had been relaxing, listening to music and not thinking of anything much. Most of the music we had was vinyl, and I was doing some cultural exploration of Earth of my own, since almost all of it was before my time. We were currently listening to jazz, which was Grak’s choice; improvisational music was apparently a mainstay of dwarven culture, though theirs was (to hear him tell it) much more constrained, or at least had been within his one specific clan.

“I took in a devil to see what I would say,” said Valencia. “And then a few more to get second
opinions. But when I asked him, it was just me, with my own words. They were only giving advice.”

“Seems sketchy,” said Fenn.

Valencia crossed her arms. “I didn’t want to screw it up.”

“There are things that he can’t know,” said Amaryllis.

“I know,” said Valencia.

The List of Things That People Can’t Know

1. Game layer
2. The identity of Amaryllis Penndraig
3. Our possession of a teleportation key
4. The assault at Aumann’s
5. The existence of the locus
6. The public fight in Boastre Vino
7. The murder of Larkspur and company
8. Releasing Fallatehr from prison
9. Valencia the non-anima
10. Extracting Esuen
11. The hijacking of the Down and Out
12. Our “possession” of a meta-entad
13. Our deal with Uniquities

Jorge already knew a whole lot of those, naturally, since he was Finch’s second-in-command, a relatively high-ranking member of Uniquities, and part of the operation that had briefly captured Valencia. The ones he didn’t know were of concern, and the one Valencia was at the greatest danger of revealing to him was the identity of her father, which would raise a whole lot of really obvious questions that we didn’t want to answer.

“What do you two talk about?” asked Grak.

“Harry Potter,” said Fenn.

“We talk about other things,” said Valencia, slightly defensive. She looked at the book Fenn was halfway through. “It’s good, isn’t it?”

“It is,” said Fenn. “Though some things get lost in translation, and some of it I’m sure Amaryllis would rail against as being bigotry.” She leafed back a handful of pages. “Greedy goblins, for example.”

I nodded at that. “I mean, their primary cultural trait on Aerb is still material possession, right?”

“You have to make a distinction between the traits of a culture and a species,” said Amaryllis. “You don’t say that goblins are greedy, you don’t say that goblins focus on possession of written information, you instead say that historically their society has been dominated by warring gold mages and a veneration of wealth, and that currently, the Kel’te’thar Library engages in some practices which, yes, might contain some elements of greed.”

“Jesus that’s a mouthful,” said Fenn.

“Don’t take the Lord’s name in vain,” said Amaryllis, almost by reflex. They did that a lot, enough
that the others had joined in. I wasn’t too big a fan; I’d been raised Christian, and while I was an atheist, it sort of seemed like they were mocking a religion that they only had second-hand knowledge of. Granted, Amaryllis had read the Bible, and Fenn had read at least part of it so they could talk about it, but it still felt kind of ...disrespectful, I guess, even if it was disrespect toward a religion that I didn’t have a lot of respect towards.

“I like Mrs. Rowling’s goblins better than Juniper’s,” said Valencia. “No offense, Juniper.”

“I’d really hesitate to call them mine,” I said. “Everything on Aerb is kind of ... twisted, warped, different in different ways, and some of it was just me being silly or making jokes.”

“Yeah, Aerb goblins suck,” said Fenn.

“Please never say anything like that in public,” said Amaryllis. “You’re a government official now.”

“I shall continue to hide and vote how you tell me to vote,” said Fenn. “And I’ll wait for the next proper adventure we all know is coming.”

“I itch to have something to do,” said Grak. He glanced down at his wooden hand. It hadn’t seen combat yet. There were a few gnars and knots in it, but it was tough as iron, with a few extra properties as well. I might have cut off my own hand, if I had thought that the locus would assent to that. (The locus was the only one not in the common room. Bethel was the common room, but wasn’t presenting an illusion; she only appeared when she wanted to talk, or when someone called for her.)

“After the first round of tuunglings is born, we’ll have some time to breathe,” said Amaryllis. “My engineers are already hard at work, not entirely autonomous at this point, but close enough that I could leave them for a week.”

“Maybe I’ll stay back this time,” said Fenn. “Catch some sun, watch some anime, not get shot at or cut in half, that kind of thing.”

“My hand was cut off,” said Grak. “I did not complain.”

“If my hand was cut off it would be gone forever,” said Valencia.

“Technically we could ice it and then use surgery to reattach, along with Earth antibiotics and medicines in order to ensure that it would heal properly,” said Amaryllis. “But you’d be out of action for a very long time, even if the surgery was successful.”

“Wouldn’t you just use some ninjutsu to dodge the attack?” asked Fenn.

“Not all fights are possible to win without getting hurt,” said Valencia.

“Well, you’ve been kicking my fucking ass when we spar, I’ll give you that,” said Fenn.

I’d seen a few of those beat-downs happen in our gym. Fenn was faster and stronger, with elf luck on her side, but Valencia was a far, far better fighter. It was a little unfair to Fenn, because archery was her personal domain of excellence, but Fenn had pretty much every other advantage there was to have, including height, reach, and (barely) weight. Fenn hadn’t won once, though she was improving. (Maybe this is patronizing, but I was really proud of Fenn for sticking it out. She had a bit of a tendency to bail out on things she wasn’t good at, which I figured was probably a response to the elven cultural demand of perfection.)

“I would vote for Glassy Fields,” said Grak.
“No more votes,” said Valencia, folding her arms.

“Can’t we rest on our laurels?” asked Fenn. “Besides, we haven’t even gotten our campaign of Arches back up and running.”

“We’ve been resting on our laurels,” I replied. She looked up from my lap with a frown. “It’s true. Amaryllis has been the only one actually doing much work.”

“There’s enough work for whoever wants it,” said Amaryllis.

“I’ve been tending to the locus and attempting to restore my connection to the flowers of my garden,” said Solace as she placed a puzzle piece. “I do think that I deserve a bit of rest.” She looked up at me, briefly. “Were we comparing things that we hadn’t complained about? I did die, after all.”

“Well, you did get better,” said Fenn.

I sighed. “I didn’t mean to say that we didn’t deserve a break, or that the relative downtime –”

Amaryllis gave a short little laugh.

“-- for some of us wasn’t deserved or necessary, especially with the months in the time chamber stacked up like they were, nor did I mean to devalue the work that people were doing, but … with Bethel here, it would be easy to simply abandon our higher objectives and settle into the lap of luxury. I don’t want to do that.” As soon as I said that, a small part of me said, ‘actually, I kind of do want to do that’.

“I’m happy for the lap I’m in,” said Fenn. She reached down to pet the cat that was curled up on her. “There’s something to be said for laps.”

“The Dungeon Master will punish idleness,” said Grak.

“I came out of eight months of almost pure idleness entirely unscathed,” said Amaryllis. She’d returned partial attention to her work. “I’m starting to trust Juniper’s interpretation of the Dungeon Master’s views.”

“There have got to be limits,” I said. “I mean, unless this is going to turn into a totally different game, which I guess is possible, it’s really hard to do tabletop games where the game is just managing an estate, or a kingdom, or whatever. The game system isn’t set up for massed combat, so all scenarios where there would be massed combat get abstracted out, and the actual play slash narrative is really about this small, plucky band of adventurers doing the things that small bands of people can realistically do.” I paused. “That was always how I’d done it anyway.” The truth was, I was gaining distance from Earth. The memories didn’t come as freely as they had back when I’d first arrived on Aerb.

It was hard to reconcile Uther and Arthur, but when I tried, that was always what I came back to. A teenager from Earth, immersed in this other world, with no one and nothing from home but the things he could bring forward from his memories. He spent his entire adult life on Aerb. My working theory was that he wasn’t obsessed with Tiff, making drawings of her because of a long-ago love that had never faded. Instead, she was nostalgia incarnate, a memory so old that it might have been a dream. He’d drawn her to say to himself that yes, there really had been such a place as Earth, it hadn’t all been a vivid dream. But Uther had lived his life at full tilt, always one adventure after another, even during the time he was founding his empire, so the years wouldn’t have felt like years, they’d have felt like decades, more distance … and he’d have felt a keening for his childhood, which happened in that faraway, ephemeral place called Earth. That was also my working theory for what Uther was
looking for down the Boundless Pit: home.

None of that excused what he’d done with Bethel. Maybe none of that was even true. It made me sick to think about, and sympathetic toward Arthur and the pain he’d felt, and frustrated with the lack of answers about what had happened to him. I didn’t really know who he had been.

“Well I’d rather not have an adventure just for the sake of it,” said Fenn. “But speaking of adventures for the sake of it, can we finally play Arches? We’re all here, we’ve got nothing better to do, I’ve had my campaign ready for ages, and I know that Juniper’s got stuff ready if we want to play his. Mary?”

“I … yes,” said Amaryllis. She began sorting some papers. “Give me a minute to file things away, I can spare two or three hours.”

“Well, that’s the hard one,” said Fenn. “Grak?”

“Yes,” he said. “Juniper’s? Or yours?”

“Actually,” I said. “Bethel and Val have never played a roleplaying game before, so I was thinking that maybe we would start with something fast and easy that we can get through quickly?” I bent down and gave Fenn a kiss. “Come on, up.”

She mumbled something about ‘cozy’, despite being the one that wanted to get a game going, and eventually got up so we could get to the big table, where we ate most of our meals. With Bethel in full control of the backpack’s powers, hot food appeared on plates right in front of us, exactly to order. Valencia, as had become typical, said that this was exactly like the Great Hall at Hogwarts. For our impromptu game night, there were cans of pop and bags of chips.

“A new game?” asked Solace as she sat down at the table. She had a booster on her chair, so she could rest her arms on the table. “I rather liked Arches.”

“Arches is rules-light, but it’s not that rules-light,” I said, as I watched everyone gather. “Bethel?” I asked the room.

She appeared in her customary seat at the table, which was as illusory as her physical form. “I’m listening,” she said.

“Always listening,” muttered Fenn.

“I don’t particularly care if you have sex,” said Bethel. “Hundreds of people have had sex in my rooms.”

“Well, I care,” said Fenn.

“Do you?” asked Solace. “I seem to recall you being quite free with your love.”

“They were,” said Amaryllis. She took her seat next to Solace.

“If people know, it’s -- whatever,” said Fenn. “I’m not going to feel ashamed about that. But someone actively watching feels too much like a third person in there with us. I’m not into it.” She looked at me.

“I understand,” I said. I didn’t agree, but I did understand. The locus could (probably) see everything in its domain, but apparently that didn’t trip the same internal reaction in Fenn. I thought it was probably just the fact that it was Bethel that got to Fenn. Our newly-acquired house was perfect, imperious, and powerful, much like the elves that had judged her unworthy when she was growing
“You were saying about a different game?” asked Valencia.

“Yeah,” I said. “Arches is light on rules, but it’s on the heavy end of light, if that makes sense. I was thinking that we could warm up with something that’s single stat, single die, what they used to call a one-page game. There are a couple to choose from, ones I know well enough that I shouldn’t need a refresher, and Bethel should be able to snag the rules. In Honey Heist you’re all different bears and you’ve got two stats, Bear and Criminal that you use for everything, um, Lasers and Feelings probably doesn’t translate, since it’s a Star Trek pastiche, and the same probably goes for Actual Cannibal Shia LaBeouf, which --”

“Stop,” said Amaryllis. Her voice was sharp. “No one speak.”

“Wha --” began Fenn.

“No, stop. No one say another fucking word,” said Amaryllis. Her eyes were wide. “Infohazard. Don’t speak without thinking about every single word coming out of your mouth, no nouns, keep yourself to the most common hundred words in Anglish.” She got up from her chair. “We need to go to war footing, there’s a sixty percent chance that most of us will be dead in the next hour, start getting armored up, now. Quickly.”

Fenn looked like she was about to say something, but she glanced at Valencia, who had risen from her own chair and adopted a stance that was familiar from the sparring they’d done together. Whatever Fenn had wanted to say, she thought better of it and began disgorging armor and weapons from the glove. I had practiced getting armored quickly, but it still took some time. Most of us will be dead in the next hour. I tried to think about what I had said and give some context to the threat we were suddenly facing.

“Barriers won’t work,” said Amaryllis as she put on the immobility plate. She was speaking fast, almost breathless. “Wards won’t work. Obstructions won’t work, raw killing power won’t work, magic will be shrugged off or only partially successful, no known entad can stop him, and he scales to any threats. On the first invocation of the word there’s a sixty percent chance he’ll appear, and if he does we’re absolutely fucked -- no Juniper, don’t write anything down.”

I had a pencil in my hand and dropped it at her command. “Can … I … think?” I asked, measuring each word carefully. Can I think the name that has you spooked? I was continuing to do up the straps on my armor. Shia LaBeouf. Shit.

“Think all you want,” said Amaryllis. “Maintain protocol for speech, no writing whatsoever.” She was sweating slightly, maybe from the exertion of rapidly donning full plate armor. Valencia, wearing a dress but without armor of her own, helped to do up the immobility plate.

“Sixty percent he comes, forty percent he doesn’t,” said Amaryllis as her helmet came down to cover her face. “I’ll explain after, if I can.”

I was pretty sure that I already knew what was going on.

“You’ve come up to Craig’s cabin for the weekend, prepared for a night of gaming, but not knowing the horrible fate that awaits you,” I said. We were at Arthur’s house on Halloween night, too old for trick-or-treating. We’d each brought a bag of fun-sized candy, which were strewn across the table. The lights were off for this part of the evening, leaving us to play by candlelight.

“Spooky,” said Craig with a roll of his eyes.
“It is spooky,” I said. “There have been little things, little signs, the old man who issued you a word of warning at the gas station, a blood-smeared sign you passed by on the dirt road, which you told yourselves was just roadkill, the sound the radio made when you turned it on that seemed very much like a pained scream before the radio shorted out.” I had prepared that ahead of time. “But you’ve almost managed to forget all the foreboding and have settled in for a night enjoying each other’s company. The fireplace crackles beside you. Suddenly, your idle conversation is interrupted when one of the windows rattles,” I said.

“Must have been the wind?” asked Tiff.

“Might have been,” I replied with a small smile.

“Anyway, as I was saying,” said Arthur, “My father got me this neat book full of Aramaic, and I was going to try to read some of it.” He was putting on a bit of a character voice, a little higher, a little more nasal, classically nerdy.

“Can I be armed?” asked Reimer.

“Wouldn’t do you any good,” I replied.

“Really?” asked Reimer.

“Just get into the genre, Reimer,” said Tiff. “Horror movie rules. A gun is never enough, he’s supernatural. You go to a phone, the line is dead. You reach a policeman sitting in his car, you’re going to discover that his throat has been slit.”

“The bathroom?” I asked.

“We’re away from civilization in a run-down cabin,” said Arthur. “It’s a dark and stormy night.”

“Sure,” I said. I hadn’t described the weather, or even given all that much detail to the cabin.

“I want to start this right,” said Arthur. “I stand in front of the mirror, I close my eyes. I say it slowly, getting faster each time. Shia LaBeouf, Shia LaBeouf, Shia LaBeouf! Does anything happen?”

“You open your eyes?” I asked.

“I do,” Arthur smiled.

“He’s standing behind you, fully naked, his beard drenched in blood,” I said.

An hour into waiting, Amaryllis decided that it was time for her to talk.

“We don’t know if it’s a name, or just a word,” said Amaryllis. “Joon? Name or word?”

“Name,” I said, saying as little as possible.

“If you invoke it, a man shows up,” said Amaryllis. “Not all the time. Sixty percent, maybe.” She let out a shaky breath. “If you invoke it three times, you guarantee his arrival.”

“And then?” asked Grak, his words as carefully measured as mine had been.

“He starts killing,” said Amaryllis. “Sometimes dozens, sometimes hundreds. It depends on who’s
around. He’s arbitrarily strong. He moves as fast as he needs to. Anything you put in front of him, he’ll grow a new power to tear down or go around.” She let out a breath. “I think if he were coming, he would have. We can stand down.”

She sat in her chair and slumped against it. I returned to my seat as well, still in my armor and not feeling any relief. “To be clear,” I said slowly. “It was the name after --”

“No,” said Amaryllis. “Don’t repeat anything. I’ll do it. You said ‘actual’ then ‘cannibal’ and then the name. Don’t speak it, don’t spell it, don’t write it, don’t try putting it in code, don’t knowingly transmit it to anyone else, in whole or in part, through any medium or any level of cryptography.”

“Okay,” I said, swallowing. “How much of that is,” I tried to think of a simple word, “too much caution?” I was pretty sure it was only the name we needed to worry about, and using simple language to speak was just paranoia and a reminder to think very carefully about every single word spoken.

“None of it is paranoia,” said Amaryllis. “We’ve tried to harness him in the past. It always ends with everyone dying.”

I frowned, trying to think about that. “If you were able to transmit it to someone, somehow,” I said. “Have them say it, weaponize it? Suicide bombers?” I was relaxing the attention I was paying to my words, just a hitch. Obviously in the long-term, I couldn’t be so careful that I had to think over every word out of my mouth, especially if there was only a single name that I really had to watch out for, and that name was as uncommon as Shia LaBeouf.

“Your suicidal agent would die,” said Amaryllis. “Any means of protecting them or bringing them back would fail. Then he would go after whoever told the agent the word, and whoever gave the order, even if they didn’t know the word. Five of my cousins died in that particular experiment. It’s not something that anyone can actually use, except as an absolute last resort when all you want to do is call down extreme violence on yourself and everyone else in the area.”

I narrowed my eyes slightly at that. She could have killed Fallatehr with it, when she’d been captured by him, just before he’d touched her soul. Shia LaBeouf would have killed her, but he’d also have killed Fallatehr too. Understanding dawned on me as I thought back to what she’d said about that misadventure. ‘Suicide comes in many flavors’, she’d said.

“Is Joon in danger now?” asked Fenn. “If any of us say it, this thing will kill him too, even if he’s nowhere close?”

“Yes,” said Amaryllis.

“Fuck,” I said.

“I heard it from a phonograph playing in the middle of nowhere on a loop, recorded by a dead man who had heard it from others who were also dead,” said Amaryllis. “That’s the only safe way to learn it.”

“Wait,” I said. “Writing triggers it?” Amaryllis nodded. “We have to stop using the backpack. We can’t pull movies from out of it, at least not ones from after 1990, and … shit, we can’t use IMDB, or printouts from websites that might list actors. I don’t know if that would twig it, but --”

“Movies?” asked Amaryllis, suddenly confused.

“The name,” I said. “It belongs to an actor from Earth.”
“What.” Amaryllis was staring at me.

“He was a child actor, became a movie star, now … kind of a meme, I guess.” I said.

“Juniper, you confirmed that there weren’t infohazards on Earth,” said Amaryllis.

“No,” I said. “A meme, just … not making fun of him, exactly, because he invited a lot of it on himself, and I think he knew what he was doing, but the idea of him was bigger than the reality? And there was this video,” Actual Cannibal Shia LaBeouf, “which I guess I can’t say the name of, but the joke was that he was a kind of weird Hollywood actor being portrayed as a horror movie monster. It wasn’t horrifying, really, it was the juxtaposition. It was a joke. And then someone made it into a rules-light game that you could play with no prep and sixty seconds to make characters.” I paused. “We only played it two or three times, it was supposed to be campy, not …” I trailed off. “I had no idea he existed on Aerb. You’re not supposed to be able to summon him, not in the base rules, that was just something Arthur came up with, an improvisation. I mean, one that fit well within the theme of the game, but still.”

Amaryllis was staring at me. I could see disgust on her face, but I was pretty sure that it was aimed at the world of Aerb, rather than at me personally.

“Look,” I said. “It’s fine. We’re past the moment of danger, right?”

“Maybe,” said Amaryllis. “Probably.”

“And now that I know, I can avoid it,” I said.

“You could have told us beforehand,” said Fenn. This was directed at Amaryllis, not me.

“Oh, yes,” said Amaryllis. “That’s a fucking brilliant idea, spreading knowledge of things that are dangerous to know and even more dangerous to say, and which might literally kill me if spoken by someone else. Why did I not think to tell you, of all people?”

“I love when you get snarky,” said Fenn with a grin. “So are we going to play a game of Actual Cannibal --”

Valencia moved over to Fenn in the space of a heartbeat, grabbing her wrist and thrusting it up and behind her back, forcing her down onto the table. Valencia’s hand covered Fenn’s mouth in the same motion. Fenn stayed down, not trying to fight it. After a few seconds, muffled words came from behind Valencia’s hand.

“She’s licking me,” said Valencia.

“I think she was probably making a joke,” I said. “She wasn’t actually going to say it.”

There was more muffled noise from Fenn.

“Not a thing that anyone should joke about,” said Amaryllis. “It’s a word -- name that’s killed thousands.”

“How many of those because you tried to weaponize it?” asked Grak.

Amaryllis’ lips went thin.

“I’m going to let her up now,” said Valencia. Her eyes had an alertness to them that I was growing better at recognizing, which was a clear sign that she was, temporarily, something more than just
herself. It was trivial for her to mask, when she had a devil, but less so when she had a demon, and much of the time she didn’t bother.

“I obviously wasn’t going to say it,” said Fenn and she sat up in her chair. “If we can’t joke about things trying to kill us, what can we joke about?”

“Puns,” said Grak.

Amaryllis stood up from her chair. “I think I’m done for the day,” she said. “I’ll be in the study if anyone needs me.”

“I think I’m done too, sorry,” I said. “That was, uh, sort of an unpleasant reminder of what kind of world this is.”

Fenn grumped at that, but didn’t gainsay me. When I left, she was already back into animated conversation with the others. I had sort of thought that with Amaryllis and I gone, the common room might empty, but there were apparently things they wanted to talk with each other about. Personally, I wanted to be alone.

Fenn and I shared a bedroom on the third floor, up the house’s grand central staircase and with a view of the cold, grey, bleak Isle of Poran. The ceilings were high throughout the house, which in the case of our bedroom allowed for an enormous four-poster bed for Fenn and I, which we could draw the curtains on for privacy. We had dressers filled with clothes, half from Earth and half from Aerb, and a fireplace with a pair of armchairs in front of it. We barely ever used the fireplace; Bethel had generated a number of Earth books on architecture and building practices, which had led her to discover central heating, and that was more or less the end of fireplaces being needed for anything aside from atmosphere.

I did light the fireplace when I came back to our room though, because I was in need of some atmosphere as a backdrop for my thoughts.

There was a knock on my door before I could get too lost in thinking.

“Come in,” I said.

Amaryllis slipped in and shut the door behind her, quickly taking the seat beside me. She looked at the fire and stayed silent for a while.

“Just wanted company?” I asked.

“No,” she said, after some time had passed. “I think what just happened was a warning.”

“Maybe,” I said. “A warning from the Dungeon Master that if we sit around doing nothing, adventure will come to us?”

“I don’t know,” said Amaryllis. The armchair was big, and made her look smaller than she was. “Something like that.” She turned to me. “I know you don’t want to level up again. It’s something we should talk about more. You didn’t tell me how bad it was the time before, when it was just you and Fenn. You had two and a half months and you just ignored it, like it was going to go away on its own. I should have asked, but I just … I thought you had it under control.”

I shifted in my seat. “I don’t understand the point of the pleasure,” I said. “If you were an idiot, you’d think that it was a good way to compel me to go adventuring more, to complete quests, to kill things … but I was given the resources to alter myself early on, and if you were literally omniscient, then you’d have to understand that I would be horrified by the idea of losing myself to an impulse to
become stronger. Right? I’ve got a disincentive to pursue leveling up now.”

“It’s terrible game design,” said Amaryllis. “But we need you to level up.”

I turned to look at her. “There are things that only I can do,” I said. “I know. I don’t want to lose myself though. I don’t want my identity to be stripped away, not more than it already has been. The levels have been getting further apart, but they’re ramping up in intensity. If you hadn’t been there ...”

“I know,” said Amaryllis. Her voice was soft. “You want to refuse the call.”

“In monomythic terms?” I asked. “No. It’s more … the later parts of the hero’s journey, the death and rebirth. That’s what worries me, being forged into something new, and maybe something unpleasant.” I paused. “Shit. We missed something.”

“We did?” asked Amaryllis.

“The name,” I said. I saw her stiffen slightly. “It’s the name of a famous actor on Earth. We need to get to Speculation and Scrutiny and warn them, because that’s a disaster waiting to happen. You’ve said before that the nation’s pursuit is going to be the spread of technological development for personal gain, and I’ve said that the group’s pursuit should be doing things that only we can do. I’m pretty sure that this is one of those things. There are a bunch of people from Earth there, and the moment one of them says the name of a well-known actor, it’s going to be a disaster.”

“Fuck,” said Amaryllis.

**Quest Accepted: The Name of the Beast - Go to the Athenaeum of Speculation and Scrutiny and warn them of the word that no one can be allowed to say.**

Bethel elected not to come with, which I think we all saw coming. She had expressed a strong preference for being a house, and had spent the last few weeks filling herself with all sorts of crap that couldn’t easily be moved. For her to come with would mean taking everything that wasn’t ‘house’ and tossing it out onto the ground, or alternately, having someone go around with the glove and hoover up everything from every room. For what was planned as a day trip, and one where we probably wouldn’t need overwhelming firepower, that didn’t seem worth it.

Granted, we were still loaded for bear and treating this as though it were a military operation, because the most important thing we’d learned about quests so far was that they could be as difficult and complicated as they wanted to be. We were going there for two quests, one the Shia LaBeouf quest, the other *Straddling Worlds*, which had been in my quest log since my very first day on Aerb. Both seemed easy, which was suspicious, but at least the dream-skewered quest had been given to me when I was level two. You weren’t supposed to get incredibly difficult quests at level two, you were supposed to get the first quest in a long chain that you would eventually be able to handle with another dozen levels under your belt. I expected more quests to follow.

We gathered together our things, armored up, checked our weapons over, made sure that the glove was stocked. I felt a little outclassed by Valencia and Amaryllis, given that they were both covered head-to-toe in full plate and decked out with weapons. Bethel had made sheaths, pouches, and in some cases, clothes, pulling things from Earth with precision and making the necessary alterations.

Given that the Anyblade was gone, I was using the shortsword we’d taken from Aumann’s vault, ages ago. Bethel could speak considerably faster than any of us, and focus intently on a single task without growing bored (at the exclusion of everything else), so she’d launched a dictionary attack on
it, trying to find out whether it had a code phrase that we just didn’t know. That had turned out to be
the case: it was “smoke”. When spoken, the bluish-silver blade would go black, and it gained the
ability to pass through metal for a few seconds before reverting to normal. It could do this once a
day, which was entirely underwhelming, especially given that Amaryllis had the flicker-blade which
could do the same thing, but better and more often. I had bonded to the shortsword anyhow, since it
was better than nothing, and I still wanted to be able to use my bladebound powers.

I had a rifle strapped to my back, in order to give me some range. It wasn’t magical or anything, but
it was the best we had, unless I wanted to use a bow and arrow. As good as I was with a bow,
largely thanks to Fenn, I still favored the rifle, in part because I didn’t have a fancy ‘quiver’ like she
did to give me near-infinite ammo in easy reach.

I wore bandoliers, mostly filled with bones, in part to give cover to the technique that I was using,
which by imperial law, I wasn’t supposed to have. Amaryllis was working on squaring everything
away as far as legality was concerned, but that was a work in progress, and it was likely going to
require some amount of legal recognition of our tiny nation. Once that was all done, we could reveal
a little bit more of our true abilities, but as of right now, we were completely unlicensed soul mages
working for what was only really a nation because of our pretensions and the backing of polities like
the Ha-lunde.

Amaryllis was very clear that the rules of engagement had changed, and Jorge had been very clear
that there were limits to what Uniquities was willing (or able) to cover for. If there was another fight
in the streets like the last time we’d been to Boastre Vino, then at a minimum we would need to stick
around and explain things to the authorities, which would open up our tiny nation to more scrutiny
than it was already under.

In retrospect, maybe taking a fully-armed party of six in to complete a level 2 quest was tempting the
narrative a bit too much.
The Dream That Skewers

When looking at the athenaeum system as a whole, I was very much reminded about what Figaro Finch and I had talked about regarding specialized hammers. If all you had were thirteen special hammers, then eventually you would start designating some of them for ‘close-enough’ purposes. Each of the athenaeums had carved out their own little slice of the higher-education pie, and usually centered around one or two complementary or linked types of magic, but there was a strong tendency for them to expand beyond that. The Athenaeum of Bone and Flesh wasn’t just a place where people learned bone magic, it was where they learned healing magic in general, and beyond that, they were the renowned experts in non-magical healing as well, save for the niche that the Athenaeum of Quills and Blood had carved out for itself. There were things you could learn without going to one of the athenaeums, since Aerb also had independent colleges, and not all of the minor magics were tightly regulated … but anyone who wanted to be someone in academics or magic needed to go to an athenaeum.

Speculation and Scrutiny was, in many respects, the junk drawer of the athenaeum system. They were the ‘hey, that’s weird …’ athenaeum, the place that studied all those little bits and bobs that people wanted to fully understand. Speculation and Scrutiny was divided up into colleges with their own subspecialties, one for entads, one for racial attributes and bloodline magics, one for ‘dead’ magics, one for Animalia, and so on and so forth. All in all, it was a long list of different things that were in need of study, with toes occasionally dipped into the waters that others had claimed. The dream-skewered were a part of the Cerebral College, with a small dormitory tucked away on the mountaintop campus. That was our destination.

Getting up the mountain from Boastre Vino was relatively easy; all we had to do was present temporary guest passes, which were given out fairly freely. Ours were forged, but there was no way to easily tell that. Much of the groundwork for our visit to Speculation and Scrutiny had been laid the last time we were in Boastre Vino; while Fenn and I had been busy with the unicorn stuff, the other members of the party had been getting some work done, and Amaryllis had put as much work as she could into all of the quests we had listed.

The trolley had seats for twenty, but we were the only ones on it. That wasn’t a huge surprise; we’d picked a time of day that was well outside peak hours. Boastre Vino was less connected to the athenaeum than you might have thought, for two places that were so close to each other. Speculation and Scrutiny had their own mess halls, entertainment, and services, all of them with the fairly large advantage of not having to spend a forty minute round trip to get to them. People did go down to Boastre Vino, but it was usually to buy specialty things that they couldn’t order by catalog, or to take in some sort of excitement that the athenaeum didn’t have on offer. The trollies ran, regardless.

“So, he’s an actor?” asked Fenn.

“Fenn,” said Amaryllis. “Don’t ask about him.”

“I just want to know whether I’ve seen anything he’s been in,” said Fenn. “Is that so much to ask?”

“Odds are you haven’t,” I replied. “I know that media gets a bit spotty as you go further forward in time, since there’s stuff that never went to VHS. DVD came out in, uh …”

“1995,” said Amaryllis. “But they still made movies on VHS as late as 2006.”

“Huh,” I said. “Yeah, that sounds right.”
“It is,” replied Amaryllis.

“But it would be useful to know if I had seen him somewhere, right?” asked Fenn. “Like, as an instrumental?”

“Instrumental what?” asked Amaryllis.

“... utility?” asked Fenn.

“I would prefer not to tempt fate,” said Grak.

“It’s not tempting fate, it’s learning,” said Fenn. “It can’t possibly hurt anything to know what the Cannibal was in,” she pointed to me. “Joon?”

“Uh, Transformers,” I said.

Fenn froze. “Wait, really? Transformers, robots in disguise, more than meets the eye, those Transformers? Because we totally saw that one. It’s got Citizen Kane, right?”

“What?” I asked. I tried to see some way that she could have misunderstood something, but was coming up blank.

“We need to shut this line of conversation down,” said Amaryllis. “Too much risk.”

“Wait, I want to understand what Fenn is talking about,” I said. “I really thought that getting you all exposure to Earth stuff would help, but it’s not really been the case. Half of the references are just gibberish to me.”

“Because you’re uncultured,” said Fenn with a huff. “Kane, from Citizen Kane, he was a Transformer, and apparently the world-eating cannibal was in it too.”

Solace leaned over to Valencia. “Should I be following any of this? What’s a robot?”

Valencia shrugged. “Sometimes I think they all went mad down in the time chamber.”

“To clarify, he won’t eat the world,” said Amaryllis. “I think it’s very important to not overstate threats. At best, the cannibal will kill a fairly large number of innocent people, especially if his name is said in a place with as dense a population as one of the athenaeums.”

“What is our plan?” asked Grak.

“We gather information first,” said Amaryllis. “There’s a lot that we don’t know about the dream-skewered. They’re a very, very niche curiosity.”

“Who you know about, in depth,” said Fenn. She rolled her eyes. “Naturally.”

“I really don’t,” said Amaryllis. “It’s included, briefly, in most reckonings of the greater cosmology, usually nestled somewhere between a paragraph on the excluded mirror dimension and a summary of the more hypothetical elemental planes. Before I met Joon, everything that I knew about Earth could have fit in a few pages, if that. I read The Dream that Skewers, which is authoritative, while I was in the chamber, but it’s a very thin book, and most of it is filled with musings rather than hard data. You’d think that if you were going to write a whole book about a group of people that claim to come from a shared alternate reality, you would include very important things like, I don’t know, the year that they think it is, or the names of the major governments.”

“You never asked me,” I said.
“Well,” said Amaryllis. She shifted slightly. “I did eventually. It didn’t seem important until much later.”

“It’s kind of not,” I replied with a shrug. “I read the book too.” I looked to the others. “It was more about Earth as a concept, the affliction, a few case studies, the facilities at Speculation and Scrutiny, the care provided there … it really went in the direction of *The Care and Feeding of Dream-Skewered*. There’s not a bunch about Earth. If you don’t actually care about Earth, which might as well not exist except so far as the deluded dream-skewered people think it does, then you don’t care so much about timelines.”

“What year is it on Earth?” asked Valencia.

“2017,” I said.

Valencia nodded. “I don’t know what that means. Fifteen hundred years in the future?”

“They use a different calendar,” said Amaryllis.

“I guess when I think about it, it took me quite a while to ask what year it was,” I said. “Unless you’re time traveling or studying history, it’s not really important.”

“You said that 1990 was the cut-off for our problem?” asked Amaryllis. “Anything before that, we don’t care about?”

“I … think so?” I asked. “He was a child actor, but … I don’t know when he really rose to fame. It was *Even Stevens*, I think? But that was before my time. I also don’t know how old he is. Twenties or thirties, I guess, so let’s say … he was probably born between 1977 and 1997.”

“Wait,” said Fenn. “When did *Transformers* come out?”

“Uh,” I said. “No clue, but I would say after 2000 before 2010?”

“And I suppose we can’t use IMDB?” asked Fenn, aiming that question at Amaryllis.

“Absolutely not,” said Amaryllis. “No web pages, period. I’m not just worried about the cannibal, I’m worried about other, hidden infohazards. Things that Joon didn’t think would make the leap, or which were intended as jokes.”

“I’m sorry,” I said. “But I really don’t think this one is on me. I mean, it’s a lot more not on me than all the other stuff, which is also not my fault or responsibility. The purpose wasn’t to torture game characters … or, I guess it was to torture them as a joke, which is totally different.”

“Will it be funny if the cannibal kills us?” asked Grak.

“Uh,” I said. “Not to me, but from a certain point of view … yeah.”

“Well that’s fucking great,” said Fenn. She paused for a moment. “Wait! You have that virtue!”

“I do?” I asked.

“You take half as much damage from physical comedy, so long as it’s funny, right?” asked Fenn.

“You … may actually have a point,” said Amaryllis.

“Regardless,” I replied. “It’s not going to be a problem, because no one is going to say it. We don’t even have Bethel with us, which means that there’s no possibility that someone will try to pull
something innocuous from Earth and trip the trigger by accident. Which we’re not actually sure is a possibility in the first place.”

“I’m pretty sure that Transformers didn’t come out when you think it did,” said Fenn with a frown. “And I really want to keep using the backpack, because guess what, there’s no one on Aerb that knows how to make sushi. Plus Earth bras are great.”

“I don’t think there’s an infohazard risk for clothing,” said Amaryllis. “But we need to have a serious discussion on opsec with regards to that particular ability, because there are going to be people gunning for us, and it’s better that no one makes the connection until after we’ve already established ourselves enough that they can’t knock our feet from under us.”

“I’m sorry that Uniquities found out,” said Valencia.

“They don’t know the full truth,” said Amaryllis. “All they have are some books.”

(This was significantly understating it. The actual text of the books wasn’t too worrisome, it was the covers and front pages that gave things away, because they were chock full of clues of their origin. Publishing companies, Earth locations, ISBN numbers, a barcode, all the kinds of things that marked it as very distinctly not a thing from Aerb. Amaryllis had some misgivings about all this, both that we’d left Valencia with that kind of thing, and that Valencia hadn’t put up a fuss about handing it over to Uniquities. It was understandable, from Val’s perspective, given that she’d just been given a reprieve from intense violence, but the whole affair had put a little wrinkle into their relationship. I was certain that Amaryllis was marking the information leaked to Uniquities as one of her failures, even though we’d both been there.)

“Well, I’m still sorry,” said Valencia.

“Can we talk about the Citizen Kane thing?” asked Fenn. “This is bugging me.”

I looked up the slope. “We’ve got a few minutes,” I said. “But I’m pretty sure you’re wrong, and we don’t have anything to reference in order to settle it. Transformers is, uh, not what I would consider a cultural touchstone, not in the same way that Star Wars or -- oh, shit, don’t watch the fourth Indiana Jones movie.”

“I didn’t even know there was a fourth,” said Fenn. “Wasn’t on your list.”

“I don’t even know what Indiana Jones is,” said Valencia with a frown.

“Well, movie night is going to be on hold, apparently,” said Fenn. “I should still be able to watch anime though, right?”

“Subs or dubs?” I asked.

Fenn frowned at me. “Mary doesn’t have subtitles working.”

“Do you have any idea -- no, I know that you don’t,” said Amaryllis. “But if we’re talking about EIA-608 encoding, which is the simplest form of closed captioning I could probably do, it’s not something that I’m ever going to have the time or manpower to work on, especially since I’m going to gather a standards council together in order to make our own, Aerb-specific standards.”

“You’re so great,” said Valencia.

“I was only asking because if it’s dubs, then you’d have to be careful,” I said. “He might have done voice work.”
“This is bullshit,” said Fenn. “And yes, obviously he’s done voice work, but American voice work, right? Blugh, I hate this.”

“I somewhat enjoy it,” said Solace.

“Um,” said Amaryllis. “What?”

The trolley car crested up to flat ground then came to a stop, in a long line with the others. Trolleys left every few minutes, in a continuous circuit.

“Sorry, hold that thought,” said Amaryllis. “We’re going full opsec, no breaches of the fourteen points of contention.”

“What’s opsec?” asked Fenn.

Amaryllis glared at her, then slid her helmet on as the doors opened.

“Well, I thought it was funny,” said Valencia.

“A bit,” said Grak.

We filed out of the car and took in the place. The Athenaeum of Speculation and Scrutiny was one of the smaller athenaeums, which meant that it ‘only’ had a hundred thousand students, divided up into a handful of colleges. It was a hell of a lot of people even before you added in all the faculty and staff, all of them packed onto the tip of the mountain. The architecture followed a uniform aesthetic, with tall buildings, lots of terraces, and swirling bas-reliefs wherever there was a large expanse of wall. The air was a bit thin, enough to be noticeable, and we were far above the timberline, but someone had gone through the effort of making sure there was greenery, in the form of short grasses growing in stone beds, and more exotic plants that didn’t have any leaves, instead looking like curled, waxy stalks.

“I think that I can explain as we walk, without revealing anything,” said Solace. Her voice was higher, now that she was a child, but it still had the air of wisdom and age to it. “Juniper has said that the great virtue of my kind is saxud, ‘doublethink’ in his parlance. The part I find enjoyable is in seeing how others react to having certain subjects which must be danced around, or certain thoughts that must not be thought.”

“Is that what being a -- what being you is like?” asked Valencia. She stopped herself from calling Solace a druid at the last moment.

“Sometimes,” said Solace. “Not often. It was difficult, when I was younger, but as I grew old, it became much simpler. Now, after that violent rebirth, I find myself closer to the true ideal of those in my vocation. Pieces of the old me have been cleaned from my soul.”

“I wish you wouldn’t talk like that,” said Amaryllis.

“With happiness?” asked Solace. She let out a little laugh. “You’re a very good mother, to be worried about me so.”

The dream-skewered were kept in a combination dormitory, clinic, and research center. Last time we’d been in Boastre Vino, Amaryllis had gotten all of the information she’d thought we would need. This time, there wasn’t a Larkspur to stop us. The dormitory was a four-story building, wider than it was tall, but with the same terraces and bas-reliefs of the other, taller buildings around it. It had a fifteen foot, solidly-built wall, with holes and arches at the top for decoration. It was the only building with a wall around it, and I noticed that everything decorative about it was above the height
a person could reach, even if they were jumping. The main gates were thick iron, locked shut. For all the efforts the exterior made to make the place look inviting, it still had the air of institutional confinement to it. So far as I was aware, the dream-skewered were checked in voluntarily and stayed by their own decision, but …

“There are heavy wards,” said Grak. “Heavier than on any other building on campus.” He pointed up to the top floor. “Annihilation wards, there. Instant death if you tried to enter or leave.”

“Ominous,” said Solace.

“Not instant death for everyone,” said Amaryllis, glancing in Valencia’s direction. Valencia was in the Red Armor of Arramor, completely covered, which would hide her from any warder, but it also made her look really fucking scary, especially because of the crown of thorns sitting on top of her helmet.

“There’s an intercom,” I said, pointing to a small box next to the gate.

“I want it on record that this is the most obvious trap in the world,” said Fenn.

I moved forward and gave the intercom button a press. There was something very satisfying about technology on Aerb. Everything had a thunk to it. I had to wait a few seconds before there was a voice on the other end.

“Yes?” it asked.

“Male, human, bored, wary,” said Valencia. She was speaking at a bare whisper, just behind my shoulder. If this was a trap, I had the feeling the jig would be up for them in short order.

“I was hoping to speak to Speculator Masters,” I said. “I had a few questions.” The name was one we’d picked up while we were in Boastre Vino, no thanks to me. “This is the place the dream-skewered are housed, isn’t it?”

The speaker was silent for a moment, then the gates began to creak open. “Someone will meet you in the lobby.”

“I can’t tell what the change in demeanor was,” said Valencia, still pitching her voice so that I could only just hear it. “It was either the name of Masters being mentioned, or something else.”

“You have speculations?” asked Amaryllis, who was standing close by.

“They have protocols and we just tripped one,” said Valencia. “I don’t have any insight beyond that. It might be paranoia. There are innocuous solutions to the question.”

“It wouldn’t be absurd for them to have a protocol for visitors,” I said.

“Not that kind of protocol,” said Valencia. “Something serious.”

The gates stopped with a shudder as whatever internal mechanism was responsible for opening it finished its work. It didn’t look like an evil lair of evil. We walked forward, on guard.

Wearing armor was frowned upon in polite society, but not so much that there were laws against it, or even so much that people would actually frown. There were a few features that were common for entad armor, including resizing, comfortability, breathability, and a host of others, which meant that armor wasn’t always such a burden on people as it might have seemed, and that in turn meant that you couldn’t just assume someone wearing full plate was getting ready for war. In addition to that,
there were armors that provided useful, day-to-day utility for people, especially with regards to movement, and you wouldn’t want to castigate someone for wearing armor that could spirit him across the city and let him skip his commute.

(Added onto that was the question of money. Most entads ended up in the hands of the rich, through a couple of different mechanisms, and the rich tended to make the rules and set the fashions. Breastplates occasionally came into fashion as knock-offs or inspirations from some rich asshole being seen with a new entad, though the copycat armor was rarely functional. More often though, you’d see clothes cut or dyed such that they gave the impression of armor without any of the inconvenience.)

Weapons were a little less defensible in polite society. Some had mundane utility, sure, but for every entad sword that healed people instead of hurting them, you had a hundred more that were just more effective instruments of murder. The social pressure against going around armed was stronger, and you would get a look or two, though it was unlikely that anyone would make a comment about it. Swords were more acceptable than guns, in part because of the implied level of training and knowledge. Either way, a weapon at the hip would draw attention, and that attention would be largely negative, but it wasn’t anything you couldn’t overcome with a smile and a friendly demeanor. The attention was the big worry; if you wanted to go around without attracting attention, then it was better to be dressed as simply and non-threateningly as possible.

And then you had our little group of six. We hadn’t made any attempt at hewing to cultural expectations. No, if we were going up against He-Who-Must-Not-Be-Named, we were going to be doing it as fully armed as we could possibly be, at least to within the limits of what was legal. Valencia had red armor with tiny thorns, a crown of thorns, a sword at her hip, and two pistols in their holsters. All that was intimidating, even before you knew that the crown ate poisons, the sword ate memories, and the girl inside the armor was absolutely insanely proficient at combat. Amaryllis was next-most-scarily equipped, and I think Solace was the only one of us who could have passed for unthreatening.

A young man sat behind a counter in a reception area, looking a little too alert and straight-backed for my tastes, but that had to be the natural reaction of someone seeing so many heavily armed people come into the place.

“Ah,” he said, taking us in. His eyes lingered on Grak’s wooden hand. “Spec Masters will be down in a moment. Can I ask what this is regarding?”

“It’s confidential,” I said.

The young man nodded, then swallowed. “He’ll be right down. If you could sign in?” He pushed a clipboard across his desk, and Amaryllis picked it up, filling it in with our real names, save for her own, which matched the official pseudonym she used on the Isle of Poran.

(We were coming as ourselves for this one, more or less. It wasn’t the ideal trial run for coming out of the shadows, but it was the hand we’d been dealt. We were really hoping that there wasn’t going to be an official investigation, but if there was, we really couldn’t be operating as covert agents on foreign soil. That was not to mention the distinctive armor, weapons, and abilities, all of which had already been the giveaway for Uniquities. Going covert might have worked if we’d been willing to go in without weapons or armor, as we’d done when we hijacked the sky ship, but that seemed like asking for trouble here.)

The man who came down the elevator a few minutes later was wearing armor of his own, though nothing so ostentatious as what Valencia had on. His breastplate was semi-transparent and etched with the design of a tree in deep black. His shirt was an Earth-standard dress shirt though, and his
black slacks and dress shoes weren’t too far off from Earth fashions either. He was an older man, gray at the temples, with crow’s feet and wrinkles on his forehead that became more pronounced when he looked at us.

“Speculator Masters,” he said, coming forward and shaking my hand first. I briefly wondered why that was, but I wasn’t too troubled by it; Amaryllis had said that she would defer to me, since I had far more knowledge about Earth and the threat surface of the infohazard.

“Juniper Smith,” I said. “We’re the Council of Arches. There’s something highly confidential that we need to discuss with you.”

“All of you?” asked Masters with a raised eyebrow. His eyes went to Valencia’s pistols and sword. “Am I in any danger?”

“This whole facility is,” I said. “And yes, I would prefer that we all stayed together.”

Masters looked at the six of us. “May I ask whether this is in regards to the dream-skewered?”

“Yes,” I said. “I won’t say more until we’re in private and under a fair number of wards.”

Masters didn’t move. “I’m not familiar with the Council of Arches.”

“We’re a relatively new national agency,” I said. “We recently happened to come across some information that it’s critically important for you to have.” Not that we were going to actually tell him, but we did need to give him the bare bones and talk with him about how the dream-skewered were handled with regards to topics on Earth. It made me uneasy that they were presumably all together.

“Very well,” he finally said. “We do have a conference room available for consultations with the affected and their families. We can discuss it there. As for wards, may I assume you’ll be supplying your own?”

“Yes,” I said with a nod.

We went up a flight of stairs together, and Masters eventually led us into a room with a long table that seated ten and a chalkboard at one end. Grak went to work immediately, laying in wards that would do at least a little bit of work toward making sure that no one could listen in.

“I’m listening,” said Masters, once Grak had confirmed that the room was about as secure as he could make it. He was still looking at me. I’d talked with Amaryllis about what I was going to say, but it felt nervous for me to be in the driver’s seat.

“We need information first, in order to know how to present this,” I said.

“Information of what sort?” asked Masters.

“Information about Earth,” I replied. “We need to know some specifics about the world that the dream-skewered believe they come from.”

Masters frowned slightly. “You believe that you might have found something that would negatively impact the health and safety of my patients or the staff at this facility?” he asked.

I nodded. “It’s hard to know whether or not it’s even wise to give you the barest description without knowing more about the dream-skewered.”

Masters looked like he’d just eaten a lemon. “I’m going to need to screen you,” he said.
“Screen us?” I asked. I was already on guard, but that bumped me up a few levels.

“I need to check whether any of you are dream-skewered,” said Masters.

“And there’s a screening protocol for that?” I asked.

Masters nodded. “There are certain things that I would not say to a dream-skewered, for reasons of their health and safety.”

“Valencia?” I asked, turning to her. She was sitting just to my left, with her fingers resting on my thigh, where she could tap in code to tell me what she was picking up without Masters being able to see. So far, nothing.

“What’s your species?” asked Valencia.

“Ell,” replied Masters, looking at Valencia more closely. She had used a voice of command and authority, but it was still a girl’s voice.

The Ell were one of the earliest races that I ever made, the kind of sloppy worldbuilding that you’d expect from a ten-year-old. They looked human, but lived a hundred times slower. That meant that when they slept, it was 800 hours, not eight. Their meals were one hundred times bigger, but spread out over one hundred times longer. There was a lot about the concept that hadn’t made too much sense when you thought about it, but they existed on Aerb, and all the rough edges of that amateur effort had been sanded down in various ways.

“You trained with the Elon Gar,” said Valencia.

Masters nodded once, cautiously. “It’s not uncommon for my people,” he said. “Sleep is more of a thief to us than almost any of the other mortal species.”

I was inwardly groaning. The Elon Gar were an order of monks who specialized in manipulating the mind; they could get by on ten minutes of meditation instead of sleeping, they could organize their memories far better than normal, and in general exhibited a degree of control over their own minds and bodies which on Earth would have been considered supernatural. Checking them out was on our list, but there was no quest, despite efforts at prompting one, and no obvious skill that needed unlocking. My guess was that they were the equivalent of the blade-bound, but for more social or mental skills, and ostensibly ‘non-magical’.

Their best ability? Total control of their facial features. The monks of the Elon Gar were masters of keeping a stone face, which made them impeccable liars. And it was just like the Dungeon Master to throw one at us now that we had Valencia.

“You were trained inexpertly,” said Valencia with some satisfaction. She turned to look at me through the eye slits of the armor. The decorative thorns around them looked a bit like flames. “He’s lying.”

Okay, or he’s not meant as a foil to that particular ability.

“I’m not lying,” said Masters. “I do need to perform a screening. There’s more to the dream-skewered than you know.” I felt my heart start beating a little faster at that. Did he know about the Cannibal? Or was this about something else?

“But it’s not for health and safety?” I asked.

Masters paused. “No,” he said.
“He’s following deeper directives,” Valencia supplied.

“Then we both have information the other wants,” I said. I hesitated for just a tick. There was no way that they were going to involuntarily commit me, not when we had this much firepower on our side. “I’m dream-skewered.”

Masters sucked in a breath, which he let out slowly. “Then it’s all the more important that I screen you.”

“Looking for what?” I asked.

“There are different presentations of the phenomenon,” said Masters.

_Ah. Others with my power? That would be … unexpected, but not wholly unanticipated._

“What form does this screening take?” asked Amaryllis.

“You’ll hold an entad in your hand while I say a series of words,” said Masters. “The entad will change colors, giving a reading of your surface level recognition.”

_Mind-reading._ Entads had variable effects, but some effects were rarer than others. Mind-reading, even at the low level he was talking about, was virtually unknown. That gave a good benchmark of his power level: high.

“I consent,” I replied.

Masters nodded briefly, then excused himself so he could retrieve the entad he would need.

“Grak, are we good to talk?” asked Amaryllis, as soon as Masters was gone.

“Likely,” said Grak.

“Luck sense isn’t getting pinged yet,” said Fenn. “Common sense is screaming at me to get out of here though.”

“I’m worried about black swans,” said Amaryllis. “Really worried. There’s too much power concentrated here. Something isn’t right.”

“If he were coming back to kill us, I’m pretty sure I would feel it,” said Fenn.

“He might just be trying to contain the infohazard we’re here to warn him about,” I said. “That would be consistent with his level of caution.” I hesitated. “Val, you said that he was lying about it being for my health and safety?”

“I was bluffing,” she said. “It seemed like a good idea at the time. He is out of practice, or wasn’t trained well, but he’s still very hard to read, and he’s trying very hard to keep it that way.”

“Well, --” began Amaryllis.

The door opened back up, and Masters slipped back inside. He was holding a small gray ball in his hand. It was slightly reflective, with striations on the surface that reminded me of marble. In his other hand, he held a sheet of papers.

“You can have your warden inspect the entad, if you would like,” said Masters. He took his seat once more, placed the papers on the table, then rolled the ball from one hand to the other. “I’ll demonstrate its use. Say a noun or noun phrase, one that you would expect me to know, then one that you
wouldn’t expect me to know.” He picked the ball up, holding it in his hand.

“Anglecynn,” I said. The ball in his hand lit up a bright green. I paused, trying to think carefully about a noun that he wouldn’t know. “Fenn Greenglass.” The ball lit up again, this time emitting a gray light before fading back to its base, unlit state. It was on our intake form, but he hadn’t read that, and we’d made no formal introductions. He set it down on the table again. “How many colors?” I asked.

“Four,” said Masters. “Green is known to you personally, blue is known to you from some outside source, grey is unknown, and yellow is known and then later forgotten. Intensity of light matches intensity of knowledge.” He rolled the ball across the table to me. I glanced at Grak, who gave me a nod, then picked it up, feeling its weight. “It’s harmless, save for the information it allows me to obtain.” The ball pulsed green as he spoke, once each for ‘it’, ‘information’, ‘it’ and ‘me’.

I stared at the ball and wondered how complex of a noun phrase it was capable of dealing with, and then pondered how it could possibly be working, then trying to think like Reimer about all the things that I would munchkin it for, if it were mine. He would probably try to pin down exactly what constituted a noun phrase and then move on from there. The entad wasn’t something that I had designed, but it had that familiarity to it, like it was something that I would design.

“Okay,” I said. “I’m ready.”

“We’ll start slowly,” said Masters. He paused. “Really, I should have the rest of you leave the room, so as not to influence future screenings. It’s not normally a concern, but --”

“No,” I said. “I’m freely admitting to being dream-skewered. If the others were, they would say so as well.”

Masters nodded. “Very well.” He looked down at his papers. “We’ll start slow. Before we begin, can you give me a rough estimate of how long it’s been since you were transferred to Aerb?”

I frowned as I tried to think about that. From whose reference frame? “Four months,” I said.

Masters gave me a quizzical look. I was fairly sure that was longer than the average. “Many features of Aerb will be familiar to you then.”

“Many more than you know. I was a tiny bit worried about that.

This continued on for longer than it seemed like it should have. I understood that it was probably calibration, but I didn’t really need thirty names and places from Aerb in a row. At first they were blue or green across the board, but the last ten had a few yellow and gray, presumably because they were more obscure. Whatever Mome Rath was, I had apparently forgotten it.

And then, without seeming to switch gears at all, Masters said “Earth”, which came up green.

He was holding his paper up slightly, so I couldn’t read what was on it from where I was sitting. I was suddenly curious whether this was a list or a flowchart. If dream-skewered came from England, you’d need a different chart for them, wouldn’t you? He continued with places for a bit.

We were moving forward in time, that much was clear. Was the purpose of the screening to figure out what time the dream-skewered were from? But that didn’t make sense, since there didn’t seem to be any reason you couldn’t just ask, aside from maybe the mind-fuck of someone asking what year you thought it was.

“Elon Musk.” Blue. “Justin Bieber.” Blue. “Miley Cyrus.” Blue. Even after all that I’d spent two months in the chamber steeped back into Earth culture, it was utterly bizarre to hear these names coming from the mouth of an armored man while sitting at a conference table. “Henry Swift.” Gray. “Abigail March.” Gray. I frowned at that. Testing for false positives? Or something else? “Abigail Breslin.” Blue. “Adam Driver.” Blue. “Zootopia.” Green. “Finding Dory.” Green. We continued on with movies for a while, all of them somewhat recent. I’d heard of all of them; the ones I’d seen showed up green, while the ones I hadn’t showed blue. The movies were a surprise, but it was expected that someone who ran a dorm filled with dream-skewered would have in-depth knowledge of Earth. So close to the time I left though … that was curious.

I kept waiting for the moment he would mention a movie in the Cannibal’s filmography. Was this an infohazard they had already contained? Was that the purpose of this?

“Arthur Blum,” said Masters. The ball lit up a bright green.

He said the name like it was any other thing on that list. I wanted to stop him, but I was too shocked to say anything.

I sat there as he listed off a dozen names. The ones that weren’t members of our gaming group were people we’d gone to high school with. I just sat there in stunned silence, watching the ball turn green again and again.

“We’re done,” said Masters. He was looking at me calmly, as though nothing was strange about any of this. “You said that your own name was Juniper Smith.” The ball flashed green for a final time, and I gently set it down on the table.

We sat in silence for a bit. Maybe Masters was waiting for me to speak, but I had nothing to say.

“So,” I said slowly. “Where does that list come from?”

“Uther Penndraig, the Lost King,” said Masters.

I stayed silent for a moment, looking at the wall to the left of Masters’ head. “And … how many does the average dream-skewered get from that list?”

“How many would you guess?” asked Masters. His voice was flat, emotionless.

“I don’t know,” I said. “Mome Rath was the last of the Aerbian ones?”

Masters nodded.

“Then … I would guess that they stop somewhere around Adolf Hitler.” I wasn’t sure about that. I had wondered why, if there were a thousand dream-skewered, none of them had done something like what Arthur had done. Surely with a thousand of them over the course of the last five hundred years, one would have been an engineer capable of making the advances that Amaryllis was
planning. My current working theory was that most of the dream-skewered came from earlier in Earth’s history, maybe centered around a bell curve, with Arthur at the very far end, which would solve a lot of the problems inherent in the worldbuilding aspects, but --

“There are no dream-skewered,” said Valencia.

Masters hesitated, then nodded.

*Quest Completed: The Name of the Beast - I guess some problems just solve themselves.*
“They’re a recognized phenomenon,” said Amaryllis. “To maintain the deception for so long, under so much scrutiny, you’d need --”

“Powerful magic,” replied Masters.

“I was going to say that you’d need the complicity of far too many people,” replied Amaryllis. “People -- scholars -- would come to this place and they’d want to speak with the dream-skewered, they’d want to take notes, they’d want to know things about Earth. You can’t possibly have -- how could you possibly have kept up the pretense for five hundred years?”

“It’s not important,” said Masters. He was still looking at me.

“What’s important is what happens now,” I said. I was watching Masters. If there were no dream-skewered, that meant that someone had created the myth, and done it with purpose. I thought it was probably easier than Amaryllis was making it out to be; the dream-skewered were a curiosity, nothing more, a footnote rather than one of the greater mysteries of the universe. “Uther Penndraig gave you those names. Why?”

“Together, we might find the truth,” said Masters. He stood up from his chair. “Come with me.”

I stayed where I was and looked to Valencia.

“I … I don’t know,” she said. “He’s soaked in weariness. Maybe intentionally. It might be masking something else.”

“These are your knights?” asked Masters.

“Knights?” I asked.

“As Uther had,” replied Masters.

“No, not really,” which was a bald-faced lie. I turned to Fenn. “Verdict?”

“Nothing is twigging,” she said with a shrug. “That doesn’t mean that it’s safe.”

I stood from my seat. “Okay then. Uther … what, he left me something?”

Masters nodded once. “I haven’t seen it myself.” He stepped away from the table, leaving his papers and his entad behind, and went to the conference room’s door without another word. He moved like he wasn’t sure of himself. Five hundred years of perpetuating this deception? All, presumably, for this?

We walked down the hall. I followed close behind him, with Valencia and Grak flanking me as best they could. Masters seemed like he was in a daze, and I felt like I was in a daze too. When Amaryllis had told me that there was a condition that caused people to believe they were from Earth, I had thought that it was just something to explain away the fact that I was on Aerb. Later on … well, I’d taken a tiny bit of comfort in the fact that there were other people who remembered Earth on Aerb. To find out that they were all just figments was, strangely, a bit crushing. I hadn’t been sure what I was going to do with the other dream-skewered, but now all those possibilities had been washed away.
We went up to the fourth floor, the place with heavy wards. Valencia was watching Masters carefully, while Grak watched for unknown magic. I wasn’t sure what trick he had up his sleeve, if any, but we were going to be as prepared as we could possibly be for it. I didn’t like this new development.

We came to a large, circular room with a mirror standing in the center of it. The mirror was ornate, gilded around the outside edge, with swoops and swirls that suggested something floral.

“Entad,” said Grak. “It has marks of display and illusion.”

“Uther spoke into it,” said Masters as he stared into the mirror. “Only the intended recipient can hear what he had to say.”

“Tell me more,” I said, not moving toward the mirror. “Tell me … tell me why you would devote your life to this.”

“I hadn’t intended to,” said Masters. “There were dream-skewered, once upon a time. Five of them, all presenting within a handful of years, all collected together in a madhouse, in the city that would later become Boastre Vino. Uther took an interest. He was, in that time, a man known for doing impossible things, for solving unsolvable problems, erudite beyond anyone of that period, wise far beyond his years.” He was staring at the mirror as he spoke. “Uther tasked me with watching for more of the dream-skewered. He created a generous endowment for their care. I was to conduct interviews with them, find what they knew, compile a book or two. He wanted me to cast a wide net, and I did.” Masters sighed, still staring at the mirror. “Five unremarkable people, that was all we ever had. Of course, once the stories of the dream-skewered began to spread, there were others who came to see me and my small staff. We became something of an attractor for those with paranoid delusions and psychosis, in part because we were willing to take in such people with few questions asked. They all failed the tests that Uther had developed -- not the screening that I gave you, but a simpler set of questions.”

“Why did you keep it going?” I asked.

“Uther returned,” said Masters. “He seemed unconcerned by the fact that there was no recurrence of the phenomenon. He brought entads with him, the Orb of Knowledge, the Mirror of Messages, the armor that I now wear, and a new command.” Masters looked to me. “He told me that I was to keep up the pretense of there being dream-skewered for the rest of my natural life. Two or three every year should be sufficient, he said, some of them pulled from the ranks of the insane, others invented from whole cloth. The endowment would last in perpetuity. He gave me instructions that I should follow. Lies I would need to tell.” He shook his head slightly. “I balked. The rest of my natural life, when I might live another few millennia? I agreed to twenty years, because he was Uther Penndraig, and he seemed to think it was incredibly important. After he disappeared, I decided to stay on longer.”

I stepped forward, until I was standing in front of the mirror.

Uther appeared in the reflection, standing five feet away from the surface of the mirror. He was looking out at the middle distance, likely looking at a reflection of himself. I placed myself so his eyes were on me. My own reflection was absent from the mirror. He wasn’t saying anything, but I could see the movement of his chest as he breathed.

I say Uther, because it was a far cry from Arthur as I’d known him. He was tall, well-muscled, with his facial features more defined than they’d been on Earth. He was older too. I would have guessed thirties, if not older. He had the same nose though, the same color eyes, and curly hair that was grown out, here less of an affectation, more of a kingly mane. He hadn’t had a beard at sixteen though. He’d always joked that he couldn’t grow one. He was dressed more simply than I would
have expected of a king, nothing but a doublet, breeches, and heavy boots.

“I often wonder …” he began, then stopped himself. “I wonder what it would have been like to fall into a world that I didn’t know. Something novel, rather than recycled. I wonder whether I would have believed in it more, if I hadn’t seen your fingerprints all over everything. I wonder.” He paused. “I wonder whether I could have forgotten Earth, with time, if there weren’t so many reminders of the place I’d come from. Little jokes, little references, anagrams here and there, hints and clues that the world wasn’t what it seemed. People wearing the faces of my old friends. Fleshted out versions of characters we’d had for a handful of sessions.”

He stopped again. He wasn’t quite looking at me. I waved my hand slightly, but there was no reaction. I hadn’t thought there would be.

“So, if you’re listening to this, then you’re here. There’s a decent chance that I’m still alive. If I am, I imagine that I’ll find you soon enough. If I’m dead, which I might be, then it’s likely that you’re on your own narrative path, may God have mercy on your soul.” He let out a sigh. “You’ll have noticed, by now. I’m not sure about the others, but you? You’ll have figured things out. The coincidences, the improbabilities, the way that things seem to fit just right, character arcs that are completed in the final seconds of the last battle. I don’t know how much of my biography you’ll have read, or how much you’ll have learned about me, but if you don’t see the patterns in your own life, I’m sure you’ll see them in mine. Looking back, it all seems so trite. So many NPCs with their sob stories, so many love interests, paraded around in front of me before their inevitable deaths. I’ll admit to being affected, at first.”

He shook his head slightly. “And if you’re here, watching this, then you’re in it too. If it had to be anyone, Joon, I’m glad that it was you. You’ll know this world better than I ever did, I think. There are things on Aerb that were only hinted at briefly in your campaigns, and I imagine there must be secrets that only you can unlock, words of power written down on your yellow legal pad that never made it to our ears. Maybe together, we can find a way back home. If I’m dead, then maybe you can find a way back on your own. Think back to the campaigns, try to visualize the magic items and the magics.” His eyes had grown a bit wider, his look intense. “If you come up short, think about what you would have done, how you would have made it in order to fit with the aesthetic of this place. Think about something that would have the stink of Joon on it, that’s where the answer will come from.”

Uther backed away slightly. He brought his hand up to his mouth and rubbed at his beard. “I don’t know what this place is,” he said. “I don’t know this world better than I ever did, I think. There are things on Aerb that were only hinted at briefly in your campaigns, and I imagine there must be secrets that only you can unlock, words of power written down on your yellow legal pad that never made it to our ears. Maybe together, we can find a way back home. If I’m dead, then maybe you can find a way back on your own. Think back to the campaigns, try to visualize the magic items and the magics.” His eyes had grown a bit wider, his look intense. “If you come up short, think about what you would have done, how you would have made it in order to fit with the aesthetic of this place. Think about something that would have the stink of Joon on it, that’s where the answer will come from.”

Uther backed away slightly. He brought his hand up to his mouth and rubbed at his beard. “I don’t know what this place is,” he said. “It’s not reality. I hope that you never get this message, because if you do, then it means that you’re here. I’m leaving it for you anyway.” He gave a hollow laugh. “There’s so much I want to say to you. When I first heard of the dream-skewered, I thought that they would be all my old friends from -- from Kansas. I haven’t said that word in a long time.” His face had fallen. His eyes were unfocused. “But no, they were nobodies, a teenage girl from medieval France, an idiot teenager who had been in the middle of the Civil War, disparate times and places, nothing obviously relevant to me. It took me some time to see the narrative purpose of them. They were a temptation from the path of heroism, an invitation to indulge in the past, or maybe a call to remember who I was and what I was doing. I’ve done a fair job at resisting those temptations, or at least cloaking them in the guise of art or work. You’ve seen some of that, I’m sure.”

Uther stretched slightly, drawing himself to his full height. He was tall, taller than I was, and I’d gained a few inches as the game had added onto my physique. Uther was an intimidating man. I’d known that, but I’d underestimated the extent.

“This is the closest that I’ve ever come to telling anyone on Aerb where I’m really from,” he said. “Sitting behind uncrackable wards, with a mirror I spent three weeks testing … I sometimes wonder
why I bother with maintaining the silence. My peculiar form of insanity would cost me political power if it were known to the public, certainly, but my knights? My wife and children? Perhaps I feel like saying it out loud would take the story in some unexpected direction I’m not prepared to handle. I’ve been playing the part of Uther Penndraig for over two decades now, and I’ve gotten good at it. To go back to being Arthur again, to talk about the past with someone … well, I suppose this is what this message has become. I should be giving you warnings, I suppose, or secret histories, but either the narrative here is that this is a flight of fancy and a final send-off for the past I knew, or this is the narrative thread that draws you into the web. None of it really matters anyway.”

He looked like he was going to say more, but instead a slight frown crossed his face, and his reflection disappeared, leaving me to look at myself in the mirror. I turned toward the others, who were all watching me.

“Yeah,” I said. “It was meant for me.” I looked at Masters. “I’m not sure how much I should say. I … don’t really know you.” I was sure there was a more diplomatic way of putting it, but I was in a bit of shell-shock. I hadn’t started the day thinking that I would see Arthur again, even if it was just in a recording. He was so … different. After talking with Bethel, I had known he would be, but it was different, in the flesh.

“Scenario?” asked Amaryllis.

“Zero,” I replied. I looked at Masters again. “He said that if he was alive, he would see me shortly,” I said. “Do you have any idea what that means?”

“I was given an entad to contact him with, a candle he said would light his way back to me,” said Masters. “I used it four hundred and fifty years ago, during the time of the Internecine Wars. There was no response, nor has there been one in all that time. The candle has continued to burn, to no effect.” He hesitated. “Please, if you could just … if you could tell me anything, who you are, who he was, the connection between the two of you, anything, I’ve spent five hundred years in loyal service, with your name on a list written by Uther himself. Please.”

I glanced at Valencia, who gave me a barely perceptible nod. I was relieved that she hadn’t hesitated.

“You said that this place had powerful magic,” I replied. “Tell me what it was, and I’ll tell you some of what I know, enough to sate your curiosity.”

“Curiosity?” asked Masters. His eyes were wide. “The fate of the universe is at stake.”

“Explain,” I said. My mouth was set into a thin line. I wanted time to process, instead of being confronted by another crisis. If dream-skewered didn’t exist, then we didn’t need to worry as much about the Cannibal. I was really skeptical that this was going to end with us going home.

“The threats escalated during Uther’s time on Aerb,” said Masters. “In the years before he disappeared, they were enormous, bigger than was ever let on to the general public. They were tied to him, in some way, attracted to him with something like luck. It was joked that the world would have ended a hundred times over without him around. When he went missing, that joke stopped being funny. There were horrors lurking, entities waiting, and we had to fight them tooth and nail, losing people with every one we put down.” He was rubbing his hands together. “The world settled down, eventually, at great cost, and the exclusions have helped with more than one of our collective problems in the time since, but …” He stopped and stared at me. “Things have been heating back up.”

“Which powers?” asked Amaryllis. “How recently?”
Masters turned to look at her. She was still fully armored, which meant she gave even less away than usual. “The Void Beast has started moving again, the Outer Reaches are no longer dormant, the Infinite Library is down to five years, Celestar is thrumming with renewed power, a raiding party from the Other Side crashed against the Gates of Leron three weeks ago, and there’s reportedly something new that has the minions of the hells living in abject fear.” Masters looked back at me. “How strong are you? You said you’ve been on Aerb for months?”

“Back up,” I said. “I didn’t understand half of what you just said.”

“Then tell me everything,” said Masters. He had shaken some of his weariness, but I didn’t like what had replaced it. It wasn’t quite mania, but it was close. “If you knew Uther, if you can get to him, or if you can act in his stead, with the same utter power that he wielded, then there are allies ready and waiting for you to call on. There are things you’ll need to know.”

I stared at him. “Uther Penndraig was, himself, dream-skewered,” I said. “Earth isn’t a delusion, nor a dream, it’s a real place. It’s a place that I’m from. Uther was … a friend. If I had to take a guess about where Uther went … I guess I would say that he went home, back to Earth. He said as much in the message he left for me, not that he was going back, but that he was looking for a way.” He’d mentioned narrative too much; that was the framing he’d put on almost everything. I left that out.

“Tell us about the magic around this place,” said Amaryllis. “Tell us how you kept up the deception.”

“The Athenaeum of Speculation and Scrutiny was moved, at Uther’s behest, specifically to be located within an exclusion zone. It’s a well-guarded secret.” Masters shook his head. “I won’t say more.”

I stared at him. “Which one?” I asked.

“No one known to you,” said Masters. “Silent exclusions, Uther called them. A part of my work here, with the others, is keeping that secret contained. I’m one of three.”

“You’re all waiting here for him to return?” I asked.

“No,” said Masters. “Waiting for him … or for you, if you’re like him. You must have read his writings, if you’ve already gathered your knights. Have you not realized the common thread of chosen heroes answering the Call?”

Something felt off. Maybe it was the understanding that this man was, by his own admission, a master mage at the top of his game, or maybe it was that the message from Uther had contained too much, too fast. Uther had many allies; I’d known that. To be speaking with one now made me start thinking about what enemies he might have left behind.

“Grak, Val, Fenn, status?” I asked.

“No changes,” said Grak.

“He’s sincere,” said Val.

“Something’s not right,” said Fenn. “Not just the obvious. A little tingle came on in the last minute or so, and it’s getting stronger. You feel it too?”

I nodded. My own sense of it was far weaker than hers. Luck had been one of the things that I’d trained in the chamber; I hadn’t gotten luckier, only better at distinguishing the sensation. It was faint and inconsistent, but I had a single point in LUK, and that was enough to give me the occasional
flash of nebulous something-or-other, a pull in one direction instead of the other, or a hint of what
was to come, usually when there was no good option left.

“I don’t understand,” said Masters. He was looking between us.

“There are wards against teleportation,” said Grak.

“Solace?” asked Amaryllis.

“A way out?” she asked. Amaryllis nodded. Solace closed her eyes. They glowed golden beneath
her green eyelids, just for a moment. “There’s a tree two hundred yards away. Now?”

“Yes,” said Amaryllis.

“Ah,” said Masters. His tone was flat, only with a slight note of curiosity. “Elf luck?”

Solace was using her fingernails to pry apart her staff, in a way that should have been impossible
with wood. Masters frowned at her, and she became encased in a block of amber. Fenn fired an
arrow before I could react. It would have been a direct hit, but Masters batted it aside with a casual
wave.

“Well, fuck,” said Fenn.

“We need to talk, Juniper,” he said.

“I’m getting a feeling it’s a bad time to be standing around,” I said. Valencia was working at the
amber with her sword, hacking away at bits and pieces of it. I was growing increasingly certain that
he wasn’t just blowing smoke about us being in an exclusion zone, the only question was which one.
I had a very slight advantage here, in that I had a list of eighty-two excluded skills. They didn’t fully
map to the exclusions, but there was a list I could start going down. Funnel magic? Conjoinery?
Uniqulomancy? Carrollism (please no)?

“Truce,” said Masters.

“Free my friend,” I said.

Solace was instantly free and gasping for breath. Masters was looking between the six of us,
frowning slightly. “She said tree. Wood magic?”

“You were waiting for me,” I said, ignoring the question. “Why?”

“Answers,” replied Masters. “I want to know who you are, where you come from, and what your
connection to Uther is. I have no intent to hurt you.”

“Explain,” I said.

“I’m not your enemy,” said Masters. “I’m only taking precautions. I didn’t keep this clinic running
for five hundred years just to let you slip away a few minutes after having gotten a message from the
mirror.”

“So it’s a hostage scenario?” I asked.

“No,” said Masters with a frown. “You have to understand that there are complexities to Uther’s
legacy. Everything I said about the old threats moving again is true.” He took a breath. “The world
warped itself around Uther,” said Masters. “When he disappeared, gone with no trace, it took
hundreds of skilled individuals to stem the bleeding. Many of them, good friends of both Uther and
myself, died in the process. And after that ... there was calm. Enemies had sprung from the woodwork for three decades, ancient conspiracies were uncovered by the handfuls, and toward the end, world-ending threats were showing up every other year, with Uther the only one capable of dealing with them. The great question the survivors were left with, once we had sealed the holes in the dam, was how it was possible for us to have done it, and why there weren't more dangers coming to greet us, when there had been so many before.”

“And?” I asked.

“We fell into different camps,” said Masters. “One camp believed that Uther was a messianic figure, one who had been delivered to us in our time of need by a higher power, one who left once his work was done. The other camp believed that Uther was the one who attracted or caused all the problems in the first place, whether wittingly or not, and with him gone, there was no longer any pull drawing such things into existence. There were naturally different cleaving lines within our community, axes of disagreement, some of it quite fierce.”

“So which were you?” I asked. “Given that you’re keeping us here, my guess is that you’re in the latter camp.”

“I seek understanding,” said Masters. “Theories are all well and good, but I never thought that the answers to the many mysteries of Uther were unknowable. That’s all I want from you.”

“Duress was a bad option then,” I replied.

“You were going to leave,” said Masters. “There’s no danger here. This place is a fortress hidden in plain sight, and has been since Uther was still alive. The wards were laid by his very hand. All I want is to have the answer to who he was. Without that information, how can we know?”

I stared at him. “You think that I’m the Chosen One,” I said.

“Uther referenced the idea constantly. It was a staple of his works. Many of his contemporaries thought that it was sheer narcissism on his part.” Masters was staring at me. “Have you accepted that’s what you are yet, you with your motley crew of powerful knights, walking where Uther once trod before?”

I gave a fractional nod. “There are certain things that I believe only I can do,” I said. That had been the whole point of coming here.

“Do you learn things faster than others?” asked Masters. “Uther had what he called the Knack. If you gave him a day, he could attain proficiency in any language, any trade, any obscure piece of magic. He never revealed the source of it, save to say that it wasn’t magic. I pestered him, if truth be told, more than he enjoyed, but he had my little girl with him --”

“Wait,” I said. “Raven?” She was the same species as him. Even in her biography, it hadn’t given her any other name but Raven.

Masters nodded. “You’ve heard the stories, I’m sure,” he said. “She accumulated mysteries of her own. She carried some of his burdens for him. She would never tell me. She searched for him for a solid century, then loudly declared that if he was gone, we were all going to have to make do without him. But if you’re here ... I don’t know what she will make of you, when you meet her. I don’t know if she’ll see you as a wound on the world or a shining savior.”

I wasn’t quite ready to call Masters insane, but I was mighty worried, especially given that he had us trapped by unknown means. His display of power before had been frightening. I looked back at the
others, wondering what they made of all this, and was startled to see that they all had the same expression on their faces, which was the same as the expression on my face, one of apprehension and confusion. That was out of character.

I walked over to Fenn and prodded her shoulder with a finger as she watched me. She looked down at the spot where I’d pushed and raised an eyebrow. “Satisfied?” she asked.

“Come on, Juniper, it’s me,” said Fenn with a small laugh, as though she couldn’t believe that I would test her with one of our prearranged code words.

I let out a small groan. She was a fake, or mind-controlled, but at least they didn’t have her memories. Besides failing the code word, Fenn almost never called me Juniper, not unless she was pissed off with me.

“Oh,” I said, turning back to Masters. “You replaced them while we talked? You have some way of masking sound and movement? And, let me guess, the exclusion was illusion magic?” That was a guess. Mentalism and Psionics also fit the bill, given their names, and there were a dozen others whose functions I could only guess at.

I glanced back at my companions and watched them pop like bubbles, one by one.

“How would you know that?” asked Masters. “How would you narrow it down so fast?”

“You’re not doing any favors on the diplomacy front,” I said.

“Earth was real?” asked Masters. “That’s why you came here?”

“Real would be indistinguishable from delusion,” I said. Unless you can make predictions, which I can, but that only complicates matters. And let’s leave aside the overgod of Aerb speaking to me directly.

“Tell me about where you come from,” said Masters.

I turned away from him and went back to the door -- but there was no door anymore. I felt around for a bit, trying to find where I knew there should have been a knob, but I’d been able to push Fenn, and she’d been an illusion. Tactile illusions? No, more than that, tactile illusions that warder’s sight couldn’t see through? I could see where that would get degenerate in a hurry. I turned back to Masters.

“You said there were five people from Earth,” I said. “You must have met them. They must have told you something.”

“Plenty,” said Masters. “We made a map, a cosmology, and a timeline. And yet the screening that Uther produced went far beyond what we knew from those five, and his instructions were very specific with regard to what should be publically available. He wanted our work to remain vague, speaking in generalities. Why? Who are the other names?”

I tried to think about how I was going to get out of this. Being trapped in a room with a master illusion mage -- and I didn’t even know if he was actually in the room with me, come to think of it -- was pretty bad, especially since the only thing I knew about illusion magic was what it said on the tin. No, that wasn’t quite right. What had Uther said? He’d said that I should think about things that had the stink of Juniper on them.
“They were childhood friends of ours,” I said, stalling for time. “I come from a small town in one of the United States called Kansas.” I prattled on about Bumblefuck while I thought, giving out only those details I hoped were completely irrelevant.

If I were the Dungeon Master, how would I have done illusion magic? Stripped to a fundamental level, what did I think was interesting or compelling about illusion? What seams would I have wanted to dig my fingers into? Illusion was fundamentally about the relation of the senses to reality, which meant that illusion wasn’t just about the projection of light and sound, it was about how the mind interfaced with raw, physical reality. And yet, Valencia hadn’t said anything about not being able to see Masters, which meant that either he really was in the room with me, or that illusion magic was somehow able to fool even a non-anima, which shouldn’t have been possible if he’d needed to affect the mind. Had Valencia entered the room with me?

(I talked to Masters about my friends from back home, whatever came to mind, both the meaningful and the inconsequential. We used to ride our bikes through a local park after school, until I broke my arm doing a trick off a little ramp that some older kids had made. In the summers, I’d worked on my uncle’s farm, running ahead of the tractor to pick up rocks from out of the field. It was hard, sweaty, work that earned me twenty dollars a day, a fortune when I was younger. Tiff had been on the swim team. Reimer’s parents had divorced when he was ten. Tom’s father had died in a farm accident. Despite my best efforts, I thought it was all pretty transparent as not important to the fate of Aerb, but Masters let me continue on. I made sure to stay away from the topic of tabletop games, Arthur’s role as player, and my own role as DM.)

How would I do a deconstruction and reconstruction of illusion, if that was what I would do? Sight was easy enough, you could just do photons emitted, absorbed, and reflected without an actual object there … but that was more or less how you could do illusions with carefully crafted and shaped wards, which seemed redundant. And you couldn’t do illusory sound like that, because fake sounds that got to the ears were still sound, that wasn’t any more illusion than a boombox produced illusory sounds. Boomboxes as the basis for a magic system had a sort of Juniper-like ring to it, but still didn’t seem to fit.

I kept coming back to the idea of the sensorium as an abstract concept, or the sensory homunculus as a more literal creature that lived inside me rather than just being a representation of the prominence of sense organs. That still didn’t explain how it would affect Valencia … but maybe it didn’t need to, if she hadn’t been affected. The problem was that I didn’t know when the illusions had started. Was Masters still in the room with me? Was anyone else? Was the room itself real?

Whatever illusion magic was, I fucking hated it. Why had I been so stupid as to be thankful that illusion magic was excluded? Why had I been so stupid as to say that out loud? ‘Dur, illusion magic is excluded, so great we don’t have to worry about that, hur dur,’ it was like horrible foreshadowing out of a terrible movie.

There was one aspect of the sensorium that, in theory, no illusion mage could have access to, and that was the ever-present HUD that I mostly ignored. So far as I’d been able to test thus far, nothing could see or interact with the information presented to me by the game layer, whether it was on the now-obsolete character sheet, in the messages that got presented to me, or the (largely unhelpful) meters that sat in the corner of my visual field. That, at least, allowed for some testing.

“And that was Bumblefuck, Kansas,” I finally finished. “It’s where Uther was from, it’s where I was from, and it wasn’t at all special in any way, not in the context of a thousand other towns exactly like it. There’s no reason for me to be special.”

“But you don’t deny that you are,” said Masters.
“No,” I said. “But that doesn’t mean that I have any answers.” Sword, dagger, rope, fairies, bones. I really didn’t want to fight him, both because he didn’t seem actively evil (aside from holding me prisoner) and because he had unknown abilities, presumably powerful ones. “What do you want from me?”

Masters was looking me over, measuring his response. “I want to know why the world is the way it is.”

“Ah,” I said. I let out a sigh. “All I have is a guess, or maybe a theory.”

Masters nodded.

“This world was set up for Uther,” I said. “Beyond the five gods, there’s an entity so powerful that it could have wiped the floor with the combined might of every threat Aerb has ever faced, and done it in such a way that no one would ever have known. Uther was the chosen one, but not just chosen, because that would imply that he was selected to be the one. And it wasn’t that. Uther came first. All of Aerb, going back into its deep, primordial history, was created to serve his needs, and the needs of his life. Only it wasn’t really for Uther’s benefit, it was because the entity … I don’t know. The entity was focused on Uther. It didn’t hate him, and it wasn’t intentionally torturing him, I don’t think, but … it also didn’t care if he was happy, or at least didn’t care that he was always happy, or even mostly happy.” I thought all that was essentially true, even if it was leaving some details out.

“Could Uther have lost?” asked Masters.

“Lost … in what sense?” I asked.

“Do you know how many times he narrowly escaped death?” asked Masters.

“Dozens?” I asked.

“Hundreds,” replied Masters. “Sometimes it could be explained away, other times it couldn’t. He had tricks up his sleeve, and an arsenal of magic beyond all reckoning, but the odds were still stacked against him so many times that most lost count, and those were the ones he thought worth mentioning, the ones that he could mention. He never lost. Not once. There were setbacks, to be sure, and victories that were bittersweet, but nothing like a loss, not for long. When the man disappeared, it’s safe to say that he did so with a perfect record.”

“No,” I said. “He wasn’t able to stop Vervain’s death.”

“Uther killed Vervain himself,” said Masters.

I didn’t know how to take that. For having been the death of Uther’s oldest friend and dearest mentor, the details on Vervain’s demise were incredibly sparse. Most accounts simply began in media res, with Uther trying to bring Vervain back and failing over and over before taking up his sword once more to defend the realm. I’d looked into it as much as I could, and asked Amaryllis, but the most that I ever been able to piece together was that Vervain had died on some important, far-off mission, which meant that no one actually knew.

“Why would he kill his mentor?” I asked.

“No one knows,” said Masters. “Very, very few people know that it was done by Uther’s own hand. He offered no explanation. He only said that he was in the right. The idea of a betrayal by a mentor figure was a recurrent theme in his works and his writings, even before Vervain’s death.”

“Dahlia then,” I said. “His only daughter.”
“Missing at the age of eleven?” asked Masters. He gave a hollow little laugh. “Another of Uther’s little deceptions. She became his squire, Helio, and later donned the Red Mask. It’s always amused me which stories stayed in the collective consciousness. At the time it was widely known that she was his daughter.”

I frowned at that. It was a niggling loose thread in Uther’s life that was now tidily wrapped up, one more plot that we could close the books on, which meant that when Uther left for his Final Quest, he really had squared away as many things as he could.

“So you don’t know whether or not he could lose,” I said.

“Opinions differed,” said Masters. He gave a wry grin. “That might well be the title of a retrospective on that period, ‘Opinions Differed’. Some thought that his disappearance was another move in the grand game that was his life, others thought that his luck or, perhaps, destiny, had finally run out. It seemed too calculated for that. Uther went off alone, without his Knights, having put his affairs in order. Do you know where he went? What he meant to do?”

“No,” I replied. Trying to get home, probably. I didn’t have much more to add to that theory.

“And you don’t know whether or not he could lose?” asked Masters. “He always seemed to try his hardest, even with the weight of a thousand victories behind him. Was that because his effort was always needed, or because he himself wasn’t sure how much the universe would bend in his favor?”

“I honestly don’t know,” I replied. “Bring my friends back, whatever you did with them. Let me go. I’d be happy to talk with you on neutral ground, somewhere that I don’t have to be questioning the nature of reality.” I already do enough of that.

Masters stared at me. I saw judgment in his eyes. “And you?” he asked. “Would it be possible for you to lose?”

There was a part of me that wanted to put some honest thought into the question, but I was getting a very bad feeling about where this was heading. I hadn’t forgotten the preamble to this conversation. Some of the people in Uther’s inner circle believed that he had been the true source of all the problems on Aerb, the attractor for all the horrible shit he’d ended up defeating. Masters claimed to want answers and nothing more. He was certainly playing the part of a man who had been searching for meaning for a long time, only to finally catch sight of a thread that he might be able to pull. And yet, if he got his answers, what kind of action would he take? Would killing the next Uther Penndraig in the cradle be the rational thing to do, if you believed that it would prevent the world from spiraling out of control? I worried that Masters might think the answer was yes.

I drew my sword.

“Please,” said Masters. “I’ve done no violence against you. I wouldn’t. I’ve seen the firsthand the fate that befell Uther’s enemies. I know better to say that you cannot win here, but --”

I lunged forward, spinning to put more of the weight of my body behind the blade, blood and bone lending their power to a single debilitating strike. The sword passed straight through Masters. He popped like a soap bubble, vanishing completely. He reappeared five feet from where he’d been standing, completely unharmed.

“Were you ever here at all?” I asked.

“I’m going to have to tell the others,” said Masters. “Some of them will want you gone, or at least contained. Others will want to help you. There are very few of us left, as you might understand,
given how much time has passed.”

“You’re going to tell people who will want me dead?” I asked.

“Uther kept secrets,” said Masters. “I’ve been privy to more than a few. Secrecy was his watchword though, even from his knights. Despite our differences, there was widespread agreement among the survivors that we keep open the lines of communication, lest we descend into war with each other.”

Would he need to be in the same room with me in order to use illusion magic? That seemed like it would be a logical limitation to illusion magic. It also seemed like the sort of thing that you could break wide open, if you had five hundred years to work on the problem. No, more than that, if you had five hundred years and worked at a place that was devoted to the collection, study, and analysis of magic items. The exclusion zones tended to have degenerate, world-ending magic in them, and I had to assume that this one was no exception.

But there had to be limits, didn’t there? If you could use illusion magic to make an illusion of a bullet moving a tenth the speed of light two inches from someone’s head … well, there would be no need for any other magic at all, would there? That might give it good reason to be hit by the exclusionary principle, but no other excluded magic was that degenerate or extreme, not even the one around Fel Seed.

I turned and went to the wall, to where the door had been. With my sword in one hand, I raised my fist and punched forward as hard as I possibly could, putting everything into it. My fist impacted the wall and set a shock of lightning-hot pain through me as skin and bone broke from the force of the blow. I sheathed my sword and clutched at my hand, gasping at the pain, and as it continued to blossom, I looked to the lower left of my vision. My health bar hadn’t changed at all, despite the significant injury I’d apparently given myself. I wondered whether I had punched anything at all, in the real world.

I reached into my bandolier and pulled out one of the lifeless marzipan fairies, using my good hand. I was shaking slightly from the pain, but I had a plan; I pulled the fairy’s head off, then took a long sniff from the neck, watching my hand carefully. As I’d expected it might, my hand began to heal.

All that pointed to sensorium capturing. Whatever had happened to my hand in the real world, I hadn’t broken it when I’d thrown my punch. And just like Masters hadn’t been able to make an illusion of Fenn that knew how to answer the key challenge, he also wouldn’t have any way of knowing what the fairies actually did. All he could do was make a guess. I let the fairy drop to the ground as my hand slowly finished healing itself.

Masters could make me feel pain and force-feedback, and he could clearly make alterations to sight and sound. Proprioception too, I supposed, given that if my hand had moved, then it hadn’t been stopped by any wall. Had it struck the door? Broken it? Were my real body and the illusory body presented to me desynced now? That, or I was simply comatose while the illusion played itself out.

“There’s no escape,” said Masters.

“Escape from this room, or from the illusion?” I asked.

“I can wait until you’re willing to listen to reason,” said Masters. “I have more questions, if you’d like some time to think about it. You know more than you’re letting on. Tell me about your Knights.”

Scratch being comatose, actually, not since it was impossible, but because if that was the case, then there was fuck all I could actually do about it. The worst case scenario that I could actually do
something about was a total desync of my body and my perception of my body, which would probably mean that from the outside, I looked like a videogame character who was going through animations that made no sense in the context they were happening.

“Why a square table?” I asked.

“You’re trying something.” said Masters with a frown.

“Maybe,” I said. “Indulge me while I try to break out of here though.”

“I think not,” said Masters.

“It’s important,” I said. “There was some meaning behind the square table, back on Earth, I want to know what it was on Aerb.” I tried my best to go into my soul without giving anything away, but I ended up closing my eyes when that didn’t work. The change I wanted to make was a simple one, lowering Bows by twenty and then increasing Essentialism by the same amount.

New Virtue: Soul Sight!

The message faded from my vision right as I opened my eyes. Masters was still speaking, but watching me closely. I had about twenty minutes of the extra sense. This was another test; I wanted to see whether or not he could fake input for senses that he shouldn’t have known about. There was no color marking him as having a soul, nor any color on his armor, marking it as linked to him. That wasn’t conclusive. What was conclusive was when I looked behind me and saw four colored shapes standing roughly where my companions had been -- red for Fenn, who was backed up against a wall, white for Amaryllis, her form banging against an invisible wall, seafoam green for Solace with a tint of a deeper green from her connection to the locus, and purple for Grak. None of them had moved much, save for Fenn. She would have had to have moved, or else I would have run into her.

And if their positions as reported by Soul Sight were accurate, then I was still in the room, and still on my feet, instead of being totally incapacitated like I’d feared. I wondered whether that was overconfidence from Masters, a limitation of illusion magic, or something else. Magic tended to have limits, even the most broken ones. If I was thinking like a Juniper, then maybe illusion magic would get more difficult the more of the sensorium you needed to fake. Based on the positions of my companions, and especially Amaryllis bashing against invisible walls, my guess was that they were all trapped in some sort of illusory cage of some kind, one that they didn’t think they could escape from. I hadn’t been able to see or hear them, but Masters needed me not to. For them, he could simply have put up a wall of sharp spikes or something worse to discourage them from moving and complicating things -- which would explain why Amaryllis was the only one attempting to get out, bashing herself against whatever was intended to be too painful to touch.

I’d been only barely listening to the nonsense that Masters was spouting; I knew all of it well enough, since it was the bullshit that Arthur had made up at the gaming table long ago. It was polished and refined, and delivered by someone who actually believed it, but backwards bullshit justification all the same. A square table had no head, it was a place where people could be meeting while sitting in opposition, on and on.

“It’s a reference to Earth,” I said. “There was a historical figure that Uther was emulating.”

No sign of Valencia. I wondered what had happened to her. She wouldn’t have shown up on Soul Sight, naturally, but I was left wondering whether Masters could affect her at all, or if he couldn’t, what he had done about that. No sign of the real Masters either, which wasn’t surprising. If he had ever been in the room in the first place, he would have had plenty of incentive to leave.
“Is that all you’ll say on the subject?” asked Masters. “Are you really so rebellious? I’m trying to help you. More than that, to ensure the existence of this world.”

“Just trying to match Uther’s perfect record,” I replied. I went over to where Soul Sight showed Amaryllis standing, and reached out to grab her by the wrist. As I did, the floor rose up and twisted around, presenting a red-hot tip of rock to me, stopping me from touching her. I reached out regardless, letting it burn me, then pulled back once I felt the pain. It was muted though, not quite at the heights of pain I’d expect from touching lava, and not quite so hot either. Another limit on illusion magic?

I stopped trying to think like a Juniper, and start thinking like a Reimer, or maybe like a Juniper reacting to a Reimer. If you gave a Reimer control of someone’s sensorium, the first way he’d weaponize it was to make an illusion of black caps over their eyes, blinding them. So the first thing that a Juniper would do is to patch that, ideally with some clever restriction that would allow for more creative (but less overpowered) munchkinry. I didn’t have a clear idea of what those restrictions would be, or how you would go about quantifying them. Plausibility of the illusion? Percent of senses that could be faked at once? I tried to think about what I had seen, and what that said about illusion magic. If you were going to make a red-hot bit of stone to stop me from touching someone, why do it like that? Why not just create it mid-air, hovering in place?

I reached forward again, and the glowing tip of rock was there again. I pushed forward, trying to channel WIS so that I could better withstand the pain. It still made my eyes water as I clenched my teeth to get through it, but it wasn’t as painful as it should have been. The lava was stopping my hand … except that it wasn’t, not really, because the feedback I felt wasn’t real, and both the proprioception and visual indicators were lies. I could see my hand with Soul Sight (dark yellow, the color of urine) as I kept reaching forward to Amaryllis.

The pain stopped all at once as the illusions faded, revealing Amaryllis standing in front of me right where Soul Sight had said she would be. She was still in full armor, with the helm concealing her from my view. She assumed a battle stance from almost the second the illusion was down and drew her sword from her hip, holding it in front of her in a defensive position.

“It’s me,” I said. “Keyring, I’ll start, rhodonite.”

“Apricot,” replied Amaryllis.

“Mourning,” I responded.

She didn’t relax, which was probably a good idea. The inclination of her head changed slightly. She was looking past me, to where Masters was still (apparently) standing.

“I don’t know how much of it you caught, but we’re in the illusion magic exclusion zone,” I said.

“How do you defeat it?” asked Amaryllis.

“Classified,” I said. “You can stop watching him, he’s not really there.”

Amaryllis looked around the room. “The others?”

I hesitated, then pointed. “There, there, and there,” I said. “Probably trapped in boxes like your own. Valencia … I don’t know.” I was worried about her. Would an illusion mage capable of capturing sensorium be able to determine what she was? Probably.

“You have another sense,” said Masters. “Which one?”
“That would be telling,” I replied. I was more or less done with his shit. Being snippy about it probably wasn’t going to help matters, but it was a useful vent for my feelings of frustration.

“You couldn’t see them,” said Masters. “Now you can. How?”

I ignored him. He didn’t deserve the answers that I had to give. “We need to be careful of a man-in-the-middle attack,” I said to Amaryllis. “I think he’s probably powerful enough that he could do that.”

Amaryllis gave me a curt nod. She hadn’t put down her sword. “Keyring is presumed compromised,” she said.

“Yes,” I replied. We couldn’t trust that what we heard from each other was what was actually said. “Ignore that for now, unless I ask you to do something stupid. He’s got weaknesses. He can’t fool your senses if he doesn’t have the information he needs to make the illusion.”

Amaryllis nodded at that. She had two entads that activated with a thought. I didn’t know whether she had used them while we’d been here, but they could provide a useful test of what was real and what wasn’t, especially the immobility plate. If an illusion pushed her immobility plate while it was locked, then she would still perceive herself as having moved, because Masters wouldn’t know that she wasn’t supposed to be able to be pushed.

I turned to Masters. “I can get the others out. It’s nearly trivial. Either you can cause me pain and inconvenience, or you can let me go. I don’t want another enemy. I already have enough of them. If there are people who think I’m important, or who want to talk to me, then we can try to set up some kind of secure line of communication, one that doesn’t put me face to face with powerful magic aimed my way.”

“I can’t let you slip through my fingers,” said Masters. “I’m sorry for any pain or distress, but I can’t let you leave, not when you’ve given me so little.”

“I don’t have anything to give,” I replied as I strode over to Grak. “I came here looking for answers, and I got … scraps. Hints.”

“Then trade me,” said Masters. “If you don’t know about the Other Side, then I can tell you. The Infinite Library? It’s a secret that I would betray, for you, if you would give me the knowledge I seek.”

“I gave you my theory,” I said.

“How can you still see your companions?” asked Masters. “The one in red is a compliant non-anima, how did you achieve such a thing?” I felt my heart hammer at that. Fuck. “Are you Uther’s dark reflection, the one that his writing prophesied?”

“Dark reflection?” I asked.

“Uther was the hero, more, the distillation of heroism, and in his writing on what it was to be a hero, there was often another, a foil, a reflection, similar in powers but unalike in mindset, a reflection.” Masters was staring at me. “Is that what you are, five hundred years late, the harbinger of his return? What did he say to you?”

“He said that if he was still alive, he would come find me,” I said. “But you already lit the candle, and people have apparently been searching for him for five hundred years, so I don’t think that’s going to happen. If he’s alive, then I don’t know what line of communication he could possibly have that would allow him to know that I’ve arrived. I’ve been on Aerb for months now, and I’ve seen no
I reached forward and grabbed Grak’s arm. There was no illusion to stop me this time, and he appeared right where Soul Sight had said he would be as soon as I made contact. I assumed that was simply Masters giving in, rather than maintaining an illusion that I could clearly get past.

“Illusion magic,” said Grak with a huff as soon as he could see me.

“Yes, probably,” I said. “Are you okay?”

“Well enough,” said Grak.

“Can you ward against it?” I asked.

“I’ve been trying to figure that out,” said Grak.

I moved over to Solace next. Masters wasn’t offering much resistance, either because he didn’t want to hurt me, or because what resistance he could offer cost him something. I had to wonder whether there was some resource being drained as he went along, some mana equivalent, or a more esoteric commodity that he was trading away, like the way that blood magic consumed my blood. I wasn’t very hopeful that it was a big limiter for him, given that he’d apparently given five different people five different illusions.

When I got to them, Masters allowed Solace and Fenn to pop into my field of view again.

“I have your non-anima,” said Masters.

I turned to him. “Another threat?” I asked.

“No,” said Masters. “Not a threat. She’s another question that needs to be answered. Uther gathered his Knights over the years, slowly but inevitably. What force bound them to him, even when they should have left his side? Why were they special, exemplars in their field?”

“We should answer him,” said Amaryllis. “He has information that we want.” She was staring at the illusion of Masters.

Fenn drew her bow again and fired it at Masters. He snatched the arrow from the air, then tossed it to one side.

“He’s not really there,” I said. “Just an illusion. And I don’t want to provide answers under duress. We need to grab Valencia and go.”

“He has information that we want,” Amaryllis repeated, turning toward me. “If there are threats beyond the ones we already know about, ones that we might be the only ones capable of stopping, then we need to know.” She turned back toward Masters. “What’s the Infinite Library? What does it mean that there are five years left?”

“It’s a library that contains every book that has been or will be written,” said Masters. “The last I’d heard, the latest book they could find was published five years from present.”

Well, fuck. That was taken straight from the Boundless Library, though the name had been changed (probably because having a Boundless Library and a Boundless Pit was too derivative and/or confusing). The countdown had always been part of it, but in my version it had always been hundreds of years out, sort of a seven generations thing that the librarians themselves had as part of their mantra but didn’t actually care that much about. With five years left? I was pretty sure that it
wouldn’t be lip service.

“Sorry,” said Fenn. “The world is going to end in five years?”

“Five hundred years ago, the world was going to end in one hundred years,” said Masters. “Changes were made, ventures embarked on, many of them by Uther himself, and the Library held steady.”

“Looped foreknowledge?” asked Amaryllis. I imagined her eyes glimmering with greed beneath her helmet.

“With limits,” said Masters. “I could make the introductions for you. My daughter is the head librarian.”

“Raven,” said Amaryllis.

Masters nodded.

One of Uther’s only living Knights. That was another mystery solved, though it raised a huge number of other questions. I thought back to what Masters had said earlier about the threats that had been rearing their heads again, and how many more questions there were ahead of us.

“Something’s off,” said Fenn. “Really, really off.”

“Exit,” said Amaryllis to Solace.

Solace slammed her staff down onto the ground and it flattened itself out into a smear of wood, which shimmered for a moment and then opened into a portal. I was wary of more illusions, but nothing about Solace’s soul seemed off. I was watching for a desync that I assumed would happen if Masters tried to overlay an illusion on top of someone I was watching.

“Zero to ten?” asked Amaryllis.

“Eleven,” said Fenn. “Not sure that portal is going to do it.” She looked at the portal for a fraction of a second, then darted over and placed her gloved hand on the mirror.

“It’s not me,” said Masters with a frown.

“What about Valencia?” I asked. The portal shimmered slightly, like ripples on the surface of a puddle, but it seemed like it went somewhere with drawers and books.

“I have her,” said Masters. “If you leave --”

The illusion that Masters had been projecting of himself disappeared. I turned back and looked at the wall, where the door had reappeared as well. It was broken in the middle, where my punch had landed, the impact of it hard enough to shatter the wood. My knuckles had apparently made it through without much damage to me, for which I thanked my virtues.

When I turned back to look at the others, Fenn was slipping through the portal, without so much as a discussion. I couldn’t feel whatever she felt, maybe because my luck was so much weaker than her own, or maybe because I had so many other things on my mind.

“We’re going,” said Amaryllis. “Val can take care of herself.”

“If that were true, she’d be with us,” I said as I watched Grak drop down. “She’d have killed everyone who stood against us. Whatever happened to her, whatever point she was taken, she’s not okay.”
The building shook slightly beneath our feet. Solace was watching us, frowning for what seemed like the first time. She stepped forward and slipped through the portal, twirling through to the other side. It immediately began to close; with druidic magic it was hard to be sure, but I was fairly sure she was forcing us to make a choice.

Amaryllis strode to the portal and stopped just beside it. “This was a honeypot, Joon, Masters might not have been the only one watching it. We’ve made our vote now, four to one.” She stepped forward and dropped down without waiting for a response. She was forcing my hand.

It was like a hundred thoughts were all crammed in my head and trying to get out the door at once. I kept thinking about what kind of threat might have just landed at the front door, whether it was one I knew about or not, whether I would be able to handle it, handle it alone since my teammates had bailed on me, then whether Valencia would be able to handle them. Uther’s old friends, from hundreds of years ago, or Uther’s old enemies, waiting and watching just like Masters had been? Both might have their reasons to go after me.

I kept thinking to myself that it was absolutely idiotic to stay in the face of whatever was happening, and I also kept thinking to myself that it would be an act of supreme cowardice and betrayal to leave Valencia behind. I thought that for the whole time the portal was closing, until it was so small that I couldn’t possibly have fit through it.

Achievement Unlocked: Solo Mode
I was alone.

I'd thought that it would feel like I'd made a huge mistake, but strangely, there was a feeling of righteousness that came with my decision. I probably shouldn’t have felt exhilarated, but I did. Whatever thing Fenn had felt so strongly, I only had a twinge of it. Did that mean that it was better for Fenn to go and me to stay? Or just that I wasn’t great at tuning into luck when the stakes were high? I shrugged off the question and tried to focus on the task at hand. I made a mental list of the things I knew.

1. Illusion magic was limited in the effects that it could produce. There was an upper limit to the amount of pain it could dish out, as an example.
2. Though it seemed like my illusory body could desync with my actual body, this either cost something, or there were limits to it.
3. For an illusion to work like reality, the illusion mage had to understand what the reality was.
4. The game layer was sacrosanct.
5. I had about fifteen minutes left on Soul Sight, which wasn’t subject to illusion, so far as I knew. Even if Masters knew that was what I was using, he would have to be able to see with soul sight in order to know what color to make it, which I wasn’t sure he could do.

Of course, any one of those could have been another layer of deception, but I was willing to bet that none of them were. That wasn’t to say that I was underestimating Masters, just that his motives seemed fairly straightforward, and even if they weren’t, it seemed like it was in his best interests to just keep the illusion as complete as he could. A fake weakness might work as a complicated chess move, but five fake weaknesses would be a bit much.

As it so happened, I had one other advantage. I wasn’t quite alone; I had Ropey.

I tried to think through the consequences of that. I didn’t know whether or not illusion magic could apply to entads, since most of what I knew was based on guesswork and some scant evidence acquired by experimentation. I did know that Bethel had something similar-to-but-distinct-from a soul, in the same way that the locus did. When I’d boosted Essentialism the first time, I had seen a line from my soul which pointed toward my sixth and seventh companions, before I had even met Bethel. That said, she had a lot of the same immunities that Valencia had, and I hadn’t gotten Bethel to Loyalty 10 as yet, meaning I hadn’t had a chance to see what her sorta-soul actually looked like. I also didn’t know whether she was typical of sentient entads in that regard, or whether she was special because she was my companion.

In the case that Ropey could be affected by illusion, he was close to being a liability. He showed up white to Soul Sight, because he was (technically) Amaryllis’ entad, so that meant that if Soul Sight couldn’t be faked, he could at least uni-directionally communicate with me, even if my own communication back wasn’t secure.

In the case that Ropey couldn’t be affected by illusion, he was a boon, but I had no idea whether or not that was actually the case. Worse, any inquiries would reveal him to anyone watching, which would remove one of the cards up my sleeve.

(Ropey didn’t have much in the way of senses, just sight, sound, and touch, and those were quite limited in range. I had asked Bethel about that in the course of some idle conversation about the vastness of her sensorium, and she had replied, in a frosty tone, that I should ask my companion myself, which I eventually had.)
I reached down and patted the rope in what I hoped was an inconspicuous way. He gave a squeeze in response. For now, I wasn’t actually sure what to do with that advantage, if it was one, but I was going to count it as another point in my favor.

I had a few problems though. The first was that Valencia didn’t have a soul, which meant Soul Sight wouldn’t work on her (naturally), and I didn’t expect any color to come from her entads either, given that they were unbound. The second problem was that I had no idea where she was. And the third problem was whatever had spooked Fenn and shaken the building, assuming that wasn’t just more illusion at work. I wasn’t sure whether Fenn’s sense of luck could be faked or not, but it didn’t seem like Masters had the incentive to do it, not when what he wanted was for me to stick around and answer all his questions.

I opened the door I’d punched a hole in and began retracing my steps. I wasn’t sure when exactly Valencia had been taken, but I thought that it was probably before Solace had been stopped from making her first attempt at a portal using her staff. My reasoning was that I’d seen Valencia hacking away at the amber that Solace had been stuck in, and Fenn had fired her arrow that was deflected shortly after that. If the amber had been an illusion, then Valencia’s attack with her sword was a misdirection, intended to keep the others away. And if Masters batting Fenn’s arrow to the side was an illusion, then Valencia would have presumably seen through it, assuming non-anima immunity applied. So, she was taken before any of that had happened.

This was assuming that Masters didn’t have other abilities beyond just being an illusion mage. Given the magic armor he was wearing and his extreme age, that probably wasn’t a great assumption. The Ell took longer to learn things than the other mortal species, but not a hundred times as long, which meant that Masters would in theory have had time to learn some other discipline as well. If I ballparked him as looking about fifty years old, then he was really five thousand years old, which was … well, daunting to say the least.

I made my way down the hallway, touching the walls as I went. I remembered passing doors, but illusion magic could have removed them from my sight. Touch could be faked too, but if my hand hit a door knob, it would knock my hand out of sync with my vision of my soul, and I would notice that.

“Ohay,” I said, partly to myself, partly to Ropey. “Unknown threats, unknown territory, not feeling too great about this.” I felt another squeeze around my midsection, which was comforting. “All I have to do is find Val and get out of here.” Easier said than done.

I stopped at the first door I came to, and tested the handle to make sure that it was real. I wasn’t sure how much Soul Sight I had left, but I was pretty sure I needed to be moving faster than I was, unless I wanted to either lose that advantage or feed more skill points into Essentialism.

When I opened the door, I saw a room full of boxes … which didn’t actually tell me anything, since my vision was suspect. I began feeling around, watching my hands carefully. Nothing seemed out of the ordinary. I stepped back, then looked down the hallway at the other doors. This place wasn’t actually a full dormitory, but it was meant to look like one from the outside, and it was sized for up to a hundred dream-skewered. That was too much space to search, especially if I assumed that Masters had taken Valencia to somewhere private and secure.

“Fuck,” I said to myself.

I went down the hallway, kicking in one door, then another, stopping only briefly to look inside. I was leery of the annihilation wards that Grak had mentioned were on the fourth-floor windows, but didn’t have the time to stop and test whether my bones were going to get removed from my body at every door. I didn’t even think I had time for a full inspection of each room, so I skipped that,
checking them over for a form visible in Soul Sight, then moving on to the next. Mostly, the rooms were empty, or with boxes in them. The windows looked out over a calm day at the athenaeum.

I was doing this when a woman with bubblegum-pink skin came jogging up the stairs. Her soul was maroon, and the fact that I could see it meant that she was real, or that Masters had somehow cracked Soul Sight. She carried a long spear with a barbed head and was dressed in black form-fitting armor of an unfamiliar material, which shimmered like an oil slick. She stopped when she saw me, just as I’d stopped when I saw her. I was pretty sure she was renacim, a species so rare that I hadn’t thought I would ever see one.

“Hi,” she said with a wave and a smile. “Speculator Masters came up here with a bunch of people, are you one of them?”

I stared at her. “Who are you?” I asked.

“Concerned citizen,” she replied. “You wouldn’t be Juniper Smith, would you?” As she spoke she reached up with her free hand and itched at her chin. If I’d been a little less world-wise, I might have missed her touching a small tattoo where her jawbone met her neck. I was almost certain it was the Parson’s Voice; if she’d activated it, then she was speaking to someone else at the same time she was speaking to me. I wanted one for everyone on the team, but the magical inks to make them were a quarter million obols each, and we hadn’t been able to justify the expense, not if it wasn’t going to cloak communication. It wasn’t much better than a walkie talkie, except that it was considerably smaller than what they had on Aerb, and much more discreet.

“No,” I lied. “Sorry. I was just coming from a meeting.”

“Kicking in doors?” asked the woman with a glance down the hall. “Look, if you are Juniper Smith, then we just want to talk, that’s it.”

I glanced at the spear in her hand.

“Just a precaution,” she said. “I assume you carry a blade for the same reason. Just in case there’s trouble.” I was holding my sword, but I wasn’t quite in a ready stance.

I was trapped. The only way down to the next level was through her, since (per Grak) all the windows had annihilation wards. I was sorely tempted to just bum rush her, but unknown entads made that a tricky prospect, especially when mine weren’t that impressive. Besides that, attacking someone who proclaimed that they just wanted to talk and had shown no aggression seemed like kind of a dick move.

“Okay,” I said. “We can talk.”

“Pallida,” said the woman as she started walking toward me with her hand held out.

“No handshakes,” I said, looking down at her hand.

“Sure, I’m wary of strangers myself,” said Pallida, dropping her hand. She looked past me. “Is Masters around?”

“No,” I replied. I immediately assumed that she or her friends were responsible for the way he’d been cut off.

“So,” said Pallida. “Are you Juniper Smith?”

“No comment,” I said. 
“I’ll take that as a yes,” Pallida replied. I was pretty sure that was for the benefit of whoever was on the other end of the tattoo. She looked past me again. “Word from reception was that you came up with a group. Are *they* with Masters, wherever he might be?”

“Sorry,” I said. “Can we cut to the chase? Are you one of Uther’s old enemies, or one of his old allies?”

Pallida straightened slightly, and some of the good humor fell from her face. “I gave my life for him on two different occasions,” she said. That was only slightly less impressive than it sounded, since renacim reincarnated instead of going to the hells. “And you?”

“I don’t know,” I said. It hurt to say that, like a betrayal of the Arthur I had known, but after so long … “I didn’t know him. From what I’ve heard, ally, I guess.”

Pallida let out a breath. “Well, good, we have that in common. I’m very serious that all we want to do is talk. Whatever Masters said to you, set that to the side for now. He’s an old friend, but a bit obsessive when the mood takes him. We should probably get out of here though. We have a ride waiting downstairs.”

“I need to find Masters first,” I said.

I heard the sound of three faint gunshots from outside, and watched Pallida turn and listen. After those three, there was silence.

“Okay, sure, sounds like things might be getting rough out there,” said Pallida. “Mind if I help you then? We sort of made a splash. You might have felt it. Sticking around too long is going to raise some questions that we’d rather not answer. The faster we leave, the better.”

My eyes went to her barbed spear. “I’m sorry,” I said. “Who the hells are you?”

“Pallida,” she said again, holding out her hand. When I made no move for it, she snatched it back. “Right, right, no handshakes. My friends and I are -- well, old allies of Uther Penndraig, as you said, here to see to the continuation of his legacy, such as it is. There’s a survey that they give to the dream-skewered --”

“I know it,” I replied.

“Ah,” said Pallida. “Did you know that your name has been on it for the last five hundred years?”

“Yes,” I replied. I didn’t see a point in lying about that, or acting shocked.

“So you can see our interest, can’t you?” asked Pallida. “And if you’ll come with us, we can fill you in a bit more. Like I said, we just want to talk.”

“What did you do with Masters?” I asked.

“Do with him?” asked Pallida with a raised eyebrow. “I haven’t seen him in a few decades. Something happen to him?”

I was momentarily startled by the loss of color as the tint of maroon left her. I inwardly cursed; I’d spent too long talking, and Soul Sight had faded. That did seem to confirm that Masters hadn’t cracked it; if he had, he likely wouldn’t have known about the time limit.

“He’s somewhere in this building, I think.” I said. “I’m not going to leave until I find him.”
I wanted to ask for a minute to myself so I could get my Soul Sight back, but obviously I wasn’t going to mention Soul Sight out loud, and in either case, I didn’t trust this armed woman I’d met a few minutes ago enough to be bereft of my senses for a few minutes. That was probably a good indicator that I shouldn’t be going with her, but I was worried that things might get violent if I resisted.

For all I knew, they’d already taken Masters out.

For all I knew, they were working with Masters, even if Soul Sight seemed to semi-conclusively rule out her being an illusion.

“I already offered my help,” said Pallida.

“I think I’m doing fine on my own,” I said. I didn’t trust her, naturally, even if she was who she said she was. She was far too eager to help me. While I wasn’t going to lean on the information Masters had given me, I also wasn’t going to completely discount it. Uther had enemies and allies, both of which had an interest in me, and some of those allies had apparently soured on him. It sounded plausible, not so much that I was willing to act on it, but enough that I was willing to let it bend how I thought.

“Kicking in doors and seeing which one he’s behind?” asked Pallida.

“Sure,” I said.

“And what’s he done to you?” asked Pallida. I didn’t like the way she was holding the spear. It was a little bit too casual. “Other than having a survey with your name on it.”

“He’s,” I started, then stopped. I didn’t know whether this woman knew anything about illusion magic. “What was he known for, when you knew him?”

“He was Raven’s father,” said Pallida. “He didn’t like his little girl, only twelve hundred years old at that point, going off on dangerous adventures. Eventually he came around, but I never got the details. He’s been watching after the dream-skewered for a long time now. Nice enough guy.”

I watched her as she said that. She seemed sincere enough. I found myself bending the other way, partly by virtue of the possibility she’d try to fight me if I kept brushing her off, and partly because I couldn’t actually do anything to stop her from following me without committing to aggression.

“You’ll help me find him?” I asked.

“I said I would,” said Pallida. “I won’t let you hurt him though.”

I frowned. “He kidnapped a friend of mine,” I said.

Pallida raised an eyebrow again. “Doesn’t sound like him, but like I said, it’s been a few decades. And I still won’t let you hurt him.” She looked down the hallway again. “There were six of you, according to reception.”

“Yeah,” I said. “Let’s go find them.”

“Masters kidnapped all of them?” asked Pallida. “Like, all of them? We’re talking about the same guy here, late middle-aged Ell, scholar?”

“He’s a man of secrets, I guess,” I replied. I started off down the hallway, moving past her and not making for the stairs. It was the only direction that I could go without trying to make her give way. I tensed as I put my back to her, ready to see a spear coming toward me from my periphery, but the
moment passed by. “And no, not all, the others left.”

I tried the handle on the first door I came across, and when it wouldn’t open, I lifted my foot, aiming squarely for the place where it latched.

“Here,” said Pallida. She reached forward and tapped the knob once, then opened it up without a problem. She gave me a cautious smile. “You pick up a thing or two, having lived since the dawn of time.” She looked me up and down. “You’re human, right?” She was trying to weasel more information out of me, as I’d expected she might.

“Sure,” I said. I looked in the room. It held row after row of bunk beds. They were well-made, but they were still bunk beds, triple-stacked and packed pretty tightly together. Each of the beds had a trunk at the base. I found the arrangement puzzling. Was this where the dream-skewered were supposed to be housed? Something resembling army barracks? It wouldn’t be a huge surprise if The Dream that Skewers misrepresented living conditions for the dream-skewered, given that they didn’t actually exist, but I didn’t really understand why you’d have something like this locked away up on the top floor. And from what Masters had said, there were a few patients, they were just plain old crazy. I assumed that they’d be kept down on the lower levels though.

“Not there?” asked Pallida.

I’d spent too long looking. “No,” I said. “Moving on.”

“Do you know why your name was on that list?” asked Pallida. “I met the dream-skewered, a dozen lifetimes ago. I asked one of them, after Uther was gone. I don’t remember everything, but I remember the look of confusion on his face when I went through the survey with him. Masters tightened things up after that. He didn’t want people snooping around, not even nominal allies.”

“He didn’t call you here?” I asked. I tried the handle of another door, and again found it locked.

Pallida came over and stopped with her fingers a few inches from the handle. “We’ve kept eyes on him, and a few others.” She tapped the handle once and then pushed down on it, letting the door swing open.

Pretty convenient that a reasonable person who also wants answers from me shows up right after Masters has burned his bridges.

The room was an armory. I counted two dozen weapons sitting on the racks mounted against one wall, all of them so different from each other that I thought most of them were probably entads. There were five suits of armor sitting against the far wall, all of them so different in their appearance that I was sure they were magical. Close to me, there were two display cabinets, side-by-side, each of them filled with trinkets.

“Guys, Masters has an armory up here, and I saw a barracks just a bit ago,” said Pallida, no longer keeping up the pretense of not using the Parson’s Voice to talk to the others. “I think we just found one of Uther’s hidey-holes. Masters might be more dangerous than he let on.”

“We’re in an exclusion zone,” I said. “Illusion magic, which is about how it sounds. Masters is a master illusion mage.”

Pallida’s eyes went wide. “What?” Someone must have said something on the other end of her tattoo, because she started talking again, her words fast and clipped. “He says we’re in an exclusion zone for illusion magic,” she said. She waited half a tick, listening to the other end. “Masters is a practitioner. Face and Lotus protocols.”
I knew those: they were lifted straight from our tabletop games. The Lotus protocol was one the group had developed when fighting a dream mage, and the rule was that nothing was to be trusted as being reality. The Face protocol was one they’d made when I had them go up against a small army of doppelgangers. I wondered how fleshed out Arthur might have made them, or what adaptations he might have made for Aerb. There was little question in my mind that was where Pallida had gotten them from.

“Because he’s the one who said it,” Pallida replied to an unspoken question. “No, I don’t know why they would. Uther, probably.” She paused again, listening. “Well, even if you were, he’s got other magic. Assume that he’s shored up any weaknesses.” She shot me an apologetic look and rolled her eyes at whatever the other person had said. “I’m going radio silent while I make conversation..” Another pause. “Because that’s what I trained on.” She touched her finger to the barely-visible tattoo. “Sorry.”

“Do you have countermeasures?” I asked. Not that I would trust them.

“One of my partners does, downstairs,” said Pallida. “You have to tell us what you know, if not about who you are and what your connection to Uther is, then about Masters and what he can do.”

And now, suddenly, we’re on the same side against Masters, uh huh, sure. “He’s capable of displaying different illusions to different people, implicitly including the ability to insert himself into conversations between two people to make each think the other said something different. He doesn’t appear to be able to model things that he has no knowledge of, including people that he’s never met, information he never heard, or entads and other magic that he doesn’t know the function of. So far as I’m aware, he can meddle with any sense. I also assume he’s got surveillance either as part of the magic, or acquired it independently.”

Pallida stared at me. “And your plan was to track him down and attack him with a sword?”

“He has my friend,” I replied. “How things are going to go depends on how willing he is to give her up.”

Pallida tapped Parson’s Voice and repeated back what I’d told her, with some bits of commentary in there, most of which was about how she really didn’t like this new development.

“You said we were short on time,” I said when she was done. “You’re worried about the police showing up?”

“Our method of arrival wasn’t exactly subtle,” said Pallida. “We were worried you’d disappear. Sounds like campus security are already downstairs.”

“Then go,” I said. “I can make the search alone, and I’ve done nothing illegal. If you really want to talk to me, then we can get in touch later. Leave an ad in a Boastre Vino newspaper that mentions the colors green, chartreuse, and gold. I’ll be checking for the next month.”

“He wants us to leave,” said Pallida with a finger to her tattoo. “Gave a semi-anonymous contact method.” She listened and winced. “No dice,” she said to me.

“I don’t want to fight you,” I said.

“Whoa, hey, no one said anything about that,” said Pallida.

“Masters wanted answers from me,” I said. “When I tried to leave, he trapped me in an illusion. So if you want to keep asking questions, it’s going to have to be while I’m searching this place from top to bottom.”
“Sure,” said Pallida. Her mouth twisted in a frown, and she twirled her spear around once. “Fine.”

We went further down the hallway, opening a few more doors (storage, bathrooms, kitchen, dining hall, more beds) until we got to the other end of the building, on the opposite side from the room that contained the mirror. The more I thought about it, the more I saw the positioning of that mirror in its own large room as being something like a shrine to Uther, especially since it hadn’t been in use for the last five hundred years. There hadn’t been any dust, either, had there? Not there, nor on the bunk beds, nor in the armory, which meant that all of it must have been regularly cleaned, waiting for … something. Me, maybe.

This last door on the top floor was bigger and more imposing, sturdily built in a way that I didn’t like.

“Do the honors?” I asked Pallida after I tested the handle and found the door locked.

Pallida tapped the handle, then frowned. “Not the kind of lock I can open,” she said.

“No?” I asked. “And what does that mean?” I didn’t trust her.

“It’s locked from the inside,” said Pallida. “Some locks you can’t open unless you’re on the right side of the door.” She stepped back. “Seems likely this is where he would be. Though …”

“Though you’re wondering why, if he’s a master illusion mage, he wouldn’t just make it seem like there’s not a door here at all?” I asked.

“Yeah,” said Pallida. She turned to me. “I’m serious that we need to get out of here sooner than later. Campus police are already on the scene, and there are limits to how hard we want to fight in order to get away. We’re not really equipped for cracking heavy defenses.”

“I’m going to kick the door down,” I replied. I stepped in front of the door and took stock of it. It was wood, but a quick knock on it was enough to confirm that under the wood was metal. What Pallida had said meant, what, that it was barred from the other side? Chained, maybe? I had a lot in the way of brute strength, but I wasn’t about to delude myself that I was going to be able to snap a steel bar with my kick, let alone something more exotic. I still squared myself and reached out to my magics, then raised my foot.

Maybe predictably, a kick using the full force of my power broke a bone in my leg and was incredibly painful. I felt ligaments and muscles tear from the strain. A now-familiar notification from the game popped up, informing me of the broken bone affliction, and I watched the health meter dip a few points, which was, in a way, comforting. At least what I was doing was real. I ate a marzipan fairy as the pain began to increase, and sighed in relief as the bone set and healed itself.

“You broke a bone,” said Pallida. “Then healed it?”

“Not important,” I said, touching the mark I’d made on the door. I glance over at her and saw her watching. “Entads.”

“Sure,” said Pallida. She was looking down at the bandoliers on my chest. “Wait. I know that one. It was one of Uther’s.”

“Probably,” I said, looking at the door. I’d used a fairy instead of burning through a bone because I hadn’t wanted to show off unexplained magical healing with all the questions that would raise, but apparently the fairy raised other questions.

“No, I mean the fairies were one that was locked to him, invested by him,” she replied. “There was a
jar of them that could only be opened with his consent. We had to give it back to his son. How do you have one of the marzipan fairies?"

“Long story,” I said. “You said we don’t have much time. Is there any way that you can open this? I don’t know what your specific abilities are.”

“We find your friend, then we go,” said Pallida. “You come with us, alright? And Masters doesn’t get hurt.”

I hesitated, naturally. So far, Pallida hadn’t done anything to inspire mistrust, but then, Masters hadn’t either, up until the point where he’d prevented me from leaving. The others were somewhere else, probably within the athenaeum, but I had no clue whether their plan was to return to me or bail out entirely using the teleportation key. I was pretty sure that Amaryllis was going to be pissed off at me for ignoring democracy, more so if I left with some strangers.

“Okay,” I said. “We find my friend, we leave. If you notice anything off about her, give me a chance to explain before you do anything rash.” When we found Valencia, I would ask her to give me her best read of the situation, and then not leave until she’d given the all-clear. I worried that she was unconscious, but that was a bridge I’d cross when I came to it.

“Stand back,” said Pallida. “I want to make sure I’m not going to kill you.” She held out her spear and pointed it at the handle of the door, raising the shaft so that she was resting it gently on one hand. She carefully swung the spear to one side, in my direction.

“Hey,” I said.

“Hold the end,” she said. “Avoid the barbs.”

I did as she said, holding onto the part of the shaft I could reach. She partially released it, letting me hold it. “What are you doing?” I asked.

“Testing,” said Pallida. “Making sure that I’m not swinging this thing where I don’t want to swing it.” She let go of the spear, leaving me holding it up. “Okay,” she said, grabbing it again. “Now I know you’re not an illusion, because if you were, then the spear would have fallen to the ground, and if it were on the ground, I couldn’t hurt the real you when I swung it.”

“Unless he has telekinesis,” I said. “Or some other way to fake haptics.”

“Does he?” asked Pallida with a frown on her face.

“I don’t know,” I said.

“If I kill you, sorry,” said Pallida. She faced the door and took a deep breath. “This is going to take a moment.”

“Sure,” I said. So far as I could tell, this was my chance. I slipped into my soul as quickly as I could, took all the points in Stealth and dumped them into Essentialism, then backed out as quickly as I could.

Skill increased: Essentialism lvl 28!

New Virtue: Soul Sight!

The door had several long slashes across it, making a crude rectangle. The tip of Pallida’s spear was still glowing. In the wake of the slashes was something bubbling and dark purple, the end result of
whatever had happened to the metal and wood. I was immediately sure I didn’t want to meet the business end of that spear.

“Try kicking that,” said Pallida, gesturing toward the marks she made.

I walked forward and squared myself, then raised my foot and kicked with all my strength. This time the metal gave, breaking apart in the few places the bubbled purple stuff was and falling inward. I ducked to one side, putting myself out of the line of fire, then peeked in when what I’d seen registered.

Valencia was standing next to Masters with her pistols drawn and pointed my way. Masters was tied up in a chair with a gag over his mouth and his eyes closed. He didn’t seem conscious. The room had all the furnishings of an office, and the chair that Masters was sitting in clearly belonged to the desk that was behind him. There were two big windows with a view down the mountain, leading to the shimmering water. I looked at Masters with Soul Sight; he was reddish-orange, right where I’d expect him to be with normal vision. Valencia showed no soul at all, which was as it should be too, but that also meant she had no color to check.

“Keyring,” said Valencia, not lowering her weapons. “Dolomite.”

“Oak,” I replied.

“Excitement,” said Valencia with a nod. “Where did we first meet?”

“Prison,” I said. “It’s me. And I don’t think that his magic would be effective on you, given the necklace you’re wearing.”

That was one of our standard deceptions to explain Valencia; she was wearing a necklace of non-detection, which would cancel out any attempt to sense her with anything more than sight or sound. We needed a plausible reason that she would appear to be a non-anima, and an entad was as good an excuse as any, given their variable effects. It wouldn’t hold up, and we didn’t want to be in a position to have to explain things in the first place, but maybe it was an excuse that might serve us for a bit, until we could get to the anti-infernal bit, which was still shaky ground. The obvious next request for anyone with half a brain was that she remove it in order to confirm that it really was an entad, which was why it was an excuse to be used sparingly. I did wonder how many devils wearing non-anima skin had come up with all the same justifications for why they appeared as they did.

“Who’s that behind you?” asked Valencia. She still hadn’t lowered her pistols.

“Pallida,” I said. “She claims to be a friend, but I was hoping that you would be able to tell me for certain.” From my periphery, I saw Pallida give a little wave. “Can I come in?” I asked.

“Of course,” said Valencia. She still hadn’t lowered her pistols. “You’re going to have to explain things for me.”

“Naturally,” I said. I stepped into the room with her and glanced back at Pallida. “You’re under your own recognizance to shoot her.”

“Excuse me?” asked Pallida, ducking behind the door. “You just said she can shoot me?”

“No,” I said. “I said that she was allowed to shoot you and shouldn’t look to me for instruction or approval, because she should be immune to the effects of illusion magic, and I’m not.”

“Ah,” said Pallida. “I’ll stay behind the barrier then, thanks. You said that once you got your friend, we could go.”
“Who is this person?” asked Valencia.

“One of Uther’s old allies,” I said. “At least, that’s what she claims.” I looked at Valencia’s armored form, then back toward the door where Pallida was hiding. “Can you tell me whether that’s true?”

“Come out,” said Valencia, toward the door.

“Guns down?” asked Pallida.

Valencia lowered her pistols, but kept them in hand. “Okay.”

Pallida poked her head in, confirmed that there were no weapons aimed in her general direction, then stepped into the room. “We really should be going,” she said.

“Tell me about Uther,” said Valencia.

“Uh, that’s sort of a long story,” said Pallida. She paused. “He was the greatest hero the world had ever known. I wasn’t one of his Knights, but there were a few times I came close to filling that role.”

“If he came back, you wouldn’t be loyal to him,” said Valencia.

Pallida hesitated, then glanced at me for a moment. “I wouldn’t pledge fealty, no,” she said.

“It’s more than that,” said Valencia. “You feel hostility toward him.”

“No,” said Pallida, shaking her head. “He was a hero, and a great man, but it’s complicated.”

“What happened to the others?” Valencia asked me, turning fractionally in my direction.

“They left through Solace’s entad,” I said. The variable effects of entads were something of a godsend for cloaking our true abilities. “They should still be somewhere on campus, unless they left for the big guns.”

“Then why are you here?” she asked.

“I didn’t want to leave without you,” I said. “Masters was making some kind of threat when he got cut off, and … I disagreed with leaving.”

Loyalty Increased: Valencia the Red lvl 26!

“I don’t think that was very smart,” said Valencia. “I was the one who silenced him, when I heard him trying to use me like that. I’ve been waiting here because there was a banging sound outside, then gunshots. Was that just you?”

“Probably our landing and the local police,” said Pallida.

“We should go,” I said. “Val, it’s up to you whether we go with them or try to escape down the mountain. Obviously if we spot Mary and the others, we’ll regroup.”

“I get the same sense from her as from Masters,” said Valencia. “Stronger, because she’s not masking it. She wants answers, and she’s willing to hurt someone to get them.”

“I don’t think that’s fair,” said Pallida with a frown. “And how the hells do you know anything about me?”

“Entad,” I said.
“You’re lying,” said Pallida.

“She’s just guessing that you’re lying,” said Valencia.

“Well, that’s already annoying,” said Pallida. “Look, we really don’t have all the time in the world, because the cavalry has just been called in.”

I didn’t really want to go with her and her friends, but I didn’t know what the other members of our party had planned for. The only information I had was that they were, probably, two hundred yards away, since that was what Solace had said before trying to make a portal the first time. Would they stay, once I hadn’t come through? Or would they use the teleportation key? I could imagine Amaryllis scouting out the situation and seeing whatever forces Pallida’s people had brought to bear, then deciding that this was a battle to fight another day, especially given that they had no easy way around illusion magic. Amaryllis thought I was important, but there were limits.

Fenn though … I thought Fenn wouldn’t let common sense stop her.
Peer Pressure

The oppressive feeling of being trapped in a corner faded away once Fenn was through the portal. Dealing with gravity was a bit tricky, as she’d gone down through a hole and come out the side of a tree, but she landed on her feet easily enough and took stock of where she was. It was clearly an office of some sort, with hundreds of drawers along one wall and a large desk built for someone who must have stood ten feet tall by the looks of the chair behind it. There were books too, so many that half of them must have just been for show. The tree was a bit of a spectacle, thirty feet tall and drinking in sunlight from a large glass roof, the centerpiece of the room. Rich people always had things like that, big ostentatious crap that proved they were someone of means. The way the glass panels were divided by metal struts called to mind the prison, which was a misadventure she hoped she might eventually forget.

The others came through soon enough, first Grak, then Solace, and finally Mary. No Juniper.

“Come on, Juniper,” said Mary, facing the portal.

“The connection won’t last,” said Solace.

“He might not come,” said Mary, still staring at the portal.

“The fuck do you mean he might not come?” asked Fenn.

“Val,” said Mary, by way of answer. She turned to Solace. “Can you hold it open?”

“No,” said Solace. “Two hundred yards is about as far a connection as I’ve ever made. What does it mean if Juniper doesn’t come back?”

“He’d fucking better come,” said Fenn. “We voted. Val can handle herself, she’s invincible.”

“She’s not,” said Mary. “I didn’t mean that we’d leave her forever.” She waited a beat. The portal was just about too small for Juniper to plausibly fit through. “Come on Joon, it’s a tactical retreat, until we know what we’re dealing with, until we --” The portal winked shut, leaving the trunk of the tree unblemished, and evaporating any last hope that Juniper was going to come through. Mary let out a groan. “This is not how a rational person reacts to someone taking a hostage.”

“We have to go back for him,” said Fenn. “We’re, what, two hundred yards away? I can cover that in a handful of seconds. Less, if I burn blood.”

“We’re in an exclusion zone,” said Mary. “I don’t even know if we’re safe from illusion magic here. There’s some level of implied surveillance too, given that Masters wasn’t in the room with us. We have no way of seeing through the illusions. Even if there weren’t some other complication on the way --”

“Still feels like there is,” said Fenn. Her luck sense wasn’t screaming so much anymore, but it was whimpering, especially at the thought of going back to where they’d been. She was willing to defy that sense of wrongness, if it meant helping Juniper.

“A confrontation with Masters would mean having to doubt every single thing that we see, and everything that we say to each other. Speaking of which, we should do a keyring.” Mary looked at the other three. “I’ll start. Granite.”

“The keyring is broken,” said Grak.
“I know,” said Mary. “There’s a good chance for false positives, or even just the enemy letting the authentication take place and then swooping in after.”

“Then what’s the point?” asked Grak.

“There might still be a negative response,” said Mary. “It’s worth doing on that count.”

“A false sense of security is worse than no sense at all,” said Grak.

“It’s not a false sense of security,” said Mary with a huff. “We just need to treat the checks as meaningless unless someone fails them.” She turned to Solace. “I don’t suppose you have a solution to this problem?”

“Not that I can think of,” said Solace. “I would say that any display of my abilities is proof enough I am who I say, but I’m not sure that’s right.”

“It seems easy to fake, given what we’ve seen of illusion,” said Mary. Fenn could practically hear her frowning under her helmet.

“Wait,” said Fenn. “I actually have something for this.” She held out her glove and thought of the entad, which appeared in her hand. It was a small gray ball, recently liberated from the conference room they’d all sat in. “Before you say anything, I didn’t steal it, I just grabbed it in case Masters hadn’t meant to leave it behind. And I didn’t steal the mirror either, since as I see it, that mirror is technically Uther’s, and you’re his heir.” The ball flashed as Fenn spoke, punctuating each part of the sentence, all green except when she’d said ‘Uther’, which was blue.

“Fourteen points,” said Mary. Fenn rolled her eyes at that. They were accumulating secrets, and Mary’s parentage was, technically, one of them.

“But we can use this for proof that we are who we say we are, right?” asked Fenn. “Citizen Kane.” The ball flashed green. “Boom, proof.”

“Hrm,” said Mary. “That does work, but we have a limited pool to draw on.”

“Whatever you say,” replied Fenn. She tossed the entad to Amaryllis. “But if you said, ‘oh, good job Fenn’, I wouldn’t be too broken up about it. Not a lot of appreciation for my contributions, of late.”

“Good job, Fenn,” said Mary. She held the entad in her hand and turned it a few times before speaking again. “Raging Bull, Lost Pills, Chinatown -- wait.” The ball had gone green, gray, green. “Chinatown, Chinatown,” said Mary. The ball went blue, then green.

“Okay, I’m sure that’s very fun for you,” said Fenn. “Let’s stop fucking around and let’s get our Juniper back.”

“We need protocols,” said Mary. “Given the demonstrated scope of the magic, it would be trivial for an illusion mage to turn us against each other. And, come to think of it, the problem with the ball as a form of authentication is that it can give false negatives if Masters can just arbitrarily change the perceived color. Actually, if we were going to be using information that both of us knew, then we could just skip the entad entirely. The bitrate would be terrible. Grak, checksums?”

“Too onerous,” said Grak.

“No,” said Mary. “First letter of each word, switched to number, mod 13? That would just be a calculation per word? Less, if we exclude words less than four letters. Checksum would mean that you couldn’t change the words without also changing the sum, and we can add a salt to the
checksum that would make it near-impossible to dupe in realtime.”

“Too onerous,” said Grak.

“Juniper is in trouble,” said Fenn, crossing her arms. “You’re acting like we’ve got the time to sit around and talk.”

“She’s acting with prudence,” said Grak.

Fenn threw up her hands. “It’s all illusion, nothing matters, Masters could just make you tell me the wrong protocols. Let’s go already.”

“I hate this,” said Mary, shaking her head. “Ugh, this is Fallatehr all over again, but worse, because at least that was just paranoia about people.”

“With some time, I might be able to ward against it,” said Grak. “I was studying the magic from inside my cage. Warding against a novel magic is … difficult.”

Fenn knew what was coming before Mary even opened her mouth. It was an objection that any ward was suspect, because blah blah blah illusion, and then Grak would counter with something about how he could see, and they were all wasting time.

Fenn strode out of the room without another word. The others would follow, or they wouldn’t, but she would at least be doing something.

---

“This is how people die,” said Amaryllis, rushing to catch up with Fenn. “Juniper split up the team, and you’re trying to split it up further. We need time to think, dammit, if we all go our separate ways, then all those different roads will lead to death.”

They were walking down a wide hallway with doors lining it. Amaryllis caught a few glimpses of classrooms, tiered seats that allowed an instructor to lecture as many people as possible at once. It reminded her of her time at Quills and Blood. Certain things were a universal part of the athenaeum experience.

“If we die, then we die,” said Fenn. “You’re the one who keeps saying that Juniper is the lever that moves the world, fucking act like it.”

“Are you pissed off at me?” asked Amaryllis. They were walking quickly, and approaching the door. “He was the one who stayed behind, we took a fucking vote and he decided to go off on his own.”

“Yeah, well I’m pissed off at him too,” said Fenn. “If he had put his foot down, I would have stayed too, obviously. The only hope I have is that he was tricked by the illusion magic somehow, but if it’s not that, then –”

She pushed her way out the doors of the building and came up short when she saw smoke in the distance.

Amaryllis really thought that ought to be the time for conversation, but Fenn took off at a dead sprint, and after a quick look back to make sure the others were coming, Amaryllis followed in Fenn’s footsteps.

Fenn’s scars had shifted enough to lose their power, and without a boost to Essentialism, Juniper wasn’t able to fix them. She was still ridiculously fast, partly from a career spent wandering the Risen Lands with her long-legged stride, partly elven heritage giving more strength and grace, and partly
just because the game had decided that was one of the things that Fenn was good at. All their skills and abilities had increased, some of them noticeably, but the increases were unevenly distributed, and though Amaryllis was far better at Climbing, Fenn had gotten a boost to Athletics. It was hard to tell what any of that actually meant, given all the other factors, but Fenn hadn’t been lying when she’d said that she could cover two hundred yards in a handful of seconds.

The scene outside the dream-skewered clinic didn’t bode well. A shiny hunk of metal shaped a bit like a bean was sitting in front of the clinic. It was as large as a sailing ship but shaped nothing like it, and it had no obvious entrance that Amaryllis could see. Around it were curls of molten rock where it had landed, making fractal patterns on the ground, not corresponding to any known means of propulsion. That was where the smoke was coming from. There were people standing some distance back, having come to see what the commotion was all about, and Amaryllis wanted to scream at them to get back.

Fenn had her bow at full draw and was moving more slowly, watching for enemies as she made her way across the smoking ground.

“Get back!” shouted Amaryllis to the people who had gathered to watch. It made her conspicuous, but there was nothing for that, especially since she was already in full plate. The helmet restricted her visibility, and she wished that it was off, but she wasn’t especially keen on the idea of getting shot in the head. “Imperial business, get back, your lives are in danger!”

There was a part of her thinking about the ramifications of all this. If it were known that dream-skewered weren’t real -- well, that would make it harder to explain Juniper to people, if they had to. If it came out that Speculation and Scrutiny were built at least partly overlapping an exclusion zone, well, that was going to be international news, likely on the front page of the broadsheets, especially if the connection to Uther was discovered. Amaryllis felt a profound regret at having used their real names, since this wasn’t what the fledgling Republic of Miunun needed. The entads would give them away easily enough to anyone watching closely, and there was little helping that, but they hadn’t needed to make it easy for anyone.

This was, simply put, an unmitigated disaster of a first public encounter.

The crowds weren’t moving much, as Amaryllis had thought they might not, because people didn’t listen to simple directives. In fact, the crowds were getting bigger, as the existing crowd attracted more crowds, and classes in the area were letting out. A ship, weapon, or entity had landed next to the clinic, melting rocks, and people were just standing around, trying to satisfy their curiosity.

(In some sense, it was heartening. The reactions of the students and faculty were those of people unaccustomed to crisis and violence. In Barren Jewel, people began pulling their children from the street at the first sign of trouble, even before someone started wielding magic or pulling out a gun. Here, in a core part of the Empire of Common Cause, where citizens from all over the world were gathered, it was like people had forgotten why all the major cities had thick walls and heavy wards around them. It was good that people weren’t adapted to crisis, since it meant that they hadn’t suffered the hard knocks of first-hand experience, even if it was also annoying, and some of them might die for it.)

Amaryllis pulled out her pistol and fired three shots, just above the heads of the crowd. Where her words had little effect, the gunfire did. People started yelling and scrambling, moving away from the clinic. She kept her pistol out, waiting to see if there would be a response. Fenn was moving too fast, close to the metal bean, not heedless of the danger (not given how strong her luck sense had gotten) but certainly not moving with caution. Amaryllis rushed over, just as Solace and Grak appeared in a burst of leaves beside her. Solace had a new staff, which was really more of a tree branch. It had
been chopped from the office tree they’d portaled through, by the looks of it.

When Amaryllis rounded the metal bean, she saw Fenn aiming the bow at a fox Animalia. The fox had a dagger in each hand, and was staring at Fenn.

“We’ll be gone soon,” said the fox. “Nothing to lose your life over.”

“Drop the daggers,” said Fenn. “Then get down on the ground and put your hands behind your back.”

“That’s not how this is going to happen,” said the fox. “You’ll shoot me, you’ll find out why that was a bad idea, then you’ll get carried off to the nearest bone mage for major healing.”

“Don’t,” said Amaryllis.

Fenn released the arrow. It zipped through the air at a terrifying speed, then stopped dead in the air a foot in front of the fox. It was hard to tell what expression was on the Animalia’s face, given how different in structure it was, but it seemed like it was grinning.

“Alright,” said Fenn. “Fair play.”

The arrow flipped around in the air with a single smooth motion. Fenn was about to say something, but she twisted to the side and stuck her hand out instead. The arrow went from a dead stop to full motion with no apparent period of acceleration, so fast that it would have been impossible to dodge. Fenn had been moving before it though, reacting before the stimulus, and she caught the arrow in her hand as though it hadn’t cost her any effort or required any special skill.

The grin had slipped from the fox’s face.

Fenn casually assumed her archer’s stance and brought the same arrow she’d shot before to full draw.

“Disarm,” she said. “Drop to the ground, hands behind your back.”

“Illusions,” said Amaryllis. “It might be bait.” And illusions can silence, swallowing up my words, or twisting them to say something else.

“Illusions?” asked the fox, speaking toward Amaryllis.

“Don’t waste resources or reveal abilities unless you have to,” said Amaryllis, hoping that her words were getting through. “Try not to do anything that might kill a civilian if you’ve gotten turned around.”

It was utter idiocy to have come back here. They weren’t able to trust their senses, weren’t able to communicate, and weren’t able to actually gather any information. What they should have done was simply left. Leaving Juniper on his own to face down whatever unknown threat might have been terrible, true, but there was such a thing as a sunk cost fallacy, even if she was the only one that seemed to realize it. They needed a way to neutralize the threat. That was the only way that an assault on the clinic could be successful. They didn’t even know the bounds of the problem.

“Grak is warding,” said Solace as she approached Amaryllis.

“You brought a child?” asked the fox, on seeing Solace.

Amaryllis glanced back to where Grak was standing with his wand out. He was using the same
technique that he’d used to trap her, making a ward and then altering the boundaries of it, hopefully to shield her. But she couldn’t trust it, could she? They hadn’t had time to work out communication. She turned back to the fox.

“Who are you?” she asked.

“I’m just going to shoot him,” said Fenn.

“Her,” replied the fox. “And who we are is none of your concern, just go back to whatever office you came out of and write up a report on a situation you were in no way prepared to deal with.”

“Is this thing a ship?” asked Fenn, gesturing with her head toward the hunk of metal. “Because we’re not going to let you back in without some explanation.”

A humanoid shape came jogging up from inside the clinic, then slipped through the gates, which were cracked open just wide enough for it. The person-shape looked like it was made of water, with a slightly-pointed skull floating at the center of what would have been the chest. A bandolier was looped over one shoulder, providing storage, and a rifle was held in what you couldn’t quite call hands. It was a lenssi, a rare species that fell well outside the norm. They weren’t even humanoid except by convention.

Fenn didn’t shift her aim. “Stop where you are or I’ll shoot,” she said.

“You’ve already seen how ineffective that is,” said the fox.

“Entad,” said Fenn with a nod to her bow. “Next arrow is going to come out molten metal.”

“Seems like it would be hard for you to catch when it comes flying back to you, no?” asked the fox.

The lenssi whipped one of its arms around, with the end as thin as a blade, making gestures in the air. The fox watched it with half an eye. The lenssi had no voice, which meant they used a gestural language, one that Amaryllis didn’t have even the barest knowledge of. She wondered whether an illusion mage would need to be able to speak whatever language they had their illusions speak. There were very few entads that granted the ability to become a full polygot, most of them well-known, and translation tattoos for everything else. Perhaps obscure languages would solve some of the communication problems their team was facing. Their collective languages were, unfortunately, relatively common, just Groglir and Elven, and whatever languages Valencia could speak (all of them, with the right devil).

“Whose authority are you under?” asked the fox, presumably in response to whatever the lenssi had gestured.

“Speculator Masters,” said Fenn, before Amaryllis could respond. As bluff went, it was an interesting one, and there was some technical truth to it, considering that they’d been invited in by him. It was, at any rate, better than saying the truth, which was that they were the Council of Arches, from the Republic of Miunun on the Isle of Poran.

The fox relaxed slightly. “You’re not police?” she asked. “Not imps?” That was short for imperials, though the slang dated back to the Second Empire and was rarely used. That was an oddity to be tucked away for later examination.

“Hells no,” said Fenn. She still had her bow at full draw. She was strong, but the strain was starting to show. There was a reason that guns made for better standoffs.

“Did Masters send you in to stop us?” asked the fox.
“Sure, let’s go with that,” said Fenn.

“There’s a truce,” said the fox. “Are you planning to act against it, or do you just not know it? Are you part of his side, or hired guns?”

“Hired would imply that we’re paid,” said Fenn. Her arm was starting to waver. “But I don’t know anything about a truce. Do you often come armed to deal with people you have truces with?”

The fox turned toward the clinic, mouth slightly agape, as though listening to something that Amaryllis couldn’t hear. “Shit,” said the fox. She turned back toward Fenn. “Fine, a temporary truce between us?”

Fenn relaxed the tension of the draw, probably more from the strain of keeping it up than because of any particular feeling of goodwill. “Truce,” she said. “Temporarily.”

Amaryllis stepped up close to Fenn. “Not really your call,” she said with a low voice.

Fenn rolled her eyes, and not in a particularly carefree way, more of a ‘fuck off’ kind of way.

“If you’re with Masters, then we’re almost friends, of a sort,” said the fox. A flash of emotion crossed her face. She slipped her daggers into their sheaths on her hips, then turned and looked to the lenssi. “Sade says it’s an exclusion zone, illusion magic.” Unseen communication. One that wouldn’t extend to the lenssi? Parson’s Voice?

The lenssi gestured something quick in response with fast cutting motions at different angles.

“No, no idea,” said the fox with a frown. “And yes, I agree, it’s exactly his style.”

“Do you mind cluing us in?” asked Amaryllis. “Assuming that you don’t want to deal with an altercation.”

(Real or not? That was the question, and it was going to keep being the question. The solution was to treat them as though they were both real and not real at the same time, saying only those things that could be said to real and not real versions of themselves. The arrow was a point in favor of the Animalia not being an illusion, because Fenn had personally handled the arrow, and then held it at tension with the bow. Juniper had described illusion magic as being the fooling of senses, and it seemed just barely possible to return the arrow, but it would require fooling three senses in rapid succession, not just sight and touch, but Fenn’s luck sense as well. The exact upper bounds of illusion magic weren’t known, but exclusion zones tended to be degenerate. Still, it seemed as though the back-and-forth of the arrow was pointless extravagance and opportunity to be revealed, if the fox was an illusion.)

“I said,” replied the fox with a nod in Amaryllis’ direction. “Exclusion zone, illusion magic, whatever that might entail, if you’re really there at all. We’re getting details now.”

“No,” said Amaryllis. “We knew about that. You were saying that something was his style.”

“Go back inside,” said the fox to the lenssi. “I’ll deal with these interlopers.”

“Ward is done,” said Grak.

“Good,” said Amaryllis. “Confirm with a moving picture, green or blue for yes, grey for no.” Fenn’s idea had been a good one, even if using the entad for it was pointless. Solace didn’t have the depth of Earth knowledge that the others had, but for movies in particular, they had a deep well to draw from, dozens if restricted to movies that they’d seen, and probably hundreds if they were just movies that
were known to the two parties.

“Deepthroat,” replied Grak. (Fenn let out a chuckle.)

“And I’m within the ward?” asked Amaryllis.

Amaryllis looked at the fox, the retreating figure of the lenssi, Fenn, Grak, Solace, and finally, the building itself. Nothing had changed. Grak’s confirmation wasn’t sufficient, of course, and became less sufficient as time passed. It was better than nothing though, especially before the presumed enemy had time to adapt to it. There would be pauses or delays to watch out for, pieces of conversation that didn’t line up quite right.

“We appear to be in the clear, for now,” said Grak, by way of confirmation.

“What does that mean?” asked Fenn.

“It means that we need to be cautious,” said Solace.

“I’m sorry,” said the fox. “But what are you all talking about?”

“Wards against the excluded magic,” said Grak.

“But you’re on Masters’ side?” asked the fox with a frown.

“We’ve had some disagreements, of late,” said Fenn. “Safe to say if you pull him out of there, we’re going to have some things to talk about.”

“But then who are you?” asked the fox. “If you didn’t come here on his behalf, then why did you come?”

“It’s complicated,” said Amaryllis, before Fenn could do any more damage. Being inconsistent about who they were and why they were here was going to be damaging to conversation. Unfortunately, the truth was a tricky thing, given the unknown motivations of this group. “You were saying that it was someone’s style.”

“Uther Penndraig,” replied the fox. She seemed blithely unconcerned that Amaryllis wasn’t answering questions; she was stalling, then, buying time while something went on inside, ‘dealing with the interlopers’, as she’d put it.

“Masters knew him,” said Amaryllis. “That lenssi might have been old enough too. He would have been before your time though, wouldn’t he?” She shifted position slightly, moving closer to the clinic.

“Enough chatting,” said Fenn. “I’m going in.”

“Ah,” said the fox with an exaggerated frown. “I’m afraid I can’t allow that.”

Fenn raised her bow again, popping an arrow from her glove. “Looks like our truce is over then.”

Amaryllis reached over and pushed Fenn’s arm down. “Who was Uther to you?” asked Amaryllis, trying to get the conversation back on track. Juniper and Valencia were in the clinic, but it wasn’t clear that they needed rescuing just yet, and stumbling into armed conflict with people who weren’t even necessarily opponents was to be avoided at all costs. Amaryllis did trust Fenn’s luck sense, to within reason, but the lucky path wasn’t always lucky in all senses, at least so far as she’d seen and
“Fine,” said the fox. “You’re right, I never knew Uther. But I’d say that I have some connection to his legacy, which you might be able to guess if Masters has kept you informed. You still haven’t explained what you’re doing here. It can’t be coincidence that you came so soon after we landed.”

“Mary, I love you, but we’re wasting time while who-knows-what is going on in there,” said Fenn.

“We didn’t come here for violence,” said the fox. “Though we did come prepared for it. We’re not even planning on touching Masters. All we want are his recent visitors.”

“Why?” asked Amaryllis.

“It’s complicated,” said the fox.

“And if we refuse to come?” asked Amaryllis.

“We?” asked the fox. “You can’t mean -- ah.” She reached up and touched a spot of fur by her throat. “I think I found the other ones, they’re standing around outside with me.” *Definitely Parson’s Voice.* “Yes, I’m serious.”

*Others. They have Juniper, maybe Valencia too.* “We can meet elsewhere,” said Amaryllis. “We have a safehouse, far away from civilization, neutral ground.”

“One moment,” the fox said to Amaryllis. “Dwarven warder, half-elf archer, a crantek child -- yes, six or seven years old -- and the last seems like their leader, but she’s in full plate.” The fox paused for a moment, then looked to Amaryllis. “What’s your species?” she asked.

“Human,” replied Amaryllis.

“Human,” repeated the fox. Her hand dropped down from her fur. “Where is this elsewhere?” the fox asked.

“A hundred miles from Cranberry Bay,” said Amaryllis. “Nestled in a forested valley, shielded by trees and hills. We’ll give you the exact location later, via an ad in a local newspaper.”

The fox put a finger back to the same spot on her fur. “The offer is semi-anonymous contact followed by a face-to-face meeting.” A brief pause. “Yes, I know you did, but I think we should take it, especially since campus security just showed up.”

Amaryllis looked over to see a pair of vans approaching, moving at speed. She allowed herself to frown, since she was hidden by her helm. *In theory* they were going to need to explain themselves. That was a choice they’d made ahead of time, cemented when they’d given their real names at the front desk of the clinic. To undo that … well, it might have been possible. The receptionist was almost certainly real, as was the book they’d signed their names in, but to put everything back into the bottle seemed like it was going to be terribly difficult, if it was possible at all.

“Sorry,” said the fox. “We need you to come with. It’s important. We can pay you in a dozen different ways, but we need you physically present.”

“Stop!” shouted a voice from the vans. A man wearing a breastplate and holding a flaming sword had gotten out, with others close behind him. “Drop your weapons and entads!”

“Vote,” said Amaryllis, loud enough for her three companions to hear.
“I thought we were ignoring votes?” asked Fenn.

“Go,” said Solace. She was frowning as she said it though.

“Go,” said Grak. He seemed more firm on the idea, perhaps because of the idea that they would pay, or maybe just out of a desire to be gone from the exclusion zone, one way or another.

“Fine, but only if it’s all of us,” said Fenn.

“We go,” said Amaryllis with a nod.

It was a relief that they could reach unanimity. They would go into the ship, at least, and have some cover from whatever was happening with campus security. Going inside the ship would provide them some cover, in case things went sour, though they were disobeying a direct order from the man with the sword. It was, in a sense, another tactical retreat, which didn’t feel great.

The fox gave a low whistle, and one side of the metal bean opened up, spreading its skin like it was a dress being unzipped. The opening wasn’t particularly doorlike, and it revealed the hull to be no more substantial or thick than fabric. Amaryllis glanced back at Grak, their resident expert on entads given that Bethel had stayed at home. He gave her a nod.

When he realized that wasn’t going to be enough, he said, “Cannonball Run.” She knew that wasn’t a movie he’d seen, but per the entad color scheme, it would have been blue, not green. The symbolism of that was clear enough to her: yes, but watch out. Importantly, it was hard subtlety to fake.

Amaryllis headed inside. The ship, if you could call it that, was the size of a small house, and where the exterior was bean-like, the interior wasn’t too dissimilar from a drawing room. Given the impact it had apparently made upon landing, she’d thought that the insides would be like that of a tank, with bulky seats and harnesses to keep people from being crushed, but the chairs were armchairs, and it didn’t even seem like anything was pinned down.

“Check for traps,” said Amaryllis when Grak stepped up inside.

“This seems like a monumentally bad idea,” said Fenn as she stepped up in.

Outside, Amaryllis could hear shouting from campus security.

The term campus security didn’t inspire fear on Earth. On Aerb? The athenaeums were all enormous, and while each was its own institution with its own culture, internal politics, and relationships with the local nations, security was something they all took seriously, and rarely off-loaded that responsibility to their parent polity, if they had one. Most of the athenaeums taught at least one subject with practical applications in combat, and they were all extraordinarily wealthy, in part because of the strangleholds they held on education and cronyism on the hexal stage.

Amaryllis had done her reading on Speculation and Scrutiny. Campus security had been slow to respond, but for something suspected of being a major incident, they would come with every ounce of power they had available. The fox – name still unknown – had assumed that’s what Amaryllis and Fenn were, which said something, given how visibly armed they were. The response they were actually getting, delayed though it was, seemed to be about a dozen people, glimpsed only briefly as Amaryllis had ducked into the ship.

*Please, Juniper, let’s leave before things get any more complicated.*
“Okay,” I said. “Let’s go. Valencia, at the first sign of trouble, we’re bailing. Watch them closely.”

“Mode?” asked Valencia.

_Ah. Fast-talking or fisticuffs?_ Based on how she’d described the experience, it wasn’t so much that she had a demon or devil’s thoughts, it was that for the strong ones, their skills became so much a part of her way of thinking that it was hard to avoid. When all you had was godly combat ability, every situation seemed like it could be solved with combat. When all you had was social manipulation, it might seem like you could lie your way out of anything. Either of those approaches could be really dangerous. Unfortunately, the turnaround time on switching between the two skill sets was just long enough that it could be a problem. (The talk of them being modes had come from me, I was pretty sure.)

“Talking,” I said. Not because I was terribly eager to talk, but because I was still on edge from Masters and his illusions. I wasn’t going to fully trust Valencia, not with illusion magic in the air and Soul Sight not as sure a thing as I would have liked, but if she were really there and really communicating with me, then her insights might allow me to avoid tripping over a landmine.

Valencia just gave a curt nod. She holstered one of her pistols, clipping it in place with one hand, but kept the other.

“Move?” asked Pallida. “Now?”

“We should take Masters,” said Valencia. “Joon?”

“Do we need him?” I asked. “Because it’s probably going to look like we’re kidnapping him, and if these people have answers, then --”

“I’m worried that if we leave him here, he might die,” said Valencia. “We don’t need to take him with us, but he’s going to need medical attention, which means getting him somewhere that he’ll be found quickly once we’re gone. Unless you want me to wake him up?”

I frowned at that. “How did he capture you?” I asked.

“Really not the time for this,” said Pallida. “Campus security is apparently here. Your friends have agreed to come with.”

“My friends?” I asked.

“Yes,” replied Pallida. “Four of them? They’re in the ship, waiting for you.”

I turned to Valencia and raised an eyebrow. “That’s apparently the truth, as far as she knows,” said Valencia. She must have seen my expression, because she continued on. “Authentication, two pass, two fail, random order as confirmation.”

I nodded, slowly. “Go ahead.”

She gave me four names. Two were Harry Potter characters, and the other two were (so far as I knew) made up.

“Okay,” I said with a sigh of relief. I wasn’t that worried about Masters anymore, given that I was as
sure as I could be that he really had been knocked out, but there was no guarantee that he was the only illusion mage.

“Yes, now can we go, pretty please?” asked Pallida. “Word is that we’re dangerously close to an altercation with campus security. Our options as far as non-violent resistance go are limited.”

I went over and lifted Masters up, then put him over my shoulder. It was far easier than it had any right to be, especially since he was dead weight, but I’d put on a lot of (debatably unearned) muscle in the course of my level ups, and had him secured with relatively little effort. I positioned him so that I would be able to draw my sword at a moment’s notice, not that I thought I would have that much warning if things started to go south.

We moved down through the building, taking the central stairs, while Pallida talked.

“There’s Gemma Tails, she’s a fox Animalia, blade-bound, and a pretty weak velocity mage. She took a leave from Might and Motion, where she’s still enrolled, about a month ago. Heshnel Elec is a dark elf, flower mage and former soul mage, though he got stripped of that skill after the Second Empire fell, nothing to worry about there. O’kald is a bellad, our brute. And then Gur Dehla is lenssi, our warder. There are others back at base, which is where we’re going, but those are all the people that are on my side, which means your side.” She spoke rapidly as we went down the stairs, not paying much attention to me.

I was grateful that she didn’t see me tense at the mention of a team warder. Valencia showed no reaction whatsoever, which wasn’t at all surprising.

The Valencia Problem was one that we were going to have to deal with sooner than later. The Red Armor of Arramor (which sounded like a made up name every time I said it in my head, like someone had just fumbled through saying ‘armor’) would block her from warder’s sight, but she couldn’t stay in it forever, and there were other senses that could be problematic beyond just the one warders got. I was pretty sure that Soul Sight wasn’t just a game mechanical thing, it was a real thing that advanced soul mages had, in the same way that the Blade Bound virtues correlated to something that people who trained could actually achieve. I was really hoping not to ever run into another soul mage, but not at all counting on it. Beyond those two, there were entads that simply wouldn’t work, magics that would fail, and all sorts of esoterica that could reveal her. Masters had probably been able to sense our senses from the moment he’d met us, and I didn’t doubt that he’d sensed Valencia’s lack of senses.

I saw Valencia reach down to the pouch that she wore on her hip and slip her hand inside. I could tell what she was thinking, mostly because I had been the one that had come up with the plan in the first place. We’d done some testing on her Soul Capture ability, mostly using the ‘blank’ souls, enough to confirm that Valencia could use one for about fifteen minutes of ‘having a soul’ if she pushed it hard. That was Plan Mountain Dew. Unfortunately, Valencia was a vessel who could only fit one thing in her at a time (phrasing), which meant that if she was going to pretend to be human, it was going to be at the expense of all her other abilities. Also, apparently it was bad manners to drink a soul, because that would condemn it to the hells.

Valencia looked back at me, face unreadable given the armor, but I knew that it was a questioning look. I shook my head fractionally, hoping that I wasn’t making a mistake. The armor would hide her, and I had a feeling we were going to want all the advantage we could get. The lenssi and bellad were going to be problems for Val, I was pretty sure, given that one was just a floating skull in human-shaped fluid, and the other was a rock creature without much in the way of facial expression. We’d discussed all the ways that her social-fu could be thwarted, in whole or in part, and the more extreme mortal species were definitely on the list of possible counters. All the mortal species had
souls, and all ended up in the hells (renacim aside), but some were niche, and not every devil had full knowledge on the particulars of all the species.

(That we’d run into two of the more problematic mortal species and someone who had studied with the Elon Gar was either an example of the Dungeon Master being predictable, or the Dungeon Master having a joke at our expense.)

We stepped down the first set of stairs and found ourselves in the lobby again. The receptionist was gone, and three people were standing around, the dark elf, lenssi, and bellad. They were watching me, and I noted how close their hands were to their weapons.

“Let’s go,” said Pallida. “Introductions later.”

“Gemma is talking to campus security,” said the dark elf, Heshnel. It occurred to me that if I were Pallida, I might have lied about the capabilities of my teammates, but maybe that was because I had a hard time trusting new people, especially when they were armed. “We should give her a chance to resolve things.”

“And what the hell is she going to say to them that’s going to convince them to let us leave without arresting us?” asked Pallida.

“She seemed to have a plan,” said Heshnel with a shrug. He was wearing a cape that came down over one side, giving him an asymmetric look. He wasn’t wearing armor, but his jacket seemed specially designed to hold a fair number of flower buds, which were arranged like an army general might pin his medals. As he spoke, I realized what seemed off about him: his teeth weren’t the horrifying fangs of the other elves I’d seen. They looked like human teeth, if a little too white, just like Fenn’s. I wasn’t sure if he was half-elf though; I thought his features were too pronounced for that. His skin was purple-black and his hair was white, classic drow, though on Aerb the historical drow lived at the bottoms of the oceans, in the Gelid Depths, rather than in caves. “We’ll wait until the fighting starts and make our escape then, unless she finds some way of convincing them that this was all a misunderstanding.”

“There were other ways we could have come,” said the bellad, O’kald. His voice was like a bucket of rocks being poured out. This was my first time seeing a bellad, but he was more or less what I’d expected. No nose, and just little slits for eyes and a mouth, like someone had put as little effort as possible into a rock carving of someone’s face. They weren’t a common fixture of the empire, in part because they weighed too much.

The lenssi made a quick gesture through the air, warping its vague hand-shapes into tendrils in the process.

“Yes, and much slower,” replied Heshnel. “Do you think that Masters was going to share what information he had? It was inevitable that we would butt heads.”

The lenssi made another series of gestures, going on for longer.

“I don’t intend to find out until we’re far away from this place,” said Heshnel. My eyes kept being drawn to his teeth. Dark elves were close to being monochrome, but his gums and tongue were more purple than black. I didn’t trust him. Drow were one of the classically evil races, fodder for many adventures, and while the dark elves on Aerb didn’t fit that mold, I was immediately suspicious. He turned away from the others and cracked the door, looking out.

“How is Masters doing?” asked Pallida.
I gently laid him down on the floor, making sure to keep his head and neck supported. I glanced up at Valencia for a moment before realizing that she'd have given up her ability to see whether or not he was okay by switching to talking mode. I reached down and lifted up one of Masters’ eyelids, checking pupil dilation, then felt for a pulse. I didn’t really know how he was doing, just that getting knocked out wasn’t too great for you, even if it was done by a competent professional.

“Fine,” I lied.

“I’m worried about what’s going to happen when he wakes up,” said Valencia. “I don’t have a good estimate. I hope he wakes up. I did hit him pretty hard.”

“Do we have a way of confirming that any of this is real?” asked Pallida.

“No,” O’kald rumbled.

“We don’t have a way of confirming that he’s right about this being an exclusion zone,” said Heshnel, turning back toward the group. “It’s worrying.”

He had a point. I knew that it was an exclusion zone because someone had used illusion magic on me, but for him, hearing it second hand … yeah, he had to be paranoid about whether or not to be paranoid.

“Is Gemma talking her way out of the problem?” asked Pallida.

“It doesn’t appear so,” said Heshnel. He reached down for one of the flower buds pinned to his chest. “I can arrange a distraction.”

“We should talk about where we’re going,” said O’kald. I took stock of his clothing, which was a far cry from the armor I might have expected. So far as I knew, the bellad didn’t need to wear clothing, since they were made of rock, but O’kald had apparently put time and effort into dressing himself. He had on a coat with tails, and breeches that were partly covered up by thick, heavy boots. I also took stock of his weapons, which hung at his hip, a hand axe and a hammer, both of them different enough in style that I assumed one or both were entads.

“I told him we were going back to base,” said Pallida. “So, we’re going back to base.”

“Plan B,” said O’kald, crossing his arms.

“No,” said Pallida. “He’s just a kid.”

“That’s the point,” said O’kald.

“I’m inclined to agree with our rocky companion,” said Heshnel. His hand was still positioned so that his fingers were close to the buds. “Perhaps if Uther hadn’t prepared this place as well as he did, I might think it was something innocuous.”

“I don’t suppose that I get a say in this?” I asked. “What’s Plan B?”

“We don’t need to go with Plan B,” said Valencia. “We’re cooperating with you. Plan A is equitable exchange of information with the others, right? That’s exactly what we’d like.”

“Who are you?” asked Heshnel. “Sade said there was an entad of some sort. Mind reading?”

“No,” said Valencia. “Nothing so invasive.” She turned to me. “Plan B is suicidal, indiscriminate violence against us. Maybe not right away, but with the option for it if we give the wrong
“How the hells do you know that?” asked Pallida, her voice sharp. She looked to the others. “Look, we can’t do Plan B if he knows, he’ll never come with us.”

The lenssi made a series of quick swipes through the air.

“It says that they can kill us at base if they have to,” said Valencia.

Everyone froze at that.

“Alright,” I said. “I don’t think we’re going anywhere with you.”

The dark elf plucked a flower bud from its place on his jacket. “We’ll go with Plan A,” he said slowly. “We’ll return to base and discuss things there.”

“You think that I’m the next Uther Penndraig?” I asked.

“We don’t know,” said Heshnel.

“That’s what they think,” said Pallida, who had taken a few steps back. She was holding her spear in both hands, no longer just using it as a walking stick.

“Do you have some kind of distance communication?” I asked. “We could use that instead, if all you want to do is talk.”

“You think that I’m the next Uther Penndraig?” I asked.

“We don’t know,” said Heshnel.

“That’s what they think,” said Valencia.

“It’s not what I think,” said Pallida, who had taken a few steps back. She was holding her spear in both hands, no longer just using it as a walking stick.

“Do you have some kind of distance communication?” I asked. “We could use that instead, if all you want to do is talk.”

“Your friends are already on board the Egress. They agreed to go,” said Pallida. “Look, we’re not going with Plan B, we’re going with Plan A, and before we get to talking, you can have your warder set up whatever defenses you’d like. We’ll even show you how to use the Egress and you can sit in it while we talk so you can make a getaway in a hurry.”

“She doesn’t speak for the group,” said Valencia.

“Can you stop trying to undermine every single thing we say?” asked Pallida.

“Start telling the full truth and I won’t have to,” said Valencia.

Heshnel had the door propped open with one foot, and from outside, we heard a yell, followed by the distinctive sound of metal on metal. I really, really hoped that my companions weren’t in a battle with campus security.

“Diplomacy has failed,” said Heshnel, with a glance outside.

The lenssi swished its tentacles through the air.

“No, not yet,” said Heshnel. He turned to me. “We’re leaving in the Egress. If you don’t come with us, you’ll be left facing campus security and trying to explain to them what you were doing with the ship that came down, who we were, and what happened to Masters, who will be waking up shortly, unless you killed him.”

I hesitated. “Val?” I asked.

“He’ll live,” she replied. “Unless you have information I don’t, I think we should go with them. If they try Plan B, I’ll know, and be ready to warn you. If Grak and the others are really in that ship,
then we can bargain for time to set up defenses before we say anything.”

“Okay,” I said, sucking in a breath. “Then we’ll go with you.”

“Mode shift,” Valencia said, voice so low I was hopeful that I was the only one who heard her. She’d have to shift back once we were aboard their ship, or whatever it was, but I was in agreement that combat prowess might be a useful thing to have in the next handful of minutes.

“We’re going to leave Masters,” said Valencia. “Assuming he can get some medical attention, he’ll be fine. He’ll wake up on his own.” There was something about how she said that which made it sound more like hope than certainty.

I nodded at that, then steeled myself to go. I hesitated for just a moment, then ducked behind the reception desk and grabbed the clipboard there, taking the piece of paper that still had our names on it. That wasn’t going to erase our presence here, not by a long shot, but it would give Masters some cover to lie for us, if he wanted to. I had no idea where the receptionist was, but hoped that he was okay.

We left out the front door, with O’kald in the lead. Pallida had said that he was their brute, which meant that they had a soul link with him. That was one of the few uses of soul magic that was still authorized, if you had the right permits. The actual process was a little tricky, since it required manipulating two souls at once, but it was the sort of tricky that didn’t need a lot of deep understanding. The binding effect was short-range and non-permanent, useful mostly for if you wanted someone to take the brunt of every single attack made against your group, which we really didn’t.

I saw the fox Animalia, Gemma, in heated combat with campus security, who she was running rings around. I was mildly surprised to see that she had two daggers, and wondered which one of them was bound, but it didn’t seem to matter, since she danced her way between sword and hammer strikes with grace and precision, parrying attacks and slipping past defenses. She wasn’t hurting anyone, and I had enough of an eye for combat that I could see most of the times she could have easily jammed one of those daggers in the gap in someone’s plate.

Campus security had a lot of people though, and preparation on their side. With a shout from by the vans, they began pulling back. One of the vans was moving, backing up so the back of it was facing toward the ship they’d come in, which --

Well, the ship was Cloud Gate, the sculpture that sits in Chicago, a big metal bean that reflected the campus around us. I had visited the sculpture with my parents and thought that it was utterly magical, like someone had taken a bit of D&D and transplanted it into the real world. It was how I had always envisioned the ship that the party had used in our world-hopping campaign, but my description must not have been obvious, since Tiff had made a drawing of it that looked completely different. In my head though, I’d always described the ship like it was the one I saw in front of me.

Gunfire erupted from the van. The back was open, and they were firing a fucking chaingun at the fox Animalia. She spun her daggers around, deflecting about half of the bullets in a very impressive display. That left the other half to hit her, hits that showed up on O’kald, barely seeming to affect him. I didn’t waste any more time looking, and raced across the open ground to where the bean was sitting, its skin split along the side. Grak was standing at the entrance, watching me, waving me forward.

Very suddenly, Masters was standing in front of me.

I kept running, until I’d run through him, but the world began to warp and shift around me, and after
a few seconds, I had to stop for fear that I would run into something, or that I had ended up running
the wrong way.

Master was standing in front of me again.

“I don’t have any illusions about keeping you here forever,” said Masters. He seemed haggard, with
sunken eyes. I still didn’t have the full details on what had happened between him and Val, but she
had said that she’d seen him speaking. Did he need to project himself? Or was it just easier that way?

“Yeah,” I said. “But you’re not going to let me go without a fight.”

“If this were a fight, you would be dead,” said Masters. “I never wanted to hurt you, I only wanted to
know. The people you’re going with are part of the group that thinks it would be better if you were
dead.”

I didn’t respond. The noise of the chain gun had cut out, but I could still see it firing. I assumed that
Masters had hijacked my sense of sound so that he could get the last word in. The problem was, I
wasn’t actually sure where I was in relation to everything, not when Masters could spin the world
around me. “Val, help!” I shouted. “Illusion!”

She stopped and ran back for me, holstering her pistols, as the land around me twisted and warped.

“You’re in danger if you leave,” said Masters. “I can fix everything here, if you stay. We can talk at
a distance, with you outside the exclusion zone, as you wanted. Please.”

Again, I didn’t respond. The newcomers weren’t any more trustworthy than Masters, and maybe less
so, but at least they hadn’t tried to fuck me yet.

“Uther left behind a cache, for you, or whoever else might have come instead of you. Some of it is
quite powerful, the kind of equipment you’ll need if you mean to take up his mantle.” Masters was
watching me, or at least appearing to watch me. He looked run down, which wasn’t surprising given
that he’d been knocked out. “Please,” he said.

I was tempted, not just by the power on offer, but by the idea that I would get to see more of what
Arthur might have planned for me, beyond just the message in the mirror. If he’d thought that I might
show up, or maybe one of the others, or just someone from Earth, then he’d have made more
preparations than just a simple, melancholy message, right? Well, I already knew that was the case,
since I’d seen the room with the entads, and I was pretty sure that they were actually real, since
everything I’d seen and heard had been consistent with Masters being incapacitated. With Valencia
on my side, and strategies for mitigating what he could do … well, as I said, it was tempting.

(There was something else, buried under the surface, and mostly unexamined. Masters wanted
answers, but he was following Uther’s will. From what I’d heard, this new group wasn’t too keen on
Uther. They would give me different stories about Uther, I was sure, and I would prefer to hear
Masters’ version.)

But on the other hand, Masters was actively restraining me to get the last word in, and whatever he
was offering, it wasn’t enough. I didn’t trust many people outside the party, but if I was going to be
with someone I didn’t trust, then it was going to be the group without illusion magic making me
question every single thing I saw or heard.

“I still have your non-anima,” said Masters. As he said it, Valencia popped like a bubble,
disappearing from view. Whatever methods he was using to mask his emotions, they weren’t holding
up. He sounded utterly distraught and defeated, and I didn’t believe my own eyes for even a second.
That lack of faith was rewarded a few moments later, as the world abruptly changed its shape around me.

I was being dragged across the ground by Valencia, who was holding a harness Ropey had fashioned. We were only a few yards from the ship, with Fenn waiting anxiously a few feet away. As soon as she saw that she had my attention, she sprang forward, heedless of a shout from Amaryllis, and lifted me up from the ground, pulling me back toward the ship. I couldn’t see much further than five yards away from me, as the air was dense with pink petals. As soon as Valencia was in, the thin metal skin of the ship closed behind her, and Heshnel began manipulating a silvered expanse of the wall.

“We should wait,” said Amaryllis. “We need to confirm that everyone is here.”

“You have this place warded against Masters,” said Heshnel.

“We think we do,” said Amaryllis. “How much punishment can this ship take?”

“More than a chaingun,” said the fox, Gemma.

“It’s too late,” said Heshnel, stepping back. “We’re already on our way.”

I took a quick inventory, first of our people, then of theirs. We had six to their five, but if we were moving (and there was no way to know for sure that we were) --

Quest Completed: Straddling Worlds - There were five dream-skewered, five centuries ago. There were no answers about those others to be found at Speculation and Scrutiny. If you want to know more, complete The Lost King, Found.

That was reassuring, even if it left me feeling a bit hollow. I turned to face the others, swallowing once at the idea of being with this group who had shown various levels of hostility toward me. I was really hoping that we were still on Plan A, given what I had seen of their abilities. And if Plan B was that they would kill me with swift and overwhelming force, then I thought we were already probably fucked if that’s what they’d decided on, since I held no illusions that the Dungeon Master would spare my life, nor that we would win in terms of raw power.

“Introductions,” said the dark elf. “I’m Heshnel Elec, this is O’kald, Gemma, Dehla, and Sade.” O’Kald was much the worse for wear for having tanked a fair bit of chain gun fire, pitted and cracked in places and pressing pebbles against himself where ichor was coming through. Gemma was the only one of them I hadn’t met, and the mystery of which of the fox Animalia’s weapons was blade-bound was resolved when I saw her smash them together, causing them to shift and warp before forming a long blade. Dehla, the lenssi, was sitting as far from everyone else as possible, its floating skull turned away from us. As for the one he’d called Sade, that was apparently what Pallida went by. Her oil-slick armor had changed to cover her head and hands, completely encasing her, but it was dripping back down now, allowing her to speak.

“Sorry about circumstances,” she said once it was past her lips.

“We can worry about pleasantries later,” I said. I looked to my companions. “We do need to establish trust among ourselves.”

“Juniper, you fucking asshole,” said Fenn. She had her arms folded across her chest.

“What ever this is, it can wait,” I said. I looked at Amaryllis. “Keyring is presumed compromised. Personal details have the same problem, if we assume that”
“I’m not letting you off the hook,” said Fenn.

“No, I know,” I replied, trying to keep my temper in check. “But before you can yell at me for staying behind, I need to make sure that everyone is who they say they are.”

“Moving pictures,” said Amaryllis. She pulled a small gray ball from the pouch at her side, the one that Masters had used for the screening. I only needed one guess for who had taken it from the table. “Green, blue, and grey get assigned two, one, and zero. Each triplet of titles will encode one letter. Here, I’ll write them down.”

“Jesus Christ, are we really going to do this?” asked Fenn. “This is going to take forever.”

“I’m afraid I may not have the depth of knowledge necessary to pass this test,” said Solace.

“We’re here,” said Heshnel. I hadn’t felt any acceleration on leaving or deceleration on arriving.

“So soon?” asked Amaryllis.

The dark elf nodded. “The Egress is slower than some other methods of hexal travel, but not by much.” He strode toward the side of the ship and split the skin of it with the motion of his hand. The landscape beyond him was a wide field of something like wheat, with tall mountains in the distance beyond that. A handful of cobblestone houses sat in a clearing, which he strode toward with purpose.

“We’re within teleportation wards,” said Grak. “Again.”

“We still need to verify,” said Amaryllis.

“Take your time,” said Heshnel, turning back to look our way. “There’s no rush.”

“I will stay with them,” said O’Kald as he continued patching himself up.

“Me too,” said Pallida. “Gemma?”

“Sure,” she replied.

The lenssi made a few swift motions with its tendrils and walked out of the ship without waiting for a response from anyone.

I don’t think anyone really wanted to do it, but we sat down at the table and worked out a system that would work, given what we knew we knew, and keeping as much mutually known information secret as possible until it could be mixed with information that was false or not mutually known, such that we could communicate to each other without the possibility of someone being able to forge it.

“It’s not totally secure,” I said. I was specifically thinking of the possibility that Amaryllis had gone through all this with an illusion of me, and now I was going through all of this with an illusion of her, one that was ready with all the answers she’d given the illusion of me. I would have to ask questions that Masters wouldn’t have known to ask, and she would have to do the same.

“Nothing is ever completely secure,” said Grak. “Anyone who says otherwise is lying.” He got up from his chair and began tracing out a ward around us, which I guessed was a ward against sound from the way that the noise of the outside world immediately cut off. A second ward followed the first, which made the area outside the ward a bit dimmer; that would have been an annihilation ward against light, making it so that we could see out but they couldn’t see in. The last one had no visible effect, but I assumed he was redoing his ward against illusion magic.
Grak began. In theory, if he was able to communicate to us using movie titles, then we could trust him, which would mean that we could trust the wards. It was slow, painstaking work to spell out each letter three movie titles at a time, but our “hosts” were apparently willing to give that time to us, so we took it.

S-A-F-E

“Oh, okay,” said Fenn. “So we’re good?”

“No yet,” said Amaryllis. “I want one short, coherent message from everyone, ideally something personal. If there’s any doubt, we can ask questions and give responses to each other. Solace, you should have enough, given movie nights. Some small amount of repetition is allowable. False titles should be repeated at roughly the same rate as true titles.”

We all went, one by one. I found it a bit hard to follow sometimes, especially since the distinction between green and blue was between movies that had been seen and movies that we’d only heard of, which was different for every one of us. There was a little bit of guesswork involved, but we were just spelling out words, and getting one letter off wasn’t a huge detail. I also had a much better memory than when I’d first started out on Aerb.

While we were doing this, Fenn was quietly stewing. She took her turn last.

“Citizen Kane, Lawrence of Arabia, Fifty First Dates,” she said.

That was either W or Z; I didn’t know whether or not she’d seen Lawrence of Arabia, but I didn’t think so. Fifty First Dates was proposed for group movie night but ultimately rejected.

“Transformers, My Boyfriend Sucks, Snakes on a Plane,” she said.

“Your boyfriend sucks?” I asked. Obviously not a movie, which meant that was code for T.

“Yeah,” she said. “Do you really need me to tell you why?”

“Finish up, please,” said Amaryllis. She’d taken her helmet off once Solace had finished, which let me see the way her lips went thin.

“Fine,” said Fenn. “Bulls, The Thing, Scream.” Scream was another movie night movie, while I had vetoed The Thing. That meant F. “Done,” said Fenn.

“That’s not a word,” said Amaryllis with a frown.

“It’s an acronym,” said Fenn. “Joon knows.”

“It’s an initialism,” I said. I could feel my cheeks growing warm. The raw hostility radiating off Fenn was raising my hackles. It was clear to me, and probably to all of us, that she was spoiling for a fight, and there wasn’t much ambiguity about who she wanted to fight with.

“Oh fuck you,” said Fenn. She turned to look at Amaryllis. “Are we good? We’re done? All wrapped up here?”

“Yes,” nodded Amaryllis.

“Do you want to yell at me?” I asked Fenn. “Because you can yell at me now, if you really need to.”

“We took a fucking vote, Juniper, we weren’t declaring what we were each going to do, we took a vote on what we were going to do, as a team, and then you just stayed behind like you thought you
were a hero,” said Fenn. She practically spat the words.

I couldn’t keep myself from frowning. “As much fun as it might be to second-guess every--”

“Juniper, if you had put your foot down, I would have stayed, but you made the dumbest, most boneheaded move you could have,” said Fenn.

“I think we should calm down,” said Solace. “We haven’t heard each other’s own perspectives on what happened. Given that illusions were in play, this might be no more than a misunderstanding.”

“I’m pretty sure it’s not,” I replied. “It seems like Val knocked out Masters not long after Solace opened up the connection to the tree.”

Fenn looked at Valencia. “Are you fucking kidding me?” Fenn asked. She looked back to me. “So on top of it all, I was right, the invincible Valencia handled all her problems on her own and would have been completely fine without us?”

“Look, I’ll agree I should have said something,” I replied. I could feel a flush in my cheeks. I didn’t want to be having this conversation, not with Fenn on the attack, and not in front of our friends. It felt too much like airing dirty laundry. “But there were considerations. I was the only one that had some kind of workaround for what Masters was doing.”

Fenn glared at me. “You made up that excuse after the fact.”

“Yeah,” I said. She knew me too well. “So what? Is it not valid?”

“Juniper, do you remember me telling you all the shitty things that happened to me when I didn’t listen to luck sense?” asked Fenn. “I was put in prison. I got cut in half. When I say that it’s time to get the fuck out, then we should get the fuck out.”

“I didn’t feel it as strongly,” I said. “And Masters could have faked it.”

“You said he got knocked out,” said Fenn, folding her arms across her chest.

“He could have faked it. He obviously didn’t, but -- look, I didn’t feel it like you did,” I began. I was on weak ground. It had seemed unconscionable to leave Val behind, but now it was seeming just as bad that I had left, and all I was doing was making up stories to make myself feel better, arguing positions that I was thinking up as they came to me, rather than what I’d actually felt or thought at the time.

“I didn’t feel it as strongly,” repeated Fenn. She was staring at me. “You are so fucking --” she paused, searching for the word, “-- dismissive of me.”

“Is this about the Citizen Kane thing?” I asked. I was getting frustrated with her, not just because this didn’t really seem like the time, but because it seemed like it was coming out of nowhere.

“Fucking --” started Fenn, before she thought better of it and popped two VHS cassettes out of her glove, slamming each one down on the table. “Right there, Orson Welles, Orson Welles.”

I looked between the two of them. The VHS sleeve she was pointed at said “The Transformers The Movie” on it, with cheesy ‘70s art on it. Down in the corner, with the rest of the credits, it said “and Orson Welles as Unicron”.

I looked up at Fenn. “Different movie.” I flipped the box over. “Copyright 1988.”
“That’s not even the point,” said Fenn. “The point is, I said that I had seen it, and you just thought that I was confused or being stupid, and I wasn’t, I was right. I said that I felt like we needed to get out, and you just brushed me off like it wasn’t actually important.”

“Alright,” said Amaryllis. “This is going to have to be something that the two of you fix in your own time. Val, can you help?”

“Excuse me?” asked Fenn, turning on Amaryllis. “Are you serious?”

“I think I would have to lie,” said Valencia. She lifted up her faceplate and looked between me and Fenn. “I’m trying to chart a course where sticking to the truth makes things better.” She frowned a bit. “No,” she finally said. “Maybe if they didn’t know who I was. I could talk to them individually, but it would take hours of time.”

“That’s time we don’t have,” said Amaryllis. “I’m sorry, but you can continue hating each other for the time being. We need to strategize, while we still can.”

“Agreed,” said Grak.

“Fine,” said Fenn. She looked at me with a glare. “I do love you.”

“But,” I said.

“Yeah,” replied Fenn.

“They had two plans,” said Valencia. “This is Plan A. Plan B would have taken us to a different site, possibly killing us in transit, and if not, it would mean something akin to suicide for all but the renacim. They intend to talk to us and find out whether or not Juniper is the Chosen One. If he is, opinions are mixed on what should be done about it. They might attempt to kill Juniper, but it would depend on the specifics.”

“Okay,” said Amaryllis. “Then we’ll chart a course.”

“I don’t know the course,” said Valencia. “I’m putting together what Masters said, what they’ve said, and some reading of sentiment.” She gestured out to Sade and Gemma, who were standing beyond the ward that Grak had constructed, in low conversation with each other. “Sade is practically radiating with uncertainty. My read is that she’s in over her head here, possibly, given her species, because she mellowed out too much from deaths and rebirths. Gemma was born into her role here -- that’s supplemental knowledge from below, she’s part of the Foxguard, I can give a summary of them later -- so she’s compelled by duty, but she’s uncertain whether that duty extends to whatever is going to happen here.”

“And the lenssi wants to kill me,” I said. “As does the bellad. What about the dark elf?”

“It’s more complicated than that,” said Valencia. “I know that you know that.”

“I assumed it was complicated,” I said. “But in general terms, I’m looking at these people as allies or enemies.”

“Reductive,” said Grak.

“Heshnel was an acolyte of Vervain,” Valencia continued. “I assume their association was brief, by elven standards, but I also think he probably knows that Uther was the one to kill Vervain.”
“What?” asked Amaryllis. Her voice was spiked with alarm.

“We’re a little behind, it seems,” said Solace.

“Masters mentioned it,” I said. “I’m not sure whether to believe it.”

“I don’t think he was lying, or at least he didn’t think he was,” said Valencia. “I only heard Masters’ half of the conversation, but he seemed sincere. He wasn’t doing too much to hide his emotions, aside from how badly he misses his daughter, which he was trying to cover for.”

“He spoke?” asked Amaryllis.

“Yes,” said Valencia. “He didn’t when he removed me from the room, but after we were in his office, he began speaking. Whatever he was doing, it placed some strain on him. I think speaking out loud was easier for him.” She turned to Fenn. “To answer your question, he used some kind of amber effect on me, an entad, I think. It trapped me in place while he moved me. I-I couldn’t breathe, and I didn’t understand why no one was doing anything, and then he drew on the floor with a piece of chalk and I was trapped.” She let out a breath. “And I still don’t really understand what happened to everyone.”

We had a bit of necessary debriefing after that, as we each got filled in on what the others had been up to. The chalk that Masters had drawn around Valencia created an impenetrable barrier, but she had gotten past it by damaging the floorboards and going underneath it enough to break the magic that held her, all while not seeming to be anything but resigned to her fate. Amaryllis and the others had gone through their portal and then cautiously backtracked, though less cautiously than Amaryllis would have liked, mostly due to Fenn trying to rush back to me.

She flushed slightly as Amaryllis talked. She was still angry with me, clearly, but she’d come back to the clinic because she was worried. I softened somewhat on hearing that.

“Okay,” I said, once the mutual sharing of information was finished. “What’s our game plan?”

“I’d like to listen to what they have to say,” said Solace.

“Me too,” said Amaryllis. “If the world is going to end in five years … it seems likely that we’re going to have to be the ones to do something about it, the way things have been going.”

“We’ll probably all be dead before then,” said Fenn.

“True,” said Grak.

“Do we have a quest?” asked Amaryllis.

“No,” I said. “But we haven’t been given the pitch yet. Straddling Worlds completed, as did The Name of the Beast.”

“Meaning you’re one step closer to a level up?” asked Fenn.

“Probably,” I said. “I don’t exactly get experience points.”

“We’re going to have to be on watch for it,” said Amaryllis. “So long as Fenn or I are close, we can change you back.”

“Sure,” I said. My stomach churned at that. The way the level ups affected me was invasive, but it still felt wrong to have one of them monkeying around in my soul. I stopped short of saying that I
would rather Amaryllis do it. Whatever problems Fenn had with me at the moment, I didn’t want them to bleed into forcible soul surgery. I also didn’t want to say that out loud, now that her discontent had (momentarily) passed. I wasn’t worried that she would do something we’d both regret … but it was my soul, and it was best not to take chances.

“We need to talk about the fourteen points,” said Amaryllis. “What we want them to know, or not know, the things we can hide, and the things we can’t. Juniper, did you reveal anything to them?”

“Not that I can think of,” I said. “Valencia is going to be a problem for us, given that they have a warder who apparently has warder’s sight.”

“Sorry,” said Valencia.

“It’s just … tough to explain to people,” I said.

“I know,” said Valencia. “I’m sorry.”

“We can cross that bridge when we come to it,” said Amaryllis. “I acquired an infernoscope and packed it into the glove, but that requires some preamble. I’d almost say that we should deal with that first, but …”

“But it’s asking them for a lot of trust,” I said. “And that’s before we get to any of the stuff that they actually want to talk about, or that we actually want to say.”

“I’m fine in the armor,” said Valencia.

“Okay,” I said. I breathed out a sigh. “I’m worried about what they’re going to do if they think that I’m an agent of Uther’s, or his reincarnation, or the Chosen One.”

“You think that the Dungeon Master would let the world fall, because that’s what you would do,” said Amaryllis.

“Yeah,” I said. “Kindred spirits, he said. I wouldn’t do it to real people, obviously, but for worlds that I’d built … I did. It happened three or four times.”

From the corner of my eye I saw movement, and I turned to see Heshnel stepping back into the ship. He gave the wards an appraising look, then frowned slightly and went to join Gemma and Pallida, who were still in murmured conversation.

“They’ll know that Uther was dream-skewered,” said Amaryllis. “They’ll assume that you are too. Maybe we can let those particular secrets go. It’s possible that outright telling them you are the Chosen One is the way to go.”

“Unless that gets them all ready to commit a murder,” said Fenn.

“Yeah,” I said, looking at Heshnel. “Let’s hope that it doesn’t come to that.”
There were sometimes little things about Aerb that bothered me, usually because there wasn’t any obvious reason why something should be the case. Early on, I had just rolled with most of it, more concerned with survival than asking the little questions that had popped into my head, or more focused on the big existential questions of where I was and what it meant. But as time had passed, and I’d grown more comfortable with Aerb, I’d eventually come around to paying attention to those little things and trying to make some sense of them.

The cobblestone houses in Comfort had baffled me. Cobblestone houses themselves made a lot of sense, so long as the rounded stones were available, and mortar was cheap enough that it could be used in quantity without much in the way of costs. Thatched roofs were somewhat similar, if you lived in an area where you needed something to cover your house and had a bunch of reeds or straw laying about. The problem was, those cobblestone houses with thatched roofs were sitting alongside pretty standard drywall and shingled roofs, and that raised some serious questions about the world. I had come up with a few possible explanations:

- Technological and economic advances were in a transitional state, such that all the cobblestone buildings were a legacy and drywall with two-by-fours were what people used for new constructions.
- Cobblestone buildings were a symbol of some kind, a social, cultural, or political statement about something. I had no idea what, but harkening back to the old days was a good guess, especially if it was an outmoded method of construction.
- Cobblestones and thatch were local, and subject to local market forces, which had eventually reached equilibrium with the stuff that was bulk-teleported in from elsewhere. That might make sense if the cobblestone houses were made of a byproduct that no one would (or could, or economically could) intentionally make more of, meaning that the business of cobblestone house building couldn’t actually expand without getting a lot more expensive.

I eventually found the answer in the book of spells we’d taken from the tattoo parlor in Barren Jewel. As it turned out, there was a tattoo you could make with the right magical inks that would produce a cobblestone house for you, one complete with a thatched roof. Unfortunately, the cobblestone houses that it produced weren’t terribly good in the long term, and after five years or so, they would begin to break down, with the mortar crumbling, the thatch rotting, and the wooden beams shifting in place. None of these problems were magical in nature, they were simply due to the poor initial construction of the house the tattoo produced. All those problems could be corrected for, but if you were going to go through all that expense and labor, on top of the expense of the tattoo, it was better to have just built a house the normal way, with drywall and two-by-fours. Economically, it was sort of like the difference between renting and buying, a question of whether you wanted to make an investment that would take some time to pay off, or cheaper living in the short term.

And so, when we got to the region I would later learn was called the Amber Lands, I immediately noted that all the structures were made of that exact same type of cobblestone with that exact same thatched roof. This base camp, then, was a temporary place, most likely purpose-built in the last handful of years. There weren’t any roads that I could see leading out of this place, which meant that the big ship must have been one of only a few ways to get there. All that was pretty suggestive. Pallida had said that Gemma took her leave from Might and Motion a month ago, which was also suggestive. Combined with what Masters had said about things heating up again, it all painted a fairly grim picture. These people were responding to something recent, something that they’d needed or wanted a base of operations for that was far away from everything else.
The only structure that wasn’t made of cobblestone and thatch was a small fort, which had been hidden from our view inside the ship. The fort’s design was about as basic as it could possibly be, a cube shape with stone walls of the sort that I’d come to associate with steel mage designs. There were small crenellations at the top, and windows with arrow slits, but there weren’t many actual features to it. Despite that, I thought I recognized it from one of our campaigns. It was of the ‘neat practical effects with no combat applications’ school of magical bases. I’d been fond of those as gold sinks, as a DM, because players could funnel their money into something like that without unbalancing the game much.

“The building is magical,” said Grak as he stared at it.

“You may inspect it as much as you wish,” said Heshnel. “Our meeting will be conducted in there, when you’re ready. I’ve instructed Gur Dehla to remove all of the most onerous wards, leaving only those you wouldn’t likely find any objection to. There are wards against a wide variety of entads, none of which you’re likely to have on your person. If any more wards need to be removed, let us know.”

That was a trap, and not one that I thought any of us were likely to fall for. Explicitly asking for wards to be lowered would indicate something of our abilities, which meant that we would either have to argue for a change of location, argue for all the entad wards to be dropped, or show our hand.

“I will need some time,” said Grak. “A half hour.”

“As you will,” said Heshnel. “We should all refrain from saying anything sensitive until we’re inside the fort. There are a few methods of surveillance only protected against within the wards, and aside from that, two less mobile members.”

“Are there things you can say in the meantime?” asked Amaryllis. “Background you can give? Things that someone watching would already know?”

Heshnel’s eyes flicked over to me. “Which of you is the group leader?”

“We’re a democracy,” said Fenn. I cringed at the bitterness in her voice.

“A democracy of how many?” asked Heshnel. I wasn’t sure whether he hadn’t caught her tone (which seemed unimaginable to me), or whether he was just brushing by it.

“Eight,” I said. “Two of our members had to stay home.”

“Which is where?” asked Heshnel.

All his people had gathered around for this chat while Grak took a look at the wards and the magic of the fort. It appeared that we were going to have an impromptu meeting before the meeting, one where we could establish a baseline with each other, which wasn’t a horrible idea now that we weren’t under time pressure.

“I suppose in a formal sense, we’re the Council of Arches, part of the Republic of Miunun,” said Amaryllis.

“The new place?” asked Gemma. “With the tuung?”

“I hadn’t heard of it,” said Heshnel, casting her a glance. “The tuung?”

“They only have a handful,” said Gemma. “But one of them is female, and in a decade or two,
they’ll have more. Not really a nation though, unless they’re an upstart one.”

“And where is it located?” asked Heshnel.

“On the Isle of Poran,” Amaryllis answered, taking back the reins of conversation. “It’s an insignificantly small island on the Caltric Sea, not far from the lands of the Ha-lunde.”

“Your accent marks you as being from Anglecynn,” said Heshnel with a frown.

“Originally,” nodded Amaryllis.

“Can I see your face?” asked Heshnel. “Speaking through a full helm is no way to have a conversation.”

Amaryllis was in a bit of a tough spot. Obviously she wanted to keep the armor on in order to protect herself from a sudden attack, but she also wanted to keep it on because if she removed it, then Valencia would have less cover for keeping herself hidden from view.

“He thinks that he knows you,” said Valencia.

“Her voice is familiar,” said Heshnel with a slight nod.

Amaryllis slowly removed her helmet and held it to one side. Her hair was tied up in a tight, flat, bun, and she was sweating slightly from hours in full plate. For all that, she still looked pretty, which I found a bit annoying.

“Dahlia?” asked Pallida. Her eyes were wide.

The lenssi slashed its tendrils through the air a few times.

“No,” replied Heshnel. “She was never so severe. This girl is merely the spitting image.”

“Dahlia?” asked Amaryllis. She was looking between them. “Uther’s daughter?”

“There’s a resemblance,” said Heshnel with a nod. “Unless you are her?”

“No,” said Amaryllis. She was frowning. “I’m missing something.”

“Oh,” I said. “Uh, Dahlia was apparently never missing, she just became Uther’s squire in secret.”

Amaryllis stared at me. “And … when did you learn this?”

“It was something Masters said,” I replied. “Sorry, I forgot you weren’t able to hear.”

“Dahlia lived?” asked Amaryllis. “She was Helio?”

“And later the Red Mask,” I said.

“You have got to be fucking kidding me,” said Amaryllis.

“He’s wrong, actually,” said Pallida. “She did actually go missing, it was just for the space of about a month. And then when she showed up as Helio, that deception lasted for a few weeks before Uther wised up.” She was watching Amaryllis.

“But Helio —” Amaryllis began. “No, it’s not important.” She had the look of someone who desperately wanted answers to questions but wasn’t willing to waste the time. “I’m not her.”
“There’s some relation though?” asked Heshnel.

“I’m Amaryllis Penndraig,” said Amaryllis. “The most direct living descendant of Uther Penndraig.” She stood as tall as she could, with her most regal bearing. The only reason it wasn’t more impressive was that she had good posture to start with, and drawing herself up to her full height didn’t change much.

“I thought you were dead?” asked Pallida.

“Clearly not,” said Heshnel with a frown. “We’ll have more questions, it seems.”

“We have questions too,” said Fenn. “Like, to start with, what you plan to do with Juniper.”

“That will have to wait until we’re inside,” said Heshnel. “There are things we cannot safely discuss outside the walls of our meeting room.” He looked to Grak, who was still pacing around the place with his wand out. “How much longer?”

“Not much,” said Grak with a grunt.

“I have questions you might be able to answer,” I said. “How did you know that Masters had found me?”

“I paid off his receptionist,” said Pallida with a shrug. “He sent us a message using an entad I’d given him.”

“That’s surprisingly unsophisticated,” I replied.

“Yes, well, all the sophisticated things I’d tried over the years turned out to be failures,” said Pallida. “I had a familiar watching the place for a few weeks once, but Masters found and killed it. I had a homunculus that was doing the same, but Masters found and killed it two days after I’d placed it. So yes, I was unsophisticated, I cornered the guy at a bar and offered him money to send me a message if anything suspicious happened. I thought it was more likely that Raven would show up than someone from Uther’s list, but here you are.”

“You said that you hadn’t seen him in decades,” I said.

“Technically true,” replied Pallida. “We weren’t sure whose side he would be on, if --”

“We’ll speak more inside,” said Heshnel.

“If Uther returned,” finished Pallida. She turned on Heshnel. “You know that I have seniority here, right? You’re not the boss of me. If anyone is watching us, they already know that’s one of the reasons we’re here, they’d have to be stupid not to.”

“Prudence,” replied Heshnel. “Perhaps you would die less often if you exercised it.”

“You can’t live if you’re not willing to die,” said Pallida. “It’s a better philosophy if you keep getting reborn though, I’ll grant you that.”

“Who is the other one in armor?” asked O’kald. He had been mostly silent over the course of the conversation.

I saw Amaryllis clench her jaw.

“I’ll be staying armored,” replied Valencia.
O’kald grumbled at that, with a sound of rocks rubbing together.

“I’m less curious what she looks like and more curious about her abilities,” said Pallida. “She supposedly has an entad that’s letting her make some pretty substantial leaps of logic. If that’s what you’re bringing to the meeting room, we’re going to have a problem.”

“We have a problem anyway,” said Grak. He’d stepped back from the fort and sheathed his wand. “There are wards that will be problematic.”

Gur Delha moved its tendrils.

“Can I stop for a moment to ask how it is you know the lenssi gestural language?” asked Pallida.

“No,” said Valencia.

“The problem with the wards concerns point number nine,” said Grak. Valencia. “I’m not sure how we want to handle that.”

“Vote,” said Fenn. There was still a hard edge to her voice.

“We could bring out the infernoscope,” said Amaryllis.

“Infernoscope?” asked Pallida. “Any particular reason that you’d need one of those?”

“There’s a wrinkle,” said Valencia. “A piece of information that it would probably be better for you to know now, rather than having it be exposed later.”

“Are you sure?” I asked.

“No,” replied Valencia. “But I’ve been watching them, and I think this is probably the best path.”

“Okay,” said Fenn. “But if we have to fight, then we have to fight.”

“I don’t think anyone wants to fight, whatever you have to show us,” said Pallida.

“And the surveillance?” asked Amaryllis. “Are we about to reveal something that we’d want some unknown persons to be ignorant of?”

“Possibly,” said Valencia. She shifted slightly. “We’re already exposed on that front though. The surveillance is more hypothetical than actual. Depending on the exact mechanisms of the surveillance, and the identities of the surveilling, it’s probably best to clear up any confusion about me with them as well.”

(This was something we’d discussed in private. We wouldn’t always know when someone was watching us, and we wouldn’t always know when Valencia had been made. Doris Finch was still out there, and still in control of some kind of probability sensing entad or magic. We didn’t know what would happen if she tried to target Valencia, but there was a good chance that she would know something was up, even if she maybe wouldn’t know what. If the good guys were spying on us, they might see that Valencia didn’t show up on whatever instruments they were using and get the wrong idea. Having Valencia reveal herself, so long as it was accompanied by a demonstration, might actually have been the best course of action with regards to the people spying. Of course, the infernals were on the shortlist of people who might be spying, and having them know about Valencia wouldn’t be good … but if they were spying, they were likely to make the connection even without a
Fenn held out her glove, and popped the infernoscope into existence.

It sat nearly five feet across, with the glass surface being roughly the height of a table. Five thick, oaken legs held it up, and the outer edge was made of the same polished wood, with polished copper sliders that controlled the mechanisms beneath the glass. It was a class of machine that had been invented during Uther’s time, and not changed all that much since then. It required no external power to use, little in the way of expertise, and wasn’t all that expensive to manufacture. Peering down into the hells was easy, it was just a question of whether people were compelled to do so.

Valencia moved forward and moved a mechanism at the bottom of the table, which caused the glass to light up with a scene from another world. We were looking at a funny angle, one which showed piss-yellow skies and blood-red clouds, and something puke-green that covered the rolling hills, more like moss than grass. Valencia moved the view around, so that it was more level and pointed in the right direction to see the trees.

Except … they weren’t trees, they were a parody of trees, recognizably wood, but with people stuck in them and splayed in crucifixion. Their skin was peeled back, exposing muscle, and blood endlessly dripped down to feed the roots of the trees. Small fruits grew near the fingers, pustulant and crimson. There wasn’t any sound, but from the people's mouths, I thought they were probably moaning rather than screaming, a low, dull, continuous agony rather than something sharp and hot.

“Just a moment, I need to find one,” said Valencia as she moved the controls. The picture lost focus for a moment as she rapidly panned around and zoomed in. The heart of the machine was a crystal that tuned light from another plane, and everything else was a method of either manipulating how and where the plane was tuned.

“Why are we seeing this?” asked Pallida. She looked a little bit sick.

“A demonstration,” said Valencia. “Less of a happy one than I would like. There.”

The view had changed to the interior of a building, and was clarifying by the moment as Valencia adjusted the mechanisms that were making the view possible. From what I’d seen of the outside, this was something akin to a farmhouse. The interior view we were given was that of a dining room, similar to what might have been seen on Earth, save for the color of the wood used in the walls, the taxidermied faces on the wall, and the table, which was made of bone and leather. An infernal sat at one end of the table, with twisted red horns and cracked black skin. There was a human with him, moving like a broken man, sweat slicking back thin hair. He was scarred and scabbed, bruised and beaten, but still mobile. As we watched, the demon was served a meal, most of which was sliced fruit of the same kind we’d seen growing on the trees. Mixed with that were curled bits of something rubbery, and smaller pieces of what I had little doubt was raw meat.

The infernal said something, and the man staggered slightly. He pulled a knife from his pocket though, moving without hesitation. As he did, I realized that he was missing two fingers. I barely had time to realize what he was going to do before he brought the knife down on his finger, cutting at the joint, until he was all the way through. He placed the bloody finger on the plate, then moved to the other end of the table and collapsed in his own chair. The infernal said something again, and the man leaned forward to look at his own plate, which was covered in hair, eyeballs, and what must have been fecal matter.

“Watch,” said Valencia.

The infernal shifted slightly in his seat, then fell to the side with faint smoke trailing from where his
yellowed eyes had been. The human stopped in place with a handful of ‘food’ from his plate halfway to his mouth.

“What was that?” asked Heshnel, narrowing his eyes at the infernoscope.

“That was the last moment of the thirty millennia existence of Gelgroroth Drozgeg, Eater of Whimpers, Chohan of Absqueltion. He was a minor devil of the 321st hell,” said Valencia.

The man set down his food with a shaking hand and went over to the devil, moving slowly and cautiously. He looked the devil over, checking him without touching, pushing just enough to check that there was no reaction. The man stood back up, staring down at the devil for a moment, then returned to his chair and began eating the slop he’d been given, gagging and crying the whole while.

Valencia adjusted the mechanism and the view disappeared.

“What happened to that devil?” asked Heshnel with a soft voice.

“I ate him,” replied Valencia.

“What about the human?” asked Gemma. “There at the end, I don’t understand why he returned to that … meal.”

“The human’s name was Betram,” said Valencia. “He’d been owned by Gelgroroth for two decades or so. This is almost assuredly not the first time he’d seen one of his masters apparently die in front of him. He’s assuming that what he saw was a ruse intended as part of psychological torture. Most likely he’ll realize that the death was real in the next few days and find some other infernal to be his master.”

I frowned at that, but I knew enough about the hells to know why that might be the case. Being a kept human was, in some sense, the best that you could do in the hells, especially if you were kept by someone rich. Hell was an ecosystem, and every part of that ecosystem fed on mortal suffering in one way or another, usually indirectly by following incentives. All the mortal species regenerated in the hells, which made them the ecological equivalent to the sun, the source of all life and energy.

Some of this was my design. We’d done a campaign inspired by Dante’s Inferno, and I’d done my best to make justifications for why hell looked so suspiciously tailored to producing suffering. I’d had more of a flourish to my design, as I hadn’t really felt the need to be grounded and wanted big set pieces, but some of what I had made had been lifted directly, and even if it hadn’t been, I could recognize my own fingerprints, even if I was certain that my fingers hadn’t been the ones to make them. The hells were, in some sense, my sort of hells, hells that didn’t really care about you and only tortured you because there was something in it for them. Infernals made people eat gross stuff because that helped make their own food taste better. People were farmed for their blood, muscle, skin, and bone, to within the limits of their enhanced post-death bodies to withstand such things.

I felt my stomach churn. Hell #321 wasn’t even one of the really bad ones. Deep down, the rules got harsher for mortals.

“You … ate … a devil?” asked Heshnel. “While standing on the surface of Aerb? What are the limits of that ability?”

“Classified,” said Valencia. “I will say that I can give another demonstration, if one isn’t enough.”

“Please,” said Heshnel, but I could tell that he didn’t really care that much about more proof: he wanted to see the things destroyed.
“You can operate the infernoscope yourself, if you’d like,” said Valencia. “I wouldn’t want you to think that there was any trickery involved.”

“It’s too good to be true,” said O’kald.

“We’ll see,” replied Heshnel. He stepped up to the controls of the infernoscope and began fiddling with it, far less expertly than Valencia had. It took him some time, working in silence, while I looked away from the scenes that flashed by. It wasn’t quite slavery and harvest of mortals so far as the eye could see, but it was close enough to make me feel sick. My thought, after seeing what Valencia had done, had been to question why she hadn’t killed the devil before the man had been made to cut off his finger, but obviously in the context of the hells and the screaming insanity of a trillion people being tortured forever, that led down a rabbit hole.

“There,” said Heshnel.

I steeled myself and looked down. The image quality wasn’t as good, and while Valencia was able to improve it by fiddling with the controls, it stayed blurry enough that we couldn’t make out fine details. We were watching some kind of staged fight, with a huge demon pitted against a man in plate armor and a sword. The crowds behind them were even less clear, but it had to be thousands of infernals. It took me some time to realize that the demon was moving oddly because he was handicapped, both arms bound behind his back and a solid bar of some dark metal connecting his ankles. That left him with snapping, discolored teeth, and three long horns, two on each side and one protruding from his forehead. The demon was going to win, I was fairly sure.

The demon toppled over, slamming its face into the dirt, from no apparent cause.

“Incredible,” said Heshnel with a low voice. “More.”

Valencia adjusted the controls on the infernoscope slightly, until it was pointed toward the crowd that had been watching, which was moving around quite a bit more than it had been. I imagined them uneasy, not quite knowing what was going on, too stunned at having witnessed the death of one of their kind to make any sense of things, or maybe wondering whether this was an act. The infernoscope showed a stretch of the crowd, its view close to the front line of infernals. One of them fell over the side, into the pit with the fighter, and the crowd almost immediately erupted in a furor.

I saw more of them falling, one by one, dropping to the bleachers as the crowd began to part and run in a mad panic. More and more of their ranks were cut through with every passing second, and Valencia worked the controls to give us a broader view. They weren’t quite dying en masse, but the crowd was moving in a crushing stampede, and bodies were being left behind with every foot the crowd managed to move.

I didn’t realize that Valencia was hyperventilating until Amaryllis had pulled her away from the infernoscope’s controls. In the view that we’d been given, the deaths continued, heedless of the fact that Valencia was no longer at the controls.

“Paper bag,” said Amaryllis in Fenn’s direction.

Fenn rushed in and pulled a paper bag from her glove, which Amaryllis took and inflated with a puff of air. She slipped back Valencia’s faceplate and handed Valencia the paper bag, which Valencia took and began breathing into with deep breaths. I glanced at the infernoscope only for long enough to confirm that the killings had stopped, even as the mass panic continued.

“For years,” Valencia said, “For years,” she said again, between breaths. “I was theirs for years and I don’t, I can’t.” Tears were streaming down her face.
“Deep breaths,” said Amaryllis.

I saw the lenssi make a gesture with its tendrils that not all of the others caught at first.

“She’s non-anima,” said O’kald as he drew his weapons. “It was too good to be true.”

“Weapons down,” said Heshnel.

“It’s fakery,” said O’kald. “A display, meant for us. They did the same for Uther.”

“No,” said Valencia, still breathing hard, but with the paper bag tossed to the side. “Please.”

“Weapons down,” said Heshnel.

“There are protocols,” said O’kald.

“He’s right,” said Gemma.

“How would they have faked it though?” asked Pallida. “Hesh picked the second site.”

“I was non-anima,” said Valencia. “And then something changed, and I became something new.” I couldn’t take the desperate pleading in her voice, the way she sounded like a child in need of protection.

“She’s under our aegis,” said Amaryllis with a hard edge to her voice. She was still crouched down next to Valencia. “We’ve had more thorough confirmation that she is what she says.”

“The protocols exist for a reason,” said O’kald. He had not, in fact, lowered his weapons. “I’m willing to get a second opinion on what she is, but we can’t trust a word she says.”

“Do you recall the things they said about Forty-Two?” asked Heshnel. “He was a changeling, the boogeyman of that era. Tell me that she would be so different, an outcast, for good reason, allied with the Chosen One and turned, completely, against their own kind.”

“The infernals were never my kind,” said Valencia. She staggered to her feet and rested a hand on the infernoscope for support. “I was possessed, deprived of my will, a slave.”

O’kald stared at her. He had a hammer in one hand and a handaxe in the other. I was pretty sure that he would be the toughest of their group to take down, if it came to that, but I was really, really hoping that it wouldn’t come to that. Bellads had internal organs, of a sort, not anything organic, but still places that could cause him some trouble if pierced. Amaryllis had her flickerblade, Fenn had void weapons in her glove, and Solace would surely be able to pull something out of her bag of tricks against a being that was largely made of rock. If it was just him, I was optimistic that we could take him down, but I wasn’t sure that he would be the only one.

The lenssi made a few gestures in the air. I looked to Valencia for translation.

“I don’t, I can’t, sorry,” said Valencia. She wiped some of her tears away. “I’m too -- I overdid it.”

“Dehla was arguing for trust,” said Gemma. “Measured trust.”

“Wait, she ate them?” asked Pallida. “And gained their powers? That’s why she knew all that stuff?”

“Yes,” said Valencia with a small voice. “I just wanted to protect my friends.”

“It’s an act,” said O’kald. “Am I the only one who sees that?”
“You haven’t answered how it would be possible,” said Amaryllis.

“It’s a ploy by the devils,” said O’kald. “Fakery and lies.”

“Yes, but how?” asked Pallida. “You think that this is a fake infernoscope? Or that they arranged those scenes for us in the hells?”

“I don’t know,” said O’kald. “And now she says she can’t do more. Convenient.”

Valencia squared her shoulders. “I can,” she said. “I just killed a thousand of the infernals. How many more do you need to see die?”

“The ruling council,” said Heshnel. His eyes were piercing, full of intent.

“There are considerations,” said Amaryllis. “We’re worried about retaliation from the hells. For the hells to be unified would, I’m sure you’d agree, be problematic.” She glanced at Valencia. “This was already more than I had thought should be done without a concrete plan in place, especially given the circumstances. If they develop countermeasures --”

“Sorry,” said Valencia, hanging her head. “I just wanted to not be seen as a monster. I wanted to kill the creatures that make people see me that way.”

Pallida began laughing. “Oh, I just got it! She’s the one that the hells have been running around scared of? That’s amazing. We were so worried! She’s eating them!”

“O’kald, lower your weapons,” said Heshnel. “We don’t have to trust them, not in the slightest, but whatever the truth, they’re obviously willing to defend her. We don’t want this to come to blows any more than they do.”

O’kald slowly lowered his weapons. “I’ll watch her,” he said.

Valencia sighed, sagging down like it had been taking all her energy to stand tall.

“This ward will need to be removed,” said Grak. He took his wand out and pointed to the fort, lifting the tip of the wand out and back like he was balancing an egg on the wand’s end.

The lenssi took out its own wand out from the bandolier around its liquid form and swished it twice through the air before quickly resheathing the wand.

“I thought that you couldn’t ward against non-anima?” I asked.

“The construction is ingenious,” said Grak. I waited for him to go on, but that was what he left it at. More detail on that later, I supposed.

“But she’s not a non-anima?” asked Pallida. “You said she’s something else.”

“She doesn’t have a soul,” I said. “But there’s no risk of possession. Instead, it’s sort of the opposite.”

“That’s so cool,” said Pallida. “Wait so, she’s immune to magic?”

“This isn’t what we brought them here for,” said Heshnel. Whatever glimmering of excitement I had seen was gone. Whatever was going on in his head, he’d become more reserved. “It’s only a piece of the puzzle.”

“We should be able to go in,” said Grak. “It’s as safe as the rest of this place.” I knew Grak well
enough to read the implied reservation there, even if it wasn’t readable from his tone.

“Alright,” I said. “Then let’s get this meeting started.”
The Meeting of Minds

The interior of the fort was bigger than the exterior, which was readily apparent once we were through the front entryway and looking down the great hall. Two long tables made of a pale wood looked like they probably sat a hundred people between them, though both were empty. A huge fireplace took up most of one wall, with an expansive splash and a mantle above it; it was unlit. My eyes were drawn to the back of the room, where two people sat at a round table. One was a wrinkled old man with skin so white it was almost blue, and the other was a young woman, who I thought was probably his caretaker.

We sat around the table, with spots left open between our two groups. Heshnel sat to the left of the old man, at the center of their formation, while Amaryllis and I sat near the center of our side. We had six, and with the two newcomers, they had seven, which made for thirteen in total. That seemed like a lot of people to me, especially when they each had their own views on things.

“Dahlia?” the old man asked as we were taking our seats. His voice was like the creaking of a door, and the word was spoken with effort.

“No,” said Heshnel, placing a hand on the man’s shoulder. “She is one of Uther’s heirs though.” He cleared his throat. “Everett, Lyda, this is the Council of Arches. There have been some developments that I’d like to communicate about privately, but for now I think that we should focus on Juniper Smith. Lyda, are you ready?”

“Certainly,” the young woman replied. She was dressed somewhat conservatively, with bangs that reminded me of Maddie’s, and a choker around her neck that was inset with a large opal. She brought delicate fingers up to the choker and gently pressed on it. The reaction was immediate: her hair lit up with a glowing green light, flying upward like she was doing her best impression of going super-saiyan, and her eyes were suffused with a pale green light. This lasted for no more than a moment before settled back down, but the green glow didn’t fade entirely.

The choker had been one I’d thought up for a villain in one of our campaigns. Special effects aside, all it did was allow someone to pilot a willing body remotely. I’d used it as one way to get around the problem of villains that die before they can be built up or make their motivations known. Naturally, I couldn’t communicate any of this to the rest of the party, and I wasn’t sure that it was entirely relevant, given that its presence wasn’t necessarily laden with meaning. The villain in question had been a marquis, mostly forgettable aside from all the times he’d managed to evade capture.

“Hello,” said the entity that was using Lyda’s body. The voice was like a chorus, with similar tones layered on top of each other. The thing-that-had-Lyda looked around, taking in its surroundings. It froze with its eyes locked on Amaryllis. “Dahlia,” it said.

“I look that much like her?” asked Amaryllis. She seemed vaguely annoyed by being mistaken for a long-lost relative a third time.

“Ah,” said the Possessor. “Not Dahlia.”

“No,” said Heshnel. “Amaryllis Penndraig, a distant descendant of Uther.”

“I’m the most direct descendant,” said Amaryllis, seeming a bit annoyed.

“Still distant,” said Heshnel.

“Are we going to get introduced to this creepy thing or not?” asked Fenn.
“We should make introductions all around,” said Heshnel. “But to start with, the entity using Lyda to communicate is called Thargox. The particulars must remain secret, I’m afraid.”

“Oh, I know Thargox,” said Solace. Her smile looked especially child-like. She waved from her seat. “Hello Thargox!”

The thing wearing Lyda’s skin gave Solace a puzzled look. “Hello little girl,” it said. “I do not recognize you.”

“That’s okay,” said Solace. “I looked different the last time we met. Oorang Solace?”

Thargox chuckled. “You do not look so different,” she/it said. “Your friend is well?”

Solace’s face fell slightly. “As well as can be expected,” replied Solace. “My companions are trying their best to help with that.”

(I didn’t think that was true. Up until we were made aware of the Cannibal, we had mostly been dealing with our fledgling nation, and when I said ‘we’, I mostly meant Amaryllis. We had been following that questline pretty steadily up, given it was half the reason we’d broken Fallatehr out of prison, and our entire time down in the Boundless Pit had ultimately been in service of having Solace be born again so that the locus wouldn’t die … but we didn’t actually have any good options as far as the locus was concerned, and the thing that made the most sense to try was to have me level up and increase my skills. We weren’t really making a beeline for that either, for reasons that should be obvious.)

“I’m sorry,” said Amaryllis. “Solace, can you explain?”

“It doesn’t appear that Thargox would like me to tell you yet,” said Solace. “I hold its secret in confidence.” I made note of the pronoun, ‘it’.

“Thargox?” asked Heshnel. “Can you tell us who this child is?”

“No,” replied Thargox.

“Lovely,” said Pallida.

We went around and made introductions after that, though I already knew everyone’s name by that point. It strangely reminded me of first day getting-to-know-you activities in high school, which I’d always hated with a passion. I had a better working memory now though, or I was maybe just a bit more attentive, because their names hadn’t just gone in one ear and out the other, reduced to background noise.

It hadn’t escaped my notice that Everett, the decrepit old man, shared a name with Everett, the bumbling skin mage based on Tom’s character and one of Uther’s seven Knights. Immortality was a very tricky prospect on Aerb, but I thought it likely that if someone had found a way around soul degeneration, it would be Uther or one of his people.

(It was probably obvious from the fact that there weren’t a bunch of really old humans walking around, and the fact that Amaryllis was the most direct descendant at ten generations removed from Uther, but people still died from ‘old age’. Even if you took care of physical health, mental health would eventually begin to decline, and if you took care of that, then the soul itself would start to unwind, dropping away bits and pieces of itself faster and faster as time went on. I was pretty sure those rules existed in service of maintaining a world that was a bit closer to Earth, since I’d used similar rules myself to curb the question of how everything becomes different if immortality is easy.)
“You’re Everett Wolfe?” asked Amayrillis, putting the question to him directly.

“Once upon a time,” he said with a nod.

“Alright,” said Tom. “So you know how we were talking about points and what they mean?”

“Uh,” I said. “Sure?”

“You were distracted,” said Reimer. “The argument --”

“Not an argument,” said Arthur. I made a silent prayer that we wouldn’t rehash the argument about what an argument was.

“The discussion was about what a hit point actually meant in concrete terms,” said Reimer. “Arthur began talking about luck, like, hit points are just a measure of how much luck you have until you get hit, and obviously in D&D, Pathfinder, and other derivatives, that’s not right, because there are other mechanics that interact with hit points, and how the heck does it make any sense for clerics to be restoring luck?”

“That actually makes a lot of sense,” I said. “Clerics can work with divine favor, and they’re restoring your connection to the gods that are ultimately responsible for protecting you in the frenzy of battle.”

“You don’t actually believe that,” said Reimer.

“It’s interesting from a lore perspective,” I said. “But no, I don’t think it’s literally true as the default, given it’s contradicted by loads of flavor and mechanics. I’ve always conceived of hit points as being something like exhaustion, physical damage, hunger, et cetera, all rolled into one.” I turned to Tom. “You were going somewhere with this though? About your new character?”

“Yeah,” said Tom. “I was thinking, like, normally all the points that you get for things represent how skilled you are, right? It’s experience and stuff. But I was thinking that instead I could play a guy that just bumbles his way through everything? Like, he’s a sorcerer, and he casts spells and things, but most of the time he’s got no idea what he’s doing, and when he levels up it just gets a little bit more ridiculous.”

“That seems like a horrible idea,” said Reimer. “Also, mechanically incompatible with the game.”

“We could homebrew something if mechanics get in the way,” I said with a shrug. “Let me think about it for a bit. Mostly it would come from narration on your end, right? You wouldn’t say that you were casting a fireball, you would say, I don’t know, that you were trying to light your pipe to calm your nerves and accidentally threw a fireball? Something like that?”

“Yes,” said Tom with a beaming smile. “Exactly!”

“Veto,” said Reimer.

“You don’t get to just veto character concepts,” I said.

“You veto my characters all the time,” said Reimer, scowling at me.

“First, I don’t think ‘how many daggers can you possibly throw in a round’ is actually a character, second, I have veto power, you don’t.” I gave him my best shit-eating grin. “And also, for what it’s worth, I feel like I really try to be accommodating, so long as it’s not bullshit like the hulking hurler.”
“It does seem like a bumbling sorcerer will wear thin pretty quickly,” said Arthur, cutting in.

“Well, I think it’s neat,” I said. “And if it wears thin, then that aspect of the character can just get phased out. Tom, you’ll figure out some stuff so I don’t have to narrate? Like, for each of your spells, figure out what you might have been intending to do instead?”

“Absolutely,” said Tom with a smile. “I’m going to be the bumblingest sorcerer anyone has ever seen.”

“So long as you don’t actually do worse on any of your checks,” said Reimer with a frown. “I can only pull so much weight.”

I’d read the biography of Everett Wolfe. The more I’d read, the more I’d seen the things he’d had in common with Tom’s character. This Everett Wolfe, the one sitting in front of me, had started out as a somewhat absent-minded artist, one with a focus on tattoos. Tattoo magic wasn’t well-known at the time, and the Athenaeum of Steel and Sweat hadn’t even been founded yet, but for Everett it was about the art, rather than the magic. Half the time he used exotic ingredients just for the sake of trying to get newer, sharper colors. It wasn’t quite right to say that everything he did was done through luck, but he worked on a deeper level of intuition, and that keen intuition saved his life a number of times, often unwittingly.

He didn’t stay like that forever though. Most of Uther’s Knights had their own stories, and Everett’s seemed to be one of moving from the intuitive, inspired artist to more of a prolific workhorse. His struggles, at least as outlined in the biography I’d read, were struggles of artistry, a push and pull between a desire to do something unique and original, following his strong intuitions about what tattoos to create, and the need to create tattoos over and over to the exacting standards that were demanded by the nature of the magic and the needs of his team. Tattoos, at least magical ones, boiled down to what were little more than vector graphics, and any competent tattooist was essentially required to do tedious, precision repetition of the same relatively small handful of patterns.

Amaryllis and I had both read up on him, and talked about him a bit, as we’d talked about all of the Knights. I almost felt like I knew the man, given how many of his struggles I had read about, and the things that his biography had revealed about him. Now he was, apparently, sitting across the table from us. It was weird.

“You look just like her,” Everett said to Amaryllis. “Doesn’t she, Sade?”

“Yeah,” said Pallida. “It’s kind of giving me the creeps, no offense.”

“None taken,” said Amaryllis. She cleared her throat. “I think that it’s time to get down to business. We’ve come here for answers, which was the same reason we were at Speculation and Scrutiny. Unfortunately, all we got from Masters were more questions and a cryptic message from my distant ancestor, as well as some implicit threats and undue use of force. There’s a good chance that we each have pieces of the puzzle that the other might want to take a look at.”

“Clearly,” said Heshnel. “That display outside was impressive, to say the least.”

Valencia sat in silence. I didn’t know what I expected from her, or what I thought she should have said, but the silence made her seem withdrawn. I was worried about her.

Heshnel returned to splitting focus between Amaryllis and myself. “Juniper Smith’s name was on a questionnaire written by Uther Penndraig’s own hand, five hundred years ago, for reasons which are unclear,” said Heshnel. “Following Uther’s disappearance and, presumably, death, it was speculated
by many who were familiar with the phenomenon that he was dream-skewered. Speculator Masters
has been sitting at his clinic, treating it as a fiefdom, and guarding it with quite a bit more fervor than
one might imagine he would, if there was nothing to hide. Some token effort was put into
independent investigation, but our attention was elsewhere following Uther taking his leave, and
conversations with the dream-skewered didn’t turn up anything fruitful, aside from the anomaly of
the questionnaire. Now, five hundred years later, as too many old threats have sprung into motion at
once, someone arrives at the athenaeum with a name that was written long, long ago, beyond the
threshold of any probabilistic or prophetic magic known to us. Who is Juniper Smith, and why did he
come to the athenaeum?”

“I think it’s better that we have some of our questions answered first,” I said. “I don’t know what
Plan B was, but Valencia assures me that it was more violent than a meeting.” That was understating
it significantly. “We’re in the dark here. We need to be brought into the light, just a little bit, before
we’ll say anything.”

“Masters mentioned specific threats,” said Amaryllis, taking the conversational ball from me. “Some
were known to us, others weren’t, and the specifics are unclear. Tell us about the Infinite Library.”

“Why do you need to know?” asked O’kald. He was the only one of us standing; he weighed too
much to sit in a chair. “What do you plan to do about it?”

“They have firepower, clearly,” said Pallida. “Just like Uther and his Knights.”

“If there’s anything that you haven’t heard of, there’s a reason,” said Heshnel. “But for the Infinite
Library --”

“Are you really going to tell them?” asked O’kald.

The lenssi flicked its tendrils in the air.

“I am,” said Heshnel. “If he’s the Chosen One, then that might be cause for him to know, one way or
another.” He turned back to me. “The Infinite Library contains every book that ever has been or will
be published. Searching it is arduous, and currently feasible only with the use of a magic specific to
that place.” Library Magic, naturally. “When someone enters or leaves the library, the books in the
library change, because it cannot account for itself. With it, we can glimpse an imperfect future, the
future as it would exist without our knowledge of that future and the work of the librarians. Per the
last report from the head librarian, there are two years before no more books are published.”

“Masters said five years,” I replied. I felt my chest get a little tight at hearing how tight a deadline we
were on, for a project whose existence we hadn’t even been informed of yet.

“Then I will hope that his information is more up to date than my own,” replied Heshnel.
“Unfortunately, I’m skeptical that’s the case. Six weeks ago, it was five years, as low as it’s ever
been. Then, something changed, and it became two years instead. We’re still tracking down a
number of leads, as the exact cause is uncertain.”

**Quest Accepted: We’re Going To Need Books, Lots of Books - The latest report from the ‘Infinite’
Library is that the world will stop publishing books roughly two years from now. The man who
left the library changed the future, and if you go in, you’ll change the future too -- but perhaps
that’s for the best.**

“Why would you ask what the library is if you already knew?” Pallida asked Amaryllis.

The lenssi made three quick gestures with its tendrils.
“Ah,” said Pallida. “Right, cross-checking to make sure we’re not lying.”

“And what do those books say about me, if anything?” I asked.

“As far as I’ve read, nothing,” replied Heshnel. “Should they have? Are you so important that you would expect to be written about?”

“You don’t have books published yourself?” asked Amaryllis. “You haven’t already seen how this meeting is going to go? Because if this library can bring in books from some alternate future, then there’s nothing to stop you from writing your own books, and there also shouldn’t be anything to stop you from taking information from the future and advancing the arts and sciences by decades at a time.”

There was something a little too intense about the way that Amaryllis was speaking. I could see the parallels to her own situation, of course. She had books that weren’t from the future, exactly, but which were going to advance Aerb up a few ranks on the technology ladder. She was doing what she thought anyone should be doing, given the same resources we had.

“Exclusions,” said Everett with a cough. “We tried. It caused exclusions. There was once a thing called a demiplane.” He sounded wistful, and not entirely with us.

“The future that the library provides is a false one,” said Heshnel. “There are some things it cannot account for, beyond just itself. The exclusionary principle appears to be one of those things. There exists a moratorium on research.”

“Eight exclusions,” said Everett.

“More, when the Second Empire got ahold of the Library,” said O’kald.

Heshnel frowned slightly. “Yes.”

“The library is now in neutral hands,” said Thargox. This seemed directed at Solace.

“Ah. Neutral,” said Solace, as though that was a bitter word to swallow.

It suddenly occurred to me that more than half of the people in the room had been alive during the Second Empire. The thought that immediately followed was I didn’t have any concrete information about which ‘side’ any of these people might have been on. And once that thought was in place, it finally connected that when Pallida had said that Heshnel had been stripped of his abilities as a soul mage, it had probably been against his will, done by the same counter-imperialists that had thrown Fallatehr in prison. I don’t know why, but in my head, I had immediately cast him as being a revolutionary fighter taking up the signature tool of the enemy, maybe because he was one of Uther’s old allies. It was just as likely -- maybe more likely, given how people were responding to each other -- that some of Uther’s old allies had been instrumental members of the Second Empire.

“We’re not here to relitigate the past,” said Heshnel. “Far from it. We’re here to discuss the future.” His voice had gotten firmer. “Who is Juniper Smith?”

“There are other things that we need to know,” said Amaryllis. “The Outer Reaches, the Other Side, these are words that were spoken with weight to them by Masters.”

“No,” said Heshnel. “If we’re to exchange information, then it needs to go in both directions. Who are you, Juniper Smith? How did Uther know you would come?”

I glanced at the others. I hadn’t ever thought we were going to get out of this without me giving up
some information, and I thought it likely that they would just talk to Masters after things had cooled down a little bit, especially if they had information to trade with him. We planned to talk with Masters again, so long as we could do it without stepping within a few hundred miles of the exclusion zone.

“Uther Penndraig was dream skewered,” I said. “I am too. We knew each other, as teenagers, on Earth. So far as I can tell, the dream skewered were a real, if very minor phenomenon, and from that kernel of truth, Uther and Masters built a deception intended solely as a way of baiting me or a few dozen others from Earth to come seek him out, if they ever showed up. To my knowledge, I’m the only one who did. I came to Speculation and Scrutiny because, like you, I wanted answers.”

“For someone who should have lost all knowledge of Aerb, you have remarkably capable companions,” said the fox Animalia, Gemma. She’d been mostly quiet, watching us. It reminded me of our bigger tabletop sessions, when there had been eight or nine people because too many of us had shown up, leaving people like Craig to sit quietly for long stretches of time, watching and waiting for a moment to contribute.

“I will forever be grateful that I found Amaryllis,” I said. “I don’t think that I would have survived for so long without her.”

“Diplomatic,” scowled O’kald.

“How old are you?” asked Gemma.

“Eighteen,” I said.

“And how long has it been since you were dream-skewered?” asked Gemma.

“Four months,” I replied, rounding up.

“Pallida, do you have some measure of his skills?” asked Gemma.

The pink-skinned girl looked at me with a raised eyebrow. “I watched him deliver a pretty powerful kick,” she replied. “I think he’d probably try to explain it away as being an entad, but I really doubt that. Assuming that he’s actually human, then I’d say he’s a pretty strong blood mage, magus tier at least, based on what I’ve seen. I was kind of hoping that he’d reveal something while we made our escape, but no luck there.”

The lenssi gestured, a long series of motions that took place in near-silence.

“What?” I asked, once it was finished.

Pallida was the one to answer. “The gist of it is that Dehla thinks there’s nothing to indicate that you’re all that special.”

“It seemed like there were a lot of words there,” I said. I glanced over at Valencia.

“Sorry,” she said. “I’m still not up to it right now.”

“It wasn’t really important,” said Pallida. “Basically, if you were a blood mage, then you had to have trained at the athenaeum, but you couldn’t have actually achieved the level of skill that you did in a handful of months. So, maybe the dream skewering thing doesn’t work like we thought it did, or you’re lying, or I was wrong about what I saw, or wrong about --”

Dehla started gesturing again and Pallida stopped to watch.
“Okay,” said Pallida, once Dehla was done. “Apparently my skills as translator are not being valued today. What Dehla wants to know is how easy you found learning blood magic to be, and whether you did it at the anthenaeum.”

“That’s assuming that I know a single thing about blood magic,” I said.

“Do you?” asked Heshnel.

“Masters mentioned that Uther had something called the Knack,” I said. “He could learn things faster than anyone could reasonably be expected to, without any apparent magical aid. I … don’t think that I have whatever he had.” I looked at Grak. “I’ve been trying to learn Groglir for quite a while now, and while I am making progress, it’s about as fast as I would expect given how much time and effort I put into it.” I took a deep breath. “But as far as blood magic goes, yes, I attained some level of proficiency after a short lesson from a novice. I don’t think that necessarily makes me the Chosen One.”

“What does the term mean to you?” asked Heshnel.

“It appears in a lot of Uther’s writings, and it’s implicit in a lot of the works he created,” I replied. I hesitated. “Sorry, but if you know that he was dream skewered, and that I’m dream skewered, then I guess it doesn’t hurt anything to say that a lot of the ideas that Uther claimed for himself, and nearly all of the works he ever published, were all taken from Earth. A lot of it is, uh, straight plagiarism.”

“That fits in well with the theory, yes,” said Heshnel.

“Well, the Chosen One crops up a lot in Uther’s writing because it belonged to a class of stories that he really liked, and he wrote his own versions of a lot of those stories during his time on Aerb,” I said. “I’m given to understand that some of his focus on the idea of a Chosen One was seen as political propaganda, as though he was writing stories that tried to justify giving him power, but I don’t really think it was that, or at least not just that.” I swallowed. “He missed Earth. For whatever reason, he felt like he couldn’t talk to anyone about it, so he wrote stories instead, as a way of connecting to Earth and covertly sharing a part of it with people here. And … maybe he did think that he was the Chosen One, and maybe he even was?” I was watching Heshnel. I had lost him at some point, I could see that, because he’d spent most of the time I was explaining looking like he wanted to butt in.

“Uther never lost,” said Heshnel. “His enemies appeared in exactly the right order for him to be able to barely defeat each of them. He gained power rapidly, but it was always just enough to secure a victory, and there were times, rarely, that he got lucky rather than winning through pure might, skill, or knowledge. We never found out who Chose him, or for what purpose. When he left, we had to pick up the pieces and fight back against all of the problems that it had seemed like only he could handle.” He gestured to the great hall. “We were an army without its general, but we pushed on. And at great cost of life, the threats were put down, and the world was safe and secure.”

I let out a long breath. “The question is the direction of causality. If Uther had died early on, would the threats have never reared their heads? Or did he only arise because there were threats that only someone like him could be dealt with? It’s a question that you can’t possibly answer, but I have a feeling that you’ve all made up your mind.”

“Not really,” said Pallida. “But any insight you could give would sure be helpful.”

I looked at the seven of them, then glanced toward Valencia again, who gave me nothing more than a helpless look. “There are things that you’ll need to understand. It will take a long time to explain, but I’m willing to do it. To start with, I met the entity that I think did the choosing, and he told me in
no uncertain terms that nothing was going to save me if I failed. I’m sure that if you did some
research on us, which I assume you will, you would see some similarities between Uther and I, but -
-
“Then it’s better you’re ended now,” said O’kald. I felt my blood run cold at the naked aggression,
but none of the others on his side seemed to share it.

“Let him speak,” said Gemma.

“On Earth, I knew Uther as a teenaged boy named Arthur,” I said. I really didn’t like the feeling that
we might have to fight if my explanation wasn’t good enough. “We were both pretty normal. We
lived in a small town whose focus was mostly agriculture, corn, wheat, and soybeans. None of that is
terribly important. What is important is that we played games together, games of imagination and
storytelling, and our roles in those games were very different. Arthur was a roleplayer, someone who
played at being different people, walking through a different world every few months. I was the one
who created those worlds.”

I got some blank stares at that.

“Fenn?” I asked. “Can you bring out the Monster Manual?”

“Which edition?” asked Fenn.

“Fifth,” I said.

I caught Amaryllis looking at me, seeming none too happy, though this part, at least, we’d discussed
beforehand. Yes, we were letting more people in on the fact that we could get things from Earth, but
that didn’t really help them much, given that the backpack had been folded into what had to be one
of the most defensible houses in the world. Besides, if Uniquities knew, then we had to assume that
other people would soon know too. This group of people, led by Heshnel, was operating in secret,
which was more than could be said for Uniquities.

Fenn popped the book from her glove and slid it across the table to Heshnel, who stopped it in place
with his delicate, purple-black fingers. He glanced over at Dehla, who gave a swish of a tendril to
confirm that it was non-magical.

“What am I looking at?” asked Heshnel as he leafed through the pages. He stopped on one, staring at
it. “Drow?” he asked, looking up at me.

“Arthur and I played this game,” I said. “In that book there, dark elves are described as living deep
underground in matriarchal societies, which I used as a jumping-off point for creating a race of elves
that lived deep beneath the oceans, within a thick layer of ice that coated the ocean floors, down so
deep that no light could reach. Then I came here, and found that the thing I’d thought up was
actually true here.”

Heshnel stared at me, then down at the Monster Manual, and began flipping through the pages again.
I hoped that he wouldn’t be too terribly scandalized to find the z-word.

“Elements, remembered from Aerb, in your dream of Earth?” asked Thargox. “A wrinkle in the
nature of Earth?”

“No,” I said. “I know things that I couldn’t possibly have known. Uther did too, didn’t he?”

“He did,” said Everett. He sank slightly in his chair.
“You’re implying, what?” asked Pallida. “That a lot of what Uther knew was because he had seen it before, in these games that you’d played? That’s…” she stopped, staring at me, then looking at the book. “Are renacim in there?”

“No,” I said. “They were a species of my own invention.” Not unique, really, except maybe in the implications of their rebirth process.

“Juniper claims to have invented a lot of what’s on Aerb,” said Amaryllis. “I’ve seen enough in my time with him to think that even if he’s deluded, there’s valuable information in his head. I assume the same was true of Uther.” We’d more or less agreed on this framing. Amaryllis could be skeptical about me, which would help them undercut whatever I was saying. It wasn’t too different from the role she’d taken when we first met, and it wasn’t entirely a stretch.

“That’s only half the story, or maybe less than half,” said Gemma. “Why did Uther always win?”

“Uther thought that his life was a story,” I said. I looked at Everett. “More, as time went on?”

Everett nodded.

“I think that Uther was right,” I said. “You might think of it as him being in a story, but I’m not sure that’s helpful. Maybe instead think of it like a specific type of magic that would be completely invisible to a warder, with no actual counter, and which warped the very fabric of the world such that he would always have challenges to win by the skin of his teeth, if he applied himself to them.”

“Or even if he didn’t,” said O’kald.

“No,” I said. “It wouldn’t have worked if he’d just blown things off. At least, I don’t know enough to say for sure. There’s an entity, above the gods. I spoke with him, and he seemed adamant that he would let me die. He said that he didn’t care about narrative. I don’t know whether he once cared and then stopped, or if he was lying, but that’s what he said. He did say that there was a plot, but that if I scribbled outside the lines, he would see where that new direction took me.”

“This all sounds unbelievable,” said Heshnel. “You seem like you understand that.”

“Yeah, I know,” I said. “It’s hard to prove, if not impossible. There is this, though.” I held out my hand. “I wish for a hot dog.”

A hot dog appeared in my outstretched hand.

Dehla began gesturing frantically as I took a bite. The hot dog wasn’t very good, as I had known it wouldn’t be. I’d used three of the hundred hot dog wishes already for testing, the first to make sure that they actually did something, and the second and third to make sure that there weren’t combat applications. Grak had watched when I’d made the third wish, but hadn’t seemed as surprised by the results as Dehla seemed. It was a new wavelength of magic, distinct from the signature of the entad bands, and noteworthy in that regard, but it wasn’t going to upend anyone’s conception of reality.

“Translation?” I asked.

“You used an excluded magic outside the exclusion zone,” said Pallida. The pink of her skin had gone somewhat pale. I glanced at Grak, and he shrugged. Apparently, he hadn’t known that.

“Then he’s the Chosen One,” said O’kald. His hand went down from the surface of the table, to where his weapons rested.

“Why do you think that it would do any good to kill him?” asked Amaryllis. “Why would you think
“Is it even possible?”

“Easy enough to test,” said O’kald. I couldn’t tell how much of that was a threat, and how much of it was dark humor.

“Uther disappeared,” said Heshnel. “We suffered heavy losses afterward, but we beat back every threat to Aerb, and what followed was a five hundred year period of peace.”

“Peace,” said Solace. “It’s odd, to hear the rise of the Second Empire described in such terms.”

“He doesn’t mean it like that,” said Pallida. “There were wars, sure, but there are usually wars somewhere or other. We measure peace relative to the cosmic scale. It was five centuries, more or less, of Aerb not having cataclysmic threats. There were exclusions, sure, and they sucked, and the Second Empire was, you know,” she glanced at Heshnel. “But it wasn’t like we were two steps away from the whole hex dying, you know? And that’s where we are right now.”

I saw Amaryllis pale slightly at hearing that.

“If you’ve read what Uther had to say on the matter of narrative, then you’ll have read Degenerate Cycles?” asked Heshnel.

“I haven’t heard of it,” I said. I wasn’t quite a Penndraig scholar, but I had read most of his stuff, and I was well-acquainted with his bibliography. I would have picked up a book with such a suggestive title immediately.

Heshnel held out a hand, and after a few seconds, a book came flying around a corner next to the door to come to a dead stop in his delicate grip. He set it down next to the Monster Manual and opened it up.

“He talks about escalation, and its role within narrative,” said Heshnel. “Uther considered a story to be, at its heart, a conflict and its resolution. The problem was that for a conflict to be compelling, there must be some question of its resolution, at least to his way of thinking. In this book, the last he ever wrote, he considers the case of narrative cycles and how they might be made to be extensible, given a few tight constraints, though it’s unclear where these rules might have come from. The main cast of characters, he says, must always remain the same, never varying. The threats they face must also remain the same, or nearly so. The cast are free to wander as they please, in the course of this narrative, but they must never grow, never change, never become more powerful.”

“He tried,” said Everett, seeming to gain some energy for speaking. “He never said that it was what he was doing. I didn’t know until after he was gone. He wanted us all to adventure together, forever, static.”

Heshnel tapped the book. “Uther writes that it’s a lost cause. Contrary to what he wrote in On the Nature of Narrative, he says here that narrative isn’t infinitely extensible, not within the rules that he’s set out. A story with a foregone conclusion is no story at all, or if it is, then the conflict isn’t what it appears to be on first blush. He says, explicitly, that there needs to be some element of change to keep a story compelling. If the cast changes, they can face new, different challenges, conflicts whose resolutions might be in question. Each cycle results in change and growth, trivializing old conflicts. Escalation, he says, is inevitable, if you’re constrained by an unchanging cast.”

I frowned at that. “No,” I said. “It doesn’t have to be an upward trend. Different conflicts are possible if the hero is weaker too.” Throw Superman some kryptonite, if you really want the conflict to be in doubt.
“We suffered,” said Everett. His voice was raspy. “We lost loved ones. We gained afflictions. Vervain lost his sight. Alcida became blocked, unable to let loose her charge. Forty-Two was stuck in a single form for a month. Uther had always been the one to fix everything, and he found himself impotent, or so I thought.”

I blanched at the implication.

“There’s no proof but what he writes here, none of it conclusive,” said Heshnel. “If he was sabotaging his team in an effort to prevent this entity from escalating the conflicts, he abandoned it after not too many years, for reasons that are unclear to us. Escalation wasn’t constant, after that, but as he points out in *Degenerate Cycles*, there are only so many compelling conflicts, given that something must be learned or gained along the way for the story to be complete.”

“You think that the escalation would have continued, if Uther hadn’t left,” said Amaryllis. “You think that it wouldn’t have ended at the terrible things you can’t or won’t tell us about, it would have kept on, escalating more and more until … until he lost? Or until the world became meaningless in the face of whatever he was dealing with?”

It was a difficult question. If the narrative lasts forever, and it needs to include some element of escalation, then what does it look like fifty or a hundred years down the line?

“Imagine the world is as Juniper says,” replied Heshnel. “Imagine that Uther had some power that reshaped the entirety of existence to be consistent with facts that allowed for Uther to perpetually be the Chosen One. In the best case scenario, he would continue on in perpetuity, forever keeping the world safe from ever-escalating threats.”

“In the worst case?” asked O’kald. “The threats become greater and greater until we’re left in the lurch again, this time with problems that we cannot solve by throwing lives at them.”

“That’s not the worst case or the best case,” said Amaryllis. “The worst case is that you leave *yourself* in the lurch, because you took out the only person who could have actually resolved things. The best case is that Juniper doesn’t win a partial victory, he wins a complete one. That’s what the Dungeon Master said was on the line. At the end of the road, Juniper assumes the Dungeon Master’s place.”

“It seems an awful lot of power for a single person to have,” said Gemma.

“Yes,” said Amaryllis. “And I’m not happy with that. But we’ve been led to believe that he can clear every exclusion zone and empty the hells of devils and demons.”

“Led to believe,” said O’kald. “By a supposed creature so powerful that it could have fixed every problem on its own.”

“The internal motivations of the Dungeon Master are opaque to us,” I said. “That said, I’ve been taking what he says at face value, at least lately, because it seems like the most reasonable thing to do. I don’t think that it makes sense to try to cut the Gordian Knot here.”

“Gordian Knot?” asked Pallida.

I looked at the confused faces around the table. “It’s an idiom from Earth,” I said. “It means to attempt to solve an intractable problem in some clever way.”

“Uther did that,” said Everett, croaking out the words. “The Uttalak write their stories in knotwork.” He heaved a sigh. “Uther cut their epic in twain, to make two stories of it. Solved a lot of problems that day.”
“Doesn’t seem terribly clever to try to kill the Chosen One,” said Fenn. “No offense.”

“This was the last book that Uther ever wrote,” said Heshnel, poking at *Degenerate Cycles*. “It was only discovered after he was gone. It’s very difficult to read it and not think of it as a suicide note.” I could see why such a thing wouldn’t be in his official bibliography. I wondered how many copies of it existed, and who controlled them.

“He wouldn’t commit suicide,” I said, but I felt my heart sink, because I had no conviction.

“He might have,” said O’kald. “If he thought that it was what was best for Aerb. You have some better explanation for what happened to him?”

“I think he might have gone home,” I said.

“Abandoned us?” asked Everett. “After so many years?”

“I don’t know,” I said. “He left me a message in a magic mirror, which I only viewed today, and he seemed … nostalgic, I guess. He was hoping that maybe if he was still alive when I got the message, we could meet with each other and find a way back home. It dated to maybe sometime after 12 FE, based on what he said.”

“He kept to himself,” said Everett, with a note of finality, as though that was all you needed to know about Uther.

The lenssi gestured something, and I looked to Pallida.

“You know, we all understand the gestures,” said Pallida. “I don’t think that I should have to be the one on translation duty.”

“Tell him,” said O’kald.

“Them,” said Fenn. O’kald only grunted in response, a sound that was like two rocks coming together in his throat.

Pallida sighed. “Fine, the lenssi says that we’re essentially in a quagmire of unknowability, at which point it’s best to just look at the possible outcomes and place our bets.”

“Meaning?” I asked.

“Meaning that we can set up a payout matrix,” said Amaryllis. “Figure out the outcomes, assign values to those outcomes, then assign probabilities.”

Pallida watched Dehla gesture some more, just two quick slashes this time. “That … is more or less correct,” said Pallida. She glanced over at Amaryllis. “Where did you learn that?”

“Studies of philosophy,” said Amaryllis. “If Dehla would like to make a map of the possibilities, their probabilities, and the values we’d place on them, I think that would be a good use of our time.”

I’ll skip ahead a bit here, because most of the twenty minutes that followed was spent with Amaryllis and Dehla in conference with each other. Pallida acted as translator for Dehla’s half of the conversation, but it was pretty apparent that the renacim wasn’t strongly invested in the conversation.

“So,” said Amaryllis, looking down at her sheet of paper. “The real question I have at the moment is how likely you all think it is that with Juniper eliminated, you would be able to put an end to all the threats Aerb currently faces.”
I wasn’t terribly comfortable with this line of thinking, but I supposed it was worth something to have the option on the table and discussed openly, rather than something that no one could actually verbalize. There was a very small part of me that was concerned that Amaryllis could be convinced that Aerb would be better off with me dead, through some kind of narrative or meta-narrative logic. She seemed to care about narrative more than I did, even after I’d had my talk with the Dungeon Master, but I was almost certain that she wasn’t about to stab me through the heart in a bid to save the world. (Almost.)

“With the threat of infernals taken off the tables, the picture isn’t so bleak,” said Heshnel. “You know the threats by name, at least. The Void Beast might be mollified, if we can figure out why it’s moving towards us again, and it’s a threat that’s known to the people of Aerb. Moreover, it’s a far-off threat, a century at current rates, which is more than it was when the imperial ban was implemented. The infernals are, apparently, worried about something that’s entirely against them and on your side, though obviously there are concerns there, especially with regards to another unification.”

“Something on their side?” asked Everett, half a step behind.

“We’ll speak on it later,” said Heshnel. He turned back to us. “The defenses that Uther laid in place against the Other Side have held strong for five centuries, and will hold for decades at least, so long as we can bring together the necessary expertise to fix them where they’ve frayed at the edges. If those defenses are breached, we might still win, with considerable losses, but that’s not something that anyone would like to risk.” He let out a sigh. “The biggest risk factor, aside from whatever undefined fate the Library is attempting to warn of, is the Outer Reaches, of which I can say no more.”

“Those are the ones that we can see,” said O’kald. “Those are the threats as they exist now.”

“He thinks that more will come,” said Pallida. “In one version of the theory, so long as there’s a Chosen One, there will be challenges for them to meet. And granted, there’s no evidence that any threats were retroactively created for Uther, aside from the sheer coincidence of it all … but the Lost King himself seemed to think that there was something to the idea.”

“I’ll need to read a copy of that book,” I said.

“Certainly,” said Heshnel. He slid it across the table to me, and I glanced at Grak for long enough to get a nod from him. I really wouldn’t have minded having warder’s sight, given how useful it was for making sure there were no traps.

“You’re taking this well,” Gemma said.

“It’s not really news,” I said. “We already knew that Uther had an obsession with narrative. Arthur had that same obsession, when I knew him, even before all of this started. And as for how it applies to me, I’d already seen some of the strands of escalation present themselves. It’s complicated, it really is, but I’m willing to tell you everything.” Everything I can, anyway. Adding that caveat would have been a bit more honest, but at the expense of sounding really sketchy.
Communicative

I talked for what felt like hours, with relatively few interruptions.

There were a fair number of things that I had to leave out, and a fair number of things that didn’t make sense because I had to leave parts out. I didn’t want to tell them about the teleportation key, but without explaining that, how would I explain that a fireteam had been sent for it? I had to reframe that entire ordeal as revolving around an unspecified entad that belonged to Amaryllis, one locked to her so that the only person who would have been seeking after it was a close relative, which was close enough to the truth. That, in turn, opened up more questions, but thankfully, no one seemed inclined to poke holes in the story, not even O’kald.

It seemed safe enough to confine our story to what Uniquities knew, given that Uniquities knew it, and had already done most of the work necessary to either cover for us or get people to look the other way. We’d killed a unicorn, which there weren’t any laws against, and we’d killed Larkspur and his people, which was arguably self-defense if you squinted at it just right.

Everett spoke up once I began talking about the Boundless Pit.

“He spent weeks of his life there,” said Everett. There was no question who ‘he’ was. The way the ancient skin mage said it, he gave the pronoun a kingly weight. “The house was something special to him.”

“Yes,” I said. “The house was why we came.” I glanced at Solace. It wasn’t too hard to reframe the story without mentioning her, given that we had always had other interests in Kuum Doona, but it made us look more mercenary than we actually were.

“Oh, very well,” said Solace. She sat a little taller in her chair, which, given how small she was, wasn’t very tall at all. “I am the last living druid. My locus lies trapped in an entad, unable to expand into its fullness. Juniper was attempting to respect my wishes when he failed to mention that I had died.” I’d actually left out the whole part about Fallatehr, both because I didn’t want to reveal myself as a soul mage, and because I didn’t think it reflected that well on us. “Through a combination of magics, the rite of Yaxukasu Axud allowed me to be reborn, but the time without a druid would have been too long for the locus, given its state. They ventured to the house in order to use its time chamber. My rather youthful appearance is the result.”

“A druid?” asked Pallida with wide eyes. “How much raw power is your side of the table packing?”

“Juniper has gathered his Knights, then,” said Gemma.

“And one of them died,” said Heshnel.

“I got better,” said Solace.

“We’ve had our share of losses,” I said. “If there’s anything that I considered a strict loss, I would have mentioned it, but it hasn’t been uncommon for us to face setbacks and problems. From what I’ve seen, it falls within the same parameters of success and failure as happened for Uther, though there’s far more to his history than ever made it into his biographies.”

“It speaks to the question of whether Uther could fail,” said Heshnel. “You imagine that the rules were different for the two of you?”

“I don’t know,” I said. I glanced at Everett and tried to weigh my words. “In these games that Arthur
and I played, it wasn’t just the two of us, we had a circle of friends. Some of the people on Aerb, in Uther’s time, were patterned after those, ah, characters.”

“Me?” asked Everett.

“Yes,” I replied. “There are twists and reflections, and not everyone Uther met was ‘wearing the face of an old friend’, to use his words. Some of them were, though. For me, that hasn’t been true at all. And ...” I tried to think about how to put this. “I think that I’m more beset by romantic complications than he ever was.” I very studiously didn’t look at any of the members of my party when I said that. It was true, and it was a valid data point I thought needed to be added to the conversation, but it also wasn’t the sort of thing that I liked to say out loud.

“You’ve done little to sway me,” said O’kald.

“I’m doing my best to report the facts as I know them,” I replied. “If I’m trying to sway you, it’s only because I think that you’re wrong, and if I think you’re wrong, that’s because I have evidence that you don’t, or because you’ve made some error in your thinking.” I turned to look at Amaryllis. “For whatever it’s worth, I really believe that if Amaryllis thought the world would be saved by eliminating me, she would do it herself.”

Amaryllis gave me a curt nod. “Looking to stop the generation of problems at its source is, I think, sensible, but that’s not the level we want to play on. We’re playing to get to the end, and eliminate every problem that everyone on Aerb might ever face.”

There was steel in her voice. She said it with more conviction than I had ever felt about anything. It felt weird, to hear all of that concrete hope be pinned on me, especially when I’d done nothing much to deserve it, especially of late. Looking into the infernoscope and seeing the hells in person rather than reading about them in an academic book … it was chilling to think that eliminating the hells was a responsibility that was going to fall on my shoulders. Valencia would be the one to do it, obviously, but I was pretty sure that if I ever got a quest, it wouldn’t just be something that she would decide to do on her own with no involvement on my part.

“Uther thought that the world existed in narrative,” I found myself saying. “I think that maybe that was his problem, or at least one of them. He was intent on playing a part. He focused his effort on shaping stories. I don’t really care about any of that, and I’m not going to bend to narrative conventions. All I really care about is winning.”

(Set aside for a moment that wasn’t actually true, and that I cared about other things, like good food, stimulating conversation, having fun, time with Fenn when she wasn’t trying to pick fights with me, and all sorts of other things that weren’t winning. It still sounded good, and summed up my attitude a bit better than saying that I could be distracted by shinies.)

“And what does winning look like, to you?’ asked Heshnel. “What is your great plan for Aerb?”

_A glorious transmortal utopia, naturally._ “We’ll eliminate the hells,” I said. “We’ll eliminate suffering. No one will ever feel pain again, unless they wish to. No one will feel hunger. Nothing will be scarce. You’ll be able to be whoever or whatever you want to be, without fear.”

“Dangerous talk,” said O’kald.

“Dangerous?” I asked, furrowing my brow.

Solace gave a small cough. “You came close to repeating the First Proclamation of the Second Empire,” she said. “The clarion call of progress is a seductive one, but if you speak of infinite riches,
it becomes easy to justify any atrocity.” I watched her eyes move across the people seated at the other end of the table. “We all took different lessons from the Second Empire, I suppose.”

“What’s past is past,” said Heshnel.

“What’s past is prologue,” said Everett, rolling the words out slowly. “Uther said that.”

“We should set it aside, for now,” I said. “Solace, I didn’t mean any offense, and you know that I don’t think that the Second Empire was correct, not when they made so many clearly visible mistakes, but --”

“What mistakes?” asked Pallida. “And how do you know? Was the Second Empire something that you dreamed up?”

“No,” I said. “I’m not a student of Aerb’s history, especially not about that time frame. Most of what I’ve read has been about either Uther or the more recent past. And I agree with Heshnel, it’s not time to talk about the mistakes of the past, nor to talk about how to avoid those mistakes in the future. That’s not why we’re here, is it?”

“It might be,” said Pallida. “Uther reshaped Aerb. He’s the one that made the athenaeums what they are today, and while the First Empire might have collapsed when he left, it laid the groundwork for the Second, and the Third. His fingerprints are all over Aerb, just like yours supposedly are.”

“We need to have some measure of you,” said O’kald. “Uther was less than perfect, in ways that only became apparent after he was gone.”

“I’ll need to know about those ways,” I said. “I still intend to find Uther.”

“You do?” asked Heshnel. “People have been searching for one reason or another for as long as he’s been gone.”

“And I might succeed where they failed,” I said. “I don’t think that’s fair, but it is what it is.”

“We should take a break,” said Amaryllis. “There are some things that we need to discuss as a group.”

“It’s been some time,” said Heshnel with a small nod. “We, as well, need to discuss. You’re free to use one of the houses, if you’d like, once your warder has checked things over.”

Grak grunted slightly at that.

“We’ll be taking our leave,” said Amaryllis. “There are others in our group that we’d be remiss if we didn’t speak with. If you mark off a spot for us, we’ll have a way to come back in.”

“They’re trying to escape,” said O’kald.

“We’re not,” I said. “We just want the safety and security of being behind our own defenses again, so that we can have a conversation in true privacy. Sorry, but we have the ability to return home for a day, and it makes sense to take it. You can’t keep us here against our will, not if you want to stay on good terms.” And not unless you want to have a fight about it.

“Very well,” said Heshnel with a wave of his hand. “I think we have some measure of you, at this point. If there’s a loss of contact, we know the pathways we’d need to follow to speak with you again.”
They knew about the Isle of Poran, and could find us there. I felt a little uncomfortable about having
given that information away, but they’d probably already gotten it from talking to the receptionist,
and if not him, then they might have gotten it from Masters. Still, the way that Heshnel said it didn’t
sit right with me.

“They’ll be talking to a devil,” said O’kald, nodding to Valencia.

“That’s an open question,” said Heshnel to his rocky companion. “One of many. He’s right. We
can’t reasonably expect to keep him here. I know that you don’t like this, and your objection is
noted.”

O’kald grumbled at that, but let it stand.

“We’ll expect you back in twenty hours,” said Heshnel. “That should be enough time for both of
us.”

We had to walk to the far edge of their encampment to get outside the wards that they’d placed
against the teleportation key. We were giving something away by going outside the range of the
wards, but it was hard to avoid. As I understood it, broad-spectrum wards against entads were too
difficult for anyone to use, while wards against individual entads were quite easy. Grak hadn’t
discussed it with us, not given the security concerns, but I thought it likely that Dehla hadn’t put that
many wards up to prevent travel, which meant not all that many that we’d have to go ‘outside’ for,
which meant we were narrowing down which method we were using. I was trying my best not to let
paranoia flavor my interactions with this new group, but the flow of information to them seemed like
something worth paying attention to, especially given all the things that we weren’t saying.

Grak put up wards to cloak what we were doing, just to be on the safe side, and then we were back
home.

“A fruitful trip?” asked Bethel as the pain rapidly faded. We had arrived in her custom teleportation
room, which was sequestered from the heavy wards that surrounded the rest of the house, allowing
us to actually enter, and ensuring that anything that teleported in would still have to get through all
the wards that protected the massive house.

“Juniper mutinied,” said Fenn.

“Give me a sec,” I said, as I tried to get my bearings.

“I agree, let’s take some time,” said Amaryllis. “But we are going to have to talk about it eventually.”

“I take it there were complications?” asked Bethel.

“Yeah,” I replied. “One after the other.”

“More of Uther’s baggage came to light,” said Valencia. “We met a number of his old allies. You
would have fit right in with them.”

“Oh?” asked Bethel. She smiled slightly, and glowed a bit as she allowed her illusion a little bit of
impossibility. “The man was not so wonderful as claimed?”

Ropey slipped down from my waist and to the floor, and slithered off into the house. I didn’t hate the
idea of the two of them as a couple, but Ropey communicating to her in private was a little bit
worrying. Bethel’s physical form disappeared once he was out the door, which I hoped meant that he
would fill her in. She could hear us either way, and she had enough processing power to listen to two
conversations at once, as unsettling as that was, especially without knowing how Ropey was going
to cast things.

“We don’t know much more than when we started,” said Amaryllis. “Luckily, the people we met
didn’t seem to know much either, at least, not as far as Uther was concerned.”

“You showed your desperation too much,” said Valencia.

Amaryllis cast her a critical eye. “Did I?” she asked.

“Yes,” said Valencia. “Pallida misread you, but I don’t think that Heshnel or Gemma did. You care
about the threats, and want to know more, and that desire is something they’ll try to leverage against
you, if they need to.”

“You were also a little too convincing in throwing me under the bus,” I said.

“Juniper, everyone at that table besides Fenn would have killed you to save Aerb,” said Valencia.
“That includes you.”

“Back to your old self?” I asked.

Valencia gave me a pitying look. “It’s very sweet of you to have believed me,” she said.

“Wait, that was all fake?” asked Fenn. “You … you faked being traumatized?”

“I needed to set them at ease,” said Valencia. “I was going to be removed from the conversation one
way or another, so I choose the path that would allow me some leeway to act.”

“But … your manipulations didn’t work on O’kald,” I said.

Valencia gave me another pitying look.

“What, that was part of the ploy too?” I asked.

“O’kald is the most dangerous one,” said Valencia. “He’s not likely to listen to reason, and that kind
of poisonous viewpoint can be dangerous in a group setting. If I could engender sympathy from
everyone else and dismissiveness from him, it would help to drive a wedge between them once we
were away. It’s part of why I wanted to be revealed in the first place.”

“Do you know what they’ll decide?” I asked.

“They won’t decide,” said Valencia. “They’re too fractious to come to an agreement on anything. As
a group, they were never set up to deal with you. They weren’t sitting around waiting on this kind of
development. If Uther had come back from the dead, they would act with unanimity. Now? At
best, they might be heading toward a compromise, which will almost certainly not be an attempt to
kill you. At worst, they might have a schism, in which case we’d have to fight off three or four of
them, possibly on a different field of battle, depending on how everything falls out.”

“Which ones?” asked Amaryllis.

“O’kald, Dehla, Gemma, and Everett,” said Valencia. “Pallida is weak-willed, Heshnel is too easily
seduced by the promises of power, and Thargox places an unreasonable amount of importance on
the fact that Solace is with us, though I have less of a read on it, given the means of communication
and the relative little speaking it did.”

“Val, you’re speaking too much like a devil,” said Amaryllis.
Valencia blinked. “Sorry,” she said. “It’s a bit draining, looking through that lens and seeing everyone’s faults.”

“So, wait, you could understand the lenssi the whole time?” asked Fenn.

“Yes,” said Valencia. “That was another benefit of being presumed powerless. The only thing that Dehla let slip was to imply that their other plan had been to take you to Blue Fields.”

“What?” I asked. “Blue Fields, as in, the exclusion zone with nuclear weapons? They were going to nuke me?”

“I believe so, yes,” said Valencia. “That’s consistent with the fatalism they presented when discussing that plan.”

“That implies a worrying level of commitment to the plan of killing me,” I said. “Like, really, really worrying.”

“I should point out they didn’t actually do that,” said Amaryllis. “Having a plan isn’t the same as enacting that plan.”

“Batman had a plan to kill all the members of the Justice League,” said Fenn.

“Batman doesn’t kill,” I said.

Fenn rolled her eyes.

“Valencia, do you have time for therapy?” asked Amaryllis.

“I don’t think any of us have time for that right now,” I said.

“Whether we have time depends on how long we want to wait before getting back to them,” said Valencia. “I don’t believe the friction between the two of them will prevent us from working properly as a team.”

“It already has,” said Grak.

“In what way?” I asked.

“You broke with the group,” said Grak. “Fenn went racing back for you. Both of you endangered all our lives.”

“They endangered their own lives,” Amaryllis clarified.

“Compromising one part of the party compromises all of it,” said Grak.

“That’s not how I would frame it,” said Amaryllis, pursing her lips. “I would call it blackmail.”

“That seems harsh,” I said.

“No, that’s exactly right,” said Fenn. “You stomped your foot down and said that you were going to kill yourself if we didn’t help.”

“I didn’t actually need your help, as it turned out,” I said.

“It’s time for therapy,” said Valencia. “Bethel, can I get a room prepared with three chairs, something gentle and soothing?” She turned her head slightly toward the ceiling, which had become standard
protocol for making requests. Our house offered a soft bing-bong sound in response.

I wasn’t terribly happy. I had never particularly liked therapy.
“Okay,” I said to Fenn as the train rumbled along the Lion’s Mane. I reached into the backpack, visualized what I wanted, and pulled out a candy in an orange wrapper. “This is a Reese’s.”

“Are we going to be sick from all the sugar?” asked Fenn.

“Do you get sick from too much sugar?” I asked. “Because this is important cultural understanding I’m giving to you.”

“Okay,” said Fenn with a smile. “If I get sick, you’re to blame. Explain your Earth candies to me.”

“Alright,” I said. I unwrapped the peanut butter cups. “Now, this is an Earth detail that only us Earthlings would know. You take the paper wrapper off the chocolate, and -- ah, see there?” I pointed to the center part of the paper cup, which had bits of chocolate and peanut butter stuck to it. “That’s a detail that you’d only know if you were from Earth,” I said. “Vintage Americana.”

Fenn stared at the residue. “Why?” she asked.

“You know, I don’t know,” I said. “I mean, obviously the chocolate sticks to the wrapper and then tears away because it’s partially melted and pretty thin without structural integrity, but the real question is why this travesty has been allowed to continue for something like eighty years. Probably it would cost an extra few fractions of a cent to change to a different wax paper that didn’t stick so much, which would mean millions of dollars in costs.”

“No,” said Fenn, smiling at me. “I meant, why are you showing this to me? But ah, this is one of those things you think is Serious, isn’t it, and now I’m in the know.”

“It is serious,” I said with a frown. “It’s very serious. This is the sort of person that I was before coming to Aerb.”

“The sort who complained about candy?” asked Fenn. “Yes, I suppose I can see that, Juniper Smith, railing against the,” she picked up the wrapper and looked it over, “The Hershey Company. You know, this has got nothing on how annoying elf candy is.”

“Elves have candy?” I asked. “I thought they mostly ate raw meat.”

“Oh, sure,” replied Fenn. “But you know how elf culture places all this importance on eating and consuming, right?”

“I really, really don’t,” I said.

“Well, I told you,” said Fenn. “Are you an inconsiderate hooman that doesn’t listen to his betters?”

“Right,” I said. “Right, right, I just meant that I don’t really ‘get’ the whole consumption thing. Like, you’re the only elf that I know even a little bit, and you don’t make a big deal out of your meals, so it’s hard to get a firm grip on what it actually means from the inside.”

“Well, meals are always a production,” said Fenn. “It’s the same attention to detail and precision that gets placed on almost everything else, and though the ritual aspects of it are simple, they have to be done exactly right, and if you don’t do them right, then -- well, it only really applied to me, and they
hated me, so you can guess that it wasn’t good.”

“Anything that I come up with is going to be worse than what it was,” I said. “You shouldn’t let my imagination run wild.”

Fenn rolled her eyes. “Anyway, most meals were put together by someone who did that as their jobs. They’d take the meat, slice it up, present it, and we’d all eat these arrangements, but the dessert, or thing that was sort of like a dessert, was always put together by the people eating it. The chef would bring out little bowls of things, mostly animal byproducts, and everyone would assemble their own little work of art, usually not more than a few bites worth. We’d present them to each other before eating.” She cupped her hands forward, like she was holding out a present for me.

“That doesn’t sound so bad,” I said. I frowned slightly. “Makes me think of frozen yogurt, actually. Wait, let me try something.” I dipped my hand back into the backpack and focused on my ‘order’.

“You look cute when you concentrate,” said Fenn. “So serious about candy.”

“It’s a dessert,” I said. “And I believe you meant I’m handsome.”

“That too,” said Fenn. She leaned forward and kissed me, and that continued on as I tried to make the perfect frozen yogurt for her, until eventually I pushed her away so I could present it to her.

“Ta da!” I declared.

Fenn looked down at my creation. It hadn’t come out quite the way I’d envisioned it, but the basics were there. It was a sloppy mix of base flavors, with heaps of different candy, dessert, and fruit piled on top, including four different syrups.

“There is nothing that I want more in this world than to bring you to meet my extended family and fumble your way through a dessert,” said Fenn. “It would be glorious. We’ll have to make sure that you can take ten or twenty elves in a fight before that though.”

I smiled at her. “Whatever would make you happy,” I said. “Now, we should eat this before it warms up too much.”

And that was how it went between the two of us, when we were alone and there was no pressure to talk about anything else.

The room was dimly lit by a handful of lamps, with the humidity of a conservatory and a wide array of plants hanging down above us. I wasn’t entirely sure why Bethel had decided on a semi-tropical theme for the room, but we just sort of accepted Bethel’s eclectic taste in rooms. A large, hexagonal terrarium sat to one side, with its own lighting, which showed a complicated scene made up of exotic plants, rocks, and water. It took me some time to realize it was supposed to be a stylized map of Aerb.

“Before we start, we need to have some ground rules,” said Valencia. “First, I won’t say anything to either of you that I know to be false. I’ll work primarily toward trying to fix the problems in this relationship, and if I feel that’s impossible, I’ll work toward making the split as amicable as possible.”

“You think that it might not be possible to save?” asked Fenn. She looked over at me. “Come on, it’s a fight, they happen.”

“So you’re not all that pissed?” I asked.
“Didn’t say that,” said Fenn. “I’m agreeing to this mostly to hear you get told off by our darling little devil girl.”

“Fights happen,” said Valencia. “But I don’t want either of you to get your hopes up about what I can do, especially given that such a belief would be destructive to the process. What we’re doing here is, essentially, completely untested and far different than anything a devil’s skills have been used for in the past. Devils put people together as couples sometimes, and even make them fall in love, but that’s only so that they can be broken apart again. I’m aiming for something a bit more permanent.”

I shifted in my seat. “You’re going to use social fu in order to weld us together?”

“Ah,” said Valencia. “You feel uncomfortable with that. Why do you think that is?” Fenn was staring at me.

“Well,” I said. “First, I don’t appreciate being called out, and second, I … kind of think that’s a big step? Like, I wouldn’t voluntarily alter my internal values to make Fenn my sole focus, and I wouldn’t ask, expect, or want her to do the same. The idea that she wouldn’t kill me in order to save Aerb is, frankly, insane. So I guess that I want us to go back to the way things were, rather than being bonded together forever.”

“What do you imagine the end state of your relationship as?” asked Valencia.

“I don’t know,” I said. “I thought that we had fun together. We enjoy each other’s company. I felt like we could keep doing that. Maybe in a year or two it would be something else, but right now … we haven’t been together for that long. Months, if you count the batches of letters. Less, if you don’t.”

“We’ve been through a lot,” said Fenn. “It feels like more than it’s been, at least to me. I’d hoped you felt the same. If you didn’t, maybe you should have said something sooner.” She folded her hands in her lap. “I offered to have your children.”

“You said someday,” I replied, but I felt a little bit of sting from that.

“You took what she said as notional or emotive, rather than earnest,” said Valencia. “It’s a recurring problem between the two of you.”

“You mean a problem with him,” said Fenn, frowning slightly. “I say things, and he brushes them aside.”

“You share culpability,” said Valencia. “You often deflect from unpleasant subjects, and you make a habit of being intentionally obtuse as a way of hiding your thoughts and feelings from others.”

“Yeah,” I said. “It makes it hard to tell when you’re serious or just making a joke. It gets really frustrating when you do all that and then expect me to be able to read your mind and know which is which, especially since you say things as a joke so you have cover in case you’re wrong.” It was the same way that she had flirted with me, come to think of it. Her flirts were jokes, but jokes that could either hint at the truth or be deniable as humor to make me uncomfortable. Jokes were a way for Fenn to protect herself. I had known that for a long time. I’d had some success in getting through them, but it was effort that I couldn’t always spare, and effort that I wasn’t always sure was wanted.

“She’s right that you’re dismissive,” said Valencia.

“I’m not,” I replied, a bit too quick. “I think of some things as jokes when they were only halfway meant as jokes, but that isn’t nearly the same thing as --”
“That’s not what I mean,” said Valencia. “You don’t treat Fenn as an equal in the same way that you treat Amaryllis as an equal.”

I tried my best to shift gears. “Is this about Amaryllis?” I asked Valencia.

“Ask her,” replied Valencia.

“Is it?” I asked Fenn. “Because you know that I chose you, and she cut her attraction toward me out entirely, and we went two months without anything happening --”

“You do not get points for not cheating on me,” said Fenn. She was glaring at me. “That’s basic decency. And no, it’s not at all about romance, you bonehead, it’s about how you treat us. If Amaryllis says something, you treat it like it’s serious, and if I say something, it’s just brushed off to the side, and I get why that is, I really do, but I also kind of hate it. I sometimes feel like I’m your girlfriend and nothing else to you.”

“You know that’s not true,” I said. “And besides, you’re the one who’s always joking about how you’re the laziest member of the group, and how you don’t care about anything so long as you can have a nap every once in a while.”

“Do you not notice that her words don’t match with what she does?” asked Valencia.

I stopped for a moment to think about that. “You mean the training she does with you?” I asked.

“Among other things,” said Valencia. “Do you understand that most of her efforts to assimilate Earth culture have been in service of forming a deeper bond with you?”

“I’m not sure that counts as work,” I said. I saw Fenn’s face fall slightly. “Sorry, but watching anime isn’t what I would call work, especially not when it’s not related to Aerb, and it’s not stuff that Arthur or I have ever seen.”

“Well, screw you,” said Fenn, crossing her arms. “And you get that a lot of elven culture is ripped off from Japanese culture, right? We’re carnivores, and most of our meals are delicately prepared slices of raw meat. That’s almost exactly sashimi, and sushi is like the bastard child of elven and human culture. And then past that, half of elven culture is the exact polar opposite of Japanese culture, like someone took wabi-sabi and decided to explore the opposite direction of it entirely, which seems like a thing you might have done and just forgotten about. Part of why I was ‘wasting time’ looking into Japanese culture is that I thought it was meant to be a reflection on elven culture, or maybe the other way around, and we could learn something from it.”

“You never told me that,” I said.

“I did!” shouted Fenn. “I tried, anyway, but I said wabi-sabi, and you apparently didn’t have any idea what that meant. Instead of asking me, so I could tell you, which is what you would have done with Mary, you just brushed me off and wanted to talk about something else instead. And that’s the whole frustrating thing about you. Sometimes you save my life with a blood transfusion, and sometimes you just don’t give a shit about me. The end point of that is me saying, ‘hey, I have a bad feeling, we should take off’. You left me behind so you could go play the hero.”

“You were the one that left me behind,” I said.

“I don’t think this is a productive line of conversation,” said Valencia. She shifted slightly. “We should focus on the root issues. Fenn, do you think you understand the reasons that Juniper might sometimes act dismissive toward you?”
“Because he’s so up his own ass that he can’t --” began Fenn.

“If you want this process to work, you’re going to have to show some charity,” said Valencia. “Don’t insult him.”

Fenn folded her arms. “You want me to be polite?” asked Fenn. Valencia nodded. “Okay, well. Juniper likes to monologue about things that he gets off on, whether that’s game design or tabletop games or Nash equilibria or worlds and how they’re designed. Right?”

I gave a curt nod. “You said you found it endearing.” I’d have stopped, if I thought that she wanted me to, or if she’d said something, like a grown adult should have done.

“I do find it endearing,” said Fenn. “The problem is that it’s a one way street. At best, you listen to what other people say and break it down into a Juniper-understanding of things.”

“I have no idea what that means,” I replied.

“May I?” asked Valencia. Fenn gave her a nod, arms still crossed. “What she means is that you have a way of modeling information as either facts or systems, reordering them into a framework that works within what you understand to be the totality of existence.”

“What does that even mean?” I asked.

“I’m not sure that the concepts fully translate,” said Valencia with a frown. “Just a moment, let me get a different devil.” Her face sagged slightly, but after not too much time she returned to the same studious expression she’d had before. “Ah, you understand the philosophical roots of the Second Empire, don’t you?”

“Sure,” I said. I was a little bit confused by the non-sequitur. “They were … I don’t want to say the equivalent to the Enlightenment, since Uther more or less started that on Aerb, but they were something similar, at a larger scale.” Also, Nazis.

“You think the way they did,” said Valencia. She left that sentence hanging there, all by itself, not quite an accusation to be answered, but somewhat close.

“They were top down,” I said. It was the second time in an hour that I’d had to defend myself as not actually being a fantasy Nazi. “Most of their mistakes were mistakes of thinking that the world would easily bend to the imposition of mortal rules. Even if that were true, a lot of their rules were, as I understand it, stupid.”

“So you don’t believe in rules?” asked Valencia.

I frowned slightly at that, then looked to Fenn. “Does this have anything to do with our relationship?”

“Do you think she’d be asking if it didn’t?” asked Fenn.

“Well, do you know where she’s going with it?” I asked.

“No,” said Fenn, frowning at me. “Probably she’s going to say that you’re bad at seeing things from someone else’s point of view.”

“Not quite,” said Valencia.

“Good,” I said, crossing my arms, then uncrossing them when that seemed like it would signal
defensiveness. “Because frankly, I think that I’m pretty good at seeing other points of view.”

A slight look of consternation crossed Valencia’s face, just for a moment, which I assumed was intentional on her part, either a piece of her strategy here, or maybe just a signal of her internal emotions she was allowing herself to express. “I would say that you’re good at disassembling a variety of viewpoints and reconstructing a version of them which maps cleanly to your view of the world and how things work within it.”

“That’s the same as what I said,” Fenn added.

“And that was one of the sins of the Second Empire?” I asked. “They ignored the world as it was and mapped their version of reality in places where the territory wasn’t conducive to that mapping? That seems like it’s just a sign that their map wasn’t very good to start with.”

“It’s why you have a hard time with the locus,” said Valencia.

I tried to think that over before I offered a response. “I will accept that as true.”

“It’s why you have a hard time with me,” said Fenn.

“I’m not actually convinced that I do,” I said. “Like, okay, you’ve been trying to do more but hiding it under the guise of not actually doing anything, and you make jokes so that no one will call you out on your imperfections because --” because you’re so horribly insecure “-- because you grew up with the elves, and they would slap you down whenever you did anything at all imperfectly.”

Fenn frowned. “Is that what you think of me?” she asked.

“I mean … yes?” I asked. “That’s not all I think of you, but if I had to break you down into a set of simple algorithms and their sources, then yeah, I would say that’s a big part of why you act the way you do. You joke a lot, and those jokes all serve some purpose, which is usually to cover for your failings, to push people away, or to avoid potential problems.”

“My failings?” asked Fenn. She was scowling at me.

“I really don’t think that’s such a shitty thing to say,” I replied. “I have failings, you have failings, even Val has failings, though none come to mind at the moment. I’m saying, if you fuck up, you treat it like a joke rather than owning up to it. Your default is to just brush things off, or bury them, and you try your best to not be serious, even when that’s what the situation warrants.” I shrugged. “I get it.” I glanced at Valencia, whose impassive look gave away nothing.

Fenn seemed a bit pissed, but she opened her mouth and then closed it again, and let out a deflated sigh. “I’ve been trying to get better,” she said. “I’ve been trying to tell you things, as much as I can, I’ve been trying to be more serious, I’ve been getting the crap kicked out of me by Val, it’s just, I don’t get rewarded for it, I get punished. I come looking for a seat at the table, and you push me away. You make me feel unwanted.”

“Come on,” I replied. “You know that I want you.”

“You want me in one specific way,” said Fenn. “You want me as the outwardly happy woman who hides her damages and acts as though she doesn’t give a shit about anything.”

“That’s not true,” I said.

“It is,” said Valencia. Her voice was soft. “A bit.”
“It is?” I asked.

“It may not be the way you think of yourself, but Juniper, the way you think of yourself is not the way that you actually are,” said Valencia.

“Do you remember after we came down the tower in Parsmont?” asked Fenn. “I was trying to talk about serious stuff with you and you were just getting distracted by, I don’t know, random bullshit about worldbuilding. And when I told you that I was going to try to be better, you just made this token effort to support me and then blew me off like it wasn’t actually important.”

“I had other things going on,” I said. “And you said that you didn’t want me to help, so it seems like there was nothing that I could have done to win. It was lose-lose.”

“There are a number of problems with your relationship,” said Valencia, taking the reins. “Fenn, you often want Juniper to act of his own accord, even when you’ve either expressed disinterest in his help or advice, or actively told him that you didn’t want it, even when you did. Juniper isn’t terribly good at reading those complexities.”

“I shouldn’t have to be,” I said. “I try to say what I mean, and everyone else should too.”

“Except that when Fenn does, you ignore or deflect,” said Valencia. “This is, in part, also due to your failure to read social cues. You have an image of Fenn, one which you prefer, which doesn’t match up to who she actually is, and you often mistake forthright behavior for coy, joking behavior.”

I frowned at that. “You’re saying, essentially, that I don’t treat Fenn with the complexity that she’s owed?”

I thought back to the letter that Fenn had written me, laying out how she’d had an illegitimate child she’d never told me about. She’d said that I had an image of her, and that she was worried that if I ever realized that she wasn’t who I thought she was, I wouldn’t love her anymore. At the time, I’d thought that was absurd, and it hadn’t changed my feelings toward her, but I was seeing echoes of that argument here, and I wondered whether she had been more right than I’d known. I was about to say that out loud, but I could immediately see what Fenn would say, ‘oh, so when Val says it, it’s worth listening to’, willfully forgetting for a moment there were reasons for me to trust Valencia’s logic more than Fenn’s.

“It’s deeper than that,” said Valencia. “There are disconnects between the two of you, both in terms of who you are, who you think you are, and who you think the other is. Those are the things that we need to very delicately reconcile.”

“Very delicately … because otherwise we’d fall out of love?” asked Fenn.

“One or the other would, yes, or neither would, but the relationship wouldn’t be salvageable,” said Valencia. “This is the reason I thought it would probably take a few hours of discussion. It would be better to resolve things over the course of weeks or months, a little bit at a time, but the problems between the two of you are already interfering with our ability to function as a group.”

“If we’re talking about what happened at Speculation and Scrutiny, I’m not even sure that’s true, given that things worked out in the end,” I said.

“You arguably both broke democracy,” said Valencia. Her voice was calm and understanding. I sort of hated the level of control she had. “One of the primary pillars supporting group unity has been kicked out from under us, and there’s nothing to replace it. Amaryllis agreed that any self-modification would be mediated by the group, and you’ve set a precedent that the will of the group
and established order could both be bucked at a moment’s notice. Grak was already only hanging on
by a thread, and without group unity, he’s likely to go through with leaving us once we have the
money he thinks he needs.”

“There’s nothing left of Darili Irid,” I said. “I talked to him about it, in private. Where’s he going to
go?”

“That’s not for me to say,” said Valencia. She turned away from me. “I’ve already collected too
many secrets, most of them on accident, and it’s not my place to reveal them all.”

“Do we need to be worrying about Mary?” asked Fenn.

“You need to be worrying about each other more,” said Valencia. She was looking at Fenn. “Juniper
needs you, but the specific way in which he needs you is as someone fun and unserious. He might
not put it like that, but it’s one of the reasons that he loves you. You’re his refuge from the stress he
faces. You need to remember that he’s young and doesn’t really understand what he’s doing in
relationships.”

Valencia turned to me. “Fenn is trying to be someone better. She can’t be what you need her to be,
not if she’s going to become that other person, at least not in the short term. If you want to keep
dating her, or eventually marry her, then you’re going to have to cultivate an appreciation for her that
extends beyond her ability to make you laugh and keep things down to earth. Unfortunately, you’ve
been ignoring all the parts of her that you don’t like, which is going to make that difficult.”

Valencia sat back in her chair and closed her eyes. “Just a moment, I need to get another devil.”

“We’re sure burning through them, aren’t we?” asked Fenn. “Sign of a good relationship, that.”

“Yes,” I replied. I wasn’t really in the mood for jokes.

“I’m really waiting on tenterhooks for the moment she fixes everything,” said Fenn.

“I can’t,” said Valencia, opening up her eyes. “I’m sorry.”

“Can’t, meaning, what?” I asked.

“I said that I wouldn’t lie,” said Valencia. “I’m trying my best, but devils aren’t suited for this. They
have the understanding of people necessary to manipulate, but all that fine-grained manipulative
power is geared toward improving people in the short term so that they can be broken down later on.
You both understand the problems now, right?”

“Not really,” I said. “I mean, we seemed fine yesterday.”

“No,” said Fenn. She was slouched down in her chair.

“No?” I asked.

“No,” said Fenn, more firmly. “I love you, but …” she trailed off. “I shouldn’t have sent you that
letter.”

“If you think that I love you less,” I began.

“No,” said Fenn. “I mean, I shouldn’t have been so much of a coward that I needed to send it in a
letter, and because I did, it screwed the whole thing up. I was waiting, really nervous about what you
would say, and then when you responded, it was, you know, a few weeks later for me, and a few
weeks later for you, and the whole thing sort of shifted us around without us ever being face to face, and when we came back together I think I’d changed a little, or at least I’d tried to, and it’s just felt off since then.” The words were coming out fast, slightly disjointed from one another, as though she’d thought about this a lot and was trying to get it all out now without fully remembering the things she’d been thinking in the shower. “I told you that I’d prepared a campaign of Arches, and you gave me this look like I’d pooped in your cereal. You think that I’m dumber than you, and we’ve both got soul magic, so it’s not really a secret that’s true, but I’ve still been wishing that you wouldn’t treat me like I was dumber. We’ve been out of sync. Partly it’s the backpack, and all the effort I’ve put into learning about Earth, which seems like it just annoys you, when you get it at all. That’s how I’ve felt since getting out of the time chamber. And we still haven’t really had an in-person talk about a bunch of the stuff that we said in letters, because I’m scared, and you’re scared too, but for you it’s more about not wanting to rock the boat because you’re happy where things are, and for me it’s just … feeling shitty about myself.”

We sat in silence for a moment. There were a lot of things that I wanted to say. Not talking about things was, in a way, our default mode. We’d spent a lot of time together, and most of it wasn’t spent talking about serious things, it was superfluous, light and airy, as she’d said back in Barren Jewel. I wanted to make up all sorts of justifications for why I was in the right, or claim that she was changing the script right when we’d gotten on stage.

The truth was, Valencia was right. The thing that I loved most about Fenn was how easy it was to be with her. It had felt natural, and Fenn was right, it had felt less natural since we’d gotten out of the time chamber, even if I felt like our letters should, by rights, have drawn us closer together. I didn’t know how to deal with her baggage. I barely knew how to deal with my own.

I stayed silent.

“Fix it,” said Fenn. She was looking to Valencia. “Just manipulate us however you have to. Say the magic words, even if they’re false.”

“I don’t think there’s anything I can say that would fix the underlying issues,” said Valencia. Her face had fallen. “I could try, but you can’t convert someone in the course of a conversation, not unless you’re converting them in a direction they were already predisposed to. And … I’m not going to prey on your guilt or insecurities.”

I swallowed, feeling a hard lump in my throat. “What does this mean?”

“You have options,” said Valencia. “You can stay together, which I think would likely result in cycles of unhappiness as you fought and made up. It’s possible that might be enough for the both of you. Whether it is or not depends on the sorts of situations we find ourselves in. Maybe you could both grow into a different relationship from the one you have right now, one that’s less prone to argument and discontent.”

“Or we could break up,” said Fenn.

“That has its own problems,” said Valencia.

“Yeah,” said Fenn. She slammed her fist down onto the chair and broke something wooden in the arm.

“I don’t think it’s come to that,” I said. “Can’t we just resolve to be better? I’ll try to take you seriously, if you try to make sure that you’re not asking me to read through layers of social cloaking to know when you’re joking and when you’re not, or when you’re joking but also serious. Okay?”
“You’re suggesting a restructuring of your relationship, not just in the way that you relate to each other, but in what you both expect from a partner,” said Valencia.

“I -- yeah. So?” I asked. “If that’s what it takes, then yeah, I don’t just want to throw it all away.”

“No,” said Fenn. Her voice was distant, cold. “It was a mistake.”

“What was?” I asked.

“Us,” she replied. “I love you, that hasn’t changed, but … we need to take a break.”

“Are you seriously dumping me?” I asked. “How is that even going to work? I see you every day, we’re attached at the soul, we can’t just go back to … what, being friends?”

“We made good friends,” said Fenn. She kicked at the rug beneath her chair. “We can do that again, until I can figure some things out.”

“I don’t even think it makes any difference,” I said. “We’d have all the same problems as companions as we have right now, if I accept the premise that we do have problems.”

“I need to figure out how to be my own person,” said Fenn.

“And how the hells are you going to do that?” I asked. “We’re together all the time.”

“Yeah,” said Fenn. “Maybe that’s going to have to change, just a little bit.”

I stared at her. She wasn’t looking at me.

“Are you serious?” I asked.

“You get that the whole reason I was ever with you and Mary was that it felt like home, right?” asked Fenn. “And if we’re not together, as a couple, I don’t think it’s going to feel like that, or maybe it will feel like all the shitty homes I’ve been a part of. I’d just be following along, risking my life for … I don’t know.”

“To do good,” I said. “The fate of Aerb is on the line. You can’t just bow out.” I could feel desperation clawing at me. I hadn’t gone into this therapy session thinking that things were really that bad between us, but it seemed like the chickens had come home to roost, all at once.

“I can bow out,” said Fenn. “I’ll talk with the others first, but … Juniper, we want different things.”

“We don’t,” I said. “I love you.”

“But the thought of being with me for the rest of your life is a little bit of an off note, isn’t it?” asked Fenn.

I clenched my teeth together, not saying anything, because she was right.

“I’m sorry,” said Valencia. Her voice was soft. “That’s not how I wanted this to end.”

Fenn got up and walked out of the room, closing the door softly behind her.

“You’re not a great therapist,” I told Valencia. “I don’t know what you were planning on doing for a career, but I wouldn’t recommend couples counseling.”

“Are you mad at me?” asked Valencia. Her voice was still soft, and she was sitting in her chair like
she was worried that I was going to hit her.

“You don’t know?” I asked.

“You are,” said Valencia. “I screwed up.”

“Yeah,” I said. I closed my eyes. “At best, you overestimated your abilities, at worst, it was deliberate sabotage.”

“Juniper,” Valencia began.

“I’d assume that was what it was, except I don’t see what you gain from it,” I said. “Maybe you could see a way to make things work, but thought we’d both be better off in the long run if we didn’t have each other? I’d almost call that noble, but we asked you to fix things, and you fucked it up, deliberately, because you thought you knew better.”

“You’re hurting me,” said Valencia.

I opened my eyes and looked at her. She was crying, not sobbing, but with tears rolling down her face.

“They never believed me,” said Valencia. “My father and his people, they always assumed that they were talking to a devil, they thought that every cry for food or water was simply a plot of some kind or another. I lived with a gag in my mouth for much of my life. Unless I can prove myself, that’s how people will always treat me, once they know I’m non-anima. You were supposed to be different. You were supposed to have faith in me.”

“I’m sorry,” I said. “I was out of line. I think I’m just shook up from earlier today. Seeing you lie about what your powers were doing, it … it’s not about you, it’s about me feeling shitty about myself and looking for someone to blame.”

“It’s okay,” said Valencia. “I know your faults.”

“Yeah,” I said.

“I didn’t know about you and Maddie until halfway through,” said Valencia. “It would have been helpful.”

“And … what do you know?” I asked.

“You dated her,” said Valencia. She shrugged. “It’s one of the sources of Fenn’s insecurity about your relationship.”

“Our relationship, which is now, apparently, over,” I replied. I felt hollow inside, like someone had scooped out a piece of me. “The whole thing with Maddie was complicated,” I said. “I don’t really want to get into it right now.”

“That’s fine,” said Valencia. “Amaryllis doesn’t know?”

“No,” I said. “Not really a thing that I ever want to talk about with anyone, ever.”

“Amaryllis would prefer to know,” said Valencia. “She has her narrative theories, and I have little doubt that whatever sins you think you’ve committed play into them. Raven is templated from Maddie, created from Maddie’s character, and narrative logic would dictate that we’re going to meet her within the next few years, if not considerably sooner.”
“Sure,” I said. I leaned back in the chair and looked over at the terrarium. “Sure, bring it all on, one horrible hit after another, what do I care?”

“You’re going to be okay,” said Valencia. “It might be a little bit awkward with Fenn, and it won’t feel good, but I think this is for the best in the long term, even if the timing isn’t ideal.”

“Yeah,” I said. “Jesus Christ, we have to go back and talk to those assholes about whether or not they want to kill me.” I leaned forward and rested my face in my palms. “This is dicks.”

“I agree,” said Valencia. “I wish that I could have done more. The problems are fixable, just not in the short term. If you value the relationship, you can work to get her back, the same as you’d do if you were in the relationship. Treat her well, pay attention to what she says, include her on important decisions, and ask her questions if you’re confused about what she means instead of just letting what she says blow past like a gentle, unimportant wind.”

“Poetic,” I said with a frown.

“I phrased it that way so you’ll remember it,” said Valencia.

“Yeah, I probably will,” I said. I let out a sigh. I didn’t feel like moving. “Cheer me up?”

“You want me to fill the role that Fenn was filling?” asked Valencia.

“It sounds terrible, when you put it like that,” I said. “Do you think that anyone would miss me if I just slunk off for a week or two to get my head on straight?” I looked up at Valencia. She was smiling at me. “What?”

“You’re so morose,” said Valencia, still with her faint smile. “But no, you’re not allowed to wander off and wallow while the world slowly collapses into dust around you. There’s work to be done, and unfortunately, you’re the only one that’s going to be able to do it.”

“Doesn’t seem fair,” I said.

Valencia raised an eyebrow.

“Right, sorry again, you know all about not fair, I guess on both sides of the coin.”

I paused and actually took the time to think, but my thoughts wandered to Fenn. What were the rules now? Was I supposed to not look at her? To just shut off the part of myself that was attracted to her? To literally do that, on the level of my soul? I had little doubt that was what Amaryllis would do, if faced with the same situation, especially given we were in the middle of something important that should ideally have my full attention. I wasn’t about to complicate matters further by bringing it to the Council of Arches, nor was I onboard with the idea of soul-surgery in any case, but I did give it enough thought that I had to consciously reject it.

There was this concept of grief as having five different stages, which wasn’t really that grounded in science, but nonetheless sometimes helpful for people to get a handle on their emotions. At times like this, I liked to run through them all as quick as I could, just to try them on for size.

Denial was easy. Of course Fenn and I weren’t really broken up, it was just a bump in the road, and we’d still be seeing each other enough that the sparks that had initially drawn us together would eventually rekindle something. We couldn’t share a room together anymore, obviously, but it wasn’t hard to imagine that while we were splitting things up, I could just say that I missed her, or ask for one last kiss, or something.
Anger was easier. If it had been such a problem for her, she should have said something sooner, instead of letting it fester, and if she knew me as well as she thought she did, she should have realized that I sometimes needed more direct prompting. There were a lot of things to be angry with Fenn for, and faults that I could pick at, little things that I had let slide at the time but were eager to come crawling back. I could tell, already, that it was going to sting that she’d been the one to dump me. I could feel a coiled serpent of anger inside me, a familiar one, all my worst impulses brought to life, and I had to remind myself that I was just trying anger on for size, it wasn’t actually what I *wanted* to feel. It didn’t get in more than a lick of flames.

(“You are better than her,” the serpent hissed. “If anyone was going to dump anyone, it should have been you that ended things with her.”)

Bargaining? I’d already done some of it, but I could have amplified it more, prostrating myself to Fenn in order to try to save what we’d had together, calling to mind all the good times we’d had together. Fenn, in her sundress, as we sat on a picnic blanket at the bottom of the bottle, wasn’t that worth staying together for? Couldn’t we have that again? It felt like I had just let her go without a fight, and maybe that was a sign that I agreed on some level that we shouldn’t be together.

I’d had enough depression in my life that I didn’t need to simulate how that might feel. It was already tinting how I saw the world, crowding out the serpent of anger that was my next-strongest feeling. I couldn’t really afford depression at the moment. Valencia was right, the timing was terrible.

Of the five stages, that only left acceptance. I tried to imagine a world where I had made peace with Fenn and I no longer being a couple, and I just couldn’t do it. Logically, I knew how I would behave, but it was like looking at a different person in my mind’s eye, and I couldn’t see how I would ever bridge the gap between myself and that person.

I looked to Valencia. “Can you see how this goes for me?” I asked.

“I can’t read the future,” said Valencia. “I can’t even read minds. My best guess is that things will be awkward for a while, you’ll try your best to be more aware and accepting of Fenn. Whether you’ll succeed or fail … I think you’ll succeed, personally, but it might go either way.”

“You’ll promise to try your best to manipulate us?” I asked.

Valencia shifted in her seat. “No,” she said. “I don’t actually think you’re that good together.”

“Oh,” I said.

“I didn’t sabotage you,” said Valencia.

“I didn’t say it,” I replied. *Not that I would have to, if you can read it on my face.* “Sorry, can you drop the devil now? I don’t really think it’s necessary for this. If we’re just talking, I mean.”

“I’ll keep it for now,” said Valencia, folding her hands. “And I’m letting you know that, rather than just faking it, because I think it’s important that you know I’ll be honest with you about that. I’m sorry that I faked it when I used the infernoscope, but I would probably do it again.”

“Okay,” I said. I stood up from my chair and stretched. “Can I ask why you think we make a bad couple?” *No, why we made a bad couple, past tense.*

“Right now, or in the future?” asked Valencia.

“Either,” I said. “Both. I mean, I know what you said about us having different needs …” I trailed off. I didn’t really like thinking about it, but I did want to hear what Valencia said.
“In a proper relationship, both people become better for it,” said Valencia. “Fenn was clinging to you because you were the first person in a very long time, maybe ever, who didn’t mark her as being abnormal.” I wondered whether that included Amaryllis, but held my tongue. “She wasn’t making you a better person. You weren’t making her a better person. You indulged each other, and annoyed each other when that indulgence wasn’t there. There was no introspection on the nature of the relationship, not that there needs to be, if you’re naturally responsive to each other’s needs … which you weren’t.”

“And if we do change?” I asked, still frowning. “You still think we wouldn’t be good together?”

“There are possibilities,” said Valencia with a shrug. “Telling you about them makes them a little less likely, I think. You already struggle with entitlement, in part due to your unique position within the world.”

I grit my teeth, just a bit. “Meaning that if you tell me what I need to do, I’ll do it with the expectation that I’ll get something out of it, and that will be less effective than simply doing things for their own sake, or because of internal motivations? That kind of thing?”

“Yes,” nodded Valencia.

I let out a sigh. “Okay,” I said. “Sure, I’ll just … try to be better. And if I fail, you tell me, okay?”

Valencia nodded.

“Alright, let’s go in for round two with these people, I guess,” I said with a sigh. “And let’s hope I’m not required to be chipper.”

The worst thing about going to school in a small town was that you couldn’t actually escape your problems or your past. That was triply true in high school, since I had to see the same old people in the hallways. Victor Clark, the boy I’d attacked because he’d said the thing I least wanted to hear at the time I least wanted to hear it? I still had classes with him, even after the school administrators shuffled our schedules around so they could minimize that conflict. We were a class of a hundred fifty students, which meant seeing the same people over and over again, unavoidably, especially in the electives. The anger I’d felt toward him was slow to fade, given that every time I saw his face I thought about his stupid, guileless face saying, ‘God works in mysterious ways’, as though he’d meant to comfort me.

I sometimes thought about what it would be like if we’d been young adults living in New York City or some other equally large metropolitan area where you never saw the same person twice unless you really wanted to.

I saw Tiff a lot. I had three classes with her, and we ate lunch during the same period. We never actually formally broke up, but then, we’d never actually formally been dating either. She always made me feel like a wounded animal, like I was just limping along hoping to happen on food and shelter that I didn’t have the energy to find for myself. When I passed her, it was in stony silence, not wanting to say or do anything that would invite her to say something to me. I was always disappointed when she didn’t.

My fantasy version of Tiff looked hopeful at seeing me pass by. Fantasy Tiff was always on the verge of trying to break the ice with me, always trying to get me to warm back up to her. My wishful version of my ex-girlfriend missed me terribly and wanted nothing but to comfort me. It wasn’t actually like that, even if it was sometimes hard to see past what was in my head, or what I wanted the truth to be. Tiff wasn’t quite afraid of me, but she recognized that there was something ugly in
me, and maybe that made her sad, and maybe she did want to fix me, but she wasn’t ever on the verge of reaching out to me.

There were other bridges I burned a little more thoroughly, and I was stuck with seeing those failures too. After the Fel Seed incident … well, it’s usually true that people think about themselves more than they think about you, but that doesn’t mean that they don’t think about you at all, and I suffered my share of dirty looks.

Our little group on Aerb was close, maybe a little too close, and the thought of those same looks from them had my stomach in knots.
Beast of Burden

I got some awkward looks when I came into the common room. Everyone was seated around the large center table except for Valencia and myself. We didn’t have assigned seats, except for Grak and Solace, who needed special chairs to make it less awkward to sit at the table, but we did have places we normally sat. That defined order had been thrown out though; Fenn was sitting across from where she usually did, having given up her seat next to me. I sat down and tried not to look at Fenn. I assumed that she’d told them, or that maybe Bethel had, given that our house had surely heard everything.

Amaryllis cleared her throat. She’d changed out of her armor, and was wearing athletic clothing I thought she’d probably gotten from Earth. “We need to talk about next steps,” said Amaryllis.

“I’m not going with,” said Bethel. Her imperious form was in her usual (illusory) seat.

“I missed something?” I asked, grateful that the topic of conversation wasn’t on me and Fenn.

“Amaryllis would wish to wield me like a weapon, much as her ancestors did,” said Bethel.

“No,” said Amaryllis. “That’s not my intent at all. You’re a valuable member of this party, but if you’re stationary, then you have little input on whatever happens when we’re abroad, and we can’t make use of your considerable skills.”

“You could bring those people here,” said Bethel. “They would find a warm welcome in my domain, from how they’ve been described to me. And if they were lacking, then we would be better served where they could experience my might in a direct manner.”

“They wouldn’t allow it,” I said. “Sorry, I don’t really have a handle on the complete argument, but they have a warder, and that warder would take one look at you, then sound the warning and have everyone leave. Right?”

“Possibly,” said Grak. “The signature is unique. The magics are strong and readily apparent. Everett has some knowledge of the house’s power. He might balk. He did not seem entirely present.”

“So they’re allowed a magic fort and we’re not?” asked Fenn. “Lame.” Her voice sounded off. She was making an effort to talk, but I had little doubt she was in the same confused fog of emotion that I was. She didn’t sound like Fenn; she sounded like Fenn pretending at being Fenn.

“It would be best for us to meet on neutral ground,” said Amaryllis. “If they were going to attack, then it would be best for them to attack right when we returned, during the disorientation of our arrival. It’s what I would do. They may or may not know what method we’re using to cross the distance, and we can teleport in anywhere we have a worldline, but they’ll still have us at the advantage because we’ll be on their home turf.”

“You’re turning adversarial against them,” I said.

“I’m assuming the best and preparing for the worst,” said Amaryllis. “I think they have vital information, and I would like more than what we were able to get from our first round of conversation with them. The idea of the world ending two years from now, and the future being so uncertain that it could go from five to two so rapidly, should put a healthy fear into all of us.”

“It does,” I said. “But we’re going to need allies, and I pretty firmly believe that you don’t get allies by being shitty to them. They let us go as a gesture of goodwill, and replying to goodwill with a
wary stance doesn’t help us.”

“What do you propose?” asked Amaryllis.

“I don’t know,” I said. “I was thinking that I could tell them more. I could invite them to help solve some of our problems. I could explain the game interface and what we know about it, in case it helps to explain something unexplained about Uther and how he operated, or what happened to him.”

“Do we care?” asked Fenn, folding her arms. “Seems like we have better things to worry about than where he ran off to.”

“We care,” I said. “We care deeply. He left, and the problems stopped, or at least were stopped by outside parties. If we can get to the bottom of why he left, or even how he left, or what happened to him if he didn’t leave, then we can do an end run around all the other problems.”

“We need to look at it on a meta level,” said Amaryllis.

“I’m really not in the mood for narrative,” I said.

Amaryllis shifted in her seat. “It’s not necessarily about narrative,” she said. “If we take as a given that Juniper is cosmically significant, and all signs point to that being the truth, then we have to say that the same is likely true for Arthur, if only by extension. The question is whether our efforts should be focused on cosmically significant endeavors, or those that are simply a natural part of the world.”

“Assuming that we can distinguish between the two?” I asked.

“Yes,” nodded Amaryllis. “But we have your quests, which should provide some metric for us to go by.”

“I have a lot of quests,” I said. “I don’t think that they’re all necessarily cosmically significant, if that’s the term we’re using. There are too many enpersoned exclusion zones for them to all be meaningful, I think.”

“We could look at Uther’s life again,” said Grak. “We could take wisdom from what he did and did not do.”

“Or we could elect to assume that he did things wrong,” said Bethel.

“That was what I meant,” grumbled Grak.

“We don’t know enough,” I said. “We don’t even know if he was playing by the same rules. If we had different rules -- I mean, it seems like we did, doesn’t it? His so-called Knack seems stronger than whatever you’d call the thing that I have.”

“Washater,” said Fenn, from across the table.

“And … what does that mean?” I asked. Step one of getting back on the right footing with Fenn was, after all, treating her more seriously. I had no idea how things were going to look between us going forward, but I could at least see the shape of things.

“Washater,” said Fenn. She seemed unaccountably annoyed that I’d asked. “Just an elven word that fits pretty well.” She paused slightly. “It means a system of rules, basically. I don’t think you’d want to call it a game.”
“No,” I said with a nod. “I don’t even really think that mentioning narrative is the right way to go. Maybe we could phrase it as a godly test? Both ‘game’ and ‘narrative’ seem trivializing to me.”

“That aside, narrative is the term that Arthur used,” said Valencia. “It’s in our best interests to make cleaving distinctions where we can. Juniper, you did very well when you pointed out that your companions were all sexually appealing to you.”

I frowned at her, but her look was the picture of innocence. “I’d rather not talk about that,” I said. “It makes me uncomfortable.”

“All companions?” asked Grak. He was speaking toward Valencia, but I noticed an eyebrow raised in my direction.

“A number of those across the table found the argument compelling,” said Valencia. “Their collective was formed in preparation for Uther’s return, in order to deal with him. You’re not what they expected. The more you can prove that you’re a different presentation of the same problem, the better. It probably wouldn’t hurt to simply hand them a stack of our notes on the differences between Arthur and Juniper.”

“We would have to scrub the notes,” said Amaryllis. “There are things we didn’t tell them, and we would want to stick with the sanitized version of events, unless there’s more that we want to reveal.”

“You’re still treating them as adversarial,” I said.

“Some of them are,” said Valencia. “I’m not entirely sure what O’kald, in particular, will do if the group rejects his call to violence. That’s also a problem because he’s likely to be their most difficult opponent for us to kill.”

“How long have you been channeling devils today?” asked Solace.

Valencia frowned. “I haven’t stopped for more than a few seconds at a time since we got to Speculation and Scrutiny,” said Valencia. “I don’t think that there are any side effects though.”

“You said that it takes an act of will to recognize that the preferred suggestions presented by your borrowed skillset might have moral consequences,” I said. “Even if there aren’t side effects, you’re still expending mental effort, and if you get worn down, the devil’s biases will start to come through more.”

“I don’t think she said anything too shocking,” said Amaryllis. “It’s a judgment of combat prowess, and important for us to take into consideration.”

“Sure,” I said.

“I worry,” added Solace, holding up a hand to show that she was willing to relent.

“We still need a plan for meeting with them tomorrow,” said Amaryllis. “Joon, you think we should do something approaching full disclosure?”

“Yes,” I said. “Maybe. I’d like to lay out some of the basics about the washater to them, and possibly ask them whether they know anything about the addictive power of the level ups. Either Uther had something similar and there might be some solution that they know, or it will help distinguish me as being different from him. Either way, I worry that I’m not that far from the next one, and if the problem has a solution, it’s something I want solved.”

“Sure,” said Amaryllis. “I’ll spend some of tonight making a proper presentation. Bethel, would it be
acceptable for me to use the time chamber for that?” Her wording was careful, pointedly so.

“If you’d like,” nodded Bethel. “I have few compunctions about you taking advantage of it for brief personal matters. I should note that when the tuung are using it, you won’t be able make those quick trips in the same way.”

Amaryllis let out a sigh. “Yes, I figured as much,” she said. “And we’re a week away, though the Republic seems like a waste of time and resources if we’re going to be dealing with the end of the world in two years’ time.”

“We’ll save the world,” I said. “The library has always been wrong in the past. That’s kind of the point.”

Amaryllis nodded, but still seemed glum.

“I have a question,” said Solace. “We spoke before about those quests with cosmic significance and those without. It’s an issue I’d like to revisit.”

“Ah,” said Amaryllis.

“I was wondering which sort the quest to restore the locus was considered,” said Solace. Even when she wasn’t making much of an effort, Solace always sounded calm and understanding, so when she was actually trying, it was only like shifting a few gears up, not a change in general strategy. It was still noticeable.

I squirmed in my seat. Amaryllis saying ‘ah’ was much more understandable now that Solace had spelled it out.

“We don’t actually know how to solve that quest,” I said. “We don’t have any leads, you tried for years or decades to find those leads but came up short, and the only real option at this point seems to be leveling up again and hoping that I can unlock something else within the washater.”

“No,” said Solace. “You could attempt to increase loyalty.”

“That’s not something that I’ve had much success with in the past,” I said. “Pursuing loyalty with mercenary intent is sort of destructive to the process. Maybe I’m just bad at it, but that’s been my experience. I can try to maybe open myself to the possibility, but --”

“How much time have you spent in the bottle since we were reunited?” asked Solace.

“Not much,” I said. “Point taken. If you can get me in and out, then … I guess I’m going to need a new room anyway.”

“You are?” asked Grak.

“Why?” asked Amaryllis.

I looked between the two of them, then to Fenn. “Uh, Fenn and I … broke up.”

“Wait,” I said. “She was really helpful, I thought. And Fenn didn’t tell you?”

“I didn’t want to make a big thing of it,” said Fenn. “I really didn’t want to have a group meeting about it.”
“She said that it could have gone better,” said Amaryllis. She looked back and forth between the two of us. “You broke up? I need some time to think about this.”

“We should leave them alone,” said Grak. “We’ve spoken enough for one night. We should save our voices.”

“It’s a shame,” said Solace. “I thought you made a wonderful couple. Very carefree.”

“That was part of the problem,” said Valencia.

“Was it --” Amaryllis began.

“It wasn’t sabotage,” said Valencia with a frown. “I know that’s not what you were going to ask, but it’s what you were thinking.”

“You were supposed to fix this distraction,” said Grak.

“Oh, sorry that our relationship is a distraction, gods forbid we have feelings,” said Fenn with a huff.

“For what it’s worth, I was trying to keep things quiet so we didn’t have to have a big talk about it. And if that’s what we’re doing, then I should probably just go.”

“No,” said Amaryllis. “It’s not something that we should be talking about as a group anyway, I agree with that, but the timing of internal conflict is both unfortunate and suspicious.”

“Suspicious?” I asked. “You suspect narrative?”

“I don’t know,” said Amaryllis. “Regardless, there are a few other issues that we should discuss, and more detail we should go into with regards to the pros and cons of strategy. I’m planning to spend two days in the chamber to get things in order. Anyone can come in with me, if they’d like to combine our intellects, but I’m not sure that’s necessary, especially since the chamber still isn’t an ideal place to spend a few days, and time is a resource we need to conserve. I’d also like to do a group reading of Degenerate Cycles, if anyone else is interested.”

“We only have the one copy,” I said. I’d taken it from Heshnel, same as he’d taken the Monster Manual from me.

“I should be able to make more through the power of illusion,” said Bethel. “It would mean giving up my physical form, naturally, but only for the duration that the chamber is in use.”

“Let me know what you find,” I said. “The idea of being in a cramped space for a handful of days doesn’t really appeal to me.”

“Me either,” said Fenn. There was a bit of hard edge to her voice. She was still angry with me, it seemed. I hadn’t expected her to change her mind at the drop of a hat, but I’d hoped that she’d be heartbroken, not pissed off.

“Then perhaps Juniper can spend the night with me in the bottle,” said Solace.

“Sure,” I said.

“There’s one last issue before we break,” said Amaryllis. “We need to talk about decision-making within the group.”

I pursed my lips, not liking the sound of that. “I’m sorry for what I did,” I said. “Things were happening fast, we didn’t have time to talk, and if I had concrete objections, or even weak
objections, I should have raised them.”

“That’s appreciated,” said Amaryllis. “But I don’t think that it gets to the heart of the issue. The problems that we face appear, to me, to be ones regarding internal structure. A fireteam might take an informal poll, in order to gauge the wisdom of some course of action, but it’s also got an unambiguous leader and a clear chain of command. I think we need that. Sometimes time is tight, and it’s often the case that acting decisively in a suboptimal way is better than waiting, whatever plan you might come up with given the extra time.”

I frowned slightly. “Sure,” I said. “But that leaves the issue of who our group leader is.”

“It should depend on the needs of the individual mission,” said Amaryllis. “With a default to you if we haven’t planned for whatever mission we find ourselves on.”

“Me?” I asked, somewhat surprised. “I’d have thought that you’d pick yourself.”

“You’re strictly better than I am at a great deal of things,” said Amaryllis. “You also have access to information and resources that I’ll never have. If we were going into Anglecynn to retrieve something from the libraries there, it might make sense that I would be the one calling the shots, but absent a specific scenario, I think it makes the most sense for it to be you.”

“Juniper is worse at making dispassionate decisions,” said Valencia.

“I do not know if that matters,” said Grak. “Dispassion should not be our main criteria.”

“I would prefer decisions with a bit of emotion, speaking for myself,” said Solace.

“The only criteria should be the expected speed and correctness of decisions made,” I said. “And, obviously, no one should take the mantle of leadership if they don’t want it.” I glanced at Fenn when I said that, and she raised an eyebrow in my direction. “With that in mind, I’ll be the default if everyone wants me to, but I’m not actually sure that I’m the best choice. Ideally, we’d look at my successes and failures, and stack them up against Mary’s successes and failures, if we’re the two primary candidates.” I hesitated just a fraction. “Unless someone else wants to throw their hat in the ring.”

“No,” said Amaryllis. “I’m bowing out.”

I stared at her. “This had better not be about narrative,” I said.

Amaryllis shifted in her seat. “I don’t think I need to justify myself,” she replied.

“You do, if the reason that you’re doing this is that you’re worried the Dungeon Master doesn’t like you taking charge,” I said. “We’re not going to make decisions on the basis of what we think the Dungeon Master wants. I don’t think that he wants us to make choices that way.”

“So you’re ordering me to take charge?” asked Amaryllis.

“No,” I said with a sigh. “I just want to know that your reasoning is sound.”

“If there’s a specific instance where I think I’m better, I’ll gladly take the reins,” said Amaryllis. “As it stands, I think you have a stronger grasp of the fundamentals of our situation, and special knowledge that I can’t yet replicate. I’ve read a fair number of the source books you’ve used, but that’s not enough, especially not given how much inspiration Aerb takes from your own particular styles of play. Do you remember in the prison, when we came across those statues? You argued that it was a trap, and if I had been team leader then, I would have walked right into it even if you’d
warned me.”

“That was a long time ago,” I said. “You know more now than you did then, and you trust me more. I hope.”

“Juniper, if you don’t want to be a leader, you can say that,” said Solace.

“No,” I said. I squared my shoulders. “I’ll take a position as default leader. I just want to make sure it’s for the right reasons.”

“Then that’s settled,” said Amaryllis.

“I want to know that if I say we should get out, I’ll be listened to,” said Fenn. There was something timorous in her voice.

“I will,” I said. “But just because I listen doesn’t mean that I’ll decide in favor of the course of action you suggest.”

“Fine,” said Fenn. She got up and left the room without saying another word.

“I’m hoping that’s not going to be a problem,” said Amaryllis.

“Yeah,” I said. “Me too.”

I spent the night in the bottle, and put some effort into getting to know the locus. My heart wasn’t really in it, and my presence was mostly to appease Solace.

“My uncle owned a horse,” I said. I was leaning against the locus, who was curled up and half-asleep. She felt warm, though not quite feverish, which was good, because the air was cool. Bethel had crafted an open-air patio for the bottle to sit in. It was held in a stylized bronze hand that jutted up from the sod surface, surrounded by greenery and rocks from Earth, and exposed to the light that fell on the Isle of Poran. From the inside, it almost made the bottle seem invisible, in a way that being set on the grass at the foothills of the Spine of the World didn’t. It was about the best environment for the locus’ domain to be in. I felt guilty for not having spent more time in the bottle, but Solace had the only easy way in, and Bethel was pretty adamant that we were living in her house, not in the house inside the bottle.

I missed Fenn. We’d been sleeping in the same bed since after Solace had been reborn, and I’d gotten used to feeling her next to me. The stars were out and it was late, but I was still up. I wasn’t sure whether the locus slept out of habit or because she needed to, but she was beside me, halfway nodding off. I was talking to her, not really trying to bond, but because I wanted a better therapist than Valencia had been. There was still a thought at the back of my mind that Valencia had sabotaged things, and while that might have been for noble reasons rather than selfish ones -- well, no, I couldn’t think like that, because it wasn’t like I could actually have her prove her intentions to me.

“I could fight her, I guess,” I said. “She can’t do social manipulation and combat at the same time, so maybe I could fight her, and then ask her questions at the same time. If she didn’t sabotage us, then she’d probably never forgive me, but so far as I can see, that’s about the only way that I would ever know if she’d been trying to tear us apart. And obviously there’s some culpability on her part, because even if she was telling the truth that she wanted us together, she wasn’t willing to. I don’t know, let us have our stupid, unhappy relationship. It wasn’t actually that unhappy though.”

The locus snorted.
“Yeah,” I said, “My mind is wandering. I was going to tell you about my uncle’s horse.” I paused. “I don’t actually understand you, and I don’t know how much you can understand me. There was a play, maybe you’ve seen it, called _The Star War_, which was based off some movies from Earth, where I’m from. Anyway, there was this character, Chewbacca, and he’s a companion to this other character, Han, and some of the humor comes from the fact that Han is always responding to Chewie, but the audience is left to imagine what it was that Chewie said. They do that with R2D2 too. Anyway, that’s what I was doing, pretending that I knew what you meant as a kind of joke. I didn’t want to leave you out of the loop.”

The locus snorted again.

“Right, the horse,” I said. “Horses on Aerb are about how they are on Earth, but on Earth there isn’t a whole lot of competition. I mean, cars, sure, but historically, the horse was dominant. On Aerb, there are all kinds of animals you can ride, birds, lizards, turtles, wolves, moose, whatever I’d dreamed up or stolen from someplace else, or had to find some way to justify because someone wanted one in one of my games. You know?”

The locus was silent.

“So if you picture my uncle’s horse as being just a regular horse, you’re pretty much right,” I continued. “It wasn’t a giant, wild stallion or anything, it was just a horse kitted out in all the horse stuff, I don’t know, a bridle, saddle, reins, that sort of thing. My uncle thought I’d have a fun time learning to ride, and I didn’t want to back down just because the horse scared me. I think I’d heard one too many warnings about how I should stay the hell away from a horse’s back end because a single kick to the head could leave me braindead, and that message stuck a little more than my uncle had maybe intended.” I let out a breath. “So I was about ten or eleven or something, and I got up on this horse, and my uncle gave me a bunch of instructions that I don’t remember anymore, stuff about steering with my knees, and I was just scared out of my mind, and thinking that it was stupid for people to do this. How had the first people to ride horses done it? What intrepid soul had figured it out?” I thought about that for a moment. “Maybe that wasn’t how I thought about it at ten, but it’s how I think about it now.”

It was cold enough that I could see the fog of my breath. “Anyway, riding the horse was great. My uncle was leading it around and giving me instructions, and I thought, you know, I didn’t know what I was doing, but I was having a good time. But when my uncle let go of the reins, the horse bolted. It started galloping as fast as it could go down the gravel road, and I was hanging on for dear life. We got a half mile away before my uncle came by with an ATV. The horse didn’t really have plans for me, he might have just been spooked, or wanted to run, or I just wasn’t controlling him how he was used to being controlled or something.”

I was fairly sure from the way the locus’ breathing had changed she was asleep.

“I mean, the parallels are pretty obvious,” I said. “Not that I’m calling Fenn a horse.”

_Loyalty Increased: Six-Eyed Doe lvl 6!_

I smiled at that. “But relationships, for me, are like riding a horse that first time was. Scary, but kind of exhilarating, and then the horse just decides to go its own direction, and I’m left clinging onto it, hoping that I’m not going to get thrown off. There’s not a Relationships skill, you know? There’s just loyalty, and I have no idea what the hell that’s tracking, because apparently people can still break up with you even if they’re very loyal to you. Which is good, I guess, in that it means loyalty isn’t mind control, or maybe just not that particular kind of mind control, but … I’ve got some really big questions about loyalty right now.”
The Six-Eyed Doe stood up, and I stood up too, because I had been leaning against her. She circled around, then leaned down in front of me, tipping slightly to press her flank against me. I touched her once, uncertain.

“You, uh,” I said. “You want me to ride you?”

She didn’t respond.

“Sure,” I said. “But I only ever had that one horse-riding experience, and swore them off after, so be gentle.”

I climbed up onto the locus’ back. Her pelt was soft to the touch, and she was making an effort to keep me centered. Riding the locus wasn’t something that I would probably have done in normal circumstances, but I felt a kind of energy in the air that came with a cold night. I was also riding a high from getting a loyalty point, but it wasn’t just the thrill of seeing the number go up, it was from having it go up from a joke. Most of the loyalty increases I’d seen had been from somber, serious things, or more lately, from me putting effort into not being a shit about things. It was nice to have a loyalty point from being silly.

The locus didn’t go terribly fast, which I appreciated. I had seen both Fenn and Val ride her before, and she’d gone at breakneck speeds for them, letting the wind whip their hair. For me, the Six-Eyed Doe moved at a gentle trot. It was good, except it was giving me too much time to think. There were too many people to deal with, and I couldn’t trust them all to be straightforward, not even Fenn anymore. Valencia could cloak whatever she was doing, and I couldn’t tell whether my paranoia was justified or not. Amaryllis was attempting to manipulate the narrative. And Fenn … I wasn’t giving her what she wanted, whether because I had failed as a boyfriend, or because it had been doomed from the start to be something brief.

“Faster,” I said.

The Six-Eyed Doe picked up the pace, stepping with preternatural grace and delicacy over rough terrain, which smoothed out the ride. I tried to use my knees to steer a bit, though given the intelligence of the locus, it was more like giving her a suggestion than anything else.

(I’d made a conscious choice to switch to thinking of the locus as a ‘her’, mostly out of mercenary interest in bringing us closer together. ‘It’ was impersonal. To my surprise, changing my internal narration did actually help a little bit.)

I tried to shut off my brain. I didn’t want to be thinking. Worldbuilding has always been my go-to for that, before Arthur had died, but after, there were too many reminders of him in everything I thought of, and the results were always twisted and cruel. Videogames had been a standby, but those weren’t really an option on Aerb. Everything else had been tainted with the memory of Arthur; he was the one that I talked with most about books and movies.

I managed it, somewhat, but as soon as I was in the moment, I was thrown right back out of it again.

*Loyalty Increased: Six-Eyed Doe lvl 7!*

That one I was a little less comfortable with. I probably should have turned as much of the HUD and notifications off as I could, if I was going to be with the locus. The thought that the locus enjoyed me losing myself in the moment as an escape from something approaching depression was … well, unsettling. Something had happened to Solace when she’d come back and been aged up, and I had no real choice but to hope that there hadn’t been any horrible changes in the process. The locus liking me more (or whatever loyalty was actually a proxy for) because I was seeking mindlessness as
an escape didn’t really say too much that was good about the locus.

She could sense something had changed, and slowed down a bit, until she’d trotted back to the tree house where I was going to be spending the night. I was feeling a little bit ill, brought back down to reality by the game. It was tempting to blame everything that happened on the game, or on the Dungeon Master, but I had never been a terribly big believer in free will, and one of the ways of making sense of the world if you assumed there was no free will was to decide that it still mattered what you decided to do, even if everything was all predetermined.

“Sorry,” I said as I climbed down. “There’s just a lot going on up here right now.” I tapped the side of my head. “You helped, but the game -- the washater -- was being intrusive.”

My mind went back to the achievement I’d gotten, ‘Petite Mort’, and the other one I’d gotten a progress update on, ‘A Key For Seven Locks’. There were a lot of things about Aerb that made intuitive sense to me, things that had a clear cause and effect. Other stuff … not so much. Those achievements seemed scummy for the sake of being scummy, intrusive and invasive just to show me that my life wasn’t wholly my own. It was the Dungeon Master whispering in my ear, just a bit, saying, ‘this is a game’. What was the point though, especially when I’d already rejected that notion?

Solace had long since gone to bed, and I got into one of the cubbies, making sure not to pick the one that Fenn and I had slept in. I didn’t want to wake up to those sorts of memories.
We left Bethel behind again.

She and Amaryllis got in a fight about it, or at least as much of a fight as Amaryllis usually got into, which amounted to speaking a little more passionately and quickly than was necessary. The problem was, Bethel didn’t wholly care about us. The idea of being a mobile home, or worse, only technically a home by the definitions that her Anyhouse ability allowed, seemed somewhat abhorrent to her. To temporarily be a thick staff with a fairy house on top was, it seemed, an experience reserved for special occasions.

Valencia and Amaryllis got in their own fight when Amaryllis asked Valencia to kill a devil and assist in the conversation. Valencia objected strongly to the idea of using her abilities against another party member, because she knew as well as anyone that people could be talked into doing things that they didn’t really want to do, and would later regret. She had thousands of years of infernal experience with precisely those sorts of arrangements: it was one of the things that devils were known for. That led their conversation down a different track, with Amaryllis essentially arguing that there was a good chance we would die without Bethel there to help us in our time of need, and Valencia arguing that there ought to be some lines in the sand that shouldn’t be crossed, lest our web of relationships become degenerate.

I didn’t give my full attention over to these conversations. I thought that Bethel’s role in the group was pretty clear; she was our house. She wouldn’t always be at the Isle of Poran, but she had built herself up here, furnishing all the rooms and sculpting herself to the atmosphere and geography of the island. The east wing in particular had a slope that ran parallel to one of the tall, rocky hills. On a purely strategic level, yes, it would have been better for Bethel to come with us, held as a staff, but that wasn’t really what she’d signed on for.

My thoughts were on Fenn, who was sitting across the table. A night apart didn’t seem to have changed much. While Amaryllis was getting her argumentation in, Fenn was having a more pleasant sort of conversation with Solace and Grak, one that I was too far away to hear properly, in part because they were keeping their voices low. Fenn didn’t seem to be in her usual high spirits, but she wasn’t sitting there staring at me like I was glumly staring at her. I had thought that maybe we’d come to each other and say, ‘hey, we said some things, but on reflection, I want to work it out’, but that hadn’t happened. She wasn’t leaving, as I’d thought she might, but she was avoiding me as much as she could.

“Okay,” said Amaryllis, voice a little bit louder than it had been while she’d been having her argument with Valencia. The other conversation died down a bit. “We’re going to return to the group to continue negotiations. After having read through Degenerate Cycles over the last few days and made some notes, I’m ready to engage with them on their level. Hopefully there’s not any critical information that they’ve left out, but I’m not counting on it. The primary argument that we’re going to go with is that Juniper and Uther were different in too many ways to be able to generalize Juniper’s circumstance from Uther’s. In particular, Uther posits that for what he terms a ‘degenerate cycle’ to end, it needs to be with a note of complete finality, but even then, he’s a bit ambivalent about whether that would actually work. The crux of the argument is that whatever Uther did, it succeeded, but it likely succeeded in accordance with Uther’s own thinking about narrative, which doesn’t apply to Juniper. Therefore, we need to apply a different metric to the situation, one which is fitted to Juniper.’”

“That approach will work on most of them,” said Valencia. “Not all.”
“No,” said Amaryllis. “It’s possible that we can get a few of them separately in order to try different, tailored approaches to them, but we really don’t know much about them.”

“Why do they think nuking me would work?” I asked.

“Do you think it wouldn’t?” asked Grak.

“I think it would,” I said. “But given what they know about Uther … why would they think it would work against him?”

“It’s in the book,” said Amaryllis. “Uther spends a lot of time in Degenerate Cycles contemplating how a fictional character, or a real person in a fictional world, would escape from the cycles. He posits a few different methods, all of which should be of interest to us. The first was foisting narrative weight from himself to another. He gives the example of a main character who grows too old to carry on, which causes the story to continue with his son instead. But as he notes, that’s not actually something that solves the degenerate cycles of narrative, it just moves focus, and not having narrative weight on you would probably be pretty dangerous.”

“To be clear,” I said. “We’re only talking about this in the context of what Uther believed to be true?”

“If that would make you feel better, sure,” said Amaryllis. “It’s important in many regards. I don’t expect anyone to outright accept what Uther wrote as true.”

“Okay,” I said, shifting in my seat.

“The second solution, the one that I think he took, was closing all extant narrative cycles in the most final way possible. He lays out the possibility that every resolution is the inciting event for another narrative, even a narrative with the same central character. The young farmhand defeats the Dark Lord, bringing a close to the narrative that started with his family being slaughtered by the Dark Lord’s army … and the defeat of the Dark Lord becomes the fuel for other narratives, the starting point for the unification of neighboring kingdoms. Maybe the Dark Lord had some secret backers, or allies who move into position. The solution, then, is to find a way to bring the whole thing to a close. Either win forever, or resolve some ur-incident that closes the cycle of cycles.”

“That ur-incident would have been him coming to Aerb,” I said.

Amaryllis nodded. “Likely,” she said. “He speaks a lot in general terms, and when he dips into the specifics, they’re always hypotheticals, bland, boring examples meant to make a point. It’s not clear to me who he was writing this book for. At any rate, his thinking about what ‘win forever’ means transitions into his third solution, which we might broadly define as ‘lose’. He makes it clear that in theory, there might be a loss so overwhelming that it could never be bounced back from, and the degenerate cycles would have no available avenue of continuing. There’s some contemplation of what that would look like.”

“A nuclear weapon to the face,” I said. “Even that wouldn’t be enough to kill him, I wouldn’t think. Prince’s Invulnerability would save him, right, so long as he knew it was coming? But I guess that would depend on how long he was riding the shockwave.”

“It’s likely that they had backup plans,” said Valencia.

“It’s moot,” said Amaryllis. “I don’t want to step foot on their ship again, not if we know or assume they have a nuclear weapon prepped and waiting in Blue Fields. I do agree that these people might be allies, given the right lines of argument, but until we can confirm that, we should be careful. I
would rather not be killed by a nuclear weapon.”

“Same,” I said. “I’m sure that things will go fine. Right Val?”

“Probably,” said Valencia. “Interestingly, different devils have slightly different reads on the situation. We also left them alone for roughly a day, and they have information not known to us, which makes thinking about their response when we arrive a little bit difficult. My ability to extrapolate from incomplete information isn’t as good as you think it is. I think that we’ll come back to find them ready to talk, perhaps with a few of them missing from the table.”

“If they have high explosives waiting for us?” asked Grak.

“Rigged to a hair trigger,” I said with a nod. “Yeah, that would be a problem.”

“Prince’s Invulnerability then?” asked Amaryllis. “We have the funds necessary for it, Skin Magic 20 should be high enough to cast it, and we have six people, approximately.” The spell probably wouldn’t cover Valencia, but her armor would, in theory, protect her.

“It wouldn’t hurt to have it in our back pocket anyway,” I said. “We’d be spending half a day on it. The problem is that if we activate it before the teleportation, we’re wasting a fair amount of money on paranoid precaution, and if we use it after, there’s a risk that we get blown away before I can activate it. Pushing speed through bone magic helps with response time, but I don’t know if it helps enough.”

“There are too many vectors of attack,” said Valencia. “We can’t protect against everything.”

“We can protect against the most likely,” said Grak.

“I think the point is that going adversarial is probably not a great use of our time,” I said. “Especially not when the field of things we need to protect against is so incredibly wide.”

“We’ll make some preparations,” said Amaryllis. “It’s just a shame that we can’t prepare for everything.”

Fenn, Amaryllis, and myself were all burning through bones as we came in, hoping to get an edge. The flash of pain that the teleportation key brought caused some disorientation, as did the sudden change in location, though we’d tried to match the expected lighting conditions as closely as possible. Everything seemed to be moving in slow motion, even the pain, and I looked across the horizon, scanning for threats or the unexpected.

There were no threats though, or at least no obvious ones, just the fort some distance away, the cobblestone houses around it, the ship resting like some alien thing in the center of it all. The only person around was Pallida, who was lounging in an armchair that she must have dragged over. She looked up from the book she was reading and smiled at us.

“What ho, friends!” she called. She stood up from her chair, tapped a page of the book, and then tapped the chair itself, which vanished. She took the book and put it into a bag, then picked up her barbed spear and jogged over to us. As she moved, the simple shirt and breeches she was wearing were covered by the oil slick armor that seemed to come from beneath her clothes. “We had some significant debate about whether you’d be back, or whether we’d need to track you down. Looks like I won.”

“You got stuck with watch?” I asked.
“Volunteered,” said Pallida. “I’m the friendliest face around these parts, aside from maybe Lyda.” She looked at Amaryllis, who had just finished undoing her helmet. “Kind of wanted to see you again, to be honest?”

“No reason,” said Pallida. “The family resemblance. I don’t know what you knew about her, but thought you might want to hear about her.”

“I think I’d like that,” said Amaryllis. “Family’s never had great associations for me, which I guess you’d know if you did your research. It might be good to change that.” She looked toward the fort. “I suppose you’ve got your orders though?”

“Yeah,” said Pallida, grimacing slightly. “We talked late into the night, just like you probably did.” She took her eyes off Amaryllis and looked at me. “Seems like you and your Knights are probably going to get read in.”

“Good,” I said. “Great.”

“Not what you wanted?” asked Pallida.

“Saving the world is a big responsibility,” I said.

“Ah, weight of the world on your shoulders,” said Pallida with a nod. “I personally never knew how he bore it, but as it turns out, maybe he didn’t, at least at the end.”

Valencia’s read on Pallida was that she wasn’t quite so gung ho about things as any of the others. Renacim were essentially unknown to the denizens of hell, given that their souls refused to go there, but from what Valencia could read, Pallida was with this group more out of a sense of duty to her past lives than because she really believed that Uther needed to be stopped at all costs. At least according to Valencia, the pact had likely been made a long, long time ago, and while Pallida still felt bound to it, the connection wasn’t that strong. Whatever her specific gripes with Uther and however painful his leaving had been, that wasn’t a strong part of her internal being any longer. Her relationship to Dahlia, on the other hand, had left more of an impact. For that reason, Valencia had suggested that Amaryllis do her best to respond positively to any flirtation. We still didn’t have the whole story on Dahlia, not by a long shot, but she was apparently well-liked, and that was something we could use to our advantage.

We stopped at the fort, so that Grak could re-check the wards. This was paranoia, but that was expected of warders, and apparently not too much of a faux pas.

“So, can you tell us about Dahlia?” I asked.

“Oh,” said Pallida. She shifted slightly. “I wasn’t thinking that was going to be a public conversation.”

“I’m curious,” I said. “She’s not in the history books.”

“By choice,” said Pallida. “She went missing and it was a whole thing, then joined up with Uther under another identity, and by the time she was caught out … well, she’d already proven herself as Uther’s squire, and I suppose he liked the idea of having her around. She was the only one of his children that he really connected with, for various reasons. They were princes, with all that implies, but Dahlia was never really much of a princess. She was a hellion, truth be told. That’s where she took her name from, Helio.”
“Uther didn’t recognize his own child?” asked Amaryllis.

“She wore a belt,” said Pallida. “It was an entad that changed her gender. There was a familial resemblance, certainly, but Uther hadn’t expected his little girl to show up as a boy.”

**Girdle of opposite gender.** It had been removed from later editions of D&D as being either politically incorrect or, a little more charitably, because it marginalized gender dysphoria and made for too many jokes about gender roles in a game that didn’t encourage such notions. I didn’t actually know what the writers of the various editions had been thinking, but I had sat through a two hour long argument between Tiff and Arthur about it. I wondered what that would have been like for him, to see his daughter wearing it.

“What fate befell her?” I asked.

“She survived the Grand Finale,” said Pallida. “That was what we called it, when Uther left, though at the time it was uncertain whether or not we were just facing the end of the world. She remained a hellion after that, traveling, adventuring, and living a somewhat solitary life.”

“But she had no children?” asked Amaryllis. “If she had, we would have known. The entads lock to their bloodlines.”

“No children, no,” said Pallida. “She died at one hundred and twelve years old, having never married.” She shifted slightly. “She was always on her father’s side, even after he went missing.”

“But she had no special knowledge?” asked Grak. He had sheathed his wand; apparently the wards had passed muster.

“No,” said Pallida. “At least, I don’t think so. I can’t imagine that he would have told her and not his Knights.”

“That’s good background, thank you,” said Amaryllis.

“There’s some more I wanted to say,” said Pallida. “But it’s a bit private.”

“The wards haven’t been changed,” said Grak. “The fortress itself still shows the same signature.”

“You could trust us a little bit,” said Pallida.

“Trust, but verify,” I said.

“He used to say that,” said Pallida. “He only said it when he didn’t actually trust someone.”

“Sorry,” I said.

Pallida waved a hand. “Not a problem,” she replied. “We don’t really trust you either. But hey, you did come back, and that’s worth something. We just don’t want to always have these talks with metaphorical guns pointed at each other. Literal guns either.”

“No,” I said. “Not really what we want either. O’kald is going to cool it?”

“Maybe,” said Pallida with a shrug that I didn’t find at all reassuring.

We went back into the fortress and took our place at the round table. We had to wait for a bit for the others to arrive. They filtered in by ones and twos, coming from different directions. O’kald and Dehla came together, and he shot me a nasty look. I responded with a nod.
It might have been one thing if he’d been arguing that I needed to die because it was in the best interests of the world as a whole, a way of stopping the degenerate cycles that were going to continue escalating until something was done, but he’d given no sign of being dispassionate. Instead, there was real malice toward me, which must have been transferred from Uther. At least part of that was by Valencia’s design; she’d wanted him riled up to color his ‘side’ as unreasonable. There was nothing like an extremist to drive out moderates, at least according to her, and O’kald had already occupied that role before she’d revealed herself as non-anima. O’kald didn’t have the rhetorical chops necessary to convince anyone that he was actually right.

Everett was the last to come in, and once he sat down at the table, a silence descended on us. There were, mercifully, no new people whose names and quirks I would have to remember. Heshnel had placed the Monster Manual on the table after Everett sat down, and drummed his fingers on it as people stopped talking amongst themselves.

“I read this last night,” he said. “Interesting, if not terribly true to reality.”

“I came up with my own versions,” I said. “And Aerb came up with its own versions of what I’d made. It’s two steps removed.” Three or four, in some cases, and sometimes more, given how much D&D cribbed from fantasy literature.

“And that’s the nature of reality then?” asked Heshnel.

“It seems to be, from what we know,” I said. I wasn’t going to mention anything about the simulation hypothesis or computers, in part because of how long that would take to explain and how little it seemed to add to the conversation.

“Then the question remains,” said Heshnel. “We need to decide on what is to be done.”

“We?” I asked. “As a group?”

“Perhaps,” said Heshnel. “I imagine us to be similarly aligned in terms of goals, but perhaps not yet in sync in terms of how we might achieve those goals. In my experience, those differences of opinion are cause for a lot of friction.”

“Are you taking up his mantle?” asked Everett. He said it with effort, enunciating more clearly than I’d heard from him thus far. I didn’t know exactly what was wrong with him, aside from age, but he was obviously infirm. Valencia thought that he probably wasn’t five hundred years old, but she hadn’t been able to give me much more beyond that. I could think of half a dozen things that could have sent him forward in time, the most likely of which was a bobbler that I’d adapted from Vinge’s Marooned in Realtime for a campaign.

“If I can stop the destruction of Aerb, then I will,” I said. “If I can prevent suffering and pain, I will. I’m not planning to do things the way Uther did though. I’ve already told you all more than he ever seemed to have. Uther was secretive, for his own reasons. Maybe he was justified, maybe he wasn’t, but I haven’t actually seen his justifications, and from what he said to me in the message he left, he might have just been keeping quiet because he was afraid.”

“He feared nothing,” said Gemma.

“With respect, I don’t think that’s true,” I said. “At least, it wasn’t true for Arthur, when I knew him as a teenager.”

“Regardless,” said Heshnel. “We need to discuss what it means to save Aerb. Did you read Degenerate Cycles?”
“I did,” said Amaryllis. “Uther wasn’t entirely clear on what it would mean to stop the narrative, so I doubt that you could be either. There are three primary cases. The first is that the cycles can’t be stopped, in which case we’re both doomed, because escalation is a natural consequence of perpetual narrative, and saved, because the resolution is always assured.”

“Unless it’s not,” said O’kald. It was the first thing he’d said. I’d forgotten how rough and grating his voice was.

“Unless it’s not,” nodded Amaryllis. “Also a problem, but there’s not much that we could actually do about it except give it our all every time, in the case that the cycles can’t be stopped. The second case is that the cycles can be stopped by putting the entire system into a no-win situation without a narrative resolution. Your plan to use nuclear weapons against us might have worked to do that, but I doubt that it would, since there’s some implication that Juniper would continue to possess a narrative in hell.”

“Oh?” asked Heshnel. “Do tell.”

“I get messages from the Dungeon Master,” I said. “Sometimes I can send them back. I was given an option to continue on after death, which I have selected.”

“And if your soul were captured?” asked O’kald.

“I don’t know,” I replied.

“There’s also the third case,” said Amaryllis. “We might be able to manipulate the narrative into a position where it’s impossible for another cycle to start because all conflicts have been rendered trivial. I’ll put forth that given what we know, this is the single most likely favorable outcome. Juniper has been directly informed that it’s a possibility by the Dungeon Master.”

“So he says,” replied O’kald.

“Enough,” said Heshnel. “Your objections have been voiced.” He turned back to us. “And how do you propose to gain power?” he asked. “What would be needed?”

“We’re already working on it,” said Amaryllis. “Juniper has something like the Knack. Exposure to different magics will help him. Beyond that, training by professionals will give him the ability to increase his skills faster. And naturally, we need to learn everything that Uther was keeping secret, no matter what the reason was, so long as that knowledge won’t literally end the world or kill us. That’s what we asked for coming in here, and it’s a request we’re repeating now.”

“What happens if Juniper fails?” asked O’kald. “Can he?”

I glanced at Heshnel, who was sitting impassively, as though he wasn’t responsible for keeping order on their side. I didn’t like that; it might have been one thing for him to cede authority to O’kald, but this was an underhanded ‘well I can’t stop him’ maneuver that made me think they were playing good cop bad cop.

“The Dungeon Master has said that I can fail, yes,” I said. “He didn’t say what would happen if I died, beyond what I’m assuming is true about me going to the hells. I think Uther and I are being treated differently. He got strictly structured narratives. I got something a little more freeform.”

“Stop,” said Valencia. Her voice was sudden and sharp. “Whatever your plan is, put a halt to it right now. You can do more good as allies than enemies, and the costs if you’re wrong are astronomically high.”
“Wait, what plan?” asked Pallida, looking to the bellad with wide eyes. “What did you do?”

“O’kald,” Heshnel began.

“I’ve got nothing,” said Fenn, looking over to me with a raised eyebrow.

“Nor I,” said Grak. His eyes were narrowed and moving rapidly between the people at the other end of the table.

“Poison,” said Valencia, just before Everett let out a wet cough that left blood smeared on the inside of his hand.

We moved quickly after that. Valencia took the crown from her head and placed it on my own, and I took it right back off and put it on hers. There was a lot of yelling and commotion from the thirteen assembled people. I was up and out of my seat when a small hammer came flying my way. I didn’t have my sword fully drawn and took a hit to my chin that snapped my head to the side hard enough that I blacked out for a moment. When I came to I was in the middle of pulling myself up off the ground and healing the damage that had been done, using the wrong bones to do it. There was a white mark on my otherwise blue armor, a hit that I hadn’t seen or felt, but which had been absorbed anyway.

I was half-deaf from the thumping sound of Valencia’s guns, which were firing across the table to the other side. I saw Everett stagger backward, half out of his chair, as the bullets tore through his clothes, but there was no visible blood, and at his arm I could see tattoos moving over his wrinkled skin. Heshnel was down, either taking cover, wounded, or dead, which the game confirmed a moment later.

**Heshnel Elec defeated!**

I brought my blade up to parry another thrown weapon from O’kald, and registered that it was the same hammer from before only after I had knocked it aside and seen it vanish from mid-air. He hopped up on the table, which creaked beneath his weight, then began trudging toward me, moving about as fast as he could. I scrambled back, trying to keep eyes on my flanks at the same time. The thought of going toe-to-toe with someone who could tank a hit from a chain gun was terrifying, more so because I was almost certainly poisoned with something.

Amaryllis had been grabbed by the lenssi, enveloped in its liquid, with its skull butted up against her armor. She was holding her breath, but there were limits on how well that worked. Grak was on the ground and screaming, bleeding from a large wound that had gone down into his shoulder, the source unknown, and Solace was beside him, using her staff to trace a healing path through the injury. It was nearly impossible to hear anything, given the way the gunfire had made my ears ring.

I only had a vague idea who was friend and who was foe. A tattoo on Everett’s arm billowed outward like a flame licking in the wind, ephemeral and white, which caught the fox Animalia off-guard. Her hair went white all over her body and she dropped to the floor, either injured or dead, but I had no idea which side either of them was on.

**Gemma Tails defeated!**

(The game didn’t actually help clarify matters there.)

I didn’t have too much time to think about it before O’kald’s handaxe came toward me. I parried, but he had more weight behind his strike than I had expected, even given his sheer mass, and I was pushed back by the force of it, nearly taking the backside of my own sword to the face. O’kald was
shorter than I was, and lacking in reach, but he was two or three times as dense, maybe more, which
gave his hits much more of a punch than I could muster, even with the magical power at my disposal.
I was used to employing haymaker attacks, but that wasn’t going to work here, not given how hard
he was. I backed away again as he advanced, and again faced a hammer throw that I dodged with
ease.

There were a limited number of abilities in our arsenal that could put the hurt on him, and out of the
corner of my eye I saw Amaryllis slip to the floor under the lenssi’s assault. Fenn was firing her bow
as fast as she could, trying to hit the skull in the lenssi’s center, but the liquid had a fair amount of
stopping power to it, and I wasn’t sure that her bow was up to the task. The flickerblade was one of
the few things I’d thought could get at the O’kald’s internals, but that was out of the picture until
Amaryllis was back on her feet. I looked around for Solace but couldn’t find her. She was the other
weapon suited to the task, but she was gone or missing, or maybe just ducked down behind a table
making sure that someone important didn’t die.

Valencia joined up with me as I continued backing up, giving O’kald another target. I noticed the
way he moved in jerks and how chips kept falling from him, the result of him taking damage through
the soul link. It might have been because of the hit to the head, but I made the connection late,
realizing only then that O’kald was still their brute. He must have known going in that he’d be taking
all the damage, which was why Everett had used an attack that bypassed the physical contralocation
of the soul link. The bellad had made himself the lynchpin of their defense, and he was toughing out
the hits.

Everett Wolfe defeated!

Valencia came in from the side, flanking O’kald, and wrenched the handaxe from his grip with her
borrowed expertise. O’kald used his other arm, swinging wildly with his hammer, and it struck her
on the chest, sending her backwards but unharmed thanks to her armor. Her efforts were undone in
an instant though, as the handaxe burst into flames. When she dropped it, it dipped low to the floor,
then changed trajectory and landed back in O’kald’s outstretched hand. The flame that was
apparently part of the entad’s magic didn’t go out. Instead, the axe grew to white-hot, so hot that I
could see the waves of heat. It would surely have burnt his hand, if he weren’t made of rock.

It was around that time that I noticed the blood flowing freely from my nose. It was cascading down,
right, poison. Why did I give her back the crown of
a river of blood that was wetting my lips. Right, poison. Why did I give her back the crown of thorns?
I took a brief moment to survey the battlefield and was shocked to see how many people
were down. There had been thirteen people sitting around the table, but the only ones still standing
were Pallida, Fenn, the lenssi, and our own little trio of combatants. Solace was laying on the floor,
not moving, and Grak was beside her, moving his wand in the air and not looking like he had the
strength to do much more than that. We needed Solace back up, she was our healer, without her the
drowning that Amaryllis had received was going to be fatal.

I circled O’kald once and looked to Fenn, who was engaged with the lenssi. She’d been trying hit
and run tactics, but she couldn’t seem to land a shot on the skull hard enough, and the poison was
hitting her harder than it was hitting me. She was stumbling now, and even as I noted that, I
misplaced a foot, which left me open for an attack from O’kald. His strike was weak, since he was
still playing defense against Valencia’s sword, but he clipped me hard enough to send me to the
ground. It struck a place that had been hit before, and I felt nearly the full weight of it.

I sprang to my feet and almost fell, staggering slightly under the weight of my body. I charged
O’kald and activated my sword’s ability to move through metal, hoping against hope that the internal
rules that governed it would count his rockflesh as being close enough. The sword passed cleanly
through the axe he brought up to block me, but bounced off him hard enough to make my hands
sting. Though the attack was ineffective, taking no more than a chip out of him, it gave Valencia room to go on the offensive, attacking him repeatedly, hitting his back. The pieces that she cut out from him got larger with every stroke of her sword, and O’kald seemed caught in a moment of confusion. Valencia’s Memory Blade was taking his memories and honing itself in the process, making him a worse fighter as it made her sword more deadly.

O’kald pushed her back, which she allowed, but that only gave her space for a forward thrust that caught him directly in the chest. He’d lost clothes in the fight, enough that I could see the crack that the memory blade made as it hit the other side of the interior rock face. O’kald stopped moving with a stunned look on his face, then backhanded Valencia hard enough to send her flying. The sword was still lodged within him, but whatever damage had been done to his internals, it apparently wasn’t enough.

*Gur Dehla defeated!*

I was feeling woozy. A quick glance showed Fenn down, but the lenssi was down too, just a puddle of fluid with the skull nowhere in sight, a feat accomplished by some miracle of combat from Fenn. When I looked back at O’kald, he was still coming toward me, even with the crack across his chest and the sword still stuck in him.

“Why?” I croaked out as I limped backward. My calf hit the edge of a chair, and I nearly fell over.

“My wife,” answered O’kald. He raised his hand to throw his hammer forward, and I wasn’t sure that I was going to be able to dodge it. My armor could take the hit, if it landed in the right spot, but if I went down, I was probably going to die.

I was saved from having to make the dodge by a barbed spear covered in purple-black flames slicing through O’kald. Pallida was covered head-to-toe in her oil-black armor, making her face unreadable, but the exhaustion was clear from her stance. I had no idea what her part of the brawl had looked like, but she was worse for the wear. She was the only other person still on her feet, aside from myself and Valencia.

*O’kald defeated!*

There was no time lose though. I raced forward and picked up Solace, and Grak since he was beside her, slinging both of them on my shoulders with a boost from my few remaining bones. Solace was a featherweight, a member of a small race and a child at that, but Grak was heavier. My muscles complained, but I carried them away from the great hall, through the entry and out onto the grass a few dozen feet away. I had no idea what a safe distance was, or even how the poison had been administered, but getting them out was all my tired brain could focus on. We needed Solace alive so she could fix everyone, which made her the priority.

After I had laid them out, I went back in. Valencia was following my lead; she’d grabbed Amaryllis and was carrying the princess awkwardly. I grabbed Amaryllis and ran her out to set her down with the others. Blood was dripping out of her helm, but I tried not to think about that. My own blood was coming out of my nose and mouth so freely that I was almost choking on it. I yelled instructions to Valencia, then forgot what I’d said only a few moments after I’d said it.

I passed by Pallida, who was dragging Gemma, the fox’s hair still white from whatever Everett had done. She called for me to help, but I passed her by. There was only one more of my own people left in there, and I didn’t even know if I had the energy needed to get her out. I reached into my bandolier and shoved one of the fairies in my mouth, hoping that it would do something for me, but all I could taste was blood, and trying to swallow down the chewed fairy and thinned blood nearly made me gag.
I grabbed Fenn without really looking at her, slinging her over my shoulder in a fireman’s carry. She was light, even as weak as I was feeling, and I carried her as quick as I could, stomping and stumbling, occasionally leaning up against walls for support so I could make the next step. I glanced at Fenn only once, enough to see that she was frighteningly pale and bleeding profusely, and continued on. The way out seemed longer than the way in had been.

Solace was just beginning to sit up with the crown of thorns around her head when I set Fenn down.

“Heal us,” I slurred. I just wanted to close my eyes and rest, that was all.

Solace swayed slightly and made a gesture with her closed fist. When she opened it, I didn’t feel any better. “Soul deep,” she said.

Valencia swooped forward and took the crown from Solace’s head, then placed it firmly on Amaryllis’, standing back slightly and giving every appearance of counting to herself. I couldn’t see her face, but she was radiating tension. After a few moments of the crown of thorns being in place, she took it from Amaryllis’ head and placed it on Grak’s. Valencia glanced at Fenn, just for a moment, then back to Grak.

“Working?” I asked, half-gasping at getting the words out.

“Not enough,” replied Valencia.

I closed my eyes and dove down into my own soul. I could immediately see what Solace had meant about the damage being soul deep. My physical form looked sickly, the hues of my skin nearly gray. Whatever the poison had done, it had impacted my soul, and though the crown of thorns might have removed the poison, it wasn’t going to fix the damage that had been done. I was trying my hardest not to slip into the soul trance, which would probably cost all of us our lives, but I was unfocused from the sickness, and I could feel the call of it, the need to look around and mull things over.

I went to my skills and began dumping points into Essentialism, just enough that I’d be able to access the backups we’d made of our bodies. It would also make the soul diving go faster, which was likely going to be an issue.

When I came back out, I realized there was a problem with that line of thought. The backups were in the glove, which was invested to Fenn by Amaryllis, and both of them were unconscious. The crown had been passed around, and hopefully that would mostly stop the damage, but they weren’t getting up like Solace had. More exposure to the poison? Less in the way of defenses against it? Variable biology? I needed to know the answer, but I had no way of figuring any of that out.

“I need a soul,” I said to Valencia. “One without poison.”

Valencia reached into the pouch at her side. She had a small handful of them, the most useful ones, in case she needed to engage in Plan Mountain Dew and take on a soul for a few minutes. I grabbed the bottle she offered to me, not even bothering to read the label, and emptied it into the palm of my hand. With Essentialism boosted, it was trivial to enter the soul, and equally trivial to swap my body with theirs. I healed myself as soon as I was out of the soul trance, feeling the changes to my body and a sudden relief from the pain. My skin had become a few shades darker, and I’d shrunk a few inches, but at least this body template hadn’t sustained damage. I’d pull my regular body from the backup I’d made once everyone was healed.

I went to Amaryllis, removing her helmet so I could place my hand against her skin, swapping her soul’s conception of her body, then healing her into the same form that I was using. Her armor shifted shape around her, adapting to her new form. Her eyes snapped open and she looked around,
then stood up and drew her sword, falling into a fighting stance as she scanned for threats.

“What happened?” she asked as I moved to Grak. Her voice was much lower. I wasn’t sure that we’d have the same voice, but it would be close.

“Our souls were poisoned,” answered Solace.

I fixed Grak next, but the healing didn’t go quite right. His armor wasn’t magical, and didn’t conform to his new body, which meant that I was trying to reshape his body against the constraints of his armor. I stopped the process halfway through, and Amaryllis went to him to continue the process.

“Might need some of whatever you’re doing too,” said Pallida from where she was sprawled out on the grass. Her mouth was covered in cotton-candy pink blood, and she was lolling her head.

“Sure,” I replied, moving over to Fenn. “One sec.”

I was out of sorts, and I’d been doing things wrong without even thinking about it. I had wasted time taking off Amaryllis’ helmet, given the link between our souls, and though I needed to touch her to heal her, it would have been better to make the soul swap and let Solace handle the healing. For whatever reason, that was where my mind was going, to the inefficiency of the triage action. I’d been thinking quick and acting decisively, and we were going to make it through this with little damage to show for it, but I hadn’t been acting optimally, and in the future --

There had been four lines leading away from my soul, and now there were three. One was snipped and waving in the wind, the presentation that the game had chosen for Valencia’s soul. I raced down one of the other two lines, found Amaryllis, and went back to choose the other line. I arrived at Grak’s soul, and looked at his body, which I’d just swapped out.

Fenn’s soul was nowhere to be found.

I laid down next to her and pressed a shaky hand against her collarbone. Her skin was cold and pale. There was too much blood around her mouth. I felt for a pulse first, but my fingers just fumbled at her neck, and I didn’t really know how to take a pulse anyway. I tried to gain access to her soul, but the thread of Fenn wasn’t there anymore, not in her skin or the blood that wet my fingers.

I didn’t actually believe she was dead until I felt Solace’s hand on my shoulder, trying to comfort me.
I spent some time staring at her body, her corpse, the flesh that had contained her but now did not. It felt like the weight of her death settled on my shoulders and then stayed there, pressing me into place.

It probably wasn’t all that long, since Amaryllis moved over to Fenn and pointed the flickerblade at her forehead, making a hole using the brief appearance of the blade, then kneeling down to stick the runed spike into Fenn’s forehead. The soul was out moments later, and Amaryllis put it into a waiting bottle, which disappeared into Fenn’s glove the moment it was full.

“Heal Solace,” said Amaryllis.

“Give us some time,” said Solace. Her voice was soft.

“We don’t have time,” said Amaryllis. “Juniper, is the fix working?”

“I don’t know,” I said. I had to force the words out. “I don’t know how it works.”

“Body talks to the soul,” said Pallida. She was in the middle of stripping the fox Animalia of her effects. “Poison says to the body, hey, stop working, body says to the soul, hey, you suck, healer comes to heal the body and the soul says hey, the body is supposed to not work.” She looked over at us. “Devil’s tansy, usually you drink it,” she said. She slipped a bracelet off of Gemma’s wrist and onto her own, then dabbed at the blood by her mouth, looking at it for a moment. “Need that dejang, when you’ve got a moment, clock is ticking for the people inside.”

Valencia nodded once. *And what the fuck do you know?* The thought came and went in an instant. I went back to staring at Fenn. I could feel Solace’s hand squeeze my shoulder.

Amaryllis tossed the spike to Pallida, who let the armor flow back around her as she turned and ran back inside.

“Heal Solace,” said Amaryllis, turning to me. She was still wearing the body of the dark-skinned man.

“I think it was airborne,” said Grak. “I put a ward for clean air around Solace and myself. It was as much as I could do before I blacked out.”

“Juniper, we all breathed it in, the crown purged it, but Solace needs her soul healed so her body can heal too,” said Amaryllis. She was gritting her teeth. “She’s my fucking daughter, heal her, now.”

“We don’t have a backup of her body,” said Grak.

“So fucking what,” said Amaryllis.

“When you’re ready, Juniper,” said Solace. Her voice was still soft and understanding, but hoarse, as though speaking took effort. The poison had been purged from her system by the crown, but it had done its damage, both to her physical self and her soul.

I looked away from Fenn, and knew that I wouldn’t be able to look back.

I placed my hand on Solace’s shoulder, with my thumb resting on her artery. Blood and skin were connections to the soul, pathways that you could use. I thought about checking Fenn for a pulse and
finding nothing, touching her skin and finding it dead to my senses. I opened my eyes and looked at Solace. I was crying, and not doing anything to help her, but she just looked at me with pity and understanding.

I closed my eyes and tried again. This time I slipped into her soul with little effort on my part.

I replaced her body with the one I was using, the same dark-skinned human that had randomly been handed to me from our collection of souls. I was about to leave, the work having been done, when something caught my eye. Solace wasn’t a companion, she was just a person along for the ride, which meant that her soul didn’t have the helpful text and numerical markers that the others had. Instead, there was something that stuck out like a sore thumb: images. In places there were scenes of verdant green where abstract, hard-to-read blobs of raw information should have been. I’d only seen anything remotely similar in the locus’ own soul. I’d been in Solace’s soul before, and it hadn’t had these aberrations. They didn’t cover the whole of her soul, just bits and pieces.

I was distantly aware that I was in a soul trance as I looked things over and tried to work out what it all meant. My emotions were muted, and I could think a little bit more clearly, without the pressure of the real. I wondered, briefly, how many soul mages had died because they couldn’t pull themselves out of a soul. Then a picture caught my eye, and I looked at it more closely, curious.

The image was taking the place of a memory. You could go inside a memory and get the experience of it, I’d done that before, but this was something else entirely. The image was surrealist, stitched in with the surrounding network of nodes, a crantek woman giving birth by squatting, naked, in a wide field. Her feet melded with the grass, and her green hair stood up on end, reaching to the sky like branches. I couldn’t tell whether it was supposed to be a memory, a memory-equivalent, or something else, but it was clearly a piece of the locus.

What, exactly, had happened to Solace when she’d been aged up was a mystery, but it was the sort of mystery that I’d thought was just druidic weirdness, not actually anything to worry too much about.

I went looking for more of these images, not thinking that I would get much insight into who Solace was or what had happened to her, but not wanting to go back to the real world where I’d be faced with Fenn’s corpse.

I had been thinking about the soul of the locus the night before, and what it might actually mean. My assumption, from the moment I had seen it, was that the soul of the locus was like all the others I had seen, a barely disguised database of information. The difference with the locus was that there was interpretative art overlaid on top of it, either cloaking what was beneath, or interpreting it.

The more I looked at Solace’s soul, the more I thought that I might have been wrong. To say that the locus must necessarily be, at its root level, reducible to raw data seemed like it was a very Juniper way of looking at things, and perhaps the lesson that was intended to be drawn from the locus was --

I was yanked out of Solace’s soul as we broke contact. I had to look at the armor to confirm that it was Amaryllis, since we were all wearing the same face now.

The feeling of loss hit me a moment later, and my eyes went to the place where Fenn was laying, only to find her gone. The grass was flattened, and there was a small spot of blood where her head had been, but there was nothing else. I sank down slightly. Amaryllis would have put the body into the glove then.

“Juniper,” said Amaryllis. “Are you okay?” Her voice had lost its edge. I wasn’t sure how long I had been in, but it had been long enough for her to cool down.
“No,” I said. I looked around, trying to find something. Some idiot part of my brain was probably still playing catch-up, and thought that Fenn should be standing next to me.

Pallida was standing next to Heshnel. The left side of his face was a Cronenberg horror of pulsating flesh. The eye was the size of an apple, misshapen and with a pupil that was split, like a goat’s. Around the eye were fleshy ridges and bits that hung down, nearly resembling tentacles, wet with something viscous. That aside, he looked no worse for the wear.

Beside them, Gemma was back on her feet, her fur still white. That wasn’t the only change to her. She had sagging skin, and her paws, which held her swords, had that skeletal look of the elderly. She looked like she had aged a hundred years.

“You have Essentialism boosted,” Amaryllis said to me. “We’d like our bodies back.”

“Yeah,” I said. I was still feeling too shocked to do much of anything. Thinking seemed like it would take a Herculean effort. I had tears in my eyes and a tightness in my throat. “The bottles --”

Amaryllis held a bottle forward, labeled with her name. I took it from her. I felt like I wasn’t really there, moving my body like a puppet, or maybe underwater. I uncorked the bottle and let the soul fall into my hand.

Fenn was dead.

I let out a choking sob as my breath caught, then dived down into my soul.

It was better in there, easier to think, if harder to think about the real world. Fenn’s line was absent, the connection we shared completely gone, but I picked out the one belonging to Amaryllis without breaking down into tears. I followed the line to her soul, until I was staring at the body I’d given her. It took some time and effort to link in to the soul in my hand, but I managed it all the same, and from there, the swap was easy enough.

I distantly felt someone manipulating my hand, touching me firmly enough that I could feel it through the soul trance, and manipulated the new soul that had been pressed into my hand. It was Grak’s, fast enough to replace, his soul’s version of his body replaced a second time in the span of minutes, this time with his body as it had been months ago. I stared at him for a moment, tempted to go looking deeper into his soul, but backed away and into my own instead.

I was waiting there, looking at the skills I’d decimated, when the third soul of our batch was placed into my hand. I swapped my own body back in. That was all I was really there to accomplish. It was time for me to leave.

One of the interesting things about the soul was that attributes stayed static even when the body changed. If I’d given myself the body of a child, I’d have still had the same attributes, at least according to my soul. The differences in how I would actually move through the world were handled by other game systems, either Afflictions or some other, less game-like mechanism. It seemed as though there was probably some way to break the system, given what I knew about it. Logically, if stats were independent from physical reality, or only loosely connected, then there were probably some benefits to minmaxing. When Reimer played gnomes, he almost always made them as short and light as the rules would allow for, on the thinking that he was going to be small no matter what, and optimizing for situations where being small was helpful made the most sense. Contrarily, whenever he played an orc, he made them heavy and muscular, and usually tall to boot, though there were obvious concerns about being too tall to move through doorways or fight in confined quarters.

I stared at my body. I was taller than I’d been on Earth, more handsome, and far more muscular. I’d
worried that increasing PHY might be a path toward eventually looking cartoonish, but the game apparently cared about personal aesthetics, and had stopped me from becoming grotesque. I looked like I had always imagined myself to look, in a world where I had been motivated enough to go to the gym. My friend Colin was our high school’s star wrestler, and he’d kept encouraging me to join, mostly because he was the only real geek on the wrestling team. I sometimes thought about what I might have looked like if I’d taken him up on the offer and seen it through, and never in my wildest dreams had I thought that I would have the body that I did.

There were interesting wrinkles in how things worked for me, compared to how they seemed to work for everyone else, but as I let my mind drift to those things, safe from thinking about the real world, I could feel my mouth being forced open. Reluctantly, I drew away from my soul.

“Oh,” said Amaryllis. She was staring at me. She was back to her old body, almost a full year younger, the body she’d had before having a child. She held a fairy in her hand, which she was in the process of forcing into my mouth. “We need you to stay out.”

“Mental afflictions,” said Grak. “They’re the price of purging the poison.”

“Oh,” I said. My eyes went to the spot where Fenn had been laying. I hated feeling like this. I wanted to retreat back into my soul, where emotion was muted and I could focus on something other than what had happened.

“I think mine is aggression or possibly impulse control,” said Amaryllis. “I’m dealing with it. They should burn out, given time. They’re supposed to.” Her voice was firm and calm, forcibly so, tight and controlled. “We need to know what it is you got.”

“Okay,” I said. My eyes went to the spot where Fenn had been laying. I hated feeling like this. I wanted to retreat back into my soul, where emotion was muted and I could focus on something other than what had happened.

“I think mine is aggression or possibly impulse control,” said Amaryllis. “I’m dealing with it. They should burn out, given time. They’re supposed to.” Her voice was firm and calm, forcibly so, tight and controlled. “We need to know what it is you got.”

“Uh,” I said. The soul trance was like getting thrust forward into the future, minutes passing like seconds. Things had changed around me. Solace, now the dark-skinned man, was standing with her cape behind her, watching the three surviving members of Heshnel’s group. The tip of her staff was dug into the ground, and the top of it had been changed so the wood interlocked with her hand. Useless druidic bullshit, no doubt. “I don’t know.”

“Dissociation?” asked Amaryllis. “We should have gotten a list of possibilities from Bethel.”

“She’s dead,” I said. Fenn. “I … I don’t know how we’re going to bring her back.”

The ritual of Yaxukasu Axud we’d used to bring Solace back wasn’t going to work. The person performing the ritual had to be a druid, and the soul to be reborn needed a druidic connection as well. We had faked the first half of the requirements for Solace’s rebirth, but for Fenn … I didn’t know how I would stitch a druidic connection into her soul. If I could have done that, I could have made more druids. It seemed hopeless even before taking into account the quest message I’d gotten when Solace had been born. If another of your party members dies, don’t expect it to be so easy.

I found my hands curled into tight fists, squeezing my thumbs so hard it was painful. The Dungeon Master had let this happen. He had probably known it would when he gave me that message. He had nudged things into place so that Fenn would die.

“Breathe,” said Solace, placing a hand on my arm.

I let out a shaky breath and tried to refocus myself. I found myself burning WIS in order to get some semblance of balance, but while it helped, I still felt like a piece of me had been ripped out.

**Skill increased: Bone Magic lvl 30!**

I ignored the message. New levels, new powers, more game bullshit that did nothing good for me.
Amaryllis had already made her predictions about what all my skills would give me at their higher levels, cross-referenced with historical notes. Level 30 was either social attributes, luck, or special powers like the one I could already sense was lodged in the unicorn bones. It all seemed like meaningless faff to me.

“Juniper?” asked Amaryllis. Her voice was too controlled to sound comforting. “Does the game tell you that you have a new affliction?”

“Don’t know,” I said. “There wasn’t a pop up.” I’d gotten a small handful of notifications during the battle, but the only ones I’d paid any attention to were the ‘defeated’ messages that let me know who was out of the picture.

“It would have come from the crown,” said Amaryllis. “It would have been a handful of minutes ago.”

“No,” I said. “Nothing.”

“Check the list?” asked Amaryllis.

“I -- yeah,” I said. I barely ever looked at the screen behind my eyes anymore, in the same way that I almost never looked at the HUD. It was so easy to fall into patterns, to ignore the things in front of you because they’d fallen into the background of your existence. My mind turned to Fenn without any conscious effort on my part. I had thought, after our disastrous therapy session, that we might find our way back together, because I really did love her, I had just done a poor job of paying attention to her and a worse job of understanding her. I let myself become accustomed to things far too easily, and taken them for granted.

“Juniper?” asked Amaryllis.

I closed my eyes and counted out three seconds, then flipped through the screens. I stopped when I got to the Companions section. Fenn was missing from it, her name, biography, and perks all completely gone, as though she’d never been there. My breath caught on seeing that, and I continued on to quests, to find that her companion quest had been silently scrubbed too, without so much as a greying out. It was like Fenn had never existed, so far as the game was concerned.

My teeth were clenched as I moved on to Afflictions. There, at the bottom, were not one, but two new entries.

**Griefstricken (MEN -1, SOC -2)**

**Bad Dreams**

The afflictions had always been light on words, and these were no exceptions.

“Bad dreams,” I said as I opened my eyes. I was feeling ill. My heart was beating too fast and I’d broken out in a cold sweat. “I need to lay down.”

“Bad dreams?” asked Amaryllis. “That’s it?”

“That was all it said,” I replied. I sat down in the grass, hunched over slightly. “We’re going to have to bring her back to life.”

“Are we meant to?” asked Grak.

“No,” I replied. “I don’t know. No quest.” That didn’t mean anything. It might have been a test. I
hadn’t been fond of tests like that, as a DM, saying that something was impossible as a way of issuing a challenge, but the Dungeon Master wasn’t literally me, he was just borrowing my sensibilities. “I don’t know,” I repeated. “Maybe.”

“We should go,” said Amaryllis.

“Wait,” said Pallida. The three of them had been standing off to the side, giving us space but not so far away that they couldn’t make out our conversation. “We need to talk.”

“Fuck off,” I said. I wasn’t angry with her, I just wanted her to go away. I needed time, time to think, time to plan, time to grieve, or maybe just figure things out. My heart was beating too fast.

Pallida knelt down, laying her spear across her knee. “Juniper Smith, I pledge my life to you, from now until the moment I die, by the sacred power of my eternal soul.”

“Fine,” I said.

“Can you pilot that thing to the Isle of Poran?” asked Amaryllis. “Meet us there tomorrow, at the big house. You’ll know it when you see it. We’re leaving. Bring all the entads and material wealth you can.”

“Okay,” said Pallida. “For what it’s worth —”

“If you’re about to say that you’re sorry,” I began. “If you’re about to say that you lost people too. Whatever it was, I don’t want to hear it.” After Arthur had died, there were so many things people said to me that I hadn’t wanted to hear. I had been too much of a cynic to hear the kindness in their words. Now, I was right back where I had been, not able to deal with whatever trite condolences or explanation Pallida might offer.

“Yeah,” said Pallida. “Okay. We’ll meet you.”

We came down into the teleportation room with a flash of pain that was almost welcome, given how it crowded out my other thoughts.

“A pleasant trip?” asked Bethel as she looked us over.

“Fenn is dead,” said Valencia. Her voice had taken on some of the same hollowness that I was sure my own had, and I couldn’t stop myself from wondering whether it was faked or genuine. Val would know what I was thinking and feeling toward her, I was certain of that, especially since I didn’t have the wherewithal to hide it.

“A shame,” said Bethel with a raised eyebrow. “I had liked her.”

“She would have lived if you had been there,” said Amaryllis, gritting her teeth.

“I would need to hear the specifics to know for certain whether that’s true,” said Bethel.

“Evil triumphs when good men do nothing,” said Amaryllis.

“Do you think to sway me with Utherian platitudes?” asked Bethel.

“She died and if you had been there, she would have lived,” said Amaryllis. She was clenching her fists. I had no idea what she expected she could actually do against Bethel.

“I am not a weapon for you to wield, Penndraig,” said Bethel.
“Would it be too much to ask for you to be a fucking friend then?” asked Amaryllis.

“Stop,” said Valencia. “Mary, you’re compromised right now, it’s better that you don’t say anything. Bethel, do you know how long the mental affliction of the crown lasts?”

“What happened, precisely?” asked Bethel. Her eyes moved to Solace. “Ah, is that Solace?”

“We were poisoned,” said Valencia. “Everyone used the crown. We need to know how long the affliction lasts.”

“A week or two, perhaps more,” said Bethel. “In my experiments, the afflictions faded with time. May I inquire as to the poison?”

“Devil’s tansy,” said Valencia.

“Ah,” said Bethel. “Particularly offensive, that one. Did it affect you?”

“I had the crown on,” said Valencia. “I think the purely physical side of it would have gotten me if I hadn’t.” She looked over at me. “I was willing to give my life for you. You shouldn’t have handed it back.”

I couldn’t formulate a response. The whole fight had been a confusing blur, too many people doing too many things for me to track them all at once, too many unknown magics, or effects that I could only guess at, unclear loyalties and independent strategies. It had ended with Fenn dead. Or, no, it had ended with Fenn down on the ground, but not dead then, only dead because I had pulled her out last. It had seemed sensible at the time, prioritize the healer so she could cure the poison, grab Grak because they were next to each other, grab Amaryllis because Valencia was struggling with her and she was already halfway out, and then Fenn … well, she was last, and she died for it.

“I need time,” I said. “A few days, a week, I won’t be useful until then.” I glanced at Amaryllis. “I know there’s work to be done, I know that, but I need to get my head back on, and --”

“Use the chamber,” said Amaryllis. “We probably all should, to purge the afflictions.”

I didn’t want to spend time in the cramped time chamber with Amaryllis again, even if it could be made larger. It seemed like it would take an overwhelming amount of effort to explain or articulate that. Amaryllis wasn’t to blame for Fenn being dead, but I still didn’t want to be around her. She would be talking about plots and plans, pushing herself past whatever emotions she was feeling, maybe even editing her soul to wipe away the traces of Fenn … and I couldn’t spend a week with her, not if she was going to be Amaryllis.

“Juniper and I will take the first shift,” said Grak.

“We shouldn’t do shifts,” said Amaryllis. “The four of us should go together to conserve our remaining time.”

“No,” said Valencia. “It’s better that the two of them go together.”

Amaryllis frowned, but nodded fractionally.

“Before they do, Juniper, I’m sorry, I fucked up,” said Valencia. Her voice was small. “I shouldn’t have pushed on O’kald, I should have seen it coming sooner, I shouldn’t have even tried to be something that I couldn’t for you and Fenn, I’ve been pushed up to the frontlines because of what I can do and I keep failing at things that I shouldn’t be failing at, and there’s no excuse for it, but --”
“Take the devil out,” I said. I could hear the lack of affect in my voice. I’d been drained of emotion, wrung out beyond simply the urge to sit and cry.

“I can’t,” said Valencia. Her voice was nearly a whimper. “If I did we would fight, and I wouldn’t be able to defend myself. I know you’re angry with me, that you don’t trust or believe me, but --”

“Talk to me when you get out,” said Valencia. Her voice was desperate, pleading. “Write me a letter if that’s easier.”

I wasn’t sure how calculated that was, and didn’t feel like taking the time to think about it. Writing letters just left me thinking about Fenn again.

Bethel’s incorporation of the Anyblade meant that she could designate any room in the house as the time chamber. Because the accrual of time was linked to the size of the chamber, she typically alternated between designating an enormous ballroom as the time chamber when it wasn’t in use, or vesting it in any one of a set of smaller, purpose-built rooms.

The room that Grak and I had was small, but it had been purpose-built for a two person confinement. We had a small common room with little nooks for each of us off to the side, and with the glove, we could rearrange it to our liking. The bedrooms had bunks, with wards Bethel had put up to block out light and sound, Grak on the top, and myself on the bottom. Unlike the original time chamber, we had a working bathroom with actual plumbing. It was all still entirely self-contained, but the septic system was an actual septic system, with swappable tanks hidden beneath the floorboards, rather than a glorified bucket that we took in and out of the glove.

I climbed into the top bunk and laid there for a bit, crying.

When Arthur had died, it had come in waves. I’d feel empty and lost, which would spiral into this tight feeling in my chest, and that would always lead to tears. It was only rarely wracking sobs. Usually I just sat there with tears rolling down my cheeks while I stared at the wall. I would think about how much I missed him, or how unfair his death was, or all the ways that I’d been a shitty friend to him. My mind kept going back to the fact that the world would probably have been better off if I had died in his place. Once I was done with the self-flagellation, I would go back to feeling hollow, and the cycle would repeat itself.

Fenn had been the best part of my time on Aerb, and for all the wrong reasons. She’d been funny in a way that the others weren’t, always ready to add levity to the proceedings, easy-going and down to earth, chipper and fun. I’d taken it all for granted. I’d kept her in that mold even when she’d been trying to grow beyond it. I’d failed her, and it had all been laid bare for me the day before, in her own words, and now she was gone.

I had enough experience with grief that I could see the cycles. Self-loathing, longing, despair, purposelessness, a circling through vast terrain with familiar landmarks, the cycles were plain to see, but I felt powerless to stop myself.

I wondered if, in a few years, my conception of Fenn would be as white-washed as much as my conception of Arthur had been. Fenn had her hard edges and imperfections. I hadn’t paid it much attention at the time, but when we’d been on the Down and Out, she’d called the owner a weirdo birdfucker because his wife was Animalia. We’d had more important things to deal with, but it had stuck with me. I’d never asked her about it. With Arthur, maybe I had smoothed away his rough edges some because it was painful to think of him as being less than perfect, or because I had felt like
garbage because I was a terrible friend to him. The revisionist history was motivated. Uther was a completely different person from Arthur, put under incredible stresses and through extraordinary events, but it had taken seeing Uther’s dark side for me to start on a reconstruction who Arthur had actually been. He was just a person, mostly, however much he’d changed on Aerb.

I didn’t want to do that with Fenn. Thinking of her as a perfect person would have diminished her and turned her into something false. She had -- my breath caught at the past tense, even after hours sitting in my bunk thinking about her and the fact that she was dead -- she had spent a large portion of her life as a scavenger, breaking imperial law to steal from the dead. She’d gone to prison for it, and the only reason we’d met was that she had been roped into it by Anglecynn’s dysfunctional government. She was quick to violence and had a callous disregard for people she didn’t know.

I had loved her.

And it wasn’t even that I had been blind to her faults. I had, for the most part, loved those too. She was a reflection of me, in a few ways, including some of my worst impulses, and seeing those in her was affirming. She had a “shoot first and ask questions later” policy that was grounded more in not wanting to deal with assholes than anything pragmatic. I was sure that her time as a scavenger and outlaw, not to mention in prison, had given her some of that callousness, but it appealed to me, even though I knew it shouldn’t. There were times when she said exactly what I was thinking, even if it was nothing that I would actually have said out loud.

Even the weirdo birdfucker line was something that had been at the back of my head. People were free to consort with whoever they wanted, I did believe that, but a bog standard human deciding to have sex with something that looked way too much like a bird still tripped my weirdness sensors. I wouldn’t have said anything about it, and I didn’t think that Fenn should have, but it was true to my experience.

There was probably something to be said about the way the oppressed took on the views of the oppressors, which probably shaped Fenn’s own view of deviancy. She didn’t have half-elf friends, and part of that must have been that she looked at other half-elves the same way she looked at herself, which was, in turn, the same way that the fucked up society of Anglecynn had looked at her. She was half-caste, essentially, but that didn’t give her solidarity with other half-caste, it made her dislike them in the same ways that she disliked herself.

I realized, slowly, that I was doing more thinking about Fenn than I’d done through most of our time together, and began crying again, because I loved her and missed her, and wanted her back so I could say all the things that I should have said to her when she was alive. Why hadn’t we had some long, intellectual conversation about racism? The obvious answers were that I didn’t take her seriously and I didn’t value her in that way, at least not enough. Too much of our conversations with each other had been me giving exposition, because that was something I liked to do, and while I listened to her, I didn’t listen nearly well enough.

I might have stayed in bed for days if my bladder hadn’t gotten the best of me. I climbed down from my bunk, took off the armor I hadn’t bothered to remove, and made my way into the cramped, multi-functional room that served all the primary functions of a bathroom. I pulled a glass down from the medicine cabinet and drank long gulps from it, then a second one after the first was done. My head wasn’t in the right place if I was forgetting about basic biological function. One of the things my therapist had said after Arthur died was that ignoring physical need would only make things worse. I had ignored her, but she had been right. When I closed the cabinet, I stared into the mirror Bethel had placed. I looked haggard, and my eyes were puffy. I needed to shave, too. I wiped at my face, then splashed it with some cold water. That didn’t do much to help.
When I came out of the bathroom, Grak was waiting for me.

“Come,” he said. “I’ve made dinner.”

“I’m not hungry,” I said. That was an understatement. I felt like I was never going to eat again.

“Sorry.”

“Eat,” said Grak. “It’s stew. You will feel better.”

“I won’t,” I said. “I’ll force it down and not feel anything.”

“You won’t feel worse then,” said Grak.

“Okay,” I nodded. I went with him into the common room, where a table with chairs was waiting for us. Two bowls of stew were sitting on a table that had been fully set. A small pot of flowers sat in the center of the table for ambiance. The common room had a lot of plants under grow lights, partly to help with our oxygen needs, partly for food, and partly for decoration. It made me feel a little better. Bethel had done as much with the constrained design as she could, and the place felt naturalistic in a way the previous time chamber had felt utilitarian.

“After dinner I will teach you the game of Ranks,” said Grak as he began eating.

“Oh,” I said. “I’m … not really sure I’m up for that.” I still had that hollow feeling, and it wasn’t going to go away anytime soon. Television I could probably handle, so long as it was something that didn’t take too much attention.

“We will play,” said Grak.

“Is this your idea of helping?” I asked. I tried to keep the bitterness from my voice. I’d had a lot of people try to help me with my grief.

“No helping you,” said Grak. “Helping me.”

“Ah,” I said. I took my first mouthful of stew. It was mostly vegetables, with a few chunks of some gamey meat that tasted like venison. Grak hardly ever cooked. I was surprised that he’d made something good.

“There is no pleasure in Ranks,” said Grak. “There is thought. It turns the mind from sorrow.”

“I’m not sure that I can give you what you want,” I said. “I’m going to be terrible at it.”

“I know,” said Grak. He ate another bite of stew, chewing it down with quick motions of his flat teeth. “The distraction will be in teaching you.”

I stared down at my stew. After Arthur had died, I’d fucked things up. One of the ways I’d fucked things up had been by pushing people away, and laying claim to grief at the expense of everyone else. Tiff had tried to tell me that she was in pain, and I had brushed her aside, telling her that it was nothing compared to what I felt. That was a dick move, no matter what I’d been feeling, or how much I needed to say it so I could not hate myself.

“Tell me about her,” I said.

“Fenn?” asked Grak. I looked up from my stew and actually took stock of him. It was less obvious than it had been on my own face in the mirror, but he’d been crying too.

“We should have a funeral,” I said. “Trade stories. Talk about her. Remember her.” I frowned and
held back tears. “Temporary, of course, I mean we’ll figure out a way to bring her back, obviously. But before that, yeah, tell me about her. About Fenn.”

“Hrm,” said Grak. “We talked, sometimes, about our species.”

I furrowed my brow slightly at that. Fenn had never mentioned it. “About … their relationship with each other? Or?”

“No,” said Grak. “Our species have little relationship. The dwarves live underground and keep to themselves. The elves have small populations. They never hunted us for sport or ate us alive.” He grunted slightly. “No, we talked about not being human. There are small things. You would not understand.”

I ate more of the stew. He was probably right. “Can you try to explain?” I asked.

“She told me that it was hard to find clothes,” said Grak. “Most didn’t fit her. She was too slender, too tall, unless she wore men’s clothing. She wore bespoke, when she could, but bespoke clothing cost money she didn’t always have. She was a terrible seamstress. I don’t know if you knew that.”

“I didn’t,” I said. I tried to slot that into what I knew about Fenn. Aside from the time she’d worn her black dress on our single actual date together, I had barely taken any notice of her clothes. “She made changes to her clothes?”

“She tried,” said Grak. “I did some of them for her.”

“You … sewed some of her clothes?” I asked. *How did I not know that?*

“I helped with alterations,” said Grak, nodding. “She was a very long woman. When we met in Barren Jewel, she had three outfits to her name. One was issued by her captors. The other two were stolen. None were flattering.”

“I … don’t think I agree,” I said. “I liked the way she looked.”

“She said you had bad taste,” said Grak.

“Oh,” I said. I felt crestfallen. Not that I thought I had a good eye for clothes, because I surely didn’t, but Fenn thinking less of me hurt.

“She made jokes,” said Grak. He put down his fork. “She said that you liked anything that suggested nudity. It did not matter to you that her clothes didn’t fit right if you could see her legs.”

I set down my fork and closed my eyes, breathing through my nose and trying to find my balance.

“She loved you,” said Grak. I opened my eyes to look at him. “She liked the unvarnished way you saw her.”

“She liked that I didn’t see her as a half-elf,” I said. “Or that I didn’t only see her as that. There was all this stuff that I was ignorant about, and even when I wasn’t ignorant anymore, I didn’t care about any of it, because it was dumb social stuff that obviously didn’t apply to her.”

“I didn’t feel the same way when we met,” said Grak. He pursed his lips. “It took some time for her to win me over.”

“Yeah?” I asked. “You had some … prejudices?”

Grak ate more of his stew. “Amaryllis and I do not see eye to eye,” he finally said.
“Sorry,” I said. “Can we switch to Groglir?”

“Certainly,” said Grak, making the switch effortlessly. “Will you be able to keep up if I speak at a normal pace?”

“Maybe,” I said. “No big words.” I was feeling better, despite myself, a combination of food and conversation helping to keep the waiting grief at bay, at least for the time being. I had a stack of old letters from Fenn, and I was going to read through them again someday, but I thought they would give me the same feeling that I was getting from this conversation, not just the inevitable sadness over her death, which was naturally there, but an appreciation for who she had been.

“Half-breeds lie between worlds,” said Grak. “It is their nature. There are good cases and bad for that, but overwhelmingly, we see more of the bad cases than the good. When I saw Fenn, it was as a woman drifting from place to place. She had no proper home to call her own. My father … he used to say that our cultures were time-tested. All the old species had their places in the world, and woe betide any who tried something new. There were times I believed it. When I met her …” He was picking his words with care, slowing down in a language that was usually much faster for him. “I didn’t think highly of her, at first. She was antagonistic. I knew few elves, but of course there are stories, and she fit the mold too well. Arrogant, flippant, unconcerned with others, consumed by her own perfection. It was partly misreading, partly not. Her better qualities didn’t shine through for some time. When they finally did, she became one of the few people I ever called friend.”

“She was easy to be around,” I said. That was part of what our fight had been about. It gave me a feeling like a punch to the gut. The blow was softened somewhat by saying it in Groglir.

“She was megi,” said Grak.

“Sorry,” I said. “I don’t know that one.”

“Hard to explain,” said Grak, switching back to Anglish. “Honest.”

“Fenn?” I asked. She had been a lot of things, but honest wasn’t anywhere near the top of the list.

“Forthright,” said Grak. “Blunt, at times. She spoke her mind often, without … hrm.”

“Filters?” I asked.

“Yes,” nodded Grak. He raised his hand and made a so-so gesture. “I think you understand.”

_Skill unlocked: Language!_

There was always something primal about the skill ups, a raw hit of dopamine that came with a sudden, concrete change in my ability. I didn’t think that was anything the game had done, not directly; I’d had the same experience playing videogames when I got achievements or leveled up. The earlier feeling I’d gotten from the Bone Magic skill up had been more muted, but this was a whole new skill unlocking, and one that I had spent enough time on that I was passably bad at speaking Groglir even without it.

I felt shame at the small spike of pleasure slipping through my grief.

“I finally unlocked Language,” I said, tapping my temple. My Groglir was perfect. Whatever had happened, the entire language had been laid bare for me. I knew words like ‘didil’ and ‘rekohon’, words that Grak had never taught me. The knowledge seemed like it had always been there. “One moment.” I closed my eyes for a moment and paged to the skill. It was at 2, which I assumed was meant to represent Anglish and Groglir. Ideally the next few languages would come faster now that I
had the skill unlocked. If not, the jump from barely fluent to full fluency seemed like a very minor perk.

“Auspicious timing,” said Grak.

“Yes,” I said with a nod. “The washater is trying to cheer me up. Not really helping.”

“It is appropriate to take joy in a gift, even in foul times,” said Grak. He was still speaking in Groglir. It was weird: I could hear that he was speaking the language, and that I was responding in kind, but there was practically no resistance in switching between the two. “It’s difficult, sometimes,” he added. “Impossible, even.”

“Do you know me that well?” I asked.

“Yes,” said Grak. “We are alike.”

I nodded as I chewed on that thought. Grak bore the weight of a burden that he couldn’t discharge, not until he’d paid his penance. He’d devoted himself to a task that no one had asked of him, as single-mindedly as could be expected, and I wasn’t entirely sure that I really understood, not when there were cultural, social, and maybe even racial differences in play. But if I did understand, then the impossible task was a way of living with himself, a way of keeping the memory of his dwarfhold alive and devoting himself to them. Under a certain kind of lens, I had maybe done the same when Arthur had died. I’d been depressed and angry and a complete dick to a lot of people, but at least some of that was because I felt like it was required of me. The term Arthur would have used was ‘performative’, or maybe ‘virtue signaling’.

“I don’t want to do that with her,” I said. “With Fenn. I don’t want to wrap myself in the dark feelings.” I found myself crying. For whatever reason, I wished that Grak couldn’t see me, even though it was probably obvious from the way that crying warped my voice. “I don’t want to break down, she wouldn’t want me to, but it’s just so … so hard to think about being happy.”

“I know,” said Grak. “It feels like betrayal.” He wiped away a tear of his own. “Think about what she would have wanted.”

That line of thinking had never helped me with Arthur. Whenever I tried to imagine what he would want, all I could think about was how sad he would be about being dead for a dumb reason at the age of seventeen. And with Fenn …

“She would want to be alive,” I said. It was almost a joke. “She would put her hands on her hips and say … something witty. Or maybe not even witty, but a joke, because that was how she dealt with things.” My mind went back to the therapy session. “She was more than that.” I wasn’t sure if I was saying that for Grak’s benefit or for my own.

“She would give you instructions,” said Grak. “Flippant ones. ‘Put your shoe on your head every
third morning, so I know that you’re remembering me.” It might have been because he was speaking in his native tongue, but Grak’s impression wasn’t actually that bad. He at least caught some of the intonation.

“I would do it,” I said. “It would be stupid, but I would do it.” I was silent for a bit. “I miss her. I miss her so much already and it’s hardly been any time at all, and I feel like there’s nothing that could ever replace the gap she left in my heart.”

Grak nodded. “It’s possible that your heart will always have a gap,” he said. He clenched his teeth for a moment. “I’m a bad person to be speaking with. I can’t give you good advice.”

“Thank you,” I said. “For coming in. For dinner, for being here, for … trying, at least.”

Grak shrugged. “We’re friends,” he said.

The game of Ranks was played on grids of various sizes, but the most common was sixteen by sixteen. The pieces were usually rounded stones, different minerals or colors to mark the different pieces, or sometimes different shapes.

The game, such as it was, consisted of a gamesmaster setting up a set of rules, and the players attempting to find the best solution given both the rules the gamesmaster had selected and the criteria that the gamesmaster had set. Every player had their own board; it wasn’t a cooperative game, and the aspects of competition seemed like they were there mostly because all the players were playing the game at the same time. There were scores, since that was the whole point, but it was at least partly a test of self rather than a test against others.

Grak held no illusions that I would be able to compete against him. Instead, he acted as gamesmaster, putting forward some example games for me.

I didn’t really want to play.

Back when Arthur had died, --

(I wished that I had some other frame of reference. Things had been complicated with Arthur, and they were more complicated now on Aerb. There was too much history of him, and he’d had too much of an impact as Uther, all added to the fact that he had either lived a second life and then died a second time, or had never fully died at all. I didn’t like the feeling of conflating the two, of thinking about Fenn in the same few inches of thought as the man who had, apparently, violated our house when she was younger and then killed his own mentor. Still, as far as loss went, that was what there was. My grandfather had died when I was ten years old, and while that had been a deeply unpleasant experience for me, it was more because I’d watched him wither away in hospice rather than because we’d been particularly close. Arthur was the point of comparison, as much as that made me uncomfortable.)

-- I’d gotten really into clicker games. If you’ve never played one, they’re basically just games where you click things repeatedly in order to make the numbers go higher. They were mindless, simple things that were designed as simple Skinner boxes, tapping into the animal portion of the brain to induce addiction-like behavior. For the most part, they weren’t fun, but they did occupy my mind in a way that helped block out other thoughts. An hour or two of stimulus and response could pass, and that acted as a numbing agent on my brain.

“I kind of hate myself,” I said.

Grak paused in the middle of setting up the board. “Oh?” he asked.
“Sorry, just,” I paused. “I don’t feel like a normal human sometimes. I’m not one, here, but even before, on Earth, it felt like I didn’t know how to do the things I was supposed to do. I felt like I was fumbling through the world trying to just make it to the next day. Even before Arthur died it felt like that sometimes.” I was crying again. “It’s not just thinking about her that’s getting to me, it’s thinking about the thinking, and thinking about thinking about thinking. I want to just bury myself in something so I don’t have to feel anything, and I feel guilty for wanting that, and I feel embarrassed for feeling guilty, and I have no idea whether that’s what other people would feel.”

“It’s normal,” said Grak. He continued laying out the pieces. “We can play later.”

“No,” I said. “We’ve come this far. You just … left me alone with my thoughts too long.”

Grak nodded. “I have enjoyed being part of this party,” he said. “There is not much time to myself.”

I didn’t like that answer, even though I empathized with it. It didn’t seem particularly healthy, but it was familiar. I wasn’t equipped to help Grak with his issues though -- I was barely capable of dealing with my own in the best of circumstances, and these weren’t them. I almost let it go to ask more about the game.

“We want you to stick around,” I said. “Even after you’ve got your gold. It’s what Fenn wanted too, for what that’s worth to you.”

“I know,” said Grak.

“After you’ve paid your penance … what happens?” I asked. “What are you going to do, where are you going to go?”

Grak stayed silent.

“You’ll still let me come with you?” I asked.

Grak held his silence for a moment, then nodded.

“I guess that’s as much as I have a right to ask,” I said. “And if you ever want to talk … I’m probably not the best person. We’re probably not the best people for each other.” I had gone to group therapy a few times, at my mother’s insistence, and always come out of it feeling more depressed. “I didn’t mean it like that. But, I’ll be here, and I’ll listen. I’ll try to be megí.” I was speaking in Groglir, as easily as breathing, but I put some emphasis on that last word.

“Thank you,” said Grak. His voice was low.

“Now,” I said, looking down at the board. “When two fox tokens are next to each other, what happens?”

We spent a week in the chamber. A lot of that time was with each other, either playing Ranks or talking. Grak’s loyalty increased three times, mostly from the two of us idly speaking with each other, usually for no clear reason. I was afraid that it was because I was feeding his depression.

I spent a lot of my time in bed, thinking about Fenn and sometimes crying.

Naturally, I also spent some time playing the blame game.

O’kald, Dehla, and Everett were at the top of the list, because they were literally responsible. The rest of Heshnel’s crew were responsible as well, since they had let vipers into their midst and not
done enough to curb those murderous impulses. I considered all of that fairly boring though; I didn’t really know those people, and most of them were dead. Masters too, since we would never have gone with them if he hadn’t been a dick about trying to keep us in his clinic.

The Dungeon Master came next, and was arguably first among evils, but I was only mad when I was thinking about him, and I didn’t do it all that much. I blamed him more for the way he’d removed Fenn from the game so silently and entirely, without so much as an acknowledgement that he’d done it. The entire confrontation with Heshnel’s people had been one that he’d likely orchestrated, or maybe nudged, and any possibility that someone could have done something different could have been negated by him. So, fuck him, it was all his fault, everything was, but I had spent enough of my young life raging against gods, and I couldn’t sustain the anger. I got desperate one night and called for a time out, putting my hands up to make a T, like we’d done in my group when we wanted an out-of-character discussion, but I got no response. I also said a small prayer that Fenn was, if not alive and watching us somewhere, then at least recoverable by some means, at some point in time.

And the blame on our side? I could (and did) blame myself in half a hundred different ways. I should have pulled Fenn out first. Or, maybe I shouldn’t have, but if I had loved her more, I would have, and damn the consequences. Fenn would have done it for me. It wouldn’t have been right, but she’d have done it, even after the break-up. And if I hadn’t pulled her out, then I should have triaged her first, or checked the soul strands before doing anything else, or a dozen other things that might have made the difference. I didn’t know when she’d died, exactly, and knowing precisely would have helped me pin down the errors a bit better, so that I could figure out precisely how best to blame myself.

Naturally, there was only so much blame I could heap upon myself, and my eyes turned to the other members of my team. Grak hadn’t seen the poison in the air, and while he couldn’t do anything about the fact that he couldn’t see it, he might have prepared better for that sort of vector of attack. Threat analysis was part of his job as a warder, and given what had happened, he’d failed. I found it hard to blame him though; his entire dwarfhold had been poisoned, albeit unintentionally, and I knew Grak well enough to think that he was probably beating himself up for having not done more.

Solace took some blame too, though it was mostly in the form of me internally complaining about the limits and peculiarities of druidic magic. Solace was our healer, and hadn’t been able to stop the poison or properly heal us, but it was hard to say whether she’d made any mistakes. That was hardly surprising, given that I didn’t really have much of an idea about what Solace’s limits actually were, or how her magic worked in practice. I resented her for not doing more, at least a little bit, but I couldn’t properly say that she hadn’t done everything she could. There was nothing more than a gnawing suspicion that she could have done more, if she’d actually wanted to.

I could easily blame Bethel for not being there for us when we needed her. I wasn’t quite sure how her bag of tricks might have handled the unique poison, but it was probable that she could have done something, rather than the nothing that she actually did.

Amaryllis was blameless. She’d argued for more caution, she’d been laid out early on in the fight, and so far as I could see, everything would have gone fine if we’d done what she suggested. I’d owe her an apology, perhaps, when I felt like I could deliver it without bitterness.

That left Valencia.

There were times I just thought, ‘fuck Valencia’. Fuck her for her terrible therapy, fuck her for pushing O’kald, fuck her for not seeing the trap until it was too late, just … absolutely fuck her, even if she was an emotionally and intellectually undeveloped kid with social superweapons. There weren’t all that many things that I could have done differently, given what I knew and that a rock
monster was trying to kill me, but Val? She was supposed to be more competent than me. She should have been able to save us all. And, sure, that was a little bit unfair, but there were all these little things nagging me, and I was in full-on obsession mode.

I had taken Solace out first because she was our healer and the easiest to move. I had taken Grak out at the same time because he’d been right next to her. Then I’d gone back in, but Valencia had been struggling with carrying Amaryllis, and it had seemed sensible to take her out quickly. That was what had left Fenn for last. Valencia had the strength and stamina of a weak teenage girl who was gradually bulking up under a training regime, so I wasn’t suspicious that she could have done more … but she’d been the one to pick Amaryllis, not me.

Then, when we were going through triage, she had put the crown on Fenn last. That had been her decision, not anyone else’s.

I had liked Valencia, but now there was this alternate world in my head, one consistent with the facts as I knew them, where maybe this wasn’t all just horrible happenstance. It was possible that Valencia had been acting of her own accord, manipulating her companions. ‘Possible’ wasn’t synonymous with ‘probable’, but it was hard to keep these two images of her in my head at the same time. One version of her was a young girl who’d had too much power and responsibility pushed on her plate, and found herself not up to the tasks in front of her, or at least not enough to have done everything as right as her powers might have allowed. In the other … at the very worst, she had intentionally worked toward killing Fenn.

The problem was that her social powers were too strong. She could lie with the best of them, she could read microexpressions, and with a devil’s powers, she had all the inborn powers of manipulation that Aerb could offer. If I talked to her about it, she would surely have some logically consistent explanation for her actions that painted her in a favorable light, maybe with enough bumps that I would find it believable. The only way that I could distinguish whether or not she had a devil in her was by ensuring that she had something else instead, either a human soul that Grak could confirm, or a demon whose combat prowess a devil couldn’t fake. That would naturally assume that Valencia was telling the truth about how her power actually worked; it wasn’t inconceivable that if she was the sort of person who had been willing to kill Fenn, she might have been the sort of person to leave herself a way out.

Frustratingly, it was nothing that could be resolved until I got out of the chamber.

I spent a fair amount of time thinking about all the ways we might be able to bring Fenn back. The ritual of Yaxukasu Axud was a non-starter for a few reasons, but we might potentially discover ways around all the reasons that it didn’t work, especially if we found entads that touched the raw soul in various ways.

Speaking of, I had Fenn’s soul, which opened up possibilities. Chief among those was the possibility that I could pin down someone sufficiently evil, scrape out all their memories and values, and replace them, wholesale, with Fenn’s. I’d replace the body too, naturally. There were a lot of things that couldn’t be transferred, like skills, attributes, race, and a handful of others, but either I could find a death-row inmate equivalent who matched her closely in along the parameters I cared about, or I could just live with the discrepancies.

That kind of FrankenFenn wouldn’t really be her though. There were things that weren’t included in the soul. We weren’t automatons, strictly defined by our values, skills, and attributes. This wasn’t a purely philosophical stance, it was a matter of practical, testable reality (though we hadn’t actually tested it). The soul didn’t actually define a person’s psychology, only pieces of it. I wasn’t at all ruling out the possibility that the soul had hidden parts to it that continued the definition to the level I
would expect to have a complete person … but even if that were the case, it didn’t help me, because for the purposes of the FrankenFenn, I couldn’t touch or see those pieces.

(I already knew that I would do it at the first opportunity, however unwise that might have been. The chance to speak with her again was too tempting, even if it was just her shade.)

The last major pathway to getting Fenn back was sending her to the hells. Her soul was bottled, which meant three years until it would fade away into nothingness. Until that time, we could unbottle her, which would send her to the hells, where she would live on forever. Given that we had Valencia, at least for the time being, we could deal with the majority of the threats that the hells had to offer … but that was another stopgap measure, and the inevitable counterattack from the infernals wasn’t something I thought the others would want to weather.

I was willing to do it, naturally, but it was far in the future. Until there was some actual risk of her soul decaying to nothing, I could keep her bottled. I would build up my powers and capabilities, figure out a way to either extract someone from the hells or turn the hells into a paradise, and then work on a plan that could be enacted the moment she showed up in the hells.

So Fenn was still around, in some sense, but that wasn’t much of a comfort, because for now, and far into the foreseeable future, she was gone.
“No,” said Arthur. “I’m saying it’s a numbers game, and only once you know the numbers can you play the game.”

I slid into the booth next to Tiff with my food. Ruttles’ had a burger bar, full of fixin’s, and whenever we ate there, I always spent a lot of time making sure that I had created the right sort of burger. Usually I went with my parents, but this was a rare night out. After dinner, we were going to stand in line for a midnight showing of Captain America: Civil War at the local theater. It was a tradition that wasn’t really necessary, but which we did anyway, mostly for the sake of it. It was Arthur, myself, Tiff, and Tom, with others joining us later on.

“What are we talking about?” I asked.

“Women in refrigerators,” said Tiff.

“Explain?” asked Tom as he took his seat. Like myself, Tom took care in adding things to his burger. He was good people. “Are we just talking about how many women can fit in the average refrigerator? Because I would say two, if you took the shelves out.”

“It would be more, if you were talking about the average refrigerator,” I said. “Pretty much every food service place has a walk-in, so the average refrigerator is considerably bigger than a home fridge.”

“Not at all what we were talking about,” said Tiff. “So, back in what I want to say was the 90s, there was an issue of Green Lantern where Green Lantern comes home to find his girlfriend has been killed and then stuffed into the refrigerator for him to find by some villain.”

“Gross,” said Tom. “Can we not, while I’m eating?”

“That’s not really the point,” said Arthur as he dipped one of his fries in a mayo/ketchup mix. “It was just the thing that they named the trope after. The trope is basically this concept that you can evoke emotion in the reader by killing off a loved one, sidekick, mentor, etc. as a cheap trick, which you see show up a lot. But the real thing we’re talking about is Tiff’s contention that it’s mostly women. And that is a numbers game.”

“Is this going to be the Bechdel test all over again?” I asked.

“Probably,” said Tiff with a frown.

“I’m not sure what numbers have to do with it,” said Tom. “Whatever ‘it’ is.”

“So, the original version of this was just a survey of comic books,” said Arthur. “It was feminists who liked comic books pointing out all the times that it happened, which they put into a long list, and anytime you see someone make a long list like that, you need to be suspicious, because the point of a long list is usually just to say, ‘hey, look how long this list is’, as though that means anything.”

“So you’re arguing that it doesn’t?” asked Tiff.

“I call it the Problem of Long Lists,” said Arthur. “It’s a variant on the gish gallop. And anyway, I’m not arguing against the general complaint, just the rhetorical technique. Generally speaking, yes, I would agree that it’s much more likely to happen to women than to men, but I think it’s a numbers game, and the root of the issue is that most protagonists are male.”
“So this is exactly like the Bechdel test,” I said. “Do we really need to rehash it?” I was halfway
done with my burger. Arthur had barely started on his, despite getting to the table first. It always took
him forever to eat, mostly because he liked talking instead of eating.

“I think I missed that one,” said Tom.

“You were making a new character,” said Tiff.

“Yeah, don’t die so much,” I said with a smile.

“The Bechdel Test is basically a thing for movies where you say, ‘hey, are there two women talking
to each other in this movie, but not about a man?’” said Arthur. “And you make a Long List of
movies that fail it. But that, too, comes back to the fact that most protagonists are male.”

“Is that better?” asked Tiff.

“Might be,” I said. “Like, if the argument about women in refrigerators is about the portrayal of
women being bad, then no, it’s not better, because identifying the root issue doesn’t actually change
the portrayal. But if you’re trying to change the result, then you need to know where the result comes
from. If it’s some alternate cause, then that should really be the thing that you’re trying to mess with.”

“I think you guys are too smart for me,” said Tom, looking between the three of us.

“You get it though, right?” I asked him. “Like, if you had a bunch of rats in your basement, and kept
hiring an exterminator to come in, and eventually someone said, ‘hey, you’d get less rats if you
walled up that hole and stopped leaving all that food around’, that would be a lot more helpful than
just ‘hey, better kill those rats’.”

“Ah,” said Tom. “Got it. But can we not talk about rats when I’m eating?”

“Does Tom have a weak stomach?” asked Tiff.

“Famously weak,” I said with a sigh.

“Infamously weak,” said Arthur.

“I don’t have a weak stomach, I just lose my appetite,” said Tom, looking down at his burger.

“Quick, change the subject.”

Arthur leapt at that. “Stories are fundamentally simple,” he said. “You’ve got your protagonist, your
antagonist, your mentor, your sidekicks, and your love interest, just as basic building blocks. All
those things need to be used economically for the purposes of storytelling, which means that there’s a
clear delineation between those characters, and a lot of the parts get reused. With me so far?”

“Yes,” said Tom, around a bite of his burger.

“This is just the Bechdel thing again,” said Tiff. “Don’t repeat it for my benefit.”

“It’s a good rant,” said Arthur. “This helps refine it.”

“Fine,” said Tiff with a wave of her hand.

“So, in terms of gender,” Arthur continued. “Let’s say that you start with a male protagonist as the
first gender you decide on. If we’re talking comic books, there are a lot of reasons for that, some of
them economic, some social, but whatever, that’s the default. Right?” I nodded, which was all he
needed to keep going. “Well, in terms of market, it again makes the most sense to go
heteronormative, which means that the love interest is locked in as female.”

“Seems like you might be arguing that the real problem is actually capitalist control of artistic industries, rather than male protagonists,” I said.

“I haven’t actually agreed that there is a problem,” said Arthur. “And that’s not ground I’m willing to cede at this time.”

I waved a hand. “Fine, fine. Still seems like if you’re going to claim market forces for a lot of this stuff, then the problem is market forces. But continue with your rant.”

“Okay,” said Arthur. “So the protagonist is male, and the love interest is female, but the plot doesn’t revolve around them, because plots are conflict and conflict isn’t about that relationship unless it’s a romance, which, for the sake of argument, this isn’t.”

“This’ being a comic book?” asked Tiff.

“Or a movie based on a comic book,” said Arthur. “Apropos, given what we’re going to see tonight, don’t you think? At any rate, if you’re going to have the love interest be a part of the plot, rather than just being there to serve some part of the demographic, then they’re probably going to interact with the antagonist at some point, and there are a lot more interesting things that you can do with a male/female dynamic than you can with a female/female dynamic —”

“Wait, hold on, foul,” said Tiff.

“In the context of what it says about the primary male/male dynamic that defines the central conflict,” Arthur corrected. “The antag/protag relationship is usually one of mirroring, antagonists are built to highlight their differences, at least when they’re actual characters rather than just a CGI gray space alien who wants to take over the world. Point is, you muddle the main thrust of the movie by having both a female love interest and a female antagonist, right? Because then they share gender, and it looks like you’re saying something about gender.”

“Again, foul,” said Tiff. “Gender is not really that important.”

“Well, then I won the argument,” said Arthur with a smile.

“Bah,” said Tiff.

“I mean, right?” asked Arthur. “You can either say that gender is an important thing that audiences will pay attention to, in which case a female antagonist is Saying Something, or you can say that it’s not at all important, in which case who frickin’ cares whether there’s a gender imbalance in fiction?”

“Wait,” said Tom, snapping his fingers. “Oh, I know this one, wait, no one say it, I’ve got it. Ah, it’s … false dichotomy?”

“Yeah,” I said.

“Score!” said Tom with a pump of his fist. “Okay, that’s as much as I can contribute tonight.”

“And our debate champ was disparaging Long Lists as being bad rhetoric,” said Tiff, shaking her head. “Tsk tsk.”

“You can’t just claim false dichotomy,” said Arthur, looking a bit annoyed. “You have to actually show why it’s false.”
“The whole argument is about stories and their impacts in aggregate,” said Tiff. “Set aside your pet theories on causes for a second, if ninety percent of protagonists are male, and ninety percent of love interests are female, and writers kill off love interests half the time, then that’s -- I don’t know, some math, but you’d run into it a lot of the time, and most of what a girl sees growing up is women having horrible things happen to them as a way of motivating the main character or increasing the stakes. Which sucks.”

Arthur shrugged. “Okay?” he asked. “I never said that it didn’t suck.”

“But,” I said, looking at Tiff. “There are sort of different levels of sucking. Like, if someone does something that’s bad in the aggregate for their own self-motivated reasons, that’s less bad than if someone does something that’s bad all on its own. Take that original Green Lantern run, right? Most people wouldn’t argue that it was on its own bad, it’s just that when you universalize what happened to all or most other media.”

“Are you all huge Green Lantern fans?” asked Tom.

“I saw the movie,” I said. “Plus I’ve read a lot of wiki pages. That’s about it. So, sure, maybe it was bad on its own, that was just an example.”

“Can we talk about the market forces thing for a bit?” asked Arthur. “Because I think that bears some digging into, especially if we’re digging into moral statements.”

“Moral statements!” said Fenn as she slipped into the booth next to me. “My favorite!”

“You’re late,” said Tiff. “Arthur, you’re not allowed to repeat the rant.”

“Which one was it?” asked Fenn. “I have them memorized. Unless it was a new one?”

“Bechdel test,” I replied.

“Weak,” said Fenn.

“Well, I’m working on refining it,” said Arthur, folding his hands across his chest. “And I think the idea of morality in response to market forces is more interesting anyway. Like, say that you decide there need to be more female protagonists in comic books, and you take it on yourself to write one, and someone else takes it on themselves to publish it.”

“Hold up,” said Tiff. “You’re begging the question.”

“What does that even mean?” asked Fenn.

“No one actually knows,” said Tom. “It’s the Calvinball of objections. It means whatever you want it to mean at the moment you say it.”

“I don’t think that’s true,” I said. “But I don’t know enough about rhetoric to dispute it.”

“Can we back up?” asked Fenn. “I’m lost.”

From the booth behind Arthur and Tom a man turned around, pushing them slightly to the side so he could let his arms rest on the top of the booth. He was in his thirties, with a slightly crooked nose and a full beard. He looked familiar, but I couldn’t place him. The text on his shirt, partially obscured by the booth, said ‘No More Mr. Dice Guy’.

“Uther was just explaining narrative again,” said the man. “You merge down characters until
everyone carries as much weight as they can. Male protagonist means female love interest, and that takes up the quota of both serious interpersonal drama and romance in one fell swoop, which means if there’s another character, they’re plucky comic relief or a mentor figure, and there are good reasons for both of those to have the same gender as the main character.”

“Which are?” asked Tiff. She was taking the interruption in stride. Looking around the table, it seemed like I was the only one who felt uneasy.

“People like to see romance,” said the man. “Plucky comic relief can read as flirty, so that’s a no go. And for mentor, the mentor usually represents the main character as they’d like to be, or as they might be, so gender matching is preferred to strengthen the mirror, and obviously you also don’t want it to read as a creepy romantic thing, especially with a bigger age gap. But anyway, that doesn’t get to the heart of it, does it? Because the question isn’t about what gender balance looks like in a story optimized for the lowest common denominator, is it? It’s why the girl is the one to die.”

The man reached back and grabbed something off his table. He pointed it at Fenn, and I only realized that it was a gun when he fired it at her. She slumped against me, dead, with a bullet wound in the center of her forehead.

“Why?” I asked as I stared at him. The others hadn’t moved or reacted to the gunshot, nor to Fenn’s death. I had a queasy feeling in the pit of my stomach.

“Wasn’t me,” he said, throwing the gun behind his shoulder.

I woke up drenched in sweat. It took me a while until I remembered the affliction the crown had saddled me with, Bad Dreams.

“Come on,” said Amaryllis as soon as the door to the time chamber was shut. “With me.”

“Where?” asked Valencia.

“We have just enough time to spar while they’re in there,” said Amaryllis. “You’ll have to take the armor off, but you were probably planning to do that anyway.”

“You want to test me,” said Valencia.

Amaryllis started walking, and fervently hoped that Valencia would follow. It was with a bit of relief that she saw Valencia fall into place behind her. They didn’t have much time, maybe half an hour at the most, all of that in the chamber’s spin-up and spin-down time.

“Why?” asked Valencia.

“Juniper is going to do it,” said Amaryllis. “If he doesn’t, then he’s at least thought about it. Better for me to test you first.”

“I can just tell you,” said Valencia as they moved through the bowels of Bethel.

The training room was one of the places that Amaryllis spent the most time, at least when she wasn’t working on the fledgling republic or doing some of the managerial and engineering work that was going to be necessary to make the grand entrance into Earth exploitation. Keeping in peak physical condition was a necessity, as was honing and refining combat skills. Amaryllis had absolutely no illusions about what sort of role she was playing in this world: peace was never going to be an option for long.
The training room was enormous, with one full wall taken up by a five story climbing wall, complete with auto-belays. Half the floor was taken up with exercise equipment, while the other half was devoted to training mats for sparring. It was more ostentatious than anything Amaryllis had known as a princess of Anglecynn, but that was a part of Bethel’s nature; there were no amenities that she wouldn’t provide, so long as she could give them freely, and so long as they fit within her conception of what it meant to be a house. It was maddening to deal with, and so far, Amaryllis had been the only one really putting effort into testing what the house would and would not do, a venture that had only earned Bethel’s enmity.

Amaryllis made her way to the closest of the mats, shedding armor as she went.

“I can just tell you,” repeated Valencia. “We don’t need to fight.”

Amaryllis sat on the ground to strip off the last of the immobility plate. She tried not to think about how her body had changed with the repeated overwriting of her soul. She was back to the body she’d had before the pregnancy. Magic handled the worst of it, certainly, in terms of what her body was supposed to feel like, but she kept being momentarily intellectually surprised by the changes. It wasn’t pleasant.

“You’re going ahead in the hopes that I follow in your wake,” said Valencia.

“Yes,” said Amaryllis. She stopped momentarily. “I need to know the truth. I need to know what Juniper might discover. If your plan is to just talk your way out of being tested, then … you have to understand that’s not going to work. If there are secrets, then they’re going to come out. It’s narrative, it’s plot, a force powerful enough to shape our entire existence. Reading Uther’s biographies always gives me the sense that there are entire civilizations that only ever existed because Uther needed something to do for a few weeks between larger plots. Everything, everything, has to be calculated with that in mind. I tried to tell Fenn that, but she didn’t fucking listen, and now she’s dead.”

Amaryllis was breathing hard and did her best to calm herself. The aggression was pumping through her veins, making every situation seem like it could be solved by beating the problem to death with her bare hands. She could almost understand why Juniper would have thought that killing the Dungeon Master was a smart idea, which was a sign of just how compromised her own thinking was.

“Okay,” said Valencia. Her voice was small. She began taking her own armor off as well, then stopped and sat on the floor and began crying.

“I screwed up,” said Valencia from the floor.

“Up,” Amaryllis repeated. “Take on a demon, tell it to me while we fight, I know you’re good enough to keep your emotions in check while you have one.”

Valencia shook her head. “I screwed up,” she said again.

“Eat a demon, now, or I’m going to punch you in your face as hard as I can,” said Amaryllis. “In fact, I’m going to punch you in the face as hard as I can no matter what you say or do, and it’s up to you to stop me.”

“What do you even think of me?” asked Valencia, still crying. She shrugged, using her hands, and let them fall back into her lap.
“I think this might be another tactic to get out of the fight,” said Amaryllis, stretching out slightly. She didn’t like to see Valencia like this. Without the armor, she was pretty far from fearsome, and that was before she was sitting on the ground crying. “You offer up a half-truth, or a clever lie, something that minimizes whatever actually happened and gets you out of the fight, where you’d have to reveal the full truth, or depend on your native ability to lie under pressure plus whatever the demon gives you. And then, at some critical moment weeks or months in the future, everyone learns the truth and it all goes to shit.”

Valencia nodded once, looking miserable. “And no one can ever trust me anymore, because I screwed up, I wasn’t looking far enough ahead, I wasn’t thinking about what might happen, I was - -” She choked back a sob and lay there, crying.

Amaryllis made a fist and walked over. Was Valencia trying to call a bluff? If she was using a devil’s powers, then she would know that Amaryllis didn’t bluff like that. So why make the play? Was a devil good enough to know that Amaryllis would second-guess herself? Or was it a move made out of desperation, predicated on hope more than practicality? Or … was she telling the truth, and it wasn’t a ploy all along? But Amaryllis couldn’t stop, because if she did, then she would be the sort of person that could be manipulated by a sobbing mess of a young girl.

“I’m going to punch you in the face now,” said Amaryllis, clenching her fist. “I don’t want to, and I don’t want to hurt you, but you need to take a demon now, and you need to keep him so that I can get the full story from you, without varnish.”

Valencia only cried, shaking her head.

Amaryllis looked down at her fist. The anger was fading away. It hadn’t been more than an hour earlier she’d been furious with Juniper for not bottling away his emotions and getting things done. It shouldn’t have been different for Valencia, but somehow it was. Maybe Juniper was an equal, more or less, and Valencia was … a child, in many ways.

There was a side of Amaryllis, naturally, that was horrified of the idea of hitting Valencia, in the world where Valencia had simply made some error in judgement and was too distraught to comply with orders.

Amaryllis didn’t put quite as much power into the hit as she possibly could. She had blood and bone magic at her disposal, and she didn’t tap into them, choosing instead to use only her physical strength. It was still a full-on strike at someone with no defenses up.

Valencia moved at the last second, raising an arm to push away the strike and rolling backward to get away. She was on her feet in seconds, standing in a loose fighting stance, one she seemed to prefer. There was a rigidity to how people fought when they’d had extensive training, a way that certain patterns and stances were ingrained in them, not just in their muscles, but their muscle memory. Valencia was always more adaptive, unless she was intentionally aping a style. She didn’t need a default stance, not when she could create a fighting style from whole cloth to suit her opponent.

She still had tears streaming down her face.

“Okay,” said Amaryllis. “Good. Now --”

Valencia moved forward and kicked at the last second, catching Amaryllis in the gut. It hadn’t quite been a feint, but Amaryllis had been expecting a strike to the face. Amaryllis had the wind knocked from her, which she thought was probably the point. She stood, trying to catch her breath, and put up as much of a defense as she could.
“I wanted them to break up,” said Valencia. She delivered a strike, which Amaryllis blocked with her forearm. Valencia paused. “I’m going to have to hurt you, or you probably won’t believe me.” She made another strike, but it turned into a grab, which she used to flip Amaryllis through the air. “I’m not in love with him,” said Valencia. “I just didn’t think they were any good together. I could have fixed them, but it would have taken too much time and too much of Juniper’s attention. I should have said that I didn’t want to do it, but it was selfish to think that.”

She continued her assault on Amaryllis, who was doing her best to play defense. If this had been real combat, Amaryllis was sure that she’d have been dead a dozen times over. There were too many places where someone as skilled in hand-to-hand as Valencia (temporarily) was would have had a chance to deal the killing blow.

“Did you kill her?” asked Amaryllis. She’d given up on healing the damage as it came in, instead electing to let her flesh be battered. Juniper managed mid-combat healing deftly, but at half his skill, Amaryllis still found herself having to devote too much attention to it, which caused her guard to lapse, which Valencia was taking advantage of.

Valencia paused, tears in her eyes. “I chose you,” she said, her voice soft. “Juniper took Grak and Solace, and I had to choose between you and Fenn. I didn’t know for certain that she would die, but … I could see that Juniper was suffering under the poison. I saw him go back in. I almost stopped him, so I could give him the crown, but I decided that we needed to give Solace every advantage we could. He was late coming out. If I’d handed over the crown, he could have put it on her, gotten out faster, they might have …” She sat down on the ground and broke down into tears again.

Amaryllis slowly started the healing process, burning bones that would need to be replaced later on, when she had a spare moment.

“We’re going to have to tell him,” said Amaryllis. She went over to Valencia and put an arm around her. “Soon. It will come to a head otherwise. You didn’t do anything that can’t be forgiven.”

“I know him better than you do,” said Valencia. “I know how he thinks.”

Amaryllis was silent. It was difficult to defer to that opinion. It was also difficult not to start proposing solutions, which started with infernal manipulation and got less ethical from there. Narrative was going to be a problem even if there weren’t serious qualms about those less savory methods of dealing with the problem.

“If you tell him as yourself?” asked Amaryllis. “You’ve said before that the infernal skills don’t give you self-reflection.”

Valencia looked up at Amaryllis. “I would have no defenses. Not even hiding how I felt.”

Amaryllis frowned. “I think it’s the right way to go about things. Maybe he still won’t believe it, but it will be more true to yourself.”

“When?” asked Valencia.

“Later,” said Amaryllis. “Their time is up, and it will be our turn soon. When we come out … maybe then.”

“He’ll hate me,” said Valencia.

“Well,” said Amaryllis. “Let’s hope that you underestimated him.”
I stepped out of the chamber feeling better than when I’d gone in. The nightmares were a nightly occurrence, and I often woke up from them sore from how tense my muscles had been. They were vivid and slow to fade, leaving me with unpleasant imagery for most of my mornings. In a weird way, it was almost helpful. Dealing with the shift between dreaming and waking life helped me come to terms with the fact that I lived in a world without Fenn. The dreams had gotten less intense with each passing night, which I was thankful for, but I suspected there would be a long tail of bad dreams that would plague me for weeks if not months.

“Hey,” I said as we stepped out.

“What was Grak’s affliction?” asked Amaryllis. She’d ditched her armor somewhere, and had a sheen of sweat that I didn’t remember being there when I’d gone into the chamber.

“Bouts of mania,” said Grak. He turned to look at me. “Juniper was helpful.”

I shrugged. “My mom had a few episodes,” I said.

“I didn’t know that,” said Amaryllis, frowning slightly. “You managed?”

“I didn’t know that,” said Amaryllis, frowning slightly. “You managed?”

“With her, or with Grak?” I asked. “I guess the answer to both is the same.”

Grak had all sorts of ideas while he was in his manic episodes, mostly related to warding. I’d recognized the signs when he started talking quickly in Groglir, and tried my best to direct his efforts towards things that didn’t have too much of a cost. When the mania passed, he’d realize all his ideas and plans had been half-baked, the warding diagrams he’d drawn up nonsensical. I had talked with him some about what mania was like, which seemed to help. His affliction was passing too, though still not completely gone.

“And ... how are you?” asked Amaryllis.

“Well, she’s still dead.” I replied. It left a bitter taste in my mouth. “I’m ... better.” I hated saying that. It felt like an admission that I hadn’t loved her enough. The affliction, Griefstricken, was gone, and that had felt like a slap in the face. I still felt the grief, but it wasn’t the same oppressive cloud it had been in the first few days. “We should have a funeral, once you get out. I intend to bring her back from death, but that doesn’t seem like it’s in the cards for quite some time.”

Amaryllis nodded. “Grak, can I have the glove?” she asked, holding out her hand.

Grak had been the one to be invested with it, for reasons that were both obvious and a little bit painful. He’d been my caretaker, in a manner of speaking. He handed the glove over to Amaryllis without any fuss. Where the glove would ultimately end up was an open question, and not one that I really wanted to think too much about. It was another reminder that Fenn was gone; the glove had been one of her signatures.

I hadn’t looked over at Valencia. I could see in my peripheral vision that she was keeping her eyes at the floor, studiously not saying anything. Good, I thought, but I didn’t like thinking like that, because there was a chance, albeit a small one, that she didn’t deserve to be cast in such a bad light.

Amaryllis handed me an envelope, which I stared at dumbly for a few seconds before taking it.

“What’s this?” I asked, even as I read what was written on it. ‘In Case Fenn Dies’. It was written in Fenn’s handwriting. “She ... she wrote a letter? To me?”

“Yes,” said Amaryllis. “I advised against it. She wanted me to wait a bit before giving it to you, in case she wasn’t dead, but it’s been a week for you now, and I’m going in, so ... I don’t know what’s
on there, but maybe it will help.” She hesitated slightly, then gave me a nod and strode forward into
the chamber. Valencia and Solace followed her, neither of them saying anything.

“We’ll see you soon,” said Amaryllis as she closed the door.

I didn’t have a response. I was staring at the letter.

Dearest Juniper,

If you’re reading this, then I’m dead, which is probably a bummer.

Mary told me not to write this letter, because, and I quote, ‘if you write a letter to be opened after
you die then Chekhov will rise from his grave and shoot you himself’. But hey, she’s still pretty
wrapped up in the narrative thing, and I’m with you on it not really holding water. I guess if I’m
dead, she’ll get one more ‘I told you so’ in.

I naturally don’t know how I died, but for the sake of this letter I’ll assume that I went down in a
blaze of glory, maybe after having mouthed off to the wrong person, or in a moment of heroism, or
… just, hopefully something cool, rather than a freak accident or as a result of my own stupidity.

I’m doing a bad job of getting to the point. The thing is, I’m writing this letter with a request, and I
don’t want to just come right out and say it, because it might sound mean. Here goes.

Juniper, I don’t want you to do the same thing to me that you did to Arthur.

I guess that means I have to explain what you did to Arthur, but I’m worried that I’ve got it wrong,
and then you’ll have a letter from your dead girlfriend (or wife, depending on what’s happened since
I wrote this) where you’re thinking to yourself the whole time, ‘what kind of idiocy is this?’.

You used to have this way of talking about Arthur like he was the greatest guy in the world, and this
burning fire when you talked about getting him back. There’s a little less of that now, I guess, but I
haven’t asked, because I think you wouldn’t take it well if I said anything.

And, you know, there’s a part of me that gets all hot and bothered about you doing that for me. What
right-thinking woman wouldn’t want you as her avenging champion, sword in hand, going on a
rampage of revenge? The fantasy version of it all is that you finally find the bastard that killed me,
after a two year quest, and you say ‘This is for Fenn!’ before blasting him to pieces. It really does it
for me. I almost want to die just so you can avenge me.

The thing is … I’m trying to be a better person. Old Fenn (no age jokes, please, I’m dead, have
mercy) would just punch people in their faces when they were being jerks and then run away
because, as it turns out, most people don’t like that. There was this one guy who I overheard talking
to his buddy, and he was saying that elves were a serviceable lay if you didn’t have to look at them.
So I went over, punched him in his mouth, and then made myself scarce. That was Old Fenn. I spent
a good amount of time laying low after that, and took on longer expeditions in the Risen Lands so
that there would be some time for the air to clear.

But you see, New Fenn is a different sort of girl, isn’t she? I’ll still punch people in their stupid faces,
but it’ll be for good, sensible reasons. You imagine Amaryllis punching someone in the face (not that
she’s who I want to be when I grow up) and it’s hard to imagine that she would do it because that
was what she felt like doing, right? She’d have some kind of calculation to it, I would think. I’m
trying to think if I’ve ever seen her punch someone in the face, and I don’t think I have. She’s more
the stabby sort of person, or a shooty sort (even though everyone knows that guns are a coward’s
weapon, completely different from bows, which are noble and brave). Me? I’m a puncher, unless I
have my bow, in which case I’ll gladly put an arrow into someone who seems like they might deserve it. Or at least, that was the Old Fenn, who I’m trying to leave behind.

The thing is, giving in to those stupid impulses is the mark of a bad person. There are probably plenty of bad people who don’t have impulse problems too, I guess, but whatever. I know that having you become obsessed with avenging me is probably not what’s best for the world, or for you. So though this letter is being written by a not-dead Fenn, who doesn’t have to deal with all the problems of being dead, let me do my best to absolve you of the need to go all bonkers because I’m dead.

First things first? I need you to not see me as someone that I wasn’t. I mean, maybe by the time I die, I’ll have become the sort of girlfriend that deserves being thought of how you think of me, but probably that was still a road that I was walking. The Fenn writing this letter? She’s kind of shit. I’d always thought that about myself, but I guess it was only in the last few months that I started to really realize that I thought it. Parsmont had a lot to do with that. So if I’m dead, and you’re thinking of me, then I really want you to remember me as I was. Don’t go making up some fake version of me that never really existed, because it feels better not to think about all the ways that I was flawed. I’m not saying that you did that with Arthur, but you totally did that with Arthur.

Second … blegh. Make sure that I’m really dead first, and spend some time getting over me so it’s not a mistake, but you should try your best to move on. Like I said, I do love the idea of you pining for me for the rest of your life, because I’m pretty great and all, but Good Fenn is in the driver’s seat now. I don’t want you to be looking at me with rose-tinted glasses, and I don’t want you to f**k everything up because you think that I’d be furious, or that I need, want, or deserve that level of devotion. (Hopefully the Dungeon Master gives me a ringside seat once I’m out of the game, and if he does, I’ll do my best to keep these instructions in mind.)

(If you’re going to hook up with someone in the group after I die, which seems likely, here’s my list in order, because I know you like lists: Amaryllis (she’s hot), Grak (he needs to get laid), locus (it would be fucking hilarious), Solace (grown up, naturally), the house (if she doesn’t look like Tiff), Valencia (bleh), and the house (if she looks like Tiff). But maybe the party will have a bunch of new members by the time I die. Not really planning to rewrite this letter.)

Third, you owe me one favor. For that favor? Don’t send me to the hells. I know you’ve got your own views on whether it would be better to be tortured forever or face oblivion, but for me, I choose oblivion. If I’m dead, you’re probably the one that gets to make that choice, and unless there are some really unusual circumstances, I don’t want to go to hell. Use my soul for parts, if it makes sense to, sell or use all the shit that I gathered up from our whirlwind tour of Aerb, and burn my body up after taking the bones out to use for their luck. Double check that I’m dead first, naturally. Maybe even triple check.

Mary thinks that it’s both morbid and stupid for me to be writing this letter. Stupid, maybe, I don’t know. Morbid though? I think we come closer to death on a regular basis than most people get in their whole lives (right up until they actually die, anyway). It’s a bit fun sometimes, I’ll grant that, but it’s no way to live long-term. Really, it seems like a good way for one of us to die. Solace already did, but she’s coming back, so I’m not sure that means anything. Maybe if I die, I’ll come back too, but I’m kind of skeptical that’s going to happen. Mary’s the one that was supposed to give you this letter, so if she did, that shows what she thinks about my chances.

All my love from beyond the grave,

Fenn

(How cool is it that I can do things from beyond the grave? I don’t know why more people don’t
write death letters.

(Also, this is a cheap shot, because I can get the last word in, but you were totally wrong about the baryton/baritone argument. I looked it up like five minutes ago using the backpack. A barytone is a thing on Earth too, it wasn’t put on Aerb to confuse you, you were just wrong. Happens to the best of us, clearly, if I’m dead. Probably would have been more appropriate for another letter, but I’m dead, I can do what I want.)

I stared at the sheets of paper after I’d finished reading. I missed her terribly. It was astonishing to me how much we were thinking in the same direction. Fenn got me, in a way that I didn’t think anyone else ever had. And at the same time, we were nothing alike. I’d written more than one letter like hers, to be opened after my death. One for Tiff, one for Reimer, one for Tom, one for Maddie, one each for my parents … only if you wrote them like I did, you called them suicide notes instead.

We held a funeral in the late afternoon, the same day that Fenn had died. I was the one who dug the grave, in a courtyard within Bethel’s demesne. She’d said in her letter that we should chop her up and use her for parts, but there was no way that I could have ever done that. Just the thought of touching one of Fenn’s bones and draining it for its Luck gave me an uncomfortable tightness in my chest. We still had Fallatehr’s corpse, if we really needed elf luck by way of bone magic. (The fact that I could give consideration to the practical side of things was a sign that I was holding myself together well enough that maybe I wouldn’t fuck up our next serious encounter.)

The funeral was a small affair. She had a son out there somewhere, and he was the only one that I would have liked to bring in. The list of other people that might possibly have wanted to come and pay their respects was painfully short, no more than a handful of names. Fenn made fast friends, but our little group was insular for obvious reasons, and most of her friendships had been based on omissions of truth, if not outright lies.

Grak helped me lower her coffin into the grave; I cried the entire time, then set to the task of burying her. Most of this happened in silence. When I was finished, we said some words.

“She was the closest thing I’ve ever had to a sister,” said Amaryllis. “I feel fortunate to have had longer with her than the rest of you. We spent two months together in a room that was twenty feet to a side, and there were days when she made me forget that.” Amaryllis looked down at the grave. “If we ever gain the ability to bring people back from the dead, she’s the first on my list. Odds are, she’ll probably crack a joke. That was one of the best things about her.”

Grak had only a sentence. “She always found a way to be happy.”

It hurt, to hear him say that, because I knew it wasn’t exactly true. She hadn’t found a way to be happy with me. I understood where he was coming from, but it still rubbed me the wrong way.

“She had the mindset of a druid,” said Solace. She was still in a man’s body, a state that apparently didn’t bother her much. “She could bend like a reed in the wind and act without thinking when the time came to act. Her life was an act of improvisation and adaptation, always on her toes, adjusting to whatever the next day might bring. Part of that was because she was rootless, cast out from her two homes by family who didn’t understand her. It might have taken her some time, but I like to think that she found family in us, however briefly.”

My eyes went to Valencia, who was standing next in the circle. We hadn’t arranged a proper ceremony, but we were going in order, and she was next. Her hands were tucked into the pockets of her dress. It was a little bit too cold for what she was wearing, given the bleak weather on the Isle of Poran. Her nose was slightly red from the cold.
“I didn’t know her well,” said Valencia. “I had insights.” She twisted her lips slightly. “She was intensely loyal. She was trying her hardest to become better, more than most people ever try. She was … I wish that she could have been my sister too.” She began crying, silent tears rolling down her cheeks. “I’m sorry.”

I wanted to ask her what she was sorry for, but I didn’t think I could do it without sounding angry. Were those tears crocodile tears? I assumed that she could cry on command, if she needed to. My jaw was set and I was breathing through my nose, very deliberately. It felt like at any moment I would break again, and I wanted to prevent that. We were going to have to talk, but I wasn’t even remotely up for it.

“She had an attractive sort of flippancy,” said Bethel, speaking with the same calm voice she seemed to use for everything, as though she was above everyone else. The fact that she could kill everyone standing in the courtyard in the space of a few seconds added to that impression. “There’s something very fetching about a woman who thumbs her nose at pandering, even in the face of overwhelming power. When I first watched her, I thought that it was stupidity, but in time, I saw that it was an admirable attitude of defiance. She was my favorite resident.”

We’d come back around to me. I felt a lump in my throat. I didn’t know how I could possibly sum up what she’d meant to me. Most likely if I tried to write it all down, I would end up filling a whole book. To condense it all down into a handful of sentences seemed impossible. Worse, there was a sense of finality to saying goodbye like this. I didn’t want Fenn to be gone. There was a part of me that wanted to simply launch into a speech about how no, this wasn’t something I was going to accept, I was going to fight for her, I was going to keep the dream of her alive, put pieces of her soul into someone else until I’d reassembled her, throw her into the hells against her wishes and then rescue her from them …

“She was my first real friend in this place,” I said. The words felt thick in my mouth. I glanced at Amaryllis. “Sorry.” She gave a small wave of her hand. She understood; we’d had a bit of a rocky start. “She had a lot of edifice, and a lot of depth. She was dealt a bad hand, right from the start, caught between two worlds, neither of which really seemed to want her, and … she loved us like family, because she never really had a family. The edifice was there because that was her way of dealing with a world that was shitty to her, and it was a good edifice, one that she enjoyed. And her depths … I never really got to explore them as much as I would have liked.” I let that hang in the air for a moment. I hadn’t meant it as a joke, or something crude, but as I was trying to think of what to say next my mind kept circling back to that. I felt myself smiling a little. “I think we’re doing this all wrong. I’m sure she’d appreciate people saying nice things about her, but a solemn, somber funeral wasn’t really her style.”

“You’re probably right,” replied Amaryllis.

“I don’t know what she would have wanted,” I continued. “She didn’t say in her letter. I’d argue maybe that we should be celebrating her life, but a lot of her life wasn’t that great, and the part of it we shared with her wasn’t always the best either.”

“I have an idea,” said Valencia. Her voice was soft. I froze when she spoke, and didn’t look her direction.

“What kind of idea?” asked Amaryllis. “What … provenance?”

“My own,” said Valencia. I looked at her, finally, and saw her head hung low. “She -- she had a campaign, with notes, one that she really wanted to run. I know that we couldn’t play it like she’d have done it, but it was something that she made, and wanted to share with us, so … I don’t know, I just thought.”
“Joon?” asked Amaryllis.

“I .. sure,” I said. “I’ll need some time to look over her notes and see what I can make of it.”

“I was thinking that I could run it,” said Valencia.

I looked at her, feeling cold. “Why?” I asked.

“She meant for you to play it, not run it,” said Valencia. “She wanted to be the one in the driver’s seat.”

“I think it might be a bad idea,” said Amaryllis. She gave a polite cough. “We need to clear the air before too much longer, ideally before tomorrow’s visitors.”

“Clear the air?” I asked. I could feel my fists clenching, seemingly of their own volition.

Valencia was looking away.

“Val?” asked Amaryllis. “We need to get this done now, not in the heat of combat, and not when there’s some momentous decision that needs to be made in a hurry.”

“That was part of the argument for Fenn and I going to therapy,” I said. “Better to do it now than later, better that it be handled quickly on our own terms than at a time when it might blow up in our faces.”

“I understand how you feel,” said Amaryllis. “But in a full combat situation where you’re managing multiple different types of magic and trying to process information, we really can’t afford for any of this to come out. The line between life and death is razor thin here.” She looked at the small mound of earth where Fenn was buried. “I’m trying to keep everyone safe. Val, tell him.”

“No,” I said, looking at Valencia. “Take in a soul, then we’ll have Grak and Bethel watch your skin to make sure that you’re not using a devil. That’s the only way that I want to talk to you.” I could feel my blood starting to run hot. If she refused, it was as good as an admission of guilt. Of what, that remained to be seen, but my mind was already going to the worst case scenarios.

“Okay,” said Valencia. Her voice was small. She looked to Amaryllis, who was wearing the glove, Sable. “I’ll need a soul.”

Amaryllis frowned slightly. “I’d rather not do this at a funeral,” she said.

“I think we’ve all said our piece,” I replied. “And if we’re laying things to rest, I can’t think of a better place than here.” I was too angry, and I knew that I was too angry. It was hard to modulate my tone and think about the words that were coming out of my mouth.

“Fine,” said Amaryllis. She popped a small glass bottle from the glove and handed it over to Valencia, who took the stopper out and downed the small white sphere in a single swift motion.

Her face fell slightly as she looked at me. “I can still lie,” she said. “And … and I looked at what was going on from the eyes of dozens of devils, so I still remember what they would have said, even if I don’t have their powers. It’s important that you know that, because otherwise you might think of it later, and not trust me.”

“I already thought of that, thanks,” I said. “And I’ve already thought of the fact that you might have been lying about only being able to take in one at a time. You can kill them without taking them in, and your powers keep growing.”
Valencia slumped. “Then there would be nothing that I could ever say.”

I had no response to that. “Say what you have to say,” I said.

Valencia hesitated. “You were the only couple I ever knew,” she said. “My father’s relationship with his thralls was … it wasn’t ever like romance. And so I looked at the two of you, and you were happy together, and … and then I looked at you through a devil’s eyes, even though I knew that I shouldn’t. I could see all the ways you hated each other, all the things that I could have said to turn you against each other, the little annoyances and lingering problems, and … I hated what I saw.”

I pursed my lips.

“I could see all the good, too, the devils aren’t hopeless about that, they’re not Voldemort, not being able to understand love, they just hate it and they’re not as good at it because why would they be, but … it just wasn’t enough. The good wasn’t enough to outweigh the bad, and I never … never liked Fenn, not until after she began to change, and things just got worse between the two of you when she did, and I spent all this time trying to understand what had happened. It was all the stuff we talked about in therapy, the ways you were rubbing each other the wrong way, and it was becoming worse and worse as time went on, especially when you got back from being in the chamber, and … I should have kept to myself, but I couldn’t say anything without it looking like I was badmouthing this thing you were both proud of, and you wouldn’t have believed that I wasn’t jealous. And there were all these other things that I was keeping my mouth shut about, because I didn’t want people to know how I felt about them, because they wouldn’t have understood that I loved them anyway.” She was speaking fast and carelessly. I glanced at Grak, who was watching her impassively and not saying a word.

“So you decided to split us up,” I said.

“No,” said Valencia. “No, I never wanted to, even if you weren’t happy, I was just going to let you be, because trying to fix it without seeming like that was what I was doing would take too many plots and planning, and the devils aren’t all the same, they have different skills and approaches, so … I was going to not say anything and hope that it worked out somehow, even though I didn’t think it would. And then Mary said that maybe I should help work things out between you two, and, and I thought that maybe it wouldn’t hurt anything if I just … if I let the process fail.”

“We came to you for help,” I said. My hands were balled into fists. I wasn’t going to hit her, not unless she confessed to killing Fenn, but I wanted to. Valencia was small and vulnerable, without her armor or weapons, but even given that, there was a part of me that wanted to take out my frustration through excessive violence.

“I know,” said Valencia. “And I thought … I thought that maybe the means would justify the means. And I didn’t think … the door was still open, it didn’t need to be forever that you were apart --”

“Well, it is now,” I said. “What about during the fight? Could you have saved her?”

“I … yes,” said Valencia. And then I thought that I really would have to kill her, because if she had sat there and done nothing, she was no better than the Dungeon Master. “But I chose Mary! I had to pick one of them, and I picked the one who was more important. If Mary dies we lose all our best entads, that was what I was thinking. Please, Juniper, I had to make a choice, and I wasn’t thinking about what would look good, I was trying to -- to --” She closed her eyes. She was crying. “I was trying to make it through,” she finally said.

My heart was hammering in my chest, so I focused on my bones and began pulling WIS. It wasn’t just the stat boost that helped, it was the actual act of burning the bone, which took my mind off of
what I was feeling. I slowed down and controlled my breathing, then slowed the beating of my heart by changing the flow of my blood through my body. I closed my eyes so I could block out the world around me, and focused on the manipulations of my internal magic.

“I forgive you,” I said. I opened my eyes and looked at Valencia. She was staring at me with tears still streaking her cheeks. “I forgive you for trying to manipulate me, I don’t actually think that you need forgiveness for saving Amaryllis, because it was a choice that had no good solution. If --” and there my attempt at magnanimity faltered, because ‘if you really didn’t do all this for nefarious reasons’ was the hitch in all of it, and the prime source of mistrust. “I’m probably still going to feel upset, but … I don’t want to be. You’re younger than your years. You’re going to make mistakes. Big ones, I guess.” I took a slow breath. “Fenn didn’t die because of you.”

Valencia let out a shaky breath. “I don’t deserve you,” she said.

“I’m not saying -- it’s going to take some time to get back on good footing,” I said. I wasn’t even sure that I meant the words that I was saying, I only knew that some better version of Juniper would be saying them. That was the Juniper that I wanted to be, the one who could forgive a mistake and not go down the rabbit-hole of recrimination and anger. And if it hadn’t been a mistake … well, gods willing it would come out at some point, and I would deal with it when it did.

“Okay,” said Valencia, her head hung low. “Can I … can I see, with a devil, to see whether --”

“No,” I said.

“To see whether what?” asked Amaryllis, furrowing her brow.

“To see if he … if he means it,” said Valencia. “To see whether it’s actual forgiveness, or, I don’t know.”

“Absolutely not,” I said. “You look at me with a devil behind your eyes again and I’ll never speak to you again.”

“I can’t watch her all the time,” said Grak. “And she can’t be expected to hold a soul for the rest of her life.”

“I can watch her so long as she’s here,” said Bethel. “Though I don’t really think she’s done anything so bad. So far as I can see, everything said in the therapy session was essentially true, most of it offered by yourself and Fenn.”

“Don’t fucking start with me,” I said. I hadn’t known that she’d listened in. I’d known she had the capacity, but I hadn’t realized that she had been party to those talks. Even if she had, I hadn’t thought that she would say anything about them.

Bethel gave a casual shrug. “I’m only offering my perspective.”

“Are we done then?” asked Amaryllis. “Juniper, was there something else you wanted to ask, something that needs to be resolved?”

“No,” I said, folding my arms. “I don’t really feel up for playing Fenn’s game though.”

“Perhaps that’s for the better,” said Bethel. “We have a visitor.”

“We do?” asked Amaryllis. “They weren’t supposed to come here until tomorrow.”

“Not the ones you spoke of,” said Bethel. “An old friend has come knocking on our door.” She held
her hand out in front of her, and an image appeared above it, showing a teenage girl with dark black hair standing in front of the door. It was Raven, Uther’s archivist, and later the keeper of the magical library, at our doorstep. The resemblance to Maddie was uncanny.

_Fucking great._
There wasn’t much to say about Maddie. She was Craig’s shadow, as much as he would let her be, which meant that I’d known her about as long as I’d known him. On the rare occasions that I would go over to their house, she would bring chips or drinks for us while we played videogames or watched TV, and then stay there, sometimes adding to whatever conversation was going on, but usually being quiet. Craig’s attitude toward her seemed to be that he would tolerate her so long as she stayed in the background, and I didn’t ever see a lot of pushback from her on that. Craig only spoke of her in annoyance, but for the most part, he didn’t speak of her at all.

Their home life wasn’t great. Their father had been out of the picture since around the time Maddie was born, and their mother went through a string of boyfriends, but none that lasted long. Craig didn’t talk about his mom much, except to say that she was a ‘raging bitch’. The charitable version is probably that she was a single mother with too few resources to deal with her children. Craig was often put in charge of Maddie, even though he was only three years older than her. That was how Maddie had ended up joining our games.

She was awkward, enough that I noticed it. Some of that was just the fact that she was an interloper, mentally tagged by all of us as Craig’s kid sister rather than being her own person. I could make more excuses for her, like pointing out that she was a girl entering into a male-dominated game, or pointing out that she was younger than us by enough of a margin to matter. Really though, she was just awkward. She didn’t really have any friends her own age, and none of us were really interested in being friends. Tiff was the one exception to that, but the friendship never really clicked, maybe because Tiff was too well-adjusted and Maddie was too … not.

As far as I could gather, Maddie spent most of her free time online, which meant that she was at least partly raised by the internet, and not the best parts of the internet either. To my knowledge, she never fell in with the kind of people who were on the lookout for impressionable pre-pubescent girls, but she did find a lot of those incestuous websites that have built up their own obsessive mythologies, rituals, and words of power. There were times when she was talking when she would drop in some random bit of deep lore from one of those places, or use a turn of phrase that no one around her was at all familiar with. Sometimes we asked her to explain, but mostly we ignored her, in part because her explanations made it clear she expected us to have read some obscure creepypasta or watched five seasons of a show someone had given a glowing recommendation to.

(I’m aware that this is me saying that, trust me, I am, but when I dropped my references, it was either with the necessary background, or with the intent that no one would be able to connect. With Maddie, it was pure social disconnect, like she didn’t realize that other people had internal lives of their own.)

She leaned hard into whatever counterculture she could get her hands on, where “counterculture” is loosely defined so as to include Hot Topic, Star Wars, and anime. Being a teenager is, at least to some extent, a matter of trying things out, but she took that to the extremes of what people wouldn’t physically stop her from doing. The worst was probably the week she went around wearing cat ears and a tail, which made me physically cringe whenever I saw her in the halls.

(Actually, scratch that, the actual worst was when she glued circles of velvet to her face. During the 18th century it was fashionable to wear ‘beauty patches’ to cover up the facial blemishes associated with smallpox scarring. Maddie had learned about this during a session of my Magus Europa campaign, and, I guess, thought that she was going to bring it back in style? I never really asked
about it, because it caused a lot of second-hand embarrassment I wasn’t eager to relive.)

She hit puberty at 13, and transformed from an awkward, gangly little girl to a slightly taller and still very awkward girl with big boobs, which mostly changed things for her in a negative way, since it meant that she started getting the wrong kind of attention. The most that was ever said about this by anyone I knew was when Reimer made a comment about no one talking about “the two elephants in the room” when she went to go use the bathroom, which got Craig more pissed off than I’d ever seen him. He made it pretty clear that his sister was off-limits for those kinds of comments, and while Reimer protested that he was just making a joke, it was the last time anyone so much as joked about her.

I should put an asterisk there, because it was about two years later that I ended up having sex with her.

Look, age of consent laws aren’t really governed by reason --

Wait, no, I can do better than that.

Kansas legislators respond to their incentives, and there’s nobody lobbying for saner age of consent laws because of the obvious assumption that they were doing so for nefarious purposes, so obviously the age of consent laws that we got were ridiculously poorly constructed, mostly to appease the religious majority, who have their own motivated reasons for --

Okay, no, let me start again.

When we’re talking about capacity to consent, we’re really talking about mental development, which isn’t a hard line, and which age is only an inaccurate proxy for, and --

Nope. I don’t think there’s any way to justify it without sounding like a creep. She was just barely fifteen and I was a few months from eighteen, and age difference aside, there was a pretty big difference in emotional maturity, so I couldn’t even hide behind her being old for her age. To make it all worse, she was Craig’s little sister.

And legally? In Kansas, having sex with a fifteen-year-old was classed as criminal sodomy, a felony that carried a sentence of up to five years in prison, with no close-in-age exemption to speak of.

All of which might lead one to wonder why the hell I did it.

Arthur had set up a wiki for our group, which I was the primary contributor to. We mostly used it for campaign notes, maps, and (more rarely) character sheets and backstories, but it was the online holding area for pretty much everything that we wrote down. I had special permissions as the resident DM, which let me make pages that no one else could see, and there were dozens of half-baked worlds that had skeletal outlines, plot threads, and characters on them, all hidden from anyone.

One of the features Arthur had enabled on the wiki was the forum, which we used to supplement our group chat, especially during the summers, when we didn’t see each other every day in school, or when there was something going on that we wanted to talk about without being realtime.

When Arthur died, Reimer made a memorial post in the forum, which we all added to, but then no one wanted to be the one to displace that memorial with some new bit of unimportant discussion, or necro some old conversation with an update. The forum effectively died. I went to visit it sometimes, mostly to reread old stuff from back when Arthur was still around. It was, in a way, like he was there, a digital ghost that could regurgitate his old opinions on things. I didn’t believe in an afterlife, but Arthur lived on in the stuff he’d written. Reading through his posts invariably made me feel
depressed and anxious, knowing that he would never post anything ever again. Sometimes I would type up a response to some long-ago comment from him and sit there, crying, because he was gone.

I eventually stopped going to the dead forum, not because I’d gotten smarter about avoiding the things that hurt to look at, but because I’d read everything there was to read, and I’d grown inured to what was contained in that particular crypt.

After the Fel Seed Incident, I visited the forum again, only to find that someone had been there.

There were six posts by Maddie, none of them with any replies, all a few days apart from each other. None of them were anything too special, nor did they seem like they’d taken a lot of time or effort on her part. At a cursory glance, it seemed like she’d found some links she liked and wanted to share them, which was one of the things that the forum was sometimes used for.

I was pissed off about it. The forum was dead, a dusty mausoleum, and trying to bring it back was only going to underline how dead it was while marring its usefulness as a memorial.

The thing was, I was also lonely as all hell. Reimer, Tom, and Craig were the only three people who really talked to me anymore, and of them, Reimer hated me, Tom was so earnest it grated on me, and Craig was more or less checked out, ready to go join the Army once he had his high school diploma. I could recognize, in the way Maddie had posted, a desire for someone to talk to, and as upset as I was that she’d desecrated the final resting place for Arthur’s online presence, I felt so alone I was on the verge of a breakdown.

One of the links she’d posted was to a video of a cat failing to jump properly. I typed “heh”, waffled over whether or not to post it, and then finally clicked the button and closed the tab before I could change my mind and delete it.

When I came back to the forum a few hours later, Maddie had left a few excited paragraphs for me. She treated me like we were old friends who had lost touch, even though I saw her in the halls every once in a while, and she’d been to a handful of our D&D games since Arthur had passed. It was transparently obvious that she wanted someone to talk to, and while Maddie had never been my favorite person (or even someone that I thought that much about), she was validating my existence at a time when I was passing by the train tracks and thinking about how easy it would be to dart in front of a moving train to end it all.

Maddie and I began talking a lot, mostly online. I’d had three or four pen pals over the years, and we fell into that same sort of pattern, leaving each other long chunks of text. It gave me something to look forward to. It’s hard to say that I really enjoyed myself, because I wasn’t at a point in my life where I enjoyed anything, but talking to Maddie took me out of my own head a little bit, except when I had some heavy stuff that I wanted to talk about to someone, or more accurately, depression and anxiety that I wanted to weigh someone else down with.

Eventually we switched from that single thread on the forum to talking to each other on messenger, multi-paragraph bursts replaced by single lines fired back forth. Maddie had a habit of splitting up her sentences into multiple lines, as though she was hitting the Enter key out of nervous habit rather than because she’d finished a thought, which drove me nuts. I tended to write longer messages, sometimes several paragraphs, which would inevitably lead to her seeing that I was typing. She would always tell me that she was patiently waiting for me to finish, which never came off as particularly patient.

There was a lot that I didn’t like about Maddie. Maybe I would come off better if I said that I liked her, or even that I’d fallen in love with her, but the truth was, she was the only person that I really
had to talk to, and liking her wasn’t really what it was about. She was there, ready to hear my side of the stories that she must have already heard through the grapevine. She got anxious when she didn’t hear from me, and she was eager to listen. I didn’t really like Maddie that much, but the attention was intoxicating.

“Do you think I’m pretty?” she asked one night, a few weeks into our let’s-call-it-a-friendship.

“It’s okay if you don’t,” she added, when I didn’t immediately reply.

“Obviously I want you to find me pretty,” she said.

“Not you, specifically,” she added.

“People,” she said.

“I just asked you because,” she said. Then the typing indicator lit up, died down, then lit up again.

“I care about what you think,” she finally finished.

“Yeah, I think you’re pretty,” I replied.

“Yay!” she replied.

“Did you have to think a lot?” she asked. “Or?” It had taken me some time to think about my reply, and one of my big problems with instant messaging was that people could tell how long you were thinking.

“It’s probably not a thing I should be saying to you,” I said.

“???” she asked.

“I don’t want things to get weird,” I replied.

“ Weird how?” she asked.

“Do you really not know?” I asked.

“Is it weird that I think you’re handsome?” she asked.

“I’m not handsome,” I replied.

“You are,” said Maddie. “I was looking at pictures of you,” she continued. “Today.”

I sat and stared at my keyboard for a bit.

“Was that weird?” she asked.

“Sorry,” she said.

“Maybe I’ll just shut up now?” she asked.

“You were typing and then you stopped typing,” she said.

“Press Enter,” she said.

“Please press Enter?” she asked.
“I thought manners might help,” she continued.

“Waiting patiently, since you’re still typing,” she added. “Don’t mind me.”

Here’s what I’d been typing: “You said that you cut yourself sometimes, just to feel something. I keep thinking that if we started dating it would be that, for me. I have so much trouble caring about anything anymore. It feels good to have you flirt with me, and maybe I encouraged it because … I wanted to feel something that wasn’t pain, loneliness, and despair. I’m standing at the edge of a cliff now, with you. So far, I haven’t actually done anything. If I tell you that I like you, and you say that you like me back, then what happens? It’s mean and unfair to you, but I’d be a senior dating a freshman, and with everything else that’s happened I’d probably have to accept that I’d actually hit rock bottom. If I keep my distance then at least I can say, ‘well, I didn’t date Maddie’. Even if no one would ever give me credit for that, I would be able to hold onto it. And the shitty thing is, I don’t even like you that much.”

I stared at the wall of text. Maddie was typing, again. Ctrl+A, Ctrl+X, and what I’d written was gone. She was fifteen, and it was just too fucking mean.

“Maddie,” I finally said, instead of all that. “I don’t want to hurt you.”

“So don’t?” she asked.

“Yeah,” I replied.

“Can we meet in person?” she asked. “I don’t like IM. Too many weird pauses.”

“In person they would just be silences,” I said.

“I could see you though,” said Maddie. “I’d like that.”

“I need to shower,” I replied.

“I don’t mind,” she said. “Or I can wait until you’ve showered.”

I kept staring at my computer screen. It was late in January and just below freezing. My dad kept the temperature low in our house, and the heating ducts never really seemed to circulate air to my room properly, so it was frigid. If I sat at home by myself, I was probably going to spend a half hour trying to find something to watch on Netflix, then spend an hour or two on reddit trying to find something funny enough that I would exhale slightly harder than normal, then porn and masturbation, and then the nightly few hours of staring at the ceiling thinking about how much I hated my life.

“Sure,” I said. “We can meet in person.”

We ended up dating.

It was the same cloak-and-dagger shit that I’d done with Tiff, but a bit more serious this time, and a lot less fun, because I was pretty sure that Craig would be fucking pissed if he found out. There was also the question of their mom, who had reported Maddie’s last boyfriend to the police, though he was a year older than I was, in college when they dated, and nothing had ever come of it. I didn’t know whether or not it would be worse because I was a friend of the family, but I expected that it would be worse.

I guess I had this idea that I could save her from the trajectory she was on; it was certainly a way for me to cast myself as the good guy. Maddie smoked cigarettes, which I thought was a fucking stupid
idea for anyone, let alone a teenager who didn’t even have the excuse of having started before anyone knew that it was bad. She was in a few remedial classes, and talked a lot about emancipation, dropping out, and getting her GED, since she didn’t think college was in her future. I had no idea what kind of life Maddie had in front of her, but it certainly didn’t look good, and I thought that I could swoop in and fix it.

Being together was weird and awkward. We’d talked more naturally online than we had in person. Online, I’d understood the cadence of her typing, but when she was next to me she was like a totally different person, and we didn’t really mesh together. Despite that, I was determined that I was going to make it work somehow, because if Maddie liked me, and I was her boyfriend, then I wasn’t going to bow out at the first sign of trouble. In some ways it seemed like that would be the worst possible thing, because I’d prove that I was just as much of a heel as I suspected myself of being. If I was going to be her boyfriend, then I wanted to do it right, not just fuck it up like I’d fucked up everything else.

As it turned out, dumping her wasn’t the worst thing that could have happened.

Instead, she dumped me, after about a week.

The thing was, she said, that we were better as friends, and she didn’t want me to take it too hard, but she just wasn’t feeling it. I sat in stunned silence as she dumped me, and then she kept asking me to say something, and I just sat there, not knowing what the hell I’d done with my life that I’d gotten to this point.

It was a few days later that Craig showed up early to D&D. We were playing at my house, because my parents were out of town. I had everything laid out on the table for the session, paper, pens, dice, minis, battlemat, et cetera, and was staring at my skeletal notes. I should have been preparing, but I felt too numb to do it. Most likely the session would go the way that sessions had been going lately, with me winging it, poorly, and then us ending things far earlier than we used to. I hadn’t made anything new since the whole Fel Seed thing. After that had all gone down, we went back to Long Stairs, but I wasn’t even bringing much creativity to it, because I couldn’t think of anything suitably horrifying. There were lots of gaping, sucking voids, empty places that had once held life, all painfully thin metaphors that no one appreciated, not even me. Our gaming sessions were happening by rote, one more thing that I couldn’t take pleasure from anymore. I had almost canceled the session, but I knew once I canceled one, I would start cancelling others, and that would be one less thing tying me to the world.

Craig came in and sat down without saying a word. He was staring daggers at me. I couldn’t meet his eyes.

“You fucked my sister,” said Craig.

It was pure, naked hostility, and it was almost cathartic, given how much I deserved it. “Yeah,” I said.

“Jesus fucking Christ Juniper,” said Craig. “Do you know, if it had been anyone else, I would have been okay with it? Tom? Fucking great guy, salt of the earth, probably too good for her, and she’d break his fucking heart without meaning to, but I wouldn’t have had a problem with it, except that it would be stupid. Even Reimer would at least have been the best boyfriend she’d ever had, though that’s not saying much, because she’s dated some real fucking losers. But you?” He clenched his fists in front of him like he wanted to grab me and shake me to death. “You are such a fucking cancer on everyone around you. You’re a sad sack piece of garbage just fucking intent on infecting everyone around you with all the pain, anger, and misery that you can squeeze out. And fucking why?”
“I’m not in a great place,” I said.

“No shit?” asked Craig. “Fucking no shit, Joon, really? Because Arthur died, eight months ago? Does it have something to do with that?” He threw up his hands. “Arthur left this hole in all of us, and you grew these fucking claws and tore that hole open wide like fucking Satan himself. Arthur died, and it fucking sucked, and then you just wanted to see how much worse you could make it, didn’t you, you fucking miserable shitbag.” He was seething with anger. “Do you know I defended you? Colin was talking shit about you, and I damn near threw the first punch in a fight that I knew I couldn’t win, because I thought, you know, he’s fucking Juniper, he’s going through some shit, but he’s still in there somewhere. But no, you’re this fucking zombie, and I would stab you in the heart myself to put you down if I thought that you had a fucking heart anymore. You never even liked Maddie.”

“I did,” I said, but it didn’t sound convincing.

“Bullshit,” said Craig. He stood up from his chair. “Fucking bullshit, and you know it. You know that I fucking talk to her, right? Because she’s my goddamn sister? She came home crying and, just, fucking why would you put her through that? What in the hell was your end game?”

“I thought,” I started, then stopped. “I just needed,” I said, then stopped again.

“Yeah,” said Craig. He turned to go, then turned back. “Look me up in a few years if you ever get your shit together.”

I stayed silent.

I wanted to tell him that I probably wasn’t going to be around in another few months, let alone a few years, but I held my tongue as he stormed out of the house. I looked down at my threadbare notes for the session. I was going to have to change things around, because we were down to two players, Tom and Reimer.

I closed my eyes and let out a shuddering breath, and didn’t open them again until Reimer and Tom came in the door together.

“Got a text saying Craig’s out?” asked Reimer.

“Yeah,” I said.

“You okay?” asked Tom.

“No, I said. “Whatever, let’s run it. Craig’s character will have died between sessions. Poison, I guess, something thick and choking that was filling the room, and he just … it got to be too much for him. And Maddie, she’s not -- she won’t be coming.”

“Joon,” began Tom. “If there’s anything --”

“No,” I said. “Let’s just fucking run it, okay? Either you make new characters or I can fill out your ranks with NPCs, party needs a healer one way or another.”

“Something happen between you and Maddie?” asked Reimer. “Last session she was a little --”

“I really don’t want to talk about it,” I said.

I was faintly surprised when they let it drop. I knew they’d hear the story from Craig or Maddie later on. Tiff probably would too. I felt a wave of nauseous anxiety just thinking about that, but I could
take some comfort in the fact that she probably already hated me.

I always thought one of the really underrated things about getting transported to a fantasy world was that you could leave everything from the normal world behind. You get to start over from scratch, and sure, maybe that sucks if you were a star athlete at the top of his game, or you have a job doing something you love, or a wife and kids or whatever else, but even then, there’s no one around to remember all the things from your past that you hope no one is going to bring up in polite conversation. It’s basically the ultimate form of having things expunged from your record.

I felt a profound sense of shame at the way things had gone with Maddie, but on Aerb, I wasn’t actually obligated to tell anyone. I could instead let that incident fade into the past and forget it had ever happened. I hadn’t really planned it, but the way things had shaken out with Amaryllis and Fenn, I could construct this new version of my past that was at least partially sanded down, with some of the warts and hard edges removed. I had eventually told Fenn, in a long letter during the endless months in the time chamber, but that had mostly been because I felt like I was keeping things from her by never mentioning it. (And Fenn, naturally, hadn’t given a shit about any of it, except to say that if Valencia was Joon-bait, then Maddie was proto-bait.)

The problem was, Aerb didn’t seem to really go in for the “leave the past at the door” type of deal that fantasy protagonists usually got. I’d been given a few things that felt like pokes and prods in that direction, all of which I’d ignored, none of which I’d talked about. Now Maddie’s character was literally standing at our front door, impossible to ignore.
I opened Bethel’s front door slowly and looked out at Raven with a raised eyebrow. She was dressed in black from head to toe, a concealing outfit that went so far as to keep her neck covered. Her hair was the same way Maddie had usually worn hers, bangs cut to just above her eyes, with the rest of her hair falling down to her shoulders. Raven looked a bit older than Maddie, which made some sense given their relative ages; Raven was 1700 years old, which translated to seventeen years old. When I’d left Earth, Maddie had been fifteen. They still looked the same, which wasn’t a surprise.

“Can I help you?” I asked.

She held out her hand. “Brayda Beaman,” she replied. “I’m looking for the Advisor on Industry? I was told by those down in the village that the Council of Arches resides in this building.” She gestured toward the collection of houses down the hill from us, where everyone outside the group lived. Aerb had a lot in the way of quickly made buildings, whether that was the cobblestone houses you could create via tattoo, or structures put up by steel mages. It was an architectural mishmash laid out according to as much of future-proofed design as Amaryllis’ skill as an urban planner would allow.

“Come in, please,” I said, gesturing inside the house. “Sorry to keep you waiting.”

She followed me in, stepping more firmly into Bethel’s domain.

(Bethel had already gotten a look at Raven so invasive that it would have made the TSA blush. Raven was wearing eight entads, six that were deemed harmless or defensive and two weapons. Her blood pressure and flow was normal, indicating that it was unlikely she was a skilled blood mage. She had magical tattoos, but they were primarily utility oriented, including a small suite of extremely expensive (and obscure) translation tattoos. Bethel had read every piece of paper that Raven was carrying on her, including her forged travel documents and credentials in the name of Brayda Beaman, as well as the second and third set of documents hidden on her person for two other identities. In Bethel’s words, she could have described the taste of Raven’s nasal cavity; we were mostly concerned about the entads and any black swans, but Bethel had assured me that if Raven so much as looked at me wrong, she would be deprived of her life in as brutal a fashion as possible. Bethel was also silently and invisibly moving wards around us to ensure that we were breathing different air supplies.)

“What is this regarding?” I asked. “The Advisor of Industry puts in some long hours, and I would rather not bother her if at all possible. Even some background information might be helpful in making sure we don’t impact her time too negatively.”

I wasn’t the ideal person for this job. The problem was, Amaryllis apparently looked enough like Dahlia Penndraig that people would stop and remark on it, which was something that Raven was sure to either note or remark on. Amaryllis’ identity was an open secret, one that was going to hit the wider world sooner than later, but there was no need to reveal it now, especially not when we weren’t sure why Raven was actually here. Beyond that, we thought I had better odds of survivability in case of a surprise attack. There was another reason too; we knew what papers she was carrying in her satchel.

“I’m sorry,” said Raven as she took her seat. “I didn’t catch your name.”

“Simon Trent,” I said. “I’m the Advisor’s secretary. Sorry about this impromptu pre-screening, but I’m sure you can understand.” I wasn’t sure how well I was pulling it off, but I could lie half as well
as Amaryllis, unless there were hidden modifiers that made me worse than half, which there very well might have been. (If abilities were a factor in the successful use of skills, then it was possible that my lower social abilities made me less effective at using social skills granted by Symbiosis. We didn’t really have a good way to test this, so it was just a hypothesis sitting in Amaryllis’ notes somewhere.)

“It’s not a problem,” said Raven. “I hadn’t expected that I would be able to get a meeting that quickly. From what I’ve heard, the industrial plans for the Republic of Miunun are quite ambitious, almost beyond reason, and the Advisor on Industry is, in fact, more akin to an executive position than an advisory role. That must come with a lot of meetings.”

“It does,” I said with a shrug. “There are two tuung, and there are things that need to be done beyond what they’re capable of doing. Once we’re up and running, the Advisor intends to return to a more traditionally advisory role.” Fat chance of that happening.

I was fine with playing this game for as long as Raven was. It was uncomfortable, talking to Maddie like this, but she was so vastly different from Maddie that it wasn’t fazing me as much as it might have. She was close to the character of Raven, a studious scholar who dabbled in magic as an outgrowth of her obsession with books, but Raven had been played by Maddie, and the character suffered from an actor who wasn’t up to snuff, as much as I might have tried to help her out. There was a weirdly dissociative experience associated with being next to her, like my brain was trying to play catch-up, but in some ways that was a boon, because I was forced to pay attention to everything that I said.

“Alright,” said Raven once we got to a room that Bethel had hastily repaired. Raven took a seat across the coffee table from me, and I sat opposite her. “Shall we get started then? What do you need from me?”

“Credentials, for a start, though we’re still at the stage where those aren’t terribly important, if you’re here selling something or giving us an offer,” I said. That much was true; we cared about pedigree and testing for competence, but the Isle of Poran had become a welcome place for people pulling themselves up by their bootstraps. Disruption was the name of the game, after all. We already knew that Raven couldn’t possibly be here for that.

“Nothing like that,” said Raven. She reached into her satchel and withdrew a sheaf of papers, which she set down on the coffee table. “I work with the Intellectual Property division of Imperial Affairs. Sorry, I don’t have much in the way of a warrant card. The matter that I’d like to talk to the Advisor about is with regards to some planned industrial processes.”

<Seems like she’s here because of the Library, not because Masters or Heshnel sent her,> Bethel said into my head.

<Perhaps,> I replied back.

We already knew the contents of her satchel, and who she was presenting as. Unfortunately, we didn’t know whether it was a bulletproof cover or a paper thin one, since we didn’t have the requisite knowledge, and we didn’t know whether it was a cover with layers. Really, we only had guesses as to why she was here, and I wasn’t about to take anything for granted.

<You and Amaryllis think alike,> replied Bethel.

“Ah,” I said, looking up from the papers I’d been pretending to read. The documents outlined Raven’s role within her division and the authorities that had been granted to her. “To my knowledge, we haven’t publicly discussed our plans.”
“That city you’re building down there leaks like a sieve,” said Raven. “I would be extremely surprised if there were any secrets left on the Isle of Poran.”

I couldn’t tell whether that was intended seriously or not. It seemed like a masterful joke, one that acknowledged the depth of secrets that Bethel contained, but I wasn’t sure. If she actually believed that we had no secrets, was that because she was hinting she’d found out everything there was to find out? Was it all written in a book somewhere in the future, which she’d brought into the present? Now that would have been a good joke.

“Which innovation in particular are you concerned with?” I asked. “And if you’re from the Empire, you must be aware that we already have imperial agents here, and that we aren’t part of the Empire.”

<Two peas in a pod, you and Amaryllis,> said Bethel.

“You would like to be though,” said Raven. “Everything that I’ve seen indicates that you intend to be on the fast track into the Empire. There’s no grandfathering for patent issues. That’s why I’m here. Aside from that, unofficially, I would like to know where the innovations came from.”

“You said we had no secrets,” I said. I forced a smile.

“I didn’t claim to know all of them,” said Raven. “I’ve only been here half a day.”

<Amaryllis would like you to ask her directly about the Library,> Bethel said into my head. She was relaying this entire conversation to where the others were waiting in the next room, naturally.

“May I ask a question?” I asked.

“Certainly,” said Raven. “Whatever gets me to see the Advisor.” There was a slight twinkle in her eyes, like she knew something was up and was humoring the false reality I’d created.

“Was Uther Penndraig a good man?” I asked.

Raven’s face fell.

<Amaryllis didn’t like that,> said Bethel.

<Noted,> I replied.

“From what I’ve read,” began Raven.

“No,” I replied. “You were his archivist, you cataloged his travels, you had to have formed an opinion on him, given five hundred years to think about it. Was he a good man?”

Raven stared at me for a moment. “Yes,” she replied. “He was haunted, and he kept his secrets, but yes.”

“My name is Juniper Smith,” I said. “Does that mean anything to you?”

“Oh,” said Raven. “You’re the Advisor on Culture for the Republic of Miunun.” She shook her head slightly. “I’m sorry, have we met?”

“Hard question to answer,” I replied. “My name wasn’t in one of your books?”

Raven froze up again. “My … books?”

“Or your father,” I continued. “He didn’t share the details of his questionnaire with you?”
“Juniper Smith,” said Raven, as though chewing the words. “Juniper Smith!” Her eyes widened. “Uther wrote your name, five hundred years ago, that’s where I’d heard it before, and … how do you know any of this?”

“Why are you here?” I asked.

The door on my left opened before I could get an answer. Amaryllis walked in, wearing a functional dress that she often put on for business. She had been wearing plate armor when last I’d seen her, loaded for bear. I was impressed with how quickly she’d changed, especially since she was wearing makeup that hadn’t been there before.

“Dahlia?” asked Raven.

Amaryllis rolled her eyes. “No,” she replied. “The resemblance has been remarked upon a number of times though. I’m Amaryllis Penndraig, alias of Lydia Chance, Advisor on Industry. You’re here because part of your remit with the Infinite Library is stopping the development of technology, isn’t it?”

“I … what?” asked Raven. She looked between the two of us. “You’re Uther Penndraig’s most direct female descendant?”

“Yes,” said Amaryllis. “And I take it you’re not here because of the altercation with your father, nor the separate altercation with a number of Uther’s cohort?”

“I’m sorry,” said Raven, holding up a hand. “Let’s start from the beginning.”

“With fewer lies this time, please,” I said.

“No, not the beginning,” said Amaryllis. “Tell me what happens if we widely distribute televisions, or any of the other technologies we have planned.”

“We have time to talk,” I said.

“I just want to know what utter bullshit is standing in our way,” said Amaryllis. “I spent a year and a half of my life working on the technical details of this island’s planned industries, and now you’re going to come in here to tell me that no, it’s going to end the world? You could have just fucking put out an Empire-wide bulletin that explains what the threat is, and I wouldn’t have had to waste so goddamn much of my time.”

I stared at her. The math wasn’t quite right. A year and a half? She’d had eight months in the chamber while pregnant with Solace, and a few weeks outside of it with us. I wondered whether she’d been spending more time in the chamber than previously revealed. That was a little worrisome for a number of reasons.

“Calm down,” said Raven.

“I’m perfectly calm,” said Amaryllis, but I was pretty sure we all knew that was a lie. I was still having the bad dreams, and if we’d been in detox for the same amount of time, I was pretty sure that she was still suffering from bouts of aggression. If it was possible to change emotions within the soul, I was sure she would have dialed impulse control as high as it would go and anger as low as it could be, but that wasn’t a lever that we actually had access to (nor were dreams, for that matter).

“Tell me where you got the technologies from,” said Raven. “If you know about the Infinite Library, then surely you know that we’re constantly running against a deadline, and the deadline has gotten tight of late. This island seems to be the turning point, at the moment, but it’s very possible that it’s a
symptom rather than a cause, and we don’t have the time for another few weeks of delving the library in order to find some sparse scraps of information that point us in the direction of something actionable. Tell me what your source is.”

“No,” said Amaryllis. She straightened somewhat and I watched her demeanor change. “You hold approximately none of the cards here. We’ll speak once we’re satisfied with your answers. To start with, tell us what you know of what happened to Uther. You were looking for him. Why did you stop?”

I looked Amaryllis over. Something wasn’t right. Raven seemed to sense it too.

“You know who I am,” said Raven. “You know my pedigree and my mission. If --”

“Tell me where he is,” said Amaryllis. Her voice had gone cold. “Start in the next few seconds, or I’ll begin cutting your fingers off one by one.”

“Bethel, stop,” I said. Amaryllis hadn’t taken off her armor frighteningly fast and then makeup on top of that, she’d sent in a projection of herself via Bethel, of course she had. Why risk more exposure than necessary? Well, naturally, because the house had some unresolved issues, and talking through her holographic projections ran the risk of a man-in-the-middle. Our house was unruly, with a few triggers, one of which had apparently stepped in through our door, blithely unaware of the danger.

Raven’s robes split apart at the front and swept behind her, making something of a cloak, which twirled and twisted in a magical wind. She had been wearing plain clothes beneath the robe, at least according to Bethel’s first report, but one of the entads she was wearing must have changed that, because she was fully armored, in a suit of armor composed of golden bands, which went from her neck down to her toes. Something clicked near her neck, and I saw a shimmer in the air around her, which I guessed was either a private air supply or invisible armor. Raven twisted her wrist while this was happening, and three seafoam-green orbs began orbiting her, which apparently wasn’t enough in the way of offense, because she produced a sword from thin air which reflected light better than a mirror. She was horribly mismatched in terms of aesthetics, which was the sign of a high level character.

“Don’t make threats that you’re not capable of carrying out,” said Raven. There was a hard edge to her voice, and it was the first time I’d really been able to see her as being one of Uther’s fabled Knights, powerful beyond reason and the veteran of a hundred thousand adventures.

Bethel-as-Amaryllis frowned for a moment, then raised her right hand and snapped.

All of Raven’s fingers fell to the ground.

Her sword fell to the ground a bit later, since it’s hard to hold a sword without any fingers, and she stared down at her hands in shock for just a moment as blood spurted from clean, identical wounds. They began closing up after half a second, with the skin creeping over to close up, and Raven set herself into a defensive stance, though she no longer had a weapon to defend herself.

“These orbs,” began Raven.

The orbs winked out of existence. The shimmer around her head disappeared moments later, then the billowing cape behind her fell down, no longer supported by any unfelt winds. Bethel had put up wards against each individual entad that Raven wore, leaving her with only her inborn powers, and at a guess, Bethel had layered wards so tightly that even those (whatever they might be) wouldn’t work.
“You were telling me where Uther is,” said Bethel.

“Stop,” I said. <Bethel, stop.>

“I don’t know where he is,” said Raven. “I searched for a hundred years and never found him. The trail went cold.” She looked down at her fingers, which were laying on the floor, but made no move to grab them. “That’s all I know, I swear.”

“Oh, naturally I’ll want the longer version,” said Bethel. “You’ll need to account for that hundred years. Tell me the secrets you uncovered. Tell me the paths you looked down, in pursuit of him. And I don’t believe you, incidentally. You did find him.”

“We can reattach the fingers,” I said. “Bethel, stand down, I want answers as much as you do, but this isn’t the way to get them.” I wasn’t actually sure that was true -- the kind of raw power on display here would have gotten me talking.

“I can’t be coerced,” said Raven. Her voice had a slight hitch to it.

“Tell me again how Uther was a good man,” said Bethel. She barely even looked like Amaryllis anymore. It was very rare to see Bethel do anything except by intent, that was just the nature of her powers, since everything required some amount of deliberation on her part. It took me a while to realize that her physical appearance was halfway between Tiff and Amaryllis.

There was a pounding at the door behind us, but when Bethel waved a hand, it stopped.

“I want answers too,” I said. “She’ll have incentive to talk to us once she’s in the know.”

A slight frown crossed Bethel’s face. “I want to hear her justify everything that he did.”

“I don’t know everything that he did,” said Raven. The place where her fingers had been hadn’t closed up entirely, and they were still bleeding, dripping down onto the rug. I didn’t know if that was a limitation of whatever healing magic she was using, or if Bethel had simply cut off her healing supply with another ward. “If he did something to you, or your people, --”

Bethel held out a hand, and Uther appeared above it, a talking head speaking with restrained fury.

“If you speak about this to anyone, whisper so much as a word, I’ll return here and start ripping away every piece of you. I’ll smash your windows and tear up your floorboards. Your power? I’ll load you with so many entads you won’t be able to think, let alone speak. There are dark and twisted items of power, and I’ve been collecting the worst of them for quite some time, horrible things that would warp you beyond all recognition. Don’t so much as think my name, do you understand?” I didn’t know how close to the truth that actually was, since by her own admission her intellect and memory hadn’t been fully formed at that point, but he was nearly snarling. He seemed ready to launch into something else, another threat from the look on his face, but Bethel waved the image away like it was a cloud of smoke.

Raven had a pale complexion, which went paler on seeing that. (Maddie had spent most of her time in a dark room with blackout curtains, typing away on her computer. The whiteness was another thing they shared in common.)

“You were … the house, Kuum Doona,” said Raven. “I … I don’t know why he would have said such a --”

“Oh, that,” replied Bethel with a malicious grin.
She showed it. I turned away, but the sound was loud enough to fill the room. It made my skin crawl. Bethel showed no mercy whatsoever, which wasn’t a surprise; this was a display intended purely to torment, dirty and ugly. I heard Uther stop more than once to give some instruction, and I felt my stomach churn at hearing his voice. It felt like a few minutes had passed before it finally stopped.

“Strange, to me, how important the act is to mortals,” said Bethel. “It was meaningless to me, and still is, but you care more about the images I projected with one power and the force I applied with another than his threats to me, or the decades of isolation he enforced. He deprived me of purpose, he refused to be my master, and it’s the ephemeral, simulated flesh that makes you cringe in horror. No, don’t speak.” This was directed at Raven, who had opened her mouth to say something. She shut it and pressed her lips into a thin line. “Juniper, what do you imagine is going to happen when you drag him out of whatever hole he’s hiding in? Will you bring him here, to me?”

“I don’t know,” I said. I clenched my teeth. “Probably.”

She seemed surprised at that. “After all that time? All that questing?” asked Bethel. “Why?”

“So he can answer to you,” I said. “If I had to guess, I would say … I would say that he would probably explain that he was going through some shit and you were the way he dealt with it. Or if he’s stupider than I think, he’ll say that you weren’t even a person then, that you didn’t have real feelings or weight to you, even if you do now. He could say that your ability to process anything only came later. I’m not sure that would absolve him. On Earth, there were computer programs that could fake being human, well enough to fool a few of the people some of the time.”

“Sims,” said Bethel.

It took my brain a moment to catch up. “Uh, no, The Sims was a game, I was thinking more of, um, Markov chains and chatbots. I’ll give you some of the literature later, moratorium on Earth stuff be damned.” I paused for a second. “I’m sorry that I haven’t been a good companion to you. I should have talked to you more, before it became an issue.”

“It was always going to be an issue,” said Bethel.

“I know,” I said. “But if we had talked about your feelings beforehand, we might have been able to … I don’t know. Deal with them, I guess. I didn’t give enough thought to how you felt about Raven. She introduced you to,” fucking brain don’t fail me, what the hell was his name, “Tansy, and without him, you might have had a better life. She was complicit in what Uther did, even if she was ignorant, because the way these things work, that ignorance was cultivated.” I looked at Raven as I said it.

“You’re not angry with me?” asked Bethel. “Amaryllis certainly is.”

“I’m not happy,” I said. “But … I get it. I might have done the same in your position. Sometimes it feels good to hurt people.”

Loyalty Increased: Bethel lvl 4!

“That said,” I continued. “We should probably put her fingers back on and actually hear what she has to say. If you don’t think that you can talk to her without wanting to hurt her again, we can go to one of the rooms where you can’t listen in. I’ll give you a full report later.” There was only one room that she couldn’t listen in on, the time chamber, but I didn’t need to say that out loud.

Bethel stared at me, with eyes that were halfway between the color of Amaryllis’ and Tiff’s. “You’re
not acting like yourself,” she said.

“I’m putting in effort,” I said. “Most likely it’s effort that I can’t sustain, and when I slip up, I’ll be back to how I was again, but … I am making an effort.” I looked at Raven. “Let her speak?”

“Hrm,” said Bethel. “Very well, she’s yours.” Bethel vanished, blinking out of existence. It was always hard to remember that what we saw of the person was just a projection, and her actual self was the house we were standing in. She wasn’t actually gone.

<‘I’ll let the others in when you give the signal,’> Bethel said into my head.

“Help me with my fingers,” said Raven. There was a certain weariness to her voice. Her face was damp with sweat.

I collected the fingers from the floor and looked them over one by one, trying to figure out which one was which. It was ghastly work, and she was bleeding through all of it, though not very heavily.

“You’re going to have to cut away some of the skin,” said Raven. “Unless you have better healing than I do.”

“I don’t,” I said with a grimace. “And I don’t have a suitable knife, so --”

A knife appeared in midair, courtesy of Bethel, and I caught it without so much as a pause.

Raven was more or less silent as I cut away the skin enough that the finger could be reattached and then healed so it was a functional part of her again.

“Can she hear everything we’re saying?” asked Raven after I was done with her right hand.

I nodded. “If you assumed that she had arbitrarily powerful senses, you wouldn’t be too far off. She can’t read thoughts or memories.” That I know of.

“I see,” replied Raven.

“Sorry about your fingers,” I said. “I think your boasting rubbed her the wrong way.”

“It’s fine,” said Raven, her voice a little bit cold. “I’m seventeen hundred years old, and more to the point, I adventured with Uther Penndraig for thirty-two years. I’ve had my fingers cut off before.” She was silent as I reattached another finger. “Uther loved when his enemies made boasts. I’m not sure that he ever enjoyed himself more than when he was making someone eat their words.” She went silent again as she watched me work. I didn’t really have much to add. “It’s starting up again, isn’t it?”

“Yes,” I said.

Raven let out a long, low sigh. “Fudge,” she said.

I finished with the last finger. My hands were slick with her blood. She flexed and looked over the work.

“Yeah, pretty much,” I said. “I’m sorry about … about how Bethel chose to express her anger and frustration. She’s only recently reformed.”

“Reformed from?” asked Raven.

“Killing everyone that steps inside her,” I replied. “She did that for, uh, a few centuries, I think.”
“Ah,” said Raven.

Up close, the resemblance to Maddie was stronger. By rights, it shouldn’t have been, given that Raven was 1,700 years old and completely divorced from Earth fashions, but the Dungeon Master had probably manipulated things behind the scenes. They had the same hair style and the same makeup, and even the same cast to their expressions.

“I’m sorry,” I said. I shook my head slightly. “We’re, um, going through some things right now. I can explain more later. It’s complicated. I’m sure it was like that with Uther sometimes.”

“All the time,” nodded Raven. “It was complicated even when it was straightforward. He always assumed that anything simple was a trap, and he was usually right.”

<Amaryllis has some questions for Raven,> Bethel said into my head. <She is quite insistent. Are you building rapport?>

“Bethel can speak into our minds, so long as we’re touching her,” I said to Raven, by way of explaining why I’d gone silent. <I’m not sure. Another few seconds, a minute at most.>

<Take all the time you want,> replied Bethel.

“She just told me off,” said Raven.

I gave her a faint smile. “That doesn’t surprise me,” I said. My smile was quick to slip. Every smile I gave made me think of Fenn, and how she was gone.

“Why did you ask me whether he was a good man?” asked Raven.

“I don’t know,” I said. “I guess I just thought … I thought that maybe you would give an unambiguous yes, one that would clear away some things that I’ve heard about him.”

“No,” said Raven.

“Ah,” I replied.

“He saved his kingdom from ruin a dozen times,” said Raven. “He saved the empire he founded too. He saved the world. Billions of people owe their lives to him dozens of times over. If you stack up everything that he accomplished, there’s no way that you can say he wasn’t a force for good in the world.”

“And yet,” I said. The images that Bethel had presented flashed through my mind.

“Yes,” said Raven.

“I need to find him,” I said. “Even if you don’t know where he is or what happened to him, you must have made notes when you were looking. There are probably dead ends that we wouldn’t have to spend so much time tracking down.” And then I can find the Lost King, and we can rush the ending of this thing, and Fenn can have her life back.

“I know the last place he was,” said Raven. “I was never able to investigate it, though I did try.”

“Why not?” I asked.

“It’s in an exclusion zone,” Raven replied. There was something dark behind her eyes.

“Which one?” I asked, hoping that she wasn’t about to give the answer I thought she was.
“Fel Seed,” Raven replied.
“So what, precisely, will happen if we start shipping out televisions?” asked Amaryllis.

She was pissed off, for a number of reasons. She was pissed off at Bethel, naturally, for both the foul play and the break in communication, especially against someone who was probably an ally. She was pissed off at me, for taking it in stride. And she was pissed off at Raven, or maybe Raven-as-messenger, because a lot of her plans had apparently been shot in the foot. (On a different level, she was pissed off because that was the lingering affliction that the crown of thorns had given her.)

We had switched rooms again, into one with less blood on the floor. I had cleaned off, and Raven had too, though she hadn’t changed out of the clothes she came in. She was a little bit shaky, and I’m sure part of that was that we were still inside the house that had temporarily maimed her. The entire Council of Arches (Fenn excluded) sat at a half-moon table, with Raven seated at the focal point, on a chair that was set in a sunken floor. We didn’t quite tower over her, but the room had been built and furnished a few minutes ago using every trick in the book to put Raven at a psychological disadvantage. It wasn’t remotely subtle, and in my opinion, entirely pointless, perhaps even detrimental, but a quick tele-thought conversation with Bethel stopped me from objecting outright.

Bethel had made a seat for herself, but she wasn’t sitting in it, instead allowing the projection to fade away. The empty chair was ominous.

Raven took a breath. “A cathode ray tube television works by manipulation of an electron stream, modulated by --”

“I’ve built four prototypes,” said Amaryllis. “I don’t need a primer on how they work. What is the consequence to the world you’re attempting to avoid by coming here and issuing me a warning?”

“There’s a planar entity,” said Raven. “Under certain circumstances, it’s capable of altering the electron stream within a television in order to produce moving images of its own design. Some of those designs are capable of producing … effects.”

“Specifically,” said Amaryllis, gritting her teeth.

“Mental changes in those who view them,” said Raven. “The effects vary.” She continued on quickly, because it seemed like Amaryllis was going to press the issue again. “The best case scenario is increased mental acuity, decreased reaction times, better impulse control, and lessened emotional response, which comes packaged with a direct line of communication to the entity itself. Non-replicable when the moving pictures are recorded, in case you were wondering. The ‘gifts’ are temporary and used as leverage. In the worst case … there are a lot of worst cases. The entity can make people into flesh puppets. It can leave them comatose. It can hold them hostage in their own bodies, locked in, which it does if it thinks that will give it an advantage.”

“And why wouldn’t you --” Amaryllis paused. “Ah. Cultists.”

“Cultists,” nodded Raven. “Not like those that worship the infernals though, because there’s every indication that the entity is forthright in honoring the promises he makes. There have been scenarios where knowledge of the entity was presented to the world at large, as you suggest, in the hopes of mutual cooperation. The result, every time, was a race to the bottom as the nations of the world attempted to be the first to get on the entity’s good side. World population undergoes a precipitous drop once the entity has its toehold, until eventually the last one percent of survivors live in something approaching a paradise for a decade or two before the entity is brought to immanence.
From there, it’s a paradise with bodily sacrifices. The contorted writings of those living in that world are something to behold.”

“How much danger are we in, if we’ve watched television?” asked Amaryllis.

“Your prototypes?” asked Raven. “Almost none, if it was just for testing. The dangers are more on a wide scale.”

“Let’s say … six hundred hours of exposure,” said Amaryllis.

Raven stared at her. “Six hundred?” asked Raven. “You would know if you had seen one of the sequences, but … six hundred?”

“And if I’m not conscious of having seen one of the sequences, I’m safe?” asked Amaryllis.

“Yes,” said Raven. “But what were you even watching? That’s twenty-five days without rest watching television, and without anyone making compliant media --”

“It’s not important,” said Amaryllis. *A deer barfed up a magical backpack that pulls potentially infohazardous information from a world that may or may not actually exist.* I was trying to track Amaryllis’ math again. Six hundred hours would be an hour every day for almost two years, or two hours a day for less than a year, which didn’t seem too far off from what I’d seen of her media consumption in the chamber. Six hundred seemed like a bit of a lower end estimate, to be honest.

“So, sorry … you do have books from after the fall of civilization?” I asked. “I was under the impression that no more were published past the end date.”

“She asked about television,” said Raven. “I’m doing my best to answer the questions that are presented to me as accurately and completely as possible.” She left ‘because you have a gun to my head’ unsaid.

Amaryllis pinched the bridge of her nose. “Then what threat are you here about?” she asked. “Plastics, somehow?”

“I’m not here about any specific threat,” said Raven. “Though if you’re talking about synthetic polymers, there are some pitfalls we’ll need to discuss, specifically regarding the volatility of their innate magic. It’s fairly likely that you would abandon the project on your own, after having invested quite a bit into it.”

“Then why are you here?” I asked.

“We only know what’s going to happen because the Library contains books that either discuss what’s happened, or what’s happening at the time the disaster occurred,” said Raven. “Sometimes it’s simple, and sometimes it’s not, but it requires *something* from the books, some hint as to what happened. In this particular case, we have no hints. It’s not an apocalypse that one percent of the world survives, it’s not a total collapse of civilization, it’s not an infernal invasion, the books just … stop. I came here because the Republic of Miumun is the strongest single lead we have, and it’s not -- or wasn’t -- particularly strong. There are warning signs here, mostly in terms of the technologies that are being produced with wild abandon, and whose origin I’m still ignorant of.”

We still hadn’t told her anything, mostly because we didn’t have to. Eventually she was going to put her foot down and refuse to say more, but we hadn’t reached that point yet. So long as she was willing to answer our questions without demanding anything in return, I was pretty sure that we weren’t going to volunteer anything.
“So you don’t actually know if we’re implicated?” asked Amaryllis.

“No,” said Raven, but there was a note of hesitation.

“And the Library is fallible, in more ways than one?” asked Amaryllis.

“It is,” said Raven with a nod. “It’s entirely possible that the entity I spoke of would be excluded to his own patch of Aerb if televisions were ever distributed, and we might lose another metropolis because of it, but it wouldn’t be the disaster for all the mortal species that the Library was predicting when I left. Unfortunately, we have no idea whether the exclusionary principle will protect us until it actually happens -- or fails to. Obviously intentionally attempting to trigger an exclusion is something we don’t do.”

“Obviously,” said Amaryllis.

“And you are, by your own admission, implicated,” said Raven. She had her hands folded in her lap. “I came here wanting to know what the ultimate source of your technological sophistication is, and I think that I might have found a deeper answer than I expected. This might be the solution to the greater problem.”

“Wait,” I said, holding up a hand. “Explain? Draw me a timeline here.”

“You’ll need background,” said Raven, taking a breath. “The Library staff consists of roughly one hundred librarians, with another three hundred working on the outside. The Library contains every book that has been or will be published, including duplicates, but the exact nature of the predicted future displayed in the books-yet-to-be-written is missing a few crucial elements. So far as we can determine, the future written in the Library cannot account for people coming and going from the Library itself. That means that anyone entering into the Library will, from the Library’s perspective, vanish from the face of Aerb, which has some unpleasant knock-on effects. The second major problem, at least for our purposes, is that the exclusionary principle is unknown to the Library.” She took another breath. This was clearly a rehearsed speech, one which she was trying to get through quickly. I wondered how many people she’d shared these details with, and how their conspiracy had stood the test of time.

“Whenever someone enters or exits the library, everyone in the library instantly returns to the vestibule, and all books are instantly reorganized and altered on the basis of the new future,” said Raven. “The organizational schema are unique to each reset, but there are patterns to them, and with the help of a specific type of magic unique to the Infinite Library, we can generally find relevant books within weeks or months of a reset. Because those resets represent a complete loss of cataloging effort, we make every effort to control travel to and from the library. Are you with me so far?”

I nodded.

“Wait,” said Amaryllis. “It resets when people enter? You said that the predicted future already accounts for people entering the Library. Why would that be the case that their entrance causes everything to change again?”

“We don’t know,” said Raven. “We only know that it happens. Much of the Library is like that.”

“Fine,” said Amaryllis with a wave of her hand. “Go ahead.”

“The problems started roughly two and a half months ago,” said Raven. “The world’s end date was two hundred years into the future, and all was right with the world. Then we had a regularly
scheduled shift change, the Library reset, and we began delving the books again, only to find that our timeline had been cut down to virtually nothing. We’d been dreading the day that the Library turned up something that we couldn’t stop, and for seventeen frantic, exhausting days it seemed as though that was what had happened, because there was simply a dead stop in publications. We started on our contingencies, the biggest of which involves building up a map of all the scheduled events on the week that the world is supposed to end, in the hopes that we could find a trigger, something like the announcement of a new testing facility being opened. None of that bore fruit.” She went silent, as if reliving the stress.

“How did you avert it?” I asked.

“We didn’t,” she answered. “We had a few desperate contingencies that we were going to put into place. When our agents left the Library, a week and a half before the end of the world, the Library reset, and the end of the world had been pushed back considerably, and without any seeming involvement on our part. We sent out another set of agents to stop the first set from enacting the contingencies, which reset the Library a second time. We were down to a twenty year timeframe.”

“What are the contingencies?” I asked.

Raven shifted in her seat. “That information is classified,” she said.

“Just curious,” I said with a shrug.

“I’m more than curious,” said Amaryllis. She tapped her fingers on the table in front of her. “Tell us.”

“I don’t actually know who any of you are,” Raven replied.

Bethel appeared as Tiff, standing two feet in front of Raven, leaning in with her hands on the arms of the chair. Raven let out a very understandable yelp of surprise.

“You know me,” said Bethel.

“I do,” said Raven. She had pushed herself back into the chair, as far from Bethel’s projection as possible. “Sorry.”

“Don’t give her PTSD, please,” I said.

Bethel stood back from Raven’s chair. “What’s PTSD?” Bethel asked, still staring at Raven.

“Posttraumatic stress disorder,” I replied. “You’d call it shellshock, or maybe combat neuroses?”

“ERD,” said Amaryllis. “Event response disorder.”

I frowned at that, and nearly let it go. “That seems like the most bland possible name for it,” I said. “That’s not even a description of what it is. It’s a stress response.”

“I didn’t name it,” said Amaryllis. She sounded weary, which was a good change of pace from angry, so far as I was concerned.

“Ah, I think I’m well familiar with the phenomenon,” said Bethel. “Tell me, does it take one hundred times longer to induce it in the Ell?”

“Yes,” said Raven. She seemed to be holding her breath.

“Enough with the threats,” I said. “If she can’t tell us, there’s probably a good reason.”
“No,” said Raven, still backed up in her chair. “No, I can tell, if things are starting back up again … at least I can say in general terms. There are different ways the world can end, different levels, and our most extreme contingencies involve causing something we would normally try to prevent.”

I frowned. “So you unleash certain horrors that you’re responsible for keeping contained in the hopes of turning back a reality restructuring event?”

Raven froze. “Where did you hear that term?” she asked.

I sat in silence. The answer was that it was part of the overarching plot of Long Stairs, or at least, the first version of it I ran, which was in turn loosely inspired by the SCP Foundation. The concepts I’d need to lay down as background were too daunting for the time being. There’s this thing called an electronic computer on Earth, and a lot of them are hooked together, and people can collaboratively edit documents on them, and, and, and.

“I’ve been extremely cooperative,” said Raven. “You’re keeping me in the dark, and I can respect that, but I can communicate more effectively if I know who you people are and what you’re trying to get from me.”

“Continue with the recent history, please,” said Amaryllis.

Raven opened her mouth, then closed it again. “The future was shifting rapidly,” she said. “That was a bad sign. There was something that the Library was having trouble with, either a cascade of events that balanced on a knife’s edge, or something that the Library couldn’t account for. It was hard to say which. We saw the Isle of Poran in three of those futures, three times when it was a catalyst for some unpleasant future we wanted to avoid, and worse, three different bad futures. We put plans into motion to stop you, and the future would clear up, but not always for the better, and using the Library risks damaging it. The internal schemas becomes more convoluted and the Library’s geography more unfriendly, depending on the intervention used.” She furrowed her eyebrows. “It felt like we were being backed into a corner. And then it finally happened, something that we had only theorized before. We got the good future.”

“Ah,” I said. “The future with no calamities in it.” The Infinite Library was patterned off the Boundless Library, and that was one of the concepts I’d worked up for it. Librarians would try to monkey with the future only to find that they got the good future -- and they were locked out of it, if they wanted it to remain the way it was. Mix in some uncertainty of how accurate the Library was, and you’d get a powderkeg of conflicting views among the librarians.

Raven nodded. “The future without end,” she said. “There were too many books for us to get an accurate estimate of how many there were. Most were in languages so foreign that they could only be read using our most powerful translation magics. They didn’t even use the same calendars we were used to.”

“But it locked you inside the Library,” I said. “You couldn’t go out without changing the future.”

“It wouldn’t have mattered,” said Raven. “We would all gladly have died in the library if it would have given us that future. But the future the Library shows isn’t always true to events, and it wouldn’t be the first time that it’s shown a future better than what happened. Either way, there was no stopping the next shift change, which would happen regardless. We scrambled to find answers as best we could, but we weren’t even able to crack the schema in the time we had.” She paused, weighing her words. “There was a book that spoke, in passing, of a transition from danger to safety. We didn’t learn enough to know what had happened to create the paradise, because the shift change came, and the library reset. It was back down to ten years time.”
“So you came to find us,” I said.

“Something was happening,” said Raven. “We didn’t know the root of it. We knew that the Isle of Poran and the Council of Arches were, at least in some futures, a part of it. I think it’s safe to say that I didn’t know what I was walking into.” She gave a little snort of laughter at that as she glanced down at her fingers. It was reminiscent of the nasal way that Maddie sometimes laughed. She looked back up at us. “What more do you need from me?”

“Did Uther kill Vervain?” I asked. I saw a muscle in Amaryllis’ jaw move. No doubt she considered this a distraction, but she had the good grace to let me continue.

“That’s,” said Raven, then stopped herself. “May I ask who told you that? So I can know which version of the story you heard?”

“It was Heshnel Elec,” I said. “He didn’t say much on the subject.” And he’ll be visiting tomorrow.

“There’s not much to say,” said Raven. “They went off together, to somewhere unspecified, and when Uther came back he was alone. He didn’t give us answers. He only said that he had killed Vervain, and that he was justified in doing so. It was cryptic, even for him. We thought that perhaps it was something that we couldn’t know, or something that it would be dangerous to know. That had been the case in the past. I’m sorry I can’t offer more.”

“We need profiles of all of the threats,” said Amaryllis. “You haven’t specified how you enter the Library, but we’ll be coming with you next time you go there.”

“That’s not how it’s done,” said Raven, her voice taking on a bit of chill. “We don’t let people into the Library without carefully vetting them first. We aren’t supposed to let people know of its existence, though obviously leaks occur from time to time. You said that you met with my father. Was he the one who told you?”

Bethel appeared again, still as Tiff, wearing the ‘Kansas Swim’ shirt we’d first found her in. “Would you like me to do an impression of you, if you fail to let us into the Library?”

“Bethel, enough,” I said. “She’s going to let us in, with or without your threats.”

“It’s a very good threat,” said Bethel, turning back to me and raising an eyebrow.

“I have very little doubt about that,” I said. Seeing Tiff again was hard. I had pangs of longing for her, not as my girlfriend, but as someone I’d always been comfortable talking to. With all the stuff that had been going on lately, with losing Fenn, I wished that -- I don’t know, that I had her to lean on in my time of need. None of my party members really felt like they could fill that role.

“Juniper, would you like to do the reveal?” asked Amaryllis.

“Oh,” I said. “Certainly.” I had been working on refining my speech a bit, since it seemed as though we were going to be bringing people in. I cleared my throat. “The universe shaped itself around Uther Penndraig. It’s doing the same for me.” I gestured around me. “This is the Council of Arches, which I guess would be the equivalent to Uther’s Knights. I have the same Knack that Uther did. If it looks like something is going wrong with the world, it’s probably because we’re expected to fix it.”

“That’s not what it was like,” said Raven. Her voice was soft.

I frowned. I hadn’t been done. “It wasn’t?”

“The universe didn’t shape itself to him,” she said. “The world threw everything it had at him. He
fought with a fervor that I doubt most men could ever have hoped to match. He had advantages, we all did, I would never dispute that, but he was put through the wringer until the very end, when there was practically nothing left of him. But that’s not the whole story.” She leaned forward in her chair. “There were times we were rudderless, when he didn’t know the next thing he should be doing. He wasn’t a man who liked lacking for purpose, and those times were always the most difficult. We would go to new places with him sometimes, following in his wake, and we would have to watch him searching for a way he could insert himself into the affairs of others, a way he could reframe whatever was happening so that it would become a part of his mythology.” She leaned back. “And it’s very apparent that he was too successful, because there are people who legitimately believe that the entire world was made for him.”

“It was,” I said, voice firm.

“No,” said Raven, shaking her head.

“It was,” I repeated. “I know, because I was the one who made it.”

Raven stared at me.

“It’s a long story,” I said. “If you wanted to start at the beginning, you would start on Earth. Arthur and I were classmates. We played games together. Aerb is … it’s hard to pin down, but I invented most of the pieces of Aerb from whole cloth, or cribbed from Earth media, before I came here, and before I knew that it was or could be a place of its own. Every single day, I see things in my notes brought to life. I read through history books and I remember doodling out fragmentary versions of those events while I was watching TV. Maybe Aerb didn’t bend itself to Uther completely, not if he was going to bend it all on his own, but whatever it is that’s going on, it was made for him.”

“You’re dream-skewered,” said Raven, staring at me. “That’s how you met my father.”

“Yes,” I replied. “Uther was too. Those times that he sometimes knew things that he shouldn’t? That’s because he’d already played with the toy versions.”

Raven sank in her chair. “Why?”

“Why what?” I asked.

“Why … why all of it?” she asked. “I never wanted to believe there was a plan, because if there was a plan, there was a planner, and if it was all according to plan, then the planner was a madman and a monster. So why, if this was all meant to be, if it wasn’t just some abstract force … why?” She was staring at me like she thought that I actually had the answers.

“We’re still working on that,” said Amaryllis, in her most sardonic tone.

“There’s more background I’ll have to give you, once I know you’re not a threat to us,” I said.

“I’m as thoroughly disarmed as I’ve ever been in the last few hundred years,” said Raven.

“We were attacked, earlier today,” I said, though it didn’t feel like earlier today, since subjectively, it wasn’t. It hit me like a punch to the gut when I realized that it had been less than twenty-four hours since Fenn had died. I was grateful for the time we’d had in the chamber. Without it, I wasn’t sure I’d have been able to hold things together. “They were old friends of Uther’s. We’re not inclined to take chances anymore.”

“Attacked?” asked Raven.
“Yes,” said Amaryllis. “Everett Wolfe, Gur Dehla, and a bellad, O’kald. We were poisoned and attacked. They’re all dead now.”

“Everett,” said Raven. “Gods, Everett.” She sat forward in her chair and held her face in her hands. “Gods, is he …” When she looked up, it was clear she was crying. “Is he in the hells?”

“I don’t think so,” said Amaryllis. “A renacim, Pallida Sade, said that she was going to retrieve the souls. We never learned whether she was successful or not.”

Raven wiped her eyes, drying them on the sleeve of her robe. She drew in a breath and then let it out, shaking slightly. “Forgive me,” she said.

“We lost one of our own,” I said. I could feel myself resenting her for her grief over someone who had tried to kill us, someone who was at least partially responsible for Fenn’s death. I took a deep breath and burned WIS. Raven had been with Everett for thirty-some years, through all kinds of crazy adventures, of course she would mourn his loss. The phrase ‘monopoly on grief’ kept going through my head. I’d been accused of that a few times, back on Earth. I’d tried my hardest not to do the same on Aerb in the wake of Fenn’s death, trying not to lash out in the same ways. The only reason not to show sympathy was that it took effort. “I’m sorry,” I said. I tried to formulate some way of phrasing ‘sorry we killed your friend but we were totally in the right’ that didn’t sound dickish, but nothing seemed suitable, so I left it at ‘sorry’.

“It’s fine,” said Raven, wiping her tears again. “I’m the only one left. I knew I would be. Everett thought … he thought that maybe if he jumped ahead he might get answers, some day.”

“He did,” said Amaryllis. “I don’t know if that’s any consolation.” She turned to me. <Juniper, scenario?> Bethel asked in her voice, relaying the message.

<Zero,> I replied. <Surprised that you’re willing to use this method of communication given the potential for man-in-the-middle, no offense.>

<None taken,> replied Bethel.

<We’ll have a long talk as a group after this is over,> said Amaryllis. <I’m not happy about the way things went. That said, we have more important fish to fry.>

<Sorry about your plans,> I said. <They were very nice before they got destroyed.>

<We’ll see what we can salvage,> replied Amaryllis.

“Thank you,” said Raven. “And thank you for giving me time.” She looked at me with bleary eyes. I had some preconceptions of Raven, which had been reinforced when she’d gone into Valkyrie mode with magic flaring around her, but now I was finding her much more vulnerable than I had thought she would be. A small part of me wondered whether that was an act intended to evoke sympathy, but it didn’t seem likely.

“You said that Uther’s last known location was the Fel Seed exclusion zone?” I asked.

The faint, grateful smile on Raven’s face fell. “Yes,” she said. “That’s not widely known.”

“Why?” asked Amaryllis.

Raven licked her lips. “How much do you know about the time after his passing?”

“Some,” I said. “Largely unspecified threats, spoken of in such a way you assume that people are
using capital letters, massive loss of life among those who fought, bad feelings all around, and at least one schism between the survivors.” I shrugged. “Most of that we learned in the last few days, speaking with either Speculator Masters or Heshnel Elec.”

“By the time I found what I’d found, things had quieted down,” said Raven. She wiped at her eyes again, though they were already dry. “I didn’t want to stir them up again. And it had been so long … it was very likely that he was dead.”

“Likely,” I said, “But it was possible that he wasn’t?”

Raven swallowed. “Fel Seed,” she began, then stopped. “We don’t know how Fel Seed happened,” she said, measuring her words. “There wasn’t a source, like the others, some magic gone awry or some entad that came out too powerful. He appeared in 34 FE, but … we’re not sure that there wasn’t some kind of incubation period, that he hadn’t gained his power, or that he was in hiding, and … there were rumors.”

“Rumors that Fel Seed was Uther,” said Amaryllis.

Raven nodded, head down.

“Not a theory that anyone gives actual credit to anymore,” said Amaryllis. “I read it once in a footnote, a theory that was dismissed in the same sentence it was brought up. I had the same thought myself, even before that.” She was staring at Raven. “Do you believe it?”

“No,” said Raven, looking back up at us. I kind of hated the way we were sitting above her, in a position of power we didn’t really need. “No,” she repeated. “It’s absurd, there’s a four year gap you’d have to account for, and -- and even if he had broken completely, there’s no way that he could have become something like that, whatever his sins, he just wasn’t --” She stopped and looked at Bethel’s empty seat. “If people knew that I’d tracked his last location to the Fel Seed exclusion zone, that rumor wouldn’t be so quickly dismissed. He wouldn’t be the Lost King, he would be the Fallen King.”

“Who knows?” I asked, after a silence had fallen over the room.

“Only the people in this room,” said Raven, looking between us.

“You trust us?” asked Grak, frowning.

“I don’t know,” said Raven. She was breathing harder than she had been. “It’s starting up again. I could already feel it before I came here. Maybe you’re villains, maybe you’re heroes, but whoever you are, I think you’re important.” She glanced at Bethel’s empty chair. “The secret has come close to dying with me. I wouldn’t want that.”

“We’re going to need to have some private discussion,” said Amaryllis.

“I did come here for a reason,” said Raven. “Wherever you’re getting your plans from, you have to stop. This is more of an intervention than the Library usually likes, but if you’re the common denominator, it needs to be brought to an end one way or another.”

“Once I know the details, I’ll know how to work around it,” said Amaryllis, folding her arms.

“That’s historically met with problems,” said Raven.

“Of what sort?” asked Amaryllis, after Raven didn’t volunteer anything further.
“Let’s say, for example, that you decide that you’re intent on producing cathode ray tube televisions,” said Raven. She furrowed her brow. “You decide that you can come up with some clever workarounds for the entity that will prevent him from getting his hooks in or inflicting damage, such as testing which specific images he’s able to produce and mapping out the contours of how and when it can alter the images you’re projecting. You would build up a model of the threat and work on some countermeasure, one that’s proof against the inevitable reverse engineering by others. Yes?”

Amaryllis squinted slightly, then nodded. I was sure she didn’t agree on the specifics, but in the general sense, yes, she would be inclined to that sort of approach.

“Perhaps you miss something, and we see it in the Library,” said Raven. “That’s probably your first thought, because it was Uther’s first thought. Unfortunately, the Library doesn’t take kindly to that kind of iteration, and every attempt to rapidly cycle through futures in hopes of avoiding specific negative outcomes has resulted in a Library that’s twisted and warped, sometimes beyond our ability to properly use it.” Raven cleared her throat. “Now, that might be a bullet that you’re willing to bite, because you might consider the Library to be of little worth given its limitations, but this is where we get into other problems. Namely, sometimes an exclusion will rear its head for what seems like no good reason. The exclusionary principle is a double-edged sword, protective and limiting, and sometimes pushing some seemingly promising idea too far will trigger it, or invoke it, or whatever is actually happening on the cosmic level to create it. Those are probably the two least bad scenarios, at least from your perspective.”

“And the third?” I asked, because I could see where this was going. Amaryllis was silent, with a sour look on her face.

“Third and fourth,” replied Raven. “The third outcome is a mysterious death, or deaths, or accidents, or … something. We don’t know what. All the books we would read about your ventures would be filled with stories of success, but even if we sequestered ourselves away in the hopes of ensuring that future happened …” Raven went silent and looked into the distance. “We’d come out, twenty years later, only to find that the future hadn’t gone like the books said it would. We would try to trace back what had happened, and find that there was a freak fire in your laboratory that claimed the lives of everyone involved. Or a lead scientist would have caught a seemingly innocuous cold, only for it to develop into something more serious and beyond the workings of any magic he had available to him. Those aren’t hypothetical.” She took a breath. “And sometimes these would be small things, chance happenings with surgical impact on the project, but other times they would be nationwide calamities like wars or plagues.”

“Like someone was nudging history away from the places they didn’t want it to go,” I said.

“Maybe,” said Raven. “It was believed, for a long time, that there were agents working within the Infinite Library itself. That would have closed the question nicely, since it would explain why the Library couldn’t account for them, even if it would be incredibly troubling. A conspiracy within a conspiracy … I’m the head librarian. If that conspiracy exists, then I’ve never found any evidence for it. I don’t even know what the point of it would be.”

“And the fourth scenario?” asked Amaryllis, voice barely above a whisper. Her fists were clenched in front of her.

“It’s something similar to redaction magic,” said Raven.

Amaryllis let out a sigh that ended in a growl. “Redaction magic is excluded.”

“Yes,” replied Raven. “It’s not redaction magic, but it is something similar. More powerful, too.
Small traces get left behind, which is as close to evidence as we ever get. It appears to have some problem with numbers, leading to accounts that are inconsistent with themselves, places where line items were removed but the total wasn’t changed. Proper recordkeeping makes it more noticeable, but you have to already have a good guess in order to start looking for evidence. Again, we don’t have any clue who or what might be the cause.”

“There seem to be a lot of fingers on the scale,” I said.

Raven shifted uncomfortably in her seat. “I’m overstating because I’m trying to warn you,” she said. “These occurrences are exceptional, specifically because we work so hard to avoid them. We work with the Library only in very specific ways, ones calculated to cause the minimum amount of damage to both the Library’s continued function and to the world at large.” She grimaced. “That’s been a challenge, of late.” She looked between us. “I need more from you. You might start with where you’re getting these innovations from.”

“The last living locus spit up a magical backpack that can pull in books from Earth,” I said.

Raven stared at me.

“I had a long conversation with the ur-creator of Aerb, and he offered me the backpack as either a way of being generous, or as a ploy to set this up,” I said. “I’m reasonably certain that he’s directly responsible for creating exclusion zones as one of his few interventions, though he’s also confessed that he gives occasional nudges from time to time, which would explain the apparently random accidents that happen when you attempt to exploit the Library. He’s almost certainly capable of unpersoning anyone he wants, though he could do it flawlessly if he really wanted to, so my guess is that the evidence is either left behind because it’s more convenient that way, or because he’s sending a message, maybe both. He would probably be inclined to cloak these activities in some way, so I would expect, say, an antimemetic monster that feeds on, say, a specific brain pattern associated with,” I waved my hand. “Whatever phenomenon he wants to limit as a way of keeping the world to a certain level of technological advancement, rooted within a particular aesthetic he’s fond of, or possibly something even more flippant.”

Raven kept staring at me, mouth slightly open. Her eyes flicked over to Amaryllis, who had her face in her hands.

“So,” I said. “It looks like we’re probably going to be heading into the Fel Seed exclusion zone in the fairly near future, and you’ve got a strong pedigree, strong magic, lots of knowledge, and a personal connection. Would you like to come with?”

“Juniper, sidebar,” said Amaryllis.

A column of pitch black surrounded Raven in her chair as wards snapped into place.

“We need to talk about this as a group,” said Amaryllis.

“I know,” I replied. “And we need to know how she knows, and then confirm it ourselves, before we’d even think about going near Fel Seed. I’m not about to ask anyone to put their life on the line, and the most compelling case I can make is that Arthur seems like the endgame to me, the point where I might actually be able to win instead of treading my way through challenges. I know that’s not terribly compelling.”

“Juniper, to put this in terms that you’d understand, Fel Seed is a high level quest,” said Amaryllis. “We have an enormous stack of high level quests, and as far as I can see, he’s the highest. Making a beeline for him is … it’s probably not suicide, though I can’t actually think of any reason that it
wouldn’t be, other than narrative, which you’re adamant that you don’t believe in.” I saw the muscles of her jaw working after she was finished speaking.

“What would you have us do?” asked Grak. To my surprise, he pointed the question at Amaryllis, not me.

“We should go into the library and try to find some answers there,” said Amaryllis. “Juniper has the skill —”

“Picked because I didn’t know what it did,” I said.

“Juniper has the skill,” Amaryllis restated. “And there’s almost certainly an angle there, in spite of all the warnings that Raven has issued. We’ll wait until tomorrow when we have a meeting with Pallida and Heshnel to see what they know, and whether there’s something more urgent that we need to focus our attention on. It’s very likely that we need to put out what seem like a wide variety of fires. We need to know the threats, then assess them, then decide on which order we’ll tackle them in given our abilities and how rapidly we think we can escalate up to being able to deal with them.” I saw the muscles of her jaw tighten again. Her speaking was rapid and slightly clipped. It was subtle enough that I wouldn’t have noticed it if I didn’t know her so well.

“The locus cannot wait forever,” said Solace. She was still in the body of the brown-skinned man, but her manner was as patient and calm as ever. “It’s possible, even probable, that the Library has some information that would be of use.”

“I’ll do whatever anyone wants me to,” said Valencia. Her voice was low and she kept her head down.

“Well, if we’re making our wishes known,” said Bethel, appearing out of thin air and still wearing Tiff’s skin, “I would rather not lose any more members of the house. At the same time, I very much look forward to the conversation with Uther that Juniper has promised me.”

“Don’t talk about Fenn that way, please,” I said.

“It’s fine,” I said with a wave of my hand. “Just still very raw.”

“And that’s why you want to go after Fel Seed?” asked Amaryllis.

“No,” I said. “I think, if I were the Dungeon Master, I would have made Fel Seed the final quest. He was one of the first things I thought about once I realized what Aerb was. The fact that Raven has brought us a link is a pretty damned clear signal. We’ll have to figure out why Uther actually went there though.”

“He’s Fel Seed, obviously,” said Bethel.

“No,” I said. “At least, I don’t think so. Not just because he’s Arthur, but … I made up Fel Seed. Maybe it would be best for us if he was Uther, because then I’d at least be able to make a personal appeal, instead of … however we’re supposed to beat him, if it’s possible.”

“You haven’t told us the whole story,” said Amaryllis.

“Not much to tell,” I said. “It was stupid edgelord bullshit. If you know what Fel Seed is, then telling you why I made him is just … I don’t know. Redundant.”
“Excuse me,” said Solace, frowning slightly. “What do the Edge Lords have to do with this?”

“Oh, right,” I said. “Er, it’s just an Earth term. I mean, the Edge Lords were also based on that, in part, but it just means someone who’s being moody and dark for no real reason, or at least a reason that doesn’t fully explain why they’re being ... edgy.” My vocabulary was failing me.

“Except the Edge Lords do have a reason,” said Amaryllis.

I waved a hand. “Doesn’t matter,” I said. “It was a poor choice of words on my part.”

“She’s struggling against the barrier,” said Bethel, peering at the black column she’d erected.

“I thought it was just for privacy?” I asked. “Blocking light and sound?”

“No,” said Bethel. “She can’t leave.”

“Well, let her,” I said.

“Please,” said Amaryllis.

Bethel frowned slightly and waved a hand, which caused the column of black to disappear, leaving Raven standing there. She must have been pounding or pushing against the barrier, because she tumbled out and then had to pick herself up from the floor.

“Productive conversation without me?” she asked, brushing herself off and retaking her seat. She didn’t seem terribly put out.

“We’re deciding on next steps,” I said.

“No,” said Amaryllis. “We’ll decide on next steps when we have more information. We were discussing possible next steps, once information gathering is concluded.”

“I see,” replied Raven, looking between the two of us.

“We’d like to go into the Library,” I said. “It’s likely that I’ll be capable of becoming the most proficient librarian you’ve ever had in the space of about a day.” Though I might have to trade off some other skills to make that happen.

“I see,” replied Raven again.

“In exchange, I’ll do my best to permanently stop the end of the world, get the good future set in stone, and as a bonus, clear up any lingering questions you might have had about Uther. My knowledge of him is limited to the time before he became Isiah of Colm, but I know a lot about Earth and the society he was raised in. Were there things he said that made no sense?”

“Almost every day,” said Raven. She pursed her lips. “My father,” she said. “Is he … did he survive?”

“Did you know that Speculation and Scrutiny was built within the exclusion zone for illusion magic?” I asked. “We found that out from your father, firsthand. But no, we left him alive and well. He owes us a cache of supplies and a handful of answers, actually.”

“Oh,” said Raven. It was the fourth or fifth time I’d heard her say it, an audible little reaction to new information. I somehow found it endearing.

“Pallida Sade, Heshnel Elec, and possibly Gemma Tails are all coming here sometime tomorrow,”
said Amaryllis. “Are you comfortable being our guest until then? We’d like to know what information you have on them, and what information they have on you, before we make any concrete decisions on what we’re doing next. It’s been a very busy few days for us.”

“Do I have a choice?” asked Raven. It seemed like honest curiosity, but I couldn’t help but see the way her eyes flickered to Bethel’s empty spot.

“Yes,” I said. “You can walk out of that door right now if you’d like.”

“The hells she can,” said Bethel, appearing in her seat with her bare feet up on the table.

“She can,” I repeated. “She’s not going to, because we’re the key to mysteries she spent a century of her life trying to solve, not to mention we’re very likely to be the only ones capable of saving the world, which she spent … what, the past four centuries on?”

“Less,” said Raven. “I wasn’t a librarian until after the collapse of the Second Empire.”

I glanced at Solace, and she gave me a small smile and a nod. It was something that I’d wanted to clear up sooner than later, and I was happy that it wasn’t going to be a point of friction. Heshnel, on the other hand, might be more of an issue, as he had not only been a working member of the Second Empire, but had seemed a bit defensive of it.

“Can you stop Kuum Doona, if she decides to kill me?” asked Raven.

“No,” I said. “I have faith that she won’t.”

“It’s true,” said Bethel, voice calm. “I won’t. I never said that I would, because as I’m sure you’ve gathered, I back up my words with my actions, as any moral entity would.”

“Then I’ll stay,” said Raven. “I need some time to think, if that’s okay with you … and some time to grieve.”

I wasn’t terribly surprised when Amaryllis pulled me in for a private conversation a few minutes after we’d left the room.
“I wanted to talk about,” I began, before Amaryllis raised a hand.

“Ten minutes,” she said.

She’d led me to the room we’d been using as a time chamber, and had had a brief conversation with Bethel along the way. Bethel understood the purpose of us going off together like this was so we could get as close to true privacy as there was inside Bethel, but she didn’t seem to mind terribly much. It was very hard to tell with our house, but I thought that she was pleased with me.

“Tell me when the time is up,” I said.

“I will,” replied Amaryllis. “I’m going to take off this armor, turn around if it makes you uncomfortable.”

“Okay,” I said. It didn’t really make me uncomfortable in the sense that it might have in the past. Anhedonia was a part of depression for me, and it was definitely in full effect. Watching her undress seemed rude and disrespectful though, so I turned away, went into the ‘bedroom’ and pulled out a book that I’d left in the chamber, a dwarven legend written in Groglir about a brave dwarf who bucked her mother’s wishes and set off to found a new dwarfhold. It was one of Grak’s favorites, and while I wasn’t taking much pleasure from it, I was pretty sure that with Fenn on my mind, I wasn’t going to find much enjoyment from anything I read. I sat on the bottom bunk, trying not to think about how our conversation was going to go.

“I want to punch something,” said Amaryllis. “Are you available?” She was standing in the doorway, leaning slightly against it, with her mouth set. She was dressed down, in nothing more than a tank top and loose-fitting pants.

“You want to punch me?” I asked.

“Yes,” said Amaryllis. “I want to beat the shit out of you. Not you, specifically, but apparently the mental disorder lottery gave me aggression, and then the universe saw fit to shit in my cereal, so yes, I would very much like to inflict pain and damage on someone. You’re durable and you can heal.”

“Okay,” I said. I set my book aside and got up. I practically towered over her. Sometimes I forgot how short she was. She wasn’t overly short, but she was shorter than Fenn (than Fenn had been, I mentally corrected with a wince) and I had gotten taller.

“Lay on the ground,” said Amaryllis. She gestured behind her. “In the common room.” She had removed the table and chairs.

“Is this what we came in here for?” I asked.

“No,” said Amaryllis. “But it’s going to be easier to talk when I’ve had a chance to vent the affliction a bit.”

I walked into the common room. “One request?” I asked as I lay down on the ground.

“Sure,” said Amaryllis. She was stretching out, limbering up, which I thought was probably important if you were going to give someone a beating.

“Can I tell you something first?” I asked. “It’s kind of bad. And then you can be beating the shit out
of me for that thing, which is what I’m going to imagine is happening anyway.”

Amaryllis pinched the bridge of her nose. “Jesus fucking Christ Juniper, what did you do?”

“I slept with Maddie,” I said.

Amaryllis lowered her hand from her face and stared at me. “Why in the fuck would you not tell me that?” she asked.

“It makes me feel like a piece of shit,” I said. “Aerb was supposed to be a fresh start.”

Amaryllis stared at me like she was willing lasers to come from her eyes and incinerate me. “Lay on the ground, please.”

I laid down on the ground. “Try not to kill me on accident,” I said. “There’s a lot I can heal back from, but --”

Amaryllis climbed on top of me, so she was straddling my chest. She reached forward and grabbed my chin in her hand. She’d dropped all pretense of being calm.

“A fresh start?” she asked, leaning in toward me.

She punched me in the face, right around my left cheekbone, and I let out a gasp of pain.

“Tell me things you fucking asshole!” she screamed. She punched me in the face again, and she must have been using some of her magic, because even with my enhanced durability it cracked bone. “It’s all your fucking bullshit we’re going through,” she continued, but I was having trouble fighting through the pain enough to hear her.

I got beat on for a while. It really, really hurt, and took just about everything I had not to fight back. I burned bones for END, which healed and, at the same time, helped to dull the pain, but Amaryllis was still hitting me really hard, and repeated blows to the head left me feeling out of sorts even as I continued to repair the damage. I was barely listening to her as she went at it, but so far as I could tell, she got through telling me off pretty quickly before moving on to other subjects and using me as a stand-in for other people. The Dungeon Master was an obvious one, as were Bethel and Valencia, then Grak, then Fallatehr and Larkspur, and from there, to other members of her family, including Uther himself. I laid there and took it, fighting back only enough that she could feel like she was actually dominating me. It was easy to take the hits when I felt like I deserved them.

When she started crying, I stopped her. She’d been going on about a weak little girl who was never going to amount to anything, and my mind caught up only after the fact to make the connection. She was talking about herself.

She pushed away from me and sat with her back against the wall. Her hands were covered in blood and her clothes would probably have to be thrown away, because they were splattered with blood too. Looking at them, I thought that had probably been the plan, in the same way that people dressed down when they were going to paint a house. I was sure that I was as much of a mess, if not more. I barely had the bones left for healing myself back up, and I’d lost almost a tenth of my blood, most of which was in a slick pool beneath where I’d been laying. According to the HUD, she hadn’t taken me down past three-quarters of my health, but it didn’t seem like that was for lack of trying.

“Feel better?” she asked me. She wiped a tear from her face, leaving her cheek streaked with blood.

Amaryllis shrugged. “Less angry now."

“Wanna talk?” I asked.

Amaryllis closed her eyes and let out a breath. “Give me another second?” she asked.

“Sure,” I said. “When you’re ready.”

Amaryllis kept her eyes closed and leaned back against the wall. I looked around the room. We were going to have to clean up, which I wasn’t really looking forward to. In retrospect, we should have put down a tarp. Also in retrospect, I should have declared a safeword. I had blacked out for part of it, I was pretty sure.

“If I had known that you’d had sex with Maddie, I would have been able to make a stronger prediction that Raven was going to show up,” said Amaryllis.

“Yeah,” I said. “I just … I didn’t want you to think less of me for something that’s … it’s not the person I am anymore.” 

“Culture gap,” said Amaryllis with a shrug. “I was put into an arranged marriage when I was twelve.” Her eyes moved to me as she furrowed her brow. “With Maddie, was it … consensual?”

“Yes,” I said quickly. “Yes, god, sorry, I didn’t mean to give the impression -- I mean, there are maybe some questions about power dynamics, or maturity, but --”

“I was twelve years old,” said Amaryllis. “My aunt Rosemallow was the one who set it up, and so it fell to her to give me the talk. I told her that I wasn’t really interested in Larkspur, so she told me that he was a perfectly handsome man, only eight years older than me. I was told not to make things hard for him, not to cry out if it was painful, all these other things I’m sure would make your blood curdle, knowing you.”

“Yeah,” I said. “Blegh.”

“It fell through,” said Amaryllis. “I mean, obviously you know that, you helped kill him. So you can understand where I’m not the least bit fazed by you having sex with someone two years younger than you. I don’t think that it’s unreasonable for you to feel bad, but if you had told me before, I would have just tried to puzzle through your cultural understandings to figure out why you felt that way. Whereas now, I’m upset with you for hiding information that I could really have used when making my plans.”

“Yeah,” I said. “I just … I never knew how to bring it up.” I paused slightly. “Can we just burn the Lost King’s Court to the ground some day?” I asked. “Because so far, I know of exactly one prince or princess worth saving.”

“If it would prevent you from throwing yourself at Fel Seed, I would agree with doing whatever side quests you wanted,” replied Amaryllis.

“And that’s what we came in here to talk about?” I asked. “Aside from me getting the shit kicked out of me and you finally getting to blow off some steam?”

“There are a lot of things we need to talk about,” said Amaryllis, looking down at her bloodied hands. “Val, Bethel, and Grak would be a good start. Fenn, maybe.” The name stung.

“I miss her,” I said. “A week wasn’t long enough.”
“She was my best friend,” said Amaryllis. “No offense.”

“Mine too,” I said. “Also no offense.”

“And now,” said Amaryllis, slowly. “It kind of feels like we should be each other’s best friends, but we’re not.”

“Yeah,” I said, as I mulled that over. I was definitely close to her, we’d spent two months together in the chamber, but it seemed like there was more distance between us than there ever had been in the past. “You and Valencia …” I began, then trailed off.

“She’s out of control,” said Amaryllis, hanging her head. “It’s my fault. I pushed her when she shouldn’t have been pushed, asked her to do things -- told her to do things that she wasn’t ready for. She’s a railgun being held by a toddler. We’re friends in one sense, but in another sense she’s like my daughter.”

“A daughter you kissed,” I said, raising an eyebrow.

“She kissed me,” said Amaryllis. “I won’t say that it was unpleasant, but it wasn’t an ideal thing to have happened. Fenn told you?”

“Yeah,” I said. “On our date. She had a lot to get off her chest, and … I don’t know, I think back and I think I should have listened to her more.”

“A lot of what she said was nonsense,” said Amaryllis with a shrug.

“A lot of it wasn’t,” I said. “There were a lot of times she was just saying things I dismissed because she was Fenn.” I reached up and touched my face. It was still tender. I hadn’t quite had the bone power to finish the job, not without crossing over into the bones that I couldn’t easily replenish. I would need to retreat into my soul for more healing power. “I really deserved to get hit in the face.”

“Valencia got in your head,” said Amaryllis. She was staring at me with her glacial blue eyes, unwavering.

“She was right,” I said, looking away. “I mean, even if I accept that everything she said was suspect, when I turn it over in my head and look at the evidence, she was right. I’m just glad she didn’t hand me more hard truths than she did.”

“You know human psychology better than that,” said Amaryllis. “I know you do. A reframing on the facts can create an emotional impression that doesn’t actually fit with those facts. Even facts themselves can lie, if you select them with biased intent, or frame them in ways that play on psychological flaws.”

“Yeah,” I said. I prodded at my face some more.

“Need a fairy?” asked Amaryllis. She had set the glove off to one side, and gestured toward it.

“Nah,” I said. “Sometimes it feels good to be a little bit hurt.”

“I really don’t think you did anything wrong,” said Amaryllis. “Not with Maddie, not with Fenn. She loved you, you know that, right? She just … needed some time and space. It’s hard, when we’re all together all the time.”

“Even for you?” I asked.
Amaryllis let out a low laugh. “I’m alone more than most. Hasn’t really helped me. The Dungeon Master keeps spitting in my face. I wish I could blame everything on him, but … meh.” It was the most dejected ‘meh’ I had ever heard.

“Did you want some time to vent?” I asked. “Is that part of why we’re here?”

“A bit,” said Amaryllis. “I worked off most of the feelings I was having trouble with, but the sources … the soul goes back to the way it was, not because there’s something inherent to that state, but because all the pieces work together. Same with the mind, and with feelings, I suppose. Same with relationships. I do need someone to talk to, and you’re basically it.”

“Not Solace?” I asked.

“It’s awkward between us,” said Amaryllis. “In the weeks after she was born, she slept on me almost constantly, and … I don’t know. I don’t think it would make sense to you. She was this soft, green baby, my baby, and she was suckling at me, and it was everything that I had ever wanted motherhood to be. And then the locus just fast forwarded through to the point where she was Solace again, in a smaller form. And now my body’s been reset to what it was a year ago, and Solace is a grown adult man, and I can’t even have the illusion of any of it being real.”

“Sorry,” I said. “I would endorse making alterations to your soul, in this instance, for what it’s worth.”

“Thanks,” said Amaryllis. “I don’t know how to do it though, on a mechanical level. Otherwise I would have petitioned the Council ages ago.”

Ages ago. “You’ve been using the time chamber more than you let on,” I said. “A year and a half, you said.”

Amaryllis sighed. “I wasn’t aware that I’d made any agreements not to. I take almost every scrap that Bethel gives me.”

“Yeah,” I said. “Speaking as your friend, I’m not sure that’s such a great idea.”

“I know,” said Amaryllis. She slumped back against the wall. “Are you more worried about the social isolation, the drift, or something else?”

“I don’t know,” I replied. “You’re off doing your own thing, but --”

“But that’s not how the game is played,” said Amaryllis. “No, I know that. I just thought that if I had this project going, something longer term, I would be able to have an open plot thread. And if it actually worked, then I could do a lot of good, not to mention make the money that would get us the pricier entads and tattoos we need.” She sighed, and I thought about what Raven had said. “You know, it’s not so much the thought that there are setbacks, it’s this insidious idea that no matter what I do, I’m going to hit some unforeseeable roadblock somewhere. I can’t do television because there’s a hypnotizing monster somewhere? I could have dealt with that. I can’t put our chemical processes into action because synthetic polymers have some horrible innate magic? Again, fine, it can be dealt with. But if it’s going to be like that for everything that I try to do, then maybe we should just follow the quests in front of us and do what the Dungeon Master wants.”

I frowned at that. “It’s not my style,” I said.

“Not so kindred spirits?” asked Amaryllis with a raised eyebrow.

“No, we’re not,” I said. “But I didn’t mean it like that. I mean, if it were me, I wouldn’t have stopped
you. And whatever you learn from Raven about the specifics of the threats, if I were DM I wouldn’t mean that as a blanket ‘no’ either.” I leaned forward slightly. “Look, you had the backpack land in your lap, right? I’m not about to suggest that everything you’ve done up to this point wasn’t real effort on your part, but when I was DMing, I would always throw curveballs at the players when it looked like they had a straight path in front of them.”

“The path was far from straight,” said Amaryllis. “But you’re saying that there’s a chance this isn’t the end?”

“Yeah,” I said. “My read on the Library is that the librarians are an inherently conservative bunch, probably because they had a lot of bad experiences in the past, or maybe because a lot of them are from older races that can remember bad times, or … something. M—Raven came on after the fall of the Second Empire, which implies something about how their views have shifted. My guess is that their mandate is for saving the world, which is a laudable goal, but they’ve been acting as the Dungeon Master’s agents, helping to keep the world a bit more stagnant than it should be. You remember saying that to me, don’t you? That it seemed like something was missing from the equation, when you were trying to figure out why no one had come up with television before?”

“I should have known a thumb was on the scale,” said Amaryllis, frowning. “I just didn’t think being erased from existence was on the table.”

“You’re too important to retroactively erase from existence,” I said with a weak smile that Amaryllis didn’t return.

“Fenn,” said Amaryllis, before sucking in a breath. “I told her not to write that godsdamned letter.”

“I don’t think it was the letter that did it,” I said.

“No,” sighed Amaryllis. “But it didn’t help.”

“I don’t know,” I said. “I think about it a lot, whether there was a cause. Narrative, or if not that, then maybe just the Dungeon Master’s whims.”

“Fuck him,” spat Amaryllis.

“Yeah,” I said, but it was weaker, because so much of Aerb had my fingerprints on it, and so many of the decisions that had been made in its creation were the decisions I would have made. It felt like telling me to go fuck myself.

“I feel like I’m teetering on the edge,” said Amaryllis. “So much of my effort is going into fighting against the group, which doesn’t have a cohesive identity, and everyone wants different things, and it’s just …” she threw up her hands. “Bethel is cutting off fingers, Valencia is manipulating us, Grak is going to leave as soon as we pay him what he’s owed, and Solace is focusing more and more on the locus, pushing for us to do some unidentifiable something with it. You’re the only one that I can count on.”

“If I didn’t know you better, I would swear that was sarcasm,” I said. “I’m forgiven for going rogue at Speculation and Scrutiny already?”

“You wanted to save Val,” said Amaryllis with a shrug. “It wasn’t the right choice, but you were at least trying to be a moral person and save one of the members of our party. That’s what I mean when I say that I can count on you. You don’t always do the right things, but usually you’re fumbling in the direction of following your own moral code.”

“... thanks?” I asked.
Amaryllis nodded. “I could probably have phrased that better, but if you wanted me to beat you up so you could feel like less of an asshole, I thought you probably wouldn’t care if I left the sugar off my words.”

“Yeah,” I said. “Incidentally, I don’t really feel much better. It just felt like I deserved it.”

“For Fenn, or Maddie, or Tiff?” asked Amaryllis. “Or someone else?”

“All of it,” I said. “Mostly Maddie. Raven isn’t her, but there are things they have in common. Looks, for one, but some mannerisms too, the way she speaks. I just think back to it, and hate myself a little more.”

“She was two years younger than you?” asked Amaryllis.

“It wasn’t that,” I said. “I mean, it was partly that, but she was Craig’s sister too, and I didn’t really like her, I was just looking for a life raft.” I paused. “It was like I was trying to rebuild my life in the dumbest possible way, at the expense of her emotional wellbeing.”

“You’re not really that person anymore,” said Amaryllis.

“Yeah?” I asked. “Even in the last two weeks there are a lot of things I would have done differently. All the fights I had with Fenn, before the end … just little, unthinking things.”

“Was your relationship with Maddie unthinking?” asked Amaryllis.

“No,” I said. “I thought it was shitty of me, and I did it anyway.”

“Well, there you go,” said Amaryllis. “You went from hurting people deliberately to hurting them accidentally. Next step is not hurting them at all, and the step beyond that is actually helping them.”

“I missed your dry wit,” I said.

Amaryllis gave me a weak smile. “I didn’t actually go anywhere.”

“Sorry,” I said.

“It’s fine,” said Amaryllis with a shrug. “I was working on nation building and Val, though the results of both those ventures don’t say much to my credit.”

I gave that some thought. “What Val did … it was a very Amaryllis thing to do,” I said. “Meddling, I mean.”

“You’re right,” said Amaryllis, letting out a breath. She was still leaned back against the wall. Some of the blood had dried, and flaked away when she scratched the back of her hand. “You’re thinking of the void arrow?”

“I was thinking about you pushing yourself to fall in love with me,” I said.

“Right,” said Amaryllis, slamming her head back against the wall. “That. I get a nice reminder every morning when I undo the damage.”

“Still creeps up?” I asked. My ‘Level Up’ value still did, though it was getting slower as the memory of pure bliss faded with time.

“Still creeps up,” said Amaryllis. She shifted her position, leaned up against the wall.
There was an oppressively large elephant in the room, and it seemed like neither of us really wanted to talk about it. I didn’t want Amaryllis like that, not now, not when I needed friends more than anything. I didn’t want to dictate to her what to do with her soul though, and I didn’t want to ruminate on the idea that maybe, someday in the distant future … just thinking about it made my heart sink.

“I miss her too,” said Amaryllis. I looked up, and she had her eyes closed.

“Yeah,” I said. I wanted to say something about how things were between us, now that Fenn was gone, something that would express that a week wasn’t nearly enough time, that I felt sick to my stomach at the thought of ever moving on, but no formulation of the words sounded remotely right in the confines of my mind, and I didn’t think they’d sound better when expressed out loud. “There’s a hole in the group,” I said instead. “Things have always been kind of heavy, and the last bit of levity is finally gone.” I paused slightly. “Grak is planning to kill himself, I’m pretty sure. Seventy percent sure.” Amaryllis stayed silent, still with her head against the wall and her eyes closed. “Some kind of ritual suicide, I’m guessing.”

“Sounds about right,” said Amaryllis with a sigh.

“I attempted suicide,” I said.

Amaryllis’ eyes flew open. “Joon, please, I can’t lose you too, you’re --”

“No,” I said, “No, no, shit, sorry, this was a few weeks before I came to Aerb, no, I didn’t mean recently, I just meant to tell you, because I hadn’t told you, and I didn’t want it to be a thing that you felt I was hiding from you, or not telling you.” I was speaking quickly, trying to talk her down. “I should have thought about what I was saying, I didn’t mean … I wouldn’t do it again.”

“Oh boy,” said Amaryllis. She relaxed back against the wall, but there was a new tension in her shoulders. “A few weeks before you met me? Which would be a few weeks after the Fel Seed thing?”

“Yeah,” I said. “You’ll have to update your timeline.” It came out more bitter than I’d intended it to.

“Don’t say it like that,” said Amaryllis. “Don’t say it like you think I don’t care about you.”

“Sorry,” I said. “Just … me being shitty again.”

“No,” said Amaryllis, waving her hand. “I understand it. You don’t want to look at your life like it’s the key to unlocking mysteries. It’s your life, adding layers on top of it feels like it diminishes your experience of living it. The problem is, I think there’s real predictive power in knowing your past, and if the Dungeon Master is playing on that, then we need to pay attention.”

“Yeah,” I said. I twisted my mouth into a frown. “Do you think that’s … do you think that’s why Fenn died?”

“Mirroring?” asked Amaryllis.

I nodded.

“I have no idea,” said Amaryllis. “Maybe. Maybe it’s the Bond girl thing, but up close it’s so monstrous that it’s hard to credit. We’re going to have to ask Raven and the others more about that. It might be a test of how you deal with loss. There are a lot of things that it could be.” Her eyes were downcast. “In the games you ran, what was your narrative like?”
“You’ve asked me that before,” I said with a hollow smile. Besides, she had also experienced it, albeit not in full campaign mode.

“You always brushed me off,” said Amaryllis. “You told me that your games weren’t really like that, you were adaptive, responding to the players, picking things up and dropping them when people got bored or forgot. But if you could control all the players —”

“You can’t,” I said. “That’s the nature of it. Players derail you, if you’re foolish enough to put up rails.”

“If you could guide them?” asked Amaryllis.

I sighed. I knew exactly what she was getting at, and fundamentally disagreed with the question, at least as it applied to our situation. “I guess I like structure,” I said. “I like mirroring, physical manifestation of internal problems, or anthropomorphizing abstract concepts that are part of character growth. I like when things end right where they started, when places and sets get reused a second or third time. Does that help?”

Amaryllis shrugged. “It was just something that had been bothering me.” She looked down at her bloody hands. “If the Dungeon Master is running our game like that, then you’re right that we’re going to have to fight Fel Seed at some point. I’m just really not looking forward to it, for obvious reasons. Can we try to work something out? Some compromise, so we don’t make a beeline for him?”

“If I can ever get to the Dungeon Master’s level of power, I can bring her back,” I said. So far as I was concerned, that was argument enough.

“And when players ran into high level encounters because they wanted to get to the logical end of the campaign?” asked Amaryllis. “What would you do, in that position?”

I grimaced, because the answer was that I would either divert them or kill them, neither of which were especially attractive at the present moment. “Point taken.”

We talked a lot, then took showers (her first, because I was a gentleman), then talked some more, like we hadn’t done in a long time. It had been longer for her than it had been for me, thanks to her abuse of the time chamber. It was weird to realize that someone who had once been my closest friend had grown so distant from me, so fast. Worse, I hadn’t even really noticed it. I was glad that I wasn’t keeping score, because that would go firmly in the ‘Juniper Sucks’ column.

“So do you think it’s safe for us to watch movies?” I asked. “What with the Couch Potato out there?”

“Couch Potato?” asked Amaryllis. “Seriously, that’s what you’re going with?”

“Yeah,” I said. “We weren’t given a name.”

“I’m six hundred hours in at this point,” said Amaryllis. “But if I had to guess, I would say that the time chamber provides something of a barrier. The Couch Potato — is that really what we’re going with?”

“Yes,” I replied with a faint smile. *Fenn would have loved it.*

“But he’s the one controlling the television, not the one watching -- you know what, not important.” Amaryllis shook her head. “Time is accelerated within the time chamber, and anything that can get around the barrier of warped time might still have some problems interacting with what’s in the
chamber.” She looked over to where the television was sitting. “We should probably still not use it, just like we should probably not bring in anything from Earth. We’re at risk of tripping across infohazards, and even if we don’t, there are other things that go bump in the night.”

“So you don’t want to do movie night?” I asked.

Amaryllis frowned. “It seems like tempting fate,” she said.

“It seems like playing Russian Roulette, but the trigger hit on empty six hundred times before, which makes me a lot more relaxed than I would be,” I said.

“Which one is that?” asked Amaryllis. “I know Russia, obviously, and we have roulette, but together?”

“You take a revolver, put a single bullet in it, spin it, and then take turns pulling the trigger and respinning until someone dies,” I said. “Or maybe you just keep going without spinning again? But that seems like it would lead to situations where you know you’re going to die, so I don’t know.”

Amaryllis nodded along to that explanation. “How did you try to kill yourself?” she asked.

I flinched at that. “Ahrm,” I said. “That’s, uh.” I paused. “That’s not really how I want to talk about it, if we’re going to have that talk.”

“We’re here to have talks,” said Amaryllis. She was staring at me with her ice-blue eyes. One of the things that I thought about a lot, with other people, was that they had imperfections, and when I was looking at them, I had to be careful not to stare at a mole, or their acne, or the way their eyebrows were overgroomed, or something like that. It distracted me from talking to them, because I was overly conscious of where my eyes were. Amaryllis had no imperfections, and it was a little eerie to look at her face and see only thoughts and emotions. In this particular case, a sort of detached, wry, assessment of me. “How would you like to talk about it?”

“I don’t know,” I said. “Can I … can I talk to Grak first?”

“I don’t know,” I said. “I just … I think I understand him a bit better than I did, and the thing we share in common is a degree of self-loathing. He told me all about his thing, and I should have told him about mine, either when we were getting the cursed items from Bethel’s pit, or when we were in the chamber together, but I was a chickenshit about it.” I took a breath. “And I feel like if I tell you first, it sort of means less when I tell him, if you understand what I’m saying.”

“You don’t want him to be the last into that circle of trust, because it would minimize his role in the group,” said Amaryllis with a nod.

“That’s a better way of putting it,” I said. “Except you somehow make it sound calculated.”

“God forbid that anyone do any calculations,” said Amaryllis with a roll of her eyes. She smiled at me after though. It was a smile that was quick to fall. “And Grak’s ‘thing’?” she asked. “He told you?”

“Ah,” I said. “I’m not sure how much I should say.” Though I mentioned it in passing to Valencia when we were in therapy, which means Bethel overheard too, and --

“I already know,” said Amaryllis. “I found out a week ago. Without your biography of him, I doubt we would ever have heard the name Darili Irid, but the name gave me something to go on, and I
have resources now, so … I know as much as there was to know from secondhand sources.”

“You didn’t tell me?” I asked.

“I really don’t mean any offense by this,” said Amaryllis. “But I was worried that you would bungle it.”

“I might have,” I shrugged.

“Do you think talking to Grak about your suicide attempt is smart?” asked Amaryllis.

“Attempts,” I said. “I mean, there are distinctions between suicidal ideation, suicidal gestures, and actual suicide attempts, but -- sorry, tangent.” I tried to think about how it would go with Grak. “I don’t know. I think that he’s really resistant to getting help, because the thing in his past is so incredibly big, and accepting help is an admission that he wants to get over it. And … yeah, I think that I might be able to help him.” I frowned slightly. “Valencia would probably be better.”

“Yes,” said Amaryllis with a small nod.

“If we trust her,” I continued.

“Which we don’t,” said Amaryllis with another small nod.

“You don’t?” I asked.

“There are different levels of trust,” said Amaryllis. “I trust that she could help Grak. I don’t necessarily trust that she will always choose to do what she believes is the right thing, nor do I trust that she’ll correctly pick the right thing when presented with all the options, even if she was trying to be good.”

“It worries me to hear you say that,” I replied, after a moment to think.

“When we found her, she was sitting in a cage, inside a prison, being cared for by a man whose outlook on life was ethically, morally, and strategically questionable, and that’s not to mention the fact that she underwent a fairly routine process of being possessed by creatures intent on harming living beings,” said Amaryllis. She leaned back and looked up at the ceiling. “I shouldn’t have pushed her as hard as I did.”

“So … that’s a no on getting her to talk to Grak?” I asked. “I think I should talk to him either way, for what that’s worth, but I would defer to your judgement.”

“I don’t know,” said Amaryllis. She snapped her head down from the ceiling and looked at me. “I’ve had too many wrong calls.”

“We both have,” I said. I felt a stab of grief for Fenn.

“True,” replied Amaryllis. She shook her head. “If talking to him is what you want, then do it, so long as it’s not faked. He’s on the lookout for that, not just from you but from everyone else. We probably shouldn’t even be having this conversation, and we certainly shouldn’t tell him about it. He’d see it as collusion and meddling, which is debatably true, even if it’s just meant to help him.”

“Shit, I didn’t even think of that,” I said.

Amaryllis sat in silence for a moment, then started drumming her fingers on the table. “What movie do you want to watch tonight?” she asked.
“Seriously?” I asked. “You’re willing to take the risk?”

Amaryllis sat in her chair, staring off into the distance for a bit, frowning. “I’m running the numbers,” she said after a bit. “I think if we get hit by something from beyond space and time, then that’s just the Dungeon Master being a complete fuck to us, and if that’s how he feels like doing things, then not watching the movie doesn’t help much.”

“Oh, I said. “Then I guess I’d like to watch something that Fenn would have liked.”

“How about Kiki’s Delivery Service?” asked Amaryllis. “She wanted me to watch it.”

“Sure,” I said. “I don’t think I’ve seen that one.”

So we had ourselves a movie night, with popcorn and hot chocolate, more or less how we’d done them when we’d been in the chamber together for two months. Amaryllis was on edge for the first fifteen or twenty minutes, waiting for a flash of something unexpected on the screen, but eventually she relaxed, which let me relax too. I found myself getting into it, and eventually broke into tears.

Amaryllis paused the movie and patted me awkwardly on the shoulder. “It’s okay,” said Amaryllis. She was trying to keep her voice soothing. “It’s okay.”

“Just miss her,” I said. “That’s all.”

“Me too,” said Amaryllis.

I leaned back and pinched the bridge of my nose, trying to will the tears to stop. There wasn’t anything in particular that had set me off, it was just the feeling of watching something that Fenn would have enjoyed and knowing that we’d never get to watch it together, or at least not until after the end of everything. I wasn’t holding out hope for a resurrection, not with how clearly the game was signaling that it wasn’t going to happen.

“Is this how you did movie nights with her?” I asked, trying to get my mind somewhere better. We’d done movie nights as a group, every few days since we’d made the cold, bleak Isle of Poran our home, but those were substantially different.

“More snacks, more sugar,” said Amaryllis. Her voice was distant and sad. “More cuddling.”

“Cuddling?” I asked, raising an eyebrow. My moment of sadness was mostly gone.

“She fell asleep on me more than once,” said Amaryllis with a faint smile. She was watching me. “I hope that doesn’t upset you. It wasn’t romantic, if that’s what you’re thinking.”

“Nah,” I said. “I knew you shared a bed. She liked to cuddle. I’m just jealous that you got so much of it. If the Dungeon Master appeared to me and asked me give something up in exchange for two months in the chamber with Fenn ...” I trailed off.

“I shouldn’t have mentioned it,” said Amaryllis.

“No, it’s fine,” I replied. “I like knowing more about her. I was talking to Grak, and he had a lot more to say than I’d expected. It was food for thought. I’ve been trying to be less self-centered, more aware of what’s going on with the people around me. More forgiving, or at least understanding, I guess.”

“Pallida pledged herself to you,” Amaryllis began.
“I already planned to apologize to her,” I said.

“Oh,” said Amaryllis. She shifted on the couch. “Well, good.” She looked at the television. “Ready to start back up again? Or …”

“Yeah,” I said. “It was getting good.”

We hadn’t really discussed how long we were going to stay in the chamber. I could see how it might be a little addictive, if you could get used to the near-complete isolation. While we were in the chamber, the outside world was on pause, and the upcoming meeting with Pallida and Heshnel could be postponed indefinitely, as could any decisions about what our next steps would be. If I’d had a time chamber like this in high school, I would have spent every other day in it so I could get more time to myself and procrastinate until the last minute had stretched out for a week.

(Was I technically a high school dropout? Probably, right? I certainly had no credentials worth speaking of, aside from being the Advisor on Culture in the Council of Arches, which was a made up position with no actual responsibilities to speak of. I was pretty sure that I would qualify as a magus in a number of disciplines if I could take the relevant tests, but you didn’t get the title of magus just from that, you got it from schooling at the athenaeums. My off-grid training was verboten, so certification was never going to happen, not that it would actually do me any good, given that I was operating so far outside the normal systems. It still made me feel a little weird to know that I was never going to graduate.)

In the end, our little unplanned vacation ended up being three days long. Amaryllis was still working off her aggression, which she thought was clouding her judgment, and she was probably right about that. She beat me up two more times with my express consent, though it was never as raw and primal as the first time, and she did a lot less damage. I got the sense that it was less satisfying for her the second and third time, but didn’t really have a good sense of why that would be the case. For my part, I didn’t get any further catharsis.

“We need to talk about Bethel,” said Amaryllis at the end of the third ‘day’.

I’d been waiting for that. We’d talked about Grak and Valencia, and to a lesser extent, Solace, but Bethel had been a topic that we were skirting.

“Do you understand her compulsion toward violence a little better now?” I asked.

“Yes,” nodded Amaryllis. “It was a blunt lesson, but maybe one that helped me empathize with her a bit better, in the same way that you seem to.” She pursed her lips. “With that said, she’s completely out of our control, and given how powerful she is, and the fact that we literally live inside her, it’s something that needs to be addressed.”

Bethel had never given any indication of being able to hear or see us when the time chamber was engaged, and in fact, had complained about that limitation a number of times. It was still entirely possible that she was just concealing abilities from us. We had, in the past, used the glove to hide in, which was almost certainly beyond her view, but that was an enormous hassle. I was operating under the assumption that Bethel would hear the conversation about her, and assumed that Amaryllis was doing the same.

“She’s angry, with good reason,” I said. “She never wanted much from life, and because she was powerful, she was used and abused by people who didn’t care about her. She’s … kind of the opposite of Valencia?”
“How so?” asked Amaryllis, narrowing her eyes.

“Valencia spent most of her life being weak,” I said. “She was used and abused because she was powerless, both powerless to stop the infernals from occupying her body, and powerless to stop Fallatehr from doing whatever experiments he did on her. Powerless to forge herself a better life. She was … was viewed as trash. For Bethel, it was the opposite, right? She was too valuable to be anyone’s home, because she was a weapon. Uther’s big crime, from her perspective, was that he acquired her and then did the equivalent of putting her in a vault, never to be used again, and all your other ancestors brought her out like she was the good silverware that’s only for special occasions. Right?”

“I think that framing is a bit lacking,” said Amaryllis. “I would show you my notes on theories of party composition, dualities, and specialization, but they didn’t end up amounting to much. It would suffice to say that viewing us as standing on opposite sides of various coins doesn’t really get at the truth.”

“Huh,” I said. “It was just a thought, a framing that maybe helps to understand who Bethel is and where she’s coming from. For what it’s worth, I think at least some of her behavior is antagonistic because she doesn’t trust that we’ll stay. Same thing Fenn used to do, actually. She would needle people and rub them the wrong way so that when they told her to fuck off, she would be able to pretend that she’d never wanted them around in the first place.” I paused. “I think, anyway. I obviously didn’t have a great read on her.”

“No,” said Amaryllis. “That sounds about right. Her affectations were partly about putting distance between her and others. But with Bethel, those affectations, if that’s what they are, include cutting off the fingers of our house guests.”

“More severe, yes,” I said. “But I think Raven was a special case. Raven is at least a little culpable for what Uther did, and she’s the entire reason that your ancestor Tansy came to live in Bethel. My guess is there’s only one person that Bethel would have a worse reaction to.”

“And you intend to bring him to her?” asked Amaryllis.

“I want him to answer for it,” I said. “I think that healing, for Bethel, probably means finding some way for her to make peace with her life up to this point. I don’t know what she would consider justice, but I do think that what he did was shitty, and I think he should have to face something in the way of consequences.”

“Not if Uther is the key to saving the world,” said Amaryllis, shaking her head. “Aren’t you a self-described utilitarian?”

“I am,” I said. “And yes, if it comes down to Aerb on the one hand, and Uther getting a bit of comeuppance on the other, then yes, I’ll choose Aerb.”

“That’s all I wanted to hear,” said Amaryllis, holding up a hand. “And we still haven’t heard his side of things.”

“I don’t want to go down that road,” I said.

“What road?” asked Amaryllis.

“I don’t want to question her account and suggest that she’s mistaken or lying,” I said. “There’s some reasonable doubt, sure, but if I began questioning her, it would probably be because what she’s saying is inconvenient to what I want to be true.”
“So what are we going to do about her?” asked Amaryllis.

“I don’t really know,” I said. “She kind of hates you, because you’re Utherspawn.”

“I’ve been trying not to confront her,” said Amaryllis. “We really, really could have used her when we went in for the meeting with Heshnel. If she had expanded next to their camp, or enveloped their keep, or even if she’d just been held as a staff … you’ve been very quick to forgive her.”

“She’s got her own shit going on,” I said.

“So does Valencia,” replied Amaryllis. “We all do.”

“Yeah,” I said. “I don’t know. Probably I’m just not very good at empathy, and it’s easier for me to empathize with Bethel, because she’s feeling a lot of things that I felt before.”

“You’d have cut off someone’s fingers?” asked Amaryllis.

“If I had the power to?” I asked. “And if I knew that the problem could be fixed with no lasting damage? Probably. I’d probably have done a lot worse.”

“Worse than torturing people to death?” asked Amaryllis.

“Alright, maybe not that,” I replied. “I just -- Valencia was manipulating me, she admitted to that, and that I can’t empathize with, because it’s not really something that I do, at least not intentionally. And if I have done it intentionally, then I’ve felt horrible about it. Snapping at people who have wronged me is a much more Juniper thing to do. Same with being depressed. Manipulation? Maybe I just never learned the skill for it. Maybe that’s why I dislike it so much.”

“Hrm,” murmured Amaryllis. “It’s not that I like it,” she said.

“I didn’t say you liked it,” I replied.

“Yes, well, were you thinking that it was one of the biggest differences between us?” she asked, raising an eyebrow.

“I was,” I admitted. “The thought didn’t come until the tail end of what I was saying though. I wasn’t thinking about you, per se, just in general, and if that’s the natural connection my mind makes …” I shrugged.

“I was born into it,” said Amaryllis. “My mother trained me, until she died, and after that, it was a series of cousins, aunts, and uncles who thought that I could be used as a pawn, given the wealth and magic I had been born into. I don’t like manipulation, but it’s part of the toolbox, and the mindset can be poisonous.”

“I really wouldn’t have expected to hear you say that,” I replied with a frown. “You’ve tried manipulation on me, uh,” I did a little internal count in my head as I tried to put a number on it.

“Too much,” said Amaryllis. “In Anglecynn, at least among the nobility, there’s this expectation that alliances are ephemeral and promises are only good for as long as they’re feasible to keep. When the going got tough, people would drop their supposed friends like a hot rock.” She slumped slightly as she said it. “And that’s sort of how I am. It’s sensible, but it always makes people think less of you, because they know your love isn’t eternal, and your promises are breakable if circumstances mean you’re willing to eat the cost to reputation.”

I sat back and watched her for a bit. She seemed like she was mostly talking to herself. “You okay?”
“Just thinking,” she said, shaking her head. “Thinking that it would be nice if people treated those conditionals in the spirit in which they were intended, and didn’t have such ridiculous notions about what we should mean to each other.” She shrugged. “But maybe I’m just a heinous bitch who can’t actually commit myself to a person.”

“Where’s this coming from?” I asked. The things she was saying were a little concerning. Amaryllis was supposed to be the rock that the group was moored to, the compass that would help us find our direction, or at least that was how I had come to think of her.

“Don’t worry about it,” said Amaryllis. “I just feel the difference between myself and the other members of the party a little keenly sometimes. We all have our different priorities, and sometimes I just want to go to each of you and scream in your faces about how the entirety of Aerb is more important than whatever your individual little things are.”

“Pretty dismissive, to call them little things,” I said, trying to keep my tone light. “I’m trying to get Fenn back.”

Amaryllis closed her eyes and took a breath. “You’re right, I’m sorry.” She opened one eye. “I was going to ask you whether that took priority over getting everyone out of the hells and creating a paradise on Aerb, but from your perspective, those are one in the same, at least for the time being.”

“Amaryllis, I promise you that if I ever have to decide between Fenn and all of Aerb, I’ll choose Aerb,” I said. “I won’t want to, but sometimes morality is about doing the thing you really don’t want to do because you know it’s right. Okay?”

“Okay,” said Amaryllis.

**Loyalty Increased: Amaryllis lvl 22!**

“What does it feel like, internally, for your loyalty to go up?” I asked.

“Oh,” said Amaryllis. She sat and thought about that. “It feels like learning something important about you in a way that makes me like you more. I’m trying to think of all the times you told me it happened … usually there’s some element of surprise, even if it’s affirming something that I already thought about you. Sometimes it’s a reminder about the sort of person you are.”

“In a good way though,” I said.

Amaryllis smiled at that. “Yes, in a good way. I know you’re down on yourself, especially with the arrival of Raven, but you’re really not that bad.”

“Do you have the expression ‘damning with faint praise’ here?” I asked.

“I’m allowed some gentle ribbing,” said Amaryllis. She was still smiling at me.

“With Fenn gone,” I said, and then it felt like the air had been sucked from the room. “Someone has to,” I finished. I hated the reminder that she was gone, but I had no one to blame but myself.

“Are you going to be ready for some meetings?” asked Amaryllis.

“The first time was satisfying,” said Amaryllis with a shake of her head. “After that, it helped, but not as much.”

“Well, if you ever need that again, just let me know,” I replied. “It’s a service I’m happy to provide.”

“How are your dreams?” asked Amaryllis. “Better?”

“Last night we were putting on a play in the Boundless Library,” I said. “We were all playing our own parts, except for Solace, who was being played by the locus for some reason, and all the other players, everyone outside the party, was being played by the same man.”

“The Dungeon Master?” asked Amaryllis.

“No,” I replied. “The Dungeon Master was in the audience, in his own little box, with people all around him, none of them that I recognized. No, the guy who was on stage was just some guy.” I shrugged. “But the play was a play about us, and our adventures, and eventually we got to the part where Fenn died, and it was just so melodramatic. She had a whole final speech and everything as she was dying in my arms. And she was really overacting. She was having fun with it.” I smiled a bit. It was a dream, and I could only remember it in bits and pieces, or in the general impression it had left.

“Then what happened?” asked Amaryllis.

“The lights went down, she was taken off stage, and she blew me a kiss from the wings,” I said. “And then the play went on for a very long time, until we had finished, and we all took a bow.” I shrugged. “That was about when I woke up.”

“Do you remember anything of what came ahead?” asked Amaryllis.

“No,” I replied. “It’s all right on the tip of my tongue. I think that’s the sense in which it was a bad dream, since Fenn exiting stage left was … almost nice, I guess, because she was there, and she was in on it, as much as that wasn’t how it was in the real world. But if there was anything prophetic in the dreams, I wasn’t allowed to hang onto it. All I got was a nagging sense of things forgotten.”

“Which would be just like the Dungeon Master,” said Amaryllis with a sigh. “I’m really starting to dislike him.”

“I don’t think there’s anything important to conclude from the dreams,” I said. “I’ll keep telling you about them if you want, but eventually they’re going to just be dreams. They don’t really trouble me anymore. If anything, they might be helping.” Maybe that’s the point. “You’re right, we have some meetings to prepare for. We should probably get on that.”

“Right,” nodded Amaryllis.
Pallida showed up with Heshnel and Gemma right around dawn, the earliest that they could have come and still claimed to have waited a day like we’d wanted them to. Their metallic bean-ship came down in a field half a mile from Bethel, and I walked down the path a bit to go say hello.

“There are a few things you need to know,” I said, without much preamble. “First, our house is magical and sentient. She hates Uther with a burning passion, she doesn’t like being threatened, she doesn’t like people boasting about how powerful they are, and she has, in the recent past, shown a penchant for violence as a way of getting her point across. She’s a valued member of our team though, so try not to piss her off.”

“Sounds lovely,” replied Gemma. Her voice croaked. She was still looking painfully old, her fox fur still grey-white and her skin wrinkled and loose where I could see it.

“The second thing you should be aware of is that she can hear and see everything that anyone says or writes, but she stops short of being able to read minds,” I continued. “I don’t want to trick anyone into thinking that there’s privacy when there really, really isn’t.”

“Wait,” said Pallida, looking up toward the house. “What kind of range are we talking here?”

“Ah,” I said. “You’re currently inside it.” Normally that wouldn’t have been the case, but Bethel had projected an extension beneath the ground, similar to the way that the tallest buildings on Earth had put on mooring masts and radio towers so they could claim an extra hundred feet. It was right beneath the path.

“Fuck,” said Pallida. Her skin was bubblegum pink, but her lips were a slightly darker color, and they were turned into a frown. She was dressed in her oil-slick, skin-tight armor, but she’d left her spear behind, or possibly just hidden in extradimensional space. “You know we come in peace, right?”

“I know,” I replied. “I’m just giving you information that I think you would want. It’s not a gun to the head, it’s just gently letting you know that we’re armed, so you don’t freak out if you see the gun. Does that make sense?”

“It’s appreciated,” replied Heshnel. The dark elf’s face was still disfigured, his eye too large and the flesh still weeping and spotted. Whatever their capacity for healing, apparently they hadn’t been able to deal with their afflictions on short notice. I had learned from The Book of Blood how he had survived the poison; apparently a general immunity to poison was one of the dark elf’s primary traits.

“So, how many guns do you have?” asked Pallida.

“Less than you’d think,” I replied. I paused slightly. “I’m sorry about yesterday,” I said. “You made your pledge, and I brushed you off, and I shouldn’t have done that. I wasn’t thinking right, for obvious reasons.”

Pallida waved a hand. “Uther was the same way, though I think he didn’t understand how seriously I meant it.”

“She had broken into his house to steal from him,” said Heshnel.

“In my defense, he had way too much stuff,” replied Pallida. She turned to me. “Obviously I was forgiven, in time.” She stammered slightly. “And, obviously, what happened to Fenn was more
serious than stealing some magic, I don’t mean to put them on the same level, it’s just --”

“It’s fine,” I said, forcing myself to relax. “I’ve had some time to process. More than just a day.” Less than I probably need.

“Well, I come bearing gifts,” said Pallida, pointing behind her toward where the ship was sitting. “I don’t know if you want them now or later.”

“Later,” I said. “Unless you have some means of instant resurrection, which I gather you don’t. If there are any proverbial guns you have, that it would be better for me to know about, I’d like to know about them now. We didn’t get to that stage before we were interrupted yesterday.”

Bethel was no doubt bringing her sensorium to bear on them, which would include a warder’s analysis in conference with Grak. I considered them duly warned that they were under surveillance, albeit once they were already in range.

“My armor is wardproof,” said Pallida. “When I’m enveloped, I’m wardproof too. I assume that’s something you’d want to know about.”

“I have a number of buds,” replied Heshnel, pointing to his lapel where they were all neatly lined up. “My specialty is in connection, as was my mentor’s, though I have a number of combat and utility strains, a few of them descended from Vervain’s stock. There are thirty buds. Shall I list them now?”

“No,” I said, trying not to look at his disfigured face, and also to not look at it.

“Aside from that, my cloak is capable of obscuring me from notice,” said Heshnel. “I wear a necklace that can keep my head perfectly preserved and capable of speech in the event of my death. My skin is embedded with the Seven Psalms, rendering me difficult to physically injure unless such efforts are taken eight times.” He paused slightly. “I think those are the ones you would find most relevant, if you don’t want the complete list.”

“No weapons?” I asked.

Heshnel gestured toward the buds with a raised eyebrow.

“Point taken,” I replied.

“I have the Twenty-blade,” said Gemma, gesturing to her hip. “The sheath can apply poison with a thought, and stores several dozen. That aside, there’s an amulet to return bullets and arrows fired at me, a belt that helps track the path of blades, and a bracelet that consumes poisons. That last was a gift from Dehla, given the night before you were attacked. I assume it was meant to spare my life.” She slipped it from her wrist and handed it to me. “I don’t wish to wear it any longer.”

I stared at it for a moment.

“Safe,” a voice whispered in my ear. “And warded against anyhow.”

I took the bracelet and slipped it on. “Thank you,” I said. “We’re all in this together.”

“That remains to be seen,” replied Gemma with a slight bob of her head.

“Does it?” I asked.

“I did not pledge to you,” she replied. “Breaking guest right falls somewhat on my shoulders, but the burden is not absolute.”
“To be clear, you had no part in the attack?” I asked.

“No. I fought to defend you,” replied Gemma. She didn’t seem upset by the question, but it was hard to tell, because the facial features of an anthropomorphic fox were far different from that of a human.

“I don’t mean to challenge your honor,” I said. “I just want to make sure that we’re all on the same page.”

“I sort of doubt that,” said Pallida with a small, rueful laugh. “I don’t even know what book we’re reading from.”

“There’s one more thing,” I said. “We have Raven with us.”

Pallida tilted her head back, exposing her pink throat, and let out a groan. “How much does she know?”

“As much as you,” I replied. “Maybe a bit more, given her status. There are certainly things that she’s not telling us.” We hadn’t had the promised debriefing with her; it was meant to be in the early morning, but they’d decided to come even earlier. I looked between the three of them. It had been clear from the way that Raven talked about Uther that she would be at odds with them, given that their plan had seemed to be to nuke Uther the moment he showed up. I wasn’t sure that we could all be allies, let alone friends, but I didn’t really know how deep the bad blood went. The Infinite Library was supposed to be ‘neutral’ in Heshnel’s words, and by rights that should extend to Raven, who was the head librarian, but I wasn’t sure all that would hold with the return of an Uther-like entity on the horizon. “We’re all going to have a talk. Is that a problem?”

“No,” replied Pallida. “Can I give you my side of the story first?”

I hesitated, not really sure that was necessary. Everyone else was back at the house, listening to Bethel relay the conversation. Raven was sequestered, and hadn’t even been informed when Bethel’s sensorium first picked up the Egress coming down through the sky. Amaryllis had been against me going out there alone after how Bethel had handled things with Raven, but I’d argued that Raven was a special case unlikely to be repeated, and Amaryllis didn’t really have a choice but to relent.

“Ohay,” I said. “In brief?”

“You want me to give you the short version of thirty years of history?” asked Pallida, raising an eyebrow.

“You were dead for some of that, weren’t you?” I asked. I resisted the urge to fold my arms across my chest.

“I was a toddler for some of it, sure,” said Pallida, waving a hand. “All I’m saying is that when we get in there, she’s going to say some stuff, and then I’ll say some stuff, and you won’t have context, and the short version is what you’d get then anyway. Unless she already told you?”

“No,” I said.

“This is important to her,” said Heshnel.

“Go ahead,” I said. “Give me the context.”

Pallida cleared her throat. “Really didn’t think that I would have to be telling this story today,” she said. “It starts … hells, I guess when I broke into Uther’s vault.” She paused. “How much history do you know?”
“Enough,” I said. “I’ve read his biographies.”

“Well, this was after the Dark King and before the Seventeen Swords,” said Pallida. “I made my plans, paid off the right people, slipped past his wards, and got into his vault, only to find that he was waiting for me in a comfortable chair with a crossbow pointed straight at my heart.” She sighed. “Sorry, I’ll skip ahead a bit. I found myself in his service, traveled with him occasionally when he called on me, and put my particular skills to use on interesting problems. It wasn’t a bad life until Uther asked me to break into the wrong man’s castle, where I was caught and beheaded.”

“And that was the first time you died in his service,” I said slowly.

Pallida nodded. “I was reborn, suffered through a childhood with a mother that detested me for not being the human daughter she’d wanted, then ran away at five years old to go find Uther again. Renacim weren’t well-known in Anglecynn in those days, and the cooperatives didn’t have the reach they do now -- irrelevant stuff, I am trying to be brief here. The point is, I eventually joined back up with Uther and his people. I’m not good for much when I’m five years old, though I’m a fair sight better than any human that age, so Uther parked me in the Caledwich castle he was spending less and less time in, while he waited for me to come back into the fullness of my usefulness.”

“That was how he saw people,” said Gemma. She nearly snarled as she said it. It was a strangely bitter accusation, given that Gemma had never met the man. I didn’t have all that much information on the Foxguard, except that they were a thing that Uther had started, composed entirely of fox Animalia.

“I didn’t begrudge him that,” said Pallida. “Not then, anyway. He was paying for my tutors, I was growing up with his children, I had the best meals I’d had in lifetimes and a comfy bed … sorry, again, trying to keep it brief. Eventually I joined up with his camp, leaving my friends at his castle behind, and I started doing work for him again, usually the kind that was strictly illegal, highly dangerous, and liable to get me killed again. He saved my life a few times when things went wrong.” She paused a bit at that. “Anyway, Raven and I were about the same age at that time, and we became fast friends. She’d been twelve years old for a hundred years, and it was my thousandth time being twelve, so we had more in common with each other than almost anyone in Uther’s circles.”

“And then you had a falling out,” I said.

Pallida shifted. “Hang on, I’m getting there,” she said. Whatever it was she had to say, she seemed to really think that it would be softened by a long lead-in. I still felt bad about having been a dick about her giving her pledge to me, so I was inclined to listen. “Well, Dahlia went missing, and it was this big, all hands on deck type thing, but eventually it just seemed like she was gone, no ransom, no demands, no evidence at all. Uther was off-kilter, maybe for the first time in his life, furious and sorrowful, taken by moods, not really knowing what to do. Eventually it kind of died down, because there was nothing to be done … and that was when Helio showed up.” She swallowed.

“Uther took him on, maybe because he was missing his daughter, or to make up for the fact that he couldn’t relate to his sons, or … I don’t know what he was thinking, only that Helio joined up with us, and the three of us, Raven, Helio, and myself, all went on some adventures together for a few short weeks, until Uther found out that Helio was really Dahlia, who had run away from home and changed into a boy with the help of a magical belt.” She looked over at the house. “They had a big fight in Uther’s traveling court, all his Knights present, all us hangers-on too, with her, at eleven years old, looking as perfectly defiant as anyone I’ve ever seen, and him consumed by anger. Eventually he settled down though, and allowed her to be part of things.”

“You’re not going to say the line?” asked Heshnel.
Pallida hesitated and pursed her lips. “I’m trying to be brief,” she said. “But, okay, fine.” She sighed. “At this showdown they had, Uther wasn’t quite yelling, but he was livid, talking about all of the worry and anguish she’d caused by sneaking off, treating all of this like a game, and then he started going on about the belt she’d used to become a boy, and he said, ‘Do you understand how illegal that is?’, which was the first thing that gave her pause. She spoke for the first time in a while, because it seemed like he wanted an answer, and she asked him with a firm voice what crime she was guilty of.” Pallida stared at me for a moment and gave me a faint smile, seemingly despite herself.

“And?” I asked.

“‘Male fraud,’” said Pallida, chuckling slightly. “And with his pun delivered, it was like all the tension in the room broke, and all was forgiven.” She turned to look at Heshnel, to see if he was satisfied, and he gave her a little nod. “There was a reason that people liked Uther,” said Pallida, but she looked a little bit sad when she said it. “Anyhow. Dahlia stayed as Helio, and they kept that secret under wraps, since the princess traveling along with her father on his adventures was decidedly not a done thing, even if she hadn’t been so young. Uther seemed to like the deception.”

Pallida seemed lost in thought, like she was reliving memories that were five hundred years old. I wasn’t sure quite how old this body of hers was, but from what The Book of Blood said about renacim, they had memories and skills that were stronger the closer they were to being the same age as in their past life.

“You got into a relationship with Dahlia,” I said.

“Shit,” said Pallida, snapping out of her reverie. “Was that a good guess, or do you already know this story? Did Raven tell you?”

“It was an educated guess,” I replied. “I saw the way you looked at Amaryllis.”

Pallida blushed, her cheeks turning a darker pink. “Well,” she said. “Yes, Dahlia and I went on our adventures together, sometimes with Raven, sometimes without, and Lia and I began to grow up, leaving Raven behind, and … it was Raven who caught us together.” She seemed uncomfortable. “But you see, the thing is, --”

“Sorry,” I said, holding up a hand, then glancing at Gemma and Heshnel to see if I could get some context clues from how they were reacting. “Which part of this is or was scandalous, if any? I think I’m missing cultural context.”

Pallida stared at me for a moment. “Ah,” she said. “Right, well, Dahlia could switch back and forth between being a girl or a boy, but, ah, when Raven caught us, she was the former, rather than the latter.”

I frowned. “And Uther had a problem with that?” I asked.

“Uther had a lot of problems with it,” said Pallida with a grimace. “I’m actually halfway confident that he made up a bunch of philosophy on the spot just to explain how many problems he had with it. The other kings and politicians had always found him a little bit terrifying, because he had this way of arguing with people like it was one of the martial arts he’d mastered. I got the full force of it.”

“But,” I said slowly. “Did he really have a problem with the fact that you were both women?”

“Lia never thought that he did,” said Pallida. “She thought some of it was bunk he was saying because it sounded good, and other parts were, in his opinion, true, but that one she didn’t think he
believed. She tore his arguments apart and turned his rhetoric against him, but that was always easier when she was ranting to me, rather than facing him down. All the stoic determination in the world couldn’t make her better at argument than her father was.”

“Ah,” I said, frowning slightly as I thought about that. Homosexuality was frowned upon in the same sense that most interspecies marriages were, but it wasn’t illegal, at least as far as I knew. In Uther’s time though … well, I didn’t imagine that it would really matter. “I don’t suppose he ended it with a pun?”

“He did not,” replied Pallida. She shifted in place, causing her oil-slick armor to display new ribbons of color. “Anyway. I guess we can skip whatever comes afterward, since it’s really not that important. A couple years later, Uther sent me out on a dangerous mission, and I died again. I was about ten years old when the Grand Finale happened, but I was there for it.”

“What happened to Dahlia?” I asked.

“She had donned the Red Mask by that point,” replied Pallida. “She came through the Grand Finale just fine, nothing more than scars to show for it, and lived out the rest of her life in Cidium as one of the city’s protectors. She was a big deal there, but never wanted people to know she was Uther’s daughter, and all the shit her brothers were getting up to back in Anglecynn … she’d never had much stomach for it.” Pallida hesitated again. “Dahlia only ever went for women. Raven might bring that up. She thinks it’s my fault.”

“Oh,” I said with a nod. “I consider myself properly briefed. I’ll ask you for the less brief version another time, maybe even tonight, but for the moment, we need to all sit down and have a discussion about next steps.”

“Heshnel, Pallida,” said Raven with a nod to each of them as they came into the large conference room. She paused slightly as she saw the fox Animalia. “I’m sorry, I haven’t had the pleasure. Foxguard?”

“I am,” replied Gemma with a small bow.

“I wouldn’t have thought a member of the Foxguard would fall in with these sorts of people,” replied Raven.

Gemma shrugged. “I was born into a role, not into every thought I would ever have about what that role meant.”

Raven looked between the three of them as they took their seats. “I’m not sure how comfortable I am with all of this,” Raven said to me.

“Nor I,” replied Heshnel.

“We’re all here for a reason,” said Amaryllis. “Juniper is a continuation of the same phenomenon that caused Uther to be far, far more important than any one person had a right to be. He’s spoken to what we believe to be the creator and ultimate master of Aerb and the other planes. What we need is information, contacts, and resources.”

“I brought resources,” said Pallida. “Entads and money, including the Egress. They’re yours.”

“Uther buried treasures,” said Raven. “Some of them were dug up when it became clear he wasn’t coming back, but others were too dangerous for me to get alone. I can tell you their locations.” She took a breath. “I’m also prepared to bring Juniper into the Infinite Library in the hopes that he can
“leverage his talent.”

“Just me?” I asked.

“Just you,” replied Raven. “It would allow us to learn what happens in your absence with the remaining pieces left in place.”

“I’m not sure that I like being referred to as a piece,” said Solace with a slight frown.

“Apologies,” said Raven with a nod, “It’s how we tend to think of things in our calculations. I’ll amend my speech.”

“You’re going to try to brainwash him,” said Pallida.

“I imagine we’ll have some time to speak,” replied Raven. “That’s hardly brainwashing. And I would also like to point out that I’ve maintained the Library as strictly neutral during my tenure as head librarian.”

“My girlfriend was murdered yesterday,” I said, voice cold. “I also narrowly avoided being nuked. I’m not going anywhere without all the firepower I have at my disposal.”

“You would get a far less clear picture of the future,” said Raven, frowning at me. “Uther always went alone.”

“I’m not Uther,” I said. “I don’t have Knights, I have companions. I listen to their advice and don’t keep secrets from them. Uther never told you that he was dream-skewered either. His way of doing things isn’t going to be mine.”

Raven swallowed. “His way of doing things saved the world a few dozen times over. That’s not an exaggeration.”

“I’ll have to talk to him about that,” I replied.

“Excuse me?” asked Pallida, eyes wide. “Is he -- Raven, is he alive?”

“That’s unclear,” replied Raven.

“I have reason to believe that I can find and recover him,” I said. “At the very least, I should be able to ask him some questions and get some answers.” The text of the quest was a bit vague, but I was pretty sure that I wouldn’t get to the end and have it say, ‘oh, actually he died five hundred years ago and his soul is completely beyond recovery, sorry’. Then again, the game had erased all traces of Fenn, with her companion quest disappearing completely from the logs.

“You didn’t reveal that to us,” said Heshnel, his voice soft. I tried not to look at him too closely. I wasn’t sure that it was in my ability to fix his face, but until someone did, it was off-putting, especially because of the casual way he seemed to wear the deformity.

“If Uther had come back in the time of need, you would have tried to take him to Blue Fields and nuke him, right?” I asked. “As, perhaps, one part of a bigger plan?”

Heshnel glanced at Raven, then nodded.

“How can you possibly think that was what Vervain would have wanted?” asked Raven, her tone sharp.

“It’s clear now that Vervain was blinded to Uther in some ways,” said Heshnel. “You all were.”
“You are,” said Pallida.

“I’m the only one left,” said Raven, looking slightly haunted.

“Unless the man himself still lives, or is recoverable,” said Heshnel.

“We think that he is,” said Amaryllis. “Unfortunately, there might be some minor problems. Raven, would you care to offer some illumination?”

Raven frowned slightly. “I’ve gone a very long time without sharing what I’ve found with anyone,” she said. “It’s information that I plan to guard jealously, especially given that it might mean my life.”

“It’s fine,” I said. “We’ll get the specifics later.” I really didn’t want to press Raven on the point, because it was the one scrap of leverage she still had left while in this house. “The short version is that Uther Penndraig is likely somewhere in the Fel Seed exclusion zone. If he’s not, then that’s where we’ll get information on the next step.”

Pallida was staring at me with her mouth slightly open, and Heshnel had a grimace on his face.

“For what it’s worth, I consider any plan to enter into Fel Seed’s domain utter insanity,” said Amaryllis. “I’ll do it, if I believe there’s no other choice, but going there to rescue my ancestor, who might well be insane, broken, or powerless for all we know, reeks of poor decision-making.”

“I’m leaning toward waiting,” I said. We’d talked about it some in the chamber together. I’d given her the low-down on Fel Seed as I had designed him, plus the changes that I’d made during the course of the session, and she’d asked her clarifying questions, but the long and short of it was that she ended up believing me when I told her that Fel Seed had no weaknesses known to me. “We need more information on the threats Aerb is facing though. We’re stumbling around blind right now, and apparently the Library has had us as the culprits for the end of the world three times now.”

“Rule of three,” said Raven with a nod. “I should have seen it.”

“How did they end the world?” asked Heshnel.

“Widespread proliferation of a proscribed technology was the first one,” said Amaryllis. “I’ll do it, if I believe there’s no other choice, but going there to rescue my ancestor, who might well be insane, broken, or powerless for all we know, reeks of poor decision-making.”

“I’m leaning toward waiting,” I said. We’d talked about it some in the chamber together. I’d given her the low-down on Fel Seed as I had designed him, plus the changes that I’d made during the course of the session, and she’d asked her clarifying questions, but the long and short of it was that she ended up believing me when I told her that Fel Seed had no weaknesses known to me. “We need more information on the threats Aerb is facing though. We’re stumbling around blind right now, and apparently the Library has had us as the culprits for the end of the world three times now.”

“How did we learn about it then, if no one knows?” I asked. I wished that she’d shared this last night, but it had already been late when she’d arrived, and we’d spent a lot of time talking then too, all about things that had seemed important.

“That’s unclear,” Raven sighed. “All five of us were inside the Library, which means that either it was independently discovered on the outside, or someone had let it leak.”

“More secrets from the Library,” said Heshnel, with a slight note of disdain.

Raven made no response to that.

I turned to Heshnel. “Our briefing yesterday was interrupted. There are still things that we need to know, if knowing about them doesn’t drive us into insanity, blow up the world, or otherwise cause some catastrophic failure.” I looked back at Raven. “Either of you can give us that briefing now.”

Raven eyed Heshnel. “I suppose we’ll start with exclusion breaks,” she said. “We see them written
about in the Library sometimes, though it’s never happened in the real world. We don’t typically take action on them, with the exception of co-opting the imperial monitoring stations. They’re always far into the future, one of the default end states of civilization or life, and there’s virtually nothing that we could actually do about threat containment. I mention it primarily because if you find some way of breaking the exclusionary principle, it’s entirely possible that you would accidentally end the world.”

Raven stared at me, eyes wide beneath her black bangs. “How?” she asked.

“I was misinformed,” I said. “See, I thought that the exclusionary principle was more of a guideline than a rule, and no one corrected me until it was too late.”

No one laughed. *Fenn would have loved that.*

“No more seriously,” I continued, “I don’t know. My power, and presumably Uther’s as well, ties into the exclusionary principle, and is capable of selectively ignoring it in special circumstances. I suppose technically one of those two instances was because of a gift the Aerbian over-entity gave to me.”

“You could break containment on the exclusion zones,” said Raven, staring at me.

“I don’t actually know how,” I said. “But it’s probably possible.”

“You could break containment on the exclusion zones and you want to go face to face with Fel Seed!” she said, raising her voice and standing up slightly from her chair.

“Is it possible that Fel Seed could take the ability?” asked Amaryllis. “Did anyone ever take Uther’s Knack or otherwise gain the use of his ability?”

Raven settled back in her seat. “No,” she said. “But that’s not the point. The point is that Fel Seed escaping the exclusion zone would almost certainly result in the end of civilized life on Aerb. All that would remain are his brides and his flesh-beasts. It’s not a thing to risk if you don’t have a plan, and I know that you don’t have a plan, because you heard about Uther being there yesterday, you have no idea where in the zone he is, and all of my plans were too risky when I was planning to risk my own life and the lives of others, not the entirety of Aerb.” My experience of Raven had been that she was fairly reserved, forthright but deferential, even when she’d gotten her fingers cut off, but this, finally, seemed to have lit a fire in her.

“There are some details that need to be worked out,” said Amaryllis with a small nod. “Before we make plans, we need to know the threats. You may continue.”

Raven pursed her lips, as though there were a hundred things she needed to say about the whole Fel Seed thing. Instead, she swallowed her words.

“There are five primary problems facing Aerb as a whole which are unknown to the Empire at large,” said Raven. “We can start with the problem in the hells, since it’s the most pressing one at the moment and the one we’re least capable of solving. Infernal unification has happened in seven timelines, with complete infernal depopulation in the hells in another two, and the cause for unification is assumed to be whatever effect would otherwise result in depopulation. Unification leads to an assault on Aerb that mortal civilization can’t withstand. Because we have no worldly idea what’s actually happening there --”

“It’s her,” said Pallida, pointing out Valencia. “She can kill infernals with her mind.”

“Uther gave his companions some measure of power, didn’t he?” asked Valencia. “Killing infernals at range is one aspect of mine.”

Raven didn’t seem to know how to respond to that. “We were exemplars in our fields,” she finally said. “At the start it just seemed like he was collecting people who were far above average, but later on …” she trailed off, as though not knowing how to phrase it. “We were powerful, yes, we had some fraction of his Knack, somehow, though he couldn’t or didn’t say how. Nothing like what you’re suggesting. A trillion infernals dead by your hand?”

“Not yet,” said Valencia. “I’ve been improving though.”

“We need a moratorium on infernal killing,” said Amaryllis, speaking with the iron will of command, a power that she used rarely and was probably ineffective against Valencia if she was using an infernal for this meeting. “A true moratorium, no more using them for anything until we have a handle on this.”

“I won’t be able to listen to what they’re saying if I can’t kill them,” said Valencia. “It’s useful for tracking rumors and public information about myself.”

“You can see down there?” asked Raven. “You’re an intelligence asset too?”

“She’s likened the effect to soul scaphism,” said Heshnel.

“Apparently we win a quarter of the time,” I said. “That’s better odds than I would have given us. Not that we were planning on trying anyway, given the obvious unknowns if the infernals began fighting for their lives.”

“They won’t, after the display yesterday?” asked Heshnel.

“Valencia killed a few hundred in a stadium in one of the upper-middle hells,” I said. “It was very public.”

Raven closed her eyes and took a deep breath. “Okay,” she said when she opened her eyes. “Do the infernals know the who, what, or where? I’m assuming not.”

“Consider it irrelevant for now,” said Amaryllis. “Mutual debriefing is important, and we will get to it, but we don’t want to get endlessly sidetracked delivering information to each other in the least efficient possible way.”

Raven frowned. “Fine.” She took a moment to compose herself. I wondered whether she was thinking about the sheer power the house was ready to direct her way if she put her foot down. She didn’t so much as glance at where Bethel was seated (actually seated this time, not just an empty chair for spooking purposes). “Moving on,” she said, then took a breath. “It’s widely known that Aerb is flat, but what few realize is that it has two sides, the one we live on, and the one roughly eight thousand miles below us, where the force of gravity is inverted. There exists a singular shortcut between the two sides within an exclusion zone called the Gates of Leron, and the Other Side has been locked out of Aerb for five centuries with defenses that Uther put in place. The last I heard, they sent a raiding party to probe at the Gates, but that’s information from outside the Library, not from any books we’ve read. Of course, if you’re breaking exclusion zones, then perhaps we have to be worried after all.”

“The Other Side is not of immediate concern,” said Heshnel. “If they keep exerting force, or find their way past Uther’s defenses, we might need to worry.”
I looked over and saw Amaryllis with a deep-set frown on her face. “May I ask why, exactly, this isn’t an issue that’s being handled by the broader international community?”

“The Other Side has different magic than we do,” said Raven. “They can use theirs here, and we can use ours there. They have their own mortal species, some with bloodline magics, and their own billion-some entads. Our worry is that they have, or might eventually develop, a way to get here that isn’t the Gates of Leron, and that such an event is much more likely to happen if more people know about them.”

“Based on the Library?” asked Amaryllis.

“Partially,” said Raven. “Uther had made a few trips there, over the years, and spent some time thinking about the vectors given what he’d seen of their resources and capabilities. Most entads don’t work across that kind of distance, but a rare few do, and meme-class entads were one of them. Uther had a brooch that would allow him to teleport to the last person to say his name. It was how he ended up on the Other Side in the first place, and once he got back home, he never used it again for fear he would wind up there.” She hesitated, chewing her words. “We have several pathways to the Other Side, tools that Uther kept stockpiled in case we needed to return there without compromising the integrity of the Gates. I don’t believe that it will be necessary, and I don’t know enough of your capabilities to say whether it would be wise, but the fact that they sent a raiding party is worrisome.”

“The fact that so many worrisome things are happening at once was our sign to regroup,” said Heshnel.

“Is the Boundless Pit a vector they could approach through?” I asked.

“No,” said Raven. “It’s boundless. Vervain always said that cosmic topology gave him a headache, and he was our expert on the subject.”

“Until Uther killed him,” said Heshnel. “Killed him, without so much as saying why.”

“For another time,” said Amaryllis. “I doubt that we can solve this by talking about it, if it hasn’t already been solved.” She nodded to Raven. “You may continue. The Outer Reaches next, if you please.”

Raven looked over to Heshnel, who shook his head with the smallest possible motion he could manage.

“I’m sorry,” said Raven. “It’s memetic in nature.”

“And you can’t even describe the nature of the threat?” I asked. “You can’t even describe the effect that makes talking about the threat itself dangerous? Because you all seem to know, and you all seem to be alive.”

“We’re protected,” said Raven. “Uther was the one who protected us. It’s not impossible that you might be able to match that feat, but Uther could only do it after having surpassed yet another master, and all the masters who would teach you are now dead.”

“Vervain among them,” said Heshnel.

“Yes,” said Raven, lips thin.

“So there’s a lost magic that I’ll need to find first,” I said. “Alright, I’ll put that on my to-do list.” I silently waited for the game to give me some smarmy quest text about it, but it was keeping up the silence that had become somewhat typical since Fenn had died. I wasn’t sure whether to be relieved
that I hadn’t gotten a quest.

“Is that it?” asked Amaryllis. “Five threats? The hells, the Outer Reaches, the Other Side, and all the things that we’re apparently prohibited from doing, plus the Void Beast as a problem that the international community will deal with?”

*Quest Accepted: Tragedy of the Commons - Following the discovery of the Void Beast, void weapons and tools were made illegal under international law, usable only with expensive permits or in situations that called for it. For a time, this was sufficient. Now the Void Beast stirs once again, and imperial regulatory schemes won’t be enough.*

“Er,” I said. “About that. Scenario two.”

“What does that mean?” asked Raven, alarm in her voice.

“Which part?” Amaryllis asked me.

“Void Beast,” I said. “To quote, ‘imperial regulatory schemes won’t be enough’.”

“Fuck,” said Amaryllis.

“What’s happening?” asked Raven.

“A message from the entity you’re linked to?” asked Heshnel with a raised eyebrow.

I glanced at Amaryllis. “Yes,” I said. “Amaryllis, is it time for our end of things?”

Amaryllis twisted her mouth in a small pout. It was information that she didn’t want to part with. “Juniper’s ability exists on a higher level than magic. We’re not entirely certain that Uther’s ability was the same, but there are, at the very least, a number of points of commonality.” She reached out with her gloved hand (it was still hard not to think of Sable as Fenn’s glove) and produced four folders. Bethel’s unseen force pushed each of these folders across the table. “I’m not entirely comfortable sharing this with you, but Juniper has argued in favor of transparency. This is what he sees when he closes his eyes for three seconds.”

Our four guests began looking through the papers. There had been some redactions (most notably the character biographies) and there was some information omitted but not redacted, but it was as much as we’d told anyone.

“Uther had this power?” asked Pallida, looking quickly through the sheets. Raven was taking her time, one page after another, reading quickly but from the way her eyes were scanning, completely.

“We don’t know,” said Amaryllis. “It’s possible. If he did, he obviously never told anyone.” She looked to Raven. “Did he?”

“I don’t know,” said Raven, not looking up from the papers she was reading, and apparently able to split focus without a problem. “He never explained the Knack, only that he’d had it since shortly after his family had been slaughtered by the Dark King. I don’t know whether he told Vervain or any of the others, only that he never told *me*. Something like this --” she paused, stopping on something in the paper momentarily before her eyes started moving back and forth again. “This page titled ‘Skills’ appears to contain a list of magics, some known to me and others unknown, including exclusions, but not all of them ... what’s Essentialism?”

“It was a name once used for soul magic, early in its history,” said Heshnel.
“You’re a soul mage?” asked Raven, looking up from the papers.

“Each of those skills is associated with a number,” I said. “The numbers have been redacted. Some of those skills aren’t available to me without a cost. The ones that are excluded could theoretically be used if I were in an exclusion zone, but we haven’t tried, and we don’t know what the result would be.”

“You didn’t answer the question,” said Raven.

“Yes, I’m a soul mage,” I said. “It’s one of a handful of magics I’ve attained some level of mastery over.” I assumed that Pallida and the others already knew, given what I had done to save the other members of my party. (Most of them, anyway.)

“He’s not of the old breed,” said Solace, looking over at the dark elf as she said that. *I wonder how reformed Heshnel Elec really is. I also wonder how complete the removal of his soul magic was.*

“We can save some of the inevitable questions for later,” said Amaryllis. “Most of the redactions I’ve made have been in the direction of not leaking any strengths or weaknesses.” She took a breath. “Part of the reason that I’m showing this to you is that we need help with a rather particular problem, one that it’s entirely possible Uther grappled with and circumvented. When Juniper accomplishes tasks on that list, titled ‘Quests’, or otherwise accomplishes something meaningful to the outside entity, he eventually sees a change in that number, called ‘Level’. This is accompanied by a strong rush of pleasure, which has been increasing in power with every level he attains, is accompanied by violent tendencies and a blackout, and which is extremely addictive. From the outside, there are physical signs, including a slight gravitational effect and a rush of golden light. The last time he attained a level, the compulsion was beyond his power to fix without outside intervention. Unfortunately, he’s getting stronger with every level, and there’s no guarantee that the outside interventions will remain viable, especially if it happens when he’s by himself. In the event that occurs, it’s likely that he’ll go rogue.”

A silence fell over the room.

“That didn’t happen to Uther,” Raven finally said. “If it did, then it was fixed before I joined his group.”

“What’s the nature of the outside intervention?” asked Heshnel. He narrowed one eyebrow; the other was missing from the disfigured side of his face.

“Soul magic,” I said. “I need a soul mage to reduce down the value, because as of last time, I won’t do it on my own.”

“You have a second soul mage?” asked Heshnel. “Beside yourself?”

“Yes,” I said. “That’s need to know, given that the practice is frowned upon.”

“How proficient are you or they with soul magic?” asked Heshnel, leaning forward slightly. “How complete has the Knack’s gift been?”

“I’m proficient,” I said. “There are other disciplines that I would probably benefit from bringing to bear on the problem, if I knew what they were, because some of the skills listed there have synergies that aren’t listed until the right conditions are met.” I shrugged. “At this point I don’t think that soul magic is going to be the answer, or at least not by itself, and there’s no soul mage that I actually trust to work on my soul.”

“Aside from the one you already have working on your soul,” said Gemma. There was just the
barest hint of upward inflection, making it almost, but not quite a question.

“I believe I may know of someone who can help,” said Heshnel. “He was a soul mage during the
time of the Second Empire, my mentor in that art, spared when Manifest claimed the Imperial City.
He wasn’t simply a soul mage, but a researcher, and an extremely proficient one at that. It would take
some doing, but he’s likely still alive, living out a life sentence in a sentient prison he was put in by
the counter-imperialists. I had heard he managed to retain his abilities, in part because of the respect
the soul mages held for him.”

I stared at Heshnel, not knowing what to say, because I was ninety percent certain that the man he
was talking about was --

“Fallatehr Whiteshell was my father,” said Valencia. I had almost forgotten she was at the table with
us. There was something faraway in her eyes. My mind went to the cage she’d been pulled out of
when we first met her. With everything that had happened with her, it was sometimes hard to
remember the conditions that she’d been suffering in until just before we met her. I felt a pang of
empathy for her.

“Was?” asked Heshnel, focusing in on that word.

“Father to a teenage non-anima?” asked Gemma.

“A what?” asked Raven.

“Former non-anima,” I said with a wave of my hand.

“No,” said Valencia, turning to me with a scowl. “I still don’t have a soul.”

“I was just trying to clarify,” I said, but really, it wasn’t that, I’d just put my foot in my mouth. We’d
had a whole conversation about her being insistent on terminology, and I had fucked up. I turned to
Raven as I used blood magic to make sure that I wasn’t blushing. “She’s still non-anima, in the sense
that she doesn’t have a soul, but she’s not at risk of infernal possession. The opposite, actually, as
we’ve said. Once she’s killed them she can take them in and use their memories and skills.” Raven
relaxed slightly, but I could tell she was still on edge.

“Fallatehr,” said Heshnel, insistent. “He’s dead? And within the last handful of years?”

I decided to bite the bullet and do my best not to mince words. “We met with him. He killed one of
our party members, he used his magic to make grossly unethical alterations to Grakhul and
Amaryllis, then attempted to do the same to me. This came along with a fair bit of coercion and
blackmail on his part.” I hesitated for a moment. “I don’t know who he was when you knew him, but
the man we met didn’t allow us the possibility of a working relationship, not one that would leave
our minds and souls intact. I had to kill him.”

Heshnel’s lips had gone thin. “Where did you meet him?”

“We went to the prison on Sulid Isle,” I said. “He was there with twenty or so people whose souls he
had altered beyond recognition. He had intentionally created Valencia as a non-anima, and was
keeping her locked in a cage. We still tried to work with him, for a time. He was the one who taught
me soul magic in the first place.”

“A mentor, dead by your hand,” said Heshnel, voice tight.

“I hardly think the comparison is fair,” said Amaryllis. “We had known Fallatehr for less than a day
when he turned on us, and --”
“There’s no evidence whatsoever that Vervain ever turned on Uther,” said Heshnel. He’d raised his voice to talk over her. The ruined side of his face was pulsing, and had begun weeping a white fluid.

“I never said that he did,” replied Amaryllis. “You’re letting your emotions get the better of you. I understand that there’s quite a bit of history here, much of which we’re ignorant of, but --”

“No one should ever have told you it was Uther who killed Vervain,” Raven said, raising her voice. “Whatever reason Uther had, we only have the choice to accept what he did or not. You didn’t know him like I knew him, he wouldn’t have done anything to any of us unless it was necessary. He --”

“Did he ever tell you what it meant?” asked Heshnel. “He killed Vervain, admitted it to everyone, said that it had to be done, and after, that giant monument to the man at the Vervainium … a paragraph of accomplishments, but above it, writ large, four cryptic letters. I asked him, and he just gave me a sad smile.”

“He said that it was the final word on Vervain,” replied Raven. “A message that might make the gods laugh at a private joke. I asked for more. We all did. He had a way of shutting people down and barrelling on to the next adventure.” She leaned forward slightly. “Heshnel, there was a time when Uther was your ally, when you would have died for him, and even after Vervain was gone, you believed in Uther. And I know that it was hard when he left, that we all had to fight tooth and nail, I know that he didn’t leave any clues behind, but to forsake him so completely,” she threw up her hands. “We owe him more than that.”

“I’m sorry,” I said, once there was a frosty silence between the two of them. “Can someone fill me in on what Vervain’s grave actually said?”

“I’m curious too,” said Amaryllis, frowning slightly. It seemed like the kind of detail that she would have known, and maybe she was upset with herself for not having it in her memory banks. ‘What’s written on Vervain’s monument in the Vervainium?’ did seem a little obscure though, so maybe she was just annoyed that she was expected to know.

“The bottom part is an ode to what he did,” said Heshnel. “I thought it was magnanimous of Uther, when I first saw it. Vervain was his mentor, first and foremost, and that would be what history would remember him as. Yet the list of accomplishments omitted any mention of Uther or the others, focusing solely on what Vervain himself had done. When I found out what had happened to Vervain, it took on a darker tone, because perhaps Uther was trying to drive some distance between them after the fact, not admitting that Vervain had made Uther into what he became. And yet the epigraph is overshadowed by four letters, set on the plinth as large as all of Vervain’s accomplishments. D-M-P-C.”
“I don’t really understand the distinction,” said Tiff. “The DM controls all of the characters.”

“DMPC is Dungeon Master Player Character,” said Arthur, putting emphasis on the last two words. “It’s true that the DM controls all the characters, but the DMPC occupies a role as a player character in a way that NPCs typically don’t. A DMPC is a full-fledged member of the party, rather than being a patron, someone we need to escort, an enemy, mentor, side character, et cetera. It’s a little bit hard to define.”

“What?” asked Craig. “It’s when the DM is a player in their own game, boom, sorted.”

“The DM plays all the characters,” said Reimer. “I think more formally you would say that it’s when an NPC gets a share of the experience and loot.”

“No,” said Arthur. “The end-run around that would be leveling them up without experience and having them gain treasure through some alternate stream, which would circumvent the definition but still be,” he glanced at Tiff for a fraction of a second, “problematic.”

“Problematic because the DMPC knows everything there is to know?” asked Tiff.

“Well, no,” I said. “If you think of it like that, then all NPCs know everything there is to know, and you would be able to coerce a confession from any NPC about things that happened to the others. Which, spoilers, you can’t. No, it’s more about bias, or the implication of bias.”

“It’s like trying to tickle yourself,” said Reimer.

“That too,” I said. “But sometimes it’s necessary, when the party decides that they’re going to go completely without healing, or some other vital role isn’t going to be filled. Doctrine is for the DMPC to not have a decision-making role in the group or otherwise have actual agency of their own.”

“Doctrine,” said Craig, rolling his eyes.

“It’s important,” I said, feeling defensive. “It’s too easy to pollute the game otherwise.”

I tried to think through the implications of what Heshnel had said. *Vervain was a DMPC. No, Uther thought that Vervain was a DMPC, and that’s almost certainly why he killed him.* It fit with what I knew about Vervain eerily well. The very first thing that I’d thought, when I’d learned about Vervain from Solace, was that his powers sounded suspiciously like Powers as the Plot Demands. But for him to be a literal avatar for the Dungeon Master had implications about the Dungeon Master’s role in all of this. And, naturally, it was possible that Uther was wrong, driven to suspect Vervain because of the insane cycles of narrative. I wasn’t even sure what it would mean for Vervain to be a DMPC, but I had a vague idea of Mr. Dice Guy stepping in and puppeting Vervain’s body, bending the rules of the simulation and working to steer the narrative from the inside. He’d implied that he took avatars before, that would simply be another step in that direction.

That aside, there was the question of what to tell Raven and Heshnel about it. I’d been trying my best to tell people the truth, not just because the truth was easier, and not just because it could help them to reveal things that I wanted to know, but because honesty was how I preferred things these days, and had been since coming to Aerb. This, though … I wasn’t so sure.
“It’s a game term,” I said. “If I had loaned you the *Dungeon Master’s Guide* rather than the *Monster Manual*, you might even have run across it, or figured it out yourself. Dungeon Master Player Character. I don’t know enough about Vervain, beyond what’s in the history books, to know why Uther would have put that on Vervain’s grave, but a DMPC is a character that the controlling entity wears like a skin, if I had to guess. It’s impossible to say what Uther was thinking, or what evidence he had, but … that’s what the letters mean.”

“Does that help connect any dots?” Amaryllis asked Raven. “Does it help illuminate anything about how Uther was behaving or why he did what he did?”

“I -- I don’t know,” said Raven. “Sorry, what’s *The Dungeon Master’s Guide*?”

“It’s one of the three core rulebooks for the game that Arthur and I used to play, back on Earth,” I said, leaving aside that Dungeons & Dragons was only one of dozens of systems we’d used. I turned to Bethel. “Can you give them copies?”

Bethel waved a hand and the books appeared in front of our guests. I didn’t miss the fact that Raven had gotten a used copy, which brought a faint smile to my face, mostly because it was so petty at a time when things were increasingly serious.

*Loyalty Increased: Bethel lvl 5!*

Loyalty increases for her had been few and far between, and I didn’t know what it said that seeing a small smile from me was enough to trigger one. It didn’t make me feel particularly good, not about myself, and not about her.

“We have a lot of reading for you to do,” I said. “The situation we’re in isn’t like one of those games, obviously, but there are some surface similarities. It’s one of the reasons that I want to go after Fel Seed as soon as feasible.”

“It’s never going to be feasible,” said Amaryllis, frowning at me. “The Second Empire sent hundreds to their deaths trying to kill him and reclaim the zone. Motivated individuals have tried their hand. We don’t even know the *scope* of what it would take to kill him, and from the information you shared with me, he’s literally unkillable, and any weakness he appears to have will only be a false weakness he was using to put someone in a compromising position, which is *entirely* in line with historic attempts at killing him.”

She was airing a lot in front of our guests. I wasn’t sure what I was supposed to think about that. Obviously I didn’t mean that we were going to go in half-cocked, we would have *some* kind of plan, and I knew Fel Seed better than most people did, so the challenges inherent were obvious to me … but it was still a thing that I wanted to do, that I *had* to do, if it meant being able to get to Arthur, if only to confront him, or get some kind of closure.

“Okay,” I said. “Obviously there are substantive reasons that we shouldn’t go. He’s got hundreds of thousands of flesh-beasts, he’s got toxic spores that would let him kill us with a thought, blah blah blah, *he’s* blink-fast, murderously strong, capable of regenerating from the smallest scrap of himself, completely immune to any attempts at poisoning, mind control, soul alteration -- if he even has a soul -- and just about a dozen other immunities, plus his physical body is just a focal point for command and control, because the car-wide flesh tunnels and nearly-invisible spiderweb veins that thread his territory still count as him for the purposes of his regeneration and for his ability to instantly manipulate the biology of those he touches, and … yeah. “But the thing is, I have a quest, and quests have been completable. So if, in our current state, we’re not capable of beating Fel Seed, then there has to be a way, either manipulation of exclusion zones so that we can bring a nuclear weapon to bear against him, a unique quirk of how my Knack works, or … or maybe I’m a part of
some plan that someone else has already made, the key that fits into a lock that was decades in the making?"

My eyes had drifted to Raven as I was talking. I saw her pale as I said the idea that had just come to me.

“Wait,” I said. “Does someone actually have a plan like that?”

Raven cleared her throat. “I’ve said before that exclusions sometimes appear to break, though it’s never been seen in the real world. One of our internal departments is devoted to extinguishing or controlling the exclusions, where possible. There are partial plans in place, some that we don’t have the manpower to pull off, others that lack specific entads or pieces of magic. Some … some were waiting for Uther’s return. I’m not up-to-date on all of their plans, but -- it’s possible they have something relevant.”

Amaryllis swore.

We talked for a long time after that. Some of it was just infodumping one way or the other.

I had to bring them up to speed on what tabletop gaming was like. I sort of felt like I owed it to them, since their lives had been jerked around by the Dungeon Master and maybe, to a lesser extent, Uther. The more I’d thought about it, the more sympathetic I was to Masters, given that we seemed to (and probably did) have some answers to the enduring mysteries of the world. I had little doubt that we were going to talk to him again at some point, especially if Raven was going to be an ally. I wasn’t particularly looking forward to it, but I was a believer in making amends and rebuilding crumbled relationships, maybe because that had been my plan back on Earth, in the weeks leading up to my transfer to Aerb.

We got a bit of after action with regards to what had happened with the attack, which Raven had a keen interest in. Apparently the poison had been airborne, and Everett had made some efforts to protect the others from it, which might actually have been the thing to save our lives. Gemma had been given a bracelet the night before the attack, and he’d used (barely) non-lethal spells on Heshnel and Gemma.

“If he’d hit me with that aging spell, I would almost certainly have died,” I said.

“He tried,” said Valencia. “I got in the way. I don’t think the spell knew what to make of me.” I think she must have seen the skepticism in my eyes. “You had just gotten hit in the head.”

“I can confirm,” said Amaryllis, watching me closely.

“So you’re saying that they would have won if they’d been bloodlusted?” asked Raven.

“Probably,” I said.

“I think that’s probably why I lived,” said Amaryllis. “I was trapped in Gur Dehla’s fluid and being choked. Perhaps it meant to have the poison finish me.”

“Mercy wouldn’t have been out of the question,” said Pallida. “O’kald was always the hardest among us. For Gur Dehla, I believe the attack was a matter of perceived necessity. And Everett …”

“Fatalism,” said Raven. “He was still old, when you met him?”

“Yes,” I said. “Old and withered.” My eyes went to Gemma, very briefly and despite some effort on
my part not to look at her.

“He wanted to die,” said Raven. “He’d wanted to die for centuries, but he kept hopping and skipping forward through time, hoping that he would find some answers, or at least some purpose. Maybe he was just looking for an excuse to finally end it.” She paused, swallowing, and wiped at a tear that was forming. “I suppose he found it.”

I tried my best not to bring up the fact that their friends had, you know, tried to murder me, but it was awkward and a bit painful. If I hadn’t had a week and a half in the chamber, I probably would have had an outburst, but as it was, I mostly just shifted around and felt uncomfortable. I understood, to some extent, why they had believed that killing me was the right thing to do, and to be honest, I really wasn’t sure what would happen to Aerb if I was gone. There was a long list of questions that needed answering, like what had actually happened to Uther, why five hundred years had passed between his disappearance and my arrival, and what kind of plans, if any, the Dungeon Master actually had.

We broke for lunch, since no one wanted to power straight through with the meeting in perpetuity. Lunch consisted of adjourning to the next room, which Bethel had transformed into an eating space, complete with a buffet of food, most of it from Earth.

“You can’t keep pulling from Earth,” Amaryllis said to Bethel, doing her best to pull the illusory woman aside. “There are more threats in that single entad than maybe any other entad in the entire history of Aerb. Even seemingly innocuous things can’t be presumed safe. It’s a time bomb waiting to go off in our faces.”

“I’m willing to take my chances with food, for now,” said Bethel.

“I wouldn’t,” said Raven, coming over to us with a plate. The room was on the larger side, with different places for people to sit and congregate, but even if Bethel weren’t in play, you’d naturally assume that no conversation were private. Solace and Grak were having their own conversation at a small table, while Heshnel and Gemma had lowered themselves down into another of the small tables. Pallida was standing next to them, plate in hand, but she kept glancing toward Amaryllis. “Biocontainment was a considerable problem during the First Empire, and to a lesser extent, the Second Empire as well. If the entad you’ve obtained is laced with traps, then seeds, bacteria, and insects would all be problems you would want to look out for. The Isle of Poran is contained, but --”

“No one asked you,” said Bethel, staring Raven down.

Raven nodded. “Of course.” She took a piece of fried chicken from her plate and bit into it without saying another word. The foods on offer were all Midwestern comfort foods, with a dash of Southern cuisine thrown in there. I’d spotted barbeque, fried chicken, collard greens, cornbread, and coleslaw. I had no idea why Bethel had chosen those, but my guess was that she was attempting to put our guests off-balance.

“No more foods from Earth, please,” said Amaryllis. “It’s too much of a risk. We have a kitchen and a stockpile of food, we should be using that.”

“Juniper?” asked Bethel, turning to me.

“I reluctantly agree,” I said. “You make great food, but I don’t want to die because there’s a rogue culinary element that becomes deadly when transitioned to Aerb. I think you’d be a good cook, if you took some time to learn how.”

“Very well,” said Bethel. She looked at Amaryllis and clucked her tongue. “Uther’s spawn and his
lackey, brought together. I can’t say that I approve.” She wandered off to collect a plate of her own, though I was watching carefully, and saw that she was just making an illusory plate with illusory food on it. She was still limited enough in her telekinesis that she couldn’t easily carry a plate full of food around.

I turned to say something to Amaryllis, but Pallida had found her opportunity, and it was fairly clear that I wasn’t meant to be a part of that conversation, which was, from what I could hear, mostly about Dahlia.

That left me with Raven.

“Care to sit?” asked Raven, gesturing to a table.

“Sure,” I said. “Let me get some food.” I went off to where the food was and grabbed a plate of my own, piling it up with a little bit of everything. As I was making my way to the small, two person table that Raven was sitting at, I was hit by a wave of unpleasant memory. It was too close to high school and carrying a tray of food to a table with friends. It was possible that Raven had triggered the memory; she looked almost exactly like Maddie had.

“I do like the concept here,” said Raven, once I’d returned. “The informality is nice, and people have some time to mingle with each other. Whose idea was it?”

“Mine,” I said. “We were talking it over early this morning, and I really didn’t want to be eating while we talked formally, especially since I would be the one doing a lot of the talking. There was a bit there where I wasn’t sure that we would make it to lunch. It was getting tense.”

“Not the most tense meeting I’ve ever had,” said Raven.

“Oh,” I said. “You’ll have to tell me what he was like. Especially his early years, when he would have been more like he was as a teenager.”

“Ah,” I said. I ate my chicken, feeling awkward and not knowing what to say. “You’ll have to tell me what he was like. Especially his early years, when he would have been more like he was as a teenager.”

“Not the most tense meeting I’ve ever had,” said Raven.

“Oh,” I said. “You’ll have to tell me what he was like. Especially his early years, when he would have been more like he was as a teenager.”

“I didn’t come on until a long time after,” said Raven. “But I agree, we both have memories of him, and even if it’s not very important, we should probably share them.” She looked up from her food. “You’ve read my biography?”

“Yes,” I said.

“I didn’t even know there was more than one,” I said. “It was The Archivist’s Hand. There’s not a lot of information on you. I sort of think that the publisher just wanted to be able to have a full set of the Knights.”

“I never did much,” said Raven. “I was the runt of the litter. Uther called me his ‘exposition fairy’, but that didn’t particularly boost my spirits. He also called me the moral center of the group, but I was twelve years old, and I knew it, so it always sounded false. I decided, centuries later, that what he really meant was that it was hard for him to do bad things when he had to look me in the eyes and tell me about them.” She saw the look of confusion on my face. “Half of my job as archivist was tracking down information for him from every book I could get my hands on. The other half was to keep track of what we did, when he didn’t have the time or stamina for it.”

“That’s also something not mentioned in the biography,” I said with a frown. “I ate a bit more as I thought about that. “But he didn’t tell you everything.”
“No,” said Raven. “Not nearly. Some of it simply couldn’t be written down, for all the usual reasons, but he was also a man with secrets. He was very candid with me, but not as much as he could have been.”

“So why would he have you track it all?” I asked. “Why devote the time and effort to it if he was just going to leave out important stuff?”

“He would consult my notes,” said Raven. “They would help if he needed to be briefed on some foreign king’s court he’d visited ten years prior. Sometimes those notes would help the pieces come together and make a connection that spanned the years. We ran into old enemies with alarming frequency.” She shrugged. “I was happy to do it. I idolized him, all the way to the end. Less, now. When I was younger I had this romantic notion that when he died, I would write the true story of Uther Penndraig, as I had known him, the biography to end all biographies.” She picked at her food. “That never ended up happening, obviously.”

There was a palpable sense of loss.

“Did he ever tell you about the early years?” I asked. “Not Earth stuff, obviously, but … when he joined up with a theater troupe? I’ve always wondered about that. It was one of the things I planned to ask him.”

“He told me,” said Raven, nodding as she swallowed her food. “He always called it the Refusal of the Call. You might have read the term in one of his books, though he was never clear that he was speaking of himself.” I nodded at that and made the snap decision to leave Joseph Campbell out of it. “After his family was killed, he took what he could from their farmstead, then made his way down the road without really knowing what he was doing. The theater troupe was happenstance. They had been putting on a play in the nearest village, and he had pleaded with them for a job. Most of the biographies of him emphasize that he was raised as a farmer, but he actually started even lower than that.” Raven shrugged.

“Eventually he started to prove his worth. The Knack made itself apparent a number of times, but to hear him tell it, he was still too much of a coward to do anything with it. He was training for a minor part and his sword-fighting skill improved by leaps and bounds within the course of a day. He’d always had an active imagination, but he found himself able to put those things he’d imagined into words more easily. Everything came naturally to him.” She paused, looking at me. “You’ve been much more active than he was in the beginning.”

“Not all of that was by choice, as I’ve said,” I replied. I had told most of our story, leaving out almost nothing, not even the Fallatehr stuff.

“Still, it’s a difference,” said Raven. “The differences are what I’m paying the most attention to right now.”

I was watching her closely. The similarities are most of what I see, I wanted to say. I was probably going to tell her about Maddie, in the non-creepiest way that I could, but that was something that I would save for another time. They really were, in spite of all reason, very similar in their mannerisms.

“There was a girl,” said Raven, continuing on as she watched me eat. “She was part of the theater troupe, an actress, his age or perhaps a little younger. He told me that he was a coward about her too, not able to express his feelings toward her, always wanting to, and never quite getting there.”

I frowned at that. I couldn’t tell whether this was a warped story of him and Tiff, told as though he’d been on Aerb when it happened, or whether it was simply history repeating itself. Either seemed
plausible to me. Arthur had ambitions in high school, he was in every vaguely intellectual club or group that would have him, but all of that was within the structure of what the high school offered. It made me indescribably sad to think that he would come to another world, one brimming with possibility and ripe to be leveraged even without gifts piled on top of his knowledge from Earth, and end up just trying to live a normal life.

“And then he wrote a play that upset the Dark Lord,” I said. “And it all came crashing down.”

“Yes,” said Raven. “There was something he said that stuck with me though. He said that he had a chance to save the girl, and he chose to leave instead. It was certain death for her weighed against his own survival. He always regretted it. I used to think that one act was at the core of him, the reason that he kept pressing on so hard, inserting himself into so many places where he wasn’t entirely wanted. Now, I’m less sure.”

“What happened after?” I asked.

“He stumbled into Vervain,” said Raven, furrowing her brow. “He was taken under the old man’s wing. In the context of what you said earlier, I don’t know how well it fits. Vervain had been tracking the Dark Lord’s forces, so it wasn’t entirely coincidence that they ran into each other, but I’ve always thought that it smacked of the unnatural, the right two people meeting at just the right time. Sometimes history is like that though.”

“What do you think that he was right?” I asked. “Do you think that Vervain was controlled by something greater?”

Raven shook her head. “You’re talking about an entity whose powers are greater than any of the things I’ve spent the last hundred years saving the world from, greater than anything Uther ever fought off. If Vervain was what you say -- what Uther says -- then I don’t know how we could tell. I don’t know how Uther would ever have made the leap. How could he have gathered enough evidence to kill the man who taught him so much?”

I left that question hang in the air, because I had more food to shovel down, and I didn’t have a good answer. If one of my party members were a DMPC --

Is one of my party members a DMPC? Could they be? Yes, obviously they could be, but were they?

“Everything okay?” asked Raven. “You stopped.”

Before I could answer, Amaryllis came over. “I think we’re wrapping up here,” she said. Her face was slightly flushed, and Pallida, behind her, had a faint smile. Amaryllis could control the flow of her blood, just like I could, and I had to wonder how much intention was behind the color of Amaryllis’ cheeks. “The plan, such as it is, is that we’ll be going back to the other room for phase two of the meeting, where we talk about next steps.”

“Sure,” I said. “Fine by me.”

Solace was the most likely candidate, of course. She was a flower mage, just like Vervain had been, and her powerset could be (somewhat inaccurately) summed up as ‘whatever the DM says’. As points against, she was one of our later acquisitions, fourth to join the party, and not only was she not a close confidant, she’d been dead for quite a bit of our adventuring. She was, maybe, a mentor, in the sense that I had been taught the basics of flower magic by her, and she was certainly the oldest of us, but that was nothing concrete.

I didn’t actually think that Solace was a DMPC, but it was on my mind as I sat and listened to
Amaryllis speak. She was making her pitch.

“... the obvious security concerns we have with regards to anyone coming to join us. You would have housing, inside Bethel, so long as she’s willing to have you as a guest. If Aerb needs to be defended, we’ll act, as one, sharing information and resources to ensure the continued survival of civilization, and failing that, life.”

“I’ve already pledged this life to Juniper,” said Pallida. She seemed like she was in a better mood than she had been when lunch had begun. “That gives me first dibs on a room.”

The others were a bit more hesitant. “My loyalty is to the Foxguard,” said Gemma. Her voice was hoarse. “I will need to consult with the elder council.”

“We can come with, to make our case,” said Amaryllis.

“That won’t be possible,” said Gemma. “Humans aren’t allowed to step upon our sacred ground these days.”

Amaryllis nodded. “We can offer transport, if --”

“The Egress will suffice,” said Gemma. She was being curt, and I didn’t have high hopes that she would be a proper ally when all was said and done.

“Very well,” said Amaryllis. She looked to Heshnel.

“Uther had a saying,” Heshnel replied to the implied question. The good half of his face looked pensive, while the other half was still a horrifying mishmash of alien design. “Those who do not learn from history are doomed to repeat it.”

“Actually, that was George Santayana,” I said. “Uther cribbed it from Earth. And on Earth, we also have another saying. ‘History is bunk.’” I could feel everyone staring at me, like a weight settling onto me. Amaryllis was better at this sort of thing than I was, not just in the sense of what skills she had on the game-mechanical level, but also on a higher level, something that didn’t seem touched by the soul. “Uther thought that he was constrained by the narrative. Maybe that was even true, for him. For me, the rules are different. Narrative isn’t a guide. History isn’t a guide. I travel through this world guided only by the facts of reality as I see them. You can help me, or not, but I’m trying my best to protect this world from harm.”

Heshnel’s mouth twitched. “We shall see,” he said. “For the time being, I would be content with a place here, to observe if not always to lend aid.”

I turned to look at Raven. “What do you say?” I asked.

“I don’t think I have a choice but to say yes,” replied Raven.

“If it’s Bethel --” I began.

“No,” said Raven. “I meant -- there are certain things that you’re forced to do because that’s the only option you realistically have. I made my way to the Library because I thought it was where I could do the most good. Now, that place is probably with you.” She swallowed. “I’ll take you to the Library. You, and only you. I don’t have the power to act unilaterally, and if I’m going to be taking a leave from the Library, then it’s best that we stay on good terms with them.”

“Okay,” I said, letting out a breath. “Sooner is probably better than later.”
Gemma took the *Egress*, which apparently belonged to Pallida, but before she did, we took a few crates full of stuff out of it.

“These are good times for renacim. We weathered the storm of the Second Empire far better than most,” she said as I helped her haul the crates up the hill to Bethel. We were doing it as one trip, with the crates stacked up between us. “To give you some history you may not have, the Second Empire was money hungry, especially in the early years, and there was this undercurrent of fighting back against the entrenched interests of the world, so you know, it was a combination of laws and direct executive action that essentially robbed the wealthy and long-lived. Legally speaking, all a renacim’s wealth was forfeit to the empire whenever we died, but we had schemes in place, and all the money seemed to vanish into thin air when the Empire came to collect.” She gave a little laugh. “I helped with some of that. Even stole from the Empire on a few occasions, though the other renacim didn’t like that so much, especially not when I was using our networks to shift the goods around.”

“So you’re rich, is what you’re saying?” I asked.
